Land Division
Honolulu, Hawaii 96813

January 10, 2014

Board of Land and Natural Resources
State of Hawaii
Honolulu, Hawaii

Statewide

Annual Renewal of Revocable Permits on the Islands of Hawaii, Maui, Molokai, Kauai
and Oahu.

BACKGROUND:

At the end of each calendar year, Land Division reviews its list of current revocable permits issued statewide and determines which ones to recommend to the Board of Land and Natural Resources for renewal for the upcoming year. Generally, those revocable permits in good standing will be recommended for renewal, unless the Board has approved a different disposition for the land covered by a particular permit.

Rents for renewed revocable permits are to be reviewed periodically according to a schedule approved by the Board at its meeting of April 22, 2005, Item D-17. See Exhibits 1 and 2 attached.¹ According to the approved schedule, revocable permits issued for baseyard/storage, commercial or industrial purposes are to be reviewed on an annual basis. Rents for all other revocable permits are reviewed at 5- or 10-year intervals. These intervals coincide in January 2015, with the result that rents for many of these other revocable permits will be reviewed at that time.

In the past, Land Division's in-house appraiser recommended rents for renewed revocable permits in accordance with the schedule set forth in Exhibit 1. Accordingly, at the time the Board approved the renewal of the permits, it also authorized a rent adjustment for applicable categories of permits. Since June 2011, however, Land Division has been without the services of a licensed, in-house appraiser (except for a four-month period from December 2011 to March 2012). As a result, staff has been unable to make recommendations to the Board as to the fair market rents to be charged for these permits.

¹ Exhibit 1 sets forth the rent review schedule in table format. Exhibit 2 is a copy of the Board action of April 22, 2005, Item D-17, less Exhibit A (which is the list of revocable permits renewed in 2005).

At its meeting of December 14, 2012, Item D-18, as amended by January 11, 2013, Item D-15, the Board approved the renewal of the revocable permits listed in the submittal without a rent increase, but authorized Land Division to procure an appraiser to review the rents of revocable permits for baseyard/storage, commercial or industrial purposes (as well as other revocable permits) during the course of the year and determine if adjustments were warranted.

REMARKS:

Pursuant to the Board authorization of December 14, 2012, as amended, staff procured the services of a licensed appraiser to review revocable permits issued for baseyard/storage, commercial or industrial (BSCI) purposes. Staff has been working with the appraiser to refine the scope of work for the project to ensure that Land Division and the Board will be provided with the best information on the rents for these permits. Staff expects to finalize the scope of work and obtain the appraisal report or reports later this year.

As explained in last year's submittal on revocable permit renewal, based on staff's familiarity with its BSCI revocable permits and those that may be underperforming in terms of revenue generated, staff has identified groups of revocable permits to be reviewed by the appraiser.² The appraiser will provide a consulting report or opinion to the department as to recommended rents for these BSCI permits, and after review, staff will make a recommendation to the Chairperson to either approve or disapprove the rent determined. The rent determination will not be brought back to the Board for approval. However, staff will report in the next year's revocable permit renewal submittal on those BSCI permits whose rent had been adjusted in the course of the 2014 calendar year.

RECOMMENDATION: That the Board:

1. Approve the continuation of the revocable permits listed in Exhibit 3 on a month-to-month basis for another one-year period through December 31, 2014, except for permits that are in arrears of rental payment for more than 60 days and/or have been approved for forfeiture by a separate Board action. Permits in arrears of rental for 60 days or more and/or approved by the Board for forfeiture shall not be renewed;
2. Approve no immediate change in current monthly rent for revocable permits as listed in Exhibit 3, provided however, that the Land Board reserves and delegates to the Chairperson the right at any time to review and reestablish new rental charges for baseyard/storage, commercial or industrial and any other revocable permit, to reflect market conditions or the fair market rental for the rights and

² Revocable permits would be grouped on the basis of proximity of permitted lands, character of use, or other logical criteria.

privileges granted by such revocable permit and to best serve the interests of the State;

3. Continue its authorization to Land Division to procure the services of one or more licensed appraisers to assist in establishing fair market rents as authorized in recommendation 2 above.

Respectfully Submitted,

Kevin E. Moore
Assistant Administrator

APPROVED FOR SUBMITTAL:

William J. Aila, Jr., Chairperson

SCHEDULE OF REVOCABLE PERMIT RENT REVIEW

Permit Type	Methodology ¹	Reason	Next Scheduled Review
Access/utility easements, Parking	Methods 4 and 5 – Review RP rents once every 10 years, utilizing market interviews and research to arrive at percentage adjustments, if any.	Permit rents stable.	1/1/2015
Agricultural and Pasture	Methods 4 and 5 - Review RP rents once every 5 years, utilizing market interviews and research to arrive at percentage adjustments, if any.	Permit rents fairly stable. Cost/benefit ratio justifies.	1/1/2015
Baseyard/Storage; Commercial; Industrial	Methods 3 and 4 – Review RP rents each year based on a review of market indices, interviews and research to arrive at percentage adjustments, if any.	Detailed, annual market research will ensure rents will reflect market.	Annually
Community; Government	Methods 4 and 5 – Review RP rents once every 10 years, utilizing market interviews and research to arrive at percentage adjustments, if any.	Permit rents stable.	1/1/2015
Landscaping; Recreational	Methods 4 and 5 – Review RP rents once every 10 years, utilizing market interviews and research to arrive at percentage adjustments, if any.	Permit rents stable. Cost/benefit ratio justifies.	1/1/2015
Residential	Methods 3, 4 and 5 – Review RP rents every 5 years based on a review of market indices, interviews, and research to determine whether adjustments are warranted.	Timely adjustments to rents will track closely to market.	1/1/2015

1 See Exhibit 2 attached, pages 2-4, for a description on the various methods of valuation referenced in this column.

Rent Review Methodology of Revocable Permits

BACKGROUND:

On December 10, 2004, under agenda item D-27, the Board approved the continuation of the revocable permits listed in Exhibit A on a month-to-month basis for another one-year period up to December 31, 2005 except for permits that are in arrears of rental payment for more than 60 days and/or have been approved for forfeiture by a separate Board action. Further, the Board approved the continuation of rent subject to rent revisions to be presented to the Board at a later date.

At the January 26, 2001 meeting, the Land Board, under agenda item D-17, approved a method of revocable permit rent review for future years as follows:

- A. Starting May 2001, a review and appraisal of at least 10% of existing revocable permits on each island. This sample will include all property types.
- B. Based on these findings, a decision would be made to review and appraise all existing revocable permits, just a portion of the permits (based on character of use, island or both) or none of the remaining existing revocable permits. The decision was to be based on whether the sampling produced rent increases of 5% or more.
- C. In December of each year, the Appraisal Section would present the findings of its sampling and revocable permit recommendation for the coming year.

A review of the RP rent according to the proposal presented at the 2001 meeting was not conducted in the past few years, mainly due to lack of appraisal staff. The last time RP rent was adjusted was in 1999.

At its December 12, 2003 meeting, the Board requested staff look at possible alternatives that may be more feasible and less time-consuming.

ALTERNATIVE METHODS:

A breakdown of individual permits statewide approved by the Board in December 10, 2004 according to the type of use and island is shown in the following table. Staff lists different review option methods and their pros and cons. One of these options is recommended for Board approval.

EXHIBIT 2

APPROVED BY THE BOARD OF
LAND AND NATURAL RESOURCES
AT ITS MEETING HELD ON 110

April 22, 2005

ITEM D-17

Assigned category/No. of cases	Oahu	Maui	Hawaii	Kauai	Subtotal
Access, utility easement, parking	33	24	17	13	87
Agriculture or agriculture related	23	70	65	62	220
Baseyard/Storage	4	1	3	3	11
Commercial	4	2	14	4	24
Community/Government	4	10	17	6	37
Industrial	0	0	4	0	4
Landscaping/Recreational	38	19	2	16	75
Residential	9	3	1	5	18
Subtotal	115	129	123	109	476

Method 1 – Sampling

This method is the approach approved by the Board in 2001. Staff would review and appraise at least 10% of each type of RP on each island around September/October of each year. If the sampling produces an increase in rent of 5% or more in a certain category of RPs, all RPs of the same category, would be appraised. According to the above table, the sampling will involve about 50 RPs. Any group producing less than a 5% increase would maintain its prevailing RP rent for another year. Sources of information include interviews with real estate professionals, statistical reports, and published market reports released by major local brokerage companies. If necessary, the staff appraiser would travel to other islands for site inspections as required by the Uniform Standards of Professional Appraisal Practice (USPAP).

Pros – The sampling method substantially reduces the time consumed. Further, all types of RP's statewide will be covered in the analysis on an annual basis. This annual review would ensure RP rents would closely reflect market rents.

Cons –The selection of a proper sample is arbitrary and may not be an easy task. The problem relates to which permits would be selected for review. These permits have different size, location, and revenue generation characteristics. Different parts of an island may have varying market conditions. Accordingly, selecting any specific area for sampling may not reflect the market value of other areas where permits exist, which is essential if we are to review and appraise rents statewide. Furthermore, most of the major brokerages that release quarterly or annual statistical and market reports focus on Oahu and Honolulu in particular. The outer island data is usually more general and abbreviated. These market reports are also focused on the commercial, industrial, and residential real estate sectors. Agriculture, landscaping, parking, community/government and access and utility easements would not benefit from these market reports. Also, leasehold property on a month-to-month tenancy is a unique real estate product not commonly found on private lands so data on these types of tenancies would be limited. Furthermore, this method would entail a substantial amount of staff resources. Whether the benefits of accuracy outweigh the costs in time and resources is highly questionable.

Method 2 – Individual Appraisals, if necessary

This method requires staff to review and appraise, if deemed necessary, each individual permit. In view of the large number of cases, staff would start doing the research in the summer each year. The research would be similar to that of Method 1. If necessary, the staff appraiser would travel to other islands for site inspections as required by the

Uniform Standards of Professional Appraisal Practice (USPAP). Staff estimates the process would take several months. Appraisals would be completed after the completion of the research and inspections. About 6 to 8 months would be spent on the appraisal process.

Pros – This appraisal method involves detailed research and analysis which would more closely reflect the fair market rent value for individual permits. The research and data can also provide a benchmark for future RP reviews.

Cons – Time would be the major requirement for this method. For over 400 permits, the staff appraiser would need a tremendous amount of time to do the research, analysis, inspections, appraisals and the subsequent recommendation. The total estimated time to review all permits would be 160 working days or approximately 8 months. Given that the Division only has one staff appraiser, such a time allowance would not be possible. The majority of the RP's are for agriculture, pasture, landscaping uses for which there is not normally much fluctuation year to year. Therefore, the benefits would likely not outweigh the costs in terms of time. Also, as mentioned in Method 1, most of the major brokerages that release quarterly or annual statistical and market reports focus on Oahu and Honolulu in particular. The outer island data is usually more general and abbreviated. These market reports are also focused on commercial, industrial, and residential sectors. Therefore, agriculture, landscaping, parking, community and access and utility easements would not benefit from these market reports

Method 3 – Use of Consumer Price Index or Other Indices

Staff would utilize the indices and measure changes in this index to apply to RP rent adjustments. Research would come from the US Bureau of Labor Statistics (BLS). Staff would recommend an increase based on the change in CPI for all RP, rounded to the nearest dollar, for the coming year.

Pros – This method is simple and straightforward and it would not be too time consuming. Once the % change is determined, every permit will be subject to the same rate of increase.

Cons – Staff notes that land value is not necessarily tied to or affected by the consumer price index. Supply and demand and other economic factors may trigger movement in property value. Therefore, the final outcome will likely not be a true indication of the market. Further, the CPI is only provided for Honolulu as a major metropolitan area in both BLS and DBEDT. Also, the State of Hawaii is included in the West Urban district studied by BLS. Either way, it would not provide specific data for outer islands or rural areas and no statewide figure is provided. For the purpose of a statewide rent review, the use of CPI may not be accurate and conclusive. Also, over time, the continued use of the CPI to make adjustments may result in the RP rents straying further from market values.

Method 4 – Adjustments based on interviews/research

Under this method, staff would discuss market rental rates, vacancy rates and trends with real estate professionals and research available real estate market reports published by local real estate brokerage firms. Independent appraisals of recent rental reopenings for leases would also be reviewed. Based on this research, staff would recommend a certain % increase in rent. These increases could vary by RP use category depending on how the market is reacting. If the research reveals that a certain category of RP does not require any adjustment, then the rents would be maintained for

the following year. Other categories not typically researched by real estate professionals would not be covered by this method. Permits for landscaping, access & utility easements, parking, government/community uses would require other research such as analyzing underlying land value. If necessary, the staff appraiser would travel to other islands for site inspections.

Pros – Knowledge of certain sectors would be gained from real estate professionals and their insight into the market. This would shed light on those markets most likely affected by economic indicators such as the commercial, industrial and residential properties.

Cons – Other real estate sectors such as agriculture, landscaping, access & utility easements, parking & government/community uses would not be accurately analyzed since most real estate experts do not research these types of properties. Most major brokerages publish market studies and reports and maintain a database for commercial, industrial and residential sectors. Also, leasehold on a month-to-month basis is a unique real estate product not commonly found on private lands so data on these types of tenancies would be limited.

Method 5 – Scheduled re-evaluations based on type or use

This approach follows the same thinking as reopenings in our general leases which follow a set schedule every x years. Staff believes that the type or category of permit will be a determining factor in how much fluctuation it will have in reaction to the real estate market. Some RP categories may be more vulnerable while others are relatively stable during the same period. Under this approach, staff would establish a schedule for reviewing the rent for different types or use categories. All real estate data resources pertinent to the category of permit being reviewed would be utilized. If necessary, the staff appraiser would travel to other islands for site inspections.

Among all the permits, industrial (including baseyard/storage), commercial (including office, concession, hotel-resort) and residential are considered to be the most likely categories to be influenced by any fluctuations in the market. Agriculture, pasture and landscape permits are considered more stable than commercial, industrial and residential. The remaining permits, namely, access, utility easement, parking, landscaping/ recreational, and community/government are determined to be the least likely to be influenced by changes in market conditions. These permit types would likely be reviewed less often.

Pros – A set schedule for various groups of permits will maintain the balance of appraisal workload between new and existing disposition. This will allow staff a better planning mechanism for distribution of resources. Further, rent can still keep pace with the current market though not all appraisals will be done on an annual basis. Staff feels this is feasible and appropriate in view of the volume of permits and the available staff resources.

Cons – There is no individual appraisal for each individual permit on an annual basis to bring the rent to current market level. Rents would not be adjusted annually so there may be some time lag for certain permit types to reflect market rents.

EVALUATION OF ALTERNATIVES

Staff believes Methods 1 and 2 are time consuming and should only be considered

where necessary. These methods require substantial Staff resources for research, analysis, and possibly travel. Currently, the Appraisal Section is comprised of one staff appraiser. Method 3, using the indices, would not address rural and outer island properties appropriately. The CPI and most other indices focus on large metropolitan areas and may not accurately reflect changes in land values.

Method 4 is both a feasible and reasonable alternative among those discussed above for reviewing rent for commercial, industrial and residential-type permits. Since these types of permits are most likely to be influenced by changes in the real estate market and economy, this method adequately tracks any trends in rents. Discussions with local real estate experts such as brokers, property managers, appraisers, and consultants is considered the best way to gain insight and knowledge of local real estate trends. Most major brokerages are fairly active in these real estate segments and would have the market data required to make fairly accurate adjustments to permit rents.

Method 5 makes more sense for the review of agricultural, pasture, and landscaping-type permits. Because these permit rents appear to be relatively stable and less influenced by market fluctuations, Staff feels a predetermined schedule of review based on the nature of these permits is appropriate. This would allow Staff to dedicate resources to other appraisal needs such as new dispositions, lease reopenings, and commercial/residential permit review. Since most long-term ground leases contain step-ups or reopenings every ten years, Staff recommends that access/utility, parking, community and government, landscaping and recreation permits be reviewed every 10 years. Past history has shown that agriculture and pasturelands have not been very volatile. Farm prices of beef, which has been relatively stable, is more of an influence on Pasture rents. Therefore, Staff feels periodic reviews every five years would be appropriate for residential, agriculture and pasture permits.

Proposed Methodology

Staff recommends the following approach to reviewing RP rents:

Permit Type	Methodology	Reason
Access/utility easements, Parking	Methods 5 and 4 – Review RP rents once every 10 years, utilizing market interviews and research to arrive at percentage adjustments, if any.	Permit rents stable.
Agricultural and Pasture	Methods 4 and 5 - Review RP rents once every 5 years, utilizing market interviews and research to arrive at percentage adjustments, if any.	Permit rents fairly stable. Cost/benefit ratio justifies.
Baseyard/Storage; Commercial; Industrial	Methods 3 and 4 – Review RP rents each year based on a review of market indices, interviews and research to arrive at percentage adjustments, if any.	Detailed, annual market research will ensure rents will reflect market.
Community; Government	Methods 4 and 5 – Review RP rents once every 10 years, utilizing market interviews and research to arrive at percentage adjustments, if any.	Permit rents stable.
Landscaping; Recreational	Methods 4 and 5 – Review RP rents once every 10 years, utilizing market interviews and research to arrive at percentage adjustments, if any.	Permit rents stable. Cost/benefit ratio justifies.

Residential	Methods 3, 4 and 5 – Review RP rents every 5 years based on a review of market indices, interviews, and research to determine whether adjustments are warranted.	Timely adjustments to rents will track closely to market.
-------------	--	---

The Staff Appraiser should have the discretion to account for specific circumstances and to make adjustments (which will be explained in the appraisals).

Under separate cover, staff is recommending the rent review for the RPs for the coming year using the recommended methodology.

RECOMMENDATION:

That the Board approve the Proposed Methodology above for the review of Land Division revocable permit rents.

Respectfully Submitted,

CYRUS CHEN, Appraisal Manager
