INTRODUCTION

About This Report

The report, *2010 Census Tract Names and Their Population, Housing and Land Area for the State of Hawaii*, was produced by the Hawaii State Data Center from data provided by the U.S. Census Bureau, Census 2010 Redistricting Data (P.L. 94-171) Summary File.

This report contains eight statistical tables: three summary tables for the state, counties, and islands; three detailed tables by islands and census tracts on selected demographic and housing characteristics; and two summary tables with census tract counts by islands. Data in the tables are from the Census 2010 Redistricting Data Summary File, which are based on questions asked from everyone completing a questionnaire during the 2010 Census. The summary file provided only census tract numbers. Corresponding census tract names in this report were provided to us by the county planning offices. This report also includes census tract boundary maps which were produced by the Hawaii State Office of Planning's GIS Program.

We would like to recognize the tremendous contribution of the following county planning offices in providing the 2010 Census tract names for the State of Hawaii:

County of Hawaii Planning Department

City and County of Honolulu Department of Planning and Permitting

Kauai County Planning Department

Maui County Department of Planning

In addition to the above organizations, our Data Center received invaluable assistance with this report from the U.S. Census Bureau Los Angeles RCC Geography Department and the Hawaii State Office of Planning's GIS Program.

Availability of Data

This report may be viewed or downloaded from the Hawaii State Department of Business, Economic Development & Tourism's Internet site at:

http://hawaii.gov/dbedt/info/census/Census_2010/PL94-171/index_html

Census reference maps are available on the Hawaii State Office of Planning Internet site at:

http://www.hawaii.gov/dbedt/gis/2010_census.htm

The U.S. Census Bureau Internet site is at:

<http://www.census.gov/>

Census tract names from the Census 2000 may be found in our DBEDT publication HSDC 2000-1 at:

<http://hawaii.gov/dbedt/info/census/Folder.2005-10-13.2927/hsdc-tables-redistrict>

For further information, call the Hawaii State Data Center at (808) 586-2499.

HIGHLIGHTS OF THE DATA

The highlights shown below were based on the analysis of all standard census tracts in the State of Hawaii. No special land use tracts (9800 to 9899 tract number series) and water census tracts (9900 to 9989 tract number series) were included. See the “Notes and Subject Definitions” section of this report for an explanation of special land use and water tracts.

Persons Per Household

The number of persons per household for the State of Hawaii was 2.9 in 2010. The island with the highest number of persons per household was Niihau with 6.3 persons and the islands with the least number of persons per household were Lanai and Hawaii with 2.7 persons each.

Rank	Island	Persons per household
1	Niihau	6.3
2	Oahu	3.0
3	Molokai	2.8
4	Kauai	2.8
5	Maui	2.8
6	Lanai	2.7
7	Hawaii	2.7
State Average		2.9

The top area by far with the highest number of persons per household was tract 412 (Ni'ihau-Kaula) with 6.3 persons per household. This was the only area in the top 6 listing which was not on Oahu. The rest of the areas included tract 64.01 (Gulick Avenue-Likelike); tract 89.12 (August Ahrens School); tract 9400.02 (Nanakuli); tract 61 (Kalihi Waena); and tract 83.02 (Campbell High School).

Rank	2010 census tract number	Island	Census tract name	Persons per household
1	412	Niihau	Ni'ihau-Kaula	6.3
2	64.01	Oahu	Gulick Avenue-Likelike	5.1
3	89.12	Oahu	August Ahrens School	5.0
4	9400.02	Oahu	Nanakuli	5.0
5	61	Oahu	Kalihi Waena	4.9
6	83.02	Oahu	Campbell High School	4.9

The census tract with the least number of persons per household was tract 39 (Civic Center) with 1.2 persons per household. The other 3 tracts on the bottom were as follows: 319 (Kalawao); 19.01 (Waikiki Beach); and 18.01 (Koa Avenue). Among these 4 areas in our state, tract 319 was the only census tract not on the island of Oahu. It is important to note, however, that most of these areas had little population when compared to the population residing in other census tracts.

For example, Civic Center had a total of 270 people living in housing units while Kalawao had only 87 people living in housing units.

Rank	2010 census tract number	Island	Census tract name	Persons per household
1	39	Oahu	Civic Center	1.2
2	319	Molokai	Kalawao	1.3
3	19.01	Oahu	Waikiki Beach	1.5
4	18.01	Oahu	Koa Avenue	1.6

Density

The number of persons per square mile (density) for the State of Hawaii was 211.8 in 2010. The Island of Oahu was significantly more dense than any of the other islands with 1,594.9 persons per square mile. The island with the least number of persons per square mile was Niihau with 2.5.

Rank	Island	Density, per square mile
1	Oahu	1,594.9
2	Maui	187.1
3	Kauai	121.2
4	Hawaii	45.9
5	Molokai	28.2
6	Lanai	22.2
7	Niihau	2.5
State Average		211.8

The tract with the highest density was 19.04 (Hobron Lane) with 87,816 persons per square mile. The other top 4 tracts in regard to density included census tract 18.03 (Tusitala Street) with a density of 81,167; census tract 68.09 (Ala Ilima Makai) with a density of 78,744; census tract 19.03 (Ena Road) with a density of 77,629; and census tract 68.08 (Ala Ilima Mauka) with a density of 69,290. Three of these top areas were in Waikiki and the other two were in the Salt Lake area. All of these top areas were on the island of Oahu.

Rank	2010 census tract number	Island	Census tract name	Density, per square mile
1	19.04	Oahu	Hobron Lane	87,816.0
2	18.03	Oahu	Tusitala Street	81,167.4
3	68.09	Oahu	Ala Ilima Makai	78,743.9
4	19.03	Oahu	Ena Road	77,629.3
5	68.08	Oahu	Ala Ilima Mauka	69,289.6

The tract with the lowest density was 412 (Ni'ihau-Kaula) with 2.5 persons per square mile. Please note that the inclusion of the land area from the unpopulated isle of Kaula contributes to this census tract's low density figure. The next 4 tracts on the lowest density list included census tract 220 (Pa'auhau-Pa'auilo); census tract 221.02 (North Hilo); census tract 319 (Kalawao); and census tract 212.02 (Ka'u). All 5 areas with the lowest density were on the neighbor islands and 3 of the 5 areas were on the Big Island.

Rank	2010 census tract number	Island	Census tract name	Density, per square mile
1	412	Kauai	Ni'ihau-Kaula	2.5
2	220	Hawaii	Pa'auhau-Pa'auilo	5.6
3	221.02	Hawaii	North Hilo	6.4
4	319	Molokai	Kalawao	7.5
5	212.02	Hawaii	Ka'u	9.0

Waikiki areas on the island of Oahu were on both the lowest number of persons per household and the highest density listings. This may be due to many people living alone in apartment and condominiums.

CENSUS TRACT NUMBERING CHANGES BETWEEN 2000 AND 2010

There were several significant changes in the numbering of census tracts for Hawaii between 2000 and 2010.

First, our state now has several new types of census tracts which were not found in 2000. Each type has its own census tract number range. There are Hawaiian Home Land tracts (9400-9499 range); special land use tracts (9800-9899 range) and water tracts (9900 to 9989 range). It should be noted that Hawaiian Home Land tracts are part of the census tract geographic level and are separate from the geographic level called the American Indian Area/Alaska Native Area/Hawaiian Home Lands areas. The formation of special land use areas which may have large land areas but little population does impact the population density figures. The density figures are now closer to the true density of land areas with population residing on them.

Secondly, in 2010, there are duplicate census tract numbers in the State of Hawaii. According to Census Bureau guidelines, census tract numbers must only be unique within each county. Up until the Census 2000, each census tract number has actually been unique within our entire state. This is no longer true. For the 2010 Census, there are now duplicate tract numbers within the state. For example, the census tract number 319 now appears in both the County of Maui (Spreckelville area) and in the County of Kalawao. Another example is the County of Hawaii and the County of Maui which both have the same water census tract number of 9900.

Lastly, the Census Bureau worked hard to realign streets and geographic features in their geographic database to more accurately reflect the correct physical location. For this and other reasons, even slight boundary changes resulted in the renumbering of the census tract. One example is the island of Lanai which in 2000 was designated as census tract 316. Lanai's census tract boundaries were changed slightly in 2010 and its census tract number is now 316.01.

**Table 1-- RESIDENT POPULATION AND HOUSEHOLDS
BY COUNTY AND ISLAND, STATE OF HAWAII: 2010**

County and island	Resident population	Household population 1/	Households 2/	Persons per household
STATE	1,360,301	1,317,421	455,338	2.9
CITY AND COUNTY OF HONOLULU	953,207	917,907	311,047	3.0
Oahu Island	953,207	917,907	311,047	3.0
Northwestern Hawaiian Islands	-	-	-	(X)
HAWAII COUNTY	185,079	181,435	67,096	2.7
MAUI COUNTY 3/	154,924	152,149	53,955	2.8
Maui Island	144,444	141,691	50,215	2.8
Lanai Island	3,135	3,135	1,158	2.7
Molokai Island 3/	7,345	7,323	2,582	2.8
KAUAI COUNTY	67,091	65,930	23,240	2.8
Kauai Island	66,921	65,760	23,213	2.8
Niihau Island	170	170	27	6.3

- Represents zero or rounds to 0.0.

X Ratios involving negative numbers or zero are meaningless.

1/ Group quarters population is subtracted from the resident population to obtain the household population.

2/ The count of households is always the same as the count of occupied housing units in the 100% data tabulations.

3/ Includes Kalawao County.

**Table 2-- HOUSING OCCUPANCY BY COUNTY AND ISLAND,
STATE OF HAWAII: 2010**

[Housing units]

County and island	Total	Occupied		Vacant 1/	
		Number	%	Number	%
STATE	519,508	455,338	87.6	64,170	12.4
CITY AND COUNTY OF HONOLULU	336,899	311,047	92.3	25,852	7.7
Oahu Island	336,899	311,047	92.3	25,852	7.7
Northwestern Hawaiian Islands	-	-	(X)	-	(X)
HAWAII COUNTY	82,324	67,096	81.5	15,228	18.5
MAUI COUNTY 1/	70,492	53,955	76.5	16,537	23.5
Maui Island	65,232	50,215	77.0	15,017	23.0
Lanai Island	1,545	1,158	75.0	387	25.0
Molokai Island 1/	3,715	2,582	69.5	1,133	30.5
KAUAI COUNTY	29,793	23,240	78.0	6,553	22.0
Kauai Island	29,758	23,213	78.0	6,545	22.0
Niihau Island	35	27	77.1	8	22.9

- Represents zero or rounds to 0.0.

X Ratios involving negative numbers or zero are meaningless.

1/ Includes housing units "for seasonally, recreational or occasional use". States with a large number of timeshares and vacation rentals such as Hawaii, therefore, have a higher vacancy figure. Census data being released later this year will show the number of units in this occasional use category.

Data Center.

**Table 4.-- NUMBER OF CENSUS TRACTS BY ISLAND,
STATE OF HAWAII: 1990 TO 2010**

County and island	1990 1/	2000 1/	2010 1/	Change between 2000 to 2010
STATE	265	286	351	65
CITY AND COUNTY OF HONOLULU	200	217	244	27
Oahu Island	200	217	244	27
Northwestern Hawaiian Islands	-	-	-	-
HAWAII COUNTY	28	28	50	22
MAUI COUNTY 2/	24	29	40	11
Maui Island	20	25	35	10
Lanai Island	1	1	1	-
Molokai Island 2/	3	3	4	1
KAUAI COUNTY	13	12	17	5
Kauai	11	10	16	6
Niihau	1	1	1	-
Kaula 3/	1	1	-	-1

1/ Includes water census tracts newly designated in 2010. Water tracts were included in the 1990 Census, eliminated in the Census 2000, then again included in 2010.

2/ Includes Kalawao County.

3/ An uninhabited islet listed as a separate census tract in 1990 and 2000. It was combined with Niihau in 2010.

Source: U.S. Census Bureau, 2010 Census Redistricting Data (Public Law 94-171) Summary File (February 2011); State of Hawaii Department of Business, Economic Development & Tourism, Hawaii State Data Center, 2000 Census Tract Names and 1990 and 2000 Resident Population for the State of Hawaii (April 2001); compiled by the Hawaii State Department of Business, Economic Development & Tourism, Hawaii State Data Center.

**Table 5.-- TYPES OF CENSUS TRACTS BY ISLAND,
STATE OF HAWAII: 2010**

County and island	Standard		Special land use 2/	Water 3/
	Standard (excluding AIR/ORTL/ HHL)	AIR/ORTL/ HHL 1/		
STATE	311	3	12	25
CITY AND COUNTY OF HONOLULU	230	2	11	1
Oahu Island	230	2	11	1
Northwestern Hawaiian Islands	-	-	-	-
HAWAII COUNTY	33	-	-	17
MAUI COUNTY 4/	35	-	1	4
Maui Island	31	-	1	3
Lanai Island	1	-	-	-
Molokai Island 4/	3	-	-	1
KAUAI COUNTY	13	1	-	3
Kauai Island	12	1	-	3
Niihau Island	1	-	-	-

1/ The majority of the census tract's population and/or area is in a federally recognized American Indian reservation (AIR), off-reservation trust land (ORTL) or Hawaiian Home Land (HHL). These tracts fall in the 9400-9499 range.

2/ A census tract encompassing a large airport, business/employment area, college, hospital, jail, military installation, public park or public forest with zero or very little population or housing units or meeting the standard census tract thresholds. In a densely populated, urban area, a special land use census tract should be approximately 1 square mile in area or greater. If delineated completely outside an urban area, a special land use census tract should have an area of 10 square miles or greater. These tracts fall in the 9800-9899 range.

3/ A census tract encompassing all or part of a territorial sea, coastal water, a Great Lake, or an inland water body at least 100 square miles in area. These tracts fall in the 9900 to 9989 range.

4/ Includes Kalawao County.

- Represents zero or rounds to 0.0.

X Ratios involving negative numbers or zero are meaningless.

* New 2010 census tract number.

** Census tract number existed during the Census 2000, but tract name differs from the Census 2000 tract name.

1/ Group quarters population is subtracted from the resident population to obtain the household population.

2/ The count of households is always the same as the count of occupied housing units in the 100% data tabulations.

- Represents zero or rounds to 0.0.

X Ratios involving negative numbers or zero are meaningless.

1/ Includes housing units "for seasonally, recreational or occasional use". States with a large number of timeshares and vacation rentals such as Hawaii, therefore, have a higher vacancy figure. Census data being released later this year will show the number of units in this occasional use category.

NOTES AND SUBJECT DEFINITIONS

CENSUS TRACT

Census tracts are small, relatively permanent statistical subdivisions of a county or equivalent entity that are updated by local participants prior to each decennial census as part of the Census Bureau's Participant Statistical Areas Program. The Census Bureau delineates census tracts in situations where no local participant existed or where state, local, or tribal governments declined to participate. The primary purpose of census tracts is to provide a stable set of geographic units for the presentation of statistical data.

Census tracts generally have a population size between 1,200 and 8,000 people, with an optimum size of 4,000 people. A census tract usually covers a contiguous area; however, the spatial size of census tracts varies widely depending on the density of settlement. Census tract boundaries are delineated with the intention of being maintained over a long time so that statistical comparisons can be made from census to census. Census tracts occasionally are split due to population growth or merged as a result of substantial population decline.

Census tract boundaries generally follow visible and identifiable features. They may follow nonvisible legal boundaries, such as minor civil division (MCD) or incorporated place boundaries in some states and situations, to allow for census-tract-to governmental-unit relationships where the governmental boundaries tend to remain unchanged between censuses. State and county boundaries always are census tract boundaries in the standard census geographic hierarchy. Tribal census tracts are a unique geographic entity defined within federally recognized American Indian reservations and off-reservation trust lands and can cross state and county boundaries. Tribal census tracts may be completely different from the census tracts and block groups defined by state and county.

CENSUS TRACT CODES AND NUMBERS

Census tracts are identified by an up to four-digit integer number and may have an optional two-digit suffix; for example 1457.02 or 23. The census tract codes consist of six digits with an implied decimal between the fourth and fifth digit corresponding to the basic census tract number but with leading zeroes and trailing zeroes for census tracts without a suffix. The tract number examples above would have codes of 145702 and 002300, respectively.

Some ranges of census tract numbers in the 2010 Census are used to identify distinctive types of census tracts. The code range in the 9400s is used for those census tracts with a majority of population, housing, or land area associated with an American Indian area and matches the numbering used in Census 2000. The code range in the 9800s is new for 2010 and is used to specifically identify special land-use census tracts; that is, census tracts defined to encompass a large area with little or no residential population with special characteristics, such as large parks or employment areas. The range of census tracts in the 9900s represents census tracts delineated specifically to cover large bodies of water. This is different from Census 2000 when water-only census tracts were assigned codes of all zeroes (000000); 000000 is no longer used as a census tract code for the 2010 Census.

The Census Bureau uses suffixes to help identify census tract changes for comparison purposes. Census tract suffixes may range from .01 to .98. As part of local review of existing census tracts before each census, some census tracts may have grown enough in population size to qualify as more than one census tract. When a census tract is split, the split parts usually retain the basic number but receive different suffixes. For example, if census tract 14 is split, the new tract numbers would be 14.01 and 14.02. In a few counties, local participants request major changes to, and renumbering of, the census tracts; however, this is generally discouraged. Changes to individual census tract boundaries usually do not result in census tract numbering changes.

NOTES AND SUBJECT DEFINITIONS (cont.)

THE RESIDENCE RULE

The residence rule is used to determine where people should be counted in the United States during the 2010 Census.

The rule says:

Count people at their usual residence, which is the place where they live and sleep most of the time.

People in certain types of facilities or shelters (i.e., places where groups of people live together) on Census Day should be counted at the facility or shelter.

People who do not have a usual residence, or cannot determine a usual residence, should be counted where they are on Census Day.

HOUSING UNITS

A housing unit is a living quarters in which the occupant or occupants live separately from any other individuals in the building and have direct access to their living quarters from outside the building or through a common hall. Housing units are usually houses, apartments, mobile homes, groups of rooms, or single rooms that are occupied as separate living quarters. They are residences for single individuals, for groups of individuals, or for families who live together. A single individual or a group living in a housing unit is defined to be a household.

For vacant housing units, the criteria of separateness and direct access are applied to the intended occupants whenever possible. Nontraditional living quarters, such as boats, RVs, and tents are considered to be housing units ONLY if someone is living in them and they are either the occupant's usual residence or the occupant has no usual residence elsewhere. These nontraditional living arrangements are not considered to be housing units if they are vacant.

Housing units are classified as being either occupied or vacant.

OCCUPIED HOUSING UNIT

A housing unit is classified as occupied if it is the usual place of residence of the individual or group of individuals living in it on Census Day, or if the occupants are only temporarily absent, such as away on vacation, in the hospital for a short stay, or on a business trip, and will be returning.

The occupants may be one individual, a single family, two or more families living together, or any other group of related or unrelated individuals who share living arrangements.

Occupied rooms or suites of rooms in hotels, motels, and similar places are classified as housing units only when occupied by permanent residents; that is, occupied by individuals who consider the hotel their usual place of residence or who have no usual place of residence elsewhere. However, when rooms in hotels and motels are used to provide shelter for people experiencing homelessness, they are not housing units. Rooms used in this way are considered group quarters.

NOTES AND SUBJECT DEFINITIONS (cont.)

VACANT HOUSING UNIT

A housing unit is classified as vacant if no one is living in it on Census Day, unless its occupant or occupants are only temporarily absent – such as away on vacation, in the hospital for a short stay, or on a business trip – and will be returning.

Housing units temporarily occupied at the time of enumeration entirely by individuals who have a usual residence elsewhere are classified as vacant. When housing units are vacant, the criteria of separateness and direct access are applied to the intended occupants whenever possible. If that information cannot be obtained, the criteria are applied to the previous occupants.

Boats, RVs, tents, caves, and similar shelter that no one is using as a usual residence are **not** considered living quarters and, therefore, are not enumerated at all.

LAND AREA

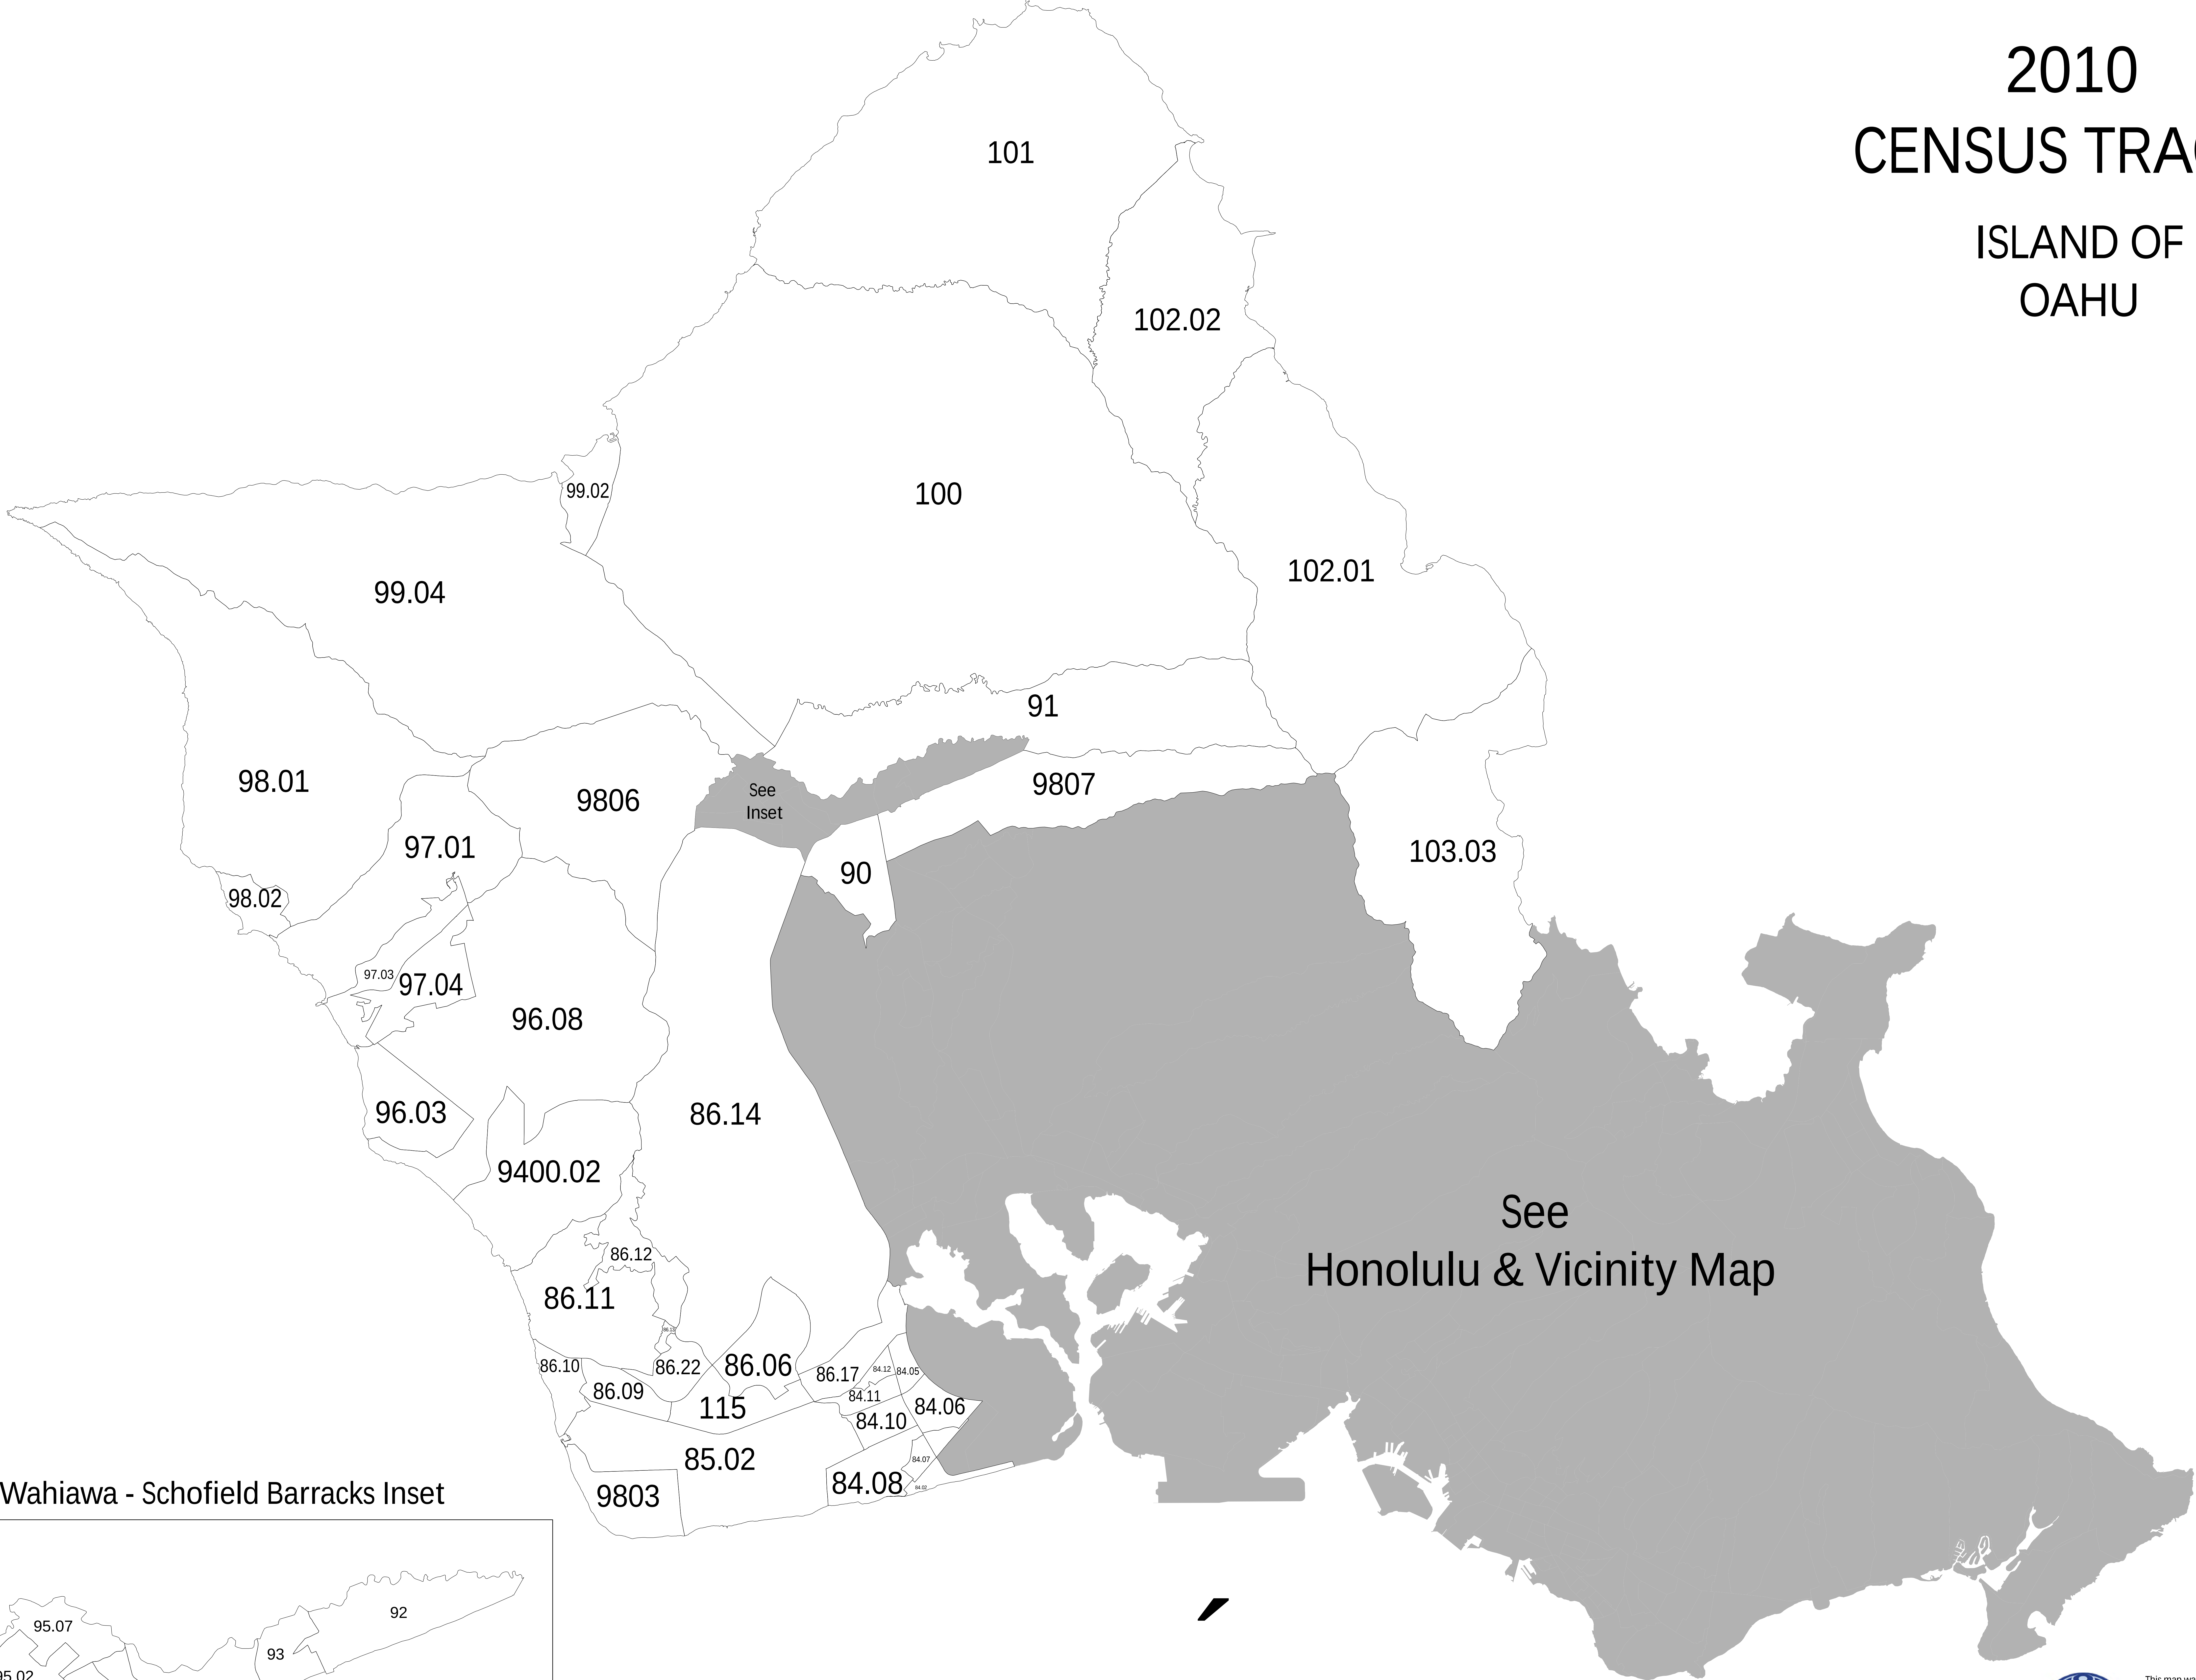

Land area measurement in square meters. The accuracy of the area measurement is limited by the inaccuracy inherent in the mapping of the various boundary features in the Census Bureau's geographic database. Land area includes areas classified as intermittent water, swamps, and glaciers, which appear on census maps and in the Census Bureau's geographic database as hydrographic features. Square miles can be derived by dividing square meters by 2,589,988.

POPULATION AND HOUSING UNIT DENSITY

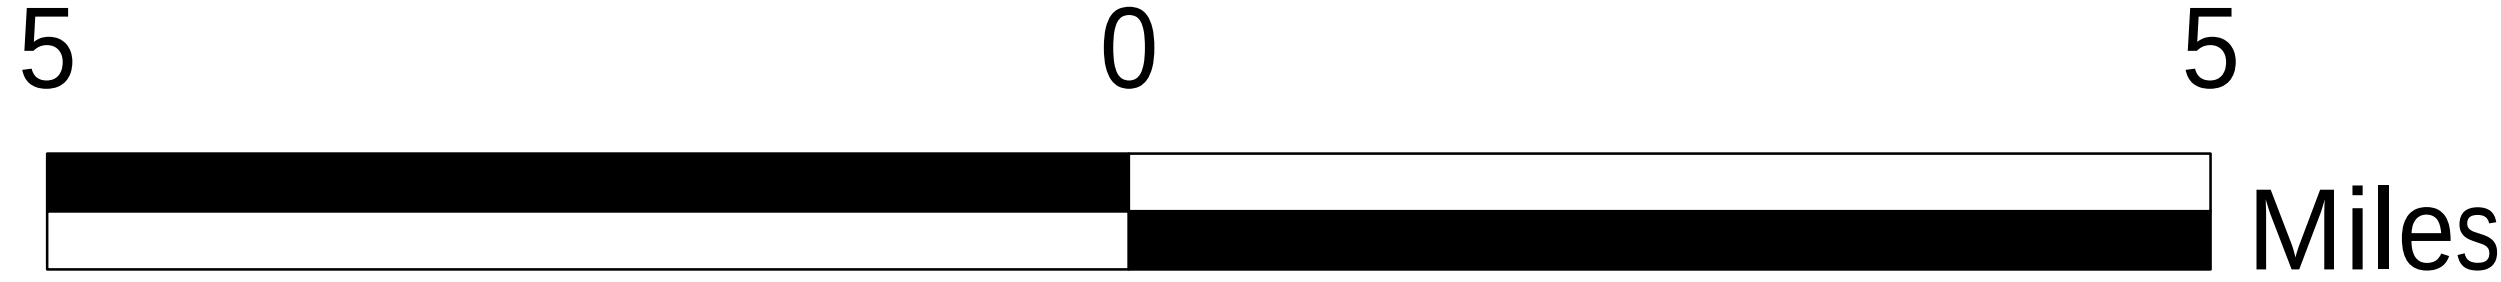

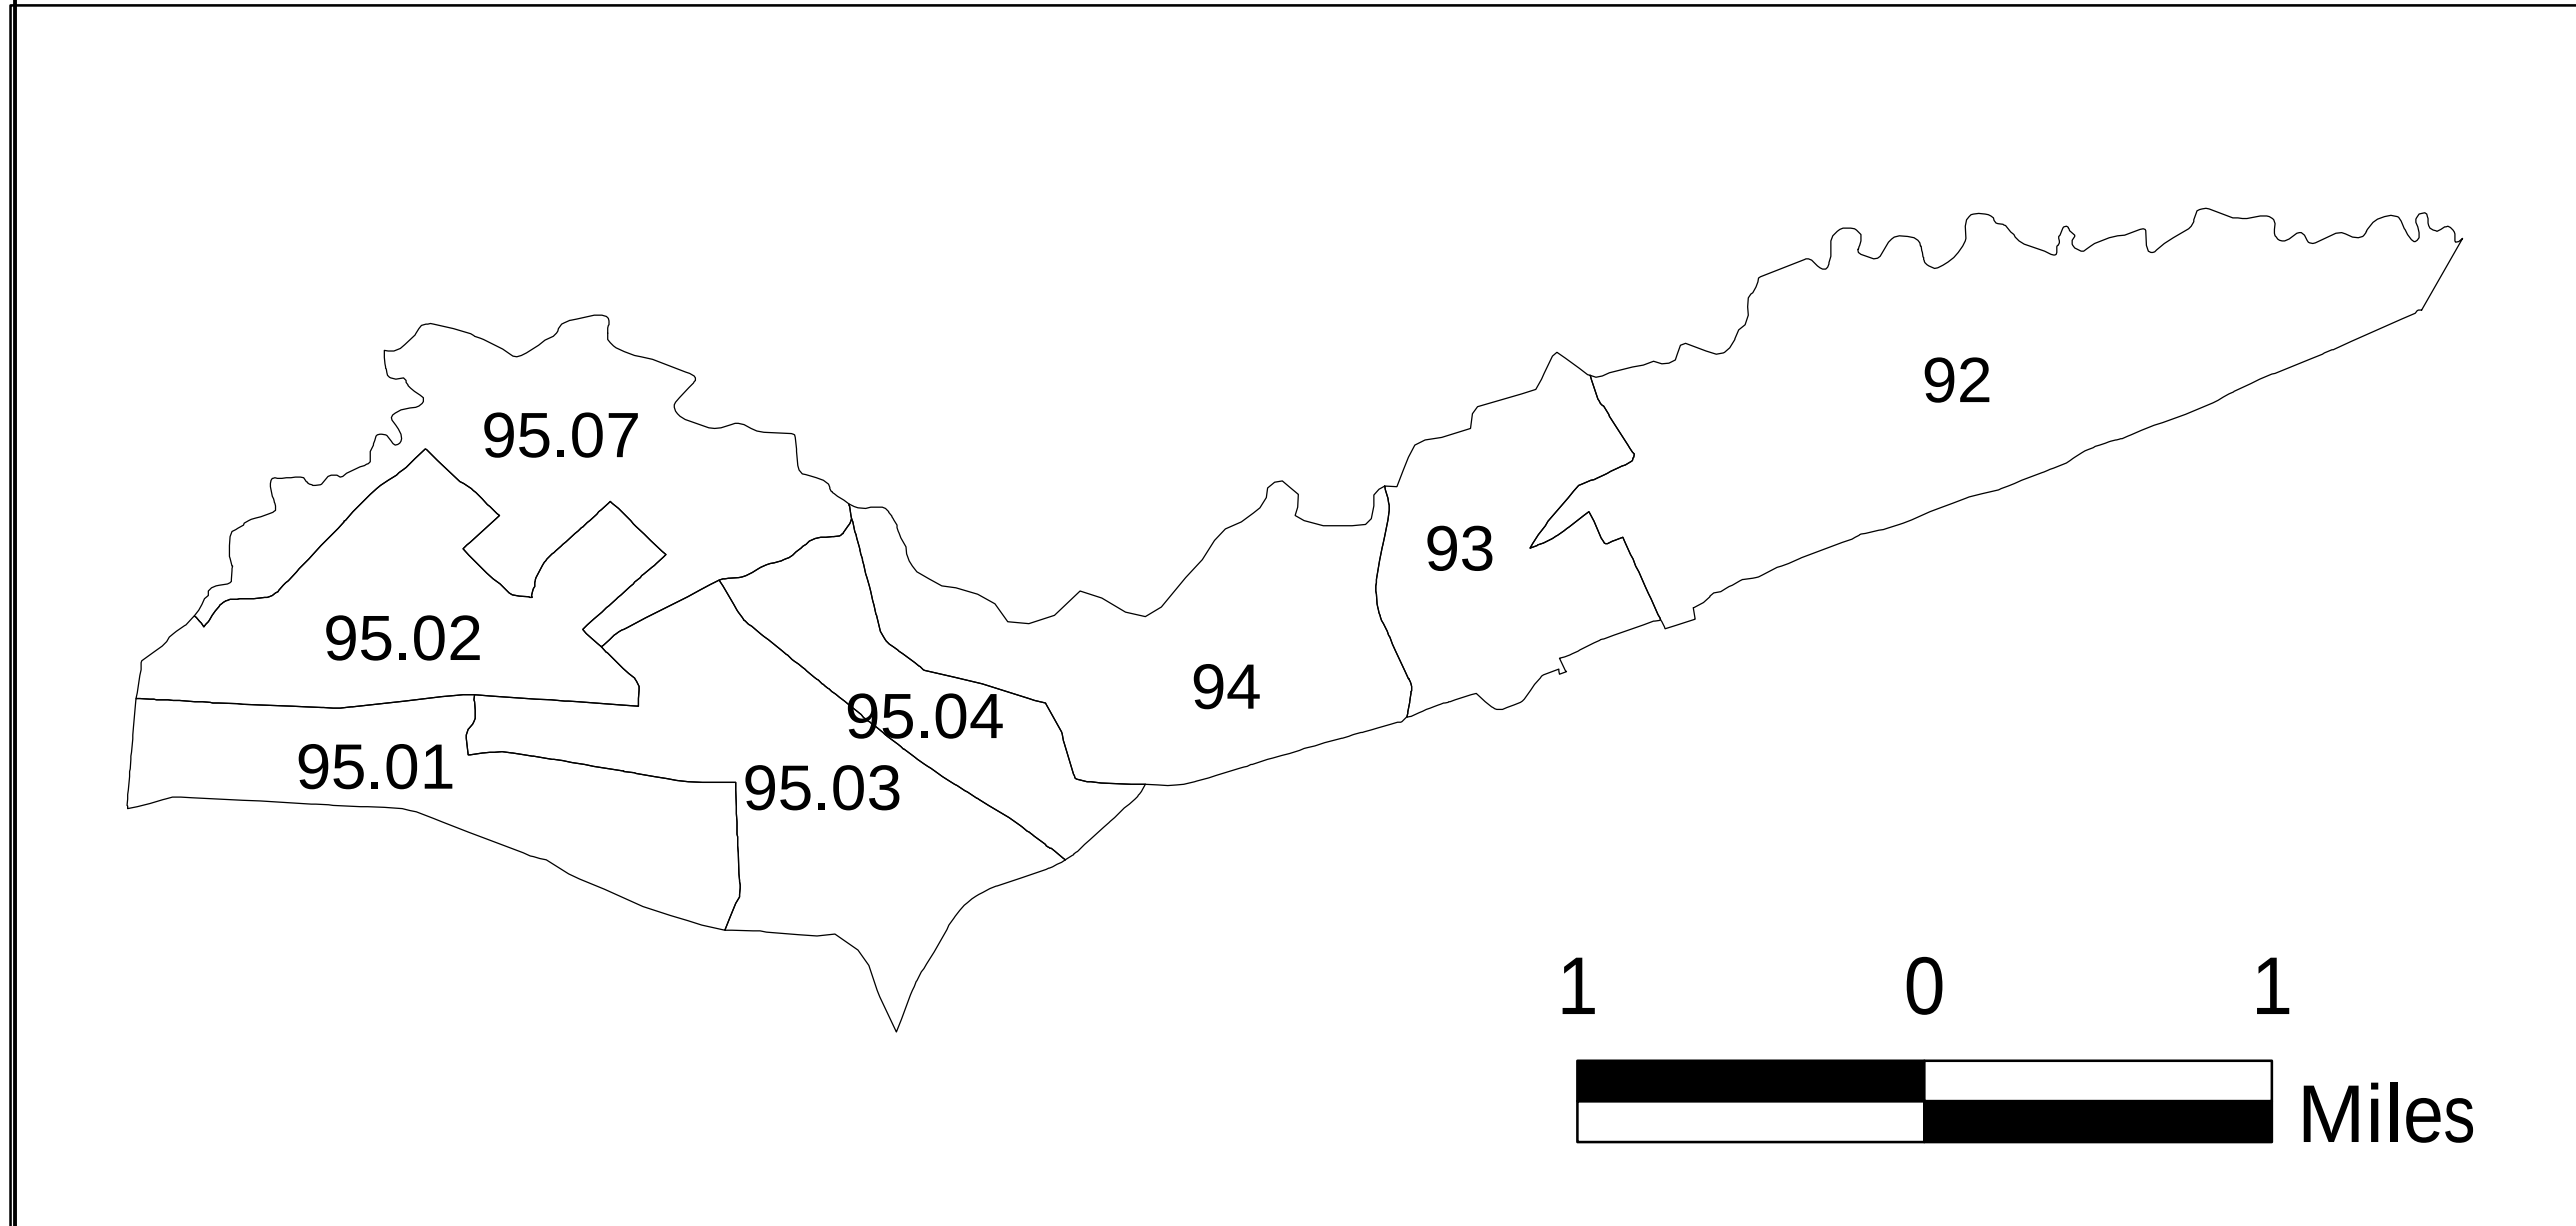

Population and housing unit density are computed by dividing the total population or number of housing units within a geographic entity by the land area of that entity measured in square miles or in square kilometers. Density is expressed as “population per square mile (kilometer)” or “housing units per square mile (kilometer)”.
