January 27, 2013

HIGHLIGHTS FOR THE 2008-2012 AMERICAN COMMUNITY SURVEY (5-YEAR DATA) FOR HAWAII

The U.S. Census Bureau released its 2008-2012 ACS 5-year estimates on December 17, 2013. The estimates are based on the annual American Community Survey conducted by the Census Bureau. No “long form” data was collected by the Census Bureau during the 2010 Census. Therefore, the Census Bureau recommends that we use the social, economic, and detailed housing characteristics from the ACS’s 5-year estimates, while using the basic demographic information such as population count, race, sex, and Hispanic origin from the 2010 Census and the annual population estimates.

The Census Bureau releases 5-year data for all census geographic areas down to the block group level. About 8% of Hawaii’s population was surveyed between 2008 and 2012.

The data contains information by the new Hawaii legislative districts which were designated in the 2011 Hawaii Reapportionment Plan. MSAs in this dataset, however, were still based on the definitions used as of January 1, 2009 and were not based on the newer 2013 MSA definitions. This means that Kahului-Wailuku-Lahaina is still a micropolitan area in the dataset. Kahului-Wailuku-Lahaina became a metropolitan statistical area in 2013.

The following analyses are based upon the ranking of the 317 census tracts in Hawaii which had at least one person. The numbers presented below are averages over the 2008-2012 time period. Here are some highlights for Hawaii. Tables included in these highlights display only the 20 top ranking census tracts. For the more detailed ranking tables, see the accompanying data file.

- Only one census tract, Ewa Villages (census tract 86.17) had 10,000 people or more. Five additional census tracts had 9,000 people or more. (Table 1)

- All 39 census tracts that had median household incomes of $100,000 or more were located on Oahu. Waialae Iki (census tract 4.02) had the highest household income which was $157,991. (Table 2)
In regard to median family incomes, there were 66 census tracts with family income of $100,000 or more. One of these tracts, Launiupoko (census tract 320), was located on Maui, while the rest were on Oahu. (Table 3)

Of the 17 census tracts with percent of persons below the poverty level equaling to or greater than 30%, 10 were located on Oahu, 6 were on the Island of Hawaii, and 1 was on Maui. Linapuni Street (census tract 62.02) on Oahu had the highest percentage of people below the poverty rate at 65.2%. (Table 4)

In regard to family poverty rates, 8 census tracts had family poverty rates equal to or greater than 30%. Civic Center (census tract 39) on Oahu, which has a small population, ranked the highest with 62.5% of families below the poverty standard. Two additional census tracts were located on the Island of Hawaii and the rest were on Oahu. (Table 5)

All 4 census tracts with civilian unemployment rates of 20% or above were located on Oahu. Civic Center (census tract 39) ranked the highest with 24.0%, followed by Kolekole Avenue (census tract 95.01) with 23.4%, Leilehua Avenue (census tract 95.04) with 22.5% and Wheeler-East Range (census tract 90) with 20.3%. (Table 6)

All 7 census tracts where 100% of their population 25 years and over had a high school degree or higher were located on Oahu. (Table 7)

The top 5 census tracts with 70% or more of their population 25 years or over holding a bachelor’s degree or higher were also all located on Oahu. (Table 8)

Aala (census tract 53) on Oahu had the highest foreign-born population with 60.5% of its population being born in other countries. This area was followed by Kapalama (census tract 56) with a foreign-born population of 56.5% and Foster Botanical Garden (census tract 51) with a foreign-born population of 55.7%. A majority of the top census tracts with foreign-born populations of 50% or more were located in the urban Honolulu area. (Table 9)

Aala (census tract 53) was the top census tract in regard to the percentage of people who spoke a language other than English at home with 68.1%. This area was followed by Kapalama (census tract 56) with 67.7% of the people in this area who spoke a language other than English at home, then Waikamilo Road (census tract 58) and Umi Street (census tract 60), both with a figure of 66.9%. Not surprisingly, 7 of these top 10 census tracts matched those found at the top of the percent foreign-born population listing. (Table 10)

11 census tracts in Hawaii had owner-occupied homes with values averaging a million dollars or more. Many of these areas were in East Oahu - Portlock (census tract 1.14), Waialae Iki (census tract 4.02), Waialae-Kahala (census tract 5), and Diamond Head.
(census tract 6). Neighbor island areas were also on the top of the list and included Wailea (census tract 303.03) and Honokowai (census tract 315.03) which were both on the island of Maui and Ha'ena-Hanalei (census tract 401.04) on the island of Kauai. (Table 11)
