

**FOR IMMEDIATE RELEASE: THURSDAY, FEB. 6, 2014**

**New Census Bureau Migration Data Detail Specific  
County-to-County Moves For Every County in Hawaii**

**Focus on Hawaii County**

The U.S. Census Bureau reported today on all of Hawaii's counties from where residents were most likely to have moved from and moved to over a one-year period between 2007 and 2011.

Among Hawaii County residents, 6,555 or 3.6 percent, lived in a different county one year earlier. The Hawaii counties they were most likely to have come from were the City & County of Honolulu and Maui County. Counties on the continental U.S. that these residents were most likely to have moved from included Virginia Beach City (Virginia), Ventura County (California), San Francisco County (California), and Orange County (California).

About 8,474 residents moved away from Hawaii County during the course of the year. The most common county destinations in Hawaii for these movers were City & County of Honolulu and Maui County while the top continental U.S. destinations included Los Angeles (California), King County (Washington), Jackson County (Oregon) and Maricopa County (Arizona)

In addition to the county-to-county data provided above, information on in-migrants from foreign locations was also available. For Hawaii, this is an important factor because many of our migrants come from areas such as Asian, the Oceania region and Europe. Of the 1,009 resident coming from foreign areas, the top regions that they arrived from were Asia and the region Oceania and At Sea.

This information is based on statistics from the American Community Survey, which shows how many U.S. residents moved from one county to another during the course of a year. Today's release includes a set of 2007-2011 statistical tables that present information on movers by educational attainment, individual income and household income. These statistics can also be explored using the Census Flows Mapper, an interactive mapping application that allows users to visualize movers by data such as educational attainment and income.

Among people with a graduate or professional degree, the top counties that migrants came to Hawaii County from were California (no county specified), Asia, Los Angeles County (California), Utah (no county specified), and Wisconsin (no county specified). The top areas that these people left Hawaii for were the City & County of Honolulu (Hawaii), San Diego County (California), Kauai County (Hawaii), King County (Washington), Alameda County (California), Maui County (Hawaii) and Kenai Peninsula Borough County (Alaska).

Similar statistics are available for every county nationwide through the tables released today. Additionally, more findings are available in a working paper also released today, and users can find more information about how to use the flow tables and mapping tool in a PowerPoint tutorial.

### **Find Your Ideal Place with Census Bureau's Newest App**

People considering a move can now easily access and explore information on U.S. towns and cities with dwellr, the newest Census Bureau mobile app. Powered by American Community Survey statistics, dwellr can pull up a list of U.S. locations that matches users' preferences for such variables as city size, geographic region, job type and income.

## **About the American Community Survey**

The American Community Survey provides a wide range of important statistics about all communities in the country. It gives communities the current information they need to plan investments and services. Retailers, homebuilders, police departments, and town and city planners are among the many private- and public-sector decision makers who count on these annual results.

The Census Bureau uses information collected over five years from the American Community Survey in order to have more accurate and reliable statistics for areas with populations smaller than 20,000. Statistics for larger areas are also included with this release, making comparisons across large and small geographies possible.

The data represents the average characteristic of an area over the entire 5-year period. About 8% of Hawaii's population was sampled during this time.

## COUNTY-TO-COUNTY MIGRATION FOR THE STATE OF HAWAII: 2007-2011 IN-MIGRANTS TO HAWAII COUNTY

**FOR IMMEDIATE RELEASE: THURSDAY, FEB. 6, 2014**

**New Census Bureau Migration Data Detail Specific  
County-to-County Moves For Every County in Hawaii**

**Focus on the City & County of Honolulu**

The U.S. Census Bureau reported today on all of Hawaii's counties from where residents were most likely to have moved from and moved to over a one-year period between 2007 and 2011.

Among the City & County of Honolulu residents, 45,085 or 4.8 percent, lived in a different county one year earlier. The Hawaii counties they were most likely to have come from were Hawaii County and Maui County. Counties on the continental U.S. that these residents were most likely to have moved from included San Diego County (California), Los Angeles County (California), Bexar County (Texas) and Clark County (Nevada).

About 49,520 residents moved away from City & County of Honolulu during the course of the year. The most common county destinations in Hawaii for these movers were Maui County and Hawaii County, while the top continental U.S. destinations included Clark County (Nevada), San Diego County (California), Los Angeles County (California) and Bexar County (Texas).

In addition to the county-to-county data provided above, information on in-migrants from foreign locations was also available. For Hawaii, this is an important factor because many of our migrants come from areas such as Asian, the Oceania region and Europe. Of the 14,133 resident coming from foreign areas, the top regions that they arrived from were Asia and Europe.

This information is based on statistics from the American Community Survey, which shows how many U.S. residents moved from one county to another during the course of a year. Today's release includes a set of 2007-2011 statistical tables that present information on movers by educational attainment, individual income and household income. These statistics can also be explored using the Census Flows Mapper, an interactive mapping application that allows users to visualize movers by data such as educational attainment and income.

Among people with a graduate or professional degree, the top counties that migrants came to the City & County of Honolulu from were San Diego County (California), Hawaii County (Hawaii), King County (Washington), Los Angeles County (California) and Bexar County (Texas). The top areas that these people left Hawaii for were San Diego County (California), Los Angeles County (California), Sacramento County (California), Cook County (Illinois), and the District of Columbia. It is significant, however, that the data showed that about 24% of all incoming people with advance degrees came from the foreign areas of Asia and Europe.

Similar statistics are available for every county nationwide through the tables released today. Additionally, more findings are available in a working paper also released today, and users can find more information about how to use the flow tables and mapping tool in a PowerPoint tutorial.
