

Population and Housing Narrative Profile 2010-2014 American Community Survey 5-Year Estimates

While the ACS produces sample-based population group and housing estimates used in this report, the Census Bureau's Population Estimates Program produces and disseminates official estimates of the population for the nation, states, counties, cities and towns, as well as estimates of housing units for states and counties. For more information see: <http://www.census.gov/popest/>

Note that for small geographic areas, the sample used for the Narrative Profile may be small as well. Users are encouraged to examine the detailed tables on [American FactFinder](#) that are associated with the Narrative Profile text. These tables provide additional information on sampling variability associated with the estimates in this report.

Geography: Hawaii

► Households and Families

In 2010-2014 there were 450,300 households in Hawaii. The average household size was 3 people.

Families made up 69 percent of the households in Hawaii. This figure includes both married-couple families (51 percent) and other families (18 percent). Of other families, 5 percent are female householder families with no husband present and own children under 18 years. Nonfamily households made up 31 percent of all households in Hawaii. Most of the nonfamily households were people living alone, but some were composed of people living in households in which no one was related to the householder.

In Hawaii, 33 percent of all households have one or more people under the age of 18; 32 percent of all households have one or more people 65 years and over.

Types of Households in Hawaii in 2010-2014

Explanation of Symbols:

An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.

An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
