

Layer Name: Reserves

File Name: reserves

Layer Type: Polygon

Status: Complete

Geog. Extent: Islands of Kauai, Oahu, Maui, Molokai, Lanai, Hawaii, and Kure Atoll

Projection: Universal Transverse Mercator, Zone 4 (Meters)

Datum: NAD 83 HARN

Description: Various reserves, preserves, parks, etc. as of March, 2018.

Abstract: Various reserves, preserves, parks, etc. as of March, 2018. Reserve boundaries are generally based off of the County's tax map key (TMK) layers (Kauai County TMK 2012, Maui County TMK 2016, Honolulu and Hawaii Counties 2017). Since boundaries from other agencies are derived from different source scales, these boundaries are modified to match the TMK layer with exceptions. Note: Kaumahina State Recreation Area on Maui was digitized from USGS 7.5 minute topographic map.

Purpose: Centralized location of managed lands protecting natural and cultural resources of the Main Hawaiian Islands.

Source: Originally compiled 2002 by SOH, DLNR, DOFAW from various sources including the data provided by U.S. Fish and Wildlife Refuges, U.S. National Park Service, Division of State Parks, County parcel boundaries and The Nature Conservancy with input from State foresters and others familiar with the reserve boundaries. The boundaries in this layer are not final; they are updated frequently.

Use Limitations: This dataset was compiled from various data sources and is updated frequently. No warranty is made that the GIS data or any subsequent update will be error free, and no warranty is made regarding the positional or thematic accuracy of the GIS data. The features are graphic representation of managed areas for planning purposes and do not represent or confer any legal rights, privileges, benefits, boundaries, or claims of any kind. DOFAW encourages GIS data users to verify the suitability of the data before use. Please report any discrepancies or errors to the point of contact.

Note: *In some cases, differences in the acreage calculated by the GIS and the acreage listed in county real property records may exist. This can be especially evident in large parcels in remote areas, and is often a result of the difficulty in surveying the steep, overgrown terrain found in these natural areas.*
