INTRODUCTION

The HSDC Report No. 2000-3, *General Social and Economic Characteristics for the State of Hawaii, by Islands and Census Tracts: 2000*, contains seven summary tables for the state, counties, and islands as well as seven detailed tables by islands and census tracts. The report provides information on selected social and economic characteristics from the Census 2000 Summary File 3 (SF3). Data from this summary file are based on questions asked from only a sample of the population during the Census 2000, approximately one in six households nationwide. This report also includes three sets of thematic maps displaying selected economic characteristics and three census tract boundary maps which were produced by the Office of Planning, GIS Section.

The report and its tables may be viewed or downloaded from the Hawaii State Department of Business, Economic Development & Tourism's Internet site at <<http://www.state.hi.us/dbedt/census2k/>>. Census 2000 data as well as information on Census Bureau products may also be obtained from the U.S. Census Bureau Internet site at <<http://www.census.gov/>>. Additional boundary and thematic census maps are displayed on the Office of Planning Internet site at <<http://www.state.hi.us/dbedt/gis/>>.

The Department of Business, Economic Development and Tourism produces a CD-ROM called the "2002 Hawai'i Data Disc" which includes selected data from the Census 2000 and the State of Hawaii Data Book for 2001. The CD-ROM may be purchased from the DBEDT Research and Economic Analysis Division, 250 South Hotel Street, 4th floor, P.O. Box 2359, Honolulu, Hawaii, 96804, phone (808) 586-2466. The price per CD-ROM is \$10.00 if purchased at DBEDT, \$12 postpaid for first-class delivery in Hawaii and the continental U.S., airmail delivery to Canada and Mexico, and \$13 airmail postpaid to all other countries. Please make check or money order payable to The State of Hawaii.

For further assistance with census data, call our DBEDT Library at (808) 586-2424 or the Hawaii State Data Center at (808) 586-2499. There are also Hawaii State Data Center affiliates on the islands of Oahu, Hawaii, Kauai, Maui, and Molokai. For your convenience, a list of contact persons and phone numbers is shown in the back of this report.

Comparing SF 3 (Sample Data) Estimates with Corresponding Values in SF1 and SF 2 (100% Data)

As in earlier censuses, the responses from the sample of households reporting on long forms must be weighted to reflect the entire population. Specifically, each responding household represents, on average, six or seven other households who reported using short forms.

One consequence of the weighting procedures is that each estimate based on the long form responses has an associated confidence interval. These confidence intervals are wider (as a percentage of the estimate) for geographic areas with smaller populations and for characteristics that occur less frequently in the area being examined (such as the proportion of people in poverty in a middle-income neighborhood).

In order to release as much useful information as possible, statisticians must balance a number of factors. In particular, for Census 2000, the Bureau of the Census created weighting areas --geographic areas from which about two hundred or more long forms were completed-- which are large enough to produce good quality estimates. If smaller weighting areas had been used, the confidence intervals around the estimates would have been significantly wider, rendering many estimates less useful due to their lower reliability.

The disadvantage of using weighting areas this large is that, for smaller geographic areas within them, the estimates of characteristics that are also reported on the short form will not match the counts reported in SF 1 or SF 2. Examples of these characteristics are the total number of people, the number of people reporting specific racial categories, and the number of housing units. The official values for items reported on the short form come from SF 1 and SF 2.

The differences between the long form estimates in SF 3 and values in SF 1 or SF 2 are particularly noticeable for the smallest places, tracts, and block groups. The long form estimates of total population and total housing units in SF 3 will, however, match the SF 1 and SF 2 counts for larger geographic areas such as counties and states, and will be essentially the same for medium and large cities.

This phenomenon also occurred for the 1990 Census, although in that case, the weighting areas included relatively small places. As a result, the long form estimates matched the short form counts for those places, but the confidence intervals around the estimates of characteristics collected only on the long form were often significantly wider (as a percentage of the estimate).

SF 1 gives exact numbers even for very small groups and areas, whereas SF 3 gives estimates for small groups and areas such as tracts and small places that are less exact. The goal of SF 3 is to identify large differences among areas or large changes over time. Estimates for small areas and small population groups often do exhibit large changes from one census to the next, so having the capability to measure them is worthwhile.

Table 3-- INCOME AND POVERTY CHARACTERISTICS, FOR COUNTIES AND ISLANDS: 2000 -- Cont.

- Represents zero or rounds to 0.0.

NA Not available.

1/ Data are based on the U.S. poverty thresholds and for population for whom poverty status is determined. Poverty status was determined for all people except institutionalized people, people in military group quarters and in college dormitories, and unrelated individuals under 15 years old. These groups also were excluded from the numerator and denominator when calculating poverty rates. (Poverty thresholds in Hawaii are about 15 percent higher; these statistics accordingly understate the prevalence of poverty in Hawaii).

2/ Includes Kalawao County.

3/ Maui County excluding Kalawao County contained 99.9% of this area's population while Kalawao County had the remaining 0.1% of the area's population. Although median income data are not available for the area of Maui County including Kalawao County, it was available for the original two separate Census Bureau counties. For Maui County (excluding Kalawao County), the median household income was \$49,489 and the median family income was \$55,277. For Kalawao County, the median household income was \$9,333 and the median family income was \$26,250.

4/ Although median income data for Kauai Island are not available, it should be noted that Kauai Island contained 99.7% of the county's population while Niihau Island had the remaining 0.3% of the county's population.

HIGHLIGHTS OF CENSUS TRACT TABLES

The highlights shown below are based on the analysis of all census tracts in the State of Hawaii, except for tracts with no population.

Census tract populations vary. This affects areas highlighted which may have small populations and, therefore, the least amount of people in a specified category or areas with large populations which will have a large number of people in a specified category. This is also an important factor with the percentages highlighted. For example, although tract 86.10 (Ko Olina-Campbell Industrial Park, Oahu) has the highest percentages in certain categories, the tract contains only 11 people. The same is true for tract 313 (Puunene, Maui) which has only 8 people.

Educational Attainment (Population 25 years and over)

The tracts with the highest percent of high school graduates or higher are tracts 72 (Airport, Oahu) and 95.04 (Leilehua Avenue, Oahu), and 410 (Niihau) with 100%. The area with the lowest percent of high school graduates or higher is tract 313 (Puunene, Maui) and 86.10 (Ko Olina-Campbell Industrial Park, Oahu) with 0% high school graduates.

The tract with the highest percent of college graduates or higher is tract 4.02 (Waialae-Iki, Oahu) with 66.7%. The tracts with the lowest percent of persons who are college graduates or higher are tracts 86.10 (Ko Olina-Campbell Industrial Park, Oahu), 313 (Puunene, Maui), and 410 (Niihau) with 0%.

The tract with the highest number of persons with a high school diploma or G.E.D. is tract 210.01 (Lower Keaau, Hawaii) with 2,235 persons. Populated tracts having no persons with a high school diploma or G.E.D. are 86.10 (Ko Olina-Campbell Industrial Park, Oahu) and 313 (Puunene, Maui).

Populated tracts having no persons with a graduate/professional degree are tracts 54 (Mayor Wright Housing, Oahu), 81 (Pearl City Pen-Ford Island, Oahu), 86.10 (Ko Olina-Campbell Industrial Park, Oahu), 313 (Puunene, Maui), 319 (Kalawao, Molokai), and 410 (Niihau). The tract with the highest number of persons with a graduate/professional degree is tract 1.06 (Hahaione, Oahu) with 1,158 persons.

Labor Force (Population 16 years and over)

The tract with the highest percent of employed civilian persons in professional or managerial occupations is tract 6 (Diamond Head, Oahu) with 62.6%. The tracts with the lowest percent of civilian persons in professional or managerial occupations are tracts 68.03 (Mapunapuna, Oahu), and 319 (Kalawao, Molokai) with 0%.

The tract with the highest percent of unemployed civilian persons is tract 42 (Queen Emma Gardens, Oahu) with 38.2%. The tracts with the lowest percent of unemployed civilian persons are tracts 33 (Makiki Heights, Oahu), 68.03 (Mapunapuna, Oahu), 72 (Airport, Oahu), 95.03 (Foote Avenue, Oahu), 319 (Kalawao, Molokai), and 410 (Niihau) with 0%.

The tract with the largest number of males in the armed forces is tract 108.02 (Mokapu-East, Oahu) with 3,660. The tract with the largest number of employed male civilians is tract 89.16 (Mililani Mauka, Oahu) with 3,006. The tract with the largest number of unemployed males is tract 42 (Queen Emma Gardens, Oahu) with 797 males. The tract with the largest number of males not in the labor force is tract 210.02 (Keaau-Volcano, Hawaii) with 1,757 males.

The tract with the largest number of females in the armed forces is tract 95.03 (Foote Avenue, Oahu) with 283 women. The tract with the largest number of employed female civilians is tract 89.16 (Mililani Mauka, Oahu) with 2,909. The tract with the largest number of unemployed females is tract 211 (Pahoa-Kalapana, Hawaii) with 325. The tract with the largest number of females not in the labor force is tract 210.02 (Keaau-Volcano, Hawaii) with 1,640 females.

Income and Poverty (Individuals for whom poverty status is determined)

The tract with the highest median household income in 1999 is tract 4.02 (Waialae-Iki, Oahu) with \$127,437. The tract with the lowest median household income is tract 86.10 (Ko Olina-Campbell, Oahu) with \$2,499 in 1999.

The tract with the highest median family income in 1999 is tract 4.02 (Waialae-Iki, Oahu) with \$137,275. The tract with the lowest median family income in 1999 is tract 86.10 (Ko Olina-Campbell, Oahu) with \$2,499. The tract with the highest percent of persons below the poverty level is tract 86.10 (Ko Olina-Campbell, Oahu) with 100.0%. The tracts with the lowest percent of persons below the poverty level is in tracts 95.03 (Foote Avenue, Oahu), 95.04 (Leilehua Avenue, Oahu), and 313 (Puunene, Maui) with 0%.

The tract with the largest number of persons below the poverty level is 210.01 (Lower Keaau, Hawaii) with 2,700 persons. The tract with the highest number of children under 5 years of age with income below the poverty level is 62.02 (Kuhio Park Terrace, Oahu) with 248 children.

Table 10-- INCOME AND POVERTY CHARACTERISTICS, FOR ISLANDS AND CENSUS TRACTS: 2000 -- Con.

- Represents zero or rounds to 0.0.

X Not applicable.

1/ Data are based on the U.S. poverty thresholds and for population for whom poverty status is determined. Poverty status was determined for all people except institutionalized people, people in military group quarters and in college dormitories, and unrelated individuals under 15 years old. These groups also were excluded from the numerator and denominator when calculating poverty rates. They were considered neither "poor" nor "nonpoor". Poverty thresholds in Hawaii are about 15 percent higher; these statistics accordingly understate the prevalence of poverty in Hawaii.

2/ Maui County excluding Kalawao County contained 99.9% of this area's population while Kalawao County had the remaining 0.1% of the area's population. Although median income data are not available for the area of Maui County including Kalawao County, it was available for the original two separate Census Bureau counties. For Maui County (excluding Kalawao County), the median household income was \$49,489 and the median family income was \$55,277. For Kalawao County, the median household income was \$9,333 and the median family income was \$26,250.

3/ Although median income data for Kauai Island are not available, it should be noted that Kauai Island contained 99.7% of the county's population while Niihau Island had the remaining 0.3% of the county's population.

**Table 14-- PERSONS WITH INCOME IN 1999 BELOW POVERTY LEVEL, BY AGE,
FOR ISLANDS AND CENSUS TRACTS: 2000**

[Individuals for whom poverty status was determined. Poverty status was determined for all people except institutionalized people, people in military group quarters, people in college dormitories, and unrelated individuals under 15 years old. These groups also were excluded from the numerator and denominator when calculating poverty rates. They were considered neither "poor" nor "nonpoor". Data are based on the U.S. poverty thresholds. Thresholds in Hawaii are about 15 percent higher; these statistics accordingl
Data based on a sample]

DEFINITIONS

EDUCATIONAL ATTAINMENT

Data on educational attainment were derived from answers to long-form questionnaire Item 9, which was asked of a sample of the population. Data on attainment are tabulated for the population 25 years old and over. However, when educational attainment is cross-tabulated by other variables, the universe may change. (For example, when educational attainment is crossed by disability status, the data are tabulated for the civilian noninstitutionalized population 18 to 34 years old.) People are classified according to the highest degree or level of school completed.

The order in which degrees were listed on the questionnaire suggested that doctorate degrees were “higher” than professional school degrees, which were “higher” than master’s degrees. The question included instructions for people currently enrolled in school to report the level of the previous grade attended or the highest degree received. Respondents who did not report educational attainment or enrollment level were assigned the attainment of a person of the same age, race, Hispanic or Latino origin, occupation and sex, where possible, who resided in the same or a nearby area. Respondents who filled more than one box were edited to the highest level or degree reported.

The question included a response category that allowed respondents to report completing the 12th grade without receiving a high school diploma. It allowed people who received either a high school diploma or the equivalent, for example, passed the Test of General Educational Development (G.E.D.) and did not attend college, to be reported as “high school graduate(s).” The category “Associate degree” included people whose highest degree is an associate degree, which generally requires 2 years of college level work and is either in an occupational program that prepares them for a specific occupation, or an academic program primarily in the arts and sciences. The course work may or may not be transferable to a bachelor’s degree. Master’s degrees include the traditional MA and MS degrees and field-specific degrees, such as MSW, MEd, MBA, MLS, and MEng. Some examples of professional degrees include medicine, dentistry, chiropractic, optometry, osteopathic medicine, pharmacy, podiatry, veterinary medicine, law, and theology. Vocational and technical training, such as barber school training; business, trade, technical, and vocational schools; or other training for a specific trade, are specifically excluded.

High school graduate or higher. This category includes people whose highest degree was a high school diploma or its equivalent, people who attended college but did not receive a degree, and people who received a college, university, or professional degree. People who reported completing the 12th grade but not receiving a diploma are not high school graduates.

EMPLOYMENT STATUS

The data on employment status (referred to as labor force status in previous censuses), were derived from answers to long-form questionnaire Items 21 and 25, which were asked of a sample of the population 15 years old and over. The series of questions on employment status was designed to identify, in this sequence: (1) people who worked at any time during the reference week; (2) people who did not work during the

reference week, but who had jobs or businesses from which they were temporarily absent (excluding people on layoff); (3) people on temporary layoff who expected to be recalled to work within the next 6 months or who had been given a date to return to work, and who were available for work during the reference week; and (4) people who did not work during the reference week, who had looked for work during the reference week or the three previous weeks, and who were available for work during the reference week.

The employment status data shown in Census 2000 tabulations relate to people 16 years old and over. In the 1940, 1950, and 1960 censuses, employment status data were presented for people 14 years old and over. The change in the universe was made in 1970 to agree with the official measurement of the labor force as revised in January 1967 by the U.S. Department of Labor. The 1970 census was the last to show employment data for people 14 and 15 years old.

Employed. All civilians 16 years old and over who were either (1) “at work” - those who did any work at all during the reference week as paid employees, worked in their own business or profession, worked on their own farm, or worked 15 hours or more as unpaid workers on a family farm or in a family business; or (2) were “with a job but not at work” - those who did not work during the reference week, but who had jobs or businesses from which they were temporarily absent because of illness, bad weather, industrial dispute, vacation, or other personal reasons. Excluded from the employed are people whose only activity consisted of work around their own house (painting, repairing, or own home housework) or unpaid volunteer work for religious, charitable, and similar organizations. Also excluded are all institutionalized people and people on active duty in the United States Armed Forces.

Civilian employed. This term is defined exactly the same as the term “employed” above.

Unemployed. All civilians 16 years old and over were classified as unemployed if they were neither “at work” nor “with a job but not at work” during the reference week, were looking for work during the last 4 weeks, and were available to start a job. Also included as unemployed were civilians 16 years old and over who: did not work at all during the reference week, were on temporary layoff from a job, had been informed that they would be recalled to work within the next 6 months or had been given a date to return to work, and were available to return to work during the reference week, except for temporary illness. Examples of job seeking activities were:

- Registering at a public or private employment office
- Meeting with prospective employers
- Investigating possibilities for starting a professional practice or opening a business
- Placing or answering advertisements
- Writing letters of application
- Being on a union or professional register

Civilian labor force. Consists of people classified as employed or unemployed in accordance with the criteria described above.

Labor force. All people classified in the civilian labor force (i.e., “employed” and “unemployed” people), plus members of the U.S. Armed Forces (people on active duty with the United States Army, Air Force, Navy, Marine Corps, or Coast Guard).

Not in labor force. All people 16 years old and over who are not classified as members of the labor force. This category consists mainly of students, individuals taking care of home or family, retired workers, seasonal workers enumerated in an off-season who were not looking for work, institutionalized people (all institutionalized people are placed in this category regardless of any work activities they may have done in the reference week), and people doing only incidental unpaid family work (fewer than 15 hours during the reference week).

FAMILY

A family includes a householder and one or more other people living in the same household who are related to the householder by birth, marriage, or adoption. All people in a household who are related to the householder are regarded as members of his or her family. A family household may contain people not related to the householder, but those people are not included as part of the householder’s family in census tabulations. Thus, the number of family households is equal to the number of families, but family households may include more members than do families. A household can contain only one family for purposes of census tabulations. Not all households contain families since a household may be comprised of a group of unrelated people or of one person living alone.

In 100-percent tabulations, the count of households or householders always equals the count of occupied housing units. In sample tabulations, the numbers may differ as a result of the weighing process.

HOUSEHOLD

A household includes all of the people who occupy a housing unit. (People not living in households are classified as living in group quarters.) A housing unit is a house, an apartment, a mobile home, a group of rooms, or a single room occupied (or if vacant, intended for occupancy) as separate living quarters. Separate living quarters are those in which the occupants live separately from any other people in the building and that have direct access from the outside of the building or through a common hall. The occupants may be a single family, one person living alone, two or more families living together, or any other group of related or unrelated people who share living quarters.

INCOME IN 1999

The data on income in 1999 were derived from answers to long-form questionnaire Items 31 and 32, which were asked of a sample of the population 15 years old and over. “Total income” is the sum of the amounts reported separately for wage or salary income; net self-employment income; interest, dividends, or net rental or royalty income or income from estates and trusts; social security or railroad retirement income; Supplemental Security Income (SSI); public assistance or welfare payments; retirement, survivor, or disability pensions; and all other income.

Income of households. This includes the income of the householder and all other individuals 15 years old and over in the household, whether they are related to the householder or not. Because many households consist of only one person, average household income is usually less than

average family income. Although the household income statistics cover calendar year 1999, the characteristics of individuals and the composition of households refer to the time of enumeration (April 1, 2000). Thus, the income of the household does not include amounts received by individuals who were members of the household during all or part of calendar year 1999 if these individuals no longer resided in the household at the time of enumeration. Similarly, income amounts reported by individuals who did not reside in the household during 1999 but who were members of the household at the time of enumeration are included. However, the composition of most households was the same during 1999 as at the time of enumeration.

Income of families. In compiling statistics on family income, the incomes of all members 15 years old and over related to the householder are summed and treated as a single amount. Although the family income statistics cover calendar year 1999, the characteristics of individuals and the composition of families refer to the time of enumeration (April 1, 2000). Thus, the income of the family does not include amounts received by individuals who were members of the family during all or part of calendar year 1999 if these individuals no longer resided with the family at the time of enumeration. Similarly, income amounts reported by individuals who did not reside with the family during 1999 but who were members of the family at the time of enumeration are included. However, the composition of most families was the same during 1999 as at the time of enumeration.

Income of individuals. Income for individuals is obtained by summing the eight types of income for each person 15 years old and over. The characteristics of individuals are based on the time of enumeration (April 1, 2000), even though the amounts are for calendar year 1999.

Median income. The median divides the income distribution into two equal parts: one-half of the cases falling below the median income and one-half above the median. For households and families, the median income is based on the distribution of the total number of households and families including those with no income. The median income for individuals is based on individuals 15 years old and over with income. Median income for households, families, and individuals is computed on the basis of a standard distribution. Median income is rounded to the nearest whole dollar. Median income figures are calculated using linear interpolation if the width of the interval containing the estimate is \$2,500 or less. If the width of the interval containing the estimate is greater than \$2,500, Pareto interpolation is used.

Per capita income. Per capita income is the mean income computed for every man, woman, and child in a particular group. It is derived by dividing the total income of a particular group by the total population in that group. (The aggregate used to calculate per capita income is rounded.) Per capita income is rounded to the nearest whole dollar.

Limitation of the data. Since answers to income questions are frequently based on memory and not on records, many people tended to forget minor or sporadic sources of income and, therefore, underreport their income. Underreporting tends to be more pronounced for income sources that are not derived from earnings, such as public assistance, interest, dividends, and net rental income.

Extensive computer editing procedures were instituted in the data processing operation to reduce some of these reporting errors and to improve the accuracy of the income data. These procedures corrected various reporting deficiencies and improved the consistency of reported income items associated with work experience and information on occupation and class of worker. For example, if people reported they were self employed on their own farm, not incorporated, but had reported wage and salary earnings only, the latter amount was shifted to self-employment income. Also, if any respondent reported total income only, the amount was generally assigned to one of the types of income items according to responses to the work experience and class-of-worker questions. Another type of problem involved nonreporting of income data. Where income

information was not reported, procedures were devised to impute appropriate values with either no income or positive or negative dollar amounts for the missing entries.

In income tabulations for households and families, the lowest income group (for example, less than \$10,000) includes units that were classified as having no 1999 income. Many of these were living on income "in kind," savings, or gifts, were newly created families, or were families in which the sole breadwinner had recently died or left the household. However, many of the households and families who reported no income probably had some money income that was not reported in the census.

OCCUPATION, INDUSTRY AND CLASS OF WORKER

The data on industry, occupation, and class of worker were derived from answers to long-form questionnaire Items 27, 28, and 29 respectively, which were asked of a sample of the population 15 years old and over. Information on industry relates to the kind of business conducted by a person's employing organization; occupation describes the kind of work a person does on the job.

For employed people, the data refer to the person's job during the reference week. For those who worked at two or more jobs, the data refer to the job at which the person worked the greatest number of hours during the reference week. For unemployed people, the data refer to their last job. The industry and occupation statistics are derived from the detailed classification systems developed for Census 2000 as described below.

Respondents provided the data for the tabulations by writing on the questionnaires descriptions of their industry and occupation. These descriptions were data captured and sent to an automated coder (computer software), which assigned a portion of the written entries to categories in the classification system. The automated system assigned codes to 59 percent of the industry entries and 56 percent of the occupation entries. Those cases not coded by the computer were referred to clerical staff in the Census Bureau's National Processing Center in Jeffersonville, Indiana, for coding. The clerical staff converted the written questionnaire responses to codes by comparing these responses to entries in the *Alphabetical Index of Industries and Occupations*. For the industry code, these coders also referred to an Employer Name List. This list, prepared from the American Business Index (ABI), contained the names of business establishments and their North American Industrial Classification System (NAICS) codes converted to population census equivalents. This list facilitated coding and maintained industrial classification comparability.

Occupation

The occupational classification system used during Census 2000 consists of 509 specific occupational categories for employed people arranged into 23 major occupational groups. This classification was developed based on the *Standard Occupational Classification (SOC) Manual: 2000*, which includes a hierarchical structure showing 23 major occupational groups divided into 96 minor groups, 449 broad groups, and 821 detailed occupations. For Census 2000, tabulations with occupation as the primary characteristic present several levels of occupational detail.

Some occupation groups are related closely to certain industries. Operators of transportation equipment, farm operators and workers, and healthcare providers account for major portions of their respective industries of transportation, agriculture, and health care. However, the industry categories include people in other occupations. For example, people employed in agriculture include truck drivers and bookkeepers; people

employed in the transportation industry include mechanics, freight handlers, and payroll clerks; and people employed in the health care industry include occupations such as security guard and secretary.

POVERTY STATUS IN 1999

The poverty data were derived from answers to long-form questionnaire Items 31 and 32, the same questions used to derive income data. The Census Bureau uses the federal government's official poverty definition. The Social Security Administration (SSA) developed the original poverty definition in 1964, which federal interagency committees subsequently revised in 1969 and 1980. The Office of Management and Budget's (OMB's) *Directive 14* prescribes this definition as the official poverty measure for federal agencies to use in their *statistical* work.

Derivation of the Current Poverty Measure

When the Social Security Administration (SSA) created the poverty definition in 1964, it focused on family food consumption. The U.S. Department of Agriculture (USDA) used its data about the nutritional needs of children and adults to construct food plans for families. Within each food plan, dollar amounts varied according to the total number of people in the family and the family's composition, such as the number of children within each family. The cheapest of these plans, the Economy Food Plan, was designed to address the dietary needs of families on an austere budget.

Since the USDA's 1955 Food Consumption Survey showed that families of three or more people across all income levels spent roughly one third of their income on food, the SSA multiplied the cost of the Economy Food Plan by three to obtain dollar figures for the poverty thresholds. Since the Economy Food Plan budgets varied by family size and composition, so too did the poverty thresholds. For 2 person families, the thresholds were adjusted by slightly higher factors because those households had higher fixed costs. Thresholds for unrelated individuals were calculated as a fixed proportion of the corresponding thresholds for 2-person families.

The poverty thresholds are revised annually to allow for changes in the cost of living as reflected in the Consumer Price Index (CPI-U). The poverty thresholds are the same for all parts of the country - they are not adjusted for regional, state or local variations in the cost of living. For a detailed discussion of the poverty definition, see U.S. Census Bureau, Current Population Reports, "*Poverty in the United States: 1999*," P-60-210.

How Poverty Status is Determined

The poverty status of families and unrelated individuals in 1999 was determined using 48 thresholds (income cutoffs) arranged in a two dimensional matrix. The matrix consists of family size (from 1 person to 9 or more people) cross classified by presence and number of family members under 18 years old (from no children present to 8 or more children present). Unrelated individuals and 2-person families were further differentiated by the age of the reference person (RP) (under 65 years old and 65 years old and over).

To determine a person's poverty status, one compares the person's total family income with the poverty threshold appropriate for that person's family size and composition (see table below). If the total income of that person's family is less than the threshold appropriate for that family, then the person is considered poor, together with every member of his or her family. If a person is not living with anyone related by birth, marriage, or adoption, then the person's own income is compared with his or her poverty threshold.

Weighted average thresholds. Even though the official poverty data are based on the 48 thresholds arranged by family size and number of children within the family, data users often want to get an idea of the “average” threshold for a given family size. The weighted average thresholds provide that summary. They are weighted averages because for any given family size, families with a certain number of children may be more or less common than families with a different number of children. In other words, among 3-person families, there are more families with two adults and one child than families with three adults. To get the weighted average threshold for families of a particular size, multiply each threshold by the number of families for whom that threshold applies; then add up those products, and divide by the total number of families who are of that family size.

For example, for 3-person families, 1999 weighted thresholds were calculated in the following way using information from the 2000 Current Population Survey:

Family type	Number of families	Threshold		
No children (three adults)	5,213	* \$ 13,032	=	\$67,935,816
One child (two adults)	8,208	* \$ 13,410	=	\$110,069,280
Two children (one adult)	2,656	* \$ 13,423	=	\$35,651,488
Totals	16,077			\$213,656,584

Source: Current Population Survey, March 2000.

Dividing \$213,656,584 by 16,077 (the total number of 3-person families) yields \$13,290, the weighted average threshold for 3 person families. Please note that the thresholds are weighted not just by the number of poor families, but by all families for which the thresholds apply: the thresholds are used to determine which families are *at* or *above* poverty, as well as below poverty.

Individuals for whom poverty status is determined. Poverty status was determined for all people except institutionalized people, people in military group quarters, people in college dormitories, and unrelated individuals under 15 years old. These groups also were excluded from the numerator and denominator when calculating poverty rates. They are considered neither “poor” nor “nonpoor.”

Specified poverty levels. For various reasons, the official poverty definition does not satisfy all the needs of data users. Therefore, some of the data reflect the number of people below different percentages of the poverty level. These specified poverty levels are obtained by multiplying the official thresholds by the appropriate factor. For example, the average income cutoff at 125 percent of the poverty level was \$21,286 (\$17,029 x 1.25) in 1999 for family of four people.

Poverty Threshold in 1999, by Size of Family and Number of Related Children Under 18 Years Old
(Dollars)

Size of family unit	Weighted average threshold	Related children under 18 years old									
		None	One	Two	Three	Four	Five	Six	Seven	Eight or more	
One person (unrelated individual)	8501										
Under 65 years old	8667	8667									
65 years and over old and over	7990	7990									
Two people	10869										
Householder under 65 years old	11214	11156	11483								
Householder 65 years and over	10075	10070	11440								
Three people	13290	13032	13410	13423							
Four people	17029	17184	17465	16895	16954						
Five people	20127	20723	21024	20380	19882	19578					
Six people	22727	23835	23930	23436	22964	22261	21845				
Seven people	25912	27425	27596	27006	26595	25828	24934	23953			
Eight people	28967	30673	30944	30387	29899	29206	28327	27412	27180		
Nine people or more	34417	36897	37076	36583	36169	35489	34554	33708	33499	32208	

RESIDENT POPULATION

Enumeration rules. Each person whose usual residence was in the United States was to be included in the census, without regard to the person's legal status or citizenship. As in previous censuses, people specifically excluded from the census were citizens of foreign countries temporarily traveling or visiting in the United States who had not established a residence.

Americans temporarily overseas were to be enumerated at their usual residence in the United States. With some exceptions, Americans with a usual residence outside the United States were not enumerated in Census 2000. U.S. military personnel and federal civilian employees stationed outside the United States and their dependents living with them, are included in the population counts for the 50 states for purposes of Congressional apportionment but are excluded from all other tabulations for states and their subdivisions. The counts of overseas U.S. military personnel, federal civilian employees, and their dependents were obtained from administrative records maintained by the employing federal

departments and agencies. Other Americans living overseas who were not affiliated with the U.S. government were not included in the census.

Residence rules. Each person included in the census was to be counted at his or her usual residence the place where he or she lives and sleeps most of the time. If a person had no usual residence, the person was to be counted where he or she was staying on Census Day.

People temporarily away from their usual residence on Census Day, such as on a vacation or business trip, were to be counted at their usual residence.

Armed forces personnel in the United States. Members of the U.S. Armed Forces were counted at their usual residence (the place where they lived and slept most of the time), whether it was on or off the military installation. Family members of armed forces personnel were counted at their usual residence (for example, with the armed forces person or at another location).

Personnel assigned to each Navy and Coast Guard vessel with a U.S. homeport were given the opportunity to report an onshore residence where they usually stayed when they were off the ship. Those who reported an onshore residence were counted there; those who did not were counted at their vessel's homeport.

Personnel on U.S. flag merchant vessels. Crews of U.S. flag merchant vessels docked in a U.S. port, sailing from one U.S. port to another U.S. port, or sailing from a U.S. port to a Puerto Rico port were counted at their usual onshore residence if they reported one. Those who did not were counted as residents of the ship and were assigned as follows:

- The U.S. port, if the vessel was docked there on Census Day.
- The port of departure, if the ship was sailing from one U.S. port to another U.S. port, or from a U.S. port to a Puerto Rico port.

Crews of U.S. merchant ships docked in a foreign port (including the U.S. Virgin Islands, American Samoa, the Commonwealth of the Northern Mariana Islands, and Guam), sailing from one foreign port to another foreign port, sailing from a U.S. port to a foreign port, or sailing from a foreign port to a U.S. port were not included in the census.

People away at school. College students were counted as residents of the area in which they were living while attending college, as they have been since the 1950 census. Children in boarding schools below the college level were counted at their parental home.

People in institutions. People under formally authorized, supervised care or custody, such as in federal or state prisons; local jails; federal detention centers; juvenile institutions; nursing or convalescent homes for the aged or dependent; or homes, schools, hospitals, or wards for the physically handicapped, mentally retarded, or mentally ill; or in drug/alcohol recovery facilities were counted at these places.

People in general hospitals. People in general hospitals or wards (including Veterans Affairs hospitals) on Census Day were counted at their usual residence. Newborn babies were counted at the residence where they would be living.

People in shelters. People staying on Census Day at emergency or transitional shelters with sleeping facilities for people without housing, such as for abused women or runaway or neglected youth, were counted at the shelter.

People with multiple residences. People who lived at more than one residence during the week, month, or year were counted at the place where they lived most of the time. For example, commuter workers living away part of the week while working were counted at the residence where they stayed most of the week. Likewise, people who lived in one state but spent the winter in another state with a warmer climate (“snowbirds”) were to be counted at the residence where they lived most of the year.

People away from their usual residence on Census Day. Temporary, migrant, or seasonal workers who did not report a usual U.S. residence elsewhere were counted as residents of the place where they were on Census Day.

In some areas, natural disasters (hurricanes, tornadoes, flooding, and so forth) displaced households from their usual place of residence. If these people reported a destroyed or damaged residence as their usual residence, they were counted at that location.

People away from their usual residence were counted by means of interviews with other members of their families, resident managers, or neighbors.
