IN REPLY REFER TO:

DEP-HAR.25.0075

July 15, 2024

TO: MARY ALICE EVANS, DIRECTOR
OFFICE OF PLANNING AND SUSTAINABLE DEVELOPMENT
ENVIRONMENTAL REVIEW PROGRAM

FROM: DREANALEE K. KALILI *Dreanalee Kalili*
DEPUTY DIRECTOR OF TRANSPORTATION FOR HARBORS

SUBJECT: DRAFT ENVIRONMENTAL ASSESSMENT – ANTICIPATED FINDING OF
NO SIGNIFICANT IMPACT (DEA-ANSFI)
TRADEWINDS GARDEN
HONOLULU, O'AHU, HAWAII
TAX MAP KEYS: [1] 2-1-014:006, [1] 2-1-001:057 AND 58

The State of Hawaii Department of Transportation- Harbors Division (HDOT- Harbors) is the owner of the subject properties. We hereby authorize Wilson Okamoto Corporation (WOC) to prepare and submit the subject Draft Environmental Assessment which is anticipated to have a Finding of No Significant Impact. The DEA-AFNSI has been prepared pursuant to Chapter 343, Hawai'i Revised Statutes and Chapter 11-200.1, Hawai'i Administrative Rules. Please publish this DEA-AFNSI in the upcoming issue of *The Environmental Notice*.

The studies prepared in conjunction with this DEA-AFNSI include a Natural Resources Assessment, Archaeological Literature Review and Field Inspection, Reconnaissance Level Survey, Cultural Assessment, Environmental Site Assessment, Traffic Impact Assessment Report, and a Preliminary Engineering Report. These studies are appended to this EA. The DEA-AFNSI also includes a reproduction of comments and responses from the Early Consultation Package for this project.

Please contact our consultants, Mr. Keola Cheng or Mr. Dalton Beauprez with Wilson Okamoto Corporation at (808) 946-2277 if you have any questions.

Action summary

The Proposed Project aims to revitalize the waterfront by introducing a contemporary garden and art attraction. This new attraction is anticipated to offer a wide range of experiences at the water's edge, promote and expand creative arts in Hawai'i, and serve as an educational hub designed to enlighten the public about art and the science of glass art. Simultaneously, the Proposed Project seeks to commemorate the past by honoring the rich tapestry of Hawai'i's history.

Reasons supporting determination

See Chapter 6 of the DEA.

PREFACE

This Draft Environmental Assessment (EA) / Anticipated Finding of No Significant Impact (FONSI) has been prepared under Chapter 343-5(e), Hawai'i Revised Statutes (HRS), whenever an applicant proposes an action specified by HRS Section 343-5(a) that requires approval of an agency, and that action is not declared exempt under HRS Section 343-6, the Applicant must engage in the environmental review process set forth under Chapter 343.

The preparation and processing of this EA is required because the Proposed Project constitutes an "applicant action" that involves the use of State lands, administered by the State of Hawai'i Department of Transportation- Harbors Division (HDOT- Harbors). Pursuant to §343-5(a)(1) HRS, an EA is required for actions that: *"Propose the use of state or county lands or the use of state or county funds, other than funds to be used for feasibility or planning studies for possible future programs or projects which the agency has not approved, adopted, or funded, or funds to be used for the acquisition of unimproved real property; provided that the agency shall consider environmental factors and available alternatives in its feasibility or planning studies."* The determining Agency is the HDOT- Harbors, which will be responsible for determining if the Final EA can be filed as a Finding of No Significant Impact (FONSI).

This Draft EA includes an assessment of the potential environmental, social, cultural, and economic impacts associated with the Proposed Project. This Draft EA has also been prepared in consideration of the comments received in response to the Early Consultation Package mailed out on February 13, 2024, to the respective stakeholders listed in Chapter 7.1 of this EA.

(This page is intentionally left blank)

SUMMARY

Type of Document:	Draft Environmental Assessment (EA)
Proposing Applicant:	Garden Art, LLC
Determining Agency:	Hawai'i Department of Transportation- Harbors Division
Name of Project:	Tradewinds Garden
Location:	Honolulu, O'ahu, Hawai'i
Tax Map Keys (TMK):	Pier 7- [1] 2-1-001:057 and 58 Old Honolulu Power Plant- [1] 2-1-014:006
Record Fee Owner:	Pier 7- State of Hawai'i Old Honolulu Power Plant- Hawaiian Electric Co Inc (HECO)
Project Area:	2.43 acres combined
State Land Use Classification:	Urban
City & County Development Plan:	Primary Urban Center Development Plan
Special District	Hawai'i Capitol Special District- Waterfront Precinct
City & County Zoning Designation:	B-2 Community Business District and Kaka'ako Community Development District
SMA:	Not in the SMA
Flood Zone:	V, AE, and X
Existing Use:	The Project Site is the current home of the derelict Hawai'i Maritime Center and Old Honolulu Power Plant. The Hawai'i Maritime Center once served as an educational and cultural resource, preserving Hawai'i's rich maritime history. However, due to the cessation of operations, Pier 7 now showcases significant decay and deterioration. Similarly, the Old Honolulu Power Plant was decommissioned in 2014,

leaving a void of inactivity in the waterfront area.

Proposed Project:

The Proposed Project aims to revitalize the waterfront by introducing a contemporary garden and art attraction. This new attraction is anticipated to offer a wide range of experiences at the water's edge, promote and expand creative arts in Hawai'i, and serve as an educational hub designed to enlighten the public about art and the science of glass art. Simultaneously, the Proposed Project seeks to commemorate the past by honoring the rich tapestry of Hawai'i's history.

Impacts:

No significant impacts are anticipated to result from the Proposed Project. It is anticipated that the best management practice and mitigation measures discussed in Chapter 3 of the EA will minimize/ reduce/ eliminate any potential impacts to the various resource categories presented.

Anticipated Determination:

Finding of No Significant Impact (FONSI)

Parties Consulted During Early Consultation:

Federal Agencies

U.S. Environmental Protection Agency
U.S. Department of Interior, Fish and Wildlife Service
U.S. Army Corps of Engineers

Federal Representatives

Senator Mazie Hirono

Councilmember Tyler Dos Santos-Tam

Utility Companies

Hawai'i Gas
Spectrum Hawai'i
Hawaiian Telecom
Hawaiian Electric Company

Other Interested Parties and Individuals

Hawai'i Pacific University

(This page is intentionally left blank)

CHAPTER 1: INTRODUCTION

1. INTRODUCTION

1.1 Project Background

Garden Art, LLC (herein referred to as the Applicant) is proposing to develop the Tradewinds Garden (herein referred to as the Proposed Project) at Pier 7 and Units 5 and 7 of the Honolulu Power Plant in Honolulu, on the island of O‘ahu, near the Aloha Tower Marketplace.

This Environmental Assessment (EA) assesses and discloses the anticipated environmental effects that the Proposed Project may have on a host of environmental resources. Specifically, this effort encompasses an evaluation of primary, secondary, and cumulative effects, in alignment with Chapter 343, Hawai‘i Revised Statutes (HRS) and Title 11, Chapter 200.1, Hawai‘i Administrative Rules (HAR). The EA also identifies feasible means of avoiding or substantially lessening potential significant adverse impacts and evaluates a range of reasonable alternatives to the Proposed Project, including the required No Action Alternative.

As stated in the Preface of this document, this EA is being prepared as an “Applicant Action” by the Applicant. In accordance with §11-200.1-7(d)(5), the State of Hawai‘i Department of Transportation- Harbors Division (HDOT- Harbors), will serve as the determining agency, as they have the most land involved in the action. Pursuant to HRS §343-5(b), the HDOT- Harbors will be responsible for determining the significance of potential environmental impacts and processing the EA. Furthermore, the Proposed Project is situated within the Hawai‘i Capitol Special District (further discussed in Section 4.2.3) and the Kaka‘ako Community Development District (further discussed in Section 4.2.6).

In summary, this EA serves as a disclosure and informational document intended to identify the anticipated environmental effects of implementing the Proposed Project, and to evaluate the potential significance of their impact. Consequently, this EA serves to:

- To inform and provide the general public, the local community, Federal, State, and City and County of Honolulu (CCH) agencies, as well as any other interested stakeholders, an opportunity to comment on the Proposed Project and its environmental effects, feasible measures to mitigate those effects, as well as the reasonable and feasible alternatives;
- To better inform the Applicant on the environmental consequences and concerns of implementing the Proposed Project so that the Project Site can be appropriately designed at an early stage;
- To enable responsible agencies to consider the environmental consequences of the Proposed Project for which they have a role in approving or issuing permits; and
- To satisfy Chapter 343, HRS, and Chapter 200.1, HAR, requirements and support any further discretionary permits required for the Proposed Project.

This EA also serves to evaluate and discuss the Proposed Project’s conformance with relevant State and County land use plans, policies, and controls, with the intent of providing both the public and decisionmakers with comprehensive overview of the regulatory compliance

associated with the Proposed Project. The following land use plans, policies, and controls are outlined and discussed in Chapter 4 of the EA:

State of Hawai‘i

- Hawai‘i State Plan, HRS Chapter 226
- Hawai‘i State Functional Plans
- State Land Use Law, HRS Chapter 205
- Hawai‘i Coastal Zone Management Program, HRS Chapter 205A
- Hawai‘i Environmental Policy Act, HRS Chapter 344

City and County of Honolulu

- City and County of Honolulu General Plan
- Primary Urban Center Development Plan
- Hawai‘i Capitol Special District
- Aloha Tower Development Corporation
- Honolulu Waterfront Master Plan
- City and County of Honolulu Land Use Ordinance

1.2 Project Location and Surrounding Region

The Proposed Project spans two primary areas: Pier 7 of Honolulu Harbor and Units 5 and 7 of the Old Honolulu Power Plant, collectively denoted as the Project Site (See Figure 1-1).

The State of Hawai‘i holds the record fee ownership of Pier 7, identified as Tax Map Key (TMK) parcels [1] 2-1-001:0057 and 58, which together cover a combined approximate area of 9.6 acres or approximately 423,054 square feet (sf) (See Figure 1-2A). While Pier 7 is located in the Aloha Tower Complex which is managed by the Aloha Tower Development Corporation (ATDC), HDOT - Harbors owns and controls the Pier & property and is the lessor. Established in 1981, the ATDC is the public agency that oversees the redevelopment of State-owned properties along the Downtown Honolulu Waterfront. It should be noted that the Pier 7 Project Site excludes the two waterside berths adjacent to the fast land property. However, the Applicant intends to acquire these water berths as a part of the overall development of the Proposed Project.

Hawaiian Electric Co. Inc. (HECO) is the record fee owner of the Old Honolulu Power Plant, identified by TMK parcel [1] 2-1-014:006, which covers an area of approximately 3.4 acres or approximately 149,644 sf (see Figure 1-2B).

The Pier 7 portion of the Project Site is situated east of Aloha Tower and is the current location of the now derelict Hawai‘i Maritime Center (See Figure 1-3), which was formerly operated by the Bishop Museum. The Maritime Center was opened in 1988 and closed in 2009. Functioning as an educational and cultural resource, the museum played a crucial role in celebrating and preserving Hawai‘i’s rich history. The Maritime Center showcased a varied array of items, including historical photographs, scale models, and a rich assortment of artifacts spanning from the era of ancient Polynesian mariners to the arrival of Captain Cook, the flourishing whaling industry, the golden age of transpacific passenger line transit, up to the present day. Notably, the museum is adjacent to the Falls of Clyde, a vessel constructed in 1878 in Scotland and used briefly to carry molasses and oil between Hawai‘i and California. While the vessel is owned by a private non-profit organization Friend of Falls Clyde, HDOT impounded the vessel in 2016 and retains custody of it. In 2023, the HDOT prepared a Draft Environmental

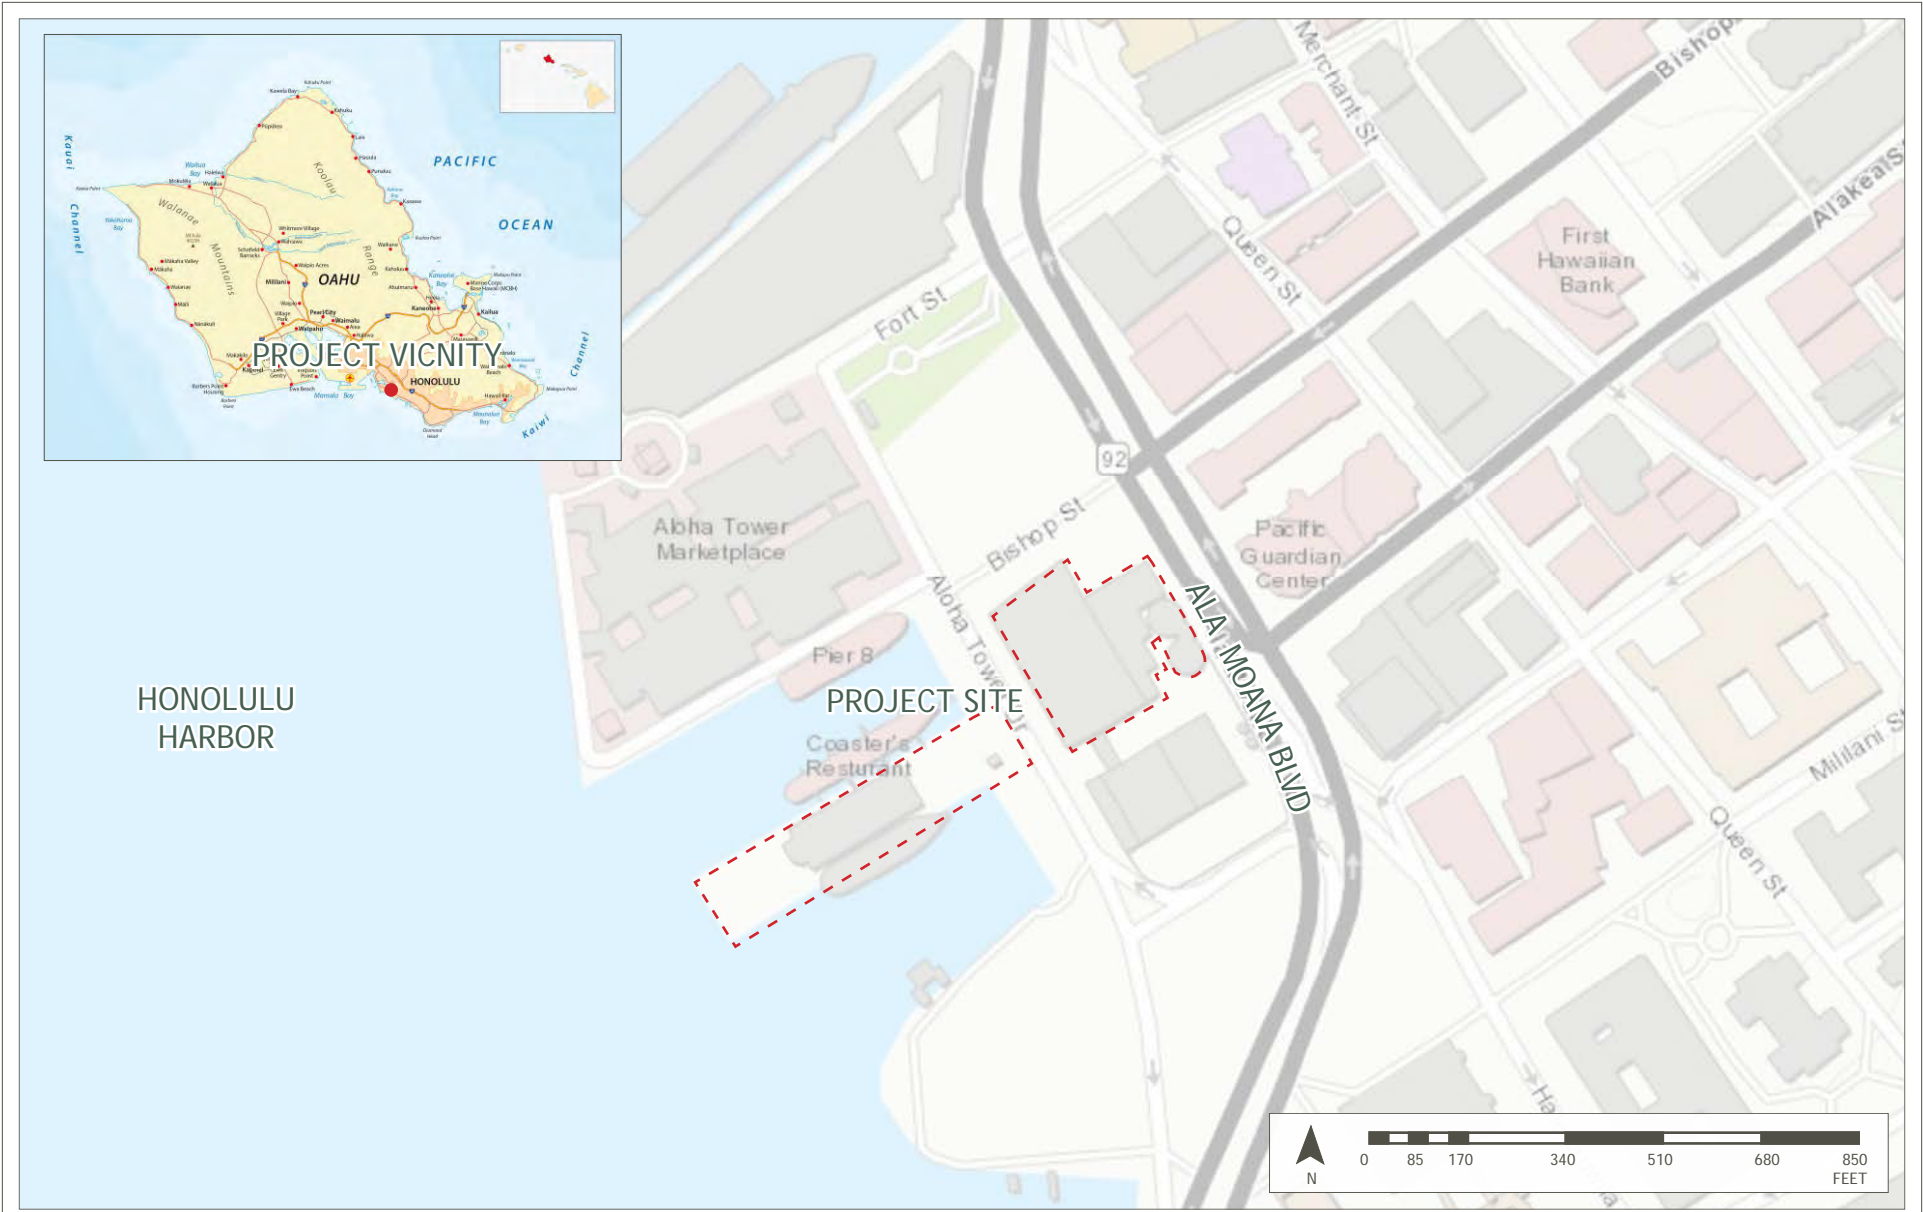

Assessment for the removal of the Falls of Clyde and published the Final Environmental Assessment on June 8, 2024. HDOT expects to issue a request for proposal from bidders for the removal of this vessel in 2024.

The Old Honolulu Power Plant (See Figure 1-4) sits at the intersection of Bishop Street and Aloha Tower Drive, with limited direct access to Ala Moana Boulevard. The Honolulu Power Plant was originally constructed in the 1920's to enhance electricity supply to O'ahu, housing power-generating units and associated hardware. It was further expanded and commissioned as the Leslie A. Hick's Honolulu Power Plant in 1954. With the significant expansion of renewable energy generation and the buildout of HECO infrastructure elsewhere on O'ahu, the Old Honolulu Power Plant was decommissioned in 2014, along with other oil-fired units around the island. Since its deactivation, the site has remained largely vacant and underutilized. As mentioned previously, the Old Honolulu Power Plant Project Site would only occupy a portion (Units 5 and 7) of the building.

The Project Site is situated at the southern end of O'ahu's central business district which is home to a number of important historical and cultural landmarks. Adjacent to the Project Site are Honolulu Harbor to the northwest, Aloha Tower Marketplace (leased by Hawai'i Pacific University / Aloha Tower (the historic landmark owned by HDOT)) to the north, Irwin Memorial Park to the northeast, HDOT Harbors headquarters and operable piers to the northeast (See Figure 1-5). Moreover, there is an abundance of office space, the port's secondary cruise ship terminal, and ample parking space within walking distance of the Project Site. Important landmarks such as the 'Iolani Palace, Ali'iolani Hale, and the Hawai'i State Capitol are also relatively near the Project Site, approximately 0.5 miles to the northeast. Access to the Project Site is provided by Nimitz Highway / Ala Moana Boulevard via Bishop Street and Aloha Tower Drive. Additionally, the future Kuloloia Downtown Skyline Station is anticipated to be in close proximity to the Project Site, positioned on the northwestern edge of the Old Honolulu Power Plant, near Nimitz Highway and Bishop Street (See Figure 1-6). The Kuloloia Downtown Skyline Station is expected to be completed by 2031 (further discussed in Section 3.11 of the EA).

The Project Site is also located near Honolulu's Arts District which is approximately 0.25 miles northeast. The Arts District feature shops, theaters, nightclubs, restaurants, and various galleries showcasing collections of art such as authentic Hawaiian paintings, textiles, and glass-blown pieces. Furthermore, the Proposed Project is in close proximity to Honolulu's Chinatown Historic District. Established during the 1840s and 1850s due to the sugar industry's influence on recruiting Chinese laborers, Chinatown has flourished as many immigrants settled there after their work contracts expired. With its proximity to the harbor, Chinatown evolved into a bustling commercial hub. Today, it remains the largest area in Honolulu reflecting architectural and historical significance, embodying a rich blend of cultures.

The Project Site also lies near the Our Kaka'ako neighborhood, approximately 0.5 miles to the southeast. Our Kaka'ako is a Kamehameha Schools (KS) community approved by HCDA in 2009 through the Kai'āulu 'o Kaka'ako Master Plan. The neighborhood is centered around art, featuring a collection of local and global artists' original murals with the goal of sharing creativity, beautifying the community, and bringing people together. Additionally, the Old Honolulu Power Plant portion of the Project Site is situated within the Kaka'ako Community Development District, which is redevelopment initiative by the HCDA (further discussed in Section 4.2.6 of the EA).

1.3 Project Location: Honolulu Harbor and Aloha Tower

A brief outline of the Project Site's historic context and regional dynamics is outlined below.

Prior to western contact, a naturally occurring channel formed what is now known as Honolulu Harbor, traditionally referred to as *Māmala*, by the outflow of freshwater streams from Nu'uānu Valley. The outflow impeded the growth of coral and created an opening in the shallow reef along the south shore of O'ahu.

The Hawaiian Islands became a popular and convenient port for various industries such as fur, sandalwood, and whaling vessels. This popularity spurred the rapid development of Honolulu Harbor and the surrounding community. By the 1820's, shops, various businesses, and residential neighborhoods were established to support the growing whaling industry, with all aspects of community life centered around providing goods and services to the harbor.

In the late 1800s, the focus of shipping shifted from the whaling industry to the sugar and pineapple industry. The growing prosperity of the harbor led King Kamehameha III to declare Honolulu as the city and capital of the Hawaiian Kingdom. The US Civil War (1861-65) greatly increased the demand for Hawaiian sugar. The notable surge in demand for sugar further drove the development of the harbor and waterfront. These developments included widening the harbor entrance, deepening the channels, and constructing wharves, warehouses, harbor lights, and sea walls.

In 1898, Hawai'i was annexed to the U.S. Post-annexation, the harbor was further developed to support maritime commerce and other private developments. These developments included the reconfiguration of the waterfront, harbor construction, dredging, and landfilling activities. Between 1915-1929, projects such as reconstructing the existing wood piers in concrete, along with various repairs and improvements, were carried out. Following the bombing of Pearl Harbor, Honolulu Harbor served as a secondary location for waterfront military activities, prompting additional improvements to the harbor. The U.S. Navy took control of several piers and were painted in camouflage, including Pier 7, during the war. Post World War II, the harbor underwent further alterations with the construction of Nimitz Highway and industrial structures.

During the 1920s, Hawai'i became a popular tourist destination, attracting visitors from around the world who arrived and departed on ships. Aloha Tower, constructed in 1926, continues to serve as a navigation landmark for ships and a welcoming beacon for visitors traveling to O'ahu. As the Twentieth Century moved forward, container shipping was introduced, altering harbor operations, and prompting adjustments to accommodate container shipping methods. For many decades, the Honolulu Harbor played a vital role in daily life as one of the few connections Hawai'i has to the outside world. It continues to function as the central port hub of Hawai'i. These maritime operations play a crucial role in supplying a wide range of essential needs such as food, clothing, construction materials, fuel, and other vital provisions.

Honolulu Harbor is overseen by HDOT Harbors and contains five components: the Main Channel, the Main Harbor Basin, the Kapālama Channel, the Kapālama Basin, and the Kalihi Channel. Presently, efforts are underway to maintain and develop the harbor through HDOT Harbor's *Honolulu Harbor Master Plan* (HHMP). This ongoing initiative aims to develop a comprehensive plan for the infrastructure development, utilization terms, and optimization of the port and its facilities. The HHMP aims to provide a long-range strategic plan that offers

guidance for both harbor-wide and pier- specific strategies to ensure that Honolulu Harbor can meet the projected cargo demands in 2050, fortify port facilities against climate change and rising sea level, and to enhance public access and enjoyment of the harbor waterfront. This effort is geared towards meeting the evolving needs of the State of Hawai'i.

1.4 Land Ownership

As mentioned above, the State of Hawai'i holds the record fee ownership of Pier 7, while HECO holds the record fee owner of Units 5 and 7 of the Old Honolulu Power Plant. Therefore, the Applicant will lease the Project Site.

CHAPTER 2: PROJECT DESCRIPTION

2. PROJECT DESCRIPTION

2.1 Proposed Project

The Proposed Project encapsulates the Applicant's vision for revitalizing both the Pier 7 and Old Honolulu Power Plant portions of the Project Site, as well as catalyzing the activation of the Downtown Waterfront at large. This vision is centered on embracing and celebrating creativity and the arts, with a core emphasis on a comprehensive commitment to thoughtful and adaptive reuse. The anticipated improvements entail both interior and exterior modifications to facilitate the establishment of a garden and art museum, complemented by various additional features (See Figure 2-1).

The renovated Honolulu Power Plant will be designed to preserve its outer shell and historic architectural features with renovations primarily targeting the interior main level spaces for art galleries, an auditorium, and a bookstore/lobby. Exterior open space areas are planned to become open-air and shade spaces for flexible programming, such as a mobile hot shop glass blowing exhibit, and facilitating visitor experiences. The tank structures along Ala Moana Boulevard are slated for potential repurposing, with plans to remove the primary tank and convert the concrete containment silo into a functional space. The existing two-story structure adjacent to the future Skyline rail station is intended to potentially house retail and food and beverage programs (See Figure 2-2).

The existing Hawai'i Maritime Center situated atop Pier 7 will undergo demolition to make way for a new building. Massing of the new structure is currently under study, with the intention to complement the existing building massing and reference widespread harbor building typologies (Figure 2-3). The new building may be able to be structurally supported by portions of the existing deep pile foundation, but the existing foundation may need to be augmented with new piles or drilled piers. Foundational augmentation work would occur entirely within the cross sectional footprint of the existing foundation pilings and would not encompass additional disturbance / in-water work. The new building aims to showcase a range of indoor and outdoor gardens with native Hawaiian vegetation, as well as featuring a retail/lobby area, deck spaces, a bar, and a restaurant (See Figure 2-4). The existing timber pier structure on the Aloha Tower side of Pier 7 will be rebuilt to allow for occupancy.

A marked raised crosswalk with curb extensions is anticipated to be installed along Aloha Tower Drive, between the Old Honolulu Power Plant and Pier 7 to facilitate pedestrian access and provide a safe route that connects the two sites (Figure 2-5).

One of the central objectives of the Proposed Project is to serve as an educational resource catering to students, tourists, artists, and the general public. To realize this objective, the Proposed Project will institute programs specifically crafted to impart knowledge about art and the science of glass art. Local educators will collaborate to develop a curriculum for a program providing an immersive educational experience in these fields. Additionally, the Proposed Project aims to engage the community by offering a diverse range of classes, demonstrations, and excursions, inviting both visitors and residents to participate and enhance their

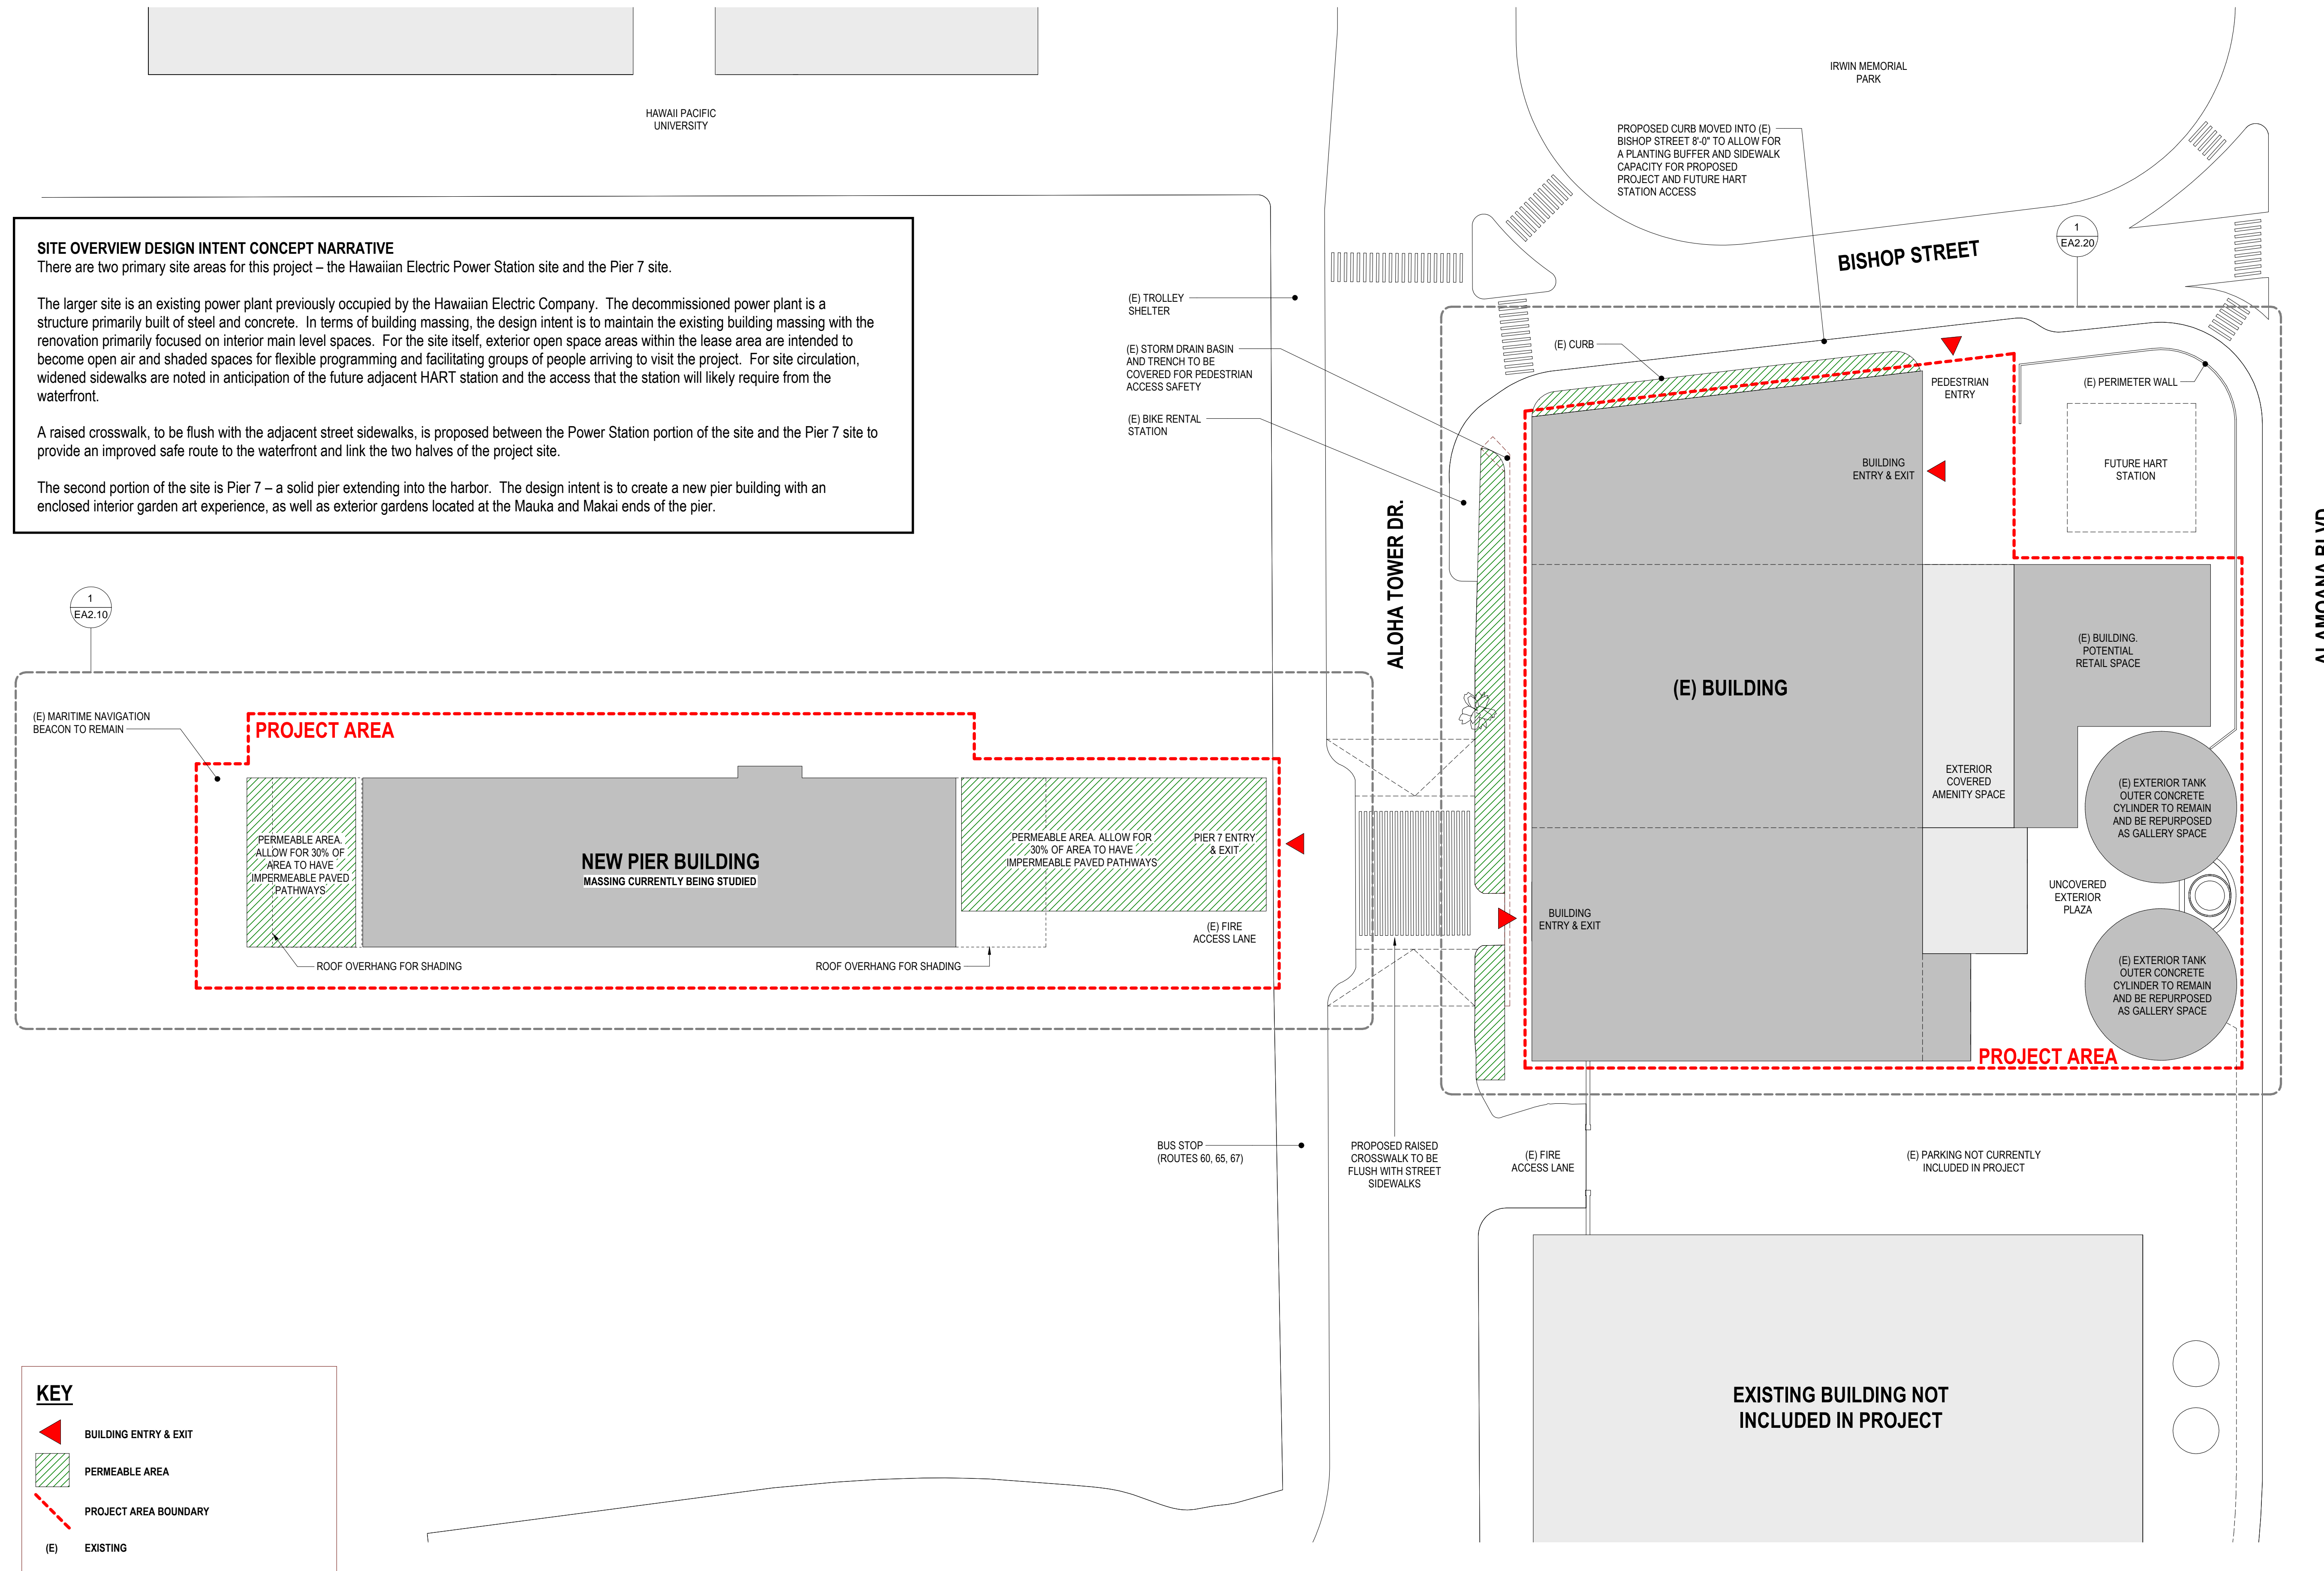

understanding of art. Moreover, cultural related themes and stories will be woven into the Proposed Project's programming and exhibits.

In addition to its educational role, the Proposed Project aspires to serve as a creative / arts incubator, providing a space for artists to introduce various types of art into the Project Site to foster business growth.

The overall design themes for the Project Site are anticipated to center around the adaptive re-use of the existing Honolulu Power Plant and construction of a new structure to replace the existing Hawai'i Maritime Center. The vision for the new structure incorporates tropical wood and shuttering features to achieve a harmonious aesthetic. In contrast, the design approach for the adaptive re-use of the Old Honolulu Power Plant emphasizes minimal exterior treatments, directing attention to the building's walls, floors, and structural steel.

Fundamentally, the Proposed Project's design aims to craft an immersive visual experience, conveying the historical significance of the Project Site by seamlessly integrating local stories into overarching, design-driven themes.

Figure 2-1: Preliminary Surface Permeability Site Plan

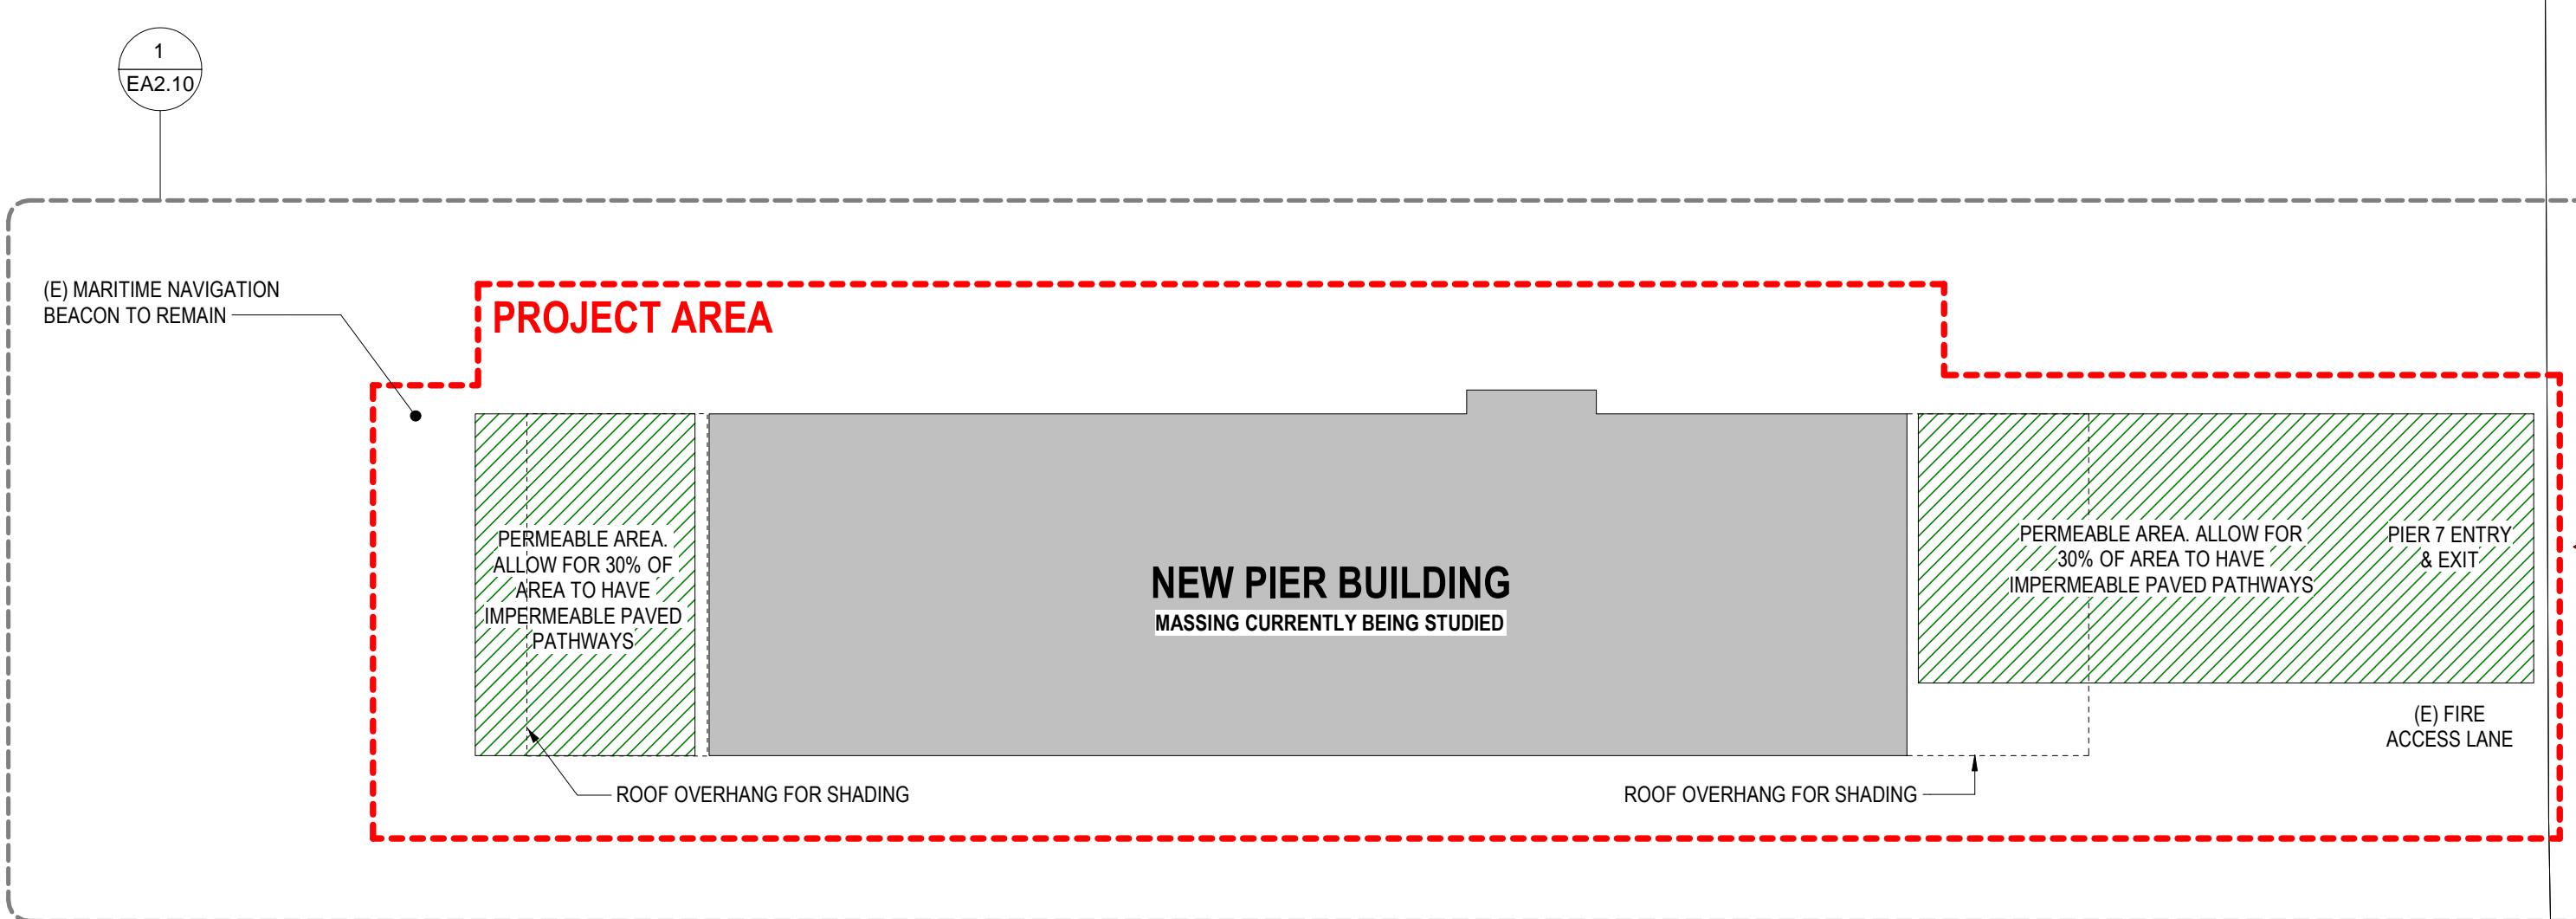

SITE OVERVIEW DESIGN INTENT CONCEPT NARRATIVE
 There are two primary site areas for this project – the Hawaiian Electric Power Station site and the Pier 7 site.

The larger site is an existing power plant previously occupied by the Hawaiian Electric Company. The decommissioned power plant is a structure primarily built of steel and concrete. In terms of building massing, the design intent is to maintain the existing building massing with the renovation primarily focused on interior main level spaces. For the site itself, exterior open space areas within the lease area are intended to become open air and shaded spaces for flexible programming and facilitating groups of people arriving to visit the project. For site circulation, widened sidewalks are noted in anticipation of the future adjacent HART station and the access that the station will likely require from the waterfront.

A raised crosswalk, to be flush with the adjacent street sidewalks, is proposed between the Power Station portion of the site and the Pier 7 site to provide an improved safe route to the waterfront and link the two halves of the project site.

The second portion of the site is Pier 7 – a solid pier extending into the harbor. The design intent is to create a new pier building with an enclosed interior garden art experience, as well as exterior gardens located at the Mauka and Makai ends of the pier.

Figure 2-2: Renovated Honolulu Power Plant

HAWAIIAN ELECTRIC DESIGN INTENT CONCEPT NARRATIVE

The design intent for the existing Hawaiian Electric Power Plant is for public programming to be initially limited to the Main Level with the renovation not engaging the floors above. The goal is to work within the existing conditions of the building and use existing elements to both frame the experience and limit the extent of modifications needed.

The galleries will flow through the existing structures utilizing their capacity to support works in various ways. The floor surfaces will be treated to provide level accessible navigation of the space by all visitors.

The exhibition and event space in the Power Plant will be a substantially open volume embracing the industrial heritage of the space. A limited number of volumes may be enclosed within the larger interior space to create temperature-controlled environments as necessary. The experience will include gallery space, an auditorium and retail space.

At the buildings and tank structures along Ala Moana Boulevard, the intention is that they are also repurposed to complement the Power Plant program. For the tanks, the intention is to remove the primary inner tank and repurpose the concrete outer containment silo as a gallery space. The existing two-level structure adjacent to the future HART Station is intended as a potential retail / food and beverage program.

Figure 2-4: Proposed Pier 7

PIER 7 DESIGN INTENT CONCEPTUAL NARRATIVE
 At Pier 7, the design intent is to provide an interior and exterior garden experience for visitors. The exterior garden experience welcomes visitors from Aloha Tower Drive, guiding them to the entry of the enclosed garden experience within a new pier building.
 For the pier building, massing is still being studied. Supporting the interior garden experience is a new food and beverage component at the second level.
 The Makai end of the pier can be experienced by either a raised walkway extending from the pier building interior or a Main Level exterior garden space. The existing building's observation tower will be maintained and potentially modified as an art opportunity.

2.2 Purpose and Need

As previously discussed in Section 1.2, the Maritime Center, now in a state of disrepair, ceased operations in 2009, resulting in significant decay and deterioration of on-site facilities. Similarly, the decommissioning of the Honolulu Power Plant occurred in 2014. These closures have left a void of inactivity in the Downtown Waterfront, presenting an opportunity and a demand for the revitalization and activation of these two specific sites.

The Proposed Project is poised to transform and modernize the area into a vibrant cultural destination by establishing a contemporary garden and art, drawing inspiration from Chihuly Garden and Glass in Seattle. Through the creation of an immersive experience that celebrates cultural heritage and artistic expression, the Proposed Project aims to breathe new life into the waterfront. This revitalization offers residents and visitors a unique space that seamlessly merges art, education, and the scenic beauty of the waterfront.

The Proposed Project is set to introduce art galleries, gardens, educational facilities, and additional complementary features, fostering a supportive environment for both local and international artists, as well as established and emerging talents. This initiative aims to significantly contribute to the promotion and expansion of creative arts in Hawai'i. Furthermore, the Proposed Project is anticipated to stimulate economic growth by drawing residents and visitors to the Downtown Waterfront, potentially attracting additional businesses and creating new opportunities for the local community.

The Proposed Project is set to introduce art galleries, gardens, educational facilities, and additional complementary features, fostering a supportive environment for both local and international artists, as well as established and emerging talents. This initiative aims to significantly contribute to the promotion and expansion of creative arts in Hawai'i. Furthermore, the Proposed Project is anticipated to stimulate economic growth by drawing residents and visitors to the waterfront area, potentially attracting additional businesses and creating new opportunities for the local community.

Beyond its economic impact, the Proposed Project is positioned as an educational hub, offering programs designed to impart knowledge about the art and the science of glass art. Simultaneously, it seeks to honor the historical significance of the Project Site, creating a space that commemorates the past while fostering creativity and innovation for the future.

In summary, the goals and objectives of the Proposed Project are to:

- Align the Proposed Project with the Honolulu Waterfront Master Plan and development objectives of the ATDC;
- Revitalize and modernize the existing Hawai'i Maritime Center and the Old Honolulu Power Plant into a garden and art attraction to provide a variety of experiences at the water's edge;
- Foster and promote visual art and creative expression;
- Showcase glass art installations; and
- Serve as an educational resource by implementing programs, classes, demonstrations, and excursions designed to educate all segments of the population about art and the science of glass art.

2.3 Project Timeline

Following design and permitting, the construction of the Proposed Project is anticipated to commence in 2025 and begin operating in 2026.

(This page is intentionally left blank)

CHAPTER 3: DESCRIPTION OF EXISTING ENVIRONMENT, IMPACTS, AND MITIGATION MEASURES

3. DESCRIPTION OF EXISTING ENVIRONMENT, IMPACTS, AND MITIGATION MEASURES

3.1 Climate and Climate Change

3.1.1 Current Climate Conditions

The climate of O'ahu is characterized as semi-tropical and remains relatively moderate year-round. Generally, O'ahu experiences two seasons with the summer season running from May through September and the winter season running from October through April. The summer period is typically warm and dry, with predominantly northeast trade winds. In contrast, the winter season is associated with lower temperatures, higher rainfall, and less prevalent trade winds.

The Proposed Project is located in Honolulu, situated along the southeast coast of the island of O'ahu. Honolulu is characterized by a tropical climate with warm temperatures, abundant sunshine, and persistent trade winds throughout the year. Honolulu is generally windy and mostly clear year-round with temperatures varying from 68 degrees Fahrenheit (°F) to 87 °F and is rarely below 63 °F or above 89 °F. Wind speed varies year-round in Honolulu with windier months from May to September with an average wind speed of more than 14.4 miles per hour. Calmer months run from September to May with an average wind speed of 12.4 miles per hour. Rain falls throughout the year in Honolulu with most rain occurring in January, with an average rainfall of 2.4 inches.

Impacts and Mitigation Measures

No significant adverse impacts to climate conditions at or in the vicinity of the Project Site are anticipated to result from the development and operation of the Proposed Project. The Proposed Project will be appropriately designed to take into consideration the context of the surrounding environment and is not anticipated to significantly influence or affect temperatures, wind, or rainfall levels.

3.1.2 Observed Climate Change

It has become widely acknowledged that the State of Hawai'i has been and will continue to be impacted by diverse climatic variabilities including, but not limited to rising sea levels, increasing ocean acidity, changing rainfall patterns, decreasing stream base flow, changing wind and wave patterns, and changing habitats and species distribution. Research identifies anthropogenic greenhouse gas (GHG) emissions as the key contributor to climate change and its impacts which pose considerable challenges to the State of Hawai'i (Climate Change Commission, 2018). Over the last 40 years, the rate of temperature rise in the State of Hawai'i has increased by over 0.3°F (0.17°Celsius (C)) per decade. Over the past 100 years, the average air temperature has increased by 0.76°F (0.42 °C) with the most recent years having the highest recorded temperatures (Climate Change Commission, 2018).

Increased temperatures cause thermal stress for plants and animals, as well as heat-related illnesses in humans. Additionally, pathogens and invasive species are expected to surge with increasing temperatures. The risk of transmission of avian disease is likely to escalate due to the warming of high elevation forests, threatening endemic avian bird species, such as the

Hawaiian honeycreeper. Impeding precipitation at higher elevations will constitute a threat to Hawai'i's major freshwater source. Four Representative Concentration Pathways (RCPs) of the climate response to GHG emission levels from socioeconomic scenarios were provided by the Intergovernmental Panel on Climate Change (IPCC) Fifth Assessment Report (AR5). The RCPs estimate that global mean temperature will increase by at least 2.7°F (1.5 °C) by the end of the century for intermediate to high future scenarios. The range of nightly low and daytime high temperatures, an important factor for circadian species, is decreasing more rapidly in Hawai'i than the global mean (Safeeq et al., 2012). Hawai'i's temperature is projected to increase, with a range of +4-5°F (2.2-2.8°C) for high emissions scenarios by 2085 (Keener et al., 2013).

Ocean warming projections predict the most severe impacts to be experienced in tropical and Northern Hemisphere subtropical regions, with increases up to 3.6°F (2.0°C) in the upper ocean levels above 650 feet. (200 meters) by the end of the century. Sea surface temperatures have warmed between 0.13°F and 0.41°F (0.007°C and 0.23°C) per decade in the Pacific. This trend is projected to accelerate, warming by 2.3°F to 4.9°F (1.3°C to 2.7°C) before the end of the century. As an island, O'ahu has both a heavy economic and cultural dependency on the ocean. Increasing sea surface temperatures will have an effect on ocean circulation and nutrient distribution having major impacts on ocean habitats such as coral reefs.

Coral reefs are necessary for the global ecosystem to thrive, and function by absorbing carbon dioxide and producing oxygen. However, due to continued temperature increases, the symbiotic algae within coral are harmed, impairing a coral's ability to provide necessary ecosystem services. The algae are a main source of nutrients for the coral; therefore, a loss of algae weakens the coral causing eventual death and a major loss of surrounding biodiversity. This process is known as "coral bleaching" because the expelling of algae causes the coral to lose its color. Events of mass coral bleaching are increasing in frequency throughout Hawai'i and the rise of sea temperatures has additionally been linked to coral disease outbreaks. In addition to the damaging effects of rising sea temperatures, increases in ocean acidity are another threat to coral reefs. As ocean acidity increases, corals and shellfish that depend on the minerals in the water weaken. Pacific Ocean acidity has increased by approximately 25 percent in the past three centuries and is likely to increase another 40 to 50 percent by 2100. Rainfall in Hawai'i significantly varies based on trade winds, topography, mid-latitude weather systems, storms and cyclones, El Niño-Southern Oscillation and Pacific Decadal Oscillation phases, and more (Schroeder, 1993). Challenges presented by the accurate projection of future rainfall and runoff patterns are heavily impacted by climate change in addition to natural variability, complex topography, land uses, and other factors. The overarching trend across the islands has shown a decrease in total rainfall over the past 30 years in both wet and dry seasons (Climate Change Commission, 2018). On O'ahu, the largest declines have occurred in the northern Ko'olau mountains. Future projections predict an increase in the frequency of extreme rain events, which has negative implications for stormwater infrastructure, sustainable yield from aquifers and runoff into coastal waters. The total annual average rainfall in Hawai'i, represented by the Hawai'i Rainfall Index, has decreased over the last century (Hawai'i Climate Data Portal, 2023). Streamflow records also show a decline in base flow by 20 - 70% over the last century depending on the water shed, suggesting a decrease in groundwater levels. On O'ahu and Kaua'i, rainfall intensity has decreased over the last 60 years; however, rainfall intensity has increased on the island of Hawai'i. Due to the steep terrain and concrete stream channels, flash flooding caused by high intensity rainfall has resulted in multimillion dollars of damage to infrastructure. In recent years, Hawai'i has experienced longer droughts due to an

increasing trend in length of dry periods between 1980-2011 as compared to 1950-1970 (Chu et al., 2010). Prevailing northeasterly trade winds in Hawai'i have decreased in frequency since 1973 (Collins et al., 2010; Tokinaga et al., Garza et al., 2012).

There are different models and methodologies in forecasting sea level rise projections at the end of the century. Model projections range from small increases to increases of up to 30% in wet areas, and from small decreases to decreases of up to 60% in dryer areas (Climate Change Commission, 2018). Timm et al., (2014) applied a statistical downscaling method described by Timm and Diaz (2009) to find a connection between the large-scale atmospheric circulation over the Pacific with the rainfall over Hawai'i. This six-model analysis concluded that the most likely scenario for Hawai'i is a 5-10% reduction of precipitation during the winter season, and a 5% increase during dry season by the late 21st century, as a result of circulatory changes (Timm and Diaz, 2009). While it remains uncertain whether this data will reflect in Hawai'i, if drought events continue to increase, dry areas could see more fire and issues with decreased water supplies.

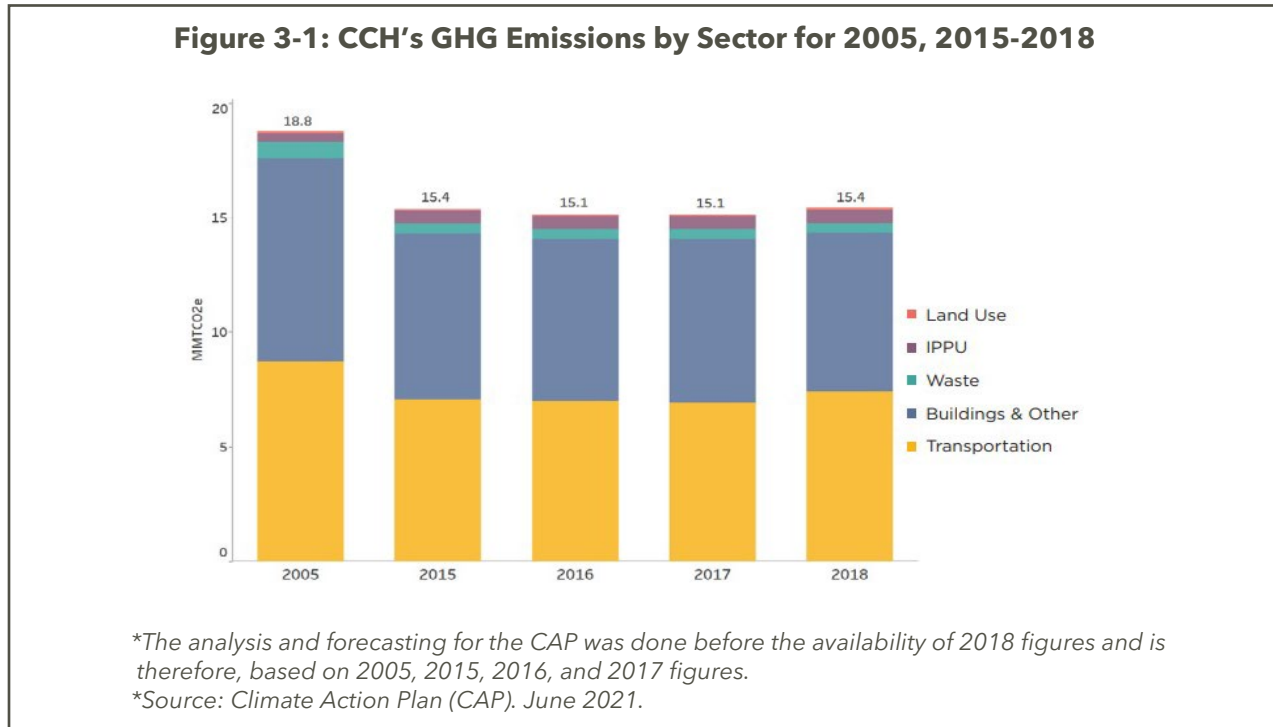

Two centuries of unabated greenhouse gas (GHG) emissions including carbon dioxide (CO₂), methane (CH₄), nitrous oxide (N₂O), ozone (O₃), and fluorinated gases, from anthropogenic sources is largely responsible for increases in global atmospheric temperatures and ocean warming over the past century. GHG's absorb and "trap" solar radiation instead of reflecting it back into space which causes the greenhouse gas effect. While a fraction of GHG emissions is released from natural sources, a majority result from human activity in the following economic sectors, in order from most to least emissions: electricity and heat production; agriculture, forestry and other land-use activities; industrial activity; transportation; other energy production processes; and buildings (IPCC, 2014). The United States is one of the top 3 GHG emitters, which together contribute 42.6% of total emissions according to the World Resources Institute (Friedrich et al., 2023).

The risks of climate change, as discussed earlier, include changes in rainfall intensity, SLR, temperature, groundwater levels, saltwater intrusion, and impacts from storm hazards, which collectively make planning for climate change a challenging task. In response to the Paris Agreement, Hawai'i is under the directive of the Hawai'i Climate Change Mitigation and Adaptation Commission (Commission), which aims to reduce ground transportation emissions and adapt to sea level rise (SLR), including disaster recovery preparedness on the statewide level. The CCH has outlined a plan to prepare for the effects of climate change in the CCH's Climate Change Commission's Climate Change Brief. In July of 2018, the Mayor of CCH issued Directive 18-02, which requires each CCH department and agency to:

- Consider the need for both climate change mitigation and adaptation as pressing and urgent matters;
- Take a proactive approach in both reducing GHG and adapting to impacts caused by SLR; and
- Align programs whenever possible to help protect and prepare the infrastructure, assets, and citizens of the CCH for the physical and economic impacts of climate change.

The CCH City Council passed its first-ever Climate Action Plan (CAP) in June 2021. This CAP is a science-based, community-driven strategy for O'ahu to combat climate change and eliminate

fossil fuel emissions. The CAP outlines that the CCH’s GHG emissions have declined nearly 18% between 2005 and 2018. However, transportation related GHG emissions caused an increase from 2017 to 2018 as illustrated by Figure 3-1 below. The figure represents the CCH’s GHG emissions by sector, which includes Land-Use, Industrial Processes and Product Use (IPPU), Waste, Buildings & Other, and Transportation.

In summary, the CAP outlines a detailed list of programs, policies, and actions that the CCH can implement, alongside with State and Federal actions, to reduce GHG emissions by 45% over the next 5 years and to achieve carbon neutrality by 2045.

Impacts and Mitigation Measures

The development and operation of the Proposed Project is not anticipated to directly contribute to, or substantially impact climate change or climate change related conditions at or within the vicinity of the Project Site. Annual and daily variations of climate are dependent on numerous factors including elevation, distance inland, and exposure to trade winds. The Proposed Project will be appropriately designed to take into consideration the context of the surrounding environment and is not anticipated to significantly influence or affect temperatures, wind, or rainfall levels at the Project Site or within the greater region. Moreover, the Proposed Project will not exacerbate the impacts associated with climate change at the Project Site, greater region, or State from the development and operation of the Proposed Project.

In the short term, it is anticipated that activities related to the construction of the Proposed Project may result in minimal GHG emissions. Construction related emissions include tailpipe emission from construction equipment, delivery trucks, and workers commuting to and from the construction site. It is anticipated that the quantities of GHGs released from construction related activities will be negligible and usage of each

piece of equipment would be sporadic and not simultaneous. Moreover, the contractors from the construction of the applicable projects will be required to prepare a dust control plan compliant with the provisions of Chapter 11-60.1, HAR, Air Pollution Control. In the long term, the Proposed Project is anticipated to have a minimal impact on traffic conditions in the area. While there may be some increase in traffic generated by the Proposed Project, it is expected to be negligible and not significantly affect the overall traffic flow (further discussed in Section 3.11).

However, it is acknowledged that the exact nature of how the climate will change in the upcoming years is unknown. The 2023 Honolulu Climate Change Commission's letter to the mayor and council chair regarding project estimates of sea level rise underscores the importance of integrating the latest scientific insights into both planning and policy formulation. This highlights the necessity for continual updates and flexibility in adaptation strategies to effectively address the evolving challenges posed by climate change. On a broader policy level, new information will continually need to be incorporated into future assessments to identify where efforts should be focused when developing adaptation strategies to climatic changes. It is anticipated that the Proposed Project will be flexible in order to conform with guidance set forth by best practices outlined by policies and research based on the best scientific data at the time as climate change science, technology, and policies evolve. It is anticipated that the Proposed Project will conform to guidance set forth by best practices outlined by policies and research based on the most recent data as it continues to evolve.

3.2 Physiography

3.2.1 Geology and Topography

The island of O'ahu is formed by the Wai'anae Range to the west and the Ko'olau Range to the east. Both are remnants of shield volcanoes that have lost most of their original shield outlines with long, narrow current formations shaped by erosion. Lava is sent down the valleys during post-erosional eruptions resulting in the formation of volcanic cones such as Diamond Head and Tantalus. The southern central coast of O'ahu, geographically referred to as the Honolulu Plain, showcases a substantial elevated coral reef partly covered by alluvium from the mountains. Core examples reveal interbedded lava flows of the Honolulu Series along with reef deposits formed during periods of higher sea levels. Before the dredging and filling of Honolulu Harbor, the shoreline includes submerged coral reefs, mudflats, and islands of varying sizes, shapes, and elevations.

Honolulu harbor was formed from the continuous flow of fresh water from Nu'uuanu Valley, which restricted coral growth and led to the formation of a basin and a natural harbor. The freshwater also carved channels through the coral reef, where sand gradually accumulated, resulting in the growth of Sand Island over time. Over the years, dredging activities in Honolulu Harbor have continually expanded both the size and depth of the harbor basin and entrance channel. The material excavated from these dredging operations was repurposed to create additional land by filling the tidelines surrounding the harbor, including the Project Site, and the seaward reef at Sand Island, formerly known as Ānuenuue Island. The Kapālāma Basin, initially a natural break in the reef, became linked to the Main Harbor Basin through the creation of the Kapālāma Channel through dredging. In 1960, the western entrance channel (Kalihi Channel) was introduced to the Kapālāma Basin, significantly enhancing circulation within the

latter basin and the overall Honolulu Harbor. This ongoing process has played a crucial role in shaping both the size and the depth of the harbor infrastructure.

As mentioned previously, the Project Site was created from fill land and is located at elevations approximately 0 - 10 feet above mean sea level (msl) (See Figure 3-2). The Project Site is generally flat and will be constructed on the current site of the Maritime Museum and the Honolulu Power Plant as discussed in Section 1.2.

Impacts and Mitigation Measures

Construction activities associated with the implementation of the Proposed Project will not result in soil erosion as a result of the clearing, grubbing, grading, excavation, and infilling of soil. Soil erosion will be minimized through compliance with the CCH’s grading ordinance, and the applicable provisions of the State of Hawai‘i Department of Health (HDOH) Water Quality Standards (HAR, Section 11-54) and Water Pollution Control requirements (HAR, Section 11-55). With the implementation of best management practices (BMPs), potential impacts including the phasing of construction activities replacing ground cover of the disturbed area, providing adequate water sources at the Project Site, and the use of temporary silt fencing and screens will be mitigated. Project construction actions will not involve major land disturbing activities involving mass grading or significant revisions to site contours.

3.2.2 Soils

The soil types or classifications for the Project Site are based on soil surveys by the U.S. Department of Agriculture (USDA) Natural Resource Conservation Service (NRCS) Soil Survey (See Figure 3-3). The NRCS system classifies soils by type, capability classification, and permeability. Soils underlying the Project Site are classified in Table 3-1 below.

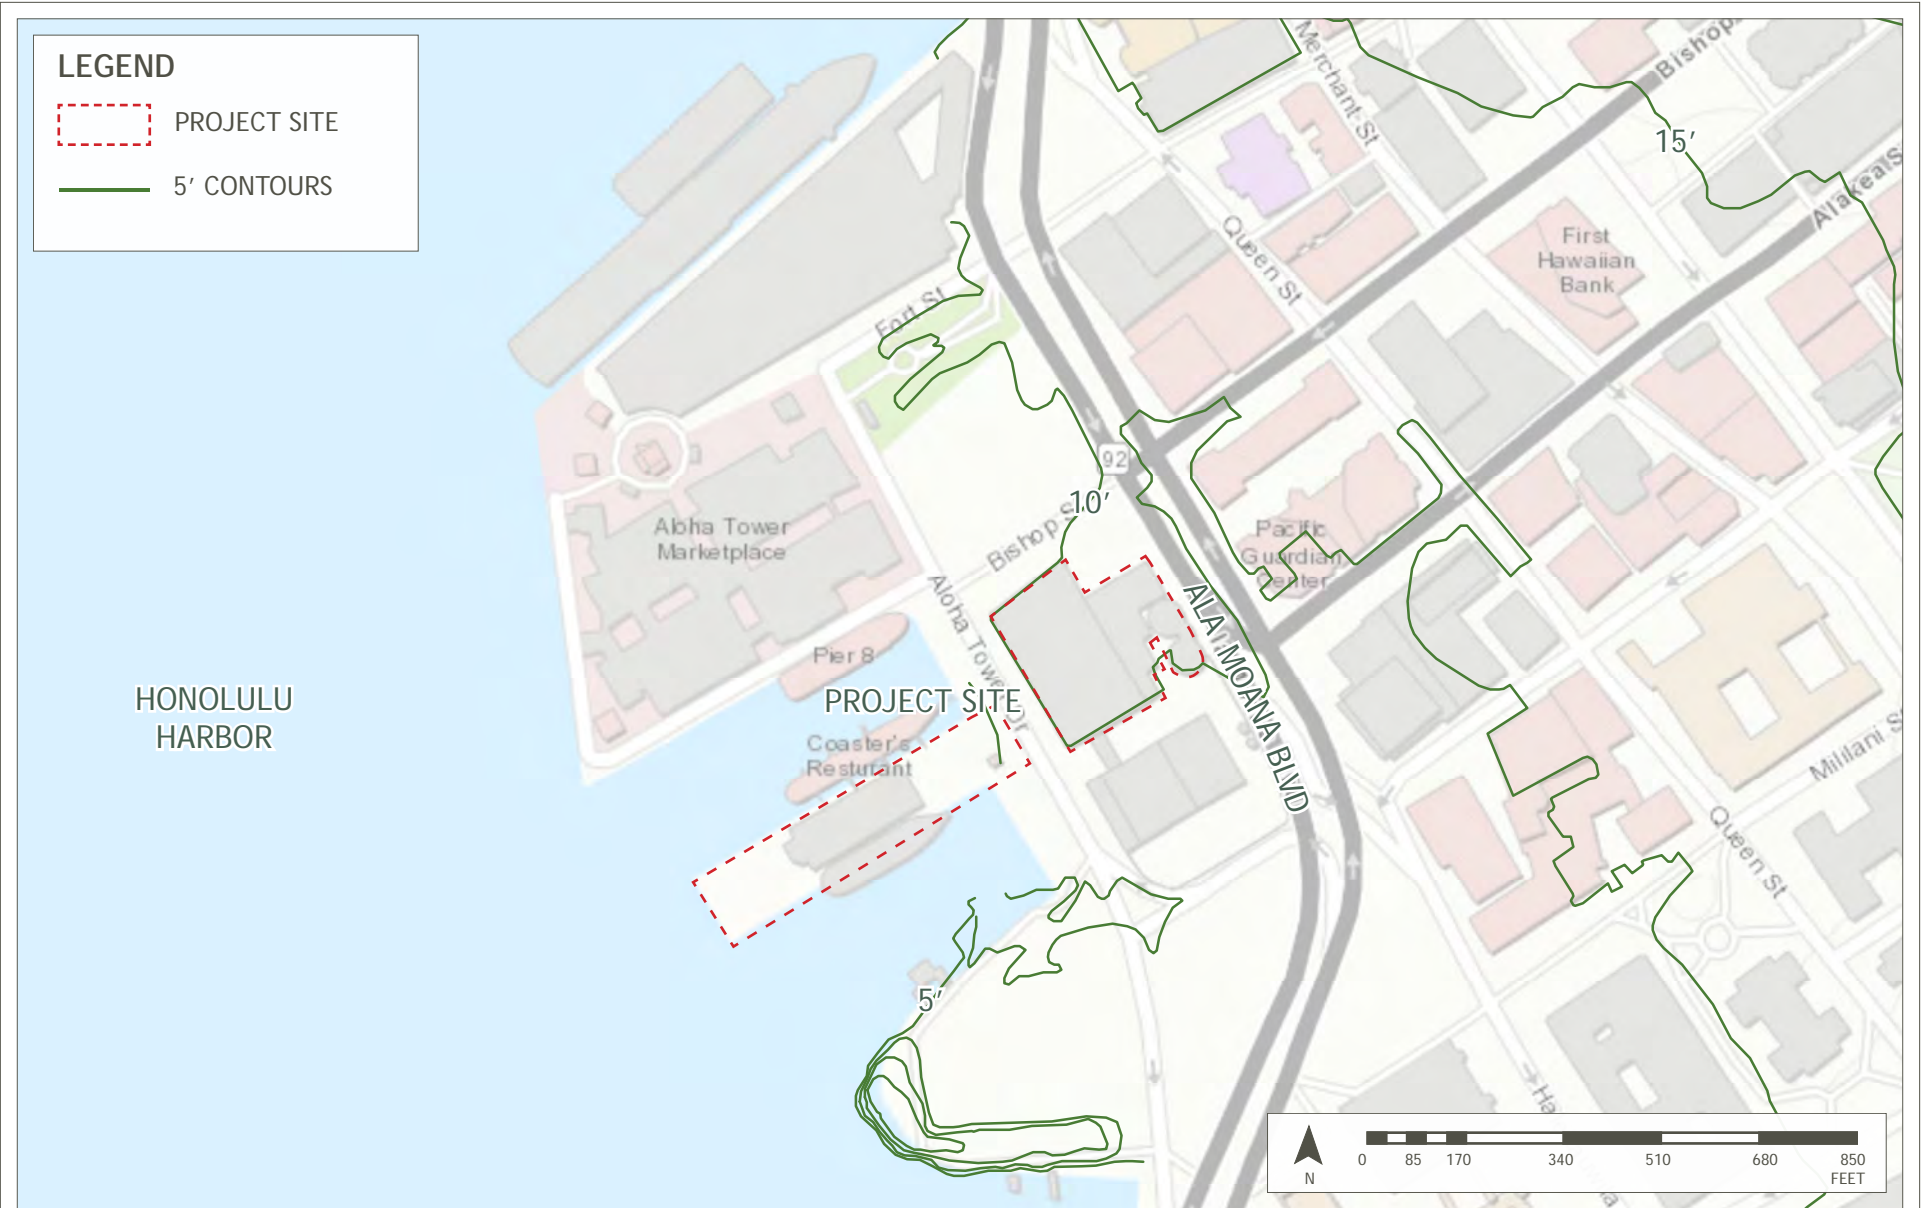

Table 3-1 Soil Classification		
Map Unit Symbol	Map Unit Name	Description
FL	Fill Land, mixed	100% filled land. Rare frequency of flooding, low runoff classification, well drained. Typical profile of gravelly sandy loam and fine sandy loam.

Impacts and Mitigation Measures

The Proposed Project is not anticipated to result in long-term, secondary, or cumulative adverse impacts to soils. The Project Site will be graded to provide positive drainage for storm water runoff to flow towards onsite drain inlets or directly off-site. Storm water excess of the existing conditions will need to be retained on onsite. Accessible walkway layouts, dimensions, and slopes will comply with ADA Accessibility Guidelines.

In the short term, minor grading activities may be undertaken in association with project construction. Grading activities will be limited to the Project Site and will not impact the surrounding area. All excavation and grading activities would be regulated by applicable provisions of the CCH’s grading ordinances (Chapter 14, Articles 13-16, HAR) and comply with the Rules Relating to Water Quality, Department of Planning and Permitting (DPP), CCH, amended September 17, 2018, to control soil erosion and ensure that discharge of pollutants from the construction site will be reduced to the maximum extent practicable (MEP). Temporary erosion control measures will be installed prior to any demolition and/ or construction activities. Recommend Structural

BMPs include silt fence, filter sock, stabilized construction ingress/ egress, and sediment control filters at drain inlets and catch basins as required. Additionally, a National Pollutant Discharge Elimination System (NPDES) permit for stormwater runoff from construction activities would be required should individual and/or cumulative soil disturbances in the Project Site exceed one acre of land area.

3.3 Hydrology

3.3.1 Surface and Coastal Waters

The nearest stream within the vicinity of the Project Site is Nu'uuanu Stream, which is situated approximately 0.5 miles to the north. Nu'uuanu Stream is a perennial stream which originates from flows that begin in the Ko'olau mountain ranges and discharge into Honolulu Harbor, near Pier 15.

The nearest coastal water to the Project Site is Honolulu Harbor, which borders it on the north, south, and west sides. Honolulu Harbor is the result of dredging of what was originally the drainage basin of Nu'uuanu Steam. Dredging activities began as early as the mid-1800s to accommodate maritime industries, leading to the development of the harbor and its surrounding community. The dredged material was utilized to fill the tidelines surrounding the harbor, including the Project Site. Over the past century, Honolulu Harbor has undergone significant changes due to ongoing development modifications of its shoreline. Coral wetlands that once surrounded the harbor were filled in to construct docks and wharves, altering the harbor's natural landscape.

In the 1980s, concern grew over the abundance of nonindigenous marine species in Hawaiian waters, due to Hawai'i's location in the Pacific ocean and its role as a major port. In a Bishop Museum study conducted from 1997 to 1998, various harbor locations that are major points of entry to the Hawaiian Islands for commercial shipping, fishing vessels, and long range sailing craft that might transport nonindigenous species into Hawaiian waters were surveyed. These harbors include Honolulu Harbor, Keehi Lagoon, Kewalo Basin, Ala Wai Yacht Harbor, and Barber's Point Deep Draft Harbor to evaluate the composition of marine communities. Observations were made on common macroinvertebrate and fish species, and benthic fouling and sediment biota were sampled. One of 15 stations surveyed in Honolulu Harbor was near the Project Site, particularly in the basin where the intake for the Hawaiian Electric power station cooling is located. This area features a concrete wall extending 8 feet deep to the top of the dredged reef, where abundant reef corals are found along the wall (McCain and Coles 1973; McCain et al 1975). The wooden piers at Pier 7 and Pier 8 once supported abundant coral, however, corals are now scarce because of the deck's shading of the pier walls. The pillars now support an abundant fouling community of suspension feeders.

In summary, the study detected 13 nonindigenous and two cryptogenic marine species not previously reported in Hawai'i. Factors contributing to the apparent increase in marine introductions include increased transport, survival, and propagation of introduced species through vectors such as hull fouling, ballast water transport, aquaculture, or fisheries introductions and aquarium releases. Additionally, increased sampling efforts in the 1990s and attention to taxonomic groups likely transported and introduced to new areas may have led to the discovery of previously unnoticed species.

The results of this study are similar to findings from a Pearl Harbor survey in 1996, indicating that high values for introductions in certain decades were sampling effort related. In Pearl Harbor, during the 1910s and 1940s, the ratio of introductions to total species were higher in periods of harbor opening and construction, as well as during intense increases in shipping activity and following WWII (Coles et al 1999). This finding may also be related to increased shipping activities in Honolulu Harbor during the decade of WWII when harbor construction

and activity increased. Both studies suggest that introductions have been occurring over an extended period.

AECOS conducted a Natural Resources Assessment for the Project Site in 2024 and found two benthic habitat types recognized throughout Honolulu Harbor: the soft bottom substrate of the harbor floor and the hard substrate along the shoreline perimeter, including both man-made and naturally occurring substrate that has been modified over the past century to construct the harbor. At Pier 7, both soft substrate and hard substrate habitats occur. The soft substrate community consists primarily of dark, very soft silt and fine sand with no evidence of any surface dwelling macroinvertebrates, macroalgae, or seagrass beds. With the exception of numerous small (typically less than 1 cm) burrow holes, the bottom lacks visible structural features. However, it is known that soft sediment habitats, in general, support a diverse community likely consisting of primarily polychaetas, crustaceans, mollusks, and burrow-dwelling fish living within the mud. See Section 3.5.1 for more information on marine biota and a summary of AECOS Natural Resources Assessment, also included herein as Appendix A.

Honolulu Harbor is classified as Class A water by the HDOH. Class A waters classification signifies that protection should be given to uses for recreational purposes and aesthetic enjoyment (See Figure 3-4). Honolulu Harbor is a commercial harbor and a USCG regulated secured zone due to its nature as a critical infrastructure. Recreational activity, such as no fishing, is restricted.

Impacts and Mitigation Measures

No short- or long-term significant adverse impacts on surface and / or coastal waters in the vicinity of the Project Site are anticipated during construction or operation of the Proposed Project. It should be noted that the Proposed Project does not include any developments within the Honolulu Harbor waters. The existing foundation of Pier 7 may require structural augmentation; however, work will be limited to the cross sectional footprint of the existing foundation pilings - this work would not constitute additional disturbance / in-water work. Potential impacts to surface water are related to construction activities and stormwater runoff. Thus, measures to prevent or minimize impacts to fish and wildlife resources include the following:

- Stormwater runoff will be minimized through compliance with HDOH and CCH regulations. Any discharged water encountered and removed while digging foundations for the Proposed Project must comply with Federal requirements as well as applicable State Water Quality Standards specified in HAR, Chapter 11-54 and 11-55 Water Pollution Control, HDOH. As noted above, applicable erosion control measures and BMPs will be implemented in order to mitigate any possible adverse effects relating to runoff.
- Inspect and clean all project construction-related materials and equipment to remove pollutants prior to use.
- Avoid debris disposal, non-native species introduction, or attraction of non-native pests to the affected or adjacent aquatic or terrestrial habitats.
- Avoid construction activities on the pier during spawning season to minimize vibrations and impact on the marine environment.

-
- Avoid stockpiling project construction-related materials in close proximity to aquatic habitats and protect from erosion, to prevent materials from being carried into waters by wind, rain, or high surf.
 - Fueling of project-related vehicles and equipment will take place away from aquatic environments. In addition, a contingency plan will be created to control petroleum products accidentally spilled during the project construction. Absorbent pads and containment booms will be stored on-site to facilitate the clean-up of accidental petroleum releases.
 - All deliberately exposed soil or under-layer materials used in the Proposed Project near the water will be protected from erosion and stabilized as soon as possible with geotextile, filter fabric or native/ non-invasive vegetation matting, hydro-seeding, etc.

Additionally, coordination will be undertaken with the appropriate agencies during permitting and construction in order to ensure that the Proposed Project will not result in significant impacts with regard to surface and coastal waters.

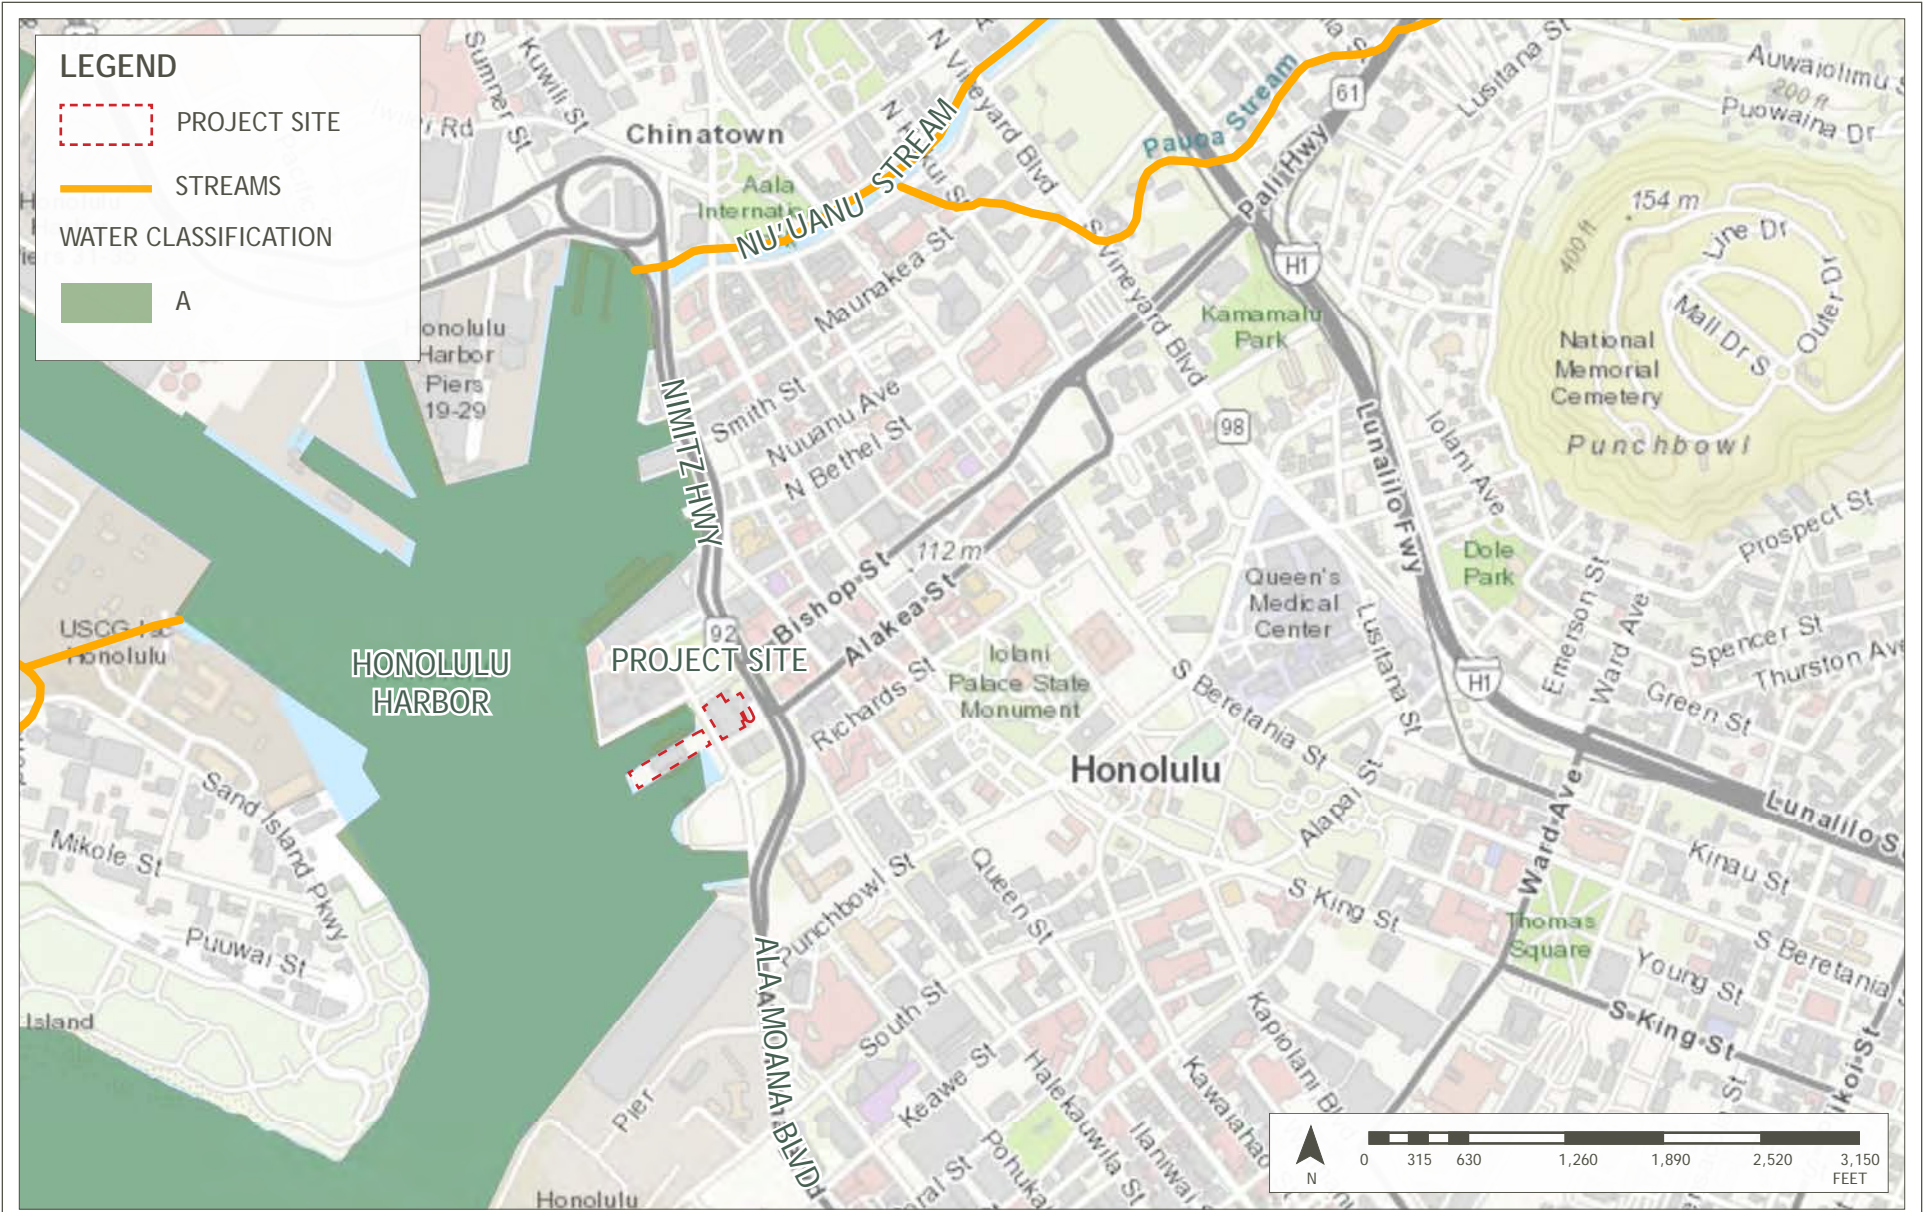

3.3.2 Groundwater Resources

The State Department of Land and Natural Resources (DLNR), Commission on Water Resource Management (CWRM) has established a groundwater hydrologic unit and coding system for groundwater resource management. The Project Site is located within Honolulu aquifer sector, in the Nu'uaniu Aquifer System (See Figure 3-5). The Nu'uaniu Aquifer has an estimated yield of 14 million gallons per day (mgd). The users of this aquifer include residential, commercial, manufacturing, government, parks, school, and other public facilities.

Impacts and Mitigation Measures

The Proposed Project is not expected to have significant adverse impacts on groundwater quantity or quality within the Project Site. Significant impacts to the coastal environment due to groundwater inputs are not expected from the Proposed Project. Any activity occurring near groundwater would be conducted in accordance with applicable regulations. In addition, appropriate mitigation measures including silt fencing, proper storage, and movement of spoils, monitoring groundwater, and careful site preparation will be utilized to minimize adverse impacts. In the short term, construction activities are not likely to introduce to, nor release from the soils, any materials that could adversely affect the underlying groundwater. Any materials or waste produced during the operation of the Proposed Project would be handled in compliance with the necessary CCH and State regulatory requirements.

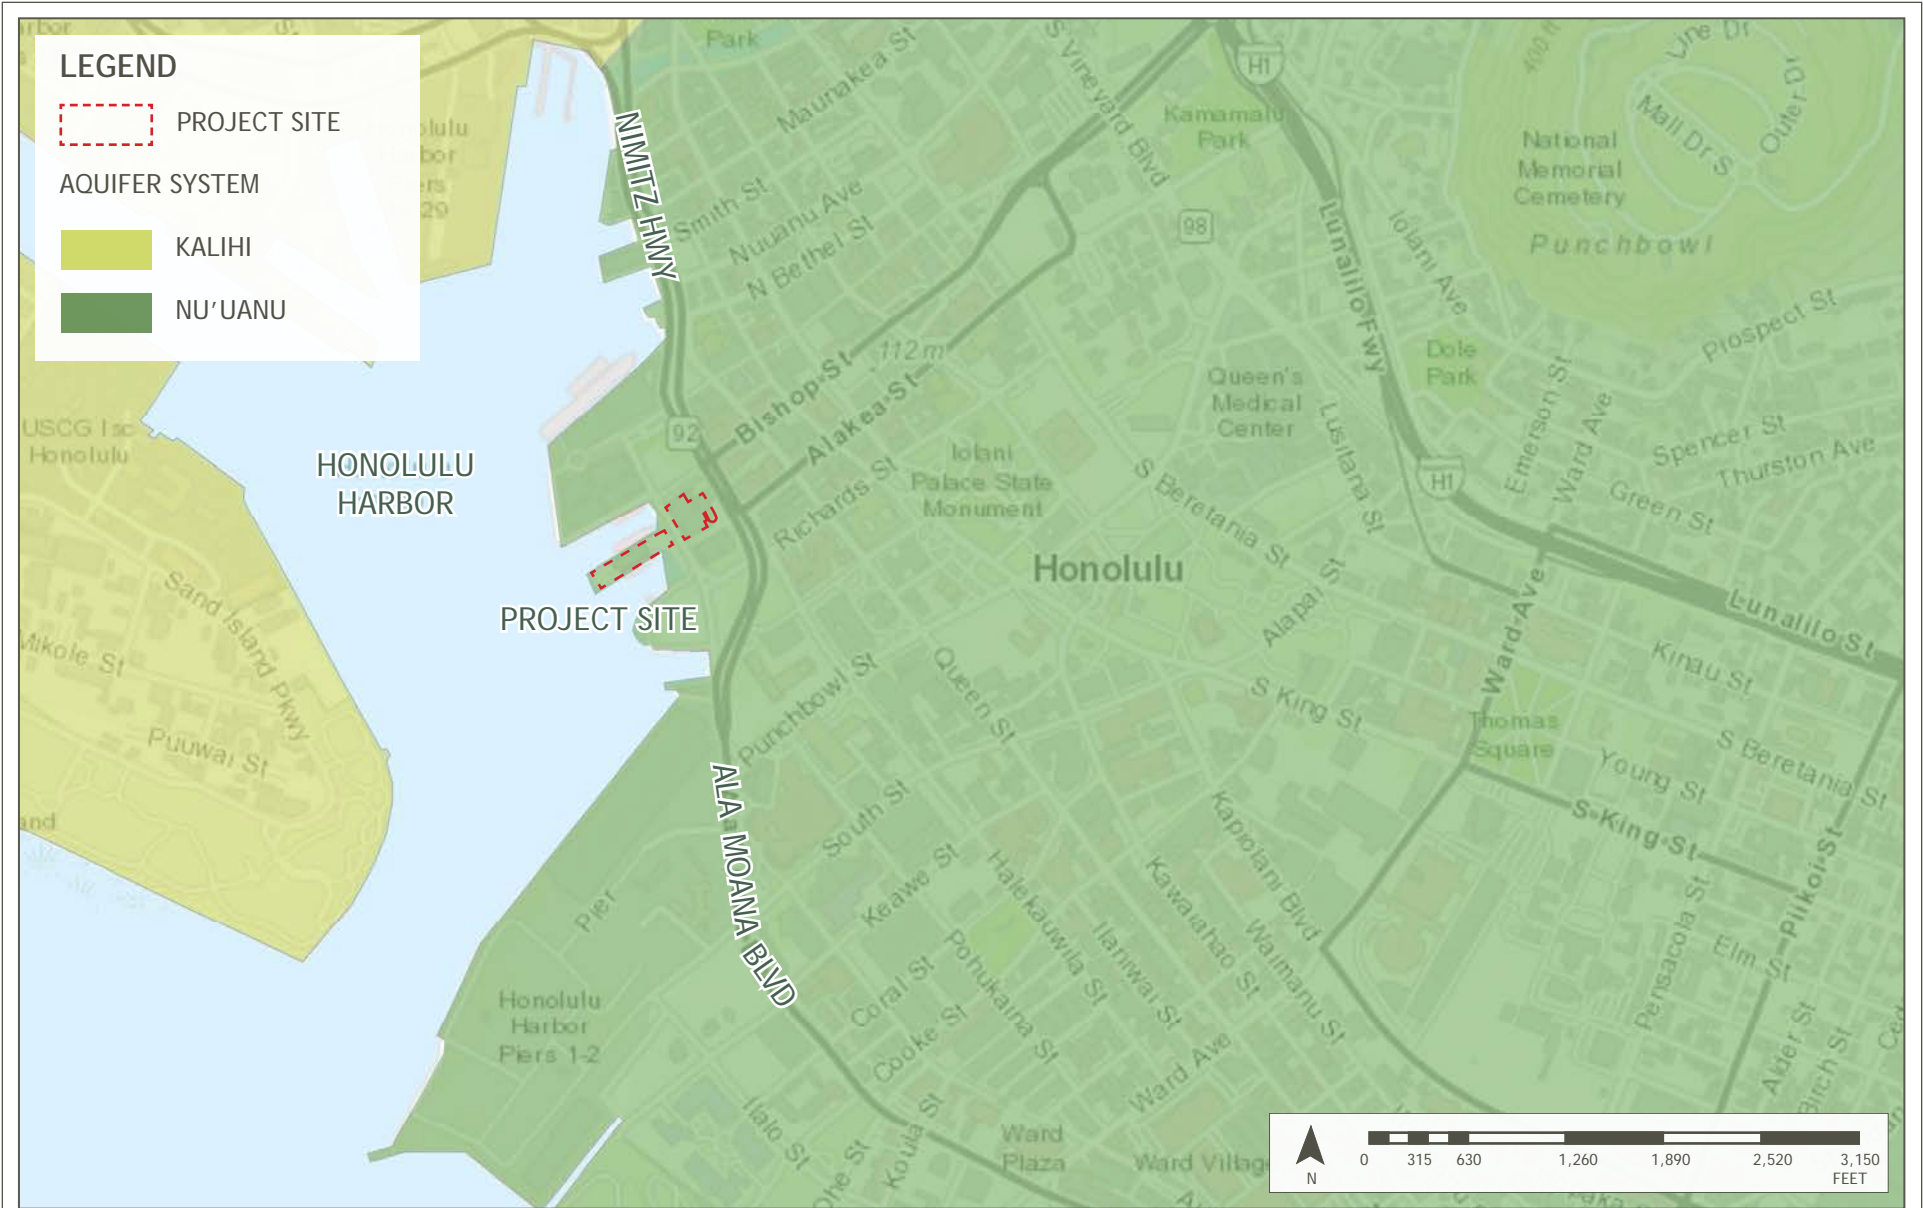

In addition, water conservation measures as requested by the Board of Water Supply (BWS) will be implemented until new sources are completed. These measures may include utilization of non-potable water for irrigation using rain catchment, drought tolerant plants, xeriscape landscaping, efficient irrigation systems, such as a drop system and moisture sensors, and the use of Water Sense labeled ultra-low flow water fixtures and toilets.

3.4 Natural Hazards

According to the Disaster Mitigation Act of 2000 (FEMA, 2000), 44 Code of Federal Regulations, Hazard Mitigation Planning, required States and Counties to have approved hazard mitigation plans as of November 1, 2004, to receive Pre-Disaster Mitigation funding. The development of State and local hazard mitigation plans remains critical for maintaining eligibility for future Federal Emergency Management Agency (FEMA) mitigation and disaster recovery funding.

The 2018 State Multi-Hazard Mitigation Plan is a comprehensive multi-hazard mitigation strategy to reduce loss of life and property damage. The mitigation plan identifies the major natural hazards that affect the state and assesses / analyzes each risk the hazard poses as well as the vulnerability of the State's population, property, and infrastructure to the specific hazard, and recommends actions that can be taken to reduce the risk and vulnerability to the hazard. The mitigation plan contains a description of programs, policies, statues, and regulations applicable to hazard mitigation that has begun and is expected to be released at the end of 2023.

The CCH also maintains a Local Hazard Mitigation Plan, that the State of Hawai'i Emergency Management Agency reviews in accordance with The Disaster Mitigation Act of 2000 (FEMA, 2000), 44 Code of Federal Regulations and coordinates with the CCH to ensure compliance with the federal regulations.

Identified major natural hazards that could affect the State and the CCH are climate change effects (including SLR / coastal erosion), floods, tsunamis, strong windstorms / hurricanes, earthquakes, landslides / rockfalls, wildfires, and volcanic hazards.

3.4.1 Sea Level Rise

Climate change and associated impacts are discussed in detail in Section 3.1.2 above. This section will thoroughly discuss SLR and coastal erosion impacts.

Honolulu is the State's most populous city and serves as the State's capital. O'ahu, with approximately one million residents, constitutes around 70% of the State's total population. As a result, O'ahu possesses many of the State's critical resources, infrastructure, and services. The vulnerability of O'ahu to flooding and SLR has substantial economic and social implications for the islands and communities across the State.

According to findings from the UH Sea Level Center, Hawai'i has approximately 15 years to prepare for the impacts of SLR. A study compared sea level data from 89 harbors, including 6 in Hawai'i, with known tidal and SLR projections from the National Oceanic and Atmospheric Administration (NOAA). The results indicated a rapid increase in the number of flood days by the mid-2030s (Thompson et al., 2021). It is anticipated that Honolulu will experience two to three high tide flood days per month by the early 2040s (Thompson et al., 2021).

Coastal erosion is a natural occurrence, however, rising sea levels are accelerating its rate. Over the next 30 to 70 years, properties situated at or near shorelines across the State will face severe impacts of SLR, including chronic flooding.

The combination of rising sea levels and projections indicating stronger and more frequent El Niño events and tropical cyclones in the waters surrounding Hawai'i suggests a growing vulnerability to coastal flooding and erosion. The Hawai'i Sea Level Rise Vulnerability and Adaptation Report, last updated in 2022, provides the latest projections of global and regional SLR from an intergovernmental report led by NOAA. Models suggest that Hawai'i will experience SLR between 0.7 and 1.5 feet by 2050 (AR6; IPCC 2021). By the end of the century, SLR is anticipated to range from 1.3 feet to 8 feet (NOAA, 2022).

Compound flood sources, including rain events, overwhelmed drainage systems, and coastal groundwater emergence, are likely to exacerbate flooding impacts resulting from SLR. The CCH Climate Commission has issued SLR guidance, recommending the use of 3.2 feet of SLR as a planning benchmark for most developments, and considering 6 feet of SLR as a planning benchmark for critical infrastructure with long expected lifespans and low risk tolerance (Climate Change Commission, 2018).

The Project Site is located within the 6.0 feet SLR Exposure area (See Figure 3-6).

Impacts and Mitigation Measures

The Proposed Project is not anticipated to have adverse effects that could result in SLR. However, the Project Site is bounded by Honolulu Harbor to the north, south, and west side and is within the predicted 6.0 SLR exposure area. Consequently, the Project Site is susceptible to potential impacts from SLR. However, it is anticipated that the Proposed Project will incorporate mitigation measures to safeguard critical resources, infrastructure, and services associated with the Proposed Project.

On a broader policy level, new information will continually be incorporated within future assessments to identify where efforts should be focused when developing adaptation strategies to SLR impacts. It is anticipated that the Proposed Project will be flexible to conform with guidance set forth by best practices outlined by policies and research based on the best scientific data at the time as climate change science, technology and policies evolve.

3.4.2 Flood and Tsunami Hazards

Flood can be defined as the temporary inundation of land, often resulting from excessive rainfall events, storm surges, or other sources. While floods are caused by natural events, the majority of flood damage is attributable to human occupation and land development that is susceptible to flooding due to inadequate protection. Urban Honolulu is particularly vulnerable to flooding from storms, storm surges, high surf, longer-range sea-level rise, and, on rarer occasions, tsunamis. According to the Department of Emergency Management (DEM), flood-related damages amount to millions of dollars annually, and historical data from 1915 to 2018 indicate that floods caused by rainstorms, tsunamis, and hurricanes have claimed over 140 lives and inflicted more than \$200 million in direct and indirect damages in the CCH. The 2018 State of Hawai'i Multi-Hazard Mitigation Plan emphasizes flood control and floodplain management, with a focus on reducing repetitive loss properties.

Flood Insurance Rate Maps (FIRM) for the area, prepared by the Federal Emergency Management Agency (FEMA), designate the Project Site within Flood Zone VE, AE, and X (See Figure 3-7). Table 3-2 outlines the various Flood Zone's associated with the Project Site.

Table 3-2 Flood Zone	
Flood Zone	Description
VE	Coastal High Hazard Area. Areas subject to inundation by 1% annual chance flood, with additional hazards from storm-induced waves, where the blasé floor elevation is determined.
AE	Flood Fringe. Areas subject to inundation by 1% chance flood where the base flood elevations are determined and shown on the map.
X	Areas of minimal flood hazard that are determined to be outside of the 0.2% annual chance floodplain.

Tsunamis are generated by earthquakes, landslides, or volcanism, and can reach speeds of up to 600 mph. Since the early 1800’s, approximately 50 tsunamis have inundated the State of Hawai’i. The most current tsunami was reported in 2011 and caused extensive damage estimated to be worth \$8.275 million today. Generated by a M9.0 earthquake off the coast of Honshu, Japan, peak heights between 7 and 11 feet were reported in the counties of Honolulu, Maui, and Hawai’i. Additional tsunamis impacting O’ahu shores occurred in 1952, 1957, 1960, and 1964.

There are three tsunami zones based on historical tsunami impacts over the past 100 years on O’ahu: 1) Tsunami Evacuation Zone (TEZ) which is commonly used for tsunami warnings. 2) Extreme Tsunami Evacuation Zone (XTEZ) representing a worst-case scenario, once in a thousand-year tsunami event for the State of Hawai’i and 3) Safe Zone.

The Project Site is located within the Tsunami Evacuation Zone (See Figure 3-8). In accordance with guidance from the CCH Department of Emergency Management and International Tsunami Information Center, it is recommended to evacuate inland toward a Safe Zone, or go to the fourth floor, or above in a building at least ten stories or taller in the event of a tsunami. It is recommended that people in the Safe Zone stay home to minimize traffic and allow emergency access for first responders and evacuees leaving the coastline.

Impacts and Mitigation Measures

No significant adverse impacts on flood hazards at the Project Site are anticipated to result from the construction or operation of the Proposed Project. As flood hazards are possible within the Project Site, best management practices (BMPs) are recommended to minimize any potential impacts. In the short-term, applicable BMPs may include temporary sediment basins, temporary diversion berms and swales to intercept runoff, silt fences, dust fences, slope protection, stabilized construction vehicle entrance, grate inlet protection, truck wash down areas, and use of compost filter socks so that impacts of flooding are not exacerbated from construction. In the long term the Proposed Project will incorporate applicable drainage improvements (discussed in further detail in Section 3.15.3) and appropriate building codes related to flooding impacts. While natural hazards cannot be avoided during construction, the impacts would be less than significant and reduced to the degree possible with the incorporation of the actions and practices recommended.

3.4.3 Hurricane and Wind Hazards

A hurricane can be defined as a tropical storm consisting of winds reaching a constant speed of 74 mph or more, posing significant risks to both people and infrastructure. While relatively rare in Hawai'i, the Hawaiian Islands are seasonally affected by hurricanes from the late summer to early winter months. Not all identified hurricane and strong wind storm threats make landfall in Hawai'i, and actual hurricane strikes in Hawai'i are relatively rare in modern record. More commonly, near misses occur, generating large swell and moderately high winds that cause varying degrees of damage to the islands.

When hurricanes and storm events occur, high winds can cause strong uplift forces on structures, particularly on roofs. Wind-driven debris can reach high velocities leading to significant property damage and posing risks to life and safety. Along the coastline, a surge of water, accompanied by battering waves can inundate low lying coastal areas. Due to differences in atmospheric pressure, tidal stage, coastal topography, and location relative to the eye of the hurricane it is challenging to predict the impact of hurricane-induced storm surge on specific locations due to various factors such as differences in atmospheric pressure, tidal stage, coastal topography, and distance from the eye of the hurricane.

Impacts and Mitigation Measures

The potential for hurricanes, while relatively rare, is present across the State of Hawai'i. Construction activities from the Proposed Project could potentially exacerbate the effects of hurricanes if loose materials are not secured prior to the event of a storm and become flying debris during project construction. To minimize this hazard, construction materials and equipment would be stored properly when not in use consistent with construction BMPs. The Proposed Project will be designed in accordance with the American Society of Civil Engineers and International Building Code Standards for wind exposure to safeguard against hurricane damage.

3.4.4 Seismic Hazard

Earthquake hazards include ground shaking, landslides, ground cracks, surface faulting, ground failures, rockfalls and tsunamis. In Hawai'i, the earthquake hazard is one of the highest in the U.S. due to volcanic activity occurring between Kīlauea and Mauna Loa on the island of Hawai'i. Although difficult to predict, an earthquake of sufficient magnitude causing structural or other property damage may occur in the future. However, apart from the island of Hawai'i, the Hawaiian Islands are not situated in a high seismic area subject to frequent earthquakes (Macdonald et al. 1983).

Under the International Building Code (IBC) seismic provisions the likelihood of seismic activity is classified into zones ranging from 0 to 4. Seismic Zone 0 represents no chance of severe ground shaking and Seismic Zone 4 represents a 10 percent chance of severe shaking in a 50-year interval. The U.S. National Seismic Hazard Model for Hawai'i, redesigned a Uniform Building Code which designates the Project Site within the region of O'ahu classified as Seismic Zone 2A under the IBC (2018). Earthquakes that occur in this zone are associated with strong shaking and may result in negligible damage to buildings in good design and construction, slight to moderate damage in well-built ordinary structures, and considerable damage in poorly built structures. Accordingly, the Proposed Project is assessed to have low vulnerability to earthquakes.

Volcanic hazards on O‘ahu are considered minimal due to the extinct status of former volcanoes; however, the effects of earthquakes occurring on the islands of Hawai‘i and Maui may be felt on the island of O‘ahu.

Impacts and Mitigation Measures

O‘ahu has not experienced significant seismic events in the modern era. As assessed above, the Project Site is within Zone 2A designation under the IBC, therefore damage to structure on the Project Site is negligible. The development of the Project Site, as pursued under the Proposed Project would be subject to adherence to strict design requirements, to ensure that all development of the Proposed Project would comply with geotechnical recommendations for seismic hazards and meet prevailing building codes by incorporating specifications to reduce vulnerability to earthquake at that time.

3.4.5 Landslides and Rockfall Hazards

Landslides have several causes including heavy precipitation, runoff, and ground saturation. Debris flows, also known as mudslides, mudflows, lahars, or debris avalanches, are common types of landslides that occur within a wide range of environments. Flows are distinguished from slides by their high-water content and distribution of velocities that resembles that of viscous fluids. Such flows are a form of rapid mass movement in which loose soils, rocks, and organized matter, combined with air and water, form a slurry that flows downslope. Flows generally occur during periods of intense rainfall (3 inches in a peak 6-hour period) (DEM, 2020). Indications of a landslide occurrence include, but are not limited to springs, seeps, or saturated ground that appear in areas that are usually not wet; new cracks or unusual bulges in the ground, street pavements, or sidewalks; and soil moving away from foundations.

Impacts and Mitigation Measures

The Proposed Project is not anticipated to have adverse impacts that could result in landslide or rockfall events as the Project Site is relatively flat and broad. Moreover, the Proposed Project’s construction will not involve any major land disturbing activities involving mass grading or significant revisions to site contours.

3.4.6 Wildfire Hazards

Wildfires pose many threats to life, property, the environment, and important natural resources, including endangered species. Nine out of ten wildfires are human caused; however, lightning has also been known as a natural cause of wildfires. The term “wildfire” applies to any unwanted and unplanned fire burning in a forest, shrubs, or grass regardless of whether it is naturally or humanly induced (DEM, 2020).

Globally, the number of wildfires has increased in past decades. Increases were likely caused by four key factors:

1. Past fire suppression policies, including one of “total suppression,” which allowed for the accumulation of fuel in the form of fallen leaves, branches, and excessive plant overgrowth in forest and wild land areas.
2. Increasingly dry, hot weather.
3. Changing weather patterns.
4. Increased residential development in the wild land/urban interface.

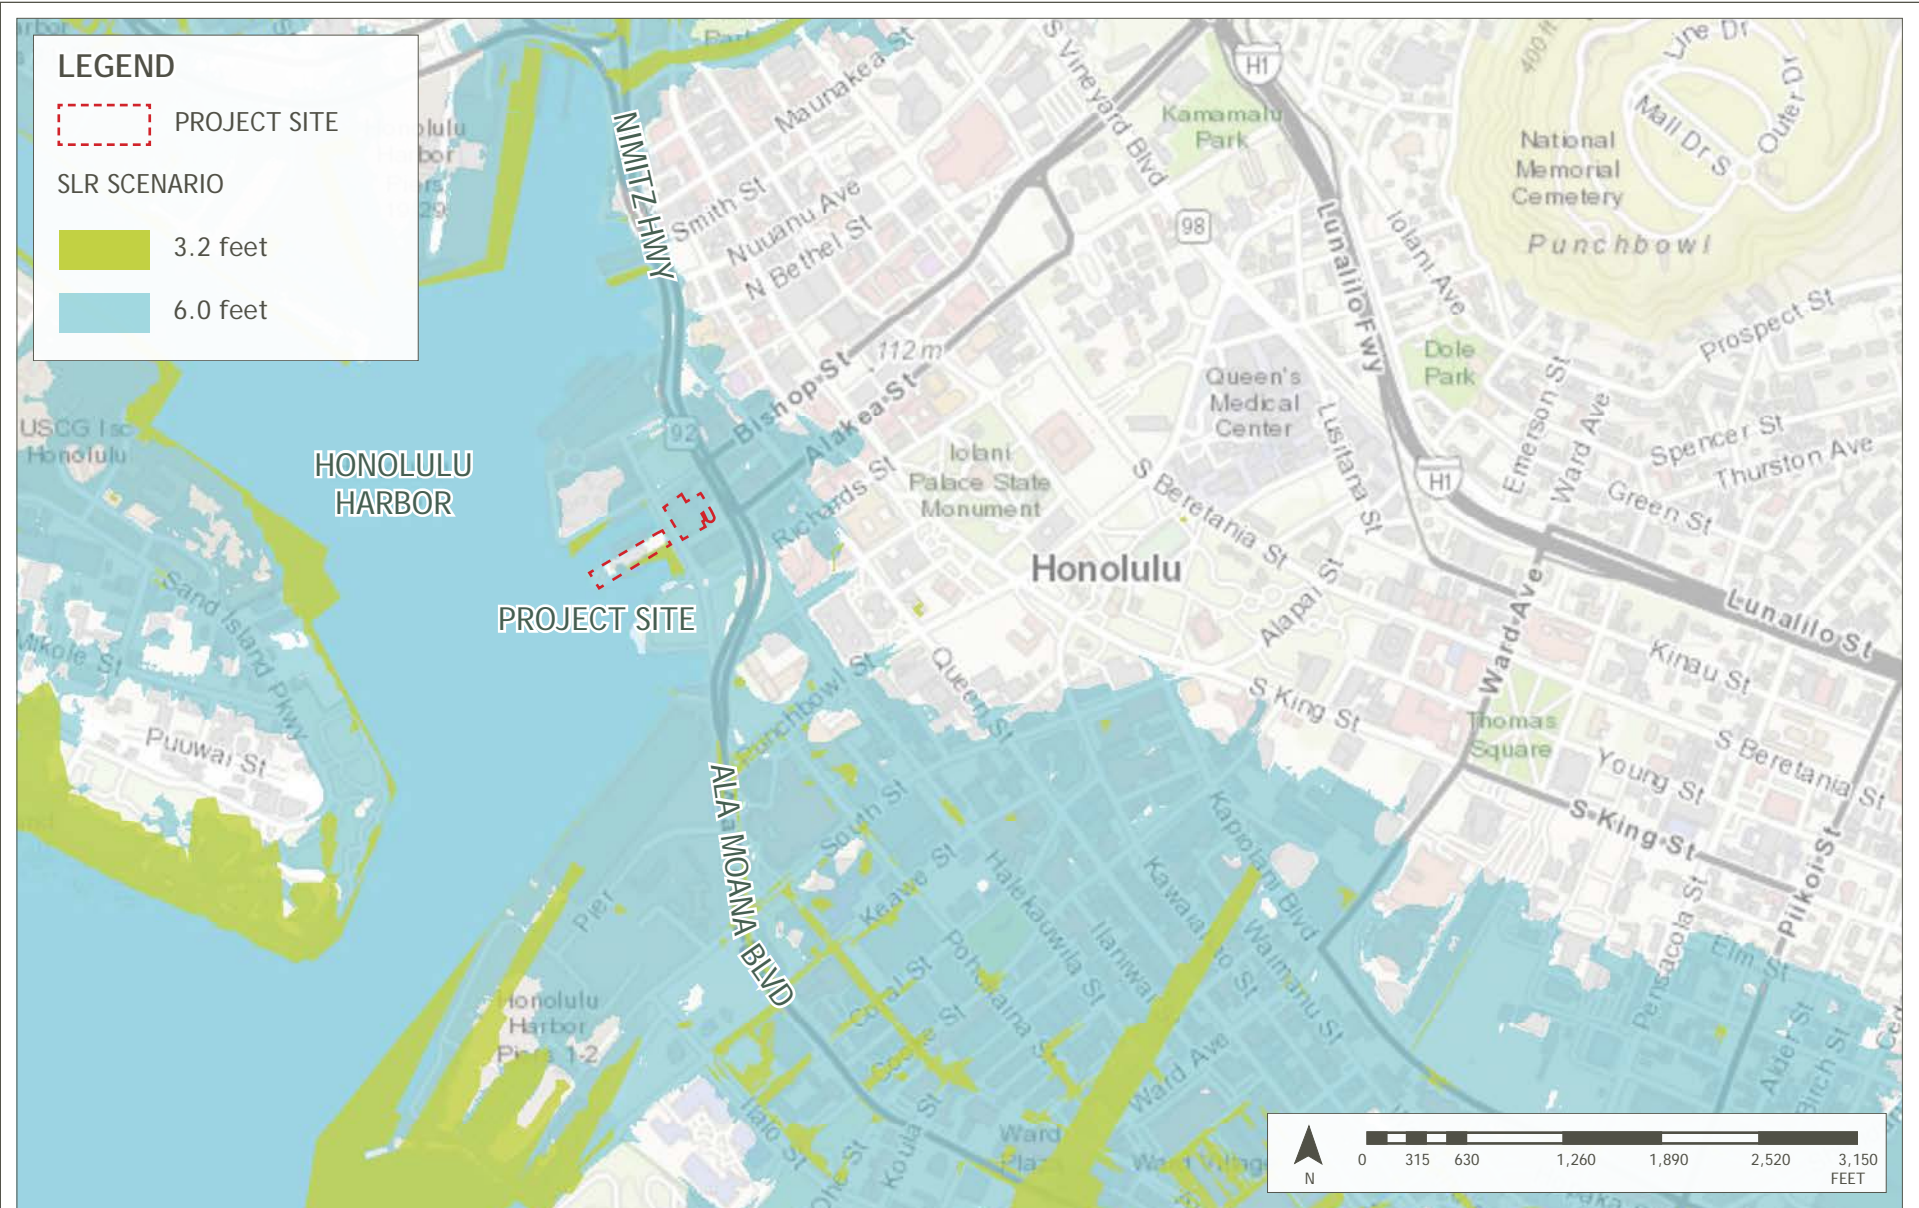

All the Hawaiian Islands are susceptible to wildfires, especially during prolonged drought and high winds. Hawai'i has experienced an annual average of over 1,000 ignitions burning over 20,000 acres each year in the last decade (Congressional Research Service, 2023). The wildfire occurrences were primarily human-caused ignitions; however, expansion of invasive non-native species and fire prone grasslands were cited to have been additional causes. Every year, approximately 0.5% of Hawai'i's total land area is burned which affects human safety, infrastructure, drinking water, agricultural production, cultural resources, native forests, watersheds, native forests, and coral reefs (Hawaii Wildfire). In recent years, the average annual cost to suppress wildfires in Hawai'i is about \$1,100,000 - making it a Statewide risk (DEM, 2020). The greatest danger of fire is where wildlands border urban areas. Through August 2018, wildfires in Hawai'i have burned 30,000 acres (about double the annual average). Historically, most of these fires have been directly caused by humans, either directly or by negligence. As further evidenced by recent events in West Maui, wildfires pose a significant threat to health and human safety and must be taken very seriously.

According to the Fire Risk Area Map produced by the Statewide GIS Program, the Project Site is within a low-risk area for wildfires (See Figure 3-9).

Impacts and Mitigations Measures

The Proposed Project is not anticipated to have adverse effects that could result in wildfire events. According to the Fire Risk Area Map produced by the Statewide GIS Program, the Project Site is within a low-risk area for wildfires.

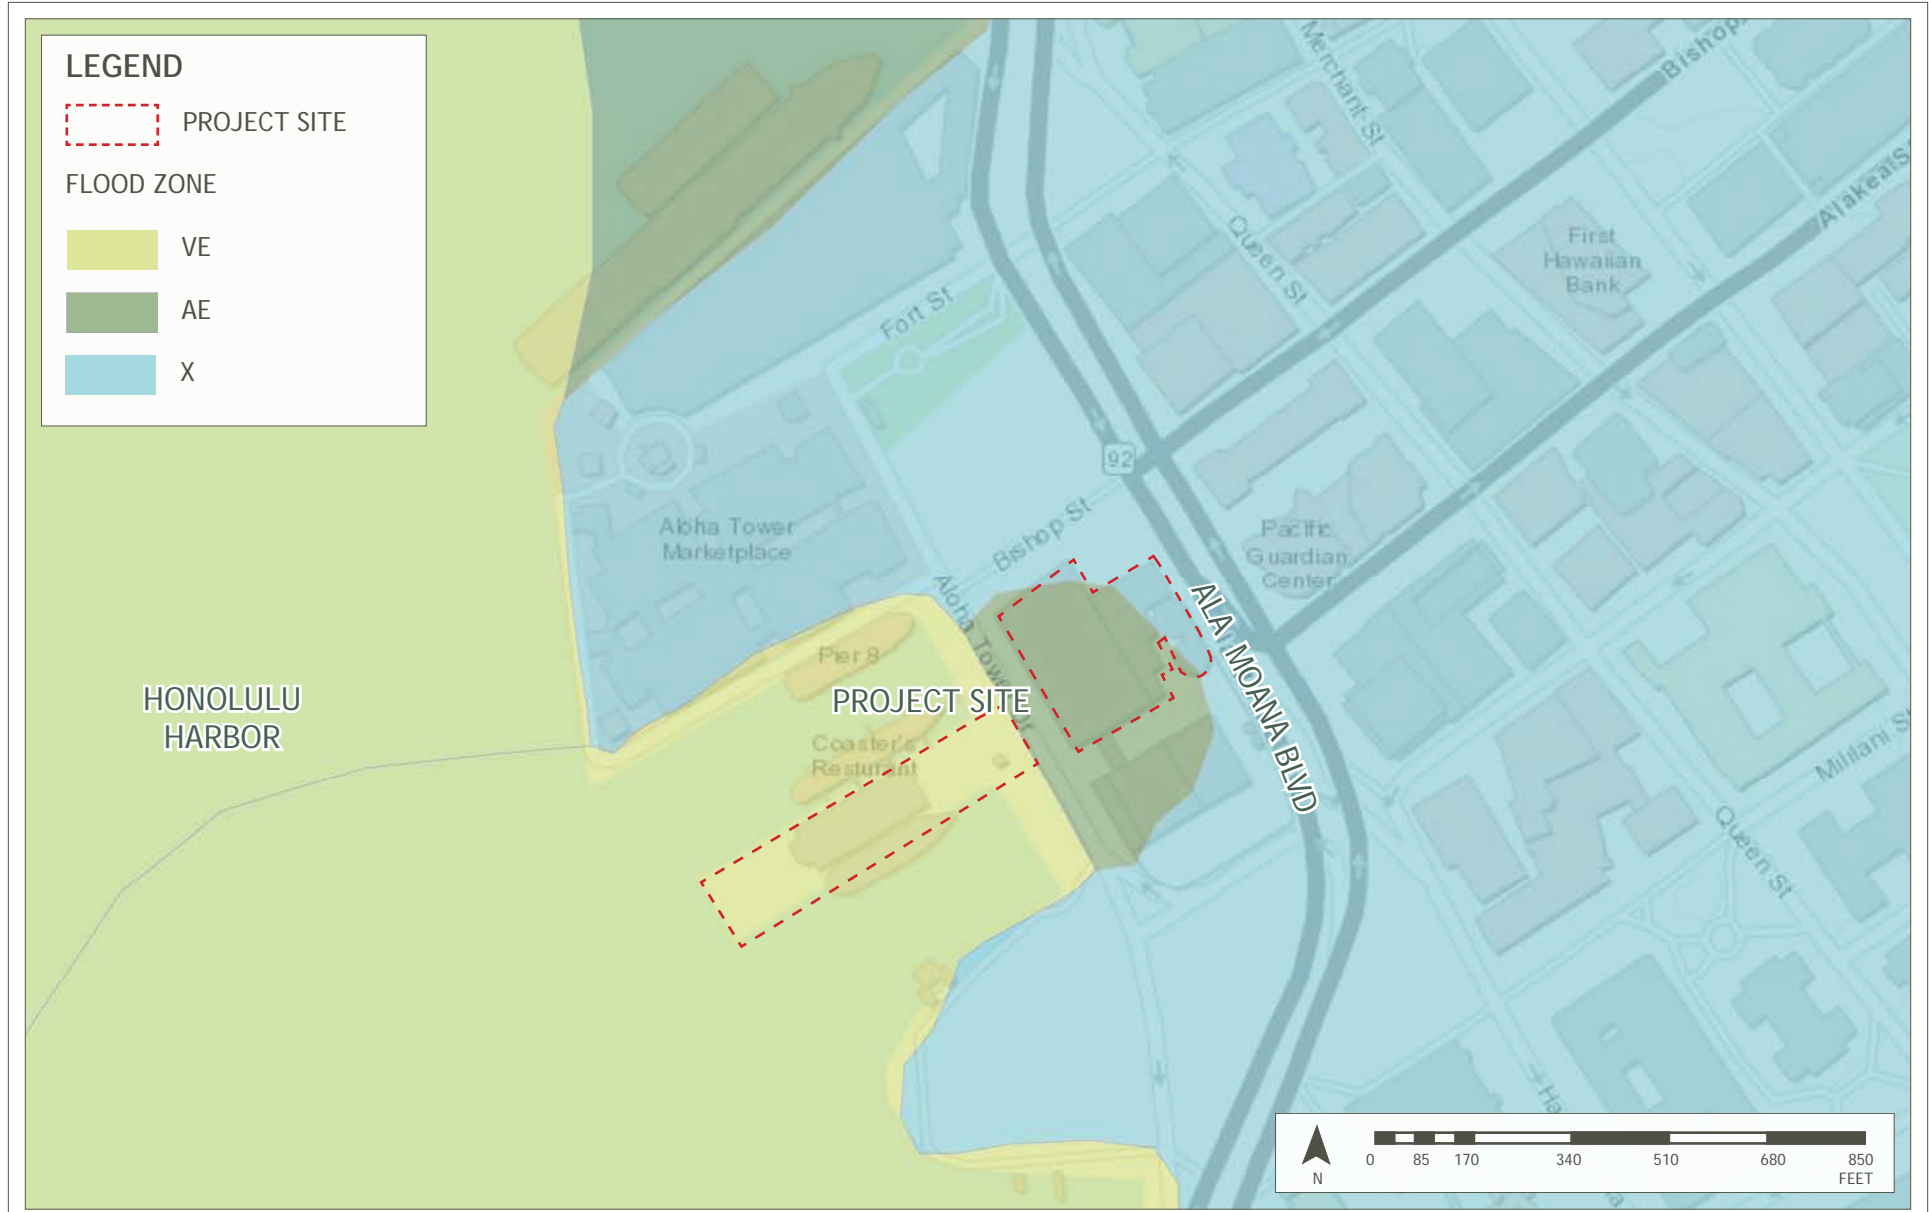

The Fire Management Handbook adopted by the State Department of Land and Natural Resources-Division of Forestry and Wildlife (DLNR-DOFAW), specifies standards for wildfire prevention, pre-suppression, and suppression. A structured approach is provided within the document for public/firefighter safety and minimizing damage to Hawai'i's environment. Funding for the fire management program is provided by the State's general fund and federal cost share programs through the U.S. Forest Service. These programs include the Rural Community Fire Protection and Rural Fire Protection and Control programs. Additionally, the DLNR-DOFAW is a key agency within the State who can trigger provisions of the Stafford Act (Fire Suppression Assistance) which provides for FEMA funding assistance in situations where forest and grass fires on public or private lands threaten a major disaster to communities and economies. For DLNR-DOFAW to meet its legal fire protection mandate for State-owned lands and honor its partnership with other fire services, DLNR-DOFAW negotiated with its local fire departments and established a cooperative mechanism for prevention, pre-suppression, and suppression measures by way of the current Memorandum of Agreements.

3.5 Natural Environment

3.5.1 Flora and Fauna

In 2024, a Natural Resources Assessment was conducted by AECOS Inc. for the Proposed Project. The assessment observed the avian diversity and densities present within the Project Site and its surrounding vicinity. A summary of the Natural Resources Assessment is outlined below and included herein as Appendix A.

Flora Survey

AECOS biologists surveyed the Project Site and identified that the plant species that were encountered consist of native and naturalized flowering plants, ferns, ornamental, and agricultural plants. Vegetation found on the Project Site is dominated by a lawn of pitted beard grass (*Bothriochloa pertusa*) and zoysia grass (*Zoysia matrella*). Multiple species of palms are planted throughout the Project Site, which provide only limited canopy cover throughout the Project Site. The power plant area included a fenced-in parking lot which was not accessible during the field survey. Observations noted that the paved parking lot featured palms, ferns, and herbs consistent with the rest of the Project Site.

A total of 69 plant taxa were recorded during the survey: five ferns, and 64 flowering plants. No endemic native species were recorded. AECOS biologists identified the following indigenous species that are of fern/ fern allies: Palapalai (*Microlepia strigosa*) and moa (*Psilotum nudum*), and trees hau (*Hibiscus tiliaceus*) and milo (*Thespesia populnea*), and the widespread naupaka kahakai (*Scaevola taccada*) and 'uhaloa (*Waltheria indica*). AECOS biologists also identified Early Polynesian introductions such as niu or coconut (*Cocos nucifera*), ti or kī (*Cordyline fruticosa*), and 'ihi'ae (*Oxalis corniculata*).

Avian Fauna

AECOS biologists recorded a total of 7 bird species, representing 5 separate families. Native bird species found at the Project Site and surrounding vicinity include only indigenous white tern (*Gygis alba*). The remaining species recorded are non-native introductions that have become naturalized in the Hawai'i. Spotted around Pier 7 were white tern, cardinals, finches, and sparrows. Spotted around the decommissioned Honolulu Power Plant were doves, zebra doves, and rock pigeons. The avian diversity observed during the surveyed is consistent with habitats present in this urban area.

Terrestrial Mammals

Although no mammals were observed during the survey, it is probable that one or more of the four Muridae found on O'ahu—roof rat (*Rattus rattus*), brown rat (*Rattus norvegicus*), Polynesian rat (*Rattus exulans hawaiiensis*), and European house mouse (*Mus musculus domesticus*)—use resources within the general project area.

Marine Biota

Species observed in the waters off Pier 7 are invertebrate feeding fish (e.g. yelling tang (*Zebrasoma flavescens*) and Moorish idol (*Zanclus cornutus*)). The hard substrate typical of Honolulu Harbor include hydroids (*Pennaria disticha*), byozoans (*Bugula denata* and *Amathia distans*), sponges, bivalves (*Isognomon perna* and *Dendostrea sandvicensis*), anemones (*Aiptasia pulchella*), and tunicates (*Phallusia nigra* and *Herdmania momus*). Common coral colonies observed throughout Honolulu Harbor include *Porites lobata*, *P. Compressa*, *Letastrea spp.*, *Pavona varians*, and *Cyphastrea ocellina*.

State- and federally listed marine species—green sea turtle (*Chelnoia mydas*), hawksbill sea turtle (*Eretmochelys imbricata*), and monk seal (*Neomonachus schauinslandi*)—may occur in the general vicinity of the Project Site.

In summary, the flora and fauna species found at the Project Site and its vicinity are consistent with the highly altered urban environment. This includes entirely maintained landscaping and associated weeds. Given the Project Site's proximity to the coast, endangered species such as Hawaiian seabirds are likely to overfly or utilize the Project Site. These species include the 'ua'u kani (Wedge-tailed shearwater, *Ardenna pacifica*), 'ua'u (Hawaiian petrel, *Pterodroma sanwicensis*), 'a'o (Newell's shearwater, *Puffinus newelli*), and the 'ake'ake (Bandrumped storm petrel, *Hydrobates castro*). Endangered waterbirds such as the ae'o (Hawaiian stilt, *Himantopus mexicanus knudseni*), koloa maoli (Hawaiian Duck, *Anas wyvilliana*), 'alae 'ula (Hawaiian common gallinule, *Gallinula galeata sandvicensis*) and the 'alae ke'oke'o (Hawaiian coot, *Fulica alai*). The endangered 'ope'ape'a (Hawaii hoary bat, *Lasiurus cinereus semotus*) may also be found residing or transiting through the Project Site and its vicinity. Marine biota that may be found in Honolulu Harbor are the Hawaiian monk seal (*Monachus schauinslandi*) and green sea turtles (*Chelonia mydas agassizi*). However, waters within constructed boat harbors are excluded from critical habitat for these species, and no basking of the green sea turtles has been documented in the vicinity of the Project Site.

Impacts and Mitigations Measures

The Proposed Project is not anticipated to have adverse impacts on flora and fauna. Mitigation measures to ensure the safety of endangered species known to reside or transit through the Project Site and its vicinity will be taken during the construction period. It is recommended that the movement of plants or soil between worksites be minimized. Soil and plant material may contain invasive fungal pathogens (e.g., Rapid 'Ōhi'a Death), vertebrate and invertebrate pests (e.g., Little Fire Ants, Coconut Rhinoceros Beetles), or invasive plant parts that could harm our native species and ecosystems. All equipment, materials, and personnel should be cleaned of excess soil and debris to minimize the risk of spreading invasive species. Gear that may contain soil, such as work boots and vehicles, should be thoroughly cleaned with water, and sprayed with 70% alcohol solution to prevent the spread of Rapid 'Ōhi'a Death and other harmful fungal pathogens. It is also recommended that native plant species be used for landscaping that are appropriate for the area (i.e., climate conditions are suitable for the plants to thrive, historically occurred there, etc.).

Construction activities may temporarily disrupt routine behavior of common faunal species in the immediate Project Site, but will not result in permanent displacement, or adversely affect regional distribution of affected fauna. Once the Proposed Projects redevelopment is complete, faunal activity in the vicinity of the work site is expected to return to pre-existing conditions.

No adverse impacts resulting from the project are anticipated. However, measures to prevent adverse effects to protected species include the following:

- During construction activities, all nighttime lighting will be shielded and angled downward to reduce glare and disruption of bird flight. Nighttime work that

requires outdoor lighting should be avoided during the seabird fledging season from September 15 through December 15. This is the period when young seabirds take their maiden voyage to the open sea. Following construction, permanent light sources will be shielded and angled downward to eliminate glare that could disturb or disorient birds in flight.

- If tree trimming or removal is planned, DLNR-DOFAW strongly recommends a qualified biologist survey for the presence of White Terns prior to any action that could disturb the trees.
- If any of the State-listed waterbirds are present during construction activities, then all activities within 100 feet (30 meters) should cease, and the bird should not be approached. Work may continue after the bird leaves the area of its own accord.
- Any required clearing should be timed to avoid disturbance to bats during their birthing and pup rearing season (June 1 through September 15). During these periods, woody plants greater than 15 ft should not be disturbed, trimmed, or removed. Barbed wire should not be used as fencing for construction because bat mortalities have been documented as a result of becoming ensnared by barbed fencing during flight.
- All mechanical or construction activities within 100 feet of a found foraging sea turtle, Hawaiian monk seal, or other marine mammal, must cease until the animal voluntarily leaves the area. If a pup is observed in the area, create a larger buffer between construction materials and the animal should. Minimize the use of lighting and shield all project-related lights from May to December so the light is not visible from any beach, as they may interfere with sea turtles during nesting season.
- Work performed during coral spawning period (May to August) will monitor potential sedimentation and turbidity effects to coral eggs and larvae. Work will halt once sedimentation and turbidity surpass the water quality threshold determined by the Division of Aquatic Resources.
- Mitigate the spread of invasive species between areas of activities by inspecting and disinfecting construction equipment.
- Incorporate applicable erosion control and land-based sources of pollution (LBSP) barrier measures to avoid continuous release or buildup.
- Incorporate applicable BMPs for Work in Aquatic Environments into the project design.
- Removing any project-related debris, trash, or equipment from the beach or dune if not actively being used.
- Avoid stockpiling project-related materials in the intertidal zone, reef flats, or stream channels.

3.6 Historic and Archaeological Resources

Honua Consulting (Honua) prepared an Archaeological Literature Review and Field Inspection (LRFI) report in April 2024 (See Appendix B). The LRFI was designed to determine the likelihood that historic properties (any building, structure, object, district, area, or site over 50 years old) may be affected by the Proposed Project based on findings, propose any mitigation measures. As explained in the LRFI, the purpose of the report is intended to determine the land-use history, potential subsurface deposits which may exist within the property, and

identify any potential artifacts or cultural deposits present on the ground surface observable during surface survey of the property. It should be noted that this study is not an archaeological inventory survey (AIS), however the LRFI report was written using HAR §13-276 standards and is intended to assist with historic preservation efforts related to the Proposed Project.

The following is a brief discussion and summary of the LRFI report and archaeology-focused research within the context of the traditional background and history of the Project Area.

Traditional and Historical Background

Prior to its discovery by foreigners, the vicinity in and around Honolulu Harbor was named Kou, so named because groves of kou (cordia) trees were a prominent feature on the landscape. Several additional traditional place names are known to have been used for land areas of Honolulu including Kīkīhale (small area from Maunakea Street and King Street to Nuʻuanu Stream), Kapuʻukolo (area bound by Nuʻuanu Stream to Honolulu Harbor), Nihoa (waterfront to west of the Project Site), Kuloloia (former beach near the foot of Fort Street and extending east of Kakaʻako), Honokaʻupu (waterfront at makai end of Alakaʻi Street), Koaopa (area near the coast to the east of the Project Site), and Waikahalulu (waterfront between Fort Street and Richards Street). Table 1 of the LRFI (Appendix B) lists place names referenced and shown on maps.

Historic Land Tenure and Use Within the Project Area

From 1893 to 1918, Land Grants for fee simple purchases for the west portion of the project area were made by Honolulu Electric Co Ltd. And J.A. McCandless. Table 2 of the LRFI lists land commission awards and royal patents associated with the land within the current project area.

Brief History of the Growth and Development of Honolulu

Due to the significant influx of ship traffic into Honolulu Harbor, the city experienced a surge in prosperity. As more foreigners arrived on Oʻahu, the surrounding community naturally grew. The area of Merchant Street near the harbor began to be commercially developed. However, this period of growth was accompanied by diseases, causing the native population to decline while the foreign population increased, a trend seen throughout Hawaiʻi in the 19th century and early 20th century.

The construction of Honolulu Fort began in 1815 by Russian representatives, who was then forced to leave the island. Construction continued the following year until the fort was dismantled in 1857. Rubble from the fort, combined with harbor dredge material was used to fill the new land area called the Esplanade, adding approximately 15 acres of waterfront.

In the mid-1940s, coral and basalt block buildings emerged, marking a shift in architectural style. After Honolulu became the capital of the Hawaiian Islands in the 1850s, the area known as the capital complex began to be developed.

The first Chinese came to Hawaiʻi in the early 1800s and slowly began to settle in a 36 acre area along Nuʻuanu Stream, known today as Chinatown. The area grew as Chinese plantation workers, upon completing their contracts, established businesses such as restaurants, tailor shops, groceries, and various other types of businesses. However, in 1886, the Chinatown fire devastated much of the area, but was quickly rebuilt afterward. By the 1900s, sanitary issues

and disease outbreaks, including cholera and bubonic plague, led to measures like quarantine and “controlled fires” set at buildings where victims resided to eliminate threats. In 1973, nearly 36 acres of Chinatown were added to the National Register of Historic Places (Number 73000658). The burned areas of downtown began to be developed by investors commercially, which spurred the growth and development that led to Honolulu becoming the commercial and financial hub it is today.

Honolulu Harbor

Honolulu Harbor was developed as early as 1823 with the construction of piers, wharfs, warehouses, sheds, storage areas, and various other improvements, becoming the main point of commerce, administration, and immigration to the islands. By the 1850s, fringes of Honolulu Harbor were filled to accommodate the expansion of the Harbor (the Esplanade). The northern portion of the Esplanade was completed by the 1870s and improvements and reclamation efforts along Honolulu Harbor continued southward through the end of the 19th century. When Hawai'i was annexed by the U.S., Honolulu Harbor became a vital American port and was continued to be developed with wharves, piers, and maritime infrastructure.

Honolulu Harbor not only served commercial significance but also for recreation. By the 1920s Hawai'i was a popular tourist destination, which prompted the renovation of Piers 8, 9, and 10 in 1925. This renovation to these piers required demolition of the city block between Fort Street, Esplanade, Kekuanaoa, and Allen streets. With the completion of Pier 11 in 1919, cruise ships were able to dock on Piers 8 to 11. In 1926, Aloha Tower was completed on Pier 9, just north of the current project area, and became the landmark of the Honolulu waterfront.

The surface of Pier 7 has changed overtime. Historic photos and maps from circa 1965-1997 show Pier 7 being used as a level, asphalted parking lot and the presence of large, elevated ramp extending north/south through the project area. The ramp extends from Aloha Tower over the project area to former Piers 5 and 6 which were combined together for another large parking lot. Pier 7 currently houses the Hawai'i Maritime Center, built around 1988 to 1989 until it closed in 2009. The Maritime Center has since been vacant on Pier 7.

The Hawaiian Electric Building in the east portion of the project area, was constructed in the 1920s, added onto in 1954, and decommissioned in 2014.

Today, Honolulu Harbor continues to be the center of commerce in Hawai'i.

Previous Archaeological Studies

Numerous archaeological investigations have been conducted in downtown Honolulu. Archaeological investigations in downtown Honolulu were first conducted by the Bishop Museum in the late 1960s and 1970s. The projects documented historic artifacts and features associated with the monarchy and dwellings that were once in the area. Studies near the Project Site have largely focused on the Capital District, commercial development of the harbor fronts, and highway and utility infrastructure. Archaeological studies and historic properties present within a 0.3 mile (500 meter) radius of the Project Site are listed in Table 3-3.

Table 3-3 Historic Properties Located within 0.3 miles of the Project Site

Mason Architects, Inc. (Mason) prepared a Reconnaissance Level Survey (RLS) for the Proposed Project in February 2024 to identify and evaluate the presence of significant historic properties within the Project Site. This report was written to fulfill requirements under HRS §6E-42 and §6E-8 and HAR §13-284 and §13-275 to identify historic properties, evaluate their significance and the Proposed Project's effect on them, as well as provide recommendation for mitigation of any adverse effects. The findings of this report are summarized below, and included herein as Appendix C.

Mason surveyed Pier 7, former Maritime Center, and Units 5 and 7 of the Honolulu Power Plant for significance and integrity in keeping with HAR §13-284-6 and §13-275-6 Criteria a through d. Evaluation for the Project Site is outlined in Table 3-4.

**Table 3-4 Evaluation of Significance and Integrity
(HAR §13-284-6 and §13-275-6)**

Name/ Address/ TMK	Year Built	Evaluation of Significance	Integrity Assessment
Pier 7- Aloha Tower Dr. TMK: [1]2-1-001:058	1922-27	<ul style="list-style-type: none"> • Meets Criterion "a" for its association with the development of Honolulu Harbor. The pier was built during the Board of Harbor Commissioner's campaign beginning in the 1910s to rebuild the harbor's wood piers in concrete. • Meets Criterion "c" because it is one of a few remaining examples of Honolulu Harbor's early reinforced concrete piers. 	<ul style="list-style-type: none"> • Retains integrity of L,D,W,F, and A • Partially retains integrity of M • Does not retain integrity of S
Former Maritime Center- Aloha Tower Dr. TMK:[1]2-001:058	1988	<ul style="list-style-type: none"> • This is not a historic property. It is less than 50 years old. It cannot meet HAR §13-275-6 significance and integrity criteria. 	N/A
Old Honolulu Power Plant, Units 5 and 7- 170 Aloha Tower Dr. TMK:[1]2-1-014:006 (por.)	1920- ca. 1924 (Unit 7) and 1930 (Unit 5)	<ul style="list-style-type: none"> • Units 5 and 7 are not significant due to a loss of integrity. They no longer convey their periods of significance. While they are associated with HECO'S generation of power in the 1920s and 30s, alterations made outside their periods of significance have impaired their integrity. 	<ul style="list-style-type: none"> • Retains integrity of L • Partially retains integrity of M and A • Does not retain integrity of D,S,W, and F

**Integrity assessments provided in the table above are abbreviation for the aspects of integrity specified in HAR §13-284-6 and §13-275-6. The seven aspects of integrity are:*

L= Location D= Design S= Setting M= Materials W= Workmanship F= Feeling A= Association

Evaluation of Effect

The Proposed Project was evaluated for its effects on the integrity of historic properties against HAR §13-284-7 and §13-357-7 criteria. "Determining effects to significant properties" describes effects on historic properties as follows:

- Effects include but are not limited to, partial or total destruction or alteration of the historic property, detrimental alteration of the properties' surrounding environment, detrimental visual, spatial, noise or atmospheric impingement, increasing access with the chances of resulting damage, and neglect resulting in deterioration and destruction.

Furthermore, HAR §13-284-7 and §13-357-7- "Determining effects to significant properties" explains that one of two effect determinations must be establish; "No historic properties affected" or "Effect, with agreed upon mitigation commitments."

In summary, it is assumed that the Proposed Project will result in a "No Historic Properties Affected" finding, based on the project description. The Proposed Project is not likely to substantially change Pier 7's setting, assuming that the massing, scale, and materials of the former Maritime Center will not be substantially changed. For Units 5 and 7 of the Old Honolulu

Power Plant, it is evaluated as not meeting HAR §13-284-6 significance and integrity criteria, the proposed work will not result in effects to significant historic properties.

Impacts and Mitigations Measures

No adverse impacts on historical or archaeological resources are anticipated to result from the construction and operation of the Proposed Project. The Proposed Project is situated within an already heavily disturbed parcel of a heavily disturbed urban environment.

In general, open trenching has the potential to result in the greatest impact to archeological and historic resources as it involves linear areas of disturbance in the layers of soil and subsoil that typically hold cultural materials associated with subsurface archeological sites. Tunneling, micro-tunneling, and horizontal drilling all involve less disturbance of the soils closer to the surface that may contain cultural materials; these would primarily result in impacts from the construction of shafts, which represent a smaller footprint of ground disturbance than open trenching. In order to minimize any potential impact on these resources, construction contractors would be required to adhere to standard BMPs regarding the protection of archeological resources, including identification, stop work, and notification measures. Should archeological resources be discovered, all appropriate measures would be adhered to for their protection; and as a result, long-term impacts to archeological resources would be expected to be minor as irreversible ground disturbance has the potential to impact archeological sites permanently.

No historic or archeological sites have been previously identified within the Project Site. There are no properties within the Project Site listed on the Hawai'i Register of Historic Places (HRHP). However, the existing building is eligible to be listed on the National Register of Historic Places as the existing building was constructed in 1939 and meets the minimum age requirement of 50 years. However, the existing building has undergone several additions and alterations.

It should be noted that the Proposed Project is subject to Chapter 6E, HRS, review by the State Historic Preservation Division (SHPD). Through this process, the SHPD will make a determination of the effects of the Proposed Project with regards to historic and archaeological resources. If there are potential impacts, the SHPD will require various mitigation measures to minimize any impacts.

3.7 Cultural Resources

Cultural resources, for the purposes of this EA, refer to those associated with cultural practices and traditions. Cultural practices are defined as activities imbued with cultural or spiritual meaning, which can be traditional or modern. Cultural practices may include traditional Hawaiian Practices in addition to the cultural practices of other communities and ethnic groups. Assessment of the Proposed Project's impacts on cultural practices, per HRS 343, HRHP Criterion E, Act 50, considers effects on cultural practitioners' ability to access the locations and resources needed to undertake cultural practices. Wahi pana (storied places) are also considered as they are imbued with cultural significance through their appearance in mo'olelo, mele (songs), oli (chants), and other oral history traditions.

Honua Consulting (Honua) also prepared a Cultural Impact Assessment (CIA) report in for the Proposed Project in April 2024 to identify valued cultural, historical, and natural resources within the Project Site. The CIA was prepared in conjunction with the LRFI discussed in Section 3.6 above¹. This includes the extent to which traditional and customary native rights practiced in the area were once extensive, as the area has a long history of significance to the Hawaiian people. The CIA is intended to provide information to State and County agencies when making decisions that may impact cultural, historical, and natural resources or Native Hawaiian traditional and customary practices. Consistent with the framework set forth in the Hawai'i Supreme Court's decision, *Ka Pa'akai O Ka 'Āina v. Land Use Commission*, the CIA includes information to assist agency decision-making related to the Proposed Project, including: "(1) the identity and scope of valued cultural, historical, or natural resources in the petition area, including the extent to which traditional and customary native Hawaiian rights are exercised in the petition area; (2) the extent to which those resources—including traditional and customary native Hawaiian rights—will be affected or impaired by the Proposed Project; and, (3) the feasible action, if any, to be taken by HDOT- Harbors to reasonably protect native Hawaiian rights if they are found to exist." *Ka Pa'akai O Ka 'Āina v. Land Use Comm'n*, 94 Hawai'i 31, 47, 7 P.3d 1068, 1084 (2000). The CIA is included herein as Appendix D and is summarized below.

During the preparation of the EA, Honua conducted interviews with three (3) Native Hawaiian residents, who all live in and/ or are familiar with the Honolulu Harbor area. A summary of these interviews is summarized below:

Interview with Deana (Dre) Kalili

Dre is the current President of the Association of Hawaiian Civic Clubs and the HDOT Deputy Director for Harbors. When asked about the project area, Dre acknowledges that the project area once served as an important place for Native Hawaiians prior to foreign contact, particularly Pier 7 as Kālakaua's boathouse. However, Dre is not aware of any ongoing traditional practices at Pier 7 and believes that the Proposed Project would not adversely impact cultural resources or traditional practices.

Interview with Na'alehu Anthony

Na'alehu Anthony is a Native Hawaiian storyteller and documentary filmmaker, who produced and directed a number films, including the award-winning PBS Documentary of Mau Piailug: The Wayfinder. Anthony emphasized the historical significance of Māmala for canoe travel and the entire ahupua'a. Anthony also notes that Pier 7 has been underutilized in years and expressed support for the development of an art space, particularly one that would bring a renowned museum to Honolulu. Anthony believes that the Proposed Project would not negatively impact cultural resources or practices. Instead, he sees it as an opportunity to integrate Hawaiian culture and collaborate with Hawaiian artists or cultural events.

Interview with Elmer Ka'ai

Elmer Ka'ai is the President and Chairman of Hui Kāko'o Ho'opulapula and spent a lot of time near the project area growing up. Elmer does not think that the Proposed Project will adversely

¹ Information and discussions presented from CSH's LRFI in Section 3.6 was not repeated in this discussion to avoid repetition.

impact cultural resources or traditional practices and thinks it would be good to integrate the history of the area into the project, especially aspects of Hawaiian culture and history.

Impacts and Mitigations Measures

There are no known or identified cultural practices currently taking place at the Project Site, which has been heavily disturbed. It is unlikely that the Proposed Project would adversely impact intangible cultural resources currently taking place on the property or in adjacent areas.

Construction of the Proposed Project improvements will not disturb traditional sacred sites or traditional cultural objects; will not result in the degradation of resources used by Native Hawaiians for subsistence or traditional cultural practices; will not obstruct culturally significant landforms or way-finding features; and will not result in loss of access to the shoreline or other areas customarily used by the Native Hawaiians or others for resource gathering or traditional cultural practices. As noted above in Section 3.6, should any unidentified archaeological resources be encountered during construction, all work will cease, and the State Historic Preservation Office will be contacted for review and approval of mitigation measures.

3.8 Air Quality

Air Quality is determined by measuring pollutants in the air and assessing their impact on human health and the environment, including plants and animals. Air quality can degrade through various human-caused emissions such as vehicular use and natural sources such as wildfires that release air pollutants and threaten human health. The number of emissions released by pollutant sources and the ability of the atmosphere to transport and disperse such emissions are what determine ambient concentrations of air pollutants. Relevant sources that will derive from the Proposed Project include vehicles, construction vehicles and equipment, as well as stationary sources such as pump station generations.

Ambient air quality in the State is monitored by the HDOH Clean Air Branch for various gaseous and particulate air pollutants. The U.S. Environmental Protection Agency (EPA) has set national ambient air quality standards (NAAQS) for six criteria pollutants: carbon monoxide (CO), nitrogen dioxide (NO₂), sulfur dioxide (SO₂), lead (Pb), ozone (O₃), and particulate matter (PM₁₀ and PM₂). A state ambient air standard for hydrogen sulfide (H₂S) related to volcanic activity on Hawai'i Island. The primary purpose of the Statewide monitoring network is to measure ambient air concentrations of these pollutants and ensure that these air quality standards are met.

The NAAQS include primary and secondary standards which respectively govern applicable air quality standards. Primary standards are applicable to any outdoor atmosphere accessible by the public and were established to protect human health, including the health of sensitive populations, such as asthmatics, children, and the elderly. Secondary standards set limits to protect the environment, which includes plants and animals, from adverse effects associated with pollutants in the air. The State of Hawai'i has adopted many NAAQS as the state standards and established its own standards for several pollutants. Table 3-5 below presents the State and National standards.

Table 3-5: National and State Ambient Air Quality Standards

Air Pollutant	Averaging Time	Standards		
		Hawai'i State Standard	Federal Primary Standard ^a	Federal Secondary Standard ^a
Carbon Monoxide	1-hour	9 ppm	35 ppm	None
	8-hour	4.4 ppm	9 ppm	
Nitrogen Dioxide	1-hour	--	0.100 ppm	--
	Annual	0.04 ppm	0.053 ppm	0.053 ppm
PM ₁₀	24-hour	150 µg/m ³	150 µg/m ³	--
	Annual ^c	50 µg/m ³	--	--
PM _{2.5}	24-hour	--	35 µg/m ³	35 µg/m ³
	Annual		12 µg/m ³	15 µg/m ³
Ozone	8-hour	0.08 ppm	0.070 ppm	0.070 ppm
Sulfur Dioxide	1-hour	--	0.075 ppm	--
	3-hour	0.5 ppm	--	0.5 ppm
	24-hour	0.14 ppm	--	--
	Annual	0.03 ppm	--	--
Lead	Rolling 3-month	1.5 µg/m ^{3d}	0.15 µg/m ³	0.15 µg/m ³
Hydrogen Sulfide	1-hour	0.025 ppm	None	None

*Source: HDOH, State of Hawai'i Annual Summary 2015 Air Quality Data, December 2016.

^a Primary Standards set limits to protect public health, including the health of "sensitive" populations such as asthmatics, children and the elderly.

^b Secondary Standards set limits to protect public welfare, including protection against decreased visibility, damage to animals, crops, vegetation, and buildings.

^c Due to a lack of evidence linking health problems to long-term exposure to coarse particle pollution, EPA revoked the annual PM₁₀ standard effective December 17, 2006. However, the state still has an annual standard.

^d The state standard is based on calendar quarter.

ppm - parts per million.

µg/m³ - Micrograms per cubic meter.

An area where the ambient air concentration of a criteria pollutant is less than the applicable NAAQS and is not contributing to ambient concentrations which exceeds NAAQS standards in nearby areas is categorized as being "in attainment" for that pollutant per the Clean Air Act (CAA). An area where the ambient air concentration equals or exceeds the NAAQS or is contributing to a nearby area which exceeds NAAQS standards is categorized as being in "nonattainment". A "maintenance area" is defined as being an area that has been re-designated from nonattainment status to attainment status and has an approved maintenance plan under §175 of the CAA. The location of the Project Site has been designated as an attained area for each criteria pollutant.

The cause of air pollution in Hawai'i is caused by many different anthropogenic and natural sources. There are industrial sources of pollution, such as power plants and petroleum

refineries; mobile sources, such as cars, trucks, and buses; agricultural sources, such as crop burning, and natural sources, such as windblown dust and volcanic activity. The HDOH Clean Air Branch is responsible for regulating and monitoring pollution sources to ensure that the levels of criteria pollutants remain well below the State and federal ambient air quality standards.

Three air quality monitoring sites are maintained and operated by the HDOH Clean Air Branch. The monitoring sites are located on the island of O‘ahu: Honolulu, Pearl City, and Kapolei. Ground-level concentrations of criteria pollutants are measured where most commercial, industrial, and transportation activities and their associated air quality effect occur. Hawaiian Electric Company’s downtown power plant is the primary stationary source, while vehicular traffic with State and Federal air pollution control regulations. Air quality at the Project Site is generally considered to be good due to the typical flow of fairly constant northeasterly trade winds that disperse pollutants seaward.

Air quality within the vicinity of the Project Site is mostly affected by emissions from vehicular, industrial, and/ or natural resources. Ala Moana Boulevard, which is adjacent to the Project Site, is a major arterial roadway that carries heavy volumes of traffic. Natural sources of air pollution affecting the air quality of the site include ocean spray, plant pollen, wind-blown dust, and emissions from distant volcanoes.

Impacts and Mitigations Measures

In the short- and long-term, no significant adverse impacts on air quality are anticipated as a result of the construction and operation of the Proposed Project. In the short-term, it is anticipated that the various construction activities associated with the Proposed Project will result in irrevocable release of GHGs. Construction related emissions include tailpipe emissions from construction equipment, delivery trucks, and workers commuting to and from the construction site. It is anticipated that the quantities of GHGs released from construction related activities will be negligible and usage of each piece of equipment would be sporadic and not simultaneous. Moreover, the contractors for the construction of the applicable projects will be required to prepare a dust control plan compliant with the provisions of Chapter 11-60.1, HAR, Air Pollution Control.

3.9 Noise

The existing noise environment at the Project Site is characterized by that of a typical urban setting. The primary source of ambient noise in the Project Site is predominantly attributed to vehicular traffic traveling along Nimitz Highway, Ala Moana Boulevard, adjacent roadways, and harbor operations. Additionally, noise from the low-pitched sounds of coastal waves, wind, and birds further contributes to the acoustic environment.

Noise Descriptors and Their Relationship to Land Use Compatibility

The Federal Housing Administration (FHA) and the US Department of Housing and Urban Design (HUD) currently utilize a noise descriptor called the Day-Night Average Sound Level (DNL) to assess environmental noise. This descriptor incorporates a 24-hour average of instantaneous A-Weighted Sound Levels as read on a standard Sound Level Meter. The minimum averaging period for the DNL descriptor is 24 hours and sound levels which occur

during the hours of 10:00 PM and 7:00 AM are increased by 10 decibels (dB) prior to computing the 24-hour average by the DNL descriptor.

Table 3-6 below presents land use compatibility guidelines for various levels of environmental noise as measured by the DNL descriptor system pursuant to HDOH limits on the level of noise allowed in various zoning districts.

Table 3-6: Noise Standards			
Zoning District	Zoning Equivalent	Daytime (7 a.m. to 10 p.m.)	Nighttime (10 p.m. to 7 a.m.)
Class A	Residential, Conservation, Preservation, Public Space, Open Space, or Similar Type	55	45
Class B	Multi-family Dwellings, Apartment, Business, Commercial, Hotel, Resort, or Similar Type	60	50
Class C	Agriculture, Country, Industrial, or Similar Type	70	70

**Source: HAR Title 11, HDOH, Chapter 46 Community Noise Control*

Generally speaking, noise levels of 55 DNL or less tend to occur in rural areas, or in areas which are removed from high volume roadways. In urbanized areas which are shielded from high volume streets, DNL levels generally range from 55 to 65 DNL, and are usually controlled by motor vehicle traffic noise.

Impacts and Mitigations Measures

In the short-term, noise from construction activities such as excavation, grading, cutting, and paving will be unavoidable. The increase in noise level will vary according to the particular phase of construction. Noise may also increase as a result of operation of heavy vehicles and other power equipment during the construction period. Nighttime construction is not currently anticipated, but if nighttime construction is performed, a noise variance will be required from the HDOH.

Construction noise impacts will be mitigated by compliance with provisions of the State HDOH Administrative Rules, Title 11, Chapter 46, "Community Noise Control" regulations. These rules require a noise permit if the noise levels from construction activities are expected to exceed the allowable levels stated in the HDOH Administrative Rules. It shall be the contractor's responsibility to minimize noise by properly maintaining noise mufflers and other noise-attenuating equipment, and to maintain noise levels within regulatory limits. Also, the guidelines for heavy equipment operation and noise curfew times, as set forth by the HDOH noise control rules, will be adhered to; or, if necessary, a noise permit shall be obtained. In the long-term, operation of the Proposed Project is not anticipated to result in adverse noise impacts.

3.10 Hazardous Materials

Hazardous materials are generally characterized as items or agents (physical, chemical, or biological) which have the potential to cause harm to humans, animals, or the environment, either independently or through interaction with other factors. Toxic materials are specific hazardous materials identified in regulations. Hazardous wastes are distinguished as those specifically determined based on their ignitability, corrosiveness, reactivity, and toxicity. The

potential impacts of hazardous materials and wastes on human health and the environment are largely dependent upon their types, quantities, toxicities, and management practices.

Hazardous wastes may take the form of a solid, liquid, contained gas, or semi-solid. Generally, any combination of waste that poses a substantial present or potential hazard to human health or the environment that has been discarded or abandoned is a hazardous waste.

The Federal Environmental Protection Agency (EPA) and Hawai'i universal waste regulations streamline hazardous waste management standards for federally designated "universal wastes," which include batteries, pesticides, and mercury-containing materials. Universal wastes are considered hazardous; however, they are subject to less restrictive waste disposal regulations than for hazardous wastes.

Hazardous wastes associated with construction, including used oils, antifreeze, and solvents are handled and disposed of by licensed contractors.

Construction activities associated with the implementation of the Proposed Project improvements may include the use of materials and processes that involve chemical agents or materials typical to construction that could be considered hazardous. These materials are primarily associated with vehicle and/or equipment maintenance that typically include flammable and combustible liquids, acids, aerosols, batteries, corrosives, solvents, paints, and hydraulic fluids.

ENPRO Environmental (ENPRO) conducted a Phase I Environmental Site Assessment (ESA) in May 2024 to identify Recognized Environmental Conditions (REC), Controlled RECs (CRECs), and Historical RECs (HRECs) associated with the Project Site. The result of the ESA is included herein as Appendix E and summarized in Table 3-7 below.

Table 3-7 Recognized Environmental Conditions			
RECs	REC Categories		
	Release	Conditions Indicative of a Release	Conditions Posing a Threat of Future Release
Historic Use: Previous environmental reports indicated that soil and soil vapor beneath the Old Honolulu Power Plant was impacted by acetone, naphthalene, 1-MNP, PCE, TPH-d, TPH-o, 1,2-DCA, BaP, BbF, DahA, pyrene, and/ or lead.	X		
Several leaks were reported from the fuel pipeline beneath the property. Has the potential to impact environmental conditions due to petroleum products that it supplies to property.			X
Extended site history supporting petroleum-fueled power generation, related commercial activities, and military use.		X	
PCBs in electrical equipment and transformers.			X

<p>Storage Tanks: A diesel above ground storage tank (AST) and two low sulfur fuel oil (LSFO) ASTs were observed at the Old Honolulu Power Plant site. Regulatory records indicated that one of the of the LSFO ASTs leaked.</p>	X		
<p>Wells: Three underground monitoring wells were observed on the property. Reportedly, an Environmental Hazard Management Plan (EHMP) was prepared from this data.</p>	X		
<p>Adjacent/ Nearby Site Contamination: Elevated concentrations of petroleum, hydrocarbons, pesticides, and metals were present in site soils for the Aloha Tower Development. This has the potential to impact the Project Site.</p>	X		
<p>Solid Waste: The deteriorating Falls of Clyde ship located at Pier 7 has the potential to impact the Project Site.</p>			X
Historical Recognized Environmental Conditions (HRECs)			
No Further Action (NFA) Date	HRECs		
February 17, 2006	A 500-galloon UST situated approximately 0.1-mile northwest of the Project Site underwent permanent closure and granted a "Site Cleanup Completed".		
July 31, 2014	A 1.5- ounce mercury oil spill reported at the Old Honolulu Power Plant property. DOH Hazard Evaluation and Emergency Response (HEER) Office of On-Scene Coordinator (SOSC) issued an NFA Status.		
November 9, 2004	100 gallons of Shell Diala- Transformer Oil spill reported at the Old Honolulu Power Plant property. SOSC NFA status was issued.		
Unknown	1,000 gallons of fuel oil was reported to have spilled at the Old Honolulu Power Plant property. SOSC NFA status was issued.		
Unknown	50 gallons of turbine oil was reported to have been released at the Old Honolulu Power Plant property. SOSC NFA status was issued.		
January 31, 2017	35 gallons of fuel oil was reported to have been released at the Old Honolulu Power Plant property. SOSC NFA status was issued.		
May 9, 2019	A vehicle veered off Pier 5 and entered Honolulu Harbor. Despite efforts, a tow truck dispatched that night was unable to extract the vehicle. A salvage company was able to successfully remove the vehicle the next day. This spill, located on the subject property, received an NFA. However, an investigation to assess the extent of the contamination was not conducted.		

September 6, 2021	Laboratory analysis of soil samples collected from borings installed in the north portion of the property indicated contaminated soil below the groundwater table at depths of 8 to 9 feet. The source was believed to be the HECO Honolulu Power Plant. The identified contaminant was reported to be aged hydrocarbons in the carbon range of C10 to C30 with the bulk of the identified hydrocarbons between C14 and C25. This received an NFA from DOH. However, an investigation to assess the extent of the contamination was not conducted.
Potential Concerns and/or Business Environmental Risks (BER)	
Concern	Summary
Contaminants of emerging concern (CECs)	CECs may be present on the subject property but are not covered under the scope of the Practice until they are defined as hazardous substances under federal regulation.
Asbestos-containing material (ACM)	ACM may be present on the subject property.
Lead-containing paint (LCP)	LCP may have been used in the construction and/or maintenance and upkeep of structures at the subject property.
Potential PCB-containing building materials	PCBs are widely present in manufactured products in buildings constructed or renovated between 1950 and 1979.
Indoor air quality concerns	Indoor air pollutants can be released into the building, causing a potential health hazard for inhabitants.
Mold	Large quantities of mold spores can present a health hazard and mold growth can cause damage to building materials.
Lead in drinking water	Lead can enter drinking water when plumbing materials that contain lead corrode, especially where the water has high acidity or low mineral content that corrodes pipes and fixtures. The most common sources of lead in drinking water are lead pipes, faucets, and fixtures.
Harbor waters	An abandoned ship on the subject property at Pier 7 TMK (1) 2-1-001: 058, was observed during the site visit. In addition, multiple small releases have been documented in the harbor near the subject property.
Potential Pesticides Beneath Existing Structure Slabs	Application of pesticides, primarily for termite control, was common practice in Hawai'i. While this is not considered a REC if the slab of the building remains intact, any re-development involving disturbing and/or disposal of these soils will require environmental oversight and management.
Fill Land of Unknown Origin	The subject property is built on fill land of unknown origin. Currently, there are no documented contaminants associated with this fill material, other than what has been identified as resulting from past use (see Table 1-1). However, if this material is to be disturbed and/or disposed as part of future development activities, further characterization is recommended.

In summary, ENPRO's assessment revealed no RECs, CRECs, or significant data gaps in connection to the Project Site, except for those described in the table above.

Impacts and Mitigations Measures

Based on the findings of the ESA, ENPRO recommends the following additional actions and/ or investigations:

- Properly disposing of 20-pound propane tanks observed on the southern exterior of Pier 7.
- Properly clean the two-foot by one-foot oil sheen on the collapsing dock of Pier 7.
- Historical activities at the subject property, including a machine shop, power plant, fuel pipeline, and a Naval reservation: conduct soil and groundwater sampling in the areas of the above historical features to assess for the presence of COPCs. If contamination is identified, additional sampling may be required to delineate its extent.
- Remove the abandoned ship and deteriorating dock at Pier 7.
- Evaluate the management of contaminants covered by the SWPCP and assess the effectiveness of the implementation of this Plan.
- Assess possible impacts to the subject property associated with contaminants detected on the Aloha Tower property adjacent to the northwest.
- In the event redevelopment or subsurface improvements are planned (including utility repairs/upgrades) evaluate for the presence of contaminants in soils and/or groundwater to be disturbed and perform the environmental hazard assessment and management planning recommended in the DOH Technical Guidance Manual for the implementation of the Hawai'i State Contingency Plan (TGM).

Hazardous materials, including chemicals, petroleum-based projects, and waste materials, including solid and liquid waste, would be stored in areas specifically designed to prevent discharge into storm water runoff. Areas used for storage of toxic materials would be designed with full enclosure in mind. The work associated with the Proposed Project would require the removal of asbestos materials if encountered, and the Asbestos Abatement Office would need to be contacted. These remediation activities would comply with all established regulations and procedural guidelines. Design features specific to the reduction of the potential effects of hazardous spills will be implemented, where appropriate.

Prior to and during demolition and renovation, any fibrous or suspected Asbestos-Containing Material (ACM) should be sampled and analyzed at a U.S Department of Commerce - National Voluntary laboratory Accreditation Program (USNVLAP) accredited microscopic laboratory. The removal of Regulated Asbestos Containing Building Material (RACM) is required for all RACM that exceeds the threshold limits as defined in the regulations promulgated as the National Emissions Standards for Hazardous Air Pollutant (NESHAP). All RACM must be removed prior to routine demolition and renovation activities that will disturb the material. Removal of the RACM must be performed by a specialty licensed contractor (C-19) adhering to contract specification developed based on the results of the inspection and assessment, and EPA, Occupational Safety and Health Administration (OSHA) and HDOH regulations. Additionally, all ACM disturbed during the course of demolition or renovation should

be sampled and analyzed in accordance with the EPA and HDOH regulation by a State certified inspector.

Affected areas suspected of Lead Based Paint (LBP) is a regulatory concern for abatement of workers per OSHA requirements and for disposal acceptance at municipal landfill facilities. Prior to the disturbance of the suspect LBP containing materials, the materials will be tested by the State of Hawai'i verified LBP inspector using an EPA approved method. If paint chip samples are collected, the samples should be analyzed by a USNVLAP accredited laboratory, to be analyzed for lead content using EMC SOP Method #L01/1 and EPA SW-846 Method 7420. Furthermore, bulk samples of homogenous materials may be collected in accordance with HDOH and EPA requirements. Alternatively, any or all LBP materials will be presumed to be LBP containing and handled as such by the remediation contractor.

A hazardous materials inventory and survey should be conducted in all areas occupied by tenant organizations scheduled for displacement or relocation. Any hazardous materials that may be identified prior to or during construction of the Proposed Project will be disposed of properly.

3.11 Traffic

A Traffic Impact Report (TIR) was prepared by Wilson Okamoto Corporation in March 2024 to identify and assess the traffic impacts resulting from the development of the Proposed Project. Specifically, the scope of assessment for the TIR included:

- Evaluation of existing roadway system and traffic operations in the vicinity of the Project Site;
- Analysis of future roadway and traffic conditions with the Proposed Project;
- Analysis and development of trip generation traffic over future traffic conditions;
- Identification and analysis of traffic impacts resulting from the Proposed Project; and,
- Recommendations of improvements, if appropriate, that would mitigate identified traffic impacts resulting from the Proposed Project.

The findings of this report are summarized below, and included herein as Appendix F.

Area Roadway System

In the vicinity of the Project Site, Nimitz Highway is a two-way, State of Hawai'i divided arterial generally oriented in the east-west direction. Near the northwest corner of the Project Site, Nimitz Highway intersects with Bishop Street. At this signalized intersection, the eastbound approach along Nimitz Highway includes four through lanes and an exclusive right-turn lane, while the westbound approach includes four through lanes. Bishop is a CCH roadway oriented in the north-south direction and starts at the intersection with South Beretania Street as a five-lane, one-way (southbound) roadway until it intersects Nimitz Highway where it transitions as a four-lane, two-way roadway. The southbound approach on Bishop Street includes two exclusive left-turns, a through lane, and an exclusive right-turn lane while the northbound approach includes exclusive turning lanes.

East of the intersection with Bishop Street, Nimitz Highway intersects Alakea Street. At this signalized T-intersection, the eastbound approach along Nimitz Highway includes two

exclusive left-turn lanes and three through lanes while the westbound approach includes three through lanes and an exclusive right-turn lane. It should be noted that there is signage at the intersection allowing U-turn maneuvers from both approaches of Nimitz Highway. Alakea Street is a predominantly four-lane, one-way (northbound) CCH roadway between Nimitz Highway and South Beretania Street. At the intersection with Nimitz Highway, the Alakea Street leg of the intersection has four receiving lanes.

East of the intersection with Alakea Street, Nimitz Highway intersects Richards Street and Halekauwila Street. At this signalized intersection, the eastbound approach of Nimitz Highway includes an exclusive left-turn lane, two through lanes and a shared through and right-turn lane, while the westbound approach includes an exclusive left-turn lane and three through lanes. Richards Street is CCH roadway generally oriented in the north-south direction and is comprised of two separate segments, north and south of Nimitz Highway. In the vicinity of the Project Site, Richards Street is a one-way (southbound) roadway that provides access to the Aloha Tower Complex. At the intersection with Nimitz Highway, the Richards Street leg of the intersection includes a receiving lane. The north leg of the intersection is comprised of Halekauwila Street, a CCH roadway generally oriented in the east-west direction. At the intersection with Nimitz Highway, the Halekauwila Street leg of the intersection also has one receiving lane.

South of the intersection with Nimitz Highway, Richards Street intersects Aloha Tower Drive. At this unsignalized intersection, the southbound approach on Richards Street includes a stop-controlled shared lane that serves all turning movements. The northbound approach of the intersection is comprised of the access roadway for a parking lot for the Aloha Tower Complex. That approach includes a stop-controlled lane that serves left-and right-turn movements. Aloha Tower Drive is a predominantly two-lane, two-way private roadway generally oriented in the east-west direction serving uses within the Aloha Tower Complex such as the Hawaii Pacific University (HPU), various commercial uses, and the complex's parking lots. In addition, field observations also indicate that the south side of the roadway is used for commercial bus loading/unloading for passengers associated with the Star of Honolulu Cruise Terminal located off Pier 8, as well as stops for the trolleys and public transit that serve the Aloha Tower Complex. At the intersection with Richards Street, the eastbound approach of Aloha Tower Drive includes a stop-controlled lane that serves through and right turn movements while the westbound leg of the intersection includes a receiving lane.

West of the intersection with Richards Street, Aloha Tower Drive intersects Bishop Street. At this unsignalized T-intersection, the eastbound approach includes an exclusive left-turn lane and a through lane while the westbound approach includes one lane that serves through and right-turn movements. The southbound approach of Bishop Street includes a stop-controlled shared left- and right-turn lane and an exclusive right-turn lane.

West of the intersection with Bishop Street, Nimitz Highway intersects Fort Street Mall. At this signalized T-intersection, the eastbound approach of Nimitz Highway includes three through lanes and a shared through and right-turn lane while the westbound approach includes four through lanes. Fort Street is a CCH roadway that is generally oriented in the north-south direction. North of Nimitz Highway, Fort Street becomes a pedestrian mall through the downtown area. The northbound approach of Fort Street includes two exclusive turning lanes.

Transit Facilities

Bus transit service within the vicinity of the Project Site is provided by “The Bus” which is operated by the O’ahu Transit Service (OTS) for the CCH- Department of Transportation Services (DTS). Existing bus transit resources located closest to the Project Site include bus stops along Aloha Tower Drive, Nimitz Highway, Bishop Street, Queen Street, and Alakea Street. Nearby bus stops include amenities like benches and shelters with access to bus stops facilitated via improved pedestrian facilities along the adjacent roadways. The Aloha Tower Complex is also served by Waikiki Trolley Red Line with a trolley stop located along Aloha Tower Drive. The Waikiki Trolley Redline operates daily approximately with the first pickup at 11:25 AM and the last pickup at 4:25 PM with headways of approximately one hour.

The U.S. Department of Transportation Federal Transit Administration in collaboration with the CCH are undertaking a project that will provide rail transit service on O’ahu. The Honolulu Rail Transit corridor spans approximately 20 miles long, extending from East Kapolei to Ala Moana Center in the east, with a total of 21 station stops. Within the study area, the guideway alignment is expected to run along Nimitz Highway with the Bishop Street transit station to be in close proximity to the Project Site, providing an alternate mode of travel through the area.

Bike Facilities

There is a BIKI bike share station located within the Aloha Tower Complex near the intersection of Bishop Street with Aloha Tower Drive and adjacent to the Project Site. However, with the exception of buffered bike lanes along Alakea Street, designated bicycle facilities are currently limited along the roadways in the vicinity of the Proposed Project.

The subject TIR when assessing bike facilities based on its methodology on Bicycle Level of Traffic Stress (LTS), a metric developed by the Mineta Transportation Institute used to classify a roadway segment or intersection. The LTS ranking system is based on the amount of traffic stress imposed on cyclists based on variables such as street width, prevailing vehicle speed, and average daily traffic volumes. The LTS ranges from 1 to 4 and can be assessed for a given segment or intersection via six tables provided by the Mineta Transportation Institute. The general descriptions of the LTS level are as follows:

- LTS 1: Characterized by strong separation from all except low speed, low volume traffic. Simple crossings. Suitable for children.
- LTS 2: Except in low speed / low volume traffic situations, cyclists have their own place to ride that keeps them from having to interact with traffic except at formal crossings. There is a physical separation from higher speed and multi-lane traffic. Crossings are easy for an adult to navigate. This refers to a level of traffic stress that most adults can tolerate, particularly those sometimes classified as interested but concerned.
- LTS 3: Involves interaction with moderate speed or multilane traffic, or close proximity to higher speed traffic. Refers to a level of traffic stress acceptable to those classified as enthused and confident.
- LTS 4: Involves interaction with higher speed traffic or close proximity to high-speed traffic. Refers to a level of stress acceptable only to those classified as strong and fearless.

Given the limited availability of designated bicycle facilities, most of the roadways in the vicinity of the Project Site are rated at LTS 3 or higher. Nimitz Highway is rated at LTS 4, representing the highest level of traffic stress, while Bishop Street (north of Nimitz Highway), Richards Street

are rated at LTS 3. The high LTS along these roadways are due to the high volume of vehicular traffic and the lack of dedicated facilities along these roadways, requiring bicyclists to utilize the travel way and interact with vehicular traffic. As such, the conditions along these roadways are better suited for more experienced bicyclists. Within the Aloha Tower Complex, along Aloha Tower Drive, Richards Street and Fort Street, the LTS for these roadways are rated at LTS 2 since vehicular traffic volumes are relatively less with lower prevailing speeds.

Pedestrian Facilities

The Aloha Tower Complex includes a network of sidewalks and marked crosswalks along Aloha Tower Drive to facilitate access between the complex's parking lots, trolley/ bus stops and destinations. Outside of the Aloha Tower Complex, designated pedestrian facilities such as sidewalks are provided along Nimitz Highway with designated pedestrian crossings at the signalized intersections with Fort Street, Bishop Street, Alakea Street, and Richard Street/ Halekauwila Street. Further northwest of the Project Site, Fort Street transitions as a pedestrian mall providing convenient access through the downtown area. Although there are provided facilities, the overall pedestrian environment along Nimitz Highway is influenced by the high volume of vehicular traffic along this roadway.

Parking Facilities and Conditions

The Aloha Tower Complex includes existing parking lots located east and west of the Project Site with access provided off Aloha Tower Drive via Fort Street, Bishop Street, and Richard Street.

Existing Traffic Conditions

The subject TIR is based on the concept of Level of Service (LOS) to identify the traffic impacts associated with traffic demands during the peak periods of traffic. LOS is quantitative and qualitative assessment of traffic operations. LOS are defined by LOS "A" through "F"; LOS "A" representing ideal or free-flow traffic operating conditions and LOS "F" unacceptable or potentially congested traffic operation conditions.

"Volume-to-Capacity" (v/c) ratio is another measure indicating the relative traffic demand to the road carrying capacity. A v/c ratio of one (1.00) indicates that the roadway is operating at or near capacity. A v/c ratio of greater than 1.00 indicates that traffic demands exceed the road's carrying capacity.

Field investigations were conducted on February 1, 2024, and consisted of manual turning movement count surveys during the morning peak hours between 6:00 AM and 9:00 AM and the afternoon peak hours between 3:00 PM and 6:00 PM at the following intersections:

- Nimitz Highway and Bishop Street
- Nimitz Highway, Halekauwila Street, and Bishop Street
- Richards Street and Aloha Tower Drive
- Aloha Tower Drive and Bishop Street
- Nimitz Highway and Fort Street

See Appendix A of the TIR for traffic count data.

The AM peak hour of traffic generally occurs between 7:15 AM and 8:15 AM, while the PM peak hour of traffic generally occurs between 4:30 PM and 5:30 PM. Although the peak hours of traffic generally occur at the same periods at each of the study intersections, the absolute commuter peak hour time periods for each intersection may differ slightly. The analysis is based on the absolute commuter peak hour time periods for each intersection to identify the traffic impacts resulting from the Proposed Project.

Nimitz Highway and Bishop Street

At this intersection, Nimitz Highway carries 2,878 vehicles eastbound and 1,399 vehicles westbound during the AM peak period. During the PM peak period, the overall traffic volume is higher with 2,764 vehicles traveling eastbound and 2,025 vehicles traveling westbound. Both approaches operate at LOS "A" during both peak periods. Average queue lengths of 7-9 vehicles were observed on the eastbound approach while average queue lengths of 10-12 vehicles were observed on the westbound approach during both peak periods. Field observations indicate that queueing along the westbound direction of the highway is influenced by the queues that form at the downstream intersection with Fort Street with these queues occasionally extending through the intersections with Bishop Street, Alakea Street, and Richards Street. Most of these queues were observed clearing the intersection after each traffic signal cycle change.

The Bishop Street approaches of the intersection carries 42 vehicles northbound and 606 vehicles southbound during the AM peak period. During the PM peak period, overall traffic volume is slightly less with 93 vehicles traveling northbound and 511 vehicles traveling southbound. The northbound approach operates at LOS "D" during both peak periods while the southbound approach operates at LOS "D" and LOS "E" during the AM and PM peak periods, respectively. The low levels of service at these approaches are influenced by the high volume of traffic along the highway, thereby requiring a greater proportion of the green time to be allocated to facilitate throughput along the highway. Traffic queues occasionally formed on the Bishop Street approaches with the most significant queueing occurring along the southbound approach. Average queue lengths of 6-8 vehicles were observed on that approach during both peak periods. Most of these queues were observed clearing the intersection after each traffic signal cycle change.

Crosswalks are provided across Bishop Street on the north and south sides of the intersection, as well as across Nimitz Highway on the west side of the intersection. During the AM peak period, 28 pedestrians were observed crossing Bishop Street on the north side of the intersection, while 58 pedestrians were observed crossing Nimitz Highway on the west side of the intersection. During the PM peak period, 24 pedestrians and 1 pedestrian were observed crossing Bishop Street on the north and south sides of the intersection, respectively, while 73 pedestrians were observed crossing Nimitz Highway on the west side of the intersection.

Nimitz Highway and Alakea Street

At this intersection, Nimitz Highway carries 3,091 vehicles eastbound and 1,728 vehicles westbound. During the PM peak period, overall traffic volume is higher with 2,957 vehicles traveling eastbound and 2,288 vehicles traveling westbound. The eastbound and westbound approaches of the intersection with significant queueing occurring along the westbound direction during both peak periods. As previously discussed, these queues are influenced by

queues that form at the downstream intersections during both peak periods. Most of these queues were observed clearing the intersection after each traffic signal change.

A crosswalk is provided across Alakea Street on the north side of the intersection. During the AM peak period, 37 pedestrians were observed crossing Alakea Street on the north side of the intersection. During the PM peak period, 39 pedestrians were observed crossing at the same location.

Nimitz Highway, Richards Street, and Halekauwila Street

At the intersection with Richards Street and Halekauwila Street, Nimitz Highway carries 2,436 vehicles eastbound and 1,787 vehicles westbound. During the PM peak period, traffic volumes are higher with 2,551 vehicles traveling eastbound and 2,352 vehicles traveling westbound. The eastbound approach operates at LOS "B" and LOS "A" during the AM and PM peak periods, respectively while the westbound approach operates at LOS "B" during both peak periods. Traffic queues periodically formed along the highway approach the intersection with the most significant queueing occurring along the westbound direction. As previously discussed, westbound queues from the downstream intersection with Fort Street occasionally extended to this intersection. Most of these queues were observed clearing the intersection after each traffic signal cycle change.

Crosswalks are provided across Nimitz Highway on the west side of the intersection, as well as across Richards Street and Halekauwila Street on the south and north sides of the intersection, respectively. During the AM peak period, 42 pedestrians were observed crossing Nimitz Highway on the west side of the intersection, 1 pedestrian was observed crossing Richards Street on the south side of the intersection, and 62 pedestrians were observed crossing Halekauwila Street on the north side of the intersection. During the PM peak period, 69 pedestrians were observed crossing Nimitz Highway on the west side of the intersection, while 7 pedestrians and 60 pedestrians were observed crossing Richards Street and Halekauwila Street, respectively.

Richards and Aloha Tower Drive

At the intersection with Aloha Tower Drive, Richards Street carries 61 vehicles southbound while the parking access carries 3 vehicles northbound. During the PM peak period, traffic volumes are higher with 69 vehicles traveling southbound and 60 vehicles northbound. Both approaches, the southbound approach along Richards Street and the northbound approach along the parking access operate at LOS "A" during both peak periods. Minimal queues were observed along the northbound and southbound approaches of the intersection.

The Aloha Tower Drive approach of the intersection carries 99 vehicles eastbound during the AM peak period and 62 vehicles during the PM peak period. The eastbound approach operates at LOS "A" during both peak periods. Minimal queues were observed on the eastbound approach during both peak periods.

Crosswalks are provided across Richards Street on the south side of the intersection, as well as across Aloha Tower Drive on the west side of the intersection. During the AM peak period, 50 pedestrians were observed crossing Richards Street on the south side of the intersection, while 25 pedestrians were observed crossing Aloha Tower Drive on the east side of the intersection. During the PM peak period, 118 pedestrians were observed crossing Richards Street on the

south side of the intersection, while 46 pedestrians were observed crossing Aloha Tower Drive on the east side of the intersection. It should be noted that although there are currently no marked crosswalks provided on the north and east sides of the intersection, 4 pedestrians were observed crossing Richards Street on the north side of the intersection and 4 pedestrians were observed crossing Aloha Tower Drive on the east side of the intersection during the AM peak period.

Aloha Tower Drive and Bishop Street

At the intersection with Bishop Street, Aloha Tower Drive carries 26 vehicles westbound and 48 vehicles eastbound during the AM peak period. During the PM peak period, traffic volumes are higher with 118 vehicles traveling westbound and 94 vehicles traveling eastbound. The eastbound approach operates at LOS "A" during both peak periods. Minimal queues were observed on the Aloha Tower Drive approaches to the intersection throughout most of the duration of the field investigations. However, it should be noted that traffic operations in the vicinity of this intersection are influenced by the operations associated with the adjacent Star of Honolulu Cruise Terminal during the PM peak period. Dinner cruises from this terminal depart at 5:30 PM with passengers arriving and embarking within the hour preceding launch. During this arrival period, a portion of the north side of Aloha Tower Drive west of Bishop Street is coned off for valet operations while the south side of Aloha Tower Drive east of Bishop Street is used for commercial bus and rideshare loading/unloading for cruise passengers. Field observations indicate that queues associated with the valet operations are generally minimal (no more than 2-3 vehicles in queue on average) with sufficient width along the roadway to allow through vehicles to bypass the queues for valet parking. East of Bishop Street, a maximum queue length of 3 commercial buses was observed, occupying majority of the available curbside. These queues dissipated quickly after the cruise ship's departure.

The Bishop Street approach of the intersection carries 119 vehicles southbound during the AM peak period and 78 vehicles southbound during the PM peak period. The southbound approach operates at LOS "A" during both peak periods. Minimal queues were observed on the southbound approach during both peak periods.

Crosswalks are provided across Aloha Tower Drive on the west side of the intersection, as well as across Bishop Street on the north side of the intersection. During the AM peak period, 40 pedestrians were observed crossing Aloha Tower Drive on the west side of the intersection, while 10 pedestrians were observed crossing Bishop Street on the north side of the intersection. During the PM peak period, 60 pedestrians were observed crossing Aloha Tower Drive on the west side of the intersection, while 5 pedestrians were observed crossing Bishop Street on the north side of the intersection. It should be noted that although there are no marked crosswalks on the east side of the intersection, 2 pedestrians were observed crossing at this location during the AM peak period.

Nimitz Highway and Fort Street

At the intersection with Fort Street, Nimitz Highway carries 2,950 vehicles eastbound and 1,497 vehicles westbound during the AM peak period. During the PM peak period, the overall traffic volume is higher with 2,780 vehicles traveling eastbound and 2,413 vehicles traveling westbound. The eastbound approach operates at LOS "B" during both peak periods while the westbound approach operates at LOS "A" during both peak periods. Traffic queues periodically formed on the highway approach the intersection with the most significant

queueing occurring during the PM peak period. Average queue lengths of 10-12 vehicles were observed on the eastbound approach during this peak period. As previously discussed, queues in the westbound occasionally extended to the upstream intersections. Most of these queues were observed clearing the intersection after each traffic signal cycle change.

Fort Street carries 35 vehicles northbound during the AM peak period and 96 vehicles during the PM peak period. The northbound approach operates at LOS "D" during both peak periods. Although the northbound approach carries relatively low traffic volumes during both peak periods, the low levels of service are influenced by the high volume of traffic along the highway, thereby requiring more green time to be allocated to those movements. Minimal traffic queues were observed on the northbound approach with average queue lengths of 2-3 vehicles observed during both peak periods.

Crosswalks are provided across Fort Street on the south side of the intersection and across Nimitz Highway on the east side of the intersection. During the AM peak period, 6 pedestrians were observed crossing Fort Street on the south side of the intersection, while 23 pedestrians were observed crossing Nimitz Highway on the east side of the intersection. During the PM peak period, 6 pedestrians were observed crossing Fort Street on the south side of the intersection, while 47 pedestrians were observed crossing Nimitz Highway on the south side of the intersection.

Impacts and Mitigations Measures

Transit Facilities

As mentioned previously, there is a bus and trolley stop along Aloha Tower Drive. Thus, coordination with CCH DTS will be undertaken for the potential relocation of the existing bus and trolley stop as a result of the proposed midblock crossing (further discussed under the Pedestrian Facilities section). Additionally, in conjunction with the future Kuloloia Rail Station, bus routes within the vicinity of the Project Site may potentially be modified to provide connections to/from the transit station. Since the Kuloloia Rail Station is anticipated to begin operations in 2031 or later, several years after the completion of the Proposed Project, it was not factored into the project's conditions. In summary, transit services within the vicinity of the Project Site are generally expected to remain similar to existing conditions.

Bike Facilities

The Proposed Project is expected to provide bicycle facilities on-site. In addition, the existing BIKI bike share station adjacent to the north portion of the Project Site is expected to be maintained. Although designated bicycle facilities along the roadways in the vicinity are currently limited, there are future plans to provide bicycle facilities in the project vicinity. Additionally, the CCH DTS plan to incorporate bike improvements ("Oahu Bike Plan", 2019) in the vicinity of the Project Site. These improvements include the following:

- Bike lanes along Nimitz Highway east of Fort Street
- Shared roadway along Bishop Street between Aloha Tower Drive and Nimitz Highway
- Buffered bike lanes along Bishop Street north of Nimitz Highway
- Bike lanes on Richards Street between Nimitz Highways and South Hotel Street

-
- Shared-use path along the Aloha Tower Drive waterfront between Fort Street and Forrest Avenue

These improvements are expected to increase the availability of bicycle facilities in the vicinity of the Project Site, but the timelines for these improvements are not known at this time.

Pedestrian Facilities

Under the Proposed Project, existing pedestrian facilities along the roadways adjacent to the Project Site are generally expected to be maintained/ enhanced with the widening of sidewalk area and the addition of landscaping treatments currently being considered along the project frontage on Bishop Street to enhance the activities of the Project Site. Pedestrian entry and exit points into the northern portion of the Project Site is expected to be provided along Aloha Tower Drive and Bishop Street while access to the Pier 7 portion of the Project Site is planned off Aloha Tower Drive.

In addition, in conjunction with the Proposed Project, a raised midblock crossing with curb extensions along Aloha Tower Drive is expected to be provided to facilitate access between the planned uses north and south of that roadway. It should be noted that the addition of this improvement is expected to reduce the existing curbside width along this roadway. Given the existing use of Aloha Tower Drive as a loading/unloading area for the adjacent cruise services and with bus and trolley stops located in the vicinity of the planned midblock crossing, an assessment of this crossing was conducted through an evaluation tool, the "Guidelines for Pedestrian Crossing Treatments".

Crossing Assessment

The number of anticipated pedestrian crossings used for the purpose of analysis was determined based on guests traveling between the north and south portions of the project site that straddle Aloha Tower Drive. With the proposed project, approximately 514 pedestrian crossings per hour are expected at the midblock crossing. Considering the projected pedestrian and conflicting vehicular traffic along Aloha Tower Drive, the guidelines in the NCHRP indicate that in addition to providing a marked crossing, active or enhanced crossing treatments should be implemented. It should be noted that this recommendation is consistent with the planned improvements associated with the crossing which includes a raised crosswalk with curb extensions. In addition, other enhancements/high visibility treatments should also be considered. These include in-street crossing signs, high visibility signs/markers and advanced stop/yield lines. However, as previously discussed, the curblines on the south side of Aloha Tower Drive is used as passenger loading/unloading for the commercial buses that serve the Star of Honolulu Cruise Terminal. There are also stops for the Waikiki Trolley and The Bus located along this roadway. During field investigations, a maximum queue of 3 commercial buses were observed, occupying the majority of the available curbside. As such, coordination with the existing users of this roadway is critical during the design phase of the midblock crossing since the addition of this crossing may impact their existing operations.

Parking Facilities

No significant adverse impacts with regard to parking facilities are anticipated as a result of the Proposed Project. It should be noted that no parking for employees will be allocated on-site. Employees of the Proposed Project are expected to be either dropped-off/ picked-up from the Project Site or use alternative modes of transportation. Parking for guests is expected to be accommodated within the existing parking lots in the Aloha Tower Complex with access provided off Aloha Tower Drive.

Projected Traffic Conditions

The trip generation methodology used in this study is based upon generally accepted techniques developed by the Institute of Transportation Engineers (ITE) published in "Trip Generation, 10th Edition," 2021. The Proposed Project is expected to operate daily between 10:00 AM and 8:00 PM during non-peak months (Spring, Fall, and Winter) and 8:00 AM and 8:00 PM during peak months (Summer). For this report, the traffic assessment is based on the non-summer period since the traffic volumes along the adjacent roadways are higher when schools are in session. As such, no additional trips associated with the Proposed Project are expected to overlap with the AM peak period and the subsequent analysis focuses primarily on the PM peak period.

Site generated trips resulting from the Proposed Project are expected to be attributed to guests and employees. Based on projections provided by the developer that are consistent with other similar entertainment attractions in other states, ticket sales during peak months (Summer) are anticipated to be approximately 66,500 tickets per month with an hourly demand of 400 tickets. During off-season months (Spring, Fall, and Winter), month ticket sales are expected to be approximately 42,750 tickets, representing approximately 64% of the peak summer month's ticket sales. Applying that peak/non-peak ratio to the hourly demand results in an anticipated demand of approximately 257 tickets per hour during non-peak months. On average, guests to the Proposed Project are expected to spend approximately 2-3 hours on site. As such, guest departures are expected to be distributed over time with only a portion of arrivals expected to leave within the same peak hour. The projected rate of departures was based on the assumed duration of visits and available data on other entertainment venues with similar characteristics.

The trip generation characteristics applied to the PM peak period also incorporates provisions for multi-modal trips consistent with the methodology developed by ITE. Multi-modal trips are trips made utilizing non-motorized modes of travel such as walking and biking, as well as trips made using transit. The prevailing mode split from the study "Commuting Patterns in Hawai'i" published by the State of Hawai'i Department of Business, Economic Development, and Tourism (DBEDT) was taken into consideration along with the existing limited access to alternative modes of transportation from the Project Site. Although pedestrian access is facilitated through improved sidewalks, curb ramps, crosswalks, and signalized intersection crossings, there are no designated bicycle facilities in the immediate vicinity and transit access in the immediate vicinity of the project is generally limited. Although the closest bus stop for eastbound passengers is located within the Aloha Tower Complex, the nearest stop for westbound passengers is located east of the intersection of Nimitz Highway and Halekauwila Street. It should be noted that most of the east-west transit service through

downtown Honolulu utilizes regional roadways located further north (i.e., Queen Street, South King Street, etc.). The westbound stop near the intersection with Halekauwila Street is served by Routes 60, 65, 67, and 88A. Public transit services are supplemented by trolley service within the Aloha Tower Complex provided by the Waikiki Trolley (Red Line) with a trolley stop located on Aloha Tower Drive adjacent to the Project Site. As such, the majority of guests to the Proposed Project are expected to access the Project Site via a vehicular mode (includes private vehicles, rideshare, tour buses/trolleys, etc). In addition, as previously discussed, no parking will be allocated onsite for employees with employees expected to be either dropped-off/picked up from the Project Site or use alternative modes of transportation. Based on information provided by the developer, a total of 40 employees are expected to be on site at any point in time with their shifts occurring between 9:00 AM and 4:00 PM (Shift 1) or between 3:30 PM and 8:30 PM (Shift 2). As such, the arrivals of employees in Shift 2 are expected to overlap with the PM peak period. Table 3-8 summarizes the trip generation characteristics related to Proposed Project based on anticipated ticket sales, employee shifts, modal splits, and average vehicular occupancy as applied to the AM and PM peak hours of traffic.

Table 3-8: Peak Hour Trip Generation		
		Projected Trip Ends
AM PEAK	ENTER	--
	EXIT	--
	TOTAL	--
PM PEAK	ENTER	118
	EXIT	61
	TOTAL	179

Total Traffic Volumes Without Project

The projected Year 2026 AM and PM peak period traffic volumes and operating conditions without the Proposed Project are summarized in Table 3-9 below. As previously mentioned, the Year 2026 without project conditions incorporates ambient growth in traffic. In addition, no site-generated traffic is expected to overlap with the AM peak period and as such, the analysis focuses primarily on the PM peak period. The existing LOS are provided for comparison purposes. LOS calculations are included in Appendix D of the TIR.

Table 3-9: Existing and Projected Year 2026 (Without Project) LOS Traffic Operating Conditions			
Intersection	Approach / Critical Movement	PM	
		Existing	Year 2026 w/o Project
Nimitz Hwy/ Bishop St	Eastbound	A	A
	Westbound	A	A
	Northbound	D	D
	Southbound	E	E
Nimitz Hwy/ Alakea St	Eastbound	A	A

	Westbound	A	A
Nimitz Hwy/ Richards St/ Halekauwila St	Eastbound	A	A
	Westbound	B	B
Richards St/ Aloha Tower Dr	Westbound	A	A
	Northbound	A	A
	Southbound	A	A
Aloha Tower Dr/ Bishop St	Westbound	A	A
	Southbound	A	A
Nimitz Hwy/ Fort St	Eastbound	B	B
	Westbound	A	A
	Northbound	D	D

Under Year 2026 without project conditions, traffic operations are expected to remain similar to existing conditions despite ambient growth in traffic. Along Nimitz Highway, all the approaches at the intersection with Alakea Street and Richards/ Halekauwila Street are expected to continue operation at LOS "B" or better during while those at Fort Street are expected to continue operating at LOS "D" or better during the PM peak period. At the intersection with Bishop Street, the highway approaches are expected to continue operating at LOS "A" during both peak periods while the side street approaches are expected to continue operating at LOS "E" or better during both peak periods. As previously discussed, traffic operations at this location are influenced by the high volume of traffic along the highway. Thereby requiring more green time to be allocated to facilitate the through movements along the highway. The remaining study intersections are also expected to remain similar to existing conditions.

Total Traffic Volumes With and Without Project

The projected Year 2026 cumulative AM and PM peak hour traffic conditions with the Proposed Project are summarized in Table 3-9 below. The existing and projected Year 2026 (Without Project) operating condition as provided for comparison purposes. LOS calculation as included in Appendix E of the TIR.

Table 3-10: Existing and Projected Year 2026 (With and Without Project) LOS Traffic Operating Conditions				
Intersection	Approach	Existing	PM	
			Year 2026	
			w/out Project	w/ Project
Nimitz Hwy/ Bishop St	Eastbound	A	A	A
	Westbound	A	A	A
	Northbound	D	D	D
	Southbound	E	E	E
Nimitz Hwy/ Alakea St	Eastbound	A	A	A
	Westbound	A	A	A
Nimitz Hwy/ Richards St/ Halekauwila	Eastbound	A	A	A
	Westbound	B	B	B
	Westbound	A	A	A

Richards St/ Aloha Tower Dr	Northbound	A	A	A
	Southbound	A	A	A
Aloha Tower Dr/ Bishop St	Eastbound	A	A	A
	Southbound	A	A	B
Nimitz Hwy/ Fort St	Eastbound	B	B	B
	Westbound	A	A	A
	Northbound	D	D	D

Under Year 2026 with project conditions, traffic operations in the vicinity are generally expected to remain similar to without project conditions despite the anticipated increases in traffic along the surrounding roadways. Along Nimitz Highway, traffic operations are generally expected to continue operating at similar levels of service with the highway approaches at Fort Street, Bishop Street, and Richards Street/Halekauwila Street expected to continue operating at LOS "B" or better during both peak periods. Along Aloha Tower Drive, traffic operations at the intersection with Richards Street are expected to continue operating at LOS "A" or better during both peak periods, while those at the intersection with Bishop Street are expected to operate at a slightly lower LOS "B" during the PM peak period. As previously discussed, traffic operations along this roadway are influenced by the operations associated with the adjacent cruise terminal with passenger Loading/unloading activities occurring along this roadway. As such, given the adjacent uses, the preparation of a Transportation Management Plan should be considered with the Proposed Project to further minimize the project's potential impact to the surrounding roadways. The levels of service at the remaining study intersection on Nimitz Highway are also expected to remain similar to without project conditions.

Recommendations and Conclusions

Based on the analysis of the traffic data, the following are the recommendations of this study to be incorporated in the design of the Proposed Project:

1. Maintain sufficient sight distance for motorists to safely enter and exit the project driveways.
2. Provide adequate on-site loading and off-loading service areas and prohibit off-site loading operations.
3. Provide adequate turnaround for service, delivery, and refuse collection vehicles to maneuver on the Project Site and prohibit vehicle-reversing maneuvers onto Kona Street.
4. Provide sufficient turning radii at all project driveways to avoid or minimize vehicle encroachments on oncoming traffic lanes.
5. Coordinate with the owner and users of Aloha Tower Drive with regards to the proposed midblock raised crossing along Aloha Tower Drive and any planned improvements along that roadway. The midblock crossing is expected to limit the available space for loading/ unloading along that roadway. As previously discussed, field observations indicate there is sufficient space for three tour buses under existing conditions. As such, coordination with the existing users of that area is critical, especially during PM peak period. In addition, it should be noted that during project development, consideration of an additional loading/

unloading area was considered along Bishop Street. However, the proposed sidewalk widening along that stretch of Bishop Street may preclude the use of this area for that function.

6. Ensure adequate transition space and sufficient clearance areas are provided to and from the adjacent CCH bus stop and trolley bus loading areas on either side of the proposed midblock raised crossing.
7. Coordinate with CCH DTS with regards to the potential relocation of the existing bus stop along Aloha Tower Drive with implementation of the midblock crossing.
8. With regards to the proposed midblock crossing, provide adequate signage, advanced stop/ yield lines, and high visibility signs and markings to further increase pedestrian visibility at this location.
9. Prepare a Construction Management Plan (CMP) for the development which includes discussions regarding the anticipated construction schedule and phasing, as well as traffic circulation, traffic control, and parking during the construction period given the project's location.
10. Prepare a Traffic Management Plan (TMP) for the Proposed Project to further minimize its potential impact to the surrounding roadways given the existing loading/unloading activities along Aloha Tower Drive and the adjacent uses within the Aloha Tower Marketplace.

In conclusion, traffic operations under the Proposed Project are generally expected to remain similar to existing and without the Proposed Project with the implementation of the aforementioned recommendations. Although traffic operations along the roadways in the vicinity are generally expected to remain similar to existing conditions, coordination with the existing users along Aloha Tower Drive is critical as the provision of a midblock crossing is expected to reduce the available curbside width currently used as passenger loading/unloading. In addition, given the Project Site's location within the Aloha Tower Complex and surrounding use, the preparation of a CMP and TMP is also recommended to identify strategies to further minimize the Proposed Project's impact to the surrounding roadways.

3.12 Visual Resources

Hawai'i's visual resources are important to the State's tourism industry and quality of life enjoyed by the State's residents. A broad range of natural and developed areas and a wide variety of land uses, water bodies, and vegetation types are included in the State's visual resources. Such visual resources also include urbanized areas that range from small rural towns to the metropolitan center of Honolulu.

Situated on the south shore of O'ahu, Honolulu presents a blend of both urban and natural environments. It is home to a mixture of contemporary skyscrapers and historic buildings, showcasing a juxtaposition of modern and traditional Hawaiian architectures. Notable structures such as the Aloha Tower, Iolani Palace, and the King Kamehameha Statue contribute to the city's cultural richness. The scenic beauty is enhanced by the presence of the Ko'olau Mountain Range in the background, where the mountains create a contrast against the urban landscape. In essence, the scenic views of Honolulu offer a captivating blend of cultural heritage, natural beauty, and urban sophistication.

Impacts and Mitigations Measures

The Proposed Project is not anticipated to have any significant adverse impact on visual resources. However, it is anticipated that construction activities are expected to have temporary visual impacts from neighboring areas directly surrounding the Project Site in the short-term. Such impacts would be due to the presence of construction equipment within the Project Site. In the long-term, the Proposed Project will not have significant visual impacts and is anticipated to be designed to be consistent with the existing visual character of the surrounding area.

3.13 Socio-Economic Characteristics

The CCH accounts for 69.4% of the State’s total resident population, down from 69.7% a few years ago. Based on the latest population projections, Honolulu’s population is expected to continue climbing, but at a slower rate than other counties. By 2045, the County is projected to be home to approximately 1.074 million residents. However, the average annual growth rate is predicted to slow from 0.4% between 2020 and 2030 to 0.1% by 2045. The projected population increase will result in increased demand for housing and public services across the island.

The Proposed Project is situated within the Urban Honolulu Census Designated Place (CDP). The 2021 American Community Survey (ACS) was reviewed for the Urban Honolulu and the CCH is summarized in the Table 3-11 below:

Table 3-11: Demographic Characteristics				
Subject	Urban Honolulu CDP		CCH	
	Number	Percent	Number	Percent
Total Population	347,403	100	1,000,080	100
AGE				
Under 5 years	20,021	5.7	58,801	5.9
5-19 years	48,767	4.8	173,167	17.3
20-64 years	208,200	59.9	581,037	58.1
65 years and over	70,415	20.2	187,885	18.8
Median age (years)	41.3	--	39.0	--
RACE				
White	58,248	16.7	185,542	18.5
Black or African American	6,836	1.9	24,788	2.5
American Indian and Alaskan Native	324	0.09	2,962	0.3
Asian	181,174	52.1	418,614	41.8
Native Hawaiian or other Pacific Islander	27,090	7.7	97,409	9.7
Two or more races	70,479	20.2	253,310	25.3
Other	3,252	0.9	18,265	1.8
HOUSEHOLD (BY TYPE)				
TOTAL HOUSEHOLDS	125,103	100	330,393	100
Average Household Size	2.67	--	2.96	--

Total Family Households	74,275	59.3	228,955	69.3
Average Family Size	3.46	--	3.55	--
Non-family Households	50,828	40.6	101,438	30.7
HOUSING OCCUPANCY AND TENURE				
Total Housing Units	153,191	100	338,093	100
Occupied Units	125,103	81.6	330,393	97.7
By Owner	55,557	36.2	193,041	57.1
By Renter	69,546	45.3	137,352	40.6
Vacant Units	28,088	18.3	7,700	2.3

Based on the data presented in the table, the Urban Honolulu CDP has a slightly older population than the CCH. The median age of the population in Urban Honolulu CDP is 41.3 compared to 39.0 for the CCH. In terms of racial composition, the Urban Honolulu CDP has a lower percentage of White (16.7%), Native Hawaiian or other Pacific Islander (7.7%) and those with two or more races (20.2%) compared to the CCH (18.5, 9.7% and 25.3% respectively). The table indicates that the Urban Honolulu and CCH CDP have similar profiles for the Black or African American, American Indian or Alaskan Native, Asian and other communities.

According to the 2021 ACS, housing units within Urban Honolulu are occupied by owners at 36.2% and by renters at 45.3%. In contrast, within the CCH CDP, 57.1% of housing units are occupied by owners, while 40.6% are occupied by renters.

Impacts and Mitigations Measures

No significant adverse impacts are anticipated to result from the construction or operation of the Proposed Project. In the short-term, development of the Proposed Project may provide temporary construction jobs in addition to construction expenditures. Activities related to the development of the Proposed Project will generate positive benefits to the local economy through indirect benefits to local retail businesses resulting from construction activities. In the long-term, the operation of the Proposed Project will provide job opportunities as it is anticipated that the Proposed Project will employ approximately 75-125 full and part-time employees. The Proposed Project is not anticipated to affect land and housing speculation, property values of area homes, or affordable housing in the area as it is an existing program in the community already.

3.14 Public Services and Facilities

3.14.1 Police, Fire, and Medical Services

Police protection for the CCH is provided by Honolulu Police Department (HPD). The Project Site falls within District 1- Central Honolulu patrol district, covering Downtown Honolulu, Chinatown, Nuʻuanu, Makiki, Ala Moana and Kakaʻako. The nearest police station is located at 801 South Beretania Street, located approximately 1.3 miles northeast of the Project Site.

Fire protection is provided by the Honolulu Fire Department (HFD). The nearest fire station, Fire Station 01 Central, is situated at 104 South Beretania Street, approximately 0.5 miles north of the Project Site.

The nearest hospital to the Project Site is The Queen’s Medical Center, located approximately 1.0 miles to the northeast of the Project Site. This medical facility is a major provider of medical services in Hawai‘i.

Emergency medical services are overseen by the CCH’s Emergency Services Department, specifically the Emergency Medical Services (EMS) Division. This department has 22 ambulance units across two districts, all designated as advance life support units and are staffed by a minimum of two emergency medical technicians. The Project Site is served by District 2, which covers Downtown Honolulu to Salt Lake. Additionally, the HFD provides first aid assistance in coordination with EMS for medical emergencies.

Impacts and Mitigation Measures

The Proposed Project is not anticipated to have significant adverse impacts on police, fire, and medical services. During the construction period, flagmen or off-duty police officers may be present to direct traffic and emergency vehicles. The contractor shall ensure to keep roadways clear and allow accessibility of police, fire, and emergency vehicles.

In the long term, the Proposed Project may require occasional police and fire protection, as well as medical services. However, it would likely not present a significant amount relative to the overall regional demand. It is recommended that the Proposed Project be built in consideration of public safety by installing features such as ample lighting, necessary signage, and other safety measures to keep the public safe, in an effort to reduce the need of emergency services.

With regard to fire protection, civil drawings will be submitted to the HFD for review and approval, and on-site fire protection requirements coordinated with the Fire Prevention Bureau of the HFD. The Proposed Project is not anticipated to increase the population, therefore, would not increase demand for fire protection services. No direct, secondary, or cumulative impacts on fire protection are anticipated or expected, and no mitigation measures are necessary or recommended.

3.14.2 Education

The Project Site is situated within the Honolulu District of the State Department of Education, specifically in the Kaimuki-McKinley-Roosevelt complex area. This complex area oversees two community schools, three high schools, five middle schools, 19 elementary schools, five public charter schools, and two special schools. The State DOE public school situated within the vicinity of the Proposed Project include:

- Royal Elementary School
- Queen Ka‘ahumanu Elementary School
- President William McKinley High School

Impacts and Mitigation Measures

The Proposed Project does not involve construction of residential units; therefore, it is not expected to affect existing educational facilities near the Project Site. No mitigation measures are required.

3.14.3 Recreational Facilities

The City and County Department of Parks and Recreation operates parks and recreational facilities across O‘ahu. The nearest recreational facilities to the Project Site include the following:

- Robert W. Wilcox Mini Park
- Smith- Beretania Urban Park
- Kamali‘i Mini Park
- Dr. Sun Yat-sen Park
- Kaka‘ako Waterfront Park

Impacts and Mitigation Measures

No significant adverse impacts are anticipated to occur from the construction or operation of the Proposed Project; therefore, no mitigation measures are proposed.

3.14.4 Solid Waste Disposal and Collection

In accordance with HRS Chapter 342G, solid waste encompasses any garbage, refuse, and other residential or commercial discarded materials from residential or commercial sources, including solid, liquid, semisolid, or contained gaseous materials resulting from industrial, commercial, mining, and agricultural activities. This includes sludge from waste treatment plants and residues from air pollution control facilities and community activities. Solid waste collection and disposal service is provided by the Department of Environmental Services for incineration at the Campbell Industrial Park H-POWER Plant, which generates electricity. The remaining ash and non-combustibles materials are then disposed of at the Waimanalo Gulch Sanitary Landfill. Construction and demolition material is disposed of at the privately-owned PVT landfill in Wai‘anae. PVT Land Company conducts material recovery and recycling in addition to its C&D landfill operations.

Impacts and Mitigation Measures

The Proposed Project is not anticipated to result in significant adverse impacts to solid waste collection and/or disposal. It is anticipated that construction of the Proposed Action will result in a short-term increase in the volume of construction-related waste generated at the Project Site due to the demolition of the existing facilities. To mitigate potential impacts, contractors will be required to minimize the amount of solid waste generated during the construction of the Proposed Project and a job-site waste management and recycling program will be implemented to maintain clean construction sites, maximize material recycling, and minimize disposal truck traffic impacts. This recycling program will incorporate the concept of “Reduce, Reuse, and Recycle”:

- Reduce by preventing unnecessary waste before it happens through efficient design;
- Reuse by using materials removed during demolition; and,
- Recycle by separating recyclable materials from non-recyclable materials and supplying these recyclable materials to a recycler for the use as new products.

It is anticipated that most earthen material excavated for new structures and facilities would be used as backfill on site. However, any excess excavated material that could not be kept on site would require offsite disposal. Coordination with local landfills and recycling centers for the disposal of construction debris and/or hazardous material will be required to accommodate the increased volume of solid waste that may be generated during construction activities. Disposal activities would be done in accordance with appropriate regulations and standards pertaining to solid waste disposal. Solid waste generated by the operation and public use of facilities at the Project Site that would continue after construction of the Proposed Project and is not anticipated to result in a greater daily demand of services at the Project Site.

3.15 Infrastructure and Utilities

A Preliminary Engineering Report (PER) was prepared by WOC in March 2024 to inform and serve as a basis for the EA evaluation for the Project Site and regional infrastructure and utilities under the context of the Proposed Project. The objectives of the subject PER is:

1. Provide and evaluation of the site infrastructure and utility systems for the Proposed Project;
2. Review the existing site infrastructure improvements and determine the requirement related to the roadway and parking facilities, site grading, storm drainage system, sanitary sewer system; and,
3. Based on the requirement, determine the required improvements, and identify possible opportunities and constraints for the redevelopment of the Project Site.

This PER is included herein as Appendix G, and its findings are summarized in the sections below.

3.15.1 Water System

Water for domestic use in the Project Site and surrounding vicinity is provided by the CCH BWS municipal water system. The offsite BWS water system near the Project Site consists of a 12-inch main running along Aloha Tower Drive, Bishop Street, and Ala Moana Boulevard and an 8-inch main running through the utility easement on the Honolulu Power Plant property. The existing Pier 7 is served by a 1½ - inch DC meter (M/N#15060319) off the 12-inch main within Aloha Tower Drive. The Old Honolulu Power Plant portion of the Project Site is served by three existing connections all served from an existing 12-inch main. The connections are located along Aloha Tower Drive, Bishop Street, and Ala Moana Boulevard. The connection along Aloha Tower Drive is served by a 1½ - inch meter (M/N#2006100341), the Bishop Street connection is served by a 4-inch meter (M/N#03124104), and the Ala Moana Boulevard connection is served by a 2-inch meter (M/N#2207100279).

There are six fire hydrants in the vicinity of the Project Site with one located on Aloha Tower Drive fronting Pier 7, two directly across the Project Site along Bishop Street and Ala Moana Boulevard, one located on the north side of Richard's Street, and two on the westbound side of Ala Moana Boulevard. All fire hydrants tap off the existing 12-inch main and are denoted as M00015, M00081, M00016, M02757, M0020, and M03052.

Impacts and Mitigation Measures

No short- or long-term adverse impacts are anticipated to result from the development and operation of the Proposed Project. On March 14, 2024, a letter was submitted to the BWS requesting information on the availability of water for the Proposed Project and water pressure information for fire hydrants near the Project Site. The initial letter was based on programming for the Proposed Project and the estimated average daily demand shown in Table 3-12 below.

Table 3-12: Average Daily Demand				
Facility	Zoning Designation	Area (sf)	Gal/ day/ unit	Avg. Daily Demand (gpd)
Museum, Restaurant, Retail, Garden, Gallery	Commercial	50,500	120 gpd / 1000 sf	6,060 gpd
			Total	6,060 gpd

On March 28, 2024, the BWS responded stating that based on current data, the existing water system is adequate to accommodate the proposed development scenarios. BWS record information indicates the water supply systems along Aloha Tower Drive and Ala Moana Boulevard have a calculated fire flow capacity of 4,000 gallons per minute. The final decision on the availability of water will be confirmed when the building permit application is submitted for approval, pending evaluation of the water system conditions at that time on a first-come first-served basis.

On-site water system improvements will consist of a new water connection(s) to provide domestic and fire protection water service to the Project Site. When water is made available, the Applicant will be required to pay the BWS Water System Facilities charges for resources development, transmission, and daily storage. Water conservation measures will be required for the Proposed Project to minimize water usage impacts.

The Proposed Project anticipates using existing connection(s) for domestic and fire protection water services for the Project Site. Improvements to the existing water system will be determined through correspondence with the BWS. Actual line sizes and routing will need to be determined during the design phase.

Trenching and backfilling of proposed water lines will follow BWS standards and the Soils Engineers recommendations. During the design phase, the calculated water demands from the Proposed Project will determine the appropriate required meter and lateral size.

3.15.2 Wastewater System

The existing offsite wastewater collection system near the Project Site is operated and maintained by the CCH. There is an existing 8-inch sewer main running along Aloha Tower Drive and the 20-foot-wide Easement "B" (City) from south to north located between the Honolulu Power Plant property in the Alakea Street extension. The 8-inch sewer main then connects to an existing 28-inch sewer main along Ala Moana Boulevard and is ultimately treated at the Sand Island Wastewater Treatment Plant (WWTP). There are two 6-inch laterals

connecting to the Honolulu Power Plant, one of which connects off of Aloha Tower Drive to the east and the other within the easement to the south. There is one 6-inch lateral from the former Maritime Center connection to the 8" main within Aloha Tower Drive.

The DPP Wastewater Branch (WBB) reviews and approves sewer connection applications for developments which require sanitary sewer service. On March 27, 2024, a sewer connection application (SCA) based on the proposed program (see Table 3-13 below) was approved by the WWB indicating that the existing sewer system is adequate to support the Proposed Project (See Appendix A of the PER). The approved SCA (Application No. 2024/SCA-0298) will be valid for a 2-year period and is set to expire on March 27, 2026.

Table 3-13: Proposed Program Information		
Facility	Area (sf)	Quantity
Museum/ Garden/ Gallery	41,000	85 employees
Restaurant	4,500	792 seats per day
Retail	5,000	30 employees

With the approval of the SCA, complete construction plans shall be submitted by the design team, reviewed, and approved by the WWB within two years. Construction is required to commence within one year after approval of plans. An updated or revised sewer connection application could be submitted to request an extension, if required for project completion. However, extension or approval of the updated SCA is subject to agency review and is not readily ascertained.

Impacts and Mitigation Measures

Sewage flows from the Proposed Project will be collected by existing sewer lines within the Project Site and are expected to connect to the existing 6-inch laterals along Aloha Tower Drive and within the easement in the Honolulu Power Plant property. Improvements to the existing sanitary sewer system will be determined through correspondence with WWB. Upgrades to existing sewer line sizes and alignments will need to be determined during the design phase.

Onsite water system improvements will consist of new water connection(s) to provide domestic and fire protection water service for the Project Site. The proposed onsite sewer improvements will consist of new sewer cleanouts, and underground piping to provide a lateral connection to the new building. New sewer lateral locations and sizes will be verified during the design phase.

Trenching and backfilling of proposed water lines will follow BWS standards and the Soils Engineers recommendations. During the design phase, the calculated water demands from the proposed project will determine the appropriate required meter and lateral size.

Upon CCH approval of the SCA(s) and construction plans, along with payment of the sewer facilities charges, the proposed system can be connected to the CCH sewer system.

No significant adverse impacts are anticipated on the existing wastewater system as a result of the construction and operation of the Proposed Project as indicated by the DPP WWB.

3.15.3 Drainage System

The existing site is currently developed and is comprised of both impervious and pervious surfaces. There is no existing onsite underground storm drainage system. The site is currently graded such that stormwater from the site sheet flows directly into Honolulu Harbor.

The Honolulu Power Plant collects stormwater onsite via drain inlets and downspouts which connects to either the 66" box culvert at the northwest corner of the property or to a 36" main running through a 20' wide city utility easement running between the Old Honolulu Power Plant. Both systems eventually discharge into Honolulu Harbor.

Impacts and Mitigation Measures

Drainage runoff patterns from the Project Site will generally remain unchanged, allowing drainage to be collected via existing onsite drain inlets, drain manholes, and underground piping with rainfall eventually flowing offsite into Honolulu Harbor.

No short- or long-term significant adverse impacts on the quantity or quality of drainage in the vicinity of the Project Site are anticipated during construction or operation of the Proposed Project. Construction of the Proposed Project will not involve major land disturbing activities that will significantly alter site contours. Applicable erosion control measures and BMPs will be implemented to mitigate any possible adverse effects relating to runoff. As applicable for each phase, these may include but are not limited to the following: infiltration basins and trenches, subsurface infiltration systems, dry wells, bioretention basins, permeable pavement, green roofs, vegetated biofilters, enhanced swales, detention basins, sand filters, vegetated swales, and buffer strips. Planting of landscaping also will be done as soon as possible on completed areas to help control erosion. Permanent sediment control measures will be used once construction is completed.

Drainage runoff rates and improvements for the Proposed Project are determined based on the CCH DPP, Storm Drainage Standards, dated August 2017. Any increase in runoff due to the proposed improvements will need to be retained on-site to ensure that the Proposed Project will not have any adverse effects on downstream properties.

In addition, it is anticipated that drainage improvement will also be required to comply with CCH Rules Relating to Water Quality amended September 2018. Under these rules, projects that disturb more than one acre of land are classified as "Priority A" projects. Priority "A" projects are required (unless determined to be infeasible) to:

- Incorporate appropriate Low Impact Development (LID) site design strategies to the maximum extent possible (MEP).
- Incorporate appropriate Source Control BMPs to the MEP.
- Retain on-site by filtration, evapotranspiration, or harvest/reuse as much of the water quality volume (WQV) as feasible with appropriate LID Retention Post-Construction Treatment Control BMPs.

-
- Biofilter any portion of the WQV that is not retained on-site with appropriate LID Biofiltration Post-Construction Treatment Control BMPs.

If it is determined to be infeasible to retain and/or biofilter the Water Quality Volume, the CCH rules require the project to:

- Treat (by detention, filtration, settling, or vortex separation) and discharge with appropriate Alternative Compliance Post-Construction Treatment Control BMPs, any portion of the WQV that is not retained on-site or biofiltered.
- Retain or biofilter at an offsite location, the volume of runoff from a non-tributary drainage area equivalent to the difference between the project's WQV and the amount retained on-site or biofiltered.

Appropriate BMPs include but are not limited to: infiltration basins and trenches, subsurface infiltration systems, dry wells, bioretention basin, permeable pavement, green roofs, vegetated bio-filters, enhanced swales, detention basins, sand filters, vegetated swales, and buffer strips.

The final drainage system design will be determined during the design phase of the project and maintain the existing discharge points to the CCH drainage system. As required by Storm Drainage Standards, DPP, CCH, dated 2017, stormwater quality measures will be installed to provide treatment of the water quality flow or volume.

Coordination will be undertaken with the appropriate agencies during the design, permitting, and construction processes to ensure that the Proposed Project will not interfere or result in significant impacts related to drainage.

3.15.4 Electrical and Communications System

Electrical power on the island of O'ahu is provided by Hawaiian Electric Company (HECO). HECO generates its electricity from oil-based power plants in Pearl City and Kapolei, a waste-to-energy power plant, Honolulu Program of Waste Energy Recovery (HPOWER) in Kapolei and other renewable energy generators across the island.

Telephone and cable television (CATV) services in the area are provided by Hawaiian Telecom and Spectrum.

Impacts and Mitigation Measures

In the short and long term, the Proposed Project is not anticipated to have significant adverse impacts to regional electrical and communications infrastructure. While the Proposed Project will increase the electrical capacity at the Project Site, it is not expected to result in a significant increase in overall demand for electrical and communications systems in the area. Coordination will be undertaken with HECO and installed per applicable standards and building code regulations.

3.15.5 Natural Gas

Natural Gas on the island of O‘ahu is provided by Hawai‘i Gas. Record drawings indicate that there is an existing 4-inch gas main that runs between Pier 7 and the Honolulu Power Plant along Aloha Tower Drive.

Impacts and Mitigation Measures

Gas is anticipated in the development of the Proposed Project and will connect to the existing 4-inch gas main.

In the short- and long-term, the Proposed Project is not anticipated to impact or increase overall demand for electrical and communication systems in the area. Further coordination with Hawai‘i Gas by the mechanical engineer will be required during the design phase to confirm fuel system service connections. The fuel system demand required by the Proposed Project will be needed at that time to determine the proposed improvements required.

CHAPTER 4: RELATIONSHIPS TO PLANS, POLICIES, AND CONTROLS

4. RELATIONSHIP TO PLANS, POLICIES, AND CONTROLS

Pursuant to HAR Section 11-200.1-24, this section describes the relationship of the Proposed Project to “land use and natural or cultural resource plans, policies, and controls for the affected area.” This will serve to discuss how the Proposed Project “may conform or conflict with objectives and specific terms of approved or proposed land use and resource plans, policies, and controls, if any, for the affected area.” Where a conflict or inconsistency exists, described is the extent to which the Proposed Project has been reconciled “with the plan, policy, or control, and the reasons why” the proposing agency “...has decided to proceed, notwithstanding the absence of full reconciliation.”

To facilitate describing the relationships of the Proposed Project to the numerous land use and natural or cultural resource plans, policies, and controls for the affected area, some of those plans, policies, and controls are presented in tabular form, and are described with text and / or the following letter code:

S = Supportive, NS = Not Supportive, N/A = Not Applicable

4.1 State Land Use Plans and Policies

4.1.1 Hawai'i State Plan

The Hawai'i State Plan, Chapter 226, HRS, as amended, provides goals, objectives, policies, and priorities for the State. The purpose of the Hawai'i State Plan is to set forth a plan that shall serve as a guide for the future long-range development of the State; identify the goals, allocating limited resources, such as public funds, services, human resources, land, energy, water, and other resources; improve coordination of Federal, State, and County plans, policies, programs, projects, and regulatory activities; and, to establish a system for plan formulation and program coordination to provide for an integration of all major state, and county activities. The State Plan is divided into three sections. Part 1 is Overall Theme, Goals, Objectives, and Policies. Part 2 is Planning Coordination and Implementation. Part 3 is Priority Guidelines. The Proposed Project's consistency with applicable goals, objectives and policies of Part 1 is discussed in Table 4-1, and an assessment of conformance with Part 3 is discussed in Table 4-2. Part 2 of the State Plan, which primarily covers internal government affairs, is not related to the Proposed Project.

Table 4-1: The Hawai'i State Plan		S	NS	N/A
<p>§226-4 State goals. In order to ensure, for present and future generations, those elements of choice and mobility that ensure that individuals and groups may approach their desired levels of self-reliance and self-determination, it shall be the goal of the State to achieve:</p>				
(1)	A strong, viable economy, characterized by stability, diversity, and growth, that enables the fulfillment of the needs and expectations of Hawai'i's present and future generations.	X		
(2)	A desired physical environment, characterized by beauty, cleanliness, quiet, stable natural systems, and uniqueness, that enhances the mental and physical well-being of the people.	X		

Table 4-1: The Hawai'i State Plan		S	NS	N/A
(3) Physical, social, and economic well-being, for individuals and families in Hawai'i, that nourishes a sense of community responsibility, of caring, and of participation in community life.		X		
<p>Discussion: The Proposed Project will support the State's goals for present and future generations to ensure individuals and groups may approach their desired levels of self-reliance and self-determination.</p> <p>The Proposed Project aims to revitalize the waterfront by introducing a contemporary garden and art attraction. This new attraction is anticipated to provide a variety of experiences at the water's edge, foster the promotion and expansion of creative arts in Hawai'i, and serve as an educational hub designed to enlighten the public about the art and science of glass art. Simultaneously, the Proposed Project seeks to commemorate the past by honoring the rich tapestry of Hawai'i's history.</p> <p>Moreover, the Proposed Project will support the goals of the State to achieve a strong and viable economy through the creation of construction, construction support jobs, and the purchase of local materials during development. Additionally, the Proposed Project will generate employment opportunities during the operation and maintenance of the Proposed Project which will contribute to not only the cultural vibrancy of the area but also the economic prosperity of the State.</p>				
§226-5 Objective and policies for population.				
(a) It shall be the objective in planning for the State's population to guide population growth to be consistent with the achievement of physical, economic, and social objectives contained in this chapter. To achieve the population objective, it shall be the policy of this State to:				
(1) Manage population growth statewide in a manner that provides increased opportunities for Hawai'i's people to pursue their physical, social, and economic aspirations while recognizing the unique needs of each county.				X
(2) Encourage an increase in economic activities and employment opportunities on the Neighbor Islands consistent with community needs and desires.				X
(3) Promote increased opportunities for Hawai'i's people to pursue their socio-economic aspirations throughout the islands.	X			
(4) Encourage research activities and public awareness programs to foster an understanding of Hawai'i's limited capacity to accommodate population needs and to address concerns resulting from an increase in Hawai'i's population.				X
(5) Encourage federal actions that will promote a more balanced distribution of immigrants among the states, provided that such actions do not prevent the reunion of immediate family members.				X
(6) Pursue an increase in federal assistance for states with a greater proportion of foreign immigrants relative to their state's population.				X
(7) Plan the development and availability of land and water resources in a coordinated manner so as to provide for the desired levels of growth in each geographic area.	X			
<p>Discussion: The Proposed Project will support the objectives and policies outlined within the Hawai'i State Plan related to population.</p> <p>The Proposed Project is not intended to contribute to Hawai'i's residential population growth. The Proposed Project will, however, revitalize and modernize the waterfront area by introducing a contemporary garden and art attraction. The Proposed Project is designed to positively impact Hawai'i by enhancing the socio-economic landscape. The implementation of the Proposed Project will add vibrancy to the waterfront area, positively stimulate Hawai'i's tax base, and create new jobs in both the short-term construction phase and long-term operation. The Proposed Project is a coordinated effort to utilize available developed land and infrastructure to ensure valuable resources are utilized in a prudent and efficient manner.</p>				
§226-6 Objectives and policies for the economy--in general.				
(a) Planning for the State's economy in general shall be directed toward achievement of the following objectives:				
(1) Increased and diversified employment opportunities to achieve full employment, increased				

Table 4-1: The Hawai'i State Plan	S	NS	N/A
income and job choice, and improved living standards for Hawai'i's people.			
(2) A steady growing and diversified economic base that is not overly dependent on a few industries and includes the development and expansion of industries on the neighboring islands.			
(b) To achieve the general economic objectives, it shall be the policy of this State to:			
(1) Promote and encourage entrepreneurship within Hawai'i by residents and nonresidents of the State.	X		
(2) Expand Hawai'i's national and international marketing, communication, and organizational ties, to increase the State's capacity to adjust to and capitalize upon economic changes and opportunities occurring outside the State.			X
(3) Promote Hawai'i as an attractive market for environmentally and socially sound investment activities that benefit Hawai'i's people.			X
(4) Transform and maintain Hawai'i as a place that welcomes and facilitates innovative activity that may lead to commercial opportunities.			X
(5) Promote innovative activity that may pose initial risks, but ultimately contribute to the economy of Hawai'i.			X
(6) Seek broader outlets for new or expanded Hawai'i business investments.			X
(7) Expand existing markets and penetrate new markets for Hawai'i's products and services.	X		
(8) Assure that the basic economic needs of Hawai'i's people are maintained in the event of disruptions in overseas transportation.			X
(9) Strive to achieve a level of construction activity responsive to, and consistent with, state growth objectives.	X		
(10) Encourage the formation of cooperatives and other favorable marketing arrangements at the local or regional level to assist Hawai'i's small-scale producers, manufacturers, and distributors.			X
(11) Encourage labor-intensive activities that are economically satisfying, and which offer opportunities for upward mobility.			X
(12) Encourage innovative activities that may not be labor-intensive, but may otherwise contribute to the economy of Hawai'i.			X
(13) Foster greater cooperation and coordination between the public and private sectors in developing Hawai'i's employment and economic growth opportunities.			X
(14) Stimulate the development and expansion of economic activities which will benefit areas with substantial or expected employment problems.			X
(15) Maintain acceptable working conditions and standards for Hawai'i's workers.	X		
(16) Provide equal employment opportunities for all segments of Hawai'i's population through affirmative action and non-discrimination measures.			X
(17) Stimulate the development and expansion of economic activities capitalizing on defense, dual-use, and science and technology assets, particularly on the neighbor islands where employment opportunities may be limited.			X
(18) Encourage businesses that have favorable financial multiplier effects within Hawai'i's economy, particularly with respect to emerging industries in science and technology.			X
(19) Promote and protect intangible resources in Hawai'i, such as scenic beauty and the aloha spirit, which are vital to a healthy economy.	X		
(20) Increase effective communication between the educational community and the private sector to develop relevant curricula and training programs to meet future employment needs in general, and requirements of new, potential growth industries in particular.			X
(21) Foster a business climate in Hawai'i- including attitudes, tax and regulatory policies, and financial and technical assistance programs-that is conducive to the expansion of existing enterprises and the creation and attraction of new business and industry.			X
Discussion: The Proposed Project will support the objectives and policies outlined within the Hawai'i State Plan related to economy—in general.			

Table 4-1: The Hawai'i State Plan	S	NS	N/A
<p>The Proposed Project aims to revitalize and modernize the waterfront area by introducing a contemporary garden and art attraction. The Proposed Project is designed to positively impact Hawai'i by enhancing the socio-economic landscape. The implementation of the Proposed Project will add vibrancy to the waterfront area, positively stimulate Hawai'i's tax base, and create new jobs in both the short-term construction phase and long-term operation. In the short-term, project construction expenditures will confer positive benefits to the local economy in the form of direct wages and expenditures. These benefits would be derived from the creation of construction and construction support jobs as well as revenues generated by the procurement of building supplies and materials. In the long-term, the Proposed Project will benefit Hawai'i's local economy with the increase in revenue to the State's tax base as well as job opportunities. The Proposed Project is anticipated to employ approximately 75-125 full and part-time employees. Furthermore, the implementation of the Proposed Project will maintain acceptable working conditions and standards by adhering to relevant labor laws, regulations, and industry best practices in terms of worker safety.</p>			
<p>§226-7 Objectives and policies for the economy--agriculture.</p>			
<p>(a) Planning for the State's economy with regard to agriculture shall be directed towards achievement of the following objectives:</p>			
<p>(1) Viability of Hawai'i's sugar and pineapple industries.</p>			
<p>(2) Growth and development of diversified agriculture throughout the State.</p>			
<p>(3) An agriculture industry that continues to constitute a dynamic and essential component of Hawai'i's strategic, economic, and social well-being.</p>			
<p>To achieve the agriculture objectives, it shall be the policy of this State to:</p>			
(1) Establish a clear direction for Hawai'i's agriculture through stakeholder commitment and advocacy.			X
(2) Encourage agriculture by making the best use of natural resources.			X
(3) Provide the governor and the legislature with information and options needed for prudent decision-making for the development of agriculture.			X
(4) Establish strong relationships between the agricultural and visitor industries for mutual marketing benefits.			X
(5) Foster increased public awareness and understanding of the contributions and benefits of agriculture as a major sector of Hawai'i's economy.			X
(6) Seek the enactment and retention of federal and state legislation that benefits Hawai'i's agricultural industries.			X
(7) Strengthen diversified agriculture by developing an effective promotion, marketing, and distribution system between Hawai'i's food producers and consumers in the State, nation, and world.			X
(8) Support research and development activities that strengthen economic productivity in agriculture, stimulate greater efficiency, and enhance the development of new products and agricultural by-products.			X
(9) Enhance agricultural growth by providing public incentives and encouraging private initiatives.			X
(10) Assure the availability of agriculturally suitable lands with adequate water to accommodate present and future needs.			X
(11) Increase the attractiveness and opportunities for an agricultural education and livelihood.			X
(12) In addition to the State's priority on food, expand Hawai'i's agricultural base by promoting growth and development of flowers, tropical fruits and plants, livestock, feed grains, forestry, food crops, aquaculture, and other potential enterprises.			X
(13) Promote economically competitive activities that increase Hawai'i's agricultural self-sufficiency, including the increased purchase and use of Hawaii-grown food and food products by residents, businesses, and governmental bodies as defined under section 103D-104.			X
(14) Promote and assist in the establishment of sound financial programs for diversified agriculture			X

Table 4-1: The Hawai'i State Plan	S	NS	N/A
(15) Institute and support programs and activities to assist the entry of displaced agricultural workers into alternative agricultural or other employment.			X
(16) Facilitate the transition of agricultural lands in economically non-feasible agricultural production to economically viable agricultural uses.			X
(17) Perpetuate, promote, and increase use of traditional Hawaiian farming systems, such as the use of Loko i'a, māla, and irrigated lo'i, and growth of traditional Hawaiian crops, such as kalo, 'uala, and 'ulu.			X
(18) Increase and develop small-scale farms.			X
Discussion: The objectives and policies pertaining to economy-- agriculture will not be applicable to the Proposed Project.			
226-8 Objective and policies for the economy--visitor industry.			
(a) Planning for the State's economy with regard to the visitor industry shall be directed towards the achievement of the objective of a visitor industry that constitutes a major component of steady growth for Hawai'i's economy.			
(b) To achieve the visitor industry objective, it shall be the policy of this State to:			
(1) Support and assist in the promotion of Hawai'i's visitor attractions and facilities.	X		
(2) Ensure that visitor industry activities are in keeping with the social, economic, and physical needs and aspirations of Hawai'i's people.	X		
(3) Improve the quality of existing visitor destination areas by utilizing Hawai'i's strengths in science and technology.			X
(4) Encourage cooperation between the public and private sectors in developing and maintaining well-designed, adequately serviced visitor industry and related developments which are sensitive to neighboring communities and activities.	X		
(5) Develop the industry in a manner that will continue to provide new job opportunities and steady employment for Hawai'i's people.	X		
(6) Provide opportunities for Hawai'i's people to obtain job training and education that will allow for upward mobility within the visitor industry.	X		
(7) Foster a recognition of the contribution of the visitor industry to Hawai'i's economy and the need to perpetuate the aloha spirit.	X		
(8) Foster an understanding by visitors of the aloha spirit and of the unique and sensitive character of Hawai'i's cultures and values.	X		
Discussion: The Proposed Project will support the State's objectives and policies pertaining to economy--visitor industry.			
<p>The Proposed Project will contribute to visitor attractions and facilities by revitalizing and modernizing the waterfront area by introducing a contemporary garden and art attraction. This new attraction is anticipated to provide a variety of experiences at the water's edge, foster the promotion and expansion of creative arts in Hawai'i, and serve as an educational hub designed to enlighten the public about art and the science of glass art. The implementation of the Proposed Project will add vibrancy to the waterfront area, positively stimulate Hawai'i's tax base, and create new jobs in both the short-term construction phase and long-term operation. In the short-term, project construction expenditures will confer positive benefits to the local economy in the form of direct wages and expenditures. These benefits would be derived from the creation of construction and construction support jobs as well as revenues generated by the procurement of building supplies and materials. In the long-term, the Proposed Project will benefit Hawai'i's local economy with the increase in revenue to the State's tax base as well as job opportunities. The Proposed Project is anticipated to employ approximately 75-125 full- and part-time employees.</p> <p>Furthermore, the implementation of the Proposed Project will foster an understanding between visitors and Hawai'i's rich history by creating an immersive visual experience that honors the historical significance of the Project Site.</p>			
§226 9 Objective and policies for the economy--federal expenditures.			

Table 4-1: The Hawai'i State Plan		S	NS	N/A
(a) Planning for the State's economy with regard to federal expenditures shall be directed towards achievement of the objective of a stable federal investment base as an integral component of Hawai'i's economy.				
(b) To achieve the federal expenditure's objective, it shall be the policy of this State to:				
(1)	Encourage the sustained flow of federal expenditures in Hawai'i that generates long-term government civilian employment.			X
(2)	Promote Hawai'i's supportive role in national defense, in a manner consistent with Hawai'i's social, environmental, and cultural goals by building upon dual-use and defense applications to develop thriving ocean engineering, aerospace research and development, and related dual-use technology sectors in Hawai'i's economy.			X
(3)	Promote the development of federally supported activities in Hawai'i that respect statewide economic concerns, are sensitive to community needs, and minimize adverse impacts on Hawai'i's environment.			X
(4)	Increase opportunities for entry and advancement of Hawai'i's people into federal government service.			X
(5)	Promote federal use of local commodities, services, and facilities available in Hawai'i.			X
(6)	Strengthen federal-state-county communication and coordination in all federal activities that affect Hawai'i.			X
(7)	Pursue the return of federally controlled lands in Hawai'i that are not required for either the defense of the nation or for other purposes of national importance and promote the mutually beneficial exchanges of land between federal agencies, the State, and the counties.			X
Discussion: The objectives and policies pertaining to economy--federal expenditures will not be applicable to the Proposed Project.				
§226-10 Objective and policies for the economy--potential growth and innovative activities.				
(a) Planning for the State's economy with regard to potential growth and innovative activities shall be directed towards achievement of the objective of development and expansion of potential growth and innovative activities that serve to increase and diversify Hawai'i's economic base.				
(b) To achieve the potential growth activity objective, it shall be the policy of this State to:				
(1)	Facilitate investment and employment growth in economic activities that have the potential to expand and diversify Hawai'i's economy, including but not limited to diversified agriculture, aquaculture, renewable energy development, creative media, health care, and science and technology-based sectors.			X
(2)	Facilitate investment in innovative activity that may pose risks or be less labor-intensive than other traditional business activity, but if successful, will generate revenue in Hawai'i through the export of services or products or substitution of imported services or products.			X
(3)	Encourage entrepreneurship in innovative activity by academic researchers and instructors who may not have the background, skill, or initial inclination to commercially exploit their discoveries or achievements.			X
(4)	Recognize that innovative activity is not exclusively dependent upon individuals with advanced formal education, but that many self-taught, motivated individuals are able, willing, sufficiently knowledgeable, and equipped with the attitude necessary to undertake innovative activity.			X
(5)	Increase the opportunities for investors in innovative activity and talent engaged in innovative activity to personally meet and interact at cultural, art, entertainment, culinary, athletic, or visitor-oriented events without a business focus.	X		
(6)	Expand Hawai'i's capacity to attract and service international programs and activities that generate employment for Hawai'i's people.	X		
(7)	Enhance and promote Hawai'i's role as a center for international relations, trade, finance, services, technology, education, culture, and the arts.	X		

Table 4-1: The Hawai'i State Plan	S	NS	N/A
(8) Accelerate research and development of new energy-related industries based on wind, solar, ocean, and underground resources and solid waste.			X
(9) Promote Hawai'i's geographic, environmental, social, and technological advantages to attract new economic activities into the State.			X
(10) Provide public incentives and encourage private initiative to attract new industries that best support Hawai'i's social, economic, physical, and environmental objectives.			X
(11) Increase research and the development of ocean related economic activities such as mining, food production, and scientific research.			X
(12) Develop, promote, and support research and educational and training programs that will enhance Hawai'i's ability to attract and develop economic activities of benefit to Hawai'i.	X		
(13) Foster a broader public recognition and understanding of the potential benefits of new, growth-oriented industry in Hawai'i.			X
(14) Encourage the development and implementation of joint federal and state initiatives to attract federal programs and projects that will support Hawai'i's social, economic, physical, and environmental objectives.			X
(15) Increase research and development of businesses and services in the telecommunications and information industries.			X
(16) Foster the research and development of non-fossil fuel and energy efficient modes of transportation			X
(17) Recognize and promote health care and health care information technology as growth industries.			X
<p>Discussion: The Proposed Project will support the objectives and policies pertaining to economy– potential growth and innovative activities.</p> <p>One of the objectives of the Proposed Project is to serve as a creative / artistic incubator, providing a space for artists (local and international), a space to introduce various types of art into the Project Site to foster business growth. In addition, the Proposed Project will function as an educational resource to impart knowledge about art and the science of glass art by offering a diverse range of classes, demonstrations, and excursions. Overall, the Proposed Project will facilitate opportunities in the art and educational industries and promotes Hawai'i's social advantages attracting economic activities to the State.</p>			
<p>226-10.5 Objectives and policies for the economy--information industry.</p> <p>(a) Planning for the State's economy with regard to telecommunications and information technology shall be directed toward recognizing that broadband and wireless communication capability and infrastructure are foundations for an innovative economy and positioning Hawai'i as a leader in broadband and wireless communications and applications in the Pacific Region.</p> <p>(b) To achieve the information industry objective, it shall be the policy of this State to:</p>			
(1) Promote efforts to attain the highest speeds of electronic and wireless communication within Hawai'i and between Hawai'i and the world, and make high speed communication available to all residents and businesses in Hawai'i			X
(2) Encourage the continued development and expansion of the telecommunications infrastructure serving Hawai'i to accommodate future growth and innovation in Hawai'i's economy.			X
(3) Facilitate the development of new or innovative business and service ventures in the information industry which will provide employment opportunities for the people of Hawai'i.			X
(4) Encourage mainland- and foreign-based companies of all sizes, whether information technology-focused or not, to allow their principals, employees, or contractors to live in and work from Hawai'i, using technology to communicate with their headquarters, offices, or customers located out-of-state.			X
(5) Encourage greater cooperation between the public and private sectors in developing and maintaining a well-designed information industry.			X
(6) Ensure that the development of new businesses and services in the industry are in keeping with the social, economic, and physical needs and aspirations of Hawai'i's people.			X

Table 4-1: The Hawai'i State Plan	S	NS	N/A
(7) Provide opportunities for Hawai'i's people to obtain job training and education that will allow for upward mobility within the information industry.			X
(8) Foster a recognition of the contribution of the information industry to Hawai'i's economy.			X
(9) Assist in the promotion of Hawai'i as a broker, creator, and processor of information in the Pacific.			X
Discussion: The objectives and policies pertaining to economy–information industry will not be applicable to the Proposed Project.			
§226-11 Objectives and policies for the physical environment-land-based, shoreline, and marine resources.			
(a) The land-based, shoreline, and marine resources objectives are:			
(1) Prudent use of Hawai'i's land-based, shoreline, and marine resources.			
(2) Effective protection of Hawai'i's unique and fragile environmental resources.			
(b) To achieve the land-based, shoreline, and marine resources objectives, it shall be the policy of this State to:			
(1) Exercise an overall conservation ethic in the use of Hawai'i's natural resources.			X
(2) Ensure compatibility between land-based and water-based activities and natural resources and ecological systems.			X
(3) Take into account the physical attributes of areas when planning and designing activities and facilities.	X		
(4) Manage natural resources and environs to encourage their beneficial and multiple use without generating costly or irreparable environmental damage.	X		
(5) Consider multiple uses in watershed areas, provided such uses do not detrimentally affect water quality and recharge functions.			X
(6) Encourage the protection of rare or endangered plant and animal species and habitats native to Hawai'i.	X		
(7) Provide public incentives that encourage private actions to protect significant natural resources from degradation or unnecessary depletion.			X
(8) Pursue compatible relationships among activities, facilities, and natural resources.	X		
(9) Promote increased accessibility and prudent use of inland and shoreline areas for public recreational, educational, and scientific purposes.			X
Discussion: The Proposed Project will support the objectives and policies outlined within the Hawai'i State Plan related to the physical environment–land based, shoreline, and marine resources.			
<p>The Proposed Project aims to ensure that activities at the Project Site are in harmony with land-based, water-based, natural systems and ecological systems in the area. By analyzing the existing conditions of the Project Site, the Proposed Project seeks to optimize facility design and layout to best suit the programmatic needs of the new attraction and fit the attributes of the Honolulu Waterfront.</p> <p>The existing foundation of Pier 7 may require structural augmentation; however, work will be limited to the cross sectional footprint of the existing foundation pilings - this work would not constitute additional disturbance / in-water work. Coordination will be undertaken with the appropriate agencies during permitting and construction in order to ensure that the Proposed Project will not result in significant impacts with regard to surface and coastal waters. Soil disturbances such as excavation and grading activities will be regulated by applicable provisions of the County's grading ordinance.</p> <p>As described in Section 3.5.1, the plant species present at the Project Site are consistent with those found in highly altered urban environments which are common non-native introduced species and scattered weedy growth. The ornamental species (ornamentals plus naturalized, indigenous, or Polynesian species planted as landscape plants) are commonly used for landscaping. Thus, based on the composition of vegetation at the Project Site, impacts to vegetation would not be anticipated as a result of construction and operation of the Proposed Project.</p>			

Table 4-1: The Hawai'i State Plan	S	NS	N/A
Rare, threatened, or endangered fauna are not known to utilize the site for either habitat or foraging purposes. However, measures to prevent adverse effects to protected seabirds from night lighting, any permanent light sources will be shielded and angled downward to eliminate glare that could disturb or disorient seabirds in flight.			
§226-12 Objective and policies for the physical environment--scenic, natural beauty, and historic resources.			
(a) Planning for the State's physical environment shall be directed towards achievement of the objective of enhancement of Hawai'i's scenic assets, natural beauty, and multi-cultural/historical resources.			
(b) To achieve the scenic, natural beauty, and historic resource's objective, it shall be the policy of this State to:			
(1) Promote the preservation and restoration of significant natural and historic resources.			X
(2) Provide incentives to maintain and enhance historic, cultural, and scenic amenities.			X
(3) Promote the preservation of views and vistas to enhance the visual and aesthetic enjoyment of mountains, ocean, scenic landscapes, and other natural features.	X		
(4) Protect those special areas, structures, and elements that are an integral and functional part of Hawai'i's ethnic and cultural heritage.			X
(5) Encourage the design of developments and activities that complement the natural beauty of the islands.	X		
Discussion: The Proposed Project will support the objectives and policies outlined within the Hawai'i State Plan related to scenic, natural beauty, and historic resources.			
The Proposed Project will maintain the physical and scenic attributes of the Project Site. The Proposed Project will maintain prominent view corridors as identified by the State's Land Use Ordinance (LUO), which emphasizes the preservation of visual resources including natural and developed areas as well as land uses. The visual characteristics of the Project Site align with the urban setting of Honolulu, which include high-rise structures that accommodate scenic resources such as the Ko'olau Mountain Range. As discussed in Section 3.12 (Visual Resources) the Proposed Project is not expected to have an impact on the recognized view planes supporting the objectives and policies for the physical environment - scenic, natural beauty, and historic resources.			
§226-13 Objectives and policies for the physical environment--land, air, and water quality.			
(a) Planning for the State's physical environment with regard to land, air, and water quality shall be directed towards achievement of the following objectives:			
(1) Maintenance and pursuit of improved quality in Hawai'i's land, air, and water resources.			
(2) Greater public awareness and appreciation of Hawai'i's environmental resources.			
(b) To achieve the land, air, and water quality objectives, it shall be the policy of this State to:			
(1) Foster educational activities that promote a better understanding of Hawai'i's limited environmental resources.	X		
(2) Promote the proper management of Hawai'i's land and water resources.			X
(3) Promote effective measures to achieve desired quality in Hawai'i's surface, ground, and coastal waters.	X		
(4) Encourage actions to maintain or improve aural and air quality levels to enhance the health and well-being of Hawai'i's people.	X		
(5) Reduce the threat to life and property from erosion, flooding, tsunamis, hurricanes, earthquakes, volcanic eruptions, and other natural or man-induced hazards and disasters.	X		
(6) Encourage design and construction practices that enhance the physical qualities of Hawai'i's communities.	X		
(7) Encourage urban developments in close proximity to existing services and facilities.	X		
(8) Foster recognition of the importance and value of the land, air, and water resources to Hawai'i's people, their cultures, and visitors.	X		

Table 4-1: The Hawai'i State Plan	S	NS	N/A
<p>Discussion: The Proposed Project will support the objectives and policies related to the physical environment - land, air, and water quality.</p>			
<p>As discussed in Section 3.3 (Hydrology), necessary permits will be sought and construction BMPs will be implemented to reduce runoff generated from construction related activities. Additionally, construction activities are not likely to introduce to, nor release from the soils, any materials that could adversely affect the underlying groundwater. Construction material wastes will appropriately be disposed of to prevent any leachate from contaminating groundwater.</p>			
<p>The existing foundation of Pier 7 may require structural augmentation; however, work will be limited to the cross sectional footprint of the existing foundation pilings - this work would not constitute additional disturbance / in-water work. Coordination will be undertaken with the appropriate agencies during permitting and construction in order to ensure that the Proposed Project will not result in significant impacts with regard to surface and coastal waters. Soil disturbances such as excavation and grading activities will be regulated by applicable provisions of the County's grading ordinance.</p>			
<p>As discussed in Section 3.4 (Natural Hazards) the Proposed Project is not anticipated to have adverse effects that could result to erosion, flooding, tsunami, hurricanes, earthquakes, volcanic eruptions, or other hazards and the Proposed Project will not exacerbate any natural hazard conditions. All structures will be designed in compliance with the City's building code. Impacts from natural hazards can be further mitigated by adherence to appropriate civil defense evacuation procedures.</p>			
<p>As discussed in Section 3.7 (Air Quality) the Proposed Project will have a short-term impact in the project region. Short-term construction-related air impacts can be mitigated; Ambient concentrations of carbon monoxide from motor vehicle traffic will remain well within State and national ambient air quality standards; and long-term impacts on air quality are likely to be negligible due to indirect emissions associated with the Proposed Project's electrical power and solid waste disposal requirements.</p>			
<p>As previously stated, the Project Site is situated within the existing urban context and has access to existing infrastructure in regard to utilities such as water, wastewater, electrical, and communication systems.</p>			
<p>§226-14 Objective and policies for facility systems--in general.</p>			
<p>(a) Planning for the State's facility systems in general shall be directed towards achievement of the objective of water, transportation, waste disposal, and energy and telecommunication systems that support statewide social, economic, and physical objectives.</p>			
<p>(b) To achieve the general facility systems objective, it shall be the policy of this State to:</p>			
<p>(1) Accommodate the needs of Hawai'i's people through coordination of facility systems and capital improvement priorities in consonance with state and county plans.</p>			X
<p>(2) Encourage flexibility in the design and development of facility systems to promote prudent use of resources and accommodate changing public demands and priorities.</p>			X
<p>(3) Ensure that required facility systems can be supported within resource capacities and at reasonable cost to the user.</p>			X
<p>(4) Pursue alternative methods of financing programs and projects and cost-saving techniques in the planning, construction, and maintenance of facility systems.</p>			X
<p>Discussion: The objectives and policies pertaining to facility systems--in general will not be applicable to the Proposed Project.</p>			
<p>§226-15 Objectives and policies for facility systems--solid and liquid wastes.</p>			
<p>(b) Planning for the State's facility systems with regard to solid and liquid wastes shall be directed towards the achievement of the following objectives:</p>			
<p>(1) Maintenance of basic public health and sanitation standards relating to treatment and disposal of solid and liquid wastes.</p>			
<p>(2) Provision of adequate sewerage facilities for physical and economic activities that alleviate problems in housing, employment, mobility, and other areas.</p>			

Table 4-1: The Hawai'i State Plan	S	NS	N/A
(c) To achieve solid and liquid waste objectives, it shall be the policy of this State to:			
(1) Encourage the adequate development of sewerage facilities that complement planned growth.			X
(2) Promote re-use and recycling to reduce solid and liquid wastes and employ a conservation ethic.			X
(3) Promote research to develop more efficient and economical treatment and disposals of solid and liquid wastes.			X
Discussion: The objectives and policies pertaining to facility systems--solid and liquid wastes will not be applicable to the Proposed Project.			
§226-16 Objective and policies for facility systems--water.			
(a) Planning for the State's facility systems with regard to water shall be directed towards achievement of the objective of the provision of water to adequately accommodate domestic, agricultural, commercial, industrial, recreational, and other needs within resource capacities.			
(b) To achieve the facility systems water objective, it shall be the policy of the State to:			
(1) Coordinate development of land use activities with existing and potential water supply.	X		
(2) Support research and development of alternative methods to meet future water requirements well in advance of anticipated needs.			X
(3) Reclaim and encourage the productive use of runoff water and wastewater discharges.			X
(4) Assist in improving the quality, efficiency, service, and storage capabilities of water systems for domestic and agricultural use.			X
(5) Support water supply services to areas experiencing critical water problems.			X
(6) Promote water conservation programs and practices in government, private industry, and the general public to help ensure adequate water to meet long-term needs.			X
Discussion: The Proposed Project will support the State's objective and policies for water facility systems.			
Coordination with BWS will be taken to ensure there is adequate water source, storage, and delivery to service the Proposed Project. Upon finalization of the design, BWS will determine if the current municipal water system is adequate to accommodate the demand generated by the Proposed Project.			
§226-17 Objectives and policies for facility systems--transportation.			
(a) Planning for the State's facility systems with regard to transportation shall be directed towards the achievement of the following objectives:			
(1) An integrated multi-modal transportation system that services statewide needs and promotes the efficient, economical, safe, and convenient movement of people and goods.			
(2) A statewide transportation system consistent with planned growth objectives throughout the State			
(b) To achieve the transportation objectives, it shall be the policy of this State to:			
(1) Design, program, and develop a multi-modal system in conformance with desired growth and physical development as stated in this chapter.			X
(2) Coordinate state, county, federal, and private transportation activities and programs toward the achievement of statewide objectives.			X
(3) Encourage a reasonable distribution of financial responsibilities for transportation among participating governmental and private parties.			X
(4) Provide for improved accessibility to shipping, docking, and storage facilities.			X
(5) Promote a reasonable level and variety of mass transportation services that adequately meet statewide and community needs.			X
(6) Encourage transportation systems that serve to accommodate present and future development needs of communities.			X
(7) Encourage a variety of carriers to offer increased opportunities and advantages to inter-island movement of people and goods.			X

Table 4-1: The Hawai'i State Plan	S	NS	N/A
(8) Increase the capacities of airport and harbor systems and support facilities to effectively accommodate transshipment and storage needs.			X
(9) Encourage the development of transportation, systems and programs which would assist statewide economic growth and diversification.			X
(10) Encourage the design and development of transportation systems sensitive to the needs of affected communities and the quality of Hawai'i's natural environment.			X
(11) Encourage safe and convenient uses of low-cost, energy-efficient, non-polluting means of transportation.			X
(12) Coordinate intergovernmental land use and transportation planning activities to ensure the timely delivery of supporting transportation infrastructure in order to accommodate planned growth objectives.			X
(13) Encourage diversification of transportation modes and infrastructure to promote alternate fuels and energy efficiency.			X
Discussion: The objectives and policies pertaining to facility systems–transportation will not be applicable to the Proposed Project.			
§226-18 Objectives and policies for facility systems–energy.			
(a) Planning for the State's facility systems with regard to energy shall be directed toward the achievement of the following objectives, giving due consideration to all:			
(1) Dependable, efficient, and economical statewide energy and telecommunication systems capable of supporting the needs of the people.			
(2) Increased energy self-sufficiency through the reduction and ultimate elimination of Hawaii's dependence on imported fuels for electrical generation and ground transportation;			
(3) Greater diversification of energy generation in the face of threats to Hawai'i's energy supplies and systems;			
(4) Reduction, avoidance, or sequestration of greenhouse gas emissions from energy supply and use; and			
(5) Utility models that make the social and financial interests of Hawai'i's utility customers a priority.			
(b) To achieve the energy objectives, it shall be the policy of this State to ensure the provision of adequate, reasonably priced, and dependable energy services to accommodate demand.			
(c) To further achieve the energy objectives, it shall be the policy of this State to:			
(1) Support research and development as well as promote the use of renewable energy sources.			X
(2) Ensure a sufficient supply of energy to enable power systems to support the demands of growth.			X
(3) Base decisions of least-cost supply-side and demand-side energy resource options on a comparison of their total costs and benefits when a least-cost is determined by a reasonably comprehensive, quantitative, and qualitative accounting of their long-term, direct and indirect economic, environmental, social, cultural, and public health costs and benefits.			X
(4) Promote all cost-effective conservation of power and fuel supplies through measures, including: (A) Development of cost-effective demand-side management programs; (B) Education; (C) Adoption of energy-efficient practices and technologies; and (D) Increasing energy efficiency and decreasing energy use in public infrastructure.			X
(5) Ensure, to the extent that new supply-side resources are needed, that the development or expansion of energy systems uses the least-cost energy supply option and maximizes efficient technologies.			X
(6) Support research, development, demonstration, and use of energy efficiency, load management, and other demand-side management programs, practices, and technologies.			X

Table 4-1: The Hawai'i State Plan	S	NS	N/A
(7) Promote alternate fuels and transportation energy efficiency.			X
(8) Support actions that reduce, avoid, or sequester greenhouse gases in utility, transportation, and industrial sector applications.			X
(9) Support actions that reduce, avoid, or sequester Hawai'i's greenhouse gas emissions through agriculture and forestry initiatives.			X
(10) Provide priority handling and processing for all state and county permits required for renewable energy projects.			X
(11) Ensure that liquefied natural gas is used only as a cost-effective transitional, limited-term replacement of petroleum for electricity generation and does not impede the development and use of other cost-effective renewable energy sources.			X
(12) Promote the development of indigenous geothermal energy resources that are located on public trust land as an affordable and reliable source of firm power for Hawai'i.			X
Discussion: The objectives and policies for socio-cultural advancement in energy will not be applicable to the Proposed Project.			
§226-18.5 Objectives and policies for facility systems--telecommunications.			
(a) Planning for the State's telecommunications facility systems shall be directed towards the achievement of dependable, efficient, and economical statewide telecommunications systems capable of supporting the needs of the people.			
(b) To achieve the telecommunications objective, it shall be the policy of this State to ensure the provision of adequate, reasonably priced, and dependable telecommunications services to accommodate demand.			
(c) To further achieve the telecommunications objective, it shall be the policy of this State to:			
(1) Facilitate research and development of telecommunication systems and resources.			X
(2) Encourage public and private sector efforts to develop means for adequate, ongoing telecommunication planning.			X
(3) Promote efficient management and use of existing telecommunication systems and services.			X
(4) Facilitate the development of education and training of telecommunication personnel.			X
Discussion: The objectives and policies pertaining to facility systems--telecommunications will not be applicable to the Proposed Project.			
§226-19 Objectives and policies for socio-cultural advancement--housing.			
(a) Planning for the State's socio-cultural advancement with regard to housing shall be directed toward the achievement of the following objectives:			
(1) Greater opportunities for Hawaii's people to secure reasonably priced, safe, sanitary, and livable homes, located in suitable environments that satisfactorily accommodate the needs and desires of families and individuals, through collaboration and cooperation between government and nonprofit and for-profit developers to ensure that more rental and for sale affordable housing is made available to extremely low-, very low-, lower-, moderate-, and above moderate-income segments of Hawaii's population.			
(2) The orderly development of residential areas sensitive to community needs and other land uses.			
(3) The development and provision of affordable rental housing by the State to meet the housing needs of Hawaii's people.			
(b) To achieve the housing objectives, it shall be the policy of this State to:			
(1) Effectively accommodate the housing needs of Hawai'i's people.			X
(2) Stimulate and promote feasible approaches that increase affordable rental and for sale housing choices for extremely low-, very low-, lower-, moderate-, and above moderate-income households.			X

Table 4-1: The Hawai'i State Plan	S	NS	N/A
(3) Increase homeownership and rental opportunities and choices in terms of quality, location, cost, densities, style, and size of housing.			X
(4) Promote appropriate improvement, rehabilitation, and maintenance of existing housing units and residential areas.			X
(5) Promote design and location of housing developments taking into account the physical setting, accessibility to public facilities and services, and other concerns of existing communities and surrounding areas.			X
(6) Facilitate the use of available vacant, developable, and underutilized urban lands for housing.			X
(7) Foster a variety of lifestyles traditional to Hawai'i through the design and maintenance of neighborhoods that reflect the cultures and values of the community.			X
(8) Promote research and development of methods to reduce the cost of housing construction in Hawai'i.			X
Discussion: The objectives and policies pertaining to socio-cultural advancement-- housing will not be applicable to the Proposed Project.			
§226-20 Objectives and policies for socio-cultural advancement--health.			
(a) Planning for the State's socio-cultural advancement with regard to health shall be directed towards achievement of the following objectives:			
(1) Fulfillment of basic individual health needs of the general public.			
(2) Maintenance of sanitary and environmentally healthful conditions in Hawai'i's communities.			
(3) Elimination of health disparities by identifying and addressing social determinants of health.			
(b) To achieve the health objectives, it shall be the policy of this State to:			
(1) Provide adequate and accessible services and facilities for prevention and treatment of physical and mental health problems, including substance abuse.			X
(2) Encourage improved cooperation among public and private sectors in the provision of health care to accommodate the total health needs of individuals throughout the State.			X
(3) Encourage public and private efforts to develop and promote statewide and local strategies to reduce health care and related insurance costs.			X
(4) Foster an awareness of the need for personal health maintenance and preventive health care through education and other measures.			X
(5) Provide programs, services, and activities that ensure environmentally healthful and sanitary conditions.			X
(6) Improve the State's capabilities in preventing contamination by pesticides and other potentially hazardous substances through increased coordination, education, monitoring, and enforcement			X
(7) Prioritize programs, services, interventions, and activities that address identified social determinants of health to improve native Hawaiian health and well-being consistent with the United States Congress' declaration of policy as codified in title 42 United States Code section 11702, and to reduce health disparities of disproportionately affected demographics, including native Hawaiians, other Pacific Islanders, and Filipinos. The prioritization of affected demographic groups other than native Hawaiians may be reviewed every ten years and revised based on the best available epidemiological and public health data.			X
Discussion: The objectives and policies pertaining to socio-cultural advancement-- health will not be applicable to the Proposed Project.			
§226-21 Objective and policies for socio-cultural advancement--education.			
(a) Planning for the State's socio-cultural advancement with regard to education shall be directed towards achievement of the objective of the provision of a variety of educational opportunities to enable individuals to fulfill their needs, responsibilities, and aspirations.			
(b) To achieve the education objective, it shall be the policy of this State to:			

Table 4-1: The Hawai'i State Plan	S	NS	N/A
(1) Support educational programs and activities that enhance personal development, physical fitness, recreation, and cultural pursuits of all groups.	X		
(2) Ensure the provision of adequate and accessible educational services and facilities that are designed to meet individual and community needs.	X		
(3) Provide appropriate educational opportunities for groups with special needs.	X		
(4) Promote educational programs which enhance understanding of Hawai'i's cultural heritage.	X		
(5) Provide higher educational opportunities that enable Hawai'i's people to adapt to changing employment demands.			X
(6) Assist individuals, especially those experiencing critical employment problems or barriers, or undergoing employment transitions, by providing appropriate employment training programs and other related educational opportunities.			X
(7) Promote programs and activities that facilitate the acquisition of basic skills, such as reading, writing, computing, listening, speaking, and reasoning.			X
(8) Emphasize quality educational programs in Hawai'i's institutions to promote academic excellence.			X
(9) Support research programs and activities that enhance the education programs of the State.			X
<p>Discussion: The Proposed Project will support the State's objectives and policies for socio-cultural advancement pertaining to education.</p> <p>The Proposed Project aims to revitalize the waterfront by introducing a contemporary garden and art attraction. This new attraction is anticipated to provide a variety of experiences at the water's edge and serve as an educational hub. The Proposed Project will institute programs specifically crafted to impart knowledge about the art and the science of glass art. Local educators will collaborate by offering a diverse range of classes, demonstrations, and excursions. Simultaneously, the Proposed Project seeks to commemorate the past by honoring the rich tapestry of Hawai'i's history.</p>			
<p>§226-22 Objective and policies for socio-cultural advancement–social services.</p> <p>(a) Planning for the State's socio-cultural advancement with regard to social services shall be directed towards the achievement of the objective of improved public and private social services and activities that enable individuals, families, and groups to become more self-reliant and confident to improve their well-being.</p> <p>(b) To achieve the social services objective, it shall be the policy of this State to:</p>			
(1) Assist individuals, especially those in need of attaining a minimally adequate standard of living and those confronted by social and economic hardship conditions, through social services and activities within the State's fiscal capacities.			X
(2) Facilitate the adjustment of new residents, especially recently arrived immigrants, into Hawaii's communities			X
(3) Promote alternatives to institutional care in the provision of long-term care for elder and disabled populations.			X
(4) Support public and private efforts to prevent domestic abuse and child molestation and assist victims of abuse and neglect.			X
(5) Promote programs which assist people in need of family planning services to enable them to meet their needs.			X
<p>Discussion: The objectives and policies pertaining to socio-cultural advancement–social services will not be applicable to the Proposed Project.</p>			
<p>§226-23 Objective and policies for socio-cultural advancement--leisure.</p> <p>(a) Planning for the State's socio-cultural advancement with regard to leisure shall be directed towards the achievement of the objective of the adequate provision of resources to accommodate diverse cultural, artistic, and recreational needs for present and future generations.</p> <p>(b) To achieve the leisure objective, it shall be the policy of this State to:</p>			
(1) Foster and preserve Hawai'i's multi-cultural heritage through supportive cultural, artistic, recreational, and humanities-oriented programs and activities.	X		

Table 4-1: The Hawai'i State Plan	S	NS	N/A
(2) Provide a wide range of activities and facilities to fulfill the cultural, artistic, and recreational needs of all diverse and special groups effectively and efficiently.	X		
(3) Enhance the enjoyment of recreational experiences through safety and security measures, educational opportunities, and improved facility design and maintenance.	X		
(4) Promote the recreational and educational potential of natural resources having scenic, open space, cultural, historical, geological, or biological values while ensuring that their inherent values are preserved	X		
(5) Ensure opportunities for everyone to use and enjoy Hawai'i's recreational resources.	X		
(6) Assure the availability of sufficient resources to provide for future cultural, artistic, and recreational needs	X		
(7) Provide adequate and accessible physical fitness programs to promote the physical and mental well-being of Hawai'i's people.			X
(8) Increase opportunities for appreciation and participation in the creative arts, including the literary, theatrical, visual, musical, folk, and traditional art forms.	X		
(9) Encourage the development of creative expression in the artistic disciplines to enable all segments of Hawai'i's population to participate in the creative arts.	X		
(10) Assure adequate access to significant natural and cultural resources in public ownership.	X		
<p>Discussion: The Proposed Project will support the objectives and policies pertaining to socio-cultural advancement-- leisure.</p> <p>The Proposed Project aims to revitalize the waterfront by introducing a contemporary garden and art attraction. This new attraction is anticipated to provide a variety of experiences at the water's edge, foster the promotion and expansion of creative arts in Hawaii, and serve as an educational hub designed to enlighten the public about art and the science of glass art. Simultaneously, the Proposed Project seeks to commemorate the past by honoring the rich tapestry of Hawai'i's history.</p>			
<p>§226-24 Objective and policies for socio-cultural advancement--individual rights and personal well-being.</p> <p>(a) Planning for the State's socio-cultural advancement with regard to individual rights and personal well-being shall be directed towards achievement of the objective of increased opportunities and protection of individual rights to enable individuals to fulfill their socio-economic needs and aspirations.</p> <p>(b) To achieve the individual rights and personal wellbeing objective, it shall be the policy of this State to:</p>			
(1) Provide effective services and activities that protect individuals from criminal acts and unfair practices and that alleviate the consequences of criminal acts in order to foster a safe and secure environment.			X
(2) Uphold and protect the national and state constitutional rights of every individual.	X		
(3) Assure access to, and availability of, legal assistance, consumer protection, and other public services which strive to attain social justice.			X
(4) Ensure equal opportunities for individual participation in society.	X		
<p>Discussion: The Proposed Project will support the State's objectives and policies for socio-cultural advancement-- individual rights and personal well-being.</p> <p>The Proposed Project is anticipated to have a well-trained staff and security to provide a safe and accommodating environment for all team members, guests, and local residents who visit the Tradewinds Garden.</p>			
<p>§226-25 Objective and policies for socio-cultural advancement--culture.</p> <p>(a) Planning for the State's socio-cultural advancement with regard to culture shall be directed toward the achievement of the objective of enhancement of cultural identities, traditions, values, customs, and arts of Hawai'i's people.</p> <p>(b) To achieve the culture objective, it shall be the policy of this State to:</p>			
(1) Foster increased knowledge and understanding of Hawai'i's ethnic and cultural heritages and the history of Hawai'i.	X		

Table 4-1: The Hawai'i State Plan	S	NS	N/A
(2) Support activities and conditions that promote cultural values, customs, and arts that enrich the lifestyles of Hawai'i's people and which are sensitive and responsive to family and community needs.			X
(3) Encourage increased awareness of the effects of proposed public and private actions on the integrity and quality of cultural and community lifestyles in Hawai'i.			X
(4) Encourage the essence of the aloha spirit in people's daily activities to promote harmonious relationships among Hawai'i's people and visitors.	X		
<p>Discussion: The Proposed Project will support the objectives and policies pertaining to socio-cultural advancement-- culture.</p> <p>The Proposed Project aims to revitalize the waterfront by introducing a contemporary garden and art attraction. This new attraction is anticipated to provide a variety of experiences at the water's edge, foster the promotion and expansion of creative arts in Hawaii, and serve as an educational hub designed to enlighten the public about art and the science glass art. Simultaneously, the Proposed Project seeks to commemorate the past by honoring the rich tapestry of Hawai'i's history.</p> <p>Additionally, the Proposed Project will embrace the aloha spirit that is celebrated throughout the Hawaiian Islands and honor the Project Site's history by seamlessly integrating local stories, cultural related themes and stories into over-arching, design-driven themes.</p>			
<p>§226-26 Objectives and policies for socio-cultural advancement--public safety.</p> <p>(a) Planning for the State's socio-cultural advancement with regard to public safety shall be directed towards the achievement of the following objectives:</p> <p>(1) Assurance of public safety and adequate protection of life and property for all people.</p> <p>(2) Optimum organizational readiness and capability in all phases of emergency management to maintain the strength, resources, and social and economic well-being of the community in the event of civil disruptions, wars, natural disasters, and other major disturbances.</p> <p>(3) Promotion of a sense of community responsibility for the welfare and safety of Hawai'i's</p> <p>(b) To achieve the public safety programs objectives, it shall be the policy of this State to:</p>			
(1) Ensure that public safety programs are effective and responsive to community needs.			X
(2) Encourage increased community awareness and participation in public safety programs.			X
<p>(c) To achieve the public safety programs objectives, it shall be the policy of this State to:</p>			
(1) Support criminal justice programs aimed at preventing and curtailing criminal activities.			X
(2) Develop a coordinated, systematic approach to criminal justice administration among all criminal justice agencies.			X
(3) Provide a range of correctional resources which may include facilities and alternatives to traditional incarceration in order to address the varied security needs of the community and successfully reintegrate offenders into the community.			X
<p>(d) To further achieve public safety objectives related to emergency management, it shall be the policy of this State to:</p>			
(1) Ensure that responsible organizations are in a proper state of readiness to respond to major war related, natural, or technological disasters and civil disturbances at all times.			X
(2) Enhance the coordination between emergency management programs throughout the State.			X
<p>Discussion: The objectives and policies pertaining to socio-cultural advancement--public safety will not be applicable to the Proposed Project.</p>			
<p>§226-27 Objectives and policies for socio-cultural advancement--government.</p> <p>(a) Planning the State's socio-cultural advancement with regard to government shall be directed towards the achievement of the following objectives:</p> <p>(1) Efficient, effective, and responsive government services at all levels in the State.</p>			

Table 4-1: The Hawai'i State Plan	S	NS	N/A
(2) Fiscal integrity, responsibility and efficiency in the state government and county governments.			
(b) To achieve the government objectives, it shall be the policy of this State to:			
(1) Provide for necessary public goods and services not assumed by the private sector.			X
(2) Pursue an openness and responsiveness in government that permits the flow of public information, interaction, and response.			X
(3) Minimize the size of government to that necessary to be effective.			X
(4) Stimulate the responsibility in citizens to productively participate in government for a better Hawai'i.			X
(5) Assure that government attitudes, actions, and services are sensitive to community needs and concerns.			X
(6) Provide for a balanced fiscal budget.			X
(7) Improve the fiscal budgeting and management system of the State.			X
(8) Promote the consolidation of state and county governmental functions to increase the effective and efficient delivery of government programs and services and to eliminate duplicative services wherever feasible.			X
Discussion: The objectives and policies pertaining to socio-cultural advancement-- government will not be applicable to the Proposed Project.			

PART III. PRIORITY GUIDELINES

Part III of the Hawai'i State Plan establishes the overall priority guidelines to address areas of Statewide concern. Under HRS § 226-102, "The State shall strive to improve the quality of life for Hawai'i's present and future population through the pursuit of desirable courses of action in seven major areas of Statewide concern which merit priority attention: economic development, population growth and land resource management, affordable housing, crime and criminal justice, quality education, principles of sustainability, and climate change adaptation.

Table 4-2: The Hawai'i State Plan Part III	S	NS	N/A
§226-103 Economic priority guidelines.			
(a) Priority guidelines to stimulate economic growth and encourage business expansion and development to provide needed jobs for Hawai'i's people and achieve a stable and diversified economy:			
(1) Seek a variety of means to increase the availability of investment capital for new and expanding enterprises.			X
(2) Encourage the expansion of technological research to assist industry development and support the development and commercialization of technological advancements.			X
(3) Improve the quality, accessibility, and range of services provided by government to business, including data and reference services and assistance in complying with governmental regulations.			X
(4) Seek to ensure that state business tax and labor laws and administrative policies are equitable, rational, and predictable.			X
(5) Streamline the building and development permit and review process and eliminate or consolidate other burdensome or duplicative governmental requirements imposed on business, where public health, safety, and welfare would not be adversely affected.			X
(6) Encourage the formation of cooperatives and other favorable marketing or distribution arrangements at the regional or local level to assist Hawai'i's small-scale producers, manufacturers, and distributors.			X
(7) Continue to seek legislation to protect Hawai'i from transportation interruptions between Hawai'i and the continental United States.			X

Table 4-2: The Hawai'i State Plan Part III		S	NS	N/A
(8)	Provide public incentives and encourage private initiative to develop and attract industries which promise long-term growth potentials, and which have the following characteristics: (a) An industry that can take advantage of Hawai'i's unique location and available physical and human resources. (b) A clean industry that would have minimal adverse effects on Hawai'i's environment. (c) An industry that is willing to hire and train Hawai'i's people to meet the industry's labor needs. (d) An industry that would provide reasonable income and steady employment.			X
(9)	Support and encourage, through educational and technical assistance programs and other means, expanded opportunities for employee ownership and participation in Hawai'i business.			X
(10)	Enhance the quality of Hawai'i's labor force and develop and maintain career opportunities for Hawai'i's people through the following actions: (a) Expand vocational training in diversified agriculture, aquaculture, and other areas where growth is desired and feasible. (b) Encourage more effective career counseling and guidance in high schools and post-secondary institutions to inform students of present and future career opportunities. (c) Allocate educational resources to career areas where high employment is expected and where growth of new industries is desired. (d) Promote career opportunities in all industries for Hawai'i's people by encouraging firms doing business in the State to hire residents. (e) Promote greater public and private sector cooperation in determining industrial training needs and in developing relevant curricula and on-the-job training opportunities. (f) Provide retraining programs and other support services to assist entry of displaced workers into alternative employment.			X
(b) Priority guidelines to promote the economic health and quality of the visitor industry:				
(1)	Promote visitor satisfaction by fostering an environment which enhances the Aloha Spirit and minimizes inconveniences to Hawai'i's residents and visitors.	X		
(2)	Encourage the development and maintenance of well-designed, adequately serviced hotels and resort destination areas which are sensitive to neighboring communities and activities and which provides for adequate shoreline setbacks and beach access.			X
(3)	Support appropriate capital improvements to enhance the quality of existing resort destination areas and provide incentives to encourage investment in upgrading, repair, and maintenance of visitor facilities.			X
(4)	Encourage visitor industry practices and activities which respect, preserve, and enhance Hawai'i's significant natural, scenic, historic, and cultural resources.	X		
(5)	Develop and maintain career opportunities in the visitor industry for Hawai'i's people, with emphasis on managerial positions.	X		
(6)	Support and coordinate tourism promotion abroad to enhance Hawai'i's share of existing and potential visitor markets.			X
(7)	Maintain and encourage a more favorable resort investment climate consistent with the objectives of this chapter.			X
(8)	Support law enforcement activities that provide a safer environment for both visitors and residents alike.			X
(c) Priority guidelines to promote the continued viability of the sugar and pineapple industries:				
(1)	Provide adequate agricultural lands to support the economic viability of the sugar and pineapple industries.			X
(2)	Continue efforts to maintain federal support to provide stable sugar prices high enough to allow profitable operations in Hawai'i.			X

Table 4-2: The Hawai'i State Plan Part III	S	NS	N/A
(3) Support research and development, as appropriate, to improve the quality and production of sugar and pineapple crops.			X
(d) Priority guidelines to promote the growth and development of diversified agriculture and aquaculture:			
(1) Identify, conserve, and protect agricultural and aquaculture lands of importance and initiate affirmative and comprehensive programs to promote economically productive agricultural and aquaculture uses of such lands.			X
(2) Assist in providing adequate, reasonably priced water for agricultural activities.			X
(3) Encourage public and private investment to increase water supply and to improve transmission, storage, and irrigation facilities in support of diversified agriculture and aquaculture.			X
(4) Assist in the formation and operation of production and marketing associations and cooperatives to reduce production and marketing costs.			X
(5) Encourage and assist with the development of a waterborne and airborne freight and cargo system capable of meeting the needs of Hawai'i's agricultural community			X
(6) Seek favorable freight rates for Hawai'i's agricultural products from interisland and overseas transportation operators.			X
(7) Encourage the development and expansion of agricultural and aquaculture activities which offer long-term economic growth potential and employment opportunities.			X
(8) Continue the development of agricultural parks and other programs to assist small independent farmers in securing agricultural lands and loans.			X
(9) Require agricultural uses in agricultural subdivisions and closely monitor the uses in these subdivisions.			X
(e) Priority guidelines for water use and development:			
(1) Maintain and improve water conservation programs to reduce the overall water consumption rate.			X
(2) Encourage the improvement of irrigation technology and promote the use of non-potable water for agricultural and landscaping purposes.			X
(3) Increase the support for research and development of economically feasible alternative water sources.			X
(4) Explore alternative funding sources and approaches to support future water development programs and water system improvements.			X
(f) Priority guidelines for energy use and development:			
(1) Encourage the development, demonstration, and commercialization of renewable energy sources.			X
(2) Initiate, maintain, and improve energy conservation programs aimed at reducing energy waste and increasing public awareness of the need to conserve energy.			X
(3) Provide incentives to encourage the use of energy conserving technology in residential, industrial, and other buildings.			X
(4) Encourage the development and use of energy conserving and cost-efficient transportation systems.			X
(g) Priority guidelines to promote the development of the information industry:			
(1) Establish an information network, with an emphasis on broadband and wireless infrastructure and capability that will serve as the foundation of and catalyst for overall economic growth and diversification in Hawai'i.			X
(2) Encourage the development of services such as financial data processing, a products and services exchange, foreign language translations, telemarketing, teleconferencing, a twenty-four-hour international stock exchange, international banking, and a Pacific Rim management center.			X
(3) Encourage the development of small businesses in the information field such as software development; the development of new information systems, peripherals, and applications; data conversion and data entry services; and			X

Table 4-2: The Hawai'i State Plan Part III	S	NS	N/A
home or cottage services such as computer programming, secretarial, and accounting services.			
(4) Encourage the development or expansion of educational and training opportunities for residents in the information and telecommunications fields.			X
(5) Encourage research activities, including legal research in the information and telecommunications fields.			X
(6) Support promotional activities to market Hawai'i's information industry services.			X
(7) Encourage the location or co-location of telecommunication or wireless information relay facilities in the community, including public areas, where scientific evidence indicates that the public health, safety, and welfare would not be adversely affected.			X
Discussion: The Proposed Project will support the economic priority guidelines outlined within the Hawai'i State Plan.			
The Proposed Project will promote economic health and quality of the visitor industry by fostering an environment that enhances the Aloha Spirit and minimizes inconveniences to Hawai'i's residents and visitors. The implementation of the Proposed Project will foster an understanding between visitors and Hawai'i's rich history by creating an immersive visual experience that honors the historical significance of the Project Site. Additionally, the operation of the Proposed Project offers employment opportunities to 75- 125 part- and full-time employees.			
§226-104 Population growth and land resources priority guidelines.			
(a) Priority guidelines to effect desired statewide growth and distribution:			
(1) Encourage planning and resource management to ensure that population growth rates throughout the State are consistent with available and planned resource capacities and reflect the needs and desires of Hawai'i's people.			X
(2) Manage a growth rate for Hawai'i's economy that will parallel future employment needs for Hawai'i's people.			X
(3) Ensure that adequate support services and facilities are provided to accommodate the desired distribution of future growth throughout the State.			X
(4) Encourage major state and federal investments and services to promote economic development and private investment to the neighbor islands, as appropriate.			X
(5) Explore the possibility of making available urban land, low-interest loans, and housing subsidies to encourage the provision of housing to support selective economic and population growth on the neighbor islands.			X
(6) Seek federal funds and other funding sources outside the State for research, program development, and training to provide future employment opportunities on the neighbor islands.			X
(7) Support the development of high technology parks on the neighbor islands.			X
(b) Priority guidelines for regional growth distribution and land resource utilization:			
(1) Encourage urban growth primarily to existing urban areas where adequate public facilities are already available or can be provided with reasonable public expenditures and away from areas where other important benefits are present, such as protection of important agricultural land or preservation of lifestyles.	X		
(2) Make available marginal or non-essential agricultural lands for appropriate urban uses while maintaining agricultural lands of importance in the agricultural district.			X
(3) Restrict development when drafting of water would result in exceeding the sustainable yield or in significantly diminishing the recharge capacity of any groundwater area.			X
(4) Encourage restriction of new urban development in areas where water is insufficient from any source for both agricultural and domestic use.			X
(5) In order to preserve green belts, give priority to state capital improvement funds which encourage location of urban development within existing urban areas except where compelling public interest dictates development of a non-contiguous new urban core.	X		

Table 4-2: The Hawai'i State Plan Part III	S	NS	N/A
(6) Seek participation from the private sector for the cost of building infrastructure and utilities and maintaining open spaces.			X
(7) Pursue rehabilitation of appropriate urban areas.			X
(8) Support the redevelopment of Kaka'ako into a viable residential, industrial, and commercial community.			X
(9) Direct future urban development away from critical environmental areas or impose mitigating measures so that negative impacts on the environment would be minimized.			X
(10) Identify critical environmental areas in Hawai'i to include but not be limited to the following: watershed and recharge areas; wildlife habitats (on land and in the ocean); areas with endangered species of plants and wildlife; natural streams and water bodies; scenic and recreational shoreline resources; open space and natural areas; historic and cultural sites; areas particularly sensitive to reduction in water and air quality; and scenic resources.			X
(11) Identify all areas where priority should be given to preserving rural character and lifestyle.			X
(12) Utilize Hawai'i's limited land resources wisely, providing adequate land to accommodate projected population and economic growth needs while ensuring the protection of the environment and the availability of the shoreline, conservation lands, and other limited resources for future generations.			X
(13) Protect and enhance Hawai'i's shoreline, open spaces, and scenic resources.	X		
<p>Discussion: The Proposed Project will support the population growth and land resources policy guidelines outlined within the Hawai'i State Plan.</p> <p>The Proposed Project will be constructed on Pier 7 and Units 5 and 7 of the Honolulu Power Plant, contributing to the wise use of land resources in Honolulu. The decommissioning of the Honolulu Power Plant in 2014 and the cessation of operations at the Hawai'i Maritime Center on Pier 7, have left a void of inactivity in the waterfront area, and presents an opportunity to revitalize these two sites. This approach allows for land to be allocated effectively for supporting projected population and economic growth needs, while ensuring the protection of the environment for the benefit of future generations.</p>			
<p>§226-105 Crime and criminal justice Priority guidelines in the area of crime and criminal justice:</p>			
(1) Support law enforcement activities and other criminal justice efforts that are directed to provide a safer environment.			X
(2) Target state and local resources on efforts to reduce the incidence of violent crime and on programs relating to the apprehension and prosecution of repeat offenders.			X
(3) Support community and neighborhood program initiatives that enable residents to assist law enforcement agencies in preventing criminal activities.			X
(4) Reduce overcrowding or substandard conditions in correctional facilities through a comprehensive approach among all criminal justice agencies which may include sentencing law revisions and use of alternative sanctions other than incarceration for persons who pose no danger to their community.			X
(5) Provide a range of appropriate sanctions for juvenile offenders, including community-based programs and other alternative sanctions.			X
(6) Increase public and private efforts to assist witnesses and victims of crimes and to minimize the costs of victimization.			X
<p>Discussion: The priority guidelines regarding crime and criminal justice outlined within the Hawai'i State Plan will not be applicable to the Proposed Project.</p>			
<p>§226-106 Affordable housing Priority guidelines for the provision of affordable housing:</p>			
(1) Seek to use marginal or non-essential agricultural land and public land to meet housing needs of low and moderate-income and gap-group households.			X

Table 4-2: The Hawai'i State Plan Part III		S	NS	N/A
(2)	Encourage the use of alternative construction and development methods as a means of reducing production costs.			X
(3)	Improve information and analysis relative to land availability and suitability for housing.			X
(4)	Create incentives for development which would increase home ownership and rental opportunities for Hawai'i's low and moderate-income households, gap-group households, and residents with special needs.			X
(5)	Encourage continued support for government or private housing programs that provide low interest mortgages to Hawai'i's people for the purchase of initial owner-occupied housing.			X
(6)	Encourage public and private sector cooperation in the development of rental housing alternatives.			X
(7)	Encourage improved coordination between various agencies and levels of government to deal with housing policies and regulations.			X
(8)	Give higher priority to the provision of quality housing that is affordable for Hawaii's residents and less priority to development of housing intended primarily for individuals outside of Hawai'i.			X
Discussion: The priority guidelines regarding affordable housing outlined within the Hawai'i State Plan will not be applicable to the Proposed Project.				
§226-107 Quality education.				
Priority guidelines to promote quality education:				
(1)	Pursue effective programs which reflect the varied district, school, and student needs to strengthen basic skills achievement.			X
(2)	Continue emphasis on general education "core" requirements to provide common background to students and essential support to other university programs.			X
(3)	Initiate efforts to improve the quality of education by improving the capabilities of the education work force.			X
(4)	Promote increased opportunities for greater autonomy and flexibility of educational institutions in their decision-making responsibilities.			X
(5)	Increase and improve the use of information technology in education by the availability of telecommunications equipment for: (A) The electronic exchange of information; (B) Statewide electronic mail; and (C) Access to the Internet. Encourage programs that increase the public's awareness and understanding of the impact of information technologies on our lives.			X
(6)	Pursue the establishment of Hawai'i's public and private universities and colleges as research and training centers of the Pacific.			X
(7)	Develop resources and programs for early childhood education.			X
(8)	Explore alternatives for funding and delivery of educational services to improve the overall quality of education.			X
(9)	Strengthen and expand educational programs and services for students with special needs.			X
Discussion: The priority guidelines regarding education outlined in the Hawai'i State Plan will not be applicable to the Proposed Project.				
The Proposed Project will, however, function as an educational hub catering to students, tourists, artists, and the general public. The Proposed Project will institute programs specifically crafted to impart knowledge about art and the science of glass art. Local educators will collaborate to develop a curriculum for a program providing an immersive education experience in these fields. Additionally, the Proposed Project will offer a range of classes, demonstrations, and excursions, inviting visitors and residents to participate and enhance their understanding of art and glass artistry.				
§226-108 Sustainability.				

Table 4-2: The Hawai'i State Plan Part III	S	NS	N/A
Priority guidelines and principals to promote sustainability:			
(1) Encouraging balanced economic, social, community, and environmental priorities.	X		
(2) Encouraging planning that respects and promotes living within the natural resources and limits of the State.	X		
(3) Promoting a diversified and dynamic economy.			X
(4) Encouraging respect for the host culture.	X		
(5) Promoting decisions based on meeting the needs of the present without compromising the needs of future generations.	X		
(6) Considering the principles of the ahupua'a system.			X
(7) Emphasizing that everyone, including individuals, families, communities, businesses, and government, has the responsibility for achieving a sustainable Hawai'i.	X		
Discussion: The Proposed Project will support the priority guidelines for sustainability outlined within the Hawai'i State Plan.			
The Proposed Project will maximize the use of appropriate BMPs prior to, during and after construction to ensure that resources are used in a sustainable manner.			
§226-109 Climate change adaption.			
Priority guidelines for climate change adaption:			
(1) Ensure that Hawaii's people are educated, informed, and aware of the impacts climate change may have on their communities.			X
(2) Encourage community stewardship groups and local stakeholders to participate in planning and implementation of climate change policies.			X
(3) Invest in continued monitoring and research of Hawai'i's climate and the impacts of climate change on the State.			X
(4) Consider native Hawaiian traditional knowledge and practices in planning for the impacts of climate change.			X
(5) Encourage the preservation and restoration of natural landscape features, such as coral reefs, beaches and dunes, forests, streams, floodplains, and wetlands that have the inherent capacity to avoid, minimize, or mitigate the impacts of climate change.			X
(6) Explore adaptation strategies that moderate harm or exploit beneficial opportunities in response to actual or expected climate change impacts to the natural and built environments.			X
(7) Promote sector resilience in areas such as water, roads, airports, and public health, by encouraging the identification of climate change threats, assessment of potential consequences, and evaluation of adaptation options.			X
(8) Foster cross-jurisdictional collaboration between county, state, and federal agencies and partnerships between government and private entities and other nongovernmental entities, including nonprofit entities.			X
(9) Use management and implementation approaches that encourage the continual collection, evaluation, and integration of new information and strategies into new and existing practices, policies, and plans.			X
(10) Encourage planning and management of the natural and built environments that effectively integrate climate change policy.			X
Discussion: The priority guidelines regarding climate change adaptation outlined within the Hawai'i State Plan will not be applicable to the Proposed Project.			

4.1.2 Hawai'i State Functional Plans

The Hawai'i State Plan, HRS Chapter 226, directs appropriate State agencies to prepare Functional Plans which address Statewide needs, problems, and issues, and recommend policies and actions to mitigate those problems. The Functional Plans are prepared to further

define and implement statewide goals, objectives, policies, and priority guidelines contained in the Hawai'i State Plan. Thirteen Functional Plans were prepared to implement the State Plan provisions in the areas of agriculture, conservation lands, education, employment, energy, health, higher education, historic preservation, housing, human services, recreation, tourism, and transportation. The Proposed Project's conformance with the policies of the State Functional Plans are set forth in Table 4-3 below.

Table 4-3: Hawai'i State Functional Plans		S	NS	N/A
1	Agricultural State Functional Plan (1991)			
Purpose: Continued viability of agriculture throughout the State				X
Discussion: The Agricultural State Functional Plan is not directly applicable to the Proposed Project.				
2	Conservation Lands State Functional Plan (1991)			
Purpose: Addresses issues of population and economic growth and its strain on current natural resources; broadening public use of natural resources while protecting lands and shorelines from overuse; additionally, promotes the aquaculture industry				X
Discussion: The Conservation Lands State Functional Plan is not directly applicable to the Proposed Project.				
2	Education State Functional Plan (1989)			
Purpose: Improvements to Hawai'i's educational curriculum, quality of educational staff, and access to adequate facilities				X
Discussion: The Education State Functional Plan is not directly applicable to the Proposed Project. The Proposed Project will, however, function as an educational hub catering to students, tourists, artists, and the general public. The Proposed Project will institute programs specifically crafted to impart knowledge about art and the science of glass art. Local educators will collaborate to develop a curriculum for a program providing an immersive education experience in these fields. Additionally, the Proposed Project will offer a range of classes, demonstrations, and excursions, inviting visitors and residents to participate and enhance their understanding of art and glass artistry.				
4	Employment State Functional Plan (1990)			
Purpose: Improve the qualifications, productivity, and effectiveness of the State's workforce through better education and training of workers as well as efficient planning of economic development, employment opportunities, and training activities		X		
Discussion: The Proposed Project will support the Employment State Functional Plan. The implementation of the Proposed Project will add vibrancy to the waterfront area, positively stimulate Hawai'i's tax base, and create new jobs in both the short-term construction phase and long-term operation. In the short-term, project construction expenditures will confer positive benefits to the local economy in the form of direct wages and expenditures. These benefits would be derived from the creation of construction and construction support jobs as well as revenues generated by the procurement of building supplies and materials. In the long-term, the Proposed Project will benefit Hawai'i's local economy with the increase in revenue to the State's tax base as well as job opportunities. The Proposed Project is anticipated to employ approximately 75-125 full- and part-time employees.				
5	Energy State Functional Plan (1991)			
Purpose: Lessen the reliance on petroleum and other fossil fuels in favor of alternative sources of energy so as to keep up with the State's increasing energy demands while also becoming a more sustainable island state; achieving dependable, efficient, and economical statewide energy systems				X

Discussion: The Energy State Functional Plan is not directly applicable to the Proposed Project.			
6	Health State Functional Plan		
Purpose: Improve the health care system by providing for those who do not have access to private health care providers; increasing preventative health measures; addressing 'quality of care' elements in private and public sectors to cut increasing costs			X
Discussion: The Health State Functional Plan is not directly applicable to the Proposed Project.			
7	Higher Education Functional Plan (1984)		
Purpose: Prepare Hawai'i's citizens for the demands of an increasingly complex world through providing technical and intellectual tools.			X
Discussion: The Higher Education Functional Plan is not directly applicable to the Proposed Project.			
The Proposed Project will, however, function as an educational hub catering to students, tourists, artists, and the general public. The Proposed Project will institute programs specifically crafted to impart knowledge art and the science of glass art. Local educators will collaborate to develop a curriculum for a program providing an immersive education experience in these fields. Additionally, the Proposed Project will offer a range of classes, demonstrations, and excursions, inviting visitors and residents to participate and enhance their understanding of art and glass artistry.			
8	Historic Preservation State Functional Plan (1991)		
Purpose: Preservation of historic properties, records, artifacts, and oral histories; provide public with information/education on the ethnic and cultural heritages and history of Hawai'i			X
Discussion: The Historic Preservation State Functional Plan is not directly applicable to the Proposed Project.			
9	Housing State Functional Plan (1989)		
Purpose: Provide affordable rental and for-sale housing; increase homeownership and amount of rental housing units; acquiring public and privately-owned lands for future residential development; maintain a statewide housing data system.			X
Discussion: The Proposed Project is not directly applicable to the Housing State Functional Plan			
10	Human Services State Functional Plan (1991)		
Purpose: Refining support systems for families and individuals by improving elderly care, increasing preventative measures to combat child/spousal abuse and neglect; providing means for 'self-sufficiency.'			X
Discussion: The Human Services State Functional Plan is not directly applicable to the Proposed Project.			
11	Recreation State Functional Plan (1991)		
Purpose: Manage the use of recreational resources via addressing issues: (1) ocean and shoreline recreation, (2) mauka, urban, and other recreation, (3) public access to shoreline and upland recreation areas, (4) resource conservation and management, (5) management of recreation programs/facilities/areas, and (6) wetlands protection and management			X
Discussion: The Proposed Project is not directly applicable to the Recreation State Functional Plan.			
12	Tourism State Functional Plan (1991)		
Purpose: Balance tourism/economic growth with environmental and community concerns; development that is cognizant of the limited land and water resources of the islands; maintaining friendly relations between tourists and community members;		X	

development of a productive workforce and enhancement of career and employment opportunities in the visitor industry			
<p>Discussion: The Proposed Project will support the Tourism State Functional Plan.</p> <p>The Proposed Project will contribute to visitor attractions and facilities by revitalizing and modernizing the waterfront area by introducing a contemporary garden and art attraction. This new attraction is anticipated to provide a variety of experiences at the water's edge, foster the promotion and expansion of creative arts in Hawaii, and serve as an educational hub designed to enlighten the public about art and science of glass art. The implementation of the Proposed Project will add vibrancy to the waterfront area, positively stimulate Hawaii's tax base, and create new jobs in both the short-term construction phase and long-term operation. In the short-term, project construction expenditures will confer positive benefits to the local economy in the form of direct wages and expenditures. These benefits would be derived from the creation of construction and construction support jobs as well as revenues generated by the procurement of building supplies and materials. In the long-term, the Proposed Project will benefit Hawaii's local economy with the increase in revenue to the State's tax base as well as job opportunities. The Proposed Project is anticipated to employ approximately 75-125 full- and part-time employees.</p> <p>Furthermore, the implementation of the Proposed Project will foster an understanding between visitors and Hawaii's rich history by creating an immersive visual experience that honors the historical significance of the Project Site.</p>			
13	Transportation State Functional Plan (1991)		
<p>Purpose: Development of a safer, more efficient transportation system that also is consistent with planned physical and economic growth of the state; construction of facility and infrastructure improvements; develop a transportation system balanced with new alternatives; pursue land use initiatives which help reduce travel demand.</p>			X
<p>Discussion: The Proposed Project is not directly applicable to the Transportation State Functional Plan.</p>			

4.1.3 State Land Use District

The State Land Use Law, Chapter 205, HRS, establishes an overall framework of land use management whereby all lands in the State of Hawaii are classified into one of four land use districts: Urban District, Agricultural District, Conservation District, and Rural District. The State Land Use Commission (LUC) is responsible for preserving and protecting Hawaii's lands and encouraging those uses to which lands are best suited.

Discussion:

The Project Site is situated entirely within the Urban State Land Use District (See Figure 4-1). Urban District lands generally include lands characterized by "city-like" concentrations of people, structures, and services. The Urban District also includes vacant areas for future development. The jurisdiction of the Urban District lies primarily with the county. In general, lot sizes and uses permitted in the district area are established by the county through ordinances or rules. The purpose and intent of the Proposed Project are consistent with the Urban State Land Use District.

STATE LAND USE DISTRICT

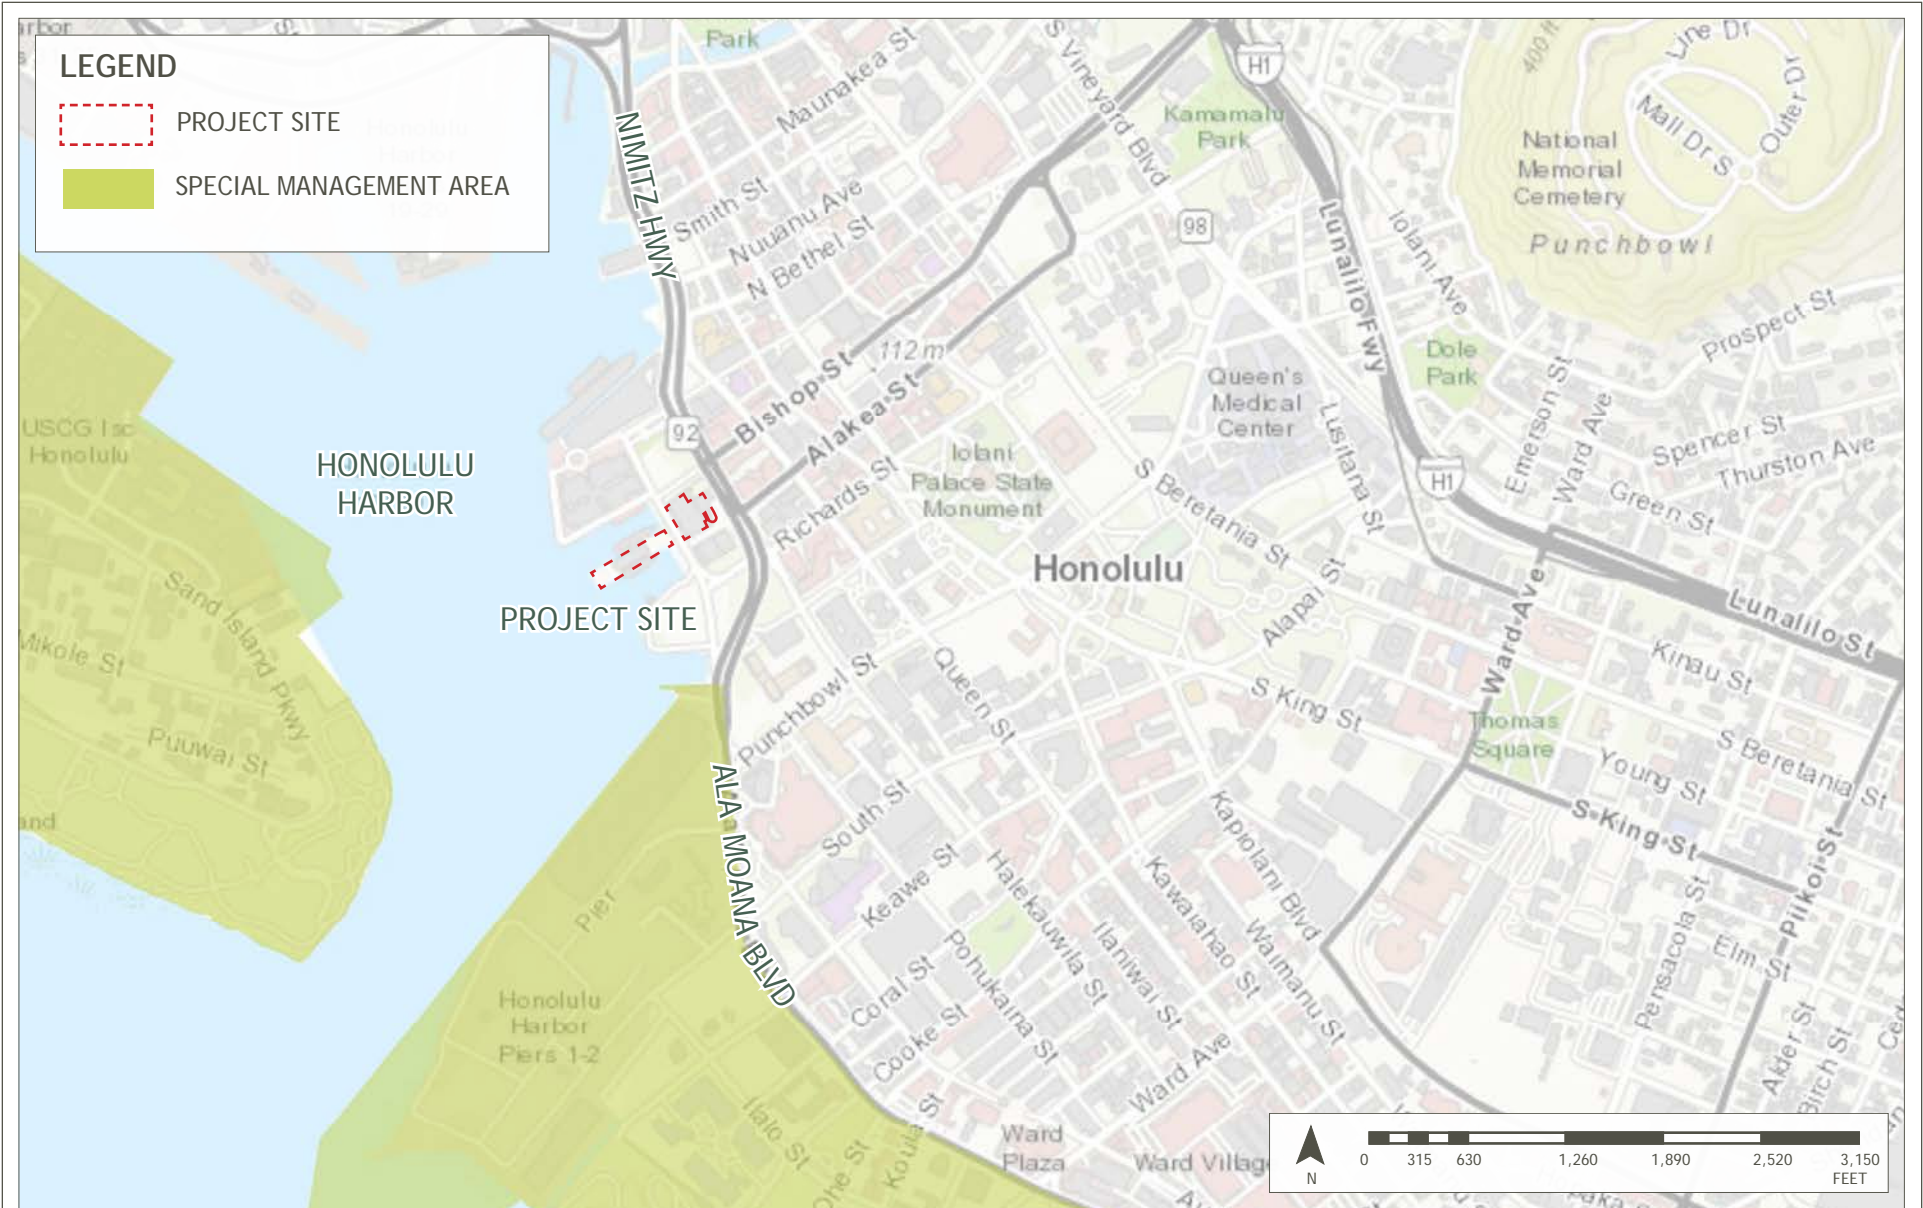

Tradewinds Garden and Glass
Honolulu, O'ahu, Hawai'i

FIGURE
4-1

4.1.4 Hawai'i Coastal Zone Management Plan

The National Coastal Zone Management (CZM) Program was created through passage of the Coastal Zone Management Act of 1972. The U.S. Congress enacted the CZM Act to assist states in better managing coastal and estuarine environments. The CZM Act provides grants to states that develop and implement federally approved CZM plans. The goal of the CZM Act is to *"preserve, protect, develop, and where possible, to restore or enhance the resources of the nation's coastal zone."* Hawai'i's CZM Act, adopted as Chapter 205A, HRS, provides a basis for protecting, restoring, and responsibly developing coastal communities and resources. In Hawai'i, the "coastal zone management area" refers to all lands within the area extending seaward from the shoreline to the furthest limit of the state's police power and management authority, including the territorial sea.

The Proposed Project's conformance with the ten objectives and numerous policies of the State of Hawai'i CZMP is set forth in Table 4-4 below. The Proposed Project is not located within the Special Management Area (SMA) as designated by the CCH (See Figure 4-2). Therefore, SMA permits are not required to implement the Proposed Project.

SPECIAL MANAGEMENT AREA

Tradewinds Garden and Glass
Honolulu, O'ahu, Hawai'i

FIGURE
4-2

Table 4-4: Hawai'i Coastal Zone Management Act		S	NS	N/A
Recreational Resources				
Objective: Provide coastal recreational opportunities accessible to the public.				
(A) Improve coordination and funding of coastal recreational planning and management; and				X
(B) Provide adequate, accessible, and diverse recreational opportunities in the coastal zone management area by:				X
i. Protecting coastal resources uniquely suited for recreational activities that cannot be provided in other areas;				X
ii. Requiring replacement of coastal resources having significant recreational value including, but not limited to, surfing sites, fishponds, and sand beaches, when such resources will be unavoidably damaged by development; or requiring reasonable monetary compensation to the State for recreation when replacement is not feasible or desirable;				X
iii. Providing and managing adequate public access, consistent with conservation of natural resources, to and along shorelines with recreational value;				X
iv. Providing an adequate supply of shoreline parks and other recreational facilities suitable public recreation;				X
v. Ensuring public recreational uses of county, state, and federally owned or controlled shoreline lands and waters having recreational value consistent with public safety standards and conservation of natural resources;				X
vi. Adopting water quality standards and regulating point and nonpoint sources of pollution to protect, and where feasible, restore the recreational value of coastal waters;				X
vii. Developing new shoreline recreational opportunities, where appropriate, such as artificial lagoons, artificial beaches, and artificial reefs for surfing and fishing; and				X
viii. Encouraging reasonable dedication of shoreline areas with recreational value for public use as part of discretionary approvals or permits by the land use commission, board of land and natural resources, and county authorities; and crediting such dedication against the requirements of section 46-6.				X
Discussion: The objectives and policies regarding Recreation Resources will not be directly applicable to the Proposed Project.				
Historic Resources				
Objective: Protect, preserve, and, where desirable, restore those natural and manmade historic and prehistoric resources in the coastal zone management area that are significant in Hawaiian and American history and culture.				
(A) Identify and analyze significant archaeological resources;				X
(B) Maximize information retention through preservation of remains and artifacts or salvage operations; and				X
(C) Support state goals for protection, restoration, interpretation, and display of historic resources.	X			
Discussion: The Proposed Project will support the objectives and policies of the Historic Resources of the Hawai'i Coastal Zone Management Act.				
<p>The Project Site consists of a developed urban environment and has been successively altered over the past century, for commercial and residential use. Throughout the property, construction contractors would be required to adhere to standards DMPs regarding the protection of archaeological resources, including identification, stop work, and notification measures. Should any archaeological resources be discovered, all appropriate measures would be adhered to for their protection; and as a result, long-term impacts to archaeological resources would be expected to be minor as irreversible ground disturbance has the potential to impact archaeological site permanently. However, potential impacts are preventable with mitigation measures which include construction</p>				

Table 4-4: Hawai'i Coastal Zone Management Act	S	NS	N/A
<p>monitoring, and data recovery in compliance with all relevant regulations and BMPs regarding archaeological resources.</p> <p>Construction of the Proposed Project will not disturb traditional sacred sites or traditional cultural objects; will not result in the degradation of resources used by Native Hawaiians for subsistence or traditional cultural practices; will not obstruct culturally significant landforms or way-finding features; and will not result in loss of access to the shoreline or other areas customarily used by Native Hawaiians or others for resource gathering or traditional cultural practices. However, should any significant archaeological, cultural, or historic resources be found during construction activities, all work will cease and SHPD be immediately notified for appropriate response and action.</p>			
Scenic and Open Space Resources			
Objective: Protect, preserve, and, where desirable, restore or improve the quality of coastal scenic and open space resources.			
(A) Identify valued scenic resources in the coastal zone management area;			X
(B) Ensure that new developments are compatible with their visual environment by designing and locating such developments to minimize the alteration of natural landforms and existing public views to and along the shoreline;	X		
(C) Preserve, maintain, and, where desirable, improve and restore shoreline open space and scenic resources; and			X
(D) Encourage those developments that are not coastal dependent to locate in inland areas.	X		
Discussion: The Proposed Project will support the objectives and policies of the Scenic and Open Space Resources of the Hawai'i Coastal Zone Management Act.			
<p>The Proposed Project is being developed on the current Honolulu Power Plant and Pier 7 site and in an urban setting that has been successively altered over the past century. Since the Project Site is being developed on a previously disturbed area, it will not impinge upon any significant public scenic view corridors and will not have an impact on coastal view. As discussed in Section 3.12 (Visual Resources) the Proposed Project is not expected to affect the objectives and policies for the physical environment- scenic, natural beauty and visual resources.</p>			
Coastal Ecosystems			
Objective: Protect valuable coastal ecosystems, including reefs, beaches, and coastal dunes from disruption and minimize adverse impacts on all coastal ecosystems.			
(A) Exercise an overall conservation ethic, and practice stewardship in the protection, use, and development of marine and coastal resources;			X
(B) Improve the technical basis for natural resource management;			X
(C) Preserve valuable coastal ecosystems of significant biological or economic importance, including reefs, beaches, and dunes;			X
(D) Minimize disruption or degradation of coastal water ecosystems by effective regulation of stream diversions, channelization, and similar land and water uses, recognizing competing water needs; and			X
(E) Promote water quantity and quality planning and management practices that reflect the tolerance of fresh water and marine ecosystems and maintain and enhance water quality through the development and implementation of point and nonpoint source water pollution control measures.	X		
Discussion: The Proposed Project will support the objectives and policies of the Coastal Ecosystems of the Hawai'i Coastal Zone Management Act.			
<p>The Proposed Project is located along the coastline; therefore, applicable BMPs will be implemented to mitigate construction impacts to protect marine quality near the Project Site. The existing foundation of Pier 7 may require structural augmentation; however, work will be limited to the cross sectional footprint of the existing foundation pilings - this work would not constitute additional disturbance / in-water work. Applicable erosion control measures and BMPs will be implemented in order to mitigate any possible adverse effects relating to runoff are described in detail in Section 3.3 (Hydrology).</p>			
Economic Uses			

Table 4-4: Hawai'i Coastal Zone Management Act		S	NS	N/A
Objective: Provide public or private facilities and improvements important to the State's economy in suitable locations.				
(A) Concentrate coastal dependent development in appropriate areas;				X
(B) Ensure that coastal dependent development such as harbors and ports, and coastal related development such as visitor industry facilities and energy generating facilities, are located, designed, and constructed to minimize adverse social, visual, and environmental impacts in the coastal zone management area; and	X			
(C) Direct the location and expansion of coastal dependent developments to areas presently designated and used for such developments and permit reasonable long-term growth at such areas, and permit coastal dependent development outside of presently designated areas when:				X
i. Use of presently designated locations is not feasible;				X
ii. Adverse environmental effects are minimized; and				X
iii. The development is important to the State's economy;				X
Discussion: The Proposed Project will support the Economic Uses of the Hawai'i Coastal Zone Management Act.				
The Proposed Project aims to revitalize the waterfront by introducing a contemporary garden and art attraction. This new attraction is anticipated to provide a variety of experiences at the water's edge, foster the promotion and expansion of creative arts in Hawai'i, and serve as an educational hub designed to enlighten the public about the art and science of glass art. Simultaneously, the Proposed Project seeks to commemorate the past by honoring the rich tapestry of Hawai'i's history.				
Moreover, the Proposed Project will minimize adverse social, visual, and environmental impacts at the Project Site and its surrounding vicinity as discussed in Chapter 3 of the EA.				
Coastal Hazards				
Objective: Reduce hazard to life and property from coastal hazards.				
Policies:				
(A) Develop and communicate adequate information about the risks of coastal hazards;				X
(B) Control development, including planning and zoning control, in areas subject to coastal hazards;				X
(C) Ensure that developments comply with requirements of the National Flood Insurance Program; and	X			
(D) Prevent coastal flooding from inland projects.				X
Discussion: The Proposed Project will support the objective and policies of the Coastal Hazards of the Hawai'i Coastal Zone Management Act.				
As discussed in Section 3.4 (Natural Hazards) the Proposed Project will not exacerbate any natural hazard conditions. The Proposed Project is located within the Tsunami Evacuation Zone of the Tsunami Evacuation map; therefore, impacts from natural hazards will be mitigated by adherence to appropriate civil defense evacuation procedures.				
Managing Development				
Objective: Improve the development review process, communication, and public participation in the management of coastal resources and hazards.				
(A) Use, implement, and enforce existing law effectively to the maximum extent possible in managing present and future coastal zone development;				X
(B) Facilitate timely processing of applications for development permits and resolve overlapping or conflicting permit requirements; and				X

Table 4-4: Hawai'i Coastal Zone Management Act	S	NS	N/A
(C) Communicate the potential short and long-term impacts of proposed significant coastal developments early in their life cycle and in terms understandable to the public to facilitate public participation in the planning and review process.	X		
<p>Discussion: The Proposed Project will support the objective and policies of the Managing Development of the Hawai'i Coastal Zone Management Act.</p> <p>This EA has been prepared under the procedural provisions of HRS, Chapter 343, and HAR, Title 11, Chapter 200.1, which allows for public review and participation. Accordingly, the preparation of this EA, and disclosure of anticipated effects of the Proposed Project, will comply with the policy on managing development.</p> <p>As part of the EA process, an Early Consultation Package was prepared to inform interested parties of the Proposed Project and seek relevant public comment on subjects of concern for EA documentation. The filing and publication of this DEA and ERP will be followed by a 30-day comment period by the public. All relevant comments received during the 30-day public comment period will receive a written response for inclusion and use in the preparation in the Proposed Project's forthcoming FEA. Comments and responses are reproduced in Appendix H.</p>			
Public Participation			
Objective: Stimulate public awareness, education, and participation in coastal management.			
(A) Promote public involvement in coastal zone management processes;	X		
(B) Disseminate information on coastal management issues by means of educational materials, published reports, staff contact, and public workshops for persons and organizations concerned with coastal issues, developments, and government activities; and	X		
(C) Organize workshops, policy dialogues, and site-specific mitigation to respond to coastal issues and conflicts.			X
<p>Discussion: The Proposed Project will support the objective and policies of the Public Participation of the Hawai'i Coastal Zone Management Act.</p> <p>This EA has been prepared under the procedural provisions of HRS, Chapter 343, and HAR, Title 11, Chapter 200.1, which allows for public review and participation. Accordingly, the preparation of this EA, and disclosure of anticipated effects of the Proposed Project, will comply with the policy on managing development.</p> <p>As part of the EA process, an Early Consultation Package was prepared to inform interested parties of the Proposed Project and seek relevant public comment on subjects of concern for EA documentation. The filing and publication of this Draft EA will be followed by a 30-day comment period by the public. All relevant comments received during the 30-day public comment period will receive a written response for inclusion and use in the preparation in the Proposed Project's forthcoming Final EA. Comments and responses are reproduced in Appendix H.</p>			
Beach Protection and Coastal Dune Protection			
Objective: Protect beaches and coastal dunes for:			
<ul style="list-style-type: none"> i. Public use and recreation; ii. The benefit of coastal ecosystems; and iii. Use of natural buffers against coastal hazard; and iv. Coordinate and fund beach management and protection. 			
(A) Locate new structures inland from the shoreline setback to conserve open space, minimize interference with natural shoreline processes, and minimize loss of improvements due to erosion;			X
(B) Prohibit construction of private shoreline hardening structures, including seawalls and revetments, at sites where shoreline hardening structures interfere with existing recreational and waterline activities; and			X
(C) Minimize the construction of public shoreline hardening structures, including seawalls and revetments, at sites having sand beaches and at sites where shoreline hardening structures interfere with existing recreational and waterline activities;			X
(D) Minimize grading of land damage to coastal dunes;			

Table 4-4: Hawai'i Coastal Zone Management Act		S	NS	N/A
(E) Prohibit private property owners from creating a public nuisance by inducing or cultivating the private property owner's vegetation in a beach transit corridor; and				X
(F) Prohibit private property owners from creating a public nuisance by allowing the private property owner's unmaintained vegetation to interfere or encroach upon a beach transit corridor.				X
Discussion: The policies and objectives pertaining to Beach Protection of the Hawai'i Coastal Management Act will not be directly applicable the Proposed Project.				
Marine Resources and Coastal Resources				
Objective: Promote the protection, use, and development of marine and coastal resources to assure their sustainability.				
Policies:				
(A) Ensure that the use and development of marine and coastal resources are ecologically and environmentally sound and economically beneficial;				X
(B) Coordinate the management of marine and coastal resources and activities to improve effectiveness and efficiency;				X
(C) Assert and articulate the interests of the State as a partner with federal agencies in the sound management of ocean resources within the United States exclusive economic zone;				X
(D) Promote research, study, and understanding of ocean and coastal processes, impacts of climate change and sea level rise, marine life, and other ocean resources in order to acquire and inventory information necessary to understand how ocean development activities relate to and impact upon ocean and coastal resources; and				X
(E) Encourage research and development of new, innovative technologies for exploring, using, or protecting marine and coastal resources.				X
Discussion: The policies and objectives pertaining to Marine Resources of the Hawai'i Coastal Management Act will not be directly applicable the Proposed Project.				
Applicable erosion control measures and BMPs will be implemented in order to mitigate any possible adverse effects relating to runoff are described in detail in Section 3.3 (Hydrology).				
The existing foundation of Pier 7 may require structural augmentation; however, work will be limited to the cross sectional footprint of the existing foundation pilings - this work would not constitute additional disturbance / in-water work.				
Coordination will be undertaken with the appropriate agencies during permitting and construction in order to ensure that the Proposed Project will not result in significant impacts with regard to surface and coastal waters. Soil disturbances in excess of one acre would require an NPDES Individual Permit for Storm Water Associated with Construction Activity, administered by the State DOH, will be required to control storm water discharges. Any discharges related to Proposed Project's construction or operation activities will comply with applicable State Water Quality Standards as specified in Hawai'i Administrative Rules, Chapter 11-54 and 11-55 Water Pollution Control, DOH. Excavation and grading activities will be regulated by applicable provisions of the County's grading ordinance.				

4.1.5 Hawai'i Environmental Policy Act

The Hawai'i Environmental Policy Act, codified as Chapter 344, HRS, was enacted to establish a policy to encourage productive and enjoyable harmony between people and their environment, promote efforts which will prevent or eliminate damage to the environment and biosphere and stimulate the health and welfare of humanity, and enrich the understanding of the ecological systems and natural resources important to the people of Hawai'i.

Table 4-5: Hawai'i Environmental Policy Act		S	NS	N/A
§344-4 Guidelines. In pursuance of the state policy to conserve the natural resources and enhance the quality of life, all agencies, in the development of programs, shall, insofar as practicable, consider the following guidelines:				
(1) Population				
(A)	Recognize population impact as a major factor in environmental degradation and adopt guidelines to alleviate this impact and minimize future degradation.			X
(B)	Recognize optimum population levels for counties and districts within the State, keeping in mind that these will change with technology and circumstance, and adopt guidelines to limit population to the levels determined.			X
Discussion: The Hawai'i Environmental Policy Act's objectives regarding Population is not directly applicable to the Proposed Project.				
(2) Land, water, mineral, visual, air, and other natural resources				
(A)	Encourage management practices which conserve and fully utilize all-natural resources.			X
(B)	Promote irrigation and wastewater management practices which conserve and fully utilize vital water resources.			X
(C)	Promote the recycling of wastewater.			X
(D)	Encourage management practices which conserve and protect watersheds and water sources, forest, and open space areas.			X
(E)	Establish and maintain natural area preserves, wildlife preserves, forest reserves, marine preserves, and unique ecological preserves.			X
(F)	Maintain an integrated system of state land use planning which coordinates the state and county general plans.	X		
(G)	Promote the optimal use of solid wastes through programs of waste prevention, energy resource recovery, and recycling so that all our wastes become utilized.			X
Discussion: The Proposed Project will support the Hawai'i Environmental Policy Act's objectives regarding Land, water, mineral, visual, air, and other natural resources.				
<p>The Proposed Project will utilize facilities related to solid and liquid waste facilities. The size capacities of solid and liquid waste facilities needed to supplement existing infrastructure is ultimately contingent upon the design and programming plan executed by the design team. However, it is assumed that modern designs for the disposal of solid and liquid wastes would be incorporated to complement the Proposed Project.</p> <p>The ENV Refuse Division manages the solid and liquid waste for O'ahu. The ENV and private haulers do not extend to construction and demolition debris. It is anticipated that construction of the Proposed Project will result in a short-term increase in the volume of construction related waste generated at the Project Site.</p> <p>It is anticipated that most earthen material excavated for new structures and facilities would be used as backfill on site. However, any excess excavated material not utilized would require offsite disposal. Coordination with local landfills and recycling centers for disposal of construction debris and/or hazardous materials will be required to accommodate the increased volume of solid waste that may be generated during construction activities. Disposal activities would be done in accordance with appropriate regulations and standards pertaining to solid waste disposal.</p> <p>Liquid waste generated during construction activities will be managed through services provided by the ENV. The ENV's facilities on O'ahu have the design capacity of 51 million gallons per day with all units in service. The need for new sewer lateral locations and sizes will not likely be applicable as the Proposed Project is being developed at the existing Pier 7 and Honolulu Power Plant site where exiting services can be used.</p>				
(3) Flora and fauna				
(A)	Protect endangered species of indigenous plants and animals and introduce new plants or animals only upon assurance of negligible ecological hazard.	X		
(B)	Foster the planting of native as well as other trees, shrubs, and flowering plants compatible to the enhancement of our environment.	X		
Discussion: The Proposed Project will support the Hawai'i Environmental Policy Act's objectives regarding Flora and fauna.				

Table 4-5: Hawai'i Environmental Policy Act		S	NS	N/A
As described in detail in Section 3.5 (Natural Environment), the flora and fauna species found in the vicinity of the Project Site is consistent with the highly altered environment; therefore, the Proposed Project is not anticipated to have adverse impacts on flora and fauna. However, measures to prevent adverse effects to protected species will be in place to ensure that construction activities will not result in the permanent displacement of flora and fauna. Additionally, trees targeted for removal or trimming should be surveyed by a qualified biologist following the State Department of Fish and Wildlife protocol.				
(4) Parks, recreation, and open space				
(A) Establish, preserve, and maintain scenic, historic, cultural, park and recreation areas, including the shorelines, for public recreational, educational, and scientific uses.				X
(B) Protect the shorelines of the State from encroachment of artificial improvements, structures, and activities.				X
(C) Promote open space in view of its natural beauty not only as a natural resource but as an ennobling, living environment for its people.				X
Discussion: The Hawai'i Environmental Policy Act's objectives regarding Parks, recreation, and open space is not directly applicable to the Proposed Project.				
(5) Economic development				
(A) Encourage industries in Hawai'i which would be in harmony with our environment.				X
(B) Promote and foster the agricultural industry of the State; and preserve and conserve productive agricultural lands.				X
(C) Encourage federal activities in Hawai'i to protect the environment.				
(D) Encourage all industries including the fishing, aquaculture, oceanography, recreation, and forest products industries to protect the environment.				X
(E) Establish visitor destination areas with planning controls which shall include but not be limited to the number of rooms.				X
(F) Promote and foster the aquaculture industry of the State; and preserve and conserve productive aquacultural lands.				X
Discussion: The Hawai'i Environmental Policy Act's objectives regarding Economic development is not directly applicable to the Proposed Project.				
(6) Transportation				
(A) Encourage transportation systems in harmony with the lifestyle of the people and environment of the State.	X			
(B) Adopt guidelines to alleviate environmental degradation caused by motor vehicles.				X
(C) Encourage public and private vehicles and transportation systems to conserve energy, reduce pollution emission, including noise, and provide safe and convenient accommodations for their users.	X			
Discussion: The Proposed Project will support the Hawai'i Environmental Policy Act's objectives regarding Transportation.				
The Proposed Project aims to promote the utilization of both public and private modes of transportation, along with various transportation systems including The Bus, Skyline Rail, and Trolley, to facilitate access to the Project Site. This initiative is anticipated to enhance accessibility and connectivity while encouraging commuters to opt for sustainable transportation options.				
(7) Energy				
(A) Encourage the efficient use of energy resources.	X			
Discussion: The Proposed Project will support the Hawaii Environmental Policy Act's objectives regarding Energy.				
(8) Community life and housing				
(A) Foster lifestyles compatible with the environment; preserve the variety of lifestyles traditional to Hawai'i through the design and maintenance of neighborhoods which reflect the culture and mores of the community.				X

Table 4-5: Hawai'i Environmental Policy Act		S	NS	N/A
(B) Develop communities which provide a sense of identity and social satisfaction in harmony with the environment and provide internal opportunities for shopping, employment, education, and recreation.		X		
(C) Encourage the reduction of environmental pollution which may degrade a community.				X
(D) Foster safe, sanitary, and decent homes.				X
(E) Recognize community appearances as major economic and aesthetic assets of the counties and the State; encourage green belts, plantings, and landscape plans and designs in urban areas; and preserve and promote mountain-to-ocean vistas.				X
<p>Discussion: The Proposed Project will support the Hawai'i Environmental Policy Act's objectives regarding Community life and housing.</p> <p>The Proposed Project intends to revitalize and modernize the waterfront area by introducing a contemporary garden and art attraction. This new attraction is anticipated to provide a variety of experiences at the water's edge, foster the promotion and expansion of creative arts in Hawaii, and serve as an educational hub designed to enlighten the public about art and the science of glass art. The implementation of the Proposed Project will add vibrancy to the waterfront area.</p>				
(9) Education and culture				
(A) Foster culture and the arts and promote their linkage to the enhancement of the environment.		X		
(B) Encourage both formal and informal environmental education to all age groups.		X		
<p>Discussion: The Proposed Project will support the Hawai'i Environmental Policy Act's objectives regarding Education and culture.</p> <p>The Proposed Project aims to revitalize the waterfront by introducing a contemporary garden and art attraction. This new attraction is anticipated to provide a variety of experiences at the water's edge, foster the promotion and expansion of creative arts in Hawai'i, and serve as an educational hub designed to enlighten the public about the art and science of glass art. Simultaneously, the Proposed Project seeks to commemorate the past by honoring the rich tapestry of Hawai'i's history.</p>				
(10) Citizen participation				
(A) Encourage all individuals in the State to adopt a moral ethic to respect the natural environment; to reduce waste and excessive consumption; and to fulfill the responsibility as trustees of the environment for the present and succeeding generations.				X
(B) Provide for expanding citizen participation in the decision-making process so it continually embraces more citizens and more issues.		X		
<p>Discussion: The Proposed Project will support the Hawai'i Environmental Policy Act's objectives regarding Citizen participation.</p> <p>Public involvement related to the Proposed Project includes the preparation of an Early Consultation Package to inform interested parties of the Proposed Project and seek relevant public comment on subjects of concern for EA documentation. The filing and publication of this Draft EA with the Environmental Review Program will be followed by a 30-day public comment period and will receive a written response for inclusion and use in the preparation in the Proposed Project's forthcoming Final EA.</p>				

4.2 City and County of Honolulu Land Use Plans and Policies

4.2.1 City and County of Honolulu General Plan

The CCH updated its General Plan in January 2022. The General Plan is intended to be a dynamic document, expressing the aspirations of the residents of O’ahu. It sets forth the long-range objectives and policies for the general welfare and, together with the regional development plans, provides a direction and framework to guide the programs and activities of the CCH. It is a written commitment by the CCH government to a future for the island of

O‘ahu that it considers desirable and attainable. The General Plan is a two-fold document: First, it is a statement of the long-range social, economic, environmental, and design objectives for the general welfare and prosperity of the people of O‘ahu. These objectives contain both statements of desirable conditions to be sought over the long run and statements of desirable conditions that can be achieved within an approximately 20-year time horizon. Second, the General Plan is a statement of broad policies that facilitate the attainment of the objectives of the General Plan.

The General Plan is a guide for all levels of government, private enterprise, neighborhood and citizen groups, organizations, and individual citizens in eleven areas of concern:

1. Population;
2. Economic Activity;
3. Natural Environment;
4. Housing;
5. Transportation and utilities;
6. Energy;
7. Physical development and urban design;
8. Public safety;
9. Health and Education;
10. Culture and recreation; and
11. Government and fiscal management.

The Proposed Project is relevant and consistent with the goals, objectives, policies, and actions of the *City and County of Honolulu General Plan* as outlined in Table 4-6 below:

Table 4-6: City and County of Honolulu: General Plan - Objectives and Policies	S	NS	N/A
I. Population			
Objective A. To plan for anticipated population in a manner that acknowledges the limits of O‘ahu’s natural resources, protects the environment, and minimizes social, cultural, and economic disruptions.			
1. Allocate efficiently the money and resources of the City in order to meet the needs of O‘ahu’s current and future population.			X
2. Provide adequate support facilities to accommodate future numbers of visitors to O‘ahu while seeking to minimize disruption to residents and protect the natural environment.			X
3. Seek a balanced pace of physical development in harmony with the City's environmental, social, cultural, and economic goals by effecting and enforcing City regulations.			X
4. Establish geographic growth boundaries to accommodate future population growth while at the same time protecting valuable agricultural lands, environmental resources, and open space.			X
5. Support family planning and social equity.			X
Discussion: The Proposed Project will not directly affect Objective A of Section I of the City and County of Honolulu’s General Plan related to population.			
Objective B. To establish a pattern of population distribution that will allow the people of O‘ahu to live, work and play in harmony.			

1. Facilitate the full development of the primary urban center through higher-density redevelopment and the provision of adequate infrastructure.			X
2. Encourage development within the secondary urban center at Kapolei and the 'Ewa and Central O'ahu urban-fringe areas to relieve developmental pressures in the remaining urban-fringe and rural areas and to meet housing needs not readily provided in the primary urban center.			X
3. Manage land use and development in the urban-fringe and rural areas so that: a. Development is contained within growth boundaries; and b. Population densities in all areas remain consistent with the character, culture, and environmental qualities desired for each community.			X
4. Direct growth according to Policies 1, 2, and 3 above by providing development capacity and needed infrastructure to support a distribution of O'ahu's resident population.			X
Discussion: The Proposed Project will not directly affect Objective B of Section I of the City and County of Honolulu's General Plan related to population distribution.			
II. Economic Activity			
Objective A. To promote diversified economic opportunities that enable all the people of O'ahu to attain meaningful employment and a decent standard of living.			
1. Support a strong, diverse, and dynamic economic base that protects the natural environment and is resilient to changes in global conditions.			X
2. Encourage the viability of businesses and industries, including support for small businesses, which contribute to the economic and social well-being of O'ahu resident	X		
3. Pursue opportunities to grow and strategically develop non-polluting industries such as healthcare, agriculture, renewable energy, and technology in appropriate locations that contribute to O'ahu's long-term environmental, economic, and social sustainability.			X
4. Support entrepreneurship and innovation through creative efforts such as partnerships with businesses and non-profit organizations, and by encouraging complementary policies that support access to capital markets.			X
5. Foster a healthy business climate by streamlining regulatory processes to be transparent, predictable, and efficient.			X
6. Encourage the development of local, national, and world markets for the products of O'ahu-based industries.			X
7. Explore and encourage alternate economic models that reflect traditional cultural values and improve economic resilience, i.e., subsistence, barter and a culture of reciprocity and sharing.			X
Discussion: The Proposed Project will support Objective A of Section II of the City and County of Honolulu's General Plan related to economic activity.			
<p>The Proposed Project aims to revitalize the waterfront by introducing a contemporary garden and art attraction, providing a variety of experiences at the water's edge, fostering the promotion and expansion of creative arts in Hawai'i, and serving as an educational hub designed to enlighten the public about the art and science of glass art. The Proposed Project is anticipated to stimulate economic growth by drawing residents and visitors to the waterfront area, potentially attracting additional businesses and creating new opportunities for the local community.</p> <p>Moreover, the Proposed Project will support the goals of the State to achieve a strong and viable economy through the creation of construction, construction support jobs, and the purchase of local materials during development. Additionally, the Proposed Project will generate employment opportunities during the operation and maintenance of the Proposed Project which will contribute to not only the cultural vibrancy of the area but also the economic prosperity of the State.</p>			

Objective B. To maintain a successful visitor industry that creates living wage employment, enhances quality of life, and actively supports our unique sense of place, natural beauty, Native Hawaiian culture, and multi-cultural heritage.			
1. Encourage the visitor industry to support the quality of the visitor experience, the economic and social well-being of communities, the environment, and the quality of life of residents.	X		
2. Respect and emphasize the value that Native Hawaiian culture, its cultural practitioners, and other established ethnic traditions bring to enrich the visitor experience and appreciation for island heritage, culture, and values.	X		
3. Guide the development and operation of visitor accommodations and attractions in a manner that avoids unsustainable increases in the cost of providing public services and infrastructure, and that respects existing lifestyles, cultural practices, and natural, cultural, and historic resources.	X		
4. Partner with the private sector to support the long-term viability of Waikīkī as a world-class visitor destination and as O'ahu's primary resort area, and to support adequate adaptation strategies against climate change impacts.			X
5. Provide related public expenditures for rural and urban-fringe areas that are highly impacted by the visitor industry.			X
6. Provide a high-quality, livable, and safe environment for visitors and residents in Waikīkī, and support measures to ensure visitors' and residents' safety in all areas of O'ahu.			X
7. Concentrate on the quality of the visitor experience in Waikīkī, rather than on development densities.			X
8. Facilitate the development of the following secondary resort areas: Ko 'Olina, Turtle Bay, Hoakalei, and Mākaha Valley in a manner that respects existing lifestyles and the natural environment			X
9. Preserve scenic qualities of O'ahu for residents and visitors alike.	X		
10. Encourage physical improvements, social services, and cultural programs that contribute to a high-quality visitor experience, while seeking financial support of these improvements from the visitor industry.			X
<p>Discussion: The Proposed Project will support Objective B of Section II of the City and County of Honolulu's General Plan related to the viability of O'ahu's visitor industry.</p> <p>The Proposed Project aims to revitalize the waterfront by introducing a contemporary garden and art attraction. This new attraction is anticipated to provide a variety of experiences at the water's edge, foster the promotion and expansion of creative arts in Hawai'i, and serve as an educational hub designed to enlighten the public about the art and science of glass art. Simultaneously, the Proposed Project seeks to commemorate the past by honoring the rich tapestry of Hawai'i's history.</p> <p>Moreover, the Proposed Project will preserve the scenic qualities of O'ahu. As discussed in Section 3.11 (Visual Resources) the Proposed Project is not anticipated to impact the natural landmarks or scenic views of O'ahu.</p>			
Objective C. To ensure the long-term viability, continued productivity, and sustainability of agriculture on O'ahu			
1. Foster a positive business climate for agricultural enterprises of all sizes, as well as innovative approaches to farming as a business, to ensure the continuation of agriculture as an important component of O'ahu's economy			X
2. Support agricultural diversification to strengthen the agricultural industry and make more locally grown food available for local consumption.			X
3. Foster market opportunities and increased consumer demand for safe, locally grown, fresh, processed, and value-added agricultural products.			X
4. Streamline the implementation of regulations to enhance a producer's ability to develop, market, and distribute locally grown food and products.			X

5. Identify the economic benefits of local food production for local markets. Provide economic incentives to encourage local food production and sustainability and encourage agricultural and aquaculture occupations.			X
6. Promote small-scale farming activities and other operations, such as truck farming, flower growing, aquaculture, livestock production, taro growing, subsistence farms, and community gardens.			X
7. Encourage landowners to actively use agricultural lands for agricultural purposes, and to pursue the long-term preservation of agricultural land with high productivity potential for agricultural production.			X
8. Encourage sustainable agricultural production to coexist on lands with renewable energy generation.			X
9. Prohibit the urbanization of agricultural land located outside the City's growth boundaries.			X
10. Support and encourage technologies and agricultural practices that conserve and protect water, soil, air quality, and drainage areas, reduce carbon emissions, and promote public health and safety.			X
11. Support and encourage the availability and use of non-potable water for irrigation, where feasible			X
12. Provide plans, incentives, and strategies to ensure the affordability of agricultural land for farmers.			X
13. Encourage both public and private investments to improve and expand agricultural infrastructure, such as irrigation systems, agricultural processing centers, and distribution networks.			X
14. Promote farming as a desirable and fulfilling occupation by encouraging agricultural education and training programs and by raising public awareness and appreciation for agriculture.			X
15. Protect the right to farm by enforcing right-to-farm laws, enacting policies to protect agricultural operations, and imposing meaningful buffer zones.			X
16. Seek ways to discourage agricultural theft and vandalism.			X
17. Recognize the scenic value of agricultural lands as an open-space resource and amenity.			X
Discussion: The Proposed Project is not directly applicable to Objective C of Section II of the City and County of Honolulu General Plan related to the viability of agriculture on O'ahu.			
Objective D. To use the economic resources of the sea in a sustainable manner.			
1. Encourage the fishing industry to maintain its viability at a level that does not degrade or damage marine ecosystems.			X
2. Encourage the ongoing development of aquaculture, ocean research, and other ocean related industries.			X
3. Encourage the expansion of ocean recreation activities for residents and visitors that are operated in a sustainable manner.			X
Discussion: The Proposed Project will not directly impact Objective D of Section II of the City and County of Honolulu General Plan related to economic resources of the sea.			
Objective E. To ensure meaningful employment and economic equity.			
1. Support public and private training and employment programs to prepare residents for existing and future jobs, including those for historically marginalized communities.	X		
2. Make full use of State and Federal employment and training programs.			X

3. Encourage the provision of retraining programs for workers in industries with planned reductions in their labor force.			X
4. Identify emerging industries, encourage investments needed to support the industries, and develop a skilled workforce in these fields.			X
Discussion: The Proposed Project will support Objective E of Section II the City and County of Honolulu General Plan related to employment and economic equity.			
In the short term, project construction expenditures will confer positive benefits on the local economy. These benefits would be derived from the creation of construction and construction support jobs as well as revenues generated by the procurement of building supplies and materials. In the long term, the Proposed Project will improve the productivity and effectiveness of the State's workforce.			
Objective F. To maintain federal programs and economic activity on O'ahu consistent with the City's infrastructure and environmental goals.			
1. Take full advantage of Federal programs and grants which will contribute to the economic and social well-being of O'ahu's residents.			X
2. Encourage the Federal government to pay for the cost of public services used by Federal agencies.			X
3. Encourage the Federal government to lease new facilities rather than construct them on tax-exempt public land.			X
4. Encourage the military to purchase locally all needed services and supplies which are available on O'ahu .			X
5. Encourage the continuation of a high level of military-related employment both on and off base in the Hickam-Pearl Harbor, Wahiawā, Kailua-Kāne'ohe, and 'Ewa areas.			X
Discussion: The Proposed Project will not impact Objective F of Section II of the City and County of Honolulu General Plan related to economic activity as the Proposed Project does not involve any federal funds.			
Objective G. To bring about orderly economic growth on O'ahu.			
1. Concentrate economic activity and government services in the primary urban center and in the secondary urban center at Kapolei.			X
2. Advance the equitable distribution of City capital spending, employment opportunities, infrastructure investments, and other benefits throughout communities based on need and regardless of income level. Allow infrastructure and business activity in urban fringe areas appropriate to population needs			X
3. Maintain sufficient land in appropriately located commercial and industrial areas to help ensure a favorable business climate on O'ahu.			X
Discussion: The Proposed Project will not directly impact Objective G of Section II of the City and County of Honolulu General Plan related to economic activity.			
III. Natural Environment			
Objective A. To protect and preserve the natural environment.			
1. Protect O'ahu's natural environment, especially the shoreline, valleys, and ridges, from incompatible development.			X
2. Seek the restoration of environmentally damaged areas and natural resources.			X
3. Preserve, protect, and restore stream flows and stream habitats to support aquatic and environmental processes and riparian, scenic, recreational, and Native Hawaiian cultural resources.			X
4. Require development projects to give due consideration to natural features and hazards such as slope, inland and coastal erosion, flood hazards, water-recharge areas, and existing vegetation, as well as to plan for coastal hazards that threaten life and property	X		

5. Require sufficient setbacks from O'ahu's shorelines to protect life and property, preserve natural shoreline areas and sandy beaches, and minimize the future need for protective structures or relocation of structures.			X
6. Design and maintain surface drainage and flood-control systems in a manner which will help preserve natural and cultural resources.			X
7. Protect the natural environment from damaging levels of air, water, carbon, and noise pollution.	X		
8. Protect plants, birds, and other animals that are unique to the State of Hawai'i and the Island of O'ahu.			X
9. Increase tree canopies and ensure its integration into new developments and protect significant trees on public and private lands.			X
10. Increase public awareness, appreciation, and protection of O'ahu's land, air, and water resources.			X
11. Support the State and federal governments in the protection of the unique environmental, marine, cultural and wildlife assets of the Northwestern Hawaiian Islands.			X
12. Plan, prepare for, and mitigate the impacts of climate change on the natural environment, including strategies of adaptation.			X
<p>Discussion: The Proposed Project will support the Objective A of Section III of the City and County of Honolulu General Plan related to natural environment.</p> <p>The Proposed Project gives due consideration to the natural features and environment of the site and surrounding area through this environmental assessment. Potential impacts to the natural setting will be mitigated through BMPs during the implementation of the Proposed Project. This will minimize any potential impacts to plants, birds, and other animals unique to the island of O'ahu and State of Hawai'i. The Proposed Project will adhere to County, State, and Federal guidelines for noise, air, and water pollution.</p>			
<p>Objective B. To preserve and enhance natural landmarks and scenic views of O'ahu for the benefit of both residents and visitors as well as future generations.</p>			
1. Protect the Island's significant natural resources: its mountains and craters; forests and watershed areas; wetlands, rivers, and streams; shorelines, fishponds, and bays; and reefs and offshore islands.			X
2. Protect O'ahu's scenic views, especially those seen from highly developed and heavily traveled areas.	X		
3. Locate and design public facilities, infrastructure, and utilities to minimize the obstruction of scenic views.	X		
4. Protect and expand public access to the natural and coastal environment for recreational, educational, and cultural purposes, and maintain access in a way that does not damage natural, historic, or cultural resources.	X		
<p>Discussion: The Proposed Project will support Objective B of Section III of the City and County of Honolulu General Plan related to the natural environment.</p> <p>The Proposed Project aims to revitalize the waterfront by introducing a contemporary garden and art attraction. This new attraction is anticipated to provide a variety of experiences at the water's edge, foster the promotion and expansion of creative arts in Hawai'i, and serve as an educational hub designed to enlighten the public about the art and science of glass art. Simultaneously, the Proposed Project seeks to commemorate the past by honoring the rich tapestry of Hawai'i's history.</p> <p>Moreover, the Proposed Project will support the goals of the State to achieve a strong and viable economy through the creation of construction, construction support jobs, and the purchase of local materials during development. Additionally, the Proposed Project will generate employment opportunities during the operation and maintenance of the Proposed Project which will contribute to not only the cultural vibrancy of the area but also the economic prosperity of the State.</p>			

IV. HOUSING AND COMMUNITIES			
Objective A. To ensure a balanced mix of housing opportunities and choices for all residents at prices they can afford.			
1. Support programs, policies, and strategies that will provide decent and affordable homes for local residents, especially those in the lowest income brackets.			X
2. Streamline approval and permit procedures, in a transparent manner, for housing and other development projects.			X
3. Encourage innovative residential developments that result in lower costs, sustainable use of resources, more efficient use of land and infrastructure, greater convenience and privacy, and a distinct community identity.			X
4. Support and encourage programs to maintain and improve the condition of existing housing.			X
5. Make full use of government programs that provide assistance for low- and moderate-income renters and homebuyers.			X
6. Maximize local funding programs available for affordable housing.			X
7. Provide financial and other incentives to encourage the private sector to build homes for low- and moderate-income residents.			X
8. Encourage and participate in joint public-private development of low- and moderate- income housing.			X
9. Encourage the replacement of low- and moderate-income housing in areas which are being redeveloped at higher densities.			X
10. Promote the design and construction of dwellings which take advantage of O'ahu's year-round moderate climate and use other sustainable design techniques.			X
11. Encourage the construction of affordable homes within established low-density and rural communities by such means as 'ohana units, duplex dwellings, and cluster development that embraces the 'ohana concept by maintaining multi-generational proximity for local families			X
12. Promote higher-density, mixed-use development where appropriate, including rail transit-oriented development, to increase the supply of affordable and market housing in convenient proximity to jobs, schools, shops, and public transit.			X
13. Encourage the production and maintenance of affordable rental housing.			X
14. Encourage the provision of affordable housing designed for the elderly and people with disabilities in locations convenient to critical services and to public transit.			X
15. Encourage equitable relationships between landowners and leaseholders, between landlords and tenants, and between condominium developers and owners.			X
16. Support collaborative partnerships that work toward immediate solutions to house and service homeless populations and also toward long-term strategies to prevent and eliminate homelessness.			X
17. Support programs to address all facets of homelessness, so that every homeless person has a place to stay, along with the infrastructure and support services that are needed.			X
Discussion: The Proposed Project will not impact Objective A of Section IV of the City and County of Honolulu General Plan related to housing.			
Objective B. To minimize speculation in land and housing.			

1. Encourage the State government to coordinate its urban-area designations with the developmental policies of the City.			X
2. Discourage speculation in lands outside of areas planned for urban use, reduce the prevalence of vacant dwelling units, and reduce the use of residential dwelling units for short-term vacation rentals			X
3. Seek public benefits from increases in the value of land owing to City and State developmental policies and decisions.			X
4. Require government-assisted housing to be delivered to qualified purchasers and renters.			X
5. Ensure that owners of housing properties, including government-subsidized housing, maintain housing affordability over the long term			X
Discussion: The Proposed Project will not impact Objective B of Section IV of the City and County of Honolulu General Plan related to housing.			
Objective C. To provide residents with a choice of living environments that are reasonably close to employment, schools, recreation, and commercial centers, and that are adequately served by transportation networks and public utilities.			
1. Ensure that residential developments offer affordable housing to people of different income levels and to families of various sizes to alleviate the existing condition of overcrowding.			X
2. Encourage the fair distribution of low- and moderate-income housing throughout the island.			X
3. Encourage the co-location of residential development and employment centers with commercial, educational, social, and recreational amenities in the development of desirable communities.			X
4. Encourage residential development in suburban areas where existing roads, utilities, and other community facilities are not being used to capacity, and in urban areas where higher densities may be readily accommodated			X
5. Support mixed-use development and higher-density redevelopment in areas surrounding rail transit stations.			X
6. Discourage residential development in areas where the topography makes construction difficult or hazardous, where sea level rise and flooding are a hazard, and where providing and maintaining roads, utilities, and other facilities would be extremely costly or environmentally damaging.			X
7. Encourage public and private investments in older communities as needed to keep the communities vibrant and livable.			X
8. Encourage the military to provide housing for active-duty personnel and their families on military bases and in areas turned over to military housing contractors.			X
Discussion: The Proposed Project will not impact Objective C of Section IV of the City and County of Honolulu General Plan related to housing.			
V. Transportation & Utilities			
Objective A. To create a multi-modal transportation system that moves people and goods safely, efficiently, and at a reasonable cost and minimizes fossil fuel consumption and greenhouse gas emissions; serves all users, including limited income, elderly, and disabled populations; and is integrated with existing and planned development.			
1. Develop a comprehensive, well-connected, and integrated ground transportation system that reduces carbon emissions and enables safe, comfortable, and convenient travel for all users, including motorists, pedestrians, bicyclists, and public transportation users of all ages and abilities			X

2. Provide multi-modal transportation services to people living within the 'Ewa, Central O'ahu, and Pearl City-Hawai'i Kai corridors primarily through a mass transit system including exclusive right-of-way rail transit and feeder-bus components as well as through the existing highway system.			X
3. Provide multi-modal transportation services outside the 'Ewa, Central O'ahu, and Pearl City-Hawai'i Kai corridors primarily through a system of express- and feeder-buses as well as through the highway system with limited to moderate improvements sufficient to meet the needs of the communities being served.			X
4. Work with the State to ensure adequate and safe access for communities served by O'ahu's coastal highway system, and to plan for the relocation of highways and roads subject to sea level rise away from coastlines			X
5. Support the rail transit system as the transportation spine for the urban core, with links to the airport and maritime terminals, which will work together with other alternative modes of transit and transit-oriented development to reduce automobile dependency and increase multi-modal travel.			X
6. Support the development of transportation plans, programs, and facilities that are based on Complete Streets features. Maintain and improve road, bicycle, pedestrian, and micromobility facilities in existing communities to eliminate unsafe conditions.			X
7. Design street networks to incorporate greater roadway and pathway connectivity.			X
8. Make transportation services safe and accessible to people with limited mobility: the young, elderly, disabled, and those with limited incomes			X
9. Consider environmental, social, cultural, and climate change and natural hazard impacts, as well as construction and operating costs, as important factors in planning transportation system improvements			X
10. Reduce traffic congestion and maximize the efficient use of transportation resources by pursuing transportation demand management strategies such as carpooling, telecommuting, flexible work schedules, and incentives to use alternative travel modes.	X		
11. Enhance pedestrian-friendly and bicycle-friendly travel via public and private programs and improvements.			X
12. Maintain separate aviation facilities for general aviation operations to supplement the capacity of the Daniel K. Inouye International Airport.			X
13. Support improvements to Kalaeloa Barbers Point Harbor as O'ahu's second deep-water harbor.			X
14. Support the operation, maintenance, and improvement of Honolulu Harbor as O'ahu's primary cargo and ocean transportation hub.			X
15. Advance the transition to electric and alternative fuel infrastructure to provide adequate and accessible charging spaces and renewal fueling stations for ground transportation on O'ahu.			X
<p>Discussion: The Proposed Project will support Objective A of Section V of the City and County of Honolulu General Plan related to transportation and utilities.</p> <p>The Proposed Project aims to promote the utilization of both public and private modes of transportation, along with various transportation systems including The Bus, Skyline Rail, and Trolley, to facilitate access to the Project Site. This initiative is anticipated to enhance accessibility and connectivity while encouraging commuters to opt for sustainable transportation options.</p>			
<p>Objective B. Provide an adequate supply of water and environmentally sound systems of waste disposal for O'ahu's existing population and for generations and support a one water approach that uses and manages freshwater, wastewater, and stormwater resources in an integrated manner.</p>			

1. Develop and maintain an adequate, safe, and reliable supply of fresh water in a cost-effective way that supports the long-term sustainability of the resource and considers the impacts of climate change			X
2. Help to develop and maintain an adequate, safe, and reliable supply of water for agricultural and industrial needs in a resource-integrated and cost-effective way that supports the long-term health of the resource.			X
3. Use technologies that provide water, waste disposal, and recycling services at a reasonable cost and in a manner that addresses environmental and community impacts.	X		
4. Encourage the increased availability and use of recycled or brackish water to meet non potable demands.			X
5. Pursue strategies and programs to reduce the per capita consumption of water and the per capita production of waste.			X
6. Provide safe, reliable, efficient, and environmentally sound waste-collection, waste-disposal, and recycling services that consider the near- and long-term impacts of climate change during the siting and construction of new facilities.	X		
7. Pursue programs to expand on-island recycling and resource recovery from O'ahu's solid-waste and wastewater streams.			X
8. Support initiatives that educate the community about the importance of conserving resources and reducing waste streams through reduction, reuse, and recycling.			X
9. Require the safe use and disposal of hazardous materials.			X
Discussion: The Proposed Project will comply with Objective B of Section V of the City and County of Honolulu General Plan related to water resources.			
The Applicant will coordinate with the BWS to ensure there is adequate water source, storage, and delivery to service the Proposed Project. Upon finalization of the design, BWS will determine if the current municipal water system is adequate to accommodate the demand generated by the Proposed Project. Additionally, it is assumed that modern designs for the management of water resources would be incorporated to complement the Proposed Project.			
Objective C. To ensure reliable, cost-effective, and responsive service for all utilities with equitable access for residents			
1. Maintain and upgrade utility systems in order to avoid major breakdowns and service interruptions.			X
2. Provide improvements to utilities in existing neighborhoods to reduce substandard conditions, and increase resilience to use fluctuations, natural hazards, extreme weather, and other climate impacts.			X
3. Facilitate timely and orderly upgrades and expansions of utility systems.			X
4. Increase the efficiency of public-serving utilities by encouraging a mixture of uses with peak periods of demand aligning with the availability of resources.			X
Discussion: The Proposed Project will not impact Objective C of Section V of the City and County of Honolulu General Plan related to transportation and utilities.			
Objective D. To maintain transportation and utility systems which support O'ahu as a desirable place to live and visit.			
1. Provide adequate resources to ensure the maintenance and improvement of transportation systems and utilities.			X
2. Evaluate the social, cultural, economic, and environmental impact of additions to the transportation and utility systems before they are constructed.			X
3. Require the installation of underground utility lines wherever feasible.			X

4. Seek improved taxing powers for the City in order to provide a more equitable means of financing transportation and utility services.			X
5. Evaluate impacts of sea level rise on existing public infrastructure, especially sewage treatment plants, roads, and other public and private utilities located along or near O'ahu's coastal areas and avoid the placement of future public infrastructure in threatened areas.			X
Discussion: The Proposed Project will not impact Objective D of Section V of the City and County of Honolulu General Plan related to transportation and utilities.			
VI. Energy			
Objective A. To increase energy self-sufficiency through renewable energy and maintain an efficient, reliable, resilient, and cost-efficient energy system.			
1. Encourage the implementation of a comprehensive plan to guide and coordinate energy conservation and renewable energy development and utilization programs.			X
2. Support and encourage programs and projects, including economic incentives, regulatory measures, and educational efforts, and seek to eliminate O'ahu's dependence on fossil fuels.			X
3. Ensure access to an adequate reserve of fuel and energy supplies to aid disaster response and recovery			X
4. Support the increased use of solid waste energy recovery and other biomass energy conversion systems			X
5. Support and participate in research, development, demonstration, commercialization, and optimization programs aimed at developing cost-effective and environmentally sound renewable energy supplies.			X
6. Support State and federal initiatives to utilize renewable energy sources.			X
7. Manage resources and development of communities in line with long-term efficiency and sustainability goals and targets in the areas of energy, carbon emissions, waste streams, all utilities, and food security			X
8. Encourage and equitably incentivize the use of commercially available renewable energy systems in public facilities, institutions, residences, and business developments.			X
9. Consider health, safety, environmental, cultural, and aesthetic impacts, as well as resource limitations, land use patterns, and relative costs in all major decisions on renewable energy.			X
10. Work closely with the State and federal governments in the formulation and implementation of all City energy-related programs and regulations, including updating building energy codes.			X
Discussion: The Proposed Project is not directly applicable to Objective A of Section VI of the City and County of Honolulu General Plan related to energy.			
Objective B. To conserve energy through the more efficient management of its use and through more energy-efficient technologies.			
1. Ensure that the efficient use of energy is a primary factor in the preparation and administration of land use plans and regulations.			X
2. Provide incentives and, where appropriate, mandatory controls to achieve energy-efficient and sustainable siting and design of new developments. Support the increased use of nationally recognized energy efficiency and resource conservation rating and certification systems.			X
3. Provide incentives and, where appropriate, mandatory controls to reduce energy consumption in existing buildings and outdoor facilities, and in design and construction practices.			X

4. Promote the development of a multi-modal transportation system that minimizes and seeks to eliminate fossil fuel consumption and greenhouse gas emissions.			X
5. Encourage the implementation of an adaptable and reliable electrical grid, energy transmission, energy storage, microgrids, and energy generation technologies.			X
6. Support the availability and use of energy efficient vehicles, especially hybrid, fuel cell, and pure electrical vehicles.			X
Discussion: The Proposed Project will not directly impact Objective B of Section VI of the City and County of Honolulu General Plan related to energy.			
The Proposed Project aims to promote the utilization of both public and private modes of transportation, along with various transportation systems including The Bus, Skyline Rail, and Trolley, to facilitate access to the Project Site. This initiative is anticipated to enhance accessibility and connectivity while encouraging commuters to opt for sustainable transportation options.			
Objective C. To foster an ethic of energy conservation that inspires residents to engage in sustainable practices			
1. Provide citizens with the information they need to fully understand severe climate change, supply chain issues, costs, security, and other issues associated with O'ahu's dependence on imported fossil fuels.			X
2. Increase consumer awareness of available renewable energy sources and their costs and benefits			X
3. Provide information concerning the impact of public and private decisions on future energy generation, transmission, storage, and use.			X
4. Provide communities with timely, relevant, and accurate information concerning renewable energy facilities proposed in their area and ensure adequate buffer zones required for health or safety.			X
Discussion: The Proposed Project will not directly impact Objective C of Section VI of the City and County of Honolulu General Plan related to energy.			
VII. Physical Development and Urban Design			
Objective A. To coordinate changes in the physical environment of O'ahu to ensure that all new developments are timely, well-designed, and appropriate for the areas in which they will be located.			
1. Provide infrastructure improvements to serve new growth areas, redevelopment areas, and areas with badly deteriorating infrastructure.	X		
2. Coordinate the location and timing of new development with the availability of adequate water supply, sewage treatment, drainage, transportation, and other public facilities and services.	X		
3. Require new developments to provide or pay the cost of all essential community services, including roads, utilities, schools, parks, and emergency facilities that are intended to directly serve the development.			X
4. Facilitate and encourage compact, higher-density development in urban areas designated for such uses.	X		
5. Encourage the establishment of mixed-use town centers that are compatible with the physical and social character of their community	X		
6. Facilitate transit-oriented development in rail transit station areas to create live/work/play multi-modal communities that reduce travel and traffic congestion			X
7. Encourage the clustering of development to reduce the cost of providing utilities and other public services.			X
8. Locate new industries and new commercial areas so that they will be well-related to their markets and suppliers, and to residential areas and transportation facilities			X

9. Locate community facilities on sites that will be convenient to the people they are intended to serve			X
10. Discourage uses which are major sources of noise, air, and light pollution			X
11. Implement siting and design solutions that seek to reduce exposure to natural hazards, including those related to climate change, flooding, and sea level rise.	X		
12. Prohibit new airfields, high-powered electromagnetic-radiation sources, and storage places for fuel and explosives from locating on sites where they will endanger or disrupt nearby communities.			X
13. Promote opportunities for the community to participate meaningfully in planning and development processes, including new forms of communication and social media.			X
<p>Discussion: The Proposed Project will support Objective A of Section VII of the City and County of Honolulu General Plan related to physical development and urban design.</p> <p>The Proposed Project aims to revitalize the waterfront by introducing a contemporary garden and art attraction. This new attraction is anticipated to provide a variety of experiences at the water's edge, foster the promotion and expansion of creative arts in Hawai'i, and serve as an educational hub designed to enlighten the public about the art and science of glass art. Simultaneously, the Proposed Project seeks to commemorate the past by honoring the rich tapestry of Hawai'i's history.</p> <p>Moreover, the Project Site is situated within the existing urban context and has access to existing infrastructure in regard to utilities.</p>			
<p>Objective B. To plan and prepare for the long-term physical impacts of climate change.</p>			
1. Integrate climate change adaptation into the planning, design, and construction of all significant improvements to and development of the built environment.	X		
2. Coordinate plans in the private and public sectors that support research, monitoring, and educational programs on climate change.			X
3. Prepare for the anticipated impacts of climate change and sea level rise on existing communities and facilities through mitigation, adaptation, managed retreat, or other measures in exposed areas	X		
<p>Discussion: The Proposed Project will support Objective B of Section VII of the City and County of Honolulu General Plan related to climate change.</p> <p>The Proposed Project will be appropriately designed to take into consideration the context of the surrounding environment and are not anticipated to significantly influence or affect temperatures, wind, or rainfall levels at the Project Site or within the greater region.</p>			
<p>Objective C. To develop Honolulu (Waialae-Kahala to Halawa), Aiea, and Pearl City as the Island's primary urban center.</p>			
1. Provide downtown Honolulu and other major business centers with a well-balanced mixture of uses.			X
2. Encourage the development of attractive residential communities downtown and other business centers.			X
3. Maintain and improve downtown as the financial and office center of the island, and as a major retail center			X
4. Provide for the continued viability of the Hawai'i Capital District as a center of government activities and as an attractive park-like setting in the heart of the city.			X
5. Encourage the development of attractive residential communities downtown and other business centers.			X
6. Foster the development of Honolulu's waterfront as the State's major port and maritime center, as a people-oriented mixed-use area, and as a major recreation area with accommodation for sea level rise.	X		

Discussion: The Proposed Project will support Objective B of Section VII of the City and County of Honolulu General Plan related to physical development and urban design.			
The Proposed Project aims to revitalize the waterfront by introducing a contemporary garden and art attraction. This new attraction is anticipated to provide a variety of experiences at the water's edge, foster the promotion and expansion of creative arts in Hawai'i, and serve as an educational hub designed to enlighten the public about the art and science of glass art. Simultaneously, the Proposed Project seeks to commemorate the past by honoring the rich tapestry of Hawai'i's history.			
Moreover, the Proposed Project will be appropriately designed to take into consideration the context of the surrounding environment and accommodate for sea level rise.			
Objective D. To develop a secondary urban center in Ewa with its nucleus in the Kapolei area.			
1. Support public projects that are needed to facilitate development of the secondary urban center at Kapolei.			X
2. Encourage the development of a major residential, commercial, and employment center within the secondary urban center at Kapolei.			X
3. Encourage the continuing development of the area encompassing Campbell Industrial Park, Kalaeloa Barbers Point Harbor, and West Kapolei as a major industrial center.			X
4. Coordinate plans for the development of the secondary urban center at Kapolei with the State and federal governments, major landowners and developers, and the community.			X
5. Cooperate with the State and federal governments in the improvements to the deep-water harbor at Kalaeloa Barbers Point.			X
6. Encourage the development of the Ocean Pointe/Hoakalei Communities as a major residential and recreation area emphasizing recreational activities and a waterfront commercial center containing light-industrial, commercial, and visitor accommodation uses.			X
Discussion: The Proposed Project will not impact Objective C of Section VII of the City and County of Honolulu General Plan related to physical development and urban design.			
Objective E. To maintain those development characteristics in the urban-fringe and rural areas which make them desirable places to live.			
1. Develop and maintain urban-fringe areas as predominantly residential areas characterized by generally lower-rise, lower-density development which may include significant levels of retail and service commercial uses as well as satellite institutional and public uses geared to serving the needs of households.			X
2. Coordinate plans for developments within the 'Ewa and Central O'ahu urban-fringe areas with the State and federal governments, major landowners and developers, agricultural industries, and the community.			X
3. Maintain a "green belt" of open space and agricultural land around developed communities in the 'Ewa and Central O'ahu areas of O'ahu.			X
4. Maintain rural areas that reflect an open and scenic setting, dominated by small to moderate size agricultural pursuits, with small towns of low-density and low-rise character, and which allows modest growth opportunities tailored to address area residents' future needs			X
5. Encourage the development of a variety of housing choices including affordable housing in rural communities, to give people the choice to continue to live in the community that they were raised in.			X
6. Ensure the social and economic vitality of rural communities by supporting infill development and modest increases in heights and densities around existing rural town areas where feasible to maintain an adequate supply of housing for future generations.			X

Discussion: The Proposed Project will not impact Objective E of Section VII of the City and County of Honolulu General Plan related to physical development and urban design.			
Objective F. To create and maintain attractive, meaningful, and stimulating environments throughout O'ahu.			
1. Encourage distinctive community identities for both new and existing communities and neighborhoods.			X
2. Require the consideration of urban design principles in all development projects.			X
3. Require developments in stable, established communities and rural areas to be compatible with the existing communities and areas			X
4. Provide design guidelines and controls that will allow more compact development and intensive use of lands in the primary urban center and along the rail transit corridor.			X
5. Seek to protect residents' quality of life and to maintain the integrity of neighborhoods by strengthening regulatory and enforcement strategies that address the presence of inappropriate non-residential activities.	X		
6. Promote public and private programs to beautify the urban and rural environments.			X
7. Design public structures to meet high aesthetic and functional standards and to complement the physical character of the communities they will serve.	X		
8. Design public street networks to be safe and accessible for users of all ages and abilities, to accommodate multiple modes of travel to be visually attractive and to support sustainable ecological processes, such as stormwater infiltration.			X
9. Recognize the importance of using Native Hawaiian plants in landscaping to further the traditional Hawaiian concept of mālama 'āina and to create a more Hawaiian sense of place.	X		
Discussion: The Proposed Project will support Objective E of Section VII of the City and County of Honolulu General Plan related to physical development and urban design.			
The Proposed Project aims to revitalize the waterfront by introducing a contemporary garden and art attraction. This new attraction is anticipated to provide a variety of experiences at the water's edge, foster the promotion and expansion of creative arts in Hawai'i, and serve as an educational hub designed to enlighten the public about the art and science of glass art. Simultaneously, the Proposed Project seeks to commemorate the past by honoring the rich tapestry of Hawai'i's history.			
Objective G. To promote and enhance the social and physical character of O'ahu's older towns and neighborhoods.			
1. Encourage new construction in established areas to be compatible with the character and cultural values of the surrounding community.	X		
2. Encourage, wherever desirable, the rehabilitation of existing substandard structures.			X
3. Provide and maintain roads, public facilities, and utilities without damaging the character of older communities			X
4. Seek the satisfactory relocation of residents before permitting their displacement by new development, redevelopment, or neighborhood rehabilitation.			X
5. Acknowledge the cultural and historical significance of kuleana lands, the ancestral ownership of kuleana lands, and promote policies that preserve and protect kuleana lands.	X		
6. Support and encourage cohesive neighborhoods which foster interactions among neighbors, promote vibrant community life, and enhance livability.	X		
Discussion: The Proposed Project will support Objective F of Section VII of the City and County of Honolulu General Plan related to physical development and urban design.			

The design team will need to consider how the Proposed Project can complement the surrounding area to comply with the policies and guidelines stated above and be consistent with the Honolulu Waterfront Master Plan and the ATDC development goals.

VIII. Public Safety			
Objective A. To prevent and control crime and maintain public order.			
1. Provide a safe environment for residents and visitors on O’ahu.			X
2. Provide adequate, safe, and secure criminal justice facilities.			X
3. Provide adequate training, staffing, and support for City public safety agencies.			X
4. Emphasize improvements to police and prosecution operations which will result in a higher proportion of wrongdoers who are arrested, convicted, and punished for their crimes.			X
5. Support policies and programs that expand access to treatment, rehabilitation, and reentry programs for adult and juvenile offenders			X
6. Keep the public informed of the nature and extent of criminal activity on O’ahu.			X
7. Establish and maintain programs to encourage public cooperation in the prevention and solution of crimes and promote strong community-police relationships.			X
8. Seek the help of State and federal law-enforcement agencies to curtail the activities of organized crime syndicates on O’ahu.			X
9. Conduct periodic reviews of criminal laws to ensure their relevance to the community's needs and values.			X
10. Cooperate with other law-enforcement agencies to develop new methods of addressing crime. Support communication and coordination across federal, State and City law enforcement and corrections agencies.			X
11. Encourage the improvement of rehabilitation programs and facilities for criminals and juvenile offenders.			X
Discussion: The Proposed Project will not impact Objective A of Section VIII of the City and County of Honolulu General Plan related to public safety.			
Objective B. To protect residents and visitors and their property against natural disasters and other emergencies, traffic and fire hazards, and unsafe conditions			
1. Keep up-to-date and enforce all City and County safety regulations.	X		
2. Require all developments in areas subject to floods and tsunamis, and coastal erosion to be located and constructed in a manner that will not create any health or safety hazards or cause harm to natural and public resources.	X		
3. Participate with State and federal agencies in the funding and construction of flood control projects, and prioritize the use of ecologically sensitive flood-control strategies whenever feasible.			X
4. Collaborate with State and federal agencies to provide emergency warnings, protection, mitigation, response, and recovery, during and after major emergencies such as tsunamis, hurricanes, and other high-hazard events.			X
5. Cooperate with State and federal agencies to provide protection from war, civil disruptions, pandemics, and other major disturbances.			X
6. Reduce hazardous traffic conditions.			X
7. Provide adequate resources to effectively prepare for and respond to natural and manmade threats to public safety, property, and the environment.			X
8. Foster disaster-ready communities and households through implementation of resilience hubs and other resiliency strategies.			X

9. Plan for the impacts of climate change and sea level rise on public safety, in order to minimize potential future hazards.	X		
10. Develop emergency management plans, policies, programs, and procedures to protect and promote public health, safety, and welfare of the people.			X
11. Provide educational materials on emergency management preparedness, fire protection, traffic hazards, and other unsafe conditions			X
<p>Discussion: The Proposed Project will support Objective B of Section VIII of the City and County of Honolulu General Plan related to public safety.</p> <p>The Proposed Project will be conducted following all building codes and OSHA/HIOSH standards to ensure the security of public health and safety are protected during construction and through day-to-day operations.</p>			
IX. Health and Education			
Objective A. To protect the health and well-being of residents and visitors.			
1. Encourage the provision of health-care facilities that are accessible to both employment and residential centers.			X
2. Provide prompt and adequate ambulance and first-aid services in all areas of O'ahu.			X
3. Coordinate City health codes and other regulations with State and federal health codes to facilitate the enforcement of air-, water-, and noise-pollution controls.			X
4. Integrate public health concerns such as air and water pollution as a consideration in land use planning decisions.			X
5. Encourage healthy lifestyles by supporting opportunities that increase access to and promote consumption of fresh, locally grown foods.			X
6. Encourage healthy lifestyles through walkable and livable communities, safe street crossings, safe routes to schools, and parks and pathways for pedestrians and bicyclists.			X
7. Support efforts to make healthcare accessible and affordable for everyone.			X
8. Support efforts to improve and expand access to mental health, drug treatment, community-based programs, and other similar programs for those requiring such services.			X
9. Support becoming an age-friendly city that provides people of all ages with user-friendly parks and other public gathering places, that offers safe streets and multi-modal transportation options, that provides an adequate supply of affordable housing, that encourages growth in needed and desirable jobs, that provides quality healthcare and support services, and that encourages civic participation, social inclusion, and respect between interest groups.	X		
10. Plan for our aging population's growing healthcare, personal service, and diverse daily activity needs, and encourage these services to be provided in a timely manner, including age-specific social activities.			X
<p>Discussion: The Proposed Project will not impact Objective A of Section IX of the City and County of Honolulu General Plan related to health and education.</p> <p>The Proposed Project will, however, function as an educational hub catering to students, tourists, artists, and the general public. The Proposed Project will institute programs specifically crafted to impart knowledge about art and the science of glass art. Local educators will collaborate to develop a curriculum for a program providing an immersive education experience in these fields. Additionally, the Proposed Project will offer a range of classes, demonstrations, and excursions, inviting visitors and residents to participate and enhance their understanding of art and glass artistry.</p> <p>Additionally, The Proposed Project aims to promote the utilization of both public and private modes of transportation, along with various transportation systems including The Bus, Skyline Rail, and Trolley, to facilitate</p>			

access to the Project Site. This initiative is anticipated to enhance accessibility and connectivity while encouraging commuters to opt for sustainable transportation options.			
Objective B. To provide a wide range of educational opportunities for the people of O’ahu.			
1. Support education programs that encourage the development of employable skills.	X		
2. Encourage the provision of informal educational programs for people of all age groups.			X
3. Encourage the after-hours use of school buildings, grounds, and facilities.			X
4. Encourage the construction of school facilities that are designed for flexibility and high levels of use			X
5. Facilitate the appropriate location of childcare facilities as well as learning institutions from preschool through the university levels.			X
6. Encourage outdoor learning opportunities and venues that reflect our unique natural environment and Native Hawaiian culture.			X
<p>Discussion: The Proposed Project will support Objective B of Section IX of the City and County General Plan related to health and education.</p> <p>The Proposed Project will function as an educational hub catering to students, tourists, artists, and the general public. The Proposed Project will institute programs specifically crafted to impart knowledge about art and the science of glass art. Local educators will collaborate to develop a curriculum for a program providing an immersive education experience in these fields. Additionally, the Proposed Project will offer a range of classes, demonstrations, and excursions, inviting visitors and residents to participate and enhance their understanding of art and glass artistry.</p>			
Objective C. To make Honolulu the center of higher education in the Pacific.			
1. Encourage continuing improvement in the quality of higher education in Hawai’i, as well as ways to make higher education more affordable.			X
2. Encourage the development of diverse opportunities in higher education.			X
3. Encourage research institutions to establish branches on O’ahu.			X
4. Establish Honolulu as a knowledge center and international Pacific crossroads hub.			X
<p>Discussion: The Proposed Project will support impact Objective C of Section IX of the City and County of Honolulu General Plan related to higher education.</p> <p>The Proposed Project will function as an educational hub catering to students, tourists, artists, and the general public. The Proposed Project will institute programs specifically crafted to impart knowledge about art and the science of glass art. Local educators will collaborate to develop a curriculum for a program providing an immersive education experience in these fields. Additionally, the Proposed Project will offer a range of classes, demonstrations, and excursions, inviting visitors and residents to participate and enhance their understanding of art and glass artistry.</p>			
X. Culture and Recreation			
Objective A. To foster the multiethnic culture of Hawai’i and respect the host culture of the Native Hawaiian people.			
1. Recognize the Native Hawaiian host culture, including its customs, language, history, and close connection to the natural environment, as a dynamic, living culture and as an integral part of O’ahu’s way of life.			X
2. Promote the preservation and enhancement of local cultures, values, and traditions.	X		
3. Encourage greater public awareness, understanding, and appreciation of the cultural heritage and contributions to Hawai’i made by O’ahu’s various ethnic groups.			X

4. Foster equity and increased opportunities for positive interaction among people with different ethnic, social, and cultural backgrounds.			X
5. Preserve the identities of the historical communities of O'ahu.	X		
<p>Discussion: The Proposed Project will support Objective A of Section X of the City and County of Honolulu General Plan related to culture and recreation.</p> <p>As described in Sections 3.6 (Historic and Archaeological Resources) and 3.6.1 (Cultural Resources), there are no known or identified cultural, historic, architectural, and archaeological resources at the Project Site, which has been heavily disturbed.</p> <p>It is unlikely that the Proposed Project would adversely impact resources currently located on the property or in adjacent areas. Should any unidentified resources be encountered during construction, all work will cease, and the State Historic Preservation Office will be contacted for review and approval of mitigation measures.</p>			
<p>Objective B. To protect, preserve and enhance O'ahu's cultural, historic, architectural, and archaeological resources.</p>			
1. Promote the restoration and preservation of early Hawaiian structures, artifacts, and landmarks.	X		
2. Identify and, to the extent possible, preserve and restore buildings, sites, and areas of social, cultural, historic, architectural, and archaeological significance.	X		
3. Cooperate with the State and federal governments in developing and implementing a comprehensive preservation program for social, cultural, historic, architectural, and archaeological resources.			X
4. Promote the interpretive and educational use of cultural, historic, architectural, and archaeological sites, buildings, and artifacts			X
5. Seek public and private funds, and encourage public participation and support, to protect, preserve and enhance social, cultural, historic, architectural, and archaeological resources.			X
6. Provide incentives for the restoration, preservation, maintenance, and enhancement of social, cultural, historic, architectural, and archaeological resources.			X
7. Encourage the protection of areas that are historically important to Native Hawaiian cultural practices and to the cultural practices of other ethnicities, in order to further preserve and continue these practices for future generations.	X		
<p>Discussion: The Proposed Project will support Objective B of Section X of the City and County of Honolulu General Plan related to culture and recreation.</p> <p>As described in Section 3.6 (Historic and Archaeological Resources) and 3.6.1(Cultural Resources), there are no known or identified cultural, historic, architectural, and archaeological resources at the Project Site, which has been heavily disturbed.</p> <p>It is unlikely that the Proposed Project would adversely impact resources currently located on the property or in adjacent areas. Should any unidentified resources be encountered during construction, all work will cease, and the State Historic Preservation Office will be contacted for review and approval of mitigation measures.</p>			
<p>Objective C. To foster the visual and performing arts.</p>			
1. Encourage and support programs and activities for the visual and performing arts.			X
2. Encourage creative expression and access to the arts by all segments of the population.	X		
3. Provide permanent art in appropriate City public buildings and places.			X
<p>Discussion: The Proposed Project will not impact Objective C of Section X of the City and County of Honolulu General Plan related to culture and recreation.</p>			

The Proposed Project aims to revitalize the waterfront by introducing a contemporary garden and art attraction. This new attraction is anticipated to provide a variety of experiences at the water's edge, foster the promotion and expansion of creative arts in Hawai'i, and serve as an educational hub designed to enlighten the public about the art and science of glass art. Simultaneously, the Proposed Project seeks to commemorate the past by honoring the rich tapestry of Hawai'i's history.			
Objective D. To provide a wide range of recreational facilities and services that are readily available to residents and visitors alike, and to balance access to natural areas with the protection of those areas.			
1. Develop, maintain, and expand a community-based park system to meet the needs of the diverse communities on O'ahu.			X
2. Develop, maintain, and expand a system of regional parks and specialized recreation facilities, based on the cumulative demand of residents and visitors.			X
3. Develop, maintain, and improve urban parks, squares, and beautification areas in high-density urban place			X
4. Encourage public and private natural reserves and botanical and zoological parks to foster greater awareness and appreciation of the natural environment.			X
5. Encourage the State to develop, improve, and maintain a system of natural resource-based parks, such as beach, shoreline, and mountain parks.			X
6. Ensure that public recreational facilities balance the demand for facilities against capital and operating cost constraints so that they are adequately sized and properly maintained.			X
7. Ensure and maintain convenient and safe access to beaches, ocean environments and mauka recreation areas in a manner that protects natural and cultural resources.			X
8. Encourage ocean and water-oriented recreation activities that do not adversely impact the natural environment and cultural assets, or result in overcrowding or overuse of beaches, shoreline areas and the ocean.			X
9. Require all new developments to provide their residents with adequate recreation space.			X
10. Utilize our unique natural environment in a responsible way to promote cultural events and activities and maintain cultural practices.			X
11. Encourage the after-hours, weekend, and summertime use of public-school facilities for recreation			X
12. Provide for safe and secure use of public parks, beaches, and recreation facilities.			X
13. Create and promote recreational venues for kūpuna and keiki and for kama'āina and malihini.			X
14. Encourage the State and federal governments to transfer excess and underutilized land to the City for public recreation use.			X
Discussion: The Proposed Project will not impact Objective D of Section X of the City and County General Plan related to health and education.			
XI. Government Operations and Fiscal Management			
Objective A. To promote increased efficiency, effectiveness, and responsiveness in the provision of government services by the City and County of Honolulu.			
1. Maintain and adequately fund City government services at the level necessary to be effective.			X
2. Promote alignment and consolidation of State and City functions whenever more efficient and effective delivery of government programs and services may be achieved			X
3. Ensure that government attitudes, actions, and services are sensitive to community needs and concerns, and held accountable to the public trust			X

4. Sufficiently fund and staff the timely preparation, maintenance, and update of public policies and plans to guide and coordinate City programs and regulatory responsibilities.			X
5. Expand the adoption of technology across all City agencies to achieve greater transparency, efficiency, and accountability to the general public throughout government operations.			X
Discussion: The Proposed Project will not impact Objective A of Section XI of the City and County of Honolulu General Plan related to government operations and fiscal management.			
Objective B. To ensure fiscal integrity, responsibility, and efficiency by the City and County government in carrying out its responsibilities.			
1. Provide for a balanced budget.			X
2. Allocate fiscal resources of the City and County to efficiently implement the policies of the General Plan and Development Plans.			X
3. Ensure accountability and transparency in government operations.			X
Discussion: The Proposed Project will not impact Objective B of Section XI of the City and County of Honolulu General Plan related to government operations and fiscal management.			
Objective C. To achieve equitable outcomes for City programs, policies, and allocation of resources throughout the O'ahu community.			
1. Promote policies that actively address and eliminate disparate outcomes for historically underserved communities.			X
2. Seek equitable distribution of City investments towards promoting employment opportunities, infrastructure, and other community benefits appropriate to the community needs and proportionate to the population size.			X
3. Promote adherence to processes that advance procedural, distributional, structural, intergenerational, and cultural equity within the City.			X
4. Provide resources for City employees to understand and actively advance equity solutions within all agencies of City government.			X
Discussion: The Proposed Project will not impact Objective B of Section XI of the City and County of Honolulu General Plan related to government operations and fiscal management.			

4.2.2 Primary Urban Center Development Plan

The Proposed Project is located within the Primacy Urban Center (PUC) Development Plan (DP) area, which extends from Downtown Honolulu to Pearl City in the west to Wai'alaie-Kahala in the east. The PUC is home to almost half of O'ahu's population and three quarters of all jobs. The PUCDP (2004) provides a vision for the PUC in the areas of land use, transportation, infrastructure, and public facilities. It also provides policies and guidelines for achieving that vision. The Proposed Project is consistent with the guidelines, policies, and principles contained in the PUCDP as outlined in Table 4-7.

Table 4-7: Primary Urban Center Development Plan	S	NS	N/A
3. Land Use and Transportation			
3.1 Protecting and Enhancing Natural, Cultural, and Scenic Resources			
3.1.2 Policies			
1. Preserve historic and cultural sites. Preserve and protect sites that have high preservation value because of their good condition or unique features. Protection includes planning and design of adjacent uses to avoid conflicts or abrupt contrasts that detract from or destroy the physical integrity and historic or cultural value of the site. Retain, whenever possible, significant vistas associated	X		

Table 4-7: Primary Urban Center Development Plan			
	S	NS	N/A
with historic, natural and man-made features. Allow adaptive reuse of historic buildings to serve a new function and/or enhance interpretive value without destroying the historic value of a site.			
2. Preserve and protect natural resources and constraint areas. Establish an Urban Community Boundary to define the area for urban development. Place large contiguous areas of natural resource and constraint areas designated for Preservation, including all lands within the State Conservation District, outside of the Urban Community Boundary.			X
3. Preserve panoramic views of natural landmarks and the urban skyline. Preserve views of the Koolau and Waianae Mountain Ranges, Punchbowl, Diamond Head, Pearl Harbor and other natural landmarks. Maintain important view corridors within and across urban Honolulu and keep Downtown as the most prominent feature of the urban skyline. Views along the Pearl Harbor shoreline and the Pearl Harbor Historic Trail toward the mountains, shoreline, significant landmarks, and adjacent communities should be created and maximized wherever possible and appropriate.	X		
4. Improve access to shoreline and mountain areas. Provide continuous lateral access along the Honolulu waterfront and around the East Loch of Pearl Harbor, where urban activity is most intense. Maintain access to mountain hiking trails and increase opportunities for nature education and camping.			X
5. Provide parks and active recreation areas. Develop and maintain parks and other outdoor public spaces in a manner that expands opportunities for both active and passive recreation. Increase and enhance recreational open space in the most densely settled parts of the PUC.			X
<p>Discussion: The Proposed Project will support natural, cultural, and scenic resources related to Section 3.1.2 of the PUCDP.</p> <p>As discussed in Section 3.11 (Visual Resources) the Proposed Project is not expected to have an impact on the objectives and policies for the physical environment – scenic, natural beauty, and visual resources. The visual characteristics of the Proposed Project align with the urban setting of Honolulu and its surrounding area which includes high-rise and mid-size structures that accommodate scenic resources such as the Ko’olau Mountain Range and Honolulu Harbor.</p> <p>Moreover, the Proposed Project is expected to embrace and celebrate creativity and arts, with a central emphasis on a comprehensive commitment to thoughtful and adaptive reuse. The renovated Honolulu Power Plant is anticipated to be designed in a manner that preserves its outer shell and historic architectural features. In essence, the Proposed Project will be designed in a way that respects the physical integrity, scenic views, and historic / cultural value of the Project Site and its surrounding vicinity</p>			
3.2 Neighborhood Planning and Improvement			
3.2.2 Policies			
3.2.2.1 Neighborhood Planning			
1. Develop a system for collaborative neighborhood planning. Planning for neighborhood improvement must be undertaken at the neighborhood level. Neighborhood planning is a collaborative enterprise involving residents, business and property owners, government agencies, and others who have a stake in the neighborhood.			X
2. Cultivate existing and new “neighborhood centers.” Neighborhoods need central places where people gather for shopping, entertainment, and/or recreation. The center of a neighborhood could be a public plaza or a recreation complex, or a commercial town center, with a grocery store and other shops and services. It could have a public park or a plaza linked to shops. Cultivating neighborhood centers entails investment in parks and pedestrian street improvements.			X

Table 4-7: Primary Urban Center Development Plan	S	NS	N/A
3. Promote mixed land uses. Office, retail, and community service uses can coexist with residential uses; and there are a number of opportunities for them to support each other. In traditional single-family neighborhoods, groupings of small stores provide convenient service and a place to meet neighbors. In the PUC's in-town neighborhoods, both residential and office development support retail and other services. Neighborhoods with a strong mix of uses have activity 24 hours a day. Residences providing "eyes on the street" contribute to neighborhood safety.			X
4. Create parks that draw people and activity. The PUC should have a range of parks. While all provide open space and relief from buildings and traffic, some should provide organized sports and fitness activities, and others should function more as neighborhood gathering places. In the PUC, development of one or two large sports complexes with substantial parking could provide for league play of all kinds, while smaller parks could be used in inventive ways to meet the needs of their surrounding neighborhoods. Like other cities throughout the world, plazas and open spaces that attract people and activity are integrated with churches, shops, and other buildings.			X
5. Make streets "pedestrian-friendly." There are many opportunities to create street environments that invite pedestrian use, such as widening sidewalks, planting trees to provide shade and buffer pedestrians from vehicular traffic and narrowing intersections to provide shorter and safer pedestrian crossings. The Land Use Maps (Maps A.4, A.5 and A.6) show primary pedestrian routes. These streets and others identified through neighborhood planning should be given high priority for pedestrian improvement.			X
6. Make major streets which connect communities convey neighborhood identity. The identifying characteristics that give neighborhoods their unique visual signatures or identities should be emphasized and conveyed by the streets that connect them to other places. To help accomplish this, landscape and other streetscape design for major streets which serve as principal routes connecting two or more neighborhoods should reflect the unique identities of each neighborhood and, where possible, should provide open spaces between them which create significant public views or access to mauka or shoreline resources.			X
3.2.2.2 Mauka Residential Neighborhoods			
1. Density. Lower-density residential areas may have single-family residences and townhouse apartments at a density of five to 12 dwelling units per acre, with predominantly two-story building heights. Areas zoned for apartment use may have higher densities.			X
2. Appropriate Building Design. For institutional and other nonresidential uses allowed within lower-density residential areas, provide guidelines for the location and design of buildings, service areas, and pedestrian and vehicular access. In general, street-facing building elements should be attractive, designed for human scale, and have clear points of entry. Service and utility elements should be located out of sight from the street and away from residences.			X
3.2.2.3 In-Town Residential Neighborhoods			
1. Density. Areas close to transit lines and the major east-west arterials should be zoned for medium-density residential, which may range from 13 to 90 units per acre, or high-density residential mixed use, which may range up to 140 units per acre. Neighborhoods in these zones would also include reinforcing uses which support resident lifestyle and livelihood choices, such as convenience or neighborhood stores, dining establishments, professional and/or business services, or other similar activities.			X

Table 4-7: Primary Urban Center Development Plan	S	NS	N/A
<p>2. Building Heights. Establish maximum desired building heights in apartment-zoned districts on the basis of view plane studies to preserve views of natural landmarks as indicated in Section 3.1. Otherwise, the maximum building height for districts zoned low-density apartment should be approximately four stories or 40 feet. For areas zoned medium-density apartment, the maximum desired building height should be either 60 feet or the present height of the building occupying the lot. It is expected that with these criteria, building heights for most in-town residential neighborhoods, including Moiliili, McCully, and other established neighborhoods between Ala Moana and the University of Hawai'i would not exceed currently allowed heights. Given market conditions, development feasibility, and future incentives and standards encouraging the enhancement and development of livable neighborhoods, such districts may experience lower than currently sanctioned building heights.</p>			X
<p>3. Building Design and the Streetscape Environment. Neighborhood plans should distinguish between principal or "front door" streets that give a neighborhood the opportunity to "put on its best face," and secondary or local streets where a variety of activities are appropriate or where service is the main function. Utilitarian elements such as service yards, parking lots, or utilities should be located on nonprincipled streets in ways that support efficient patterns of circulation.</p>			X
3.2.2.4 Shopping and Retail Business Districts			
<p>1. Community/Neighborhood Commercial. These commercial areas should be located within and should primarily serve lower-density residential neighborhoods. Generally, 10 acres or less in land area, these districts or clusters of establishments typically have service stations, grocery and sundry stores, and other small businesses serving residential customers. Buildings are generally one or two stories in height. While they vary greatly in total size and number of business establishments, a Community/Neighborhood Commercial area typically has no more than 200,000 square feet of commercial floor area.</p>			X
<p>2. District Commercial. District Commercial includes a wide variety of commercial uses located in the core areas of the Primary Urban Center. These districts typically have larger facilities and serve larger populations than community/neighborhood commercial districts. They may include major office buildings, shopping centers, and older commercial streets that serve a district-wide, regional or island wide population. Mixed uses, including medium to higher density residential uses where appropriate, and higher densities are encouraged in these areas. Downtown should have the tallest buildings on O'ahu. In other areas, maximum building heights should be established on the basis of view plane studies to preserve views of natural landmarks.</p>			X
<p>3. Commercial streets. Enliven commercial streets by providing wide sidewalks and trees for shade and encouraging property owners to build to the sidewalk edge. Vital urban neighborhoods rely on high pedestrian activity. Storefronts create interest and stimulate pedestrian activity along the street, especially when they are built to the property line and meet the public sidewalk.</p>			X
<p>4. District-wide parking. Support older commercial districts and the continued use and rehabilitation of small commercial lots by providing conveniently located municipal parking. In the past, the City organized parking improvement districts and built centralized parking in Downtown and Kaimuki.</p>			X
<p>5. Integration of shopping centers with adjacent neighborhoods. Ensure that all shopping areas integrate well with adjacent residential neighborhoods. Require safe, pleasant, pedestrian connections between shopping establishments and their host neighborhoods. Encourage the planning and development of centers or clusters of shopping establishments to have their shops rather than parking lots face and be adjacent to abutting neighborhoods. Wherever possible and</p>			X

Table 4-7: Primary Urban Center Development Plan	S	NS	N/A
appropriate, encourage compatible or seamless design and landscape treatment of public routes and thoroughfares between residential and shopping areas. To the greatest extent possible, avoid placing service uses adjacent to resident areas and major frontages. Efforts should be made to appropriately locate and distinguish between front door and service zones.			
Discussion: The objectives and policies outlined above related to Section 3.2.2 of the PUCDP is not directly applicable to the Proposed Project.			
3.3 In-Town Housing Choices			
3.3.2 Policies			
1. Promote people-scaled apartment and townhouse dwellings in low- or mid-rise buildings oriented to the street. Promote buildings that are modest in height and have a pedestrian entrance facing the street. Encourage the use of ground-floor space for shops that will serve residents and contribute to a pedestrian-oriented neighborhood. This policy entails revising zoning regulations.			X
2. Improve the feasibility of redeveloping small lots. Remove disincentives for townhouse and low-rise apartment development on smaller lots zoned for multifamily dwellings. This policy entails revising zoning regulations.			X
3. Reduce costs for apartment homes. Reduce construction costs and promote low-rise buildings by allowing less expensive building construction types while maintaining health and safety. Reduce land costs by allowing greater dwelling unit density while limiting building volume consistent with promoting livable neighborhoods. This policy entails revising building and zoning regulations.			X
4. Provide adequate parks and schools for in-town neighborhoods. Community parks and recreation facilities should be provided in and near residential neighborhoods. To attract young families, access to elementary schools must be assured.			X
5. Expand the capacity of infrastructure, including water supply, sewers, and storm drains. Government needs to lead both planning and investment in renewing and expanding infrastructure. To remedy district- or neighborhood-scale infrastructure constraints is beyond the capability of individual landowners. Likewise, paying for relief lines and larger-scale projects that will benefit multiple landowners requires government leadership in providing long-term financing and apportioning costs.			X
6. Support the retention, rehabilitation, and improvement of older, low-rent apartment buildings. Many older, walk-up apartment buildings constructed prior to the 1969 Comprehensive Zoning Code do not conform to current zoning or building standards but collectively comprise a valuable reservoir of low-cost rental housing. The City should relax zoning requirements to encourage the rehabilitation and improvement of these buildings.			X
7. Preserve the current inventory of affordable rental housing units. The City should assure that the current inventory of affordable rental units, whether owned by the city or not, is preserved and retained as affordable rentals.			X
8. Provide for special needs housing. Allow housing for people with special needs, such as group homes for the disabled or congregate living and care homes for the elderly, subject to special development standards or permit review. Promote the dispersal of special needs housing among various neighborhoods and avoid overconcentrating facilities in just a few areas.			X
9. Provide incentives and cost savings for affordable housing. Provide exemptions from zoning and building codes for housing projects that meet established standards of affordability, on a case-by-case basis.			X

Table 4-7: Primary Urban Center Development Plan	S	NS	N/A
10. Provide for high-density housing options in mixed-use developments around transit stations. This type of “transit-oriented development” facilitates transit use and allows for increased densities without generating increased vehicular congestion.			X
Discussion: The objectives and policies outlined above related to Section 3.3.2 of the PUCDP is not directly applicable to the Proposed Project.			
3.4 The Pacific’s Leading City			
3.4.2 Policies			
3.4.2.1 Honolulu and Pearl Harbor Waterfronts			
1. Create public open space along the Pearl Harbor waterfront and strengthen the physical and visual connections between the urban center and the water			X
2. Improve mauka-makai pedestrian and bicycle circulation across Kamehameha Highway. Developing physical access to the Pearl Harbor waterfront demands substantial improvements to pedestrian and bicycle access across Kamehameha Highway.			X
3. Redevelop the Downtown/Iwilei waterfront. Reroute through traffic to a new Sand Island parkway and harbor tunnel thoroughfare and replace the makai portion of Nimitz Highway with a new shoreline pedestrian promenade and mixed-use commercial/recreational/residential complexes. Adopt appropriate measures to enhance the attractiveness of the Nimitz corridor and public and private responsibilities to implement and maintain such improvements. By creating a new parkway across Sand Island and a tunnel beneath the Harbor entrance, Airport-to-Waikiki traffic (and all other through traffic not destined for the Iwilei/Downtown area) will bypass this unsightly industrial section and significantly reduce the traffic demand on Nimitz Highway through town. This will enable the Ewa-bound mauka section of the highway to be converted to a two-way local access street. It will also allow the Waikiki-bound makai section to be converted to a major shoreline promenade and waterfront activity area, providing space for restaurants, shops, indoor and outdoor entertainment, and recreation areas. This area would also hold potential for development of low- to mid-rise housing.			X
3.4.2.2 Visitor Facilities			
1. Adopt and implement a plan for a vibrant and livable Waikiki. This plan needs to address the quality of the resident experience as well as the quality of the visitor experience. Based on development parameters set by the Waikiki Special District, the plan should encompass mobility, the quality of the street environment for pedestrians, public spaces, the scale and design of new buildings, and Waikiki’s relationship to the Convention Center and neighboring districts.			X
2. Support attractions that are of interest to both residents and visitors in the Ala Moana/Kakaako/Downtown corridor. Opportunities include State sponsored waterfront commercial and cultural attractions around the Kewalo Basin area; retail/entertainment facilities around Ala Moana Center, Victoria Ward Centers, and Kamehameha Schools properties; and improvements to serve visitors in the Capitol District, Aloha Tower, and Chinatown.			X
3. Provide opportunities for the development of visitor units in the Ala Moana/Kakaako/Downtown corridor. Hotels serving the Convention Center should be within a 5-minute walk (one-quarter mile) and located on commercially zoned parcels along major thoroughfares. Those in the Downtown area should be in the area zoned BMX-4 or the Aloha Tower complex.			X
4. Provide a transit link along the Ala Moana/Kakaako/Downtown corridor. The City should ensure that there is convenient transit service between visitor			X

Table 4-7: Primary Urban Center Development Plan		S	NS	N/A
accommodations and the visitor attractions along the corridor. Visitor oriented transit should utilize at-grade trolley types of vehicles and could be publicly or privately operated.				
5.	Provide opportunities for the development of smaller-scale visitor accommodation (i.e., inns and lodges) in existing commercial centers. These could serve residents and business needs (visiting family, friends, and business associates) as well as visitors looking for an alternative to the resort enclave. Potential areas include Kapahulu, Kaimuki, the King/Beretania corridor, Kapālama, Pearlridge, and Pearl City. Development of such facilities should consider the community's preferences and be integrated with the surrounding neighborhood.			X
6.	Allow Bed & Breakfast establishments (but not transient vacation units or TVU's) in residential neighborhoods. With adequate parking, community involvement, and other regulatory controls, B&Bs provide a highly integrated, well-supervised, low-impact form of visitor accommodation. For residents, operating a B&B is a viable home occupation and a means to retain and reuse homes in older neighborhoods.			X
3.4.2.3 Technology Business, Office Facilities				
1.	Stimulate development of high technology and knowledge-based industries. Take advantage of Honolulu's active urban ambience to attract high-technology businesses. Use State lands in Kakaako for a campus dedicated to biomedical research and other high-technology businesses. Encourage investment in infrastructure in commercial buildings to accommodate and attract high-technology and biotechnology businesses.			X
2.	Encourage street-front retail. Office buildings should have retail stores, entrances, and windows fronting the principal street.			X
3.	Provide usable open space. Zoning requirements and bonus provisions for open space associated with larger office buildings should specify design guidelines for usable plazas, parks, and arcades. Key elements of usable open space are enclosure, shade, seating, and location at street level.			X
3.4.2.4 Military, Airport, Harbor, and Industrial				
1.	Support continuation of military uses. National defense objectives and budget priorities determine the military bases and functions located in the Primary Urban Center and the state as a whole. The City should support long-range land use planning by the military services and coordinate with them to achieve common goals of employment, housing, and recreation.			X
2.	Integrate civilian and military residential communities. The City should work with the military services to link adjacent residential communities through the use of connecting roadways, bikeways, walkways, landscape features, and/or architectural scale and character.			X
3.	Allow a mix of industrial and commercial uses. Allow a broader mix of commercial uses in the Airport and Bougainville industrial districts. The Airport district should include office, hotel, and retail uses that are compatible with airport operations, as well as existing light industrial uses. The Bougainville district should include uses that support surrounding residential neighborhoods.			X
4.	Enhance Honolulu Harbor and harbor-related uses. Reserve areas around Honolulu Harbor, particularly around Kapālama Basin and the Sand Island container yards, for harbor-related uses.			X
5.	Support industrial uses in Kalihi-Palama industrial districts. Commercial uses along the Nimitz, Dillingham, King, Kalihi, and Waiakamilo corridors should be recognized and encouraged. In industrial districts where residential uses have			X

Table 4-7: Primary Urban Center Development Plan		S	NS	N/A
endured for many years - i.e., Kalihi Kai and Kapālama - such uses should be all continue and should be rehabilitated and improved.				
6.	Promote compatibility with the surrounding urban and natural environment. Where industrial uses are mixed with or adjacent to residential communities or natural areas, mitigate visual, noise, and other environmental impacts by adopting performance standards.			X
7.	Support development of adequate warehousing facilities to support increased economic activity. Encourage development and maintenance of warehouse space of sufficient quality to prevent shortages and support growing businesses.			X
3.4.2.5 Aiea-Pearl City Town Centers				
8.	Define the role of town centers. Establish the "Pearlridge" area as the Pearl Harbor Regional Town Center and strengthen the physical and visual connection between this urban activity center and the Pearl Harbor waterfront. Other town centers at Pearl City, Waimalu, Aiea, and Halawa should serve as more localized or specialized activity and service areas.			X
9.	Promote mixed land use. Town centers should support some form of mixed land use to respond more flexibly to market needs and to reduce dependency on the private automobile for local travel. The Pearl Harbor Regional Town Center should be designated for a greater diversity of uses than the other town centers, emphasizing an integration of medium- or higher-density residential and commercial development. Land use designations and design standards should be oriented toward assuring compatibility of building forms and uses, creating street connections, and providing a smooth transition between town centers and adjacent residential neighborhoods.			X
10.	Facilitate pedestrian, transit, and bicycle improvements. There should be major improvements to transportation facilities and services, with particular emphasis on pedestrian, bicycle, and public transit modes along Kamehameha Highway, and commuter travel on the H-1 Freeway and in the Aloha Stadium vicinity (see Figure 3.17: Pedestrian Network Concept for Pearl Harbor). Design standards for new development in the town centers - especially the Pearl Harbor Regional Town Center - should encourage pedestrian and transit travel.			X
Discussion: The objectives and policies outlined above related to Section 3.4.2 of the PUCDP is not directly applicable to the Proposed Project.				
3.5 Develop a Balanced Transportation System				
3.5.2 Policies				
1.	Implement land use strategies to achieve a balanced transportation system. To improve the quality of life in the Primary Urban Center and to accommodate growth, development initiatives and regulatory controls should promote the growth of sustainable and appropriate alternative urban travel modes such as transit, walking, and bicycling.			X
2.	Improve the public transit system, including development of a rapid transit component. Improvements to the transit system should be targeted to accommodating trans-PUC travel and making neighborhood service more convenient. A rapid transit component is needed to serve the high-volume east-west corridor, connect activity centers, and provide transportation capacity in place of increased roadways.			X
3.	Implement Transportation Demand Management strategies. Due to limited land area and high costs, it is increasingly necessary to shift from increasing roadway and parking capacity to policies and practices that reward use of transit and other alternative modes.			X

Table 4-7: Primary Urban Center Development Plan	S	NS	N/A
4. Review existing plans and establish priorities for roads and road improvements. Conduct a comprehensive review of roads and designate those which should receive priority treatment for transit, bike routes, and pedestrian routes, as well as the principal arterial and collector network for automobile travel.			X
5. Implement the Honolulu Bicycle Master Plan. Institutionalize the policy that every street and highway on which bicycles are permitted to operate is a "bicycle street," designated and maintained to accommodate shared use by bicycles and motor vehicles.			X
6. Enhance and improve pedestrian mobility. Create special pedestrian districts and corridors and a regional network of pedestrian facilities. Comprehensively address pedestrian safety concerns related to vehicle speeding and excessive volumes on local streets and neighborhood collector streets.			X
7. Encourage the full use of existing private and public parking garages. Encourage private parking garage owners to rent underused parking stalls within commercial buildings and large-scale residential projects.			X
Discussion: The objectives and policies outlined above related to Section 3.5.2 of the PUCDP is not directly applicable to the Proposed Project.			
4. Infrastructure and Public Facilities			
4.1 Water Allocation and System Development			
4.1.2 Policies			
1. Integrate resource management of all potable and non-potable water sources, including groundwater, stream water, storm water, and wastewater effluent.			X
2. Adapt water conservation practices in the design of new developments and modification of existing uses, including landscaped areas.			X
3. Implement upgrades and capacity improvements to serve projected population increases.			X
4. Protect and maintain watersheds to ensure an adequate supply of high-quality water with sufficient infiltration recharge into groundwater aquifers.			X
Discussion: The objectives and policies outlined above related to Section 4.1.2 of the PUCDP is not directly applicable to the Proposed Project.			
4.2 Wastewater System			
4.2.2 Policies			
1. Implement wastewater collection system improvements to provide adequate service and sound facilities to existing neighborhoods and timely increases in system capacity to areas planned to undergo improvement or change in use.			X
2. Implement adequate and timely upgrades/expansion of wastewater treatment facilities to meet the growth demands of the PUC.			X
Discussion: The objectives and policies outlined above related to Section 4.2.2 of the PUCDP is not directly applicable to the Proposed Project.			
4.3 Electrical Power			
4.3.2 Policies			
1. Support retention and upgrade of the Waiau and Honolulu Power Plants as part of a strategic plan to improve the reliability of the Primary Urban Center's electrical power system.			X
2. Promote and implement energy conservation measures and integrated resource planning.			X

Table 4-7: Primary Urban Center Development Plan	S	NS	N/A
3. Planning and building of new or relocated transmission lines should take into consideration the system and cost concerns, and the impacts on the environment. Options to place utility lines underground should be considered, and priorities should be established.			X
Discussion: The objectives and policies outlined above related to Section 4.3.2 of the PUCDP is not directly applicable to the Proposed Project.			
4.4 Telecommunications Facilities			
4.4.2 Policies			
1. Minimize the visual impacts and potential health hazard of new facilities.			X
Discussion: The objectives and policies outlined above related to Section 4.4.2 of the PUCDP is not directly applicable to the Proposed Project.			
4.5 Solid Waste			
4.5.2 Policies			
1. Reduce the solid waste stream by encouraging recycling and reuse.			X
2. Reduce dependence on landfills by encouraging alternative waste disposal technologies.			X
Discussion: The objectives and policies outlined above related to Section 4.5.2 of the PUCDP is not directly applicable to the Proposed Project.			
4.6 Stormwater Systems			
4.6.2 Policies			
1. Require methods of retaining or detaining stormwater for gradual release into the ground as the preferred strategy for the management of stormwater. Where feasible, utilize open spaces including parking lots, landscaped areas, parks, and golf courses to detain or infiltrate stormwater flows to reduce their volume and runoff rates. (City Council Resolution No. 94-296).			X
2. Manage stormwater flows through best management practices to minimize stormwater runoff and peak discharge rates.			X
3. Preserve stream and estuarine habitats.			X
Discussion: The objectives and policies outlined above related to Section 4.6.2 of the PUCDP is not directly applicable to the Proposed Project.			
4.7 School and Library Facilities			
4.7.2 Policies			
1. Support the development of a high-quality educational system of schools and post-secondary institutions that increase the attractiveness of the Primary Urban Center as a place to live and work.			X
2. Work with the Department of Education to develop innovative shared-use facilities, particularly on City-owned school properties.			X
Discussion: The objectives and policies outlined above related to Section 4.7.2 of the PUCDP is not directly applicable to the Proposed Project.			
4.8 Civic and Public Safety Facilities			
4.8.2 Policies			
1. Provide adequate staffing and facilities to ensure effective and efficient delivery of basic governmental service and protection of public safety.			X
Discussion: The objectives and policies outlined above related to Section 4.8.2 of the PUCDP is not directly applicable to the Proposed Project.			

4.2.3 Hawai'i Capitol Special District

The Hawai'i Capitol Special District (HCSD) was established in 1972 and serves as the civic hub for the State government and the CCH. It features expansive open spaces and numerous State and CCH buildings. The HCSD is also home to several buildings listed on the State and National registers of historic places. Given their proximity, these facilities and adjacent areas significantly contribute to the urban design of Honolulu. The primary purpose of the HCSD is to protect and enhance the preservation of buildings and landmarks within the district, representing elements of the State's civic, aesthetic, cultural, social, economic, political, and architectural heritage. Additionally, it aims to promote new developments that align with and complement these structures and sites while preserving and enhancing the park-like setting of the HCSD, including its view from the Punchbowl Lookout. The HCSD is composed of the following precincts:

- 1) Alapai Precinct;
- 2) Municipal Service Building Precinct;
- 3) Queen's Medical Center Precinct;
- 4) Tower Precinct;
- 5) Old Vineyard Precinct;
- 6) Historic Precinct;
- 7) Judiciary Precinct;
- 8) Alakea/ Hotel Street Precinct;
- 9) Alakea Commercial Precinct;
- 10) Queen Street Precinct;
- 11) Mililani Commercial Precinct;
- 12) South Street Precinct; and
- 13) Waterfront Precinct.

Under ROH, Chapter 21, Land Use Ordinance, all developments within special districts are required to obtain a Special District Permit. A portion of the Proposed Project (Pier 7) is situated within the HCSD- Waterfront Precinct (See Figure 4-3). The Proposed Project's conformance with the policies of the HCSD is set forth in Table 4-8 below.

Table 4-8: Hawai'i Capitol Special District		S	NS	N/A
§21-9.30-2 Prominent Views and Historic Places				
a)	Preserve the following streets and locations that identify important pedestrian and vehicular corridors by which one experiences the HCSD, as well as views of the mountains and waterfront. The design of all Proposed Project's within the district shall be guided by the required yards in the judiciary precinct, Alakea/Hotel street precinct, and the Alakea commercial precinct: <ol style="list-style-type: none"> (1) Beretania Street between Alapai Street and Alakea Street; (2) The Hotel Street Mall between Alapai Street and Richards Street; (3) Hotel Street between Richards Street and Alakea Street; (4) King Street between South Street and Alakea Street; (5) Kapiolani Boulevard at the intersection of South Street and King Street; (6) Ala Moana Boulevard between Punchbowl Street and the district boundary; (7) Mililani Street and Mall between Halekauwila Street and King Street; (8) Punchbowl Street between Beretania Street and Ala Moana Boulevard; 			X

<ul style="list-style-type: none"> (9) South Street between King and Pohukaina Streets; (10) Richards Street between Halekauwila and Beretania Streets; (11) Alapai Street between King and Beretania Streets; and (12) The fifth-floor lanais of the State Capitol Building, emphasizing a mauka-makai orientation. 			
<p>b) Preserve the following list of sites, structures, and objects which are on the State and National Registers of Historic Sites:</p> <ul style="list-style-type: none"> (1) Kawaiahao Church and grounds; (2) Adobe School House; (3) Lunalilo Mausoleum; (4) Kekuanaoa Building; (5) Kapuaiwa Building; (6) Hale Auhau; (7) Kamehameha I Statue; (8) Ali'iolani Hale; (9) U.S Post Office; (10) Hawaiian Electric Building; (11) Honolulu Hale and grounds; (12) Mission Memorial Building Annex; (13) Honolulu Hale Annex (Mission Memorial Building and Auditorium); (14) Iolani Palace and grounds; (15) Iolani Barracks; (16) Royal Burial Ground and Fence; (17) Coronation Bandstand; (18) Captain Cook Memorial Tablet; (19) YWCA and grounds; (20) Banyan tree on the 'Iolani Palace grounds; (21) Old Archives Building (Attorney General's Building) (22) Hawai'i State Library (23) State Capitol and grounds; (24) Armed Services YMCA and grounds (No. 1 Capitol District) (25) St. Andrew's Cathedral, including ST. Andrew's Close, Davies and Tenney Halls, and Parke Memorial Chapel adjacent to the cathedral; (26) Washington Place and grounds; (27) Mission Houses; (28) Aloha Tower; (29) Royal Brewery; (30) Podmore Building; and (31) Old Kakaako Fire Station 	<p>X</p>		
<p>c) Preserve the following buildings contributing to the character of the district:</p> <ul style="list-style-type: none"> (1) St. Andrew's Priory; (2) St. Peter's Church (3) Ali'iolani Hale Annex; (4) Mabel Smythe Building; (5) Harkness Nurses Home; (6) Board of Water Supply Buildings; (7) Arcade Building; and (8) 1919 Hawaiian Electric Company Building 			<p>X</p>
<p>Discussion: The Proposed Project will support the objectives and policies outlined above related to Prominent Views and Historic Places of the HCSD.</p> <p>As described in Sections 3.6 (Historic and Archaeological Resources) and 3.6.1 (Cultural Resources), there are no known or identified cultural, historic, architectural, and archaeological resources at the Project Site, which has been heavily disturbed.</p>			

It is unlikely that the Proposed Project would adversely impact resources currently located on the property or in adjacent areas. Should any unidentified resources be encountered during construction, all work will cease, and the State Historic Preservation Office will be contacted for review and approval of mitigation measures.

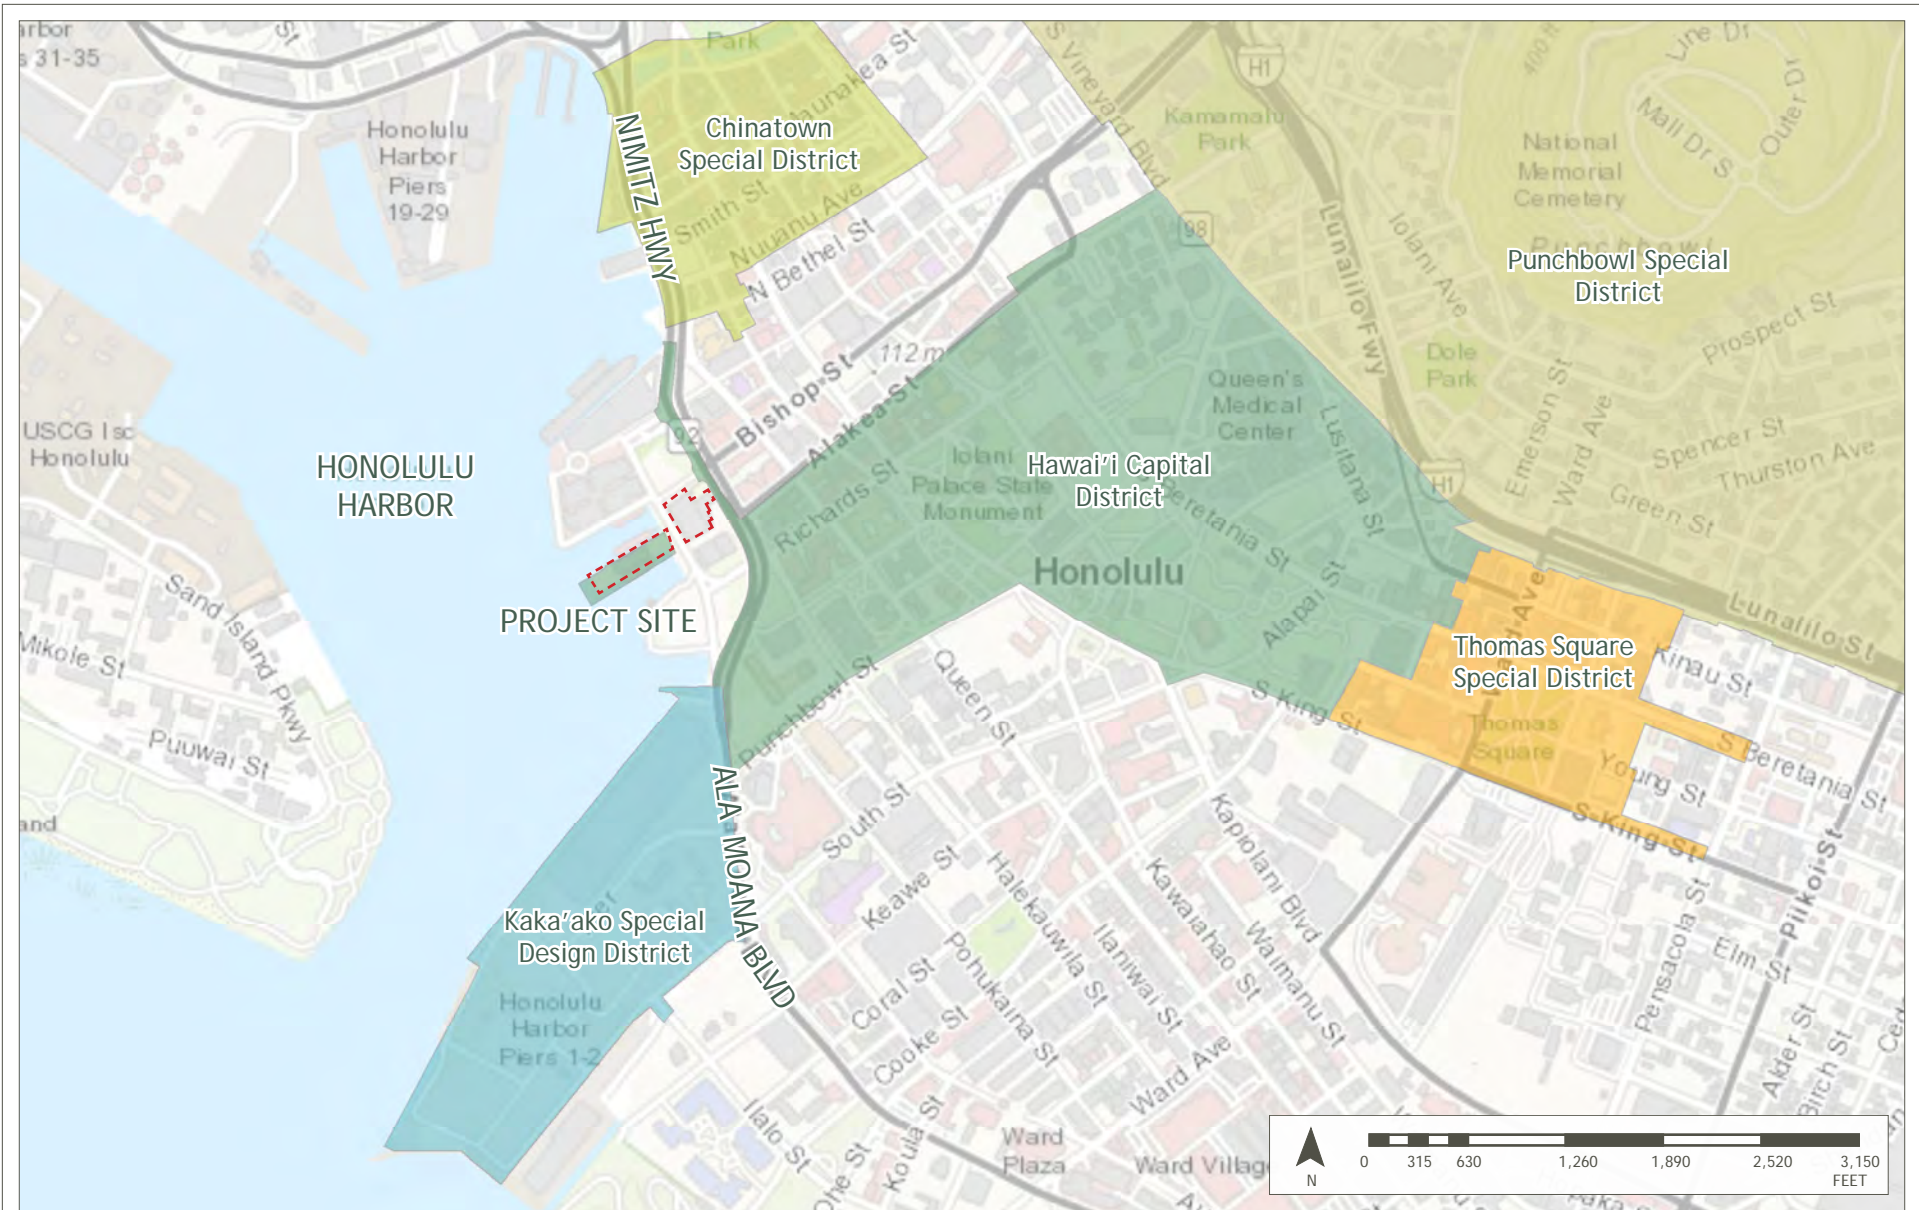

§21-9.30-4 Design Controls

Landscaping: Open space and yard requirements for each precinct shall be landscaped in accordance with the landscape guidelines and regulations of the HCSD.

a)	Encourage all required yards to be landscaped and maintained with a minimum of 75% of the area devoted exclusively to plant material rooted directly in the ground or permanently fixed plant containers.			X
b)	Encourage the planting of vertical form trees and maintain the front yard perimeter of parking structures to reduce the visual impact of blank walls and parked vehicles. A tree shall be planted for every 20 feet of linear building length. Acceptable tree species include coconut palms, paperbark, and eucalyptus. If there is sufficient space, canopy form trees may be substituted. Alternatively, planter boxes with vines may be provided on the facades of every parking level.	X		
c)	Encourage rooftop parking and mechanical equipment to be substantially screened or painted, or both, to soften their appearance from the Capitol building and the Punchbowl lookouts.			X
d)	Encourage all required trees to be provided in conformance with subdivision (8), and shall be a minimum 2-inch caliper, except palms which shall have a minimum trunk height of 15 feet. All tree planting shall be in conformance with the requirements and standards, except that alternative species, especially native Hawaiian or species long present and common to the Hawaiian Islands, including flowering varieties, shall be encouraged and may be substituted in all instances upon approval by the director. Other exceptions to accommodate special conditions may be approved by the director.	X		
e)	Encourage landscaping for the Iolani Palace grounds to be in conformance with the master plan as approved by the department, the National Council on Historic Preservation and the State department of land and natural resources.			X
f)	Encourage landscaping for the Queen’s Medical Center to include retention of its existing large front lawn along Punchbowl Street, except for the Queen Emma Tower expansion and the Hawai’i Medical Library parking garage authorized by Res. 04-244, CD1, FD1; necessary driveways providing vehicular access through the campus; and pedestrian accessways. Main entrances that exit to ground level shall include a view of landscaping, including trees wherever possible.			X
g)	Encourage street trees to be provided along major streets as delineated below: 1) Beretania Street, except fronting the State Capitol: (Monkeypod; maximum spacing 60 feet on center; and location within the required front yard) 2) King Street, except fronting the Iolani Palace grounds and Aliiolani Hale: (Rainbow Shower, or Monkeypod; maximum spacing 50 feet on center; and location within first 5 feet of required front yard) 3) Richards Street, except fronting Iolani Palace grounds: (Royal Poinciana; maximum spacing 60 feet on center; and location within first 5 feet of required front yard) 4) Punchbowl Street: (Monkeypod; maximum spacing, 60 feet on center and; location within required front yard) 5) Alapai Street: (Monkeypod; maximum spacing 60 feet on center; and location within required front yard)	X		

<p>6) Ala Moana/ Nimitz Highway: (Coconut Palm; maximum spacing three palm trees shall be provided per 50 feet of street frontage; and location within first 5 feet of required front yard)</p> <p>7) South Street: (Autograph; maximum spacing 40 feet on center; and location within required front yard)</p> <p>8) Alakea Street and Queen Emma Street; (False Olive; maximum spacing 20 feet on center; and location within the sidewalk area)</p> <p>9) Vineyard Boulevard; (Monkeypod; maximum spacing 60 feet on center; and location within the required front yard.</p>			
<p>Discussion: The Proposed Project will support the objectives and policies outlined above related to Design Controls- Landscaping of the HCSD.</p> <p>The design team will need to consider how the Proposed Project can complement the surrounding area to comply with the policies and guidelines stated above and be consistent with the Honolulu Waterfront Master Plan and the ATDC development goals.</p>			
<p>Historic Precinct: The following design guidelines shall be used in the design and review of new construction and renovation in the Historic Precinct.</p>			
<p>a) Encourage roof treatment to reflect existing roofscape by using combinations of overhanging eaves and pitches greater than 1:3. Roofing materials should be green or reddish earth-toned tile or gray slate roofing surfaces, or roofing surfaces that closely resemble existing tile or slate roof in color, texture, and appearance.</p>			X
<p>b) Encourage architectural elements to be an open design of arcades, porches, entryways, internal pedestrian spaces, and courtyards. New developments should be influenced by the following architectural styles: modified Mediterranean, Spanish mission, Victorian, U.S. Greek revival, Italianate revival, and French second empire.</p>			X
<p>c) Encourage facade elements common to the precinct to include recessed window openings and strong horizontal lines expressed by combinations of fenestrations, openings, wall edges, and decorations. New development should incorporate and employ these elements to visually relate new buildings to adjacent facades of established historic value. Typical is the use of projections, columns, balconies, and recessed openings.</p>			X
<p>d) Avoid the use of shiny metal or reflective surfaces, including paints and smooth or plastic-like surfaces. Colors and surfaces that predominate include warm white walls, earth tones, natural colors of stone, coral, and cast concrete. Concrete, stone, terra cotta, plaster, and wood should be principal finish materials; and If the use of metal surfaces is required, they should be used with black or dark earth-toned matte finishes. Copper and brass may be acceptable metal surfaces. Glass surfaces, where used, should be recessed and clear, or of light earth-toned tints.</p>			X
<p>e) Encourage the use of characteristic textures such as stucco, tile, concrete, cut coral, cut stone, cast iron, grass, and foliage. Development should employ surface qualities that are sympathetic to historic and original uses of material.</p>			X
<p>f) Encourage the use of terra cotta, plaster work, ironwork, ornament painting, and sculptural elements.</p>			X
<p>g) Respect historic design including detailing, which should be maintained on elements such as pavers, curbs, signs, planters, benches, trash cans, fountains, lighting, bus shelters, and flag and utility poles.</p>			X
<p>h) Preserving characteristic of places within the precinct is the treatment of building entry which provides comfortable transitions from outside to inside. These elements include arcades and porches recessed or projecting from the building mass.</p>			X

i)	Protect mauka views within the precinct by orienting new development on a mauka- makai axis.			X
j)	Avoid signs that are directly illuminated, have moving parts, luminous paints, or reflective materials. Any illumination should be from a detached source shielded from direct view. No box fluorescent signs shall be allowed.			X
k)	Encourage the following landscape treatment: (1) Large open spaces, lawns and canopy-type shade trees, fountains, and sculptures shall be compatible with the grounds of Iolani Palace and the Capitol building; (2) In small open areas, combinations of ground covers, shrub masses, flowering trees, and palms may be used either to introduce rich foliage patterns, for screening purposes, or to provide contrast to large, open lawn areas; and (3) Small-scale landscape features such as courtyards, resting places, entrances, and intimate gardens are encouraged and should be compatible with, and secondary to, the larger park-like landscape.			X
Discussion: The Project Site is situated within the Waterfront Precinct; therefore, the objectives and policies outlined above related to Design Controls- Historic of the HCSD will not be applicable to the Proposed Project.				
Other Precincts				
a)	Encourage all parcels to comply with the minimum open space expressed as a percentage of lot area			X
b)	Encourage all major developments, especially on those parcels and building facades visible and adjacent to the historic precinct, to be reviewed to ensure that new structures do not visually intrude into the historic precinct. Articulated building walls are encouraged. The use of recessed windows, lanais, projecting eyebrows, offsets in the wall planes and exterior colors may be used to achieve this articulation.			X
c)	Ensure that the following architectural features from the height regulations of the HCSD do not exceed the 12 feet limit. These building elements may be exempted only if the director finds they do not obstruct any significant views which are to be preserved, protected, and enhanced, and are consistent with the intent and objectives of the HCSD: (1) Necessary mechanical appurtenances of the building on which they are erected; provided that they are screened from view; (2) Necessary utilitarian features, including stairwell enclosures, ventilators, and skylights; (3) Decorative or recreational features, including rooftop gardens, planter boxes, flagpoles, parapet walls, or ornamental cornices; and (4) Except for flagpoles and smokestacks, all items listed in Section 21-4.60© shall be exempt from the height provisions/			X
Discussion: The objectives and policies outlined above related to Design Controls- Other Precincts of the HCSD will not be applicable to the Proposed Project.				

SPECIAL DISTRICT

Tradewinds Garden and Glass
Honolulu, O'ahu, Hawai'i

FIGURE
4-3

4.2.4 Aloha Tower Development Corporation

The Aloha Tower Development Corporation(ATDC) was established in 1981 to manage the redevelopment of State-owned properties situated along the Downtown Honolulu Waterfront. ATDC has the statutory mandate of redeveloping, renovating, and/ or improving the Aloha Tower Complex and its adjacent project area. Through its development objectives, ATDC, strives to create an area that acts as a catalyst for enhancing commercial activities in the downtown business district and help transform the waterfront urban core into a vibrant hub for the people Hawai'i.

The Proposed Project's conformance with the ATDC Development Objectives is set forth in Table 4-9 below.

Table 4-9: ATDC Development Objectives		S	NS	N/A
Purpose: The goal of the ATDC is to transform Aloha Tower and its surrounding project area into a thriving hub of commerce, culture, and recreation, while preserving its rich heritage and sense of place.				
a)	Provide accessible vehicular ingress and egress and create a parking strategy which minimizes both the cost and impacts of parking on the Aloha Tower complex.			X
b)	Ensure the object is capable of integration into any overall development plan which may be adopted for the Honolulu Waterfront.	X		
c)	Maintain passenger ship operations in a manner compatible with the development of the Downtown Waterfront as a people place in conformity to the maritime requirements of the DOT.			X
d)	Balance practical economic and market realities with a vision of what can be created.			X
e)	Provide ease of pedestrian access to the project and waterfront, and generous open spaces for public enjoyment by eliminating visual and physical barrier between the waterfront and Downtown, and by creating strong pedestrian links between Downtown and Aloha Tower, particularly along Fort and Bishop Streets.			X
f)	Improve view corridors down Fort, Bishop, and Alakea Streets			X
g)	Expand and improve Irwin Park while maintaining its vegetation.			X
h)	Create homogeneous project that avoid fragmentation.	X		
i)	Feature and enhance the physical, public use and visual characteristics of the historic Aloha Tower.			X
j)	Minimize unattractive physical facilities (e.g. parking, utilities, service and back of house operation).	X		
k)	Plan buildings and project features to attract people to the waterfront and create a major public gathering place at the Aloha Tower complex by enhancing public access to and along the water's edge and by creating opportunities for a variety of water's-edge experiences appropriate to the Downtown Waterfront.	X		
l)	Develop uses which would stimulate and be compatible with the commercial activities of the downtown business community, which may include, but not limited to, retail, restaurant, office, hotel, condominium, recreational, historical, and cultural uses; and create new activities to assist in bringing people to the waterfront.	X		

m)	Establish a constructing phasing strategy which would minimize disruption of maritime operations and achieve planned development of the Aloha Tower in the earliest practicable time.			X
n)	Create a financially feasible and aesthetically creative project which can be initiated at the earliest practicable time.	X		
o)	Encourage, to the extent possible, development of the Aloha Tower complex and adjoining area by a qualified private sector developer who will provide all or substantially all of the costs of development.	X		
p)	Utilize the powers of the development corporation to transcend, as necessary, zoning, density, and height limitations in an aesthetically pleasing manner to accomplish the goals of the development corporation and to encourage private sector developers to undertake development plan solutions which will satisfy the foregoing development objectives.	X		
Discussion: The Proposed Project will support the ATDC's objectives and policies outlined above.				
The Proposed Project aims to align with the development objectives of the ATDC by proposing a garden and art museum to merge art, education, and the scenic beauty of the waterfront. Simultaneously, it seeks to honor the historical significance of the Project Site, creating a space that commemorates the past while fostering creativity and innovation for the future. The design team will need to consider how the Proposed Project can complement the surrounding area to comply with the policies and guidelines stated above and be consistent with the Honolulu Waterfront Master Plan and the ATDC development goals.				

4.2.5 Honolulu Waterfront Master Plan

The Honolulu Waterfront Master Plan (HWMP) represents a long-range vision for the Honolulu Waterfront. It serves as a comprehensive, sustainable, and inclusive roadmap for development, aiming to maximize the economic, social, and environmental advantages of the waterfront area for current and future generations. Acknowledging the crucial role of the Honolulu Port in state-wide commerce, the HWMP also strives to address the recreational, cultural, and economic needs of Hawai'i's growing population.

The Proposed Project's consistency with the Overall Honolulu Waterfront objectives and goals, where applicable, is discussed in Table 4-10 below.

Table 4-10: Honolulu Waterfront Master Plan		S	NS	N/A
I. Objectives and goals related to Physical				
Land Use				
a)	Provide sufficient space and facilities (landside and waterside) to meet the functional requirements of O'ahu's harbor and maritime needs for the long-range economic welfare of the state			X
b)	Provide recreational resources (active or cultural) to meet the needs of Honolulu's growing residential population without jeopardizing the capability of meeting the State's maritime goals	X		
c)	Provide Space for water-related commercial and institutional facilities which meet the demands of the State's economy			X
Discussion: The Proposed Project will support the objectives and policies outlined above related to Physical-Land Use of the HWMP.				
The Proposed Project aims to revitalize the waterfront by introducing a contemporary garden and art attraction. This new attraction is anticipated to provide a variety of experiences at the water's edge, foster the promotion and expansion of creative arts in Hawai'i, and serve as an educational hub designed to enlighten the public about				

the art and science of glass art. Simultaneously, the Proposed Project seeks to commemorate the past by honoring the rich tapestry of Hawai'i's history.

Urban Design			
a)	Promote safe public access to the ocean and along the water's edge.		X
b)	Enhance views of and from the waterfront and protect significant view corridors		X
c)	Protect existing historical landmarks, historical features, and themes into waterfront redevelopment programs	X	
d)	Encourage the highest quality of design for all possibly visible facilities and features	X	
e)	Develop distinctly Hawaiian design in the waterfront redevelopment projects	X	
f)	Provide for one or more major landmark to give the Honolulu waterfront its own world-renowned identity		X

Discussion: The Proposed Project will support the objectives and policies outlined above related to Physical-Urban Design of the HWMP.

As described in Sections 3.6 (Historic and Archaeological Resources) and 3.6.1 (Cultural Resources), there are no known or identified cultural, historic, architectural, and archaeological resources at the Project Site, which has been heavily disturbed.

It is unlikely that the Proposed Project would adversely impact resources currently located on the property or in adjacent areas. Should any unidentified resources be encountered during construction, all work will cease, and the State Historic Preservation Office will be contacted for review and approval of mitigation measures.

Moreover, the design team will need to consider how the Proposed Project can complement the surrounding area to comply with the policies and guidelines stated above and be consistent with the Honolulu Waterfront Master Plan and the ATDC development goals.

Circulation			
a)	Promote availability and use of transportation (land and water-borne) to and within the waterfront area.		X
b)	Provide service access to all waterfront uses	X	
c)	Moderate the use of the Nimitz Highway corridor for through traffic and/ or seek other ways including grade separated facilities, to reduce this traffic barrier between the waterfront and areas immediately mauka of it		X
d)	Provide a system of pedestrian ways and bikeways linking all major activity nodes along the waterfront to those areas mauka of it		X

Discussion: The Proposed Project will support the objectives and policies outlined above related to Physical-Circulation of the HWMP.

Infrastructure			
a)	Provide adequate water, sewer, drainage, power, and communication systems to meet the needs of existing and future waterfront activities in a timely fashion	X	

Discussion: The Proposed Project will support the objectives and policies outlined above related to Physical-Infrastructure of the HWMP.

It is assumed that modern designs for the management of water resources would be incorporated to complement the Proposed Project.

The existing foundation of Pier 7 may require structural augmentation; however, work will be limited to the cross sectional footprint of the existing foundation pilings - this work would not constitute additional disturbance / in-water work. Coordination will be undertaken with the appropriate agencies during permitting and construction in order to ensure that the Proposed Project will not result in significant impacts with regard to surface and coastal

waters. Soil disturbances such as excavation and grading activities will be regulated by applicable provisions of the County's grading ordinance.			
Environment			
a)	Minimize the adverse impacts on existing ecosystems in the harbor and the nearshore waters	X	
b)	Protect surfing conditions along the coastline		X
c)	Maintain air quality, noise, vibration, and night lighting levels within acceptable health and nuisance standards	X	
Discussion: The Proposed Project will support the objectives and policies outlined above related to the Physical- Environment of the HWMP.			
The Proposed Project is anticipated to minimize adverse social, visual, and environmental impacts at the Project Site and its surrounding vicinity as discussed in Chapter 3 of the EA.			
Phasing			
a)	Ensure that sufficient maritime facilities are available for the State's long-range economic welfare before designating existing maritime lands for non-maritime uses		X
b)	Encourage redevelopment to take place in an orderly and incremental fashion starting with identified "priority projects" which are expected to serve as catalysts for further development of surrounding properties		X
c)	Strive to implement a long-range land use plan for the waterfront and avoid any actions which would foreclose implementing such a plan without fully analyzing and accepting the outcomes of such actions		X
Discussion: The objectives and policies outlined above related to Physical-Phasing of the HWMP will not be directly applicable to the Proposed Project.			
II. Objectives and goals related to Economic			
Existing/ Future Operations			
a)	Maintain the viability of Honolulu Harbor primary port, and ensure that the harbor operations will be able to accommodate all necessary existing and future inter-island and overseas state needs		X
b)	Seek to expand or enhance existing opera compatible and consistent with the long-range plans for the waterfront. Minimize dislocation impacts of non-compatible uses		X
c)	Where practical, seek to consolidate activities in order to provide more efficient services	X	
d)	Encourage the development of uses take advantage of or seek to promote Hawai'i's unique ocean opportunities	X	
Discussion: The Proposed Project will support the objectives and policies outlined above related to Economic-Existing/ Future Operations of the HWMP.			
The Proposed Project aims to revitalize the waterfront by introducing a contemporary garden and art attraction. This new attraction is anticipated to provide a variety of experiences at the water's edge, foster the promotion and expansion of creative arts in Hawaii, and serve as an educational hub designed to enlighten the public about the art and science of glass art. Simultaneously, the Proposed Project seeks to commemorate the past by honoring the rich tapestry of Hawai'i's history.			
Financial			
a)	Seek to maximize public benefits and public costs for development within the project area		X
b)	Encourage private sector redevelopment where possible but provide sufficient off-site infrastructure or public/ private partnerships to reduce private sector risks		X

c)	Utilize innovative financing techniques to cover expenditures such as tax increment financing, user fees, etc.			X
Discussion: The objectives and policies outlined above related to Economic–Financial of the HWMP will not be directly applicable to the Proposed Project.				
Implementation/ Operational Responsibilities				
a)	Identify existing or create new government agencies, authorities, or development corporations which will be responsible for implementing the long-range waterfront plan			X
b)	Ensure that an umbrella organization has the power to update, monitor, and direct the overall implementation of the master plan on an on-going basis			X
Discussion: The objectives and policies outlined above related to Economic- Implementation/ Operational Responsibilities of the HWMP will not be directly applicable to the Proposed Project.				
Phasing				
a)	Do not proceed with any new development until there is sufficient market to support the project or an economic benefit to the State			X
b)	Seek to minimize adverse economic impacts on existing businesses and other activities during construction of off-site infrastructure and adjacent redevelopment projects			X
Discussion: The objectives and policies outlined above related to Economic–Phasing of the HWMP will not be directly applicable to the Proposed Project.				
III. Objectives and goals related to Social				
Employment				
a)	Enhance employment opportunities within the waterfront area to support the uses and activities being provided	X		
Discussion: The Proposed Project will support the objectives and policies outlined above related to Social–Employment of the HWMP. The Proposed Project is anticipated to employ approximately 75-125 full- and part-time employees. Furthermore, the implementation of the Proposed Project will maintain acceptable working conditions and standards by adhering to relevant labor laws, regulations, and industry best practices in terms of worker safety.				
Housing				
a)	Housing within the waterfront area should only be provided where it is not competing or conflicting with, nor impacted by, long-term maritime, commercial, industrial, recreational, cultural, or institutional uses which need or benefit from waterfront locations			X
b)	Housing should only be considered when its financial returns can contribute significantly to reducing public costs for waterfront improvements, and its presence will enhance the sense of community by providing people and activities in the area 24 hours a day			X
Discussion: The objectives and policies outlined above related to Social-- Housing of the HWMP will not be directly applicable to the Proposed Project.				
Development Impacts				
a)	Relocation sites and assistance should only be for existing activities which may prove to be incompatible with the waterfront area			X
b)	Uses within the waterfront area, particularly recreational and cultural, should be aimed at meeting the needs of the local residents, visitors second.	X		
Discussion: The Proposed Project will support the objectives and policies outlined above related to Social–Development Impacts of the HWMP.				

The Proposed Project aims to revitalize the waterfront by introducing a garden and art attraction, offering both residents and visitors a unique space that merges art, education, and the scenic beauty of the waterfront. Furthermore, the Proposed Project is anticipated to stimulate economic growth by drawing residents and visitors to the waterfront area, potentially attracting additional businesses and creating new opportunities for the local community.

Phasing

a) Recreational, cultural, and institutional functions should be provided in the waterfront area as regional needs for these particularly as generally by the growing residential areas mauka side of Nimitz Highway and Ala Moana Boulevard	X		
--	---	--	--

Discussion: The Proposed Project will support the objectives and policies outlined above related to Social-Phasing of the HWMP.

The Proposed Project is anticipated to be developed at the derelict Maritime Center at Pier 7 of Honolulu Harbor, along with Units 5 and 7 of the Honolulu Power Plant. The Proposed Project aims to introduce a garden and art attraction to activate the waterfront, providing Hawai'i residents and visitors a space that blends art, education, and the scenic beauty of the waterfront, while also honoring the historical significance of the Project Site.

4.2.6 City and County of Honolulu Land Use Ordinance

The purpose and intent of the City and County of Honolulu Land Use Ordinance (LUO) is to regulate land use in a manner that will encourage orderly development in accordance with adopted land use policies, including the O'ahu General Plan and development plans, and to promote and protect the public health, safety, and welfare.

Discussion:

According to the CCH LUO, the Project Site lies within the B-2 Community Business District and the Kaka'ako Community Development District (Kak) (See Figure 4-4).

The B-2 district provides areas for community-wide business establishments, serving multiple neighborhoods and offering a broader range of uses than in the B-1 district. The intent is to apply this district to areas conveniently accessible by vehicular and pedestrian modes and served by adequate public facilities. The front yard setback is five feet, with no side and rear setbacks for B-2 districts.

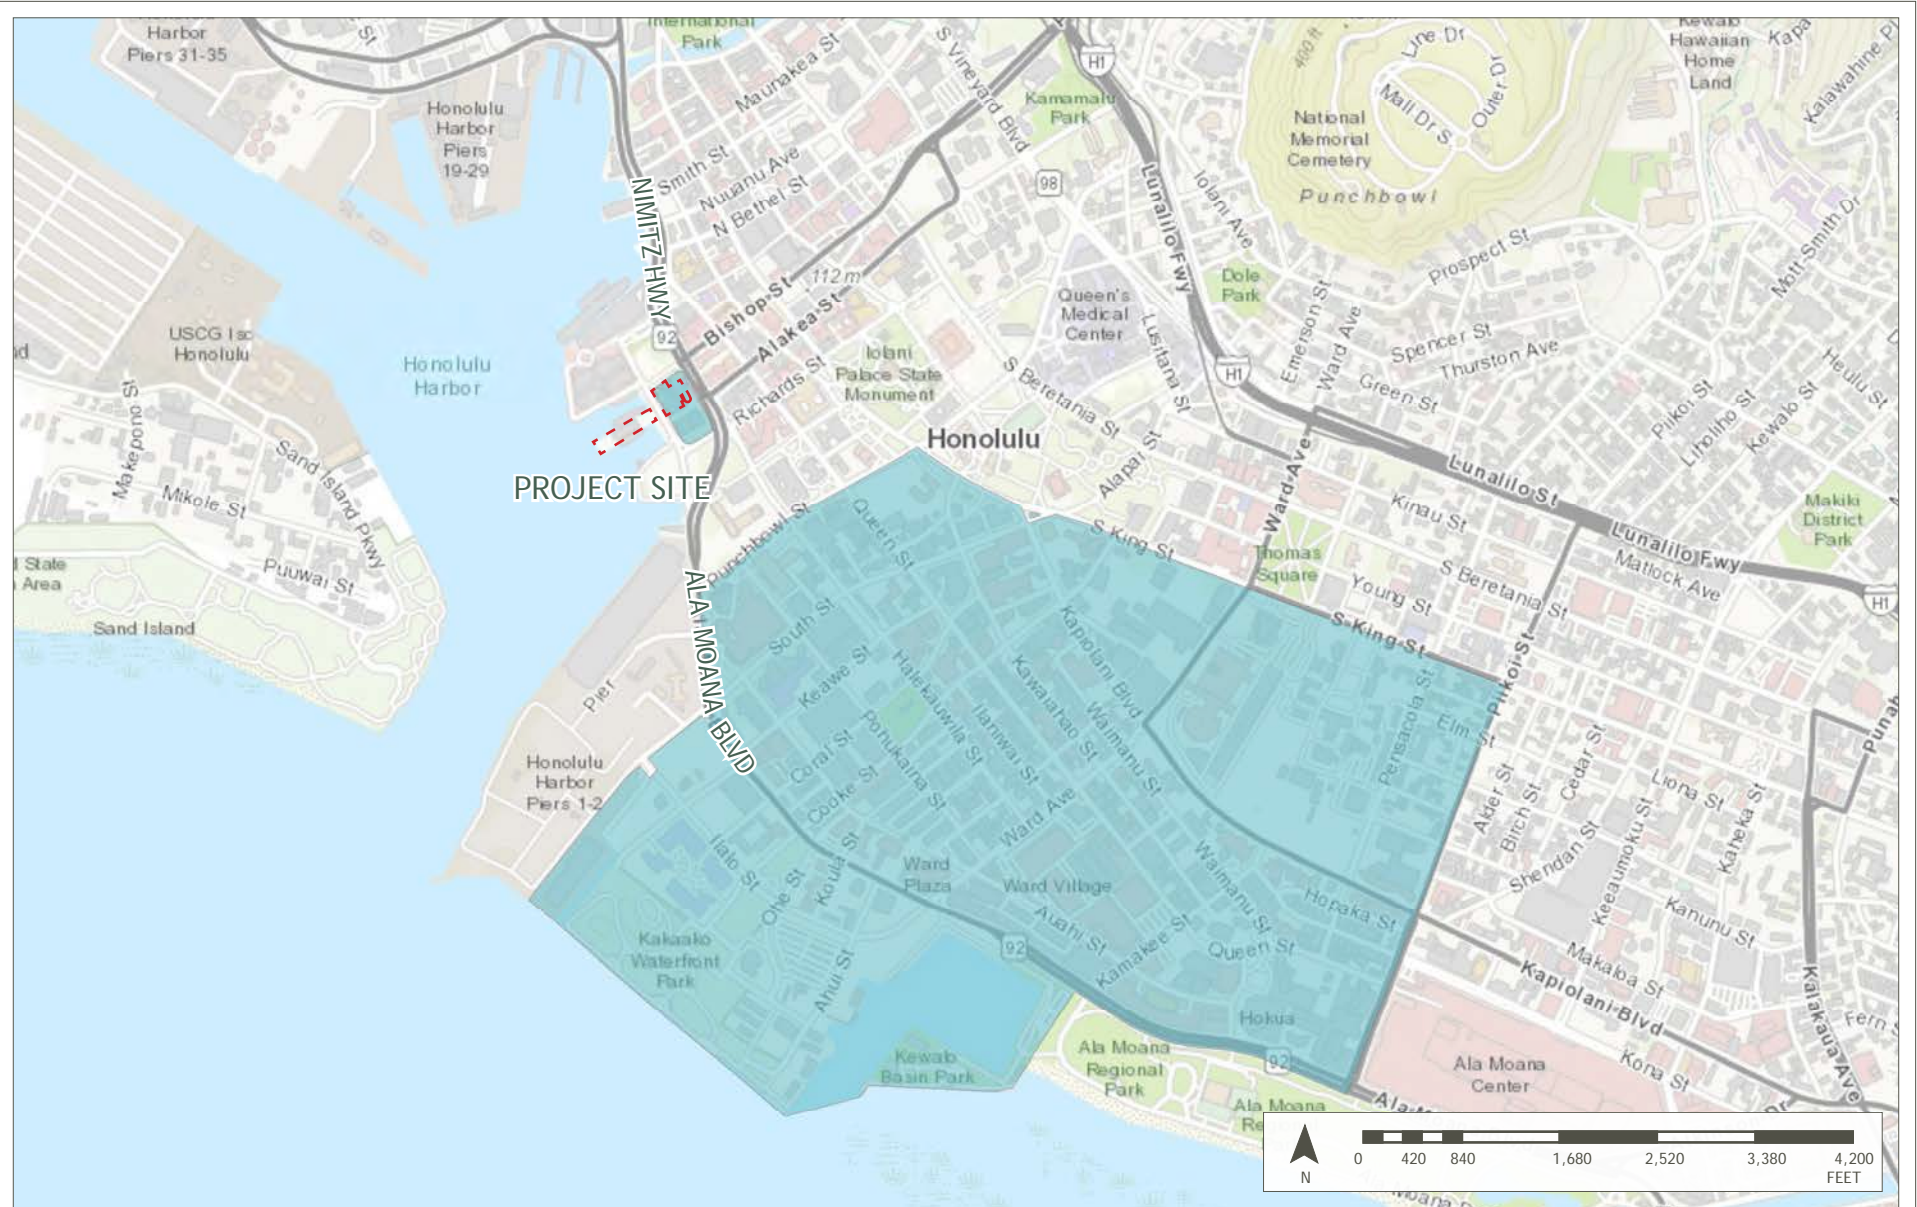

The Old Honolulu Power Plant portion of the Project Site lies within the Kak district, specifically under the Makai Area Plan (2005) (See Figure 4-5). The Makai Area encompasses the Honolulu Waterfront stretching from Kewalo Basin to the Aloha Tower boundary, later adjusting to include the waterfront from Kewalo Basin to Forrest Avenue, along with the Old Honolulu Power Plant. The overarching goal of the Makai Area is to foster an active, lively environment through various new developments, where each principle and element function together to create a physical environment that is suitable to live, work, and play, and its potential to contribute to economic development.

4.3 Permits and Approvals

The following is a list of permits, approvals, and reviews that may be required prior to construction and operation of the Proposed Project.

Federal

- Federal Aviation Administration (FAA) Form 7460-1, "Notice of Proposed Construction or Alteration"
- FAA Form 7460-1, "Technical Assistance Memorandum"

State of Hawai'i

Department of Land and Natural Resources

- Chapter 6E, HRS, State Historic Preservation Law

Department of Health

- Community Noise Permit
- Air Pollution Control Permit
- Individual Wastewater Treatment System Review

Department of Transportation

- Perform Work Upon State Highways Permit
- Operate or Transport Oversize and/or Overweight Vehicles and Loads Over State Highways Permit
- Occupancy and Use of State Highways Permit

City and County of Honolulu

Board of Water Supply

- Cross-Connection Control Requirements
- Backflow Prevention Requirements
- Water System Facilities Charge

Department of Planning and Permitting

- Special District Permit
- Building Permit
- Grading Permit/Trenching Permit
- Stockpiling Permit
- Demolition Permit
- Sewer Permit

Department of Transportation Services

- Lane Use / Occupancy Permit
- Street Usage Permit

(This page is intentionally left blank)

CHAPTER 5: ALTERNATIVES

5. ALTERNATIVES

Under § 11-200.1-18, HAR, an EA is required to present a discussion of the consideration of project alternatives that could reasonably attain the goals and objectives of the Proposed Project.

As presented in Chapter 2 of this EA., the goals and objectives of the Proposed Project are to:

- Align the Proposed Project with the Honolulu Waterfront Master Plan and development objectives of the ATDC;
- Revitalize and modernize the existing Maritime Center and the Honolulu Power Plant into a garden and art attraction to provide a variety of experiences at the water's edge;
- Foster and promote visual art and creative expression;
- Showcase glass art installations; and
- Serve as an educational resource by implementing programs, classes, demonstrations, and excursions designed to educate all segments of the population about art and the science of glass art.

In observance of these goals, the Proposed Project has considered a range of alternatives including: (1) the Proposed Project (a detailed description of the Proposed Project is provided in Chapter 2 and an assessment of the anticipated environmental impacts of the Proposed Project is provided in Chapter 3); (2) alternative locations to construct the Proposed Project; (3) alternative design concepts; (4) the No Action alternative.

The "No Action" alternative constitutes a scenario whereby the Proposed Project as described in Chapter 2 of the EA would not be implemented. In other words, the Project Site would remain as it currently exists now. General assessment of the No Action alternative clearly underscores that maintaining the status quo would not meet the spirit and intent of the objectives of the Proposed Project.

5.1 Alternative Locations

In exploring alternative locations for the Proposed Project, various sites were considered to assess their suitability and alignment with the project's goals and objectives. These alternative locations included potential areas along the Honolulu waterfront and other adjacent sites within the city. Factors such as accessibility, land availability, zoning regulations, and compatibility with the Honolulu Waterfront Master Plan and ATDC development objectives were evaluated during the assessment process.

While alternative locations were studied, it was determined that the selected Pier 7 and the Honolulu Power Plant sites best align with the project's vision and objectives. These sites offer proximity to existing infrastructure, and significant potential for synergy with surrounding uses and developments. Additionally, relocating the project to alternative sites would entail significant challenges such as land acquisition, permitting, and potential

disruption to established community dynamics. As a result, alternative locations were not pursued further in the analysis.

5.2 Alternative Design Schemes

As the design phase progresses, the design team continues to explore various alternative design schemes for both the Pier 7 and Honolulu Power Plant sites to identify design outcomes that best align with the goals and objectives of the Proposed Project, and mesh with the context of the surrounding area.

Specifically, a range of architectural design schemes were considered under the scope of the Proposed Project; however, the design scheme presented in Chapter 2 of this EA best reflects the anticipated design outcomes of the project and was selected to serve as the basis of the impact assessment.

5.3 No Action Alternative

Inclusion of the No Action Alternative in an alternatives analysis assists decision-makers with the evaluation of the extent of a Proposed Project's potential environmental impact by providing a baseline against which impacts can be measured and assessed.

Under the No Action Alternative, development under the Proposed Project would not be constructed, and the Project Site would remain in its current condition. The No Action Alternative would preclude permit approvals, as well as costs for design and construction, which would otherwise be required for the Proposed Project. The No Action Alternative would also avoid insignificant environmental impacts that would occur as a result of implementing the Proposed Project along with appropriate mitigation measures as discussed in Chapter 3 of this EA.

The No Action Alternative, however, would fail to align with the purpose and need of the Proposed Project as described in Section 2.2 of this EA. The Proposed Project aims to revitalize and modernize Pier 7 and the Honolulu Power Plant. The closure and dereliction of these facilities has resulted in a void of inactivity in the waterfront area, and the Proposed Project seeks to address this by breathing new life into these sites. Poised to transform the waterfront, the Proposed Project aspires to introduce a contemporary garden and art attraction. This new attraction aims to provide a variety of experiences at the water's edge, foster the promotion and expansion of creative arts in Hawai'i, and serve as an educational hub designed to enlighten the public about art and the science of glass art. Simultaneously, it commemorates the past by honoring the historical significance of the Project Site. Furthermore, the Proposed Project is anticipated to stimulate economic growth by attracting residents and visitors to the waterfront, potentially drawing additional businesses, and creating new opportunities for the local community.

Under the No Action Alternative, existing site conditions would remain the same, and would fail to align with the purpose and need / goals and objectives of the Proposed Project that are intended to offer residents and visitors a unique space that seamlessly merges art, education, and the revitalization of the waterfront. Notably, the No Action Alternative would prevent the realization of several significant benefits associated with the implementation of the Proposed Project including cultural vibrancy, economic vitality, educational outreach, employment opportunities, and aesthetic improvements to the waterfront. These unrealized

benefits would hinder the transformative potential the Proposed Project aims to bring to the community.

Ultimately, the No Action Alternative fails to meet the objectives of the Proposed Project and consequently, was rejected for further consideration as a feasible alternative.

(This page is intentionally left blank)

CHAPTER 6: ANTICIPATED DETERMINATION OF FONSI

6. ANTICIPATED DETERMINATION OF FONSI

Potential impacts of the Proposed Project on a range of environmental resource criteria have been evaluated in accordance with the significance criteria outlined in § 11-200.1-13, HAR. Discussion of the Proposed Project's conformance to the criteria is presented as follows:

- 1) *Irrevocably commit a natural, cultural, or historic resource;*

The Proposed Project will be developed within the footprint of Pier7 and Units 5 and 7 of the Honolulu Power Plant. No natural, cultural, or historic resources of significance were identified within the Project Site in conjunction with this EA Process.

Based on previous archaeological studies conducted in the region, it is unlikely that any unknown cultural or historic properties / human skeletal remains would be discovered or disturbed by the various development and operational activities of the Proposed Project. In the event of an unexpected discovery of historic and archaeological resources, the SHPD will be immediately notified for appropriate response and action. Thus, it is anticipated that if any significant plant or landscapes needs to be removed or altered to implement the Proposed Project, the plant or landscapes would be returned to existing conditions to the extent feasible or enhanced.

A Reconnaissance Level Survey (RLS) was completed for the Project Site to identify and evaluate the presence of significant historic architectural properties. According to the RLS (included herein as Appendix C), the Proposed Project is assumed to result in a "No Historic Properties Affected" finding.

- 2) *Curtail the range of beneficial uses of the environment;*

The Proposed Project will not curtail the range of beneficial uses of the environment. The operations and uses associated with the Proposed Project are generally consistent with the character of the surrounding area and are anticipated to seamlessly integrate into the Honolulu waterfront.

- 3) *Conflict with the State's environmental policies or long-term environmental goals established by law;*

The Proposed Project will not conflict with the long-term environmental policies, goals, and guidelines of the State of Hawai'i as noted throughout Chapter 4 of the EA. The State's environmental policies enumerated in Chapter 344, HRS, promote the conservation of natural resources, and an enhanced quality of life for all citizens. The Proposed Project does not conflict with the State's long-term environmental policies, goals, or guidelines as expressed in Chapter 344, HRS, and will not significantly impact natural resources since the Project Site is already disturbed and has been subject to intense human utilization since the Project Site was developed as a Maritime Center and the Honolulu Power Plant, which have both ceased operations.

-
- 4) *Have a substantial adverse effect on the economic welfare, social welfare, or cultural practices of the community and State;*

The Proposed Project is not anticipated to result in significant adverse impacts to the economic welfare, social welfare, or cultural practices of the community and State as discussed in Chapter 3 and 4 of the EA.

In the short-term, construction jobs will be created to develop and construct the Proposed Project. The construction of the Proposed Project will provide positive benefits to the local economy through construction expenditures, but not at a level that would generate any significant population expansion.

In the long-term, the Proposed Project will provide positive economic and social impacts to the community. The Proposed Project aims to revitalize the waterfront by introducing a contemporary garden and art attraction, drawing inspiration from the Chihuly Garden and Glass Museum in Seattle. This new attraction is anticipated to provide a variety of experiences at the water's edge, foster the promotion and expansion of creative arts in Hawai'i, and serve as an educational hub designed to enlighten the public about art and the science of glass art. Simultaneously, the Proposed Project seeks to commemorate the past by honoring the historical significance of the Project Site. In addition, the Proposed Project is anticipated to employ 75-125 full and part-time employees, providing new employment opportunities for the community.

The Proposed Project will not have an effect on cultural resources or practices at the Project Site as none exist as discussed in Section 3.7 (Cultural Resources) of the EA.

- 5) *Have substantial adverse effect on public health;*

No identified adverse short- nor long-term impacts on public health are anticipated to result from the construction and operation of the Proposed Project. Typical short-term construction-related impacts (e.g., noise and air quality) are anticipated; however, they will be temporary in nature and will comply with the Federal, State and County regulations discussed in Chapter 3 of the EA.

- 6) *Involve adverse secondary impact, such as population changes or effects on public facilities;*

Substantial adverse impacts to public facilities are not anticipated to result from the construction and operation of the Proposed Project. Moreover, the Proposed Project is not anticipated to induce population changes in the area or region, nor will it increase overall tourism to the island of O'ahu. The Proposed Project is intended to revitalize the waterfront by introducing a contemporary garden and art attraction that will serve as space that seamlessly merges art and education.

Existing public water, wastewater, drainage, and utility infrastructure have served the area for many years and are expected to have sufficient capacity to serve anticipated demands for the

Proposed Project. Agencies with jurisdiction over their respective infrastructure systems will be consulted as the Proposed Project proceeds to assure that it can be accommodated.

7) *Involve a substantial degradation of environmental quality;*

The Proposed Project is not anticipated to substantially degrade environmental quality. Long-term impacts to air and water quality, noise levels and natural resources will be minimal. Typical short-term impacts derived from construction activities (e.g., noise and air quality) are anticipated but will be temporary and will comply with State and County regulations as discussed in Chapter 3 will help ensure that the Proposed Project will not result in the degradation of environmental quality.

8) *Be individually limited but cumulatively have substantial adverse effect upon the environment or involves a commitment for larger actions;*

The Proposed Project is not anticipated to have considerable effect upon the environment as discussed in Chapter 3 of the EA. there are no commitments to further action beyond the scope presented within this EA.

9) *Have substantial adverse effect on rare, threatened, or endangered species, or its habitat;*

No rare, threatened and/or endangered flora or fauna species are known to inhabit the Project Site as discussed in Section 3.5 (Natural Environment) of the EA. The Project Site is situated within a highly altered urban environment in Downtown Honolulu. The flora and fauna in the vicinity of the Project Site is consistent with the highly altered environment. This includes entirely maintained landscaping and associated weeds. Species most commonly frequenting the site and vicinity are typical of urban areas and consist of commonly introduced species.

The Proposed Project is not anticipated to have any adverse effects on rare, threatened, or endangered species or any critical habitat areas. Soil disturbing construction related activities may unearth soil and plant material that potentially contains invasive fungal pathogens vertebrate and invertebrate pests (e.g. Little Fire Ants, Coconut Rhinoceros Beetles), or invasive plant parts that could harm Hawai'i's native species and ecosystems. In general, to reduce potential impacts, the mitigation measures presented in Section 3.5.1 (Flora and Fauna) are recommended.

10) *Have a substantial adverse effect on air or water quality or ambient noise levels;*

No long-term significant adverse impacts to air quality, water quality, or noise levels within the Project Site are anticipated as a result of the construction and operation of the Proposed Project. Land disturbing activities include demolition, foundation work, and potential utility repairs and upgrades. Construction and operation of the new facilities will be performed in accordance with Federal, State, and County regulations, thereby minimizing potential impacts to air and water quality.

In the short-term, noise from construction activities such as demolition, clearing, and paving will be unavoidable. The increase in noise level will vary according to the particular phase of construction. Noise may also increase as a result of operating power equipment during the construction period. Construction noise impacts will be mitigated by compliance with provisions of the State DOH Administrative Rules, Title 11, Chapter 46, "Community Noise Control" regulations. These rules require a noise permit if the noise levels from construction activities are expected to exceed the allowable levels stated in the DOH Administrative Rules. It shall be the contractors' responsibility to minimize noise by properly maintaining noise mufflers and other noise-attenuating equipment, and to maintain noise levels within regulatory limits. Fugitive dust will be controlled, as required, by methods such as dust fences, water spraying, and sprinkling of loose or exposed soil or ground surface areas. Planting of landscaping and stabilization measures will be done as soon as possible on completed areas to help control erosion and runoff that could potentially enter the stream in the long-term. Respective contractors will be responsible for minimizing air quality impacts during the various phases of construction. Exhaust emissions from construction vehicles are anticipated to have negligible impact on air quality in the project vicinity as the emissions would be relatively small and readily dissipated. In the long-term, some vehicular emissions related to operation at the Project Site are expected, however, due to the generally prevailing trade winds, the emissions would be readily dissipated.

- 11) *Have substantial adverse effect on or be likely to suffer damage by being located in an environmentally sensitive area such as a flood plain, tsunami zone, sea level rise exposure area, beach, erosion-prone area, geologically hazardous land, estuary, fresh water, or coastal waters;*

No short-term or long-term significant impacts are anticipated as the Project Site is not located within an environmentally sensitive area related to coastal or flood hazards as noted in Section 3.4 (Natural Hazards of the EA).

According to the FIRM, the Project Site is designated within Flood Zone VE, AE, and X. In the short-term, applicable best management practices would be implemented including, but not limited to, temporary sediment basins, temporary diversion berms and swales to intercept runoff, silt fences, dust fences, slope protection, stabilized construction vehicle entrance, grate inlet protection, truck wash down areas, and use of compost filter socks so that impacts of flooding are not exacerbated from construction. In the long-term, the Proposed Project will incorporate applicable drainage improvement and appropriate building codes related to flooding impacts.

- 12) *Have substantial adverse effect on scenic vistas and view planes, during day or night, identified in County or State plan or studies; or*

The Proposed Project will not result in significant impacts to view planes identified in County or State plans or studies. Moreover, the Proposed Project is not expected to adversely affect scenic and visual resources in the area. The Proposed Project will not degrade lateral coastal views or mauka-makai views from areas in the vicinity of the Project Site. The Proposed Project is anticipated to be designed and consistent with the existing visual character of the surrounding areas and the align with the Honolulu Waterfront Master Plan and development objectives of the ATDC.

13) *Require substantial energy consumption or emit substantial greenhouse gas.*

The construction and operation of the Proposed Project will not require substantial energy consumption. The implementation of the Proposed Project will result in short-term irrevocable release of GHGs from construction activities, which will be temporary and the quantities of GHGs released will be negligible. Moreover, the contractors from the construction of the Proposed Project will be responsible for preparing a dust control plan compliant with the provisions of Chapter 11-60.1, HAR Air Pollution Control.

Based on the finding and the assessment of potential impacts, the Proposed Project does not require preparation of an environmental impact assessment and an anticipated FONSI is determined.

(This page is intentionally left blank)

CHAPTER 7: CONSULTATION

7. CONSULTATION

7.1 Early Consultation Package

The Early Consultation/Pre-Assessment process included efforts to inform the community and solicit input in scoping the EA for the Proposed Project. The Early Consultation/Pre-Assessment Package for the Proposed Project was mailed out on April 10, 2023, to the following agencies, organizations, and stakeholders listed below in preparation of the EA process. Consultation was conducted to solicit comments regarding potential concerns and requirements pursuant to refining the scope of EA documentation. Parties that formally replied during the Early Consultation/Pre-Assessment process are indicated by a " ✓ " below. All written comments are reproduced in Appendix H.

Introduction

Garden Art, LLC proposes to repurpose three existing structures for the Tradewinds Garden & Glass Project (herein the “Project”)¹. These structures include two decommissioned power plant buildings at 170 Aloha Tower Dr. and one structure at Pier 7 of Honolulu Harbor, located in Honolulu, O‘ahu (Figure 1). AECOS, Inc. has been subcontracted by Wilson Okamoto Corporation (WOC) to conduct a biological survey of flora and fauna within the two parcels of land that contain these structures. In addition, AECOS has provided information on common biota and marine community composition in Honolulu Harbor based on extensive experience in the area. A marine biological survey was not undertaken for this report.

Methods

Botanical Survey

AECOS biologists Gioconda López and Patricia Myer walked the Project parcels on the morning of January 17, 2024. Plant species were identified as they were encountered, and notes were taken to develop a relative abundance for each species recorded. Species names follow *Manual of the Flowering plants of Hawai‘i* (Wagner et al., 1990; Wagner & Herbst, 1999) for native and naturalized

¹ This report is intended to become part of the public record by incorporation into the EA prepared for the subject project. The recommendations provided by AECOS do not account for any in-water work.

flowering plants, *Hawai'i's Ferns and Fern Allies* (Palmer, 2003), *Taxonomic and Nomenclatural Updates to the Fern and Lycophyte Flora of the Hawaiian Islands* (Ranker et al., 2019) for ferns, and *A Tropical Garden Flora* (Staples & Herbst, 2005) for ornamental and agricultural plants. More recent name changes for naturalized flowering plants mostly follow Imada (2019).

Figure 1. Project location on the Island of O'ahu.

Terrestrial Vertebrates Survey

Avian Biota

AECOS biologists characterized the avian assemblage at the Project parcels in the morning hours of January 17, 2024, the most active time of day for birds. Visual observations were aided by Bushnell 10 x 42 mm binoculars. Weather conditions were good for avian observations, with no rain and slight wind (5 mph) for most of the survey. Cloud cover was at around 30% at the beginning, but after two hours, it had increased to 80%. Light rain began in the last five minutes of the survey.

The avian phylogenetic order and nomenclature used in this report follows the AOU *Check-List of North and Middle American Birds 2022* (Chesser et al., 2022) and the 64th supplement to the checklist (Chesser et al., 2023). Local common names are provided for indigenous and endemic species.

Terrestrial Mammals

Both biologists recorded all mammals encountered during the surveys. Indicators of mammalian presence, such as tracks, scat, and other sign were noted. Mammalian phylogenetic order and nomenclature follow *Mammal Species of the World* (Wilson & Reeder, 2005) and Pinzari et al. (2020) for Hawaiian hoary bat.

Insects

All coconut palms encountered were investigated for signs of damage by coconut rhinoceros beetle (*Oryctes rhinoceros*), which is indicated by large bores in the crowns of coconut palms, with distinctive V-shaped cuts (HISC, 2023). Observations were aided by Bushnell 10 x 42 mm binoculars. No evidence of coconut rhinoceros beetle was observed.

Results

Vegetation

Vegetation on the Project parcels is dominated by a lawn of pitted beardgrass (*Bothriochloa pertusa*) and zoysia grass (*Zoysia matrella*). Multiple species of palms are planted throughout the parcels, which provide only limited canopy cover throughout the property. The vegetation on Pier 7 was closely examined, as biologists were given full access, however, the power plant area included a fenced-in parking lot that was not accessible, so observations were made from outside the fence. This parking lot is paved and featured palms, ferns, and herbs present elsewhere in the survey area.

Flora

A botanical listing (flora) with relative abundance for all plant taxa encountered in the survey is presented in Table 1. Entries are arranged alphabetically under family names and include scientific name, common name, status (i.e., native or non-native; see key at end of table), and a relative abundance value by survey area. "Status" reflects the state-wide distribution of the species.

A total of 69 plant taxa were recorded during the January 2024 survey: five ferns and 64 angiosperms (flowering plants). Among them, three (4%) species are early Polynesian introductions (so-called “canoe plants”), and six are indigenous species representing 9% of the total. No endemic native species were recorded. All the remaining taxa are plants introduced to the Hawaiian Islands after 1778, including 49 (67%) naturalized species (i.e., grow naturally in the wild) and 11 (16%) ornamental species (i.e., species not found in the wild).

The indigenous species recorded are the fern/fern allies *palapalai* (*Microlepia strigosa*) and *moa* (*Psilotum nudum*), the trees *hau* (*Hibiscus tiliaceus*) and *milo* (*Thespesia populnea*), and the widespread *naupaka kahakai* (*Scaevola taccada*) and *‘uhaloa* (*Waltheria indica*). Early Polynesian introductions recorded are: *niu* or coconut (*Cocos nucifera*), *ti* or *kī* (*Cordyline fruticosa*), and *‘ihi’ae* (*Oxalis corniculata*). With the exception of *‘uhaloa* and *‘ihi’ae*, these species are all part of the landscaping, with some growing in an enclosed area (Table 1). These are all common plants across the Hawaiian Islands.

Legend to Table 1

STATUS = distributional status for the Hawaiian Islands:

Ind - indigenous; native to Hawai'i, but not unique to the Hawaiian Islands.

Nat - naturalized, exotic, plant introduced to the Hawaiian Islands since the arrival of the Cook Expedition in 1778, and well-established outside of cultivation.

Orn - exotic, ornamental or cultivated; plant not naturalized (not well established outside of cultivation).

Pol - Polynesian introduction before 1778.

ABUNDANCE = occurrence ratings for plants by area:

R - Rare seen in only one or perhaps two or three times.

U - Uncommon seen at most in several locations.

Table 1 (continued).

O - Occasional seen with some regularity.
 C - Common observed numerous times during the survey.
 A - Abundant found in large numbers; may be locally dominant.
 P - Present abundance not established due to the intentional
 cultivation of the plant for ornamental or edible purposes.

NOTES:

- <1> Plant juvenile or lacking flowers or fruit; identification therefore uncertain.
- <2> Species recorded in enclosed garden on the *makai* side of HECO building.
- <3> Plants recorded in a planter outside of pier 7.

Avian Fauna

A total of 7 bird species, representing 5 separate families, were recorded during the survey as incidental observations. Native bird species found at the Project site or vicinity include only indigenous white tern (*Gygis alba*). The remaining species recorded are non-native introductions that have become naturalized in Hawai'i.

Table 2. Avian species observed in the Project vicinity.

Common Name	ORDER FAMILY <i>Species</i>	Status
	COLUMBIFORMES	
	COLUMBIDAE	
Rock Pigeon	<i>Columba livia</i>	NN
Spotted Dove	<i>Streptopelia chinensis</i>	NN
Zebra Dove	<i>Geopelia striata</i>	NN
	CHARADRIIFORMES	
	LARIDAE	
White Tern, <i>manu o Kū</i>	<i>Gygis alba</i>	IR
	PASSERIFORMES	
	ESTRILDIDAE	
Java Sparrow	<i>Padda oryzivora</i>	NN
	FRINGILLIDAE	
House Finch	<i>Haemorhous mexicanus</i>	NN
	THRAUPIDAE	
Red-crested Cardinal	<i>Paroaria coronata</i>	NN

Table 2 (continued).

Legend to Table 2

Status:

NN = Non-native; alien introduced species.

IR = Indigenous resident.

The avian diversity observed during the survey is consistent with habitats present in this urban area. All recorded birds were spotted numerous times. White tern, cardinals, finches, and sparrows were spotted around Pier 7. Spotted dove, zebra dove, and rock pigeon surrounded the decommissioned power plant buildings.

Terrestrial Mammals

No mammals were observed during the survey; however, it is probable that one or more of the four Muridae found on O'ahu—roof rat (*Rattus rattus*), brown rat (*Rattus norvegicus*), Polynesian rat (*Rattus exulans hawaiiensis*), and European house mouse (*Mus musculus domesticus*)—use resources within the general Project area. We observed numerous rodent traps throughout the parcels. These mammalian species are non-native and deleterious to native ecosystems and native faunal species within them.

Marine Biota

Over the past century, Honolulu Harbor has undergone drastic physical changes, with gradual development and modifications of the harbor shoreline, including the construction of Sand Island on barrier reef islets and the dredging of the basins and Kalihi Channel to support ship traffic. Coastal wetlands that once surrounded the harbor were filled to construct docks and wharves.

Two benthic habitat types are recognized throughout Honolulu Harbor: the soft bottom substrate of the harbor floor and the hard substrate along the shoreline perimeter, including both man-made and naturally occurring substrate that has been modified over the past century to construct the harbor. At Pier 7, both soft substrate and hard substrate habitats occur.

The soft substrate community consists primarily of dark, very soft silt and fine sand with no evidence of any surface-dwelling macroinvertebrates, macroalgae, or seagrass beds. With the exception of numerous small (typically <1 cm) burrow holes, the bottom lacks visible structural features. However, it is known that soft sediment habitats, in general, support a diverse community likely consisting

primarily of polychaetes, crustaceans, mollusks, and burrow-dwelling fish living just within the mud. Species adapted to this habitat structurally alter the habitat through bioturbation, burrowing, and tube building. The abundance of mobile invertebrate feeding fish (e.g. yellow tang [*Zebrasoma flavescens*] and moorish idol [*Zanclus cornutus*]) observed in the waters off Pier 7 are at least partially dependent upon these bottom dwelling organisms for their food. Members of this community have the most direct link to managed fishery species. The soft bottom community provides food either directly or in the form of eggs and larvae broadcast into the water column.

The hard substrate surrounding Pier 7 is artificial and vertically oriented around the shoreline perimeter. The substrate is primarily encrusted with a biofouling community typical of Honolulu Harbor (AECOS, 2016; 2023), including hydroids (*Pennaria disticha*), bryozoans (*Bugula denata* and *Amathia distans*), sponges, bivalves (*Isognomon perna* and *Dendostrea sandvicensis*), anemones (*Aiptasia pulchella*), and tunicates (*Phallusia nigra* and *Herdmania momus*). Throughout the harbor, coral colonies are present within the fouling community. Colonies are primarily located within the upper portions of the hard substrate (upper 10 ft or 3 m) and are less abundant in deeper portions (AECOS, 2016; 2023). Common coral species observed throughout the harbor include *Porites lobata*, *P. compressa*, *Leptastrea* spp., *Pavona varians*, and *Cyphastrea ocellina* (AECOS, 2016; 2023).

State- and federally-listed marine species—green sea turtle (*Chelonia mydas*), hawksbill sea turtle (*Eretmochelys imbricata*), and monk seal (*Neomonachus schauinslandi*)—may occur in the general vicinity of the Project, considering the distribution of these species and their occurrences throughout the Islands as discussed below.

Discussion and Recommendations

Recommendations are partly based on U.S. Fish and Wildlife Service Animal Avoidance and Minimization Measures (USFWS-PIFWO, 2023). Implementation of the recommendations (provided below as bulleted items) by the Project contractor will minimize impacts to listed species to the maximum extent practicable.

Botanical Resources

Most of the Project area is either landscaped or overgrown by weeds and grasses. Although occurrences of native flora are present within the Project area, these plants are all common species, and their respective populations are more

numerous outside of the survey area. No plants proposed or listed as threatened or endangered species as set forth in the Endangered Species Act of 1973 as amended (16 U.S.C. 1531-1543; USFWS, n.d.-a; HDLNR, 1998) were seen in the project area. For plants, state listing follows the federal listing.

Avian Resources

Seabirds

Six of the seven avian species detected during this survey are non-native introduced species naturalized in the Hawaiian Islands. White tern (*Gygis alba*) or *manu o Kū*, is an indigenous seabird listed as threatened under State of Hawai'i endangered species statute, HRS 195D (HDLNR, 2015). In the main Hawaiian Islands, the majority of the white tern population is restricted to central urban and suburban Honolulu, with a known nesting and breeding range extending from Aloha Tower to Niu Valley (VanderWerf & Downs, 2018). This project area is within the known nesting area of the White Tern population.

White tern typically nest from January to June, and lay eggs on tree branches 5-10 m (16-33 ft) above the ground, commonly in monkeypod, *kukui*, shower, and mahogany trees (VanderWerf & Downs, 2022). These preferred trees are not present at the Project site.

U.S. Fish and Wildlife Service (USFWS) provides the following recommendations for the species:

- If tree trimming or removal is anticipated for the Project, trees slated to be cut should be surveyed for nesting White Terns, especially during the White Tern breeding season (January to June). If an egg is found, the nesting tree or branch should not be disturbed for at least 80 days (USFWS-PIFWO, 2023).

Given the Project location in a coastal environment, protected night-flying Hawaiian seabirds are likely to overfly or otherwise utilize the parcel. Protected seabirds in Hawai'i include Wedge-tailed Shearwater (*Ardenna pacifica*), Hawaiian Petrel (*Pterodroma sandwichensis*), Newell's Shearwater (*Puffinus newelli*), and Band-rumped Storm-Petrel (*Hydrobates castro*). In the summer and fall, night-flying seabirds (especially fledglings) transiting to the sea from inland can become disoriented by exterior lighting. When disoriented, seabirds may collide with man-made structures or the ground. If not killed outright, dazed or injured birds are targets of opportunity for feral mammals (Podolsky et al., 1998; Ainley et al., 2001; Day et al., 2003). The primary cause of mortality in these seabird species is predation by alien mammalian species at the nesting colonies (USFWS, 1983; Ainley et al., 2001). Collision with man-made structures is considered the second-most significant cause of mortality of these seabirds in

Hawai'i. No suitable nesting habitat for seabird species occurs in or near the Project area.

- The Project can minimize or avoid risks to protected night-flying seabirds by not conducting night-time construction and ensuring that all outdoor lighting is fully shielded (dark sky compliant; see HDLNR-DOFAW, 2016).

No nests, burrows, or other sign (feathers, eggs, scat) of Wedge-tailed Shearwater were observed at the parcel, and it appears that no seabirds have recruited to the site. Project construction activities at the parcel should not adversely affect Wedge-tailed Shearwater nests, as none is present on-site. As Wedge-tailed Shearwater typically return to their natal colonies, recruitment away from such locations is limited. Despite a low probability, if a nest is found during construction, work in the vicinity should be suspended and USFWS notified. USFWS provides the following recommendations:

- If Wedge-tailed Shearwater nest within a proposed project area and construction would cause ground disturbance, time project construction to occur outside of the breeding season (March through November; USFWS-PIFWO, 2023).
- Use opaque shields on outdoor lighting, positioned so that the bulb is only visible from below and the light source cannot be seen from the beach. In addition, use motion sensor controls so that lights are off when the area is not in use (USFWS-PIFWO, 2023).

Three of the other night-flying Hawaiian seabird species (Hawaiian Petrel, Newell's Shearwater, and Band-rumped Storm-petrel) nest at high elevations in the mountains, precluding nesting disturbance by the Project.

Terrestrial Mammalian Resources

Hawaiian Hoary Bat

It is possible that the endangered Hawaiian hoary bat (*Lasiurus semotus*) uses resources in the area. Tall trees are suitable for roosting by Hawaiian hoary bat. This bat species is solitary and rare but has a widespread distribution in Hawai'i. The Hawaiian hoary bat uses multiple roosts within a home territory (Bonaccorso, 2015), so the disturbance associated with removal of any particular tree would be minimal. An exception might be during the pupping season if a female bat carrying a pup or an unattended pup is in a tree being felled; these individuals could be unable to flee the tree.

- Potential adverse impacts to Hawaiian hoary bat can be avoided or minimized by not clearing woody vegetation taller than 4.6 m (15 ft) between June 1 and September 15, the bat pupping season, and by avoiding the use of barbed wire for fencing (USFWS-PIFWO, 2023).

Marine Biota

Hawaiian Monk Seal

The Hawaiian monk seal (*Monachus schauinslandi*) was first listed as an endangered species pursuant to the Endangered Species Act (ESA) on November 23, 1976 (41 FR 51612) and remains listed as endangered. In that same year, the Hawaiian monk seal population was designated as "depleted" under the Marine Mammal Protection Act (MMPA). Critical habitat for Hawaiian monk seal in the Main Hawaiian Islands (MHI) is marine habitat from the 200-m (650 ft) depth contour line, including the seafloor and all subsurface waters and marine habitat within 10 m (33 ft) of the seafloor to the water's edge. This critical habitat extends 5 m (16 ft) beyond the water's edge into the terrestrial environment between identified boundary points that identify preferred Hawaiian monk seal pupping areas and significant haul-out areas, as defined in the final rule (NOAA-NMFS, 2015).

However, waters off federal military bases and waters within constructed boat harbors are excluded from critical habitat for this species. In addition, specific types of features within a designated critical habitat area may be excluded from critical habitat designation, including "docks, seawalls, piers, fishponds, roads, pipelines, ramparts, jetties, groins, buildings, pilings, and bulkheads" because these habitats do not meet the definition of critical habitat. Therefore, Pier 7 is excluded as a structure and by location within a harbor.

Sea Turtles

The distinct population segment of green sea turtle that occurs in Hawai'i is federally-listed as a threatened species (USFWS, n.d.-a; USFWS-PIFWO, 2023) and as a threatened subspecies (*Chelonia mydas agassizi*) under Hawai'i state regulations (HDLNR, 2014). Green sea turtle nesting is not known to occur on O'ahu, but they do forage and bask around the island. Honolulu Harbor does not contain significant grazing habitat for green sea turtles. Sea turtles have been observed within the harbor, but no basking has been documented in the vicinity of the Project site (NOAA-NMFS, 2023).

Hawksbill sea turtle is much less common in the Hawaiian Islands than green sea turtle and is known to nest only in the southern reaches of the state (NOAA-PIFSC,

2010), with no nesting documented on O'ahu (Gaos et al., 2021). Hawksbill sea turtle is federally-listed as endangered (USFWS, n.d.-a; USFWS-PIFWO, 2023) and is also listed as an endangered subspecies (*Eretmochelys imbricata bissa*) under State of Hawai'i regulations (HDLNR, 2014).

- If a foraging sea turtle is found at the Project area, cease all mechanical or construction activities within 30 m (100 ft) until the animal voluntarily leaves the area.
- Minimize the use of lighting and shield all project-related lights so the light is not visible from any beach, as this may interfere with sea turtles during the nesting season (May to December).

Other Resources of Potential Concern

Critical Habitat

Federally delineated Critical Habitat is not present in the Project area (USFWS, n.d.-b). No in-water work is proposed; thus, the Project will not impinge on jurisdictional waters.

Honolulu, Hawai‘i

April 2024

Management Summary

This archaeological literature review and field inspection (ALRFI) report was prepared by Honua Consulting, LLC at the request of Wilson Okamoto Corporation for the Tradewinds Garden and Glass Museum located in Honolulu Ahupua‘a, Kona (Honolulu) District, Island of O‘ahu, TMK: [1] 2-1-014:006, [1] 2-1-001:057 and 058. The project area consists of two discontinuous areas, consisting of Pier 7 of Honolulu Harbor and Units 5 and 7 of the Honolulu Power Plant. Pier 7 (TMK: 2-1-001:057 and 058) contains the former Maritime Center Museum, owned by the State of Hawai‘i, and encompasses approximately 9.6 acres (423,054 sq. ft.). The Honolulu Power Plant (TMK: 2-1-014:006) is owned by the Hawaiian Electric Co Inc (HECO) and includes approximately 3.4 acres (149,644 square feet [sq. ft.]). The Aloha Tower Development Corporation (ATDC) is the lessee of Pier 7 and oversees the redevelopment of State-owned properties along the Downtown Honolulu waterfront. For reporting purposes, Pier 7 is often referred to as the west portion of the project area, while the parcel containing the Honolulu Power Plant is referred to as the east portion of the project area.

The proposed project is planned to consist of renovation and adaptive reuse of existing Honolulu Power Plant and Maritime Center buildings. The Honolulu Power Plant is proposed to be preserved with interior spaces reworked to include glass art galleries, a hot shop for observing glass art creation, and a bookstore/lobby. Renovation of the Maritime Center structure is proposed to include five gardens designed to emulate native Hawaiian vegetation, a bookstore/lobby, deck areas, a bar, and a restaurant.

Background research indicates the project area was traditionally located within the coastal mud flat or low reef of Waikahalulu, which was in-filled in the 1850s-1890s to form a land area named the “Esplande”. Historically, the project area was part of Land Commission Award (LCA) 44520 for Waikahalulu ‘Ili claimed by Hazaleleponi Kalama (Queen Kalama) in 1848 and refuted by the government. Following litigation, the government paid Queen Kalama \$22,000 for the land. LCA 11219 was then awarded to the government for 46 acres within Waikahalulu, including the project area. The reef of Waikahalulu was filled using dredged material from Honolulu Harbor and rubble from dismantling of the Honolulu fort. Makai (seaward) areas adjacent the project area were dug out to create Pier 7 from 1906-1907. A large warehouse was constructed upon the pier in 1906, it was removed in the 1960s to provide accessway for an elevated ramp. The ramp was removed in the 1980s and a new building was built on the pier in 1988 for use as the Hawai‘i Maritime Center which closed in 2009. The east portion of the project area was used for multiple business ventures from the late-1800s through early-1900s, including office space, storage for rope, buoys, coal, boats, ice, and power. The Hawaiian Electric Building was constructed in the east portion of the project area in the 1920s.

One previous archaeological study was conducted in the project area which focused on the waterfront of Honolulu Harbor from Pier 5 to Pier 14 (Wong-Smith and Rosendahl 1990). The study found their entire study area had traditionally been underwater and that a small portion of shoreline that was once present was removed during channel dredging for the harbor. The area was then filled during land reclamation activities and development of Honolulu Harbor. It was reported that coral blocks from the Honolulu fort were known to have been used as bulkheads for Piers 8-12. The field inspection identified Piers 8 through 12 and Aloha Tower as the only significant surface features present, as other piers in their study area had been dramatically reconstructed.

The purpose of this archaeological literature review and field inspection is to determine the land-use history, potential sub-surface deposits which may exist within the property, and identify any potential artifacts or cultural deposits present on the ground surface observable during surface survey of the property. This study is not an archaeological inventory survey (AIS), however, this report was written using standards outlined within Hawai'i Administrative Rules (HAR) 13-276 for AIS studies and is intended to assist with historic preservation efforts related to the proposed project.

The archaeological field inspection conducted for the current project included a pedestrian survey of the property. Nothing of archaeological interest was observed or collected during the inspection. Although the project area is built on dredged material, it was extensively used for historic commercial activities. If the proposed project requires ground disturbance then an archaeological monitoring program may be necessary, to be conducted in coordination with the archaeology branch of the SHPD. Furthermore, historic architectural structures exist within the project area and it is recommended to consult with the architecture branch of the SHPD regarding how to appropriately rehabilitate or restore the structures for the project's purpose of adaptive reuse.

Introduction

1.1 Project Background

This archaeological literature review and field inspection (ALRFI) report was prepared by Honua Consulting, LLC at the request of Wilson Okamoto Corporation for the Tradewinds Garden and Glass Museum located in Honolulu Ahupua‘a, Kona (Honolulu) District, Island of O‘ahu, TMK: [1] 2-1-014:006, [1] 2-1-001:057 and 058. The project area consists of two discontinuous areas, consisting of Pier 7 of Honolulu Harbor and Units 5 and 7 of the Honolulu Power Plant. The Honolulu Power Plant (TMK: 2-1-014:006) is owned by the Hawaiian Electric Co Inc (HECO) and includes approximately 3.4 acres (149,644 square feet [sq. ft.]). Pier 7 (TMK: 2-1-001:057 and 058) contains the former Maritime Center Museum, owned by the State of Hawai‘i, and encompasses approximately 9.6 acres (423,054 sq. ft.). The Aloha Tower Development Corporation (ATDC) is the lessee of Pier 7 and oversees the redevelopment of State-owned properties along the Downtown Honolulu waterfront. The project area is shown in an USGS, aerial image, and Tax Map Key (TMK) (Figure 1 through Figure 3).

The proposed project is planned to consist of renovation and adaptive reuse of existing Honolulu Power Plant and Maritime Center buildings. The Honolulu Power Plant is proposed to be preserved with interior spaces reworked to include glass art galleries, a hot shop for observing glass art creation, and a bookstore/lobby. Renovation of the Maritime Center structure is proposed to include five gardens designed to emulate native Hawaiian vegetation, a bookstore/lobby, deck areas, a bar, and a restaurant. A preliminary plan is provided as Figure 4.

The purpose of this archaeological literature review and field inspection is to determine the land-use history, potential sub-surface deposits which may exist within the property, and identify any potential artifacts or cultural deposits present on the ground surface observable during surface survey of the property. This study is not an archaeological inventory survey (AIS), however, this report was written using standards outlined within Hawai‘i Administrative Rules (HAR) 13-276 for AIS studies and is intended to assist with historic preservation efforts related to the proposed project.

1.2 Environmental Setting

The project area is situated along the Honolulu waterfront, in a dense commercial area. Honolulu Harbor lies to the west and south. Bishop Street borders to the north, Ala Moana Boulevard runs adjacent to the east, and Aloha Tower Drive separates the two portions of the project area. Irwin Memorial Park and Aloha Tower Marketplace are to the north and northwest. The project area lies at approximately 3 ft. (1 m.) above mean sea level (amsl).

The climate of downtown Honolulu is relatively dry for O‘ahu. The project area receives a mean annual rainfall of approximately 709 millimeters (mm), with wetter months November through March (Giambelluca et al. 2013). Honolulu Harbor is located at the mouth of Nu‘uanu Stream. The freshwater of Nu‘uanu Stream created a long, narrow channel through the coral reef which provided a natural deep-water harbor. Honolulu Harbor is the largest and most important commercial harbor in the state.

Tradewinds Garden and Glass Museum

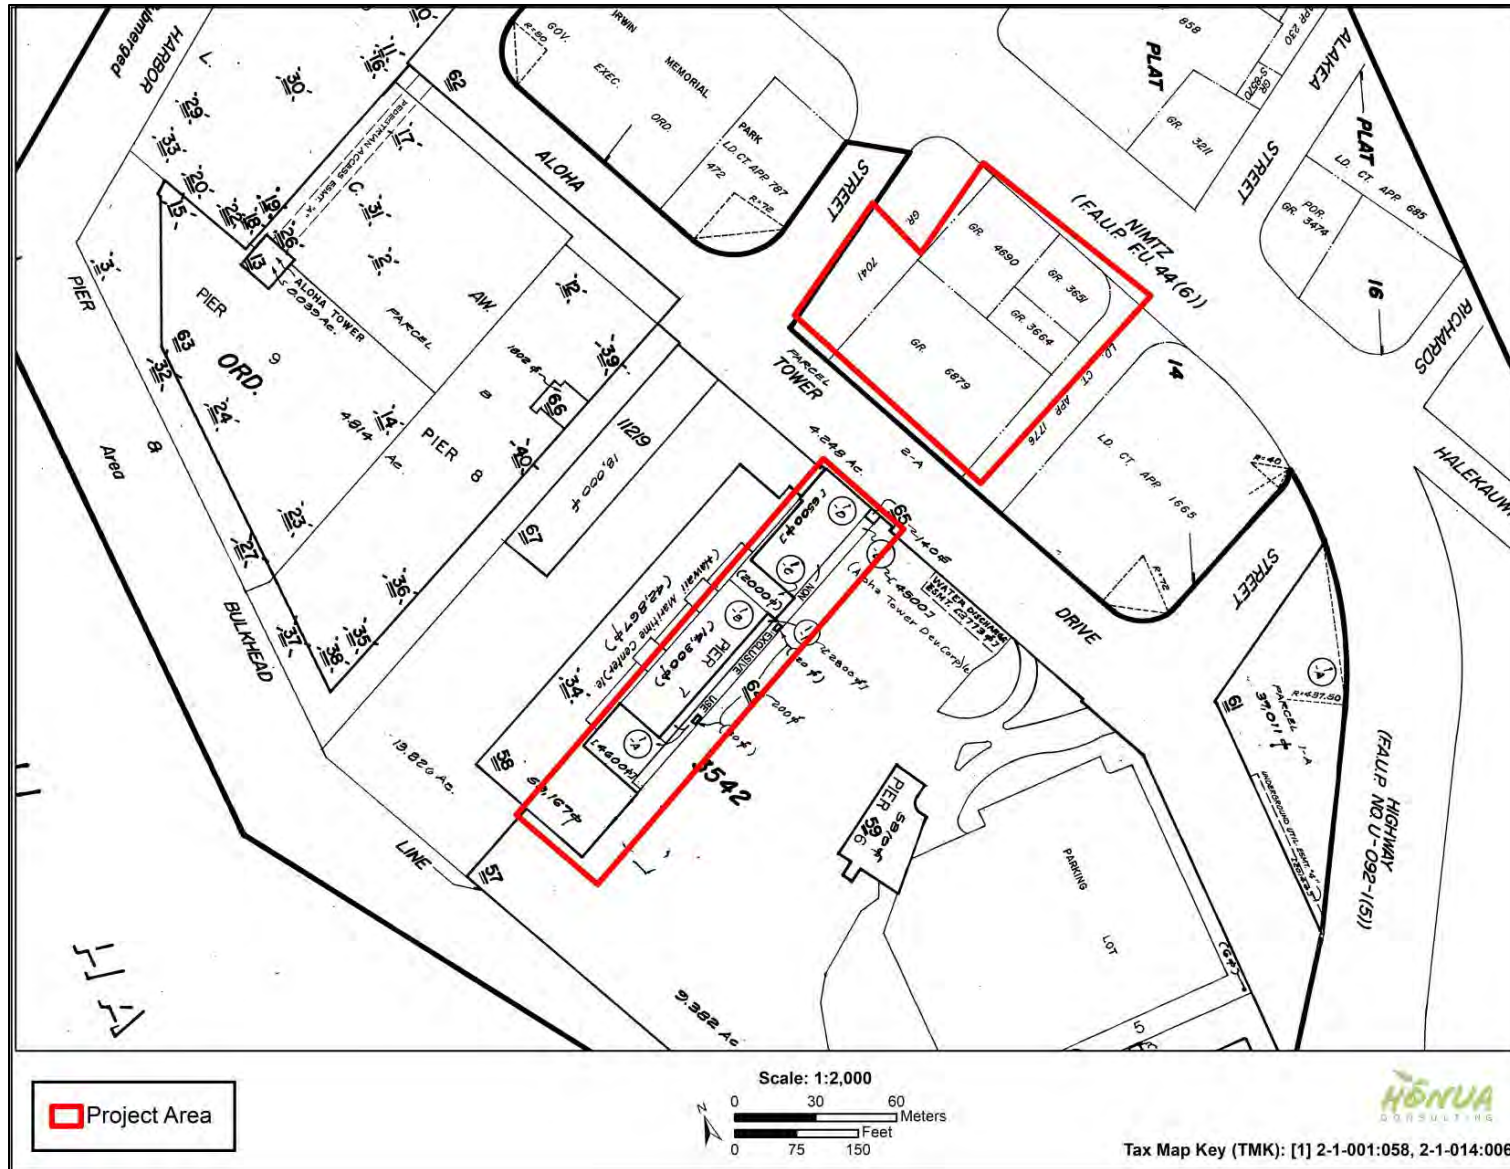

Figure 3. Portion of Tax Map Key (TMK): [1] 2-1-001 showing the project area

Tradewinds Garden and Glass Museum

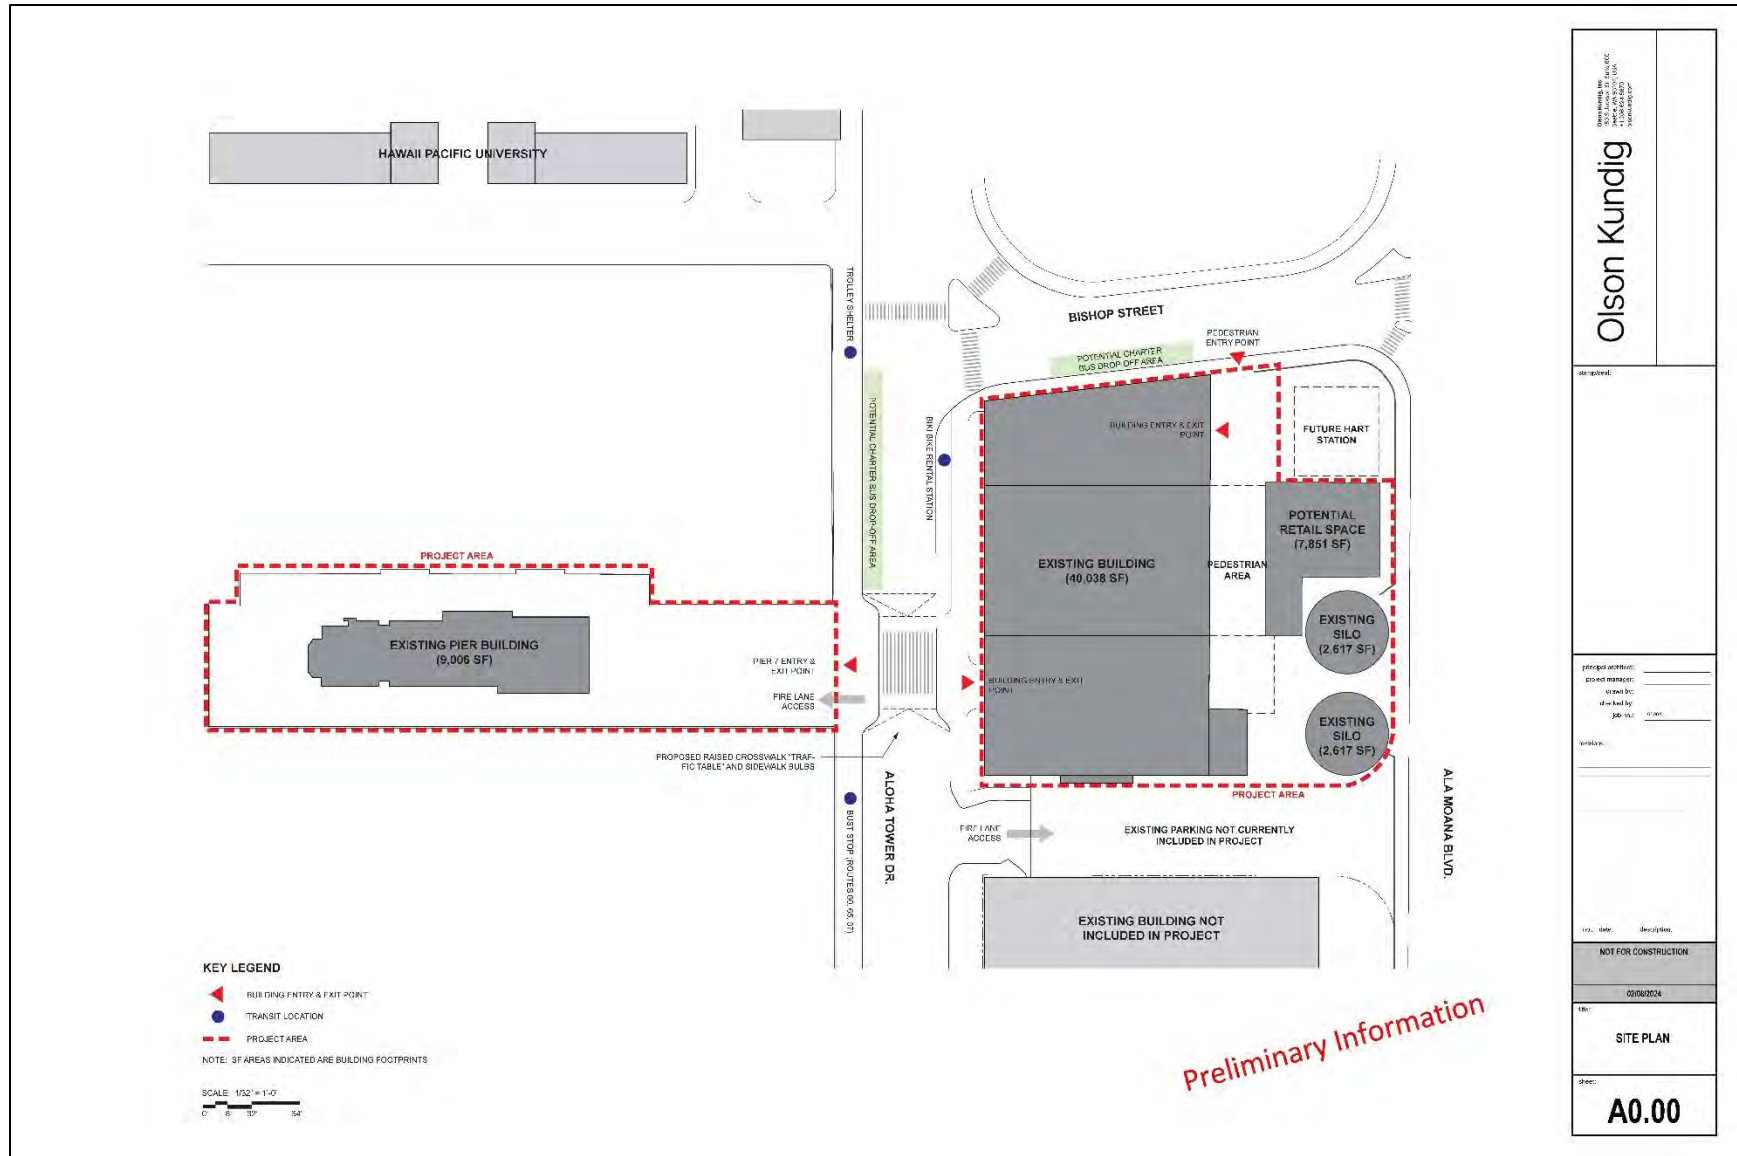

Figure 4. Preliminary Plan showing the project area (provided by client)

The soil within the project area is characterized as Fill Land (FL) (Figure 5). Fill Land contains material from dredging, adjacent uplands, garbage, and biproducts from sugar mills (Foote et al. 1972:31). FL soil types are typically found near Pearl Harbor and in Honolulu adjacent to the ocean. The land type is used for urban development and industrial facilities.

The project area includes the Honolulu Power Plant which was built in the 1920s, added onto in 1954, and decommissioned in 2014 (*Hawai'i Free Press* 2014). The project area also encompasses Pier 7 which extends into Honolulu Harbor and from which the former Hawai'i Maritime Center (1988-2009) is built upon. The ship, *Falls of Clyde*, is currently docked along the pier. The ship was built in 1878 and was once listed on the State and National Registers of Historic Places, as well as a National Historic Landmark. The *Falls of Clyde* was delisted from the Hawai'i Register of Historic Places in 2023 and the National Register in 2024 due to its deteriorated condition (HHF 2024).

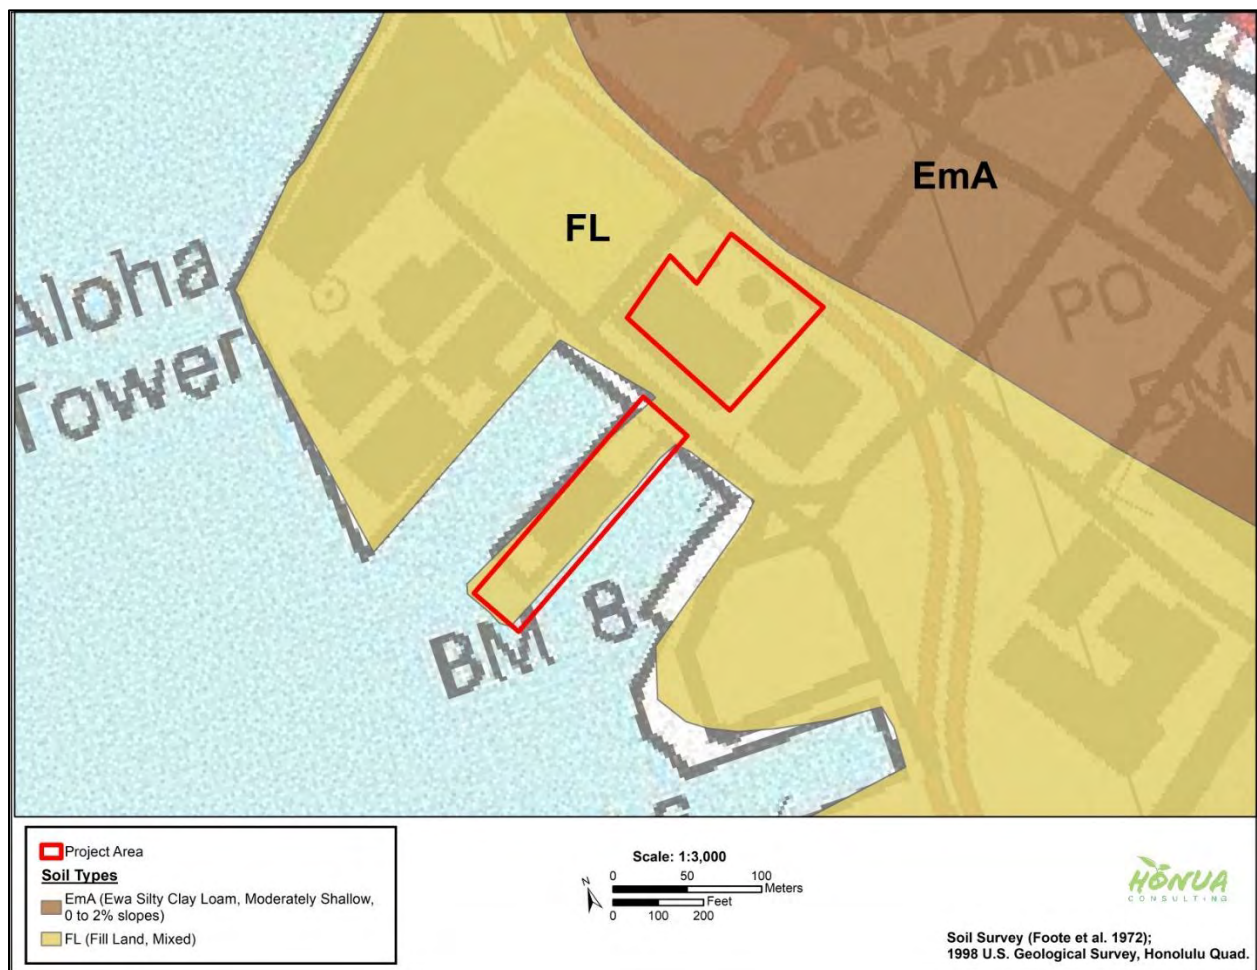

Figure 5. Portion of a USGS with Soil Series Overlay showing anticipated soil within the project area (Foote et al. 1972)

Traditional and Historical Background

Background research for the literature review was conducted using materials obtained from the State Historic Preservation Division (SHPD) library in Kapolei and the Honua Consulting LLC. report library. On-line materials consulted included the Ulukau Electronic Hawaiian Database (www.ulukau.com, Soehren 2002-2010), Papakilo Database (www.papakilodatabase.com), the State Library on-line (<http://www.librarieshawaii.org/Serials/databases.html>), and Waihona ‘Aina Mahele database (<http://www.waihona.com>). Hawaiian terms and place names were translated using the on-line Hawaiian Dictionary (Nā Puke Wehewehe ‘Ōlelo Hawai‘i) (www.wehewehe.com) and Place Names of Hawaii (Pukui et al. 1974). Historic maps were obtained from the State Archives, State of Hawai‘i Land Survey Division website (<http://ags.hawaii.gov/survey/map-search/>), and UH-Mānoa Maps, Aerial Photographs, and GIS (MAGIS) website (<http://guides.library.manoa.hawaii.edu/magis>). Maps were geo-referenced for this report by Catharine Thetford, B.A. using ArcGIS Pro desktop. GIS is not 100% precise and historic maps were created with inherent flaws; therefore, geo-referenced maps should be understood to have some built-in inaccuracy.

2.1 Traditional and Historic Places of Honolulu

The place name “Honolulu” (“sheltered or protected cove”) has international recognition (Pukui and Elbert 1986:79). In the 1860s, native Hawaiian historian Samuel Kamakau wrote about the origin of the name, Honolulu:

Honolulu was originally a small place at Niukukahi [at the junction of Liliha and School streets] which some man turned into a small taro patch. Because of their aloha for him, his descendants gave this name to the whole ahupua‘a. (Kamakau 1976:7)

Prior to its discovery by foreigners, the vicinity in and around Honolulu Harbor was named Kou, so named because groves of kou (*Cordia*) trees were a prominent feature on the landscape. It was here that the city now called Honolulu began to grow and was established as a haven for foreign ships (Handy and Handy 1972). Kou was noted for a number of heiau (temple/ceremonial sites), particularly in the Nu‘uanu area. Pukui et al. (1974:117-118) describes Kou as “the area from Nu‘uanu Avenue to Alakea Street and from Hotel Street to the sea, noted for kōnane [Hawaiian checkers] and for ‘ulu maika [an ancient game likened to lawn bowling] and said to be named for the executive officer (Ilamuku) of Chief Kākuhihewa of Oahu” (also described in Pukui and Elbert 1986:167).

Several additional traditional place names are known to have been used for land areas of Honolulu, prior to terming the entire region as Honolulu. These names include Kīkīhale (small area from Maunakea St. and King St. to Nu‘uanu Stream), Kapu‘ukolo (area bound by Nu‘uanu Stream to Honolulu Harbor), Nihoa (waterfront to west of project area), Kuloloia (former beach near the foot of Fort St. and extending east to Kaka‘ako), Honoka‘upu (waterfront at makai [seaward] end of Alaka‘i St.), Koaopa (area near the coast to the east of the project area), and Waikahalulu (waterfront between Fort St. and Richards St.). A Bishop Museum map depicting Honolulu in 1810 based off early descriptions shows place names and important sites (Figure 6). Place names used in this report and shown on corresponding maps are listed in Table 1.

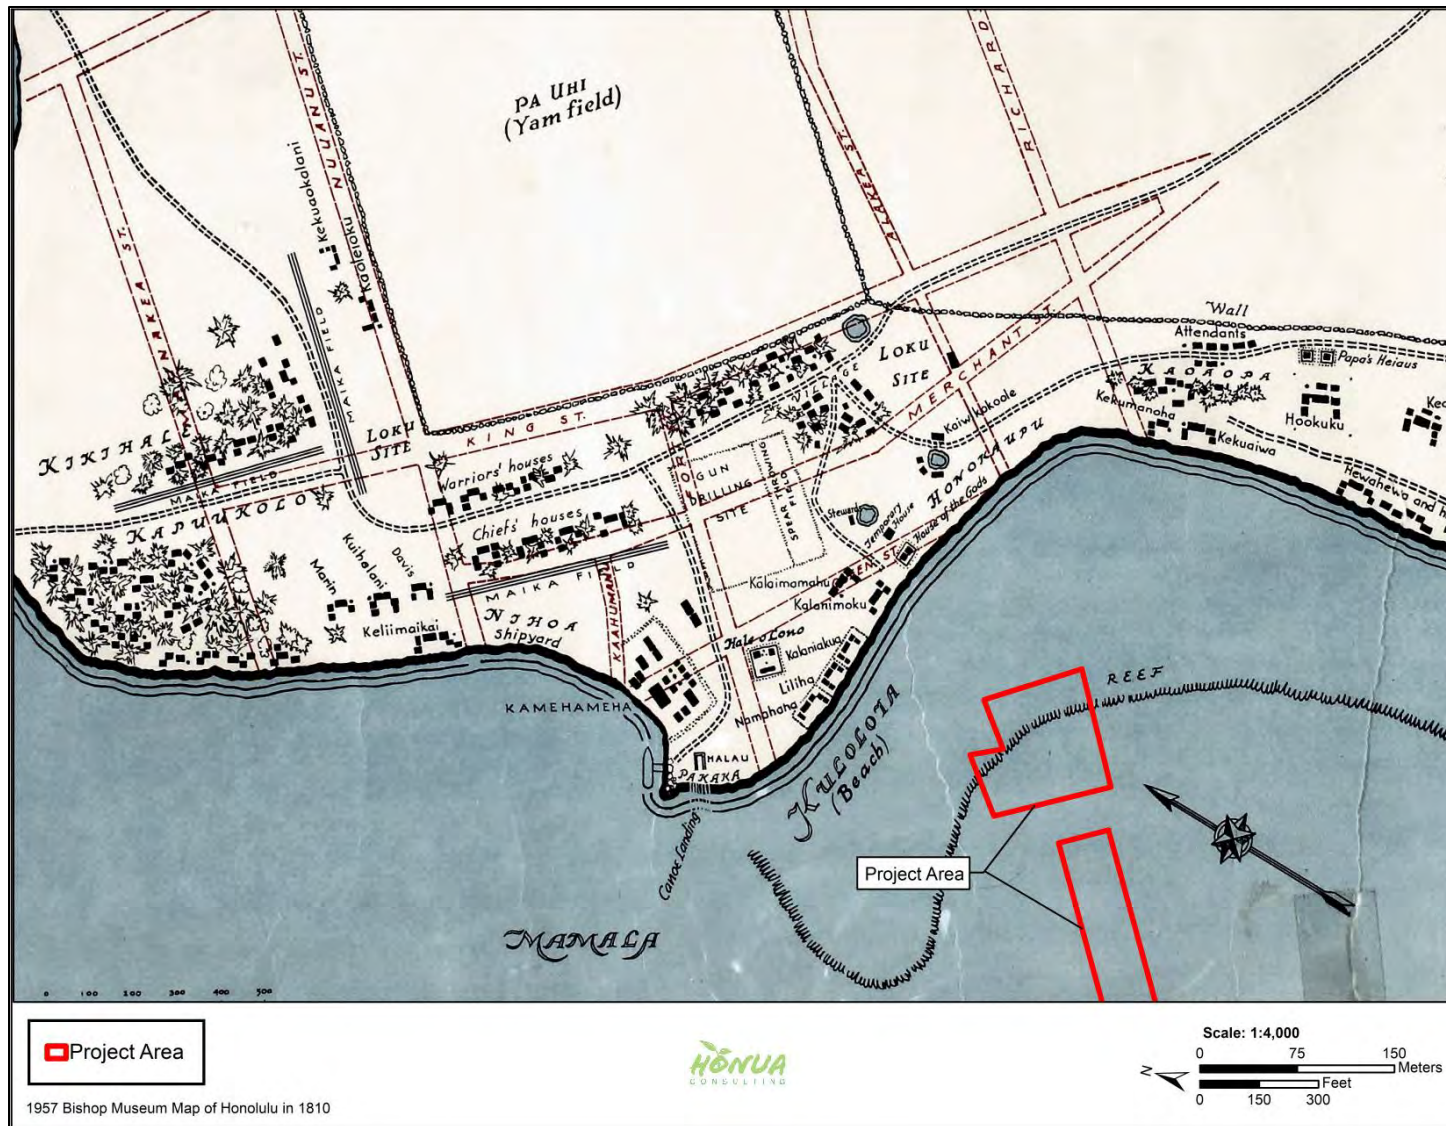

Figure 6. 1957 Bishop Museum Map of Honolulu showing a rendering of Honolulu as it looked in 1810 with city streets of the 20th century overlaid, the project area is outlined in red (Rockwood and Barrere 1957)

Table 1. Table Listing Place Names Referenced and Shown on Maps in this Report

Place Name	Translation	Description/Location	Source
Hale o Lono	House of Lono	On all the islands we these heiau for worship of Lono, including ceremonies for rain and growth	Pukui et al. 1974:38, Bishop Museum 1810 (Figure 6)
Honoka‘upu	Albatross bay	Land section along waterfront beyond the seaward end of Alaka‘i St. in downtown Honolulu, old surfing area, coconut grove	Pukui et al. 1974:49; Bishop Museum 1810 (Figure 6)
Honolulu	Protected bay	Capitol of Hawai‘i, old names for Harbor include Kou and Māmala	Pukui et al. 1974:49-50
Ka‘ākaukukui	The right (or north) light	Filled-in reef, Honolulu Harbor	Pukui et al. 1974:59
Kaoaopa		‘ili ‘āina (small land area)	Soehren 2019, Bishop Museum 1810 (Figure 6)
Kapu‘ukolo		Old section of Honolulu bounded by Nu‘uanu Stream and Honolulu Harbor	Pukui et al. 1974:90, Bishop Museum 1810 (Figure 6)
Kauanono‘ula	The dark red rain	Area around the intersection of Merchant and Alakea St. in Honolulu, named for chiefess fond of kōnane	Pukui et al. 1974:91
Kīkīhale		Old section of Honolulu bordered by Maunakea St. and King St. to Nu‘uanu Stream, named for the daughter of Chief Kou	Pukui et al. 1974:110, Bishop Museum 1810 (Figure 6)

Place Name	Translation	Description/Location	Source
Kou	Kou (<i>Cordia</i>) tree	Old name until 1800 for Honolulu Harbor and vicinity, including the areas from Nu‘uanu Ave to Alakea St. and Hotel St. to the sea; noted for kōnane and ulu maika, named for an officer of Chief Kākuhihewa	Pukui et al. 1974:117-118
Kuloloia		Former beach extending from the foot of Fort St. to Kaka‘ako, Honolulu	Pukui et al. 1974:124, Bishop Museum 1810 (Figure 6)
Māmala		Bay, Honolulu Harbor to Pearl Harbor, named for a shark woman who lived at the entrance to the harbor and played kōnane	Pukui et al. 1974:144
Nihoa	Firmly set	Waterfront area in downtown Honolulu formerly owned by Ka‘ahumanu and named by her in honor of her visit to Nihoa Island	Pukui et al. 1974:165, Bishop Museum 1810 (Figure 6)
Niukūkahi	Coconut standing alone	Included an area named Honolulu which was given to the entire area	Pukui et al. 1974:166, Kamakau 1976:7
Pākākā	To skim (as stones over water)	Old canoe landing at Honolulu Harbor, wharf building on same location; heiau	Pukui et al. 1974:175, Westervelt 1915:25, 27

Place Name	Translation	Description/Location	Source
Pele‘ula	Red Pele	Lane, old section of downtown Honolulu, named for a chiefess seer who tried to steal Lohi‘au from Hi‘iaka during a kilu game, many healing heiau were here	Pukui et al. 1974:183
Ulakoheo		Area west of Nu‘uanu Ave. known as the old iron works, end of ali‘i ulu maika course	Westervelt 1915:15-25
‘Ulakua	Back red	Shore area and ancient surfing area near foot of Richards St., downtown Honolulu	Pukui et al. 1974:214
Waikahalulu	Water [of] the roaring	Waterfront area between Fort St. and Richards St., formerly a reef that was filled in when the harbor was dredged in early 1850s	Pukui et al. 1974:222

One of the earliest references for lands of the Honolulu region was recorded by preeminent Native Hawaiian historian David Malo in the 1840s, who listed the genealogies of ancient chiefs. Notably, Luanu‘u, son of Laka, died in Honolulu and was buried in Nu‘uanu, while his great-grandson, Pau, son of Hua, was born at Kewalo (Malo 1951:191).

Noted places in the region were also described in the tradition of Pele and Hi‘iaka (Kapihenui 1861-1862; Hooulumahiechie 2008; Desha and Keonaona 1924-1928), Hi‘iaka-i-ka-poli-o-Pele, youngest and beloved sister of Pele, goddess of the volcano, was sent to fetch Kaua‘i chief, Lohi‘au, from Kaua‘i and return with him to Kīlauea on Hawai‘i. This epic account includes site history, place name documentation, and accounts of noted figures throughout the Hawaiian Islands. The tradition also includes a number of mele (chants) and poetical references to noted places between Kapālama Ahupua‘a (to west) and Waikīkī Ahupua‘a (to east) within the Kona

District of O‘ahu. While in the Honolulu region, events focused on games of kilu.¹ Most notable in this account is the reference to Pele‘ula, a chiefess of the area, and for whom an old section of Honolulu was named. Summarizing the tradition of Hi‘iaka’s visit with the chiefess Pele‘ula in the regions of Kou and Honolulu, Gessler (1942:6) wrote that:

Hi‘iaka and Lohi‘au, immortal lovers of legend, entered this harbor in the course of their voyage from Kaua‘i to Hawai‘i, and a little farther up the valley [in the Nu‘uanu and Vineyard streets vicinity] Hi‘iaka’s skill at the game of kilu won her sweetheart from the wiles of the local enchantress Pele‘ula.

The land area of Pele‘ula was also observed by Hawaiian historian John Papa ‘Ī‘ī in the early 1800’s to be “covered with healing heiaus, where offerings were made, and methods of healing were taught” (‘Ī‘ī 1959:46).

According to Westervelt (1915), when Kākuhihewa, the noted ancient king of O‘ahu, divided the island among his favorite chiefs, the area lying roughly between Hotel Street and the ocean and between Nu‘uanu and Alakea Streets was given to and named after Kou, who was an ilāmuku (marshal) for Kākuhihewa. The area was known as Kou up to the time of the reign of Kamehameha I (Westervelt 1915:2). Gessler (1942:8) adds:

At about the same time when the Lord Marshal Kou was staking out his fishing camp along the harbor, another chief, it is said, occupied another fief under Kakuhihewa farther up the valley. This chief’s name was Honolulu. For many years, far into the time of the white men’s occupation of the island, a stone that stood near the intersection of Liliha and School streets was called Pohaku o Honolulu, the Honolulu stone. But the area between the present course of Hotel Street and the sea was “the land of Kou”.

Westervelt (1915) provided a summary of place names and their related stories in the Honolulu/Kou region.

Ke-Kai-o-Mamala was the name of the surf which came in the outer entrance of the harbor of Kou. It was named after Mamala, a chiefess who loved to play konane, (Hawaiian checkers), drink ‘awa, and ride the surf. Her first husband was the shark man Ouha, who later became a shark god, living as a great shark outside the reefs of Waikiki and Koko Head. Her second husband was the chief Hono-kau-pu (Hono-ka‘upu - Albatross bird bay), to whom the king gave the land east of Kou, which afterward bore the name of its chief. In this section of Kou now called Honolulu were several very interesting places...

...Kou was probably the most noted place for konane on O‘ahu. There was a famous stone almost opposite the site of the temple. Here the chiefs gathered for many a game. Property and even lives were freely gambled away. The Spreckels

¹ Kilu is a Hawaiian game in which a gourd or a coconut shell, cut in half, is tossed at an opponent’s pob (something like horseshoes). The individual who successfully hits the pob that he or she had selected was the winner and could claim a kiss or some other favor from the opponent (Malo 1951:216).

Building covers the site of this well-known gambling resort.

In Honoka‘upu was one of the noted places for rolling the flat-sided stone disc known as “the maika stone.” This was not far from Richards and Queen Streets, although the great ‘Ulu-maika’ place for the gathering of the chiefs was in Kou. This was a hard, smooth track about twelve feet wide extending from the corner of Merchant and Fort Streets now occupied by the Bank of Hawai‘i along the seaward side of Merchant Street to the place beyond Nu‘uanu Avenue known as the old iron works at ‘Ula-ko-heo. It was used by the highest chiefs for rolling the stone disc known as “the maika stone.” Kamehameha I is recorded as having used this maika track.

‘Ula-kua was the place where idols were made. This was near the lumber yards at the foot of the present Richards street.

Ke-kau-kukui [Ka‘ākaukukui] was close to ‘Ula-kua, and was the place where small konane boards were laid. These were flat stones with rows of little holes in which a game was played with black and white stones. Here Mamala and Ouha drank awa and played konane. Here also Kekuanao‘a, father of Kamehameha V, built his home.

“Ka-ua-nono-‘ula” (the rain with the red rainbow) was the place in this district for the “wai-lua” or ghosts, to gather for their nightly games and sports. Under the shadows of the trees, near the present Hawaiian Board rooms at the junction of Alakea and Merchant streets, these ghosts made night a source of dread to all the people. Another place in Honolulu for the gathering of ghosts was at the corner of King Street and Nu‘uanu Avenue.

In Kou itself was the noted Pakaka Temple. This temple was standing on the western side of the foot of Fort Street long after the fort was built from which the street was named. It was just below the fort. Pakaka was owned by Kina‘u, the mother of Kamehameha V. It was a heiau, or temple, built before the time of Kakuhewehewa. In this temple, the school of the priests of O‘ahu had its headquarters for centuries. The walls of the temple were adorned with heads of men offered in sacrifice.

Enormous quantities of stone were used in the construction of all these heiaus often passed by hand from quarries at great distances so the work of erection was one consuming much time and energy... (Westervelt 1915:15-25)

2.1.1 Pākākā Heiau, Hale o Lono, and the Residence of Liholiho

The history of Pākākā Temple is described in detail in Westervelt's (1915) story “The God of Pakaka Temple”. The following summary tells how the god of that temple came into being.

Kalauokekahuli, a sacred tree once grew in Waipi‘o Valley. The goddess Haumea stopped there for a time and saw a beautiful tree. She agreed to aid a princess and her mother who were very sick in exchange for the tree. After she acquired the tree, Haumea traveled to Maui and planted her tree by Waihe‘e Stream [atop Pu‘u-kuma or Pu‘u-ku‘ua hill]. The tree grew and grew and Haumea returned to her home in

the mists when the tree blossomed. Then one day, a man saw the beautiful tree and cut it down and laid it where it fell. That night a great storm broke out that lasted 20 days and nights. The river rushed through the valley and carried the tree and its branches far into the sea.

For six months the waves tossed the branches until one finally landed at Kailua, Kona. The people there saw the branch and where it lay in the water, there were many kinds of fish gathering and leaping around it. The chiefs took the branch and made the god Makalei, which was used for many generations. Another branch landed on Maui and the Maui chiefs used it as a stick for hanging bundles. It became a god for the Maui chiefs, and they named it Kukeoloewa. The body of the tree was hidden among refuse along the beach at Waihe'e.

A chief and his wife were looking for a god for their home and in a dream they were told to get a god. They prayed and consulted priests and on the third night the omens led them to the beach where they saw the tree trunk.

They took the tree, cut out their god, and called it Ku-ho'o-ne'e-nu'u. They built a heiau for it named Waihau [the Waihau class of temples were generally associated with promoting the abundance of the land], and made it taboo. The power of this god was very great and it was noted throughout all the Hawaiian Islands.

The king who was living on O'ahu heard about the tree and sent his servants to Maui to find out whether such an idol did exist. They found the god and told the chief who owned it that the king wanted to establish it at Kou, and would build a temple for it there. The chief readily gave up the god and it was taken to its new home. Thus Pakaka Heiau was built at Kou and the god Ku-ho'o-ne'e-nu'u was placed in it. Pakaka became the most noted temple on the island and the log became god of the chiefs of O'ahu. (Westervelt 1915:27)

Citing historical accounts, McAllister (1933:81) reported that Pākākā Heiau was:

...an ancient temple, a Waihau po'okanaka [a temple at which human sacrifices were sometimes used; Ku-ho'o-ne'e-nu'u was a war god of the chiefs of O'ahu]. It was built by Ka-maunu-i-Halakaipo the chief. Ku-ho'one'e-nu'u was the god.

Native historian John Papa 'Ī'ī who wrote about his childhood experiences among members of the Kamehameha household, describing the heiau and features around it:

...a short distance from where the Hale Hookolokolo, or court house, later stood. There was a beach there [Kuloloia], and heiau houses, each one enclosed with a fence. Wooden female images stood outside of each enclosure, with iholena and popo'ulu bananas in front of them. There were maoli bananas before the male images at the lele altar inside of the enclosure of lama wood. Back of the male images of wood was an 'anu'u tower, about 8 yards (iwilei) high and 6 yards wide. It stood on the right side of the house, and was covered with strips of white 'oloa tapa attached to the sticks resembling thatching sticks. The opu tower was just as tall and broad as the 'anu'u [oracle tower], and was wrapped in an 'aeokahaloa tapa

that resembled a moelola tapa. The small lama branches at its top were like unruly hair, going every which way. The opu stood on the left side of the house, facing the images and the 'anu'u. Between the two towers and extending from one to the other was a fine pavement of stones. In line with the middle of the pavement were the gate and the house which was called the Hale o Lono, where Liholiho was staying. It was thatched with dried ti leaves [page 56], just as Hale o Keawe in Honaunau, Hawaii, was thatched. Houses of this kind were all thatched with ti leaves, and all the posts and beams were of lama wood. The Hale o Lono was like a heiau. There were two others like it in the vicinity, one called the Hale Hui and the other, Hale o Kaili. The Hale Hui was the dwelling for miscellaneous gods and Hale o Kaili was for the god Kaili, or Kukailimoku.

As the boy [Ii] drew near the Hale o Lono, he saw two crossed lama sticks outside the entrance gate. He knew that the tapa covering he wore must be removed before entering, and this he did although he was not yet near the houses. Then he walked to the steward's house just outside the enclosure and found Liholiho there waiting for him. When he was recognized by the occupants of the house and was told to enter, he went in and sat by the edge of the fireplace. He bundled his tapa and just sat as a stranger. The chief and people of the house treated him kindly... ('Ī'ī, 1959:56-58)

In traditions of the progenitors of the Hawaiian race - the goddess Papa, who was also called Haumea, and her husband, the god Wākea - it is said that these creative forces of nature took human form and lived on the Ko'olau side of O'ahu. A reference to Pākākā Heiau as a place of human sacrifice is discussed in Westervelt (1915) and Handy and Handy (1972), as one of the land sections of Waikahalulu near Kou is cited as being the setting of a supernatural 'ulu (breadfruit tree), which later became the goddess Kāmeha'ikana:

...On the Honolulu side of the mountains were many chiefs and their people, living among whom was Lele-ho'o-mao, the ruler, whose fields were often despoiled by Papa and her husband. It was his servants who while searching the country around these fields, had found and captured Wakea. They were forcing him to the temple Pakaka to be there offered in sacrifice. They were shouting, "We have found the mischief maker and have tied him."

The Pakaka temple through its hundreds of years of existence received from time to time human sacrifice (Westervelt 1915:28-34).

Learning of her husband's plight, Papa ran to Wakea and embraced him. She then took the form of an 'ulu (breadfruit) tree, enclosing Wakea within the tree and thus rescued him. The place at which this occurred is at Waikahalulu, near the present day Lili'uokalani Botanical Park on School Street, a short distance above the lands of Kou (Handy and Handy 1972:449).

The Waikahalulu waterfront was known to be a place for diving, "usually crowded with both chiefs and commoners" ('Ī'ī 1959:63).

2.1.2 Māmala - The Bay of Honolulu

The tradition of “Mamala the Surf-Rider” is an account of an ancient chiefess of this region. Her story, as recorded by Westervelt (1915), mentions many names of people which were later made into place names of Honolulu and surrounding districts. A synopsis of this legend is included here:

“Kou” was a noted place for games and sports among the chiefs of long ago. A little to the east of Kou was a pond with a beautiful grove of cocoa-nut trees belonging to a chief, Honoka‘upu, and afterward known by his name. Straight out toward the ocean was the narrow entrance to the harbor, through which rolled the finest surf waves of old Honolulu. The ocean bore the name “Ke-kai-o-Mamala” (The sea of Mamala), and the high surf bore the name “Ka-nuku-o-Mamala” (The mouth or peak of Mamala).

Mamala was a chiefess of kupua [supernatural] character. This meant that she was a mo‘o [nature-water form goddess], as well as a beautiful woman, and could assume whichever shape she most desired. One of the legends says that she was a shark and woman, and had for her husband the shark-man Ouha, afterward a shark-god having his home in the ocean near Koko Head. Mamala and Ouha drank ‘awa together and played konane on the large smooth stone at Kou.

Mamala was a wonderful surf-rider. Very skillfully she danced on the roughest waves. The surf in which she most delighted rose far out in the rough sea, where the winds blew strong and whitecaps were on waves which rolled in rough disorder into the bay of Kou. The people on the beach, watching her, filled the air with resounding applause, clapping their hands over her extraordinary athletic feats.

The chief, Honoka‘upu, chose to take Mamala as his wife, so she left Ouha and lived with her new husband. Ouha was angry and tried at first to injure Honoka‘upu and Mamala, but he was driven away. He fled to the lake Ka-ihi-kapu toward Waikiki. There he appeared as a man with a basket full of shrimps and fresh fish, which he offered to the women of that place, saying, “Here is life [i.e., a living thing] for the children.” He opened his basket, but the shrimps and the fish leaped out and escaped into the water.

The women ridiculed the god-man. As the ancient legendary characters of all Polynesia could not endure anything that brought shame or disgrace upon them in the eyes of others, Ouha fled from the taunts of the women, casting off his human form, and dissolving his connection with humanity. Thus he became the great shark-god of the coast between Waikiki and Koko Head.

The surf-rider Mamala is remembered in a beautiful mele, or chant, which comes from ancient times:

“The surf rises at Ko‘olau,
Blowing the waves into mist,
Into little drops,
Spray falling along the hidden harbor.

There is my dear husband Ouha,
There is the shaking sea, the running sea of Kou,
The crab-like moving sea of Kou.
Prepare the 'awa to drink, the crab to eat.
The small konane board is at Honoka'upu.
My friend on the highest point of the surf.
This is a good surf for us.
My love has gone away.
Smooth is the floor of Kou,
Fine is the breeze from the mountains.
I wait for you to return,
The games are prepared,
Pa-poko, pa-loa, pa-lele,
Leap away to Tahiti
By the path to Nu'umealani (home of the gods),
Will that lover (Ouha) return?
I belong to Honoka'upu,
From the top of the tossing waves.
The eyes of the day and the night are forgotten.
Kou has the large konane board.
This is the day, and to-night
The eyes meet at Kou (Westervelt 1915:52-54)

2.2 Historical Background

2.2.1 Kou to Honolulu - Western "Discovery" of "Fair Haven"

English Captain William Brown of the *Butterworth* is usually credited as being the first Westerner to see and enter Honolulu Harbor; he entered the harbor in November of 1794 (Krauss 1987, Thrum 1892, Stroup 1959:10, Fornander 1969:264, Bingham 1969:46, Alexander 1907:13, Westervelt 1915:81). The *Butterworth* was a fur trading ship that stopped in Hawai'i for supplies. Captain Brown called the harbor "Fair Haven," but it was less romantically referred to for years by seamen as "Brown's Harbor" (Stroup 1959:11). Brown's entourage included the schooner, *Jackall*, which is said to be the first vessel to enter the harbor, and her tender, *Prince Leboo*, which followed shortly after (Krauss 1987, Thrum 1892:77, Kuykendall 1967:46).

Brown's discovery of the harbor came at a time when Kalanikūpule, ruler of O'ahu, was defending his land from Kā'eo of Maui. Fornander (1969:264) wrote of Brown's involvement in the battle between the two rulers:

In the month of November 1794 Kaeo broke up his camp at Wai'anae and marched on Ewa. At a place named Punahawehe he encountered the troops of Kalanikūpule, who had received an auxiliary force of armed seamen from the English vessels "Jackal" and "Prince Leboo," under command of Captain Brown, who shortly previous had been the first to enter the harbour of Honolulu, known to the natives by the name of Kou.

Under Kamehameha's rule, Honolulu Harbor became the favored "resort for shipping" (Alexander 1907:13). Although previously encamped at Waikīkī, In 1809, Kamehameha and his court moved to Pākākā near the Honolulu Harbor area to conduct trading with visiting captains (Daws 2006).

Honolulu had already increased in size many times by the year of Kamehameha's shift (from "not more than half a dozen" native huts in 1803, to "several hundred" by 1809-1810) and certainly the addition of the court enlarged it further...in the first year of the kings residence, ships arrived at the rate of only one a month (Portlock 1789 cited in Daws 2006:18)

A description of the area at the time of Kamehameha I's rule is given by Gideon La'anui, a retainer in Kamehameha's court:

We came down to the shore of Kou (Honolulu Harbor), my parents and I. The king was awake night and day. My father was drilling with him. Our house was erected where the foreign church (Bethel) stands. Below that was the place of Hoa'ai folks. There stood the cluster of houses belonging to Kaainahuna folks. Adjoining was the drill house, their place. There we lived till the arrival of Kaumualii from Kauai on a foreign ship, commanded by Winship... It anchored outside Mamala... On landing at Pakaka they held audience there, after which was a prostration ho'okupu, at the close of which Kaumualii sailed for Kauai... (Laanui in Thrum 1929:87-88)

2.2.2 Historic Land Tenure and Use Within the Project Area

According to historic maps, the project area was located within a coastal mud flat or shallow reef that was filled-in to create the "Esplanade" starting in the 1850s (Figure 8). A review of Māhele documents indicated the shallow reef belonged to the land of Waikahalulu. Land Court Award (LCA) 4452O claimed by Hazaleponi Kalama (Queen Kalama) in 1848 lists multiple lands throughout the Hawaiian islands, including the 'ili of Waikahalulu in Kona, O'ahu. However, the Hawaiian government refuted her claim to Waikahalulu, stating that the makai (seaward) portion had been under control of public authorities from ancient times and it was clearly regarded as being set apart for use by the government (Awards Book 2:356 cited from Waihona 'Aina 2024). The matter was settled by payment to Queen Kalama for \$22,000 (Kuykendall 1967, Moffat and Fitzpatrick 1995). Four Royal Patents (RP) were found in Waikahalulu which were given to Queen Kalama for lands associated with LCA 4452O, totaling 6.54 acres (RP 5683, 7220, 7255, and 7516).

In 1854, the Hawaiian Government claimed 47.84 acres of Waikahalulu, designated LCA 11219, and was subsequently granted RP 8489 for the land. The limits of LCA 11219 are described as extending from a wall on the north side of Punchbowl St., south to Kaina's small fish pond, then to the bank of a taro small fish pond, along a high water mark towards the angle of a stone wall, then west to a buoy and on the same line as the 20 ft. high water mark (Hawaiian Government, Awards p. 256-258 Volume 10 obtained from Waihona 'Aina 2024). The limits of the LCA are shown on Figure 9 and Figure 10.

Land Grants (LG) for fee simple purchases of the west portion of the project area were made by the Honolulu Electric Co Ltd. and J.A. McCandless from 1893-1918. All LCA, RP, and LG associated with lands within the current project area are listed in Table 2.

Table 2. Table Listing Land Commission Awards and Royal Patents Associated with Land Within the Current Project Area

LCA, RP, LG	Claimant	‘Ili	# ‘Āpana, Acreage	Date
LCA 44520	Hazaleleponi Kalama	Waikahalulu		1848
RP 5683	Hazaleleponi Kalama	Waikahalulu	1 acre	1873
RP 7220	Hazaleleponi Kalama	Waikahalulu	3 acres	1878
RP 7255	Hazaleleponi Kalama	Waikahalulu	5 ‘āpana, 1.48 acres	1879
RP 7516	Hazaleleponi Kalama	Waikahalulu	1.06 acres	1880
LCA 11219	Aupuni (Government)	Waikahalulu	47.84 acres	1854
RP 8489	Hawaiian Government & Electric Co.	Waikahalulu	47.84 acres	1944
LG 3651	The Hawaiian Electric Co Ltd	Honolulu, Alakea & Halekauwila Sts, Esplanade	10,000 sq. ft.	1893
LG 3664	The Hawaiian Electric Co Ltd	Alakea St., Honolulu, Esplanade	5,000 sq. ft.	1893
LG 4690	J.A. McCandless	Honolulu, Esplanade	20,000 sq. ft	1903
LG 6879	The Hawaiian Electric Co Ltd	Honolulu, Alakea St.	0.689 acres	1917
LG 7041	The Hawaiian Electric Co Ltd	Honolulu, Kilauea & Halekauwila Sts.	0.617 acres	1918

2.2.3 Brief History of the Growth and Development of Honolulu

The reason that Honolulu became the bustling world renowned city it is today was strictly based on Māmala Bay, now Honolulu Harbor, which became the best place for landing ships in the Hawaiian Islands. A couple native villages, a small canoe landing, and a heiau were already present in the area at the time of contact, as described in the early historical accounts. Naturally, the town grew up around the harbor as more foreigners began to come to the islands. Honolulu remained relatively Hawaiian with scores of thatched huts until the 1820’s when western-style buildings began to be constructed. The town was officially named Honolulu at this time and early maps show a fort, Pākākā Heiau, a yam field, ‘ulu maika courses, a spear throwing field, walls, and houses of the chiefs, warriors, and villagers (refer to Figure 6). Beginning at this time, the area of Merchant

Street near Honolulu Harbor began to be commercially developed. The town grew but due to disease, the native population declined while the foreign population increased, a trend seen throughout Hawai‘i in the 19th and early-20th century.

Construction of the Honolulu Fort began by Russian representatives who had been given permission to build a storehouse near the harbor in 1815. However, once their Russian flag was raised and the plan was known, they were forced to leave the island (Judd 1975). Construction of the fort was then continued in 1816 under Kalanimōkū and it was utilized as an administrative center and prison until the 1850s. The fort was approximately 340 ft. long by 300 ft. wide, with walls 12 ft. high and 20 ft. thick at the base (Judd 1975) (Figure 7). It was faced with coral blocks cut from the nearby reef with a soil and rubble fill and multiple mounted guns, causing Hawaiians to refer to it as Kekunohu (“thorny back”). In the early to mid-1800s, a plan was made to dismantle the fort and use the coral blocks to extend the wharfage, build a new prison, and improve port facilities (Thrum 1896:100, Kuykendall 1967). After the fort was dismantled in 1857, the coral blocks were used to extend the shoreline some 2,000 feet onto the reef of Waikahalulu (Judd 1975). Rubble from the fort mixed with harbor dredge was used to fill the new land area called the Esplanade, adding some 15 acres of waterfront (Clark 1939, Kuykendall 1967, Judd 1975, Daws 2006). A small image of an 1856 T.A. Hull map is shown in Moffat and Fitzpatrick (1995:87) which appears to show the retaining wall created with the fort’s coral blocks, located along the north and northwest edges of the Esplanade boundary, northwest of the current project area. An 1881 Hawaiian Government Survey map shows the project area makai (seaward) of the developing town and on the edge of a mud flat or low reef area (Figure 11). This map also shows the location of the new prison.

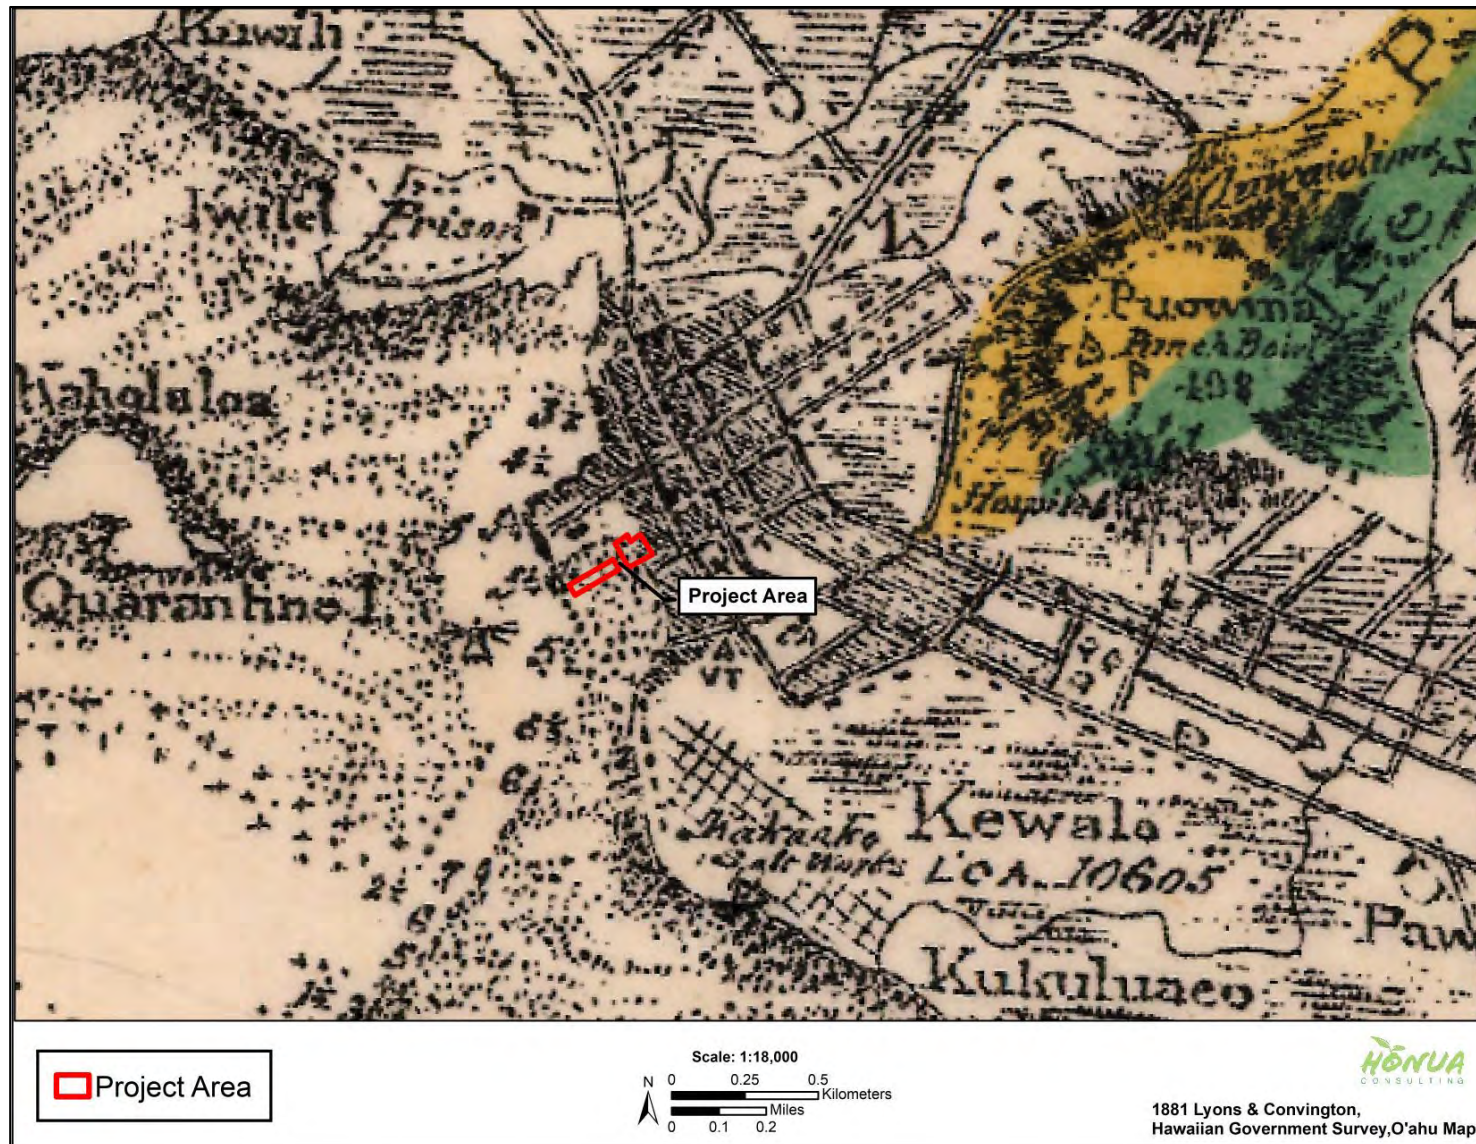

Figure 11. 1881 Lyons & Covington Hawaiian Government Survey Map showing the project area adjacent to mud flats or an area of shallow reef

Coral and basalt block buildings largely began being constructed in the mid-1840's. The original 'Iolani Palace was built by Charles Kanaina in 1845 of coral and was used by Kamehameha III, IV and V, as well as Kings Lunalilo and Kalākaua (Lanzone and Cummins 1976). Other coral and basalt buildings of the area include Kawaiaha'o Church in 1842, the Melchers Building in 1854, and various other buildings of the style constructed through the end of the 19th century, including the Podmore Building (1902). After Honolulu became the capital of the Hawaiian Islands in the 1850's, the area now known as the capital complex began to be developed. 'Iolani Barracks (moved to its present location) was constructed in 1871 and the existing 'Iolani Palace was constructed in 1882 (Riconda 1971, Lanzone and Cummins 1976, Levy 1985). Ali'iōlani Hale (Judiciary Bldg.) was built in 1874 and the Kapuāiwa Building was constructed in 1884. The remainder of the buildings that now comprise the historic portion of the Capital District were constructed between this time and the late 1920's.

The first Chinese came to Hawai'i in the early 1800's and slowly began to settle in a 36 acre area along Nu'uuanu Stream, now known as Chinatown. Later, the area grew due to Chinese plantation workers who had finished their contracts and went into business for themselves opening restaurants, tailor shops, groceries, and various other types of businesses (Riconda 1972b). The Chinatown fire started at a Chinese cookhouse on April 18th, 1886 at the northeast corner of Smith and Hotel Street and soon engulfed much of the area (NDNP 2013). The fire devastated much of the area, but it was quickly rebuilt afterward. By 1900, the area became so densely packed that bubonic plague had become a concern due to several deaths in the area. The Chinatown fire of 1900 was intentionally set as an effort to deter a bubonic plague epidemic, but quickly spread out of control and burned much of the area once again.

Following the burning of portions of downtown in 1900, controlled or otherwise, the burned areas of downtown began to be developed by investors commercially. This spurred the growth and development that led to Honolulu becoming the commercial and financial center of the islands that it is today. Modern downtown Honolulu is a densely packed commercial center blanketed with high-rise commercial and residential buildings but still retaining its historic character in the areas which have been preserved, namely the Capital Complex, Chinatown, and the buildings now comprising the Merchant Street Historic District.

2.2.4 Honolulu Harbor

In the early 19th century ocean transportation by commercial vessels to and from Hawai'i became common with fur traders from the northwest coast of America, the sandalwood trade, whaling ships, foreign trade vessels, and the California gold rush. Honolulu Harbor became the main point of commerce, administration, and immigration to the islands. However, due to tightness of space, the shape of the harbor, and winds the harbor was uneasy to traverse. At times, ships had to be towed into the harbor by double haul canoes and small boats, and even pulled in with oxen, horses, cattle, and people hauling lines up Richards St. (Bush 1957 cited in Wong-Smith and Rosendahl 1990, Kuykendall 1967) (refer to Figure 8).

Honolulu Harbor was developed as early as 1823 with construction of piers, wharfs, warehouses, sheds, storage areas, and various other improvements. By the 1850s, fringes of Honolulu Harbor were filled to accommodate the expansion of the harbor. The Esplanade was an area of some 11 acres makai (seaward) of Queen St., built upon the Waikahalulu reef, that was filled-in from around the 1850s-1890s (Moffat and Fitzpatrick 1995) (refer to Figure 8 through Figure 10 and Figure 13 through Figure 17). In doing so, Fort Street, where the old fort once stood

prior to 1857, was expanded to form the northern boundary of the new land area. Names of the streets of the Esplanade were updated in 1875 (Clark 1939). At that time, the Esplanade land area was bound by Halekauwila St. to the east (now Ala Moana Blvd.), Alakea St. (“white street” due to being paved with coral stones) to the south, and the constructed waterfront to the west simply named Esplanade St. (Thrum 1931a:76, Clark 1939, Pukui et al. 1974:9) (refer to Figure 8). Streets forming blocks in between were named for a steamer often at the wharf, *Kilauea*, the 1840s governor, Kekūanaō‘a, and W.F. Allen (Allen St.), the collector general of customs (Clark 1939). On December 12, 1877 there was a terrible fire known as the Esplanade fire, with losses reaching some \$250,000 (Thrum 1931b:49).

The northern portion of the Esplanade was completed by the 1870s, however, improvements and reclamation efforts along Honolulu Harbor continued southward through the end of the 19th century. An 1888 U.S. Hydrography map shows the project area on the edge of an “extensive mud and sand flat” that was “dry at low water”. The 1888 map shows the project area to be within the Esplanade, adjacent to an area labeled “Reclamation Proceeding” (Figure 14). The map also indicates the coastal area of the Esplanade housed a “Steamers Wharf”. 1891 and 1893 maps of Honolulu show further development of the Esplanade, with proposed city streets drawn over areas yet to be filled to the south of the project area (Figure 15 and Figure 17). The 1893 map labels the building adjacent to the waterfront as “P.M.S.S. Co. Bldg” which refers to the Pacific Mail Steamship Company (1848-1925) based out of San Francisco and synonymous with Gold Rush transportation and Pacific Basin trade (Potash n.d.).

An 1891 Dakin Fire Insurance map shows the current project area containing a “steamer freight shed” “government warehouse”, “shed”, “warehouse Rope & Co”, “government buoys”, “off[ices]”, and a “boat” (Figure 16). The 1891 Dakin also labels the land parcel to the south (Parcel 30A) as “being filled in”. An 1899 Dakin map includes new additions of “shed[s]”, “coal pile[s]”, “storage”, a “machine shop”, and a “boat builder” in the west portion and a “shed”, “cold storage”, and “ammonia cond[ensor]” owned by the “Hawaiian Electric Light Co.” in the east portion of the project area (Figure 18).

In 1898, Hawai‘i was annexed by the United States and became an important American port. In the early twentieth century the harbor continued to be developed with wharves, piers, and maritime infrastructure. A 1902 map of Honolulu shows the relation of the project area to the growing city of Honolulu (Figure 19). A 1906 Dakin Fire Insurance map shows “Alakea Wharf and Shed” on a large pier (Pier 7) extending from the harbor all the way to Allen St. (Figure 20). The 1906 map shows the north side of the pier labeled “to be excavated” and “new wharf”. The south side of the pier is labeled “being excavated”. The 1906 map also shows “Hawn Ele [Hawaiian Electric], Delivery Shed, Cold Storage” and an “Oil Tank” in the east portion of the project area. By 1907, both sides of the pier were nearly dug out. A 1907 map of Honolulu Harbor shows Pier 7 as labeled “Alakea Street Wharf”. Just north of the wharf is labeled “Kilauea Slip (about 2/3 dredged)” and just south reads “Alakea Slip (dredged)” (Figure 21). Across Allen St. from the wharf, the project area is labeled “U.S. Naval Reservation” and “Hwn. Electric Co.”. A 1906/1907 photo of the construction/enlargement of Pier 7 is provided as Figure 22. A photo of the east side of the Pier 7 warehouse is provided as Figure 23.

Thrum’s Annual for 1908 notes improvements to Honolulu Harbor were well underway and described the work as the following:

Contract work on the \$410,000 improvement of Honolulu harbor dredging and enlarging, by the War Department, began early in February by the Hawaiian Dredging Co. The project includes dredging the harbor seaward from present deep water northward and westward of the channel, and between the channel and quarantine wharf, to give greater facilities for largest ships entering or leaving port. The basin of the harbor is being deepened to a uniform depth of 35 feet below high tide, and is nearing completion. The material from this and the channel dredging is building up an island some seven hundred feet wide and extending from the channel northward and westward about 1,400 feet on which is erected the new front range light, with place for several government buildings. (Thrum 1907:165)

Removed dredge material was used to create Quarantine Island, now called Sand Island. Figure 12 shows a picture of the Honolulu Harbor Dredger.

Figure 12. Photo (n.d.) of the Honolulu Harbor Dredger (c. 1849-1933, Hawai‘i State Archives)

In 1912, the value of the harbor for Hawai‘i was touted.

The deepening of Honolulu Harbor to a sufficient depth to enable the largest ships to enter the port and the improvement of harbors and wharves on all of the islands of the group, are important recent achievements. The fortification of Oahu and the steps taken by the Federal government to make Pearl Harbor a great military and naval base in the Pacific...are of a nature to emphasize the very great commercial and strategic importance of the group. (Bryan 1912:39)

The harbor was an integral part of the city, not only for commerce but also for recreation. “From the mid-1800s to the late-1930s Honolulu Harbor was the focus of attention whenever a ship arrived. The crew and passengers were sources of news from the rest of the world” (Wendt 1989:15 quoted in Wong-Smith and Rosendahl 1990:22). Thrum (1912) mentions the warship, *Kaimiloa*, was sacrificed by setting the ship ablaze off the Esplanade during a 4th of July celebration. A 1914 Army map shows the project area within defined city blocks (Figure 24).

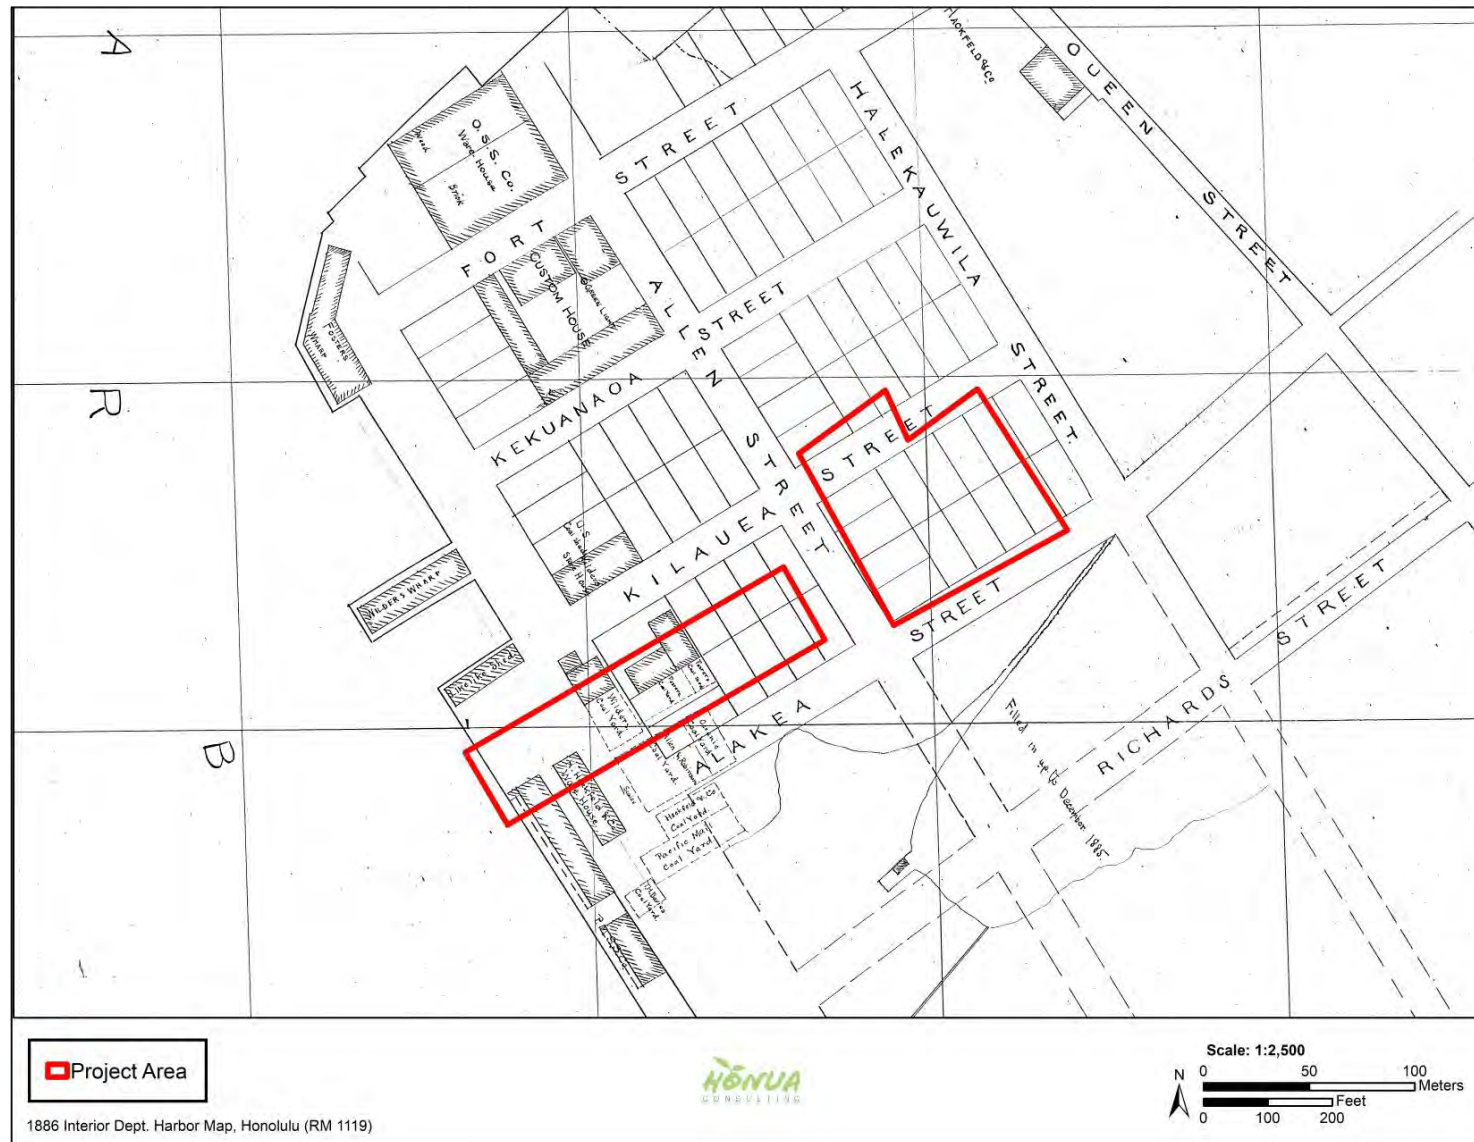

Figure 13. 1886 Interior Department Harbor Map showing the project area containing portions of the “Hackfield & Co Warehouse”, “Wilder’s Coal Yard”, “Allen & Robinson Coal Yard”, “Oceanic Coal Yard”, and “Fosters Coal Yard” (RM 1119)

Figure 23. Circa 1912 photo of the east side of Pier 7 (Wong-Smith and Rosendahl 1990:B-12)

Tradewinds Garden and Glass Museum

A 1914 Sanborn Fire Insurance Map shows the “Alakea St. Wharf, Pier No. 7”, with completed adjoining “Kilauea St. Slip” and “Alakea St. Slip” in the harbor, and “offices” along the west side of Allen St. The east side of Allen St. labels a “coal pile 10’ high”, a “Hawaiian Electric Co. Ltd Power Plant”, “oil tank[s]”, “sheds”, “machine shop/garage”, “transformer houses”, “ice tanks”, “ice apparatus”, “ammonia condenser”, and “cold storage” (Figure 25).

By the 1920s, Hawai‘i was a popular tourist destination. In 1925, Piers 8, 9 and 10 were renovated, which had required demolition of the city block between Fort St., Esplanade, Kekuanaoa, and Allen streets. With completion of Pier 11 in 1919, cruise ships were able to dock on Piers 8-11 of Honolulu Harbor (Walsworth 2020). For further discussion on the development of piers of Honolulu Harbor, particularly Piers 5-14 refer to Wong-Smith and Rosendahl (1990) and for Piers 10-15 refer to O’Hare et al. (2013).

In 1926, Aloha Tower was completed on Pier 9, just north of the current project area, and became the landmark of the Honolulu waterfront. Aloha Tower is 184 ft. tall, the tallest building on O‘ahu for four decades, and offered memorable views of the harbor, a lookout station for harbor pilots, and a lighthouse. Streets were once again renamed, with Kilauea St. being removed, realigned, and replaced with Bishop St. and Allen St. becoming Ala Moana and later, Aloha Tower Dr. Aerial photos of the area from 1926-1927 are provided as Figure 26 and Figure 27.

A 1927 Sanborn Fire Insurance Map shows the renamed streets, Pier 7, and infrastructure related to the Hawaiian Electric Co, Ltd. and Power House, Ice Plant & Cold Storage within the project area Figure 28. Pier 7 is depicted as covered with a long building with “open galleries” along the long north and side sides, “supported by concrete posts and beams”. The Power Plant is labeled “Power: steam & electric, Fuel: oil, Lights: electric, city and well water” and includes a “boiler house and power house”, “steel fuel oil tanks”, “machine shop”, “pipe shop”, “ice freezing tanks”, “cold storage”, and an “ammonia condenser”. A 1927 USGS shows the building on Pier 7 and the Hawaiian Electric Building (Figure 29). Aerial photographs and maps from 1952, 1953, and later show the project area within the heavily developed city of Honolulu (Figure 30 and Figure 31).

The surface of Pier 7 has changed over time. A large warehouse building is shown atop the pier in a 1906 Dakin map (refer to Figure 20). Historic maps and photographs show the building existing until the 1960s (Figure 32 and Figure 33). It is recorded that:

“In 1956, \$6.5 million were expended on Piers 5, 6, 7, and 8 (Krause 1987). This work included filling in the area between Piers 5 and 6, building the mezzanine and ramp, and rebuilding of Piers 8, 9, and 10 (pers. comm., Sian Melman 6/25/90). Like Piers 5 and 6. Pier 12 has since been demolished” (Wong-Smith and Rosendahl 1990:23).

Historic photos and maps from circa 1965-1997 show Pier 7 being used as a level, asphalted parking lot and the presence of a large elevated ramp extending north/south through the project area (Figure 34 through Figure 36). The ramp extends from Aloha Tower over the project area to former Piers 5 and 6 which were combined together for another large parking lot. Pier 7 currently has a building on it that was built around 1988-1989, used as the Hawai‘i Maritime Center until it closed in 2009 (Figure 37). The building has since sat vacant on Pier 7.

The Hawaiian Electric Building in the east portion of the project area, was constructed in the 1920s, added onto in 1954, and decommissioned in 2014 (*Hawai‘i Free Press* 2014).

Harbor construction continued throughout the 21st century. Today, Honolulu Harbor continues to be the center of commerce in Hawai‘i. It houses large container ships, tankers, barges, auto carriers, and cargo ships carrying a wide variety of consumer goods and products (HDOT 2012). Honolulu Harbor averages approximately 40 ft. in depth and includes over 200 acres of container yard, over 30 major berth facilities, and more than 5 linear miles of mooring space. The current project area is located in the Main Harbor Basin (Figure 38). Pier 7 is listed as having a berth length of 380 ft. on its south side, 330 ft. on the north side, with a water depth of 30 ft (HDOT 2012).

Figure 38. Map of Honolulu Harbor (HDOT 2012)

Previous Archaeological Studies

Numerous archaeological investigations have been conducted in downtown Honolulu. Studies near the current project area have largely focused on the Capital District, commercial development of the harbor front, and highway and utility infrastructure. Archaeological studies have documented pre- and post-contact subsurface cultural deposits, building foundations, remnants of the early Honolulu rapid transit system, and human burials. Archeological studies and historic properties present within a 0.3 mile (500 meter) radius of the project area are shown in Figure 40 and Figure 41. They are also listed in Table 4 and are described below.

3.1 Archaeological Studies Within the Project Area

The majority of the project area, including all of TMK: [1] 2-1-014:006 (HECO Power Plant) and the majority of TMK: [1] 2-1-001:057 and 058 (Pier 7), have not been formerly surveyed prior to this study. One previous archaeological study included a small portion of the current project area (Wong-Smith and Rosendahl 1990) and several others have been conducted adjacent to the project area within Bishop Street, Aloha Tower Drive, and Ala Moana Boulevard. No historic properties have been designated within or adjacent to the project area, with the exception of the ship, *Falls of Clyde* (SIHP # 50-80-14-9700, NRHP #73000659), which is proposed to be removed.

The *Falls of Clyde*, is a four-masted ship, measuring approximately 266 feet long by 40 ft. wide (Delgado 1988). The ship was built in 1878 in Port Glasgow, Scotland, on the banks of the River Clyde. It was part of Captain William Matson's Matson Navigation Company sugar fleet from 1898-1907 and was then retrofitted to carry oil to the plantations. It was modified again in 1922 to become a fuel-oil barge and floating gasoline depot (Delgado 1988:6). The ship has been docked in Honolulu Harbor since the 1960s and was opened to the public in 1968. It was first docked along Pier 5 and later moved to Pier 7 where it remains currently. Due to its deteriorated condition, the ship was delisted from the Hawai'i Register of Historic Places in 2023 and the National Register in 2024 (HHF 2024). The ship was once recognized as a National Historic Landmark (NHL), however, the Secretary of the Interior is reviewing whether the ship will continue to be delisted as an NHL. The ship is proposed to either be dismantled or moved back to Scotland.

Figure 39. Post 1968 photo of the *Falls of Clyde* along Pier 7 (HAERS 1968)

3.1.1 Wong-Smith and Rosendahl 1990

In 1990, Paul H. Rosendahl Ph.D. Inc. (PHRI) conducted an historic assessment and field inspection for the Aloha Tower Complex, focusing on the waterfront of Honolulu Harbor from Pier 5 to Pier 14 (Wong-Smith and Rosendahl 1990). Background research indicated that the entire project area had been underwater and that a small portion of shoreline that was once present was removed during channel dredging for the harbor. Therefore, it was determined that the entire project area was filled during land reclamation activities and development of Honolulu Harbor. It was reported to the report author by Captain David Lyman, that coral “blocks from Honolulu fort were used as bulkheads for Piers 8-12” (Wong-Smith and Rosendahl 1990:25). Large, submerged, cut coral blocks were observed during the study some 10 ft. out from Pier 12. The field inspection identified Piers 8 through 12 and Aloha Tower as the only significant surface features present. The report states that other piers in their study area had been dramatically reconstructed. Piers 8-11 were found to be significant under criteria A and C of the National Register.

3.2 Archaeological Studies in the Vicinity

3.2.1 McAllister 1933

In the early 1930’s, the Bishop Museum conducted the first systematic archaeological study of the Honolulu area as part of the island-wide survey of O‘ahu. McAllister (1933:80-83) provides an extensive historical description of Honolulu:

Site 66. Honolulu.

Information regarding former sites within the present limits of Honolulu must come entirely from literary sources. If there are any Hawaiians who remember having heard of old places, I have not been able to discover them.

The old name for Honolulu is said to be Kou, a district from Nu‘uanu to Alakea streets and Hotel Street to the sea. Westervelt (85, p. 1) says:

“Honolulu” was probably a name given to a very rich district of farm land near what is now...the junction of Liliha and School Streets, because its chief was Honolulu, one of the high chiefs of the time of Kakuhihewa. [The name Honolulu is said to mean] “abundance of peace” or “sheltered hollow.”

After the discovery of the excellence of Honolulu’s harbor the town rapidly increased. In 1825 Macrae (59, pp. 16, 17) found:

The town of Hanaruru contains about five or six hundred houses, and if the number of inhabitants is taken at about ten to a hut, where they generally live together in families of two or three generations, they will amount to about 6000, which I think is underrated. Their huts are built without any regular form, enclosed with low mud walls, and a small garden, but without taro ponds the same as we saw at Mowee.

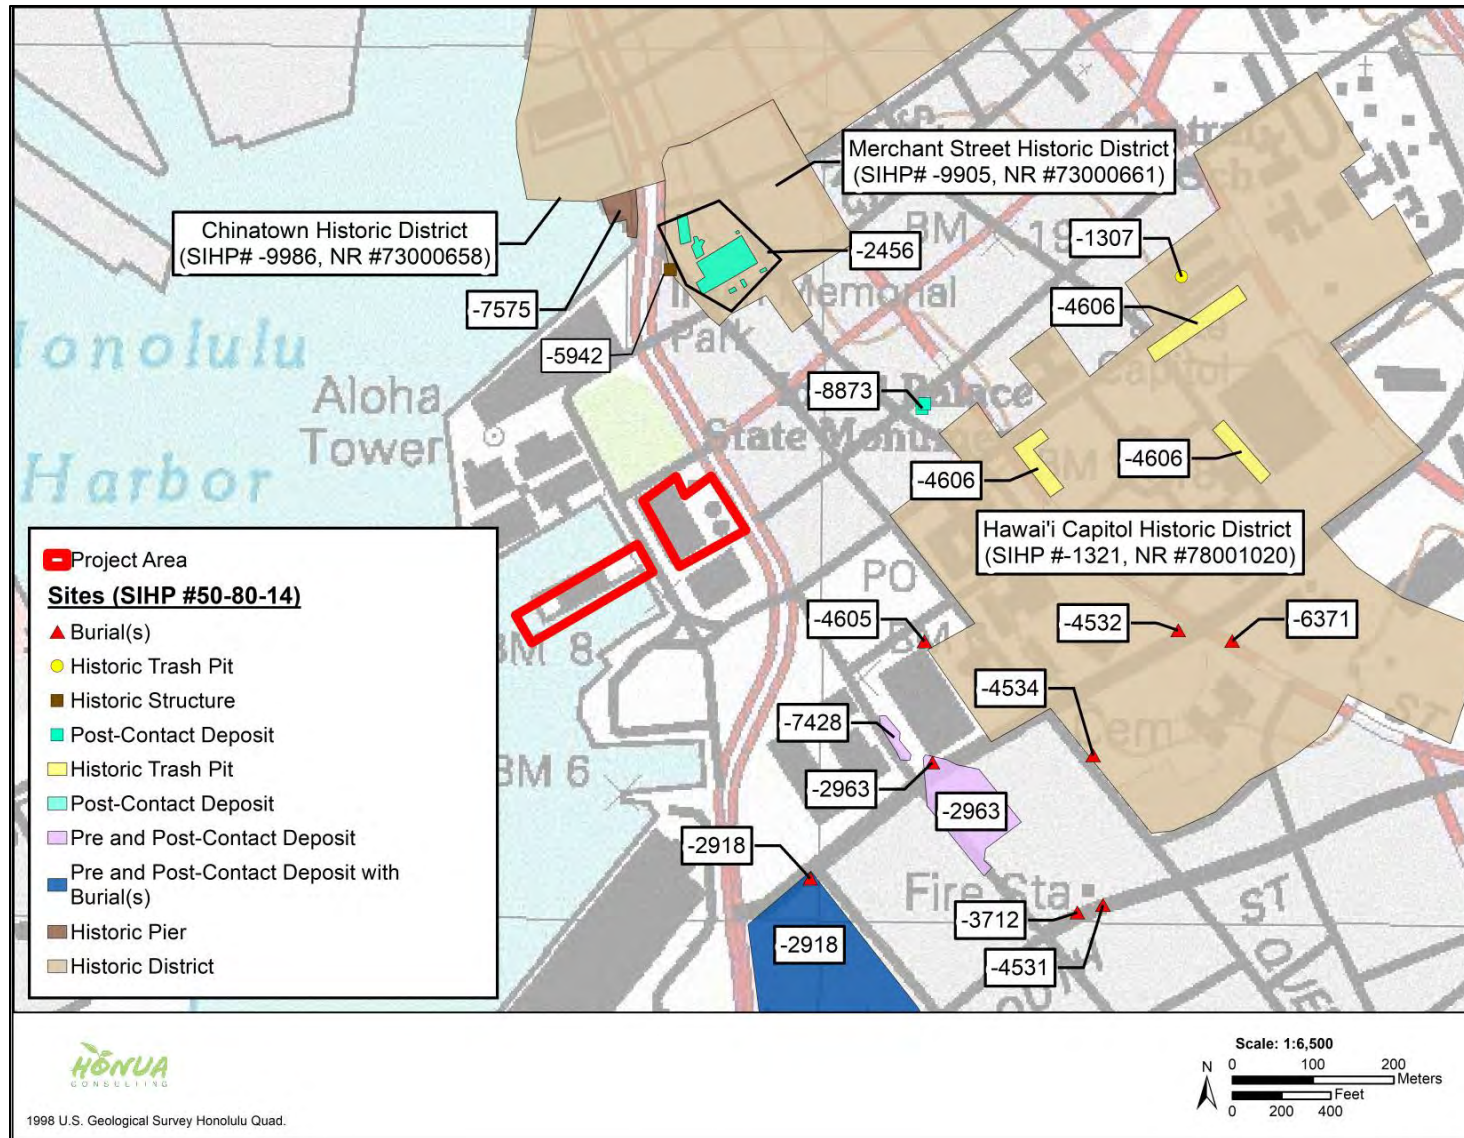

Figure 41. Portion of a USGS showing previously documented sites within 0.3 miles of the project area

Table 3. List of Previous Archaeological Studies within 0.25 Miles of the Project Area

Author(s)	Type of Study	Location	Findings (SIHP #50-80-14)
McAllister 1933 (not shown in Figure 40)	Island-Wide Survey	O'ahu	Honolulu recorded as Site 66 (not shown in Figure 41)
Fairfax 1971a	Archeological Excavation Report	'Iolani Palace, moat curb	Documented a historic refuse pit containing hundreds of artifacts; no SIHP assigned
Fairfax 1971b	Archaeological Excavation and Exploration Report	'Iolani Palace, carriage road	Documented a portion of the old 'Iolani Palace carriage road; no SIHP assigned
Rosendahl 1971	Archaeological Investigation and Exploration Report	'Iolani Palace, carriage road	Documented a portion of the old 'Iolani Palace carriage road; no SIHP assigned
Fairfax 1972	Archaeological Exploration Report	'Iolani Palace	Documented a portion of the parterre garden path of 'Iolani Palace; no SIHP assigned
Spilker 1974	Archaeological Salvage Report	'Iolani Palace, moat wall	Documented a historic refuse pit and a portion of the old 'Iolani Palace carriage road; no SIHP assigned
Luscomb and Reeve 1976	Archaeological Surveillance and Salvage Report	'Iolani Palace grounds	Documented 5 artifact concentrations and 3 refuse pits, over 1,200 artifacts collected; no SIHP assigned
Sinoto 1977	Archaeological Surveillance and Salvage Report	'Iolani Palace	Documented a single refuse pit; no SIHP assigned
Ota and Kam 1982	Osteological Analysis	State Office Building #2, corner of Punchbowl and Halekauwila Street	Documented 6 sets of human remains (SIHP # -2963); tooth evulsion reported, likely traditional Hawaiian or early historic period
Yent 1985	Burial Excavation Report	Honolulu Ironworks Construction Site; TMK: [1] 2 1-29:001	Documented 6 set of human skeletal remains and a sandy loam pre- and post-contact A-horizon (SIHP # -2918), burials likely from Ka'ākaukukui Cemetery (early historic period)

Author(s)	Type of Study	Location	Findings (SIHP #50-80-14)
Clark 1987	Archaeological Monitoring Report	Corner of Punchbowl and Halekauwila Street	Documented 7 human burials and 27 pre- and post-contact features as a portion of previously recorded (SIHP # -2963)
Wong- Smith and Rosendahl 1990	Historical Assessment	Aloha Tower Complex; TMK: [1] 2-1-001; Includes a Portion of Current Project Area	Concluded that the entire project area had been historic period reclaimed land, assessed Piers 8-12 and Aloha Tower as potentially significant surface features
Simons et al. 1991	Historical Research, Archaeological Monitoring, and Artifact Analysis	Armed Forces YMCA Building (Hawai'i State Art Museum); TMK: [1] 2-1-017:001 and 002	Recorded several historic refuse pits (SIHP # -1307) with artifacts dating between the early historic period and early 20 th century some of which were associated with the Hawaiian Hotel
Hurst and Allen 1992	Archaeological Monitoring and Inventory Survey	Towers at Harbor Court, 847 Bethel Street	Recorded a subsurface cultural layer (SIHP # -2456) containing pre- and post-contact features, primarily foundations associated with 19 th century development of Honolulu Harbor
Denham and Kennedy 1993	Archaeological Monitoring Report	State Capital Complex	Recorded two sites; SIHP # -4605, a multi-component site consisting of a single human burial, a historic trash pit, a ditch, a pit, a firepit, and 6 postholes with a radiocarbon date from the firepit ranging to 1390-1700 A.D., and SIHP # -4606, consisting of 9 historic era trash pits throughout the capital complex
Dunn and Rosendahl 1993	Archaeological Inventory Survey	Nu'uaniu Court; TMK: [1] 2-1- 002:026	Recorded 19 features as additional components of SIHP # -2456, consisting of 11 pre-contact and early-historic postholes, a pre-contact pit, an historic ash lens, a foundation wall, a pipe trench, and two historic floors; site was interpreted as being occupied as early as 1250 A.D.

Author(s)	Type of Study	Location	Findings (SIHP #50-80-14)
Pfeffer et al. 1993	Archaeological Monitoring Report	Kaka‘ako Improvement District 1; TMK’s: [1] 2-1-029 to [1] 2-1-032, [1] 2-1-046 to [1] 2-1-048, [1] 2-1-051, [1] 2-1-054, and [1] 2-1-055	Recorded over 149 human burials, including 116 historic burials from Kawaiaha‘o Cemetery (SIHP # -4534) (1825-1920 A.D.), 31 burials from the Honuakaha Smallpox Cemetery (SIHP # -3712 and -4531) (1853-1854 A.D.), a historic burial at Punchbowl Street (SIHP # -4532), and a possible pre-contact burial at Halekauwila Street (no SIHP)
Lebo 1997	Archaeological Data Recovery	Towers at Harbor Court, 847 Bethel Street	Conducted data recovery excavations on the post-contact deposits of previously documented SIHP # -2456, a subsurface cultural layer containing pre- and post-contact features and building foundations; recorded an additional 35 feature components, collected and analyzed hundreds of artifacts dating to the 19 th century
Winieski and Hammatt 2001	Archaeological Monitoring Report	Nimitz Highway; TMK: [1] 1-7-02, 03 and [1] 2-1-02, 13-16, 25, 27, and 29-32	Recorded remnants of a historic light gauge railway (SIHP # -5942) located at the intersection of Queen Street and Nimitz Highway
Dye 2002	Archaeological Monitoring	No. 1 Capitol District Building (Hawai‘i State Art Museum); TMK: [1] 2-1-017:001 and 002	Secondarily deposited historic artifacts were encountered during excavation of the elevator shaft but were assessed as not significant; no sites recorded
Lebo 2002	Archaeological Data Recovery	Towers at Harbor Court, 847 Bethel Street	Conducted data recovery excavations on the pre-contact deposits of previously documented SIHP # -2456, a subsurface cultural layer containing pre- and post-contact features and building foundations; recorded an additional 113 feature components, based on radiocarbon dates the site was interpreted as utilized between 1000 to 1200 A.D.

Author(s)	Type of Study	Location	Findings (SIHP #50-80-14)
Mann and Hammatt 2002	Archaeological Monitoring Report	King Street Rehabilitation Project; TMK: [1] 2-1 por. and [1] 1-7 por.	Recorded a single human burial (SIHP # -6371) interpreted to be of native Hawaiian ancestry on King Street fronting Honolulu Hale; documented a historic trash pit containing butchered animal bones at the corner of North King and Richards Streets
Putzi and Dye 2004	Archaeological Monitoring Report	Ali‘iōlani Hale; TMK: [1] 2-1-025:003	Recorded a single historic refuse pit; assessed as not significant, no SIHP assigned
Hazlett and Hammatt 2008	Archaeological Monitoring Report	American Disabilities Act Improvements at Alakea, Queen, and Merchant Streets; TMK: [1] 2-1-001,[1] 2-1-014, and [1] 2-1-016	Documented historic trash, building materials, and animal bones within fill and/or previously disturbed soils at both intersections; artifacts were assessed as not significant; no SIHP assigned
Hazlett et al. 2008a	Archaeological Monitoring Report	Water Main Installation on Aloha Tower Drive, Nimitz Highway, and Richards Street; TMK: [1] 2-1-014 & [1] 2-1-027; Adjacent to Project Area	Documented fill materials associated with the growth and development of Honolulu Harbor; no sites recorded
Hazlett et al. 2008b	Archaeological Monitoring Report	Fort Street Mall and Hotel Street; TMK: [1] 2-1-002, [1] 2-1-003, and [1] 2-1-010-012	Documented building materials including brick, tile, and concrete as well as broken glass bottle fragments at Fort and Hotel Street; assessed as not significant, no SIHP assigned
Petrey et al. 2009	Archaeological Monitoring Report	Nimitz Highway and Ala Moana Boulevard Resurfacing; TMK: [1] 2-1-014 and 027	Documented various marine and terrestrial fill materials associated with the 19 th century development of Honolulu Harbor, no sites recorded
Fechner et al. 2012	Archaeological Inventory Survey	Seawater Air Conditioning in Kaka‘ako and Downtown Honolulu	Fragmented historic materials were encountered, no sites recorded

Author(s)	Type of Study	Location	Findings (SIHP #50-80-14)
Hammatt 2013	Archaeological Inventory Survey	Honolulu High-Capacity Transit Corridor; TMK: [1] 1-2, [1] 1-5, [1] 1-7, [1] 2-1 and [1] 2-3 (Various plats and parcels)	Recorded 19 sites total (only in vicinity listed); SIHP #50-80-14-7428, cultural deposit with historic infrastructural features, habitation features, and burial sites; added an additional 30 feature components of previously recorded SIHP # -2918 and 12 feature components added to SIHP # -2963
O'Hare et al. 2013 (not on Figure 40)	Archaeological Literature Review and Field Inspection	Pier 12 and Pier 15, Honolulu Harbor; TMK: [1] 2-1-001:043, -044, -045, -055, and -056	Recorded Pier 12, first built as early as 1823 A.D. as SIHP # -7575 and Pier 15 built in 1900 A.D. as SIHP # -7576 (not shown on Figure 41)
O'Hare et al. 2016	Literature Review and Field Inspection	Honolulu Water System Improvements; TMK: [1] 1-5, [1] 1-7, [1] 2-1, [1] 2-3, [1] 2-4 and [1] 2-6 (Various plats and parcels)	No sites recorded
DiVito et al. 2020	Archaeological Inventory Survey	Podmore Restaurant, TMK: [1] 2-1-016:004	Recorded a ditch filled with late-19 th century refuse (Feature 1) and a historic bottle deposit (Feature 2) as SIHP #50-80-14-8873

The native huts are small and thatched with grass from top to bottom, but there are others inhabited by some Europeans and chiefs, which are covered over with mud, half a yard thick, to prevent accidents by fire, which so often occur in the others. These are better finished inside, and the floors are spread over with mats from rushes or the leaves of pandanus.

The huts of the poorer classes are mere hovels, having a low door placed where they creep on hands and knees to get out and in, with nothing to cover the opening but a piece of cloth or mat.

In 1828, a little more 100 years ago, Honolulu was still comparatively Hawaiian. Judd (48, p. 2) remarks: "There! I see the town of Honolulu, a mass of brown huts, looking precisely like so many haystacks in the country; not one white cottage, no church spire, not a garden or tree to be seen save the grove of coconuts".

The famous temple of Honolulu was Pakaka, located at the foot of Fort Street. Westervelt (85, p. 8) records the legend of how Kuhooneenuu came to be the god of Pakaka and regarding Pakaka writes:

This temple was standing on the western side of the foot of Fort Street long after the fort was built for which the street was named. It was just below the fort. Pakaka was owned by Kinau. It was...built before the time of Kakuhihewa. In this temple the school of the priests of Oahu had its headquarters for centuries. The walls of the temple were adorned all with the heads of men offered in sacrifice.

Kamakau (49), who gives a more detailed description of what is believed to be Pakaka heiau, says:

Pakaka was an ancient temple, a Waihau pookanaka. It was built by Kamaunui-halakaipo the chief. Kuhooneenuu was the god...

Iholena and popoulu bananas hung in front of the female idols of the paehumu and maoli bananas hung in front of the male idols at the alter (lele) inside the paehumu which was of lama.

At the back of the male images is the anuu, 24 ft. high, 18 ft. wide, covered with white oloa, standing on North side of the house, and also the opu its height and width similar to the anuu, but this was laid with kapa aeokahaloa, resembling Moeloa kapa. The small lama branches at top are like hair standing on end. The opu stands on the south side of the house facing the images and anuu, the space between the altar and the opu is well paved. In the middle of the space is...the house. The house is covered with dry...leaves (and made like Hale o keawe) and is called Hale o Lono, made o lama

wood, here the young chiefs stay. Two other houses called Hale Hui and Hale o Kaili were also enclosed. The former was for the collective gods, and the other was for Kaili. Two lama posts were crossed at the entrance gate, before entering one must divest himself of his clothing.

Hale ai puupuu (Mua house?) was where the chief and others were in which was the fireplace (umu).

There were apparently a number of heiaus in and about Honolulu. In 1819 Corney (25, p. 101) saw

...several morais, or churches in the village, and a new moon the priests, chiefs and hikanees (aikane) enter them with offerings of hogs, plantains, and cocoanuts, which they set before the wooden images. The place is fenced in and has pieces of white flags flying of the fences.

According to Thrum (79, 4) Kaahaimauli is the name of one of these heiaus which is said to have been located near the site of the palace. Mauna heiau was back of Queen's Hospital on the side of Puowaina (Punchbowl). Kamakau (49) says that the menehune lived on Puowaina, "and the pit for excrement was Pauoa" and as quoted by Westervelt (85, pp. 4, 5):

"Formerly there was an 'imu ahi,' a fire oven for burning men on this hill. Chiefs and common people were burned as sacrifices in that noted place. Men were brought for sacrifice from Kauai, Oahu, and Maui, but not from Hawaii. People could be burned in this place for violating the tabus of the tabu divine chiefs."

"The Great stone on the top of Punchbowl Hill was the place for burning men."

Above Puowaina, on what is now Pacific Heights, there were apparently two heiaus: Kahuoi, mentioned only by Thrum (79, 4), who says it was of husbandry class, but destroyed about 1850; and Kaheiki, a famous heiau mentioned in several legends. Kamakau (49) remarks:

There is Kaheiki at Keoihuihu on the ridge between Nuuanu and Pauoa. It is a temple built by the Menehunes for Kahanaiakeakua. But when the government was taken by the dog Kaupe, Kaihilona the guardian of the dog resided at Kaheiki. Kaihilona the priest.

According to Westervelt (85, p. 6), it was "here the priest and prophet lived who founded the priest-clan called 'Mo-o-kahuna,' one of the most sacred clans of ancient Hawaiians."

Aside from heiaus, there were many important sites in Honolulu, only a few of which are now known... Westervelt also notes (85, p. 6) that Kawaiaha‘o is the name of an old spring, at the site of which the noted church of the same name was built. According to Emerson (60, note, p. 283), “In old times the site on which now stands Bishop’s Bank (Kaahumanu Street) was occupied by a house in which kilu and ume [a sexual game for commoners, counterpart to kilu] were wont to be played.” Two ula-maika courses are mentioned by Westervelt (85, pp. 8, 9):

In Hono-kau-pu was one of the noted places for rolling the ... “maika stone.” This was not far from Richards and Queen Streets.

One of the finest Ula-maika places on the islands was the one belonging to Kou. This was a hard, smooth track about twelve feet wide extending from the corner on Merchant and Fort Streets now occupied by the Bank of Hawaii along the seaward side of Merchant Street to the place beyond Nuuanu Avenue known as the old iron works at Ula-ko-heo. It was used by the highest chiefs for rolling stone disc known as the “maika stone.”

According to Kamakau (49), “At the north side of the Kaumakapili Church [on Beretania between Nuuanu and Maunakea] is an altar of the aku fishhook of Kahuoi. This aku fishhook was very famous.”

On the east bank of the Nuuanu stream at Puehuehu, the old name for the stream where it is crossed by the Nuuanu Street bridge, stood a very famous breadfruit tree, regarding which Kamakau (49) writes:

On my going to see the place where the breadfruit stood, whereby Kamehaikana became a goddess, I found it at Nini, a short distance above Waikahalulu. This breadfruit became a deity, known as Kamehaikana, a goddess famous from Hawaii to Kauai, for its power and ability to overthrow governments. It is own of the deities of Oahu, and was taken by the chiefs of Maui at Hana, and became a deity of Kamehameha when he ruled the land.

Pele-ula, where Vineyard Street crosses Nuuanu, is the land where Hi‘iaka and Lohi‘au visited the chiefess Pele-ula, on their return to Hawaii. This is where the game of kilu was played in which the power and wits of Hi‘iaka were matched with those of Lohi‘au. An entire chapter is given to the minute description of this performance by Emerson (32, p. 168). (McAllister 1933:80-83)

3.2.2 Fairfax 1971a

In 1971, archaeological excavations were conducted on the outside edge of the moat curb on the east corner of ‘Iolani Palace (Fairfax 1971a). The excavation encountered a single refuse pit which contained hundreds of historic-era artifacts associated with the palace and grounds.

3.2.3 Fairfax 1971b

In 1971, an archeological excavation was conducted to obtain information on the old carriage road of 'Iolani Palace (Fairfax 1971b). The excavation consisted of a single test pit on the outer surface of the moat wall. The excavation documented a hard packed, crushed gravel and soil carriage roadbed at approximately 30 cm below surface (cmbs).

3.2.4 Rosendahl 1971

In 1971, the Bishop Museum conducted an archaeological investigation of the old carriage road of 'Iolani Palace (Rosendahl 1971). The investigation consisted of archaeological excavations near the modern gate at Hotel Street and also documented evidence of the old carriage road at approximately 30 cmbs.

3.2.5 Fairfax 1972

In 1972, an archaeological investigation was conducted to obtain information on the parterre garden path (Fairfax 1972). The investigation consisted of the excavation of a trench east of the King Street entrance roadway. The excavation documented the parterre garden path, constructed of packed cinder, at approximately 30 cmbs.

3.2.6 Spilker 1974

In 1974, archaeological monitoring was conducted for the 'Iolani Palace moat wall waterproofing project (Spilker 1974). A trash pit containing historic artifacts and a portion of the old carriage road were encountered during monitoring. A formal analysis was conducted for some of the artifacts and documented ceramics produced by Copeland and Garrett as early as the 1830's A.D.

3.2.7 Luscomb and Reeve 1976

In 1976, the Bishop Museum conducted archaeological monitoring for electrical conduit excavations on the grounds of 'Iolani Palace (Luscomb and Reeve 1976). A total of five artifact concentrations and three trash pits were recorded on the mauka (inland) side of the palace. Over 1,200 artifacts were collected and consisted mostly of historic glass, ceramics, and metal but also coral abraders, a common traditional Hawaiian artifact type.

3.2.8 Sinoto 1977

In 1977, the Bishop Museum conducted additional archaeological monitoring associated with an extension of the previous electrical conduit excavations (Luscomb and Reeve 1976) on the 'Iolani Palace grounds (Sinoto 1977). Additional artifacts and a historic trash pit were documented during monitoring.

3.2.9 Ota and Kam 1982

In 1982, Department of Land and Natural Resources archaeologists conducted an osteological analysis of six sets of human remains inadvertently discovered during construction of State Office Building #2 located on the corner of Punchbowl and Halekauwila Streets (Ota and Kam 1982). The sets of remains were impacted by construction activities and were fragile and incomplete and

only a limited analysis was conducted. The analysis identified tooth evulsion in some of the remains and they were interpreted as dating to between the pre-contact era and 1850 A.D. Following the analysis, the sets of remains were assigned SIHP #50-80-14-2963.

3.2.10 Yent 1985

In 1985, the Department of Land and Natural Resources documented six sets of human skeletal remains inadvertently discovered on the Honolulu Iron Works construction site located at the corner of Punchbowl and Pohukaina Streets (Yent 1985). The burials and their associated burial pits were interred in Jaucas sand at approximately 80 cm below the existing surface of the property. The burials and a sandy loam pre- and post-contact A-horizon were documented as SIHP #50-80-14-2918. Later, it was determined that the burials were associated with the Ka'ākaukukui Cemetery utilized from the 1700's to the early 1800's A.D. (McElroy et al. 2008).

3.2.11 Clark 1987

In 1987, the Bishop Museum monitored construction of a parking garage on the southeast corner of Punchbowl and Halekauwila Street, at the same property where Ota and Kam (1982) documented six sets of human remains discovered during the construction of State Office Building #2 (Clark 1987). A total of 27 pre- and post-contact features were documented as well as seven human burials and several animal burials. Four of the human burials had well defined burial pits and included two flexed burials, a bundle burial, and a burial where position could not be determined. Unidentified wood charcoal found in association with one of the burials (Feature 28) returned a radiocarbon date range of 1270-1410 A.D. Post-mortem breakage and removal of the long bones was also documented in association with the dated burial. Based on the skeletal remains and grave goods present, the individuals were interpreted to be of Hawaiian ancestry and likely maka'ainana (commoners). Pre and post contact artifacts collected consisted of glass bottles, glass and ceramic fragments, rusty metal objects, an adze, a hammerstone, the top to a poi pounder, and a coral abrader. Following monitoring, the remains and deposits were documented as a portion of previously recorded SIHP # -2963.

3.2.12 Simons et al. 1991

In 1991, the Applied Research Group of the Bishop Museum produced a report including historical research, archaeological monitoring, and artifact analysis associated with modifications and rehabilitation of the Armed Forces YMCA Building (Simons et al. 1991). Background research indicated the project area was the site of native huts and domestic dwellings, a bath house, hotel cottages, and the first hotel in Honolulu, the Hawaiian Hotel constructed in 1872. The majority of the artifacts came from a trash pit on Beretania Street side of the property and historic artifacts associated with the hotel were encountered on the Richards Street side of the property. All of the features and artifacts documented during the project dated from between the early 19th and early 20th century and were attributed to use of the Hawaiian Hotel and house lots in the area up until the 1920's. The features documented during the project were recorded as SIHP #50-80-14-1307. Following the project, archaeological monitoring was recommended for any future construction within the parcel and greater Capitol District.

3.2.13 Hurst and Allen 1992

In 1991, the Applied Research Group of the Bishop Museum conducted an archaeological inventory survey and monitoring for the Towers at Harbor Court condominium, the site of the former Ka‘ahumanu Parking Garage (Hurst and Allen 1992). A single historic property, SIHP #50-80-14-2456, was documented and consisted of a subsurface cultural layer containing pre- and post-contact features, primarily comprised of the remains of building foundations associated with development of the area in the 19th century. The artifacts collected included basalt and volcanic glass flakes, modified marine shell, and 19th century glass bottles and ceramic fragments. A total of 6 human burials were encountered during the project but no description of the burials or osteological analysis was included. Osteological analysis of the remains was conducted later during additional work on the property (Lebo 2002).

3.2.14 Denham and Kennedy 1993

In 1993, Archaeological Consultants of Hawaii, Inc. (ACH) conducted archaeological monitoring for telecommunication conduits in the area of the State Capitol Complex (Denham and Kennedy 1993). Two historic properties, SIHP #50-80-14-4605 and SIHP #50-80-14-4606, were documented during monitoring. SIHP # -4605 was a multi-component site which consisted of a single human burial, a historic trash pit, a ditch, a pit, a firepit, and 6 postholes. Unidentified wood charcoal from the firepit returned a radiocarbon date range of 1390-1700 A.D. Additionally, unidentified wood charcoal from one of the post holes returned an age range of 860-1330 A.D. and was interpreted as representing occupation in the 12th century. The human remains were heavily impacted during excavation and the in-situ portion of the burial was disinterred.

SIHP # -4606 consisted of 9 historic trash pits documented in various locations in the conduit excavations. They contained historic glass, ceramics, marine shell midden, and butchered animal bone and were interpreted as dating from between the mid-19th century to the early 20th century. Following monitoring and the subsequent analysis, the sites were assessed as no longer significant.

3.2.15 Dunn and Rosendahl 1993

In 1993, PHRI conducted an archaeological inventory survey for the Nu‘uanu Court project located along Nimitz Highway between Bethel Street and Nu‘uanu Avenue (Dunn and Rosendahl 1993). The survey included the excavation of 6 backhoe trenches which documented a pre- and post-contact cultural deposit covered by historic fill materials. A total of 19 features, recorded as a portion of previously documented SIHP # -2456, were documented and consisted of 11 pre-contact and early-historic postholes, a pre-contact pit, an historic ash lens, a foundation wall, a pipe trench, and two historic floors. The site was interpreted as being occupied as early as 1250 A.D. based on radiocarbon dates obtained from unidentified wood charcoal collected from the site.

3.2.16 Pfeffer et al. 1993

Between 1986 and 1988, Cultural Surveys Hawai‘i Inc (CSH) conducted archaeological monitoring, data recovery excavations, and burial disinterment associated with the Kaka‘ako Improvement District 1 (Pfeffer et al. 1993). Stratigraphy observed during the project consisted of construction fills over natural black cinder and/or Jaucas sand deposits. Numerous pre and post contact artifacts, building foundations, trash pits, midden concentrations, and human burials were recorded in the Jaucas sand encountered during the project. A total of 149 human burials were

recorded and disinterred during the project and include a single historic burial encountered under Punchbowl Street (SIHP #50-80-14-4532), a possible pre-contact burial from under Halekauwila Street (no SIHP), 31 burials from the Honuakaha Smallpox Cemetery (SIHP #'s 50-80-14-3712 and 50-80-14-4531), and 116 historic burials associated with Kawaiaha'o Cemetery (SIHP #50-80-14-4534).

3.2.17 Lebo 1997

In 1991 the Bishop Museum conducted data recovery excavations at SIHP #50-80-14-2456, a multi-component site containing pre- and post-contact features and deposits and human burials previously documented during an archaeological inventory survey and monitoring (Hurst and Allen 1992) for the Towers at Harbor Court condominiums (Lebo 1997). The study consisted of 8 backhoe assisted shovel test probes and the excavation of several block excavation units and a couple 2x2 meter test units. The investigation is one of the largest and most comprehensive studies of 19th century post-contact land use and occupation of early downtown Honolulu and hundreds of historic artifacts were collected and analyzed from the site. Collected artifacts included lithic materials, modified bone and marine shell, marine shell midden, glass bottles, glass and ceramic vessel fragments, building materials, metal, cut nails, window glass, and butchered animal bone all of which were attributed to the historic era. A total of 53 features were documented during data recovery excavations, 18 of which had been previously documented. The documented features were associated with urban development of the area in the 1800's with the foundations of structures cut into earlier historic and pre-contact deposits and features. The pre-contact deposits on the site were not investigated during the data recovery excavations and were conducted later by PHRI (Lebo 2002).

3.2.18 Winieski and Hammatt 2001

In 2001, CSH conducted archaeological monitoring for the Nimitz Highway reconstructed sewer project which extended from River and Hotel Streets and ran east along Nimitz Highway to the Ala Moana wastewater pump station (Winieski and Hammatt 2001). Micro-tunneling was employed during the project and 24 jacking and receiving pits measuring approximately 8 x 8 meters were monitored. A single site, SIHP #50-80-14-5942, was documented at the intersection of Nimitz Highway and Queen Street during monitoring and consisted of the remnants of a light gauge rail track associated with the early Honolulu trolley system. A small amount of historic artifacts and rubbish were also encountered during the project, none of which was assessed as significant.

3.2.19 Dye 2002

In 2001, T.S. Dye and Colleagues Archaeologists, Inc. (T.S. Dye) conducted archaeological monitoring associated with the construction of an elevator and installation of various underground facilities at the No. 1 Capitol District Building, now known as the Hawai'i State Art Museum (Dye 2002). A concentration of historic artifacts was encountered in the elevator excavation and consisted mostly of building materials. A glass bottle and several glass sherds, ceramic dishware sherds, clay pipe fragments, and butchered animal bones were also collected. The secondarily deposited artifacts were interpreted as associated with either the construction, renovation, or demolition of the Hawaiian Hotel. Due to the mixing of artifacts of differing ages and their secondary deposition, no SIHP number was assigned to the deposit.

3.2.20 Lebo 2002

Between 1991 and 1992, PHRI conducted additional data recovery excavations at previously documented SIHP # -2456 located at the site of the Tower at Harbor Court condominiums, formerly the Ka‘ahumanu parking garage (Lebo 2002). Data recovery excavations consisted of four large block excavations focused on the pre-1850 deposits of the site. Hundreds of features were documented and included pits and post molds associated with traditional Hawaiian structures and firepits and historic features dating to the transitional early historic period and the 19th century. Blocks A and B contained the majority of the traditional Hawaiian features documented. They were mostly interpreted as associated with the village of Pūlaholaho and dated from the late pre-contact period (1650-1790 A.D.) to the early historic period (1790-1850 A.D.). The features in Blocks C and D were primarily from the early historic period and represent most of the historic features documented. Artifacts collected included traditional Hawaiian basalt tools and flakes, modified bone and marine shell, marine shell midden, glass bottles, glass and ceramic vessel fragments, building materials, metal, cut nails, window glass, faunal remains, and butchered animal bone. Based on radiocarbon dating, stratigraphic position, and contents, all of the features documented are interpreted to date between the late pre-contact period and the early to late historic period.

Additionally, osteological analysis was conducted for remains recovered from the project area during the initial AIS and monitoring (Hurst and Allen 1992). All six sets of remains were determined to be of Hawaiian ancestry and consisted of four adult females with ages ranging from 18 to 35 years old, an adult male between 25 to 35 years old, and a subadult between 8-12 years old. It was also noted that the jaw of one of the females had evidence of tooth evulsion and the skull and long bones of the subadult were missing and had likely been removed from the burial.

3.2.21 Mann and Hammatt 2002

Between 2001 and 2002, CSH conducted archaeological monitoring for the King Street Rehabilitation Project on King Street between Alapai Street and Dillingham Boulevard (Mann and Hammatt 2002). The project documented a historic trash pit containing butchered animal bones at the corner of North King and Richards Street (no SIHP assigned) and the skeletal remains of a single human burial recorded as SIHP #50-80-14-6371 and located in front of Honolulu Hale. The skeletal remains were poorly preserved and fragmentary and had been disturbed by prior utility excavations in the area.

3.2.22 Putzi and Dye 2004

In 2003, T.S. Dye conducted archaeological monitoring for the removal of several architectural barriers on the southeast side of Ali‘iōlani Hale, the removal and transplanting of several trees, and grading for a sidewalk (Putzi and Dye 2004). A single feature containing historic artifacts (no SIHP assigned) was documented during the project. Based on the monitoring results, archaeological monitoring was recommended for future construction projects in the area of Queen Street, Punchbowl Street near the Kapuāiwa Building, the parking lot on the mauka side of the Kapuāiwa Building, and the area between Ali‘iōlani Hale and the statue of Kamehameha I.

3.2.23 Hazlett and Hammatt 2008

In 2006, CSH monitored American Disabilities Act improvements at the intersection of Alakea and Queen Street and at the intersection of Alakea and Merchant Street, which is adjacent to the current project area (Hazlett and Hammatt 2008). Historic trash, building materials, and animal bones were encountered in the excavations at both intersections. However, the artifacts were encountered within fill and/or previously disturbed soils and were assessed as not significant and no SIHP numbers were assigned. No intact cultural deposits, features, or human burials were documented during the project.

3.2.24 Hazlett et al. 2008a

Between 2006 and 2007, CSH conducted archaeological monitoring for water main installation along Aloha Tower Drive, adjacent to the current project area (Hazlett et al. 2008a). The project documented stratigraphy consisting entirely of fill materials associated with road and utility construction, historic land reclamation activities, and the expansion of Honolulu Harbor. No historic properties were documented during monitoring.

3.2.25 Hazlett et al. 2008b

In 2006, CSH conducted archaeological monitoring for the Fort Street Mall and Hotel Street sewer rehabilitation/replacement project (Hazlett et al. 2008b). The majority of the excavations monitored did not extend below the existing base course, fill materials, and/or previously disturbed soils associated with the installation of utilities in the area. Historic building materials including brick, tile, concrete, and broken glass bottle fragments were encountered in the excavations at Fort and Hotel Street but were assessed as not significant due to being highly fragmented and secondarily deposited.

3.2.26 Petrey et al. 2009

In 2007, CSH conducted archaeological monitoring for road improvements along Nimitz Highway and Ala Moana Boulevard (Petrey et al. 2009). The project documented various marine and terrestrial fill materials believed to have been deposited in the latter half of the 19th century during the development of Honolulu Harbor. No historic properties were documented during the project.

3.2.27 Fechner et al. 2012

In 2012, Pacific Legacy conducted an AIS for the Honolulu Seawater Air Conditioning Project (Fechner et al. 2012). The project extended through portions of Bishop St., Richards St., Punchbowl St., South King St., Queen St., and Pohukaina St. The AIS consisted of archaeological monitoring of keyholing activities. Thirty-four (34) keyholes were excavated, with 24 successfully completed. Two of the keyholes were excavated in order to test for subsurface archaeological deposits. Fragments of historic materials (glass and ceramics) were encountered, no features or historic properties were designated during the project.

3.2.28 Hammatt 2013

In 2013, CSH conducted an AIS for the city center section of the Honolulu High-Capacity Transit Corridor Project which extends from Middle Street east to Ala Moana Center (Hammatt 2013). In the vicinity of the project area, SIHP #50-80-14-7428 was recorded as cultural deposits with historic infrastructural features, habitation features, and burial sites. The project also identified additional feature components of previously recorded sites SIHP #50-80-14-2918 and SIHP #50-80-14-2963. SIHP #-2918 was previously recorded by Yent (1985) and consisted of 6 human burials and a culturally enriched buried A-horizon. A total of 30 additional feature components were identified and included a single human burial, a dog burial, 4 post molds, a pit with historic trolley and structural remnants, and 23 indeterminate pits. Following the identification of additional features, the boundary of the site was expanded accordingly. SIHP # -2963 was previously recorded by Ota and Kam (1982) and Clark (1987) and consists of a buried A-horizon containing 27 pre- and post-contact features, pond sediments, and 13 human burials. A total of 12 additional feature components were identified and incorporated into SIHP # -2963 during the project.

3.2.29 O’Hare et al. 2013

In 2013, CSH conducted an archaeological literature review and field inspection for improvements to Pier 12 and Pier 15 of Honolulu Harbor (O’Hare et al. 2013) (outside the radius of Figure 40 and Figure 41). Background research indicated that the landing for Pier 12 was built as early as 1823 and had been modified several times since. Coral blocks and bricks, possibly from the demolition of the Honolulu Fort in 1857, were observed on the makai side of the pier and were used to build a seawall around the newly filled and constructed harbor. Due to its historic significance, Pier 12 was recorded as SIHP #50-80-14-7575 during the project. Background research on Pier 15 indicated it was built in 1900 on fill land and was modified in the 1950’s when Queen Street was widened to create Nimitz Highway. Pier 15 was recorded as SIHP #50-80-14-7576. Other than the coral blocks and bricks at Pier 12 nothing of archaeological note was encountered during the field inspection. Following the inspection, archaeological monitoring guided by an archaeological monitoring plan was recommended for construction activities associated with the project.

3.2.30 O’Hare 2016

In 2016, CSH conducted an archaeological literature review and field inspection for the Board of Water Supply Honolulu Water System Improvements project which included the installation of a 24-inch replacement water main from the intersection of River Street and North King Street to the intersection of Kalākaua Avenue and Ala Moana Boulevard, a distance of approximately 20,000 feet (O’Hare et al. 2016). Due to the project being located under city streets, no archaeological sites were documented during the field inspection. However, due to the likelihood of encountering subsurface deposits and/or human burials a project-specific archaeological survey guided by an archaeological monitoring plan was recommended for the project.

3.2.31 DiVito et al. 2020

In 2020, Honua consulting conducted an AIS for the Podmore Restaurant at 202 Merchant Street (DiVito et al. 2020). The Joseph W. Podmore Building is on the State and National Registers

of Historic Places (SIHP #50-80-14-1357, NR #83000251). The AIS consisted of pre-excavation of a grease trap interceptor measuring approximately 3.5 m x 2.25 m and 1.75 m in depth as well as sub-surface utility lines. A ditch filled with late-19th century refuse (Feature 1) and a historic bottle deposit (Feature 2) were recorded as SIHP #50-80-14-8873. A historic fill layer containing complete and fragmented 19th century household items was also recorded but no site number was obtained.

3.3 Nearby Historic Properties

A total of 18 historic properties are reported within a 0.3 mile radius of the project parcel. They include three historic districts, with the rest of the sites being split between historic structures, pre- and post-contact subsurface historic properties, and human burials. A list of nearby historic properties within a 0.3 mile radius of the project area is presented as Table 4.

The project area is located just outside the Hawaii Capital Historic District, SIHP #50-80-14-1321 (NRHP #78001020), which consists of 20 buildings, structures, and monuments with historical and/or architectural significance, some of which have been assigned SIHP numbers. The district includes the State Capital and grounds, 'Iolani Palace and grounds (SIHP #50-80-14-9912, NRHP #66000293), Ali'iōlani Hale (SIHP #50-80-14-9908, NRHP #72000414), Kawaiaha'o Church and grounds (SIHP #50-80-14-9991), 'Iolani Barracks, 'Iolani Palace Bandstand (SIHP # -9912), the YMCA and YWCA buildings, the Hawaiian Electric Company building, the Federal Building (SIHP #50-80-14-9952), the State (Territorial) Office Building, the Hawaii State Library, Honolulu Hale and grounds and the Honolulu Hale Annex, Washington Place and grounds (SIHP # -9907), Saint Andrew's Cathedral (SIHP #50-80-14-9915), the State Tax office, the Kapuāiwa Building (SIHP #50-80-14-9970), the Mission Houses (SIHP #50-80-14-9991), and the Kamehameha Statue.

The Merchant Street Historic District, SIHP #50-80-14-9905 (NRHP #73000661) is located to the north and includes four square blocks. The district includes the Bishop Estate building, the Bishop Bank Building, Honolulu City Hall (Original Site), the Kamehameha V post office (SIHP #50-80-14-9903, NRHP #72000416), the Honolulu District Court (old Honolulu Police Station), the Yokohama Specie Bank, the Friend Building, the McCandless Building, the Waterhouse Building, Old Royal Saloon, the T.R. Foster Building, and the oldest standing building in Honolulu, the Melchers Building constructed of coral block in 1854.

The Chinatown Historic District, SIHP #50-80-14-9986 (NRHP #73000658), is a large district comprised of many buildings comprised of various building materials and made using various techniques, but mostly dating to the late 19th and early 20th centuries. The district includes the properties between channelized Nu'uānu Stream and Nu'uānu Avenue and between the ocean and Beretania Street and comprises approximately 6 square blocks. Numerous subsurface sites have been documented throughout the district.

Historic buildings located in the vicinity but not within historic districts are not shown individually on Figure 41. Significant historic buildings, sites, and structures in the vicinity include Aloha Tower (SIHP #50-80-14-7380, NRHP #76000660) located at Pier 9 of Honolulu Harbor, the Irwin Memorial Park (SIHP #50-80-14-9829) located at Pier 8, and the ship *Falls of Clyde* (SIHP # 50-80-14-9700, NRHP #73000659) historically docked at Pier 7. Other important historic properties include Pier 12 of Honolulu Harbor (SIHP 50-80-14-7575) and the Dillingham

Transportation Building (SIHP #50-80-14-9900, NRHP #79000756) located at 735 Bishop Street, amongst others.

Documented subsurface historic properties in the vicinity include historic refuse pits (SIHP #50-80-14-1307) documented at the YMCA Building (now the Hawaii State Museum of Art), a ditch, refuse pit, fire pits, postholes, and a burial (SIHP #50-80-14-4605) documented in the Capital Complex, various refuse pits (SIHP #50-80-14-4606) documented throughout the Capital Complex, historic refuse deposits (SIHP #50-80-14-8873) along Merchant Street, a pre- and post-contact subsurface deposit with historic building foundations and human burials (SIHP #50-80-14-2456) located at what is now the Tower at Harbor Court Condominiums, a burial (SIHP #50-80-14-4532) documented along Punchbowl Street, a burial (SIHP #50-80-14-6371) along King Street, a pre- and post-contact subsurface cultural deposit with human burials (SIHP #50-80-14-2918) located at the location of the Honolulu Ironworks, a cultural deposit with historic infrastructural features, habitation features, and burial sites (SIHP #50-80-14-7428) located along Halekauwila Street, a subsurface cultural deposit, pond sediments, human burials, and animal burials (SIHP #50-80-14-2963) located at the corner of Punchbowl and Halekauwila Streets, the Kawaiaha‘o Cemetery (SIHP #50-80-14-4534) the Honuakaha Smallpox Cemetery (SIHP # -3712 and -4531), and a historic light gauge rail track (SIHP #50-80-14-5942) associated with the historic Honolulu Trolley system located at the intersection of Nimitz Highway and Queen Streets.

3.4 Summary of Previous Archaeology

Archaeological investigations in downtown Honolulu were first conducted by the Bishop Museum in late 1960's and 1970's and include numerous excavation and monitoring projects associated with improvements to 'Iolani Palace. The projects documented historic artifacts and features associated with the monarchy and the dwellings that were once in that area. Archaeological investigations and monitoring for construction and infrastructure improvement projects in downtown Honolulu began in the mid 1980's with inadvertent discoveries of human remains at two properties along the east side of Punchbowl Street in the border area of the Kaka'ako district. Archaeological monitoring projects conducted in the 1990's documented a few burials in the vicinity of the project area and include six burials associated with the construction of The Towers at Harbor Court Condominiums, a single heavily impacted burial documented during conduit excavations at the Capital Complex, and a historic burial found under Punchbowl Street. Later studies documented pre- and post-contact deposits, building foundations, a segment of the Honolulu trolley system, and historic fill materials in the area.

The sites documented in the surrounding area are comprised of three historic districts, numerous historic buildings, and several pre- and post- contact subsurface deposits and features, and a few human burials. More than half of the sites documented downtown are historic buildings dating from as early as 1854 but mostly from the late 19th and early 20th century, most of which are associated with historic districts. The three districts include the Chinatown Historic District, the Merchant Street Historic District, and the Hawaii State Capital Historic District. The districts are not based on subsurface deposits, but rather on the integrity and significance of the historic buildings that comprise them. The majority of the archaeological excavations conducted have been in these districts, as they are the oldest and most culturally rich areas of downtown.

The pre-contact subsurface deposits documented in the area include firepits, postholes, and pits possibly associated with early villages of the Honolulu area. Radiocarbon dates from these deposits have been interpreted to date to initial Hawaiian occupation of the downtown area in the 12th century A.D., with increasing activity and occupation in the latter portion of the pre-contact period. Documented historic subsurface deposits include foundations, postholes, refuse pits, and fill layers associated with the growth and development of the city of Honolulu from the 1830's onward.

It is possible that ground disturbance within the proposed project may encounter historic materials associated with earlier pier construction, harbor use, discarded historic artifacts, and historic and traditional materials imported within the fill used to construct the area. It is also possible that coral blocks and rubble associated with the former fort, used to line and fill portions of the harbor, could be encountered.

Field Results

Fieldwork for this project was conducted on January 25, 2024 by Dodge Watson, B.A under the supervision of Rosanna Thurman, M.A. (principal investigator). Fieldwork required approximately 3.5 person-hours to complete. Fieldwork for this project was performed under the archaeological permit number 24-26 issued to Honua Consulting by the SHPD/DLNR in accordance with HAR Chapter 13-282.

4.1 Methodology

The archaeological field inspection consisted of a 100% pedestrian survey of accessible portions of the project area. The interior of buildings were not accessible. The exterior of the Honolulu Power Plant property and perimeter of Pier 7 were surveyed and photos were taken. No artifacts or samples of any kind were collected during the project.

Historic architectural structures exist within the project area. However, it is beyond the scope of this study to document or assess them as they are architectural rather than archaeological. It is recommended to consult with the architecture branch of the SHPD regarding how to appropriately rehabilitate or restore the structures for the project's purpose of adaptive reuse.

4.2 Results of Field Inspection

The project area is described in two portions, consisting of the Honolulu Power Plant (TMK: 2-1-014:006) and Pier 7 of Honolulu Harbor (TMK: 2-1-001:057 and 058). The two portions of the project area are separated by Aloha Tower Dr. which runs roughly north/south, with the Honolulu Power Plant along the east side and Pier 7 adjacent to the west side. No significant archaeological resources were observed during the survey. However, historic architectural structures do exist within the project area and consultation with the architecture branch of the SHPD is recommended.

The project area includes the Honolulu Power Plant which was built in the 1920s, added onto in 1954, and decommissioned in 2014 (*Hawai'i Free Press* 2014). Pier 7 of Honolulu Harbor was built around 1906-1907 and the former Hawai'i Maritime Center (1988-2009) is built upon it. The ship, *Falls of Clyde*, is currently docked alongside Pier 7. The ship was built in 1878 and was once listed on the State and National Registers of Historic Places, as well as a National Historic Landmark. The *Falls of Clyde* was delisted from the Hawai'i Register of Historic Places in 2023 and the National Register in 2024 due to its deteriorated condition (HHF 2024). The ship is planned to be removed from Pier 7 prior to onset of proposed project activities.

4.2.1 Honolulu Power Plant (TMK: 2-1-014:006)

The Honolulu Power Plant includes a large building at the corner of Aloha Tower Dr. and Bishop St. in downtown Honolulu (Figure 42 and Figure 43). Along the west portion of the property is a brick and metal perimeter wall that secludes power plant infrastructure, including two large silo towers (Figure 44 and Figure 45). It is beyond the scope of this study to document or assess the historic architectural structures on the Honolulu Power Plant property.

Figure 42. Photo of the Honolulu Power Plant at the corner of Aloha Tower Dr. (foreground) and Bishop St. (to the left), view to east

Figure 43. Photo of the south side of the project area showing the Honolulu Power Plant (on right), Aloha Tower Dr. (center), and Pier 7 (on left), view to north

Figure 45. Photo showing the west side of the project area, notice the rear of the Honolulu Power Plant (back left) and a silo tower (right) within a perimeter wall, view to west

4.2.2 Pier 7 of Honolulu Harbor (TMK: 2-1-001:057 and 058)

The ground survey of Pier 7 observed the dock to be made of concrete, with various surfaces including landscaped grasses, concrete walkways, asphalt, and tile. The former Hawai'i Maritime Center is located in the center of the pier (Figure 46 through Figure 48). The building is approximately 2 stories in height, with a second-story overhang supported by small pillars extending the entire south side of the building and in parts along the north side of the building (Figure 49). Concrete docking blocks and large metal cleats were observed along the dock surface perimeter for tying up ships and water vessels (Figure 50). The *Falls of Clyde* ship was tied to the north side of the pier (Figure 51 and Figure 52).

The east portion of Pier 7 contains a level area with concrete pathway and asphalt access road extending from Aloha Tower Dr., where a former guard shack is positioned (Figure 53). A large metal anchor on concrete supports was observed on the northwest edge of the pier, likely associated with the former Maritime Center (Figure 54).

Figure 46. Photo looking towards Pier 7, notice the former Maritime Center upon the dock (also notice the concrete footing in the water slip likely associated with the formerly existing elevated ramp [1964-1980s]), view northwest

Figure 47. Photo on Pier 7 showing the former Maritime Center (east side), view southwest

Figure 48. Photos on Pier 7 showing the former Maritime Center (west side), view northeast (left) and north (right)

Figure 49. Photo on Pier 7 under the overhang of the former Maritime Center

Summary and Recommendation

This ALRFI report was prepared by Honua Consulting, LLC at the request of Wilson Okamoto Corporation for the Tradewinds Garden and Glass Museum located in Honolulu Ahupua‘a, Kona (Honolulu) District, Island of O‘ahu, TMK: [1] 2-1-014:006, [1] 2-1-001:057 and 058. The project area consists of two discontinuous areas, consisting of Pier 7 of Honolulu Harbor and Units 5 and 7 of the Honolulu Power Plant. The Honolulu Power Plant (TMK: 2-1-014:006) is owned by HECO and includes approximately 3.4 acres. Pier 7 (TMK: 2-1-001:057 and 058) contains the former Maritime Center Museum, owned by the State of Hawai‘i, and encompasses approximately 9.6 acres. The ATDC is the lessee of Pier 7 and oversees the redevelopment of State-owned properties along the Downtown Honolulu waterfront.

The proposed project is planned to consist of renovation and adaptive reuse of existing Honolulu Power Plant and Maritime Center buildings. The Honolulu Power Plant is proposed to be preserved with interior spaces reworked to include glass art galleries, a hot shop for observing glass art creation, and a bookstore/lobby. Renovation of the Maritime Center structure is proposed to include five gardens designed to emulate native Hawaiian vegetation, a bookstore/lobby, deck areas, a bar, and a restaurant.

Background research indicates the project area was traditionally located within the coastal mud flat or low reef of Waikahalulu, which was in-filled in the 1850s-1890s to form a land area named the “Esplande”. Historically, the project area was part of Land Commission Award (LCA) 44520 for Waikahalulu ‘Ili claimed by Hazaleleponi Kalama (Queen Kalama) in 1848 and refuted by the government. Following litigation, the government paid Queen Kalama \$22,000 for the land. LCA 11219 was then awarded to the government for 46 acres within Waikahalulu, including the project area. The reef of Waikahalulu was filled using dredged material from Honolulu Harbor and rubble from dismantling of the Honolulu fort. Makai (seaward) areas adjacent the project area were dug out to create Pier 7 from 1906-1907. A large warehouse was constructed upon the pier in 1906, it was removed in the 1960s to provide accessway for an elevated ramp. The ramp was removed in the 1980s and a new building was built on the pier in 1988 for use as the Hawai‘i Maritime Center which closed in 2009. It is not clear whether all or portions of the pier itself have been reconstructed since it was built in 1906. The east portion of the project area was used for multiple business ventures from the late-1800s through early-1900s, including office space, storage for rope, buoys, coal, boats, ice, and power. The Hawaiian Electric Building was constructed in the east portion of the project area in the 1920s.

One previous archaeological study was conducted in the project area which focused on the waterfront of Honolulu Harbor from Pier 5 to Pier 14 (Wong-Smith and Rosendahl 1990). The study found their entire study area had traditionally been underwater and that a small portion of shoreline that was once present was removed during channel dredging for the harbor. The area was then filled during land reclamation activities and development of Honolulu Harbor. It was reported that coral blocks from the Honolulu fort were known to have been used as bulkheads for Piers 8-12. The field inspection identified Piers 8 through 12 and Aloha Tower as the only significant surface features present, as other piers in their study area had been dramatically reconstructed.

The purpose of this archaeological literature review and field inspection is to determine the land-use history, potential sub-surface deposits which may exist within the property, and identify any potential artifacts or cultural deposits present on the ground surface observable during surface

survey of the property. This study is not an archaeological inventory survey (AIS), however, this report was written using standards outlined within Hawai'i Administrative Rules (HAR) 13-276 for AIS studies and is intended to assist with historic preservation efforts related to the proposed project.

The archaeological field inspection conducted for the current project included a pedestrian survey of the property. Nothing of archaeological interest was observed or collected during the inspection. Although the project area is built on dredged material, it was extensively used for historic commercial activities. If the proposed project requires ground disturbance then an archaeological monitoring program may be necessary, to be conducted in coordination with the archaeology branch of the SHPD. Furthermore, historic architectural structures exist within the project area and it is recommended to consult with the architecture branch of the SHPD regarding how to appropriately rehabilitate or restore the structures for the project's purpose of adaptive reuse.

Introduction

Mason Architects, Inc. (MASON) was hired by Wilson Okamoto Corporation (WOC) to provide Hawai'i Revised Statutes (HRS) Chapter 343 Environmental Assessment (EA) and §6E-42 and §6E-8 support services for the Tradewinds Garden and Glass Museum project in Honolulu, Hawai'i.

Project Objectives

The Tradewinds Garden and Glass Museum project proposes to renovate the HECO Honolulu Power Plant Units 5 and 7 as well as the former Maritime Center for adaptive reuse. New uses proposed for Units 5 and 7 include glass art galleries, a hot shop for observing glass art creation, and a combined bookstore/lobby. New uses proposed for the former Maritime Center include a bookstore/lobby, outdoor deck areas, a bar, and a restaurant. For more information on the proposed project, refer to the Early Consultation Package in Appendix D – Proposed Work.

In addition to supporting the development of an EA required under HRS Chapter 343, this Reconnaissance Level Survey (RLS) report is intended to fulfill requirements under HRS §6E-42 and §6E-8 and Hawai'i Administrative Rules (HAR) §13-284 and §13-275 to identify historic properties in the project area, evaluate their significance, evaluate the proposed project's effect on them, and provide recommendations for mitigation of any adverse effects.

Methodology

To complete this RLS, MASON's SOI qualified architectural historian conducted historical research, a site visit, and an evaluation of significance and integrity in keeping with HAR §13-284-6. Research included the review of MASON's company archives, State of Hawai'i archives, relevant context studies, City & County of Honolulu tax records, and historical newspaper articles. This research was used to develop a historical context and physical development history of Honolulu Harbor, and the HECO Honolulu Power Plant.

MASON visited the properties on January 9, 2024, to digitally photograph the buildings and structures.

MASON evaluated the properties for significance under HAR §13-284-6 and §13-275-6 Criteria "a-d," but did not evaluate the resources for Criterion "e" ("having important value to the native Hawaiian people or to other ethnic groups") as MASON is not qualified or scoped to undertake evaluation under this criterion.

This report was written by Architectural Historian Annalise Shiraki with assistance of Angie Westfall, and overseen by Polly Tice, Principal and Research Section Director at MASON. Ms. Shiraki, Ms. Westfall, and Ms. Tice meet the Secretary of the Interior's Professional Qualification Standards for Architectural History.

Project Area (Boundary Explanation and Justification)

The Project Area encompasses two distinct areas (Figure 1), both off Aloha Tower Drive, Honolulu, Hawai'i, 96813, on TMKs (1) 2-1-001:057 (por.), 058, and (1) 2-1-014:006 (por.). TMK (1) 2-1-001:057 is a 405,709 square foot (9.3138 acre) parcel encompassing portions of Pier 7, the slip between Piers 7 and 6, Piers 6 and 5, and the slip to the south of Pier 5. The project area is

limited to the Pier 7 portion of this parcel. TMK (1) 2-1-001:058 is a 17,345 square foot (0.3982 acre) parcel containing portions of Pier 7 and the former Maritime Center building. TMK (1) 2-1-014:006 is a 149,644 square foot (3.4353 acre) parcel containing the HECO Honolulu Power Plant. While the plant is made up of several individual buildings and structures, the project area is limited specifically to Units 5 and 7.

Setting

Pier 7 is part of Honolulu Harbor. To the northwest, it is bound by the waters of the harbor and Pier 8, to the northeast by Aloha Tower Drive, to the southeast by the waters of the harbor and Pier 6, and to the southwest by the waters of the harbor.

The HECO Honolulu Power Plant is situated at the Honolulu Harbor waterfront, northeast of Pier 7. It is within the block bounded by Bishop Street, Richards Street, and Aloha Tower Drive. To the northeast of the Power Plant is Downtown Honolulu, across Ala Moana Boulevard. To the northwest and southeast are small, open parks and parking lots shaded by large trees.

Figure 1. Project and survey area. Source: base map, Google Earth; graphics, MASON, 2023.

Historical Context

Honolulu Harbor

Management of the Harbor

The following provides an overview of governmental agencies that were historically responsible for the management of Honolulu Harbor.¹

Under the Hawaiian Kingdom Government, the Harbormaster, within the Ministry of the Interior, maintained shipping and harbor records dating from 1842. Later, these records were kept by the Collector General of Customs under the Ministry of Finance.

After the overthrow of the Hawaiian Kingdom in 1893 and establishment of Hawai'i as territory of the United States in 1900, responsibilities related to harbors, wharves, landings, and other public infrastructure were transferred to the Superintendent of Public Works, under the Territory of Hawai'i.

In 1911, the Superintendent of Public Works' port and harbor-related responsibilities were transferred to an independent Board of Harbor Commissioners, who was tasked with controlling and managing "the harbors, harbor improvements, ports, docks, wharves and shipping throughout the Territory."²

After Hawai'i became a state in 1959, the Board of Harbor Commissioners was reorganized under the State of Hawai'i Department of Transportation (DOT). In 1961, the Board of Harbor Commissioners was abolished. In its place, the DOT organized a Commission on Transportation to advise the department's director.

Development of the Harbor

Origins

Before western intervention, there was a naturally occurring channel at Honolulu Harbor (traditionally known as Māmala) caused by the outflow of Nu'uuanu Stream. This outflow impeded the growth of coral and created an opening in the shallow reef along O'ahu's south shore. It also provided a rich marine environment.³ Abundant fishing grounds extended between 'Ewa and Maunaloa-Māmala was renowned for its aku fishing and Kahalaloa (the reef fronting Kawa, a fishpond in Iwilei that was later infilled) for its lobster, crab, and limu.⁴ To the west of the channel were several tidal islands, including ka Moku 'Ākulikuli⁵ (currently referred to as Sand Island).

¹ State of Hawai'i, Department of Accounting and General Services, Hawai'i State Archives, *Finding Aid for The Board of Harbor Commissioners*, 1-16. [Unless otherwise noted, the following overview is from this finding aid.]

² Act 163, Laws of the Territory of Hawaii Passed by the Legislature at its Regular Session, 1911 (Honolulu: Bulletin Publishing Co., Ltd., 1911), 262.

³ Office of Hawaiian Affairs, Research Division, *Nā Lama Kukui*, by Holly K. Coleman, February 2013, 1.

⁴ *Ibid.*, 4.

⁵ The name ka Moku 'Ākulikuli is written in other sources as Kamoku'ākulikuli. Ka Moku 'Ākulikuli was chosen for this report as it is used repeatedly in Hawaiian language newspapers.

Early Development

In 1794, the earliest known foreigners entered the harbor. It soon became a popular provisioning location for ships participating in the Pacific Trade.⁶ Before the first known wharf was developed in 1825, passengers and goods were transported between ships, which were anchored offshore or pulled into the harbor, and the shore. This early wharf, located near Nu'uaniu Avenue, was made from a sunken ship's hull. Early on, the Fort (1816), surrounded by thatched structures, was the waterfront's largest edifice (Figure 2). The Fort is Fort Street's namesake and was located just makai of the intersection of Fort and Queen streets.⁷

Figure 2. Map of Honolulu Harbor showing the Fort among thatched buildings, dated 1816. Source: *Maps of Hawaii—cities and towns of Honolulu 1816 to 1927*, Library of Congress.

Aside from the improvised wharf, other early improvements were made by both businesses and the Hawaiian Kingdom government. Robinson & Company started operating at the harbor in 1827. The company had a wharf and a shipyard 'Ewa of the Fort. Within the next thirteen years, several other companies had wharves at the bottom of Nu'uaniu Avenue. In the 1840s, the harbor was dredged several times providing materials to fill the surrounding tidelands. As a result of these dredging and filling activities, a 22-acre area bound by Fort, Queen, and Richards streets, known as the Esplanade, was created between 1857-70 (Figure 3).⁸ Contemporaneous

⁶ Fung Associates Inc., *Honolulu Harbor, Volume II: Reconnaissance Level Historic Structures Assessment Report, Located within the Survey Area, Final Report* (Honolulu: prepared for State of Hawai'i, Department of Transportation, Harbors Division, 2019), 11-47. [The following history of Honolulu Harbor is from this report, unless otherwise noted. Pages will be noted for direct quotes]

⁷ Bob Sigall, "200 Years Ago the Russians Built a Fort, and Fort Street is its Namesake," *Honolulu-Star Advertiser Sunday Magazine*, October 30, 2016, <https://historichawaii.org/2016/11/04/honolulufort/>.

⁸ Some maps identify the both the Esplanade and the reef fronting this area as Waikahalulu. Others refer to the infilled reef or beach area as Kuloloia. For more information, see the following maps: Dorothy Barrare, *Honolulu in 1810*, Bishop Museum Press, 1957, UHM Library Digital Image Collections,

with construction of the Esplanade, the Fort was dismantled and some of its coral blocks were reused to build a retaining wall.⁹ As the harbor continued to develop, the community surrounding the harbor also grew (Figure 4). Uses cropping up around the harbor primarily provided goods and services to support visiting ships. This included a three-story coral Custom House (1843), and a two-story coral block market (1851), both erected by the Hawaiian Kingdom government. The US Civil War (1861-65) greatly increased the demand for Hawaiian sugar (as the supply of sugar from southern states was cut off), and sugar exports caused a surge in the economy and development of the harbor (the number of wharves increased).

[Stephenson notes that a portion of the retaining wall was still visible in 2007 immediately 'Ewa of Hawai'i Department of Transportation, Harbor's Division Office.]

Figure 4. Photo of the waterfront at the Esplanade, ca. 1880. Source: *Honolulu Harbor: 1880s*, Hawai'i State Archives.

Between 1898-1900, additional dredging took place at the harbor, providing fill materials for Quarantine Island (known in 2024 as Sand Island). These filling activities gave the island a regular, oval shape.¹⁰ Also near the turn of the century, maps indicate that the harbor included a cattle wharf, Oahu Railway & Land (OR&L) Co.'s railway wharf, several additional wharves used by C. Brewer & Co., Oceanic Steamship Co., Inter Island Steamship Navigation Co., Wilder Steam Ship Co., Pacific Mail Steamship Co., and other unidentified companies, a marine railway, a boat house, a light house, and a pier at Quarantine Island (Figures 5-8). The marine railway was built instead of a floating or stationary drydock, which at the time were deemed infeasible for Honolulu Harbor.¹¹ Late nineteenth century maps also show that portions of the Esplanade were still being filled¹² and several new wharves at the bottom of Richards and Mililani streets were under construction.¹³ All wharves from this period were made of wood. None of these early wharves remain in 2024.

¹⁰ MASON, *Draft Sand Island State Recreation Area, Historic Inventory Survey, Honolulu, O'ahu, Hawai'i* (Honolulu: prepared under contract to Hawai'i Department of Land and Natural Resources, 2024), 11.

¹¹ "Honolulu Marine Railway," *Daily Bulletin*, August 14, 1885, 5. A marine railway is described in this article as: "an inclined railway, descending from a repairing shipyard into deep water. A heavy platform with high frames and sides, called the cradle, slides upon series of rollers running in grooves in ironclad timber rails. A system of chains connected with powerful steam winches is employed to let the cradle down into deep water and haul it up again. When the cradle is run out into a sufficient depth, the vessel to be hauled up is floated between the arms of cradle. Then a system of movable blocks, worked by cranks from the tops of the cradle frames, grasps the hull of the vessel, and the cradle and its burthen are drawn up high and dry."

¹² F.S. Dodge, "Part of the City of Honolulu, Oahu, H.I.," 1893. This map shows that the waterfront next to the Esplanade (Diamond Head of Richards Street) remained unfilled as of December 1893.

Early Twentieth Century Projects

In 1898, Hawai'i was annexed to the United States, and,

The formal transfer of sovereignty of the Republic of Hawai'i occurred in ceremonies on August 12, 1898, at 'Iolani Palace. The Joint Resolution of Annexation also transferred the title to Hawai'i's public lands, as claimed by the Republic of Hawai'i, to the United States. These lands, which included both the Government and Crown Lands were estimated to amount to almost 1.8 million acres, with a value of at least \$5.5 million.¹⁴

¹⁴ Davianna Pōmaika'i McGregor and Melody Kapilialoha MacKenzie, *Mo'olelo Ea O Nā Hawai'i: History of Native Hawaiian Governance in Hawai'i* (Honolulu: Office of Hawaiian Affairs, 2015), 52.

This transfer of public lands included Honolulu Harbor. With the passage of the Organic Act in 1900, control of Hawai'i's public lands was again transferred, this time to the Territory of Hawai'i. Between 1900-14, the Superintendent of Public Works (and later the Board of Harbor Commissioners), the U.S. military, and the U.S Army Corps of Engineers carried out several harbor projects, including reconfiguration of the waterfront, construction of new wharves and sheds, and enlargement of the harbor's basin:

- In 1903, after the Territorial Legislature authorized bond funds, the Territory demolished several old buildings at the waterfront, including the Custom House (1843).
- By 1904, periodic dredging resulted in a depth of 27' over most of the harbor and an entry channel of approximately 200' in width.¹⁵
- In 1905, Brewer's wharf (later redeveloped as Pier 12) was renovated, and a new shed constructed.
- Between 1905-07, the Territory built new wharves at the bottom of Fort Street (later developed as Pier 10) and Alakea Street (later developed as Pier 7). At Alakea Street, the Pacific Mail Steamship Co. wharf, which ran parallel to the shore, was demolished. In its place, the perpendicularly oriented Alakea Street wharf was built.¹⁶ This wharf had roughly the same footprint as Pier 7 in 2024. A 1905 report provided the following information on the Alakea Street wharf:

In December of last year the contract for dredging the new slip at the foot of Alakea street was awarded to Mr. John Walker for \$168,000. Owing to delays of various kinds of work was not started until after July 1. Preliminary plans have been prepared for new wharves immediately adjacent to the naval docks. On the first wharf [Alakea Street wharf] the plans provide for a two-story building, so as to facilitate the handling of passengers arriving on the large steamers.¹⁷

- By 1907, the Alakea Street wharf was finished (Figure 9).
- In 1907, the U.S. Army started construction on Fort Armstrong on land that was previously filled.
- In 1908, the U.S. Army Corps of Engineers began widening the harbor's entrance. Funds for this project came from the Rivers and Harbors Act of 1905. This involved removal of a point at the channel's entrance, where a lighthouse was located, and depositing fill on Sand Island, increasing its size. On Sand Island, the lighthouse keeper's residence was relocated, and a new lighthouse was constructed.
- Between 1908-13, a concrete bulkhead wharf along Queen Street (later location of Pier 15) and an additional wharf at Kekūanaō'a Street (later location of Piers 8, 9, and 10) were built.
- In 1909, under a \$45,000 appropriation, a two-story shed was added to the Alakea Street wharf to accommodate freight and passenger traffic (Figures 10 and 11).¹⁸ Housed in the shed were offices for the harbormaster, pilots, and customs inspections.

¹⁷ Ibid., 38.

¹⁸ Report of the Governor of Hawaii to the Secretary of the Interior for the Fiscal Year Ended June 30, 1909 (Washington: Government Printing Office, 1909), 58.

- In 1911, the Richards Street wharf and shed (later location of Pier 6) were completed, Sorenson’s wharf was widened, and Hackfield wharf’s (later site of Pier 16) was extended.
- In 1912, the U.S. Army constructed Pier 1 as part of its Fort Armstrong project. This was the earliest known pier at the harbor to use a concrete deck and concrete piles.
- In 1913, the Queen Street bulkhead wharf and sheds (later location of Pier 15) were completed, and the Inter Island Steam Navigation Co. built a 100’ x 400’ floating dry dock (making the marine railway obsolete). Around this period, the shed on Brewer’s wharf was extended to accommodate Matson’s operations, requiring demolition of the Market House (ca. 1850). As part of this project, the Territory also purchased the lease of the wharf from Brewer.
- On January 6, 1914, the board accepted a special committee report recommending that the harbor’s wharves be renamed using numbers,¹⁹ and two days later it was reported in the *Honolulu Star-Bulletin* that the Alakea Street wharf was renamed Pier 7.²⁰
- In 1914, a 70’ tall steel tower with a watchman’s house and pilots’ balcony was added to the makai end of Pier 7 (replacing the old pilot house near Pier 2),²¹ and Pier 15’s ‘ōhi’a block pavement was coated in asphalt.

None of these early Territorial improvements remain in 2024.

Concrete Upgrades

After harbor-related responsibilities were transferred from the Superintendent of Public Works to the Board of Harbor Commissioners, the board initiated an effort between 1915-29 to reconstruct existing wood piers in concrete, and the harbor's appearance as we know it in 2024 began to take shape (Figure 12-14):

- In 1915, the board initiated a complete overhaul of Piers 8, 9, and 10 for overseas cargo and passengers, using reinforced concrete; at the time the construction methods and materials used for these new piers were innovative. Once completed, two story concrete sheds were constructed atop the piers. The slips of these piers were also dredged so they could accommodate larger ships.
- In 1919, the board began its second large project, the redevelopment of Pier 2 (to accommodate the lumber trade), by demolishing the existing structure. In 1920, construction began on "a new reinforced concrete, pile supported, bulkhead wharf, which was to be of 'the most modern type of permanent cement masonry construction.'"²² Roads were also developed to access the pier.
- Between 1916-22, the board carried out several projects, like replacing the wood structural members of several piers with concrete, repairing fenders, deck timber, and planking, repainting metalwork, and repairing leaky roofs and joints in the oil pipelines (of Pier 2). Piers 6, 7, 12, 14, 15, and 16 were the focus of this work. For Pier 7, the board spent a total of \$12,997.12 on said repairs in 1922.²³
- In 1923, the board performed additional repairs to Pier 7, with a report from the same year providing the following information on the work:

Repairs to Pier No. 7—The 140-foot concrete section constructed by day labor by the regular repair crew employed by the board of harbor commissioners was completed and has proven so satisfactory that additional sections will be similarly constructed as repairs are made to the wooden structure and funds are made available.²⁴

- Also in 1923, the board awarded a contract to construct reinforced concrete sheds atop Piers 8, 9, and 10, and in 1925, construction began on Aloha Tower.
- In 1925, the board awarded a contract to construct Pier 11 in reinforced concrete. The following year, an additional contract was awarded to construct a two-story, reinforced concrete shed on Pier 11. Aloha Tower was completed in 1926 and the shed in 1927. A harbor light was placed atop Aloha Tower and the lighthouse on Sand Island was decommissioned.
- Between 1927-29 several smaller projects included rebuilding a portion of Pier 7 in concrete and construction of Pier 4 and its shed, all in reinforced concrete, by the U.S. Lighthouse Service. For Pier 7, the board let contracts in 1927 in the amounts of \$2,105.10 and \$1,388.50 for furnishing construction materials.²⁵

²⁴ *Report of the Governor of Hawaii to the Secretary of the Interior 1923* (Washington: Government Printing Office, 1923), 59.

²⁵ *Report of the Governor of Hawaii to the Secretary of the Interior 1927* (Washington: Government Printing Office, 1927), 75.

- In 1929, redevelopment of Piers 13 and 14 began. This project called for the construction of a steel and reinforced concrete shed and other features that were both fire and salt resistant. The project was completed in 1931.

Between 1920-30, as the board completed the projects listed above, the Territory acquired property around the harbor to allow for expansion of facilities, including:

- Allen & Robinson land along Queen Street (at the waterfront).
- OR&L Co. land near Piers 15 and 16.
- Three blocks near Piers 8-11.
- Robinson and Campbell estate land near the intersection Queen and Fort streets.
- The remaining privately owned parcels in the block bounded by Halekauwila, Allen, Fort, and Kekūanaō'a streets.
- The coral block Custom House (1860) at Fort and Allen streets (current location of Irwin Park).
- Hawaiian Construction & Draying land.

These lands were either purchased by the Territory from private owners, deeded to the Territory by the federal government, or donated to the Territory by private owners. Upon acquiring the Custom House from the federal government, the board moved customs operations to Pier 7. The board also demolished the buildings in this area so Queen Street could be widened, and parking could be provided.

Figure 14. Photo of Pier 7 and HECO Honolulu Power Plant, ca. 1932. Source: Hawai'i State Archives.

'Ewa Expansion

As the board upgraded wood wharves and carried out major projects like the construction of Piers 8-11, and Aloha Tower, it also expanded the harbor westward (Figures 15-17). Between 1920-41, a channel was incrementally dredged to connect the harbor with Kapālama Basin, the Territory acquired the basin (along with its fishing rights) from Bishop Estate and new wharves (Piers 35 and 36) were built for pineapple companies 'Ewa of Nu'uano Stream. The Inter Island Steam Navigation Co. constructed Piers 26-29 at the location of its former coaling station, OR&L Co. built Piers 31, 31A, and 32, and the U.S. Army initiated construction of Piers 39 and 40.

Figure 17. Aerial of Honolulu Harbor, 1940. Source: Williams Photography, *Honolulu Harbor: Aerial 1940*, Hawai'i State Archives.

World War II

During World War II (WWII), the U.S. Army completed a pier on Sand Island, harbor traffic was placed under the Director of Cargo and Passenger Control (a U.S. military position), the U.S. Navy took control of Pier 11 and 20 acres of land next to Piers 35 and 36, and Piers 2, 8-11, and 35 handled freight from overseas. Additionally, several piers, including Pier 7, were painted in camouflage during the war (Figure 18).

Figure 18. Photo of Pier 7 with camouflage paint during WWII. Source: Hawai'i State Archives.

Post World War II

In the post-WWII years, between 1949-63, Dillingham built Pier 33 and an extension to Pier 31A's shed, control of Pier 5 was transferred from the U.S. government to the Territory, Piers 6 and 16 were demolished, and Pier 2 underwent a major redevelopment. External changes, including the rise of passenger jet travel and decline in number of vessels carrying passengers, movement toward inter-island freight being transported via barge, and improvement of outer-island ports, affected the harbor's appearance. The harbor was further changed by the construction of Nimitz Highway and industrial structures (including a bulk sugar plant, grain silos, flour silos, and a flour mill).

Statehood-Present

Just before statehood in 1959, container shipping and passenger jet travel were introduced to Hawai'i. Container shipping transformed the way goods were shipped and altered operations at the harbor. As shipping methods changed, the harbor's appearance morphed because container shipping did not need covered sheds—it required large swaths of open land.

In the early 1960s, a second entrance to the harbor opened, a bascule bridge to Sand Island was built, and work on roads and utilities began at Sand Island. Also in the early 1960s, the State of Hawai'i carried out a major cargo-passenger terminal project involving Piers 5-7 and Piers 8-11. The project started with the development of open-air parking lots at Piers 5-7. To accommodate the parking lot on Pier 7, the two-story shed (1909) was demolished (Figure 19). In the second phase, a vehicular ramp from the parking lot near Piers 5-7 to Piers 8-11 was constructed. At the time, this project was controversial because it affected views of the water from Bishop Street.

Figure 19. Photo of two-story shed being atop Pier 7 being demolished to make way for a paved parking lot, 1960. Source: "Harbor Board Charges May Have to be Raised," *Honolulu Star-Bulletin*, October 6, 1960, 6.

Figure 20. Photo of paved parking lot atop Pier 7, 1969. Source: *Honolulu Star-Bulletin*, Aerial Photographs Before & After, Capitol 50th Anniversary, Hawai'i State Archives.

Between 1965-67, the State acquired nearly all remaining privately-owned properties at the harbor. Between 1969-80, the State developed a container handling facility on Sand Island with the demolition of existing wood wharves and construction of Pier 51 and later Pier 51A and Pier 51B.

Figure 21. 1968 aerial (left) and 1978 aerial (right), showing changes that occurred, particularly on Sand Island, during this period. Source: Hawai'i Aerial Photos (1950-2000), MAGIS at the University of Hawai'i at Mānoa Library.

Pier 7

Between 1905-07, Pacific Mail Steamship Co.'s wharf near Alakea Street was redeveloped into the Alakea Street wharf. This wharf had roughly the same footprint as Pier 7 in 2024. In 1909, a two-story shed was added to the wharf. In 1914, the wharf was renamed Pier 7, and a 70' steel tower was added to the makai end.

In 1922, 1923, and 1927, Pier 7 was incrementally rebuilt in concrete to "conform with the most modern ideas of pier construction."²⁶

In 1947, a portion (the makai end) of the pier was removed.

As part of the State's cargo-passenger terminal project, Pier 7's two-story shed was demolished in 1960. In 1962, the pier's coral surface was paved to create an open-air parking lot.²⁷ The project also involved construction of open-air parking lots atop Piers 5 and 6 and a two-lane vehicle ramp between the parking lot next to Piers 5-7 and a second-story platform in the courtyard area of Piers 8-11. The cargo-passenger terminal project was completed in 1965 and demolished in 1993. Remnants of the ramp's footings are visible between Piers 7 and 6.

In 1988, the former Maritime Center was constructed atop Pier 7. It remained in operation until 2009.

Former Maritime Center

The former Maritime Center was completed in 1988, after several years of planning and fundraising. A 1986 article summarized the vision for the center as follows:

The building to be erected on Pier 7 will be called the Kalakaua Boat House, inspired by the headquarters of the Myrtle Boat Club founded in 1883.

The club at Honolulu Harbor at the foot of Punchbowl Street was a center for canoe races, yachting regattas, and swimming events. King Kalakaua, a patron of the Myrtle Boat Club, had a private boathouse nearby. The pier, now used as a parking lot, was known as Alakea Wharf at the turn of the century and was where trans-Pacific steamships docked.

The proposed boat house will have three stories and wraparound decks for watching harbor activities. A Pacific Ocean theater and changing exhibits will occupy the interior...²⁸

HECO Honolulu Power Plant

The HECO Honolulu Power Plant is comprised of Units 5 and 7 and the Leslie A. Hicks Power Plant. The Hicks Plant is slightly taller than adjacent Units 5 and 7. Collectively, the Honolulu Power Plant is "part of HECO's long-term electric power generation infrastructure."²⁹

²⁹ MASON (Dee Ruzicka and Polly Tice), Draft National Register of Historic Places Registration Form, Hawaiian Electric Company (HECO) Honolulu Power Plant, 170 and 222 Aloha Tower Drive, Honolulu, ed. Angie Westfall November 2020, 12.

Pursuant to the Programmatic Agreement for the Honolulu High-Capacity Transit Corridor Project, the plant was previously documented through a Historic American Engineering Record (HAER) project and preparation of a Draft National Register of Historic Places (NRHP) Registration Form. From the Draft NRHP Registration Form, the plant's physical development is summarized as follows:

The generation of electrical power in Hawaii began in 1881 at Claus Spreckles' sugar mill at Spreckelsville on the island of Maui so that the mill could be operational at night as well as during the day. While on a world tour in 1881, King Kalakaua had called on Thomas Edison at his New Jersey workshop and received an electrical lighting demonstration. Kalakaua maintained enthusiasm for electric lighting, and in 1886 hosted a demonstration at Iolani Palace with power that was supplied by a dynamo at the Honolulu Iron Works. Another demonstration was provided at the palace on the King's 50th birthday in November 1886 with power that was supplied by an on-site steam dynamo. By late 1886 Honolulu's had electric streetlights that were powered from dynamos at the palace, and in 1887 a hydroelectric system in Nuuanu Valley lit additional streetlights. By 1891, small generating plants were available for sale in Honolulu to individuals.

In May of that same year, a co-partnership [between Honolulu attorney Jonathan Austin and three men of E. O. Hall & Son: William W. Hall, Edwin O. White, and William V. Lockwood] named Hawaiian Electric Company (HECO) was formed that began selling electricity from a coal-fired boiler that powered dynamos at a building located at the intersection of King and Richards Streets in Honolulu. On May 3, 1893, just four months after the overthrow of the Hawaiian Monarchy, HECO – as the only bidder – was granted a 10-year franchise by the provisional Hawaiian Government to supply electricity to customers in Honolulu.

The HECO site at Alakea and Halekauwila Streets was first developed in 1894, with coal-fired boilers powering alternating current generators and dynamos that produced direct current. ... During the early years of HECO, lighting was the primary use for electricity, and demand was mostly confined to a few hours before dawn and in the evenings. During times of lower demand, it was most efficient to keep the boilers partially stoked, and HECO produced ice with the power supplied from its generators. During the early twentieth century, the Alakea Street Plant served Honolulu's electrical needs.³⁰ Lines were extended to Waikiki in 1897 and 1901, and to Manoa Valley ca. 1904. The Alakea Plant boilers were converted from coal to oil-fired about 1905, and a steam turbine was installed in 1908. Additional generating units were added at that plant in 1910 and 1913. By 1916, the company's installation of high voltage transmission lines stretched to Windward Oahu and Pearl Harbor, allowing those areas to receive HECO power.

In 1920, a new generating plant (that would become Unit 7) was completed adjacent to the Alakea Street Plant. In 1930, another plant was built (which would become Unit 5). In 1930, HECO's generating capacity stood at 50,000kw between the two units [Units 5

³⁰ The government retained control of the plant at Nu'uuanu until 1895 when HECO took control of it. While under the government, it was primarily used to operate streetlights when it was able. For more see MASON (Dee Ruzicka), "Hawaiian Electric Company, Honolulu Power Plant," HAER No. HI-139, Historic American Engineering Record (HAER), National Park Service, U.S. Department of the Interior, October 2017, 6-7.

and 7]. The 1894 Alakea Plant was relegated entirely to ice production in 1925. In 1933 Unit 7 received an additional 10,000kw generator, and in 1938 HECO expanded its production outside of Honolulu with a 7,500kw unit at a new site at Waiiau in Pearl City, Oahu.

After World War II, the Waiiau Plant was expanded in several increments to keep up with post-war era construction that was adding new homes and businesses throughout Oahu. During the 1950s HECO expanded service to provide power to Ala Moana Shopping Mall, and to the town of Kailua, which was experiencing a boom in residential growth.

In 1954, HECO opened a new Plant at Alakea and Halekauwila Streets. This plant had a 50,000kw capability, which was expanded in 1957 with an additional 50,000kw, and renamed after HECO's president [from 1943-59], Leslie A Hicks.³¹

Figure 23. Photo of HECO Honolulu Power Plant, Unit 7, ca. 1925. Source: *Honolulu City – 1920s*, Hawai'i State Archives.

Figure 24. Photos of HECO Honolulu Power Plant, Units 5 and 7, ca. 1940 (left) and 1955 (right). Source: *Honolulu City: 1940s*, Hawai'i State Archives.

Additional history on each the plant's units is also provided by the Draft NRHP Registration Form as follows:

Unit 7 Structure – Units 1, 2 and 3 (1920 – ca. 1924)

To provide for the further electrification of Oahu during the 1920s, HECO planned construction of a new plant on property adjacent to the existing 1894 Alakea Plant. Some

of this property had previously been purchased ca. 1903-04 by then Vice-president John A McCandless, who had quietly acquired adjacent lots for the company in anticipation of such an expansion. HECO purchased additional property adjacent to the Alakea Plant site in 1918, and its total land holdings amounted to the entire block bounded by Alakea, Halekauwila, Bishop, and Allen Streets (now Aloha Tower Drive). The 1920 plant that would become Unit 7 originally held three oil-fired generating units that went into operation in 1920, 1922, and 1924. Additional units were installed in the ensuing years, and in 1944 the structure received a 35,000kw unit that was the seventh to be installed on the property. It was at this time that the structure began to be referred to as Unit 7.

Unit 5 Structure (1930)

The 1930 power plant structure, the extant Honolulu Power Plant/Unit 5, was built adjacent to, and northwest of, the 1920 Unit 7 structure. It originally contained a 20,000kw steam turbine generator that was the fifth unit to be installed on the property. Unit 5 was decommissioned, along with Unit 7, in December 1983.³²

It should be noted that information on the development of the Hicks Plant has been omitted from the previous excerpt as it falls outside the project area.

Architectural Descriptions

Figure 27. Project area denoting building and structure locations and construction dates. Source: base map, Google Earth; graphics, MASON, 2024.

Each resource surveyed as part of this study is described on the following pages, including brief alteration histories, if known. The alteration history section is not meant to be a comprehensive list of every alteration, but a list of the most significant alterations.

Character defining features are only provided for the resources that meet HAR §13-284-6 or §13-275-6 significance and integrity criteria.

Pier 7 (1922-27)

Figure 28. Top of Pier 7, camera facing southwest (MASON, 2024).

While the Alakea Street Wharf was built in the location of Pier 7 between 1905-07, much of the pier that exists in 2024 was built between 1922-27. The pier is rectangular in plan and is approximately 17,345 square feet in area. Per Fung Associates Inc.'s *Honolulu Harbor Historic Structures Report*:

Pier 7 is located between the south end of Alakea and Bishop Street and is comprised of concrete retaining slip walls. The pier is supported by two concrete piles and a concrete decked breasting platform.

Remnants of footings for the automobile ramp up to Aloha Tower and Piers 8, 9, 10, and 11 are at the North (*mauka*) end of the slip between Pier 7 and Pier 6. The pier is the location of the Falls of Clyde and Hawaii Maritime Center.³³

Alterations

The following information on alterations to Pier 7 is compiled from MASON's research and Fung Associates Inc.'s *Honolulu Harbor Historic Structures Report*:

- Between 1905-07, Pier 7's predecessor, the Alakea Street Wharf was built.
- In 1909, a two-story shed was constructed atop Pier 7.
- In 1914, a 70' tower was added to the south end of the pier.
- In 1922, a portion of Pier 7 was rebuilt in concrete.
- In 1923, more of the pier was rebuilt in concrete.

³³ Fung Associates Inc., *Honolulu Harbor Historic Structures Assessment Report*, 119.

- In 1927, an additional section of the pier was reconstructed in concrete.
- In 1947, the outer end of the pier was demolished.
- In 1960, the two-story shed atop Pier 7 was demolished.
- In 1962, the pier's coral surface was paved to create an open-air parking lot.
- In 1965, a vehicle ramp between the parking lot near Piers 5-7 and Piers 8-11 was completed (all part of the cargo-passenger terminal project), where it remained until 1993 when it was demolished.
- In 1968, a sheet pile bulkhead for the pier was completed.
- In 1988, the former Maritime Center building was built atop Pier 7.

Character Defining Features

- Based on the description of Pier 7 provided in Fung Associates Inc.'s *Honolulu Harbor Historic Structures Report*, its reinforced concrete structural system is a character defining feature.

Figure 29. Top of Pier 7, camera facing northeast (MASON, 2024).

Figure 30. Southeast side of Pier 7, camera facing northwest (MASON, 2024).

Figure 31. Northwest side of Pier 7, camera facing southwest (MASON, 2024).

Figure 32. Southeast side of Pier 7, camera facing west (MASON, 2024).

Former Maritime Center (1988)

Figure 33. Northeast facade of former Maritime Center, camera facing southwest (MASON, 2024).

The former Maritime Center is a three-story building. It is not considered a historic property as it was completed in 1988. Originally known as the “Kalākaua Boat House,” it is sited atop Pier 7, has a rectangular plan, concrete foundation, and a standing seam metal-clad gable-on-hip roof with intersecting gables at the front (east), north, and south facades. Along its south façade is a large inset lanai on the first floor. At the northern side of the building is a tall, attached viewing platform with a square plan and a hipped roof. The platform projects from the building’s northern wall beginning at an upper floor.

Alterations

- Since the Maritime Center closed, the windows and second-floor lanai on the south façade have been covered with plywood.

Figure 34. Northeast facade of former Maritime Center, camera facing west (MASON, 2024).

Figure 35. Northwest façade of former Maritime Center, camera facing southwest (MASON, 2024).

Figure 36. Southeast and northeast facades of former Maritime Center, camera facing northwest (MASON, 2024).

HECO Honolulu Power Plant Units 5 (1930) and 7 (1920-ca. 1924)

Figure 37. Southwest facades of HECO Honolulu Power Plant, Unit 5 (left) and Unit 7 (right), camera facing northeast (MASON, 2024).

The HAER Report for the HECO Honolulu Power Plant provides the following details on Units 5 and 7:

PART II. Structural/ Design/ Equipment Information

A. General Statement

1. Character

The HECO Power Plant Unit 5 & 7 and the Leslie A. Hicks Power Plant are large industrial buildings with modest architectural detailing. All have flat roofs and rectangular massing. Unit 5 and Unit 7 have a complex, multi-level roof. They were built with arched window openings, clerestory windows, roof parapets, belt courses, and a narrow projecting cornices below the top of the parapets. Although greatly altered, vestiges of some of these features are still visible. One trait of these two buildings that remains intact is the approximate 8'-6" high plinth with a distinctive outward flare at the top. The Hicks Plant is a slightly taller building than Units 5 & 7, and its rectangular massing is made more pronounced by the simpler, three level roof and the original full height louver panels on three sides of the building.

2. Condition of fabric

All buildings are in good condition and appear structurally sound. They appear to have been well maintained. Windows and doors in Units 5 & 7 have typically been replaced and are in good condition. No deteriorated or weathered areas were noted on the buildings' exteriors.

C. Description of Exterior

1. Overall dimensions

Unit 5 & 7 has an irregular rectangular footprint with overall dimensions of about 150' x 252' with its longest dimension fronting Aloha Tower Drive. About 192' of this length along Aloha Tower Drive comprises Unit 7. Unit 5 is about 60' long fronting Aloha Tower Drive and it widens to about 75' long at its east side. The multi-level roof of this building has a height at the parapet of about 78' above street level. Portions of the roof at the northwest corner and at the south end are lower, at about 60'. There are two penthouses that are about 24' above the parapet height, to 102' above street level. The Hicks Plant has a rectangular footprint that measures about 222' x 130' long (extending along Aloha Tower Drive). The 222' depth of the building (extending back from Aloha Tower Drive) is divided into three sections with different roof heights. At Aloha Tower Drive the building has an approximate 28' high entry section that extends back about 18' from the street. The building's roof level then increases to about 65' at the middle portion of the building, which is about 108' in depth x 130' in width. The east portion of the Hicks Plant building is tallest at about 108' in height and measures about 96' in depth x 130' in width. Projecting above the east portion are two smokestacks that have been constructed to a height of about 160' above street level. An approximate 60' wide driveway separates the Hicks Plant from Unit 7. A gangway enclosed with corrugated siding, and two ducts extend between these buildings about 18' above driveway level.

2. Foundations

No engineering plans were located for this report that provide information on the buildings' foundations. However, because of the heavy equipment these building were designed to contain, it is assumed that their concrete slab floors are supported by concrete piles or footings.

3. Walls

Unit 5 and Unit 7 have concrete exterior walls that are painted. Two simple belt courses go around the building at about 12' and 40' above the street level. The building has a water table that extends up about 9'-6" above street level. The top 1'-6" of this feature is flared out slightly and the bottom 2' projects out about 3" forming a plinth with a cavetto contoured top edge.

4. Structural system, framing

Units 5 and 7 are built with reinforced concrete frames. Unit 7 has a steel truss-framed roof.³⁴ ...

6. Openings

a. Doorways and doors:

Facing the streets, Unit 5 and Unit 7 have large scale door openings that are enclosed with chain-link fencing to provide security and ventilation inside the building.

All side and rear facades of the buildings feature equipment and pedestrian doors of varying configurations that could not be closely examined due to lack of access.

b. Windows and shutters: Unit 5 and Unit 7 have all window openings on the street facing facades filled with either solid panels, louver vent panels, or grid-pattern perforated grilles. At the rear sides, Unit 5 and Unit 7 have various windows and vents that could not be examined due to lack of access.

³⁴ HECO. Historic photos from HECO archives. Various dates.

7. Roof

a. Shape, truss type, covering: Units 5 and 7, and the Hicks Plant have flat roofs. The roof of Unit 7 is supported by steel trusses. All buildings are presumed to have built-up roofs.

b. Cornice, eaves: Units 5 and 7 have thin, rectilinear cornices at the top of the parapets.

c. Monitors:
The south portion of the Unit 7 building has a sloped roofed monitor that extends northeast to southwest near the centerline of this section of the building.³⁵

It should be noted that details concerning the Hicks Plant have been omitted from the previous excerpt as it falls outside the project area.

Alterations

Alterations to Unit 5 are summarized in the HAER report as follows:

After the 1930 construction of Unit 5, changes in the fenestration of Unit 5 and Unit 7 appear to have been undertaken on the two facilities as one. The dates and configurations for these alterations can only be approximated from available historic photos. Sometime between 1935 and 1945, many of the large, vertically-oriented window openings that originally contained multi-light sash were in-filled. The five openings at the center of the southwest façade of the Unit 5 and Unit 7 building appear to have remained unaltered, except for a large loading or freight doorway added at the bottom of the northern-most opening. Most of the remaining vertical openings received solid panels with louvers at the top and bottom, as did smaller openings on the northwest (rear) side of the building. By 1955, some of these smaller openings had been changed back to louvers filling the entire opening.

Sometime after 1958 solid panels with rectangular sections of fixed orthogonal grilles filled the five openings at the center of the southwest façade and smaller openings in the roof penthouses.³⁶

Alterations to Unit 7 are summarized in the same document as follows:

...modifications were made in 1944 which altered the roof configuration. It was raised about 25' and a penthouse (footprint about 50' x 50') was added above the new boiler. In addition, the original smokestacks which protruded through the roof near the northeast edge were removed and new stacks built nearer to the center of the building, above the location of the two boilers. The original stacks were very tall, extending about 180' above the original building roof. The 1944 stacks were much shorter, only reaching about 75' above the height of the original building roof.³⁷

Evaluation of Significance and Integrity

Research undertaken during the development of the Draft NRHP Registration Form and HAER documentation for the HECO Honolulu Power Plant, the Honolulu Harbor RLS, and this RLS shows that Units 5 and 7 of the HECO Honolulu Power Plant and Pier 7 are historic properties as they are over 50 years of age. They were assessed for significance in keeping with HAR §13-284-6 and §13-275-6 Criteria a-d. (MASON is not a qualified ethnographer that meets the qualifications in HAR Chapter 13-281 and did not evaluate the properties for Criterion “e” significance).

Pier 7

MASON’s evaluation for Pier 7 is as follows:

Significance

- Criterion “a” – Per the Honolulu Harbor RLS Report, “Pier 7 is a contributing pier under [NRHP] Criterion A for its association with the development of the Harbor.”³⁸ Therefore, it meets HAR §13-275-6 Criterion “a”. The pier was constructed during the Board of Harbor Commissioner’s campaign starting in the 1910s to rebuild all wood piers in concrete. This pier’s use of reinforced concrete was consistent with the Board of Harbor Commissioner’s policy “to make all waterfront improvements in so far as possible with the funds available, of a substantial permanent nature.”³⁹
- Criterion “b” – Pier 7 does not meet HAR §13-275-6 Criterion “b” since it has no known association with the “lives of persons important in our past.”
- Criterion “c” – Pier 7 meets HAR §13-275-6 Criterion “c” because it embodies the distinctive characteristics of a type of construction. It is one of a few remaining examples of the harbor’s early reinforced concrete piers.
- Criterion “d” – Pier 7 does not meet HAR §13-275-6 Criterion “d” since it is not known for having “yielded, or [being] likely to yield, information important in prehistory or history.”

Integrity

Pier 7 retains its integrity in keeping with HAR §13-275-6 integrity requirements. There are some changes, as noted below, that detract from the pier’s integrity of setting and materials.

- Location – Pier 7 has not been moved. Therefore, it retains its integrity of location.
- Design – Pier 7 retains its integrity of design. Its features, including its concrete retaining slip walls, concrete piles, and a concrete decked breasting platform are still intact.
- Setting – Pier 7 does not retain its integrity of setting. The configuration and density of the waterfront and harbor has changed significantly since Pier 7 was initially constructed. Additionally, the historic structure that once sat atop Pier 7 was demolished in the early

³⁸ Fung Associates Inc., *Honolulu Harbor Historic Structures Assessment Report*, 129.

³⁹ Report of the Superintendent of Public Works to the Governor of the Territory of Hawaii for the year ending June 20, 1914, 201 in Fung Associates Inc., *Honolulu Harbor Historic Structures Assessment Report*, 21.

1960s to make way for a parking area. The parking area was later redeveloped with the former Maritime Center building in the late 1980s.

- Materials – Pier 7 partially retains its integrity of materials. While it had previously been topped with coral, the pier was paved in the early 1960s to create a parking lot. Despite that change, it is still discernable as a reinforced concrete pier.
- Workmanship – Pier 7 retains the elements that make it discernable as a reinforced concrete pier constructed in the 1920s. Therefore, it retains its integrity of workmanship.
- Feeling – Although the setting of the nearby waterfront has changed, the area is still actively used as a harbor and that feeling remains. Additionally, Pier 7 still conveys the aesthetic of a maritime structure constructed of reinforced concrete from the 1920s. Therefore, Pier 7 retains its integrity of feeling.
- Association – Pier 7 continues to function as an important component of the harbor’s maritime infrastructure. Therefore, it retains its integrity of association.

Former Maritime Center

The former Maritime Center is not a historic property because it is less than 50 years old. It cannot meet HAR §13-275-6 significance and integrity criteria.

HECO Honolulu Power Plant Units 5 and 7

MASON’s evaluation for the HECO Power Plant Units 5 and 7 is as follows:

Significance

- Criterion “a” – Units 5 and 7 are not significant under Criterion “a” due to loss of integrity. If they retained sufficient integrity, they would be significant under this criterion for their association with HECO’s long-term electric power generation infrastructure. Because the buildings have been altered, as described in previous sections, they are no longer recognizable for their associations with HECO’s generation of electric power in Honolulu in the 1920s and ‘30s.
- Criterion “b” – Units 5 and 7 do not meet Criterion “b” since they have no known association with the “lives of persons important in our past.”
- Criterion “c” – Units 5 and 7 are not significant under Criterion “c” due to loss of integrity. If they retained sufficient integrity, they would be significant under this criterion as examples of 1920s and ‘30s industrial buildings with Classical influences, including arched openings with keystones, a cornice, pilasters, and wall bases. Alterations described in previous sections have removed important character defining features and changed the buildings height and overall massing. Details, including original fenestration, which would have distinguished them as industrial buildings dating from the 1920s and ‘30s, have been changed numerous times outside their periods of significance. Additionally, classically inspired details, such as the cornice, have been removed.
- Criterion “d” – Units 5 and 7 do not meet Criterion “d” since they are not known for having “yielded, or [being] likely to yield, information important in prehistory or history.”

Integrity

Per the Draft NRHP Registration Form for HECO Honolulu Power Plant, Units 5 and 7 are “non-contributing resources as are the other building and structures within the HECO property.”⁴⁰

Therefore, they do not retain integrity in keeping with HAR §13-284-6 integrity requirements.

There are several changes noted below that detract from their integrity of design, setting, materials, workmanship, feeling, and association:

- Location – Integrity of location is retained as the HECO Honolulu Power Plant has not been moved.
- Design – Units 5 and 7 do not retain their integrity of design. The buildings have been altered since their construction in the 1920s and '30s, removing character defining features, including original windows, doors, cornices, and smokestacks. Additionally, the roof configuration of Unit 7 has been changed (its height has been increased, altering its overall massing and scale).
- Setting – Units 5 and 7 do not retain their integrity of setting. The configuration and density of the waterfront has changed since they were initially constructed: new roads were built, buildings in downtown have increased in height, and south of the plant, low transit sheds have been transformed into the open, planted area and parking lot.
- Materials – Units 5 and 7 partially retain their integrity of materials. Their concrete walls are still apparent; however, original windows and doors have been removed.
- Workmanship – Units 5 and 7 have been altered in a manner that make their original workmanship difficult to discern (there are no original windows to provide clues about original window types or configurations, likewise, there are no original smokestacks). Therefore, they do not retain integrity of workmanship.
- Feeling – Units 5 and 7 were originally constructed by HECO to produce electric power. Their industrial nature is still apparent; however, their integrity of feeling has been diminished by changes to their setting and loss of the physical features that conveyed their historic character.
- Association – Unit 5 was decommissioned in 1982 and Unit 7 in the following year. Although they are currently vacant they retain some elements (including their industrial appearance and relationship to the larger Honolulu Power Plant) that convey their integrity of association.

⁴⁰ MASON, Draft NRHP Registration Form, HECO Honolulu Power Plant, 4.

Table 1: Significance Evaluation and Integrity Assessments

Name/Address/TMK/Photo	Year Built	Evaluation of Significance (HAR §13-284-6 and §13-275-6)	Integrity Assessment* (HAR §13-284-6 and §13-275-6)
Pier 7 – Aloha Tower Dr. TMK (1) 2-1-001:058 	1922-27	Meets Criterion “a” for its association with the development of Honolulu Harbor. The pier was built during the Board of Harbor Commissioner’s campaign beginning in the 1910s to rebuild the harbor’s wood piers in concrete. Meets Criterion “c” because it is one of a few remaining examples of Honolulu Harbor’s early reinforced concrete piers.	Retains integrity of L, D, W, F, and A. Partially retains integrity of M. Does not retain integrity of S.
Former Maritime Center – Aloha Tower Dr. TMK (1) 2-1-001:058 	1988	This is not a historic property. It is less than 50 years old. It cannot meet HAR §13-275-6 significance and integrity criteria.	N/A
HECO Power Plant Units 5 and 7 – 170 Aloha Tower Dr. TMK (1) 2-1-014:006 (por.) 	1920–ca. 1924 (Unit 7) and 1930 (Unit 5)	Units 5 and 7 are not significant due to a loss of integrity. They no longer convey their periods of significance. While they are associated with HECO’s generation of power in the 1920s and ‘30s, alterations made outside their periods of significance have impaired their integrity.	Retains integrity of L. Partially retains integrity of M and A. Does not retain integrity of D, S, W, and F.

*Integrity assessments provided in the table are abbreviations for the aspects of integrity specified in HAR §13-284-6 and §13-275-6. The seven aspects of integrity are:

- L = Location
- D = Design
- S = Setting
- M = Materials
- W = Workmanship
- F = Feeling
- A = Association

Evaluation of Effect on Historic Properties

For a detailed description of the proposed Tradewinds Garden and Glass Museum project, refer to the Early Consultation Package in Appendix D. In general, the project proposes to renovate Units 5 and 7 of the HECO Honolulu Power Plant and the former Maritime Center for reuse.

For Units 5 and 7, proposed uses include glass art galleries, a hot shop for observing glass art creation, and a bookstore/lobby. Alterations associated with the proposed uses will primarily occur on the interior, with limited exterior alterations involving cleaning the buildings, installation of signage at locations yet to be determined, and replacement of existing louvers and windows in-kind or similar, replacement of non-original garage doors on the makai and Irwin Park-facing facades with glazed doors and entrance features. Most of the adjacent site features will be retained with changes to the site potentially involving:

- Expanding the sidewalk and adding landscaping or planters to the Irwin Park side of the building.
- Repairing or repaving the approach to the building from the corner of Ala Moana Boulevard and Bishop Street.
- Repairing or repaving the driveway along the mauka side of the building.
- Reconstructing the sidewalk and landscaped area along the makai side of the building.

For the former Maritime Center (built in 1988), proposed uses include a bookstore/lobby, deck areas, a bar, and a restaurant. The building's same basic massing will be retained with exterior alterations potentially including:

- Renovating the first several bays on the mauka end.
- Reconstructing several bays on the makai end with large, glazed openings. The bays on this end of the building are beyond repair.
- Recladding the building with a material that is yet to be determined.
- Replacing the windows.
- Repairing and retaining the tower.

Potential alterations to the site/Pier 7 include:

- Adding new gardens to the mauka and makai ends of the pier.
- Reconstructing the wooden portion of the pier (a non-historic addition) on the Aloha Tower side.
- Adding planters to the Diamond Head side of the pier.

Criteria Used for Evaluations of Effect

The proposed project was evaluated for its effects on the integrity of historic properties against HAR §13-284-7 and §13-275-7 criteria. See Appendix C for more information.

HAR §13-284-7 and §13-275-7 - "Determining effects to significant historic properties" describes effects on historic properties as follows:

Effects include, but are not limited to, partial or total destruction or alteration of the historic property, detrimental alteration of the properties' surrounding

environment, detrimental visual, spatial, noise or atmospheric impingement, increasing access with the chances of resulting damage, and neglect resulting in deterioration or destruction.

Further, HAR §13-284-7 and §13-275-7 - "Determining effects to significant historic properties" explains that one of two effect determinations must be established; "No historic properties affected" or "Effect, with agreed upon mitigation commitments."

Evaluations of Effect Findings

Based on the project information provided to MASON by WOC, it is MASON's opinion that the proposed project will result in a "No historic properties affected" finding under HAR §13-284-7 and §13-275-7, as follows:

Pier 7

For Pier 7, it is assumed that the proposed project will result in a "No historic properties affected" finding, based on the project description provided to MASON by WOC. The project is not likely to substantially change Pier 7's setting (minor site improvements are proposed—new landscaping/gardens are proposed within existing landscaped or grassy areas). This determination assumes that the massing, scale, and materials of the former Maritime Center will not be substantially changed by the proposed project.

HECO Honolulu Power Plant Units 5 and 7

For Units 5 and 7 of the HECO Honolulu Power Plant, which are evaluated as not meeting HAR §13-284-6 significance and integrity criteria, the proposed work will not result in effects to significant historic properties.

Mitigation Recommendations

HAR §13-284-8 and §13-275-8 – Mitigation (a) provides four types of mitigation accepted by the SHPD for an architectural resource. These are Preservation, Architectural Recordation, Historical Data Recovery, and Ethnographic Documentation. See Appendix D.

For this project, no mitigation is recommended for Pier 7 or HECO Honolulu Power Plant Units 5 and 7 due to the proposed finding of "No historic properties affected."

Appendices

Appendix A – HAR §13-284-6 and §13-275-6 Criteria for Evaluation

Hawai'i Administrative Rules (HAR) §13-284-6 and §13-275-6, Evaluation of Significance, explains that "to be significant, a historic property shall possess integrity of location, design, setting, materials, workmanship, feeling, and association and shall meet one or more of the following criterion:"

- a. That are associated with events that have made a significant contribution to the broad patterns of our history; or
- b. That are associated with the lives of significant persons in our past; or
- c. That embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a distinguishable entity whose components may lack individual distinction; or
- d. That have yielded or may be likely to yield, information important in history or prehistory;
- e. Has an important value to the native Hawaiian people or to another ethnic group of the state due to association with cultural practices once carried out, or still carried out at the property; or due to associations with traditional beliefs, events or oral accounts – these associations being important to the group's history and cultural identity (similar traditional cultural significance for NRHP)

Appendix B – HAR §13-284-7 and §13-275-7 Determining Effects to Historic Properties

The following is an excerpt from HAR §13-284-7 and §13-275-7:

(a) The effects or impacts of a project on significant properties shall be determined by the agency. Effects include direct as well as indirect impacts. One of the following effect determinations must be established:

(1) "No historic properties affected". The project will have no effect on significant historic properties; or

(2) "Effect, with proposed mitigation commitments". The project will affect one or more significant historic properties, and the effects will be potentially harmful. However, the agency has proposed mitigation commitments involving one or more forms of mitigation to reasonably and acceptably mitigate the harmful effects.

(b) Effects include, but are not limited to, partial or total destruction or alteration of the historic property, detrimental alteration of the properties' surrounding environment, detrimental visual, spatial, noise or atmospheric impingement, increasing access with the chances of resulting damage, and neglect resulting in deterioration or destruction.

Appendix C – HAR §13-284-8 and §13-275-8 Mitigation

According to HAR §13-284-8 and §13-275-8, mitigation for an architectural resource may take the form of one or more of the following:

- A. Preservation. Preservation may include avoidance of the effect and protection, rehabilitation, restoration, or reconstruction.
- B. Architectural Recordation. Recordation involves the photographic documentation and possibly the measured drawing of a building, structure or object prior to its alteration. Architectural recordation plans and photos shall meet the minimal standards as provided by Historic American Building Survey (HABS).
- C. Historical Data Recovery. Data recovery involves researching historical source materials to document an adequate and reasonable amount of information about the property when a property will be altered or destroyed.
- D. Ethnographic Documentation. Ethnographic documentation consists of interviewing knowledgeable individuals and researching historical materials to document an adequate and reasonable amount of information about the property.

TRADEWINDS GARDEN AND GLASS MUSEUM
Environmental Assessment Early Consultation Package

1. CHAPTER 343, HAWAI'I REVISED STATUTES REQUIREMENTS

Garden Art, LLC (herein referred to as the Applicant) is proposing to develop the Tradewinds Garden (herein referred to as the Proposed Project) at Pier 7 in Honolulu, on the island of O'ahu, near the Aloha Tower Marketplace.

Under HRS § 343-5(e), whenever an applicant proposes an action specified by Hawai'i Revised Statutes (HRS) Section 343-5(a) that requires approval of an agency, and that action is not declared exempt under HRS Section 343-6, the applicant must engage in the environmental review process set forth under Chapter 343. The implementation of the Proposed Project will require an Environmental Assessment (EA) due to the use of State lands, administered by the State of Hawai'i Department of Transportation - Harbor Division (HDOT-H), pursuant to §343-5 (1), Hawai'i Revised Statutes (HRS), *"Propose the use of state or county lands or the use of state or county funds, other than funds to be used for feasibility or planning studies for possible future programs or projects which the agency has not approved, adopted, or funded, or funds to be used for the acquisition of unimproved real property; provided that the agency shall consider environmental factors and available alternative in its feasibility of planning studies."*

This Early Consultation Package constitutes the first step in the EA process leading towards compliance with environmental review documentation requirements as outlined under Chapter 343, HRS. The Early Consultation Package is intended to serve as a vehicle to notify stakeholders of the commencement of the preparation of the EA for the Proposed Project as well as to solicit scoping input in relation to the assessment of the Proposed Project against a host of environmental resource criteria. The forthcoming EA will be prepared in accordance with Title 11, Chapter 200.1, Hawai'i Administrative Rules (HAR), as an "Applicant Action" which will include an assessment of potential environmental, social, cultural, and economic impacts associated with the Proposed Project. In accordance with § 11-200.1-7(d)(5), the HDOT-H will be the determining agency as they have the most land involved in the action. Pursuant to HRS §343-5(b), the HDOT-H will be the responsible for determining the significance of potential environmental impacts and processing the EA.

2. PROJECT LOCATION AND SURROUNDING REGION

The Proposed Project spans two primary areas: Pier 7 of Honolulu Harbor and Units 5 and 7 of the Honolulu Power Plant, collectively denoted as the Project Site (refer to Figure 1).

The State of Hawai'i holds the record fee ownership of Pier 7, identified as Tax Map Key (TMK) parcels [1] 2-1-001:057 and 58, which together cover a combined approximate area of 9.6 acres or approximately 423,054 square feet (sf) (see Figure 2A and 2B). The Aloha Tower Development Corporation (ATDC) serves as the lessee of Pier 7. Established in 1981, ATDC oversees the redevelopment of State-owned properties along the Downtown Honolulu waterfront.

Hawaiian Electric Co Inc (HECO) is the record fee owner of the Honolulu Power Plant, identified by TMK parcel [1] 2-1-014:006, which covers an area of approximately 3.4 acres or approximately 149,644 sf (see Figure 2C).

TRADEWINDS GARDEN AND GLASS MUSEUM
Environmental Assessment Early Consultation Package

The Pier 7 portion of the Project Site is situated east of Aloha Tower, and is the current location of the now derelict Hawai'i Maritime Center, which was formerly operated by the Bishop Museum. The Maritime Center held the distinction of being one of the State's most popular museums from its opening in 1988 till its closure in 2009. Functioning as an educational and cultural resource, the museum played a crucial role in celebrating and preserving Hawai'i's rich maritime history. The Maritime Center showcased a varied array of items, including historical photographs, scale models, and a rich assortment of artifacts spanning from the era of ancient Polynesian mariners, to the arrival of Captain Cook, the flourishing whaling industry, the golden age of transpacific passenger line transit, up to the present day. Notably, the museum is home to the Falls of Clyde, a vessel constructed in 1878 for the oil industry and once designated as a National Historic Landmark. Following the cessation of operations, and years of dereliction as a maritime heritage site, the current state of the museum reflects significant deterioration and decay. In 2023, the HDOT-H delisted the Falls of Clyde from the Hawai'i Register of Historic Places to allow for the redevelopment of Pier 7. It is anticipated that the Falls of Clyde will be relocated back to Scotland where it was originally constructed.

The Old Honolulu Power Plant sits at the intersection of Bishop Street and Aloha Tower Drive, with limited direct access to Ala Moana Boulevard. The Honolulu Power Plant was originally constructed in the 1920's to enhance electricity supply to O'ahu, housing power-generating units and associated hardware. It was further expanded and commissioned as the Leslie A. Hick's Honolulu Power Plant in 1954. With the significant expansion of renewable energy generation and the buildout of Hawaiian Electric Company (HECO) infrastructure elsewhere on Oahu, the Honolulu Power Plant was decommissioned in 2014, along with other oil-fired units around the island. Since its deactivation, the site has remained largely vacant and underutilized.

The Project Site is situated at the southern end of O'ahu's central business district which is home to a number of important historical and cultural landmarks (See Figure 3). Adjacent to the Project Site is Honolulu Harbor to the northwest, Aloha Tower Marketplace (including the Aloha Tower historical landmark) / Hawai'i Pacific University to the southwest, Irwin Memorial Park to the southeast, HDOT-H headquarters and working piers to the northeast. Moreover, there is an abundance of office space, multiple functioning cruise ship piers, and ample parking space within walking distance of the Project Site. Important landmarks such as the 'Iolani Palace, Ali'iolani Hale, and the Hawai'i State Capital are also relatively near the project site, approximately 0.5 miles to the northeast. Access to the Project Site is provided by Nimitz Highway/Ala Moana Boulevard via Bishop Street and Aloha Tower Drive.

The Project Site is also situated near Honolulu's Arts District which is approximately 0.25 miles northwest. The Arts District feature shops, theaters, nightclubs, restaurants, and various galleries showcasing collections of art such as authentic Hawaiian paintings, textiles, and glass-blown pieces. The Project Site also lies near the Our Kaka'ako neighborhood which is approximately 0.5 miles to the east. Our Kaka'ako is a community consisting of nine city blocks within the Kaka'ako neighborhood, centered around art. It showcases a collection of local and global artists' original murals with the goal of sharing creativity, beautifying the community, and bringing people together.

TRADEWINDS GARDEN AND GLASS MUSEUM
Environmental Assessment Early Consultation Package

The Project Site parcels are situated within the City and County of Honolulu (CCH) B-2 Community Business District and the Kaka'ako Community Development District (Kak) (See Figure 4) and the Pier 7 site is also located within the Hawai'i Capital Special District (See Figure 5).

3. PROJECT DESCRIPTION

The Proposed Project encapsulates the Applicant's vision for revitalizing both the Pier 7 and Honolulu Power Plant sites, as well as catalyzing the activation of the Downtown Waterfront at large. This vision is centered on embracing and celebrating creativity and the arts, with a core emphasis on a comprehensive commitment to thoughtful and adaptive reuse. The anticipated improvements entail interior modifications to facilitate the establishment of a garden and glass art museum, complemented by various additional features. Minimal exterior enhancements and modifications are also anticipated. The renovated Honolulu Power Plant will be designed to preserve its outer shell and historic architectural features, providing interior space for glass art galleries, a hot shop for observing glass art creation, and a bookstore/lobby. The Maritime Center structure is slated for renovation, and aims to showcase five gardens designed to emulate native Hawaiian vegetation. Additionally, the Maritime Center is anticipated to feature a bookstore/lobby, deck areas, a bar, and a restaurant.

One of the central objectives of the Proposed Project is to serve as an educational resource catering to students, tourists, artists, and the general public. To realize this objective, the project will institute programs specifically crafted to impart knowledge about the science of art and glass art. Local educators will collaborate to develop a curriculum for a program providing an immersive educational experience in these fields. Additionally, the Proposed Project aims to engage the community by offering a diverse range of classes, demonstrations, and excursions, inviting both visitors and residents to participate and enhance their understanding of art and glass artistry. Moreover, maritime related themes and stories will be woven into Project programming and exhibits.

In addition to its educational role, the Proposed Project aspires to serve as an creative / artistic incubator, providing a space for artists to introduce various types of art into the Project Site to foster business growth.

The overall design themes for the Project Site are anticipated to center around the adaptive re-use of both the existing Maritime Center and the Honolulu Power Plant. The vision for the existing Maritime Center incorporates tropical wood and shuttering features to achieve a harmonious aesthetic. In contrast, the design approach for the adaptive re-use of the Honolulu Power Plant emphasizes minimal exterior treatments, directing attention to the building's walls, floors, and structural steel.

Fundamentally, the Project's design aims to craft an immersive visual experience, conveying the historical significance of the site by seamlessly integrating local stories into overarching, design-driven themes.

4. PURPOSE AND NEED

As previously discussed, the Maritime Center, now in a state of disrepair, ceased operations in 2009, resulting in significant decay and deterioration of on-site facilities. Similarly, the decommissioning of the Honolulu Power Plant occurred in 2014. These closures have left a void of inactivity in the waterfront area, presenting an opportunity and a demand for the revitalization and activation of these two specific sites.

The Proposed Project is poised to transform and modernize the area into a vibrant cultural destination by establishing a contemporary garden and glass art attraction, drawing inspiration from the Chihuly Garden and Glass Museum in Seattle. Through the creation of an immersive experience that celebrates cultural heritage and artistic expression, the project aims to breathe new life into the waterfront. This revitalization offers residents and visitors a unique space that seamlessly merges art, education, and the scenic beauty of the waterfront.

The Proposed Project is set to introduce glass art galleries, gardens, educational facilities, and additional complementary features, fostering a supportive environment for both local and international artists, as well as established and emerging talents. This initiative aims to significantly contribute to the promotion and expansion of creative arts in Hawai'i. Furthermore, the Project is anticipated to stimulate economic growth by drawing residents and visitors to the waterfront area, potentially attracting additional businesses and creating new opportunities for the local community.

Beyond its economic impact, the Proposed Project is positioned as an educational hub, offering programs designed to impart knowledge about the science of art and glass art. Simultaneously, it seeks to honor the historical significance of the site, creating a space that commemorates the past while fostering creativity and innovation for the future.

In summary, the goals and objectives of the Proposed Project are to:

- Align the Proposed Project with the Honolulu Waterfront Master Plan and development objectives of the ATDC;
- Revitalize and modernize the existing Maritime Center and the Honolulu Power Plant into a garden and glass art attraction to provide a variety of experiences at the water's edge;
- Foster and promote visual art and creative expression;
- Showcase Dale Chihuly's signature glass art collection and various pieces of art; and
- Serve as an educational resource by implementing programs, classes, demonstrations, and excursions designed to educate all segments of the population about the science of art and glass art.

5. PROJECT TIMELINE

Following design and permitting, and construction of the Proposed Project is anticipated to start in **Q4 of 202X** with the Proposed Project operating in **QX of 202X**.

6. CONSULTATION

This Early Consultation Package constitutes the first step in the EA process and is intended to notify stakeholders of the commencement of the preparation of an EA for the Proposed Project, as well as to solicit scoping input on the EA process.

This Early Consultation Package has been circulated to the following parties:

Federal Agencies

U.S. Environmental Protection Agency
U.S. Department of Interior, Fish and Wildlife Service
U.S. Army Corps of Engineers

Federal Representatives

Senator Mazie Hirono
Senator Brian Schatz
Representative Jill Tokuda
Representative Ed Case

State Agencies

Aloha Tower Development Corporation
Department of Accounting and General Services
Department of Business, Economic Development and Tourism (DBEDT)
DBEDT, Hawai'i State Energy Office
DBEDT, Land Use Commission
DBEDT, Office of Planning and Sustainable Development (OPSD)
DBEDT, Hawai'i Community Development Authority
DBEDT, Hawai'i Tourism Authority
OPSD, Environmental Review Program
Department of Defense
Department of Health (DOH)
DOH, Environmental Management Division
DOH, Hazard Evaluation and Emergency Response Office
DOH, Safe Drinking Water Branch
Department of Land and Natural Resources (DNLR)
DNLR, Office of Coastal and Conservation Lands
DNLR, Historic Preservation District
Department of Hawaiian Home Lands
Department of Transportation (HDOT)
DOT, Highways Division
DOT, Airports Division
Office of Hawaiian Affairs

State Representatives

Senator Karl Rhoads
Representative Scott K. Saiki

Note on Hawaiian Language Use

In keeping with other Hawaiian scholars, we do not italicize Hawaiian words. Hawaiian is both the native language of the pae‘āina of Hawai‘i and an official language of the State of Hawai‘i. Some authors will leave Hawaiian words italicized if part of a quote; we do not. In the narrative, we use diacritical markings to assist our readers, except in direct quotes, in which we keep the markings used in the original text. We provide translations contextually when appropriate. Unless otherwise noted, all translations are by Honua Consulting authors.

Executive Summary

By request of Garden Art, LLC, and Wilson Okamoto Corporation, this cultural impact assessment (CIA) was written for the Tradewinds Garden and Glass Museum, located in Kona District, Tax Map Keys (TMKs): (1) 2-1-014:006, 2-1-001:057 and -058. The project area encompasses approximately 9.6 acres or approximately 423,054 square feet (sf). The Proposed Project encapsulates the Applicant's vision for revitalizing both the Pier 7 and Honolulu Power Plant sites, as well as catalyzing the activation of the Downtown Waterfront at large.

The Proposed Project encapsulates the Applicant's vision for revitalizing both the Pier 7 and Honolulu Power Plant sites, as well as catalyzing the activation of the Downtown Waterfront at large. This vision is centered on embracing and celebrating creativity and the arts, with a core emphasis on a comprehensive commitment to thoughtful and adaptive reuse. The anticipated improvements entail interior modifications to facilitate the establishment of a garden and glass art museum, complemented by various additional features. Minimal exterior enhancements and modifications are also anticipated. The renovated Honolulu Power Plant will be designed to preserve its outer shell and historic architectural features, providing interior space for glass art galleries, a hot shop for observing glass art creation, and a bookstore/lobby. The Maritime Center structure is slated for renovation and aims to showcase five gardens designed to emulate native Hawaiian vegetation. Additionally, the Maritime Center is anticipated to feature a bookstore/lobby, deck areas, a bar, and a restaurant.

One of the central objectives of the Proposed Project is to serve as an educational resource catering to students, tourists, artists, and the general public. To realize this objective, the project will institute programs specifically crafted to impart knowledge about the science of art and glass art. Local educators will collaborate to develop a curriculum for a program providing an immersive educational experience in these fields. Additionally, the Proposed Project aims to engage the community by offering a diverse range of classes, demonstrations, and excursions, inviting both visitors and residents to participate and enhance their understanding of art and glass artistry. Moreover, maritime related themes and stories will be woven into Project programming and exhibits.

In addition to its educational role, the Proposed Project aspires to serve as a creative / artistic incubator, providing a space for artists to introduce various types of art into the Project Site to foster business growth.

The overall design themes for the Project Site are anticipated to center around the adaptive re-use of both the existing Maritime Center and the Honolulu Power Plant. The vision for the existing Maritime Center incorporates tropical wood and shuttering features to achieve a harmonious aesthetic. In contrast, the design approach for the adaptive re-use of the Honolulu

Power Plant emphasizes minimal exterior treatments, directing attention to the building's walls, floors, and structural steel.

Fundamentally, the Project's design aims to craft an immersive visual experience, conveying the historical significance of the site by seamlessly integrating local stories into overarching, design-driven themes.

This survey thoroughly identified valued cultural, historical, and natural resources in the project area, including the extent to which traditional and customary Native Hawaiian rights are exercised in the project area. Perhaps the project site's most important historic use was as the site of Kalākaua's boathouse. Additionally, the traditional and customary rights practiced in the area were once extensive, as the area has a long history of significance to the Hawaiian people. There are no active traditional practices occurring in the project area, aside from occasional recreational fishing, and the potential for the project to impact practices is negligible.

1.0 Project Description and Compliance

By request of Garden Art, LLC, and Wilson Okamoto Corporation, this cultural impact assessment (CIA) was written for the Tradewinds Garden and Glass Museum, located in Kona District, Tax Map Keys (TMKs): (1) 2-1-014:006, 2-1-001:057 and -058. The project area encompasses approximately 9.6 acres or approximately 423,054 square feet (sf). The Proposed Project encapsulates the Applicant's vision for revitalizing both the Pier 7 and Honolulu Power Plant sites, as well as catalyzing the activation of the Downtown Waterfront at large.

1.1 Project Description

The Proposed Project spans two primary areas: Pier 7 of Honolulu Harbor and Units 5 and 7 of the Honolulu Power Plant, collectively denoted as the Project Site (refer to Figure 1).

The State of Hawai'i holds the record fee ownership of Pier 7, identified as Tax Map Key (TMK) parcels [1] 2-1-001:057 and 58, which together cover a combined approximate area of 9.6 acres or approximately 423,054 square feet (sf) (see Figure 2A and 2B). The Aloha Tower Development Corporation (ATDC) serves as the lessee of Pier 7. Established in 1981, ATDC oversees the redevelopment of State-owned properties along the Downtown Honolulu waterfront.

Hawaiian Electric Co Inc (HECO) is the record fee owner of the Honolulu Power Plant, identified by TMK parcel [1] 2-1-014:006, which covers an area of approximately 3.4 acres or approximately 149,644 sf (see Figure 2C).

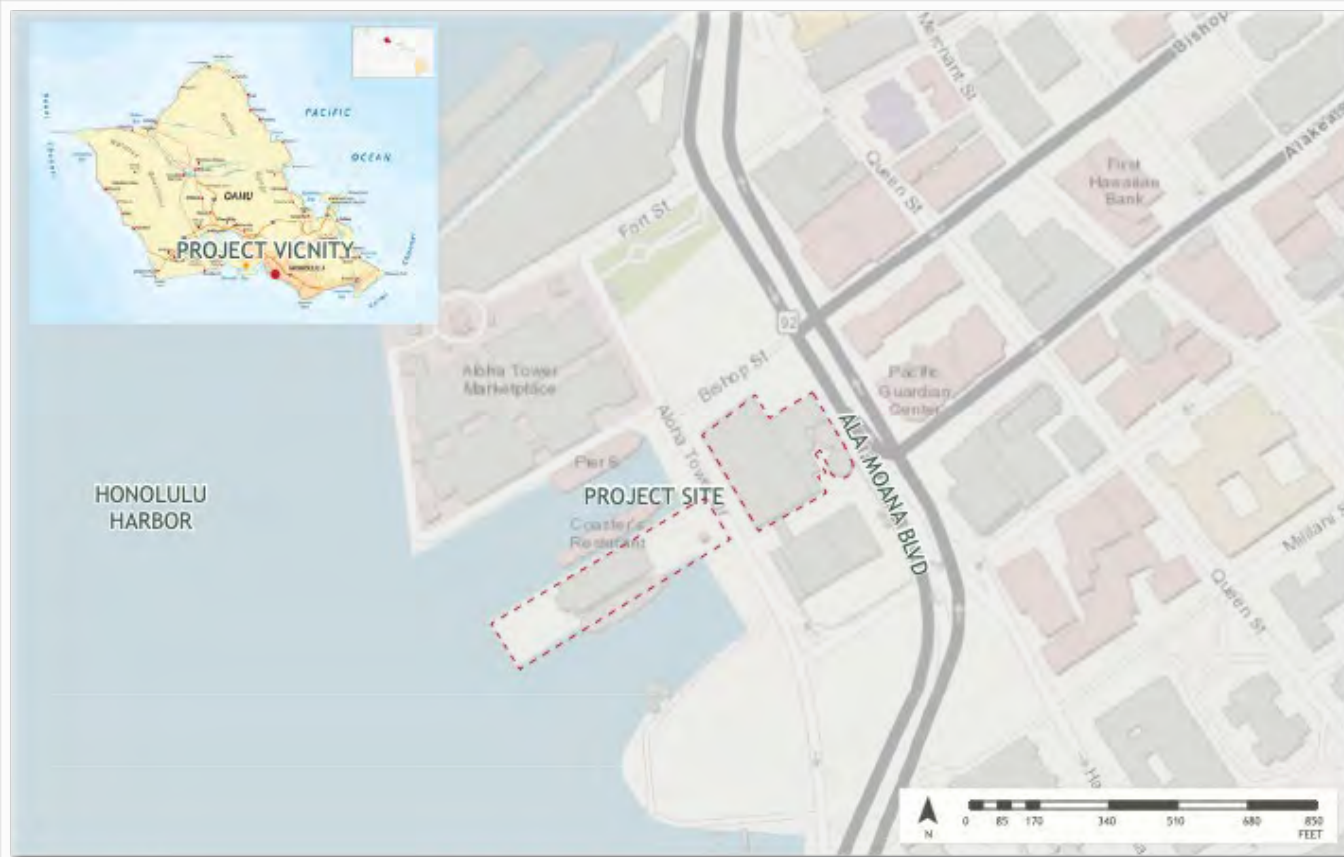

The Pier 7 portion of the Project Site is situated east of Aloha Tower, and is the current location of the now derelict Hawai'i Maritime Center, which was formerly operated by the Bishop Museum. The Maritime Center held the distinction of being one of the State's most popular museums from its opening in 1988 till its closure in 2009. Functioning as an educational and cultural resource, the museum played a crucial role in celebrating and preserving Hawai'i's rich maritime history. The Maritime Center showcased a varied array of items, including historical photographs, scale models, and a rich assortment of artifacts spanning from the era of ancient Polynesian mariners to the arrival of Captain Cook, the flourishing whaling industry, the golden age of transpacific passenger line transit, up to the present day. Notably, the museum is home to the Falls of Clyde, a vessel constructed in 1878 for the oil industry and once designated as a National Historic Landmark. Following the cessation of operations, and years of dereliction as a maritime heritage site, the current state of the museum reflects significant deterioration and decay. In 2023, the HDOT-H delisted the Falls of Clyde from the Hawai'i Register of Historic Places.

The Old Honolulu Power Plant sits at the intersection of Bishop Street and Aloha Tower Drive, with limited direct access to Ala Moana Boulevard. The Honolulu Power Plant was originally constructed in the 1920's to enhance electricity supply to O'ahu, housing power-generating units and associated hardware. It was further expanded and commissioned as the Leslie A. Hick's Honolulu Power Plant in 1954. With the significant expansion of renewable energy generation and the buildout of Hawaiian Electric Company (HECO) infrastructure elsewhere on Oahu, the Honolulu Power Plant was decommissioned in 2014, along with other oil-fired units around the island. Since its deactivation, the site has remained largely vacant and underutilized.

The Project Site is situated at the southern end of O'ahu's central business district which is home to a number of important historical and cultural landmarks (See Figure 3). Adjacent to the Project Site is Honolulu Harbor to the northwest, Aloha Tower Marketplace (including the Aloha Tower historical landmark) / Hawai'i Pacific University to the southwest, Irwin Memorial Park to the southeast, HDOT-H headquarters and working piers to the northeast. Moreover, there is an abundance of office space, multiple functioning cruise ship piers, and ample parking space within walking distance of the Project Site. Important landmarks such as the 'Iolani Palace, Ali'iolani Hale, and the Hawai'i State Capital are also relatively near the project site, approximately 0.5 miles to the northeast. Access to the Project Site is provided by Nimitz Highway/Ala Moana Boulevard via Bishop Street and Aloha Tower Drive.

The Project Site is also situated near Honolulu's Arts District which is approximately 0.25 miles northwest. The Arts District feature shops, theaters, nightclubs, restaurants, and various galleries showcasing collections of art such as authentic Hawaiian paintings, textiles, and glass-blown pieces. The Project Site also lies near the Our Kaka'ako neighborhood which is approximately 0.5 miles to the east. Our Kaka'ako is a community consisting of nine city blocks within the Kaka'ako neighborhood, centered around art. It showcases a collection of local and global artists' original murals with the goal of sharing creativity, beautifying the community, and bringing people together.

1.2 Background

The State and its agencies have an affirmative obligation to preserve and protect Native Hawaiians' customarily and traditionally exercised rights to the extent feasible.¹ State law further recognizes that the cultural landscapes provide living and valuable cultural resources where Native Hawaiians have and continue to exercise traditional and customary practices, including hunting, fishing, gathering, and religious practices. In *Ka Pa'akai*, the Hawai'i Supreme Court provided government agencies an analytical framework to ensure the protection and preservation of traditional and customary Native Hawaiian rights while reasonably accommodating competing private development interests. This is accomplished through:

- 1) The identification of valued cultural, historical, or natural resources in the project area, including the extent to which traditional and customary Native Hawaiian rights are exercised in the project area;
- 2) The extent to which those resources—including traditional and customary Native Hawaiian rights—will be affected or impaired by the proposed action; and
- 3) The feasible action, if any, to be taken to reasonably protect Native Hawaiian rights if they are found to exist.

The appropriate information concerning the ahupua'a of Honolulu, traditional known as Kou, has been collected, focusing on areas near or adjacent to the project area. A thorough analysis of this project and potential impacts to cultural resources, historical resources, and archaeological sites is included in this survey.

This ethnographic survey provides an overview of cultural and historic resources in the project area using thorough literature review, community and cultural practitioner consultation, and high-level, project-specific surveys. This survey focuses on identifying areas in which disturbance should be avoided or minimized to reduce impacts to historic properties or culturally important features. The paramount goal is to prevent impacts through avoidance of sensitive areas and mitigating for impacts only if avoidance is not possible.

1.3 Geographic Extent

The geographic extent for impacts to cultural resources and historic properties includes the project area and localized surroundings. This CIA also reviews some of the resources primarily covered by the regulatory review. It primarily researches and reviews the range of biocultural

¹ Article XII, Section 7 of the Hawai'i State Constitution, *Ka Pa'akai O Ka 'Āina v. Land Use Commission*, 94 Haw. 31 [2000] (Ka Pa'akai), Act 50 SLH 2000.

resources identified through historical documents, traditional knowledge, information found in the Hawaiian language historical cache, and oral histories and knowledge collected from cultural practitioners and experts.

The best practice for ethnographic surveys is to define a geographic extent beyond the identified or typical boundaries of the geographic project area. The recommended area is typically the size of the traditional land area (ahupua'a) or region (moku), but this can be larger or smaller depending on what best helps to identify the resources appropriately. For this project, the moku is Kona.

1.4 Goal of Ethnographic Survey

This survey, along with the archaeological work, looks to fulfill the requirement of taking into account the Project's potential impacts on historic and cultural resources and, at a minimum, describe: a) any valued cultural, historic, or natural resources in the area in questions, including the extent to which traditional and customary native Hawaiian rights are exercised in the area, b) the extent to which those resources – including traditional and customary native Hawaiians rights – will be affected or impaired by the Project; and c) the feasible action, if any, to be taken to reasonably protect native Hawaiian rights if they are found to exist.

2.0 Methodology

The approach to developing the ethnographic survey is as follows:

- 1) Gather Best Information Available
 - a) Gather historic cultural information from stories and other oral histories about the affected area to provide cultural foundation for the report;
 - b) Inventory as much information as can be identified about as many known cultural, historic, and natural resources, including previous archaeological inventory surveys, CIAs, etc. that may have been completed for the possible range of areas; and
 - c) Update the information with interviews with cultural or lineal descendants or other knowledgeable cultural practitioners.
- 2) Identify Potential Impacts to Cultural Resources
- 3) Develop Reasonable Mitigation Measures to Reduce Potential Impacts
 - a) Involve the community and cultural experts in developing culturally appropriate mitigation measures; and
 - b) Develop specific Best Management Practices (BMPs), if any are required, for conducting the project in a culturally appropriate and/or sensitive manner as to mitigation and/or reduce any impacts to cultural practices and/or resources.

While numerous studies have been conducted on this area, not all utilized Hawaiian language resources and Hawaiian knowledge. This appears to have impacted modern understanding of this location, as many of the relevant documents are native testimonies given by Kanaka Hawai'i (Hawaiians) who lived on this land.

While hundreds of place names and primary source historical accounts (from both Hawaiian and English language narratives) are cited on the following pages, it is impossible to tell the whole story of these lands in any given manuscript. A range of history, spanning the generations, has been covered. Importantly, the resources herein are a means of connecting people with the history of their communities—that they are part of that history. Knowledge of place will, in turn, promote appreciation for place and encourage acts of stewardship for the valued resources that we pass on to the future.

Background research for the literature review was conducted using materials obtained from the State Historic Preservation Division (SHPD) library in Kapolei and the Honua Consulting LLC. report library. On-line materials consulted included the Ulukau Electronic Hawaiian Database (www.ulukau.com), Papakilo Database (www.papakilodatabase.com), the State Library on-line (<http://www.librarieshawaii.org/Serials/databases.html>), and Waihona 'Āina Māhele database (<http://www.waihona.com>). Hawaiian terms and place names were translated using the on-line Hawaiian dictionaries (Nā Puke Wehewehe 'Ōlelo Hawai'i)

(www.wehewehe.com), *Place Names of Hawai'i* (Pukui et al. 1974), and *Hawai'i Place Names* (Clark 2002). Historic maps were obtained from the State Archives, State of Hawai'i Land Survey Division website (<http://ags.hawaii.gov/survey/map-search/>), UH-Mānoa Maps, Aerial Photographs, and GIS (MAGIS) website (<http://guides.library.manoa.hawaii.edu/magis>). Maps were geo-referenced for this report using ArcGIS 10.3. GIS is not 100% precise and historic maps were created with inherent flaws; therefore, geo-referenced maps should be understood to have some built-in inaccuracy.

While conducting the research, primary references included, but were not limited to: land use records, including the Hawaiian L.C.A. records from the Māhele 'Āina (Land Division) of 1848; the Boundary Commission Testimonies and Survey records of the Kingdom and Territory of Hawai'i; and historical texts authored or compiled by: David Malo (1987); Samuel M. Kamakau (1964, 1991, 1992); records of the American Board of Commissioners of Foreign Missions (A.B.C.F.M.) (1820–1860); Charles Wilkes (1845); Alexander & Preston (1892–1894); Abraham Fornander (1916–1919); and many other native and foreign writers. The study also includes several native accounts from Hawaiian language newspapers (primarily compiled and translated from Hawaiian to English by K. Maly), and historical records authored by nineteenth century visitors, and residents of the region.

Historical and archival resources were located in the collections of the Hawai'i State Archives, Survey Division, Land Management Division, Survey Division, and Bureau of Conveyances; the Bishop Museum Library and Archives; the Hawaiian Historical Society and the Hawaiian Mission Children's Society Library; University of Hawai'i-Hilo Mo'okini Library; the National Archives and Records Administration (NARA), Maryland; the Library of Congress, Washington D.C.; the National Oceanic and Atmospheric Administration National Library, Maryland; the Smithsonian Institution Natural History and National Anthropological Archives libraries, Washington, D.C.; the Houghton Library at Harvard; the United States Geological Survey (USGS) Library, Denver; the Paniolo Preservation Society and Parker Ranch collections; private family collections; and in the collection of Kumu Pono Associates LLC. This information is generally cited in categories by chronological order of the period depicted in the narratives.

M. P. Nogelmeier (2010) discusses the adverse impacts of methodology that fails to properly research and consider Hawaiian language resources. He strongly cautions against a mono-rhetorical approach that marginalizes important native voices and evidence from consideration, specifically in the field of archaeology. For this reason, Honua Consulting consciously employs a poly-rhetorical approach, whereby all data, regardless of language, is researched and considered. To fail to access these millions of pages of information within the Hawaiian language cache could arguably be a violation of Act 50, as such an approach would fundamentally fail to gather the best information available, especially considering the

voluminous amounts of historical accounts available for native tenants in the Hawaiian language.

Hawaiian culture views natural and cultural resources as largely being one and the same: without the resources provided by nature, cultural resources could and would not be procured. From a Hawaiian perspective, all natural and cultural resources are interrelated, and all natural and cultural resources are culturally significant. Kepā Maly (2001), ethnographer and Hawaiian language scholar, points out, “In any culturally sensitive discussion on land use in Hawai‘i, one must understand that Hawaiian culture evolved in close partnership with its natural environment. Thus, Hawaiian culture does not have a clear dividing line of where culture ends and nature begins” (Maly 2001:1).

This study also specifically looks to identify intangible resources. Tangible and intangible heritage are inextricably linked (Bouchenaki 2003). Intangible cultural resources, also identified as intangible cultural heritage (ICH), are critical to the perpetuation of cultures globally. International and human rights law professor Federico Lenzerini notes that, “At present, we are aware on a daily basis of the definitive loss—throughout the world—of language, knowledge, knowhow, customs, and ideas, leading to the progressive impoverishment of human society” (Lenzerini 2011:12). He goes on to warn that:

the rich cultural variety of humanity is progressively and dangerously tending towards uniformity. In cultural terms, uniformity means not only loss of cultural heritage—conceived as the totality of perceptible manifestations of the different human groups and communities that are exteriorized and put at the others’ disposal—but also standardization of the different peoples of the world and of their social and cultural identity into a few stereotyped ways of life, of thinking, and of perceiving the world. Diversity of cultures reflects diversity of peoples; this is particularly linked to ICH, because such a heritage represents the living expression of the idiosyncratic traits of the different communities. Preservation of cultural diversity, as emphasized by Article 1 of the UNESCO Universal Declaration on Cultural Diversity, ‘is embodied in the uniqueness and plurality of the identities of the groups and societies making up humankind’. Being a ‘source of exchange, innovation and creativity’, cultural diversity is vital to humanity and is inextricably linked to the safeguarding of ICH. Mutual recognition and respect for cultural diversity—and, *a fortiori*, appropriate safeguarding of the ICH of the diverse peoples making up the world—is essential for promoting harmony in intercultural relations, through fostering better appreciation and understanding of the differences between human communities. (Lenzarini 2011:103)

Therefore, tradition and practice, as elements of Hawaiian ICH, are essential to the protection of Hawaiian rights and the perpetuation of the Hawaiian culture.

2.1 Identifying Traditional or Customary Practices

It is within this context that traditional or customary practices are studied. The concept of traditional or customary practices can often be a challenging one for people to grasp. Traditional or customary practices can be defined as follows:

Figure 5. Diagram of elements that contribute to traditional or customary practices (Honua Consulting)

The first element is knowledge. This has been referred to as traditional ecological knowledge (TEK), Indigenous local knowledge (ILK), or ethnoscience. In the context of this study, it is the information, data, knowledge, or expertise Native Hawaiians or local communities possessed or possess about an area's environment. In a traditional context, this would have included information Hawaiians possessed in order to have the skills to utilize the area's resources for a range of purposes, including, but not limited to, travel, food, worship or habitation. This element is largely intangible.

The second element are the resources themselves. These are primarily tangible resources, either archaeological resources (i.e., habitation structures, walls, etc.) or natural resources (i.e., plants, animals, etc.). These can also be places, such as a sacred or culturally important sites or wahi pana. Sometimes these wahi pana are general locations; this does not diminish their importance or value. Nonetheless, it is important to recognize that potential eligibility as a "historic site" on the National Register of Historic Places (NRHP) would require identifiable boundaries of a site.

The third element is access. The first two elements alone are not enough to allow for traditional or customary practices to take place. The practitioners must have access to the resource in order to be able to practice their traditional customs. Access does not just mean the ability to physically access a location, but it also means access to resources. For example, if a particular plant is used for medicinal purposes, there needs to be a sufficient amount of that plant available to practitioners for use. Therefore, an action that would adversely impact the population of a particular plant with cultural properties would impact practitioners' ability to access that plant. By extension, it would adversely impact the traditional or customary practice.

Traditional or customary practices are, therefore, the combination of knowledge(s), resource(s) and access. Each of these individual elements should be researched and identified in assessing any potential practices or impacts to said practices.

2.2 Traditional Knowledge, or Ethnoscience, and the Identification of Cultural Resources

Traditional Native Hawaiian practitioners were scientists and expert natural resource managers by necessity. Without modern technological conveniences to rely on, Hawaiians developed and maintained prosperous and symbiotic relationships with their natural environment for thousands of years. Their environments were their families, their homes, and their laboratories. They knew the names of every wind and every rain. The elements taught and inspired. The ability of Indigenous people to combine spirituality and science led to the formation of unique land-based methodologies that spurred unsurpassed innovation. Therefore, identifying significant places requires a baseline understanding of what made places significant for Hawaiians.

Hawaiians were both settlers and explorers. In *Plants in Hawaiian Culture*, B. Krauss explains: “Exploration of the forests revealed trees, the timber of which was valuable for building houses and making canoes. The forests also yielded plants that could be used for making and dyeing tapa, for medicine, and for a variety of other artifacts” (Krauss 1993). Analysis of native plants and resource management practices reveals the depth to which Hawaiians excelled in their environmental science practices:

[Hawaiians] demonstrated great ability in systematic differentiation, identification, and naming of the plants they cultivated and gathered for use. Their knowledge of the gross morphology of plants, their habits of growth, and the requirements for greatest yields is not excelled by expert agriculturists of more complicated cultures. They worked out the procedures of cultivation for every locality, for all altitudes, for different weather conditions and exposures, and for soils of all types. In their close observations of the plants they grew, they noted and selected mutants (spores) and natural hybrids, and so created varieties of the plants they already had. Thus over the years after their arrival in the Islands, the Hawaiians added hundreds of named varieties of taro, sweet potatoes, sugarcane, and other cultivated plants to those they had brought with them from the central Pacific (Krauss 1993).

Thus, Native Hawaiians reinforced the biodiversity that continues to exist in Hawai'i today through their customary traditional natural resource management practices.

The present analyses of archival documents, oral traditions (oli or chants, mele or songs, and/or hula dances and ha'i mo'olelo or storytelling performances), and Hawaiian language sources including books, manuscripts, and newspaper articles, are focused on identifying

recorded cultural resources present on the landscape, including: Hawaiian and non-Hawaiian place names; landscape features (ridges, gulches, cinder cones); archaeological features (kuleana parcel walls, house platforms, shrines, heiau [places of worship], etc.); culturally significant areas (viewsheds, unmodified areas where gathering practices and/or rituals were performed); and significant biological, physiological, or natural resources. This research also looks to document the wide range of Hawaiian science that existed within the geographic extent.

2.3 Mo'olelo 'Āina: Native Traditions of the Land

Among the most significant sources of native mo'olelo are the Hawaiian language newspapers which were printed between 1838 and 1948, and the early writings of foreign visitors and residents. Most of the accounts that were submitted to the papers were penned by native residents of areas being described and noted native historians. Over the last 30 years, Kepā Maly has reviewed and compiled an extensive index of articles published in the Hawaiian language newspapers, with particular emphasis on those narratives pertaining to lands, customs, and traditions. Many traditions naming places around Hawai'i are found in these early writings. Many of these accounts describe native practices, the nature of land use at specific locations, and native mo'olelo (history, narrative, story). Thus, we are given a means of understanding how people related to their environment and sustained themselves on the land.

2.4 Historic Maps

There are also numerous, informative historic maps for the region. Surveyors of the eighteenth and nineteenth centuries were skilled in traversing land areas and capturing important features and resources throughout Hawai'i's rich islands. Historic maps were carefully studied, and the features detailed therein were aggregated and categorized to help identify specific places, names, features, and resources throughout the study area. From these, among other documents, new maps were created that more thoroughly capture the range of resources in the area.

2.5 Archaeological and Studies

An archaeological review was conducted by Honua Consulting, LLC. Previous archaeological studies identified significant historic properties within the surrounding areas. These findings are further discussed in **Section 4.1 (Historic and Cultural Sites)**.

2.6 Ethnographic Methodology

Information from lineal and cultural descendants is instrumental in procuring information about the project area's transformation over time and its changing uses. The present analyses of archival documents, oral traditions (including 'oli or chants, mele or songs), and/or

hula dance), and Hawaiian language sources including books, manuscripts, and newspaper articles, are focused on identifying recorded cultural and archaeological resources present on the landscape, including: Hawaiian and non-Hawaiian place names; landscape features (ridges, gulches, cinder cones); archaeological features (kuleana parcel walls, house platforms, shrines, heiau or places of worship, etc.); culturally significant areas (viewsheds, unmodified areas where gathering practices and/or rituals were performed); and significant biocultural resources. The information gathered through research helped to focus interview questions on specific features and elements within the project area. Descendants from the area were contacted and interviewed for this CIA.

3.0 Historic Background

Traditionally, the project area, located in the Kona moku (traditional regional land district), was inhabited and stewarded by Native Hawaiians for centuries. Kou, or Honolulu, also served as the home for native tenants, as further described below. Place names and mo'olelo provide valuable information about the history of this area and its important historic resources, including cultural resources and practices.

3.1 Inoa 'Āina (Place Names)

The focus of the inoa 'āina and mo'olelo is within the ahupua'a of Honolulu, although some references in mo'olelo extend to specific notable points (such as hills and mountaintops) just outside the ahupua'a boundaries. Notable inoa 'āina memorialize geographic and environmental features of the larger Kona region. Historic maps of the area show place names in the near vicinity. There are an unusually large number of historic maps for the area because of the harbor.

Honua Consulting developed a list of place names from the ahupua'a of Honolulu in the vicinity of the project area, specifically looking at names within the harbor area, which includes but is not limited to the following places and terms, to help guide research and analyses. The development of this selected list stemmed from extensive research into a wide range of documents related to the project area. At the time of the Māhele 'Āina, few kuleana land applications were submitted by native tenants. In many cases, land divisions would be referred to as both ahupua'a and 'ili, depending upon the document. It was also unclear from documents where land was identified as 'ili as to if the 'ili were simply a subdivision of larger ahupua'a or if they were 'ili kūpono, distinct land areas unto themselves. From the historical land records, there appeared to be little concern for specific boundaries, as foreigners, many of them missionaries who converted to businessmen, eagerly maneuvered their relationships with the new formalized government to acquire themselves strategically located parcels of land that proved valuable.

Kāwā (Channel)	Honolulu. Land area and fishpond along Honolulu Harbor. Site of the new O'ahu prison built in 1857. (Cited in Māhele Claim 6236; and Register Map No.'s 900, 1039 and 1910) Also, Loko Kāwā (Kāwā fishpond).
----------------	--

Kepahoni (Cape Horn)	Honolulu. A historical name from the Hawaiianized "Cape Horn," named on account of the many ships that came into Honolulu Harbor, having sailed around Cape Horn. Of course, the sailors were looking for entertainment, and Kepahoni, became known as a place where such
----------------------	---

entertainment could be purchased. (Cited in Kawena Pukui – Pomroy Genealogy, ms. 1959; and Register Map No. 900)

Koholaloa (The long reef)

Honolulu. A reef/sand section situated in Honolulu Harbor, later called “Quarantine Island and Sand Island. (Cited in Māhele Claim 153 to Sumner (Reef part), and Helu 7712; historical accounts; and Register Map No.’s 900, 1471 and 1472) Also known as Quarantine or Sand Island, often written Kahololoa.

Pu’uiki (Little hill/mound)

Honolulu. A surf spot of Māmala - Honolulu Harbor. (Cited in traditions of Hiiaka, 1862; and Aiai, 1902)

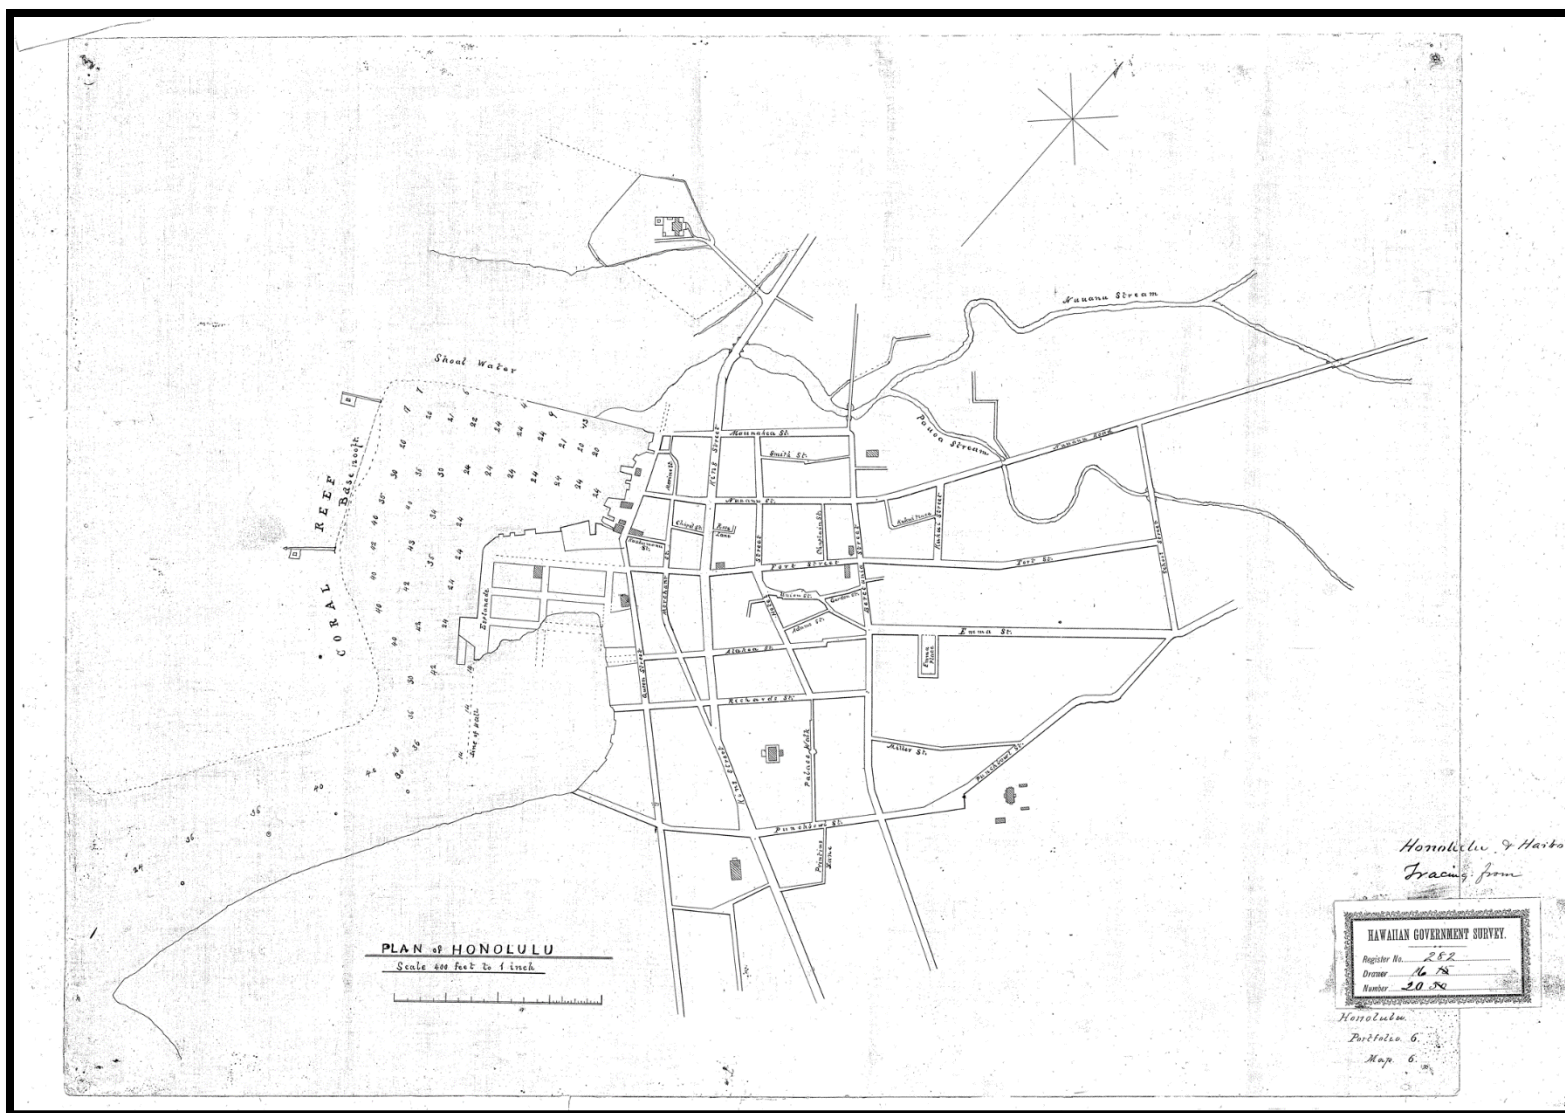

Figure 6. Registered Map 282

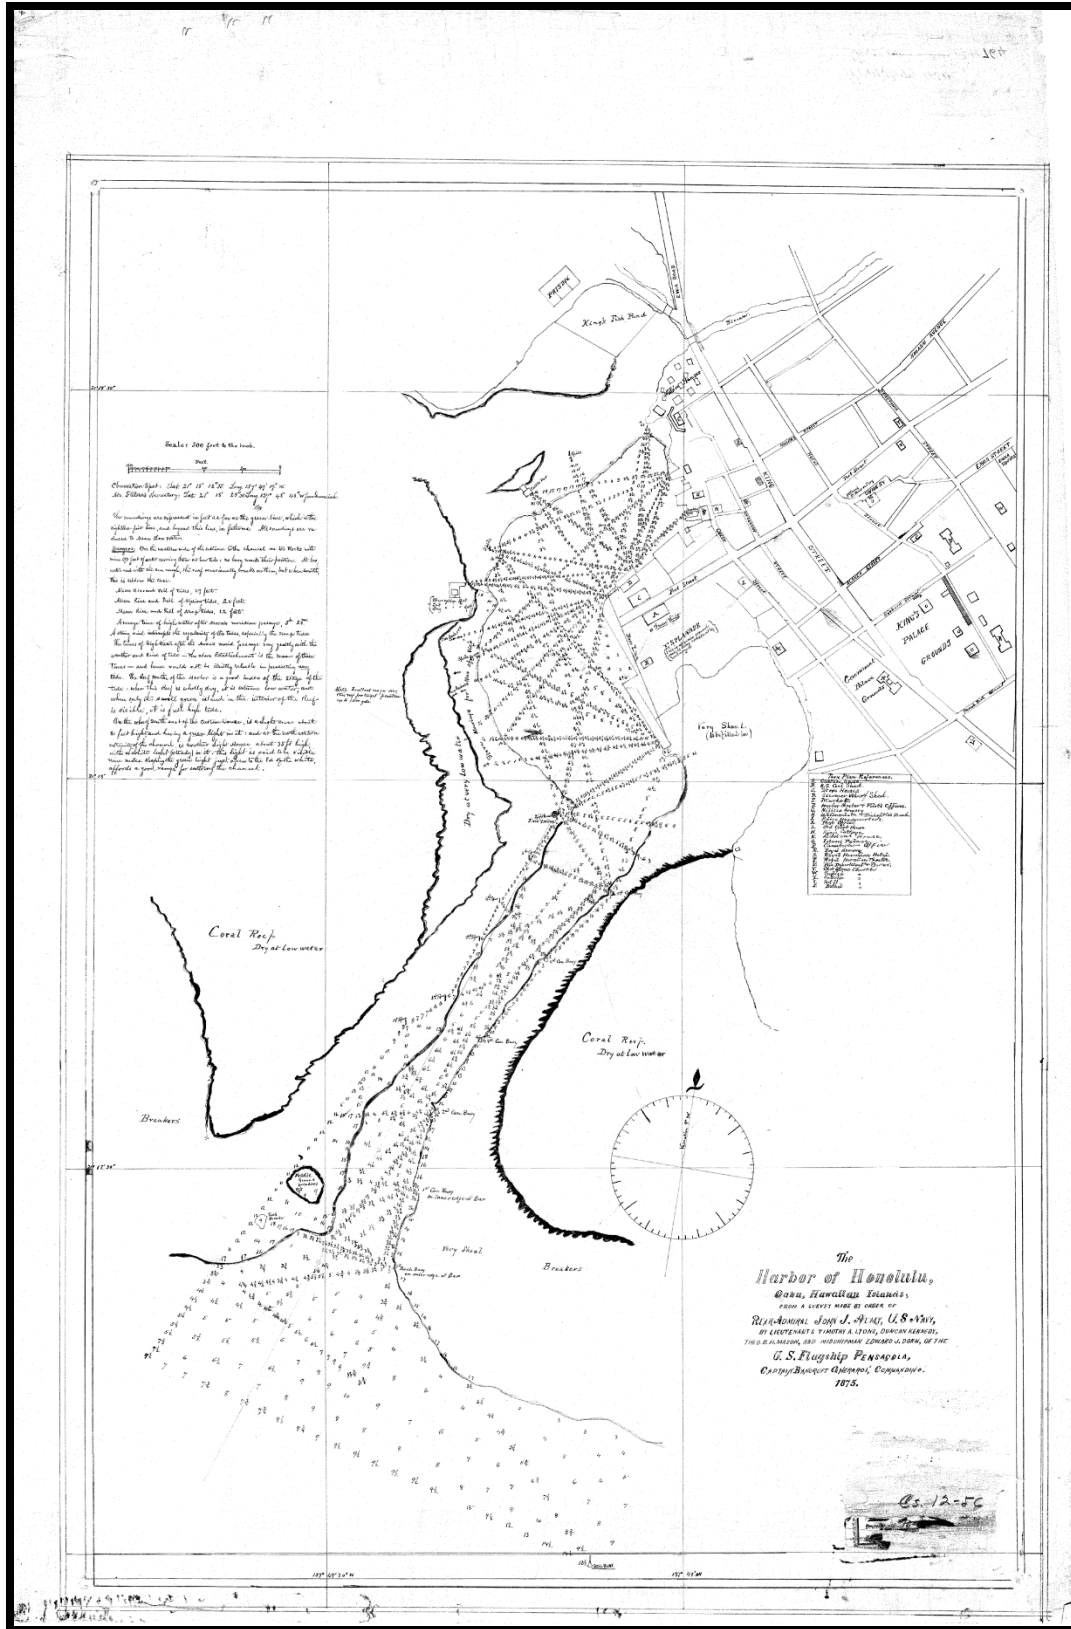

Figure 7. Registered Map 430

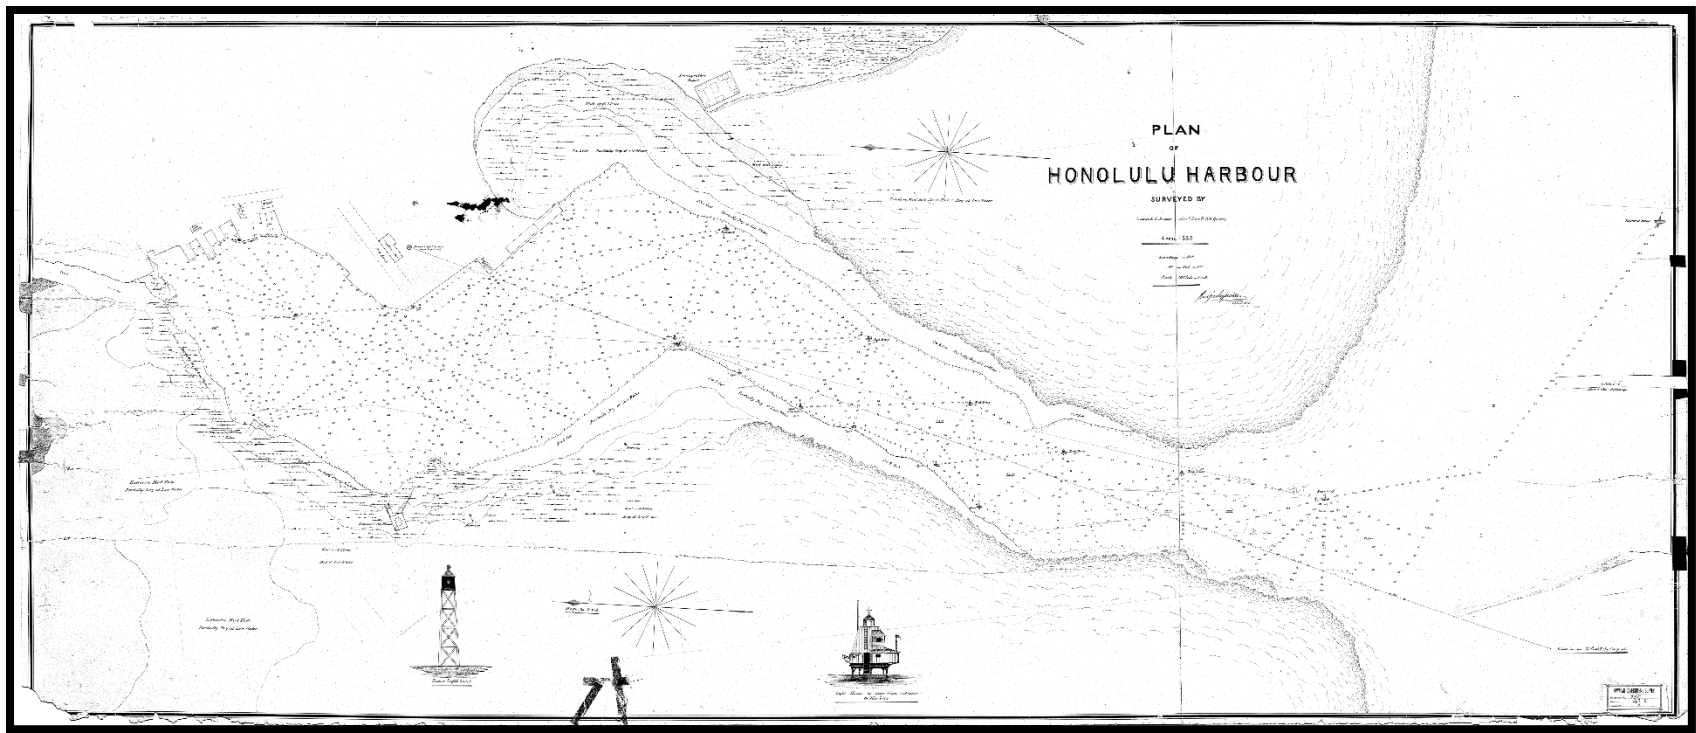

Figure 8. Registered Map 795

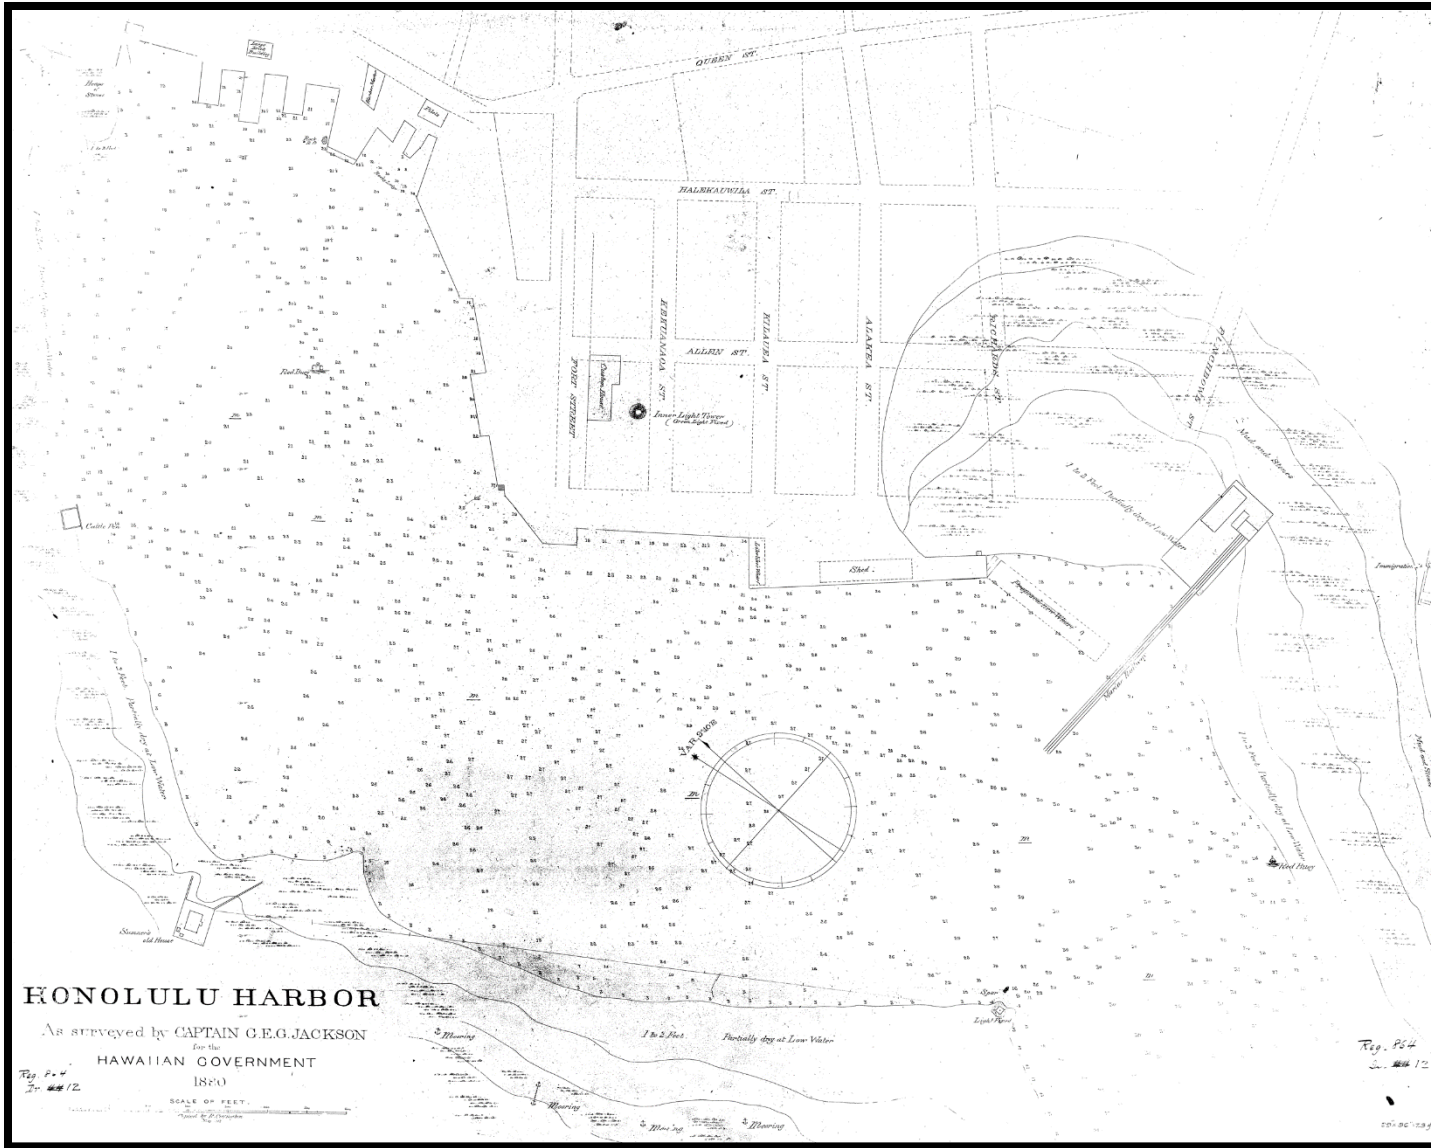

Figure 9. Registered Map 864

3.2 Traditional Period of Māmala

The traditional harbor area was known as Māmala. This area is defined by Pukui as:

Māmala

Bay, Honolulu Harbor to Pearl Harbor, O‘ahu, named for a shark woman who lived at the entrance of Honolulu Harbor and often played *kōnane*. She left her shark husband, ‘Ouha, for Hono-ka‘upu. ‘Ouha then became the shark god of Wai-kīkī and of Koko Head (Finney and Houston 39; Westervelt, 1964b:15, 52-54). In the song "Nā ka Pueo" (Elbert and Mahoe 81), the name of the bay is juxtaposed to *mālama*, to protect: *Ma ka ‘ilikai a‘o Māmala, mālama iho ke aloha*, on the surface [of the sea] of Māmala, protect the love. See Ke-kai-o-Māmala.

Ke-kai-o-Māmala

The surf in the outer entrance of Honolulu Harbor, named for the chiefess Māmala who loved to play *kōnane*, drink ‘awa, and ride the surf. See Māmala.

The area known as Honolulu today looked and functioned quite different in traditional times. After Kamehameha unified the islands under his rule, he spent considerable time in the Honolulu area. The following is an excerpt from John Papa ‘Ī‘ī’s series in *Ka Nupepa Kuokoa*, “Na Hunuhuna no ka Moolelo Hawaii” and discusses the farming that Kamehameha was famous for doing throughout the Kona moku on O‘ahu. Kamehameha was famed for being a hard working cultivator despite also being Mō‘ī, king, which is reflective of the cultivation culture that existed in the islands before the start of large plantations throughout Hawai‘i. The following describes his farming endeavors on O‘ahu.

...Kamehameha, with the members of his court, also gave much attention to farming, especially in Nuuanu, from Niolopa to Hapuu. He also farmed at Ualakaa in Manoa, in Waikiki, and in Kapalama.

When Kamehameha went to Nuuanu, mounted on his horse, Kawaiolaloa, many of the children, including li, followed him with great interest. They found innumerable people all over the farming area, from down below the present road at Niuhelewai to the bend in the road where the houses of the Portuguese now stand. The bulrushes were as nothing, for they were cleared away in a single day. Some men cut the rushes, some dug them out, some built mounds, and others covered the mounds with the rushes. Much food was provided for the noonday meal of the workers, who then resumed their work until evening. The actual planting was reserved for the caretaker of the land.

So it was on the following day, at Kahoikekanaka, close to Kamanuwai at Peleula. It, too, was teeming with men, though there had been more people at

Nuuanu. The men, scattered systematically from a spot on the upland side to a place on the seaward side, dug and beat on the banks with dried coconut-leaf stems. The next day they trampled in the wet patches and planted taro. When the workers and Kamehameha ate, li shared in the food, for among the men in the crowd were his mother's own brothers. All he did was watch the horse, but actually he just wanted to be there.

After these projects, three schools for lua fighting (pa ku'i-a-lua) were established by Kamehameha, and perhaps there were some smaller ones. Hahakea was the instructor at one of them, Namakaimi was the instructor at another, and Napuauki and his assistant were teachers at the third. At the school taught by Napuauki and his assistant were twenty-four boys from Kamehameha's court who were trained for more than two months. Among them was the king's own son [page 68] Kekuaiwa, who was older than the chiefess Kinau. li also attended this school, as did Kekuanaoa, father of Kamehameha IV and V. Twenty-three of these boys are dead at this writing.

Earlier, some of Kamehameha's warriors had been organized into a company called the Kulailua (Knocked Over). It was so named for the force by which the discharging of a rifle on the shoulder made one fall backward...

We have already seen some things accomplished under Kamehameha, but some not mentioned previously were fishing, canoe-making, paddle-making, and the like. His craftsmen were as well cared for as were his farmers, and there were many of them. His wish was to obtain prosperity for the people.

Here let us return briefly to farming. The places Kamehameha farmed and the houses he lived in at those farms were show places. His farmhouses in Nuuanu stood several hundred fathoms away from the right side of Kapaehala, a knoll on the western side of Nuuanu Street and Hanaiakamalama House. Perhaps the location was chosen to enable him to look both inland and seaward to his food patches. Some elevated houses seem to have been for that purpose. So it was with Puupueo, directly below Ualakaa. He dwelt part of the time at Helumoa in Puaaliilii, Waikiki (in the house mistakenly called Kekuaokalani; Kuihelani is the correct name) to till the famous large gardens there. He also lived in Honolulu, where his farms at Kapalama, Keoneula, and other places became famous. These tasks Kamehameha attended to personally, and he participated in all the projects.

Kamehameha was often seen fishing with his fishermen in the deep ocean, where the sea was shallow, and where fish-poison plants were used. He took

care of the canoe paddlers who went out for aku fish, bringing in supplies from the other islands for them, and sent ships to-and-fro fetching nets, lines, olona fibers, and other things. Part of his goodly supply of such necessities he divided among his chiefs and among those he had conquered. Because of his generosity, all of the chiefs worked too and gave him a portion of the products of their lands. [page 69]

...While li was at court, there were two other occasions when sports and games were held in the royal town of Honolulu. These occurred when the makahiki gods went forth from the luakini heiau at Leahi... [page 70]

...In the evening of the day on which the wooden gods departed to go on their circuit of the island, the chiefs who had fed the attendants remained secluded with their possessions from daylight to dark. The attendants of the gods carried them facing backward when they traveled. Therefore it was said that the eyes of Lono remained upon the activities of the people when the gods left the presence of the chiefs for the circuit of the island. The procession went from Honolulu toward Ewa, and when the procession reached the boundary between Honolulu and Kapalama, the akua loa stopped with its two alai markers, two sticks that were used to mark the area that was made kapu for the god. This area was forbidden to the people, but not to the attendants. As the akua loa stood on its designated place, the persons in charge of the land of Kapalama brought all the taxes of the land. If the taxes were sufficient, the tapa of the aku[a] loa was gathered in (papio'ia) and the god proceeded to the next ahupua'a. The akua pa'ani was placed where the akua loa had stood to inspire the men to box. [li, 1959:75]

In the following sections, 'Ī'Ī describes the trails and royal structures throughout the Honolulu region and provides insight into some of the early architectural sites in Honolulu during the reign of Kamehameha.

...Perhaps it would be well to follow the Honolulu trails of about 1810, that they may be known, and to determine whether the houses were many or few. Let us begin looking.

The trail from Kalia led to Kukuluaeo, then along the graves of those who died in the smallpox epidemic of 1853, and into the center of the coconut grove of Honuakaha. On the upper side of the trail was the place of Kinau, the father of Kekauonohi. His houses were made kapu after his death, and no one was permitted to pass in front of them. Piopio and others were in charge.

The trail came out of the coconut grove and went on to Koaopa. Mauka of the spot where it came out of the coconut grove was a bare place, like a plain, and below this spot were Keopuolani's houses. Back of her houses was a long stone wall, beginning outside of the grove and going north to the edge of the pond of Umukanaka, as far as a cluster of houses there.

The trail went by Papa's heiaus of healing, and in front of them was Hookuku, the residence of the heir to the kingdom. His houses were separated from all the others there because of the strict kapu surrounding them. Four kapu sticks were set up, one at each corner, about 2 chains away from the houses; and the trail was about 5 fathoms beyond the sticks. When those approaching drew near to the kapu sticks, they observed the rules we have mentioned previously. [page 89]

We have spoken of Koaopa before as the location for the homes of attendants to the heir to the kingdom. Their houses stood on both the makai and mauka sides of the trail, set apart from the others like those of the heir. From the makai side of Koaopa was a trail to the sea at Kakaako, where stood the homes of the fishermen. Below the trail lived Hewahewa and his fellow kahunas. The trail led to the spot where the ship Namahana was berthed, then went on to Kaholoakeahole. The Namahana was in the charge of Leleahana, father of Abel Wahineahi, and was berthed on the north side of Naahu's place, where Halakika later resided. North of where this trail branched off from Koaopa, and close to the home of li's mother, was a coconut tree on which the boy made a swing. Here he and his companions whiled away hours each evening. The person who could chant the most pleasingly swung the most often.

Also on the north were Leleahana's houses, then those of the attendants of Kekuaiwa, son of Kamehameha. Kekuaiwa's home was set apart with four kapu sticks. Next came Kekumanoha's place, then a vacant place that reached as far as the bathing pool of Honokaupu, above Queen Street, north of a pier at the corner where Queen and Alakea Streets now meet. There were two houses above this bathing pool which belonged to Kaiwikokoole; and north of the pool was one house, on the mauka side of the trail. Many bathers gathered of ten at this pool.

The trail went on above the spring of Honokaupu to the loku site at Merchant and Alakea Streets. Just above this spot it joined the trail from Waikiki which came over a wall and branched off to the two drilling sites mentioned earlier. Beyond them, to the west of the drilling sites, were the king's houses. A trail joined the one from Waikiki above the field where maika rolling and foot racing

were held, on the mauka side of the king's houses, and came out at Pakaka.

West of the Honokaupu spring was the pond owned by Mataio Kekuanaoa, where the coconut trees later grew. The houses of the king's stewards were there, in the charge of Kamokupanee. Makai, and south of the drilling field, was a temporary house for those of the Kulailua company. On the makai side of the temporary house were the houses of the gods Kalaipahoa, Kihawahine, and others. Just beyond the houses of the gods were Kalanimoku's houses, close to the edge of the sea. The trail there was always used to reach the drilling field, for by going between the houses of the gods and the heiaus one escaped death. Mauka of Kalanimoku's houses were Kalaimamahu's houses, and there he had died. Next to Kalanimoku's houses were those of Kalaniakua, Liliha, Kekauonohi, and Namahana.

Let us return to where the trail from Waikiki met the trail from Honuakaha, mauka of the Honokaupu spring. The trail ran on from there until it reached above Aienui, going by the big stone house of Kimo Pakaka, or James Robinson. It went to the maika field of Kikihale, and then on to the stream above [page 91] Lepekaholo (Liberty Hall). Adjoining Kikihale and stretching from Kaumakapili to the south side of John Meek's yard was the maika field of Kalanikahua. On the south side of Kalanikahua were Kaoleioku's houses and those of Kekuaokalani, son of Keliimaikai. Each side of this maika field was bordered with houses, as was the maika field of Kikihale. A loku site at King and Nuuanu Streets, mentioned before, was where the two maika fields joined, and that place was without a house.

On the mauka side of the place where the trails met at Honokaupu, houses occupied both sides of the trail. The stone wall mentioned before ran on mauka of the church at Polelewa to the upper corner of King and Nuuanu Streets. Then the stone wall turned and went on up to Beretania Street. The fence on the mauka side was made of hau wood, and it led to the corner of Emma Street. There it turned and came down to meet the edge of the trail from Waikiki. That was the enclosure of the yam farm called Kapauhi mentioned earlier.

The trail to Nuuanu began at Kalanikahua and led north of Kaumakapili Church to below the little stream which flowed out of Kamanuwai pond. There the trail turned slightly to the right, went along the edge of the pond, and down into the water. Then, coming up on the bank onto Waiakemi, it led on to Waaakekupua, along the bank of the taro patches, to the Pauoa stream, up to Pualalo, and on to the gap at Nuuanu Pali.

Our description of the trails of the royal town is finished, but we have not yet told of the trails going to lower Waikiki, Kamoilili, and Manoa. A trail led out of the town at the south side of the coconut grove of Honuakaha and went on to Kalia.

From Kalia it ran eastward along the borders of the fish ponds and met the trail from lower Waikiki. At Kawaiahao a trail passed in front of the stone house of Kaina, late father of Kikaha. The trail went above Kalanipuu's place, along the stream running down from Poopoo to the sea, close by Kaaihee in Makiki, to Puu o Manoa, then below Puupueo, where a trail branched off to go to upper Kaaipu and Kahoiwai, and another to go below Kaahulue, to Kapulena and Kolowalu.

The trail from Kawaiahao which led to lower Waikiki went along Kaananiau, into the coconut grove at Pawaa, the coconut grove of Kuakuaka, then down to Piinaio; along the upper side of Kahanaumaikai's coconut grove, along the border of Kaihikapu pond, into Kawehewehe; then through the center of Helumoa of Puaalilili, down to the mouth of the Apuakehau stream; along the sandy beach of Ulukou to Kapuni, where the surfs roll in; thence to the stream of Kuekaunahi; to Waiaula and to Paluki, Kamanawa's house site. The latter was named for the Paluki in Punahoa, Hilo. Perhaps that was where Kamanawa lived when the king resided in Hilo during the battle called Puana, prior to the building of the great peleleu fleet.

From Paluki the trail ran up to Kalahu, above Leahi, and on to the place where the Waialae stream reached the sand. The trail that ran through Kaluahole...
[page 92]

...Let us now examine the remainder of the places in the royal town, for we have not yet seen them all. There were many people living in those other places. Perhaps we should glance first at the spot below Kikihale's maika field. Many people who lived here at Kapuukolo were fishermen who fished with draw nets and with the many other kinds of nets needed in their profession.

Kuihelani was an important person there, for he was of high station. He had many people to serve him, his wives were many, and his household was large. Li went often with his mother to see Kuihelani, who was related to them, perhaps through Kaaloakaulani or perhaps through their makuahine. This large family was related to the family of Luluka. Perhaps that was why the mother and the boy went to these places often and were known by many of the people in the household of each wife, who lived there as a retainer. Because of his skill in

handling the property of the king, Kuihelani attracted prosperity to himself. The keeping of a multitude was as nothing to a man so wealthy. The king's faith in him never changed, for the king's lands in his charge were cared for by his kinsmen, and they were obedient to Kuihelani's commands. Therefore the kinsmen also held good positions and were well known.

Among these people was the Spaniard Paula Marin, a friend of the king, who lived wherever the king's relatives lived. On his place—which was surrounded on the sides, back, and part of the front by Kuihelani's property—he had two or three horses, one a mare, and a young cow. Marin was very fond of fishing, perhaps because he saw Kamehameha doing it. And he was also an expert in the stick hula.

Makai of Kuihelani's own home was Keliimaikai's home, which was on the coral point where the first custom house stood. On the south side of this place was berthed the Kaaloo, a ship belonging to Kuihelani, which lay at the extreme north of all the ships previously discussed.

Near the Kaaloo and in the vicinity of the custom house at the beach was a house for the very first Chinese ever seen here. There were two or three of them and they prepared food for the captains of the ships which took sandalwood to China. Because the faces of these people were unusual and their speech—which is now commonly heard—was strange, a great number of persons went to look at them. [page 94]

On the south of Kuihelani's residence was that of George Isaac Davis and his company of people. The chiefs' places extended from there, above the maika field to the Honokaupu trail junction. Near there, too, were the houses for the king's stewards, and above that group of houses were the houses of the warriors. These stood on the upper side of the trail. Among the chiefs' houses were those of Kuakini, of Kaiko, and of Kaukuna Kahekili, Kaiko's younger brother.

Let us turn to look at the trail going to Ewa from Kikihale, up to Leleo, to Koiuiu and on to Keoneula. There were no houses there, only a plain. It was there that the boy Ii and his attendants, coming from Ewa, met with the god Kaili and its attendants who were going to Hoaeae. When the kapu moe was proclaimed, they all prostrated themselves on the plain until the god and his attendants passed by.

When the trail reached a certain bridge, it began going along the banks of taro

patches, up to the other side of Kapalama, to the plain of Kaiwiula; on to the taro patches of Kalihi; down to the stream and up to the other side; down into Kahauiki and up to the other side; turned right to the houses of the Portuguese people; along the plain to Kauwalua, Kalaikoa's house of bones; down to a coconut grove and along the taro patches of Kahohonu; over to the other side, and from there to a forded stream and up to Kapapakolea, an established resting place for travelers.

From there the trail went to Kaleinakauhane, then to Kapukaki, from where one could see the irregular sea of Ewa; then down the ridge to Napeha, a resting place for the multitude that went diving there at a deep pool. This pool was named Napeha (Lean Over), so it is said, because Kualii, a chief of ancient Oahu, went there and leaned over the pool to drink water... [li, 1959:95]

3.2.1 Early Modernity in Honolulu under Kamehameha I

Kamehameha seemed to have an appreciation for embracing elements of the modernity coming to Hawai'i from foreigners. The following is another section taken from the translation of the series, "Na Hunuhuna no ka Moolelo Hawaii" by John Papa Āīī. In this installment, Āīī describes the very first stone house built in Honolulu by a man named Aitona, who Āīī recalls was either Portuguese or French. After building the first stone house in Honolulu, Kamehameha has Aitona build him a stone house at his fort in Kamakahonu, Kona, Hawai'i, which Kamehameha used as a store house for his valuables.

Aikona's first stone house, which was built in Honolulu before the company left Oahu [ca. 1811], stood near W. N. Ladd's stone house. On its north was the first custom house. For this house, the chiefesses and men and women of the royal household brought earth for mortaring from Kanelaau [site of a heiau on Pū'owaina]. They formed a large procession, and by time for the morning meal, the earth was in such a great heap that they had enough. This well-built house was the only large stone building of that time. Marin's house was built like it, for Aikona was his son-in-law, through marriage with Miela, Marin's oldest daughter.

When Aikona began building the end and side walls of the house at Kamakahonu he built a third wall between them and arranged stones in the center of this middle wall to form a door. The walls rose together until the house, from one end to the other, was finished. When Aikona later removed the stones set up in the doorway of the center wall, the doorway looked like the fine arched bridge of Pualoalo at Peleula in Honolulu... This house was well completed. In the stone house were stored the king's valuables and those of Aikona. These

valuables were kegs of rum and gunpowder and guns, of which the guns and powder were placed on the inside near the inner wall. Rum distilled on Oahu accounted for most of the freight aboard the ship Keoua when it returned to Hawaii. [I'i, 1959:120]

It was also under Kamehameha's rule, Honolulu Harbor became the favored "resort for shipping" (Alexander 1907:13). Although previously encamped at Waikīkī, Kamehameha moved to the harbor area to conduct trading with visiting captains. A description of the area at the time of Kamehameha I's rule is given by Gideon La'anui, a retainer in Kamehameha's court:

We came down to the shore of Kou (Honolulu Harbor), my parents and I. The king was awake night and day. My father was drilling with him. Our house was erected where the foreign church (Bethel) stands. Below that was the place of Hoa'ai folks. There stood the cluster of houses belonging to Kaainahuna folks. Adjoining was the drill house, their place. There we lived till the arrival of Kaumualii from Kauai on a foreign ship, commanded by Winship... It anchored outside Mamala... On landing at Pakaka they held audience there, after which was a prostration ho'okupu, at the close of which Kaumualii sailed for Kauai... [Laanui in Thrum 1930:87-88]

English Captain William Brown of the Butterworth is usually credited as being the first Westerner to see and enter Honolulu Harbor. He entered the harbor in November of 1794 (Krauss 1987; Thrum 1893; Stroup 1959:10; Fornander 1969:11264.; Bingham 1969:46; Alexander 1907:13; Westervelt 1910:81). The Butterworth was a fur trading ship that stopped in Hawai'i for supplies. Captain Brown called the harbor "Fair Haven," but it was less romantically referred to for years by seamen as "Brown's Harbor" (Stroup 1959:11). In Brown's entourage was the schooner, Jackall, which is said to be the first vessel to enter the harbor, and her tender, Prince Leeboo, which followed shortly after (Krauss 1987, Thrum 1893:77, Kuykendall 1938:46).

Brown's discovery of the harbor came at a time when Kalanikūpule, ruler of O'ahu, was defending his land from Kā'eo of Maui. Fornander (1969) writes of Brown's involvement in the battle between the two rulers:

In the month of November 1794 Kaeo broke up his camp at Wai'anae and marched on Ewa. At a place named Punahawehe he encountered the troops of Kalanikūpule, who had received an auxiliary force of armed seamen from the English vessels "Jackal" and "Prince Leboo," under command of Captain Brown, who shortly previous had been the first to enter the harbour of Honolulu, known to the natives by the name of Kou. [Fornander, 1969:264]

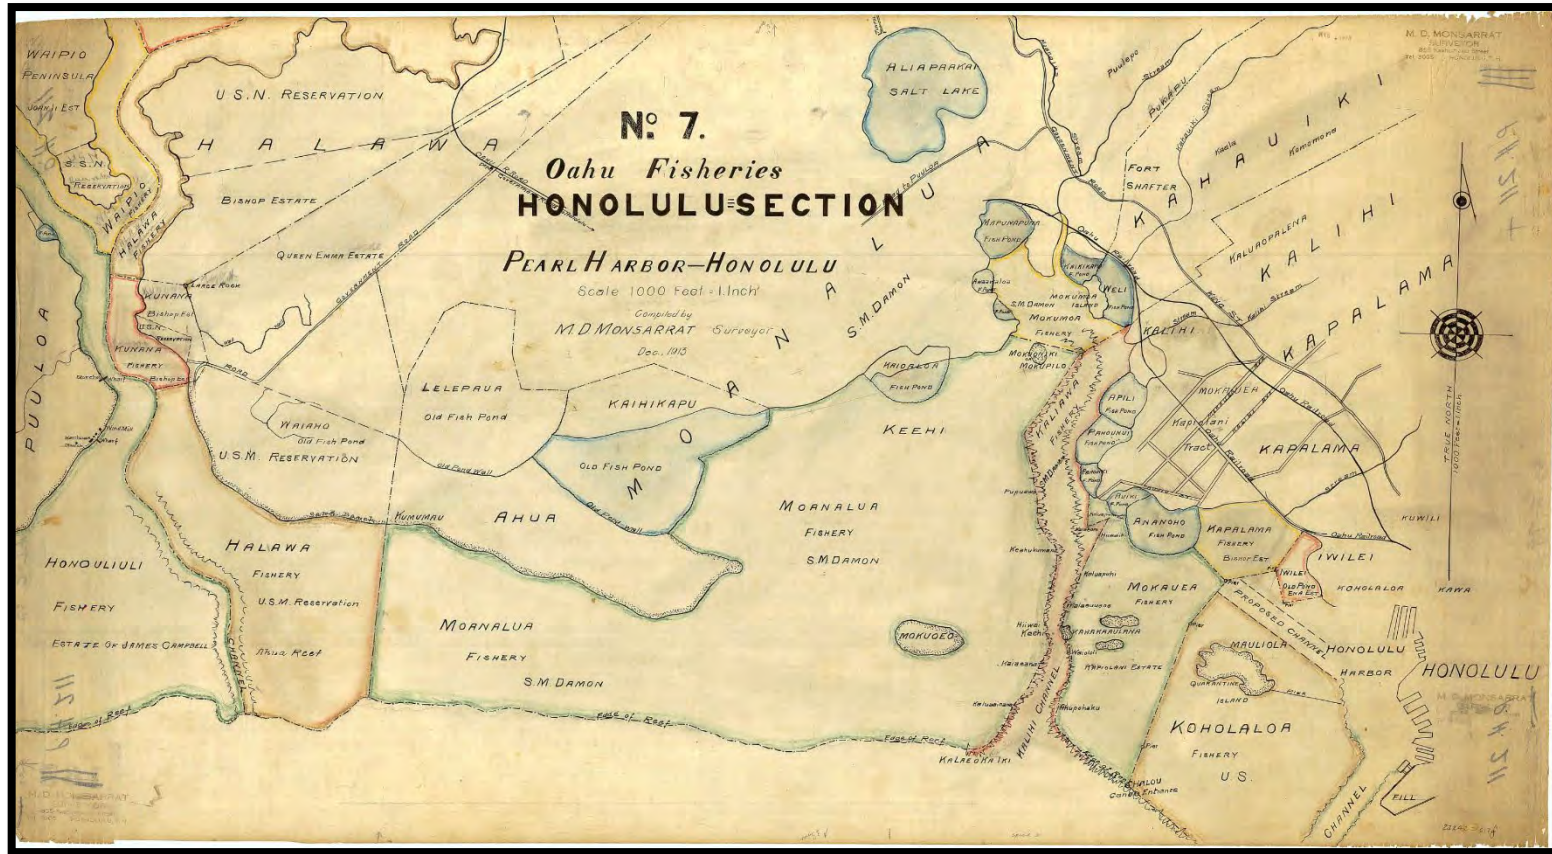

Figure 10. Maps of the Honolulu Fisheries, Honolulu Harbor is shown in the bottom right section of the map.

3.3 Historic Period

Pier 7 in Honolulu, located in the bustling Honolulu Harbor, has a rich history intertwined with the development and transformation of Hawaii's maritime industry. This area has been a pivotal point for various activities, from commercial operations to naval defense, reflecting the broader changes in Honolulu and Hawaii at large over the years.

3.3.1 Early Beginnings and Commercial Significance

In the early 20th century, as Honolulu began to emerge as a vital hub in the Pacific for shipping and trade, the infrastructure around its harbor was rapidly developed. Pier 7, like its neighboring piers, was constructed to accommodate the increasing volume of cargo and passengers arriving and departing from Honolulu. The Kingdom and its ali'i recognized the need to build infrastructure within the islands. The harbor was the lifeline of the Hawaiian Islands, serving as the primary entry point for goods, immigrants, and visitors, which played a crucial role in Hawai'i's economic and social development. Yet, while the Kingdom worked to develop infrastructure on behalf of its people, foreigners quickly moved to use this growth of infrastructure to their own advantage.

In 1885-1886, James Campbell entered into an agreement with Benjamin Franklin Dillingham to implement a "great land colonization scheme" for Honouliuli (Thrum, 1886:73). B.F. Dillingham began developing the O'ahu Railway and Land Company (O.R. & L. Co.), and by 1889 the rail system from the Honolulu Harbor had been extended to Manana, ending near the old 'Ewa Court House (Whitney, 1890:155). In 1895, the railroad had been extended to Wai'anae, and in July 1895, a group ride along the railroad was described in the newspaper, *Ka Makaainana* (Iulai 8, 1895:1).

**"O.R. & L. CO. Huakai Makaikai a na Poe Kakau Nupepa i ke Alahao Hou."
(O.R. & L. CO. Sight-seeing Trip taken by Newswriters on the New Railroad.)**

At 9:30 on Tuesday morning, newspaper editors and others gathered at the Honolulu station of the O'ahu Railway & Land Company. At 9:40 we departed on our trip past Kūwili on our way to the end of the route now at the Pōka'i in the coconut grove.

Having left Honolulu by 10:09 drew near to Pearl City, and then reached the 'Ewa Sugar Mill at 10:25. We continued on our path [through Honouliuli] before us towards the shore of Wai'anae, passing the place made famous in the traditions of Kamapua'a and Ka'ōpuluhulu in the time of Kahanana, king of O'ahu; also, in the tradition of Hi'iaka-i-ka-poli-Pele, in her journey to fetch Lohi'au...We entered into Waimānalo, where the kiawe trees grew here and

there, and passed along the seashore, arriving at Pili-o-kahe, where there is an ancient stone wall. This was pointed out by a native as being the boundary between 'Ewa and Wai'anae...

Reaching our destination, we ate and then left Wai'anae at 2 o'clock, traveling along the new track to the mill at Honouliuli where we waited for the passing of another train. From there, it was not long until we traveled to Waiau, then a short time to Kalauao, returning [to Honolulu] at 4 o'clock.

Nearby, Honolulu's Chinatown evolved. John Papa 'Ī'Ī (1959) wrote about the first Chinese to be seen in Honolulu, as being three Chinese cooks associated with ships from the sandal wood trade who settled along the Kapāpoko-Waikahalulu waterfront prior to 1810. By 1844, three Chinese businesses were situated near the Honolulu waterfront in the Nu'uaniu Street vicinity (R.C. Wyllie, in the Friend, 1844). By the early 1860s extensive tracts of lo'i kalo were being turned over to the cultivation of rice, and at various outlying locations, large sugar plantations were emerging on the island scene. As a result, programs of Chinese immigration for the workforce were implemented. By 1884 the area in the vicinity of Mauna Kea, Nu'uaniu, King and Beretania Streets was heavily devoted to Chinese businesses and residences. A large and devastating fire in 1886 burned most of "Chinatown" to the ground. The Chinese residents quickly rebuilt, but by the early 1890s, sanitary conditions and a "slum-like" environment brought about renewed fears of cholera and other diseases. At the same time extensive development of western businesses all around Chinatown took place, and concerns about "property values" arose.

In December 1899, the first case of bubonic plague was confirmed in Chinatown, and events following identification of the case, and subsequent deaths, led to relocating hundreds of people from Chinatown to a Kaka'ako quarantine on January 5, 1900. On January 6th, 1900, "controlled fires" began to be set at buildings where victims had resided, and additional quarantine facilities capable of housing 2,000 people were being set up on Bishop Estate lands in Kalihi.

As cases of the plague continued to increase, "controlled burns," were used in larger areas to remove the threat. On January 20th, 1900, the fire at Block 15, between Beretania, Kukui, River and Nu'uaniu Streets went wild, and the entire block, including Kaumakpili Church was destroyed. From there, the flames spread, and a day later, on January 21st, 1900 nearly all the buildings between Kukui, Queen, River and Nu'uaniu Streets were burned to the ground.

Today, several of the buildings in or adjoining the rail corridor, and particularly those in Chinatown, date after 1901. In 1973, nearly 36 acres of the area called Chinatown were added to the National Register of Historic Places (National Register Information System Number 73000658). The district is generally bounded by "Beretania St. on NE, Nuuanu

Stream on N, Nuuanu Ave. on SE, and Honolulu Harbor” (National Register Nomination Form, January 17, 1973).

As has been the history of the larger Honolulu region, the landscape of Chinatown is also changing. While a number of the post-1900 buildings are still in use, change is always occurring, not only in the nature of goods and business endeavors, but also in the makeup of the purveyors and merchants. With the National Register Bulletin No. 38 (Parker & King, 1990:6) as the reference, Chinatown was the only “Traditional Cultural Property” identified along the entire HART rail route (Cultural Surveys Hawai‘i, 2011:76). While there is no remnant of the “traditional” Hawaiian period visible above the surface of the ground, it is known that the multi-layered history of the region spans centuries of Hawaiian residency, traditions, beliefs and practices, and a shorter period of time in cultural overlays since the early 1800s. The underlying foundation of the proposed route is a Hawaiian landscape. Place names document the occurrence of sacred and storied sites, and the po‘e kahiko still walk the land. Thus, in the minds of many Hawaiians, the places identified in this study, along with many others, are still considered to be traditional cultural properties. All land in Hawai‘i will always be culturally significant and storied. It is the spirit of place that resonates with Hawaiians of the modern day.

With the strategic importance of Hawaii in the Pacific, Pier 7 also played a role in military operations, especially during World War II. The attack on Pearl Harbor in 1941 by Japanese forces highlighted the strategic significance of Honolulu Harbor and its facilities, including Pier 7. The harbor and its piers were adapted to meet military needs, serving as a logistical base for the United States Navy and Army, facilitating the movement of troops, equipment, and supplies during the war.

Post-World War II, as peace and normalcy returned, Pier 7 along with Honolulu Harbor, shifted focus back to commercial activities, contributing to Hawaii's economic recovery and growth. The latter half of the 20th century saw significant improvements and expansions in harbor facilities to accommodate modern shipping technology, including containerization, which revolutionized maritime transport. In recent decades, Pier 7 has continued to evolve, reflecting changes in global shipping trends, environmental regulations, and Hawaii's own economic shifts. Efforts have been made to modernize the facilities while balancing the needs of commercial operations, tourism, and local communities.

Today, while still serving its primary function in shipping and trade, Pier 7 and the surrounding area have also become points of cultural and tourist interest. The harbor area offers insights into Honolulu's rich maritime history, its role in World War II, and its significance in Hawaii's economic development. Projects and initiatives often aim to preserve this heritage while promoting sustainable tourism and educational opportunities.

4.0 Cultural Resources

Cultural resources can be natural, tangible or intangible. They are most commonly considered physical evidence of past human activity and can be a site, object, landscape, structure; or a site, structure, landscape, object or natural feature of significance to a group of people traditionally associated with it. A more comprehensive definition also considers places of cultural importance and biological resources of cultural importance. There are also intangible cultural resources, which may have not had physical form, but contribute to the cultural identity of a group.

4.1 Historic and Cultural Sites

The archaeological literature review and field identification report identified archaeological studies have been conducted in the project area. They are discussed in that report.

4.1.1 Healani Hale

One site was identified through the ethnographic data is Kalākaua's boathouse. The history of King Kalākaua's boathouse starts with his keen interest in navigation, marine activities, and the promotion of Hawaii as a center of the Pacific. His reign was marked by significant efforts to strengthen the ties between the Hawaiian islands and the broader Pacific and global communities, partly through the encouragement of maritime activities.

The boathouse was constructed at the harbor, in the vicinity of the king's personal residence, the 'Iolani Palace, and his beach house. The exact date of construction is not well-documented, but it is believed to have been built in the late 1870s or early 1880s. This structure was not merely a storage space for canoes and boats but served as a symbol of the king's affinity for the sea and his desire to link Hawaiian cultural traditions with the modern world.

Kalākaua's boathouse was used for both personal recreation and official events. It was a site for hosting dignitaries and guests, showcasing Hawaiian hospitality and the importance of the ocean in Hawaiian culture. The boathouse also played a role in the king's efforts to revive traditional Hawaiian sports, including outrigger canoe racing, which he promoted during his reign.

While specific architectural details of the boathouse are scarce, it is known to have been designed in a style that blended Western and Hawaiian elements, reflecting Kalākaua's overall vision for Hawai'i. The structure likely featured open spaces to accommodate the canoes and boats, with areas designated for gatherings and possibly adorned with Hawaiian motifs and symbols to celebrate the islands' heritage. The maritime center would be built on the site of the former boathouse.

4.2 Natural Resources with Cultural Significance

Hawaiians, like most indigenous and local communities, ascribe great cultural value to the natural resources in the environment around them. Some of these are discussed below.

4.2.1 Wind

Winds, like rains, can be unique and distinctive to an individual location. The most famed of Hawaiian mo'olelo about winds is by Moses Kuaea Nakuina, *Moolelo Hawaii o Pakaa a me Ku-a-Paka, na Kahu Iwikuamoo o Keawenuiaumi, ke Alii o Hawaii, a o na Moopuna hoi a Laamaomao* (The Hawaiian Story of Paka'a and Kuapaka'a, the Personal Attendants of Keawenuia'umi, the Chief of Hawai'i, and the Descendants of La'amaomao), published in Hawaiian in 1901. This mo'olelo was later translated into English as *The Wind Gourd of La'amaomao* by Sarah Nākoa and Esther T. Mookini (1992). Thus, this important mo'olelo has remained in print for over a century and is an important cultural source text within the discourse on Hawaiian history and natural resource management. Many have written about the gourd's mythical properties, which is believed to contain all the winds of Hawai'i. More than myth, the gourd itself exists in physical form and was last owned by King David Kalākaua. Today, it is held in the collection of the Bishop Museum.

According to this mo'olelo, the descendants of La'amaomao, the wind god, used the wind gourd, Ka Ipu Makani o La'amaomao, to control the winds and cause the demise of their enemies. Pāka'a and his son Kūapāka'a, La'amaomao's descendants, control the winds by chanting the wind name, which recalls that particular wind from the gourd. Each wind name is associated with a specific ahupua'a or 'āina. Pāka'a passed on his knowledge of the wind names and the gourd to Kūapāka'a, who called on all of the winds to destroy the canoe fleet of Pāka'a's enemies in the Kaiwi Channel separating O'ahu and Moloka'i. Additionally, Mary Kawena Pūkui also compiled wind names in her text *Ka Makani, mai ka puke wehewehe 'ōlelo 'o Hawaiian Dictionary* (1971).

These texts identify the follow formal wind names for the region. Common wind names are not included:

'Aoa or 'Ao'aoa (Honolulu) – name of a sea breeze at Honolulu blowing gently towards land.

Ki'owao (Nu'uaniu) – cool mountain rain accompanied by wind and fog.

Malailua (Nu'uaniu) – name of a strong, blustering wind at Nu'uaniu; to blow; of this wind.

'Ōlauniu (Kapālama, Honolulu) – Name of a wind. (For. 5:93).

Puahiohio (Nu‘uanu) – Redup. Of puahio; whirlwind. Puahio. To come and go swiftly, as a puff of wind.

4.2.2 Water

Fresh water (wai) is of tremendous significance to Native Hawaiians. It is closely associated with many Hawaiian gods. According to traditional accounts, Kāne and Kanaloa were the “water finders:” “Ka-ne and Kanaloa were the water-finders, opening springs and pools over all the islands, each pool known now as Ka-Wai-a-ke-Akua (The water provided by a god)” (Westervelt 1915, 38). Kāne is widely known to be closely associated with all forms of water, as outlined in the mele “He Mele No Kane.”

There was no element more important or precious than water. There was no god more powerful than Kāne. Pua Kanahale recounts the oli “‘O Kāne, ‘o wai ia ali‘i o Hawai‘i?” and notes of the oli: “The chant begins with Kāne and focuses on this deity as the connective force of all the po‘e akua, or god family. All the entities mentioned in each paukū, or verse, are a manifestation of Kāne” (Kanahale 2011, 24). The association between water and Kāne is logical considering certain interpretations of Hawaiian mythology identify Kāne as the most powerful of all the Hawaiian gods.

Further investigation into the relationship between Kāne and Pele would be appropriate and helpful. Some interpretations identify Kāne as Pele’s father (Westervelt 1915). A full analysis of the different perspectives on Pele and Kāne would be helpful to refining an approach in developing community education programs for geothermal energy and culture. A brief analysis is provided below.

He Mele No Kāne

E ui aku ana au iā ‘oe,
Aia i hea ka Wai a Kāne?
Aia i lalo, i ka honua, i ka Wai hū,
I ka wai kau a Kāne me Kanaloa-
He waipuna, he wai e inu,
He wai e mana, he wai e ola,
E ola no, ‘ea!

One question I ask of you:
Where flows the water of Kane?
Deep in the ground, in the gushing spring,
In the ducts of Kane and Kanaloa,
A well spring of water, to quaff,
A water of magic power- The water of life!
Life! O give us this life!

This mele and other mo‘olelo are clear: Kāne is water. It is deeply valued among the Hawaiian people. The only exceptions may be mist, known to be associated with Lilinoe, and snow, associated with Poli‘ahu. There is an extensive body of traditional knowledge about the expeditions of Kāne and Kanaloa during which Kāne drove his ‘ō‘ō (digging stick) into the earth in search of water. The bay where the harbor now exists was known as Māmala.

4.2.3 Biological Resources

A biological assessment was prepared for the project and is incorporated herein by reference.

4.3 Intangible Cultural Resources

It is important to note that Honua Consulting's unique methodology divides cultural resources into two categories: biocultural resources and built environment resources. We define biocultural resources as elements that exist naturally in Hawai'i without human contact. These resources and their significance can be shown, proven, and observed through oral histories and literature. We define built environment resources as elements that exist through human interaction with biocultural resources whose existence and history can be defined, examined, and proven through anthropological and archaeological observation. Utilizing this methodology is critical in the preparation of a CIA as many resources, such as those related to akua, do not necessarily result in material evidence, but nonetheless are significant to members of the Native Hawaiian community.

Hawaiian culture views natural and cultural resources as being one and the same: without the resources provided by nature, cultural resources could and would not be procured. From a Hawaiian perspective, all natural and cultural resources are interrelated, and all natural and cultural resources are culturally significant. Kepā Maly, ethnographer and Hawaiian language scholar, points out, "In any culturally sensitive discussion on land use in Hawaii, one must understand that Hawaiian culture evolved in close partnership with its natural environment. Thus, Hawaiian culture does not have a clear dividing line of where culture ends and nature begins" (Maly 2001, 1).

4.3.1 'Ōlelo No'eau

'Ōlelo no'eau are another source of cultural information about the area. 'Ōlelo no'eau literally means "wise saying," and they encompass a wide variety of literary techniques and multiple layers of meaning common in the Hawaiian language. Considered to be the highest form of cultural expression in old Hawai'i, 'ōlelo no'eau bring us closer to understanding the everyday thoughts, customs, and lives of those that created them. There is no identified 'ōlelo no'eau for the Honolulu Harbor area specifically.

656 He kai hele kohana ko Māmala.

A sea for going naked is at Māmala.

The entrance to Honolulu Harbor was known as Māmala. In time of war the people took off their clothes and traveled along the reef to avoid meeting the enemy on land.

1510 Ka nuku o Māmala.

The mouth of Māmala.

The entrance to Honolulu Harbor, named for a shark goddess who once lived in the vicinity.

1685 Ke awa la'i lulu o Kou.
The peaceful harbor of Kou.
 Honolulu Harbor.

4.3.2 Mele (Songs)

The *Buke Mele Lahui* (Hawaiian National Songbook), published in 1895, is “the largest number of political and patriotic Hawaiian songs ever printed in one place,” featuring mele that “echo the steadfast resilience of Hawaiians of that time as they weathered the political turbulence of the 1880s and 1890s that completely altered their world” through the overthrow and establishment of a foreign-led provisional government and subsequent annexation to the U.S. (Nogelmeier and Stillman 2003, xii). The following mele are all inspired by the Honolulu Harbor, neighboring Aloha Tower, or post-contact historic events that occurred in the vicinity.

4.3.2.1 Honolulu Harbor

Honolulu Harbor - Mary Pula'a Robins

Kaulana mai nei Honolulu Harbor ‘O ka ipu kukui mālamalama	Famous is Honolulu Harbor The shining beacon
He nani no ‘oe ua ‘ike ‘ia A ka nui manu a’e pōhai nei	You see the beauty Surrounded by sounds of the birds
Kū mai o Robins me ka hiehie He ui ninau ia Henry Aa	
E ‘uleu kua a e pono ai I loa’a ka makani ma i luna mai	
Ho‘ike piha ‘oe i kou ike Noia nowelo a ike okamai	
O ka pāia keleawe o hulali ana ‘Ō ‘apu‘u kaimana ‘ālohilohi	**The metal walls reflect A mound of diamond splendor
Ua hana no‘eau ‘ia e Pālani Ke pipi‘o nei e ke ānuenuē	Decorated skillfully by the French The rainbow's arch

O ka pipi'o no ia Honolulu Harbor A welo ē ka hae helu 'ekahi	The arch in Honolulu Harbor The first flag flies
Lohe aku Kaleponi he 'āina nani Ua kau ka hōkū i waena konu	California, a beautiful land, heeds The star fixed in the center
O ka piue kohu ana ko umauma E owaka e ika naula i Kilauea	
Ka moena weleweka ka moena ia O pu'u kaimana kau umauma *(Ke 'ala laua'e e moani nei)	**Velvet mat is the carpet One great diamond mound *(The fragrance of laua'e is borne)
Imua kāua a lanakila Ke Akua mau loa kou kokua	Forward to our destination With the help of God
Hea aku au e ō mai 'oe E ō e Robins i kou inoa	When I call, you answer Robins, answer to your name
*Hō'ike a'e 'oe a i kou nani I ka mālamalama 'oi kelakela	Show your beauty The far-reaching light
*Ha'ina 'ia mai 'ana ka puana O ka ipu kukui mālamalama	The story is told Of the shining beacon
E ō e Honolulu Harbor kou inoa O ka ipu kukui mālamalama	When I call, Honolulu Harbor, answer to your name, The shining beacon
*These verses and alternate stanza, do not appear in the original publication, but are commonly sung today	**Stanzas similar to verses in Royal Hawaiian Hotel *

Source: This mele appeared in Nupepa Kuokoa, June, 1919, under the title: He Hula E.E. Robins - Haku'ia , Mrs. Mary Robins. Translation by Kini Sullivan (Huapala)

4.3.2.2 He Aloha Nō 'O Honolulu

He Aloha Nō 'O Honolulu (Goodbye to Honolulu) - by Lot Kauwe

He aloha nō 'o Honolulu
I ka ua Kūkalahale
Ka nuku a'ō Māmala
'Au a'e nei mahope
Kau mai ana mamua
Ka malu 'ulu a'ō Lele
Kukui 'a'ā mau
Pio 'ole i ke Kaua'ula

'Au aku i ke kai loa
Oni mai ana 'o 'Upolu
Ho'okomo iā Mahukona
Ka makani 'Āpa'apa'a
E wiki 'oe 'apa nei
Eia a'e 'o Kawaihae
Ho'ohaehae Nāulu
Ka makani Ku'ehu 'ale

Ka hao a ka Mūmuku
Poho pono nā pe'a heke
'O ka heke a'ō nā Kona
I ke kai mā'oki'oki
Ki'ina ke koi'i koi
I ka piko o Hualālai
A I`i wale ke kaunu
'A'ole pahuna hala
Hala 'ole nō ka ua

I ke kole maka onaona
E haupā 'oe a kena
I ka piko 'oe lihalaha
Hāli'ali'a mai ana
Kou aloha kākia iwi
Ho'okomo iā Honu'apo
I ke kai kauha'a

Ha'alele ka Maunaloa
I ka pohu la'i a'ō Kona
Ho'okomo iā Ho'okena
I ka pewa a'ō ka manini

Goodby Honolulu
In the Kūkalahale rain
Māmala, the entrance of Honolulu Harbor
Lies behind
Ahead
The shady groves of Lele
Lighthouse is always burning
And not extinguished by the Kaua'ula rain

Sailing out to the open sea
'Upolu point appears
Take shelter at Mahukona
From the 'Āpa'apa'a wind
Hurry, so we may tarry
Here at Kawaihae
From the Nāulu showers and
The wind that stirs the waves

The Mūmuku wind gusts
Filling the top sails
Kona is the best
Of the streaked sea
Urging on
To the center of Hualālai
Peace overwhelms
After the piercing

The rain does not pass
The sweet-eyed kole
Eat heartily
Especially the belly, so fat and choice
Remembering
Your love in the depths of my soul
Entering Honu'apo
The sea is dancing

Leave the Maunaloa
In the calm night of Kona
Enter Ho'okena
Like the tail of the manini
Tell the refrain

Ha'ina mai ka puana	Kona is the best
'O ka heke nō nā Kona	Kona of the calm sea
No Kona ke kai malino	Famous among multitudes
Kaulana i ka lehulehu	

Source: Lot Kauwe was an accomplished singer, dancer, musician, composer and entertainer whose talents went beyond the stage. He was known to set his indiscretions to music, veiled in kaona. This is one of his best known compositions and tells of his return home from Honolulu to Kona, aboard the inter-island steamer, Maunaloa. Verse 1, the house, in many instances, is symbolic of a long term lover. Kaua'ula waterfall in stanza #8, is near Lele, short for Lahaina. 'Apa'apa'a, Kuehu'ale in verse #2 and Mūmuki in verse #3 are names of Kona winds. The kole and manini fish in verses 3 and 4 are terms of endearment. Place names, such as Ho'okena, are used as a play on words in many love songs. (Huapala)

4.3.2.3 Aloha Tower

Aloha Tower - Clarence Kinney

Oheohe Aloha Tower a'e kū nei
Kilakila i ke awa a'o Honolulu

'O ka ipu kukui e 'ānapanapa
Kou mālamalama u'i kelakela

Nāu e mālama a'e helu pono
I ka manawa pololei a'o ke kaona

'O kāu hana mau lā 'o ka ho'okipa
'O nā malihini a'e pōhai nei

Ha'ina ka puana me ka maluhia
Oheohe Aloha Tower a'e kū nei

Aloha Tower stands tall and majestic
At the harbor of Honolulu

Your beacon light shines bright
Beaming with a beautiful glow

It's you that keeps a careful watch and
Maintains the accurate time for the town

Your function is to welcome
The visitors that gather here

Here now the refrain with peace
Aloha tower stands tall

Source: - In 1924, construction began on Aloha Tower, a 10-story skyscraper, at the cost of \$190,000. It was completed in a year and a half and became the landmark of Honolulu. The 4 clocks, each face 12 feet in diameter and facing different directions, were made of bronze and weighed 7 tons each. The beacon could be seen 20 miles out at sea. This was composed in 1928 to honor Aloha Tower. Translator unknown. Hawaiian Text edited by Puakea Nogelmeier. (Huapala)

4.3.2.4 Pelekane

Pelekane (England) - Elizabeth Kuahaia

Hakakā kaulana puni i ke ao lā Ke kaula weliweli ma Eulopa	Famous conflict throughout the world The terrible war in Europe
Ma ka nūpepa i ha'i maila lā 'O ka topeto kau i ka beli	In the newspapers it said The torpedo struck the belly (of the ship)
Weliweli nā hana ke 'ike aku lā 'O nei lima koko he aloha 'ole	Dreadful deeds, horrible to look upon Merciless bloody hands
Ha'ina 'ia mai ana ka puana lā Ke kaula weliweli ma Eulopa	Let the story be told Of the terrible war in Europe

Source: Hawaiian Historical Society - Translated by Leialoha Kamai and Lalepa Koga Recorded by Pound 4 Pound - The sinking of the Lusitania is immortalized in this mele. The Lusitania was a British cargo and passenger ship that sailed the Atlantic between England and the United States. She was proclaimed a floating palace by her passengers on her maiden voyage June 7, 1906. Voyages across the Atlantic were peaceful, but as World War I escalated, the situation became precarious as German U-boats roamed the seas. Over-confident because of her reserve speed capabilities, which would enable her to flee under attack, the ship set out from New York to England May 1, 1915, in spite of threats by German authorities. A number

of Americans were aboard, including tycoon Alfred Vanderbilt and noted theatre producer, Charles Frohman. May 7, with the coast of Ireland in sight, a German submarine torpedoed the Lusitania. She took a solid hit, but there was no explosion. Water rushed into the first and second boiler rooms causing the ship to shake from side to side, before a second massive explosion took her down to the sea within 20 minutes. The Lusitania may have been torpedoed a second or third time taking 1,195 souls, 123 of them American. 764 were saved. When news of the tragedy finally reached Hawai'i, the anger and grief was not diminished. The inspiration to remember this event may have been generated by a recent submarine tragedy. March 25, 1915, the U.S. submarine Skate, with a crew of 21 men, exploded and sank outside Honolulu harbor. Desperate attempts to make contact with the vessel, submerged in more than 300 feet, were fruitless and deep-sea divers were unable to reach that depth, the local diving record being 215 feet in those days. The 350-ton, 142 foot craft arrived in Honolulu, August 1914, as part of a flotilla of 4 submarines of the First Submarine Division of the Pacific Fleet. Three times a week at 9 a.m, the subs would go on a one-hour practice run, but ever since their arrival at Pearl Harbor, one thing after another seemed to go wrong for the Skate. On the last run, the sub cruised to about a mile and a half south of the harbor and made its dive. Later that morning, the empty sub's berth was not of immediate concern, but as the afternoon passed, anxiety heightened. At 3 p.m. the commander of the unit ordered a search party. The lighthouse keeper at the entrance of Honolulu Harbor reported hearing an explosion just after the Skate disappeared. Oil bubbles were spotted in the water where the submarine had slipped beneath the surface. As darkness descended and news of the disaster spread, locals gathered at the piers to pray and watch for the rescue ships. The rescue, turned into salvage operation, would last 5 months and was unprecedented in maritime history. The wreckage of the Skate was raised and towed to Honolulu harbor August 29. Navy Board of Investigation's report found many defects in American submarines and suggested all F-class submarines were not in a safe condition for use on long dives. Immediate improvements in submarine construction and performance were ordered. After the investigation, the wreckage was towed to Pearl Harbor, re-sunk and forgotten. It's final resting place is not far from the USS Arizona Memorial. (Huapala)

5.0 Traditional or Customary Practices

In traditional (pre-western contact) culture, named localities served a variety of functions, informing people about: (1) places where the gods walked the earth and changed the lives of people for good or worse; (2) heiau or other features of ceremonial importance; (3) triangulation points such as ko'a (fishing markers) for fishing grounds and fishing sites (4) residences and burial sites; (5) areas of planting; (6) water sources; (7) trails and trail side resting places (o'io'ina), such as a rock shelter or tree shaded spot; (8) the sources of particular natural resources/resource collections areas, or any number of other features; or (9) notable events which occurred at a given area. Through place names knowledge of the past and places of significance was handed down across countless generations. There is an extensive collection of native place names recorded in the mo'olelo (traditions and historical accounts) published in Hawaiian newspapers.

Hawaiian environmental resilience was a regular part of traditional life. Famed anthropologist Marion Kelly wrote:

Changes made by Hawaiians, as in the case of fishpond building, enhance the food productivity for the people as they modify or adapt some elements of the environment, without creating unplanned, extensive and irreversible destructions of other important elements of the original environment. ... The dedication of Hawaiian society to the concept of *malama* (caring) is basically a conservation value. Sometimes it is explained as a belief that the land and sea in the last analysis “belonged” to the gods. Permission for the use of the gods’ domain was continually asked of them through religious ceremonies, large and small. Works of Hawaiians, both on land and in the sea, were so carefully planned, engineered and executed that they enhanced productively without massive environmental degradation following as a result... (Kelly 2000).

This is not intended to be a comprehensive list of all the practices that historically or contemporaneously occur in Waiakalua. This is meant to show the range of traditional or customary practices that took place in the larger geographic extent.

5.1 Mo'olelo

Mo'olelo is the practice of storytelling and developing oral histories for the purpose of transmitting knowledge information and values intergenerationally. Mo'olelo are particularly critical in protecting and preserving traditional culture in that they are the primary form through which information was transmitted over many generations in the Hawaiian Islands and particularly in the Native Hawaiian community. In a collection of essays about mo'olelo, professors C.M. Kaliko Baker and Tammy Haili'ōpua Baker explain: “*Mo'olelo*, loosely translated as stories and histories, are the *kūkulu* “pillars” that shoulder and chronicle

Kanaka Maoli narratives and beliefs. The mo‘o, or successions, of ‘ōlelo “words” are the foundation for the many genres of mo‘olelo which collectively represent the prowess of the Kanaka Maoli literary canon” (2023, 2).

Storytelling, oral histories, and oration are widely practiced throughout Polynesia and important in compiling the ethnohistory of the area. The Native Hawaiian newspapers were particularly valued for their regular publication of different mo‘olelo about native Hawaiian history. Were it not for the newspapers having the foresight to allow for the printing and publication of mo‘olelo, far less information about the cultural history of the Hawaiian people would be available today.

There are some mo‘olelo about Honolulu Harbor and the Honolulu area. The large body of mo‘olelo from in the geographic extent in not included. These mo‘olelo are provided in **Section 3.2 (Traditional Period)**, **Section 3.3 (Historic Period)** and in **Section 4.0 (Cultural Resources)**.

5.2 Habitation

Hawaiians lived extensively throughout the islands. Handy, Handy, and Pukui (1991) identify how different kānaka and their ‘ohana lived in accordance with what the authors termed “occupational contrasts” (286), meaning that based on occupation (i.e., planter or fisherman, for example), habitation systems differed. They describe, “The typical homestead or *kauhale*... consisted of the sleeping or common house, the men’s house, women’s eating house, and storehouse, and generally stood in relative isolation in dispersed communities. It was only when topography or the physical character of an area required close proximity of homes that villages exist. There was no term for village. *Kauhale* meant homestead, and when there were a number of *kauhale* close together the same term was used. The old Hawaiians, in other words, had no conception of village or town as a corporate social entity. The terrain and the subsistence economy natural created the dispersed community of scattered homesteads” (284).

The place names for this area reveal that there were house lots and other lands claimed by Native tenants in the area, mostly prior to foreign contact. No native habitants actively remain on these lands, as they converted for infrastructure early in the days of the Kingdom, even going back to the time of Kamehameha.

5.3 Travel and Trail Usage

The ability to travel was essential to Hawaiians and enabled their sustainability. Travel, and the freedom to move throughout different areas, had different names, including huaka‘i, ka‘apuni, or ka‘ahele. Traveling by sea had distinct names as well, like ‘aumoana. Traveling through the mountains was sometimes referred to as hele mauna. Travel, and moving throughout various places and regions was an essential practice and way of life in traditional Hawai‘i.

The freedom to travel safely was so important that Kamehameha I would come to pass a well-known law protecting travelers, *Ke Kānāwai Māmalahoe* (The Law of the Splintered Paddle). It is explained by the William S. Richardson School of Law as follows:

As a young warrior chief, Kamehameha the Great came upon commoners fishing along the shoreline. He attacked the fishermen, but during the struggle caught his foot in a lava crevice. One of the fleeing fishermen turned and broke a canoe paddle over the young chief’s head. The fisherman’s act reminded Kamehameha that human life was precious and deserved respect, and that it is wrong for the powerful to mistreat those who may be weaker.

Years later when Kamehameha became ruler of Hawai‘i, he declared one of his first laws, *Ke Kānāwai Māmalahoe* (the Law of the Splintered Paddle), which guaranteed the safety of the highways to all. This royal edict was law over the entire Hawaiian kingdom during the reign of Kamehameha the Great. Considered one of the most important *kānāwai* (royal edict), the law gave the Hawaiian people an era of freedom from violent assault (William S. Richardson School of Law 2021).

The *kānāwai* (law) reads:

E nā kānaka	O my people
E mālama ‘oukou i ke akua	Honor thy god
A e mālama ho‘i	Respect alike, the rights of
Ke kānaka nui a me kānaka iki	All men great and humble
E hele ka ‘elemakule	See to it that our aged,
Ka luahine, a me ke kama	Our women, and children
A moe i ke ala	Lie down to sleep by the roadside
A‘ohe mea nana e ho‘opilikia	Without fear of harm
Hewa no, make	Disobey, and die

The law would have such long-lasting resonance that it would be expressly incorporated into the Hawai‘i State Constitution.²

The presence of the bay and the canoe hale built by Kalākaua indicate that canoe travel continued in the area through the 19th century and possibly as late as the early 20th century.

5.4 Fishing

² Article IX. Section 10 of the Hawaii State Constitution reads: “The law of the splintered paddle, *mamala-hoe kanawai*, decreed by Kamehameha I—Let every elderly person, woman and child lie by the roadside in safety—shall be a unique and living symbol of the State's concern for public safety.”

The nearshore reef environment provides a rich biodiversity that has helped to sustain this community for generations. Honolulu, with fresh water resources that come down to the bay from Nu‘uahu, traditionally enjoyed a healthy ocean environment, which would have been effectively utilized by traditional practitioners.

This ocean expertise was critical to traditional Hawaiian practices. In *Hawaiian Fishing Traditions*, Moses Manu and Others write,

With a knowledge of fishing areas and seasons and an array of implements that included hooks and lines, lures, nets, basket traps, poisonous plants, and spears, a fisher supplied his family or his ali‘i with fish and shellsih from streams, fishponds, reefs, and ocean. Sometimes the catch was so huge, fish could be fed to teh pigs and dogs, with some left over to dry as food or fuel for fire; some was left to rot. Those fishers that could supply large amounts of fish from ponds or catches at sea were belieed to possess mana kupua, or supernatural power, to attract fish at will or make them multiply. Successful fishing implements, such as hooks or cowry shell lures became famous and were prised, passed on to heirs, and sometimes fought over (Manu 2006, ix).

Fishing rights were originally linked to ahupua‘a rights; there was important continuity between mountain ridges out to fringing reefs. Figure 10 shows the identified fisheries in both Honolulu Harbor and neighboring Pearl Harbor. Fishing may continue in the area off the Pier.

5.5 Kilo

Kilo are observational traditions and people who examine, observe, or forecast are identified as kilo and serve as traditional climate and weather experts. Kilo “references a Hawaiian observation approach which includes watching or observing [the] environment and resources by listening to the subtleties of place to help guide decisions for management and pono practices” (‘Āuamo Portal 2021). The practice of kilo is seeing a resurgence on Hawai‘i Island and in the Hawaiian Islands.

Kilo hōkū are traditional astronomers, or those who study the stars. A hale kilo or hale kilo hōkū were observatories or star observatories respectfully. Kilo makani were those who traditionally observed the winds. Kilo moana were traditionally oceanographers. Kilo ‘uhane were those who observed and communicated with spirits.

Traditionally the practice of kilo or observation was critical to the management of traditional Hawaiian landscapes. This practice is very closely tied to traditional or customary access as observers would require access to specific vistas viewsheds or areas in order to observe environmental phenomenon.

As illustrated in the proceeding section, Native Hawaiians created a wide range of terms for the environment and understanding the ecosystems around them. These terms were often quite specific, and many were tied closely to a specific geographic area. This level of specificity illustrated the close kinship Hawaiians shared to their surrounding environment. The ability to observe and understand all elements of their ecosystem was essential to both the successful care of natural resources and the survival of the Hawaiian people.

The ability to effectively and accurately read weather phenomena was essential to the ability of Hawaiian people who farm, fish, navigate, and conduct any number of practices in a sustainable and successful manner. The knowledge Hawaiians acquired about their environment around them, including weather phenomena were the result of multi-generational observations that comprised an extensive body of information passed down through oral traditions. The following Hawaiian names and their descriptions of weather phenomena include words for clouds, rains, and winds that are utilized by kilo to help guide activities and practices:

ao akua – godly cloud, figurative representative of a rainbow.

ao loa – long cloud or high, distant cloud. Status cloud along the horizon.

ao 'ōnohi – cloud with rainbow, 'ōnohi, colors contained within it.

ao pua'a – cumulus clouds of various sizes piled together, like a mother pig with piglets clustered around her. The Kona coast is famous for ao pua'a, a sign of good weather and no impending storms.

ao pehupehu – continually growing cumulus typical of summer. Drifting with the tradewinds, these clouds pick up moisture and darken at their base, finally releasing their rain on the windward mountain cliffs.

ho'omalumalu – sheltering cloud.

ho'oweliweli – threatening cloud.

ānuenuē – rainbow, a favorable omen.

ua loa – extended rainstorm.

ua poko – short rain spell.

Most kilo practices off the pier would be associated with the ocean, specifically observing ocean conditions prior to going to fish or dive. Fishing practices are discussed in **Section 5.4**.

5.6 Haku Mele, Haku Oli, and Hula

This practice is related to the composition of song and chants. This is a practice that has existed for many centuries in the Hawaiian culture. When the Hawaiian culture primarily relied on an oral tradition to pass on knowledge and information, the ability to create songs and chants was essential to pass information from one generation to the next. As Donaghy (2013) notes, Hawaiians had hundreds of terms associated with this practice.

Songs and chants are largely influenced by the environment around them. As a pedagogical device it was important if not imperative that these songs or chants effectively captured data

from the environment around the composer and passed on this information for others to utilize when managing natural resources. In a very real sense, the land and natural resources act as a muse for composers. The category of songs that provide information on or speak to natural resources are called mele 'āina (songs of the land). As shown in the previous section, there are numerous traditional chants and songs about the project area and its surrounding landscape.

Much like mele and oli, hula serves as a way of both honoring place and telling the story of place. Many hula, especially those based on mele 'āina, require intimate understanding of the place where the mele was composed, including the natural elements of that 'āina. Hula hālau will regularly take huaka'i, or journeys, to visit and honor the place a particular mele speaks of. The ability to visit the place and learn about it is important to the practice of hula. There are numerous mele written specifically for Honolulu Harbor, they are provided in Section 4.3.2.

6.0 Ethnographic Data

As discussed previously in **Section 2.6 (Ethnographic Methodology)**, information was collected from a wide range of individuals and sources. The findings of those efforts are discussed in this section. Ethnographic data is utilized to supplement the other research methods utilized. It is one in a range of research tools employed to gather information about the project area.

Honua Consulting was tasked with gathering information from individuals with lineal and cultural ties to the area and its vicinity regarding regional biocultural resources, potential impacts to these biocultural resources, and mitigation measures to minimize and/or avoid these impacts.

The bulk of the information available from practitioners and kūpuna were drawn from native testimonies and Hawaiian language sources and integrated into the cultural and historic overview section of this survey. Those sources, along with responses to this project, were considered when researching the traditional or customary practices discussed in a previous section.

Interviews were conducted with three (3) Native Hawaiian residents. All live in and/or are familiar with the Honolulu Harbor area.

6.1 Interview with Dreana Kalili

Dreana (Dre) Kalili is a highly respected leader in the Native Hawaiian community. She is currently the President of the Association of Hawaiian Civic Clubs. Founded by Prince Kūhiō in 1918, the Hawaiian Civic Club movement is the oldest Native Hawaiian community-based advocacy movement. The Association of Hawaiian Civic Clubs is a not-for-profit organization that is a confederation of individual and autonomous Hawaiian Civic Clubs located across Hawai'i and across the continental United States. Our clubs are organized into five councils: Moku o Keawe (Hawai'i Council), Nā Hono A'o Pi'ilani (Maui Council), Ke One o Kākuhihewa (O'ahu Council), Moku o Manokalanipō (Kaua'i Council), and Nā Lei Makalapua (Mainland Council). It is governed by an 18-member volunteer Board of Directors and advocates for improved welfare of Native Hawaiians in culture, health, economic development, education, social welfare, and nationhood, and perpetuates and preserves language, history, music, dance and other Native Hawaiian cultural traditions.

Dre is also the State of Hawaii Department of Transportation Deputy Director for Harbors. Most recently, Dre served as the Special Projects Manager for the department's highways division, leading the \$25 million broadband pilot project to fiber-enable highway facilities and provide free high-speed internet service in eight underserved communities statewide. She also collaborated with federal, state, and county stakeholders to implement the Infrastructure Investment and Jobs Act and worked to expend this new funding, and prepared discretionary grant applications for various highway programs.

She also served as an Interim Deputy Director and Executive Assistant for the City and County of Honolulu's Department of Transportation Services, Business Development Manager for DOT, Policy and Program Analyst for the Department of Hawaiian Home Lands, and as a Projects Director for Government Affairs and Business Development for the Native Affairs and Development Group in Washington D.C.

When asked about the project area, Dre understood it once be an important place for Native Hawaiians prior to foreign contact. She also recalled that Pier 7 specifically was the prior location of King Kalakaua's boat house. This was an important site for his dynasty, as he often held events there and took important meetings there. She is not aware of any traditional practices that continue to be held at Pier 7, but she did not that there are Hawaiian mele written about Honolulu Harbor. She does not believe this project would adversely impact cultural resources or traditional practices. She believes that it would be good for the project to consider integrity native plants into the landscaping space.

6.2 Interview with Na'alehu Anthony

Na'aluhu Anthony is a Native Hawaiian storyteller and documentary filmmaker. He is the co-founder of 'Oiwī TV and the 'Āina Aloha coalition and directs and produces documentaries and oral histories through his production company, Palikū Documentary Films. He has produced and directed a number of films including the award-winning PBS Documentary of Mau Piailug: The Wayfinder. He is a frequent advisor to the film industry.

Anthony also is vice chairman and O'ahu commissioner for the Native Hawaiian Roll Commission. He has served as a crew member of the Polynesian Voyaging Society since 1995 and more recently as a captain aboard Hōkūle'a, sailing more than 12,000 miles on the canoe's Worldwide Voyage, which began in 2013. He has documented all the major voyages made by Hōkūle'a. Nā'ālehu holds an MBA and a BA in Hawaiian Studies from UH-Manoa. He is a 1993 graduate of Kamehameha Schools and lives in Nu'uānu.

Anthony joined the Board of Water Supply (BWS) Board of Directors in January 2021. He became Chair of the Board effective July 2023.

Anthony noted that the entire Māmāla area was important for canoe travel, which was one of the primary means of travel in traditional Hawai'i. He further explained that the entire ahupua'a was a well-known wahi pana, as there are many mo'olelo about speak about the importance of the entire ahupua'a. The Honolulu area would become an important seat of political power for the Kingdom, as Kamehameha moved the capital of the Kingdom to Honolulu. He did so in part due to Honolulu Harbor, which had a larger, deep port allowing for more commerce to come through. Recognizing the economic importance that was growing in Honolulu, Kamehameha III decided to relocate the sovereign government's capital there.

Anthony notes that Pier 7 has not been effectively used in years, and the development of an art space, specifically one that would bring a renowned museum to Honolulu would be welcomed. He suggested that the museum utilized as much Hawaiian language and culture as possible in the space, considering its historic importance to the Hawaiian people and the Hawaiian Kingdom. He does not believe the project would adversely impact cultural resources or cultural practices. He does see the potential space as opportunity to integrate the Hawaiian culture and potentially invite collaborations with Hawaiian artists or cultural events.

6.3 Interview with Elmer Ka'ai

Elmer is a proud graduate of the University of Hawai'i at Mānoa. He has been with the Mānoa since 2008 after working in both the private and public sectors. Although his field of study is in human development, his professional career over the last forty-plus years has centered around leadership, legal and land title research, organizational capacity, planning, and public policy. As the government relations and community affairs liaison, Elmer is often provided challenging and confidential matters that require transparency and forthright solutions. Elmer also serves as his family's genealogist, which he is extremely passionate about and will humbly tell you that it is simply his "kuleana."

He is also President and Chairman of Hui Kāko'o 'Āina Ho'opulapula, which is the nationwide organization representing native Hawaiian homestead beneficiaries on the homestead waitlist. In this and other community roles, he has been a leader in the Hawaiian community for over 40 years. He was born in Honolulu and raised in Nu'uano. He continues to reside in Honolulu today.

Elmer remembers spending a lot of time in the area near the project area growing up. He said there were regular paddling activities in the Kaka'ako area, and people used to go to the beach near there often. He said his uncle used to fish in the area too. He remembers that Pier 7 and the area was already built when he was growing up.

He doesn't think the project will adversely impact cultural resources or traditional practices. He thinks it would be good to integrate the history of the area into the project, especially aspects of Hawaiian culture and history.

7.0 Impact Assessment

The project as currently conceptualized would not adversely impact cultural resources or traditional or customary practices. There are wahi pana (storied places) within the overall region in which the project area is located, but it is not anticipated that any of the resources or practices in the ahupua'a would be impacted by the project.

7.1 Impacts to Flora

Impacts to flora are addressed through the biological assessment. It was recommended though that the project integrate native plants as much as possible into the project and the landscaping.

7.2 Impacts to Fauna

Impacts to fauna are addressed through the biological assessment.

7.3 Impacts to Historic Sites

Impacts to historic sites and properties will be formally assessed through the HRS 6E-42 process, which is required for this project.

7.4 Impacts to Intangible Cultural Resources

Intangible cultural resources refer to those resources without physical form, such as hula or mele. The project is unlikely to impact any such resources.

7.5 Impacts to Cultural Practices

It is unlikely that the project would adversely impact any cultural practices as the area. Fishing occurs in the area off the pier (see **Section 5.4**), but the project would not likely impact this activity.

7.6 Cumulative and Indirect Impacts

Adverse cumulative and indirect impacts to cultural resources are often overlooked in CIAs, as they are difficult to assess. Cumulative impacts are cultural impacts that result from the incremental impacts of an activity when added to past, present, and reasonably foreseeable future actions and activities. Indirect impacts are impacts on cultural resources which are not a direct result of the project, but a secondary or tertiary result of the project. It is currently not anticipated that the project will have any cumulative or indirect impacts.

7.7 Mitigation and Best Management Practices

No impacts are anticipated, nonetheless, standard best management practices should be followed. Although recommendations regarding the integration of native plants, Hawaiian history, and cultural activities in partnership with Hawaiian artists is recommended.

8.0 Ka Pa‘akai Analysis

It has long been the law of the land that the State of Hawai‘i has an “obligation to protect the reasonable exercise of customary and traditionally exercised rights of Hawaiians to the extent feasible” *Public Access Shoreline Hawai‘i v. Hawai‘i County Planning Commission* (“PASH”) 79 Hawai‘i 425, 450 n. 43, 903 P.2d 1246, 1271 n. 43 (1995). In 2000, in the *Ka Pa‘akai* decision, the Court established a framework “to help ensure the enforcement of traditional and customary Native Hawaiian rights while reasonably accommodating competition private development interests.” 94 Hawai‘i 31, 35, 7 P.3d 1068, 1972 (2000). This analysis is used here to fulfill the goal of this CIA (**Section 1.4**).

Based on the guidelines set forth in *Ka Pa‘akai*, the Hawai‘i Supreme Court provided government agencies an analytical framework to ensure the protection and preservation of traditional and customary Native Hawaiian rights while reasonably accommodating competing private development, or other, interests. The Court has stated: “that in order to fulfill its duty to preserve and protect customary and traditional Native Hawaiian rights to the extent feasible, as required by Article XII, Section 7 of the Hawai‘i Constitution, an administrative agency must, at minimum, make specific findings of fact and conclusions of law as to the following:

- 1) The identification of valued cultural, historical, or natural resources in the project area, including the extent to which traditional and customary Native Hawaiian rights are exercised in the project area.
- 2) The extent to which those resources—including traditional and customary Native Hawaiian rights—will be affected or impaired by the proposed action; and
- 3) The feasible action, if any, to be taken to reasonably protect Native Hawaiian rights if they are found to exist. *Ka Pa‘akai*, 94, Hawaii at 47, 7 P.3d at 1084. Cited in *Matter of Contested Case Hearing Re Conservation District Use Application (CDUA) HA-3568 for the Thirty Meter Telescope at the Mauna Kea Science Reserve, Ka‘ohe Mauka, Hāmākua, Hawai‘i*, 143 Hawai‘i 379, 431 P.3d 752 (2018) (“*Mauna Kea II*”).

In order to complete a thorough CIA that complies with statutory and case law, it is necessary to fully consider information available from, and provided by, Native Hawaiian cultural practitioners and cultural descendants from the project area. From thorough research, data was extrapolated that provides a comprehensive look at the cultural resources in this ‘āina. Through this research, the factors from *State v Hanapi* are met. These factors are: “to establish that his or her conduct is constitutionally protected as a native Hawaiian right, he or she must show, at minimum, the following three factors. First, he or she must qualify as a “native Hawaiian” within the guidelines set out in PASH . . . [as] “those persons who are ‘descendants of native Hawaiians who inhabited the islands prior to 1778,’ ... regardless of their blood quantum.” Second, once a defendant qualifies as a native Hawaiian, he or she

must then establish that his or her claimed right is constitutionally protected as a customary or traditional native Hawaiian practice.... Finally, a defendant claiming his or her conduct is constitutionally protected must also prove that the exercise of the right occurred on undeveloped or “less than fully developed property.”” 89 Hawai‘i 177, 185-86, 970 P.2d. 485, 493-94 (1998).

The *Ka Pa‘akai* analysis is largely a legal analysis, as the applicable tests are legal standards. Therefore, a strong analysis is one conducted by someone with sufficient legal training. Additionally, at the core of a thoughtful *Ka Pa‘akai* analysis is a comprehensive understanding of traditional and customary practices. In breaking down the Court’s tests, it is important to the different elements that contribute to each test.

The first test - “The identification of valued cultural, historical, or natural resources in the project area, including the extent to which traditional and customary Native Hawaiian rights are exercised in the project area” – actually consists of two separate elements. First, the simple identification and existence of valued cultural, historical, or natural resources. These resources are tangible in nature. They can include sacred places, culturally valuable plants, or a religious or historic site. This survey how sought to exhaustively identified the great multitude of resources that may exist in the project area or adjacent areas.

As to this test, this survey shows there are no identified resources within the project area. Additionally, there are no identified practices occurring the project area, although numerous practices would have historically occurred in the larger region.

The second element of this first test is access. Access requires two things to occur. One is the existence of a resource. Whether a plant, an animal, a place, or site, the resource must exist in order a practitioner to access it. The second thing is physical access. This includes, but it is not limited to, the ability to physically access a plant, animal, site, or location associated with a particular practice. This can also include the traditional and customary route or path taken to access the resource. This can also include cultural protocols that existed in accessing a resource. These are often temporal, in that access protocols can be at a certain time of day or year. Makahiki would be a good example of a traditional custom that has specific cultural protocols associated with access. In the case of Makahiki, the custom takes place at a certain time of year.

Therefore, the first test under *Ka Pa‘akai* should include not only a listing of resources, but the identification of ways in which those resources are accessed and utilized in association with a traditional and customary practice.

There is no evidence that the specific project area is currently accessed for traditional or customary practices, although the larger region would have been accessed for such purposes.

Therefore, the second test under the *Ka Pa‘akai* analysis – “The extent to which those resources—including traditional and customary Native Hawaiian rights—will be affected or impaired by the proposed action” – also looks at two separate elements. The first, does the proposed action and its alternatives have an adverse impact on the existence of resources? This would include the alteration, destruction, modification, or harm of sites, including biological resources, sacred places, burial sites, etc. It also includes a loss of species. Any adverse impact or harm to resources is alone an affect or impairment caused by the proposed action.

Under this element, adverse impacts to historic sites or culturally utilized plants would all be identified adverse impacts. Under this same element, any indirect or cumulative effects would create an adverse impact under *Ka Pa‘akai* if those actions harmed resources. **It is not currently anticipated that any of these impacts would occur on this project.**

In addition to this, any action that impacts traditional and customary access to resources, even if there is not direct adverse impact to the resource itself, would result in an affect or impairment resulting from the proposed action. Therefore, the limitations on access that could result from development or use of the project area could create an adverse impact under *Ka Pa‘akai*. **Again, it is not anticipated any impacts to cultural access would result from this project.**

The third part of the *Ka Pa‘akai* framework aims to identify “[t]he feasible action, if any, to be taken to reasonably protect Native Hawaiian rights if they are found to exist.” Determining whether or not action has been suitably “feasible” is a matter for the State. These feasible actions could include continued access to the project as needed to conduct cultural practices.

As there are no resources, practices, or potential impacts, the third part of the *Ka Pa‘akai* framework becomes moot.

9.0 Conclusion

This cultural impact assessment investigated potential traditional or customary practices that occur within the proposed project area. This survey found Pier 7 was used for some traditional activities but was most known for being the location of Kalākaua's boathouse. These activities have long been discontinued.

Impacts to historic sites and properties will be formally assessed through the HRS 6E-42 process, which is required for this project.

The project is unlikely to adversely impact cultural practices. Nonetheless, it would be important for the project to implement best management practices recommended from the biological assessment and archaeological survey during the construction of the project, should there be any such recommendations. It is also advised to continue to work closely with the community to ensure there are no unintended adverse effects and that practitioners have a means of quickly contacting the project applicant with questions or concerns should any arise. It is also recommended the project integrate appropriate elements of Hawaiian landscaping, culture, and history.

Appendix I: Glossary of Hawaiian Terms

The following list of terms were used throughout this report. All definitions were compiled using Pukui and Elbert's *Hawaiian Dictionary* (1986).

Ahupua'a	Land division usually extending from the uplands to the sea, so called because the boundary was marked by a heap (ahu) of stones surmounted by an image of a pig (pua'a), or because a pig or other tribute was laid on the altar as tax to the chief.
'Āina	Land, earth.
Akua	1. God, goddess, spirit, ghost. 2. Divine, supernatural, godly.
Ala	Path, road, trail.
Ali'i	1. Chief, chiefess, ruler, monarch. 2. Royal, regal. 3. To act as chief, reign.
'Aumakua	Family or personal gods, deified ancestors who might assume the shape of sharks, owls, hawks, dogs, plants, etc. A symbiotic relationship existed; mortals did not harm or eat them, and the 'aumakua warned or reprimanded mortals in dreams, visions, and calls.
'Aumākua	Plural of 'aumakua.
'Auwai	Irrigation ditch, canal.
Haku mele	Poet, composer; to compose song or chant.
Hālau	1. Long house, as for canoes or hula instruction; meeting house. 2. Large, numerous; much.
Hale	House, building, institution, lodge, station, hall.
Hale pili	House thatched with pili grass.
Heiau	Pre-Christian place of worship, shrine. Some heiau were elaborately constructed stone platforms, other simple earth terraces.
Hula	A Polynesian dance form accompanied by chant or song.
'Ili	Land section, next in importance to ahupua'a and usually a subdivision of an ahupua'a.
'Ili kūpono	A nearly independent 'ili land division within an ahupua'a, paying tribute to the ruling chief and not to the chief of the ahupua'a. Transfer of the ahupua'a from one chief to another did not include the 'ili kūpono located within its boundaries.
Iwi	Bone, carcass. The bones of the dead, considered the most cherished possession, were hidden, and hence there are many figurative expressions with iwi meaning life, old age.
Kalo	Taro (<i>Colocasia esculenta</i>), a kind of aroid cultivated since ancient times for food, spreading wildly from the tropics of the Old World. In Hawai'i, taro has been the staple from earliest times to the present, and

Glossary of Hawaiian Terms

	here its culture developed greatly, including more than 300 forms. All parts of the plant are eaten, its starchy root principally as poi, and its leaves as lū'au.
Kanaka	Human being, man, person, individual, party, mankind, population.
Kānaka	Plural of kanaka.
Kāne	Male, husband, male sweetheart, man; brother-in-law of a woman.
Kanikau	1. Dirge, lamentation, chant of mourning, lament. 2. To chant, wail, mourn.
Kapu	1. Taboo, prohibition. 2. Special privilege or exemption from ordinary taboo. 3. Sacredness, prohibited, forbidden, sacred, holy, consecrated. 4. No trespassing, keep out.
Kuleana	Right, privilege, concern, responsibility, title, business, property, estate, portion, jurisdiction, authority, liability, interest, claim, ownership, tenure, affair, province.
Kumu	Teacher, tutor, manual, primer, model, pattern.
Kumu hula	Hula teacher.
Kupuna	Grandparent, ancestor, relative or close friend of the grandparent's generation, grandaunt, granduncle.
Kūpuna	Plural of kupuna.
Limu	A general name for all kinds of plants living under water, both fresh and salt, also algae growing in any damp place in the air, as on the ground, on rocks, and on other plants; also mosses, liverworts, lichens.
Lo'i	Irrigated terrace, especially for taro, but also for rice and paddy.
Loko i'a	Traditional Hawaiian fishpond.
Lua	A type of dangerous hand-to-hand fighting in which the fighters broke bones, dislocated bones at the joints, and inflicted severe pain by pressing on nerve centers. There was much leaping, and (rarely) quick turns of spears. Many of the techniques were secret. Lua holds were named. Lua experts were bodyguards to chiefs.
Mahi 'ai	Farmer, planter; to farm, cultivate; agricultural.
Makai	On the seaside, toward the sea, in the direction of the sea.
Māla	Garden, plantation, patch, cultivated field, as māla 'ai, māla kalo, māla kō, māla kūlina.
Mālama	To take care of, tend, attend, care for, preserve, protect, beware, save, maintain.
Mana'o	Thought, idea, belief, opinion, theory, thesis, intention, meaning, suggestion, mind, desire, want; to think, estimate, anticipate, expect, suppose, mediate, deem, consider.
Mauka	Inland, upland, towards the mountain.
Mele	1. Song, anthem, or chant of any kind. 2. Poem, poetry. 3. To sing, chant.
Mele māka'ika'i	Travel chant.

Glossary of Hawaiian Terms

Mōī	King, sovereign, monarch, majesty, ruler, queen.
Moku	1. District, island, islet, section, forest, grove, clump, fragment. 2. To be cut, severed, amputated, broken in two.
Mo‘o	Lizard, reptile of any kind, dragon, serpent.
Mo‘olelo	Story, tale, myth, history, tradition, literature, legend, journal, log, yard, fable, essay, chronicle, record, article.
Mo‘owahine	Female lizard deity.
Nī‘au-pi‘o	Offspring of the marriage of a high-born brother and sister, or half-brother and half-sister.
‘Ohana	Family, relative, kin group; related.
‘Ōlelo no‘eau	Proverb, wise saying, traditional saying.
Oli	Chant that was not danced to, especially with prolonged phrases chanted in one breath, often with a trill at the end of each phrase; to chant thus.
‘Ō‘ō	Digging stick, digging implement, spade.
Pae ‘āina	Group of islands, archipelago.
Pi‘o	Marriage of full brother and sister of nī‘aupi‘o rank, presumably the highest possible rank. Their offspring had the rank of naha, which is less than pi‘o but probably more than nī‘aupi‘o. Later pi‘o included marriage with half-sibling.
Pueo	Hawaiian short-eared owl (<i>Asio flammeus sandwichensis</i>), regarded often as a benevolent ‘aumakua.
Wai	Water, liquid or liquor of any kind other than sea water.
Wahi pana	A sacred and celebrated/legendary place.
Wahine	Woman, lady, wife; sister-in-law, female cousin-in-law of a man.
Wao	1. Realm. 2. A general term for inland region usually forested but not precipitous and often uninhabited.

1.0 EXECUTIVE SUMMARY

Wilson Okamoto Corporation (the Client) retained ENPRO Environmental (ENPRO) to conduct a Phase I Environmental Site Assessment (ESA) in conformance with ASTM International (ASTM) Practice E1527-21 “Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process” (the Practice), for the subject property identified as Tax Map Keys (TMKs) (1) 2-1-001: 057, 058, and (1) 2-1-014: 006 located on Aloha Tower Drive in Honolulu, Hawaii (the subject property). The purpose of the Phase I ESA was to identify Recognized Environmental Conditions (if any) as part of due diligence prior to leasing the subject property.

The subject property, owned by Hawaiian Electric Company (HECO) and The State of Hawaii, is approximately 13 acres.

ENPRO has performed a Phase I ESA of the subject property in conformance with the scope and limitations of the Practice.

This assessment has revealed evidence of Recognized Environmental Conditions (RECs) in connection with the subject property as listed in **Tables 1-1 through 1-3** below and on the following pages. Recommendations for additional actions are listed in Section 9.1.

Potential environmental concerns which cannot be definitively categorized as RECs due to insufficient available information required to make a determination, and business environmental risks (BERs) which fall outside the scope of a Phase I ESA but may warrant investigation were identified as listed in **Table 1-4**.

**Table 1-1
Recognized Environmental Conditions**

RECs	REC Categories		
	Release	Conditions Indicative of a Release	Conditions Posing a Threat of Future Release
<p><u>Historic Use:</u></p> <ul style="list-style-type: none"> A review of previous environmental reports indicated that soil and soil vapor beneath portions of the subject property on TMK (1) 2-1-014: 006 was impacted by acetone, naphthalene, 1-methylnaphthalene (1-MNP), tetrachloroethylene (PCE), total petroleum hydrocarbon, diesel range organics (TPH-d), total petroleum hydrocarbon, oil range organics (TPH-o), 1,2 dichloroethane (1,2-DCA), benzo[a]anthracene (BaP), benzo[a]pyrene (BaP), benzo[b]fluoranthene (BbF), dibenzo[a,h]anthracene (DahA), indeno[1,2,3-c,d]pyrene (I123cdP), pyrene, and/or lead. 	✓		
<ul style="list-style-type: none"> Beneath the subject property a fuel pipeline delivers fuel from the Iwilei fuel storage area to onsite above ground storage tanks (ASTs). Several leaks from this pipeline have been reported. The pipeline enters the property at the north end of the subject property. This pipeline has the potential to impact environmental conditions due to the petroleum products that it supplies to the subject property. 			✓
<ul style="list-style-type: none"> Extended site history supporting petroleum-fueled power generation, related commercial activities, and military use. 		✓	
<ul style="list-style-type: none"> PCBs in electrical equipment and transformers. 			✓
<p><u>Storage Tanks:</u></p> <ul style="list-style-type: none"> A diesel AST with a capacity of approximately 43,000 gallons and two Low Sulfur Fuel Oil (LSFO) ASTs with capacities of approximately 616,000 gallons each were observed on the northeast portion of subject property on TMK (1) 2-1-014: 006. Regulatory records indicated that one of the LSFO ASTs had leaked. Information about corrective action was not provided. 	✓		
<p><u>Wells:</u></p> <ul style="list-style-type: none"> Three (3) groundwater monitoring wells were observed on the subject property, likely associated with environmental investigations regarding documented releases in the northeast portion of the subject property. Reportedly, an Environmental Hazard Management Plan (EHMP) was prepared from this data, but ENPRO did not find a DOH regulatory response indicating this could be categorized as a Controlled REC. 	✓		

**Table 1-1
Recognized Environmental Conditions**

RECs	RECs		
	Release	Conditions Indicative of a Release	Conditions Posing a Threat of Future Release
<p><u>Adjacent/Nearby Site Contamination:</u></p> <ul style="list-style-type: none"> A 1991 Work Plan was created to address the findings of a 1990 Preliminary Environmental Assessment and a 1991 Phase I Environmental Site Assessment for the Aloha Tower Development at 1 Aloha Tower Drive, Honolulu, Hawaii. Results of environmental sampling indicated that elevated concentrations of petroleum hydrocarbons, pesticides, and metals were present in site soils. The Aloha Tower Development site has the potential to impact the subject property. 	✓		
<p><u>Solid Waste:</u></p> <ul style="list-style-type: none"> An abandoned ship was observed on the subject property at Pier 7; TMK (1) 2-1-001: 058. The ship had been retired and turned over to the Hawaiian Maritime Center and used as a museum ship in the 1960s. Due to lack of funds, the ship was not maintained. The deteriorating ship has the potential to impact subject property. 			✓

**Table 1-2
Historical Recognized Environmental Conditions**

No Further Action (NFA) Date	Historical RECs (HRECs)
February 17, 2006	A 500-gallon underground storage tank (UST) with the identification number 9-103797, situated at Pier 2 within Honolulu Harbor, underwent permanent closure and was subsequently granted a "Site Cleanup Completed" NFA status. This UST was located approximately 0.1-mile northwest of the subject property.
July 31, 2014	A 1.5-ounce mercury spill was reported to have been spilled at the HECO – Honolulu Generating Station (subject property). The State of Hawaii Department of Health (DOH) Hazard Evaluation and Emergency Response (HEER) Office On-Scene Coordinator (SOSC) issued an NFA status. The reportable quantity for mercury is 1.28 ounces.
November 9, 2004	100 gallons of Shell Diala – Transformer Oil was reported to have been spilled at the HECO – Honolulu Generating Station (subject property). SOSC NFA status was issued.
Unknown	1,000 gallons of fuel oil was reported to have been spilled at the HECO – Honolulu Generating Station (subject property). SOSC NFA status was issued.

Table 1-2
Historical Recognized Environmental Conditions

No Further Action (NFA) Date	Historical RECs (HRECs)
Unknown	50 gallons of turbine oil was reported to have been released at the HECO – Honolulu Generating Station (subject property). SOSC NFA status was issued.
January 31, 2017	35 gallons of fuel oil was reported to have been released at the HECO – Honolulu Generating Station (subject property). SOSC NFA status was issued.
May 9, 2019	A vehicle veered off Pier 5 and entered Honolulu Harbor. Despite efforts, a tow truck dispatched that night was unable to extract the vehicle. A salvage company was able to successfully remove the vehicle the next day. This spill, located on the subject property, received an NFA. However, an investigation to assess the extent of the contamination was not conducted.
September 6, 2021	Laboratory analysis of soil samples collected from borings installed in the north portion of the property indicated contaminated soil below the groundwater table at depths of 8 to 9 feet. The source was believed to be the HECO Honolulu Power Plant. The identified contaminant was reported to be aged hydrocarbons in the carbon range of C10 to C30 with the bulk of the identified hydrocarbons between C14 and C25. This received an NFA from DOH. However, an investigation to assess the extent of the contamination was not conducted.

Table 1-3
Potential Concerns and/or Business Environmental Risks

Concern	Summary
Contaminants of emerging concern (CECs)	CECs may be present on the subject property but are not covered under the scope of the Practice until they are defined as hazardous substances under federal regulation.
Asbestos-containing material (ACM)	ACM may be present on the subject property.
Lead-containing paint (LCP)	LCP may have been used in the construction and/or maintenance and upkeep of structures at the subject property.
Potential PCB-containing building materials	PCBs are widely present in manufactured products in buildings constructed or renovated between 1950 and 1979.
Indoor air quality concerns	Indoor air pollutants can be released into the building, causing a potential health hazard for inhabitants.

Table 1-3
Potential Concerns and/or Business Environmental Risks

Concern	Summary
Mold	Large quantities of mold spores can present a health hazard and mold growth can cause damage to building materials.
Lead in drinking water	Lead can enter drinking water when plumbing materials that contain lead corrode, especially where the water has high acidity or low mineral content that corrodes pipes and fixtures. The most common sources of lead in drinking water are lead pipes, faucets, and fixtures.
Harbor waters	An abandoned ship on the subject property at Pier 7 TMK (1) 2-1-001: 058, was observed during the site visit. In addition, multiple small releases have been documented in the harbor near the subject property.
Potential Pesticides Beneath Existing Structure Slabs	Application of pesticides, primarily for termite control, was common practice in Hawai'i. While this is not considered a REC if the slab of the building remains intact, any re-development involving disturbing and/or disposal of these soils will require environmental oversight and management.
Fill Land of Unknown Origin	The subject property is built on fill land of unknown origin. Currently, there are no documented contaminants associated with this fill material, other than what has been identified as resulting from past use (see Table 1-1). However, if this material is to be disturbed and/or disposed as part of future development activities, further characterization is recommended.

In the case of redevelopment, ENPRO recommends a Phase II investigation of the identified RECs and assessment of BERs related to demolition of the on-site structures.

2.0 INTRODUCTION

The Client retained ENPRO to conduct a Phase I ESA of the subject property described in **Table 2-1** in accordance with ENPRO's Proposal Number 23D-0081-HNL dated April 14, 2023.

Table 2-1: Location and Legal Description

Address	Aloha Tower Drive, Honolulu, Hawaii
TMK	(1) 2-1-001: 057, 058, and (1) 2-1-014: 006
Location	Latitude: 21.30497834 (21° 18' 17.9202'') Longitude: -157.86438018 (-157° 51' 51.768'') Elevation: Less than 10 feet above sea level
Land Area (Assessor)	~571,950 square feet
Zoning	I3: Waterfront Industrial
Owner/Operator	(1) 2-1-001: 057 & 058: State of Hawaii DOT Harbors Division (2)-1-014-006: Hawaiian Electric Company, Inc.
Legal Description (Assessor)	ENPRO was not provided with title information.

This Phase I ESA conforms to standards for all appropriate inquiries¹ (AAI) into the previous ownership and uses of the subject property consistent with good commercial and customary practice as defined in the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) (42 USC §9601).

2.1 PURPOSE

The goal of this Phase I ESA was to identify, to the extent reasonably feasible, RECs, controlled RECs (CRECs), and historical RECs (HRECs) associated with the subject property in accordance with the Practice and the Code of Federal Regulations (CFR) (40 CFR Part 312).

This Phase I ESA also includes a limited vapor encroachment screen with respect to chemicals of potential concern (COPCs) that may migrate as vapors into the vadose zone of the subject property. The goal of this process is to identify a vapor encroachment condition (VEC), should one exist, as per ASTM E2600-22 "Standard Guide for Vapor Encroachment Screening on a Property Involved in Real Estate Transactions."

¹ As defined at 42 USC §96S01(35)(B) and 40 CFR Part 312

In addition, this Phase I ESA was conducted to support the Bona Fide Prospective Purchaser defense with respect to petroleum products and the range of contaminants within the CERCLA scope. As such, this report is intended to permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability² (hereinafter, the “landowner liability protections,” or “LLPs”).

2.2 DEFINITIONS

The Practice defines a REC as:

- (1) The presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment;
- (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or
- (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.

The definition of a REC may be contrasted with the definition of a *de minimis* condition. *De minimis* conditions are not RECs. The Practice defines a *de minimis* condition as:

A condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

In addition to the generalized REC, the Practice defines two specific types of RECs that may be present on a property.

A C-REC is a REC:

Affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, activity and use limitation or other property use limitations) (ASTM E1527-21).

A C-REC designation does not imply that the Environmental Professional has evaluated or confirmed the adequacy, implementation, or continued effectiveness of the required control that has been, or is intended to be, implemented. Additionally, a past release that previously qualified as a C-REC may no longer constitute a C-REC at the time of this Phase I ESA if new conditions or information is identified (e.g., a change in regulatory criteria or a newly identified migration pathway).

² 42 USC §9601(35)(A)&(B), §9607(b)93), §9607(q), and §9607(r)

An H-REC is defined as:

A previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations) (ASTME1527-21).

A past release that previously qualified as an H-REC may no longer constitute an H-REC at the time of this Phase I ESA if new conditions or information is identified (e.g., a change in regulatory criteria or a newly identified migration pathway).

A VEC is:

The presence or likely presence of [contaminant of concern] vapors in the vadose zone of the [subject] property caused by the release of vapors from contaminated soil and/or groundwater either on or near the [subject property] as defined by Tier 1 or Tier 2 procedures (ASTM E2600-15).

The first Tier is defined by adjusting the area of concern (AOC) to determine whether there are releases on or proximal to the property that result in a VEC. The second tier includes a detailed literature search or possible sampling to obtain greater certainty. It should be noted that a VEC is not necessarily a REC, and RECs may not result in a VEC. The evaluation of RECs is a separate process from that of evaluation VECs.

A BER is a risk which can have a material environmental or environmentally driven impact on the business associated with the current or planned use of commercial real estate not necessarily related to those environmental issues required to be investigated in a Phase I ESA. BERs may warrant consideration by parties to a commercial real estate transaction. Consideration may involve additional investigation beyond this ESA, such as soil sampling, groundwater sampling, asbestos surveying, or other considerations listed in **Section 7.0**.

2.3 SCOPE OF WORK

ENPRO's scope of services for this Phase I ESA included the following:

- Identify the source(s) of potable water for the subject property and current heating and sewage disposal system(s) used at the subject property, if any, and their age if readily ascertainable (**Section 4.2**).
- Conduct a visual reconnaissance of the subject property and cursory reconnaissance of adjacent properties to identify visible evidence of RECs (**Sections 4.3 and 4.4**).
- Review current United States Geological Survey (USGS) topographic maps to identify the physiographic setting of the subject property and provide a statement

on the local geologic, soil, and groundwater conditions based on ENPRO's general experience and sources such as geologic maps and soil surveys (**Section 5.1.1**).

- Review historical aerial photographs, fire insurance maps, city directories, chain-of-title reports, and land use and tax assessor records, as available and appropriate, to identify past development history on and adjacent to the subject property relative to the possible use, generation, storage, release, or disposal of hazardous substances (**Section 5.2**). ENPRO attempted to identify uses of the subject property from the present back to the time that records show no apparent structures on the subject property, back to the time that the property was first used for residential, agricultural, commercial, industrial, or governmental purposes, or back to 1940, whichever is earliest.
- Review readily available geotechnical reports, environmental reports and/or other relevant documents pertaining to environmental conditions at the subject property (**Section 5.2.3**).
- Review the results of a federal, state, local and tribal environmental database search provided by an outside environmental data service for listings of properties with known or suspected environmental concerns on or near the subject property within the search distances specified by the Practice. Our database and file review search also included a review of United States Environmental Protection Agency (EPA) and State of Hawaii Department of Health (HDOH) websites for readily available information (publications and reports) concerning area-wide soil and groundwater contamination on or adjacent to the subject property (**Section 5.3**).
- Review regulatory agency files regarding listed properties of potential environmental concern relative to the subject property (**Section 5.3**).
- Interview representatives of the local fire department and HDOH to gather information or fill data gaps regarding the history of the subject property and surrounding properties relative to the likely presence of hazardous substances (**Section 5.3**).
- Identify a key site manager with specific knowledge of past and present property use and request that the key site manager meet an ENPRO representative on-site for an interview during the visual reconnaissance and/or an interview by telephone if they are not available during the reconnaissance (**Section 6.0**).
- Interview past owners and occupants of the subject property as necessary to gather information or fill property use data gaps regarding property use history (**Section 6.0**).
- Interview current owners or occupants of neighboring properties as necessary to gather information or fill property use data gaps regarding the subject property (**Section 6.0**).
- Identify data gaps relative to the Phase I ESA study findings (**Section 8.1**).

- Provide a written summary of the Phase I ESA results and identified RECs, if present, along with ENPRO's opinion and recommendations regarding the potential for contamination by hazardous substances at the subject property and any significant data gaps identified (**Section 9.0**).

This ESA did not address whether requirements in addition to AAI have been met to qualify for the LLPs, nor does it address requirements of any federal, state, or local laws other than AAI. Federal, state, and local laws may impose environmental assessment obligations that are beyond the scope of this report.

This Phase I ESA did not assess BERs as defined in Section 13 of the Practice, which are beyond the scope of ASTM Practice E1527-21. Potential BERs include, but are not limited to:

- Asbestos-containing material (ACM)
- Biological agents
- Climate change
- Controlled substances
- Contaminants of emerging concern (CECs) and substances not defined as hazardous substances under CERCLA
- Cultural and historical resources
- Ecological resources
- Endangered species
- Geotechnical concerns
- Health and safety
- Indoor air quality unrelated to releases of hazardous substances or petroleum products into the environment
- Industrial hygiene
- Land use changes
- Lead-containing paint (LCP) unrelated to releases to the environment
- Mold
- Polychlorinated biphenyl (PCB)-containing building materials
- Regulatory compliance
- Suspect termiticide application
- Wetlands

This Phase I ESA did not include any sampling or testing.

2.4 SIGNIFICANT ASSUMPTIONS

In preparing this report, ENPRO assumes the following:

- Certain verbal information and representations provided by Phase I ESA owner/users; landowners, tenants, occupants, and/or their representatives; government employees; and others, are complete and accurate to the best of their knowledge.
- Government agency responses to public requests for information are complete and accurate.
- Reports provided by the private database search company (detailing a computer search of government databases) are complete and accurate.
- Written information and documents provided by the Phase I ESA owners/users, tenants, occupants and/or their representatives are complete and accurate to the best of their knowledge.

Except as discussed, ENPRO has relied on the information provided and did not attempt to verify its accuracy or completeness independently but did not detect any inconsistency or omission of a nature that might call into question the validity of the data. To the extent that the conclusions in this report are based in whole or in part on such information, they are contingent on its validity. ENPRO assumes no responsibility for any consequence arising from any information or condition that was concealed, withheld, misrepresented, or otherwise not fully disclosed or available to ENPRO.

2.5 LIMITATIONS, EXCEPTIONS, SPECIAL TERMS, AND CONDITIONS

This investigation focused on potential sources of hazardous substances and petroleum products that maybe considered to represent a REC and a potential liability concern due to the presence of such materials in significant concentrations (i.e., above acceptable limits set by the federal, state, or local government) or due to the potential for contaminant migration through exposure pathways (e.g., contact with groundwater). Materials that contain substances that are not currently deemed hazardous by the EPA, or the prevailing state environmental regulatory agency were not considered as part of this study.

Unless specifically included in our scope of services, consideration of building materials, asbestos, lead-based paint, Clean Water Act concerns, Clean Air Act concerns, shoreline concerns, and Endangered Species Act concerns are not considered in this report, nor are building issues such as fire safety, indoor air quality, mold, or similar matters. ENPRO did not evaluate the subject

property for compliance with land use, zoning, wetlands, or similar laws. This report is not intended to be relied upon as a full environmental compliance audit.

Hazardous substances occurring naturally in plants, soils, and rocks (e.g., heavy metals, naturally occurring asbestos, or radon gas) are not typically considered during these investigations. Similarly, construction debris (e.g., discarded concrete, asphalt) is not considered unless the observation suggests that hazardous substances have been disposed on the subject property, and/or have substances likely to be present in significant concentrations, and/or likely to migrate to the subject property. Further, ENPRO may not identify materials that are concealed behind walls, floors, buried in the ground, located below heavy brush, or are otherwise undetectable using prevailing assessment practices.

Certain other limitations could affect the accuracy and completeness of this report, as follows, and as described in detail in **Section 8.1**:

- Subject property access limitations
- Physical obstructions to observations
- Outstanding information requests
- Historical data source failures
- Other limitations

The conclusions presented in this report are professional opinions based solely upon visual observations of the subject property and surrounding areas and ENPRO's interpretation of the available historical and regulatory information and documents reviewed. They are intended exclusively for the purpose outlined herein and apply only to the subject property indicated. Findings and opinions presented herein apply to subject property conditions existing at the time of ENPRO's investigation and those reasonably foreseeable; they cannot necessarily apply to site changes of which ENPRO is not aware and has not had the opportunity to evaluate.

It is possible that other information exists or subsequently has become known, just as it is possible for conditions ENPRO observed to have changed after the initial observations. For these and associated reasons, ENPRO cannot under any circumstances warrant or guarantee that not finding indicators of hazardous substances or petroleum products means that hazardous substances or petroleum products and/or associated contamination do not exist on the subject property.

ENPRO's services are performed, within limits prescribed by the Client, with the usual thoroughness and competence of the consulting profession in accordance with the standard for professional services at the time those services are rendered. No warranty or representation, either expressed or implied, is included or intended in the proposals, contracts, or reports.

ENPRO makes no other representations whatsoever, including those concerning the legal significance of its findings, or as to other legal matters touched on in this report, including, but not

limited to, ownership of any property, or the application of any law to the facts set forth herein. With respect to regulatory compliance issues, regulatory statutes are subject to interpretation and change. Such interpretations and regulatory changes should be reviewed with legal counsel.

2.6 USER RELIANCE

For the purposes of the contractual relationship, the term “Client” refers to Wilson Okamoto Corporation, and its affiliates, which have sole permission to rely on this report. The Practice defines the “User” as the party seeking to use the standard to complete an ESA. The User of this Phase I ESA is Tradewinds Garden and Glass and Garden Art LLC.

The User may rely upon this report in evaluating a request for one or more extensions of credit to be secured directly or indirectly by the subject property (including mortgage and mezzanine loans) and the acquisition of the direct or indirect interest in the subject property as applicable.

This Phase I ESA may not be relied upon by other parties without the express written consent of ENPRO and acceptance of our Terms and Conditions through ENPRO’s Third-Party Reliance Agreement. ENPRO will not distribute nor publish this report without the consent of the Client except as required by law or court order.

In accordance with the Practice, this report is valid for one year from the date of the report, assuming interviews, a search for environmental liens, a review of government records, the visual reconnaissance of the subject property and surrounding properties, and the Environmental Professional declarations are updated within 180 days prior to the intended transaction.

To qualify for one of the threshold criteria for satisfying the LLPs to CERCLA liability, AAI components must be conducted or updated within 180 days of and prior to the subject property acquisition date, and all other components of AAI must be conducted within one year prior to the date of acquisition of the subject property. The date of the report generally does not represent the date the individual components of AAI were completed and should not be used when evaluating compliance with the 180-day or 1-year AAI requirements.

Provided that this report is still valid and reliable, as per the limitations and exceptions listed above, ENPRO will issue a third-party reliance letter to parties that the Client identifies in writing, upon payment of the then-current fee for such letters. All third parties relying on ENPRO’s report, by such reliance, agree to be bound by ENPRO’s proposal and reliance agreement.

3.0 USER PROVIDED INFORMATION

In accordance with the Practice, the User of this Phase I ESA was informed of their responsibility to provide the following information for consideration during the assessment:

- Environmental liens and AULs for the subject property resulting from the User's review of land title and judicial records
- Actual knowledge of the User regarding any environmental liens or AULs
- Specialized knowledge or experience which may be indicative of a REC
- Commonly known (within the local community) or reasonably ascertainable information regarding past releases, conditions indicative of releases, or threatened releases of hazardous substances or petroleum products
- Information as to whether the purchase price of the subject property is lower than the fair market value due to contamination
- The reason why the User wants to have the Phase I ESA performed

Ms. Rachel Oximana, Enterprise Project Manager for Tradewinds Gardens and Glass, and Mr. Ron Severt Manager of Garden Art, LLC provided responses regarding the above information on behalf of the User through ENPRO-provided questionnaires.

3.1 TITLE RECORDS

The User representatives did not provide ENPRO with any information regarding their review of land title and judicial records.

3.2 ENVIRONMENTAL LIENS AND AULS

The User representatives indicated they have not researched title information for environmental liens or AULs relevant to the subject property.

3.3 SPECIALIZED KNOWLEDGE AND EXPERIENCE

The User representatives reported no specialized knowledge or experience which may be indicative of a REC for the subject property.

3.4 COMMONLY KNOWN INFORMATION

The User representatives did not report any commonly known or reasonably ascertainable information that may indicate contamination at the subject property or any past events that could have resulted in environmental impacts for the subject property or adjoining properties.

3.5 VALUATION REDUCTION

The User representatives indicated the purchase price for the subject property was not applicable to this ESA.

3.6 REASONS FOR PERFORMING THE PHASE I ESA

The purpose of this Phase I ESA was to identify environmental issues as part of due diligence prior to leasing the subject property.

4.0 SITE RECONNAISSANCE

Site reconnaissance was performed by Alexis Aguilar on February 2, 2024 to observe general conditions and operations at the subject property. The reconnaissance included a visual survey of the subject property, a brief survey of the visible portions of the adjacent parcels, and an interview with Ms. Donna Takeda of The Wilhelm Group as described in **Section 6.0**.

Weather conditions at the time of the reconnaissance were 81 degrees Fahrenheit and sunny, with steady winds from the east.

4.1 METHODOLOGY AND LIMITING CONDITIONS

The subject property was observed from the periphery, including adjacent public thoroughfares, and then systematically traversed to view exterior features and existing structures. Observations of exterior features were not obstructed, except for the following:

- Pier 7 northwest ship dock and abandoned ship
- Pier 7 exterior rooftop features
- Honolulu power plant southeast building (Hicks Plant)

It was possible to walk the entire subject property and all buildings on the subject property were accessible, except the northwest ship dock, abandoned ship, and the fenced off Honolulu Power Plant southeast building (Hicks Plant).

All accessible interior areas were observed for evidence of storage, activities, or features that could represent RECs. Due to the damaged condition of building floors, some areas were not accessed. Interior areas below floors, above ceilings, and behind walls were not observed.

No opinion is provided regarding environmental conditions in areas that were not inspected.

4.2 SUBJECT PROPERTY IMPROVEMENTS AND USAGE

The subject property was located southwest of Nimitz Highway at the terminus of Bishop Street, Alakea Street, and Richards Street. The subject property was accessed via Aloha Tower Drive.

The following improvements were observed at the subject property (**Figure 4**):

- A 29,916 sf power plant building constructed in 1920 (the Alakea Plant)
- A 43,783 square foot (sf) power plant building constructed in 1957 (the Hicks Plant)
- An 18,424 sf, 2-story building and associated pier constructed in 1989
- A 150 sf, single-story ticketing office constructed in the late 1990s

The Alakea Plant, addressed as 170 Aloha Tower Drive, occupies the northeast portion of the subject property. It was previously occupied by HECO who vacated the property in 2006. This building is currently vacant. The ground floor was completely empty at the time of our reconnaissance, whereas the upper levels retained limited contents left by the previous tenant.

The Hicks Plant, also addressed as 170 Aloha Tower Drive, is currently in use by HECO primarily as office space. Access was not provided to the Hicks Plant or supporting offices.

The 2-story building on the pier, addressed as Pier 7 Honolulu Harbor, was located on the southwest portion of the subject property, approximately 250 feet southwest of the 10-story power plant building. This building served as a maritime museum. This building has been vacated and is not in use.

The single-story ticketing office was located south of Pier 7 and southwest of the power plant buildings. Its purpose was selling tickets for boat tours leaving from the subject property.

With the exception of limited landscaping, the remainder of the subject property was paved with asphalt and concrete for on-site traffic and motor vehicle parking.

Electricity was provided by Hawaii Electric Company (HECO). The subject property receives potable water from the City and County of Honolulu (C&CH). The buildings are serviced by the C&CH sanitary sewer system.

4.3 SUBJECT PROPERTY OBSERVATIONS

Table 4-1, on the following page, summarizes the site inspection and findings of environmental conditions at the subject property.

**Table 4-1
Site Observations**

Item	Observation	Finding
Roads	Roads or paths with no apparent outlet, which are considered to have potentially been used as an avenue for releases or the disposal of hazardous substances or petroleum products, were not observed on the subject property.	Not a REC
Storage Tanks	ASTs, underground storage tanks (USTs), associated dispensers, and/or piping were not observed on the interior or exterior portions of the subject property, except for a diesel AST with a capacity of approximately 43,000 gallons, and two low sulfur fuel oil (LSFO) ASTs each with capacities of approximately 616,000 gallons. The HECO Site contact indicated that these tanks are out of use. One of the LSFO tanks reportedly experienced a leak which has been documented, remediated, and has received an SOSC NFA status.	REC
Odors	Strong, pungent, or noxious odors were not noted on the subject property during the site reconnaissance.	Not a REC
Standing Surface Water or Pools of Liquid	Standing surface water, pools, catchment structures, and/or sumps containing liquids likely to be hazardous substances or petroleum products were not observed on the interior or exterior portions of the subject property during the site reconnaissance.	Not a REC
Drums, Totes, and Bulk Containers	Drums, totes, and/or bulk containers were not observed on the interior or exterior portions of the subject property, except for three 55-gallon drums, on the southern exterior of Pier 7. These drums contained miscellaneous debris including an empty wood sealant container. Stains or odors were not observed around the drums.	Not a REC
Hazardous Substances or Petroleum Products Not Connected to Identified Uses	Hazardous substances or petroleum product containers unrelated to identified site uses were not observed on the interior or exterior portions of the subject property, except for two 20-pound propane tanks on the southern exterior of Pier 7. The exterior of these tanks were rusted. Stains and odors were not observed.	<i>De minimis condition</i>
Unidentified Substance Containers	Containers of unidentified substances suspected of being hazardous substances or petroleum products were not observed on the interior or exterior portions of the subject property.	Not a REC
Polychlorinated Biphenyls (PCBs)	<p>Electrical and hydraulic equipment known or likely to contain PCBs was not observed on the interior or exterior portions of the subject property, except for 11 transformers and 6 oil filled circuit breakers, owned by HECO located in the outdoor Honolulu power plant switching station. As indicated by the Site contact, PCB concentrations range from <0.50 – 25ppm.</p> <p>Fluorescent light ballasts, caulk, paint, or other building materials that may contain PCBs, are outside the scope of the Practice.</p>	REC

**Table 4-1
Site Observations**

Item	Observation	Finding
Heating/Cooling	Heating and cooling systems including elements such as natural gas furnaces, heating oil fueled boilers, electric baseboards, and/or municipally supplied steam were not observed on the subject property. Air-conditioning was reported in use for the offices and the Hicks power plants has boilers that have not been decommissioned.	Not a REC
Stains or Corrosion	Stains or corrosion indicative of hazardous substances or petroleum products were not observed on floors, walls, or ceilings, except for a two-foot by one-foot oil sheen on the collapsing dock of Pier 7 (Photo 8). The source was not apparent.	<i>De minimis</i> condition
Drains and Discharge Features	<p>Drains and other discharge features were not observed on the interior or exterior portions of the subject property, except for storm water discharge into the Honolulu Harbor on Aloha Tower Drive.</p> <p>The HECO Site contact provided a stormwater pollution control plan (SWPCP) that specifies effluent limitations and monitoring requirements for the discharge of stormwater from the facility. Monitoring activities reported high levels of copper in the stormwater runoff. HECO conducted a copper study in 2011 that determined that high levels of copper were due to vehicle traffic, urban activity, and naturally occurring background sources.</p>	Not a REC
Pits, Ponds, or Lagoons	Pits, ponds, and lagoons were not observed on the subject property.	Not a REC
Stained Concrete or Pavement	Stained concrete or pavement was not observed on the interior or exterior portions of the subject property during the Site reconnaissance.	Not a REC
Stained Soil or Stressed Vegetation	Stained soil and stressed vegetation were not observed on the exterior portion of the subject property.	Not a REC
Solid Waste or Fill Dirt	Areas that appeared to be graded by non-natural causes, filled with fill of unknown origin, mounds, depressions, or other features suggesting trash, construction debris, demolition debris, or other solid waste disposal were not observed on the subject property. However, the soil type for the subject property is listed as Fill Land. While this is not considered a REC, it should be treated as a BER in the event of significant soil disturbance.	Not a REC
Wastewater	Wastewater or other liquids, including stormwater, that discharges into a drain, ditch, underground injection system, or stream on or near the subject property were not observed during the site reconnaissance, except for outfalls discharging into the Honolulu Harbor. The Site contact provided a SWPCP for the property. Monitoring activities reported high levels of copper in the stormwater runoff, as discussed above.	Not a REC

**Table 4-1
Site Observations**

Item	Observation	Finding
Wells	Dry wells, irrigation wells, injection wells, abandoned wells, or monitoring wells were not observed on the interior or exterior portions of the subject property, except for the cooling water well that was abandoned on January 7, 2009, as indicated by the Site contact and three monitoring wells on the northeast portion of TMK (1) 2-1-014: 006. These were installed in 2021 during HART's PH II investigation, as a part of the environmental hazard management plan (EHMP). The information reviewed did not indicate the extent of this contamination had been defined.	REC
Septic Systems or Cesspools	Septic systems, cesspools, and/or leach fields were not observed on the subject property.	Not a REC
Wet Areas or Surface Waters	A detailed wetland evaluation was beyond the scope of this investigation. Areas that may be wetlands or nearby surface water bodies were observed not observed on or near the subject property, except for the Honolulu Harbor. There were no obvious signs of filling of wetlands or discharges (e.g., oily sheen) to the Honolulu Harbor.	Not a REC
Other Observations	Housekeeping was noted to be poor throughout the structures on the subject property. Flaking and peeling paint was observed on HECO and museum buildings exterior and interior. Exposed soil was not adjacent to the damaged paint.	Not a REC

4.4 ADJACENT PROPERTY AND SURROUNDING AREA OBSERVATIONS

The area surrounding the subject property consisted of residential, commercial, and governmental properties. Adjoining and surrounding properties were observed from the subject property and from public thoroughfares to identify features, activities, uses, and conditions that may indicate RECs at the subject property. Adjoining property uses are listed in **Table 4-2**, on the following page.

Table 4-2
Adjoining Property Use

Direction	Property	Use
Northwest	Aloha Tower, Hawaii Pacific University student housing, restaurants, and paved parking structure	Commercial and Residential
Southwest	Honolulu Harbor Fishery Management Area, beyond which is Honolulu Coast Guard Regional Exam Center	Conservation/Governmental
Southeast	Honolulu Coast Guard Regional Exam Center and Prince Kuhio Federal Building	Governmental
Northeast	Pacific Guardian Tower, Topa Tower, and Harbor Square	Commercial and Residential

ENPRO did not observe features, activities, uses, or conditions on the adjacent or surrounding properties that may present an environmental concern to the subject property.

4.5 SITE RECONNAISSANCE FINDINGS

ENPRO identified two RECs during the site reconnaissance:

- REC: Three monitoring wells located on the northeast portion of subject property on TMK (1) 2-1-014: 006), indicating the potential for groundwater concerns.
- REC: A diesel AST with a capacity of approximately 43,000 gallons and two LSFO ASTs with capacities of approximately 616,000 gallons were observed on the northeast portion of subject property on TMK (1) 2-1-014: 006). Although these tanks have been decommissioned, there is a reasonable potential for contamination beneath these tanks.

There is a reasonable potential that pesticides have been applied for termite control beneath the slab foundations on the on-site structures. Although the DOH reports that such pesticides were applied between the mid-1940s to the late 1980s, and the Alakea Plant was built earlier than that, we consider it prudent to evaluate the soil beneath the structures in the event property re-development involves disturbing these soils. This is not considered a REC but may be a concern if the building slab is removed and/or or sub-surface utility work is conducted.

Photographic documentation of ENPRO's site reconnaissance is included in **Appendix B**.

5.0 RECORDS REVIEW

This section presents the results of ENPRO's environmental records review. These records were reviewed to assess potential environmental concerns for the subject property and, when applicable, surrounding properties.

5.1 PHYSICAL SETTING SOURCES

ENPRO reviewed reasonably ascertainable sources to assess the physical setting of the subject property, including topographic, geologic, hydrogeologic, and hydrologic characteristics. The results of ENPRO's review are presented below.

5.1.1 TOPOGRAPHY AND DRAINAGE

The general location of the subject property was shown on the 1998 USGS Honolulu Quadrangle at an elevation of less than ten feet above mean sea level (**Figure 1**).

Based on ENPRO's on-site observations and topographic maps reviewed, the topographic gradient and presumed hydraulic gradient was to the southwest, towards Honolulu Harbor and the Pacific Ocean.

A stormwater outfall feature was observed on the southwest side of the northwest-southeast running road, Aloha Tower Drive (**Figure 4**). The feature appears to receive drainage from the HECO power plant property.

Any uncaptured stormwater runoff from the subject property was generally presumed to flow to the southwest via sheet flow eventually reaching storm drains along Aloha Tower Drive prior to discharge into the Honolulu Harbor and the Pacific Ocean.

5.1.2 SURFACE WATERS

The Honolulu Harbor was located to the southwest of the subject property.

Table 5-1 lists the surface water bodies nearest to the subject property.

Table 5-1
Nearby Surface Water Bodies

Direction	Name	Approximate Distance (feet)
North	Pauoa Stream	3,292
	Honolulu Harbor	2,484
South	Honolulu Harbor	Adjacent
East	Kanaha Stream	Approximately 10,000
West	Honolulu Harbor	Adjacent

The subject property was within 150 meters (approximately 500 feet) of a surface body of water.

5.1.3 GROUNDWATER

Groundwater beneath the subject property occurs in two distinct aquifers within the Nuuanu Aquifer System of the Honolulu Aquifer Sector. The shallow aquifer was classified as a basal, unconfined, sedimentary aquifer, occurring in non-volcanic lithology. The groundwater status was reported as currently used, but not for drinking water, nor was it considered to be ecologically important. This aquifer was described as having a moderate salinity (1000-5000 milligrams per liter [mg/L] chloride). Groundwater within the aquifer was further described as replaceable, with a high vulnerability to contamination (Mink & Lau, 1990).

The deeper aquifer was classified as a basal, confined, flank aquifer, occurring in horizontally extensive lavas. This aquifer was classified as currently used as a drinking water source, and as having a fresh salinity (<250 mg/L chloride). The groundwater was further described as irreplaceable, with a low vulnerability to contamination (Mink & Lau, 1990).

HDOH has established the underground injection control (UIC) line to determine the level of protectiveness afforded an aquifer as reflected by water quality standard criteria. Generally, groundwater mauka (inland) of the UIC line is considered a potential source of drinking water and groundwater makai (seaward) of the UIC line is not a potential drinking water source. The subject property lies makai of the UIC line. Therefore, groundwater beneath the subject property is not considered a potential source of drinking water.

The Commission on Water Resource Management (CWRM) within the Department of Land and Natural Resources (DLNR) is responsible for managing groundwater resources in Hawaii. Individual files on all permanent wells drilled in the state are maintained by the CWRM and indexed in a searchable database (DLNR CWRM). ENPRO's March 27, 2024 review of the CWRM database identified 208 wells within one mile radius of the subject property.

Depth to groundwater is estimated based on the elevation of the subject property above sea level. Groundwater is expected to be encountered at approximately 5 feet below ground surface.

5.1.4 SOILS

According to the United States Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS) Web Soil Survey accessed on March 27, 2024, the predominant soil type found throughout the subject property is Fill Land, mixed (USDA NRCS). This well-drained soil is found mostly near Pearl Harbor and in Honolulu, adjacent to the ocean. It consists of areas filled with material dredged from the ocean or hauled from nearby areas, garbage, and general material from other sources.

5.2 HISTORICAL RECORDS REVIEW

ENPRO consulted historical record sources to develop a history of the subject property's previous uses. The sources reviewed for this Phase I ESA included:

- Topographic Maps
- Aerial photographs
- Sanborn fire insurance maps
- City directories
- Historic maps of Oahu
- Title records
- Internet search query

A summary of ENPRO's significant findings is provided in **Table 5-2** for the subject property and **Table 5-3** for adjacent and nearby properties. Copies of source documents are included in **Appendix D**.

The historical research presented in this report has established the use of the subject property since 1914, when the Property was depicted in a fire insurance map as a built-up area with a garage, machine shop, military storage, and three piers. Two large circular features were depicted near the northern corner of the subject property, but the labelling describing these features was illegible.

In the 1927 fire insurance map, the parcel with the machine shop appeared to have been acquired by HECO and was used as a powerhouse, boiler house, ice plant, and cold storage with two steel above ground tanks (ASTs) used to store fuel. Historical topographic maps indicate the subject property was a built-up area in 1953, and in 1959 two of the three piers had been demolished. In a 1968 aerial photograph, the southern portion of the subject property was depicted

as a paved parking lot with a bridge connected to the northwest adjoining property. A 2000 aerial photograph indicated the adjoining bridge had been demolished. The subject property currently has an abandoned ship and building at Pier 7 and an abandoned building at the former Honolulu power plant. The paved parking lot is still in use.

Table 5-2
Historical Subject Property Use

Year	Source	Observation
1914	Fire Insurance Map	The subject property is depicted as a developed area, housing a machine shop, U.S. Army dispensary/storage shed, and three piers, two of which were occupied by the U.S. Navy.
1927, 1950, 1951, 1952, 1953	Fire Insurance Map Aerial Photograph Topographic Map	The machine shop previously located in the northeast portion of the subject property was apparently acquired by HECO and was repurposed as a powerhouse, ice plant, and cold storage facility, featuring two steel fuel tanks. A boiler house was also depicted on the fire insurance maps.
1959, 1963	Aerial Photograph Topographic Map	The subject property is depicted as developed with several large structures. Two of the piers previously depicted on the southwest portion of the subject property were no longer present.
1968, 1969, 1978, 1982, 1983, 1985, 1993	Aerial Photograph Topographic Map	The subject property is depicted as developed with the two current HECO power plant buildings, one building on Pier 7, and a paved parking lot with a bridge connected to the northwest adjoining property.
1998, 2000, 2004, 2008, 2011, 2013, 2015, 2017, 2022	Aerial Photograph Topographic Map	The bridge linking the subject property's paved parking lot to the northwest adjoining property is no longer present. The property generally appeared similar to the present-day configuration.

Table 5-3
Historical Adjacent and Nearby Property Use

Year	Source	Observation
1914	Fire Insurance Map	The adjacent nearby properties are depicted as developed, consisting of a naval station, government offices, and industrial business
1927, 1950, 1951, 1952, 1953, 1959, 1963	Fire Insurance Map Aerial Photograph Topographic Map	A park appeared to be added to the northwest adjacent property and approximately 70% of the adjacent properties were depicted as part of military/government agencies, which were tinted in pink on the topographic map, indicative of built-up areas.
1968, 1969, 1978, 1982, 1983, 1985, 1993	Aerial Photograph Topographic Map	The adjacent and nearby properties remain developed and a bridge appeared to be added to connect the subject property to the adjacent northwest property.
1998, 2000, 2004, 2008, 2011, 2013, 2015, 2017, 2022	Aerial Photograph Topographic Map	The adjacent northwest property appeared to be redeveloped as a paved parking lot and a new structure.

5.2.1 SUMMARY OF HISTORICAL USE

The subject property was situated in an area historically used for commercial/industrial and military use. The initial development of the subject property could not be established from readily accessible historical documents. Based on ENPRO's knowledge of the development of Oahu, it is our opinion that the commercial/industrial and military uses depicted on the 1914 fire insurance map represent the most significant early uses of the subject property. In-depth historical research prior to this period would require additional effort beyond the scope of the Practice.

Adjacent properties were initially developed for commercial/industrial and military use as documented on fire insurance maps. Current uses of the adjacent properties are listed in **Table 4-2, Section 4.4**.

5.2.2 HISTORICAL USE FINDINGS

ENPRO identified four REC's during the historical record review of the subject property, adjacent properties, and surrounding areas:

- REC: historical use of the subject property as a machine shop due to potential use and storage of hazardous materials, petroleum products and solvents to support operations
- REC: historical use of the subject property as a U.S. Army dispensary/storage shed and Naval wharf due to potential use and storage of hazardous materials and petroleum products to support operations
- REC: historical use of the adjacent properties as a U.S. Naval Reservation due to potential use and storage of hazardous materials and petroleum products to support operations
- REC: historical and current use of the subject property as a power plant due to potential use and storage of hazardous materials and petroleum products to support operations

5.2.3 PREVIOUS ENVIRONMENTAL REPORTS

Eight previous reports were provided to ENPRO for review. Summaries of the reports are provided in the following subsections.

1989

Underground Storage Tank Removal Notification, HECO Inc., Hawaii. Industrial Technology Tank Cleaning and Waste Management. November 10, 1989.

The document was prepared by Industrial Technology Tank Cleaning and Waste Management for M. Nakai Repair Service. It provides a site assessment report for the removal of an underground tank from the Hawaiian Electric Company location at Nimitz Highway, Honolulu, Hawaii. The report details the removal of a 1,000-gallon gasoline tank, including the collection and shipment of soil and water samples for analysis to Brewer Analytical Laboratories in Papaikou, Hawaii. The soil samples were collected from under each end of the tank, while the water sample was taken from below the tank's center. Additionally, soil vapor analysis was conducted during excavation, revealing no significant contamination. The tank was vapor freed, cleaned, dismantled, and disposed of at the Olai St., Ewa Beach facility. The letter concludes by stating that further action on the excavation site is not recommended due to the absence of significant contamination.

2003

RCRA Compliance Evaluation Inspection (CEI), HECO – Honolulu Generating Station, 170 Ala Moana Boulevard, Honolulu, Hawaii. United States Environmental Protection Agency (EPA) Waste Management Division RCRA Enforcement Office. March 18, 2003.

The report details an inspection conducted on the Hawaiian Electric Company- Honolulu Generating Station by the U.S. Environmental Protection Agency (EPA) inspectors. It covers various aspects such as hazardous waste management, potential violations, and environmental permits. It states that, at the time of the inspection, the facility maintained the contingency plan and record requirements applicable to a large quantity generator. However, potential violations at housing units eight and nine regarding used oil storage and accumulation time were identified. Pursuant to section 3008 of RCRA [42 U.S.C. 6928] HECO was required to submit documentation to show that corrective actions for the potential violations were made.

ENPRO did not receive documentation stating that corrective actions were completed. ENPRO did not have access to the building for which these potential violations were reported.

2014

National Pollutant Discharge Elimination System (NPDES) CEI, HECO, Inc. Generating Station, Honolulu, Hawaii. PG Environmental, LLC, November 17, 2014.

This NPDES CEI report was prepared by PG Environmental, LLC in 2014 for the HECO Honolulu Generating Station. The report highlights results of elevated copper levels in stormwater runoff from the facility, emphasizing exceedances of copper discharge limits. Despite efforts to identify the sources, no specific causes were found. The report stresses the importance of implementing best management practices and maintaining housekeeping to prevent further copper

discharge. It also discusses regulations concerning stormwater discharge through specific outfalls and actions required for unauthorized discharge. Overall, the report underscores the need to monitor and mitigate copper discharge to comply with regulations and protect receiving waters.

API 653 Internal Inspection, HECO Tank 5, Honolulu, Hawaii. Powers Engineering & Inspection, Inc. May 27, 2014.

This report documents an API 653 internal inspection by Powers Engineering & Inspection, Inc. at the Hawaiian Electric Company's Honolulu Generating Station. It specifically focuses on Tank 5, which stored fuel oil, following the guidelines of the American Petroleum Institute (API) 653 standards. It was the stated opinion of the inspector that Tank 5 complied with the API 653 standard if the following Action Items were properly addressed:

- Extensive soil-side indication: Soil-side indications were identified along the tank's double bottom. Most of these indications are prevalent on the outer perimeter and critical zone of the bottom. To address this issue, the following repairs were recommended:
 - Replace necessary sketch plates and install patch plates to repair areas of soil-side corrosion.
 - Conduct extensive ultrasonic testing (UT) after removing the coating to determine the remaining thickness for the next inspection interval calculation.
 - Seal the double bottom to reduce future corrosion damage.
- 8-inch under bottom nozzle: Extensive corrosion damage was present on the bottom of the tank. To mitigate this damage, it was recommended to install a new seal welded bottom.

API 653 Internal Inspection, HECO Tank 6, Honolulu, Hawaii. Powers Engineering & Inspection, Inc. May 27, 2014.

The report documents an API 653 internal inspection by Powers Engineering & Inspection, Inc. for Tank 6 at the HECO's Honolulu Generating Station. The tank was previously used to handle fuel oil but was intended to be decommissioned at the time of the inspection. The inspection intended to assess the tank's condition before decommissioning, ensuring compliance with API 653 standards. The inspector reported that Tank 6 complied with the API 653 standard if the following action items were properly addressed:

- Extensive soil-side indication: Soil-side indications were identified along the tank's double bottom. Most of these indications were prevalent on the outer perimeter and critical zone of the bottom.

To address this issue, the following repairs were recommended:

- Replace necessary sketch plates and install patch plates to repair areas of soil-side corrosion.
- Conduct extensive ultrasonic testing (UT) after removing the coating to determine the remaining thickness for the next inspection interval calculation.
- Seal the double bottom to reduce future corrosion damage.
- 8-inch under bottom nozzle: Extensive corrosion damage was present on the bottom of the tank. To mitigate this damage, it was recommended to install a new seal welded bottom.

API 653 Internal Inspection, HECO Tank 7, Honolulu, Hawaii. Powers Engineering & Inspection, Inc. May 27, 2014.

The report documents an API 653 internal inspection by Powers Engineering & Inspection, Inc. for Tank 7 at HECO's Honolulu Generating Station. The tank was previously used to handle fuel oil and diesel fuel but was intended to be decommissioned at the time of the inspection. The inspection intended to assess the tank's condition to ensure compliance with API 653 standards. The inspector reported that Tank 7 complied with the API 653 standard if the following action items were properly addressed:

- Extensive soil-side indication: Extensive soil-side indication was identified with the MFL scanner along the single lap welded bottom. If the tank was to be returned to service, in order to extend the formal next inspection interval to 20 years (2034) the following repairs were recommended:
 - Install a lap welded double bottom. The worst area of remaining thickness during this inspection was identified at 0.107-in remaining thickness. The probable cause of this damage mechanism was water in the secondary containment penetrating under the single bottom.
 - Extensive cleaning, surface preparation, and re-inspection of the bottom to identify the needed repairs. The corrosion damage on the bottom was widespread.
 - 8-inch under bottom nozzle: Extensive corrosion damage was present on the bottom of the tank. To mitigate this damage, it was recommended to install a new seal welded bottom.

2016

Storm Water Pollution Control Plan, Honolulu Generating Station, HECO Inc., 170 Ala Moana Boulevard, Honolulu, Hawaii. Hawaiian Electric Environmental Department. October 31, 2016.

This SWPCP was prepared by Hawaiian Electric Environmental Department in 2016 for the Honolulu Generating station and covered a 3.4-acre portion of the subject property, TMK (1) 2-1-014: 006. It introduces the SWPCP implemented under the NPDES program in Hawaii. Authorized by the DOH, it governs stormwater discharge associated with industrial activities at the Hawaiian Electric's Honolulu Generating Station. The SWPCP outlines pollutant identification, control procedures, monitoring, and response protocols to minimize discharge of pollutants in storm water runoff. It also includes provisions for periodic implementation reviews and record retention for compliance monitoring.

The SWPCP includes the following assessment and description of all activities and significant materials that are potential sources of storm water pollution. This assessment identifies known or potential pollutant sources that require preventive and/or corrective action. The following potential sources are identified in the SWPCP:

- Pollutants that are or have a reasonable potential to be present in storm water discharges in significant amounts based on ground and surface water quality and sediment standards
- Areas associated with the following activities:
 - Equipment and material storage
 - Vehicle/equipment maintenance and/or cleaning
 - Outdoor manufacturing or processing
 - Liquid storage in aboveground storage tanks(AST)
 - Flammable and hazardous materials storage
 - Refuse storage
 - Sandblasting
 - Pesticide and herbicide application
 - Activities or areas with significant erosion potential
 - Metal storage
- Significant spills and leaks of toxic or hazardous pollutants during the past three years
- Unauthorized non-storm water discharges. The permittee must certify that no unauthorized non-storm water discharges are present in the storm water runoff.

Based on the operations of the HECO power plant facilities, the SWPCP listed the following constituents as contaminants of concern to be monitored in storm water runoff :

- Biological Oxygen Demand (5- Day)
- Oil & Grease
- Chemical Oxygen Demand
- pH
- Total Suspended Solids
- Total Recoverable Lead
- Total Phosphorus
- Total Recoverable Copper
- Total Nitrogen
- Total Recoverable Arsenic
- (Nitrate + Nitrite) - Nitrogen

In addition, temperature and flow of the storm water runoff is to be monitored.

2020

Authorization to Discharge Under the NPDES, Honolulu Generating Station, HECO, Inc., 170 Ala Moana Boulevard, Honolulu, Hawaii. HDOH. July 10, 2020.

The document, prepared by the HDOH in 2020, is an authorization permit issued to the HECO Honolulu Generating Station (TMK (1) 2-1-014: 006) under the NPDES. It allows the discharge of the following into the Honolulu Harbor, Pacific Ocean:

- Once-through condenser cooling waters
- Treated metal cleaning waste
- Low volume wastes
- Stormwater

The permit outlines specific outfall serial numbers, effluent descriptions, latitude, and longitude coordinates for each discharge point. The permit specifies compliance conditions, monitoring requirements, and enforcement measures. It is effective from September 1, 2020 to August 31, 2025.

5.2.4 PREVIOUS REPORT FINDINGS

ENPRO identified one REC during review of the previous reports:

- 2003 CEI indicating used oil violations. ENPRO did not receive documentation stating that corrective actions were completed. ENPRO did not have access to the building for which these potential violations were reported.

5.3 REGULATORY RECORDS REVIEW

ERIS provided results of a regulatory agency database search in their Database Report dated December 23, 2023. ENPRO reviewed that report for information pertaining to storage and/or reported releases of hazardous substances and petroleum products on the subject property and on surrounding properties that may affect the subject property as required by the Practice.

The subject property was listed in the following databases as identified in ERIS's report:

- Resource Conservation and Recovery Act Very Small Quantity Generator (RCRA-VSQG)
- Facility Registry Service/Facility Index (FINDS/FRS)
- HEER Sites of Interest (SHWS)
- Comprehensive Environmental Response, Compensation and Liability Information System – No Further Remedial Action Required (CERCLIS NFRAP)
- The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database (FED BROWNFIELDS)
- Brownfields Sites (BROWNFIELDS)
- RCRA – Corrective Action (RCRA CORRACTS)
- Delisted HEER Sites of Interest (DELISTED SHWS)
- Underground Storage Tank (UST)
- SEMS List 8R Archive Sites (SEMS ARCHIVE)
- Facilities with Institutional Controls (INST)
- Hazardous Waste Management Facility (HWM)
- Toxic Release Inventory Program (TRIS)
- Facility Response Plan (FRP)
- Air Facility System (AFS)

- Spills Listing (SPILLS)
- Integrated Compliance Information System (ICIS)
- Emergency Response Notification System (ERNS)

The ERIS Database Report identified a total of 291 properties and 93 “unplottable” sites with inadequate address information within the Practice’s approximate minimum search distances (AMSDs) from the subject property. ENPRO reviewed each listing to assess whether the corresponding property details included in the Database Report revealed a potential environmental impact to the subject property.

The following sites were identified for further investigation:

- Honolulu Harbors Piers 6 & 7 (subject property)
- State of Hawaii Pier 6 (subject property)
- Honolulu Harbor Pier 5 (subject property)
- Aloha Tower Drive, Nimitz Highway (subject property)
- HART HECO Downtown Station 170 Aloha Tower Drive, Honolulu (subject property)
- 181 Ala Moana Blvd, Honolulu (subject property)
- 79 south Nimitz highway (subject property)
- Pearl Harbor Hickam, 648 Bishop Point, Honolulu
- Awa Street Wastewater Pump Station, 190 Nimitz Hwy, Facility ID 9-103664
- 300 Ala Moana Blvd, Honolulu, Facility ID 9-101930
- Pier 2, Honolulu, Facility ID 9-103797
- Pacific Light Net, 737 Bishop Street, Honolulu, Facility ID 9-101803
- 733 Bishop St, Mauka Tower, 27th floor, Honolulu Facility ID 9-101521
- HECO pipeline South Nimitz Hwy/Fort St Intersection Makai Side
- 1 Aloha Tower Drive, Honolulu
- Aloha Tower Pier 8, Honolulu
- Aloha Tower Pier 9, Honolulu
- HART Boring CC103L Ala Moana Blvd, Honolulu

The remaining listed sites were not expected to have the potential to impact the subject property based on the following, or a combination thereof:

- The listed property was sufficiently distant from the subject property that the expected quantities and hazardous materials potentially present at the site were unlikely to impact the subject property
- The listed property was down-gradient or cross-gradient to the subject property and located at a sufficient distance that it would be unlikely to impact the subject property
- The listed property was identified in the UST or Small Quantity Generator (SQG) databases and was not on or adjoining the subject property, nor was the site listed in other databases indicating a release or environmental violations
- The listing for the facility suggested a short-term release had occurred (e.g., a traffic accident or illegal drugs founds at a residence) with associated response actions completed
- The quantity of the hazardous substances or petroleum product released from a listed facility was not considered to have resulted in contamination above the most stringent criteria that would require regulatory action
- The listed property record indicated that the site was not on or adjoining the subject property, was fully characterized after 2015, the release impacted soil only, and the release was not recognized as indicative of area-wide conditions
- The listed property record indicated that contamination at the site was limited to non-mobile contaminants originating from a localized source, impacted soil only, and was not on or adjoining the subject property
- The listed property record indicated the case was closed to the satisfaction of the lead regulatory agency after 2015 and residual contamination, if present, was not considered likely to affect the subject property based on one or more of the criteria described above

The ERIS Database Report is included in **Appendix E**.

In addition to the ERIS Database Report, ENPRO consulted government sources to obtain historical use information and aid in identifying RECs, C-RECs, and/or H-RECs for the subject property. The sources reviewed for this Phase I ESA included:

- Department of Planning and Permitting (DPP) records
- Fire Department records
- HDOH Solid and Hazardous Waste Branch (SHWB) records
- HDOH Hazard Evaluation and Emergency Response (HEER) Office records

5.3.1 DPP RECORDS

The C&CH DPP database was reviewed on March 27, 2024, to obtain historical use information on the subject property.

The building permit search results are provided in **Appendix G**.

5.3.2 FIRE DEPARTMENT RECORDS

The Honolulu Fire Department (HFD) was contacted on February 12, 2024 to obtain information regarding any fires, complaints, permits, or violations involving hazardous material use, USTs, or ASTs on record for the subject property.

HFD reported no permits or records of incidents related to the subject property.

HFD's response is provided in **Appendix C**.

5.3.3 SHWB RECORDS

The HDOH SHWB was contacted on February 12, 2024 to obtain records for properties listed in **Section 5.3**.

The SHWB provided records for the following properties:

- Aloha Tower Drive, Nimitz Highway, Facility ID 9-102893
- Awa Street Wastewater Pump Station, 190 Nimitz Highway, Facility ID 9-103664
- 300 Ala Moana Boulevard, Honolulu, Hawaii, Facility ID 9-101930
- Pier 2, Honolulu, Hawaii, Facility ID 9-103797
- Pacific Light Net, 737 Bishop Street, Honolulu, Facility ID 9-101803
- 733 Bishop St, Mauka Tower, 27th floor, Honolulu Facility ID 9-101521
- Aloha Tower Pier 8, Honolulu, Hawaii Facility ID 9-101093

The SHWB's response is provided in **Appendix C**.

ENPRO's review of the provided records did not indicate evidence of any RECs, C-RECs, or H-RECs to the subject property.

5.3.4 HEER OFFICE RECORDS

The HDOH HEER Office was contacted on February 12, 2024 to obtain records for the properties listed in **Section 5.3**.

ENPRO also reviewed the HEER Office's iHEER database on February 12, 2024 and obtained information for the following properties:

- Honolulu Harbors Piers 6 & 7, Honolulu, Hawaii
- State of Hawaii Pier 6, Honolulu, Hawaii
- Honolulu Harbor Pier 5, Honolulu, Hawaii
- Aloha Tower Drive, Nimitz Highway
- 181 Ala Moana Boulevard, Honolulu, Hawaii
- 79 South Nimitz Highway, Honolulu, Hawaii
- 300 Ala Moana Boulevard, Honolulu, Hawaii

The HEER Office's response is provided in **Appendix C**.

Honolulu Power Plant, 170 Aloha Tower Drive, Honolulu, Hawaii Within TMK (1) 2-1-014: 006

Phase I Preliminary Hazardous Materials Site Assessment (PSA), Honolulu Power Plant, Honolulu, Oahu, Hawaii. Harding Lawson Associates November 3, 1989.

The Phase I PSA report was prepared by Harding Lawson Associates (HLA) in 1989 for the HECO Power Plant. The project site for this report included the subject property TMK (1) 2-1-014: 006. The report included the following relevant information:

- Two fuel AST's were located within the HECO property
- A 1969 release of fuel from a bulk storage tank located approximately 200 feet east of the HECO property
- The removal of an underground storage tank (UST) in September 1989. State of Hawaii Department of Health (HDOH) UST records indicate a 1,000-gallon gasoline tank permanently out of use on the site.
- Three aboveground storage tanks (ASTs) observed on the site (a 500-gallon kerosene tank, a 1,000-gallon propane tank, and a 500-gallon propane tank)
- Reference to two fuel supply pipelines beneath TMK (1) 2-1-014: 006

Release Report Form, Appendix D-12, Nimitz Highway & Bishop Street Intersection, Honolulu, Hawaii. HART. April 5, 2023.

A release report form filled out by HART indicated that approximately two gallons of black fuel/oil was released and spilled on the soil while removing an abandoned fuel line at the intersection of Ala Moana Blvd. and Bishop Street (located approximately 0.1 mile north of the site). The fuel oil and affected contaminated materials were contained and disposed of. The pipe was temporarily plugged and later tapped to extract residual fuel/oil.

Phase II Environmental Site Assessment Report for the Downtown Station Makai Lot, Honolulu, Hawaii. CH2M HILL (CH2M). February 2021.

A previous Phase I ESA conducted at 170 Aloha Tower Drive, Honolulu, Hawaii, recommended further assessment be conducted to investigate contamination potentially present in the subsurface at the site. A Phase II ESA report was prepared by CH2M HILL (CH2M) in 2021 for HART. The report covered the northeast portion of TMK (1) 2-1-014: 006 (Figure 3). Activities included multi-increment soil sampling at three lateral decision units (DU's) and five vertical DU layers, groundwater from one temporary monitoring well and three permanent wells. Soil vapor sampling from 3 temporary monitoring points within the future building footprint (DU DS01) was also included. A site map showing the DU locations is included herein as **Figure 5**.

The Phase II ESA report included the following relevant information:

- Soil chemicals of concern were identified as VOCs (1,2-Dichloroethane and tetrachloroethane (PCE)), total petroleum hydrocarbons (TPH) as diesel (-d) and oil (-o), PAHs (benzo[a]anthracene, benzo[a]pyrene, benzo[b]fluoranthene, dibenzo[a,h]anthracene, indeno[1,2,3-c,d]pyrene, naphthalene, and pyrene), and lead.
- Soil concentrations for acetone, TPH-d, TPH-o, 1-methylnaphthalene, benzo[a]anthracene, benzo[a]pyrene, naphthalene, and pyrene were reported at concentrations greater than the HDOH site-specific EALs at different depths. The highest concentrations were detected within the shallow aquifer where grossly impacted soil was observed at the bottom of the fill material between approximately 7.5 and 9 feet below ground surface (bgs).
- Grossly impacted soil and the highest concentrations of COPCs were interpreted to be associated with oil sand possibly used for corrosion control at the bottom of the former fuel oil tanks that were present on site between the 1920s and the 1950s.
- No exceedances of the HDOH unrestricted Tier 1 groundwater EALs were reported.

- Carbon tetrachloride, ethyl acetate, PCE, and trichloroethylene were detected in the soil vapor samples; however, PCE was the only COPC detected above the HDOH most conservative EAL.
- Potential vapor intrusion concerns exist at the site under different land use scenarios due to PAH and VOC concentrations detected in soil in DU DS02 and DU DS03.
- Hypothetical future residents, occupational workers, and construction workers were identified as receptors potentially exposed through incidental ingestion, dermal contact, and inhalation.

Through an environmental hazard evaluation, human direct exposure, gross contamination, and vapor intrusion concerns were confirmed to be a concern. To address unacceptable risks, a combination of soil management, soil excavation and disposal, and soil vapor management was recommended at the site. An EHMP was developed to manage risk associated with soil and soil vapor during construction and long-term site activities.

Aloha Tower, 841 Bishop Street, Suite 2006, Honolulu, Hawaii (adjacent to subject property)

Protective Casing Installation Phase III Geotechnical Borings, Aloha Tower Development, Honolulu, Oahu, Hawaii. Subsurface Consultants, Inc. February 20, 1991.

A Phase III Geotechnical Borings report was prepared by Subsurface Consultants, Inc. in February 1991 for Aloha Tower Associates. The report covered the adjacent property northwest of the subject property. The report presents results of chemical analyses of soil samples obtained during protective casing installation.

The report included the following relevant information:

- Petroleum hydrocarbons were detected in soil samples, with the highest concentrations found in samples from four out of seven borings. The concentrations varied across samples, with the highest recorded concentration being 180 milligrams per kilogram.
- Pesticides were also detected in soil samples, including organochlorine pesticides such as aldrin and chlordane. These pesticides are often associated with agricultural use but are also found where foundations have been prepared with termiticides prior to construction.
- A distribution analysis indicated that the concentrations of arsenic in soil samples were fairly uniform, with results varying within a specific range across different borings and depths.

- The presence of certain contaminants, such as petroleum hydrocarbons and pesticides, indicates potential contamination of the soil, likely due to historical activities or spills.
- The report stated that further investigation and monitoring may be necessary to assess the extent of contamination and potential risks to human health and the environment.

Work Plan Sampling and Analysis Plan (SAP) Subsurface Investigation and Feasibility Study, Aloha Tower Development, Honolulu, Oahu, Hawaii. Harding Lawson Associates April 9, 1991.

This SAP was prepared by HLA in April 1991 for Aloha Tower Associates and presents a work plan for a subsurface investigation and feasibility study for the Aloha Tower Development. Laboratory results of soil samples collected during geotechnical investigation activity in February 1991 (HLA 1991) indicated that detectable concentrations of petroleum hydrocarbons, pesticides, and metals were present in site soil. Additional characterization of soil and ground water was recommended prior to site construction.

ENPRO was unable to obtain further information on the extent of soil and potential groundwater contamination discussed in the SAP.

In addition to the reports described above, review of the HEER records discovered the following. All of these sites have received a No Further Action (NFA) designation from DOH:

**Table 5-4
HEER Regulatory File Review**

No Further Action (NFA) Date	Description
July 3, 2023	A release report form filled out by Honolulu Authority for Rapid Construction (HART) indicated that approximately two gallons of black fuel oil was released and spilled on the soil while removing an abandoned fuel line at the intersection of Ala Moana Boulevard and Bishop Street (located approximately 0.1 mile north of the site). The fuel oil and affected contaminated materials were contained and disposed. The pipe was temporarily plugged and later tapped to extract residual fuel/oil. This spill received an NFA, however information on groundwater contamination is not available.
February 18, 2016	Three gallons of fuel spilled from the Star of Honolulu into Honolulu Harbor when it was being refueled. Absorbent pads were used to clean up the spill and a contractor was called in for further clean up and assessment. This spill, located approximately 0.03 miles northwest of the subject property, received an NFA. However, no investigation was undertaken to evaluate the full extent of the contamination.
June 1, 2016	There was a spill of diesel from the Star of Honolulu tour boat into the Honolulu Harbor at Pier 8. This was due to a ruptured fuel transfer hose. This spill, located approximately 0.04 miles northwest of the subject property, received an NFA. However, no investigation was undertaken to evaluate the full extent of the contamination.

Table 5-4
HEER Regulatory File Review

No Further Action (NFA) Date	Description
October 30, 2020	An unknown sheen originating from SemiSub One was reported near Aloha Tower Pier 8. Approximately 3 gallons of an unknown oil substance was reported as the cause. The owner used absorbent pads to clean the spill. This spill, located approximately 0.04 miles northwest of the subject property, received an NFA.
December 9, 2022	A West Oahu Aggregate (WOA) trash truck's hydraulic system leaked at Hawaii Pacific University (HPU) Aloha Tower campus' loading area. The spilled oil ponded on the concrete pad. However, HPU security told the driver to move. The driver complied and drove >100 yards away and parked. The truck's system leaked during that transit. The weather was dry. Storm drains were not impacted. HFD responded and contained the ponded oil with kitty litter. WOA hired cleanup contractors which included pressure washing. This spill, located approximately 0.04 miles northwest of the subject property, received an NFA. However, no investigation was undertaken to evaluate the full extent of the contamination.
October 20, 2015	HECO pad-mounted transformer #68382 released approximately 3 gallons of mineral oil/transformer oil at 1 Aloha Tower Drive, Honolulu, Hawaii. The transformer was replaced, and the concrete pad was cleaned. This spill, located approximately 0.07 miles northwest of the subject property, received an NFA. However, no investigation was undertaken to evaluate the full extent of the contamination.
Unknown	An odor from a boat was reported. An unknown amount of diesel fuel was determined to be the source. Additionally, an unknown amount of latex paint was spilled at Aloha Tower Market Place. These spills, located approximately 0.07 miles northwest of the subject property, received a State On-Scene Coordinator (SOSC) NFA. However, no investigation was undertaken to evaluate the full extent of the contamination.
May 20, 2022	A report was made of alleged “globs” of oil near the sea wall at Pier 7, Aloha Tower Market Place. Elizabeth Galvez of the State of Hawaii Department on Health (DOH) performed a follow up assessment. Ms. Galvez indicated that she did not observe oil at this location. The reported spill, located approximately 0.08 miles northwest of the subject property, received a SOCS NFA. However, no investigation was undertaken to evaluate the full extent of the contamination.
November 20, 2020	During the unloading of waste oil from the Pride of America at Pier 10 in Honolulu Harbor, two barrels of waste oil were mishandled. One of these barrels ended up in the water. Immediate response measures were enacted, including the deployment of boom and absorbents to contain and mitigate the spillage. This spill, located approximately 0.1-mile northwest of the subject property, received an NFA. However, no investigation was undertaken to evaluate the full extent of the contamination.
February 17, 2006	A 500-gallon underground storage tank (UST) with the identification number 9-103797, situated at Pier 2 within Honolulu Harbor, underwent permanent closure procedures and was subsequently granted a "Site Cleanup Completed" NFA status. This UST was positioned approximately 0.1-mile northwest of the subject property.
October 22, 2020	Aloha Tower reported a sheen coming from SemiSub One. USCG investigated and the owner of SemiSub One acknowledged his crew had dumped a “few buckets” of oily water to the Honolulu harbor. Absorbents were used to remediate the sheen. This spill, located approximately 0.1-mile northwest of the subject property, received an NFA.

Table 5-4
HEER Regulatory File Review

No Further Action (NFA) Date	Description
February 24, 2017	A caller reported a diesel sheen observed at Pier 7, where the vessel Kulamanu, formerly known as Windjammers, was docked. Additionally, a witness noted the presence of a diesel-saturated absorbent pad in the water near the vessel. The spill was cleaned up by the vessel. This spill, located on the subject property, received an NFA.
July 31, 2014	A 1.5 ounce mercury spill was reported to have been spilled at the HECO – Honolulu Generating Station (subject property). SOSC NFA status was issued.
November 9, 2004	100 gallons of Shell Diala – Transformer Oil was reported to have been spilled at the HECO – Honolulu Generating Station (subject property). SOSC NFA status was issued.
Unknown	1,000 gallons of fuel oil was reported to have been spilled at the HECO – Honolulu Generating Station (subject property). SOSC NFA status was issued.
July 8, 2004	Less than one gallon of an unknown oil created an oil sheen at the HECO – Honolulu Generating Station (subject property). SOSC NFA status was issued.
Unknown	50 gallons of turbine oil was reported to have been released at the HECO – Honolulu Generating Station (subject property). SOSC NFA status was issued.
January 31, 2017	35 gallons of fuel oil was reported to have been released at the HECO – Honolulu Generating Station (subject property). SOSC NFA status was issued.
March 30, 2019	An unidentified substance was detected in Honolulu Harbor near Pier 6, prompting an investigation by harbor police. The substance covered approximately 20 feet by 30 feet on the water surface and displayed no noticeable odor or sheen. It appeared to be disintegrating and dispersing on its own. This spill, located on the subject property, received an NFA. However, an investigation to assess the extent of the contamination was not conducted.
May 9, 2019	A vehicle veered off Pier 5 and entered Honolulu Harbor. Despite efforts, a tow truck dispatched that night was unable to extract the vehicle. A salvage company was able to successfully remove the vehicle the next day. No evidence of pollution was observed during the night or the following morning. However, a sheen was reported later in the day. This spill, located on the subject property, received an NFA. However, an investigation to assess the extent of the contamination was not conducted.
Unknown	An undetermined amount of bunker C fuel oil was released from an underground pipeline. This spill, located approximately 0.02 miles southeast of the subject property, received a SOSC NFA. However, no investigation was undertaken to evaluate the full extent of the contamination.
March 12, 2001	A leaking UST (identification number 9-103509) located at 700 Richards Street, approximately 0.06 miles northeast of the subject property, was issued a “Site Cleanup Completed” NFA status. The UST is reportedly still currently in use.

Table 5-4
HEER Regulatory File Review

No Further Action (NFA) Date	Description
December 21, 1999	A UST located on 700 Richards Street, approximately 0.06 miles northeast of the subject property, was permanently closed and issued a “Site Cleanup Complete” NFA status.
April 9, 2003	20 gallons of oil was reported to have been released from a storage tank on a vessel due to over filling. Booms and absorbents were used to contain the material and PENCO was hired to do the cleanup. This, spill located on the subject property, received a SOCS NFA. However, an investigation to assess the extent of the contamination was not conducted.
September 6, 2021	On the north portion of the subject property, borings indicated contaminated soil below the groundwater table at depths of eight to nine feet. The source was believed to be from the former HECO Honolulu Power Plant. Samples were provided for an initial analytical screen and split samples were collected and provided. Results obtained from the lab indicated that the samples were of a hydrocarbon fraction, appearing to be aged, with carbon ranging from C10 to C30 and the bulk between C14 and C25.
September 3, 2023	A HART contractor released an estimated 2 gallons of fuel onto surrounding soil while removing an abandoned fuel line. The line was capped until it could be further drained, and the impacted soil was excavated and stockpiled. The amount of fuel that came out of the pipeline was later revised to be less than one gallon. This spill, located approximately 0.01 miles from the subject property, received an NFA.
Unknown	An unknown amount of paint was released into a storm drain at 100 Ala Moana Boulevard, approximately 0.08 miles north of the subject property. SOSC NFA status was issued.
March 23, 2015	Four 1,000-gallon diesel USTs (9-101803) located at 737 Bishop Street, approximately 0.07 miles northeast of the subject property, were closed in 1996 and 2014. A release was reported, but they were subsequently issued a “Site Cleanup Complete” NFA status. One 2,500-gallon diesel UST (9-103246) remains in use on this property.
October 17, 2000	Two 1,000-gallon diesel USTs (9-101521) located at 733 Bishop Street, approximately 0.05 miles northwest of the subject property, were closed in 2013. The USTs were issued a “Site Cleanup Complete” NFA status. Two 1,000-gallon diesel USTs remain in use on this property.

5.3.5 REGULATORY RECORDS FINDINGS

ENPRO identified two RECs during the government record review of the subject property and surrounding areas:

- REC: Honolulu Power Plant at 170 Aloha Tower Drive, Honolulu, Hawaii, the results indicate the subject property has been impacted.
- REC: Aloha Tower Development, Nimitz Highway, Honolulu, Hawaii, has the potential to environmentally affect the subject property. No information on the

extent of soil and groundwater contamination is available, and the site is adjacent to the subject property.

5.4 VAPOR ENCROACHMENT SCREENING

ENPRO reviewed ERIS's Database Report for sites related to former dry cleaners, gas stations and manufactured gas plants with recorded releases within the AMSDs specified by ASTM's Standard Guide for Vapor Encroachment Screening of Property Involved in Real Estate Transactions (ASTM E2600-22).

ENPRO's review for potential vapor encroachment conditions (VECs) accounts for the following factors:

- Site land use
- Contaminant type
- Location of known or suspect contaminated property within the area of concern
- Soil characteristics
- Groundwater depth
- Preferential pathways
- Cleanup status

Potential VECs evaluated included all RECs, including H-RECs and C-RECs, with identified releases of petroleum products or other potentially volatile contaminants of concern.

The results of soil vapor sampling performed by CH2M Hill as documented in their February 2021 Phase 2 Environmental Site Assessment report indicate the potential for a VEC associated with the subject property. No other VECs were identified.

6.0 INTERVIEWS

ENPRO interviewed the individuals listed in **Table 6-1** in accordance with the Practice to obtain information regarding the past and current use and activities on the subject and adjacent properties to identify potential RECs in connection with the subject property. Findings from the interview process may also be incorporated in other sections of this report as appropriate.

Table 6-1
Interviewed Parties

Name	Affiliation	Role
Rachel Oximana	Enterprise Project Manager for Tradewinds Garden and Glass	User
Ron Severt	Manager, Garden Art, LLC	User
Ms. Brittani Capps-Balinbin	Senior Environmental Scientist, HECO	Owner Representative
Ms. Donna Takeda	The Wilhelm Group	Other
Ms. Amy Susana Liana ¹	Planner for the Planning & Design Section, HDOH SHWB	Local Government Agency, File Review
Ms. Rosa Iu ²	Administrative Assistant, HDOH HEER Office	Local Government Agency, File Review
Ms. Christine Cabalo ³	Information Specialist, HFD	Local Government Agency, File Review

¹Information provided by the HDOH SHWB is presented in **Section 4.4.4**.

²Information provided by the HDOH HEER Office is presented in **Section 4.4.5**.

³Information provided by the HFD is presented in **Section 4.4.3**.

6.1 USER

In accordance with the Practice, the User of this Phase I ESA was requested for information regarding:

- Title record information
- Environmental liens and AULs
- Specialized knowledge and experience
- Commonly known or reasonably ascertainable information
- Valuation reduction for environmental issues
- Reason for performing the Phase I ESA

The information above was provided via ENPRO’s user questionnaire (**Appendix C**) and is described in detail in **Section 3.0**.

Rachel Oximana, Enterprise Project Manager for Tradewinds Garden and Glass, was interviewed in person at the time of the site reconnaissance on February 2, 2024. Ms. Oximana stated she had been familiar with subject property for approximately 3 years.

Ms. Oximana completed a subject property questionnaire supplied by ENPRO on January 31, 2024.

Mr. Ron Severt, who works as a Project Manager for Garden Art, LLC also completed a subject property questionnaire supplied by ENPRO on January 31, 2024. Mr. Severt reported he has been familiar with the site for approximately 3 years.

The completed questionnaires are included in the Appendix to this report.

6.2 CURRENT OWNERS, OPERATORS, AND OCCUPANTS

Ms. Brittani Capps-Balinbin, Senior Environmental Scientist of HECO, completed a subject property questionnaire supplied by ENPRO on January 26, 2024 on behalf of the owner of parcel 2-1-014:006 (HECO). Ms. Capps-Balinbin, reported she had been familiar with the site for one and a half years. Ms. Capps-Balinbin provided the following pertinent information:

- The subject property is occupied by the Hicks and Alakea Power Plants. The electrical generating equipment of the Alakea Plant has been decommissioned and removed. The electrical generating units in the Hicks Plant remain.
- The Alakea Plant is essentially abandoned.
- The Hicks Plant currently contains an active electrical switching station, abandoned steam generating units, and office space.
- Historically, hazardous materials and/or petroleum products have been present at the subject property to include the following:
 - Caustic soda
 - Sulfuric acid
 - Lubricating oil
 - Diesel fuel
 - Low sulfur fuel oil (LSFO)
 - Transformer oil
 - Mercury equipment >2ppm

- Lead paint (removed from decommissioned power generating units 5-7)
- Asbestos
- PCB oil <50ppm
- Adjacent and nearby properties are currently and have been in commercial use.
- Pits, ponds, or lagoons are located on or near the subject property (upon further inquiry Ms. Capps-Balinbin indicated she was referring to stormwater infrastructure features)
- There are or have been ASTs on the property. These include:
 - 43,218- gallon diesel tank #7
 - 616,434-gallon LSFO tank #5
 - 615,888-gallon LSFO tank #6
 - Two 3,750-gallon lube oil tanks at the Hicks Plant
 - 330-gallon caustic tank at the Alakea Plant
 - 300-gallon acid tank at the Alakea Plant
- Two 1,000-gallon gasoline USTs were removed from the property in 1968 and 1989. Only the UST removed in 1989 (facility ID 9-100961) has a closure report.
- There is electrical equipment on the property exterior. Further inquiry identified that the outdoor Honolulu Power Plant Switching Station contains 11 transformers and six oil-filled circuit breakers with PCB concentrations ranging from < 0.50 – 25 ppm.
- There are no wells on the property. Further inquiry identified that a cooling water well was abandoned in 2009 and another well listed in DLNR records is believed to be buried and/or paved over. A closure report for this well has been requested, but not yet received. (Note: ENPRO identified the presence of three monitoring wells on the subject property at the time of our site reconnaissance)
- The subject property includes interior heating (boilers) and cooling (air-conditioning) systems.
- There are sump pumps on the subject property. Further inquiry identified that these are interceptor sumps that pump stormwater runoff to a wastewater treatment facility. They are located on the southwest corner of the Hicks Plant (TMK (1) 2-1-014: 006).
- There is electrical equipment on the property interior. Further inquiry identified that the administration building basement contains six transformers, three of which are online and three that are offline and drained of oil. PCB concentrations range from 5.99 – 17 ppm.

- Ms. Capps-Balinbin provided supporting documentation that included the following:
 - A 2003 Hazardous Waste Inspection Report
 - A 1989 UST Closure Report
 - An NPDES Permit and a 2014 NPDES Inspection Report
 - A 2016 Stormwater Pollution Control Plan
 - Above ground storage tank inspection reports
 - Site maps

Ms. Capps-Balinbin also reported that the Honolulu Authority for Rapid Transportation (HART) is in the process of eminent domain on a portion of the facility and it is understood that HART is engaged in due diligence for that purpose. (See <https://eha-cloud.doh.hawaii.gov/iheer/api/documents/183047/download>)

Prior to the HART Phase II investigation, PCBs were voluntarily cleaned up by HECO under 40 CFR § 761.50(b)(3) and petroleum affected soils were encountered in the area that is subject to the eminent domain action. Reports documenting these activities were not provided. Ms. Capps-Balinbin referred ENPRO to the HART documents for the condition of that portion of the facility.

A copy of the completed subject property questionnaire is included in **Appendix C**.

At the time of our site reconnaissance, the Alakea Plant was unoccupied and ENPRO was not allowed access to the Hicks Plant. The other structures at the subject property were also unoccupied/abandoned. Therefore, additional interviews with current owners, operators and/or occupants were not conducted.

7.0 NON-SCOPE SERVICES

Based on our assessment of the subject property it is our opinion that the following potential business environmental risks (BERs), which are not considered RECs as defined by the Practice, may be present:

- Suspect asbestos-containing materials (ACM)
- Suspect lead-containing paint (LCP)/lead-based paint (LBP)
- Contaminants of emerging concern (CECs)
- PCB-containing building materials
- Indoor air quality concerns
- Mold
- Lead in drinking water

While noted, these potential BERS were not evaluated for their potential to impact the subject property. General information regarding potential BERs at the subject property is provided in the following sections.

7.1 ASBESTOS-CONTAINING MATERIALS

In July 1989, under the Toxic Substances Control Act (TSCA), the United States Environmental Protection Agency (EPA) promulgated an Asbestos Ban Phaseout Rule. Beginning in 1990 and taking effect in three stages, the rule prohibits the importation, manufacture, and processing of 94 percent of all remaining asbestos products in the United States over a period of seven years. Presently, asbestos has not been prohibited from all construction building materials. However, in 1991, this rule was vacated and remanded by the Fifth Circuit Court of Appeals. As a result, most of the original ban on the manufacture, importation, processing, or distribution in commerce for most asbestos-containing products originally covered in the 1989 final rule was overturned.

Suspect ACM should be sampled and analyzed for possible asbestos content prior to activities (e.g., renovation, demolition) that may damage or disturb the material. If the materials are asbestos-containing, the building owner must comply with applicable EPA National Emissions Standards for Hazardous Air Pollutants (NESHAPS), Occupational Safety and Health Administration (OSHA), state and local regulations.

7.2 LEAD-CONTAINING PAINT

There is no commercial property definition of a lead-based paint. Regulations specifically addressing lead-based paint (LBP) include Housing and Urban Development (HUD) guidelines (1995) and the Consumer Product Safety Act (1977). These regulations are for housing and consumer products.

OSHA regulations apply to worker protection during renovation and demolition activities when working with LCP, regardless of if the paint meets the definition of LBP.

7.3 CONTAMINANTS OF EMERGING CONCERN

CECs describe chemicals that are not yet federally regulated but are known or suspected of causing harm to human health or the environment. These substances may be present on a property, and even significantly contaminate it, but wouldn't be covered under the scope of a Phase I ESA until they were defined as hazardous substances under CERCLA.

For example, per- and polyfluoroalkyl substances (PFAS) are considered CECs and are regulated by several states, including Hawaii, even though they are not yet federally regulated as of this writing. Once defined as hazardous substances under CERCLA, PFAS will fall under the scope of the Practice and be subject to CERCLA liability. There are several other CECs and substances not defined as hazardous substances under CERCLA (e.g., methane) that may present a BER.

7.4 POTENTIAL PCB-CONTAINING BUILDING MATERIALS

Polychlorinated biphenyls (PCBs) are widely present in manufactured products in buildings constructed or renovated between 1950 and 1979. These products include, but are not limited to:

- Paint, varnishes, and lacquers
- Non-conducting materials in electrical cables
- Rubber and felt gaskets
- Insulation materials
- Adhesives, tapes, and mastics
- Pipe hangers
- Caulk, grout, and joint material
- Acoustic ceiling and floor tiles

- Asphalt roofing and tar paper
- Sprayed-on fireproofing

Prior to renovation or demolition, suspect materials must be sampled for PCBs or presumed to contain PCBs at concentrations equal to or greater than 50 ppm. All materials that contain PCBs equal to or greater than 50 ppm require special disposal considerations.

7.5 INDOOR AIR QUALITY CONCERNS

Indoor air quality refers to the air in and surrounding buildings or structures, especially as it relates to the health and comfort of building occupants. Indoor air pollutants can be released into the building, causing a potential health hazard for inhabitants.

Pollutants may include:

- Microbial contaminants (e.g., mold, bacteria)
- Gases (e.g., carbon monoxide, volatile organic compounds)
- Formaldehyde
- Asbestos and lead
- Pesticides

7.6 MOLD

Although frequently associated with the aftermath of natural disasters, mold is much more likely to result from routine maintenance issues such as leaky pipes or HVAC malfunctions.

When mold spores are present in large quantities, they can present a health hazard to humans, potentially causing allergic reactions and respiratory problems. Some produce allergens that can trigger allergic reactions or even asthma attacks in people allergic to mold. Others are known to produce potent toxins and/or irritants.

In addition to the potential health effects, molds can cause damage to building materials as they grow and reproduce. Professional remediation efforts can be both costly and disruptive.

7.7 LEAD IN DRINKING WATER

When infrastructure was originally being built in the United States, materials were selected based on characteristics, availability, and longevity. Lead was frequently used in pipes used to transport water (or in solder). At the time, the serious health effects associated with even low

levels of lead exposure were unknown. Lead is no longer used in drinking water infrastructure, but the EPA estimates there are still between 6 and 10 million lead service lines in use in the US.

Lead can enter drinking water when plumbing materials that contain lead corrode, especially where the water has high acidity or low mineral content that corrodes pipes and fixtures. The most common sources of lead in drinking water are lead pipes, faucets, and fixtures.

8.0 FINDINGS AND OPINIONS

ENPRO's assessment yielded the following findings:

- The subject property has historically been used for maritime, military, and industrial (including power petroleum-fueled power generation) purposes since at least 1914.
- During site reconnaissance the following were observed:
 - Three monitoring wells located on the northeast portion of subject property on TMK (1) 2-1-014: 006)
 - An abandoned historical ship on the collapsing dock on the northeast side of pier 7, TMK (1) 2-1-001: 058.
 - Multiple ASTs on the subject property.
 - Six transformers are in the basement of the abandoned HECO building. The Site contact indicated that three of the transformers have been closed in place and drained of oil and three remain online. No further information about the condition, use, maintenance, or history of the transformers was available.
- During ENPROs record review, the following were identified:
 - An investigation at the Aloha Tower property, adjacent to the northwest boundary of the subject property, indicated that elevated concentrations of petroleum hydrocarbons, pesticides, and metals were detected in site soil.
 - Beneath the subject property a fuel pipeline delivers fuel from the Iwilei fuel storage area. Several leaks from this pipeline have been reported.
 - An investigation conducted by CH2M Hill focusing on the northeast portion of TMK (1) 2-1-014: 006 found that potential soil vapor intrusion, direct exposure, and gross contamination concerns exist at the site. An EHMP was developed to manage risks associated with soil and soil vapor during construction and long-term site activities. ENPRO did not identify a DOH response to the EHMP document.
 - HECO's Honolulu Generating Station located at 170 Aloha Tower Drive, Honolulu, Hawaii currently has a NPDES permit and has implemented a SWPCP.
 - The subject property is built on fill material of an unknown origin.

It is ENPRO's opinion that of the findings above, the following constitute RECs to the subject property:

- REC: Aloha Tower Development Phase III results of environmental sampling indicated elevated concentrations of COPCs in site soils. Additional

characterization of both soils and groundwater is required to evaluate the extent, volume, and nature of contamination. Due to its proximity to the subject property (adjacent to the northwest boundary), this site is interpreted to be a REC with the potential to affect the environmental condition of the subject property.

- REC: A large, abandoned historical ship on the subject property at Pier 7, TMK (1) 2-1-001: 058, was observed during the site visit. This deteriorating ship is interpreted to have the potential to environmentally affect the subject property as a result of potential residual fuels and lead in paint.
- REC: An investigation conducted by CH2M HILL on the northeast portion of TMK (1) 2-1-014: 006 found that potential vapor intrusion, direct exposure, and gross contamination concerns exist at the site. The three monitoring wells observed on the northeast portion of subject property are presumed to be remnants of this investigation. An EHMP was reportedly prepared with instruction for managing contaminated media. ENPRO did not discover a DOH response to this EHMP.
- REC: Historical and current use of the subject property as a power plant has the potential to have impacted the subject property due to potential use and storage of hazardous materials and petroleum products to support operations. Industrial and military use of the subject property and surrounding area dates back to 1914.
- REC: A fuel pipeline runs onto and beneath the northern portion of the subject property. This fuel pipeline has the potential to impact the subject property due to the petroleum products that it supplies to the subject property. Several releases have been documented associated with this fuel pipeline.
- REC: A 43,218-gallon diesel AST and two 616,434-gallon LSFO ASTs were observed on the northeast portion of subject property on TMK (1) 2-1-014: 006. Although these tanks have been decommissioned, the possibility of contamination beneath the tanks still exists.

8.1 DATA GAPS

Data gaps are not uncommon in ESAs. A data gap by itself is not inherently significant. The significance is determined by other information and professional experience as to whether the data gap raises reasonable concerns about activities that may present a REC.

8.1.1 GENERAL DATA GAPS

ENPRO identified the following data failures or data gaps during this ESA. These data gaps did not affect ENPRO's ability to form an opinion regarding RECs, C-RECs, or H-RECs in connection with the subject property:

- Site use to first development was not identified.

- During the site reconnaissance, the abandoned ship and the dock it was stored at were inaccessible due to safety concerns.
- During the site reconnaissance, the Hicks Plant and the machine shop on TMK (1) 2-1-014: 006 were not made accessible.

Based on the information obtained, the lack of documentation for these data gaps is not deemed critical and did not affect the ability to identify potential REC(s) associated with the subject property.

If any information deemed relevant to ENPRO's conclusions is obtained within 20 days of the date of this report, ENPRO will issue an addendum letter revising the Phase I ESA's findings, opinions, and conclusions.

8.1.2 SIGNIFICANT DATA GAPS

ENPRO identified the following data failures or data gaps during this ESA that are considered to be significant, meaning they potentially affect ENPRO's ability to form an opinion regarding RECs, C-RECs, or H-RECs in connection with the subject property:

- The subject property may be negatively impacted by activities associated with the former Naval Reserve (circa [c.] 1914 to c. 1959), which previously occupied portions of the subject property and historical industrial activities identified on the subject property prior to HECO's operations. No information was readily ascertainable regarding the historical military use of the subject property.
- User representatives did not provide Title information or information regarding any research into potential AULs or environmental liens associated with the subject property.
- ENPRO did not receive documentation stating that corrective actions regarding potential violations identified during a 2003 RCRA Compliance Evaluation Inspection were completed. These violations involved used oil storage and accumulation time within the Hicks Plant. ENPRO did not have access to the building for which these potential violations were reported.

8.2 DELETIONS

This Phase I ESA did not contain any deletions from the Practice.

9.0 CONCLUSIONS

We have performed a Phase I ESA of the subject property in conformance with the scope and limitations of the Practice. Any exceptions to, or deletions from, this practice are described in Sections 2.5 and 8.2 of this report.

This assessment has revealed no RECs, CRECs, or significant data gaps in connection with the subject property, except for those described in **Table 1-1** (RECs) and **Table 1-2** (H-RECs).

Potential BERS and other environmental concerns which cannot be definitively categorized as RECs due to insufficient available information required to make a determination are described in **Table 1-3**.

9.1 RECOMMENDATIONS

The Practice does not require the environmental professional to provide recommendations regarding identified environmental conditions at the subject property. As a service to its clients, ENPRO provides recommendations to further evaluate and/or address potential environmental concerns, if warranted, as described below.

Based on the findings of this investigation, ENPRO recommends the following additional actions and/or investigations:

- Properly dispose of 20-pound propane tanks observed on the southern exterior of Pier 7.
- Properly clean the two-foot by one-foot oil sheen on the collapsing dock of Pier 7.
- Historical activities at the subject property, including a machine shop, power plant, fuel pipeline, and a Naval reservation: conduct soil and groundwater sampling in the areas of the above historical features to assess for the presence of COPCs. If contamination is identified, additional sampling may be required to delineate its extent.
- Remove the abandoned ship and deteriorating dock at Pier 7.
- Evaluate the management of contaminants covered by the SWPCP and assess the effectiveness of the implementation of this Plan.
- Assess for possible impacts to the subject property associated with contaminants detected on the Aloha Tower property adjacent to the northwest.
- In the event redevelopment or subsurface improvements are planned (including utility repairs/upgrades) evaluate for the presence of contaminants in soils and/or groundwater

to be disturbed and perform the environmental hazard assessment and management planning recommended in the DOH TGM.

10.0 ENVIRONMENTAL PROFESSIONAL STATEMENT

In expressing the opinions stated in this report, ENPRO has exercised a degree of skill and care ordinarily exercised by a reasonably prudent environmental professional in the same community and in the same time frame given the same or similar facts and circumstances. The independent conclusions represent our professional judgment based on information and data available to us during this assignment.

If you have any questions regarding this report, please contact the ENPRO contact listed on the cover of this report at (808) 748-2108.

I declare that to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR Part 312.

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the property. I have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Communications/Interviews

Phase I Environmental Site Assessment User Questionnaire

The person who will use the Phase I ESA should provide the following information. Please fill in this form to the best of your ability, explaining any Yes answers to 1b), 2, 3, 4, 5, and/or 6 on a separate sheet of paper and attaching supporting documentation. Without these answers, our report would have to note that the Phase I ESA is incomplete, and your Landowner Liability Protections could be at risk. Provide the completed questionnaire before we conduct the site visit.

Completed by:	Name:	Rachel Oximana
	Company:	Tradewinds Garden & Glass
	Title:	Enterprise Project Manager
	Phone Number:	206-719-0725
	Time Familiar with Site:	Since 2021
	Relationship to Site:	Future Lessee

PROJECT NO.: 2312-00396-PH1
PROJECT NAME/ADDRESS: 170 Aloha Tower Drive

1. **Environmental Cleanup Liens.** ASTM requires the User to check for environmental liens that may be filed or recorded against the subject property. Such liens might be found in the “exceptions to coverage” section of the property’s title insurance commitment or policy. Please attach all documentation pertaining to environmental cleanup liens.

- a) *Have you checked for these environmental cleanup liens?* Yes No
- b) *Are you aware of any such liens against the subject property?* Yes No

2. **Activity and Use Limitations (AULs).** These include engineering controls (e.g. caps) and land use restrictions or institutional controls (e.g. deed restrictions, covenants) that may be in place at the subject property or filed under federal, tribal, state, or local law. The title commitment or policy might list AULs. Please attach all documentation pertaining to environmental cleanup liens.

Are you aware of any possible AULs involving the subject site? Yes No

3. **Specialized Knowledge.** This involves personal knowledge or experience related to the subject property or nearby properties. For example, any chemicals, oil, degreasers, gasoline, or other hazardous substances commonly used at the subject property or adjacent properties. Include information on above-ground and/or underground storage tanks, cess pools, etc.

Do you have any specialized knowledge that might indicate the past or present use of such substances on the subject or nearby properties? Yes No

4. **Fair Market Value.** A purchase price significantly below fair market value may indicate an environmental problem. Please note that this question does not require an appraisal of the property. If the price is significantly below market value, the User should consider whether it might be because contamination may be present at the subject property.

Is the purchase price significantly below fair market value? Yes No

5. **Common Knowledge.** Please use a separate sheet if necessary.

a) Describe past uses of the property:

This building was occupied by HECO. We were not aware of the specific functions that were operating in this building. +

b) Describe any specific chemicals that are present or were once present at the property:

Unknown

c) Describe any other information such as spills, cleanups, or previous environmental investigations that may help us identify possible contamination:

Unknown

6. **Obvious Indicators.** This includes any spills, stains, releases, cleanups, etc. on or near the subject property.

Do you know of any obvious indicators of possible contamination on or near the site? Yes No

7. **Purpose of Phase I.** Please indicate your purpose for conducting a Phase I Environmental Site Assessment as the subject property.

Sale/purchase Return of lease Redevelopment Other _____

8. **Plans.** This includes general maps, as-build drawings, etc. Please attach all available plans for the subject property.

Can you supply a floor plan diagram and list of tenants for the structures at the property? Yes No

9. **Attachments.** Please indicate all documentation provided along with this questionnaire.

Phase I Environmental Site Assessment Site Questionnaire

Persons with significant knowledge of the subject property – such as past and present owners and occupants – should provide the following information. Please fill in this form to the best of your ability and attach supporting documentation, if available. Without these answers, our report would have to note that the Phase I ESA is incomplete, and applicable Landowner Liability Protections could be at risk. **Return the completed questionnaire as soon as possible.**

GENERAL SITE USEAGE

1. What is the current use of the property? _____
2. Are hazardous materials or petroleum products currently present at the property? Yes No Unknown
 If yes, what type and where are they located? _____

3. What is the past use of the property? _____
4. Were hazardous materials or petroleum products previously present at the property? Yes No Unknown
 If yes, what type and where were they located? _____

5. What are the current uses of the adjacent properties? _____
6. What were the past uses of the adjacent properties? _____
7. What are the current uses of the surrounding area? _____
8. What were the past uses of the surrounding area? _____

EXTERIOR AREAS

9. Are there pits, ponds, or lagoons on or near the property? Yes No Unknown
10. Are there any rivers or creeks that run through the property? Yes No Unknown
11. Are there or have there ever been any above-ground storage tanks? Yes No Unknown

If yes, please complete the table below (status = active, out-of-use, removed, etc.):

Contents	Capacity	Location	Status	Known Leak?	Closure Report?

12. Are there any underground storage tanks on the property? Yes No Unknown

If yes, please complete the table below (status = active, out-of-use, removed, etc.):

Contents	Capacity	Location	Status	Known Leak?	Closure Report?

13. Are there any pipes of unidentified use on the property exterior? Yes No Unknown

If yes, where? _____

14. Are there any 55-gallon drums on the property exterior? Yes No Unknown

If yes, please describe number, contents, and location: _____

15. Are there any unidentified substance containers on the property exterior? Yes No Unknown

If yes, please describe their size and location: _____

16. Is there any electrical or hydraulic equipment on the property exterior? Yes No Unknown

If so, does the equipment contain PCBs?

Please describe the number, type, and location of the equipment: _____

17. Are there any areas of stained soil or pavement on the property? Yes No Unknown

If so, where? _____

18. Is there any evidence of stressed vegetation on the property? Yes No Unknown
If so, where? _____
19. Is there any solid waste on the property? Yes No Unknown
If so, where? _____
20. Are there any wells on the property? Yes No Unknown
If so, please describe the number, type, location, and purpose: _____

21. Are there any septic systems on the property? Yes No Unknown

Phase I Environmental Site Assessment User Questionnaire

The person who will use the Phase I ESA should provide the following information. Please fill in this form to the best of your ability, explaining any Yes answers to 1b), 2, 3, 4, 5, and/or 6 on a separate sheet of paper and attaching supporting documentation. Without these answers, our report would have to note that the Phase I ESA is incomplete, and your Landowner Liability Protections could be at risk. Provide the completed questionnaire before we conduct the site visit.

Time Familiar with Site: Since 2021
Relationship to Site: Future Lessee

PROJECT NO.: 2312-00396-PH1
PROJECT NAME/ADDRESS: 170 Aloha Tower Drive

1. Environmental Cleanup Liens. ASTM requires the User to check for environmental liens that may be filed or recorded against the subject property. Such liens might be found in the "exceptions to coverage" section of the property's title insurance commitment or policy. Please attach all documentation pertaining to environmental cleanup liens.

- a) Have you checked for these environmental cleanup liens? Yes No
b) Are you aware of any such liens against the subject property? Yes No

2. Activity and Use Limitations (AULs). These include engineering controls (e.g. caps) and land use restrictions or institutional controls (e.g. deed restrictions, covenants) that may be in place at the subject property or filed under federal, tribal, state, or local law. The title commitment or policy might list AULs. Please attach all documentation pertaining to environmental cleanup liens.

Are you aware of any possible AULs involving the subject site? Yes No

3. Specialized Knowledge. This involves personal knowledge or experience related to the subject property or nearby properties. For example, any chemicals, oil, degreasers, gasoline, or other hazardous substances commonly used at the subject property or adjacent properties. Include information on above-ground and/or underground storage tanks, cess pools, etc.

Do you have any specialized knowledge that might indicate the past or present use of such substances on the subject or nearby properties? Yes No

4. Fair Market Value. A purchase price significantly below fair market value may indicate an environmental problem. Please note that this question does not require an appraisal of the property. If the price is significantly below market value, the User should consider whether it might be because contamination may be present at the subject property.

Is the purchase price significantly below fair market value? Yes No

5. **Common Knowledge.** Please use a separate sheet if necessary.

a) Describe past uses of the property:

The building on Pier 7 was previously the Hawaii Maritime Center which closed in 2009. The Falls of Clyde is also docked at this pier. The Falls of Clyde was closed to the public in 2007. +

b) Describe any specific chemicals that are present or were once present at the property:

Unknown

c) Describe any other information such as spills, cleanups, or previous environmental investigations that may help us identify possible contamination:

Unknown

6. **Obvious Indicators.** This includes any spills, stains, releases, cleanups, etc. on or near the subject property.

Do you know of any obvious indicators of possible contamination on or near the site? Yes No

7. **Purpose of Phase I.** Please indicate your purpose for conducting a Phase I Environmental Site Assessment as the subject property.

Sale/purchase Return of lease Redevelopment Other _____

8. **Plans.** This includes general maps, as-built drawings, etc. Please attach all available plans for the subject property.

Can you supply a floor plan diagram and list of tenants for the structures at the property? Yes No

9. **Attachments.** Please indicate all documentation provided along with this questionnaire.

- a) Ownership records Attached Not Provided Not Applicable
- b) Environmental liens Attached Not Provided Not Applicable
- c) AULs Attached Not Provided Not Applicable
- d) Explanation of specialized knowledge Attached Not Provided Not Applicable
- e) Explanation of reduced fair market value Attached Not Provided Not Applicable
- f) Additional information regarding common knowledge Attached Not Provided Not Applicable
- g) Explanation of obvious indicators of contamination Attached Not Provided Not Applicable
- h) Previous environmental reports Attached Not Provided Not Applicable
- i) Floor plan Attached Not Provided Not Applicable
- j) Site map Attached Not Provided Not Applicable
- k) As-built drawings Attached Not Provided Not Applicable
- l) Other Drawings (Pier 7 Hawaii Maritime Center drawings_Reduced), Topo (21133 and 2133-01 HECO BUILDING and PIER 7)

Respondent Affirmation. Respondent represents that to the best of their knowledge the above statements and facts are true and correct and no material facts have been suppressed or misstated.

INFORMATION WITHHELD

APPLICABLE
STATUTES

AGENCY
JUSTIFICATION

REQUESTER'S RESPONSIBILITIES:

You are required to (1) pay any lawful fees and costs assessed; (2) make any necessary arrangements with the agency to inspect, copy or receive copies as instructed below; and (3) provide the agency any additional information requested. **For questions about this notice or the records being sought, please ask the agency's contact person named at the top of this form.** Also, please submit your payment, if any, to the agency at the address listed at the top of this form. **DO NOT SEND YOUR PAYMENT** to the Office of Information Practices (OIP) unless you are requesting records directly from OIP.

If you do not comply with the requirements set forth in this notice within 20 business days after the postmark date of this notice or the date the agency makes the records available, you will be presumed to have abandoned your request and the agency shall have no further duty to process your request. Once the agency begins to process your request, you

may be liable for any fees and costs incurred. If you wish to cancel or modify your request, you must advise the agency upon receipt of this notice.

Please note that the Office of Information Practices (OIP) does not maintain the records of other agencies, and a requester must seek records directly from the agency it believes maintains the records. If the agency denies or fails to respond to your written request for records or if you have other questions regarding compliance with the UIPA, then you may contact OIP at (808) 586-1400, oip@hawaii.gov, or 250 South Hotel Street, Suite 107, Honolulu, Hawaii, 96813.

METHOD & TIMING OF DISCLOSURE:

Records available for public access in their entireties must be disclosed within a reasonable time, not to exceed 10 business days from the date the request was received, or after receipt of any prepayment required. Records not available in their entireties must be disclosed within 5 business days after this notice or after receipt of any prepayment required. HAR § 2-71-13(c). If incremental disclosure is authorized by HAR § 2-71-15, the first increment must be disclosed within 5 business days of this notice or after receipt of any prepayment required.

Method of Disclosure:

- Inspection at the following location: _____
- As requested, a copy of the record(s) will be provided in the following manner:
 - Available for pick-up at the following location: _____
 - Will be mailed to you.
 - Will be transmitted to you by other means requested: _____

Timing of Disclosure: All records, or the first increment if applicable, will be made available or provided to you:

- On _____, 20____.
- After prepayment of 50% of fees and 100% of costs, as estimated below.

For incremental disclosures, each subsequent increment will be disclosed within 20 business days after:

- The prior increment (if one prepayment of fees is required and received), or
- Receipt of each incremental prepayment, if prepayment for each increment is required.

Records will be disclosed in increments because the records are voluminous and the following extenuating circumstances exist:

- Agency must consult with another person to determine whether the record is exempt from disclosure under HRS chapter 92F.
- Request requires extensive agency efforts to search, review, or segregate the records or otherwise prepare the records for inspection or copying.
- Agency requires additional time to respond to the request in order to avoid an unreasonable interference with its other statutory duties and functions.
- A natural disaster or other situation beyond agency's control prevents agency from responding to the request within 10 business days.

ESTIMATED FEES & COSTS AND PAYMENT:

FEES: For personal record requests under Part III of chapter 92F, HRS, the agency may charge you for its costs only, and fee waivers do not apply.

For public record requests under Part II of chapter 92F, HRS, the agency is authorized to charge you fees to search for, review, and segregate your request (even if a record is subsequently found to not exist or will not be disclosed in its entirety). The agency must waive the first \$30 in fees assessed for general requesters, OR in the alternative, the first \$60 in fees when the agency finds that the request is made in the public interest. Only one waiver is provided for each request. See HAR §§ 2-71-19, -31 and -32.

COSTS: For either personal or public record requests, the agency may charge you for the costs of copying and delivering records in response to your request, and other lawful fees and costs.

PREPAYMENT: The agency may require prepayment of 50% of the total estimated fees and 100% of the total estimated costs prior to processing your request. If a prepayment is required, the agency may wait to start any search for or review of the records until the prepayment is received by the agency. Additionally, if you have outstanding fees or costs from previous requests, including abandoned requests, the agency may require prepayment of 100% of the unpaid balance from prior requests before it begins any search or review for the records you are now seeking.

The following is an itemization of what you must pay, based on the estimated fees and costs that the agency will charge you and the applicable waiver amount that will be deducted:

For public record requests only:

Fees: Search	Estimate of time to be spent: <u>15</u> ^{MINS} hours (\$2.50 for each 15-minute period)	\$ 2.50 x 18
Review & segregation	Estimate of time to be spent: <u>15</u> ^{MINS} hours (\$5.00 for each 15-minute period)	\$ 5.00 x 7
Fees waived	<input checked="" type="checkbox"/> general (\$30), <u>OR</u> <input type="checkbox"/> public interest (\$60) (Only one waiver per request)	<\$ <u>30.00 x 18</u> >
Other	_____	\$
	(Pursuant to HAR §§ 2-71-19 & 2-71-31)	
Total Estimated Fees:		\$ 0.00

For public or personal record requests:

Costs: Copying	Estimate of # of pages to be copied: _____ (@ \$ _____ per page, pursuant to HRS § 92-21)	\$
Delivery	Postage	\$
Other	_____	\$
Total Estimated Costs:		\$

TOTAL ESTIMATED FEES AND COSTS from above: **\$ 0.00**

- The estimated fees and costs above are for the first incremental disclosure only. Additional fees and costs, and no further fee waivers, will apply to future incremental disclosures.
- PREPAYMENT IS REQUIRED** (50% of fees + 100% of costs, as estimated above) \$
- UNPAID BALANCE FROM PRIOR REQUESTS** (100% must be paid before work begins) \$

TOTAL AMOUNT DUE AT THIS TIME **\$ 0.00**

Payment may be made by: cash
 personal check payable to _____
 other _____

Submit your payment to the agency at the address listed at the beginning of this form, including the name of the agency's contact person.

REQUEST TO ACCESS A GOVERNMENT RECORD

DATE: February 12, 2024

TO: DOH/EMD/Solid & Hazardous Waste Branch (Fax: 808-586-7509)

FROM: Alexis Aguilar ENPRO Environmental aguilar@enproenvironmental.com

Name or Alias	151 Hekili Street, Suite 210	(808) 262-0909 phone
Contact Information	Kailua, Hawaii 96734	(808) 262-4449 fax

USF: 7
 TW: —
 SW: —

Although you are not required to provide any personal information, you should provide enough information to allow the agency to contact you about this request. The processing of this request may be stopped if the agency is unable to contact you. Therefore, please provide any information that will allow the agency to contact you (name or alias, telephone or fax number, mailing address, e-mail address, etc.).

I WOULD LIKE THE FOLLOWING GOVERNMENT RECORD:

Describe the government record as specifically as possible so that it can be located. Try to provide a record name, subject matter, date, location, purpose, or names of persons to whom the record refers, or other information that could help the agency identify the record. A complete and accurate description of the government record you request will prevent delays in locating the record. Attach a second page if needed.

Aloha,

I am currently working on a Phase I Environmental Site Assessment for the following property located on Oahu: 170 Aloha Tower Drive in Honolulu Hawaii. I would like to review regulatory records for the following properties:

- Honolulu Harbors piers 6 & 7 (project site)
- State of Hawaii pier 6 (project site)
- Honolulu Harbor pier 5 (project site)
- Aloha Tower Drive, Nimitz Highway (project site) *9-102893*
- HART HECO Downtown Station 170 Aloha Tower Drive, Honolulu (project site)
- 181 Ala Moana Blvd, Honolulu (project site)
- 79 south Nimitz highway (project site)
- Pearl Harbor Hickam, 648 Bishop Point, Honolulu
- Awa Street Wastewater Pump Station, 190 Nimitz Hwy, **Facility ID 9-103664** ✓
- 300 Ala Moana Blvd, Honolulu, **Facility ID 9-101930** ✓
- Pier 2, Honolulu, **Facility ID 9-103797** ✓
- Pacific Light Net, 737 Bishop Street, Honolulu, **Facility ID 9-101803** ✓
- 733 Bishop St, Mauka Tower, 27th floor, Honolulu **Facility ID 9-101521** ✓
- HECO pipeline South Nimitz Hwy/Fort St Intersection Makai Side
- 1 Aloha Tower Drive, Honolulu
- Aloha Tower Pier 8, Honolulu *9-101093*
- Aloha Tower Pier 9, Honolulu
- HART Boring CC103L Ala Moana Blvd, Honolulu

→
2/12

My report is due Feb 22, 2024. In light of my timeline, I would greatly appreciate any assistance you can provide in expediting access to the files. Mahalo for you time and assistance,

Alexis Aguilar

I WOULD LIKE: (please check one or more of the options below)

- To inspect the government record.**
- A copy of the government record:** (Please check one of the options below.) See the back of this page for information about fees that you may be required to pay for agency services to process your record request. Note: Copying and transmission charges may also apply to certain options.
 - Pick up at agency (**date and time**): _____
 - Mail
 - Fax (toll free and only if available)
 - Other, if available (please specify): _____
- If the agency maintains the records in a form other than paper, please advise in which format you would prefer to have the record.
 - Electronic Audio Other (please specify): _____
- Check this box if you are attaching a request for waiver of fees in the public interest (see waiver information on back).

REQUEST TO ACCESS A GOVERNMENT RECORD

DATE: February 12, 2024
 TO: DOH/EMD/Solid & Hazardous Waste Branch (Fax: 808-586-7509)
 FROM: Alexis Aguilar ENPRO Environmental aaquilar@enproenvironmental.com
Name or Alias 151 Hekili Street, Suite 210 (808) 262-0909 phone
Contact Information Kailua, Hawaii 96734 (808) 262-4449 fax

USF: _____
 HW: _____
 SW: _____

Although you are not required to provide any personal information, you should provide enough information to allow the agency to contact you about this request. The processing of this request may be stopped if the agency is unable to contact you. Therefore, please provide any information that will allow the agency to contact you (name or alias, telephone or fax number, mailing address, e-mail address, etc.).

I WOULD LIKE THE FOLLOWING GOVERNMENT RECORD:

Describe the government record as specifically as possible so that it can be located. Try to provide a record name, subject matter, date, location, purpose, or names of persons to whom the record refers, or other information that could help the agency identify the record. A complete and accurate description of the government record you request will prevent delays in locating the record. Attach a second page if needed.

Aloha,

I am currently working on a Phase I Environmental Site Assessment for the following property located on Oahu: 170 Aloha Tower Drive in Honolulu Hawaii. I would like to review regulatory records for the following properties:

- Honolulu Harbors piers 6 & 7 (project site)
- State of Hawaii pier 6 (project site)
- Honolulu Harbor pier 5 (project site)
- Aloha Tower Drive, Nimitz Highway (project site)
- HART HECO Downtown Station 170 Aloha Tower Drive, Honolulu (project site)
- 181 Ala Moana Blvd, Honolulu (project site)
- 79 south Nimitz highway (project site)
- Pearl Harbor Hickam, 648 Bishop Point, Honolulu
- Awa Street Wastewater Pump Station, 190 Nimitz Hwy, Facility ID 9-103664 ✓
- 300 Ala Moana Blvd, Honolulu, Facility ID 9-101930 ✓
- Pier 2, Honolulu, Facility ID 9-103797 ✓
- Pacific Light Net, 737 Bishop Street, Honolulu, Facility ID 9-101803 ✓
- 733 Bishop St, Mauka Tower, 27th floor, Honolulu Facility ID 9-101521 ✓
- HECO pipeline South Nimitz Hwy/Fort St Intersection Makai Side
- 1 Aloha Tower Drive, Honolulu
- Aloha Tower Pier 8, Honolulu 9-101093
- Aloha Tower Pier 9, Honolulu
- HART Boring CC103L Ala Moana Blvd, Honolulu

→
2/12

My report is due Feb 22, 2024. In light of my timeline, I would greatly appreciate any assistance you can provide in expediting access to the files. Mahalo for you time and assistance,

Alexis Aguilar

I WOULD LIKE: (please check one or more of the options below)

- To inspect the government record.
- A copy of the government record: (Please check one of the options below.) See the back of this page for information about fees that you may be required to pay for agency services to process your record request. Note: Copying and transmission charges may also apply to certain options.
 - Pick up at agency (date and time): _____
 - Mail
 - Fax (toll free and only if available)
 - Other, if available (please specify): _____
- If the agency maintains the records in a form other than paper, please advise in which format you would prefer to have the record.
 - Electronic Audio Other (please specify): _____
- Check this box if you are attaching a request for waiver of fees in the public interest (see waiver information on back).

The ERIS **Physical Setting Report - PSR** provides comprehensive information about the physical setting around a site and includes a complete overview of topography and surface topology, in addition to hydrologic, geologic and soil characteristics. The location and detailed attributes of oil and gas wells, water wells, public water systems and radon are also included for review.

The compilation of both physical characteristics of a site and additional attribute data is useful in assessing the impact of migration of contaminants and subsequent impact on soils and groundwater.

Disclaimer

This Report does not provide a full environmental evaluation for the site or adjacent properties. Please see the terms and disclaimer at the end of the Report for greater detail.

Hydrologic Information

FEMA Flood Zone Definitions

Special Flood Hazard Areas – High Risk

Special Flood Hazard Areas represent the area subject to inundation by 1-percent-annual chance flood. Structures located within the SFHA have a 26-percent chance of flooding during the life of a standard 30-year mortgage. Federal floodplain management regulations and mandatory flood insurance purchase requirements apply in these zones.

ZONE	DESCRIPTION
A	Areas subject to inundation by the 1-percent-annual-chance flood event. Because detailed hydraulic analyses have not been performed, no Base Flood Elevations (BFEs) or flood depths are shown.
AE, A1-A30	Areas subject to inundation by the 1-percent-annual-chance flood event determined by detailed methods. BFEs are shown within these zones. (Zone AE is used on new and revised maps in place of Zones A1–A30.)
AH	Areas subject to inundation by 1-percent-annual-chance shallow flooding (usually areas of ponding) where average depths are 1–3 feet. BFEs derived from detailed hydraulic analyses are shown in this zone.
AO	Areas subject to inundation by 1-percent-annual-chance shallow flooding (usually sheet flow on sloping terrain) where average depths are 1–3 feet. Average flood depths derived from detailed hydraulic analyses are shown within this zone.
AR	Areas that result from the decertification of a previously accredited flood protection system that is determined to be in the process of being restored to provide base flood protection.
A99	Areas subject to inundation by the 1-percent-annual-chance flood event, but which will ultimately be protected upon completion of an under-construction Federal flood protection system. These are areas of special flood hazard where enough progress has been made on the construction of a protection system, such as dikes, dams, and levees, to consider it complete for insurance rating purposes. Zone A99 may be used only when the flood protection system has reached specified statutory progress toward completion. No BFEs or flood depths are shown.

Coastal High Hazard Areas – High Risk

Coastal High Hazard Areas (CHHA) represent the area subject to inundation by 1-percent-annual chance flood, extending from offshore to the inland limit of a primary front dune along an open coast and any other area subject to high velocity wave action from storms or seismic sources. Structures located within the CHHA have a 26-percent chance of flooding during the life of a standard 30-year mortgage. Federal floodplain management regulations and mandatory purchase requirements apply in these zones.

ZONE	DESCRIPTION
V	Areas along coasts subject to inundation by the 1-percent-annual-chance flood event with additional hazards associated with storm-induced waves. Because detailed coastal analyses have not been performed, no BFEs or flood depths are shown.
VE, V1-V30	Areas along coasts subject to inundation by the 1-percent-annual-chance flood event with additional hazards due to storm-induced velocity wave action. BFEs derived from detailed hydraulic coastal analyses are shown within these zones. (Zone VE is used on new and revised maps in place of Zones V1–V30.)

Hydrologic Information

Moderate and Minimal Risk Areas

Areas of moderate or minimal hazard are studied based upon the principal source of flood in the area. However, buildings in these zones could be flooded by severe, concentrated rainfall coupled with inadequate local drainage systems. Local stormwater drainage systems are not normally considered in a community's flood insurance study. The failure of a local drainage system can create areas of high flood risk within these zones. Flood insurance is available in participating communities, but is not required by regulation in these zones. Nearly 25-percent of all flood claims filed are for structures located within these zones.

ZONE	DESCRIPTION
B, X (shaded)	Moderate risk areas within the 0.2-percent-annual-chance floodplain, areas of 1-percent-annual-chance flooding where average depths are less than 1 foot, areas of 1-percent-annual-chance flooding where the contributing drainage area is less than 1 square mile, and areas protected from the 1-percent-annual-chance flood by a levee. No BFEs or base flood depths are shown within these zones. (Zone X (shaded) is used on new and revised maps in place of Zone B.)
C, X (unshaded)	Minimal risk areas outside the 1-percent and .2-percent-annual-chance floodplains. No BFEs or base flood depths are shown within these zones. (Zone X (unshaded) is used on new and revised maps in place of Zone C.)

Undetermined Risk Areas

ZONE	DESCRIPTION
D	Unstudied areas where flood hazards are undetermined, but flooding is possible. No mandatory flood insurance purchase requirements apply, but coverage is available in participating communities.

Geologic Information

Geologic Units

This maps shows geologic units in the area. Please refer to the report for detailed descriptions.

Geologic Information

The previous page shows USGS geology information. Detailed information about each unit is provided below.

No records found for the project property or surrounding properties.

Soil Information

SSURGO Soils

This maps shows SSURGO soil units around the target property. Please refer to the report for detailed soil descriptions.

Soil Information

The previous page shows a soil map using SSURGO data from USDA Natural Resources Conservation Service. Detailed information about each unit is provided below.

Map Unit EmA (10.11%)

Map Unit Name:	Ewa silty clay loam, moderately shallow, 0 to 2 percent slopes
Bedrock Depth - Min:	74cm
Watertable Depth - Annual Min:	
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	C - Soils in this group have moderately high runoff potential when thoroughly wet. Water transmission through the soil is somewhat restricted.

Major components are printed below

Ewa(100%)	
horizon H1(0cm to 20cm)	Silty clay loam
horizon H2(20cm to 74cm)	Silty clay loam
horizon H3(74cm to 99cm)	Bedrock

Component Description:

Minor map unit components are excluded from this report.

Map Unit: EmA - Ewa silty clay loam, moderately shallow, 0 to 2 percent slopes

Component: Ewa (100%)

The Ewa component makes up 100 percent of the map unit. Slopes are 0 to 2 percent. This component is on alluvial plains. The parent material consists of basic igneous rocks. Depth to a root restrictive layer, bedrock, paralithic, is 20 to 40 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 3 percent. Nonirrigated land capability classification is 4s. Irrigated land capability classification is 2s. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 97 percent. The soil has a maximum sodium adsorption ratio of 3 within 30 inches of the soil surface.

Map Unit FL (57.95%)

Map Unit Name:	Fill land, mixed
Bedrock Depth - Min:	152cm
Watertable Depth - Annual Min:	
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	B - Soils in this group have moderately low runoff potential when thoroughly wet. Water transmission through the soil is unimpeded.

Major components are printed below

Fill land, mixed(100%)	
horizon H1(0cm to 15cm)	Gravelly sandy loam
horizon H2(15cm to 152cm)	Fine sandy loam
horizon H3(152cm to 178cm)	Bedrock

Component Description:

Minor map unit components are excluded from this report.

Map Unit: FL - Fill land, mixed

Component: Fill land, mixed (100%)

The Fill land, mixed, mixed component makes up 100 percent of the map unit. Slopes are 0 to 3 percent. This component is on fill flats. The parent material consists of Fill land. Depth to a root restrictive layer, bedrock, lithic, is 40 to 60 inches. The natural drainage

Soil Information

class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is low. This soil is rarely flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 3 percent. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 45 percent. There are no saline horizons within 30 inches of the soil surface. The soil has a maximum sodium adsorption ratio of 10 within 30 inches of the soil surface.

Map Unit Mka (31.62%)

Map Unit Name: Makiki clay loam, 0 to 2 percent slopes
Bedrock Depth - Min:
Watertable Depth - Annual Min:
Drainage Class - Dominant: Well drained
Hydrologic Group - Dominant: B - Soils in this group have moderately low runoff potential when thoroughly wet. Water transmission through the soil is unimpeded.

Major components are printed below

Makiki(100%)	
horizon H1(0cm to 51cm)	Clay loam
horizon H2(51cm to 76cm)	Clay loam
horizon H3(76cm to 152cm)	Paragravelly clay loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: Mka - Makiki clay loam, 0 to 2 percent slopes

Component: Makiki (100%)

The Makiki component makes up 100 percent of the map unit. Slopes are 0 to 2 percent. This component is on terraces alluvial fans. The parent material consists of alluvium. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 9 percent. Nonirrigated land capability classification is 3c. This soil does not meet hydric criteria.

Map Unit W (0.32%)

Map Unit Name: Water > 40 acres
No more attributes available for this map unit

Component Description:

Minor map unit components are excluded from this report.

Map Unit: W - Water > 40 acres

Component: Water > 40 acres (100%)

Generated brief soil descriptions are created for major soil components. The Water > 40 acres is a miscellaneous area.

Radon Information

This section lists any relevant radon information found for the target property.

Federal EPA Radon Zone for *HONOLULU* County: **3**

Zone 1: Counties with predicted average indoor radon screening levels greater than 4 pCi/L

Zone 2: Counties with predicted average indoor radon screening levels from 2 to 4 pCi/L

Zone 3: Counties with predicted average indoor radon screening levels less than 2 pCi/L

Federal Area Radon Information for *HONOLULU* County

No Measures/Homes:	257
Geometric Mean:	0.1
Arithmetic Mean:	0.1
Median:	0
Standard Deviation:	0.6
Maximum:	4.8
% >4 pCi/L:	0
% >20 pCi/L:	0
Notes on Data Table:	TABLE 1. Screening indoor radon data from the State/EPA Residential Radon Survey of Hawaii conducted during 1989-90. Data represent 2-7 day charcoal canister measurements from the lowest level of each home tested.

Federal Sources

FEMA National Flood Hazard Layer

FEMA FLOOD

The National Flood Hazard Layer (NFHL) data incorporates Flood Insurance Rate Map (FIRM) databases published by the Federal Emergency Management Agency (FEMA), and any Letters Of Map Revision (LOMRs) that have been issued against those databases since their publication date. The FIRM Database is the digital, geospatial version of the flood hazard information shown on the published paper FIRMs. The FIRM Database depicts flood risk information and supporting data used to develop the risk data. The FIRM Database is derived from Flood Insurance Studies (FISs), previously published FIRMs, flood hazard analyses performed in support of the FISs and FIRMs, and new mapping data, where available.

Indoor Radon Data

INDOOR RADON

Indoor radon measurements tracked by the Environmental Protection Agency(EPA) and the State Residential Radon Survey.

Public Water Systems Violations and Enforcement Data

PWSV

List of drinking water violations and enforcement actions from the Safe Drinking Water Information System (SDWIS) made available by the Drinking Water Protection Division of the US EPA's Office of Groundwater and Drinking Water. Enforcement sensitive actions are not included in the data released by the EPA. Address information provided in SWDIS may correspond either with the physical location of the water system, or with a contact address.

Radon Zone Level

RADON ZONE

Areas showing the level of Radon Zones (level 1, 2 or 3) by county. This data is maintained by the Environmental Protection Agency (EPA).

Safe Drinking Water Information System (SDWIS)

SDWIS

The Safe Drinking Water Information System (SDWIS) contains information about public water systems as reported to US Environmental Protection Agency (EPA) by the states. Addresses may correspond with the location of the water system, or with a contact address.

Soil Survey Geographic database

SSURGO

The Soil Survey Geographic database (SSURGO) contains information about soil as collected by the National Cooperative Soil Survey at the Natural Resources Conservation Service (NRCS). Soil maps outline areas called map units. The map units are linked to soil properties in a database. Each map unit may contain one to three major components and some minor components.

U.S. Fish & Wildlife Service Wetland Data

US WETLAND

The U.S. Fish & Wildlife Service Wetland layer represents the approximate location and type of wetlands and deepwater habitats in the United States.

USGS Current Topo

US TOPO

US Topo topographic maps are produced by the National Geospatial Program of the U.S. Geological Survey (USGS). The project was launched in late 2009, and the term "US Topo" refers specifically to quadrangle topographic maps published in 2009 and later.

USGS Geology

US GEOLOGY

Seamless maps depicting geological information provided by the United States Geological Survey (USGS).

USGS National Water Information System

FED USGS

The U.S. Geological Survey's (USGS) National Water Information System (NWIS) is the nation's principal repository of water resources data. The data includes comprehensive information of well-construction details, time-series data for gage height, streamflow, groundwater level, and precipitation and water use data. This NWIS database information is obtained through the Water Quality Data Portal (WQP). The WQP is a cooperative service sponsored by the USGS, the Environmental Protection Agency (EPA), and the National Water Quality Monitoring Council (NWQMC).

State Sources

Appendix

Oil and Gas Wells

OGW

As of HI state regulatory agencies, FracTracker Alliance - state of Hawaii confirmed not to have any active (drilled but not plugged) oil and gas wells.

Well Index Database

WATER WELLS

The Department of Land and Natural Resources Commission on Water Resource Management (CWRM) maintains the Well Index Database that tracks specific information pertaining to the construction and installation of production wells in Hawaii.

Liability Notice

Reliance on information in Report: The Physical Setting Report (PSR) DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as a review of environmental databases and physical characteristics for the site or adjacent properties.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS Information Inc. disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report(s) are protected by copyright owned by ERIS Information Inc. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

RE: CITY DIRECTORY RESEARCH
170 Aloha Tower Drive
Honolulu, HI

Thank you for contacting ERIS for an City Directory Search for the site described above. Our staff has conducted a reverse listing City Directory search to determine prior occupants of the subject site and adjacent properties. We have provided the nearest addresses(s) when adjacent addresses are not listed. If we have searched a range of addresses, all addresses in that range found in the Directory are included.

Note: Reverse Listing Directories generally are focused on more highly developed areas. Newly developed areas may be covered in the more recent years, but the older directories will tend to cover only the "central" parts of the city. To complete the search, we have either utilized the ACPL, Library of Congress, State Archives, and/or a regional library or history center as well as multiple digitized directories. These do not claim to be a complete collection of all reverse listing city directories produced.

ERIS has made every effort to provide accurate and complete information but shall not be held liable for missing, incomplete or inaccurate information. To complete this search we used the general range(s) below to search for relevant findings. If you believe there are additional addresses or streets that require searching please contact us at 866-517-5204.

Search Criteria:

150-300 of Ala Moana Blvd
All of Aloha Tower Dr

Search Notes:

Notice: IMPORTANT LIMITATIONS and YOUR LIABILITY

Reliance on information in Report: This report DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as database review of environmental records.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report (s) are protected by copyright owned by ERIS Information Inc. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

 Status Comment: spill cleaned up by vessel
 Summary:

Caller reported to USCG diesel sheen at pier 7. Vessel Kulamanu formerly known as Windjammers is docked there. Per Aloha Tower, vessel has sat of years and is about ready to leave State on its own power pending USCG approval. Witness also observed a diesel saturated absorbent pad in the water by the vessel.

Status Comment:		SDAR				
Summary:						

Discovery of petroleum-impacted soil at nine feet below ground surface where above-ground storage tanks were located. No impacts to groundwater or to surrounding areas. 7/15/2016 Dave Martin called to update incident. PCB's were later detected, and after delineating lateral and vertical migration, the RQ was exceeded. The source is unknown.

Summary:						

Borings indicate contaminated soil below groundwater, table, at depths eight to nine feet. Source is believed to be from the former HECO Honolulu Power Plant. Samples to be provided by initial screen Upon my request, split samples were collected and provided for an initial analytical screen. Results obtained today from our lab indicate that the samples are of a hydrocarbon fraction, appears to be aged, with carbon ranging from C10 – C30 and the bulk between C14 – C25.

Release Name:	HART Contractor Removing Abandoned Fuel Line Release		
Location:	Bishop Street and South Nimitz Hwy		
Assigned SOSOC:	adam.teekell@doh.hawaii.gov		
NRC Incident Rpt No:			
Release Duration:			
Notified Agencies:	HIDOT-HIGHWAY		
Response Measure Taken:	The line was capped and the contaminated soil was excavated and stockpiled.		
BC State Activity:			
Invoice To:			
Status Comment:			
Summary:			

A HART contractor release an estimated 2 gallons of fuel while removing an abandoned fuel line. The 2 gallons of residual fuel was released and spilled on to the soil. The line was capped until it could be further drained and the impacted soil was excavated and stockpiled. The fuel that came out of the pipeline was later revised as being less than one gallon.

Release Name:		Star of Honolulu Fuel Release				
Location:		Aloha Tower Pier 8				
Assigned SOSC:		adam.teekell@doh.hawaii.gov				
NRC Incident Rpt No:		1140668				
Release Duration:						
Notified Agencies:		USCG,HIDOT-HARBOR				
Response Measure Taken:		Contractor hired to clean up.				
BC State Activity:						
Invoice To:						
Status Comment:						
Summary:						

3 gallons of fuel spilled from the Star of Honolulu when it was being refueled. Absorbent pads were used to clean up the spill and a contractor was called in for further clean up and assessment.

Release Name:	WOA trash truck hydraulic oil spill		
Location:	Hawaii Pacific University loading area		
Assigned SOSOC:	terence.corpus@doh.hawaii.gov		
NRC Incident Rpt No:	1354576		
Release Duration:			
Notified Agencies:			
Response Measure Taken:			
BC State Activity:			
Invoice To:			
Status Comment:	spill was cleaned up		
Summary:			

A West Oahu Aggregate (WOA) trash truck's hydraulic system leaked at Hawaii Pacific University (HPU) Aloha Tower campus' loading area. Spilled oil ponded on the concrete pad. However, HPU security told driver to move. Driver complied and drove >100 yards away and parked. The truck's system leaked during that transit. The weather was dry. Storm drains were not impacted. HFD responded and contained the ponded oil with kitty litter. WOA hired cleanup contractors which included pressure washing.

Release Name:		Oily Discharge From Semisub One at Aloha Tower				
Location:		Aloha Tower Pier 8				
Assigned SOSOC:		adam.teekell@doh.hawaii.gov				
NRC Incident Rpt No:						
Release Duration:						
Notified Agencies:						
Response Measure Taken:						
BC State Activity:						
Invoice To:						
Status Comment:						
Summary:						

An unknown sheen was reported near Aloha Towner. The sheen was later found to be coming from the semi-sub. The crew was working on the engine and accidentally put oily water into the harbor. An estimated 3 gallons of oily water was released. The owner admitted the release and deployed absorbents.
