Section 5

GEOGRAPHY AND ENVIRONMENT

This section relates to land and water areas, physical geography, climate, air and water quality, and other geographic and environmental measurements of Hawaii. Most statistics on land use and ownership, however, appear in Section 6.

Important sources of data include the U.S. Geological Survey, the National Ocean Survey, the National Climatic Data Center, the Division of Water Resource Management of the Hawaii State Department of Land and Natural Resources, the Hawaii State Department of Health, and the University of Hawaii at Manoa, School of Ocean and Earth Science and Technology, Department of Atmospheric Science. Detailed information is given in *Atlas of Hawaii,* 3rd edition, published by the University of Hawaii Press in 1998.

2/ Width measured in statute miles between designated points on National Ocean Survey and Coast and Geodetic Survey charts. Width in kilometers calculated from miles (1 mile = 1.60934 km.).

3/ Depths given are the deepest soundings noted at or near the line joining the two designated points, on National Ocean Survey and Coast and Geodetic Survey charts. Depths measured in fathoms and converted to feet and meters (1 fathom = 6 feet = 1.8288 meters).

2/ Shoreline of outer coast, offshore islands, bays, rivers, and creeks is included to the head of tidewater or to a point where tidal waters narrow to a width of 100 feet.

3/ Derived from data expressed in statute miles; independently rounded and accordingly may not add exactly to indicated totals and subtotals. 1 mi. = 1.609 km.

4/ Data are not available for five minor islands: Molokini, Lehua, Gardner Pinnacles, Maro Reef, and Pearl and Hermes Atoll.

5/ Excludes the Midway Islands, which are part of the Hawaiian Archipelago but not legally part of the State of Hawaii. Midway has a general coastline of 20 miles and a tidal shoreline of 33 miles.

Table 5.08-- HAWAIIAN PERENNIAL STREAMS, BY ISLAND: 2022 AND 2024

[Perennial refers to fresh waters flowing year-round in all or part of natural channels. Perennial streams discharge continuously to the ocean in their natural state and contain water in the entire length of the stream channel year-round. Flow in perennial streams may vary seasonally and may be modified by humans. Perennial streams may be subdivided into longitudinal zones, based on elevation and gradient: (1) headwater zone (elevation above 800 m (2600 ft) or gradient above 30 percent or both); (2) mid-zone (elevation between 50-800 m (165-2600 ft), or gradient between 5 and 30 percent or both); and (3) terminal zone (elevation below 50 m (165 ft) or gradient below 5 percent or both)]

1/ Modified Mercalli Scale of 1931, 1956 abridged version further simplified. This scale, which extends from I to XII, reads in part:

IV. Hanging objects swing. Vibration like passing of heavy trucks or sensation of a jolt. Standing autos rock. Windows, dishes, doors rattle. Crockery clashes. In the upper part of range wooden construction creaks.

V. Felt outdoors; direction estimated. Sleepers wakened. Liquids distributed, some spilled. Small unstable objects displaced or upset. Doors, shutters, pictures swing. Pendulum clocks stop.

VI. Felt by all. Many frightened, run outdoors. Persons walk unsteadily. Windows, dishes, glassware broken. Knickknacks, books thrown off shelves, pictures off walls. Furniture moved, overturned. Weak plaster and masonry cracked. Small bells ring. Trees, bushes noticeably shaken.

VII. Difficulty in standing. Noticed by drivers of autos. Hanging objects quiver. Furniture broken. Damage to weak masonry. Weak chimneys broken at roof line. Fall of plaster, loose bricks, etc. Some cracks in ordinary masonry. Waves on ponds. Small slides on sand and gravel banks. Large bells ring. Irrigation ditches damaged.

Table 5.31-- HAZARDOUS WASTE SITES, THREATS AND CONTAMINANTS ON OAHU: 2024

[Sites on the national priorities list for the superfund program]

Sites with threats and contaminants	Location	Final listing 1/	Deletion year	Sitewide ready for anticipated use 2/

Naval Computer & Telecommunications Area 4/	Wahiawa	5/31/94	(NA)	No
Pearl Harbor Naval Complex 5/ 6/	Pearl Harbor	10/14/92	(NA)	No
Schofield Barracks (U.S. Army) 7/	Schofield	Deleted	2000	Yes

NA Not available.

1/ After the proposed listing, site was added on this date to the National Priorities List (NPL).

2/ "Yes" means all cleanup goals affecting current and reasonably anticipated future land uses of the entire site have been achieved, so there are no unacceptable risks. All required land-use restrictions or other controls have been put in place and the site has achieved "Construction Complete Status."

3/ Partial deletion, EPA delisted the Poamoho section of the site from NPL list on January 13, 2004.

4/ The Navy's Installation Restoration Program (IRP) is addressing the sites at NCTAMS EASTPAC. The sites are primarily land disposal areas that are no longer in use and PCB transformer sites. Soil contamination depends on the site but generally the chemicals of concern are PCBs, volatile organics, semi-volatile organics and metals. The Navy selected remedies for several sites and has begun cleanup activities.

5/ Soil, groundwater and sediment are contaminated with metals, organic compounds and petroleum hydrocarbons. Site investigations and cleanup activities are ongoing.

6/ As of April 2024, current human exposure is considered not under control. Consumption of contaminated fish from Pearl Harbor is an ongoing human health exposure issue. This exposure pathway is considered unacceptable based on EPA risk-based criteria because fishing trespassers are difficult to control. Currently, the planned activities to address this pathway is to implement the remedy, which includes dredging, enhanced and monitored natural recovery, and land use controls, which includes a fish advisory. The Pearl Harbor Sediment remedy, when complete, should reduce COC levels in fish to the point where limited consumption is possible. In order to help prevent exposures inherent at this site, the general public should adhere to the fish advisory posted in the area. EPA currently anticipates that human exposure will be under control by 2041 because contamination in fish and shellfish in the area should be reduced.

7/ Industrial operations at the site contaminated groundwater with volatile organic compounds (VOCs), including trichloroethene (TCE). Following cleanup, EPA took the site off the Superfund program's (NPL) in 2000.

1/ Geometric mean, number per 100 ml. The geometric mean standard for Enterococci density was 35 per 100 ml.

2/ The lowest reported average value for 2023 was Launiupoko St. Wayside on the island of Maui. The lowest reported average for 2024 was shared by two beaches: Kealia and Salt Pond Beach Co. Park, both on the island of Kauai.

3/ The highest reported average value for 2023 was Kalapaki Beach on the island of Kauai the highest reported average value for 2024 was Honoli'i Beach Co. Park on the Hilo shoreline of the island of Hawaii.

4/ Refers to number of samples over the geometric mean standard for Enterococci density which was 35 per 100 ml.

5/ Geometric mean of specified area.

6/ There are fewer samples taken for the island of Kauai in 2024 due to staffing issues.
