1/ Revised from previous *Data Book*.

2/ Number of travelers who begin a trip during the morning or evening peak travel periods (6 to 10 a.m. and 3 to 7 p.m.).

3/ Increased fuel consumption due to travel in congested conditions rather than free-flow conditions.

4/ The overall size of the congestion problem. Measured by the total travel time above that needed to complete a trip at free-flow speeds.

5/ A yearly sum of all the per-trip delays for those persons who travel in the peak period (6 to 10 a.m. and 3 to 7 p.m.). This measure illustrates the effect of the per-mile congestion as well as the length of each trip.
