

Percent of the Native Population Born in their State of Residence (Including Puerto Rico)

Universe: Native population

Data Set: 2008 American Community Survey 1-Year Estimate

Survey: American Community Survey

Geographic Area: United States and State

NOTE. For information on confidentiality protection, sampling error, nonsampling error, and definitions, see Survey Methodology.

Rank	State	Percent	Margin of Error (+/-)
1	Louisiana	82.1	0.4
2	New York	82	0.2
3	Michigan	81	0.2
4	Pennsylvania	79	0.2
5	Ohio	77.9	0.3
6	Illinois	77.4	0.2
7	Iowa	75.8	0.4
8	Wisconsin	75.1	0.3
9	Massachusetts	74.2	0.4
10	Minnesota	74.1	0.3
11	Alabama	73.4	0.4
12	Kentucky	73.2	0.4
12	Mississippi	73.2	0.5
14	California	72.9	0.2
15	Texas	72.2	0.2
16	West Virginia	71.4	0.5
17	Indiana	71.3	0.3
18	North Dakota	71.2	0.9
19	Nebraska	69.5	0.6
20	Missouri	68.8	0.3
21	South Dakota	68.6	0.9
	United States	67.3	0.1
22	Utah	67.1	0.6
23	Rhode Island	67	1
24	Maine	66	0.7
25	New Jersey	65.5	0.3
26	Tennessee	64.8	0.4
27	Oklahoma	64.6	0.5
28	Hawaii	64.3	0.8
29	Arkansas	63.9	0.6
30	Connecticut	63.8	0.5
31	Kansas	63.1	0.5
32	North Carolina	62.9	0.3
33	South Carolina	62.8	0.5
34	Georgia	61.3	0.4
35	New Mexico	57	0.7
36	Virginia	56	0.3
37	Montana	55.4	0.8
38	Maryland	55.3	0.4

39	Vermont	53.7	1
39	Washington	53.7	0.4
41	Oregon	50.9	0.5
42	Delaware	50.5	1.1
43	Idaho	49.8	0.7
44	Colorado	46.9	0.4
45	District of Columbia	46.4	1.1
46	Wyoming	43.6	1.3
47	New Hampshire	43.3	0.9
48	Arizona	42.7	0.4
49	Florida	42.2	0.2
50	Alaska	40.9	0.9
51	Nevada	29.1	0.7
	Puerto Rico	94.6	0.2

Source: U.S. Census Bureau, 2008 American Community Survey

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

Notes:

·While the 2008 American Community Survey (ACS) data generally reflect the November 2007 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities. The 2008 Puerto Rico Community Survey (PRCS) data generally reflect the November 20 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in PRCS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

·Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2000 data. Boundaries for urban areas have not been updated since Census 2000. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Explanation of Symbols:

1. An '***' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An '****' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
8. An '(X)' means that the estimate is not applicable or not available.
