

Table 13.02-- GROSS DOMESTIC PRODUCT, TOTAL AND PER CAPITA AND RESIDENT POPULATION: 1963 TO 2020

[The Standard Industrial Classification (SIC) 1972 is the basis for 1963 to 1986 and the 1987 for 1987 to 1997. The North American Industry Classification System (NAICS) 2012 is the basis for 1997 to 2020. Gross Domestic Product and per capita 1997 to 2019 and population 2010 to 2019 estimates are revised from previous *Data Book*]

1/ Real GDP is an inflation-adjusted measure of each state's gross product that is based on national prices for the goods and services produced within that state.

2/ Per capita statistics for 1997-2020 reflect the U.S. Census Bureau midyear population estimates available as of December 2020. These were used to calculate the current dollar and chained 2012 dollar (real) per capita GDP. 2010-2020 state population estimates are based on the 2010 census. BEA will incorporate Census Bureau midyear population estimates based on the 2020 census results when they become available.

3/ There is a discontinuity in the GDP time series at 1997, where the data change from Standard Industrial Classification (SIC) industry definitions to North American Industry Classification System (NAICS) industry definitions. This discontinuity results from many sources, including differences in source data and different estimation methodologies. This data discontinuity may affect both the levels and the growth rates of the GDP estimates. Users of the GDP estimates are strongly cautioned against appending the two data series in an attempt to construct a single time series of GDP estimates for 1963 to 2019.
