1/ Data refer to each distinct business income tax return filed by a nonemployer business.

2/ Includes gross receipts, sales, commissions and income received from trades and businesses, as reported on annual business income tax returns. Business income consists of all payments received for services rendered by nonemployer businesses, such as payments received as independent agents and contractors.

3/ For 2009 Nonemployer Statistics data, new cutoffs were carefully researched to more closely depict the Nonemployer business universe and improve the accuracy of the list of firms for sole proprietorships. In addition, improvements were made to filter out likely employers from the corporation and partnership data. When comparing the 2009 and later Nonemployers Statistics data to prior years, these changes in methodology must be taken into consideration.

4/ Data are from the Economic Censuses taken every five years. All other data is from the annual Nonemployer Statistics series.
