

Layer Name: Hospitals

Layer Type: Point

Status: Complete

Geog. Extent: Main Hawaiian Islands

Projection: Universal Trans Mercator, Zone 4 (Meters)

Datum: NAD 83 HARN

Description: Locations of hospitals in the State of Hawaii.

Source: The Hawaii hospitals layer was created by the Pacific Disaster Center (PDC) in 2003 from data downloaded from the FEMA Multi-Hazard Mapping Initiative's (MMI) Emergency Response Facilities database: <<http://www.hazardmaps.gov>>.

History: Risk Management Solutions, Inc. originally developed this database under contract to the National Institute of Building Sciences in 1997. This database was developed from emergency operations centers data provided by FEMA in late 1994 and supplemented with data gathered using the 1996 edition of the electronic phonebook, ProCD.

The PDC found that some locations were improperly referenced. Therefore, all locations were quality control checked (via their addresses) using USGS 1:24,000 DRG's, Census road data, as well as aerial photos. Two new points were added on the Island of Oahu. Locations of points on the other islands were moved accordingly.

The corrected shapefile was re-projected to UTM Zone 4, NAD 83 HARN.

May, 2017 – Updated the name of St. Francis Medical Center - West to Queen's Medical Center – West Oahu.

Attributes listed on following page

Attributes: Points:

NAME	Hospital Name
ADDRESS	Address of Hospital
CITY	City
ZIPCODE	Zip Code
PHONE	Phone Number of Hospital
CLASS	EF Class of Hospital (FEMA Classifications) EFHL: Large Hospital EFHM: Medium Hospital EFHS: Small Hospital EFMC: Medical Clinic
FUNCTION	Function of Facility – Hospital or Clinic
NUM_BEDS	Number of Beds
COUNTY	County FIPS Code
COMMENT	Comments
ID	Unknown
