 Stream Protection and Management Branch

FIELD INVESTIGATION REPORT
FI2008111906 (East Maui, Honopou Haiku Ditch)

Date of Field Investigation:	November 19, 2008	Time (24-hour):	1620 - 1700
CWRM Staff:	Ed Sakoda, Dean Uyeno, and Chui Ling Cheng		
Individuals Present:	Skippy Hau (DAR); Lynn Scott (Honopou resident)		
Hydrologic Unit:	Honopou (6034)		
Stream Name:	Honopou Stream		

Findings:

At 1620 hours, CWRM staff and Skippy met with Lynn Scott at the Haiku Ditch diversion intake on Honopou Stream. Due to the high flows from the heavy rain*, debris had collected on the upstream side of the berm that EMI constructed on Oct. 27, 2008 (refer to FI2008102703 for more information). The berm did not wash downstream. Water was flowing over the berm and Haiku Ditch. The water level at the ditch was a couple inches lower than the opening of the control gate at the right bank of the stream. Compared to the water level observed the previous day (11/18/2008), the water level during this visit was slightly lower. Backflow of water from the control gate was apparent.

Staff concluded the field visit at 1700 hours.

*Heavy rain fell on East Maui on the early morning of Nov. 18. USGS rain gage (Station 204916156083701) in West Wailuaiki near Keanae recorded 1.8 inches of rain on Nov 18, and 0.82 inches on Nov. 19. Most of the rain fell on the early morning of Nov. 18, between 12AM and 3:30AM. The nearest USGS active streamgage with real-time data is located on West Wailuaiki Stream (Station 16518000). At approximately 12:00AM on Nov. 18, discharge in West Wailuaiki Stream began to increase from 2.7CFS to a peak flow of 2,010 CFS at 9:45AM. By Nov. 26, streamflow returned to 3.7 CFS. Refer to FI2008111801 (East Maui, Palauhulu, high flow) for real-time rainfall and discharge graphs.
