

Summary of Hawaii Population Profile

The U.S. Census Bureau released the 2010 Census Summary File 1 for Hawaii on June 16, 2011. The Summary File 1 data includes the most detailed information available so far from the 2010 Census, including cross-tabulations of age, sex, households, families, relationship to householder, characteristics of owners and renters, detailed race and Hispanic or Latino origin groups, and group quarters.

The following is a summary of the data from Summary File 1 for Hawaii:

- Figure 1. Overall, there were about equal number of males and females in the state with 100.3 males per 100 female in 2010. However, looking at the gender distribution by age, there were more males than female under the age of 52 and the trend was opposite for ages above 52. Especially for the age group of 20 to 29, there were 113.5 males per 100 female. For the age group above 52, there were 89 males per 100 female.

10,476 persons on April 1, 2010 were 90 years of age or above, accounted for 0.8% of Hawaii’s total population. On April 2000, population in the 90+ age group was 5,896, accounted for 0.4% of the total population.

2. Table 1 and Table 2. The Filipino race group has over taken the Japanese race group and has become the second largest racial group for both pure and mixed race categories. For the pure race groups, Japanese, Chinese, Black or African American, and Malaysian decreased between 2000 and 2010. For mixed race, only Malaysian decreased during the past decade.

Table 1. Hawaii Population by Race: Race alone, 2000 and 2010

Race alone 1/	Population			2000 Ranking	2010 Ranking
	2000	2010	Growth, %
