Executive Summary

Hawai‘i offers tax incentives to encourage the growth of the film industry in the state through the Motion Picture, Digital Media, and Film Production Income Tax Credit (“film tax credit”). In 2023, the film tax credit program was allocated up to \$50 million in tax incentives. Once the \$50 million aggregate figure has been reached, film productions may claim any excess credits in the subsequent year. This study assesses the film tax credit program from two perspectives: (1) an economy-wide cost-benefit analysis based on gross domestic product (GDP) and earnings; and (2) from the State government cost-benefit perspective as measured by state tax revenues. Earnings are the sum of wage and salary disbursements, supplements to wages and salaries, and proprietors' income. Earnings are embedded in GDP and state taxes are embedded in earnings and GDP. These measures cannot be added up since they are different indicators from different perspectives.

The analyses were based on the granular data collected by Hawai‘i Film Office through the Hawai‘i Production Report (HPR) forms. In 2023, 25 productions qualified and submitted claims for \$37.3 million in film tax credits, with their qualified expenditures amounting to \$168.7 million. Hawai‘i residents received \$56.5 million in wage and salary payments, accounting for 33.5 percent of total qualified expenditures. About 30 percent, or \$51.0 million was spent on wage and salary payments to non-resident cast and crew.

Expenditures on goods and services paid to Hawai‘i-based businesses were \$58.9 million (34.9 percent) of the total qualified expenditures, while out-of-state purchases accounted for 1.3 percent, or \$2.3 million. Out of the \$168.7 million in total qualified expenditures, the total leakage of film production spending is estimated to be \$39.3 million, which is the sum of wage and salary payments to non-resident workers and spending on out-of-state goods and services minus out-of-state workers’ spending in Hawai‘i.

An economy-wide cost-benefit analysis looks at how direct spending by film productions has multiplier impacts throughout the economy and increases earnings and GDP. Meanwhile, it also takes into account the opportunity cost, or the foregone benefits if the amount of the film tax credit were spent on other government projects. The fiscal impact analysis evaluates how the film tax credit results in additional tax revenues and expenditures for the state. These two analyses are conducted under two scenarios.

Production expenditures by category in 2023
(in millions of dollars)

1. Wages & salaries to local workers	\$56.5
2. Wages & salaries to out-of-state workers	\$51.0
3. Spending on goods & services in Hawai‘i	\$58.9
Air travel	\$1.5
Construction	\$1.5
Equipment rentals	\$18.5
Purchase of materials	\$7.7
Warehouse/storage	\$1.0
Business/professional service	\$18.2
F&B catering	\$4.0
Hotel/accommodation	\$4.1
Others	\$2.5
4. Spending on out-of-state goods & services	\$2.3
Total qualified production expenditures	\$168.7

Scenario #1 Assumptions:

1. All of the film productions that received the credit would not have filmed in Hawai‘i in the absence of the tax credit. This assumption illustrates the maximum economic benefit of the film tax credit.
2. Without the film tax credit, the State government would spend the same amount either on capital improvement projects (CIP) or supporting other industries. Given the complexities of state budgets, this study assumes that the State would spend the same amount on CIP.
3. While studies of film-induced tourism and Hawai‘i visitor survey data indicate that filming is influential in drawing visitors to Hawai‘i, these impacts are the result of cumulative years of television and movies filmed in the State. It is likely that television programs and movies filmed in 2023, including productions that did not receive the tax credit, may influence visitors in future years. The impact of television program and movie filming on tourism is not included in this report, however, a study of the cumulative impacts of filming on tourism in 2022 may be found in DBEDT’s report *The Impacts of the Film Industry on 2022 Tourism in Hawai‘i*.¹
4. Out-of-state below-the-line workers stay in Hawai‘i through the entire filming period and their daily spending followed the same pattern as U.S. visitors in 2023.
5. Above-the-line workers’ local expenses – including in-state travel, food, lodging, entertainment, and ancillary expenses – are included in the spending categories of vendor and services.
6. Charitable contributions such as education and workforce development contributions and other non-qualified expenses by film producers are not included in the calculations.

Scenario #2 Assumptions:

1. The redundancy assumption: a portion of the film production expenditures would have occurred even without the tax incentives and are thus subtracted from the calculation of the economic and fiscal impacts. This study assumes that the redundant portion equals 29 percent of the total qualified film expenditures in 2023, or \$48.9 million. This is consistent with the percentage of expenditures that were assumed to be redundant in the film tax credit reports for years 2019, 2021, and 2022.

2-6.: Same as in Scenario #1.

Results:

Indicators	Scenario #1:		Scenario #2:	
	without the redundancy assumption		with the redundancy assumption	
	Net increase	Per dollar tax credit	Net increase	Per dollar tax credit
GDP	\$148.9 million	\$4.00	\$93.1 million	\$2.50
Earnings	\$94.0 million	\$2.53	\$59.8 million	\$1.61
State tax revenues	\$18.6 million	\$0.50	\$13.2 million	\$0.35

I. Introduction

Effective for taxable years beginning January 1, 1997, Hawai‘i enacted tax incentives for motion picture and television film production, creating a 4 percent income tax credit of the costs incurred in the State in the production of motion picture or television films and a 6 percent credit of actual expenditures for transient accommodations². The film tax credit was refundable; in other words, if the tax credit exceeded the taxpayer’s income tax liability, the excess of credits over liability would be refunded to the taxpayer. Since then, Hawai‘i’s film tax credit was codified in section 235-17, Hawai‘i Revised Statutes (HRS), as part of Hawai‘i’s income tax law. In 1999, the film tax credit increased from 6 percent to 7.25 percent of actual expenditures for transient accommodations³.

Several key features of the film tax credit were amended in 2006.⁴ The amendments increased the tax credit to 15 percent of the qualified production costs incurred on Oahu, and to 20 percent of the qualified production costs on the neighbor islands (Hawai‘i Island, Kaua‘i, Lana‘i, Maui, Molokai), effective beginning on July 1, 2006. To qualify for the tax credit, a production was required to have qualified production costs totaling at least \$200,000 and to make reasonable efforts to hire local talent and crew. An \$8 million per production credit cap was set on total tax credits claimed per qualified production. In addition, the tax credit was renamed the Motion Picture, Digital Media, and Film Production Income Tax Credit (“film tax credit”). In 2013, the film tax credit was further raised to 20 percent on Oahu and 25 percent on the neighbor islands.⁵ The per production credit cap was increased to \$15 million. In 2017, a \$35 million annual spending ceiling was also established for the total amount of tax credits that could be claimed in any particular year; once the \$35 million aggregate figure was reached, the excess could be claimed in the subsequent year.⁶ When making a claim for products or services acquired or rendered outside of Hawai‘i, a production is required to provide evidence that reasonable efforts were unsuccessful to procure comparable products or services within Hawai‘i.⁷ The sunset date for the film tax credit was extended to January 1, 2026. On July 10, 2019, Senate Bill 33 became law without Governor’s signature and increased the \$35 million annual rolling cap to \$50 million.⁸ Effective January 1, 2023, the film tax credit was raised to 22% of qualified production costs on Oahu and 27% of qualified production costs on the neighbor islands.⁹ The minimum qualified production cost threshold for a production to qualify for the tax credit was lowered to \$100,000 and the per production tax credit cap was increased to \$17 million. In addition, qualified productions are required to submit a fee of 0.2 percent of the tax credit claimed to DBEDT, which is deposited into the Hawaii film and creative industries development special fund. The sunset date for the tax credit was extended to January 1, 2033.

² See Act 107, Session Laws of Hawai‘i (SLH) 1997.

³ See Act 156, SLH 1998.

⁴ See Act 88, SLH 2006.

⁵ See Act 89, SLH 2013.

⁶ See Act 143, SLH 2017.

⁷ See Section 235-17(d), HRS, for a full list of qualifications.

⁸ See Act 275, SLH 2019.

⁹ See Act 217, SLH 2022.

Act 89, SLH 2013 requires the Department of Business, Economic Development and Tourism (DBEDT), which administers the film tax credit through the Hawai'i Film Office¹⁰, to submit a cost benefit analysis of the tax credit, including but not limited to “(1) the total number of full-time, part-time, and contract personnel on the payroll necessary to administer the motion picture, digital media, and film production income tax credit; and (2) the average wage of each of the above listed personnel groups and total earnings for the year.” The Office of the Auditor further recommended that the Film Office “collaborate with READ¹¹ to identify the specific production information READ needs to prepare a comprehensive cost benefit analysis and/or economic output estimates that account for the different categories of jobs created, salaries and wages of resident and non-resident production hires, and any other relevant information”¹².

The rest of the report is structured as follows. Section 2 describes the film productions' expenditures, employment, and average earnings. Sections 3 and 4 provide the economy-wide cost-benefit analysis of the film tax credit and a Hawai'i State government fiscal impact analysis, respectively. Section 5 concludes.

¹⁰ The Department of Taxation (DoTAX) and DBEDT, through its Hawai'i Film Office, are jointly responsible for the administration and implementation of the film tax credit program in the state.

¹¹ Research & Economic Analysis Division, Department of Business, Economic Development & Tourism.

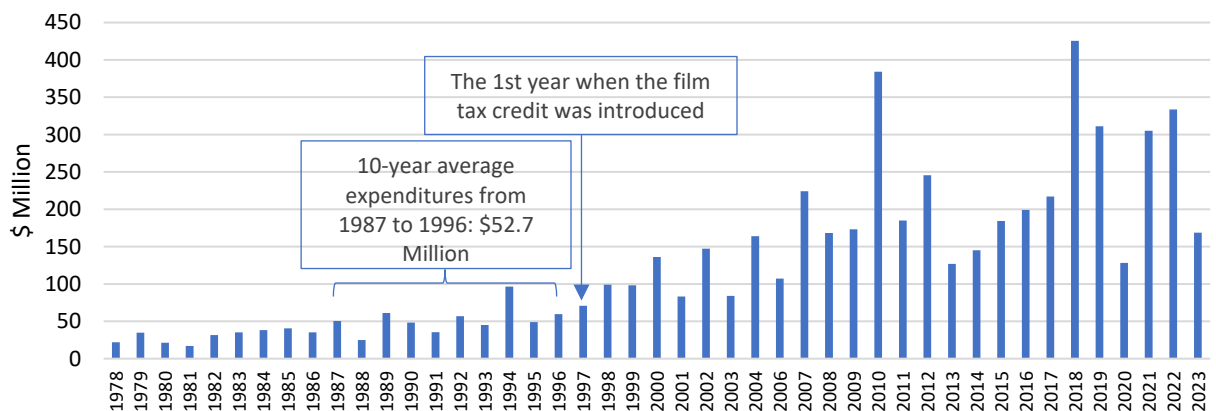

¹² Office of the Auditor. (2016, November). *Audit of Hawai'i's Motion Picture, Digital Media, and Film Production Income Tax Credit: A Report to the Governor and the Legislature of the State of Hawai'i* (Special Report No. 16-08).

II. Film Productions’ Expenditures and Employment

This report relies on the granular data collected by Hawai‘i Film Office through the Hawai‘i Production Report (HPR) forms. In order to claim the tax credit, film productions are required to submit the HPR forms after qualified production costs were expended. The HPR form is completed on a calendar year basis and includes qualified production costs incurred during the calendar year.¹³ After reviewing the HPR form DBEDT sends a certification letter, with which the film production files corporate income tax returns and film credit forms with the Department of Taxation. The Department of Taxation may audit and adjust the tax credit amount to conform to filed information. As such, the amount of expenditures reported on the HPR form may not be the same as the final amount of tax credits received by the film production in the form of reduced income tax or refund. Nevertheless, to the extent that these reported expenditures are close to the final certified amount and that they were already expended and thus made impacts on the state’s economy, this report terms the reported amount on the HPR forms as “qualified expenditures.” The first year for which granular data of film productions’ expenditures became available was 2019.

Hawai‘i qualified expenditures of film productions and claimed tax credits

Figure 1. Hawai‘i film production expenditures: 1978 – 2023

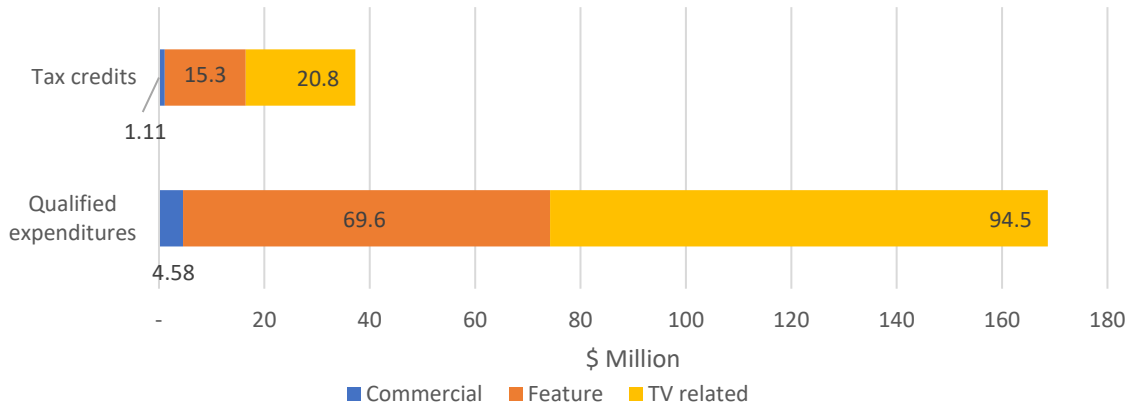

Source: DBEDT, Hawai‘i State Data Book, Hawai‘i Film Office’s annual reports to the Legislature.

Before the film tax credit was introduced in 1997, Hawai‘i film production expenditures remained under one hundred million dollars, with the 10-year average of expenditures from 1987 to 1996 at only \$52.7 million. The annual production expenditures began to take off after 1997; and the film industry’s growth accelerated when the tax credit was significantly increased in 2006. Since then, the film production expenditures generally maintained a fluctuating but steady growth and peaked at \$425.5 million in the year of 2018.

¹³ If a film production spans two or more years, all filings and expenditures must be submitted by the calendar year in which they were expended.

According to the granular data of the HPR forms, 25 productions qualified for the film tax credit in 2023. With qualified expenditures totaling \$168.7 million, the total amount claimed for the tax credit is \$37.3 million. About 56.0 percent of expenditures were spent by television related programs and 41.3 percent were spent by feature films. The ratio of claimed tax credit to qualified expenditures was 22.1 percent on average, ranging from 22.0 percent to 24.3 percent across the types of productions.

Figure 2. Total qualified expenditures and film tax credits claimed by production type in 2023

	Qualified expenditures (\$ Million)	Tax credits (\$ Million)	Ratio of tax credits to qualified expenditures	Count
Commercial	4.58	1.11	24.3%	8
Feature Film	69.6	15.3	22.0%	8
TV related	94.5	20.8	22.0%	9
All productions	168.7	37.3	22.1%	25

As shown in Figure 3, filming for productions that claimed tax credits in 2023 is largely concentrated on Oahu. Almost 98 percent (\$36.4 million) of the tax credits claimed are for productions that filmed on Oahu. In contrast, productions that filmed on the neighbor islands claimed \$0.9 million of tax credit altogether.

Figure 3. Total Hawai‘i qualified expenditures and claimed tax credits by island in 2023 (in Millions of dollars)

Qualified film production expenditures consist of wages and salaries to cast

and crew, as well as spending on goods and services. Under Hawai‘i law, film production expenditures do not have to be payments to Hawai‘i residents or purchases from Hawai‘i-based businesses in order to qualify for the film tax credit. As long as payments and purchases are subject to Hawai‘i income or general excise tax and are directly associated with a Hawai‘i-based production, they are considered as Hawai‘i spending and eligible for the 22% - 27% film tax credit. To the extent that out-of-state spending has very different economic impacts than expenditures paid to Hawai‘i residents and businesses, it is important to distinguish those out-of-state costs. This distinction is critical to establish a spending base for the following impact analyses.

As shown in Figure 4, about 30.2 percent of total qualified expenditures, or \$51.0 million was spent on wage and salary payments to non-resident cast and crew. Hawai‘i residents received \$56.5 million, accounting for 33.5 percent of total qualified expenditures. The majority of expenditures on goods and services, \$58.9 million, or 34.9 percent of production expenditures, were paid to Hawai‘i-based businesses, while out-of-state purchases only accounted for 1.3 percent, or \$2.3 million. Altogether the total spending on wage payments to non-residents and out-of-state goods and services amounted to 31.6 percent of total qualified spending. This percentage is relatively low compared with other states.

Figure 4. Composition of qualified film production expenditures in 2023
(in Millions of dollars)

Wages & salaries	Hawai'i Residents	Non-Residents	Total
	56.5	51.0	107.5
Goods & services	Hawai'i businesses	Out-of-state businesses	
	58.9	2.25	61.1
Total	115.4	53.3	168.7

Qualified expenditures on goods and services

Table 1 shows the breakdown of qualified production expenditures on goods and services, with in-state and out-of-state purchases reported separately. Not surprisingly, almost all expenditures on warehouse/storage, food and beverage, catering, and accommodations were incurred locally. All air travel expenditures were also incurred locally. The two categories with the lowest ratios of Hawai'i in-state purchases were material purchases (87.4 percent) and other (91.2 percent). Substitutes for certain equipment or materials may be more difficult to source locally and may have had to be imported. That said, over 85 percent of purchases in these categories were from Hawai'i businesses, and overall imports and out-of-state purchases only comprised 3.7 percent of total production expenditures on goods and services.

It noteworthy that for highly compensated actors, directors, producers, writers (above-the-line personnel), and their staff, local expenses – including in-state travel, food, lodging, entertainment, and ancillary expenses – are likely to be included in the production expenditures on goods and services. This is an important factor to estimate the local spending of these out-of-state workers in order to gauge the level of the actual spending added to the local economy and to determine a spending base for the impact analyses later.

Table 1. Production expenditures on goods and services by category in 2023 (in thousands of dollars)

	Hawai'i businesses		Out-of-state businesses		Total	% of total	Ratio of Hawai'i purchase
Air travel	1,450	2.5%	-	0.0%	1,450	2.4%	100.0%
Construction	1,466	2.5%	55	2.4%	1,521	2.5%	96.4%
Equipment rentals	18,519	31.4%	473	21.0%	18,992	31.1%	97.5%
Purchase of materials	7,726	13.1%	1,114	49.5%	8,840	14.5%	87.4%
Warehouse/storage	962	1.6%	-	0.0%	962	1.6%	100.0%
Business/professional Service	18,197	30.9%	367	16.3%	18,563	30.4%	98.0%
F&B/catering	3,992	6.8%	4	0.2%	3,995	6.5%	99.9%
Hotel/accommodations	4,101	7.0%	-	0.0%	4,101	6.7%	100.0%
Other	2,484	4.2%	239	10.6%	2,724	4.5%	91.2%
Total paid out:	58,897	100.0%	2,251	100.0%	61,148	100.0%	96.3%

Qualified expenditures on wage and salary payments

Figure 5. Production expenditures on wage and salary payments by category in 2023 (in Millions of dollars)

	Above the Line			Below the Line			Total		
	Hawai'i Residents	Non-Residents	Hawai'i ratio	Hawai'i Residents	Non-Residents	Hawai'i ratio	Hawai'i Residents	Non-Residents	Hawai'i ratio
1099 Contractors	0.1	7.5	1.9%	0.7	0.6	56.7%	0.9	8.1	9.8%
W2 employees	5.2	23.3	18.1%	50.5	19.6	72.0%	55.7	42.9	56.4%
Total Paid Out:	5.3	30.8	14.7%	51.2	20.2	71.8%	56.5	51.0	52.6%

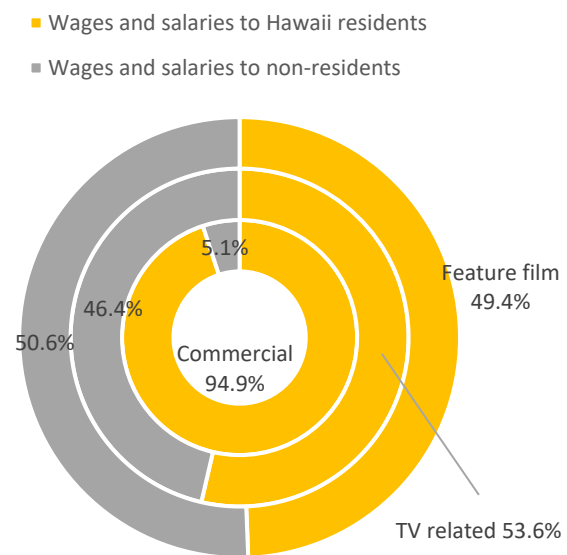

Payroll of a film production is divided into “above-the-line” and “below-the-line.” Above-the-line (ATL) workers include directors, producers, writers, and principal cast; below-the-line (BTL) workers refers to the rest of the crew. In 2023, wages and salaries paid to Hawai'i resident cast and crew were \$56.5 million, almost 53 percent of the total wage payments. However, looking at the above-the-line workers, which is the highest-compensated group, Hawai'i

residents only received about 15 percent, or \$5.3 million, of total above-the-line wage payments, while non-residents received \$30.8 million of above-the-line wages and salaries. This is not surprising as above-the-line positions are highly skilled and it would be difficult to find local substitutes. ATL personnel also often provide training and mentoring opportunities for Hawai‘i residents so that local residents can advance in their fields of expertise.

Another way to categorize payroll cost production expenditures is by employees who are employed directly by the production company and issued traditional W2s, and independent contractors who use a 1099 form. Contractors earned a very small portion of wages and salaries, only \$9.0 million in total. Of that amount, 7.5 million, or 83.3 percent, went to non-resident above-the-line contractors. In contrast, about \$98.6 million of wages and salaries were earned by W2 employees, 56.4 percent of which went to Hawai‘i residents. Of all the W2 above-the-line wage and salary payments, 18.1 percent were earned by Hawai‘i residents, while 72.0 percent of all W2 below-the-line wage payments went to Hawai‘i residents. It is not clear how many full-time jobs the W2 payroll supported. Due to the short-term nature of most film projects, a substantial number of part-time jobs are likely on the W2 payroll.

Ratios of wages and salaries paid to Hawai‘i residents and to non-residents vary significantly across production types. For feature films, 49.4 percent of total wage payments went to Hawai‘i residents; for television-related programs, 53.6 percent of payments went to residents. For other types of productions, including commercials, short films, music videos, etc., 94.9 percent of wage payments were paid to Hawai‘i residents. Feature film productions, which tend to be more heavily dependent on out-of-state cast and crew, are more likely to come to Hawai‘i for the film tax credit.

Figure 6. Wage and salary payments by category and by production type in 2023

“Commercial” also includes short-film documentaries, music videos, etc.

Hiring of film productions

Figure 7 shows the number of Hawai‘i resident and non-Hawai‘i resident hires by category, such as above-the-line directors, producers, writers, and principal cast; talent, including supporting cast and extras; department heads and keys; and other below-the-line crew. In 2023, film productions supported 9,168 jobs in total, 84.8 percent of which were filled by Hawai‘i residents. Out of that 84.8 percent, or 7,770 Hawai‘i resident jobs, 1.4 percent, or 109, were in the above-

the-line category; by contrast, 281 above-the-line jobs were filled by non-residents. Hawaii residents filled 66.3%, or 250, of the department heads and keys positions. Local hires of supporting cast and extras were predominantly more than out-of-state hires: 90.7 percent of supporting cast and extras, or 4,279 jobs were filled by Hawai‘i residents.

Figure 7. Hawai‘i resident and non-resident hires by category in 2023 (in number of jobs)

	Hawai‘i residents	Non-residents	Hawai‘i ratio
1. Above-the-line (directors, producers, writers, principal cast)	109 1.4%	281 20.1%	27.9%
2. Talent (supporting cast and extras only)	4,279 55.1%	438 31.3%	90.7%
3. Department heads and keys	250 3.2%	127 9.1%	66.3%
4. Below-the-line crew (excluding line 2 & 3)	3,132 40.3%	552 39.5%	85.0%
Total	7,770 100.0%	1,398 100.0%	84.8%

Table 2 further breaks down the number of local and out-of-state hires by department and ranks jobs by the ratio of Hawai‘i residents. Jobs with the smallest ratio of Hawai‘i residents were in post-production (16.7% of jobs held by Hawai‘i residents) and producers, directors, and writers (25.3% of jobs held by Hawai‘i residents). While resident hires were in the minority, the percentages of residents hired in these categories improved compared to 2022 (7.5% of post-production jobs held by Hawai‘i residents and 13.2% of producer, director, and writer jobs held by Hawai‘i residents). At the other end, jobs filled 90 percent or more by Hawai‘i residents were in stand-ins, medic, electric, extras, grip, set decoration, transportation, and sound. Despite the lack of information on the compensation rates of detailed jobs, it appears that most jobs with a higher ratio of Hawai‘i residents tend to be lower paying jobs, and vice versa.

It is important to note that these job figures count each employee, regardless of the number of hours worked. Employment in film productions includes full-time, part-time, permanent and seasonal employees and the self-employed, and one employee may work on multiple productions. Without knowing the hours worked, the job count gains will tend to overstate the

actual economic impact to the State in terms of job creation. For example, according to Table 2, 3,830, or about 49.3 percent of local jobs were production extras, whose impact on state employment may be relatively insignificant.

Table 2. Hawai‘i resident and non-resident hires by department in 2023 (in number of jobs)

	Hawai‘i residents	Non-residents	Hawai‘i ratio		Hawai‘i residents	Non-residents	Hawai‘i ratio
Post-Production	10	50	16.7%	Stand-Ins	26	0	100.0%

TOTAL					7,770	1,398	84.8%

No Game/Software Developer positions were reported in 2023.

Length of production duration by stage

Information about duration of production offers a glimpse into the features of production jobs in Hawai‘i and establishes a base to estimate Hawai‘i spending by out-of-state employees. The average duration for productions that qualified for the film tax credit, including all stages of production, in 2023 was 105.8 days, while the average shoot period lasted 23.0 days. This compares to an average duration of 156.8 days in 2022 with an average shoot period of 42.4 days. The shorter durations in 2023 compared to 2022 are driven in part by the increased share of commercials in 2023 (32.0 percent of all productions in 2023 compared to 11.5 percent of all productions in 2022) which tend to have shorter production periods, including shoot days, compared to other types of productions such as television series or feature films. The shoot period is the stage when most personnel are employed, especially for out-of-state workers who come to Hawai‘i for the purpose of filming. By multiplying the number of out-of-state workers by the production’s shoot days, an estimate of total visiting days of out-of-state workers can be obtained, which forms the basis to calculate their spending in Hawai‘i.

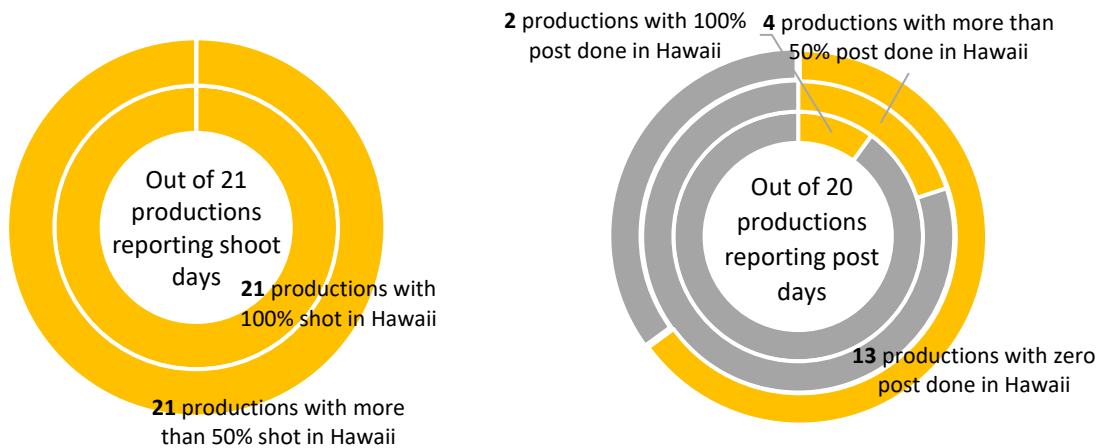

Table 3. Production duration by stage

	Total	Average ^{1/}	Shortest	Longest
Pre-Production Days	955	43.4	3	234
Shoot days	483	23.0	1	88
Wrap days	294	14.7	0	69
Post days	914	83.1	1	325
Entire duration (all stages)	2,646	105.8		

1/ Of the 25 productions that qualified for the tax credit in 2023, 22 reported pre-production days, 21 reported shoot days, 20 reported wrap days and 20 reported post-production days.

Out of 25 productions that qualified for the tax credit in 2023, 21 reported shoot days.¹⁴ Each of those 21 productions reported filming their projects completely in Hawai‘i. In contrast, only four productions had more than 50 percent of post-production in Hawai‘i; two of the four productions completed 100 percent their post-production in Hawai‘i. Of the 20 productions reporting post-production days, 13 productions did post-production completely outside of Hawai‘i. On average, productions filmed 100 percent of their work in Hawai‘i but only 7 of the 20 productions reporting post days (35.0 percent) did post-production work in Hawai‘i.

Figure 8. Number of productions with filmed and completed post-production in Hawai‘i

Average earnings of the film production jobs incentivized by the film tax credit

A key component to evaluate the benefits of the film tax credit is the average earnings of film production jobs which were incentivized by the tax credit. Average earnings are calculated as the ratio of total wage and salary payments to the number of jobs for each category. Average earnings of local above-the-line jobs were \$48,620, which is much lower than the average

¹⁴ Some productions, for example, may have only been in pre-production and may not have started shooting in 2023.

earnings of non-resident above-the-line jobs at \$109,781. Average earnings of below-the-line jobs were much lower, at only \$18,054 for non-residents and \$6,688 for Hawai‘i residents.

Table 4. Average earnings by residency in 2023

	Hawai‘i Residents			Non-residents		
	Jobs	Wages (\$ Million)	Average earnings (\$)	Jobs	Wages (\$ Million)	Average earnings (\$)
Above-the-line	109	5.3	48,620	281	30.8	109,781
Below-the-line	7,661	51.2	6,688	1,117	20.2	18,054
Total	7,770	56.5	7,276	1,398	51.0	36,491

As noted above, on average, each production ran 105.8 days and the filming period only lasted for 23.0 days (Table 3). The majority of below-the-line jobs are short-term or temporary jobs, which do not last throughout the entire production duration; for example, 45.7 percent of below-the-line jobs are extras, which may be on-site for a few days, if not hours. If employment is measured on a job-count basis regardless of the number of hours worked, the actual impact on employment is likely to be overstated and the estimate of average earnings will tend to be biased significantly downward.

III. An Economy-Wide Cost-Benefit Analysis of the Film Tax Credit

When assessing the benefits, or the economic impacts of the film tax credit, this study evaluates how much economic activity is created due to the production spending induced by the tax credit. Film and television production, for example, require expenditures to be made on a variety of goods and services, including cast and crew, production facilities, equipment rental, catering, etc. This initial "direct" spending will in turn stimulate so-called "indirect" impacts through the supply chain. For example, when the production companies spend money on catering, catering companies make purchases across the supply chain of the food service industry. In addition, payments to employees increase personal income and spending, resulting in additional "induced" impact. For instance, wages paid to a supporting actress are spent to purchase food, housing, apparel, etc. Those expenditures in turn become wages in another layer of economic activity, where they are spent again. Total impacts, or the sum of direct, indirect, and induced impacts, are measured by multipliers. The multiplier represents the proportional change of total economic activity generated by an injection of new spending. The multipliers used in this report are from The Hawai‘i State Input-Output Study: 2017 Benchmark Report¹⁵. Type II final demand multipliers measure the total impacts.

The film industry is a very mobile industry and can relocate production or parts of production easily. The film tax credit offsets 22 to 27 percent of the qualified film production costs and thus is an important consideration for film productions to choose to film in Hawai‘i. However, there are many other factors influencing production companies’ location decisions, such as availability of studio space, the quality and supply of workers, climate, and appropriate scenery. Some productions may still choose to film in Hawai‘i even in the absence of the tax credit. To gauge

¹⁵ DBEDT. (2020, December). *The Hawaii State Input-Output Study: 2017 Benchmark Report*.

the impact of the tax credit, this study is conducted under two scenarios. The first scenario assumes that *all* of the film productions that received the credit would not have filmed in Hawai‘i in the absence of the tax credit. Under this assumption, the film production expenditures represent new spending in the State, so this assumption illustrates the maximum economic benefit of the film tax credit. The second scenario uses an estimate of the portion of production expenditures which would have occurred even without the film tax credit, or the so-called redundant film production expenditures. This study assumes 29 percent of the total qualified expenditures, or \$48.9 million, as the redundant portion and subtracts this amount from the alternative impact analysis. This is consistent with the percentage of redundant expenditures assumed in DBEDT’s film tax credit reports for years 2019, 2021, and 2022.¹⁶

It is important to note that the multiplier gives no thought to any activity outside of the local economy; it only measures additional demand generated by new spending *within* a region. Therefore, expenditures made outside the region are considered a “leakage” and do not contribute to the multiplier effect. As shown in Figure 4, 31.6 percent of film production spending was paid to non-Hawai‘i cast and crew, as well as to out-of-state businesses. Non-resident talent are not likely to spend the majority of their earnings in Hawai‘i; payment on imports and to out-of-state businesses do not cycle back through the Hawai‘i economy, however productions must prove that the Use Tax is paid to the State of Hawai‘i to qualify any imported goods or services brought to the state for production if they cannot be procured locally. As such, not making the distinction between out-of-state and in-state spending will overstate the benefits of the film tax credit. In the analysis below, efforts are made to evaluate the impacts of out-of-state spending separately.

In this report, the costs and benefits of the film tax credit are evaluated by two measures: gross domestic product (GDP) and earnings. Earnings are the sum of wage and salary disbursements, supplements to wages and salaries, and proprietors’ income. As earnings are embedded in GDP, these two measures cannot be added; they are different indicators from different perspectives. For non-resident workers, only their spending in Hawai‘i is included in calculating the economic impacts.

Benefits of the Film Tax Credit

Section A of Table 5 and Table 7 summarize all of the economic benefits of the film tax credit in terms of state GDP and earnings.

¹⁶ For these years, redundant expenditures were assumed to be the 10-year average of expenditures between 1987 and 1996, prior to the enactment of film tax credit, adjusted for inflation. The percentage of redundant expenditures to total expenditures was 28 percent for year 2019 expenditures (\$87.0 million/\$311.2 million), 30 percent for year 2021 expenditures (\$91.7 million/\$305.0 million), and 29 percent for year 2022 expenditures (\$97.6 million/\$333.7 million). The redundancy assumption was not used in the film tax credit report for year 2020, the starting year of the COVID-19 pandemic.

Net GDP generated by \$1 of tax credit	\$4.00	\$2.50

1/ The redundancy assumption means that the portion of film production expenditures which would have occurred even in the absence of the film tax is subtracted from the calculation of the impacts. This portion is estimated to be \$48.9 million.

2/ Assuming 86 percent of local workers' income derived from working in film production were spent based on the estimate in the 2017 Hawai'i State Input-Output model.

3/ Assuming the State would spend the same amount on CIP projects.

Shaded areas indicate the components of benefits/costs.

Wages and salaries paid to local workers

As shown in Figure 5, film productions' total wage and salary payment to local workers in 2023 amounted to \$56.5 million. As part of this amount of income was spent in the local economy, it increased GDP by \$47.7 million, or by \$20.7 million if measured by earnings (section A1).

Hawai'i spending of out-of-state workers while filming in Hawai'i

As discussed earlier, the economic benefit of film productions' wage and salary payments to non-resident workers is limited by the fact that only a portion of their income was spent on Hawai'i's economy. As this portion is not reported on the HPR form, this study assumes that out-of-state workers stay in Hawai'i through the entire shooting period and that their daily spending followed the same pattern as U.S. visitors in 2023. This may be an upper bound of out-of-state workers' spending in Hawai'i for two reasons. First, not all out-of-state workers stayed through the entire shoot period. Secondly, to the extent that their expenses were included in vendor or services, their spending while working in Hawai'i would be overestimated. Thus, this study only accounts for the shoot days of non-resident below-the-line workers, as it is more likely that above-the-line workers' local expenses – including in-state travel, food, lodging, entertainment, and ancillary expenses – are already included in the film production budget. As shown in section A2 of Table 5, out-of-state workers' spending in Hawai'i is estimated to be \$14.0 million. This amount of spending generated an additional \$15.5 million of state GDP or \$7.1 million of earnings.

The total leakage of film production spending is the sum of wage and salary payments to non-resident workers and spending on out-of-state goods and services minus out-of-state workers' spending in Hawai'i. Using the estimate of out-of-state workers' local spending, total leakage of film production is estimated at \$39.3 million or 23.3 percent of the total production expenditures. See Table 6.

Table 6. Estimate of production spending leakage
(in millions of dollars)

Wage payments to out-of-state workers	51.0
– Out-of-state below-the-line workers' spending in Hawai'i	14.0
Spending on out-of-state goods or services	2.3
Total leakage	39.3

Production spending on goods and services in Hawai'i

To get a more accurate estimate of the multiplier impacts of production spending on goods and services in Hawai'i, generated state GDP and earnings are estimated by each spending category (section A3). Goods and services spending for each spending category is obtained from Table 1. Total generated state GDP and earnings from production spending on all goods and services in Hawai'i amounted to \$70.9 million and \$33.6 million respectively.

Shaded areas indicate the components of benefits/costs.

Hawai'i Film Office spending on managing the film tax credit

The film tax credit is administered through the Hawai'i Film Office situated in DBEDT's Creative Industries Division. Total payroll costs of Film Office employees who manage the film tax credit are estimated to be \$0.19 million, are used. This amount of income increased state GDP by \$0.16 million or earnings by \$0.07 million.

Altogether, total economic benefits of the film tax credit were \$190.7 million in additional state GDP or \$117.9 million in additional earnings. This is a conservative estimate as it does not include the economic impact of film-induced tourism. It is documented in the literature that major motion pictures are influential in drawing tourists to the locations where they are filmed. In a seminal 1998 study, Riley, Baker, and Van Doren found that the effect of the motion pictures was to increase tourist visits to the sites, on average, by 40 to 50 percent for at least four years following release. Hudson & Ritchie (2006) studied over thirty movies and found that the visitor numbers could increase by up to 300 percent after release.¹⁷ Based on survey findings, HR&A Advisors, Inc. (2015) estimated that 14.5 percent of Louisiana visitors can be considered film-induced tourists. MNP, LLP (2013) assumed 5 to 19.5 percent of visitors to Florida are influenced in whole or in part by film and/or television.¹⁸ MNP, LLC (2016), in a study prepared for the State of New Mexico, estimated that between 5 to 13 percent of total visitor spending in New Mexico in 2014 was attributed in whole or in part to film induced tourism.

While studies of film-induced tourism and Hawai'i visitor survey data indicate that filming is influential in drawing visitors to Hawai'i, these impacts are the result of cumulative years of television and movies filmed in the State and may include productions that did not receive film tax credits. As such, the impact of television program and movie filming on tourism cannot be assigned to a particular year of filming or film tax credits and is not included in this report.¹⁹ Charitable contributions and other non-qualified expenses by film producers are not included in the calculations.

Costs of the Film Tax Credit

If the amount of the film tax credits were not spent on film productions but on some other government projects instead, would this additional government spending have generated more economic benefit? This foregone benefit is the "opportunity cost" of the film tax credit. However, given the complexities of state budgets and the numerous factors that affect revenue and expenditures, it is quite difficult to identify the actual opportunity cost. Therefore, this study

¹⁷ This is the case with *Braveheart* filmed in Scotland.

¹⁸ The HR&A Advisors (2015) study was prepared for the Louisiana Film and Entertainment Association and the Motion Picture Association of America (MPAA). The MNP, LLP (2013) study was prepared for the MPAA, with supplementary report that contained revised estimates of film induced tourism based on a visitor survey by Visit Florida. The supplementary report was prepared by MNP, LLP for the Florida Department of Economic Opportunity.

¹⁹ The cumulative impact of filming on tourism in 2022 can be found in DBEDT's report *The Impacts of the Film Industry on 2022 Tourism in Hawai'i*. It is likely that television programs and movies filmed in 2023 may influence visitors in future years.

simply assumes that the amount of tax credits would have been spent on the state's Capital Improvement Projects (CIP) fund.

The costs include the \$37.3 million in tax credit claimed by film producers, less the fee collected from qualified productions (equal to 0.2 percent of the claimed tax credits). It is also assumed that \$0.19 million was spending by the Film Office to manage the film tax credit. The total cost amounted to \$37.4 million. If this \$37.4 million were not spent on the state's CIP fund to improve highways, airports, harbors, or public-school facilities, the lost GDP would be \$41.9 million and lost earnings would be \$23.9 million.

Combining both the benefits and costs, the net benefits of the tax credit were \$148.9 million in increased state GDP or \$94.0 million if measured by earnings. In other words, one dollar spent on the film tax credit generated \$4.00 of state GDP, or \$2.53 of earnings. The last columns of Table 5 and Table 7 recalculate the benefits under the redundancy assumption that \$48.9 million of film production expenditures would have occurred regardless the film tax credit being in place. In that scenario, one dollar spent on the film tax credit is estimated to generate \$2.50 of state GDP, or \$1.61 of earnings.

IV.A Fiscal Impact Analysis of the Film Tax Credit

Film productions not only generate additional state GDP and earnings, but they also create tax revenue for the state government. At the same time, the funding of the film tax credit, the administration of the credit, as well as the cost of public services for non-resident film workers, all create additional cost to the state government. In this section, the fiscal impact analysis evaluates how the film tax credit results in additional tax revenues and expenditures for the state.

State Revenues from the Film Productions

When Hawai'i local workers receive earnings from film productions, when producers purchase goods and services in Hawai'i, and when out-of-state workers spend on the local economy, these new activities generate tax revenues for the state government. The magnitude of these state revenue changes is measured by state tax multipliers, which include individual income tax, GET, TAT, and other state taxes. While the indirect impact of out-of-state spending through the Hawai'i economy is prevented, out-of-state spending still generates tax revenues to the state government. Compensation of out-of-state workers is subject to Hawai'i income tax, because income taxes are paid in the state where they are earned, regardless of whether or where they are spent saved. Similarly, production spending on imports and out-of-state businesses is subject to Hawai'i Use Tax. Each source of these additional tax revenues is discussed in order (Table 8).

Wages and salaries paid to out-of-state workers

Out-of-state workers contribute to state tax revenues in two ways. First, when they spend part of their income while filming in Hawai'i, their spending generates state tax revenues in the same way as U.S. tourists do. Second, out-of-state workers' earnings are subject to Hawai'i state income tax. Combining the two, the state tax revenues generated from out-of-state workers was \$4.6 million (section A2).

Net state tax revenues/spending = A – B – C – D	-19.08	-24.47
State tax revenues generated by \$1 of tax credit	\$0.50	\$0.35

1/ The redundancy assumption means that the portion of film production expenditures which would have occurred even in the absence of the film tax credit is subtracted from the calculation of the impacts. This portion is estimated to be \$48.9 million.

2/ Assuming 86 percent of local workers' income derived from working in film production was spent based on the estimate in the 2017 Hawai'i State Input-Output model.

Shaded areas indicate the components of benefits/costs.

Wages and salaries paid to local workers

Film productions' wage and salary payment to local workers amounted to \$56.5 million. This amount of earnings was subject not only to income tax, but also to GET tax and other state taxes when part of Hawai'i workers' earnings that are spent in the local economy. The state tax revenue generated was estimated to be \$7.1 million (section A1).

Production spending on goods and services in Hawai'i

Similarly, as in the cost-benefit analyses of production spending on goods and services, generated state tax revenue is estimated by each spending category (section A3). Total generated tax revenues from production spending on all goods and services in Hawai'i amounted to \$6.9 million.

Production spending on imports and out-of-state services

Despite not contributing to the earnings, production spending on imports and out-of-state services are subject to state Use Tax, at the rate of 0.5 percent. The \$2.3 million of out-of-state spending generated \$0.01 million of tax revenues.

Hawai'i Film Office spending on managing the film tax credit

The \$0.19 million of total payroll costs of Film Office employees who manage the film tax credit also generated state tax revenues, which are estimated to be \$0.01 million.

Taking all these together, total state tax revenues generated by film productions amounted to \$18.6 million.

State Spending on the Film Tax Credit

The State spent \$37.3 million on the film tax credit claimed by film producers, less the fee collected from qualified productions (equal to 0.2 percent of the claimed tax credits). There is an administration cost of the tax credit through the Hawai'i Film Office, which is estimated to cost the State \$0.19 million. There is also a cost to the state when production companies film in Hawai'i and consume public services. Highways, police and fire protection, natural resources, parks, and other public services consumed by film production are not free. The cost to state government come primarily in the form of increased use of infrastructure and services²⁰. Appendix C describes how to measure the cost of providing various public services.

The estimate of state government expenditures on public services consumed by film productions is \$0.28 million. Overall, the film productions which claimed the film tax credit in 2023 cost the state government \$37.7 million.

²⁰ This additional spending on infrastructure and public services due to out-of-state film workers' visit also generates economic benefits, as the state would invest more in highways, airports, public safety, etc. However, this portion of economic benefits is excluded from our cost-benefit analysis, because if this additional spending were not used for infrastructure or public services for the above purpose, then the state would spend the money on infrastructure or services for other purposes, which would also generate economic benefits. Therefore, this additional government spending has an opportunity cost equal to its benefit and the two cancel each other out.

Net State Spending on the Film Tax Credit

On a revenue basis, film production activities generate state tax revenues to partially offset the cost of the tax credits, but the impact of those offsets did not result in a net increase in revenue to the State. In 2023, the \$37.7 million of tax credits and associated state expenditures was estimated to have been offset by an increase in tax revenues of \$18.6 million, leaving the State with a net revenue loss of \$19.1 million. The Return on Investment (ROI) rate of Hawai‘i’s film tax credit was estimated to be \$0.50 per dollar of tax credit. In other words, one dollar of Hawai‘i’s film tax credit generated 50 cents of state tax revenues in 2023. Under the redundancy assumption, the ROI rate is reduced to \$0.35. As shown in Appendix A, Table A - 1, Hawai‘i’s ROI rate was in the middle of the range of ROI rates of other states. However, \$0.50 or \$0.35 is relatively high among studies on film incentives which account for out-of-state spending.

V. Conclusion

In 2023, 25 film productions qualified for and claimed the Hawai‘i film tax credit. Their qualified production expenditures amounted to \$168.7 million, with \$37.3 million in claimed tax credits. About 30 percent of total qualified expenditures, or \$51.0 million was spent on wage and salary payments to non-resident cast and crew. Hawai‘i residents received \$56.5 million, accounting for 33.5 percent of total qualified expenditures. Hawaii-based businesses were paid \$58.9 million, while out-of-state purchases accounted for \$2.3 million. Altogether the total spending on wage payments to non-residents and out-of-state goods and services amounted to 31.6 percent of total qualified spending, or \$53.3 million. After subtracting out-of-state workers’ local spending, total leakage of film production spending out of Hawai‘i’s local economy is estimated to be \$39.3 million.

These 25 film productions supported 9,168 jobs in 2023, 84.8 percent of which were filled by Hawai‘i residents. However, out of that 84.8 percent, or 7,770 Hawai‘i resident jobs, about 49.3 percent were production extras, whose impact on employment may be relatively insignificant. Also, the 9,168 job count is prone to “multiple-counting” to the extent that the same workers work part time for multiple productions and are counted multiple times. Average earnings of above-the-line jobs among Hawai‘i local workers were \$48,620 but only \$6,688 for local below-the-line jobs. The average earnings are underestimated because employment is reported on a job-count basis regardless of the number of hours worked.

The economy-wide cost-benefit analysis and fiscal impact analysis of this report takes into account two important factors which were often missed in earlier studies on film production incentives. One is the opportunity cost of the film tax credit; the other is the out-of-state spending which does not contribute to the local economy as much as expenditures spent in the state. In 2023, the net benefits of Hawai‘i’s film tax credit were \$148.9 million in increased state GDP, or \$94.0 million if measured by earnings. Thus, one dollar spent on the film tax credit generated \$4.00 of state GDP, or \$2.53 of earnings. On a state government’s tax revenue basis, the \$37.7 million of tax credit and associated state expenditures is estimated to have been offset by an increase in tax revenues of \$18.6 million. One dollar of Hawai‘i’s film tax credit generated 50 cents of state tax revenues.

Appendix A: Literature Review

Many state-specific reports have examined the economic and fiscal impacts of film production incentives. The economic impact analysis looks at how the direct spending of film productions has multiplier impacts throughout the state economy and results in new jobs, earnings, and economic output. These multiplier effects are calculated by input-output tables.²¹

Measures of direct spending vary across reports. For example, the Massachusetts Department of Revenue (MA DOR) (2022) excludes most non-resident wages and salaries from total qualified production spending in the calculation of multiplier effects, assuming that virtually all local expenses such as lodging, food, and entertainment expenses for non-residents are covered by the production budgets. Camoin Associates (2019b) adopts a broader approach, including both qualified and non-qualified spending.²² In addition, although many studies assume that all productions receiving tax credits would not have occurred in the absence of the tax credit, studies such as MA DOR (2022) assume that economic activity that occurred prior to the implementation of film tax incentives would continue to occur even if the incentives had not been adopted while RI ORA (2022) does a “breakeven” sensitivity analysis that examines the impact of the program under a range of assumptions of the economic activity attributable to the tax credit program.²³

Substantial economic impacts are reported in these reports. For New York State over the two-year period of 2017 and 2018, Camoin Associates (2019b) estimates the \$8 billion of direct spending generated by the Film Production Tax Credit and the Post-Production Tax Credit programs resulted in 85,835 total jobs, \$5.1 billion in earnings, and over \$15.2 billion in total spending throughout the state economy. Camoin Associates (2022) estimates that \$438 million in direct spending generated by Louisiana’s tax credit program resulted in 10,323 jobs, \$362.1 million in earnings and \$847.6 million in total spending in FY 2022. MA DOR (2022) estimates that the film tax credits resulted in \$615.5 million in “new” Massachusetts spending between CY 2013-2017, generating 6,341 local jobs, \$366.9 million in personal income, and \$1.5 billion in State GDP.

Two other impact measures also take into account of the cost of film production tax credit programs. One is the cost per job to state. MNP LLP (2014b) estimates for New Mexico, the net cost per FTE job created from film production was approximately \$8,519. Loren C. Scott & Associates (2017) estimates the cost per job was \$15,460 for Louisiana state in 2016. Some studies, however, report rather steep costs per job. Zin (2010), for example, estimates that each

²¹ These studies generally used general equilibrium packages such as IMPLAN and BEA’s REMI.

²² Camoin Associates (2019b) assumes that non-qualified spending is contingent on the qualified spending incentivized by the tax credit program.

²³ RI ORA (2022) finds that the state’s tax credit program has a positive impact on state GDP if at least 41.2% of economic activity associated with the tax credits is caused by the program. LAEDC (2022) assumes all economic activity associated with spending by productions receiving the tax credit is due to the tax credit, however, the California Legislative Analyst’s Office (LAO) concludes, based on data from California’s initial film tax credit program, that about one-third of productions that received a tax credit would have been made without the subsidy. See LAO (2016) and LAO (2019).

job cost \$42,991 in the form of tax credit. MA DOR (2022) reports a net cost to the state of \$102,945 per net new Massachusetts-resident job over the 2006-2017 period.

A more widely used indicator is a measure of fiscal impact, the return on investment (ROI) of tax credit programs, which is how much state tax revenue is raised by tax credit. Table A-1 summarizes the return on investment from recent evaluations of film tax credit programs in other states. As shown, these ROIs range from \$0.03 per dollar of tax credit in Rhode Island to \$1.08 per dollar of tax credit in New York. FL EDR (2021) provides a detailed list of ROI evaluations by state agencies in Table 2 of the report’s appendix.

Table A-1. Return on investment of film tax credit programs in other states

State	ROI and Period(s) examined	Source
New York	1.08 (FY2017-18)	Camoin Associates (2019b)
California	1.07 (FY 2015-16 through FY 2019-20)	LAEDC (2022)
Louisiana	0.39 (FY 2021); 0.35(FY 2020)	Camoin Associates (2022)
Georgia 1/	0.21 (TY 2016)	GA DOAA (2020)
Virginia	0.20 (FY2012-16)	VA JLARC (2017)
Massachusetts 1/	0.14 (CY 2006-17)	MA DOR (2022)
Pennsylvania 1/	0.13 (FY 2017-18)	PA IFO (2019)
Florida 1/ 2/	0.07 (FY 2017-19); 0.18 (FY2016-17); 0.43 (FY 2012-14)	FL EDR (2021); FL EDR (2018); FL EDR (2015)
Rhode Island 1/	0.03 (CY 2016-18)	RI ORA (2022)

1/ Studies subtract out-of-state spending in calculating the fiscal impact.

2/ The Florida Entertainment Industry Financial Incentive Program ended on June 30, 2016. Available credits were awarded through FY 2017-18, with previously awarded credits continuing to be used through FY 2018-19.

FY = Fiscal Year, CY = Calendar year, TY = Tax Year

Two considerations in the impact analyses of film production incentive programs are sometimes missing and may result in overestimated impacts. One is the opportunity costs of the foregone revenue. Because film tax credits cost the state revenue, this lost revenue could have represented either tax reductions or state spending that would have benefited residents in another way (Robyn & David, 2012; Thom & An, 2017). The other factor is how much of the qualified film production expenditures are made *outside* the state and thus do not contribute to the local economy, or at least not as much as expenditures occurring in the state do (Luther, 2010; Zin, 2010). The multiplier impact is additional demand generated by a dollar of spending in an industry *within* a region. Expenditures made outside the region are considered as a “leakage” and do not contribute to the multiplier effect. Studies which take account of either or both of these two important factors tend to find reduced impacts and higher costs associated with the film incentive programs. As shown in Table A - 1, studies which subtract out-of-state spending generally find relatively low ROI of the incentive programs.

In addition to state-specific studies, there are also multistate analyses of the impact of film production incentive programs on employment. These studies rely on quasi-experimental statistical analysis such as difference-in-differences techniques to control for counterfactual, or

the economic activity that would have occurred in the absence of tax incentives. Their results do not provide compelling evidence that film production incentives increased employment in the film industry (Button, 2019; Swenson, 2017). However, it is noteworthy that these multistate analyses examine only *direct* employment in the film production industry and thus neglect that movie productions can result in more diffuse impacts on other industries, or the multiplier effects. Additionally, since these studies are done at the aggregate level, no significant net employment gains after incentives may just suggest a zero-sum game between states over time. In other words, some states experienced employment gains thanks to film production incentive programs and other decreased employment during the same time period, “amounting to a ‘wash’ in the aggregate” (Swenson, 2017).

Appendix C: The Cost of Providing Public Services to the State Government

The costs to state government are primarily in the form of increased use of infrastructure and services. Filming activities increase the costs of various public services such as highways, airports, harbors, police and fire protections, and natural resources. Thus, the costs of the film tax credit include the costs of providing these public services. In this section, the state government expenditures which directly benefit film productions are measured. These have been identified to fall into five categories: (1) public safety, (2) highways, (3) conservation of natural resources, (4) airports, (5) harbors.

The methodology used to calculate all costs is as follows. First, the direct expenditure by state government is estimated for each category. Table A - 2 shows the total expenditures in the above categories by the state government in 2022; this is used to approximate 2023 expenditures.²⁴ Second, the expenditures are divided by the de facto population to get the average annual cost per user. De facto population²⁵ includes the daily visitors present in the state but excludes the daily number of residents temporarily absent. The average annual cost is further divided by 365 days to get the estimate for expenditures by the state government per user per day. Finally, the average daily cost per user is multiplied by total shoot days, which serves as a proxy for total length of stay of all the film production personnel. Line 10 of Table A - 2 shows that total public expenditures by the state government spent on film productions were \$0.28 million.

Table A - 1. State government spending on public services

Line 1	Total film-related expenditures (sum of line 2-6) ^{1/} (\$M)	\$2,225.9
2	- Public safety	\$712.8
3	- Highways	\$570.1
4	- Conservation of natural resources	\$204.4
5	- Airports	\$632.9
6	- Harbors	\$105.9
7	De facto population	1,594,742
8	Film-related expenditure per person per day in 2023 (= line 1*1,000,000/line 7/365)	\$3.82
9	Visitor days of non-residents in film productions	73,127
10	Cost to the state government due to non-resident film personnel stay (\$M) (= line 8*line 9/1,000,000)	\$0.28

1/ The average of fiscal year 2022 and 2023.

Source: Department of Accounting and General Services, *State of Hawai'i Comprehensive Annual Financial Report for the Fiscal Year ended June 30, 2023*.

²⁴ Updated estimates for 2023 are not available at the time of publication as the Hawai'i Department of Accounting and General Services' Comprehensive Annual Financial Report for fiscal year 2024 has not yet been published.

²⁵ The de facto population is defined as the number of persons physically present in an area, regardless of military status or usual place of residence. It includes visitors present but excludes residents temporarily absent, both calculated as an average daily census.
