

Table 5.31-- HAZARDOUS WASTE SITES, THREATS AND CONTAMINANTS ON OAHU: 2022

[Sites on the national priorities list for the superfund program]

| Sites with threats and contaminants | Location | Final listing 1/ | Deletion year | Sitewide ready for anticipated use 2/ |
|--------------------------------------|--------------|------------------|---------------|---------------------------------------|
| Del Monte Corp. (Oahu Plantation) 3/ | Kunia | 12/16/94 | (4/) | Yes |
| Naval Computer & | Wahiawa | 5/31/94 | (NA) | No |
| Telecommunications Area 5/ | Pearl Harbor | 10/14/92 | (NA) | No |
| Pearl Harbor Naval Complex 6/ | Schofield | Deleted | 2000 | Yes |
| Schofield Barracks (U.S. Army) 7/ | | | | |

NA Not available.

1/ After the proposed listing, site was added on this date to the National Priorities List (NPL).

2/ "Yes" means all cleanup goals affecting current and reasonably anticipated future land uses of the entire site have been achieved, so there are no unacceptable risks. All required land-use restrictions or other controls have been put in place and the site has achieved "Construction Complete Status."

3/ "Yes" means soil and shallow groundwater at the site have been contaminated with the fumigants EDB, DBCP and DCP, the solvents TCP and benzene and the pesticide Lindane. Deep groundwater is contaminated with EDB, DBCP and TCP. People who touch or ingest contaminated groundwater or soil could be at risk.

4/ Partial deletion, EPA delisted the Poamoho section of the site from NPL list on January 13, 2004.

5/ The Navy's Installation Restoration Program (IRP) is addressing the sites at NCTAMS EASTPAC. The sites are primarily land disposal areas that are no longer in use and PCB transformer sites. Soil contamination depends on the site but generally the chemicals of concern are PCBs, volatile organics, semi-volatile organics and metals. The Navy selected remedies for several sites and has begun cleanup activities.

6/ Soil, groundwater and sediment are contaminated with metals, organic compounds and petroleum hydrocarbons. Site investigations and cleanup activities are ongoing. Site investigations indicate that there are no immediate threats to human health or the environment at the site.

7/ Industrial operations at the site contaminated groundwater with volatile organic compounds (VOCs), including trichloroethene (TCE). Following cleanup, EPA took the site off the Superfund program's (NPL) in 2000.
