Periodic research and data reports on issues of current interest State of Hawaii - Department of Business, Economic Development & Tourism Research & Economic Analysis Division

Data Report 2011

GEOGRAPHIC AREA STATISTICS

Income, Employment, Education, and Housing Characteristics of Public Use Microdata Areas (PUMAs) in Hawaii from 2005 to 2008

Introduction

This report presents selected economic, social, and housing characteristics of geographical areas in Hawaii known as Public Use Microdata Areas (PUMAs).

Data in this report are mainly from the American Community Survey (ACS) conducted by the U.S. Census Bureau and can be found at the Census Bureau's website at http://www.census.gov/acs/www/.

As defined by the Census Bureau, there are nine Public Use Microdata Areas (PUMAs) in Hawaii.

The Island of Oahu is composed of seven PUMA's (PUMA 301 through PUMA 307).

Because geographic areas have to meet a threshold population of 100,000 or more, Maui, Kalawao

and Kauai Counties are combined into one PUMA area (PUMA 100).

Previous ACS data (prior to 2005) were available only for areas with population of 250,000 or more. Therefore, this report covers years from 2005 to 2008.

Note that in some tables, data for both the state of Hawaii and the U.S. as a whole are presented.

PUMAs	Area	Detail description of area
100	Maui County, Kalawao County and Kauai County	Maui County, Kalawao County and Kauai County
200	Hawaii County	Hawaii County
301	Rural Oahu	Waianae, Wahiawa, North Shore and Koolauloa.
302	Koolaupoko	Kahaluu, Kaneohe, Kailua, Waimanalo and Mokapu
303	Makapuu-Manoa Stream	Hawaii Kai, Kuliouou-Kalani Iki, Waialae-Kahala, Kaimuki, Diamond Head/Kapahulu/St Louis Heights and Palolo
304	Manoa-Waikiki- Kakaako-Tantalus	Manoa, McCully, Moiliili, Waikiki, Makiki, Lower Punchbowl, Tantalus, Ala Moana and Kakaako
305	Pauoa-Downtown-Kalihi	Nuuanu, Punchbowl, Downtown, Liliha, Kapalama, Kalihi, <u>Palama</u> and Kalihi Valley
306	Moanalua-Airport-Pearl City	Moanalua, Aliamanu, Salt Lake, Foster Village, Airport, Aiea, <u>Waimalu</u> and Pacific Palisades
307	Mililani-Waipahu-Ewa	Waiawa, Waipahu, Ewa, Mililani, Waipio, Melemanu, Makakilo, Kapolei, Honokai Hale, Mililani Mauka and Launani Valley

A. Income and Poverty

Three indicators are often used to describe the income level of the population;

- household income,
- family income, and
- per capita income.

A household is defined as all persons occupying a housing unit. Specifically, a household includes related family members and all other unrelated persons such as lodgers, foster children, wards, or students who share the housing unit.

A household also includes persons living alone in a housing unit or two or more unrelated persons sharing a housing unit.

A "family" is a subset of households that includes two or more persons related by birth, marriage, or adoption and residing together. All such persons are considered members of one family.

The sum of income of all the persons in a household is "household income."

Likewise, the sum of income of all family members is "family income."

For analysis of income distribution, household income is often used because it is considered the basic spending unit. However, due to different sizes of households, the income of one household may not be comparable with another. For example, a household with 2 persons and \$100,000 household income is wealthier than another household of 10 persons with the same amount of household income.

Per capita income (total income divided by the number of persons), may be a better measure for comparing income levels between areas.

"Median income" refers to the income of the household, family or person exactly in the middle of the entire income range. That is, there are an equal number of households, families or persons making more and less.

This differs from "average" income, which is simply total income divided by the number of households, families or persons. The *median* measure tends to be less affected than the *average* measure by unusually large numbers of high or low income earners in the population.

Household income in Manoa-Waikiki-Kakaako-Tantalus (PUMA 304) was lower than the U.S. median household income between 2005 and 2008.

The lower household income in this area may be due to the large proportion of one-person households in the area. Householders living alone in the U.S. accounted for 27.8 percent of the total U.S. households in 2008¹. On the other hand, those living alone in PUMA 304 accounted for 43.3 percent in 2008 of the area's total households. Data for this particular group for other years showed similar results.

		United S	itates			PUM	IA 304	
Household size	2005	2006	2007	2008	2005	2006	2007	2008
1-person household	27.1	27.3	27.3	27.8	43.6	47.2	49.0	43.3

In terms of **per capita income**, this area had the third highest per capita income in 2008 and the second highest per capita income in 2006 and 2007 among the PUMAs in Hawaii (Table A-2).

Median household income in Hawaii in 2008 was \$67,214, 29.2% higher than the U.S. level. Among PUMAs in Hawaii, Koolaupoko (PUMA 302) had the highest median household income at \$86,074 in 2008, 28.1% higher than the state level. Between 2005 and 2007, this area had the second highest median household income among all PUMA areas. Mililani-Waipahu-Ewa (PUMA

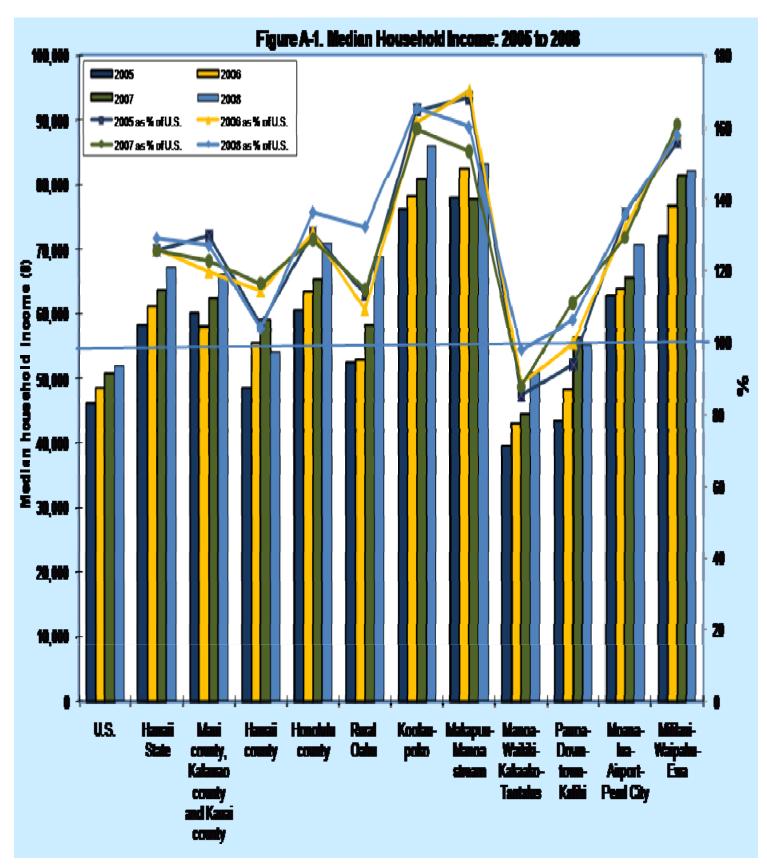

307) had the highest median household income in 2007, and Makapuu-Manoa stream (PUMA 303) had the highest median household income in 2006 and 2005 (Table A-1).

PUMA 302 and 303 were the only areas in which more than 10 percent of the households had income of \$200,000 or more in 2008. Although only around 4 percent of the households in Mililani-Waipahu-Ewa fell into the income range of \$200,000 or more, 56.0% of the households in this area had income of \$75,000 or more (Table A-1).Rural Oahu had the lowest per capita income in the state at \$22,939 in 2008, about 22% lower than the state level (Table A-2).

Figure A-3. Household Income Distribution: 2005 to 2008

To measure how equally income is distributed in a particular area, the Gini coefficient is commonly used. The Gini Coefficient is a summary measure that expresses the degree of overall equality or inequality present in an income distribution and ranges from 0 to 1. 0 indicates perfect income equality, meaning that income of every household in a particular area is exactly the same.

On the other hand, a Gini coefficient of 1 indicates absolute inequality of income distribution; that is, a single household earns all of the income in the economy. The Gini coefficient is derived from household income data.

Manoa-Waikiki-Kakaako-Tantalus area (PUMA 304) had the highest Gini coefficient of 0.48 in 2008, indicating that household income in this area was the most unequally distributed among all the PU-MAs in Hawaii in 2008. As indicated by the value of the Gini coefficient that was 0.32, household income was more evenly distributed in PUMA 307 (Mililani-Waipahu-Ewa) in 2008 than in other areas.

Another measure of income inequality is the Kuznets Ratio. This is the ratio of the income received by the top 20%, compared to the bottom 40% of the household. The higher the ratio, the higher the proportion of income that is earned by the richest 20% of household. PUMA 304 (Manoa-Waikiki-Kakaako-Tantalus) had the highest Kuznets Ratio in the state (least equal income distribution), while PUMA 307 (Mililani-Waipahu-Ewa) had in the lowest ratios (more equal distribution) 2008. These results are consistent with those revealed by using the Gini coefficient.

1/The Group Quantom (GQ) population is included in the 2016, 2017 and 2018 ACS and not included in the 2015 ACS. The part of the group quantum population in the times meen likely to be prevery universe in many in prevery than people living in households. Direct comparisons would likely result in enverous conclusions about changes in the prevery status of all people in the prevery universe, thus comparisons cannot be made 2/ Sample size was two small.

B. Employment

Hawaii had a labor force participation rate of 67.5% in 2008, slightly higher than the 65.9% rate for the nation. Mililani-Waipahu-Ewa area had the highest labor force participation rate at 71.5%, followed by Maui and Kauai Counties at 69.9%. Pauoa-Downtown-Kalihi had the lowest labor force participation rate at 61.4% in the same year (Table B-1).

For all four years, 2005-2008, Rural Oahu (PUMA 301) had the highest unemployment rate among the PUMAs. In 2008, the unemployment rate in this area was 6.7% while the rates in 2005 to 2007 hit more than 8.0 percent. Rural Oahu is also the only PUMA in Hawaii that had an unemployment rate higher than the national average for the past four years (Table B-1).

Over 40 percent of the workers were engaged in management, professional and related occupations in Makapuu-Manoa Stream (PUMA 303) during the past four years (Table B-2), much higher than the state average of between 33.1% and 32.2% and the national average of around 34 percent during the same periods.

There were more government workers in Moanalua-Airport-Pearl City (PUMA 306), Mililani-Waipahu-Ewa (PUMA 307), Rural Oahu (PUMA 301), and Koolaupoko (PUMA 302) areas - perhaps because these areas are close to military bases.

In 2008, government workers in the Moanalua-Airport-Pearl City area accounted for 27.4 percent of the total area workforce (Table B-4).

Four areas on Oahu had high percentages of Armed Forces. These areas were Moanalua-Airport-Pearl City (PUMA 306), Mililani-Waipahu-Ewa (PUMA 307), Koolaupoko (PUMA 302), and Rural Oahu (PUMA 301).

19.7 percent of the labor force consisted of Armed Forces members in PUMA 306,

12.8 percent in PUMA 302, 12.4 percent in PUMA 301 and 10.3 percent in PUMA 307 in 2008 (Table B-1).

Two other areas had slightly less than 10% who were in the Armed Forces in 2007. The share of armed forces in 2005 was much lower than in 2006, 2007 and 2008 because 2005 data did not include military barracks and other group housing units.

C. Education

Hawaii had a higher percentage of students attending private schools (23.4%) than the national average (17.4%) in 2008. Koolaupoko led the state with more than one third of the students attending private schools in 2008. Students in Rural Oahu and the neighbor islands had the least percentage of students attending private schools (Table C-1).

Among all areas in Hawaii, more than 31 percent of those who enrolled in graduate or professional schools in 2008 lived in Manoa-Waikiki-Kakaako-Tantalus (PUMA 304). Those who enrolled in college in Mililani-Waipahu-Ewa (PUMA 307) accounted for 15.7% in 2008 (Table C-1).

Those residents who were between 25 and 64 years of age and lived in Makapuu-Manoa stream area (PUMA 303) during the past four years were the most educated compared with other areas in the state (Table C-2). 51.9 % of persons in PUMA 303 held at least a bachelor's degree in 2008. Residents in Rural Oahu had the lowest percentage of persons with Bachelor's degree or higher at 18.2% in 2008. The share of people with Bachelor's degree or higher in the Pauoa-Downtown-Kalihi area (PUMA 305) was slightly above or similar to the U.S. during the past four years. However, this area had fairly large number of persons whose educational attainment was less than high school graduation in this area (17.3% in 2005, 20.2% in 2006, 14.3% in 2007 and 14.6% in 2008).

D. Housing and Vehicles

Homeownership was higher in Mililani-Waipahu-Ewa (71.6% in PUMA 307), Koolaupoko (70.1% in PUMA 302) and Makapuu-Manoa stream (69.3% in PUMA 303) than the national average of 66.6% in 2008 (Table D-2).

Renter occupied units dominated in Manoa-Waikiki-Kakaako-Tantalus (PUMA 304) and Pauoa-Downtown-Kalihi (PUMA 305). About 59.1% of housing units in PUMA 304 and 52.2% of those in PUMA 305 were renter occupied in 2008. These two areas also reported lower rates of vehicle ownership.

Households with no vehicles accounted for 21.1% in PUMA 304 and 18.3% in PUMA 305 in 2008 (Table D-1). These areas are generally closer to shopping centers, schools and businesses on Oahu, and are the most crowded areas with restricted parking.

PUMA 304, Manoa-Waikiki-Kakaako-Tantalus area, had more studio units (13.1% in 2005 and 2007, 13.4% in 2006 and 15.1% in 2008) and one bedroom units (39.5% in 2005, 38.7% in 2006, 37.1% in 2007 and 33.9% in 2008) in condominium/apartments (Table D-1).

Therefore, the monthly gross rent in this area was relatively lower (Table D-4). PUMA 304 was dominated by apartments /condominiums rather than single family homes. 68.5% of structures had 20 or more units in PUMA 304 in 2008 while the single family home is the more common type of structure in suburbs and rural areas in Hawaii.

Hawaii had higher homeowner costs than the U.S. on average. In 2008, almost 60% of the homeowners in Hawaii paid monthly fees of \$2,000 or more, as compared with only 31.0 percent paying this amount or more at the U.S level.

Homeowner costs on the Big Island were less than other islands in the state, with 44.6 percent of homeowners on that island paying \$2,000 or more per month (Table D-3).

Monthly homeowner costs include mortgage payments, deeds of trust, contracts to purchase, or similar debts on the property, property taxes, fire, hazard and flood insurance, utilities and fuels, the monthly maintenance fee for condominiums and mobile home costs.

High mortgage payments were probably the primary cause of higher monthly homeowner costs in Hawaii.

The median monthly homeowner cost in Hawaii was \$2,265 in 2008, as compared with \$1,514 for the U.S. The median homeowner cost in PUMA 303 (Makapuu-Manoa Stream) was \$2,748 per month and in PUMA 302 (Koolaupoko) was \$2,702 per month 2008, the two highest areas in the state.

The median monthly rent in Hawaii was \$1,298 in 2008, 57.5% higher than the U.S. average.
