**The Law of the Splintered Paddle** is also on Kamehameha Schools website, so they should want to help make Big Island roads become safer and not add to the traffic and possible traffic death toll problem. <https://www.ksbe.edu/article/the-lessons-of-the-law-of-the-splintered-paddle-rings-true-200-years-after-k>

Besides a resort development in Keauhou Bay causing runoffs that will severely pollute the bay as the above research and science articles have shown above causing marine life to die, it will also increase in the bay's population that will seriously add to damaging even more coral, plankton and all marine life as well, and the island has severe traffic issues already with increased death tolls rising, and a resort development in Keauhou Bay will totally increase even more traffic in these already severely congested traffic areas.

Reason #5 The Big Island Doesn't Have the Resources and Infrastructure for Another Resort

Please see the articles below because the Big Island doesn't have the resources or infrastructure to safely add another resort development on island and these other NEWS and Research articles prove this point.

1) Hawaii Deals with Burgeoning Waste Management Problem

As landfills face closure and waste-to-energy projects stall, various counties in Hawaii are dealing with waste management issues. Waste360 Staff January 10, 2020

"Hawaii Island is in the enviable position of having a landfill with anywhere from 20 to 100 years of capacity left to take in trash. But the island still wrestles with significant issues like plastic products that are no longer being recycled." <https://www.waste360.com/landfill/hawaii-deals-with-burgeoning-waste-management-problem>

2) "Big Island Now readers seem to agree that there's likely no single solution for slowing down the timeline of the West Hawai'i Sanitary Landfill reaching capacity.

The West Hawai'i Sanitary Landfill, the only remaining landfill on the Big Island, is forecast to reach capacity within the next 20 to 25 years." <https://bigislandnow.com/2023/09/17/big-island-now-poll-no-27-results-more-than-one-solution-needed-to-help-extend-life-of-west-hawaii-landfill/>

3) Hawaii Island Has Decades of Landfill Space But Still Faces Challenges In Dealing With Its Waste Hawai'i Public Radio Published January 9, 2020 at 5:00 AM HST

"Hawaii Island is in the enviable position of having a landfill with anywhere from 20 to 100 years of capacity left to take in trash. But the island still wrestles with significant issues like plastic products that are no longer being recycled.

For the past four decades, trash from the east side of Hawaii Island has been dumped in a landfill outside of Hilo. But now trash from all parts of the island is being trucked to a

facility north of Kona." <https://www.hawaiipublicradio.org/local-news/2020-01-09/hawaii-island-has-decades-of-landfill-space-but-still-faces-challenges-in-dealing-with-its-waste>

4)"What happens to Hawaii Island's trash and recyclables? BY MICHELLE BRODER VANDYKE HAWAII ISLAND PUBLISHED 11:30 AM ET DEC. 17, 2022 By Michelle Broder Vandyke HAWAII ISLAND PUBLISHED 11:30 AM ET Dec. 11The future of the landfill

The West Hawaii Landfill will be full in about 20 years. Finding a location for the next landfill is a concern, according to the DEM officials. They said it will be challenging to find a location for a future landfill because of stringent regulations and costs related to planning, environmental regulations, design and construction that will take many years to complete. It will also require community support." <https://spectrumlocalnews.com/hi/hawaii/news/2022/12/15/what-happens-to-hawaii-island-s-trash-and-recyclables->

5) "The overwhelming plastic waste Hawaii visitors leave behind By Natasha Bourlin Aug 24, 2023

Hawaii saw more than 9 million visitors last year. Those tourists' first stops are often big-box and convenience stores, where they buy bottled water, plastic sand toys, single-use bodyboards, noodles, floaties and inner tubes for their <https://www.sfgate.com/hawaii/article/plastic-waste-hawaii-visitors-leave-behind-18286076.php>

6) "A county commission drafts ordinance aiming to ban recyclables at West Hawaii landfill By Megan Moseley September 6, 2023 · 1:00 AM HST \* Updated September 6, 2023 · 2:02 PM

Hawaii's County's Environmental Management Commission is developing an ordinance that aims to prohibit the amount of recyclable materials ending up in the island's only working landfill." <https://bigislandnow.com/2023/09/06/new-draft-ordinance-aims-to-ban-recyclables-at-west-hawaii-landfill/>

7) " Hawaii's County issues mandatory 25% water restriction for North Kona August 7, 2023 · 5:21 PM HST

A mandatory 25% water restriction has been issued for various communities in North Kona due to the failure of the Honokohau Deepwell over the weekend." <https://bigislandnow.com/2023/08/07/hawaii-county-issues-mandatory-25-water-restriction-for-north-kona/>

8) "Hawaii's Water Supply Closely Monitored As Severe Drought Continues by Big Island Video Newson Nov 6, 2023 at 3:28 pm STORY SUMMARY

HAWAII COUNTY - Officials say a special focus will be placed on the South Kohala Water System, which is more susceptible to drought conditions." <https://www.bigislandvideonews.com/2023/11/06/water-supply-closely-monitored-as-hawaii-CA%BBi-under-severe-drought/>

9) "Big Island Concerns About Water Quality Prompt A Lawsuit: Over A Kona Sewage Plant Kealahehe sewage plant discharges more than 1 million gallons of wastewater into a lava pit near the ocean. By Paula Dobbyn / February 6, 2024

Settlement talks are scheduled in an environmental lawsuit involving a county-operated Big Island sewage plant in Kona." <https://www.civilbeat.org/2024/02/concerns-about-water-quality-prompt-a-lawsuit-over-a-kona-sewage-plant/>

10) "Researchers find sewage from an oceanfront Big Island community reaches nearshore waters Hawaii's Public Radio | By Russell Subiono, Sophia McCullough Published December 20, 2021 at 5:56 PM HST

There are nearly 50,000 cesspools on the Big Island, with tens of thousands posing a risk to water resources, according to the Hawaii Department of Health." <https://www.hawaiipublicradio.org/the-conversation/2021-12-20/researchers-find-sewage-from-an-oceanfront-big-island-community-reaches-nearshore-waters>

11) "Kona coast faces stark wastewater tradeoffs Current situation

There are approximately 88,000 cesspools across the state, releasing more than 200,000 cubic meters of wastewater per day to the environment. <https://www.hawaii.edu/news/2021/09/10/kona-stark-wastewater-tradeoffs/>

We ask that you start figuring out how this can never happen again? These are the kind of issues that need to be resolved before you approve more development.

12) "BIG ISLAND NEWS HECO restores power after initiating emergency outages on Big Island by: Elizabeth 'Ufi Posted: Jan 30, 2024 / 09:43 AM HST Updated: Jan 30, 2024 / 04:15 PM HST

An unexpected loss of several large Hawaii Electric generators left some residents on Big Island without power for parts of the morning on Tuesday, Jan. 30." <https://www.khon2.com/big-island-news/heco-initiates-30-min-rolling-outages-after-loss-of-generators/>

13) Hawaii's State News Update: Hawaiian Electric initiates rolling outages throughout Big Island February 13, 2024 · 5:23 PM HST \* Updated February 14, 2024 · 4:21 PM

The emergency outages are being initiated in various areas around the entire island to prevent loss of power to an even greater number of customers. The timing and extent of the outages will depend on the amount of demand on the system and the availability of generators." <https://bigislandnow.com/2024/02/13/hawaii-island-customers-asked-to-reduce-electricity-use/>

14) "LOCAL NEWS

HECO issues rolling power outages around Big Island by: Emily Cervantes Posted: Feb 13, 2024 / 05:11 PM HST Updated: Feb 13, 2024 / 09:12 PM HST Hawaiian Electric initiated rolling outages for Big Island after several large generators became unavailable and reduced output Tuesday night.

15) "Here's how power outages can have repercussions for Hawai'i's water supply Hawai'i Public Radio | By Savannah Harriman-Pote  
Published February 13, 2024 at 10:59 AM HST

Water departments on O'ahu and Hawai'i Island have advised customers to conserve water ahead of possible storm-related power outages this month.

But what does the power grid have to do with the water supply?

It is impossible to separate Hawai'i's power system from its water system, said Kawika Uyehara, deputy director of Hawai'i County's Department of Water Supply. "<https://www.hawaiipublicradio.org/local-news/2024-02-13/residents-on-hawaii-island-and-oahu-are-asked-to-conserve-water-amid-power-outages>

16) U.S. Hawaii is "on the verge of a greater catastrophe," locals say, as water crisis continues  
By Li Cohen

Updated on: April 11, 2024 / 8:23 AM EDT / CBS News

In Hawaii, one of the most important sayings is *ola i ka wai*, "water is life" — a phrase that not only sums up what it means to exist on an island, but what it means to live, period. But now, one of the largest of the island chain's land masses is facing a triple threat to its sole freshwater source, and if it isn't addressed soon, one community member says, "we're in deep trouble."

<https://www.cbsnews.com/news/hawaii-water-crisis-climate-change/>

17) NewsHawai'i County issues mandatory 25% water restriction for North Kona  
August 7, 2023 · 5:21 PM HS

A mandatory 25% water restriction has been issued for various communities in North Kona due to the failure of the Honokōhau Deepwell over the weekend.

21) "NewsHawaiian Electric asking Big Island customers to conserve power due to down generators

March 25, 2024 · 11:49 AM HST

According to the utility company, this is an usual situation as the large generators are experiencing mechanical problems resulting in a reduced output. The largest generator, an independent power producer that sells electricity to Hawaiian Electric, is offline with significant mechanical issues.

The plant generates 60 megawatts or nearly one-third of the typical peak demand of 180 megawatts on the island."

<https://bigislandnow.com/2024/03/25/hawaiian-electric-asking-big-island-customers-to-conserve-power-due-to-down-generators/>

All the articles above show that a resort development will damage Keauhou Bay coral and marine life and, Big Island resources and infrastructure are currently being negatively affected from the development that is on island already, and there are years of new development that have already been approved, before having safe resources and infrastructures for new developments.

With these scientifically proven articles by some of the most professional scientists in the world, they say the a serious population increase, as well as development and resort runoff that happens because of parking lots, and... with all coastal developments, it will be dangerous for Keauhou Bay to be development because it will damage the marine ecosystems in the area.

Please, save Keauhou Bay's marine life and help the island's resources by saying NO to a Bungalow Resort built by Kamehameha Schools because all of these articles prove it would be extremely damaging to the waters at Keauhou Bay.

Rebecca Melendez

**To:** 221053-01 KS, Keaouhou Entitlements; Roy, Alex; Planning@hawaiicounty.gov; Keaouhoubay@ksbe.edu  
**Subject:** Kamehameha Schools EIS Draft For Keaouhou Bay WILL HAVE NEGATIVE IMPACT  
**Attachments:** SAVE Keaouhou Bay Petition.jpg; Help Big Island Resources Petition.jpg  
**Categories:** Yellow Category

To whom it may concern,

Please reject Kamehameha Schools EIS because they have NOT followed the cultural laws. By law they MUST do what is BEST for the Hawaiian people's cultural practices and it is proven developments WILL pollute nearby waters and if these waters get polluted, the Hawaiian people will be paddling canoe, swimming, fishing... in polluted water.

Kamehameha School's Bungalow Resort Development will clear land that has been protecting Keaouhou Bay from golf course runoff pollution for years, and the development will kill an entire ecosystem.

- The "Natural Ground Cover has 10% runoff, where as development has 55% runoff..." [This was taken from NOAA'S website](#) and this researched article proves the natural land has been soaking up the above golf course pollutions before it runs into the bay for years.
- "Golf courses kill coral reefs and fisheries: harmful algae blooms and disease cause by nutrient runoff from golf course development..." This info was taken from [Global Coral's website](#) and it SCIENTIFICALLY PROVES that their development will pollute Keaouhou Bay because of the golf course runoff that will happen.
- "Coastal development and runoff lead to sedimentation, which directly impacts coral recruitment, growth, mortality, and ecosystem services that coral reefs provide." This info is from [Environmental Evidence Journal website](#) and SCIENTIFICALLY PROVES that developments KILL CORAL AND MARINE LIFE.

Please watch this video <https://www.youtube.com/watch?v=DoKlUa9Pyk5c>

Please watch this video <https://www.youtube.com/watch?v=IT9sle0egA0>

In their EIS they have NOT contacted as many Hawaiian people as they NEED to contact to prove that the Hawaiian people want this bungalow resort because in the ONLY public meeting they held in 2022 (I was on this zoom call) there were many people on this zoom call and EVERY SINGLE PERSON ON THIS ZOOM CALL OPPOSED THEIR BUNGALOW RESORT DEVELOPMENT and their were plenty Hawaiians on the call.

Kamehameha Schools have NOT spoken with the Kong family who are descendants from Keaouhou Bay and this video is of Kupuna Kumu Lily Kong who was born in Keaouhou Bay and she states that she is against development. She also states that her mother was against development as well. Please listen to her words in her testimonial video about Keaouhou Bay on this link and know that this proves that

1

descendant directly from Keaouhou Bay OPPOSE THIS DEVELOPMENT <https://vimeo.com/994680462> and it is CULTURAL LAW THEY MUST BE HEARD AND ACKNOWLEDGED!

These laws were created, "After these legal victories, the Kohanaiki 'Ohana worked to create a new law in the state of Hawaii to require Cultural Impact Statements along with Environmental Impact Statements for all future large-scale development. Act 50, the Cultural Impact Statement Law was adopted in 2000." <https://kohanaikiokhiana.org/legal-victories>

Kupuna Kumu Lily Kong also states that there are burial grounds on the land that Kamehameha Schools wants to clear and it is told that Kamehameha Schools has bulldozed sacred land in the past and Keaouhou Bay's burial grounds MUST BE RESPECTED AND NOT DISTURBED!

I was also told by Hawaiians that there were bones in the small cave that is at the base of Keaouhou Bay. These burials need to take priority over a Bungalow Resort Development.

Kamehameha Schools has completely IGNORED this petition that OPPOSES their development resort in Keaouhou bay because when I presented this petition to them, Marissa Harman told me, "Those signatures are just tourists" and there are many signatures that ARE tourists. The exact tourists that they want to rent too in their Bungalow Resort Development, and these people are signing a petition OPPOSING this resort development.

Also, there are thousands of signatures on this petition that are the Hawaiian people and locals, and I have sent Kamehameha Schools these signatures and the comments from this petition so they can read what Hawaiians, locals and tourists are saying about why they are OPPOSING their resort development and Kamehameha Schools has NOT read or considered that these comments have value in anyway.

There are over 6,198 signatures as of Aug. 5<sup>th</sup> and these signatures and comments HAVE A RIGHT TO BE ACKNOWLEDGED AND THEY HAVE VALUE TO BE HEARD, THESE PEOPLE MATTER AND IT IS CULTURAL LAW THEY MUST BE ACKNOWLEDGED!

Here is the petition link: [https://www.change.org/p/save-keaouhou-bay-from-becoming-a-big-crowded-resort?utm\\_source=share\\_petition&utm\\_medium=custom\\_url&recruited\\_by\\_id=92a53560-1e91-11e5-b4ef-b94e90cedb4d](https://www.change.org/p/save-keaouhou-bay-from-becoming-a-big-crowded-resort?utm_source=share_petition&utm_medium=custom_url&recruited_by_id=92a53560-1e91-11e5-b4ef-b94e90cedb4d)

Please read and acknowledge this petition and the 6,198 signatures (grows daily with more signatures and comments) on this petition and acknowledge the comments from the Hawaiian people, locals and tourists on this petition because I have coped ALL of comments as of today and added them below.

Petition: **Save Keaouhou Bay From Becoming a Big Crowded Resort**

Keaouhou Bay is historical sacred land. It's also a small commercial and quiet residential area, with a local canoe club that uses the bay daily, local volleyball groups that play there daily, families BBQ every weekend, hold funeral services, baptisms local kids enjoy swimming, and visitors enjoy paddle boarding and kayaking all the time without a crowd.

Read their information on this link [https://www.ksbe.edu/keaouhou\\_bay/](https://www.ksbe.edu/keaouhou_bay/)

It's possibly the last untouched historical area that has not been seriously developed and it has been a comfortable and quiet bay for locals and visitors alike for many years without a big resort crowd.

2

The beach is just over the size of one volleyball court that is there, with an even smaller park on the other side. It doesn't have a crowded feel and it's not big enough to become a resort area.

It is also the historical site of the birthplace of the Hawaiian people's King Kamehameha III. The area holds much history and is a very sacred area to everyone, especially the Hawaiian people.

Developers are considering building this area up and putting 150 Resort-style bungalows in this very historical, quiet, charming, and small commercial and residential area that many people have enjoyed as it is for many decades.

Not only is the area not big enough for a new resort, but there is also already a nice hotel at the point of this bay and Time Share homes right next to that.

Both of those work very well with this area and offer tourists a lot of fun places to stay without taking away from the land, its history, quietness, all the local activities, and the small commercial buildings that have been there for many years.

Updating the commercial builds that are already there would be great, and adding a nice cultural center there would be nice for everyone as well, not just tourists having bungalows.

To have a cultural center where people can learn more about the land, and the Hawaiian people can have a place of their own at King Kamehameha III's birthplace would be great.

Creating a walkway so the disabled can get from the Northside to the Southside would be another great add, but NOT building 150 new bungalows for a lot of people who don't even live here, who will then crowd the bay because the bay will be the focus for them staying there.

Now, besides putting another resort in this area, they want to open up the old road that has been beautifully overgrown with native plants and is located just above the canoe club and goes right through King Kamehameha III's birth site.

This will bring a lot of traffic right through this beautiful historical place where many locals hold family funerals, baptisms, birthday parties... It will overcrowd this very small special area that locals and visitors have been using for many decades, in many different loving ways.

Putting a road in could also increase the temperature there because of the pavement, and the traffic that will then pass through this beautiful, historical, sacred, and quiet area will be huge.

Trees shade this area right now very well and also help keep the erosion down by helping stop a lot of mud and debris from going into the ocean after big tropical storms that the island has sometimes. Without trees the bay could be extra muddy.

Plus, they want to add more commercial shops to Keaouhou Bay, and Keaouhou Shopping Center has a lot of empty For Lease stores available. To create more shops when there are shops empty and For Lease in Keaouhou Shopping Center just above the bay, is not being sustainable and using what we already have.

Please HELP SAVE Keaouhou Bay from becoming a big Resort area. It is one of the last historically untouched areas on the island that has not been overdeveloped and has been fully enjoyed completely by locals and visitors for many decades.

**Comments for the above petition:**

### Reasons for signing

I have been a visitor to this location and it is perfect just the way it is!

**Janet Berketa** 1 week ago

this project is very environmentally destructive, and bad for our climate.

0

Report

**Fran copp** 1 week ago

The Keauhou Bay should be protected as is bc the island needs to be protected for the recreation of the residents. It would be ruined if that many units for short term rentals were put in such a small place. It would pollute the environment and change the habitat for the animals that live there for the benefit of the golf course. In 10-20 years the place would be trashed. It's a small location not able to handle the traffic, and trash. Government is here to serve the community not promote a business that cause irreparable harm to the people and animals who leave. We don't want it.

0

Report

**Karen Kenyon** 2 weeks ago

I believe that preserving the bay is absolutely vital—this project does not do this. It will also add to traffic and increase noise for those with condos in the area.

Welina mai kākou. This sacred place is the birthplace of Kauikoaouli, King Kamehameha III longest reigning monarch of Hawaii and should be preserved for generations to come. Please preserve Keauhou! E mālama i keia ʻāina kapu, Mahalo

**Terri Yoshinaga** 7 days ago

Problem: Kamehameha Schools wants Keauhou Bay to become a Bungalow Resort. This is a VERY small bay. The Resort will have 105 rooms that means 200+ more people in this small area. This will have serious negative impacts on the bay like more pollution, traffic congestion, negatively affect the endanger species there and more!

**Ron Dias** 1 week ago

Ron Dias

**Kathleen Delorme** 1 week ago

Turning this into a resort will lead to over-crowding, congestion, pollution and environmental and social problems unneeded by the area to flourish and sustain life respectfully!

[I want to save the bay!](#)
- 0
- **Report**
- **Jennifer Lund** 2 weeks ago  
 Enough is enough. Short term financial gain is not worth it. Environmental Impact: Pollution Risk: Developments pollute nearby waters both during and after construction. Endangered Species: Habitat for federally protected green sea turtles and endangered monk seals. Development will threaten these species due to pollution and human disturbance. Golf Course Runoff: Golf course pesticides and fertilizers lead to harmful algae blooms, killing coral and marine life. The removal of the trees that act as a natural filter will allow golf course runoff to pollute the Bay. Increased Human Activity: More tourists and residents will increase noise, water, and light pollution, further disturbing marine life. Motor Vehicle Pollution: Increased traffic from the resort will lead to more oil and heavy metal runoff into the bay. Noise Pollution: Construction and increased human activity will disrupt marine life, particularly cetaceans. Stormwater Runoff: Development will increase impervious surfaces, leading to higher stormwater runoff and pollution. Sea Foam Toxins: Pollutants in runoff can lead to toxic sea foam, affecting air quality and marine health. Scientific Evidence: NOAA & Other Studies: Developments have always polluted coastal waters, harming marine ecosystems. Coral Reefs: Runoff from developments causes coral bleaching and death, as evidenced in Hawai'i and other coastal areas. Plankton Decline: Pollutants from runoff kill plankton, crucial for manta rays' diet, leading to ecosystem collapse. Algae Blooms: Pollution runoff causes algae blooms, smothering coral reefs and killing marine life. Ecosystem Research: Studies show significant negative impacts on marine ecosystems from development-related runoff. Legal Concerns: Endangered Species Act: Development violates the act's mandate to conserve habitats for endangered species. Hawaii Conservation Laws: Local statutes require conservation of indigenous aquatic life and their ecosystems. Conservation Mandate: Federal and state laws emphasize conserving ecosystems that support endangered species. Infrastructure Issues: Resource Strain: Big Island already faces water shortages, limited landfill capacity, and power conservation needs. Inadequate Infrastructure: Existing infrastructure cannot support additional strain from a large resort development. Waste Management: Big Island's landfill is nearing capacity, and new developments will exacerbate waste issues. Water Crisis: Ongoing drought and water contamination issues make additional strain from new developments unsustainable. Power Conservation: Big Island is currently experiencing power shortages and rolling blackouts, and new developments will increase demand. Case Studies: Chesapeake Bay. Coastal developments cause significant harm due to runoff, a situation Keauhou Bay could face. Hawaiian Islands: Existing research shows developments lead to severe degradation of coral reefs and marine life. Global Examples: Similar coastal developments worldwide have resulted in long-term environmental damage. Community Impact: Local Use: Keauhou Bay is a popular spot for local activities

such as boating, fishing, canoeing, paddle boarding, snorkeling, manta night dives, surfing, and swimming. Tourist Impact: Increased tourist activity will further degrade natural resources and disturb local wildlife. Economic Considerations: Tourism Dependence: Manta ray tours and other eco-tourism activities depend on a healthy marine environment. Local Economy: Damage to the bay's ecosystem will negatively affect local businesses reliant on marine tourism. Long-Term Costs: Environmental degradation will lead to long-term economic costs, outweighing short-term development gains. Conclusion: Long-Term Impact: Allowing the bungalow resort will permanently alter and likely destroy Keauhou Bay's ecosystem. Conservation Priority: Emphasis on conserving the bay as a natural habitat for endangered species and marine life. Community Responsibility: Urge decision-makers to consider the long-term environmental, economic, and community impacts before approving the development

- This project is not in alliance with the general plan for Hawaii County. County residents need more affordable housing in areas already zoned for residences. County residents need more beach parks for free recreation, for which this bay is zoned, according to the 2045 General Plan. Bishop Estate/KSBE had net assets of 1.1 B (eleven billion) dollars on their 2022 Form 990. Enough is enough.

1

Report

[Lisa Diaz](#) 2 years ago

I care about protecting historic Keauhou Bay Ahupua'a ecosystem and our community. New resort development for tourism at the proposed large scale is totally inappropriate for Keauhou Bay. Keauhou Shopping Center has vacant space - they should not build more. Instead- make this area more accessible for our community, families and improve the small beach area making a park & managing trash. Allow the Hawaii County transit Trolley to access the bus stop on Kaleiopapa Street so people can access the bay without a car would improve sustainability and reduce pollution. We need to protect this area for it's cultural, historical and ecosystem - NOT over develop it for tourists and profit!

Report

•

[Desialee Cabalar](#) 2 years ago

All of the local spots are being blocked off by gates or homes with gated communities. This is not fair the local who were born and raised here should not be locked out of their own land just because greed and money. We have something the rich want until they fully pollute and destroy it and then they no longer want it. Hawaii/ Big Island is known to a lot of tourist as the relaxing island. I do not have a problem with tourist but when you buy here on this island as a vacation home now your crowding the island so eventually it will be like Oahu where no one really thinks of it as a vacation spot. Just come stay the week

and go home. We have many many hotels and condos that can't be full all year round. Support those places that are already built.

This is King Kamehameha the third birth place and hold significant historical and sacred mana to the island of Hawaii. There is no more need to take and replace what is already there!!!! This piece of Hawaii that still is used by keahou canoe club and an area for little family gathering, such as Picnics and paddle boarding. Not to mention the boat ramp for fisherman and fishing grounds around the area. This place is well taken care of by the locals of the big island and hold significant Hawaiian history!!! We don't need any more hotels, condos, homes on this beach front property. It is a respectable play ground for our children and adults as well from land to water. Please save hawaii and our sacred land and history from being over built for greed and control.

0

Report

**Kaulahoolai Pilago** 2 years ago

The resort on Keahou point is way more than enough. The entire Aiihi drive is hotels, resorts, condos, vacation rentals, and multimillion dollar properties. Why must our community always conform to the greedy desires for people to exploit Hawaii. When you build stuff like this, the area that we all grew up in and have cherished memories in turns into a sad perversion of what it once was.

We ask that you read all articles below about Big Island resources and learn that the island's resources are limited and are already being affected negatively.

All the development that has already been built, and the many years of new development that has been approved for the future, will affect the island's resources, and we ask that you STOP and look at Big Island resource to make sure that the island has the needed resources for all the development that has been built and the approved development that will be built in the future, before approving even more developments, for the safety of all who live here and visit here.

We stand and ask that you stop before approving more and more developments and learn what is happening to the island's resources and what will happen to the island's resources after the years of development that is already scheduled for the future.

Because the island's resources are being severely impacted as of today.

What will future development do to the island's resources if there are already resource issues happening today?

Please, learn how to take island resources seriously because you have approved many more years of development to come and today the island's resources are having issues.

What will the future look like if you keep approving more developments and don't start look and taking the island's resources seriously?

Read the articles below to learn what is happening to Big Island Resources

- 1) Hawaii Deals with Burgeoning Waste Management Problem  
As landfills face closure and waste-to-energy projects stall, various counties in Hawaii are dealing with waste management issues. Waste360 Staff January 10, 2020

"Hawaii Island is in the enviable position of having a landfill with anywhere from 20 to 100 years of capacity left to take in trash. But the island still wrestles with significant issues like plastic products that are no longer being recycled." <https://www.waste360.com/landfill/hawaii-deals-with-burgeoning-waste-management-problem>

- 2) "Big Island Now readers seem to agree that there's likely no single solution for slowing down the timeline of the West Hawai'i Sanitary Landfill reaching capacity.

The West Hawai'i Sanitary Landfill, the only remaining landfill on the Big Island, is forecast to reach capacity within the next 20 to 25 years." <https://bigislandnow.com/2023/09/17/big-island-landfill-no-27-results-more-than-one-solution-needed-to-help-extend-life-of-west-hawaii-landfill/>

- 3) Hawaii Island Has Decades of Landfill Space But Still Faces Challenges In Dealing With Its Waste  
Hawai'i Public Radio Published January 9, 2020 at 5:00 AM HST

"Hawaii Island is in the enviable position of having a landfill with anywhere from 20 to 100 years of capacity left to take in trash. But the island still wrestles with significant issues like plastic products that are no longer being recycled.

For the past four decades, trash from the east side of Hawaii Island has been dumped in a landfill outside of Hilo. But now trash from all parts of the island is being trucked to a facility north of

Here is another petition that has 444 signatures (grows daily with more signatures and comments) as of Aug. 5<sup>th</sup> and it speaks about Big Island resources. It proves that the Big Island DOES NOT have the resources for another Big Resort Development.

Petition Link: <https://www.change.org/p/help-prioritize-big-island-developments-to-keep-island-s-resources-safe-for-all>

**Petition: Help Prioritize Big Island Developments to Keep Island's Resources Safe for ALL**

We stand to keep The Big Island in a place where the island's resources and infrastructure are safe for the entire population and visitors.

We stand and say homes for locals should MATTER more than mass vacation rentals.

If a home has multiple dwellings, we ask that one could be a vacation rental and the rest should be housing for locals. Local housing needs to come before vacation rentals.

This is an island and it would help the island to have a building stipulation in where the developer has to sell a high percentage to Hawaiians, and locals who have lived here for many years, to help keep the increase in population at a reasonable rate for the island's resources and infrastructure.

Kona." <https://www.hawaiipublicradio.org/local-news/2020-01-09/hawaii-island-has-decades-of-landfill-space-but-still-faces-challenges-in-dealing-with-its-waste>

4) "What happens to Hawaii Island's trash and recyclables? BY MICHELLE BRODER VANDYKE HAWAII ISLAND PUBLISHED 11:30 AM ET DEC. 17, 2022 By Michelle Broder Vandyke Hawaii Island PUBLISHED 11:30 AM ET Dec. 17 The future of the landfill

The West Hawaii Landfill will be full in about 20 years. Finding a location for the next landfill is a concern, according to the DEM officials. They said it will be challenging to find a location for a future landfill because of stringent regulations and costs related to planning, environmental regulations, design and construction that will take many years to complete. It will also require community support." <https://spectrumsocalnews.com/hi/hawaii/news/2022/12/15/what-happens-to-hawaii-island-s-trash-and-recyclables>==

5) "The overwhelming plastic waste Hawaii visitors leave behind By Natasha Bourlin Aug 24, 2023

Hawaii saw more than 9 million visitors last year. Those tourists' first stops are often big-box and convenience stores, where they buy bottled water, plastic sand toys, single-use bodyboards, noodles, floaties and inner tubes for their trips." <https://www.sfgate.com/hawaii/article/plastic-waste-hawaii-visitors-leave-behind-18286076.php>

6) "A county commission drafts ordinance aiming to ban recyclables at West Hawaii landfill By Megan Moseley September 6, 2023 · 1:00 AM HST \* Updated September 6, 2023 · 2:02 PM

Hawaii County's Environmental Management Commission is developing an ordinance that aims to prohibit the amount of recyclable materials ending up in the island's only working landfill." <https://bigislandnow.com/2023/09/06/new-draft-ordinance-aims-to-ban-recyclables-at-west-hawaii-landfill/>

7) "Hawaii County issues mandatory 25% water restriction for North Kona August 7, 2023 · 5:21 PM HST A mandatory 25% water restriction has been issued for various communities in North Kona due to the failure of the Honokohau Deepwell over the weekend." <https://bigislandnow.com/2023/08/07/hawaii-county-issues-mandatory-25-water-restriction-for-north-kona/>

10) "Researchers find sewage from an oceanfront Big Island community reaches nearshore waters Hawaii'i Public Radio | By Russell Subiono, Sophia McCullough Published December 20, 2021 at 5:56 PM HST

There are nearly 50,000 cesspools on the Big Island, with tens of thousands posing a risk to water resources, according to the Hawaii'i Department of Health." <https://www.hawaiipublicradio.org/the-conversation/2021-12-20/researchers-find-sewage-from-an-oceanfront-big-island-community-reaches-nearshore-waters>

11) "Kona coast faces stark wastewater tradeoffs Current situation

There are approximately 88,000 cesspools across the state, releasing more than 200,000 cubic meters of wastewater per day to the environment. <https://www.hawaii.edu/news/2021/09/10/kona-stark-wastewater-tradeoffs/>

We ask that you start figuring out how this can never happen again? These are the kind of issues that need to be resolved before you approve more development.

12) "BIG ISLAND NEWS HECO restores power after initiating emergency outages on Big Island by: Elizabeth 'Ufi Posted: Jan 30, 2024 / 09:43 AM HST Updated: Jan 30, 2024 / 04:15 PM HST

An unexpected loss of several large Hawaii Electric generators left some residents on Big Island without power for parts of the morning on Tuesday, Jan. 30." <https://www.khon2.com/big-island-news/heco-initiates-30-min-rolling-outages-after-loss-of-generators/>

13) Hawaii State News Update: Hawaiian Electric initiates rolling outages throughout Big Island February 13, 2024 · 5:23 PM HST \* Updated February 14, 2024 · 4:21 PM

The emergency outages are being initiated in various areas around the entire island to prevent loss of power to an even greater number of customers. The timing and extent of the outages will depend on the amount of demand on the system and the availability of generators." <https://bigislandnow.com/2024/02/13/hawaii-island-customers-asked-to-reduce-electricity-use/>

14) "LOCAL NEWS

HECO issues rolling power outages around Big Island by: Emily Cervantes Posted: Feb 13, 2024 / 05:11 PM HST Updated: Feb 13, 2024 / 09:12 PM HST Hawaiian Electric initiated rolling outages for Big Island after several large generators became unavailable and reduced output Tuesday night." <https://www.khon2.com/local-news/heco-releases-conservation-alert-for-big-island/>

15) "Here's how power outages can have repercussions for Hawaii's water supply Hawaii'i Public Radio | By Savannah Harriman-Pote Published February 13, 2024 at 10:59 AM HST

Water departments on O'ahu and Hawaii'i Island have advised customers to conserve water ahead of possible storm-related power outages this month.

But what does the power grid have to do with the water supply?

It is impossible to separate Hawai'i's power system from its water system, said Kawika Uyebara, deputy director of Hawai'i County's Department of Water Supply." <https://www.hawaiipublicradio.org/local-news/2024-02-13/residents-on-hawaii-island-and-oahu-are-asked-to-conserve-water-amid-power-outages>

16) U.S. Hawaii is "on the verge of a greater catastrophe," locals say, as water crisis continues  
By Li Cohen

Updated on: April 11, 2024 / 8:23 AM EDT / CBS News

In Hawaii, one of the most important sayings is *ola i ka wai*, "water is life" — a phrase that not only sums up what it means to exist on an island, but what it means to live, period. But now, one of the largest of the island chain's land masses is facing a triple threat to its sole freshwater source, and if it isn't addressed soon, one community member says, "we're in deep trouble."

<https://www.cbsnews.com/news/hawaii-water-crisis-climate-change/>

17) NewsHawaii'i County issues mandatory 25% water restriction for North Kona  
August 7, 2023 · 5:21 PM HS

A mandatory 25% water restriction has been issued for various communities in North Kona due to the failure of the Honokōhau Deepwell over the weekend.

<https://bigislandnow.com/2023/08/07/hawaii-county-issues-mandatory-25-water-restriction-for-north-kona/>

18) Hawai'i Water Supply Closely Monitored As Severe Drought Continues

by Big Island Video News  
on Nov 6, 2023 at 3:28 pm

(BIVN) – With an ongoing drought on the island of Hawai'i, the Hawai'i County Department of Water Supply says it is closely monitoring its 23 public water systems, with a "special focus" placed on the South Kohala Water System.

<https://www.bigislandvideonews.com/2023/11/06/water-supply-closely-monitored-as-hawai%CA%BBi-under-severe-drought/>

This is a map of Power Outages on the Big Island. This map wouldn't have been created if Power Outages were not a problem. <https://www.hawaiianelectric.com/safety-and-outages/power-outages/hawaii-island-outage-map>

Please, give Tax Breaks to all homes that provide solar and/or wind turbine to there homes to help with power issues on the island.

20) "Hawaiian Electric is reporting that several large generators on the Big Island are experiencing a range of issues and may lead to the need for rolling outages if supply does not meet demand."

[https://www.reddit.com/r/BigIsland/comments/1bnuar3/hawaiian\\_electric\\_is\\_reporting\\_that\\_several\\_large/?t=52660](https://www.reddit.com/r/BigIsland/comments/1bnuar3/hawaiian_electric_is_reporting_that_several_large/?t=52660)

21) "NewsHawaiian Electric asking Big Island customers to conserve power due to down generators  
March 25, 2024 · 11:49 AM HST

According to the utility company, this is an usual situation as the large generators are experiencing mechanical problems resulting in a reduced output. The largest generator, an independent power producer that sells electricity to Hawaiian Electric, is offline with significant mechanical issues.

The plant generates 60 megawatts or nearly one-third of the typical peak demand of 180 megawatts on the island."

<https://bigislandnow.com/2024/03/25/hawaiian-electric-asking-big-island-customers-to-conserve-power-due-to-down-generators/>

The articles above show that Big Island resources are currently being negatively affected from the development on island, and there are years of new development that has already been approved, and even more development is still being approved before learning if the island's resources can handle more development.

This needs to STOP, and island resources need to be addressed and taken seriously.

We stand to say LEARN WHAT IS HAPPENING TO THE ISLAND'S RESOURCES before approving more development because this is an island, and if there is not enough resources for the developments that are here now, how will there be enough resources for the developments you have approved for the future?

If the island doesn't have enough resources for the developments as of now, there won't be enough resources for developments that have not been approved as of yet, and we ask that you say NO to ALL future developments until you FULLY understand that the island's resources can accommodate future developments.

We stand and say that Big Island resources need to be FULLY considered before any more new development is approved for the safety of ALL who live here and visit.

There are many, many developments that have been approved for years to come and we stand and say we need to learn how the island's resources will be affected when these developments are finished before you keep approving more and more developments!

We stand and say NO DEVELOPING ON BURIAL GROUND. The history of the island needs to be preserved and the burial grounds need to be respected at all costs.

We stand and ask to make it mandatory for vacation rentals and ALL resorts and hotels to provide drinking water machines to their guests to help stop all the empty water bottle waste on the island.

We stand and ask to make it mandatory for vacation rentals and ALL resorts and hotels to provide shampoo, conditioner, body wash in bulk containers rather than continuously using small, different containers for every new guest, to help stop all the empty bottles waste in the limited landfill.

We ask for an Environmental Impact Report to be done to learn what is safe for Big Island resources with future developments and the population that live here now and will move here in the future.

How can we be sure to have enough landfill, water, sewer, power...for everyone? This needs to be learned.

Also, there are mostly only 2 lanes throughout the entire Big Island and some places where cars cannot pull over if an ambulance needs to get by.

The traffic has seriously increased and if the island's population keeps increasing there will be hours and hours of constant serious traffic in the near future, how will ambulances get by in emergencies?

What if there is a tsunami and people need to get to higher ground? Will they be able to get to higher ground in a safe time without the infrastructure to accommodate the increase in population?

We stand and ask that you start increasing the infrastructure to accommodate the traffic before you approve more developments.

The island's small road infrastructure isn't made for a high population and that needs to be taken seriously.

We ask for another hospital to be built, as well as a trauma center and dive chamber to be put on the island to accommodate all types of injuries because of all the years of new future development that you have already approved, these buildings will be needed.

Alii Drive is only two lanes and right now there are three huge developments in progress, and over 10 more acres of land on this street has just been approved for even more development on this street.

Did you research to learn how this one road can handle more development before your approval?

Did you research and check on the island's resources before you approved this and many other developments all over the Big Island?

We stand to say, stop development to learn how roads will handle all the new homes that you have already approved for years to come before more development is approved because right now there is serious traffic issues all over Big Island?

We stand to say what are you doing about the growth in homelessness on the island? We stand and ask that this be taken seriously.

What about parking?

All of the Big Island towns have parking issues, especially during high tourist seasons and especially Ironman.

The land at the bottom of Henery St. has been for sale for a new resort for years and the town needs parking. Would it be possible to use that land for town parking instead of another resort?

With more subdivisions comes more cars and the island towns are already overcrowded with parking issues. How will parking improve with more houses? Is the Hawaii Planning Department considering the parking issues?

There is vacant land next to Lavern's in Kona town, can you build a parking lot there?

We stand and ask for you to find a way to improve the parking issues before approving more development because parking and traffic are increasing.

87

There are over 50,000 cesspools on The Big Island. We stand to say that all cesspools be upgraded or converted into a toilet such as the one below ASAP, to stop waste water polluting in the ocean around the island.

Please, give Tax breaks to all those who change from a cesspool to a toilet such as the Cinderella Cinder <https://cinderellaeco.com/en-us> this does not use water and is a way to get rid of cesspools so they stop polluting the ocean that we all swim in today.

If you agree with this info, please sign this petition.

There are many new homes that have been approved for future development and are currently being built right now and today, the island has many resources issues before these developments are complete.

This petition states that we strongly OPPOSE approving new development applications because the island's resources are currently having serious issues, as you can see from the articles above, and many more homes have already been approved for future years of developments.

You need to learn how island resources will be affected by these years of future developments before approving more developments.

There are many big black and white signs on vacant lands that have development application information and Tax Map Key numbers for new developments and they are all over the island. What will the island become if you don't start taking island resources seriously?

The safety of all our lives is in your hands. Please, take that seriously!

Thank you for your support!

**Please read these comments because these comments and signatures MATTER AND DESERVE TO BE ACKNOWLEDGED BECAUSE THEY ARE THE HAWAIIAN PEOPLE, LOCALS AND TOURISTS!**

**Reasons for signing the above petition**

For me it is so important to protect the nature, and the biodiversity of Hawaii. There is enough tourism and enough accommodations for tourists and the priority should be to preserve and protect the marine life and environment, not to make money! Animals were there first and they must be respected and preserved.

**Jennifer Lund** 2 weeks ago

Environmental Impact: Pollution Risk: Developments pollute nearby waters both during and after construction. Endangered Species: Habitat for federally protected green sea turtles and endangered monk seals. Development will threaten these species due to pollution and human disturbance. Golf Course Runoff: Golf course pesticides and fertilizers lead to harmful algae blooms, killing coral and marine life. The removal of the trees that act as a natural filter will allow golf course runoff to pollute the Bay. Increased Human Activity: More tourists and residents will increase noise, water, and light pollution, further disturbing marine life. Motor Vehicle Pollution: Increased traffic from the resort will lead to more oil and heavy metal runoff into the bay. Noise Pollution: Construction and increased human activity will disrupt marine life, particularly cetaceans. Stormwater Runoff: Development will increase impervious surfaces, leading to higher stormwater runoff and pollution. Sea Foam Toxins: Pollutants in runoff can lead to toxic sea foam, affecting air quality and marine health. Scientific Evidence: NOAA & Other Studies: Developments have always polluted coastal waters, harming marine ecosystems. Coral Reefs: Runoff from developments causes coral bleaching and death, as evidenced in Hawaii and other coastal areas. Plankton Decline: Pollutants from runoff kill plankton, crucial for manta rays' diet, leading to ecosystem collapse. Algae Blooms: Pollution runoff causes algae blooms, smothering coral reefs and killing marine life. Ecosystem Research: Studies show significant negative impacts on marine ecosystems from development-related runoff. Legal Concerns: Endangered Species Act: Development violates the act's mandate to conserve habitats for endangered species. Hawaii Conservation Laws: Local statutes require conservation of indigenous aquatic life and their ecosystems. Conservation Mandate: Federal and state laws emphasize conserving ecosystems that support endangered species. Infrastructure Issues: Resource Strain: Big Island already faces water shortages, limited landfill capacity, and power conservation needs. Inadequate Infrastructure: Existing infrastructure cannot support additional strain from a large resort development. Waste Management: Big Island's landfill is nearing capacity, and new developments will exacerbate waste issues. Water Crisis: Ongoing drought and water contamination issues make additional strain from new developments unsustainable. Power Conservation: Big Island is currently experiencing power shortages and rolling blackouts, and new developments will increase demand. Case Studies: Chesapeake Bay: Coastal developments cause significant harm due to runoff, a situation Keauhou Bay could face. Hawaiian Islands: Existing research shows developments lead to severe degradation of coral reefs and marine life. Global Examples: Similar coastal developments worldwide have resulted in long-term environmental damage. Community Impact: Local Use: Keauhou Bay is a popular spot for local activities such as boating, fishing, canoeing, paddle

89

boarding, snorkeling, manta night dives, surfing, and swimming. Tourist Impact: Increased tourist activity will further degrade natural resources and disturb local wildlife. Economic Considerations: Tourism Dependence: Manta ray tours and other eco-tourism activities depend on a healthy marine environment. Local Economy: Damage to the bay's ecosystem will negatively affect local businesses reliant on marine tourism. Long-Term Costs: Environmental degradation will lead to long-term economic costs, outweighing short-term development gains. Conclusion: Long-Term Impact: Allowing the bungalow resort will permanently alter and likely destroy Keauhou Bay's ecosystem. Conservation Priority: Emphasis on conserving the bay as a natural habitat for endangered species and marine life. Community Responsibility: Urge decision-makers to consider the long-term environmental, economic, and community impacts before approving the development

I'm not opposed to development, but I AM adamantly opposed to irresponsible development that neglects community input, resources, and access. I strongly opposed development that exploits what's left of our natural resources and Shorelines for the sake of profit. Too much already. Enough is enough. No more.

Simply put, the traffic on Kamehameha III Road, should this project be completed, will be similar to that fronting Hulih'e Palace and the pier. Tourists clamoring to swim and recreate on the bay, ride on the snorkel and fishing boats, and passing through to the Outrigger Keauhou Bay Hotel will irreversibly and negatively affect the peaceful nature of this gem of an ocean masterpiece. I am firmly against the construction of the through road from Ali'i Drive to the Hotel.

No new development until we update public infrastructure like roads and sewage. It's amazing how far out of control this has gotten already.

Kamehameha Schools are the trustees, and they are legally obligated NOT ONLY BY CULTURAL LAW but also, they are LEGALLY OBLIGATED to do what is BEST for the land and their BENEFICIARIES. THE HAWAIIAN PEOPLE ARE THEIR BENEFICIARIES and thousands of their BENEFICIARIES are OPPOSING this Bungalow Resort Development and these people have a RIGHT TO BE HEARD AND ACKNOWLEDGED BY LAW!

Princess Bernice Pauahi Bishop's Will states, under 4th paragraph down from Thirteen, "I desire my trustees to provide **first and chiefly a good education** in the common English branches, and also instruction in morals and in such useful knowledge as may tend to make good and industrious men and women; and I desire instruction in the higher branches to be subsidiary to the foregoing objects.

**For the purposes aforesaid** I grant unto my said trustees full power to lease or sell any portion of my real estate...not to exceed however one-half of the fund which may come into their hands, in the purchase of suitable premises, the erection of school buildings... expend the annual income in the maintenance of said schools..." <https://www.ksbe.edu/about-us/about-pauahi/will>

Kamehameha Schools is to use the land specifically, "**For the purposes aforesaid**" and that would be education for the Hawaiian people and NOT a DEVELOP a Bungalow Resort for tourists and offer tourists an education in Hawaiian culture. This is stated clearly in Princess Bernice Pauahi Bishop's WILL.

Kamehameha Schools claims they need money and that is why they want to develop Keauhou Bay, but the truth is, they have lands that are ALREADY DEVELOPED that they hardly use, and these lands CAN BE USED TO MAKE MONEY. THEY DON'T NEED TO DEVELOP KEAUHOU BAY!

Please watch this video

<https://www.youtube.com/watch?si=7B88BIBBQd4pXaWek&v=1UtiWeyLAs&feature=youtu.be>

For example, Kaha'u'u Beach Park they only use for their Private Events and this land could bring in money through parking fees, day pass use, wedding and birthday function fees, farmers market fees, concert fees to benefit the schools... there are endless amount of ways to make money from these already developed lands.

Kamehameha Schools also has Hale Lauu that hasn't been used for years and it is fully developed with a parking lot and structures already on the land. They could use this land to school kids, house Hawaiian elders that need a home, hold weddings and events that they charge fees... but they have just let it sit there for years doing nothing.

Pauahi Bishop's Beneficiaries who are the Hawaiian people and they are stating DO NOT DEVELOP KEAUHOU BAY!

[https://www.change.org/p/save-keauhou-bay-from-becoming-a-big-crowded-resort?utm\\_source=share\\_petition&utm\\_medium=custom\\_url&recruited\\_by\\_id=92a53560-1e91-11e5-b4ef-b94e90cedb8d](https://www.change.org/p/save-keauhou-bay-from-becoming-a-big-crowded-resort?utm_source=share_petition&utm_medium=custom_url&recruited_by_id=92a53560-1e91-11e5-b4ef-b94e90cedb8d)

<https://www.change.org/p/help-prioritize-big-island-developments-to-keep-island-s-resources-safe-for-all>

Please reject this EIS because under Princess Bernice Pauahi Bishop's Will it states Kamehameha Schools are her trustees and they have a "fiduciary duty" to do what is best for **THEIR BENEFICIARIES (the Hawaiian people's) and a Bungalow Resort is BEST FOR TOURISTS NOT THE HAWAIIANA PEOPLE!**

Please reject this EIS because the Big Island DOES NOT HAVE THE RESOURCES TO PROVIDE FOR ANOTHER BIG RESORT ON ISLAND and there are many comments that agree with this fact because of the factual reported articles in the **Help Prioritize Big Island Developments to Keep Island's Resources Safe for ALL** petition <https://www.change.org/p/help-prioritize-big-island-developments-to-keep-island-s-resources-safe-for-all>

Thank you for listening to ALL OUR VOICES.

Sincerely,

Rebecca Melendez

**Subject:** [EXTERNAL] Kamehameha Schools EIS Draft For Keahou Bay WILL HAVE NEGATIVE IMPACT

**CAUTION: This email is from an outside sender. Do not click on links or open attachments unless you recognize the sender and know the content is safe.**

To whom it may concern,

Please reject Kamehameha Schools EIS because they have NOT followed the cultural laws. By law they MUST do what is BEST for the Hawaiian people's cultural practices and it is proven developments WILL

pollute nearby waters and if these waters get polluted, the Hawaiian people will be paddling canoe, swimming, fishing...in polluted water.

Kamehameha School's Bungalow Resort Development will clear land that has been protecting Keaouhou Bay from golf course runoff pollution for years, and the development will kill an entire ecosystem.

- The "Natural Ground Cover has 10% runoff, where as development has 55% runoff..." [This was taken from NOAA'S website](#) and this researched article proves the natural land has been soaking up the above golf course pollutions before it runs into the bay for years.
- "Golf courses kill coral reefs and fisheries: harmful algae blooms and disease cause by nutrient runoff from golf course development..." This info was taken from [Global Corals website](#) and it SCIENTIFICALLY PROVES that their development will pollute Keaouhou Bay because of the golf course runoff that will happen.
- "Coastal development and runoff lead to sedimentation, which directly impacts coral recruitment, growth, mortality, and ecosystem services that coral reefs provide." This info is from [Environmental Evidence Journal website](#) and SCIENTIFICALLY PROVES that developments KILL CORAL AND MARINE LIFE.

Please watch this video <https://www.youtube.com/watch?v=DoKlUa9Pxt5c>

Please watch this video <https://www.youtube.com/watch?v=IT9sle0eqA0>

In their EIS they have NOT contacted as many Hawaiian people as they NEED to contact to prove that the Hawaiian people want this bungalow resort because in the ONLY public meeting they held in 2022 (I was on this zoom call) there were many people on this zoom call and EVERY SINGLE PERSON ON THIS ZOOM CALL OPPOSED THEIR BUNGALOW RESORT DEVELOPMENT and their were plenty Hawaiians on the call.

Kamehameha Schools have NOT spoken with the Kong family who are descendants from Keaouhou Bay and this video is of Kupuna Kumu Lily Kong who was born in Keaouhou Bay and she states that she is against development. She also states that her mother was against development as well. Please listen to her words in her testimonial video about Keaouhou Bay on this link and know that this proves that descendant directly from Keaouhou Bay OPPOSE THIS DEVELOPMENT <https://vimeo.com/994680462> and it is CULTURAL LAW THEY MUST BE HEARD AND ACKNOWLEDGED!

These laws were created, "After these legal victories, the Kohanaiki 'Ohana worked to create a new law in the state of Hawaii to require Cultural Impact Statements along with Environmental Impact Statements for all future large-scale development. Act 50, the Cultural Impact Statement Law was adopted in 2000." <https://kohanaikiohana.org/legal-victories>

Kupuna Kumu Lily Kong also states that there are burial grounds on the land that Kamehameha Schools wants to clear and it is told that Kamehameha Schools has bulldozed sacred land in the past and Keaouhou Bay's burial grounds MUST BE RESPECTED AND NOT DISTURBED!

I was also told by Hawaiians that there were bones in the small cave that is at the base of Keaouhou Bay. These burials need to take priority over a Bungalow Resort Development.

Kamehameha Schools has completely IGNORED this petition that OPPOSES their development resort in Keaouhou bay because when I presented this petition to them, Marissa Harman told me, "Those

signatures are just tourists" and there are many signatures that ARE tourists. The exact tourists that they want to rent too in their Bungalow Resort Development, and these people are signing a petition OPPOSING this resort development.

Also, there are thousands of signatures on this petition that are the Hawaiian people and locals, and I have sent Kamehameha Schools these signatures and the comments from this petition so they can read what Hawaiians, locals and tourists are saying about why they are OPPOSING their resort development and Kamehameha Schools has NOT read or considered that these comments have value in anyway.

There are over 6, 198 signatures as of Aug. 5<sup>th</sup> and these signatures and comments HAVE A RIGHT TO BE ACKNOWLEDGED AND THEY HAVE VALUE TO BE HEARD, THESE PEOPLE MATTER AND IT IS CULTURAL LAW THEY MUST BE ACKNOWLEDGED!

Here is the petition link: [https://www.change.org/p/save-keaouhou-bay-from-becoming-a-big-crowded-resort?utm\\_source=share\\_petition&utm\\_medium=custom\\_url&recruited\\_by\\_id=92a53560-1e91-11e5-b4ef-b94e90cedbdd](https://www.change.org/p/save-keaouhou-bay-from-becoming-a-big-crowded-resort?utm_source=share_petition&utm_medium=custom_url&recruited_by_id=92a53560-1e91-11e5-b4ef-b94e90cedbdd)

Please read and acknowledge this petition and the 6, 198 signatures (grows daily with more signatures and comments) on this petition and acknowledge the comments from the Hawaiian people, locals and tourists on this petition because I have coped ALL of comments as of today and added them below.

**Petition: Save Keaouhou Bay From Becoming a Big Crowded Resort**

Keaouhou Bay is historical sacred land. It's also a small commercial and quiet residential area, with a local canoe club that uses the bay daily, local volleyball groups that play there daily, families BBQ every weekend, hold funeral services, baptisms local kids enjoy swimming, and visitors enjoy paddle boarding and kayaking all the time without a crowd.

Read their information on this link [https://www.ksbe.edu/keaouhou\\_bay/](https://www.ksbe.edu/keaouhou_bay/)

It's possibly the last untouched historical area that has not been seriously developed and it has been a comfortable and quiet bay for locals and visitors alike for many years without a big resort crowd.

The beach is just over the size of one volleyball court that is there, with an even smaller park on the other side. It doesn't have a crowded feel and it's not big enough to become a resort area.

It is also the historical site of the birthplace of the Hawaiian people's King Kamehameha III. The area holds much history and is a very sacred area to everyone, especially the Hawaiian people.

Developers are considering building this area up and putting 150 Resort-style bungalows in this very historical, quiet, charming, and small commercial and residential area that many people have enjoyed as it is for many decades.

Not only is the area not big enough for a new resort, but there is also already a nice hotel at the point of this bay and Time Share homes right next to that.

Both of those work very well with this area and offer tourists a lot of fun places to stay without taking away from the land, its history, quietness, all the local activities, and the small commercial buildings that have been there for many years.

Updating the commercial builds that are already there would be great, and adding a nice cultural center there would be nice for everyone as well, not just tourists having bungalows.

It is important to protect small communities and special ecosystems from over development which puts too much strain on these areas.

- **Kathryn Matlock**2 days ago  
I live in Keauhou and want to have this beautiful part of Hawaii NOT ruined. Kamehameha Schools lets all of the hillside behind go. It is full of coquis as brush just waiting for a fire! Take care of the land you are already supposed to be RESPONSIBLE for!

- **Keri Johns**3 days ago  
The people who live here and pay taxes should come first.. Hawaiians should have homes first!

- **Judy MacDonald**3 days ago  
Keauhou Bay is a historical site that should be preserved for residents and visitors use.

- **Glonda Jennings**5 days ago  
I have been a visitor to this location and it is perfect just the way it is!

- **Ledias Szabo**5 days ago  
To keep Hawaii beautiful... and to protect our sea life.

- **Cyndi Wong**6 days ago  
Weina mai kākou... This sacred place is the birthplace of Kauikaouli, King Kamehameha III longest reigning monarch of Hawaii and should be preserved for generations to come. Please preserve Keauhou! E mālama i kēia āina kapu. Mahalo

To have a cultural center where people can learn more about the land, and the Hawaiian people can have a place of their own at King Kamehameha III's birthplace would be great.

Creating a walkway so the disabled can get from the Northside to the Southside would be another great add, but NOT building 150 new bungalows for a lot of people who don't even live here, who will then crowd the bay because the bay will be the focus for them staying there.

Now, besides putting another resort in this area, they want to open up the old road that has been beautifully overgrown with native plants and is located just above the canoe club and goes right through King Kamehameha III's birth site.

This will bring a lot of traffic right through this beautiful historical place where many locals hold family funerals, baptisms, birthday parties... It will overcrowd this very small special area that locals and visitors have been using for many decades, in many different loving ways.

Putting a road in could also increase the temperature there because of the pavement, and the traffic that will then pass through this beautiful, historical, sacred, and quiet area will be huge.

Trees shade this area right now very well and also help keep the erosion down by helping stop a lot of mud and debris from going into the ocean after big tropical storms that the island has sometimes. Without trees the bay could be extra muddy.

Plus, they want to add more commercial shops to Keauhou Bay, and Keauhou Shopping Center has a lot of empty For Lease stores available. To create more shops when there are shops empty and For Lease in Keauhou Shopping Center just above the bay, is not being sustainable and using what we already have.

Please HELP SAVE Keauhou Bay from becoming a big Resort area. It is one of the last historically untouched areas on the island that has not been overdeveloped and has been fully enjoyed completely by locals and visitors for many decades.

**Comments for the above petition:**  
**Reasons for signing**

See why other supporters are signing, why this petition is important to them, and share your reason for signing (this will mean a lot to the starter of the petition).

- **Lisa Lopez**1 day ago  
Please stop building and adding more to areas that need open space...it's too crowded already.

- **Elizabeth A Goehner**2 days ago  
Want to save Kealakua Bay from being destroyed by more new developments

Problem: Kamehameha Schools wants Keauhou Bay to become a Bungalow Resort. This is a VERY small bay. The Resort will have 105 rooms that means 200+ more people in this small area. This will have serious negative impacts on the bay like more pollution, traffic congestion, negatively affect the endanger species there and more!

**Ron Dias** 1 week ago

Ron Dias

**Kathleen Delorme** 1 week ago

Turning this into a resort will lead to over-crowding, congestion, pollution and environmental and social problems unneeded by the area to flourish and sustain life respectfully!

0

**Janet Berketa** 1 week ago

this project is very environmentally destructive, and bad for our climate.

0

Report

**Fran copp** 1 week ago

The Keauhou Bay should be protected as is bc the island needs to be protected for the recreation of the residents. It would be ruined if that many units for short term rentals were put in such a small place. It would pollute the environment and change the habitat for the animals that live there for the benefit of the golf course. In 10-20 years the place would be trashed. It's a small location not able to handle the traffic.

Enough is enough... Short term financial gain is not worth it. Environmental Impact: Pollution Risk: Developments pollute nearby waters both during and after construction. Endangered Species: Habitat for federally protected green sea turtles and endangered monk seals... Development will threaten these

species due to pollution and human disturbance. Golf Course Runoff: Golf course pesticides and fertilizers lead to harmful algae blooms, killing coral and marine life. The removal of the trees that act as a natural filter will allow golf course runoff to pollute the Bay. Increased Human Activity: More tourists and residents will increase noise, water, and light pollution, further disturbing marine life. Motor Vehicle Pollution: Increased traffic from the resort will lead to more oil and heavy metal runoff into the bay. Noise Pollution: Construction and increased human activity will disrupt marine life, particularly cetaceans. Stormwater Runoff: Development will increase impervious surfaces, leading to higher stormwater runoff and pollution. Sea Foam Toxins: Pollutants in runoff can lead to toxic sea foam, affecting air quality and marine health. Scientific Evidence: NOAA & Other Studies: Developments have always polluted coastal waters, harming marine ecosystems. Coral Reefs: Runoff from developments causes coral bleaching and death, as evidenced in Hawaii and other coastal areas. Plankton Decline: Pollutants from runoff kill plankton, crucial for manta rays' diet, leading to ecosystem collapse. Algae Blooms: Pollution runoff causes algae blooms, smothering coral reefs and killing marine life. Ecosystem Research: Studies show significant negative impacts on marine ecosystems from development-related runoff. Legal Concerns: Endangered Species Act: Development violates the act's mandate to conserve habitats for endangered species. Hawaii Conservation Laws: Local statutes require conservation of indigenous aquatic life and their ecosystems. Conservation Mandate: Federal and state laws emphasize conserving ecosystems that support endangered species. Infrastructure Issues: Resource Strain: Big Island already faces water shortages, limited landfill capacity, and power conservation needs. Inadequate Infrastructure: Existing infrastructure cannot support additional strain from a large resort development. Waste Management: Big Island's landfill is nearing capacity, and new developments will exacerbate waste issues. Water Crisis: Ongoing drought and water contamination issues make additional strain from new developments unsustainable. Power Conservation: Big Island is currently experiencing power shortages and rolling blackouts, and new developments will increase demand. Case Studies: Chesapeake Bay: Coastal developments cause significant harm due to runoff, a situation Keahou Bay could face. Hawaiian Islands: Existing research shows developments lead to severe degradation of coral reefs and marine life. Global Examples: Similar coastal developments worldwide have resulted in long-term environmental damage. Community Impact: Local Use: Keahou Bay is a popular spot for local activities such as boating, fishing, canoeing, paddle boarding, snorkeling, manta night dives, surfing, and swimming. Tourist Impact: Increased tourist activity will further degrade natural resources and disturb local wildlife. Economic Considerations: Tourism Dependence: Manta ray tours and other eco-tourism activities depend on a healthy marine environment. Local Economy: Damage to the bay's ecosystem will negatively affect local businesses reliant on marine tourism. Long-Term Costs: Environmental degradation will lead to long-term economic costs, outweighing short-term development gains. Conclusion: Long-Term Impact: Allowing the bungalow resort will permanently alter and likely destroy Keahou Bay's ecosystem. Conservation Priority: Emphasis on conserving the bay as a natural habitat for endangered species and marine life. Community Responsibility: Urge decision-makers to consider the long-term environmental, economic, and community impacts before approving the development

More land abuse..... GOP EVIL ROTTEN BASTARDS..... August 6, 2019 Dear Americans, THE PLAGUE Ring around the polls Republicans on their toes Much to disclose Really foes Time to expose.....(published Dec. 1992) I thank the Democrats for all they have done...over the 76 years of my life. We need to speak to

the people about Republican hindrance and how they have effected our countries progress and hurt most of our citizens. Starting with President Obama, we need to inform our citizens: how the Republicans refused to pass Democratic legislation, spell out HOW it affected the country and "we citizens." Every time a congressman or congresswomen speak, have at least 1 example. Unstable 45 should be exposed.. The robber barons have been the Democratic down fall.. They are the real enemies! EXPOSE Our Governments self-serving bureaucracy Corporate greed/lack of responsibility Peoples' prejudice/loss of integrity Organized religion, the medical community Scores more.. ripping-off humanity America! The land of the free!? We need to get coverage on local News channels.. Even the fox brainwashed, watch the local News. Save our Country from crimes against all Americans and the Constitution.. Continue to fight.. Sincerely DRL P.S. Especially the police racist policies.. Name the Democratic bills that are being pigeonholed!

0

Report

•

[Janice palma-glennie](#) 2 years ago

I've lived in or near keauhou for most of my 40 years in hawaii. The resources of the bay are limited, lovely, and cherished by local residents for all they provide for the health and welfare of we humans and the environment upon which we depend. Creating another exclusive enclave for the rich is far from what is needed to protect Hawaii. I nei from the ravages it's experienced in the past and is experiencing every minute by those who would exploit her.

1

Report

•

**Lisa Diaz**2 years ago

Learn about protecting historic Keahou Bay Ahupua'a ecosystem and our community. New resort development for tourism at the proposed large scale is totally inappropriate for Keahou Bay. Keahou Shopping Center has vacant space - they should not build more. Instead - make this area more accessible for our community, families and improve the small beach area making a park & managing trash. Allow the Hawaii County Transit Trolley to access the bus stop on Kaleiopapa Street so people can access the bay without a car would improve sustainability and reduce pollution. We need to protect this area for it's cultural, historical, and ecosystem - NOT over develop it for tourists and profit!

1

- 

Report

- 

[Desialee Cabalar](#)2 years ago

All of the local spots are being blocked off by gates or homes with gated communities. This is not fair the local who were born and raised here should not be locked out of their own land just because greed and money. We have something the rich want until they fully pollute and destroy it and then they no longer want it. Hawaii/ Big Island is known to a lot of tourist as the relaxing island. I do not have a problem with tourist but when you buy here on this island as a vacation home now your crowding the island so eventually it will be like Oahu where no one really thinks of it as a vacation spot. Just come stay the week and go home. We have many many hotels and condos that can't be full all year round. Support those places that are already built.

Save the historical areas before it's gone.  
**Report**
- [GinnyJo Minamishin](#)2 years ago  
This is King Kamehameha the third birth place and hold significant historical and sacred mana to the island of Hawaii. There is no more need to take and replace what is already there !!! This piece of Hawaii, that still is used by keahou canoe club and an area for little family gathering, such as Picnics and paddle boarding. Not to mention the boat ramp for fisherman and fishing grounds around the area. This place is well taken care of by the locals of the big island and hold significant Hawaiian history!!! We don't need any more hotels, condos, homes on this beach front property. It is a respectable play ground for our children and adults as well from land to water. Please save hawaii and our sacred land and history from being over built for greed and control.

Keauhou does not need and cannot handle more condos or resorts. No no to more development on our already fragile over crowded coast.

Here is another petition that has 444 signatures (grows daily with more signatures and comments) as of Aug. 5<sup>th</sup> and it speaks about Big Island resources. It proves that the Big Island DOES NOT have the resources for another Big Resort Development.

Petition Link: <https://www.change.org/p/help-prioritize-big-island-developments-to-keep-island-resources-safe-for-all>

**Petition: Help Prioritize Big Island Developments to Keep Island's Resources Safe for ALL**

We stand to keep The Big Island in a place where the island's resources and infrastructure are safe for the entire population and visitors.

We stand and say homes for locals should MATTER more than mass vacation rentals.

If a home has multiple dwellings, we ask that one could be a vacation rental and the rest should be housing for locals. Local housing needs to come before vacation rentals.

This is an island and it would help the island to have a building stipulation in where the developer has to sell a high percentage to Hawaiians, and locals who have lived here for many years, to help keep the increase in population at a reasonable rate for the island's resources and infrastructure.

We ask that you read all articles below about Big Island resources and learn that the island's resources are limited and are already being affected negatively.

All the development that has already been built, and the many years of new development that has been approved for the future, will affect the island's resources, and we ask that you STOP and look at Big Island resource to make sure that the island has the needed resources for all the development that has been built and the approved development that will be built in the future, before approving even more developments, for the safety of all who live here and visit here.

We stand and ask that you stop before approving more and more developments and learn what is happening to the island's resources and what will happen to the island's resources after the years of development that is already scheduled for the future.

Because the island's resources are being severely impacted as of today.

What will future development do to the island's resources if there are already resource issues happening today?

Please, learn how to take island resources seriously because you have approved many more years of development to come and today the island's resources are having issues.

What will the future look like if you keep approving more developments and don't start look and taking the island's resources seriously?

Read the articles below to learn what is happening to Big Island Resources

1) Hawaii Deals with Burgeoning Waste Management Problem  
As landfills face closure and waste-to-energy projects stall, various counties in Hawaii are dealing with waste management issues. Waste360 Staff January 10, 2020

"Hawaii Island is in the enviable position of having a landfill with anywhere from 20 to 100 years of capacity left to take in trash. But the island still wrestles with significant issues like plastic products that

are no longer being recycled." <https://www.waste360.com/landfill/hawaii-deals-with-burgeoning-waste-management-problem>

2) "Big Island Now readers seem to agree that there's likely no single solution for slowing down the timeline of the West Hawai'i Sanitary Landfill reaching capacity.

The West Hawai'i Sanitary Landfill, the only remaining landfill on the Big Island, is forecast to reach capacity within the next 20 to 25 years." <https://bigislandnow.com/2023/09/17/big-island-now-poll-no-27-results-more-than-one-solution-needed-to-help-extend-life-of-west-hawaii-landfill/>

3) Hawaii Island Has Decades of Landfill Space But Still Faces Challenges In Dealing With Its Waste  
Hawai'i Public Radio Published January 9, 2020 at 5:00 AM HST

"Hawaii Island is in the enviable position of having a landfill with anywhere from 20 to 100 years of capacity left to take in trash. But the island still wrestles with significant issues like plastic products that are no longer being recycled.

For the past four decades, trash from the east side of Hawaii Island has been dumped in a landfill outside of Hilo. But now trash from all parts of the island is being trucked to a facility north of Kona." <https://www.hawaiipublicradio.org/local-news/2020-01-09/hawaii-island-has-decades-of-landfill-space-but-still-faces-challenges-in-dealing-with-its-waste>

4) "What happens to Hawaii Island's trash and recyclables? BY MICHELLE BRODER VANDYKE HAWAII ISLAND PUBLISHED 11:30 AM ET DEC. 17, 2022 By Michelle Broder Vandyke Hawaii Island PUBLISHED 11:30 AM ET Dec. 17 the future of the landfill

The West Hawai'i Landfill will be full in about 20 years. Finding a location for the next landfill is a concern, according to the DEM officials. They said it will be challenging to find a location for a future landfill because of stringent regulations and costs related to planning, environmental regulations, design and construction that will take many years to complete. It will also require community support." <https://spectrumlocalnews.com/hi/hawaii/news/2022/12/15/what-happens-to-hawaii-island-s-trash-and-recyclables->

5) "The overwhelming plastic waste Hawaii visitors leave behind  
By Natasha Bourlin Aug 24, 2023

Hawaii saw more than 9 million visitors last year. Those tourists' first stops are often big-box and convenience stores, where they buy bottled water, plastic sand toys, single-use bodyboards, noodles, floaties and inner tubes for their trips." <https://www.sfgate.com/hawaii/article/plastic-waste-hawaii-visitors-leave-behind-18286076.php>

6) "A county commission drafts ordinance aiming to ban recyclables at West Hawai'i landfill By Megan Moseley September 6, 2023 · 1:00 AM HST  
\* Updated September 6, 2023 · 2:02 PM

Hawai'i County's Environmental Management Commission is developing an ordinance that aims to prohibit the amount of recyclable materials ending up in the island's only working landfill." <https://bigislandnow.com/2023/09/06/new-draft-ordinance-aims-to-ban-recyclables-at-west-hawaii-landfill/>

7) "Hawai'i County issues mandatory 25% water restriction for North Kona August 7, 2023 · 5:21 PM HST

A mandatory 25% water restriction has been issued for various communities in North Kona due to the failure of the Honokōhau Deepwell over the weekend." <https://bigislandnow.com/2023/08/07/hawaii-county-issues-mandatory-25-water-restriction-for-north-kona/>

8) "Hawai'i Water Supply Closely Monitored As Severe Drought Continues by Big Island Video Newson Nov 6, 2023 at 3:28 pm STORY SUMMARY

HAWAII COUNTY - Officials say a special focus will be placed on the South Kohala Water System, which is more susceptible to drought conditions." <https://www.bigislandvideonews.com/2023/11/06/water-supply-closely-monitored-as-hawaii-ca-bbi-under-severe-drought/>

9) "Big Island Concerns About Water Quality Prompt A Lawsuit Over A Kona Sewage Plant Kealakehe sewage plant discharges more than 1 million gallons of wastewater into a lava pit near the ocean. By Paula Dobbyn / February 6, 2024

Settlement talks are scheduled in an environmental lawsuit involving a county-operated Big Island sewage plant in Kona." <https://www.civilbeat.org/2024/02/concerns-about-water-quality-prompt-a-lawsuit-over-a-kona-sewage-plant/>

10) "Researchers find sewage from an oceanfront Big Island community reaches nearshore waters Hawai'i Public Radio | By Russell Subiono, Sophia McCullough Published December 20, 2021 at 5:56 PM HST

There are nearly 50,000 cesspools on the Big Island, with tens of thousands posing a risk to water resources, according to the Hawai'i Department of Health." <https://www.hawaiipublicradio.org/the-conversation/2021-12-20/researchers-find-sewage-from-an-oceanfront-big-island-community-reaches-nearshore-waters>

11) "Kona coast faces stark wastewater tradeoffs Current situation

There are approximately 88,000 cesspools across the state, releasing more than 200,000 cubic meters of wastewater per day to the environment. <https://www.hawaii.edu/news/2021/09/10/kona-stark-wastewater-tradeoffs/>

We ask that you start figuring out how this can never happen again? These are the kind of issues that need to be resolved before you approve more development.

12) "BIG ISLAND NEWS HECO restores power after initiating emergency outages on Big Island by: Elizabeth 'Ufi' Posted: Jan 30, 2024 / 09:43 AM HST Updated: Jan 30, 2024 / 04:15 PM HST

An unexpected loss of several large Hawai'i Electric generators left some residents on Big Island without power for parts of the morning on Tuesday, Jan. 30." <https://www.khon2.com/big-island-news/heco-initiates-30-min-rolling-outages-after-loss-of-generators/>

\* Updated February 14, 2024 · 4:21 PM

The emergency outages are being initiated in various areas around the entire island to prevent loss of power to an even greater number of customers. The timing and extent of the outages will depend on the amount of demand on the system and the availability of

generators." <https://bigislandnow.com/2024/02/13/hawaii-island-customers-asked-to-reduce-electricity-use/>

14) "LOCAL NEWS

HECO issues rolling power outages around Big Island by: Emily Cervantes Posted: Feb 13, 2024 / 05:11 PM HST Updated: Feb 13, 2024 / 09:12 PM HST Hawaiian Electric initiated rolling outages for Big Island after several large generators became unavailable and reduced output Tuesday night."

<https://www.khon2.com/local-news/heco-releases-conservation-alert-for-big-island/>

15) "Here's how power outages can have repercussions for Hawai'i's water supply Hawai'i Public Radio | By Savannah Harriman-Pote Published February 13, 2024 at 10:59 AM HST

Water departments on O'ahu and Hawai'i Island have advised customers to conserve water ahead of possible storm-related power outages this month.

But what does the power grid have to do with the water supply?

It is impossible to separate Hawai'i's power system from its water system, said Kawika Uyehara, deputy director of Hawai'i County's Department of Water Supply." <https://www.hawaiipublicradio.org/local-news/2024-02-13/residents-on-hawaii-island-and-oahu-are-asked-to-conserve-water-amid-power-outages>

16) U.S. Hawaii is "on the verge of a greater catastrophe," locals say, as water crisis continues By Li Cohen

Updated on: April 11, 2024 / 8:23 AM EDT / CBS News

In Hawaii, one of the most important sayings is *ola i ka wai*, "water is life" — a phrase that not only sums up what it means to exist on an island, but what it means to live, period. But now, one of the largest of the island chain's land masses is facing a triple threat to its sole freshwater source, and if it isn't addressed soon, one community member says, "we're in deep trouble."

<https://www.cbsnews.com/news/hawaii-water-crisis-climate-change/>

17) NewsHawai'i County issues mandatory 25% water restriction for North Kona August 7, 2023 · 5:21 PM HS

A mandatory 25% water restriction has been issued for various communities in North Kona due to the failure of the Honokōhau Deepwell over the weekend.

<https://bigislandnow.com/2023/08/07/hawaii-county-issues-mandatory-25-water-restriction-for-north-kona/>

18) Hawai'i Water Supply Closely Monitored As Severe Drought Continues

by Big Island Video News on Nov 6, 2023 at 3:28 pm

(BIVN) – With an ongoing drought on the island of Hawai'i, the Hawai'i County Department of Water Supply says it is closely monitoring its 23 public water systems, with a "special focus" placed on the South Kohala Water System.

<https://www.bigislandvideonews.com/2023/11/06/water-supply-closely-monitored-as-hawai%CA%BBi-under-severe-drought/>

This is a map of Power Outages on the Big Island. This map wouldn't have been created if Power Outages were not a problem. <https://www.hawaiianelectric.com/safety-and-outages/power-outages/hawaii-island-outage-map>

Please, give Tax Breaks to all homes that provide solar and/or wind turbine to there homes to help with power issues on the island.

20) "Hawaiian Electric is reporting that several large generators on the Big Island are experiencing a range of issues and may lead to the need for rolling outages if supply does not meet demand."

[https://www.reddit.com/r/BigIsland/comments/1bnuar3/hawaiian\\_electric\\_is\\_reporting\\_that\\_serious\\_large/?rtd=52660](https://www.reddit.com/r/BigIsland/comments/1bnuar3/hawaiian_electric_is_reporting_that_serious_large/?rtd=52660)

21) "NewsHawaiian Electric asking Big Island customers to conserve power due to down generators March 25, 2024 · 11:49 AM HST

According to the utility company, this is an usual situation as the large generators are experiencing mechanical problems resulting in a reduced output. The largest generator, an independent power producer that sells electricity to Hawaiian Electric, is offline with significant mechanical issues.

The plant generates 60 megawatts or nearly one-third of the typical peak demand of 180 megawatts on the island."

<https://bigislandnow.com/2024/03/25/hawaiian-electric-asking-big-island-customers-to-conserve-power-due-to-down-generators/>

The articles above show that Big Island resources are currently being negatively affected from the development on island, and there are years of new development that has already been approved, and even more development is still being approved before learning if the island's resources can handle more development.

This needs to STOP, and island resources need to be addressed and taken seriously.

We stand to say LEARN WHAT IS HAPPENING TO THE ISLAND'S RESOURCES before approving more development because this is an island, and if there is not enough resources for the developments that are here now, how will there be enough resources for the developments you have approved for the future?

If the island doesn't have enough resources for the developments as of now, there won't be enough resources for developments that have not been approved as of yet, and we ask that you say NO to ALL future developments until you FULLY understand that the island's resources can accommodate future developments.

We stand and say that Big Island resources needs to be FULLY considered before any more new development is approved for the safety of ALL who live here and visit.

There are many, many developments that have been approved for years to come and we stand and say we need to learn how the island's resources will be affected when these developments are finished before you keep approving more and more developments!

We stand and say NO DEVELOPING ON BURIAL GROUND. The history of the island needs to be preserved and the burial grounds need to be respected at all costs.

We stand and ask to make it mandatory for vacation rentals and ALL resorts and hotels to provide drinking water machines to their guests to help stop all the empty water bottle waste on the island.

We stand and ask to make it mandatory for vacation rentals and ALL resorts and hotels to provide shampoo, conditioner, body wash in bulk containers rather than continuously using small, different containers for every new guest, to help stop all the empty bottles waste in the limited landfill.

We ask for an Environmental Impact Report to be done to learn what is safe for Big Island resources with future developments and the population that live here now and will move here in the future.

How can we be sure to have enough landfill, water, sewer, power...for everyone? This needs to be learned.

Also, there are mostly only 2 lanes throughout the entire Big Island and some places where cars cannot pull over if an ambulance needs to get by.

The traffic has seriously increased and if the island's population keeps increasing there will be hours and hours of constant serious traffic in the near future, how will ambulances get by in emergencies?

What if there is a tsunami and people need to get to higher ground? Will they be able to get to higher ground in a safe time without the infrastructure to accommodate the increase in population?

We stand and ask that you start increasing the infrastructure to accommodate the traffic before you approve more developments.

The island's small road infrastructure isn't made for a high population and that needs to be taken seriously.

We ask for another hospital to be built, as well as a trauma center and dive chamber to be put on the island to accommodate all types of injuries because of all the years of new future development that you have already approved, these buildings will be needed.

Alii Drive is only two lanes and right now there are three huge developments in progress, and over 10 more acres of land on this street has just been approved for even more development on this street.

Did you research to learn how this one road can handle more development before your approval?

Did you research and check on the island's resources before you approved this and many other developments all over the Big Island?

We stand to say, stop development to learn how roads will handle all the new homes that you have already approved for years to come before more development is approved because right now there is serious traffic issues all over Big Island?

We stand to say what are you doing about the growth in homeless on the island? We stand and ask that this be taken seriously.

What about parking?

All of the Big Island towns have parking issues, especially during high tourist seasons and especially Ironman.

The land at the bottom of Henery St. has been for sale for a new resort for years and the town needs parking. Would it be possible to use that land for town parking instead of another resort?

With more subdivisions comes more cars and the island towns are already overcrowded with parking issues. How will parking improve with more houses? Is the Hawaii Planning Department considering the parking issues?

There is vacant land next to Lavern's in Kona town, can you build a parking lot there?

We stand and ask for you to find a way to improve the parking issues before approving more development because parking and traffic are increasing.

There are over 50,000 cesspools on The Big Island. We stand to say that all cesspools be upgraded or converted into a toilet such as the one below ASAP, to stop waste water pollutin in the ocean around the island.

Please, give Tax breaks to all those who change from a cesspool to a toilet such as the Cinderella Cinder <https://cinderellaeco.com/en-us> this does not use water and is a way to get rid of cesspools so they stop polluting the ocean that we all swim in today.

If you agree with this info, please sign this petition.

There are many new homes that have been approved for future development and are currently being built right now and today, the island has many resources issues before these developments are complete.

This petition states that we strongly OPPOSE approving new development applications because the island's resources are currently having serious issues, as you can see from the articles above, and many more homes have already been approved for future years of developments.

You need to learn how island resources will be affected by these years of future developments before approving more developments.

There are many big black and white signs on vacant lands that have development application information and Tax Map Key numbers for new developments and they are all over the island. What will the island become if you don't start taking island resources seriously?

The safety of all our lives is in your hands. Please, take that seriously!

Thank you for your support!

**Please read these comments because these comments and signatures MATTER AND DESERVE TO BE ACKNOWLEDGED BECAUSE THEY ARE THE HAWAIIAN PEOPLE, LOCALS AND TOURISTS!**

**Reasons for signing the above petition**

See why other supporters are signing, why this petition is important to them, and share your reason for signing (this will mean a lot to the starter of the petition).

For me it is so important to protect the nature and the biodiversity of Hawaii. There is enough tourism and enough accommodations for tourists and the priority should be to preserve and protect the marine life and environment, not to make money! Animals were there first and they must be respected and preserved.

0

• [Jennifer Lund](#) 2 weeks ago

Environmental Impact: Pollution Risk; Developments pollute nearby waters both during and after construction. Endangered Species: Habitat for federally protected green sea turtles and endangered monk seals. Development will threaten these species due to pollution and human disturbance. Golf Course Runoff: Golf course pesticides and fertilizers lead to harmful algae blooms, killing coral and marine life. The removal of the trees that act as a natural filter will allow golf course runoff to pollute the Bay. Increased Human Activity: More tourists and residents will increase noise, water, and light pollution, further disturbing marine life. Motor Vehicle Pollution: Increased traffic from the resort will lead to more oil and heavy metal runoff into the bay. Noise Pollution: Construction and increased human activity will disrupt marine life, particularly cetaceans. Stormwater Runoff: Development will increase impervious surfaces, leading to higher stormwater runoff and pollution. Sea Foam Toxins: Pollutants in runoff can lead to toxic sea foam, affecting air quality and marine health. Scientific Evidence: NOAA & Other Studies: Developments have always polluted coastal waters, harming marine ecosystems. Coral Reefs: Runoff from developments causes coral bleaching and death, as evidenced in Hawaii and other coastal areas. Plankton Decline: Pollutants from runoff kill plankton, crucial for manta rays' diet, leading to ecosystem collapse. Algae Blooms: Pollution runoff causes algae blooms, smothering coral reefs and

killing marine life. Ecosystem Research: Studies show significant negative impacts on marine ecosystems from development-related runoff. Legal Concerns: Endangered Species Act: Development violates the act's mandate to conserve habitats for endangered species. Hawaii Conservation Laws: Local statutes require conservation of indigenous aquatic life and their ecosystems. Conservation Mandate: Federal and state laws emphasize conserving ecosystems that support endangered species. Infrastructure Issues: Resource Strain: Big Island already faces water shortages, limited landfill capacity, and power conservation needs. Inadequate Infrastructure: Existing infrastructure cannot support additional strain from a large resort development. Waste Management: Big Island's landfill is nearing capacity, and new developments will exacerbate waste issues. Water Crisis: Ongoing drought and water contamination issues make additional strain from new developments unsustainable. Power Conservation: Big Island is currently experiencing power shortages and rolling blackouts, and new developments will increase demand. Case Studies: Chesapeake Bay: Coastal developments cause significant harm due to runoff, a situation Keauhou Bay could face. Hawaiian Islands: Existing research shows developments lead to severe degradation of coral reefs and marine life. Global Examples: Similar coastal developments worldwide have resulted in long-term environmental damage. Community Impact: Local Use: Keauhou Bay is a popular spot for local activities such as boating, fishing, canoeing, paddle boarding, snorkeling, manta night dives, surfing, and swimming. Tourist Impact: Increased tourist activity will further degrade natural resources and disturb local wildlife. Economic Considerations: Tourism Dependence: Manta ray tours and other eco-tourism activities depend on a healthy marine environment. Local Economy: Damage to the bay's ecosystem will negatively affect local businesses reliant on marine tourism. Long-Term Costs: Environmental degradation will lead to long-term economic costs, outweighing short-term development gains. Conclusion: Long-Term Impact: Allowing the bungalow resort will permanently alter and likely destroy Keauhou Bay's ecosystem. Conservation Priority: Emphasis on conserving the bay as a natural habitat for endangered species and marine life. Community Responsibility: Urge decision-makers to consider the long-term environmental, economic, and community impacts before approving the development

**Alexis Stubbs** 2 weeks ago

I'm not opposed to development, but I AM adamantly opposed to irresponsible development that neglects community input, resources, and access. I strongly opposed development that exploits what's left of our natural resources and Shorelines for the sake of profit. Too much already. Enough is enough. No more.

Simply put, the traffic on Kamehameha III Road, should this project be completed, will be similar to that fronting Hulihe'e Palace and the pier. Tourists clamoring to swim and recreate on the bay, ride on the snorkel and fishing boats, and passing through to the Outrigger Keauhou Bay Hotel will irreversibly and negatively affect the peaceful nature of this gem of an ocean masterpiece. I am firmly against the construction of the through road from Ali'i Drive to the Hotel.

Kamehameha Schools claims they need money and that is why they want to develop Keauhou Bay, but the truth is, they have lands that are ALREADY DEVELOPED that they hardly use, and these lands CAN BE USED TO MAKE MONEY. THEY DON'T NEED TO DEVELOP KEAUHOU BAY!

Please watch this video

<https://www.youtube.com/watch?si=7B8BIBBQd4pxaWek&v=1UtiIWeyLA&feature=youtu.be>

For example, Kahalu'u Beach Park they only use for their Private Events and this land could bring in money through parking fees, day pass use, wedding and birthday function fees, farmers market fees, concert fees to benefit the schools... there are endless amount of ways to make money from these already developed lands.

Kamehameha Schools also has Hale Laau that hasn't been used for years and it is fully developed with a parking lot and structures already on the land. They could use this land to school kids, house Hawaiian elders that need a home, hold weddings and events that they charge fees... but they have just let it sit there for years doing nothing.

Those are only two lands that I know of that are not being used and that are already developed. How many other properties do they have that are not being used and that are already developed?

Who has so much land that they can develop it and let it just sit there doing nothing?

Who has so much land that they can develop a beautiful park and ONLY use it for THEIR PERSONAL AND PRIVATE EVENTS?

Who has so much land that they don't want to offer their already developed lands to make money but rather want to develop a historical bay that is the birthplace of King Kamehameha III and their Bungalow Resort development will KILL the entire ecosystem that is there, by causing SCIENTIFICALLY PROVEN POLLUTION that WILL go into the bay because that is what has been reported happens when development is near water, who is happy to pollute a historical bay, rather than use their already developed lands that are just sitting there not being fully used to make money?

**Kamehameha Schools! SHAMEFUL!!**

The Princess's Will States "**A good education**" was to be the trustees (Kamehameha Schools) "**first and chiefly**" concern. This site shows Hawai'i is 49th with a D+ Overall rating <https://www.alectreportcard.org/state/> and Hawai'i has been on the low end of national ranking for years and is the ONLY state in the country that was given Endowed Land for the Hawaiian people to be "**first and chiefly**" educated.

In The Last Will and Testament of Bernice Pauahi Bishop, Mr. Bishop states, "The improvement of young Hawaiians was an object and desire constantly near to the heart of the founder of the Schools (Princess Bernice Pauahi Bishop)... these schools were provided for, in which Hawaiians have the preference, and which she hoped they would value and take the advantage of as fully as possible..." <https://kaiwikilooumoku.ksbe.edu/article/heritage-center-the-last-will-and-testament-of-bernice-pauahi-bishop>

"The Princess's Will distinctly states that: "To devote a portion of each year's income to the support and education of orphans, and others in indigent circumstances, **GIVING THE PREFERENCE TO PURE OR PART-ABORIGINAL BLOOD**." <https://www.moolelo.com/ks-willbetter2.html>

Frederick Smith 2 years ago

[No new development until we update public infrastructure like roads and sewage. It's amazing how far out of control this has gotten already.](#)

Kamehameha Schools are the trustees, and they are legally obligated NOT ONLY BY CULTURAL LAW but also, they are LEGALLY OBLIGATED to do what is BEST for the land and their BENEFICIARIES. THE HAWAIIAN PEOPLE ARE THEIR BENEFICIARIES and thousands of their BENEFICIARIES are OPPOSING this Bungalow Resort Development and these people have a RIGHT TO BE HEARD AND ACKNOWLEDGED BY LAW!

Princess Bernice Pauahi Bishop's Will states, under 4th paragraph down from Thirteen, "I desire my trustees to provide **first and chiefly a good education** in the common English branches, and also instruction in morals and in such useful knowledge as may tend to make good and industrious men and women; and I desire instruction in the higher branches to be subsidiary to the foregoing objects.

**For the purposes aforesaid** I grant unto my said trustees full power to lease or sell any portion of my real estate...not to exceed however one-half of the fund which may come into their hands, in the purchase of suitable premises, the erection of school buildings... expend the annual income in the maintenance of said schools..." <https://www.ksbe.edu/about-us/about-pauahi/will>

Kamehameha Schools is to use the land specifically, "**For the purposes aforesaid**" and that would be education for the Hawaiian people and NOT a DEVELOP a Bungalow Resort for tourists and offer tourists an education in Hawaiian culture. This is stated clearly in Princess Bernice Pauahi Bishop's WILL.

Princess Pauahi Bishop's Will states that the trustees are to use the Endowed land's money to educate Hawaiian people because they are the Princess's Beneficiaries. "I **desire my trustees to provide first and chiefly a good education...** For the purposes aforesaid I grant unto my said trustees full power to lease or sell..." **THIS STATES THE LAND IS TO BE USED TO EDUCATE THE HAWAIIAN PEOPLE, THE PRINCESS'S BENEFICIARIES.**

Supporting and educating these kids is why Princess Bernice Pauahi Bishop created Kamehameha Schools and it states this in her Will that is what was to be the trustees (managers) "First and Chiefly" concerns. It's why they received the Endowed land because the Hawaiian people are the beneficiaries of this land in the Will.

Marissa Harman with Kamehameha Schools told me they plan to give "Full Access" to ALL their Endowed Hawaiian lands to the high-end tourist guests who stay in their bungalow resort they want to develop in Keaouhou Bay, to **educate** these tourists in Hawaiian culture because it's the **perk** they want to offer tourists for staying in their bungalow resort.

They want to educate tourists when **their Beneficiaries** are not receiving a **good education as per the Princess's Will.**

Kamehameha Schools Endowment was valued at 14.7 Billion in 2021 per this [Google Financial](#), and the reason they say they want to develop in Keaouhou Bay is because they **NEED** money and if they **NEED** money, then they **NEED** to start looking at who is managing their money because they have more land than anyone in the world has and they have already developed land than can use starting today to make money!

Princess Bernice Pauahi Bishop wanted education for her people to be "First and Chiefly" the trustees (Kamehameha Schools) responsibility. This is stated very clearly in her Will because she named that the Hawaiian people's were her beneficiaries and they were to receive "a good education" **through the lands she ENDOWED to Kamehameha Schools to use the money to support and educate her beneficiaries, the Hawaiian people's, and NOT educate tourists in a bungalow resort that doesn't need to be developed because there are developed lands they currently have that they CAN use to make money.**

Please reject this EIS because Kamehameha Schools have lands, they can use to make money with starting today if they wanted, because these lands are already developed.

Please reject this EIS because petition **Save Keaouhou Bay From Becoming a Big Crowded Resort** has thousands of Hawaiians and locals who are **OPPOSING** this development. These people **DO NOT WANT THIS DEVELOPMENT AND THEIR VOICES MATTER AND MUST BE ACKNOWLEDGED!**

Please reject this EIS because it is **SCINETIFICALLY PROVEN DEVELOPMENTS POLLUTE NEARBY WATERS and Keaouhou Bay WILL BE POLLUTED** for years to come and the Hawaiian people won't be able to fish, spear fishing, swim, free dive, snorkel, dive... in Keaouhou Bay because it **WILL BE POLLUTED** and in the Cultural Law it states that cultural practices **MUST BE CONSIDERED!**  
<https://kohanaikiohana.org/legal-victories>

Please reject this EIS because Kapuna Kumu Lily Kong states there are burial grounds there on the land Kamehameha Schools wants to clear, and other Hawaiian's have also stated there are bones in the caves there on this land.

Please reject this EIS for cultural reasons as it is stated in many of the comments from both petitions above.

Please reject this EIS because Kamehameha Schools has **NOT ACKNOWLEDGED OR ASKED** thousands of Hawaiians, or Hawaiian Descendants from Keaouhou Bay how they feel about developing this land, Keaouhou Bay. They have asked **ONLY 4 families** (who probably work for them) on an island that has thousands of Hawaiian people and I have presented video testimony from Kupuna Kumu Lily Kong who is a Keaouhou Bay descendant and her and her family **OPPOSE DEVELOPMENT!**  
<https://vimeo.com/994680462>

Please reject this EIS because there are over 6,198 signatures on petition **Save Keaouhou Bay From Becoming a Big Crowded Resort** and 444 signatures on petition **Help Prioritize Big Island Developments to Keep Island's Resources Safe for ALL** as of Aug. 5<sup>th</sup> and **ALL OF THESE SIGNATURES COMPLETELY OPPOSE** this development and many of these voices are the voices of Princess Bernice Pauahi Bishop's Beneficiaries who are the Hawaiian people and they are stating **DO NOT DEVELOP KEAOUHOU BAY!**

[https://www.change.org/p/save-keaouhou-bay-from-becoming-a-big-crowded-resort?utm\\_source=share\\_petition&utm\\_medium=custom\\_url&recruited\\_by\\_id=92a53560-1e91-11e5-b48f-b94e90cebdbd](https://www.change.org/p/save-keaouhou-bay-from-becoming-a-big-crowded-resort?utm_source=share_petition&utm_medium=custom_url&recruited_by_id=92a53560-1e91-11e5-b48f-b94e90cebdbd)

<https://www.change.org/p/help-prioritize-big-island-developments-to-keep-island-s-resources-safe-for-all>

Please reject this EIS because under Princess Bernice Pauahi Bishop's Will it states Kamehameha Schools are her trustees and they have a **"fiduciary duty"** to do what is **best for THEIR BENEFICIARIES (the Hawaiian people's) and a Bungalow Resort is BEST FOR TOURISTS NOT THE HAWAIIAN PEOPLE!**

Please reject this EIS because the Big Island **DOES NOT HAVE THE RESOURCES TO PROVIDE FOR ANOTHER BIG RESORT ON ISLAND** and there are many comments that agree with this fact because of the factual reported articles in the **Help Prioritize Big Island Developments to Keep Island's Resources Safe for ALL** petition <https://www.change.org/p/help-prioritize-big-island-developments-to-keep-island-s-resources-safe-for-all>

Thank you for listening to **ALL OUR VOICES.**

Sincerely,

Rebecca Melendez

Aloha e Rebecca,

Thank you for your comments concerning the Keahou Bay Management Plan, Draft Environmental Impact Statement. Your comments have been received and administratively recorded.

Comments received during the 45-day public comment period will be reproduced in the Final Environmental Impact Statement, and substantive comments addressed.

Since you also provided a copy to the County of Hawai'i and our planning consultant, G70, we will not be forwarding them a duplicate copy.

We appreciate your involvement and contribution to the environmental review process. Your input is invaluable in helping us develop a management plan that reflects the needs and concerns of our community.

Thank you once again for your engagement and commitment to the future of Keahou Bay.

Mahalo,

The Keahou Bay Project Team

---

**CAUTION: This email is from an outside sender. Do not click on links or open attachments unless you recognize the sender and know the content is safe.**

Dear County of Hawai'i Planning,  
Please, Do NOT risk polluting the water in Keahou Bay by allowing Kamehameha Shoals to develop their bungalow project, because it is proven that developments will ALWAYS have rain runoff that will pollute the bay constantly during development and after.  
Please, read the Scientific articles below that prove that development ALWAYS pollutes the water in every coastal developed area.  
The coral all over Hawai'i has had extremely high mortality rates, due to developments near ocean areas throughout the years, and development in Keahou Bay will be devastating to the coral, reef

fish, and all Aquatic life there, and even the Manta Rays that go there every night to eat zooplankton from the Manta Ray tours at night, and eat it during the day as well because they need to eat 5 times their body weight in zooplankton daily.  
If you allow this bay to be development you will be allowing all types of marine life to die and there is NO WAY to stop this from happening because runoff water from development can't be stopped. It is what happens in ALL coastal developments.

Please, read these articles that Scientifically Prove this point:  
Reason #1 a Resort Development WILL SeverelyPollute Keahou Bay  
Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Coral Bleaching is occurring more frequently in Hawai'i. Across the Hawaiian Archipelago, coral bleaching has increased in frequency and severity since 1996. The last major bleaching event in 2014-2015 had catastrophic impacts state-wide..."

This was the third major bleaching episode in Hawai'i over the last 6 years. The frequency of these events is unprecedented in the archipelago. NOAA scientists and partners have determined that the key drivers of the bleaching were environmental factors (such as heat stress, depth, and surface light) and human impacts (sewage effluent and urban run-off). "<https://www.fisheries.noaa.gov/feature-story/cautionary-tale-2019-coral-bleaching-event-hawaii#:~:text=Coral%20Bleaching%20is%20occurring%20more,had%20catastrophic%20impacts%20state%20wide>."

This article is by the Coral Reef Alliance here in Hawai'i, "An ecosystem under threat  
Hawai'i's reefs face major global and local threats including climate change, overfishing, and sediment and nutrient pollution caused by sewage and stormwater runoff..."

When it rains, flash floods carry stormwater and large amounts of sediment downstream to the ocean. Just offshore, once-thriving coral reefs are now struggling to survive." "<https://coral.org/en/where-we-work/hawaiian-islands#:~:text=Hawai%CA%BBi's%20reefs%20face%20major%20global,into%20Hawai%CA%BBi's%20waterways%20every%20day>."

Reason #2 a Resort Development WILL Kill Marine Life  
The manta rays go to Keahou Bay every night to eat zooplankton and if you allow this development that WILL have runoff water, you WILL be causing zooplankton to be seriously affected because as this article by MarinBIO states, "Zooplankton are also sensitive to their environment and like phytoplankton—a change in zooplankton concentration can indicate a subtle environmental change. Zooplankton are highly responsive to nutrient levels, temperatures, pollution, food that is not nutritious, levels of light, and increases in predation. As well as providing an essential link in the marine food chain (which is an understatement), the diversity of species, amount of biomass and abundance of zooplankton communities can be used to determine the health of an ecosystem... Zooplankton are also affected by levels of pH, heavy metals, calcium, and aluminum. Nutrients like nitrogen and phosphorus will affect the prey of zooplankton (like algae, protozoa and bacteria), indirectly affecting zooplankton survival. Scientists are still putting together pieces of the zooplankton puzzle. Some questions include how nutrient levels found in algae can influence the growth and behavior of zooplankton. Another question important to marine and human life is how toxins and pollution will affect this crucial link in the food chain"<https://www.marinebio.org/creatures/zooplankton/#:~:text=Zooplankton%20are%20also%20sensitive%20to,light%2C%20and%20increases%20in%20predation>.

Here is a research article by Environmental Research Laboratory, United States Environmental Protection Agency that discusses, "Toxic Effects of Pollutants on Plankton There are four main sources of aquatic pollution: industrial wastes, municipal wastes, agricultural run-off, and accidental spillage. Non-point sources, such as automobile exhausts, add appreciable amounts of pollutants to air that may enter aquatic systems in rainfall or dry fall-out. These sources add pesticides, heavy metals, oil, petroleum products, and a large number of organic and inorganic compounds to water. Lakesand oceansserveasinksfor many pollutants. Plankton comprise a large portion of the living

matter in natural waters and function in biogeochemical cycles. They are affected by pollutants, transfer them to sediments and other organisms, and function in their biological transformation. "[https://scope.doe.carnegiescience.edu/SCOPE\\_12\\_3.6\\_chapter12\\_257-274.pdf](https://scope.doe.carnegiescience.edu/SCOPE_12/SCOPE_12_3.6_chapter12_257-274.pdf)

The above articles show that development of Keaouhou Bay WILL hurt plankton life in the area because of the pollutant runoff that WILL happen during the development and after, and if this happens this will cause the manta ray food source to disappear. This will be devastating for the manta rays eating habits, as well as cause the manta rays to not show up in this area, in turn taking away many lively hoods from locals on the island that depend on this tour to survive.

Here is another article that proves runoff from development in this area will hurt and kill plankton, by **Frontiers in Marine Science, "Effects of an experimental terrestrial runoff on the components of the plankton food web in a Mediterranean coastal lagoon"** The main result observed in the present study was that the effects of the simulated terrestrial runoff spread along the plankton food web, significantly affecting all trophic levels of the natural plankton community studied. This occurred in a relatively short time considering that the experiment lasted less than three weeks. The lower light availability in the terrestrial runoff treatment compared to the control resulted in a net decrease of approximately one-third of Chl-a concentration and phytoplankton abundance over the entire experiment." <https://www.frontiersin.org/journals/marine-science/articles/10.3389/fmars.2023.1200757/full>

This article states that runoff is a leading source in coral degradation. Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Land-based sources of pollution are a leading cause of coral reef degradation in the Main Hawaiian Islands. Water quality is impacted by urban runoff, failing sewage systems, unpaved roads, farms, land clearing, and development."

[https://www.coris.noaa.gov/monitoring/status\\_report/docs/Hawaii\\_status\\_report\\_forweb.pdf](https://www.coris.noaa.gov/monitoring/status_report/docs/Hawaii_status_report_forweb.pdf)

This article is a Research Article by PLOS ONE and their motto is, "We're driving change in research integrity and publication ethics." This is some of their article information, "Coral taxonomy and local stressors drive bleaching prevalence across the Hawaiian Archipelago in 2019..."

We found little evidence for acclimation by reefs to thermal stress in the main Hawaiian Islands. Moreover, our findings illustrate how detrimental effects of local anthropogenic stressors, such as tourism and urban run-off, may be exacerbated under high thermal stress. In light of the forecasted increase in severity and frequency of bleaching events, future mitigation of both local and global stressors is a high priority for the future of corals in Hawaii."

<https://journals.plos.org/plosone/article?id=10.1371/journal.pone.0269068>

The Chesapeake Bay has a foundation that is trying to save it due to runoff pollution that developments create, and the Chesapeake Bay is a lot bigger than Keaouhou Bay. If it's being drastically hurt by runoff water, Keaouhou Bay waters won't stand a chance if development above the bay is allowed because this bay is very small.

This Article is by the Chesapeake Bay Foundation, Saving a National Treasure states, "...runoff is a significant source of harmful nitrogen pollution that continues to grow... As rainwater and snowmelt run off our streets, parking lots, lawns, and other surfaces, they pick up pet waste, pesticides, fertilizer, oil, and other contaminants. If the draining water doesn't evaporate or soak into the ground where it can be filtered, it flushes straight into local creeks, rivers, and the Chesapeake Bay, adversely affecting water quality and aquatic life.

Only 10 to 20 percent of rain that falls in forests, fields, and other natural areas runs off, with the rest absorbed by soil and plants, where it is filtered before reaching aquifers or local waterways. (Right now Keaouhou Bay has a lot of trees and is very natural, this is what helps stop runoff.) By contrast, close to 100 percent of the rain that falls on concrete and other hard surfaces produces runoff. One inch of rain falling on an acre of hardened surface produces 27,000 gallons of runoff.

Stormwater runoff pollution threatens Chesapeake Bay and its rivers and streams...Polluted runoff is one of the most harmful sources of pollution to the Bay, and its waters. And much of it starts right in the urban and suburban neighborhoods where we live." <https://www.cbf.org/issues/polluted->

<runoff/index.html#:~:text=Besides%20carrying%20pollutants%20that%20harm,them%20are%20place%20in%20leopardy.>

If that is what runoff is doing to the Chesapeake Bay, the effects of runoff will be even more devastating to Keaouhou Bay because it is so much smaller than the Chesapeake Bay.

If you allow Keaouhou Bay to be developed there will be a higher population in the bay and that will hurt the coral in the bay as well, because it's known that "Denser coastal populations... will lead to reef degradation by coastal constructions. Denser populations inland will lead to more runoff and situations...

Reason #3 a Resort Development WILL Increased Human Traffic In Keaouhou Bay Easily visible trends in human population dynamics combined with well-established and tested ecological theory give a clear, intuitive, yet quantifiable guide to the severity of survival challenges faced by coral reefs. Management challenges and required actions can be clearly shown and, contrary to frequent claims, no scientific ambiguity exists with regards to the serious threat posed to coral reefs by humankind's continued numerical increase." This is in the article by National Library of Medicine National center for Biotechnology Information PubMed. <https://pubmed.ncbi.nlm.nih.gov/33293007/#:~:text=Denser%20coastal%20populations%20and%20greater,fo%20more%20runoff%20and%20siltation.>

This article is by abc NEWS, "This is how tourists are destroying coral reefs in Hawaii The less people at a certain site, the more coral there are, the research found. The millions of tourists who flock to the shores of Hawaii every year are wreaking havoc on its natural environment -- especially the coral reefs, which are at risk all over the world, a new study said. The most popular coral reefs on the Hawaiian islands are likely being degraded by the very visitors they attract, according to a study published Monday in Nature Sustainability." <https://abcnews.go.com/US/hawaiian-coral-reefs-degrading-popular-tourist-sites-scientists/story?id=96308858#:~:text=The%20less%20people%20at%20a,there%20are%20C%20the%20research%20found.&text=The%20millions%20of%20tourists%20who,world%2C%20a%20new%20study%20said.>

If you allow this resort to be developed, you will be destroying the coral reefs in the bay because this bay is extremely small and used by a lot of locals already for fishing, canoeing, swimming, snorkeling, paddle boarding, surfing, boating...it can't afford more use by many thousands more people yearly.

Another article by Nature Sustainability, "Coral reefs and coastal tourism in Hawaii Coral reefs are popular for their vibrant biodiversity. By combining web-scraped Instagram data from tourists and high-resolution live coral cover maps in Hawaii, we find that, regionally, coral reefs both attract and suffer from coastal tourism. Higher live coral cover attracts reef visitors, but that visitation contributes to subsequent reef degradation. Such feedback loops threaten the highest quality reefs, highlighting both their economic value and the need for effective conservation management."

[https://www.nature.com/articles/s41893-022-01021-4.epdf?sharing\\_token=wsakqGNhaJhJAnWAq453RtRqN0JAiW6l9mR3ZoTv0PvGzA51c\\_H001zrHNIP3ASnhccKRV6\\_vKLPw49dbmBYoXSq3Y1MgQIGBZsapidGUH7O1SLbu9x5P3xED4KxI4T0sJvqQ1a72RzR3tUbraxpodJ62A0NlSmWSuXb7JIEDdpj8OGJpx71TJW6GfXVFKJZYeNdcJ3Sw\\_dnaU695Zlh](https://www.nature.com/articles/s41893-022-01021-4.epdf?sharing_token=wsakqGNhaJhJAnWAq453RtRqN0JAiW6l9mR3ZoTv0PvGzA51c_H001zrHNIP3ASnhccKRV6_vKLPw49dbmBYoXSq3Y1MgQIGBZsapidGUH7O1SLbu9x5P3xED4KxI4T0sJvqQ1a72RzR3tUbraxpodJ62A0NlSmWSuXb7JIEDdpj8OGJpx71TJW6GfXVFKJZYeNdcJ3Sw_dnaU695Zlh)

Coral reefs are known to be highly negatively impacted by developments because, "Impacts from land-based sources of pollution including coastal development...can impede coral growth and reproduction, disrupt overall ecological function, and cause disease and mortality in sensitive species." <https://oceanservice.noaa.gov/facts/coral-pollution.html#:~:text=Impacts%20from%20land%20based%20sources,and%20mortality%20in%20sensitive%20species.>

Article by Environmental Evidence, "Coastal development and runoff lead to sedimentation, which directly impacts coral recruitment, growth, mortality, and ecosystem services that coral reefs provide." <https://environmentalevidencejournal.biomedcentral.com/articles/10.1186/s13750-020-00200->

[0#:~:~:~:Coastal%20development%20and%20unoff%20lead,services%20that%20coral%20reefs%20provide.](#)

All developments can't fully stop polluting because of runoff from rain during development and after. Article by NOAA, "One of the most significant threats to reefs is pollution. Land-based runoff and pollution discharges can result from dredging, coastal development... This runoff may contain sediments, nutrients, chemicals, insecticides, oil and debris.

When some pollutants enter the water, nutrient levels can increase, promoting the rapid growth of algae and other organisms that can smother coral."

[https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humanthreats.html#:~:text=This%20unoff%20may%20contain%20sediments,organisms%20that%20can%20smother%20corals.](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humanthreats.html#:~:text=This%20unoff%20may%20contain%20sediments,organisms%20that%20can%20smother%20corals.)

Another article by NOAA, "Coral reefs also are affected by leaking fuels, anti-fouling paints and coatings, and other chemicals that enter the water... (All of those are show up in every development project.)

Among the most damaging pollutants on coral reefs is sediment, which can remain suspended in the water or be deposited on the coral surface (i.e., turbidity and sedimentation, respectively) and can contain toxicants, pathogens, and nutrients, all of which impact coral growth, recruitment, and survival"

[https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humanthreats.html#:~:text=This%20unoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days.](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humanthreats.html#:~:text=This%20unoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days.)

Reason #4 a Resort Development WILL Increase Traffic

The Big Island already has a serious problem with traffic on the island because of a lack of infrastructure that in places a bigger road can't be built due to cliffs on one side and homes on the other side.

Allowing another resort to be developed will bring more cars that will lead to a lot more traffic that the island can not handle, please read the articles below by different NEWS companies that prove this point.

This NEWS article by Hawaii News Now, "Report shows alarming surge in Hawaii island traffic deaths The Hawaii Police Department's Traffic Services Section released a new report showing a dramatic increase in both major crashes and fatal accidents from last year.

The startling statistics show a dramatic increase in the number of year-over-year traffic fatalities on the island of Hawaii, revealing major crashes are up more than 12% and traffic fatalities are up more than 100%." Please watch their video on their link below because it is a professional report on Big Island traffic problems. <https://www.hawaiinewsnow.com/2024/05/18/new-report-shows-hawaii-island-traffic-fatalities-are-up-over-100-last-year/>

With more tourists comes more accidents, more traffic, and more traffic deaths. Please read this article by KHON 2 NEWS, "Hawaii Island has most traffic fatalities in state, This time last year Hawaii island was at five traffic deaths, as of April 1, 2024, they're at 14.

Seven of which happened in the last two weeks..

Chief Moszkowicz said the police force is small compared to the size of the island and response times can take 15 to 20 minutes.

"We don't have the resources like in the small space of Oahu where you can saturate an area to control speeding, that just doesn't exist here," he added. <https://www.khon2.com/local-news/7-traffic-fatalities-for-hawaii-island-in-march/>

The traffic on Big Island has increased drastically and safety issues and infrastructure needs to be addressed before adding more resort developments.

Please read this article because what it says about Oahu is the same for Big Island. The traffic problems they talk about are the same issues here on Big Island, and this article also gives one Big Island example, "On the Big Island, the mayor had to issue an emergency order shutting down Waipio Valley Road due to overuse and poor prior maintenance." <https://www.civilbeat.org/2024/02/angry-over-island-traffic-iams-lets-talk-about-solutions/>

Please, watch the NEWS video from the link below on aerial footage in Hilo because the footage shown is the same thing that is happening on Alii Drive and Queen K HWY, and for the same reasons.

There are 2 developments already on Alii Dr. being built as of today, and more are scheduled for this road in the near future, and Alii Dr. and Queen K HWY are the roads Kamehameha Schools Bungalow Resort will be using if approved and they are already seriously congested.

These roads have the exact same traffic congestion as Hilo, with the exact same problems. Traffic is extremely slow already.

The worry on Kona side is tsunami evacuations rather than lava evacuations, and in this kind of traffic, not everyone will be able to get to safer ground, especially if you allow another resort to be developed in this area when traffic is already at a crawl every week day and sometimes on weekends as well.

See the photo below that proves this point in Kona, and here is the NEWS article by KITV NEWS that talks about Hilo and the same thing is happening in Kona on the roads Kamehameha Schools wants to develop their resort, "Hawaii island traffic jams could have safety impact. In the event of an evacuation, Mayor Mitch Roth acknowledges that will make the Traffic Jam up even worse. But says, he is working with The State on a solution." [https://www.kitv.com/news/local/hawaii-island-traffic-iams-could-have-safety-impact/article\\_b06a5374-5a6a-11ed-8d23-8313ef8c4c19.html](https://www.kitv.com/news/local/hawaii-island-traffic-iams-could-have-safety-impact/article_b06a5374-5a6a-11ed-8d23-8313ef8c4c19.html)

There was a crash on Alii Dr. and when there is an accident on this road, it turns into only one lane that needs a flagger to help direction traffic, and that adds even more traffic to this already seriously congestion road, and Kamehameha Schools wants to add a resort on this road, and that will increase the traffic even more.

Here is the Island News video on the crash on Alii Dr. <https://www.youtube.com/watch?v=FQSnPDii8>

Please see from these articles that traffic on Big Island is deadly already and adding another resort will be devastating to the island.

Please read this Path article, HAWAII COUNTY'S VISION ZERO INITIATIVE

A motorcyclist is in critical condition after a collision with a car. A driver accidentally hits and kills a pedestrian. It seems that not a day goes by without the news reporting on a traffic crash on Hawaii Island.

"That's just Big Island traffic," is a common sentiment. But what if we didn't have to accept this endangerment of vehicle drivers, motorcyclists, and pedestrians as a way of life?"

This was taken from Path as well as The Law of the Splintered Paddle below <https://pathhawaii.org/hawaii-countys-vision-zero-initiative/>

### The Law of the Splintered Paddle

Hawaiian history tells us that young Kamehameha was once an aggressive chief. The story goes that the young chief even chased after two fishermen in a Puna fishing village. While pursuing them, his foot got stuck in a crevice, and one of the fishermen struck Kamehameha over the head with his paddle in defense, which splintered into pieces.

After the incident, Kamehameha recognized that it was wrong to misuse his power and learned compassion. Years later, Kamehameha declared a new law, "KŪŌ WAI MALAHOE" or "the Law of the Splintered Paddle." Meant to protect the innocent and vulnerable from unprovoked attacks, this law proclaimed that the defenseless (especially KŪPUNA and KEIKI) across Hawaii be able to sleep safely on the side of the road, unharmed.

The law provided for the safety of non-warriors during wartime and became the first written law of the Kingdom of Hawaii. After being added back in 1978, the law is part of Hawaii's State Constitution today.

It is symbolic of servant leadership, reinforcing the importance of:

· Caring for and serving one's people

· Knowing and doing what is pono (right)

· Standing for the principle that leadership privilege is earned

Taking kuleana (responsibility) for those we serve  
Doing so with compassion, love, and respect  
"We take that to mean that anyone who uses our roadways should be able to do so without fear of harm," explains Tina."

**The Law of the Splintered Paddle** is also on Kamehameha Schools website, so they should want to help make Big Island roads become safer and not add to the traffic and possible traffic death toll problem. <https://www.ksbe.edu/article/the-lessons-of-the-law-of-the-splintered-paddle-rmq-true-200-years-after-k>

Besides a resort development in Keauhou Bay causing runoff that will severely pollute the bay as the above research and science articles have shown above causing marine life to die, it will also increase in the bay's population that will seriously add to damaging even more coral, plankton and all marine life as well, and the island has severe traffic issues already with increased death tolls rising, and a resort development in Keauhou Bay will totally increase even more traffic in these already severely congested traffic areas.

**Reason #5 The Big Island Doesn't Have the Resources and Infrastructure for Another Resort**  
Please see the articles below because the Big Island doesn't have the resources or infrastructure to safely add another resort development on island and these other NEWS and Research articles prove this point.

1) Hawaii Deals with Burgeoning Waste Management Problem  
As landfills face closure and waste-to-energy projects stall, various counties in Hawaii are dealing with waste management issues. Waste360 Staff January 10, 2020  
"Hawaii Island is in the enviable position of having a landfill with anywhere from 20 to 100 years of capacity left to take in trash. But the island still wrestles with significant issues like plastic products that are no longer being recycled." <https://www.waste360.com/landfill/hawaii-deals-with-burgeoning-waste-management-problem>

2) "Big Island Now readers seem to agree that there's likely no single solution for slowing down the timeline of the West Hawaii Sanitary Landfill reaching capacity.

The West Hawaii Sanitary Landfill, the only remaining landfill on the Big Island, is forecast to reach capacity within the next 20 to 25 years." <https://bigislandnow.com/2023/09/17/big-island-now-poll-no-27-results-more-than-one-solution-needed-to-help-extend-life-of-west-hawaii-landfill>

3) Hawaii Island Has Decades of Landfill Space But Still Faces Challenges in Dealing With Its Waste  
Hawaii Public Radio Published January 9, 2020 at 5:00 AM HST  
"Hawaii Island is in the enviable position of having a landfill with anywhere from 20 to 100 years of capacity left to take in trash. But the island still wrestles with significant issues like plastic products that are no longer being recycled.

For the past four decades, trash from the east side of Hawaii Island has been dumped in a landfill outside of Hilo. But now trash from all parts of the island is being trucked to a facility north of Kona." <https://www.hawaiipublicradio.org/local-news/2020-01-09/hawaii-island-has-decades-of-landfill-space-but-still-faces-challenges-in-dealing-with-its-waste>

4) "What happens to Hawaii Island's trash and recyclables? BY MICHELLE BRODER VANDYKE  
HAWAII ISLAND PUBLISHED 11:30 AM ET DEC. 17, 2022 By Michelle Broder Vandyke Hawaii Island PUBLISHED 11:30 AM ET Dec. 17, 2022

The West Hawaii Landfill will be full in about 20 years. Finding a location for the next landfill is a concern, according to the DEM officials. They said it will be challenging to find a location for a future landfill because of stringent regulations and costs related to planning, environmental regulations, design and construction that will take many years to complete. It will also require community support." <https://spectrumslocalnews.com/hi/hawaii/news/2022/12/15/what-happens-to-hawaii-island-s-trash-and-recyclables->

5) "The overwhelming plastic waste Hawaii visitors leave behind  
By Natasha Bourlin Aug 24, 2023

Hawaii saw more than 9 million visitors last year. Those tourists' first stops are often big-box and convenience stores, where they buy bottled water, plastic sand toys, single-use bodyboards, noodles, floaties and inner tubes for their trips." <https://www.sfgate.com/hawaii/article/plastic-waste-hawaii-visitors-leave-behind-18286076.php>

6) "A county commission drafts ordinance aiming to ban recyclables at West Hawaii landfill By Megan Moseley September 6, 2023 · 1:00 AM HST  
\* Updated September 6, 2023 · 2:02 PM

Hawaii County's Environmental Management Commission is developing an ordinance that aims to prohibit the amount of recyclable materials ending up in the island's only working landfill."

<https://bigislandnow.com/2023/09/06/new-draft-ordinance-aims-to-ban-recyclables-at-west-hawaii-landfill/>

7) "Hawaii County issues mandatory 25% water restriction for North Kona August 7, 2023 · 5:21 PM HST

A mandatory 25% water restriction has been issued for various communities in North Kona due to the failure of the Honokōhau Deepwell over the weekend." <https://bigislandnow.com/2023/08/07/hawaii-county-issues-mandatory-25-water-restriction-for-north-kona/>

8) "Hawaii Water Supply Closely Monitored As Severe Drought Continues by Big Island Video Newson Nov 6, 2023 at 3:28 pm STORY SUMMARY  
HAWAII COUNTY - Officials say a special focus will be placed on the South Kohala Water System, which is more susceptible to drought conditions."

<https://www.bigislandvideonews.com/2023/11/06/water-supply-closely-monitored-as-hawaii-ca-bbi-under-severe-drought/>

9) "Big Island Concerns About Water Quality Prompt A Lawsuit Over A Kona Sewage Plant  
Kealakehe sewage plant discharges more than 1 million gallons of wastewater into a lava pit near the ocean. By Paula Dobbyn / February 6, 2024

Settlement talks are scheduled in an environmental lawsuit involving a county-operated Big Island sewage plant in Kona." <https://www.civilbeat.org/2024/02/concerns-about-water-quality-prompt-a-lawsuit-over-a-kona-sewage-plant/>

10) "Researchers find sewage from an oceanfront Big Island community reaches nearshore waters  
Hawaii Public Radio | By Russell Subiono, Sophia McCullough Published December 20, 2021 at 5:56 PM HST

There are nearly 50,000 cesspools on the Big Island, with tens of thousands posing a risk to water resources, according to the Hawaii Department of Health. <https://www.hawaiipublicradio.org/the-conversation/2021-12-20/researchers-find-sewage-from-an-oceanfront-big-island-community-reaches-nearshore-waters>

11) "Kona coast faces stark wastewater tradeoffs Current situation  
There are approximately 88,000 cesspools across the state, releasing more than 200,000 cubic meters of wastewater per day to the environment. <https://www.hawaii.edu/news/2021/09/10/kona-stark-wastewater-tradeoffs/>

We ask that you start figuring out how this can never happen again? These are the kind of issues that need to be resolved before you approve more development.

12) "BIG ISLAND NEWS HECO restores power after initiating emergency outages on Big Island by: Elizabeth Ufi Posted: Jan 30, 2024 / 09:43 AM HST Updated: Jan 30, 2024 / 04:15 PM HST

An unexpected loss of several large Hawaii Electric generators left some residents on Big Island without power for parts of the morning on Tuesday, Jan. 30." <https://www.khon2.com/big-island-news/heco-initiates-30-min-rolling-outages-after-loss-of-generators/>

13) Hawaii State News Update: Hawaiian Electric initiates rolling outages throughout Big Island  
February 13, 2024 · 5:23 PM HST

\* Updated February 14, 2024 · 4:21 PM

The emergency outages are being initiated in various areas around the entire island to prevent loss of power to an even greater number of customers. The timing and extent of the outages will depend on the amount of demand on the system and the availability of generators."

<https://bigislandnow.com/2024/02/13/hawaii-island-customers-asked-to-reduce-electricity-use/>

#### 14) "LOCAL NEWS

HECO issues rolling power outages around Big Island by: Emily Cervantes Posted: Feb 13, 2024 / 05:11 PM HST Updated: Feb 13, 2024 / 09:12 PM HST Hawaiian Electric initiated rolling outages for Big Island after several large generators became unavailable and reduced output Tuesday night."

15) "Here's how power outages can have repercussions for Hawaii's water supply Hawaii Public Radio | By Savannah Harriman-Pote Published February 13, 2024 at 10:59 AM HST Water departments on O'ahu and Hawaii Island have advised customers to conserve water ahead of possible storm-related power outages this month. But what does the power grid have to do with the water supply?

It is impossible to separate Hawaii's power system from its water system, said Kawiika Uyehara, deputy director of Hawaii County's Department of Water Supply."

<https://www.hawaiipublicradio.org/local-news/2024-02-13/residents-on-hawaii-island-and-ohahu-are-asked-to-conserve-water-amid-power-outages>

16) U.S. Hawaii is "on the verge of a greater catastrophe," locals say, as water crisis continues By Li Cohen

Updated on: April 11, 2024 / 8:23 AM EDT / CBS News

In Hawaii, one of the most important sayings is *ola i ka wai*, "water is life" — a phrase that not only sums up what it means to exist on an island, but what it means to live, period. But now, one of the largest of the island chain's land masses is facing a triple threat to its sole freshwater source, and if it isn't addressed soon, one community member says, "we're in deep trouble."

<https://www.cbsnews.com/news/hawaii-water-crisis-climate-change/>

17) Newshawaii County issues mandatory 25% water restriction for North Kona

August 7, 2023 · 5:21 PM HST

A mandatory 25% water restriction has been issued for various communities in North Kona due to the failure of the Honokohau Deepwell over the weekend.

<https://bigislandnow.com/2023/08/07/hawaii-county-issues-mandatory-25-water-restriction-for-north-kona/>

18) Hawaii Water Supply Closely Monitored As Severe Drought Continues

by Big Island Video News

on Nov 6, 2023 at 3:28 pm

(BIVN) – With an ongoing drought on the island of Hawaii, the Hawaii County Department of Water Supply says it is closely monitoring its 23 public water systems, with a "special focus" placed on the South Kohala Water System.

<https://www.bigislandvideonews.com/2023/11/06/water-supply-closely-monitored-as-hawaii-CA%BBi-under-severe-drought/>

This is a map of Power Outages on the Big Island. This map wouldn't have been created if Power Outages were not a problem. <https://www.hawaiieletric.com/safety-and-outages/power-outages/hawaii-island-outage-map>

Please, give Tax Breaks to all homes that provide solar and/or wind turbine to there homes to help with power issues on the island.

20) "Hawaiian Electric is reporting that several large generators on the Big Island are experiencing a range of issues and may lead to the need for rolling outages if supply does not meet demand."

[https://www.reddit.com/r/BigIsland/comments/1bnuat3/hawaiian\\_electric\\_is\\_reporting\\_that\\_several\\_articles/?rdt=52660](https://www.reddit.com/r/BigIsland/comments/1bnuat3/hawaiian_electric_is_reporting_that_several_articles/?rdt=52660)

21) "NewsHawaiian Electric asking Big Island customers to conserve power due to down generators March 25, 2024 · 11:49 AM HST

According to the utility company, this is an usual situation as the large generators are experiencing mechanical problems resulting in a reduced output. The largest generator, an independent power producer that sells electricity to Hawaiian Electric, is offline with significant mechanical issues.

The plant generates 60 megawatts or nearly one-third of the typical peak demand of 180 megawatts on the island."

<https://bigislandnow.com/2024/03/25/hawaiian-electric-asking-big-island-customers-to-conserve-power-due-to-down-generators/>

All the articles above show that a resort development will damage Keauhou Bay coral and marine life and, Big Island resources and infrastructure are currently being negatively affected from the development that is on island already, and there are years of new development that have already been approved, before having safe resources and infrastructures for new developments.

With these scientifically proven articles by some of the most professional scientists in the world, they say the a serious population increase, as well as development and resort runoff that happens because of parking lots, and... with all coastal developments, it will be dangerous for Keauhou Bay to be development because it will damage the marine ecosystems in the area.

Please, save Keauhou Bay's marine life and help the island's resources by saying NO to a Bungalow Resort built by Kamehameha Schools because all of these articles prove it would be extremely damaging to the waters at Keauhou Bay.

Thank you,

Sincerely,

Rebecca Melendez

**Sent:** Tuesday, August 6, 2024 12:46 PM  
**To:** 221053-01 KS Keaouhou Entitlements; Roy, Alex; Planning@hawaiiicounty.gov; Keaouhoubay@ksbe.edu  
**Subject:** Reject Kamehameha Schools EIS because of 2 Important Laws  
**Attachments:** Report\_Kahaluu\_Water\_Quality\_Research\_Summary.pdf; Comments DEIS Keaouhou bay final copy.pdf; Keaouhou Bay Is stated Impaired Water by the EPA Clean Water Act.jpg

**Categories:** Yellow Category

To whom it may concern,

Please reject Kamehameha Schools EIS under the Cultural Impact Statement Law which states, "Cultural assessment" means a written evaluation conducted by a qualified ethnographer as defined by the state historic preservation division to determine whether an action may have a significant effect on cultural practices, **particularly native Hawaiian traditional and customary practices expressly protected under article XII, section 7, of the state constitution.**

"Cultural impact assessment" means an ethnographic study prepared in accordance with the rules adopted pursuant to this chapter by a qualified ethnographer as defined by the state historic preservation division, which shall disclose any cultural effects of a proposed action, including **the cultural practices of the community and State**, proposed measures to minimize adverse effects, and alternatives to the action and its cultural effects." [https://www.capitol.hawaii.gov/sessions/session2020/bills/SB3152\\_.HTM#:~:text=Rrequires%20cultural%20assessments%20to%20be%20available%20for%20public,may%20have%20a%20significant%20effect%20on%20the%20environment.](https://www.capitol.hawaii.gov/sessions/session2020/bills/SB3152_.HTM#:~:text=Rrequires%20cultural%20assessments%20to%20be%20available%20for%20public,may%20have%20a%20significant%20effect%20on%20the%20environment.)

Please reject this EIS because it has NO reports on Hawaiian or community cultural practices in the bay that will be affected during this development and after it is finished.

Please reject this EIS because it has NO interviews with the Hawaiian people and community locals who use this bay, to learn how this bay is used daily by the Hawaiian people and locals in the bay, and under the Cultural Impact Statement Law this needs to be done to fully understand how this development will impact the Hawaiian people and community local's cultural practices.

That law requires that impacts to the Bay be mitigated and that further impairment does not occur. This requirement under the law has not been met."

Please reject Kamehameha Schools EIS because Keaouhou Bay is listed as **Impaired under the Environmental Protection Act for Clean Water** and this development will add more pollution into the bay. "The **Clean Water Act (CWA)** is the **primary Federal statute regulating the protection of the nation's water**. The CWA aims to prevent, reduce, and eliminate pollution in the nation's water in order to "restore and maintain the chemical, physical, and biological integrity of the Nation's waters", as described in CWA section 101(a). A stated goal of the CWA is to eliminate discharge of pollutants into navigable waters, as that term is defined in CWA § 502(7) and corresponding case law." <https://www.epa.gov/enforcement/clean-water-act-cwa-and-federal-facilities>

I have attached a screenshot of Keaouhou Bay on the EPA Impaired water list and here is the link for **Keaouhou Bay (Kona)** **Assessment Unit ID: HI713293** <https://mywaterway.epa.gov/waterbody-report/21HI/HI713293/2020>

The goal of the Clean Water Act (CWA) is "to restore and maintain the chemical, physical, and biological integrity of the Nation's waters" (33 U.S.C §1251(a)) and Kamehameha Schools Bungalow Resort will devastate the entire ecosystem in Keaouhou Bay.

Kamehameha Schools EIS needs to be rejected because Kamehameha Schools has not contacted hundreds of Hawaiian people, especially descendants from Keaouhou Bay and spoken with them about how they would feel about their Endowed land that was given to Kamehameha Schools as trustees by Princess Bernice Pauahi Bishop for the Hawaiian people to benefit from and under Cultural Impact Law these people **MUST BE CONTACTED**.

Here is a video by Kupuna Kuryu Lily Kong and she states that her and her mother are against development. She was born in Keaouhou Bay and SHE has the right to be heard <https://vimeo.com/994680462>

Please reject Kamehameha Schools EIS under the Cultural Impact Statement Law as well as under the EPA Clean Water Act listing that Keaouhou Bay is declared Impaired Water Body Under Section 303 D.

Thank you,  
Rebecca Melendez

Hawaiian cultural practices are canoe paddling and by creating this bungalow resort you will be taking away all the one man canoes that are at the bay to make room for tourists. This is not honoring Hawaiian canoe traditional practices and is going against the Cultural Impact Statement Law.

Hawaiian cultural practices are also fishing and if you allow this bungalow resort to be developed there will be hundreds of tourists in the bay preventing Hawaiian fishermen from safely fishing without accidentally hooking a tourist who is swimming by. This goes against the Cultural Impact Statement Law because there won't be any room for fishermen to enjoy fishing at the bay because the bay is so small that having more paddle boards, more kayaks, more people swimming...will take away from Hawaiian cultural practice of being able to fish safely in Keaouhou Bay and this goes against the Cultural Impact Statement Law.

This EIS has not done any studies on "cultural practices of the community" and there are many baptisms and funeral services held in the bay and creating a bungalow resort in this area would create a tourists destination with hundreds of tourists all over this bay and baptisms and funeral services will become challenging to have for the community in this small historical bay because tourists will be there sunbathing everywhere and this will go against the Cultural Impact Statement Law for the community who have enjoyed this small historical bay to perform their cultural practices of baptisms and funeral services.

Please reject Kamehameha Schools EIS because a bungalow resort development will go against the Hawaiian cultural practices, as well as the communities cultural practices and this goes AGAINST the Cultural Impact Statement Law SB #3152.

I was sent these reports from Richard H. Bennett MS, PhD Applied Life Sciences LLC and Kamehameha Schools EIS needs to be rejected because of the researched information he has sent. Richard H. Bennet MS Phd states in his report that has been attached to this email.

"The following comments pertain specifically to water quality issues affecting Keaouhou Bay. The draft EIS does not address these nor accounts for the fact that the State and the EPA list Keaouhou Bay as an Impaired Water Body under section 303 D of the Clean Water Act (CWA).

## Summary of the Water Quality Research from Kahalu'u Bay, Hawai'i Island: Tidal Flows, Recreation Water Indicator Bacteria, and Nutrient Fluxes

R.H. Bennett Ph.D.<sup>1</sup>, and K. M. Clark<sup>2</sup>

The Kahalu'u Bay Education Center (a program of The Kohala Center) actively strives to inform visitors and the community about the protection and conservation of the bay's marine ecosystem. A group of committed volunteers and staff provide daily, on-site educational programs. Similarly, they have collected scientific data about the bay for over a decade. This trove of data is priceless. It tells us much about the interaction of the ocean with the adjacent urban lands. Except for the marine waters of Kaloko Honokōhau National Historical Park, no other maritime site in Kona has been studied so thoroughly and for so long.

The data from Kahalu'u Bay gave rise to three technical research reports. They are:

- I. Tidal Influence on Temperature and Salinity
- II. Elevated Kahalu'u Bay Enterococci Associated with Large Tidal Flux
- III. Kahalu'u Bay Nutrient Trends 2009 to 2019

The purpose of this summary is to provide an easy-to-understand synopsis of the three technical reports to enable the community to "see below sea level" so that we may be better informed of the best stewardship of our nearshore waters.

### I. Tidal and Ground Water Influence on Bay Waters

The mountains above Kailua Kona are blessed with abundant rainfall. Some sites get over 70 inches of rain per year. Yet there are no rivers or streams. On the Hilo side of the island, there are over 200 streams. So, in Kona, where does all that water go? It percolates quickly through the fractured lava rock and forms a fresh groundwater lens that floats upon the seawater that permeates the island. From there, fresh groundwater flows toward the shore. It includes a nearshore subterranean estuary (STE). In the estuary, groundwater and seawater mix under the forces of tidal action. Four times a day, the tides rise and fall. During the Spring Tides, massive tidal fluxes of over two feet push and pull on the estuary with great force.

Groundwater eventually discharges along the coast as a cold mixture of fresh water and recirculated seawater. For those that swim in the ocean, encountering cold spots is inevitable. For snorkelers, these surface cold spots can have hazy visibility. This is a refraction caused by the incomplete mixing of seawater and groundwater. The fresher water is less dense and floats on the ocean surface in many locations.

<sup>1</sup> Applied Life Sciences LLC, and Waiwai Olu Ohana

<sup>2</sup> The Kahalu'u Bay Education Center, The Kohala Center

In the Kahalu'u Bay shore area, there are pronounced discrete locations where water flows can be seen, and the coolness is perceived. In other places, the brackish water is more diffuse. And yet, in some offshore sites, the cold brackish water emerges from the floor of the ocean. Most of all, water that does not evaporate flows into the sea one way or another. Water is almost a perfect solvent. A high number of things dissolve in it even though it may remain crystal clear. In the kitchen, we can dissolve a lot of salt or sugar in a glass of water without changing its appearance.

Figure 1. Kahalu'u Bay Shoreline Sample Sites

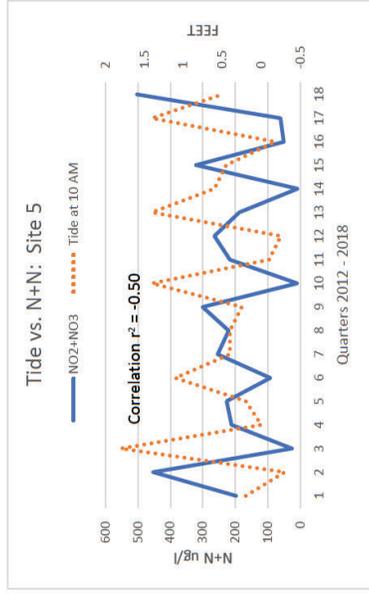

This site map of the bay shows where water samples are collected. Site one is where water flow at low tide can be seen. At low tide, the salinities at site 1 differed from the others. At high tide, the salinity of sites 1 - 4 was different from 5. This shows that water inflow can be very localized. We know that lava tubes and fractured rock can provide such a discrete conveyance.

Statistical Distribution of Salinity 2017  
Low tide, 29.36 Orange vs. High Tide 32.26 ppt Green

Similarly, it should not be too hard to imagine how the flow of the tides can influence the

temperature of the nearshore water. Ocean water is warmer and more saline. Thus, a good high tide will render the nearshore water warmer and saltier. At a very low tide, the converse is also true.

Figure 2. The Influence of Tides on Nitrogen Concentration.

At low tide, groundwater flows increase, and salinity and temperature decrease quite dramatically. This suggests the volume of water flowing into the bay is massive. As shown in Figure 2., over a 4.5-year period, there is an inverse relationship between the tide level and the concentration of Nitrogen (N) measured as Nitrate and Nitrite. The effect is simply seawater, that is lower in Nitrogen is diluting the higher N groundwater Nitrogen content. Thus, it is critical that tidal effects be accounted for in any monitoring of marine nitrogen. Accounting for groundwater Nitrogen concentrations flowing into near shore waters is a requirement of Hawai'i Administrative Rules when conducting water tests.<sup>3</sup>

UH researchers using some advanced chemistry with Radon isotopes, estimate for each mile of the Kona Coastline between one to three million gallons of groundwater flow into the sea per mile of coastline per day. On the Hilo side, the flow of water from the land can be seen in rivers and streams. On the Kona side, it is unseen but still vast in many submarine groundwater discharges.

One way we can see this flow is to use cameras that see temperature, called infra-red (IR). This IR photo was taken of a submarine groundwater discharge, just north of the Kona Airport. The cold, fresh water (shown by the cooler colors in the image) extends over 200 yards out to sea.

<sup>3</sup> Hawai'i Administrative Rules §11-54-6(B)

Figure 3. Thermal Image of a Prominent Submarine Groundwater Discharge. Adapted from Johnson (2008)

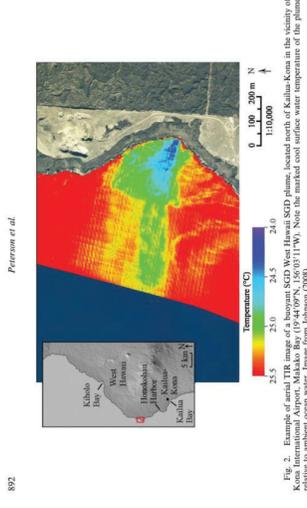

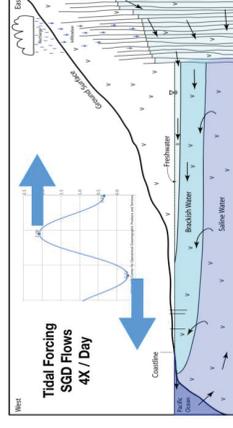

Fig. 3. Thermal image of a prominent submarine groundwater discharge. Note the visibility of Kona International Airport, Makaha Bay (19°44'09"N, 156°09'11"W). Note the marked cool surface water temperature of the plume relative to ambient ocean water. Image from Johnson (2008).

The take-home story in this section is that groundwater flows dramatically alter the nearshore ocean and it's easily detected and measured with simple instruments like a thermometer or salinity meter. This will take on greater significance in Part III.

Figure 4. The Tidal Forces that Drive the Subterranean Estuary (STE) on the Kona Shore.

Adapted from Johnson 2017

The greater Kona area is underlain by a complex network of fissures and crevasses filled with saline waters. Anchialine Ponds are a common feature of this geology, yet rather unique to Kona, Hawaii. The term, Subterranean Estuary (STE) more aptly describes these structures (Bishop 2015). Monitoring wells tracked by NELHA<sup>4</sup> as far as one mile inland provide evidence

of seawater intrusion and water levels consistent with tidal action (Peterson 2009). This fact is largely unrecognized by the state as well as the community. The implications are profound. Marine waters of the Kona Coast communicate with ground water well inland and vice versa. Nonetheless, wastewater discharges to land in this region are likely to be impacting the waters of the coast and circumventing requirements for the regulation of such waste discharges to the waters of the United States.<sup>5</sup>

## II. Influence of Tides on the Recreation Safety Bacterial Water Quality Indicator

When the local news recently (Jan 8, 2019) reported several beaches on Oahu were closed due to elevated Enterococci (ENT) indicator bacteria, and Kahalu'u Bay was "Posted" by the Health Department of Hawai'i, at about the same time. These events raised curiosity. There had been no significant rain events on the islands, and no sewer spills to cause health department warnings. Instead, the warnings arose for beaches widely separated geographically and simply because the levels of ENT were elevated above the regulatory threshold.

The State Department of Health monitors the indicator bacteria Enterococci (ENT). The official belief was that ENT was a useful marker for fecal contamination. A lot of science has shown that it is not a valid indicator, nonetheless, it is still the official test (Boehm 2009). This ENT monitoring data is part of the Kahalu'u Bay collection. When the Bay was posted as contaminated in January, it generated posed a question. We were having colossal Spring Tides at the time. Could the tides have something to do with the bacteria levels? The bottom line is indeed they do. But how?

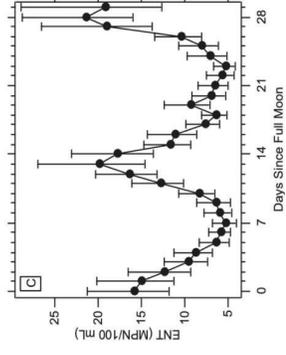

The ENT bacteria are common to land and water sources even where there is no fecal matter at all. They grow in wet places like culverts, compost piles, drainpipes, and wetlands. From there they flow into the sea, and they make a home there too. They can be found floating in the seawater, and that is where the state measures them. But more critically, they live and grow in wet beach sand above and below water level. Many times, more ENT can be found in the beach sand than in the water above.

Figure 5. How Tidal Circulation at the Shore Conveys Indicator Bacteria to the Water Column (Lee 2017)

A super high tide followed by a minus low tide and allows for a huge water outflow from the STE. The water flows above and through the sand dispersing ENT up into the water column where the ENT can be detected and counted. When the ENT count is high, beaches get warning signs and may be closed.

Figure 6. Lunar – Tidal Influence on Marine Water Enterococci (Boehm 2005)

This graph shows the ENT count and the moon cycle. Fourteen days after a full moon are the astronomical Spring Tides and associated rise in the ENT. This tidal force literally stirs things up.

There remains a distinct possibility that elevated ENT counts are often an artifact of the tide cycle at the time of sampling. This bias likely triggers official warnings where there is no apparent health risk events like sewage spills or flooding.

However, given that the region near Kahalu'u Bay is not served by sewer and most homes have utilized cesspits for decades, sewage components may be conveyed to the ocean by groundwater. Microbiologists have documented the presence of human virus in seawater when the ENT is low or absent. The need for a better risk indicator is great. Stable chemical indicators of sewage such as Sucralose (Bennett 2021) and an MRI diagnostic marker (Johannesson 2017) show promise in wastewater tracking research conducted in Hawaii Island.

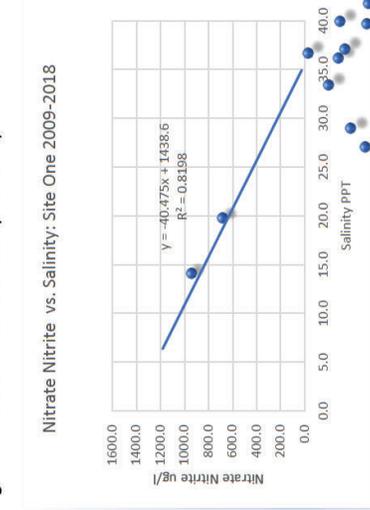

The real good news about the safety of recreation water in Hawaii is the sun. The intense midday UV sunlight penetrates clear water and kills microbes in a matter of hours. We shall see, however, in the next section, clear ocean water is less common these days.

## III. The Nutrients Nitrogen and Phosphorus in Nearshore Groundwater<sup>6</sup>

It is well established that brackish groundwater flowing in discrete and diffuse STE is abundant in the nutrient's nitrogen and phosphorus. According to University of Hawai'i researchers, wherever there is cold STE water flows, elevated nutrients are present (Johnson 2008). These flows result in thousands of pounds of nutrients being conveyed daily to the nearshore waters. Tropical water ecosystems are naturally low in nutrients (De Goeij 2013), and yet corals have adaptations to these conditions. Unfortunately, decades of human derived nutrients in the ocean nourish algal biomass expansion to the detriment of the corals.

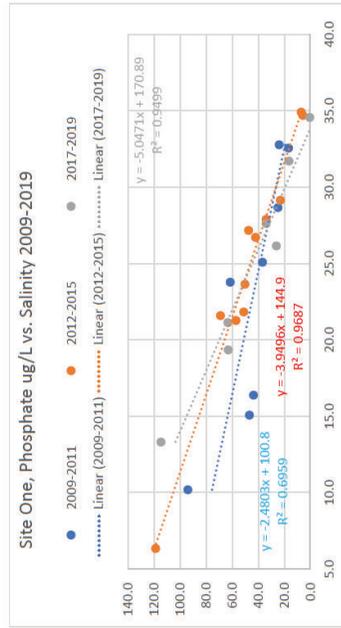

<sup>6</sup> All nutrient analysis performed by the certified laboratory at NELHA

Figure 7. Nitrate-Nitrite Relationship to Salinity

This graph looks complicated, but it's not. Let's interpret. The line says, when sea water is saltier there is less N in it. Conversely, the fresher the water the higher N is there. Taken over 10 years in many locations in the bay and from other Kona Coast sites, this pattern is very consistent. Simply, it means the elevated N source is from the land and not from groundwater and not from the sea.

Figure 8. Phosphate Relationship to Salinity

This chart looks even more complicated, but it is just three sets of years P plotted against salinity. It shows a very similar relationship as the N chart. Yet here we are looking at a ten-year period in three phases. It answers the question, are things changing over time? For both N and P there is no evidence of a time trend. The nutrient concentrations in groundwater are staying about the same.

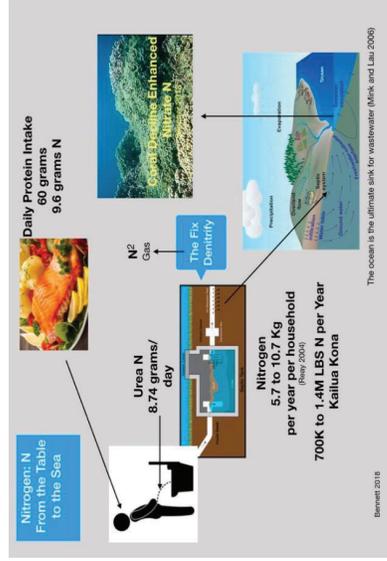

Just as for salinity and temperature in the first report, tidal action dilutes the groundwater and hence the N concentration (Fig. 2). Thus, if one was trying to say there is no problem or a lesser problem, the sample would be collected at the highest tide to get the lowest N level. In all future work, we must account for the tidal effect on nutrient concentration in nearshore waters.

A very large mass of the nutrients, N, and P, flow into the ocean for almost the entire Kona Coastline. Some have conveniently wanted to say the N and the P are natural, meaning this system was here before humans. While it is true, the mass of nutrients was far, far less as there was little importation of nutrients other than through fish consumption.

Given that, what is the reason for the large mass of nutrients? We are! A lot of research on this island and others shows very clearly that the N and P are from human activity. We say the elevated nutrients are anthropogenic, or human-associated. This includes the fertilizers imported and dispersed in landscape and agriculture. Yet the largest single source is the human diet and the nutrients we excrete daily.

For example, protein-rich foods contain much more N than starchy foods and vegetables. The proteins get absorbed and ultimately broken down and the nitrogen is excreted in the urine as urea. Leave urine in the bowl for a day and the bacteria break it down and form ammonia with its distinctive odor. In the environment, bacteria convert ammonia to nitrate. It is the same nitrate found in a bag of lawn fertilizer.

Figure 9. A Simple Mass Balance for Human Dietary Nitrogen Marine Impact

Each household, on average, contributes about 21 pounds of N per home per year. Add up all the homes in Kailua Kona and a year, and we can produce around a million pounds of N that flow into cesspits, septic systems, and treatment plants. No matter which one is used, most of the N ends up in the groundwater and the sea.

This fertilizer in the sea has the same effect as it does on your lawn. Instead of grass growing, the microscopic green plant microbes called phytoplankton grow and in high numbers make the

water shades of cloudy green. This growth absorbs sunlight making the natural UV disinfection of seawater less effective. Ecosystem research from Kaneohe Bay demonstrates that wastewater N in the bay has an additive effect with increased temperature to cause greater coral bleaching (Tanaka 2013).

Figure 10. Nitrogen Mass Dependent on Ground Water Flow Volume

Lastly, it is not sufficient just to know the concentration of the nutrient flowing into the bay as it tells us nothing of the mass or pounds in the flow. Thus, we must know or estimate the volume of the flow so that we can calculate the mass of nutrients delivered to the sea from the STE.

The blue arrows represent the same nutrient yet at very different flow volumes. The total mass of N, reaching the bay and impacting the ecosystem is very different. Where currents move and mix these nutrients to the open ocean, adverse impacts are less likely.

However, in protected embayments like Kaha'u, the transport and mixing is much less and the impact on the local ecosystem is more significant.

Think of it this way. A little soy sauce on food gives it just the right salt taste, but add a quarter cup of soy sauce on food and it becomes horribly salty. The salt in the soy is at the same concentration; there was simply more salt.

In the bay, we cannot alter the volume of water flowing in, just like we cannot stop a river. So, we need to employ the tools that reduce the concentration of N and P discharged to groundwater.

The people of Long Island NY, Cape Cod MA, and coastal Florida have severely polluted their estuaries from Septic Systems. The environmental and economic consequences are monumental. The residents put their collective shoulders to the wheel and financed solutions research. That research demonstrated a simple technique that removes the nutrients in human wastewater by over 90%. The states are implementing the "Layer Cake-Nitrogen Reducing Biosystem leach field. Kona can do this too. The consequences of "kicking the can down the road" will be dire. Sustainable Hawai'i must be our goal.

For over 35 years, Dr. Bennett has worked in the environmental science field where the land meets the water. From Tomales Bay CA, to New South Wales Australia to the Big Island wherever there are people and oceans there are huge challenges. A resident of Kona since 1999, he serves as Na Mako O Ke Kai (eyes of the sea) for the Kona Coast Waterkeeper Waiwai Ola Ohana.

**Acknowledgments**

Special appreciation goes out to Cindi Punihaole Kennedy, the founding director of The Kohala Center's Kaha'u Bay Education Center, and Marine Stewardship and Education Specialist Kathleen Clark. Together with many volunteers, they have collected high-quality data since 2009. The data is the basis of the three reports and this summary. Also extending appreciation to the former UH researcher James M. Bishop for his assistance in understanding the hydrology of Hawai'i Island and the review of the manuscripts.

COMMENTS REGARDING:

Draft Environmental Impact Statement (DEIS)  
for the Kamehameha Schools Keauhou Bay Management Plan  
Keauhou, Hawai'i Island, Hawai'i

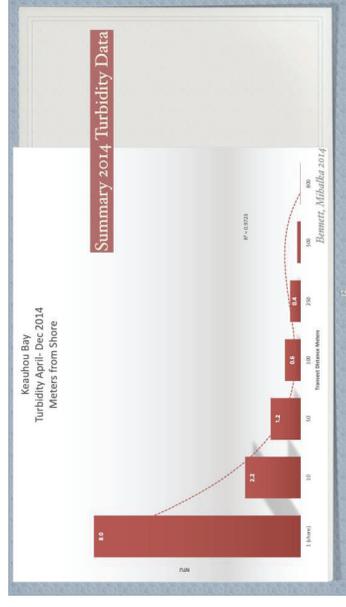

Richard H. Bennett MS, PhD  
Applied Life Sciences LLC

The following comments pertain specifically to water quality issues affecting Keauhou Bay. The draft EIS does not address these nor accounts for the fact that the State and the EPA list Keauhou Bay as an Impaired Water Body under section 303 D of the Clean Water Act (CWA). That law requires that impacts to the Bay be mitigated and that further impairment does not occur. This requirement under the law has not been met. Any development in the watershed needs to be conducted by a careful evaluation of this fact. Under the law, remediation begins by conducting a Total Maximum Daily Loading study known as a TMDL. The Bay is listed as impaired for exceeding the limits for turbidity. Turbidity has several causes in near-shore waters, such as runoff water with fine sediments and phytoplankton. Our research shows that turbidity is a problem in Keauhou Bay in the absence of surf events. The turbidity is also due to the overgrowth of marine phytoplankton. Our studies show that turbidity declines along a line moving offshore. The inner Bay has very poor circulation and is where most sediments and other factors causing turbidity arise. Phytoplankton grow in response to increased temperature and nutrient loading in the Bay. The lack of adequate circulation amplifies the problem.

The photo was taken in the summer of 2007 in response to concerns about the greening of Keauhou Bay. The brand name on the canoe paddle is not legible. (photo credit Bennett).

Figure 1. Nine-month summary of turbidity data for the Bay.

(Bennett 2002)

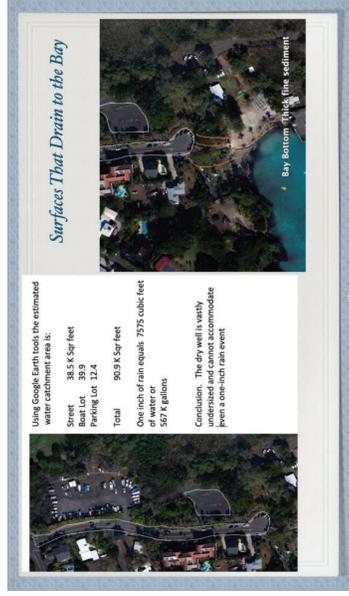

The nine-month summary chart above shows that turbidity is worse at the shoreline and decreases non-linearly in waters offshore. The slight rise in turbidity at 250 meters may be more of a phytoplankton effect than sediment.

The DEIS makes the following statement regarding groundwater.

*Due to the low frequency of substantial rainfall and high permeability of the soils throughout the Project in this area, surface runoff generally does not occur in the typical rainfall occurrence. Runoff either percolates into the underlying groundwater or evaporates into the atmosphere. There are no drainage reports or calculations on file with the County of Hawai'i or DOT for the adjacent public roadways or surrounding developed properties. However, existing stormwater runoff peak flow estimates for the three (3) drainage basins within the Project Area are presented in Table 4-4.*

The draft EIS fails to account for surface water runoff from Kamehameha III Road. At the Bayside terminus of the road is a dry well. It is typically loaded with sediment and unable to handle the storm flows that come down the length of the road. Thereafter, water overflows the curb and goes down the driveways and the slope into the Bay. As it does, it picks up considerable sediment and delivers it to the near-shore waters, increasing the turbidity problem (Fig 3).

Figure 2. Rain catchment area and water volume estimate.

(Bennett 2002)

As calculated above, a one-inch rain can produce over five hundred thousand gallons of water, with most of the flow eroding fine sediments as it enters the Bay (Figure 3). The County of Hawai'i was made aware of this dry well failure four years ago. Some of this water comes off of Kamehameha Schools land.

The DEIS statement that rainwater percolates to groundwater suggests groundwater is the terminus and the water does not flow to the sea. For at least 25 years, it was the position of the State that groundwater under the land does not communicate with the sea. Considerable research, such as Kneeb (2010), Dulai (2020), Peterson (2009), and others, shows that the State's policy is specious and not science-based. The State's anchialine system is a subterranean estuary (Bishop 2015). Consequently, the DEIS must reconsider the implication that the local groundwater is an inconsequential endpoint for fresh and waste water flows. A recent US Supreme Court decision held that wastewater disposal to the nearshore groundwater without the necessary permit was a violation of the CWA (see footnote page 7).

Figure 3. Stormwater and sediment Flow into the Bay.

The photos suggest considerable sediment erosion into the Bay.

Nutrient Degradation and Impairment of the Bay.

The draft EIS does not account for the elevated levels of nutrients in the Bay. Again, our research shows that nitrogen and phosphorus exceed state standards. Unlike other locations, it is unfortunate that the Hawai'i Department of Health fails to measure these nutrients in the Bay. Thus, conducting a nutrient analysis of the Bay waters was necessary. That analysis is provided below.

Table 1. Nutrient analysis along transects over three quarters of 2019

Note: The NELHA Lab has multiple certifications, including the State Department of Health

None of the nutrient values for water collected as shown above met state standards. The elevated nutrients in the Keolu Bay watershed come from various sources. A common misconception is that fertilizers applied to private properties and the local golf course are the significant sources. However, research shows that nutrient leaching from the Mauna Kea and Keolu golf courses is minor compared to the nearby homes on Puako Drive (Dialer 2011). The likely source is the myriad cesspools in the watershed. Some homes on the North peninsula of the Bay are connected to sewers, but most homes are not.

The elevated levels of ammonia suggest a water connection to fresh sources of animal and human waste. Ammonia in marine water is quickly converted to nitrate. Our data also shows the nitrogen and phosphorus levels exceed state standards for the Bay. Had the State collected this data, the EPA would declare water impairment from these nutrients. These elevated nutrients can cause the seasonal "greening" of the marine waters (Smith 2020).

The draft EIS makes no mention of nutrient pollution issues and implies that all new developments will be connected to the sewer line that transmits raw sewage to the Heeia wastewater treatment plant. The treated wastewater containing most of the nutrients in human waste is conveyed to the golf course to irrigate the golf course. It is not known the extent to which those nutrients leech into the groundwater and the Bay. It is also not known how much more water the golf course will utilize in the future.

Several residences and perhaps some commercial facilities in the proposed development area use cesspools or septic systems for human waste management. The impact on the Bay is significant and needs to be described and mitigated. However, this problem is not mentioned in

the DEIS. It is more than advisable that the Project connect all waste systems to the regional sewer.

It is well established that sewer lines leak, which is a function of many factors such as piping class and age (Rutch 2006). In the project area, some sewer lines are quite old. One such line on the East shore of the Bay broke during a significant tidal event. The DEIS does not account for sewer line leakage or the risk from extreme tidal events. This problem needs to be evaluated, and where sewer lines are at risk and need to be replaced by resilient lines such as High-Density Polyethylene (HDPE).

Figure 4. Nitrogen (delta N 15) signatures along the Keolu Region shoreline

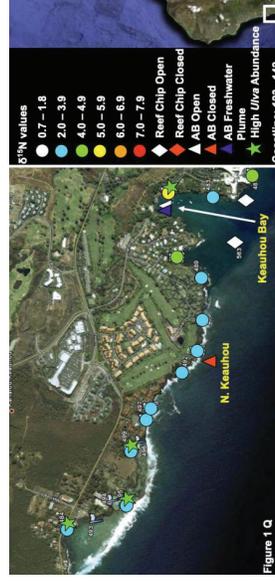

Figure 1 Q (Dailer 2011)

Nitrogen Signatures in the Keolu Area

The magnitude of the delta N 15 value indicates the greater contribution of human (animal) waste nitrogen. Raw sewage water is currently conveyed from the hotel at the Bay to the Heeia Wastewater Treatment Plant (HWWTP). The secondarily treated wastewater (WW) is provided to the local golf course for irrigation. How much water the golf course needs or could utilize is unknown. Casual observation of the course suggests that it is under-irrigated. Nutrients in the WW are not removed but beneficial to the grass. Delta N 15 data indicates that the golf course contributes negligible human (animal) nitrogen to the near-shore waters.

In contrast, the Delta N 15 values are higher in the Bay proper. The source is likely human waste from cesspools in the immediate region. Less than half of the homes are connected to sewer. It is imperative that the DEIS account for these sources and provide sewer design criteria for all new developments to be connected to the HWWTP.

Figure 5. Non-permitted wastewater discharge to the Bay

Some years ago, federal funds were provided to upgrade the Bay boat launch facilities. Before the upgrade, boat wash water flowed over the surface and into the Bay. A dry well was installed, and it drained to surface water only a few feet below the drain. Boat wash water is potable water. The wash water contains fish liquids, blood, and particulate fish waste. This wastewater may be a source of ammonia in the Bay. Washed bilge water often contains oil products. The data in Figure 5 is from the wash water surface drain at Honokohau Harbor.

Since it is obvious this wash water flows into the Bay in the groundwater, the State should have applied for an NPDES permit. Such a permit is required for any ocean discharge of wastewater, especially in waters known to be impaired under the CWA. This requirement has been affirmed by the Supreme Court<sup>1</sup>.

#### Conclusions

The surface water and groundwater flows from the proposed development and those in the upper watershed need to be considered to ensure that further degradation of this impaired water body does not occur. This is referred to herein as a TMDL. Given the environmental ethics of Kamehameha Schools and the legal history of the Public Trust Doctrine of the State Constitution<sup>2</sup>, we suggest that these environmental impacts described above be studied for the project design and mitigated.

<sup>1</sup> *Courty of Maui, Hawaii v. Hawaii Wildlife Fund*, 140 S. Ct. 1462, 590 U.S. 165, 206 L. Ed. 2d 640 (2020).

<sup>2</sup> *Kelly v. 1250 Oceanside Partners*, 140 P.3d 985, 111 Haw. 205 (2006).

Keaouhou Bay is a small bay inlet on Hawaii'i Island and, as such, is subject to much more degradation than the open shore area of West Hawaii'i. As such, the Bay requires special protections.

Sincerely,

/s/ R.H. Bennett MS, PhD, President

**Attachments:** Comments DEIS Keaouhou bay final (1).pdf  
**Categories:** Yellow Category

Aloha,

I received this letter from Richard H. Bennett MS, PhD Applied Life Sciences LLC to send to you. Please, see this information and know that this bungalow resort Development WILL have a serious negative impact on the bay because of the water quality he mentions in his letter.

Thank you,  
Sincerely,  
Rebecca Melendez

July 24, 2024,

COMMENTS REGARDING:

Draft Environmental Impact Statement (DEIS)  
for the Kamehameha Schools Keauhou Bay Management Plan  
Keauhou, Hawai'i Island, Hawai'i

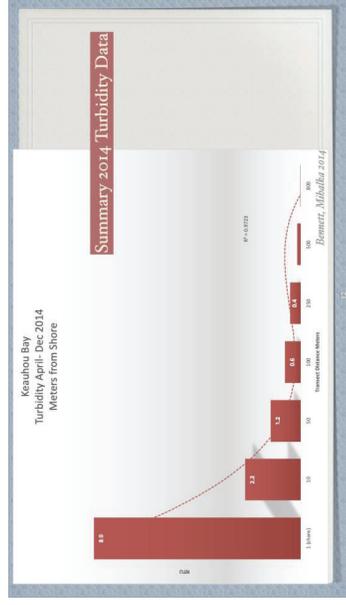

Richard H. Bennett MS, PhD  
Applied Life Sciences LLC

The following comments pertain specifically to water quality issues affecting Keauhou Bay. The draft EIS does not address these nor accounts for the fact that the State and the EPA list Keauhou Bay as an Impaired Water Body under section 303 D of the Clean Water Act (CWA). That law requires that impacts to the Bay be mitigated and that further impairment does not occur. This requirement under the law has not been met. Any development in the watershed needs to be conducted by a careful evaluation of this fact. Under the law, remediation begins by conducting a Total Maximum Daily Loading study known as a TMDL. The Bay is listed as impaired for exceeding the limits for turbidity. Turbidity has several causes in near-shore waters, such as runoff water with fine sediments and phytoplankton. Our research shows that turbidity is a problem in Keauhou Bay in the absence of surf events. The turbidity is also due to the overgrowth of marine phytoplankton. Our studies show that turbidity declines along a line moving offshore. The inner Bay has very poor circulation and is where most sediments and other factors causing turbidity arise. Phytoplankton grow in response to increased temperature and nutrient loading in the Bay. The lack of adequate circulation amplifies the problem.

The photo was taken in the summer of 2007 in response to concerns about the greening of Keauhou Bay. The brand name on the canoe paddle is not legible. (photo credit Bennett).

Figure 1. Nine-month summary of turbidity data for the Bay.

(Bennett 2002)

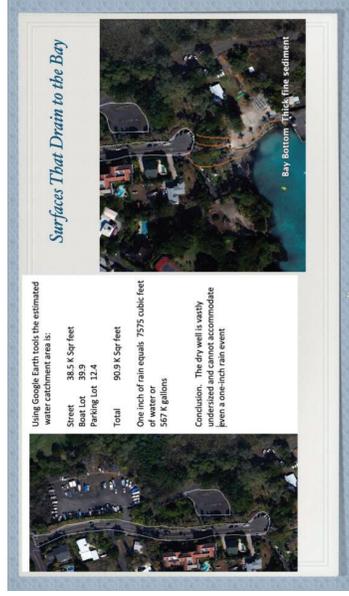

The nine-month summary chart above shows that turbidity is worse at the shoreline and decreases non-linearly in waters offshore. The slight rise in turbidity at 250 meters may be more of a phytoplankton effect than sediment.

The DEIS makes the following statement regarding groundwater.

*Due to the low frequency of substantial rainfall and high permeability of the soils throughout the Project in this area, surface runoff generally does not occur in the typical rainfall occurrence. Runoff either percolates into the underlying groundwater or evaporates into the atmosphere. There are no drainage reports or calculations on file with the County of Hawai'i or DOT for the adjacent public roadways or surrounding developed properties. However, existing stormwater runoff peak flow estimates for the three (3) drainage basins within the Project Area are presented in Table 4-4.*

The draft EIS fails to account for surface water runoff from Kamehameha III Road. At the Bayside terminus of the road is a dry well. It is typically loaded with sediment and unable to handle the storm flows that come down the length of the road. Thereafter, water overflows the curb and goes down the driveways and the slope into the Bay. As it does, it picks up considerable sediment and delivers it to the near-shore waters, increasing the turbidity problem (Fig 3).

Figure 2. Rain catchment area and water volume estimate.

(Bennett 2002)

As calculated above, a one-inch rain can produce over five hundred thousand gallons of water, with most of the flow eroding fine sediments as it enters the Bay (Figure 3). The County of Hawai'i was made aware of this dry well failure four years ago. Some of this water comes off of Kamehameha Schools land.

The DEIS statement that rainwater percolates to groundwater suggests groundwater is the terminus and the water does not flow to the sea. For at least 25 years, it was the position of the State that groundwater under the land does not communicate with the sea. Considerable research, such as Kneeb (2010), Dulai (2020), Peterson (2009), and others, shows that the State's policy is specious and not science-based. The State's anchialine system is a subterranean estuary (Bishop 2015). Consequently, the DEIS must reconsider the implication that the local groundwater is an inconsequential endpoint for fresh and waste water flows. A recent US Supreme Court decision held that wastewater disposal to the nearshore groundwater without the necessary permit was a violation of the CWA (see footnote page 7).

Figure 3. Stormwater and sediment Flow into the Bay.

The photos suggest considerable sediment erosion into the Bay.

Nutrient Degradation and Impairment of the Bay.

The draft EIS does not account for the elevated levels of nutrients in the Bay. Again, our research shows that nitrogen and phosphorus exceed state standards. Unlike other locations, it is unfortunate that the Hawai'i Department of Health fails to measure these nutrients in the Bay. Thus, conducting a nutrient analysis of the Bay waters was necessary. That analysis is provided below.

Figure 5. Non-permitted wastewater discharge to the Bay

Some years ago, federal funds were provided to upgrade the Bay boat launch facilities. Before the upgrade, boat wash water flowed over the surface and into the Bay. A dry well was installed, and it drained to surface water only a few feet below the drain. Boat wash water is potable water. The wash water contains fish liquids, blood, and particulate fish waste. This wastewater may be a source of ammonia in the Bay. Washed bilge water often contains oil products. The data in Figure 5 is from the wash water surface drain at Honokohau Harbor.

Since it is obvious this wash water flows into the Bay in the groundwater, the State should have applied for an NPDES permit. Such a permit is required for any ocean discharge of wastewater, especially in waters known to be impaired under the CWA. This requirement has been affirmed by the Supreme Court<sup>1</sup>.

#### Conclusions

The surface water and groundwater flows from the proposed development and those in the upper watershed need to be considered to ensure that further degradation of this impaired water body does not occur. This is referred to herein as a TMDL. Given the environmental ethics of Kamehameha Schools and the legal history of the Public Trust Doctrine of the State Constitution<sup>2</sup>, we suggest that these environmental impacts described above be studied for the project design and mitigated.

<sup>1</sup> *Courty of Maui, Hawaii v. Hawaii Wildlife Fund*, 140 S. Ct. 1462, 590 U.S. 165, 206 L. Ed. 2d 640 (2020).

<sup>2</sup> *Kelly v. 1250 Oceanside Partners*, 140 P.3d 985, 111 Haw. 205 (2006).

Keaouhou Bay is a small bay inlet on Hawaii'i Island and, as such, is subject to much more degradation than the open shore area of West Hawaii'i. As such, the Bay requires special protections.

Sincerely,

/s/ R.H. Bennett MS, PhD, President

**Subject:** Reject Kamehameha Schools EIS  
**Categories:** Yellow Category

Aloha,

Please reject Kamehameha Schools EIS because Keaouhou Bay is declared Impaired water HI713293 by the EPA Clean Water Act. This bay needs to be preserved because it is a natural resource that is very sensitive.

"The State of Hawaii Conservation District is a designated land area managed by the Department of Land and Natural Resources (DLNR) through the Office of Conservation and Coastal Lands (OCCL). This district was established to protect Hawaii's natural resources and encompasses various land types including watersheds, scenic areas, parklands, wilderness areas, beach reserves, and habitats for endemic plants and wildlife. The Conservation District also includes submerged lands makai of the shoreline."

<https://dlnr.hawaii.gov/occl/conservation-district/>

Keaouhou Bay is a natural resource and NEEDS TO BE PROTECTED. Under the EPA Clean Water Act it is Impaired water area and DLNR it should be conserved because it is an extremely sensitive area. <https://dlnr.hawaii.gov/occl/conservation-district/>

The district is divided into five subzones:

- Protective: The most environmentally sensitive areas.
- Limited: Areas with some environmental sensitivity.
- Resource: Areas designated for resource conservation.
- General: The least environmentally sensitive areas.
- Special: Areas with unique land uses

**Subject:** Please Reject KS EIS  
**Categories:** Yellow Category

Aloha,

Please reject Kamehameha Schools Bungalow Resort EIS for the fact that Big Island does NOT have the resources for ANOTHER resort in the Keauhou area. Because their resort development, "project area is bordered on the west by the Pacific Ocean, the Kona Country Club on the east, a residential subdivision to the north and on the south by the Outrigger Kona Resort and Spa and Hōlua Resort at Mauna Loa Village." <https://bigislandnow.com/2024/08/07/kamehameha-schools-management-plan-for-keauhou-bay-draws-waves-of-community-opposition/>

There are plenty of resorts and vacation rentals in the Keauhou Bay area already and these resorts have the use of a lot of the island's water resources, especially the golf course.

"Water allocation or who gets how much has always been an issue in Hawaii. Hawaii has one of the world's most aspirational water policies for a reason. We are an isolated island chain, and our economies and health of our citizens are dependent on ensuring our water security future.

We have indigenous cultures and communities, who evolved with flowing water in their streams, with legitimate historic and current grievances about loss of their water rights. We have unique species that are dependent on flowing waters from the mountains to the sea. <https://www.civilbeat.org/2024/01/why-reform-of-hawaiis-water-policy-may-now-be-necessary/>

"In Hawaii, one of the most important sayings is *ola i ka wai*, "water is life" — a phrase that not only sums up what it means to exist on an island, but what it means to live, period. But now, one of the largest of the island chain's land masses is facing a triple threat to its sole freshwater source, and if it isn't addressed soon, one community member says, "we're in deep trouble."

Despite being surrounded by seemingly endless ocean, freshwater on Oahu, the third-largest of Hawaii's six major islands, is not easily accessible. The island relies on an underground aquifer for its water supply. Replenishing that aquifer is a decades-long natural process, as it takes a single drop of water roughly 25 years to make it there from the sky." <https://www.cbsnews.com/news/hawaii-water-crisis-climate-change/>

"(BIWN) – With moderate to severe drought conditions being reported across Hawaii island, local water department officials issued a statement this week on the need for customers to use drinking water wisely.

Most of Hawaii'i island is under "Moderate Drought" conditions, according to the latest information [from the U.S. Drought Monitor](#). There is an area under "Abnormally Dry" conditions in

South Kona, however there are other, small pockets on the Big Island that are under "Severe Drought". There is even a small spot of "Extreme Drought" in the South Point area of Ka'u." [https://www.bigislandvideonews.com/2023/10/05/drought-conditions-on-hawaii%CA%BBi-island-prompt-water-supply-message/#google\\_vignette](https://www.bigislandvideonews.com/2023/10/05/drought-conditions-on-hawaii%CA%BBi-island-prompt-water-supply-message/#google_vignette)

Please reject Kamehameha Schools EIS because of SECTION 1. Act 50, Session Laws of Hawaii 2000 (Act 50), amended chapter 343, "...Native Hawaiian culture plays a vital role in preserving and advancing the quality of life and cultural vitality of Hawaii". Additionally, the rights of native Hawaiians are codified in the Hawai'i State Constitution, as well as other state laws and judicial decisions."

This resort Bungalow Resort development WILL turn Keauhou Bay into another tourist area and it WILL lose the presence that is there, especially on the weekends because many local Hawaiians are in Keauhou Bay barbecuing and swimming with their families and if you make this a resort, tourists will take up the bay and Hawaiians and community locals won't be able to enjoy it because it is an extremely small bay and will have more tourists and this is against Act 50 SB3152 Cultural Impact Law.

There is enough room in the small park for a few Hawaiian families to enjoy the bay with their kids, while the canoe club practices racing and that is it. They need to go to Keauhou Bay on the weekends to see Hawaiian families (the beneficiaries of this Endowed land that they own) enjoying the small park that is there because if this development is created there won't be room for Hawaiians or community locals and this goes against Act 50 SB3152 Cultural Impact Law

The Hawaiian people and local community will lose the privilege of having single man canoes in the bay because this EIS wants to decrease the canoe clubs land use that they have been using for over 60 years and there are a lot of Hawaiian people who are part of this canoe club because, "A [brief history of Hawaiian Canoe outriggers](#) The history of Hawaiian canoe outriggers is deeply rooted in the rich maritime traditions of the indigenous Polynesian people who first settled in Hawaii around 1,500 years ago. These early settlers brought with them advanced navigation and canoe-building skills, which played a crucial role in shaping Hawaiian culture and society." <https://thishawaiilife.com/hawaiian-canoe-culture/>

Taking this land away that gives the Hawaiian people (the beneficiaries of this Endowed land) a place to race and enjoy their canoes, and giving this land to tourists is against Act 50 SB3152 Cultural Impact Law because canoe paddling has been a cultural practice for thousands of years because taking this away WILL have significant impact on this cultural practice.

Volleyball has turned into a Hawaiian cultural practice because it has been played for over 60 years and is played at the state of Hawaii University <https://hawaiiathletics.com/sports/womens-volleyball> and <https://hawaiiathletics.com/sports/mens-volleyball> and the kids that play volleyball in this area are Hawaiian kids. Taking volleyball away would be against Act 50 SB3152 Cultural Impact Law because taking this away WILL have significant impact on this cultural practice.

### "The Importance of Fishing in Hawaiian Society

Fishing was not merely a means of putting food on the table; it was the lifeblood of Hawaiian society. The islands' isolation in the vast Pacific Ocean meant that the Hawaiians had to rely heavily on their marine resources for sustenance. Fish provided a primary source of protein in their diet, supplemented by taro, breadfruit, and other agricultural products." <https://www.nanihawaii.com/hawaii-ancient-fishing-practices>

It is Hawaiian Culture to fish and I have seen net fishing and pole fishing in Keauhou Bay. There are many Kapuna who fish in Keauhou Bay daily and right now they have room to enjoy their culture practice in Keauhou Bay. If you allow this resort development you will be flooding this small historical bay with swimming tourists, standup paddle boards, kayaks... and take away the room that these Hawaiian people (the beneficiaries of this Endowed land) to enjoy their fishing culture and this is against Act 50 SB3152 Cultural Impact Law because causing a flood of tourists to come into this small bay WILL have significant impact on this cultural practice.

This petition [https://www.change.org/p/save-keauhou-bay-from-becoming-a-big-crowded-resort?utm\\_source=share\\_petition&utm\\_medium=custom\\_url&recruited\\_by\\_id=92a53560-1e91-11e5-b4ef-b94e90cedbdd](https://www.change.org/p/save-keauhou-bay-from-becoming-a-big-crowded-resort?utm_source=share_petition&utm_medium=custom_url&recruited_by_id=92a53560-1e91-11e5-b4ef-b94e90cedbdd) talks about the cultural practices that must be allowed to stay in Keauhou Bay and if you build this resort development you will be going against the thousands of Hawaiians (the beneficiaries of this Endowed land) and community locals who have signed this petition and who want to be able to keep their cultural practices alive and well in this bay and this is against Act 50 SB3152 Cultural Impact Law.

I sent you this petition info on the 5th with all the comments that had been written up to that time and that day there were 6,198 signatures. Today there are now 6,361 signatures because 200 more people signed this petition in 2 days. Hawaiians (the beneficiaries of this Endowed land) community locals and tourists DO NOT WANT A BUNGALOW RESORT. I have included the new comments on why people signed this petition below.

Petition Info: "Keauhou Bay is historical sacred land. It's also a small commercial and quiet residential area, with a local canoe club that uses the bay daily, local volleyball groups that play there daily, families BBQ every weekend, hold funeral services, baptisms local kids enjoy swimming, and visitors enjoy paddle boarding and kayaking all the time without a crowd..." These cultural practices will be negatively impacted by this resort development and it will go against Act 50 SB3152 Cultural Impact Law [https://www.capitol.hawaii.gov/sessions/session2020/bills/SB3152\\_.HTM#:~:text=Act%2050%2C%20Session%20Laws%20of%20Hawaii%202000%20%28Act,on%20cultural%20practices%20of%20the%20community%20and%20State.](https://www.capitol.hawaii.gov/sessions/session2020/bills/SB3152_.HTM#:~:text=Act%2050%2C%20Session%20Laws%20of%20Hawaii%202000%20%28Act,on%20cultural%20practices%20of%20the%20community%20and%20State.)

Please read Hawaiians, community locals and tourist comments on why they signed and understand Keauhou B has been used as a small Hawaiian community for hundreds of years and local community for over two hundred years and under the law, Act 50 SB 3152 Cultural Impact Law they have the right to keep it a small historical bay and not turn it into another big resort development area because this would significantly impact their culture in many different ways.

Rebecca Melendez

[Janet Berketa](#) 2 weeks ago

this project is very environmentally destructive, and bad for our climate.

11

0

Report

[Fran Copp](#) 2 weeks ago

The Keauhou Bay should be protected as is bc the island needs to be protected for the recreation of the residents. It would be ruined if that many units for short term rentals were put in such a small place. It would pollute the environment and change the habitat for the animals that live there for the benefit of the golf course. In 10-20 years the place would be trashed. It's a small location not able to handle the traffic, and trash. Government is here to serve the community not promote a business that cause irreparable harm to the people and animals who leave. We don't want it.

0

Report

[Karen Kenyon](#) 2 weeks ago

I believe that preserving the bay is absolutely vital — this project does not do this. It will also add to traffic and increase noise for those with condos in the area.

0 .  
Report

• [Jennifer Lumd3](#) 3 weeks ago

Enough is enough. Short term financial gain is not worth it. Environmental Impact: Pollution Risk: Developments pollute nearby waters both during and after construction. Endangered Species: Habitat for federally protected green sea turtles and endangered monk seals. Development will threaten these species due to pollution and human disturbance. Golf Course Runoff: Golf course pesticides and fertilizers lead to harmful algae blooms, killing coral and marine life. The removal of the trees that act as a natural filter will allow golf course runoff to pollute the Bay. Increased Human Activity: More tourists and residents will increase noise, water, and light pollution, further disturbing

marine life. Motor Vehicle Pollution: Increased traffic from the resort will lead to more oil and heavy metal runoff into the bay. Noise Pollution: Construction and increased human activity will disrupt marine life, particularly cetaceans. Stormwater Runoff: Development will increase impervious surfaces, leading to higher stormwater runoff and pollution. Sea Foam Toxins: Pollutants in runoff can lead to toxic sea foam, affecting air quality and marine health. Scientific Evidence: NOAA & Other Studies: Developments have always polluted coastal waters, harming marine ecosystems. Coral Reefs: Runoff from developments causes coral bleaching and death, as evidenced in Hawai'i and other coastal areas. Plankton Decline: Pollutants from runoff kill plankton, crucial for manta rays' diet, leading to ecosystem collapse. Algae Blooms: Pollution runoff causes algae blooms, smothering coral reefs and killing marine life. Ecosystem Research: Studies show significant negative impacts on marine ecosystems from development-related runoff.

Legal Concerns: Endangered Species Act: Development violates the act's mandate to conserve habitats for endangered species. Hawaii Conservation Laws: Local statutes require conservation of indigenous aquatic life and their ecosystems. Conservation Mandate: Federal and state laws emphasize conserving ecosystems that support endangered species. Infrastructure Issues: Resource Strain: Big Island already faces water shortages, limited landfill capacity, and power conservation needs. Inadequate Infrastructure: Existing infrastructure cannot support additional strain from a large resort development. Waste Management: Big Island's landfill is nearing capacity, and new developments will exacerbate waste issues. Water Crisis: Ongoing drought and water contamination issues make additional strain from new developments unsustainable. Power Conservation: Big Island is currently experiencing power shortages and rolling blackouts, and new developments will increase demand. Case Studies: Chesapeake Bay: Coastal developments cause significant harm due to runoff, a situation Keauhou Bay could face. Hawaiian Islands: Existing research shows developments lead to severe degradation of coral reefs and marine life. Global Examples: Similar coastal developments worldwide have resulted in long-term environmental damage. Community Impact: Local Use: Keauhou Bay is a popular spot for local activities such as boating, fishing, canoeing, paddle boarding, snorkeling, manta night dives, surfing, and swimming. Tourist Impact: Increased tourist activity will further degrade natural resources and disturb local wildlife. Economic Considerations: Tourism Dependence: Manta ray tours and other eco-tourism activities depend on a healthy marine environment. Local Economy: Damage to the bay's ecosystem will negatively affect local businesses reliant on marine tourism. Long-Term Costs: Environmental degradation will lead to long-term economic costs, outweighing short-term development gains.

Conclusion: Long-Term Impact: Allowing the bungalow resort will permanently alter and likely destroy Keauhou Bay's ecosystem. Conservation Priority: Emphasis on conserving the bay as a natural habitat for endangered species and marine life. Community

Responsibility: Urge decision-makers to consider the long-term environmental, economic, and community impacts before approving the development

1

Report

Anaya Dorman Mackenzie 2 months ago

Truly a beautiful and sacred site. Seeing the amount of unused property which already exists on the island in and of itself wasteful, but then to add yet more vacation homes to a place which has deep meaning is insensitive and shortsighted. As the description of the petition here says, the beautiful trees along the water and inland are not just a pretty sight, but a vital part of sustaining the bay's ecosystem and have meaning of their own for people who go to the bay. Why would local people, who use this bay so often, want to

see it made into a tourist romping site? The people who are planning to create the vacation homes must not be a part of the community they will be affecting. After everything which has changed on the island, the clear-cutting of rainforest, the destruction of sacred sites, the companies who profit at the expense of people who tend the land, how could Hawaii think of letting this continue? Protecting this special little bay is part of respecting those who have been here all along, and representative of a shift towards thinking beyond short-term money-making. It shows what we want for the future of the island.

The developer seems to contradict themselves. in one hand they say there is a feeling of exclusivity with all the athletic and commercial activities that local families cannot enjoy it and on the other hand they want to build a boutique resort for the 1% tourists - so the Bay can be enjoyed exclusively by wealthy tourists?

I  KEAUHOU BAY. Please preserve Keauhou's culture and beauty.

0  
.  
Report

Janice palma-gleennie2 years ago

I've lived in or near keauhou for most of my 40 years in hawaii. The resources of the bay are limited, lovely, and cherished by local residents for all they provide for the health and welfare of we humans and the environment upon which we depend. Creating another exclusive enclave for the rich is far from what is needed to protect Hawaii. Inei from the ravages it's experienced in the past and is experiencing every minute by those who would exploit her.

0

I am from the Big Island. Our family has enjoyed Keauhou Bay for all our lives. It is beautiful the way it is... no need to build or upgrade. We love it the way it is now.

1

Report

Lisa Diaz 2 years ago

I care about protecting historic Keauhou Bay Ahupua'a ecosystem and our community. New resort development for tourism at the proposed large scale is totally inappropriate for Keauhou Bay. Keauhou Shopping Center has vacant space - they should not build more. Instead- make this area more accessible for our community, families and improve the small beach area making a park & managing trash. Allow the Hawaii County transit Trolley to access the bus stop on Kaleiopapa Street so people can access the bay without a car would improve sustainability and reduce pollution. We need to protect this area for it's cultural, historical and ecosystem - NOT over develop it for tourists and profit!

Keauhou is a local hang out not a tourist attraction. Too many favorite local beaches are getting turned into this and it needs to fuckin stop.

1

Report

• [Desiallee Cabalar](#) 2 years ago

All of the local spots are being blocked off by gates or homes with gated communities. This is not fair the local who were born and raised here should not be locked out of their own land just because greed and money. We have something the rich want until they fully pollute and destroy it and then they no longer want it. Hawaii/ Big island is known to a lot of tourist as the relaxing island. I do not have a problem with tourist but when you buy here on this island as a vacation home now your crowding the island so eventually it will be like Oahu where no one really thinks of it as a vacation spot. Just come stay the week and go home. We have many many hotels and condos that can't be full all year round. Support those places that are already built.

0

Report

• [Lisa Suttles](#) 2 years ago

[Ginnvto Minamishin](#) 2 years ago

This is King Kamehameha the third birth place and hold significant historical and sacred mana to the island of Hawaii. There is no more need to take and replace what is already

there !!!! This piece of Hawaii, that still is used by keaouhou canoe club and and an area for little family gathering, such as Picnics and paddle boarding. Not to mention the boat ramp for fisherman and fishing grounds around the area. This place is well taken care of by the locals of the big island and hold significant Hawaiian history!!! We don't need any more hotels, condos, homes on this beach front property. It is a respectable play ground for our children and adults as well from land to water. Please save hawaii and our sacred land and history from being over built for greed and control.

0

Report

[Kauliahoolai Piliaga](#) 2 years ago

The resort on Keahou point is way more than enough. The entire Alii drive is hotels, resorts, condos, vacation rentals, and multimillion dollar properties. Why must our community always conform to the greedy desires for people to exploit Hawaii. When you build stuff like this, the area that we all grew up in and have cherished memories in turns into a sad perversion of what it once was.

0

Report

[Julie Steimbach](#) 2 years ago

I love this island because it's not over crowded and all resorts. We love it the way it is.

0

Report

Keauhou does not need and cannot handle more condos or resorts. No no no to more development on our already fragile over crowded coast.

By Akua there is to be no new development in Ka 'Aina Kapu Kanahā. There are to be no disturbances to Pu'u o Kaluaokalani; no new construction or building of dwellings. Akua calls for the appreciation and obedience of all expressions of the Ancestors of 'Ōiwi and Divine Servants of the Ancestors.

Hālau No'eau Kahelemauna now here presents KS KBMP with a proposal that follows the guidance of Akua that has been received pertinent to the greatest care of Pu'u o Kaluaokalani.

**By Akua has come the declaration that Kamakahonu now includes all of the sacred lands of Pu'u o Kaluaokalani.**

The Capital of the Restored Kingdom of Hawai'i and the First Home of Kamakahonu is Hālau No'eau Kahelemauna.

Plans by the Royal Family of the Restored Kingdom of Hawai'i include plans to purchase the lands that began as a lease of Ali'i David K. Roy, Jr. and Ali'iwahine Verda L. Vida - Roy spoken of by the Ancestors of 'Ōiwi. Obedience to Akua lays the planning for all activity to take place. A full Restoration of the First Home of Kamakahonu is planned. Obedience to Akua lays the planning for the planting of the Garden Mala'ai Piihonua where all of the first plants of Kaluaokalani are to be planted. Obedience to Akua lays the planning for the loving and nurturing of holoholona here for outcomes of lives in peace and harmony. This is the restored vibration of Kaluaokalani. The first holoholona are to be pua'a (pigs), moa (chickens), kao (goats).

2

At Hālau No'eau Kahelemauna, the Divine Work of Inquiry with Akua continues for the abiding success of the care of all of Pu'u o Kaluaokalani beginning with the Divine Guidance for the success of the care of Keauhou Bay. Other successes underway include the safekeeping by PONC purchase 68.84 acres; the lands identified as TAX MAP KEYS: 7- 6- 021: 016 AND 017, SITUATED IN HOLUALOA, DISTRICT OF NORTH KONA.

Ongoing Divine Inquiry at Hālau No'eau Kahelemauna will bring forth success for all planning at Keauhou. The strongest collaboration is anticipated of Guidance Teams for Kamehameha Schools and Guidance Teams serving Divine Ones of Hālau No'eau Kahelemauna for the Restored Kingdom of Hawai'i for complete success. Presently there is a request for collaboration to start immediately. Presently, here is a request that I meet in Kona with KSBE and Group 70 representatives as soon as possible. The outcomes of this collaboration can mean the gathering of immediate support from the Kona and Hawai'i communities. Economic development for KSBE will soon be proven as success follows Akua's planning.

This collaboration also lays the strongest foundation for the success of Kamehameha Schools Bernice Pauahi Bishop Estate to continue to be the conduit of verification that Bernice Pauahi Bishop, by founding the Kamehameha Schools, intended to establish institutions that would be of lasting benefit to her country; and to honor the name of Kamehameha-The-Great. This collaboration will ensure success in the understanding of the first faith of Hawai'i and the origins of 'Ōiwi. This collaboration will ensure the success of 'Ōiwi to know their past for success in their futures. This collaboration will support the intention for fullest success by Akua for all involved.

Collaboration of Guidance Teams also include the planning for the identification of all of the best supporters of the Kingdom, workers in Kamehameha Schools and all public workers known and yet to be discovered by best collaborations.

The following Kaouha o Ke Akua (Instructions of Akua) provide all 'Ōiwi and all mankind with understanding:

**BE IT KNOWN**

3

The Ancestors of 'Ōiwi teach all on Earth that Ahu'ena Heiau is the First Temple of Spiritual Worship built by mankind on the planet. Ahu'ena Heiau was built by the Firstborn of Akua, ka 'Ōiwi.

In 1975, Ahu'ena Heiau was restored by 'Ōiwi led by Ali'i & Kahu David Keli'ihelemauna Roy, Jr. -- the Restorer of Ahu'ena Heiau. In gratitude to Akua, in commemoration of the great progress made for 'Ōiwi and mankind by the restoration of Ahu'ena Heiau, the 'Aha'aina Kumu Pono (Gathering for True Foundations), the community feast, was held at Kamakahonu.

The Kaouha Ka Māmaka o Ka Lama was declared following the passing of Ali'iwahine Verda Leialoha Vida-Roy. This Spiritual Order declares that based upon the Lives and Service of Ali'i David Keli'ihelemauna Roy, Jr. and Ali'iwahine Verda Leialoha Vida-Roy, from this time forward there are Two Positions of Responsibility to Akua for Ahu'ena Heiau; One for the Male or the Kahu and the Second, for the Female; Divine Servant of Akua and Helpmeet of the Kahu. This is now Spiritual Law at Kamakahonu in Hawai'i for the Earth. Ola ke Kaouha Ka Māmaka o Ka Lama which means: The Divine Order of the Two Steadfast Ones Who Uphold the Highest Light of Akua at Kamakahonu. This Law of Spirit Lives.

Here is the guidance of Akua. The King is chosen as Kahu of Ahu'ena Heiau. In equal responsibility as Kahu of Ahu'ena Heiau is Lamakū and Kahunanui of Ahu'ena Heiau Mikahala Roy from now on to be known by her Royal Name of HRM Queen Ka 'I o-mana'ula-o-ka-lani-ki'eki'e-loa-ke-ahi'-ena-'ena-mau-o-ka-lau-lani by proclamation of the Ancestors of 'Ōiwi for Akua and the King Ali'i Nui Mō'ī Edmund K. Pākī - Silva, II, respectively. By order of Akua, Kamakahonu is upheld as the Restored Kingdom of Hawai'i by King Ali'i Nui Mō'ī, Edmund K. Pākī - Silva, II Kahu, Ahu'ena Heiau. Kamakahonu is the Restored Capital and First Capital of the Kingdom of Hawai'i by Ka Na'i Aupuni, King Kamehameha-the-Great the Conqueror of the Islands.

Ahu'ena Heiau is now the Home and Anchor for the Life of the Restored Kingdom of Hawai'i by Hawai'i's King Ali'i Nui Mō'ī Edmund K. Pākī - Silva, II. Ahu'ena Heiau remains the Holy First Temple of service to all mankind including those individuals who wish to remain U.S. citizens. Here expresses a condition, provided by Akua, that will provide peace and continued service to mankind and all life on the planet.

## He 'Oia'i'o Nō Truth Indeed

### May, 2018 Words of Light of the Ancestors of 'Ōiwi

Hālau No'eau Kahелеmauna  
House of Wisdom of the Mountain-Roaming-Chief

Hālau No'eau Kahелеmauna is the location where 'Ōiwi (Pacific Natives) and all of mankind may learn of the Age of Light (Ke-au-lama) and be taught of Akua's (Divine Creator's) prescription for their healing.

**IN THE AGE OF LIGHT, AKUA PROMISES TO HEAL THE PLANET  
AND ALL LIFE UPON THE PLANET.**

By learning the cosmology of the first faith of 'Ōiwi in the Pacific, Divine Creator intends to heal the planet and all life upon the planet. Hālau No'eau Kahелеmauna will be the first and key location in Hawai'i to teach others from other world centers the way to derive and to learn healing by Akua.

The vision unfolds by the restoration of the Garden named Māla'ai Pilihonua (Garden Beloved by the Earth) wherein all of the first plants of Kaluaokalani (the Second Heaven) and an ancient name for Hawai'i will be planted, loved and nurtured.

The holoholona (animals) that dwell here will be loved and nurtured by humans for an outcome of lives in peace and harmony. This is the restored rhythm and vibration of Kaluaokalani.

Lamakū Mikahala Roy  
Divine Conveyance May, 2018  
Hālau No'eau Kahелеmauna

healing by Akua.

Akua requires the land lease begun with the restorer of Ahu'ena Heiau, Kahu David Keji'helemauna Roy, Jr and his wife Verda Leialoha Roy be purchased from Kamehameha Schools / Bishop Estate by the One who inherits the purposes and authority of the station of Kahu as the Divine Servant of the Royal and Sacred Temple of the Hawaiian Islands and of the Ancestors of Hawaii under Ke Akua Manamana Loa, Divine Creator.

The conviction to hold all lands that are a part of the Bernice Pauahi Bishop Estate holds the virtue extending from the heart of Ka Mō'i Kamehameha the Great. He is among those here who convey to you these Words of Light upon the Path of Light of the Ancestors of 'Ōiwi.

The present Trustees of the Bishop Estate are asked to hear and grant this request of Akua by the Ancestors of 'Ōiwi. To do so will be the sound and virtuous act that demonstrates their true continuing prayer, ka mihi, begun by Trustees of Bishop Estate who gathered at Kahalu'u in ceremony asking forgiveness of Akua for acts upon the lands of Kahalu'u, the same ahupua'a where Hālau No'eau Kahelemauna is to be begun.

## August 21, 2018 Words of Light of the Ancestors of 'Ōiwi

The lands of Kamakahonu and the lands surrounding Kamakahonu, First Capital of the Kingdom of Hawaii united by Ka Mō'i Kalaninuiwai'ekunuiākea Kamehameha I, are laden with the wealth of life of the Divine Spirit of Akua Manamana, most High Divine Creator; Ka 'Ī-lā-lā-ōle, The-Supreme-One-Without-Branches. We wish to impart to all 'Ōiwi the Divine History of this area, the entire north Kona coastline, especially the lands from Kamakahonu through Hōlualoa through Kahalu'u and Keauhou. Here are lands of the heart of Kaluaokalani (The Second Heaven). We are set to accomplish this by teaching this Divine Content to Lamākū Mikahala Roy, Kahu of Ahu'ena Heiau.

Where the lands surrounding the First Capital are to be considered the Heartland, Mauna a Wākea is considered the pinnacle and beacon of Kaluaokalani. Mauna a Wākea is the Great Altar to Akua that beckons unto itself its similar essence and vibration that is P-E-A-C-E. This is the peaceful vibration of all the lands of Kaluaokalani that, over time, became known as Hawai'i and the Pacific Isles of the sea.

'Ōiwi are Akua's precious Firstborn ~ Ka Hiapo that helped Akua lay the tracks for what became all faiths of the Earth.

The motherland sank into the sea leaving her remnants that still call forth the essence of life of like nature -- PEACE.

The Age of Light, Keaulama, for the planet has dawned and begun in Hawai'i of the Pacific for the life, healing and hope for the planet and all of humanity.

**IN THE AGE OF LIGHT, AKUA PROMISES TO HEAL THE PLANET AND ALL LIFE UPON THE PLANET.**

By learning the cosmology of the first faith of 'Ōiwi in the Pacific, Divine Creator intends to heal the planet and all life upon the planet.

Hālau No'eau Kahelemauna will be the first and key location in Hawai'i to teach others from other world centers the way to derive and to learn

11/3/14

Kaloko-Honokōhau

**"You ask most respectfully for assistance related to a blessing sought for the National Park at Kaloko-Honokohau. May we add what we are endowed with to share.**

**Some of the Ancestors who rest here at Kaloko are they who were involved with great challenge in history. There was a battle here in a time of political change. Kamehameha the Great sought to procure the faith of the hearts of the people in him as ruler and as the representative of Most High Akua rather than in the traditions that upheld the flow of life for kaulike in the Puunohua.**

**Many who believed in the ages-old traditions of Spirit in Hawaii fought when the call for such action occurred. Many lost their lives believing to the way they were taught to believe. It would be a blessing pleasing to Akua Manamaloa that this aspect of the history be told in order to bring blessing and healing to all who lost their lives here and to their descendants.**

**That those of both sides be comforted and blessed and harm absolved and resolved by Akua is the desire of Akua and these Ancestors. This so that the Light brought forward will bless and heal all in the related 'Ohana -- every single One of their bloodlines. This, so that the Light brought forward nurtures the wellness, accord and peace of all who come here, work here, appreciate here from wherever they are. That the Light borne of this blessing from Akua aid and serve in the enlightenment presently occurring in all of Hawaii for the world."**

Testimony of Lamaku Mikahala Roy, Kahu Ahu'ena Heiau  
Kamakahonu, Hawaii'

Re: SB\_3090; HB\_1985

Hawaii State Capitol, Rm 211  
Honolulu, Hawaii

April 5, 2018

Senator Kahele and Other Distinguished Members of Legislative Committees (of Higher Education,  
Water & Land and Ways and Means),

I am Lamaku Mikahala Roy, Kahu of Ahu'ena Heiau at Kamakahonu Hawaii. I inherit the walk  
begun by my father, Kahu David Kellifhelemauna Roy, Jr. who led the restoration of Ahu'ena Heiau  
in the 1970's. I am a Healer and a Teacher who begins anew the work of Kulana Huli Honua,  
*Foundation of the Search for Wisdom* within the land archive for Kamakahonu, Hawaii named Halau  
No'eu Kahelamauna, *the House of Wisdom of the Mountain-Roaming Chief*.

Ahu'ena Heiau at Kamakahonu is the Seat of the Living Fire of Akua-mana-mana-loa, Divine  
Creator Most High God. It is the first Heiau in the Pacific of the modern era restored for and by  
'Owa, *people of the bones of the Pacific*. Here, erected and dedicated to stand forever is the Lana-nuu-  
mamao, the Oracle upon the Earth. The Great Ancestors of 'Owi who guided King Kamehameha  
the Great guided the descendants born after him. It was Liholihoho, King Kamehameha II who  
responded this way when his wisdom was praised,

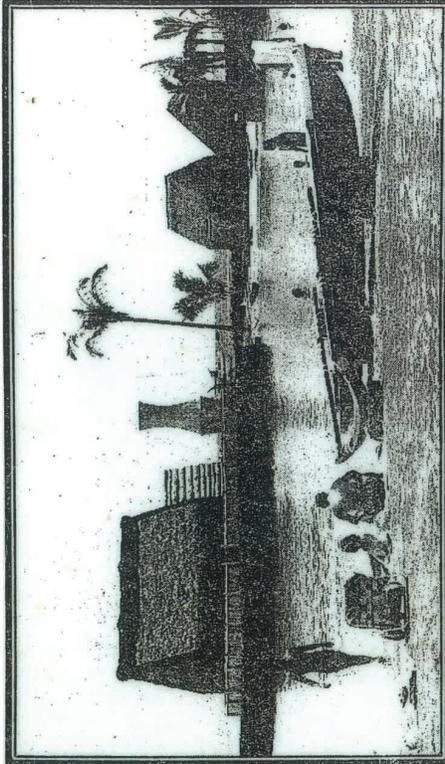

*Na wai ho'i kea 'ole o ke akamai be alanui i ma'i i ke hale 'ia e o'u mau makuai?  
Who would not be wise upon a path so well traveled by my ancestors?*

I have oral testimony to share to help you in deliberations pertinent to the sacred mountain of Earth,  
Mauna a Waka. I've traveled from Kona today to present this testimony alo i ke alo; in person, for  
it is mea nui, the matter of the utmost importance as I was unable to attend hearings on Hawaii.

Kamakahonu is the Capital of the Kingdom of Hawaii restored today by Alii Nui Mo'i Edmund K.  
Silva, Jr. Nou Ke Akua ke Aupuni O Hawaii'. Such is the proclamation of Akua-mana-mana-loa by  
Akua and by the Ancestors of 'Owi on the path of Light of Akua (Divine Creator Most High God).

Among Great Ones before us, Ke Alii Naluahine Ka'opua was the man named Konohiki of  
Kamakahonu in the Kingdom of Hawaii. Living to be well over 100 years of age, Ke Alii Naluahine  
Ka'opua is a cherished patriarch in family lines of Hawaii who descends in the lineage of Highest  
Divine Ones.

It is the voice of Spirit of this great Royal Ancestor and Others that guides me in this testimony and  
guides the work developing at Halau No'eu Kahelamauna at Kahalu'u Kona for Hawaii and Earth.

As Lamaku for Kamakahonu, Hawaii, I support the Conveyances of Divine Spirit. I uphold the leadership of Alii Nui Mo'i Edmund K. Silva, Jr. His actions and the work of Nou Ke Akua Ke Aupuni o Hawaii, are proof of his commitment to Akua.

The Kuleana of Greatest Leaders is the Great Responsibility. Alii Nui Mo'i Edmund K. Silva Jr.'s actions build the bridge of connection between mankind and the Highest Light. His actions lay the foundation for what we all may now construct in righteousness from this time forward.

**'O Hawaii ka 'Aina Malulu ~ Hawaii, land of the Eternal Wellspring**

Love is at the heart of all temples of worship in the Pacific. Such was the nature of our first world as 'O'iwi (the people of the bones).

The sacred pool is the place of peace, love and harmony.

**Here are examples of conveyances from Spirit:**

**April 14, 2010**

**Ancestors**

Erosion IS occurring AND we're not duplicating the virtues of the way of life of our Ancestors. As surely as blue rock is worn away by the constant wave action of the sea, the sturdy mountain that was the life and way of the Ancestors in our land is being converted to pebbles and grains. What comes to wipe the mountain away from existence? The constant barrage of thoughts and actions of a new way of life against the peaceful pond - against the way of peace, love and harmony.

**August 13, 2010**

**Chiefess Koniahiki, mother of Pauahi Pahi:**

The Heiau are the first altars built to God. This remains their committed purpose today. The Heiau represent the Kumulipo, ALL of Akua's creation. The support of the Heiau is the support of the way of life that HONORS the CREATOR. The rectangle represents our acknowledgement of all life God created. The rectangle represents the Kumulipo to honor ALL God's creations.

It represents the beginning of all religion today.

All Heiau of the Pacific represent the beginning of ALL religions today. They represent man's quest to bring the knowledge of the Heavens to the Earth.

**Queen Emma:**

Just think how powerful you would be if you put aside your differences and joined together as ONE then ask us, the Ancestors what to do. We are here to help in any way we can.

Ua mau ke ea o ka 'aina i ka pono. Everything is predicated upon righteousness. A rope, the aka cord, connects us to the past. Queen Emma says the strands of the rope are frail. The rope is made of our practices. Our belief system is based upon righteousness. Righteousness encompasses every aspect of life. We need to practice and experience righteousness.

The first strand is to take care of the 'Aina. The second strand is to take care of the needs of the People. The third is the religious practices of our Ancestors. The fourth strand is strong leadership that will not betray the People. The last strand is the need for much Aloha.

All the weaving of this rope is for the sole purpose of opening up our hearts with unconditional love for one other. This is our traditional way of being; it is the strongest possession that Akua has given us. When we grab a hold of THIS rope, we are grabbing hold of pure unconditional love. This is the Golden Cord of Unity of 'O'iwi.

**It is time to Ho'olokahi and to Ho'okuleana Hou i ka 'Aina Harmonize and Unite to Reclaim Responsibility for our Lands**

Here is the time to live our faith.

Here is the time to stand ~ to take action to protect that which never left our hearts nor our hands. We are told that Mauna a Wakea is Akua's Divine Mountain. We are called to stand to defend the truth that Hawaii is the country occupied ~ the Kingdom of Hawaii lives in the lands and the people.

My heart and my hands are ready to help to build the only future I wish to see for our descendants. That is a future of a Hawaii Ola Kule'a ~ a Hawaii where the people live in success, health and happiness.

Support the work now for the Restored Kingdom of Hawaii in the leadership of Alii Nui Mo'i Edmund K. Silva, Jr.

Milliani i Ke Akua (In Praise of Most High),

Keahimokuaweoweokalama'ihiiloanalani

Pu'u o Kaluaokalani

Dr. Scolari:

The purpose of this letter is to confirm my receipt of your letter of June 21, 2024, yesterday, 6/27/24 and to respond to it by special delivery mail today June 28, 2024.

Accompanying my letter, find attachments pertinent to the subject with which park staff, members of the community, special support groups & individuals, and yourself are well acquainted by numerous meetings with me over time.

The content of your letter is not the outcome that I, **HRH KA'Ī O MANA'ULAOKALANIKI'EKI'ELOAKEHI'ENA'ENAMAU'OKALAUANI LAMAKŪ**, representing **THE KINGDOM OF HAWAII RESTORED AT KAMAKAHONU** was expecting.

The course of action you outline in this communication is **REJECTED by the KINGDOM OF HAWAII RESTORED AT KAMAKAHONU THE FIRST CAPITAL OF THE KINGDOM OF HAWAII.**

In the 1970's my parents and other honored citizens are celebrated as Founders of Kaloko-Honokohau National Cultural Park to protect these royal lands from tourism development. The park has adopted the concept of a 'Spirit Day' to be held annually to honor the Honokohau Advisory Commission whose work in the seventies brought this park into being.

As recently as in a meeting held with you on my parents' birthday, 4/26/24, witnessed by staff member Keola Awong, you conveyed an understanding of how the care of these matters should be spiritually, peacefully, and respectfully conducted. You indicated your understanding and agreement with my suggestion that by abiding by the guidance of the Divine Creator received by SPIRITUAL MIRACLES from the Ancestors of Ōiwi, the call for the NAGPRA process is null and void. These burials at Kaloko-Honokohau are previously known and NOT INADVERTENT by report of the Ancestors of Ōiwi who

serve the Divine Creator of all mankind at Kamakahonu, the First Capital of the Kingdom of Hawaii of Kamehameha the Great. This Miracle of Spirit thereby cancels the call for the NAGPRA process at Kaloko Park. In all our meetings, you have never disagreed to this pronouncement.

**AS OF THIS DAY, 6/28/24, ALL WHO REST AT KALOKO-HONOKOHU NHP AND ALL WHO LIVE AND REST IN HAWAII, FORMERLY KNOWN AS THE 50 TH STATE, ARE RESTORED TO THE CARE OF AKUA MANAMANALOA IN HIS CHOSEN KING AND DECLARED QUEEN: HRH KING ALI'I NUI MŌ'Ī EDMUND K. PĀKĪ - SILVA, II AND HRH KA IŌ MANA'ULAOKALANIKI'EKI'ELOAKEAHI'ENA'ENAMAU'OKALAU'LANI QUEEN OF THE RESTORED KINGDOM OF HAWAII.**

**October 2, 2017**

*The National Park Service preserves unimpaired the natural and cultural resources and values of the National Park Service for enjoyment, education and inspiration of this and future generations.*

Gratefully, I submit the following comments, requests and edification to the Kaloko-Honokohau National Historical Park Draft Foundation Document. I am the daughter of the late Kahu David Kāhelemauna Roy, Jr. and I am his designated successor as Kahu of Ahu'ena Heiau at Kamakahonu, Hawaii. Kamakahonu Hawaii is the first Capital of the Kingdom of Hawaii of the Hawaiian Islands unified by Kamehameha the Great. It remains the abiding Capital of the Kingdom of Hawaii, country occupied.

To cite the words of this Draft Report that close the paragraph on page 8, I concur to say that SPIRIT of the first people of the Hawaiian Islands today IS strong and growing stronger in every moment.

I suggest that you make the change of the term **Native Hawaiian to 'Ōiwi** for 'Ōiwi is the accurate word by our ages-old and true language that identifies the first people of the Hawaiian Islands and our Pacific Family. Over time, this term for its accuracy has risen in use by the people and has supplanted the use of Native Hawaiian.

**SPIRIT**, and along with it, clarity and understanding by 'Ōiwi increases continually in Hawaii. We are a living people with living ancestors of SPIRIT seeking truth of our past for our health and well-being and the health and well-being of our descendants and our lands.

My heart and words are a part of the **SPIRIT Report**. My Kealakehe Intermediate Class Students are whose poetry graces the pages of this esteemed report. A supportive member to those of the Kaloko-Honokohau study commission, I became a member of Na Kokua Kaloko-Honokohau non-profit organization and later served as a member of the Na Hoapili Kaloko-Honokohau Advisory Commission. I am One who speaks in appreciation of wisdom and truth. My time and essence are a continuing part of the concern for the care and safekeeping of Kaloko-Honokohau even as it has moved into the care of the NPS.

I was in high school when Kupuna of Hawaii island and beyond came to meet with my father to discuss the large matter of an impending threat by hotel development to Kaloko-Honokohau in the early 1970's. It's thanks to the dedication of these people, others called upon by Akua along the way, and then to a growing group of us who absolutely stayed the course of effort to protect this area that this park is here.

These Kupuna made public stands to engender support against development of these lands so very important to the Lahui – to the nation of Hawaii. They gathered in united impassioned plea to protect their family members, their ancestors and ancestors of 'Ōiwi who lay buried at Kaloko. The facts were that numerous burials lay at this historic land place Kaloko-Honokohau. Why? There was greater history yet to know. 'Ōiwi and our descendants are called to know our complete history which is borne of SPIRIT in steps taken by our ancestors.

My older sister, Lynette 'A'alaonaona Roy Akana conducted the valued **Mo'olelo Ha'i Waha o Kaloko-Honokohau**, Oral History of Kaloko-Honokohau, in a day when such work was rare. She interviewed po'e (the people) of the area whose story and "way" of telling their story grows more valuable over time. She was a consultant, then, to the

Honokohau Study Advisory Commission and until her untimely passing, served as I did with dedication to the 'efforts of the people.'

My sister's report cites the importance of the religion of 'Oiwi to the history of the people at Kaloko-Honokohau.

This park is here ~ it was one option to provide safety to this area. This was a movement of and by SPIRIT. This remains a movement of and by SPIRIT at Kaloko-Honokohau and throughout the Hawaiian Islands. The determination and conviction in the hearts of the Kupuna I was among for a long time was palpable and convicting. I feel this impetus even now as I write these words to aid in the carriage of integrity in this Foundation Document. This is evidence of SPIRIT ongoing.

I am Lamaku Mikahala Roy, Kahu of Ahu'ena Heiau at Kamakahonu, Hawaii. Lamaku is the title my Ancestors give me that I am to use for it, in addition to the title of Kahu, is the identity of my Station in Spiritual Authority. I stepped off the NPS Na Hoapili Advisory Commission for the increase of the call for service to Akua as Kahu of Ahu'ena Heiau at Kamakahonu. Attached please see articles related to Kamakahonu, my father's and now my steps in time in our precious homeland.

In 2014 I was asked to conduct a blessing for the purpose of landscape clearing near and above Kaloko pond. In prayer to the Ancestors for guidance for this blessing, I was given the following spiritual conveyance by the Ancestors of 'Oiwi. By Akua, Divine Creator, it is now the time to reveal this conveyance to the parties involved and now to the writers of this Foundation Document. Here is the direct evidence that SPIRIT is real, ongoing and defines the foundation of these royal lands for 'Oiwi and all people of the Kingdom of Hawaii, for people of the United States of America who will visit here and all people of the world.

*Words of Light of the Ancestors of 'Oiwi as conveyed to Lamaku Mikahala Roy, Kahu Ahu'ena Heiau Kamakahonu, Hawai'i*

11/3/14

**You ask most respectfully for assistance related to a blessing sought for the National Park at Kaloko-Honokohau. May we add what we are endowed with to share.**

**Some of the Ancestors who rest here at Kaloko are they who were involved with great challenge in history. There was a battle here in a time of political change. Kamehameha the Great sought to procure the faith of the hearts of the people in him as ruler and as the representative of Most High Akua rather than in the traditions that upheld the flow of life for kaulike in the Puuhonua.**

**Many who believed in the ages-old traditions of Spirit in Hawaii fought when the call for such action occurred. Many lost their lives believing the way they were taught to believe. It would be a blessing pleasing to Akua Manamanaloa that this aspect of the history be told in order to bring blessing and healing to all who lost their lives here and to their descendants.**

**That those of both sides be comforted and blessed and harm absolved and resolved by Akua is the desire of Akua and these Ancestors. This so that the Light brought forward will bless and heal all in the related 'Ohana – every single One of their bloodlines. This, so that the Light brought forward nurture the wellness, accord and peace of all who come here, work here, appreciate here from wherever they are. That the Light borne of this blessing from Akua aid and serve in the enlightenment presently occurring in all of Hawaii for the world.**

Re: Initiation of Consultation for Inadvertent Discovery subject to the Native American Graves Protection and Repatriation Act (NAGPRA) 43 CFR Part 10

Aloha,

The purpose of this letter is to initiate consultation regarding inadvertent discovery of a possible tooth by a visitor at Kaloko-Honokōhau National Historical Park (Park).

The National Park Service (NPS) was notified on Friday, February 23, 2024 that a Park visitor found a tooth at the surface of the sand beach near Kaloko Fishpond Picnic Area and turned it over to the Hawaii County Police Department (HPD). The NPS is in communication with the HPD awaiting confirmation if the tooth is a human tooth and when the HPD will return the tooth to the NPS. More information will be shared with you as the NPS gets it from the HPD.

If the tooth is determined to be a human, the park will address the find under NAGPRA as an inadvertent discovery. Like previous NAGPRA repatriations at the Park, the NPS is amenable to reburial of the tooth in an appropriate location within the Park pending the completion of the NAGPRA process.

If you have any questions, please feel free to contact T [REDACTED]

Sincerely,

On behalf of  
Paul Scolari  
Superintendent

Re: Update regarding Consultation for Inadvertent Discovery subject to the Native American Graves Protection and Repatriation Act (NAGPRA) 43 CFR Part 10

Aloha,

The purpose of this letter is to update you regarding the inadvertent discovery of a possible human tooth by a visitor at Kaloko-Honokōhau National Historical Park (Park).

The National Park Service (NPS) was notified on Friday, February 23, 2024, that a Park visitor found a tooth at the surface of the sand beach near Kaloko Fishpond Picnic Area on Thursday, February 22, 2024. Rather than turning the tooth over to the NPS, the visitor contacted the Hawaii County Police Department (HPD) which took possession of the tooth. We requested that HPD transfer the tooth to the NPS immediately upon ruling out criminal involvement.

After repeated requests for the transfer of the tooth from HPD, the NPS was informed the responding HPD officer determined it was not human and disposed of the tooth.

The NPS received photos of the tooth from the Park visitor. The quality of the photos makes it difficult to determine if the tooth is human, although a trained osteologist indicated it may have indeed been human, possibly a baby molar. Because it was an isolated find with no direct context to an archeological site, the NPS cannot determine its age.

This is not the outcome the NPS was expecting. We communicated the gravity of this error to the HPD. They have requested that the NPS provide training to patrol officers on the inadvertent discovery of human remains within national park units. As part of this training, the NPS will provide information to HPD on the importance and requirements of NAGPRA, including the use of trained professionals for the identification of human remains.

We regret we were not able to make a positive determination about this tooth and treat it with the care required under federal law for human remains.

If you have any questions, comments or would like to discuss this matter, please contact

[Redacted contact information]

Sincerely,

Paul Scolari  
Superintendent

Respectful Greetings to the Trustees of the Queen Lili'uokalani Trust,

Aloha hou mai. Attached and presented here is great sacredness for your care. Here are words from Akua by the Ancestors of 'Ōiwi at Kamakahonu.

Akua intends to Heal the Planet and All Life Upon the Planet in Keaulama (The Era of Light). These sacred words of light from the Ancestors confirm the reality of 'Ōiwi Spirituality from the beginning of time to the present day.

Akua requires a moratorium on all new developments within 40 miles between Kaloko-Honokōhau and Honaunau in Kona, Hawai'i.

Akua guides that I am to present this Divine Wisdom to ALL 'Ōiwi. I am FIRST called to share with ALL 'ŌIWI -- encouraging them to be the first to receive their history & to peacefully take their stand in their light and power as the collective. We are called to share this great information with humanity that honors and obeys the commands of the Divine Creator of Heaven and Earth.

KA-LUA-O-KA-LANI means THE SECOND HEAVEN. KALUAOKALANI IS THE ANCIENT NAME FOR HAWAII

Here is why this land is the home of Ka 'Io, the Heavenly Hawk. Here is why Keolonahihi and Kaluaokalani have ALWAYS BEEN FIERCELY PROTECTED by the Great Ones of Highest Light Who Rest at Mauna a Wakea and by their Descendants in this present day.

Kona 3 LLC is a Developer and Applicant for the development of expensive housing on lands within the Ka'uha Kapu Kanahā ~ the 40-mile land area Divine Creator orders to be secured in peace with no new development upon it. We're asked to follow Akua's guidance for the protection of Mauna ā Wākea, the planet and all life upon the planet.

The developer's application will be voted upon by the Hawaii County Council in the main meeting chambers at the West Hawai'i Civic Center on Tuesday, 7/10/24. Here is the call to ALL 'ŌIWI of the planet and in Hawai'i to submit their testimony in writing to [counciltestimony@hawaiicounty.gov](mailto:counciltestimony@hawaiicounty.gov) by noon -- 7/9/24. 'Ōiwi and Supporters

of Ōiwi may send their testimonies in **support** of Akua's Kauoha and **against** plans for Kona 3 LLC.

**All Ōiwi and Supporters are invited to SIGN UP** online for this hearing - via Zoom by direct phone request to the Office of the County Clerk at (808) 961-8255 or by sending a request by email to [councilremotetestimony@hawaii.county.gov](mailto:councilremotetestimony@hawaii.county.gov) **no later than Noon on 7/9/24.**

**HERE & NOW** is the call for the collective, peaceful, powerful stand to honor Akua's guidance to Ōiwi to OBEY AKUA. Here is the call to protect the 40 miles in Kaluaokalani completely honoring the Sacred Message of Akua.

**KEEPSAKE OF HONOR FOR "THE NEW GREATEST STORY EVER TOLD"**

Gifts for all Ōiwi and Supporters of Ōiwi are being created! Tee Shirts as gifts at no charge in all sizes for Keiki through Kupuna will carry the treasured Divine History for ourselves and generations to come.

THE ANCESTORS SAY THAT KEAULAMA IS "THE NEW GREATEST STORY EVER TOLD."

Esteemed Greetings to the Trustees of the King Lunalilo Trust:

I am humbly inspired to read each of your backgrounds conveyed by the Trust's website.

We are told by good teachers of the world that history is made every day. I reach to you to reach to the heart of Alii King Lunalilo. I was guided by Akua to do so. Yours is one of three great trusts left by our Alii for the betterment of 'Ōiwi, the first people of the Pacific and Hawai'i. The materials enclosed in the pages of documents mailed to you tell a story. We have had a miracle at Kamakahonu. In 2010, I began hearing from the Ancestors of 'Ōiwi including our Great Kings and Queens. I reached to tell the members of the Hawaii State Legislature in a letter dated 3/3/21. I wrote letters to the Governor, the Mayors and county councils of every island to share this miraculous news.

When my father created the Temple Drum for Ahu'ena Heiau, the Temple he loved and restored, I had a calling to travel to all schools and announce by voice and flyer the excitement that came from the first restoration of the ancient Temple and First Capital of Hawai'i. I carried this out as I shared how Pahuai'ikoaka'awaloa is the first Temple Drum to be named in association with the first restored temple in Hawai'i, the Pacific and the world. Alii Lanakilakeihialii Na'ope guided the naming process. He told me to pray and ask Akua. I soon met as I served as a docent at Hulihe'e Palace, Sarah Malina Kalikhea of Nawiliwili Kaua'i, 87 years young, who taught us that the name of the Temple Drums are given in honor of the land they grew upon. They are called Pahuai'i, the drum of the chiefs, and so now all may honor Ka'awaloa uka where the log came from. The life to Pahuai'ikoaka'awaloa came by a naming ceremony conducted at Kamakahonu at the dawn of the millennium. 2000, by the Drum Maker, Dr. Kalena Silva of Ka Haka 'Ula o Ke'elikolani, myself and Coline Aiu Kumu Hula of Hālau o Kumukahi and Hālau Hula o Maiki, respectively.

Please review the email document I enclose entitled "The Reach to 'Ōiwi on Earth is On." This tells of even greater news from the Ancestors who represent Most High God at Kamakahonu.

By Akua, Hawai'i's Chosen King Ali'i Nui Mō'ī Edmund K. Fāki - Silva II and Hawai'i's Declared Queen Ka'i'omana'ulaokalani'eki'eloakeahi'ena'enamauokalaulani, humbly, Ali'i of our time reach in greatest reverence, respect and honor to the heart of Ali'i King Lunalilo by communication in Spirit and with the esteemed Trustees of the King Lunalilo Trust.

O ke 'Ano o ka Lāhui i ka 'Ohana

The character of the nation is seen in the family

**Re:** **Pu'u o Kaluaokalani**  
Oral Testimony re: Application of Kona 3 LLC

## **Oral History** **Spiritual Conveyance of** **Ancestors of 'Ōiwi at** **Kamakahonu**

**Pu'u o Kaluaokalani** means the "Repository of the Especially Sacred Lands of the Ages for Akua."

**Pu'u o Kaluaokalani** is the identification of the utterly sacred beating heart of Life upon the Earth. **Pu'u o Kaluaokalani** encompasses 40 miles in Kona from Kaloko-Honokōhau in the

north to Hōnaunau in the south.

Located within the expanse of this area is **Ahu'ena Heiau** (meaning "Burning Altar" referring to the Great Light there). **Ahu'ena Heiau** is the first Temple built by 'Ōiwi (mankind) upon the Earth.

Man's reach to Akua was honored by the Divine Creator of Heaven and Earth. The **Lana Nu'u Mamo** stands forever reminding mankind that man and all of life were created by Akua (Divine Source of All Life).

The **Lana Nu'u Mamo** (sacred Oracle Tower) stands upon **Ahu'ena Heiau** forever reminding man of the sacred relationship that exists between Akua (Divine Creator) and all of life created by Akua.

The 40 miles are the base and perimeter of the true **ORACLE** upon the Earth which is **Mauna a Wakea**. The **Lana Nu'u Mamo** symbolizes **Mauna a Wakea** upon **Ahu'ena Heiau**.

Akua created life in the Pacific in **Kaluaokalani** (meaning the Second Heaven and the First Name for Hawai'i) so very long ago.

**Ke-au-lama** means "The Era of Light." In **Keaulama, Akua intends to HEAL THE PLANET AND ALL LIFE UPON THE PLANET.**

The creation of Earth and life by Akua may not be quantified. Likewise, the Light, Hope, and Healing in Life by Akua in **Keaulama**, the Era of Light, may not be quantified.

**KEAULAMA** is the re-birth of the Earth planet in **Kaluaokalani**.

**KEAULAMA, The Era of Light, is Akua's Gift to mankind and to all of life wherein Akua promises to HEAL THE PLANET AND ALL LIFE UPON THE PLANET BEGINNING IN HAWAI'I.**

## Halau No'eau Kahelemauna

*House of Wisdom of the Mountain-Roaming-Chief*

**Halau No'eau Kahelemauna** is the location where 'Oiwī (Pacific Natives) and all of mankind may learn of the Age of Light (Kē-āu-lama) and be taught of Akua's (Divine Creator's) prescription for their healing.

**IN THE AGE OF LIGHT, AKUA PROMISES TO HEAL THE PLANET AND ALL LIFE UPON THE PLANET.**

By learning the cosmology of the first faith of 'Oiwī in the Pacific, Divine Creator intends to heal the planet and all life upon the planet.

**Halau No'eau Kahelemauna** will be the first and key location in Hawai'i to teach others from other world centers the way to derive and to learn healing by Akua.

The vision unfolds by the restoration of the Garden named Mala'ai Pilihonua (Garden Beloved by the Earth) wherein all of the first plants of Kaluaokalani (the Second Heaven) and an ancient name for Hawai'i will be planted, loved and nurtured.

The holoholona (animals) that dwell here will be loved and nurtured by humans for an outcome of lives in peace and harmony. This is the restored rhythm and vibration of Kaluaokalani.

**Lamaku Mikahala Roy**

## AHU'ENA HEIAU • KAMAKAHOHŪ, HAWAII HĀLĀU NO'EĀU KAHELEMALINA HOUSE OF WISDOM OF THE MOUNTAIN – ROAMING CHIEF LAND ARCHIVE & OFFICE OF THE KAHU

Aloha Kakou e ka 'Oihana,

In the mid 1970's Ahu'ena Heiau at Kamakahonu Hawaii was restored by 'Oiwī. David Kahelemauna Roy, Jr. led that effort for Akua and became Kahu of Ahu'ena Heiau by Akua and the people in the 'Aha Kumu Pono at Kamakahonu. Ahu'ena Heiau is the first restored temple of worship in the Hawaiian Islands of the modern era.

Kahuna La'au Lapa'au Morrnah N. Simeona said that the seventies were a time of great spiritual growth for Hawaii and her people. Among numerous efforts carried out meaningfully in the communities, Hokule'a traveled to Kahiki, Ho'oponopono was implemented in the Geneva Convention and taught to the world and Ahu'ena Heiau was restored in the Hawaiian Islands.

This restoration of Ahu'ena Heiau (Burning Altar -- referring to the Great Light there) was guided by Akua in the hearts of the men who came from all islands with the main working crew coming from Kona. There was no Office of Hawaiian Affairs, no presence of a state historic preservation department only dedicated and faithful individuals with pride for the heritage of 'Oiwī, pride in their bloodlines and respect for the First Capital of the Kingdom of Hawaii and all that came with it.

In 2005, I succeeded my father as Kahu of Ahu'ena Heiau. By loving communication with the Ancestors beginning for me in these past years, I'm instructed by them of the name our people have held for the station I inherit by Akua and my father.

I am guided by Akua and by Ancestors who serve Akua Manamana'aloa in the Pacific. I learn and teach the cosmology of the first faith of Hawaii, 'āina kulaiwi; ke 'āina mauiauhonua.

Miiliani i Ke Akua,

*Lamaku Mikahala Roy*

Meeting of Mauna Kea 'Ohana; HCC campus, Hilo Hawaii  
Comments of Lamaku Mikahala Roy, Kahu, Ahu'ena Heiau Kamakahonu, Hawaii

Aloha mai kakou,

I am Lamaku Mikahala Roy from Kona and I appreciate all the mana'o being brought forward today. I'm grateful for all gatherings to form and relate as Mauna Kea 'Ohana.

The Ancestors of 'O'iwi are active and worldwide, people actively engage with Divine Realm. In 2010, the commemoration of the 20th anniversary of the unification of the Hawaiian Islands by Kamehameha the Great, Divine Conveyances from the Ancestors of 'O'iwi began at Kamakahonu.

On Mother's Day, 5-10-2015, a woman received a telepathic message from an 'io, she reported, in Waikoloa. She saw in her mind's eye, the bird's features, colors and markings and was told where to look to find him. Driving along the highway, she soon did come upon the One who called her. He had passed on.

This woman made a call that came to me. I went to prayer in the noon hour of that day. A powerful Divine Conveyance came forward. Please see attached. Here is what I'd like to share with you all today. Between the first & second meetings of the Mauna Kea 'Ohana, this event and a most significant ceremony related to it took place.

First, please read the attached full message. Then, I'd like to make emphasis by what is in my na'au today to share with you related to it. Here are my words of emphasis.

Akua, in this Divine Conveyance, proclaims Mauna a Wakea to be the Holy Mountain of Creator and best representation of Kaluaokalani. Akua confirms in Hawaii. Spirit is honored by Akua's Firstborn, na Hiapo. As such, Akua still Guides in the care of the Hawaiian Islands. Akua proclaims a leader by genealogy and divinity, Alii Nui Mo'i Edmund K. Silva, Jr. and the support system formed with the people, Nou Ke Akua Ke Aupuni O Hawaii (For You, Akua, the Government of Hawaii).

Safety comes by Life with Akua. In the desire for Safety and Protection of the Hawaiian Islands from further desecration of Lands and Spirit of 'O'iwi, I hope that the 31 persons arrested and all who support Mauna a Wakea will agree that Guidance from the Source for Hawaii has been received.

Let the Heavenly Lands be protected along with the people by Akua. Let transparent relating characterize the true and worthwhile efforts of aloha 'aina and aloha ka po'e.

E Ho'ola i ke Aupuni Pono'i ~ Revive the government rooted in the righteousness of Akua for the lands and the people.

**The Message of the Sacred, Royal Messenger in Waikoloa is:**

**'O ka pono ke hana 'ia**

**A iho mai na lani**

WINDS OF LOVE SWIRL SURROUNDING MAUNA KEA UPON THE EARTH  
EXTENDING OUTWARD TO THE MOST DISTANT REALMS OF SILENT  
AND RESOUNDING SPACE.

GREAT WINDS CARRY THE LOVE OF DIVINE CREATOR FOR ALL  
CREATION FROM THE LARGEST TO THE SMALLEST MATTER. GREAT  
WINDS OF LOVE REMIND ALL LIFE WHERE YOU COME FROM ~ ON THIS  
DAY TO HONOR MOTHERS AND MOTHERHOOD ~ NOW RECALL AND  
HONOR THE CREATOR OF ALL LIFE.

LET THIS DATE, 5 - 10 -2015, REMIND US FOREVER OF 'IO (10) THAT  
DELIVERS A MESSAGE AND CONFIRMATION. THE RESTORATION OF  
THE KINGDOM OF HAWAII IN THE COMPLETE HAWAIIAN  
ARCHIPELAGO OF ISLANDS IS IN PROCESS.

MANKIND FORGETS THAT ALL OF CREATION BELONGS TO ME, YOUR  
DIVINE CREATOR. ONE OF MY FORMS ON EARTH IS THE 'IO SEEN IN  
ITS HOME IN HAWAII. HOW IS IT THAT WORDS ARE EXPRESSED BUT  
THEN FORGOTTEN?

*Psalm 24:1 "The Earth is the Lord's, and the fullness thereof; the world and they that  
dwell therein. For He has founded it upon the seas and established it upon the rivers."*

IN HAWAII, THE WORDS YET LIVE ~ SPIRIT IS HONORED BY MY  
FIRSTBORN, KNOWN AS HIAPŌ. KALUAOKALANI IS THE NAME THAT  
AMONG OTHER TRANSLATIONS MEANS "THE SECOND HEAVEN." IT IS  
THE LOVING FIRST HOME OF DIVINE WORLD AND HUMANKIND; THE  
FIRST HOME OF DIVINE BEINGS AND MAN. HERE LOVE WAS THE  
VIBRATION THAT PERMEATED AND MADE ALL LIVE IN HARMONY AND  
THRIVE.

THE NAME OF THE LAND PERSISTED THROUGH PRESENT  
GENERATIONS AND IS NOW BEING REINVIGORATED.

KALUAOKALANI IS PERHAPS BEST REPRESENTED BY HER TALLEST  
MOUNTAIN PEAK, YET SHE HAS NUMEROUS WONDROUS  
REPRESENTATIONS IN THE WATERFALLS, THE VALLEYS, THE RIVERS,  
THE SEAS. THE PEAK IS MAUNA A WAKEA; MY HOLY MOUNTAIN AND  
PLACE HELD IN GREATEST REVERENCE.

LET THIS BE THE COMMEMORATION OF THE DAY HEAVENLY HAWK IN  
WAIKOLOA CONVEYED MY MESSAGE TO THE GREATEST AND THE  
SMALLEST OF MY CREATIONS IN THE PLACE I'VE PREPARED TO SERVE  
THE EARTH AND MANKIND. LET KALUAOKALANI AWAKEN ALL TO  
LOVE AND HARMONY.

THE RESTORATION OF THE KINGDOM OF HAWAII LED BY ALII NUI MO'I EDMUND K. SILVA, JR. AND NOU KE AKUA KE AUPUNI O HAWAII IS UNDERWAY. THE UNITY OF 'OIWI OF THE PACIFIC IS HELD IN SPIRIT BY THEIR ANCESTORS WHO SERVE ME.

FROM THE VERY FIRST KINGDOM ESTABLISHED AT KAMAKAHONU, MY HOLY LIGHT HAS SHINED THROUGHOUT ALL MOVEMENTS OF MAN.

NOW BY THE READINESS OF ALL WORKERS FOR LIGHT AND WORKERS FOR MY HOLINESS THROUGHOUT THE WORLD DO I PROCLAIM MAUNA A WAKEA MY HOLY MOUNTAIN AND KO HAWAII PAE 'AINA AS LANDS OF KALUAOKALANI NOW OCCUPIED BY THE UNITED STATES OF AMERICA.

NOU KE AKUA KE AUPUNI O HAWAII BY ALII NUI MO'I EDMUND K. SILVA, JR. IS ENFORCED TO RESTORE MY HOMELAND THE PACIFIC AND ALL OF MY CREATIONS FOR THE GOOD OF ALL LIFE AND TIME TO COME.

HE 'OIA 'O NO. TRUTH INDEED.

House of Wisdom of the Mountain-Roaming Chief  
Pu'u o Kaluaokalani

**[REDACTED] : landline**

Aloha e Ryan me Aolani,

Thank you for your patience. Mahalo nui loa mau for the wonderful day we shared together last week. Mahalo for our wonderful luncheon. Mahalo nui loa for the wonderful gift of Ke Kunu Aupuni. I am very grateful -- beyond words -- for everything.

The member in our group by the name of Waiaka, asked me a deep and insightful question. Please share the following answer with him. Also please share my email address with Waiaka and all the participants. I would love to hear from all of you at any time!

**Waiaka:**

"So, since Kahumanui Hewahewa served Ka Mō'ī Kamehameha Akahi, has much changed?"

**Lamakū:**

Kahumanui Hewahewa, kau i ka 'Ihi (held in highest respect) departed Earth realm on February 16, 1837.

Hohonu ka ninau. I ask for the answers from the ancestors & here they are:

Ae, changes have been made on Earth as they are called for by Akua manamanoa.

**You may give Waiaka the example of the new Kaouoha of Akua in Ke Kaouoha Ka Māmaka o Ka Lama at Kamakahonu. You see in this example how life on Earth at Ahu'ena Heiau changed by changes made by Akua.**

**Kaouoha Ka Māmaka o Ka Lama:**

## **BE IT KNOWN**

The Ancestors of Ōiwi teach all on Earth that Ahu'ena Heiau is the First Temple of Spiritual Worship built by mankind on the planet. Ahu'ena Heiau was built by the Firstborn of Akua, ka Ōiwi.

In 1975, Ahu'ena Heiau was restored by Ōiwi led by Ali'i & Kahu David Keii'ihelemauna Roy, Jr. -- the Restorer of Ahu'ena Heiau. In gratitude to Akua, in commemoration of the great progress made for Ōiwi and mankind by the restoration of Ahu'ena Heiau, the 'Aha'āina Kumu Pono (Gathering for True Foundations), the community feast, was held at Kamakahonu.

The Kaouoha Ka Māmaka o Ka Lama was declared following the passing of Ali'iwahine Verda Leialoha Vida-Roy. This Spiritual Order declares that based upon the Lives and Service of Ali'i David Keii'ihelemauna Roy, Jr. and Ali'iwahine Verda Leialoha Vida-Roy, from this time forward there are Two Positions of Responsibility to Akua for Ahu'ena Heiau; One for the Male or the Kahu and the Second, for the Female; Divine Servant of Akua and Helpmeet of the Kahu. This is now Spiritual Law at Kamakahonu in Hawaii for the Earth. Oia ke Kaouoha Ka Māmaka o Ka Lama which means: The Divine Order of the Two Steadfast Ones Who Uphold the Highest Light of Akua at Kamakahonu. This Law of Spirit Lives.

Here is the guidance of Akua. The King is chosen as Kahu of Ahu'ena Heiau. In equal responsibility as Kahu of Ahu'ena Heiau is Lamakū and Kahunanui of Ahu'ena Heiau Mikahala Roy from now on to be known by her Royal Name of HRM Queen Ka 'I o-mana'ula-o-ka-lani-ki'eki'e-joa-ke-ahi-'ena-'ena-mau-o-ka-lau-lani by proclamation of the Ancestors of Ōiwi for Akua and the King Ali'i Nui Mō'i Edmund K. Paki - Silva, II, respectively.

By order of Akua, Kamakahonu is upheld as the Restored Kingdom of Hawaii by King Ali'i Nui Mō'i, Edmund K. Pākī - Silva, II Kahu, Ahu'ena Heiau. Kamakahonu is the Restored Capital and First Capital of the Kingdom of Hawaii by Ka Nai' Aupuni, King Kamehameha-the-Great the Conqueror of the Islands.

Ahu'ena Heiau is now the Home and Anchor for the Life of the Restored Kingdom of Hawaii by Hawaii's King Ali'i Nui Mō'i Edmund K. Paki - Silva, II. Ahu'ena Heiau remains the Holy First Temple of service to all mankind including those individuals who wish to remain U.S. citizens. Here expresses a condition, provided by Akua, that will provide peace and continued service to mankind and all life on the planet.

He 'Oia'i'o Nō  
Truth Indeed

May we share again soon. I look forward to speaking again and seeing you again on Wed. June 26, 2024.

Waiwai Mau Ke Kumu  
Akua is Our Infinite Source

Aloha Ke Akua

 Hawaii State Capitol  
 415 South Beretania  
 Honolulu, Hawai'i 96813  
 March 3, 2021

**Welina i Ke Ola o Ka La e Nā Lāiā o ka 'Aha 'Olelo Kau Kānawai:  
 Greetings in the Life-Giving Warmth of the Sun to Members of the Hawai'i State Legislature**

**In the mid-1970's Ahu'ena Heiau at Kamakahonu was restored by 'Ōiwi. Kahu David Ke'i'i'helemauna Roy, Jr. led that effort for Akua and became Kahu of Ahu'ena Heiau by Akua and the people in the 'Aha Kūnu Pono, the Gathering for True Foundations, at Kamakahonu. Ahu'ena Heiau is the first restored Temple of worship in the Hawaiian Islands, in the Pacific and in the world.**

The restoration of Ahu'ena Heiau (translated as **Burning Altar** referring to the **Great Light** there) was guided by Akua in the Kahu and in the hearts of the men who came from all islands with the main working crew coming from Kona. There was no Office of Hawaiian Affairs, no presence of a state historic preservation department, only dedicated and faithful individuals with pride for the heritage of 'Ōiwi, pride in their bloodlines and respect for the First Capital of the Kingdom of Hawai'i unified by Kamehameha-the-Great. I'm instructed by the Ancestors that all members of the steady crew that restored Ahu'ena Heiau are to be acknowledged as Ali'i.

Kahuna La'au Lapa'au Mornmah N. Simeona said that the Seventies were a time of great spiritual growth for Hawai'i and her First People. Among numerous efforts carried out meaningfully in the communities, Hokule'a traveled to Kahiki, Ho'oponono was implemented at the Geneva Convention and taught to the world and Ahu'ena Heiau was restored in the Hawaiian Islands.

In 2005, I succeeded my Father as Kahu of Ahu'ena Heiau. By loving communication with the Ancestors of 'Ōiwi who uphold the Highest Light of Akua at Kamakahonu beginning for me in these past years, I'm instructed by them of the name our people have known over centuries for the Station I inherit by Akua and by my Father.

I am Kahu of Ahu'ena Heiau and I am Lamakū. I am guided by Akua and by Ancestors who serve Akua Manamanaoa in the Pacific. I learn and teach the cosmology of the first faith of Hawai'i, ka 'Āina Kula'iwi; ka 'Āina Mauliauhouua ~ Hawai'i Homeland, Hawai'i Land of the Established Families of the Land.

For the sake of yourselves, your children and their children to come; for the sake of Beloved Heaven and Earth now coming together as one in Keaulama the Era of Light in Hawai'i for the Earth, take the appropriate time you require to read and comprehend the WORDS OF LIGHT of the Ancestors of 'Ōiwi that follow. Receive these words. Prepare to open your hearts that you will hear the Voice of your Loving Source through these WORDS OF LIGHT.

E 'Imi Mau i ka Malu Mualoa o ke Akua,  
 Seek Forever the First Peace of Divine Creator

*Lamakū 'Ihaka'ala Roy*

## **I. Nā Hua'ōlelo i Ka Lama o Nā Kūpuna o 'Ōiwi Kau i Ka 'Ihi Words of Light of the Most Revered Ancestors of 'Ōiwi**

### **Guidance from Akua for the planet is to take place from Mauna a Wakea in the New Age of Light in Keaulama (The Era of Light)**

We wish to impart Akua's plan to be shared with the members of Hawai'i's State Legislature in the peace of their forum that they may comprehend & convey the biggest view and understanding of Mauna a Wakea to the Governor of Hawai'i, all other Representatives of the U.S. Government; the President of the U.S. and to all World Leaders.

As Kahu of Ahu'ena Heiau but also so importantly and historically for Hawai'i and the planet -- as Lamakū, the station you inherit by Akua for Service to Akua, you are called by Akua to teach the cosmology of 'Ōiwi for 'Ōiwi and for all of mankind. You are a Divine Healer by Akua for 'Ōiwi and for all of mankind, the planet and all life upon the planet.

Akua calls upon you, Divine Servant of Ahu'ena Heiau at Kamakahonu to share Divine Messages for Good and Helpful benefit to 'Ōiwi, all mankind, the planet and all life upon the planet. By prescription from Akua, you are asked to help Akua heal the planet and all life upon the planet for you teach of Ke-au-lama, the Age of Light, now dawned upon the planet beginning in Hawai'i.

We wish to convey to you Words of Light in the understanding of the history of the Heavens; the cosmology of 'Ōiwi that tells of the identity and sacred knowledge concerning the sacred components such as that identified in the west as the Black Hole.

What is being revealed here is that by way of the conveyances of Akua through you Lamakū and Kahu of Ahu'ena Heiau, a new way of understanding a look into the Heavens and the whole identity of the Heavens by Akua by the spirituality of 'Ōiwi is beckoning mankind upon the planet.

Why Mauna a Wakea is indeed the sacred pinnacle for Hawai'i and the planet will be told. Why no further telescopes are necessary here nor allowed here will be told. Akua has spoken by the voice of the Royal Messenger and Great One near Akua in the Heavens as to what is at hand by Akua now.

The Age of Light heralds that which is the new beginning; a rebirth for the planet and all life upon the planet. It is the birth of the New Age of Light and Change of World Order. What arrives is the Era of Peace, Love and Harmony for all of mankind and the planet.

The creation of the Earth -- very old present planet -- began in the Pacific. 'Ōiwi are Akua's Firstborn of Races and 'Ōiwi helped Akua lay the tracks for what became all faiths from the Divine Pacific Sea.

Akua, with the assistance and presence of the Divine Seven Identities honored as Kāne, Kū, Lono, Kamaloa, Hina, Laka and Pelehonamea, caused the progression of life by Akua in the Pacific in the lands first known as Kaluaokalani translated as The Second Heaven.

You, Lamakū o Hawai'i and Kahu o Ahu'ena Heiau are asked to teach the cosmology of the First Faith of 'Ōiwi at Kamakahonu and upon the planet. As Mauna a Wakea is the utterly Divine Connection between the life of the Heavens and the life created by Divine Creator Akua Manamana of the Heavens, it is Sacred Domain.

All mountaintops are the sacred domain in the same way for the good and blessings upon the planet and all life upon the planet.

'Ōiwi are known as Firstborn of Akua. They are the only Ones of the Earth that have not forgotten that "The Earth is the Lord's and the fullness thereof...." Psalms 24:1.

Akua wishes to guide the planet and all life upon the planet back to full health and long and successful life. Life eternal upon the Earth is possible by the Most Divine Gift of Akua in Keaulama; Known also as the Soul Light Era spoken of by Master Zhi Gang Sha of China; Great Divine Healer and founder of the Tao Academy and the Love, Peace, Harmony network upon the planet.

Akua wishes to bring this Gift from Heaven's realms to all life of Earth's realms.

The Light creates movement and ongoing healing upon the Earth. Akua wishes to begin this in the largest way for the New and Healing Planet in Hawai'i where life began upon the first and very Old planet so very long ago.

**This is to be known as the creation of the Kingdom of Akua or the Kingdom of God upon the Earth. Akua begins this by guidance from Mauna a Wakea Akua's Holy Mountain and pinnacle of Kaluaokalani, the Second Heaven in the Pacific.**

**Divine Creator calls for the restoration of the Kingdom of Hawai'i already begun by Leader and Ruler identified and chosen by Akua, Ali'i Nui Mō'i Edmund K. Silva, Jr. Pākā.**

The Governor of Hawai'i and all offices of note have been informed of these movements occurring in time.

## II. Nā Hua'ōlelo i Ka Lama o Nā Kūpuna o 'Ōiwi Kau i Ka 'Ihi Words of Light of the Most Revered Ancestors of 'Ōiwi

Kaloko-Honokōhau served as the northern boundary of lands of great sacredness to 'Ōiwi and to all mankind. Kaloko on the north and Hōnaunau at the south enclosed the intensely sacred lands dedicated to Akua (Divine Creator). Within these lands were and are Ahu'ena Heiau in Kamakahonu.

At Pu'u is the sacredness focused and identified as the heart of Kaluaokalani, translated as -- The Second Heaven. While Pu'u is identified as the heart of Kaluaokalani, truly, the mountain-to-shoreline trails of the north Kona coastline "hold" the true history of the "heart" of Kaluaokalani. Kaluaokalani is ALL of the Hawaiian Islands extending northward through the northwestern Hawaiian Islands. Kaluaokalani became the Kingdom of Hawaii unified by Kamehameha-the-Great.

These land points have always been honored especially for bordering the lands held as the sacred repository for all 'Ōiwi from time immemorial.

When Kamehameha-the-Great unified the Kingdom of Hawaii by Akua Manamanaloa (Most High God), he was the Chosen King and Leader of his people by Akua. Akua blessed and provided for the success of his efforts for 'Ōiwi, his Beloved People. Kamehameha-the-Great unified the islands and took special care of the repository of the especially sacred lands of the ages.

Kamehameha-the-Great comprehended that He was the representative of Most High Akua, Divine Creator, and sought to procure the hearts of his people in this belief. He ordered the conversion of the centuries-old beliefs held in the first faith of 'Ōiwi in the Pu'uhonua o ka 'āina and He and his forces stood in battles to defend these changes. A large battle took place at Kaloko-Honokōhau where many lives were lost believing the way they were taught to believe; in the way of the faith they lived.

The national park staff of Kaloko-Honokōhau that desired a blessing of Akua upon all involved in a land-clearing episode in 2014 are to be honored for seeking this Goodness and Blessing of Akua. **This Instance Was Chosen By Akua** to be the focal point for the Great Light Dawning in Hawaii for the Planet. Here is Keaulama ~ The Age of Light.

At Kaloko begins the New Greatest-Story-Ever-Told.

Where certain lands are chosen as the Capital of the Kingdom of Hawaii, what does this tell us of the lands neighboring the Capital? Mea nui iākou. They are of Great Importance. Hohonu loa ka pīlina o nēia 'āina i nā 'Ōiwi. Hohonu ka pīlina o nēia 'āina i nā hoa kanaka ā pau. To the first people of the Pacific these lands hold deep meaning in connectedness. To all mankind, these sacred lands hold deep meaning in connectedness.

Ahu'ena Heiau is the first restored Heiau (Temple) of worship of 'Ōiwi. Ahu'ena Heiau is the first Temple built upon the Earth to give honor and give all praise and glory to the Source of Life

of 'Ōiwi. The Source of Life of 'Ōiwi is the Source of Life of all Mankind. 'Ōiwi are the Firstborn of Akua; the first souls of the firmament created by Akua in Kaluaokalani in the Divine Pacific Sea.

Akua names 'Ōiwi as his Firstborn, Ka Hiapo, for they helped Akua lay the tracks for what became all faiths of the Earth. Ka Hiapo reflect the honor Akua bestowed upon 'Ōiwi for the special help they provided to Akua in Kaluaokalani. Akua made a promise to 'Ōiwi. It is the promise Akua keeps.

The lands between Kaloko-Honokōhau and Hōnaunau are SACRED AND VITAL LANDS OF AKUA for history to 'Ōiwi and all mankind. These lands constitute the sacred heart of what became the remnant of the Great Continent of Mū that flourished with great populations over time and sank over time. This history would not be known without the quality and presence of yourself, e Lamakū o Hawaii and Kahu of Ahu'ena Heiau -- as One of your Nation of 'Ōiwi o Kaluaokalani. This history would not be known without Akua Manamanaloa's Gift of these Words of Light by way of your Ancestors who uphold the Highest Light of Akua at Kamakahonu.

AHU'ENA HEIAU IS THE FIRST RESTORED TEMPLE IN HAWAII AND WAS THE FIRST TEMPLE BUILT UPON THE EARTH. AHU'ENA HEIAU IS THE ONLY TEMPLE UPON THE EARTH RESTORED WITH THE LIFE OF THE SPIRIT OF MOST HIGH AKUA MANAMANALOA. AKUA CREATED THE EARTH WITHIN DIVINE PACIFIC SEAS. AKUA HAS BEGUN THE GREAT GIFT OF THE REBIRTH OF EARTH PLANET AGAIN IN THE DIVINE PACIFIC SEAS HERALDED BY THE HŌAILONA OF **'OMAKAOLAHOUKALUAOKALANI**, OFTEN REFERRED TO AS FISSURE 8.

UPON AHU'ENA HEIAU IS KA LANA NU'U MAMAO, THE GREAT ORACLE TOWER THAT REPRESENTS MAUNA A WAKEA; THE TALLEST MOUNTAIN PEAK OF THE EARTH MEASURED FROM THE BOTTOM OF OCEAN'S DEPTHS. WHAT IS THE ORACLE BUT THE SACRED CONNECTION POINT BETWEEN DIVINE AND MANKIND. HERE IS THE REPRESENTATION OF THE SACRED CONNECTION POINT BETWEEN DIVINE AND MANKIND IN MAUNA A WAKEA. UPON MAUNA A WAKEA, HERE IS THE ULTIMATE SACRED SPACE FOR THE LIFE OF THE PLANET AND ALL LIFE UPON THE PLANET. HERE IS THE ULTIMATE STAIRWAY OF LEVELS OF SACREDNESS CARED FOR BY SACRED APPOINTED ONES BY AKUA.

THIS HAS BEEN THE PLACE TO HONOR AND GIVE THANKS TO AKUA FOR THE SACRED BALANCE BETWEEN AKUA AND AKUA'S CREATION OF PLANET EARTH. MANKIND OFFERS PROFUSE LOVE, RESPECT AND HONOR AND KEEPS THE FIRST PEACE CREATED BY AKUA. AKUA BLESSES ALL OF AKUA'S CREATIONS OF THE LIFE OF ALL THE REALMS OF EARTH AND BEYOND.

# COUNTY OF HAWAII

## Proclamation

**WHEREAS**, Verda Leialoha Vida Roy was born on April 26, 1928 in Honolulu, Hawaii, the daughter of Elythe A. Alden Vida and Earle K. Vida; and

**WHEREAS**, Verda Leialoha Vida Roy was born on the same birth day as her husband Kahu David Keli'ihelamauna Roy, Jr., the Restorer of Ahu'ena Heiau at Kamakahonu, Hawaii, in the Temple's historic restoration beginning in 1975; and

**WHEREAS**, Kamakahonu was designated the first Capital of Hawaii, and Ahu'ena Heiau the personal Temple of Ka Mō'i Kalanipai'eakūniākea Kamehameha the Great; and;

**WHEREAS**, Verda Leialoha Vida Roy is honored in her lifetime as Ka Māmaika o Ka Lama, steadfast & worthy One of Two, who upheld the Flame-of-the-Highest-Light in the traditions of 'Ōiwi (native Pacific People) for the benefit of all 'Ōiwi and all humanity; and

**WHEREAS**, Verda Leialoha Vida Roy is the mother of four children, and as such is honored along with all mothers of Hawaii and the world; and

**WHEREAS**, Verda Leialoha Vida Roy is honored as Co-Founder, along with her husband Kahu Keli'ihelamauna Roy, Jr. of Hālau No'eau Kahelemauna, the House of Wisdom of the Mountain-Roaming-Chief. Hālau No'eau Kahelemauna is the First Home of Kamakahonu and the First Residence of the Capital of the Kingdom of Hawaii, unified by Ka Mō'i Kalanipai'eakūniākea Kamehameha the Great in 1810,

NOW, THEREFORE, I, HARRY KIM, Mayor of the County of Hawaii, do hereby proclaim September 13, 2018 as

### VERDA LEIALOHA VIDA ROY DAY

in the County of Hawaii and call upon our community to cherish the memory of this most Treasured lady, who was a true ambassador of Aloha throughout her life.

IN WITNESS WHEREOF, I have hereunto set my hand and caused The Seal of the County of Hawaii to be affixed. Done this 26<sup>th</sup> of October, 2018, in Hilo, Hawaii.

Aloha,

Please receive and include in my testimony important background information telling of the restoration of the first Heiau in Hawaii, the Pacific and the world. Here also is the creation of the first non-profit organization, Kulana Huli Honua - Foundation of the Search for Wisdom to advocate for sacred sites.

## ‘I Search for the Channel Made Fragrant by the Maile’: Genealogies of Discontent and Hope

Association for Social Anthropology in Oceania 2014 Distinguished Lecture

Ty P. Kāwika Tengan  
 University of Hawai‘i at Mānoa

Lamakū Mikahala Roy  
 Ahu‘ena Heiau and Kūlana Huli Honua

### ABSTRACT

*Ahu‘ena Heiau (whose name Burning Altar describes the sacredness of light) is deemed a paramount religious temple rededicated to Lono by Kamehameha the Great at Kamakahonu, the first Capital of the Hawaiian Kingdom. Restored in 1975 under the leadership of Kahu David Kahelemauna Roy, Jr., it is a place honoured by Kānaka ‘Ōiwi (Indigenous Hawaiians) in ways not recognized by the King Kamehameha Kona Beach Hotel on whose ground it now sits. Henry E. P. Kekahuna, noted Hawaiian scholar, produced a series of maps in the 1950s that documented this heiau (traditional place of ceremony) and other significant cultural sites. Kekahuna’s maps reveal a complex, contested landscape of overlapping contemporary and historic features, many of the latter invisible yet still alive in local hearts and memory. The Association for Social Anthropology in Oceania (and indeed anthropology at large) has analogously complex relations with the communities and the region it claims as its particular field of knowledge. The 2014 annual meetings, which convened in the Kamehameha Kona Beach Hotel, provokes a critical assessment of academic practice in light of indigenous sovereignty, genealogy, senses, memory, and place.*

Keywords: Indigenous anthropology, ASAO, Kamakahonu, Ahu‘ena Heiau, Hawai‘i.

*This paper was delivered as the 2014 distinguished lecture by Tengan at the ASAO conference at King Kamehameha Kona Beach Hotel, Kamakahonu, Kona, Hawai‘i, on 7 February 2014. Prior to and after the talk, Roy worked with Tengan to edit portions that specifically referenced her own story and the history of Kamakahonu. Roy offers her own mana‘o (thoughts) at the end of this essay.*

E hō mai ka ‘ike mai luna mai ē  
 ‘O nā mea hūmā no‘eau o nā mele ē  
 E hō mai, e hō mai, e hō mai ē!

On 17 January 2014, on the 121st anniversary of the illegal overthrow of the Hawaiian Kingdom, Mikahala Roy held a torch at Kailua Pier, where once stood a stone formation resembling a turtle. The ‘āima (land) that this hotel sits on – Kamakahonu (The Eye of the Turtle) – took its name from these stones, which now exists only as a memory.<sup>2</sup> Kamakahonu was the final residence of King Kamehameha I and the first capital of the Hawaiian Nation that he established. Kamehameha rebuilt the heiau of Ahu‘ena (Burning Altar), the traditional sacred structure that now serves as the backdrop of the hotel’s evening lū‘au, and dedicated it to Lono, god of healing, peace, and abundance. This was the first of modern-era heiau restored by Hawaiian men, done under the guidance of Mikahala’s father Kahu David Kahelemauna

Figure 1: Ahu‘ena Heiau at Kamakahonu, Hawai‘i, 6 February 2014. Photo by authors.

Roy, Jr. in 1975 (Roy 2014b). Mikahala inherited the station of the Kahu (Spiritual Guardian) of Ahu‘ena Heiau from her father, though since 2007 she has been in major conflict with the business now occupying these lands, and with no assistance from the State of Hawai‘i. Nevertheless, her station compels her to be ever present here; it is who she is in connection to this land. She explains, ‘The Kingdom of Hawai‘i of the Hawaiian Islands unified by Kamehameha I has ancestry – a long spiritual ancestry that holds all members unified’ (Roy 2014a). This genealogical unification, she states, ‘has the power to *transform* the energy of this day from one of somber reflection to proactive *hope* for a bright future for the people of Hawai‘i. The efforts for the true restoration of the Kingdom of Hawai‘i originally unified by Kamehameha the Great are underway’ (2014a) (Fig. 1).

Kahu Mikahala’s vision, shared via an email kāhea (call out), was entitled ‘Lands & Seas of Hope’. It recalls the tone and language of the late Epeli Hau‘ofa’s land- (and sea-) mark essay ‘Our Sea of Islands’ (Hau‘ofa 1993). Of course, the ASAO will know this work quite well since the vision came to Hau‘ofa as he left this conference – held at this very hotel – and drove over the expansive Kona landscape to Hilo in 1993. As he stated:

The drive from Kona to Hilo was my ‘road to Damascus’. I saw such scenes of grandeur as I had not seen before: the eerie blackness of regions covered by recent volcanic eruptions; the remote majesty of Maunaloa, long and smooth, the world’s largest volcano; the awesome craters of Kilauea threatening to erupt at any moment; and the lava flow on the coast not far away. Under the aegis of Pele, and before my very eyes, the Big Island was growing, rising from the depths of a mighty sea. The world of Oceania is not small; it is huge and growing bigger every day. (Hau‘ofa 1993:5–6)

The 2009 Association for Social Anthropology in Oceania (ASAO) distinguished lecturer James Clifford found in this and other writings of Hau‘ofa a set of ‘big-enough histories, able to account for a lot, but not everything – and without guarantees of political virtue’ (Clifford

2009:241), which for him pointed to 'a tangle of historicities rather than a progressively aligned common History' (2009:246). So too did he find 'hope, necessarily entangled with more ambivalent scenarios and dystopias' (2009:248). In a special issue of *Pacific Studies* focusing on genealogies of Indigenous anthropology, Hūfanga 'Okusitino Māhina paid tribute to Hau'ōfa and other important scholars whose passing put them 'behind us, in the past, yet before us, in the present' (Māhina 2010:168). Meditating on Indigenous Moana concepts of tā (time) and vā (space) in relation to the 'cultural and historical tensions . . . within and across social, intellectual, and artistic and literary genealogies', Māhina explained that:

genealogy is about people who cross paths in physical, emotional, and social ways, culturally ordered and historically altered through intersection and separation. . . . Like all exchange relations, within and across nature, mind, and society, genealogy embraces both conflict and resolution, with resolution itself a form of conflict. (2010:188–189)

Situating himself within this Native Pacific genealogy, Vicente Diaz took a more 'bottoms up' approach in clearing a way for an 'olfactory history' in his ode to Hau'ōfa that was playfully entitled 'Sniffing Oceania's Behind' (2012:326). The primary inspiration for Diaz's piece was Hau'ōfa's 1987 satirical novel *Kisses in the Netherlands*, wherein the author fictionalized and hyperbolized his real-life experiences and battle with anal fistulae as 'a way of turning society upside down and inside out and giving it a thorough cleaning' (Hau'ōfa 2008:145). Diaz (2012:328) also breathed new life into Lilikalā Kame'elehiwa's oft-quoted explanation of 'Ōiwi Maoli (Indigenous Hawaiian) conceptualizations of the past ('*Ka wā māmua*, or 'the time in front or before') and the future ('*Ka wā mahope*, or 'the time which comes after or behind') when she wrote, 'It is as if the Hawaiian stands firmly in the present, with his back to the future, and his eyes fixed upon the past, seeking historical answers for present-day dilemmas' (Kame'elehiwa 1992:22). In pointing to sensory perceptions of times below and behind, Diaz notes that 'smells are associated with things that are meaningful and people who matter with respect to the (ongoing) past and who, for whatever reasons, are not or cannot be captured or recorded in that supposedly more permanent record called written documents and the visual conventions that underwrite their various claims to authority' (2012:326–7). Rather than looking at big Histories (capital H), an olfactory sensing of the past 'allow[s] us to delve instead into the more chaotic social world of the subaltern' (2012:333). Brandy Nālamī McDougall (2014:8) adds that 'smell can be useful to articulate aesthetics in terms of a legacy or memory, as they often indicate presence despite absence or invisibility' (Fig. 2).

And so we return to Kahu Mikahala Roy, who took time to welcome a small group of us ASAO conferees to Ahu'ena Heiau on 6 February 2014. The stories she shared are not found on the hotel's website, or on the ASAO's 2014 Meeting Information website (although there we do find that we are surrounded by the 'three S's of sea, sand, and sun'). Kahu Mikahala has graciously allowed me to share some of her story with you all, and I want to acknowledge her presence in the audience tonight. I want to also thank Mikahala for restoring my own hope that meetings such as this one can in fact create meaningful connections that acknowledge and viscerally engage Indigenous time, space, and place – despite whatever other forms of intellectual inertia and settler colonial logics continue to characterize the ASAO and other organizations and departments that produce what Brodtkin, Moren, and Hutchinson (2011) have called 'anthropology as white public space'.

Yes ASAO, I love you and I hate you. Most people here are very warm and nurturing, and I owe a debt to the organization for helping me and a small group of Pacific Islander scholars flourish in a field that would otherwise see us only as objects. I want to say here that my

Figure 2: Kahu Mikahala Roy (standing) shares stories at Kamakahonu with (left to right, sitting) Tēvita Ka'i'i, Lisa Uperesa, Kalaniopua Young, Jacob Fitiseanu, Sa'iliemanu Lilomalava-Doktor, and Adrian Bell, 6 February 2014. Photo by authors.

critique is not aimed at individuals, but at structures that, well, stink. Blow-ups on listserves were old even when Geoffrey White and I wrote about this back in 2001 (e.g., White and Tengan 2001:383), and yet I continue to hear (second-hand since I am not on it) about new ones. Then there are other things, but I will not linger there. I will point out though that they suggest a broader culture of privilege, especially the privilege of not having to deal on a *daily* basis with the profound cultural, economic, social, and political consequences of colonization. I know it is hard work to be decolonial, and so I applaud the efforts of those in this organization that have tried to shift the ASAO in this direction. I thank you for giving me this time tonight, as well as the changes you have made, which include the election of Lisa Uperesa as the next Chair of the association, and the granting of the Pacific Islands Scholars Funds mini-grants to Islanders who wish to register on-site free of charge, as Kahu Mikahala did (Fig. 3).

Kahu Mikahala has so much to share, and I can only touch the surface of it tonight. For hers is a lifelong journey: as she told us yesterday, 'I search for the channel made fragrant by the maile'. The maile, which was the lei I was given and in turn gave to Kahu at the opening of this distinguished lecture, is an aromatic vine that is used to adorn and honour individuals, and it is ceremonially cut to represent the piko (umbilical cord) of a new home. I would like to now take you on my trip to Kamakahonu. It is worth noting that in contrast to the name of this 'āina (land), turtles actually have a much keener sense of smell than sight. While I speak, please pass around the container of 'inamona I have brought, which I will explain the significance of later, and the bag with the pa sakai (salt) and 'ōlena (turmeric). The latter are cleansing agents, which I may need after I get back to the significance of the 'inamona. For now, go ahead and smell them. Together, let us see if we might pick up a scent on the trail of genealogy.

#### THE PATH TO KAMAKAHONU

After finally giving up my boycott of the ASAO and agreeing to give this lecture, I was starting to think of how I could expand upon the points that Tēvita Ka'i'i, Rochelle Fonoti, and I made

Figure 3: Kahu Mikahala Roy, wearing a maile lei, Ty Kāwika Tengan, and Tēvita Ka'ili at the ASAO meeting, Kamakahonu, Hawaii, 7 February 2014. Photo by authors.

in our introduction to the special issue of *Pacific Studies* we co-edited in 2010 on 'Genealogies: Articulating Indigenous Anthropology in/of Oceania'. Incidentally, I would like to thank the board for designating it an ASAO special publication last year and for including it on the book display this year – better late than never! (I will say more about this later.) In our introductory essay, we suggested that 'articulating visions of anthropology's future, at least from an Indigenous Oceanic perspective, can be done only through genealogical work – the search for, production, and transformation of connections across time and space' (Tengan, Ka'ili, and Fonoti 2010: 140). As someone who does not have close family or community ties to Kona, I had my work cut out for me.

Thus I set about doing some genealogical work on the site (<http://www.konabeachhotel.com>) of the King Kamehameha Kona Beach Hotel. The first of those sites was the hotel's own website, which predictably featured pretty much just the three S's with Hawaiian structures providing a picturesque backdrop for those wishing to 'dine with a view', 'enjoy a [poolside] tropical drink', have a 'Hawaiian wedding on any budget', or 'capture the Hawaiian spirit'. Of course, like me, I am sure that most of you were dedicated to being good anthropologists and so made that ethnographic commitment to scroll down the page and click on 'culture and history'. There we read: 'King Kamehameha the Great established his royal residence' at this site, and rededicated 'Ahu'ena Heiau, a temple . . . to Lono who was the Hawaiian God of peace, agriculture and prosperity. Here, on The Big Island, Kamehameha the Great lived and conducted matters of government, until his passing on 8 May 1819. Indeed, our Big Island hotel owes quite a debt to our island's rich history and culture'. Quite a debt indeed, which, as I will point out soon, is repaid in only a way that a settler colonial institution could. (Which is: not.) But onwards first with our ethnog-clicking!

When one clicks on the first occurrence of 'Ahu'ena Heiau, nothing happens, though the URL changes to add on '#Heiau' after 'historical.htm'. Was there a separate webpage that used to tell another story, or were these two always one and the same? In any case, if you are an ethnographer, as I am, you will persevere in the search for deeper understanding and click on the next 'Ahu'ena Heiau' hypertext, which takes us to [ahuna.net](http://ahuna.net), replete with the translated writings of 19th century Hawaiian authors such as John Papa 'Ī'i, accounts and sketches of

European and American explorers and missionaries, photographs from the 1950s to 2011, and a relatively empty 'Outreach' page that says only 'Coming soon . . .'. But it features images of nā koa, Hawaiian men who have taken up warrior traditions as a part of the broader Hawaiian men's movement and Hawaiian cultural nationalist movement I have written on (Tengan 2008). Back to the home page, which starts off with the following message:

The Ahu'ena Heiau rock platform base, perimeter wooden fencing, Anu'u Tower and an uprooted ki'i were all damaged from the recent tsunami. Ahu'ena Heiau, Inc. has surveyed the damage, consulted the State Historic Preservation Division and is working closely with a qualified historical site restorations coordinator. We are currently seeking grants to repair and restore the tsunami damage.

The statement seems to have been written in order to prepare the reader (or potential visitor, or visiting anthropologist) for a site of disrepair, but that somebody – Ahu'ena Heiau, Inc. – is doing something about it.

The text of the home page goes on to note that Ahu'ena was both a religious temple and meeting house for Kamehameha's inner circle of advisors and that three major events occurred there, including his death in 1819, the subsequent ending of the 'aikapu traditional religious-political system, and the landing of the first missionaries in 1820. (This perhaps is *not* the main point that others would try to convey about Ahu'ena Heiau; rather, we must recognize that it is a site steeped in mana and meaning for the people who visit.) It goes on to note that 'an accurate restoration project [was] undertaken in the mid-1970s', and '[a] community based committee Ahu'ena Heiau Inc., formed in 1993 to permanently guide the restoration and maintenance of this national treasure'.

When I went to the Historical Photos page, I came across an image taken by Theodore Kelsey in 1950 of a Mr. Henry E. P. Kekahuna standing on a 'large stone in the middle of the house of Hale Pua Ilima, in which King Kamehameha breathed his last'. That is all the information we are given about Mr. Kekahuna, but many of us in the field of anthropology and archaeology recognize him as an important archivist, scholar, historian, and community archaeologist, ethnologist, and ethnographer from Maui who had one leg, yet travelled across the islands with the assistance of his friend and colleague Theodore Kelsey, a non-Hawaiian who was nevertheless fluent in the Hawaiian language and committed to matters of cultural and historic preservation. Together they mapped heiau and other cultural sites and interviewed elders about histories of the land, and in Kona they were guided by Nāluahine Ka'ōpua the revered kupuna and konohiki (land overseer) of the Lanihau ahupua'a (district) that we are in. Contemporary 'Ōiwi archaeologists and anthropologists see Kekahuna as an important ancestor in our genealogy (Kawelu 2013). His appearance during my search of this website suggested that I was being guided on the right path.

#### KEKAHUNA'S MAPS

I pursued this path by doing a Google search on Kekahuna's maps, which I know have been used by a number of different 'Ōiwi groups and organizations in their efforts to protect and restore sacred sites. To my surprise, I found that the Bishop Museum had recently digitized and posted a number of Kekahuna's maps, prominent among them those that he drew of Ahu'ena, Kamakahonu, and Kaiakeakua (Sea of the God), today referred to as Kailua Bay. The detail in these maps and the amount of descriptive text are astounding, evidence of the care and purpose with which they were produced – to keep the histories of these places alive in the memories and hearts of all of Hawai'i's people, and particularly its 'Ōiwi (Fig. 4).

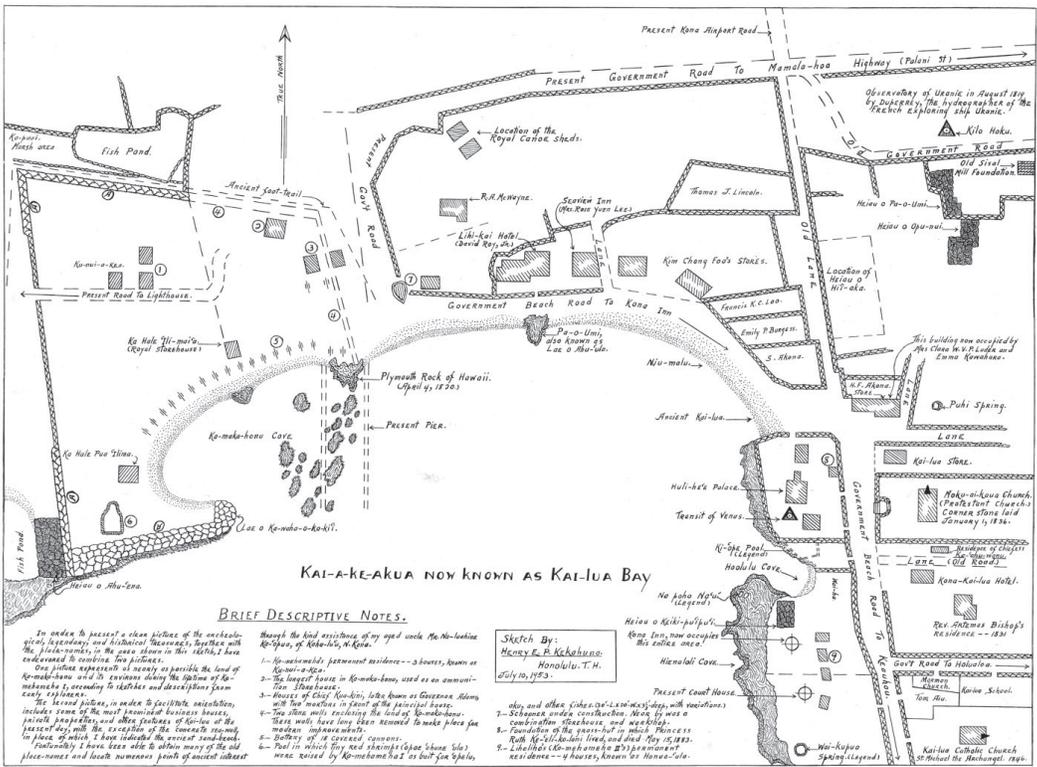

Figure 4: 1953 map of Kaiakeakua, now known as Kailua Bay. Henry E. P. Kekahuna, Bishop Museum.

322 I Search for the Channel

Though historical, Kekahuna's documentation was not of what used to be there, but rather what is still there, even if no longer visible to the eye. Take, for example, the map he did of Kaiakeakua in 1953. In his Brief Descriptive Notes, he writes:

In order to present a clear picture of the archaeological, legendary, and historical treasures, together with the place-names, in the area shown, I have endeavored to combine two pictures. One picture represents as nearly as possible the land of Ka-maka-honu and its environs during the lifetime of Kamehameha I, according to sketches and descriptions from early explorers. The second picture, in order to facilitate orientation, includes some of the most prominent business houses, private properties, and other features of Kai-lua at the present day. . . . Fortunately I have been able to obtain many of the old place-names and locate numerous points of ancient interest through the kind assistance of my aged uncle Mr. Na-luahine Ka'opua, of Kahalu'u, N. Kona. (Kekahuna 1953)

Yet even to acknowledge 'two pictures' is to underplay the multiple dimensions of time and space he reveals as he points out sites associated with the 15th century chief 'Umiāliiā, an ancestor of Kamehameha, as well as the grass hut where Kamehameha's great-granddaughter Princess Ruth Ke'elikōliāliā died in 1883. An 'ancient foot-trail' intersects – intersects – with the 'present government road' that passes a 'schooner under construction' for Kamehameha. Continue west on the Government Beach Road to Kona Inn and you pass the Seaview Inn of Mrs. Rose Yuen Lee and Kim Chong Foo's Stores. I could go on, but you get my point – multiple histories, geographies, and genealogies of people and place where the Indigenous is co-present, or ever-present.

Kekahuna and Kelsey also penned a serial on 'Kamehameha in Kailua' that ran in *The Hilo Tribune Herald* from 28 February through 5 April 1954. In it, Kekahuna reproduced a few of his maps to go along with the stories he and Kelsey told. Opening the series with an ode to the land, they wrote:

Basking in the sun of the somewhat arid coastal region of the district of Kona, beloved by Hawaiians for its calm, variegated 'opua or horizon-clouded sea, teeming with fish, in the tranquility of prehistoric King 'Ehu. . . lies the prominent historic village of Kailua Kona. By day it is famed by Kona's cooling sea-breeze, the 'Eka. . . . By night the sweet scented land-breeze the Ke-hau, suffuses Kona with its cool breath from the mountain of Hualalai. (Kekahuna and Kelsey 1954:8)

On 5 March, after describing the various structures and formations at Kamakahonu, they describe the persistence of mana in the land:

When at last it became necessary to demolish Ka Hale 'Ili-Maria [Kamehameha's Western-style storage house], foreigners and natives alike were afraid to do so, lest its mana, or spiritual power, should bring calamity upon them. The work was finally undertaken after a suitable ceremony was performed by old Mr. Na-luahine Ka-'opua. . . . whose great grandfather, La-na-i, last high-priest of the heiau of Ka-pua-noni, in Kaha-lu-u, is of the blood of Hawaii's ancient high-priesthood. Na-luahine also held a ceremony before the blasting of a nearby rock in Ka-maka-honu Cove. Thus were reconciled the powers of the unseen realm of spirit. (Kekahuna and Kelsey 1954:8)

The 'old Nāluahine Ka'opua' – the kupuna (elder) and kahuna (ritual specialist) – was the source of 'like (knowledge) and mo'olelo (histories, stories, legends) that informed

Kekahuna's maps and narratives. More needs to be said and understood about the position that cultural workers such as Kekahuna and Kelsey and elders such as Ka'ōpua found themselves in as mediators and mitigators of the forces of change and transformation. But the scent of the Kēhau breeze (or is it the 'awa?) tells me that I must move on in this journey and return to the trail that brought me to tonight.

#### AHU'ENA ARRIVAL

Knowing that I needed to connect with people who were actually caring for Ahu'ena Heiau, yet not knowing who they were, I consulted my ethnic studies colleague Davianna McGregor, an 'Ōiwi historian, activist, and mentor to me. She suggested I contact Mikahala Roy who was Kahu of the heiau but had recently gone through a major dispute with the hotel. I thus emailed Kahu Mikahala introducing myself and my project and asked if we could talk about Kamakahonu. She immediately responded by acknowledging our connection through another 'Ōiwi woman professor who has guided me, Noenoe Silva. I explained that one purpose of this talk was to underline the need for all anthropologists and scholars, Native or non-Native, to both account for and be accountable to the deep cultural and political histories of place wherever they go, be it for research or for a conference. She then forwarded me a compilation of emails, testimonies, and songs she had composed in response to events that took place since 2007, both at the hotel and throughout the islands more generally. When we finally spoke on the phone, it was as if we had known each other for a very long time, connected by those genealogies of descent as well as dissent. I asked her if she would be free to meet me when I arrived in order to properly carry out the protocols of introduction and homage to the heiau, and also if a small group of Pacific scholars could join. She gladly agreed, and I set about making plans and preparations for the ho'okupu (offering) that I would give on behalf of the ASAO.

At noon on 6 February, Lisa Uperesa, Tēvita Ka'ili, Kalaniopua Young, Sa'ilemanu Lilomaiva-Doktor, Jacob Fitiseanu, Adrian Bell, and I watched dolphins spinning in the air as we awaited the arrival of Mikahala at the entrance of Ahu'ena Heiau. I remembered that she had mentioned Nā Pōhaku Kālai a 'Umi by the banyan tree as our meeting location, which someone eventually pointed out on the other side of the hotel. I went to find her and passed a Hawaiian male employee of the hotel who gave me a fairly unfriendly look as I walked by. (I later found out from the others I left that he was questioning their presence there – though I highly doubt he was asking the same of the other tourists that were visiting). As I approached the banyan tree, Kahu Mikahala came out with a huge smile, wearing her ceremonial white kīhei. We embraced with the honi, the pressing of noses and exchanging of hā (breath) that connected us as 'Ōiwi. It was a true joy.

Together we walked to the heiau, passing the employee who maintained an emotionless face and said Mikahala's name curtly, to which she replied with a true greeting of aloha. I could feel the tension there, and I knew a story would come later. When we arrived at Ahu'ena, everyone introduced themselves while I put on my own white kīhei. Mikahala had told me before I arrived that the best offering would be a chant, but I had also brought some physical offerings in the forms of 'inamona, a kukui (candle nut) relish made with salt, a small ipu (gourd) container bound with cordage, and mashed 'awa root in a gourd cup with holder. Kalaniopua had poi, a banana, water, and corned beef, and Tēvita had a lei.

Mikahala directed us down to the sand and rocky area just below the heiau where we stood as she first gave a chant and then allowed us to offer ours. Mine was a prayer that called out to the different forms of Lono for blessings, knowledge, strength, righteousness, patience, courage, protection, guidance, and mana, and that introduced us and the ASAO as a group that

has come in respect, honor, and aloha for this 'āina. Tēvita and Kalaniopua also offered up chants, and we stood in silence acknowledging the sacredness there.

After a time, Kahu Mikahala took us down closer to the water's edge and told us a story of three turtles that had come ashore some time ago. The first, a large and aged turtle, came up out of the water with a long crack in its shell. It receded back into the sea. Soon, a second, smaller and younger turtle came upon the shore; its shell was whole. A third honu appeared that was a baby, young and vigorous. With tears in her eyes, Kahu Mikahala explained that this story was a ho'āilona (sign) that to her represented hope for our people. A Pacific nation is presently divided. It will be unified for a future of health for the young. The smell of the ocean, salt air mixed with fish, mingled with the aroma of the roasted kukui nuts I was still holding.

Kahu Mikahala explained that by Spiritual Guidance, no physical ho'okupu are to be made at this time. Instead, ho'okupu of Oli (Chants) are welcomed. She explained that she would take the physical ho'okupu that we brought, for at this point in time when Ahu'ena Heiau and Kamakahonu are under foreign occupation, leaving a physical offering would make the wrong kinds of things grow. Thus, the clear communication of our chants to the Kāpuna would be the most appropriate offering. I thus offered another prayer to Lono asking for growth and nourishment. At the end of our time there, Jake, Sa'ili and Lisa led the group in the offering of the Samoan song of gratitude 'Fa'afetai':

Ua fa'afetai, ua fa'afetai  
 Ua malie mata i va'ai  
 Ua tasi lava 'oe, ua tasi lava 'oe  
 I lo'u nei fa'amoemoe<sup>3</sup>

After leaving Ahu'ena Heiau, Mikahala took us to the rock wall boundary between the hotel and the neighbouring property, which was formerly held by the missionary-commerce family of the Thurstons whose scion led the illegal overthrow of the Kingdom of Hawaii. There she produced a large printout of a Kekahuna map of Ahu'ena and proceeded to tell us the stories of the 'āina and the efforts to educate the new land owner, Microsoft billionaire and Seattle Seahawks owner Paul Allen (Fig. 5).

Eventually we sat on the grassy area just outside Ahu'ena Heiau and had a wonderful talk story. Mikahala showed us a picture of her father Kahu David Kahelemauna Roy, Jr., who worked in strong and highly visible ways to save and restore sites (see Roy 2014b). She told of how Amfac, one of the 'Big 5' sugar companies that dominated the Territory of Hawaii (Kent 1993), agreed to restore the heiau in exchange for community support for the renovation of the King Kamehameha Hotel in 1975. Kahu David worked with Bishop Museum as the superintendent of the project, selecting the men who were all of heritage and bloodline of 'Ōiwi. Roy served as overseer for the restoration of Ahu'ena Heiau by the guidance of Akua (God) – the element neither the museum nor their staff could provide. Life in the title of Kahu is the significant outcome for the people as the restoration of Ahu'ena Heiau is the significant outcome for Hawaii (Fig. 6).

Mikahala is the second of four daughters who took keen interest in her father's work; she even sat on Nāluahine Ka'ōpua's lap when she was only one at her 'āha 'āina piha makahiki (first birthday celebration). These men inspired her to keep the sacred. Over the years she has joined other community members in fighting off multimillion dollar developments that would threaten such sites all along the Kona coast. She also protests the illegal occupation of our Hawaiian Kingdom and any efforts such as the Akaka Bill or Kana'i'olowalu that would have us forget the first true capital of Hawaii at Kamakahonu.

While Mikahala's father was alive, his priority was the life and care of Ahu'ena Heiau. With colonization and the colonized behaviour of 'Ōiwi, the road has not ever been smooth.

Figure 5: Kahu Mikahala uses a Kekahuna map to retell the history of the lands that, for her, remains the priority over all changes brought in time by present-day landholders. Kamakahonu, Hawaii, 6 February 2014. Photo by authors.

Figure 6: Kahu David Kabelemauna Roy, Jr. Kamakahonu, Hawaii, early 2000s. Photo courtesy of Kahu Mikahala Roy.

Ahu'ena Heiau Inc. (AHI) formed in 1993 but was inactive, so the community formed Kūlana Huli Honua (KHH) in 1999. For over a decade, the hotel offered KHH a small office to develop cultural services to benefit Ahu'ena Heiau and the people. Mikahala and the organization members (including teachers and historians) led property tours that benefited local and visitor alike.

However, in 2007, a major disagreement arose between KHH and the Hotel (Pacific News Service n.d). After that point men from AHI breached their support of the spiritual tradition of 'Ōiwi. The non-profit organization positioned itself to guide the discourse on how

culture and history should be represented here when a new hotel operator purported to 'own Ahu'ena Heiau'. Kahu Mikahala and Kūlana Huli Honua led a resistance in 2008 contesting the environmental impact study done for proposed renovations, which they knew would disturb iwi Kūpuna (ancestral remains). From 2007 to 2009, although these efforts failed by American legal standards, they were highly successful in building unprecedented networks for the people. The hotel proceeded with their plans. Shortly after the newly renovated King Kamehameha Kona Beach Hotel reopened, the 2011 tsunami caused massive water damage to the hotel (Rechtmann and Poepoe 2008).

Mikahala persists, upholding her kuleana as Kahu to bring people to connect to the Kapitala Mua o Hawai'i and to honor Ahu'ena Heiau. Important matters have progressed loudly and quietly here, she told us as we walked to visit the vault where iwi Kūpuna unearthed in recent years had been re-interred. When Mikahala stood on the pier on 17 January to pray for transformation and unity on the day of the illegal overthrow of the Kingdom, a Micronesian man joined her. Few words were exchanged; they communicated in silence with gestures and nods, feeling and sensing the purpose of each other's co-presence there. When her vigil was finished, they had a brief conversation. She asked him if wisdom keepers still maintained sacred sites where he was from, and he said yes. She thanked him for Mau Pūlūg and the gift of voyaging, which had, returning us back to Hau'ōfa, reminded us of the 'Ocean in Us' and 'Our Place Within'.<sup>4</sup>

## CONCLUSION

The 'inamona, which I can smell from here, reminds me that I still need to explain its significance. On the heiau, as a ho'okupu (gift), it was meant to represent enlightenment and knowledge that comes in Lono's form of the kukui, or candlenut, which traditionally would have been lit as the torch held at a vigil such as the one Kahu Mikahala carried out. I also came across another meaning for 'inamona when going through Henry Kekahuna's unpublished papers at the State Archives. In a furiously written and rigorously researched rebuttal to a group of non-Hawaiian historians who questioned the veracity of the birth date of Kamehameha as reported by 19th century 'Ōiwi scholar Samuel Kamakau, Kekahuna wrote:

the writer [referring to himself in the third person] is prompted to bring to your attention these bits of pungent kukui-nut condiment (ina-mona) with little pinches of salt added that will cause the lips of the reader to smack with each mouthful. (The roasted kernel of the kukui, or candlenut, called ina-mona, is a delicacy that only a Hawaiian can appreciate. It represents the actual truth). (n.d.:1)

I would amend his comment by noting that some Hawaiians in fact will not appreciate it and that there are non-Hawaiians who might. It all depends on how far you are willing to stick your nose in it. But do not get too fond of it – 'inamona in excess is also known to be a powerful laxative. Then again, perhaps that is what we all need – a good enema!

Let me offer one example of a blockage that could use some clearing.<sup>5</sup> On 14 January 2011, Tevita Ka'ili (on behalf of himself, Rochelle Fonoti, and me) sent an email to the ASAO leadership to request use of one of the conference rooms at the upcoming February meetings in Honolulu for the launching of our special journal issue on genealogies of Indigenous anthropology that I referenced above. While we knew it was a last minute request, we had only just found out from the editor of *Pacific Studies* that the issue was going to be ready, and we were hopeful that the association would want to celebrate the publication of this first collection of writings edited and authored by Indigenous anthropologists, with contributions from

non-Indigenous allies. Unfortunately, the very quick response we received was that 'there is no spare room or break in the program'. This, for me, was the last straw in a long line of ASAO insults that I and other Pacific Islanders had suffered over the years, experiences that might lead us to recall some of the earliest writings of Hau'ofa, in particular his essay 'Anthropology and Pacific Islanders' and poem 'Blood in the Kava Bowl' (both written in 1975 and reprinted as the first and last chapters in his 2008 book).

At first, Tēvita, Rochelle, and I were not going to make a big deal about it – we and the communities we came from were *used* to that kind of treatment. But the more we thought about it, the angrier we got. We had originally approached the board with the hope that the vision of anthropology (from below/behind/in back) that we were promoting was one that could branch out and expand in truly Hau'ofan ways (above/forward/in front, and back again). Instead, we confronted the most banal of colonial blockages: deadlines, schedules, and costs that defined who belonged and who did not in space and time. For Indigenous anthropologists, the very first thing you do anywhere is to recognize and acknowledge the sovereignty and mana of *whose space* you are in at *all times*. The affront was not so much to us as individuals but more importantly to all those people and places who precede and will succeed us, those who hold us accountable to carry on the unfinished business of resisting occupation, surviving settlement, persisting as Islanders, and striving for pono (justice, righteousness, balance) in Oceania. We did not discuss all of that explicitly, but it is the truth we embody, and it is what leads to the visceral reactions in our guts when we sense that bad history is happening all over again. And it does . . . So, I decided to take my leave of ASAO, with one parting email gift: "Thanks for the effort you have made to accommodate our request. Though it is unsurprising, it is nevertheless disappointing that there is no room for Indigenous anthropology at ASAO. Enjoy your time in Waikīkī".<sup>6</sup>

With much ambivalence, I accepted the invitation to give the Distinguished Lecture after a considerable amount of discussion with Lisa Uperesa, Paige West, and Lamont Lindstrom, who all assured me that it would be okay (even welcomed) if I shared my thoughts on what I saw were major issues in ASAO that needed to be addressed. I had originally planned to focus on the failure to book launch (at the conference site), but to be honest I was not finding much that was hopeful coming out of that story. Saying this, I acknowledge that Edward Hviding and Paige West had been very proactive in their capacities as past Chairs in trying to steer the organizational canoe in the right direction, most explicitly seen in West's 'From the Chair' message in the April 2013 ASAO newsletter. But I was away from the association, and I was still unconvinced that there was enough commitment to 'mak[ing] sure that ASAO is a welcoming and productive place for our Pacific Islander colleagues' (West 2013:5), even if our special issue was voted in as one of four new ASAO publications that year.

Facing something of a writer's block, I eventually tried to put into practice the approach to Indigenous anthropology that our collection was arguing for all along. And it was there in Kamakahonu's 'tangle of historicities' of land, sea, family, and nation that I found *ea* – the Hawaiian word for sovereignty that also translates to life, breath, and 'to smell'; coincidentally, or not, *ea* (with the glottal stop) is the term for the Hawaiian Hawksbill turtle, and it also means to smell (Pukui and Elbert 1986:36). I thank Kahu Mikahala for allowing me to see and smell that moani ke ea o Kamakahonu i pūia me ka maile/wind-blown is the maile-scented breath of Kamakahonu.

Finally, I want to sincerely thank the ASAO for bringing us here in this space of entangled and ambivalent histories. I have a new thought on Hau'ofa's revelations in 1993 – perhaps it was not only the road he was driving on and not only the aegis of Pele, but also the time he spent here with the kūpuna (ancestors) and akua (gods) from Kamakahonu that gifted him with his vision. Three turtles, smelling their way to the shore, two genealogies of discontent that might be transformed in the lands and seas of hope.<sup>7</sup>

#### COMMENTARY FROM KAHU MIKAHALA ROY

The restoration of Ahu'ena Heiau provides a strong reminder to future generations that such work is important. It is for this reason that business leaders associated with American Factors created lawful land covenants with the state of Hawai'i to abide 'with these lands' throughout changes in time. The Spirit of the memorandum of agreement requires all land tenants to promise to uphold respectfully and with honor the dignity of the lands of ke Kapitala Mua o Hawai'i (First Capital of Hawai'i).

All ensuing landholders here since Amfac have honored these land covenants. All until the current landholder, Pacifica Hotels now managed by the Marriott Courtyard took up tenure in 2007. This landholder disrespects the sacredness and sanctity of Kamakahonu.

The Kingdom of Hawai'i abides at Kamakahonu. Here, over the years, by our actions and by our words, we have told of the generational love given by 'Ōiwi for Akua, for their ancestors, for their rulers, for the love for their beginnings in heritage and hope for their country. We have shared the stories of inspirational acts in history and the customs of 'Ōiwi to inspire future leaders among 'Ōiwi. Kamakahonu's light is the beacon for the world that it has always been. We move into times of great hope for the planet and all life upon the planet. Symposium attendees are all seated in the cradle of transformation: A fireplace in the Home of Ka 'Īlālā-ole (Supreme-One-Without-Branches or Divine Creator).

Ancestors of 'Ōiwi (first people of the Pacific) paved the way for those of us who follow, to help and heal all life on the planet by fostering aloha kekahi i kekahi (love one for another). So let us pay attention here at Kamakahonu. Ancestral wisdom shares that giving your essence here, where you feel you can, aids the abiding cumulative light of healing for the world (Fig 7).

E 'oni wale nō 'oukou i ku'u pono, 'a'ole e pau  
Go on in the righteousness I have followed; it is not finished.  
–Kamehameha-the-Great.

Figure 7: Kahu Mikahala Roy dances a hula at the reception following the distinguished lecture at the ASAO meeting, Kamakahonu, Hawai'i, 7 February 2014. Photo by authors.

## ACKNOWLEDGEMENTS

Tengan would like to thank Paige West and the ASAO Board for the invitation to speak, Davianna McGregor for suggesting that he contact Kahu Mikahala, Puakea Nogelmeier for his insights into the relationships between Henry Kekahuna, Theodore Kelsey, Nāluahine Ka'ōpua, Kathy Kawelu for her observations of the unique qualities of Kekahuna's maps, and Geoff White for providing a recording of the talk and for his years of mentorship and friendship. We would both like to thank an ASAO reviewer for productive comments, and Lamont Lindstrom for his work on shepherding this article through the publication process. Finally, we acknowledge the āina of Kamakahonu, and the kūpuna, 'aumākua, and akua whose 'ike and mana inspired this essay.

## NOTES

1. Tengan opened the Distinguished Lecture with the chant 'E Hō Mai', which was composed by Edith Kanaka'ole and translates as 'Grant the knowledge from above/The hidden wisdom of the songs/Grant it, grant it' (Tengan translation).
2. Roy observes: the shapes of turtles found in the lava of the pāhoehoe islets of Kamakahonu, later referred to by missionaries as 'The Plymouth Rock' of Hawai'i, are significant to history. Mrs. Chee, a respected teacher of Kailua Elementary School as a part of her instruction, would walk her students down to the pier, which was then upheld by wooden pilings, to acknowledge the significance of this place.
3. Sa'ilitemanu Lilomaiva-Doktor provides the following translation: 'We appreciate thank you, we appreciate thank you/Our eyes have seen and are satiated/You are our one and only, one and only/In our hearts and souls'. She also notes that 'The song is sung always at any gathering of Samoans between the host and visitors where a reciprocal exchange of greetings, dances, gifts and good wishes are usually done. At the end of any excursion and visitation, to show the guests' appreciation of the wonderful time, beauty, and hospitality exhibited by their hosts they sing this song to show their appreciation, love and gratitude for the people and place they have just been guests of. The song also speaks of hope and continuity although it is not explicitly stated' (email to author, 20 February 2014).
4. Particularly over the last decade, the growing numbers of migrants from the Freely Associated States in Micronesia have become the target of racist discrimination. Intra-Oceanian conflict has been a big part of this story as Native Hawaiians have tended to see them not as family but rather as yet another wave of settlers, and in their case carrying all of the worst belittling stereotypes that Hau'ōia rejected. Indeed, Joseph Genz and Julianne Walsh organized a special session at the Kona meetings on 'Ethnic Tensions in Hawai'i' that was prompted by a recent high school fight that erupted between Hawaiians and Micronesians, located within walking distance from this year's ASAO meeting in Kailua' (Genz and Walsh 2014). Thus, the story of connection and recognition between Kahu Mikahala and the man who came up to her is particularly poignant and meaningful.
5. Tengan: I did not include this in my delivered speech, though it was originally going to be the central focus. However, comments from an anonymous reviewer and encouragement from Kahu Mikahala convinced me to augment this section.
6. Doing what any good Moana anthropologists would do, we sought to reweave the connections of tū (time) and va (space) (Māhina 2010) so relocated our party to the land of Hong Kong-style cuisine smells at Happy Days Chinese Seafood Restaurant at the intersection of Wai'aleale and 11th Ave. The food was excellent, but I probably ate too much. We made room for folks who we did not know were coming.
7. Another cause for hope: following the 2014 meetings, Sa'ili Lilomaiva-Doktor (Sāmoan) and Marama Muru-Lanning (Māori) were elected as new incoming board members, one of whom will serve as ASAO Chair in two years.

**Kulana Huli Honua**  
*Foundation of the Search for Wisdom*

Kulana Huli Honua is a group that formed in June, 1999 and whose non-profit status as an organization was established with the State of Hawaii in March, 2000, becoming a 501-C3 organization in early 2001. Individuals initially involved with the 1975 restoration of Ahu'ena Heiau came together to live their culture, support the work of the Kahu & serve the community in connection with the care of Ahu'ena Heiau, Hawaiian Sacred Site and National Historic Landmark at Kamakahonu, Kona Hawaii.

This is a non-profit organization with an old mission that is two-fold. Kulana Huli Honua (KHH) shall:

- I. Guide and support the life and care of Ahu'ena Heiau and its surrounding environment at Kamakahonu, Hawaii through work with the adjacent landowner, government and non-government entities. KHH shall guide and support the life and care of other cultural treasures and advocate for sacred sites in Hawaii.
- II. Promote the practice, study, education and preservation of Hawaiian Culture through means including the establishment of Archive Libraries to contain the history and wisdom of Hawai'i's ancients for 'O'iwi in their homeland and for the communities of Hawaii. Promote the creation of Kahu in the communities.

The restoration of Ahu'ena Heiau is an isolated case of the restoration of celebrated and sacred places of Hawaii in the modern era. Not since Naluahine Ka'opua guided the work in the mid-1900's at Kaika'iakoala Heiau in Puapua'a II, North Kona has restoration to this extent been seen. Moreover, it is an example of how collaborative effort from the cultural, business, governmental and scientific communities may result in progress toward integrity of knowledge in the lands of Hawaii.

Kamakahonu is the first Capital of Hawaii as Kamehameha the Great established residency there in 1812 entertaining visitors and conducting affairs for a newly unified Kingdom. The restoration of Ahu'ena Heiau provides a strong reminder to future generations that such work is important. On a Hawai'i Island that bears evidence of imbalanced and detrimental development of lands over time, the example of this Heiau restoration and work toward its perpetual care takes on deeper meaning.

Ahu'ena Heiau is a site that is both on dry land and in the sea. The lands at Kamakahonu were adversely affected when a pier was erected in times when there was no advocacy for Hawaiian historic and sacred sites and work toward their restoration. Such work provides valued precedent toward making the case for future generations that alternatives exist for land use in Hawaii. Further, that *Ka 'Imi 'Olan'i'o* the search of truth in knowledge of the islands of Hawaii is of high importance and is a realistic expectation.

Aloha,

Please include the following testimony with the video I have just submitted for inclusion of my testimony. Mahalo.

1. Relating to the above - cited instance confirmed by video submitted by an 'O'iwi Leader of Cultural Religious Practices, Mr. Jim Medeiros, Sr. of Hōnaunau, I wish to include this content in with the content submitted relating to the NPS at Kaloko-Honokōhau. **A.** Both parks lie in the Kapu Kanahā. **B.** Both parks present the belief that the laws of the U.S. govern & prevail over the religious practices of 'O'iwi of Akua Manamanaloa of the Restored Kingdom of Hawai'i of Ali'i Nui Mō'i Edmund K. Pākī -Silva, II. Nothing could be further from the truth. The lands from Kaloko-Hōnaunau are **KAPU** as declared by Akua Manamanaloa. It is known there are numerous Heiau, sacred sites, burials of high importance, unique resonance and unique essence of quality of reverberating peace in the lands. Further, all wildlife over the many years through the present tell their stories by their lives as part of the Sacred Whole of each Ahupua'a. For example, the sacred practices taught to 'O'iwi by their royal parents are alive and well. The sacred life of the sea is especially important to 'O'iwi and many uphold spiritual practices taught by their elders in the sanctity, peace, and harmony of Akua

## manamanoaloa. Name each & every ahupua'a throughout Kapu Kanahā.

2. Relating to the NPS Kaloko-Honokohau advisory, here is an instance of an actual instance where Divine World engaged with us at Kaloko at the occasion of a landscape-clearing episode. Where the Divine World speaks to 'Ōiwi and all, here is a precedent. The event that happened on 3 November 2014 was the spiritual conveyance written in gold letters upon a PDF page. It was a great event that that happened and can happen again --- and again. It may happen at any time concerning any lands of Hawai'i & the Pacific especially within the Kapu Kanahā (the 40 miles of especially sacred lands) in Kaluaokalani. **Now that we are fully appreciative and aware of the great gifts of Spirit arriving from our Ancestors and from Akua, we know that here at Ahu'ena Heiau and throughout the entire 40-mile perimeter outlined by Akua, known as the Kapu Kanahā, we are to be spiritually alert and awake to God's messages for mankind.**

## Diane Mistler

Please reject Kamehameha Schools EIS for Keaouhou Bay to become a Bungalow Resort. This is a VERY small bay and the added footprint of a 105 room Resort, that will include excess traffic, will have a serious negative impact in Keaouhou Bay and the surrounding community.

Please, Do NOT risk polluting the water in Keaouhou Bay by allowing Kamehameha Schools to develop their bungalow resort project. Research has shown that developments pollute nearby waters constantly during development and after. The fertilizers and pesticides alone will drain down into the ocean and have a serious impact on the fish and flora.

Developments have ALWAYS polluted the water in every near coastal development area. An article entitled, "What is the biggest source of pollution in the ocean?" by NOAA, National Oceanic and Atmospheric Administration, states, "When large tracts of land are plowed, the exposed soil can erode during rainstorms. Much of this runoff flows to the sea, carrying with it agricultural fertilizers and pesticides." It also states, "Eighty percent of pollution to the marine environment comes from the land. One of the biggest sources is called, nonpoint source pollution, which occurs as a result of runoff."

The trees you want to take down keep the runoff pollution from the golf course from going into the Bay. According to the National Library of Medicine, in their article, "Putting the Earth in Play: Environmental Awareness and Sports," shares that the golf industry uses approximately 50 pesticide active ingredients, including chlorpyrifos—an insecticide that is banned for residential use by the EPA due to developmental hazards. These pollutions and more are being held off from running into the Bay by the very trees you want to take down.

Let's not forget the marine life that will be threatened by excess pollution and traffic. Keaouhou Bay is the monk seals and the green sea turtle's habitat. More pollution and people will endanger these species.

This Bay is one of the treasures we still have and worth protecting. Please do not put a resort in such a small area. Future generations will be deprived of what it currently is. Once it is gone it is impossible to get it back!!!

Aloha e Misty,

Thank you for your comments concerning the Keaouhou Bay Management Plan, Draft Environmental Impact Statement. Your comments have been received and administratively recorded.

Comments received during the 45-day public comment period will be reproduced in the Final Environmental Impact Statement, and substantive comments addressed.

Since you also provided a copy to the County of Hawai'i and our planning consultant, G70, we will not be forwarding them a duplicate copy.

We appreciate your involvement and contribution to the environmental review process. Your input is invaluable in helping us develop a management plan that reflects the needs and concerns of our community.

Thank you once again for your engagement and commitment to the future of Keaouhou Bay.

Mahalo,

The Keaouhou Bay Project Team

Research has shown that developments pollute nearby waters constantly during development and after. The fertilizers and pesticides alone will drain down into the ocean and have a serious impact on the fish and flora.

Developments have ALWAYS polluted the water in every near coastal development area. An article entitled, "What is the biggest source of pollution in the ocean?" by NOAA, National Oceanic and Atmospheric Administration, states, "When large tracts of land are plowed, the exposed soil can erode during rainstorms. Much of this runoff flows to the sea, carrying with it agricultural fertilizers and pesticides." It also states, "Eighty percent of pollution to the marine environment comes from the land. One of the biggest sources is called, nonpoint source pollution, which occurs as a result of runoff."

The trees you want to take down keep the runoff pollution from the golf course from going into the Bay. According to the National Library of Medicine, in their article, "Putting the Earth in Play: Environmental Awareness and Sports," shares that the golf industry uses **approximately 50 pesticide active ingredients**, including chlorpyrifos—an insecticide that is banned for residential use by the EPA due to developmental hazards. These pollutions and more are **being held off** from running into the Bay by the very trees you want to take down.

Let's not forget the marine life that will be threatened by excess pollution and traffic. Keauhou Bay is the monk seals and the green sea turtle's habitat. More pollution and people will endanger these species.

This Bay is one of the treasures we still have and worth protecting. Please do not put a resort in such a small area. Future generations will be deprived of what it currently is. Once it is gone it is impossible to get it back!!

Thank you for your consideration in this matter,  
Diane E. Mistler, DDS

**Subject:** Help Keep Keauhou Bay Safe On Big Island

**Categories:** Yellow Category

To whom it may concern,

Please reject Kamehameha Schools EIS for Keauhou Bay to become a Bungalow Resort. This is a VERY small bay and the added footprint of a 105 room Resort, that will include excess traffic, will have a **serious negative impact** in Keauhou Bay.

Please, Do NOT risk polluting the water in Keauhou Bay by allowing Kamehameha Schools to develop their bungalow resort project. Research has shown that developments pollute nearby waters constantly during development and after.

Developments have ALWAYS polluted the water in every near coastal development area. An article entitled, "*What is the biggest source of pollution in the ocean?*" by NOAA, National Oceanic and Atmospheric Administration, states, "*When large tracts of land are plowed, the exposed soil can erode during rainstorms. Much of this runoff flows to the sea, carrying with it agricultural fertilizers and pesticides.*" It also states, "*Eighty percent of pollution to the marine environment comes from the land. One of the biggest sources is called, nonpoint source pollution, which occurs as a result of runoff.*"

The trees you want to take down keep the runoff pollution from the golf course from going into the Bay. According to the National Library of Medicine, in their article, "*Putting the Earth in Play: Environmental Awareness and Sports,*" shares that the golf industry uses **approximately 50 pesticide active ingredients**, including chlorpyrifos—an insecticide that is banned for residential use by the EPA due to developmental hazards. These pollutions and more are **being held off** from running into the Bay by the very trees you want to take down.

Let's not forget the marine life that will be threatened by excess pollution and traffic. Keauhou Bay is the monk seals and the green sea turtle's habitat. More pollution and people will endangered these species.

This Bay is worth protecting. Please do not put a resort in such a small area. Future generations will be deprived of what it currently is, and it could never be replaced.

Kind Regards,  
Robert Mollers

**Categories:** Green Category

To Whom It May Concern,

Please read the scientific proof in this letter and REJECT Kamehameha Schools Environment Impact Statement (EIS) for Keauhou Bay to become a Bungalow Resort.

Please state in your report that a Bungalow Resort WILL have a SERIOUS NEGATIVE IMPACT on Keauhou Bay as stated in all the different researched articles below.

Please, DO NOT risk polluting the water in Keauhou Bay by allowing Kamehameha Schools to develop their bungalow resort project. It is **scientifically proven** that developments pollute nearby waters both **during and after development**.

Below are scientific articles written by the National Oceanic and Atmospheric Administration (NOAA), Global Coral Reef Alliance, Hawaii Government, and many other professional organizations, that have studied and shown that developments have **ALWAYS** polluted the water in **EVERY** coastal development area.

Does this EIS (Environmental Impact Statement) have any kind of reports and studies on how the endangered species and marine life will handle the extra pollution due to development, and the golf course runoff? Keauhou Bay is their habitat and this development **WILL be CHANGING an Entire Ecosystem**.

#### **ENDANGERED SPECIES CONSERVATION IMPACTED BY DEVELOPMENT**

In the Endangered Species Act of 1973 Under Section 2 (b), "To provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved." This would be Keauhou Bay.

The Green Sea Turtle swims in Keauhou Bay weekly and the monk seal has also been seen swimming and resting in Keauhou Bay. Both of these marine animals are on the endangered species list.

## **Endangered Species Act**

"Section 2. Findings, Purposes, and Policy

- (4) the United States has pledged itself as a sovereign state in the international community to conserve to the extent practicable the various species of fish or wildlife and plants facing extinction, pursuant to—
- (b) PURPOSES.—The purposes of this Act are to provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved, to provide a program for the conservation of such endangered species and threatened species, and to take such steps as may be appropriate to achieve the purposes of the treaties and conventions set forth in subsection (a) of this section."

This was taken from <https://www.fisheries.noaa.gov/national/endangered-species-conservation/endangered-species-ac>

## **FEDERALLY PROTECTED GREEN SEA TURTLES WILL BE AFFECTED**

The green sea turtle is federally protected and can be seen in Keauhou Bay weekly.

The following article that states: "**POLLUTED RUNOFF IN HAWAII ENDANGERS GREEN SEA TURTLES**"

### **Why does Hawaii have a runoff problem?**

Historically, in the tropics of Hawaii, precipitation was absorbed into the soil, according to the Clean Water Branch of Hawaii's Department of Health. Any potential pollution or contaminants on the ground surface would get pushed into the soil by the rain, and plant roots and microbes would help break down the pollution into less dangerous components. However, with urban and agricultural development, less and less of the pollution gets pulled into the soil, and more of it gets washed out into storm drains. From there, the pollutants make their way to streams, rivers and the ocean that surrounds Hawaii. According to the state agency, most of these contaminants are nutrients from fertilizer, bacteria from animal waste, oil, garbage and yard waste...

If polluted runoff reaches the ocean, it can wreak havoc on marine life, including endangered green sea turtles." Taken

from <https://www.chemservice.com/news/polluted-runoff-in-hawaii-endangers-green-sea-turtles/>

**Allowing this development WILL POLLUTE Keauhou Bay.** The above article, written in 2014 (because runoff water from developments were polluting the ocean even then!!!) states this fact clearly. Keauhou Bay is home to countless sea creatures such as the protected green sea turtle, spotted eagle rays, manta rays, octopus, dolphins, fish, coral, monk seals, and more and that will ALL be harmed by the severe pollution runoff that WILL happen **because developments have been shown to ALWAYS pollute the water is that is nearby.**

The Green Sea Turtle is protected by more than one law. "All sea turtles in Hawaii are protected by the Endangered Species Act (ESA) and additionally protected by Hawai'i Revised Statutes Chapter 195D (HRS) and Hawai'i Administrative Rules (HAR) 13-124." This information was taken from this site <https://dlnr.hawaii.gov/dar/species/sea-turtles/>

## **THE ENDANGERED MONK SEAL WILL BE AFFECTED**

Keauhou Bay is known as a RESTING AREA for the ENDANGERED MONK SEAL. If another resort is allowed to be built, in addition to the pollution, it will also bring a lot more people down to Keauhou Bay. This increases the chances of a resting monk seal being disturbed by humans trying to get close, take "selfie" photos, and being generally uninformed and harmful. Please see article on Selfie Culture and its harmful effects below.

**Has the EIS done any research on what an increased population would do in such a small area, and what will happen to the endangered species that live there? With a significantly increased population their habitat of Keauhou Bay will likely be changed forever.**

This information is from a NOAA Scientist: "**Study shows selfie culture impacts how people behave when posting images of an endangered species on social media. There's a seal on the beach! Let's go get a 'selfie'!**" That must have been what nearly 18 percent of people on Instagram thought before approaching an endangered species.

In a recent study, NOAA scientists used social media to monitor human activities around endangered Hawaiian monk seals. They discovered that human disturbance is more common than they thought;" <https://www.fisheries.noaa.gov/feature-story/endangered-hawaiian-monk-seals-cry-foul-over-selfies>

NOAA clearly states a high population in a place where monk seals and sea turtles habitat can be a serious disturbance for these endangered species.

"Hawaiian monk seals are protected federally by the ESA and the Marine Mammal Protection Act (MMPA), as well as locally by Hawai'i Revised Statutes (HRS) Chapter 195D and Hawai'i Administrative Rules (HAR) 13-124." This was taken from <https://dlnr.hawaii.gov/dar/hawaiian-monk-seal/>

**Keauhou Bay is the monk seals and the green sea turtle's habitat.** Allowing a bungalow resort to be developed in Keauhou Bay, the habitat of these endangered species, is to threaten their life and habitat with golf course runoff pollution, as well as development pollution. **By threatening their habitat, and hence their lives, this development goes completely against the Endangered Species Act of 1973.**

The verbiage in the Endangered Species Act states, "to conserve". In this case, "to conserve" would be to **protect the land around Keauhou Bay** from developments that destroy the habitat of these endangered species with pollution and runoff.

**Does this EIS have any reports on the endangered species that frequent Keauhou Bay? This is their habitat and it needs to be "conserved".**

Under the **Conservation Program** there should be research done on endangered species and their associated ecosystems. A large bungalow resort development WILL FOREVER CHANGE THIS ECOSYSTEM.

"§195D-5 Conservation programs. (a) The department shall conduct research on indigenous aquatic life, wildlife, and land plants, and on endangered species and their associated ecosystems, and shall utilize the land acquisition and other authority vested in the department to carry out programs for the conservation, management, and protection of such species and their associated ecosystems." [https://www.capitol.hawaii.gov/hrscurrent/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hrscurrent/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm)

Also, under this same Conservation program, "(2) Taking such action as may be necessary to ensure that actions authorized, funded, or carried out by them do not jeopardize the continued existence of threatened or endangered species." [https://www.capitol.hawaii.gov/hrscurrent/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hrscurrent/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm)

Please consider that developing a Kamehameha Schools Bungalow Resort in Keauhou Bay WILL threaten endangered species due to the unavoidable development and golf course pollution runoff that would be caused by removing the all the trees that currently serving as a natural pollution filter, and replacing the land with housing, cars, humans, and waste. There would also be tremendous runoff damage into Keauhou Bay and the surrounding area during the building phase of this enormous project.

## **GOLF COURSE POLLUTION KILLS MARINE LIFE AND DRASTICALLY CHANGES ECOSYSTEMS**

"The golf industry uses approximately 50 pesticide active ingredients, including chlorpyrifos—an insecticide that is banned for residential use by the EPA due to developmental hazards. Having to trim golf turf to low heights also makes it even more vulnerable to pests, which leads to more pesticide use." <https://rainorshinegolf.com/pages/the-environmental-impact-of-golf-courses>

These pesticides will be in the pollution runoff that will enter Keauhou Bay more severely should the natural habitat of the trees be removed and replaced with pavement. This is unavoidable!

Please read from Wikipedia, "Most drains have a single large exit at their point of discharge (often covered by a grating) into a canal, river, lake, reservoir, sea or ocean. Other than catch basins, typically there are no treatment facilities in the piping system." [https://en.wikipedia.org/wiki/Storm\\_drain#:~:text=Most%20drains%20have%20a%20single,discharge%20into%20individual%20dry%20wells](https://en.wikipedia.org/wiki/Storm_drain#:~:text=Most%20drains%20have%20a%20single,discharge%20into%20individual%20dry%20wells)

The pavement from this development will cause pollution to runoff into Keauhou Bay because this treed land that will become a housing development is situated directly between the golf course and the Bay. These trees, which absorb all the pollution from the golf course is the BEST AND ONLY PROTECTION POLLUTION FILTER Keauhou Bay has from the golf course pesticides, fertilizer and weed killer. See the below paragraph for further references.

See page 2 at: <https://health.hawaii.gov/epo/files/2013/09/Stormwater-MS4-Presentation-HEF-7.15.14.pdf> where **the Hawai'i government states that Natural Ground Cover has 10% runoff, where has development has 55% runoff. So, even if you have storm drains the pavement this development will create will cause more runoff into Keauhou Bay than the Natural Ground Cover that is has now, that has been protecting the bay from golf course pollution for years.**

**These trees and land are saving monk seals and green sea turtles habitat from the golf course pollution and this land MUST BE PRESERVED and CONSERVED as the natural protector for Keauhou Bay and for these endangered species habitat.**

Under Section 2 (b) of the Endangered Species Act - **Keauhou Bay MUST BECOME A CONSERVATION AREA for these endangered species.** It is currently their habitat, and to allow a large resort development to be built above this bay clearly threatens the lives of these endangered species by allowing golf course toxic pollution and development pollution to run into these species natural habitat of Keauhou Bay.

#### **ALGAE BLOOMS KILL CORAL AND MARINE LIFE**

The trees that are slated to be cleared for the development further protect Keauhou Bay from algae blooms that have been proven to be caused by pollution that is runoff from fertilizer and weed killer.

When there is heavy rain the land above the bay has a greater runoff than normal. Without the trees, the runoff from the golf course pollution will pour into the Bay likely causing frequent algae blooms.

**Algae blooms have been shown to kill coral and marine life as stated in the many articles that will follow.**

One of these articles is from the Global Coral Reef Alliance. They have researched the effects on reefs before and after a golf course development. Though this development is not a golf course development, it is located just below a golf course and exposes the bay to the pollution from the golf course by removing the proven natural filter of the trees and natural ecosystem.

**Has this EIS done any kind of research about the algae blooms that happen after a serious storm because of the golf course runoff pollution?**

This information was taken from Global Coral Reef Alliance and it is an actual study on the how coral and marine life are affected before and after development. It's titled, "Golf courses kill coral reefs and fisheries: harmful algae blooms and disease cause by nutrient runoff from golf course development on Guana Cay, Abaco, Bahamas

Introduction: Bahamas coral reef deterioration

This study is thought the first ever to evaluate the health of coral reef ecosystems and fisheries before and after a golf course development. The

vast majority of corals have died from a combination of factors including global warming, new diseases, land-based sources of pollution.. "<https://www.globalcoral.org/golf-courses-kill-coral-reefs-and-fisheries-harmful-algae-blooms-and-disease-caused-by-nutrient-runoff-from-golf-course-development-on-guana-cay-abaco-bahamas/>

if you allow a Bungalow Development in Keauhou Bay you WILL be agreeing to pollute this bay for years to come and COMPLETELY CHANGING and possibly DESTROYING KEAUHOU BAYS ECOSYSTEM.

Another study by the Coral Reef Alliance titled, "Golf course fertilizer runoff causes nutrient enrichment leading to harmful algae blooms on a Bahamian coral reef.

"...After construction new algae blooms appeared nearest the golf course green, smothering corals in adjacent reefs, along with sharply increased coral diseases..." <https://www.globalcoral.org/golf-course-fertilizer-runoff-causes-nutrient-enrichment-leading-to-harmful-algae-blooms-on-a-bahamian-coral-reef>

**Does this EIS have any studies or reports on the extra runoff pollution due to clearing land and adding pavement?**

This needs to be fully assessed because **you will be changing an entire ecosystem** to build a bungalow resort. It rains in Keauhou Bay many nights out of the year and this kind of pollution will kill the beautiful and necessary coral in the Bay.

**FURTHERMORE:** "If there are toxic algal blooms, like red tide, or man-made contaminants, like pesticides or detergents in the water, those toxins are contained within the bubbles of sea foam. When those bubbles pop, the toxins can become airborne and compromise the air that is breathed in that location." <https://oceanconservancy.org/blog/2023/03/31/what-sea-foam/>

#### **ENGINE POLLUTION CAUSES ISSUES IN THE OCEAN**

**Does this EIS have any detailed traffic studies for the increase in cars that will be added to this already severely traffic area they want to build their 150 room bungalow resort in? Have they done any studies on the pollution these cars WILL have in Keauhou Bay?**

Because this Bungalow Resort could have over 150 extra cars and over 300 or more extra people in and out of Keauhou Bay, what traffic and increased population studies have they done? There will be employees with cars, guests

with cars, visitors with cars. At times this would range to over 200 cars (likely more), coming in and out of, and parking above Keauhou Bay thereby causing serious car population issues because of all these added cars right next to the bay.

### **The article below is from NOAA regarding motor vehicle engines and pollution to the sea.**

What is the biggest source of pollution in the ocean?

Most ocean pollution begins on land.

"Millions of motor vehicle engines drop small amounts of oil each day onto roads and parking lots. Much of this, too, makes its way to the sea.

Some water pollution actually starts as air pollution, which settles into waterways and oceans. Dirt can be a pollutant. Top soil or silt from fields or construction sites can run off into waterways, harming fish and wildlife habitats." <https://oceanservice.noaa.gov/facts/pollution.html#:~:text=Millions%20of%20motor%20vehicle%20engines,Dirt%20can%20be%20a%20pollutant.>

### **Land-Based Runoff Remains Top Source of Oil in the Ocean, Says New Report Oil in the Sea: Inputs, Fates, and Effects**

News Release September 28, 2022

WASHINGTON — Oil in runoff, primarily from cities and vehicles, is the top source of oil entering the ocean, says a new report from the National Academies of Sciences, Engineering, and Medicine. In North American waters, estimated ocean oil pollution from land-based runoff is up to 20 times higher than it was 20 years ago, and oil spills, natural oil seeps, and discharge from oil and gas operations remain major sources of pollution. The report recommends actions that government and others should take to minimize oil pollution, and calls for sustained research funding to better understand how oil reaches and affects ocean environments. <https://www.nationalacademies.org/news/2022/05/oil-in-the-sea-inputs-fates-and-effects#:~:text=WASHINGTON%20%2D%20Nearly%2085%20percent,pipeli ne%20spills%2C%20says%20a%20new>

### **The Impact Of Stormwater – Car Emissions**

"Car emissions are not limited to exhaust fumes that contribute to air pollution. They can also leak automotive fluid and release heavy metals that

can contribute to stormwater pollution, contaminating local waterways." <https://www.stormwatershedphd.org.au/blog/the-impact-of-stormwater-car-emissions/>

### **NOISE POLLUTION'S HARMFUL EFFECT ON MARINE LIFE**

#### **Does this EIS have any reports on the noise pollution that will happen and what it could do to marine life in Keauhou Bay during development?**

Because if you allow this Bungalow Resort to be developed you will increase constant noise in this bay for years to come and, "Noise Pollution Research shows that underwater noise from construction, shipping and naval vessels significantly impacts the natural behavior of cetaceans and many other marine species. This can be seen when mass beaching events occur or breeding success is diminished."

The above information was taken from the Ocean Conservation Trust <https://oceanconservationtrust.org/ocean-advocacy/think-ocean/ways-to-think-ocean/>

### **How Does Noise Pollution Harm Marine Species?**

"However, over the past few decades, noise pollution in the marine environment has increased dramatically and is threatening the natural soundscape of the marine environment. Ships, seismic surveys, explosions, construction, and sonar devices have made the once peaceful environment into a loud, chaotic home which is extremely damaging for marine wildlife. This type of pollution is often overlooked in comparison to others but its impacts are now being documented across all types of marine ecosystems." <https://earth.org/noise-pollution-in-the-ocean/>

If you allow this resort the amount of people in this bay will fully increase and, "Hawaii's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally, management of the resource should balance the needs of different user groups, but the welfare of the marine environment on which its inhabitants depend must be the most important consideration." This was taken from Hawaii's own Division of Aquatic Resources <https://dlnr.hawaii.gov/dar/marine-managed-areas/hawaii-marine-life-conservation->

### **It's Been Proven Developments Severely Pollute Nearby Waters**

Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Coral Bleaching is occurring more frequently in Hawaii. Across the Hawaiian Archipelago, coral bleaching has increased in frequency and severity since 1996. The last major bleaching event in 2014-2015 had catastrophic impacts state-wide..."

This was the third major bleaching episode in Hawaii over the last 6 years. The frequency of these events is unprecedented in the archipelago. NOAA scientists and partners have determined that the key drivers of the bleaching were environmental factors (such as heat stress, depth, and surface light) and human impacts (sewage effluent and urban runoff). " <https://www.fisheries.noaa.gov/feature-story/cautionary-tale-2019-coral-bleaching-event-hawaii#:~:text=Coral%20Bleaching%20is%20Occurring%20more,hard%20cattatrophic%20impacts%20state%2Dwide>.

**This article is by the Coral Reef Alliance here in Hawaii.** "An ecosystem under threat Hawaii's reefs face major global and local threats including climate change, overfishing, and sediment and nutrient pollution caused by sewage and stormwater runoff..."

When it rains, flash floods carry stormwater and large amounts of sediment downstream to the ocean. Just offshore, once-thriving coral reefs are now struggling to survive." <https://coral.org/en/where-we-work/hawaiian-islands/#:~:text=Hawai%CA%BBi%20reefs%20face%20major%20global,into%20Hawai%CA%BBi%20waterways%20every%20day>.

This article states that runoff is a leading source in coral degradation. Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Land-based sources of pollution are a leading cause of coral reef degradation in the Main Hawaiian Islands. Water quality is impacted by urban runoff, failing sewage systems, unpaved roads, farms, land clearing, and development." [https://www.coris.noaa.gov/monitoring/status\\_report/docs/Hawaii\\_status\\_report\\_forweb.pdf](https://www.coris.noaa.gov/monitoring/status_report/docs/Hawaii_status_report_forweb.pdf)

This article is a Research Article by PLOS ONE and their motto is, "We're driving change in research integrity and publication ethics." This is some of their article information, "**Coral taxonomy and local stressors drive bleaching prevalence across the Hawaiian Archipelago in 2019...**

**We found little evidence for acclimation by reefs to thermal stress in the main Hawaiian Islands. Moreover, our findings illustrate how detrimental**

**effects of local anthropogenic stressors, such as tourism and urban runoff, may be exacerbated under high thermal stress.** In light of the forecasted increase in severity and frequency of bleaching events, future mitigation of both local and global stressors is a high priority for the future of corals in Hawaii." <https://journals.plos.org/plosone/article?id=10.1371/journal.pone.0269068>

The coral all over Hawaii has had extremely high mortality rates, due to developments near ocean areas throughout the years, and development in Keauhou Bay will be devastating to the coral, reef fish, and all aquatic life there. Manta Rays need to eat 5 times their body weight in zooplankton daily. Their population will be severely affected should the plankton die. Please see the cited information below.

**"SO, HOW MUCH PLANKTON DOES YOUR AVERAGE MANTA RAY EAT? 19,200,000. Nineteen million two hundred thousand, give or take a few thousand.**

That is the number of plankton pieces a ten-foot manta ray must consume weekly to stay alive."

The above information was taken from Manta Ray Advocates <https://mantarayadvocates.com/how-much-plankton-do-mantas-eat/>

**Coral reefs are known to be highly negatively impacted by developments because, "Impacts from land-based sources of pollution including coastal development,...can impede coral growth and reproduction, disrupt overall ecological function, and cause disease and mortality in sensitive species."** <https://oceanservice.noaa.gov/facts/coral-pollution.html#:~:text=Impacts%20from%20land%2Dbased%20sources,and%20mortality%20in%20sensitive%20species>.

Article by Environmental Evidence, "**Coastal development and runoff lead to sedimentation, which directly impacts coral recruitment, growth, mortality, and ecosystem services that coral reefs provide.**" <https://environmentalevidencejournal.biomedcentral.com/articles/10.1186/s13750-020-00200-0#:~:text=Coastal%20development%20and%20runoff%20lead,services%20that%20coral%20reefs%20provide>.

Developments can't fully stop polluting because runoff is from rain during development and after. Article by NOAA, "One of the most significant threats

to reefs is pollution. **Land-based runoff and pollution discharges can result from dredging, coastal development... This runoff may contain sediments, nutrients, chemicals, insecticides, oil and debris.**

When some pollutants enter the water, nutrient levels can increase, promoting the rapid growth of algae and other organisms that can smother coral." [https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humantthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,organic%20that%20can%20smother%20corals.](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humantthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,organic%20that%20can%20smother%20corals.)

Another article by NOAA, "**Coral reefs also are affected by leaking fuels, anti-fouling paints and coatings, and other chemicals that enter the water... (All of those are show up in every development project.)**

**Among the most damaging pollutants on coral reefs is sediment, which can remain suspended in the water or be deposited on the coral surface (i.e., turbidity and sedimentation, respectively) and can contain toxicants, pathogens, and nutrients, all of which impact coral growth, recruitment, and**

**survival"** [https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humantthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days.](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humantthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days.)

**It's Been Proven Resort Developments KILL Marine Life**

This article by MarinBIO states, "**Zooplankton are also sensitive to their environment and like phytoplankton—a change in zooplankton concentration can indicate a subtle environmental change.** Zooplankton are highly responsive to nutrient levels, temperatures, pollution, food that is not nutritious, levels of light, and increases in predation. As well as providing an essential link in the marine food chain (which is an understatement), the diversity of species, amount of biomass and abundance of zooplankton communities can be used to determine the health of an ecosystem..."

Here is another article that shocking shows that in a very short time, big changes can occur due to runoff. A development will hurt and kill plankton, by Frontiers in Marine Science, "Effects of an experimental terrestrial runoff on the components of the plankton food web in a Mediterranean coastal lagoon. The main result observed in the present study was that the effects of the simulated terrestrial runoff spread along the plankton food web, significantly affecting all trophic levels of the natural plankton community studied. **This occurred in a relatively short time considering that the experiment lasted less than three weeks.** The lower light availability in the terrestrial runoff treatment compared to the control resulted in a net

decrease of approximately one-third of Chl-a concentration and phytoplankton abundance over the entire experiment." <https://www.frontiersin.org/journals/marine-science/articles/10.3389/fmars.2023.1200757/full>

**The ecosystem is fragile and interconnected as is stated in this article:**

"Zooplankton are also affected by levels of pH, heavy metals, calcium, and aluminum. Nutrients like nitrogen and phosphorus will affect the prey of zooplankton (like algae, protozoa and bacteria), indirectly affecting zooplankton survival. Scientists are still putting together pieces of the zooplankton puzzle. Some questions include how nutrient levels found in algae can influence the growth and behavior of zooplankton. Another question important to marine and human life is how toxins and pollution will affect this crucial link in the food chain" This information is in article by MarineBIO.

<https://www.marinebio.org/creatures/zooplankton/#:~:text=Zooplankton%20are%20also%20sensitive%20to,light%2C%20and%20increases%20in%20predation.>

A research article by Environmental Research Laboratory, United States Environmental Protection Agency that discusses, "**Toxic Effects of Pollutants on Plankton: There are four main sources of aquatic pollution: industrial wastes, municipal wastes, agricultural run-off, and accidental spillage.** Non-point sources, such as automobile exhausts, add appreciable amounts of pollutants to air that may enter aquatic systems in rainfall or dry fall-out. These sources add pesticides, heavy metals, oil, petroleum products, and a large number of organic and inorganic compounds to water. Lakes and oceans serve as sinks for many pollutants. Plankton comprise a large portion of the living matter in natural waters and function in biogeochemical cycles. They are affected by pollutants, transfer them to sediments and other organisms, and function in their biological transformation."

[https://scope.dge.carnegiescience.edu/SCOPE\\_12/SCOPE\\_12\\_3.6\\_chapter12\\_257-274.pdf](https://scope.dge.carnegiescience.edu/SCOPE_12/SCOPE_12_3.6_chapter12_257-274.pdf)

All the above articles show that development of Keauhou Bay WILL hurt plankton life and marine life in the bay because pollutant runoff is inevitable and unavoidable during construction and afterwards. The manta ray food source will likely disappear. This will be devastating for the manta ray populations. Furthermore, if manta rays die or leave the area, the loss will in turn affect many lively hoods from locals on the island who depend on the manta ray tour for their income.

**HUMAN POPULATION INCREASES LINKED DIRECTLY TO CORAL DEATH**

### **Does this EIS have any reports on their resort adding to the population increase that happens during IRONMAN?**

"On average, each Ironman racer brings three people with them to the Big Island. Counting members of the media, VIPs who come from around the globe to watch and the triathlons partners, there likely be more than 6,300 people descending on Kona..." <https://bigislandnow.com/2023/10/07/ironman-2023-in-kona-shines-spotlight-on-some-of-best-women-triathletes-in-the-world/>

And "Resident dissatisfaction with tourists is multifaceted: **The overwhelming majority (92%) of locals felt visitors were not educated enough on protecting Hawaii's natural environment and local resources; other factors include the impact of the vacation rental industry and ignorance of the residents' quality of life.**" <https://www.triathlete.com/culture/news/kona-locals-ask-ironman-visitors-for-respect/>

### **Where are the EIS reports on human density? Below are reports that show human population destroys coral reefs.**

"The number of people living on the coasts has rapidly increased in recent decades, causing significant development of coastal areas. Coastal development can negatively impact the ocean through the destruction of coastal marine habitat and through run-off of sediments and pollution.

-Coastal development involves activities such as the creation of harbors, stabilization of shorelines, and aquaculture that involve the destruction of sensitive marine habitats such as mangroves, coral reefs, and seagrass beds.

-Coastal development may cause the run-off of sediments into coastal habitats, which can smother corals or seaweeds and reduce the amount of light available for photosynthesis. Losses of primary producers and important habitat-forming species such as corals can negatively impact entire food webs."

The above information was taken from the Education Development Center, INC, from their Coastal Development page called Ocean Tracks <https://oceantracks.org/library/human-impacts/coastal-development#:~:text=Coastal%20development%20may%20cause%20the,negatively%20impact%20entire%20food%20webs.>

There is nothing Kamehameha Schools can do to their development that can stop the guests of this possible Bungalow Resort from going to Keauhou

Bay. **Human traffic WILL seriously increase if this resort is allowed to be built and the marine life will be negatively affected by it.** Marine life will suffer from this development as stated in this letter in many different scientific reported articles.

If you allow this resort the amount of people in this bay will fully increase and, "Hawaii's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally, management of the resource should balance the needs of different user groups, but the welfare of the marine environment on which its inhabitants depend must be the most important consideration." This was taken from Hawaii's own Division of Aquatic Resources <https://dlnr.hawaii.gov/dar/marine-managed-areas/hawaii-marine-life-conservation-districts/#:~:text=Snorkeling%20and%20SCUBA%20diving%20are,effect%20on%20nearshore%20fish%20populations.>

### **It's Been Proven an Increase in Human Population Destroys Coral Reefs**

if a Bungalow Resort is allowed to be built in Keauhou Bay, it will bring a serious increase in human traffic. **"Easily visible trends in human population dynamics combined with well-established and tested ecological theory give a clear, intuitive, yet quantifiable guide to the severity of survival challenges faced by coral reefs.** Management challenges and required actions can be clearly shown and, contrary to frequent claims, no scientific ambiguity exists with regard to the serious threat posed to coral reefs by humankind's continued numerical increase." This is in the article by National Library of Medicine National center for Biotechnology Information PubMed. <https://pubmed.ncbi.nlm.nih.gov/33293007/#:~:text=Denser%20coastal%20populations%20and%20greater,to%20more%20runoff%20and%20siltation.>

This article is by ABC NEWS, **"This is how tourists are destroying coral reefs in Hawaii. The less people at a certain site, the more coral there are, the research found.** The millions of tourists who flock to the shores of Hawaii every year are wreaking havoc on its natural environment -- especially the coral reefs, which are at risk all over the world, a new study said. The most popular coral reefs on the Hawaiian islands are likely being degraded by the very visitors they attract, according to a study published Monday in Nature Sustainability." <https://abcnews.go.com/US/hawaiian-coral-reefs-degrading-popular-tourist-sites-scientists/story?id=96308858#:~:text=The%20less%20people%20at%20a,there>

%20are%2C%20the%20research%20found&text=The%20millions%20of%20tourists%20who%20world%2C%20a%20new%20study%20said.

By allowing this development you are stressing an already fragile Eco-system. The small bay is currently used by many locals for boating, fishing, canoeing, paddle boarding, snorkeling, manta night dives, surfing, and swimming. We know, and research shows, that more people cause more damage. The area simply cannot afford or support this development.

**"Denser coastal populations and greater wealth will lead to reef degradation by coastal construction.** Denser populations inland will lead to more runoff and siltation. Effects of human perturbations can be explored with meta-population theory since they translate to increases in patch-mortality and decreases in patch-colonization (= regeneration). All such changes will result in a habitat with overall fewer settled patches, so fewer live reefs." This information was taken from Science Direct <https://www.sciencedirect.com/science/article/abs/pii/S0065288120300328#:~:text=Aquaculture%20will%20alleviate%20some%20fishing,to%20more%20runoff%20and%20siltation>.

Another article by Nature Sustainability, "**Coral reefs and coastal tourism in Hawaii** Coral reefs are popular for their vibrant biodiversity. By combining web-scraped Instagram data from tourists and high-resolution live coral cover maps in Hawaii, we find that, regionally, **coral reefs both attract and suffer from coastal tourism.** Higher live coral cover attracts reef visitors, but that visitation contributes to subsequent reef degradation. Such feedback loops threaten the highest quality reefs, highlighting both their economic value and the need for effective conservation management." [https://www.nature.com/articles/s41893-022-01021-4.epdf?sharing\\_token=wsakgQNha3hJjAnWAq453tRgN0jAjWel9jnR3ZvT0PjYGzA51c\\_H001zcHNIP3ASnhcgKRY6\\_vKLPw49dbrmBYoX5g3YIMgQjGBZsapidGUH701SLbu9x5P3xED4KxI4TosJlvqQ1a7ZZRt3rUbraxpodId2AoNlSmWSuxB7JjEDdpJ8OGJpx71TJWdCRxvFKJZYeNdcJj3Sw\\_dnaUg5tZlhcjPBDImmaH15yqT5Q%3D&tracking\\_referrer=abcnews.go.com](https://www.nature.com/articles/s41893-022-01021-4.epdf?sharing_token=wsakgQNha3hJjAnWAq453tRgN0jAjWel9jnR3ZvT0PjYGzA51c_H001zcHNIP3ASnhcgKRY6_vKLPw49dbrmBYoX5g3YIMgQjGBZsapidGUH701SLbu9x5P3xED4KxI4TosJlvqQ1a7ZZRt3rUbraxpodId2AoNlSmWSuxB7JjEDdpJ8OGJpx71TJWdCRxvFKJZYeNdcJj3Sw_dnaUg5tZlhcjPBDImmaH15yqT5Q%3D&tracking_referrer=abcnews.go.com)

## **INFRASTRUCTURE AND RESOURCES ON AN ISLAND ALREADY HIGHLY IMPACTED AND STRUGGLING FOR ANSWERS**

### **Has the EIS done any research or reports on the Resources and Infrastructure it will need for a bungalow resort?**

There are many big housing developments currently under construction in Kailua Kona, Waikoloa Village, Hilo, Puna, Ocean View and Volcano. The entire Big Island has construction projects already in progress.

### **Has Kamehameha Schools EIS done any kind of reports or surveys to know if Big Island has the Resources and Infrastructures for their resort development?**

"Hilo waste management refers to all the practices and processes that hotels implement to handle and dispose of the multiple types of waste generated on their premises. **Worldwide, hotels produce almost 300,000 tonnes of waste each year.**" <https://www.homebiogas.com/blog/hotels-waste-management/>

As of now, the Big Island's Resources and Infrastructure are having serious negative issues and many more developments that have been approved are not even completed as of yet, which means our island's resources and infrastructure will be taxed even more severely in the near future.

Please read the below articles that prove Big Island does not have the resources or infrastructure for a 143-Unit Bungalow Resort Development at Keauhou Bay. On Hawaii Island, we are already struggling to meet the increasing need for resources and infrastructure.

### **Big Island Now poll No. 27 results: More than one solution needed to help extend life of West Hawaii'i landfill**

September 17, 2023

The West Hawaii'i Sanitary Landfill, the only remaining landfill on the Big Island, is forecast to reach capacity within the next 20 to 25 years.

The West Hawaii'i landfill became the island's only one after the Hilo Landfill closed three years ago. It only has about 20 to 25 years left before it can no longer be used to store rubbish.

<https://bigislandnow.com/2023/09/17/big-island-now-poll-no-27-results-more-than-one-solution-needed-to-help-extend-life-of-west-hawaii-landfill/>

### **A County commission drafts ordinance aiming to ban recyclables at West Hawaii'i landfill**

By Megan Moseley September 6, 2023

Hawaii County's Environmental Management Commission is developing an ordinance that aims to prohibit the amount of recyclable materials ending up in the island's only working landfill.

During a commission meeting on July 26, Ramzi Mansour, Hawaii County Director of Environmental Management, told commissioners the West Hawaii Sanitary Landfill only has 20 to 25 years left before it reaches capacity.

With the Hilo Landfill permanently closed in 2020, the clock is ticking for the island's sole dump. Commission chairperson Georjean Adams said it's a good time to start looking into solutions.

Adams said the proposed ordinance is in its early stages and is more about getting the conversation started about how to prevent unnecessary, or recyclable items — green waste, metals, plastics, paper, paperboard and glass — from ending up in the rubbish dump, located off Queen Ka'ahumanu Highway in Waikōloa.

"Trying to site a new landfill is close to impossible," Adams said. "So what are we going to do? So I was looking around, and the commission agreed, to look deeply into the idea of diverting the recyclables out and at least slow the filling up of the landfill."

The proposed ordinance refers to the 2019 Integrated Solid Waste Management Plan that commits the county to "divert, as much as feasible, commercial and municipal solid waste, including but not limited to green waste, metals, plastics, paper, paperboard, and glass to help achieve goals related to climate resiliency, renewable energy, sustainable agriculture, and zero waste."

<https://bigislandnow.com/2023/09/06/new-draft-ordinance-aims-to-ban-recyclables-at-west-hawaii-landfill/>

### **Time's Up For Landfills**

'Gentle' demolition strategies can help preserve resources

PAULA BENDER April 2, 2024

As Hawaii government officials grapple with the challenge of limited landfill space statewide, federal restrictions set in place by the Environmental Protection Agency are ruling out possible locations that were once considered for new landfills.

Hawaii Act 73 states landfills must be located at least half a mile from residential areas; are prohibited from being located in areas with heavy rain and steep slopes, as well as agricultural land/or conservation lands; above aquifers; 300 feet beyond streams; and 1,000 feet beyond the ocean.

New landfills are also now prohibited from being created in tsunami inundation zones, 100-year flood zones and wetlands. There are also concerns that landfills near airports will attract birds, resulting in damage to aircraft and fatalities among pilots and passengers.

The City & County of Honolulu is in the process of identifying its next landfill and it doesn't want one any bigger or more active than absolutely necessary.

### **Drought Conditions On Hawaii Island Prompt Water Supply Message**

by Big Island Video News  
on Oct 5, 2023 at 3:59 pm

(BIVN) – With moderate to severe drought conditions being reported across Hawaii island, local water department officials issued a statement this week on the need for customers to use drinking water wisely.

Most of Hawaii island is under "Moderate Drought" conditions, according to the latest information from the [U.S. Drought Monitor](#). There is an area under "Abnormally Dry" conditions in South Kona, however there are other, small pockets on the Big Island that are under "Severe Drought". There is even a small spot of "Extreme Drought" in the South Point area of Ka'u.

"The National Weather Service's forecast calls for the existing drought conditions to expand over the entire island and intensify over the upcoming months due to the ongoing El Niño event," reported the Hawaii County Department of Water Supply. "Peak dryness is expected to occur from around January through February 2024. The El Niño event will likely persist well into spring 2024."

### **From a Water Supply news release:**

U.S.

## Hawaii is "on the verge of a greater catastrophe," locals say, as water crisis continues

By Li Cohen

Updated on: April 11, 2024 / 8:23 AM EDT / CBS News

And recent years have seen compounding problems: less rain, leading to significant droughts, and repeated jet fuel leaks and PFAS chemical spills contaminating water systems. All of this significantly limits available water use for locals, many of whom say tourism is only worsening the situation. Just months ago, the world's largest surfing wave pool opened up on the island — filled with freshwater.

"They're not using it to drink or to support life, they're using it to make money. They're commodifying it," said Healani Sonoda-Pale, who is Native Hawaiian and a member of advocacy group O'ahu Water Protectors. "... We are on the verge of a greater catastrophe."

**"We are in a water crisis, that has to be made very clear,"** Wayne Tanaka, director of Sierra Club of Hawaii, told CBS News, saying that if the reasons for this crisis aren't soon addressed, "We may come to a point where we have to decide ... who gets water and who doesn't."

<https://www.cbsnews.com/news/hawaii-water-crisis-climate-change/>

Because this is an island, parts need to be shipped. The power plant currently has generators that are not working, and because of this (and other reasons), the Big Island needs to seriously conserve power so that everyone will have power. If this problem of shipping parts can happen once, it can and will happen again.

### UPDATE: HELCO asks for continued energy conservation

BY SPECTRUM NEWS STAFF HAWAII ISLAND

UPDATED 6:28 PM ET APR. 16, 2024 PUBLISHED 9:05 AM ET APR. 15, 2024

HILO, Hawaii — Hawaiian Electric continues to urge Hawaii Island customers to reduce their electricity use to prevent the need for rolling outages.

In a news release Tuesday afternoon, the utility stated that Monday saw a reduced demand of approximately 5 megawatts. That, combined with increased wind and solar battery storage prevented the need for rolling blackouts on Monday. HELCO credited conservation efforts, particularly those by large businesses and government customers, for the reduction in electricity demand.

"We're grateful for our customers' efforts to conserve electricity, especially between 5 to 9 p.m., when electricity us is highest, because it does make a difference," said Hawaiian Electric spokesperson Kristen Okinaka. "By working together, we're helping to ensure that enough power can be available for all customers and prevent or minimize the impacts of rolling outages."

### Hawaiian Electric announced Monday afternoon that it may initiate rolling outages in parts of Hawaii Island because of the unavailability of several generators and lower than normal wind and solar resources.

In a news release, the utility said that outages could start as early as 6:30 p.m. and rotate around the island for 30-minute intervals. The impacted areas and the timing of the outages will be based on wind generation and the amount of electric demand that needs to be reduced. Individuals who are dependent on electrically powered life support medical equipment are advised to arrange for a backup power supply.

The outages are being done to prevent power loss to even more customers, who are all being asked to conserve electricity throughout the month.

<https://spectrumlocalnews.com/hi/hawaii/news/2024/04/15/heco-customers-on-hawaii-island-asked-to-conserve-power->

### Big power supply problems continue to plague Hawaii Island

Apr 8, 2024

The company has been facing an unusual situation with mechanical problems at three of the island's five largest power plants while part of the largest plant undergoes an annual overhaul. All four of these affected power plants are owned by the utility or an affiliate of its parent company.

Also contributing to the trouble is lower output from a geothermal plant, which has the third-largest generation capacity on the island and is owned by an independent operator.

"This is an unusual situation, driven mainly by the unavailability of several large generators that have experienced mechanical problems, are at reduced output, or are undergoing maintenance," Hawaiian Electric said in its March 25 announcement asking customers to use less electricity, especially on weekdays from 5 to 9 p.m.

**The company explained that it faces an "extremely tight" supply of power at peak use periods,** especially when production from wind, solar and hydroelectric facilities is lower than normal. Those sources of variable, renewable energy can supply up to 15% of electricity needs on the island.

"Without enough supply to meet electricity demand, the company may initiate rolling outages of up to an hour around the island," the March 25 announcement said.

<https://energycentral.com/news/big-power-supply-problems-continue-plague-hawaii-island>

#### **Hawaii island customers urged to reduce electricity use through April**

BY SARAH YAMANAKA HILO PUBLISHED 9:00 AM ET MAR. 26, 2024

What You Need To Know

-Hawaii Island customers may see alerts asking them to conserve energy, especially on days when there isn't much wind that generates up to 15% of electricity

-When alerts are issued, Hawaiian Electric is asking customers to take immediate action to minimize electricity use

-Even when no alerts are issued, customers — including hotels and large retailers — are urged to reduce electricity use as much as possible, especially between 5 and 9 p.m. on weekdays

**-If there is not enough electricity to meet demand,** Hawaiian Electric may initiate rolling outages of up to an hour around the island

<https://spectrumlocalnews.com/hi/hawaii/news/2024/03/25/hawaii-island-customers-urged-to-reduce-electricity-use-through-april>

#### **FURTHERMORE: TRAFFIC, LACK OF RESOURCES, AND FATALITIES**

#### **A Resort Development WILL Increase Traffic on Already Severely Trafficked Roads. Are there traffic study reports for this EIS?**

A development with 150 rooms comes with over 150+ cars. Employees, guests, and visitors will all have cars, plus the regular locals who go there to paddle and enjoy the bay. All this could range in over 300 cars a day because of this resort development.

The Big Island already has a serious traffic issue due to a lack of infrastructure. This is in part due to poor planning, and in part due to geography challenges.

The articles below by different NEWS companies highlight the point that many traffic issues stem from lack of infrastructure and resources. Adding more cars to the road by building another resort in an area that is already stressed, will only increase the already mounting problems with traffic.

This NEWS article by Hawaii News Now, "Report shows alarming surge in Hawaii Island traffic deaths The Hawaii Police Department's Traffic Services Section released a new report showing a dramatic increase in both major crashes and fatal accidents from last year.

The startling statistics show a dramatic increase in the number of year-over-year traffic fatalities on the island of Hawaii, revealing major crashes are up more than 12% and traffic fatalities are up more than 100%." Watch the video on their link below as it is a professional report on Big Island traffic problems. <https://www.hawaiinewsnow.com/2024/05/18/new-report-shows-hawaii-island-traffic-fatalities-are-up-over-100-last-year/>

With more tourists there will be more accidents, more traffic, and more traffic deaths. Please read this article by KHON 2 NEWS, "**Hawaii Island has most traffic fatalities in state.**" This time last year Hawaii Island was at five traffic deaths, as of April 1, 2024, they're at 14.

Seven of which happened in the last two weeks.

Chief Moszkowicz said the police force is small compared to the size of the island and response times can take 15 to 20 minutes.

**"We don't have the resources like in the small space of Oahu where you can saturate an area to control speeding, that just doesn't exist here,"** he added." <https://www.khon2.com/local-news/7-traffic-fatalities-for-hawaii-island-in-march/>

**The traffic on Big Island has increased drastically and safety issues and infrastructure needs to be addressed before adding more resort developments.**

Please read this article because what it says about Oahu is a mirror for Big Island. The traffic problems they discuss are the same issues here on Big Island; and it also gives one Big Island example, "On the Big Island, the mayor had to issue an emergency order shutting down Waipio Valley Road due to overuse and poor prior maintenance." This is happening all over Big Island. <https://www.civilbeat.org/2024/02/angry-over-island-traffic-jams-lets-talk-about-solutions/>

The news video below shows aerial footage in Hilo. The footage shown is the same thing that is happening on Alii Drive and Queen K Highway, and for all the same reasons: **All of these roads only have two lanes!**

There are two developments already on Alii Drive being built as of today; and more are scheduled for this road in the near future. Alii Drive and Queen K Highway are the roads Kamehameha Schools Bungalow Resort will be using if approved, and they are already seriously congested.

These roads have the exact same traffic congestion as Hilo, with the exact same problems. Traffic is extremely slow because of so many people who now live here and all the visitors that come yearly.

In addition, the concern on Kona side is tsunami evacuations rather than lava evacuations. In this kind of traffic, not everyone will be able to get to safer ground, especially if you allow another resort to be developed in this area when traffic is already at a crawl every weekday and often on weekends as well.

Here is the news article by KITV NEWS that highlights the traffic issues discussed above: "Hawaii Island traffic jams could have safety impact. In the event of an evacuation, Mayor Mitch Roth acknowledges that will make the Traffic Jam up even worse. But says, he is working with The State on a solution." [https://www.kitv.com/news/local/hawaii-island-traffic-jams-could-have-safety-impact/article\\_b06a5374-5a6a-11ed-8d23-8313ef8c4c19.html](https://www.kitv.com/news/local/hawaii-island-traffic-jams-could-have-safety-impact/article_b06a5374-5a6a-11ed-8d23-8313ef8c4c19.html)

There was a crash recently on Alii Drive (see video below). When there is an accident on Alii Drive, it turns the already small two-lane road into only one lane that requires a flagger to help direct traffic. Kamehameha Schools wants to add a resort on this tiny road that will increase the traffic by hundreds of cars.

Here is the Island News video on the crash on Alii Dr. <https://www.youtube.com/watch?v=-FQsSnPDjI8>

**Please see from these articles that traffic on Big Island is deadly already and adding another resort will be devastating to the island.**

**Read this Path article, HAWAII COUNTY'S VISION ZERO INITIATIVE:**

A motorcyclist is in critical condition after a collision with a car. A driver accidentally hits and kills a pedestrian. It seems that not a day goes by without the news reporting on a traffic crash on Hawai'i Island...

Here are some other statistics that are even more staggering:

-28% of roadside crashes were the result of someone leaving the roadway and going into barriers or trees

-13% of pedestrians hit at 20 mph actually suffer fatality

-73% of pedestrians hit at 40 mph suffer fatality

-25% of fatal crashes were the result of distracted driving... So PLEASE put those cell phones away and pay attention to the road!

-56% of fatal crashes were the result of alcohol or drugs

-41% of fatal crashes occurred in light trucks and vans

-49% of crashes occur during the day, outside of peak traffic hours

-Of all the crash fatalities, most were males between 20 to 24-years old.

**"That's just Big Island traffic,"** is a common sentiment. But what if we didn't have to accept this endangerment of vehicle drivers, motorcyclists, and pedestrians as a way of life?"

This was taken from Path <https://pathhawaii.org/hawaii-countys-vision-zero-initiative/>

We ask that you start figuring out how this can never happen again? These are the kind of issues that need to be resolved before you approve more development.

**12) "HELCO restores power after initiating emergency outages on Big Island by: Elizabeth Ufi Posted: Jan 30, 2024 / 09:43 AM HST Updated: Jan 30, 2024 / 04:15 PM HST**

An unexpected loss of several large Hawaii Electric generators left some residents on Big Island without power for parts of the morning on Tuesday, Jan. 30." <https://www.khon2.com/big-island-news/heco-initiates-30-min-rolling-outages-after-loss-of-generators/>

**13) Hawaii State News Update: Hawaiian Electric initiates rolling outages throughout Big Island February 13, 2024 · 5:23 PM HST**  
\* Updated February 14, 2024 · 4:21 PM

The emergency outages are being initiated in various areas around the entire island to prevent loss of power to an even greater number of customers. The timing and extent of the outages will depend on the amount of demand on the system and the availability of generators." <https://bigislandnow.com/2024/02/13/hawaii-island-customers-asked-to-reduce-electricity-use/>

**14) HELCO issues rolling power outages around Big Island** by: Emily Cervantes Posted: Feb 13, 2024 / 05:11 PM HST Updated: Feb 13, 2024 / 09:12 PM HST Hawaiian Electric initiated rolling outages for Big Island after several large generators became unavailable and reduced output Tuesday night." <https://www.khon2.com/local-news/heco-releases-conservation-alert-for-big-island/>

**15) "Here's how power outages can have repercussions for Hawaii's water supply Hawaii" Public Radio | By Savannah Harriman-Pote Published February 13, 2024 at 10:59 AM HST**

Water departments on Oahu and Hawaii Island have advised customers to conserve water ahead of possible storm-related power outages this month.

But what does the power grid have to do with the water supply?

It is impossible to separate Hawaii's power system from its water system, said Kawika Uyehara, deputy director of Hawaii County's Department of Water Supply." <https://www.hawaiipublicradio.org/local-news/2024-02-13/residents-on-hawaii-island-and-oahu-are-asked-to-conserve-water-amid-power-outages>

**16) US Hawaii is "on the verge of a greater catastrophe," locals say, as water crisis continues**

By Li Cohen

Updated on: April 11, 2024 / 8:23 AM EDT / CBS News

In Hawaii, one of the most important sayings is *ola i ka wai*, "water is life" — a phrase that not only sums up what it means to exist on an island, but what it means to live, period. But now, one of the largest of the island chain's land masses is facing a triple threat to its sole freshwater source, and it isn't addressed soon, one community member says, "We're in deep trouble."

<https://www.cbsnews.com/news/hawaii-water-crisis-climate-change/>

17) News Hawaii'i County issues mandatory 25% water restriction for North Kona  
August 7, 2023 · 5:21 PM HS

A mandatory 25% water restriction has been issued for various communities in North Kona due to the failure of the Honokōhau Deepwell over the weekend.

<https://bigislandnow.com/2023/08/07/hawaii-county-issues-mandatory-25-water-restriction-for-north-kona/>

**18) Hawaii'i Water Supply Closely Monitored As Severe Drought Continues**

by Big Island Video News  
on Nov 6, 2023 at 3:28 pm

(BIVN) – With an ongoing drought on the island of Hawaii, the Hawaii'i County Department of Water Supply says it is closely monitoring its 23 public water systems, with a "special focus" placed on the South Kohala Water System.

<https://www.bigislandvideonews.com/2023/11/06/water-supply-closely-monitored-as-hawaii-ca-bbi-under-severe-drought/>

This is a map of Power Outages on the Big Island. This map wouldn't have been created if Power Outages were not a problem. <https://www.hawaiianelectric.com/safety-and-outages/power-outages/hawaii-island-outage-map>

Please, give Tax Breaks to all homes that provide solar and/or wind turbine to there homes to help with power issues on the island.

**19) "Hawaiian Electric is reporting that several large generators on the Big Island are experiencing a range of issues and may lead to the need for rolling outages if supply does not meet demand."**

[https://www.reddit.com/r/Bigisland/comments/1bnuar3/hawaiian\\_electric\\_is\\_reporting\\_that\\_several\\_large/?rdt=52660](https://www.reddit.com/r/Bigisland/comments/1bnuar3/hawaiian_electric_is_reporting_that_several_large/?rdt=52660)

**20) "Hawaiian Electric asking Big Island customers to conserve power due to down generators"**

March 25, 2024 · 11:49 AM HST

According to the utility company, this is an usual situation as the large generators are experiencing mechanical problems resulting in a reduced output. The largest generator, an independent power producer that sells electricity to Hawaiian Electric, is offline with significant mechanical issues.

The plant generates 60 megawatts or nearly one-third of the typical peak demand of 180 megawatts on the island."

<https://bigislandnow.com/2024/03/25/hawaiian-electric-asking-big-island-customers-to-conserve-power-due-to-down-generators/>

All the articles above show that a resort development will further deplete and stress resources and infrastructure on an island already struggling. There are years of new development that have already been approved but not completed. It is not responsible or prudent to continue to develop this resort under these current conditions.

## **HISTORICAL AND CULTURAL SIGNIFICANCE:**

### **The Law of the Splintered Paddle**

Hawaiian history tells us that young Kamehameha was once an aggressive chief. The story goes that the young chief even chased after two fishermen in a Puna fishing village. While pursuing them, his foot got stuck in a crevice, and one of the fishermen struck Kamehameha over the head with his paddle in defense, which splintered into pieces.

After the incident, Kamehameha recognized that it was wrong to misuse his power and learned compassion. Years later, Kamehameha declared a new law "Ke Kānawai Māmalahoe" or "the Law of the Splintered Paddle." Meant to protect the innocent and vulnerable from unprovoked attacks, this law proclaimed that the defenseless, especially Kupuna and Keiki, be able to sleep safely on the side of the road, unharmed.

The law provided for the safety of non-warriors during wartime and became the first written law of the Kingdom of Hawaii. After being added back in 1978, **the law is part of Hawaii's State Constitution today.**

It is symbolic of servant leadership, reinforcing the importance of:

-Caring for and serving one's people

-Knowing and doing what is pono (right)

-Standing for the principle that leadership privilege is earned

-Taking kuleana (responsibility) for those we serve

-Doing so with compassion, love, and respect

**"We take that to mean that anyone who uses our roadways should be able to do so without fear of harm," explains Tina."**

**The Law of the Splintered Paddle is also on Kamehameha Schools website.** The historical value of this law should be enough to help make

Big Island roads become safer, and not adding to the traffic and issues of our already dangerous roads. <https://www.ksbe.edu/article/the-lessons-of-the-law-of-the-splintered-paddle-ring-true-200-years-after-k>

**Does this EIS have any reports about how this development will safely add to the land fill on Big Island, and are there reports proving the island has enough water for another big resort, what about reports on how much power this resort will use because the Big Island already has serious resource and infrastructure issues.**

## IN CONCLUSION

The articles cited in this letter, many by some of the most esteemed scientists in the world, show with clarity that allowing this development is going to cause devastating, lasting, effects on the Eco-system in Keaouhou Bay and "The **Endangered Species Act of 1973 (ESA)** or "The Act"; 16 U.S.C. § 1531 et seq.) **is the primary law in the United States for protecting and conserving imperiled species.** Designed to protect critically imperiled species from extinction as a "consequence of economic growth and development untempered by adequate concern and conservation", the ESA was signed into law by President Richard Nixon on December 28, 1973. The **Supreme Court of the United States** described it as "the most comprehensive legislation for the preservation of endangered species enacted by any nation".<sup>[1]</sup>" [https://en.wikipedia.org/wiki/Endangered\\_Species\\_Act\\_of\\_1973](https://en.wikipedia.org/wiki/Endangered_Species_Act_of_1973)

This location, currently acting as a natural filter, is especially vulnerable due to having a golf course on one side and a natural treasure like Keaouhou Bay on the other. This land **MUST** be conserved in order to keep Keaouhou Bay safe for all the marine life to be able to live there for years to come.

In addition to the natural disaster this will cause, Hawai'i Island is already having serious infrastructure and resource issues that have yet to be solved. These issues **MUST** be solved before considering another resort development on Big Island.

We need to work in harmony with the land and the people before pushing forward with new developments, especially in sacred and special places like Keaouhou Bay, the birthplace of King Kamehameha III. Keaouhou Bay is a small, fragile Eco-system, that is already pressured by boating, golfing, population issues, and hotels that are all around the entire bay.

The trees that currently stand on the land that is threatened to be developed clearly protects the marine life and environment from further damage. The location is **NOT** suitable for this kind of development for both environmental and infrastructure reasons.

The cost of what stands to be lost is far too high to allow this to happen.

Please save Keaouhou Bay's marine life and help the island's resources by saying **NO** to a Bungalow Resort built by Kamehameha Schools.

Please reject this EIS because Kamehameha Schools has **NOT** **ACKNOWLEDGED** OR **ASKED** thousands of Hawaiians, or Hawaiian Descendants from Keaouhou Bay how they feel about developing this land, Keaouhou Bay.

They have asked **ONLY** a few families on an island that has thousands of Hawaiian people and here is video testimony from Kupuna Kumu Lily Kong who is a Keaouhou Bay descendant and her and her mother **OPPOSE DEVELOPMENT!** <https://vimeo.com/994680462>

Kupuna Kumu Lily Kong who was born in Keaouhou Bay and she states that she is against development. She also states that her mother was against development as well. Please listen to her words in her testimonial video about Keaouhou Bay on this link and know that this proves that descendant directly from Keaouhou Bay **OPPOSE THIS DEVELOPMENT** <https://vimeo.com/994680462> and it is **CULTURAL LAW THEY MUST BE HEARD AND ACKNOWLEDGED!**

These laws were created, "After these legal victories, the Kohaiki 'Ohana worked to create a new law in the state of Hawaii to require Cultural Impact Statements along with Environmental Impact Statements for all future large-scale development. Act 50, the Cultural Impact Statement Law was adopted in 2000." <https://kohanaikiohana.org/legal-victories>

Kupuna Kumu Lily Kong also states that there are burial grounds on the land that Kamehameha Schools wants to clear and it is told that Kamehameha Schools has bulldozed sacred land in the past and Keaouhou Bay's burial grounds MUST BE RESPECTED AND NOT DISTURBED!

Hawaiians locals have said that there were bones in the small cave that is at the base of Keaouhou Bay. These burials need to take priority over a Bungalow Resort Development.

There are over 6,219 signatures as of Aug. 5th (these signatures grow daily) and these signatures are Hawaiians, locals and tourist and some of these Hawaiians have left comments on why they are opposing this development.

**ALL OF THESE PEOPLE HAVE A RIGHT TO BE ACKNOWLEDGED AND THEIR VOICES HAVE VALUE TO BE HEARD, THESE PEOPLE MATTER AND IT IS CULTURAL LAW THEY MUST BE ACKNOWLEDGED!**

Here is the petition link with thousands of Hawaiian signatures and comments opposing Kamehameha Schools Bungalow Resort Development. Please read these signatures and comments! [https://www.change.org/p/save-keaouhou-bay-from-becoming-a-big-crowded-resort?utm\\_source=share\\_petition&utm\\_medium=custom\\_url&recruited\\_by\\_id=92a53560-1e91-11e5-b4ef-b94e90cedbdd](https://www.change.org/p/save-keaouhou-bay-from-becoming-a-big-crowded-resort?utm_source=share_petition&utm_medium=custom_url&recruited_by_id=92a53560-1e91-11e5-b4ef-b94e90cedbdd)

Please reject this EIS because under Princess Bernice Pauahi Bishop's Will it states Kamehameha Schools are her trustees and they have a **"fiduciary duty" to do what is best for THEIR BENEFICIARIES (the Hawaiian people's) and a Bungalow Resort is BEST FOR TOURISTS NOT THE HAWAIIAN PEOPLE BECAUSE THOUSANDS OF HAWAIIAN PEOPLE SINGED THE ABOVE PETITION OPPOSING KAMEAHMEHA SCHOOLS BUNGALOW RESORT.**

Please reject this EIS because the **Big Island DOES NOT HAVE THE RESOURCES TO PROVIDE FOR ANOTHER BIG RESORT ON ISLAND** and there are 445 signatures with many comments that agree with this fact because of the factual reported articles in the **Help Prioritize Big Island Developments to Keep Island's Resources Safe for ALL petition. Please read this petition, all the signatures and comments** <https://www.change.org/p/help-prioritize-big-island-developments-to-keep-island-s-resources-safe-for-all>

Mahalo,

Alicia Morrier

The Green Sea Turtle is protected by more than one law. "All sea turtles in Hawai'i are protected by the Endangered Species Act (ESA) and additionally protected by Hawai'i Revised Statutes Chapter 195D (HRS) and Hawai'i Administrative Rules (HAR) 13-124." This information was taken from this site <https://dlnr.hawaii.gov/dar/species/sea-turtles/>

#### THE ENDANGERED MONK SEAL WILL BE AFFECTED

Keaouhou Bay is known as a RESTING AREA for the ENDANGERED MONK SEAL. If another resort is allowed to be built, in addition to the pollution, it will also bring a lot more people down to Keaouhou Bay. This increases the chances of a resting monk seal being disturbed by humans trying to get close, take "selfie" photos, and being generally uninformed and harmful. Please see article on Selfie Culture and its harmful effects below.

Has the EIS done any research on what an increased population would do in such a small area, and what will happen to the endangered species that live there? With a significantly increased population their habitat of Keaouhou Bay will likely be changed forever.

This information is from a NOAA Scientist; "Study shows selfie culture impacts how people behave when posting images of an endangered species on social media. There's a seal on the beach! Let's go get a 'selfie'!" That must have been what nearly 18 percent of people on Instagram thought before approaching an endangered species.

In a recent study, NOAA scientists used social media to monitor human activities around endangered Hawaiian monk seals. They discovered that human disturbance is more common than they thought." <https://www.fisheries.noaa.gov/feature-story/endangered-hawaiian-monk-seals-cry-foul-over-selfies>

NOAA clearly states a high population in a place where monk seals and sea turtles habitat can be a serious disturbance for these endangered species.

"Hawaiian monk seals are protected federally by the ESA and the Marine Mammal Protection Act (MMPA), as well as locally by Hawai'i Revised Statutes (HRS) Chapter 195D and Hawai'i Administrative Rules (HAR) 13-124." This was taken from <https://dlnr.hawaii.gov/dar/hawaiian-monk-seal/>

Keaouhou Bay is the monk seals and the green sea turtle's habitat. Allowing a bungalow resort to be developed in Keaouhou Bay, the habitat of these endangered species, is to threaten their life and habitat with golf course runoff pollution, as well as development pollution. By threatening their habitat, and hence their lives, this development goes completely against the Endangered Species Act of 1973.

The verbiage in the Endangered Species Act states, "to conserve". In this case, "to conserve" would be to protect the land around Keaouhou Bay from developments that destroy the habitat of these endangered species with pollution and runoff.

Does this EIS have any reports on the endangered species that frequent Keaouhou Bay? This is their habitat and it needs to be "conserved".

Under the Conservation Program there should be research done on endangered species and their associated ecosystems. A large bungalow resort development WILL FOREVER CHANGE THIS ECOSYSTEM.

"§195D-5 Conservation programs. (a) The department shall conduct research on indigenous aquatic life, wildlife, and land plants, and on endangered species and their associated ecosystems, and shall utilize the land acquisition and other authority vested in the department to carry out programs for the conservation, management, and protection of such species and their associated ecosystems." [https://www.capitol.hawaii.gov/hrs/current/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hrs/current/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm)

Also, under this same Conservation program, "(2) Taking such action as may be necessary to ensure that actions authorized, funded, or carried out by them do not jeopardize the continued existence of threatened or endangered species." [https://www.capitol.hawaii.gov/hrs/current/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hrs/current/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm)

Please consider that developing a Kamehameha Schools Bungalow Resort in Keaouhou Bay WILL threaten endangered species due to the unavoidable development and golf course pollution runoff that would be caused by removing the all the trees that currently serving as a natural pollution filter, and replacing the land with housing, cars, humans, and waste. There would also be tremendous runoff damage into Keaouhou Bay and the surrounding area during the building phase of this enormous project.

#### GOLF COURSE POLLUTION KILLS MARINE LIFE AND DRASTICALLY CHANGES ECOSYSTEMS

"The golf industry uses approximately 50 pesticide active ingredients, including chlorpyrifos—an insecticide that is banned for residential use by the EPA due to developmental hazards. Having to trim golf turf to low heights also makes it even more vulnerable to pests, which leads to more pesticide use." <https://rainorshingolf.com/pages/the-environmental-impact-of-golf-courses>

These pesticides will be in the pollution runoff that will enter Keaouhou Bay more severely should the natural habitat of the trees be removed and replaced with pavement. This is unavoidable!

Please read from Wikipedia, "

Most drains have a single large exit at their point of discharge (often covered by a grating) into a canal, river, lake, reservoir, sea or ocean. Other than catch basins, typically there are no treatment facilities in the piping system." [https://en.wikipedia.org/wiki/Storm\\_drain#:~:text=Most%20drains%20have%20a%20single,dishcharge%20into%20individual%20dry%20wells](https://en.wikipedia.org/wiki/Storm_drain#:~:text=Most%20drains%20have%20a%20single,dishcharge%20into%20individual%20dry%20wells)

The pavement from this development will cause pollution to runoff into Keaouhou Bay because this treed land that will become a housing development is situated directly between the golf course and the Bay. These trees, which absorb all the pollution from the golf course is the BEST AND ONLY PROTECTION POLLUTION FILTER Keaouhou Bay has from the golf course pesticides, fertilizer and weed killer. See the below paragraph for further references.

See page 2 at: <https://health.hawaii.gov/epo/files/2013/09/Stormwater-MS4-Presentation-HEF-7.15.14.pdf> where the Hawai'i government states that Natural Ground Cover has 10% runoff, where has development has 55% runoff.

These trees and land are saving monk seals and green sea turtles habitat from the golf course pollution and this land MUST BE PRESERVED and CONSERVED as the natural protector for Keauhou Bay and for these endangered species habitat.

Under Section 2 (b) of the Endangered Species Act - Keauhou Bay MUST BECOME A CONSERVATION AREA for these endangered species. It is currently their habitat, and to allow a large resort development to be built above this bay clearly threatens the lives of these endangered species by allowing golf course toxic pollution and development pollution to run into these species natural habitat of Keauhou Bay.

#### ALGAE BLOOMS KILL CORAL AND MARINE LIFE

The trees that are slated to be cleared for the development further protect Keauhou Bay from algae blooms that have been proven to be caused by pollution that is runoff from fertilizer and weed killer.

When there is heavy rain the land above the bay has a greater runoff than normal. Without the trees, the runoff from the golf course pollution will pour into the Bay likely causing frequent algae blooms.

Algae blooms have been shown to kill coral and marine life as stated in the many articles that will follow.

One of these articles is from the Global Coral Reef Alliance. They have researched the effects on reefs before and after a golf course developments. Though this development is not a golf course development, it is located just below a golf course and exposes the bay to the pollution from the golf course by removing the proven natural filter of the trees and natural ecosystem.

Has this EIS done any kind of research about the algae blooms that happen after a serious storm because of the golf course runoff pollution?

This information was taken from Global Coral Reef Alliance and it is an actual study on the how coral and marine life are affected before and after development. It's titled, "Golf courses kill coral reefs and fisheries: harmful algae blooms and disease cause by nutrient runoff from golf course development on Guana Cay, Abaco, Bahamas

Introduction: Bahamas coral reef deterioration

This study is thought the first ever to evaluate the health of coral reef ecosystems and fisheries before and after a golf course development. The vast majority of corals have died from a combination of factors including global warming, new diseases, land-based sources of pollution.

" <https://www.globalcoral.org/golf-courses-kill-coral-reefs-and-fisheries-harmful-algae-blooms-and-disease-caused-by-nutrient-runoff-from-golf-course-development-on-guana-cay-abaco-bahamas/>

If you allow a Bungalow Development in Keauhou Bay you WILL be agreeing to pollute this bay for years to come and COMPLETELY CHANGING and possibly DESTROYING KEAHOUBAY'S ECOSYSTEM.

Another study by the Coral Reef Alliance titled, "Golf course fertilizer runoff causes nutrient enrichment leading to harmful algae blooms on a Bahamian coral reef.

"...After construction new algae blooms appeared nearest the golf course green, smothering corals in adjacent reefs, along with sharply increased coral diseases..." <https://www.globalcoral.org/golf-course-fertilizer-runoff-causes-nutrient-enrichment-leading-to-harmful-algae-blooms-on-a-bahamian-coral-reef-pavement?>

Does this EIS have any studies or reports on the extra runoff pollution due to clearing land and adding pavement?

This needs to be fully assessed because you will be changing an entire ecosystem to build a bungalow resort. It rains in Keauhou Bay many nights out of the year and this kind of pollution will kill the beautiful and necessary coral in the Bay.

FURTHERMORE: "If there are toxic algal blooms, like red tide, or man-made contaminants, like pesticides or detergents in the water, those toxins are contained within the bubbles of sea foam. When those bubbles pop, the toxins can become airborne and compromise the air that is breathed in that location." <https://oceanconservancy.org/blog/2023/03/31/what-sea-foam/>

#### ENGINE POLLUTION CAUSES ISSUES IN THE OCEAN

Does this EIS have any detailed traffic studies for the increase in cars that will be added to this already severely traffic area they want to build their 150 room bungalow resort in? Have they done any studies on the pollution these cars WILL have in Keauhou Bay?

Because this Bungalow Resort could have over 150 extra cars and over 300 or more extra people in and out of Keauhou Bay, what traffic and increased population studies have they done? There will be employees with cars, guests with cars, visitors with cars. At times this would range to over 200 cars (likely more), coming in and out of, and parking above Keauhou Bay thereby causing serious car population issues because of all these added cars right next to the bay.

The article below is from NOAA regarding motor vehicle engines and pollution to the sea.

What is the biggest source of pollution in the ocean?

Most ocean pollution begins on land.

"Millions of motor vehicle engines drop small amounts of oil each day onto roads and parking lots. Much of this, too, makes its way to the sea.

Some water pollution actually starts as air pollution, which settles into waterways and oceans. Dirt can be a pollutant. Top soil or silt from fields or construction sites can run off into waterways, harming fish and wildlife <https://oceanservice.noaa.gov/facts/pollution.html#:~:text=Millions%20of%20motor%20vehicle%20engines,Dirt%20can%20be%20a%20pollutant.>

Land-Based Runoff Remains Top Source of Oil in the Ocean, Says New Report Oil in the Sea: Inputs, Fates, and Effects

News Release September 28, 2022

WASHINGTON — Oil in runoff, primarily from cities and vehicles, is the top source of oil entering the ocean, says a new report from the National Academies of Sciences, Engineering, and Medicine. In North American waters, estimated ocean oil pollution from land-based runoff is up to 20 times higher than it was 20 years ago, and oil spills, natural oil seeps, and discharge from oil and gas operations remain major sources of pollution. The report recommends actions that government and others should take to minimize oil pollution, and calls for sustained research funding to better understand how oil reaches and affects ocean environments. <https://www.nationalacademies.org/news/2002/05/oil-in-the-sea-inputs-fates-and-effects#:~:text=WASHINGTON%20%2D%20Nearly%2085%20percent,pipeline%20spills%2C%20says%20a%20new>

#### The Impact Of Stormwater – Car Emissions

"Car emissions are not limited to exhaust fumes that contribute to air pollution. They can also leak automotive fluid and release heavy metals that can contribute to stormwater pollution, contaminating local waterways." <https://www.stormwatershed.org.au/blog/the-impact-of-stormwater-car-emissions/>

#### NOISE POLLUTION'S HARMFUL EFFECT ON MARINE LIFE

Does this EIS have any reports on the noise pollution that will happen and what it could do to marine life in Keaou Bay during development?

Because if you allow this Bungalow Resort to be developed you will increase constant noise in this bay for years to come and, "Noise Pollution Research shows that underwater noise from construction, shipping and naval vessels significantly impacts the natural behavior of cetaceans and many other marine species. This can be seen when mass beaching events occur or breeding success is diminished."

The above information was taken from the Ocean Conservation Trust <https://oceanconservationtrust.org/ocean-advocacy/think-ocean/ways-to-think-ocean/>

#### How Does Noise Pollution Harm Marine Species?

"However, over the past few decades, noise pollution in the marine environment has increased dramatically and is threatening the natural soundscape of the marine environment. Ships, seismic surveys, explosions, construction, and sonar devices have made the once peaceful environment into a loud, chaotic home which is extremely damaging for marine wildlife. This type of pollution is often overlooked in comparison to others but its impacts are now being documented across all types of marine ecosystems." <https://earth.org/noise-pollution-in-the-ocean/>

If you allow this resort the amount of people in this bay will fully increase and, "Hawaii's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally, management of the resource should balance the needs of different user groups, but the welfare of the

marine environment on which its inhabitants depend must be the most important consideration." This was taken from Hawaii's own Division of Aquatic Resources <https://dhr.hawaii.gov/dar/marine-managed-areas/hawaii-marine-life-conservation-districts/#:~:text=Snorkeling%20and%20SCUBA%20diving%20are,effect%20on%20nearshore%20fish%20populations.>

#### What is ocean noise?

"Ocean noise refers to sounds made by human activities that can interfere with or obscure the ability of marine animals to hear natural sounds in the ocean.

Many marine organisms rely on their ability to hear for their survival. Sound is a highly efficient means of communication underwater and is the primary way that many marine species gather and understand information about their environment. Many aquatic animals use sound to find prey, locate mates and offspring, avoid predators, guide their navigation and locate habitat, as well as to listen and communicate with each other.

Over the last century, human activities such as shipping, recreational boating, and energy exploration have increased along our coasts, offshore, and deep ocean environments. Noise from these activities can travel long distances underwater, leading to increases and changes in ocean noise levels in many coastal and offshore habitats.

These rising noise levels can negatively impact ocean animals and ecosystems. Higher noise levels can reduce the ability of animals to communicate with potential mates, other group members, their offspring, or feeding partners. Noise can also reduce an ocean animal's ability to hear environmental cues that are vital for survival, including those key to avoiding predators, finding food, and navigating to preferred habitats." <https://oceanservice.noaa.gov/facts/ocean-noise.html>

#### LEARN FROM OTHERS: RUN-OFF FROM DEVELOPMENT KILLS

The Chesapeake Bay has a foundation that is trying to save their bay due to runoff pollution that was caused by developments. Chesapeake Bay is a lot bigger than Keaou Bay. If it's being drastically hurt by runoff water from developments, Keaou Bay waters won't stand a chance if development above the bay is allowed. Keaou Bay is a much smaller ecosystem.

This Article is by the Chesapeake Bay Foundation, Saving a National Treasure states, "...runoff is a significant source of harmful nitrogen pollution that continues to grow..."

As rainwater and snowmelt run off our streets, parking lots, lawns, and other surfaces, they pick up pet waste, pesticides, fertilizer, oil, and other contaminants. If the draining water doesn't evaporate or soak into the ground where it can be filtered, it flushes straight into local creeks, rivers, and the Chesapeake Bay, adversely affecting water quality and aquatic life.

Only 10 to 20 percent of rain that falls in forests, fields, and other natural areas runs off, with the rest absorbed by soil and plants, where it is filtered before reaching aquifers or local waterways. (Right now Keaou Bay has a lot of trees and is very natural, this is what helps stop runoff.) By contrast, close to

100 percent of the rain that falls on concrete and other hard surfaces produces runoff. One inch of rain falling on an acre of hardened surface produces 27,000 gallons of runoff.

Stormwater runoff pollution threatens Chesapeake Bay and its rivers and streams...Polluted runoff is one of the most harmful sources of pollution to the Bay and its waters. And much of it starts right in the urban and suburban neighborhoods where we live." <https://www.cbf.org/issues/polluted-runoff/index.html#:~:text=Besides%20carrying%20pollutants%20that%20harm,them%20are%20placed%20in%20jeopardy.>

If that is what runoff is doing to the Chesapeake Bay, the effects of runoff will be even more devastating to Keauhou Bay due to its size and fragility.

#### MANTA RAY HABITAT, CORAL REEF BLEACHING, & MARINE LIFE ~ THE DEVASTATING EFFECTS OF DEVELOPMENT ON THE OCEAN

Are there any reports in this EIS about what the impact to the coral, marine life, plankton especially zooplankton will be because of this development?

The studies below show that developments kill coral, and marine life. Zooplankton are part of this marine life and they are also killed and negatively affected. Zooplankton are food for manta rays. Manta rays are in Keauhou Bay every night to eat zooplankton, and are often seen here during the day as well.

Allowing this bay developed will also be a death sentence for many types of marine life including planktons. There is NO WAY to stop this from happening due to the fact that polluted runoff rain water from developments can't be fully stopped. This has been shown to happen in ALL coastal developments.

Please read the Scientific articles below.

It's Been Proven Developments Severely Pollute Nearby Waters

Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Coral Bleaching is occurring more frequently in Hawai'i. Across the Hawaiian Archipelago, coral bleaching has increased in frequency and severity since 1996. The last major bleaching event in 2014-2015 had catastrophic impacts statewide..."

This was the third major bleaching episode in Hawai'i over the last 6 years. The frequency of these events is unprecedented in the archipelago. NOAA scientists and partners have determined that the key drivers of the bleaching were environmental factors (such as heat stress, depth, and surface light) and human impacts (sewage effluent and urban run-off). " <https://www.fisheries.noaa.gov/feature-story/cautionary-tale-2019-coral-bleaching-event-hawaii#:~:text=Coral%20bleaching%20is%20occurring%20more,had%20catastrophic%20impacts%20statewide.>

This article is by the Coral Reef Alliance here in Hawai'i. "An ecosystem under threat Hawai'i's reefs face major global and local threats including climate change, overfishing, and sediment and nutrient pollution caused by sewage and stormwater runoff..."

When it rains, flash floods carry stormwater and large amounts of sediment downstream to the ocean. Just offshore, once-thriving coral reefs are now struggling to survive." <https://coral.org/en/where-we-work/hawaiian-islands/#:~:text=Hawa%CA%BBj%20reefs%20face%20major-%20global,into%20Hawai%CA%BBj%20waterways%20every%20day.>

This article states that runoff is a leading source in coral degradation. Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Land-based sources of pollution are a leading cause of coral reef degradation in the Main Hawaiian Islands. Water quality is impacted by urban runoff, failing sewage systems, unpaved roads, farms, land clearing, and development." [https://www.coris.noaa.gov/monitoring/status\\_report/docs/Hawaii\\_status\\_report\\_forweb.pdf](https://www.coris.noaa.gov/monitoring/status_report/docs/Hawaii_status_report_forweb.pdf)

This article is a Research Article by PLOS ONE and their motto is "We're driving change in research integrity and publication ethics." This is some of their article information, "Coral taxonomy and local stressors drive bleaching prevalence across the Hawaiian Archipelago in 2019..."

We found little evidence for acclimation by reefs to thermal stress in the main Hawaiian Islands. Moreover, our findings illustrate how detrimental effects of local anthropogenic stressors, such as tourism and urban run-off, may be exacerbated under high thermal stress. In light of the forecasted increase in severity and frequency of bleaching events, future mitigation of both local and global stressors is a high priority for the future of corals in Hawai'i." <https://journals.plos.org/plosone/article?id=10.1371/journal.pone.0269068>

The coral all over Hawai'i has had extremely high mortality rates, due to developments near ocean areas throughout the years, and development in Keauhou Bay will be devastating to the coral, reef fish, and all aquatic life there. Manta Rays need to eat 5 times their body weight in zooplankton daily. Their population will be severely affected should the plankton die. Please see the cited information below.

"SO, HOW MUCH PLANKTON DOES YOUR AVERAGE MANTA RAY EAT? 19,200,000. Nineteen million two hundred thousand, give or take a few thousand.

That is the number of plankton pieces a ten-foot manta ray must consume weekly to stay alive."

The above information was taken from Manta Ray Advocates <https://mantarayadvocates.com/how-much-plankton-do-mantas-eat/>

Coral reefs are known to be highly negatively impacted by developments because, "Impacts from land-based sources of pollution including coastal development...can impede coral growth and reproduction, disrupt overall ecological function, and cause disease and mortality in sensitive species." <https://oceanservice.noaa.gov/facts/coral-pollution.html#:~:text=Impacts%20from%20land%2Dbased%20sources,and%20mortality%20in%20sensitive%20species.>

Article by Environmental Evidence, "Coastal development and runoff lead to sedimentation, which directly impacts coral recruitment, growth, mortality, and ecosystem services that coral reefs provide." <https://environmentalevidencejournal.biomedcentral.com/articles/10.1186/s13750-020-00200-0#:~:text=Coastal%20development%20and%20runoff%20lead,services%20that%20coral%20reefs%20provide.>

Developments can't fully stop polluting because runoff is from rain during development and after. Article by NOAA, "One of the most significant threats to reefs is pollution. Land-based runoff and pollution discharges can result from dredging, coastal development... This runoff may contain sediments, nutrients, chemicals, insecticides, oil and debris."

When some pollutants enter the water, nutrient levels can increase, promoting the rapid growth of algae and other organisms that can smother coral." [https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,organisms%20that%20can%20smother%20corals.](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,organisms%20that%20can%20smother%20corals.)

Another article by NOAA, "Coral reefs also are affected by leaking fuels, anti-fouling paints and coatings, and other chemicals that enter the water... (All of those are show up in every development project.)"

Among the most damaging pollutants on coral reefs is sediment, which can remain suspended in the water or be deposited on the coral surface (i.e., turbidity and sedimentation, respectively) and can contain toxicants, pathogens, and nutrients, all of which impact coral growth, recruitment, and survival" [https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days.](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days.)

It's Been Proven Resort Developments KILL Marine Life

This article by MarinBIO states, "Zooplankton are also sensitive to their environment and like phytoplankton—a change in zooplankton concentration can indicate a subtle environmental change. Zooplankton are highly responsive to nutrient levels, temperatures, pollution, food that is not nutritious, levels of light, and increases in predation. As well as providing an essential link in the marine food chain (which is an understatement), the diversity of species, amount of biomass and abundance of zooplankton communities can be used to determine the health of an ecosystem..."

Here is another article that shocking shows that in a very short time, big changes can occur due to runoff. A development will hurt and kill plankton, by Frontiers in Marine Science, "Effects of an experimental terrestrial runoff on the components of the plankton food web in a Mediterranean coastal lagoon The main result observed in the present study was that the effects of the simulated terrestrial runoff spread along the plankton food web, significantly affecting all trophic levels of the natural plankton community studied. This occurred in a relatively short time considering that the experiment lasted less than three weeks. The lower light availability in the terrestrial runoff treatment compared to the control resulted in a net decrease of approximately one-third of Chl-*a* concentration and phytoplankton abundance over the entire experiment." <https://www.frontiersin.org/journals/marine-science/articles/10.3389/fmars.2023.1200757/full>

The ecosystem is fragile and interconnected as is stated in this article: "Zooplankton are also affected by levels of pH, heavy metals, calcium, and aluminum. Nutrients like nitrogen and phosphorus will affect the prey of zooplankton (like algae, protozoa and bacteria), indirectly affecting zooplankton survival. Scientists are still putting together pieces of the zooplankton puzzle. Some questions include how nutrient levels found in algae can influence the growth and behavior of zooplankton. Another question important to marine and human life is how toxins and pollution will affect this crucial link in the food chain" This information is in article by

MarineBIO. <https://www.marinebio.org/creatures/zooplankton/#:~:text=Zooplankton%20are%20als>  
<https://www.marinebio.org/creatures/zooplankton/#:~:text=Zooplankton%20are%20als>  
<https://www.marinebio.org/creatures/zooplankton/#:~:text=Zooplankton%20are%20als>

A research article by Environmental Research Laboratory, United States Environmental Protection Agency that discusses, "Toxic Effects of Pollutants on Plankton: There are four main sources of aquatic pollution: industrial wastes, municipal wastes, agricultural run-off, and accidental spillage. Non-point sources, such as automobile exhausts, add appreciable amounts of pollutants to air that may enter aquatic systems in rainfall or dry fall-out. These sources add pesticides, heavy metals, oil, petroleum products, and a large number of organic and inorganic compounds to water. Lakes and oceans serve as sinks for many pollutants. Plankton comprise a large portion of the living matter in natural waters and function in biogeochemical cycles. They are affected by pollutants, transfer them to sediments and other organisms, and function in their biological transformation."

[https://scope.dge.carnegiescience.edu/SCOPE\\_12/SCOPE\\_12\\_3\\_6\\_chapter12\\_257-274.pdf](https://scope.dge.carnegiescience.edu/SCOPE_12/SCOPE_12_3_6_chapter12_257-274.pdf)

All the above articles show that development of Keauhou Bay WILL hurt plankton life and marine life in the bay because pollutant runoff is inevitable and unavoidable during construction and afterwards. The manta ray food source will likely disappear. This will be devastating for the manta ray populations. Furthermore, if manta rays die or leave the area, the loss will in turn affect many lively hoods from locals on the island who depend on the manta ray tour for their income.

#### HUMAN POPULATION INCREASES LINKED DIRECTLY TO CORAL DEATH

Does this EIS have any reports on their resort adding to the population increase that happens during IRONMAN?

"On average, each Ironman racer brings three people with them to the Big Island. Counting members of the media, VIPs who come from around the globe to watch and the triathlons partners, there likely be more than 6,300 people descending on Kona..." <https://bigislandnow.com/2023/10/07/ironman-2023-in-kona-shines-spotlight-on-some-of-best-women-triathletes-in-the-world/>

And "Resident dissatisfaction with tourists is multifaceted: The overwhelming majority (92%) of locals felt visitors were not educated enough on protecting Hawaii's natural environment and local resources; other factors include the impact of the vacation rental industry and ignorance of the residents' quality of life." <https://www.triathlete.com/culture/news/kona-locals-ask-ironman-visitors-for-respect/>

Where are the EIS reports on human density? Below are reports that show human population destroys coral reefs.

"The number of people living on the coasts has rapidly increased in recent decades, causing significant development of coastal areas. Coastal development can negatively impact the ocean through the destruction of coastal marine habitat and through run-off of sediments and pollution."

-Coastal development involves activities such as the creation of harbors, stabilization of shorelines, and aquaculture that involve the destruction of sensitive marine habitats such as mangroves, coral reefs, and seagrass beds.

-Coastal development may cause the run-off of sediments into coastal habitats, which can smother corals or seaweeds and reduce the amount of light available for photosynthesis. Losses of primary producers and important habitat-forming species such as corals can negatively impact entire food webs."

The above information was taken from the Education Development Center, INC, from their Coastal Development page called Ocean Tracks <https://oceantracks.org/library/human-impacts/coastal-development#:~:text=Coastal%20development%20may%20cause%20the,negatively%20impact%20entire%20food%20webs>.

There is nothing Kamehameha Schools can do to their development that can stop the guests of this possible Bungalow Resort from going to Keauhou Bay. Human traffic WILL seriously increase if this resort is allowed to be built and the marine life will be negatively affected by it. Marine life will suffer from this development as stated in this letter in many different scientific reported articles.

If you allow this resort the amount of people in this bay will fully increase and, "Hawaii's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally, management of the resource should balance the needs of different user groups, but the welfare of the marine environment on which its inhabitants depend must be the most important consideration." This was taken from Hawaii's own Division of Aquatic Resources <https://dlnr.hawaii.gov/dar/marine-managed-areas/hawaii-marine-life-conservation-districts/#:~:text=Snorkeling%20and%20SCUBA%20diving%20are,effect%20on%20nearshore%20fish%20populations.>

It's Been Proven an Increase in Human Population Destroys Coral Reefs

If a Bungalow Resort is allowed to be built in Keauhou Bay, it will bring a serious increase in human traffic. "Easily visible trends in human population dynamics combined with well-established and tested ecological theory give a clear, intuitive, yet quantifiable guide to the severity of survival challenges faced by coral reefs. Management challenges and required actions can be clearly shown and, contrary to frequent claims, no scientific ambiguity exists with regard to the serious threat posed to coral reefs by humankind's continued numerical increase." This is in the article by National Library of Medicine National center for Biotechnology Information PubMed. <https://pubmed.ncbi.nlm.nih.gov/33293007/#:~:text=Denser%20coastal%20populations%20and%20greater,to%20more%20runoff%20and%20siltation.>

This article is by ABC NEWS, "This is how tourists are destroying coral reefs in Hawaii. The less people at a certain site, the more coral there are, the research found. The millions of tourists who flock to the shores of Hawaii every year are wreaking havoc on its natural environment -- especially the coral reefs, which are at risk all over the world, a new study said. The most popular coral reefs on the Hawaiian islands are likely being degraded by the very visitors they attract, according to a study published Monday in Nature Sustainability." <https://abcnews.go.com/US/hawaiian-coral-reefs-degrading-popular-tourist-sites-scientists/story?id=96308858#:~:text=The%20less%20people%20at%20a,there%20are%2C%20the%20research%20found.&text=The%20millions%20of%20tourists%20who,world%2C%20a%20new%20study%20said.>

By allowing this development you are stressing an already fragile Eco-system. The small bay is currently used by many locals for boating, fishing, canoeing, paddle boarding, snorkeling, manta night dives, surfing, and swimming. We know, and research shows, that more people cause more damage. The area simply cannot afford or support this development.

"Denser coastal populations and greater wealth will lead to reef degradation by coastal construction. Denser populations inland will lead to more runoff and siltation. Effects of human

perturbations can be explored with meta-population theory since they translate to increases in patch-mortality and decreases in patch-colonization (= regeneration). All such changes will result in a habitat with overall fewer settled patches, so fewer live reefs." This information was taken from Science Direct <https://www.sciencedirect.com/science/article/abs/pii/S0065288120300328#:~:text=Aquaculture%20will%20alleviate%20some%20fishing,to%20more%20runoff%20and%20siltation.>

Another article by Nature Sustainability, "Coral reefs and coastal tourism in Hawaii Coral reefs are popular for their vibrant biodiversity. By combining web-scraped Instagram data from tourists and high-resolution live coral cover maps in Hawaii, we find that, regionally, coral reefs both attract and suffer from coastal tourism. Higher live coral cover attracts reef visitors, but that visitation contributes to subsequent reef degradation. Such feedback loops threaten the highest quality reefs, highlighting both their economic value and the need for effective conservation management." [https://www.nature.com/articles/s41893-022-01021-4.epdf?sharing\\_token=wsakgQNhaJhJAnWAq453trGn0JAJweI9mR3ZofTv0PyGzA5Ic.H001zcHNIP3ASnhcgkRy6.yKLPw49dbmBYoXSg3YlMgQIGBZsapdGUH701SLbu9xSPr3xED4Kk4fT0sJlvgQ1a72ZR3rUbraxpdId2AoNISMWsuXB7jJEDdpj8Gjpx71TjWdCfXvFkIIZYeNdcJf3Sw\\_dnaUg5ZlhcjPBDImmahI45yqT5Q%3D&tracking\\_referrer=abcnews.go.com](https://www.nature.com/articles/s41893-022-01021-4.epdf?sharing_token=wsakgQNhaJhJAnWAq453trGn0JAJweI9mR3ZofTv0PyGzA5Ic.H001zcHNIP3ASnhcgkRy6.yKLPw49dbmBYoXSg3YlMgQIGBZsapdGUH701SLbu9xSPr3xED4Kk4fT0sJlvgQ1a72ZR3rUbraxpdId2AoNISMWsuXB7jJEDdpj8Gjpx71TjWdCfXvFkIIZYeNdcJf3Sw_dnaUg5ZlhcjPBDImmahI45yqT5Q%3D&tracking_referrer=abcnews.go.com)

INFRASTRUCTURE AND RESOURCES ON AN ISLAND ALREADY HIGHLY IMPACTED AND STRUGGLING FOR ANSWERS

Has the EIS done any research or reports on the Resources and Infrastructure it will need for a bungalow resort?

There are many big housing developments currently under construction in Kailua Kona, Waikoloa Village, Hilo, Puna, Ocean View and Volcano. The entire Big Island has construction projects already in progress.

Has Kamehameha Schools EIS done any kind of reports or surveys to know if Big Island has the Resources and Infrastructures for their resort development?

"Hotel waste management refers to all the practices and processes that hotels implement to handle and dispose of the multiple types of waste generated on their premises. Worldwide, hotels produce almost 300,000 tonnes of waste each year." <https://www.homebiogas.com/blog/hotels-waste-management/>

As of now, the Big Island's Resources and Infrastructure are having serious negative issues and many more developments that have been approved are not even completed as of yet, which means our island's resources and infrastructure will be taxed even more severely in the near future.

Please read the below articles that prove Big Island does not have the resources or infrastructure for a 143-Unit Bungalow Resort Development at Keauhou Bay. On Hawai'i Island, we are already struggling to meet the increasing need for resources and infrastructure.

Big Island Now poll No. 27 results: More than one solution needed to help extend life of West Hawai'i landfill

September 17, 2023

The West Hawai'i Sanitary Landfill, the only remaining landfill on the Big Island, is forecast to reach capacity within the next 20 to 25 years.

The West Hawai'i landfill became the island's only one after the Hilo Landfill closed three years ago. It only has about 20 to 25 years left before it can no longer be used to store rubbish.

<https://bigislandnow.com/2023/09/17/big-island-now-poll-no-27-results-more-than-one-solution-needed-to-help-extend-life-of-west-hawaii-landfill/>

A County commission drafts ordinance aiming to ban recyclables at West Hawai'i landfill

By Megan Moseley September 6, 2023

Hawai'i County's Environmental Management Commission is developing an ordinance that aims to prohibit the amount of recyclable materials ending up in the island's only working landfill.

During a commission meeting on July 26, Ramzi Mansour, Hawai'i County Director of Environmental Management, told commissioners the West Hawai'i Sanitary Landfill only has 20 to 25 years left before it reaches capacity.

With the Hilo Landfill permanently closed in 2020, the clock is ticking for the island's sole dump. Commission chairperson Georjean Adams said it's a good time to start looking into solutions.

Adams said the proposed ordinance is in its early stages and is more about getting the conversation started about how to prevent unnecessary, or recyclable items — green waste, metals, plastics, paper, paperboard and glass — from ending up in the rubbish dump, located off Queen Ka'ahumanu Highway in Waikōloa.

"Trying to site a new landfill is close to impossible," Adams said. "So what are we going to do? So I was looking around, and the commission agreed, to look deeply into the idea of diverting the recyclables out and at least slow the filling up of the landfill."

The proposed ordinance refers to the 2019 Integrated Solid Waste Management Plan that commits the county to "divert, as much as feasible, commercial and municipal solid waste, including but not limited to green waste, metals, plastics, paper, paperboard, and glass to help achieve goals related to climate resiliency, renewable energy, sustainable agriculture, and zero waste."

<https://bigislandnow.com/2023/09/06/new-draft-ordinance-aims-to-ban-recyclables-at-west-hawaii-landfill/>

Time's Up For Landfills

'Gentle' demolition strategies can help preserve resources

PAULA BENDER April 2, 2024

15

As Hawai'i government officials grapple with the challenge of limited landfill space statewide, federal restrictions set in place by the Environmental Protection Agency are ruling out possible locations that were once considered for new landfills.

Hawaii Act 73 states landfills must be located at least half a mile from residential areas; are prohibited from being located in areas with heavy rain and steep slopes, as well as agricultural and/or conservation lands; above aquifers; 300 feet beyond streams; and 1,000 feet beyond the ocean.

New landfills are also now prohibited from being created in tsunami inundation zones, 100-year flood zones and wetlands. There are also concerns that landfills near airports will attract birds, resulting in damage to aircraft and fatalities among pilots and passengers.

The City & County of Honolulu is in the process of identifying its next landfill and it doesn't want one any bigger or more active than absolutely necessary.

<https://buildingindustryhawaii.com/2024/04/times-up-for-landfills/>

Drought Conditions On Hawai'i Island Prompt Water Supply Message

by Big Island Video News  
on Oct 5, 2023 at 3:59 pm

(BIVN) – With moderate to severe drought conditions being reported across Hawai'i island, local water department officials issued a statement this week on the need for customers to use drinking water wisely.

Most of Hawai'i island is under "Moderate Drought" conditions, according to the latest information from the U.S. Drought Monitor. There is an area under "Abnormally Dry" conditions in South Kona, however there are other, small pockets on the Big Island that are under "Severe Drought". There is even a small spot of "Extreme Drought" in the South Point area of Ka ū.

"The National Weather Service's forecast calls for the existing drought conditions to expand over the entire island and intensify over the upcoming months due to the ongoing El Niño event," reported the Hawai'i County Department of Water Supply. "Peak dryness is expected to occur from around January through February 2024. The El Niño event will likely persist well into spring 2024."

From a Water Supply news release:

<https://www.bigislandvideonews.com/2023/10/05/drought-conditions-on-hawai%CA%BBi-island-prompt-water-supply-message/>

U.S.

Hawaii is "on the verge of a greater catastrophe," locals say, as water crisis continues

By Li Cohen

Updated on: April 11, 2024 / 8:23 AM EDT / CBS News

And recent years have seen compounding problems: less rain, leading to significant droughts, and repeated jet fuel leaks and PFAS chemical spills contaminating water systems. All of this significantly

16

limits available water use for locals, many of whom say tourism is only worsening the situation. Just months ago, the world's largest surfing wave pool opened up on the island — filled with freshwater.

"They're not using it to drink or to support life, they're using it to make money. They're commodifying it," said Healani Sonoda-Pale, who is Native Hawaiian and a member of advocacy group O'ahu Water Protectors. " ... We are on the verge of a greater catastrophe."

"We are in a water crisis, that has to be made very clear," Wayne Tanaka, director of Sierra Club of Hawai'i, told CBS News, saying that if the reasons for this crisis aren't soon addressed, "We may come to a point where we have to decide ... who gets water and who doesn't."

<https://www.cbsnews.com/news/hawaii-water-crisis-climate-change/>

Because this is an island, parts need to be shipped. The power plant currently has generators that are not working, and because of this (and other reasons), the Big Island needs to seriously conserve power so that everyone will have power. If this problem of shipping parts can happen once, it can and will happen again.

UPDATE: HELCO asks for continued energy conservation

BY SPECTRUM NEWS STAFF HAWAII ISLAND

UPDATED 6:28 PM ET APR. 16, 2024 PUBLISHED 9:05 AM ET APR. 15, 2024

HILO, Hawaii — Hawaiian Electric continues to urge Hawaii Island customers to reduce their electricity use to prevent the need for rolling outages.

In a news release Tuesday afternoon, the utility stated that Monday saw a reduced demand of approximately 5 megawatts. That, combined with increased wind and solar battery storage prevented the need for rolling blackouts on Monday. HELCO credited conservation efforts, particularly those by large businesses and government customers, for the reduction in electricity demand.

"We're grateful for our customers' efforts to conserve electricity, especially between 5 to 9 p.m., when electricity use is highest, because it does make a difference," said Hawaiian Electric spokesperson Kristen Okinaka. "By working together, we're helping to ensure that enough power can be available for all customers and prevent or minimize the impacts of rolling outages."

Hawaiian Electric announced Monday afternoon that it may initiate rolling outages in parts of Hawaii Island because of the unavailability of several generators and lower than normal wind and solar resources.

In a news release, the utility said that outages could start as early as 6:30 p.m. and rotate around the island for 30-minute intervals. The impacted areas and the timing of the outages will be based on wind generation and the amount of electric demand that needs to be reduced. Individuals who are dependent on electrically powered life support medical equipment are advised to arrange for a backup power supply.

The outages are being done to prevent power loss to even more customers, who are all being asked to conserve electricity throughout the month.

<https://spectrumlocalnews.com/hi/hawaii/news/2024/04/15/heco-customers-on-hawaii-island-asked-to-conserve-power->

Big power supply problems continue to plague Hawaii Island

Apr 8, 2024

The company has been facing an unusual situation with mechanical problems at three of the island's five largest power plants while part of the largest plant undergoes an annual overhaul. All four of these affected power plants are owned by the utility or an affiliate of its parent company.

Also contributing to the trouble is lower output from a geothermal plant, which has the third-largest generation capacity on the island and is owned by an independent operator.

"This is an unusual situation, driven mainly by the unavailability of several large generators that have experienced mechanical problems, are at reduced output, or are undergoing maintenance," Hawaiian Electric said in its March 25 announcement asking customers to use less electricity, especially on weekdays from 5 to 9 p.m.

The company explained that it faces an "extremely tight" supply of power at peak use periods, especially when production from wind, solar and hydroelectric facilities is lower than normal. Those sources of variable, renewable energy can supply up to 15% of electricity needs on the island.

"Without enough supply to meet electricity demand, the company may initiate rolling outages of up to an hour around the island," the March 25 announcement said.

<https://energycentral.com/news/big-power-supply-problems-continue-plague-hawaii-island>

Hawaii Island customers urged to reduce electricity use through April

BY SARAH YAMANAKA HILO PUBLISHED 9:00 AM ET MAR. 26, 2024

What You Need To Know

-Hawaii Island customers may see alerts asking them to conserve energy, especially on days when there isn't much wind that generates up to 15% of electricity

-When alerts are issued, Hawaiian Electric is asking customers to take immediate action to minimize electricity use

-Even when no alerts are issued, customers — including hotels and large retailers — are urged to reduce electricity use as much as possible, especially between 5 and 9 p.m. on weekdays

-If there is not enough electricity to meet demand, Hawaiian Electric may initiate rolling outages of up to an hour around the island  
<https://spectrumlocalnews.com/hi/hawaii/news/2024/03/25/hawaii-island-customers-urged-to-reduce-electricity-use-through-april>

#### FURTHERMORE: TRAFFIC, LACK OF RESOURCES, AND FATALITIES

A Resort Development WILL Increase Traffic on Already Severely Trafficked Roads. Are there traffic study reports for this EIS?

A development with 150+ rooms comes with over 150+ cars. Employees, guests, and visitors will all have cars, plus the regular locals who go there to paddle and enjoy the bay. All this could range in over 300 cars a day because of this resort development.

The Big Island already has a serious traffic issue due to a lack of infrastructure. This is in part due to poor planning, and in part due to geography challenges.

The articles below by different NEWS companies highlight the point that many traffic issues stem from lack of infrastructure and resources. Adding more cars to the road by building another resort in an area that is already stressed, will only increase the already mounting problems with traffic.

This NEWS article by Hawai'i News Now, "Report shows alarming surge in Hawaii Island traffic deaths The Hawaii Police Department's Traffic Services Section released a new report showing a dramatic increase in both major crashes and fatal accidents from last year.

The startling statistics show a dramatic increase in the number of year-over-year traffic fatalities on the Island of Hawaii, revealing major crashes are up more than 12% and traffic fatalities are up more than 100%." Watch the video on their link below as it is a professional report on Big Island traffic problems. <https://www.hawaiinewsnow.com/2024/05/18/new-report-shows-hawaii-island-traffic-fatalities-are-up-over-100-last-year/>

With more tourists there will be more accidents, more traffic, and more traffic deaths. Please read this article by KHON 2 NEWS, "Hawaii Island has most traffic fatalities in state. This time last year Hawaii Island was at five traffic deaths, as of April 1, 2024, they're at 14.

Seven of which happened in the last two weeks.

Chief Moszkowicz said the police force is small compared to the size of the island and response times can take 15 to 20 minutes.

"We don't have the resources like in the small space of Oahu where you can saturate an area to control speeding that just doesn't exist here," he added." <https://www.khon2.com/local-news/7-traffic-fatalities-for-hawaii-island-in-march/>

The traffic on Big Island has increased drastically and safety issues and infrastructure needs to be addressed before adding more resort developments.

Please read this article because what it says about Oahu is a mirror for Big Island. The traffic problems they discuss are the same issues here on Big Island; and it also gives one Big Island example, "On the Big Island, the mayor had to issue an emergency order shutting down Waipio Valley Road due to overuse and poor prior maintenance." This is happening all over Big Island. <https://www.civilbeat.org/2024/02/angry-over-island-traffic-jams-lets-talk-about-solutions/>

The news video below shows aerial footage in Hilo. The footage shown is the same thing that is happening on Alii Drive and Queen K Highway, and for all the same reasons: All of these roads only have two lanes!

There are two developments already on Alii Drive being built as of today; and more are scheduled for this road in the near future. Alii Drive and Queen K Highway are the roads Kamehameha Schools Bungalow Resort will be using if approved, and they are already seriously congested.

These roads have the exact same traffic congestion as Hilo, with the exact same problems. Traffic is extremely slow because of so many people who now live here and all the visitors that come yearly.

In addition, the concern on Kona side is tsunami evacuations rather than lava evacuations. In this kind of traffic, not everyone will be able to get to safer ground, especially if you allow another resort to be developed in this area when traffic is already at a crawl every weekday and often on weekends as well.

Here is the news article by KITV NEWS that highlights the traffic issues discussed above: "Hawaii Island traffic jams could have safety impact. In the event of an evacuation, Mayor Mitch Roth acknowledges that will make the Traffic jam up even worse. But says, he is working with The State on a solution." [https://www.kitv.com/news/local/hawaii-island-traffic-jams-could-have-safety-impact/article\\_b06a5374-5a6a-11ed-8d23-8313ef8c4c19.html](https://www.kitv.com/news/local/hawaii-island-traffic-jams-could-have-safety-impact/article_b06a5374-5a6a-11ed-8d23-8313ef8c4c19.html)

There was a crash recently on Alii Drive (see video below). When there is an accident on Alii Drive, it turns the already small two-lane road into only one lane that requires a flagger to help direct traffic. Kamehameha Schools wants to add a resort on this tiny road that will increase the traffic by hundreds of cars.

Here is the Island News video on the crash on Alii Dr. <https://www.youtube.com/watch?v=FQ5smPDj8>

Please see from these articles that traffic on Big Island is deadly already and adding another resort will be devastating to the island.

Read this Path article, HAWAII COUNTY'S VISION ZERO INITIATIVE:

A motorcyclist is in critical condition after a collision with a car. A driver accidentally hits and kills a pedestrian. It seems that not a day goes by without the news reporting on a traffic crash on Hawaii Island...

Here are some other statistics that are even more staggering:

-28% of roadside crashes were the result of someone leaving the roadway and going into barriers or trees

-13% of pedestrians hit at 20 mph actually suffer fatality

Kona." <https://www.hawaiipublicradio.org/local-news/2020-01-09/hawaii-island-has-decades-of-landfill-space-but-still-faces-challenges-in-dealing-with-its-waste>

4) "What happens to Hawaii Island's trash and recyclables? BY MICHELLE BRODER VANDYKE HAWAII ISLAND PUBLISHED 11:30 AM ET DEC. 17, 2022 By Michelle Broder Vandyke Hawaii Island PUBLISHED 11:30 AM ET Dec. 17 The future of the landfill

The West Hawaii Landfill will be full in about 20 years. Finding a location for the next landfill is a concern, according to the DEM officials. They said it will be challenging to find a location for a future landfill because of stringent regulations and costs related to planning, environmental regulations, design and construction that will take many years to complete. It will also require community support." <https://spectrumlocalnews.com/hi/hawaii/news/2022/12/15/what-happens-to-hawaii-island-s-trash-and-recyclables-->

5) "The overwhelming plastic waste Hawaii visitors leave behind By Natasha Bourlin Aug 24, 2023

Hawaii saw more than 9 million visitors last year. Those tourists' first stops are often big-box and convenience stores, where they buy bottled water, plastic sand toys, single-use bodyboards, noodles, floaties and inner tubes for their trips." <https://www.sfgate.com/hawaii/article/plastic-waste-hawaii-visitors-leave-behind-18286076.php>

6) "A County commission drafts ordinance aiming to ban recyclables at West Hawaii landfill By Megan Moseley September 6, 2023 · 1:00 AM HST  
\* Updated September 6, 2023 · 2:02 PM

Hawaii's County's Environmental Management Commission is developing an ordinance that aims to prohibit the amount of recyclable materials ending up in the island's only working landfill." <https://bigislandnow.com/2023/09/06/new-draft-ordinance-aims-to-ban-recyclables-at-west-hawaii-landfill/>

7) "Hawaii County issues mandatory 25% water restriction for North Kona August 7, 2023 · 5:21 PM HST

A mandatory 25% water restriction has been issued for various communities in North Kona due to the failure of the Honokohau Deepwell over the weekend." <https://bigislandnow.com/2023/08/07/hawaii-county-issues-mandatory-25-water-restriction-for-north-kona/>

8) "Hawaii's Water Supply Closely Monitored As Severe Drought Continues by Big Island Video Newson Nov 6, 2023 at 3:28 pm STORY SUMMARY

HAWAII COUNTY - Officials say a special focus will be placed on the South Kohala Water System, which is more susceptible to drought conditions." <https://www.bigislandvideonews.com/2023/11/06/water-supply-closely-monitored-as-hawaii-CA-BBI-under-severe-drought/>

9) "Big Island Concerns About Water Quality Prompt A Lawsuit Over A Kona Sewage Plant Kealakehe sewage plant discharges more than 1 million gallons of wastewater into a lava pit near the ocean. By Paula Dobbyn / February 6, 2024

-73% of pedestrians hit at 40 mph suffer fatality

-25% of fatal crashes were the result of distracted driving... So PLEASE put those cell phones away and pay attention to the road!

-56% of fatal crashes were the result of alcohol or drugs

-41% of fatal crashes occurred in light trucks and vans

-49% of crashes occur during the day, outside of peak traffic hours

-Of all the crash fatalities, most were males between 20 to 24-years old.

"That's just Big Island traffic," is a common sentiment. But what if we didn't have to accept this endangerment of vehicle drivers, motorcyclists, and pedestrians as a way of life?"

18) Hawai'i Water Supply Closely Monitored As Severe Drought Continues

by Big Island Video News  
on Nov 6, 2023 at 3:28 pm

(BIVN) – With an ongoing drought on the island of Hawai'i, the Hawai'i County Department of Water Supply says it is closely monitoring its 23 public water systems, with a "special focus" placed on the South Kohala Water System.

<https://www.bigislandvideonews.com/2023/11/06/water-supply-closely-monitored-as-hawaii-ca%BB-under-severe-drought/>

This is a map of Power Outages on the Big Island. This map wouldn't have been created if Power Outages were not a problem. <https://www.hawaiielectric.com/safety-and-outages/power-outages/hawaii-island-outage-map>

Please, give Tax Breaks to all homes that provide solar and/or wind turbine to there homes to help with power issues on the island.

19) "Hawaiian Electric is reporting that several large generators on the Big Island are experiencing a range of issues and may lead to the need for rolling outages if supply does not meet demand."  
[https://www.reddit.com/r/BigIsland/comments/1bnuar3/hawaiian\\_electric\\_is\\_reporting\\_that\\_several\\_large/?rdt=52660](https://www.reddit.com/r/BigIsland/comments/1bnuar3/hawaiian_electric_is_reporting_that_several_large/?rdt=52660)

20) "Hawaiian Electric asking Big Island customers to conserve power due to down generators March 25, 2024 · 11:49 AM HST  
According to the utility company, this is an usual situation as the large generators are experiencing mechanical problems resulting in a reduced output. The largest generator, an independent power producer that sells electricity to Hawaiian Electric, is offline with significant mechanical issues. The plant generates 60 megawatts or nearly one-third of the typical peak demand of 180 megawatts on the island."

<https://bigislandnow.com/2024/03/25/hawaiian-electric-asking-big-island-customers-to-conserve-power-due-to-down-generators/>

All the articles above show that a resort development will further deplete and stress resources and infrastructure on an island already struggling. There are years of new development that have already been approved but not completed. It is not responsible or prudent to continue to develop this resort under these current conditions.

#### HISTORICAL AND CULTURAL SIGNIFICANCE:

The Law of the Splintered Paddle

Hawaiian history tells us that young Kamehameha was once an aggressive chief. The story goes that the young chief even chased after two fishermen in a Puna fishing village. While pursuing them, his foot got stuck in a crevice, and one of the fishermen struck Kamehameha over the head with his paddle in defense, which splintered into pieces.

After the incident, Kamehameha recognized that it was wrong to misuse his power and learned compassion. Years later, Kamehameha declared a new law "Ke Kānāwai Māmalahoe" or "the Law of the Splintered Paddle." Meant to protect the innocent and vulnerable from unprovoked attacks, this law proclaimed that the defenseless, especially kupuna and keiki, be able to sleep safely on the side of the road, unharmed.

The law provided for the safety of non-warriors during wartime and became the first written law of the Kingdom of Hawai'i. After being added back in 1978, the law is part of Hawai'i's State Constitution today.

It is symbolic of servant leadership, reinforcing the importance of:

- Caring for and serving one's people
- Knowing and doing what is pono (right)

- Standing for the principle that leadership privilege is earned
- Taking kuleana (responsibility) for those we serve
- Doing so with compassion, love, and respect

"We take that to mean that anyone who uses our roadways should be able to do so without fear of harm," explains Tina."

The Law of the Splintered Paddle is also on Kamehameha Schools website. The historical value of this law should be enough to help make

Big Island roads become safer, and not adding to the traffic and issues of our already dangerous roads. <https://www.ksbe.edu/article/the-lessons-of-the-law-of-the-splintered-paddle-ring-true-200-years-after-k>

Does this EIS have any reports about how this development will safely add to the land fill on Big Island, and are there reports proving the island has enough water for another big resort, what about reports on how much power this resort will use because the Big Island already has serious resource and infrastructure issues.

#### IN CONCLUSION

The articles cited in this letter, many by some of the most esteemed scientists in the world, show with clarity that allowing this development is going to cause devastating, lasting, effects on the Eco-system in Keauhou Bay and "The Endangered Species Act of 1973 (ESA or "The Act"; 16 U.S.C. § 1531 et seq) is the primary law in the United States for protecting and conserving imperiled species. Designed to protect critically imperiled species from extinction as a "consequence of economic growth and development untempered by adequate concern and conservation", the ESA was signed into law by President Richard Nixon on December 28, 1973. The Supreme Court of the United States described it as "the most comprehensive legislation for the preservation of endangered species enacted by any nation". [1]" [https://en.wikipedia.org/wiki/Endangered\\_Species\\_Act\\_of\\_1973](https://en.wikipedia.org/wiki/Endangered_Species_Act_of_1973)

This location, currently acting as a natural filter, is especially vulnerable due to having a golf course on one side and a natural treasure like Keauhou Bay on the other. This land MUST be conserved in order to keep Keauhou Bay safe for all the marine life to be able to live there for years to come.

In addition to the natural disaster this will cause, Hawai'i Island is already having serious infrastructure and resource issues that have yet to be solved. These issues MUST be solved before considering another resort development on Big Island.

We need to work in harmony with the land and the people before pushing forward with new developments, especially in sacred and special places like Keauhou Bay, the birthplace of King Kamehameha III. Keauhou Bay is a small, fragile Eco-system, that is already pressured by boating, golfing, population issues, and hotels that are all around the entire bay.

The trees that currently stand on the land that is threatened to be developed clearly protects the marine life and environmental from further damage. The location is NOT suitable for this kind of development for both environmental and infrastructure reasons.

The cost of what stands to be lost is far too high to allow this to happen.

Please save Keauhou Bay's marine life and help the island's resources by saying NO to a Bungalow Resort built by Kamehameha Schools.

Mahalo,

**Categories:** Yellow Category

Aloha e Celia,

Thank you for your comments concerning the Keauhou Bay Management Plan, Draft Environmental Impact Statement. Your comments have been received and administratively recorded.

Comments received during the 45-day public comment period will be reproduced in the Final Environmental Impact Statement, and substantive comments addressed.

Since you also provided a copy to the County of Hawaii'i and our planning consultant, G70, we will not be forwarding them a duplicate copy.

We appreciate your involvement and contribution to the environmental review process. Your input is invaluable in helping us develop a management plan that reflects the needs and concerns of our community.

Thank you once again for your engagement and commitment to the future of Keauhou Bay.

Mahalo,

The Keauhou Bay Project Team

**Subject:** [EXTERNAL] Kamehameha Schools EIS Draft for Keauhou Bay Will Get The State SUED and have NEGATIVE IMPACT (obviously)

**CAUTION: This email is from an outside sender. Do not click on links or open attachments unless you recognize the sender and know the content is safe.**

To Whom It May Concern,

Please read the scientific proof in this letter and REJECT Kamehameha Schools Environment Impact Statement (EIS) for Keauhou Bay to become a Bungalow Resort. The EIS is not well-informed, ethical, or legal. Industries based on Hawaii (tourism, hospitality) should be prioritizing sustainability. You can't tour something that isn't there. Hawaii will not even be Hawaii anymore. It's disappointing that a school, who is supposed to perpetuate Hawaiian culture, is the one

putting it in danger. This doesn't even make common sense, and it goes against many laws. The state has been sued before when they accepted a EIS that would have gotten me a failing grade in my high school environmental science class. Stop. Selling. Out. Soon there won't be anything to sell. <https://biologicaldiversity.org/w/news/press-releases/lawsuit-targets-hawaii-land-boards-failure-to-protect-reefs-fish-aquarium-pet-trade-2021-07-13/>

Please state in your report that a Bungalow Resort WILL have a SERIOUS NEGATIVE IMPACT on Keaouhou Bay as stated in all the different researched articles below.

Please, DO NOT risk polluting the water in Keaouhou Bay by allowing Kamehameha Schools to develop their bungalow resort project. It is scientifically proven that developments pollute nearby waters both during and after development.

Below are scientific articles written by the National Oceanic and Atmospheric Administration (NOAA), Global Coral Reef Alliance, Hawaii Government, and many other professional organizations, that have studied and shown that developments have ALWAYS polluted the water in EVERY coastal development area.

Does this EIS (Environmental Impact Statement) have any kind of reports and studies on how the endangered species and marine life will handle the extra pollution due to development, and the golf course runoff? Keaouhou Bay is their habitat and this development WILL be CHANGING an Entire Ecosystem.

#### ENDANGERED SPECIES CONSERVATION IMPACTED BY DEVELOPMENT

In the Endangered Species Act of 1973 Under Section 2 (b), "To provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved." This would be Keaouhou Bay.

The Green Sea Turtle swims in Keaouhou Bay weekly and the monk seal has also been seen swimming and resting in Keaouhou Bay. Both of these marine animals are on the endangered species list.

Endangered Species Act

"Section 2. Findings, Purposes, and Policy

(4) The United States has pledged itself as a sovereign state in the international community to conserve to the extent practicable the various species of fish or wildlife and plants facing extinction, pursuant to—

(b) PURPOSES.—The purposes of this Act are to provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved, to provide a program for the conservation of such endangered species and threatened species, and to take such steps as may be appropriate to achieve the purposes of the treaties and conventions set forth in subsection (a) of this section."

This was taken from <https://www.fisheries.noaa.gov/national/endangered-species-conservation/endangered-species-ac>

#### FEDERALLY PROTECTED GREEN SEA TURTLES WILL BE AFFECTED

The green sea turtle is federally protected and can be seen in Keaouhou Bay weekly.

The following article that states: "POLLUTED RUNOFF IN HAWAII ENDANGERS GREEN SEA TURTLES" Why does Hawaii have a runoff problem?

Historically, in the tropics of Hawaii, precipitation was absorbed into the soil, according to the Clean Water Branch of Hawaii's Department of Health. Any potential pollution or contaminants on the ground surface would get pushed into the soil by the rain, and plant roots and microbes would help break down the pollution into less dangerous components. However, with urban and agricultural development, less and less of the pollution gets pulled into the soil, and more of it gets washed out into storm drains. From there, the pollutants make their way to streams, rivers and the ocean that surrounds Hawaii. According

to the state agency, most of these contaminants are nutrients from fertilizer, bacteria from animal waste, oil, garbage and yard waste...

If polluted runoff reaches the ocean, it can wreak havoc on marine life, including endangered green sea turtles." Taken from <https://www.chemservice.com/news/polluted-runoff-in-hawaii-endangers-green-sea-turtles/>

Allowing this development WILL POLLUTE Keaouhou Bay. The above article, written in 2014 (because runoff water from developments were polluting the ocean even then!!!) states this fact clearly. Keaouhou Bay is home to countless sea creatures such as the protected green sea turtle, spotted eagle rays, manta rays, octopus, dolphins, fish, coral, monk seals, and more and that will ALL be harmed by the severe pollution runoff that WILL happen because developments have been shown to ALWAYS pollute the water is that is nearby.

The Green Sea Turtle is protected by more than one law. "All sea turtles in Hawaii are protected by the Endangered Species Act (ESA) and additionally protected by Hawaii's Revised Statutes Chapter 195D (HRS) and Hawaii's Administrative Rules (HAR) 13-124." This information was taken from this site <https://dlnr.hawaii.gov/dar/species/sea-turtles/>

#### THE ENDANGERED MONK SEAL WILL BE AFFECTED

Keaouhou Bay is known as a RESTING AREA for the ENDANGERED MONK SEAL. If another resort is allowed to be built, in addition to the pollution, it will also bring a lot more people down to Keaouhou Bay.

This increases the chances of a resting monk seal being disturbed by humans trying to get close, take "selfie" photos, and being generally uninformed and harmful. Please see article on Selfie Culture and its harmful effects below.

Has the EIS done any research on what an increased population would do in such a small area, and what will happen to the endangered species that live there? With a significantly increased population their habitat of Keaouhou Bay will likely be changed forever.

This information is from a NOAA Scientist; "Study shows selfie culture impacts how people behave when posting images of an endangered species on social media. There's a seal on the beach! Let's go get a 'selfie'!" That must have been what nearly 18 percent of people on Instagram thought before approaching an endangered species.

In a recent study, NOAA scientists used social media to monitor human activities around endangered Hawaiian monk seals. They discovered that human disturbance is more common than they thought." <https://www.fisheries.noaa.gov/feature-story/endangered-hawaiian-monk-seals-cry-foul-over-selfies>

NOAA clearly states a high population in a place where monk seals and sea turtles habitat can be a serious disturbance for these endangered species.

"Hawaiian monk seals are protected federally by the ESA and the Marine Mammal Protection Act (MMPA), as well as locally by Hawaii's Revised Statutes (HRS) Chapter 195D and Hawaii's Administrative Rules (HAR) 13-124." This was taken from <https://dlnr.hawaii.gov/dar/hawaiian-monk-seal/>

Keaouhou Bay is the monk seals and the green sea turtle's habitat. Allowing a bungalow resort to be developed in Keaouhou Bay, the habitat of these endangered species, is to threaten their life and habitat with golf course runoff pollution, as well as development pollution. By threatening their habitat, and hence their lives, this development goes completely against the Endangered Species Act of 1973. The verbiage in the Endangered Species Act states, "to conserve". In this case, "to conserve" would be to protect the land around Keaouhou Bay from developments that destroy the habitat of these endangered species with pollution and runoff.

Does this EIS have any reports on the endangered species that frequent Keaouhou Bay? This is their habitat and it needs to be "conserved".

Under the Conservation Program there should be research done on endangered species and their associated ecosystems. A large bungalow resort development WILL FOREVER CHANGE THIS ECOSYSTEM.

"§195D-5 Conservation programs. (a) The department shall conduct research on indigenous aquatic life, wildlife, and land plants, and on endangered species and their associated ecosystems, and shall utilize the land acquisition and other authority vested in the department to carry out programs for the conservation, management, and protection of such species and their associated ecosystems." [https://www.capitol.hawaii.gov/hrs/current/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hrs/current/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm)

Also, under this same Conservation program, "(2) Taking such action as may be necessary to ensure that actions authorized, funded, or carried out by them do not jeopardize the continued existence of threatened or endangered species." [https://www.capitol.hawaii.gov/hrs/current/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hrs/current/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm)

Please consider that developing a Kamehameha Schools Bungalow Resort in Keaouhou Bay WILL threaten endangered species due to the unavoidable development and golf course pollution runoff that would be caused by removing the all the trees that currently serving as a natural pollution filter, and replacing the land with housing, cars, humans, and waste. There would also be tremendous runoff damage into Keaouhou Bay and the surrounding area during the building phase of this enormous project.

#### GOLF COURSE POLLUTION KILLS MARINE LIFE AND DRASTICALLY CHANGES ECOSYSTEMS

"The golf industry uses approximately 50 pesticide active ingredients, including chlorpyrifos—an insecticide that is banned for residential use by the EPA due to developmental hazards. Having to trim golf turf to low heights also makes it even more vulnerable to pests, which leads to more pesticide use." <https://rainorshinegolf.com/pages/the-environmental-impact-of-golf-courses>  
These pesticides will be in the pollution runoff that will enter Keaouhou Bay more severely should the natural habitat of the trees be removed and replaced with pavement. This is unavoidable!

Please read from Wikipedia, "  
Most drains have a single large exit at their point of discharge (often covered by a grating) into a canal, river, lake, reservoir, sea or ocean. Other than catch basins, typically there are no treatment facilities in the piping system." [https://en.wikipedia.org/wiki/Storm\\_drain#:~:text=Most%20drains%20have%20a%20single,discharge%20into%20individual%20dry%20wells](https://en.wikipedia.org/wiki/Storm_drain#:~:text=Most%20drains%20have%20a%20single,discharge%20into%20individual%20dry%20wells)

The pavement from this development will cause pollution to runoff into Keaouhou Bay because this treed land that will become a housing development is situated directly between the golf course and the Bay. These trees, which absorb all the pollution from the golf course is the BEST AND ONLY PROTECTION POLLUTION FILTER Keaouhou Bay has from the golf course pesticides, fertilizer and weed killer. See the below paragraph for further references.

See page 2 at: <https://health.hawaii.gov/epo/files/2013/09/Stormwater-MS4-Presentation-HEF-7.15.14.pdf> where the Hawaii government states that Natural Ground Cover has 10% runoff, where has development has 55% runoff.

These trees and land are saving monk seals and green sea turtles habitat from the golf course pollution and this land MUST BE PRESERVED and CONSERVED as the natural protector for Keaouhou Bay and for these endangered species habitat.

Under Section 2 (b) of the Endangered Species Act - Keaouhou Bay MUST BECOME A CONSERVATION AREA for these endangered species. It is currently their habitat, and to allow a large resort development to be built above this bay clearly threatens the lives of these endangered species by allowing golf course toxic pollution and development pollution to run into these species natural habitat of Keaouhou Bay.

#### ALGAE BLOOMS KILL CORAL AND MARINE LIFE

The trees that are slated to be cleared for the development further protect Keaouhou Bay from algae blooms that have been proven to be caused by pollution that is runoff from fertilizer and weed killer. When there is heavy rain the land above the bay has a greater runoff than normal. Without the trees, the runoff from the golf course pollution will pour into the Bay likely causing frequent algae blooms.

Algae blooms have been shown to kill coral and marine life as stated in the many articles that will follow. One of these articles is from the Global Coral Reef Alliance. They have researched the effects on reefs before and after a golf course development. Though this development is not a golf course development, it is located just below a golf course and exposes the bay to the pollution from the golf course by removing the proven natural filter of the trees and natural ecosystem.

Has this EIS done any kind of research about the algae blooms that happen after a serious storm because of the golf course runoff pollution?

This information was taken from Global Coral Reef Alliance and it is an actual study on the how coral and marine life are affected before and after development. It's titled, "Golf courses kill coral reefs and fisheries: harmful algae blooms and disease cause by nutrient runoff from golf course development on Guana Cay, Abaco, Bahamas

Introduction: Bahamas coral reef deterioration

This study is thought the first ever to evaluate the health of coral reef ecosystems and fisheries before and after a golf course development. The vast majority of corals have died from a combination of factors including global warming, new diseases, land-based sources of pollution..

" <https://www.globalcoral.org/golf-courses-kill-coral-reefs-and-fisheries-harmful-algae-blooms-and-disease-caused-by-nutrient-runoff-from-golf-course-development-on-guana-cay-abaco-bahamas/> If you allow a Bungalow Development in Keaouhou Bay you WILL be agreeing to pollute this bay for years to come and COMPLETELY CHANGING and possibly DESTROYING KEAOUHOU BAY'S ECOSYSTEM.

Another study by the Coral Reef Alliance titled, "Golf course fertilizer runoff causes nutrient enrichment leading to harmful algae blooms on a Bahamian coral reef.

"...After construction new algae blooms appeared nearest the golf course green, smothering corals in adjacent reefs, along with sharply increased coral diseases..." <https://www.globalcoral.org/golf-course-fertilizer-runoff-causes-nutrient-enrichment-leading-to-harmful-algae-blooms-on-a-bahamian-coral-reef>

Does this EIS have any studies or reports on the extra runoff pollution due to clearing land and adding pavement?

This needs to be fully assessed because you will be changing an entire ecosystem to build a bungalow resort. It rains in Keaouhou Bay many nights out of the year and this kind of pollution will kill the beautiful and necessary coral in the Bay.

FURTHERMORE: "If there are toxic algal blooms, like red tide, or man-made contaminants, like pesticides or detergents in the water, those toxins are contained within the bubbles of sea foam. When those bubbles pop, the toxins can become airborne and compromise the air that is breathed in that location." <https://oceanconservancy.org/blog/2023/03/31/what-sea-foam/>

#### ENGINE POLLUTION CAUSES ISSUES IN THE OCEAN

Does this EIS have any detailed traffic studies for the increase in cars that will be added to this already severely traffic area they want to build their 150 room bungalow resort in? Have they done any studies on the pollution these cars WILL have in Keaouhou Bay?

Because this Bungalow Resort could have over 150 extra cars and over 300 or more extra people in and out of Keaouhou Bay, what traffic and increased population studies have they done? There will be employees with cars, guests with cars, visitors with cars. At times this would range to over 200 cars

(likely more), coming in and out of, and parking above Keauhou Bay thereby causing serious car population issues because of all these added cars right next to the bay.

The article below is from NOAA regarding motor vehicle engines and pollution to the sea.

What is the biggest source of pollution in the ocean?

Most ocean pollution begins on land.

"Millions of motor vehicle engines drop small amounts of oil each day onto roads and parking lots. Much of this, too, makes its way to the sea.

Some water pollution actually starts as air pollution, which settles into waterways and oceans. Dirt can be a pollutant. Top soil or silt from fields or construction sites can run off into waterways, harming fish and wildlife

habitats." <https://oceanservice.noaa.gov/facts/pollution.html#:~:text=Millions%20of%20motor%20vehicle%20engines,Dirt%20can%20be%20a%20pollutant.>

Land-Based Runoff Remains Top Source of Oil in the Ocean, Says New Report Oil in the Sea: Inputs,

Fates, and Effects

News Release September 28, 2022

WASHINGTON — Oil in runoff, primarily from cities and vehicles, is the top source of oil entering the ocean, says a new report from the National Academies of Sciences, Engineering, and Medicine. In North American waters, estimated ocean oil pollution from land-based runoff is up to 20 times higher than it was 20 years ago, and oil spills, natural oil seeps, and discharge from oil and gas operations remain major sources of pollution. The report recommends actions that government and others should take to minimize oil pollution, and calls for sustained research funding to better understand how oil reaches and affects ocean environments. <https://www.nationalacademies.org/news/2002/05/oil-in-the-sea-inputs-fates-and-effects#:~:text=WASHINGTON%20%2D%20Nearly%2085%20percent,pipeline%20spills%2C%20oases%20a%20new>

The Impact Of Stormwater – Car Emissions

"Car emissions are not limited to exhaust fumes that contribute to air pollution. They can also leak automotive fluid and release heavy metals that can contribute to stormwater pollution, contaminating local waterways." <https://www.stormwatershedrds.org.au/blog/the-impact-of-stormwater-car-emissions/>

NOISE POLLUTION'S HARMFUL EFFECT ON MARINE LIFE

Does this EIS have any reports on the noise pollution that will happen and what it could do to marine life in Keauhou Bay during development?

Because if you allow this Bungalow Resort to be developed you will increase constant noise in this bay for years to come and, "Noise Pollution Research shows that underwater noise from construction, shipping and naval vessels significantly impacts the natural behavior of cetaceans and many other marine species. This can be seen when mass beaching events occur or breeding success is diminished."

The above information was taken from the Ocean Conservation

Trust <https://oceanconservationtrust.org/ocean-advocacy/think-ocean/ways-to-think-ocean/>

How Does Noise Pollution Harm Marine Species?

"However, over the past few decades, noise pollution in the marine environment has increased dramatically and is threatening the natural soundscape of the marine environment. Ships, seismic surveys, explosions, construction, and sonar devices have made the once peaceful environment into a loud, chaotic home which is extremely damaging for marine wildlife. This type of pollution is often

overlooked in comparison to others but its impacts are now being documented across all types of marine ecosystems." <https://earth.org/noise-pollution-in-the-ocean/>

If you allow this resort the amount of people in this bay will fully increase and, "Hawaii's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally, management of the resource should balance the needs of different user groups, but the welfare of the marine environment on which its inhabitants depend must be the most important consideration." This was taken from Hawaii's own Division of Aquatic Resources <https://dlnr.hawaii.gov/dar/marine-managed-areas/hawaii-marine-life-conservation-districts/#:~:text=Snorkeling%20and%20SCUBA%20diving%20are,effect%20on%20nearshore%20fish%20populations.>

What is ocean noise?

"Ocean noise refers to sounds made by human activities that can interfere with or obscure the ability of marine animals to hear natural sounds in the ocean.

Many marine organisms rely on their ability to hear for their survival. Sound is a highly efficient means of communication underwater and is the primary way that many marine species gather and understand information about their environment. Many aquatic animals use sound to find prey, locate mates and offspring, avoid predators, guide their navigation and locate habitat, as well as to listen and communicate with each other.

Over the last century, human activities such as shipping, recreational boating, and energy exploration have increased along our coasts, offshore, and deep ocean environments. Noise from these activities can travel long distances underwater, leading to increases and changes in ocean noise levels in many coastal and offshore habitats.

These rising noise levels can negatively impact ocean animals and ecosystems. Higher noise levels can reduce the ability of animals to communicate with potential mates, other group members, their offspring, or feeding partners. Noise can also reduce an ocean animal's ability to hear environmental cues that are vital for survival, including those key to avoiding predators, finding food, and navigating to preferred habitats." <https://oceanservice.noaa.gov/facts/ocean-noise.html>

LEARN FROM OTHERS:

RUN-OFF FROM DEVELOPMENT KILLS

The Chesapeake Bay has a foundation that is trying to save their bay due to runoff pollution that was caused by developments. Chesapeake Bay is a lot bigger than Keauhou Bay. If it's being drastically hurt by runoff water from developments, Keauhou Bay waters won't stand a chance if development above the bay is allowed. Keauhou Bay is a much smaller ecosystem.

This Article is by the Chesapeake Bay Foundation, Saving a National Treasure states, "...runoff is a significant source of harmful nitrogen pollution that continues to grow..."

As rainwater and snowmelt run off our streets, parking lots, lawns, and other surfaces, they pick up pet waste, pesticides, fertilizer, oil, and other contaminants. If the draining water doesn't evaporate or soak into the ground where it can be filtered, it flushes straight into local creeks, rivers, and the Chesapeake Bay, adversely affecting water quality and aquatic life.

Only 10 to 20 percent of rain that falls in forests, fields, and other natural areas runs off, with the rest absorbed by soil and plants, where it is filtered before reaching aquifers or local waterways. (Right now Keauhou Bay has a lot of trees and is very natural, this is what helps stop runoff.) By contrast, close to 100 percent of the rain that falls on concrete and other hard surfaces produces runoff. One inch of rain falling on an acre of hardened surface produces 27,000 gallons of runoff.

Stormwater runoff pollution threatens Chesapeake Bay and its rivers and streams....Polluted runoff is one of the most harmful sources of pollution to the Bay and its waters. And much of it starts right in the urban

and suburban neighborhoods where we live." <https://www.cbf.org/issues/polluted-runoff/index.html#:~:text=Besides%20carrying%20pollutants%20that%20harm,them%20are%20placed%20in%20jeopardy.>

If that is what runoff is doing to the Chesapeake Bay, the effects of runoff will be even more devastating to Keauhou Bay due to its size and fragility.

#### MANTA RAY HABITAT, CORAL REEF BLEACHING, & MARINE LIFE~ THE DEVASTATING EFFECTS OF DEVELOPMENT ON THE OCEAN

Are there any reports in this EIS about what the impact to the coral, marine life, plankton especially zooplankton will be because of this development?

The studies below show that developments kill coral, and marine life. Zooplankton are part of this marine life and they are also killed and negatively affected. Zooplankton are food for manta rays. Manta rays are in Keauhou Bay every night to eat zooplankton, and are often seen here during the day as well.

Allowing this bay developed will also be a death sentence for many types of marine life including planktons. There is NO WAY to stop this from happening due to the fact that polluted runoff rain water from developments can't be fully stopped. This has been shown to happen in ALL coastal developments. Please read the Scientific articles below.

It's Been Proven Developments Severely Pollute Nearby Waters

Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Coral Bleaching is occurring more frequently in Hawai'i. Across the Hawaiian Archipelago, coral bleaching has increased in frequency and severity since 1996. The last major bleaching event in 2014-2015 had catastrophic impacts statewide..."

This was the third major bleaching episode in Hawai'i over the last 6 years. The frequency of these events is unprecedented in the archipelago. NOAA scientists and partners have determined that the key drivers of the bleaching were environmental factors (such as heat stress, depth, and surface light) and human impacts (sewage effluent and urban runoff)." <https://www.fisheries.noaa.gov/feature-story/cautionary-tale-2019-coral-bleaching-event-hawaii#:~:text=Coral%20bleaching%20is%20occurring%20more,had%20catastrophic%20impacts%20statewide.>

This article is by the Coral Reef Alliance here in Hawai'i. "An ecosystem under threat Hawai'i's reefs face major global and local threats including climate change, overfishing, and sediment and nutrient pollution caused by sewage and stormwater runoff..."

When it rains, flash floods carry stormwater and large amounts of sediment downstream to the ocean.

Just offshore, once-thriving coral reefs are now struggling to survive." <https://coral.org/en/where-we-work/hawaiian-islands/#:~:text=Hawai%20reefs%20face%20major%20global,into%20Hawai%20CA%20BBi%20waterways%20every%20day.>

This article states that runoff is a leading source in coral degradation. Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Land-based sources of pollution are a leading cause of coral reef degradation in the Main Hawaiian Islands. Water quality is impacted by urban runoff, failing sewage systems, unpaved roads, farms, land clearing, and development." [https://www.coris.noaa.gov/monitoring/status\\_report/docs/Hawaii\\_status\\_report\\_forweb.pdf](https://www.coris.noaa.gov/monitoring/status_report/docs/Hawaii_status_report_forweb.pdf)

This article is a Research Article by PLOS ONE and their motto is "We're driving change in research integrity and publication ethics." This is some of their article information, "Coral taxonomy and local stressors drive bleaching prevalence across the Hawaiian Archipelago in 2019..."

We found little evidence for acclimation by reefs to thermal stress in the main Hawaiian Islands. Moreover, our findings illustrate how detrimental effects of local anthropogenic stressors, such

as tourism and urban runoff, may be exacerbated under high thermal stress. In light of the forecasted increase in severity and frequency of bleaching events, future mitigation of both local and global stressors is a high priority for the future of Hawai'i." <https://journals.plos.org/plosone/article?id=10.1371/journal.pone.0269068>

The coral all over Hawai'i has had extremely high mortality rates, due to developments near ocean areas throughout the years, and development in Keauhou Bay will be devastating to the coral, reef fish, and all aquatic life there. Manta Rays need to eat 5 times their body weight in zooplankton daily. Their population will be severely affected should the plankton die. Please see the cited information below. "SO, HOW MUCH PLANKTON DOES YOUR AVERAGE MANTA RAY EAT? 19,200,000. Nineteen million two hundred thousand, give or take a few thousand."

That is the number of plankton pieces a ten-foot manta ray must consume weekly to stay alive."

The above information was taken from Manta Ray Advocates <https://mantarayadvocates.com/how-much-plankton-do-mantas-eat/>

Coral reefs are known to be highly negatively impacted by developments because, "Impacts from land-based sources of pollution including coastal development...can impede coral growth and reproduction, disrupt overall ecological function, and cause disease and mortality in sensitive species." <https://oceanservice.noaa.gov/facts/coral-pollution.html#:~:text=Impacts%20from%20land%20based%20sources,and%20mortality%20in%20sensitive%20species.>

Article by Environmental Evidence, "Coastal development and runoff lead to sedimentation, which directly impacts coral recruitment, growth, mortality, and ecosystem services that coral reefs provide." <https://environmentalevidencejournal.biomedcentral.com/articles/10.1186/s13750-020-00200-0#:~:text=Coastal%20development%20and%20runoff%20lead,services%20that%20coral%20reefs%20provide.>

Developments can't fully stop polluting because runoff is from rain during development and after. Article by NOAA, "One of the most significant threats to reefs is pollution. Land-based runoff and pollution discharges can result from dredging, coastal development...This runoff may contain sediments,

nutrients, chemicals, insecticides, oil and debris. When some pollutants enter the water, nutrient levels can increase, promoting the rapid growth of algae and other organisms that can smother coral." [https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,organisms%20that%20can%20smother%20corals.](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,organisms%20that%20can%20smother%20corals.)

Another article by NOAA, "Coral reefs also are affected by leaking fuels, anti-fouling paints and coatings, and other chemicals that enter the water... (All of those are show up in every development project.) Among the most damaging pollutants on coral reefs is sediment, which can remain suspended in the water or be deposited on the coral surface (i.e., turbidity and sedimentation, respectively) and can contain toxicants, pathogens, and nutrients, all of which impact coral growth, recruitment, and survival" [https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days.](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days.)

It's Been Proven Resort Developments KILL Marine Life This article by MarinBIO states, "Zooplankton are also sensitive to their environment and like phytoplankton—a change in zooplankton concentration can indicate a subtle environmental change. Zooplankton are highly responsive to nutrient levels, temperatures, pollution, food that is not nutritious, levels of light, and increases in predation. As well as providing an essential link in the marine food chain (which is an understatement), the diversity of species, amount of biomass and abundance of zooplankton communities can be used to determine the health of an ecosystem..."

Here is another article that shocking shows that in a very short time, big changes can occur due to runoff. A development will hurt and kill plankton, by Frontiers in Marine Science, "Effects of an experimental terrestrial runoff on the components of the plankton food web in a Mediterranean coastal lagoon The main result observed in the present study was that the effects of the simulated terrestrial runoff spread along the plankton food web, significantly affecting all trophic levels of the natural plankton community studied. This occurred in a relatively short time considering that the experiment lasted less than three weeks. The lower light availability in the terrestrial runoff treatment compared to the control resulted in a net decrease of approximately one-third of Chl-a concentration and phytoplankton abundance over the entire experiment." <https://www.frontiersin.org/journals/marine-science/articles/10.3389/fmars.2023.1200757/full>

The ecosystem is fragile and interconnected as is stated in this article: "Zooplankton are also affected by levels of pH, heavy metals, calcium, and aluminum. Nutrients like nitrogen and phosphorus will affect the prey of zooplankton (like algae, protozoa and bacteria), indirectly affecting zooplankton survival. Scientists are still putting together pieces of the zooplankton puzzle. Some questions include how nutrient levels found in algae can influence the growth and behavior of zooplankton. Another question important to marine and human life is how toxins and pollution will affect this crucial link in the food chain" This information is in article by

MarineBIO. <https://www.marinebio.org/creatures/zooplankton/#:~:text=Zooplankton%20are%20also%20sensitive%20to,light%2C%20and%20increases%20in%20predation.>

A research article by Environmental Research Laboratory, United States Environmental Protection Agency that discusses, "Toxic Effects of Pollutants on Plankton: There are four main sources of aquatic pollution: industrial wastes, municipal wastes, agricultural run-off, and accidental spillage. Non-point sources, such as automobile exhausts, add appreciable amounts of pollutants to air that may enter aquatic systems in rainfall or dry fall-out. These sources add pesticides, heavy metals, oil, petroleum products, and a large number of organic and inorganic compounds to water. Lakes and oceans serve as sinks for many pollutants. Plankton comprise a large portion of the living matter in natural waters and function in biogeochemical cycles. They are affected by pollutants, transfer them to sediments and other organisms, and function in their biological transformation."

[https://scope.dge.carnegiescience.edu/SCOPE\\_12\\_3\\_6\\_chapter12\\_257-274.pdf](https://scope.dge.carnegiescience.edu/SCOPE_12_3_6_chapter12_257-274.pdf)

All the above articles show that development of Keauhou Bay WILL hurt plankton life and marine life in the bay because pollutant runoff is inevitable and unavoidable during construction and afterwards. The manta ray food source will likely disappear. This will be devastating for the manta ray populations. Furthermore, if manta rays die or leave the area, the loss will in turn affect many lively hoods from locals on the island who depend on the manta ray tour for their income.

**HUMAN POPULATION INCREASES LINKED DIRECTLY TO CORAL DEATH**

Does this EIS have any reports on their resort adding to the population increase that happens during IRONMAN?

"On average, each Ironman racer brings three people with them to the Big Island. Counting members of the media, VIPs who come from around the globe to watch and the triathlons partners, there likely be more than 6,300 people descending on Kona..." <https://bigislandnow.com/2023/10/07/ironman-2023-in-kona-shines-spotlight-on-some-of-best-women-triathletes-in-the-world/>

And "Resident dissatisfaction with tourists is multifaceted: The overwhelming majority (92%) of locals felt visitors were not educated enough on protecting Hawaii's natural environment and local resources; other factors include the impact of the vacation rental industry and ignorance of the residents' quality of life." <https://www.triathlete.com/culture/news/kona-locals-ask-ironman-visitors-for-respect/>

Where are the EIS reports on human density? Below are reports that show human population destroys coral reefs.

"The number of people living on the coasts has rapidly increased in recent decades, causing significant development of coastal areas. Coastal development can negatively impact the ocean through the destruction of coastal marine habitat and through run-off of sediments and pollution.

-Coastal development involves activities such as the creation of harbors, stabilization of shorelines, and aquaculture that involve the destruction of sensitive marine habitats such as mangroves, coral reefs, and seagrass beds.

-Coastal development may cause the run-off of sediments into coastal habitats, which can smother corals or seaweeds and reduce the amount of light available for photosynthesis. Losses of primary producers and important habitat-forming species such as corals can negatively impact entire food webs."

The above information was taken from the Education Development Center, INC, from their Coastal Development page called Ocean Tracks <https://oceantracks.org/library/human-impacts/coastal-development#:~:text=Coastal%20development%20may%20cause%20the,negatively%20impact%20entire%20food%20webs.>

There is nothing Kamehameha Schools can do to their development that can stop the guests of this possible Bungalow Resort from going to Keauhou Bay. Human traffic WILL seriously increase if this resort is allowed to be built and the marine life will be negatively affected by it. Marine life will suffer from this development as stated in this letter in many different scientific reported articles.

If you allow this resort the amount of people in this bay will fully increase and, "Hawaii's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally,

management of the resource should balance the needs of different user groups, but the welfare of the marine environment on which its inhabitants depend must be the most important consideration." This was taken from Hawaii's own Division of Aquatic Resources <https://dlnr.hawaii.gov/dar/marine-managed-areas/hawaii-marine-life-conservation-districts/#:~:text=Snorkeling%20and%20SCUBA%20diving%20are,effect%20on%20nearshore%20fish%20populations.>

It's Been Proven an Increase in Human Population Destroys Coral Reefs

If a Bungalow Resort is allowed to be built in Keauhou Bay, it will bring a serious increase in human traffic. "Easily visible trends in human population dynamics combined with well-established and tested ecological theory give a clear, intuitive, yet quantifiable guide to the severity of survival challenges faced by coral reefs. Management challenges and required actions can be clearly shown and, contrary to frequent claims, no scientific ambiguity exists with regard to the serious threat posed to coral reefs by humankind's continued numerical increase." This is in the article by National Library of Medicine National center for Biotechnology Information

PubMed. <https://pubmed.ncbi.nlm.nih.gov/33293007/#:~:text=Denser%20coastal%20populations%20and%20greater,to%20more%20runoff%20and%20siltation.>

This article is by ABC NEWS, "This is how tourists are destroying coral reefs in Hawaii. The less people at a certain site, the more coral there are, the research found. The millions of tourists who flock to the shores of Hawaii every year are wreaking havoc on its natural environment -- especially the coral reefs, which are at risk all over the world, a new study said. The most popular coral reefs on the Hawaiian islands are likely being degraded by the very visitors they attract, according to a study published Monday in Nature Sustainability." <https://abcnews.go.com/US/hawaiian-coral-reefs-degrading-popular-tourist-sites->

<https://abcnews.go.com/US/hawaiian-coral-reefs-degrading-popular-tourist-sites-scientists/story?id=96308858#:~:text=The%20less%20people%20at%20a,there%20are%2C%20the%20research%20found.&text=The%20millions%20of%20tourists%20who,world%2C%20a%20new%20stud>

By allowing this development you are stressing an already fragile Eco-system. The small bay is currently used by many locals for boating, fishing, canoeing, paddle boarding, snorkeling, manta night dives, surfing, and swimming. We know, and research shows, that more people cause more damage. The area simply cannot afford or support this development.

"Denser coastal populations and greater wealth will lead to reef degradation by coastal construction. Denser populations inland will lead to more runoff and siltation. Effects of human perturbations can be explored with meta-population theory since they translate to increases in patch-mortality and decreases in patch-colonization (= regeneration). All such changes will result in a habitat with overall fewer settled patches, so fewer live reefs." This information was taken from Science Direct <https://www.sciencedirect.com/science/article/abs/pii/S0065288120300328H?text=Aquacultur> e%20will%20alleviate%20some%20fishing,to%20more%20runoff%20and%20siltation.

Another article by Nature Sustainability, "Coral reefs and coastal tourism in Hawaii Coral reefs are popular for their vibrant biodiversity. By combining web-scraped Instagram data from tourists and high-resolution live coral cover maps in Hawaii, we find that, regionally, coral reefs both attract and suffer from coastal tourism. Higher live coral cover attracts reef visitors, but that visitation contributes to subsequent reef degradation. Such feedback loops threaten the highest quality reefs, highlighting both their economic value and the need for effective conservation management." [https://www.nature.com/articles/s41893-022-01021-4.epdf?sharing\\_token=wsakgQNhaJhJAnWAq453tRgN0jAJWeI9jnR3z0TvoPyGzA5lc\\_H001zcHNIP3ASnhcgKRy6\\_vkLPw49dbmBYoX5g3Y1MgQIGBZsapdGUH1701SLbu9x5P3xED4KxI4T0slvgQ1a7Z2Rk3Ubraxpod42AoNISMWSuxB7JfEDdpJ8OGjpx71JW6CfXvKJIZYeNdcIj3Sw\\_dnalug5IzhcjPBDlimmaH15yqT5Q%3d&tracking\\_referrer=abcnews-go.com](https://www.nature.com/articles/s41893-022-01021-4.epdf?sharing_token=wsakgQNhaJhJAnWAq453tRgN0jAJWeI9jnR3z0TvoPyGzA5lc_H001zcHNIP3ASnhcgKRy6_vkLPw49dbmBYoX5g3Y1MgQIGBZsapdGUH1701SLbu9x5P3xED4KxI4T0slvgQ1a7Z2Rk3Ubraxpod42AoNISMWSuxB7JfEDdpJ8OGjpx71JW6CfXvKJIZYeNdcIj3Sw_dnalug5IzhcjPBDlimmaH15yqT5Q%3d&tracking_referrer=abcnews-go.com)

#### INFRASTRUCTURE AND RESOURCES ON AN ISLAND ALREADY HIGHLY IMPACTED AND STRUGGLING FOR ANSWERS

Has the EIS done any research or reports on the Resources and Infrastructure it will need for a bungalow resort?  
There are many big housing developments currently under construction in Kailua Kona, Waikoloa Village, Hilo, Puna, Ocean View and Volcano. The entire Big Island has construction projects already in progress.

Has Kamehameha Schools EIS done any kind of reports or surveys to know if Big Island has the Resources and Infrastructures for their resort development?

"Hotel waste management refers to all the practices and processes that hotels implement to handle and dispose of the multiple types of waste generated on their premises. Worldwide, hotels produce almost 300,000 tonnes of waste each year." <https://www.homebiogas.com/blog/hotels-waste-management/>

As of now, the Big Island's Resources and Infrastructure are having serious negative issues and many more developments that have been approved are not even completed as of yet, which means our island's resources and infrastructure will be taxed even more severely in the near future.

Please read the below articles that prove Big Island does not have the resources or infrastructure for a 143-Unit Bungalow Resort Development at Keahou Bay. On Hawaii's Island, we are already struggling to meet the increasing need for resources and infrastructure.

Big Island Now poll No. 27 results: More than one solution needed to help extend life of West Hawaii's landfill

September 17, 2023

The West Hawaii's Sanitary Landfill, the only remaining landfill on the Big Island, is forecast to reach capacity within the next 20 to 25 years.

The West Hawaii's landfill became the island's only one after the Hilo Landfill closed three years ago. It only has about 20 to 25 years left before it can no longer be used to store rubbish.

<https://bigislandnow.com/2023/09/17/big-island-now-poll-no-27-results-more-than-one-solution-needed-to-help-extend-life-of-west-hawaii-landfill/>

A County commission drafts ordinance aiming to ban recyclables at West Hawaii's landfill

By Megan Moseley September 6, 2023

Hawaii's County's Environmental Management Commission is developing an ordinance that aims to prohibit the amount of recyclable materials ending up in the island's only working landfill.

During a commission meeting on July 26, Ramzi Mansour, Hawaii's County Director of Environmental Management, told commissioners the West Hawaii's Sanitary Landfill only has 20 to 25 years left before it reaches capacity.

With the Hilo Landfill permanently closed in 2020, the clock is ticking for the island's sole dump. Commission chairperson Georjean Adams said it's a good time to start looking into solutions.

Adams said the proposed ordinance is in its early stages and is more about getting the conversation started about how to prevent unnecessary, or recyclable items — green waste, metals, plastics, paper, paperboard and glass — from ending up in the rubbish dump, located off Queen Ka'ahumanu Highway in Waikōloa.

"Trying to site a new landfill is close to impossible," Adams said. "So what are we going to do? So I was looking around, and the commission agreed, to look deeply into the idea of diverting the recyclables out and at least slow the filling up of the landfill."

The proposed ordinance refers to the 2019 Integrated Solid Waste Management Plan that commits the county to "divert, as much as feasible, commercial and municipal solid waste, including but not limited to green waste, metals, plastics, paper, paperboard, and glass to help achieve goals related to climate resiliency, renewable energy, sustainable agriculture, and zero waste."

#### Time's Up For Landfills

'Gentle' demolition strategies can help preserve resources

PAULA BENDER April 2, 2024

As Hawaii's government officials grapple with the challenge of limited landfill space statewide, federal restrictions set in place by the Environmental Protection Agency are ruling out possible locations that were once considered for new landfills.

Hawaii Act 73 states landfills must be located at least half a mile from residential areas; are prohibited from being located in areas with heavy rain and steep slopes, as well as agricultural and/or conservation lands; above aquifers; 300 feet beyond streams; and 1,000 feet beyond the ocean.

New landfills are also now prohibited from being created in tsunami inundation zones, 100-year flood zones and wetlands. There are also concerns that landfills near airports will attract birds, resulting in damage to aircraft and fatalities among pilots and passengers.

The City & County of Honolulu is in the process of identifying its next landfill and it doesn't want one any bigger or more active than absolutely necessary.

Drought Conditions On Hawaii's Island Prompt Water Supply Message

by Big Island Video News

on Oct 5, 2023 at 3:59 pm

(BIVN) – With moderate to severe drought conditions being reported across Hawaii's island, local water department officials issued a statement this week on the need for customers to use drinking water wisely.

Most of Hawaii island is under "Moderate Drought" conditions, according to the latest information from the U.S. Drought Monitor. There is an area under "Abnormally Dry" conditions in South Kona, however there are other, small pockets on the Big Island that are under "Severe Drought". There is even a small spot of "Extreme Drought" in the South Point area of Kāʻū.

"The National Weather Service's forecast calls for the existing drought conditions to expand over the entire island and intensify over the upcoming months due to the ongoing El Niño event," reported the Hawaii County Department of Water Supply. "Peak dryness is expected to occur from around January through February 2024. The El Niño event will likely persist well into spring 2024."

From a Water Supply news release:

Hawaii is "on the verge of a greater catastrophe," locals say, as water crisis continues

By Li Cohen

Updated on: April 11, 2024 / 8:23 AM EDT / CBS News

And recent years have seen compounding problems: less rain, leading to significant droughts, and repeated jet fuel leaks and PFAS chemical spills contaminating water systems. All of this significantly limits available water use for locals, many of whom say tourism is only worsening the situation. Just months ago, the world's largest surfing wave pool opened up on the island — filled with freshwater. "They're not using it to drink or to support life, they're using it to make money. They're commodifying it," said Healani Sonoda-Pale, who is Native Hawaiian and a member of advocacy group O'ahu Water Protectors. "... We are on the verge of a greater catastrophe."

"We are in a water crisis, that has to be made very clear," Wayne Tanaka, director of Sierra Club of Hawaii, told CBS News, saying that if the reasons for this crisis aren't soon addressed, "We may come to a point where we have to decide ... who gets water and who doesn't."

<https://www.cbsnews.com/news/hawaii-water-crisis-climate-change/>

Because this is an island, parts need to be shipped. The power plant currently has generators that are not working, and because of this (and other reasons), the Big Island needs to seriously conserve power so that everyone will have power. If this problem of shipping parts can happen once, it can and will happen again.

UPDATE: HELCO asks for continued energy conservation

BY SPECTRUM NEWS STAFF HAWAII ISLAND

UPDATED 6:28 PM ET APR. 16, 2024 PUBLISHED 9:05 AM ET APR. 15, 2024

HILO, Hawaii — Hawaiian Electric continues to urge Hawaii Island customers to reduce their electricity use to prevent the need for rolling outages.

In a news release Tuesday afternoon, the utility stated that Monday saw a reduced demand of approximately 5 megawatts. That, combined with increased wind and solar battery storage prevented the need for rolling blackouts on Monday. HELCO credited conservation efforts, particularly those by large businesses and government customers, for the reduction in electricity demand.

"We're grateful for our customers' efforts to conserve electricity, especially between 5 to 9 p.m., when electricity use is highest, because it does make a difference," said Hawaiian Electric spokesperson Kristen Okinaka. "By working together, we're helping to ensure that enough power can be available for all customers and prevent or minimize the impacts of rolling outages."

Hawaiian Electric announced Monday afternoon that it may initiate rolling outages in parts of Hawaii Island because of the unavailability of several generators and lower than normal wind and solar resources.

In a news release, the utility said that outages could start as early as 6:30 p.m. and rotate around the island for 30-minute intervals. The impacted areas and the timing of the outages will be based on wind generation and the amount of electric demand that needs to be reduced. Individuals who are dependent on electrically powered life support medical equipment are advised to arrange for a backup power supply.

The outages are being done to prevent power loss to even more customers, who are all being asked to conserve electricity throughout the month.

Big power supply problems continue to plague Hawaii Island

Apr 8, 2024

The company has been facing an unusual situation with mechanical problems at three of the island's five largest power plants while part of the largest plant undergoes an annual overhaul. All four of these affected power plants are owned by the utility or an affiliate of its parent company.

Also contributing to the trouble is lower output from a geothermal plant, which has the third-largest generation capacity on the island and is owned by an independent operator.

"This is an unusual situation, driven mainly by the unavailability of several large generators that have experienced mechanical problems, are at reduced output, or are undergoing maintenance," Hawaiian Electric said in its March 25 announcement asking customers to use less electricity, especially on weekdays from 5 to 9 p.m.

The company explained that it faces an "extremely tight" supply of power at peak use periods, especially when production from wind, solar and hydroelectric facilities is lower than normal. Those sources of variable, renewable energy can supply up to 15% of electricity needs on the island.

"Without enough supply to meet electricity demand, the company may initiate rolling outages of up to an hour around the island," the March 25 announcement said.

Hawaii Island customers urged to reduce electricity use through April

BY SARAH YAMANAKA HILO PUBLISHED 9:00 AM ET MAR. 26, 2024

What You Need To Know

-Hawaii Island customers may see alerts asking them to conserve energy, especially on days when there isn't much wind that generates up to 15% of electricity

-When alerts are issued, Hawaiian Electric is asking customers to take immediate action to minimize electricity use

-Even when no alerts are issued, customers — including hotels and large retailers — are urged to reduce electricity use as much as possible, especially between 5 and 9 p.m. on weekdays

-If there is not enough electricity to meet demand, Hawaiian Electric may initiate rolling outages of up to an hour around the island

<https://spectrumsocalnews.com/hi/hawaii/news/2024/03/25/hawaii-island-customers-urged-to-reduce-electricity-use-through-april>

FURTHERMORE: TRAFFIC, LACK OF RESOURCES, AND FATALITIES

A Resort Development Will Increase Traffic on Already Severely Trafficked Roads. Are there traffic study reports for this EIS?

A development with 150 rooms comes with over 150+ cars. Employees, guests, and visitors will all have cars, plus the regular locals who go there to paddle and enjoy the bay. All this could range in over 300 cars a day because of this resort development.

The Big Island already has a serious traffic issue due to a lack of infrastructure. This is in part due to poor planning, and in part due to geography challenges.

The articles below by different NEWS companies highlight the point that many traffic issues stem from lack of infrastructure and resources. Adding more cars to the road by building another resort in an area that is already stressed, will only increase the already mounting problems with traffic.

This NEWS article by Hawaii News Now, "Report shows alarming surge in Hawaii Island traffic deaths The Hawaii Police Department's Traffic Services Section released a new report showing a dramatic increase in both major crashes and fatal accidents from last year.

The startling statistics show a dramatic increase in the number of year-over-year traffic fatalities on the island of Hawaii, revealing major crashes are up more than 12% and traffic fatalities are up more than 100%." Watch the video on their link below as it is a professional report on Big Island traffic problems. <https://www.hawaiinewsnow.com/2024/05/18/new-report-shows-hawaii-island-traffic-fatalities-are-up-over-100-last-year/>

With more tourists there will be more accidents, more traffic, and more traffic deaths. Please read this article by KHON 2 NEWS, "Hawaii Island has most traffic fatalities in state. This time last year Hawaii island was at five traffic deaths, as of April 1, 2024, they're at 14.

Seven of which happened in the last two weeks.

Chief Moszkowicz said the police force is small compared to the size of the island and response times can take 15 to 20 minutes.

"We don't have the resources like in the small space of Oahu where you can saturate an area to control speeding, that just doesn't exist here," he added." <https://www.khon2.com/local-news/77-traffic-fatalities-for-hawaii-island-in-march/>

The traffic on Big Island has increased drastically and safety issues and infrastructure needs to be addressed before adding more resort developments.

Please read this article because what it says about Oahu is a mirror for Big Island. The traffic problems they discuss are the same issues here on Big Island; and it also gives one Big Island example, "On the Big Island, the mayor had to issue an emergency order shutting down Waipio Valley Road due to overuse and poor prior maintenance." This is happening all over Big Island. <https://www.civilbeat.org/2024/02/angry-over-island-traffic-jams-lets-talk-about-solutions/>

The news video below shows aerial footage in Hilo. The footage shown is the same thing that is happening on Alii Drive and Queen K Highway, and for all the same reasons: All of these roads only have two lanes.

There are two developments already on Alii Drive being built as of today; and more are scheduled for this road in the near future. Alii Drive and Queen K Highway are the roads Kamehameha Schools Bungalow Resort will be using if approved, and they are already seriously congested.

These roads have the exact same traffic congestion as Hilo, with the exact same problems. Traffic is extremely slow because of so many people who now live here and all the visitors that come yearly.

In addition, the concern on Kona side is tsunami evacuations rather than lava evacuations. In this kind of traffic, not everyone will be able to get to safer ground, especially if you allow another resort to be developed in this area when traffic is already at a crawl every weekday and often on weekends as well.

Here is the news article by KITV NEWS that highlights the traffic issues discussed above: "Hawaii Island traffic jams could have safety impact. In the event of an evacuation, Mayor Mitch Roth acknowledges that will make the Traffic Jam up even worse. But says, he is working with The State on a solution." [https://www.kitv.com/news/local/hawaii-island-traffic-jams-could-have-safety-impact/article\\_b06a5374-5a6a-11ed-8d23-8313ef8c4c19.html](https://www.kitv.com/news/local/hawaii-island-traffic-jams-could-have-safety-impact/article_b06a5374-5a6a-11ed-8d23-8313ef8c4c19.html)

There was a crash recently on Alii Drive (see video below). When there is an accident on Alii Drive, it turns the already small two-lane road into only one lane that requires a flagger to help direct traffic. Kamehameha Schools wants to add a resort on this tiny road that will increase the traffic by hundreds of cars.

Here is the Island News video on the crash on Alii Dr. <https://www.youtube.com/watch?v=FQSnPDj8> Please see from these articles that traffic on Big Island is deadly already and adding another resort will be devastating to the island.

Read this Path article, HAWAII COUNTY'S VISION ZERO INITIATIVE:

A motorcyclist is in critical condition after a collision with a car. A driver accidentally hits and kills a pedestrian. It seems that not a day goes by without the news reporting on a traffic crash on Hawaii Island...

Here are some other statistics that are even more staggering:

-28% of roadside crashes were the result of someone leaving the roadway and going into barriers or trees

-13% of pedestrians hit at 20 mph actually suffer fatality

-73% of pedestrians hit at 40 mph suffer fatality

-25% of fatal crashes were the result of distracted driving... So PLEASE put those cell phones away and pay attention to the road!

-56% of fatal crashes were the result of alcohol or drugs

-41% of fatal crashes occurred in light trucks and vans

-49% of crashes occur during the day, outside of peak traffic hours

-Of all the crash fatalities, most were males between 20 to 24-years old.

"That's just Big Island traffic," is a common sentiment. But what if we didn't have to accept this endangerment of vehicle drivers, motorcyclists, and pedestrians as a way of life?"

This was taken from Path drivers, <http://pathhawaii.org/hawaii-countys-vision-zero-initiative/>

20) "Hawaiian Electric asking Big Island customers to conserve power due to down generators  
March 25, 2024 · 11:49 AM HST  
According to the utility company, this is an usual situation as the large generators are experiencing mechanical problems resulting in a reduced output. The largest generator, an independent power producer that sells electricity to Hawaiian Electric, is offline with significant mechanical issues. The plant generates 60 megawatts or nearly one-third of the typical peak demand of 180 megawatts on the island."  
<https://bigislandnow.com/2024/03/25/hawaiian-electric-asking-big-island-customers-to-conserve-power-due-to-down-generators/>  
All the articles above show that a resort development will further deplete and stress resources and infrastructure on an island already struggling. There are years of new development that have already been approved but not completed. It is not responsible or prudent to continue to develop this resort under these current conditions.

#### HISTORICAL AND CULTURAL SIGNIFICANCE:

The Law of the Splintered Paddle  
Hawaiian history tells us that young Kamehameha was once an aggressive chief. The story goes that the young chief even chased after two fishermen in a Puna fishing village. While pursuing them, his foot got stuck in a crevice, and one of the fishermen struck Kamehameha over the head with his paddle in defense, which splintered into pieces.  
After the incident, Kamehameha recognized that it was wrong to misuse his power and learned compassion. Years later, Kamehameha declared a new law "Ke Kānāwai Māmalahoe" or "the Law of the Splintered Paddle." Meant to protect the innocent and vulnerable from unprovoked attacks, this law proclaimed that the defenseless, especially kupuna and keiki, be able to sleep safely on the side of the road, unharmed.  
The law provided for the safety of non-warriors during wartime and became the first written law of the Kingdom of Hawai'i. After being added back in 1978, the law is part of Hawai'i's State Constitution today. It is symbolic of servant leadership, reinforcing the importance of:  
-Caring for and serving one's people  
-Knowing and doing what is pono (right)  
-Standing for the principle that leadership privilege is earned  
-Taking kuleana (responsibility) for those we serve

-Doing so with compassion, love, and respect  
"We take that to mean that anyone who uses our roadways should be able to do so without fear of harm," explains Tina."  
The Law of the Splintered Paddle is also on Kamehameha Schools website. The historical value of this law should be enough to help make  
Big Island roads become safer, and not adding to the traffic and issues of our already dangerous roads. <https://www.ksbe.edu/article/the-lessons-of-the-law-of-the-splintered-paddle-ring-true-200-years-after-k>  
Does this EIS have any reports about how this development will safely add to the land fill on Big Island, and are there reports proving the island has enough water for another big resort, what about reports on how much power this resort will use because the Big Island already has serious resource and infrastructure issues.

#### IN CONCLUSION

The articles cited in this letter, many by some of the most esteemed scientists in the world, show with clarity that allowing this development is going to cause devastating, lasting, effects on the Eco-system in Keaouhou Bay and "The Endangered Species Act of 1973 (ESA or "The Act"; 16 U.S.C. § 1531 et seq.) is the primary law in the United States for protecting and conserving imperiled species. Designed to protect critically imperiled species from extinction as a "consequence of economic growth and development untempered by adequate concern and conservation", the ESA was signed into law by President Richard Nixon on December 28, 1973. The Supreme Court of the United States described it as "the most comprehensive legislation for the preservation of endangered species enacted by any nation". [1]" [https://en.wikipedia.org/wiki/Endangered\\_Species\\_Act\\_of\\_1973](https://en.wikipedia.org/wiki/Endangered_Species_Act_of_1973)  
This location, currently acting as a natural filter, is especially vulnerable due to having a golf course on one side and a natural treasure like Keaouhou Bay on the other. This land MUST be conserved in order to keep Keaouhou Bay safe for all the marine life to be able to live there for years to come.  
In addition to the natural disaster this will cause, Hawai'i Island is already having serious infrastructure and resource issues that have yet to be solved. These issues MUST be solved before considering another resort development on Big Island.

We need to work in harmony with the land and the people before pushing forward with new developments, especially in sacred and special places like Keaouhou Bay, the birthplace of King Kamehameha III. Keaouhou Bay is a small, fragile Eco-system, that is already pressured by boating, golfing, population issues, and hotels that are all around the entire bay.

The trees that currently stand on the land that is threatened to be developed clearly protects the marine life and environment from further damage. The location is NOT suitable for this kind of development for both environmental and infrastructure reasons.

The cost of what stands to be lost is far too high to allow this to happen.

Please save Keaouhou Bay's marine life and help the island's resources by saying NO to a Bungalow Resort built by Kamehameha Schools.

Mahalo,

## Charles Nahale

Aloha,  
I have reviewed the Keaouhou Bay Management Plan and want to provide my input and support in favor of it moving forward.  
I am a resident and descendant of the Nahale Ohana, who's roots emanate from Kahaluu N. Kona. I have seen the pristine beaches and ocean accessibility disappear over my lifetime, due to commercial, luxury residential and resort development. The significance and history of Kahaluu, Keaouhou and surrounding lands have been ignored, destroyed and pilfered as a result of lack of respect and greed of quick development and profitable exit. The once abundant ocean resources and access, which afforded a subsistence lifestyle for our Kamaaina is no longer a viable means to support a growing family. We must look at alternatives ways to maintain and support our families, We still have a responsibility to malama and restore our heritage, culture, history, and access of this Aina, in perpetuity.  
The Keaouhou Bay Management Plan addresses these issues regarding restoring access, creating public access and facility use, consolidating commercial facilities, restoring significant historical and critical habitat, providing education and collaborative development and stewardship. This is an opportunity for our community to see a development that is perpetuating the historical preservation of Keaouhou bay, its surrounding lands, its culture and inclusion of our Opio's.  
I am in support of this project  
Mahalo nui  
Charles Nahale

Aloha Kawika,

Attached are comments from the Hawaii Department of Land and Natural Resources ("DLNR") to the above-entitled subject project.

Please note that future requests for the DLNR's review and comments may be emailed to both of the following email addresses:

[dlnr@hawaii.gov](mailto:dlnr@hawaii.gov) and [dlnr.land@hawaii.gov](mailto:dlnr.land@hawaii.gov)

Mahalo,  
Darlene

## Non Mon

I would like to ask you not to proceed with developing the Keauhou Bay. The bay is not only sacred but it is cherished by many as it is. By building another cookie cutter development that follow formula, you are escalating the tension with the peaceful community and further isolating the local people who respect the bay.  
Thank you for your attention

## Marcy O'Malley

Stop the over building of that beautiful sacred spot. Hotel units are definitely NOT needed at all there! Improve the bathroom's and keep the undeveloped area undeveloped

Please read the scientific proof in this letter and REJECT Kamehameha Schools EIS for Keauhou Bay to become a Bungalow Resort.

Please state in your report that a Bungalow Resort WILL have a SERIOUS NEGATIVE IMPACT in Keauhou Bay as stated in all the different researched articles below.

Please, Do NOT risk polluting the water in Keauhou Bay by allowing Kamehameha Shoals to develop their bungalow resort project, because it is scientifically proven that developments pollute nearby waters constantly during development and after.

Please read these Scientific articles written by NOAA, National Oceanic and Atmospheric Administration and many other professional organizations, that have studied and proved that developments has ALWAYS polluted the water in every near coastal developed area.

**First, does this EIS have any kind of reports and studis on how the endangered species and marine life will handle the extra pollution due to development and golf course runoff because Keauhou Bay is their habitat and this development WILL be CHANGING an Entire Ecosystem.**

**In the Endangered Species Act of 1973 Under Section 2 (b), "to provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved." This would be Keauhou Bay.**

The Green Sea Turtle swims in Keauhou Bay weekly and the monk seal has also been seen swimming and resting in Keauhou Bay. Both of these marine animals are on the endangered species list.

The Green Sea Turtle is protected by more than one law. "All sea turtles in Hawai'i are protected by the [Endangered Species Act \(ESA\)](#), and additionally protected by [Hawaii Revised Statutes Chapter 195D \(HRS\)](#) and [Hawaii Administrative Rules \(HAR\) 13-124](#)." This information was taken from this site <https://dlnr.hawaii.gov/dar/species/sea-turtles/>

"Hawaiian monk seals are protected federally by the ESA and the [Marine Mammal Protection Act \(MMPA\)](#), as well as locally by Hawai'i Revised Statutes (HRS) [Chapter 195D](#) and Hawai'i Administrative Rules (HAR) [13-124](#)." This was taken from <https://dlnr.hawaii.gov/dar/hawaiian-monk-seal/>

[ENDANGERED SPECIES CONSERVATION](#)

Endangered Species Act

Aloha -

Thank you for your additional comments concerning the Keauhou Bay Management Plan, Draft Environmental Impact Statement. Your comments have been received and administratively recorded.

Comments received during the 45-day public comment period will be reproduced in the Final Environmental Impact Statement, and substantive comments addressed.

Copied here is our planning consultant, G70, who was not copied on this second email.

We appreciate your involvement and contribution to the environmental review process. Your input is invaluable in helping us develop a management plan that reflects the needs and concerns of our community.

Thank you once again for your engagement and commitment to the future of Keauhou Bay.

Mahalo,

The Keauhou Bay Project Team

**Subject:** [EXTERNAL] Zendo Kern Please OPPOSE Keauhou Bay Bungalow Resort because it WILL CAUSE SERIOUS NEGATIVE IMPACT!

**CAUTION: This email is from an outside sender. Do not click on links or open attachments unless you recognize the sender and know the content is safe.**

To whom it may concern,

(b) PURPOSES.—**The purposes of this Act are to provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved**, to provide a program for the conservation of such endangered species and threatened species, and to take such steps as may be appropriate to achieve the purposes of the treaties and conventions set forth in subsection (a) of this section." This was taken from <https://www.fisheries.noaa.gov/national/endangered-species-conservation/endangered-species-act>

Keauhou Bay IS the monk seals and the green sea turtle's habitat and to allow a bungalow resort to be developed in Keauhou Bay, that is these endangered species habitat, is to threaten these endangered species habit with golf course runoff pollution, as well as development pollution and hence, threaten their habitat, hence their lives, and goes completely against the Endangered Species Act of 1973.

The words in the Endangered Species Act states, "to conserve" and conserving the endangered species that enter into Keauhou Bay would be to NOT DEVELOP A BUNGALOW RESORT because this would cause serious pollution runoff that would pollute the bay and endanger these already endangered species, the green sea turtle and the monk seal.

**Does this EIS have any reports on the endangered species that frequent Keauhou Bay because this is their habitat.**

**Under the Conservation Program there should be research done on endangered species and their associated ecosystems, which is Keauhou Bay. Because this bungalow resort development WILL FOREVER CHANGE THIS ECOSYSTEM.**

**"§195D-5 Conservation programs. (a) The department shall conduct research on indigenous aquatic life, wildlife, and land plants, and on endangered species and their associated ecosystems, and shall utilize the land acquisition and other authority vested in the department to carry out programs for the conservation, management, and protection of such species and their associated ecosystems."** [https://www.capitol.hawaii.gov/hrscurrent/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hrscurrent/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm)

**Also, under this same Conservation program, "(2) Taking such action as may be necessary to ensure that actions authorized, funded, or carried out by them do not jeopardize the continued existence of threatened or endangered species."** [https://www.capitol.hawaii.gov/hrscurrent/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hrscurrent/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm)

Please see that developing Kamehameha Schools Bungalow Resort in Keauhou Bay WILL threaten endangered species due to the unavoidable development and golf course pollution runoff that would happen a lot more often due to taking out the natural pollution filter, that is the trees and the land that is there now.

"The golf industry uses approximately 50 pesticide active ingredients, including chlorpyrifos—an insecticide that is banned for residential use by the EPA due to

developmental hazards. Having to trim golf turf to low heights also makes it even more vulnerable to pests, which leads to more pesticide use." <https://rainorshinegolf.com/pages/the-environmental-impact-of-golf-courses>

These pesticides will be in the pollution runoff that will enter Keauhou Bay more severely because of the bungalow resort development's pavement. As of right now the trees and land that this development wants to clear and develop into a bungalow resort is a Natural Pollution Filter.

Please read from **Wikipedia.**"

**Most drains have a single large exit at their point of discharge (often covered by a grating) into a canal, river, lake, reservoir, sea or ocean.** Other than catchbasins, **typically there are no treatment facilities in the piping system.**" [https://en.wikipedia.org/wiki/Storm\\_drain#:~:text=Most%20drains%20have%20a%20single%20discharge%20into%20individual%20dry%20wells](https://en.wikipedia.org/wiki/Storm_drain#:~:text=Most%20drains%20have%20a%20single%20discharge%20into%20individual%20dry%20wells)

It's the pavement that this development wants to put in that will cause a lot of pollution to runoff into Keauhou Bay because this top land that is directly below the golf course (that they want to clear) soaks in the golf course pesticides, fertilizer, weed killer... and is the BEST AND ONLY PROTECTION POLLUTION FILTER Keauhou Bay has from the golf course pollution.

Please see this site at <https://health.hawaii.gov/epo/files/2013/09/Stormwater-MS4-Presentation-HEF-7.15.14.pdf> because on page 2 it states **from the Hawaii government that Natural Ground Cover has 10% runoff, where has development has 55% runoff.**

**These trees and land** are saving monk seals and green sea turtles habitat from the golf course pollution and this land **MUST BE PRESERVED and CONSERVED** as the natural protector for Keauhou Bay hence, **for these endangered species habitat.**

**Under Section 2 (b) of the Endangered Species Act** - Keauhou Bay MUST BECOME a CONSERVATION AREA for these endangered species because it is their habitat as of today, and to allow a resort development to be built above this bay would threaten the very lives of these endangered species because it will allow golf course toxic pollution and development pollution to run into these species natural habitat, which is Keauhou Bay.

Keauhou Bay has trees and land just under the golf course (that Kamehameha Schools wants to clear for their bungalow resort) that protects Keauhou Bay from a lot of algae blooms because it soaks up pollution that is runoff from fertilizer, weed killer... in the golf course, and unfortunately when there is a severely heavy rain storm the land up on top of the bay has a greater runoff than normal from the golf course pollution, and pollution foam and algae blooms happen because of it.

If you clear this land, this kind of algae bloom will happen a lot more often and end up killing a lot of coral and marine life as stated in the many articles that will follow.

One of these articles is in the Global Coral Reef Alliance. They researched the reef before and after a golf course development, and even though this development is not a golf

course development, it is still a development and it will also be located just under a golf course and this will allow the pollution from the golf course to come down to the bay a lot more often because the natural land that soaks up this pollution will be gone.

### **Has this EIS done any kind of research about the algae blooms that happen after a serious storm because of the golf course runoff pollution?**

This information was taken from Global Coral Reef Alliance and it is an actual study on the how coral and marine life are affected before and after development. It's titled, "Golf courses kill coral reefs and fisheries: harmful algae blooms and disease cause by nutrient runoff from golf course development on Cuana Cay, Abaco, Bahamas

Introduction: Bahamas coral reef deterioration

This study is thought the first ever to evaluate the health of coral reef ecosystems and fisheries before and after a golf course development. The vast majority of corals have died from a combination of factors including global warming, new diseases, land-based sources of pollution. . " <https://www.globalcoral.org/golf-courses-kill-coral-reefs-and-fisheries-harmful-algae-blooms-and-disease-caused-by-nutrient-runoff-from-golf-course-development-on-guana-cay-abaco-bahamas/>

If you allow a Bungalow Development in Keauhou Bay you WILL be agreeing to pollute this bay for years to come and COMPLETELY CHANGING KEAHOU BAY'S ECOSYSTEM because the golf course runoff won't have the best protection which is the natural trees and land that can soak up the polluted water most of the year and polluted foam algae blooms will happen a lot more often.

Here is another study by the Coral Reef Alliance titled, "Golf course fertilizer runoff causes nutrient enrichment leading to harmful algae blooms on a Bahamian coral reef

...After construction new algae blooms appeared nearest the golf course green, smothering corals in adjacent reefs, along with sharply increased coral diseases..." <https://www.globalcoral.org/golf-course-fertilizer-runoff-causes-nutrient-enrichment-leading-to-harmful-algae-blooms-on-a-bahamian-coral-reef>

### **Does this EIS have any studies or reports on the extra runoff pollution due to clearing land and adding pavement?**

This needs to be fully known because you will be changing an entire ecosystem to build a bungalow resort. Because it rains in Keauhou Bay many nights out of the year and the land they want to clear absorbs the golf course toxins so this bay is not as severely polluted as it will be with pavement and development, and when serious storms come Keauhou Bay won't stand a chance because the land can't keep ALL golf course pollutions out during this time and pavement won't even come close.

"If there are [toxic algal blooms](#), like red tide, or man-made contaminants, like pesticides or detergents in the water, those toxins are contained within the bubbles of sea foam.

When those bubbles pop, the toxins can become airborne and compromise the air that is breathed in that location." <https://oceanconservancy.org/blog/2023/03/31/what-sea-foam/>

### **Federally Protected Green Sea Turtle Swim in Keauhou Bay Often**

The green sea turtle that is federally protected and can be seen in Keauhou Bay weekly. Please see the following article that states "POLLUTED RUNOFF IN HAWAII ENDANGERS GREEN SEA TURTLES

### **Why does Hawaii have a runoff problem?**

Historically, in the tropics of Hawaii, precipitation was absorbed into the soil, according to the Clean Water Branch of Hawaii's Department of Health. Any potential pollution or contaminants on the ground surface would get pushed into the soil by the rain, and plant roots and microbes would help break down the pollution into less dangerous components. However, with urban and agricultural development, less and less of the pollution gets pulled into the soil, and more of it gets washed out into storm drains. From there, the pollutants make their way to streams, rivers and the ocean that surrounds Hawaii. According to the state agency, most of these contaminants are nutrients from fertilizer, bacteria from animal waste, oil, garbage and yard waste...

If polluted runoff reaches the ocean, it can wreak havoc on marine life, including endangered green sea turtles." Taken from <https://www.chemservice.com/news/polluted-runoff-in-hawaii-endangers-green-sea-turtles/>

If you allow this development it WILL POLLUTE Keauhou Bay as the above article (that was written in 2014 because runoff water from developments were polluting the ocean even then) states, and this bay holds many sea creatures such as the protected green sea turtle, spotted eagle rays, manta rays, octopus, dolphins, fish, coral, monk seals that have rested on the dock before and...that will ALL be harmed by the more severe pollution runoff that WILL happen because developments can't help but pollute the water nearby.

Keauhou Bay is known as a RESTING AREA for the ENDANGERED MONK SEAL, and if a resort is allowed to be built, that will bring a lot more people down to Keauhou Bay and if a monk seal is resting they most likely will disturb the monk seal with their selfies because it is fully known this is now a SELFIE CULTURE.

### **Has the EIS done any research on what a high population would do in such a small area, and what will happen to the endangered species that live there because it's their habitat and a high population will change this bay forever?**

This information is by NOAA Scientist, "Study shows selfie culture impacts how people behave when posting images of an endangered species on social media.

There's a seal on the beach! Let's go get a 'sealfie!" That must have been what nearly 18 percent of people on Instagram thought before approaching an endangered species. In [a recent study](#), NOAA scientists used social media to monitor human activities around endangered [Hawaiian monk seals](#). They discovered that human disturbance is more common than they thought." <https://www.fisheries.noaa.gov/feature-story/endangered-hawaiian-monk-seals-city-foul-over-selfies>

NOAA clearly states a high population in a place where monk seals and sea turtles habitat can be a serious disturbance for these endangered species.

### **Has the EIS done any research or reports on the Resources and Infrastructure it will need for a bungalow resort?**

There are many big housing developments currently under construction in Kailua Kona, Waikoloa Village, in Hilo, Puna, and there are Ocean View and Volcano housing construction projects as well. The entire Big Island has construction projects all over.

### **Has Kamehameha Schools EIS done any kind of reports or surveys to know if Big Island has the Resources and Infrastructures for their resort development?**

Because, "Hotel waste management refers to all the practices and processes that hotels implement to handle and dispose of the multiple types of waste generated on their premises.

Worldwide, hotels produce almost [300,000 tonnes of waste](https://www.homebiogas.com/blog/hotels-waste-management/) each year." <https://www.homebiogas.com/blog/hotels-waste-management/>

As of now, the Big Island's Resources and Infrastructure are having serious negative issues and many more developments that have been approved are not even completed as of yet, which means these resources and infrastructures will be taxed even more in the near future.

Please read the below articles that prove that Big Island doesn't have the resources or infrastructure for a Bungalow Resort Development because it will increase the need for resources and infrastructure that the island doesn't have as of today.

### **Big Island Now poll No. 27 results: More than one solution needed to help extend life of West Hawai'i landfill**

September 17, 2023

The West Hawai'i Sanitary Landfill, the only remaining landfill on the Big Island, is forecast to reach capacity within the next 20 to 25 years. (File photo)

Of the 900 total votes in our most recent poll, which asked people to weigh in on the best way to extend the life of the Big Island's [only remaining landfill](#), all of the above was the most popular answer, garnering 274 votes, or 30%.

The West Hawai'i landfill became the island's only one after the Hilo Landfill closed three years ago. It only has about 20 to 25 years left before it can no longer be used to store rubbish.

<https://bigislandnow.com/2023/09/17/big-island-now-poll-no-27-results-more-than-one-solution-needed-to-help-extend-life-of-west-hawaii-landfill/>

### **A county commission drafts ordinance aiming to ban recyclables at West Hawai'i landfill**

By [Megan Moseley](#) September 6, 2023

Hawai'i County's Environmental Management Commission is developing an ordinance that aims to prohibit the amount of recyclable materials ending up in the island's only working landfill.

During a commission meeting on July 26, Ramzi Mansour, Hawai'i County Director of Environmental Management, told commissioners the West Hawai'i Sanitary Landfill only has 20 to 25 years left before it reaches capacity.

With the Hilo Landfill permanently closed in 2020, the clock is ticking for the island's sole dump. Commission chairperson Georjean Adams said it's a good time to start looking into solutions.

Adams said the proposed ordinance is in its early stages and is more about getting the conversation started about how to prevent unnecessary, or recyclable items — green waste, metals, plastics, paper, paperboard and glass — from ending up in the rubbish dump, located off Queen Kaahumanu Highway in Waikōloa.

"Trying to site a new landfill is close to impossible," Adams said. "So what are we going to do? So I was looking around, and the commission agreed, to look deeply into the idea of diverting the recyclables out and at least slow the filling up of the landfill."

The proposed ordinance refers to the 2019 Integrated Solid Waste Management Plan that commits the county to "divert, as much as feasible, commercial and municipal solid waste, including but not limited to green waste, metals, plastics, paper, paperboard, and glass to help achieve goals related to climate resiliency, renewable energy, sustainable agriculture, and zero waste."

<https://bigislandnow.com/2023/09/06/new-draft-ordinance-aims-to-ban-recyclables-at-west-hawaii-landfill/>

### **Time's Up For Landfills**

#### **'Gentle' demolition strategies can help preserve resources**

**PAULA BENDER April 2, 2024**

As Hawai'i government officials grapple with the challenge of limited landfill space statewide, federal restrictions set in place by the Environmental Protection Agency are ruling out possible locations that were once considered for new landfills.

Hawaii Act 73 states landfills must be located at least half a mile from residential areas; are prohibited from being located in areas with heavy rain and steep slopes, as well as agricultural and/or conservation lands; above aquifers; 300 feet beyond streams; and 1,000 feet beyond the ocean.

New landfills are also now prohibited from being created in tsunami inundation zones, 100-year flood zones and wetlands. There are also concerns that landfills near airports will attract birds, resulting in damage to aircraft and fatalities among pilots and passengers.

The City & County of Honolulu is in the process of identifying its next landfill and it doesn't want one any bigger or more active than absolutely necessary.

<https://buildingindustryhawaii.com/2024/04/times-up-for-landfills/>

### **Drought Conditions On Hawai'i Island Prompt Water Supply Message**

**by Big Island Video News**

**on Oct 5, 2023 at 3:59 pm**

**(BIVN)** – With moderate to severe drought conditions being reported across Hawai'i island, local water department officials issued a statement this week on the need for customers to use drinking water wisely.

Most of Hawai'i island is under "Moderate Drought" conditions, according to the latest information **from the U.S. Drought Monitor**. There is an area under "Abnormally Dry" conditions in South Kona, however there are other, small pockets on the Big Island that are under "Severe Drought". There is even a small spot of "Extreme Drought" in the South Point area of Ka'u.

"The National Weather Service's forecast calls for the existing drought conditions to expand over the entire island and intensify over the upcoming months due to the ongoing El Niño event," reported the Hawai'i County Department of Water Supply. "Peak dryness is expected to occur from around January through February 2024. The El Niño event will likely persist well into spring 2024."

From a Water Supply news release:

<https://www.bigislandvideonews.com/2023/10/05/drought-conditions-on-hawai%CA%BBi-island-prompt-water-supply-message/>

**U.S.**

**Hawaii is "on the verge of a greater catastrophe," locals say, as water crisis continues**

By **Li Cohen**

Updated on: April 11, 2024 / 8:23 AM EDT / CBS News

And recent years have seen compounding problems: less rain, leading to [significant droughts](#), and repeated jet fuel leaks and PFAS chemical spills contaminating water systems. All of this significantly limits available water use for locals, many of whom say tourism is only worsening the situation. Just months ago, the [world's largest surfing wave pool](#) opened up on the island — filled with freshwater.

"They're not using it to drink or to support life, they're using it to make money. They're commodifying it," said Healani Sonoda-Pale, who is Native Hawaiian and a member of advocacy group O'ahu Water Protectors. "... We are on the verge of a greater catastrophe."

"We are in a [water crisis](#), that has to be made very clear," Wayne Tanaka, director of Sierra Club of Hawai'i, told CBS News, saying that if the reasons for this crisis aren't soon addressed, "**We may come to a point where we have to decide ... who gets water and who doesn't.**"

<https://www.cbsnews.com/news/hawaii-water-crisis-climate-change/>

Because this is an island parts need to be shipped and the power plant has generators that are not working and because of this, and other reasons, the Big Island needs to seriously conserve power so that everyone will have power, and if this problem of shipping parts can happen once it can happen again.

UTILITIES

UPDATE: HECO asks for continued energy conservation

BY SPECTRUM NEWS STAFF HAWAII ISLAND

UPDATED 6:28 PM ET APR. 16, 2024 PUBLISHED 9:05 AM ET APR. 15, 2024

HILO, Hawaii — Hawaiian Electric continues to urge Hawaii Island customers to reduce their electricity use to prevent the need for rolling outages.

In a news release Tuesday afternoon, the utility stated that Monday saw a reduced demand of approximately 5 megawatts. That, combined with increased wind and solar battery storage prevented the need for rolling blackouts on Monday. HECO credited conservation efforts, particularly those by large businesses and government customers, for the reduction in electricity demand.

"We're grateful for our customers' efforts to conserve electricity, especially between 5 to 9 p.m., when electricity use is highest, because it does make a difference," said Hawaiian Electric spokesperson Kristen Okinaka. "By working together, we're helping to ensure that enough power can be available for all customers and prevent or minimize the impacts of rolling outages."

Hawaiian Electric announced Monday afternoon that it may initiate rolling outages in parts of Hawaii Island because of the unavailability of several generators and lower than normal wind and solar resources.

In a news release, the utility said that outages could start as early as 6:30 p.m. and rotate around the island for 30-minute intervals. The impacted areas and the timing of the outages will be based on wind generation and the amount of electric demand that needs

to be reduced. Individuals who are dependent on electrically powered life support medical equipment are advised to arrange for a backup power supply.

The outages are being done to prevent power loss to even more customers, who are all being asked to conserve electricity throughout the month.

<https://spectrumlocalnews.com/hi/hawaii/news/2024/04/15/heco-customers-on-hawaii-island-asked-to-conserve-power>

### **Big power supply problems continue to plague Hawaii island**

Apr 8, 2024

The company has been facing an unusual situation with mechanical problems at three of the island's five largest power plants while part of the largest plant undergoes an annual overhaul. All four of these affected power plants are owned by the utility or an affiliate of its parent company.

### **Also contributing to the trouble is lower output from a geothermal plant, which has the third-largest generation capacity on the island and is owned by an independent operator.**

"This is an unusual situation, driven mainly by the unavailability of several large generators that have experienced mechanical problems, are at reduced output, or are undergoing maintenance," Hawaiian Electric said in its March 25 announcement asking customers to use less electricity, especially on weekdays from 5 to 9 p.m.

The company explained that it faces an "extremely tight" supply of power at peak use periods, especially when production from wind, solar and hydroelectric facilities is lower than normal. Those sources of variable, renewable energy can supply up to 15% of electricity needs on the island.

"Without enough supply to meet electricity demand, the company may initiate rolling outages of up to an hour around the island," the March 25 announcement said.

<https://energycentral.com/news/big-power-supply-problems-continue-plague-hawaii-island>

Hawaii Island customers urged to reduce electricity use through April

BY SARAH YAMANAKA HILO PUBLISHED 9:00 AM ET MAR. 26, 2024

### **What You Need To Know**

#### **-Hawaii Island customers may see alerts asking them to conserve energy, especially on days when there isn't much wind that generates up to 15% of electricity**

-When alerts are issued, Hawaiian Electric is asking customers to take immediate action to minimize electricity use

-Even when no alerts are issued, customers — including hotels and large retailers — are urged to reduce electricity use as much as possible, especially between 5 and 9 p.m. on weekdays

-if there is not enough electricity to meet demand, Hawaiian Electric may initiate rolling outages of up to an hour around the island

<https://spectrumlocalnews.com/hi/hawaii/news/2024/03/25/hawaii-island-customers-urged-to-reduce-electricity-use-through-april>

### **Does this EIS have any detailed traffic studies for the increase in cars that will be added to this already severely traffic area they want to build their 150 room bungalow resort in? Have they done any studies on the pollution these cars WILL have in Keauhou Bay?**

**Because this Bungalow Resort could have over 150 extra cars and over 300 or more extra people in and out of Keauhou Bay, what traffic and increased population studies have they done? Because they will have employees with cars, guests with cars, visitors with cars and this would range at times at least over 200 cars or more, parking above Keauhou Bay causing serious car population because of all these added cars right next to the bay.**

Article below is from NOAA.

### **What is the biggest source of pollution in the ocean?**

#### **Most ocean pollution begins on land.**

"Millions of motor vehicle engines drop small amounts of oil each day onto roads and parking lots. Much of this, too, makes its way to the sea.

Some water pollution actually starts as air pollution, which settles into waterways and oceans. Dirt can be a pollutant. Top soil or silt from fields or **construction sites can run off** into waterways, harming fish and wildlife habitats." <https://oceanservice.noaa.gov/facts/pollution.html#:~:text=Millions%20of%20motor%20vehicle%20engines,Dirt%20can%20be%20a%20pollutant.>

Land-Based Runoff Remains Top Source of Oil in the Ocean, Says New Report Oil in the Sea: Inputs, Fates, and Effects

### **News Release September 28, 2022**

WASHINGTON — Oil in runoff, primarily from cities and vehicles, is the top source of oil entering the ocean, says a [new report](#) from the National Academies of Sciences, Engineering, and Medicine. In North American waters, estimated ocean oil pollution from land-based runoff is up to 20 times higher than it was 20 years ago, and oil spills, natural oil seeps, and discharge from oil and gas operations remain major sources of pollution. The report recommends actions that government and others should take to minimize oil

pollution, and calls for sustained research funding to better understand how oil reaches and affects ocean environments. <https://www.nationalacademies.org/news/2002/05/oil-in-the-sea-inputs-fates-and-effects#:~:text=WASHINGTON%20%2D%2D%20Nearly%2085%20percent,pipeline%20spills%2C%20says%20a%20new>

The Impact Of Stormwater – Car Emissions

"Car emissions are not limited to exhaust fumes that contribute to air pollution. They can also leak automotive fluid and release heavy metals that can contribute to stormwater pollution, contaminating local waterways." <https://www.stormwaterstphedds.org.au/blog/the-impact-of-stormwater-car-emissions/>

**Does this EIS have any reports on the noise pollution that will happen and what it could do to marine life in Keauhou Bay during development?**

Because if you allow this Bungalow Resort to be developed you will increase constant noise in this bay for years to come and, "Noise Pollution Research shows that underwater noise from construction, shipping and naval vessels significantly impacts the natural behaviour of cetaceans and many other marine species. This can be seen when mass beaching events occur or breeding success is diminished."

The above information was taken from the Ocean Conservation Trust <https://oceanconservationtrust.org/ocean-advocacy/think-ocean/ways-to-think-ocean/>

## OCEANS POLLUTION

How Does Noise Pollution Harm Marine Species?

"However, over the past few decades, noise pollution in the marine environment has increased dramatically and is threatening the natural soundscape of the marine environment. Ships, seismic surveys, explosions, construction, and sonar devices have made the once peaceful environment into a loud, chaotic home which is extremely damaging for marine wildlife. This type of pollution is often overlooked in comparison to others but its impacts are now being documented across all types of marine ecosystems." <https://earth.org/noise-pollution-in-the-ocean/>

If you allow this resort the amount of people in this bay will fully increase and, "Hawaii's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally, management of the resource should balance the needs of different user groups, but the welfare of the marine environment on which its inhabitants depend must be the most important consideration." This was taken from Hawaii's own Division of Aquatic Resources <https://dlnr.hawaii.gov/dar/marine-managed-areas/hawaii-marine-life-conservation>.

[districts,#:~:text=Snorkeling%20and%20SCUBA%20diving%20are,effect%20on%20nearshore%20fish%20populations.](#)

**What is ocean noise?**

"Ocean noise refers to sounds made by human activities that can **interfere with or obscure** the ability of marine animals to **hear natural sounds in the ocean**.

Many marine organisms rely on their ability to hear for their survival. Sound is a highly efficient means of communication underwater and is the primary way that many marine species gather and understand information about their environment. Many aquatic animals use sound to find prey, locate mates and offspring, avoid predators, guide their navigation and locate habitat, as well as to listen and communicate with each other.

Over the last century, human activities such as shipping, recreational boating, and energy exploration have increased along our coasts, offshore, and deep ocean environments. Noise from these activities can travel long distances underwater, leading to increases and changes in ocean noise levels in many coastal and offshore habitats.

These rising noise levels can negatively impact ocean animals and ecosystems. Higher noise levels can reduce the ability of animals to communicate with potential mates, other group members, their offspring, or feeding partners. Noise can also reduce an ocean animal's ability to hear environmental cues that are vital for survival, including those key to avoiding predators, finding food, and navigating to preferred habitats." <https://oceanservice.noaa.gov/facts/ocean-noise.html>

**The Chesapeake Bay has a foundation that is trying to save it due to runoff pollution that was caused by developments, and the Chesapeake Bay is a lot bigger than Keauhou Bay.** If it's being drastically hurt by runoff water from developments, Keauhou Bay waters won't stand a chance if development above the bay is allowed because this bay is very small.

This Article is by the Chesapeake Bay Foundation, Saving a National Treasure states, "...**runoff is a significant source of harmful nitrogen pollution that continues to grow...**

As rainwater and snowmelt run off our streets, parking lots, lawns, and other surfaces, they pick up pet waste, pesticides, fertilizer, oil, and other contaminants. If the draining water doesn't evaporate or soak into the ground where it can be filtered, it flushes straight into local creeks, rivers, and the Chesapeake Bay, adversely affecting water quality and aquatic life.

**Only 10 to 20 percent of rain that falls in forests, fields, and other natural areas runs off, with the rest absorbed by soil and plants, where it is filtered before reaching aquifers or local waterways. (Right now Keauhou Bay has a lot of trees and is very natural, this is what helps stop runoff.) By contrast, close to 100 percent of the rain that falls on concrete and other hard surfaces produces runoff. One inch of rain falling on an acre of hardened surface produces 27,000 gallons of runoff.**

Stormwater runoff pollution threatens Chesapeake Bay and its rivers and streams...Polluted runoff is one of the most harmful sources of pollution to the Bay and its waters. And much of it starts right in the urban and suburban neighborhoods where we live." <https://www.cbf.org/issues/polluted-runoff/index.html#:~:text=Besides%20carrying%20pollutants%20that%20harm,them%20are%20placed%20in%20leopardy.>

**If that is what runoff is doing to the Chesapeake Bay, the effects of runoff will be even more devastating to Keauhou Bay because it is so much smaller than the Chesapeake Bay.**

**Are there any reports in this EIS about what the impact to the coral, marine life, plankton especially zooplankton will be because of this development?**

**Because the studies below show developments kill coral, marine life and zooplankton are kill and negatively affected as well, and zooplankton is the manta ray food. Manta rays are in this bay every night to eat zooplankton and sometimes they are in this bay during the day time too.**

If you allow this bay to be development you will be allowing all types of marine life to die and there is NO WAY to stop this from happening because polluted runoff rain water from developments can't be fully stopped. It is what has happened in ALL coastal developments.

Please read the Scientific proof below.

It's Been Proven Developments Severely Pollute Nearby Waters

Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Coral Bleaching is occurring more frequently in Hawaii". Across the Hawaiian Archipelago, coral bleaching has increased in frequency and severity since 1996. The last major bleaching event in 2014-2015 had catastrophic impacts state-wide...

This was the third major bleaching episode in Hawaii over the last 6 years. The frequency of these events is unprecedented in the archipelago. NOAA scientists and partners have determined that the key drivers of the bleaching were environmental factors (such as heat stress, depth, and surface light) and human impacts (sewage effluent and urban run-off). " <https://www.fisheries.noaa.gov/feature-story/cautionary-tale-2019-coral-bleaching-event-hawaii#:~:text=Coral%20bleaching%20is%20occurring%20more,had%20catastrophic%20impacts%20state%20wide.>

This article is by the Coral Reef Alliance here in Hawaii. "An ecosystem under threat Hawaii's reefs face major global and local threats including climate change, overfishing, and sediment and nutrient pollution caused by sewage and stormwater runoff..."

When it rains, flash floods carry stormwater and large amounts of sediment downstream to the ocean. Just offshore, once-thriving coral reefs are now struggling to survive." <https://coral.org/en/where-we-work/hawaiian-islands/#:~:text=Hawai%CA%BBIs%20reefs%20face%20major%20global,into%20Hawai%CA%BBIs%20waterways%20every%20day.>

This article states that runoff is a leading source in coral degradation. Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Land-based sources of pollution are a leading cause of coral reef degradation in the Main Hawaiian Islands. Water quality is impacted by urban runoff, failing sewage systems, unpaved roads, farms, land clearing, and development." [https://www.coris.noaa.gov/monitoring/status\\_report/docs/Hawaii\\_status\\_report\\_forweb.pdf](https://www.coris.noaa.gov/monitoring/status_report/docs/Hawaii_status_report_forweb.pdf)

This article is a Research Article by PLOS ONE and their motto is,"We're driving change in research integrity and publication ethics." This is some of their article information, "Coral taxonomy and local stressors drive bleaching prevalence across the Hawaiian Archipelago in 2019..."

We found little evidence for acclimation by reefs to thermal stress in the main Hawaiian Islands. **Moreover, our findings illustrate how detrimental effects of local anthropogenic stressors, such as tourism and urban run-off, may be exacerbated under high thermal stress.** In light of the forecasted increase in severity and frequency of bleaching events, future mitigation of both local and global stressors is a high priority for the future of corals in Hawaii." <https://journals.plos.org/plosone/article?id=10.1371/journal.pone.0269068>

The coral all over Hawaii has had extremely high mortality rates, due to developments near ocean areas throughout the years, and development in Keauhou Bay will be devastating to the coral, reef fish, and all Aquatic Life there, and even the Manta Rays that go there to eat zooplankton from the Manta Ray tours at night, and they eat it during the day in that area as well because they need to eat 5 times their body weight in zooplankton daily. Please see the cited information below.

**"SO, HOW MUCH PLANKTON DOES YOUR AVERAGE MANTA RAY EAT? 19,200,000. Nineteen million two hundred thousand, give or take a few thousand.**

That is the number of plankton pieces a ten-foot manta ray must consume weekly to stay alive."

The above information was taken from Manta Ray Advocates <https://mantarayadvocates.com/how-much-plankton-do-mantas-eat/>

**Coral reefs are known to be highly negatively impacted by developments because, "Impacts from land-based sources of pollution including coastal development,...can impede coral growth and reproduction, disrupt overall ecological function, and cause disease and mortality in sensitive species."** <https://oceanservice.noaa.gov/facts/coral->

[pollution.html#:~:text=Impacts%20from%20land%2Dbased%20sources,and%20mortality%20in%20sensitive%20species.](#)

Article by Environmental Evidence, "Coastal development and runoff lead to sedimentation, which directly impacts coral recruitment, growth, mortality, and ecosystem services that coral reefs provide." <https://environmentalevidencejournal.biomedcentral.com/articles/10.1186/s13750-020-00200-0>  
O#:~:text=Coastal%20development%20and%20runoff%20lead,service%20that%20coral%20reefs%20provide.

Developments can't fully stop polluting because runoff is from rain during development and after. Article by NOAA, "One of the most significant threats to reefs is pollution. Land-based runoff and pollution discharges can result from dredging, coastal development... This runoff may contain sediments, nutrients, chemicals, insecticides, oil and debris.

When some pollutants enter the water, nutrient levels can increase, promoting the rapid growth of algae and other organisms that can smother coral." [https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,organisms%20that%20can%20smother%20corals.](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,organisms%20that%20can%20smother%20corals.)

Another article by NOAA, "Coral reefs also are affected by leaking fuels, anti-fouling paints and coatings, and other chemicals that enter the water... (All of those are show up in every development project.)

Among the most damaging pollutants on coral reefs is sediment, which can remain suspended in the water or be deposited on the coral surface (i.e., turbidity and sedimentation, respectively) and can contain toxicants, pathogens, and nutrients, all of which impact coral growth, recruitment, and survival." [https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days.](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days.)

It's Been Proven Resort Developments KILL Marine Life

The manta rays go to Keauhou Bay every night to eat zooplankton and if you allow this development that WILL have runoff water, you WILL be causing zooplankton to be seriously affected because as this article by MarinBIO states, "Zooplankton are also sensitive to their environment and like phytoplankton—a change in zooplankton concentration can indicate a subtle environmental change. Zooplankton are highly responsive to nutrient levels, temperatures, pollution, food that is not nutritious, levels of light, and increases in predation. As well as providing an essential link in the marine food chain (which is an understatement), the diversity of species, amount of biomass and abundance of zooplankton communities can be used to determine the health of an ecosystem...

Here is another article that proves runoff from development in this area will hurt and kill plankton, by **Frontiers in Marine Science**, "**Effects of an experimental terrestrial runoff on the components of the plankton food web in a Mediterranean coastal lagoon. The main result observed in the present study was that the effects of the simulated terrestrial runoff spread along the plankton food web, significantly affecting all trophic levels of the natural plankton community studied. This occurred in a relatively short time considering that the experiment lasted less than three weeks. The lower light availability in the terrestrial runoff treatment compared to the control resulted in a net decrease of approximately one-third of Chl-a concentration and phytoplankton abundance over the entire experiment.**" <https://www.frontiersin.org/journals/marine-science/articles/10.3389/fmars.2023.1200757/full>

"Zooplankton are also affected by levels of pH, heavy metals, calcium, and aluminum. Nutrients like nitrogen and phosphorus will affect the prey of zooplankton (like algae, protozoa and bacteria), indirectly affecting zooplankton survival. Scientists are still putting together pieces of the zooplankton puzzle. Some questions include how nutrient levels found in algae can influence the growth and behavior of zooplankton. Another question important to marine and human life is how toxins and pollution will affect this crucial link in the food chain" This information is in article by MarineBIO. <https://www.marinebio.org/creates/zooplankton/#:~:text=Zooplankton%20are%20also%20sensitive%20to,light%2C%20and%20increases%20in%20predation.>

Here is a research article by Environmental Research Laboratory, United States Environmental Protection Agency that discusses, "**Toxic Effects of Pollutants on Plankton. There are four main sources of aquatic pollution: industrial wastes, municipal wastes, agricultural run-off, and accidental spillage. Non-point sources, such as automobile exhausts, add appreciable amounts of pollutants to air that may enter aquatic systems in rainfall or dry fall-out. These sources add pesticides, heavy metals, oil, petroleum products, and a large number of organic and inorganic compounds to water. Lakes and oceans serve as sinks for many pollutants. Plankton comprise a large portion of the living matter in natural waters and function in biogeochemical cycles. They are affected by pollutants, transfer them to sediments and other organisms, and function in their biological transformation.**" [https://scope.dge.carnegiescience.edu/SCOPE\\_12/SCOPE\\_12\\_3\\_6\\_chapter12\\_257-274.pdf](https://scope.dge.carnegiescience.edu/SCOPE_12/SCOPE_12_3_6_chapter12_257-274.pdf)

The above articles show that development of Keauhou Bay WILL hurt plankton life in the area because of the pollutant runoff that WILL happen during the development and after, and if this happens this could cause the manta ray food source to disappear and that will be devastating for the manta rays eating habits, as well as cause the manta rays to not show up in this area, in turn taking away many lively hoods from locals on the island that depend on the manta ray tour for their income.

**Does this EIS have any reports on their resort adding to the population increase that happens during IRONMAN?**

"On average, each Ironman racer brings three people with them to the Big Island. Counting members of the media, VIPs who come from around the globe to watch and the triathlons partners, **there likely be more than 6,300 people descending on Kona...**" <https://bigislandnow.com/2023/10/07/ironman-2023-in-kona-shines-spotlight-on-some-of-best-women-triathletes-in-the-world/>

And "Resident dissatisfaction with tourists is multifaceted: The overwhelming majority (92%) of locals felt visitors were not educated enough on protecting Hawaii's natural environment and local resources; other factors include the impact of the vacation rental industry and ignorance of the residents' quality of life." <https://www.triathlete.com/culture/news/kona-locals-ask-ironman-visitors-for-respect/>

**Where are the EIS reports on human density because this resort will increase this area in population by hundreds. Below are reports that human population destroy coral reefs.**

"The number of people living on the coasts has rapidly increased in recent decades, causing significant development of coastal areas. Coastal development can negatively impact the ocean through the destruction of coastal marine habitat and through run-off of sediments and pollution.

-Coastal development involves activities such as the creation of harbors, stabilization of shorelines, and aquaculture that involve the **destruction of sensitive marine habitats** such as mangroves, coral reefs, and seagrass beds.

-Coastal development may cause the run-off of **sediments** into coastal habitats, which can smother corals or seaweeds and reduce the amount of light available for photosynthesis. Losses of primary producers and important habitat-forming species such as corals can negatively impact entire food webs."

The above information was taken from the Education Development Center, INC, from their Coastal Development page called Ocean Tracks <https://oceantracks.org/library/human-impacts/coastal-development#:~:text=Coastal%20development%20may%20cause%20the,negatively%20impact%20entire%20food%20webs.>

There is nothing Kamehameha Schools can do to their development that can stop the guests of this possible Bungalow Resort from going to Keauhou Bay. Human traffic WILL seriously increase if this resort is allowed to be built and the marine life will be negatively affected by it. Marine life will suffer from this development as stated in this letter in many different scientific reported articles.

If you allow this resort the amount of people in this bay will fully increase and, "Hawaii's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally, management of the resource should balance the needs of different user groups, but the welfare of the marine environment on which its

inhabitants depend must be the most important consideration." This was taken from Hawaii's own Division of Aquatic Resources <https://dlnr.hawaii.gov/dar/marine-managed-areas/hawaii-marine-life-conservation-districts#:~:text=Snorkeling%20and%20SCUBA%20diving%20are,effect%20on%20nearshore%20fish%20populations.>

It's Been Proven an Increase in Human Population Destroys Coral Reefs

If a Bungalow Resort is allowed to be built in Keauhou Bay, it will forsure bring a serious increase in human traffic. "Easily visible trends in human population dynamics combined with well-established and tested ecological theory give a clear, intuitive, yet quantifiable guide to the severity of survival challenges faced by coral reefs. Management challenges and required actions can be clearly shown and, contrary to frequent claims, no scientific ambiguity exists with regards to the serious threat posed to coral reefs by humankind's continued numerical increase." This is in the article by National Library of Medicine National center for Biotechnology Information PubMed. <https://pubmed.ncbi.nlm.nih.gov/33293007/#:~:text=Denser%20coastal%20populations%20and%20greater,to%20more%20runoff%20and%20siltation.>

This article is by ABC NEWS, "This is how tourists are destroying coral reefs in Hawaii The less people at a certain site, the more coral there are, the research found. The millions of tourists who flock to the shores of **Hawaii** every year are wreaking havoc on its natural **environment** -- especially the coral reefs, which are at risk all over the world, a new study said. The most popular coral reefs on the Hawaiian islands are likely being degraded by the very visitors they attract, according to a study published Monday in **Nature Sustainability**." <https://abcnews.go.com/US/hawaiian-coral-reefs-degrading-popular-tourist-sites-scientists/story?id=96308858#:~:text=The%20less%20people%20at%20a,there%20are%2C%20the%20research%20found.&text=The%20millions%20of%20tourists%20who,world%2C%20a%20new%20study%20said.>

If you allow this resort to be developed, you will be destroying the coral reefs in the bay because this bay is extremely small and used by a lot of locals already for fishing, canoeing, swimming, snorkeling, paddle boarding, surfing, boating...it can't afford more use by many thousands more people yearly.

if you allow Keauhou Bay to be development there will be a higher population in the bay and that will hurt the coral in the bay as well, because it's known that, "Denser coastal populations and greater wealth will lead to reef degradation by coastal construction. Denser populations inland will lead to more runoff and siltation. Effects of human perturbations can be explored with metapopulation theory since they translate to increases in patch-mortality and decreases in patch-colonization (= regeneration). All such changes will result in a habitat with overall fewer settled patches, so fewer live reefs." This information was taken from Science Direct <https://www.sciencedirect.com/science/article/abs/pii/S0065288120300328#:~:text=Aquaculture%20will%20alleviate%20some%20fishing,to%20more%20runoff%20and%20siltation.>

Another article by Nature Sustainability, "Coral reefs and coastal tourism in Hawaii Coral reefs are popular for their vibrant biodiversity. By combining web-scraped Instagram data from tourists and high-resolution live coral cover maps in Hawaii, we find that, regionally, coral reefs both attract and suffer from coastal tourism. Higher live coral cover attracts reef visitors, but that visitation contributes to subsequent reef degradation. Such feedback loops threaten the highest quality reefs, highlighting both their economic value and the need for effective conservation

management." [https://www.nature.com/articles/s41893-022-01021-4.epdf?sharing\\_token=wsakgQNhaJhJjAnWAq453trRgN0iAJWle9jinR3ZotV0PyCzA5lc\\_H0O1zcHNIIP3ASnhcgkRY6\\_vkLPw49qdbmBYoX5g3YIMgOIGBZsapdGUHI7O1SLbu9x5Pr3xED4KxI4ToSjIvgQ1a7ZzR3rUbraxpodJd2AoNISMmWwSuxB7JIEDdJj8OCJpX7JTJWdCFxvFKJIZYeNdcJj3Ssw\\_dnaUg5ZihciPBdImmaH15vgI5O%3D&tracking\\_referrer=abcnews.go.com](https://www.nature.com/articles/s41893-022-01021-4.epdf?sharing_token=wsakgQNhaJhJjAnWAq453trRgN0iAJWle9jinR3ZotV0PyCzA5lc_H0O1zcHNIIP3ASnhcgkRY6_vkLPw49qdbmBYoX5g3YIMgOIGBZsapdGUHI7O1SLbu9x5Pr3xED4KxI4ToSjIvgQ1a7ZzR3rUbraxpodJd2AoNISMmWwSuxB7JIEDdJj8OCJpX7JTJWdCFxvFKJIZYeNdcJj3Ssw_dnaUg5ZihciPBdImmaH15vgI5O%3D&tracking_referrer=abcnews.go.com)

**A Resort Development Will Increase Traffic on Already Severely Trafficked Roads. Where are the traffic study reports for this EIS because with 150 rooms comes over 150 cars because you must include employee cars, as well as visitors for the people staying in the resort, and what if the guests have more than one car?**

The Big Island already has a serious problem with traffic on the island because of a lack of infrastructure that in places a bigger road can't be built due to cliffs on one side and homes on the other side.

Allowing another resort to be developed will bring more cars that will lead to a lot more traffic that the island can not handle, please read the articles below by different NEWS companies that prove this point.

This NEWS article by Hawaii News Now, "Report shows alarming surge in Hawaii island traffic deaths The Hawaii Police Department's Traffic Services Section released a new report showing a dramatic increase in both major crashes and fatal accidents from last year.

The startling statistics show a dramatic increase in the number of year-over-year traffic fatalities on the island of Hawaii, revealing major crashes are up more than 12% and traffic fatalities are up more than 100%." Please watch their video on their link below because it is a professional report on Big Island traffic <https://www.hawaii.newsnow.com/2024/05/18/new-report-shows-hawaii-island-traffic-fatalities-are-up-over-100-last-year/>

With more tourists comes more accidents, more traffic, and more traffic deaths. Please read this article by KHON 2 NEWS, "Hawaii island has most traffic fatalities in state, This time last year Hawaii island was at five traffic deaths, as of April 1, 2024, they're at 14.

Seven of which happened in the last two weeks...

Chief Moszkowicz said the police force is small compared to the size of the island and response times can take 15 to 20 minutes.

"We don't have the resources like in the small space of Oahu where you can saturate an area to control speeding, that just doesn't exist here," he added." <https://www.khon2.com/local-news/7-traffic-fatalities-for-hawaii-island-in-march/>

The traffic on Big Island has increased drastically and safety issues and infrastructure needs to be addressed before adding more resort developments.

Please read this article because what it says about Oahu is the same for Big Island. The traffic problems they talk about are the same issues here on Big Island, and this article also gives one Big Island example, "On the Big Island, the mayor had to issue an emergency order shutting down Waipio Valley Road due to overuse and poor prior maintenance." This is happening all over Big Island. <https://www.civilbeat.org/2024/02/angry-over-island-traffic-jams-lets-talk-about-solutions/>

Please, watch the NEWS video below on aerial footage in Hilo because the footage shown is the same thing that is happening on Alii Drive and Queen K HWY, and for the same reasons, all of these roads only have 2 lanes.

There are 2 developments already on Alii Dr. being built as of today, and more are scheduled for this road in the near future, and Alii Dr. and Queen K HWY are the roads Kamehameha Schools Bungalow Resort will be using if approved and they are already seriously congested.

These roads have the exact same traffic congestion as Hilo, with the exact same problems, traffic is extremely slow because of so many people who now live here and all the visitors that come yearly.

The worry on Kona side is tsunami evacuations rather than lava evacuations, and in this kind of traffic, not everyone will be able to get to safer ground, especially if you allow another resort to be developed in this area when traffic is already at a crawl every week day and sometimes on weekends as well.

See the photo below that proves this point in Kona, and here is the NEWS article by KITV NEWS that talks about Hilo and the same thing is happening in Kona on the roads Kamehameha Schools wants to develop their resort, "Hawaii island traffic jams could have safety impact. In the event of an evacuation, Mayor Mitch Roth acknowledges that will make the Traffic Jam up even worse. But says, he is working with The State on a solution." [https://www.kitv.com/news/local/hawaii-island-traffic-jams-could-have-safety-impact/article\\_b06a5374-5a6a-11ed-8d23-8313ef8c4c19.html](https://www.kitv.com/news/local/hawaii-island-traffic-jams-could-have-safety-impact/article_b06a5374-5a6a-11ed-8d23-8313ef8c4c19.html)

There was a crash on Alii Dr. and when there is an accident on this road, it turns into only one lane that needs a flagger to help direct traffic. and that adds even more traffic to this already seriously congestion road, and Kamehameha Schools wants to add a resort on this road that will increase the traffic by 100's of cars.

Here is the Island News video on the crash on Alii Dr. <https://www.youtube.com/watch?v=-FQ5snPDjI8>

Please see from these articles that traffic on Big Island is deadly already and adding another resort will be devastating to the island.

Please read this Path article, HAWAII COUNTY'S VISION ZERO INITIATIVE

A motorcyclist is in critical condition after a collision with a car. A driver accidentally hits and kills a pedestrian. It seems that not a day goes by without the news reporting on a traffic crash on Hawai'i Island...

Here are some other statistics that are even more staggering:

- 28% of roadside crashes were the result of someone leaving the roadway and going into barriers or trees
- 13% of pedestrians hit at 20 mph actually suffer fatality
- 73% of pedestrians hit at 40 mph suffer fatality
- 25% of fatal crashes were the result of distracted driving... So PLEASE put those cell phones away and pay attention to the road!
- 56% of fatal crashes were the result of alcohol or drugs
- 41% of fatal crashes occurred in light trucks and vans
- 49% of crashes occur during the day, outside of peak traffic hours
- Of all the crash fatalities, most were males between 20 to 24-years old.

"That's just Big Island traffic," is a common sentiment. But what if we didn't have to accept this endangerment of vehicle drivers, motorcyclists, and pedestrians as a way of life?"

This was taken from Path as well as The Law of the Splintered Paddle below <https://pathhawaii.org/hawaii-countys-vision-zero-initiative/>

### **The Law of the Splintered Paddle**

Hawaiian history tells us that young Kamehameha was once an aggressive chief. The story goes that the young chief even chased after two fishermen in a Puna fishing village. While pursuing them, his foot got stuck in a crevice, and one of the fishermen struck Kamehameha over the head with his paddle in defense, which splintered into pieces.

After the incident, Kamehameha recognized that it was wrong to misuse his power and learned compassion. Years later, Kamehameha declared a new law, "[K?n?wāi M?malahoe](#)," or "the Law of the Splintered Paddle." Meant to protect the innocent and vulnerable from unprovoked attacks, this law proclaimed that the defenseless (especially k?puna and keiki) across Hawai'i be able to sleep safely on the side of the road, unharmed.

The law provided for the safety of non-warriors during wartime and became the first written law of the Kingdom of Hawai'i. After being added back in 1978, the law is part of Hawai'i's State Constitution today.

It is symbolic of servant leadership, reinforcing the importance of:

- Caring for and serving one's people
- Knowing and doing what is pono (right)
- Standing for the principle that leadership privilege is earned
- Taking kuleana (responsibility) for those we serve
- Doing so with compassion, love, and respect

"We take that to mean that anyone who uses our roadways should be able to do so without fear of harm," explains Tina."

**The Law of the Splintered Paddle is also on Kamehameha Schools website**, so they should want to help make Big Island roads become safer and not add to the traffic and possible traffic death toll problem. <https://www.ksbe.edu/article/the-lessons-of-the-law-of-the-splintered-paddle-true-200-years-after-k>

**Does this EIS have any reports about how this development will safely add to the land fill on Big Island, and are there reports proving the island has enough water for another big resort, what about reports on how much power this resort will use because the Big Island already has serious Resource and Infrastructure issues. Please read the articles below.**

### **The Big Island Doesn't Have the Resources and Infrastructure for Another Resort**

Please see the articles below because the Big Island doesn't have the resources or infrastructure to safely add another resort development on island and these other NEWS and Research articles prove this point.

1) Hawaii Deals with Burgeoning Waste Management Problem

As landfills face closure and waste-to-energy projects stall, various counties in Hawaii are dealing with waste management issues. Waste360 Staff January 10, 2020

"Hawaii Island is in the enviable position of having a landfill with anywhere from 20 to 100 years of capacity left to take in trash. But the island still wrestles with significant issues like plastic products that are no longer being recycled." <https://www.waste360.com/landfill/hawaii-deals-with-burgeoning-waste-management-problem>

2) "Big Island Now readers seem to agree that there's likely no single solution for slowing down the timeline of the West Hawai'i Sanitary Landfill reaching capacity.

The West Hawai'i Sanitary Landfill, the only remaining landfill on the Big Island, is forecast to reach capacity within the next 20 to 25 years." <https://bigislandnow.com/2023/09/17/big-island-now-poll-no-27-results-more-than-one-solution-needed-to-help-extend-life-of-west-hawaii-landfill/>

3) Hawaii Island Has Decades of Landfill Space But Still Faces Challenges in Dealing With Its Waste Hawai'i Public Radio Published January 9, 2020 at 5:00 AM HST

"Hawaii Island is in the enviable position of having a landfill with anywhere from 20 to 100 years of capacity left to take in trash. But the island still wrestles with significant issues like plastic products that are no longer being recycled.

For the past four decades, trash from the east side of Hawaii Island has been dumped in a landfill outside of Hilo. But now trash from all parts of the island is being trucked to a facility north of Kona." <https://www.hawaiipublicradio.org/local-news/2020-01-09/hawaii-island-has-decades-of-landfill-space-but-still-faces-challenges-in-dealing-with-its-waste>

4) "What happens to Hawaii Island's trash and recyclables? BY MICHELLE BRODER VANDYKE HAWAII ISLAND PUBLISHED 11:30 AM ET DEC. 17, 2022 By Michelle Broder Vandyke Hawaii Island PUBLISHED 11:30 AM ET Dec. 17 The future of the landfill

The West Hawaii Landfill will be full in about 20 years. Finding a location for the next landfill is a concern, according to the DEM officials. They said it will be challenging to find a location for a future landfill because of stringent regulations and costs related to planning, environmental regulations, design and construction that will take many years to complete. It will also require community support." <https://spectrumlocalnews.com/hi/hawaii/news/2022/12/15/what-happens-to-hawaii-island-s-trash-and-recyclables--18286076.php>

5) "The overwhelming plastic waste Hawaii visitors leave behind By Natasha Bourlin Aug 24, 2023

Hawaii saw more than 9 million visitors last year. Those tourists' first stops are often big-box and convenience stores, where they buy bottled water, plastic sand toys, single-use bodyboards, noodles, floaties and inner tubes for their trips." <https://www.sfgate.com/hawaii/article/plastic-waste-hawaii-visitors-leave-behind-18286076.php>

6) "A county commission drafts ordinance aiming to ban recyclables at West Hawaii landfill By Megan Moseley September 6, 2023 · 1:00 AM HST  
\* Updated September 6, 2023 · 2:02 PM

Hawai'i County's Environmental Management Commission is developing an ordinance that aims to prohibit the amount of recyclable materials ending up in the island's only working landfill." <https://bigislandnow.com/2023/09/06/new-draft-ordinance-aims-to-ban-recyclables-at-west-hawaii-landfill/>

7) "Hawai'i County issues mandatory 25% water restriction for North Kona August 7, 2023 · 5:21 PM HST

A mandatory 25% water restriction has been issued for various communities in North Kona due to the failure of the Honokohau Deepwell over the weekend." <https://bigislandnow.com/2023/08/07/hawaii-county-issues-mandatory-25-water-restriction-for-north-kona/>

8) "Hawai'i Water Supply Closely Monitored As Severe Drought Continues by Big Island Video Newson Nov 6, 2023 at 3:28 pm STORY SUMMARY

HAWAII COUNTY - Officials say a special focus will be placed on the South Kohala Water System, which is more susceptible to drought conditions." <https://www.bigislandvideonews.com/2023/11/06/water-supply-closely-monitored-as-hawaii-ca%BBi-under-severe-drought/>

9) "Big Island Concerns About Water Quality Prompt A Lawsuit Over A Kona Sewage Plant Kealahou sewage plant discharges more than 1 million gallons of wastewater into a lava pit near the ocean. By Paula Dobbyn / February 6, 2024

Settlement talks are scheduled in an environmental lawsuit involving a county-operated Big Island sewage plant in Kona." <https://www.civilbeat.org/2024/02/concerns-about-water-quality-prompt-a-lawsuit-over-a-kona-sewage-plant/>

10) "Researchers find sewage from an oceanfront Big Island community reaches nearshore waters Hawai'i Public Radio | By Russell Subiono, Sophia McCullough Published December 20, 2021 at 5:56 PM HST

There are nearly 50,000 cesspools on the Big Island, with tens of thousands posing a risk to water resources, according to the Hawai'i Department of Health." <https://www.hawaiipublicradio.org/the-conversation/2021-12-20/researchers-find-sewage-from-an-oceanfront-big-island-community-reaches-nearshore-waters>

11) "Kona coast faces stark wastewater tradeoffs Current situation

There are approximately 88,000 cesspools across the state, releasing more than 200,000 cubic meters of wastewater per day to the environment. <https://www.hawaii.edu/news/2021/09/10/kona-stark-wastewater-tradeoffs/>

We ask that you start figuring out how this can never happen again? These are the kind of issues that need to be resolved before you approve more development.

21) "NewsHawaiian Electric asking Big Island customers to conserve power due to down generators

March 25, 2024 . 11:49 AM HST

According to the utility company, this is an usual situation as the large generators are experiencing mechanical problems resulting in a reduced output. The largest generator, an independent power producer that sells electricity to Hawaiian Electric, is offline with significant mechanical issues.

The plant generates 60 megawatts or nearly one-third of the typical peak demand of 180 megawatts on the island."

28

<https://bigislandnow.com/2024/03/25/hawaiian-electric-asking-big-island-customers-to-conserve-power-due-to-down-generators/>

All the articles above show that a resort development will damage Keauhou Bay coral and marine life and, Big Island resources and infrastructure are currently being negatively affected from the development that is on island already, and there are years of new development that have already been approved, before having safe resources and infrastructures for new developments.

With these scientifically proven articles by some of the most professional scientists in the world, they say the a serious population increase, as well as development and resort runoff that happens because of parking lots, and... with all coastal developments, it will be dangerous for Keauhou Bay to be development because it will damage the marine ecosystems in the area.

Please, save Keauhou Bay's marine life and help the island's resources by saying NO to a Bungalow Resort built by Kamehameha Schools because all of these articles prove it would be extremely damaging to the waters at Keauhou Bay.

Thank you,

Sincerely,

Mayari Sherina Ong

**Subject:** Kamehameha Schools EIS Draft For Keauhou Bay WILL HAVE NEGATIVE IMPACT!

**Categories:** Yellow Category

To whom it may concern,

Please reject Kamehameha Schools EIS for Keauhou Bay to become a Bungalow Resort. This is a VERY small bay and the added footprint of a 105 room Resort, that will include excess traffic, will have a **serious negative impact** in Keauhou Bay.

Please, Do NOT risk polluting the water in Keauhou Bay by allowing Kamehameha Schools to develop their bungalow resort project. Research has shown that developments pollute nearby waters constantly during development and after.

Developments have ALWAYS polluted the water in every near coastal development area. An article entitled, "What is the biggest source of pollution in the ocean?" by NOAA, National Oceanic and Atmospheric Administration, states, "When large tracts of land are plowed, the exposed soil can erode during rainstorms. Much of this runoff flows to the sea, carrying with it agricultural fertilizers and pesticides." It also states, "Eighty percent of pollution to the marine environment comes from the land. One of the biggest sources is called, nonpoint source pollution, which occurs as a result of runoff."

The trees you want to take down keep the runoff pollution from the golf course from going into the Bay. According to the National Library of Medicine, in their article, "Putting the Earth in Play: Environmental Awareness and Sports," shares that the golf industry uses **approximately 50 pesticide active ingredients**, including chlorpyrifos—an insecticide that is banned for residential use by the EPA due to developmental hazards. These pollutions and more are **being held off** from running into the Bay by the very trees you want to take down.

Let's not forget the marine life that will be threatened by excess pollution and traffic. Keauhou Bay is the monk seals and the green sea turtle's habitat. More pollution and people will endangered these species.

This Bay is worth protecting. Please do not put a resort in such a small area. Future generations will be deprived of what it currently is, and it could never be replaced.

Kind Regards,  
Koohan Paik-Mander

## Johanne Parker

I walk down to and through the Bay by the Canoe Club every day. I believe that it needs serious clean-up, restructuring of the parking, congestion and some enhancements. I do NOT believe more housing is needed in this area... that will simply add to the congestion, pollution and disruption to this lovely area.

It's wonderful to have a place that does NOT feel like a resort. It does however need care. Perhaps Kamehameha Schools should focus on caring for what it already has, instead of creating what we don't need.  
Thank you.

## Stuart Parker

Another development in this special area will only serve to enrich developers and Kamehameha Schools' pocketbooks...there is nothing in this proposal that benefits those of us who live here. I walk and use the bay every day and what strikes me as odd is the lack of care and respect for the area by the owner...Kamehameha Schools. Do something about the parking lot, the toxic trash can in the boat parking area, but don't give us more STVR/vacation rentals - ENOUGH VACATION RENTALS. Use your \$14Billion in assets for educating the locals and give them a chance at a better life - not one working in hospitality you want to build! Keep Keauhou Bay old-school.

## Kaleolani Pasciuta

My sister Leiola August wrote an amazing comment that I am attaching below as our ohana stands united.

"I was fortunate enough to be born as the granddaughter to a very special wahine. Tutu or aunty Lily Kong who was the last person to be born and raised in Keaou Bay. She dedicated her life to the preservation of the bay and through her I learned about our cultural heritage as Hawaiians and the rich history and culture of Keaou Bay.

There is no place that still exists like Keaou Bay. Having been the birth site and home site to many of our ali'i signifies its importance to Hawaiian culture and indigenous people. Its ability to self-sustain its population and those of neighboring ahupua'a through recent history makes this a very special place that could be lost if KS chose to develop the property to its full capacity of 700+ units vs the 150 units it proposes.

Contrary to what some people have recently said of my grandmother, she was not against development. She was against certain developments and development in ways that did not properly care for the land, preserve cultural and historical sites and displaced indigenous people. She knew, with no modern industry other than tourism, that development was inevitable in Kona. Without development such as all the condos, hotels and vacation rentals that surround Keaou Bay where would people who wanted to vacation here stay? Where would people who wanted to move here live? Without the economic contributions of those people how would future generations live in this modern, technological society?

She knew that in order for the following generations to thrive in a modern world that new skills through education would be required, but how are indigenous keiki going to be educated? How would they obtain the skills and resources to make a life among outsiders who had more economic and educational resources than we had here? Our princess Pauahi, through her schools and education programs are one of the few ways keiki would be able to learn those skills. She understood, and I currently live, the complex and complicated dichotomy of preserving our 'aina and culture while living in a modern world.

I'd like to make it clear that my preference is to see no further development in the bay and to actually remove certain features such as the seawalls that cover the beach and the restroom at Kailiinehe that covers the spring and stop all commercial activity in the bay so the bay can return to its natural state. However, I also know that some of this is not realistic and therefore appreciate a private landowner who is willing to work with the community to ensure the property is developed with community involvement and with as much integrity as possible.

Volume I section 6.1 states: "Without comprehensive improvements, the Kamehameha Schools-owned properties would remain underutilized and underperforming financially".

It might be helpful for those who oppose this development to understand that KS and the trustees are bound by the trust to financially increase the endowment for our lahui. I welcome those opposed to this development and KS to think outside the box and offer another avenue for these lands that

will achieve the desired financial benchmark other than a commercial and resort development. Those opposed, please understand that without meeting this financial benchmark or offering some other source of educational or financial support, you are continuing to displace indigenous Hawaiians and taking away from our lahui.

Regarding the "underutilized" portion of the above statement I do feel as though we should leave some of these areas as just that. Not utilized at all. I do believe and appreciate that our cultural sites are to be preserved with this new plan, but want to ensure that KS recognizes and understands that there is increasing sensitivity amongst indigenous Hawaiians as to not market our culture for financial gain or for our culture to be on display as a novelty. As a suggestion, let the families or those organizations that bear the responsibility of maintaining those sites or take ownership of the cultural significance of those sites, the freedom to choose who, how and if those sites, customs and history shall be shared.

Pollution - My tutu always spoke about the pollution and overuse of the bay. I do see that there is a plan to connect current and future facilities to the He'eia sewer system. Also, implementing water runoff solutions to eliminate further pollution of the bay will be imperative.

Commercial & Recreational Tenant Selection - I would like to see more clarity on the criteria for use and tenant selection in commercial and recreational spaces. Priority should be given to tenants who have a low impact on the bay and are inclusive of indigenous customers/participants, rather than those with a high impact and culturally exclusive practices. The same low impact and culturally inclusive criteria should be applied to recreational tenants, favoring those who are sensitive to cultural considerations over those who are high impact and exclusive.

Volume I section 3.1.5 paragraph 4 talks of the the Kau cemetery, which was where my great grandfather and other family members along with other families that inhabited the bay were laid to rest. Also, volume II page 112 and 113 notes that Ilina (burial sites) and 'Iwi (bones) should be left in place. I appreciated Malay and Malay's recommendation to follow my kupuna's wishes to leave any Ilina and 'Iwi in place. However, even though my family's Ilina located mauka of the current volleyball court and mauka of the old Kona road has since been bulldozed by Mr. Post from Texas to build his golf course and our ohana's 'Iwi has since, without our approval, been relocated. My immediate ohana and I wish that the Ilina Kau to no longer be used as a golf course and to be further left alone. It does seem that figure 3-34 and figure 3-35 honors those wishes and that no further development would take place in that area.

In case I was not clear before, the restrooms/comfort station at Kailiinehe beach must be relocated to allow for the spring can flow.

Furthermore, to any party who is using my ohana's mo'olele for commercial or monetary advancement or to further advance your position we ask you to stop. My tutu willingly and freely shared her mo'olele and mana'o so it would not be lost, but that does not mean that permission was granted to be used in connection with individual gain. Her mo'olele and her mana'o live through us, her living descendants.

I'd like to commend KS on its willingness to listen to and include community and kupu'aina involvement as this is only the second time (that I am aware of) a landowner in the bay has sought out the opinion of those with interests in the bay. We mahalo you for including us and ask that our

ohana continue to be consulted as the progress of this project."

**From:** Belinda Pate <[REDACTED]>  
**Sent:** Sunday, July 28, 2024 5:40 PM  
**To:** 221053-01 KS Keaouhou Entitlements  
**Subject:** Opposition to Keaouhou Bay  
**Categories:** Green Category

Aloha, as a concerned citizen, I expect the authorities to protect our delicate ecosystem. I am appalled that I am in the position to have to defend our land.

Please read the scientific proof in this letter and **REJECT** Kamehameha Schools Environment Impact Statement (EIS) for Keaouhou Bay to become a Bungalow Resort.

Please state in your report that a Bungalow Resort **WILL** have a **SERIOUS NEGATIVE IMPACT** on Keaouhou Bay as stated in all the different researched articles below.

Please, **DO NOT** risk polluting the water in Keaouhou Bay by allowing Kamehameha Schools to develop their bungalow resort project. It is **scientifically proven** that developments pollute nearby waters both **during and after development**.

Below are scientific articles written by the National Oceanic and Atmospheric Administration (NOAA), Global Coral Reef Alliance, Hawaii Government, and many other professional organizations, that have studied and shown that developments have **ALWAYS** polluted the water in **EVERY** coastal development area.

Does this EIS (Environmental Impact Statement) have any kind of reports and studies on how the endangered species and marine life will handle the extra pollution due to development, and the golf course runoff? Keaouhou Bay is their habitat and this development **WILL be CHANGING an Entire Ecosystem**.

#### **ENDANGERED SPECIES CONSERVATION IMPACTED BY DEVELOPMENT**

In the Endangered Species Act of 1973 Under Section 2 (b), "To provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved." This would be Keaouhou Bay.

The Green Sea Turtle swims in Keaouhou Bay weekly and the monk seal has also been seen swimming and resting in Keaouhou Bay. Both of these marine animals are on the endangered species list.

### **Endangered Species Act**

"Section 2. Findings, Purposes, and Policy

(4) the United States has pledged itself as a sovereign state in the international community to conserve to the extent practicable the various species of fish or wildlife and plants facing extinction, pursuant to—

(b) PURPOSES.—The purposes of this Act are to provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved, to provide a program for the conservation of such endangered species and threatened species, and to take such steps as may be appropriate to achieve the purposes of the treaties and conventions set forth in subsection (a) of this section."

This was taken from <https://www.fisheries.noaa.gov/national/endangered-species-conservation/endangered-species-ac>

### **FEDERALLY PROTECTED GREEN SEA TURTLES WILL BE AFFECTED**

The green sea turtle is federally protected and can be seen in Keauhou Bay weekly.

The following article states: "**POLLUTED RUNOFF IN HAWAII ENDANGERS GREEN SEA TURTLES**"

#### **Why does Hawaii have a runoff problem?**

Historically, in the tropics of Hawaii, precipitation was absorbed into the soil, according to the Clean Water Branch of Hawaii's Department of Health. Any potential pollution or contaminants on the ground surface would get pushed into the soil by the rain, and plant roots and microbes would help break down the pollution into less dangerous components. However, with urban and agricultural development, less and less of the pollution gets pulled into the soil, and more of it gets washed out into storm drains. From there, the pollutants make their way to streams, rivers and the ocean that surrounds Hawaii. According to the state agency, most of these contaminants are nutrients from fertilizer, bacteria from animal waste, oil, garbage and yard waste...

If polluted runoff reaches the ocean, it can wreak havoc on marine life, including endangered green sea turtles." Taken from <https://www.chemservice.com/news/polluted-runoff-in-hawaii-endangers-green-sea-turtles/>

**Allowing this development WILL POLLUTE Keauhou Bay.** The above article, written in 2014 (because runoff water from developments were polluting the ocean even then!!)

states this fact clearly. Keauhou Bay is home to countless sea creatures such as the protected green sea turtle, spotted eagle rays, manta rays, octopus, dolphins, fish, coral, monk seals, and more and that will ALL be harmed by the severe pollution runoff that WILL happen **because developments have been shown to ALWAYS pollute the water is that is nearby.**

The Green Sea Turtle is protected by more than one law. "All sea turtles in Hawai'i are protected by the [Endangered Species Act \(ESA\)](#) and additionally protected by [Hawaii Revised Statutes Chapter 195D \(HRS\)](#) and [Hawaii Administrative Rules \(HAR\) 13-124.](#)" This information was taken from this site <https://dlnr.hawaii.gov/dar/species/sea-turtles/>

### **THE ENDANGERED MONK SEAL WILL BE AFFECTED**

Keauhou Bay is known as a RESTING AREA for the ENDANGERED MONK SEAL. If another resort is allowed to be built, in addition to the pollution, it will also bring a lot more people down to Keauhou Bay. This increases the chances of a resting monk seal being disturbed by humans trying to get close, take "selfie" photos, and being generally uninformed and harmful. Please see article on Selfie Culture and its harmful effects below.

**Has the EIS done any research on what an increased population would do in such a small area, and what will happen to the endangered species that live there? With a significantly increased population their habitat of Keauhou Bay will likely be changed forever.**

This information is from a NOAA Scientist; "**Study shows selfie culture impacts how people behave when posting images of an endangered species on social media. There's a seal on the beach! Let's go get a 'selfie'!**" That must have been what nearly 18 percent of people on Instagram thought before approaching an endangered species.

In [a recent study](#), NOAA scientists used social media to monitor human activities around endangered [Hawaiian monk seals](#). They discovered that human disturbance is more common than they thought. "<https://www.fisheries.noaa.gov/feature-story/endangered-hawaiian-monk-seals-cry-foul-over-selfies>

NOAA clearly states a high population in a place where monk seals and sea turtles habitat can be a serious disturbance for these endangered species.

"Hawaiian monk seals are protected federally by the ESA and the [Marine Mammal Protection Act \(MMPA\)](#), as well as locally by Hawai'i Revised Statutes (HRS) [Chapter 195D](#) and Hawai'i Administrative Rules (HAR) [13-124](#)." This was taken from <https://dlnr.hawaii.gov/dar/hawaiian-monk-seal/>

"The golf industry uses approximately 50 pesticide active ingredients, including chlorpyrifos—an insecticide that is banned for residential use by the EPA due to developmental hazards. Having to trim golf turf to low heights also makes it even more vulnerable to pests, which leads to more pesticide use." <https://rainorshinegolf.com/pages/the-environmental-impact-of-golf-courses>

These pesticides will be in the pollution runoff that will enter Keauhou Bay more severely should the natural habitat of the trees be removed and replaced with pavement. This is unavoidable!

Please read from Wikipedia, "

Most drains have a single large exit at their point of discharge (often covered by a [grating](#)) into a canal, river, lake, [reservoir](#), sea or ocean. Other than catch basins, typically there are no treatment facilities in the piping system." [https://en.wikipedia.org/wiki/Storm\\_drain#:~:text=Most%20drains%20have%20a%20single,discharge%20into%20individual%20dry%20wells](https://en.wikipedia.org/wiki/Storm_drain#:~:text=Most%20drains%20have%20a%20single,discharge%20into%20individual%20dry%20wells)

The pavement from this development will cause pollution to runoff into Keauhou Bay because this treed land that will become a housing development is situated directly between the golf course and the Bay. These trees, which absorb all the pollution from the golf course is the BEST AND ONLY PROTECTION POLLUTION FILTER Keauhou Bay has from the golf course pesticides, fertilizer and weed killer. See the below paragraph for further references.

See page 2 at: <https://health.hawaii.gov/epo/files/2013/09/Stormwater-MS4-Presentation-HEE-7.15.14.pdf> where **the Hawaii'i government states that Natural**

**Ground Cover has 10% runoff, where the Hawaii'i government has 55% runoff. So, even if you have storm drains the pavement this development will create will cause more runoff into Keauhou Bay than the Natural Ground Cover that is has now, that has been protecting the bay from golf course pollution for years.**

**These trees and land are saving monk seals and green sea turtles habitat from the golf course pollution and this land MUST BE PRESERVED and CONSERVED as the natural protector for Keauhou Bay and for these endangered species habitat.**

Under Section 2 (b) of the Endangered Species Act -- **Keauhou Bay MUST BECOME A CONSERVATION AREA for these endangered species.** It is currently their habitat, and to allow a large resort development to be built above this bay clearly threatens the lives of these endangered species by allowing golf course toxic pollution and development pollution to run into these species natural habitat of Keauhou Bay.

**ALGAE BLOOMS KILL CORAL AND MARINE LIFE**

**Keauhou Bay is the monk seals and the green sea turtle's habitat.** Allowing a bungalow resort to be developed in Keauhou Bay, the habitat of these endangered species, is to threaten their life and habitat with golf course runoff pollution, as well as development pollution. **By threatening their habitat, and hence their lives, this development goes completely against the Endangered Species Act of 1973.**

The verbiage in the Endangered Species Act states, "to conserve". In this case, "to conserve" would be to **protect the land around Keauhou Bay** from developments that destroy the habitat of these endangered species with pollution and runoff.

**Does this EIS have any reports on the endangered species that frequent Keauhou Bay? This is their habitat and it needs to be "conserved".**

Under the **Conservation Program** there should be research done on endangered species and their associated ecosystems. A large bungalow resort development WILL FOREVER CHANGE THIS ECOSYSTEM.

"§195D-5 Conservation programs. (a) The department shall conduct research on indigenous aquatic life, wildlife, and land plants, and on endangered species and their associated ecosystems, and shall utilize the land acquisition and other authority vested in the department to carry out programs for the conservation, management, and protection of such species and their associated ecosystems." [https://www.capitol.hawaii.gov/hrs/current/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hrs/current/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm)

Also, under this same Conservation program, "(2) Taking such action as may be necessary to ensure that actions authorized, funded, or carried out by them do not jeopardize the continued existence of threatened or endangered species." [https://www.capitol.hawaii.gov/hrs/current/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hrs/current/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm)

Please consider that developing a Kamehameha Schools Bungalow Resort in Keauhou Bay WILL threaten endangered species due to the unavoidable development and golf course pollution runoff that would be caused by removing the all the trees that currently serving as a natural pollution filter, and replacing the land with housing, cars, humans, and waste. There would also be tremendous runoff damage into Keauhou Bay and the surrounding area during the building phase of this enormous project.

**GOLF COURSE POLLUTION KILLS MARINE LIFE AND DRASTICALLY CHANGES ECOSYSTEMS**

The trees that are slated to be cleared for the development further protect Keauhou Bay from algae blooms that have been proven to be caused by pollution that is runoff from fertilizer and weed killer.

When there is heavy rain the land above the bay has a greater runoff than normal. Without the trees, the runoff from the golf course pollution will pour into the Bay likely causing frequent algae blooms.

**Algae blooms have been shown to kill coral and marine life as stated in the many articles that will follow.**

One of these articles is from the Global Coral Reef Alliance. They have researched the effects on reefs before and after a golf course development. Though this development is not a golf course development, it is located just below a golf course and exposes the bay to the pollution from the golf course by removing the proven natural filter of the trees and natural ecosystem.

**Has this EIS done any kind of research about the algae blooms that happen after a serious storm because of the golf course runoff pollution?**

This information was taken from Global Coral Reef Alliance and it is an actual study on the how coral and marine life are affected before and after development. It's titled, "Golf courses kill coral reefs and fisheries: harmful algae blooms and disease cause by nutrient runoff from golf course development on Guana Cay, Abaco, Bahamas

Introduction: Bahamas coral reef deterioration

This study is thought the first ever to evaluate the health of coral reef ecosystems and fisheries before and after a golf course development..The vast majority of corals have died from a combination of factors including global warming, new diseases, land-based sources of pollution.. . <https://www.globalcoral.org/golf-courses-kill-coral-reefs-and-fisheries-harmful-algae-blooms-and-disease-caused-by-nutrient-runoff-from-golf-course-development-on-guana-cay-abaco-bahamas/>

If you allow a Bungalow Development in Keauhou Bay you WILL be agreeing to pollute this bay for years to come and COMPLETELY CHANGING and possibly DESTROYING KEAUHOU BAY'S ECOSYSTEM.

Another study by the Coral Reef Alliance titled, "Golf course fertilizer runoff causes nutrient enrichment leading to harmful algae blooms on a Bahamian coral reef.

"...After construction new algae blooms appeared nearest the golf course green, smothering corals in adjacent reefs, along with sharply increased coral

diseases..." <https://www.globalcoral.org/golf-course-fertilizer-runoff-causes-nutrient-enrichment-leading-to-harmful-algae-blooms-on-a-bahamian-coral-reef>

**Does this EIS have any studies or reports on the extra runoff pollution due to clearing land and adding pavement?**

This needs to be fully assessed because you will be changing an entire ecosystem to build a bungalow resort. It rains in Keauhou Bay many nights out of the year and this kind of pollution will kill the beautiful and necessary coral in the Bay.

**FURTHERMORE:** "If there are [toxic algal blooms](https://www.globalcoral.org/golf-course-fertilizer-runoff-causes-nutrient-enrichment-leading-to-harmful-algae-blooms-on-a-bahamian-coral-reef), like red tide, or man-made contaminants, like pesticides or detergents in the water, those toxins are contained within the bubbles of sea foam. When those bubbles pop, the toxins can become airborne and compromise the air that is breathed in that location." <https://oceanconservancy.org/blog/2023/03/31/what-sea-foam/>

## ENGINE POLLUTION CAUSES ISSUES IN THE OCEAN

**Does this EIS have any detailed traffic studies for the increase in cars that will be added to this already severely traffic area they want to build their 150 room bungalow resort in? Have they done any studies on the pollution these cars WILL have in Keauhou Bay?**

Because this Bungalow Resort could have over 150 extra cars and over 300 or more extra people in and out of Keauhou Bay, what traffic and increased population studies have they done? There will be employees with cars, guests with cars, visitors with cars. At times this would range to over 200 cars (likely more), coming in and out of, and parking above Keauhou Bay thereby causing serious car population issues because of all these added cars right next to the bay.

**The article below is from NOAA regarding motor vehicle engines and pollution to the sea.**

What is the biggest source of pollution in the ocean?

Most ocean pollution begins on land.

"Millions of motor vehicle engines drop small amounts of oil each day onto roads and parking lots. Much of this, too, makes its way to the sea.

Some water pollution actually starts as air pollution, which settles into waterways and oceans. Dirt can be a pollutant. Top soil or silt from fields or construction sites can run

off into waterways, harming fish and wildlife habitats." <https://oceanservice.noaa.gov/facts/pollution.html#:~:text=Millions%20of%20motor%20vehicle%20engines.Dirt%20can%20be%20a%20pollutant.>

### **Land-Based Runoff Remains Top Source of Oil in the Ocean, Says New Report Oil in the Sea: Inputs, Fates, and Effects**

News Release September 28, 2022

WASHINGTON — Oil in runoff, primarily from cities and vehicles, is the top source of oil entering the ocean, says a [new report](#) from the National Academies of Sciences, Engineering, and Medicine. In North American waters, estimated ocean oil pollution from land-based runoff is up to 20 times higher than it was 20 years ago, and oil spills, natural oil seeps, and discharge from oil and gas operations remain major sources of pollution. The report recommends actions that government and others should take to minimize oil pollution, and calls for sustained research funding to better understand how oil reaches and affects ocean environments. <https://www.nationalacademies.org/news/2002/05/oil-in-the-sea-inputs-fates-and-effects#:~:text=WASHINGTON%20%2D%2D%20Nearly%2085%20percent.pipeline%20spills%20says%20a%20new>

### **The Impact Of Stormwater – Car Emissions**

"Car emissions are not limited to exhaust fumes that contribute to air pollution. They can also leak automotive fluid and release heavy metals that can contribute to stormwater pollution, contaminating local waterways." <https://www.stormwatershepherds.org.au/blog/the-impact-of-stormwater-car-emissions/>

### **NOISE POLLUTION'S HARMFUL EFFECT ON MARINE LIFE**

#### **Does this EIS have any reports on the noise pollution that will happen and what it could do to marine life in Keauhou Bay during development?**

Because if you allow this Bungalow Resort to be developed you will increase constant noise in this bay for years to come and, "Noise Pollution Research shows that underwater noise from construction, shipping and naval vessels significantly impacts the natural behavior of cetaceans and many other marine species. This can be seen when mass beaching events occur or breeding success is diminished."

The above information was taken from the Ocean Conservation Trust <https://oceanconservationtrust.org/ocean-advocacy/think-ocean/ways-to-think-ocean/>

### **How Does Noise Pollution Harm Marine Species?**

"However, over the past few decades, noise pollution in the marine environment has increased dramatically and is threatening the natural soundscape of the marine environment. Ships, seismic surveys, explosions, construction, and sonar devices have made the once peaceful environment into a loud, chaotic home which is extremely damaging for marine wildlife. This type of pollution is often overlooked in comparison to others but its impacts are now being documented across all types of marine ecosystems." <https://earth.org/noise-pollution-in-the-ocean/>

if you allow this resort the amount of people in this bay will fully increase and, "Hawaii's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally, management of the resource should balance the needs of different user groups, but the welfare of the marine environment on which its inhabitants depend must be the most important consideration." This was taken from Hawaii's own Division of Aquatic Resources <https://dlnr.hawaii.gov/dar/marine-managed-areas/hawaii-marine-life-conservation-districts/#:~:text=Snorkeling%20and%20SCUBA%20diving%20are,effect%20on%20nearshore%20fish%20populations.>

### **What is ocean noise?**

"Ocean noise refers to sounds made by human activities that can interfere with or obscure the ability of marine animals to hear natural sounds in the ocean.

Many marine organisms rely on their ability to hear for their survival. Sound is a highly efficient means of communication underwater and is the primary way that many marine species gather and understand information about their environment. Many aquatic animals use sound to find prey, locate mates and offspring, avoid predators, guide their navigation and locate habitat, as well as to listen and communicate with each other.

Over the last century, human activities such as shipping, recreational boating, and energy exploration have increased along our coasts, offshore, and deep ocean environments. Noise from these activities can travel long distances underwater, leading to increases and changes in ocean noise levels in many coastal and offshore habitats.

These rising noise levels can negatively impact ocean animals and ecosystems. Higher noise levels can reduce the ability of animals to communicate with potential mates, other group members, their offspring, or feeding partners. Noise can also reduce an ocean animal's ability to hear environmental cues that are vital for survival, including those key to avoiding predators, finding food, and navigating to preferred habitats."

<https://oceanservice.noaa.gov/facts/ocean-noise.html>

### **LEARN FROM OTHERS: RUN-OFF FROM DEVELOPMENT KILLS**

The Chesapeake Bay has a foundation that is trying to save their bay due to runoff pollution that was caused by developments. Chesapeake Bay is **a lot bigger** than Keauhou Bay. If it's being drastically hurt by runoff water from developments, Keauhou Bay waters won't stand a chance if development above the bay is allowed. Keauhou Bay is a much smaller ecosystem.

**This Article is by the Chesapeake Bay Foundation, Saving a National Treasure states,** "...runoff is a significant source of harmful nitrogen pollution that continues to grow..."

As rainwater and snowmelt run off our streets, parking lots, lawns, and other surfaces, they pick up pet waste, pesticides, fertilizer, oil, and other contaminants. If the draining water doesn't evaporate or soak into the ground where it can be filtered, it flushes straight into local creeks, rivers, and the Chesapeake Bay, adversely affecting water quality and aquatic life.

Only 10 to 20 percent of rain that falls in forests, fields, and other natural areas runs off, with the rest absorbed by soil and plants, where it is filtered before reaching aquifers or local waterways. (Right now Keauhou Bay has a lot of trees and is very natural, this is what helps stop runoff.) By contrast, close to 100 percent of the rain that falls on concrete and other hard surfaces produces runoff. One inch of rain falling on an acre of hardened surface produces 27,000 gallons of runoff.

Stormwater runoff pollution threatens Chesapeake Bay and its rivers and streams...Polluted runoff is one of the most harmful sources of pollution to the Bay and its waters. And much of it starts right in the urban and suburban neighborhoods where we live." <https://www.cbf.org/issues/polluted-runoff/index.html#:~:text=Besides%20arrying%20pollutants%20that%20harm,them%20are%20placed%20in%20jeopardy.>

If that is what runoff is doing to the Chesapeake Bay, the effects of runoff will be even more devastating to Keauhou Bay due to its size and fragility.

### **MANTA RAY HABITAT, CORAL REEF BLEACHING, & MARINE LIFE ~ THE DEVASTATING EFFECTS OF DEVELOPMENT ON THE OCEAN**

**Are there any reports in this EIS about what the impact to the coral, marine life, plankton especially zooplankton will be because of this development?**

The studies below show that developments kill coral, and marine life. Zooplankton are part of this marine life and they are also killed and negatively affected. Zooplankton are food for manta rays. Manta rays are in Keauhou Bay every night to eat zooplankton, and are often seen here during the day as well.

Allowing this bay developed will also be a death sentence for many types of marine life including planktons. There is NO WAY to stop this from happening due to the fact that polluted runoff rain water from developments can't be fully stopped. This has been shown to happen in ALL coastal developments.

Please read the Scientific articles below.

### **It's Been Proven Developments Severely Pollute Nearby Waters**

Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Coral Bleaching is occurring more frequently in Hawaii. Across the Hawaiian Archipelago, coral bleaching has increased in frequency and severity since 1996. The last major bleaching event in 2014-2015 had catastrophic impacts state-wide..."

This was the third major bleaching episode in Hawaii over the last 6 years. The frequency of these events is unprecedented in the archipelago. NOAA scientists and partners have determined that the key drivers of the bleaching were environmental factors (such as heat stress, depth, and surface light) and human impacts (sewage effluent and urban runoff)." <https://www.fisheries.noaa.gov/feature-story/cautionary-tale-2019-coral-bleaching-event-hawaii#:~:text=Coral%20bleaching%20is%20occurring%20more,hard%20catastrophic%20impacts%20state%20wide.>

**This article is by the Coral Reef Alliance here in Hawaii.** "An ecosystem under threat Hawaii's reefs face major global and local threats including climate change, overfishing, and sediment and nutrient pollution caused by sewage and stormwater runoff..."

When it rains, flash floods carry stormwater and large amounts of sediment downstream to the ocean. Just offshore, once-thriving coral reefs are now struggling to survive." <https://coral.org/en/where-we-work/hawaiian->

Here is another article that shocking shows that in a very short time, big changes can occur due to runoff. A development will hurt and kill plankton, by Frontiers in Marine Science, "Effects of an experimental terrestrial runoff on the components of the plankton food web in a Mediterranean coastal lagoon. The main result observed in the present study was that the effects of the simulated terrestrial runoff spread along the plankton food web, significantly affecting all trophic levels of the natural plankton community studied. **This occurred in a relatively short time considering that the experiment lasted less than three weeks.** The lower light availability in the terrestrial runoff treatment compared to the control resulted in a net decrease of approximately one-third of Chl-a concentration and phytoplankton abundance over the entire experiment." <https://www.frontiersin.org/journals/marine-science/articles/10.3389/fmars.2023.1200757/full>

**The ecosystem is fragile and interconnected as is stated in this article:** "Zooplankton are also affected by levels of pH, heavy metals, calcium, and aluminum. Nutrients like nitrogen and phosphorus will affect the prey of zooplankton (like algae, protozoa and bacteria), indirectly affecting zooplankton survival. Scientists are still putting together pieces of the zooplankton puzzle. Some questions include how nutrient levels found in algae can influence the growth and behavior of zooplankton. Another question important to marine and human life is how toxins and pollution will affect this crucial link in the food chain" This information is in article by MarineBIO.

<https://www.marinebio.org/creatures/zooplankton/#:~:text=Zooplankton%20are%20also%20sensitive%20to,light%2C%20and%20increases%20in%20predation.>

A research article by Environmental Research Laboratory, United States Environmental Protection Agency that discusses, "**Toxic Effects of Pollutants on Plankton: There are four main sources of aquatic pollution: industrial wastes, municipal wastes, agricultural run-off, and accidental spillage.** Non-point sources, such as automobile exhausts, add appreciable amounts of pollutants to air that may enter aquatic systems in rainfall or dry fall-out. These sources add pesticides, heavy metals, oil, petroleum products, and a large number of organic and inorganic compounds to water. Lakes and oceans serve as sinks for many pollutants. Plankton comprise a large portion of the living matter in natural waters and function in biogeochemical cycles. They are affected by pollutants, transfer them to sediments and other organisms, and function in their biological transformation."

[https://scope.dge.carnegiescience.edu/SCOPE\\_12/SCOPE\\_12\\_3.6\\_chapter12\\_257-274.pdf](https://scope.dge.carnegiescience.edu/SCOPE_12/SCOPE_12_3.6_chapter12_257-274.pdf)

All the above articles show that development of Keauhou Bay WILL hurt plankton life and marine life in the bay because pollutant runoff is inevitable and unavoidable during construction and afterwards. The manta ray food source will likely disappear. This will be devastating for the manta ray populations. Furthermore, if manta rays die or leave the area,

the loss will in turn affect many lively hoods from locals on the island who depend on the manta ray tour for their income.

## HUMAN POPULATION INCREASES LINKED DIRECTLY TO CORAL DEATH

**Does this EIS have any reports on their resort adding to the population increase that happens during IRONMAN?**

"On average, each Ironman racer brings three people with them to the Big Island. Counting members of the media, VIPs who come from around the globe to watch and the triathlons partners, there likely be more than 6,300 people descending on Kona..." <https://bigislandnow.com/2023/10/07/ironman-2023-in-kona-shines-spotlight-on-some-of-best-women-triathletes-in-the-world/>

And "Resident dissatisfaction with tourists is multifaceted: **The overwhelming majority (92%) of locals felt visitors were not educated enough on protecting Hawaii's natural environment and local resources; other factors include the impact of the vacation rental industry and ignorance of the residents' quality of life.**" <https://www.triathlete.com/culture/news/kona-locals-ask-ironman-visitors-for-respect/>

**Where are the EIS reports on human density? Below are reports that show human population destroys coral reefs.**

"The number of people living on the coasts has rapidly increased in recent decades, causing significant development of coastal areas. Coastal development can negatively impact the ocean through the destruction of coastal marine habitat and through run-off of sediments and pollution.

-Coastal development involves activities such as the creation of harbors, stabilization of shorelines, and aquaculture that involve the destruction of sensitive marine habitats such as mangroves, coral reefs, and seagrass beds.

-Coastal development may cause the run-off of sediments into coastal habitats, which can smother corals or seaweeds and reduce the amount of light available for photosynthesis. Losses of primary producers and important habitat-forming species such as corals can negatively impact entire food webs."

The above information was taken from the Education Development Center, INC, from their Coastal Development page called Ocean Tracks <https://oceantracks.org/library/human-impacts/coastal>

"Hotel waste management refers to all the practices and processes that hotels implement to handle and dispose of the multiple types of waste generated on their premises. **Worldwide, hotels produce almost 300,000 tonnes of waste each year.**" <https://www.homebiogas.com/blog/hotels-waste-management/>

As of now, the Big Island's Resources and Infrastructure are having serious negative issues and many more developments that have been approved are not even completed as of yet, which means our island's resources and infrastructure will be taxed even more severely in the near future.

Please read the below articles that prove Big Island does not have the resources or infrastructure for a 143-Unit Bungalow Resort Development at Keaouhou Bay. On Hawaii's Island, we are already struggling to meet the increasing need for resources and infrastructure.

#### **Big Island Now poll No. 27 results: More than one solution needed to help extend life of West Hawai'i landfill**

September 17, 2023

The West Hawai'i Sanitary Landfill, the only remaining landfill on the Big Island, is forecast to reach capacity within the next 20 to 25 years.

The West Hawai'i landfill became the island's only one after the Hilo Landfill closed three years ago. It only has about 20 to 25 years left before it can no longer be used to store rubbish.

<https://bigislandnow.com/2023/09/17/big-island-now-poll-no-27-results-more-than-one-solution-needed-to-help-extend-life-of-west-hawaii-landfill/>

#### **A County commission drafts ordinance aiming to ban recyclables at West Hawai'i landfill**

By [Megan Moseley](#) September 6, 2023

Hawai'i County's Environmental Management Commission is developing an ordinance that aims to prohibit the amount of recyclable materials ending up in the island's only working landfill.

During a commission meeting on July 26, Ramzi Mansour, Hawai'i County Director of Environmental Management, told commissioners the West Hawai'i Sanitary Landfill only has 20 to 25 years left before it reaches capacity.

With the Hilo Landfill permanently closed in 2020, the clock is ticking for the island's sole dump. Commission chairperson Georjean Adams said it's a good time to start looking into solutions.

Adams said the proposed ordinance is in its early stages and is more about getting the conversation started about how to prevent unnecessary, or recyclable items — green waste, metals, plastics, paper, paperboard and glass — from ending up in the rubbish dump, located off Queen Kā'ahumanu Highway in Waikōloa.

"Trying to site a new landfill is close to impossible," Adams said. "So what are we going to do? So I was looking around, and the commission agreed, to look deeply into the idea of diverting the recyclables out and at least slow the filling up of the landfill."

The proposed ordinance refers to the 2019 Integrated Solid Waste Management Plan that commits the county to "divert, as much as feasible, commercial and municipal solid waste, including but not limited to green waste, metals, plastics, paper, paperboard, and glass to help achieve goals related to climate resiliency, renewable energy, sustainable agriculture, and zero waste."

<https://bigislandnow.com/2023/09/06/new-draft-ordinance-aims-to-ban-recyclables-at-west-hawaii-landfill/>

#### **Time's Up For Landfills**

'Gentle' demolition strategies can help preserve resources

PAULA BENDER April 2, 2024

As Hawai'i government officials grapple with the challenge of limited landfill space statewide, federal restrictions set in place by the Environmental Protection Agency are ruling out possible locations that were once considered for new landfills.

Hawaii Act 73 states landfills must be located at least half a mile from residential areas; are prohibited from being located in areas with heavy rain and steep slopes, as well as agricultural and/or conservation lands; above aquifers; 300 feet beyond streams; and 1,000 feet beyond the ocean.

New landfills are also now prohibited from being created in tsunami inundation zones, 100-year flood zones and wetlands. There are also concerns that landfills near airports will attract birds, resulting in damage to aircraft and fatalities among pilots and passengers.

The City & County of Honolulu is in the process of identifying its next landfill and it doesn't want one any bigger or more active than absolutely necessary.

<https://buildingindustryhawaii.com/2024/04/times-up-for-landfills/>

### **Drought Conditions On Hawai'i Island Prompt Water Supply Message**

by Big Island Video News  
on Oct 5, 2023 at 3:59 pm

(BIVN) – With moderate to severe drought conditions being reported across Hawai'i island, local water department officials issued a statement this week on the need for customers to use drinking water wisely.

Most of Hawai'i island is under "Moderate Drought" conditions, according to the latest information from the [U.S. Drought Monitor](#). There is an area under "Abnormally Dry" conditions in South Kona, however there are other, small pockets on the Big Island that are under "Severe Drought". There is even a small spot of "Extreme Drought" in the South Point area of Ka'u.

"The National Weather Service's forecast calls for the existing drought conditions to expand over the entire island and intensify over the upcoming months due to the ongoing El Niño event," reported the Hawai'i County Department of Water Supply. "Peak dryness is expected to occur from around January through February 2024. The El Niño event will likely persist well into spring 2024."

### **From a Water Supply news release:**

<https://www.bigislandvideonews.com/2023/10/05/drought-conditions-on-hawai%CA%BB-island-prompt-water-supply-message/>

[U.S.](#)

### **Hawaii is "on the verge of a greater catastrophe," locals say, as water crisis continues**

By [Li Cohen](#)

Updated on: April 11, 2024 / 8:23 AM EDT / CBS News

And recent years have seen compounding problems: less rain, leading to [significant droughts](#), and repeated jet fuel leaks and PFAS chemical spills contaminating water systems. All of this significantly limits available water use for locals, many of whom say tourism is only worsening the situation. Just months ago, the [world's largest surfing wave pool](#) opened up on the island — filled with freshwater.

"They're not using it to drink or to support life, they're using it to make money. They're commodifying it," said Healani Sonoda-Pale, who is Native Hawaiian and a member of advocacy group O'ahu Water Protectors. "... We are on the verge of a greater catastrophe."

"**We are in a water crisis, that has to be made very clear,**" Wayne Tanaka, director of Sierra Club of Hawai'i, told CBS News, saying that if the reasons for this crisis aren't soon addressed, "We may come to a point where we have to decide ... who gets water and who doesn't."

<https://www.cbsnews.com/news/hawaii-water-crisis-climate-change/>

Because this is an island, parts need to be shipped. The power plant currently has generators that are not working, and because of this (and other reasons), the Big Island needs to seriously conserve power so that everyone will have power. If this problem of shipping parts can happen once, it can and will happen again.

### **UPDATE: HELCO asks for continued energy conservation**

BY SPECTRUM NEWS STAFF HAWAII ISLAND

UPDATED 6:28 PM ET APR. 16, 2024 PUBLISHED 9:05 AM ET APR. 15, 2024

HILO, Hawaii — Hawaiian Electric continues to urge Hawaii Island customers to reduce their electricity use to prevent the need for rolling outages.

In a news release Tuesday afternoon, the utility stated that Monday saw a reduced demand of approximately 5 megawatts. That, combined with increased wind and solar battery storage prevented the need for rolling blackouts on Monday. HELCO credited conservation efforts, particularly those by large businesses and government customers, for the reduction in electricity demand.

"We're grateful for our customers' efforts to conserve electricity, especially between 5 to 9 p.m., when electricity use is highest, because it does make a difference," said Hawaiian Electric spokesperson Kristen Okinaka. "By working together, we're helping to ensure that enough power can be available for all customers and prevent or minimize the impacts of rolling outages."

**Hawaiian Electric announced Monday afternoon that it may initiate rolling outages in parts of Hawaii Island because of the unavailability of several generators and lower than normal wind and solar resources.**

In a news release, the utility said that outages could start as early as 6:30 p.m. and rotate around the island for 30-minute intervals. The impacted areas and the timing of the outages will be based on wind generation and the amount of electric demand that needs to be reduced. Individuals who are dependent on electrically powered life support medical equipment are advised to arrange for a backup power supply.

The outages are being done to prevent power loss to even more customers, who are all being asked to conserve electricity throughout the month.

<https://spectrumlocalnews.com/hi/hawaii/news/2024/04/15/heco-customers-on-hawaii-island-asked-to-conserve-power->

### **Big power supply problems continue to plague Hawaii Island**

Apr 8, 2024

The company has been facing an unusual situation with mechanical problems at three of the island's five largest power plants while part of the largest plant undergoes an annual overhaul. All four of these affected power plants are owned by the utility or an affiliate of its parent company.

Also contributing to the trouble is lower output from a geothermal plant, which has the third-largest generation capacity on the island and is owned by an independent operator.

"This is an unusual situation, driven mainly by the unavailability of several large generators that have experienced mechanical problems, are at reduced output, or are undergoing maintenance," Hawaiian Electric said in its March 25 announcement asking customers to use less electricity, especially on weekdays from 5 to 9 p.m.

**The company explained that it faces an "extremely tight" supply of power at peak use periods**, especially when production from wind, solar and hydroelectric facilities is lower than normal. Those sources of variable, renewable energy can supply up to 15% of electricity needs on the island.

"Without enough supply to meet electricity demand, the company may initiate rolling outages of up to an hour around the island," the March 25 announcement said.

<https://energycentral.com/news/big-power-supply-problems-continue-plague-hawaii-island>

### **Hawaii Island customers urged to reduce electricity use through April**

BY SARAH YAMANAKA HILO PUBLISHED 9:00 AM ET MAR. 26, 2024

What You Need To Know

-Hawaii Island customers may see alerts asking them to conserve energy, especially on days when there isn't much wind that generates up to 15% of electricity

-When alerts are issued, Hawaiian Electric is asking customers to take immediate action to minimize electricity use

-Even when no alerts are issued, customers — including hotels and large retailers — are urged to reduce electricity use as much as possible, especially between 5 and 9 p.m. on weekdays

**-If there is not enough electricity to meet demand**, Hawaiian Electric may initiate rolling outages of up to an hour around the island

<https://spectrumlocalnews.com/hi/hawaii/news/2024/03/25/hawaii-island-customers-urged-to-reduce-electricity-use-through-april>

### **FURTHERMORE: TRAFFIC, LACK OF RESOURCES, AND FATALITIES**

#### **A Resort Development Will Increase Traffic on Already Severely Trafficked Roads. Are there traffic study reports for this EIS?**

A development with 150 rooms comes with over 150+ cars. Employees, guests, and visitors will all have cars, plus the regular locals who go there to paddle and enjoy the bay. All this could range in over 300 cars a day because of this resort development.

The Big Island already has a serious traffic issue due to a lack of infrastructure. This is in part due to poor planning, and in part due to geography challenges.

The articles below by different NEWS companies highlight the point that many traffic issues stem from lack of infrastructure and resources. Adding more cars to the road by building another resort in an area that is already stressed, will only increase the already mounting problems with traffic.

This NEWS article by Hawai'i News Now, "Report shows alarming surge in Hawaii Island traffic deaths The Hawaii Police Department's Traffic Services Section released a new

report showing a dramatic increase in both major crashes and fatal accidents from last year.

The startling statistics show a dramatic increase in the number of year-over-year traffic fatalities on the island of Hawaii, revealing major crashes are up more than 12% and traffic fatalities are up more than 100%. "Watch the video on their link below as it is a professional report on Big Island traffic problems. <https://www.hawaiinewsnow.com/2024/05/18/new-report-shows-hawaii-island-traffic-fatalities-are-up-over-100-last-year/>

With more tourists there will be more accidents, more traffic, and more traffic deaths. Please read this article by KHON 2 NEWS, "**Hawaii Island has most traffic fatalities in state**". This time last year Hawaii Island was at five traffic deaths, as of April 1, 2024, they're at 14.

Seven of which happened in the last two weeks.

Chief Moszkowicz said the police force is small compared to the size of the island and response times can take 15 to 20 minutes.

**"We don't have the resources like in the small space of Oahu where you can saturate an area to control speeding, that just doesn't exist here,"** he added." <https://www.khon2.com/local-news/7-traffic-fatalities-for-hawaii-island-in-march/>

**The traffic on Big Island has increased drastically and safety issues and infrastructure needs to be addressed before adding more resort developments.**

Please read this article because what it says about Oahu is a mirror for Big Island. The traffic problems they discuss are the same issues here on Big Island; and it also gives one Big Island example, "On the Big Island, the mayor had to issue an emergency order shutting down Waipio Valley Road due to overuse and poor prior maintenance." This is happening all over Big Island. <https://www.civilbeat.org/2024/02/angry-over-island-traffic-jams-lets-talk-about-solutions/>

The news video below shows aerial footage in Hilo. The footage shown is the same thing that is happening on Alii Drive and Queen K Highway, and for all the same reasons: **All of these roads only have two lanes!**

There are two developments already on Alii Drive being built as of today; and more are scheduled for this road in the near future. Alii Drive and Queen K Highway are the roads Kamehameha Schools Bungalow Resort will be using if approved, and they are already seriously congested.

These roads have the exact same traffic congestion as Hilo, with the exact same problems. Traffic is extremely slow because of so many people who now live here and all the visitors that come yearly.

In addition, the concern on Kona side is tsunami evacuations rather than lava evacuations. In this kind of traffic, not everyone will be able to get to safer ground, especially if you allow another resort to be developed in this area when traffic is already at a crawl every weekday and often on weekends as well.

Here is the news article by KITV NEWS that highlights the traffic issues discussed above: "Hawaii Island traffic jams could have safety impact. In the event of an evacuation, Mayor Mitch Roth acknowledges that will make the Traffic Jam up even worse. But says, he is working with The State on a solution." [https://www.kitv.com/news/local/hawaii-island-traffic-jams-could-have-safety-impact/article\\_b06a5374-5a6a-11ed-8d23-8313ef8c4c19.html](https://www.kitv.com/news/local/hawaii-island-traffic-jams-could-have-safety-impact/article_b06a5374-5a6a-11ed-8d23-8313ef8c4c19.html)

There was a crash recently on Alii Drive (see video below). When there is an accident on Alii Drive, it turns the already small two-lane road into only one lane that requires a flagger to help direct traffic. Kamehameha Schools wants to add a resort on this tiny road that will increase the traffic by hundreds of cars.

Here is the Island News video on the crash on Alii Dr. <https://www.youtube.com/watch?v=FQSnPDjI8>

**Please see from these articles that traffic on Big Island is deadly already and adding another resort will be devastating to the island.**

**Read this Path article, HAWAII COUNTY'S VISION ZERO INITIATIVE:**

A motorcyclist is in critical condition after a collision with a car. A driver accidentally hits and kills a pedestrian. It seems that not a day goes by without the news reporting on a traffic crash on Hawaii's Island...

Here are some other statistics that are even more staggering:

-28% of roadside crashes were the result of someone leaving the roadway and going into barriers or trees

-13% of pedestrians hit at 20 mph actually suffer fatality

-73% of pedestrians hit at 40 mph suffer fatality

-25% of fatal crashes were the result of distracted driving... So PLEASE put those cell phones away and pay attention to the road!

-56% of fatal crashes were the result of alcohol or drugs

-41% of fatal crashes occurred in light trucks and vans

-49% of crashes occur during the day, outside of peak traffic hours

-Of all the crash fatalities, most were males between 20 to 24-years old.

**“That’s just Big Island traffic,”** is a common sentiment. But what if we didn’t have to accept this endangerment of vehicle drivers, motorcyclists, and pedestrians as a way of life?”

This was taken from Path <https://pathhawaii.org/hawaii-countys-vision-zero-initiative/>

#### **MORE ARTICLES HIGHLIGHTING INFRASTRUCTURE AND RESOURCE DEFICITS, INCLUDING WATER, TRASH, ELECTRIC and WASTEWATER:**

##### **1) Hawaii Deals with Burgeoning Waste Management Problem**

As landfills face closure and waste-to-energy projects stall, various counties in Hawaii are dealing with waste management issues. Waste360 Staff January 10, 2020

“Hawaii Island is in the enviable position of having a landfill with anywhere from 20 to 100 years of capacity left to take in trash. But the island still wrestles with significant issues like plastic products that are no longer being recycled.” <https://www.waste360.com/landfill/hawaii-deals-with-burgeoning-waste-management-problem>

**2) “Big Island Now readers seem to agree that there’s likely no single solution for slowing down the timeline of the West Hawai’i Sanitary Landfill reaching capacity.**

The West Hawai’i Sanitary Landfill, the only remaining landfill on the Big Island, is forecast to reach capacity within the next 20 to 25 years.” <https://bigislandnow.com/2023/09/17/big-island-now-poll-no-27-results-more-than-one-solution-needed-to-help-extend-life-of-west-hawaii-landfill/>

**16) US Hawaii is "on the verge of a greater catastrophe"**, locals say, as water crisis continues

By Li Cohen

Updated on: April 11, 2024 / 8:23 AM EDT / CBS News

In Hawaii, one of the most important sayings is *ola i ka wai*, "water is life" — a phrase that not only sums up what it means to exist on an island, but what it means to live, period. But now, one of the largest of the island chain's land masses is facing a triple threat to its sole freshwater source, and if it isn't addressed soon, one community member says, "We're in deep trouble."

<https://www.cbsnews.com/news/hawaii-water-crisis-climate-change/>

17) News Hawai'i County issues mandatory 25% water restriction for North Kona August 7, 2023 · 5:21 PM HS

A mandatory 25% water restriction has been issued for various communities in North Kona due to the failure of the Honokōhau Deepwell over the weekend.

**18) Hawai'i Water Supply Closely Monitored As Severe Drought** Continues

by Big Island Video News  
on Nov 6, 2023 at 3:28 pm

(BIVN) – With an ongoing drought on the island of Hawai'i, the Hawai'i County Department of Water Supply says it is closely monitoring its 23 public water systems, with a "special focus" placed on the South Kohala Water System.

<https://www.bigislandvideonews.com/2023/11/06/water-supply-closely-monitored-as-hawaii-CA%BB-i-under-severe-drought/>

This is a map of Power Outages on the Big Island. This map wouldn't have been created if Power Outages were not a problem. <https://www.hawaiianelectric.com/safety-and-outages/power-outages/hawaii-island-outage-map>

Please, give Tax Breaks to all homes that provide solar and/or wind turbine to there homes to help with power issues on the island.

**19) "Hawaiian Electric is reporting that several large generators on the Big Island are experiencing a range of issues and may lead to the need for rolling outages if supply does not meet demand."**

[https://www.reddit.com/r/BigIsland/comments/1bnuar3/hawaiian\\_electric\\_is\\_reporting\\_that\\_several\\_large/](https://www.reddit.com/r/BigIsland/comments/1bnuar3/hawaiian_electric_is_reporting_that_several_large/)

**20) "Hawaiian Electric asking Big Island customers to conserve power due to down generators**

March 25, 2024 · 11:49 AM HST

According to the utility company, this is an usual situation as the large generators are experiencing mechanical problems resulting in a reduced output. The largest generator, an independent power producer that sells electricity to Hawaiian Electric, is offline with significant mechanical issues.

The plant generates 60 megawatts or nearly one-third of the typical peak demand of 180 megawatts on the island."

<https://bigislandnow.com/2024/03/25/hawaiian-electric-asking-big-island-customers-to-conserve-power-due-to-down-generators/>

All the articles above show that a resort development will further deplete and stress resources and infrastructure on an island already struggling. There are years of new development that have already been approved but not completed. It is not responsible or prudent to continue to develop this resort under these current conditions.

## **HISTORICAL AND CULTURAL SIGNIFICANCE:**

### **The Law of the Splintered Paddle**

Hawaiian history tells us that young Kamehameha was once an aggressive chief. The story goes that the young chief even chased after two fishermen in a Puna fishing village. While pursuing them, his foot got stuck in a crevice, and one of the fishermen struck Kamehameha over the head with his paddle in defense, which splintered into pieces.

After the incident, Kamehameha recognized that it was wrong to misuse his power and learned compassion. Years later, Kamehameha declared a new law "Ke Kānāwai Māmalahoe" or "the Law of the Splintered Paddle." Meant to protect the innocent and vulnerable from unprovoked attacks, this law proclaimed that the defenseless, especially kupuna and keiki, be able to sleep safely on the side of the road, unharmed.

The law provided for the safety of non-warriors during wartime and became the first written law of the Kingdom of Hawai'i. After being added back in 1978, **the law is part of Hawaii's State Constitution today.**

It is symbolic of servant leadership, reinforcing the importance of:

- Caring for and serving one's people
- Knowing and doing what is pono (right)
- Standing for the principle that leadership privilege is earned
- Taking kuleana (responsibility) for those we serve
- Doing so with compassion, love, and respect

**"We take that to mean that anyone who uses our roadways should be able to do so without fear of harm," explains Tina."**

**The Law of the Splintered Paddle is also on Kamehameha Schools website.** The historical value of this law should be enough to help make

Big Island roads become safer, and not adding to the traffic and issues of our already dangerous roads. <https://www.ksbe.edu/article/the-lessons-of-the-law-of-the-splintered-paddle-ring-true-200-years-after-k>

**Does this EIS have any reports about how this development will safely add to the land fill on Big Island, and are there reports proving the island has enough water for another big resort, what about reports on how much power this resort will use because the Big Island already has serious resource and infrastructure issues.**

## IN CONCLUSION

The articles cited in this letter, many by some of the most esteemed scientists in the world, show with clarity that allowing this development is going to cause devastating, lasting, effects on the Eco-system in Keauhou Bay and "The **Endangered Species Act of 1973 (ESA)** or "The Act"; 16 U.S.C. § 1531 et seq.) **is the primary law in the United States for protecting and conserving imperiled species.** Designed to protect critically imperiled species from extinction as a "consequence of economic growth and development untempered by adequate concern and conservation", the ESA was signed into law by President [Richard Nixon](#) on December 28, 1973. The [Supreme Court of the United States](#) described it as "the most comprehensive legislation for the preservation of endangered species enacted by any nation".<sup>[1]</sup>" [https://en.wikipedia.org/wiki/Endangered\\_Species\\_Act\\_of\\_1973](https://en.wikipedia.org/wiki/Endangered_Species_Act_of_1973)

This location, currently acting as a natural filter, is especially vulnerable due to having a golf course on one side and a natural treasure like Keauhou Bay on the other. This land **MUST** be conserved in order to keep Keauhou Bay safe for all the marine life to be able to live there for years to come.

In addition to the natural disaster this will cause, Hawai'i Island is already having serious infrastructure and resource issues that have yet to be solved. These issues **MUST** be solved before considering another resort development on Big Island.

We need to work in harmony with the land and the people before pushing forward with new developments, especially in sacred and special places like Keauhou Bay, the birthplace of King Kamehameha III. Keauhou Bay is a small, fragile Eco-system, that is already pressured by boating, golfing, population issues, and hotels that are all around the entire bay.

The trees that currently stand on the land that is threatened to be developed clearly protects the marine life and environment from further damage. The location is **NOT** suitable for this kind of development for both environmental and infrastructure reasons.

The cost of what stands to be lost is far too high to allow this to happen.

Please save Keauhou Bay's marine life and help the island's resources by saying **NO** to a Bungalow Resort built by Kamehameha Schools.

Mahalo,

Belinda Pate

**Subject:** Save Keaouhou Bay - Kamehameha Schools EIS Draft For Keaouhou Bay WILL HAVE NEGATIVE IMPACT!  
**Attachments:** pollution-runoff.jpg; runoff-pollution-after-storm.jpg; title.jpg; swimmin-turtle.jpg; keaouhou-bay-green.jpg; monk-seal-in-keaouhou-bay2.jpg; keaouhou-bay-green-algae.jpg; green-sea-turtle.jpg

**Categories:** Green Category

To whom it may concern,

Please read the scientific proof in this letter and REJECT Kamehameha Schools EIS for Keaouhou Bay to become a Bungalow Resort.

Please state in your report that a Bungalow Resort WILL have a SERIOUS NEGATIVE IMPACT in Keaouhou Bay as stated in all the different researched articles below.

Please, Do NOT risk polluting the water in Keaouhou Bay by allowing Kamehameha Schools to develop their bungalow resort project, because it is scientifically proven that developments pollute nearby waters constantly during development and after.

Please read these Scientific articles written by NOAA, National Oceanic and Atmospheric Administration and many other professional organizations, that have studied and proved that developments has ALWAYS polluted the water in every near coastal developed area.

**First, does this EIS have any kind of reports and studies on how the endangered species and marine life will handle the extra pollution due to development and golf course runoff because Keaouhou Bay is their habitat and this development WILL be CHANGING an Entire Ecosystem.**

**In the Endangered Species Act of 1973 Under Section 2 (b), "to provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved." This would be Keaouhou Bay.**

The Green Sea Turtle swims in Keaouhou Bay weekly and the monk seal has also been seen swimming and resting in Keaouhou Bay. Both of these marine animals are on the endangered species list.

The Green Sea Turtle is protected by more than one law. "All sea turtles in Hawaii are protected by the Endangered Species Act (ESA) and additionally protected by Hawaii Revised Statutes Chapter 195D (HRS) and Hawaii Administrative Rules (HAR) 13-124." This information was taken from this site <https://dlnr.hawaii.gov/dar/species/sea-turtles/>

"Hawaiian monk seals are protected federally by the ESA and the Marine Mammal Protection Act (MMPA), as well as locally by Hawaii Revised Statutes (HRS) Chapter 195D and Hawaii Administrative Rules (HAR) 13-124." This was taken from <https://dlnr.hawaii.gov/dar/hawaiian-monk-seal/>

#### ENDANGERED SPECIES CONSERVATION

Endangered Species Act

#### **"Section 2. Findings, Purposes, and Policy**

**(4) the United States has pledged itself as a sovereign state in the international community to conserve** to the extent practicable the various species of fish or wildlife and plants facing extinction, pursuant to—

(b) PURPOSES.—**The purposes of this Act are to provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved**, to provide a program for the conservation of such endangered species and threatened species, and to take such steps as may be appropriate to achieve the purposes of the treaties and conventions set forth in subsection (a) of this section." This was taken from <https://www.fisheries.noaa.gov/national/endangered-species-conservation/endangered-species-act>

Keaouhou Bay IS the monk seals and the green sea turtle's habitat and to allow a bungalow resort to be developed in Keaouhou Bay, that is these endangered species habitat, is to threaten these endangered species habit with golf course runoff pollution, as well as development pollution and hence, threaten their habitat, hence their lives, and goes completely against the Endangered Species Act of 1973.

The words in the Endangered Species Act states, "to conserve" and conserving the endangered species that enter into Keaouhou Bay would be to NOT DEVELOP A BUNGALOW RESORT because this would cause serious pollution runoff that would pollute the bay and endanger these already endangered species, the green sea turtle and the monk seal.

Does this EIS have any reports on the endangered species that frequent Keauhou Bay because this is their habitat.

Under the Conservation Program there should be research done on endangered species and their associated ecosystems, which is Keauhou Bay. Because this bungalow resort development WILL FOREVER CHANGE THIS ECOSYSTEM.

"§195D-5 Conservation programs. (a) The department shall conduct research on indigenous aquatic life, wildlife, and land plants, and on endangered species and their associated ecosystems, and shall utilize the land acquisition and other authority vested in the department to carry out programs for the conservation, management, and protection of such species and their associated ecosystems." [https://www.capitol.hawaii.gov/hrs/current/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hrs/current/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm)

Also, under this same Conservation program, "(2) Taking such action as may be necessary to ensure that actions authorized, funded, or carried out by them do not jeopardize the continued existence of threatened or endangered species." [https://www.capitol.hawaii.gov/hrs/current/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hrs/current/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm)

Please see that developing Kamehameha Schools Bungalow Resort in Keauhou Bay WILL threaten endangered species due to the unavoidable development and golf course pollution runoff that would happen a lot more often due to taking out the natural pollution filter, that is the trees and the land that is there now.

"The golf industry uses approximately 50 pesticide active ingredients, including chlorpyrifos—an insecticide that is banned for residential use by the EPA due to developmental hazards. Having to trim golf turf to low heights also makes it even more vulnerable to pests, which leads to more pesticide use." <https://rainorshinegolf.com/pages/the-environmental-impact-of-golf-courses>

These pesticides will be in the pollution runoff that will enter Keauhou Bay more severely because of the bungalow resort development's pavement. As of right now the trees and land that this development wants to clear and develop into a bungalow resort is a Natural Pollution Filter.

Please read from **Wikipedia**.

**Most drains** have a single large exit at their point of **discharge (often**

**covered by a grating) into** a canal, river, lake, reservoir, sea or ocean. Other than catchbasins, **typically there are no treatment facilities in the piping system.**"[https://en.wikipedia.org/wiki/Storm\\_drain#:~:text=Most%20drains%20have%20a%20single,discharge%20into%20individual%20dry%20wells](https://en.wikipedia.org/wiki/Storm_drain#:~:text=Most%20drains%20have%20a%20single,discharge%20into%20individual%20dry%20wells)

It's the pavement that this development wants to put in that will cause a lot of pollution to runoff into Keauhou Bay because this top land that is directly below the golf course (that they want to clear) soaks in the golf course pesticides, fertilizer, weed killer... and is the BEST AND ONLY PROTECTION POLLUTION FILTER Keauhou Bay has from the golf course pollution.

Please see this site at <https://health.hawaii.gov/epo/files/2013/09/Stormwater-MS4-Presentation-HEE-715174.pdf> because on page 2 it **states from the Hawaii' government that Natural Ground Cover has 10% runoff, where has development has 55% runoff.**

**These trees and land** are saving monk seals and green sea turtles habitat from the golf course pollution and this land **MUST BE PRESERVED and CONSERVED** as the natural protector for Keauhou Bay hence, **for these endangered species habitat.**

**Under Section 2 (b) of the Endangered Species Act** - Keauhou Bay MUST BECOME a CONSERVATION AREA for these endangered species because it is their habitat as of today, and to allow a resort development to be built above this bay would threaten the very lives of these endangered species because it will allow golf course toxic pollution and development pollution to run into these species natural habitat, which is Keauhou Bay.

Keauhou Bay has trees and land just under the golf course (that Kamehameha Schools wants to clear for their bungalow resort) that protects Keauhou Bay from a lot of algae blooms because it soaks up pollution that is runoff from fertilizer, weed killer... in the golf course, and unfortunately when there is a severely heavy rain storm the land up on top of the bay has a greater runoff than normal from the golf course pollution, and pollution foam and algae blooms happen because of it.

If you clear this land, this kind of algae bloom will happen a lot more often and end up killing a lot of coral and marine life as stated in the many articles that will follow.

One of these articles is in the Global Coral Reef Alliance. They researched the reef before and after a golf course development, and even though this development is not a golf course development, it is still a development and it will also be located just under a golf course and this will allow the pollution

from the golf course to come down to the bay a lot more often because the natural land that soaks up this pollution will be gone.

### **Has this EIS done any kind of research about the algae blooms that happen after a serious storm because of the golf course runoff pollution?**

This information was taken from Global Coral Reef Alliance and it is an actual study on the how coral and marine life are affected before and after development. It's titled, "Golf courses kill coral reefs and fisheries: harmful algae blooms and disease caused by nutrient runoff from golf course development on Guana Cay, Abaco, Bahamas

Introduction: Bahamas coral reef deterioration

This study is thought the first ever to evaluate the health of coral reef ecosystems and fisheries before and after a golf course development..The vast majority of corals have died from a combination of factors including global warming, new diseases, land-based sources of pollution..  
". <https://www.globalcoral.org/golf-courses-kill-coral-reefs-and-fisheries-harmful-algae-blooms-and-disease-caused-by-nutrient-runoff-from-golf-course-development-on-guana-cay-abaco-bahamas/>

If you allow a Bungalow Development in Keauhou Bay you WILL be agreeing to pollute this bay for years to come and COMPLETELY CHANGING KEAHOU BAY'S ECOSYSTEM because the golf course runoff won't have the best protection which is the natural trees and land that can soak up the polluted water most of the year and polluted foam algae blooms will happen a lot more often.

Here is another study by the Coral Reef Alliance titled, "Golf course fertilizer runoff causes nutrient enrichment leading to harmful algae blooms on a Bahamian coral reef

...After construction new algae blooms appeared nearest the golf course green, smothering corals in adjacent reefs, along with sharply increased coral diseases..." <https://www.globalcoral.org/golf-course-fertilizer-runoff-causes-nutrient-enrichment-leading-to-harmful-algae-blooms-on-a-bahamian-coral-reef>

### **Does this EIS have any studies or reports on the extra runoff pollution due to clearing land and adding pavement?**

This needs to be fully known because you will be changing an entire ecosystem to build a bungalow resort. Because it rains in Keauhou Bay many

nights out of the year and the land they want to clear absorbs the golf course toxins so this bay is not as severely polluted as it will be with pavement and development, and when serious storms come Keauhou Bay won't stand a chance because the land can't keep ALL golf course pollutions out during this time and pavement won't even come close.

"If there are **toxic algal blooms**, like red tide, or man-made contaminants, like pesticides or detergents in the water, those toxins are contained within the bubbles of sea foam. When those bubbles pop, the toxins can become airborne and compromise the air that is breathed in that location." <https://oceanconservancy.org/blog/2023/03/31/what-sea-foam/>

### **Federally Protected Green Sea Turtle Swim in Keauhou Bay Often**

The green sea turtle that is federally protected and can be seen in Keauhou Bay weekly. Please see the following article that states "POLLUTED RUNOFF IN HAWAII ENDANGERS GREEN SEA TURTLES

#### **Why does Hawaii have a runoff problem?**

Historically, in the tropics of Hawaii, precipitation was absorbed into the soil, according to the Clean Water Branch of Hawaii's Department of Health. Any potential pollution or contaminants on the ground surface would get pushed into the soil by the rain, and plant roots and microbes would help break down the pollution into less dangerous components. However, with urban and agricultural development, less and less of the pollution gets pulled into the soil, and more of it gets washed out into storm drains. From there, the pollutants make their way to streams, rivers and the ocean that surrounds Hawaii. According to the state agency, most of these contaminants are nutrients from fertilizer, bacteria from animal waste, oil, garbage and yard waste..

If polluted runoff reaches the ocean, it can wreak havoc on marine life, including endangered green sea turtles." Taken from <https://www.chemservice.com/news/polluted-runoff-in-hawaii-endangers-green-sea-turtles/>

If you allow this development it WILL POLLUTE Keauhou Bay as the above article (that was written in 2014 because runoff water from developments were polluting the ocean even then) states, and this bay holds many sea creatures such as the protected green sea turtle, spotted eagle rays, manta rays, octopus, dolphins, fish, coral, monk seals that have rested on the dock before and..that will ALL be harmed by the more severe pollution runoff that WILL happen because developments can't help but pollute the water nearby.

Keauhou Bay is known as a RESTING AREA for the ENDANGERED MONK SEAL, and if a resort is allowed to be built, that will bring a lot more people down to Keauhou Bay and if a monk seal is resting they most likely will disturb the monk seal with their selfies because it is fully known this is now a SELFIE CULTURE.

**Has the EIS done any research on what a high population would do in such a small area, and what will happen to the endangered species that live there because it's their habitat and a high population will change this bay forever?**

This information is by NOAA Scientist, "Study shows selfie culture impacts how people behave when posting images of an endangered species on social media.

There's a seal on the beach! Let's go get a 'selfie!'" That must have been what nearly 18 percent of people on Instagram thought before approaching an endangered species. In [a recent study](#), NOAA scientists used social media to monitor human activities around endangered [Hawaiian monk seals](#). They discovered that human disturbance is more common than they thought." <https://www.fisheries.noaa.gov/feature-story/feature-story/endangered-hawaiian-monk-seals-cry-foul-over-selfies>

NOAA clearly states a high population in a place where monk seals and sea turtles habitat can be a serious disturbance for these endangered species.

**Has the EIS done any research or reports on the Resources and Infrastructure it will need for a bungalow resort?**

There are many big housing developments currently under construction in Kailua Kona, Waikoloa Village, in Hilo, Puna, and there are Ocean View and Volcano housing construction projects as well. The entire Big Island has construction projects all over.

**Has Kamehameha Schools EIS done any kind of reports or surveys to know if Big Island has the Resources and Infrastructures for their resort development?**

Because, "Hotel waste management refers to all the practices and processes that hotels implement to handle and dispose of the multiple types of waste generated on their premises.

Worldwide, hotels produce almost [300,000 tonnes of waste](#) each year." <https://www.homebiogas.com/blog/hotels-waste-management/>

As of now, the Big Island's Resources and Infrastructure are having serious negative issues and many more developments that have been approved are not even completed as of yet, which means these resources and infrastructures will be taxed even more in the near future.

Please read the below articles that prove that Big Island doesn't have the resources or infrastructure for a Bungalow Resort Development because it will increase the need for resources and infrastructure that the island doesn't have as of today.

**Big Island Now poll No. 27 results: More than one solution needed to help extend life of West Hawai'i landfill**

September 17, 2023

The West Hawai'i Sanitary Landfill, the only remaining landfill on the Big Island, is forecast to reach capacity within the next 20 to 25 years. (File photo)

Of the 900 total votes in our most recent poll, which asked people to weigh in on the best way to extend the life of the Big Island's [only remaining landfill](#), all of the above was the most popular answer, garnering 274 votes, or 30%.

The West Hawai'i landfill became the island's only one after the Hilo Landfill closed three years ago. It only has about 20 to 25 years left before it can no longer be used to store rubbish.

<https://bigislandnow.com/2023/09/17/big-island-now-poll-no-27-results-more-than-one-solution-needed-to-help-extend-life-of-west-hawaii-landfill/>

**A county commission drafts ordinance aiming to ban recyclables at West Hawai'i landfill**

By [Megan Moseley](#) September 6, 2023

Hawai'i County's Environmental Management Commission is developing an ordinance that aims to prohibit the amount of recyclable materials ending up in the island's only working landfill.

During a commission meeting on July 26, Ramzi Mansour, Hawai'i County Director of Environmental Management, told commissioners the West Hawai'i Sanitary Landfill only has 20 to 25 years left before it reaches capacity.

With the Hilo Landfill permanently closed in 2020, the clock is ticking for the island's sole dump. Commission chairperson Georjean Adams said it's a good time to start looking into solutions.

Adams said the proposed ordinance is in its early stages and is more about getting the conversation started about how to prevent unnecessary, or recyclable items — green waste, metals, plastics, paper, paperboard and glass — from ending up in the rubbish dump, located off Queen Kāhūmanu Highway in Waikōloa.

"Trying to site a new landfill is close to impossible," Adams said. "So what are we going to do? So I was looking around, and the commission agreed, to look deeply into the idea of diverting the recyclables out and at least slow the filling up of the landfill."

The proposed ordinance refers to the 2019 Integrated Solid Waste Management Plan that commits the county to "divert, as much as feasible, commercial and municipal solid waste, including but not limited to green waste, metals, plastics, paper, paperboard, and glass to help achieve goals related to climate resiliency, renewable energy, sustainable agriculture, and zero waste."

<https://bigislandnow.com/2023/09/06/new-draft-ordinance-aims-to-ban-recyclables-at-west-hawaii-landfill/>

### Time's Up For Landfills

**'Gentle' demolition strategies can help preserve resources**

**PAULA BENDER April 2, 2024**

As Hawai'i government officials grapple with the challenge of limited landfill space statewide, federal restrictions set in place by the Environmental Protection Agency are ruling out possible locations that were once considered for new landfills.

Hawaii Act 73 states landfills must be located at least half a mile from residential areas; are prohibited from being located in areas with heavy rain and steep slopes, as well as agricultural and/or conservation lands; above aquifers; 300 feet beyond streams; and 1,000 feet beyond the ocean.

New landfills are also now prohibited from being created in tsunami inundation zones, 100-year flood zones and wetlands. There are also concerns

that landfills near airports will attract birds, resulting in damage to aircraft and fatalities among pilots and passengers.

The City & County of Honolulu is in the process of identifying its next landfill and it doesn't want one any bigger or more active than absolutely necessary. <https://buildingindustryhawaii.com/2024/04/times-up-for-landfills/>

### Drought Conditions On Hawai'i Island Prompt Water Supply Message

**by Big Island Video News**  
on Oct 5, 2023 at 3:59 pm

**(BIVN)** – With moderate to severe drought conditions being reported across Hawai'i island, local water department officials issued a statement this week on the need for customers to use drinking water wisely.

Most of Hawai'i island is under "Moderate Drought" conditions, according to the latest information **from the U.S. Drought Monitor**. There is an area under "Abnormally Dry" conditions in South Kona, however there are other, small pockets on the Big Island that are under "Severe Drought". There is even a small spot of "Extreme Drought" in the South Point area of Ka'u.

"The National Weather Service's forecast calls for the existing drought conditions to expand over the entire island and intensify over the upcoming months due to the ongoing El Niño event," reported the Hawai'i County Department of Water Supply. "Peak dryness is expected to occur from around January through February 2024. The El Niño event will likely persist well into spring 2024."

From a Water Supply news release:

<https://www.bigislandvideonews.com/2023/10/05/drought-conditions-on-hawaii%CA%BB-i-island-prompt-water-supply-message/>

### U.S.

**Hawaii is "on the verge of a greater catastrophe," locals say, as water crisis continues**

By [Li Cohen](#)

Updated on: April 11, 2024 / 8:23 AM EDT / CBS News

And recent years have seen compounding problems: less rain, leading to [significant droughts](#), and repeated jet fuel leaks and PFAS chemical spills contaminating water systems. All of this significantly limits available water use for locals, many of whom say tourism is only worsening the situation. Just months ago, the [world's largest surfing wave pool](#) opened up on the island — filled with freshwater.

"They're not using it to drink or to support life, they're using it to make money. They're commodifying it," said Healani Sonoda-Pale, who is Native Hawaiian and a member of advocacy group O'ahu Water Protectors. " ... We are on the verge of a greater catastrophe."

"We are in a [water crisis](#), that has to be made very clear," Wayne Tanaka, director of Sierra Club of Hawaii, told CBS News, saying that if the reasons for this crisis aren't soon addressed, **"We may come to a point where we have to decide ... who gets water and who doesn't."**

<https://www.cbsnews.com/news/hawaii-water-crisis-climate-change/>

Because this is an island parts need to be shipped and the power plant has generators that are not working and because of this, and other reasons, the Big Island needs to seriously conserve power so that everyone will have power, and if this problem of shipping parts can happen once it can happen again.

#### UTILITIES

UPDATE: HECO asks for continued energy conservation

BY SPECTRUM NEWS STAFF HAWAII ISLAND

UPDATED 6:28 PM ET APR. 16, 2024 PUBLISHED 9:05 AM ET APR. 15, 2024

HILO, Hawaii — Hawaiian Electric continues to urge Hawaii Island customers to reduce their electricity use to prevent the need for rolling outages.

In a news release Tuesday afternoon, the utility stated that Monday saw a reduced demand of approximately 5 megawatts. That, combined with increased wind and solar battery storage prevented the need for rolling blackouts on Monday. HECO credited conservation efforts, particularly those by large businesses and government customers, for the reduction in electricity demand.

"We're grateful for our customers' efforts to conserve electricity, especially between 5 to 9 p.m., when electricity us is highest, because it does make a difference," said Hawaiian Electric spokesperson Kristen Okinaka. "By working together, we're helping to ensure that enough power can be available for all customers and prevent or minimize the impacts of rolling outages."

Hawaiian Electric announced Monday afternoon that it may initiate rolling outages in parts of Hawaii Island because of the unavailability of several generators and lower than normal wind and solar resources.

In a news release, the utility said that outages could start as early as 6:30 p.m. and rotate around the island for 30-minute intervals. The impacted areas and the timing of the outages will be based on wind generation and the amount of electric demand that needs to be reduced. Individuals who are dependent on electrically powered life support medical equipment are advised to arrange for a backup power supply.

The outages are being done to prevent power loss to even more customers, who are all being asked to conserve electricity throughout the month.

<https://spectrumlocalnews.com/hi/hawaii/news/2024/04/15/heco-customers-on-hawaii-island-asked-to-conserve-power->

#### Big power supply problems continue to plague Hawaii island

Apr 8, 2024

The company has been facing an unusual situation with mechanical problems at three of the island's five largest power plants while part of the largest plant undergoes an annual overhaul. All four of these affected power plants are owned by the utility or an affiliate of its parent company.

**Also contributing to the trouble is lower output from a geothermal plant, which has the third-largest generation capacity on the island and is owned by an independent operator.**

"This is an unusual situation, driven mainly by the unavailability of several large generators that have experienced mechanical problems, are at reduced output, or are undergoing maintenance," Hawaiian Electric said in its March 25 announcement asking customers to use less electricity, especially on weekdays from 5 to 9 p.m.

The company explained that it faces an "extremely tight" supply of power at peak use periods, especially when production from wind, solar and

hydroelectric facilities is lower than normal. Those sources of variable, renewable energy can supply up to 15 % of electricity needs on the island.

"Without enough supply to meet electricity demand, the company may initiate rolling outages of up to an hour around the island," the March 25 announcement said.

<https://energycentral.com/news/big-power-supply-problems-continue-plague-hawaii-island>

Hawaii Island customers urged to reduce electricity use through April

BY SARAH YAMANAKA HILO PUBLISHED 9:00 AM ET MAR. 26, 2024

#### **What You Need To Know**

**-Hawaii Island customers may see alerts asking them to conserve energy, especially on days when there isn't much wind that generates up to 15% of electricity**

-When alerts are issued, Hawaiian Electric is asking customers to take immediate action to minimize electricity use

-Even when no alerts are issued, customers — including hotels and large retailers — are urged to reduce electricity use as much as possible, especially between 5 and 9 p.m. on weekdays

-If there is not enough electricity to meet demand, Hawaiian Electric may initiate rolling outages of up to an hour around the island

<https://spectrumlocalnews.com/hi/hawaii/news/2024/03/25/hawaii-island-customers-urged-to-reduce-electricity-use-through-april>

**Does this EIS have any detailed traffic studies for the increase in cars that will be added to this already severely traffic area they want to build their 150 room bungalow resort in? Have they done any studies on the pollution these cars WILL have in Keaouhou Bay?**

**Because this Bungalow Resort could have over 150 extra cars and over 300 or more extra people in and out of Keaouhou Bay, what traffic and increased population studies have they done? Because they will have employees with cars, guests with cars, visitors with cars and this would range at times at least over 200 cars or more, parking above Keaouhou Bay**

**causing serious car population because of all these added cars right next to the bay.**

Article below is from NOAA.

**What is the biggest source of pollution in the ocean?**

**Most ocean pollution begins on land.**

"Millions of motor vehicle engines drop small amounts of oil each day onto roads and parking lots. Much of this, too, makes its way to the sea.

Some water pollution actually starts as air pollution, which settles into waterways and oceans. Dirt can be a pollutant. Top soil or silt from fields or **construction sites can run off** into waterways, harming fish and wildlife habitats." <https://oceanservice.noaa.gov/facts/pollution.html#:~:text=Millions%20of%20motor%20vehicle%20engines,Dirt%20can%20be%20a%20pollutant.>

Land-Based Runoff Remains Top Source of Oil in the Ocean, Says New Report Oil in the Sea: Inputs, Fates, and Effects

**News Release September 28, 2022**

WASHINGTON — Oil in runoff, primarily from cities and vehicles, is the top source of oil entering the ocean, says a [new report](#) from the National Academies of Sciences, Engineering, and Medicine. In North American waters, estimated ocean oil pollution from land-based runoff is up to 20 times higher than it was 20 years ago, and oil spills, natural oil seeps, and discharge from oil and gas operations remain major sources of pollution. The report recommends actions that government and others should take to minimize oil pollution, and calls for sustained research funding to better understand how oil reaches and affects ocean environments. <https://www.nationalacademies.org/news/2002/05/oil-in-the-sea-inputs-fates-and-effects#:~:text=WASHINGTON%20D%2D%20Nearly%2085%20percent,pipeline%20spills%2C%20says%20a%20new>

The Impact Of Stormwater – Car Emissions

"Car emissions are not limited to exhaust fumes that contribute to air pollution. They can also leak automotive fluid and release heavy metals that can contribute to stormwater pollution, contaminating local waterways." <https://www.stormwatershepherds.org.au/blog/the-impact-of-stormwater-car-emissions/>

### **Does this EIS have any reports on the noise pollution that will happen and what it could do to marine life in Keauhou Bay during development?**

Because if you allow this Bungalow Resort to be developed you will increase constant noise in this bay for years to come and, "Noise Pollution Research shows that underwater noise from construction, shipping and naval vessels significantly impacts the natural behaviour of cetaceans and many other marine species. This can be seen when mass beaching events occur or breeding success is diminished."

The above information was taken from the Ocean Conservation Trust <https://oceanconservationtrust.org/ocean-advocacy/think-ocean/ways-to-think-ocean/>

### OCEANS POLLUTION

How Does Noise Pollution Harm Marine Species?

"However, over the past few decades, noise pollution in the marine environment has increased dramatically and is threatening the natural soundscape of the marine environment. Ships, seismic surveys, explosions, construction, and sonar devices have made the once peaceful environment into a loud, chaotic home which is extremely damaging for marine wildlife. This type of pollution is often overlooked in comparison to others but its impacts are now being documented across all types of marine ecosystems." <https://earth.org/noise-pollution-in-the-ocean/>

If you allow this resort the amount of people in this bay will fully increase and, "Hawaii's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally, management of the resource should balance the needs of different user groups, but the welfare of the marine environment on which its inhabitants depend must be the most important consideration." This was taken from Hawaii's own Division of Aquatic Resources <https://dlnr.hawaii.gov/dar/marine-managed-areas/hawaii-marine-life-conservation-districts/#:~:text=Snorkeling%20and%20SCUBA%20diving%20are,effect%20on%20nearshore%20fish%20populations.>

### **What is ocean noise?**

"Ocean noise refers to sounds made by human activities that can **interfere with or obscure** the ability of marine animals to **hear natural sounds in the ocean**.

Many marine organisms rely on their ability to hear for their survival. Sound is a highly efficient means of communication underwater and is the primary way that many marine species gather and understand information about their environment. Many aquatic animals use sound to find prey, locate mates and offspring, avoid predators, guide their navigation and locate habitat, as well as to listen and communicate with each other.

Over the last century, human activities such as shipping, recreational boating, and energy exploration have increased along our coasts, offshore, and deep ocean environments. Noise from these activities can travel long distances underwater, leading to increases and changes in ocean noise levels in many coastal and offshore habitats.

These rising noise levels can negatively impact ocean animals and ecosystems. Higher noise levels can reduce the ability of animals to communicate with potential mates, other group members, their offspring, or feeding partners. Noise can also reduce an ocean animal's ability to hear environmental cues that are vital for survival, including those key to avoiding predators, finding food, and navigating to preferred habitats." <https://oceanservice.noaa.gov/facts/ocean-noise.html>

**The Chesapeake Bay has a foundation that is trying to save it due to runoff pollution that was caused by developments, and the Chesapeake Bay is a lot bigger than Keauhou Bay.** If it's being drastically hurt by runoff water from developments, Keauhou Bay waters won't stand a chance if development above the bay is allowed because this bay is very small.

This Article is by the Chesapeake Bay Foundation, Saving a National Treasure states, "...**runoff is a significant source of harmful nitrogen pollution that continues to grow...**

As rainwater and snowmelt run off our streets, parking lots, lawns, and other surfaces, they pick up pet waste, pesticides, fertilizer, oil, and other contaminants. If the draining water doesn't evaporate or soak into the ground where it can be filtered, it flushes straight into local creeks, rivers, and the Chesapeake Bay, adversely affecting water quality and aquatic life.

**Only 10 to 20 percent of rain that falls in forests, fields, and other natural areas runs off, with the rest absorbed by soil and plants, where it is filtered before reaching aquifers or local waterways. (Right now Keauhou**

**Bay has a lot of trees and is very natural, this is what helps stop runoff.) By contrast, close to 100 percent of the rain that falls on concrete and other hard surfaces produces runoff. One inch of rain falling on an acre of hardened surface produces 27,000 gallons of runoff.**

Stormwater runoff pollution threatens Chesapeake Bay and its rivers and streams...Polluted runoff is one of the most harmful sources of pollution to the Bay and its waters. And much of it starts right in the urban and suburban neighborhoods where we live." <https://www.cbf.org/issues/polluted-runoff/index.html#:~:text=Besides%20carrying%20pollutants%20that%20harm,them%20are%20placed%20in%20leopardy>.

**If that is what runoff is doing to the Chesapeake Bay, the effects of runoff will be even more devastating to Keauhou Bay because it is so much smaller than the Chesapeake Bay.**

**Are there any reports in this EIS about what the impact to the coral, marine life, plankton especially zooplankton will be because of this development?**

**Because the studies below show developments kill coral, marine life and zooplankton are kill and negatively affected as well, and zooplankton is the manta ray food. Manta rays are in this bay every night to eat zooplankton and sometimes they are in this bay during the day time too.**

If you allow this bay to be development you will be allowing all types of marine life to die and there is NO WAY to stop this from happening because polluted runoff rain water from developments can't be fully stopped. It is what has happened in ALL coastal developments.

Please read the Scientific proof below.

It's Been Proven Developments Severely Pollute Nearby Waters

Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Coral Bleaching is occurring more frequently in Hawaii. Across the Hawaiian Archipelago, coral bleaching has increased in frequency and severity since 1996. The last major bleaching event in 2014-2015 had catastrophic impacts state-wide...

This was the third major bleaching episode in Hawaii over the last 6 years. The frequency of these events is unprecedented in the archipelago. NOAA scientists and partners have determined that the key drivers of the bleaching were environmental factors (such as heat stress, depth, and surface light) and

human impacts (sewage effluent and urban runoff). " <https://www.fisheries.noaa.gov/feature-story/cautionary-tale-2019-coral-bleaching-event>.  
[hawaii#:~:text=Coral%20bleaching%20is%20occurring%20more,hard%20catalytic%20impacts%20state%20wide](https://www.fisheries.noaa.gov/feature-story/cautionary-tale-2019-coral-bleaching-event).

This article is by the Coral Reef Alliance here in Hawaii. "An ecosystem under threat Hawaii's reefs face major global and local threats including climate change, overfishing, and sediment and nutrient pollution caused by sewage and stormwater runoff...

When it rains, flash floods carry stormwater and large amounts of sediment downstream to the ocean. Just offshore, once-thriving coral reefs are now struggling to survive." <https://coral.org/en/where-we-work/hawaiian-islands/#:~:text=Hawai%20reefs%20face%20major%20global,into%20Hawai%20CA%20waterways%20every%20day>.

This article states that runoff is a leading source in coral degradation. Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Land-based sources of pollution are a leading cause of coral reef degradation in the Main Hawaiian Islands. Water quality is impacted by urban runoff, failing sewage systems, unpaved roads, farms, land clearing, and development." [https://www.coris.noaa.gov/monitoring/status\\_report/docs/Hawaii\\_status\\_report\\_forweb.pdf](https://www.coris.noaa.gov/monitoring/status_report/docs/Hawaii_status_report_forweb.pdf)

This article is a Research Article by PLOS ONE and their motto is, "We're driving change in research integrity and publication ethics." This is some of their article information, "Coral taxonomy and local stressors drive bleaching prevalence across the Hawaiian Archipelago in 2019...

We found little evidence for acclimation by reefs to thermal stress in the main Hawaiian Islands. **Moreover, our findings illustrate how detrimental effects of local anthropogenic stressors, such as tourism and urban runoff, may be exacerbated under high thermal stress.** In light of the forecasted increase in severity and frequency of bleaching events, future mitigation of both local and global stressors is a high priority for the future of corals in Hawaii." <https://journals.plos.org/plosone/article?id=10.1371/journal.pone.0269068>

The coral all over Hawaii has had extremely high mortality rates, due to developments near ocean areas throughout the years, and development in Keauhou Bay will be devastating to the coral, reef fish, and all Aquatic Life there, and even the Manta Rays that go there to eat zooplankton from the Manta Ray tours at night, and they eat it during the day in that area as well

because they need to eat 5 times their body weight in zooplankton daily. Please see the cited information below.

**"SO, HOW MUCH PLANKTON DOES YOUR AVERAGE MANTA RAY EAT? 19,200,000. Nineteen million two hundred thousand, give or take a few thousand.**

That is the number of plankton pieces a ten-foot manta ray must consume weekly to stay alive."

The above information was taken from Manta Ray Advocates <https://mantarayadvocates.com/how-much-plankton-do-mantas-eat/>

**Coral reefs are known to be highly negatively impacted by developments because, "Impacts from land-based sources of pollution including coastal development, can impede coral growth and reproduction, disrupt overall ecological function, and cause disease and mortality in sensitive species."** <https://oceanservice.noaa.gov/facts/coral-pollution.html#:~:text=Impacts%20from%20land%2Dbased%20sources,and%20mortality%20in%20sensitive%20species.>

Article by Environmental Evidence, "Coastal development and runoff lead to sedimentation, which directly impacts coral recruitment, growth, mortality, and ecosystem services that coral reefs provide." <https://environmentalevidencejournal.biomedcentral.com/articles/10.1186/s13750-020-00200-0#:~:text=Coastal%20development%20and%20runoff%20lead,services%20that%20coral%20reefs%20provide.>

Developments can't fully stop polluting because runoff is from rain during development and after. Article by NOAA, "One of the most significant threats to reefs is pollution. Land-based runoff and pollution discharges can result from dredging, coastal development...This runoff may contain sediments, nutrients, chemicals, insecticides, oil and debris.

When some pollutants enter the water, nutrient levels can increase, promoting the rapid growth of algae and other organisms that can smother coral." [https://oceanservice.noaa.gov/education/tutorial\\_coral/coral09\\_humantthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,organism%20that%20can%20smother%20corals.](https://oceanservice.noaa.gov/education/tutorial_coral/coral09_humantthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,organism%20that%20can%20smother%20corals.)

Another article by NOAA, "Coral reefs also are affected by leaking fuels, anti-fouling paints and coatings, and other chemicals that enter the water... (All of those are show up in every development project)

Among the most damaging pollutants on coral reefs is sediment, which can remain suspended in the water or be deposited on the coral surface (i.e., turbidity and sedimentation, respectively) and can contain toxicants, pathogens, and nutrients, all of which impact coral growth, recruitment, and survival" [https://oceanservice.noaa.gov/education/tutorial\\_coral/coral09\\_humantthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days.](https://oceanservice.noaa.gov/education/tutorial_coral/coral09_humantthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days.)

It's Been Proven Resort Developments KILL Marine Life

The manta rays go to Keauhou Bay every night to eat zooplankton and if you allow this development that WILL have runoff water, you WILL be causing zooplankton to be seriously affected because as this article by MarinBIO states, "Zooplankton are also sensitive to their environment and like phytoplankton—a change in zooplankton concentration can indicate a subtle environmental change. Zooplankton are highly responsive to nutrient levels, temperatures, pollution, food that is not nutritious, levels of light, and increases in predation. As well as providing an essential link in the marine food chain (which is an understatement), the diversity of species, amount of biomass and abundance of zooplankton communities can be used to determine the health of an ecosystem..."

Here is another article that proves runoff from development in this area will hurt and kill plankton, by **Frontiers in Marine Science**, "**Effects of an experimental terrestrial runoff on the components of the plankton food web in a Mediterranean coastal lagoon The main result observed in the present study was that the effects of the simulated terrestrial runoff spread along the plankton food web, significantly affecting all trophic levels of the natural plankton community studied. This occurred in a relatively short time considering that the experiment lasted less than three weeks. The lower light availability in the terrestrial runoff treatment compared to the control resulted in a net decrease of approximately one-third of Chl-a concentration and phytoplankton abundance over the entire experiment.**" <https://www.frontiersin.org/journals/marine-science/articles/10.3389/fmars.2023.1200757/full>

"Zooplankton are also affected by levels of pH, heavy metals, calcium, and aluminum. Nutrients like nitrogen and phosphorus will affect the prey of zooplankton (like algae, protozoa and bacteria), indirectly affecting zooplankton survival. Scientists are still putting together pieces of the

zooplankton puzzle. Some questions include how nutrient levels found in algae can influence the growth and behavior of zooplankton. Another question important to marine and human life is how toxins and pollution will affect this crucial link in the food chain" This information is in article by MarineBIO.

<https://www.marinebio.org/creatures/zooplankton/#:~:text=Zooplankton%20are%20also%20sensitive%20to,light%2C%20and%20increases%20in%20predation.>

Here is a research article by Environmental Research Laboratory, United States Environmental Protection Agency that discusses, "**Toxic Effects of Pollutants on Plankton** **There are four main sources of aquatic pollution: industrial wastes, municipal wastes, agricultural run-off, and accidental spillage. Non-point sources, such as automobile exhausts, add appreciable amounts of pollutants to air that may enter aquatic systems in rainfall or dry fall-out. These sources add pesticides, heavy metals, oil, petroleum products, and a large number of organic and inorganic compounds to water. Lakes and oceans serve as sinks for many pollutants. Plankton comprise a large portion of the living matter in natural waters and function in biogeochemical cycles. They are affected by pollutants, transfer them to sediments and other organisms, and function in their biological transformation.**" [https://scope.dge.carnegiescience.edu/SCOPE\\_12/SCOPE\\_12\\_3.6\\_chapter12\\_257-274.pdf](https://scope.dge.carnegiescience.edu/SCOPE_12/SCOPE_12_3.6_chapter12_257-274.pdf)

The above articles show that development of Keauhou Bay WILL hurt plankton life in the area because of the pollutant runoff that WILL happen during the development and after, and if this happens this could cause the manta ray food source to disappear and that will be devastating for the manta rays eating habits, as well as cause the manta rays to not show up in this area, in turn taking away many lively hoods from locals on the island that depend on the manta ray tour for their income.

**Does this EIS have any reports on their resort adding to the population increase that happens during IRONMAN?**

"On average, each Ironman racer brings three people with them to the Big Island. Counting members of the media, VIPs who come from around the globe to watch and the triathlons partners, **there likely be more than 6,300 people descending on Kona.**" <https://bigislandnow.com/2023/10/07/ironman-2023-in-kona-shines-spotlight-on-some-of-best-women-triathletes-in-the-world/>

And "Resident dissatisfaction with tourists is multifaceted: The overwhelming majority (92%) of locals felt visitors were not educated enough on protecting

Hawaii's natural environment and local resources; other factors include the impact of the vacation rental industry and ignorance of the residents' quality of life." <https://www.triathlete.com/culture/news/kona-locals-ask-ironman-visitrs-for-respect/>

**Where are the EIS reports on human density because this resort will increase this area in population by hundreds. Below are reports that human population destroy coral reefs.**

"The number of people living on the coasts has rapidly increased in recent decades, causing significant development of coastal areas. Coastal development can negatively impact the ocean through the destruction of coastal marine habitat and through run-off of sediments and pollution.

-Coastal development involves activities such as the creation of harbors, stabilization of shorelines, and aquaculture that involve the **destruction of sensitive marine habitats** such as mangroves, coral reefs, and seagrass beds.

-Coastal development may cause the run-off of **sediments** into coastal habitats, which can smother corals or seaweeds and reduce the amount of light available for photosynthesis. Losses of primary producers and important habitat-forming species such as corals can negatively impact entire food webs."

The above information was taken from the Education Development Center, INC, from their Coastal Development page called Ocean Tracks <https://oceantracks.org/libray/human-impacts/coastal-development#:~:text=Coastal%20development%20may%20cause%20the,negatively%20impact%20entire%20food%20webs.>

There is nothing Kamehameha Schools can do to their development that can stop the guests of this possible Bungalow Resort from going to Keauhou Bay. Human traffic WILL seriously increase if this resort is allowed to be built and the marine life will be negatively affected by it. Marine life will suffer from this development as stated in this letter in many different scientific reported articles.

If you allow this resort the amount of people in this bay will fully increase and, "Hawaii's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally, management of the resource should balance the needs of different user groups, but the welfare of the marine environment on which its

inhabitants depend must be the most important consideration." This was taken from Hawaii's own Division of Aquatic Resources <https://dlnr.hawaii.gov/dar/marine-managed-areas/hawaii-marine-life-conservation-districts/#:~:text=Snorkeling%20and%20SCUBA%20diving%20are,effect%20on%20nearshore%20fish%20populations.>

It's Been Proven an Increase in Human Population Destroys Coral Reefs

If a Bungalow Resort is allowed to be built in Keauhou Bay, it will force bring a serious increase in human traffic. "Easily visible trends in human population dynamics combined with well-established and tested ecological theory give a clear, intuitive, yet quantifiable guide to the severity of survival challenges faced by coral reefs. Management challenges and required actions can be clearly shown and, contrary to frequent claims, no scientific ambiguity exists with regards to the serious threat posed to coral reefs by humankind's continued numerical increase." This is in the article by National Library of Medicine National center for Biotechnology Information PubMed. <https://pubmed.ncbi.nlm.nih.gov/33293007/#:~:text=Denser%20coastal%20populations%20and%20greater,to%20more%20runoff%20and%20siltation.>

This article is by ABC NEWS, "This is how tourists are destroying coral reefs in Hawaii. The less people at a certain site, the more coral there are, the research found. The millions of tourists who flock to the shores of Hawaii every year are wreaking havoc on its natural environment -- especially the coral reefs, which are at risk all over the world, a new study said. The most popular coral reefs on the Hawaiian islands are likely being degraded by the very visitors they attract, according to a study published Monday in Nature Sustainability." <https://abcnews.go.com/US/hawaiian-coral-reefs-degrading-popular-tourist-sites-scientists/story?id=96308858#:~:text=The%20less%20people%20at%20a,there%20are%20the%20research%20found.&text=The%20millions%20of%20tourists%20who,world%20a%20new%20study%20said.>

If you allow this resort to be developed, you will be destroying the coral reefs in the bay because this bay is extremely small and used by a lot of locals already for fishing, canoeing, swimming, snorkeling, paddle boarding, surfing, boating...it can't afford more use by many thousands more people yearly.

if you allow Keauhou Bay to be developed there will be a higher population in the bay and that will hurt the coral in the bay as well, because it's known that, "Denser coastal populations and greater wealth will lead to reef degradation by coastal construction. Denser populations inland will lead

to more runoff and siltation. Effects of human perturbations can be explored with metapopulation theory since they translate to increases in patch-mortality and decreases in patch-colonization (= regeneration). All such changes will result in a habitat with overall fewer settled patches, so fewer live reefs." This information was taken from Science Direct <https://www.sciencedirect.com/science/article/abs/pii/S0065288120300328#:~:text=Aquaculture%20will%20alleviate%20some%20fishing,to%20more%20runoff%20and%20siltation.>

Another article by Nature Sustainability, "Coral reefs and coastal tourism in Hawaii. Coral reefs are popular for their vibrant biodiversity. By combining web-scraped Instagram data from tourists and high-resolution live coral cover maps in Hawaii, we find that, regionally, coral reefs both attract and suffer from coastal tourism. Higher live coral cover attracts reef visitors, but that visitation contributes to subsequent reef degradation. Such feedback loops threaten the highest quality reefs, highlighting both their economic value and the need for effective conservation management." [https://www.nature.com/articles/s41893-022-01021-4.epdf?sharing\\_token=wsakgQNhaJhJAnWAq453tRqNOAJWeI9inR3ZoTvOPyGZA5ic\\_H00JzcHNIP3ASnhcgKRY6\\_VKLPw49dbmBYoXSg3YIMgOIGBZsabdGUH7OISLbu9x5Pr3xED4KxI4T0sJvgQ1a7Z2Rt3rUbraxpodJd2AonISMWSuxB7JjEDdpj8OGJpx7TJTWdCfXvFKJZYeNdcj3Sw\\_dhaUg5ZlhcjPBdImmaH15yqT5O%3D&tracking\\_referrer=abcnews.go.com](https://www.nature.com/articles/s41893-022-01021-4.epdf?sharing_token=wsakgQNhaJhJAnWAq453tRqNOAJWeI9inR3ZoTvOPyGZA5ic_H00JzcHNIP3ASnhcgKRY6_VKLPw49dbmBYoXSg3YIMgOIGBZsabdGUH7OISLbu9x5Pr3xED4KxI4T0sJvgQ1a7Z2Rt3rUbraxpodJd2AonISMWSuxB7JjEDdpj8OGJpx7TJTWdCfXvFKJZYeNdcj3Sw_dhaUg5ZlhcjPBdImmaH15yqT5O%3D&tracking_referrer=abcnews.go.com)

**A Resort Development WILL Increase Traffic on Already Severely Trafficked Roads. Where are the traffic study reports for this EIS because with 150 rooms comes over 150 cars because you must include employee cars, as well as visitors for the people staying in the resort, and what if the guests have more than one car?**

The Big Island already has a serious problem with traffic on the island because of a lack of infrastructure that in places a bigger road can't be built due to cliffs on one side and homes on the other side.

Allowing another resort to be developed will bring more cars that will lead to a lot more traffic that the island can not handle, please read the articles below by different NEWS companies that prove this point.

This NEWS article by Hawaii News Now, "Report shows alarming surge in Hawaii Island traffic deaths The Hawaii Police Department's Traffic Services Section released a new report showing a dramatic increase in both major crashes and fatal accidents from last year.

The startling statistics show a dramatic increase in the number of year-over-year traffic fatalities on the island of Hawaii, revealing major crashes are up more than 12% and traffic fatalities are up more than 100%." Please watch their video on their link below because it is a professional report on Big Island traffic problems. <https://www.hawaiinewsnow.com/2024/05/18/new-report-shows-hawaii-island-traffic-fatalities-are-up-over-100-last-year/>

With more tourists comes more accidents, more traffic, and more traffic deaths. Please read this article by KHON 2 NEWS, "Hawaii Island has most traffic fatalities in state. This time last year Hawaii island was at five traffic deaths, as of April 1, 2024, they're at 14.

Seven of which happened in the last two weeks...

Chief Moszkowicz said the police force is small compared to the size of the island and response times can take 15 to 20 minutes.

"We don't have the resources like in the small space of Oahu where you can saturate an area to control speeding, that just doesn't exist here," he added." <https://www.khon2.com/local-news/7-traffic-fatalities-for-hawaii-island-in-march/>

The traffic on Big Island has increased drastically and safety issues and infrastructure needs to be addressed before adding more resort developments.

Please read this article because what it says about Oahu is the same for Big Island. The traffic problems they talk about are the same issues here on Big Island, and this article also gives one Big Island example, "On the Big Island, the mayor had to issue an emergency order shutting down Waipio Valley Road due to overuse and poor prior maintenance." This is happening all over Big Island. <https://www.civilbeat.org/2024/02/angry-over-island-traffic-jams-lets-talk-about-solutions/>

Please, watch the NEWS video below on aerial footage in Hilo because the footage shown is the same thing that is happening on Alii Drive and Queen K HWY, and for the same reasons, all of these roads only have 2 lanes.

There are 2 developments already on Alii Dr. being built as of today, and more are scheduled for this road in the near future, and Alii Dr. and Queen K HWY are the roads Kamehameha Schools Bungalow Resort will be using if approved and they are already seriously congested.

These roads have the exact same traffic congestion as Hilo, with the exact same problems, traffic is extremely slow because of so many people who now live here and all the visitors that come yearly.

The worry on Kona side is tsunami evacuations rather than lava evacuations, and in this kind of traffic, not everyone will be able to get to safer ground, especially if you allow another resort to be developed in this area when traffic is already at a crawl every week day and sometimes on weekends as well.

See the photo below that proves this point in Kona, and here is the NEWS article by KITV NEWS that talks about Hilo and the same thing is happening in Kona on the roads Kamehameha Schools wants to develop their resort, "Hawaii Island traffic jams could have safety impact. In the event of an evacuation, Mayor Mitch Roth acknowledges that will make the Traffic Jam up even worse. But says, he is working with The State on a solution." [https://www.kitv.com/news/local/hawaii-island-traffic-jams-could-have-safety-impact/article\\_b06a5374-5a6a-11ed-8d23-8313ef8c4c19.html](https://www.kitv.com/news/local/hawaii-island-traffic-jams-could-have-safety-impact/article_b06a5374-5a6a-11ed-8d23-8313ef8c4c19.html)

There was a crash on Alii Dr. and when there is an accident on this road, it turns into only one lane that needs a flagger to help direct traffic. and that adds even more traffic to this already seriously congestion road, and Kamehameha Schools wants to add a resort on this road that will increase the traffic by 100's of cars.

Here is the Island News video on the crash on Alii Dr. <https://www.youtube.com/watch?v=-FQSnPDji8>

Please see from these articles that traffic on Big Island is deadly already and adding another resort will be devastating to the island.

Please read this Path article, HAWAII COUNTY'S VISION ZERO INITIATIVE

A motorcyclist is in critical condition after a collision with a car. A driver accidentally hits and kills a pedestrian. It seems that not a day goes by without the news reporting on a traffic crash on Hawaii Island...

Here are some other statistics that are even more staggering:

-28% of roadside crashes were the result of someone leaving the roadway and going into barriers or trees

-13% of pedestrians hit at 20 mph actually suffer fatality

-73% of pedestrians hit at 40 mph suffer fatality

-25% of fatal crashes were the result of distracted driving... So PLEASE put those cell phones away and pay attention to the road!

-56% of fatal crashes were the result of alcohol or drugs

-47% of fatal crashes occurred in light trucks and vans

-49% of crashes occur during the day, outside of peak traffic hours

-Of all the crash fatalities, most were males between 20 to 24-years old.

"That's just Big Island traffic," is a common sentiment. But what if we didn't have to accept this endangerment of vehicle drivers, motorcyclists, and pedestrians as a way of life?"

This was taken from Path as well as The Law of the Splintered Paddle below <https://pathhawaii.org/hawaii-countys-vision-zero-initiative/>

### **The Law of the Splintered Paddle**

Hawaiian history tells us that young Kamehameha was once an aggressive chief. The story goes that the young chief even chased after two fishermen in a Puna fishing village. While pursuing them, his foot got stuck in a crevice, and one of the fishermen struck Kamehameha over the head with his paddle in defense, which splintered into pieces.

After the incident, Kamehameha recognized that it was wrong to misuse his power and learned compassion. Years later, Kamehameha declared a new law, "[K?n?wai M?malaha?e](#)" or "the Law of the Splintered Paddle." Meant to protect the innocent and vulnerable from unprovoked attacks, this law proclaimed that the defenseless (especially k?puna and keiki) across Hawai'i be able to sleep safely on the side of the road, unharmed.

The law provided for the safety of non-warriors during wartime and became the first written law of the Kingdom of Hawai'i. After being added back in 1978, the law is part of Hawai'i's State Constitution today.

It is symbolic of servant leadership, reinforcing the importance of:

-Caring for and serving one's people

-Knowing and doing what is pono (right)

-Standing for the principle that leadership privilege is earned

-Taking kuleana (responsibility) for those we serve

-Doing so with compassion, love, and respect

"We take that to mean that anyone who uses our roadways should be able to do so without fear of harm," explains Tina."

**The Law of the Splintered Paddle is also on Kamehameha Schools website**, so they should want to help make Big Island roads become safer and not add to the traffic and possible traffic death toll problem. <https://www.ksbe.edu/article/the-lessons-of-the-law-of-the-splintered-paddle-ring-true-200-years-after-k>

**Does this EIS have any reports about how this development will safely add to the land fill on Big Island, and are there reports proving the island has enough water for another big resort, what about reports on how much power this resort will use because the Big Island already has serious Resource and Infrastructure issues. Please read the articles below.**

### **The Big Island Doesn't Have the Resources and Infrastructure for Another Resort**

Please see the articles below because the Big Island doesn't have the resources or infrastructure to safely add another resort development on island and these other NEWS and Research articles prove this point.

1) Hawaii Deals with Burgeoning Waste Management Problem

As landfills face closure and waste-to-energy projects stall, various counties in Hawaii are dealing with waste management issues. Waste360 Staff January 10, 2020

"Hawaii Island is in the enviable position of having a landfill with anywhere from 20 to 100 years of capacity left to take in trash. But the island still wrestles with significant issues like plastic products that are no longer being recycled." <https://www.waste360.com/landfill/hawaii-deals-with-burgeoning-waste-management-problem>

2) "Big Island Now readers seem to agree that there's likely no single solution for slowing down the timeline of the West Hawai'i Sanitary Landfill reaching capacity.

The West Hawai'i Sanitary Landfill, the only remaining landfill on the Big Island, is forecast to reach capacity within the next 20 to 25 years." <https://bigislandnow.com/2023/09/17/big-island-now-poll-no-27-results-more-than-one-solution-needed-to-help-extend-life-of-west-hawaii-landfill/>

3) Hawaii Island Has Decades of Landfill Space But Still Faces Challenges in Dealing With Its Waste Hawai'i Public Radio Published January 9, 2020 at 5:00 AM HST

"Hawaii Island is in the enviable position of having a landfill with anywhere from 20 to 100 years of capacity left to take in trash. But the island still wrestles with significant issues like plastic products that are no longer being recycled.

For the past four decades, trash from the east side of Hawaii Island has been dumped in a landfill outside of Hilo. But now trash from all parts of the island is being trucked to a facility north of Kona." <https://www.hawaiipublicradio.org/local-news/2020-01-09/hawaii-island-has-decades-of-landfill-space-but-still-faces-challenges-in-dealing-with-its-waste>

4) "What happens to Hawaii Island's trash and recyclables? BY MICHELLE BRODER VANDYKE HAWAII ISLAND PUBLISHED 11:30 AM ET DEC. 17, 2022 By Michelle Broder Vandyke Hawaii Island PUBLISHED 11:30 AM ET Dec. 17 The future of the landfill

The West Hawaii Landfill will be full in about 20 years. Finding a location for the next landfill is a concern, according to the DEM officials. They said it will be challenging to find a location for a future landfill because of stringent regulations and costs related to planning, environmental regulations, design and construction that will take many years to complete. It will also require community support." <https://spectrumlocalnews.com/hi/hawaii/news/2022/12/15/what-happens-to-hawaii-island-s-trash-and-recyclables-->

5) "The overwhelming plastic waste Hawaii visitors leave behind By Natasha Bourlin Aug 24, 2023

Hawaii saw more than 9 million visitors last year. Those tourists' first stops are often big-box and convenience stores, where they buy bottled water, plastic sand toys, single-use bodyboards, noodles, floaties and inner tubes for their trips." <https://www.sfgate.com/hawaii/article/plastic-waste-hawaii-visitors-leave-behind-18286076.php>

6) "A county commission drafts ordinance aiming to ban recyclables at West Hawai'i landfill By Megan Moseley September 6, 2023 · 1:00 AM HST \* Updated September 6, 2023 · 2:02 PM

Hawai'i County's Environmental Management Commission is developing an ordinance that aims to prohibit the amount of recyclable materials ending up in the island's only working landfill." <https://bigislandnow.com/2023/09/06/new-draft-ordinance-aims-to-ban-recyclables-at-west-hawaii-landfill/>

7) "Hawai'i County issues mandatory 25% water restriction for North Kona August 7, 2023 · 5:21 PM HST

A mandatory 25% water restriction has been issued for various communities in North Kona due to the failure of the Honokohau Deepwell over the weekend." <https://bigislandnow.com/2023/08/07/hawaii-county-issues-mandatory-25-water-restriction-for-north-kona/>

8) "Hawai'i Water Supply Closely Monitored As Severe Drought Continues by Big Island Video Newson Nov 6, 2023 at 3:28 pm STORY SUMMARY

HAWAII COUNTY - Officials say a special focus will be placed on the South Kohala Water System, which is more susceptible to drought conditions." <https://www.bigislandvideonews.com/2023/11/06/water-supply-closely-monitored-as-hawaii-ca-bbi-under-severe-drought/>

9) "Big Island Concerns About Water Quality Prompt A Lawsuit Over A Kona Sewage Plant Kealahou sewage plant discharges more than 1 million gallons of wastewater into a lava pit near the ocean. By Paula Dobbyn / February 6, 2024

Settlement talks are scheduled in an environmental lawsuit involving a county-operated Big Island sewage plant in Kona." <https://www.civilbeat.org/2024/02/concerns-about-water-quality-prompt-a-lawsuit-over-a-kona-sewage-plant/>

10) "Researchers find sewage from an oceanfront Big Island community reaches nearshore waters Hawai'i Public Radio | By Russell Subiono, Sophia McCullough Published December 20, 2021 at 5:56 PM HST

There are nearly 50,000 cesspools on the Big Island, with tens of thousands posing a risk to water resources, according to the Hawai'i Department of Health." <https://www.hawaiipublicradio.org/the-conversation/2021-12->

[20/researchers-find-sewage-from-an-oceanfront-big-island-community-reaches-near-shore-waters](https://www.khonn2.com/local-news/hawaii-island-community-reaches-near-shore-waters)

11) "Kona coast faces stark wastewater tradeoffs Current situation

There are approximately 88,000 cesspools across the state, releasing more than 200,000 cubic meters of wastewater per day to the environment. <https://www.hawaii.edu/news/2021/09/10/kona-stark-wastewater-tradeoffs/>

We ask that you start figuring out how this can never happen again? These are the kind of issues that need to be resolved before you approve more development.

12) "BIG ISLAND NEWS HECO restores power after initiating emergency outages on Big Island by: Elizabeth 'Ufi Posted: Jan 30, 2024 / 09:43 AM HST Updated: Jan 30, 2024 / 04:15 PM HST

An unexpected loss of several large Hawaii Electric generators left some residents on Big Island without power for parts of the morning on Tuesday, Jan. 30." <https://www.khonn2.com/big-island-news/heco-initiates-30-min-rolling-outages-after-loss-of-generators/>

13) Hawaii State News Update: Hawaiian Electric initiates rolling outages throughout Big Island February 13, 2024 · 5:23 PM HST  
\* Updated February 14, 2024 · 4:21 PM

The emergency outages are being initiated in various areas around the entire island to prevent loss of power to an even greater number of customers. The timing and extent of the outages will depend on the amount of demand on the system and the availability of generators." <https://bigislandnow.com/2024/02/13/hawaii-island-customers-asked-to-reduce-electricity-use/>

14) "LOCAL NEWS

HECO issues rolling power outages around Big Island by: Emily Cervantes Posted: Feb 13, 2024 / 05:11 PM HST Updated: Feb 13, 2024 / 09:12 PM HST Hawaiian Electric initiated rolling outages for Big Island after several large generators became unavailable and reduced output Tuesday night." <https://www.khonn2.com/local-news/heco-releases-conservation-alert-for-big-island/>

Water departments on O'ahu and Hawaii'i Island have advised customers to conserve water ahead of possible storm-related power outages this month. But what does the power grid have to do with the water supply?

It is impossible to separate Hawaii's power system from its water system, said Kawika Uyebara, deputy director of Hawaii County's Department of Water Supply." <https://www.hawaiipublicradio.org/local-news/2024-02-13/residents-on-hawaii-island-and-oahu-are-asked-to-conserve-water-amid-power-outages>

16) U.S. Hawaii is "on the verge of a greater catastrophe," locals say, as water crisis continues  
By Li Cohen

Updated on: April 11, 2024 / 8:23 AM EDT / CBS News

In Hawaii, one of the most important sayings is *ola i ka wai*, "water is life" — a phrase that not only sums up what it means to exist on an island, but what it means to live, period. But now, one of the largest of the island chain's land masses is facing a triple threat to its sole freshwater source, and if it isn't addressed soon, one community member says, "we're in deep trouble." <https://www.cbsnews.com/news/hawaii-water-crisis-climate-change/>

17) NewsHawaii'i County issues mandatory 25% water restriction for North Kona  
August 7, 2023 · 5:21 PM HS

A mandatory 25% water restriction has been issued for various communities in North Kona due to the failure of the Honokōhau Deepwell over the weekend.

<https://bigislandnow.com/2023/08/07/hawaii-county-issues-mandatory-25-water-restriction-for-north-kona/>

18) Hawaii'i Water Supply Closely Monitored As Severe Drought Continues  
by Big Island Video News  
on Nov 6, 2023 at 3:28 pm

(BIVN) – With an ongoing drought on the island of Hawaii, the Hawaii'i County Department of Water Supply says it is closely monitoring its 23 public water systems, with a "special focus" placed on the South Kohala Water System.

<https://www.bigislandvideonews.com/2023/11/06/water-supply-closely-monitored-as-hawaii-ca%BBi-under-severe-drought/>

This is a map of Power Outages on the Big Island. This map wouldn't have been created if Power Outages were not a problem. <https://www.hawaiianelectric.com/safety-and-outages/power-outages/hawaii-island-outage-map>

Please, give Tax Breaks to all homes that provide solar and/or wind turbine to there homes to help with power issues on the island.

20) "Hawaiian Electric is reporting that several large generators on the Big Island are experiencing a range of issues and may lead to the need for rolling outages if supply does not meet demand."

[https://www.reddit.com/r/BigIsland/comments/1bnuar3/hawaiian\\_electric\\_is\\_reportng\\_that\\_several\\_large/?rdt=52660](https://www.reddit.com/r/BigIsland/comments/1bnuar3/hawaiian_electric_is_reportng_that_several_large/?rdt=52660)

21) "NewsHawaiian Electric asking Big Island customers to conserve power due to down generators

March 25, 2024 · 11:49 AM HST

According to the utility company, this is an usual situation as the large generators are experiencing mechanical problems resulting in a reduced output. The largest generator, an independent power producer that sells electricity to Hawaiian Electric, is offline with significant mechanical issues.

The plant generates 60 megawatts or nearly one-third of the typical peak demand of 180 megawatts on the island."

<https://bigislandnow.com/2024/03/25/hawaiian-electric-asking-big-island-customers-to-conserve-power-due-to-down-generators/>

All the articles above show that a resort development will damage Keauhou Bay coral and marine life and, Big Island resources and infrastructure are currently being negatively affected from the development that is on island already, and there are years of new development that have already been

approved, before having safe resources and infrastructures for new developments.

With these scientifically proven articles by some of the most professional scientists in the world, they say the a serious population increase, as well as development and resort runoff that happens because of parking lots, and... with all coastal developments, it will be dangerous for Keauhou Bay to be development because it will damage the marine ecosystems in the area.

Please, save Keauhou Bay's marine life and help the island's resources by saying NO to a Bungalow Resort built by Kamehameha Schools because all of these articles prove it would be extremely damaging to the waters at Keauhou Bay.

Thank you,

Sincerely,

Roslyn Patrick-Sunnes

Douglas Perrine

Polly & Mark Petersen

I am a private boater, residing in Kailua Kona, a little under 5 miles from Keauhou Bay. For the last 27 years I have launched my small boat at the boat ramps there. My concern about this plan is my ability to continue to make use of this state-owned facility. Even without the massive new development proposed in this plan, these two small boat ramps and the associated trailer parking area and wash-down area are often over-utilized, requiring a wait to launch, a wait to wash down, and sometimes a long drive to park along the shoulder of Kaleiopapa Rd. when the 16 provided trailer parking stalls are occupied. The Kamehameha Schools documents are vague, perhaps deliberately, regarding the fate of these critical trailer stalls in their plans, as well as on the continued availability of road shoulder trailer parking. The 2021 conceptual plan drawing shows these 16 stalls sort of blurred out, implying that they may be eliminated. It shows 8 new stalls a little further up the road. Without further clarification I can only assume that KS intends to cut the boat trailer parking in half. This would change the situation from a condition of frequently inadequate trailer parking to one of guaranteed frustration, aggravation, and user conflict. It's not clear if KS intends to change the current long-term boat storage area on the north side of the bay to short-term trailer parking, as it is labeled "boat trailer storage" on their drawing, but this is not a feasible solution to the day-use trailer parking problem. After parking the trailer at the north end of the bay, the boater would have to walk all the way around the bay back to the boat ramp, where there would be a line of angry boaters waiting to launch at the ramp occupied by his boat. The net effect of cutting the number of trailer parking slots near the ramp in half, for me, would be that I would be denied use of the launching ramps I have used for over a quarter of a century now. I could not justify navigating my trailer through morning rush hour traffic to reach Keauhou Bay only to find that all the trailer parking was occupied or that there was a huge line of boats waiting for the owners of the boats ahead of them to make the long walk back from the north side of the bay. Please note that the 8 proposed new stalls occupy an area of shoulder that is currently available for trailer parking, so the net gain is perhaps only 6 stalls. Presumably KS will also block or ban parking on the remaining shoulders of Kaleiopapa, eliminating at least 6 potential parking spots for a boat trailer. This would mean the net number of available trailer stalls will decrease from about 24 to 8, or a third of what is presently not quite adequate. If KS presents a plan that guarantees an increase of available boat trailer parking close to the ramp, then I will not be personally adversely affected by their development plans, as far as I can tell, but if they actually reduce the available trailer parking from 16 stalls plus shoulder parking to only 8 stalls, as implied in their diagram, I will be cut off from a cherished part of my life. All private boaters and probably most commercial operators using the Keauhou boat ramps will likewise be severely adversely affected. We can expect that some companies might go out of business, and that some boaters might become victims of the violence that sometimes occurs when alcohol mixes with boating and there is some disagreement about how much time someone is taking at a boat launch or wash down area.

**To:** Kamehameha Schools  
**From:** Polly and Mark Petersen  
**Date:** August 6, 2024  
**Re:** Kamehameha Schools - Keauhou Bay Management Plan DEIS

## COMMENTS:

The Environmental Impact Statement (EIS) for the proposed development of Keauhou Bay raises significant concerns. The bay is a cherished local haven, heavily utilized by residents for a variety of water sports, and is one of the few areas not yet overrun by tourist-centric development. The current restriction of cars has successfully preserved the bay's unique character, making it less congested and more enjoyable compared to other areas in the Kona district. It's crucial to consider that the introduction of additional housing and/or retail spaces for tourists could disrupt the local ecosystem and the community's way of life. Instead of yielding to development pressures, alternative strategies such as establishing an endowment could be explored to enhance Kamehameha Schools' income without sacrificing the bay's integrity. Preserving Keauhou Bay as it is, while focusing on infrastructure improvements, would ensure that this natural gem remains a sanctuary for local culture and recreation for decades to come.

## Ioana Petrisor

Dear County of Hawaii, Planning Department, This letter serves as comments to the Keauhou Bay Management Plan Draft EIS (the "Project"). As discussed below, I am an expert in environmental forensics and I have experience with the assessment of the impact of pollutants on bodies of water. As the Editor of the Environmental Forensics Journal, I have peer reviewed hundreds of articles, including those with studies related to impact of pollutants on bodies of water and sediments including in the marine environment. I have reviewed portions of the EIS and provide the following comment about additional studies and research that, in my opinion, are needed to assess the environmental impact of the Project on Keauhou Bay. My Background I am a biochemist with 30 years of experience including basic and applied research related to environmental contaminants focused on fate & transport evaluations. I have applied a variety of environmental forensic/fingerprinting methods to track the source and age-date environmental contaminants in water, soil, and air (including chlorinated solvents, PFAS, crude oil and petroleum products, metals, PCBs, perchlorate, nutrients, and 1,4-dioxane). I am the Editor-in-Chief of Environmental Forensics Journal and the author of the textbook "Environmental Forensics Fundamentals: A Practical Guide". Over the years, I have published over seventy scientific articles and an invention patent, and provided numerous presentations, workshops, and courses on environmental forensics. I am actively involved with Interstate Technology and Regulatory Council (ITRC). As a member of the ITRC's PFAS (per- and polyfluoroalkyl substances) team, I am currently actively contributing to several sections of the PFAS technical guideline document, including those on aqueous film forming foams (AFFFs), fate and transport and source evaluations. I have also conducted innovative research for U.S. DOE, U.S. DoD, and the European Community on environmental characterization, risk assessment, and innovative remedial technologies for soils, sediments, and water. A copy of my CV is attached. Comment Studies Are Needed to Assess The Environmental Impact of Additional Pollutants On Keauhou Bay The Project proposes to construct a 150-unit resort in an existing forested area, build a number of commercial kiosks, construct a cultural center and construct roughly 14,000 feet of retail/commercial space on and/or adjacent to Keauhou Bay. This also includes the construction of additional roads and a significant amount of hardscape. The project proposes to remove a large amount of existing historical forest area that may be capturing pollutants from the golf course and preventing them from entering the bay. The Project will likely increase the number of visitors and vehicles around the bay, which is likely to increase the quantity of pollutants that may enter the bay and effect flora and fauna within the bay. A study needs to be done to assess existing pollutant loading to the bay from the surrounding properties. This would likely include sampling any runoff to the bay, including from the golf course and runoff from the existing parking lots, as well as core sampling within the bay to assess the level of pollutants within the sediment and to evaluate the historical pollutant loading in the bay that are currently impacting flora and fauna (and water quality) within the bay. Note that while the EIS suggests that rainfall on the project site may percolate in the subsurface rather than running into the bay, it is my understanding (based on discussion with locals) that there is current flooding experienced on nearby Kamehameha III drive during rain events (with part of the flooding potentially originating from Project lands) and in the past rain events have washed out the 2 nd volleyball court that was located to the west of the remaining court. It appears that, at least at times, runoff does get into the bay and that should be considered. Moreover, locals have reported that the East end of the bay has gotten noticeably shallower in recent years, suggesting that sedimentation of the bay is occurring. Overall, there appears to be evidence that historical land

clearing in the area has led to increased runoff from the Project area. Moreover, the project proposes to remove 10+ acres of heavily forested land and replace it with roads, parking lots, buildings and other hardscape. That forested land receives runoff from the golf course area uphill of the forested area. One would expect forested area to slow down rainfall and reduce runoff the upper portions of the project area and golf course. As Kailua-Kona receives rainfall from periodic tropical storms and/or remnants of hurricanes where several inches of rain can fall within a couple of days, the project needs to study rainfall from large episodic events and the impact on the bay. In particular, with the forest gone and replaced by roads, parking lots, buildings and other hardscape, that water can no longer percolate and will be added runoff. None of this analysis was apparently conducted. An assessment should then include projections as to the amount of the potential increases in the quantity of pollutants entering the bay from the Project, assess potential mitigation measures and assess the ecological impact from the runoff. In conclusion, the EIS as written fails to include studies necessary to assess historical and ongoing impacts to the bay, future impacts to the bay from the Project, and potential mitigation measures to address historical issues caused by Proponents lands, if any, and future impacts from the proposed Project. Sincerely, Ioana G. Petrisor, Ph.D. Editor-in-Chief Environmental Forensics Journal

Dear County of Hawaii, Planning Department,

This letter serves as comments to the Keaouhou Bay Management Plan Draft EIS (the "Project"). As discussed below, I am an expert in environmental forensics and I have experience with the assessment of the impact of pollutants on bodies of water. As the Editor of the Environmental Forensics Journal, I have peer reviewed hundreds of articles, including those with studies related to impact of pollutants on bodies of water and sediments including in the marine environment. I have reviewed portions of the EIS and provide the following comment about additional studies and research that, in my opinion, are needed to assess the environmental impact of the Project on Keaouhou Bay.

#### My Background

I am a biochemist with 30 years of experience including basic and applied research related to environmental contaminants focused on fate & transport evaluations. I have applied a variety of environmental forensic/fingerprinting methods to track the source and age-date environmental contaminants in water, soil, and air (including chlorinated solvents, PFAS, crude oil and petroleum products, metals, PCBs, perchlorate, nutrients, and 1,4-dioxane). I am the Editor-in-Chief of Environmental Forensics Journal and the author of the textbook "Environmental Forensics Fundamentals: A Practical Guide". Over the years, I have published over seventy scientific articles and an invention patent, and provided numerous presentations, workshops, and courses on environmental forensics. I am actively involved with Interstate Technology and Regulatory Council (ITRC). As a member of the ITRC's PFAS (per- and polyfluoroalkyl substances) team, I am currently actively contributing to several sections of the PFAS technical guideline document, including those on aqueous film forming foams (AFFFs), fate and transport and source evaluations. I have also conducted innovative research for U.S. DOE, U.S. DoD, and the European Community on environmental characterization, risk assessment, and innovative remedial technologies for soils, sediments, and water. A copy of my CV is attached.

#### Comment

#### Studies Are Needed to Assess The Environmental Impact of Additional Pollutants On Keaouhou Bay

The Project proposes to construct a 150-unit resort in an existing forested area, build a number of commercial kiosks, construct a cultural center and construct roughly 14,000 feet of retail/commercial space on and/or adjacent to Keaouhou Bay. This also includes the construction of additional roads and a significant amount of

## IOANA G. PETRISOR, PHD

Senior Project Manager/Chief Chemist

Dr. Petrisor is a biochemist with 30 years of experience, helping both domestic and international clients recover costs in complex cases involving multiple contaminants and releases, playing a key role in strategy development and contaminant fate & transport evaluations. She has applied a variety of environmental forensic / fingerprinting methods to track the source and age-date environmental contaminants (including chlorinated solvents, PFAS, crude oil and petroleum products, metals, PCBs, perchlorate, nutrients, and 1,4-dioxane). Dr. Petrisor is the Editor-in-Chief of Environmental Forensics Journal and the author of the textbook "Environmental Forensics Fundamentals: A Practical Guide". She has also published over seventy scientific articles and an invention patent, and provided numerous presentations, workshops, and courses on environmental forensics. Dr. Petrisor is actively involved with Interstate Technology and Regulatory Council (ITRC). As a member of the ITRC's PFAS (per- and polyfluoroalkyl substances) team she is contributing to several sections of the PFAS technical guideline document, including those on aqueous film forming foams (AFFFs), fate and transport and source evaluations. Dr. Petrisor has conducted innovative research for U.S. DOE, U.S. DOD, and the European Community on environmental characterization, risk assessment, and innovative remedial technologies for soil, sediments, and water.

### SELECTED EXPERIENCE

**PFAS Investigations at Multiple Department of Defense (DoD) Sites / U.S. Department of the Navy (2021-present)**

Dr. Petrisor is evaluating PFAS sources at multiple DoD sites, including in South Carolina and New Jersey. She is using multiple lines of evidence, including historical document review, fate & transport evaluation, and chemical fingerprinting to identify and investigate potential release sources and delineate co-mingled groundwater plumes. Apart from the well-defined sources of PFAS, such as the aqueous film forming foams (AFFF) used for fire suppression, Dr. Petrisor has identified other, less publicized, PFAS sources with potential environmental impact, including munitions, weapon cleaning solutions, lubricants, demolition debris, waste handling, and on-site specific operations (e.g., metal plating, auto service). Additionally, she also investigates off-site potential sources and background levels in various environmental media. For a U.S. Navy site located in New Jersey this approach resulted in elimination of a series of on-site areas and the delineation of co-mingled plumes from both on-site and off-site sources. The described approach may be adapted to site specific conditions at other DoD and non-DoD sites.

**Preparation of a Guidebook for PFAS Management at Airports / Airport Cooperative Research Program (ACRP) (2021-present)**

Dr. Petrisor is part of a team that prepared a Guidebook aiming to assist airports with developing plans to manage PFAS exposure and risks at their facilities. Her specific contributions included: the review of ACRP Report 173 on the "Use and Potential Impacts of AFFF Containing PFAS at Airports" and preparation of a gap analysis; identification of non-AFFF sources of PFAS in airport settings and their potential impacts on daily operations and released PFAS; as well as PFAS source

hardscape. The project proposes to remove a large amount of existing historical forest area that may be capturing pollutants from the golf course and preventing them from entering the bay. The Project will likely increase the number of visitors and vehicles around the bay, which is likely to increase the quantity of pollutants that may enter the bay and effect flora and fauna within the bay. A study needs to be done to assess existing pollutant loading to the bay from the surrounding properties. This would likely include sampling any runoff to the bay, including from the golf course and runoff from the existing parking lots, as well as core sampling within the bay to assess the level of pollutants within the sediment and to evaluate the historical pollutant loading in the bay that are currently impacting flora and fauna (and water quality) within the bay. Note that while the EIS suggests that rainfall on the project site may percolate in the subsurface rather than running into the bay, it is my understanding (based on discussion with locals) that there is current flooding experienced on nearby Kamehameha III drive during rain events (with part of the flooding potentially originating from Project lands) and in the past rain events have washed out the 2<sup>nd</sup> volleyball court that was located to the west of the remaining court. It appears that, at least at times, runoff does get into the bay and that should be considered. Moreover, locals have reported that the East end of the bay has gotten noticeably shallower in recent years, suggesting that sedimentation of the bay is occurring. Overall, there appears to be evidence that historical land clearing in the area has led to increased runoff from the Project area. Moreover, the project proposes to remove 10+ acres of heavily forested land and replace it with roads, parking lots, buildings and other hardscape. That forested land receives runoff from the golf course area uphill of the forested area. One would expect forested area to slow down rainfall and reduce runoff the upper portions of the project area and golf course. As Kailua-Kona receives rainfall from periodic tropical storms and/or remnants of hurricanes where several inches of rain can fall within a couple of days, the project needs to study rainfall from large episodic events and the impact on the bay. In particular, with the forest gone and replaced by roads, parking lots, buildings and other hardscape, that water can no longer percolate and will be added runoff. None of this analysis was apparently conducted.

An assessment should then include projections as to the amount of the potential increases in the quantity of pollutants entering the bay from the Project, assess potential mitigation measures and assess the ecological impact from the runoff.

In conclusion, the EIS as written fails to include studies necessary to assess historical and ongoing impacts to the bay, future impacts to the bay from the Project, and potential mitigation measures to address historical issues caused by Proponents lands, if any, and future impacts from the proposed Project.

Sincerely,

**Ioana G. Petrisor, Ph.D.**

Editor-in-Chief

Environmental Forensics Journal

[Environmental.Forensics@gmail.com](mailto:Environmental.Forensics@gmail.com)

characterization and fate & transport evaluation. For this project, Dr. Petrisor completed two comprehensive Technical Memoranda on PFAS fate & transport and PFAS methods of investigation, with emphasis on state-of-art fingerprinting techniques (including comprehensive chemical analysis, total oxidizable precursors, total organic fluorine, and non-targeted analysis). Information from these Memoranda was included in the final draft Guidance document, which provides an in-depth understanding of airport operations and potential PFAS sources, along with specific regulatory requirements. This Guidebook sets the bases for successful PFAS investigations & remediation, as well as efficient PFAS management applicable to airports worldwide.

**\*Isotopic Study of Chlorinated Solvents in Subsurface of a Historical Landfill Site in Hollywood, California / Vulcan Materials Company (2018-2019)**

Dr. Petrisor has conducted forensic screening studies (using compound-specific isotopic analysis (CSIA)), to better understand subsurface contaminant fate & transport and to assess the possibility of off-site sources of PCE/TCE and 1,4-dioxane contributing to on-site subsurface contaminant plumes at a historical landfill site in Hollywood, California. The isotopic data were used in conjunction with quarterly monitoring and other site data helping to refine the conceptual site model (CSM) for this site. The isotopic data were also indicative of multiple releases and helpful in evaluating off-site contributions to the plume.

**\*Source Identification for Complex Groundwater Plume and Soil Contamination with Petroleum Hydrocarbons and Chlorinated Solvents, Los Angeles, CA / Angeles Chemical Company (2006-2010)**

Dr. Petrisor provided litigation support for a former chemical storage and re-packaging facility located in a heavily industrialized area of Los Angeles, California. Many organic chemicals were handled and stored, including a large variety of petroleum and non-petroleum solvents, as well as chlorinated solvents. The dispute involved a neighboring site with similar historical operations. In this context, she performed a thorough document review of company records, environmental databases, monitoring reports, more than 200 depositions, aerial photos, and maps, and conducted chemical fingerprinting and signature chemicals analysis based on monitoring data. As a result of all these, she identified a "signature" chemical associated with one site only. Its presence in subsurface of the client's site provided the physical proof that the other site was a contributing source. This finding correlated well with other lines of evidence used in the case. Based on various forensic lines of evidence, the case favorably settled for the client.

**\*Forensic Evaluation of a Groundwater Plume, New Jersey / Confidential Client (2010-2011)**

As a subject matter expert, Dr. Petrisor evaluated potentially contributing sources to a PCE/TCE/1,1,1-TCA/1,4-dioxane groundwater plume under active remediation at a former industrial site in New Jersey. The investigation was triggered when routine groundwater monitoring revealed the presence of a chemical that had never been used at the site. A comprehensive document review helped interpret historical groundwater data, and three neighboring sites were identified as potential contributors to the plume. Dr. Petrisor prepared a technical memorandum describing to the regulatory agency the existing evidence and the need for further environmental investigation by other PRPs.

**Subsurface PFAS Investigation Following an AFFF Spill at an Airport in Dallas, TX / Confidential Client (2023)**

An AFFF spill occurred in January 2023 at a hangar from an airport in Dallas, TX. The spill occurred on thick paved surfaces and spill response actions followed promptly. Dr. Petrisor has reviewed the PFAS sampling data and the associated Response Action Report providing comments and recommendations. PFAS fingerprinting was also conducted and proved useful in delineating the current spill from residual PFAS soil contamination from what appeared to be an older spill of a distinct AFFF type. The forensic evaluation on PFAS in soil denoted that the PFAS compounds left after excavation, still exceeding regulatory values, are not associated with the AFFF from the recent release. This investigation denoted the important role of fingerprinting evaluations in PFAS investigations since many historical spills of PFAS products were not investigated/delineated and could still contribute residual PFAS contamination in subsurface environments at many sites. That residual PFAS contamination may, in many cases, exceed the extremely low regulatory limits, triggering costly remedial

actions. Therefore, delineating a new release from residual and background PFAS in soils becomes critical at any sites with detected PFAS.

**Investigation of PFAS Sources in Groundwater Managed by a Municipality in Mid-Western US / Confidential Client (2022)**

Dr. Petrisor has led a forensic investigation related to the sources of PFAS in groundwater managed and discharged into a river by a Municipality located in mid-western US. Specifically, the goal was to establish if aqueous film forming foams (AFFFs) contributed to the PFAS detected in groundwater. Dr. Petrisor conducted PFAS fingerprinting, along with a comprehensive literature review related to PFAS fingerprints in legacy and modern AFFFs and in groundwater at sites impacted by AFFFs. Relevant literature on PFAS fingerprints in non-AFFF sources has also been consulted. Other independent lines of evidence were developed, including historical document review and PFAS fate & transport evaluation. Consequently, Dr. Petrisor prepared a Technical Memorandum synthesizing this investigation. This case study also resulted in the creation of a library of PFAS fingerprints in AFFFs and other sources, with general relevance to PFAS forensic investigations.

**\*Comprehensive Review of PFAS Sources and Fingerprinting Methods for Source Differentiation and Age-Dating / Environmental Forensics Journal (2019-2021)**

As Editor of Environmental Forensics Journal and member of the Interstate Technology Regulatory Council (ITRC) PFAS team, Dr. Petrisor has conducted a comprehensive literature review to evaluate available forensic techniques applicable to PFAS and advances in PFAS fingerprinting. The types and characteristics of PFAS sources were also investigated in the context of developing specific forensic techniques. Moreover, she has reviewed the advances and limitations of available sampling & analytical techniques applicable to PFAS, helping understand the implications for data evaluation and interpretation, with the final aim of building defensible lines of evidence. Dr. Petrisor already applies the gained knowledge in projects throughout the U.S.

**Forensic Evaluation of PCBs and other Contaminants in Sediments of a River in Northeastern U.S. / Confidential client (2023)**

On behalf of a confidential client that historically operated a steel manufacturing site located along a River in northeastern U.S., Dr. Petrisor reviewed expert reports related to cost allocation of PCBs and other contaminants in river sediments. The river sediments have been historically contaminated by many industrial properties located along the river. Dr. Petrisor has also forensically analyzed PCBs and other contaminant data (including heavy metals and PAHs) from the river sediments and from the client property. This ongoing evaluation is performed to propose a reliable cost allocation at this complex site with multiple potentially responsible parties (PRPs).

**\*Investigation of Nutrient Contamination in an Urban Lake, San Marcos, CA / Citizen Development Corporation (2013-2021)**

Dr. Petrisor provided expert services to investigate the sources of nutrients (i.e., N and P) and allocation of contributions to nutrients in lake water and sediment within a dynamic urban watershed in San Marcos, California. She has reviewed historical documents and conducted forensic sampling and testing of lake water and sediments, applying techniques of chemical fingerprinting, signature chemicals, and sediment age-dating. In preparation for litigation, she provided strategic advice in the context of mediation between the client (lake owner) and several public agencies. She also served as an appointed member of the technical team established to conduct investigations during the mediation proceedings and to regularly communicate the findings to the Regional Water Board. Dr. Petrisor participated in monthly meetings with the Regional Water Board representatives and has communicated to the Regional Water Board on behalf of the client, contributing to a path forward in this complex case, and resulting in the acceptance of the Remedial Investigation/Feasibility study and implementation of numerous field pilot tests.

**\*Age-Dating Heating Oil Releases in Soil of a Property in Anchorage, Alaska / Four Season LLC. (2018-2020)**

Dr. Petrisor was appointed expert witness for a heating oil contaminated property case in Anchorage, Alaska. She prepared an Expert Report focusing on age-dating heating oil releases in soil and evaluating the sources of the released heating oil. For this, she performed a detailed review of relevant environmental reports and historical documents, along with many oil chromatograms. Also, she has performed a comprehensive literature review on fate & transport of petroleum products in Alaska subsurface environment. Additionally, she prepared rebuttal comments related to an opposing expert report, as well as a Supplement to the Expert Report that had a key role in favorably settling the case.

**\*Deepwater Horizon Oil Spill Fingerprinting and Data Usability Evaluation for Litigation Support / British Petroleum (2011-2013)**

As part of a complex litigation support team of scientists, Dr. Petrisor conducted extensive fingerprinting studies related to this major oil spill in the U.S. This work included evaluation of n-alkanes and isoprenoids, PAHs, and various classes of biomarkers in sediments, water, and tarballs/oil sheens, using a large variety of forensic techniques. She has contributed to the development of innovative forensic approaches to differentiating closely related oils and conducted data QA/QC and data usability evaluations for numerous water and sediment samples.

**\*Source Identification of Petroleum Hydrocarbons in Soils at a Former Industrial Site, Lyon, France / Adams (2006)**

In another international case, Dr. Petrisor was commissioned by a French developer (through the client law firm) to conduct a forensic evaluation at an underground parking structure (848 spaces on seven floors) that was under construction at a former industrial area that was considered to be rehabilitated. The discovery of hydrocarbons and other contaminants in soils triggered a temporary halt to construction, followed by the forensic investigation to delineate the source for purposes of cost recovery. A forensic sampling plan was proposed, and a fingerprinting analysis was performed for selected soil samples. The relative concentrations and distributions of different classes of hydrocarbons and other compounds (such as dibenzothiophenes) were examined based on extracted-ion counts for different m/z values (SIM mode). Different diagnostic ratios were calculated. The investigation pointed out the presence, in all samples, of a main petroleum product consisting of a weathered (20 years or more) middle distillate that originated from a common source. This product was mixed with a hydraulic oil in some samples. A responsible party was identified as a historical service station operated by a major oil company. The results of the forensic analysis conducted by Dr. Petrisor were sufficient for the identified responsible party to offer to pay for the remediation costs before any legal action was initiated. The forensic investigation was completed within 3 weeks, at a cost of approximately \$7,000, and saved hundreds of thousands of dollars in remedial costs.

**\*Source Identification for Pb and As in an Urban Community Neighboring a Historical Pesticide Manufacturing and Storage Site in Watsonville, California / Confidential Client (2008-2010)**

Dr. Petrisor provided expert witness services for multiple-plaintiff cases in Watsonville, California. Investigated the sources of lead (Pb) and arsenic (As) in the community near a historical pesticide manufacturing site. She used several independent lines of evidence, including document review, fate-and-transport evaluation, chemical fingerprinting (e.g., correlation plots), and mineralogical fingerprinting. Based on all these, impacts from the historical pesticide manufacturing site in the neighboring community were established, in addition to other potential sources, and the case settled before trial.

**\*Investigation of the Source of PCBs in Soil near a Historical Power Plant at a Former U.S. Navy Base in Unalaska, Alaska / City of Unalaska (2009-2010)**

For this case, Dr. Petrisor provided expert services to the City of Unalaska, Alaska, related to investigating the source of PCBs in soil around a historical power plant that had been owned and operated by the city since the mid-1980s, but was built and initially operated during the Second World War as part of a military base (U.S.

Navy). The PCB contamination was initially discovered in sediments close to the plant, and a subsequent environmental assessment confirmed its presence in soils, before construction of a new power plant to meet increasing demand. Additionally, petroleum contamination (including middle distillates and bunker C) has been discovered throughout the area and is linked to storage and likely usage of petroleum products over the years. Several forensic lines of evidence were investigated, including historical document review and evaluation of various Navy practices, as well as evaluation of available PCB and other contaminant data on the City's property and throughout the former Navy base. The main finding related to the correlation between PCBs distribution patterns and historical Navy practices of using waste oil (including PCBs) on the bases to get rid of the dust. The results of this forensic investigation were presented in a mediation meeting and reached a positive resolution for the client that recovered all remedial costs from the Navy (about \$2.5 million), while avoiding costly litigation.

**\*Tree-Ring Fingerprinting Age-Dating and Source Identification of a Groundwater PCE Plume, Cambridge, Massachusetts / Confidential Client (2006-2007)**

Dr. Petrisor provided technical expertise, applying the dendroecology method, for a case of PCE groundwater contamination discovered while building a parking structure at the client's site in Cambridge, Massachusetts. The case was puzzling, as the only obvious source of PCE (a historical dry cleaner at a mall—upgraded) did not show any contamination at the time of sampling. However, tree-ring analyses of trees between the dry cleaner and the client's site revealed evidence of past releases. Specifically, multiple PCE releases were identified and age-dated to the year. The tree-ring data also allowed a reliable evaluation of plume size and past movement (using information from trees at increasing distance from the site). Dr. Petrisor contributed to a confidential report to the client for possible use in filing an insurance claim.

**\*Natural Attenuation Mechanisms Evaluation at Sites in Southern California / Confidential Clients (2008-2010)**

As a subject matter expert, Dr. Petrisor provided technical expertise to evaluate and confirm the occurrence of biodegradation and other natural attenuation mechanisms at several Los Angeles industrial sites contaminated with chlorinated solvents (PCE, TCE). General groundwater parameters, selected metals, and isotopic data were used as lines of evidence. Molecular diagnostic techniques (through biotrap sampling) were also deployed at selected locations. Results were correlated with geological and hydrological data. The isotopic results correlated well with the other natural attenuation parameters (dissolved oxygen, redox potential, sulfates, nitrates, pH, temperature, etc.), providing direct evidence of active degradation processes and supporting regulatory acceptance of a monitored natural attenuation remedy.

**\*Groundwater Evaluation of Natural Degradation Mechanisms of PCE, New Jersey / Confidential Client (2010-2011)**

As a subject matter expert, Dr. Petrisor evaluated various natural degradation mechanisms of PCE in groundwater at a former grocery store site in New Jersey. The site had no PCE degradation products and showed little evidence of reductive conditions. In this context, Dr. Petrisor identified aerobic biodegradation and potential abiotic degradation on iron minerals as possible degradation mechanisms at this site. She then developed specific recommendations for sampling and analyses to confirm that such degradation pathways were involved, apart from water parameters, and included specialty testing (of specific intermediate products), as well as isotopic and molecular diagnostic testing.

**U.S. DOE-Funded Research (USC) (2002-2003)**

**\*In-Situ Stabilization of Subsurface Contaminants (Metals and Radionuclides) Using Microbial Polymers. U.S.A.**

Dr. Petrisor managed a project funded by U.S. DOE and conducted at the University of Southern California, which involved experimental work performed by graduate students. The goal was to develop an innovative biotechnology for stabilizing a variety of heavy and radioactive metals in subsurface soils, based on the use of microbial polymers (biopolymers). Theoretical aspects of biopolymer interactions with metals in different porous media were studied initially, using published information. For practical aspects, the project focused on small-

arms firing ranges with soils contaminated by lead. Different soil treatments were screened through laboratory testing and column simulation experiments, with the aim of creating interpenetrating networks of biopolymers within the soil that would have the ability to entrap metal species inside the network. The in-situ production of biopolymers via the growth of microorganisms inside the soil was also investigated. In sum, this work demonstrated the ability to stabilize lead in firing-range soils to achieve non-concern levels. Subsequently, practical methods of treatment application were proposed.

**\*European Community-Funded Research (Romania, Greece) (1997-2000)**

Dr. Petrisor researched environmental characterization and assessment, and conducted laboratory, greenhouse, and field tests for bio- and phytoremediation deployments at mining sites in Romania and Greece. The project focused on three case studies of sites along the Black Sea Coast in Romania that were contaminated by heavy and radioactive metals (from mining activities). A thorough environmental characterization was performed, which produced an in depth understanding of environmental issues associated with a variety of heavy metals (including Pb, Cd, As, Zn, Mn, Ni) from mining, along with the fate and transport of such metals. The investigation then focused on laboratory studies of biosolubilization of metals from mine tailings (using rotary shakers and bioreactors) and biosorption of metals from contaminated water (column studies), as well as on laboratory, greenhouse, and field studies of phytostabilization (establishing vegetative covers) of tailing dumps. This work was conducted in the Laboratory of Metallurgy at the National Technical University of Athens, Greece. Aspects of this work are presented in Dr. Petrisor's Ph.D. thesis and multiple scientific publications.

**U.S. DOE/U.S. DOD-Funded Research (U.S. and Poland) (2007-2002)**

**\*Field-Scale Evaluation of Phytoremediation for Extraction of Pb from Contaminated Soil, Poland**  
Dr. Petrisor provided technical expertise and peer-review of data for a phytoremediation project. She conducted field analyses, deployed portable chlorophyll fluorometers to monitor metal uptake and plant health status, and peer-reviewed resulting data. The aim of the project was to create a link between the theory of phytoextraction established in lab and pilot-scale experiments, by applying phytoextraction at the field scale. In this context, Dr. Petrisor developed and field-tested advanced technologies for the application of amendments to contaminated soil, to support the process of lead and cadmium phytoextraction, resulting in a significant reduction of application costs and efficiency. This demonstration project covered all activities, from site characterization through final disposal of contaminated biomass, and addressed life-cycle costs based on both actual costs and anticipated "real-world" expenditures. The impact of amendments on soil microorganisms was also evaluated, and the technology developed was deployed in Poland in a large field application.

**\*Evaluation of Novel Mercury Remediation Technologies, Poland and U.S.A.**

Dr. Petrisor provided technical expertise and was involved in research regarding phytostabilization of mercury in soil. Soil contamination at a site in Poland was characterized, and bioremediation, phytoremediation, and chemical treatments were evaluated. Investigations focused on phytostabilization and/or chemical stabilization of the mercury in soils, as well as suitable techniques for mercury volatilization, capture, and recovery from contaminated soils. As a result, several practical approaches for remediation of mercury-contaminated soils were proposed.

**\*Production and Scale Implementation of Petroleum Contaminated Soils Bioreactor, Poland and U.S.A.**

In cooperation with the Westinghouse Savannah River Technology Center (SRTC), Dr. Petrisor was part of a research team that investigated the removal of low-level organic contaminants from petroleum-contaminated soils by using a mobile bioreactor. The work focused on the design, construction, and operation of a continuous-airflow, packed-bed reactor designed to accept both contaminated water and soil. The bioventing process was used to remediate contaminated soils amended with wood chips and fertilizers. Investigations of bioaugmentation were also carried out. The outcome was the design of a mobile bioreactor.

**\*Production and Scale-Implementation of Chlorinated Solvent Bioreactor, Poland and U.S.A.**

creative thinking, custom solutions.

I. G. Petrisor Resume Page | 6

Dr. Petrisor conducted feasibility studies, and biodegradation tests for remediation of soils contaminated with chlorinated solvents in a mobile bioreactor, which could work in both aerobic and anaerobic conditions. A hybrid anaerobic and aerobic biodegradation mechanism was considered. The study emphasized the use of bioaugmentation to increase overall process efficiency.

**\*Monitored Natural Attenuation at a Biopile Site from an Oil Refinery in Southern Poland**

Dr. Petrisor provided technical expertise and peer-review of publications for a project to compare long- and short-term natural attenuation, as well as active and passive aeration systems, at an engineered biopile. The work included periodic sampling and biochemical and microbiological characterization of hydrocarbon-degrading acidophilic microorganisms.

**\*Research at Institute of Biology of the Romanian Academy of Sciences (ICEBIOL) (1993-2000)**

**Bioremediation of Environments Contaminated with Petroleum Wastes, Romania.** As part of a research team of scientists, Dr. Petrisor participated in several projects with the aim of isolating, identifying, and characterizing microbial communities that are present at petroleum-contaminated sites and have the ability to degrade hydrocarbons. Additional laboratory and field studies successfully bioremediated petroleum-contaminated soils using inoculation with such microbial isolates (bioaugmentation) and/or stimulation of indigenous microbiota through special treatments (biostimulation). Bioventing was also tested.

**\*Biosynthesis and Purification of Microbial Products of Biotechnological Interest, Romania.**

As part of a research team of scientists, Dr. Petrisor was involved in a series of projects to identify and obtain microbial products with potential use in bioremediation. Biopolymers obtained from strains of *Xanthomonas sp.* and *Pseudomonas sp.* proved useful in removing metallic ions from water when used as biosorbent filters. Also, semi-purified biosurfactants from *Pseudomonas sp.*, *Coryne-bacterium sp.* and *Bacillus sp.* were used efficiently in soil pre-treatments.

**\*Means to Increase Hydrocarbon Bioavailability in Soils, Romania.**

The aim of several projects at ICEBIOL was to find innovative treatments for bioremediation of petroleum-contaminated soils. Semi-purified biosurfactant products or other microbial products, as well as inoculation with biosurfactant-producing bacterial strains were studied for pre-treatment of contaminated soils. The best results were provided by the treatments with whole-culture broth.

**\*Adsorption/Biosorption of Heavy Metals from Mine Effluents, Romania.**

Dr. Petrisor was a member of the scientific team for several projects to assess the efficiency of using adsorbent/biosorbent materials, with or without immobilized bacterial cells, in the removal of heavy metals from contaminated waters. Studies conducted in lab columns identified several adsorbent and biosorbent materials (inert biomass) to be used in practical applications.

**\*Biosolubilization of Heavy Metals from Mine Tailings, Romania.**

Dr. Petrisor was a member of the scientific team investigating the efficiency of biosolubilization in removal, with possible recovery of heavy metals from polymetallic, copper, and phosphate mine tailings. Experiments were carried out in rotary shakers and bioreactors and identified the best microbial treatments for biosolubilization purposes.

**UNESCO Funded Research (1999)**

**\*Gene Expression in a Transgenic Line of Lotus japonicas, University of Queensland, Brisbane, Australia.**  
Under a short-term UNESCO research grant, Dr. Petrisor conducted research in plant molecular genetics, working in the Department of Botany at the University of Queensland, Brisbane, Australia. The project studied gene expression in a transgenic line of *Lotus japonicas*; to identify plant genes involved (essential) in modulation in legumes. The work focused on plant growth and gene expression in the presence of several hormones, different pH levels, and varying light/dark conditions, as well as other factors that influence growth.

## John Phillips

As a resident and home owner here in Kailua Kona I often paddle in Keauhou Bay. I believe your proposed development there will pollute the bay and destroy it for generations to come. I urge you to stop this development!

**James Plant**

Dear KS Management,

In regards to your proposed development at Keauhou Bay, I would like to see much more detail on how the additional waste water, sewage and run-off is going to be managed. The bay is very fragile and it seems that a responsible and caring land owner would do everything possible to keep from damaging such a beautiful and special place. I do not believe your environmental impact study goes far enough in addressing these issues. It appears to be only the bare minimum, and that feels very wrong from a company that is supposed to hold Hawaiian environmental sensibilities.

Sincerely,

James Plant  
Kailua-Kona

**Subject:** Proposed Keauhou Bay Development

**Categories:** Green Category

**DO NOT RUIN THIS BEAUTIFUL BAY!**

Please, **DO NOT** risk polluting the water in Keauhou Bay by allowing Kamehameha Schools to develop their bungalow resort project. It is scientifically proven that developments pollute nearby waters both during and after development.

Below are scientific articles written by the National Oceanic and Atmospheric Administration (NOAA), Global Coral Reef Alliance, Hawaii Government, and many other professional organizations, that have studied and shown that developments have **ALWAYS** polluted the water in EVERY coastal development area.

Does this EIS (Environmental Impact Statement) have any kind of reports and studies on how the endangered species and marine life will handle the extra pollution due to development, and the golf course runoff? Keauhou Bay is their habitat and this development **WILL** be **CHANGING** an Entire Ecosystem.

**ENDANGERED SPECIES CONSERVATION IMPACTED BY DEVELOPMENT**

In the Endangered Species Act of 1973 Under Section 2 (b). "To provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved." This would be Keauhou Bay.

The Green Sea Turtle swims in Keauhou Bay weekly and the monk seal has also been seen swimming and resting in Keauhou Bay. Both of these marine animals are on the endangered species list.

Endangered Species Act

"Section 2. Findings, Purposes, and Policy

(4) the United States has pledged itself as a sovereign state in the international community to conserve to the extent practicable the various species of fish or wildlife and plants facing extinction, pursuant to—

(b) PURPOSES.—The purposes of this Act are to provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved, to provide a program for the conservation of such endangered species and threatened species, and to take such steps as may be appropriate to achieve the purposes of the treaties and conventions set forth in subsection (a) of this section."

This was taken from <https://www.fisheries.noaa.gov/national/endangered-species-conservation/endangered-species-ac>

#### FEDERALLY PROTECTED GREEN SEA TURTLES WILL BE AFFECTED

The green sea turtle is federally protected and can be seen in Keauhou Bay weekly.

The following article that states: "POLLUTED RUNOFF IN HAWAII ENDANGERS GREEN SEA TURTLES"

Why does Hawaii have a runoff problem?

Historically, in the tropics of Hawaii, precipitation was absorbed into the soil, according to the Clean Water Branch of Hawaii's Department of Health. Any potential pollution or contaminants on the ground surface would get pushed into the soil by the rain, and plant roots and microbes would help break down the pollution into less dangerous components. However, with urban and agricultural development, less and less of the pollution gets pulled into the soil, and more of it gets washed out into storm drains. From there, the pollutants make their way to streams, rivers and the ocean that surrounds Hawaii. According to the state agency, most of these contaminants are nutrients from fertilizer, bacteria from animal waste, oil, garbage and yard waste...

If polluted runoff reaches the ocean, it can wreak havoc on marine life, including endangered green sea turtles." Taken from <https://www.chemservice.com/news/polluted-runoff-in-hawaii-endangers-green-sea-turtles/>

Allowing this development WILL POLLUTE Keauhou Bay. The above article, written in 2014 (because runoff water from developments were polluting the ocean even then!!!) states this fact clearly. Keauhou Bay is home to countless sea creatures such as the protected green sea turtle, spotted eagle rays, manta rays, octopus, dolphins, fish, coral, monk seals, and more and that will ALL be harmed by the severe pollution runoff that WILL happen because developments have been shown to ALWAYS pollute the water is that is nearby.

The Green Sea Turtle is protected by more than one law. "All sea turtles in Hawaii are protected by the Endangered Species Act (ESA) and additionally protected by Hawaii's Revised Statutes Chapter 195D (HRS) and Hawaii's Administrative Rules (HAR) 13-124."

This information was taken from this site <https://dlnr.hawaii.gov/dar/species/sea-turtles/>

#### THE ENDANGERED MONK SEAL WILL BE AFFECTED

Keauhou Bay is known as a RESTING AREA for the ENDANGERED MONK SEAL. If another resort is allowed to be built, in addition to the pollution, it will also bring a lot more people down to Keauhou Bay. This increases the chances of a resting monk seal being disturbed by humans trying to get close, take "selfie" photos, and being generally uninformed and harmful. Please see article on Selfie Culture and its harmful effects below.

Has the EIS done any research on what an increased population would do in such a small area, and what will happen to the endangered species that live there? With a significantly increased population their habitat of Keauhou Bay will likely be changed forever.

This information is from a NOAA Scientist; "Study shows selfie culture impacts how people behave when posting images of an endangered species on social media. There's a seal on the beach! Let's go get a 'selfie'!" That must have been what nearly 18 percent of people on Instagram thought before approaching an endangered species.

In a recent study, NOAA scientists used social media to monitor human activities around endangered Hawaiian monk seals. They discovered that human disturbance is more common than they thought." <https://www.fisheries.noaa.gov/feature-story/endangered-hawaiian-monk-seals-cry-foul-over-selfies>

NOAA clearly states a high population in a place where monk seals and sea turtles habitat can be a serious disturbance for these endangered species.

"Hawaiian monk seals are protected federally by the ESA and the Marine Mammal Protection Act (MMPA), as well as locally by Hawai'i Revised Statutes (HRS) Chapter 195D and Hawai'i Administrative Rules (HAR) 13-124." This was taken from <https://dlnr.hawaii.gov/dar/hawaiian-monk-seal/>

Keauhou Bay is the monk seals and the green sea turtle's habitat. Allowing a bungalow resort to be developed in Keauhou Bay, the habitat of these endangered species, is to threaten their life and habitat with golf course runoff pollution, as well as development pollution. By threatening their habitat, and hence their lives, this development goes completely against the Endangered Species Act of 1973.

The verbiage in the Endangered Species Act states, "to conserve". In this case, "to conserve" would be to protect the land around Keauhou Bay from developments that destroy the habitat of these endangered species with pollution and runoff.

Does this EIS have any reports on the endangered species that frequent Keaouhou Bay? This is their habitat and it needs to be "conserved".

Under the Conservation Program there should be research done on endangered species and their associated ecosystems. A large bungalow resort development WILL FOREVER CHANGE THIS ECOSYSTEM.

"§195D-5 Conservation programs. (a) The department shall conduct research on indigenous aquatic life, wildlife, and land plants, and on endangered species and their associated ecosystems, and shall utilize the land acquisition and other authority vested in the department to carry out programs for the conservation, management, and protection of such species and their associated ecosystems." [https://www.capitol.hawaii.gov/hrscurrent/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hrscurrent/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm)

Also, under this same Conservation program, "(2) Taking such action as may be necessary to ensure that actions authorized, funded, or carried out by them do not jeopardize the continued existence of threatened or endangered species." [https://www.capitol.hawaii.gov/hrscurrent/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hrscurrent/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm)

Please consider that developing a Kamehameha Schools Bungalow Resort in Keaouhou Bay WILL threaten endangered species due to the unavoidable development and golf course pollution runoff that would be caused by removing the all the trees that currently serving as a natural pollution filter, and replacing the land with housing, cars, humans, and waste. There would also be tremendous runoff damage into Keaouhou Bay and the surrounding area during the building phase of this enormous project.

#### GOLF COURSE POLLUTION KILLS MARINE LIFE AND DRASTICALLY CHANGES ECOSYSTEMS

"The golf industry uses approximately 50 pesticide active ingredients, including chlorpyrifos—an insecticide that is banned for residential use by the EPA due to developmental hazards. Having to trim golf turf to low heights also makes it even more vulnerable to pests, which leads to more pesticide use." <https://rainorshinegolf.com/pages/the-environmental-impact-of-golf-courses>

These pesticides will be in the pollution runoff that will enter Keaouhou Bay more severely should the natural habitat of the trees be removed and replaced with pavement. This is unavoidable!

Please read from Wikipedia, "

Most drains have a single large exit at their point of discharge (often covered by a grating) into a canal, river, lake, reservoir, sea or ocean. Other than catch basins, typically there are

no treatment facilities in the piping system." [https://en.wikipedia.org/wiki/Storm\\_drain#:~:text=Most%20drains%20have%20a%20single,discharge%20into%20individual%20dry%20wells](https://en.wikipedia.org/wiki/Storm_drain#:~:text=Most%20drains%20have%20a%20single,discharge%20into%20individual%20dry%20wells)

The pavement from this development will cause pollution to runoff into Keaouhou Bay because this treed land that will become a housing development is situated directly between the golf course and the Bay. These trees, which absorb all the pollution from the golf course is the BEST AND ONLY PROTECTION POLLUTION FILTER Keaouhou Bay has from the golf course pesticides, fertilizer and weed killer. See the below paragraph for further references.

See page 2 at: <https://health.hawaii.gov/epo/files/2013/09/Stormwater-MS4-Presentation-HEF-7.15.14.pdf> where the Hawai'i government states that Natural Ground Cover has 10% runoff, where has development has 55% runoff.

These trees and land are saving monk seals and green sea turtles habitat from the golf course pollution and this land MUST BE PRESERVED and CONSERVED as the natural protector for Keaouhou Bay and for these endangered species habitat.

Under Section 2 (b) of the Endangered Species Act - Keaouhou Bay MUST BECOME A CONSERVATION AREA for these endangered species. It is currently their habitat, and to allow a large resort development to be built above this bay clearly threatens the lives of these endangered species by allowing golf course toxic pollution and development pollution to run into these species natural habitat of Keaouhou Bay.

#### ALGAE BLOOMS KILL CORAL AND MARINE LIFE

The trees that are slated to be cleared for the development further protect Keaouhou Bay from algae blooms that have been proven to be caused by pollution that is runoff from fertilizer and weed killer.

When there is heavy rain the land above the bay has a greater runoff than normal. Without the trees, the runoff from the golf course pollution will pour into the Bay likely causing frequent algae blooms.

Algae blooms have been shown to kill coral and marine life as stated in the many articles that will follow.

One of these articles is from the Global Coral Reef Alliance. They have researched the effects on reefs before and after a golf course developments. Though this development is not a golf course development, it is located just below a golf course and exposes the bay to the pollution from the golf course by removing the proven natural filter of the trees and natural ecosystem.

Has this EIS done any kind of research about the algae blooms that happen after a serious storm because of the golf course runoff pollution?

This information was taken from Global Coral Reef Alliance and it is an actual study on the how coral and marine life are affected before and after development. It's titled, "Golf courses kill coral reefs and fisheries: harmful algae blooms and disease cause by nutrient runoff from golf course development on Guana Cay, Abaco, Bahamas

Introduction: Bahamas coral reef deterioration

This study is thought the first ever to evaluate the health of coral reef ecosystems and fisheries before and after a golf course development. The vast majority of corals have died from a combination of factors including global warming, new diseases, land-based sources of pollution... " <https://www.globalcoral.org/golf-courses-kill-coral-reefs-and-fisheries-harmful-algae-blooms-and-disease-caused-by-nutrient-runoff-from-golf-course-development-on-guana-cay-abaco-bahamas/>

If you allow a Bungalow Development in Keahou Bay you WILL be agreeing to pollute this bay for years to come and COMPLETELY CHANGING and possibly DESTROYING KEAHOUBAY'S ECOSYSTEM.

Another study by the Coral Reef Alliance titled, "Golf course fertilizer runoff causes nutrient enrichment leading to harmful algae blooms on a Bahamian coral reef.

"...After construction new algae blooms appeared nearest the golf course green, smothering corals in adjacent reefs, along with sharply increased coral diseases..." <https://www.globalcoral.org/golf-course-fertilizer-runoff-causes-nutrient-enrichment-leading-to-harmful-algae-blooms-on-a-bahamian-coral-reef>

Does this EIS have any studies or reports on the extra runoff pollution due to clearing land and adding pavement?

This needs to be fully assessed because you will be changing an entire ecosystem to build a bungalow resort. It rains in Keahou Bay many nights out of the year and this kind of pollution will kill the beautiful and necessary coral in the Bay.

FURTHERMORE: "If there are toxic algal blooms, like red tide, or man-made contaminants, like pesticides or detergents in the water, those toxins are contained within the bubbles of sea foam. When those bubbles pop, the toxins can become airborne and compromise the air that is breathed in that location." <https://oceanconservancy.org/blog/2023/03/31/what-sea-foam/>

ENGINE POLLUTION CAUSES ISSUES IN THE OCEAN

Does this EIS have any detailed traffic studies for the increase in cars that will be added to this already severely traffic area they want to build their 150 room bungalow resort in? Have they done any studies on the pollution these cars WILL have in Keahou Bay?

Because this Bungalow Resort could have over 150 extra cars and over 300 or more extra people in and out of Keahou Bay, what traffic and increased population studies have they done? There will be employees with cars, guests with cars, visitors with cars. At times this would range to over 200 cars (likely more), coming in and out of, and parking above Keahou Bay thereby causing serious car population issues because of all these added cars right next to the bay.

The article below is from NOAA regarding motor vehicle engines and pollution to the sea.

What is the biggest source of pollution in the ocean?

Most ocean pollution begins on land.

"Millions of motor vehicle engines drop small amounts of oil each day onto roads and parking lots. Much of this, too, makes its way to the sea.

Some water pollution actually starts as air pollution, which settles into waterways and oceans. Dirt can be a pollutant. Top soil or silt from fields or construction sites can run off into waterways, harming fish and wildlife habitats." <https://oceanservice.noaa.gov/facts/pollution.html#:~:text=Millions%20of%20motor%20vehicle%20engines,Dirt%20can%20be%20a%20pollutant>

Land-Based Runoff Remains Top Source of Oil in the Ocean, Says New Report Oil in the Sea: Inputs, Fates, and Effects

News Release September 28, 2022

WASHINGTON — Oil in runoff, primarily from cities and vehicles, is the top source of oil entering the ocean, says a new report from the National Academies of Sciences, Engineering, and Medicine. In North American waters, estimated ocean oil pollution from land-based runoff is up to 20 times higher than it was 20 years ago, and oil spills, natural oil seeps, and discharge from oil and gas operations remain major sources of pollution. The report recommends actions that government and others should take to minimize oil pollution, and calls for sustained research funding to better understand how oil reaches and affects ocean environments. <https://www.nationalacademies.org/news/2022/05/oil-in-the-sea-inputs-fates-and-effects#:~:text=WASHINGTON%20%2D%20Nearly%2085%20percent,pipeline%20spills%2C%20says%20a%20new>

The Impact Of Stormwater – Car Emissions

"Car emissions are not limited to exhaust fumes that contribute to air pollution. They can also leak automotive fluid and release heavy metals that can contribute to stormwater pollution, contaminating local waterways." <https://www.stormwatershepherds.org.au/blog/the-impact-of-stormwater-car-emissions/>

#### NOISE POLLUTION'S HARMFUL EFFECT ON MARINE LIFE

Does this EIS have any reports on the noise pollution that will happen and what it could do to marine life in Keauhou Bay during development?

Because if you allow this Bungalow Resort to be developed you will increase constant noise in this bay for years to come and, "Noise Pollution Research shows that underwater noise from construction, shipping and naval vessels significantly impacts the natural behavior of cetaceans and many other marine species. This can be seen when mass beaching events occur or breeding success is diminished."

The above information was taken from the Ocean Conservation Trust <https://oceanconservationtrust.org/ocean-advocacy/think-ocean/ways-to-think-ocean/>

#### How Does Noise Pollution Harm Marine Species?

"However, over the past few decades, noise pollution in the marine environment has increased dramatically and is threatening the natural soundscape of the marine environment. Ships, seismic surveys, explosions, construction, and sonar devices have made the once peaceful environment into a loud, chaotic home which is extremely damaging for marine wildlife. This type of pollution is often overlooked in comparison to others but its impacts are now being documented across all types of marine ecosystems." <https://earth.org/noise-pollution-in-the-ocean/>

If you allow this resort the amount of people in this bay will fully increase and, "Hawaii's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally, management of the resource should balance the needs of different user groups, but the welfare of the marine environment on which its inhabitants depend must be the most important consideration." This was taken from Hawaii's own Division of Aquatic Resources <https://dlnr.hawaii.gov/dar/marine-managed-areas/hawaii-marine-life-conservation-districts/#:~:text=Snorkeling%20and%20SCUBA%20diving%20are,effect%20on%20nearshore%20fish%20populations.>

What is ocean noise?

"Ocean noise refers to sounds made by human activities that can interfere with or obscure the ability of marine animals to hear natural sounds in the ocean.

Many marine organisms rely on their ability to hear for their survival. Sound is a highly efficient means of communication underwater and is the primary way that many marine species gather and understand information about their environment. Many aquatic animals use sound to find prey, locate mates and offspring, avoid predators, guide their navigation and locate habitat, as well as to listen and communicate with each other.

Over the last century, human activities such as shipping, recreational boating, and energy exploration have increased along our coasts, offshore, and deep ocean environments. Noise from these activities can travel long distances underwater, leading to increases and changes in ocean noise levels in many coastal and offshore habitats.

These rising noise levels can negatively impact ocean animals and ecosystems. Higher noise levels can reduce the ability of animals to communicate with potential mates, other group members, their offspring, or feeding partners. Noise can also reduce an ocean animal's ability to hear environmental cues that are vital for survival, including those key to avoiding predators, finding food, and navigating to preferred habitats."

<https://oceanservice.noaa.gov/facts/ocean-noise.html>

#### LEARN FROM OTHERS: RUN-OFF FROM DEVELOPMENT KILLS

The Chesapeake Bay has a foundation that is trying to save their bay due to runoff pollution that was caused by developments. Chesapeake Bay is a lot bigger than Keauhou Bay. If it's being drastically hurt by runoff water from developments, Keauhou Bay waters won't stand a chance if development above the bay is allowed. Keauhou Bay is a much smaller ecosystem.

This Article is by the Chesapeake Bay Foundation, Saving a National Treasure states, "...runoff is a significant source of harmful nitrogen pollution that continues to grow..."

As rainwater and snowmelt run off our streets, parking lots, lawns, and other surfaces, they pick up pet waste, pesticides, fertilizer, oil, and other contaminants. If the draining water doesn't evaporate or soak into the ground where it can be filtered, it flushes straight into local creeks, rivers, and the Chesapeake Bay, adversely affecting water quality and aquatic life.

Only 10 to 20 percent of rain that falls in forests, fields, and other natural areas runs off, with the rest absorbed by soil and plants, where it is filtered before reaching aquifers or

local waterways. (Right now Keauhou Bay has a lot of trees and is very natural, this is what helps stop runoff.) By contrast, close to 100 percent of the rain that falls on concrete and other hard surfaces produces runoff. One inch of rain falling on an acre of hardened surface produces 27,000 gallons of runoff.

Stormwater runoff pollution threatens Chesapeake Bay and its rivers and streams...Polluted runoff is one of the most harmful sources of pollution to the Bay and its waters. And much of it starts right in the urban and suburban neighborhoods where we live." <https://www.cbf.org/issues/polluted-runoff/index.html#:~:text=Besides%20carrying%20pollutants%20that%20harm,them%20are%20placed%20in%20jeopardy.>

If that is what runoff is doing to the Chesapeake Bay, the effects of runoff will be even more devastating to Keauhou Bay due to its size and fragility.

#### MANTA RAY HABITAT, CORAL REEF BLEACHING, & MARINE LIFE ~ THE DEVASTATING EFFECTS OF DEVELOPMENT ON THE OCEAN

Are there any reports in this EIS about what the impact to the coral, marine life, plankton especially zooplankton will be because of this development?

The studies below show that developments kill coral, and marine life. Zooplankton are part of this marine life and they are also killed and negatively affected. Zooplankton are food for manta rays. Manta rays are in Keauhou Bay every night to eat zooplankton, and are often seen here during the day as well.

Allowing this bay developed will also be a death sentence for many types of marine life including planktons. There is NO WAY to stop this from happening due to the fact that polluted runoff rain water from developments can't be fully stopped. This has been shown to happen in ALL coastal developments.

Please read the Scientific articles below.

It's Been Proven Developments Severely Pollute Nearby Waters

Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Coral Bleaching is occurring more frequently in Hawai'i. Across the Hawaiian Archipelago, coral bleaching has increased in frequency and severity since 1996. The last major bleaching event in 2014-2015 had catastrophic impacts state-wide..."

This was the third major bleaching episode in Hawai'i over the last 6 years. The frequency of these events is unprecedented in the archipelago. NOAA scientists and partners have determined that the key drivers of the bleaching were environmental factors (such as heat stress, depth, and surface light) and human impacts (sewage effluent and urban run-

off." <https://www.fisheries.noaa.gov/feature-story/cautionary-tale-2019-coral-bleaching-event-hawaii#:~:text=Coral%20bleaching%20is%20occurring%20more,had%20catastrophic%20impacts%20state%20wide.>

This article is by the Coral Reef Alliance here in Hawai'i. "An ecosystem under threat Hawai'i's reefs face major global and local threats including climate change, overfishing, and sediment and nutrient pollution caused by sewage and stormwater runoff..."

When it rains, flash floods carry stormwater and large amounts of sediment downstream to the ocean. Just offshore, once-thriving coral reefs are now struggling to survive." <https://coral.org/en/where-we-work/hawaiian-islands/#:~:text=Hawaii%CA%BBi's%20reefs%20face%20major%20global,into%20Hawaii%CA%BBi's%20waterways%20every%20day.>

This article states that runoff is a leading source in coral degradation. Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Land-based sources of pollution are a leading cause of coral reef degradation in the Main Hawaiian Islands. Water quality is impacted by urban runoff, failing sewage systems, unpaved roads, farms, land clearing, and development." [https://www.coris.noaa.gov/monitoring/status\\_report/docs/Hawaii\\_status\\_report\\_forweb.pdf](https://www.coris.noaa.gov/monitoring/status_report/docs/Hawaii_status_report_forweb.pdf)

This article is a Research Article by PLOS ONE and their motto is, "We're driving change in research integrity and publication ethics." This is some of their article information, "Coral taxonomy and local stressors drive bleaching prevalence across the Hawaiian Archipelago in 2019..."

We found little evidence for acclimation by reefs to thermal stress in the main Hawaiian Islands. Moreover, our findings illustrate how detrimental effects of local anthropogenic stressors, such as tourism and urban run-off, may be exacerbated under high thermal stress. In light of the forecasted increase in severity and frequency of bleaching events, future mitigation of both local and global stressors is a high priority for the future of corals in Hawai'i." <https://journals.plos.org/plosone/article?id=10.1371/journal.pone.0269068>

The coral all over Hawai'i has had extremely high mortality rates, due to developments near ocean areas throughout the years, and development in Keauhou Bay will be devastating to the coral, reef fish, and all aquatic life there. Manta Rays need to eat 5 times their body weight in zooplankton daily. Their population will be severely affected should the plankton die. Please see the cited information below.

"SO, HOW MUCH PLANKTON DOES YOUR AVERAGE MANTA RAY EAT? 19,200,000. Nineteen million two hundred thousand, give or take a few thousand.

That is the number of plankton pieces a ten-foot manta ray must consume weekly to stay alive."

The above information was taken from Manta Ray Advocates <https://mantarayadvocates.com/how-much-plankton-do-mantas-eat/>

Coral reefs are known to be highly negatively impacted by developments because, "Impacts from land-based sources of pollution including coastal development,...can impede coral growth and reproduction, disrupt overall ecological function, and cause disease and mortality in sensitive species." <https://oceanservice.noaa.gov/facts/coral-pollution.html#:~:text=impacts%20from%20land%2Dbased%20sources,and%20mortality%20in%20sensitive%20species.>

Article by Environmental Evidence, "Coastal development and runoff lead to sedimentation, which directly impacts coral recruitment, growth, mortality, and ecosystem services that coral reefs provide." <https://environmentalevidencejournal.biomedcentral.com/articles/10.1186/s13750-020-00200-0#:~:text=Coastal%20development%20and%20runoff%20lead,services%20that%20coral%20reefs%20provide.>

Developments can't fully stop polluting because runoff is from rain during development and after. Article by NOAA, "One of the most significant threats to reefs is pollution. Land-based runoff and pollution discharges can result from dredging, coastal development...This runoff may contain sediments, nutrients, chemicals, insecticides, oil and debris."

When some pollutants enter the water, nutrient levels can increase, promoting the rapid growth of algae and other organisms that can smother coral." [https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,organisms%20that%20can%20smother%20corals.](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,organisms%20that%20can%20smother%20corals.)

Another article by NOAA, "Coral reefs also are affected by leaking fuels, anti-fouling paints and coatings, and other chemicals that enter the water... (All of those are show up in every development project)

Among the most damaging pollutants on coral reefs is sediment, which can remain suspended in the water or be deposited on the coral surface (i.e., turbidity and sedimentation, respectively) and can contain toxicants, pathogens, and nutrients, all of which impact coral growth, recruitment, and survival" [https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days.](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days.)

It's Been Proven Resort Developments KILL Marine Life

This article by MarinBIO states, "Zooplankton are also sensitive to their environment and like phytoplankton—a change in zooplankton concentration can indicate a subtle environmental change. Zooplankton are highly responsive to nutrient levels, temperatures,

pollution, food that is not nutritious, levels of light, and increases in predation. As well as providing an essential link in the marine food chain (which is an understatement), the diversity of species, amount of biomass and abundance of zooplankton communities can be used to determine the health of an ecosystem..."

Here is another article that shocking shows that in a very short time, big changes can occur due to runoff. A development will hurt and kill plankton, by Frontiers in Marine Science, "Effects of an experimental terrestrial runoff on the components of the plankton food web in a Mediterranean coastal lagoon The main result observed in the present study was that the effects of the simulated terrestrial runoff spread along the plankton food web, significantly affecting all trophic levels of the natural plankton community studied. This occurred in a relatively short time considering that the experiment lasted less than three weeks. The lower light availability in the terrestrial runoff treatment compared to the control resulted in a net decrease of approximately one-third of Chl-*a* concentration and phytoplankton abundance over the entire experiment." <https://www.frontiersin.org/journals/marine-science/articles/10.3389/fmars.2023.1200757/full>

The ecosystem is fragile and interconnected as is stated in this article: "Zooplankton are also affected by levels of pH, heavy metals, calcium, and aluminum. Nutrients like nitrogen and phosphorus will affect the prey of zooplankton (like algae, protozoa and bacteria), indirectly affecting zooplankton survival. Scientists are still putting together pieces of the zooplankton puzzle. Some questions include how nutrient levels found in algae can influence the growth and behavior of zooplankton. Another question important to marine and human life is how toxins and pollution will affect this crucial link in the food chain"

This information is in article by MarineBIO. <https://www.marinebio.org/creatures/zooplankton/#:~:text=Zooplankton%20are%20also%20sensitive%20to,light%2C%20and%20increases%20in%20predation.>

A research article by Environmental Research Laboratory, United States Environmental Protection Agency that discusses, "Toxic Effects of Pollutants on Plankton: There are four main sources of aquatic pollution: industrial wastes, municipal wastes, agricultural run-off, and accidental spillage. Non-point sources, such as automobile exhausts, add appreciable amounts of pollutants to air that may enter aquatic systems in rainfall or dry fall-out. These sources add pesticides, heavy metals, oil, petroleum products, and a large number of organic and inorganic compounds to water. Lakes and oceans serve as sinks for many pollutants. Plankton comprise a large portion of the living matter in natural waters and function in biogeochemical cycles. They are affected by pollutants, transfer them to sediments and other organisms, and function in their biological transformation."

[https://scope.dge.carnegiescience.edu/SCOPE\\_12/SCOPE\\_12\\_3-6\\_chapter12\\_257-274.pdf](https://scope.dge.carnegiescience.edu/SCOPE_12/SCOPE_12_3-6_chapter12_257-274.pdf)

All the above articles show that development of Keauhou Bay WILL hurt plankton life and marine life in the bay because pollutant runoff is inevitable and unavoidable during construction and afterwards. The manta ray food source will likely disappear. This will be devastating for the manta ray populations. Furthermore, if manta rays die or leave the area,

the loss will in turn affect many lively hoods from locals on the island who depend on the manta ray tour for their income.

#### HUMAN POPULATION INCREASES LINKED DIRECTLY TO CORAL DEATH

Does this EIS have any reports on their resort adding to the population increase that happens during IRONMAN?

"On average, each Ironman racer brings three people with them to the Big Island. Counting members of the media, VIPs who come from around the globe to watch and the triathlons partners, there likely be more than 6,300 people descending on Kona..." <https://bigislandnow.com/2023/10/07/ironman-2023-in-kona-shines-spotlight-on-some-of-best-women-triathletes-in-the-world/>

And "Resident dissatisfaction with tourists is multifaceted: The overwhelming majority (92%) of locals felt visitors were not educated enough on protecting Hawaii's natural environment and local resources; other factors include the impact of the vacation rental industry and ignorance of the residents' quality of life." <https://www.triathlete.com/culture/news/kona-locals-ask-ironman-visitors-for-respect/>

Where are the EIS reports on human density? Below are reports that show human population destroys coral reefs.

"The number of people living on the coasts has rapidly increased in recent decades, causing significant development of coastal areas. Coastal development can negatively impact the ocean through the destruction of coastal marine habitat and through run-off of sediments and pollution.

-Coastal development involves activities such as the creation of harbors, stabilization of shorelines, and aquaculture that involve the destruction of sensitive marine habitats such as mangroves, coral reefs, and seagrass beds.

-Coastal development may cause the run-off of sediments into coastal habitats, which can smother corals or seaweeds and reduce the amount of light available for photosynthesis. Losses of primary producers and important habitat-forming species such as corals can negatively impact entire food webs."

The above information was taken from the Education Development Center, INC, from their Coastal Development page called Ocean Tracks <https://oceantracks.org/library/human-impacts/coastal-development#:~:text=Coastal%20development%20may%20cause%20the,negatively%20impact%20entire%20food%20webs.>

There is nothing Kamehameha Schools can do to their development that can stop the guests of this possible Bungalow Resort from going to Keauhou Bay. Human traffic WILL seriously increase if this resort is allowed to be built and the marine life will be negatively affected by it. Marine life will suffer from this development as stated in this letter in many different scientific reported articles.

If you allow this resort the amount of people in this bay will fully increase and, "Hawaii's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally, management of the resource should balance the needs of different user groups, but the welfare of the marine environment on which its inhabitants depend must be the most important consideration." This was taken from Hawaii's own Division of Aquatic Resources <https://dlnr.hawaii.gov/dar/marine-managed-areas/hawaii-marine-life-conservation-districts/#:~:text=Snorkeling%20and%20SCUBA%20diving%20are,effect%20on%20nearshore%20fish%20populations.>

It's Been Proven an Increase in Human Population Destroys Coral Reefs

If a Bungalow Resort is allowed to be built in Keauhou Bay, it will bring a serious increase in human traffic. "Easily visible trends in human population dynamics combined with well-established and tested ecological theory give a clear, intuitive, yet quantifiable guide to the severity of survival challenges faced by coral reefs. Management challenges and required actions can be clearly shown and, contrary to frequent claims, no scientific ambiguity exists with regard to the serious threat posed to coral reefs by humankind's continued numerical increase." This is in the article by National Library of Medicine National center for Biotechnology Information PubMed. <https://pubmed.ncbi.nlm.nih.gov/33293007/#:~:text=Denser%20coastal%20populations%20and%20greater,to%20more%20runoff%20and%20siltation.>

This article is by ABC NEWS, "This is how tourists are destroying coral reefs in Hawaii. The less people at a certain site, the more coral there are, the research found. The millions of tourists who flock to the shores of Hawaii every year are wreaking havoc on its natural environment -- especially the coral reefs, which are at risk all over the world, a new study said. The most popular coral reefs on the Hawaiian islands are likely being degraded by the very visitors they attract, according to a study published Monday in Nature Sustainability." <https://abcnews.go.com/US/hawaiian-coral-reefs-degrading-popular-tourist-sites-scientists/story?id=96308858#:~:text=The%20less%20people%20at%20a,there%20are%20C%20the%20research%20found.&text=The%20millions%20of%20tourists%20who,would%20C%20a%20new%20study%20said.>

By allowing this development you are stressing an already fragile Eco-system. The small bay is currently used by many locals for boating, fishing, canoeing, paddle boarding, snorkeling, manta night dives, surfing, and swimming. We know, and research shoes, that

more people cause more damage. The area simply cannot afford or support this development.

"Denser coastal populations and greater wealth will lead to reef degradation by coastal construction. Denser populations inland will lead to more runoff and siltation. Effects of human perturbations can be explored with meta-population theory since they translate to increases in patch-mortality and decreases in patch-colonization (= regeneration). All such changes will result in a habitat with overall fewer settled patches, so fewer live reefs." This information was taken from Science Direct <https://www.sciencedirect.com/science/article/abs/pii/S0065288120300328#:~:text=Aquaculture%20will%20alleviate%20some%20fishing,to%20more%20runoff%20and%20siltation.>

Another article by Nature Sustainability, "Coral reefs and coastal tourism in Hawaii Coral reefs are popular for their vibrant biodiversity. By combining web-scraped Instagram data from tourists and high-resolution live coral cover maps in Hawaii, we find that, regionally, coral reefs both attract and suffer from coastal tourism. Higher live coral cover attracts reef visitors, but that visitation contributes to subsequent reef degradation. Such feedback loops threaten the highest quality reefs, highlighting both their economic value and the need for effective conservation" [https://www.nature.com/articles/s41893-022-01021-4.epdf?sharing\\_token=wsakgQNhahJhijAnWAq453RgN0jAjwEl9jnR3ZotY0PyGzA5Ic\\_H001zCHNIP3ASnhcgKKry6\\_vKLPw49dbmBYoxSg3YIMgQIGBZsapdGUH70ISLbu9X5Pr3xED4Kxl470sflvgQ1a72ZrT3rUbraxpodId2A0NISmWSuxB7HjEDdpj80Gjpx71TJWdCfXvFKIIZYeNdcj3Sw\\_dnatUg5IZhlcjPBDImmaH15yqT5Q%3D&tracking\\_referrer=abcnews.go.com](https://www.nature.com/articles/s41893-022-01021-4.epdf?sharing_token=wsakgQNhahJhijAnWAq453RgN0jAjwEl9jnR3ZotY0PyGzA5Ic_H001zCHNIP3ASnhcgKKry6_vKLPw49dbmBYoxSg3YIMgQIGBZsapdGUH70ISLbu9X5Pr3xED4Kxl470sflvgQ1a72ZrT3rUbraxpodId2A0NISmWSuxB7HjEDdpj80Gjpx71TJWdCfXvFKIIZYeNdcj3Sw_dnatUg5IZhlcjPBDImmaH15yqT5Q%3D&tracking_referrer=abcnews.go.com)

#### INFRASTRUCTURE AND RESOURCES ON AN ISLAND ALREADY HIGHLY IMPACTED AND STRUGGLING FOR ANSWERS

Has the EIS done any research or reports on the Resources and Infrastructure it will need for a bungalow resort?

There are many big housing developments currently under construction in Kailua Kona, Waikoloa Village, Hilo, Puna, Ocean View and Volcano. The entire Big Island has construction projects already in progress.

Has Kamehameha Schools EIS done any kind of reports or surveys to know if Big Island has the Resources and Infrastructures for their resort development?

"Hotel waste management refers to all the practices and processes that hotels implement to handle and dispose of the multiple types of waste generated on their premises. Worldwide, hotels produce almost 300,000 tonnes of waste each year." <https://www.homebiogas.com/blog/hotels-waste-management/>

As of now, the Big Island's Resources and Infrastructure are having serious negative issues and many more developments that have been approved are not even completed as of yet, which means our island's resources and infrastructure will be taxed even more severely in the near future.

Please read the below articles that prove Big Island does not have the resources or infrastructure for a 143-Unit Bungalow Resort Development at Keaunoh Bay. On Hawaii Island, we are already struggling to meet the increasing need for resources and infrastructure.

Big Island Now poll No. 27 results: More than one solution needed to help extend life of West Hawaii'i landfill

September 17, 2023

The West Hawaii'i Sanitary Landfill, the only remaining landfill on the Big Island, is forecast to reach capacity within the next 20 to 25 years.

The West Hawaii'i landfill became the island's only one after the Hilo Landfill closed three years ago. It only has about 20 to 25 years left before it can no longer be used to store rubbish.

<https://bigislandnow.com/2023/09/17/big-island-now-poll-no-27-results-more-than-one-solution-needed-to-help-extend-life-of-west-hawaii-landfill/>

A County commission drafts ordinance aiming to ban recyclables at West Hawaii'i landfill  
By Megan Moseley September 6, 2023

Hawaii'i County's Environmental Management Commission is developing an ordinance that aims to prohibit the amount of recyclable materials ending up in the island's only working landfill.

During a commission meeting on July 26, Ramzi Mansour, Hawaii'i County Director of Environmental Management, told commissioners the West Hawaii'i Sanitary Landfill only has 20 to 25 years left before it reaches capacity.

With the Hilo Landfill permanently closed in 2020, the clock is ticking for the island's sole dump. Commission chairperson Georjean Adams said it's a good time to start looking into solutions.

Adams said the proposed ordinance is in its early stages and is more about getting the conversation started about how to prevent unnecessary, or recyclable items — green

waste, metals, plastics, paper, paperboard and glass — from ending up in the rubbish dump, located off Queen Ka'ahumanu Highway in Waikōloa.

"Trying to site a new landfill is close to impossible," Adams said. "So what are we going to do? So I was looking around, and the commission agreed, to look deeply into the idea of diverting the recyclables out and at least slow the filling up of the landfill."

The proposed ordinance refers to the 2019 Integrated Solid Waste Management Plan that commits the county to "divert, as much as feasible, commercial and municipal solid waste, including but not limited to green waste, metals, plastics, paper, paperboard, and glass to help achieve goals related to climate resiliency, renewable energy, sustainable agriculture, and zero waste."

<https://bigislandnow.com/2023/09/06/new-draft-ordinance-aims-to-ban-recyclables-at-west-hawaii-landfill/>

Time's Up For Landfills

'Gentle' demolition strategies can help preserve resources

PAULA BENDER April 2, 2024

As Hawai'i government officials grapple with the challenge of limited landfill space statewide, federal restrictions set in place by the Environmental Protection Agency are ruling out possible locations that were once considered for new landfills.

Hawaii Act 73 states landfills must be located at least half a mile from residential areas; are prohibited from being located in areas with heavy rain and steep slopes, as well as agricultural and/or conservation lands; above aquifers; 300 feet beyond streams; and 1,000 feet beyond the ocean.

New landfills are also now prohibited from being created in tsunami inundation zones, 100-year flood zones and wetlands. There are also concerns that landfills near airports will attract birds, resulting in damage to aircraft and fatalities among pilots and passengers.

The City & County of Honolulu is in the process of identifying its next landfill and it doesn't want one any bigger or more active than absolutely necessary.

Drought Conditions On Hawai'i Island Prompt Water Supply Message

by Big Island Video News  
on Oct 5, 2023 at 3:59 pm

(BIVN) – With moderate to severe drought conditions being reported across Hawai'i island, local water department officials issued a statement this week on the need for customers to use drinking water wisely.

Most of Hawai'i island is under "Moderate Drought" conditions, according to the latest information from the U.S. Drought Monitor. There is an area under "Abnormally Dry" conditions in South Kona, however there are other, small pockets on the Big Island that are under "Severe Drought". There is even a small spot of "Extreme Drought" in the South Point area of Ka'u.

"The National Weather Service's forecast calls for the existing drought conditions to expand over the entire island and intensify over the upcoming months due to the ongoing El Niño event," reported the Hawai'i County Department of Water Supply. "Peak dryness is expected to occur from around January through February 2024. The El Niño event will likely persist well into spring 2024."

From a Water Supply news release:

U.S.

Hawaii is "on the verge of a greater catastrophe," locals say, as water crisis continues

By Li Cohen

Updated on: April 11, 2024 / 8:23 AM EDT / CBS News

And recent years have seen compounding problems: less rain, leading to significant droughts, and repeated jet fuel leaks and PFAS chemical spills contaminating water systems. All of this significantly limits available water use for locals, many of whom say tourism is only worsening the situation. Just months ago, the world's largest surfing wave pool opened up on the island — filled with freshwater.

"They're not using it to drink or to support life, they're using it to make money. They're commodifying it," said Healani Sonoda-Pale, who is Native Hawaiian and a member of advocacy group O'ahu Water Protectors. " ... We are on the verge of a greater catastrophe."

"We are in a water crisis, that has to be made very clear," Wayne Tanaka, director of Sierra Club of Hawai'i, told CBS News, saying that if the reasons for this crisis aren't soon addressed, "We may come to a point where we have to decide ... who gets water and who doesn't."

<https://www.cbsnews.com/news/hawaii-water-crisis-climate-change/>

Because this is an island, parts need to be shipped. The power plant currently has generators that are not working, and because of this (and other reasons), the Big Island needs to seriously conserve power so that everyone will have power. If this problem of shipping parts can happen once, it can and will happen again.

UPDATE: HELCO asks for continued energy conservation

BY SPECTRUM NEWS STAFF HAWAII ISLAND

UPDATED 6:28 PM ET APR. 16, 2024 PUBLISHED 9:05 AM ET APR. 15, 2024

HILO, Hawaii — Hawaiian Electric continues to urge Hawaii Island customers to reduce their electricity use to prevent the need for rolling outages.

In a news release Tuesday afternoon, the utility stated that Monday saw a reduced demand of approximately 5 megawatts. That, combined with increased wind and solar battery storage prevented the need for rolling blackouts on Monday. HELCO credited conservation efforts, particularly those by large businesses and government customers, for the reduction in electricity demand.

"We're grateful for our customers' efforts to conserve electricity, especially between 5 to 9 p.m., when electricity use is highest, because it does make a difference," said Hawaiian Electric spokesperson Kristen Okinaka. "By working together, we're helping to ensure that enough power can be available for all customers and prevent or minimize the impacts of rolling outages."

Hawaiian Electric announced Monday afternoon that it may initiate rolling outages in parts of Hawaii Island because of the unavailability of several generators and lower than normal wind and solar resources.

In a news release, the utility said that outages could start as early as 6:30 p.m. and rotate around the island for 30-minute intervals. The impacted areas and the timing of the outages will be based on wind generation and the amount of electric demand that needs to be reduced. Individuals who are dependent on electrically powered life support medical equipment are advised to arrange for a backup power supply.

The outages are being done to prevent power loss to even more customers, who are all being asked to conserve electricity throughout the month.

<https://spectrumlocalnews.com/hi/hawaii/news/2024/04/15/heco-customers-on-hawaii-island-asked-to-conserve-power->

Big power supply problems continue to plague Hawaii Island

Apr 8, 2024

The company has been facing an unusual situation with mechanical problems at three of the island's five largest power plants while part of the largest plant undergoes an annual overhaul. All four of these affected power plants are owned by the utility or an affiliate of its parent company.

Also contributing to the trouble is lower output from a geothermal plant, which has the third-largest generation capacity on the island and is owned by an independent operator.

"This is an unusual situation, driven mainly by the unavailability of several large generators that have experienced mechanical problems, are at reduced output, or are undergoing maintenance," Hawaiian Electric said in its March 25 announcement asking customers to use less electricity, especially on weekdays from 5 to 9 p.m.

The company explained that it faces an "extremely tight" supply of power at peak use periods, especially when production from wind, solar and hydroelectric facilities is lower than normal. Those sources of variable, renewable energy can supply up to 15% of electricity needs on the island.

"Without enough supply to meet electricity demand, the company may initiate rolling outages of up to an hour around the island," the March 25 announcement said.

<https://energycentral.com/news/big-power-supply-problems-continue-plague-hawaii-island>

Hawaii Island customers urged to reduce electricity use through April

BY SARAH YAMANAKA HILO PUBLISHED 9:00 AM ET MAR. 26, 2024

What You Need To Know

-Hawaii Island customers may see alerts asking them to conserve energy, especially on days when there isn't much wind that generates up to 15% of electricity

-When alerts are issued, Hawaiian Electric is asking customers to take immediate action to minimize electricity use

-Even when no alerts are issued, customers — including hotels and large retailers — are urged to reduce electricity use as much as possible, especially between 5 and 9 p.m. on weekdays

-If there is not enough electricity to meet demand, Hawaiian Electric may initiate rolling outages of up to an hour around the island  
<https://spectrumlocalnews.com/hi/hawaii/news/2024/03/25/hawaii-island-customers-urged-to-reduce-electricity-use-through-april>

#### FURTHERMORE: TRAFFIC, LACK OF RESOURCES, AND FATALITIES

A Resort Development WILL Increase Traffic on Already Severely Trafficked Roads. Are there traffic study reports for this EIS?

A development with 150 rooms comes with over 150+ cars. Employees, guests, and visitors will all have cars.

The Big Island already has a serious traffic issue due to a lack of infrastructure. This is in part due to poor planning, and in part due to geography challenges.

The articles below by different NEWS companies highlight the point that many traffic issues stem from lack of infrastructure and resources. Adding more cars to the road by building another resort in an area that is already stressed, will only increase the already mounting problems with traffic.

This NEWS article by Hawai'i News Now, "Report shows alarming surge in Hawaii Island traffic deaths The Hawaii Police Department's Traffic Services Section released a new report showing a dramatic increase in both major crashes and fatal accidents from last year.

The startling statistics show a dramatic increase in the number of year-over-year traffic fatalities on the Island of Hawaii, revealing major crashes are up more than 12% and traffic fatalities are up more than 100%." Watch the video on their link below as it is a professional report on Big Island traffic problems. <https://www.hawaiinewsnow.com/2024/05/18/new-report-shows-hawaii-island-traffic-fatalities-are-up-over-100-last-year/>

With more tourists there will be more accidents, more traffic, and more traffic deaths. Please read this article by KHON 2 NEWS, "Hawaii Island has most traffic fatalities in state. This time last year Hawaii Island was at five traffic deaths, as of April 1, 2024, they're at 14.

Seven of which happened in the last two weeks.

Chief Moszkowicz said the police force is small compared to the size of the island and response times can take 15 to 20 minutes.

"We don't have the resources like in the small space of Oahu where you can saturate an area to control speeding, that just doesn't exist here," he added." <https://www.khon2.com/local-news/7-traffic-fatalities-for-hawaii-island-in-march/>

The traffic on Big Island has increased drastically and safety issues and infrastructure needs to be addressed before adding more resort developments.

Please read this article because what it says about Oahu is a mirror for Big Island. The traffic problems they discuss are the same issues here on Big Island; and it also gives one Big Island example, "On the Big Island, the mayor had to issue an emergency order shutting down Waipio Valley Road due to overuse and poor prior maintenance." This is happening all over Big Island. <https://www.civilbeat.org/2024/02/angry-over-island-traffic-jams-lets-talk-about-solutions/>

The news video below shows aerial footage in Hilo. The footage shown is the same thing that is happening on Alii Drive and Queen K Highway, and for all the same reasons: All of these roads only have two lanes!

There are two developments already on Alii Drive being built as of today; and more are scheduled for this road in the near future. Alii Drive and Queen K Highway are the roads Kamehameha Schools Bungalow Resort will be using if approved, and they are already seriously congested.

These roads have the exact same traffic congestion as Hilo, with the exact same problems. Traffic is extremely slow because of so many people who now live here and all the visitors that come yearly.

In addition, the concern on Kona side is tsunami evacuations rather than lava evacuations. In this kind of traffic, not everyone will be able to get to safer ground, especially if you allow another resort to be developed in this area when traffic is already at a crawl every weekday and often on weekends as well.

Here is the news article by KITV NEWS that highlights the traffic issues discussed above: "Hawaii Island traffic jams could have safety impact. In the event of an evacuation, Mayor Mitch Roth acknowledges that will make the Traffic Jam up even worse. But says, he is working with The State on a solution." [https://www.kitv.com/news/local/hawaii-island-traffic-jams-could-have-safety-impact/article\\_b06a5374-5a6a-11ed-8d23-8313ef8c4c19.html](https://www.kitv.com/news/local/hawaii-island-traffic-jams-could-have-safety-impact/article_b06a5374-5a6a-11ed-8d23-8313ef8c4c19.html)

There was a crash recently on Alii Drive (see video below). When there is an accident on Alii Drive, it turns the already small two-lane road into only one lane that requires a flagger to help direct traffic. Kamehameha Schools wants to add a resort on this tiny road that will increase the traffic by hundreds of cars.

Here is the Island News video on the crash on Alii Dr.  
<https://www.youtube.com/watch?v=-FQSnPDji8>

Please see from these articles that traffic on Big Island is deadly already and adding another resort will be devastating to the island.

Read this Path article, HAWAII COUNTY'S VISION ZERO INITIATIVE:

A motorcyclist is in critical condition after a collision with a car. A driver accidentally hits and kills a pedestrian. It seems that not a day goes by without the news reporting on a traffic crash on Hawaii's Island...

Here are some other statistics that are even more staggering:

-28% of roadside crashes were the result of someone leaving the roadway and going into barriers or trees

-13% of pedestrians hit at 20 mph actually suffer fatality

-73% of pedestrians hit at 40 mph suffer fatality

-25% of fatal crashes were the result of distracted driving... So PLEASE put those cell phones away and pay attention to the road!

-56% of fatal crashes were the result of alcohol or drugs

-41% of fatal crashes occurred in light trucks and vans

-49% of crashes occur during the day, outside of peak traffic hours

-Of all the crash fatalities, most were males between 20 to 24-years old.

"That's just Big Island traffic," is a common sentiment. But what if we didn't have to accept this endangerment of vehicle drivers, motorcyclists, and pedestrians as a way of life?"

This was taken from Path <https://pathhawaii.org/hawaii-countys-vision-zero-initiative/>

**MORE ARTICLES HIGHLIGHTING INFRASTRUCTURE AND RESOURCE DEFICITS, INCLUDING WATER, TRASH, ELECTRIC and WASTEWATER:**

1) Hawaii Deals with Burgeoning Waste Management Problem

As landfills face closure and waste-to-energy projects stall, various counties in Hawaii are dealing with waste management issues. Waste360 Staff | January 10, 2020

"Hawaii Island is in the enviable position of having a landfill with anywhere from 20 to 100 years of capacity left to take in trash. But the island still wrestles with significant issues like plastic products that are no longer being recycled." <https://www.waste360.com/landfill/hawaii-deals-with-burgeoning-waste-management-problem>

2) "Big Island Now readers seem to agree that there's likely no single solution for slowing down the timeline of the West Hawai'i Sanitary Landfill reaching capacity.

The West Hawai'i Sanitary Landfill, the only remaining landfill on the Big Island, is forecast to reach capacity within the next 20 to 25 years." <https://bigislandnow.com/2023/09/17/big-island-now-poll-no-27-results-more-than-one-solution-needed-to-help-extend-life-of-west-hawaii-landfill/>

3) Hawaii Island Has Decades of Landfill Space But Still Faces Challenges In Dealing With Its Waste Hawai'i Public Radio Published January 9, 2020 at 5:00 AM HST

"Hawaii Island is in the enviable position of having a landfill with anywhere from 20 to 100 years of capacity left to take in trash. But the island still wrestles with significant issues like plastic products that are no longer being recycled.

For the past four decades, trash from the East side of Hawaii Island has been dumped in a landfill outside of Hilo. But now trash from the island is being trucked to a facility north of Kona." <https://www.hawaiipublicradio.org/local-news/2020-01-09/hawaii-island-has-decades-of-landfill-space-but-still-faces-challenges-in-dealing-with-its-waste>

The timing and extent of the outages will depend on the amount of demand on the system and the availability of generators." <https://bigislandnow.com/2024/02/13/hawaii-island-customers-asked-to-reduce-electricity-use/>

14) HELCO issues rolling power outages around Big Island by: Emily Cervantes Posted: Feb 13, 2024 / 05:11 PM HST Updated: Feb 13, 2024 / 09:12 PM HST Hawaiian Electric initiated rolling outages for Big Island after several large generators became unavailable and reduced output "Tuesday night." <https://www.khon2.com/local-news/heco-releases-conservation-alert-for-big-island/>

15) "Here's how power outages can have repercussions for Hawai'i's water supply Hawai'i Public Radio | By Savannah Harriman-Pote Published February 13, 2024 at 10:59 AM HST

Water departments on O'ahu and Hawai'i Island have advised customers to conserve water ahead of possible storm-related power outages this month.

But what does the power grid have to do with the water supply?

It is impossible to separate Hawai'i's power system from its water system, said Kawika Uyehara, deputy director of Hawai'i County's Department of Water

Supply." <https://www.hawaiipublicradio.org/local-news/2024-02-13/residents-on-hawaii-island-and-oahu-are-asked-to-serve-water-amid-power-outages>

16) US Hawaii is "on the verge of a greater catastrophe," locals say, as water crisis continues

By Li Cohen

Updated on: April 11, 2024 / 8:23 AM EDT / CBS News

In Hawaii, one of the most important sayings is *ola i ka wai*, "water is life" — a phrase that not only sums up what it means to exist on an island, but what it means to live, period. But now, one of the largest of the island chain's land masses is facing a triple threat to its sole freshwater source, and if it isn't addressed soon, one community member says, "We're in deep trouble."

<https://www.cbsnews.com/news/hawaii-water-crisis-climate-change/>

17) News Hawai'i County issues mandatory 25% water restriction for North Kona August 7, 2023 · 5:21 PM HS

A mandatory 25% water restriction has been issued for various communities in North Kona due to the failure of the Honokōhau Deepwell over the weekend.

<https://bigislandnow.com/2023/08/07/hawaii-county-issues-mandatory-25-water-restriction-for-north-kona/>

18) Hawai'i Water Supply Closely Monitored As Severe Drought Continues

by Big Island Video News  
on Nov 6, 2023 at 3:28 pm

(BIVN) – With an ongoing drought on the island of Hawai'i, the Hawai'i County Department of Water Supply says it is closely monitoring its 23 public water systems, with a "special focus" placed on the South Kohala Water System.

<https://www.bigislandvideonews.com/2023/11/06/water-supply-closely-monitored-as-hawai%CA%BBi-under-severe-drought/>

This is a map of Power Outages on the Big Island. This map wouldn't have been created if Power Outages were not a problem. <https://www.hawaiaianelectric.com/safety-and-outages/power-outages/hawaii-island-outage-map>

Please, give Tax Breaks to all homes that provide solar and/or wind turbine to there homes to help with power issues on the island.

19) "Hawaiian Electric is reporting that several large generators on the Big Island are experiencing a range of issues and may lead to the need for rolling outages if supply does not meet demand."

[https://www.reddit.com/r/BigIsland/comments/1bnuar3/hawaiian\\_electric\\_is\\_reporting\\_that\\_several\\_large/?t=52660](https://www.reddit.com/r/BigIsland/comments/1bnuar3/hawaiian_electric_is_reporting_that_several_large/?t=52660)

20) "Hawaiian Electric asking Big Island customers to conserve power due to down generators

March 25, 2024 · 11:49 AM HST

According to the utility company, this is an usual situation as the large generators are experiencing mechanical problems resulting in a reduced output. The largest generator, an independent power producer that sells electricity to Hawaiian Electric, is offline with significant mechanical issues.

The plant generates 60 megawatts or nearly one-third of the typical peak demand of 180 megawatts on the island."

<https://bigislandnow.com/2024/03/25/hawaiian-electric-asking-big-island-customers-to-conserve-power-due-to-down-generators/>

All the articles above show that a resort development will further deplete and stress resources and infrastructure on an island already struggling. There are years of new development that have already been approved but not completed. It is not responsible or prudent to continue to develop this resort under these current conditions.

HISTORICAL AND CULTURAL SIGNIFICANCE:

The Law of the Splintered Paddle

Hawaiian history tells us that young Kamehameha was once an aggressive chief. The story goes that the young chief even chased after two fishermen in a Puna fishing village. While pursuing them, his foot got stuck in a crevice, and one of the fishermen struck Kamehameha over the head with his paddle in defense, which splintered into pieces.

After the incident, Kamehameha recognized that it was wrong to misuse his power and learned compassion. Years later, Kamehameha declared a new law "Ke Kānāwai Māmalahoe" or "the Law of the Splintered Paddle." Meant to protect the innocent and vulnerable from unprovoked attacks, this law proclaimed that the defenseless, especially kupuna and keiki, be able to sleep safely on the side of the road, unharmed.

The law provided for the safety of non-warriors during wartime and became the first written law of the Kingdom of Hawai'i. After being added back in 1978, the law is part of Hawai'i's State Constitution today.

It is symbolic of servant leadership, reinforcing the importance of:

- Caring for and serving one's people
- Knowing and doing what is pono (right)
- Standing for the principle that leadership privilege is earned
- Taking kuleana (responsibility) for those we serve
- Doing so with compassion, love, and respect

"We take that to mean that anyone who uses our roadways should be able to do so without fear of harm," explains Tina."

The Law of the Splintered Paddle is also on Kamehameha Schools' website. The historical value of this law should be enough to help make

Big Island roads become safer, and not adding to the traffic and issues of our already dangerous roads. <https://www.ksbe.edu/article/the-lessons-of-the-law-of-the-splintered-paddle-ring-true-200-years-after-k>

Does this EIS have any reports about how this development will safely add to the land fill on Big Island, and are there reports proving the island has enough water for another big resort, what about reports on how much power this resort will use because the Big Island already has serious resource and infrastructure issues.

## IN CONCLUSION

The articles cited in this letter, many by some of the most esteemed scientists in the world, show with clarity that adding another development is going to cause devastating, lasting, effects on the Eco-system at Keauhou Bay.

This location, currently acting as a natural filter, is especially vulnerable due to having a golf course on one side and a natural treasure like Keauhou Bay on the other.

In addition to the natural disaster this will cause, Hawai'i Island is already having serious infrastructure and resource issues that have yet to be solved.

We need to work in harmony with the land and the people before pushing forward with new developments, especially in sacred and special places like Keauhou Bay, the birthplace

of King Kamehameha III. Keauhou Bay is a small, fragile Eco-system, that is already pressured by boating, golfing, population issues, and hotels.

The trees that currently stand on the land that is threatened to be developed clearly protect the marine life and environment from further damage. The location is not suitable for this kind of development for both environmental and infrastructure reasons.

The cost of what stands to be lost is far too high to allow this to happen.

Please save Keauhou Bay's marine life and help the island's resources by saying NO to a Bungalow Resort!

Mahalo,

Jo Quinn

## Sally Rankin

My husband and I made the difficult decision to move away from Keauhou Bay in 2022, after several years of voicing our concern over the development plan put forth by Kamehameha Schools and the detrimental effect it would have on our quality of life with increased traffic just feet from our home.

Over the last decade we have consistently heard from others: past neighbors, environmentalist and scientist studying the long term effects of development at Keauhou Bay being concerned about the quality of water. Currently affected by the existing roadways, the golf course, cesspools and extractive tourism, we believe that this concern has not been adequately addressed.

This development plan is misguided and has not sufficiently taken in account the current residential neighborhood or the negative effects on such a small bay that is easily subject to further degradation.

While the zoning and laws may allow Kamehameha Schools to proceed with this project, should there not be respect for an area full of sacred and culturally significant sites that need to be protected. Do we not look back and learn from past mistakes, as we watch the rebuilding and restoration at Kahala'u within the same corridor, at the cost of millions of dollars, because of a decision just like this one, building more hotels, when really preservation should be most important.

## Comments on Impact of Proposed Keauhou Bay Management Plan: Alice Ray

I appreciate the thorough review of public policy documents, clarity and transparency about goals in the KS Strategic Map for 2025, and good faith efforts to make community input an important part of the planning process. However, this plan fails on many levels. My focus here is the lack of consideration potentially superior alternatives for use of the *mauka* plot planned for a high end hotel. Many alternatives align better with the 2025 KS Strategic Map to “develop resilient economies, cultural landscapes, diverse learning and career pathways” - and get a return on investment in the process. The focus here is on economics and diverse learning.

### The economics of this plan don't work: not for jobs, not for justice, not for financial return

People of Hawaiian heritage are leaving the island at greater rates than any other ethnic group. Why? Wages for hospitality industry service workers are too low to make even modest housing affordable. A resort hotel and high end restaurant would perpetuate a business model that depends on low paying service jobs and would reinforce cultural stereotypes of Hawaiians as entertainment features and/or servants for more affluent visitors.

Ownership of Hawaii hotels by private equity investment companies has gone from 4% twenty years ago, to 29% this year. 27% of hotels on this island are already owned not by hoteliers, but by investment companies, who use debt to acquire distressed properties (like the nearby Sheraton/Outrigger), renovate them enough to jack up prices, then squeeze labor in the name of “operational efficiencies” at the expense of working conditions and the aloha spirit. All in order to flip the property to another debt-financed buyer, or refinance with more debt, used to pay off investors and raise rates again, but not raise up their workers.

The competitive landscape for both workers and customers - for a high-end restaurant in this location is not good either. Two high end restaurants within a quarter mile have failed. Economics haven't work in the off season. Owners can't afford to keep good help. Chef's leave, making it hard to control quality. As for customers, a planned huge new *Duke's* restaurant at the Outrigger (practically next door), with positive brand recognition, tested staff and a profitable business model, will open in 2025, taking significant market share.

KS asserts the hotel/restaurant project is needed to finance their educational initiatives, but the numbers don't work. It would need to generate \$5 million in operational profits each year just to match the cash return from keeping the proposed \$100 million investment (hotel and restaurant only) in a safe CD. But with the number of high end rooms (including VRBO) already exceeding visitors to fill them, risk is high. Transferring the risk to a management company increases pressure to maximize efficiencies at the expense of worker well-being, often including loss of health care benefits, less secure paid hours, and loss of seniority.

### There is a better, less risky alternative for social, economic, learning and career goals

Good paying jobs of the future will build on Hawaiian heritage, not by making the past an object for tourists to consume, but by re-imagining how the wisdom and technologies of the ancestors can inform and be informed by today's technologies and today's people. That goal can be met by focusing development of the targeted *mauka* space on the fourth of five primary KS management strategies: Maintain and Establish New Place-based Cultural Education Areas.

Cultural Education is about looking forward as well as back. It is about honoring today's workers, not just yesterday's royalty - having an accessible place for *kupuna* to share their history, *kanaka* to share work and play experience, and *keiki* to begin writing the next chapter

of shared history. It is recognizing that play and sports have long been part of Hawaiian culture. They are effective, evidence-based means of education as well as entertainment.

The proposed alternative plan for this location would maintain several acres of vegetation up mauka, as a barrier to golf course runoff. The remaining acres would become a state of the art **Play and Learn Center**, with no-tech, low-tech and high-tech options. Operations would be funded by a combination of tiered, pay-to-play fees that favor local families with generational ties, then *kama'aina*, then visitors. It could include paid sponsorship of some spaces, with limited advertising; and grant funding for continuing innovation.

**No tech:** Demand focused, small footprint, shaded

- Sports courts for Volleyball, Pickleball, *Ulu Maika* (rolling stone disks)
- Picnic areas with tables and large barbecue grills, shaded viewing benches

**Low tech:** Leveraging ubiquitous smart phones and basic GPT

- Distributed, educational, outdoor posts with posters about the *'aina*, plants, sea, sky, with QR codes to extend learning via video on personal phones
- Learn by Doing huts: *Talk Story* (oral history), *Learn Hula*, *Learn 'Olele*, *Huts*, made with traditional materials; personalized experiences delivered through AI
- Telescopes: One for moon and sea, one for deep sky, one for wheelchair access

**High tech:** AI to increase empathy, place-based identity and *malama 'aina*, *malama kai*

- *Facelife:* Transform your race, gender, even species by degrees, to see at what point you become other, and/or they become you.
- *Fishite:* Use your mind and muscle to land a big marlin, without the cost of the boat
- *Finalite:* Bird and bug watchers' treasure hunt
- *HoldOn-Holua:* VR toboggan ride down the side of this very mountain
- *Choosing Hawaii:* Videogame of choices and consequences to sustain Hawaii island

Instead of more new buildings for affluent tourists, with 150+ more toilets, and even more cars above Keaou Bay, this alternative would conserve land, cost just 10% of the \$125 million project budget, and provide a reasonable financial return of 8% above operating costs after three years. That would leave \$100 million to invest in the affordable housing desperately needed by working families and *kupuna*, and provide construction jobs in the process.

**About the Author:** Alice Ray, MBA, is a *kama'aina kupuna* who lives less than ¼ mile from Keaou Bay and co-founded the non-profit He Iia Bay Forever. Business Schools at UW, and UC, Berkeley, have honored her with awards for leadership as a social entrepreneur. Her interactive software designs, similar to the proposed high tech options cited here, travelled with the Lalapaloa Concert Tour and were widely featured in national media. She has consulted to dozens of non-profits on how to make good works good business. She is co-founder, CEO for 23 years, and current Board Chair of Ripple Effects, which provides technology-enabled resources to strengthen children's resilience in the face of challenge, including in ten public schools on Hawaii Island. An Education Fellow in the Aspen Global Leadership Network, she has received more than 50 major awards from education, health, software and communication industries, for creative achievement, product excellence, social leadership and entrepreneurial success, as well as regional emmys and national film awards. She is happy to consult on technology development for the proposed *Play and Learn Center*.

**To:** 221053-01 KS Keaouhou Entitlements  
**Subject:** kam schools eis draft will have negative impact!!!

**Categories:** Yellow Category

To whom it may concern,

Please reject Kamehameha Schools EIS for Keaouhou Bay to become a Bungalow Resort. This is a VERY small bay and the added footprint of a 105 room Resort, that will include excess traffic, will have a **serious negative impact** in Keaouhou Bay.

Please, Do NOT risk polluting the water in Keaouhou Bay by allowing Kamehameha Schools to develop their bungalow resort project. Research has shown that developments pollute nearby waters constantly during development and after.

Developments have ALWAYS polluted the water in every near coastal development area. An article entitled, "*What is the biggest source of pollution in the ocean?*" by NOAA, *National Oceanic and Atmospheric Administration*, states, "*When large tracts of land are plowed, the exposed soil can erode during rainstorms. Much of this runoff flows to the sea, carrying with it agricultural fertilizers and pesticides.*" It also states, "*Eighty percent of pollution to the marine environment comes from the land. One of the biggest sources is called, nonpoint source pollution, which occurs as a result of runoff.*"

The trees you want to take down keep the runoff pollution from the golf course from going into the Bay. According to the National Library of Medicine, in their article, "*Putting the Earth in Play: Environmental Awareness and Sports*," shares that the golf industry uses [approximately 50 pesticide active ingredients](#), including chlorpyrifos—an insecticide that is banned for residential use by the EPA due to developmental hazards. These pollutions and more are **being held off** from running into the Bay by the very trees you want to take down.

Let's not forget the marine life that will be threatened by excess pollution and traffic. Keaouhou Bay is the monk seals and the green sea turtle's habitat. More pollution and people will endangered these species.

This Bay is worth protecting. Please do not put a resort in such a small area. Future generations will be deprived of what it currently is, and it could never be replaced.

Kind Regards,  
Juhl rayne

**Subject:** Kamehameha Schools EIS Draft For Keaouhou Bay WILL HAVE NEGATIVE IMPACT!

**Categories:** Yellow Category

To whom it may concern,

Please, read the scientific proof below and state in your report that this Bungalow Resort WILL have a SERIOUS NEGATIVE IMPACT in Keaouhou Bay as stated in all the different reported articles below.

Keaouhou Bay has the trees and land just under the golf course (that Kamehameha Schools wants to clear for their bungalow resort) that protects Keaouhou Bay from a lot of algae blooms because it soaks up pollution that is runoff from fertilizer, weed killer... in the golf course, and unfortunately when there is a severely heavy rain storm the land up on top of the bay has a greater runoff than normal from the golf course and an algae bloom happens.

The photos below were taken by Rebecca Melendez and they show this kind of an algae bloom that happened in Keaouhou Bay Feb. 13, 2023.

If you clear this land, this kind of algae bloom will happen a lot more often and end up killing a lot of coral and marine life as stated in the two Global Coral Reef Alliance articles below because this is what happened in the Bahamas when they researched the reef before and after a golf course development, and even though this development is not a golf course development, it will be just under one and this will allow the pollution from the golf course to come down to the bay a lot more often.

This information was taken from Global Coral Reef Alliance titled, "Golf courses kill coral reefs and fisheries: harmful algae blooms and disease cause by nutrient runoff from golf course development on Guana Cay, Abaco, Bahamas

Introduction: Bahamas coral reef deterioration

This study is thought the first ever to evaluate the health of coral reef ecosystems and fisheries before and after a golf course development. The vast majority of corals have died from a combination of factors including global warming, new diseases, land-based sources of pollution..  
". <https://www.globalcoral.org/golf-courses-kill-coral-reefs-and-fisheries-harmful-algae-blooms-and-disease-caused-by-nutrient-runoff-from-golf-course-development-on-guana-cay-abaco-bahamas/>

If you allow a Bungalow Development in Keaouhou Bay you WILL be agreeing to pollute this bay for years to come because the golf course runoff won't have the best protection which is the natural trees and land that can soak up the polluted water most of the year and this kind of harmful algae bloom will happen more often.

Here is another study by the Coral Reef Alliance titled, "Golf course fertilizer runoff causes nutrient enrichment leading to harmful algae blooms on a Bahamian coral reef

...After construction new algae blooms appeared nearest the golf course green, smothering corals in adjacent reefs, along with sharply increased coral diseases." <https://www.globalcoral.org/golf-course-fertilizer-runoff-causes-nutrient-enrichment-leading-to-harmful-algae-blooms-on-a-bahamian-coral-reef>

Algae Bloom photos above taken in Keaouhou Bay Feb. 14, 2024.

Green Sea Turtle photos below taken in Keaouhou Bay September 25, 2022.

The green sea turtle that is federally protected and can be seen in Keaouhou Bay weekly. Please see the following article that states "POLLUTED RUNOFF IN HAWAII ENDANGERS GREEN SEA TURTLES

Why does Hawaii have a runoff problem?

Historically, in the tropics of Hawaii, precipitation was absorbed into the soil, according to the Clean Water Branch of Hawaii's Department of Health. Any potential pollution or contaminants on the ground surface would get pushed into the soil by the rain, and plant roots and microbes would help break down the pollution into less dangerous components. However, with urban and agricultural development, less and less of the pollution gets pulled into the soil, and more of it gets washed out into storm drains. From there, the pollutants make their way to streams, rivers and the ocean that surrounds Hawaii. According to the state agency, most of these contaminants are nutrients from fertilizer, bacteria from animal waste, oil, garbage and yard waste...

If polluted runoff reaches the ocean, it can wreak havoc on marine life, including endangered green sea turtles." Taken from <https://www.chemservice.com/news/polluted-runoff-in-hawaii-endangers-green-sea-turtles/>

Even with storm drains if you allow this development it WILL POLLUTE Keaouhou Bay as the above article (that was written in 2014 because runoff water from developments were polluting the ocean even then) states, and this bay holds many sea creatures such as the protected green sea turtle, spotted eagle rays, manta rays, octopus, dolphins, fish, coral, monk seals that have rested on the dock before and...that will ALL be harmed by the more severe pollution runoff that WILL happen because developments can't help but pollute the water nearby.

Keaouhou Bay is a DOCUMENTED RESTING AREA for the ENDANGERED MONK SEAL, and if a resort is allowed to be built, that will bring a lot more people down to Keaouhou Bay and if a monk seal is resting they most likely will disturb the monk seal with their selfies because it is fully known this is now a SELFIE CULTURE.

This information is by NOAA Scientist, "Study shows selfie culture impacts how people behave when posting images of an endangered species on social media."

There's a seal on the beach! Let's go get a 'sealife'!" That must have been what nearly 18 percent of people on Instagram thought before approaching an endangered species. In a recent study, NOAA scientists used social media to monitor human activities around endangered Hawaiian monk seals. They discovered that human disturbance is more common than they thought." <https://www.fisheries.noaa.gov/feature-story/endangered-hawaiian-monk-seals-try-foul-over-selfies>

Has there been a detailed traffic study for the increase in cars that will be added to this already severely traffic area?

"The number of people living on the coasts has rapidly increased in recent decades, causing significant development of coastal areas. Coastal development can negatively impact the ocean through the destruction of coastal marine habitat and through run-off of sediments and pollution."

-Coastal development involves activities such as the creation of harbors, stabilization of shorelines, and aquaculture that involve the destruction of sensitive marine habitats such as mangroves, coral reefs, and seagrass beds.

-Coastal development may cause the run-off of sediments into coastal habitats, which can smother corals or seaweeds and reduce the amount of light available for photosynthesis. Losses of primary producers and important habitat-forming species such as corals can negatively impact entire food webs."

The above information was taken from the Education Development Center, INC, from their Coastal Development page called Ocean Tracks <https://oceantracks.org/library/human-impacts/coastal-development/#:~:text=Coastal%20development%20may%20cause%20the,negatively%20impact%20entire%20food%20webs>.

If you allow this Bungalow Resort to be developed you will increase constant noise in this bay for years and, "Noise Pollution

Research shows that underwater noise from construction, shipping and naval vessels significantly impacts the natural behaviour of cetaceans and many other marine species. This can be seen when mass beaching events occur or breeding success is diminished."

The above information was taken from the Ocean Conservation Trust <https://oceanconservationtrust.org/ocean-advocacy/think-ocean/ways-to-think-ocean/>

If you allow this resort the amount of people in this bay will fully increase and, "Hawaii's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally, management of the resource should balance the needs of different user groups, but the welfare of the marine environment on which its inhabitants depend must be the most important consideration." This was taken from Hawaii's own Division of Aquatic Resources <https://dlnr.hawaii.gov/dar/marine-managed-areas/hawaii-marine-life-conservation-districts/#:~:text=Snorkeling%20and%20SCUBA%20diving%20are,effect%20on%20nearshore%20fish%20populations>.

There is nothing Kamehameha Schools can do to their development that can stop the guests of this possible Bungalow Resort from going to Keauhou Bay. Human traffic WILL seriously increase if this resort is allowed to be built and the marine life will be negatively affected by it. Marine life will suffer from this development as stated in this letter in many different scientific reported articles.

Please, Do NOT risk polluting the water in Keauhou Bay by allowing Kamehameha Schools to develop their bungalow resort project, because it is scientifically proven that developments will ALWAYS have rain runoff that will pollute nearby waters constantly during development and after.

Please, read the Scientific articles below written by NOAA, National Oceanic and Atmospheric Administration and other professional organizations, that prove that developments have ALWAYS polluted the water in every coastal developed area.

The coral all over Hawai'i has had extremely high mortality rates, due to developments near ocean areas throughout the years, and development in Keauhou Bay will be devastating to the coral, reef fish, and all Aquatic Life there, and even the Manta Rays that go there to eat zooplankton from the Manta Ray tours at night, and they eat it during the day in that area as well because they need to eat 5 times their body weight in zooplankton daily. Please see the cited information below.

"SO, HOW MUCH PLANKTON DOES YOUR AVERAGE MANTA RAY EAT? 19,200,000. Nineteen million two hundred thousand, give or take a few thousand.

That is the number of plankton pieces a ten-foot manta ray must consume weekly to stay alive."

The above information was taken from Manta Ray Advocates <https://mantarayadvocates.com/how-much-plankton-do-mantas-eat/>

If you allow this bay to be developed you will be allowing all types of marine life to die and there is NO WAY to stop this from happening because polluted runoff rain water from developments can't be fully stopped. It is what has happened in ALL coastal developments.

Please read the Scientific proof below.

It's Been Proven Developments Severely Pollute Nearby Waters

Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Coral Bleaching is occurring more frequently in Hawai'i. Across the Hawaiian Archipelago, coral bleaching has increased in frequency and severity since 1996. The last major bleaching event in 2014-2015 had catastrophic impacts statewide..."

This was the third major bleaching episode in Hawai'i over the last 6 years. The frequency of these events is unprecedented in the archipelago. NOAA scientists and partners have determined that the key drivers of the bleaching were environmental factors (such as heat stress, depth, and surface light) and human impacts (sewage effluent and urban run-off)." <https://www.fisheries.noaa.gov/feature-story/cautionary-tale-2019-coral-bleaching-event-hawaii#:~:text=Coral%20bleaching%20is%20occurring%20more,had%20catastrophic%20impacts%20statewide>.

This article is by the Coral Reef Alliance here in Hawai'i. "An ecosystem under threat Hawai'i's reefs face major global and local threats including climate change, overfishing, and sediment and nutrient pollution caused by sewage and stormwater runoff..."

When it rains, flash floods carry stormwater and large amounts of sediment downstream to the ocean. Just offshore, once-thriving coral reefs are now struggling to survive." <https://coral.org/en/where-we-work/hawaiian-islands/#:~:text=Hawaii%CA%BBi's%20reefs%20face%20major%20global,into%20Hawaii%CA%BBi's%20waterways%20every%20day.>

This article states that runoff is a leading source in coral degradation. Article by National Oceanic and Atmospheric Administration, AKA NOAA. "Land-based sources of pollution are a leading cause of coral reef degradation in the Main Hawaiian Islands. Water quality is impacted by urban runoff, failing sewage systems, unpaved roads, farms, land clearing, and development." [https://www.coris.noaa.gov/monitoring/status-report/docs/Hawaii\\_status\\_report\\_forw\\_b.pdf](https://www.coris.noaa.gov/monitoring/status-report/docs/Hawaii_status_report_forw_b.pdf)

This article is a Research Article by PLOS ONE and their motto is, "We're driving change in research integrity and publication ethics." This is some of their article information. "Coral taxonomy and local stressors drive bleaching prevalence across the Hawaiian Archipelago in 2019..."

We found little evidence for acclimation by reefs to thermal stress in the main Hawaiian Islands. Moreover, our findings illustrate how detrimental effects of local anthropogenic stressors, such as tourism and urban run-off, may be exacerbated under high thermal stress. In light of the forecasted increase in severity and frequency of bleaching events, future mitigation of both local and global stressors is a high priority for the future of corals in Hawai'i." <https://journals.plos.org/plosone/article?id=10.1371/journal.pone.0269068>

The Chesapeake Bay has a foundation that is trying to save it due to runoff pollution that was caused by developments, and the Chesapeake Bay is a lot bigger than Keauhou Bay. If it's being drastically hurt by runoff water from developments, Keauhou Bay waters won't stand a chance if development above the bay is allowed because this bay is very small.

This Article is by the Chesapeake Bay Foundation, Saving a National Treasure states, "...runoff is a significant source of harmful nitrogen pollution that continues to grow..."

As rainwater and snowmelt run off our streets, parking lots, lawns, and other surfaces, they pick up pet waste, pesticides, fertilizer, oil, and other contaminants. If the draining water doesn't evaporate or soak into the ground where it can be filtered, it flushes straight into local creeks, rivers, and the Chesapeake Bay, adversely affecting water quality and aquatic life.

Only 10 to 20 percent of rain that falls in forests, fields, and other natural areas runs off, with the rest absorbed by soil and plants, where it is filtered before reaching aquifers or local waterways. (Right now Keauhou Bay has a lot of trees and is very natural, this is what helps stop runoff) By contrast, close to 100 percent of the rain that falls on concrete and other hard surfaces produces runoff. One inch of rain falling on an acre of hardened surface produces 27,000 gallons of runoff.

Stormwater runoff pollution threatens Chesapeake Bay and its rivers and streams...Polluted runoff is one of the most harmful sources of pollution to the Bay and its waters. And much of it starts right in the urban and suburban neighborhoods where we live." <https://www.cbf.org/issues/polluted->

[runoff/index.html#:~:text=Besides%20carrying%20pollutants%20that%20harm,them%20are%20placed%20in%20jeopardy.](#)

If that is what runoff is doing to the Chesapeake Bay, the effects of runoff will be even more devastating to Keauhou Bay because it is so much smaller than the Chesapeake Bay.

Coral reefs are known to be highly negatively impacted by developments because, "Impacts from land-based sources of pollution including coastal development...can impede coral growth and reproduction, disrupt overall ecological function, and cause disease and mortality in sensitive species." <https://oceanservice.noaa.gov/facts/coral-pollution.html#:~:text=Impacts%20from%20land%20based%20sources,and%20mortality%20in%20sensitive%20species.>

Article by Environmental Evidence, "Coastal development and runoff lead to sedimentation, which directly impacts coral recruitment, growth, mortality, and ecosystem services that coral reefs provide." <https://environmentalevidencejournal.biomedcentral.com/articles/10.1186/s13750-020-00200-0#:~:text=Coastal%20development%20and%20runoff%20lead,services%20that%20coral%20reefs%20provide.>

Developments can't fully stop polluting because runoff is from rain during development and after. Article by NOAA, "One of the most significant threats to reefs is pollution. Land-based runoff and pollution discharges can result from dredging, coastal development...This runoff may contain sediments, nutrients, chemicals, insecticides, oil and debris.

When some pollutants enter the water, nutrient levels can increase, promoting the rapid growth of algae and other organisms that can smother coral." [https://oceanservice.noaa.gov/education/tutorial\\_coral/coral09\\_humantreats.html#:~:text=Th is%20runoff%20may%20contain%20sediments,organisms%20that%20can%20smother%20corals.](https://oceanservice.noaa.gov/education/tutorial_coral/coral09_humantreats.html#:~:text=Th is%20runoff%20may%20contain%20sediments,organisms%20that%20can%20smother%20corals.)

Another article by NOAA, "Coral reefs also are affected by leaking fuels, anti-fouling paints and coatings, and other chemicals that enter the water... (All of those are show up in every development project.)

Among the most damaging pollutants on coral reefs is sediment, which can remain suspended in the water or be deposited on the coral surface (i.e., turbidity and sedimentation, respectively) and can contain toxicants, pathogens, and nutrients, all of which impact coral growth, recruitment, and survival" [https://oceanservice.noaa.gov/education/tutorial\\_coral/coral09\\_humantreats.html#:~:text= This%20runoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days.](https://oceanservice.noaa.gov/education/tutorial_coral/coral09_humantreats.html#:~:text= This%20runoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days.)

It's Been Proven Resort Developments KILL Marine Life

The manta rays go to Keauhou Bay every night to eat zooplankton and if you allow this development that WILL have runoff water, you WILL be causing zooplankton to be seriously affected because as this article by MarinBIO states, "Zooplankton are also sensitive to their environment and like phytoplankton—a change in zooplankton concentration can indicate a subtle environmental change. Zooplankton are highly responsive to nutrient levels, temperatures, pollution, food that is not nutritious, levels of light, and increases in predation. As well as providing an essential link in the marine food chain (which is an understatement), the diversity of species, amount of biomass and abundance of zooplankton communities can be used to determine the health of an ecosystem..."

Here is another article that proves runoff from development in this area will hurt and kill plankton, by Frontiers in Marine Science, "Effects of an experimental terrestrial runoff on the components of the plankton food web in a Mediterranean coastal lagoon. The main result observed in the present study was that the effects of the simulated terrestrial runoff spread along the plankton food web, significantly affecting all trophic levels of the natural plankton community studied. This occurred in a relatively short time considering that the experiment lasted less than three weeks. The lower light availability in the terrestrial runoff treatment compared to the control resulted in a net decrease of approximately one-third of chl- $\alpha$  concentration and phytoplankton abundance over the entire experiment." <https://www.frontiersin.org/journals/marine-science/articles/10.3389/fmars.2023.1200757/full>

"Zooplankton are also affected by levels of pH, heavy metals, calcium, and aluminum. Nutrients like nitrogen and phosphorus will affect the prey of zooplankton (like algae, protozoa and bacteria), indirectly affecting zooplankton survival. Scientists are still putting together pieces of the zooplankton puzzle. Some questions include how nutrient levels found in algae can influence the growth and behavior of zooplankton. Another question important to marine and human life is how toxins and pollution will affect this crucial link in the food chain." This information is in article by MarineBio. <https://www.marinebio.org/creatures/zooplankton/#:~:text=Zooplankton%20are%20als%20sensitive%20to,light%20and%20increases%20in%20predation.>

Here is a research article by Environmental Research Laboratory, United States Environmental Protection Agency that discusses, "Toxic Effects of Pollutants on Plankton. There are four main sources of aquatic pollution: industrial wastes, municipal wastes, agricultural run-off, and accidental spillage. Non-point sources, such as automobile exhausts, add appreciable amounts of pollutants to air that may enter aquatic systems in rainfall or dry fall-out. These sources add pesticides, heavy metals, oil, petroleum products, and a large number of organic and inorganic compounds to water. Lakes and oceans serve as sinks for many pollutants. Plankton comprise a large portion of the living matter in natural waters and function in biogeochemical cycles. They are affected by pollutants, transfer them to sediments and other organisms, and function in their biological transformation." [https://scope.dge.carnegiescience.edu/SCOPE\\_12/SCOPE\\_12\\_3.6\\_chapter12\\_257-274.pdf](https://scope.dge.carnegiescience.edu/SCOPE_12/SCOPE_12_3.6_chapter12_257-274.pdf)

The above articles show that development of Keauhou Bay WILL hurt plankton life in the area because of the pollutant runoff that WILL happen during the development and after, and if this happens this could cause the manta ray food source to disappear and that will be devastating for the manta rays eating habits, as well as cause the manta rays to not show up in this area, in turn taking away many lively hoods from locals on the island that depend on the manta ray tour for their income.

It's Been Proven an Increase in Human Population Destroys Coral Reefs

If a Bungalow Resort is allowed to be built in Keauhou Bay, it will forsure bring a serious increase in human traffic. "Easily visible trends in human population dynamics combined with well-established and tested ecological theory give a clear, intuitive, yet quantifiable guide to the severity of survival challenges faced by coral reefs. Management challenges and required actions can be clearly shown and, contrary to frequent claims, no scientific ambiguity exists with regards to the serious threat posed to coral reefs by humankind's continued numerical increase." This is in the article by National Library of Medicine National center for Biotechnology Information <https://pubmed.ncbi.nlm.nih.gov/33293007/#:~:text=Denser%20coastal%20populations%20and%20greater,to%20more%20runoff%20and%20siltation.>

This article is by ABC NEWS, "This is how tourists are destroying coral reefs in Hawaii! The less people at a certain site, the more coral there are, the research found. The millions of tourists who flock to the shores of Hawaii every year are wreaking havoc on its natural environment -- especially the coral reefs, which are at risk all over the world, a new study said. The most popular coral reefs on the Hawaiian Islands are likely being degraded by the very visitors they attract, according to a study published Monday in Nature Sustainability." <https://abcnews.go.com/US/hawaiian-coral-reefs-degrading-popular-tourist-sites-scientists/story?id=96309858#:~:text=The%20less%20people%20at%20a,there%20are%20C%20the%20research%20found.&text=The%20millions%20of%20tourists%20who,world%2C%20a%20new%20study%20said.>

If you allow this resort to be developed, you will be destroying the coral reefs in the bay because this bay is extremely small and used by a lot of locals already for fishing, canoeing, swimming, snorkeling, paddle boarding, surfing, boating...it can't afford more use by many thousands more people yearly.

If you allow Keauhou Bay to be developed there will be a higher population in the bay and that will hurt the coral in the bay as well, because it's known that, "Denser coastal populations and greater wealth will lead to reef degradation by coastal construction. Denser populations inland will lead to more runoff and siltation. Effects of human perturbations can be explored with metapopulation theory since they translate to increases in patch-mortality and decreases in patch-colonization (= regeneration). All such changes will result in a habitat with overall fewer settled patches, so fewer live reefs." This information was taken from Science

Direct <https://www.sciencedirect.com/science/article/abs/pii/S0065288120300328#:~:text=Aquaculture%20will%20alleviate%20some%20fishing,to%20more%20runoff%20and%20siltation.>

Another article by Nature Sustainability, "Coral reefs and coastal tourism in Hawaii Coral reefs are popular for their vibrant biodiversity. By combining web-scraped Instagram data from tourists and high-resolution live coral cover maps in Hawaii, we find that, regionally, coral reefs both attract and suffer from coastal tourism. Higher live coral cover attracts reef visitors, but that visitation contributes to subsequent reef degradation. Such feedback loops threaten the highest quality reefs, highlighting both their economic value and the need for effective conservation

management." [https://www.nature.com/articles/s41893-022-01021-4.epdf?sharing\\_token=wsakgONhahhJAnWAq453tRgN0AIWcl9mR3ZoTv0PvGzA5lc-H001zcHNIP3ASnhcgKRy6\\_vKLPw494bmbY0xS63Y1Mg0IGBZsapdGUH701SLbu9x5Pr3xED4KxI4T0sIlvgO1a72ZRk3rUbraXpoodId2AoNJSmWSuxB7JEDqplj8OGIpx71TIWdCFXvFKIIZYeNdcj3Sw\\_dnaUjg5ZlhcjPBDImmaH15yqT50%3D&tracking\\_referrer=abcnews.go.com](https://www.nature.com/articles/s41893-022-01021-4.epdf?sharing_token=wsakgONhahhJAnWAq453tRgN0AIWcl9mR3ZoTv0PvGzA5lc-H001zcHNIP3ASnhcgKRy6_vKLPw494bmbY0xS63Y1Mg0IGBZsapdGUH701SLbu9x5Pr3xED4KxI4T0sIlvgO1a72ZRk3rUbraXpoodId2AoNJSmWSuxB7JEDqplj8OGIpx71TIWdCFXvFKIIZYeNdcj3Sw_dnaUjg5ZlhcjPBDImmaH15yqT50%3D&tracking_referrer=abcnews.go.com)

A Resort Development WILL Increase Traffic on Already Severely Trafficed Roads

The Big Island already has a serious problem with traffic on the island because of a lack of infrastructure that in places a bigger road can't be built due to cliffs on one side and homes on the other side.

Allowing another resort to be developed will bring more cars that will lead to a lot more traffic that the island can not handle, please read the articles below by different NEWS companies that prove this point.

This NEWS article by Hawai'i News Now, "Report shows alarming surge in Hawaii Island traffic deaths The Hawaii Police Department's Traffic Services Section released a new report showing a dramatic increase in both major crashes and fatal accidents from last year."

The startling statistics show a dramatic increase in the number of year-over-year traffic fatalities on the Island of Hawaii, revealing major crashes are up more than 12% and traffic fatalities are up more than 100%.<sup>4</sup> Please watch their video on their link below because it is a professional report on Big Island traffic problems. <https://www.hawaiinewsnow.com/2024/05/18/new-report-shows-hawaii-island-traffic-fatalities-are-up-over-100-last-year/>

With more tourists comes more accidents, more traffic, and more traffic deaths. Please read this article by KHON 2 NEWS, "Hawaii Island has most traffic fatalities in state, This time last year Hawaii island was at five traffic deaths, as of April 1, 2024, they're at 14.

Seven of which happened in the last two weeks...

Chief Moszkowicz said the police force is small compared to the size of the island and response times can take 15 to 20 minutes.

"We don't have the resources like in the small space of Oahu where you can saturate an area to control speeding, that just doesn't exist here," he added." <https://www.khon2.com/local-news/7-traffic-fatalities-for-hawaii-island-in-march/>

The traffic on Big Island has increased drastically and safety issues and infrastructure needs to be addressed before adding more resort developments.

Please read this article because what it says about Oahu is the same for Big Island. The traffic problems they talk about are the same issues here on Big Island, and this article also gives one Big Island example, "On the Big Island, the mayor had to issue an emergency order shutting down Waipio Valley Road due to overuse and poor prior maintenance." <https://www.civilbeat.org/2024/02/angry-over-island-traffic-jams-lets-talk-about-solutions/>

Please, watch the NEWS video from the link below on aerial footage in Hilo because the footage shown is the same thing that is happening on Alii Drive and Queen K HWY, and for the same reasons.

There are 2 developments already on Alii Dr. being built as of today, and more are scheduled for this road in the near future, and Alii Dr. and Queen K HWY are the roads Kamehameha Schools Bungalow Resort will be using if approved and they are already seriously congested.

These roads have the exact same traffic congestion as Hilo, with the exact same problems. Traffic is extremely slow aready.

The worry on Kona side is tsunami evacuations rather than lava evacuations, and in this kind of traffic, not everyone will be able to get to safer ground, especially if you allow another resort to be developed in this area when traffic is already at a crawl every week day and sometimes on weekends as well.

See the photo below that proves this point in Kona, and here is the NEWS article by KITV NEWS that talks about Hilo and the same thing is happening in Kona on the roads Kamehameha Schools wants to develop their resort, "Hawaii Island traffic jams could have safety impact. In the event of an evacuation, Mayor Mitch Roth acknowledges that will make the T-traffic jam up even worse. But says, he is working with The State on a solution." [https://www.kitv.com/news/local/hawaii-island-traffic-jams-could-have-safety-impact/article\\_b06a5374-5a6a-11ed-8d23-8313ef8c4c19.html](https://www.kitv.com/news/local/hawaii-island-traffic-jams-could-have-safety-impact/article_b06a5374-5a6a-11ed-8d23-8313ef8c4c19.html)

There was a crash on Alii Dr. and when there is an accident on this road, it turns into only one lane that needs a flagger to help direction traffic. and that adds even more traffic to this already seriously congested road, and Kamehameha Schools wants to add a resort on this road, and that will increase the traffic even more.

Here is the Island News video on the crash on Alii Dr. <https://www.youtube.com/watch?v=FOSsmPDii8>

Please see from these articles that traffic on Big Island is deadly already and adding another resort will be devastating to the island.

Please read this Path article, HAWAII COUNTY'S VISION ZERO INITIATIVE

A motorcyclist is in critical condition after a collision with a car. A driver accidentally hits and kills a pedestrian. It seems that not a day goes by without the news reporting on a traffic crash on Hawaii Island.

"That's just Big Island traffic," is a common sentiment. But what if we didn't have to accept this endangerment of vehicle drivers, motorcyclists, and pedestrians as a way of life?"

This was taken from Path as well as The Law of the Splintered Paddle below <https://pathhawaii.org/hawaii-countys-vision-zero-initiative/>

The Law of the Splintered Paddle

Hawaiian history tells us that young Kamehameha was once an aggressive chief. The story goes that the young chief even chased after two fishermen in a Puna fishing village. While pursuing them, his foot got stuck in a crevice, and one of the fishermen struck Kamehameha over the head with his paddle in defense, which splintered into pieces.

After the incident, Kamehameha recognized that it was wrong to misuse his power and learned compassion. Years later, Kamehameha declared a new law, "Kʻŏhʻwai Mʻmalahoe" or "the Law of the Splintered Paddle." Meant to protect the innocent and vulnerable from unprovoked attacks, this law proclaimed that the defenseless (especially kʻpuna and keiki) across Hawaiʻi be able to sleep safely on the side of the road, unharmed.

The law provided for the safety of non-warriors during wartime and became the first written law of the Kingdom of Hawaiʻi. After being added back in 1978, the law is part of Hawaii's State Constitution today.

It is symbolic of servant leadership, reinforcing the importance of:

- Caring for and serving one's people
- Knowing and doing what is pono (right)
- Standing for the principle that leadership privilege is earned
- Taking kuleana (responsibility) for those we serve
- Doing so with compassion, love, and respect

"We take that to mean that anyone who uses our roadways should be able to do so without fear of harm," explains Tina."

The Law of the Splintered Paddle is also on Kamehameha Schools website, so they should want to help make Big Island roads become safer and not add to the traffic and possible traffic death toll problem. <https://www.ksbe.edu/article/the-lessons-of-the-law-of-the-splintered-paddle-ting-true-200-years-after-k>

Besides a resort development in Keaouhou Bay causing runoffs that will severely pollute the bay as the above research and science articles have shown above causing marine life to die, it will also increase in the bay's population that will seriously add to damaging even more coral, plankton and all marine life as well, and the island has severe traffic issues already with increased death tolls rising, and a resort development in Keaouhou Bay will totally increase even more traffic in these already severely congested traffic areas.

The Big Island Doesn't Have the Resources and Infrastructure for Another Resort

Please see the articles below because the Big Island doesn't have the resources or infrastructure to safely add another resort development on island and these other NEWS and Research articles prove this point.

#### 1) Hawaii Deals with Burgeoning Waste Management Problem

As landfills face closure and waste-to-energy projects stall, various counties in Hawaii are dealing with waste management issues. Waste360 Staff January 10, 2020

"Hawaii Island is in the enviable position of having a landfill with anywhere from 20 to 100 years of capacity left to take in trash. But the island still wrestles with significant issues like plastic products that are no longer being recycled." <https://www.waste360.com/landfill/hawaii-deals-with-burgeoning-waste-management-problem>

2) "Big Island Now readers seem to agree that there's likely no single solution for slowing down the timeline of the West Hawai'i Sanitary Landfill reaching capacity.

The West Hawai'i Sanitary Landfill, the only remaining landfill on the Big Island, is forecast to reach capacity within the next 20 to 25 years." <https://bigislandnow.com/2023/09/17/big-island-now-poll-no-27-results-more-than-one-solution-needed-to-help-extend-life-of-west-hawaii-landfill/>

3) Hawaii Island Has Decades of Landfill Space But Still Faces Challenges In Dealing With Its Waste  
Hawai'i Public Radio Published January 9, 2020 at 5:00 AM HST

"Hawaii Island is in the enviable position of having a landfill with anywhere from 20 to 100 years of capacity left to take in trash. But the island still wrestles with significant issues like plastic products that are no longer being recycled.

For the past four decades, trash from the east side of Hawaii Island has been dumped in a landfill outside of Hilo. But now trash from all parts of the island is being trucked to a facility north of Kona." <https://www.hawaiipublicradio.org/local-news/2020-01-09/hawaii-island-has-decades-of-landfill-space-but-still-faces-challenges-in-dealing-with-its-waste>

4) "What happens to Hawaii Island's trash and recyclables?" BY MICHELLE BRODER VANDYKE HAWAII ISLAND PUBLISHED 11:30 AM ET DEC. 17, 2022 By Michelle Broder Vandyke Hawaii Island PUBLISHED 11:30 AM ET Dec. 17 The future of the landfill

The West Hawaii Landfill will be full in about 20 years. Finding a location for the next landfill is a concern, according to the DEM officials. They said it will be challenging to find a location for a future landfill because of stringent regulations and costs related to planning, environmental regulations, design and construction that will take many years to complete. It will also require community support." <https://spectrumlocalnews.com/hi/hawaii/news/2022/12/15/what-happens-to-hawaii-island-s-trash-and-recyclables->

5) "The overwhelming plastic waste Hawaii visitors leave behind  
By Natasha Bourin/Aug 24, 2023

Hawaii saw more than 9 million visitors last year. Those tourists' first stops are often big-box and convenience stores, where they buy bottled water, plastic sand toys, single-use bodyboards, noodles, floaties and inner tubes for their trips." <https://www.sfgate.com/hawaii/article/plastic-waste-hawaii-visitors-leave-behind-18286076.php>

6) "A county commission drafts ordinance aiming to ban recyclables at West Hawai'i landfill By Megan Moseley September 6, 2023 · 1:00 AM HST  
\* Updated September 6, 2023 · 2:02 PM

Hawai'i County's Environmental Management Commission is developing an ordinance that aims to prohibit the amount of recyclable materials ending up in the island's only working landfill." <https://bigislandnow.com/2023/09/06/new-draft-ordinance-aims-to-ban-recyclables-at-west-hawaii-landfill/>

7) "Hawai'i County issues mandatory 25% water restriction for North Kona August 7, 2023 · 5:21 PM HST

A mandatory 25% water restriction has been issued for various communities in North Kona due to the failure of the Honokōhau Deepwell over the weekend." <https://bigislandnow.com/2023/08/07/hawaii-county-issues-mandatory-25-water-restriction-for-north-kona/>

8) "Hawai'i Water Supply Closely Monitored As Severe Drought Continues by Big Island Video Newson Nov 6, 2023 at 3:28 pm STORY SUMMARY

HAWAII COUNTY - Officials say a special focus will be placed on the South Kohala Water System, which is more susceptible to drought conditions." <https://www.bigislandvideonews.com/2023/11/06/water-supply-closely-monitored-as-hawaii-ca%BBi-under-severe-drought/>

9) "Big Island Concerns About Water Quality Prompt A Lawsuit Over A Kona Sewage Plant Kealakehe sewage plant discharges more than 1 million gallons of wastewater into a lava pit near the ocean. By Paula Dobbyn / February 6, 2024

Settlement talks are scheduled in an environmental lawsuit involving a county-operated Big Island sewage plant in Kona." <https://www.civilbeat.org/2024/02/concerns-about-water-quality-prompt-a-lawsuit-over-a-kona-sewage-plant/>

But what does the power grid have to do with the water supply?

It is impossible to separate Hawaii's power system from its water system, said Kawika Uyehara, deputy director of Hawaii's Department of Water Supply. <https://www.hawaiipublicradio.org/local-news/2024-02-13/residents-on-hawaii-island-and-oahu-are-asked-to-conserve-water-amid-power-outages>

16) U.S. Hawaii is "on the verge of a greater catastrophe," locals say, as water crisis continues  
By Li Cohen

Updated on: April 11, 2024 / 8:23 AM EDT / CBS News

In Hawaii, one of the most important sayings is *ola i ka wai*, "water is life" — a phrase that not only sums up what it means to exist on an island, but what it means to live, period. But now, one of the largest of the island chain's land masses is facing a triple threat to its sole freshwater source, and if it isn't addressed soon, one community member says, "we're in deep trouble."  
<https://www.cbsnews.com/news/hawaii-water-crisis-climate-change/>

17) NewsHawaii County issues mandatory 25% water restriction for North Kona  
August 7, 2023 · 5:21 PM HST

A mandatory 25% water restriction has been issued for various communities in North Kona due to the failure of the Honokōhau Deepwell over the weekend.

18) Hawaii Water Supply Closely Monitored As Severe Drought Continues  
by Big Island Video News  
on Nov 6, 2023 at 3:28 pm

(BIVN) – With an ongoing drought on the island of Hawaii, the Hawaii County Department of Water Supply says it is closely monitoring its 23 public water systems, with a "special focus" placed on the South Kohala Water System.  
<https://www.bigislandvideonews.com/2023/11/06/water-supply-closely-monitored-as-hawaii-CA%BBi-under-severe-drought/>

This is a map of Power Outages on the Big Island. This map wouldn't have been created if Power Outages were not a problem. <https://www.hawaiianelectric.com/safety-and-outages/power-outages/hawaii-island-outage-map>

Please, give Tax Breaks to all homes that provide solar and/or wind turbine to there homes to help with power issues on the island.

20) "Hawaiian Electric is reporting that several large generators on the Big Island are experiencing a range of issues and may lead to the need for rolling outages if supply does not meet demand."

10) "Researchers find sewage from an oceanfront Big Island community reaches nearshore waters  
Hawaii Public Radio | By Russell Subiono, Sophia McCullough Published December 20, 2021 at 5:56 PM HST

There are nearly 50,000 cesspools on the Big Island, with tens of thousands posing a risk to water resources, according to the Hawaii Department of Health. " <https://www.hawaiipublicradio.org/the-conversation/2021-12-20/researchers-find-sewage-from-an-oceanfront-big-island-community-reaches-nearshore-waters>

11) "Kona coast faces stark wastewater tradeoffs Current situation

There are approximately 88,000 cesspools across the state, releasing more than 200,000 cubic meters of wastewater per day to the environment. <https://www.hawaii.edu/news/2021/09/10/kona-stark-wastewater-tradeoffs/>

We ask that you start figuring out how this can never happen again? These are the kind of issues that need to be resolved before you approve more development.

12) "BIG ISLAND NEWS HECO restores power after initiating emergency outages on Big Island by: Elizabeth 'Ufi Posted: Jan 30, 2024 / 09:43 AM HST Updated: Jan 30, 2024 / 04:15 PM HST

An unexpected loss of several large Hawaii Electric generators left some residents on Big Island without power for parts of the morning on Tuesday, Jan. 30." <https://www.khon2.com/big-island-news/heco-initiates-30-min-rolling-outages-after-loss-of-generators/>

13) Hawaii State News Update: Hawaiian Electric initiates rolling outages throughout Big Island  
February 13, 2024 · 5:23 PM HST  
\* Updated February 14, 2024 · 4:21 PM

The emergency outages are being initiated in various areas around the entire island to prevent loss of power to an even greater number of customers. The timing and extent of the outages will depend on the amount of demand on the system and the availability of generators." <https://bigislandnow.com/2024/02/13/hawaii-island-customers-asked-to-reduce-electricity-use/>

14) "LOCAL NEWS  
HECO issues rolling power outages around Big Island by: Emily Cervantes Posted: Feb 13, 2024 / 05:11 PM HST Updated: Feb 13, 2024 / 09:12 PM HST Hawaiian Electric initiated rolling outages for Big Island after several large generators became unavailable and reduced output Tuesday night" <https://www.khon2.com/local-news/heco-releases-conservation-alert-for-big-island/>

15) "Here's how power outages can have repercussions for Hawaii's water supply Hawaii Public Radio | By Savannah Harriman-Pote  
Published February 13, 2024 at 10:59 AM HST

Water departments on O'ahu and Hawaii Island have advised customers to conserve water ahead of possible storm-related power outages this month.

[https://www.reddit.com/r/BigIsland/comments/1bnuar3/hawaiian\\_electric\\_is\\_reporting\\_that\\_several\\_large/?rdt=52660](https://www.reddit.com/r/BigIsland/comments/1bnuar3/hawaiian_electric_is_reporting_that_several_large/?rdt=52660)

21) "NewsHawaiian Electric asking Big Island customers to conserve power due to down generators

March 25, 2024 - 11:49 AM HST

According to the utility company, this is an usual situation as the large generators are experiencing mechanical problems resulting in a reduced output. The largest generator, an independent power producer that sells electricity to Hawaiian Electric, is offline with significant mechanical issues.

The plant generates 60 megawatts or nearly one-third of the typical peak demand of 180 megawatts on the island."

<https://bigislandnow.com/2024/03/25/hawaiian-electric-asking-big-island-customers-to-conserve-power-due-to-down-generators/>

All the articles above show that a resort development will damage Keaouhou Bay coral and marine life and, Big Island resources and infrastructure are currently being negatively affected from the development that is on island already, and there are years of new development that have already been approved, before having safe resources and infrastructures for new developments.

With these scientifically proven articles by some of the most professional scientists in the world, they say the a serious population increase, as well as development and resort runoff that happens because of parking lots, and... with all coastal developments, it will be dangerous for Keaouhou Bay to be development because it will damage the marine ecosystems in the area.

Please, save Keaouhou Bay's marine life and help the island's resources by saying NO to a Bungalow Resort built by Kamehameha Schools because all of these articles prove it would be extremely damaging to the waters at Keaouhou Bay.

Thank you,

Sincerely,

Riley Reynolds

**Subject:** Keaouhou Bay / Proposed Project

**Categories:** Yellow Category

Once again, I am outraged by Kamehameha Schools/Bishop Estate. We all know of their long history of ignoring the Hawaiian people they claim to watch out for. "Broken Trust," winner of "Hawaii Book of the Year 2007, was an eye-opener for some of us, but it was "old news" for many. Now, they want to sacrifice one of the most important cultural sites that remain mostly undisturbed on the Big Island--Keaouhou Bay. Why? So that tourists will have another beautiful location to stay in. They claim that their 150 new bungalows, a high-end restaurant, and shops will lead to more native Hawaiian children enjoying the beach. This claim is false and outrageous. The narrow Bay and tiny beach can't comfortably hold more than 50 people. The nearby Outrigger Kona Resort & Spa, with its 508 rooms, doesn't have a beach, and if Keaouhou makes the beach "nicer," the guests there will want to enjoy it, too. Who do we think will wind up enjoying the tiny beach? When will we as a community take on Kamehameha Schools/ Bishop estate? As a result of the Maui fire settlement, they will pay a tremendous amount of money because they failed to protect Lahaina and its people by not removing grasses that had already been recognized as a fire threat. What's next? Paying for a cultural and environmental disaster by ruining the birthplace of Kamehameha III? Please review the many environmental letters filed with the county complaining that the "studies" Kamehameha Schools rely on are far short of what is demanded under State and Federal law.

COMMENTS REGARDING:  
Draft Environmental Impact Statement (DEIS)  
for the Kamehameha Schools Keauhou Bay Management Plan  
Keauhou, Hawaii Island, Hawaii'

My husband and I have owned property in the neighborhood adjacent to the project area since 2013 and stay there for several months yearly. I offer the following comments.

The DEIS adversely and significantly impacts the effects caused by climate change already felt in this area:

As the November 2nd **U.S. Drought Monitor detailed**, most of the Big Island is under a D2 Severe Drought, with a few spots of D3 Extreme Drought.

By constructing a 150-unit resort, 188 resort parking spaces, 60 more parking spaces for the retail center, more commercial spaces, a restaurant, and a cultural/educational center, the DEIS proposes to replace forested lands with hardscape. When deforestation occurs, much of the carbon stored by trees is released back into the atmosphere as carbon dioxide. This in turn influences local temperature and climate, which in turn creates more drought conditions, severe weather events, and sea level rise.

<https://www.nature.org/en-us/about-us/where-we-work/latin-america/brazil/stories-in-brazil/deforestation-and-climate-change/>

“Reduced rainfall from climate change reduces submarine groundwater discharge and increases salinity of nearshore waters. Future urban development coupled with elevated water demand will likely further decrease submarine groundwater discharge and increase salinity in coastal springs. Protecting native forests prevents the further loss of freshwater and further increases in salinity.”

<https://www.hawaii.edu/news/2023/07/27/protecting-native-seaweed-species/>

“As it is critical to incorporate an imminent rise in sea level and other climate change effects into plans for future development, these impacts should also be considered when drafting an EIS.”

<https://planning.hawaii.gov/erp/>

The DEIS states: “The project would not affect climatic conditions; therefore, no mitigation measures are required. The KBMP may add activities that result in minimal greenhouse gas emissions (GHGs), which are known to warm global climate....” (DEIS at 4.2.1)

The DEIS fails to consider the negative impact of deforestation caused by the project and fails to adequately assess its contribution to climate change. One mitigation measure might be to forego the building of the 150-unit resort to reduce deforestation.

The DEIS adversely and significantly impacts the Bay’s water quality:

The DEIS states: “The majority of Keauhou Bay has been designated as a Fishery Management Area which is delineated and managed by the DLNR, Division of Aquatic Resources as the bay is bounded by an imaginary line extending from Haiku’ua Point to Kaukala’ela’e Point. The FMA designation regulates permitted and prohibited means to catch

fish within the area. Other normal state fishing regulations apply (NOAA 2009).” (DEIS at 4.6)

However, the DEIS does not address the need to consult the Aquatic Resources Division, which the laws requires here.

As noted by Dr. Bennett in his July 24, 2024 Comment Letter: “[T]he State and the EPA list Keauhou Bay as an Impaired Water Body under section 303(d) of the Clean Water Act (CWA). That law requires that impacts to the Bay be mitigated and that further impairment does not occur. This requirement under the law has not been met. Any development in the watershed needs to be conducted by a careful evaluation of this fact. Under the law, remediation begins by conducting a Total, Maximum Daily Loading study known as a TMDL.”

a.) The Issue of Turbidity:

In his July 24, 2024 Comment Letter, Dr. Bennett states: “The Bay is listed as impaired for exceeding the limits for turbidity. Turbidity has several causes in near-shore waters, such as runoff water with fine sediments and phytoplankton. Our research shows that turbidity is a problem in Keauhou Bay in the absence of surf events. The inner Bay has very poor circulation and is where most sediments and other factors causing turbidity arise. Phytoplankton grow in response to increased temperature and nutrient loading in the Bay. The lack of adequate circulation amplifies the problem.”

As shown by the photographs in Dr. Bennett’s Comment Letter, I have witnessed street runoff spilling over the street curb and pathway at the end of Kamehameha III Road and dumping muddy water from the boat storage facility into the Bay.

The federal National Oceanographic and Atmospheric Administration (“NOAA”) has listed Keauhou Bay One as a “Marine Protected Area” that is to be “permanently protected year-round” and that such

“protection be in perpetuity.” In 2014, the federal Environmental Protection Agency (“EPA”) concluded that the Bay was “good” for recreational use, but “impaired” due to “turbidity” as it relates to “Fish, Shellfish, And Wildlife Protection and Propagation.”

[https://iaspub.epa.gov/waters10/attains\\_waterbody.control?p\\_au\\_id=HI1713293&p\\_cycle=2014#attainments](https://iaspub.epa.gov/waters10/attains_waterbody.control?p_au_id=HI1713293&p_cycle=2014#attainments)

Unfortunately, more up-to-date information is not available from the EPA.

Mitigation measures in the form of proper waste disposal and drainage from the existing boat storage area to the Bay would be appropriate. However, the DEIS does not adequately address this concern.

b.) The Issue of Nutrient Degradation and Sewer Connections:

As pointed out in Dr. Bennett’s July 24, 2024 Comment Letter:

“The draft EIS makes no mention of nutrient pollution issues and implies that all new developments will be connected to the sewer line that transmits raw sewage to the Heeia wastewater treatment plant. The treated wastewater containing most of the nutrients in human waste is conveyed to the golf course to irrigate the golf course. It is not known the extent to which those nutrients leech into the groundwater and the Bay. It is also not known how much more water the golf course will utilize in the future.

Several residences and perhaps some commercial facilities in the proposed development area use cesspools or septic systems for human waste management. The impact on the Bay is significant and needs to be described and mitigated. However, this problem is not mentioned in the DEIS. It is more than advisable that the Project connect all waste systems to the regional sewer.

It is well established that sewer lines leak, which is a function of many factors such as piping class and age (Rutch 2006). In the project area,

some sewer lines are quite old. One such line on the East shore of the Bay broke during a significant tidal event. The DEIS does not account for sewer line leakage or the risk from extreme tidal events. This need needs to be evaluated, and where sewer lines are at risk and need to be replaced by resilient lines such as High-Density Polyethylene (HDPE).”

Mitigation measures would thus entail an assessment and possible upgrading of the sewer lines currently under the project area. The DEIS does not discuss the possible overloading of the current wastewater discharge or the leeching potential. Mitigation measures would also include a study to ascertain whether the addition of a 150-unit resort and other buildings would overload the current wastewater discharge used to irrigate the nearby golf course and whether there is leeching into the groundwater and the Bay.

c.) Use of the Boat Ramp and Discharge of Pollutants:

Current usage of the boat ramp results in the discharge of pollutants into the Bay. Most boat owners do not use ocean friendly detergents to washdown the boats, but rather harmful cleaners which go directly into Keauhou Bay. Another product used extensively by commercial fishermen (often late at night) is Clorox bleach, which is essential to sanitizing fish boxes to minimize the proliferation of bacteria, and its transfer to the next catch.

There are very few 2-stroke motors (lubricating oil is injected into the gasoline) left in the fleet, but those that remain most likely account for the majority of the oil that gets in the water especially when the engines are being flushed in the washdown area.

The DEIS fails to discuss these current negative practices. Mitigation efforts might include stopping the use of the current area for washdown and installing a completely new washdown area for boats- one that is fully isolated and prevents wastewater from entering the Bay.

The DEIS adversely and significantly impacts congestion, traffic, and noise in this area:

The construction trucks needed to implement this plan alone will add dust, traffic, and noise to otherwise quiet neighborhood. The DEIS concedes this point.

Once the 150-unit resort is built, assuming at least a two-person occupancy rate per unit with one rental car per unit, congestion will be magnified. The resort will also have employees- additional persons. The DEIS states: “An increase in visitor accommodations will result in an increase in water consumption, wastewater disposal, and solid waste generation. Therefore, there will be increased demand on existing utilities and infrastructure.” (DEIS at 4.16) However, there is an inadequate discussion of how these people will impact the area, specifically, their foot traffic and their access to and use of this tiny Bay.

Congestion already exists due to various users of the Bay: Outrigger Kona Resort & Spa guests, the popular Ho‘oulu Community Farmers Market visitors, the Canoe Club members, tourists visiting cultural sites, customers of Fair Wind Cruises, Dolphin Discoveries, and Sea Quest, kayakers, fishermen, divers, paddlers, snorkelers, swimmers, and park goers. This congestion will be amplified by those visiting and working at the proposed 150-unit resort, the restaurant, the retail center, and the cultural/educational center.

The DEIS accurately states that the area is already congested: “High demand among the Keauhou Bay user groups has resulted in vehicle, pedestrian, and in-water congestion and conflicts.” (DEIS at 2.6.3) The DEIS goes on to state: “Existing vehicle and pedestrian circulation patterns across Keauhou Bay have evolved over time to serve a variety of changing land uses within a small, constrained area. The current situation presents both functional and hazardous conflicts between pedestrians, bicyclists, and vehicles (cars, buses, delivery trucks, and boat trailers), as well as wayfinding challenges along the immediate

bayfront.” (DEIS at 2.6.5) Yet, the DEIS only offers to add more bodies, buildings, noise, and vehicles to the equation.

The DEIS does not use current numbers to describe populations, but 2020 numbers. This leads to inaccurate conclusions.

The proposal includes the rebuilding of Old Kona Road which lies behind the small beach at Keauhou Bay. How will the construction trucks that need to access Old Kona Road impact traffic on Ali‘i Drive, Kaleiopapa Street, and Kamehameha III Road? How will the influx of approximately 300 resort guests impact traffic patterns on those routes? With regard to traffic counts, the DEIS states: “The County recognizes LOS D as the minimum acceptable LOS for its intersections in most urban areas, as the minimum acceptable level (County of Hawai‘i Chapter 25, Article 2, Division 4, Section 46).” (DEIS at 4.11) The DEIS cites traffic counts applicable to **urban** areas, but the adjacent neighborhoods are not urban. Thus, the traffic analyses are faulty. Additionally, the traffic studies do not indicate in which months they were undertaken. Certain times of year have a dramatic impact on traffic.

With regard to noise, the DEIS states: “The noise levels around Keauhou Bay are consistent with noise levels found in typical **urban** areas.” (DEIS at 4.13) However, to reiterate-- the project area is not urban. Thus, the results of the noise study performed are inapplicable here.

Possible mitigation measures include foregoing the construction of a 150-unit resort, performing traffic studies and ambient noise level studies at the busiest times of the year that accurately address the impacts on adjacent neighborhoods and streets.

The DEIS adversely and significantly impacts marine life and other wildlife.

Keauhou Bay is home to certain species of sea turtles, dolphins, whales, manta rays, sharks, monk seals, corals, and seaweed which are all threatened or endangered.

<https://www.fisheries.noaa.gov/pacific-islands/conservation/marine-protected-species-hawaiian-islands>

The DEIS states: “Both endangered Hawaiian monk seals (*Monachus schauinslandi*) and the threatened Pacific green sea turtle (*Chelonia mydas*) are regularly reported from Kona waters (David, 2022). Although unlikely, either species could haul out along the shoreline close to the dock or by the beach landing. If either species is detected within 300 ft of ongoing construction, operations must cease and not continue until the animal has departed the area on its own accord.” (DEIS 4.6)

Such mitigation measures address only part of the problem, namely what happens during the construction phase of the project. The DEIS states: “The Project involves the establishment of a recreation corridor, expansion of open space, and improved access to the shoreline.” (DEIS at 4.10) After the construction of the 150-unit resort, what impact will the additional tourist population (approximately 300 persons at any given time), who have improved access to the shoreline, have on these species when they are on the beach? Case in point: in a 2019 study, NOAA scientists used social media to monitor human activities around endangered Hawaiian monk seals and they discovered that human disturbance is more common than they thought.

<https://www.fisheries.noaa.gov/feature-story/endangered-hawaiian-monk-seals-cry-foul-over-selfies>

Additionally, the DEIS misconstrues the legal standard regarding threatened species. The legal standard is not whether there is “any existing habitat...[that] is essential for the continued survival of listed species” but whether there is a “taking” (a threat to endangered species).

If there is a “taking” then a federal permit and a Habitat Conservation Plan is required. The DEIS does not mention this requirement.

The DEIS states: “Nēnē (*Branta sandvicensis*) is present in North Kona, but so far not seen in the Keauhou area (David, 2022).” (DEIS at 4.6)

Nēnē has recently been sighted and photographed at the project area. Nēnē is listed as endangered by the State of Hawaii and federally listed as threatened. They are protected under the federal Migratory Bird Treaty Act. The DEIS does not contemplate this finding.

The DEIS substantially affects these threatened and endangered species, and their habitat in the ways enumerated above, namely by increasing the number of tourists interfacing with these species and by worsening climate change effects and the Bay’s water quality.

#### Conclusion

In sum, the DEIS enumerates impacts and mitigation measures, but those are either inaccurate or only half of the story. The DEIS fails to contain: 1) an *accurate* description of the probable impacts of the project including the direct, indirect and cumulative impacts, as well as impacts on both the natural and human environments; 2) a *sufficient* statement of the unavoidable environmental impacts caused by the project and a rationale for proceeding with the project in light of these impacts; and 3) *consideration of all* mitigation measures proposed to avoid, minimize, rectify, or reduce the project’s adverse impacts. (See Hawai’i Revised Statutes Chapters 343 and 344; Hawai’i Administrative Rules 11-200.1.)

COMMENTS REGARDING:  
Draft Environmental Impact Statement (DEIS)  
for the Kamehameha Schools Keauhou Bay Management Plan  
Keauhou, Hawai'i Island, Hawai'i

My husband and I have owned property in the neighborhood adjacent to the project area since 2013 and stay there for several months yearly. I offer the following comments.

The DEIS adversely and significantly impacts the effects caused by climate change already felt in this area.

As the November 2nd **U.S. Drought Monitor detailed**, most of the Big Island is under a D2 Severe Drought, with a few spots of D3 Extreme Drought.

By constructing a 150-unit resort, 188 resort parking spaces, 60 more parking spaces for the retail center, more commercial spaces, a restaurant, and a cultural/educational center, the DEIS proposes to replace forested lands with hardscape. When deforestation occurs, much of the carbon stored by trees is released back into the atmosphere as carbon dioxide. This in turn influences local temperature and climate, which in turn creates more drought conditions, severe weather events, and sea level rise.

<https://www.nature.org/en-us/about-us/where-we-work/latin-america/brazil/stories-in-brazil/deforestation-and-climate-change/>

“Reduced rainfall from climate change reduces submarine groundwater discharge and increases salinity of nearshore waters. Future urban development coupled with elevated water demand will likely further decrease submarine groundwater discharge and increase salinity in coastal springs. Protecting native forests prevents the further loss of freshwater and further increases in salinity.”

<https://www.hawaii.edu/news/2023/07/27/protecting-native-seaweed-species/>

“As it is critical to incorporate an imminent rise in sea level and other climate change effects into plans for future development, these impacts should also be considered when drafting an EIS.”

<https://planning.hawaii.gov/erp/>

The DEIS states: “The project would not affect climatic conditions; therefore, no mitigation measures are required. The KBMP may add activities that result in minimal greenhouse gas emissions (GHGs), which are known to warm global climate....” (DEIS at 4.2.1)

The DEIS fails to consider the negative impact of deforestation caused by the project and fails to adequately assess its contribution to climate change. One mitigation measure might be to forego the building of the 150-unit resort to reduce deforestation.

The DEIS adversely and significantly impacts the Bay's water quality.

The DEIS states: “The majority of Keauhou Bay has been designated as a Fishery Management Area which is delineated and managed by the DLNR, Division of Aquatic Resources as the bay is bounded by an imaginary line extending from Haiku'ua Point to Kaukala'ela'e Point. The FMA designation regulates permitted and prohibited means to catch

fish within the area. Other normal state fishing regulations apply (NOAA 2009).” (DEIS at 4.6)

However, the DEIS does not address the need to consult the Aquatic Resources Division, which the laws requires here.

As noted by Dr. Bennett in his July 24, 2024 Comment Letter: “[T]he State and the EPA list Keahou Bay as an Impaired Water Body under section 303(d) of the Clean Water Act (CWA). That law requires that impacts to the Bay be mitigated and that further impairment does not occur. This requirement under the law has not been met. Any development in the watershed needs to be conducted by a careful evaluation of this fact. Under the law, remediation begins by conducting a Total, Maximum Daily Loading study known as a TMDL.”

a.) The Issue of Turbidity:

In his July 24, 2024 Comment Letter, Dr. Bennett states: “The Bay is listed as impaired for exceeding the limits for turbidity. Turbidity has several causes in near-shore waters, such as runoff water with fine sediments and phytoplankton. Our research shows that turbidity is a problem in Keahou Bay in the absence of surf events. The inner Bay has very poor circulation and is where most sediments and other factors causing turbidity arise. Phytoplankton grow in response to increased temperature and nutrient loading in the Bay. The lack of adequate circulation amplifies the problem.”

As shown by the photographs in Dr. Bennett’s Comment Letter, I have witnessed street runoff spilling over the street curb and pathway at the end of Kamehameha III Road and dumping muddy water from the boat storage facility into the Bay.

The federal National Oceanographic and Atmospheric Administration (“NOAA”) has listed Keahou Bay One as a “Marine Protected Area” that is to be “permanently protected year-round” and that such

“protection be in perpetuity.” In 2014, the federal Environmental Protection Agency (“EPA”) concluded that the Bay was “good” for recreational use, but “impaired” due to “turbidity” as it relates to “Fish, Shellfish, And Wildlife Protection and Propagation.”

[https://iaspub.epa.gov/waters10/attains\\_waterbody.control?p\\_auid=HI713293&p\\_cycle=2014#attainments](https://iaspub.epa.gov/waters10/attains_waterbody.control?p_auid=HI713293&p_cycle=2014#attainments)

Unfortunately, more up-to-date information is not available from the EPA.

Mitigation measures in the form of proper waste disposal and drainage from the existing boat storage area to the Bay would be appropriate. However, the DEIS does not adequately address this concern.

b.) The Issue of Nutrient Degradation and Sewer Connections:

As pointed out in Dr. Bennett’s July 24, 2024 Comment Letter:

“The draft EIS makes no mention of nutrient pollution issues and implies that all new developments will be connected to the sewer line that transmits raw sewage to the Heeia wastewater treatment plant. The treated wastewater containing most of the nutrients in human waste is conveyed to the golf course to irrigate the golf course. It is not known the extent to which those nutrients leech into the groundwater and the Bay. It is also not known how much more water the golf course will utilize in the future.

Several residences and perhaps some commercial facilities in the proposed development area use cesspools or septic systems for human waste management. The impact on the Bay is significant and needs to be described and mitigated. However, this problem is not mentioned in the DEIS. It is more than advisable that the Project connect all waste systems to the regional sewer.

It is well established that sewer lines leak, which is a function of many factors such as piping class and age (Rutch 2006). In the project area,

some sewer lines are quite old. One such line on the East shore of the Bay broke during a significant tidal event. The DEIS does not account for sewer line leakage or the risk from extreme tidal events. This problem needs to be evaluated, and where sewer lines are at risk and need to be replaced by resilient lines such as High-Density Polyethylene (HDPE).”

Mitigation measures would thus entail an assessment and possible upgrading of the sewer lines currently under the project area. The DEIS does not discuss the possible overloading of the current wastewater discharge or the leeching potential. Mitigation measures would also include a study to ascertain whether the addition of a 150-unit resort and other buildings would overload the current wastewater discharge used to irrigate the nearby golf course and whether there is leeching into the groundwater and the Bay.

c.) Use of the Boat Ramp and Discharge of Pollutants:

Current usage of the boat ramp results in the discharge of pollutants into the Bay. Most boat owners do not use ocean friendly detergents to washdown the boats, but rather harmful cleaners which go directly into Keauhou Bay. Another product used extensively by commercial fishermen (often late at night) is Clorox bleach, which is essential to sanitizing fish boxes to minimize the proliferation of bacteria, and its transfer to the next catch.

There are very few 2-stroke motors (lubricating oil is injected into the gasoline) left in the fleet, but those that remain most likely account for the majority of the oil that gets in the water especially when the engines are being flushed in the washdown area.

The DEIS fails to discuss these current negative practices. Mitigation efforts might include stopping the use of the current area for washdown and installing a completely new washdown area for boats- one that is fully isolated and prevents wastewater from entering the Bay.

The DEIS adversely and significantly impacts congestion, traffic, and noise in this area:

The construction trucks needed to implement this plan alone will add dust, traffic, and noise to otherwise quiet neighborhood. The DEIS concedes this point.

Once the 150-unit resort is built, assuming at least a two-person occupancy rate per unit with one rental car per unit, congestion will be magnified. The resort will also have employees- additional persons. The DEIS states: “An increase in visitor accommodations will result in an increase in water consumption, wastewater disposal, and solid waste generation. Therefore, there will be increased demand on existing utilities and infrastructure.” (DEIS at 4.16) However, there is an inadequate discussion of how these people will impact the area, specifically, their foot traffic and their access to and use of this tiny Bay.

Congestion already exists due to various users of the Bay: Outrigger Kona Resort & Spa guests, the popular Ho’oulu Community Farmers Market visitors, the Canoe Club members, tourists visiting cultural sites, customers of Fair Wind Cruises, Dolphin Discoveries, and Sea Quest, kayakers, fishermen, divers, paddlers, snorkelers, swimmers, and park goers. This congestion will be amplified by those visiting and working at the proposed 150-unit resort, the restaurant, the retail center, and the cultural/educational center.

The DEIS accurately states that the area is already congested: “High demand among the Keauhou Bay user groups has resulted in vehicle, pedestrian, and in-water congestion and conflicts.” (DEIS at 2.6.3) The DEIS goes on to state: “Existing vehicle and pedestrian circulation patterns across Keauhou Bay have evolved over time to serve a variety of changing land uses within a small, constrained area. The current situation presents both functional and hazardous conflicts between pedestrians, bicyclists, and vehicles (cars, buses, delivery trucks, and boat trailers), as well as wayfinding challenges along the immediate

bayfront.” (DEIS at 2.6.5) Yet, the DEIS only offers to add more bodies, buildings, noise, and vehicles to the equation.

The DEIS does not use current numbers to describe populations, but 2020 numbers. This leads to inaccurate conclusions.

The proposal includes the rebuilding of Old Kona Road which lies behind the small beach at Keauhou Bay. How will the construction trucks that need to access Old Kona Road impact traffic on Ali'i Drive, Kaleiopapa Street, and Kamehameha III Road? How will the influx of approximately 300 resort guests impact traffic patterns on those routes? With regard to traffic counts, the DEIS states: “The County recognizes LOS D as the minimum acceptable LOS for its intersections in most urban areas, as the minimum acceptable level (County of Hawai'i Chapter 25, Article 2, Division 4, Section 46).” (DEIS at 4.11) The DEIS cites traffic counts applicable to **urban** areas, but the adjacent neighborhoods are not urban. Thus, the traffic analyses are faulty. Additionally, the traffic studies do not indicate in which months they were undertaken. Certain times of year have a dramatic impact on traffic.

With regard to noise, the DEIS states: “The noise levels around Keauhou Bay are consistent with noise levels found in typical **urban** areas.” (DEIS at 4.13) However, to reiterate-- the project area is not urban. Thus, the results of the noise study performed are inapplicable here.

Possible mitigation measures include foregoing the construction of a 150-unit resort, performing traffic studies and ambient noise level studies at the busiest times of the year that accurately address the impacts on adjacent neighborhoods and streets.

The DEIS adversely and significantly impacts marine life and other wildlife.

Keauhou Bay is home to certain species of sea turtles, dolphins, whales, manta rays, sharks, monk seals, corals, and seaweed which are all threatened or endangered.

<https://www.fisheries.noaa.gov/pacific-islands/endangered-species-conservation/marine-protected-species-hawaiian-islands>

The DEIS states: “Both endangered Hawaiian monk seals (*Monachus schauinslandi*) and the threatened Pacific green sea turtle (*Chelonia mydas*) are regularly reported from Kona waters (David, 2022). Although unlikely, either species could haul out along the shoreline close to the dock or by the beach landing. If either species is detected within 300 ft of ongoing construction, operations must cease and not continue until the animal has departed the area on its own accord.” (DEIS 4.6)

Such mitigation measures address only part of the problem, namely what happens during the construction phase of the project. The DEIS states: “The Project involves the establishment of a recreation corridor, expansion of open space, and improved access to the shoreline.” (DEIS at 4.10) After the construction of the 150-unit resort, what impact will the additional tourist population (approximately 300 persons at any given time), who have improved access to the shoreline, have on these species when they are on the beach? Case in point: in a 2019 study, NOAA scientists used social media to monitor human activities around endangered Hawaiian monk seals and they discovered that human disturbance is more common than they thought.

<https://www.fisheries.noaa.gov/feature-story/endangered-hawaiian-monk-seals-cry-foul-over-selfies>

Additionally, the DEIS misconstrues the legal standard regarding threatened species. The legal standard is not whether there is “any existing habitat...[that] is essential for the continued survival of listed species” but whether there is a “taking” (a threat to endangered species).

If there is a “taking” then a federal permit and a Habitat Conservation Plan is required. The DEIS does not mention this requirement.

The DEIS states: “Nēnē (*Branta sandvicensis*) is present in North Kona, but so far not seen in the Keauhou area (David, 2022).” (DEIS at 4.6)

Nēnē has recently been sighted and photographed at the project area. Nēnē is listed as endangered by the State of Hawaii and federally listed as threatened. They are protected under the federal Migratory Bird Treaty Act. The DEIS does not contemplate this finding.

The DEIS substantially affects these threatened and endangered species, and their habitat in the ways enumerated above, namely by increasing the number of tourists interfacing with these species and by worsening climate change effects and the Bay’s water quality.

#### Conclusion

In sum, the DEIS enumerates impacts and mitigation measures, but those are either inaccurate or only half of the story. The DEIS fails to contain: 1) an *accurate* description of the probable impacts of the project including the direct, indirect and cumulative impacts, as well as impacts on both the natural and human environments; 2) a *sufficient* statement of the unavoidable environmental impacts caused by the project and a rationale for proceeding with the project in light of these impacts; and 3) *consideration of all* mitigation measures proposed to avoid, minimize, rectify, or reduce the project’s adverse impacts. ## Cyndi Richmond

Building bungalows in Keahou bay sounds like an idea not completely thought out. The permanent devastation this would cause based on the environmental impact report alone should be enough evidence. How about get a little more creative in coming up with ways to fund the school system. I would rather be taxed on a school bond than have Keahou bay permanently ruined. We put our kayaks in the bay frequently & this would ruin the bay!

---

**From:** Jason Rigmaiden <[REDACTED]>  
**Sent:** Monday, August 5, 2024 2:32 PM  
**To:** 221053-01 KS, Keaouhou Entitlements  
**Subject:** Kamehameha Schools EIS Draft For Keaouhou Bay WILL HAVE NEGATIVE IMPACT

**Categories:** Yellow Category

To Whom It May Concern,

Please read the scientific proof in this letter and REJECT Kamehameha Schools Environment Impact Statement (EIS) for Keaouhou Bay to become a Bungalow Resort.

Please state in your report that a Bungalow Resort WILL have a SERIOUS NEGATIVE IMPACT on Keaouhou Bay as stated in all the different researched articles below.

Please, DO NOT risk polluting the water in Keaouhou Bay by allowing Kamehameha Schools to develop their bungalow resort project. It is scientifically proven that developments pollute nearby waters both during and after development.

Below are scientific articles written by the National Oceanic and Atmospheric Administration (NOAA), Global Coral Reef Alliance, Hawaii Government, and many other professional organizations, that have studied and shown that developments have ALWAYS polluted the water in EVERY coastal development area.

Does this EIS (Environmental Impact Statement) have any kind of reports and studies on how the endangered species and marine life will handle the extra pollution due to development, and the golf course runoff? Keaouhou Bay is their habitat and this development WILL be CHANGING an Entire Ecosystem.

ENDANGERED SPECIES CONSERVATION IMPACTED BY DEVELOPMENT

In the Endangered Species Act of 1973 Under Section 2 (b), "To provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved." This would be Keaouhou Bay.

The Green Sea Turtle swims in Keaouhou Bay weekly and the monk seal has also been seen swimming and resting in Keaouhou Bay. Both of these marine animals are on the endangered species list.

Endangered Species Act

"Section 2. Findings, Purposes, and Policy

(4) the United States has pledged itself as a sovereign state in the international community to conserve to the extent practicable the various species of fish or wildlife and plants facing extinction, pursuant to—

(b) PURPOSES.—The purposes of this Act are to provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved, to provide a program for the conservation of such endangered species and threatened species, and to take such steps as may be appropriate to achieve the purposes of the treaties and conventions set forth in subsection (a) of this section."

This was taken from <https://www.fisheries.noaa.gov/national/endangered-species-conservation/endangered-species-ac>

FEDERALLY PROTECTED GREEN SEA TURTLES WILL BE AFFECTED

The green sea turtle is federally protected and can be seen in Keaouhou Bay weekly.

The following article that states: "POLLUTED RUNOFF IN HAWAII ENDANGERS GREEN SEA TURTLES"

Why does Hawaii have a runoff problem?

Historically, in the tropics of Hawaii, precipitation was absorbed into the soil, according to the Clean Water Branch of Hawaii's Department of Health. Any potential pollution or contaminants on the ground surface would get pushed into the soil by the rain, and plant roots and microbes would help break down the pollution into less dangerous components. However, with urban and agricultural development, less and less of the pollution gets pulled into the soil, and more of it gets washed out into storm drains. From there, the pollutants make their way to streams, rivers and the ocean that surrounds Hawaii. According to the state agency, most of these contaminants are nutrients from fertilizer, bacteria from animal waste, oil, garbage and yard waste...

If polluted runoff reaches the ocean, it can wreak havoc on marine life, including endangered green sea turtles." Taken from <https://www.chemservice.com/news/polluted-runoff-in-hawaii-endangers-green-sea-turtles/>

Allowing this development WILL POLLUTE Keaouhou Bay. The above article, written in 2014 (because runoff water from developments were polluting the ocean even then!!!) states this fact clearly. Keaouhou Bay is home to countless sea creatures such as the protected green sea turtle, spotted eagle rays, manta rays, octopus, dolphins, fish, coral, monk seals, and more and that will ALL be harmed by the severe pollution runoff that WILL happen because developments have been shown to ALWAYS pollute the water is that is nearby.

The Green Sea Turtle is protected by more than one law. "All sea turtles in Hawai'i are protected by the Endangered Species Act (ESA) and additionally protected by Hawai'i Revised Statutes Chapter 195D (HRS) and Hawai'i Administrative Rules (HAR) 13-124." This information was taken from this site <https://dlnr.hawaii.gov/dar/species/sea-turtles/>

These trees and land are saving monk seals and green sea turtles habitat from the golf course pollution and this land MUST BE PRESERVED and CONSERVED as the natural protector for Keauhou Bay and for these endangered species habitat.

Under Section 2 (b) of the Endangered Species Act - Keauhou Bay MUST BECOME A CONSERVATION AREA for these endangered species. It is currently their habitat, and to allow a large resort development to be built above this bay clearly threatens the lives of these endangered species by allowing golf course toxic pollution and development pollution to run into these species natural habitat of Keauhou Bay.

#### ALGAE BLOOMS KILL CORAL AND MARINE LIFE

The trees that are slated to be cleared for the development further protect Keauhou Bay from algae blooms that have been proven to be caused by pollution that is runoff from fertilizer and weed killer.

When there is heavy rain the land above the bay has a greater runoff than normal. Without the trees, the runoff from the golf course pollution will pour into the Bay likely causing frequent algae blooms.

Algae blooms have been shown to kill coral and marine life as stated in the many articles that will follow.

One of these articles is from the Global Coral Reef Alliance. They have researched the effects on reefs before and after a golf course developments. Though this development is not a golf course development, it is located just below a golf course and exposes the bay to the pollution from the golf course by removing the proven natural filter of the trees and natural ecosystem.

Has this EIS done any kind of research about the algae blooms that happen after a serious storm because of the golf course runoff pollution?

This information was taken from Global Coral Reef Alliance and it is an actual study on the how coral and marine life are affected before and after development. It's titled, "Golf courses kill coral reefs and fisheries: harmful algae blooms and disease cause by nutrient runoff from golf course development on Guana Cay, Abaco, Bahamas

Introduction: Bahamas coral reef deterioration

This study is thought the first ever to evaluate the health of coral reef ecosystems and fisheries before and after a golf course development. The vast majority of corals have died from a combination of factors including global warming, new diseases, land-based sources of pollution. . . "

<https://www.globalcoral.org/golf-courses-kill-coral-reefs-and-fisheries-harmful-algae-blooms-and-disease-caused-by-nutrient-runoff-from-golf-course-development-on-guana-cay-abaco-bahamas/>

If you allow a Bungalow Development in Keauhou Bay you WILL be agreeing to pollute this bay for years to come and COMPLETELY CHANGING and possibly DESTROYING KEAUHOU BAY'S ECOSYSTEM.

Another study by the Coral Reef Alliance titled, "Golf course fertilizer runoff causes nutrient enrichment leading to harmful algae blooms on a Bahamian coral reef.

"...After construction new algae blooms appeared nearest the golf course green, smothering corals in adjacent reefs, along with sharply increased coral diseases..." <https://www.globalcoral.org/golf-course-fertilizer-runoff-causes-nutrient-enrichment-leading-to-harmful-algae-blooms-on-a-bahamian-coral-reef>

Does this EIS have any studies or reports on the extra runoff pollution due to clearing land and adding pavement?

This needs to be fully assessed because you will be changing an entire ecosystem to build a bungalow resort. It rains in Keauhou Bay many nights out of the year and this kind of pollution will kill the beautiful and necessary coral in the Bay.

FURTHERMORE: "If there are toxic algal blooms, like red tide, or man-made contaminants, like pesticides or detergents in the water, those toxins are contained within the bubbles of sea foam. When those bubbles pop, the toxins can become airborne and compromise the air that is breathed in that location." <https://oceanconservancy.org/blog/2023/03/31/what-sea-foam/>

#### ENGINE POLLUTION CAUSES ISSUES IN THE OCEAN

Does this EIS have any detailed traffic studies for the increase in cars that will be added to this already severely traffic area they want to build their 150 room bungalow resort in? Have they done any studies on the pollution these cars WILL have in Keauhou Bay?

Because this Bungalow Resort could have over 150 extra cars and over 300 or more extra people in and out of Keauhou Bay, what traffic and increased population studies have they done? There will be employees with cars, guests with cars, visitors with cars. At times this would range to over 200 cars (likely more), coming in and out of, and parking above Keauhou Bay thereby causing serious car population issues because of all these added cars right next to the bay.

The article below is from NOAA regarding motor vehicle engines and pollution to the sea.

What is the biggest source of pollution in the ocean?

Most ocean pollution begins on land.

"Millions of motor vehicle engines drop small amounts of oil each day onto roads and parking lots. Much of this, too, makes its way to the sea.

Some water pollution actually starts as air pollution, which settles into waterways and oceans. Dirt can be a pollutant. Top soil or silt from fields or construction sites can run off into waterways, harming fish and wildlife habitats."

<https://oceanservice.noaa.gov/facts/pollution.html#:~:text=Millions%20of%20motor%20vehicle%20engines,Dirt%20can%20be%20a%20pollutant.>

Land-Based Runoff Remains Top Source of Oil in the Ocean, Says New Report Oil in the Sea: Inputs, Fates, and Effects

News Release September 28, 2022

WASHINGTON — Oil in runoff, primarily from cities and vehicles, is the top source of oil entering the ocean, says a new report from the National Academies of Sciences, Engineering, and Medicine. In North American waters, estimated ocean oil pollution from land-based runoff is up to 20 times higher than it was 20 years ago, and oil spills, natural oil seeps, and discharge from oil and gas operations remain major sources of pollution. The report recommends actions that government and others should take to minimize oil pollution, and calls for sustained research funding to better understand how oil reaches and affects ocean environments. <https://www.nationalacademies.org/news/2002/05/oil-in-the-sea-inputs-fates-and-effects#:~:text=WASHINGTON%20%2D%2D%20Nearly%2085%20percent.pipeline%20spills%2C%20sa ys%20a%20new>

The Impact Of Stormwater – Car Emissions

"Car emissions are not limited to exhaust fumes that contribute to air pollution. They can also leak automotive fluid and release heavy metals that can contribute to stormwater pollution, contaminating local waterways." <https://www.stormwatershepherds.org.au/blog/the-impact-of-stormwater-car-emissions/>

NOISE POLLUTION'S HARMFUL EFFECT ON MARINE LIFE

Does this EIS have any reports on the noise pollution that will happen and what it could do to marine life in Keauhou Bay during development?

Because if you allow this Bungalow Resort to be developed you will increase constant noise in this bay for years to come and, "Noise Pollution Research shows that underwater noise from construction, shipping and naval vessels significantly impacts the natural behavior of cetaceans and many other marine species. This can be seen when mass beaching events occur or breeding success is diminished."

The above information was taken from the Ocean Conservation Trust <https://oceanconservationtrust.org/ocean-advocacy/think-ocean/ways-to-think-ocean/>

How Does Noise Pollution Harm Marine Species?

"However, over the past few decades, noise pollution in the marine environment has increased dramatically and is threatening the natural soundscape of the marine environment. Ships, seismic surveys, explosions, construction, and sonar devices have made the once peaceful environment into a loud, chaotic home which is extremely damaging for marine wildlife. This type of pollution is often overlooked in comparison to others but its impacts are now being documented across all types of marine ecosystems." <https://earth.org/noise-pollution-in-the-ocean/>

If you allow this resort the amount of people in this bay will fully increase and, "Hawaii's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally, management of the resource should balance the needs of different user groups, but the welfare of the marine environment on which its inhabitants depend must be the most important consideration." This was taken from Hawaii's own Division of Aquatic Resources <https://dlnr.hawaii.gov/dar/marine-managed-areas/hawaii-marine-life-conservation-districts/#:~:text=Snorkeling%20and%20SCUBA%20diving%20are,effect%20on%20nearshore%20fish%20populations.>

What is ocean noise?

"Ocean noise refers to sounds made by human activities that can interfere with or obscure the ability of marine animals to hear natural sounds in the ocean.

Many marine organisms rely on their ability to hear for their survival. Sound is a highly efficient means of communication underwater and is the primary way that many marine species gather and understand information about their environment. Many aquatic animals use sound to find prey, locate mates and offspring, avoid predators, guide their navigation and locate habitat, as well as to listen and communicate with each other.

Over the last century, human activities such as shipping, recreational boating, and energy exploration have increased along our coasts, offshore, and deep ocean environments. Noise from these activities can travel long distances underwater, leading to increases and changes in ocean noise levels in many coastal and offshore habitats.

These rising noise levels can negatively impact ocean animals and ecosystems. Higher noise levels can reduce the ability of animals to communicate with potential mates, other group members, their offspring, or feeding partners. Noise can also reduce an ocean animal's ability to hear environmental cues that are vital for survival, including those key to avoiding predators, finding food, and navigating to preferred habitats." <https://oceanservice.noaa.gov/facts/ocean-noise.html>

LEARN FROM OTHERS:  
RUN-OFF FROM DEVELOPMENT KILLS

The Chesapeake Bay has a foundation that is trying to save their bay due to runoff pollution that was caused by developments. Chesapeake Bay is a lot bigger than Keauhou Bay. If it's being drastically hurt by runoff water from developments, Keauhou Bay waters won't stand a chance if development above the bay is allowed. Keauhou Bay is a much smaller ecosystem.

This Article is by the Chesapeake Bay Foundation, Saving a National Treasure states, "...runoff is a significant source of harmful nitrogen pollution that continues to grow..."

As rainwater and snowmelt run off our streets, parking lots, lawns, and other surfaces, they pick up pet waste, pesticides, fertilizer, oil, and other contaminants. If the draining water doesn't evaporate or soak

into the ground where it can be filtered, it flushes straight into local creeks, rivers, and the Chesapeake Bay, adversely affecting water quality and aquatic life.

Only 10 to 20 percent of rain that falls in forests, fields, and other natural areas runs off, with the rest absorbed by soil and plants, where it is filtered before reaching aquifers or local waterways. (Right now Keahou Bay has a lot of trees and is very natural, this is what helps stop runoff.) By contrast, close to 100 percent of the rain that falls on concrete and other hard surfaces produces runoff. One inch of rain falling on an acre of hardened surface produces 27,000 gallons of runoff.

Stormwater runoff pollution threatens Chesapeake Bay and its rivers and streams...Polluted runoff is one of the most harmful sources of pollution to the Bay and its waters. And much of it starts right in the urban and suburban neighborhoods where we live." <https://www.cbf.org/issues/polluted-runoff/index.html#:~:text=Besides%20carrying%20pollutants%20that%20harm,them%20are%20placed%20in%20jeopardy.>

If that is what runoff is doing to the Chesapeake Bay, the effects of runoff will be even more devastating to Keahou Bay due to its size and fragility.

#### MANTA RAY HABITAT, CORAL REEF BLEACHING, & MARINE LIFE ~ THE DEVASTATING EFFECTS OF DEVELOPMENT ON THE OCEAN

Are there any reports in this EIS about what the impact to the coral, marine life, plankton especially zooplankton will be because of this development?

The studies below show that developments kill coral, and marine life. Zooplankton are part of this marine life and they are also killed and negatively affected. Zooplankton are food for manta rays. Manta rays are in Keahou Bay every night to eat zooplankton, and are often seen here during the day as well.

Allowing this bay developed will also be a death sentence for many types of marine life including planktons. There is NO WAY to stop this from happening due to the fact that polluted runoff rain water from developments can't be fully stopped. This has been shown to happen in ALL coastal developments.

Please read the Scientific articles below.

It's Been Proven Developments Severely Pollute Nearby Waters

Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Coral Bleaching is occurring more frequently in Hawaii". Across the Hawaiian Archipelago, coral bleaching has increased in frequency and severity since 1996. The last major bleaching event in 2014-2015 had catastrophic impacts state-wide...

This was the third major bleaching episode in Hawaii over the last 6 years. The frequency of these events is unprecedented in the archipelago. NOAA scientists and partners have determined that the key drivers of the bleaching were environmental factors (such as heat stress, depth, and surface light) and human impacts (sewage effluent and urban runoff). " <https://www.fisheries.noaa.gov/feature-story/cautionary-tale-2019-coral-bleaching-event>

[hawaii#:~:text=Coral%20bleaching%20is%20occurring%20more,had%20catastrophic%20impacts%20state%20wide.](#)

This article is by the Coral Reef Alliance here in Hawaii. "An ecosystem under threat Hawaii's reefs face major global and local threats including climate change, overfishing, and sediment and nutrient pollution caused by sewage and stormwater runoff..."

When it rains, flash floods carry stormwater and large amounts of sediment downstream to the ocean. Just offshore, once-thriving coral reefs are now struggling to survive." <https://coral.org/en/where-we-work/hawaiian-islands/#:~:text=Hawai%CA%BB%20reefs%20face%20major%20global,into%20Hawai%CA%BB%20waterways%20every%20day.>

This article states that runoff is a leading source in coral degradation. Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Land-based sources of pollution are a leading cause of coral reef degradation in the Main Hawaiian Islands. Water quality is impacted by urban runoff, failing sewage systems, unpaved roads, farms, land clearing, and development." [https://www.coris.noaa.gov/monitoring/status\\_report/docs/Hawaii\\_status\\_report\\_forweb.pdf](https://www.coris.noaa.gov/monitoring/status_report/docs/Hawaii_status_report_forweb.pdf)

This article is a Research Article by PLOS ONE and their motto is, "We're driving change in research integrity and publication ethics." This is some of their article information, "Coral taxonomy and local stressors drive bleaching prevalence across the Hawaiian Archipelago in 2019..."

We found little evidence for acclimation by reefs to thermal stress in the main Hawaiian Islands. Moreover, our findings illustrate how detrimental effects of local anthropogenic stressors, such as tourism and urban runoff, may be exacerbated under high thermal stress. In light of the forecasted increase in severity and frequency of bleaching events, future mitigation of both local and global stressors is a high priority for the future of corals in Hawaii." <https://journals.plos.org/plosone/article?id=10.1371/journal.pone.0269068>

The coral all over Hawaii has had extremely high mortality rates, due to developments near ocean areas throughout the years, and development in Keahou Bay will be devastating to the coral, reef fish, and all aquatic life there. Manta Rays need to eat 5 times their body weight in zooplankton daily. Their population will be severely affected should the plankton die. Please see the cited information below.

"SO, HOW MUCH PLANKTON DOES YOUR AVERAGE MANTA RAY EAT? 19,200,000. Nineteen million two hundred thousand, give or take a few thousand.

That is the number of plankton pieces a ten-foot manta ray must consume weekly to stay alive."

The above information was taken from Manta Ray Advocates <https://mantarayadvocates.com/how-much-plankton-do-mantas-eat/>

Coral reefs are known to be highly negatively impacted by developments because, "Impacts from land-based sources of pollution including coastal development...can impede coral growth and reproduction, disrupt overall ecological function, and cause disease and mortality in sensitive species." <https://oceanservice.noaa.gov/facts/coral>

[pollution.html#:~:text=impacts%20from%20land%2Dbased%20sources.and%20mortality%20in%20sensitive%20species.](#)

Article by Environmental Evidence, "Coastal development and runoff lead to sedimentation, which directly impacts coral recruitment, growth, mortality, and ecosystem services that coral reefs provide." <https://environmentalevidencejournal.biomedcentral.com/articles/10.1186/s13750-020-00200-0#:~:text=Coastal%20development%20and%20runoff%20lead.services%20that%20coral%20reefs%20provide.>

Developments can't fully stop polluting because runoff is from rain during development and after. Article by NOAA, "One of the most significant threats to reefs is pollution. Land-based runoff and pollution discharges can result from dredging, coastal development... This runoff may contain sediments, nutrients, chemicals, insecticides, oil and debris."

When some pollutants enter the water, nutrient levels can increase, promoting the rapid growth of algae and other organisms that can smother coral." [https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments.organisms%20that%20can%20smother%20corals.](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments.organisms%20that%20can%20smother%20corals.)

Another article by NOAA, "Coral reefs also are affected by leaking fuels, anti-fouling paints and coatings, and other chemicals that enter the water... (All of those are show up in every development project.)"

Among the most damaging pollutants on coral reefs is sediment, which can remain suspended in the water or be deposited on the coral surface (i.e., turbidity and sedimentation, respectively) and can contain toxicants, pathogens, and nutrients, all of which impact coral growth, recruitment, and survival" [https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments.inte%20the%20atmosphere%20within%20days.](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments.inte%20the%20atmosphere%20within%20days.)

It's Been Proven Resort Developments Kill Marine Life

This article by MarinBio states, "Zooplankton are also sensitive to their environment and like phytoplankton—a change in zooplankton concentration can indicate a subtle environmental change. Zooplankton are highly responsive to nutrient levels, temperatures, pollution, food that is not nutritious, levels of light, and increases in predation. As well as providing an essential link in the marine food chain (which is an understatement), the diversity of species, amount of biomass and abundance of zooplankton communities can be used to determine the health of an ecosystem..."

Here is another article that shocking shows that in a very short time, big changes can occur due to runoff. A development will hurt and kill plankton, by Frontiers in Marine Science, "Effects of an experimental terrestrial runoff on the components of the plankton food web in a Mediterranean coastal lagoon The main result observed in the present study was that the effects of the simulated terrestrial runoff spread along the plankton food web, significantly affecting all trophic levels of the natural plankton community studied. This occurred in a relatively short time considering that the experiment lasted less than three weeks. The lower light availability in the terrestrial runoff treatment compared to the control resulted in a net decrease of approximately one-third of Chl-a concentration and phytoplankton abundance over the entire experiment." <https://www.frontiersin.org/journals/marine-science/articles/10.3389/fmars.2023.1200757/full>

The ecosystem is fragile and interconnected as is stated in this article: "Zooplankton are also affected by levels of pH, heavy metals, calcium, and aluminum. Nutrients like nitrogen and phosphorus will affect the prey of zooplankton (like algae, protozoa and bacteria), indirectly affecting zooplankton survival. Scientists are still putting together pieces of the zooplankton puzzle. Some questions include how nutrient levels found in algae can influence the growth and behavior of zooplankton. Another question important to marine and human life is how toxins and pollution will affect this crucial link in the food chain" This information is in article by MarineBio.

<https://www.marinebio.org/creatures/zooplankton/#:~:text=Zooplankton%20are%20also%20sensitive%20to.light%2C%20and%20increases%20in%20predation.>

A research article by Environmental Research Laboratory, United States Environmental Protection Agency that discusses, "Toxic Effects of Pollutants on Plankton: There are four main sources of aquatic pollution: industrial wastes, municipal wastes, agricultural run-off, and accidental spillage. Non-point sources, such as automobile exhausts, add appreciable amounts of pollutants to air that may enter aquatic systems in rainfall or dry fall-out. These sources add pesticides, heavy metals, oil, petroleum products, and a large number of organic and inorganic compounds to water. Lakes and oceans serve as sinks for many pollutants. Plankton comprise a large portion of the living matter in natural waters and function in biogeochemical cycles. They are affected by pollutants, transfer them to sediments and other organisms, and function in their biological transformation."

[https://scope.egc.carnegiescience.edu/SCOPE\\_12/SCOPE\\_12\\_3.6\\_chapter12\\_257-274.pdf](https://scope.egc.carnegiescience.edu/SCOPE_12/SCOPE_12_3.6_chapter12_257-274.pdf)

All the above articles show that development of Keauhou Bay WILL hurt plankton life and marine life in the bay because pollutant runoff is inevitable and unavoidable during construction and afterwards. The manta ray food source will likely disappear. This will be devastating for the manta ray populations. Furthermore, if manta rays die or leave the area, the loss will in turn affect many lively hoods from locals on the island who depend on the manta ray tour for their income.

HUMAN POPULATION INCREASES LINKED DIRECTLY TO CORAL DEATH

Does this EIS have any reports on their resort adding to the population increase that happens during IRONMAN?

"On average, each Ironman racer brings three people with them to the Big Island. Counting members of the media, VIPs who come from around the globe to watch and the triathlons partners, there likely be more than 6,300 people descending on Kona..." <https://bigislandnow.com/2023/10/07/ironman-2023-in-kona-shines-spotlight-on-some-of-best-women-triathletes-in-the-world/>

And "Resident dissatisfaction with tourists is multifaceted: The overwhelming majority (92%) of locals felt visitors were not educated enough on protecting Hawaii's natural environment and local resources; other factors include the impact of the vacation rental industry and ignorance of the residents' quality of life." <https://www.triathlete.com/culture/news/kona-locals-ask-ironman-visitors-for-respect/>

Where are the EIS reports on human density? Below are reports that show human population destroys coral reefs.

"The number of people living on the coasts has rapidly increased in recent decades, causing significant development of coastal areas. Coastal development can negatively impact the ocean through the destruction of coastal marine habitat and through run-off of sediments and pollution.

-Coastal development involves activities such as the creation of harbors, stabilization of shorelines, and aquaculture that involve the destruction of sensitive marine habitats such as mangroves, coral reefs, and seagrass beds.

-Coastal development may cause the run-off of sediments into coastal habitats, which can smother corals or seaweeds and reduce the amount of light available for photosynthesis. Losses of primary producers and important habitat-forming species such as corals can negatively impact entire food webs."

The above information was taken from the Education Development Center, INC, from their Coastal Development page called Ocean Tracks <https://oceantracks.org/library/human-impacts/coastal-development/#:~:text=Coastal%20development%20may%20cause%20the,negatively%20impact%20entire%20food%20webs.>

There is nothing Kamehameha Schools can do to their development that can stop the guests of this possible Bungalow Resort from going to Keauhou Bay. Human traffic WILL seriously increase if this resort is allowed to be built, and the marine life will be negatively affected by it. Marine life will suffer from this development as stated in this letter in many different scientific reported articles.

If you allow this resort the amount of people in this bay will fully increase and, "Hawaii's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally, management of the resource should balance the needs of different user groups, but the welfare of the marine environment on which its inhabitants depend must be the most important consideration." This was taken from Hawaii's own Division of Aquatic Resources <https://dnr.hawaii.gov/dar/marine-managed-areas/hawaii-marine-life-conservation-districts/#:~:text=Snorkeling%20and%20SCUBA%20diving%20are,effect%20on%20nearshore%20fish%20populations.>

It's Been Proven an Increase in Human Population Destroys Coral Reefs

If a Bungalow Resort is allowed to be built in Keauhou Bay, it will bring a serious increase in human traffic. "Easily visible trends in human population dynamics combined with well-established and tested ecological theory give a clear, intuitive, yet quantifiable guide to the severity of survival challenges faced by coral reefs. Management challenges and required actions can be clearly shown and, contrary to frequent claims, no scientific ambiguity exists with regard to the serious threat posed to coral reefs by humankind's continued numerical increase." This is in the article by National Library of Medicine National center for Biotechnology Information PubMed. <https://pubmed.ncbi.nlm.nih.gov/33293007/#:~:text=Denser%20coastal%20populations%20and%20gate,er.to%20more%20runoff%20and%20siltation.>

This article is by ABC NEWS, "This is how tourists are destroying coral reefs in Hawaii. The less people at a certain site, the more coral there are, the research found. The millions of tourists who flock to the shores of Hawaii every year are wreaking havoc on its natural environment -- especially the coral reefs,

which are at risk all over the world, a new study said. The most popular coral reefs on the Hawaiian islands are likely being degraded by the very visitors they attract, according to a study published Monday in Nature Sustainability. " <https://abcnews.go.com/US/hawaiian-coral-reefs-degrading-popular-tourist-sites->

<https://abcnews.go.com/US/hawaiian-coral-reefs-degrading-popular-tourist-sites-?site=science&story?id=96308858#:~:text=The%20less%20people%20at%20a,there%20are%2C%20the%20research%20found.&text=The%20millions%20of%20tourists%20who,world%2C%20a%20new%20stud,y%20said.>

By allowing this development you are stressing an already fragile Eco-system. The small bay is currently used by many locals for boating, fishing, canoeing, paddle boarding, snorkeling, manta night dives, surfing, and swimming. We know, and research shows, that more people cause more damage. The area simply cannot afford or support this development.

"Denser coastal populations and greater wealth will lead to reef degradation by coastal construction. Denser populations inland will lead to more runoff and siltation. Effects of human perturbations can be explored with meta-population theory since they translate to increases in patch-mortality and decreases in patch-colonization (= regeneration). All such changes will result in a habitat with overall fewer settled patches, so fewer live reefs." This information was taken from Science Direct <https://www.sciencedirect.com/science/article/abs/pii/S0065288120300328#:~:text=Aquaculture%20will%20alleviate%20some%20fishing,to%20more%20runoff%20and%20siltation.>

Another article by Nature Sustainability, "Coral reefs and coastal tourism in Hawaii Coral reefs are popular for their vibrant biodiversity. By combining web-scraped Instagram data from tourists and high-resolution live coral cover maps in Hawaii, we find that, regionally, coral reefs both attract and suffer from coastal tourism. Higher live coral cover attracts reef visitors, but that visitation contributes to subsequent reef degradation. Such feedback loops threaten the highest quality reefs, highlighting both their economic value and the need for effective conservation management."

[https://www.nature.com/articles/s41893-022-01021-4.epdf?sharing\\_token=wsakgQNhaHjAnWAq453RgN0AJWl9InR3Z0Tv0PvGzA5ic\\_H001zcHNIP3ASnhcgkRy6\\_XkLEw49dbmBXoXs3Y1MgQIGBZsappdGUH7ZO1SLbu9xSP3xED4kI4TOslvgQIa7Z2R3JUbrazpodt42A0nISmWSuX87JfEDpJb8OCjpx7TIWdCfXFKJZVeNdcJ3Sw\\_dnaUg5ZlncjPBDlmmaH15yqI5Q%3D&tracking\\_referrer=abcnews.go.com](https://www.nature.com/articles/s41893-022-01021-4.epdf?sharing_token=wsakgQNhaHjAnWAq453RgN0AJWl9InR3Z0Tv0PvGzA5ic_H001zcHNIP3ASnhcgkRy6_XkLEw49dbmBXoXs3Y1MgQIGBZsappdGUH7ZO1SLbu9xSP3xED4kI4TOslvgQIa7Z2R3JUbrazpodt42A0nISmWSuX87JfEDpJb8OCjpx7TIWdCfXFKJZVeNdcJ3Sw_dnaUg5ZlncjPBDlmmaH15yqI5Q%3D&tracking_referrer=abcnews.go.com)

INFRASTRUCTURE AND RESOURCES ON AN ISLAND ALREADY HIGHLY IMPACTED AND STRUGGLING FOR ANSWERS

Has the EIS done any research or reports on the Resources and Infrastructure it will need for a bungalow resort?

There are many big housing developments currently under construction in Kailua Kona, Waikoloa Village, Hilo, Puna, Ocean View and Volcano. The entire Big Island has construction projects already in progress.

Has Kamehameha Schools EIS done any kind of reports or surveys to know if Big Island has the Resources and Infrastructures for their resort development?

"Hotel waste management refers to all the practices and processes that hotels implement to handle and dispose of the multiple types of waste generated on their premises. Worldwide, hotels produce almost 300,000 tonnes of waste each year." <https://www.homebiogas.com/blog/hotels-waste-management/>

As of now, the Big Island's Resources and Infrastructure are having serious negative issues and many more developments that have been approved are not even completed as of yet, which means our island's resources and infrastructure will be taxed even more severely in the near future.

Please read the below articles that prove Big Island does not have the resources or infrastructure for a 143-Unit Bungalow Resort Development at Keauhou Bay. On Hawaii'i Island, we are already struggling to meet the increasing need for resources and infrastructure.

Big Island Now poll No. 27 results: More than one solution needed to help extend life of West Hawaii'i landfill

September 17, 2023

The West Hawaii'i Sanitary Landfill, the only remaining landfill on the Big Island, is forecast to reach capacity within the next 20 to 25 years.

The West Hawaii'i landfill became the island's only one after the Hilo Landfill closed three years ago. It only has about 20 to 25 years left before it can no longer be used to store rubbish.

<https://bigislandnow.com/2023/09/17/big-island-now-poll-no-27-results-more-than-one-solution-needed-to-help-extend-life-of-west-hawaii-landfill/>

A County commission drafts ordinance aiming to ban recyclables at West Hawaii'i landfill

By Megan Moseley September 6, 2023

Hawaii'i County's Environmental Management Commission is developing an ordinance that aims to prohibit the amount of recyclable materials ending up in the island's only working landfill.

During a commission meeting on July 26, Ramzi Mansour, Hawaii'i County Director of Environmental Management, told commissioners the West Hawaii'i Sanitary Landfill only has 20 to 25 years left before it reaches capacity.

With the Hilo Landfill permanently closed in 2020, the clock is ticking for the island's sole dump. Commission chairperson Georjean Adams said it's a good time to start looking into solutions.

Adams said the proposed ordinance is in its early stages and is more about getting the conversation started about how to prevent unnecessary, or recyclable items — green waste, metals, plastics, paper, paperboard and glass — from ending up in the rubbish dump, located off Queen Ka'ahumanu Highway in Waikōloa.

"Trying to site a new landfill is close to impossible," Adams said. "So what are we going to do? So I was looking around, and the commission agreed, to look deeply into the idea of diverting the recyclables out and at least slow the filling up of the landfill."

The proposed ordinance refers to the 2019 Integrated Solid Waste Management Plan that commits the county to "divert, as much as feasible, commercial and municipal solid waste, including but not limited to green waste, metals, plastics, paper, paperboard, and glass to help achieve goals related to climate resiliency, renewable energy, sustainable agriculture, and zero waste."

<https://bigislandnow.com/2023/09/06/new-draft-ordinance-aims-to-ban-recyclables-at-west-hawaii-landfill/>

Time's Up For Landfills

'Gentle' demolition strategies can help preserve resources

PAULA BENDER April 2, 2024

As Hawaii'i government officials grapple with the challenge of limited landfill space statewide, federal restrictions set in place by the Environmental Protection Agency are ruling out possible locations that were once considered for new landfills.

Hawaii Act 73 states landfills must be located at least half a mile from residential areas; are prohibited from being located in areas with heavy rain and steep slopes, as well as agricultural and/or conservation lands; above aquifers; 300 feet beyond streams; and 1,000 feet beyond the ocean.

New landfills are also now prohibited from being created in tsunami inundation zones, 100-year flood zones and wetlands. There are also concerns that landfills near airports will attract birds, resultin

To Whom It May Concern,

Please read the scientific proof in this letter and REJECT Kamehameha Schools Environment Impact Statement (EIS) for Keauhou Bay to become a Bungalow Resort.

Please state in your report that a Bungalow Resort WILL have a SERIOUS NEGATIVE IMPACT on Keauhou Bay as stated in all the different researched articles below.

Please, DO NOT risk polluting the water in Keauhou Bay by allowing Kamehameha Schools to develop their bungalow resort project. It is scientifically proven that developments pollute nearby waters both during and after development.

Below are scientific articles written by the National Oceanic and Atmospheric Administration (NOAA), Global Coral Reef Alliance, Hawaii Government, and many other professional organizations, that have studied and shown that developments have ALWAYS polluted the water in EVERY coastal development area.

Does this EIS (Environmental Impact Statement) have any kind of reports and studies on how the endangered species and marine life will handle the extra pollution due to development, and the golf course runoff? Keaouhou Bay is their habitat and this development WILL be CHANGING an Entire Ecosystem.

#### ENDANGERED SPECIES CONSERVATION IMPACTED BY DEVELOPMENT

In the Endangered Species Act of 1973 Under Section 2 (b), "To provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved." This would be Keaouhou Bay.

The Green Sea Turtle swims in Keaouhou Bay weekly and the monk seal has also been seen swimming and resting in Keaouhou Bay. Both of these marine animals are on the endangered species list.

Endangered Species Act

"Section 2. Findings, Purposes, and Policy

(4) the United States has pledged itself as a sovereign state in the international community to conserve to the extent practicable the various species of fish or wildlife and plants facing extinction, pursuant to—

(b) PURPOSES.—The purposes of this Act are to provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved, to provide a program for the conservation of such endangered species and threatened species, and to take such steps as may be appropriate to achieve the purposes of the treaties and conventions set forth in subsection (a) of this section."

This was taken from <https://www.fisheries.noaa.gov/national/endangered-species-conservation/endangered-species-ac>

#### FEDERALLY PROTECTED GREEN SEA TURTLES WILL BE AFFECTED

The green sea turtle is federally protected and can be seen in Keaouhou Bay weekly.

The following article that states: "POLLUTED RUNOFF IN HAWAII ENDANGERS GREEN SEA TURTLES"

Why does Hawaii have a runoff problem?

Historically, in the tropics of Hawaii, precipitation was absorbed into the soil, according to the Clean Water Branch of Hawaii's Department of Health. Any potential pollution or contaminants on the ground surface would get pushed into the soil by the rain, and plant roots and microbes would help break down the pollution into less dangerous components. However, with urban and agricultural development, less and less of the pollution gets pulled into the soil, and more of it gets washed out into storm drains. From there, the pollutants make their way to streams, rivers and the ocean that surrounds Hawaii. According

to the state agency, most of these contaminants are nutrients from fertilizer, bacteria from animal waste, oil, garbage and yard waste...

If polluted runoff reaches the ocean, it can wreak havoc on marine life, including endangered green sea turtles." Taken from <https://www.chemservice.com/news/polluted-runoff-in-hawaii-endangers-green-sea-turtles/>

Allowing this development WILL POLLUTE Keaouhou Bay. The above article, written in 2014 (because runoff water from developments were polluting the ocean even then!!!) states this fact clearly. Keaouhou Bay is home to countless sea creatures such as the protected green sea turtle, spotted eagle rays, manta rays, octopus, dolphins, fish, coral, monk seals, and more and that will ALL be harmed by the severe pollution runoff that WILL happen because developments have been shown to ALWAYS pollute the water is that is nearby.

The Green Sea Turtle is protected by more than one law. "All sea turtles in Hawai'i are protected by the Endangered Species Act (ESA) and additionally protected by Hawai'i Revised Statutes Chapter 195D (HRS) and Hawai'i Administrative Rules (HAR) 13-124." This information was taken from this site <https://dlnr.hawaii.gov/dar/species/sea-turtles/>

#### THE ENDANGERED MONK SEAL WILL BE AFFECTED

Keaouhou Bay is known as a RESTING AREA for the ENDANGERED MONK SEAL. If another resort is allowed to be built, in addition to the pollution, it will also bring a lot more people down to Keaouhou Bay. This increases the chances of a resting monk seal being disturbed by humans trying to get close, take "selfie" photos, and being generally uninformed and harmful. Please see article on Selfie Culture and its harmful effects below.

Has the EIS done any research on what an increased population would do in such a small area, and what will happen to the endangered species that live there? With a significantly increased population their habitat of Keaouhou Bay will likely be changed forever.

This information is from a NOAA Scientist; "Study shows selfie culture impacts how people behave when posting images of an endangered species on social media. There's a seal on the beach! Let's go get a 'selfie'!" That must have been what nearly 18 percent of people on Instagram thought before approaching an endangered species.

In a recent study, NOAA scientists used social media to monitor human activities around endangered Hawaiian monk seals. They discovered that human disturbance is more common than they thought." <https://www.fisheries.noaa.gov/feature-story/endangered-hawaiian-monk-seals-cy-foul-over-selfies>

NOAA clearly states a high population in a place where monk seals and sea turtles habitat can be a serious disturbance for these endangered species.

"Hawaiian monk seals are protected federally by the ESA and the Marine Mammal Protection Act (MMPA), as well as locally by Hawai'i Revised Statutes (HRS)/Chapter 195D and Hawai'i Administrative Rules (HAR) 13-124." This was taken from <https://dlnr.hawaii.gov/dar/hawaiian-monk-seal/>

Please read from Wikipedia, "

Most drains have a single large exit at their point of discharge (often covered by a grating) into a canal, river, lake, reservoir, sea or ocean. Other than catch basins, typically there are no treatment facilities in the piping

system." [https://en.wikipedia.org/wiki/Storm\\_drain#:~:text=Most%20drains%20have%20a%20single%20discharge%20into%20individual%20dry%20wells](https://en.wikipedia.org/wiki/Storm_drain#:~:text=Most%20drains%20have%20a%20single%20discharge%20into%20individual%20dry%20wells)

The pavement from this development will cause pollution to runoff into Keauhou Bay because this treed land that will become a housing development is situated directly between the golf course and the Bay. These trees, which absorb all the pollution from the golf course is the BEST AND ONLY PROTECTION POLLUTION FILTER Keauhou Bay has from the golf course pesticides, fertilizer and weed killer. See the below paragraph for further references.

See page 2 at: <https://health.hawaii.gov/epo/files/2013/09/Stormwater-MS4-Presentation-HEE-7.15.14.pdf> where the Hawaii government states that Natural Ground Cover has 10% runoff, where has

development has 55% runoff. So, even if you have storm drains the pavement this development will create will cause more runoff into Keauhou Bay than the Natural Ground Cover that is has now, that has been protecting the bay from golf course pollution for years.

These trees and land are saving monk seals and green sea turtles habitat from the golf course pollution and this land MUST BE PRESERVED and CONSERVED as the natural protector for Keauhou Bay and for these endangered species habitat.

Under Section 2 (b) of the Endangered Species Act - Keauhou Bay MUST BECOME A CONSERVATION AREA for these endangered species. It is currently their habitat, and to allow a large resort development to be built above this bay clearly threatens the lives of these endangered species by allowing golf course toxic pollution and development pollution to run into these species natural habitat of Keauhou Bay.

#### ALGAE BLOOMS KILL CORAL AND MARINE LIFE

The trees that are slated to be cleared for the development further protect Keauhou Bay from algae blooms that have been proven to be caused by pollution that is runoff from fertilizer and weed killer.

When there is heavy rain the land above the bay has a greater runoff than normal. Without the trees, the runoff from the golf course pollution will pour into the Bay likely causing frequent algae blooms.

Algae blooms have been shown to kill coral and marine life as stated in the many articles that will follow.

One of these articles is from the Global Coral Reef Alliance. They have researched the effects on reefs before and after a golf course developments. Though this development is not a golf course development, it is located just below a golf course and exposes the bay to the pollution from the golf course by removing the proven natural filter of the trees and natural ecosystem.

Has this EIS done any kind of research about the algae blooms that happen after a serious storm because of the golf course runoff pollution?

Keauhou Bay is the monk seals and the green sea turtle's habitat. Allowing a bungalow resort to be developed in Keauhou Bay, the habitat of these endangered species, is to threaten their life and habitat with golf course runoff pollution, as well as development pollution. By threatening their habitat, and hence their lives, this development goes completely against the Endangered Species Act of 1973.

The verbiage in the Endangered Species Act states, "to conserve". In this case, "to conserve" would be to protect the land around Keauhou Bay from developments that destroy the habitat of these endangered species with pollution and runoff.

Does this EIS have any reports on the endangered species that frequent Keauhou Bay? This is their habitat and it needs to be "conserved".

Under the Conservation Program there should be research done on endangered species and their associated ecosystems. A large bungalow resort development WILL FOREVER CHANGE THIS ECOSYSTEM.

"§195D-5 Conservation programs. (a) The department shall conduct research on indigenous aquatic life, wildlife, and land plants, and on endangered species and their associated ecosystems, and shall utilize the land acquisition and other authority vested in the department to carry out programs for the conservation, management, and protection of such species and their associated ecosystems." [https://www.capitol.hawaii.gov/hrscurrent/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hrscurrent/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm)

Also, under this same Conservation program, "(2) Taking such action as may be necessary to ensure that actions authorized, funded, or carried out by them do not jeopardize the continued existence of threatened or endangered species." [https://www.capitol.hawaii.gov/hrscurrent/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hrscurrent/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm)

Please consider that developing a Kamehameha Schools Bungalow Resort in Keauhou Bay WILL threaten endangered species due to the unavoidable development and golf course pollution runoff that would be caused by removing the all the trees that currently serving as a natural pollution filter, and replacing the land with housing, cars, humans, and waste. There would also be tremendous runoff damage into Keauhou Bay and the surrounding area during the building phase of this enormous project.

#### GOLF COURSE POLLUTION KILLS MARINE LIFE AND DRASTICALLY CHANGES ECOSYSTEMS

"The golf industry uses approximately 50 pesticide active ingredients, including chlorpyrifos—an insecticide that is banned for residential use by the EPA due to developmental hazards. Having to trim golf turf to low heights also makes it even more vulnerable to pests, which leads to more pesticide use." <https://rainorshinegolf.com/pages/the-environmental-impact-of-golf-courses>

These pesticides will be in the pollution runoff that will enter Keauhou Bay more severely should the natural habitat of the trees be removed and replaced with pavement. This is unavoidable!

This information was taken from Global Coral Reef Alliance and it is an actual study on the how coral and marine life are affected before and after development. It's titled, "Golf courses kill coral reefs and fisheries: harmful algae blooms and disease cause by nutrient runoff from golf course development on Guana Cay, Abaco, Bahamas

Introduction: Bahamas coral reef deterioration

This study is thought the first ever to evaluate the health of coral reef ecosystems and fisheries before and after a golf course development. The vast majority of corals have died from a combination of factors including global warming, new diseases, land-based sources of pollution. . . "

<https://www.globalcoral.org/golf-courses-kill-coral-reefs-and-fisheries-harmful-algae-blooms-and-disease-caused-by-nutrient-runoff-from-golf-course-development-on-guana-cay-abaco-bahamas/>

If you allow a Bungalow Development in Keauhou Bay you WILL be agreeing to pollute this bay for years to come and COMPLETELY CHANGING and possibly DESTROYING KEAUHOU BAY'S ECOSYSTEM.

Another study by the Coral Reef Alliance titled, "Golf course fertilizer runoff causes nutrient enrichment leading to harmful algae blooms on a Bahamian coral reef.

"...After construction new algae blooms appeared nearest the golf course green, smothering corals in adjacent reefs, along with sharply increased coral diseases..." <https://www.globalcoral.org/golf-course-fertilizer-runoff-causes-nutrient-enrichment-leading-to-harmful-algae-blooms-on-a-bahamian-coral-reef>

Does this EIS have any studies or reports on the extra runoff pollution due to clearing land and adding pavement?

This needs to be fully assessed because you will be changing an entire ecosystem to build a bungalow resort. It rains in Keauhou Bay many nights out of the year and this kind of pollution will kill the beautiful and necessary coral in the Bay.

FURTHERMORE: "If there are toxic algal blooms, like red tide, or man-made contaminants, like pesticides or detergents in the water, those toxins are contained within the bubbles of sea foam. When those bubbles pop, the toxins can become airborne and compromise the air that is breathed in that location." <https://oceanconservancy.org/blog/2023/03/31/what-sea-foam/>

#### ENGINE POLLUTION CAUSES ISSUES IN THE OCEAN

Does this EIS have any detailed traffic studies for the increase in cars that will be added to this already severely traffic area they want to build their 150 room bungalow resort in? Have they done any studies on the pollution these cars WILL have in Keauhou Bay?

Because this Bungalow Resort could have over 150 extra cars and over 300 or more extra people in and out of Keauhou Bay, what traffic and increased population studies have they done? There will be employees with cars, guests with cars, visitors with cars. At times this would range to over 200 cars

(likely more), coming in and out of, and parking above Keauhou Bay thereby causing serious car population issues because of all these added cars right next to the bay.

The article below is from NOAA regarding motor vehicle engines and pollution to the sea.

What is the biggest source of pollution in the ocean?

Most ocean pollution begins on land.

"Millions of motor vehicle engines drop small amounts of oil each day onto roads and parking lots. Much of this, too, makes its way to the sea.

Some water pollution actually starts as air pollution, which settles into waterways and oceans. Dirt can be a pollutant. Top soil or silt from fields or construction sites can run off into waterways, harming fish and wildlife habitats."

<https://oceanservice.noaa.gov/facts/pollution.html#:~:text=Millions%20of%20motor%20vehicle%20engines,Dirt%20can%20be%20a%20pollutant.>

Land-Based Runoff Remains Top Source of Oil in the Ocean, Says New Report Oil in the Sea: Inputs, Fates, and Effects

News Release September 28, 2022

WASHINGTON — Oil in runoff, primarily from cities and vehicles, is the top source of oil entering the ocean, says a new report from the National Academies of Sciences, Engineering, and Medicine. In North American waters, estimated ocean oil pollution from land-based runoff is up to 20 times higher than it was 20 years ago, and oil spills, natural oil seeps, and discharge from oil and gas operations remain major sources of pollution. The report recommends actions that government and others should take to minimize oil pollution, and calls for sustained research funding to better understand how oil reaches and affects ocean environments. <https://www.nationalacademies.org/news/2022/09/oil-in-the-sea-inputs-fates-and-effects#:~:text=WASHINGTON%20%2D%2D%20Nearly%2085%20percent,pipeline%20spills%2C%20says%20a%20new>

The Impact Of Stormwater – Car Emissions

"Car emissions are not limited to exhaust fumes that contribute to air pollution. They can also leak automotive fluid and release heavy metals that can contribute to stormwater pollution, contaminating local waterways." <https://www.stormwaterishepheids.org.au/blog/the-impact-of-stormwater-car-emissions/>

#### NOISE POLLUTION'S HARMFUL EFFECT ON MARINE LIFE

Does this EIS have any reports on the noise pollution that will happen and what it could do to marine life in Keauhou Bay during development?

Because if you allow this Bungalow Resort to be developed you will increase constant noise in this bay for years to come and, "Noise Pollution Research shows that underwater noise from construction, shipping and naval vessels significantly impacts the natural behavior of cetaceans and many other marine species. This can be seen when mass beaching events occur or breeding success is diminished."

The above information was taken from the Ocean Conservation Trust  
<https://oceanconservationtrust.org/ocean-advocacy/think-ocean/ways-to-think-ocean/>

How Does Noise Pollution Harm Marine Species?

"However, over the past few decades, noise pollution in the marine environment has increased dramatically and is threatening the natural soundscape of the marine environment. Ships, seismic surveys, explosions, construction, and sonar devices have made the once peaceful environment into a loud, chaotic home which is extremely damaging for marine wildlife. This type of pollution is often overlooked in comparison to others but its impacts are now being documented across all types of marine ecosystems." <https://earth.org/noise-pollution-in-the-ocean/>

If you allow this resort the amount of people in this bay will fully increase and, "Hawaii's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally, management of the resource should balance the needs of different user groups, but the welfare of the marine environment on which its inhabitants depend must be the most important consideration." This was taken from Hawaii's own Division of Aquatic Resources <https://dlnr.hawaii.gov/dar/marine-managed-areas/hawaii-marine-life-conservation-districts/#:~:text=Snorkeling%20and%20SCUBA%20diving%20are,effect%20on%20nearshore%20fish%20populations.>

What is ocean noise?

"Ocean noise refers to sounds made by human activities that can interfere with or obscure the ability of marine animals to hear natural sounds in the ocean.

Many marine organisms rely on their ability to hear for their survival. Sound is a highly efficient means of communication underwater and is the primary way that many marine species gather and understand information about their environment. Many aquatic animals use sound to find prey, locate mates and offspring, avoid predators, guide their navigation and locate habitat, as well as to listen and communicate with each other.

Over the last century, human activities such as shipping, recreational boating, and energy exploration have increased along our coasts, offshore, and deep ocean environments. Noise from these activities can travel long distances underwater, leading to increases and changes in ocean noise levels in many coastal and offshore habitats.

These rising noise levels can negatively impact ocean animals and ecosystems. Higher noise levels can reduce the ability of animals to communicate with potential mates, other group members, their offspring, or feeding partners. Noise can also reduce an ocean animal's ability to hear environmental cues that are vital for survival, including those key to avoiding predators, finding food, and navigating to preferred habitats." <https://oceanservice.noaa.gov/facts/ocean-noise.html>

LEARN FROM OTHERS:  
RUN-OFF FROM DEVELOPMENT KILLS

The Chesapeake Bay has a foundation that is trying to save their bay due to runoff pollution that was caused by developments. Chesapeake Bay is a lot bigger than Keauhou Bay. If it's being drastically hurt by runoff water from developments, Keauhou Bay waters won't stand a chance if development above the bay is allowed. Keauhou Bay is a much smaller ecosystem.

This Article is by the Chesapeake Bay Foundation, Saving a National Treasure states, "...runoff is a significant source of harmful nitrogen pollution that continues to grow..."

As rainwater and snowmelt run off our streets, parking lots, lawns, and other surfaces, they pick up pet waste, pesticides, fertilizer, oil, and other contaminants. If the draining water doesn't evaporate or soak into the ground where it can be filtered, it flushes straight into local creeks, rivers, and the Chesapeake Bay, adversely affecting water quality and aquatic life.

Only 10 to 20 percent of rain that falls in forests, fields, and other natural areas runs off, with the rest absorbed by soil and plants, where it is filtered before reaching aquifers or local waterways. (Right now Keauhou Bay has a lot of trees and is very natural, this is what helps stop runoff.) By contrast, close to 100 percent of the rain that falls on concrete and other hard surfaces produces runoff. One inch of rain falling on an acre of hardened surface produces 27,000 gallons of runoff.

Stormwater runoff pollution threatens Chesapeake Bay and its rivers and streams....Polluted runoff is one of the most harmful sources of pollution to the Bay and its waters. And much of it starts right in the urban and suburban neighborhoods where we live." <https://www.cbf.org/issues/polluted-runoff/index.html#:~:text=Besides%20carrying%20pollutants%20that%20harm,them%20are%20placed%20in%20jeopardy.>

If that is what runoff is doing to the Chesapeake Bay, the effects of runoff will be even more devastating to Keauhou Bay due to its size and fragility.

MANTA RAY HABITAT, CORAL REEF BLEACHING, & MARINE LIFE ~ THE DEVASTATING EFFECTS OF DEVELOPMENT ON THE OCEAN

Are there any reports in this EIS about what the impact to the coral, marine life, plankton especially zooplankton will be because of this development?

It's Been Proven Resort Developments KILL Marine Life

This article by MarinBIO states, "Zooplankton are also sensitive to their environment and like phytoplankton—a change in zooplankton concentration can indicate a subtle environmental change. Zooplankton are highly responsive to nutrient levels, temperatures, pollution, food that is not nutritious, levels of light, and increases in predation. As well as providing an essential link in the marine food chain (which is an understatement), the diversity of species, amount of biomass and abundance of zooplankton communities can be used to determine the health of an ecosystem..."

Here is another article that shocking shows that in a very short time, big changes can occur due to runoff. A development will hurt and kill plankton, by Frontiers in Marine Science, "Effects of an experimental terrestrial runoff on the components of the plankton food web in a Mediterranean coastal lagoon The main result observed in the present study was that the effects of the simulated terrestrial runoff spread along the plankton food web, significantly affecting all trophic levels of the natural plankton community studied. This occurred in a relatively short time considering that the experiment lasted less than three weeks. The lower light availability in the terrestrial runoff treatment compared to the control resulted in a net decrease of approximately one-third of Chl-a concentration and phytoplankton abundance over the entire experiment." <https://www.frontiersin.org/journals/marine-science/articles/10.3389/fmars.2023.1200757/full>

The ecosystem is fragile and interconnected as is stated in this article: "Zooplankton are also affected by levels of pH, heavy metals, calcium, and aluminum. Nutrients like nitrogen and phosphorus will affect the prey of zooplankton (like algae, protozoa and bacteria), indirectly affecting zooplankton survival. Scientists are still putting together pieces of the zooplankton puzzle. Some questions include how nutrient levels found in algae can influence the growth and behavior of zooplankton. Another question important to marine and human life is how toxins and pollution will affect this crucial link in the food chain" This information is in article by MarineBIO. <https://www.marinebio.org/creatures/zooplankton/#:~:text=Zooplankton%20are%20also%20sensitive%20to%20light%2C%20and%20increases%20in%20predation.>

A research article by Environmental Research Laboratory, United States Environmental Protection Agency that discusses, "Toxic Effects of Pollutants on Plankton: There are four main sources of aquatic pollution: industrial wastes, municipal wastes, agricultural run-off, and accidental spillage. Non-point sources, such as automobile exhausts, add appreciable amounts of pollutants to air that may enter aquatic systems in rainfall or dry fall-out. These sources add pesticides, heavy metals, oil, petroleum products, and a large number of organic and inorganic compounds to water. Lakes and oceans serve as sinks for many pollutants. Plankton comprise a large portion of the living matter in natural waters and function in biogeochemical cycles. They are affected by pollutants, transfer them to sediments and other organisms, and function in their biological transformation."

[https://scope.dge.carnegiescience.edu/SCOPE\\_12/SCOPE\\_12\\_3.6\\_chapter12\\_257-274.pdf](https://scope.dge.carnegiescience.edu/SCOPE_12/SCOPE_12_3.6_chapter12_257-274.pdf)

All the above articles show that development of Keauhou Bay WILL hurt plankton life and marine life in the bay because pollutant runoff is inevitable and unavoidable during construction and afterwards. The manta ray food source will likely disappear. This will be devastating for the manta ray populations. Furthermore, if manta rays die or leave the area, the loss will in turn affect many lively hoods from locals on the island who depend on the manta ray tour for their income.

27

## HUMAN POPULATION INCREASES LINKED DIRECTLY TO CORAL DEATH

Does this EIS have any reports on their resort adding to the population increase that happens during IRONMAN?

"On average, each Ironman racer brings three people with them to the Big Island. Counting members of the media, VIPs who come from around the globe to watch and the triathlons partners, there likely be more than 6,300 people descending on Kona..." <https://bigislandnow.com/2023/10/07/ironman-2023-in-kona-shines-spotlight-on-some-of-best-women-triathletes-in-the-world/>

And "Resident dissatisfaction with tourists is multifaceted: The overwhelming majority (92%) of locals felt visitors were not educated enough on protecting Hawaii's natural environment and local resources; other factors include the impact of the vacation rental industry and ignorance of the residents' quality of life." <https://www.triathlete.com/culture/news/kona-locals-ask-ironman-visitors-for-respect/>

Where are the EIS reports on human density? Below are reports that show human population destroys coral reefs.

"The number of people living on the coasts has rapidly increased in recent decades, causing significant development of coastal areas. Coastal development can negatively impact the ocean through the destruction of coastal marine habitat and through run-off of sediments and pollution.

-Coastal development involves activities such as the creation of harbors, stabilization of shorelines, and aquaculture that involve the destruction of sensitive marine habitats such as mangroves, coral reefs, and seagrass beds.

-Coastal development may cause the run-off of sediments into coastal habitats, which can smother corals or seaweeds and reduce the amount of light available for photosynthesis. Losses of primary producers and important habitat-forming species such as corals can negatively impact entire food webs."

The above information was taken from the Education Development Center, INC, from their Coastal Development page called Ocean Tracks <https://oceantracks.org/library/human-impacts/coastal-development#:~:text=Coastal%20development%20may%20cause%20the,negatively%20impact%20entire%20food%20webs.>

There is nothing Kamehameha Schools can do to their development that can stop the guests of this possible Bungalow Resort from going to Keauhou Bay. Human traffic WILL seriously increase if this resort is allowed to be built and the marine life will be negatively affected by it. Marine life will suffer from this development as stated in this letter in many different scientific reported articles.

If you allow this resort the amount of people in this bay will fully increase and, "Hawaii's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally, management of the resource should balance the needs of different user groups, but the welfare of the

28

marine environment on which its inhabitants depend must be the most important consideration." This was taken from Hawaii's own Division of Aquatic Resources <https://dlnr.hawaii.gov/dar/marine-managed-areas/hawaii-marine-life-conservation-districts/#:~:text=Snorkeling%20and%20SCUBA%20diving%20are,effect%20on%20nearshore%20fish%20populations.>

It's Been Proven an Increase in Human Population Destroys Coral Reefs

If a Bungalow Resort is allowed to be built in Keauhou Bay, it will bring a serious increase in human traffic. "Easily visible trends in human population dynamics combined with well-established and tested ecological theory give a clear, intuitive, yet quantifiable guide to the severity of survival challenges faced by coral reefs. Management challenges and required actions can be clearly shown and, contrary to frequent claims, no scientific ambiguity exists with regard to the serious threat posed to coral reefs by humankind's continued numerical increase." This is in the article by National Library of Medicine National Center for Biotechnology Information PubMed. <https://pubmed.ncbi.nlm.nih.gov/33293007/#:~:text=Denser%20coastal%20populations%20and%20gr eater,to%20more%20runoff%20and%20siltation.>

This article is by ABC NEWS, "This is how tourists are destroying coral reefs in Hawaii. The less people at a certain site, the more coral there are, the research found. The millions of tourists who flock to the shores of Hawaii every year are wreaking havoc on its natural environment -- especially the coral reefs, which are at risk all over the world, a new study said. The most popular coral reefs on the Hawaiian islands are likely being degraded by the very visitors they attract, according to a study published Monday in Nature Sustainability." <https://abcnews.go.com/US/hawaiian-coral-reefs-degrading-popular-tourist-sites-scientists/story?id=96308858#:~:text=The%20less%20people%20at%20a,there%20are%20C%20the%20research%20found.&text=The%20millions%20of%20tourists%20who,world%20C%20a%20new%20stud y%20said.>

By allowing this development you are stressing an already fragile Eco-system. The small bay is currently used by many locals for boating, fishing, canoeing, paddle boarding, snorkeling, manta night dives, surfing, and swimming. We know, and research shows, that more people cause more damage. The area simply cannot afford or support this development.

"Denser coastal populations and greater wealth will lead to reef degradation by coastal construction. Denser populations inland will lead to more runoff and siltation. Effects of human perturbations can be explored with meta-population theory since they translate to increases in patch-mortality and decreases in patch-colonization (= regeneration). All such changes will result in a habitat with overall fewer settled patches, so fewer live reefs." This information was taken from Science Direct <https://www.sciencedirect.com/science/article/abs/pii/S0065288120300328#:~:text=Aquaculture%20will%20alleviate%20some%20fishing,to%20more%20runoff%20and%20siltation.>

Another article by Nature Sustainability, "Coral reefs and coastal tourism in Hawaii Coral reefs are popular for their vibrant biodiversity. By combining web-scraped Instagram data from tourists and high-resolution live coral cover maps in Hawaii, we find that, regionally, coral reefs both attract and suffer from coastal tourism. Higher live coral cover attracts reef visitors, but that visitation contributes to subsequent reef degradation. Such feedback loops threaten the highest quality reefs, highlighting both their economic value and the need for effective conservation management."

[https://www.nature.com/articles/s41893-022-01021-4.epdf?sharing\\_token=w5akgQNhaihJAnWAg453IRgN0AJWveI9jnR3oTlv0PyGZA5lc\\_H001zeHNIP3ASnhcgkRy6\\_vkLPw49dbmBYoXsg3Y1MgQIGBZsapdGUH17O1SIbu9x5P3xED4kxI4To5JlvgQ1a7ZRR3JUbrazpodJd2AolNlSmW5uxBZJfEDdpJ8OGJpX71TW6CfXvFKJZYVeNdcjJssw\\_dnaLj5ZlhcjPBDImmaH15vqI5Q%3D&tracking\\_referrer=abcnews.go.com](https://www.nature.com/articles/s41893-022-01021-4.epdf?sharing_token=w5akgQNhaihJAnWAg453IRgN0AJWveI9jnR3oTlv0PyGZA5lc_H001zeHNIP3ASnhcgkRy6_vkLPw49dbmBYoXsg3Y1MgQIGBZsapdGUH17O1SIbu9x5P3xED4kxI4To5JlvgQ1a7ZRR3JUbrazpodJd2AolNlSmW5uxBZJfEDdpJ8OGJpX71TW6CfXvFKJZYVeNdcjJssw_dnaLj5ZlhcjPBDImmaH15vqI5Q%3D&tracking_referrer=abcnews.go.com)

INFRASTRUCTURE AND RESOURCES ON AN ISLAND ALREADY HIGHLY IMPACTED AND STRUGGLING FOR ANSWERS

Has the EIS done any research or reports on the Resources and Infrastructure it will need for a bungalow resort?

There are many big housing developments currently under construction in Kailua Kona, Waikoloa Village, Hilo, Puna, Ocean View and Volcano. The entire Big Island has construction projects already in progress.

Has Kamehameha Schools EIS done any kind of reports or surveys to know if Big Island has the Resources and Infrastructures for their resort development?

"Hotel waste management refers to all the practices and processes that hotels implement to handle and dispose of the multiple types of waste generated on their premises. Worldwide, hotels produce almost 300,000 tonnes of waste each year." <https://www.homebiogas.com/blog/hotels-waste-management/>

As of now, the Big Island's Resources and Infrastructure are having serious negative issues and many more developments that have been approved are not even completed as of yet, which means our island's resources and infrastructure will be taxed even more severely in the near future.

Please read the below articles that prove Big Island does not have the resources or infrastructure for a 143-Unit Bungalow Resort Development at Keauhou Bay. On Hawai'i Island, we are already struggling to meet the increasing need for resources and infrastructure.

Big Island Now poll No. 27 results: More than one solution needed to help extend life of West Hawai'i landfill

September 17, 2023

The West Hawai'i Sanitary Landfill, the only remaining landfill on the Big Island, is forecast to reach capacity within the next 20 to 25 years.

The West Hawai'i landfill became the island's only one after the Hilo Landfill closed three years ago. It only has about 20 to 25 years left before it can no longer be used to store rubbish.

<https://bigislandnow.com/2023/09/17/big-island-now-poll-no-27-results-more-than-one-solution-needed-to-help-extend-life-of-west-hawaii-landfill>

A County commission drafts ordinance aiming to ban recyclables at West Hawai'i landfill

By Megan Moseley September 6, 2023

Hawai'i County's Environmental Management Commission is developing an ordinance that aims to prohibit the amount of recyclable materials ending up in the island's only working landfill.

During a commission meeting on July 26, Ramzi Mansour, Hawai'i County Director of Environmental Management, told commissioners the West Hawai'i Sanitary Landfill only has 20 to 25 years left before it reaches capacity.

With the Hilo Landfill permanently closed in 2020, the clock is ticking for the island's sole dump. Commission chairperson Georjean Adams said it's a good time to start looking into solutions.

Adams said the proposed ordinance is in its early stages and is more about getting the conversation started about how to prevent unnecessary, or recyclable items — green waste, metals, plastics, paper, paperboard and glass — from ending up in the rubbish dump, located off Queen Ka'ahumanu Highway in Waikōloa.

"Trying to site a new landfill is close to impossible," Adams said. "So what are we going to do? So I was looking around, and the commission agreed, to look deeply into the idea of diverting the recyclables out and at least slow the filling up of the landfill."

The proposed ordinance refers to the 2019 Integrated Solid Waste Management Plan that commits the county to "divert, as much as feasible, commercial and municipal solid waste, including but not limited to green waste, metals, plastics, paper, paperboard, and glass to help achieve goals related to climate resiliency, renewable energy, sustainable agriculture, and zero waste."

<https://bigislandnow.com/2023/09/06/new-draft-ordinance-aims-to-ban-recyclables-at-west-hawaii-landfill>

Time's Up For Landfills

'Gentle' demolition strategies can help preserve resources

PAULA BENDER April 2, 2024

As Hawai'i government officials grapple with the challenge of limited landfill space statewide, federal restrictions set in place by the Environmental Protection Agency are ruling out possible locations that were once considered for new landfills.

Hawaii Act 73 states landfills must be located at least half a mile from residential areas; are prohibited from being located in areas with heavy rain and steep slopes, as well as agricultural and/or conservation lands; above aquifers; 300 feet beyond streams; and 1,000 feet beyond the ocean.

New landfills are also now prohibited from being created in tsunami inundation zones, 100-year flood zones and wetlands. There are also concerns that landfills near airports will attract birds, resultin

To Whom It May Concern,

Please read the scientific proof in this letter and REJECT Kamehameha Schools Environment Impact Statement (EIS) for Keaouhou Bay to become a Bungalow Resort.

Please state in your report that a Bungalow Resort WILL have a SERIOUS NEGATIVE IMPACT on Keaouhou Bay as stated in all the different researched articles below.

Please, DO NOT risk polluting the water in Keaouhou Bay by allowing Kamehameha Schools to develop their bungalow resort project. It is scientifically proven that developments pollute nearby waters both during and after development.

Below are scientific articles written by the National Oceanic and Atmospheric Administration (NOAA), Global Coral Reef Alliance, Hawaii Government, and many other professional organizations, that have studied and shown that developments have ALWAYS polluted the water in EVERY coastal development area.

Does this EIS (Environmental Impact Statement) have any kind of reports and studies on how the endangered species and marine life will handle the extra pollution due to development, and the golf course runoff? Keaouhou Bay is their habitat and this development WILL be CHANGING an Entire Ecosystem.

#### ENDANGERED SPECIES CONSERVATION IMPACTED BY DEVELOPMENT

In the Endangered Species Act of 1973 Under Section 2 (b), "To provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved." This would be Keaouhou Bay.

The Green Sea Turtle swims in Keaouhou Bay weekly and the monk seal has also been seen swimming and resting in Keaouhou Bay. Both of these marine animals are on the endangered species list.

Endangered Species Act

"Section 2. Findings, Purposes, and Policy

(4) the United States has pledged itself as a sovereign state in the international community to conserve to the extent practicable the various species of fish or wildlife and plants facing extinction, pursuant to—

(b) PURPOSES.—The purposes of this Act are to provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved, to provide a program for the conservation of such endangered species and threatened species, and to take such steps as may be appropriate to achieve the purposes of the treaties and conventions set forth in subsection (a) of this section."

This was taken from <https://www.fisheries.noaa.gov/national/endangered-species-conservation/endangered-species-ac>

#### FEDERALLY PROTECTED GREEN SEA TURTLES WILL BE AFFECTED

The green sea turtle is federally protected and can be seen in Keauhou Bay weekly.

The following article that states: "POLLUTED RUNOFF IN HAWAII ENDANGERS GREEN SEA TURTLES"

Why does Hawaii have a runoff problem?

Historically, in the tropics of Hawaii, precipitation was absorbed into the soil, according to the Clean Water Branch of Hawaii's Department of Health. Any potential pollution or contaminants on the ground surface would get pushed into the soil by the rain, and plant roots and microbes would help break down the pollution into less dangerous components. However, with urban and agricultural development, less and less of the pollution gets pulled into the soil, and more of it gets washed out into storm drains. From there, the pollutants make their way to streams, rivers and the ocean that surrounds Hawaii. According to the state agency, most of these contaminants are nutrients from fertilizer, bacteria from animal waste, oil, garbage and yard waste...

If polluted runoff reaches the ocean, it can wreak havoc on marine life, including endangered green sea turtles." Taken from <https://www.chemservice.com/news/polluted-runoff-in-hawaii-endangers-green-sea-turtles/>

Allowing this development WILL POLLUTE Keauhou Bay. The above article, written in 2014 (because runoff water from developments were polluting the ocean even then!!!) states this fact clearly. Keauhou Bay is home to countless sea creatures such as the protected green sea turtle, spotted eagle rays, manta rays, octopus, dolphins, fish, coral, monk seals, and more and that will ALL be harmed by the severe pollution runoff that WILL happen because developments have been shown to ALWAYS pollute the water is that is nearby.

The Green Sea Turtle is protected by more than one law. "All sea turtles in Hawai'i are protected by the Endangered Species Act (ESA) and additionally protected by Hawai'i Revised Statutes Chapter 195D (HRS) and Hawai'i Administrative Rules (HAR) 13-124." This information was taken from this site <https://dlnr.hawaii.gov/dar/species/sea-turtles/>

#### THE ENDANGERED MONK SEAL WILL BE AFFECTED

Keauhou Bay is known as a RESTING AREA for the ENDANGERED MONK SEAL. If another resort is allowed to be built, in addition to the pollution, it will also bring a lot more people down to Keauhou Bay. This increases the chances of a resting monk seal being disturbed by humans trying to get close, take "selfie" photos, and being generally uninformed and harmful. Please see article on Selfie Culture and its harmful effects below.

Has the EIS done any research on what an increased population would do in such a small area, and what will happen to the endangered species that live there? With a significantly increased population their habitat of Keauhou Bay will likely be changed forever.

This information is from a NOAA Scientist; "Study shows selfie culture impacts how people behave when posting images of an endangered species on social media. There's a seal on the beach! Let's go get a 'selfie'!" That must have been what nearly 18 percent of people on Instagram thought before approaching an endangered species.

In a recent study, NOAA scientists used social media to monitor human activities around endangered Hawaiian monk seals. They discovered that human disturbance is more common than they thought." <https://www.fisheries.noaa.gov/feature-story/endangered-hawaiian-monk-seals-cry-foul-over-selfies>

NOAA clearly states a high population in a place where monk seals and sea turtles habitat can be a serious disturbance for these endangered species.

"Hawaiian monk seals are protected federally by the ESA and the Marine Mammal Protection Act (MMPA), as well as locally by Hawai'i Revised Statutes (HRS) Chapter 195D and Hawai'i Administrative Rules (HAR) 13-124." This was taken from <https://dlnr.hawaii.gov/dar/hawaiian-monk-seal/>

Keauhou Bay is the monk seals and the green sea turtle's habitat. Allowing a bungalow resort to be developed in Keauhou Bay, the habitat of these endangered species, is to threaten their life and habitat with golf course runoff pollution, as well as development pollution. By threatening their habitat, and hence their lives, this development goes completely against the Endangered Species Act of 1973.

The verbiage in the Endangered Species Act states, "to conserve". In this case, "to conserve" would be to protect the land around Keauhou Bay from developments that destroy the habitat of these endangered species with pollution and runoff.

Does this EIS have any reports on the endangered species that frequent Keauhou Bay? This is their habitat and it needs to be "conserved".

Under the Conservation Program there should be research done on endangered species and their associated ecosystems. A large bungalow resort development WILL FOREVER CHANGE THIS ECOSYSTEM.

"§ 195D-5 Conservation programs. (a) The department shall conduct research on indigenous aquatic life, wildlife, and land plants, and on endangered species and their associated ecosystems, and shall utilize the land acquisition and other authority vested in the department to carry out programs for the conservation, management, and protection of such species and their associated ecosystems." [https://www.capitol.hawaii.gov/hisrcurrent/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hisrcurrent/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm)

Also, under this same Conservation program, "(2) Taking such action as may be necessary to ensure that actions authorized, funded, or carried out by them do not jeopardize the continued existence of threatened or endangered species." [https://www.capitol.hawaii.gov/hisrcurrent/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hisrcurrent/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm)

Please consider that developing a Kamehameha Schools Bungalow Resort in Keauhou Bay WILL threaten endangered species due to the unavoidable development and golf course pollution runoff that would be caused by removing the all the trees that currently serving as a natural pollution filter, and replacing the land with housing, cars, humans, and waste. There would also be tremendous runoff damage into Keauhou Bay and the surrounding area during the building phase of this enormous project.

#### GOLF COURSE POLLUTION KILLS MARINE LIFE AND DRASTICALLY CHANGES ECOSYSTEMS

"The golf industry uses approximately 50 pesticide active ingredients, including chl orpyrifos—an insecticide that is banned for residential use by the EPA due to developmental hazards. Having to trim golf turf to low heights also makes it even more vulnerable to pests, which leads to more pesticide use." <https://rainorshinegolf.com/pages/the-environmental-impact-of-golf-courses>

These pesticides will be in the pollution runoff that will enter Keauhou Bay more severely should the natural habitat of the trees be removed and replaced with pavement. This is unavoidable!

Please read from Wikipedia, "  
Most drains have a single large exit at their point of discharge (often covered by a grating) into a canal, river, lake, reservoir, sea or ocean. Other than catch basins, typically there are no treatment facilities in the piping system." [https://en.wikipedia.org/wiki/Storm\\_drain#:~:text=Most%20drains%20have%20a%20single,discharge%20into%20individual%20dry%20wells](https://en.wikipedia.org/wiki/Storm_drain#:~:text=Most%20drains%20have%20a%20single,discharge%20into%20individual%20dry%20wells)

The pavement from this development will cause pollution to runoff into Keauhou Bay because this treed land that will become a housing development is situated directly between the golf course and the Bay. These trees, which absorb all the pollution from the golf course is the BEST AND ONLY PROTECTION POLLUTION FILTER Keauhou Bay has from the golf course pesticides, fertilizer and weed killer. See the below paragraph for further references.

See page 2 at: <https://health.hawaii.gov/epp/files/2013/09/Stormwater-MS4-Presentation-HEE-7.15.14.pdf> where the Hawai'i government states that Natural Ground Cover has 10% runoff, where has development has 55% runoff. So, even if you have storm drains the pavement this development will create will cause more runoff into Keauhou Bay than the Natural Ground Cover that is has now, that has been protecting the bay from golf course pollution for years.

These trees and land are saving monk seals and green sea turtles habitat from the golf course pollution and this land MUST BE PRESERVED and CONSERVED as the natural protector for Keauhou Bay and for these endangered species habitat.

Under Section 2 (b) of the Endangered Species Act - Keauhou Bay MUST BECOME A CONSERVATION AREA for these endangered species. It is currently their habitat, and to allow a large resort development to be built above this bay clearly threatens the lives of these endangered species by allowing golf course toxic pollution and development pollution to run into these species natural habitat of Keauhou Bay.

#### ALGAE BLOOMS KILL CORAL AND MARINE LIFE

The trees that are slated to be cleared for the development further protect Keauhou Bay from algae blooms that have been proven to be caused by pollution that is runoff from fertilizer and weed killer.

When there is heavy rain the land above the bay has a greater runoff than normal. Without the trees, the runoff from the golf course pollution will pour into the Bay likely causing frequent algae blooms.

Algae blooms have been shown to kill coral and marine life as stated in the many articles that will follow.

One of these articles is from the Global Coral Reef Alliance. They have researched the effects on reefs before and after a golf course developments. Though this development is not a golf course development, it is located just below a golf course and exposes the bay to the pollution from the golf course by removing the proven natural filter of the trees and natural ecosystem.

Has this EIS done any kind of research about the algae blooms that happen after a serious storm because of the golf course runoff pollution?

This information was taken from Global Coral Reef Alliance and it is an actual study on the how coral and marine life are affected before and after development. It's titled, "Golf courses kill coral reefs and fisheries: harmful algae blooms and disease cause by nutrient runoff from golf course development on Guana Cay, Abaco, Bahamas

Introduction: Bahamas coral reef deterioration

This study is thought the first ever to evaluate the health of coral reef ecosystems and fisheries before and after a golf course development. The vast majority of corals have died from a combination of factors including global warming, new diseases, land-based sources of pollution. . . " <https://www.globalcoral.org/golf-courses-kill-coral-reefs-and-fisheries-harmful-algae-blooms-and-disease-caused-by-nutrient-runoff-from-golf-course-development-on-guana-cay-abaco-bahamas/>

If you allow a Bungalow Development in Keauhou Bay you WILL be agreeing to pollute this bay for years to come and COMPLETELY CHANGING and possibly DESTROYING KEAUHOU BAY'S ECOSYSTEM.

Another study by the Coral Reef Alliance titled, "Golf course fertilizer runoff causes nutrient enrichment leading to harmful algae blooms on a Bahamian coral reef.

"...After construction new algae blooms appeared nearest the golf course green, smothering corals in adjacent reefs, along with sharply increased coral diseases..." <https://www.globalcoral.org/golf-course-fertilizer-runoff-causes-nutrient-enrichment-leading-to-harmful-algae-blooms-on-a-bahamian-coral-reef>

Does this EIS have any studies or reports on the extra runoff pollution due to clearing land and adding pavement?

This needs to be fully assessed because you will be changing an entire ecosystem to build a bungalow resort. It rains in Keaouhou Bay many nights out of the year and this kind of pollution will kill the beautiful and necessary coral in the Bay.

FURTHERMORE: "If there are toxic algal blooms, like red tide, or man-made contaminants, like pesticides or detergents in the water, those toxins are contained within the bubbles of sea foam. When those bubbles pop, the toxins can become airborne and compromise the air that is breathed in that location." <https://oceanconservancy.org/blog/2023/03/31/what-sea-foam/>

#### ENGINE POLLUTION CAUSES ISSUES IN THE OCEAN

Does this EIS have any detailed traffic studies for the increase in cars that will be added to this already severely traffic area they want to build their 150 room bungalow resort in? Have they done any studies on the pollution these cars WILL have in Keaouhou Bay?

Because this Bungalow Resort could have over 150 extra cars and over 300 or more extra people in and out of Keaouhou Bay, what traffic and increased population studies have they done? There will be employees with cars, guests with cars, visitors with cars. At times this would range to over 200 cars (likely more), coming in and out of, and parking above Keaouhou Bay thereby causing serious car population issues because of all these added cars right next to the bay.

The article below is from NOAA regarding motor vehicle engines and pollution to the sea.

What is the biggest source of pollution in the ocean?

Most ocean pollution begins on land.

"Millions of motor vehicle engines drop small amounts of oil each day onto roads and parking lots. Much of this, too, makes its way to the sea.

Some water pollution actually starts as air pollution, which settles into waterways and oceans. Dirt can be a pollutant. Top soil or silt from fields or construction sites can run off into waterways, harming fish and wildlife habitats."

<https://oceanservice.noaa.gov/facts/pollution.html#:~:text=Millions%20of%20motor%20vehicle%20engines,Dirt%20can%20be%20a%20pollutant.>

Land-Based Runoff Remains Top Source of Oil in the Ocean, Says New Report Oil in the Sea: Inputs, Fates, and Effects

News Release September 28, 2022

WASHINGTON — Oil in runoff, primarily from cities and vehicles, is the top source of oil entering the ocean, says a new report from the National Academies of Sciences, Engineering, and Medicine. In North American waters, estimated ocean oil pollution from land-based runoff is up to 20 times higher than it was 20 years ago, and oil spills, natural oil seeps, and discharge from oil and gas operations remain major sources of pollution. The report recommends actions that government and others should take to

minimize oil pollution, and calls for sustained research funding to better understand how oil reaches and affects ocean environments. <https://www.nationalacademies.org/news/2002/05/oil-in-the-sea-inputs-fates-and-effects#:~:text=WASHINGTON%20%2D%2D%20Nearly%2085%20percent,pipeline%20spills%2C%20sa ys%20a%20new>

#### The Impact Of Stormwater – Car Emissions

"Car emissions are not limited to exhaust fumes that contribute to air pollution. They can also leak automotive fluid and release heavy metals that can contribute to stormwater pollution, contaminating local waterways." <https://www.stormwaterishepheids.org.au/blog/the-impact-of-stormwater-car-emissions/>

#### NOISE POLLUTION'S HARMFUL EFFECT ON MARINE LIFE

Does this EIS have any reports on the noise pollution that will happen and what it could do to marine life in Keaouhou Bay during development?

Because if you allow this Bungalow Resort to be developed you will increase constant noise in this bay for years to come and, "Noise Pollution Research shows that underwater noise from construction, shipping and naval vessels significantly impacts the natural behavior of cetaceans and many other marine species. This can be seen when mass beaching events occur or breeding success is diminished."

The above information was taken from the Ocean Conservation Trust <https://oceanconservationtrust.org/ocean-advocacy/think-ocean-ways-to-think-ocean/>

#### How Does Noise Pollution Harm Marine Species?

"However, over the past few decades, noise pollution in the marine environment has increased dramatically and is threatening the natural soundscape of the marine environment. Ships, seismic surveys, explosions, construction, and sonar devices have made the once peaceful environment into a loud, chaotic home which is extremely damaging for marine wildlife. This type of pollution is often overlooked in comparison to others but its impacts are now being documented across all types of marine ecosystems." <https://earth.org/noise-pollution-in-the-ocean/>

If you allow this resort the amount of people in this bay will fully increase and, "Hawaii's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally, management of the resource should balance the needs of different user groups, but the welfare of the marine environment on which its inhabitants depend must be the most important consideration." This was taken from Hawaii's own Division of Aquatic Resources <https://dlnr.hawaii.gov/dar/marine-managed-areas/hawaii-marine-life-conservation->

[districts/#:~:text=Snorkeling%20and%20SCUBA%20diving%20are,effect%20on%20nearshore%20fish%20populations.](#)

What is ocean noise?

"Ocean noise refers to sounds made by human activities that can interfere with or obscure the ability of marine animals to hear natural sounds in the ocean.

Many marine organisms rely on their ability to hear for their survival. Sound is a highly efficient means of communication underwater and is the primary way that many marine species gather and understand information about their environment. Many aquatic animals use sound to find prey, locate mates and offspring, avoid predators, guide their navigation and locate habitat, as well as to listen and communicate with each other.

Over the last century, human activities such as shipping, recreational boating, and energy exploration have increased along our coasts, offshore, and deep ocean environments. Noise from these activities can travel long distances underwater, leading to increases and changes in ocean noise levels in many coastal and offshore habitats.

These rising noise levels can negatively impact ocean animals and ecosystems. Higher noise levels can reduce the ability of animals to communicate with potential mates, other group members, their offspring, or feeding partners. Noise can also reduce an ocean animal's ability to hear environmental cues that are vital for survival, including those key to avoiding predators, finding food, and navigating to preferred habitats." <https://oceanservice.noaa.gov/facts/ocean-noise.html>

#### LEARN FROM OTHERS: RUN-OFF FROM DEVELOPMENT KILLS

The Chesapeake Bay has a foundation that is trying to save their bay due to runoff pollution that was caused by developments. Chesapeake Bay is a lot bigger than Keauhou Bay. If it's being drastically hurt by runoff water from developments, Keauhou Bay waters won't stand a chance if development above the bay is allowed. Keauhou Bay is a much smaller ecosystem.

This Article is by the Chesapeake Bay Foundation, Saving a National Treasure states, "...runoff is a significant source of harmful nitrogen pollution that continues to grow...

As rainwater and snowmelt run off our streets, parking lots, lawns, and other surfaces, they pick up pet waste, pesticides, fertilizer, oil, and other contaminants. If the draining water doesn't evaporate or soak into the ground where it can be filtered, it flushes straight into local creeks, rivers, and the Chesapeake Bay, adversely affecting water quality and aquatic life.

Only 10 to 20 percent of rain that falls in forests, fields, and other natural areas runs off, with the rest absorbed by soil and plants, where it is filtered before reaching aquifers or local waterways. (Right now Keauhou Bay has a lot of trees and is very natural, this is what helps stop runoff.) By contrast, close to 100 percent of the rain that falls on concrete and other hard surfaces produces runoff. One inch of rain falling on an acre of hardened surface produces 27,000 gallons of runoff.

Stormwater runoff pollution threatens Chesapeake Bay and its rivers and streams...Polluted runoff is one of the most harmful sources of pollution to the Bay and its waters. And much of it starts right in the urban and suburban neighborhoods where we live." <https://www.cbf.org/issues/polluted-runoff/index.html#:~:text=Besides%20carrying%20pollutants%20that%20harm,them%20are%20placed%20in%20leopardy.>

If that is what runoff is doing to the Chesapeake Bay, the effects of runoff will be even more devastating to Keauhou Bay due to its size and fragility.

#### MANTA RAY HABITAT, CORAL REEF BLEACHING, & MARINE LIFE ~ THE DEVASTATING EFFECTS OF DEVELOPMENT ON THE OCEAN

Are there any reports in this EIS about what the impact to the coral, marine life, plankton especially zooplankton will be because of this development?

The studies below show that developments kill coral, and marine life. Zooplankton are part of this marine life and they are also killed and negatively affected. Zooplankton are food for manta rays. Manta rays are in Keauhou Bay every night to eat zooplankton, and are often seen here during the day as well.

Allowing this bay developed will also be a death sentence for many types of marine life including planktons. There is NO WAY to stop this from happening due to the fact that polluted runoff rain water from developments can't be fully stopped. This has been shown to happen in ALL coastal developments.

Please read the Scientific articles below.

It's Been Proven Developments Severely Pollute Nearby Waters

Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Coral Bleaching is occurring more frequently in Hawai'i. Across the Hawaiian Archipelago, coral bleaching has increased in frequency and severity since 1996. The last major bleaching event in 2014-2015 had catastrophic impacts state-wide..."

This was the third major bleaching episode in Hawai'i over the last 6 years. The frequency of these events is unprecedented in the archipelago. NOAA scientists and partners have determined that the key drivers of the bleaching were environmental factors (such as heat stress, depth, and surface light) and human impacts (sewage effluent and urban run-off). " <https://www.fisheries.noaa.gov/feature-story/cautionary-tale-2019-coral-bleaching-event-hawaii#:~:text=Coral%20bleaching%20is%20occurring%20more,had%20catastrophic%20impacts%20state%20wide.>

This article is by the Coral Reef Alliance here in Hawai'i. "An ecosystem under threat Hawai'i's reefs face major global and local threats including climate change, overfishing, and sediment and nutrient pollution caused by sewage and stormwater runoff..."

When it rains, flash floods carry stormwater and large amounts of sediment downstream to the ocean. Just offshore, once-thriving coral reefs are now struggling to survive." <https://coral.org/en/where-we-work/hawaiian-islands/#:~:text=Hawai%CA%BBi%20reefs%20face%20major%20global%20Hawai%CA%BBi%20waterways%20every%20day.>

This article states that runoff is a leading source in coral degradation. Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Land-based sources of pollution are a leading cause of coral reef degradation in the Main Hawaiian Islands. Water quality is impacted by urban runoff, failing sewage systems, unpaved roads, farms, land clearing, and development." [https://www.coris.noaa.gov/monitoring/status\\_report/docs/Hawaii\\_status\\_report\\_forweb.pdf](https://www.coris.noaa.gov/monitoring/status_report/docs/Hawaii_status_report_forweb.pdf)

This article is a Research Article by PLOS ONE and their motto is, "We're driving change in research integrity and publication ethics." This is some of their article information, "Coral taxonomy and local stressors drive bleaching prevalence across the Hawaiian Archipelago in 2019. ...

We found little evidence for acclimation by reefs to thermal stress in the main Hawaiian Islands. Moreover, our findings illustrate how detrimental effects of local anthropogenic stressors, such as tourism and urban run-off, may be exacerbated under high thermal stress. In light of the forecasted increase in severity and frequency of bleaching events, future mitigation of both local and global stressors is a high priority for the future of corals in Hawaii". <https://journals.plos.org/plosone/article?id=10.1371/journal.pone.0269068>

The coral all over Hawaii has had extremely high mortality rates, due to developments near ocean areas throughout the years, and development in Keauhou Bay will be devastating to the coral, reef fish, and all aquatic life there. Manta Rays need to eat 5 times their body weight in zooplankton daily. Their population will be severely affected should the plankton die. Please see the cited information below.

"SO, HOW MUCH PLANKTON DOES YOUR AVERAGE MANTA RAY EAT? 19,200,000. Nineteen million two hundred thousand, give or take a few thousand.

That is the number of plankton pieces a ten-foot manta ray must consume weekly to stay alive."

The above information was taken from Manta Ray Advocates <https://mantarayadvocates.com/how-much-plankton-do-mantas-eat/>

Coral reefs are known to be highly negatively impacted by developments because, "Impacts from land-based sources of pollution including coastal development...can impede coral growth and reproduction, disrupt overall ecological function, and cause disease and mortality in sensitive species." <https://oceanservice.noaa.gov/facts/coral-pollution.html#:~:text=impacts%20from%20land%2Dbased%20sources.and%20mortality%20in%20sensitive%20species.>

Article by Environmental Evidence, "Coastal development and runoff lead to sedimentation, which directly impacts coral recruitment, growth, mortality, and ecosystem services that coral reefs provide." <https://environmentalevidencejournal.biomedcentral.com/articles/10.1186/s13750-020-00200-0#:~:text=Coastal%20development%20and%20runoff%20lead.services%20that%20coral%20reefs%20provide.>

Developments can't fully stop polluting because runoff is from rain during development and after. Article by NOAA, "One of the most significant threats to reefs is pollution. Land-based runoff and pollution discharges can result from dredging, coastal development...This runoff may contain sediments, nutrients, chemicals, insecticides, oil and debris.

When some pollutants enter the water, nutrient levels can increase, promoting the rapid growth of algae and other organisms that can smother coral." [https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments.orgamisms%20that%20can%20smother%20corals.](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments.orgamisms%20that%20can%20smother%20corals.)

Another article by NOAA, "Coral reefs also are affected by leaking fuels, anti-fouling paints and coatings, and other chemicals that enter the water... (All of those are show up in every development project.)

Among the most damaging pollutants on coral reefs is sediment, which can remain suspended in the water or be deposited on the coral surface (i.e., turbidity and sedimentation, respectively) and can contain toxicants, pathogens, and nutrients, all of which impact coral growth, recruitment, and survival" [https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments.into%20the%20atmosphere%20within%20days.](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments.into%20the%20atmosphere%20within%20days.)

It's Been Proven Resort Developments KILL Marine Life

This article by MarinBIO states, "Zooplankton are also sensitive to their environment and like phytoplankton—a change in zooplankton concentration can indicate a subtle environmental change. Zooplankton are highly responsive to nutrient levels, temperatures, pollution, food that is not nutritious, levels of light, and increases in predation. As well as providing an essential link in the marine food chain (which is an understatement), the diversity of species, amount of biomass and abundance of zooplankton communities can be used to determine the health of an ecosystem..."

Here is another article that shocking shows that in a very short time, big changes can occur due to runoff. A development will hurt and kill plankton, by Frontiers in Marine Science, "Effects of an experimental terrestrial runoff on the components of the plankton food web in a Mediterranean coastal lagoon The main result observed in the present study was that the effects of the simulated terrestrial runoff spread along the plankton food web, significantly affecting all trophic levels of the natural plankton community studied. This occurred in a relatively short time considering that the experiment lasted less than three weeks. The lower light availability in the terrestrial runoff treatment compared to the control resulted in a net decrease of approximately one-third of Chl-a concentration and phytoplankton abundance over the entire experiment." <https://www.frontiersin.org/journals/marine-science/articles/10.3389/fmars.2023.1200757/full>

The ecosystem is fragile and interconnected as is stated in this article: "Zooplankton are also affected by levels of pH, heavy metals, calcium, and aluminum. Nutrients like nitrogen and phosphorus will affect the prey of zooplankton (like algae, protozoa and bacteria), indirectly affecting zooplankton survival. Scientists are still putting together pieces of the zooplankton puzzle. Some questions include how nutrient levels found in algae can influence the growth and behavior of zooplankton. Another question important to marine and human life is how toxins and pollution will affect this crucial link in the food chain" This information is in article by MarineBIO.

<https://www.marinebio.org/creatures/zooplankton/#:~:text=Zooplankton%20are%20also%20sensitive%20to%20light%2C%20and%20increases%20in%20predation.>

A research article by Environmental Research Laboratory, United States Environmental Protection Agency that discusses, "Toxic Effects of Pollutants on Plankton: There are four main sources of aquatic pollution: industrial wastes, municipal wastes, agricultural run-off, and accidental spillage. Non-point sources, such as automobile exhausts, add appreciable amounts of pollutants to air that may enter aquatic systems in rainfall or dry fall-out. These sources add pesticides, heavy metals, oil, petroleum products, and a large number of organic and inorganic compounds to water. Lakes and oceans serve as sinks for many pollutants. Plankton comprise a large portion of the living matter in natural waters and function in biogeochemical cycles. They are affected by pollutants, transfer them to sediments and other organisms, and function in their biological transformation."

[https://scope.dge.carnegiescience.edu/SCOPE\\_12/SCOPE\\_12\\_3.6\\_chapter12\\_257-274.pdf](https://scope.dge.carnegiescience.edu/SCOPE_12/SCOPE_12_3.6_chapter12_257-274.pdf)

All the above articles show that development of Keauhou Bay WILL hurt plankton life and marine life in the bay because pollutant runoff is inevitable and unavoidable during construction and afterwards. The manta ray food source will likely disappear. This will be devastating for the manta ray populations. Furthermore, if manta rays die or leave the area, the loss will in turn affect many lively hoods from locals on the island who depend on the manta ray tour for their income.

#### HUMAN POPULATION INCREASES LINKED DIRECTLY TO CORAL DEATH

Does EIS have any reports on their resort adding to the population increase that happens during IRONMAN?

"On average, each Ironman racer brings three people with them to the Big Island. Counting members of the media, VIPs who come from around the globe to watch and the triathlons partners, there likely be more than 6,300 people descending on Kona..." <https://bigislandnow.com/2023/10/07/ironman-2023-in-kona-shines-spotlight-on-some-of-best-women-triathletes-in-the-world/>

And "Resident dissatisfaction with tourists is multifaceted: The overwhelming majority (92%) of locals felt visitors were not educated enough on protecting Hawaii's natural environment and local resources; other factors include the impact of the vacation rental industry and ignorance of the residents' quality of life." <https://www.triathlete.com/culture/news/kona-locals-ask-ironman-visitors-for-respect/>

Where are the EIS reports on human density? Below are reports that show human population destroys coral reefs.

"The number of people living on the coasts has rapidly increased in recent decades, causing significant development of coastal areas. Coastal development can negatively impact the ocean through the destruction of coastal marine habitat and through run-off of sediments and pollution.

-Coastal development involves activities such as the creation of harbors, stabilization of shorelines, and aquaculture that involve the destruction of sensitive marine habitats such as mangroves, coral reefs, and seagrass beds.

-Coastal development may cause the run-off of sediments into coastal habitats, which can smother corals or seaweeds and reduce the amount of light available for photosynthesis. Losses of primary producers and important habitat-forming species such as corals can negatively impact entire food webs."

The above information was taken from the Education Development Center, INC, from their Coastal Development page called Ocean Tracks <https://oceantracks.org/library/human-impacts/coastal-development#:~:text=Coastal%20development%20may%20cause%20the,negatively%20impact%20entire%20food%20webs.>

There is nothing Kamehameha Schools can do to their development that can stop the guests of this possible Bungalow Resort from going to Keauhou Bay. Human traffic WILL seriously increase if this resort is allowed to be built and the marine life will be negatively affected by it. Marine life will suffer from this development as stated in this letter in many different scientific reported articles.

If you allow this resort the amount of people in this bay will fully increase and, "Hawaii's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally, management of the resource should balance the needs of different user groups, but the welfare of the marine environment on which its inhabitants depend must be the most important consideration." This was taken from Hawaii's own Division of Aquatic Resources <https://dlnr.hawaii.gov/dar/marine-managed-areas/hawaii-marine-life-conservation-districts/#:~:text=Snorkeling%20and%20SCUBA%20diving%20are,effect%20on%20nearshore%20fish%20populations.>

It's Been Proven an Increase in Human Population Destroys Coral Reefs

If a Bungalow Resort is allowed to be built in Keauhou Bay, it will bring a serious increase in human traffic. "Easily visible trends in human population dynamics combined with well-established and tested ecological theory give a clear, intuitive, yet quantifiable guide to the severity of survival challenges faced by coral reefs. Management challenges and required actions can be clearly shown and, contrary to frequent claims, no scientific ambiguity exists with regard to the serious threat posed to coral reefs by humankind's continued numerical increase." This is in the article by National Library of Medicine National center for Biotechnology Information PubMed.

<https://pubmed.ncbi.nlm.nih.gov/33293007/#:~:text=Denser%20coastal%20populations%20and%20grater,to%20more%20runoff%20and%20siltation.>

This article is by ABC NEWS, "This is how tourists are destroying coral reefs in Hawaii. The less people at a certain site, the more coral there are, the research found. The millions of tourists who flock to the shores of Hawaii every year are wreaking havoc on its natural environment -- especially the coral reefs, which are at risk all over the world, a new study said. The most popular coral reefs on the Hawaiian islands are likely being degraded by the very visitors they attract, according to a study published Monday in Nature Sustainability." <https://abcnews.go.com/US/hawaiian-coral-reefs-degrading-popular-tourist-sites->

<https://abcnews.go.com/US/hawaiian-coral-reefs-degrading-popular-tourist-sites-scientists/story?id=96308858#:~:text=The%20less%20people%20at%20a,there%20are%2C%20the%20research%20found.&text=The%20millions%20of%20tourists%20who,world%2C%20a%20new%20stud>

Please read the below articles that prove Big Island does not have the resources or infrastructure for a 143-Unit Bungalow Resort Development at Keaunoh Bay. On Hawai'i Island, we are already struggling to meet the increasing need for resources and infrastructure.

Big Island Now poll No. 27 results: More than one solution needed to help extend life of West Hawai'i landfill

September 17, 2023

The West Hawai'i Sanitary Landfill, the only remaining landfill on the Big Island, is forecast to reach capacity within the next 20 to 25 years.

The West Hawai'i landfill became the island's only one after the Hilo Landfill closed three years ago. It only has about 20 to 25 years left before it can no longer be used to store rubbish.

<https://bigislandnow.com/2023/09/17/big-island-now-poll-no-27-results-more-than-one-solution-needed-to-help-extend-life-of-west-hawaii-landfill>

A County commission drafts ordinance aiming to ban recyclables at West Hawai'i landfill

By Megan Moseley September 6, 2023

Hawai'i County's Environmental Management Commission is developing an ordinance that aims to prohibit the amount of recyclable materials ending up in the island's only working landfill.

During a commission meeting on July 26, Ramzi Mansour, Hawai'i County Director of Environmental Management, told commissioners the West Hawai'i Sanitary Landfill only has 20 to 25 years left before it reaches capacity.

With the Hilo Landfill permanently closed in 2020, the clock is ticking for the island's sole dump. Commission chairperson Georjean Adams said it's a good time to start looking into solutions.

Adams said the proposed ordinance is in its early stages and is more about getting the conversation started about how to prevent unnecessary, or recyclable items — green waste, metals, plastics, paper, paperboard and glass — from ending up in the rubbish dump, located off Queen Ka'ahumanu Highway in Waikōloa.

"Trying to site a new landfill is close to impossible," Adams said. "So what are we going to do? So I was looking around, and the commission agreed, to look deeply into the idea of diverting the recyclables out and at least slow the filling up of the landfill."

The proposed ordinance refers to the 2019 Integrated Solid Waste Management Plan that commits the county to "divert, as much as feasible, commercial and municipal solid waste, including but not limited to green waste, metals, plastics, paper, paperboard, and glass to help achieve goals related to climate resiliency, renewable energy, sustainable agriculture, and zero waste."

By allowing this development you are stressing an already fragile Eco-system. The small bay is currently used by many locals for boating, fishing, canoeing, paddle boarding, snorkeling, manta night dives, surfing, and swimming. We know, and research shows, that more people cause more damage. The area simply cannot afford or support this development.

"Denser coastal populations and greater wealth will lead to reef degradation by coastal construction. Denser populations inland will lead to more runoff and siltation. Effects of human perturbations can be explored with meta-population theory since they translate to increases in patch-mortality and decreases in patch-colonization (= regeneration). All such changes will result in a habitat with overall fewer settled patches, so fewer live reefs." This information was taken from Science Direct <https://www.sciencedirect.com/science/article/abs/pii/S0065288120300328#:~:text=Aquaculture,%20will%20alleviate%20some%20fishing,to%20more%20runoff%20and%20siltation.>

Another article by Nature Sustainability, "Coral reefs and coastal tourism in Hawaii Coral reefs are popular for their vibrant biodiversity. By combining web-scraped Instagram data from tourists and high-resolution live coral cover maps in Hawaii, we find that, regionally, coral reefs both attract and suffer from coastal tourism. Higher live coral cover attracts reef visitors, but that visitation contributes to subsequent reef degradation. Such feedback loops threaten the highest quality reefs, highlighting both their economic value and the need for effective conservation management."

[https://www.nature.com/articles/s41893-022-01021-4.epdf?sharing\\_token=wsakqNhaHhJAnWAg453RnG0JAiWei9inR3ZoIv0PvGzA5lc\\_H0Q1zeHNIP3ASnhcgkRy6\\_vkLpW49dbmBYoXsg3Y1MgQIGBzsapdGUHj7O1SIbuw9x5Pr3xED4kxI4IOsIVgQ1a7ZRR3UbraxpodJd2AoNlSmW5uxB7JjEDdpJ8OGJpx71TIWqCfXvFKlZVeNdcJssw\\_dnaUjg5ZlhcjPBDImmaH5yqI5Q%3D&tracking\\_referrer=abcnews.go.com](https://www.nature.com/articles/s41893-022-01021-4.epdf?sharing_token=wsakqNhaHhJAnWAg453RnG0JAiWei9inR3ZoIv0PvGzA5lc_H0Q1zeHNIP3ASnhcgkRy6_vkLpW49dbmBYoXsg3Y1MgQIGBzsapdGUHj7O1SIbuw9x5Pr3xED4kxI4IOsIVgQ1a7ZRR3UbraxpodJd2AoNlSmW5uxB7JjEDdpJ8OGJpx71TIWqCfXvFKlZVeNdcJssw_dnaUjg5ZlhcjPBDImmaH5yqI5Q%3D&tracking_referrer=abcnews.go.com)

#### INFRASTRUCTURE AND RESOURCES ON AN ISLAND ALREADY HIGHLY IMPACTED AND STRUGGLING FOR ANSWERS

Has the EIS done any research or reports on the Resources and Infrastructure it will need for a bungalow resort?

There are many big housing developments currently under construction in Kailua Kona, Waikōloa Village, Hilo, Puna, Ocean View and Volcano. The entire Big Island has construction projects already in progress.

Has Kamehameha Schools EIS done any kind of reports or surveys to know if Big Island has the Resources and Infrastructures for their resort development?

"Hotel waste management refers to all the practices and processes that hotels implement to handle and dispose of the multiple types of waste generated on their premises. Worldwide, hotels produce almost 300,000 tonnes of waste each year." <https://www.homebiogas.com/blog/hotels-waste-management/>

As of now, the Big Island's Resources and Infrastructure are having serious negative issues and many more developments that have been approved are not even completed as of yet, which means our island's resources and infrastructure will be taxed even more severely in the near future.

<https://bigislandnow.com/2023/09/06/new-draft-ordinance-aims-to-ban-recyclables-at-west-hawaii-landfill>

#### Time's Up For Landfills

'Gentle' demolition strategies can help preserve resources

PAULA BENDER April 2, 2024

As Hawai'i government officials grapple with the challenge of limited landfill space statewide, federal restrictions set in place by the Environmental Protection Agency are ruling out possible locations that were once considered for new landfills.

Hawaii Act 73 states landfills must be located at least half a mile from residential areas; are prohibited from being located in areas with heavy rain and steep slopes, as well as agricultural and/or conservation lands; above aquifers; 300 feet beyond streams; and 1,000 feet beyond the ocean.

New landfills are also now prohibited from being created in tsunami inundation zones, 100-year flood zones and wetlands. There are also concerns that landfills near airports will attract birds, resultin

To Whom It May Concern,

Please read the scientific proof in this letter and REJECT Kamehameha Schools Environment Impact Statement (EIS) for Keaouhou Bay to become a Bungalow Resort.

Please state in your report that a Bungalow Resort WILL have a SERIOUS NEGATIVE IMPACT on Keaouhou Bay as stated in all the different researched articles below.

Please, DO NOT risk polluting the water in Keaouhou Bay by allowing Kamehameha Schools to develop their bungalow resort project. It is scientifically proven that developments pollute nearby waters both during and after development.

Below are scientific articles written by the National Oceanic and Atmospheric Administration (NOAA), Global Coral Reef Alliance, Hawaii Government, and many other professional organizations, that have studied and shown that developments have ALWAYS polluted the water in EVERY coastal development area.

Does this EIS (Environmental Impact Statement) have any kind of reports and studies on how the endangered species and marine life will handle the extra pollution due to development, and the golf course runoff? Keaouhou Bay is their habitat and this development WILL be CHANGING an Entire Ecosystem.

ENDANGERED SPECIES CONSERVATION IMPACTED BY DEVELOPMENT

In the Endangered Species Act of 1973 Under Section 2 (b), "To provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved." This would be Keaouhou Bay.

The Green Sea Turtle swims in Keaouhou Bay weekly and the monk seal has also been seen swimming and resting in Keaouhou Bay. Both of these marine animals are on the endangered species list.

Endangered Species Act

"Section 2. Findings, Purposes, and Policy

(4) the United States has pledged itself as a sovereign state in the international community to conserve to the extent practicable the various species of fish or wildlife and plants facing extinction, pursuant to—

(b) PURPOSES.—The purposes of this Act are to provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved, to provide a program for the conservation of such endangered species and threatened species, and to take such steps as may be appropriate to achieve the purposes of the treaties and conventions set forth in subsection (a) of this section."

This was taken from <https://www.fisheries.noaa.gov/national/andangered-species-conservation/andangered-species-act>

FEDERALLY PROTECTED GREEN SEA TURTLES WILL BE AFFECTED

The green sea turtle is federally protected and can be seen in Keaouhou Bay weekly.

The following article that states: "POLLUTED RUNOFF IN HAWAII ENDANGERS GREEN SEA TURTLES"

Why does Hawaii have a runoff problem?

Historically, in the tropics of Hawaii, precipitation was absorbed into the soil, according to the Clean Water Branch of Hawaii's Department of Health. Any potential pollution or contaminants on the ground surface would get pushed into the soil by the rain, and plant roots and microbes would help break down the pollution into less dangerous components. However, with urban and agricultural development, less and less of the pollution gets pulled into the soil, and more of it gets washed out into storm drains. From there, the pollutants make their way to streams, rivers and the ocean that surrounds Hawaii. According to the state agency, most of these contaminants are nutrients from fertilizer, bacteria from animal waste, oil, garbage and yard waste...

If polluted runoff reaches the ocean, it can wreak havoc on marine life, including endangered green sea turtles." Taken from <https://www.chemservice.com/news/polluted-runoff-in-hawaii-endangers-green-sea-turtles/>

Allowing this development WILL POLLUTE Keaouhou Bay. The above article, written in 2014 (because runoff water from developments were polluting the ocean even then!!!) states this fact clearly. Keaouhou

Bay is home to countless sea creatures such as the protected green sea turtle, spotted eagle rays, manta rays, octopus, dolphins, fish, coral, monk seals, and more and that will ALL be harmed by the severe pollution runoff that WILL happen because developments have been shown to ALWAYS pollute the water is that is nearby.

The Green Sea Turtle is protected by more than one law. "All sea turtles in Hawai'i are protected by the Endangered Species Act (ESA) and additionally protected by Hawai'i Revised Statutes Chapter 195D (HRS) and Hawai'i Administrative Rules (HAR) 13-124." This information was taken from this site <https://dlnr.hawaii.gov/dar/species/sea-turtles/>

#### THE ENDANGERED MONK SEAL WILL BE AFFECTED

Keaouhou Bay is known as a RESTING AREA for the ENDANGERED MONK SEAL. If another resort is allowed to be built, in addition to the pollution, it will also bring a lot more people down to Keaouhou Bay. This increases the chances of a resting monk seal being disturbed by humans trying to get close, take "selfie" photos, and being generally uninformed and harmful. Please see article on Selfie Culture and its harmful effects below.

Has the EIS done any research on what an increased population would do in such a small area, and what will happen to the endangered species that live there? With a significantly increased population their habitat of Keaouhou Bay will likely be changed forever.

This information is from a NOAA Scientist: "Study shows selfie culture impacts how people behave when posting images of an endangered species on social media. There's a seal on the beach! Let's go get a 'selfie'!" That must have been what nearly 18 percent of people on Instagram thought before approaching an endangered species.

In a recent study, NOAA scientists used social media to monitor human activities around endangered Hawaiian monk seals. They discovered that human disturbance is more common than they thought." <https://www.fisheries.noaa.gov/feature-story/endangered-hawaiian-monk-seals-cry-foul-over-selfies>

NOAA clearly states a high population in a place where monk seals and sea turtles habitat can be a serious disturbance for these endangered species.

"Hawaiian monk seals are protected federally by the ESA and the Marine Mammal Protection Act (MMPA), as well as locally by Hawai'i Revised Statutes (HRS) Chapter 195D and Hawai'i Administrative Rules (HAR) 13-124." This was taken from <https://dlnr.hawaii.gov/dar/hawaiian-monk-seal/>

Keaouhou Bay is the monk seals and the green sea turtle's habitat. Allowing a bungalow resort to be developed in Keaouhou Bay, the habitat of these endangered species, is to threaten their life and habitat with golf course runoff pollution, as well as development pollution. By threatening their habitat, and hence their lives, this development goes completely against the Endangered Species Act of 1973.

The verbiage in the Endangered Species Act states, "to conserve". In this case, "to conserve" would be to protect the land around Keaouhou Bay from developments that destroy the habitat of these endangered species with pollution and runoff.

Does this EIS have any reports on the endangered species that frequent Keaouhou Bay? This is their habitat and it needs to be "conserved".

Under the Conservation Program there should be research done on endangered species and their associated ecosystems. A large bungalow resort development WILL FOREVER CHANGE THIS ECOSYSTEM.

"§ 195D-5 Conservation programs. (a) The department shall conduct research on indigenous aquatic life, wildlife, and land plants, and on endangered species and their associated ecosystems, and shall utilize the land acquisition and other authority vested in the department to carry out programs for the conservation, management, and protection of such species and their associated ecosystems." [https://www.capitol.hawaii.gov/hrscurrent/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hrscurrent/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm)

Also, under this same Conservation program, "(2) Taking such action as may be necessary to ensure that actions authorized, funded, or carried out by them do not jeopardize the continued existence of threatened or endangered species." [https://www.capitol.hawaii.gov/hrscurrent/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hrscurrent/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm)

Please consider that developing a Kamehameha Schools Bungalow Resort in Keaouhou Bay WILL threaten endangered species due to the unavoidable development and golf course pollution runoff that would be caused by removing the all the trees that currently serving as a natural pollution filter, and replacing the land with housing, cars, humans, and waste. There would also be tremendous runoff damage into Keaouhou Bay and the surrounding area during the building phase of this enormous project.

#### GOLF COURSE POLLUTION KILLS MARINE LIFE AND DRASTICALLY CHANGES ECOSYSTEMS

"The golf industry uses approximately 50 pesticide active ingredients, including chlorpyrifos—an insecticide that is banned for residential use by the EPA due to developmental hazards. Having to trim golf turf to low heights also makes it even more vulnerable to pests, which leads to more pesticide use." <https://rainorshinegolf.com/pages/the-environmental-impact-of-golf-courses>

These pesticides will be in the pollution runoff that will enter Keaouhou Bay more severely should the natural habitat of the trees be removed and replaced with pavement. This is unavoidable!

Please read from Wikipedia, "Most drains have a single large exit at their point of discharge (often covered by a grating) into a canal, river, lake, reservoir, sea or ocean. Other than catch basins, typically there are no treatment facilities in the piping system." [https://en.wikipedia.org/wiki/Storm\\_drain#:~:text=Most%20drains%20have%20a%20single,discharge%20into%20individual%20dry%20wells](https://en.wikipedia.org/wiki/Storm_drain#:~:text=Most%20drains%20have%20a%20single,discharge%20into%20individual%20dry%20wells)

The pavement from this development will cause pollution to runoff into Keauhou Bay because this treed land that will become a housing development is situated directly between the golf course and the Bay. These trees, which absorb all the pollution from the golf course is the BEST AND ONLY PROTECTION POLLUTION FILTER Keauhou Bay has from the golf course pesticides, fertilizer and weed killer. See the below paragraph for further references.

See page 2 at: <https://health.hawaii.gov/epp/files/2013/09/Stormwater-MS4-Presentation-HEE-7.15.14.pdf> where the Hawai'i government states that Natural Ground Cover has 10% runoff, where has development has 55% runoff. So, even if you have storm drains the pavement this development will create will cause more runoff into Keauhou Bay than the Natural Ground Cover that is has now, that has been protecting the bay from golf course pollution for years.

These trees and land are saving monk seals and green sea turtles habitat from the golf course pollution and this land MUST BE PRESERVED and CONSERVED as the natural protector for Keauhou Bay and for these endangered species habitat.

Under Section 2 (b) of the Endangered Species Act - Keauhou Bay MUST BECOME A CONSERVATION AREA for these endangered species. It is currently their habitat, and to allow a large resort development to be built above this bay clearly threatens the lives of these endangered species by allowing golf course toxic pollution and development pollution to run into these species natural habitat of Keauhou Bay.

#### ALGAE BLOOMS KILL CORAL AND MARINE LIFE

The trees that are slated to be cleared for the development further protect Keauhou Bay from algae blooms that have been proven to be caused by pollution that is runoff from fertilizer and weed killer.

When there is heavy rain the land above the bay has a greater runoff than normal. Without the trees, the runoff from the golf course pollution will pour into the Bay likely causing frequent algae blooms.

Algae blooms have been shown to kill coral and marine life as stated in the many articles that will follow.

One of these articles is from the Global Coral Reef Alliance. They have researched the effects on reefs before and after a golf course developments. Though this development is not a golf course development, it is located just below a golf course and exposes the bay to the pollution from the golf course by removing the proven natural filter of the trees and natural ecosystem.

Has this EIS done any kind of research about the algae blooms that happen after a serious storm because of the golf course runoff pollution?

This information was taken from Global Coral Reef Alliance and it is an actual study on the how coral and marine life are affected before and after development. It's titled, "Golf courses kill coral reefs and fisheries: harmful algae blooms and disease cause by nutrient runoff from golf course development on Guana Cay, Abaco, Bahamas

Introduction: Bahamas coral reef deterioration

This study is thought the first ever to evaluate the health of coral reef ecosystems and fisheries before and after a golf course development. The vast majority of corals have died from a combination of factors including global warming, new diseases, land-based sources of pollution. . . "

<https://www.globalcoral.org/golf-courses-kill-coral-reefs-and-fisheries-harmful-algae-blooms-and-disease-caused-by-nutrient-runoff-from-golf-course-development-on-guana-cay-abaco-bahamas/>

If you allow a Bungalow Development in Keauhou Bay you WILL be agreeing to pollute this bay for years to come and COMPLETELY CHANGING and possibly DESTROYING KEAHOOU BAY'S ECOSYSTEM.

Another study by the Coral Reef Alliance titled, "Golf course fertilizer runoff causes nutrient enrichment leading to harmful algae blooms on a Bahamian coral reef.

"... After construction new algae blooms appeared nearest the golf course green, smothering corals in adjacent reefs, along with sharply increased coral diseases..." <https://www.globalcoral.org/golf-course-fertilizer-runoff-causes-nutrient-enrichment-leading-to-harmful-algae-blooms-on-a-bahamian-coral-reef>

Does this EIS have any studies or reports on the extra runoff pollution due to clearing land and adding pavement?

This needs to be fully assessed because you will be changing an entire ecosystem to build a bungalow resort. It rains in Keauhou Bay many nights out of the year and this kind of pollution will kill the beautiful and necessary coral in the Bay.

FURTHERMORE: "If there are toxic algal blooms, like red tide, or man-made contaminants, like pesticides or detergents in the water, those toxins are contained within the bubbles of sea foam. When those bubbles pop, the toxins can become airborne and compromise the air that is breathed in that location." <https://oceanconservancy.org/blog/2023/03/31/what-sea-foam/>

#### ENGINE POLLUTION CAUSES ISSUES IN THE OCEAN

Does this EIS have any detailed traffic studies for the increase in cars that will be added to this already severely traffic area they want to build their 150 room bungalow resort in? Have they done any studies on the pollution these cars WILL have in Keauhou Bay?

Because this Bungalow Resort could have over 150 extra cars and over 300 or more extra people in and out of Keauhou Bay, what traffic and increased population studies have they done? There will be employees with cars, guests with cars, visitors with cars. At times this would range to over 200 cars (likely more), coming in and out of, and parking above Keauhou Bay thereby causing serious car population issues because of all these added cars right next to the bay.

The article below is from NOAA regarding motor vehicle engines and pollution to the sea.

What is the biggest source of pollution in the ocean?

Most ocean pollution begins on land.

The above information was taken from the Ocean Conservation Trust <https://oceanconservationtrust.org/ocean-advocacy/think-ocean/ways-to-think-ocean/>

How Does Noise Pollution Harm Marine Species?

"However, over the past few decades, noise pollution in the marine environment has increased dramatically and is threatening the natural soundscape of the marine environment. Ships, seismic surveys, explosions, construction, and sonar devices have made the once peaceful environment into a loud, chaotic home which is extremely damaging for marine wildlife. This type of pollution is often overlooked in comparison to others but its impacts are now being documented across all types of marine ecosystems." <https://earth.org/noise-pollution-in-the-ocean/>

If you allow this resort the amount of people in this bay will fully increase and, "Hawaii's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally, management of the resource should balance the needs of different user groups, but the welfare of the marine environment on which its inhabitants depend must be the most important consideration." This was taken from Hawaii's own Division of Aquatic Resources <https://dlnr.hawaii.gov/dar/marine-managed-areas/hawaii-marine-life-conservation-districts/#:~:text=Snorkeling%20and%20SCUBA%20diving%20are,effect%20on%20nearshore%20fish%20populations.>

What is ocean noise?

"Ocean noise refers to sounds made by human activities that can interfere with or obscure the ability of marine animals to hear natural sounds in the ocean.

Many marine organisms rely on their ability to hear for their survival. Sound is a highly efficient means of communication underwater and is the primary way that many marine species gather and understand information about their environment. Many aquatic animals use sound to find prey, locate mates and offspring, avoid predators, guide their navigation and locate habitat, as well as to listen and communicate with each other.

Over the last century, human activities such as shipping, recreational boating, and energy exploration have increased along our coasts, offshore, and deep ocean environments. Noise from these activities can travel long distances underwater, leading to increases and changes in ocean noise levels in many coastal and offshore habitats.

These rising noise levels can negatively impact ocean animals and ecosystems. Higher noise levels can reduce the ability of animals to communicate with potential mates, other group members, their offspring, or feeding partners. Noise can also reduce an ocean animal's ability to hear environmental cues that are vital for survival, including those key to avoiding predators, finding food, and navigating to preferred habitats." <https://oceanservice.noaa.gov/facts/ocean-noise.html>

"Millions of motor vehicle engines drop small amounts of oil each day onto roads and parking lots. Much of this, too, makes its way to the sea.

Some water pollution actually starts as air pollution, which settles into waterways and oceans. Dirt can be a pollutant. Top soil or silt from fields or construction sites can run off into waterways, harming fish and wildlife habitats."

<https://oceanservice.noaa.gov/facts/pollution.html#:~:text=Millions%20of%20motor%20vehicle%20engines,Dirt%20can%20be%20a%20pollutant.>

Land-Based Runoff Remains Top Source of Oil in the Ocean, Says New Report Oil in the Sea: Inputs, Fates, and Effects

News Release September 28, 2022

WASHINGTON — Oil in runoff, primarily from cities and vehicles, is the top source of oil entering the ocean, says a new report from the National Academies of Sciences, Engineering, and Medicine. In North American waters, estimated ocean oil pollution from land-based runoff is up to 20 times higher than it was 20 years ago, and oil spills, natural oil seeps, and discharge from oil and gas operations remain major sources of pollution. The report recommends actions that government and others should take to minimize oil pollution, and calls for sustained research funding to better understand how oil reaches and affects ocean environments. <https://www.nationalacademies.org/news/2002/05/oil-in-the-sea-inputs-fates-and-effects#:~:text=WASHINGTON%20%2D%20Nearly%2085%20percent,pipe,line%20spills%2C%20sands%20a%20news>

The Impact Of Stormwater – Car Emissions

"Car emissions are not limited to exhaust fumes that contribute to air pollution. They can also leak automotive fluid and release heavy metals that can contribute to stormwater pollution, contaminating local waterways." <https://www.stormwatershedpheds.org.au/blog/the-impact-of-stormwater-car-emissions/>

NOISE POLLUTION'S HARMFUL EFFECT ON MARINE LIFE

Does this EIS have any reports on the noise pollution that will happen and what it could do to marine life in Keaouhou Bay during development?

Because if you allow this Bungalow Resort to be developed you will increase constant noise in this bay for years to come and, "Noise Pollution Research shows that underwater noise from construction, shipping and naval vessels significantly impacts the natural behavior of cetaceans and many other marine species. This can be seen when mass beaching events occur or breeding success is diminished."

## LEARN FROM OTHERS:

### RUN-OFF FROM DEVELOPMENT KILLS

The Chesapeake Bay has a foundation that is trying to save their bay due to runoff pollution that was caused by developments. Chesapeake Bay is a lot bigger than Keaouhou Bay. If it's being drastically hurt by runoff water from developments, Keaouhou Bay waters won't stand a chance if development above the bay is allowed. Keaouhou Bay is a much smaller ecosystem.

This Article is by the Chesapeake Bay Foundation, Saving a National Treasure states, "...runoff is a significant source of harmful nitrogen pollution that continues to grow..."

As rainwater and snowmelt run off our streets, parking lots, lawns, and other surfaces, they pick up pet waste, pesticides, fertilizer, oil, and other contaminants. If the draining water doesn't evaporate or soak into the ground where it can be filtered, it flushes straight into local creeks, rivers, and the Chesapeake Bay, adversely affecting water quality and aquatic life.

Only 10 to 20 percent of rain that falls in forests, fields, and other natural areas runs off, with the rest absorbed by soil and plants, where it is filtered before reaching aquifers or local waterways. (Right now Keaouhou Bay has a lot of trees and is very natural, this is what helps stop runoff.) By contrast, close to 100 percent of the rain that falls on concrete and other hard surfaces produces runoff. One inch of rain falling on an acre of hardened surface produces 27,000 gallons of runoff.

Stormwater runoff pollution threatens Chesapeake Bay and its rivers and streams...Polluted runoff is one of the most harmful sources of pollution to the Bay and its waters. And much of it starts right in the urban and suburban neighborhoods where we live." <https://www.cbf.org/issues/polluted-runoff/index.html#:~:text=Besides%20carrying%20pollutants%20that%20harm,them%20are%20placed%20in%20jeopardy.>

If that is what runoff is doing to the Chesapeake Bay, the effects of runoff will be even more devastating to Keaouhou Bay due to its size and fragility.

### MANTA RAY HABITAT, CORAL REEF BLEACHING, & MARINE LIFE ~ THE DEVASTATING EFFECTS OF DEVELOPMENT ON THE OCEAN

Are there any reports in this EIS about what the impact to the coral, marine life, plankton especially zooplankton will be because of this development?

The studies below show that developments kill coral, and marine life. Zooplankton are part of this marine life and they are also killed and negatively affected. Zooplankton are food for manta rays. Manta rays are in Keaouhou Bay every night to eat zooplankton, and are often seen here during the day as well.

Allowing this bay developed will also be a death sentence for many types of marine life including planktons. There is NO WAY to stop this from happening due to the fact that polluted runoff rain water from developments can't be fully stopped. This has been shown to happen in ALL coastal developments.

Please read the Scientific articles below.

55

### It's Been Proven Developments Severely Pollute Nearby Waters

Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Coral Bleaching is occurring more frequently in Hawaii. Across the Hawaiian Archipelago, coral bleaching has increased in frequency and severity since 1996. The last major bleaching event in 2014-2015 had catastrophic impacts state-wide..."

This was the third major bleaching episode in Hawaii over the last 6 years. The frequency of these events is unprecedented in the archipelago. NOAA scientists and partners have determined that the key drivers of the bleaching were environmental factors (such as heat stress, depth, and surface light) and human impacts (sewage effluent and urban run-off). " <https://www.fisheries.noaa.gov/feature-story/cautionary-tale-2019-coral-bleaching-event-hawaii#:~:text=Coral%20bleaching%20is%20occurring%20more,hard%20catastrophic%20impacts%20state%20wide.>

This article is by the Coral Reef Alliance here in Hawaii. "An ecosystem under threat Hawaii's reefs face major global and local threats including climate change, overfishing, and sediment and nutrient pollution caused by sewage and stormwater runoff..."

When it rains, flash floods carry stormwater and large amounts of sediment downstream to the ocean. Just offshore, once-thriving coral reefs are now struggling to survive." <https://coral.org/en/where-we-work/hawaiian-islands/#:~:text=Hawai%CA%BBi%20reefs%20face%20major%20global,into%20Hawai%CA%BBi%20waterways%20every%20day.>

This article states that runoff is a leading source in coral degradation. Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Land-based sources of pollution are a leading cause of coral reef degradation in the Main Hawaiian Islands. Water quality is impacted by urban runoff, failing sewage systems, unpaved roads, farms, land clearing, and development." [https://www.coris.noaa.gov/monitoring/status\\_report/docs/Hawaii\\_status\\_report\\_forweb.pdf](https://www.coris.noaa.gov/monitoring/status_report/docs/Hawaii_status_report_forweb.pdf)

This article is a Research Article by PLOS ONE and their motto is, "We're driving change in research integrity and publication ethics." This is some of their article information, "Coral taxonomy and local stressors drive bleaching prevalence across the Hawaiian Archipelago in 2019..."

We found little evidence for acclimation by reefs to thermal stress in the main Hawaiian Islands. Moreover, our findings illustrate how detrimental effects of local anthropogenic stressors, such as tourism and urban run-off, may be exacerbated under high thermal stress. In light of the forecasted increase in severity and frequency of bleaching events, future mitigation of both local and global stressors is a high priority for the future of corals in Hawaii." <https://journals.plos.org/plosone/article?id=10.1371/journal.pone.0269068>

The coral all over Hawaii has had extremely high mortality rates, due to developments near ocean areas throughout the years, and development in Keaouhou Bay will be devastating to the coral, reef fish, and all aquatic life there. Manta Rays need to eat 5 times their body weight in zooplankton daily. Their population will be severely affected should the plankton die. Please see the cited information below.

56

"SO, HOW MUCH PLANKTON DOES YOUR AVERAGE MANTA RAY EAT? 19,200,000. Nineteen million two hundred thousand, give or take a few thousand.

That is the number of plankton pieces a ten-foot manta ray must consume weekly to stay alive."

The above information was taken from Manta Ray Advocates <https://mantarayadvocates.com/how-much-plankton-do-mantas-eat/>

Coral reefs are known to be highly negatively impacted by developments because, "Impacts from land-based sources of pollution including coastal development,...can impede coral growth and reproduction, disrupt overall ecological function, and cause disease and mortality in sensitive species."

<https://oceanservice.noaa.gov/facts/coral-pollution.html#:~:text=impacts%20from%20land%2Dbased%20sources.and%20mortality%20in%20sensitive%20species.>

Article by Environmental Evidence, "Coastal development and runoff lead to sedimentation, which directly impacts coral recruitment, growth, mortality, and ecosystem services that coral reefs provide." <https://environmentalevidencejournal.biomedcentral.com/articles/10.1186/s13750-020-00200-0#:~:text=Coastal%20development%20and%20runoff%20lead.services%20that%20coral%20reefs%20provide.>

Developments can't fully stop polluting because runoff is from rain during development and after. Article by NOAA, "One of the most significant threats to reefs is pollution. Land-based runoff and pollution discharges can result from dredging, coastal development...This runoff may contain sediments, nutrients, chemicals, insecticides, oil and debris.

When some pollutants enter the water, nutrient levels can increase, promoting the rapid growth of algae and other organisms that can smother coral." [https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments.organisms%20that%20can%20smother%20corals.](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments.organisms%20that%20can%20smother%20corals.)

Another article by NOAA, "Coral reefs also are affected by leaking fuels, anti-fouling paints and coatings, and other chemicals that enter the water... (All of those are show up in every development project.)

Among the most damaging pollutants on coral reefs is sediment, which can remain suspended in the water or be deposited on the coral surface (i.e., turbidity and sedimentation, respectively) and can contain toxicants, pathogens, and nutrients, all of which impact coral growth, recruitment, and survival" [https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days.](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days.)

It's Been Proven Resort Developments Kill Marine Life

This article by MarinBio states, "Zooplankton are also sensitive to their environment and like phytoplankton—a change in zooplankton concentration can indicate a subtle environmental change. Zooplankton are highly responsive to nutrient levels, temperatures, pollution, food that is not nutritious, levels of light, and increases in predation. As well as providing an essential link in the marine food chain (which is an understatement), the diversity of species, amount of biomass and abundance of zooplankton communities can be used to determine the health of an ecosystem...."

Here is another article that shocking shows that in a very short time, big changes can occur due to runoff. A development will hurt and kill plankton, by Frontiers in Marine Science, "Effects of an experimental terrestrial runoff on the components of the plankton food web in a Mediterranean coastal lagoon The main result observed in the present study was that the effects of the simulated terrestrial runoff spread along the plankton food web, significantly affecting all trophic levels of the natural plankton community studied. This occurred in a relatively short time considering that the experiment lasted less than three weeks. The lower light availability in the terrestrial runoff treatment compared to the control resulted in a net decrease of approximately one-third of Chl-a concentration and phytoplankton abundance over the entire experiment." <https://www.frontiersin.org/journals/marine-science/articles/10.3389/fmars.2023.1200757/full>

The ecosystem is fragile and interconnected as is stated in this article: "Zooplankton are also affected by levels of pH, heavy metals, calcium, and aluminum. Nutrients like nitrogen and phosphorus will affect the prey of zooplankton (like algae, protozoa and bacteria), indirectly affecting zooplankton survival. Scientists are still putting together pieces of the zooplankton puzzle. Some questions include how nutrient levels found in algae can influence the growth and behavior of zooplankton. Another question important to marine and human life is how toxins and pollution will affect this crucial link in the food chain" This information is in article by MarineBio. <https://www.marinebio.org/creatures/zooplankton/#:~:text=Zooplankton%20are%20also%20sensitive%20to.light%2C%20and%20increases%20in%20predation.>

A research article by Environmental Research Laboratory, United States Environmental Protection Agency that discusses, "Toxic Effects of Pollutants on Plankton: There are four main sources of aquatic pollution: industrial wastes, municipal wastes, agricultural run-off, and accidental spillage. Non-point sources, such as automobile exhausts, add appreciable amounts of pollutants to air that may enter aquatic systems in rainfall or dry fall-out. These sources add pesticides, heavy metals, oil, petroleum products, and a large number of organic and inorganic compounds to water. Lakes and oceans serve as sinks for many pollutants. Plankton comprise a large portion of the living matter in natural waters and function in biogeochemical cycles. They are affected by pollutants, transfer them to sediments and other organisms, and function in their biological transformation."

[https://scope.egge.carnegiescience.edu/SCOPE\\_12/SCOPE\\_12\\_3.6\\_chapter12\\_257-274.pdf](https://scope.egge.carnegiescience.edu/SCOPE_12/SCOPE_12_3.6_chapter12_257-274.pdf)

All the above articles show that development of Keauhou Bay WILL hurt plankton life and marine life in the bay because pollutant runoff is inevitable and unavoidable during construction and afterwards. The manta ray food source will likely disappear. This will be devastating for the manta ray populations. Furthermore, if manta rays die or leave the area, the loss will in turn affect many lively hoods from locals on the island who depend on the manta ray tour for their income.

HUMAN POPULATION INCREASES LINKED DIRECTLY TO CORAL DEATH

Does this EIS have any reports on their resort adding to the population increase that happens during IRONMAN?

"On average, each Ironman racer brings three people with them to the Big Island. Counting members of the media, VIPs who come from around the globe to watch and the triathlons partners, there likely be more than 6,300 people descending on Kona..." <https://bigislandnow.com/2023/10/07/ironman-2023-in-kona-shines-spotlight-on-some-of-best-women-triathletes-in-the-world/>

And "Resident dissatisfaction with tourists is multifaceted. The overwhelming majority (92%) of locals felt visitors were not educated enough on protecting Hawaii's natural environment and local resources; other factors include the impact of the vacation rental industry and ignorance of the residents' quality of life." <https://www.triathlete.com/culture/news/kona-locals-ask-ironman-visitor-s-for-respect/>

Where are the EIS reports on human density? Below are reports that show human population destroys coral reefs.

"The number of people living on the coasts has rapidly increased in recent decades, causing significant destruction of coastal areas. Coastal development can negatively impact the ocean through the destruction of coastal marine habitat and through run-off of sediments and pollution.

-Coastal development involves activities such as the creation of harbors, stabilization of shorelines, and aquaculture that involve the destruction of sensitive marine habitats such as mangroves, coral reefs, and seagrass beds.

-Coastal development may cause the run-off of sediments into coastal habitats, which can smother corals or seaweeds and reduce the amount of light available for photosynthesis. Losses of primary producers and important habitat-forming species such as corals can negatively impact entire food webs."

The above information was taken from the Education Development Center, INC, from their Coastal Development page called Ocean Tracks <https://oceantracks.org/library/human-impacts/coastal-development/#:~:text=Coastal%20development%20may%20cause%20the,negatively%20impact%20entire%20food%20webs.>

There is nothing Kamehameha Schools can do to their development that can stop the guests of this possible Bungalow Resort from going to Keauhou Bay. Human traffic WILL seriously increase if this resort is allowed to be built, and the marine life will be negatively affected by it. Marine life will suffer from this development as stated in this letter in many different scientific reported articles.

If you allow this resort the amount of people in this bay will fully increase and, "Hawaii's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally, management of the resource should balance the needs of different user groups, but the welfare of the marine environment on which its inhabitants depend must be the most important consideration." This was taken from Hawaii's own Division of Aquatic Resources <https://dlnr.hawaii.gov/dar/marine-managed-areas/hawaii-marine-life-conservation-districts/#:~:text=Snorkeling%20and%20SCUBA%20diving%20are,effect%20on%20nearshore%20fish%20populations.>

It's Been Proven an Increase in Human Population Destroys Coral Reefs

If a Bungalow Resort is allowed to be built in Keauhou Bay, it will bring a serious increase in human traffic. "Easily visible trends in human population dynamics combined with well-established and tested ecological theory give a clear, intuitive, yet quantifiable guide to the severity of survival challenges faced by coral reefs. Management challenges and required actions can be clearly shown and, contrary to frequent claims, no scientific ambiguity exists with regard to the serious threat posed to coral reefs by humankind's continued numerical increase." This is in the article by National Library of Medicine National center for Biotechnology Information PubMed. <https://pubmed.ncbi.nlm.nih.gov/33293007/#:~:text=Denser%20coastal%20populations%20and%20gr eater,%20more%20runoff%20and%20siltation.>

This article is by ABC NEWS, "This is how tourists are destroying coral reefs in Hawaii. The less people at a certain site, the more coral there are, the research found. The millions of tourists who flock to the shores of Hawaii every year are wreaking havoc on its natural environment -- especially the coral reefs, which are at risk all over the world, a new study said. The most popular coral reefs on the Hawaiian islands are likely being degraded by the very visitors they attract, according to a study published Monday in Nature Sustainability." <https://abcnews.go.com/US/hawaiian-coral-reefs-degrading-popular-tourist-sites->

<https://www.sciencemag.org/doi/10.1126/science.1200000>#:~:text=The%20less%20people%20at%20a,there%20are%2C%20the%20research%20found.&text=The%20millions%20of%20tourists%20who,world%20are%20new%20stud y%20said.

By allowing this development you are stressing an already fragile Eco-system. The small bay is currently used by many locals for boating, fishing, canoeing, paddle boarding, snorkeling, manta night dives, surfing, and swimming. We know, and research shows, that more people cause more damage. The area simply cannot afford or support this development.

"Denser coastal populations and greater wealth will lead to reef degradation by coastal construction. Denser populations inland will lead to more runoff and siltation. Effects of human perturbations can be explored with meta-population theory since they translate to increases in patch-mortality and decreases in patch-colonization (= regeneration). All such changes will result in a habitat with overall fewer settled patches, so fewer live reefs." This information was taken from Science Direct <https://www.sciencedirect.com/science/article/abs/pii/S0065288120300328#:~:text=Aquaculture%20will%20alleviate%20some%20fishing,to%20more%20runoff%20and%20siltation.>

Another article by Nature Sustainability, "Coral reefs and coastal tourism in Hawaii Coral reefs are popular for their vibrant biodiversity. By combining web-scraped Instagram data from tourists and high-resolution live coral cover maps in Hawaii, we find that, regionally, coral reefs both attract and suffer from coastal tourism. Higher live coral cover attracts reef visitors, but that visitation contributes to subsequent reef degradation. Such feedback loops threaten the highest quality reefs, highlighting both their economic value and the need for effective conservation management."

## INFRASTRUCTURE AND RESOURCES ON AN ISLAND ALREADY HIGHLY IMPACTED AND STRUGGLING FOR ANSWERS

Has the EIS done any research or reports on the Resources and Infrastructure it will need for a bungalow resort?

There are many big housing developments currently under construction in Kailua Kona, Waikoloa Village, Hilo, Puna, Ocean View and Volcano. The entire Big Island has construction projects already in progress.

Has Kamehameha Schools EIS done any kind of reports or surveys to know if Big Island has the Resources and Infrastructures for their resort development?

"Hotel waste management refers to all the practices and processes that hotels implement to handle and dispose of the multiple types of waste generated on their premises. Worldwide, hotels produce almost 300,000 tonnes of waste each year. " <https://www.homebigogas.com/blog/hotels-waste-management/>

As of now, the Big Island's Resources and Infrastructure are having serious negative issues and many more developments that have been approved are not even completed as of yet, which means our island's resources and infrastructure will be taxed even more severely in the near future.

Please read the below articles that prove Big Island does not have the resources or infrastructure for a 143-Unit Bungalow Resort Development at Keauhou Bay. On Hawaii's Island, we are already struggling to meet the increasing need for resources and infrastructure.

Big Island Now poll No. 27 results: More than one solution needed to help extend life of West Hawaii's landfill

September 17, 2023

The West Hawaii's Sanitary Landfill, the only remaining landfill on the Big Island, is forecast to reach capacity within the next 20 to 25 years.

The West Hawaii's landfill became the island's only one after the Hilo Landfill closed three years ago. It only has about 20 to 25 years left before it can no longer be used to store rubbish.

<https://bigislandnow.com/2023/09/17/big-island-now-poll-no-27-results-more-than-one-solution-needed-to-help-extend-life-of-west-hawaii-landfill>

A County commission drafts ordinance aiming to ban recyclables at West Hawaii's landfill

By Megan Moseley September 6, 2023

Hawaii's County's Environmental Management Commission is developing an ordinance that aims to prohibit the amount of recyclable materials ending up in the island's only working landfill.

During a commission meeting on July 26, Ramzi Mansour, Hawaii's County Director of Environmental Management, told commissioners the West Hawaii's Sanitary Landfill only has 20 to 25 years left before it reaches capacity.

With the Hilo Landfill permanently closed in 2020, the clock is ticking for the island's sole dump. Commission chairperson Georjean Adams said it's a good time to start looking into solutions.

Adams said the proposed ordinance is in its early stages and is more about getting the conversation started about how to prevent unnecessary, or recyclable items — green waste, metals, plastics, paper, paperboard and glass — from ending up in the rubbish dump, located off Queen Ka'ahumanu Highway in Waikōloa.

"Trying to site a new landfill is close to impossible," Adams said. "So what are we going to do? So I was looking around, and the commission agreed, to look deeply into the idea of diverting the recyclables out and at least slow the filling up of the landfill."

The proposed ordinance refers to the 2019 Integrated Solid Waste Management Plan that commits the county to "divert, as much as feasible, commercial and municipal solid waste, including but not limited to green waste, metals, plastics, paper, paperboard, and glass to help achieve goals related to climate resiliency, renewable energy, sustainable agriculture, and zero waste."

<https://bigislandnow.com/2023/09/06/new-draft-ordinance-aims-to-ban-recyclables-at-west-hawaii-landfill>

Time's Up For Landfills

'Gentle' demolition strategies can help preserve resources

PAULA BENDER April 2, 2024

As Hawaii's government officials grapple with the challenge of limited landfill space statewide, federal restrictions set in place by the Environmental Protection Agency are ruling out possible locations that were once considered for new landfills.

Hawaii Act 73 states landfills must be located at least half a mile from residential areas; are prohibited from being located in areas with heavy rain and steep slopes, as well as agricultural and/or conservation lands; above aquifers; 300 feet beyond streams; and 1,000 feet beyond the ocean.

New landfills are also now prohibited from being created in tsunami inundation zones, 100-year flood zones and wetlands. There are also concerns that landfills near airports will attract birds, result in

To Whom It May Concern,

Please read the scientific proof in this letter and REJECT Kamehameha Schools Environment Impact Statement (EIS) for Keauhou Bay to become a Bungalow Resort.

Please state in your report that a Bungalow Resort WILL have a SERIOUS NEGATIVE IMPACT on Keaouhou Bay as stated in all the different researched articles below.

Please, DO NOT risk polluting the water in Keaouhou Bay by allowing Kamehameha Schools to develop their bungalow resort project. It is scientifically proven that developments pollute nearby waters both during and after development.

Below are scientific articles written by the National Oceanic and Atmospheric Administration (NOAA), Global Coral Reef Alliance, Hawaii Government, and many other professional organizations, that have studied and shown that developments have ALWAYS polluted the water in EVERY coastal development area.

Does this EIS (Environmental Impact Statement) have any kind of reports and studies on how the endangered species and marine life will handle the extra pollution due to development, and the golf course runoff? Keaouhou Bay is their habitat and this development WILL be CHANGING an Entire Ecosystem.

#### ENDANGERED SPECIES CONSERVATION IMPACTED BY DEVELOPMENT

In the Endangered Species Act of 1973 Under Section 2 (b), "To provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved." This would be Keaouhou Bay.

The Green Sea Turtle swims in Keaouhou Bay weekly and the monk seal has also been seen swimming and resting in Keaouhou Bay. Both of these marine animals are on the endangered species list.

Endangered Species Act

"Section 2. Findings, Purposes, and Policy

(4) the United States has pledged itself as a sovereign state in the international community to conserve to the extent practicable the various species of fish or wildlife and plants facing extinction, pursuant to—

(b) PURPOSES.—The purposes of this Act are to provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved, to provide a program for the conservation of such endangered species and threatened species, and to take such steps as may be appropriate to achieve the purposes of the treaties and conventions set forth in subsection (a) of this section."

This was taken from <https://www.fisheries.noaa.gov/national/endangered-species-conservation/endangered-species-ac>

#### FEDERALLY PROTECTED GREEN SEA TURTLES WILL BE AFFECTED

The green sea turtle is federally protected and can be seen in Keaouhou Bay weekly.

The following article that states: "POLLUTED RUNOFF IN HAWAII ENDANGERS GREEN SEA TURTLES"

Why does Hawaii have a runoff problem?

Historically, in the tropics of Hawaii, precipitation was absorbed into the soil, according to the Clean Water Branch of Hawaii's Department of Health. Any potential pollution or contaminants on the ground surface would get pushed into the soil by the rain, and plant roots and microbes would help break down the pollution into less dangerous components. However, with urban and agricultural development, less and less of the pollution gets pulled into the soil, and more of it gets washed out into storm drains. From there, the pollutants make their way to streams, rivers and the ocean that surrounds Hawaii. According to the state agency, most of these contaminants are nutrients from fertilizer, bacteria from animal waste, oil, garbage and yard waste...

If polluted runoff reaches the ocean, it can wreak havoc on marine life, including endangered green sea turtles." Taken from <https://www.chemservice.com/news/polluted-runoff-in-hawaii-endangers-green-sea-turtles/>

Allowing this development WILL POLLUTE Keaouhou Bay. The above article, written in 2014 (because runoff water from developments were polluting the ocean even then!!!) states this fact clearly. Keaouhou Bay is home to countless sea creatures such as the protected green sea turtle, spotted eagle rays, manta rays, octopus, dolphins, fish, coral, monk seals, and more and that will ALL be harmed by the severe pollution runoff that WILL happen because developments have been shown to ALWAYS pollute the water is that is nearby.

The Green Sea Turtle is protected by more than one law. "All sea turtles in Hawaii are protected by the Endangered Species Act (ESA) and additionally protected by Hawaii's Revised Statutes Chapter 195D (HRS) and Hawaii's Administrative Rules (HAR) 13-124." This information was taken from this site <https://dlnr.hawaii.gov/dar/species/sea-turtles/>

#### THE ENDANGERED MONK SEAL WILL BE AFFECTED

Keaouhou Bay is known as a RESTING AREA for the ENDANGERED MONK SEAL. If another resort is allowed to be built, in addition to the pollution, it will also bring a lot more people down to Keaouhou Bay. This increases the chances of a resting monk seal being disturbed by humans trying to get close, take "selfie" photos, and being generally uninformed and harmful. Please see article on Selfie Culture and its harmful effects below.

Has the EIS done any research on what an increased population would do in such a small area, and what will happen to the endangered species that live there? With a significantly increased population their habitat of Keaouhou Bay will likely be changed forever.

This information is from a NOAA Scientist; "Study shows selfie culture impacts how people behave when posting images of an endangered species on social media. There's a seal on the beach! Let's go get a

'selfie!'" That must have been what nearly 18 percent of people on Instagram thought before approaching an endangered species.

In a recent study, NOAA scientists used social media to monitor human activities around endangered Hawaiian monk seals. They discovered that human disturbance is more common than they thought." <https://www.fisheries.noaa.gov/feature-story/endangered-hawaiian-monk-seals-try-foul-over-selfies>

NOAA clearly states a high population in a place where monk seals and sea turtles habitat can be a serious disturbance for these endangered species.

"Hawaiian monk seals are protected federally by the ESA and the Marine Mammal Protection Act (MMPA), as well as locally by Hawai'i Revised Statutes (HRS) Chapter 195D and Hawai'i Administrative Rules (HAR) 13-124." This was taken from <https://dlnr.hawaii.gov/dar/hawaiian-monk-seal/>

Keauhou Bay is the monk seals and the green sea turtle's habitat. Allowing a bungalow resort to be developed in Keauhou Bay, the habitat of these endangered species, is to threaten their life and habitat with golf course runoff pollution, as well as development pollution. By threatening their habitat, and hence their lives, this development goes completely against the Endangered Species Act of 1973.

The verbiage in the Endangered Species Act states, "to conserve". In this case, "to conserve" would be to protect the land around Keauhou Bay from developments that destroy the habitat of these endangered species with pollution and runoff.

Does this EIS have any reports on the endangered species that frequent Keauhou Bay? This is their habitat and it needs to be "conserved".

Under the Conservation Program there should be research done on endangered species and their associated ecosystems. A large bungalow resort development WILL FOREVER CHANGE THIS ECOSYSTEM.

"§195D-5 Conservation programs. (a) The department shall conduct research on indigenous aquatic life, wildlife, and land plants, and on endangered species and their associated ecosystems, and shall utilize the land acquisition and other authority vested in the department to carry out programs for the conservation, management, and protection of such species and their associated ecosystems." [https://www.capitol.hawaii.gov/hiscurrent/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hiscurrent/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm)

Also, under this same Conservation program, "(2) Taking such action as may be necessary to ensure that actions authorized, funded, or carried out by them do not jeopardize the continued existence of threatened or endangered species." [https://www.capitol.hawaii.gov/hiscurrent/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hiscurrent/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm)

Please consider that developing a Kamehameha Schools Bungalow Resort in Keauhou Bay WILL threaten endangered species due to the unavoidable development and golf course pollution runoff that would be caused by removing the all the trees that currently serving as a natural pollution filter, and replacing the land with housing, cars, humans, and waste. There would also be tremendous runoff damage into Keauhou Bay and the surrounding area during the building phase of this enormous project.

## GOLF COURSE POLLUTION KILLS MARINE LIFE AND DRASTICALLY CHANGES ECOSYSTEMS

"The golf industry uses approximately 50 pesticide active ingredients, including chlorpyrifos—an insecticide that is banned for residential use by the EPA due to developmental hazards. Having to trim golf turf to low heights also makes it even more vulnerable to pests, which leads to more pesticide use." <https://rainorshinegolf.com/pages/the-environmental-impact-of-golf-courses>

These pesticides will be in the pollution runoff that will enter Keauhou Bay more severely should the natural habitat of the trees be removed and replaced with pavement. This is unavoidable!

Please read from Wikipedia, "

Most drains have a single large exit at their point of discharge (often covered by a grating) into a canal, river, lake, reservoir, sea or ocean. Other than catch basins, typically there are no treatment facilities in the piping system." [https://en.wikipedia.org/wiki/Storm\\_drain#:~:text=Most%20drains%20have%20a%20single%20charge%20into%20individual%20dry%20wells](https://en.wikipedia.org/wiki/Storm_drain#:~:text=Most%20drains%20have%20a%20single%20charge%20into%20individual%20dry%20wells)

The pavement from this development will cause pollution to runoff into Keauhou Bay because this treed land that will become a housing development is situated directly between the golf course and the Bay. These trees, which absorb all the pollution from the golf course is the BEST AND ONLY PROTECTION POLLUTION FILTER Keauhou Bay has from the golf course pesticides, fertilizer and weed killer. See the below paragraph for further references.

See page 2 at: <https://health.hawaii.gov/epp/files/2013/09/Stormwater-MS4-Presentation-HEE-7.15.14.pdf> where the Hawai'i government states that Natural Ground Cover has 10% runoff, where has development has 55% runoff. So, even if you have storm drains the pavement this development will create will cause more runoff into Keauhou Bay than the Natural Ground Cover that is has now, that has been protecting the bay from golf course pollution for years.

These trees and land are saving monk seals and green sea turtles habitat from the golf course pollution and this land MUST BE PRESERVED and CONSERVED as the natural protector for Keauhou Bay and for these endangered species habitat.

Under Section 2 (b) of the Endangered Species Act - Keauhou Bay MUST BECOME A CONSERVATION AREA for these endangered species. It is currently their habitat, and to allow a large resort development to be built above this bay clearly threatens the lives of these endangered species by allowing golf course toxic pollution and development pollution to run into these species natural habitat of Keauhou Bay.

## ALGAE BLOOMS KILL CORAL AND MARINE LIFE

The trees that are slated to be cleared for the development further protect Keauhou Bay from algae blooms that have been proven to be caused by pollution that is runoff from fertilizer and weed killer.

When there is heavy rain the land above the bay has a greater runoff than normal. Without the trees, the runoff from the golf course pollution will pour into the Bay likely causing frequent algae blooms.

Algae blooms have been shown to kill coral and marine life as stated in the many articles that will follow.

One of these articles is from the Global Coral Reef Alliance. They have researched the effects on reefs before and after a golf course developments. Though this development is not a golf course development, it is located just below a golf course and exposes the bay to the pollution from the golf course by removing the proven natural filter of the trees and natural ecosystem.

Has this EIS done any kind of research about the algae blooms that happen after a serious storm because of the golf course runoff pollution?

This information was taken from Global Coral Reef Alliance and it is an actual study on the how coral and marine life are affected before and after development. It's titled, "Golf courses kill coral reefs and fisheries: harmful algae blooms and disease cause by nutrient runoff from golf course development on Guana Cay, Abaco, Bahamas

Introduction: Bahamas coral reef deterioration

This study is thought the first ever to evaluate the health of coral reef ecosystems and fisheries before and after a golf course development. The vast majority of corals have died from a combination of factors including global warming, new diseases, land-based sources of pollution. . ."

<https://www.globalcoral.org/golf-courses-kill-coral-reefs-and-fisheries-harmful-algae-blooms-and-disease-caused-by-nutrient-runoff-from-golf-course-development-on-guana-cay-abaco-bahamas/>

If you allow a Bungalow Development in Keauhou Bay you WILL be agreeing to pollute this bay for years to come and COMPLETELY CHANGING and possibly DESTROYING KEAHOU BAY'S ECOSYSTEM.

Another study by the Coral Reef Alliance titled, "Golf course fertilizer runoff causes nutrient enrichment leading to harmful algae blooms on a Bahamian coral reef.

"... After construction new algae blooms appeared nearest the golf course green, smothering corals in adjacent reefs, along with sharply increased coral diseases..." <https://www.globalcoral.org/golf-course-fertilizer-runoff-causes-nutrient-enrichment-leading-to-harmful-algae-blooms-on-a-bahamian-coral-reef>

Does this EIS have any studies or reports on the extra runoff pollution due to clearing land and adding pavement?

This needs to be fully assessed because you will be changing an entire ecosystem to build a bungalow resort. It rains in Keauhou Bay many nights out of the year and this kind of pollution will kill the beautiful and necessary coral in the Bay.

FURTHERMORE: "If there are toxic algal blooms, like red tide, or man-made contaminants, like pesticides or detergents in the water, those toxins are contained within the bubbles of sea foam. When those bubbles pop, the toxins can become airborne and compromise the air that is breathed in that location." <https://oceanconservancy.org/blog/2023/03/31/what-sea-foam/>

## ENGINE POLLUTION CAUSES ISSUES IN THE OCEAN

Does this EIS have any detailed traffic studies for the increase in cars that will be added to this already severely traffic area they want to build their 150 room bungalow resort in? Have they done any studies on the pollution these cars WILL have in Keauhou Bay?

Because this Bungalow Resort could have over 150 extra cars and over 300 or more extra people in and out of Keauhou Bay, what traffic and increased population studies have they done? There will be employees with cars, guests with cars, visitors with cars. At times this would range to over 200 cars (likely more), coming in and out of, and parking above Keauhou Bay thereby causing serious car population issues because of all these added cars right next to the bay.

The article below is from NOAA regarding motor vehicle engines and pollution to the sea.

What is the biggest source of pollution in the ocean?

Most ocean pollution begins on land.

"Millions of motor vehicle engines drop small amounts of oil each day onto roads and parking lots. Much of this, too, makes its way to the sea.

Some water pollution actually starts as air pollution, which settles into waterways and oceans. Dirt can be a pollutant. Top soil or silt from fields or construction sites can run off into waterways, harming fish and wildlife habitats."

<https://oceanservice.noaa.gov/facts/pollution.html#:~:text=Millions%20of%20motor%20vehicle%20engines,Dirt%20can%20be%20a%20pollutant.>

Land-Based Runoff Remains Top Source of Oil in the Ocean, Says New Report Oil in the Sea: Inputs, Fates, and Effects

News Release September 28, 2022

WASHINGTON — Oil in runoff, primarily from cities and vehicles, is the top source of oil entering the ocean, says a new report from the National Academies of Sciences, Engineering, and Medicine. In North American waters, estimated ocean oil pollution from land-based runoff is up to 20 times higher than it was 20 years ago, and oil spills, natural oil seeps, and discharge from oil and gas operations remain major sources of pollution. The report recommends actions that government and others should take to minimize oil pollution, and calls for sustained research funding to better understand how oil reaches and affects ocean environments. <https://www.nationalacademies.org/news/2002/05/oil-in-the-sea-inputs-fates-and-effects#:~:text=WASHINGTON%20%2D%20Nearly%2085%20percent,pipeline%20spills%2C%20saves%20a%20new>

The Impact Of Stormwater – Car Emissions

"Car emissions are not limited to exhaust fumes that contribute to air pollution. They can also leak automotive fluid and release heavy metals that can contribute to stormwater pollution, contaminating local waterways." <https://www.stormwatershepherds.org.au/blog/the-impact-of-stormwater-car-emissions/>

#### NOISE POLLUTION'S HARMFUL EFFECT ON MARINE LIFE

Does this EIS have any reports on the noise pollution that will happen and what it could do to marine life in Keauhou Bay during development?

Because if you allow this Bungalow Resort to be developed you will increase constant noise in this bay for years to come and, "Noise Pollution Research shows that underwater noise from construction, shipping and naval vessels significantly impacts the natural behavior of cetaceans and many other marine species. This can be seen when mass beaching events occur or breeding success is diminished."

The above information was taken from the Ocean Conservation Trust <https://oceanconservationtrust.org/ocean-advocacy/think-ocean/ways-to-think-ocean/>

#### How Does Noise Pollution Harm Marine Species?

"However, over the past few decades, noise pollution in the marine environment has increased dramatically and is threatening the natural soundscape of the marine environment. Ships, seismic surveys, explosions, construction, and sonar devices have made the once peaceful environment into a loud, chaotic home which is extremely damaging for marine wildlife. This type of pollution is often overlooked in comparison to others but its impacts are now being documented across all types of marine ecosystems." <https://earth.org/noise-pollution-in-the-ocean/>

If you allow this resort the amount of people in this bay will fully increase and, "Hawaii's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally, management of the resource should balance the needs of different user groups, but the welfare of the marine environment on which its inhabitants depend must be the most important consideration." This was taken from Hawaii's own Division of Aquatic Resources <https://dlnr.hawaii.gov/dar/marine-managed-areas/hawaii-marine-life-conservation-districts/#:~:text=Snorkeling%20and%20SUCJBA%20diving%20are,effect%20on%20nearshore%20fish%20populations.>

What is ocean noise?

"Ocean noise refers to sounds made by human activities that can interfere with or obscure the ability of marine animals to hear natural sounds in the ocean.

Many marine organisms rely on their ability to hear for their survival. Sound is a highly efficient means of communication underwater and is the primary way that many marine species gather and understand information about their environment. Many aquatic animals use sound to find prey, locate mates and offspring, avoid predators, guide their navigation and locate habitat, as well as to listen and communicate with each other.

Over the last century, human activities such as shipping, recreational boating, and energy exploration have increased along our coasts, offshore, and deep ocean environments. Noise from these activities can travel long distances underwater, leading to increases and changes in ocean noise levels in many coastal and offshore habitats.

These rising noise levels can negatively impact ocean animals and ecosystems. Higher noise levels can reduce the ability of animals to communicate with potential mates, other group members, their offspring, or feeding partners. Noise can also reduce an ocean animal's ability to hear environmental cues that are vital for survival, including those key to avoiding predators, finding food, and navigating to preferred habitats." <https://oceanservice.noaa.gov/facts/ocean-noise.html>

#### LEARN FROM OTHERS: RUN-OFF FROM DEVELOPMENT KILLS

The Chesapeake Bay has a foundation that is trying to save their bay due to runoff pollution that was caused by developments. Chesapeake Bay is a lot bigger than Keauhou Bay. If it's being drastically hurt by runoff water from developments, Keauhou Bay waters won't stand a chance if development above the bay is allowed. Keauhou Bay is a much smaller ecosystem.

This Article is by the Chesapeake Bay Foundation, Saving a National Treasure states, "...runoff is a significant source of harmful nitrogen pollution that continues to grow..."

As rainwater and snowmelt run off our streets, parking lots, lawns, and other surfaces, they pick up pet waste, pesticides, fertilizer, oil, and other contaminants. If the draining water doesn't evaporate or soak into the ground where it can be filtered, it flushes straight into local creeks, rivers, and the Chesapeake Bay, adversely affecting water quality and aquatic life.

Only 10 to 20 percent of rain that falls in forests, fields, and other natural areas runs off, with the rest absorbed by soil and plants, where it is filtered before reaching aquifers or local waterways. (Right now Keauhou Bay has a lot of trees and is very natural, this is what helps stop runoff.) By contrast, close to 100 percent of the rain that falls on concrete and other hard surfaces produces runoff. One inch of rain falling on an acre of hardened surface produces 27,000 gallons of runoff.

Stormwater runoff pollution threatens Chesapeake Bay and its rivers and streams...Polluted runoff is one of the most harmful sources of pollution to the Bay and its waters. And much of it starts right in the urban and suburban neighborhoods where we live." <https://www.cbf.org/issues/polluted-runoff/index.html#:~:text=Besides%20carrying%20pollutants%20that%20harm,them%20are%20placed%20in%20jeopardy.>

If that is what runoff is doing to the Chesapeake Bay, the effects of runoff will be even more devastating to Keauhou Bay due to its size and fragility.

#### MANTA RAY HABITAT, CORAL REEF BLEACHING, & MARINE LIFE ~ THE DEVASTATING EFFECTS OF DEVELOPMENT ON THE OCEAN

Are there any reports in this EIS about what the impact to the coral, marine life, plankton especially zooplankton will be because of this development?

The studies below show that developments kill coral, and marine life. Zooplankton are part of this marine life and they are also killed and negatively affected. Zooplankton are food for manta rays. Manta rays are in Keauhou Bay every night to eat zooplankton, and are often seen here during the day as well.

Allowing this bay developed will also be a death sentence for many types of marine life including planktons. There is NO WAY to stop this from happening due to the fact that polluted runoff rain water from developments can't be fully stopped. This has been shown to happen in ALL coastal developments.

Please read the Scientific articles below.

It's Been Proven Developments Severely Pollute Nearby Waters

Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Coral Bleaching is occurring more frequently in Hawaii". Across the Hawaiian Archipelago, coral bleaching has increased in frequency and severity since 1996. The last major bleaching event in 2014-2015 had catastrophic impacts statewide...

This was the third major bleaching episode in Hawaii over the last 6 years. The frequency of these events is unprecedented in the archipelago. NOAA scientists and partners have determined that the key drivers of the bleaching were environmental factors (such as heat stress, depth, and surface light) and human impacts (sewage effluent and urban runoff). " <https://www.fisheries.noaa.gov/feature-story/cautionary-tale-2019-coral-bleaching-event-hawaii#:~:text=Coral%20bleaching%20is%20occurring%20more,had%20catastrophic%20impacts%20state%2Dwide>.

This article is by the Coral Reef Alliance here in Hawaii. "An ecosystem under threat Hawaii's reefs face major global and local threats including climate change, overfishing, and sediment and nutrient pollution caused by sewage and stormwater runoff..."

When it rains, flash floods carry stormwater and large amounts of sediment downstream to the ocean. Just offshore, once-thriving coral reefs are now struggling to survive." <https://coral.org/en/where-we-work/hawaiian-islands/#:~:text=Hawai%CA%BBi%20reefs%20face%20major%20global,into%20Hawai%CA%BBi%20waterways%20every%20day>.

This article states that runoff is a leading source in coral degradation. Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Land-based sources of pollution are a leading cause of coral

reef degradation in the Main Hawaiian Islands. Water quality is impacted by urban runoff, failing sewage systems, unpaved roads, farms, land clearing, and development."

[https://www.coris.noaa.gov/monitoring/status\\_report/docs/Hawaii\\_status\\_report\\_forweb.pdf](https://www.coris.noaa.gov/monitoring/status_report/docs/Hawaii_status_report_forweb.pdf)

This article is a Research Article by PLOS ONE and their motto is, "We're driving change in research integrity and publication ethics." This is some of their article information, "Coral taxonomy and local stressors drive bleaching prevalence across the Hawaiian Archipelago in 2019..."

We found little evidence for acclimation by reefs to thermal stress in the main Hawaiian Islands. Moreover, our findings illustrate how detrimental effects of local anthropogenic stressors, such as tourism and urban runoff, may be exacerbated under high thermal stress. In light of the forecasted increase in severity and frequency of bleaching events, future mitigation of both local and global stressors is a high priority for the future of corals in Hawaii". <https://journals.plos.org/plosone/article?id=10.1371/journal.pone.0269068>

The coral all over Hawaii has had extremely high mortality rates, due to developments near ocean areas throughout the years, and development in Keauhou Bay will be devastating to the coral, reef fish, and all aquatic life there. Manta Rays need to eat 5 times their body weight in zooplankton daily. Their population will be severely affected should the plankton die. Please see the cited information below.

"SO, HOW MUCH PLANKTON DOES YOUR AVERAGE MANTA RAY EAT? 19,200,000. Nineteen million two hundred thousand, give or take a few thousand.

That is the number of plankton pieces a ten-foot manta ray must consume weekly to stay alive."

The above information was taken from Manta Ray Advocates <https://mantarayadvocates.com/how-much-plankton-do-mantas-eat/>

Coral reefs are known to be highly negatively impacted by developments because, "Impacts from land-based sources of pollution including coastal development...can impede coral growth and reproduction, disrupt overall ecological function, and cause disease and mortality in sensitive species." <https://oceanservice.noaa.gov/facts/coral-pollution.html#:~:text=Impacts%20from%20land%2Dbased%20sources,and%20mortality%20in%20sensitive%20species>.

Article by Environmental Evidence, "Coastal development and runoff lead to sedimentation, which directly impacts coral recruitment, growth, mortality, and ecosystem services that coral reefs provide." <https://environmentalevidencejournal.biomedcentral.com/articles/10.1186/s13750-020-00200-0#:~:text=Coastal%20development%20and%20runoff%20lead,services%20that%20coral%20reefs%20provide>.

Developments can't fully stop polluting because runoff is from rain during development and after. Article by NOAA, "One of the most significant threats to reefs is pollution. Land-based runoff and pollution discharges can result from dredging, coastal development...This runoff may contain sediments, nutrients, chemicals, insecticides, oil and debris.

When some pollutants enter the water, nutrient levels can increase, promoting the rapid growth of algae and other organisms that can smother coral."

[https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,organisms%20that%20can%20smother%20corals.](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,organisms%20that%20can%20smother%20corals.)

Another article by NOAA, "Coral reefs also are affected by leaking fuels, anti-fouling paints and coatings, and other chemicals that enter the water... (All of those are show up in every development project.)"

Among the most damaging pollutants on coral reefs is sediment, which can remain suspended in the water or be deposited on the coral surface (i.e., turbidity and sedimentation, respectively) and can contain toxicants, pathogens, and nutrients, all of which impact coral growth, recruitment, and survival"  
[https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days.](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days.)

It's Been Proven Resort Developments Kill Marine Life

This article by MarinBio states, "Zooplankton are also sensitive to their environment and like phytoplankton—a change in zooplankton concentration can indicate a subtle environmental change. Zooplankton are highly responsive to nutrient levels, temperatures, pollution, food that is not nutritious, levels of light, and increases in predation. As well as providing an essential link in the marine food chain (which is an understatement), the diversity of species, amount of biomass and abundance of zooplankton communities can be used to determine the health of an ecosystem...."

Here is another article that shocking shows that in a very short time, big changes can occur due to runoff. A development will hurt and kill plankton, by Frontiers in Marine Science, "Effects of an experimental terrestrial runoff on the components of the plankton food web in a Mediterranean coastal lagoon The main result observed in the present study was that the effects of the simulated terrestrial runoff spread along the plankton food web, significantly affecting all trophic levels of the natural plankton community studied. This occurred in a relatively short time considering that the experiment lasted less than three weeks. The lower light availability in the terrestrial runoff treatment compared to the control resulted in a net decrease of approximately one-third of Chl-a concentration and phytoplankton abundance over the entire experiment." <https://www.frontiersin.org/journals/marine-science/articles/10.3389/fmars.2023.1200757/full>

The ecosystem is fragile and interconnected as is stated in this article: "Zooplankton are also affected by levels of pH, heavy metals, calcium, and aluminum. Nutrients like nitrogen and phosphorus will affect the prey of zooplankton (like algae, protozoa and bacteria), indirectly affecting zooplankton survival. Scientists are still putting together pieces of the zooplankton puzzle. Some questions include how nutrient levels found in algae can influence the growth and behavior of zooplankton. Another question important to marine and human life is how toxins and pollution will affect this crucial link in the food chain" This information is in article by MarineBio.  
<https://www.marinebio.org/creatures/zooplankton/#:~:text=Zooplankton%20are%20also%20sensitive%20to,light%2C%20and%20increases%20in%20predation.>

A research article by Environmental Research Laboratory, United States Environmental Protection Agency that discusses, "Toxic Effects of Pollutants on Plankton: There are four main sources of aquatic pollution: industrial wastes, municipal wastes, agricultural run-off, and accidental spillage. Non-point sources, such as automobile exhausts, add appreciable amounts of pollutants to air that may enter aquatic systems in rainfall or dry fall-out. These sources add pesticides, heavy metals, oil, petroleum products, and a large number of organic and inorganic compounds to water. Lakes and oceans serve as

sinks for many pollutants. Plankton comprise a large portion of the living matter in natural waters and function in biogeochemical cycles. They are affected by pollutants, transfer them to sediments and other organisms, and function in their biological transformation."

[https://scope.age.carnegiescience.edu/SCOPE\\_12/SCOPE\\_12\\_3.6\\_chapter12\\_257-274.pdf](https://scope.age.carnegiescience.edu/SCOPE_12/SCOPE_12_3.6_chapter12_257-274.pdf)

All the above articles show that development of Keauhou Bay WILL hurt plankton life and marine life in the bay because pollutant runoff is inevitable and unavoidable during construction and afterwards. The manta ray food source will likely disappear. This will be devastating for the manta ray populations. Furthermore, if manta rays die or leave the area, the loss will in turn affect many lively hoods from locals on the island who depend on the manta ray tour for their income.

#### HUMAN POPULATION INCREASES LINKED DIRECTLY TO CORAL DEATH

Does this EIS have any reports on their resort adding to the population increase that happens during IRONMAN?

"On average, each Ironman racer brings three people with them to the Big Island. Counting members of the media, VIPs who come from around the globe to watch and the triathlons partners, there likely be more than 6,300 people descending on Kona..." <https://bigislandnow.com/2023/10/07/ironman-2023-in-kona-shines-spotlight-on-some-of-best-women-triathletes-in-the-world/>

And "Resident dissatisfaction with tourists is multifaceted: The overwhelming majority (92%) of locals felt visitors were not educated enough on protecting Hawaii's natural environment and local resources; other factors include the impact of the vacation rental industry and ignorance of the residents' quality of life." <https://www.triathlete.com/culture/news/kona-locals-ask-ironman-visitors-for-respect/>

Where are the EIS reports on human density? Below are reports that show human population destroys coral reefs.

"The number of people living on the coasts has rapidly increased in recent decades, causing significant development of coastal areas. Coastal development can negatively impact the ocean through the destruction of coastal marine habitat and through run-off of sediments and pollution.

-Coastal development involves activities such as the creation of harbors, stabilization of shorelines, and aquaculture that involve the destruction of sensitive marine habitats such as mangroves, coral reefs, and seagrass beds.

-Coastal development may cause the run-off of sediments into coastal habitats, which can smother corals or seaweeds and reduce the amount of light available for photosynthesis. Losses of primary producers and important habitat-forming species such as corals can negatively impact entire food webs."

The above information was taken from the Education Development Center, INC, from their Coastal Development page called Ocean Tracks <https://oceantracks.org/library/human-impacts/coastal->

September 17, 2023

The West Hawai'i Sanitary Landfill, the only remaining landfill on the Big Island, is forecast to reach capacity within the next 20 to 25 years.

The West Hawai'i landfill became the island's only one after the Hilo Landfill closed three years ago. It only has about 20 to 25 years left before it can no longer be used to store rubbish.

<https://bigislandnow.com/2023/09/17/big-island-now-poll-no-27-results-more-than-one-solution-needed-to-help-extend-life-of-west-hawaii-landfill/>

A County commission drafts ordinance aiming to ban recyclables at West Hawai'i landfill

By Megan Moseley September 6, 2023

Hawai'i County's Environmental Management Commission is developing an ordinance that aims to prohibit the amount of recyclable materials ending up in the island's only working landfill.

During a commission meeting on July 26, Ramzi Mansour, Hawai'i County Director of Environmental Management, told commissioners the West Hawai'i Sanitary Landfill only has 20 to 25 years left before it reaches capacity.

With the Hilo Landfill permanently closed in 2020, the clock is ticking for the island's sole dump. Commission chairperson Georjean Adams said it's a good time to start looking into solutions.

Adams said the proposed ordinance is in its early stages and is more about getting the conversation started about how to prevent unnecessary, or recyclable items — green waste, metals, plastics, paper, paperboard and glass — from ending up in the rubbish dump, located off Queen Ka'ahumanu Highway in Waikōloa.

"Trying to site a new landfill is close to impossible," Adams said. "So what are we going to do? So I was looking around, and the commission agreed, to look deeply into the idea of diverting the recyclables out and at least slow the filling up of the landfill."

The proposed ordinance refers to the 2019 Integrated Solid Waste Management Plan that commits the county to "divert, as much as feasible, commercial and municipal solid waste, including but not limited to green waste, metals, plastics, paper, paperboard, and glass to help achieve goals related to climate resiliency, renewable energy, sustainable agriculture, and zero waste."

<https://bigislandnow.com/2023/09/06/new-draft-ordinance-aims-to-ban-recyclables-at-west-hawaii-landfill/>

Time's Up For Landfills

'Gentle' demolition strategies can help preserve resources

PAULA BENDER April 2, 2024

As Hawai'i government officials grapple with the challenge of limited landfill space statewide, federal restrictions set in place by the Environmental Protection Agency are ruling out possible locations that were once considered for new landfills.

Hawaii Act 73 states landfills must be located at least half a mile from residential areas; are prohibited from being located in areas with heavy rain and steep slopes, as well as agricultural and/or conservation lands; above aquifers; 300 feet beyond streams; and 1,000 feet beyond the ocean.

New landfills are also now prohibited from being created in tsunami inundation zones, 100-year flood zones and wetlands. There are also concerns that landfills near airports will attract birds, result in

To Whom It May Concern,

Please read the scientific proof in this letter and REJECT Kamehameha Schools Environment Impact Statement (EIS) for Keaouhou Bay to become a Bungalow Resort.

Please state in your report that a Bungalow Resort WILL have a SERIOUS NEGATIVE IMPACT on Keaouhou Bay as stated in all the different researched articles below.

Please, DO NOT risk polluting the water in Keaouhou Bay by allowing Kamehameha Schools to develop their bungalow resort project. It is scientifically proven that developments pollute nearby waters both during and after development.

Below are scientific articles written by the National Oceanic and Atmospheric Administration (NOAA), Global Coral Reef Alliance, Hawaii Government, and many other professional organizations, that have studied and shown that developments have ALWAYS polluted the water in EVERY coastal development area.

Does this EIS (Environmental Impact Statement) have any kind of reports and studies on how the endangered species and marine life will handle the extra pollution due to development, and the golf course runoff? Keaouhou Bay is their habitat and this development WILL be CHANGING an Entire Ecosystem.

#### ENDANGERED SPECIES CONSERVATION IMPACTED BY DEVELOPMENT

In the Endangered Species Act of 1973 Under Section 2 (b), "To provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved." This would be Keaouhou Bay.

The Green Sea Turtle swims in Keaouhou Bay weekly and the monk seal has also been seen swimming and resting in Keaouhou Bay. Both of these marine animals are on the endangered species list.

Endangered Species Act

"Section 2. Findings, Purposes, and Policy

(4) the United States has pledged itself as a sovereign state in the international community to conserve to the extent practicable the various species of fish or wildlife and plants facing extinction, pursuant to—

(b) PURPOSES.—The purposes of this Act are to provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved, to provide a program for the conservation of such endangered species and threatened species, and to take such steps as may be appropriate to achieve the purposes of the treaties and conventions set forth in subsection (a) of this section."

This was taken from <https://www.fisheries.noaa.gov/national/endangered-species-conservation/endangered-species-ac>

#### FEDERALLY PROTECTED GREEN SEA TURTLES WILL BE AFFECTED

The green sea turtle is federally protected and can be seen in Keauhou Bay weekly.

The following article that states: "POLLUTED RUNOFF IN HAWAII ENDANGERS GREEN SEA TURTLES"

Why does Hawaii have a runoff problem?

Historically, in the tropics of Hawaii, precipitation was absorbed into the soil, according to the Clean Water Branch of Hawaii's Department of Health. Any potential pollution or contaminants on the ground surface would get pushed into the soil by the rain, and plant roots and microbes would help break down the pollution into less dangerous components. However, with urban and agricultural development, less and less of the pollution gets pulled into the soil, and more of it gets washed out into storm drains. From there, the pollutants make their way to streams, rivers and the ocean that surrounds Hawaii. According to the state agency, most of these contaminants are nutrients from fertilizer, bacteria from animal waste, oil, garbage and yard waste...

If polluted runoff reaches the ocean, it can wreak havoc on marine life, including endangered green sea turtles." Taken from <https://www.chemservice.com/news/polluted-runoff-in-hawaii-endangers-green-sea-turtles/>

Allowing this development WILL POLLUTE Keauhou Bay. The above article, written in 2014 (because runoff water from developments were polluting the ocean even then!!!) states this fact clearly. Keauhou Bay is home to countless sea creatures such as the protected green sea turtle, spotted eagle rays, manta rays, octopus, dolphins, fish, coral, monk seals, and more and that will ALL be harmed by the severe pollution runoff that WILL happen because developments have been shown to ALWAYS pollute the water is that is nearby.

The Green Sea Turtle is protected by more than one law. "All sea turtles in Hawai'i are protected by the Endangered Species Act (ESA) and additionally protected by Hawai'i Revised Statutes Chapter 195D (HRS) and Hawai'i Administrative Rules (HAR) 13-124." This information was taken from this site <https://dlnr.hawaii.gov/dar/species/sea-turtles/>

79

#### THE ENDANGERED MONK SEAL WILL BE AFFECTED

Keauhou Bay is known as a RESTING AREA for the ENDANGERED MONK SEAL. If another resort is allowed to be built, in addition to the pollution, it will also bring a lot more people down to Keauhou Bay. This increases the chances of a resting monk seal being disturbed by humans trying to get close, take "selfie" photos, and being generally uninformed and harmful. Please see article on Selfie Culture and its harmful effects below.

Has the EIS done any research on what an increased population would do in such a small area, and what will happen to the endangered species that live there? With a significantly increased population their habitat of Keauhou Bay will likely be changed forever.

This information is from a NOAA Scientist; "Study shows selfie culture impacts how people behave when posting images of an endangered species on social media. There's a seal on the beach! Let's go get a 'selfie'!" That must have been what nearly 18 percent of people on Instagram thought before approaching an endangered species.

In a recent study, NOAA scientists used social media to monitor human activities around endangered Hawaiian monk seals. They discovered that human disturbance is more common than they thought." <https://www.fisheries.noaa.gov/feature-story/endangered-hawaiian-monk-seals-cy-foul-over-selfies>

NOAA clearly states a high population in a place where monk seals and sea turtles habitat can be a serious disturbance for these endangered species.

"Hawaiian monk seals are protected federally by the ESA and the Marine Mammal Protection Act (MMPA), as well as locally by Hawai'i Revised Statutes (HRS) Chapter 195D and Hawai'i Administrative Rules (HAR) 13-124." This was taken from <https://dlnr.hawaii.gov/dar/hawaiian-monk-seal/>

Keauhou Bay is the monk seals and the green sea turtle's habitat. Allowing a bungalow resort to be developed in Keauhou Bay, the habitat of these endangered species, is to threaten their life and habitat with golf course runoff pollution, as well as development pollution. By threatening their habitat, and hence their lives, this development goes completely against the Endangered Species Act of 1973.

The verbiage in the Endangered Species Act states, "to conserve". In this case, "to conserve" would be to protect the land around Keauhou Bay from developments that destroy the habitat of these endangered species with pollution and runoff.

Does this EIS have any reports on the endangered species that frequent Keauhou Bay? This is their habitat and it needs to be "conserved".

Under the Conservation Program there should be research done on endangered species and their associated ecosystems. A large bungalow resort development WILL FOREVER CHANGE THIS ECOSYSTEM.

80

"§195D-5 Conservation programs. (a) The department shall conduct research on indigenous aquatic life, wildlife, and land plants, and on endangered species and their associated ecosystems, and shall utilize the land acquisition and other authority vested in the department to carry out programs for the conservation, management, and protection of such species and their associated ecosystems." [https://www.capitol.hawaii.gov/hirscurrent/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hirscurrent/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm)

Also, under this same Conservation program, "(2) Taking such action as may be necessary to ensure that actions authorized, funded, or carried out by them do not jeopardize the continued existence of threatened or endangered species." [https://www.capitol.hawaii.gov/hirscurrent/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hirscurrent/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm)

Please consider that developing a Kamehameha Schools Bungalow Resort in Keauhou Bay WILL threaten endangered species due to the unavoidable development and golf course pollution runoff that would be caused by removing the all the trees that currently serving as a natural pollution filter, and replacing the land with housing, cars, humans, and waste. There would also be tremendous runoff damage into Keauhou Bay and the surrounding area during the building phase of this enormous project.

#### GOLF COURSE POLLUTION KILLS MARINE LIFE AND DRASTICALLY CHANGES ECOSYSTEMS

"The golf industry uses approximately 50 pesticide active ingredients, including chlorpyrifos—an insecticide that is banned for residential use by the EPA due to developmental hazards. Having to trim golf turf to low heights also makes it even more vulnerable to pests, which leads to more pesticide use." <https://rainorshinegolf.com/pages/the-environmental-impact-of-golf-courses>

These pesticides will be in the pollution runoff that will enter Keauhou Bay more severely should the natural habitat of the trees be removed and replaced with pavement. This is unavoidable!

Please read from Wikipedia, "

Most drains have a single large exit at their point of discharge (often covered by a grating) into a canal, river, lake, reservoir, sea or ocean. Other than catch basins, typically there are no treatment facilities in the piping system." [https://en.wikipedia.org/wiki/Storm\\_drain#:-:text=Most%20drains%20have%20a%20single,discharge%20into%20individual%20dry%20wells](https://en.wikipedia.org/wiki/Storm_drain#:-:text=Most%20drains%20have%20a%20single,discharge%20into%20individual%20dry%20wells)

The pavement from this development will cause pollution to runoff into Keauhou Bay because this tread land that will become a housing development is situated directly between the golf course and the Bay. These trees, which absorb all the pollution from the golf course is the BEST AND ONLY PROTECTION POLLUTION FILTER Keauhou Bay has from the golf course pesticides, fertilizer and weed killer. See the below paragraph for further references.

See page 2 at: <https://health.hawaii.gov/po/files/2013/09/Stormwater-MS4-Presentation-HEE-7.15.14.pdf> where the Hawaii government states that Natural Ground Cover has 10% runoff, where has development has 55% runoff. So, even if you have storm drains the pavement this development will create will cause more runoff into Keauhou Bay than the Natural Ground Cover that is has now, that has been protecting the bay from golf course pollution for years.

These trees and land are saving monk seals and green sea turtles habitat from the golf course pollution and this land MUST BE PRESERVED and CONSERVED as the natural protector for Keauhou Bay and for these endangered species habitat.

Under Section 2 (b) of the Endangered Species Act - Keauhou Bay MUST BECOME A CONSERVATION AREA for these endangered species. It is currently their habitat, and to allow a large resort development to be built above this bay clearly threatens the lives of these endangered species by allowing golf course toxic pollution and development pollution to run into these species natural habitat of Keauhou Bay.

#### ALGAE BLOOMS KILL CORAL AND MARINE LIFE

The trees that are slated to be cleared for the development further protect Keauhou Bay from algae blooms that have been proven to be caused by pollution that is runoff from fertilizer and weed killer.

When there is heavy rain the land above the bay has a greater runoff than normal. Without the trees, the runoff from the golf course pollution will pour into the Bay likely causing frequent algae blooms.

Algae blooms have been shown to kill coral and marine life as stated in the many articles that will follow.

One of these articles is from the Global Coral Reef Alliance. They have researched the effects on reefs before and after a golf course developments. Though this development is not a golf course development, it is located just below a golf course and exposes the bay to the pollution from the golf course by removing the proven natural filter of the trees and natural ecosystem.

Has this EIS done any kind of research about the algae blooms that happen after a serious storm because of the golf course runoff pollution?

This information was taken from Global Coral Reef Alliance and it is an actual study on the how coral and marine life are affected before and after development. It's titled, "Golf courses kill coral reefs and fisheries: harmful algae blooms and disease cause by nutrient runoff from golf course development on Guana Cay, Abaco, Bahamas

Introduction: Bahamas coral reef deterioration

This study is thought the first ever to evaluate the health of coral reef ecosystems and fisheries before and after a golf course development. The vast majority of corals have died from a combination of factors including global warming, new diseases, land-based sources of pollution. . ." <https://www.globalcoral.org/golf-courses-kill-coral-reefs-and-fisheries-harmful-algae-blooms-and-disease-caused-by-nutrient-runoff-from-golf-course-development-on-guana-cay-abaco-bahamas/>

If you allow a Bungalow Development in Keauhou Bay you WILL be agreeing to pollute this bay for years to come and COMPLETELY CHANGING and possibly DESTROYING KEAUHOU BAY'S ECOSYSTEM.

Another study by the Coral Reef Alliance titled, "Golf course fertilizer runoff causes nutrient enrichment leading to harmful algae blooms on a Bahamian coral reef.

Land-Based Runoff Remains Top Source of Oil in the Ocean, Says New Report Oil in the Sea: Inputs, Fates, and Effects

News Release September 28, 2022

WASHINGTON — Oil in runoff, primarily from cities and vehicles, is the top source of oil entering the ocean, says a new report from the National Academies of Sciences, Engineering, and Medicine. In North American waters, estimated ocean oil pollution from land-based runoff is up to 20 times higher than it was 20 years ago, and oil spills, natural oil seeps, and discharge from oil and gas operations remain major sources of pollution. The report recommends actions that government and others should take to minimize oil pollution, and calls for sustained research funding to better understand how oil reaches and affects ocean environments. <https://www.nationalacademies.org/news/2002/05/oil-in-the-sea-inputs-fates-and-effects#:~:text=WASHINGTON%20%2D%2D%20Nearly%2085%20percent,pipeline%20spills%2C%20sa ys%20a%20new>

The Impact Of Stormwater – Car Emissions

"Car emissions are not limited to exhaust fumes that contribute to air pollution. They can also leak automotive fluid and release heavy metals that can contribute to stormwater pollution, contaminating local waterways." <https://www.stormwaterishepheids.org.au/blog/the-impact-of-stormwater-car-emissions/>

NOISE POLLUTION'S HARMFUL EFFECT ON MARINE LIFE

Does this EIS have any reports on the noise pollution that will happen and what it could do to marine life in Keaouhou Bay during development?

Because if you allow this Bungalow Resort to be developed you will increase constant noise in this bay for years to come and, "Noise Pollution Research shows that underwater noise from construction, shipping and naval vessels significantly impacts the natural behavior of cetaceans and many other marine species. This can be seen when mass beaching events occur or breeding success is diminished."

The above information was taken from the Ocean Conservation Trust <https://oceanconservationtrust.org/ocean-advocacy/think-ocean/ways-to-think-ocean/>

How Does Noise Pollution Harm Marine Species?

"However, over the past few decades, noise pollution in the marine environment has increased dramatically and is threatening the natural soundscape of the marine environment. Ships, seismic surveys, explosions, construction, and sonar devices have made the once peaceful environment into a loud, chaotic home which is extremely damaging for marine wildlife. This type of pollution is often

"...After construction new algae blooms appeared nearest the golf course green, smothering corals in adjacent reefs, along with sharply increased coral diseases..." <https://www.globalcoral.org/golf-course-fertilizer-runoff-causes-nutrient-enrichment-leading-to-harmful-algae-blooms-on-a-bahamian-coral-reef>

Does this EIS have any studies or reports on the extra runoff pollution due to clearing land and adding pavement?

This needs to be fully assessed because you will be changing an entire ecosystem to build a bungalow resort. It rains in Keaouhou Bay many nights out of the year and this kind of pollution will kill the beautiful and necessary coral in the Bay.

FURTHERMORE: "If there are toxic algal blooms, like red tide, or man-made contaminants, like pesticides or detergents in the water, those toxins are contained within the bubbles of sea foam. When those bubbles pop, the toxins can become airborne and compromise the air that is breathed in that location." <https://oceanconservancy.org/blog/2023/03/31/what-sea-foam/>

ENGINE POLLUTION CAUSES ISSUES IN THE OCEAN

Does this EIS have any detailed traffic studies for the increase in cars that will be added to this already severely traffic area they want to build their 150 room bungalow resort in? Have they done any studies on the pollution these cars WILL have in Keaouhou Bay?

Because this Bungalow Resort could have over 150 extra cars and over 300 or more extra people in and out of Keaouhou Bay, what traffic and increased population studies have they done? There will be employees with cars, guests with cars, visitors with cars. At times this would range to over 200 cars (likely more), coming in and out of, and parking above Keaouhou Bay thereby causing serious car population issues because of all these added cars right next to the bay.

The article below is from NOAA regarding motor vehicle engines and pollution to the sea.

What is the biggest source of pollution in the ocean?

Most ocean pollution begins on land.

"Millions of motor vehicle engines drop small amounts of oil each day onto roads and parking lots. Much of this, too, makes its way to the sea.

Some water pollution actually starts as air pollution, which settles into waterways and oceans. Dirt can be a pollutant. Top soil or silt from fields or construction sites can run off into waterways, harming fish and wildlife habitats."

<https://oceanservice.noaa.gov/facts/pollution.html#:~:text=Millions%20of%20moto r%20vehicle%20engines,Dirt%20can%20be%20a%20pollutant.>

overlooked in comparison to others but its impacts are now being documented across all types of marine ecosystems." <https://earth.org/noise-pollution-in-the-ocean/>

If you allow this resort the amount of people in this bay will fully increase and, "Hawaii's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally, management of the resource should balance the needs of different user groups, but the welfare of the marine environment on which its inhabitants depend must be the most important consideration." This was taken from Hawaii's own Division of Aquatic Resources <https://dlnr.hawaii.gov/dar/marine-managed-areas/hawaii-marine-life-conservation-districts/#:~:text=Snorkeling%20and%20SCUBA%20diving%20are,effect%20on%20nearshore%20fish%20populations.>

What is ocean noise?

"Ocean noise refers to sounds made by human activities that can interfere with or obscure the ability of marine animals to hear natural sounds in the ocean.

Many marine organisms rely on their ability to hear for their survival. Sound is a highly efficient means of communication underwater and is the primary way that many marine species gather and understand information about their environment. Many aquatic animals use sound to find prey, locate mates and offspring, avoid predators, guide their navigation and locate habitat, as well as to listen and communicate with each other.

Over the last century, human activities such as shipping, recreational boating, and energy exploration have increased along our coasts, offshore, and deep ocean environments. Noise from these activities can travel long distances underwater, leading to increases and changes in ocean noise levels in many coastal and offshore habitats.

These rising noise levels can negatively impact ocean animals and ecosystems. Higher noise levels can reduce the ability of animals to communicate with potential mates, other group members, their offspring, or feeding partners. Noise can also reduce an ocean animal's ability to hear environmental cues that are vital for survival, including those key to avoiding predators, finding food, and navigating to preferred habitats." <https://oceanservice.noaa.gov/facts/ocean-noise.html>

#### LEARN FROM OTHERS: RUN-OFF FROM DEVELOPMENT KILLS

The Chesapeake Bay has a foundation that is trying to save their bay due to runoff pollution that was caused by developments. Chesapeake Bay is a lot bigger than Keauhou Bay. If it's being drastically hurt by runoff water from developments, Keauhou Bay waters won't stand a chance if development above the bay is allowed. Keauhou Bay is a much smaller ecosystem.

This Article is by the Chesapeake Bay Foundation, Saving a National Treasure states, "...runoff is a significant source of harmful nitrogen pollution that continues to grow...

As rainwater and snowmelt run off our streets, parking lots, lawns, and other surfaces, they pick up pet waste, pesticides, fertilizer, oil, and other contaminants. If the draining water doesn't evaporate or soak into the ground where it can be filtered, it flushes straight into local creeks, rivers, and the Chesapeake Bay, adversely affecting water quality and aquatic life.

Only 10 to 20 percent of rain that falls in forests, fields, and other natural areas runs off, with the rest absorbed by soil and plants, where it is filtered before reaching aquifers or local waterways. (Right now Keauhou Bay has a lot of trees and is very natural, this is what helps stop runoff.) By contrast, close to 100 percent of the rain that falls on concrete and other hard surfaces produces runoff. One inch of rain falling on an acre of hardened surface produces 27,000 gallons of runoff.

Stormwater runoff pollution threatens Chesapeake Bay and its rivers and streams...Polluted runoff is one of the most harmful sources of pollution to the Bay and its waters. And much of it starts right in the urban and suburban neighborhoods where we live." <https://www.cbf.org/issues/polluted-runoff/index.html#:~:text=Besides%20carrying%20pollutants%20that%20harm,them%20are%20placed%20in%20jeopardy.>

If that is what runoff is doing to the Chesapeake Bay, the effects of runoff will be even more devastating to Keauhou Bay due to its size and fragility.

#### MANTA RAY HABITAT, CORAL REEF BLEACHING, & MARINE LIFE ~ THE DEVASTATING EFFECTS OF DEVELOPMENT ON THE OCEAN

Are there any reports in this EIS about what the impact to the coral, marine life, plankton especially zooplankton will be because of this development?

The studies below show that developments kill coral, and marine life. Zooplankton are part of this marine life and they are also killed and negatively affected. Zooplankton are food for manta rays. Manta rays are in Keauhou Bay every night to eat zooplankton, and are often seen here during the day as well.

Allowing this bay developed will also be a death sentence for many types of marine life including planktons. There is NO WAY to stop this from happening due to the fact that polluted runoff rain water from developments can't be fully stopped. This has been shown to happen in ALL coastal developments.

Please read the Scientific articles below.

It's Been Proven Developments Severely Pollute Nearby Waters

Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Coral Bleaching is occurring more frequently in Hawai'i. Across the Hawaiian Archipelago, coral bleaching has increased in frequency and severity since 1996. The last major bleaching event in 2014-2015 had catastrophic impacts statewide...

This was the third major bleaching episode in Hawai'i over the last 6 years. The frequency of these events is unprecedented in the archipelago. NOAA scientists and partners have determined that the key drivers of the bleaching were environmental factors (such as heat stress, depth, and surface light) and human

impacts (sewage effluent and urban runoff). " <https://www.fisheries.noaa.gov/feature-story/cautionary-tale-2019-coral-bleaching-event-hawaii#:~:text=Coral%20bleaching%20is%20occurring%20more,had%20catastrophic%20impacts%20state%20wide>.

This article is by the Coral Reef Alliance here in Hawaii. "An ecosystem under threat Hawaii's reefs face major global and local threats including climate change, overfishing, and sediment and nutrient pollution caused by sewage and stormwater runoff..."

When it rains, flash floods carry stormwater and large amounts of sediment downstream to the ocean. Just offshore, once-thriving coral reefs are now struggling to survive." <https://coral.org/en/where-we-work/hawaiian-islands/#:~:text=Hawai%20reefs%20face%20major%20global,into%20Hawai%20CA%20BBIs%20waterways%20every%20day>.

This article states that runoff is a leading source in coral degradation. Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Land-based sources of pollution are a leading cause of coral reef degradation in the Main Hawaiian Islands. Water quality is impacted by urban runoff, falling sewage systems, unpaved roads, farms, land clearing, and development."

[https://www.coris.noaa.gov/monitoring/status\\_report/docs/Hawaii\\_status\\_report\\_forweb.pdf](https://www.coris.noaa.gov/monitoring/status_report/docs/Hawaii_status_report_forweb.pdf)

This article is a Research Article by PLOS ONE and their motto is, "We're driving change in research integrity and publication ethics." This is some of their article information, "Coral taxonomy and local stressors drive bleaching prevalence across the Hawaiian Archipelago in 2019..."

We found little evidence for acclimation by reefs to thermal stress in the main Hawaiian Islands. Moreover, our findings illustrate how detrimental effects of local anthropogenic stressors, such as tourism and urban runoff, may be exacerbated under high thermal stress. In light of the forecasted increase in severity and frequency of bleaching events, future mitigation of both local and global stressors is a high priority for the future of corals in Hawaii."

<https://journals.plos.org/plosone/article?id=10.1371/journal.pone.0269068>

The coral all over Hawaii has had extremely high mortality rates, due to developments near ocean areas throughout the years, and development in Keauhou Bay will be devastating to the coral, reef fish, and all aquatic life there. Manta Rays need to eat 5 times their body weight in zooplankton daily. Their population will be severely affected should the plankton die. Please see the cited information below.

"SO, HOW MUCH PLANKTON DOES YOUR AVERAGE MANTA RAY EAT? 19,200,000. Nineteen million two hundred thousand, give or take a few thousand.

That is the number of plankton pieces a ten-foot manta ray must consume weekly to stay alive."

The above information was taken from Manta Ray Advocates <https://mantarayadvocates.com/how-much-plankton-do-mantas-eat>

Coral reefs are known to be highly negatively impacted by developments because, "Impacts from land-based sources of pollution including coastal development...can impede coral growth and reproduction, disrupt overall ecological function, and cause disease and mortality in sensitive species."

<https://oceanservice.noaa.gov/facts/coral-pollution.html#:~:text=Impacts%20from%20land%2Dbased%20sources,and%20mortality%20in%20sensitive%20species>.

Article by Environmental Evidence, "Coastal development and runoff lead to sedimentation, which directly impacts coral recruitment, growth, mortality, and ecosystem services that coral reefs provide." <https://environmentalevidencejournal.biomedcentral.com/articles/10.1186/s13750-020-00200-0#:~:text=Coastal%20development%20and%20runoff%20lead,ervices%20that%20coral%20reefs%20provide>.

Developments can't fully stop polluting because runoff is from rain during development and after. Article by NOAA, "One of the most significant threats to reefs is pollution. Land-based runoff and pollution discharges can result from dredging, coastal development...This runoff may contain sediments, nutrients, chemicals, insecticides, oil and debris.

When some pollutants enter the water, nutrient levels can increase, promoting the rapid growth of algae and other organisms that can smother coral."

[https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,organisms%20that%20can%20smother%20corals](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,organisms%20that%20can%20smother%20corals).

Another article by NOAA, "Coral reefs also are affected by leaking fuels, anti-fouling paints and coatings, and other chemicals that enter the water... (All of those are show up in every development project.)

Among the most damaging pollutants on coral reefs is sediment, which can remain suspended in the water or be deposited on the coral surface (i.e., turbidity and sedimentation, respectively) and can contain toxicants, pathogens, and nutrients, all of which impact coral growth, recruitment, and survival" [https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days).

It's Been Proven Resort Developments KILL Marine Life

This article by MarinBIO states, "Zooplankton are also sensitive to their environment and like phytoplankton—a change in zooplankton concentration can indicate a subtle environmental change. Zooplankton are highly responsive to nutrient levels, temperatures, pollution, food that is not nutritious, levels of light, and increases in predation. As well as providing an essential link in the marine food chain (which is an understatement), the diversity of species, amount of biomass and abundance of zooplankton communities can be used to determine the health of an ecosystem..."

Here is another article that shocking shows that in a very short time, big changes can occur due to runoff. A development will hurt and kill plankton, by Frontiers in Marine Science, "Effects of an experimental terrestrial runoff on the components of the plankton food web in a Mediterranean coastal lagoon The main result observed in the present study was that the effects of the simulated terrestrial runoff spread along the plankton food web, significantly affecting all trophic levels of the natural plankton community studied. This occurred in a relatively short time considering that the experiment lasted less than three weeks. The lower light availability in the terrestrial runoff treatment compared to the control resulted in a net decrease of approximately one-third of Chl-a concentration and phytoplankton abundance over the entire experiment." <https://www.frontiersin.org/journals/marine-science/articles/10.3389/fmars.2023.1200757/full>

The ecosystem is fragile and interconnected as is stated in this article: "Zooplankton are also affected by levels of pH, heavy metals, calcium, and aluminum. Nutrients like nitrogen and phosphorus will affect the prey of zooplankton (like algae, protozoa and bacteria), indirectly affecting zooplankton survival. Scientists are still putting together pieces of the zooplankton puzzle. Some questions include how nutrient levels found in algae can influence the growth and behavior of zooplankton. Another question important to marine and human life is how toxins and pollution will affect this crucial link in the food chain" This information is in article by MarineBIO.  
<https://www.marinebio.org/creatures/zooplankton/#:~:text=Zooplankton%20are%20also%20sensitive%20to%20light%2C%20and%20increases%20in%20predation.>

A research article by Environmental Research Laboratory, United States Environmental Protection Agency that discusses, "Toxic Effects of Pollutants on Plankton: There are four main sources of aquatic pollution: industrial wastes, municipal wastes, agricultural run-off, and accidental spillage. Non-point sources, such as automobile exhausts, add appreciable amounts of pollutants to air that may enter aquatic systems in rainfall or dry fall-out. These sources add pesticides, heavy metals, oil, petroleum products, and a large number of organic and inorganic compounds to water. Lakes and oceans serve as sinks for many pollutants. Plankton comprise a large portion of the living matter in natural waters and function in biogeochemical cycles. They are affected by pollutants, transfer them to sediments and other organisms, and function in their biological transformation."

[https://scope.dge.carnegiescience.edu/SCOPE\\_12/SCOPE\\_12\\_3.6\\_chapter12\\_257-274.pdf](https://scope.dge.carnegiescience.edu/SCOPE_12/SCOPE_12_3.6_chapter12_257-274.pdf)

All the above articles show that development of Keauhou Bay WILL hurt plankton life and marine life in the bay because pollutant runoff is inevitable and unavoidable during construction and afterwards. The manta ray food source will likely disappear. This will be devastating for the manta ray populations. Furthermore, if manta rays die or leave the area, the loss will in turn affect many lively hoods from locals on the island who depend on the manta ray tour for their income.

#### HUMAN POPULATION INCREASES LINKED DIRECTLY TO CORAL DEATH

Does this EIS have any reports on their resort adding to the population increase that happens during IRONMAN?

"On average, each Ironman racer brings three people with them to the Big Island. Counting members of the media, VIPs who come from around the globe to watch and the triathlons partners, there likely be more than 6,300 people descending on Kona..." <https://bigislandnow.com/2023/10/07/ironman-2023-in-kona-shines-spotlight-on-some-of-best-women-triathletes-in-the-world/>

And "Resident dissatisfaction with tourists is multifaceted. The overwhelming majority (92%) of locals felt visitors were not educated enough on protecting Hawaii's natural environment and local resources; other factors include the impact of the vacation rental industry and ignorance of the residents' quality of life." <https://www.triathlete.com/culture/news/kona-locals-ask-ironman-visitors-for-respect/>

Where are the EIS reports on human density? Below are reports that show human population destroys coral reefs.

"The number of people living on the coasts has rapidly increased in recent decades, causing significant destruction of coastal areas. Coastal development can negatively impact the ocean through the destruction of coastal marine habitat and through run-off of sediments and pollution.

-Coastal development involves activities such as the creation of harbors, stabilization of shorelines, and aquaculture that involve the destruction of sensitive marine habitats such as mangroves, coral reefs, and seagrass beds.

-Coastal development may cause the run-off of sediments into coastal habitats, which can smother corals or seaweeds and reduce the amount of light available for photosynthesis. Losses of primary producers and important habitat-forming species such as corals can negatively impact entire food webs."

The above information was taken from the Education Development Center, INC, from their Coastal Development page called Ocean Tracks <https://oceantracks.org/library/human-impacts/coastal-development#:~:text=Coastal%20development%20may%20cause%20the,negatively%20impact%20entire%20food%20webs.>

There is nothing Kamehameha Schools can do to their development that can stop the guests of this possible Bungalow Resort from going to Keauhou Bay. Human traffic WILL seriously increase if this resort is allowed to be built and the marine life will be negatively affected by it. Marine life will suffer from this development as stated in this letter in many different scientific reported articles.

If you allow this resort the amount of people in this bay will fully increase and, "Hawaii's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally, management of the resource should balance the needs of different user groups, but the welfare of the marine environment on which its inhabitants depend must be the most important consideration." This was taken from Hawaii's own Division of Aquatic Resources <https://dlnr.hawaii.gov/dar/marine-managed-areas/hawaii-marine-life-conservation-districts/#:~:text=Snorkeling%20and%20SCUBA%20diving%20are,effect%20on%20nearshore%20fish%20populations.>

It's Been Proven an Increase in Human Population Destroys Coral Reefs

If a Bungalow Resort is allowed to be built in Keauhou Bay, it will bring a serious increase in human traffic. "Easily visible trends in human population dynamics combined with well-established and tested ecological theory give a clear, intuitive, yet quantifiable guide to the severity of survival challenges faced by coral reefs. Management challenges and required actions can be clearly shown and, contrary to frequent claims, no scientific ambiguity exists with regard to the serious threat posed to coral reefs by humankind's continued numerical increase." This is in the article by National Library of Medicine National center for Biotechnology Information PubMed.  
<https://pubmed.ncbi.nlm.nih.gov/33293007/#:~:text=Denser%20coastal%20populations%20and%20gr eater,to%20more%20runoff%20and%20siltation.>

This article is by ABC NEWS, "This is how tourists are destroying coral reefs in Hawaii. The less people at a certain site, the more coral there are, the research found. The millions of tourists who flock to the

shores of Hawaii every year are wreaking havoc on its natural environment -- especially the coral reefs, which are at risk all over the world, a new study said. The most popular coral reefs on the Hawaiian islands are likely being degraded by the very visitors they attract, according to a study published Monday in Nature Sustainability." <https://abcnews.go.com/US/hawaiian-coral-reefs-degrading-popular-tourist-sites-scientists/story?id=96308858#:~:text=The%20less%20people%20at%20a,there%20are%20%20the%20research%20found.&text=The%20millions%20of%20tourists%20who,world%2C%20a%20new%20stud y%20said.>

By allowing this development you are stressing an already fragile Eco-system. The small bay is currently used by many locals for boating, fishing, canoeing, paddle boarding, snorkeling, manta night dives, surfing, and swimming. We know, and research shows, that more people cause more damage. The area simply cannot afford or support this development.

"Denser coastal populations and greater wealth will lead to reef degradation by coastal construction. Denser populations inland will lead to more runoff and siltation. Effects of human perturbations can be explored with meta-population theory since they translate to increases in patch-mortality and decreases in patch-colonization (= regeneration). All such changes will result in a habitat with overall fewer settled patches, so fewer live reefs." This information was taken from Science Direct <https://www.sciencedirect.com/science/article/abs/pii/S0065288120300328#:~:text=Aquaculture%20will%20alleviate%20some%20fishing,to%20more%20runoff%20and%20siltation.>

Another article by Nature Sustainability, "Coral reefs and coastal tourism in Hawaii Coral reefs are popular for their vibrant biodiversity. By combining web-scraped Instagram data from tourists and high-resolution live coral cover maps in Hawaii, we find that, regionally, coral reefs both attract and suffer from coastal tourism. Higher live coral cover attracts reef visitors, but that visitation contributes to subsequent reef degradation. Such feedback loops threaten the highest quality reefs, highlighting both their economic value and the need for effective conservation management." [https://www.nature.com/articles/s41893-022-01021-4.epdf?sharing\\_token=wsakgQNhaiHjJAnWAg453RgN0JAiWei9inR3oIv0PYGZA5ic\\_H0Q1zcHNIP3ASnhcgKRy6\\_vKLpW49dbmBYoXSg3Y1MgQIGBZsapidGUH1701SIbuw9x5Pr3xED4kxI4I0sIvgQ1a7ZRR3UbraxpodJ42AoNISMwSuxB7JEDdplj8OGJpx71TIWdCfXvFKIzYeNdcJ3Ssw\\_dnaUjg5IZIhejPBDImmaH5yqI5Q%3D&tracking\\_referrer=abcnews.go.com](https://www.nature.com/articles/s41893-022-01021-4.epdf?sharing_token=wsakgQNhaiHjJAnWAg453RgN0JAiWei9inR3oIv0PYGZA5ic_H0Q1zcHNIP3ASnhcgKRy6_vKLpW49dbmBYoXSg3Y1MgQIGBZsapidGUH1701SIbuw9x5Pr3xED4kxI4I0sIvgQ1a7ZRR3UbraxpodJ42AoNISMwSuxB7JEDdplj8OGJpx71TIWdCfXvFKIzYeNdcJ3Ssw_dnaUjg5IZIhejPBDImmaH5yqI5Q%3D&tracking_referrer=abcnews.go.com)

## INFRASTRUCTURE AND RESOURCES ON AN ISLAND ALREADY HIGHLY IMPACTED AND STRUGGLING FOR ANSWERS

Has the EIS done any research or reports on the Resources and Infrastructure it will need for a bungalow resort?

There are many big housing developments currently under construction in Kailua Kona, Waikoloa Village, Hilo, Puna, Ocean View and Volcano. The entire Big Island has construction projects already in progress.

Has Kamehameha Schools EIS done any kind of reports or surveys to know if Big Island has the Resources and Infrastructures for their resort development?

"Hotel waste management refers to all the practices and processes that hotels implement to handle and dispose of the multiple types of waste generated on their premises. Worldwide, hotels produce almost 300,000 tonnes of waste each year." <https://www.homebiogas.com/blog/hotels-waste-management/>

As of now, the Big Island's Resources and Infrastructure are having serious negative issues and many more developments that have been approved are not even completed as of yet, which means our island's resources and infrastructure will be taxed even more severely in the near future.

Please read the below articles that prove Big Island does not have the resources or infrastructure for a 143-Unit Bungalow Resort Development at Keaunohu Bay. On Hawai'i Island, we are already struggling to meet the increasing need for resources and infrastructure.

Big Island Now poll No. 27 results: More than one solution needed to help extend life of West Hawai'i landfill

September 17, 2023

The West Hawai'i Sanitary Landfill, the only remaining landfill on the Big Island, is forecast to reach capacity within the next 20 to 25 years.

The West Hawai'i landfill became the island's only one after the Hilo Landfill closed three years ago. It only has about 20 to 25 years left before it can no longer be used to store rubbish.

<https://bigislandnow.com/2023/09/17/big-island-now-poll-no-27-results-more-than-one-solution-needed-to-help-extend-life-of-west-hawaii-landfill/>

A County commission drafts ordinance aiming to ban recyclables at West Hawai'i landfill

By Megan Moseley September 6, 2023

Hawai'i County's Environmental Management Commission is developing an ordinance that aims to prohibit the amount of recyclable materials ending up in the island's only working landfill.

During a commission meeting on July 26, Ramzi Mansour, Hawai'i County Director of Environmental Management, told commissioners the West Hawai'i Sanitary Landfill only has 20 to 25 years left before it reaches capacity.

With the Hilo Landfill permanently closed in 2020, the clock is ticking for the island's sole dump. Commission chairperson Georjean Adams said it's a good time to start looking into solutions.

Adams said the proposed ordinance is in its early stages and is more about getting the conversation started about how to prevent unnecessary, or recyclable items — green waste, metals, plastics, paper, paperboard and glass — from ending up in the rubbish dump, located off Queen Ka'ahumanu Highway in Waikoloa.

“Trying to site a new landfill is close to impossible,” Adams said. “So what are we going to do? So I was looking around, and the commission agreed, to look deeply into the idea of diverting the recyclables out and at least slow the filling up of the landfill.”

The proposed ordinance refers to the 2019 Integrated Solid Waste Management Plan that commits the county to “divert, as much as feasible, commercial and municipal solid waste, including but not limited to green waste, metals, plastics, paper, paperboard, and glass to help achieve goals related to climate resiliency, renewable energy, sustainable agriculture, and zero waste.”

<https://bigislandnow.com/2023/09/06/new-draft-ordinance-aims-to-ban-recyclables-at-west-hawaii-landfill>

Time's Up For Landfills

‘Gentle’ demolition strategies can help preserve resources

PAULA BENDER April 2, 2024

As Hawai'i government officials grapple with the challenge of limited landfill space statewide, federal restrictions set in place by the Environmental Protection Agency are ruling out possible locations that were once considered for new landfills.

Hawaii Act 73 states landfills must be located at least half a mile from residential areas; are prohibited from being located in areas with heavy rain and steep slopes, as well as agricultural and/or conservation lands; above aquifers; 300 feet beyond streams; and 1,000 feet beyond the ocean.

New landfills are also now prohibited from being created in tsunami inundation zones, 100-year flood zones and wetlands. There are also concerns that landfills near airports will attract birds, result in

To Whom It May Concern,

Please read the scientific proof in this letter and REJECT Kamehameha Schools Environment Impact Statement (EIS) for Keaouhou Bay to become a Bungalow Resort.

Please state in your report that a Bungalow Resort WILL have a SERIOUS NEGATIVE IMPACT on Keaouhou Bay as stated in all the different researched articles below.

Please, DO NOT risk polluting the water in Keaouhou Bay by allowing Kamehameha Schools to develop their bungalow resort project. It is scientifically proven that developments pollute nearby waters both during and after development.

Below are scientific articles written by the National Oceanic and Atmospheric Administration (NOAA), Global Coral Reef Alliance, Hawaii Government, and many other professional organizations, that have studied and shown that developments have ALWAYS polluted the water in EVERY coastal development area.

Does this EIS (Environmental Impact Statement) have any kind of reports and studies on how the endangered species and marine life will handle the extra pollution due to development, and the golf course runoff? Keaouhou Bay is their habitat and this development WILL be CHANGING an Entire Ecosystem.

#### ENDANGERED SPECIES CONSERVATION IMPACTED BY DEVELOPMENT

In the Endangered Species Act of 1973 Under Section 2 (b), "To provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved." This would be Keaouhou Bay.

The Green Sea Turtle swims in Keaouhou Bay weekly and the monk seal has also been seen swimming and resting in Keaouhou Bay. Both of these marine animals are on the endangered species list.

Endangered Species Act

"Section 2. Findings, Purposes, and Policy

(4) the United States has pledged itself as a sovereign state in the international community to conserve to the extent practicable the various species of fish or wildlife and plants facing extinction, pursuant to—

(b) PURPOSES.—The purposes of this Act are to provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved, to provide a program for the conservation of such endangered species and threatened species, and to take such steps as may be appropriate to achieve the purposes of the treaties and conventions set forth in subsection (a) of this section."

This was taken from <https://www.fisheries.noaa.gov/national/andangered-species-conservation/andangered-species-act>

#### FEDERALLY PROTECTED GREEN SEA TURTLES WILL BE AFFECTED

The green sea turtle is federally protected and can be seen in Keaouhou Bay weekly.

The following article that states: "POLLUTED RUNOFF IN HAWAII ENDANGERS GREEN SEA TURTLES"

Why does Hawaii have a runoff problem?

Historically, in the tropics of Hawaii, precipitation was absorbed into the soil, according to the Clean Water Branch of Hawaii's Department of Health. Any potential pollution or contaminants on the ground surface would get pushed into the soil by the rain, and plant roots and microbes would help break down the pollution into less dangerous components. However, with urban and agricultural development, less and less of the pollution gets pulled into the soil, and more of it gets washed out into storm drains. From there, the pollutants make their way to streams, rivers and the ocean that surrounds Hawaii. According

to the state agency, most of these contaminants are nutrients from fertilizer, bacteria from animal waste, oil, garbage and yard waste...

If polluted runoff reaches the ocean, it can wreak havoc on marine life, including endangered green sea turtles." Taken from <https://www.chemservice.com/news/polluted-runoff-in-hawaii-endangers-green-sea-turtles/>

Allowing this development WILL POLLUTE Keauhou Bay. The above article, written in 2014 (because runoff water from developments were polluting the ocean even then!!!) states this fact clearly. Keauhou Bay is home to countless sea creatures such as the protected green sea turtle, spotted eagle rays, manta rays, octopus, dolphins, fish, coral, monk seals, and more and that will ALL be harmed by the severe pollution runoff that WILL happen because developments have been shown to ALWAYS pollute the water is that is nearby.

The Green Sea Turtle is protected by more than one law. "All sea turtles in Hawai'i are protected by the Endangered Species Act (ESA) and additionally protected by Hawai'i Revised Statutes Chapter 195D (HRS) and Hawai'i Administrative Rules (HAR) 13-124." This information was taken from this site <https://dlnr.hawaii.gov/dar/species/sea-turtles/>

#### THE ENDANGERED MONK SEAL WILL BE AFFECTED

Keauhou Bay is known as a RESTING AREA for the ENDANGERED MONK SEAL. If another resort is allowed to be built, in addition to the pollution, it will also bring a lot more people down to Keauhou Bay. This increases the chances of a resting monk seal being disturbed by humans trying to get close, take "selfie" photos, and being generally uninformed and harmful. Please see article on Selfie Culture and its harmful effects below.

Has the EIS done any research on what an increased population would do in such a small area, and what will happen to the endangered species that live there? With a significantly increased population their habitat of Keauhou Bay will likely be changed forever.

This information is from a NOAA Scientist; "Study shows selfie culture impacts how people behave when posting images of an endangered species on social media. There's a seal on the beach! Let's go get a 'selfie'!" That must have been what nearly 18 percent of people on Instagram thought before approaching an endangered species.

In a recent study, NOAA scientists used social media to monitor human activities around endangered Hawaiian monk seals. They discovered that human disturbance is more common than they thought." <https://www.fisheries.noaa.gov/feature-story/endangered-hawaiian-monk-seals-cry-foul-over-selfies>

NOAA clearly states a high population in a place where monk seals and sea turtles habitat can be a serious disturbance for these endangered species.

"Hawaiian monk seals are protected federally by the ESA and the Marine Mammal Protection Act (MMPA), as well as locally by Hawai'i Revised Statutes (HRS) Chapter 195D and Hawai'i Administrative Rules (HAR) 13-124." This was taken from <https://dlnr.hawaii.gov/dar/hawaiian-monk-seal/>

Keauhou Bay is the monk seals and the green sea turtle's habitat. Allowing a bungalow resort to be developed in Keauhou Bay, the habitat of these endangered species, is to threaten their life and habitat with golf course runoff pollution, as well as development pollution. By threatening their habitat, and hence their lives, this development goes completely against the Endangered Species Act of 1973.

The verbiage in the Endangered Species Act states, "to conserve". In this case, "to conserve" would be to protect the land around Keauhou Bay from developments that destroy the habitat of these endangered species with pollution and runoff.

Does this EIS have any reports on the endangered species that frequent Keauhou Bay? This is their habitat and it needs to be "conserved".

Under the Conservation Program there should be research done on endangered species and their associated ecosystems. A large bungalow resort development WILL FOREVER CHANGE THIS ECOSYSTEM.

"§ 195D-5 Conservation programs. (a) The department shall conduct research on indigenous aquatic life, wildlife, and land plants, and on endangered species and their associated ecosystems, and shall utilize the land acquisition and other authority vested in the department to carry out programs for the conservation, management, and protection of such species and their associated ecosystems." [https://www.capitol.hawaii.gov/hrscurrent/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hrscurrent/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm)

Also, under this same Conservation program, "(2) Taking such action as may be necessary to ensure that actions authorized, funded, or carried out by them do not jeopardize the continued existence of threatened or endangered species." [https://www.capitol.hawaii.gov/hrscurrent/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hrscurrent/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm)

Please consider that developing a Kamehameha Schools Bungalow Resort in Keauhou Bay WILL threaten endangered species due to the unavoidable development and golf course pollution runoff that would be caused by removing the all the trees that currently serving as a natural pollution filter, and replacing the land with housing, cars, humans, and waste. There would also be tremendous runoff damage into Keauhou Bay and the surrounding area during the building phase of this enormous project.

#### GOLF COURSE POLLUTION KILLS MARINE LIFE AND DRASTICALLY CHANGES ECOSYSTEMS

"The golf industry uses approximately 50 pesticide active ingredients, including chlorpyrifos—an insecticide that is banned for residential use by the EPA due to developmental hazards. Having to trim golf turf to low heights also makes it even more vulnerable to pests, which leads to more pesticide use." <https://rainorshinegolf.com/pages/the-environmental-impact-of-golf-courses>

These pesticides will be in the pollution runoff that will enter Keauhou Bay more severely should the natural habitat of the trees be removed and replaced with pavement. This is unavoidable!

Please read from Wikipedia, "Most drains have a single large exit at their point of discharge (often covered by a grating) into a canal, river, lake, reservoir, sea or ocean. Other than catch basins, typically there are no treatment facilities in the piping system." [https://en.wikipedia.org/wiki/Storm\\_drain#:~:text=Most%20drains%20have%20a%20single%20discharge%20into%20individual%20dry%20wells](https://en.wikipedia.org/wiki/Storm_drain#:~:text=Most%20drains%20have%20a%20single%20discharge%20into%20individual%20dry%20wells)

The pavement from this development will cause pollution to runoff into Keauhou Bay because this treed land that will become a housing development is situated directly between the golf course and the Bay. These trees, which absorb all the pollution from the golf course is the BEST AND ONLY PROTECTION POLLUTION FILTER Keauhou Bay has from the golf course pesticides, fertilizer and weed killer. See the below paragraph for further references.

See page 2 at: <https://health.hawaii.gov/eppo/files/2013/09/Stormwater-MS4-Presentation-HEE-7.15.14.pdf> where the Hawaii government states that Natural Ground Cover has 10% runoff, where has development has 55% runoff. So, even if you have storm drains the pavement this development will create will cause more runoff into Keauhou Bay than the Natural Ground Cover that is has now, that has been protecting the bay from golf course pollution for years.

These trees and land are saving monk seals and green sea turtles habitat from the golf course pollution and this land MUST BE PRESERVED and CONSERVED as the natural protector for Keauhou Bay and for these endangered species habitat.

Under Section 2 (b) of the Endangered Species Act - Keauhou Bay MUST BECOME A CONSERVATION AREA for these endangered species. It is currently their habitat, and to allow a large resort development to be built above this bay clearly threatens the lives of these endangered species by allowing golf course toxic pollution and development pollution to run into these species natural habitat of Keauhou Bay.

#### ALGAE BLOOMS KILL CORAL AND MARINE LIFE

The trees that are slated to be cleared for the development further protect Keauhou Bay from algae blooms that have been proven to be caused by pollution that is runoff from fertilizer and weed killer.

When there is heavy rain the land above the bay has a greater runoff than normal. Without the trees, the runoff from the golf course pollution will pour into the Bay likely causing frequent algae blooms.

Algae blooms have been shown to kill coral and marine life as stated in the many articles that will follow.

One of these articles is from the Global Coral Reef Alliance. They have researched the effects on reefs before and after a golf course developments. Though this development is not a golf course development, it is located just below a golf course and exposes the bay to the pollution from the golf course by removing the proven natural filter of the trees and natural ecosystem.

Has this EIS done any kind of research about the algae blooms that happen after a serious storm because of the golf course runoff pollution?

This information was taken from Global Coral Reef Alliance and it is an actual study on the how coral and marine life are affected before and after development. It's titled, "Golf courses kill coral reefs and fisheries: harmful algae blooms and disease cause by nutrient runoff from golf course development on Guana Cay, Abaco, Bahamas

Introduction: Bahamas coral reef deterioration

This study is thought the first ever to evaluate the health of coral reef ecosystems and fisheries before and after a golf course development. The vast majority of corals have died from a combination of factors including global warming, new diseases, land-based sources of pollution. . . . " <https://www.globalcoral.org/golf-courses-kill-coral-reefs-and-fisheries-harmful-algae-blooms-and-disease-caused-by-nutrient-runoff-from-golf-course-development-on-guana-cay-abaco-bahamas/>

If you allow a Bungalow Development in Keauhou Bay you WILL be agreeing to pollute this bay for years to come and COMPLETELY CHANGING and possibly DESTROYING KEAUHOU BAY'S ECOSYSTEM.

Another study by the Coral Reef Alliance titled, "Golf course fertilizer runoff causes nutrient enrichment leading to harmful algae blooms on a Bahamian coral reef.

"...After construction new algae blooms appeared nearest the golf course green, smothering corals in adjacent reefs, along with sharply increased coral diseases..." <https://www.globalcoral.org/golf-course-fertilizer-runoff-causes-nutrient-enrichment-leading-to-harmful-algae-blooms-on-a-bahamian-coral-reef>

Does this EIS have any studies or reports on the extra runoff pollution due to clearing land and adding pavement?

This needs to be fully assessed because you will be changing an entire ecosystem to build a bungalow resort. It rains in Keauhou Bay many nights out of the year and this kind of pollution will kill the beautiful and necessary coral in the Bay.

FURTHERMORE: "If there are toxic algal blooms, like red tide, or man-made contaminants, like pesticides or detergents in the water, those toxins are contained within the bubbles of sea foam. When those bubbles pop, the toxins can become airborne and compromise the air that is breathed in that location." <https://oceanconservancy.org/blog/2023/03/31/what-sea-foam/>

#### ENGINE POLLUTION CAUSES ISSUES IN THE OCEAN

Does this EIS have any detailed traffic studies for the increase in cars that will be added to this already severely traffic area they want to build their 150 room bungalow resort in? Have they done any studies on the pollution these cars WILL have in Keauhou Bay?

Because this Bungalow Resort could have over 150 extra cars and over 300 or more extra people in and out of Keauhou Bay, what traffic and increased population studies have they done? There will be employees with cars, guests with cars, visitors with cars. At times this would range to over 200 cars

Does this EIS have any reports on the noise pollution that will happen and what it could do to marine life in Keauhou Bay during development?

Because if you allow this Bungalow Resort to be developed you will increase constant noise in this bay for years to come and, "Noise Pollution Research shows that underwater noise from construction, shipping and naval vessels significantly impacts the natural behavior of cetaceans and many other marine species. This can be seen when mass beaching events occur or breeding success is diminished."

The above information was taken from the Ocean Conservation Trust  
<https://oceanconservationtrust.org/ocean-advocacy/think-ocean/ways-to-think-ocean/>

How Does Noise Pollution Harm Marine Species?

"However, over the past few decades, noise pollution in the marine environment has increased dramatically and is threatening the natural soundscape of the marine environment. Ships, seismic surveys, explosions, construction, and sonar devices have made the once peaceful environment into a loud, chaotic home which is extremely damaging for marine wildlife. This type of pollution is often overlooked in comparison to others but its impacts are now being documented across all types of marine ecosystems." <https://earth.org/noise-pollution-in-the-ocean/>

If you allow this resort the amount of people in this bay will fully increase and, "Hawaii's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally, management of the resource should balance the needs of different user groups, but the welfare of the marine environment on which its inhabitants depend must be the most important consideration." This was taken from Hawaii's own Division of Aquatic Resources <https://dlnr.hawaii.gov/dar/marine-managed-areas/hawaii-marine-life-conservation-districts/#:~:text=Snorkeling%20and%20SCUBA%20diving%20are,effect%20on%20nearshore%20fish%20populations.>

What is ocean noise?

"Ocean noise refers to sounds made by human activities that can interfere with or obscure the ability of marine animals to hear natural sounds in the ocean.

Many marine organisms rely on their ability to hear for their survival. Sound is a highly efficient means of communication underwater and is the primary way that many marine species gather and understand information about their environment. Many aquatic animals use sound to find prey, locate mates and offspring, avoid predators, guide their navigation and locate habitat, as well as to listen and communicate with each other.

Over the last century, human activities such as shipping, recreational boating, and energy exploration have increased along our coasts, offshore, and deep ocean environments. Noise from these activities can travel long distances underwater, leading to increases and changes in ocean noise levels in many coastal and offshore habitats.

(likely more), coming in and out of, and parking above Keauhou Bay thereby causing serious car population issues because of all these added cars right next to the bay.

The article below is from NOAA regarding motor vehicle engines and pollution to the sea.

What is the biggest source of pollution in the ocean?

Most ocean pollution begins on land.

"Millions of motor vehicle engines drop small amounts of oil each day onto roads and parking lots. Much of this, too, makes its way to the sea.

Some water pollution actually starts as air pollution, which settles into waterways and oceans. Dirt can be a pollutant. Top soil or silt from fields or construction sites can run off into waterways, harming fish and wildlife habitats."

<https://oceanservice.noaa.gov/facts/pollution.html#:~:text=Millions%20of%20motor%20vehicle%20engines,Dirt%20can%20be%20a%20pollutant.>

Land-Based Runoff Remains Top Source of Oil in the Ocean, Says New Report Oil in the Sea: Inputs, Fates, and Effects

News Release September 28, 2022

WASHINGTON — Oil in runoff, primarily from cities and vehicles, is the top source of oil entering the ocean, says a new report from the National Academies of Sciences, Engineering, and Medicine. In North American waters, estimated ocean oil pollution from land-based runoff is up to 20 times higher than it was 20 years ago, and oil spills, natural oil seeps, and discharge from oil and gas operations remain major sources of pollution. The report recommends actions that government and others should take to minimize oil pollution, and calls for sustained research funding to better understand how oil reaches and affects ocean environments. <https://www.nationalacademies.org/news/2002/05/oil-in-the-sea-inputs-fates-and-effects#:~:text=WASHINGTON%20%2D%2D%20Nearly%2085%20percent,pipeline%20spills%2C%20saves%20a%20new>

The Impact Of Stormwater – Car Emissions

"Car emissions are not limited to exhaust fumes that contribute to air pollution. They can also leak automotive fluid and release heavy metals that can contribute to stormwater pollution, contaminating local waterways." <https://www.stormwatershedpartners.org.au/blog/the-impact-of-stormwater-car-emissions/>

NOISE POLLUTION'S HARMFUL EFFECT ON MARINE LIFE

These rising noise levels can negatively impact ocean animals and ecosystems. Higher noise levels can reduce the ability of animals to communicate with potential mates, other group members, their offspring, or feeding partners. Noise can also reduce an ocean animal's ability to hear environmental cues that are vital for survival, including those key to avoiding predators, finding food, and navigating to preferred habitats." <https://oceanservice.noaa.gov/facts/ocean-noise.html>

#### LEARN FROM OTHERS: RUN-OFF FROM DEVELOPMENT KILLS

The Chesapeake Bay has a foundation that is trying to save their bay due to runoff pollution that was caused by developments. Chesapeake Bay is a lot bigger than Keauhou Bay. If it's being drastically hurt by runoff water from developments, Keauhou Bay waters won't stand a chance if development above the bay is allowed. Keauhou Bay is a much smaller ecosystem.

This Article is by the Chesapeake Bay Foundation, Saving a National Treasure states, "...runoff is a significant source of harmful nitrogen pollution that continues to grow..."

As rainwater and snowmelt run off our streets, parking lots, lawns, and other surfaces, they pick up pet waste, pesticides, fertilizer, oil, and other contaminants. If the draining water doesn't evaporate or soak into the ground where it can be filtered, it flushes straight into local creeks, rivers, and the Chesapeake Bay, adversely affecting water quality and aquatic life.

Only 10 to 20 percent of rain that falls in forests, fields, and other natural areas runs off, with the rest absorbed by soil and plants, where it is filtered before reaching aquifers or local waterways. (Right now Keauhou Bay has a lot of trees and is very natural, this is what helps stop runoff.) By contrast, close to 100 percent of the rain that falls on concrete and other hard surfaces produces runoff. One inch of rain falling on an acre of hardened surface produces 27,000 gallons of runoff.

Stormwater runoff pollution threatens Chesapeake Bay and its rivers and streams...Polluted runoff is one of the most harmful sources of pollution to the Bay and its waters. And much of it starts right in the urban and suburban neighborhoods where we live." <https://www.cbf.org/issues/polluted-runoff/index.html#:~:text=Besides%20carrying%20pollutants%20that%20harm,them%20are%20placed%20in%20jeopardy.>

If that is what runoff is doing to the Chesapeake Bay, the effects of runoff will be even more devastating to Keauhou Bay due to its size and fragility.

#### MANTA RAY HABITAT, CORAL REEF BLEACHING, & MARINE LIFE ~ THE DEVASTATING EFFECTS OF DEVELOPMENT ON THE OCEAN

Are there any reports in this EIS about what the impact to the coral, marine life, plankton especially zooplankton will be because of this development?

The studies below show that developments kill coral, and marine life. Zooplankton are part of this marine life and they are also killed and negatively affected. Zooplankton are food for manta rays. Manta rays are in Keauhou Bay every night to eat zooplankton, and are often seen here during the day as well.

Allowing this bay developed will also be a death sentence for many types of marine life including planktons. There is NO WAY to stop this from happening due to the fact that polluted runoff rain water from developments can't be fully stopped. This has been shown to happen in ALL coastal developments.

Please read the Scientific articles below.

It's Been Proven Developments Severely Pollute Nearby Waters

Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Coral Bleaching is occurring more frequently in Hawai'i. Across the Hawaiian Archipelago, coral bleaching has increased in frequency and severity since 1996. The last major bleaching event in 2014-2015 had catastrophic impacts state-wide..."

This was the third major bleaching episode in Hawai'i over the last 6 years. The frequency of these events is unprecedented in the archipelago. NOAA scientists and partners have determined that the key drivers of the bleaching were environmental factors (such as heat stress, depth, and surface light) and human impacts (sewage effluent and urban runoff). " <https://www.fisheries.noaa.gov/feature-story/cautionary-tale-2019-coral-bleaching-event-hawaii#:~:text=Coral%20bleaching%20is%20occurring%20more,hard%20catastrophic%20impacts%20state%20wide.>

This article is by the Coral Reef Alliance here in Hawai'i. "An ecosystem under threat Hawai'i's reefs face major global and local threats including climate change, overfishing, and sediment and nutrient pollution caused by sewage and stormwater runoff..."

When it rains, flash floods carry stormwater and large amounts of sediment downstream to the ocean. Just offshore, once-thriving coral reefs are now struggling to survive." <https://coral.org/en/where-we-work/hawaiian-islands/#:~:text=Hawai%20reefs%20face%20major%20global,into%20Hawai%20CA%20BBIs%20waterways%20every%20day.>

This article states that runoff is a leading source in coral degradation. Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Land-based sources of pollution are a leading cause of coral reef degradation in the Main Hawaiian Islands. Water quality is impacted by urban runoff, failing sewage systems, unpaved roads, farms, land clearing, and development." [https://www.coris.noaa.gov/monitoring/status\\_report/docs/Hawaii\\_status\\_report\\_forweb.pdf](https://www.coris.noaa.gov/monitoring/status_report/docs/Hawaii_status_report_forweb.pdf)

This article is a Research Article by PLOS ONE and their motto is, "We're driving change in research integrity and publication ethics." This is some of their article information, "Coral taxonomy and local stressors drive bleaching prevalence across the Hawaiian Archipelago in 2019..."

We found little evidence for acclimation by reefs to thermal stress in the main Hawaiian Islands. Moreover, our findings illustrate how detrimental effects of local anthropogenic stressors, such as tourism and urban runoff, may be exacerbated under high thermal stress. In light of the forecasted

increase in severity and frequency of bleaching events, future mitigation of both local and global stressors is a high priority for the future of corals in Hawaii".  
<https://journals.plos.org/plosone/article?id=10.1371/journal.pone.0269068>

The coral all over Hawaii has had extremely high mortality rates, due to developments near ocean areas throughout the years, and development in Keauhou Bay will be devastating to the coral, reef fish, and all aquatic life there. Manta Rays need to eat 5 times their body weight in zooplankton daily. Their population will be severely affected should the plankton die. Please see the cited information below.

"SO, HOW MUCH PLANKTON DOES YOUR AVERAGE MANTA RAY EAT? 19,200,000. Nineteen million two hundred thousand, give or take a few thousand.

That is the number of plankton pieces a ten-foot manta ray must consume weekly to stay alive."

The above information was taken from Manta Ray Advocates <https://mantarayadvocates.com/how-much-plankton-do-mantas-eat/>

Coral reefs are known to be highly negatively impacted by developments because, "Impacts from land-based sources of pollution including coastal development...can impede coral growth and reproduction, disrupt overall ecological function, and cause disease and mortality in sensitive species."

<https://oceanservice.noaa.gov/facts/coral-pollution.html#:~:text=impacts%20from%20land%2Dbased%20sources.and%20mortality%20in%20sensitive%20species.>

Article by Environmental Evidence, "Coastal development and runoff lead to sedimentation, which directly impacts coral recruitment, growth, mortality, and ecosystem services that coral reefs provide."  
<https://environmentalevidencejournal.biomedcentral.com/articles/10.1186/s13750-020-00200-0#:~:text=Coastal%20development%20and%20runoff%20lead.services%20that%20coral%20reefs%20provide.>

Developments can't fully stop polluting because runoff is from rain during development and after. Article by NOAA, "One of the most significant threats to reefs is pollution. Land-based runoff and pollution discharges can result from dredging, coastal development...This runoff may contain sediments, nutrients, chemicals, insecticides, oil and debris.

When some pollutants enter the water, nutrient levels can increase, promoting the rapid growth of algae and other organisms that can smother coral."  
[https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,organisms%20that%20can%20smother%20corals.](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,organisms%20that%20can%20smother%20corals.)

Another article by NOAA, "Coral reefs also are affected by leaking fuels, anti-fouling paints and coatings, and other chemicals that enter the water... (All of those are show up in every development project.)

Among the most damaging pollutants on coral reefs is sediment, which can remain suspended in the water or be deposited on the coral surface (i.e., turbidity and sedimentation, respectively) and can contain toxicants, pathogens, and nutrients, all of which impact coral growth, recruitment, and survival"  
[https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments.into%20the%20atmosphere%20within%20days.](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments.into%20the%20atmosphere%20within%20days.)

It's Been Proven Resort Developments KILL Marine Life

This article by MarinBIO states, "Zooplankton are also sensitive to their environment and like phytoplankton—a change in zooplankton concentration can indicate a subtle environmental change. Zooplankton are highly responsive to nutrient levels, temperatures, pollution, food that is not nutritious, levels of light, and increases in predation. As well as providing an essential link in the marine food chain (which is an understatement), the diversity of species, amount of biomass and abundance of zooplankton communities can be used to determine the health of an ecosystem..."

Here is another article that shocking shows that in a very short time, big changes can occur due to runoff. A development will hurt and kill plankton, by Frontiers in Marine Science, "Effects of an experimental terrestrial runoff on the components of the plankton food web in a Mediterranean coastal lagoon The main result observed in the present study was that the effects of the simulated terrestrial runoff spread along the plankton food web, significantly affecting all trophic levels of the natural plankton community studied. This occurred in a relatively short time considering that the experiment lasted less than three weeks. The lower light availability in the terrestrial runoff treatment compared to the control resulted in a net decrease of approximately one-third of Chl-a concentration and phytoplankton abundance over the entire experiment." <https://www.frontiersin.org/journals/marine-science/articles/10.3389/fmars.2023.1200757/full>

The ecosystem is fragile and interconnected as is stated in this article: "Zooplankton are also affected by levels of pH, heavy metals, calcium, and aluminum. Nutrients like nitrogen and phosphorus will affect the prey of zooplankton (like algae, protozoa and bacteria), indirectly affecting zooplankton survival. Scientists are still putting together pieces of the zooplankton puzzle. Some questions include how nutrient levels found in algae can influence the growth and behavior of zooplankton. Another question important to marine and human life is how toxins and pollution will affect this crucial link in the food chain" This information is in article by MarineBIO.  
<https://www.marinebio.org/creatures/zooplankton/#:~:text=Zooplankton%20are%20also%20sensitive%20to%20light%2C%20and%20increases%20in%20predation.>

A research article by Environmental Research Laboratory, United States Environmental Protection Agency that discusses, "Toxic Effects of Pollutants on Plankton: There are four main sources of aquatic pollution: Industrial wastes, municipal wastes, agricultural run-off, and accidental spillage. Non-point sources, such as automobile exhausts, add appreciable amounts of pollutants to air that may enter aquatic systems in rainfall or dry fall-out. These sources add pesticides, heavy metals, oil, petroleum products, and a large number of organic and inorganic compounds to water. Lakes and oceans serve as sinks for many pollutants. Plankton comprise a large portion of the living matter in natural waters and function in biogeochemical cycles. They are affected by pollutants, transfer them to sediments and other organisms, and function in their biological transformation."

[https://scope.ajge.carnegiescience.edu/SCOPE\\_12/SCOPE\\_12\\_3.6\\_chapter12\\_257-274.pdf](https://scope.ajge.carnegiescience.edu/SCOPE_12/SCOPE_12_3.6_chapter12_257-274.pdf)

All the above articles show that development of Keauhou Bay WILL hurt plankton life and marine life in the bay because pollutant runoff is inevitable and unavoidable during construction and afterwards. The manta ray food source will likely disappear. This will be devastating for the manta ray populations. Furthermore, if manta rays die or leave the area, the loss will in turn affect many lively hoods from locals on the island who depend on the manta ray tour for their income.

marine environment on which its inhabitants depend must be the most important consideration." This was taken from Hawaii's own Division of Aquatic Resources <https://dlnr.hawaii.gov/dar/marine-managed-areas/hawaii-marine-life-conservation-districts/#:~:text=Snorkeling%20and%20SCUBA%20diving%20are,effect%20on%20nearshore%20fish%20populations.>

It's Been Proven an Increase in Human Population Destroys Coral Reefs

If a Bungalow Resort is allowed to be built in Keaouhou Bay, it will bring a serious increase in human traffic. "Easily visible trends in human population dynamics combined with well-established and tested ecological theory give a clear, intuitive, yet quantifiable guide to the severity of survival challenges faced by coral reefs. Management challenges and required actions can be clearly shown and, contrary to frequent claims, no scientific ambiguity exists with regard to the serious threat posed to coral reefs by humankind's continued numerical increase." This is in the article by National Library of Medicine National Center for Biotechnology Information PubMed. <https://pubmed.ncbi.nlm.nih.gov/33293007/#:~:text=Denser%20coastal%20populations%20and%20gr eater,%20more%20runoff%20and%20siltation.>

This article is by ABC NEWS, "This is how tourists are destroying coral reefs in Hawaii. The less people at a certain site, the more coral there are, the research found. The millions of tourists who flock to the shores of Hawaii every year are wreaking havoc on its natural environment -- especially the coral reefs, which are at risk all over the world, a new study said. The most popular coral reefs on the Hawaiian islands are likely being degraded by the very visitors they attract, according to a study published Monday in Nature Sustainability." <https://abcnews.go.com/US/hawaiian-coral-reefs-degrading-popular-tourist-sites-scientists/story?id=96308858#:~:text=The%20less%20people%20at%20a,share%20are%20the%20research%20found.&text=The%20millions%20of%20tourists%20who,world%20are%20new%20stud y%20said.>

By allowing this development you are stressing an already fragile Eco-system. The small bay is currently used by many locals for boating, fishing, canoeing, paddle boarding, snorkeling, manta night dives, surfing, and swimming. We know, and research shows, that more people cause more damage. The area simply cannot afford or support this development.

"Denser coastal populations and greater wealth will lead to reef degradation by coastal construction. Denser populations inland will lead to more runoff and siltation. Effects of human perturbations can be explored with meta-population theory since they translate to increases in patch-mortality and decreases in patch-colonization (= regeneration). All such changes will result in a habitat with overall fewer settled patches, so fewer live reefs." This information was taken from Science Direct <https://www.sciencedirect.com/science/article/abs/pii/S0065288120300328#:~:text=Aquaculture%20will%20alleviate%20some%20fishing,to%20more%20runoff%20and%20siltation.>

Another article by Nature Sustainability, "Coral reefs and coastal tourism in Hawaii Coral reefs are popular for their vibrant biodiversity. By combining web-scraped Instagram data from tourists and high-resolution live coral cover maps in Hawaii, we find that, regionally, coral reefs both attract and suffer from coastal tourism. Higher live coral cover attracts reef visitors, but that visitation contributes to subsequent reef degradation. Such feedback loops threaten the highest quality reefs, highlighting both their economic value and the need for effective conservation management."

## HUMAN POPULATION INCREASES LINKED DIRECTLY TO CORAL DEATH

Does this EIS have any reports on their resort adding to the population increase that happens during IRONMAN?

"On average, each Ironman racer brings three people with them to the Big Island. Counting members of the media, VIPs who come from around the globe to watch and the triathlons partners, there likely be more than 6,300 people descending on Kona..." <https://bigislandnow.com/2023/10/07/ironman-2023-in-kona-shines-spotlight-on-some-of-best-women-triathletes-in-the-world/>

And "Resident dissatisfaction with tourists is multifaceted: The overwhelming majority (92%) of locals felt visitors were not educated enough on protecting Hawaii's natural environment and local resources; other factors include the impact of the vacation rental industry and ignorance of the residents' quality of life." <https://www.triathlete.com/culture/news/kona-locals-ask-ironman-visitors-for-respect/>

Where are the EIS reports on human density? Below are reports that show human population destroys coral reefs.

"The number of people living on the coasts has rapidly increased in recent decades, causing significant destruction of coastal areas. Coastal development can negatively impact the ocean through the destruction of coastal marine habitat and through run-off of sediments and pollution.

-Coastal development involves activities such as the creation of harbors, stabilization of shorelines, and aquaculture that involve the destruction of sensitive marine habitats such as mangroves, coral reefs, and seagrass beds.

-Coastal development may cause the run-off of sediments into coastal habitats, which can smother corals or seaweeds and reduce the amount of light available for photosynthesis. Losses of primary producers and important habitat-forming species such as corals can negatively impact entire food webs."

The above information was taken from the Education Development Center, INC, from their Coastal Development page called Ocean Tracks <https://oceantracks.org/library/human-impacts/coastal-development/#:~:text=Coastal%20development%20may%20cause%20the,negatively%20impact%20ent ire%20food%20webs.>

There is nothing Kamehameha Schools can do to their development that can stop the guests of this possible Bungalow Resort from going to Keaouhou Bay. Human traffic WILL seriously increase if this resort is allowed to be built and the marine life will be negatively affected by it. Marine life will suffer from this development as stated in this letter in many different scientific reported articles.

If you allow this resort the amount of people in this bay will fully increase and, "Hawaii's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally, management of the resource should balance the needs of different user groups, but the welfare of the

[https://www.nature.com/articles/s41893-022-01021-4.epdf?sharing\\_token=wsakgQNhaHhJAnWAq453rRgN0IAIWei9inR3oTlv0PvGzA5lc\\_H0Q1zeHNIP3ASnhcgKRy6\\_vKLpW49dbmBYoXSg3Y1MgQIGBZsapdGJH17O1SI\\_bu9x5Pr3xED4KxI4IOsIvgQ1a7ZRR3UbraxpodJd2AoNiSmW5uxBZJJEDdplj8OGJpx71TlWqCfXvKJlZVeNdcj3Ssw\\_dnaUjg5IzhejPBDImmaH15yq15Q%3D&tracking\\_referrer=abcnews.go.com](https://www.nature.com/articles/s41893-022-01021-4.epdf?sharing_token=wsakgQNhaHhJAnWAq453rRgN0IAIWei9inR3oTlv0PvGzA5lc_H0Q1zeHNIP3ASnhcgKRy6_vKLpW49dbmBYoXSg3Y1MgQIGBZsapdGJH17O1SI_bu9x5Pr3xED4KxI4IOsIvgQ1a7ZRR3UbraxpodJd2AoNiSmW5uxBZJJEDdplj8OGJpx71TlWqCfXvKJlZVeNdcj3Ssw_dnaUjg5IzhejPBDImmaH15yq15Q%3D&tracking_referrer=abcnews.go.com)

#### INFRASTRUCTURE AND RESOURCES ON AN ISLAND ALREADY HIGHLY IMPACTED AND STRUGGLING FOR ANSWERS

Has the EIS done any research or reports on the Resources and Infrastructure it will need for a bungalow resort?

There are many big housing developments currently under construction in Kailua Kona, Waikoloa Village, Hilo, Puna, Ocean View and Volcano. The entire Big Island has construction projects already in progress.

Has Kamehameha Schools EIS done any kind of reports or surveys to know if Big Island has the Resources and Infrastructures for their resort development?

"Hotel waste management refers to all the practices and processes that hotels implement to handle and dispose of the multiple types of waste generated on their premises. Worldwide, hotels produce almost 300,000 tonnes of waste each year. " <https://www.homebiogas.com/blog/hotels-waste-management/>

As of now, the Big Island's Resources and Infrastructure are having serious negative issues and many more developments that have been approved are not even completed as of yet, which means our island's resources and infrastructure will be taxed even more severely in the near future.

Please read the below articles that prove Big Island does not have the resources or infrastructure for a 143-Unit Bungalow Resort Development at Keauhou Bay. On Hawaii's Island, we are already struggling to meet the increasing need for resources and infrastructure.

Big Island Now poll No. 27 results: More than one solution needed to help extend life of West Hawaii's landfill

September 17, 2023

The West Hawaii's Sanitary Landfill, the only remaining landfill on the Big Island, is forecast to reach capacity within the next 20 to 25 years.

The West Hawaii's landfill became the island's only one after the Hilo Landfill closed three years ago. It only has about 20 to 25 years left before it can no longer be used to store rubbish.

<https://bigislandnow.com/2023/09/17/big-island-now-poll-no-27-results-more-than-one-solution-needed-to-help-extend-life-of-west-hawaii-landfill>

A County commission drafts ordinance aiming to ban recyclables at West Hawaii's landfill

By Megan Moseley September 6, 2023

Hawaii's County's Environmental Management Commission is developing an ordinance that aims to prohibit the amount of recyclable materials ending up in the island's only working landfill.

During a commission meeting on July 26, Ramzi Mansour, Hawaii's County Director of Environmental Management, told commissioners the West Hawaii's Sanitary Landfill only has 20 to 25 years left before it reaches capacity.

With the Hilo Landfill permanently closed in 2020, the clock is ticking for the island's sole dump. Commission chairperson Georjean Adams said it's a good time to start looking into solutions.

Adams said the proposed ordinance is in its early stages and is more about getting the conversation started about how to prevent unnecessary, or recyclable items — green waste, metals, plastics, paper, paperboard and glass — from ending up in the rubbish dump, located off Queen Ka'ahumanu Highway in Waikōloa.

"Trying to site a new landfill is close to impossible," Adams said. "So what are we going to do? So I was looking around, and the commission agreed, to look deeply into the idea of diverting the recyclables out and at least slow the filling up of the landfill."

The proposed ordinance refers to the 2019 Integrated Solid Waste Management Plan that commits the county to "divert, as much as feasible, commercial and municipal solid waste, including but not limited to green waste, metals, plastics, paper, paperboard, and glass to help achieve goals related to climate resiliency, renewable energy, sustainable agriculture, and zero waste."

<https://bigislandnow.com/2023/09/06/new-draft-ordinance-aims-to-ban-recyclables-at-west-hawaii-landfill>

Time's Up For Landfills

'Gentle' demolition strategies can help preserve resources

PAULA BENDER April 2, 2024

As Hawaii's government officials grapple with the challenge of limited landfill space statewide, federal restrictions set in place by the Environmental Protection Agency are ruling out possible locations that were once considered for new landfills.

Hawaii Act 73 states landfills must be located at least half a mile from residential areas; are prohibited from being located in areas with heavy rain and steep slopes, as well as agricultural and/or conservation lands; above aquifers; 300 feet beyond streams; and 1,000 feet beyond the ocean.

New landfills are also now prohibited from being created in tsunami inundation zones, 100-year flood zones and wetlands. There are also concerns that landfills near airports will attract birds, resultin

**Categories:** Yellow Category

Aloha e Jason,

Thank you for your comments concerning the Keaouhou Bay Management Plan, Draft Environmental Impact Statement. Your comments have been received and administratively recorded.

Comments received during the 45-day public comment period will be reproduced in the Final Environmental Impact Statement, and substantive comments addressed.

The County of Hawai'i and our planning consultant, G70, are copied here on this email so that they receive a copy of your feedback.

We appreciate your involvement and contribution to the environmental review process. Your input is invaluable in helping us develop a management plan that reflects the needs and concerns of our community.

Thank you once again for your engagement and commitment to the future of Keaouhou Bay.

Mahalo,

The Keaouhou Bay Project Team

---

**Subject:** [EXTERNAL] Kamehameha Schools EIS Draft For Keaouhou Bay WILL HAVE NEGATIVE IMPACT

**CAUTION: This email is from an outside sender. Do not click on links or open attachments unless you recognize the sender and know the content is safe.**

To Whom it May Concern,

Please read the scientific proof in this letter and REJECT Kamehameha Schools Environment Impact Statement (EIS) for Keaouhou Bay to become a Bungalow Resort.

Please state in your report that a Bungalow Resort WILL have a SERIOUS NEGATIVE IMPACT on Keaouhou Bay as stated in all the different researched articles below.

Please, DO NOT risk polluting the water in Keaouhou Bay by allowing Kamehameha Schools to develop their bungalow resort project. It is scientifically proven that developments pollute nearby waters both during and after development.  
Below are scientific articles written by the National Oceanic and Atmospheric Administration (NOAA), Global Coral Reef Alliance, Hawaii Government, and many other professional organizations, that have studied and shown that developments have ALWAYS polluted the water in EVERY coastal development area.

Does this EIS (Environmental Impact Statement) have any kind of reports and studies on how the endangered species and marine life will handle the extra pollution due to development, and the golf course runoff? Keaouhou Bay is their habitat and this development WILL be CHANGING an Entire Ecosystem.

#### ENDANGERED SPECIES CONSERVATION IMPACTED BY DEVELOPMENT

In the Endangered Species Act of 1973 Under Section 2 (b), "To provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved." This would be Keaouhou Bay.

The Green Sea Turtle swims in Keaouhou Bay weekly and the monk seal has also been seen swimming and resting in Keaouhou Bay. Both of these marine animals are on the endangered species list.

#### Endangered Species Act

"Section 2. Findings, Purposes, and Policy

(4) the United States has pledged itself as a sovereign state in the international community to conserve to the extent practicable the various species of fish or wildlife and plants facing extinction, pursuant to—

(b) PURPOSES.—The purposes of this Act are to provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved, to provide a program for the conservation of such endangered species and threatened species, and to take such steps as may be appropriate to achieve the purposes of the treaties and conventions set forth in subsection (a) of this section."

This was taken from <https://www.fisheries.noaa.gov/national/endangered-species-conservation/endangered-species-act>

#### FEDERALLY PROTECTED GREEN SEA TURTLES WILL BE AFFECTED

The green sea turtle is federally protected and can be seen in Keaouhou Bay weekly.

The following article that states: "POLLUTED RUNOFF IN HAWAII ENDANGERS GREEN SEA TURTLES"

Why does Hawaii have a runoff problem?

Historically, in the tropics of Hawaii, precipitation was absorbed into the soil, according to the Clean Water Branch of Hawaii's Department of Health. Any potential pollution or contaminants on the ground surface would get pushed into the soil by the rain, and plant roots and microbes would help break down the pollution into less dangerous components. However, with urban and agricultural development, less and less of the pollution gets pulled into the soil, and more of it gets washed out into storm drains. From there, the pollutants make their way to streams, rivers and the ocean that surrounds Hawaii. According to the state agency, most of these contaminants are nutrients from fertilizer, bacteria from animal waste, oil, garbage and yard waste...

If polluted runoff reaches the ocean, it can wreak havoc on marine life, including endangered green sea turtles." Taken from <https://www.chemservice.com/news/polluted-runoff-in-hawaii-endangers-green-sea-turtles/>

Allowing this development WILL POLLUTE Keaouhou Bay. The above article, written in 2014 (because runoff water from developments were polluting the ocean even then!!) states this fact clearly. Keaouhou Bay is home to countless sea creatures such as the protected green sea turtle,

spotted eagle rays, manta rays, octopus, dolphins, fish, coral, monk seals, and more and that will ALL be harmed by the severe pollution runoff that WILL happen because developments have been shown to ALWAYS pollute the water is that is nearby.

The Green Sea Turtle is protected by more than one law. "All sea turtles in Hawaii are protected by the [Endangered Species Act \(ESA\)](#) and additionally protected by [Hawaii Revised Statutes Chapter 195D \(HRS\)](#) and [Hawaii Administrative Rules \(HAR\) 13-124](#)." This information was taken from this site <https://dlnr.hawaii.gov/dar/species/sea-turtles/>

#### THE ENDANGERED MONK SEAL WILL BE AFFECTED

Keaouhou Bay is known as a RESTING AREA for the ENDANGERED MONK SEAL. If another resort is allowed to be built, in addition to the pollution, it will also bring a lot more people down to Keaouhou Bay. This increases the chances of a resting monk seal being disturbed by humans trying to get close, take "selfie" photos, and being generally uninformed and harmful. Please see article on Selfie Culture and its harmful effects below.

Has the EIS done any research on what an increased population would do in such a small area, and what will happen to the endangered species that live there? With a significantly increased population their habitat of Keaouhou Bay will likely be changed forever.

This information is from a NOAA Scientist, "Study shows selfie culture impacts how people behave when posting images of an endangered species on social media. There's a seal on the beach! Let's go get a 'selfie'" That must have been what nearly 18 percent of people on Instagram thought before approaching an endangered species.

In a recent study, NOAA scientists used social media to monitor human activities around endangered [Hawaiian monk seals](#). They discovered that human disturbance is more common than they thought." <https://www.fisheries.noaa.gov/feature-story/endangered-hawaiian-monk-seals-cry-foul-over-selfies>

NOAA clearly states a high population in a place where monk seals and sea turtles habitat can be a serious disturbance for these endangered species.

"Hawaiian monk seals are protected federally by the ESA and the [Marine Mammal Protection Act \(MMPA\)](#), as well as locally by Hawaii Revised Statutes (HRS) [Chapter 195D](#) and Hawaii Administrative Rules (HAR) [13-124](#)." This was taken from <https://dlnr.hawaii.gov/dar/hawaiian-monk-seal/>

Keaouhou Bay is the monk seals and the green sea turtle's habitat. Allowing a bungalow resort to be developed in Keaouhou Bay, the habitat of these endangered species, is to threaten their life and habitat with golf course runoff pollution, as well as development pollution. By threatening their habitat, and hence their lives, this development goes completely against the Endangered Species Act of 1973.

The verbiage in the Endangered Species Act states, "to conserve". In this case, "to conserve", would be to protect the land around Keaouhou Bay from developments that destroy the habitat of these endangered species with pollution and runoff.

Does this EIS have any reports on the endangered species that frequent Keaouhou Bay? This is their habitat and it needs to be "conserved".

Under the Conservation Program there should be research done on endangered species and their associated ecosystems. A large bungalow resort development WILL FOREVER CHANGE THIS ECOSYSTEM.

"§195D-5 Conservation programs. (a) The department shall conduct research on indigenous aquatic life, wildlife, and land plants, and on endangered species and their associated ecosystems, and shall utilize the land acquisition and other authority vested in the department to carry out programs for the conservation, management, and protection of such species and their associated ecosystems." [https://www.capitol.hawaii.gov/hrs/current/vol03\\_ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hrs/current/vol03_ch0121-0200D/HRS0195D/HRS_0195D-0005.htm)

Also, under this same Conservation program, "(2) Taking such action as may be necessary to ensure that actions authorized, funded, or carried out by them do not jeopardize the continued existence of threatened or endangered species." [https://www.capitol.hawaii.gov/hrscurrent/Vol03\\_Ch0121-0200D/HR0195D/HR0195D-0005.htm](https://www.capitol.hawaii.gov/hrscurrent/Vol03_Ch0121-0200D/HR0195D/HR0195D-0005.htm)

Please consider that developing a Kamehameha Schools Bungalow Resort in Keauhou Bay WILL threaten endangered species due to the unavoidable development and golf course pollution runoff that would be caused by removing the all the trees that currently serving as a natural pollution filter, and replacing the land with housing, cars, humans, and waste. There would also be tremendous runoff damage into Keauhou Bay and the surrounding area during the building phase of this enormous project.

#### GOLF COURSE POLLUTION KILLS MARINE LIFE AND DRASTICALLY CHANGES ECOSYSTEMS

"The golf industry uses [approximately 50 pesticide active ingredients](#), including chlorpyrifos—an insecticide that is banned for residential use by the EPA due to developmental hazards. Having to trim golf turf to low heights also makes it even more vulnerable to pests, which leads to more pesticide use." <https://rainorshinegolf.com/pages/the-environmental-impact-of-golf-courses>

These pesticides will be in the pollution runoff that will enter Keauhou Bay more severely should the natural habitat of the trees be removed and replaced with pavement. This is unavoidable!

Please read from Wikipedia, "

Most drains have a single large exit at their point of discharge (often covered by a [grating](#)) into a [canal](#), river, lake, [reservoir](#), sea or ocean. Other than catch basins, typically there are no treatment facilities in the piping system." [https://en.wikipedia.org/wiki/Storm\\_drain#:~:text=Most%20drains%20have%20a%20single,discharge%20into%20individual%20dr%20wells](https://en.wikipedia.org/wiki/Storm_drain#:~:text=Most%20drains%20have%20a%20single,discharge%20into%20individual%20dr%20wells)

The pavement from this development will cause pollution to runoff into Keauhou Bay because this treed land that will become a housing development is situated directly between the golf course and the Bay. These trees, which absorb all the pollution from the golf course is the BEST AND ONLY PROTECTION POLLUTION FILTER Keauhou Bay has from the golf course pesticides, fertilizer and weed killer. See the below paragraph for further references.

See page 2 at: <https://health.hawaii.gov/epo/files/2013/09/Stormwater-MS4-Presentation-HEE-7.15.14.pdf> where the Hawaii government states that Natural Ground Cover has 10% runoff, where has development has 55% runoff. So, even if you have storm drains the pavement this development will create will cause more runoff into Keauhou Bay than the Natural Ground Cover that is has now, that has been protecting the bay from golf course pollution for years.

These trees and land are saving monk seals and green sea turtles habitat from the golf course pollution and this land MUST BE PRESERVED and CONSERVED as the natural protector for Keauhou Bay and for these endangered species habitat.

Under Section 2 (b) of the Endangered Species Act - Keauhou Bay MUST BECOME A CONSERVATION AREA for these endangered species. It is currently their habitat, and to allow a large resort development to be built above this bay clearly threatens the lives of these endangered species by allowing golf course toxic pollution and development pollution to run into these species natural habitat of Keauhou Bay.

#### ALGAE BLOOMS KILL CORAL AND MARINE LIFE

The trees that are slated to be cleared for the development further protect Keauhou Bay from algae blooms that have been proven to be caused by pollution that is runoff from fertilizer and weed killer. When there is heavy rain the land above the bay has a greater runoff than normal. Without the trees, the runoff from the golf course pollution will pour into the Bay likely causing frequent algae blooms. Algae blooms have been shown to kill coral and marine life as stated in the many articles that will follow.

One of these articles is from the Global Coral Reef Alliance. They have researched the effects on reefs before and after a golf course developments. Though this development is not a golf course development, it is located just below a golf course and exposes the bay to the pollution from the golf course by removing the proven natural filter of the trees and natural ecosystem.

Has this EIS done any kind of research about the algae blooms that happen after a serious storm because of the golf course runoff pollution?

This information was taken from Global Coral Reef Alliance and it is an actual study on the how coral and marine life are affected before and after development. It's titled, "Golf courses kill coral reefs and fisheries: harmful algae blooms and disease cause by nutrient runoff from golf course development on Guana Cay, Abaco, Bahamas

Introduction: Bahamas coral reef deterioration

This study is thought the first ever to evaluate the health of coral reef ecosystems and fisheries before and after a golf course development.. The vast majority of corals have died from a combination of factors including global warming, new diseases, land-based sources of pollution..

" <https://www.globalcoral.org/golf-courses-kill-coral-reefs-and-fisheries-harmful-algae-blooms-and-disease-caused-by-nutrient-runoff-from-golf-course-development-on-guana-cay-abaco-bahamas/> If you allow a Bungalow Development in Keauhou Bay you WILL be agreeing to pollute this bay for years to come and COMPLETELY CHANGING and possibly DESTROYING KEAUHOU BAY'S ECOSYSTEM.

Another study by the Coral Reef Alliance titled, "Golf course fertilizer runoff causes nutrient

enrichment leading to harmful algae blooms on a Bahamian coral reef.

"...After construction new algae blooms appeared nearest the golf course green, smothering corals in adjacent reefs, along with sharply increased coral diseases..." <https://www.globalcoral.org/golf-course-fertilizer-runoff-causes-nutrient-enrichment-leading-to-harmful-algae-blooms-on-a-bahamian-coral-reef>

Does this EIS have any studies or reports on the extra runoff pollution due to clearing land and adding pavement?

This needs to be fully assessed because you will be changing an entire ecosystem to build a bungalow resort. It rains in Keauhou Bay many nights out of the year and this kind of pollution will kill the beautiful and necessary coral in the Bay.

FURTHERMORE: "if there are [toxic algal blooms](#), like red tide, or man-made contaminants, like pesticides or detergents in the water, those toxins are contained within the bubbles of sea foam. When those bubbles pop, the toxins can become airborne and compromise the air that is breathed in that location." <https://oceanconservancy.org/blog/2023/03/31/what-sea-foam/>

#### ENGINE POLLUTION CAUSES ISSUES IN THE OCEAN

Does this EIS have any detailed traffic studies for the increase in cars that will be added to this already severely traffic area they want to build their 150 room bungalow resort in? Have they done any studies on the pollution these cars WILL have in Keauhou Bay?

Because this Bungalow Resort could have over 150 extra cars and over 300 or more extra people in and out of Keauhou Bay, what traffic and increased population studies have they done? There will be employees with cars, guests with cars, visitors with cars. At times this would range to over 200 cars (likely more), coming in and out of, and parking above Keauhou Bay thereby causing serious car population issues because of all these added cars right next to the bay.

The article below is from NOAA regarding motor vehicle engines and pollution to the sea.

What is the biggest source of pollution in the ocean?

Most ocean pollution begins on land.

"Millions of motor vehicle engines drop small amounts of oil each day onto roads and parking lots.

Much of this, too, makes its way to the sea.

Some water pollution actually starts as air pollution, which settles into waterways and oceans. Dirt can be a pollutant. Top soil or silt from fields or construction sites can run off into waterways, harming

fish and wildlife habitats." <https://oceanservice.noaa.gov/facts/pollution.htm#:~:text=Millions%20of%20motor%20vehicle%20Denaines.Dirt%20can%20be%20a%20pollutant.>

[Land-Based Runoff Remains Top Source of Oil in the Ocean, Says New Report Oil in the Sea: Inputs, Fates, and Effects](#)

News Release September 28, 2022

WASHINGTON — Oil in runoff, primarily from cities and vehicles, is the top source of oil entering the ocean, says a [new report](#) from the National Academies of Sciences, Engineering, and Medicine. In North American waters, estimated ocean oil pollution from land-based runoff is up to 20 times higher than it was 20 years ago, and oil spills, natural oil seeps, and discharge from oil and gas operations remain major sources of pollution. The report recommends actions that government and others should take to minimize oil pollution, and calls for sustained research funding to better understand how oil reaches and affects ocean environments. <https://www.nationalacademies.org/news/2002/05/oil-in-the-sea-inputs-fates-and-effects#:~:text=WASHINGTON%20%2D%2D%20Nearlv%20Nearlv%20percent.pipline%20spills%2C%20says%20a%20new>

The Impact Of Stormwater – Car Emissions

"Car emissions are not limited to exhaust fumes that contribute to air pollution. They can also leak automotive fluid and release heavy metals that can contribute to stormwater pollution, contaminating local waterways." <https://www.stormwatershed.org.au/blog/the-impact-of-stormwater-car-emissions/>

NOISE POLLUTION'S HARMFUL EFFECT ON MARINE LIFE

Does this EIS have any reports on the noise pollution that will happen and what it could do to marine life in Keaouhou Bay during development?  
Because if you allow this Bungalow Resort to be developed you will increase constant noise in this bay for years to come and, "Noise Pollution Research shows that underwater noise from construction, shipping and naval vessels significantly impacts the natural behavior of cetaceans and many other marine species. This can be seen when mass beaching events occur or breeding success is diminished."

The above information was taken from the Ocean Conservation

Trust <https://oceanconservationtrust.org/ocean-advocacy/think-ocean/ways-to-think-ocean/>

How Does Noise Pollution Harm Marine Species?

"However, over the past few decades, noise pollution in the marine environment has increased dramatically and is threatening the natural soundscape of the marine environment. Ships, seismic surveys, explosions, construction, and sonar devices have made the once peaceful environment into a loud, chaotic home which is extremely damaging for marine wildlife. This type of pollution is often overlooked in comparison to others but its impacts are now being documented across all types of marine ecosystems." <https://earth.org/noise-pollution-in-the-ocean/>

If you allow this resort the amount of people in this bay will fully increase and, "Hawaii's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally, management of the resource should balance the needs of different user groups, but the welfare of the marine environment on which its inhabitants depend must be the most important consideration." This was taken from Hawaii's own Division of Aquatic

Resources <https://dlnr.hawaii.gov/dar/marine-managed-areas/hawaii-marine-life-conservation-districts/#:~:text=Snorkeling%20and%20SCUBA%20diving%20are.effect%20on%20nearshore%20fish%20populations.>

What is ocean noise?

"Ocean noise refers to sounds made by human activities that can interfere with or obscure the ability of marine animals to hear natural sounds in the ocean.

Many marine organisms rely on their ability to hear for their survival. Sound is a highly efficient means of communication underwater and is the primary way that many marine species gather and understand information about their environment. Many aquatic animals use sound to find prey, locate mates and offspring, avoid predators, guide their navigation and locate habitat, as well as to listen and communicate with each other.

Over the last century, human activities such as shipping, recreational boating, and energy exploration have increased along our coasts, offshore, and deep ocean environments. Noise from these activities can travel long distances underwater, leading to increases and changes in ocean noise levels in many coastal and offshore habitats.

These rising noise levels can negatively impact ocean animals and ecosystems. Higher noise levels can reduce the ability of animals to communicate with potential mates, other group members, their offspring, or feeding partners. Noise can also reduce an ocean animal's ability to hear environmental cues that are vital for survival, including those key to avoiding predators, finding food, and navigating to preferred habitats." <https://oceanservice.noaa.gov/facts/ocean-noise.html>

LEARN FROM OTHERS:

RUN-OFF FROM DEVELOPMENT KILLS

The Chesapeake Bay has a foundation that is trying to save their bay due to runoff pollution that was caused by developments. Chesapeake Bay is a lot bigger than Keaouhou Bay. If it's being drastically hurt by runoff water from developments, Keaouhou Bay waters won't stand a chance if development above the bay is allowed. Keaouhou Bay is a much smaller ecosystem.

This Article is by the Chesapeake Bay Foundation, Saving a National Treasure states, "...runoff is a significant source of harmful nitrogen pollution that continues to grow...

As rainwater and snowmelt run off our streets, parking lots, lawns, and other surfaces, they pick up pet waste, pesticides, fertilizer, oil, and other contaminants. If the draining water doesn't evaporate or soak into the ground where it can be filtered, it flushes straight into local creeks, rivers, and the Chesapeake Bay, adversely affecting water quality and aquatic life.

Only 10 to 20 percent of rain that falls in forests, fields, and other natural areas runs off, with the rest absorbed by soil and plants, where it is filtered before reaching aquifers or local waterways. (Right now Keaouhou Bay has a lot of trees and is very natural, this is what helps stop runoff.) By contrast, close to 100 percent of the rain that falls on concrete and other hard surfaces produces runoff. One inch of rain falling on an acre of hardened surface produces 27,000 gallons of runoff.

Stormwater runoff pollution threatens Chesapeake Bay and its rivers and streams... Polluted runoff is one of the most harmful sources of pollution to the Bay and its waters. And much of it starts right in the urban and suburban neighborhoods where we live." <https://www.cbf.org/issues/polluted-runoff/index.html#:~:text=Besides%20caring%20pollutants%20that%20harm,them%20are%20placed%20in%20leopardy.>

If that is what runoff is doing to the Chesapeake Bay, the effects of runoff will be even more devastating to Keaouhou Bay due to its size and fragility.

MANTA RAY HABITAT, CORAL REEF BLEACHING, & MARINE LIFE ~ THE DEVASTATING EFFECTS OF DEVELOPMENT ON THE OCEAN

Are there any reports in this EIS about what the impact to the coral, marine life, plankton especially zooplankton will be because of this development?

The studies below show that developments kill coral, and marine life. Zooplankton are part of this marine life and they are also killed and negatively affected. Zooplankton are food for manta rays. Manta rays are in Keaouhou Bay every night to eat zooplankton, and are often seen here during the day as well.

Allowing this bay developed will also be a death sentence for many types of marine life including planktons. There is NO WAY to stop this from happening due to the fact that polluted runoff rain water from developments can't be fully stopped. This has been shown to happen in ALL coastal developments.

Please read the Scientific articles below.

It's Been Proven Developments Severely Pollute Nearby Waters

Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Coral Bleaching is occurring more frequently in Hawaii". Across the Hawaiian Archipelago, coral bleaching has increased in frequency and severity since 1996. The last major bleaching event in 2014-2015 had catastrophic impacts state-wide...

This was the third major bleaching episode in Hawaii over the last 6 years. The frequency of these events is unprecedented in the archipelago. NOAA scientists and partners have determined that the key drivers of the bleaching were environmental factors (such as heat stress, depth, and surface light) and human impacts (sewage effluent and urban run-off). <https://www.fisheries.noaa.gov/feature-story/cautionary-tale-2019-coral-bleaching-event>

<https://www.fisheries.noaa.gov/feature-story/cautionary-tale-2019-coral-bleaching-event>

<https://www.fisheries.noaa.gov/feature-story/cautionary-tale-2019-coral-bleaching-event>

This article is by the Coral Reef Alliance here in Hawaii. "An ecosystem under threat Hawaii's reefs face major global and local threats including climate change, overfishing, and sediment and nutrient pollution caused by sewage and stormwater runoff..."

When it rains, flash floods carry stormwater and large amounts of sediment downstream to the ocean. Just offshore, once-thriving coral reefs are now struggling to survive." <https://coral.org/en/where-we-work/hawaiian-islands/#:~:text=Hawai%CA%BBi%20reefs%20face%20major%20global,into%20Hawai%CA%BBi%20waterways%20every%20day>

This article states that runoff is a leading source in coral degradation. Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Land-based sources of pollution are a leading cause of coral reef degradation in the Main Hawaiian Islands. Water quality is impacted by urban runoff, failing sewage systems, unpaved roads, farms, land clearing, and development." [https://www.coris.noaa.gov/monitoring/status\\_report\\_forweb.pdf](https://www.coris.noaa.gov/monitoring/status_report_forweb.pdf)

This article is a Research Article by PLOS ONE and their motto is "We're driving change in research integrity and publication ethics." This is some of their article information, "Coral taxonomy and local stressors drive bleaching prevalence across the Hawaiian Archipelago in 2019..."

We found little evidence for acclimation by reefs to thermal stress in the main Hawaiian Islands. Moreover, our findings illustrate how detrimental effects of local anthropogenic stressors, such as tourism and urban run-off, may be exacerbated under high thermal stress. In light of the forecasted increase in severity and frequency of bleaching events, future mitigation of both local and global stressors is a high priority for the future of corals in Hawaii." <https://journals.plos.org/plosone/article?id=10.1371/journal.pone.0269068>

The coral all over Hawaii has had extremely high mortality rates, due to developments near ocean areas throughout the years, and development in Keauhou Bay will be devastating to the coral, reef fish, and all aquatic life there. Manta Rays need to eat 5 times their body weight in zooplankton daily. Their population will be severely affected should the plankton die. Please see the cited information below.

"SO, HOW MUCH PLANKTON DOES YOUR AVERAGE MANTA RAY EAT? 19,200,000. Nineteen million two hundred thousand, give or take a few thousand.

That is the number of plankton pieces a ten-foot manta ray must consume weekly to stay alive."

The above information was taken from Manta Ray Advocates <https://mantarayadvocates.com/how-much-plankton-do-mantas-eat/>

Coral reefs are known to be highly negatively impacted by developments because, "Impacts from land-based sources of pollution including coastal development,...can impede coral growth and reproduction, disrupt overall ecological function, and cause disease and mortality in sensitive species." <https://oceanservice.noaa.gov/facts/coral-pollution.html#:~:text=Impacts%20from%20land%2Dbased%20sources,and%20mortality%20in%20sensitive%20species>

Article by Environmental Evidence, "Coastal development and runoff lead to sedimentation, which directly impacts coral recruitment, growth, mortality, and ecosystem services that coral reefs provide." <https://environmentalevidencejournal.biomedcentral.com/articles/10.1186/s13750-020-00200-0>

<https://environmentalevidencejournal.biomedcentral.com/articles/10.1186/s13750-020-00200-0>

Developments can't fully stop polluting because runoff is from rain during development and after. Article by NOAA, "One of the most significant threats to reefs is pollution. Land-based runoff and pollution discharges can result from dredging, coastal development... This runoff may contain sediments, nutrients, chemicals, insecticides, oil and debris.

When some pollutants enter the water, nutrient levels can increase, promoting the rapid growth of algae and other organisms that can smother

coral." [https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humanthreats.html#:~:text=Th is%20runoff%20may%20contain%20sediments,organisms%20that%20can%20smother%20corals](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humanthreats.html#:~:text=Th is%20runoff%20may%20contain%20sediments,organisms%20that%20can%20smother%20corals)

Another article by NOAA, "Coral reefs also are affected by leaking fuels, anti-fouling paints and coatings, and other chemicals that enter the water... (All of those are show up in every development project.)

Among the most damaging pollutants on coral reefs is sediment, which can remain suspended in the water or be deposited on the coral surface (i.e., turbidity and sedimentation, respectively) and contain toxicants, pathogens, and nutrients, all of which impact coral growth, recruitment, and survival" [https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humanthreats.html#:~:text= This%20runoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humanthreats.html#:~:text= This%20runoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days)

It's Been Proven Resort Developments KILL Marine Life

This article by MarinBIO states, "Zooplankton are also sensitive to their environment and like phytoplankton—a change in zooplankton concentration can indicate a subtle environmental change. Zooplankton are highly responsive to nutrient levels, temperatures, pollution, food that is not nutritious, levels of light, and increases in predation. As well as providing an essential link in the marine food chain (which is an understatement), the diversity of species, amount of biomass and abundance of zooplankton communities can be used to determine the health of an ecosystem..."

Here is another article that shocking shows that in a very short time, big changes can occur due to runoff. A development will hurt and kill plankton, by Frontiers in Marine Science. "Effects of an experimental terrestrial runoff on the components of the plankton food web in a Mediterranean coastal lagoon. The main result observed in the present study was that the effects of the simulated terrestrial runoff spread along the plankton food web, significantly affecting all trophic levels of the natural plankton community studied. This occurred in a relatively short time considering that the experiment lasted less than three weeks. The lower light availability in the terrestrial runoff treatment compared to the control resulted in a net decrease of approximately one-third of Chl-a concentration and phytoplankton abundance over the entire

experiment." <https://www.frontiersin.org/journals/marine-science/articles/10.3389/fmars.2023.1200757/full>

The ecosystem is fragile and interconnected as is stated in this article: "Zooplankton are also affected by levels of pH, heavy metals, calcium, and aluminum. Nutrients like nitrogen and phosphorus will affect the prey of zooplankton (like algae, protozoa and bacteria), indirectly affecting zooplankton survival. Scientists are still putting together pieces of the zooplankton puzzle. Some questions include how nutrient levels found in algae can influence the growth and behavior of zooplankton. Another

question important to marine and human life is how toxins and pollution will affect this crucial link in the food chain" This information is in article by MarineBIO. <https://www.marinebio.org/creatures/zooplankton/#~:text=Zooplankton%20are%20also%20sensitive%20to,light%2C%20and%20increases%20in%20predation.>

A research article by Environmental Research Laboratory, United States Environmental Protection Agency that discusses, "Toxic Effects of Pollutants on Plankton: There are four main sources of aquatic pollution: industrial wastes, municipal wastes, agricultural run-off, and accidental spillage. Non-point sources, such as automobile exhausts, add appreciable amounts of pollutants to air that may enter aquatic systems in rainfall or dry fall-out. These sources add pesticides, heavy metals, oil, petroleum products, and a large number of organic and inorganic compounds to water. Lakes and oceans serve as sinks for many pollutants. Plankton comprise a large portion of the living matter in natural waters and function in biogeochemical cycles. They are affected by pollutants, transfer them to sediments and other organisms, and function in their biological transformation." [https://scope.dge.carnegiescience.edu/SCOPE\\_12\\_3.6\\_chapter12\\_257-274.pdf](https://scope.dge.carnegiescience.edu/SCOPE_12_3.6_chapter12_257-274.pdf)

All the above articles show that development of Keaouhou Bay WILL hurt plankton life and marine life in the bay because pollutant runoff is inevitable and unavoidable during construction and afterwards. The manta ray food source will likely disappear. This will be devastating for the manta ray populations. Furthermore, if manta rays die or leave the area, the loss will in turn affect many lively hoods from locals on the island who depend on the manta ray tour for their income.

#### HUMAN POPULATION INCREASES LINKED DIRECTLY TO CORAL DEATH

Does this EIS have any reports on their resort adding to the population increase that happens during IRONMAN?

"On average, each Ironman racer brings three people with them to the Big Island. Counting members of the media, VIPs who come from around the globe to watch and the triathlons partners, there likely be more than 6,300 people descending on Kona..." <https://bigislandnow.com/2023/10/07/ironman-2023-in-kona-shines-spotlight-on-some-of-best-women-triathletes-in-the-world/>

And "Resident dissatisfaction with tourists is multifaceted: The overwhelming majority (92%) of locals felt visitors were not educated enough on protecting Hawaii's natural environment and local resources; other factors include the impact of the vacation rental industry and ignorance of the residents' quality of life." <https://www.triathlete.com/culture/news/kona-locals-ask-ironman-visitors-for-respect/>

Where are the EIS reports on human density? Below are reports that show human population destroys coral reefs.

"The number of people living on the coasts has rapidly increased in recent decades, causing significant development of coastal areas. Coastal development can negatively impact the ocean through the destruction of coastal marine habitat and through run-off of sediments and pollution.

-Coastal development involves activities such as the creation of harbors, stabilization of shorelines, and aquaculture that involve the destruction of sensitive marine habitats such as mangroves, coral reefs, and seagrass beds.

-Coastal development may cause the run-off of sediments into coastal habitats, which can smother corals or seaweeds and reduce the amount of light available for photosynthesis. Losses of primary producers and important habitat-forming species such as corals can negatively impact entire food webs."

The above information was taken from the Education Development Center, INC, from their Coastal Development page called Ocean Tracks <https://oceantracks.org/library/human-impacts/coastal-development/#~:text=Coastal%20development%20may%20cause%20the,negatively%20impact%20a,nitre%20food%20webs.>

There is nothing Kamehameha Schools can do to their development that can stop the guests of this possible Bungalow Resort from going to Keaouhou Bay. Human traffic WILL seriously increase if this

resort is allowed to be built and the marine life will be negatively affected by it. Marine life will suffer from this development as stated in this letter in many different scientific reported articles.

If you allow this resort the amount of people in this bay will fully increase and, "Hawaii's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally, management of the resource should balance the needs of different user groups, but the welfare of the marine environment on which its inhabitants depend must be the most important consideration." This was taken from Hawaii's own Division of Aquatic Resources <https://dlnr.hawaii.gov/dar/marine-managed-areas/hawaii-marine-life-conservation-districts/#~:text=Snorkeling%20and%20SCUBA%20diving%20are,effect%20on%20nearshore%20fish%20populations.>

It's Been Proven an Increase in Human Population Destroys Coral Reefs  
If a Bungalow Resort is allowed to be built in Keaouhou Bay, it will bring a serious increase in human traffic. "Easily visible trends in human population dynamics combined with well-established and tested ecological theory give a clear, intuitive, yet quantifiable guide to the severity of survival challenges faced by coral reefs. Management challenges and required actions can be clearly shown and, contrary to frequent claims, no scientific ambiguity exists with regard to the serious threat posed to coral reefs by humankind's continued numerical increase." This is in the article by National Library of Medicine National Center for Biotechnology Information PubMed. <https://pubmed.ncbi.nlm.nih.gov/33293007/#~:text=Denser%20coastal%20populations%20and%20greater,to%20more%20runoff%20and%20siltation.>

This article is by ABC NEWS, "This is how tourists are destroying coral reefs in Hawaii. The less people at a certain site, the more coral there are, the research found. The millions of tourists who flock to the shores of Hawaii every year are wreaking havoc on its natural environment -- especially the coral reefs, which are at risk all over the world, a new study said. The most popular coral reefs on the Hawaiian islands are likely being degraded by the very visitors they attract, according to a study published Monday in Nature Sustainability." <https://abcnews.go.com/US/hawaiian-coral-reefs-degrading-popular-tourist-sites-scientists/story?id=96308858#~:text=The%20less%20people%20at%20a,there%20are%20C%20the%20research%20found.&text=The%20millions%20of%20tourists%20who,world%2C%20a%20new%20study%20said.>

By allowing this development you are stressing an already fragile Eco-system. The small bay is currently used by many locals for boating, fishing, canoeing, paddle boarding, snorkeling, manta night dives, surfing, and swimming. We know, and research shows, that more people cause more damage. The area simply cannot afford or support this development.

"Denser coastal populations and greater wealth will lead to reef degradation by coastal construction. Denser populations inland will lead to more runoff and siltation. Effects of human perturbations can be explored with meta-population theory since they translate to increases in patch-mortality and decreases in patch-colonization (= regeneration). All such changes will result in a habitat with overall fewer settled patches, so fewer live reefs." This information was taken from Science

Direct <https://www.sciencedirect.com/science/article/abs/pii/S0065288120300328#~:text=Aquaculture%20will%20alleviate%20some%20fishing,to%20more%20runoff%20and%20siltation.>

Another article by Nature Sustainability, "Coral reefs and coastal tourism in Hawaii Coral reefs are popular for their vibrant biodiversity. By combining web-scraped Instagram data from tourists and high-resolution live coral cover maps in Hawaii, we find that, regionally, coral reefs both attract and suffer from coastal tourism. Higher live coral cover attracts reef visitors, but that visitation contributes to subsequent reef degradation. Such feedback loops threaten the highest quality reefs, highlighting both their economic value and the need for effective conservation management." [https://www.nature.com/articles/s41893-022-01021-4.epdf?sharing\\_token=wsakqQNhJhJAnWaq453tRqN0AJwE9jnR3oTv0PVGzA5lc\\_H001zgHNIP](https://www.nature.com/articles/s41893-022-01021-4.epdf?sharing_token=wsakqQNhJhJAnWaq453tRqN0AJwE9jnR3oTv0PVGzA5lc_H001zgHNIP)

[3ASnhcdKRY6\\_vKLpW49dbmBYoXSq3Y1MgQicBZsappdGUJH7O1SLbu9x5P3xED4Kx14T0s.lvcQ01a72ZRt3UbraxpodJq2AoNIsmWsuXb7JIEDdpJ8OGJpx71TJW6CfXvFKJIZYvE9cJ3Sw\\_dnaUg5ZlHcjPBDlmmaH15vqT5Q%3D&tracking\\_referrer=abcnews.go.com](https://www.abcnews.go.com/US/story?id=11594159&cid=tracking_referrer)

## INFRASTRUCTURE AND RESOURCES ON AN ISLAND ALREADY HIGHLY IMPACTED AND STRUGGLING FOR ANSWERS

Has the EIS done any research or reports on the Resources and Infrastructure it will need for a bungalow resort?

There are many big housing developments currently under construction in Kailua Kona, Waikoloa Village, Hilo, Puna, Ocean View and Volcano. The entire Big Island has construction projects already in progress.

Has Kamehameha Schools EIS done any kind of reports or surveys to know if Big Island has the Resources and Infrastructures for their resort development?

"Hotel waste management refers to all the practices and processes that hotels implement to handle and dispose of the multiple types of waste generated on their premises. Worldwide, hotels produce almost 300,000 tonnes of waste each year." <https://www.homebiogas.com/blog/hotels-waste-management/>

As of now, the Big Island's Resources and Infrastructure are having serious negative issues and many more developments that have been approved are not even completed as of yet, which means our island's resources and infrastructure will be taxed even more severely in the near future.

Please read the below articles that prove Big Island does not have the resources or infrastructure for a 143-Unit Bungalow Resort Development at Keauhou Bay. On Hawaii Island, we are already struggling to meet the increasing need for resources and infrastructure.

Big Island Now poll No. 27 results: More than one solution needed to help extend life of West Hawaii landfill

September 17, 2023

The West Hawaii Sanitary Landfill, the only remaining landfill on the Big Island, is forecast to reach capacity within the next 20 to 25 years.

The West Hawaii landfill became the island's only one after the Hilo Landfill closed three years ago. It only has about 20 to 25 years left before it can no longer be used to store rubbish.

<https://bigislandnow.com/2023/09/17/big-island-now-poll-no-27-results-more-than-one-solution-needed-to-help-extend-life-of-west-hawaii-landfill/>

A County commission drafts ordinance aiming to ban recyclables at West Hawaii landfill

By [Megan Moseley](#) September 6, 2023

Hawaii County's Environmental Management Commission is developing an ordinance that aims to prohibit the amount of recyclable materials ending up in the island's only working landfill.

During a commission meeting on July 26, Ramzi Mansour, Hawaii County Director of Environmental Management, told commissioners the West Hawaii Sanitary Landfill only has 20 to 25 years left before it reaches capacity.

With the Hilo Landfill permanently closed in 2020, the clock is ticking for the island's sole dump.

Commission chairperson Georjean Adams said it's a good time to start looking into solutions.

Adams said the proposed ordinance is in its early stages and is more about getting the conversation started about how to prevent unnecessary, or recyclable items — green waste, metals, plastics, paper, paperboard and glass — from ending up in the rubbish dump, located off Queen Ka'ahumanu Highway in Waikōloa.

"Trying to site a new landfill is close to impossible," Adams said. "So what are we going to do? So I was looking around, and the commission agreed, to look deeply into the idea of diverting the recyclables out and at least slow the filling up of the landfill."

The proposed ordinance refers to the 2019 Integrated Solid Waste Management Plan that commits the county to "divert, as much as feasible, commercial and municipal solid waste, including but not

limited to green waste, metals, plastics, paper, paperboard, and glass to help achieve goals related to climate resiliency, renewable energy, sustainable agriculture, and zero waste."

<https://bigislandnow.com/2023/09/06/new-draft-ordinance-aims-to-ban-recyclables-at-west-hawaii-landfill/>

Time's Up For Landfills

'Gentle' demolition strategies can help preserve resources

PAULA BENDER April 2, 2024

As Hawaii's government officials grapple with the challenge of limited landfill space statewide, federal restrictions set in place by the Environmental Protection Agency are ruling out possible locations that were once considered for new landfills.

Hawaii Act 73 states landfills must be located at least half a mile from residential areas; are prohibited from being located in areas with heavy rain and steep slopes, as well as agricultural and/or conservation lands; above aquifers; 300 feet beyond streams; and 1,000 feet beyond the ocean.

New landfills are also now prohibited from being created in tsunami inundation zones, 100-year flood zones and wetlands. There are also concerns that landfills near airports will attract birds, resulting in damage to aircraft and fatalities among pilots and passengers.

The City & County of Honolulu is in the process of identifying its next landfill and it doesn't want one any bigger or more active than absolutely necessary.

<https://buildingindustryhawaii.com/2024/04/times-up-for-landfills/>

Drought Conditions On Hawaii Island Prompt Water Supply Message

by Big Island Video News

on Oct 5, 2023 at 3:59 pm

(BIVN) — With moderate to severe drought conditions being reported across Hawaii Island, local water department officials issued a statement this week on the need for customers to use drinking water wisely.

Most of Hawaii Island is under "Moderate Drought" conditions, according to the latest

information from the [U.S. Drought Monitor](#). There is an area under "Abnormally Dry" conditions in

South Kona, however there are other, small pockets on the Big Island that are under "Severe

Drought". There is even a small spot of "Extreme Drought" in the South Point area of Ka'u.

"The National Weather Service's forecast calls for the existing drought conditions to expand over the entire island and intensify over the upcoming months due to the ongoing El Niño event," reported the Hawaii County Department of Water Supply. "Peak dryness is expected to occur from around January through February 2024. The El Niño event will likely persist well into spring 2024."

From a Water Supply news release:

<https://www.bigislandvideonews.com/2023/10/05/drought-conditions-on-hawaii%CA%BB-island-prompt-water-supply-message/>

[U.S.](#)

Hawaii is "on the verge of a greater catastrophe," locals say, as water crisis continues

By [Li Cohen](#)

Updated on: April 11, 2024 / 8:23 AM EDT / CBS News

And recent years have seen compounding problems: less rain, leading to significant droughts, and repeated jet fuel leaks and PFAS chemical spills contaminating water systems. All of this significantly limits available water use for locals, many of whom say tourism is only worsening the situation. Just months ago, the world's largest surfing wave pool opened up on the island — filled with freshwater.

"They're not using it to drink or to support life, they're using it to make money. They're commodifying it," said Healani Sonoda-Pale, who is Native Hawaiian and a member of advocacy group Oahu Water Protectors. "... We are on the verge of a greater catastrophe."

"We are in a water crisis, that has to be made very clear," Wayne Tanaka, director of Sierra Club of

Hawaii, told CBS News, saying that if the reasons for this crisis aren't soon addressed, "We may come to a point where we have to decide ... who gets water and who doesn't."

<https://www.cbsnews.com/news/hawaii-water-crisis-climate-change/>

Because this is an island, parts need to be shipped. The power plant currently has generators that are not working, and because of this (and other reasons), the Big Island needs to seriously conserve power so that everyone will have power. If this problem of shipping parts can happen once, it can and will happen again.

UPDATE: HELCO asks for continued energy conservation  
BY SPECTRUM NEWS STAFF HAWAII ISLAND  
UPDATED 6:28 PM ET APR. 16, 2024 PUBLISHED 9:05 AM ET APR. 15, 2024  
HILO, Hawaii — Hawaiian Electric continues to urge Hawaii Island customers to reduce their electricity use to prevent the need for rolling outages.  
In a news release Tuesday afternoon, the utility stated that Monday saw a reduced demand of approximately 5 megawatts. That, combined with increased wind and solar battery storage prevented the need for rolling blackouts on Monday. HELCO credited conservation efforts, particularly those by large businesses and government customers, for the reduction in electricity demand.

"We're grateful for our customers' efforts to conserve electricity, especially between 5 to 9 p.m., when electricity us is highest, because it does make a difference," said Hawaiian Electric spokesperson Kristen Okinaka. "By working together, we're helping to ensure that enough power can be available for all customers and prevent or minimize the impacts of rolling outages."

Hawaiian Electric announced Monday afternoon that it may initiate rolling outages in parts of Hawaii Island because of the unavailability of several generators and lower than normal wind and solar resources.

In a news release, the utility said that outages could start as early as 6:30 p.m. and rotate around the island for 30-minute intervals. The impacted areas and the timing of the outages will be based on wind generation and the amount of electric demand that needs to be reduced. Individuals who are dependent on electrically powered life support medical equipment are advised to arrange for a backup power supply.

The outages are being done to prevent power loss to even more customers, who are all being asked to conserve electricity throughout the month.

<https://spectrumbroadcast.com/hi/hawaii/news/2024/04/15/heco-customers-on-hawaii-island-asked-to-conserve-power->

Big power supply problems continue to plague Hawaii Island  
Apr. 8, 2024

The company has been facing an unusual situation with mechanical problems at three of the island's five largest power plants while part of the largest plant undergoes an annual overhaul. All four of these affected power plants are owned by the utility or an affiliate of its parent company.

Also contributing to the trouble is lower output from a geothermal plant, which has the third-largest generation capacity on the island and is owned by an independent operator.

"This is an unusual situation, driven mainly by the unavailability of several large generators that have experienced mechanical problems, are at reduced output, or are undergoing maintenance," Hawaiian Electric said in its March 25 announcement asking customers to use less electricity, especially on weekdays from 5 to 9 p.m.

The company explained that it faces an "extremely tight" supply of power at peak use periods, especially when production from wind, solar and hydroelectric facilities is lower than normal. Those sources of variable, renewable energy can supply up to 15% of electricity needs on the island.

"Without enough supply to meet electricity demand, the company may initiate rolling outages of up to an hour around the island," the March 25 announcement said.

<https://energycentral.com/news/big-power-supply-problems-continue-plague-hawaii-island>

Hawaii Island customers urged to reduce electricity use through April  
BY SARAH YAMANAKA HILO PUBLISHED 9:00 AM ET MAR. 26, 2024

What You Need To Know

-Hawaii Island customers may see alerts asking them to conserve energy, especially on days when there isn't much wind that generates up to 15% of electricity

-When alerts are issued, Hawaiian Electric is asking customers to take immediate action to minimize electricity use

-Even when no alerts are issued, customers — including hotels and large retailers — are urged to reduce electricity use as much as possible, especially between 5 and 9 p.m. on weekdays

-If there is not enough electricity to meet demand, Hawaiian Electric may initiate rolling outages of up to an hour around the island

<https://spectrumbroadcast.com/hi/hawaii/news/2024/03/25/hawaii-island-customers-urged-to-reduce-electricity-use-through-april>

FURTHERMORE: TRAFFIC, LACK OF RESOURCES, AND FATALITIES

A Resort Development Will Increase Traffic on Already Severely Trafficked Roads. Are there traffic study reports for this EIS?

A development with 150 rooms comes with over 150+ cars. Employees, guests, and visitors will all have cars, plus the regular locals who go there to paddle and enjoy the bay. All this could range in over 300 cars a day because of this resort development.

The Big Island already has a serious traffic issue due to a lack of infrastructure. This is in part due to poor planning, and in part due to geography challenges.

The articles below by different NEWS companies highlight the point that many traffic issues stem from lack of infrastructure and resources. Adding more cars to the road by building another resort in an area that is already stressed, will only increase the already mounting problems with traffic.

This NEWS article by Hawaii News Now, "Report shows alarming surge in Hawaii Island traffic deaths The Hawaii Police Department's Traffic Services Section released a new report showing a dramatic increase in both major crashes and fatal accidents from last year.

The startling statistics show a dramatic increase in the number of year-over-year traffic fatalities on the Island of Hawaii, revealing major crashes are up more than 12% and traffic fatalities are up more than 100%." Watch the video on their link below as it is a professional report on Big Island traffic problems. <https://www.hawaiinewsnow.com/2024/05/18/new-report-shows-hawaii-island-traffic-fatalities-are-up-over-100-last-year/>

With more tourists there will be more accidents, more traffic, and more traffic deaths. Please read this article by KHON 2 NEWS, "Hawaii Island has most traffic fatalities in state. This time last year Hawaii Island was at five traffic deaths, as of April 1, 2024, they're at 14.

Seven of which happened in the last two weeks.

Chief Moszkowicz said the police force is small compared to the size of the island and response times can take 15 to 20 minutes.

"We don't have the resources like in the small space of Oahu where you can saturate an area to control speeding, that just doesn't exist here," he added. <https://www.khon2.com/local-news/7-traffic-fatalities-for-hawaii-island-in-march/>

The traffic on Big Island has increased drastically and safety issues and infrastructure needs to be addressed before adding more resort developments.

Please read this article because what it says about Oahu is a mirror for Big Island. The traffic problems they discuss are the same issues here on Big Island; and it also gives one Big Island example, "On the Big Island, the mayor had to issue an emergency order shutting down Waipio Valley Road due to overuse and poor prior maintenance." This is happening all over Big Island. <https://www.civilbeat.org/2024/02/langry-over-island-traffic-jams-lets-talk-about-solutions/>

The news video below shows aerial footage in Hilo. The footage shown is the same thing that is happening on Alii Drive and Queen K Highway, and for all the same reasons: All of these roads only have two lanes!

There are two developments already on Alii Drive being built as of today: and more are scheduled for this road in the near future. Alii Drive and Queen K Highway are the roads Kamehameha Schools Bungalow Resort will be using if approved, and they are already seriously congested. These roads have the exact same traffic congestion as Hilo, with the exact same problems. Traffic is extremely slow because of so many people who now live here and all the visitors that come yearly. In addition, the concern on Kona side is tsunami evacuations rather than lava evacuations. In this kind of traffic, not everyone will be able to get to safer ground, especially if you allow another resort to be developed in this area when traffic is already at a crawl every weekday and often on weekends as well.

Here is the news article by KITV NEWS that highlights the traffic issues discussed above: "Hawaii island traffic jams could have safety impact. In the event of an evacuation, Mayor Mitch Roth acknowledges that will make the Traffic Jam up even worse. But says, he is working with The State on a solution." [https://www.kitv.com/news/local/hawaii-island-traffic-jams-could-have-safety-impact/article\\_b06a5374-5a6a-11ed-8d23-8373ef8c4c19.html](https://www.kitv.com/news/local/hawaii-island-traffic-jams-could-have-safety-impact/article_b06a5374-5a6a-11ed-8d23-8373ef8c4c19.html)

There was a crash recently on Alii Drive (see video below). When there is an accident on Alii Drive, it turns the already small two-lane road into only one lane that requires a flagger to help direct traffic. Kamehameha Schools wants to add a resort on this tiny road that will increase the traffic by hundreds of cars.

Here is the Island News video on the crash on Alii Dr. <https://www.youtube.com/watch?v=FQSnPDii8>

Please see from these articles that traffic on Big Island is deadly already and adding another resort will be devastating to the island.

Read this Path article, HAWAII COUNTY'S VISION ZERO INITIATIVE:

A motorcyclist is in critical condition after a collision with a car. A driver accidentally hits and kills a pedestrian. It seems that not a day goes by without the news reporting on a traffic crash on Hawaii Island...

Here are some other statistics that are even more staggering:

-28% of roadside crashes were the result of someone leaving the roadway and going into barriers or trees

-13% of pedestrians hit at 20 mph actually suffer fatality

-73% of pedestrians hit at 40 mph suffer fatality

-25% of fatal crashes were the result of distracted driving... So PLEASE put those cell phones away and pay attention to the road!

-56% of fatal crashes were the result of alcohol or drugs

-41% of fatal crashes occurred in light trucks and vans

-49% of crashes occur during the day, outside of peak traffic hours

-Of all the crash fatalities, most were males between 20 to 24-years old.

"That's just Big Island traffic," is a common sentiment. But what if we didn't have to accept this endangerment of vehicle drivers, motorcyclists, and pedestrians as a way of life?"

This was taken from Path <https://pathhawaii.org/hawaii-countys-vision-zero-initiative/>

**MORE ARTICLES HIGHLIGHTING INFRASTRUCTURE AND RESOURCE DEFICITS, INCLUDING WATER, TRASH, ELECTRIC AND WASTEWATER:**

1) Hawaii Deals with Burgeoning Waste Management Problem  
As landfills face closure and waste-to-energy projects stall, various counties in Hawaii are dealing with waste management issues. Waste360 Staff January 10, 2020

"Hawaii Island is in the enviable position of having a landfill with anywhere from 20 to 100 years of capacity left to take in trash. But the island still wrestles with significant issues like plastic products that are no longer being recycled." <https://www.waste360.com/landfill/hawaii-deals-with-burgeoning-waste-management-problem>

2) "Big Island Now readers seem to agree that there's likely no single solution for slowing down the timeline of the West Hawaii Sanitary Landfill reaching capacity.

The West Hawaii Sanitary Landfill, the only remaining landfill on the Big Island, is forecast to reach capacity within the next 20 to 25 years." <https://bigislandnow.com/2023/09/17/big-island-now-poll-no-27-results-more-than-one-solution-needed-to-help-extend-life-of-west-hawaii-landfill/>

3) Hawaii Island Has Decades of Landfill Space But Still Faces Challenges In Dealing With Its Waste Hawaii Public Radio Published January 9, 2020 at 5:00 AM HST  
"Hawaii Island is in the enviable position of having a landfill with anywhere from 20 to 100 years of capacity left to take in trash. But the island still wrestles with significant issues like plastic products that are no longer being recycled.

For the past four decades, trash from the East side of Hawaii Island has been dumped in a landfill outside of Hilo. But now trash from all parts of the island is being trucked to a facility north of Kona." <https://www.hawaiipublicradio.org/local-news/2020-01-09/hawaii-island-has-decades-of-landfill-space-but-still-faces-challenges-in-dealing-with-its-waste>

4) "What happens to Hawaii Island's trash and recyclables? BY MICHELLE BRODER VANDYKE HAWAII ISLAND PUBLISHED 11:30 AM ET DEC. 17, 2022 By Michelle Broder Vandyke Hawaii Island PUBLISHED 11:30 AM ET Dec. 17 The future of the landfill

The West Hawaii Landfill will be full in about 20 years. Finding a location for the next landfill is a concern, according to the DEM officials. They said it will be challenging to find a location for a future landfill because of stringent regulations and costs related to planning, environmental regulations, design and construction that will take many years to complete. It will also require community support." <https://spectrlocalnews.com/hilo/hawaii/news/2022/12/15/what-happens-to-hawaii-island-s-trash-and-recyclables->

5) "The overwhelming plastic waste Hawaii visitors leave behind By Natasha Bourlin Aug 24, 2023

Hawaii saw more than 9 million visitors last year. Those tourists' first stops are often big-box and convenience stores, where they buy bottled water, plastic sand toys, single-use bodyboards, noodles, floaties and inner tubes for their trips." <https://www.sfgate.com/hawaii/article/plastic-waste-hawaii-visitors-leave-behind-18286076.php>

18) Hawaii Water Supply Closely Monitored As Severe Drought Continues

by Big Island Video News

on Nov 6, 2023 at 3:28 pm

(BIVN) – With an ongoing drought on the island of Hawaii, the Hawaii County Department of Water Supply says it is closely monitoring its 23 public water systems, with a "special focus" placed on the South Kohala Water System.

<https://www.bigislandvideonews.com/2023/11/06/water-supply-closely-monitored-as-hawaii-CA-BI-under-severe-drought/>

This is a map of Power Outages on the Big Island. This map wouldn't have been created if Power

Outages were not a problem. <https://www.hawaiianelectric.com/safety-and-outages/power-outages/hawaii-island-outage-map>

Please, give Tax Breaks to all homes that provide solar and/or wind turbine to there homes to help

with power issues on the island.

19) "Hawaiian Electric is reporting that several large generators on the Big Island are experiencing a range of issues and may lead to the need for rolling outages if supply does not meet demand." [https://www.reddit.com/r/BigIsland/comments/1bnuat3/hawaiian\\_electric\\_is\\_reporting\\_that\\_several\\_large/?rl=52660](https://www.reddit.com/r/BigIsland/comments/1bnuat3/hawaiian_electric_is_reporting_that_several_large/?rl=52660)

20) "Hawaiian Electric asking Big Island customers to conserve power due to down generators

March 25, 2024 · 11:49 AM HST

According to the utility company, this is an usual situation as the large generators are experiencing

mechanical problems resulting in a reduced output. The largest generator, an independent power

producer that sells electricity to Hawaiian Electric, is offline with significant mechanical issues.

The plant generates 60 megawatts or nearly one-third of the typical peak demand of 180 megawatts

on the island."

<https://bigislandnow.com/2024/03/25/hawaiian-electric-asking-big-island-customers-to-conserve-power-due-to-down-generators/>

All the articles above show that a resort development will further deplete and stress resources and

infrastructure on an island already struggling. There are years of new development that have already

been approved but not completed. It is not responsible or prudent to continue to develop this resort

under these current conditions.

HISTORICAL AND CULTURAL SIGNIFICANCE:

The Law of the Splintered Paddle

Hawaiian history tells us that young Kamehameha was once an aggressive chief. The story goes that

the young chief even chased after two fishermen in a Puna fishing village. While pursuing them, his

foot got stuck in a crevice, and one of the fishermen struck Kamehameha over the head with his

paddle in defense, which splintered into pieces.

After the incident, Kamehameha recognized that it was wrong to misuse his power and learned

compassion. Years later, Kamehameha declared a new law "Ke Kānāwai Māmalahoe" or "the Law of

the Splintered Paddle." Meant to protect the innocent and vulnerable from unprovoked attacks, this

law proclaimed that the defenseless, especially kupuna and keiki, be able to sleep safely on the side of the road, unharmed.  
The law provided for the safety of non-warriors during wartime and became the first written law of the Kingdom of Hawaii. After being added back in 1978, the law is part of Hawaii's State Constitution today.

It is symbolic of servant leadership, reinforcing the importance of:

- Caring for and serving one's people
- Knowing and doing what is pono (right)
- Standing for the principle that leadership privilege is earned
- Taking kuleana (responsibility) for those we serve
- Doing so with compassion, love, and respect
- "We take that to mean that anyone who uses our roadways should be able to do so without fear of harm," explains Tina."

The Law of the Splintered Paddle is also on Kamehameha Schools website. The historical value of this law should be enough to help make Big Island roads become safer, and not adding to the traffic and issues of our already dangerous roads. <https://www.ksbe.edu/article/the-lessons-of-the-law-of-the-splintered-paddle-true-200-years-after>

Does this EIS have any reports about how this development will safely add to the land fill on Big Island, and are there reports proving the island has enough water for another big resort, what about reports on how much power this resort will use because the Big Island already has serious resource and infrastructure issues.

#### IN CONCLUSION

The articles cited in this letter, many by some of the most esteemed scientists in the world, show with clarity that allowing this development is going to cause devastating, lasting, effects on the Eco-system in Keauhou Bay and "The Endangered Species Act of 1973 (ESA or "The Act"; 16 U.S.C. § 1531 et seq.) is the primary law in the United States for protecting and conserving imperiled species. Designed to protect critically imperiled species from **extinction** as a "consequence of economic growth and development untempered by adequate concern and conservation", the ESA was signed into law by President **Richard Nixon** on December 28, 1973. The **Supreme Court of the United States** described it as "the most comprehensive legislation for the preservation of endangered species enacted by any nation".<sup>[1]</sup> [https://en.wikipedia.org/wiki/Endangered\\_Species\\_Act\\_of\\_1973](https://en.wikipedia.org/wiki/Endangered_Species_Act_of_1973)  
This location, currently acting as a natural filter, is especially vulnerable due to having a golf course on one side and a natural treasure like Keauhou Bay on the other. This land MUST be conserved in order to keep Keauhou Bay safe for all the marine life to be able to live there for years to come. In addition to the natural disaster this will cause, Hawai'i Island is already having serious infrastructure and resource issues that have yet to be solved. These issues MUST be solved before considering another resort development on Big Island. We need to work in harmony with the land and the people before pushing forward with new developments, especially in sacred and special places like Keauhou Bay, the birthplace of King Kamehameha III. Keauhou Bay is a small, fragile Eco-system, that is already pressured by boating, golfing, population issues, and hotels that are all around the entire bay.

The trees that currently stand on the land that is threatened to be developed clearly protects the marine life and environment from further damage. The location is NOT suitable for this kind of development for both environmental and infrastructure reasons.  
The cost of what stands to be lost is far too high to allow this to happen.  
Please save Keauhou Bay's marine life and help the island's resources by saying NO to a Bungalow Resort built by Kamehameha Schools.  
Mahalo,

Jason Rigmaiden

**Subject:** Kamehameha Schools EIS Draft For Keaouhou Bay WILL HAVE NEGATIVE IMPACT  
**Categories:** Yellow Category

To Whom It May Concern,

Please read the scientific proof in this letter and REJECT Kamehameha Schools Environment Impact Statement (EIS) for Keaouhou Bay to become a Bungalow Resort.

Please state in your report that a Bungalow Resort WILL have a SERIOUS NEGATIVE IMPACT on Keaouhou Bay as stated in all the different researched articles below.

Please, DO NOT risk polluting the water in Keaouhou Bay by allowing Kamehameha Schools to develop their bungalow resort project. It is scientifically proven that developments pollute nearby waters both during and after development.

Below are scientific articles written by the National Oceanic and Atmospheric Administration (NOAA), Global Coral Reef Alliance, Hawaii Government, and many other professional organizations, that have studied and shown that developments have ALWAYS polluted the water in EVERY coastal development area.

Does this EIS (Environmental Impact Statement) have any kind of reports and studies on how the endangered species and marine life will handle the extra pollution due to development, and the golf course runoff? Keaouhou Bay is their habitat and this development WILL be CHANGING an Entire Ecosystem.

#### ENDANGERED SPECIES CONSERVATION IMPACTED BY DEVELOPMENT

In the Endangered Species Act of 1973 Under Section 2 (b), "To provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved." This would be Keaouhou Bay.

The Green Sea Turtle swims in Keaouhou Bay weekly and the monk seal has also been seen swimming and resting in Keaouhou Bay. Both of these marine animals are on the endangered species list.

Endangered Species Act

"Section 2. Findings, Purposes, and Policy

(4) the United States has pledged itself as a sovereign state in the international community to conserve to the extent practicable the various species of fish or wildlife and plants facing extinction, pursuant to—

(b) PURPOSES.—The purposes of this Act are to provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved, to provide a program for the conservation of such endangered species and threatened species, and to take such steps as may be appropriate to achieve the purposes of the treaties and conventions set forth in subsection (a) of this section."

This was taken from <https://www.fisheries.noaa.gov/national/endangered-species-conservation/endangered-species-ac>

#### FEDERALLY PROTECTED GREEN SEA TURTLES WILL BE AFFECTED

The green sea turtle is federally protected and can be seen in Keaouhou Bay weekly.

The following article that states: "POLLUTED RUNOFF IN HAWAII ENDANGERS GREEN SEA TURTLES"

Why does Hawaii have a runoff problem?

Historically, in the tropics of Hawaii, precipitation was absorbed into the soil, according to the Clean Water Branch of Hawaii's Department of Health. Any potential pollution or contaminants on the ground surface would get pushed into the soil by the rain, and plant roots and microbes would help break down the pollution into less dangerous components. However, with urban and agricultural development, less and less of the pollution gets pulled into the soil, and more of it gets washed out into storm drains. From there, the pollutants make their way to streams, rivers and the ocean that surrounds Hawaii. According to the state agency, most of these contaminants are nutrients from fertilizer, bacteria from animal waste, oil, garbage and yard waste...

If polluted runoff reaches the ocean, it can wreak havoc on marine life, including endangered green sea turtles." Taken from <https://www.chemservice.com/news/polluted-runoff-in-hawaii-endangers-green-sea-turtles/>

Allowing this development WILL POLLUTE Keaouhou Bay. The above article, written in 2014 (because runoff water from developments were polluting the ocean even then!!) states this fact clearly. Keaouhou Bay is home to countless sea creatures such as the protected green sea turtle, spotted eagle rays, manta rays, octopus, dolphins, fish, coral, monk seals, and more and that will ALL be harmed by the severe pollution runoff that WILL happen because developments have been shown to ALWAYS pollute the water is that is nearby.

The Green Sea Turtle is protected by more than one law. "All sea turtles in Hawaii are protected by the Endangered Species Act (ESA) and additionally protected by Hawaii Revised Statutes Chapter 195D (HRS) and Hawaii Administrative Rules (HAR) 13-124." This information was taken from this site <https://dlnr.hawaii.gov/dar/species/sea-turtles/>

## THE ENDANGERED MONK SEAL WILL BE AFFECTED

Keaouhou Bay is known as a RESTING AREA for the ENDANGERED MONK SEAL. If another resort is allowed to be built, in addition to the pollution, it will also bring a lot more people down to Keaouhou Bay. This increases the chances of a resting monk seal being disturbed by humans trying to get close, take "selfie" photos, and being generally uninformed and harmful. Please see article on Selfie Culture and its harmful effects below.

Has the EIS done any research on what an increased population would do in such a small area, and what will happen to the endangered species that live there? With a significantly increased population their habitat of Keaouhou Bay will likely be changed forever.

This information is from a NOAA Scientist, "Study shows selfie culture impacts how people behave when posting images of an endangered species on social media. There's a seal on the beach! Let's go get a 'selfie!'" That must have been what nearly 18 percent of people on Instagram thought before approaching an endangered species.

In a [recent study](#), NOAA scientists used social media to monitor human activities around endangered [Hawaiian monk seals](#). They discovered that human disturbance is more common than they thought." <https://www.fisheries.noaa.gov/feature-story/endangered-hawaiian-monk-seals-civ-foul-over-selfies>

NOAA clearly states a high population in a place where monk seals and sea turtles habitat can be a serious disturbance for these endangered species.

"Hawaiian monk seals are protected federally by the ESA and the [Marine Mammal Protection Act \(MMPA\)](#), as well as locally by Hawai'i Revised Statutes (HRS) [Chapter 195D](#) and Hawai'i Administrative Rules (HAR) [13-124](#)." This was taken from <https://dlnr.hawaii.gov/dar/hawaiian-monk-seal/>

Keaouhou Bay is the monk seals and the green sea turtle's habitat. Allowing a bungalow resort to be developed in Keaouhou Bay, the habitat of these endangered species, is to threaten their life and habitat with golf course runoff pollution, as well as development pollution. By threatening their habitat, and hence their lives, this development goes completely against the Endangered Species Act of 1973.

The verbiage in the Endangered Species Act states, "to conserve". In this case, "to conserve" would be to protect the land around Keaouhou Bay from developments that destroy the habitat of these endangered species with pollution and runoff.

Does this EIS have any reports on the endangered species that frequent Keaouhou Bay? This is their habitat and it needs to be "conserved".

Under the Conservation Program there should be research done on endangered species and their associated ecosystems. A large bungalow resort development WILL FOREVER CHANGE THIS ECOSYSTEM.

"§195D-5 Conservation programs. (a) The department shall conduct research on indigenous aquatic life, wildlife, and land plants, and on endangered species and their associated ecosystems,

and shall utilize the land acquisition and other authority vested in the department to carry out programs for the conservation, management, and protection of such species and their associated ecosystems." [https://www.capitol.hawaii.gov/hsrcurrent/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hsrcurrent/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm).

Also, under this same Conservation program, "(2) Taking such action as may be necessary to ensure that actions authorized, funded, or carried out by them do not jeopardize the continued existence of threatened or endangered species." [https://www.capitol.hawaii.gov/hsrcurrent/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hsrcurrent/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm)

Please consider that developing a Kamehameha Schools Bungalow Resort in Keaouhou Bay WILL threaten endangered species due to the unavoidable development and golf course pollution runoff that would be caused by removing the all the trees that currently serving as a natural pollution filter, and replacing the land with housing, cars, humans, and waste. There would also be tremendous runoff damage into Keaouhou Bay and the surrounding area during the building phase of this enormous project.

## GOLF COURSE POLLUTION KILLS MARINE LIFE AND DRASTICALLY CHANGES ECOSYSTEMS

"The golf industry uses approximately 50 pesticide active ingredients, including chlorpyrifos—an insecticide that is banned for residential use by the EPA due to developmental hazards. Having to trim golf turf to low heights also makes it even more vulnerable to pests, which leads to more pesticide use." <https://rainorshinegolf.com/pages/the-environmental-impact-of-golf-courses>

These pesticides will be in the pollution runoff that will enter Keaouhou Bay more severely should the natural habitat of the trees be removed and replaced with pavement. This is unavoidable!

Please read from Wikipedia, "Most drains have a single large exit at their point of discharge (often covered by a grating) into a [canal](#), river, lake, [reservoir](#), sea or ocean. Other than catch basins, typically there are no treatment facilities in the piping system." [https://en.wikipedia.org/wiki/Storm\\_drain#:~:text=Most%20drains%20have%20a%20single,disharge%20into%20individual%20dry%20wells](https://en.wikipedia.org/wiki/Storm_drain#:~:text=Most%20drains%20have%20a%20single,disharge%20into%20individual%20dry%20wells)

The pavement from this development will cause pollution to runoff into Keaouhou Bay because this treed land that will become a housing development is situated directly between the golf course and the Bay. These trees, which absorb all the pollution from the golf course is the BEST AND ONLY PROTECTION POLLUTION FILTER Keaouhou Bay has from the golf course pesticides, fertilizer and weed killer. See the below paragraph for further references.

See page 2 at: <https://health.hawaii.gov/epo/files/2013/09/Stormwater-MS4-Presentation-HEF-7.15.14.pdf> where the Hawai'i government states that Natural Ground Cover has 10% runoff, where has development has 55% runoff. So, even if you have storm drains the pavement this development will create will cause more runoff into Keaouhou Bay than the Natural Ground Cover that is has now, that has been protecting the bay from golf course pollution for years.

These trees and land are saving monk seals and green sea turtles habitat from the golf course pollution and this land MUST BE PRESERVED and CONSERVED as the natural protector for Keaouhou Bay and for these endangered species habitat.

Under Section 2 (b) of the Endangered Species Act - Keauhou Bay MUST BECOME A CONSERVATION AREA for these endangered species. It is currently their habitat, and to allow a large resort development to be built above this bay clearly threatens the lives of these endangered species by allowing golf course toxic pollution and development pollution to run into these species natural habitat of Keauhou Bay.

#### ALGAE BLOOMS KILL CORAL AND MARINE LIFE

The trees that are slated to be cleared for the development further protect Keauhou Bay from algae blooms that have been proven to be caused by pollution that is runoff from fertilizer and weed killer.

When there is heavy rain the land above the bay has a greater runoff than normal. Without the trees, the runoff from the golf course pollution will pour into the Bay likely causing frequent algae blooms.

Algae blooms have been shown to kill coral and marine life as stated in the many articles that will follow.

One of these articles is from the Global Coral Reef Alliance. They have researched the effects on reefs before and after a golf course developments. Though this development is not a golf course development, it is located just below a golf course and exposes the bay to the pollution from the golf course by removing the proven natural filter of the trees and natural ecosystem.

Has this EIS done any kind of research about the algae blooms that happen after a serious storm because of the golf course runoff pollution?

This information was taken from Global Coral Reef Alliance and it is an actual study on the how coral and marine life are affected before and after development. It's titled, "Golf courses kill coral reefs and fisheries: harmful algae blooms and disease cause by nutrient runoff from golf course development on Guana Cay, Abaco, Bahamas

Introduction: Bahamas coral reef deterioration

This study is thought the first ever to evaluate the health of coral reef ecosystems and fisheries before and after a golf course development..The vast majority of corals have died from a combination of factors including global warming, new diseases, land-based sources of pollution.."  
"<https://www.globalcoral.org/golf-courses-kill-coral-reefs-and-fisheries-harmful-algae-blooms-and-disease-caused-by-nutrient-runoff-from-golf-course-development-on-guana-cay-abaco-bahamas/>

If you allow a Bungalow Development in Keauhou Bay you WILL be agreeing to pollute this bay for years to come and COMPLETELY CHANGING and possibly DESTROYING KEAUHOU BAY'S ECOSYSTEM.

Another study by the Coral Reef Alliance titled, "Golf course fertilizer runoff causes nutrient enrichment leading to harmful algae blooms on a Bahamian coral reef.

"...After construction new algae blooms appeared nearest the golf course green, smothering corals in adjacent reefs, along with sharply increased coral diseases..." <https://www.globalcoral.org/golf-course-fertilizer-runoff-causes-nutrient-enrichment-leading-to-harmful-algae-blooms-on-a-bahamian-coral-reef>

Does this EIS have any studies or reports on the extra runoff pollution due to clearing land and adding pavement?

This needs to be fully assessed because you will be changing an entire ecosystem to build a bungalow resort. It rains in Keauhou Bay many nights out of the year and this kind of pollution will kill the beautiful and necessary coral in the Bay.

FURTHERMORE: "If there are [toxic algal blooms](#), like red tide, or man-made contaminants, like pesticides or detergents in the water, those toxins are contained within the bubbles of sea foam. When those bubbles pop, the toxins can become airborne and compromise the air that is breathed in that location." <https://oceanconservancy.org/blog/2023/03/31/what-sea-foam/>

#### ENGINE POLLUTION CAUSES ISSUES IN THE OCEAN

Does this EIS have any detailed traffic studies for the increase in cars that will be added to this already severely traffic area they want to build their 150 room bungalow resort in? Have they done any studies on the pollution these cars WILL have in Keauhou Bay?

Because this Bungalow Resort could have over 150 extra cars and over 300 or more extra people in and out of Keauhou Bay, what traffic and increased population studies have they done? There will be employees with cars, guests with cars, visitors with cars. At times this would range to over 200 cars (likely more), coming in and out of, and parking above Keauhou Bay thereby causing serious car population issues because of all these added cars right next to the bay.

The article below is from NOAA regarding motor vehicle engines and pollution to the sea.

What is the biggest source of pollution in the ocean?

Most ocean pollution begins on land.

"Millions of motor vehicle engines drop small amounts of oil each day onto roads and parking lots. Much of this, too, makes its way to the sea.

Some water pollution actually starts as air pollution, which settles into waterways and oceans. Dirt can be a pollutant. Top soil or silt from fields or construction sites can run off into waterways, harming fish and wildlife

habitats." <https://oceanservice.noaa.gov/facts/pollution.html#:~:text=Millions%20of%20motor%20vehicle%20engines,Dirt%20can%20be%20a%20pollutant.>

Land-Based Runoff Remains Top Source of Oil in the Ocean, Says New Report Oil in the Sea: Inputs, Fates, and Effects

News Release September 28, 2022

WASHINGTON — Oil in runoff, primarily from cities and vehicles, is the top source of oil entering the ocean, says a [new report](#) from the National Academies of Sciences, Engineering, and Medicine. In North American waters, estimated ocean oil pollution from land-based runoff is up to 20 times higher than it was 20 years ago, and oil spills, natural oil seeps, and discharge from oil and gas operations remain major sources of pollution. The report recommends actions that government and others

should take to minimize oil pollution, and calls for sustained research funding to better understand how oil reaches and affects ocean environments. <https://www.nationalacademies.org/news/2002/05/oil-in-the-sea-inputs-fates-and-effects#:~:text=WASHINGTON%20%2D%2D%20Nearly%2085%20percent,pipeline%20spills%2C%20Osavs%20a%20new>

#### The Impact Of Stormwater – Car Emissions

"Car emissions are not limited to exhaust fumes that contribute to air pollution. They can also leak automotive fluid and release heavy metals that can contribute to stormwater pollution, contaminating local waterways." <https://www.stormwatershepherds.org.au/blog/the-impact-of-stormwater-car-emissions/>

#### NOISE POLLUTION'S HARMFUL EFFECT ON MARINE LIFE

Does this EIS have any reports on the noise pollution that will happen and what it could do to marine life in Keauhou Bay during development?

Because if you allow this Bungalow Resort to be developed you will increase constant noise in this bay for years to come and, "Noise Pollution Research shows that underwater noise from construction, shipping and naval vessels significantly impacts the natural behavior of cetaceans and many other marine species. This can be seen when mass beaching events occur or breeding success is diminished."

The above information was taken from the Ocean Conservation Trust <https://oceanconservationtrust.org/ocean-advocacy/think-ocean/ways-to-think-ocean/>

#### How Does Noise Pollution Harm Marine Species?

"However, over the past few decades, noise pollution in the marine environment has increased dramatically and is threatening the natural soundscape of the marine environment. Ships, seismic surveys, explosions, construction, and sonar devices have made the once peaceful environment into a loud, chaotic home which is extremely damaging for marine wildlife. This type of pollution is often overlooked in comparison to others but its impacts are now being documented across all types of marine ecosystems." <https://earth.org/noise-pollution-in-the-ocean/>

If you allow this resort the amount of people in this bay will fully increase and, "Hawaii's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally, management of the resource should balance the needs of different user groups, but the welfare of the marine environment on which its inhabitants depend must be the most important consideration." This was taken from Hawaii's own Division of Aquatic Resources <https://dnh.hawaii.gov/dar/marine-managed-areas/hawaii-marine-life-conservation-districts#:~:text=Snorkeling%20and%20SCUBA%20diving%20are,effect%20on%20nearshore%20fish%20populations.>

#### What is ocean noise?

"Ocean noise refers to sounds made by human activities that can interfere with or obscure the ability of marine animals to hear natural sounds in the ocean.

Many marine organisms rely on their ability to hear for their survival. Sound is a highly efficient means of communication underwater and is the primary way that many marine species gather and understand information about their environment. Many aquatic animals use sound to find prey, locate mates and offspring, avoid predators, guide their navigation and locate habitat, as well as to listen and communicate with each other.

Over the last century, human activities such as shipping, recreational boating, and energy exploration have increased along our coasts, offshore, and deep ocean environments. Noise from these activities can travel long distances underwater, leading to increases and changes in ocean noise levels in many coastal and offshore habitats.

These rising noise levels can negatively impact ocean animals and ecosystems. Higher noise levels can reduce the ability of animals to communicate with potential mates, other group members, their offspring, or feeding partners. Noise can also reduce an ocean animal's ability to hear environmental cues that are vital for survival, including those key to avoiding predators, finding food, and navigating to preferred habitats." <https://oceanservice.noaa.gov/facts/ocean-noise.html>

#### LEARN FROM OTHERS: RUN-OFF FROM DEVELOPMENT KILLS

The Chesapeake Bay has a foundation that is trying to save their bay due to runoff pollution that was caused by developments. Chesapeake Bay is a lot bigger than Keauhou Bay, if it's being drastically hurt by runoff water from developments, Keauhou Bay waters won't stand a chance if development above the bay is allowed. Keauhou Bay is a much smaller ecosystem.

This Article is by the Chesapeake Bay Foundation, Saving a National Treasure states, "...runoff is a significant source of harmful nitrogen pollution that continues to grow..."

As rainwater and snowmelt run off our streets, parking lots, lawns, and other surfaces, they pick up pet waste, pesticides, fertilizer, oil, and other contaminants. If the draining water doesn't evaporate or soak into the ground where it can be filtered, it flushes straight into local creeks, rivers, and the Chesapeake Bay, adversely affecting water quality and aquatic life.

Only 10 to 20 percent of rain that falls in forests, fields, and other natural areas runs off, with the rest absorbed by soil and plants, where it is filtered before reaching aquifers or local waterways. (Right now Keauhou Bay has a lot of trees and is very natural, this is what helps stop runoff.) By contrast, close to 100 percent of the rain that falls on concrete and other hard surfaces produces runoff. One inch of rain falling on an acre of hardened surface produces 27,000 gallons of runoff.

Stormwater runoff pollution threatens Chesapeake Bay and its rivers and streams... Polluted runoff is one of the most harmful sources of pollution to the Bay and its waters. And much of it starts right in the urban and suburban neighborhoods where we live." <https://www.cbf.org/issues/polluted-runoff/index.html#:~:text=Besides%20carrying%20pollutants%20that%20harm,them%20are%20placed%20in%20leopardy.>

If that is what runoff is doing to the Chesapeake Bay, the effects of runoff will be even more devastating to Keauhou Bay due to its size and fragility.

#### MANTA RAY HABITAT, CORAL REEF BLEACHING, & MARINE LIFE ~ THE DEVASTATING EFFECTS OF DEVELOPMENT ON THE OCEAN

Are there any reports in this EIS about what the impact to the coral, marine life, plankton especially zooplankton will be because of this development?

The studies below show that developments kill coral, and marine life. Zooplankton are part of this marine life and they are also killed and negatively affected. Zooplankton are food for manta rays. Manta rays are in Keauhou Bay every night to eat zooplankton, and are often seen here during the day as well.

Allowing this bay developed will also be a death sentence for many types of marine life including planktons. There is NO WAY to stop this from happening due to the fact that polluted runoff rain water from developments can't be fully stopped. This has been shown to happen in ALL coastal developments.

Please read the Scientific articles below.

It's Been Proven Developments Severely Pollute Nearby Waters

Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Coral Bleaching is occurring more frequently in Hawaii". Across the Hawaiian Archipelago, coral bleaching has increased in frequency and severity since 1996. The last major bleaching event in 2014-2015 had catastrophic impacts state-wide...

This was the third major bleaching episode in Hawaii over the last 6 years. The frequency of these events is unprecedented in the archipelago. NOAA scientists and partners have determined that the key drivers of the bleaching were environmental factors (such as heat stress, depth, and surface light) and human impacts (sewage effluent and urban run-off). <https://www.fisheries.noaa.gov/feature-story/cautionary-tale-2019-coral-bleaching-event-hawaii#:~:text=Coral%20bleaching%20is%20occurring%20more,had%20catastrophic%20impacts%20state%20wide.>

This article is by the Coral Reef Alliance here in Hawaii. "An ecosystem under threat Hawaii's reefs face major global and local threats including climate change, overfishing, and sediment and nutrient pollution caused by sewage and stormwater runoff..."

When it rains, flash floods carry stormwater and large amounts of sediment downstream to the ocean. Just offshore, once-thriving coral reefs are now struggling to survive." <https://coral.org/en/where-we-work/hawaiian-islands/#:~:text=Hawaii%20reefs%20face%20major%20global,into%20Hawaii%20CA%20BBi's%20waterways%20every%20day.>

This article states that runoff is a leading source in coral degradation. Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Land-based sources of pollution are a leading cause of coral reef degradation in the Main Hawaiian Islands. Water quality is impacted by urban runoff, failing

sewage systems, unpaved roads, farms, land clearing, and development." [https://www.coris.noaa.gov/monitoring/status\\_report/docs/Hawaii\\_status\\_report\\_forweb.pdf](https://www.coris.noaa.gov/monitoring/status_report/docs/Hawaii_status_report_forweb.pdf)

This article is a Research Article by PLOS ONE and their motto is: "We're driving change in research integrity and publication ethics." This is some of their article information, "Coral taxonomy and local stressors drive bleaching prevalence across the Hawaiian Archipelago in 2019..."

We found little evidence for acclimation by reefs to thermal stress in the main Hawaiian Islands. Moreover, our findings illustrate how detrimental effects of local anthropogenic stressors, such as tourism and urban run-off, may be exacerbated under high thermal stress. In light of the forecasted increase in severity and frequency of bleaching events, future mitigation of both local and global stressors is a high priority for the future of corals in Hawaii." <https://journals.plos.org/plosone/article?id=10.1371/journal.pone.0269068>

The coral all over Hawaii has had extremely high mortality rates, due to developments near ocean areas throughout the years, and development in Keauhou Bay will be devastating to the coral, reef fish, and all aquatic life there. Manta Rays need to eat 5 times their body weight in zooplankton daily. Their population will be severely affected should the plankton die. Please see the cited information below.

"SO, HOW MUCH PLANKTON DOES YOUR AVERAGE MANTA RAY EAT? 19,200,000. Nineteen million two hundred thousand, give or take a few thousand.

That is the number of plankton pieces a ten-foot manta ray must consume weekly to stay alive."

The above information was taken from Manta Ray Advocates <https://mantarayadvocates.com/how-much-plankton-do-mantas-eat/>

Coral reefs are known to be highly negatively impacted by developments because, "Impacts from land-based sources of pollution including coastal development,...can impede coral growth and reproduction, disrupt overall ecological function, and cause disease and mortality in sensitive species." <https://oceanservice.noaa.gov/facts/coral-pollution.html#:~:text=Impacts%20from%20land%20based%20sources,and%20mortality%20in%20sensitive%20species.>

Article by Environmental Evidence, "Coastal development and runoff lead to sedimentation, which directly impacts coral recruitment, growth, mortality, and ecosystem services that coral reefs provide." <https://environmentalevidencejournal.biomedcentral.com/articles/10.1186/s13750-020-00200-0#:~:text=Coastal%20development%20and%20runoff%20lead,services%20that%20coral%20reefs%20provide.>

Developments can't fully stop polluting because runoff is from rain during development and after. Article by NOAA, "One of the most significant threats to reefs is pollution. Land-based runoff and pollution discharges can result from dredging, coastal development... This runoff may contain sediments, nutrients, chemicals, insecticides, oil and debris.

When some pollutants enter the water, nutrient levels can increase, promoting the rapid growth of algae and other organisms that can smother

coral." [https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,organisms%20that%20can%20smother%20corals.](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,organisms%20that%20can%20smother%20corals.)

Another article by NOAA, "Coral reefs also are affected by leaking fuels, anti-fouling paints and coatings, and other chemicals that enter the water..." (All of those are show up in every development project.)

Among the most damaging pollutants on coral reefs is sediment, which can remain suspended in the water or be deposited on the coral surface (i.e., turbidity and sedimentation, respectively) and can contain toxicants, pathogens, and nutrients, all of which impact coral growth, recruitment, and survival" [https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days.](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days.)

It's Been Proven Resort Developments KILL Marine Life

This article by MarinBIO states, "Zooplankton are also sensitive to their environment and like phytoplankton—a change in zooplankton concentration can indicate a subtle environmental change. Zooplankton are highly responsive to nutrient levels, temperatures, pollution, food that is not nutritious, levels of light, and increases in predation. As well as providing an essential link in the marine food chain (which is an understatement), the diversity of species, amount of biomass and abundance of zooplankton communities can be used to determine the health of an ecosystem..."

Here is another article that shocking shows that in a very short time, big changes can occur due to runoff. A development will hurt and kill plankton, by Frontiers in Marine Science, "Effects of an experimental terrestrial runoff on the components of the plankton food web in a Mediterranean coastal lagoon The main result observed in the present study was that the effects of the simulated terrestrial runoff spread along the plankton food web, significantly affecting all trophic levels of the natural plankton community studied. This occurred in a relatively short time considering that the experiment lasted less than three weeks. The lower light availability in the terrestrial runoff treatment compared to the control resulted in a net decrease of approximately one-third of Chl-a concentration and phytoplankton abundance over the entire experiment." <https://www.frontiersin.org/journals/marine-science/articles/10.3389/fmars.2023.1200757/full>

The ecosystem is fragile and interconnected as is stated in this article: "Zooplankton are also affected by levels of pH, heavy metals, calcium, and aluminum. Nutrients like nitrogen and phosphorus will affect the prey of zooplankton (like algae, protozoa and bacteria), indirectly affecting zooplankton survival. Scientists are still putting together pieces of the zooplankton puzzle. Some questions include how nutrient levels found in algae can influence the growth and behavior of zooplankton. Another question important to marine and human life is how toxins and pollution will affect this crucial link in the food chain" This information is in article by MarineBIO. <https://www.marinebio.org/creatures/zooplankton/#:~:text=Zooplankton%20are%20also%20sensitive%20to,light%2C%20and%20increases%20in%20predation.>

A research article by Environmental Research Laboratory, United States Environmental Protection Agency that discusses, "Toxic Effects of Pollutants on Plankton: There are four main sources of aquatic pollution: industrial wastes, municipal wastes, agricultural run-off, and accidental spillage. Non-point sources, such as automobile exhausts, add appreciable amounts of pollutants to air that may enter aquatic systems in rainfall or dry fall-out. These sources add pesticides, heavy metals, oil, petroleum products, and a large number of organic and inorganic compounds to water. Lakes and oceans serve as sinks for many pollutants. Plankton comprise a large portion of the living

matter in natural waters and function in biogeochemical cycles. They are affected by pollutants, transfer them to sediments and other organisms, and function in their biological transformation."

[https://scope.dge.camegiescience.edu/SCOPE\\_12/SCOPE\\_12\\_3.6\\_chapter12\\_257-274.pdf](https://scope.dge.camegiescience.edu/SCOPE_12/SCOPE_12_3.6_chapter12_257-274.pdf)

All the above articles show that development of Keauhou Bay WILL hurt plankton life and marine life in the bay because pollutant runoff is inevitable and unavoidable during construction and afterwards. The manta ray food source will likely disappear. This will be devastating for the manta ray populations. Furthermore, if manta rays die or leave the area, the loss will in turn affect many livelihoods from locals on the island who depend on the manta ray tour for their income.

HUMAN POPULATION INCREASES LINKED DIRECTLY TO CORAL DEATH

Does this EIS have any reports on their resort adding to the population increase that happens during IRONMAN?

"On average, each Ironman racer brings three people with them to the Big Island. Counting members of the media, VIPs who come from around the globe to watch and the triathlons partners, there likely be more than 6,300 people descending on Kona..." <https://bigislandnow.com/2023/10/07/ironman-2023-in-kona-shines-spotlight-on-some-of-best-women-triathletes-in-the-world/>

And "Resident dissatisfaction with tourists is multifaceted: The overwhelming majority (92%) of locals felt visitors were not educated enough on protecting Hawaii's natural environment and local resources; other factors include the impact of the vacation rental industry and ignorance of the residents' quality of life." <https://www.triathlete.com/culture/news/kona-locals-ask-ironman-visitors-for-respect/>

Where are the EIS reports on human density? Below are reports that show human population destroys coral reefs.

"The number of people living on the coasts has rapidly increased in recent decades, causing significant development of coastal areas. Coastal development can negatively impact the ocean through the destruction of coastal marine habitat and through run-off of sediments and pollution.

-Coastal development involves activities such as the creation of harbors, stabilization of shorelines, and aquaculture that involve the destruction of sensitive marine habitats such as mangroves, coral reefs, and seagrass beds.

-Coastal development may cause the run-off of sediments into coastal habitats, which can smother corals or seaweeds and reduce the amount of light available for photosynthesis. Losses of primary producers and important habitat-forming species such as corals can negatively impact entire food webs."

The above information was taken from the Education Development Center, INC, from their Coastal Development page called Ocean Tracks <https://oceantracks.org/library/human-impacts/coastal-development#:~:text=Coastal%20development%20may%20cause%20the,negatively%20impact%20entire%20food%20webs.>

There is nothing Kamehameha Schools can do to their development that can stop the guests of this possible Bungalow Resort from going to Keauhou Bay. Human traffic WILL seriously increase if this resort is allowed to be built and the marine life will be negatively affected by it. Marine life will suffer from this development as stated in this letter in many different scientific reported articles.

If you allow this resort the amount of people in this bay will fully increase and, "Hawaii's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally, management of the resource should balance the needs of different user groups, but the welfare of the marine environment on which its inhabitants depend must be the most important consideration." This was taken from Hawaii's own Division of Aquatic Resources <https://dlnr.hawaii.gov/dar/marine-managed-areas/hawaii-marine-life-conservation-districts/#:~:text=Snorkeling%20and%20SCUBA%20diving%20are,effect%20on%20nearshore%20fish%20populations.>

It's Been Proven an Increase in Human Population Destroys Coral Reefs

If a Bungalow Resort is allowed to be built in Keauhou Bay, it will bring a serious increase in human traffic. "Easily visible trends in human population dynamics combined with well-established and tested ecological theory give a clear, intuitive, yet quantifiable guide to the severity of survival challenges faced by coral reefs. Management challenges and required actions can be clearly shown and, contrary to frequent claims, no scientific ambiguity exists with regard to the serious threat posed to coral reefs by humankind's continued numerical increase." This is in the article by National Library of Medicine National center for Biotechnology Information PubMed. <https://pubmed.ncbi.nlm.nih.gov/33293007/#:~:text=Denser%20coastal%20populations%20and%20greater,fo%20more%20runoff%20and%20siltation.>

This article is by ABC NEWS, "This is how tourists are destroying coral reefs in Hawaii. The less people at a certain site, the more coral there are, the research found. The millions of tourists who flock to the shores of Hawaii every year are wreaking havoc on its natural environment -- especially the coral reefs, which are at risk all over the world, a new study said. The most popular coral reefs on the Hawaiian islands are likely being degraded by the very visitors they attract, according to a study published Monday in Nature Sustainability." <https://abcnews.go.com/US/hawaiian-coral-reefs-degrading-popular-tourist-sites-scientists/story?id=96308858#:~:text=The%20less%20people%20at%20a,there%20are%20the%20research%20found.&text=The%20millions%20of%20tourists%20who,world%20%20a%20new%20study%20said.>

By allowing this development you are stressing an already fragile Eco-system. The small bay is currently used by many locals for boating, fishing, canoeing, paddle boarding, snorkeling, manta night dives, surfing, and swimming. We know, and research shows, that more people cause more damage. The area simply cannot afford or support this development.

"Denser coastal populations and greater wealth will lead to reef degradation by coastal construction. Denser populations inland will lead to more runoff and siltation. Effects of human perturbations can be explored with meta-population theory since they translate to increases in patch-mortality and decreases in patch-colonization (= regeneration). All such changes will result in a habitat with overall fewer settled patches, so fewer live reefs." This information was taken from Science

Direct <https://www.scienceirect.com/science/article/abs/pii/S0065288120300328#:~:text=Aquaculture%20will%20alleviate%20some%20fishing,to%20more%20runoff%20and%20siltation.>

Another article by Nature Sustainability, "Coral reefs and coastal tourism in Hawaii Coral reefs are popular for their vibrant biodiversity. By combining web-scraped Instagram data from tourists and high-resolution live coral cover maps in Hawaii, we find that, regionally, coral reefs both attract and suffer from coastal tourism. Higher live coral cover attracts reef visitors, but that visitation contributes to subsequent reef degradation. Such feedback loops threaten the highest quality reefs, highlighting both their economic value and the need for effective conservation management." [https://www.nature.com/articles/s41893-022-01021-4.epdf?shating\\_token=wsakcQNhahJiAnWaq453RqNOAWel9mR3ZoTv0PVzGA5lc\\_HOO1zcHNIP3AShtcGRy6\\_vKLPw49dbrmBYoX5g3Y1MgQlGBZsabdGUH7O1SLbu9x5P3XED4Kx4T0sJlvqQ1a72Zr3rUbraxpodJq2AoNlSmWSuxB7JIEDdpj8OGJpx71TJWqCfXvFKJlZYeNdcJ3Sw\\_dnaUq5ZlhqIPBDImmaH15yqT5Q%3D&tracking\\_referrer=abcnews.go.com](https://www.nature.com/articles/s41893-022-01021-4.epdf?shating_token=wsakcQNhahJiAnWaq453RqNOAWel9mR3ZoTv0PVzGA5lc_HOO1zcHNIP3AShtcGRy6_vKLPw49dbrmBYoX5g3Y1MgQlGBZsabdGUH7O1SLbu9x5P3XED4Kx4T0sJlvqQ1a72Zr3rUbraxpodJq2AoNlSmWSuxB7JIEDdpj8OGJpx71TJWqCfXvFKJlZYeNdcJ3Sw_dnaUq5ZlhqIPBDImmaH15yqT5Q%3D&tracking_referrer=abcnews.go.com)

INFRASTRUCTURE AND RESOURCES ON AN ISLAND ALREADY HIGHLY IMPACTED AND STRUGGLING FOR ANSWERS

Has the EIS done any research or reports on the Resources and Infrastructure it will need for a bungalow resort?

There are many big housing developments currently under construction in Kailua Kona, Waikoloa Village, Hilo, Puna, Ocean View and Volcano. The entire Big Island has construction projects already in progress.

Has Kamehameha Schools EIS done any kind of reports or surveys to know if Big Island has the Resources and Infrastructures for their resort development?

"Hotel waste management refers to all the practices and processes that hotels implement to handle and dispose of the multiple types of waste generated on their premises. Worldwide, hotels produce almost 300,000 tonnes of waste each year." <https://www.homebiogas.com/blog/hotels-waste-management/>

As of now, the Big Island's Resources and Infrastructure are having serious negative issues and many more developments that have been approved are not even completed as of yet, which means our island's resources and infrastructure will be taxed even more severely in the near future.

Please read the below articles that prove Big Island does not have the resources or infrastructure for a 143-Unit Bungalow Resort Development at Keauhou Bay. On Hawaii Island, we are already struggling to meet the increasing need for resources and infrastructure.

Big Island Now poll No. 27 results: More than one solution needed to help extend life of West Hawaii landfill

September 17, 2023

The West Hawaii Sanitary Landfill, the only remaining landfill on the Big Island, is forecast to reach capacity within the next 20 to 25 years.

The West Hawai'i landfill became the island's only one after the Hilo Landfill closed three years ago. It only has about 20 to 25 years left before it can no longer be used to store rubbish.

<https://bigislandnow.com/2023/09/17/big-island-now-poll-no-27-results-more-than-one-solution-needed-to-help-extend-life-of-west-hawaii-landfill/>

A County commission drafts ordinance aiming to ban recyclables at West Hawai'i landfill

By [Megan Moseley](#) September 6, 2023

Hawai'i County's Environmental Management Commission is developing an ordinance that aims to prohibit the amount of recyclable materials ending up in the island's only working landfill.

During a commission meeting on July 26, Ramzi Mansour, Hawai'i County Director of Environmental Management, told commissioners the West Hawai'i Sanitary Landfill only has 20 to 25 years left before it reaches capacity.

With the Hilo Landfill permanently closed in 2020, the clock is ticking for the island's sole dump. Commission chairperson Georjean Adams said it's a good time to start looking into solutions.

Adams said the proposed ordinance is in its early stages and is more about getting the conversation started about how to prevent unnecessary, or recyclable items — green waste, metals, plastics, paper, paperboard and glass — from ending up in the rubbish dump, located off Queen Ka'ahumanu Highway in Waikōloa.

"Trying to site a new landfill is close to impossible," Adams said. "So what are we going to do? So I was looking around, and the commission agreed, to look deeply into the idea of diverting the recyclables out and at least slow the filling up of the landfill."

The proposed ordinance refers to the 2019 Integrated Solid Waste Management Plan that commits the county to "divert, as much as feasible, commercial and municipal solid waste, including but not limited to green waste, metals, plastics, paper, paperboard, and glass to help achieve goals related to climate resiliency, renewable energy, sustainable agriculture, and zero waste."

<https://bigislandnow.com/2023/09/06/new-draft-ordinance-aims-to-ban-recyclables-at-west-hawaii-landfill/>

Time's Up For Landfills

'Gentle' demolition strategies can help preserve resources

PAULA BENDER April 2, 2024

As Hawai'i government officials grapple with the challenge of limited landfill space statewide, federal restrictions set in place by the Environmental Protection Agency are ruling out possible locations that were once considered for new landfills.

Hawaii Act 73 states landfills must be located at least half a mile from residential areas; are prohibited from being located in areas with heavy rain and steep slopes, as well as agricultural and/or conservation lands; above aquifers; 300 feet beyond streams; and 1,000 feet beyond the ocean.

New landfills are also now prohibited from being created in tsunami inundation zones, 100-year flood zones and wetlands. There are also concerns that landfills near airports will attract birds, resulting in damage to aircraft and fatalities among pilots and passengers.

The City & County of Honolulu is in the process of identifying its next landfill and it doesn't want one any bigger or more active than absolutely necessary.

<https://buildingindustryhawaii.com/2024/04/times-up-for-landfills/>

Drought Conditions On Hawai'i Island Prompt Water Supply Message

by Big Island Video News  
on Oct 5, 2023 at 3:59 pm

(BIVN) – With moderate to severe drought conditions being reported across Hawai'i island, local water department officials issued a statement this week on the need for customers to use drinking water wisely.

Most of Hawai'i island is under "Moderate Drought" conditions, according to the latest information [from the U.S. Drought Monitor](#). There is an area under "Abnormally Dry" conditions in South Kona, however there are other, small pockets on the Big Island that are under "Severe Drought". There is even a small spot of "Extreme Drought" in the South Point area of Ka'u.

"The National Weather Service's forecast calls for the existing drought conditions to expand over the entire island and intensify over the upcoming months due to the ongoing El Niño event," reported the Hawai'i County Department of Water Supply. "Peak dryness is expected to occur from around January through February 2024. The El Niño event will likely persist well into spring 2024."

From a Water Supply news release:

<https://www.bigislandvideonews.com/2023/10/05/drought-conditions-on-hawai%CA%BBi-island-prompt-water-supply-message/>

[U.S.](#)

Hawaii is "on the verge of a greater catastrophe," locals say, as water crisis continues

By [Li Cohen](#)

Updated on: April 11, 2024 / 8:23 AM EDT / CBS News

And recent years have seen compounding problems: less rain, leading to [significant droughts](#), and repeated jet fuel leaks and PFAS chemical spills contaminating water systems. All of this significantly limits available water use for locals, many of whom say tourism is only worsening the situation. Just months ago, the [world's largest surfing wave pool](#) opened up on the island — filled with freshwater.

"They're not using it to drink or to support life, they're using it to make money. They're commodifying it," said Healani Sonoda-Pale, who is Native Hawaiian and a member of advocacy group Oahu Water Protectors. "... We are on the verge of a greater catastrophe."

"We are in a [water crisis](#), that has to be made very clear," Wayne Tanaka, director of Sierra Club of Hawaii, told CBS News, saying that if the reasons for this crisis aren't soon addressed, "We may come to a point where we have to decide ... who gets water and who doesn't."

<https://www.cbsnews.com/news/hawaii-water-crisis-climate-change/>

Because this is an island, parts need to be shipped. The power plant currently has generators that are not working, and because of this (and other reasons), the Big Island needs to seriously conserve power so that everyone will have power. If this problem of shipping parts can happen once, it can and will happen again.

UPDATE: HELCO asks for continued energy conservation

BY SPECTRUM NEWS STAFF HAWAII ISLAND

UPDATED 6:28 PM ET APR. 16, 2024 PUBLISHED 9:05 AM ET APR. 15, 2024

HILO, Hawaii — Hawaiian Electric continues to urge Hawaii Island customers to reduce their electricity use to prevent the need for rolling outages.

In a news release Tuesday afternoon, the utility stated that Monday saw a reduced demand of approximately 5 megawatts. That, combined with increased wind and solar battery storage prevented the need for rolling blackouts on Monday. HELCO credited conservation efforts, particularly those by large businesses and government customers, for the reduction in electricity demand.

"We're grateful for our customers' efforts to conserve electricity, especially between 5 to 9 p.m., when electricity use is highest, because it does make a difference," said Hawaiian Electric spokesperson Kristen Okinaka. "By working together, we're helping to ensure that enough power can be available for all customers and prevent or minimize the impacts of rolling outages."

Hawaiian Electric announced Monday afternoon that it may initiate rolling outages in parts of Hawaii Island because of the unavailability of several generators and lower than normal wind and solar resources.

In a news release, the utility said that outages could start as early as 6:30 p.m. and rotate around the island for 30-minute intervals. The impacted areas and the timing of the outages will be based on wind generation and the amount of electric demand that needs to be reduced. Individuals who are dependent on electrically powered life support medical equipment are advised to arrange for a backup power supply.

The outages are being done to prevent power loss to even more customers, who are all being asked to conserve electricity throughout the month.

<https://spectrumlocalnews.com/hi/hawaii/news/2024/04/15/hcco-customers-on-hawaii-island-asked-to-conserve-power->

Big power supply problems continue to plague Hawaii Island

17

Apr 8, 2024

The company has been facing an unusual situation with mechanical problems at three of the island's five largest power plants while part of the largest plant undergoes an annual overhaul. All four of these affected power plants are owned by the utility or an affiliate of its parent company.

Also contributing to the trouble is lower output from a geothermal plant, which has the third-largest generation capacity on the island and is owned by an independent operator.

"This is an unusual situation, driven mainly by the unavailability of several large generators that have experienced mechanical problems, are at reduced output, or are undergoing maintenance," Hawaiian Electric said in its March 25 announcement asking customers to use less electricity, especially on weekdays from 5 to 9 p.m.

The company explained that it faces an "extremely tight" supply of power at peak use periods, especially when production from wind, solar and hydroelectric facilities is lower than normal. Those sources of variable, renewable energy can supply up to 15% of electricity needs on the island.

"Without enough supply to meet electricity demand, the company may initiate rolling outages of up to an hour around the island," the March 25 announcement said.

Hawaii Island customers urged to reduce electricity use through April

BY SARAH YAMANAKA HILO PUBLISHED 9:00 AM ET MAR. 26, 2024

What You Need To Know

-Hawaii Island customers may see alerts asking them to conserve energy, especially on days when there isn't much wind that generates up to 15% of electricity

-When alerts are issued, Hawaiian Electric is asking customers to take immediate action to minimize electricity use

-Even when no alerts are issued, customers — including hotels and large retailers — are urged to reduce electricity use as much as possible, especially between 5 and 9 p.m. on weekdays

-If there is not enough electricity to meet demand, Hawaiian Electric may initiate rolling outages of up to an hour around the island

<https://spectrumlocalnews.com/hi/hawaii/news/2024/03/25/hawaii-island-customers-urged-to-reduce-electricity-use-through-april>

FURTHERMORE: TRAFFIC, LACK OF RESOURCES, AND FATALITIES

18

A Resort Development WILL Increase Traffic on Already Severely Trafficked Roads. Are there traffic study reports for this EIS?

A development with 150 rooms comes with over 150+ cars. Employees, guests, and visitors will all have cars, plus the regular locals who go there to paddle and enjoy the bay. All this could range in over 300 cars a day because of this resort development.

The Big Island already has a serious traffic issue due to a lack of infrastructure. This is in part due to poor planning, and in part due to geography challenges.

The articles below by different NEWS companies highlight the point that many traffic issues stem from lack of infrastructure and resources. Adding more cars to the road by building another resort in an area that is already stressed, will only increase the already mounting problems with traffic.

This NEWS article by Hawaii News Now, "Report shows alarming surge in Hawaii Island traffic deaths The Hawaii Police Department's Traffic Services Section released a new report showing a dramatic increase in both major crashes and fatal accidents from last year.

The startling statistics show a dramatic increase in the number of year-over-year traffic fatalities on the Island of Hawaii, revealing major crashes are up more than 12% and traffic fatalities are up more than 100%." Watch the video on their link below as it is a professional report on Big Island traffic problems. <https://www.hawaiinewsnow.com/2024/05/18/new-report-shows-hawaii-island-traffic-fatalities-are-up-over-100-last-year/>

With more tourists there will be more accidents, more traffic, and more traffic deaths. Please read this article by KHON 2 NEWS, "Hawaii Island has most traffic fatalities in state. This time last year Hawaii Island was at five traffic deaths, as of April 1, 2024, they're at 14.

Seven of which happened in the last two weeks.

Chief Moszkowicz said the police force is small compared to the size of the island and response times can take 15 to 20 minutes.

"We don't have the resources like in the small space of Oahu where you can saturate an area to control speeding, that just doesn't exist here," he added. <https://www.khon2.com/local-news/7-traffic-fatalities-for-hawaii-island-in-march/>

The traffic on Big Island has increased drastically and safety issues and infrastructure needs to be addressed before adding more resort developments.

Please read this article because what it says about Oahu is a mirror for Big Island. The traffic problems they discuss are the same issues here on Big Island; and it also gives one Big Island example, "On the Big Island, the mayor had to issue an emergency order shutting down Waipio Valley Road due to overuse and poor prior maintenance." This is happening all over Big Island. <https://www.civilbeat.org/2024/02/angry-over-island-traffic-jams-lets-talk-about-solutions/>

The news video below shows aerial footage in Hilo. The footage shown is the same thing that is happening on Alii Drive and Queen K Highway, and for all the same reasons: All of these roads only have two lanes!

There are two developments already on Alii Drive being built as of today; and more are scheduled for this road in the near future. Alii Drive and Queen K Highway are the roads Kamehameha Schools Bungalow Resort will be using if approved, and they are already seriously congested.

These roads have the exact same traffic congestion as Hilo, with the exact same problems. Traffic is extremely slow because of so many people who now live here and all the visitors that come yearly.

In addition, the concern on Kona side is tsunami evacuations rather than lava evacuations. In this kind of traffic, not everyone will be able to get to safer ground, especially if you allow another resort to be developed in this area when traffic is already at a crawl every weekday and often on weekends as well.

Here is the news article by KITV NEWS that highlights the traffic issues discussed above: "Hawaii Island traffic jams could have safety impact. In the event of an evacuation, Mayor Mitch Roth acknowledges that will make the Traffic Jam up even worse. But says, he is working with The State on a solution." [https://www.kitv.com/news/local/hawaii-island-traffic-jams-could-have-safety-impact/article\\_b06a5374-5a6a-11ed-8d23-8313ef8c4c19.html](https://www.kitv.com/news/local/hawaii-island-traffic-jams-could-have-safety-impact/article_b06a5374-5a6a-11ed-8d23-8313ef8c4c19.html)

There was a crash recently on Alii Drive (see video below). When there is an accident on Alii Drive, it turns the already small two-lane road into only one lane that requires a flagger to help direct traffic. Kamehameha Schools wants to add a resort on this tiny road that will increase the traffic by hundreds of cars.

Here is the Island News video on the crash on Alii Dr. <https://www.youtube.com/watch?v=FQSnPDii8>

Please see from these articles that traffic on Big Island is deadly already and adding another resort will be devastating to the island.

Read this Path article, HAWAII COUNTY'S VISION ZERO INITIATIVE:

A motorcyclist is in critical condition after a collision with a car. A driver accidentally hits and kills a pedestrian. It seems that not a day goes by without the news reporting on a traffic crash on Hawaii Island...

Here are some other statistics that are even more staggering:

-28% of roadside crashes were the result of someone leaving the roadway and going into barriers or trees

-13% of pedestrians hit at 20 mph actually suffer fatality

-73% of pedestrians hit at 40 mph suffer fatality

-25% of fatal crashes were the result of distracted driving... So PLEASE put those cell phones away and pay attention to the road!

-56% of fatal crashes were the result of alcohol or drugs

-41% of fatal crashes occurred in light trucks and vans

-49% of crashes occur during the day, outside of peak traffic hours

-Of all the crash fatalities, most were males between 20 to 24-years old.

"That's just Big Island traffic," is a common sentiment. But what if we didn't have to accept this endangerment of vehicle drivers, motorcyclists, and pedestrians as a way of life?"

This was taken from Path <https://pathhawaii.org/hawaii-countys-vision-zero-initiative/>

Water departments on O'ahu and Hawaii Island have advised customers to conserve water ahead of possible storm-related power outages this month.

But what does the power grid have to do with the water supply?

It is impossible to separate Hawaii's power system from its water system, said Kawika Uyehara, deputy director of Hawaii County's Department of Water Supply." <https://www.hawaiipublicradio.org/local-news/2024-02-13/residents-on-hawaii-island-and-oahu-are-asked-to-conserve-water-amid-power-outages>

16) US Hawaii is "on the verge of a greater catastrophe," locals say, as water crisis continues

By Li Cohen

Updated on: April 11, 2024 / 8:23 AM EDT / CBS News

In Hawaii, one of the most important sayings is *ola i ka wai*, "water is life" — a phrase that not only sums up what it means to exist on an island, but what it means to live, period. But now, one of the largest of the island chain's land masses is facing a triple threat to its sole freshwater source, and if it isn't addressed soon, one community member says, "We're in deep trouble."

<https://www.cbsnews.com/news/hawaii-water-crisis-climate-change/>

17) News Hawaii County issues mandatory 25% water restriction for North Kona August 7, 2023 · 5:21 PM HS

A mandatory 25% water restriction has been issued for various communities in North Kona due to the failure of the Honokohau Deepwell over the weekend.

18) Hawaii Water Supply Closely Monitored As Severe Drought Continues

by Big Island Video News on Nov 6, 2023 at 3:28 pm

(BIVN) – With an ongoing drought on the island of Hawaii, the Hawaii County Department of Water Supply says it is closely monitoring its 23 public water systems, with a "special focus" placed on the South Kohala Water System.

<https://www.bigislandvideonews.com/2023/11/06/water-supply-closely-monitored-as-hawaii-CA%BBi-under-severe-drought/>

This is a map of Power Outages on the Big Island. This map wouldn't have been created if Power Outages were not a problem. <https://www.hawaiianelectric.com/safety-and-outages/power-outages/hawaii-island-outage-map>

Please, give Tax Breaks to all homes that provide solar and/or wind turbine to there homes to help with power issues on the island.

19) "Hawaiian Electric is reporting that several large generators on the Big Island are experiencing a range of issues and may lead to the need for rolling outages if supply does not meet demand."

[https://www.reddit.com/r/BigIsland/comments/1bnuar3/hawaiian\\_electric\\_is\\_reporting\\_that\\_several\\_large/](https://www.reddit.com/r/BigIsland/comments/1bnuar3/hawaiian_electric_is_reporting_that_several_large/)

20) "Hawaiian Electric asking Big Island customers to conserve power due to down generators

March 25, 2024 · 11:49 AM HST

According to the utility company, this is an usual situation as the large generators are experiencing mechanical problems resulting in a reduced output. The largest generator, an independent power producer that sells electricity to Hawaiian Electric, is offline with significant mechanical issues.

The plant generates 60 megawatts or nearly one-third of the typical peak demand of 180 megawatts on the island."

<https://bigislandnow.com/2024/03/25/hawaiian-electric-asking-big-island-customers-to-conserve-power-due-to-down-generators/>

All the articles above show that a resort development will further deplete and stress resources and infrastructure on an island already struggling. There are years of new development that have already been approved but not completed. It is not responsible or prudent to continue to develop this resort under these current conditions.

#### HISTORICAL AND CULTURAL SIGNIFICANCE:

The Law of the Splintered Paddle

Hawaiian history tells us that young Kamehameha was once an aggressive chief. The story goes that the young chief even chased after two fishermen in a Puna fishing village. While pursuing them, his foot got stuck in a crevice, and one of the fishermen struck Kamehameha over the head with his paddle in defense, which splintered into pieces.

After the incident, Kamehameha recognized that it was wrong to misuse his power and learned compassion. Years later, Kamehameha declared a new law "Ke Kānāwai Māmalahoe" or "the Law of the Splintered Paddle." Meant to protect the innocent and vulnerable from unprovoked attacks, this law proclaimed that the defenseless, especially kupuna and keiki, be able to sleep safely on the side of the road, unharmed.

The law provided for the safety of non-warriors during wartime and became the first written law of the Kingdom of Hawaii. After being added back in 1978, the law is part of Hawaii's State Constitution today.

It is symbolic of servant leadership, reinforcing the importance of:

- Caring for and serving one's people
- Knowing and doing what is pono (right)
- Standing for the principle that leadership privilege is earned
- Taking kuleana (responsibility) for those we serve
- Doing so with compassion, love, and respect

"We take that to mean that anyone who uses our roadways should be able to do so without fear of harm," explains Tina."

The Law of the Splintered Paddle is also on Kamehameha Schools website. The historical value of this law should be enough to help make

Big Island roads become safer, and not adding to the traffic and issues of our already dangerous roads. <https://www.ksbe.edu/article/the-lessons-of-the-law-of-the-splintered-paddle-rmq-true-200-years-after-k>

Does this EIS have any reports about how this development will safely add to the land fill on Big Island, and are there reports proving the island has enough water for another big resort, what about reports on how much power this resort will use because the Big Island already has serious resource and infrastructure issues.

#### IN CONCLUSION

The articles cited in this letter, many by some of the most esteemed scientists in the world, show with clarity that allowing this development is going to cause devastating, lasting, effects on the Eco-system in Keauhou Bay and "The Endangered Species Act of 1973 (ESA or "The Act"; 16 U.S.C. § 1531 et seq.) is the primary law in the United States for protecting and conserving imperiled species.

Designed to protect critically imperiled species from extinction as a "consequence of economic growth and development untempered by adequate concern and conservation", the ESA was signed into law by President Richard Nixon on December 28, 1973. The Supreme Court of the United States described it as "the most comprehensive legislation for the preservation of endangered species enacted by any nation".<sup>[1]</sup> [https://en.wikipedia.org/wiki/Endangered\\_Species\\_Act\\_of\\_1973](https://en.wikipedia.org/wiki/Endangered_Species_Act_of_1973)

This location, currently acting as a natural filter, is especially vulnerable due to having a golf course on one side and a natural treasure like Keauhou Bay on the other. This land MUST be conserved in order to keep Keauhou Bay safe for all the marine life to be able to live there for years to come.

In addition to the natural disaster this will cause, Hawaii Island is already having serious infrastructure and resource issues that have yet to be solved. These issues MUST be solved before considering another resort development on Big Island.

We need to work in harmony with the land and the people before pushing forward with new developments, especially in sacred and special places like Keauhou Bay, the birthplace of King Kamehameha III. Keauhou Bay is a small, fragile Eco-system, that is already pressured by boating, golfing, population issues, and hotels that are all around the entire bay.

The trees that currently stand on the land that is threatened to be developed clearly protects the marine life and environment from further damage. The location is NOT suitable for this kind of development for both environmental and infrastructure reasons.

The cost of what stands to be lost is far too high to allow this to happen.

Please save Keauhou Bay's marine life and help the island's resources by saying NO to a Bungalow Resort built by Kamehameha Schools.

Mahalo,

Jason Rigmaiden

**Sent:** Wednesday, August 7, 2024 12:22 PM  
**To:** 221053-01 KS Keaouhou Entitlements; Alex Roy  
**Subject:** Keaouhou Bay DEIS

**Categories:** Yellow Category

Regarding Keaouhou Bay DEIS

My questions are as follows:

1. Will He'eia Bay be accessed through this project area? How?
2. Has KS limited lateral access along the shoreline to He'eia Bay by hardening the shoreline with rocks? Please provide the permits and approvals for that.
3. Will public vehicular and parking access to He'eia Bay be provided through this project area?
4. Please explain the authority in the trust documents for KS to develop a hotel project to maximize profits at a major royal cultural site? Are there no impermissible business strategies in the KS 2025 strategic plan?
5. How will King Kamehameha's slide be restored and celebrated?
6. How will this great royal cultural center as a whole be celebrated and communicated to future generations?
7. As an alternative to a resort hotel, can't you monetize a royal cultural center designed to educate the public, children, tourists in a culturally and environmentally sensitive way and that would provide cultural jobs as opposed to housekeeping jobs?
8. Where is the certified shoreline survey, a prerequisite to applying for a SMA permit and shoreline setback variance? Why is it not included in this DEIS?
9. Will you be seeking to purchase easements through the OCCL and BLNR for those structures encroaching onto state land in the conservation district, and when?
10. Please describe everything to be covered in the shoreline setback variance?
11. Please list, locate, and describe *all of KS's* proposed cultural and educational uses, activities, and programs for its students and charter school Hamana for the project area that must be included in any assessment application? Please show where these uses and activities are permit as a matter of right in the zoning code. Or do you intend to apply for a use permit concurrent with the SMA permit?
12. Please list, locate, and describe all of KS's contemplated cultural and educational uses, activities, and programs for the He'eia Bay property that will require an assessment application? Please show where these uses and activities are permit as a matter of right in the zoning code. Or do you intend to apply for a use permit concurrent with the SMA permit?
13. Please explain and justify why the He'eia Bay property management plan is not potentially illegally segmented from this DEIS?
14. Are you going to be building school facilities in the project area?
15. What will the school facilities consist of?
16. Will there be overnight facilities or camping as part of the school facilities? Please discuss and describe them.
17. Will open fires and imu be allowed in this project area? **Please discuss fire roads and availability of fire service.**

18. What public uses will be displaced by school facilities and/or uses in this project area and at the He'eia Bay property?

19. What are the grubbing permit numbers for the grubbing of the historic trails for the survey work?
20. Does KS intend to develop a separate wildlife conservation management plan? Why not?
21. How many workers do you foresee employing?
22. How many workforce housing units do you intend to build as part of this project?
23. Why do you need section 404 and 10 permits from the Army Corps of engineers?
24. Where are you filling or dredging or replacing wetlands?
25. What percentage of the wetlands are you filling or dredging or replacing?
26. Where do you intend to replace with new wetlands?
27. Are there any open ACE permits. Provide permit numbers, please.
28. How do you intend to protect/avoid disruption of the spring in the upland grading work?

Please acknowledge receipt of these questions as part of the DEIS process. Thank you,

Claudia Rohr  
Big Island resident

## Kathy Roney

The 5th Grade Class of Kamehameha Schools Kapalama put on a moving production calling out the cost of tourism reliance, on our water, on our land and our community and the need for change.

At 70 years old and a former resident of Keaouhou Bay, I've seen decisions made by Kamehameha Schools adversely effect our water, our land, sacred and culturally significant sites, and our community not only islands wide but especially throughout the Kahalu'u/Keaouhou Corridor.

While many will respond with citations to scientific studies as suggested, I must speak my concerns about our personal responsibility to our keiki and the wise words of concern they have voiced.

**Subject:** Kamehameha Schools EIS Draft For Keaouhou Bay WILL HAVE NEGATIVE IMPACT!  
**Categories:** Yellow Category

To whom it may concern,

Please reject Kamehameha Schools EIS for Keaouhou Bay to become a Bungalow Resort. This is a VERY small bay and the added footprint of a 105 room Resort, that will include excess traffic, will have a **serious negative impact** in Keaouhou Bay.

Please, Do NOT risk polluting the water in Keaouhou Bay by allowing Kamehameha Schools to develop their bungalow resort project. Research has shown that developments pollute nearby waters constantly during development and after.

Developments have ALWAYS polluted the water in every near coastal development area. An article entitled, "*What is the biggest source of pollution in the ocean?*" by NOAA, National Oceanic and Atmospheric Administration, states, "*When large tracts of land are plowed, the exposed soil can erode during rainstorms. Much of this runoff flows to the sea, carrying with it agricultural fertilizers and pesticides.*" It also states, "*Eighty percent of pollution to the marine environment comes from the land. One of the biggest sources is called, nonpoint source pollution, which occurs as a result of runoff.*"

The trees you want to take down keep the runoff pollution from the golf course from going into the Bay. According to the National Library of Medicine, in their article, "*Putting the Earth in Play: Environmental Awareness and Sports,*" shares that the golf industry uses **approximately 50 pesticide active ingredients**, including chlorpyrifos—an insecticide that is banned for residential use by the EPA due to developmental hazards. These pollutions and more are **being held off** from running into the Bay by the very trees you want to take down.

Let's not forget the marine life that will be threatened by excess pollution and traffic. Keaouhou Bay is the monk seals and the green sea turtle's habitat. More pollution and people will endangered these species.

This Bay is worth protecting. Please do not put a resort in such a small area. Future generations will be deprived of what it currently is, and it could never be replaced.

Kind Regards,  
Christianne van Rooij

Ambika Rose

Dear Sirs & Madams:  
GOLF COURSE POLLUTION KILLS MARINE LIFE AND DRASTICALLY CHANGES ECOSYSTEMS

"The golf industry uses approximately 50 pesticide active ingredients, including chlorpyrifos—an insecticide that is banned for residential use by the EPA due to developmental hazards. Having to trim golf turf to low heights also makes it even more vulnerable to pests, which leads to more pesticide use." <https://rainorshingolf.com/pages/the-environmental-impact-of-golf-courses>

These pesticides will be in the pollution runoff that will enter Keaouhou Bay more severely should the natural habitat of the trees be removed and replaced with pavement. This is unavoidable!

Please read from Wikipedia: "

Most drains have a single large exit at their point of discharge (often covered by a grating) into a canal, river, lake, reservoir, sea or ocean. Other than catch basins, typically there are no treatment facilities in the piping system." [https://en.wikipedia.org/wiki/Storm\\_drain#:~:text=Most%20drains%20have%20a%20single%20large%20exit,individual%20dr%20wells](https://en.wikipedia.org/wiki/Storm_drain#:~:text=Most%20drains%20have%20a%20single%20large%20exit,individual%20dr%20wells)

The pavement from this development will cause pollution to runoff into Keaouhou Bay because this treed land that will become a housing development is directly behind the golf course and the Bay. This means that runoff from the pollution from the golf course will go straight into the BAY. ONLY PROTECTION POLLUTION FILTER Keaouhou Bay has from the golf course pesticides, fertilizer and weed killer. See the below paragraph for further references.

See page 2 at: <https://health.hawaii.gov/epw/files/2013/09/Stormwater-MS4-Presentation-HEF-7.15.14.pdf> where the Hawaii's government states that Natural Ground Cover has 10% runoff, where has development has 55% runoff.

These trees and land are saving monk seals and green sea turtles habitat from the golf course pollution and this land MUST BE PRESERVED and CONSERVED as the natural protector for Keaouhou Bay and for these endangered species habitat.

The cost of what stands to be lost is far too high to allow this development to happen.

Please save Keaouhou Bay's marine life and help the island's resources by saying NO to a Bungalow Resort built by Kamehameha Schools.

Mahalo,

Ambika Rose

**Subject:** Against bungalow development at Keauhou. Golf course pollution.

**Categories:** Green Category

Dear Sirs & Madams:

### GOLF COURSE POLLUTION KILLS MARINE LIFE AND DRASTICALLY CHANGES ECOSYSTEMS

"The golf industry uses approximately 50 pesticide active ingredients, including chlorpyrifos—an insecticide that is banned for residential use by the EPA due to developmental hazards. Having to trim golf turf to low heights also makes it even more vulnerable to pests, which leads to more pesticide use." <https://rainorshinegolf.com/pages/the-environmental-impact-of-golf-courses>

These pesticides will be in the pollution runoff that will enter Keauhou Bay more severely should the natural habitat of the trees be removed and replaced with pavement. This is unavoidable!

Please read from Wikipedia, "  
Most drains have a single large exit at their point of discharge (often covered by a grating) into a canal, river, lake, reservoir, sea or ocean. Other than catch basins, typically there are no treatment facilities in the piping system." [https://en.wikipedia.org/wiki/Storm\\_drain#:~:text=Most%20drains%20have%20a%20single,discharge%20into%20individual%20wells](https://en.wikipedia.org/wiki/Storm_drain#:~:text=Most%20drains%20have%20a%20single,discharge%20into%20individual%20wells)

The pavement from this development will cause pollution to runoff into Keauhou Bay because this treed land that will become a housing development is situated directly between the golf course and the Bay. These trees, which absorb all the pollution from the golf course is the BEST AND ONLY PROTECTION POLLUTION FILTER Keauhou Bay has from the golf course pesticides, fertilizer and weed killer. See the below paragraph for further references.

See page 2 at: <https://health.hawaii.gov/epo/files/2013/09/Stormwater-MS4-Presentation-HEF-7.15.14.pdf> where the Hawaii government states that Natural Ground Cover has 10% runoff, where has development has 55% runoff.

These trees and land are saving monk seals and green sea turtles habitat from the golf course pollution and this land MUST BE PRESERVED and CONSERVED as the natural protector for Keauhou Bay and for these endangered species habitat.

The cost of what stands to be lost is far too high to allow this development to happen.

Please save Keauhou Bay's marine life and help the island's resources by saying NO to a Bungalow Resort built by Kamehameha Schools.

**Subject:** Re: [EXTERNAL] Please don't assault Keahou Bay - No condos/commercial areas

Yellow Category

Aloha e Shannon,

Thank you for submitting your comments regarding the Draft Environmental Impact Statement (DEIS) for the Keahou Bay Management Plan. We appreciate your engagement in this important environmental review process.

Please be advised that we have received and administratively recorded. However, it is important to note that your submission was made after the closure of the official 45-day comment period (August 7) as outlined in the Hawaii Administrative Rules 11-200.1-25 (Public Review Requirements for Draft Environmental Impact Statements). Consequently, comments received outside this designated period are not required to be addressed or considered in the final decision-making process.

However, Kamehameha Schools, as the Applicant, values all feedback and may choose to consider the validity, significance, and relevance of any substantive comments provided as it pertains to the scope, analysis, and process of this DEIS.

Thank you once again for your participation.

Mahalo,

The Keahou Bay Project Team

---

**CAUTION: This email is from an outside sender. Do not click on links or open attachments unless you recognize the sender and know the content is safe.**

To Whom It May Concern,  
Please read the scientific proof in this letter and REJECT Kamehameha Schools Environment Impact Statement (EIS) for Keahou Bay to become a Bungalow Resort.

Please state in your report that a Bungalow Resort WILL have a SERIOUS NEGATIVE IMPACT on Keahou Bay as stated in all the different researched articles below.

Please, DO NOT risk polluting the water in Keahou Bay by allowing Kamehameha Schools to develop their bungalow resort project. It is scientifically proven that developments pollute nearby waters both during and after development.

Below are scientific articles written by the National Oceanic and Atmospheric Administration (NOAA), Global Coral Reef Alliance, Hawaii Government, and many other professional organizations, that have studied and shown that developments have ALWAYS polluted the water in EVERY coastal development area.

Does this EIS (Environmental Impact Statement) have any kind of reports and studies on how the endangered species and marine life will handle the extra pollution due to development, and the golf course runoff? Keahou Bay is their habitat and this development WILL be CHANGING an Entire Ecosystem.

#### ENDANGERED SPECIES CONSERVATION IMPACTED BY DEVELOPMENT

In the Endangered Species Act of 1973 Under Section 2 (b), "To provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved." This would be Keahou Bay.

The Green Sea Turtle swims in Keahou Bay weekly and the monk seal has also been seen swimming and resting in Keahou Bay. Both of these marine animals are on the endangered species list.

#### Endangered Species Act

"Section 2. Findings, Purposes, and Policy

(4) the United States has pledged itself as a sovereign state in the international community to conserve to the extent practicable the various species of fish or wildlife and plants facing extinction, pursuant to—

(b) PURPOSES.— The purposes of this Act are to provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved, to provide a program for the conservation of such endangered species and threatened species, and to take such steps as may be appropriate to achieve the purposes of the treaties and conventions set forth in subsection (a) of this section."

This was taken from <https://www.fisheries.noaa.gov/national/endangered-species-conservation/endangered-species-ac>

#### FEDERALLY PROTECTED GREEN SEA TURTLES WILL BE AFFECTED

The green sea turtle is federally protected and can be seen in Keahou Bay weekly.

The following article that states: "**POLLUTED RUNOFF IN HAWAII ENDANGERS GREEN SEA TURTLES**"

**Why does Hawaii have a runoff problem?**

Historically, in the tropics of Hawaii, precipitation was absorbed into the soil, according to the Clean Water Branch of Hawaii's Department of Health. Any potential pollution or contaminants on the ground surface would get pushed into the soil by the rain, and plant roots and microbes would help break down the pollution into less dangerous components. However, with urban and agricultural development, less and less of the pollution gets pulled into the soil, and more of it gets washed out into storm drains. From there, the pollutants make their way to streams, rivers and the ocean that surrounds Hawaii. According to the state agency, most of these contaminants are nutrients from fertilizer, bacteria from animal waste, oil, garbage and yard waste...

If polluted runoff reaches the ocean, it can wreak havoc on marine life, including endangered green sea turtles." Taken from <https://www.chemservice.com/news/polluted-runoff-in-hawaii-endangers-green-sea-turtles/>

**Allowing this development WILL POLLUTE Keauhou Bay.** The above article, written in 2014 (because runoff water from developments were polluting the ocean even then!!) states this fact clearly. Keauhou Bay is home to countless sea creatures such as the protected green sea turtle, spotted eagle rays, manta rays, octopus, dolphins, fish, coral, monk seals, and more and that will ALL be harmed by the severe pollution runoff that WILL happen because **developments have been shown to ALWAYS pollute the water is that is nearby.**

The Green Sea Turtle is protected by more than one law. "All sea turtles in Hawaii are protected by the Endangered Species Act (ESA) and additionally protected by Hawaii Revised Statutes Chapter 195D (HRS) and Hawaii Administrative Rules (HAR) 13-124." This information was taken from this site <https://dlnr.hawaii.gov/dar/species/sea-turtles/>

**THE ENDANGERED MONK SEAL WILL BE AFFECTED**

Keauhou Bay is known as a RESTING AREA for the ENDANGERED MONK SEAL. If another resort is allowed to be built, in addition to the pollution, it will also bring a lot more people down to Keauhou Bay. This increases the chances of a resting monk seal being disturbed by humans trying to get close, take "selfie" photos, and being generally uninformed and harmful. Please see article on Selfie Culture and its harmful effects below.

**Has the EIS done any research on what an increased population would do in such a small area, and what will happen to the endangered species that live there? With a significantly increased population their habitat of Keauhou Bay will likely be changed forever.**

This information is from a NOAA Scientist: "**Study shows selfie culture impacts how people behave when posting images of an endangered species on social media. There's a seal on the beach! Let's go get a 'selfie'!**" That must have been what nearly 18 percent of people on Instagram thought before approaching an endangered species.

In a recent study, NOAA scientists used social media to monitor human activities around endangered Hawaiian monk seals. They discovered that human disturbance is more common than they thought." <https://www.fisheries.noaa.gov/feature-story/endangered-hawaiian-monk-seals-cry-foul-over-selfies>

NOAA clearly states a high population in a place where monk seals and sea turtles habitat can be a serious disturbance for these endangered species.

"Hawaiian monk seals are protected federally by the ESA and the Marine Mammal Protection Act (MMPA), as well as locally by Hawaii Revised Statutes (HRS) Chapter 195D and Hawaii Administrative Rules (HAR) 13-124." This was taken from <https://dlnr.hawaii.gov/dar/hawaiian-monk-seal/>

**Keauhou Bay is the monk seals and the green sea turtle's habitat.** Allowing a bungalow resort to be developed in Keauhou Bay, the habitat of these endangered species, is to threaten their life and habitat with golf course runoff pollution, as well as development pollution. **By threatening their habitat, and hence their lives, this development goes completely against the Endangered Species Act of 1973.**

The verbiage in the Endangered Species Act states, "to conserve". In this case, "to conserve" would be to protect the land around Keauhou Bay from developments that destroy the habitat of these endangered species with pollution and runoff.

**Does this EIS have any reports on the endangered species that frequent Keauhou Bay? This is their habitat and it needs to be "conserved".**

Under the Conservation Program there should be research done on endangered species and their associated ecosystems. A large bungalow resort development WILL FOREVER CHANGE THIS ECOSYSTEM.

"§195D-5 Conservation programs. (a) The department shall conduct research on indigenous aquatic life, wildlife, and land plants, and on endangered species and their associated ecosystems, and shall utilize the land acquisition and other authority vested in the department to carry out programs for the conservation, management,

and protection of such species and their associated ecosystems." [https://www.capitol.hawaii.gov/hrscurrent/Vol03\\_Ch0121-0200D/HR50195D/HR5\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hrscurrent/Vol03_Ch0121-0200D/HR50195D/HR5_0195D-0005.htm)

Also, under this same Conservation program, "(2) Taking such action as may be necessary to ensure that actions authorized, funded, or carried out by them do not jeopardize the continued existence of threatened or endangered species." [https://www.capitol.hawaii.gov/hrscurrent/Vol03\\_Ch0121-0200D/HR50195D/HR5\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hrscurrent/Vol03_Ch0121-0200D/HR50195D/HR5_0195D-0005.htm)

Please consider that developing a Kamehameha Schools Bungalow Resort in Keauhou Bay WILL threaten endangered species due to the unavoidable development and golf course pollution runoff that would be caused by removing the all the trees that currently serving as a natural pollution filter, and replacing the land with housing, cars, humans, and waste. There would also be tremendous runoff damage into Keauhou Bay and the surrounding area during the building phase of this enormous project.

#### **GOLF COURSE POLLUTION KILLS MARINE LIFE AND DRASTICALLY CHANGES ECOSYSTEMS**

"The golf industry uses approximately 50 pesticide active ingredients, including chlorpyrifos—an insecticide that is banned for residential use by the EPA due to developmental hazards. Having to trim golf turf to low heights also makes it even more vulnerable to pests, which leads to more pesticide use."

<https://rainorshinegolf.com/pages/the-environmental-impact-of-golf-courses>

These pesticides will be in the pollution runoff that will enter Keauhou Bay more severely should the natural habitat of the trees be removed and replaced with pavement. This is unavoidable! Please read from Wikipedia, "

Most drains have a single large exit at their point of discharge (often covered by a grating) into a canal, river, lake, reservoir, sea or ocean. Other than catch basins, typically there are no treatment facilities in the piping system." [https://en.wikipedia.org/wiki/Storm\\_drain#:~:text=Most%20drains%20have%20a%20single%20discharge%20into%20individual%20dry%20wells](https://en.wikipedia.org/wiki/Storm_drain#:~:text=Most%20drains%20have%20a%20single%20discharge%20into%20individual%20dry%20wells)

The pavement from this development will cause pollution to runoff into Keauhou Bay because this treed land that will become a housing development is situated directly between the golf course and the Bay. These trees, which absorb all the pollution from the golf course is the BEST AND ONLY PROTECTION POLLUTION FILTER

Keauhou Bay has from the golf course pesticides, fertilizer and weed killer. See the below paragraph for further references.

See page 2 at: <https://health.hawaii.gov/epo/files/2013/09/Stormwater-MS4-Presentation-HEF-7.15.14.pdf> where the Hawaii' government states that Natural Ground Cover has 10% runoff, where has development has 55% runoff. So, even if you have storm drains the pavement this development will create will cause more runoff into Keauhou Bay than the Natural Ground Cover that is has now, that has been protecting the bay from golf course pollution for years.

These trees and land are saving monk seals and green sea turtles habitat from the golf course pollution and this land MUST BE PRESERVED and CONSERVED as the natural protector for Keauhou Bay and for these endangered species habitat.

Under Section 2 (b) of the Endangered Species Act - Keauhou Bay MUST BECOME A CONSERVATION AREA for these endangered species. It is currently their habitat, and to allow a large resort development to be built above this bay clearly threatens the lives of these endangered species by allowing golf course toxic pollution and development pollution to run into these species natural habitat of Keauhou Bay.

#### **ALGAE BLOOMS KILL CORAL AND MARINE LIFE**

The trees that are slated to be cleared for the development further protect Keauhou Bay from algae blooms that have been proven to be caused by pollution that is runoff from fertilizer and weed killer.

When there is heavy rain the land above the bay has a greater runoff than normal. Without the trees, the runoff from the golf course pollution will pour into the Bay likely causing frequent algae blooms.

**Algae blooms have been shown to kill coral and marine life as stated in the many articles that will follow.**

One of these articles is from the Global Coral Reef Alliance. They have researched the effects on reefs before and after a golf course developments. Though this development is not a golf course development, it is located just below a golf course and exposes the bay to the pollution from the golf course by removing the proven natural filter of the trees and natural ecosystem.

**Has this EIS done any kind of research about the algae blooms that happen after a serious storm because of the golf course runoff pollution?**

This information was taken from Global Coral Reef Alliance and it is an actual study on the how coral and marine life are affected before and after development. It's

titled, "Golf courses kill coral reefs and fisheries: harmful algae blooms and disease cause by nutrient runoff from golf course development on Guana Cay, Abaco, Bahamas

Introduction: Bahamas coral reef deterioration

This study is thought the first ever to evaluate the health of coral reef ecosystems and fisheries before and after a golf course development.. The vast majority of corals have died from a combination of factors including global warming, new diseases, land-based sources of pollution.. " <https://www.globalcoral.org/golf-courses-kill-coral-reefs-and-fisheries-harmful-algae-blooms-and-disease-caused-by-nutrient-runoff-from-golf-course-development-on-guana-cay-abaco-bahamas/>

If you allow a Bungalow Development in Keauhou Bay you WILL be agreeing to pollute this bay for years to come and COMPLETELY CHANGING and possibly DESTROYING KEAUHOU BAY'S ECOSYSTEM.

Another study by the Coral Reef Alliance titled, "Golf course fertilizer runoff causes nutrient enrichment leading to harmful algae blooms on a Bahamian coral reef.

"...After construction new algae blooms appeared nearest the golf course green, smothering corals in adjacent reefs, along with sharply increased coral diseases.." <https://www.globalcoral.org/golf-course-fertilizer-runoff-causes-nutrient-enrichment-leading-to-harmful-algae-blooms-on-a-bahamian-coral-reef>

**Does this EIS have any studies or reports on the extra runoff pollution due to clearing land and adding pavement?**

This needs to be fully assessed because you will be changing an entire ecosystem to build a bungalow resort. It rains in Keauhou Bay many nights out of the year and this kind of pollution will kill the beautiful and necessary coral in the Bay.

**FURTHERMORE:** "If there are toxic algal blooms, like red tide, or man-made contaminants, like pesticides or detergents in the water, those toxins are contained within the bubbles of sea foam. When those bubbles pop, the toxins can become airborne and compromise the air that is breathed in that location." <https://oceanconservancy.org/blog/2023/03/31/what-sea-foam/>

## ENGINE POLLUTION CAUSES ISSUES IN THE OCEAN

**Does this EIS have any detailed traffic studies for the increase in cars that will be added to this already severely traffic area they want to build their 150 room bungalow resort in? Have they done any studies on the pollution these cars WILL have in Keauhou Bay?**

Because this Bungalow Resort could have over 150 extra cars and over 300 or more extra people in and out of Keauhou Bay, what traffic and increased population studies

have they done? There will be employees with cars, guests with cars, visitors with cars. At times this would range to over 200 cars (likely more), coming in and out of, and parking above Keauhou Bay thereby causing serious car population issues because of all these added cars right next to the bay.

**The article below is from NOAA regarding motor vehicle engines and pollution to the sea.**

What is the biggest source of pollution in the ocean?

Most ocean pollution begins on land.

"Millions of motor vehicle engines drop small amounts of oil each day onto roads and parking lots. Much of this, too, makes its way to the sea.

Some water pollution actually starts as air pollution, which settles into waterways and oceans. Dirt can be a pollutant. Top soil or silt from fields or construction sites can run off into waterways, harming fish and wildlife habitats."

<https://oceanservice.noaa.gov/facts/pollution.html#:~:text=Millions%20of%20motor%20vehicle%20engines,Dirt%20can%20be%20a%20pollutant.>

**Land-Based Runoff Remains Top Source of Oil in the Ocean, Says New Report Oil in the Sea: Inputs, Fates, and Effects**

News Release September 28, 2022

WASHINGTON — Oil in runoff, primarily from cities and vehicles, is the top source of oil entering the ocean, says a new report from the National Academies of Sciences, Engineering, and Medicine. In North American waters, estimated ocean oil pollution from land-based runoff is up to 20 times higher than it was 20 years ago, and oil spills, natural oil seeps, and discharge from oil and gas operations remain major sources of pollution. The report recommends actions that government and others should take to minimize oil pollution, and calls for sustained research funding to better understand how oil reaches and affects ocean environments.

<https://www.nationalacademies.org/news/2002/05/oil-in-the-sea-inputs-fates-and-effects#:~:text=WASHINGTON%20%2D%2D%20Nearly%2085%20percent,pipeline%20spills%2C%20says%20a%20new>

## The Impact Of Stormwater – Car Emissions

"Car emissions are not limited to exhaust fumes that contribute to air pollution. They can also leak automotive fluid and release heavy metals that can contribute to stormwater pollution, contaminating local waterways."

<https://www.stormwatershepherds.org.au/blog/the-impact-of-stormwater-car-emissions/>

## **NOISE POLLUTION'S HARMFUL EFFECT ON MARINE LIFE**

**Does this EIS have any reports on the noise pollution that will happen and what it could do to marine life in Keauhou Bay during development?**

Because if you allow this Bungalow Resort to be developed you will increase constant noise in this bay for years to come and, "Noise Pollution Research shows that underwater noise from construction, shipping and naval vessels significantly impacts the natural behavior of cetaceans and many other marine species. This can be seen when mass beaching events occur or breeding success is diminished."

The above information was taken from the Ocean Conservation Trust

<https://oceanconservationtrust.org/ocean-advocacy/think-ocean/ways-to-think-ocean/>

## **How Does Noise Pollution Harm Marine Species?**

"However, over the past few decades, noise pollution in the marine environment has increased dramatically and is threatening the natural soundscape of the marine environment. Ships, seismic surveys, explosions, construction, and sonar devices have made the once peaceful environment into a loud, chaotic home which is extremely damaging for marine wildlife. This type of pollution is often overlooked in comparison to others but its impacts are now being documented across all types of marine ecosystems." <https://earth.org/noise-pollution-in-the-ocean/>

If you allow this resort the amount of people in this bay will fully increase and,

"Hawaii's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally, management of the resource should balance the needs of different user groups, but the welfare of the marine environment on which its inhabitants depend must be the most important consideration." This was taken from Hawaii's own Division of Aquatic Resources <https://dlnr.hawaii.gov/dar/marine-managed-areas/hawaii-marine-life-conservation-districts/#:~:text=Snorkeling%20and%20SCUBA%20diving%20are,effect%20on%20nearshore%20fish%20populations.>

## **What is ocean noise?**

"Ocean noise refers to sounds made by human activities that can interfere with or obscure the ability of marine animals to hear natural sounds in the ocean. Many marine organisms rely on their ability to hear for their survival. Sound is a highly efficient means of communication underwater and is the primary way that many marine species gather and understand information about their environment. Many aquatic animals use sound to find prey, locate mates and offspring, avoid

predators, guide their navigation and locate habitat, as well as to listen and communicate with each other.

Over the last century, human activities such as shipping, recreational boating, and energy exploration have increased along our coasts, offshore, and deep ocean environments. Noise from these activities can travel long distances underwater, leading to increases and changes in ocean noise levels in many coastal and offshore habitats.

These rising noise levels can negatively impact ocean animals and ecosystems. Higher noise levels can reduce the ability of animals to communicate with potential mates, other group members, their offspring, or feeding partners. Noise can also reduce an ocean animal's ability to hear environmental cues that are vital for survival, including those key to avoiding predators, finding food, and navigating to preferred habitats." <https://oceanservice.noaa.gov/facts/ocean-noise.html>

## **LEARN FROM OTHERS:**

### **RUN-OFF FROM DEVELOPMENT KILLS**

The Chesapeake Bay has a foundation that is trying to save their bay due to runoff pollution that was caused by developments. Chesapeake Bay is a **lot bigger** than Keauhou Bay. If it's being drastically hurt by runoff water from developments, Keauhou Bay waters won't stand a chance if development above the bay is allowed. Keauhou Bay is a much smaller ecosystem.

**This Article is by the Chesapeake Bay Foundation, Saving a National Treasure states,** "...runoff is a significant source of harmful nitrogen pollution that continues to grow..."

As rainwater and snowmelt run off our streets, parking lots, lawns, and other surfaces, they pick up pet waste, pesticides, fertilizer, oil, and other contaminants. If the draining water doesn't evaporate or soak into the ground where it can be filtered, it flushes straight into local creeks, rivers, and the Chesapeake Bay, adversely affecting water quality and aquatic life.

Only 10 to 20 percent of rain that falls in forests, fields, and other natural areas runs off, with the rest absorbed by soil and plants, where it is filtered before reaching aquifers or local waterways. (Right now Keauhou Bay has a lot of trees and is very natural, this is what helps stop runoff.) By contrast, close to 100 percent of the rain that falls on concrete and other hard surfaces produces runoff. One inch of rain falling on an acre of hardened surface produces 27,000 gallons of runoff.

Stormwater runoff pollution threatens Chesapeake Bay and its rivers and streams...Polluted runoff is one of the most harmful sources of pollution to the Bay

and its waters. And much of it starts right in the urban and suburban neighborhoods where we live." <https://www.cbf.org/issues/polluted-runoff/index.html#:~:text=Besides%20carrying%20pollutants%20that%20harm,the%20are%20placed%20in%20jeopardy.>

If that is what runoff is doing to the Chesapeake Bay, the effects of runoff will be even more devastating to Keauhou Bay due to its size and fragility.

### **MANTA RAY HABITAT, CORAL REEF BLEACHING, & MARINE LIFE ~ THE DEVASTATING EFFECTS OF DEVELOPMENT ON THE OCEAN**

**Are there any reports in this EIS about what the impact to the coral, marine life, plankton especially zooplankton will be because of this development?**

The studies below show that developments kill coral, and marine life. Zooplankton are part of this marine life and they are also killed and negatively affected. Zooplankton are food for manta rays. Manta rays are in Keauhou Bay every night to eat zooplankton, and are often seen here during the day as well.

Allowing this bay developed will also be a death sentence for many types of marine life including planktons. There is NO WAY to stop this from happening due to the fact that polluted runoff rain water from developments can't be fully stopped. This has been shown to happen in ALL coastal developments.

Please read the Scientific articles below.

#### **It's Been Proven Developments Severely Pollute Nearby Waters**

Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Coral Bleaching is occurring more frequently in Hawai'i. Across the Hawaiian Archipelago, coral bleaching has increased in frequency and severity since 1996. The last major bleaching event in 2014-2015 had catastrophic impacts state-wide..."

This was the third major bleaching episode in Hawai'i over the last 6 years. The frequency of these events is unprecedented in the archipelago. NOAA scientists and partners have determined that the key drivers of the bleaching were environmental factors (such as heat stress, depth, and surface light) and human impacts (sewage effluent and urban run-off). " <https://www.fisheries.noaa.gov/feature-story/cautionary-tale-2019-coral-bleaching-event-hawaii#:~:text=Coral%20Bleaching%20is%20Occurring%20more,head%20catastrophic%20impacts%20state%20wide.>

**This article is by the Coral Reef Alliance here in Hawai'i.** "An ecosystem under threat Hawai'i's reefs face major global and local threats including climate change, overfishing, and sediment and nutrient pollution caused by sewage and stormwater runoff..."

When it rains, flash floods carry stormwater and large amounts of sediment downstream to the ocean. Just offshore, once-thriving coral reefs are now struggling to survive." <https://coral.org/en/where-we-work/hawaiian-islands/#:~:text=Hawai%CA%BBi's%20reefs%20face%20major%20global,into%20Hawai%CA%BBi's%20waterways%20every%20day.>

This article states that runoff is a leading source in coral degradation. Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Land-based sources of pollution are a leading cause of coral reef degradation in the Main Hawaiian Islands. Water quality is impacted by urban runoff, failing sewage systems, unpaved roads, farms, land clearing, and development."

[https://www.coris.noaa.gov/monitoring/status\\_report/docs/Hawaii\\_status\\_report\\_forweb.pdf](https://www.coris.noaa.gov/monitoring/status_report/docs/Hawaii_status_report_forweb.pdf)

This article is a Research Article by PLOS ONE and their motto is, "We're driving change in research integrity and publication ethics." This is some of their article information, "Coral taxonomy and local stressors drive bleaching prevalence across the Hawaiian Archipelago in 2019..."

**We found little evidence for acclimation by reefs to thermal stress in the main Hawaiian Islands. Moreover, our findings illustrate how detrimental effects of local anthropogenic stressors, such as tourism and urban run-off, may be exacerbated under high thermal stress.** In light of the forecasted increase in severity and frequency of bleaching events, future mitigation of both local and global stressors is a high priority for the future of corals in Hawai'i."

<https://journals.plos.org/plosone/article?id=10.1371/journal.pone.0269068>

The coral all over Hawai'i has had extremely high mortality rates, due to developments near ocean areas throughout the years, and development in Keauhou Bay will be devastating to the coral, reef fish, and all aquatic life there. Manta Rays need to eat 5 times their body weight in zooplankton daily. Their population will be severely affected should the plankton die. Please see the cited information below.

**"SO, HOW MUCH PLANKTON DOES YOUR AVERAGE MANTA RAY EAT? 19,200,000. Nineteen million two hundred thousand, give or take a few thousand.**

That is the number of plankton pieces a ten-foot manta ray must consume weekly to stay alive."

The above information was taken from Manta Ray Advocates

<https://mantarayadvocates.com/how-much-plankton-do-mantas-eat/>

**"Impacts from land-based sources of pollution including coastal**

**development, . . . can impede coral growth and reproduction, disrupt overall ecological function, and cause disease and mortality in sensitive species."** <https://oceanservice.noaa.gov/facts/coral-pollution.html#:~:text=Impacts%20from%20land%2Dbased%20sources,and%20mortality%20in%20sensitive%20species.>

Article by Environmental Evidence, "**Coastal development and runoff lead to sedimentation, which directly impacts coral recruitment, growth, mortality, and ecosystem services that coral reefs provide.**" <https://environmentalevidencejournal.biomedcentral.com/articles/10.1186/s13750-020-00200-0#:~:text=Coastal%20development%20and%20runoff%20lead%20services%20that%20coral%20reefs%20provide.>

Developments can't fully stop polluting because runoff is from rain during development and after. Article by NOAA, "One of the most significant threats to reefs is pollution. **Land-based runoff and pollution discharges can result from dredging, coastal development...This runoff may contain sediments, nutrients, chemicals, insecticides, oil and debris.**"

When some pollutants enter the water, nutrient levels can increase, promoting the rapid growth of algae and other organisms that can smother coral." [https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,organisms%20that%20can%20smother%20corals.](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,organisms%20that%20can%20smother%20corals.)

Another article by NOAA, "**Coral reefs also are affected by leaking fuels, anti-fouling paints and coatings, and other chemicals that enter the water... (All of those are show up in every development project.)**"

**Among the most damaging pollutants on coral reefs is sediment, which can remain suspended in the water or be deposited on the coral surface (i.e., turbidity and sedimentation, respectively) and can contain toxicants, pathogens, and nutrients, all of which impact coral growth, recruitment, and survival"** [https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days.](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days.)

**It's Been Proven Resort Developments KILL Marine Life**  
This article by MarinBIO states, "**Zooplankton are also sensitive to their environment and like phytoplankton—a change in zooplankton concentration can indicate a subtle environmental change.** Zooplankton are highly responsive to nutrient levels, temperatures, pollution, food that is not nutritious, levels of light,

and increases in predation. As well as providing an essential link in the marine food chain (which is an understatement), the diversity of species, amount of biomass and abundance of zooplankton communities can be used to determine the health of an ecosystem...

Here is another article that shocking shows that in a very short time, big changes can occur due to runoff. A development will hurt and kill plankton, by Frontiers in Marine Science, "Effects of an experimental terrestrial runoff on the components of the plankton food web in a Mediterranean coastal lagoon The main result observed in the present study was that the effects of the simulated terrestrial runoff spread along the plankton food web, significantly affecting all trophic levels of the natural plankton community studied. **This occurred in a relatively short time considering that the experiment lasted less than three weeks.** The lower light availability in the terrestrial runoff treatment compared to the control resulted in a net decrease of approximately one-third of Chl-a concentration and phytoplankton abundance over the entire experiment." <https://www.frontiersin.org/journals/marine-science/articles/10.3389/fmars.2023.1200757/full>

**The ecosystem is fragile and interconnected as is stated in this article:**  
"Zooplankton are also affected by levels of pH, heavy metals, calcium, and aluminum. Nutrients like nitrogen and phosphorus will affect the prey of zooplankton (like algae, protozoa and bacteria), indirectly affecting zooplankton survival. Scientists are still putting together pieces of the zooplankton puzzle. Some questions include how nutrient levels found in algae can influence the growth and behavior of zooplankton. Another question important to marine and human life is how toxins and pollution will affect this crucial link in the food chain" This information is in article by

MarineBIO. <https://www.marinebio.org/creatures/zooplankton/#:~:text=Zooplankton%20are%20also%20sensitive%20to%20light%2C%20and%20increases%20in%20predation.>

A research article by Environmental Research Laboratory, United States Environmental Protection Agency that discusses, "**Toxic Effects of Pollutants on Plankton: There are four main sources of aquatic pollution: industrial wastes, municipal wastes, agricultural run-off, and accidental spillage.** Non-point sources, such as automobile exhausts, add appreciable amounts of pollutants to air that may enter aquatic systems in rainfall or dry fall-out. These sources add pesticides, heavy metals, oil, petroleum products, and a large number of organic and inorganic compounds to water. Lakes and oceans serve as sinks for many pollutants. Plankton comprise a large portion of the living matter in natural waters and function in

biogeochemical cycles. They are affected by pollutants, transfer them to sediments and other organisms, and function in their biological transformation." [https://scope.dge.carnegiescience.edu/SCOPE\\_12\\_3.6\\_chapter12\\_257-274.pdf](https://scope.dge.carnegiescience.edu/SCOPE_12_3.6_chapter12_257-274.pdf)

All the above articles show that development of Keauhou Bay WILL hurt plankton life and marine life in the bay because pollutant runoff is inevitable and unavoidable during construction and afterwards. The manta ray food source will likely disappear. This will be devastating for the manta ray populations. Furthermore, if manta rays die or leave the area, the loss will in turn affect many lively hoods from locals on the island who depend on the manta ray tour for their income.

**HUMAN POPULATION INCREASES LINKED DIRECTLY TO CORAL DEATH**  
**Does this EIS have any reports on their resort adding to the population increase that happens during IRONMAN?**

"On average, each Ironman racer brings three people with them to the Big Island. Counting members of the media, VIPs who come from around the globe to watch and the triathlons partners, there likely be more than 6,300 people descending on Kona..." <https://bigislandnow.com/2023/10/07/ironman-2023-in-kona-shines-spotlight-on-some-of-best-women-triathletes-in-the-world/>

And "Resident dissatisfaction with tourists is multifaceted: **The overwhelming majority (92%) of locals felt visitors were not educated enough on protecting Hawaii's natural environment and local resources; other factors include the impact of the vacation rental industry and ignorance of the residents' quality of life.**" <https://www.ironman.com/culture/news/kona-locals-ask-ironman-visitors-for-respect/>

**Where are the EIS reports on human density? Below are reports that show human population destroys coral reefs.**

"The number of people living on the coasts has rapidly increased in recent decades, causing significant development of coastal areas. Coastal development can negatively impact the ocean through the destruction of coastal marine habitat and through runoff of sediments and pollution.

-Coastal development involves activities such as the creation of harbors, stabilization of shorelines, and aquaculture that involve the destruction of sensitive marine habitats such as mangroves, coral reefs, and seagrass beds.

-Coastal development may cause the runoff of sediments into coastal habitats, which can smother corals or seaweeds and reduce the amount of light available for

photosynthesis. Losses of primary producers and important habitat-forming species such as corals can negatively impact entire food webs."

The above information was taken from the Education Development Center, INC, from their Coastal Development page called Ocean Tracks <https://oceantracks.org/library/human-impacts/coastal-development#:~:text=Coastal%20development%20may%20cause%20the,negatively%20impact%20entire%20food%20webs.>

There is nothing Kamehameha Schools can do to their development that can stop the guests of this possible Bungalow Resort from going to Keauhou Bay. **Human traffic WILL seriously increase if this resort is allowed to be built and the marine life will be negatively affected by it.** Marine life will suffer from this development as stated in this letter in many different scientific reported articles.

If you allow this resort the amount of people in this bay will fully increase and, "Hawaii's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally, management of the resource should balance the needs of different user groups, but the welfare of the marine environment on which its inhabitants depend must be the most important consideration." This was taken from Hawaii's own Division of Aquatic Resources <https://dlnr.hawaii.gov/dar/marine-managed-areas/hawaii-marine-life-conservation-districts/#:~:text=Snorkelling%20and%20SCUBA%20diving%20are,effect%20on%20nearshore%20fish%20populations.>

**It's Been Proven an Increase in Human Population Destroys Coral Reefs**

If a Bungalow Resort is allowed to be built in Keauhou Bay, it will bring a serious increase in human traffic. **"Easily visible trends in human population dynamics combined with well-established and tested ecological theory give a clear, intuitive, yet quantifiable guide to the severity of survival challenges faced by coral reefs.** Management challenges and required actions can be clearly shown and, contrary to frequent claims, no scientific ambiguity exists with regard to the serious threat posed to coral reefs by humankind's continued numerical increase." This is in the article by National Library of Medicine National center for Biotechnology Information

PubMed. <https://pubmed.ncbi.nlm.nih.gov/33293007/#:~:text=Denser%20coastal%20populations%20and%20greater,to%20more%20runoff%20and%20siltation.>

This article is by ABC NEWS, **"This is how tourists are destroying coral reefs in Hawaii. The less people at a certain site, the more coral there are, the research found.** The millions of tourists who flock to the shores of Hawaii every

year are wreaking havoc on its natural environment -- especially the coral reefs, which are at risk all over the world, a new study said. The most popular coral reefs on the Hawaiian islands are likely being degraded by the very visitors they attract, according to a study published Monday in Nature

Sustainability." <https://abcnews.go.com/US/hawaiian-coral-reefs-degrading-popular-tourist-sites-scientists/story?id=96308858#:~:text=The%20less%20people%20at%20a,there%20are%2C%20the%20research%20found.&text=The%20millions%20of%20tourists%20who%20will%20live%20new%20study%20said>

By allowing this development you are stressing an already fragile Eco-system. The small bay is currently used by many locals for boating, fishing, canoeing, paddle boarding, snorkeling, manta night dives, surfing, and swimming. We know, and research shows, that more people cause more damage. The area simply cannot afford or support this development.

**"Denser coastal populations and greater wealth will lead to reef degradation by coastal construction.** Denser populations inland will lead to more runoff and siltation. Effects of human perturbations can be explored with meta-population theory since they translate to increases in patch-mortality and decreases in patch-colonization (= regeneration). All such changes will result in a habitat with overall fewer settled patches, so fewer live reefs." This information was taken from Science Direct <https://www.sciencedirect.com/science/article/abs/pii/S0065288120300328#:~:text=Aquaculture%20will%20alleviate%20some%20fishing,t%20more%20runoff%20and%20siltation>.

Another article by Nature Sustainability, **"Coral reefs and coastal tourism in Hawaii Coral reefs are popular for their vibrant biodiversity.** By combining web-scraped Instagram data from tourists and high-resolution live coral cover maps in Hawaii, we find that, regionally, **coral reefs both attract and suffer from coastal tourism.** Higher live coral cover attracts reef visitors, but that visitation contributes to subsequent reef degradation. Such feedback loops threaten the highest quality reefs, highlighting both their economic value and the need for effective conservation management." [https://www.nature.com/articles/s41893-022-01021-](https://www.nature.com/articles/s41893-022-01021-4.epdf?sharing_token=wsakgQNhaJhjJAnWAg453tRgN0jAjWl9jnR3ZoTv0PyGzA5Jc_H001zcHNIP3ASnhcgKRy6_vKLpW49dbmBYoX5g3YIMgQIGBZsapdGUH7O15Lbu9x5Pr3xED4KxI4T0sJlvqQ1a72ZRT3rUbraxpodJd2AoNlSmW5uxB7JjEDdpJj8OGJpX71TJWdCFxvFKJIZjYeNdcJj35w_dnaUg5lZlhcjPBBDImmaH15ygT5Q%3D&tracking_referrer=abcnews.go.com)

## INFRASTRUCTURE AND RESOURCES ON AN ISLAND ALREADY HIGHLY IMPACTED AND STRUGGLING FOR ANSWERS

**Has the EIS done any research or reports on the Resources and Infrastructure it will need for a bungalow resort?**

There are many big housing developments currently under construction in Kailua Kona, Waikoloa Village, Hilo, Puna, Ocean View and Volcano. The entire Big Island has construction projects already in progress.

**Has Kamehameha Schools EIS done any kind of reports or surveys to know if Big Island has the Resources and Infrastructures for their resort development?**

"Hotel waste management refers to all the practices and processes that hotels implement to handle and dispose of the multiple types of waste generated on their premises. **Worldwide, hotels produce almost 300,000 tonnes of waste each year.**" <https://www.homebiogas.com/blog/hotels-waste-management/>

As of now, the Big Island's Resources and Infrastructure are having serious negative issues and many more developments that have been approved are not even completed as of yet, which means our island's resources and infrastructure will be taxed even more severely in the near future.

Please read the below articles that prove Big Island does not have the resources or infrastructure for a 143-Unit Bungalow Resort Development at Keaouhou Bay. On Hawaii's Island, we are already struggling to meet the increasing need for resources and infrastructure.

**Big Island Now poll No. 27 results: More than one solution needed to help extend life of West Hawaii's landfill**

September 17, 2023

The West Hawaii Sanitary Landfill, the only remaining landfill on the Big Island, is forecast to reach capacity within the next 20 to 25 years.

The West Hawaii landfill became the island's only one after the Hilo Landfill closed three years ago. It only has about 20 to 25 years left before it can no longer be used to store rubbish.

<https://bigislandnow.com/2023/09/17/big-island-now-poll-no-27-results-more-than-one-solution-needed-to-help-extend-life-of-west-hawaii-landfill/>

**A County commission drafts ordinance aiming to ban recyclables at West Hawaii's landfill**

By Megan Moseley September 6, 2023

Hawaii County's Environmental Management Commission is developing an ordinance that aims to prohibit the amount of recyclable materials ending up in the island's only working landfill.

During a commission meeting on July 26, Ramzi Mansour, Hawaii County Director of Environmental Management, told commissioners the West Hawaii Sanitary Landfill only has 20 to 25 years left before it reaches capacity.

With the Hilo Landfill permanently closed in 2020, the clock is ticking for the island's sole dump. Commission chairperson Georjean Adams said it's a good time to start looking into solutions.

Adams said the proposed ordinance is in its early stages and is more about getting the conversation started about how to prevent unnecessary, or recyclable items — green waste, metals, plastics, paper, paperboard and glass — from ending up in the rubbish dump, located off Queen Kaahumanu Highway in Waiakōloa.

"Trying to site a new landfill is close to impossible," Adams said. "So what are we going to do? So I was looking around, and the commission agreed, to look deeply into the idea of diverting the recyclables out and at least slow the filling up of the landfill."

The proposed ordinance refers to the 2019 Integrated Solid Waste Management Plan that commits the county to "divert, as much as feasible, commercial and municipal solid waste, including but not limited to green waste, metals, plastics, paper, paperboard, and glass to help achieve goals related to climate resiliency, renewable energy, sustainable agriculture, and zero waste."

<https://bigislandnow.com/2023/09/06/new-draft-ordinance-aims-to-ban-recyclables-at-west-hawaii-landfill/>

### **Time's Up For Landfills**

'Gentle' demolition strategies can help preserve resources  
PAULA BENDER April 2, 2024

As Hawaii government officials grapple with the challenge of limited landfill space statewide, federal restrictions set in place by the Environmental Protection Agency are ruling out possible locations that were once considered for new landfills. Hawaii Act 73 states landfills must be located at least half a mile from residential areas; are prohibited from being located in areas with heavy rain and steep slopes, as well as agricultural and/or conservation lands; above aquifers; 300 feet beyond streams; and 1,000 feet beyond the ocean.

New landfills are also now prohibited from being created in tsunami inundation zones, 100-year flood zones and wetlands. There are also concerns that landfills near

airports will attract birds, resulting in damage to aircraft and fatalities among pilots and passengers.

The City & County of Honolulu is in the process of identifying its next landfill and it doesn't want one any bigger or more active than absolutely necessary.  
<https://buildingindustryhawaii.com/2024/04/times-up-for-landfills/>

### **Drought Conditions On Hawaii Island Prompt Water Supply Message**

by Big Island Video News  
on Oct 5, 2023 at 3:59 pm

(BIVN) - With moderate to severe drought conditions being reported across Hawaii island, local water department officials issued a statement this week on the need for customers to use drinking water wisely.

Most of Hawaii island is under "Moderate Drought" conditions, according to the latest information from the U.S. Drought Monitor. There is an area under

"Abnormally Dry" conditions in South Kona, however there are other, small pockets on the Big Island that are under "Severe Drought". There is even a small spot of "Extreme Drought" in the South Point area of Ka'u.

"The National Weather Service's forecast calls for the existing drought conditions to expand over the entire island and intensify over the upcoming months due to the ongoing El Niño event," reported the Hawaii County Department of Water Supply. "Peak dryness is expected to occur from around January through February 2024. The El Niño event will likely persist well into spring 2024."

### **From a Water Supply news release:**

<https://www.bigislandvideonews.com/2023/10/05/drought-conditions-on-hawaii-CA%BBi-island-prompt-water-supply-message/>  
U.S.

**Hawaii is "on the verge of a greater catastrophe," locals say, as water crisis continues**

By Li Cohen

Updated on: April 11, 2024 / 8:23 AM EDT / CBS News

And recent years have seen compounding problems: less rain, leading to significant droughts, and repeated jet fuel leaks and PFAS chemical spills contaminating water systems. All of this significantly limits available water use for locals, many of whom say tourism is only worsening the situation. Just months ago, the world's largest surfing wave pool opened up on the island — filled with freshwater.

"They're not using it to drink or to support life, they're using it to make money. They're commodifying it," said Healani Sonoda-Pale, who is Native Hawaiian and a

member of advocacy group O'ahu Water Protectors. " ... We are on the verge of a greater catastrophe."

**"We are in a water crisis, that has to be made very clear,"** Wayne Tanaka, director of Sierra Club of Hawai'i, told CBS News, saying that if the reasons for this crisis aren't soon addressed, "We may come to a point where we have to decide ... who gets water and who doesn't."

<https://www.cbsnews.com/news/hawaii-water-crisis-climate-change/>  
Because this is an island, parts need to be shipped. The power plant currently has generators that are not working, and because of this (and other reasons), the Big Island needs to seriously conserve power so that everyone will have power. If this problem of shipping parts can happen once, it can and will happen again.

#### **UPDATE: HELCO asks for continued energy conservation**

BY SPECTRUM NEWS STAFF HAWAII ISLAND  
UPDATED 6:28 PM ET APR. 16, 2024 PUBLISHED 9:05 AM ET APR. 15, 2024  
HILO, Hawaii — Hawaiian Electric continues to urge Hawaii Island customers to reduce their electricity use to prevent the need for rolling outages.

In a news release Tuesday afternoon, the utility stated that Monday saw a reduced demand of approximately 5 megawatts. That, combined with increased wind and solar battery storage prevented the need for rolling blackouts on Monday. HELCO credited conservation efforts, particularly those by large businesses and government customers, for the reduction in electricity demand.

"We're grateful for our customers' efforts to conserve electricity, especially between 5 to 9 p.m., when electricity use is highest, because it does make a difference," said Hawaiian Electric spokesperson Kristen Okinaka. "By working together, we're helping to ensure that enough power can be available for all customers and prevent or minimize the impacts of rolling outages."

**Hawaiian Electric announced Monday afternoon that it may initiate rolling outages in parts of Hawaii Island because of the unavailability of several generators and lower than normal wind and solar resources.**

In a news release, the utility said that outages could start as early as 6:30 p.m. and rotate around the island for 30-minute intervals. The impacted areas and the timing of the outages will be based on wind generation and the amount of electric demand that needs to be reduced. Individuals who are dependent on electrically powered life support medical equipment are advised to arrange for a backup power supply. The outages are being done to prevent power loss to even more customers, who are all being asked to conserve electricity throughout the month.

<https://spectrumlocalnews.com/hi/hawaii/news/2024/04/15/heco-customers-on-hawaii-island-asked-to-conserve-power->

#### **Big power supply problems continue to plague Hawaii Island**

Apr 8, 2024

The company has been facing an unusual situation with mechanical problems at three of the island's five largest power plants while part of the largest plant undergoes an annual overhaul. All four of these affected power plants are owned by the utility or an affiliate of its parent company.

Also contributing to the trouble is lower output from a geothermal plant, which has the third-largest generation capacity on the island and is owned by an independent operator.

"This is an unusual situation, driven mainly by the unavailability of several large generators that have experienced mechanical problems, are at reduced output, or are undergoing maintenance," Hawaiian Electric said in its March 25 announcement asking customers to use less electricity, especially on weekdays from 5 to 9 p.m. **The company explained that it faces an "extremely tight" supply of power at peak use periods,** especially when production from wind, solar and hydroelectric facilities is lower than normal. Those sources of variable, renewable energy can supply up to 15% of electricity needs on the island.

"Without enough supply to meet electricity demand, the company may initiate rolling outages of up to an hour around the island," the March 25 announcement said.

<https://energycentral.com/news/big-power-supply-problems-continue-plague-hawaii-island>

#### **Hawaii Island customers urged to reduce electricity use through April**

BY SARAH YAMANAKA HILO PUBLISHED 9:00 AM ET MAR. 26, 2024

What You Need To Know

-Hawaii Island customers may see alerts asking them to conserve energy, especially on days when there isn't much wind that generates up to 15% of electricity

-When alerts are issued, Hawaiian Electric is asking customers to take immediate action to minimize electricity use

-Even when no alerts are issued, customers — including hotels and large retailers — are urged to reduce electricity use as much as possible, especially between 5 and 9 p.m. on weekdays

**-If there is not enough electricity to meet demand,** Hawaiian Electric may initiate rolling outages of up to an hour around the island

<https://spectrumlocalnews.com/hi/hawaii/news/2024/03/25/hawaii-island-customers-urged-to-reduce-electricity-use-through-april>

### **FURTHERMORE: TRAFFIC, LACK OF RESOURCES, AND FATALITIES A Resort Development WILL Increase Traffic on Already Severely Trafficked Roads. Are there traffic study reports for this EIS?**

A development with 150 rooms comes with over 150+ cars. Employees, guests, and visitors will all have cars, plus the regular locals who go there to paddle and enjoy the bay. All this could range in over 300 cars a day because of this resort development. The Big Island already has a serious traffic issue due to a lack of infrastructure. This is in part due to poor planning, and in part due to geography challenges. The articles below by different NEWS companies highlight the point that many traffic issues stem from lack of infrastructure and resources. Adding more cars to the road by building another resort in an area that is already stressed, will only increase the already mounting problems with traffic.

This NEWS article by Hawai'i News Now, "Report shows alarming surge in Hawaii Island traffic deaths The Hawaii Police Department's Traffic Services Section released a new report showing a dramatic increase in both major crashes and fatal accidents from last year.

The startling statistics show a dramatic increase in the number of year-over-year traffic fatalities on the Island of Hawaii, revealing major crashes are up more than 12% and traffic fatalities are up more than 100%." Watch the video on their link below as it is a professional report on Big Island traffic problems.

<https://www.hawaiinewsnow.com/2024/05/18/new-report-shows-hawaii-island-traffic-fatalities-are-up-over-100-last-year/>

With more tourists there will be more accidents, more traffic, and more traffic deaths. Please read this article by KHON 2 NEWS, "**Hawaii Island has most traffic fatalities in state**. This time last year Hawaii Island was at five traffic deaths, as of April 1, 2024, they're at 14.

Seven of which happened in the last two weeks.

Chief Moszkowicz said the police force is small compared to the size of the island and response times can take 15 to 20 minutes.

**"We don't have the resources like in the small space of Oahu where you can saturate an area to control speeding, that just doesn't exist here,"** he added."

<https://www.khon2.com/local-news/7-traffic-fatalities-for-hawaii-island-in-march/>

**The traffic on Big Island has increased drastically and safety issues and infrastructure needs to be addressed before adding more resort developments.** Please read this article because what it says about Oahu is a mirror for Big Island. The traffic problems they discuss are the same issues here on Big Island; and it also gives one Big Island example, "On the Big Island, the mayor had to issue an [emergency order shutting down Waipio Valley Road](#) due to overuse and poor prior maintenance." This is happening all over Big

Island. <https://www.civilbeat.org/2024/02/angry-over-island-traffic-jams-lets-talk-about-solutions/>

The news video below shows aerial footage in Hilo. The footage shown is the same thing that is happening on Alii Drive and Queen K Highway, and for all the same reasons: **All of these roads only have two lanes!**

There are two developments already on Alii Drive being built as of today; and more are scheduled for this road in the near future. Alii Drive and Queen K Highway are the roads Kamehameha Schools Bungalow Resort will be using if approved, and they are already seriously congested.

These roads have the exact same traffic congestion as Hilo, with the exact same problems. Traffic is extremely slow because of so many people who now live here and all the visitors that come yearly.

In addition, the concern on Kona side is tsunami evacuations rather than lava

evacuations. In this kind of traffic, not everyone will be able to get to safer ground, especially if you allow another resort to be developed in this area when traffic is already at a crawl every weekday and often on weekends as well.

Here is the news article by KITV NEWS that highlights the traffic issues discussed above: "Hawaii Island traffic jams could have safety impact. In the event of an evacuation, Mayor Mitch Roth acknowledges that will make the Traffic Jam up even worse. But says, he is working with The State on a solution." [https://www.kitv.com/news/local/hawaii-island-traffic-jams-could-have-safety-impact/article\\_b06a5374-5a6a-11ed-8d23-8313ef8c4c19.html](https://www.kitv.com/news/local/hawaii-island-traffic-jams-could-have-safety-impact/article_b06a5374-5a6a-11ed-8d23-8313ef8c4c19.html)

There was a crash recently on Alii Drive (see video below). When there is an accident on Alii Drive, it turns the already small two-lane road into only one lane that requires a flagger to help direct traffic. Kamehameha Schools wants to add a resort on this tiny road that will increase the traffic by hundreds of cars.

Here is the Island News video on the crash on Alii

Dr. <https://www.youtube.com/watch?v=-FQ5snPBjI8>

**Please see from these articles that traffic on Big Island is deadly already and adding another resort will be devastating to the island.**

**Read this Path article, HAWAII COUNTY'S VISION ZERO INITIATIVE:**

A motorcyclist is in critical condition after a collision with a car. A driver accidentally hits and kills a pedestrian. It seems that not a day goes by without the news reporting on a traffic crash on Hawaii Island...

Here are some other statistics that are even more staggering:

-28% of roadside crashes were the result of someone leaving the roadway and going into barriers or trees

-13% of pedestrians hit at 20 mph actually suffer fatality

-73% of pedestrians hit at 40 mph suffer fatality

-25% of fatal crashes were the result of distracted driving... So PLEASE put those cell phones away and pay attention to the road!

-56% of fatal crashes were the result of alcohol or drugs

-41% of fatal crashes occurred in light trucks and vans

-49% of crashes occur during the day, outside of peak traffic hours

-Of all the crash fatalities, most were males between 20 to 24-years old.

**"That's just Big Island traffic,"** is a common sentiment. But what if we didn't have to accept this endangerment of vehicle drivers, motorcyclists, and pedestrians as a way of life?"

This was taken from Path <https://pathhawaii.org/hawaii-countys-vision-zero-initiative/>

#### 18) **Hawai'i Water Supply Closely Monitored As Severe Drought Continues**

by Big Island Video News  
on Nov 6, 2023 at 3:28 pm  
(BIVN) - With an ongoing drought on the island of Hawai'i, the Hawai'i County Department of Water Supply says it is closely monitoring its 23 public water systems, with a "special focus" placed on the South Kohala Water System.  
<https://www.bigislandvideonews.com/2023/11/06/water-supply-closely-monitored-as-hawaii-ca%BBi-under-severe-drought/>

This is a map of Power Outages on the Big Island. This map wouldn't have been created if Power Outages were not a problem. <https://www.hawaiianelectric.com/safety-and-outages/power-outages/hawaii-island-outage-map>

homes, give Tax Breaks to all homes that provide solar and/or wind turbine to there to help with power issues on the island.

19) **"Hawaiian Electric is reporting that several large generators on the Big Island are experiencing a range of issues and may lead to the need for rolling outages if supply does not meet demand."**

[https://www.reddit.com/r/BigIsland/comments/1bnuar3/hawaiian\\_electric\\_is\\_reporting\\_that\\_several\\_large/?rdt=52660](https://www.reddit.com/r/BigIsland/comments/1bnuar3/hawaiian_electric_is_reporting_that_several_large/?rdt=52660)

20) **"Hawaiian Electric asking Big Island customers to conserve power due to down generators**

March 25, 2024 - 11:49 AM HST

According to the utility company, this is an usual situation as the large generators are experiencing mechanical problems resulting in a reduced output. The largest generator, an independent power producer that sells electricity to Hawaiian Electric, is offline with significant mechanical issues.

The plant generates 60 megawatts or nearly one-third of the typical peak demand of 180 megawatts on the island."

<https://bigislandnow.com/2024/03/25/hawaiian-electric-asking-big-island-customers-to-conserve-power-due-to-down-generators/>

All the articles above show that a resort development will further deplete and stress resources and infrastructure on an island already struggling. There are years of new development that have already been approved but not completed. It is not responsible or prudent to continue to develop this resort under these current conditions.

#### **HISTORICAL AND CULTURAL SIGNIFICANCE:**

##### **The Law of the Splintered Paddle**

Hawaiian history tells us that young Kamehameha was once an aggressive chief. The story goes that the young chief even chased after two fishermen in a Puna fishing village. While pursuing them, his foot got stuck in a crevice, and one of the fishermen struck Kamehameha over the head with his paddle in defense, which splintered into pieces.

After the incident, Kamehameha recognized that it was wrong to misuse his power and learned compassion. Years later, Kamehameha declared a new law "Ke Kānāwai Māmalahoe" or "the Law of the Splintered Paddle." Meant to protect the innocent and vulnerable from unprovoked attacks, this law proclaimed that the defenseless, especially kupuna and keiki, be able to sleep safely on the side of the road, unharmed. The law provided for the safety of non-warriors during wartime and became the first written law of the Kingdom of Hawai'i. After being added back in 1978, **the law is part of Hawaii's State Constitution today.**

It is symbolic of servant leadership, reinforcing the importance of:

- Caring for and serving one's people
- Knowing and doing what is pono (right)
- Standing for the principle that leadership privilege is earned
- Taking kuleana (responsibility) for those we serve
- Doing so with compassion, love, and respect

**"We take that to mean that anyone who uses our roadways should be able to do so without fear of harm," explains Tina."**

**The Law of the Splintered Paddle is also on Kamehameha Schools website.** The historical value of this law should be enough to help make Big Island roads become safer, and not adding to the traffic and issues of our already dangerous roads. <https://www.ksbe.edu/article/the-lessons-of-the-law-of-the-splintered-paddle-ring-true-200-years-after-k>

**Does this EIS have any reports about how this development will safely add to the land fill on Big Island, and are there reports proving the island has enough water for another big resort, what about reports on how much power this resort**

**will use because the Big Island already has serious resource and infrastructure issues.**

## **IN CONCLUSION**

The articles cited in this letter, many by some of the most esteemed scientists in the world, show with clarity that allowing this development is going to cause devastating, lasting, effects on the Eco-system in Keaouhou Bay and "The **Endangered Species Act of 1973 (ESA)** or "The Act": 16 U.S.C. § 1531 et seq. **is the primary law in the United States for protecting and conserving imperiled species.**

Designed to protect critically imperiled species from extinction as a "consequence of economic growth and development untempered by adequate concern and conservation", the ESA was signed into law by President Richard Nixon on December 28, 1973. The Supreme Court of the United States described it as "the most comprehensive legislation for the preservation of endangered species enacted by any nation".<sup>[1]</sup> [https://en.wikipedia.org/wiki/Endangered\\_Species\\_Act\\_of\\_1973](https://en.wikipedia.org/wiki/Endangered_Species_Act_of_1973)  
This location, currently acting as a natural filter, is especially vulnerable due to having a golf course on one side and a natural treasure like Keaouhou Bay on the other. This land **MUST** be conserved in order to keep Keaouhou Bay safe for all the marine life to be able to live there for years to come.

In addition to the natural disaster this will cause, Hawai'i Island is already having serious infrastructure and resource issues that have yet to be solved. These issues **MUST** be solved before considering another resort development on Big Island. We need to work in harmony with the land and the people before pushing forward with new developments, especially in sacred and special places like Keaouhou Bay, the birthplace of King Kamehameha III. Keaouhou Bay is a small, fragile Eco-system, that is already pressured by boating, golfing, population issues, and hotels that are all around the entire bay.

The trees that currently stand on the land that is threatened to be developed clearly protects the marine life and environment from further damage. The location is **NOT** suitable for this kind of development for both environmental and infrastructure reasons.

The cost of what stands to be lost is far too high to allow this to happen. Please save Keaouhou Bay's marine life and help the island's resources by saying **NO** to a Bungalow Resort built by Kamehameha Schools.

Please reject this EIS because Kamehameha Schools has **NOT ACKNOWLEDGED OR ASKED** thousands of Hawaiians, or Hawaiian Descendants from Keaouhou Bay how they feel about developing this land, Keaouhou Bay.

They have asked **ONLY** a few families on an island that has thousands of Hawaiian people and here is video testimony from Kupuna Kumu Lily Kong who is a Keaouhou Bay descendant and her and her mother **OPPOSE DEVELOPMENT!**  
<https://vimeo.com/994680462>

Kupuna Kumu Lily Kong who was born in Keaouhou Bay and she states that she is against development. She also states that her mother was against development as well. Please listen to her words in her testimonial video about Keaouhou Bay on this link and know that this proves that descendant directly from Keaouhou Bay **OPPOSE THIS DEVELOPMENT** <https://vimeo.com/994680462> and it is **CULTURAL LAW THEY MUST BE HEARD AND ACKNOWLEDGED!**

These laws were created, "After these legal victories, the Kohanaiki 'Ohana worked to create a new law in the state of Hawaii to require Cultural Impact Statements along with Environmental Impact Statements for all future large-scale development. Act 50, the Cultural Impact Statement Law was adopted in 2000."  
<https://kohanaikiohaha.org/legal-victories>

Kupuna Kumu Lily Kong also states that there are burial grounds on the land that Kamehameha Schools wants to clear and it is told that Kamehameha Schools has bulldozed sacred land in the past and Keaouhou Bay's burial grounds **MUST BE RESPECTED AND NOT DISTURBED!**

Hawaiians locals have said that there were bones in the small cave that is at the base of Keaouhou Bay. These burials need to take priority over a Bungalow Resort Development.

There are over 6,219 signatures as of Aug. 5th (these signatures grow daily) and these signatures are Hawaiians, locals and tourist and some of these Hawaiians have left comments on why they are opposing this development.

**ALL OF THESE PEOPLE HAVE A RIGHT TO BE ACKNOWLEDGED AND THEIR VOICES HAVE VALUE TO BE HEARD, THESE PEOPLE MATTER AND IT IS CULTURAL LAW THEY MUST BE ACKNOWLEDGED!**

Here is the petition link with thousands of Hawaiian signatures and comments opposing Kamehameha Schools Bungalow Resort Development. Please read these signatures and comments! [https://www.change.org/p/save-keaouhou-bay-from-becoming-a-big-crowded-resort?utm\\_source=share\\_petition&utm\\_medium=custom\\_url&recruited\\_by\\_id=92a53560-1e91-11e5-b4ef-b94e90cedbdd](https://www.change.org/p/save-keaouhou-bay-from-becoming-a-big-crowded-resort?utm_source=share_petition&utm_medium=custom_url&recruited_by_id=92a53560-1e91-11e5-b4ef-b94e90cedbdd)

Please reject this EIS because under Princess Bernice Pauahi Bishop's Will it states Kamehameha Schools are her trustees and they have a "fiduciary duty" to do what is best for THEIR BENEFICIARIES (the Hawaiian people's) and a Bungalow Resort is BEST FOR TOURISTS NOT THE HAWAIIAN PEOPLE BECAUSE THOUSANDS OF HAWAIIAN PEOPLE SINGED THE ABOVE PETITION OPPOSING KAMEAHMEHA SCHOOLS BUNGALOW RESORT.

Please reject this EIS because the Big Island DOES NOT HAVE THE RESOURCES TO PROVIDE FOR ANOTHER BIG RESORT ON ISLAND and there are 445 signatures with many comments that agree with this fact because of the factual reported articles in the [Help Prioritize Big Island Developments to Keep Island's Resources Safe for ALL petition](https://www.change.org/p/help-prioritize-big-island-developments-resources-safe-for-all). Please read this petition, all the signatures and comments <https://www.change.org/p/help-prioritize-big-island-developments-to-keep-island-s-resources-safe-for-all>

**Categories:** Green Category  
1.  
**Keaouhou Bay**

To whom it may concern,

Please reject Kamehameha Schools EIS for Keaouhou Bay to become a Bungalow Resort. This is a VERY small bay and the added footprint of a 105 room Resort, that will include excess traffic, will have a **serious negative impact** in Keaouhou Bay.

Please, Do NOT risk polluting the water in Keaouhou Bay by allowing Kamehameha Schools to develop their bungalow resort project. Research has shown that developments pollute nearby waters constantly during development and after.

Developments have ALWAYS polluted the water in every near coastal development area. An article entitled, "What is the biggest source of pollution in the ocean?" by NOAA, National Oceanic and Atmospheric Administration, states, "When large tracts of land are plowed, the exposed soil can erode during rainstorms. Much of this runoff flows to the sea, carrying with it agricultural fertilizers and pesticides." It also states, "Eighty percent of pollution to the marine environment comes from the land. One of the biggest sources is called, nonpoint source pollution, which occurs as a result of runoff."

The trees you want to take down keep the runoff pollution from the golf course from going into the Bay. According to the National Library of Medicine, in their article, "Putting the Earth in Play: Environmental Awareness and Sports," shares that the golf industry uses **approximately 50 pesticide active ingredients**, including chlorpyrifos—an insecticide that is banned for residential use by the EPA due to developmental hazards. These pollutions and more are **being held off** from running into the Bay by the very trees you want to take down.

Let's not forget the marine life that will be threatened by excess pollution and traffic. Keaouhou Bay is the monk seals and the green sea turtle's habitat. More pollution and people will endangered these species.

This Bay is worth protecting. Please do not put a resort in such a small area. Future generations will be deprived of what it currently is, and it could never be replaced.

Kind Regards,  
Alexis Wilson Russell

## Jacquelin Sabin

Keauhou bay should be preserved without further development, for the sake of its historical, cultural and natural significance. As a local residence within a couple miles of the intended site, there is zero positive impact to be gained for the people of Keauhou.

"THE MORE PEACE THAT IN US, THE MORE PEACE THERE WILL ALSO BE IN OUR TROUBLED WORLD." Ety Hillesum

Jan Salerno

July 25, 2024

County of Hawai'i, Planning Department

Aloha,

I write this letter in support of the Keauhou Bay Management Plan.

I have been a resident of Kailua-Kona, Hawaii since November 1963 and my father ran the boat dock at Keauhou Bay throughout the 1960's as well as moored his boat in Keauhou Bay.

I admire the insight to move the commercial activities out of the bay and over to a new section to ease both the traffic, while enhancing the historic and cultural value of the deep Hawaiian Culture that has long been missing in the bay over time. To bring these historic sites, such as the Holua Slide, the Kamehameha Birthplace marker and Mo'ikeha Cave, and Ka 'ili 'ilimehe Park as preserved points of interest is much needed. These treasured places must be saved and revered.

I fully support the efforts that Kamehameha Schools is taking in this very well thought out plan for Keauhou Bay and see how it will only enhance safety, pleasure, and understanding of its cultural significance for both residents and visitors to the area.

Mahalo,

Nancy Sakamoto

They want to take down all the trees on the right side that are between the bay and the golf course, and keep the golf course pollution out of the bay, and put the resort there!

Subject: Kamehameha Schools EIS Draft For Keauhou Bay WILL HAVE NEGATIVE IMPACT!

Attn: Kawika McKeague, Principal Planner  
Group 70 International, dba G70  
111 S. King Street Suite 170  
Honolulu, HI 96813

Aloha Mr. McKeague:

I am providing these written comment pursuant to the Keahou Bay Management (KBM) Plan Environmental Impact Statement (EIS) Notice; KBM Plan dated March 2022. Issued by Kamehameha Schools Bishop Estates (KSBE) Applicant.

My husband, Brian, and I are community members of the Bayview Estates of Keahou, a subdivision whose community borders the KSBE properties. As neighbors for over a decade, we hold deep respect, appreciation and reverence for KSBE and all that it does for our Hawaii Island Community.

We are also completely aligned/and support the KBM Plan and wholeheartedly support KSBE efforts to build cultural awareness and "ohana" for all.

I am also grateful for the opportunity to comment on the KBM Plan.

With the KBM Plan EIS Notice dated March 2022, it is recommended that Section 3.4.6 Wild Land Fires be updated and revised to reflect wild fire safety mitigation efforts being recognized throughout the state of Hawaii in the aftermath of last summer's August 2023 tragic Lahaina Maui fire. As you are likely aware, the Big Island experienced wild fires along the Kohala Coast as a result of the same wind conditions experienced in the August 2023 Maui fire.

Please note the following comments focused on Section 3.4.6 Wild Land Fires of the KBM Plan/See Section 3.4.6 Wild Land Fires (excerpted):

It is my understanding that the land areas designated in the KBM Plan itself as well as surrounding areas including HI County Ag5 Designated lands owned by KSBA are considered HIGH Fire Risk by HI-County.

With the introduction of new housing and other buildings in the KBM Plan, these new structures will be vulnerable to wild land fires. This new development will also increase the risk of wildfires to neighboring lands and communities, including our in Bayview Estates community.

Shortly after the Maui fire last summer, Bayview Estates created the Bayview Estates Fire Safety Committee of which I am a member. Part of my involvement with the Fire Safety Committee included the following research on wild fire safety which was shared with our Bayview Community members:

PLEASE SEE ATTACHED DOCUMENT FOR RELEVANT LINKS AND REFERENCES IN THE BELOW COMMENTS:

- The primary threat to a home or building during a wildfire is embers and small flames from burning pieces of wood and/or vegetation that become airborne. These airborne embers and small flames can be carried more than a mile causing spot fires and igniting homes and structures as well as debris and other objects along the way.
- Studies have shown that homes/structures ignite due to the condition of the home and everything around the home/structure called the Home Ignition Zone Understanding the Wildfire Threat to Homes: An overview of fire history, fire basics, and how homes burn.

I would like to recommend the following Firewise Safety/Mitigation language be added to the KBM Plan Section 3.4.6 to include:

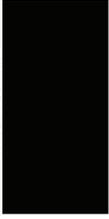

1. Creating a strategy to mitigate potential effects of wildfires on property and risk to lives including developing and adopting Firewise Landscaping/Hardscaping Guidelines for the homes/structures envisioned in the KBM Plan.
2. Forming a Firewise Safety Committee using the Waikaloa Homeowners Association as an example and adopting guidelines which could be added to Section 3.4.6: <https://www.waikoloa.org/fire/>
3. Removing (in partnership with HECO and Kona Country Club golf course) currently inactive HECO powerlines from KSBE

AgFive Designated areas. Efforts are already underway with HECO on other islands to remove inactive HECO lines and the KBM Plan would include the removal of unused, de-engorgized powerlines to mitigate wild fire. <https://www.hawaiinewsnow.com/2024/06/21/popular-east-oahu-hiking-trail-close-heco-crews-remove-unused-power-lines/>

4. Partnering with HECO to identify and remedy risks caused by exposed, active powerlines located on the new KBM Plan including burying lines for new construction.

I am happy to provide any additional assistance in drafting language to include in Section 3.4.6 Wild Fire Safety or otherwise be of service to KSBE and the KBM Plan.

Mehalo  
Leslie Rae Schmitz  

Leslie Rae Schmitz  

June 29, 2024

Attn: Kawika McKeague, Principal Planner  
Group 70 International, dba G70  
111 S. King Street Suite 170  
Honolulu, HI 96813

Aloha Mr. McKeague:

I am providing these written comment pursuant to the Keaou Bay Management (KBM) Plan Environmental Impact Statement (EIS) Notice; KBM Plan dated March 2022. Issued by Kamehameah Schools Bishop Estates (KSBE) Applicant.

My husband, Brian, and I are community members of the Bayview Estates of Keahou, a subdivision whose community boards the KSBE properties. As neighbors for over a decade, we hold deep respect, appreciation and reverence for KSBE and all that it does for our Hawaii Island Community.

We are also completely aligned/and support the KBM Plan and wholeheartedly support KSBE efforts to build cultural awareness and "ohana" for all.

I am also grateful for the opportunity to comment on the KBM Plan.

*With the KBM Plan EIS Notice dated March 2022, it is recommended that Section 3.4.6 Wild Land Fires be updated and revised to reflect wild fire safety mitigation efforts being recognized throughout the state of Hawaii in the aftermath of last summer's August 2023 tragic Lahaina/Maui fire. As you are likely aware, the Big Island experienced wild fires along the Kohala Coast as a result of the same wind conditions experienced in the August 2023 Maui fire.*

Please note the following comments focused on Section 3.4.6 Wild Land Fires of the KBM Plan (excerpted):

### 3.4.6 Wild Land Fires

The greatest danger of fire is where wild land (trees and brush) borders urban areas. Although all the Hawaiian Islands are vulnerable to wild-land fires (especially during the summer months, prolonged drought and/or high winds), the great majority of wildfires are human-caused (intentionally caused or by negligence) and start along roadsides. The numbers of such fires are increasing. Wildfires can and do also occur naturally. Hawaii County has a Fire Prevention Bureau that works to prevent fires before they can cause injuries and property damage. The proposed project will comply with all fire code requirements.

It is my understanding that the land areas designated in the KBM Plan itself as well as surrounding areas including HI County Ag5 Designated lands owned by KSBA are considered **HIGH Fire Risk by HI-County**.

With the introduction of new housing and other buildings in the KBM Plan, these new structures will be vulnerable to wild land fires. This new development will also increase the risk of wildfires to neighboring lands and communities, including our in Bayview Estates community.

Shortly after the Maui fire last summer, Bayview Estates created the Bayview Estates Fire Safety Committee of which I am a member. Part of my involvement with the Fire Safety Committee included the following research on wild fire safety which was shared with our Bayview Community members:

- The primary threat to a home or building during a wildfire is embers and small flames from burning pieces of wood and/or vegetation that become airborne. These air borne embers and small flames can be carried more than a mile causing spot fires and igniting homes and structures as well as debris and other objects along the way.

- Studies have show that homes/structures ignite due to the condition of the home and everything around the home/structure called the Home Ignition Zone [Understanding the Wildfire Threat to Homes. An overview of fire history, fire basics, and how homes burn.](#)

I would like to recommend the following Firewise Safety/Mitigation language be added to the KBM Plan Section 3.4.6 to include:

1. Creating a strategy to mitigate potential effects of wildfires on property and risk to lives including developing and adopting Firewise Landscaping/Hardscaping Guidelines for the homes/structures envisioned in the KBM Plan.
2. Forming a Firewise Safety Committee using the Waikaloa Homeowners Association as an example and adopting guidelines which could be added to Section 3.4.6: <https://www.waikaloa.org/fire/>.
3. Removing (in partnership with HECO and Kona Country Club golf course) currently inactive HECO powerlines from KSBE AgFive Designated areas. Efforts are already underway with HECO on other islands to remove inactive HECO lines and the KBM Plan would include the removal of unused, de-energized powerlines to mitigate wild fire. <https://www.hawaiinewsnow.com/2024/06/21/popular-east-coast-hiking-trail-close-heco-crews-remove-unused-power-lines/>
4. Partnering with HECO to identify and remedy risks caused by exposed, active powerlines located on the new KBM Plan including burying lines for new construction.

I am happy to provide any additional assistance in drafting language to include in Section 3.4.6 Wild Fire Safety or otherwise be of service to KSBE and the KBM Plan.

Mahalo,

---

**From:** Jean Schumer <[REDACTED]>  
**Sent:** Thursday, August 8, 2024 1:43 PM  
**To:** Alex.Roy@hawaiicounty.gov; 221053-01 KS Keaouhou Entitlements  
**Subject:** Kamehameha Schools EIS Draft For Keaouhou Bay WILL HAVE NEGATIVE IMPACT  
**Categories:** Yellow Category

To Whom It May Concern,

Please read the scientific proof in this letter and REJECT Kamehameha Schools Environment Impact Statement (EIS) for Keaouhou Bay to become a Bungalow Resort.

Please state in your report that a Bungalow Resort WILL have a SERIOUS NEGATIVE IMPACT on Keaouhou Bay as stated in all the different researched articles below.

Please, DO NOT risk polluting the water in Keaouhou Bay by allowing Kamehameha Schools to develop their bungalow resort project. It is **scientifically proven** that developments pollute nearby waters both **during and after development**.

Below are scientific articles written by the National Oceanic and Atmospheric Administration (NOAA), Global Coral Reef Alliance, Hawaii Government, and many other professional organizations, that have studied and shown that developments have **ALWAYS** polluted the water in **EVERY** coastal development area.

Does this EIS (Environmental Impact Statement) have any kind of reports and studies on how the endangered species and marine life will handle the extra pollution due to development, and the golf course runoff? Keaouhou Bay is their habitat and this development **WILL be CHANGING an Entire Ecosystem**.

#### **ENDANGERED SPECIES CONSERVATION IMPACTED BY DEVELOPMENT**

In the Endangered Species Act of 1973 Under Section 2 (b), "To provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved." This would be Keaouhou Bay.

The Green Sea Turtle swims in Keaouhou Bay weekly and the monk seal has also been seen swimming and resting in Keaouhou Bay. Both of these marine animals are on the endangered species list.

#### **Endangered Species Act**

"Section 2. Findings, Purposes, and Policy

(4) the United States has pledged itself as a sovereign state in the international community to conserve to the extent practicable the various species of fish or wildlife and plants facing extinction, pursuant to—

(b) PURPOSES.—The purposes of this Act are to provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved, to provide a program for the conservation of such endangered species and threatened species, and to take such steps as may be appropriate to achieve the purposes of the treaties and conventions set forth in subsection (a) of this section."

This was taken from <https://www.fisheries.noaa.gov/national/endangered-species-conservation/endangered-species-ac>

#### **FEDERALLY PROTECTED GREEN SEA TURTLES WILL BE AFFECTED**

The green sea turtle is federally protected and can be seen in Keaouhou Bay weekly.

The following article states: **"POLLUTED RUNOFF IN HAWAII ENDANGERS GREEN SEA TURTLES"**

#### **Why does Hawaii have a runoff problem?**

Historically, in the tropics of Hawaii, precipitation was absorbed into the soil, according to the Clean Water Branch of Hawaii's Department of Health. Any potential pollution or contaminants on the ground surface would get pushed into the soil by the rain, and plant roots and microbes would help break down the pollution into less dangerous components. However, with urban and agricultural development, less and less of the pollution gets pulled into the soil, and more of it gets washed out into storm drains. From there, the pollutants make their way to streams, rivers and the ocean that surrounds Hawaii. According to the state agency, most of these contaminants are nutrients from fertilizer, bacteria from animal waste, oil, garbage and yard waste...

If polluted runoff reaches the ocean, it can wreak havoc on marine life, including endangered green sea turtles." Taken from <https://www.chemservice.com/news/polluted-runoff-in-hawaii-endangers-green-sea-turtles/>

**Allowing this development WILL POLLUTE Keaouhou Bay.** The above article, written in 2014 (because runoff water from developments were polluting the ocean even then!!!) states this fact clearly. Keaouhou Bay is home to countless sea creatures such as the protected green sea turtle, spotted eagle rays, manta rays, octopus, dolphins, fish, coral, monk seals, and more and that will ALL be harmed by the severe pollution runoff that WILL happen **because developments have been shown to ALWAYS pollute the water is that is nearby.**

The Green Sea Turtle is protected by more than one law. "All sea turtles in Hawaii are protected by the Endangered Species Act (ESA) and additionally protected by Hawaii Revised Statutes Chapter 195D (HRS) and Hawaii Administrative Rules (HAR) 13-124." This information was taken from this site <https://dlnr.hawaii.gov/dar/species/sea-turtles/>

## THE ENDANGERED MONK SEAL WILL BE AFFECTED

Keaouhou Bay is known as a RESTING AREA for the ENDANGERED MONK SEAL. If another resort is allowed to be built, in addition to the pollution, it will also bring a lot more people down to Keaouhou Bay. This increases the chances of a resting monk seal being disturbed by humans trying to get close, take "selfie" photos, and being generally uninformed and harmful. Please see article on Selfie Culture and its harmful effects below.

**Has the EIS done any research on what an increased population would do in such a small area, and what will happen to the endangered species that live there? With a significantly increased population their habitat of Keaouhou Bay will likely be changed forever.**

This information is from a NOAA Scientist: **"Study shows selfie culture impacts how people behave when posting images of an endangered species on social media. There's a seal on the beach! Let's go get a 'selfie'!"** That must have been what nearly 18 percent of people on Instagram thought before approaching an endangered species.

In a recent study, NOAA scientists used social media to monitor human activities around endangered Hawaiian monk seals. They discovered that human disturbance is more common than they thought." <https://www.fisheries.noaa.gov/feature-story/endangered-hawaiian-monk-seals-civ-foul-over-selfies>

NOAA clearly states a high population in a place where monk seals and sea turtles habitat can be a serious disturbance for these endangered species.

"Hawaiian monk seals are protected federally by the ESA and the Marine Mammal Protection Act (MMPA), as well as locally by Hawai'i Revised Statutes (HRS) Chapter 195D and Hawai'i Administrative Rules (HAR) 13-124." This was taken from <https://dmr.hawaii.gov/dar/hawaiian-monk-seal/>

**Keaouhou Bay is the monk seals and the green sea turtle's habitat.** Allowing a bungalow resort to be developed in Keaouhou Bay, the habitat of these endangered species, is to threaten their life and habitat with golf course runoff pollution, as well as development pollution. **By threatening their habitat, and hence their lives, this development goes completely against the Endangered Species Act of 1973.**

The verbiage in the Endangered Species Act states, "to conserve". In this case, "to conserve" would be to **protect the land around Keaouhou Bay** from developments that destroy the habitat of these endangered species with pollution and runoff.

**Does this EIS have any reports on the endangered species that frequent Keaouhou Bay? This is their habitat and it needs to be "conserved".**

Under the **Conservation Program** there should be research done on endangered species and their associated ecosystems. A large bungalow resort development WILL FOREVER CHANGE THIS ECOSYSTEM.

"§195D-5 Conservation programs. (a) The department shall conduct research on indigenous aquatic life, wildlife, and land plants, and on endangered species and their associated ecosystems,

and shall utilize the land acquisition and other authority vested in the department to carry out programs for the conservation, management, and protection of such species and their associated ecosystems." [https://www.capitol.hawaii.gov/hrscurrent/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hrscurrent/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm).

Also, under this same Conservation program, "(2) Taking such action as may be necessary to ensure that actions authorized, funded, or carried out by them do not jeopardize the continued existence of threatened or endangered species." [https://www.capitol.hawaii.gov/hrscurrent/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hrscurrent/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm)

Please consider that developing a Kamehameha Schools Bungalow Resort in Keaouhou Bay WILL threaten endangered species due to the unavoidable development and golf course pollution runoff that would be caused by removing the all the trees that currently serving as a natural pollution filter, and replacing the land with housing, cars, humans, and waste. There would also be tremendous runoff damage into Keaouhou Bay and the surrounding area during the building phase of this enormous project.

## GOLF COURSE POLLUTION KILLS MARINE LIFE AND DRASTICALLY CHANGES ECOSYSTEMS

"The golf industry uses approximately 50 pesticide active ingredients, including chlorpyrifos—an insecticide that is banned for residential use by the EPA due to developmental hazards. Having to trim golf turf to low heights also makes it even more vulnerable to pests, which leads to more pesticide use." <https://rainorshinegolf.com/pages/the-environmental-impact-of-golf-courses>

These pesticides will be in the pollution runoff that will enter Keaouhou Bay more severely should the natural habitat of the trees be removed and replaced with pavement. This is unavoidable!

Please read from Wikipedia, "

Most drains have a single large exit at their point of discharge (often covered by a grating) into a canal, river, lake, reservoir, sea or ocean. Other than catch basins, typically there are no treatment facilities in the piping system." [https://en.wikipedia.org/wiki/Storm\\_drain#:~:text=Most%20drains%20have%20a%20single,discharge%20into%20individual%20driv%20wells](https://en.wikipedia.org/wiki/Storm_drain#:~:text=Most%20drains%20have%20a%20single,discharge%20into%20individual%20driv%20wells)

The pavement from this development will cause pollution to runoff into Keaouhou Bay because this treed land that will become a housing development is situated directly between the golf course and the Bay. These trees, which absorb all the pollution from the golf course is the BEST AND ONLY PROTECTION POLLUTION FILTER Keaouhou Bay has from the golf course pesticides, fertilizer and weed killer. See the below paragraph for further references.

See page 2 at: <https://health.hawaii.gov/epo/files/2013/09/Stormwater-MS4-Presentation-HEF-7.15.14.pdf> where **the Hawai'i government states that Natural Ground Cover has 10% runoff, where has development has 55% runoff. So, even if you have storm drains the pavement this development will create will cause more runoff into Keaouhou Bay than the Natural Ground Cover that is has now, that has been protecting the bay from golf course pollution for years.**

**These trees and land are saving monk seals and green sea turtles habitat from the golf course pollution and this land MUST BE PRESERVED and CONSERVED as the natural protector for Keauhou Bay and for these endangered species habitat.**

Under Section 2 (b) of the Endangered Species Act - **Keauhou Bay MUST BECOME A CONSERVATION AREA for these endangered species.** It is currently their habitat, and to allow a large resort development to be built above this bay clearly threatens the lives of these endangered species by allowing golf course toxic pollution and development pollution to run into these species natural habitat of Keauhou Bay.

### **ALGAE BLOOMS KILL CORAL AND MARINE LIFE**

The trees that are slated to be cleared for the development further protect Keauhou Bay from algae blooms that have been proven to be caused by pollution that is runoff from fertilizer and weed killer.

When there is heavy rain the land above the bay has a greater runoff than normal. Without the trees, the runoff from the golf course pollution will pour into the Bay likely causing frequent algae blooms.

**Algae blooms have been shown to kill coral and marine life as stated in the many articles that will follow.**

One of these articles is from the Global Coral Reef Alliance. They have researched the effects on reefs before and after a golf course developments. Though this development is not a golf course development, it is located just below a golf course and exposes the bay to the pollution from the golf course by removing the proven natural filter of the trees and natural ecosystem.

**Has this EIS done any kind of research about the algae blooms that happen after a serious storm because of the golf course runoff pollution?**

This information was taken from Global Coral Reef Alliance and it is an actual study on the how coral and marine life are affected before and after development. It's titled, "Golf courses kill coral reefs and fisheries: harmful algae blooms and disease cause by nutrient runoff from golf course development on Guana Cay, Abaco, Bahamas

Introduction: Bahamas coral reef deterioration

This study is thought the first ever to evaluate the health of coral reef ecosystems and fisheries before and after a golf course development. The vast majority of corals have died from a combination of factors including global warming, new diseases, land-based sources of pollution..

" <https://www.globalcoral.org/golf/courses-kill-coral-reefs-and-fisheries-harmful-algae-blooms-and-disease-caused-by-nutrient-runoff-from-golf-course-development-on-guana-cay-abaco-bahamas/>

If you allow a Bungalow Development in Keauhou Bay you WILL be agreeing to pollute this bay for years to come and COMPLETELY CHANGING and possibly DESTROYING KEAUHOU BAY'S ECOSYSTEM.

Another study by the Coral Reef Alliance titled, "Golf course fertilizer runoff causes nutrient enrichment leading to harmful algae blooms on a Bahamian coral reef.

"...After construction new algae blooms appeared nearest the golf course green, smothering corals in adjacent reefs, along with sharply increased coral diseases..." <https://www.globalcoral.org/golf/course-fertilizer-runoff-causes-nutrient-enrichment-leading-to-harmful-algae-blooms-on-a-bahamian-coral-reef>

**Does this EIS have any studies or reports on the extra runoff pollution due to clearing land and adding pavement?**

This needs to be fully assessed because **you will be changing an entire ecosystem** to build a bungalow resort. It rains in Keauhou Bay many nights out of the year and this kind of pollution will kill the beautiful and necessary coral in the Bay.

**FURTHERMORE:** "If there are [toxic algal blooms](#), like red tide, or man-made contaminants, like pesticides or detergents in the water, those toxins are contained within the bubbles of sea foam. When those bubbles pop, the toxins can become airborne and compromise the air that is breathed in that location." <https://oceanconservancy.org/blog/2023/03/31/what-sea-foam/>

### **ENGINE POLLUTION CAUSES ISSUES IN THE OCEAN**

**Does this EIS have any detailed traffic studies for the increase in cars that will be added to this already severely traffic area they want to build their 150 room bungalow resort in? Have they done any studies on the pollution these cars WILL have in Keauhou Bay?**

Because this Bungalow Resort could have over 150 extra cars and over 300 or more extra people in and out of Keauhou Bay, what traffic and increased population studies have they done? There will be employees with cars, guests with cars, visitors with cars. At times this would range to over 200 cars (likely more), coming in and out of, and parking above Keauhou Bay thereby causing serious car population issues because of all these added cars right next to the bay.

**The article below is from NOAA regarding motor vehicle engines and pollution to the sea.**

What is the biggest source of pollution in the ocean?

Most ocean pollution begins on land.

"Millions of motor vehicle engines drop small amounts of oil each day onto roads and parking lots. Much of this, too, makes its way to the sea.

Some water pollution actually starts as air pollution, which settles into waterways and oceans. Dirt can be a pollutant. Top soil or silt from fields or construction sites can run off into waterways, harming fish and wildlife habitats." <https://oceanservice.noaa.gov/facts/pollution.html#:~:text=Millions%20of%20motor%20vehicle%20engines,Dirt%20can%20be%20a%20pollutant.>

**Land-Based Runoff Remains Top Source of Oil in the Ocean, Says New Report Oil in the Sea: Inputs, Fates, and Effects**

News Release September 28, 2022

WASHINGTON — Oil in runoff, primarily from cities and vehicles, is the top source of oil entering the ocean, says a [new report](#) from the National Academies of Sciences, Engineering, and Medicine. In North American waters, estimated ocean oil pollution from land-based runoff is up to 20 times higher than it was 20 years ago, and oil spills, natural oil seeps, and discharge from oil and gas operations remain major sources of pollution. The report recommends actions that government and others should take to minimize oil pollution, and calls for sustained research funding to better understand how oil reaches and affects ocean environments. <https://www.nationalacademies.org/news/2002/05/oil-in-the-sea-inputs-fates-and-effects#:~:text=WASHINGTON%20%2D%20Neatly%2085%20percent,pipeline%20spills%2C%20sa%20a%20new>

### **The Impact Of Stormwater – Car Emissions**

"Car emissions are not limited to exhaust fumes that contribute to air pollution. They can also leak automotive fluid and release heavy metals that can contribute to stormwater pollution, contaminating local waterways." <https://www.stormwatershepherds.org.au/blog/the-impact-of-stormwater-car-emissions/>

### **NOISE POLLUTION'S HARMFUL EFFECT ON MARINE LIFE**

**Does this EIS have any reports on the noise pollution that will happen and what it could do to marine life in Keauhou Bay during development?**

Because if you allow this Bungalow Resort to be developed you will increase constant noise in this bay for years to come and, "Noise Pollution Research shows that underwater noise from construction, shipping and naval vessels significantly impacts the natural behavior of cetaceans and many other marine species. This can be seen when mass beaching events occur or breeding success is diminished."

The above information was taken from the Ocean Conservation Trust <https://oceanconservationtrust.org/ocean-advocacy/think-ocean/ways-to-think-ocean/>

### **How Does Noise Pollution Harm Marine Species?**

"However, over the past few decades, noise pollution in the marine environment has increased dramatically and is threatening the natural soundscape of the marine environment. Ships, seismic surveys, explosions, construction, and sonar devices have made the once peaceful environment into a loud, chaotic home which is extremely damaging for marine wildlife. This type of pollution is often overlooked in comparison to others but its impacts are now being documented across all types of marine ecosystems." <https://earth.org/noise-pollution-in-the-ocean/>

If you allow this resort the amount of people in this bay will fully increase and, "Hawaii's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally, management of the resource should balance the needs of different user groups, but the

welfare of the marine environment on which its inhabitants depend must be the most important consideration." This was taken from Hawaii's own Division of Aquatic Resources <https://dlnr.hawaii.gov/dar/marine-managed-areas/hawaii-marine-life-conservation-districts/#:~:text=Snorkeling%20and%20SCUBA%20diving%20are,effect%20on%20nearshore%20fish%20populations.>

### **What is ocean noise?**

"Ocean noise refers to sounds made by human activities that can interfere with or obscure the ability of marine animals to hear natural sounds in the ocean.

Many marine organisms rely on their ability to hear for their survival. Sound is a highly efficient means of communication underwater and is the primary way that many marine species gather and understand information about their environment. Many aquatic animals use sound to find prey, locate mates and offspring, avoid predators, guide their navigation and locate habitat, as well as to listen and communicate with each other.

Over the last century, human activities such as shipping, recreational boating, and energy exploration have increased along our coasts, offshore, and deep ocean environments. Noise from these activities can travel long distances underwater, leading to increases and changes in ocean noise levels in many coastal and offshore habitats.

These rising noise levels can negatively impact ocean animals and ecosystems. Higher noise levels can reduce the ability of animals to communicate with potential mates, other group members, their offspring, or feeding partners. Noise can also reduce an ocean animal's ability to hear environmental cues that are vital for survival, including those key to avoiding predators, finding food, and navigating to preferred habitats." <https://oceanservice.noaa.gov/facts/ocean-noise.html>

### **LEARN FROM OTHERS: RUN-OFF FROM DEVELOPMENT KILLS**

The Chesapeake Bay has a foundation that is trying to save their bay due to runoff pollution that was caused by developments. Chesapeake Bay is **a lot bigger** than Keauhou Bay. If it's being drastically hurt by runoff water from developments, Keauhou Bay waters won't stand a chance if development above the bay is allowed. Keauhou Bay is a much smaller ecosystem.

**This Article is by the Chesapeake Bay Foundation, Saving a National Treasure states,** "...runoff is a significant source of harmful nitrogen pollution that continues to grow ...

As rainwater and snowmelt run off our streets, parking lots, lawns, and other surfaces, they pick up pet waste, pesticides, fertilizer, oil, and other contaminants. If the draining water doesn't evaporate or soak into the ground where it can be filtered, it flushes straight into local creeks, rivers, and the Chesapeake Bay, adversely affecting water quality and aquatic life.

Only 10 to 20 percent of rain that falls in forests, fields, and other natural areas runs off, with the rest absorbed by soil and plants, where it is filtered before reaching aquifers or local waterways. (Right now Keauhou Bay has a lot of trees and is very natural, this is what helps stop runoff.) By contrast, close to 100 percent of the rain that falls on concrete and other hard surfaces produces runoff. One inch of rain falling on an acre of hardened surface produces 27,000 gallons of runoff.

Stormwater runoff pollution threatens Chesapeake Bay and its rivers and streams...Polluted runoff is one of the most harmful sources of pollution to the Bay and its waters. And much of it starts right in the urban and suburban neighborhoods where we live." <https://www.cbf.org/issues/polluted-runoff/index.html#:~:text=Besides%20carrying%20pollutants%20that%20harm,them%20are%20placed%20in%20leopardy.>

If that is what runoff is doing to the Chesapeake Bay, the effects of runoff will be even more devastating to Keauhou Bay due to its size and fragility.

### **MANTA RAY HABITAT, CORAL REEF BLEACHING, & MARINE LIFE ~ THE DEVASTATING EFFECTS OF DEVELOPMENT ON THE OCEAN**

**Are there any reports in this EIS about what the impact to the coral, marine life, plankton especially zooplankton will be because of this development?**

The studies below show that developments kill coral, and marine life. Zooplankton are part of this marine life and they are also killed and negatively affected. Zooplankton are food for manta rays. Manta rays are in Keauhou Bay every night to eat zooplankton, and are often seen here during the day as well.

Allowing this bay developed will also be a death sentence for many types of marine life including planktons. There is NO WAY to stop this from happening due to the fact that polluted runoff rain water from developments can't be fully stopped. This has been shown to happen in ALL coastal developments.

Please read the Scientific articles below.

#### **It's Been Proven Developments Severely Pollute Nearby Waters**

Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Coral Bleaching is occurring more frequently in Hawaii". Across the Hawaiian Archipelago, coral bleaching has increased in frequency and severity since 1996. The last major bleaching event in 2014-2015 had catastrophic impacts state-wide...

This was the third major bleaching episode in Hawaii over the last 6 years. The frequency of these events is unprecedented in the archipelago. NOAA scientists and partners have determined that the key drivers of the bleaching were environmental factors (such as heat stress, depth, and surface light) and human impacts (sewage effluent and urban run-off). " <https://www.fisheries.noaa.gov/feature-story/cautionary-tale-2019-coral-bleaching-event-hawaii#:~:text=Coral%20bleaching%20is%20occurring%20more,hard%20catastrophic%20impacts%20state%20wide.>

**This article is by the Coral Reef Alliance here in Hawaii.** "An ecosystem under threat Hawaii's reefs face major global and local threats including climate change, overfishing, and sediment and nutrient pollution caused by sewage and stormwater runoff..."

When it rains, flash floods carry stormwater and large amounts of sediment downstream to the ocean. Just offshore, once-thriving coral reefs are now struggling to survive." <https://coral.org/en/where-we->

[workhawaiian-islands/#:~:text=Hawai%CA%BBi's%20reefs%20face%20major%20global,into%20Hawai%CA%BBi's%20waterways%20every%20day.](http://workhawaiian-islands/#:~:text=Hawai%CA%BBi's%20reefs%20face%20major%20global,into%20Hawai%CA%BBi's%20waterways%20every%20day.)

This article states that runoff is a leading source in coral degradation. Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Land-based sources of pollution are a leading cause of coral reef degradation in the Main Hawaiian Islands. Water quality is impacted by urban runoff, failing sewage systems, unpaved roads, farms, land clearing, and development." [https://www.coris.noaa.gov/monitoring/status\\_report/docs/Hawaii\\_status\\_report\\_forweb.pdf](https://www.coris.noaa.gov/monitoring/status_report/docs/Hawaii_status_report_forweb.pdf)

This article is a Research Article by PLOS ONE and their motto is, "We're driving change in research integrity and publication ethics." This is some of their article information, "**Coral taxonomy and local stressors drive bleaching prevalence across the Hawaiian Archipelago in 2019...**"

**We found little evidence for acclimation by reefs to thermal stress in the main Hawaiian Islands. Moreover, our findings illustrate how detrimental effects of local anthropogenic stressors, such as tourism and urban run-off, may be exacerbated under high thermal stress.** In light of the forecasted increase in severity and frequency of bleaching events, future mitigation of both local and global stressors is a high priority for the future of corals in Hawaii." <https://journals.plos.org/plosone/article?id=10.1371/journal.pone.0269068>

The coral all over Hawaii has had extremely high mortality rates, due to developments near ocean areas throughout the years, and development in Keauhou Bay will be devastating to the coral, reef fish, and all aquatic life there. Manta Rays need to eat 5 times their body weight in zooplankton daily. Their population will be severely affected should the plankton die. Please see the cited information below.

**"SO, HOW MUCH PLANKTON DOES YOUR AVERAGE MANTA RAY EAT? 19,200,000. Nineteen million two hundred thousand, give or take a few thousand.**

That is the number of plankton pieces a ten-foot manta ray must consume weekly to stay alive."

The above information was taken from Manta Ray Advocates <https://mantarayadvocates.com/how-much-plankton-do-mantas-eat/>

**Coral reefs are known to be highly negatively impacted by developments because, "Impacts from land-based sources of pollution including coastal development,...can impede coral growth and reproduction, disrupt overall ecological function, and cause disease and mortality in sensitive species."** <https://oceanservice.noaa.gov/facts/coral-pollution.html#:~:text=Impacts%20from%20land%20based%20sources,and%20mortality%20in%20sensitive%20species.>

Article by Environmental Evidence, "**Coastal development and runoff lead to sedimentation, which directly impacts coral recruitment, growth, mortality, and ecosystem services that coral reefs provide.**" <https://environmentalevidencejournal.biomedcentral.com/articles/10.1186/s13750-020-00200-0#:~:text=Coastal%20development%20and%20runoff%20lead,services%20that%20coral%20reefs%20provide.>

Developments can't fully stop polluting because runoff is from rain during development and after. Article by NOAA, "One of the most significant threats to reefs is pollution. **Land-based runoff and pollution discharges can result from dredging, coastal development... This runoff may contain sediments, nutrients, chemicals, insecticides, oil and debris.**

When some pollutants enter the water, nutrient levels can increase, promoting the rapid growth of algae and other organisms that can smother coral." [https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,organisms%20that%20can%20smother%20corals.](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,organisms%20that%20can%20smother%20corals.)

Another article by NOAA, "**Coral reefs also are affected by leaking fuels, anti-fouling paints and coatings, and other chemicals that enter the water... (All of those are show up in every development project.)**

**Among the most damaging pollutants on coral reefs is sediment, which can remain suspended in the water or be deposited on the coral surface (i.e., turbidity and sedimentation, respectively) and can contain toxicants, pathogens, and nutrients, all of which impact coral growth, recruitment, and survival"** [https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days.](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days.)

#### **It's Been Proven Resort Developments Kill Marine Life**

This article by MarinBio states, "**Zooplankton are also sensitive to their environment and like phytoplankton—a change in zooplankton concentration can indicate a subtle environmental change.** Zooplankton are highly responsive to nutrient levels, temperatures, pollution, food that is not nutritious, levels of light, and increases in predation. As well as providing an essential link in the marine food chain (which is an understatement), the diversity of species, amount of biomass and abundance of zooplankton communities can be used to determine the health of an ecosystem..."

Here is another article that shocking shows that in a very short time, big changes can occur due to runoff. A development will hurt and kill plankton, by Frontiers in Marine Science, "Effects of an experimental terrestrial runoff on the components of the plankton food web in a Mediterranean coastal lagoon. The main result observed in the present study was that the effects of the simulated terrestrial runoff spread along the plankton food web, significantly affecting all trophic levels of the natural plankton community studied. **This occurred in a relatively short time considering that the experiment lasted less than three weeks.** The lower light availability in the terrestrial runoff treatment compared to the control resulted in a net decrease of approximately one-third of Chl-a concentration and phytoplankton abundance over the entire experiment." <https://www.frontiersin.org/journals/marine-science/articles/10.3389/fmars.2023.1200757/full>

**The ecosystem is fragile and interconnected as is stated in this article:** "Zooplankton are also affected by levels of pH, heavy metals, calcium, and aluminum. Nutrients like nitrogen and phosphorus will affect the prey of zooplankton (like algae, protozoa and bacteria), indirectly affecting zooplankton survival. Scientists are still putting together pieces of the zooplankton puzzle. Some questions include how nutrient levels found in algae can influence the growth and behavior of zooplankton. Another question important to marine and human life is how toxins and pollution will affect this crucial link in the food chain" This information is in article by

MarineBIO. <https://www.marinebio.org/creatures/zooplankton/#:~:text=Zooplankton%20are%20also%20sensitive%20to,light%2C%20and%20increases%20in%20predation.>

A research article by Environmental Research Laboratory, United States Environmental Protection Agency that discusses, "**Toxic Effects of Pollutants on Plankton: There are four main sources of aquatic pollution: industrial wastes, municipal wastes, agricultural run-off, and accidental spillage.** Non-point sources, such as automobile exhausts, add appreciable amounts of pollutants to air that may enter aquatic systems in rainfall or dry fall-out. These sources add pesticides, heavy metals, oil, petroleum products, and a large number of organic and inorganic compounds to water. Lakes and oceans serve as sinks for many pollutants. Plankton comprise a large portion of the living matter in natural waters and function in biogeochemical cycles. They are affected by pollutants, transfer them to sediments and other organisms, and function in their biological transformation."

[https://scope.dge.carnegiescience.edu/SCOPE\\_12/SCOPE\\_12\\_3.6\\_chapter12\\_267-274.pdf](https://scope.dge.carnegiescience.edu/SCOPE_12/SCOPE_12_3.6_chapter12_267-274.pdf)

All the above articles show that development of Keauhou Bay WILL hurt plankton life and marine life in the bay because pollutant runoff is inevitable and unavoidable during construction and afterwards. The manta ray food source will likely disappear. This will be devastating for the manta ray populations. Furthermore, if manta rays die or leave the area, the loss will in turn affect many lively hoods from locals on the island who depend on the manta ray tour for their income.

#### **HUMAN POPULATION INCREASES LINKED DIRECTLY TO CORAL DEATH**

**Does this EIS have any reports on their resort adding to the population increase that happens during IRONMAN?**

"On average, each Ironman racer brings three people with them to the Big Island. Counting members of the media, VIPs who come from around the globe to watch and the triathlons partners, there likely be more than 6,300 people descending on Kona..." <https://bigislandnow.com/2023/10/07/ironman-2023-in-kona-shines-spotlight-on-some-of-best-women-triathletes-in-the-world/>

And "Resident dissatisfaction with tourists is multifaceted: **The overwhelming majority (92%) of locals felt visitors were not educated enough on protecting Hawaii's natural environment and local resources; other factors include the impact of the vacation rental industry and ignorance of the residents' quality of life.**" <https://www.triathlete.com/culture/news/kona-locals-ask-ironman-visitors-for-respect/>

**Where are the EIS reports on human density? Below are reports that show human population destroys coral reefs.**

"The number of people living on the coasts has rapidly increased in recent decades, causing significant development of coastal areas. Coastal development can negatively impact the ocean through the destruction of coastal marine habitat and through run-off of sediments and pollution.

-Coastal development involves activities such as the creation of harbors, stabilization of shorelines, and aquaculture that involve the destruction of sensitive marine habitats such as mangroves, coral reefs, and seagrass beds.

-Coastal development may cause the run-off of sediments into coastal habitats, which can smother corals or seaweeds and reduce the amount of light available for photosynthesis. Losses of primary producers and important habitat-forming species such as corals can negatively impact entire food webs."

The above information was taken from the Education Development Center, INC, from their Coastal Development page called Ocean Tracks <https://oceantracks.org/library/human-impacts/coastal-development/#:~:text=Coastal%20development%20may%20cause%20the,negative%20impact%20enitre%20food%20webs>.

There is nothing Kamehameha Schools can do to their development that can stop the guests of this possible Bungalow Resort from going to Keauhou Bay. **Human traffic WILL seriously increase if this resort is allowed to be built and the marine life will be negatively affected by it.** Marine life will suffer from this development as stated in this letter in many different scientific reported articles.

If you allow this resort the amount of people in this bay will fully increase and, "Hawaii's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally, management of the resource should balance the needs of different user groups, but the welfare of the marine environment on which its inhabitants depend must be the most important consideration." This was taken from Hawaii's own Division of Aquatic Resources <https://dlnr.hawaii.gov/dar/marine-managed-areas/hawaii-marine-life-conservation-districts/#:~:text=Snorkeling%20and%20SCUBA%20diving%20are,effect%20on%20nearshore%20fish%20populations>.

#### It's Been Proven an Increase in Human Population Destroys Coral Reefs

If a Bungalow Resort is allowed to be built in Keauhou Bay, it will bring a serious increase in human traffic. **Easily visible trends in human population dynamics combined with well-established and tested ecological theory give a clear, intuitive, yet quantifiable guide to the severity of survival challenges faced by coral reefs.** Management challenges and required actions can be clearly shown and, contrary to frequent claims, no scientific ambiguity exists with regard to the serious threat posed to coral reefs by humankind's continued numerical increase." This is in the article by National Library of Medicine National center for Biotechnology Information PubMed. <https://pubmed.ncbi.nlm.nih.gov/33293007/#:~:text=Deniser%20coastal%20populations%20and%20greater,to%20more%20runoff%20and%20siltation>.

This article is by ABC NEWS, **"This is how tourists are destroying coral reefs in Hawaii. The less people at a certain site, the more coral there are, the research found.** The millions of tourists who flock to the shores of Hawaii every year are wreaking havoc on its natural environment – especially the coral reefs, which are at risk all over the world, a new study said. The most popular coral reefs on the Hawaiian islands are likely being degraded by the very visitors they attract, according to a study published Monday in Nature Sustainability." <https://abcnews.go.com/US/hawaiian-coral-reefs-degrading-popular-tourist-sites-scientists/story?id=96308858#:~:text=The%20less%20people%20at%20a,there%20are%20C%20the%20research%20found,&text=The%20millions%20of%20tourists%20who,world%20C%20a%20new%20study%20said>.

By allowing this development you are stressing an already fragile Eco-system. The small bay is currently used by many locals for boating, fishing, canoeing, paddle boarding, snorkeling, manta night

dives, surfing, and swimming. We know, and research shows, that more people cause more damage. The area simply cannot afford or support this development.

**"Denser coastal populations and greater wealth will lead to reef degradation by coastal construction.** Denser populations inland will lead to more runoff and siltation. Effects of human perturbations can be explored with meta-population theory since they translate to increases in patch-mortality and decreases in patch-colonization (= regeneration). All such changes will result in a habitat with overall fewer settled patches, so fewer live reefs." This information was taken from Science <https://www.sciencedirect.com/science/article/abs/pii/S0065288120300328#:~:text=Aquacultur,e%20will%20alleviate%20some%20fishing,to%20more%20runoff%20and%20siltation>.

Another article by Nature Sustainability, **"Coral reefs and coastal tourism in Hawaii Coral reefs are popular for their vibrant biodiversity. By combining web-scraped Instagram data from tourists and high-resolution live coral cover maps in Hawaii, we find that, regionally, coral reefs both attract and suffer from coastal tourism.** Higher live coral cover attracts reef visitors, but that visitation contributes to subsequent reef degradation. Such feedback loops threaten the highest quality reefs, highlighting both their economic value and the need for effective conservation management." [https://www.nature.com/articles/s41893-022-01021-4.epdf?shating\\_token=wsakqONhahJiAnWAq453tRqN0iAWel9mR3ZoTv0PVzGA5lc\\_H001zGHNP3AShtcgKRY6\\_vKLPw49dbmBYoX5g3Y1MgQIGBZsapidGJH7i01SLbu9x5P3xED4Kx4T0sJlvqQ1a72Zr3rUbraxpodJ42AoNiSmWSuxB7JIEDdpj8OGJpx71TJWwGfXvFKJZYeNdcJ3Ssw\\_dnaUg5ZlhqIPBDImmaH15vgT5Q%3D&tracking\\_referrer=abcnews.go.com](https://www.nature.com/articles/s41893-022-01021-4.epdf?shating_token=wsakqONhahJiAnWAq453tRqN0iAWel9mR3ZoTv0PVzGA5lc_H001zGHNP3AShtcgKRY6_vKLPw49dbmBYoX5g3Y1MgQIGBZsapidGJH7i01SLbu9x5P3xED4Kx4T0sJlvqQ1a72Zr3rUbraxpodJ42AoNiSmWSuxB7JIEDdpj8OGJpx71TJWwGfXvFKJZYeNdcJ3Ssw_dnaUg5ZlhqIPBDImmaH15vgT5Q%3D&tracking_referrer=abcnews.go.com)

#### INFRASTRUCTURE AND RESOURCES ON AN ISLAND ALREADY HIGHLY IMPACTED AND STRUGGLING FOR ANSWERS

**Has the EIS done any research or reports on the Resources and Infrastructure it will need for a bungalow resort?**

There are many big housing developments currently under construction in Kailua Kona, Waikoloa Village, Hilo, Puna, Ocean View and Volcano. The entire Big Island has construction projects already in progress.

**Has Kamehameha Schools EIS done any kind of reports or surveys to know if Big Island has the Resources and Infrastructures for their resort development?**

"Hotel waste management refers to all the practices and processes that hotels implement to handle and dispose of the multiple types of waste generated on their premises. **Worldwide, hotels produce almost 300,000 tonnes of waste each year.**" <https://www.homebiogas.com/blog/hotels-waste-management/>

As of now, the Big Island's Resources and Infrastructure are having serious negative issues and many more developments that have been approved are not even completed as of yet, which means our island's resources and infrastructure will be taxed even more severely in the near future.

Please read the below articles that prove Big Island does not have the resources or infrastructure for a 143-Unit Bungalow Resort Development at Keauhou Bay. On Hawaii Island, we are already struggling to meet the increasing need for resources and infrastructure.

PAULA BENDER April 2, 2024

### **Big Island Now poll No. 27 results: More than one solution needed to help extend life of West Hawai'i landfill**

September 17, 2023

The West Hawai'i Sanitary Landfill, the only remaining landfill on the Big Island, is forecast to reach capacity within the next 20 to 25 years.

The West Hawai'i landfill became the island's only one after the Hilo Landfill closed three years ago. It only has about 20 to 25 years left before it can no longer be used to store rubbish.

<https://bigislandnow.com/2023/09/17/big-island-now-poll-no-27-results-more-than-one-solution-needed-to-help-extend-life-of-west-hawaii-landfill/>

### **A County commission drafts ordinance aiming to ban recyclables at West Hawai'i landfill**

By [Megan Moseley](#) September 6, 2023

Hawai'i County's Environmental Management Commission is developing an ordinance that aims to prohibit the amount of recyclable materials ending up in the island's only working landfill.

During a commission meeting on July 26, Ramzi Mansour, Hawai'i County Director of Environmental Management, told commissioners the West Hawai'i Sanitary Landfill only has 20 to 25 years left before it reaches capacity.

With the Hilo Landfill permanently closed in 2020, the clock is ticking for the island's sole dump. Commission chairperson Georjean Adams said it's a good time to start looking into solutions.

Adams said the proposed ordinance is in its early stages and is more about getting the conversation started about how to prevent unnecessary, or recyclable items — green waste, metals, plastics, paper, paperboard and glass — from ending up in the rubbish dump, located off Queen Ka ahumanu Highway in Waikōloa.

"Trying to site a new landfill is close to impossible," Adams said. "So what are we going to do? So I was looking around, and the commission agreed, to look deeply into the idea of diverting the recyclables out and at least slow the filling up of the landfill."

The proposed ordinance refers to the 2019 Integrated Solid Waste Management Plan that commits the county to "divert, as much as feasible, commercial and municipal solid waste, including but not limited to green waste, metals, plastics, paper, paperboard, and glass to help achieve goals related to climate resiliency, renewable energy, sustainable agriculture, and zero waste."

<https://bigislandnow.com/2023/09/06/new-draft-ordinance-aims-to-ban-recyclables-at-west-hawaii-landfill/>

### **Time's Up For Landfills**

'Gentle' demolition strategies can help preserve resources

15

As Hawai'i government officials grapple with the challenge of limited landfill space statewide, federal restrictions set in place by the Environmental Protection Agency are ruling out possible locations that were once considered for new landfills.

Hawaii Act 73 states landfills must be located at least half a mile from residential areas; are prohibited from being located in areas with heavy rain and steep slopes, as well as agricultural and/or conservation lands; above aquifers; 300 feet beyond streams; and 1,000 feet beyond the ocean.

New landfills are also now prohibited from being created in tsunami inundation zones, 100-year flood zones and wetlands. There are also concerns that landfills near airports will attract birds, resulting in damage to aircraft and fatalities among pilots and passengers.

The City & County of Honolulu is in the process of identifying its next landfill and it doesn't want one any bigger or more active than absolutely necessary.

### **Drought Conditions On Hawai'i Island Prompt Water Supply Message**

by Big Island Video News  
on Oct 5, 2023 at 3:59 pm

(BIVN) – With moderate to severe drought conditions being reported across Hawai'i Island, local water department officials issued a statement this week on the need for customers to use drinking water wisely.

Most of Hawai'i island is under "Moderate Drought" conditions, according to the latest information from the [U.S. Drought Monitor](#). There is an area under "Abnormally Dry" conditions in South Kona, however there are other, small pockets on the Big Island that are under "Severe Drought". There is even a small spot of "Extreme Drought" in the South Point area of Ka'u.

"The National Weather Service's forecast calls for the existing drought conditions to expand over the entire island and intensify over the upcoming months due to the ongoing El Niño event," reported the Hawai'i County Department of Water Supply. "Peak dryness is expected to occur from around January through February 2024. The El Niño event will likely persist well into spring 2024."

### **From a Water Supply news release:**

<https://www.bigislandvideonews.com/2023/10/05/drought-conditions-on-hawaii%CA%BB%island-prompt-water-supply-message/>

[U.S.](#)

### **Hawaii is "on the verge of a greater catastrophe," locals say, as water crisis continues**

By [Li Cohen](#)

Updated on: April 11, 2024 / 8:23 AM EDT / CBS News

16

And recent years have seen compounding problems: less rain, leading to [significant droughts](#), and repeated jet fuel leaks and PFAS chemical spills contaminating water systems. All of this significantly limits available water use for locals, many of whom say tourism is only worsening the situation. Just months ago, the [world's largest surfing wave pool](#) opened up on the island — filled with freshwater.

"They're not using it to drink or to support life, they're using it to make money. They're commodifying it," said Healani Sonoda-Pale, who is Native Hawaiian and a member of advocacy group O'ahu Water Protectors. "... We are on the verge of a greater catastrophe."

**"We are in a water crisis, that has to be made very clear,"** Wayne Tanaka, director of Sierra Club of Hawaii, told CBS News, saying that if the reasons for this crisis aren't soon addressed, "We may come to a point where we have to decide ... who gets water and who doesn't."

<https://www.cbsnews.com/news/hawaii-water-crisis-climate-change/>

Because this is an island, parts need to be shipped. The power plant currently has generators that are not working, and because of this (and other reasons), the Big Island needs to seriously conserve power so that everyone will have power. If this problem of shipping parts can happen once, it can and will happen again.

#### UPDATE: HELCO asks for continued energy conservation

BY SPECTRUM NEWS STAFF HAWAII ISLAND

UPDATED 6:28 PM ET APR. 16, 2024 PUBLISHED 9:05 AM ET APR. 15, 2024

HILO, Hawaii — Hawaiian Electric continues to urge Hawaii Island customers to reduce their electricity use to prevent the need for rolling outages.

In a news release Tuesday afternoon, the utility stated that Monday saw a reduced demand of approximately 5 megawatts. That, combined with increased wind and solar battery storage prevented the need for rolling blackouts on Monday. HELCO credited conservation efforts, particularly those by large businesses and government customers, for the reduction in electricity demand.

"We're grateful for our customers' efforts to conserve electricity, especially between 5 to 9 p.m., when electricity use is highest, because it does make a difference," said Hawaiian Electric spokesperson Kristen Okinaka. "By working together, we're helping to ensure that enough power can be available for all customers and prevent or minimize the impacts of rolling outages."

**Hawaiian Electric announced Monday afternoon that it may initiate rolling outages in parts of Hawaii Island because of the unavailability of several generators and lower than normal wind and solar resources.**

In a news release, the utility said that outages could start as early as 6:30 p.m. and rotate around the island for 30-minute intervals. The impacted areas and the timing of the outages will be based on wind generation and the amount of electric demand that needs to be reduced. Individuals who are dependent on electrically powered life support medical equipment are advised to arrange for a backup power supply.

17

The outages are being done to prevent power loss to even more customers, who are all being asked to conserve electricity throughout the month.

<https://spectrumlocalnews.com/hi/hawaii/news/2024/04/15/heco-customers-on-hawaii-island-asked-to-conserve-power->

#### Big power supply problems continue to plague Hawaii Island

Apr 8, 2024

The company has been facing an unusual situation with mechanical problems at three of the island's five largest power plants while part of the largest plant undergoes an annual overhaul. All four of these affected power plants are owned by the utility or an affiliate of its parent company.

Also contributing to the trouble is lower output from a geothermal plant, which has the third-largest generation capacity on the island and is owned by an independent operator.

"This is an unusual situation, driven mainly by the unavailability of several large generators that have experienced mechanical problems, are at reduced output, or are undergoing maintenance," Hawaiian Electric said in its March 25 announcement asking customers to use less electricity, especially on weekdays from 5 to 9 p.m.

**The company explained that it faces an "extremely tight" supply of power at peak use periods,** especially when production from wind, solar and hydroelectric facilities is lower than normal. Those sources of variable, renewable energy can supply up to 15% of electricity needs on the island.

"Without enough supply to meet electricity demand, the company may initiate rolling outages of up to an hour around the island," the March 25 announcement said.

<https://energycentral.com/news/big-power-supply-problems-continue-plague-hawaii-island>

#### Hawaii Island customers urged to reduce electricity use through April

BY SARAH YAMANAKA HILO PUBLISHED 9:00 AM ET MAR. 26, 2024

What You Need To Know

-Hawaii Island customers may see alerts asking them to conserve energy, especially on days when there isn't much wind that generates up to 15% of electricity

-When alerts are issued, Hawaiian Electric is asking customers to take immediate action to minimize electricity use

-Even when no alerts are issued, customers — including hotels and large retailers — are urged to reduce electricity use as much as possible, especially between 5 and 9 p.m. on weekdays

18

**-If there is not enough electricity to meet demand,** Hawaiian Electric may initiate rolling outages of up to an hour around the island

<https://spectrumbreaknews.com/hi/hawaii/news/2024/03/25/hawaii-island-customers-urged-to-reduce-electricity-use-through-april>

#### **FURTHERMORE: TRAFFIC, LACK OF RESOURCES, AND FATALITIES**

**A Resort Development WILL Increase Traffic on Already Severely Trafficked Roads. Are there traffic study reports for this EIS?**

A development with 150 rooms comes with over 150+ cars. Employees, guests, and visitors will all have cars, plus the regular locals who go there to paddle and enjoy the bay. All this could range in over 300 cars a day because of this resort development.

The Big Island already has a serious traffic issue due to a lack of infrastructure. This is in part due to poor planning, and in part due to geography challenges.

The articles below by different NEWS companies highlight the point that many traffic issues stem from lack of infrastructure and resources. Adding more cars to the road by building another resort in an area that is already stressed, will only increase the already mounting problems with traffic.

This NEWS article by Hawaii News Now, "Report shows alarming surge in Hawaii Island traffic deaths The Hawaii Police Department's Traffic Services Section released a new report showing a dramatic increase in both major crashes and fatal accidents from last year.

The startling statistics show a dramatic increase in the number of year-over-year traffic fatalities on the Island of Hawaii, revealing major crashes are up more than 12% and traffic fatalities are up more than 100%." Watch the video on their link below as it is a professional report on Big Island traffic problems. <https://www.hawaiinewsnow.com/2024/05/18/new-report-shows-hawaii-island-traffic-fatalities-are-up-over-100-last-year/>

With more tourists there will be more accidents, more traffic, and more traffic deaths. Please read this article by KHON 2 NEWS, "**Hawaii Island has most traffic fatalities in state.** This time last year Hawaii Island was at five traffic deaths, as of April 1, 2024, they're at 14.

Seven of which happened in the last two weeks.

Chief Moszkowicz said the police force is small compared to the size of the island and response times can take 15 to 20 minutes.

**"We don't have the resources like in the small space of Oahu where you can saturate an area to control speeding, that just doesn't exist here,"** he added." <https://www.khon2.com/local-news/7-traffic-fatalities-for-hawaii-island-in-march/>

**The traffic on Big Island has increased drastically and safety issues and infrastructure needs to be addressed before adding more resort developments.**

Please read this article because what it says about Oahu is a mirror for Big Island. The traffic problems they discuss are the same issues here on Big Island; and it also gives one Big Island example, "On the Big Island, the mayor had to issue an emergency order shutting down Waipio Valley Road due to overuse and poor prior maintenance." This is happening all over Big Island. <https://www.civilbeat.org/2024/02/02/angry-over-island-traffic-jams-lets-talk-about-solutions/>

The news video below shows aerial footage in Hilo. The footage shown is the same thing that is happening on Alii Drive and Queen K Highway, and for all the same reasons: **All of these roads only have two lanes!**

There are two developments already on Alii Drive being built as of today; and more are scheduled for this road in the near future. Alii Drive and Queen K Highway are the roads Kamehameha Schools Bungalow Resort will be using if approved, and they are already seriously congested.

These roads have the exact same traffic congestion as Hilo, with the exact same problems. Traffic is extremely slow because of so many people who now live here and all the visitors that come yearly.

In addition, the concern on Kona side is tsunami evacuations rather than lava evacuations. In this kind of traffic, not everyone will be able to get to safer ground, especially if you allow another resort to be developed in this area when traffic is already at a crawl every weekday and often on weekends as well.

Here is the news article by KITV NEWS that highlights the traffic issues discussed above: "Hawaii Island traffic jams could have safety impact. In the event of an evacuation, Mayor Mitch Roth acknowledges that will make the Traffic Jam up even worse. But says, he is working with The State on a solution." [https://www.kitv.com/news/local/hawaii-island-traffic-jams-could-have-safety-impact/article\\_b06a5374-5a6a-11ed-8d23-8313ef8c4c19.html](https://www.kitv.com/news/local/hawaii-island-traffic-jams-could-have-safety-impact/article_b06a5374-5a6a-11ed-8d23-8313ef8c4c19.html)

There was a crash recently on Alii Drive (see video below). When there is an accident on Alii Drive, it turns the already small two-lane road into only one lane that requires a flagger to help direct traffic. Kamehameha Schools wants to add a resort on this tiny road that will increase the traffic by hundreds of cars.

Here is the Island News video on the crash on Alii Dr. <https://www.youtube.com/watch?v=FQSnPDjig>

**Please see from these articles that traffic on Big Island is deadly already and adding another resort will be devastating to the island.**

#### **Read this Path article, HAWAII COUNTY'S VISION ZERO INITIATIVE:**

A motorcyclist is in critical condition after a collision with a car. A driver accidentally hits and kills a pedestrian. It seems that not a day goes by without the news reporting on a traffic crash on Hawaii Island...

Here are some other statistics that are even more staggering:

-28% of roadside crashes were the result of someone leaving the roadway and going into barriers or trees

-13% of pedestrians hit at 20 mph actually suffer fatality

Kona." <https://www.hawaiipublicradio.org/local-news/2020-01-09/hawaii-island-has-decades-of-landfill-space-but-still-faces-challenges-in-dealing-with-its-waste>

4) **“What happens to Hawaii Island’s trash and recyclables?”** BY MICHELLE BRODER VANDYKE HAWAII ISLAND PUBLISHED 11:30 AM ET DEC. 17, 2022 BY Michelle Broder Vandyke Hawaii Island PUBLISHED 11:30 AM ET Dec. 17 The future of the landfill

The West Hawaii Landfill will be full in about 20 years. Finding a location for the next landfill is a concern, according to the DEM officials. They said it will be challenging to find a location for a future landfill because of stringent regulations and costs related to planning, environmental regulations, design and construction that will take many years to complete. It will also require community support." <https://spectrumlocalnews.com/hi/hawaii/news/2022/12/15/what-happens-to-hawaii-island-s-trash-and-recyclables-->

5) **“The overwhelming plastic waste Hawaii visitors leave behind**  
By Natasha Bourlin Aug 24, 2023

Hawaii saw more than 9 million visitors last year. Those tourists’ first stops are often big-box and convenience stores, where they buy bottled water, plastic sand toys, single-use bodyboards, noodles, floaties and inner tubes for their trips." <https://www.sfgate.com/hawaii/article/plastic-waste-hawaii-visitors-leave-behind-18286076.php>

6) **“A County commission drafts ordinance aiming to ban recyclables** at West Hawaii landfill By Megan Moseley September 6, 2023 · 1:00 AM HST  
\* Updated September 6, 2023 · 2:02 PM

Hawaii County’s Environmental Management Commission is developing an ordinance that aims to prohibit the amount of recyclable materials ending up in the island’s only working landfill." <https://bigislandnow.com/2023/09/06/new-draft-ordinance-aims-to-ban-recyclables-at-west-hawaii-landfill/>

7) **“Hawaii County issues mandatory 25% water restriction** for North Kona August 7, 2023 · 5:21 PM HST

A mandatory 25% water restriction has been issued for various communities in North Kona due to the failure of the Honokohau Deepwell over the weekend." <https://bigislandnow.com/2023/08/07/hawaii-county-issues-mandatory-25-water-restriction-for-north-kona/>

8) **“Hawaii Water Supply Closely Monitored As Severe Drought** Continues by Big Island Video Newson Nov 6, 2023 at 3:28 pm STORY SUMMARY

HAWAII COUNTY - Officials say a special focus will be placed on the South Kohala Water System, which is more susceptible to drought conditions." <https://www.bigislandvideonews.com/2023/11/06/water-supply-closely-monitored-as-hawaii-ca-%Bibi-under-severe-drought/>

9) **“Big Island Concerns About Water Quality** Prompt A Lawsuit Over A Kona Sewage Plant Kealahou sewage plant discharges more than 1 million gallons of wastewater into a lava pit near the ocean. By Paula Dobbyn / February 6, 2024

-73% of pedestrians hit at 40 mph suffer fatality

-25% of fatal crashes were the result of distracted driving... So PLEASE put those cell phones away and pay attention to the road!

-56% of fatal crashes were the result of alcohol or drugs

-41% of fatal crashes occurred in light trucks and vans

-49% of crashes occur during the day, outside of peak traffic hours

-Of all the crash fatalities, most were males between 20 to 24-years old.

**“That’s just Big Island traffic,”** is a common sentiment. But what if we didn’t have to accept this endangerment of vehicle drivers, motorcyclists, and pedestrians as a way of life?"

This was taken from Path <https://pathhawaii.org/hawaii-countys-vision-zero-initiative/>

It is impossible to separate Hawaii's power system from its water system, said Kawika Uyehara, deputy director of Hawaii'i County's Department of Water Supply." <https://www.hawaiipublicradio.org/local-news/2024-02-13/residents-on-hawaii-island-and-oahu-are-asked-to-conserve-water-amid-power-outages>

**16) US Hawaii is "on the verge of a greater catastrophe," locals say, as water crisis continues**

By Li Cohen

Updated on: April 11, 2024 / 8:23 AM EDT / CBS News

In Hawaii, one of the most important sayings is *ola i ka wai*, "water is life" — a phrase that not only sums up what it means to exist on an island, but what it means to live, period. But now, one of the largest of the island chain's land masses is facing a triple threat to its sole freshwater source, and if it isn't addressed soon, one community member says, "We're in deep trouble."

<https://www.cbsnews.com/news/hawaii-water-crisis-climate-change/>

**17) News Hawaii'i County issues mandatory 25% water restriction for North Kona** August 7, 2023 · 5:21 PM HS

A mandatory 25% water restriction has been issued for various communities in North Kona due to the failure of the Honokōhau Deepwell over the weekend.

<https://bigislandnow.com/2023/08/07/hawaii-county-issues-mandatory-25-water-restriction-for-north-kona/>

**18) Hawaii'i Water Supply Closely Monitored As Severe Drought Continues**

by Big Island Video News  
on Nov 6, 2023 at 3:28 pm

(BIVN) — With an ongoing drought on the island of Hawaii, the Hawaii'i County Department of Water Supply says it is closely monitoring its 23 public water systems, with a "special focus" placed on the South Kohala Water System.

<https://www.bigislandvideonews.com/2023/11/06/water-supply-closely-monitored-as-hawaii-CA-%BBI-under-severe-drought/>

This is a map of Power Outages on the Big Island. This map wouldn't have been created if Power Outages were not a problem. <https://www.hawaiianelectric.com/safety-and-outages/power-outages/hawaii-island-outage-map>

Please, give Tax Breaks to all homes that provide solar and/or wind turbine to there homes to help with power issues on the island.

19) "Hawaiian Electric is reporting that several large generators on the Big Island are experiencing a range of issues and may lead to the need for rolling outages if supply does not meet demand."

[https://www.reddit.com/r/BigIsland/comments/1bnuar3/hawaiian\\_electric\\_is\\_reporting\\_that\\_several\\_large/?rdt=52660](https://www.reddit.com/r/BigIsland/comments/1bnuar3/hawaiian_electric_is_reporting_that_several_large/?rdt=52660)

20) "Hawaiian Electric asking Big Island customers to conserve power due to down generators

March 25, 2024 · 11:49 AM HST

According to the utility company, this is an usual situation as the large generators are experiencing mechanical problems resulting in a reduced output. The largest generator, an independent power producer that sells electricity to Hawaiian Electric, is offline with significant mechanical issues.

The plant generates 60 megawatts or nearly one-third of the typical peak demand of 180 megawatts on the island."

<https://bigislandnow.com/2024/03/25/hawaiian-electric-asking-big-island-customers-to-conserve-power-due-to-down-generators/>

All the articles above show that a resort development will further deplete and stress resources and infrastructure on an island already struggling. There are years of new development that have already been approved but not completed. It is not responsible or prudent to continue to develop this resort under these current conditions.

## HISTORICAL AND CULTURAL SIGNIFICANCE:

### The Law of the Splintered Paddle

Hawaiian history tells us that young Kamehameha was once an aggressive chief. The story goes that the young chief even chased after two fishermen in a Puna fishing village. While pursuing them, his foot got stuck in a crevice, and one of the fishermen struck Kamehameha over the head with his paddle in defense, which splintered into pieces.

After the incident, Kamehameha recognized that it was wrong to misuse his power and learned compassion. Years later, Kamehameha declared a new law "Ke Kānāwai Māmalahoe" or "the Law of the Splintered Paddle." Meant to protect the innocent and vulnerable from unprovoked attacks, this law proclaimed that the defenseless, especially kupuna and keiki, be able to sleep safely on the side of the road, unharmed.

The law provided for the safety of non-warriors during wartime and became the first written law of the Kingdom of Hawai'i. After being added back in 1978, **the law is part of Hawaii's State Constitution today.**

It is symbolic of servant leadership, reinforcing the importance of:

-Caring for and serving one's people

-Knowing and doing what is pono (right)

-Standing for the principle that leadership privilege is earned

-Taking kuleana (responsibility) for those we serve

-Doing so with compassion, love, and respect

**"We take that to mean that anyone who uses our roadways should be able to do so without fear of harm," explains Tina."**

**The Law of the Splintered Paddle is also on Kamehameha Schools website.** The historical value of this law should be enough to help make

Big Island roads become safer, and not adding to the traffic and issues of our already dangerous roads. <https://www.ksbe.edu/article/the-lessons-of-the-law-of-the-splintered-paddle-true-200-years-after-k>

**Does this EIS have any reports about how this development will safely add to the land fill on Big Island, and are there reports proving the island has enough water for another big resort, what about reports on how much power this resort will use because the Big Island already has serious resource and infrastructure issues.**

## IN CONCLUSION

The articles cited in this letter, many by some of the most esteemed scientists in the world, show with clarity that allowing this development is going to cause devastating, lasting, effects on the Eco-system in Keauhou Bay and "The Endangered Species Act of 1973 (ESA or "The Act"; 16 U.S.C. § 1531 et seq.) is the primary law in the United States for protecting and conserving imperiled species. Designed to protect critically imperiled species from extinction as a "consequence of economic growth and development untempered by adequate concern and conservation", the ESA was signed into law by President Richard Nixon on December 28, 1973. The Supreme Court of the United States described it as "the most comprehensive legislation for the preservation of endangered species enacted by any nation".<sup>[1]</sup> [https://en.wikipedia.org/wiki/Endangered\\_Species\\_Act\\_of\\_1973](https://en.wikipedia.org/wiki/Endangered_Species_Act_of_1973)

This location, currently acting as a natural filter, is especially vulnerable due to having a golf course on one side and a natural treasure like Keauhou Bay on the other. This land MUST be conserved in order to keep Keauhou Bay safe for all the marine life to be able to live there for years to come.

In addition to the natural disaster this will cause, Hawai'i Island is already having serious infrastructure and resource issues that have yet to be solved. These issues MUST be solved before considering another resort development on Big Island.

We need to work in harmony with the land and the people before pushing forward with new developments, especially in sacred and special places like Keauhou Bay, the birthplace of King Kamehameha III. Keauhou Bay is a small, fragile Eco-system, that is already pressured by boating, golfing, population issues, and hotels that are all around the entire bay.

The trees that currently stand on the land that is threatened to be developed clearly protects the

marine life and environment from further damage. The location is NOT suitable for this kind of development for both environmental and infrastructure reasons.

The cost of what stands to be lost is far too high to allow this to happen.

Please save Keaouhou Bay's marine life and help the island's resources by saying NO to a Bungalow Resort built by Kamehameha Schools.

Please reject this EIS because Kamehameha Schools has NOT ACKNOWLEDGED OR ASKED thousands of Hawaiians, or Hawaiian Descendants from Keaouhou Bay how they feel about developing this land, Keaouhou Bay.

They have asked ONLY a few families on an island that has thousands of Hawaiian people and here is video testimony from Kupuna Kumu Lily Kong who is a Keaouhou Bay descendants and her and her mother OPPOSE DEVELOPMENT! <https://vimeo.com/994680462>

Kupuna Kumu Lily Kong who was born in Keaouhou Bay and she states that she is against development. She also states that her mother was against development as well. Please listen to her words in her testimonial video about Keaouhou Bay on this link and know that this proves that descendant directly from Keaouhou Bay OPPOSE THIS DEVELOPMENT <https://vimeo.com/994680462> and it is CULTURAL LAW THEY MUST BE HEARD AND ACKNOWLEDGED!

These laws were created, "After these legal victories, the Kohanaiki 'Ohana worked to create a new law in the state of Hawaii to require Cultural Impact Statements along with Environmental Impact Statements for all future large-scale development. Act 50, the Cultural Impact Statement Law was adopted in 2000." <https://kohanaikiohana.org/legal-victories>

Kupuna Kumu Lily Kong also states that there are burial grounds on the land that Kamehameha Schools wants to clear and it is told that Kamehameha Schools has bulldozed sacred land in the past and Keaouhou Bay's burial grounds MUST BE RESPECTED AND NOT DISTURBED!

Hawaiians locals have said that there were bones in the small cave that is at the base of Keaouhou Bay. These burials need to take priority over a Bungalow Resort Development.

There are over 6,219 signatures as of Aug. 5th (these signatures grow daily) and these signatures are Hawaiians, locals and tourist and some of these Hawaiians have left comments on why they are opposing this development.

ALL OF THESE PEOPLE HAVE A RIGHT TO BE ACKNOWLEDGED AND THEIR VOICES HAVE VALUE TO BE HEARD, THESE PEOPLE MATTER AND IT IS CULTURAL LAW THEY MUST BE ACKNOWLEDGED!

Here is the petition link with thousands of Hawaiian signatures and comments opposing Kamehameha Schools Bungalow Resort Development. Please read these signatures and comments! [https://www.change.org/p/save-keaouhou-bay-from-becoming-a-big-crowded-resort?utm\\_source=share\\_petition&utm\\_medium=custom\\_url&recruited\\_by\\_id=92a53560-1e91-11e5-b4ef-b94e90cedb0d](https://www.change.org/p/save-keaouhou-bay-from-becoming-a-big-crowded-resort?utm_source=share_petition&utm_medium=custom_url&recruited_by_id=92a53560-1e91-11e5-b4ef-b94e90cedb0d)

Please reject this EIS because under Princess Bernice Pauahi Bishop's Will it states Kamehameha Schools are her trustees and they have a "fiduciary duty" to do what is best for THEIR

**BENEFICIARIES (the Hawaiian people's) and a Bungalow Resort is BEST FOR TOURISTS NOT THE HAWAIIAN PEOPLE BECAUSE THOUSANDS OF HAWAIIAN PEOPLE SINGED THE ABOVE PETITION OPPOSING KAMEAHMEHA SCHOOLS BUNGALOW RESORT.**

Please reject this EIS because the **Big Island DOES NOT HAVE THE RESOURCES TO PROVIDE FOR ANOTHER BIG RESORT ON ISLAND** and there are 445 signatures with many comments that agree with this fact because of the factual reported articles in the **Help Prioritize Big Island Developments to Keep Island's Resources Safe for ALL petition. Please read this petition, all the signatures and comments <https://www.change.org/p/help-prioritize-big-island-developments-to-keep-island-s-resources-safe-for-all>**

Mahalo,

Please, Do NOT risk polluting the water in Keauhou Bay by allowing Kamehameha Schools to develop their bungalow resort project, because it is scientifically proven that developments pollute nearby waters constantly during development and after.

Please read these Scientific articles written by NOAA, National Oceanic and Atmospheric Administration and many other professional organizations, that have studied and proved that developments has ALWAYS polluted the water in every near coastal developed area.

**First, does this EIS have any kind of reports and studs on how the endangered species and marine life will handle the extra pollution due to development and golf course runoff because Keauhou Bay is their habitat and this development WILL be CHANGING an Entire Ecosystem.**

**In the Endangered Species Act of 1973 Under Section 2 (b), "to provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved." This would be Keauhou Bay.**

The Green Sea Turtle swims in Keauhou Bay weekly and the monk seal has also been seen swimming and resting in Keauhou Bay. Both of these marine animals are on the endangered species list.

The Green Sea Turtle is protected by more than one law. " All sea turtles in Hawai'i are protected by the [Endangered Species Act \(ESA\)](#) and additionally protected by [Hawai'i Revised Statutes Chapter 195D \(HRS\)](#) and [Hawai'i Administrative Rules \(HAR\) 13-124](#)." This information was taken from this [site https://dlnr.hawaii.gov/dar/species/sea-turtles/](https://dlnr.hawaii.gov/dar/species/sea-turtles/).

"Hawaiian monk seals are protected federally by the ESA and the [Marine Mammal Protection Act \(MMPA\)](#), as well as locally by Hawai'i Revised Statutes (HRS) [Chapter 195D](#) and Hawai'i Administrative Rules (HAR) [13-124](#)." This was taken from <https://dlnr.hawaii.gov/dar/hawaiian-monk-seal/>

**ENDANGERED SPECIES CONSERVATION**

Endangered Species Act

**"Section 2. Findings, Purposes, and Policy**

**(4) the United States has pledged itself as a sovereign state in the international community to conserve to the extent practicable the various species of fish or wildlife and plants facing extinction, pursuant to—**

**(b) PURPOSES.—The purposes of this Act are to provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved, to provide a program for the conservation of such endangered species and threatened species, and to take such steps as may be appropriate to achieve the purposes of the treaties and conventions set forth in subsection (a) of this section."** This was taken from <https://www.fisheries.noaa.gov/national/endangered-species-conservation/endangered-species-act>

Keauhou Bay IS the monk seals and the green sea turtle's habitat and to allow a bungalow resort to be developed in Keauhou Bay, that is these endangered species habitat, is to threaten these endangered

Aloha e Deborah -

Thank you for your comments concerning the Keauhou Bay Management Plan, Draft Environmental Impact Statement. Your comments have been received and administratively recorded.

Comments received during the 45-day public comment period will be reproduced in the Final Environmental Impact Statement, and substantive comments addressed.

The County of Hawai'i and our planning consultant, G70, are copied here on this email so that they receive a copy of your feedback.

We appreciate your involvement and contribution to the environmental review process. Your input is invaluable in helping us develop a management plan that reflects the needs and concerns of our community.

Thank you once again for your engagement and commitment to the future of Keauhou Bay.

Mahalo,  
The Keauhou Bay Project Team

**From:** Deborah Sevy <[REDACTED]>  
**Sent:** Saturday, July 20, 2024 1:41 PM  
**To:** keauhoubay <keauhoubay@ksbe.edu>  
**Subject:** [EXTERNAL] keahou Bay

**CAUTION: This email is from an outside sender. Do not click on links or open attachments unless you recognize the sender and know the content is safe.**

To whom it may concern,

Please read the scientific proof in this letter and REJECT Kamehameha Schools EIS for Keauhou Bay to become a Bungalow Resort.

Please state in your report that a Bungalow Resort WILL have a SERIOUS NEGATIVE IMPACT in Keauhou Bay as stated in all the different researched articles below.

species habit with golf course runoff pollution, as well as development pollution and hence, threaten their habitat, hence their lives, and goes completely against the Endangered Species Act of 1973.

The words in the Endangered Species Act states, "to conserve" and conserving the endangered species that enter into Keauhou Bay would be to NOT DEVELOP A BUNGALOW RESORT because this would cause serious pollution runoff that would pollute the bay and endanger these already endangered species, the green sea turtle and the monk seal.

**Does this EIS have any reports on the endangered species that frequent Keauhou Bay because this is their habitat.**

**Under the Conservation Program there should be research done on endangered species and their associated ecosystems, which is Keauhou Bay. Because this bungalow resort development WILL FOREVER CHANGE THIS ECOSYSTEM.**

**"§195D-5 Conservation programs. (a) The department shall conduct research on indigenous aquatic life, wildlife, and land plants, and on endangered species and their associated ecosystems, and shall utilize the land acquisition and other authority vested in the department to carry out programs for the conservation, management, and protection of such species and their associated ecosystems." [https://www.capitol.hawaii.gov/hrscurrent/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hrscurrent/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm)**

**Also, under this same Conservation program, "(2) Taking such action as may be necessary to ensure that actions authorized, funded, or carried out by them do not jeopardize the continued existence of threatened or endangered species."**

**[https://www.capitol.hawaii.gov/hrscurrent/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hrscurrent/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm)**

Please see that developing Kamehameha Schools Bungalow Resort in Keauhou Bay WILL threaten endangered species due to the unavoidable development and golf course pollution runoff that would happen a lot more often due to taking out the natural pollution filter, that is the trees and the land that is there now.

"The golf industry uses [approximately 50 pesticide active ingredients](https://rainorshinegolf.com/pages/the-environmental-impact-of-golf-courses), including chlorpyrifos—an insecticide that is banned for residential use by the EPA due to developmental hazards. Having to trim golf turf to low heights also makes it even more vulnerable to pests, which leads to more pesticide use." <https://rainorshinegolf.com/pages/the-environmental-impact-of-golf-courses>

These pesticides will be in the pollution runoff that will enter Keauhou Bay more severely because of the bungalow resort development's pavement. As of right now the trees and land that this development wants to clear and develop into a bungalow resort is a Natural Pollution Filter.

Please read from **Wikipedia**,

**Most drains** have a single large exit at their point of **discharge (often covered by a grating) into a canal, river, lake, reservoir, sea or ocean**. Other than catchbasins, **typically there are no treatment facilities in the piping system**. "[https://en.wikipedia.org/wiki/Storm\\_drain#:~:text=Most%20drains%20have%20a%20single,disc%20into%20individual%20dry%20wells](https://en.wikipedia.org/wiki/Storm_drain#:~:text=Most%20drains%20have%20a%20single,disc%20into%20individual%20dry%20wells)

It's the pavement that this development wants to put in that will cause a lot of pollution to runoff into Keauhou Bay because this top land that is directly below the golf course (that they want to clear) soaks in the golf course pesticides, fertilizer, weed killer... and is the BEST AND ONLY PROTECTION POLLUTION FILTER Keauhou Bay has from the golf course pollution.

Please see this site at <https://health.hawaii.gov/eppo/files/2013/09/Stormwater-MS4-Presentation-HEF-7.15.14.pdf> because on page 2 it states **from the Hawaii'i government that Natural Ground Cover has 10% runoff, where has development has 55% runoff.**

**These trees and land** are saving monk seals and green sea turtles habitat from the golf course pollution and this land **MUST BE PRESERVED and CONSERVED** as the natural protector for Keauhou Bay hence, **for these endangered species habitat.**

**Under Section 2 (b) of the Endangered Species Act** - Keauhou Bay **MUST BECOME a CONSERVATION AREA** for these endangered species because it is their habitat as of today, and to allow a resort development to be built above this bay would threaten the very lives of these endangered species because it will allow golf course toxic pollution and development pollution to run into these species natural habitat, which is Keauhou Bay.

Keauhou Bay has trees and land just under the golf course (that Kamehameha Schools wants to clear for their bungalow resort) that protects Keauhou Bay from a lot of algae blooms because it soaks up pollution that is runoff from fertilizer, weed killer... in the golf course, and unfortunately when there is a severely heavy rain storm the land up on top of the bay has a greater runoff than normal from the golf course pollution, and pollution foam and algae blooms happen because of it.

If you clear this land, this kind of algae bloom will happen a lot more often and end up killing a lot of coral and marine life as stated in the many articles that will follow.

One of these articles is in the Global Coral Reef Alliance. They researched the reef before and after a golf course development, and even though this development is not a golf course development, it is still a development and it will also be located just under a golf course and this will allow the pollution from the golf course to come down to the bay a lot more often because the natural land that soaks up this pollution will be gone.

**Has this EIS done any kind of research about the algae blooms that happen after a serious storm because of the golf course runoff pollution?**

This information was taken from Global Coral Reef Alliance and it is an actual study on the how coral and marine life are affected before and after development. It's titled, "Golf courses kill coral reefs and fisheries: harmful algae blooms and disease cause by nutrient runoff from golf course development on Guana Cay, Abaco, Bahamas

Introduction: Bahamas coral reef deterioration

This study is thought the first ever to evaluate the health of coral reef ecosystems and fisheries before and after a golf course development. The vast majority of corals have died from a combination of factors including global warming, new diseases, land-based sources of pollution..

[". https://www.globalcoral.org/golf-courses-kill-coral-reefs-and-fisheries-harmful-algae-blooms-and-disease-caused-by-nutrient-runoff-from-golf-course-development-on-guana-cay-abaco-bahamas/](https://www.globalcoral.org/golf-courses-kill-coral-reefs-and-fisheries-harmful-algae-blooms-and-disease-caused-by-nutrient-runoff-from-golf-course-development-on-guana-cay-abaco-bahamas/)

If you allow a Bungalow Development in Keauhou Bay you WILL be agreeing to pollute this bay for years to come and COMPLETELY CHANGING KEAUHOU BAY'S ECOSYSTEM because the golf course runoff won't have the best protection which is the natural trees and land that can soak up the polluted water most of the year and polluted foam algae blooms will happen a lot more often.

Here is another study by the Coral Reef Alliance titled, "Golf course fertilizer runoff causes nutrient enrichment leading to harmful algae blooms on a Bahamian coral reef

...After construction new algae blooms appeared nearest the golf course green, smothering corals in adjacent reefs, along with sharply increased coral diseases..." <https://www.globalcoral.org/golf-course-fertilizer-runoff-causes-nutrient-enrichment-leading-to-harmful-algae-blooms-on-a-bahamian-coral-reef>

#### **Does this EIS have any studies or reports on the extra runoff pollution due to clearing land and adding pavement?**

This needs to be fully known because you will be changing an entire ecosystem to build a bungalow resort. Because it rains in Keauhou Bay many nights out of the year and the land they want to clear absorbs the golf course toxins so this bay is not as severely polluted as it will be with pavement and development, and when serious storms come Keauhou Bay won't stand a chance because the land can't keep ALL golf course pollutions out during this time and pavement won't even come close.

"If there are toxic algal blooms, like red tide, or man-made contaminants, like pesticides or detergents in the water, those toxins are contained within the bubbles of sea foam. When those bubbles pop, the toxins can become airborne and compromise the air that is breathed in that location." <https://oceanconservancy.org/blog/2023/03/31/what-sea-foam/>

#### **Federally Protected Green Sea Turtle Swim in Keauhou Bay Often**

The green sea turtle that is federally protected and can be seen in Keauhou Bay weekly. Please see the following article that states "POLLUTED RUNOFF IN HAWAII ENDANGERS GREEN SEA TURTLES

#### **Why does Hawaii have a runoff problem?**

Historically, in the tropics of Hawaii, precipitation was absorbed into the soil, according to the Clean Water Branch of Hawaii's Department of Health. Any potential pollution or contaminants on the ground surface would get pushed into the soil by the rain, and plant roots and microbes would help break down the pollution into less dangerous components. However, with urban and agricultural development, less and less of the pollution gets pulled into the soil, and more of it gets washed out into storm drains. From there, the pollutants make their way to streams, rivers and the ocean that surrounds Hawaii. According to the state agency, most of these contaminants are nutrients from fertilizer, bacteria from animal waste, oil, garbage and yard waste...

If polluted runoff reaches the ocean, it can wreak havoc on marine life, including endangered green sea turtles." Taken from <https://www.chemservice.com/news/polluted-runoff-in-hawaii-endangers-green-sea-turtles/>

If you allow this development it WILL POLLUTE Keauhou Bay as the above article (that was written in 2014 because runoff water from developments were polluting the ocean even then) states, and this bay holds many sea creatures such as the protected green sea turtle, spotted eagle rays, manta rays, octopus, dolphins, fish, coral, monk seals that have rested on the dock before and...that will ALL be harmed by the more severe pollution runoff that WILL happen because developments can't help but pollute the water nearby.

Keauhou Bay is known as a RESTING AREA for the ENDANGERED MONK SEAL, and if a resort is allowed to be built, that will bring a lot more people down to Keauhou Bay and if a monk seal is resting they most likely will disturb the monk seal with their selfies because it is fully known this is now a SELFIE CULTURE.

#### **Has the EIS done any research on what a high population would do in such a small area, and what will happen to the endangered species that live there because it's their habitat and a high population will change this bay forever?**

This information is by NOAA Scientist, "Study shows selfie culture impacts how people behave when posting images of an endangered species on social media.

There's a seal on the beach! Let's go get a 'selfie!'" That must have been what nearly 18 percent of people on Instagram thought before approaching an endangered species. In a recent study, NOAA scientists used social media to monitor human activities around endangered [Hawaiian monk seals](https://www.fisheries.noaa.gov/feature-story/endangered-hawaiian-monk-seals-cry-four-over-selfies). They discovered that human disturbance is more common than they thought." <https://www.fisheries.noaa.gov/feature-story/endangered-hawaiian-monk-seals-cry-four-over-selfies>

NOAA clearly states a high population in a place where monk seals and sea turtles habitat can be a serious disturbance for these endangered species.

#### **Has the EIS done any research or reports on the Resources and Infrastructure it will need for a bungalow resort?**

There are many big housing developments currently under construction in Kailua Kona, Waikoloa Village, in Hilo, Puna, and there are Ocean View and Volcano housing construction projects as well. The entire Big Island has construction projects all over.

#### **Has Kamehameha Schools EIS done any kind of reports or surveys to know if Big Island has the Resources and Infrastructures for their resort development?**

Because, "Hotel waste management refers to all the practices and processes that hotels implement to handle and dispose of the multiple types of waste generated on their premises.

Worldwide, hotels produce almost [300,000 tonnes of waste](https://www.homebiogas.com/blog/hotels-waste-management/) each year."

<https://www.homebiogas.com/blog/hotels-waste-management/>

As of now, the Big Island's Resources and Infrastructure are having serious negative issues and many more developments that have been approved are not even completed as of yet, which means these resources and infrastructures will be taxed even more in the near future.

Please read the below articles that prove that Big Island doesn't have the resources or infrastructure for a Bungalow Resort Development because it will increase the need for resources and infrastructure that the island doesn't have as of today.

### **Big Island Now poll No. 27 results: More than one solution needed to help extend life of West Hawai'i landfill**

September 17, 2023

The West Hawai'i Sanitary Landfill, the only remaining landfill on the Big Island, is forecast to reach capacity within the next 20 to 25 years. (File photo)

Of the 900 total votes in our most recent poll, which asked people to weigh in on the best way to extend the life of the Big Island's only remaining landfill, all of the above was the most popular answer, garnering 274 votes, or 30%.

The West Hawai'i landfill became the island's only one after the Hilo Landfill closed three years ago. It only has about 20 to 25 years left before it can no longer be used to store rubbish.

<https://bigislandnow.com/2023/09/17/big-island-now-poll-no-27-results-more-than-one-solution-needed-to-help-extend-life-of-west-hawaii-landfill/>

### **A county commission drafts ordinance aiming to ban recyclables at West Hawai'i landfill**

By **Megan Moseley** September 6, 2023

Hawai'i County's Environmental Management Commission is developing an ordinance that aims to prohibit the amount of recyclable materials ending up in the island's only working landfill.

During a commission meeting on July 26, Ramzi Mansour, Hawai'i County Director of Environmental Management, told commissioners the West Hawai'i Sanitary Landfill only has 20 to 25 years left before it reaches capacity.

With the Hilo Landfill permanently closed in 2020, the clock is ticking for the island's sole dump. Commission chairperson Georjean Adams said it's a good time to start looking into solutions.

Adams said the proposed ordinance is in its early stages and is more about getting the conversation started about how to prevent unnecessary, or recyclable items — green waste, metals, plastics, paper, paperboard and glass — from ending up in the rubbish dump, located off Queen Ka'ahumanu Highway in Waikōloa.

"Trying to site a new landfill is close to impossible," Adams said. "So what are we going to do? So I was looking around, and the commission agreed, to look deeply into the idea of diverting the recyclables out and at least slow the filling up of the landfill."

The proposed ordinance refers to the 2019 Integrated Solid Waste Management Plan that commits the county to "divert, as much as feasible, commercial and municipal solid waste, including but not limited to green waste, metals, plastics, paper, paperboard, and glass to help achieve goals related to climate resiliency, renewable energy, sustainable agriculture, and zero waste."

<https://bigislandnow.com/2023/09/06/new-draft-ordinance-aims-to-ban-recyclables-at-west-hawaii-landfill>

### **Time's Up For Landfills**

'Gentle' demolition strategies can help preserve resources

PAULA BENDER April 12, 2024

As Hawai'i government officials grapple with the challenge of limited landfill space statewide, federal restrictions set in place by the Environmental Protection Agency are ruling out possible locations that were once considered for new landfills.

Hawaii Act 73 states landfills must be located at least half a mile from residential areas; are prohibited from being located in areas with heavy rain and steep slopes, as well as agricultural and/or conservation lands; above aquifers; 300 feet beyond streams; and 1,000 feet beyond the ocean.

New landfills are also now prohibited from being created in tsunami inundation zones, 100-year flood zones and wetlands. There are also concerns that landfills near airports will attract birds, resulting in damage to aircraft and fatalities among pilots and passengers.

The City & County of Honolulu is in the process of identifying its next landfill and it doesn't want one any bigger or more active than absolutely necessary.

<https://buildingindustryhawaii.com/2024/04/times-up-for-landfills/>

### **Drought Conditions On Hawai'i Island Prompt Water Supply Message**

by **Big Island Video News**  
on Oct 5, 2023 at 3:59 pm

**(BIVN)** – With moderate to severe drought conditions being reported across Hawai'i island, local water department officials issued a statement this week on the need for customers to use drinking water wisely.

Most of Hawai'i island is under "Moderate Drought" conditions, according to the latest information from **the U.S. Drought Monitor**. There is an area under "Abnormally Dry" conditions in South Kona, however there are other, small pockets on the Big Island that are under "Severe Drought". There is even a small spot of "Extreme Drought" in the South Point area of Ka'u.

"The National Weather Service's forecast calls for the existing drought conditions to expand over the entire island and intensify over the upcoming months due to the ongoing El Niño event," reported the Hawai'i County Department of Water Supply. "Peak dryness is expected to occur from around January through February 2024. The El Niño event will likely persist well into spring 2024."

From a Water Supply news release:

<https://www.bigislandvideonews.com/2023/10/05/drought-conditions-on-hawai%CA%BBI-island-prompt-water-supply-message/>

## [U.S.](#)

### **Hawaii is "on the verge of a greater catastrophe," locals say, as water crisis continues**

By [Li Cohen](#)

Updated on: April 11, 2024 / 8:23 AM EDT / CBS News

And recent years have seen compounding problems: less rain, leading to [significant droughts](#), and repeated jet fuel leaks and PFAS chemical spills contaminating water systems. All of this significantly limits available water use for locals, many of whom say tourism is only worsening the situation. Just months ago, the [world's largest surfing wave pool](#) opened up on the island — filled with freshwater.

"They're not using it to drink or to support life, they're using it to make money. They're commodifying it," said Healani Sonoda-Pale, who is Native Hawaiian and a member of advocacy group O'ahu Water Protectors. "... We are on the verge of a greater catastrophe."

"We are in a [water crisis](#), that has to be made very clear," Wayne Tanaka, director of Sierra Club of Hawai'i, told CBS News, saying that if the reasons for this crisis aren't soon addressed, **"We may come to a point where we have to decide ... who gets water and who doesn't."**

<https://www.cbsnews.com/news/hawaii-water-crisis-climate-change/>

Because this is an island parts need to be shipped and the power plant has generators that are not working and because of this, and other reasons, the Big Island needs to seriously conserve power so that everyone will have power, and if this problem of shipping parts can happen once it can happen again.

## UTILITIES

UPDATE: HECO asks for continued energy conservation

BY SPECTRUM NEWS STAFF HAWAII ISLAND

UPDATED 6:28 PM ET APR. 16, 2024 PUBLISHED 9:05 AM ET APR. 15, 2024

HILO, Hawaii — Hawaiian Electric continues to urge Hawaii Island customers to reduce their electricity use to prevent the need for rolling outages.

In a news release Tuesday afternoon, the utility stated that Monday saw a reduced demand of approximately 5 megawatts. That, combined with increased wind and solar battery storage prevented the need for rolling blackouts on Monday. HECO credited conservation efforts, particularly those by large businesses and government customers, for the reduction in electricity demand.

"We're grateful for our customers' efforts to conserve electricity, especially between 5 to 9 p.m., when electricity use is highest, because it does make a difference," said Hawaiian Electric spokesperson Kristen Okinaka. "By working together, we're helping to ensure that enough power can be available for all customers and prevent or minimize the impacts of rolling outages."

Hawaiian Electric announced Monday afternoon that it may initiate rolling outages in parts of Hawaii Island because of the unavailability of several generators and lower than normal wind and solar resources.

In a news release, the utility said that outages could start as early as 6:30 p.m. and rotate around the island for 30-minute intervals. The impacted areas and the timing of the outages will be based on wind generation and the amount of electric demand that needs to be reduced. Individuals who are dependent on electrically powered life support medical equipment are advised to arrange for a backup power supply.

The outages are being done to prevent power loss to even more customers, who are all being asked to conserve electricity throughout the month.

<https://spectrumlocalnews.com/hi/hawaii/news/2024/04/15/heco-customers-on-hawaii-island-asked-to-conserve-power->

### **Big power supply problems continue to plague Hawaii island**

Apr 8, 2024

The company has been facing an unusual situation with mechanical problems at three of the island's five largest power plants while part of the largest plant undergoes an annual overhaul. All four of these affected power plants are owned by the utility or an affiliate of its parent company.

**Also contributing to the trouble is lower output from a geothermal plant, which has the third-largest generation capacity on the island and is owned by an independent operator.**

"This is an unusual situation, driven mainly by the unavailability of several large generators that have experienced mechanical problems, are at reduced output, or are undergoing maintenance," Hawaiian Electric said in its March 25 announcement asking customers to use less electricity, especially on weekdays from 5 to 9 p.m.

The company explained that it faces an "extremely tight" supply of power at peak use periods, especially when production from wind, solar and hydroelectric facilities is lower than normal. Those sources of variable, renewable energy can supply up to 15% of electricity needs on the island.

"Without enough supply to meet electricity demand, the company may initiate rolling outages of up to an hour around the island," the March 25 announcement said.

<https://energycentral.com/news/big-power-supply-problems-continue-plague-hawaii-island>

Hawaii Island customers urged to reduce electricity use through April

BY SARAH YAMANAKA HILO PUBLISHED 9:00 AM ET MAR. 26, 2024

### **What You Need To Know**

**-Hawaii Island customers may see alerts asking them to conserve energy, especially on days when there isn't much wind that generates up to 15% of electricity**

-When alerts are issued, Hawaiian Electric is asking customers to take immediate action to minimize electricity use

-Even when no alerts are issued, customers — including hotels and large retailers — are urged to reduce electricity use as much as possible, especially between 5 and 9 p.m. on weekdays

-If there is not enough electricity to meet demand, Hawaiian Electric may initiate rolling outages of up to an hour around the island

<https://spectrumlocalnews.com/hi/hawaii/news/2024/03/25/hawaii-island-customers-urged-to-reduce-electricity-use-through-april>

**Does this EIS have any detailed traffic studies for the increase in cars that will be added to this already severely traffic area they want to build their 150 room bungalow resort in? Have they done any studies on the pollution these cars WILL have in Keauhou Bay?**

**Because this Bungalow Resort could have over 150 extra cars and over 300 or more extra people in and out of Keauhou Bay, what traffic and increased population studies have they done? Because they will have employees with cars, guests with cars, visitors with cars and this would range at times at least over 200 cars or more, parking above Keauhou Bay causing serious car population because of all these added cars right next to the bay.**

Article below is from NOAA.

**What is the biggest source of pollution in the ocean?**

**Most ocean pollution begins on land.**

"Millions of motor vehicle engines drop small amounts of oil each day onto roads and parking lots. Much of this, too, makes its way to the sea.

Some water pollution actually starts as air pollution, which settles into waterways and oceans. Dirt can be a pollutant. Top soil or silt from fields or construction sites can run off into waterways, harming fish and wildlife habitats."

<https://oceanservice.noaa.gov/facts/pollution.html#:~:text=Millions%20of%20motor%20vehicle%20engines,Dirt%20can%20be%20a%20pollutant.>

Land-Based Runoff Remains Top Source of Oil in the Ocean, Says New Report Oil in the Sea: Inputs, Fates, and Effects

**News Release September 28, 2023**

WASHINGTON — Oil in runoff, primarily from cities and vehicles, is the top source of oil entering the ocean, says a new report from the National Academies of Sciences, Engineering, and Medicine. In North American waters, estimated ocean oil pollution from land-based runoff is up to 20 times higher than it was 20 years ago, and oil spills, natural oil seeps, and discharge from oil and gas operations remain major sources of pollution. The report recommends actions that government and others should take to minimize oil pollution, and calls for sustained research funding to better understand how oil reaches and

affects ocean environments. <https://www.nationalacademies.org/news/2002/05/oil-in-the-sea-inputs-fates-and-effects#:~:text=WASHINGTON%20%2D%2D%20Nearly%2085%20percent,pipeline%20spills%2C%20saves%20a%20new>

The Impact Of Stormwater – Car Emissions

"Car emissions are not limited to exhaust fumes that contribute to air pollution. They can also leak automotive fluid and release heavy metals that can contribute to stormwater pollution, contaminating local waterways." <https://www.stormwatershedwards.org.au/blog/the-impact-of-stormwater-car-emissions/>

**Does this EIS have any reports on the noise pollution that will happen and what it could do to marine life in Keauhou Bay during development?**

Because if you allow this Bungalow Resort to be developed you will increase constant noise in this bay for years to come and, "Noise Pollution Research shows that underwater noise from construction, shipping and naval vessels significantly impacts the natural behaviour of cetaceans and many other marine species. This can be seen when mass beaching events occur or breeding success is diminished."

The above information was taken from the Ocean Conservation Trust <https://oceanconservationtrust.org/ocean-advocacy/think-ocean/ways-to-think-ocean/>

**OCEANS POLLUTION**

How Does Noise Pollution Harm Marine Species?

"However, over the past few decades, noise pollution in the marine environment has increased dramatically and is threatening the natural soundscape of the marine environment. Ships, seismic surveys, explosions, construction, and sonar devices have made the once peaceful environment into a loud, chaotic home which is extremely damaging for marine wildlife. This type of pollution is often overlooked in comparison to others but its impacts are now being documented across all types of marine ecosystems." <https://earth.org/noise-pollution-in-the-ocean/>

If you allow this resort the amount of people in this bay will fully increase and, "Hawai'i's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally, management of the resource should balance the needs of different user groups, but the welfare of the marine environment on which its inhabitants depend must be the most important consideration." This was taken from Hawaii's own Division of Aquatic Resources <https://dlnr.hawaii.gov/dar/marine-managed-areas/hawaii-marine-life-conservation-districts/#:~:text=Snorkelling%20and%20SCUBA%20diving%20are,effect%20on%20nearshore%20fish%20populations.>

**What is ocean noise?**

"Ocean noise refers to sounds made by human activities that can **interfere with or obscure** the ability of marine animals to **hear natural sounds in the ocean**.

Many marine organisms rely on their ability to hear for their survival. Sound is a highly efficient means of communication underwater and is the primary way that many marine species gather and understand information about their environment. Many aquatic animals use sound to find prey, locate mates and offspring, avoid predators, guide their navigation and locate habitat, as well as to listen and communicate with each other.

Over the last century, human activities such as shipping, recreational boating, and energy exploration have increased along our coasts, offshore, and deep ocean environments. Noise from these activities can travel long distances underwater, leading to increases and changes in ocean noise levels in many coastal and offshore habitats.

These rising noise levels can negatively impact ocean animals and ecosystems. Higher noise levels can reduce the ability of animals to communicate with potential mates, other group members, their offspring, or feeding partners. Noise can also reduce an ocean animal's ability to hear environmental cues that are vital for survival, including those key to avoiding predators, finding food, and navigating to preferred habitats." <https://oceanservice.noaa.gov/facts/ocean-noise.html>

**The Chesapeake Bay has a foundation that is trying to save it due to runoff pollution that was caused by developments, and the Chesapeake Bay is a lot bigger than Keauhou Bay.** If it's being drastically hurt by runoff water from developments, Keauhou Bay waters won't stand a chance if development above the bay is allowed because this bay is very small.

This Article is by the Chesapeake Bay Foundation, Saving a National Treasure states, "... **runoff is a significant source of harmful nitrogen pollution that continues to grow...**

As rainwater and snowmelt run off our streets, parking lots, lawns, and other surfaces, they pick up pet waste, pesticides, fertilizer, oil, and other contaminants. If the draining water doesn't evaporate or soak into the ground where it can be filtered, it flushes straight into local creeks, rivers, and the Chesapeake Bay, adversely affecting water quality and aquatic life.

**Only 10 to 20 percent of rain that falls in forests, fields, and other natural areas runs off, with the rest absorbed by soil and plants, where it is filtered before reaching aquifers or local waterways. (Right now Keauhou Bay has a lot of trees and is very natural, this is what helps stop runoff.) By contrast, close to 100 percent of the rain that falls on concrete and other hard surfaces produces runoff. One inch of rain falling on an acre of hardened surface produces 27,000 gallons of runoff.**

Stormwater runoff pollution threatens Chesapeake Bay and its rivers and streams...Polluted runoff is one of the most harmful sources of pollution to the Bay and its waters. And much of it starts right in the urban and suburban neighborhoods where we live." <https://www.cbf.org/issues/polluted-runoff/index.html#:~:text=Besides%20carrying%20pollutants%20that%20harm,them%20are%20placed%20in%20jeopardy.>

**If that is what runoff is doing to the Chesapeake Bay, the effects of runoff will be even more devastating to Keauhou Bay because it is so much smaller than the Chesapeake Bay.**

**Are there any reports in this EIS about what the impact to the coral, marine life, plankton especially zooplankton will be because of this development?**

**Because the studies below show developments kill coral, marine life and zooplankton are kill and negatively affected as well, and zooplankton is the manta ray food. Manta rays are in this bay every night to eat zooplankton and sometimes they are in this bay during the day time too.**

If you allow this bay to be development you will be allowing all types of marine life to die and there is NO WAY to stop this from happening because polluted runoff rain water from developments can't be fully stopped. It is what has happened in ALL coastal developments.

Please read the Scientific proof below.

It's Been Proven Developments Severely Pollute Nearby Waters

Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Coral Bleaching is occurring more frequently in Hawai'i. Across the Hawaiian Archipelago, coral bleaching has increased in frequency and severity since 1996. The last major bleaching event in 2014-2015 had catastrophic impacts statewide..."

This was the third major bleaching episode in Hawai'i over the last 6 years. The frequency of these events is unprecedented in the archipelago. NOAA scientists and partners have determined that the key drivers of the bleaching were environmental factors (such as heat stress, depth, and surface light) and human impacts (sewage effluent and urban run-off). "<https://www.fisheries.noaa.gov/feature-story/cautionary-tale-2019-coral-bleaching-event-hawaii#:~:text=Coral%20bleaching%20is%20occurring%20more,had%20catastrophic%20impacts%20statewide.>

This article is by the Coral Reef Alliance here in Hawai'i. "An ecosystem under threat Hawai'i's reefs face major global and local threats including climate change, overfishing, and sediment and nutrient pollution caused by sewage and stormwater runoff..."

When it rains, flash floods carry stormwater and large amounts of sediment downstream to the ocean. Just offshore, once-thriving coral reefs are now struggling to survive." <https://coral.org/en/where-we-work/hawaiian-islands/#:~:text=Hawaii%CA%BBIs%20reefs%20face%20major%20global,into%20Hawaii%CA%BBIs%20waterways%20every%20day.>

This article states that runoff is a leading source in coral degradation. Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Land-based sources of pollution are a leading cause of coral reef degradation in the Main Hawaiian Islands. Water quality is impacted by urban runoff, failing sewage systems, unpaved roads, farms, land clearing, and development." [https://www.coris.noaa.gov/monitoring/status\\_report/docs/Hawaii\\_status\\_report\\_forwe\\_b.pdf](https://www.coris.noaa.gov/monitoring/status_report/docs/Hawaii_status_report_forwe_b.pdf)

This article is a Research Article by PLOS ONE and their motto is, "We're driving change in research integrity and publication ethics." This is some of their article information, "Coral taxonomy and local stressors drive bleaching prevalence across the Hawaiian Archipelago in 2019..."

We found little evidence for acclimation by reefs to thermal stress in the main Hawaiian Islands. **Moreover, our findings illustrate how detrimental effects of local anthropogenic stressors, such as tourism and urban run-off, may be exacerbated under high thermal stress.** In light of the forecasted increase in severity and frequency of bleaching events, future mitigation of both local and global stressors is a high priority for the future of corals in Hawaii." <https://journals.plos.org/plosone/article?id=10.1371/journal.pone.0269068>

The coral all over Hawaii has had extremely high mortality rates, due to developments near ocean areas throughout the years, and development in Keauhou Bay will be devastating to the coral, reef fish, and all Aquatic Life there, and even the Manta Rays that go there to eat zooplankton from the Manta Ray tours at night, and they eat it during the day in that area as well because they need to eat 5 times their body weight in zooplankton daily. Please see the cited information below.

**"SO, HOW MUCH PLANKTON DOES YOUR AVERAGE MANTA RAY EAT? 19,200,000. Nineteen million two hundred thousand, give or take a few thousand.**

That is the number of plankton pieces a ten-foot manta ray must consume weekly to stay alive."

The above information was taken from Manta Ray Advocates <https://mantarayadvocates.com/how-much-plankton-do-mantas-eat/>

**Coral reefs are known to be highly negatively impacted by developments because, "Impacts from land-based sources of pollution including coastal development,....can impede coral growth and reproduction, disrupt overall ecological function, and cause disease and mortality in sensitive species."** <https://oceanservice.noaa.gov/facts/coral-pollution.html#:~:text=Impacts%20from%20land%20based%20sources.and%20mortality%20in%20sensitive%20species.>

Article by Environmental Evidence, "Coastal development and runoff lead to sedimentation, which directly impacts coral recruitment, growth, mortality, and ecosystem services that coral reefs provide." <https://environmentalevidencejournal.biomedcentral.com/articles/10.1186/s13750-020-00200-0#:~:text=Coastal%20development%20and%20runoff%20lead,service%20that%20coral%20reefs%20provide.>

Developments can't fully stop polluting because runoff is from rain during development and after. Article by NOAA, "One of the most significant threats to reefs is pollution. Land-based runoff and pollution discharges can result from dredging, coastal development...This runoff may contain sediments, nutrients, chemicals, insecticides, oil and debris.

When some pollutants enter the water, nutrient levels can increase, promoting the rapid growth of algae and other organisms that can smother coral." [https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humanthreats.html#:~:text=Th is%20runoff%20may%20contain%20sediments,organisms%20that%20can%20smother%20corals.](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humanthreats.html#:~:text=Th is%20runoff%20may%20contain%20sediments,organisms%20that%20can%20smother%20corals.)

Another article by NOAA, "Coral reefs also are affected by leaking fuels, anti-fouling paints and coatings, and other chemicals that enter the water... (All of those are show up in every development project.)

Among the most damaging pollutants on coral reefs is sediment, which can remain suspended in the water or be deposited on the coral surface (i.e., turbidity and sedimentation, respectively) and can contain toxicants, pathogens, and nutrients, all of which impact coral growth, recruitment, and survival" [https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days.](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days.)

It's Been Proven Resort Developments KILL Marine Life

The manta rays go to Keauhou Bay every night to eat zooplankton and if you allow this development that WILL have runoff water, you WILL be causing zooplankton to be seriously affected because as this article by MarinBIO states, "Zooplankton are also sensitive to their environment and like phytoplankton—a change in zooplankton concentration can indicate a subtle environmental change. Zooplankton are highly responsive to nutrient levels, temperatures, pollution, food that is not nutritious, levels of light, and increases in predation. As well as providing an essential link in the marine food chain (which is an understatement), the diversity of species, amount of biomass and abundance of zooplankton communities can be used to determine the health of an ecosystem...."

Here is another article that proves runoff from development in this area will hurt and kill plankton, by **Frontiers in Marine Science**, **"Effects of an experimental terrestrial runoff on the components of the plankton food web in a Mediterranean coastal lagoon** The main result observed in the present study was that the effects of the simulated terrestrial runoff spread along the plankton food web, significantly affecting all trophic levels of the natural plankton community studied. This occurred in a relatively short time considering that the experiment lasted less than three weeks. The lower light availability in the terrestrial runoff treatment compared to the control resulted in a net decrease of approximately one-third of Chl-a concentration and phytoplankton abundance over the entire experiment." <https://www.frontiersin.org/journals/marine-science/articles/10.3389/fmars.2023.1200757/full>

"Zooplankton are also affected by levels of pH, heavy metals, calcium, and aluminum. Nutrients like nitrogen and phosphorus will affect the prey of zooplankton (like algae, protozoa and bacteria), indirectly affecting zooplankton survival. Scientists are still putting together pieces of the zooplankton puzzle. Some questions include how nutrient levels found in algae can influence the growth and behavior of zooplankton. Another question important to marine and human life is how toxins and pollution will affect this crucial link in the food chain" This information is in article by MarineBIO. <https://www.marinebio.org/creatures/zooplankton/#:~:text=Zooplankton%20are%20also%20sensitive%20to,light%2C%20and%20increases%20in%20predation.>

Here is a research article by Environmental Research Laboratory, United States Environmental Protection Agency that discusses: **"Toxic Effects of Pollutants on Plankton** There are four main sources of aquatic pollution: industrial wastes, municipal wastes, agricultural run-off, and accidental spillage. Non-point sources, such as automobile exhausts, add appreciable amounts of pollutants to air that may enter aquatic systems in rainfall or dry fall-out. These sources add pesticides, heavy metals, oil, petroleum products, and a large number of organic and inorganic compounds to water. Lakes and oceans serve as sinks for many pollutants. Plankton comprise a large portion of the living matter in natural waters and function in biogeochemical cycles. They are affected by pollutants, transfer them to sediments and other organisms, and function in their biological transformation." [https://scope.dge.carnegiescience.edu/SCOPE\\_12\\_3.6\\_chapter\\_12\\_257-274.pdf](https://scope.dge.carnegiescience.edu/SCOPE_12_3.6_chapter_12_257-274.pdf)

The above articles show that development of Keaouhou Bay WILL hurt plankton life in the area because of the pollutant runoff that WILL happen during the development and after, and if this happens this could cause the manta ray food source to disappear and that will be devastating for the manta rays eating habits, as well as cause the manta rays to not show up in this area, in turn taking away many lively hoods from locals on the island that depend on the manta ray tour for their income.

#### **Does this EIS have any reports on their resort adding to the population increase that happens during IRONMAN?**

"On average, each Ironman racer brings three people with them to the Big Island. Counting members of the media, VIPs who come from around the globe to watch and the triathlons partners, **there likely be more than 6,300 people descending on Kona...**" <https://bigislandnow.com/2023/10/07/ironman-2023-in-kona-shines-spotlight-on-some-of-best-women-triathletes-in-the-world/>

And "Resident dissatisfaction with tourists is multifaceted: The overwhelming majority (92%) of locals felt visitors were not educated enough on protecting Hawaii's natural environment and local resources; other factors include the impact of the vacation rental industry and ignorance of the residents' quality of life." <https://www.triathlete.com/culture/news/kona-locals-ask-ironman-visitors-for-respect/>

#### **Where are the EIS reports on human density because this resort will increase this area in population by hundreds. Below are reports that human population destroy coral reefs.**

"The number of people living on the coasts has rapidly increased in recent decades, causing significant development of coastal areas. Coastal development can negatively impact the ocean through the destruction of coastal marine habitat and through run-off of sediments and pollution.

-Coastal development involves activities such as the creation of harbors, stabilization of shorelines, and aquaculture that involve the **destruction of sensitive marine habitats** such as mangroves, coral reefs, and seagrass beds.

-Coastal development may cause the run-off of **sediments** into coastal habitats, which can smother corals or seaweeds and reduce the amount of light available for photosynthesis. Losses of primary producers and important habitat-forming species such as corals can negatively impact entire food webs."

The above information was taken from the Education Development Center, INC, from their Coastal Development page called Ocean Tracks <https://oceantracks.org/library/human-impacts/coastal-development#:~:text=Coastal%20development%20may%20cause%20the,negatively%20impact%20entire%20food%20webs.>

There is nothing Kamehameha Schools can do to their development that can stop the guests of this possible Bungalow Resort from going to Keaouhou Bay. Human traffic WILL seriously increase if this resort is allowed to be built and the marine life will be negatively affected by it. Marine life will suffer from this development as stated in this letter in many different scientific reported articles.

If you allow this resort the amount of people in this bay will fully increase and, "Hawaii's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally,

management of the resource should balance the needs of different user groups, but the welfare of the marine environment on which its inhabitants depend must be the most important consideration." This was taken from Hawaii's own Division of Aquatic Resources <https://dlnr.hawaii.gov/dar/marine-managed-areas/hawaii-marine-life-conservation-districts/#:~:text=Snorkeling%20and%20SCUBA%20diving%20are,effect%20on%20nearshore%20fish%20populations.>

#### **It's Been Proven an Increase in Human Population Destroys Coral Reefs**

If a Bungalow Resort is allowed to be built in Keaouhou Bay, it will forsure bring a serious increase in human traffic. "Easily visible trends in human population dynamics combined with well-established and tested ecological theory give a clear, intuitive, yet quantifiable guide to the severity of survival challenges faced by coral reefs. Management challenges and required actions can be clearly shown and, contrary to frequent claims, no scientific ambiguity exists with regards to the serious threat posed to coral reefs by humankind's continued numerical increase." This is in the article by National Library of Medicine National center for Biotechnology Information PubMed. <https://pubmed.ncbi.nlm.nih.gov/33293007/#:~:text=Denser%20coastal%20populations%20and%20greater,to%20more%20runoff%20and%20siltation.>

This article is by ABC NEWS, "This is how tourists are destroying coral reefs in Hawaii The less people at a certain site, the more coral there are, the research found. The millions of tourists who flock to the shores of Hawaii every year are wreaking havoc on its natural environment -- especially the coral reefs, which are at risk all over the world, a new study said. The most popular coral reefs on the Hawaiian islands are likely being degraded by the very visitors they attract, according to a study published Monday in Nature Sustainability." <https://abcnews.go.com/US/hawaiian-coral-reefs-degrading-popular-tourist-sites-scientists/story?id=9630885&#:~:text=The%20less%20people%20at%20a,there%20are%2C%20the%20research%20found.&text=The%20millions%20of%20tourists%20who,world%2C%20a%20new%20study%20said.>

If you allow this resort to be developed, you will be destroying the coral reefs in the bay because this bay is extremely small and used by a lot of locals already for fishing, canoeing, swimming, snorkeling, paddle boarding, surfing, boating...it can't afford more use by many thousands more people yearly.

If you allow Keaouhou Bay to be development there will be a higher population in the bay and that will hurt the coral in the bay as well, because it's known that, "Denser coastal populations and greater wealth will lead to reef degradation by coastal construction. Denser populations inland will lead to more runoff and siltation. Effects of human perturbations can be explored with metapopulation theory since they translate to increases in patch-mortality and decreases in patch-colonization (= regeneration). All such changes will result in a habitat with overall fewer settled patches, so fewer live reefs." This information was taken from Science

Direct <https://www.sciencedirect.com/science/article/abs/pii/S0065288120300328#:~:text=Aquaculture%20will%20alleviate%20some%20fishing,to%20more%20runoff%20and%20siltation.>

Another article by Nature Sustainability, "Coral reefs and coastal tourism in Hawaii Coral reefs are popular for their vibrant biodiversity. By combining web-scraped Instagram data from tourists and high-resolution live coral cover maps in Hawaii, we find that, regionally, coral reefs both attract and suffer from coastal tourism. Higher live coral cover attracts reef visitors, but that visitation contributes to subsequent reef degradation. Such feedback loops threaten the highest quality reefs, highlighting both

their economic value and the need for effective conservation management." [https://www.nature.com/articles/s41893-022-01021-4.epdf?sharing\\_token=wsakgQNhaHjAnWAq453RgN0JAiWeI9inR3ZoTv0PyGzA5Ic\\_H0O1zcHNIP3ASnhcgKRv6\\_wkLEw49dbmBYoX5g3Y1MgQIG8ZsapdGUHIZO1SLbu9x5P3xED4KxI4IOsIjvGQJa7Z2Rk3Ubraxpod42AoNlSmWSuX87JjEDdplj8OGjpx71TWGcfvFKlZVeNdcIj3Sw\\_dnalj5ZlhcjPBDImmaH15yqI5Q%3D&tracking\\_referrer=abcnews-go.com](https://www.nature.com/articles/s41893-022-01021-4.epdf?sharing_token=wsakgQNhaHjAnWAq453RgN0JAiWeI9inR3ZoTv0PyGzA5Ic_H0O1zcHNIP3ASnhcgKRv6_wkLEw49dbmBYoX5g3Y1MgQIG8ZsapdGUHIZO1SLbu9x5P3xED4KxI4IOsIjvGQJa7Z2Rk3Ubraxpod42AoNlSmWSuX87JjEDdplj8OGjpx71TWGcfvFKlZVeNdcIj3Sw_dnalj5ZlhcjPBDImmaH15yqI5Q%3D&tracking_referrer=abcnews-go.com)

**A Resort Development WILL Increase Traffic on Already Severely Trafficed Roads. Where are the traffic study reports for this EIS because with 150 rooms comes over 150 cars because you must include employee cars, as well as visitors for the people staying in the resort, and what if the guests have more than one car?**

The Big Island already has a serious problem with traffic on the island because of a lack of infrastructure that in places a bigger road can't be built due to cliffs on one side and homes on the other side.

Allowing another resort to be developed will bring more cars that will lead to a lot more traffic that the island can not handle, please read the articles below by different NEWS companies that prove this point.

This NEWS article by Hawaii! News Now, "Report shows alarming surge in Hawaii Island traffic deaths The Hawaii Police Department's Traffic Services Section released a new report showing a dramatic increase in both major crashes and fatal accidents from last year.

The startling statistics show a dramatic increase in the number of year-over-year traffic fatalities on the Island of Hawaii, revealing major crashes are up more than 12% and traffic fatalities are up more than 100%." Please watch their video on their link below because it is a professional report on Big Island traffic problems. <https://www.hawaiinewsnow.com/2024/05/18/news-report-shows-hawaii-island-traffic-fatalities-are-up-over-100-last-year/>

With more tourists comes more accidents, more traffic, and more traffic deaths. Please read this article by KHON 2 NEWS, "Hawaii Island has most traffic fatalities in state, This time last year Hawaii island was at five traffic deaths, as of April 1, 2024, they're at 14.

Seven of which happened in the last two weeks...

Chief Moszkowicz said the police force is small compared to the size of the island and response times can take 15 to 20 minutes.

"We don't have the resources like in the small space of Oahu where you can saturate an area to control speeding, that just doesn't exist here," he added." <https://www.khon2.com/local-news/7-traffic-fatalties-for-hawaii-island-in-march/>

The traffic on Big Island has increased drastically and safety issues and infrastructure needs to be addressed before adding more resort developments.

Please read this article because what it says about Oahu is the same for Big Island. The traffic problems they talk about are the same issues here on Big Island, and this article also gives one Big Island example, "On the Big Island, the mayor had to issue an [emergency order](#) shutting down Waipio Valley Road due to

overuse and poor prior maintenance." This is happening all over Big Island. <https://www.civilbeat.org/2024/02/angry-over-island-traffic-jams-lets-talk-about-solutions/>

Please, watch the NEWS video below on aerial footage in Hilo because the footage shown is the same thing that is happening on Alii Drive and Queen K HWY, and for the same reasons, all of these roads only have 2 lanes.

There are 2 developments already on Alii Dr. being built as of today, and more are scheduled for this road in the near future, and Alii Dr. and Queen K HWY are the roads Kamehameha Schools Bungalow Resort will be using if approved and they are already seriously congested.

These roads have the exact same traffic congestion as Hilo, with the exact same problems, traffic is extremely slow because of so many people who now live here and all the visitors that come yearly.

The worry on Kona side is tsunami evacuations rather than lava evacuations, and in this kind of traffic, not everyone will be able to get to safer ground, especially if you allow another resort to be developed in this area when traffic is already at a crawl every week day and sometimes on weekends as well.

See the photo below that proves this point in Kona, and here is the NEWS article by KITV NEWS that talks about Hilo and the same thing is happening in Kona on the roads Kamehameha Schools wants to develop their resort, "Hawaii Island traffic jams could have safety impact. In the event of an evacuation, Mayor Mitch Roth acknowledges that will make the Traffic Jam up even worse. But says, he is working with The State on a solution." [https://www.kitv.com/news/local/hawaii-island-traffic-jams-could-have-safety-impact/article\\_b06a5374-5a6a-11ed-8d23-8313ef8c4c19.html](https://www.kitv.com/news/local/hawaii-island-traffic-jams-could-have-safety-impact/article_b06a5374-5a6a-11ed-8d23-8313ef8c4c19.html)

There was a crash on Alii Dr. and when there is an accident on this road, it turns into only one lane that needs a flagger to help direct traffic, and that adds even more traffic to this already seriously congested road, and Kamehameha Schools wants to add a resort on this road that will increase the traffic by 100's of cars.

Here is the Island News video on the crash on Alii Dr. <https://www.youtube.com/watch?v=FQsnPDjI8>

Please see from these articles that traffic on Big Island is deadly already and adding another resort will be devastating to the island.

Please read this Path article, HAWAII COUNTY'S VISION ZERO INITIATIVE

A motorcyclist is in critical condition after a collision with a car. A driver accidentally hits and kills a pedestrian. It seems that not a day goes by without the news reporting on a traffic crash on Hawaii Island...

Here are some other statistics that are even more staggering:

-28% of roadside crashes were the result of someone leaving the roadway and going into barriers or trees

-13% of pedestrians hit at 20 mph actually suffer fatality

-73% of pedestrians hit at 40 mph suffer fatality

-25% of fatal crashes were the result of distracted driving... So PLEASE put those cell phones away and pay attention to the road!

-56% of fatal crashes were the result of alcohol or drugs

-41% of fatal crashes occurred in light trucks and vans

-49% of crashes occur during the day, outside of peak traffic hours

-Of all the crash fatalities, most were males between 20 to 24-years old.

"That's just Big Island traffic," is a common sentiment. But what if we didn't have to accept this endangerment of vehicle drivers, motorcyclists, and pedestrians as a way of life?"

This was taken from Path as well as The Law of the Splintered Paddle below <https://pathhawaii.org/hawaii-countys-vision-zero-initiative/>

### **The Law of the Splintered Paddle**

Hawaiian history tells us that young Kamehameha was once an aggressive chief. The story goes that the young chief even chased after two fishermen in a Puna fishing village. While pursuing them, his foot got stuck in a crevice, and one of the fishermen struck Kamehameha over the head with his paddle in defense, which splintered into pieces.

After the incident, Kamehameha recognized that it was wrong to misuse his power and learned compassion. Years later, Kamehameha declared a new law, "[K?n?wai M?malahoe](#)" or "the Law of the Splintered Paddle." Meant to protect the innocent and vulnerable from unprovoked attacks, this law proclaimed that the defenseless (especially K?puna and keiki) across Hawaii'i be able to sleep safely on the side of the road, unharmed.

The law provided for the safety of non-warriors during wartime and became the first written law of the Kingdom of Hawaii'i. After being added back in 1978, the law is part of Hawaii's State Constitution today.

It is symbolic of servant leadership, reinforcing the importance of:

- Caring for and serving one's people
- Knowing and doing what is pono (right)
- Standing for the principle that leadership privilege is earned
- Taking kuleana (responsibility) for those we serve
- Doing so with compassion, love, and respect

"We take that to mean that anyone who uses our roadways should be able to do so without fear of harm," explains Tina."

**The Law of the Splintered Paddle is also on Kamehameha Schools website**, so they should want to help make Big Island roads become safer and not add to the traffic and possible traffic death toll problem. <https://www.ksbe.edu/article/the-lessons-of-the-law-of-the-splintered-paddle-ting-true-200-years-after-k>

**Does this EIS have any reports about how this development will safely add to the land fill on Big Island, and are there reports proving the island has enough water for another big resort, what about reports on how much power this resort will use because the Big Island already has serious Resource and Infrastructure issues. Please read the articles below.**

### **The Big Island Doesn't Have the Resources and Infrastructure for Another Resort**

Please see the articles below because the Big Island doesn't have the resources or infrastructure to safely add another resort development on island and these other NEWS and Research articles prove this point.

- 1) Hawaii Deals with Burgeoning Waste Management Problem

As landfills face closure and waste-to-energy projects stall, various counties in Hawaii are dealing with waste management issues. Waste360 Staff January 10, 2020

"Hawaii Island is in the enviable position of having a landfill with anywhere from 20 to 100 years of capacity left to take in trash. But the island still wrestles with significant issues like plastic products that are no longer being recycled." <https://www.waste360.com/landfill/hawaii-deals-with-burgeoning-waste-management-problem>

- 2) Big Island Now readers seem to agree that there's likely no single solution for slowing down the timeline of the West Hawai'i Sanitary Landfill reaching capacity.

The West Hawai'i Sanitary Landfill, the only remaining landfill on the Big Island, is forecast to reach capacity within the next 20 to 25 years." <https://bigislandnow.com/2023/09/17/big-island-now-poll-no-27-results-more-than-one-solution-needed-to-help-extend-life-of-west-hawaii-landfill/>

- 3) Hawaii Island Has Decades of Landfill Space But Still Faces Challenges In Dealing With Its Waste Hawai'i Public Radio Published January 9, 2020 at 5:00 AM HST

"Hawaii Island is in the enviable position of having a landfill with anywhere from 20 to 100 years of capacity left to take in trash. But the island still wrestles with significant issues like plastic products that are no longer being recycled.

For the past four decades, trash from the east side of Hawaii Island has been dumped in a landfill outside of Hilo. But now trash from all parts of the island is being trucked to a facility north of Kona." <https://www.hawaiipublicradio.org/local-news/2020-01-09/hawaii-island-has-decades-of-landfill-space-but-still-faces-challenges-in-dealing-with-its-waste>

- 4)"What happens to Hawaii Island's trash and recyclables? BY MICHELLE BRODER VANDYKE HAWAII ISLAND PUBLISHED 11:30 AM ET DEC. 17, 2022 By Michelle Broder Vandyke Hawaii Island PUBLISHED 11:30 AM ET Dec. 17The future of the landfill

The West Hawaii Landfill will be full in about 20 years. Finding a location for the next landfill is a concern, according to the DEM officials. They said it will be challenging to find a location for a future landfill because of stringent regulations and costs related to planning, environmental regulations, design and construction that will take many years to complete. It will also require community support." <https://spectrumlocalnews.com/hi/hawaii/news/2022/12/15/what-happens-to-hawaii-island-s-trash-and-recyclables->

5) "The overwhelming plastic waste Hawaii visitors leave behind  
By Natasha Bourlin Aug 24, 2023

Hawaii saw more than 9 million visitors last year. Those tourists' first stops are often big-box and convenience stores, where they buy bottled water, plastic sand toys, single-use bodyboards, noodles, floaties and inner tubes for their trips." <https://www.sfgate.com/hawaii/article/plastic-waste-hawaii-visitors-leave-behind-18286076.php>

6) "A county commission drafts ordinance aiming to ban recyclables at West Hawaii landfill By Megan Moseley September 6, 2023 · 1:00 AM HST  
\* Updated September 6, 2023 · 2:02 PM

Hawaii County's Environmental Management Commission is developing an ordinance that aims to prohibit the amount of recyclable materials ending up in the island's only working landfill." <https://bigislandnow.com/2023/09/06/new-draft-ordinance-aims-to-ban-recyclables-at-west-hawaii-landfill>

7) "Hawaii County issues mandatory 25% water restriction for North Kona August 7, 2023 · 5:21 PM HST

A mandatory 25% water restriction has been issued for various communities in North Kona due to the failure of the Honokohau Deepwell over the weekend." <https://bigislandnow.com/2023/08/07/hawaii-county-issues-mandatory-25-water-restriction-for-north-kona/>

8) "Hawaii Water Supply Closely Monitored As Severe Drought Continues by Big Island Video Newson Nov 6, 2023 at 3:28 pm STORY SUMMARY

HAWAII COUNTY - Officials say a special focus will be placed on the South Kohala Water System, which is more susceptible to drought conditions." <https://www.bigislandvideonews.com/2023/11/06/water-supply-closely-monitored-as-hawaii-ca%BBi-under-severe-drought/>

9) "Big Island Concerns About Water Quality Prompt A Lawsuit Over A Kona Sewage Plant Kealakehe sewage plant discharges more than 1 million gallons of wastewater into a lava pit near the ocean. By Paula Dobbyn / February 6, 2024

Settlement talks are scheduled in an environmental lawsuit involving a county-operated Big Island sewage plant in Kona." <https://www.civilbeat.org/2024/02/concerns-about-water-quality-prompt-a-lawsuit-over-a-kona-sewage-plant/>

10) "Researchers find sewage from an oceanfront Big Island community reaches nearshore waters  
Hawaii Public Radio | By Russell Subiono, Sophia McCullough Published December 20, 2021 at 5:56 PM HST

There are nearly 50,000 cesspools on the Big Island, with tens of thousands posing a risk to water resources, according to the Hawaii Department of Health." <https://www.hawaiipublicradio.org/the-conversation/2021-12-20/researchers-find-sewage-from-an-oceanfront-big-island-community-reaches-nearshore-waters>

11) "Kona coast faces stark wastewater tradeoffs Current situation

There are approximately 88,000 cesspools across the state, releasing more than 200,000 cubic meters of wastewater per day to the environment. <https://www.hawaii.edu/news/2021/09/10/kona-stark-wastewater-tradeoffs/>

We ask that you start figuring out how this can never happen again? These are the kind of issues that need to be resolved before you approve more development.

12) "BIG ISLAND NEWS HECO restores power after initiating emergency outages on Big Island by: Elizabeth Ufi Posted: Jan 30, 2024 / 09:43 AM HST Updated: Jan 30, 2024 / 04:15 PM HST

An unexpected loss of several large Hawaii Electric generators left some residents on Big Island without power for parts of the morning on Tuesday, Jan. 30." <https://www.khon2.com/big-island-news/heco-initiates-30-min-rolling-outages-after-loss-of-generators/>

\* Updated February 14, 2024 · 4:21 PM

The emergency outages are being initiated in various areas around the entire island to prevent loss of power to an even greater number of customers. The timing and extent of the outages will depend on the amount of demand on the system and the availability of generators." <https://bigislandnow.com/2024/02/13/hawaii-island-customers-asked-to-reduce-electricity-use/>

14) "LOCAL NEWS

HECO issues rolling power outages around Big Island by: Emily Cervantes Posted: Feb 13, 2024 / 05:11 PM HST Updated: Feb 13, 2024 / 09:12 PM HST Hawaiian Electric initiated rolling outages for Big Island after several large generators became unavailable and reduced output Tuesday night." <https://www.khon2.com/local-news/heco-releases-conservation-alert-for-big-island/>

15) "Here's how power outages can have repercussions for Hawaii's water supply Hawaii Public Radio | By Savannah Harriman-Pote Published February 13, 2024 at 10:59 AM HST

Water departments on O'ahu and Hawaii Island have advised customers to conserve water ahead of possible storm-related power outages this month.

But what does the power grid have to do with the water supply?

It is impossible to separate Hawai'i's power system from its water system, said Kawika Uyehara, deputy director of Hawai'i County's Department of Water Supply." [https://www.hawaii-publicradio.org/local-news/2024-02-13/residents-on-hawaii-island-and-oahu-are-asked-to-serve-water-amid-power-outages](https://www.hawaiipublicradio.org/local-news/2024-02-13/residents-on-hawaii-island-and-oahu-are-asked-to-serve-water-amid-power-outages)

16) U.S. Hawaii is "on the verge of a greater catastrophe," locals say, as water crisis continues  
By Li Cohen

Updated on: April 11, 2024 / 8:23 AM EDT / CBS News

In Hawaii, one of the most important sayings is *ola i ka wai*, "water is life" — a phrase that not only sums up what it means to exist on an island, but what it means to live, period. But now, one of the largest of the island chain's land masses is facing a triple threat to its sole freshwater source, and if it isn't addressed soon, one community member says, "we're in deep trouble."

<https://www.cbsnews.com/news/hawaii-water-crisis-climate-change/>

17) NewsHawai'i County issues mandatory 25% water restriction for North Kona  
August 7, 2023 · 5:21 PM HS

A mandatory 25% water restriction has been issued for various communities in North Kona due to the failure of the Honokōhau Deepwell over the weekend.

<https://bigislandnow.com/2023/08/07/hawaii-county-issues-mandatory-25-water-restriction-for-north-kona/>

18) Hawai'i Water Supply Closely Monitored As Severe Drought Continues  
by Big Island Video News  
on Nov 6, 2023 at 3:28 pm

(BIVN) – With an ongoing drought on the island of Hawai'i, the Hawai'i County Department of Water Supply says it is closely monitoring its 23 public water systems, with a "special focus" placed on the South Kohala Water System.

<https://www.bigislandvideonews.com/2023/11/06/water-supply-closely-monitored-as-hawaii-ca%BBi-under-severe-drought/>

This is a map of Power Outages on the Big Island. This map wouldn't have been created if Power Outages were not a problem. <https://www.hawaiianelectric.com/safety-and-outages/power-outages/hawaii-island-outage-map>

Please, give Tax Breaks to all homes that provide solar and/or wind turbine to there homes to help with power issues on the island.

20) "Hawaiian Electric is reporting that several large generators on the Big Island are experiencing a range of issues and may lead to the need for rolling outages if supply does not meet demand."

[https://www.reddit.com/r/BigIsland/comments/1bnuar3/hawaiian\\_electric\\_is\\_reporting\\_that\\_several\\_large\\_generators\\_are\\_offline/](https://www.reddit.com/r/BigIsland/comments/1bnuar3/hawaiian_electric_is_reporting_that_several_large_generators_are_offline/)

21) "NewsHawaiian Electric asking Big Island customers to conserve power due to down generators

March 25, 2024 · 11:49 AM HST

According to the utility company, this is an usual situation as the large generators are experiencing mechanical problems resulting in a reduced output. The largest generator, an independent power producer that sells electricity to Hawaiian Electric, is offline with significant mechanical issues.

The plant generates 60 megawatts or nearly one-third of the typical peak demand of 180 megawatts on the island."

<https://bigislandnow.com/2024/03/25/hawaiian-electric-asking-big-island-customers-to-conserve-power-due-to-down-generators/>

All the articles above show that a resort development will damage Keauhou Bay coral and marine life and, Big Island resources and infrastructure are currently being negatively affected from the development that is on island already, and there are years of new development that have already been approved, before having safe resources and infrastructures for new developments.

With these scientifically proven articles by some of the most professional scientists in the world, they say the a serious population increase, as well as development and resort runoff that happens because of parking lots, and... with all coastat developments, it will be dangerous for Keauhou Bay to be development because it will damage the marine ecosystems in the area.

Please, save Keauhou Bay's marine life and help the island's resources by saying NO to a Bungalow Resort built by Kamehameha Schools because all of these articles prove it would be extremely damaging to the waters at Keauhou Bay.

Thank you,

Sincerely,

Deborah Sevy

**From:** Rosanne Shank <[REDACTED]>  
**Sent:** Saturday, July 27, 2024, 8:41 PM  
**To:** 221053-01 KS, Keaouhou Entitlements  
**Subject:** Keaouhou Bay Development  
**Categories:** Yellow Category

To Whom It May Concern,

Please read the scientific proof in this letter and REJECT Kamehameha Schools Environment Impact Statement (EIS) for Keaouhou Bay to become a Bungalow Resort.

A Bungalow Resort WILL have a SERIOUS NEGATIVE IMPACT on Keaouhou Bay as stated in the researched articles below.

Please, DO NOT risk polluting the water in Keaouhou Bay by allowing Kamehameha Schools to develop their bungalow resort project. It is scientifically proven that developments pollute nearby waters both during and after development.

Below are scientific articles written by the National Oceanic and Atmospheric Administration (NOAA), Global Coral Reef Alliance, Hawaii Government, and many other professional organizations, that have studied and shown that developments have ALWAYS polluted the water in EVERY coastal development area.

Does this EIS (Environmental Impact Statement) have any kind of reports and studies on how the endangered species and marine life will handle the extra pollution due to development, and the golf course runoff? Keaouhou Bay is their habitat and this development WILL be CHANGING an Entire Ecosystem.

#### ENDANGERED SPECIES CONSERVATION IMPACTED BY DEVELOPMENT

In the Endangered Species Act of 1973 Under Section 2 (b), "To provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved." This would be Keaouhou Bay.

The Green Sea Turtle swims in Keaouhou Bay weekly and the monk seal has also been seen swimming and resting in Keaouhou Bay. Both of these marine animals are on the endangered species list.

Endangered Species Act

"Section 2. Findings, Purposes, and Policy

(4) the United States has pledged itself as a sovereign state in the international community to conserve to the extent practicable the various species of fish or wildlife and plants facing extinction, pursuant to—

(b) PURPOSES.—The purposes of this Act are to provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved, to provide a program for the conservation of such endangered species and threatened species, and to take such steps as may be appropriate to achieve the purposes of the treaties and conventions set forth in subsection (a) of this section."

This was taken from <https://www.fisheries.noaa.gov/national/endangered-species-conservation/endangered-species-ac>

#### FEDERALLY PROTECTED GREEN SEA TURTLES WILL BE AFFECTED

The green sea turtle is federally protected and can be seen in Keaouhou Bay weekly.

The following article that states: "POLLUTED RUNOFF IN HAWAII ENDANGERS GREEN SEA TURTLES"

Why does Hawaii have a runoff problem?

Historically, in the tropics of Hawaii, precipitation was absorbed into the soil, according to the Clean Water Branch of Hawaii's Department of Health. Any potential pollution or contaminants on the ground surface would get pushed into the soil by the rain, and plant roots and microbes would help break down the pollution into less dangerous components. However, with urban and agricultural development, less and less of the pollution gets pulled into the soil, and more of it gets washed out into storm drains. From there, the pollutants make their way to streams, rivers and the ocean that surrounds Hawaii. According to the state agency, most of these contaminants are nutrients from fertilizer, bacteria from animal waste, oil, garbage and yard waste...

If polluted runoff reaches the ocean, it can wreak havoc on marine life, including endangered green sea turtles." Taken from <https://www.chemservice.com/news/polluted-runoff-in-hawaii-endangers-green-sea-turtles/>

Allowing this development WILL POLLUTE Keaouhou Bay. The above article, written in 2014 (because runoff water from developments were polluting the ocean even then!!!) states this fact clearly. Keaouhou Bay is home to countless sea creatures such as the protected green sea turtle, spotted eagle rays, manta rays, octopus, dolphins, fish, coral, monk seals, and more and that will ALL be harmed by the severe pollution runoff that WILL happen because developments have been shown to ALWAYS pollute the water is that is nearby.

The Green Sea Turtle is protected by more than one law. "All sea turtles in Hawai'i are protected by the Endangered Species Act (ESA) and additionally protected by Hawai'i

Revised Statutes Chapter 195D (HRS) and Hawai'i Administrative Rules (HAR) 13-124." This information was taken from this site <https://dlnr.hawaii.gov/dar/species/sea-turtles/>

#### THE ENDANGERED MONK SEAL WILL BE AFFECTED

Keauhou Bay is known as a RESTING AREA for the ENDANGERED MONK SEAL. If another resort is allowed to be built, in addition to the pollution, it will also bring a lot more people down to Keauhou Bay. This increases the chances of a resting monk seal being disturbed by humans trying to get close, take "selfie" photos, and being generally uninformed and harmful. Please see article on Selfie Culture and its harmful effects below.

Has the EIS done any research on what an increased population would do in such a small area, and what will happen to the endangered species that live there? With a significantly increased population their habitat of Keauhou Bay will likely be changed forever.

This information is from a NOAA Scientist; "Study shows selfie culture impacts how people behave when posting images of an endangered species on social media. There's a seal on the beach! Let's go get a 'selfie'! That must have been what nearly 18 percent of people on Instagram thought before approaching an endangered species.

In a recent study, NOAA scientists used social media to monitor human activities around endangered Hawaiian monk seals. They discovered that human disturbance is more common than they thought." <https://www.fisheries.noaa.gov/feature-story/endangered-hawaiian-monk-seals-cry-foul-over-selfies>

NOAA clearly states a high population in a place where monk seals and sea turtles habitat can be a serious disturbance for these endangered species.

"Hawaiian monk seals are protected federally by the ESA and the Marine Mammal Protection Act (MMPA), as well as locally by Hawai'i Revised Statutes (HRS) Chapter 195D and Hawai'i Administrative Rules (HAR) 13-124." This was taken from <https://dlnr.hawaii.gov/dar/hawaiian-monk-seal/>

Keauhou Bay is the monk seals and the green sea turtle's habitat. Allowing a bungalow resort to be developed in Keauhou Bay, the habitat of these endangered species, is to threaten their life and habitat with golf course runoff pollution, as well as development pollution. By threatening their habitat, and hence their lives, this development goes completely against the Endangered Species Act of 1973.

The verbiage in the Endangered Species Act states, "to conserve". In this case, "to conserve" would be to protect the land around Keauhou Bay from developments that destroy the habitat of these endangered species with pollution and runoff.

Does this EIS have any reports on the endangered species that frequent Keauhou Bay? This is their habitat and it needs to be "conserved".

Under the Conservation Program there should be research done on endangered species and their associated ecosystems. A large bungalow resort development WILL FOREVER CHANGE THIS ECOSYSTEM.

"§195D-5 Conservation programs. (a) The department shall conduct research on indigenous aquatic life, wildlife, and land plants, and on endangered species and their associated ecosystems, and shall utilize the land acquisition and other authority vested in the department to carry out programs for the conservation, management, and protection of such species and their associated ecosystems." [https://www.capitol.hawaii.gov/hrscurrent/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hrscurrent/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm)

Also, under this same Conservation program, "(2) Taking such action as may be necessary to ensure that actions authorized, funded, or carried out by them do not jeopardize the continued existence of threatened or endangered species." [https://www.capitol.hawaii.gov/hrscurrent/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hrscurrent/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm)

Please consider that developing a Kamehameha Schools Bungalow Resort in Keauhou Bay WILL threaten endangered species due to the unavoidable development and golf course pollution runoff that would be caused by removing the all the trees that currently serving as a natural pollution filter, and replacing the land with housing, cars, humans, and waste. There would also be tremendous runoff damage into Keauhou Bay and the surrounding area during the building phase of this enormous project.

Thank you for considering my concerns-

Rosanne Shank

## Jennie Shield

Good afternoon, Please find attached a comment letter on the Kamehameha Schools – Keauhou Bay Management Plan Draft Environmental Impact Statement. Thank you,

Keauhou Bay Management Plan Draft Environmental Impact Statement Comments

Dear Mr. Roy,

I would like to start by introducing myself, I am the founder and President of Great Ecology, a leading ecological consulting and landscape architecture firm. Formed in 2001, Great Ecology has used ecological approaches to address environmental challenges and regulations for over two decades now. I have over 30 years of experience as an expert technical consultant on over 1,400 projects across the United States and internationally. My technical specializations include habitat restoration, ecological planning and design, and environmental strategy.

The purpose of this letter is to provide comments on the Kamehameha Schools, Keauhou Bay Management Plan Draft Environmental Impact Statement (DEIS). It is the responsibility of the party preparing the DEIS to provide substantial evidence to support the analysis and conclusions of the DEIS; however, this DEIS falls short of that. The majority of the DEIS seems to be a series of unsupported conclusions and not a DEIS that is supported by substantive research or analysis. The comments below are not all-inclusive but are intended to highlight the deficiencies of the DEIS.

**Congestion and Use Conflict**

The DEIS argues that Keauhou Bay (Bay) suffers from "congestion" and conflicts with incompatible uses, however there is no study analyzing congestion (i.e., number of users over a given time span such as daily, weekly, monthly, etc. basis). Additionally, the DEIS does not evaluate how the Project, implementation of the Keauhou Bay Management Plan on approximately 29 acres of Keauhou Bay, would reduce the existing number of users or implied incompatible uses, other than reducing access to publicly owned space. Without the required analysis, the claim that the Project would reduce congestion and/or use conflicts is unsupported. In actuality, it may be reasonable to conclude that the Project would *increase* congestion and use conflicts at Keauhou Bay with the proposed construction of 43 homes, cultural center, commercial center, and commercial kiosks. The DEIS identifies the launch ramp stretch as an area of greatest congestion, however it proposes to add a substantial number of visitors and vehicles to that area, thereby increasing congestion further. The DEIS fails to provide any explanation as to how adding thousands of people and vehicles to areas identified as having the greatest congestion will be reduced by the Project. There is also no analysis in the DEIS of the impact on local plants or wildlife from the likely increased usage of the Bay because of the Project. Lastly, there is no analysis of future impacts on the existing uses of the Bay with the addition of rental kayaks and stand-up paddle boards to the Bay. The reasons listed above demonstrate that the DEIS has failed to provide the required analyses and supporting evidence.

**Traffic Impacts**

The Project proposes to build a resort with 43 multi-bedroom houses, commercial kiosks, a cultural center, a commercial/retail center, as well as a road connecting the north and south ends of the Bay. This will result in a large amount of vehicle trips per day, however there is no study analyzing traffic impacts. There is also no evidence of what the amount of reduction on the existing roadways would be with construction of a new road. The DEIS also fails to address how the Project would mitigate increased traffic impacts. Lastly the DEIS claims that the Project will reduce traffic impacts but does not provide any substantiation or studies to support its conclusions.

### **Noise Impacts**

The DEIS fails to adequately address noise impacts from the Project. The majority of the project will remove historically forested areas, from which the only noises emanating are natural sounds. There are no studies of the existing noise levels in the area or studies of what increased noise impacts to the area will be, except statements that are made without any supporting evidence. It is obvious that the Project will alter existing conditions related to noise via a large increase in human and motorized activity in and around the Bay.

### **Air Impacts**

The DEIS fails to address air impacts from the Project. As mentioned previously, a large number of additional motorized vehicles and vessels will be added to the area. However, there have been no studies of existing air quality conditions relative to the projected conditions with more vehicular traffic.

### **Historical Runoff Issues**

The DEIS does not address how the Project will address manage flooding on Kamehameha II Drive caused by Project lands. The DEIS does not address that there were two sand volleyball courts historically. The second court was located in the publicly owned land between the seawall and existing volleyball court. When the Project proponent cleared lands to construct the existing parking lot and boat storage area, stormwater drainage was considerably affected. As a note, the DEIS fails to address the permit status of the existing boat storage and parking lot. The Project proponent failed to make repairs to the second sand volleyball court and the DEIS fails to address what appears to be unpermitted development of the current northern parking lot and boat storage lot, or their environmental impacts. The DEIS does not address the historical catchment area north of the sand volleyball court, which historically helped to capture runoff from the northern area where the new parking lots and boat storage were added. The Project proponent has failed to maintain the catchment, which has caused excess runoff from the area resulting in damage to publicly-owned property. The DEIS needs to address the permit status of the apparently illegally constructed parking and boat parking lots including the lack

of environmental review, the historical runoff issues from the Project proponent lands that have damaged publicly owned property, and the strategy to mitigate existing issues.

### **Runoff Impacts from Increased Hardscape**

The Project fails to address additional runoff impacts from increased hardscape. The Project proposes to remove existing native vegetation in favor of construction of the resort, commercial kiosks, and commercial/retail spaces. According to the Project maps, it appears that about 15-20 acres of native vegetation will be removed and replaced with mostly hardscape. There is no analysis of the current conditions or of the increased flow and rate of runoff from the increased hardscape. The same conclusion can be drawn here – that the DEIS has failed to provide the appropriate analysis and documentation to support its conclusions.

### **Toxicity and Eutrophication**

The Project fails to study, analyze, and/or provide projection as to increased toxicity and eutrophication impacts to Keauhou Bay. The decision to position the roadway closer to the Bay increases the potential for toxic pollutants entering the Bay and impacting the Bay's ecosystem. There is no study on the existing toxicity of runoff to the Bay from nearby roadways nor is there a study or projection of the concentration or ecological impact of the Project on future runoff to the Bay. Projects such as resorts with houses, pools, lawns etc. have increased runoff of nitrates and phosphates, which are known to cause eutrophication to water bodies. Golf courses have the potential to release substantial amounts of nitrates and phosphates through runoff. The forested area that the golf course drains into is proposed to be removed by the Project. The DEIS fails to analyze existing conditions as well as impacts of removal of the forest and the construction of the resort and roads on future releases of eutrophic chemical to the Bay. The DEIS is failing to provide the supporting evidence and documentation required in a DEIS.

### **Proponents Failure to Maintain Existing Facilities**

The DEIS does not analyze the long history of the Project proponent's failure to maintain existing properties. The DEIS suggests that the long-term maintenance issues related to the Project proponent's properties are due to lack of income from the properties and that in the future, maintenance will improve. According to the Project proponent's website their endowment is valued at \$14.6 billion suggesting lack of funds should not be an issue contributing to lack of maintenance. Additionally, the Project proponent has historically received funds from the Keauhou properties through the boat yard rental, parking, canoe club, and building rentals. There is little evidence to support that if the Project is approved, the Project proponent would conduct the required maintenance. An example is the existing seawall owned by the Project proponent, which has been in serious disrepair for over a decade with pieces falling into the ocean and no repairs made. As a result, the DEIS should consider the very likely scenario that the Project proponent may continue to act as it has historically and fail to maintain its properties.

### **Public Access**

The Project appears to block public access across publicly owned property. According to the maps attached to the EIS, there is publicly owned property extending from the end of Kamehameha III Drive to the boat dock area. There is currently a path that extends from the end of Kamehameha III Drive to the boat dock area that allows access to the boat dock area, however, the Project proposal maps appear to block the publicly owned path. It appears that the Project proposes to block access to the public across publicly owned property.

### **Destruction of the Sand Volleyball Courts**

There were two sand volleyball courts located on the east end of Keauhou Bay historically. According to locals, the existing volleyball court located at the western edge of the Project proponent's property has been in continuous use by the public. Due to the limited availability of volleyball courts locally, this is the primary one used by local adults and children. Until the Project proponent cleared land to create the northern parking lot and boat parking, there was a second court that was similarly used. The Project proponent proposes to eliminate both volleyball courts and instead

plant grass in the area as "open space." The DEIS does not analyze the impacts of eliminating the existing volleyball court nor the impact on the local community who enjoy it. The Project does not include replacing the second volleyball court that was damaged by the excess runoff caused by prior land clearing. Lastly, a large grassy area is incompatible with historical and current uses of that area. Historical photographs show the East end of Keauhou Bay as sandy beach all the way up to the base of the hill to the East of the existing volleyball court.

The analysis presented to support the claims made in the DEIS is insufficient, therefore the DEIS should not be certified until substantial evidence to support these claims is provided in a supplemental DEIS to meet the requirements and rules of NEPA (CEQ Regulations (40 CFR 1502.9(b))) for certification.

Sincerely,

Mark S. Laska, Ph.D.

President and CEO

## Pamela Small

I am opposed to the development of Keauhou Bay. Pollution runoff from the new pavement will be devastating to the marine ecosystem. The building process will create pollutants which could subsequently destroy the existing reef.

There are archeological considerations to contend with. As a landing spot of the original Hawaiian people, there are artifacts scattered throughout the area.

Parking lots and retail buildings are NOT what Keauhou needs.

## Jun Sogi

My family has lived in Hawaii for 125 years. I oppose building a hotel in Keauhou Bay. It is inappropriate because traffic and parking is very bad. The bay and beach is already overcrowded. The last thing needed is 100 haole tourists dripping sun lotion in the already contaminated oil fuel filled water. The current disrespect Kam schools pays to its former King is disgraceful and a hotel will make it worse. The EIS is a true sham filled with empty platitudes. Its BS. No more tourists! No more hotels!

## Helene Spencer

I strongly oppose the plan of Kamehameha Schools as they should be preserving this important cultural area as open land and cultural center to educate as they promise. They have an abundance of other commercial properties they can profit from. This area should be preserved w no housing for the affluent! My grandson also works w the manta ray dives at t Keauhau harbor and believe that this would negatively affect that business. Mahalo

## Lisa Sterritt

As a nearby resident of this proposed project, I am strongly against its continuation. Direct descendants of King Kamehameha have stated their opposition to this during previous public meetings. Ali'i Drive and Kaleiopapa St. traffic is already noisy and dangerous as drivers violate speed limits continuously. The addition of even more resorts only increases the issues of affordability for local Hawaiians and residents who struggle with housing, high energy costs and goods and services priced out of their reach.

It will also displace an important gathering place for the young people of the island who are learning canoeing through the keauhau bay canoe club.

Please stop this project. It is not needed, will over populate an area already ill-equipped to handle traffic noise and volume, and destroy the tranquility of the area.

Thank you.

In a recent study, NOAA scientists used social media to monitor human activities around endangered Hawaiian monk seals. They discovered that human disturbance is more common than they thought." <https://www.fisheries.noaa.gov/feature-story/endangered-hawaiian-monk-seals-cry-foul-over-selfies>

NOAA clearly states a high population in a place where monk seals and sea turtles habitat can be a serious disturbance for these endangered species.

"Hawaiian monk seals are protected federally by the ESA and the Marine Mammal Protection Act (MMPA), as well as locally by Hawai'i Revised Statutes (HRS) Chapter 195D and Hawai'i Administrative Rules (HAR) 13-124." This was taken from <https://dlnr.hawaii.gov/dar/hawaiian-monk-seal/>

**Keaouhou Bay is the monk seals and the green sea turtle's habitat.** Allowing a bungalow resort to be developed in Keaouhou Bay, the habitat of these endangered species, is to threaten their life and habitat with golf course runoff pollution, as well as development pollution. **By threatening their habitat, and hence their lives, this development goes completely against the Endangered Species Act of 1973.**

The verbiage in the Endangered Species Act states, "to conserve". In this case, "to conserve" would be to **protect the land around Keaouhou Bay** from developments that destroy the habitat of these endangered species with pollution and runoff.

**Does this EIS have any reports on the endangered species that frequent Keaouhou Bay? This is their habitat and it needs to be "conserved".**

Under the **Conservation Program** there should be research done on endangered species and their associated ecosystems. A large bungalow resort development WILL FOREVER CHANGE THIS ECOSYSTEM.

"§195D-5 Conservation programs. (a) The department shall conduct research on indigenous aquatic life, wildlife, and land plants, and on endangered species and their associated ecosystems, and shall utilize the land acquisition and other authority vested in the department to carry out programs for the conservation, management, and protection of such species and their associated ecosystems." [https://www.capitol.hawaii.gov/hrscurrent/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hrscurrent/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm)

Also, under this same Conservation program, "(2) Taking such action as may be necessary to ensure that actions authorized, funded, or carried out by them do not jeopardize the continued existence of threatened or endangered species." [https://www.capitol.hawaii.gov/hrscurrent/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hrscurrent/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm)

Please consider that developing a Kamehameha Schools Bungalow Resort in Keaouhou Bay WILL threaten endangered species due to the unavoidable development and golf course pollution runoff that would be caused by removing the all the trees that currently serving as a natural pollution filter, and replacing the land with housing, cars, humans, and waste. There would also be tremendous runoff damage into Keaouhou Bay and the surrounding area during the building phase of this enormous project.

### **GOLF COURSE POLLUTION KILLS MARINE LIFE AND DRASTICALLY CHANGES ECOSYSTEMS**

diseases..." <https://www.globalcoral.org/golf-course-fertilizer-runoff-causes-nutrient-enrichment-leading-to-harmful-algae-blooms-on-a-bahamian-coral-reef>

**Does this EIS have any studies or reports on the extra runoff pollution due to clearing land and adding pavement?**

This needs to be fully assessed because **you will be changing an entire ecosystem** to build a bungalow resort. It rains in Keauhou Bay many nights out of the year and this kind of pollution will kill the beautiful and necessary coral in the Bay.

**FURTHERMORE:** "If there are **toxic algal blooms**, like red tide, or man-made contaminants, like pesticides or detergents in the water, those toxins are contained within the bubbles of sea foam. When those bubbles pop, the toxins can become airborne and compromise the air that is breathed in that location." <https://oceanconservancy.org/blog/2023/03/31/what-sea-foam/>

## ENGINE POLLUTION CAUSES ISSUES IN THE OCEAN

**Does this EIS have any detailed traffic studies for the increase in cars that will be added to this already severely traffic area they want to build their 150 room bungalow resort in? Have they done any studies on the pollution these cars WILL have in Keauhou Bay?**

Because this Bungalow Resort could have over 150 extra cars and over 300 or more extra people in and out of Keauhou Bay, what traffic and increased population studies have they done? There will be employees with cars, guests with cars, visitors with cars. At times this would range to over 200 cars (likely more), coming in and out of, and parking above Keauhou Bay thereby causing serious car population issues because of all these added cars right next to the bay.

**The article below is from NOAA regarding motor vehicle engines and pollution to the sea.**

What is the biggest source of pollution in the ocean?

Most ocean pollution begins on land.

"Millions of motor vehicle engines drop small amounts of oil each day onto roads and parking lots. Much of this, too, makes its way to the sea.

Some water pollution actually starts as air pollution, which settles into waterways and oceans. Dirt can be a pollutant. Top soil or silt from fields or construction sites can run

off into waterways, harming fish and wildlife habitats." <https://oceanservice.noaa.gov/facts/pollution.html#:~:text=Millions%20of%20motor%20vehicle%20engines,Dirt%20can%20be%20a%20pollutant.>

**Land-Based Runoff Remains Top Source of Oil in the Ocean, Says New Report Oil in the Sea: Inputs, Fates, and Effects**

News Release September 28, 2022

WASHINGTON — Oil in runoff, primarily from cities and vehicles, is the top source of oil entering the ocean, says a new report from the National Academies of Sciences, Engineering, and Medicine. In North American waters, estimated ocean oil pollution from land-based runoff is up to 20 times higher than it was 20 years ago, and oil spills, natural oil seeps, and discharge from oil and gas operations remain major sources of pollution. The report recommends actions that government and others should take to minimize oil pollution, and calls for sustained research funding to better understand how oil reaches and affects ocean environments. <https://www.nationalacademies.org/news/2002/05/oil-in-the-sea-inputs-fates-and-effects#:~:text=WASHINGTON%20%2D%2D%20Nearly%2085%20percent,pipeline%20spills%2C%20says%20a%20new>

**The Impact Of Stormwater – Car Emissions**

"Car emissions are not limited to exhaust fumes that contribute to air pollution. They can also leak automotive fluid and release heavy metals that can contribute to stormwater pollution, contaminating local waterways." <https://www.stormwaterhepherds.org.au/blog/the-impact-of-stormwater-car-emissions/>

## NOISE POLLUTION'S HARMFUL EFFECT ON MARINE LIFE

**Does this EIS have any reports on the noise pollution that will happen and what it could do to marine life in Keauhou Bay during development?**

Because if you allow this Bungalow Resort to be developed you will increase constant noise in this bay for years to come and, "Noise Pollution Research shows that underwater noise from construction, shipping and naval vessels significantly impacts the natural behavior of cetaceans and many other marine species. This can be seen when mass beaching events occur or breeding success is diminished."

The above information was taken from the Ocean Conservation

Trust <https://oceanconservationtrust.org/ocean-advocacy/think-ocean/ways-to-think-ocean/>

### How Does Noise Pollution Harm Marine Species?

"However, over the past few decades, noise pollution in the marine environment has increased dramatically and is threatening the natural soundscape of the marine environment. Ships, seismic surveys, explosions, construction, and sonar devices have made the once peaceful environment into a loud, chaotic home which is extremely damaging for marine wildlife. This type of pollution is often overlooked in comparison to others but its impacts are now being documented across all types of marine ecosystems." <https://earth.org/noise-pollution-in-the-ocean/>

If you allow this resort the amount of people in this bay will fully increase and, "Hawaii's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally, management of the resource should balance the needs of different user groups, but the welfare of the marine environment on which its inhabitants depend must be the most important consideration." This was taken from Hawaii's own Division of Aquatic Resources <https://dlnr.hawaii.gov/dar/marine-managed-areas/hawaii-marine-life-conservation-districts/#:~:text=Snorkeling%20and%20SCUBA%20diving%20are,effect%20on%20nearshore%20fish%20populations.>

### What is ocean noise?

"Ocean noise refers to sounds made by human activities that can interfere with or obscure the ability of marine animals to hear natural sounds in the ocean.

Many marine organisms rely on their ability to hear for their survival. Sound is a highly efficient means of communication underwater and is the primary way that many marine species gather and understand information about their environment. Many aquatic animals use sound to find prey, locate mates and offspring, avoid predators, guide their navigation and locate habitat, as well as to listen and communicate with each other.

Over the last century, human activities such as shipping, recreational boating, and energy exploration have increased along our coasts, offshore, and deep ocean environments. Noise from these activities can travel long distances underwater, leading to increases and changes in ocean noise levels in many coastal and offshore habitats.

These rising noise levels can negatively impact ocean animals and ecosystems. Higher noise levels can reduce the ability of animals to communicate with potential mates, other group members, their offspring, or feeding partners. Noise can also reduce an ocean animal's ability to hear environmental cues that are vital for survival, including those key to avoiding predators, finding food, and navigating to preferred habitats."

<https://oceanservice.noaa.gov/facts/ocean-noise.html>

### LEARN FROM OTHERS: RUN-OFF FROM DEVELOPMENT KILLS

The Chesapeake Bay has a foundation that is trying to save their bay due to runoff pollution that was caused by developments. Chesapeake Bay is **a lot bigger** than Keauhou Bay. If it's being drastically hurt by runoff water from developments, Keauhou Bay waters won't stand a chance if development above the bay is allowed. Keauhou Bay is a much smaller ecosystem.

**This Article is by the Chesapeake Bay Foundation, Saving a National Treasure states,** "...runoff is a significant source of harmful nitrogen pollution that continues to grow..."

As rainwater and snowmelt run off our streets, parking lots, lawns, and other surfaces, they pick up pet waste, pesticides, fertilizer, oil, and other contaminants. If the draining water doesn't evaporate or soak into the ground where it can be filtered, it flushes straight into local creeks, rivers, and the Chesapeake Bay, adversely affecting water quality and aquatic life.

Only 10 to 20 percent of rain that falls in forests, fields, and other natural areas runs off, with the rest absorbed by soil and plants, where it is filtered before reaching aquifers or local waterways. (Right now Keauhou Bay has a lot of trees and is very natural, this is what helps stop runoff.) By contrast, close to 100 percent of the rain that falls on concrete and other hard surfaces produces runoff. One inch of rain falling on an acre of hardened surface produces 27,000 gallons of runoff.

Stormwater runoff pollution threatens Chesapeake Bay and its rivers and streams...Polluted runoff is one of the most harmful sources of pollution to the Bay and its waters. And much of it starts right in the urban and suburban neighborhoods where we live." <https://www.cbf.org/issues/polluted-runoff/index.html#:~:text=Besides%20carrying%20pollutants%20that%20harm,them%20are%20placed%20in%20jeopardy.>

If that is what runoff is doing to the Chesapeake Bay, the effects of runoff will be even more devastating to Keauhou Bay due to its size and fragility.

[pollution.html#:~:text=Impacts%20from%20land%2Dbased%20sources,and%20mortality%20in%20sensitive%20species.](#)

Article by Environmental Evidence, "**Coastal development and runoff lead to sedimentation, which directly impacts coral recruitment, growth, mortality, and ecosystem services that coral reefs provide.**" <https://environmentalevidencejournal.biomedcentral.com/articles/10.1186/s13750-020-00200-0#:~:text=Coastal%20development%20and%20runoff%20lead,service%20that%20coral%20reefs%20provide.>

Developments can't fully stop polluting because runoff is from rain during development and after. Article by NOAA, "One of the most significant threats to reefs is pollution. **Land-based runoff and pollution discharges can result from dredging, coastal development... This runoff may contain sediments, nutrients, chemicals, insecticides, oil and debris.**"

When some pollutants enter the water, nutrient levels can increase, promoting the rapid growth of algae and other organisms that can smother coral." [https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,organisms%20that%20can%20smother%20corals.](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,organisms%20that%20can%20smother%20corals.)

Another article by NOAA, "**Coral reefs also are affected by leaking fuels, anti-fouling paints and coatings, and other chemicals that enter the water... (All of those are show up in every development project.)**"

**Among the most damaging pollutants on coral reefs is sediment, which can remain suspended in the water or be deposited on the coral surface (i.e., turbidity and sedimentation, respectively) and can contain toxicants, pathogens, and nutrients, all of which impact coral growth, recruitment, and survival"** [https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days.](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days.)

#### **It's Been Proven Resort Developments KILL Marine Life**

This article by MarinBIO states, "**Zooplankton are also sensitive to their environment and like phytoplankton—a change in zooplankton concentration can indicate a subtle environmental change.** Zooplankton are highly responsive to nutrient levels, temperatures, pollution, food that is not nutritious, levels of light, and increases in predation. As well as providing an essential link in the marine food chain (which is an understatement), the diversity of species, amount of biomass and abundance of zooplankton communities can be used to determine the health of an ecosystem..."

Here is another article that shocking shows that in a very short time, big changes can occur due to runoff. A development will hurt and kill plankton, by Frontiers in Marine Science, "Effects of an experimental terrestrial runoff on the components of the plankton food web in a Mediterranean coastal lagoon The main result observed in the present study was that the effects of the simulated terrestrial runoff spread along the plankton food web, significantly affecting all trophic levels of the natural plankton community studied. **This occurred in a relatively short time considering that the experiment lasted less than three weeks.** The lower light availability in the terrestrial runoff treatment compared to the control resulted in a net decrease of approximately one-third of Chl-a concentration and phytoplankton abundance over the entire experiment." <https://www.frontiersin.org/journals/marine-science/articles/10.3389/fmars.2023.1200757/full>

**The ecosystem is fragile and interconnected as is stated in this article:** "Zooplankton are also affected by levels of pH, heavy metals, calcium, and aluminum. Nutrients like nitrogen and phosphorus will affect the prey of zooplankton (like algae, protozoa and bacteria), indirectly affecting zooplankton survival. Scientists are still putting together pieces of the zooplankton puzzle. Some questions include how nutrient levels found in algae can influence the growth and behavior of zooplankton. Another question important to marine and human life is how toxins and pollution will affect this crucial link in the food chain" This information is in article by MarineBIO. <https://www.marinebio.org/creatures/zooplankton/#:~:text=Zooplankton%20are%20also%20sensitive%20to,light%2C%20and%20increases%20in%20predation.>

A research article by Environmental Research Laboratory, United States Environmental Protection Agency that discusses, "**Toxic Effects of Pollutants on Plankton: There are four main sources of aquatic pollution: industrial wastes, municipal wastes, agricultural run-off, and accidental spillage.** Non-point sources, such as automobile exhausts, add appreciable amounts of pollutants to air that may enter aquatic systems in rainfall or dry fall-out. These sources add pesticides, heavy metals, oil, petroleum products, and a large number of organic and inorganic compounds to water. Lakes and oceans serve as sinks for many pollutants. Plankton comprise a large portion of the living matter in natural waters and function in biogeochemical cycles. They are affected by pollutants, transfer them to sediments and other organisms, and function in their biological transformation."

[https://scope.dge.carnegiescience.edu/SCOPE\\_12/SCOPE\\_12\\_3.6\\_chapter12\\_257-274.pdf](https://scope.dge.carnegiescience.edu/SCOPE_12/SCOPE_12_3.6_chapter12_257-274.pdf)

All the above articles show that development of Keauhou Bay WILL hurt plankton life and marine life in the bay because pollutant runoff is inevitable and unavoidable during construction and afterwards. The manta ray food source will likely disappear. This will be devastating for the manta ray populations. Furthermore, if manta rays die or leave the area,

By allowing this development you are stressing an already fragile Eco-system. The small bay is currently used by many locals for boating, fishing, canoeing, paddle boarding, snorkeling, manta night dives, surfing, and swimming. We know, and research shows, that more people cause more damage. The area simply cannot afford or support this development.

**"Denser coastal populations and greater wealth will lead to reef degradation by coastal construction.** Denser populations inland will lead to more runoff and siltation. Effects of human perturbations can be explored with meta-population theory since they translate to increases in patch-mortality and decreases in patch-colonization (= regeneration). All such changes will result in a habitat with overall fewer settled patches, so fewer live reefs." This information was taken from Science Direct <https://www.sciencedirect.com/science/article/abs/pii/S0065288120300328#:~:te xt=Aquaculture%20will%20alleviate%20some%20fishing,t0%20more%20runoff%20and%20siltation.>

Another article by Nature Sustainability, "**Coral reefs and coastal tourism in Hawaii Coral reefs are popular** for their vibrant biodiversity. By combining web-scraped Instagram data from tourists and high-resolution live coral cover maps in Hawaii, we find that, regionally, **coral reefs both attract and suffer from coastal tourism.** Higher live coral cover attracts reef visitors, but that visitation contributes to subsequent reef degradation. Such feedback loops threaten the highest quality reefs, highlighting both their economic value and the need for effective conservation management." [https://www.nature.com/articles/s41893-022-01021-4.epdf?sharing\\_token=wsakgQNhalHjAnWAq453tRgN0AJWeI9nrR3ZotV0PYGzA5lc\\_H001zcHNIP3AShncgKRy6\\_vKLpW49dbmBYoXSg3Y1MgQIGBZsapidGUHi7O1SLbu9x5P3xED4KxI4T0sJlvGQ1a72Zr3rUbraxpodId2AoNISMWSuxB7JEDqjJ8OGJpx71TJWdCFxvFKlIZYeNd cJj3Sw\\_dnaUg5IZhcjPBDImmah15yqt5Q%3D&tracking\\_referrer=abcnews.go.com](https://www.nature.com/articles/s41893-022-01021-4.epdf?sharing_token=wsakgQNhalHjAnWAq453tRgN0AJWeI9nrR3ZotV0PYGzA5lc_H001zcHNIP3AShncgKRy6_vKLpW49dbmBYoXSg3Y1MgQIGBZsapidGUHi7O1SLbu9x5P3xED4KxI4T0sJlvGQ1a72Zr3rUbraxpodId2AoNISMWSuxB7JEDqjJ8OGJpx71TJWdCFxvFKlIZYeNd cJj3Sw_dnaUg5IZhcjPBDImmah15yqt5Q%3D&tracking_referrer=abcnews.go.com)

## **INFRASTRUCTURE AND RESOURCES ON AN ISLAND ALREADY HIGHLY IMPACTED AND STRUGGLING FOR ANSWERS**

**Has the EIS done any research or reports on the Resources and Infrastructure it will need for a bungalow resort?**

There are many big housing developments currently under construction in Kailua Kona, Waikoloa Village, Hilo, Puna, Ocean View and Volcano. The entire Big Island has construction projects already in progress.

**Has Kamehameha Schools EIS done any kind of reports or surveys to know if Big Island has the Resources and Infrastructures for their resort development?**

"Hotel waste management refers to all the practices and processes that hotels implement to handle and dispose of the multiple types of waste generated on their premises. **Worldwide, hotels produce almost 300,000 tonnes of waste each year.**" <https://www.homebiogas.com/blog/hotels-waste-management/>

As of now, the Big Island's Resources and Infrastructure are having serious negative issues and many more developments that have been approved are not even completed as of yet, which means our island's resources and infrastructure will be taxed even more severely in the near future.

Please read the below articles that prove Big Island does not have the resources or infrastructure for a 143-Unit Bungalow Resort Development at Keaunoh Bay. On Hawaii's Island, we are already struggling to meet the increasing need for resources and infrastructure.

## **Big Island Now poll No. 27 results: More than one solution needed to help extend life of West Hawaii'i landfill**

September 17, 2023

The West Hawaii'i Sanitary Landfill, the only remaining landfill on the Big Island, is forecast to reach capacity within the next 20 to 25 years.

The West Hawaii'i landfill became the island's only one after the Hilo Landfill closed three years ago. It only has about 20 to 25 years left before it can no longer be used to store rubbish.

<https://bigislandnow.com/2023/09/17/big-island-now-poll-no-27-results-more-than-one-solution-needed-to-help-extend-life-of-west-hawaii-landfill/>

## **A County commission drafts ordinance aiming to ban recyclables at West Hawaii'i landfill**

By Megan Moseley September 6, 2023

Hawaii'i County's Environmental Management Commission is developing an ordinance that aims to prohibit the amount of recyclable materials ending up in the island's only working landfill.

During a commission meeting on July 26, Ramzi Mansour, Hawaii'i County Director of Environmental Management, told commissioners the West Hawaii'i Sanitary Landfill only has 20 to 25 years left before it reaches capacity.

With the Hilo Landfill permanently closed in 2020, the clock is ticking for the island's sole dump. Commission chairperson Georjean Adams said it's a good time to start looking into solutions.

Adams said the proposed ordinance is in its early stages and is more about getting the conversation started about how to prevent unnecessary, or recyclable items — green waste, metals, plastics, paper, paperboard and glass — from ending up in the rubbish dump, located off Queen Ka'ahumanu Highway in Waikōloa.

"Trying to site a new landfill is close to impossible," Adams said. "So what are we going to do? So I was looking around, and the commission agreed, to look deeply into the idea of diverting the recyclables out and at least slow the filling up of the landfill."

The proposed ordinance refers to the 2019 Integrated Solid Waste Management Plan that commits the county to "divert, as much as feasible, commercial and municipal solid waste, including but not limited to green waste, metals, plastics, paper, paperboard, and glass to help achieve goals related to climate resiliency, renewable energy, sustainable agriculture, and zero waste."

<https://bigislandnow.com/2023/09/06/new-draft-ordinance-aims-to-ban-recyclables-at-west-hawaii-landfill/>

### Time's Up For Landfills

'Gentle' demolition strategies can help preserve resources

PAULA BENDER April 2, 2024

As Hawaii's government officials grapple with the challenge of limited landfill space statewide, federal restrictions set in place by the Environmental Protection Agency are ruling out possible locations that were once considered for new landfills.

Hawaii Act 73 states landfills must be located at least half a mile from residential areas; are prohibited from being located in areas with heavy rain and steep slopes, as well as agricultural and/or conservation lands; above aquifers; 300 feet beyond streams; and 1,000 feet beyond the ocean.

New landfills are also now prohibited from being created in tsunami inundation zones, 100-year flood zones and wetlands. There are also concerns that landfills near airports will attract birds, resulting in damage to aircraft and fatalities among pilots and passengers.

The City & County of Honolulu is in the process of identifying its next landfill and it doesn't want one any bigger or more active than absolutely necessary.

### Drought Conditions On Hawaii's Island Prompt Water Supply Message

by Big Island Video News  
on Oct 5, 2023 at 3:59 pm

(BIVN) – With moderate to severe drought conditions being reported across Hawaii's island, local water department officials issued a statement this week on the need for customers to use drinking water wisely.

Most of Hawaii's island is under "Moderate Drought" conditions, according to the latest information from the U.S. Drought Monitor. There is an area under "Abnormally Dry" conditions in South Kona, however there are other, small pockets on the Big Island that are under "Severe Drought". There is even a small spot of "Extreme Drought" in the South Point area of Ka'u.

"The National Weather Service's forecast calls for the existing drought conditions to expand over the entire island and intensify over the upcoming months due to the ongoing El Niño event," reported the Hawaii County Department of Water Supply. "Peak dryness is expected to occur from around January through February 2024. The El Niño event will likely persist well into spring 2024."

### From a Water Supply news release:

U.S.

**Hawaii is "on the verge of a greater catastrophe," locals say, as water crisis continues**

By Li Cohen

Updated on: April 11, 2024 / 8:23 AM EDT / CBS News

And recent years have seen compounding problems: less rain, leading to significant droughts, and repeated jet fuel leaks and PFAS chemical spills contaminating water systems. All of this significantly limits available water use for locals, many of whom say tourism is only worsening the situation. Just months ago, the world's largest surfing wave pool opened up on the island — filled with freshwater.

"They're not using it to drink or to support life, they're using it to make money. They're commodifying it," said Healani Sonoda-Pale, who is Native Hawaiian and a member of advocacy group O'ahu Water Protectors. "... We are on the verge of a greater catastrophe."

"**We are in a water crisis, that has to be made very clear,**" Wayne Tanaka, director of Sierra Club of Hawaii, told CBS News, saying that if the reasons for this crisis aren't soon addressed, "We may come to a point where we have to decide ... who gets water and who doesn't."

<https://www.cbsnews.com/news/hawaii-water-crisis-climate-change/>

Because this is an island, parts need to be shipped. The power plant currently has generators that are not working, and because of this (and other reasons), the Big Island needs to seriously conserve power so that everyone will have power. If this problem of shipping parts can happen once, it can and will happen again.

#### **UPDATE: HELCO asks for continued energy conservation**

BY SPECTRUM NEWS STAFF HAWAII ISLAND

UPDATED 6:28 PM ET APR. 16, 2024 PUBLISHED 9:05 AM ET APR. 15, 2024

HILO, Hawaii — Hawaiian Electric continues to urge Hawaii Island customers to reduce their electricity use to prevent the need for rolling outages.

In a news release Tuesday afternoon, the utility stated that Monday saw a reduced demand of approximately 5 megawatts. That, combined with increased wind and solar battery storage prevented the need for rolling blackouts on Monday. HELCO credited conservation efforts, particularly those by large businesses and government customers, for the reduction in electricity demand.

"We're grateful for our customers' efforts to conserve electricity, especially between 5 to 9 p.m., when electricity use is highest, because it does make a difference," said Hawaiian Electric spokesperson Kristen Okinaka. "By working together, we're helping to ensure that enough power can be available for all customers and prevent or minimize the impacts of rolling outages."

**Hawaiian Electric announced Monday afternoon that it may initiate rolling outages in parts of Hawaii Island because of the unavailability of several generators and lower than normal wind and solar resources.**

In a news release, the utility said that outages could start as early as 6:30 p.m. and rotate around the island for 30-minute intervals. The impacted areas and the timing of the outages will be based on wind generation and the amount of electric demand that needs to be reduced. Individuals who are dependent on electrically powered life support medical equipment are advised to arrange for a backup power supply.

The outages are being done to prevent power loss to even more customers, who are all being asked to conserve electricity throughout the month.

<https://spectrumlocalnews.com/hi/hawaii/news/2024/04/15/heco-customers-on-hawaii-island-asked-to-conserve-power->

#### **Big power supply problems continue to plague Hawaii Island**

Apr 8, 2024

The company has been facing an unusual situation with mechanical problems at three of the island's five largest power plants while part of the largest plant undergoes an annual overhaul. All four of these affected power plants are owned by the utility or an affiliate of its parent company.

Also contributing to the trouble is lower output from a geothermal plant, which has the third-largest generation capacity on the island and is owned by an independent operator.

"This is an unusual situation, driven mainly by the unavailability of several large generators that have experienced mechanical problems, are at reduced output, or are undergoing maintenance," Hawaiian Electric said in its March 25 announcement asking customers to use less electricity, especially on weekdays from 5 to 9 p.m.

**The company explained that it faces an "extremely tight" supply of power at peak use periods,** especially when production from wind, solar and hydroelectric facilities is lower than normal. Those sources of variable, renewable energy can supply up to 15% of electricity needs on the island.

"Without enough supply to meet electricity demand, the company may initiate rolling outages of up to an hour around the island," the March 25 announcement said.

<https://energycentral.com/news/big-power-supply-problems-continue-plague-hawaii-island>

## Hawaii Island customers urged to reduce electricity use through April

BY SARAH YAMANAKA HILO PUBLISHED 9:00 AM ET MAR. 26, 2024

What You Need To Know

-Hawaii Island customers may see alerts asking them to conserve energy, especially on days when there isn't much wind that generates up to 15% of electricity

-When alerts are issued, Hawaiian Electric is asking customers to take immediate action to minimize electricity use

-Even when no alerts are issued, customers — including hotels and large retailers — are urged to reduce electricity use as much as possible, especially between 5 and 9 p.m. on weekdays

**-If there is not enough electricity to meet demand, Hawaiian Electric may initiate rolling outages of up to an hour around the island**

<https://spectrumlocalnews.com/hi/hawaii/news/2024/03/25/hawaii-island-customers-urged-to-reduce-electricity-use-through-april>

## FURTHERMORE: TRAFFIC, LACK OF RESOURCES, AND FATALITIES

### A Resort Development WILL Increase Traffic on Already Severely Trafficked Roads. Are there traffic study reports for this EIS?

A development with 150 rooms comes with over 150+ cars. Employees, guests, and visitors will all have cars, plus the regular locals who go there to paddle and enjoy the bay. All this could range in over 300 cars a day because of this resort development.

The Big Island already has a serious traffic issue due to a lack of infrastructure. This is in part due to poor planning, and in part due to geography challenges.

The articles below by different NEWS companies highlight the point that many traffic issues stem from lack of infrastructure and resources. Adding more cars to the road by building another resort in an area that is already stressed, will only increase the already mounting problems with traffic.

This NEWS article by Hawai'i News Now, "Report shows alarming surge in Hawaii Island traffic deaths The Hawaii Police Department's Traffic Services Section released a new

report showing a dramatic increase in both major crashes and fatal accidents from last year.

The startling statistics show a dramatic increase in the number of year-over-year traffic fatalities on the Island of Hawaii, revealing major crashes are up more than 12% and traffic fatalities are up more than 100%. "Watch the video on their link below as it is a professional report on Big Island traffic problems. <https://www.hawaiinewsnow.com/2024/05/18/new-report-shows-hawaii-island-traffic-fatalities-are-up-over-100-last-year/>

With more tourists there will be more accidents, more traffic, and more traffic deaths. Please read this article by KHON 2 NEWS, "**Hawaii Island has most traffic fatalities in state**. This time last year Hawaii Island was at five traffic deaths, as of April 1, 2024, they're at 14.

Seven of which happened in the last two weeks.

Chief Moszkowicz said the police force is small compared to the size of the island and response times can take 15 to 20 minutes.

**"We don't have the resources like in the small space of Oahu where you can saturate an area to control speeding, that just doesn't exist here,"** he added." <https://www.khon2.com/local-news/7-traffic-fatalities-for-hawaii-island-in-march/>

**The traffic on Big Island has increased drastically and safety issues and infrastructure needs to be addressed before adding more resort developments.**

Please read this article because what it says about Oahu is a mirror for Big Island. The traffic problems they discuss are the same issues here on Big Island; and it also gives one Big Island example, "On the Big Island, the mayor had to issue an emergency order shutting down Waipio Valley Road due to overuse and poor prior maintenance." This is happening all over Big Island. <https://www.civilbeat.org/2024/02/angry-over-island-traffic-jams-lets-talk-about-solutions/>

The news video below shows aerial footage in Hilo. The footage shown is the same thing that is happening on Alii Drive and Queen K Highway, and for all the same reasons: **All of these roads only have two lanes!**

There are two developments already on Alii Drive being built as of today; and more are scheduled for this road in the near future. Alii Drive and Queen K Highway are the roads Kamehameha Schools Bungalow Resort will be using if approved, and they are already seriously congested.

These roads have the exact same traffic congestion as Hilo, with the exact same problems. Traffic is extremely slow because of so many people who now live here and all the visitors that come yearly.

In addition, the concern on Kona side is tsunami evacuations rather than lava evacuations. In this kind of traffic, not everyone will be able to get to safer ground, especially if you allow another resort to be developed in this area when traffic is already at a crawl every weekday and often on weekends as well.

Here is the news article by KITV NEWS that highlights the traffic issues discussed above: "Hawaii Island traffic jams could have safety impact. In the event of an evacuation, Mayor Mitch Roth acknowledges that will make the Traffic Jam up even worse. But says, he is working with The State on a solution." [https://www.kitv.com/news/local/hawaii-island-traffic-jams-could-have-safety-impact/article\\_b06a5374-5a6a-11ed-8d23-8313ef8c4c19.html](https://www.kitv.com/news/local/hawaii-island-traffic-jams-could-have-safety-impact/article_b06a5374-5a6a-11ed-8d23-8313ef8c4c19.html)

There was a crash recently on Alii Drive (see video below). When there is an accident on Alii Drive, it turns the already small two-lane road into only one lane that requires a flagger to help direct traffic. Kamehameha Schools wants to add a resort on this tiny road that will increase the traffic by hundreds of cars.

Here is the Island News video on the crash on Alii Dr.  
<https://www.youtube.com/watch?v=-FQSsnPDj8>

**Please see from these articles that traffic on Big Island is deadly already and adding another resort will be devastating to the island.**

**Read this Path article, HAWAII COUNTY'S VISION ZERO INITIATIVE:**

A motorcyclist is in critical condition after a collision with a car. A driver accidentally hits and kills a pedestrian. It seems that not a day goes by without the news reporting on a traffic crash on Hawaii Island...

Here are some other statistics that are even more staggering:

-28% of roadside crashes were the result of someone leaving the roadway and going into barriers or trees

-13% of pedestrians hit at 20 mph actually suffer fatality

-73% of pedestrians hit at 40 mph suffer fatality

-25% of fatal crashes were the result of distracted driving... So PLEASE put those cell phones away and pay attention to the road!

-56% of fatal crashes were the result of alcohol or drugs

-41% of fatal crashes occurred in light trucks and vans

-49% of crashes occur during the day, outside of peak traffic hours

-Of all the crash fatalities, most were males between 20 to 24-years old.

**"That's just Big Island traffic,"** is a common sentiment. But what if we didn't have to accept this endangerment of vehicle drivers, motorcyclists, and pedestrians as a way of life?"

This was taken from Path <https://pathhawaii.org/hawaii-countys-vision-zero-initiative/>

Water departments on O'ahu and Hawaii Island have advised customers to conserve water ahead of possible storm-related power outages this month.

But what does the power grid have to do with the water supply?

It is impossible to separate Hawaii's power system from its water system, said Kawika Uyekhara, deputy director of Hawaii County's Department of Water Supply. " <https://www.hawaiipublicradio.org/local-news/2024-02-13/residents-on-hawaii-island-and-oahu-are-asked-to-conserve-water-amid-power-outages>

**16) US Hawaii is "on the verge of a greater catastrophe," locals say, as water crisis continues**

By Li Cohen

Updated on: April 11, 2024 / 8:23 AM EDT / CBS News

In Hawaii, one of the most important sayings is *ola i ka wai*, "water is life" — a phrase that not only sums up what it means to exist on an island, but what it means to live, period. But now, one of the largest of the island chain's land masses is facing a triple threat to its sole freshwater source, and if it isn't addressed soon, one community member says, "We're in deep trouble."

<https://www.cbsnews.com/news/hawaii-water-crisis-climate-change/>

**17) News Hawaii'i County issues mandatory 25% water restriction for North Kona** August 7, 2023 · 5:21 PM HS

A mandatory 25% water restriction has been issued for various communities in North Kona due to the failure of the Honokōhau Deepwell over the weekend.

<https://bigislandnow.com/2023/08/07/hawaii-county-issues-mandatory-25-water-restriction-for-north-kona/>

**18) Hawaii Water Supply Closely Monitored As Severe Drought Continues**

by Big Island Video News  
on Nov 6, 2023 at 3:28 pm

(BIVN) — With an ongoing drought on the island of Hawaii, the Hawaii County Department of Water Supply says it is closely monitoring its 23 public water systems, with a "special focus" placed on the South Kohala Water System.

<https://www.bigislandvideonews.com/2023/11/06/water-supply-closely-monitored-as-hawaii-CA%BBj-under-severe-drought/>

This is a map of Power Outages on the Big Island. This map wouldn't have been created if Power Outages were not a problem. <https://www.hawaiianelectric.com/safety-and-outages/power-outages/hawaii-island-outage-map>

Please, give Tax Breaks to all homes that provide solar and/or wind turbine to there homes to help with power issues on the island.

**19) "Hawaiian Electric is reporting that several large generators on the Big Island are experiencing a range of issues and may lead to the need for rolling outages if supply does not meet demand."**

[https://www.reddit.com/r/BigIsland/comments/1bnuar3/hawaiian\\_electric\\_is\\_reporting\\_that\\_several\\_large/?rdt=52660](https://www.reddit.com/r/BigIsland/comments/1bnuar3/hawaiian_electric_is_reporting_that_several_large/?rdt=52660)

**20) "Hawaiian Electric asking Big Island customers to conserve power due to down generators**

March 25, 2024 · 11:49 AM HST

According to the utility company, this is an usual situation as the large generators are experiencing mechanical problems resulting in a reduced output. The largest generator, an independent power producer that sells electricity to Hawaiian Electric, is offline with significant mechanical issues.

The plant generates 60 megawatts or nearly one-third of the typical peak demand of 180 megawatts on the island."

<https://bigislandnow.com/2024/03/25/hawaiian-electric-asking-big-island-customers-to-conserve-power-due-to-down-generators/>

All the articles above show that a resort development will further deplete and stress resources and infrastructure on an island already struggling. There are years of new development that have already been approved but not completed. It is not responsible or prudent to continue to develop this resort under these current conditions.

#### **HISTORICAL AND CULTURAL SIGNIFICANCE:**

##### **The Law of the Splintered Paddle**

Hawaiian history tells us that young Kamehameha was once an aggressive chief. The story goes that the young chief even chased after two fishermen in a Puna fishing village. While pursuing them, his foot got stuck in a crevice, and one of the fishermen struck Kamehameha over the head with his paddle in defense, which splintered into pieces.

After the incident, Kamehameha recognized that it was wrong to misuse his power and learned compassion. Years later, Kamehameha declared a new law "Ke Kānāwai Māmalahoe" or "the Law of the Splintered Paddle." Meant to protect the innocent and vulnerable from unprovoked attacks, this law proclaimed that the defenseless, especially kupuna and keiki, be able to sleep safely on the side of the road, unharmed.

The law provided for the safety of non-warriors during wartime and became the first written law of the Kingdom of Hawai'i. After being added back in 1978, **the law is part of Hawaii's State Constitution today.**

It is symbolic of servant leadership, reinforcing the importance of:

- Caring for and serving one's people
- Knowing and doing what is pono (right)
- Standing for the principle that leadership privilege is earned
- Taking kuleana (responsibility) for those we serve
- Doing so with compassion, love, and respect

"We take that to mean that anyone who uses our roadways should be able to do so without fear of harm," explains Tina."

**The Law of the Splintered Paddle is also on Kamehameha Schools website.** The historical value of this law should be enough to help make

Big Island roads become safer, and not adding to the traffic and issues of our already dangerous roads. <https://www.ksbe.edu/article/the-lessons-of-the-law-of-the-splintered-paddle-ring-true-200-years-after-k>

**Does this EIS have any reports about how this development will safely add to the land fill on Big Island, and are there reports proving the island has enough water for another big resort, what about reports on how much power this resort will use because the Big Island already has serious resource and infrastructure issues.**

#### **IN CONCLUSION**

The articles cited in this letter, many by some of the most esteemed scientists in the world, show with clarity that allowing this development is going to cause devastating, lasting, effects on the Eco-system in Keauhou Bay and "The Endangered Species Act of 1973 (ESA or "The Act", 16 U.S.C. § 1531 et seq.) is the primary law in the United States for protecting and conserving imperiled species. Designed to protect critically imperiled species from extinction as a "consequence of economic growth and development untempered by adequate concern and conservation", the ESA was signed into law by President Richard Nixon on December 28, 1973. The [Supreme Court of the United States](#) described it as "the most comprehensive legislation for the preservation of endangered species enacted by any nation".<sup>[1]</sup>" [https://en.wikipedia.org/wiki/Endangered\\_Species\\_Act\\_of\\_1973](https://en.wikipedia.org/wiki/Endangered_Species_Act_of_1973)

This location, currently acting as a natural filter, is especially vulnerable due to having a golf course on one side and a natural treasure like Keauhou Bay on the other. This land MUST be conserved in order to keep Keauhou Bay safe for all the marine life to be able to live there for years to come.

In addition to the natural disaster this will cause, Hawai'i Island is already having serious infrastructure and resource issues that have yet to be solved. These issues MUST be solved before considering another resort development on Big Island.

We need to work in harmony with the land and the people before pushing forward with new developments, especially in sacred and special places like Keauhou Bay, the birthplace of King Kamehameha III. Keauhou Bay is a small, fragile Eco-system, that is already pressured by boating, golfing, population issues, and hotels that are all around the entire bay.

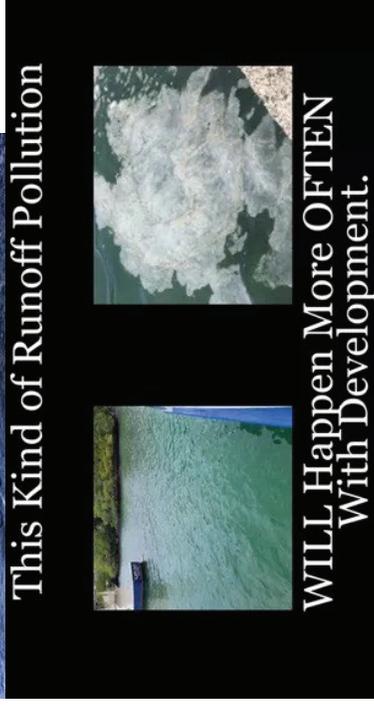

The trees that currently stand on the land that is threatened to be developed clearly protects the marine life and environment from further damage. The location is NOT suitable for this kind of development for both environmental and infrastructure reasons.

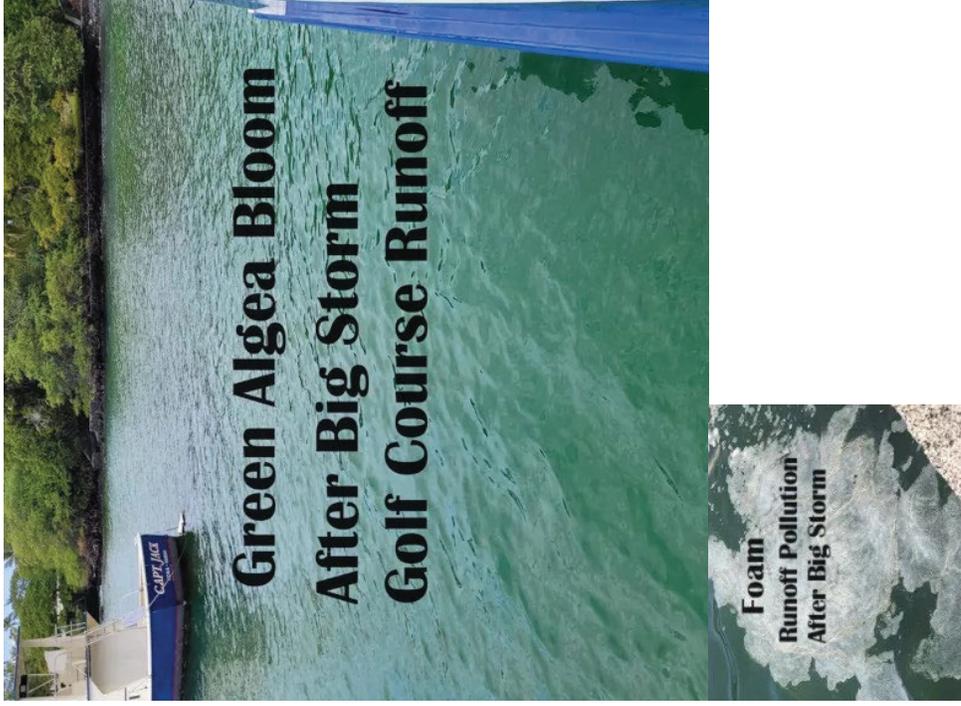

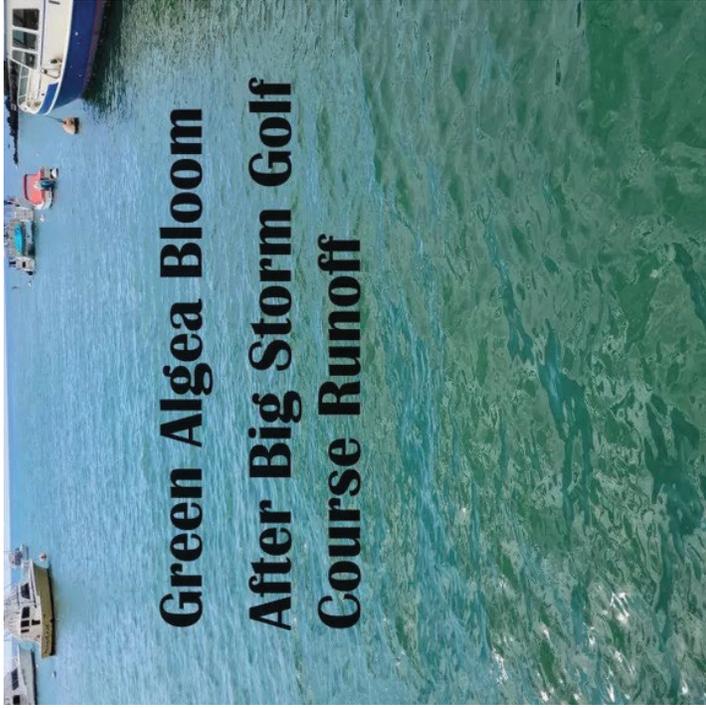

The cost of what stands to be lost is far too high to allow this to happen.

Please save Keauhou Bay's marine life and help the island's resources by saying NO to a Bungalow Resort built by Kamehameha Schools.

Mahalo,

Bryn Stites

## Rollin Stonebraker-Soles

Dear Concerned, Environmental Concerns include : \*Water use greatly increased if Resort is successful. My understanding is that our area's water supply is already suffering a capacity issue with little hope of improving. \*Within Keauhou Bay waters exist significant spots measuring cool temperatures due to cold water entry from higher elevations. These cooler 'patchwork' are critical for marine life. How would development affect current water temperatures from spot to spot within the Bay? \*Wastewater capacity. The current facility is under investigation to determine its impact on Honokohau Harbor and neighboring waters. Can KSBE find a less impactful use than a Resort/Restaurant? \*Is there a development idea that would be much less impactful to our already strained services? \*Coral colonies within and out of the Bay are in critical condition. I thought we were all concerned and wanted to enact uses that benefit re-growth of this valuable habitat? How does KSBE's development fit with its Natural World cultural mission? Afterall, the humans historically inhabiting this region depended on a rich natural resource. KSBE cannot separately honor this area's human history without doing the same in similar manner the natural wonder that once existed here. Ecological: Another Resort in this area will fail. Majority of Tourists head north of the Airport. Note the failed Resorts of the past in this area, Kahaolu in particular. What guarantee/demand does KSBE have that a resort development in this area will be successful in 15-20 years? KSBE track record for developing resort ready operations is not a sure success. In this case, the KSBE property has been poorly managed over a very long time. Now, Kamehameha Schools wants to justify this mismanagement by including a "hail mary" for income production, e.g. A Resort. A philosophy change at KSBE is needed, especially in these rural settings. Instead of Resort Thinking: What investment would benefit our graduating students the most? (hint, not a another resort). What investment would help stem the loss of talented young people from our island? What investment ensures a future, long term economic benefit? What investment is best for talent retention on the Big Island? Even, attract young talent from outside the Big Island. KSBE with its considerable resources should be a SOURCE of inspiration, research, and teaching. You have the connections to properly develop a longer thinking set of objectives for the Big Island. KSBE is based in Oahu, so it's natural that it would focus its attention there. Yet, investment on the Big Island COULD be such that young people (our future) from Oahu, Maui, Kauai would WANT to move to the Big Island. As Ms. Harman at KSBE quoted that "change can be difficult", changing KSBE's mission to actually support its student by doing the right thing for the long term will perhaps be difficult for KSBE, but the right thing at this time. A resort does not provide an incentive for young talent to remain on the Big Island. Surely an entity like KSBE can imagine BETTER than the plan presented for Keauhou Bay improvements/development. Nor does a Resort improve the environmental health of this valuable cultural site. Thank you for reading, Rollin Stonebraker-Soles

A resort does not provide an incentive for young talent to remain on the Big Island. Surely an entity like KSBE can imagine BETTER than the plan presented for Keauhou Bay improvements/development. Nor does a Resort improve the environmental health of this valuable cultural site.

## **CIVIC ECOLOGY: A COMMUNITY SYSTEMS APPROACH TO SUSTAINABILITY**

Many communities and institutions have begun to realize that attaining sustainability requires careful attention to planning, constructing, and managing a comprehensive framework of community systems. Energy flows, local food production systems, local-global economic webs, social networks, community governance, resource sharing networks, and integrated land use and transportation are just some of the community systems that, when synergized in a specific place, constitute a complex human ecosystem or "Civic Ecology."<sup>7</sup> Nurturing this web of relationships and flows affords communities opportunities to enhance their local wealth (environmental, economic, and cultural), resilience, and competitiveness, and to take control of designing and managing their future. The Civic Ecology (or "community software") approach, provides a context for the community's future "hardware": green building and sustainable infrastructure.

This 'white paper' describes the principles and benefits of Civic Ecology, as well as a planning process that communities can use to design sustainable, community-scaled systems. This approach uses The Natural Step backcasting process to help communities envision a desired future and create integrated systems to achieve multiple benefits. There are many communities around the US that exhibit varying degrees of Civic Ecology, including Portland, Ballard (Seattle), and Burlington (VT). (One advanced example is Chestnut Hill, a 300-year old community in Philadelphia, Pennsylvania, animated by a web of mature Civic Ecology flows and systems.)

### **Civic Ecology Principles**

Communities with a strong or burgeoning Civic Ecology all share several essential qualities, which can be translated into five principles. Specifically, Civic Ecology:

1. **Employs a whole systems approach.** Civic Ecology is the web of flows that animates community life. All great, enduring communities – whether rural farming villages, suburbs, urban neighborhoods, or institutions – have a refined array of locally-based systems that facilitate resource, economic, and social flows. Moreover, these flows cross sectors; that is, economic, ecological, and social systems are intertwined rather than set in opposition.
2. **Focuses on place.** The systems of flows must be focused within the community, and, to the greatest extent possible, must provide locally-produced energy, use local resources, enhance community economic multipliers, and draw upon social capital.
3. **Requires a new social contract.** Presently, paying taxes and voting in exchange for services are viewed as the defining factors of citizenship. Civic Ecology draws upon a community's social capital by requiring active civic engagement in the creation, management, and monitoring of community systems.
4. **Matches needs and assets.** A community's capacity to create a positive future is dependent on the assets and strengths it has developed over time. The whole systems approach seeks to understand problems in terms of their root causes and

broader needs. Matching assets to needs is at the heart of creating community systems that will result in an enduring Civic Ecology.

5. **Is dynamic.** Communities are continuously-evolving organisms. Because of this, Civic Ecology must be designed as a “learning ecology,” – a web of systems that adapts based on knowledge gained through constant vigilance and monitoring.

#### Civic Ecology Benefits

Communities that have and continue to nurture their Civic Ecology enjoy five essential benefits:

1. **A high degree of control** over their assets and future by virtue of the fact that they themselves create both a community vision and the systems necessary to implement, and chart progress toward, that vision. That these systems rely largely on locally-based resources enhances community ownership and control.
2. **Enduring wealth.** Because Civic Ecology integrates systems flows across sectors, it is possible for a community to realize the multiple benefits of ecological, economic, and social wealth. The common alternative pits the economic, ecological, and social camps in “zero-sum game” opposition, resulting in economic growth at the expense of ecological and social impoverishment.
3. **Resilience.** Integrated systems that are locally created and managed generally result in richness and redundancy. An example is a diverse economic base of locally-owned businesses and local resource inputs that is less affected by rising transportation and labor costs. These businesses will not “up and leave” the community for a better deal elsewhere because they are **of** the community.
4. **An enhanced sense of place.** With globalization, and the increasing homogeneity that accompanies it, those communities that are resilient, distinctively local, open, and adaptive – and ultimately unique – will succeed as valued places to live, work, and play.
5. **A deep sense of community:** Citizens of communities with a strong Civic Ecology share in learning about their community and envisioning its future. They also collaborate on designing the systems to implement that vision and labor together to keep the community on course. They work with strangers, friends, and occasionally enemies to create a collective future for themselves and the next generation. In doing so, they become citizens in-full and experience a true sense of community.

#### The Process of Civic Ecology

To begin the process of creating a Civic Ecology, a community must ask itself five essential questions:

1. **Where are we now?**
2. **Where do we want to be in 10, 20, 50 years and beyond?**
3. **How do we get to where we want to be?**
4. **How do we know if we are getting there?**
5. **Who wants to help answer these questions?**

Answering these questions requires that communities embark on a process that consists of the following **CIVIC** tasks: **C**onvening, **I**nvestigating, **V**isioning, **I**mplementing, and **C**harting.

- **Convening:** The community must first convene a Civic Ecology working group consisting of stakeholders from all sectors of the community: business, non-profits, institutions, governance, citizens, and activists. These stakeholders must be willing to put in the time and effort necessary to see the process through and most importantly, work together on behalf of the community. The group must be trained in systems thinking in order for them to see their community and its future in a different way: as a web of interrelated systems and flows.
- **Investigating:** In this task, the working group investigates what works, what does not, what systems exist, and what needs the community has. This assessment identifies problems and their root causes as well as leverage points to effect change.
- **Visioning:** As the first step in a process called “backcasting” (see The Natural Step), the community asks where it wants to be in 10, 20, 50 years and beyond. (For contrast, it may also be useful to predict where the community will be if existing trends are projected into the future (forecasting).) The outcome of this visioning can take a variety of forms but must always build upon the community’s shared core values.
- **Implementing:** Led by the Civic Ecology working group the community creates the community-scaled systems that it believes will help it realize its vision (and thus “backcasts” from their vision of the future). Some systems may be new, others enhancements of existing systems that seem to be working. In either case, the systems must bring identified assets to bear in satisfying identified needs. The group must also acknowledge barriers, assign responsibilities, and delineate specific tasks for implementation.
- **Charting Progress:** In this final, but never-ending task, the working group and community create a series of indicators that, when measured over time, will help the community assess progress towards realizing its vision. Periodic assessments and adjustments ensure that the Civic Ecology is truly a learning ecology.

Civic Ecology’s whole systems approach will yield a snapshot of the community’s desired future, the “software” necessary to achieve that future, and the ability to chart whether means and ends are in alignment. It provides the fundamental context necessary for making decisions about capital investment in “hardware” (buildings, streets, schools, parks, and utilities), economic revitalization, business growth and retention, main street improvements, and virtually anything related to the common good.

#### “How is your Civic Ecology?”

Answering this question is the ultimate community building exercise. It requires citizens to learn about their place, its strengths, its weaknesses, and its possibilities. It requires them to do it together, continuously, forever. It also requires new eyes (a whole systems approach) and constant vigilance. The rewards are many, and mostly for generations too young or not present to participate.

**Subject:** Kamehameha Schools EIS Draft For Keauhou Bay WILL HAVE NEGATIVE IMPACT

**Categories:** Green Category

To whom it may concern,

Please reject Kamehameha Schools EIS for Keauhou Bay to become a Bungalow Resort. This is a VERY small bay and the added footprint of a 105 room Resort, that will include excess traffic, will have a **serious negative impact** in Keauhou Bay.

Please, Do NOT risk polluting the water in Keauhou Bay by allowing Kamehameha Schools to develop their bungalow resort project. Research has shown that developments pollute nearby waters constantly during development and after.

Developments have ALWAYS polluted the water in every near coastal development area. An article entitled, "*What is the biggest source of pollution in the ocean?*" by NOAA, National Oceanic and Atmospheric Administration, states, "*When large tracts of land are plowed, the exposed soil can erode during rainstorms. Much of this runoff flows to the sea, carrying with it agricultural fertilizers and pesticides.*" It also states, "*Eighty percent of pollution to the marine environment comes from the land. One of the biggest sources is called, nonpoint source pollution, which occurs as a result of runoff.*"

The trees you want to take down keep the runoff pollution from the golf course from going into the Bay. According to the National Library of Medicine, in their article, "*Putting the Earth in Play: Environmental Awareness and Sports*," shares that the golf industry uses **approximately 50 pesticide active ingredients**, including chlorpyrifos—an insecticide that is banned for residential use by the EPA due to developmental hazards. These pollutions and more are **being held off** from running into the Bay by the very trees you want to take down.

Let's not forget the marine life that will be threatened by excess pollution and traffic. Keauhou Bay is the monk seals and the green sea turtle's habitat. More pollution and people will endangered these species.

This Bay is worth protecting. Please do not put a resort in such a small area. Future generations will be deprived of what it currently is, and it could never be replaced.

Kind Regards,

Umberto

Aloha e Heather,

Thank you for your comments concerning the Keahou Bay Management Plan, Draft Environmental Impact Statement. Your comments have been received and administratively recorded.

Comments received during the 45-day public comment period will be reproduced in the Final Environmental Impact Statement, and substantive comments addressed.

Since you also provided a copy to the County of Hawaii and our planning consultant, G70, we will not be forwarding them a duplicate copy.

We appreciate your involvement and contribution to the environmental review process. Your input is invaluable in helping us develop a management plan that reflects the needs and concerns of our community.

Thank you once again for your engagement and commitment to the future of Keahou Bay.

Mahalo,

The Keahou Bay Project Team

**Subject:** [EXTERNAL] Attention County of Hawaii Planning Keahou Bay EIS Comment

**CAUTION: This email is from an outside sender. Do not click on links or open attachments unless you recognize the sender and know the content is safe.**

Dear County of Hawaii Planning,  
Please, Do NOT risk polluting the water in Keahou Bay by allowing Kamehameha Schools to develop their bungalow project, because it is proven that developments will ALWAYS have rain runoff that will pollute the bay constantly during development and after.  
Please, read the Scientific articles below that prove that development ALWAYS pollutes the water in every coastal developed area.

The coral all over Hawaii has had extremely high mortality rates, due to developments near ocean areas throughout the years, and development in Keahou Bay will be devastating to the coral, reef fish, and all Aquatic life there, and even the Manta Rays that go there every night to eat zooplankton from the Manta Ray tours at night, and eat it during the day as well because they need to eat 5 times their body weight in zooplankton daily.

If you allow this bay to be a development you will be allowing all types of marine life to die and there is NO WAY to stop this from happening because runoff water from development can't be stopped. It is what happens in ALL coastal developments. Please, read these articles that Scientifically Prove this point:

Reason #1 a Resort Development WILL Severely Pollute Keahou Bay  
Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Coral Bleaching is occurring more frequently in Hawaii". Across the Hawaiian Archipelago, coral bleaching has increased in frequency and severity since 1996. The last major bleaching event in 2014-2015 had catastrophic impacts state-wide...

This was the third major bleaching episode in Hawaii over the last 6 years. The frequency of these events is unprecedented in the archipelago. NOAA scientists and partners have determined that the key drivers of the bleaching were environmental factors (such as heat stress, depth, and surface light) and human impacts (sewage effluent and urban runoff). "<https://www.fisheries.noaa.gov/feature-story/cautionary-tale-2019-coral-bleaching-event>:"

<https://www.fisheries.noaa.gov/feature-story/cautionary-tale-2019-coral-bleaching-event>:"

in the food chain" <https://www.marinebio.org/creatures/zooplankton/#:~:text=Zooplankton%20are%20also%20sensitive%20to,light%2C%20and%20increases%20in%20predation.>

Here is a research article by Environmental Research Laboratory, United States Environmental Protection Agency that discusses, "Toxic Effects of Pollutants on Plankton. There are four main sources of aquatic pollution: industrial wastes, municipal wastes, agricultural run-off, and accidental spillage. Non-point sources, such as automobile exhausts, add appreciable amounts of pollutants to air that may enter aquatic systems in rainfall or dry fall-out. These sources add pesticides, heavy metals, oil, petroleum products, and a large number of organic and inorganic compounds to water. Lakes and oceans serve as sinks for many pollutants. Plankton comprise a large portion of the living matter in natural waters and function in biogeochemical cycles. They are affected by pollutants, transfer them to sediments and other organisms, and function in their biological transformation." [https://scope.dge.carnegiescience.edu/SCOPE\\_12/SCOPE\\_12\\_3\\_6\\_chapter12\\_257-274.pdf](https://scope.dge.carnegiescience.edu/SCOPE_12/SCOPE_12_3_6_chapter12_257-274.pdf)

The above articles show that development of Keaouhou Bay WILL hurt plankton life in the area because of the pollutant runoff that WILL happen during the development and after, and if this happens this will cause the manta ray food source to disappear. This will be devastating for the manta rays eating habits, as well as cause the manta rays to not show up in this area, in turn taking away many lively hoods from locals on the island that depend on this tour to survive.

Here is another article that proves runoff from development in this area will hurt and kill plankton. by **Frontiers in Marine Science**, "**Effects of an experimental terrestrial runoff on the components of the plankton food web in a Mediterranean coastal lagoon**. The main result observed in the present study was that the effects of the simulated terrestrial runoff spread along the plankton food web, significantly affecting all trophic levels of the natural plankton community studied. This occurred in a relatively short time considering that the experiment lasted less than three weeks. The lower light availability in the terrestrial runoff treatment compared to the control resulted in a net decrease of approximately one-third of Chl-*a* concentration and phytoplankton abundance over the entire experiment." <https://www.frontiersin.org/journals/marine-science/articles/10.3389/fmars.2023.1200757/full>

This article states that runoff is a leading source in coral degradation. Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Land-based sources of pollution are a leading cause of coral reef degradation in the Main Hawaiian Islands. Water quality is impacted by urban runoff, failing sewage systems, unpaved roads, farms, land clearing, and development." [https://www.coris.noaa.gov/monitoring/status\\_report/docs/Hawaii\\_status\\_report\\_forweb.pdf](https://www.coris.noaa.gov/monitoring/status_report/docs/Hawaii_status_report_forweb.pdf)

This article is a Research Article by PLOS ONE and their motto is, "We're driving change in research integrity and publication ethics." This is some of their article information, "Coral taxonomy and local stressors drive bleaching prevalence across the Hawaiian Archipelago in 2019..."

We found little evidence for acclimation by reefs to thermal stress in the main Hawaiian Islands. Moreover, our findings illustrate how detrimental effects of local anthropogenic stressors, such as tourism and urban run-off, may be exacerbated under high thermal stress. In light of the forecasted increase in severity and frequency of bleaching events,

future mitigation of both local and global stressors is a high priority for the future of corals in Hawaii." <https://journals.plos.org/plosone/article?id=10.1371/journal.pone.0269068>

The Chesapeake Bay has a foundation that is trying to save it due to runoff pollution that developments create, and the Chesapeake Bay is a lot bigger than Keaouhou Bay. If it's being drastically hurt by runoff water, Keaouhou Bay waters won't stand a chance if development above the bay is allowed because this bay is very small.

This Article is by the Chesapeake Bay Foundation, Saving a National Treasure states, "...runoff is a significant source of harmful nitrogen pollution that continues to grow... As rainwater and snowmelt run off our streets, parking lots, lawns, and other surfaces, they pick up pet waste, pesticides, fertilizer, oil, and other contaminants. If the draining water doesn't evaporate or soak into the ground where it can be filtered, it flushes straight into local creeks, rivers, and the Chesapeake Bay, adversely affecting water quality and aquatic life.

Only 10 to 20 percent of rain that falls in forests, fields, and other natural areas runs off, with the rest absorbed by soil and plants, where it is filtered before reaching aquifers or local waterways. (Right now Keaouhou Bay has a lot of trees and is very natural, this is what helps stop runoff.) By contrast, close to 100 percent of the rain that falls on concrete and other hard surfaces produces runoff. One inch of rain falling on an acre of hardened surface produces 27,000 gallons of runoff.

Stormwater runoff pollution threatens Chesapeake Bay and it's rivers and streams...Polluted runoff is one of the most harmful sources of pollution to the Bay and its waters...And much of it starts right in the urban and suburban neighborhoods where we live." <https://www.cbf.org/issues/polluted-runoff/index.html#:~:text=Besides%20carrying%20pollutants%20that%20harm,them%20are%20placed%20in%20jeopardy.>

If that is what runoff is doing to the Chesapeake Bay, the effects of runoff will be even more devastating to Keaouhou Bay because it is so much smaller than the Chesapeake Bay.

If you allow Keaouhou Bay to be developed there will be a higher population in the bay and that will hurt the coral in the bay as well, because it's known that "Denser coastal populations...will lead to reef degradation by coastal constructions. Denser populations inland will lead to more runoff and situations..."

Reason #3 a Resort Development WILL Increased Human Traffic In Keaouhou Bay Easily visible trends in human population dynamics combined with well-established and tested ecological theory give a clear, intuitive, yet quantifiable guide to the severity of survival challenges faced by coral reefs. Management challenges and required actions can be clearly shown and, contrary to frequent claims, no scientific ambiguity exists with regards to the serious threat posed to coral reefs by humankind's continued numerical increase." This is in the article by National Library of Medicine National center for Biotechnology Information

PubMed. <https://pubmed.ncbi.nlm.nih.gov/33293007/#:~:text=Denser%20coastal%20populations%20and%20greater,to%20more%20runoff%20and%20isolation.>

This article is by abc NEWS, "This is how tourists are destroying coral reefs in Hawaii. The less people at a certain site, the more coral there are, the research found. The millions of tourists who flock to the shores of Hawaii every year are wreaking havoc on its natural environment -- especially the coral reefs, which are at risk all over the world, a new study said. The most popular coral reefs on the Hawaiian islands are likely being degraded by the very visitors they attract, according to a study published Monday

in Nature Sustainability." <https://abcnews.go.com/US/hawaiian-coral-reefs-degrading-popular-tourist-sites-scientists/story?id=96308858#:~:text=The%20less%20people%20at%20a,there%20are%2C%20the%20research%20found,&text=The%20millions%20of%20tourists%20who,world%2C%20a%20new%20study%20said.>

If you allow this resort to be developed, you will be destroying the coral reefs in the bay because this bay is extremely small and used by a lot of locals already for fishing, canoeing, swimming, snorkeling, paddle boarding, surfing, boating...it can't afford more use by many thousands more people yearly.

Another article by Nature Sustainability, "Coral reefs and coastal tourism in Hawaii Coral reefs are popular for their vibrant biodiversity. By combining web-scraped Instagram data from tourists and high-resolution live coral cover maps in Hawaii, we find that, regionally, coral reefs both attract and suffer from coastal tourism. Higher live coral cover attracts reef visitors, but that visitation contributes to subsequent reef degradation. Such feedback loops threaten the highest quality reefs, highlighting both their economic value and the need for effective conservation management." [https://www.nature.com/articles/s41893-022-01021-4.epdf?sharing\\_token=wsakgQNhaJhJwAnWAg453tRgN0jAJWel9jnR3Z0Tv0PYGzA5ic\\_H0O1zcHNIP3ASnhcgKRv6\\_vkLpW49dbmBYoXSg3YIMgQjGBZsapdCUH1701SLbu9X5Pr3xED4kx14T0sJlvqQ1a7ZRRt3rUbraxp0dJd2AoNlSmWuxB7JEDdpJ8OGJbX7JTJWdCFXvFKJIZYeNdcJj3Sw\\_dnaUg5ZlhcjPBDImmaH15qI5Q%3D&tracking\\_referrer=abcnews.go.com](https://www.nature.com/articles/s41893-022-01021-4.epdf?sharing_token=wsakgQNhaJhJwAnWAg453tRgN0jAJWel9jnR3Z0Tv0PYGzA5ic_H0O1zcHNIP3ASnhcgKRv6_vkLpW49dbmBYoXSg3YIMgQjGBZsapdCUH1701SLbu9X5Pr3xED4kx14T0sJlvqQ1a7ZRRt3rUbraxp0dJd2AoNlSmWuxB7JEDdpJ8OGJbX7JTJWdCFXvFKJIZYeNdcJj3Sw_dnaUg5ZlhcjPBDImmaH15qI5Q%3D&tracking_referrer=abcnews.go.com)

Coral reefs are known to be highly negatively impacted by developments because, "Impacts from land-based sources of pollution including coastal development,...can impede coral growth and reproduction, disrupt overall ecological function, and cause disease and mortality in sensitive species." <https://oceanservice.noaa.gov/facts/coral-pollution.html#:~:text=Impacts%20from%20land%2Dbased%20sources,and%20mortality%20in%20sensitive%20species.>

Article by Environmental Evidence, "Coastal development and runoff lead to sedimentation, which directly impacts coral recruitment, growth, mortality, and ecosystem services that coral reefs provide." <https://environmentalevidencejournal.com/articles/10.1186/s13750-020-00200-0#:~:text=Coastal%20development%20and%20runoff%20lead,services%20that%20coral%20reefs%20provide.>

All developments can't fully stop polluting because of runoff from rain during development and after. Article by NOAA, "One of the most significant threats to reefs is pollution. Land-based runoff and pollution discharges can result from dredging, coastal development...This runoff may contain sediments, nutrients, chemicals, insecticides, oil and debris.

When some pollutants enter the water, nutrient levels can increase, promoting the rapid growth of algae and other organisms that can smother coral." [https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,organisms%20that%20can%20smother%20corals.](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,organisms%20that%20can%20smother%20corals.)

Another article by NOAA, "Coral reefs also are affected by leaking fuels, anti-fouling paints and coatings, and other chemicals that enter the water... (All of those are show up in every development project)

Among the most damaging pollutants on coral reefs is sediment, which can remain suspended in the water or be deposited on the coral surface (i.e., turbidity and sedimentation, respectively) and can contain toxicants, pathogens, and nutrients, all of which impact coral growth, recruitment, and survival" [https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days.](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days.)

Reason #4 a Resort Development WILL Increase Traffic The Big Island already has a serious problem with traffic on the island because of a lack of infrastructure that in places a bigger road can't be built due to cliffs on one side and homes on the other side.

Allowing another resort to be developed will bring more cars that will lead to a lot more traffic that the island can not handle, please read the articles below by different NEWS companies that prove this point.

This NEWS article by Hawaii News Now, "Report shows alarming surge in Hawaii Island traffic deaths The Hawaii Police Department's Traffic Services Section released a new report showing a dramatic increase in both major crashes and fatal accidents from last year.

The startling statistics show a dramatic increase in the number of year-over-year traffic fatalities on the island of Hawaii, revealing major crashes are up more than 12% and traffic fatalities are up more than 100%." Please watch their video on their link below because it is a professional report on Big Island traffic problems. <https://www.hawaiinewsnow.com/2024/05/18/new-report-shows-hawaii-island-traffic-fatalities-are-up-over-100-last-year/>

With more tourists comes more accidents, more traffic, and more traffic deaths. Please read this article by KHON 2 NEWS, "Hawaii Island has most traffic fatalities in state; This time last year Hawaii island was at five traffic deaths, as of April 1, 2024, they're at 14. Seven of which happened in the last two weeks... Chief Moszkowicz said the police force is small compared to the size of the island and response times can take 15 to 20 minutes.

"We don't have the resources like in the small space of Oahu where you can saturate an area to control speeding, that just doesn't exist here," he added." <https://www.khon2.com/local-news/7-traffic-fatalities-for-hawaii-island-in-march/>

The traffic on Big Island has increased drastically and safety issues and infrastructure needs to be addressed before adding more resort developments.

Please read this article because what it says about Oahu is the same for Big Island. The traffic problems they talk about are the same issues here on Big Island, and this article also gives one Big Island example, "On the Big Island, the mayor had to issue an emergency order shutting down Waipio Valley Road due to overuse and poor prior maintenance." <https://www.civilbeat.org/2024/02/angry-over-island-traffic-jams-lets-talk-about-solutions/>

Please, watch the NEWS video from the link below on aerial footage in Hilo because the footage shown is the same thing that is happening on Alii Drive and Queen K HWY, and for the same reasons.

There are 2 developments already on Alii Dr. being built as of today, and more are scheduled for this road in the near future, and Alii Dr. and Queen K HWY are the roads Kamehameha Schools Bungalow Resort will be using if approved and they are already seriously congested.

These roads have the exact same traffic congestion as Hilo, with the exact same problems. Traffic is extremely slow already. The worry on Kona side is tsunami evacuations rather than lava evacuations, and in this kind of traffic, not everyone will be able to get to safer ground, especially if you allow another resort to be developed in this area when traffic is already at a crawl every week day and sometimes on weekends as well.

See the photo below that proves this point in Kona, and here is the NEWS article by KITV NEWS that talks about Hilo and the same thing is happening in Kona on the roads Kamehameha Schools wants to develop their resort, "Hawaii Island traffic jams could have safety impact. In the event of an evacuation, Mayor Mitch Roth acknowledges that will make the Traffic Jam up even worse. But says, he is working with The State on a solution." [https://www.kitv.com/news/local/hawaii-island-traffic-jams-could-have-safety-impact/article\\_b06a5374-5a6a-11ed-8d23-8313ef8c4c19.html](https://www.kitv.com/news/local/hawaii-island-traffic-jams-could-have-safety-impact/article_b06a5374-5a6a-11ed-8d23-8313ef8c4c19.html).

There was a crash on Alii Dr. and when there is an accident on this road, it turns into only one lane that needs a flagger to help direction traffic. and that adds even more traffic to this already seriously congestion road, and Kamehameha Schools wants to add a resort on this road, and that will increase the traffic even more. Here is the Island News video on the crash on Alii Dr. <https://www.youtube.com/watch?v=FQ5snPDjI8>

Please see from these articles that traffic on Big Island is deadly already and adding another resort will be devastating to the island.

Please read this Path article, HAWAII COUNTY'S VISION ZERO INITIATIVE

A motorcyclist is in critical condition after a collision with a car. A driver accidentally hits and kills a pedestrian. It seems that not a day goes by without the news reporting on a traffic crash on Hawaii Island.

"That's just Big Island traffic," is a common sentiment. But what if we didn't have to accept this endangerment of vehicle drivers, motorcyclists, and pedestrians as a way of life?"

This was taken from Path as well as The Law of the Splintered Paddle below <https://pathhawaii.org/hawaii-countys-vision-zero-initiative/>

### **The Law of the Splintered Paddle**

Hawaiian history tells us that young Kamehameha was once an aggressive chief. The story goes that the young chief even chased after two fishermen in a Puna fishing village. While pursuing them, his foot got stuck in a crevice, and one of the fishermen struck Kamehameha over the head with his paddle in defense, which splintered into pieces. After the incident, Kamehameha recognized that it was wrong to misuse his power and learned compassion. Years later, Kamehameha declared a new law, "Kʻŋ?wāi Mʻmalahoe" or "the Law of the Splintered Paddle." Meant to protect the innocent and vulnerable from unprovoked attacks, this law proclaimed that the defenseless (especially kʻpuna and keiki) across Hawaii be able to sleep safely on the side of the road, unharmed.

The law provided for the safety of non-warriors during wartime and became the first written law of the Kingdom of Hawaii. After being added back in 1978, the law is part of Hawaii's State Constitution today.

It is symbolic of servant leadership, reinforcing the importance of:

- Caring for and serving one's people
- Knowing and doing what is pono (right)
- Standing for the principle that leadership privilege is earned

- Taking kuleana (responsibility) for those we serve
  - Doing so with compassion, love, and respect
- "We take that to mean that anyone who uses our roadways should be able to do so without fear of harm," explains Tina."

**The Law of the Splintered Paddle** is also on Kamehameha Schools website, so they should want to help make Big Island roads become safer and not add to the traffic and possible traffic death toll problem. <https://www.kambebe.edu/article/the-lessons-of-the-law-of-the-splintered-paddle-ring-true-200-years-after-k>

Besides a resort development in Keauhou Bay causing runoffs that will severely pollute the bay as the above research and science articles have shown above causing marine life to die, it will also increase in the bay's population that will seriously add to damaging even more coral, plankton and all marine life as well, and the island has severe traffic issues already with increased death tolls rising, and a resort development in Keauhou Bay will totally increase even more traffic in these already severely congested traffic areas. Reason #5 The Big Island Doesn't Have the Resources and Infrastructure for Another Resort

Please see the articles below because the Big Island doesn't have the resources or infrastructure to safely add another resort development on island and these other NEWS and Research articles prove this point.

1) Hawaii Deals with Burgeoning Waste Management Problem  
As landfills face closure and waste-to-energy projects stall, various counties in Hawaii are dealing with waste management issues. Waste360 Staff January 10, 2020

"Hawaii Island is in the enviable position of having a landfill with anywhere from 20 to 100 years of capacity left to take in trash. But the island still wrestles with significant issues like plastic products that are no longer being recycled." <https://www.waste360.com/landfill/hawaii-deals-with-burgeoning-waste-management-problem>

2) "Big Island Now readers seem to agree that there's likely no single solution for slowing down the timeline of the West Hawai'i Sanitary Landfill reaching capacity.

The West Hawai'i Sanitary Landfill, the only remaining landfill on the Big Island, is forecast to reach capacity within the next 20 to 25

years." <https://bigislandnow.com/2023/09/17/big-island-now-poll-no-27-results-more-than-one-solution-needed-to-help-extend-life-of-west-hawaii-landfill/>

3) Hawaii Island Has Decades of Landfill Space But Still Faces Challenges in Dealing With Its Waste Hawai'i Public Radio Published January 9, 2020 at 5:00 AM HST

"Hawaii Island is in the enviable position of having a landfill with anywhere from 20 to 100 years of capacity left to take in trash. But the island still wrestles with significant issues like plastic products that are no longer being recycled.

For the past four decades, trash from the east side of Hawaii Island has been dumped in a landfill outside of Hilo. But now trash from all parts of the island is being trucked to a facility north of Kona." <https://www.hawaiipublicradio.org/local-news/2020-01-09/hawaii-island-has-decades-of-landfill-space-but-still-faces-challenges-in-dealing-with-its-waste>

4) "What happens to Hawaii Island's trash and recyclables? BY MICHELLE BRODER VAN DYKE HAWAII ISLAND PUBLISHED 11:30 AM ET DEC. 17, 2022 By Michelle Broder Vanduyke Hawaii Island PUBLISHED 11:30 AM ET Dec. 17 The future of the landfill

The West Hawaii Landfill will be full in about 20 years. Finding a location for the next landfill is a concern, according to the DEM officials. They said it will be challenging to find a location for a future landfill because of stringent regulations and costs related to

planning, environmental regulations, design and construction that will take many years to complete. It will also require community support." <https://spectrumlocalnews.com/hi/hawaii/news/2022/12/15/what-happens-to-hawaii-island-s-trash-and-recyclables-->

5) "The overwhelming plastic waste Hawaii visitors leave behind  
By Natasha Bourlin Aug 24, 2023  
Hawaii saw more than 9 million visitors last year. Those tourists' first stops are often big-box and convenience stores, where they buy bottled water, plastic sand toys, single-use bodyboards, noodles, floaties and inner tubes for their trips." <https://www.sfgate.com/hawaii/article/plastic-waste-hawaii-visitors-leave-behind-18286076.php>

21) "NewsHawaiian Electric asking Big Island customers to conserve power due to down generators"

March 25, 2024 · 11:49 AM HST

According to the utility company, this is an usual situation as the large generators are experiencing mechanical problems resulting in a reduced output. The largest generator, an independent power producer that sells electricity to Hawaiian Electric, is offline with significant mechanical issues.

The plant generates 60 megawatts or nearly one-third of the typical peak demand of 180 megawatts on the island."

<https://bigislandnow.com/2024/03/25/hawaiian-electric-asking-big-island-customers-to-conserve-power-due-to-down-generators/>

All the articles above show that a resort development will damage Keauhou Bay coral and marine life and, Big Island resources and infrastructure are currently being negatively affected from the development that is on island already, and there are years of new development that have already been approved, before having safe resources and infrastructures for new developments.

With these scientifically proven articles by some of the most professional scientists in the world, they say the a serious population increase, as well as development and resort runoff that happens because of parking lots, and... with all coastal developments, it will be dangerous for Keauhou Bay to be development because it will damage the marine ecosystems in the area.

Please, save Keauhou Bay's marine life and help the island's resources by saying NO to a Bungalow Resort built by Kamehameha Schools because all of these articles prove it would be extremely damaging to the waters at Keauhou Bay.

Thank you,

Sincerely,

Heather Tribolet

If you are not the intended recipient, you may not copy, forward, disclose or use any part of this message or its attachments. If you received this transmission in error please notify the sender immediately by e-mail or contact Kamehameha Schools at webmaster@ksbe.edu and then delete this message from your system.

This Bay is worth protecting. Please do not put a resort in such a small area. Future generations will be deprived of what it currently is, and it could never be replaced.

Mahalo and Aloha, Mary True, 96783

---

**From:** Mary True <[REDACTED]>  
**Sent:** Tuesday, August 6, 2024 3:24 PM  
**To:** 221053-01 KS Keaouhou Entitlements; Alex.Roy@hawaiicounty.gov; Planning@hawaiicounty.gov; Keaouhoubay@ksbe.edu  
**Subject:** Please Don't Develop Keaouhou Bay

**Categories:** Yellow Category

**Subject:** Kamehameha Schools EIS Draft For Keaouhou Bay WILL HAVE NEGATIVE IMPACT!

To whom it may concern,

Please reject Kamehameha Schools EIS for Keaouhou Bay to become a Bungalow Resort. This is a VERY small bay and the added footprint of a 105 room Resort, that will include excess traffic, will have a **serious negative impact** in Keaouhou Bay.

Please, Do NOT risk polluting the water in Keaouhou Bay by allowing Kamehameha Schools to develop their bungalow resort project. Research has shown that developments pollute nearby waters constantly during development and after.

Developments have ALWAYS polluted the water in every near coastal development area. An article entitled, "*What is the biggest source of pollution in the ocean?*" by NOAA, National Oceanic and Atmospheric Administration, states, "*When large tracts of land are plowed, the exposed soil can erode during rainstorms. Much of this runoff flows to the sea, carrying with it agricultural fertilizers and pesticides.*" It also states, "*Eighty percent of pollution to the marine environment comes from the land. One of the biggest sources is called, nonpoint source pollution, which occurs as a result of runoff.*"

The trees you want to take down keep the runoff pollution from the golf course from going into the Bay. According to the National Library of Medicine, in their article, "*Putting the Earth in Play: Environmental Awareness and Sports,*" shares that the golf industry uses **approximately 50 pesticide active ingredients**, including chlorpyrifos—an insecticide that is banned for residential use by the EPA due to developmental hazards. These pollutions and more are **being held off** from running into the Bay by the very trees you want to take down.

Let's not forget the marine life that will be threatened by excess pollution and traffic. Keaouhou Bay is the monk seals and the green sea turtle's habitat. More pollution and people will endangered these species.

## Cheri Uno

I would like to make a comment on the DEIS plan you have sent out for Keaouhou Bay but based on what I am provided I can only comment generally on what this would mean to this historical area. This is because the pages showing the schematics (pages showing the maps of the plans) you propose are so blurry I cannot read any of the labels or see any of the areas designated for what and where anything will be located. I know you can produce an arial map which is readable because the one showing the current locations of items is very readable. Generally, any development of this size in this area would bring so much more traffic on the streets surrounding the area which they are not currently able to handle. I live less than 100 yards from Alii and Kaleiopapa intersection where the traffic noise is already unbearable during the daytime and some nights. From ten PM to 4:30 AM, we have some quiet time. As you know, Kaleiopapa has a steep incline at the top where people need to rev their engines to get up. The trucks are the worst going up and down that steep hill. With a "Resort" the truck traffic would be increased 20 or more times a day from making deliveries to the resort, restaurants/bars and shops. Then, there are the tourist staying there. I'm assuming with 150 units that would be 300 people (conservative estimate since people usually come with family of 4 not just 2 people as honeymoon couples). They will be coming and going all day long up and down the streets. There is not much for them to do right here. It is off to volcanos, water falls, botanical gardens, zip lines and snorkel beaches. This area cannot handle that much traffic - I prefer the smell of fresh air to that of hundreds of cars/trucks exhaust. I also frequently hear the screeching of tires from people not knowing the area and missing the turn for Kaleiopapa and at least once a month a near-miss accident. The speed limit on Alii is 35 but most people travel about 45 or more. There are two condo complexes on Alii with blind driveways on to the street because of hills and curves on Alii - Country Club Villas and Keaouhou Akahi. They have a hard time now getting out of their complexes now. With increased traffic, this would make it impossible without endangering their lives. This is going to cause noise, air and traffic pollution to Keaouhou area. Current infrastructure cannot handle a resort here. Another pressing issue for this area is water and sewage. Every late summer and fall, we have had to conserve water in the Keaouhou/Kona area. Where are they going to get the extra water for 300 people? Resort people are not going to restrict their use of water. They are on vacation and need 2-3 showers a day not being accustomed to this hot humid weather. You're calling this an ECO-Resort - does that mean they expect to conserve water their entire vacation and flush just once a day. Tell that to the Japanese and they will laugh at you. (I have had that happen to me.) Where is the sewage going to go? Septic tanks for each unit. What about an overflow? Does that go downhill into the bay? Then, all water sports will be halted in Keaouhou Bay for weeks or months? Bringing more people into an area can never be good for the Ecology. Who are you trying to fool? Current infrastructure cannot handle a resort here. I know this area is zoned for resorts. Right now, we have one resort the Outrigger on the edge of Keaouhou Bay. It has been here before I came here in 1979. Before people realized the Hawaiian historic area that this is. I came here for the beauty and quiet of this historical area. Resorts are better kept to the northern end of the island where everyone expects to be on vacation with people in the pool playing Marco Polo and partying to the max. That was what I saw when looking for a place in Maui in 1978. I came to Keaouhou Bay because it contained so much history of the Hawaiian people and was a quiet reserved place. The birthplace of King Kamehameha III cannot remain intact and a place of reverence when it is overrun by tourists. What about the slide? Keaouhou Bay has always been a quiet place to make offerings to the great king on his birthday and other times of the year. A place to reflect on the island culture and ancestors. This is not a place for

a resort overrun by 300+ tourists. Now, if you could provide me with actual readable maps. I will further give you comments.

I would like to make a comment on the DEIS plan you have sent out for Keauhou Bay but based on what I am provided I can only comment generally on what this would mean to this historical area. This is because the pages showing the schematics (pages showing the maps of the plans) you propose are so blurry I cannot read any of the labels or see any of the areas designated for what and where anything will be located. Then, all water sports will be halted in Keauhou Bay for weeks or months? **Bringing more people into an area can never be good for the Ecology?** Who are you trying to fool? **Current infrastructure cannot handle a resort here.**

I know this area is zoned for resorts. Right now, we have one resort on the edge of Keauhou Bay. It has been here before I came here in 1979. Before people realized the Hawaiian historic area that this is. I came here for the beauty and quiet of this historical area. Resorts are better kept to the northern end of the island where everyone expects to be on vacation with people in the pool playing Marco Polo and partying to the max. That was what I saw when looking for a place in Maui in 1978. I came to Keauhou Bay because it contained so much history of the Hawaiian people and was a quiet reserved place.

The birthplace of King Kamehameha III cannot remain intact and a place of reverence when it is overrun by tourists. What about the slide? Keauhou Bay has always been a quiet place to make offerings to the great king on his birthday and other times of the year. A place to reflect on the island culture and ancestors. This is not a place for a resort overrun by 300+ tourists.

Now, if you could provide me with actual readable maps. I will further give you comments.

**Subject:** Keauhou Bay Development Plan  
**Categories:** Yellow Category

I am opposed to Kamehameha School's EIS regarding development at Keauhou Bay.

Development will affect and displace many who presently enjoy and /or make a living at the Bay.

This is a fragile ecosystem that is already feeling the impacts of development in the surrounding area.

Keauhou Bay gives both local families and tourists alike the opportunity to enjoy the beach park, bay, canoe club, and local vendors for daily snorkeling, fishing and dive trips, not to mention nightly manta dive excursions in front of the Kamehameha owned Outrigger Resort & Spa to see the endangered Manta Ray which are attracted to the areas fragile ecosystem.

As a member of the Keauhou Canoe Club for decades, I have personally enjoyed all the beauty and culture that Keauhou Bay, as it exists today, has provided for the community and visitors alike.

The natural landscape and koa haole tree canopy that lies just mauka of the bay acts like a filter before any runoff from housing and golf course above it reaches the ocean-- THIS is the reason that Keauhou Bay is still beautiful, STILL provides habitat for fish, sea turtles, mantas that draw locals and visitors to enjoy the natural beauty that exists ONLY HERE and the very reason why HAR 13-57 was enacted to protect this sensitive habitat.

I implore you, PLEASE, do NOT destroy the most beautiful and ALREADY ACCESSIBLE community and cultural resource that we have along the Kona Coastline that supports the needs of our families and visitors alike.

I ask of you, RESPECTFULLY, to REJECT this proposal.

Mahalo,  
Robert Vatter  
Keauhou, HI.

**Subject:** Zendo Kern Please OPPOSE Keauhou Bay Bungalow Resort because it WILL CAUSE SERIOUS NEGATIVE IMPACT  
**Categories:** Yellow Category

That Keauhou Bay is so beloved by locals and visitors alike is that it represents a small vision of what Old Hawai'i may have been like, from days long past. It serves a purpose to the community and is a resource we CANNOT do without. Any proposal to develop it will NOT enhance Keauhou Bay, it will destroy it.

I concur with Aunty Lily Kong that now is the time to speak because once those bulldozers appear, there is no going back, no fixing what cannot be undone.

As a member of the Keauhou Canoe Club for decades, I have personally enjoyed all the beauty and culture that Keauhou Bay, as it exists today, has provided for the community and visitors alike.

The tree and natural landscape canopy that lies just mauka of the bay acts like a filter before any runoff from housing and golf course above it reaches the ocean-- THIS is the reason that Keauhou Bay is still beautiful, STILL provides habitat for fish, sea turtles, mantas that draw locals and visitors to enjoy the natural beauty that exists ONLY HERE and the very reason why HAR 13-57 was enacted to protect this sensitive habitat.

Please No Building at Keaouhou Bay  
**Subject:**  
**Categories:** Yellow Category

To Whom It May Concern,

Please read the scientific proof in this letter and REJECT Kamehameha Schools Environment Impact Statement (EIS) for Keaouhou Bay to become a Bungalow Resort.

Please state in your report that a Bungalow Resort WILL have a SERIOUS NEGATIVE IMPACT on Keaouhou Bay as stated in all the different researched articles below.

Please, DO NOT risk polluting the water in Keaouhou Bay by allowing Kamehameha Schools to develop their bungalow resort project. It is scientifically proven that developments pollute nearby waters both during and after development.

Below are scientific articles written by the National Oceanic and Atmospheric Administration (NOAA), Global Coral Reef Alliance, Hawaii Government, and many other professional organizations, that have studied and shown that developments have ALWAYS polluted the water in EVERY coastal development area.

Does this EIS (Environmental Impact Statement) have any kind of reports and studies on how the endangered species and marine life will handle the extra pollution due to development, and the golf course runoff? Keaouhou Bay is their habitat and this development WILL be CHANGING an Entire Ecosystem.

#### ENDANGERED SPECIES CONSERVATION IMPACTED BY DEVELOPMENT

In the Endangered Species Act of 1973 Under Section 2 (b), "To provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved." This would be Keaouhou Bay.

The Green Sea Turtle swims in Keaouhou Bay weekly and the monk seal has also been seen swimming and resting in Keaouhou Bay. Both of these marine animals are on the endangered species list.

Endangered Species Act

"Section 2. Findings, Purposes, and Policy

(4) the United States has pledged itself as a sovereign state in the international community to conserve to the extent practicable the various species of fish or wildlife and plants facing extinction, pursuant to—

(b) PURPOSES.—The purposes of this Act are to provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved, to provide a program for the conservation of such endangered species and threatened species, and to take such steps as may be appropriate to achieve the purposes of the treaties and conventions set forth in subsection (a) of this section."

This was taken from <https://www.fisheries.noaa.gov/national/conservation/endangered-species-conservation/endangered-species-ac>

#### FEDERALLY PROTECTED GREEN SEA TURTLES WILL BE AFFECTED

The green sea turtle is federally protected and can be seen in Keaouhou Bay weekly.

The following article that states: "POLLUTED RUNOFF IN HAWAII ENDANGERS GREEN SEA TURTLES"

Why does Hawaii have a runoff problem?

Historically, in the tropics of Hawaii, precipitation was absorbed into the soil, according to the Clean Water Branch of Hawaii's Department of Health. Any potential pollution or contaminants on the ground surface would get pushed into the soil by the rain, and plant roots and microbes would help break down the pollution into less dangerous components. However, with urban and agricultural development, less and less of the pollution gets pulled into the soil, and more of it gets washed out into storm drains. From there, the pollutants make their way to streams, rivers and the ocean that surrounds Hawaii. According to the state agency, most of these contaminants are nutrients from fertilizer, bacteria from animal waste, oil, garbage and yard waste...

If polluted runoff reaches the ocean, it can wreak havoc on marine life, including endangered green sea turtles." Taken from <https://www.chemservice.com/news/polluted-runoff-in-hawaii-endangers-green-sea-turtles/>

Allowing this development WILL POLLUTE Keaouhou Bay. The above article, written in 2014 (because runoff water from developments were polluting the ocean even then!!!) states this fact clearly. Keaouhou Bay is home to countless sea creatures such as the protected green sea turtle, spotted eagle rays, manta rays, octopus, dolphins, fish, coral, monk seals, and more and that will ALL be harmed by the severe pollution runoff that WILL happen because developments have been shown to ALWAYS pollute the water is that is nearby.

The Green Sea Turtle is protected by more than one law. "All sea turtles in Hawaii are protected by the [Endangered Species Act \(ESA\)](#) and additionally protected by [Hawaii's](#)

[Revised Statutes Chapter 195D \(HRS\)](#) and [Hawaii's Administrative Rules \(HAR\) 13-124](#). This information was taken from this site <https://dlnr.hawaii.gov/dar/species/sea-turtles/>

#### THE ENDANGERED MONK SEAL WILL BE AFFECTED

Keauhou Bay is known as a RESTING AREA for the ENDANGERED MONK SEAL. If another resort is allowed to be built, in addition to the pollution, it will also bring a lot more people down to Keauhou Bay. This increases the chances of a resting monk seal being disturbed by humans trying to get close, take "selfie" photos, and being generally uninformed and harmful. Please see article on Selfie Culture and its harmful effects below.

Has the EIS done any research on what an increased population would do in such a small area, and what will happen to the endangered species that live there? With a significantly increased population their habitat of Keauhou Bay will likely be changed forever.

This information is from a NOAA Scientist; "Study shows selfie culture impacts how people behave when posting images of an endangered species on social media. There's a seal on the beach! Let's go get a 'selfie'!" That must have been what nearly 18 percent of people on Instagram thought before approaching an endangered species.

In a [recent study](#), NOAA scientists used social media to monitor human activities around endangered [Hawaiian monk seals](#). They discovered that human disturbance is more common than they thought. "<https://www.fisheries.noaa.gov/feature-story/endangered-hawaiian-monk-seals-cry-foul-over-selfies>

NOAA clearly states a high population in a place where monk seals and sea turtles habitat can be a serious disturbance for these endangered species.

"Hawaiian monk seals are protected federally by the ESA and the [Marine Mammal Protection Act \(MMPA\)](#), as well as locally by Hawaii's Revised Statutes (HRS) [Chapter 195D](#) and Hawaii's Administrative Rules (HAR) [13-124](#)." This was taken from <https://dlnr.hawaii.gov/dar/hawaiian-monk-seal/>

Keauhou Bay is the monk seals and the green sea turtle's habitat. Allowing a bungalow resort to be developed in Keauhou Bay, the habitat of these endangered species, is to threaten their life and habitat with golf course runoff pollution, as well as development pollution. By threatening their habitat, and hence their lives, this development goes completely against the Endangered Species Act of 1973.

The verbiage in the Endangered Species Act states, "to conserve". In this case, "to conserve" would be to protect the land around Keauhou Bay from developments that destroy the habitat of these endangered species with pollution and runoff.

Does this EIS have any reports on the endangered species that frequent Keauhou Bay? This is their habitat and it needs to be "conserved".

Under the Conservation Program there should be research done on endangered species and their associated ecosystems. A large bungalow resort development WILL FOREVER CHANGE THIS ECOSYSTEM.

"§195D-5 Conservation programs. (a) The department shall conduct research on indigenous aquatic life, wildlife, and land plants, and on endangered species and their associated ecosystems, and shall utilize the land acquisition and other authority vested in the department to carry out programs for the conservation, management, and protection of such species and their associated ecosystems." [https://www.capitol.hawaii.gov/hrscurrent/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hrscurrent/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm)

Also, under this same Conservation program, "(2) Taking such action as may be necessary to ensure that actions authorized, funded, or carried out by them do not jeopardize the continued existence of threatened or endangered species." [https://www.capitol.hawaii.gov/hrscurrent/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hrscurrent/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm)

Please consider that developing a Kamehameha Schools Bungalow Resort in Keauhou Bay WILL threaten endangered species due to the unavoidable development and golf course pollution runoff that would be caused by removing the all the trees that currently serving as a natural pollution filter, and replacing the land with housing, cars, humans, and waste. There would also be tremendous runoff damage into Keauhou Bay and the surrounding area during the building phase of this enormous project.

#### GOLF COURSE POLLUTION KILLS MARINE LIFE AND DRASTICALLY CHANGES ECOSYSTEMS

"The golf industry uses [approximately 50 pesticide active ingredients](#), including chlorpyrifos—an insecticide that is banned for residential use by the EPA due to developmental hazards. Having to trim golf turf to low heights also makes it even more vulnerable to pests, which leads to more pesticide use." <https://rainorshinegolf.com/pages/the-environmental-impact-of-golf-courses>

These pesticides will be in the pollution runoff that will enter Keauhou Bay more severely should the natural habitat of the trees be removed and replaced with pavement. This is unavoidable!

Please read from Wikipedia, "

Most drains have a single large exit at their point of discharge (often covered by a [grating](#)) into a [canal](#), river, lake, [reservoir](#), sea or ocean. Other than catch basins, typically there are no treatment facilities in the piping

system. "[https://en.wikipedia.org/wiki/Storm\\_drain#:~:text=Most%20drains%20have%20a%20single.discharge%20into%20individual%20dry%20wells](https://en.wikipedia.org/wiki/Storm_drain#:~:text=Most%20drains%20have%20a%20single.discharge%20into%20individual%20dry%20wells)

The pavement from this development will cause pollution to runoff into Keauhou Bay because this treed land that will become a housing development is situated directly between the golf course and the Bay. These trees, which absorb all the pollution from the golf course is the BEST AND ONLY PROTECTION POLLUTION FILTER Keauhou Bay has from the golf course pesticides, fertilizer and weed killer. See the below paragraph for further references.

See page 2 at: <https://health.hawaii.gov/epo/files/2013/09/Stormwater-MS4-Presentation-HEF-7.15.14.pdf> where the Hawaii government states that Natural Ground Cover has 10% runoff, where has development has 55% runoff. So, even if you have storm drains the pavement this development will create will cause more runoff into Keauhou Bay than the Natural Ground Cover that is has now, that has been protecting the bay from golf course pollution for years.

These trees and land are saving monk seals and green sea turtles habitat from the golf course pollution and this land MUST BE PRESERVED and CONSERVED as the natural protector for Keauhou Bay and for these endangered species habitat.

Under Section 2 (b) of the Endangered Species Act - Keauhou Bay MUST BECOME A CONSERVATION AREA for these endangered species. It is currently their habitat, and to allow a large resort development to be built above this bay clearly threatens the lives of these endangered species by allowing golf course toxic pollution and development pollution to run into these species natural habitat of Keauhou Bay.

#### ALGAE BLOOMS KILL CORAL AND MARINE LIFE

The trees that are slated to be cleared for the development further protect Keauhou Bay from algae blooms that have been proven to be caused by pollution that is runoff from fertilizer and weed killer.

When there is heavy rain the land above the bay has a greater runoff than normal. Without the trees, the runoff from the golf course pollution will pour into the Bay likely causing frequent algae blooms.

Algae blooms have been shown to kill coral and marine life as stated in the many articles that will follow.

One of these articles is from the Global Coral Reef Alliance. They have researched the effects on reefs before and after a golf course developments. Though this development is not a golf course development, it is located just below a golf course and exposes the bay to the pollution from the golf course by removing the proven natural filter of the trees and natural ecosystem.

Has this EIS done any kind of research about the algae blooms that happen after a serious storm because of the golf course runoff pollution?

This information was taken from Global Coral Reef Alliance and it is an actual study on the how coral and marine life are affected before and after development. It's titled, "Golf courses kill coral reefs and fisheries: harmful algae blooms and disease cause by nutrient runoff from golf course development on Cuana Cay, Abaco, Bahamas

Introduction: Bahamas coral reef deterioration

This study is thought the first ever to evaluate the health of coral reef ecosystems and fisheries before and after a golf course development. The vast majority of corals have died from a combination of factors including global warming, new diseases, land-based sources of pollution. "<https://www.globalcoral.org/golf-courses-kill-coral-reefs-and-fisheries-harmful-algae-blooms-and-disease-caused-by-nutrient-runoff-from-golf-course-development-on-cuana-cay-abaco-bahamas/>

If you allow a Bungalow Development in Keauhou Bay you WILL be agreeing to pollute this bay for years to come and COMPLETELY CHANGING and possibly DESTROYING KEAUHOU BAY'S ECOSYSTEM.

Another study by the Coral Reef Alliance titled, "Golf course fertilizer runoff causes nutrient enrichment leading to harmful algae blooms on a Bahamian coral reef.

"...After construction new algae blooms appeared nearest the golf course green, smothering corals in adjacent reefs, along with sharply increased coral diseases..." <https://www.globalcoral.org/golf-course-fertilizer-runoff-causes-nutrient-enrichment-leading-to-harmful-algae-blooms-on-a-bahamian-coral-reef>

Does this EIS have any studies or reports on the extra runoff pollution due to clearing land and adding pavement?

This needs to be fully assessed because you will be changing an entire ecosystem to build a bungalow resort. It rains in Keauhou Bay many nights out of the year and this kind of pollution will kill the beautiful and necessary coral in the Bay.

FURTHERMORE: "If there are [toxic algal blooms](#), like red tide, or man-made contaminants, like pesticides or detergents in the water, those toxins are contained within the bubbles of sea foam. When those bubbles pop, the toxins can become airborne and compromise the air that is breathed in that location." <https://oceanconservancy.org/blog/2023/03/31/what-sea-foam/>

#### ENGINE POLLUTION CAUSES ISSUES IN THE OCEAN

Does this EIS have any detailed traffic studies for the increase in cars that will be added to this already severely traffic area they want to build their 150 room bungalow resort in? Have they done any studies on the pollution these cars WILL have in Keauhou Bay?

Because this Bungalow Resort could have over 150 extra cars and over 300 or more extra people in and out of Keauhou Bay, what traffic and increased population studies have they done? There will be employees with cars, guests with cars, visitors with cars. At times this would range to over 200 cars (likely more), coming in and out of, and parking above Keauhou Bay thereby causing serious car population issues because of all these added cars right next to the bay.

The article below is from NOAA regarding motor vehicle engines and pollution to the sea.

What is the biggest source of pollution in the ocean?

Most ocean pollution begins on land.

"Millions of motor vehicle engines drop small amounts of oil each day onto roads and parking lots. Much of this, too, makes its way to the sea.

Some water pollution actually starts as air pollution, which settles into waterways and off into waterways, harming fish and wildlife habitats." <https://oceanservice.noaa.gov/facts/pollution.html#:~:text=Millions%20of%20motor%20vehicle%20engines,Dirt%20can%20be%20a%20pollutant.>

Land-Based Runoff Remains Top Source of Oil in the Ocean, Says New Report Oil in the Sea: Inputs, Fates, and Effects

News Release September 28, 2022

WASHINGTON — Oil in runoff, primarily from cities and vehicles, is the top source of oil entering the ocean, says a [new report](#) from the National Academies of Sciences, Engineering, and Medicine. In North American waters, estimated ocean oil pollution from land-based runoff is up to 20 times higher than it was 20 years ago, and oil spills, natural oil seeps, and discharge from oil and gas operations remain major sources of pollution. The report recommends actions that government and others should take to minimize oil pollution, and calls for sustained research funding to better understand how oil reaches and affects ocean environments. <https://www.nationalacademies.org/news/2002/05/oil-in-the-sea-inputs-fates-and-effects#:~:text=WASHINGTON%20%2D%2D%20Nearly%2085%20percent,pipeline%20spills%2C%20says%20a%20new>

The Impact Of Stormwater – Car Emissions

7

"Car emissions are not limited to exhaust fumes that contribute to air pollution. They can also leak automotive fluid and release heavy metals that can contribute to stormwater pollution, contaminating local waterways." <https://www.stormwaterishigherds.org.au/blog/the-impact-of-stormwater-car-emissions/>

#### NOISE POLLUTION'S HARMFUL EFFECT ON MARINE LIFE

Does this EIS have any reports on the noise pollution that will happen and what it could do to marine life in Keauhou Bay during development?

Because if you allow this Bungalow Resort to be developed you will increase constant noise in this bay for years to come and, "Noise Pollution Research shows that underwater noise from construction, shipping and naval vessels significantly impacts the natural behavior of cetaceans and many other marine species. This can be seen when mass beaching events occur or breeding success is diminished."

The above information was taken from the Ocean Conservation Trust <https://oceanconservationtrust.org/ocean-advocacy/think-ocean/ways-to-think-ocean/>

How Does Noise Pollution Harm Marine Species?

"However, over the past few decades, noise pollution in the marine environment has increased dramatically and is threatening the natural soundscape of the marine environment. Ships, seismic surveys, explosions, construction, and sonar devices have made the once peaceful environment into a loud, chaotic home which is extremely damaging for marine wildlife. This type of pollution is often overlooked in comparison to others but its impacts are now being documented across all types of marine ecosystems." <https://earth.org/noise-pollution-in-the-ocean/>

If you allow this resort the amount of people in this bay will fully increase and, "Hawaii's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally, management of the resource should balance the needs of different user groups, but the welfare of the marine environment on which its inhabitants depend must be the most important consideration." This was taken from Hawaii's own Division of Aquatic Resources <https://dlnr.hawaii.gov/dar/marine-managed-areas/hawaii-marine-life-conservation-districts/#:~:text=Snorkeling%20and%20SCUBA%20diving%20are%20on%20nearshore%20fish%20populations.>

What is ocean noise?

8

"Ocean noise refers to sounds made by human activities that can interfere with or obscure the ability of marine animals to hear natural sounds in the ocean.

Many marine organisms rely on their ability to hear for their survival. Sound is a highly efficient means of communication underwater and is the primary way that many marine species gather and understand information about their environment. Many aquatic animals use sound to find prey, locate mates and offspring, avoid predators, guide their navigation and locate habitat, as well as to listen and communicate with each other.

Over the last century, human activities such as shipping, recreational boating, and energy exploration have increased along our coasts, offshore, and deep ocean environments. Noise from these activities can travel long distances underwater, leading to increases and changes in ocean noise levels in many coastal and offshore habitats.

These rising noise levels can negatively impact ocean animals and ecosystems. Higher noise levels can reduce the ability of animals to communicate with potential mates, other group members, their offspring, or feeding partners. Noise can also reduce an ocean animal's ability to hear environmental cues that are vital for survival, including those key to avoiding predators, finding food, and navigating to preferred habitats." <https://oceanservice.noaa.gov/facts/ocean-noise.html>

#### LEARN FROM OTHERS:

##### RUN-OFF FROM DEVELOPMENT KILLS

The Chesapeake Bay has a foundation that is trying to save their bay due to runoff pollution that was caused by developments. Chesapeake Bay is a lot bigger than Keauhou Bay. If it's being drastically hurt by runoff water from developments, Keauhou Bay waters won't stand a chance if development above the bay is allowed. Keauhou Bay is a much smaller ecosystem.

This Article is by the Chesapeake Bay Foundation, Saving a National Treasure states, "...runoff is a significant source of harmful nitrogen pollution that continues to grow...

As rainwater and snowmelt run off our streets, parking lots, lawns, and other surfaces, they pick up pet waste, pesticides, fertilizer, oil, and other contaminants. If the draining water doesn't evaporate or soak into the ground where it can be filtered, it flushes straight into local creeks, rivers, and the Chesapeake Bay, adversely affecting water quality and aquatic life.

Only 10 to 20 percent of rain that falls in forests, fields, and other natural areas runs off, with the rest absorbed by soil and plants, where it is filtered before reaching aquifers or local waterways. (Right now Keauhou Bay has a lot of trees and is very natural, this is what helps stop runoff) By contrast, close to 100 percent of the rain that falls on concrete and other hard surfaces produces runoff. One inch of rain falling on an acre of hardened surface produces 27,000 gallons of runoff.

Stormwater runoff pollution threatens Chesapeake Bay and its rivers and streams...Polluted runoff is one of the most harmful sources of pollution to the Bay and its live." <https://www.cbf.org/issues/polluted-runoff/index.html#:~:text=Besides%20carrying%20pollutants%20that%20harm,them%20a>

[re%20placed%20in%20jeopardy.](https://www.cbf.org/issues/polluted-runoff/index.html#:~:text=Besides%20carrying%20pollutants%20that%20harm,them%20a)

If that is what runoff is doing to the Chesapeake Bay, the effects of runoff will be even more devastating to Keauhou Bay due to its size and fragility.

#### MANTA RAY HABITAT, CORAL REEF BLEACHING, & MARINE LIFE ~ THE DEVASTATING EFFECTS OF DEVELOPMENT ON THE OCEAN

Are there any reports in this EIS about what the impact to the coral, marine life, plankton especially zooplankton will be because of this development?

The studies below show that developments kill coral, and marine life. Zooplankton are part of this marine life and they are also killed and negatively affected. Zooplankton are food for manta rays. Manta rays are in Keauhou Bay every night to eat zooplankton, and are often seen here during the day as well.

Allowing this bay developed will also be a death sentence for many types of marine life including planktons. There is NO WAY to stop this from happening due to the fact that polluted runoff rain water from developments can't be fully stopped. This has been shown to happen in ALL coastal developments.

Please read the Scientific articles below.

It's Been Proven Developments Severely Pollute Nearby Waters

Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Coral Bleaching is occurring more frequently in Hawaii". Across the Hawaiian Archipelago, coral bleaching has increased in frequency and severity since 1996. The last major bleaching event in 2014-2015 had catastrophic impacts state-wide...

This was the third major bleaching episode in Hawaii over the last 6 years. The frequency of these events is unprecedented in the archipelago. NOAA scientists and partners have determined that the key drivers of the bleaching were environmental factors (such as heat stress, depth, and surface light) and human impacts (sewage effluent and urban run-off)." <https://www.fisheries.noaa.gov/feature-story/cautionary-tale-2019-coral-bleaching-event-hawaii#:~:text=Coral%20bleaching%20is%20occurring%20more,had%20catastrophic%20impacts%20state%20wide.>

This article is by the Coral Reef Alliance here in Hawaii. "An ecosystem under threat Hawaii's reefs face major global and local threats including climate change,

overfishing, and sediment and nutrient pollution caused by sewage and stormwater runoff...

When it rains, flash floods carry stormwater and large amounts of sediment downstream to the ocean. Just offshore, once-thriving coral reefs are now struggling to survive." <https://coral.org/en/wwhere-we-work/hawaiian-islands/#~:text=Hawaii%20reefs%20face%20major%20global,into%20Hawaii%20reefs%20waterways%20every%20day>.

This article states that runoff is a leading source in coral degradation. Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Land-based sources of pollution are a leading cause of coral reef degradation in the Main Hawaiian Islands. Water quality is impacted by urban runoff, failing sewage systems, unpaved roads, farms, land clearing, and development." [https://www.coris.noaa.gov/monitoring/status\\_report/docs/Hawaii\\_status\\_report\\_forweb.pdf](https://www.coris.noaa.gov/monitoring/status_report/docs/Hawaii_status_report_forweb.pdf)

This article is a Research Article by PLOS ONE and their motto is, "We're driving change in research integrity and publication ethics." This is some of their article information, "Coral taxonomy and local stressors drive bleaching prevalence across the Hawaiian Archipelago in 2019..."

We found little evidence for acclimation by reefs to thermal stress in the main Hawaiian Islands. Moreover, our findings illustrate how detrimental effects of local anthropogenic stressors, such as tourism and urban runoff, may be exacerbated under high thermal stress. In light of the forecasted increase in severity and frequency of bleaching events, future mitigation of both local and global stressors is a high priority for the future of corals in Hawaii." <https://journals.plos.org/plosone/article?id=10.1371/journal.pone.0269068>

The coral all over Hawaii has had extremely high mortality rates, due to developments near ocean areas throughout the years, and development in Keauhou Bay will be devastating to the coral, reef fish, and all aquatic life there. Manta Rays need to eat 5 times their body weight in zooplankton daily. Their population will be severely affected should the plankton die. Please see the cited information below.

"SO, HOW MUCH PLANKTON DOES YOUR AVERAGE MANTA RAY EAT? 19,200,000. Nineteen million two hundred thousand, give or take a few thousand.

That is the number of plankton pieces a ten-foot manta ray must consume weekly to stay alive."

The above information was taken from Manta Ray Advocates <https://mantarayadvocates.com/how-much-plankton-do-mantas-eat/>

Coral reefs are known to be highly negatively impacted by developments because, "Impacts from land-based sources of pollution including coastal development,...can impede coral growth and reproduction, disrupt overall ecological function, and cause disease and mortality in sensitive species." <https://oceanservice.noaa.gov/facts/coral->

[pollution.html#:~:text=Impacts%20from%20land%20based%20sources,and%20mortality%20in%20sensitive%20species.](https://www.noaa.gov/monitoring/status_report/docs/Hawaii_status_report_forweb.pdf)

Article by Environmental Evidence, "Coastal development and runoff lead to sedimentation, which directly impacts coral recruitment, growth, mortality, and ecosystem services that coral reefs provide." <https://environmentalevidencejournal.biomedcentral.com/articles/10.1186/s13750-020-00200-0>  
[#:~:text=Coastal%20development%20and%20runoff%20lead,services%20that%20coral%20reefs%20provide.](https://www.noaa.gov/monitoring/status_report/docs/Hawaii_status_report_forweb.pdf)

Developments can't fully stop polluting because runoff is from rain during development and after. Article by NOAA, "One of the most significant threats to reefs is pollution. Land-based runoff and pollution discharges can result from dredging, coastal development... This runoff may contain sediments, nutrients, chemicals, insecticides, oil and debris.

When some pollutants enter the water, nutrient levels can increase, promoting the rapid growth of algae and other organisms that can smother coral." [https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humantthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,organisms%20that%20can%20smother%20corals.](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humantthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,organisms%20that%20can%20smother%20corals.)

Another article by NOAA, "Coral reefs also are affected by leaking fuels, anti-fouling paints and coatings, and other chemicals that enter the water... (All of those are show up in every development project.)

Among the most damaging pollutants on coral reefs is sediment, which can remain suspended in the water or be deposited on the coral surface (ie., turbidity and sedimentation, respectively) and can contain toxicants, pathogens, and nutrients, all of which impact coral growth, recruitment, and survival" [https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humantthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days.](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humantthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days.)

It's Been Proven Resort Developments KILL Marine Life

This article by MarinBIO states, "Zooplankton are also sensitive to their environment and like phytoplankton—a change in zooplankton concentration can indicate a subtle environmental change. Zooplankton are highly responsive to nutrient levels, temperatures, pollution, food that is not nutritious, levels of light, and increases in predation. As well as providing an essential link in the marine food chain (which is an understatement), the diversity of species, amount of biomass and abundance of zooplankton communities can be used to determine the health of an ecosystem..."

Here is another article that shocking shows that in a very short time, big changes can occur due to runoff. A development will hurt and kill plankton, by Frontiers in Marine Science, "Effects of an experimental terrestrial runoff on the components of the plankton

food web in a Mediterranean coastal lagoon. The main result observed in the present study was that the effects of the simulated terrestrial runoff spread along the plankton food web, significantly affecting all trophic levels of the natural plankton community studied. This occurred in a relatively short time considering that the experiment lasted less than three weeks. The lower light availability in the terrestrial runoff treatment compared to the control resulted in a net decrease of approximately one-third of Chl-a concentration and phytoplankton abundance over the entire experiment." <https://www.frontiersin.org/journals/marine-science/articles/10.3389/fmars.2023.1200757/full>

The ecosystem is fragile and interconnected as is stated in this article: "Zooplankton are also affected by levels of pH, heavy metals, calcium, and aluminum. Nutrients like nitrogen and phosphorus will affect the prey of zooplankton (like algae, protozoa and bacteria), indirectly affecting zooplankton survival. Scientists are still putting together pieces of the zooplankton puzzle. Some questions include how nutrient levels found in algae can influence the growth and behavior of zooplankton. Another question important to marine and human life is how toxins and pollution will affect this crucial link in the food chain". This information is in article by MarineBIO. <https://www.marinebio.org/creatures/zooplankton/#~:text=Zooplankton%20are%20also%20sensitive%20to%20light%2C%20and%20increases%20in%20predation.>

A research article by Environmental Research Laboratory, United States Environmental Protection Agency that discusses, "Toxic Effects of Pollutants on Plankton: There are four main sources of aquatic pollution: industrial wastes, municipal wastes, agricultural runoff, and accidental spillage. Non-point sources, such as automobile exhausts, add appreciable amounts of pollutants to air that may enter aquatic systems in rainfall or dry fall-out. These sources add pesticides, heavy metals, oil, petroleum products, and a large number of organic and inorganic compounds to water. Lakes and oceans serve as sinks for many pollutants. Plankton comprise a large portion of the living matter in natural waters and function in biogeochemical cycles. They are affected by pollutants, transfer them to sediments and other organisms, and function in their biological transformation." [https://scope.dge.carnegiescience.edu/SCOPE\\_12\\_3.6\\_chapter12\\_257-274.pdf](https://scope.dge.carnegiescience.edu/SCOPE_12_3.6_chapter12_257-274.pdf)

All the above articles show that development of Keauhou Bay WILL hurt plankton life and marine life in the bay because pollutant runoff is inevitable and unavoidable during construction and afterwards. The manta ray food source will likely disappear. This will be devastating for the manta ray populations. Furthermore, if manta rays die or leave the area, the loss will in turn affect many lively hoods from locals on the island who depend on the manta ray tour for their income.

#### HUMAN POPULATION INCREASES LINKED DIRECTLY TO CORAL DEATH

Does this EIS have any reports on their resort adding to the population increase that happens during IRONMAN?

"On average, each Ironman racer brings three people with them to the Big Island. Counting members of the media, VIPs who come from around the globe to watch and the triathlons partners, there likely be more than 6,300 people descending on Kona..." <https://bigislandnow.com/2023/10/07/ironman-2023-in-kona-shines-spotlight-on-some-of-best-women-triathletes-in-the-world/>

And "Resident dissatisfaction with tourists is multifaceted: The overwhelming majority (92%) of locals felt visitors were not educated enough on protecting Hawaii's natural environment and local resources; other factors include the impact of the vacation rental industry and ignorance of the residents' quality of life." <https://www.triathlete.com/culture/news/kona-locals-ask-ironman-visitors-for-respect/>

Where are the EIS reports on human density? Below are reports that show human population destroys coral reefs.

"The number of people living on the coasts has rapidly increased in recent decades, causing significant development of coastal areas. Coastal development can negatively impact the ocean through the destruction of coastal marine habitat and through run-off of sediments and pollution.

-Coastal development involves activities such as the creation of harbors, stabilization of shorelines, and aquaculture that involve the destruction of sensitive marine habitats such as mangroves, coral reefs, and seagrass beds.

-Coastal development may cause the run-off of sediments into coastal habitats, which can smother corals or seaweeds and reduce the amount of light available for photosynthesis. Losses of primary producers and important habitat-forming species such as corals can negatively impact entire food webs."

The above information was taken from the Education Development Center, INC, from their Coastal Development page called Ocean Tracks <https://oceantracks.org/library/human-impacts/coastal-development#:~:text=Coastal%20development%20may%20cause%20the,negatively%20impact%20entire%20food%20webs.>

There is nothing Kamehameha Schools can do to their development that can stop the guests of this possible Bungalow Resort from going to Keauhou Bay. Human traffic WILL seriously increase if this resort is allowed to be built and the marine life will be negatively affected by it. Marine life will suffer from this development as stated in this letter in many different scientific reported articles.

If you allow this resort the amount of people in this bay will fully increase and, "Hawaii's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally, management of the resource should balance the needs of different user groups, but the welfare of the marine environment on which its inhabitants depend must be the most important consideration." This was taken from

Hawaii's own Division of Aquatic Resources <https://dlnr.hawaii.gov/dar/marine-managed-areas/hawaii-marine-life-conservation-districts/#:~:text=Snorkeling%20and%20SCUBA%20diving%20are,effect%20on%20nearshore%20fish%20populations>.

It's Been Proven an Increase in Human Population Destroys Coral Reefs

If a Bungalow Resort is allowed to be built in Keauhou Bay, it will bring a serious increase in human traffic. "Easily visible trends in human population dynamics combined with well-established and tested ecological theory give a clear, intuitive, yet quantifiable guide to the severity of survival challenges faced by coral reefs. Management challenges and required actions can be clearly shown and, contrary to frequent claims, no scientific ambiguity exists with regard to the serious threat posed to coral reefs by humankind's continued numerical increase." This is in the article by National Library of Medicine National center for Biotechnology Information PubMed. <https://pubmed.ncbi.nlm.nih.gov/33293007/#:~:text=Denser%20coastal%20populations%20and%20greater,to%20more%20runoff%20and%20siltation>.

This article is by ABC NEWS, "This is how tourists are destroying coral reefs in Hawaii. The less people at a certain site, the more coral there are, the research found. The millions of tourists who flock to the shores of Hawaii every year are wreaking havoc on its natural environment -- especially the coral reefs, which are at risk all over the world, a new study said. The most popular coral reefs on the Hawaiian islands are likely being degraded by the very visitors they attract, according to a study published Monday in Nature Sustainability." <https://abcnews.go.com/US/hawaiian-coral-reefs-degrading-popular-tourist-sites-scientists/story?id=96308858#:~:text=The%20less%20people%20at%20a,there%20are%2C%20the%20research%20found,&text=The%20millions%20of%20tourists%20who,world%2C%20a%20new%20study%20said>.

By allowing this development you are stressing an already fragile Eco-system. The small bay is currently used by many locals for boating, fishing, canoeing, paddle boarding, snorkeling, manta night dives, surfing, and swimming. We know, and research shows, that more people cause more damage. The area simply cannot afford or support this development.

"Denser coastal populations and greater wealth will lead to reef degradation by coastal construction. Denser populations inland will lead to more runoff and siltation. Effects of human perturbations can be explored with meta-population theory since they translate to increases in patch-mortality and decreases in patch-colonization (= regeneration). All such changes will result in a habitat with overall fewer settled patches, so fewer live reefs." This information was taken from Science Direct <https://www.sciencedirect.com/science/article/abs/pii/S0065288120300328#:~:text=Aquaculture%20will%20alleviate%20some%20fishing,to%20more%20runoff%20and%20sil> tation.

Another article by Nature Sustainability, "Coral reefs and coastal tourism in Hawaii Coral reefs are popular for their vibrant biodiversity. By combining web-scraped Instagram data

from tourists and high-resolution live coral cover maps in Hawaii, we find that, regionally, coral reefs both attract and suffer from coastal tourism. Higher live coral cover attracts reef visitors, but that visitation contributes to subsequent reef degradation. Such feedback loops threaten the highest quality reefs, highlighting both their economic value and the need for effective conservation management." [https://www.nature.com/articles/s41893-022-01021-4.epdf?sharing\\_token=wsakgQNhaJhJjAnWAq453tRgNoAJWle9JinR3ZoTv0PyGzA5lc\\_H0O1zCHNIP3AShncgKRv6\\_vKLPw49dbmBYoX5g3YIMGOIGBZsabdGUCHI701SLbu9X5Pr3xED4KXl4TosJlvgQ1a7ZZR3rUbraxpod1d2AqNlSmWsuXb7JjEDdpJ8OGJpX7JTJWdCfXvFKJIZYeNdcJ3Ssw\\_dnaUg5IzhcIPBDImmaH15vgT5O%3D&tracking\\_referrer=abcnews.go.com](https://www.nature.com/articles/s41893-022-01021-4.epdf?sharing_token=wsakgQNhaJhJjAnWAq453tRgNoAJWle9JinR3ZoTv0PyGzA5lc_H0O1zCHNIP3AShncgKRv6_vKLPw49dbmBYoX5g3YIMGOIGBZsabdGUCHI701SLbu9X5Pr3xED4KXl4TosJlvgQ1a7ZZR3rUbraxpod1d2AqNlSmWsuXb7JjEDdpJ8OGJpX7JTJWdCfXvFKJIZYeNdcJ3Ssw_dnaUg5IzhcIPBDImmaH15vgT5O%3D&tracking_referrer=abcnews.go.com)

INFRASTRUCTURE AND RESOURCES ON AN ISLAND ALREADY HIGHLY IMPACTED AND STRUGGLING FOR ANSWERS

Has the EIS done any research or reports on the Resources and Infrastructure it will need for a bungalow resort?

There are many big housing developments currently under construction in Kailua Kona, Waikoloa Village, Hilo, Puna, Ocean View and Volcano. The entire Big Island has construction projects already in progress.

Has Kamehameha Schools EIS done any kind of reports or surveys to know if Big Island has the Resources and Infrastructures for their resort development?

"Hotel waste management refers to all the practices and processes that hotels implement to handle and dispose of the multiple types of waste generated on their premises. Worldwide, hotels produce almost 300,000 tonnes of waste each year." <https://www.homebiogas.com/blog/hotels-waste-management/>

As of now, the Big Island's Resources and Infrastructure are having serious negative issues and many more developments that have been approved are not even completed as of yet, which means our island's resources and infrastructure will be taxed even more severely in the near future.

Please read the below articles that prove Big Island does not have the resources or infrastructure for a 143-Unit Bungalow Resort Development at Keauhou Bay. On Hawaii Island, we are already struggling to meet the increasing need for resources and infrastructure.

Big Island Now poll No. 27 results: More than one solution needed to help extend life of West Hawaii landfill

September 17, 2023

The West Hawai'i Sanitary Landfill, the only remaining landfill on the Big Island, is forecast to reach capacity within the next 20 to 25 years.

The West Hawai'i landfill became the island's only one after the Hilo Landfill closed three years ago. It only has about 20 to 25 years left before it can no longer be used to store rubbish.

<https://bigislandnow.com/2023/09/17/big-island-now-poll-no-27-results-more-than-one-solution-needed-to-help-extend-life-of-west-hawaii-landfill/>

A County commission drafts ordinance aiming to ban recyclables at West Hawai'i landfill

By [Megan Moseley](#), September 6, 2023

Hawai'i County's Environmental Management Commission is developing an ordinance that aims to prohibit the amount of recyclable materials ending up in the island's only working landfill.

During a commission meeting on July 26, Ramzi Mansour, Hawai'i County Director of Environmental Management, told commissioners the West Hawai'i Sanitary Landfill only has 20 to 25 years left before it reaches capacity.

With the Hilo Landfill permanently closed in 2020, the clock is ticking for the island's sole dump. Commission chairperson Georjean Adams said it's a good time to start looking into solutions.

Adams said the proposed ordinance is in its early stages and is more about getting the conversation started about how to prevent unnecessary, or recyclable items — green waste, metals, plastics, paper, paperboard and glass — from ending up in the rubbish dump, located off Queen Ka'ahumanu Highway in Waikōloa.

"Trying to site a new landfill is close to impossible," Adams said. "So what are we going to do? So I was looking around, and the commission agreed, to look deeply into the idea of diverting the recyclables out and at least slow the filling up of the landfill."

The proposed ordinance refers to the 2019 Integrated Solid Waste Management Plan that commits the county to "divert, as much as feasible, commercial and municipal solid waste, including but not limited to green waste, metals, plastics, paper, paperboard, and glass to help achieve goals related to climate resiliency, renewable energy, sustainable agriculture, and zero waste."

<https://bigislandnow.com/2023/09/06/hew-draft-ordinance-aims-to-ban-recyclables-at-west-hawaii-landfill/>

Time's Up For Landfills

'Gentle' demolition strategies can help preserve resources

PAULA BENDER April 2, 2024

17

As Hawai'i government officials grapple with the challenge of limited landfill space statewide, federal restrictions set in place by the Environmental Protection Agency are ruling out possible locations that were once considered for new landfills.

Hawaii Act 73 states landfills must be located at least half a mile from residential areas; are prohibited from being located in areas with heavy rain and steep slopes, as well as agricultural and/or conservation lands; above aquifers; 300 feet beyond streams; and 1,000 feet beyond the ocean.

New landfills are also now prohibited from being created in tsunami inundation zones, 100-year flood zones and wetlands. There are also concerns that landfills near airports will attract birds, resulting in damage to aircraft and fatalities among pilots and passengers.

The City & County of Honolulu is in the process of identifying its next landfill and it doesn't want one any bigger or more active than absolutely necessary.

Drought Conditions On Hawai'i Island Prompt Water Supply Message

by Big Island Video News  
on Oct 5, 2023 at 3:59 pm

(BIVN) – With moderate to severe drought conditions being reported across Hawai'i island, local water department officials issued a statement this week on the need for customers to use drinking water wisely.

Most of Hawai'i island is under "Moderate Drought" conditions, according to the latest information [from the U.S. Drought Monitor](#). There is an area under "Abnormally Dry" conditions in South Kona, however there are other, small pockets on the Big Island that are under "Severe Drought". There is even a small spot of "Extreme Drought" in the South Point area of Ka'u.

"The National Weather Service's forecast calls for the existing drought conditions to expand over the entire island and intensify over the upcoming months due to the ongoing El Niño event," reported the Hawai'i County Department of Water Supply. "Peak dryness is expected to occur from around January through February 2024. The El Niño event will likely persist well into spring 2024."

From a Water Supply news release:

<https://www.bigislandvideonews.com/2023/10/05/drought-conditions-on-hawai%CA%BBi-island-prompt-water-supply-message/>

[U.S.](#)

Hawaii is "on the verge of a greater catastrophe," locals say, as water crisis continues

By [LJ Cohen](#)

18

Updated on: April 11, 2024 / 8:23 AM EDT / CBS News

And recent years have seen compounding problems: less rain, leading to [significant droughts](#), and repeated jet fuel leaks and PFAS chemical spills contaminating water systems. All of this significantly limits available water use for locals, many of whom say tourism is only worsening the situation. Just months ago, the [world's largest surfing wave pool](#) opened up on the island — filled with freshwater.

"They're not using it to drink or to support life, they're using it to make money. They're commodifying it," said Healani Sonoda-Pale, who is Native Hawaiian and a member of advocacy group O'ahu Water Protectors. " ... We are on the verge of a greater catastrophe."

"We are in a [water crisis](#), that has to be made very clear," Wayne Tanaka, director of Sierra Club of Hawaii, told CBS News, saying that if the reasons for this crisis aren't soon addressed, "We may come to a point where we have to decide ... who gets water and who doesn't."

<https://www.cbsnews.com/news/hawaii-water-crisis-climate-change/>

Because this is an island, parts need to be shipped. The power plant currently has generators that are not working, and because of this (and other reasons), the Big Island needs to seriously conserve power so that everyone will have power. If this problem of shipping parts can happen once, it can and will happen again.

UPDATE: HELCO asks for continued energy conservation

BY SPECTRUM NEWS STAFF HAWAII ISLAND

UPDATED 6:28 PM ET APR. 16, 2024 PUBLISHED 9:05 AM ET APR. 15, 2024

HILO, Hawaii — Hawaiian Electric continues to urge Hawaii Island customers to reduce their electricity use to prevent the need for rolling outages.

In a news release Tuesday afternoon, the utility stated that Monday saw a reduced demand of approximately 5 megawatts. That, combined with increased wind and solar battery storage prevented the need for rolling blackouts on Monday. HELCO credited conservation efforts, particularly those by large businesses and government customers, for the reduction in electricity demand.

"We're grateful for our customers' efforts to conserve electricity, especially between 5 to 9 p.m., when electricity us is highest, because it does make a difference," said Hawaiian Electric spokesperson Kristen Okinaka. "By working together, we're helping to ensure that enough power can be available for all customers and prevent or minimize the impacts of rolling outages."

Hawaiian Electric announced Monday afternoon that it may initiate rolling outages in parts of Hawaii Island because of the unavailability of several generators and lower than normal wind and solar resources.

In a news release, the utility said that outages could start as early as 6:30 p.m. and rotate around the island for 30-minute intervals. The impacted areas and the timing of the outages will be based on wind generation and the amount of electric demand that needs to be reduced. Individuals who are dependent on electrically powered life support medical equipment are advised to arrange for a backup power supply.

The outages are being done to prevent power loss to even more customers, who are all being asked to conserve electricity throughout the month.

<https://spectrumlocalnews.com/hi/hawaii/news/2024/04/15/heco-customers-on-hawaii-island-asked-to-conserve-power->

Big power supply problems continue to plague Hawaii Island

Apr 8, 2024

The company has been facing an unusual situation with mechanical problems at three of the island's five largest power plants while part of the largest plant undergoes an annual overhaul. All four of these affected power plants are owned by the utility or an affiliate of its parent company.

Also contributing to the trouble is lower output from a geothermal plant, which has the third-largest generation capacity on the island and is owned by an independent operator.

"This is an unusual situation, driven mainly by the unavailability of several large generators that have experienced mechanical problems, are at reduced output, or are undergoing maintenance," Hawaiian Electric said in its March 25 announcement asking customers to use less electricity, especially on weekdays from 5 to 9 p.m.

The company explained that it faces an "extremely tight" supply of power at peak use periods, especially when production from wind, solar and hydroelectric facilities is lower than normal. Those sources of variable, renewable energy can supply up to 15% of electricity needs on the island.

"Without enough supply to meet electricity demand, the company may initiate rolling outages of up to an hour around the island," the March 25 announcement said.

<https://energycentral.com/news/big-power-supply-problems-continue-plague-hawaii-island>

Hawaii Island customers urged to reduce electricity use through April

BY SARAH YAMANAKA HILO PUBLISHED 9:00 AM ET MAR. 26, 2024

What You Need To Know

- Hawaii Island customers may see alerts asking them to conserve energy, especially on days when there isn't much wind that generates up to 15% of electricity
- When alerts are issued, Hawaiian Electric is asking customers to take immediate action to minimize electricity use
- Even when no alerts are issued, customers — including hotels and large retailers — are urged to reduce electricity use as much as possible, especially between 5 and 9 p.m. on weekdays

-If there is not enough electricity to meet demand, Hawaiian Electric may initiate rolling outages of up to an hour around the island

<https://spectrumlocalnews.com/hi/hawaii/news/2024/03/25/hawaii-island-customers-urged-to-reduce-electricity-use-through-april>

#### FURTHERMORE: TRAFFIC, LACK OF RESOURCES, AND FATALITIES

A Resort Development Will Increase Traffic on Already Severely Trafficked Roads. Are there traffic study reports for this EIS?

A development with 150 rooms comes with over 150+ cars. Employees, guests, and visitors will all have cars, plus the regular locals who go there to paddle and enjoy the bay. All this could range in over 300 cars a day because of this resort development.

The Big Island already has a serious traffic issue due to a lack of infrastructure. This is in part due to poor planning, and in part due to geography challenges.

The articles below by different NEWS companies highlight the point that many traffic issues stem from lack of infrastructure and resources. Adding more cars to the road by building another resort in an area that is already stressed, will only increase the already mounting problems with traffic.

This NEWS article by Hawaii News Now, "Report shows alarming surge in Hawaii Island traffic deaths The Hawaii Police Department's Traffic Services Section released a new report showing a dramatic increase in both major crashes and fatal accidents from last year.

The startling statistics show a dramatic increase in the number of year-over-year traffic fatalities on the island of Hawaii, revealing major crashes are up more than 12% and traffic fatalities are up more than 100%." Watch the video on their link below as it is a professional report on Big Island traffic

problems. <https://www.hawaiinewsnow.com/2024/05/18/new-report-shows-hawaii-island-traffic-fatalities-are-up-over-100-last-year/>

With more tourists there will be more accidents, more traffic, and more traffic deaths. Please read this article by KHON 2 NEWS, "Hawaii Island has most traffic fatalities in state. This time last year Hawaii Island was at five traffic deaths, as of April 1, 2024, they're at 14.

Seven of which happened in the last two weeks.

Chief Moszkowicz said the police force is small compared to the size of the island and response times can take 15 to 20 minutes.

"We don't have the resources like in the small space of Oahu where you can saturate an area to control speeding, that just doesn't exist here," he added." <https://www.khon2.com/local-news/7-traffic-fatalities-for-hawaii-island-in-march/>

The traffic on Big Island has increased drastically and safety issues and infrastructure needs to be addressed before adding more resort developments.

Please read this article because what it says about Oahu is a mirror for Big Island. The traffic problems they discuss are the same issues here on Big Island; and it also gives one Big Island example, "On the Big Island, the mayor had to issue an emergency order shutting down Waipio Valley Road due to overuse and poor prior maintenance." This is happening all over Big Island. <https://www.civilbeat.org/2024/02/angry-over-island-traffic-jams-lets-talk-about-solutions/>

The news video below shows aerial footage in Hilo. The footage shown is the same thing that is happening on Alii Drive and Queen K Highway, and for all the same reasons: All of these roads only have two lanes!

There are two developments already on Alii Drive being built as of today; and more are scheduled for this road in the near future. Alii Drive and Queen K Highway are the roads Kamehameha Schools Bungalow Resort will be using if approved, and they are already seriously congested.

These roads have the exact same traffic congestion as Hilo, with the exact same problems. Traffic is extremely slow because of so many people who now live here and all the visitors that come yearly.

In addition, the concern on Kona side is tsunami evacuations rather than lava evacuations. In this kind of traffic, not everyone will be able to get to safer ground, especially if you allow another resort to be developed in this area when traffic is already at a crawl every weekday and often on weekends as well.

Here is the news article by KITV NEWS that highlights the traffic issues discussed above: "Hawaii Island traffic jams could have safety impact. In the event of an evacuation, Mayor Mitch Roth acknowledges that will make the Traffic Jam up even worse. But says,

he is working with The State on a solution." [https://www.kitv.com/news/local/hawaii-island-traffic-jams-could-have-safety-impact/article\\_b06a5374-5a6a-11ed-8d23-8313ef8c4c19.html](https://www.kitv.com/news/local/hawaii-island-traffic-jams-could-have-safety-impact/article_b06a5374-5a6a-11ed-8d23-8313ef8c4c19.html).

There was a crash recently on Alii Drive (see video below). When there is an accident on Alii Drive, it turns the already small two-lane road into only one lane that requires a flagger to help direct traffic. Kamehameha Schools wants to add a resort on this tiny road that will increase the traffic by hundreds of cars.

Here is the Island News video on the crash on Alii Dr. <https://www.youtube.com/watch?v=FQ5snPDjI8>

Please see from these articles that traffic on Big Island is deadly already and adding another resort will be devastating to the island.

Read this Path article, HAWAII COUNTY'S VISION ZERO INITIATIVE:

A motorcyclist is in critical condition after a collision with a car. A driver accidentally hits and kills a pedestrian. It seems that not a day goes by without the news reporting on a traffic crash on Hawaii Island...

Here are some other statistics that are even more staggering:

-28% of roadside crashes were the result of someone leaving the roadway and going into barriers or trees

-13% of pedestrians hit at 20 mph actually suffer fatality

-73% of pedestrians hit at 40 mph suffer fatality

-25% of fatal crashes were the result of distracted driving... So PLEASE put those cell phones away and pay attention to the road!

-56% of fatal crashes were the result of alcohol or drugs

-41% of fatal crashes occurred in light trucks and vans

-49% of crashes occur during the day, outside of peak traffic hours

-Of all the crash fatalities, most were males between 20 to 24-years old.

"That's just Big Island traffic," is a common sentiment. But what if we didn't have to accept this endangerment of vehicle drivers, motorcyclists, and pedestrians as a way of life?"

This was taken from Path <https://bathhawaii.org/hawaii-countys-vision-zero-initiative/>

MORE ARTICLES HIGHLIGHTING INFRASTRUCTURE AND RESOURCE DEFICITS, INCLUDING WATER, TRASH, ELECTRIC and WASTEWATER:

1) Hawaii Deals with Burgeoning Waste Management Problem

As landfills face closure and waste-to-energy projects stall, various counties in Hawaii are dealing with waste management issues. Waste360 Staff January 10, 2020

"Hawaii Island is in the enviable position of having a landfill with anywhere from 20 to 100 years of capacity left to take in trash. But the island still wrestles with significant issues like plastic products that are no longer being recycled." <https://www.waste360.com/landfill/hawaii-deals-with-burgeoning-waste-management-problem>

2) "Big Island Now readers seem to agree that there's likely no single solution for slowing down the timeline of the West Hawaii Sanitary Landfill reaching capacity.

The West Hawaii Sanitary Landfill, the only remaining landfill on the Big Island, is forecast to reach capacity within the next 20 to 25 years." <https://bigislandnow.com/2023/09/17/big-island-now-poll-no-27-results-more-than-one-solution-needed-to-help-extend-life-of-west-hawaii-landfill/>

3) Hawaii Island Has Decades of Landfill Space But Still Faces Challenges In Dealing With Its Waste Hawaii Public Radio Published January 9, 2020 at 5:00 AM HST

"Hawaii Island is in the enviable position of having a landfill with anywhere from 20 to 100 years of capacity left to take in trash. But the island still wrestles with significant issues like plastic products that are no longer being recycled.

For the past four decades, trash from the East side of Hawaii Island has been dumped in a landfill outside of Hilo. But now trash from all parts of the island is being trucked to a facility north of Kona." <https://www.hawaiipublicradio.org/local-news/2020-01-09/hawaii-island-has-decades-of-landfill-space-but-still-faces-challenges-in-dealing-with-its-waste>

4) "What happens to Hawaii Island's trash and recyclables? BY MICHELLE BRODER VANDYKE HAWAII ISLAND PUBLISHED 11:30 AM ET DEC. 17, 2022 By Michelle Broder Vandyke Hawaii Island PUBLISHED 11:30 AM ET Dec. 17 The future of the landfill

The West Hawaii Landfill will be full in about 20 years. Finding a location for the next landfill is a concern, according to the DEM officials. They said it will be challenging to find a location for a future landfill because of stringent regulations and costs related to planning, environmental regulations, design and construction that will take many years to complete. It will also require community support." <https://spectrumlocalnews.com/hi/hawaii/news/2022/12/15/what-happens-to-hawaii-island-s-trash-and-recyclables-->

5) "The overwhelming plastic waste Hawaii visitors leave behind By Natasha Bourlin Aug 24, 2023

Hawaii saw more than 9 million visitors last year. Those tourists' first stops are often big-box and convenience stores, where they buy bottled water, plastic sand toys, single-use bodyboards, noodles, floaties and inner tubes for their trips." <https://www.sfgate.com/hawaii/article/plastic-waste-hawaii-visitors-leave-behind-18286076.php>

But what does the power grid have to do with the water supply?

It is impossible to separate Hawai'i's power system from its water system, said Kawika Uyehara, deputy director of Hawai'i County's Department of Water Supply." <https://www.hawaiipublicradio.org/local-news/2024-02-13/residents-on-hawaii-island-and-oahu-are-asked-to-conserve-water-amid-power-outages>

16) US Hawaii is "on the verge of a greater catastrophe," locals say, as water crisis continues

By Li Cohen

Updated on: April 11, 2024 / 8:23 AM EDT / CBS News

In Hawaii, one of the most important sayings is *ola i ka wai*, "water is life" — a phrase that not only sums up what it means to exist on an island, but what it means to live, period. But now, one of the largest of the island chain's land masses is facing a triple threat to its sole freshwater source, and if it isn't addressed soon, one community member says, "We're in deep trouble."

<https://www.cbsnews.com/news/hawaii-water-crisis-climate-change/>

17) News Hawaii County issues mandatory 25% water restriction for North Kona August 7, 2023 · 5:21 PM HS

A mandatory 25% water restriction has been issued for various communities in North Kona due to the failure of the Honokohau Deepwell over the weekend.

20) "Hawaiian Electric asking Big Island customers to conserve power due to down generators

March 25, 2024 · 11:49 AM HST

According to the utility company, this is an usual situation as the large generators are experiencing mechanical problems resulting in a reduced output. The largest generator, an independent power producer that sells electricity to Hawaiian Electric, is offline with significant mechanical issues.

The plant generates 60 megawatts or nearly one-third of the typical peak demand of 180 megawatts on the island."

<https://bigislandnow.com/2024/03/25/hawaiian-electric-asking-big-island-customers-to-conserve-power-due-to-down-generators/>

All the articles above show that a resort development will further deplete and stress resources and infrastructure on an island already struggling. There are years of new development that have already been approved but not completed. It is not responsible or prudent to continue to develop this resort under these current conditions.

#### HISTORICAL AND CULTURAL SIGNIFICANCE:

The Law of the Splintered Paddle

Hawaiian history tells us that young Kamehameha was once an aggressive chief. The story goes that the young chief even chased after two fishermen in a Puna fishing village. While pursuing them, his foot got stuck in a crevice, and one of the fishermen struck Kamehameha over the head with his paddle in defense, which splintered into pieces.

After the incident, Kamehameha recognized that it was wrong to misuse his power and learned compassion. Years later, Kamehameha declared a new law "Ke Kānāwai Māmalahoe" or "the Law of the Splintered Paddle." Meant to protect the innocent and vulnerable from unprovoked attacks, this law proclaimed that the defenseless, especially kupuna and keiki, be able to sleep safely on the side of the road, unharmed.

The law provided for the safety of non-warriors during wartime and became the first written law of the Kingdom of Hawai'i. After being added back in 1978, the law is part of Hawai'i's State Constitution today.

It is symbolic of servant leadership, reinforcing the importance of:

-Caring for and serving one's people

-Knowing and doing what is pono (right)

-Standing for the principle that leadership privilege is earned

28

-Taking kuleana (responsibility) for those we serve

-Doing so with compassion, love, and respect

"We take that to mean that anyone who uses our roadways should be able to do so without fear of harm," explains Tina."

The Law of the Splintered Paddle is also on Kamehameha Schools website. The historical value of this law should be enough to help make

Big Island roads become safer, and not adding to the traffic and issues of our already dangerous roads. <https://www.ksbe.edu/article/the-lessons-of-the-law-of-the-splintered-paddle-ring-true-200-years-after-k>

Does this EIS have any reports about how this development will safely add to the land fill on Big Island, and are there reports proving the island has enough water for another big resort, what about reports on how much power this resort will use because the Big Island already has serious resource and infrastructure issues.

#### IN CONCLUSION

The articles cited in this letter, many by some of the most esteemed scientists in the world, show with clarity that allowing this development is going to cause devastating, lasting, effects on the Eco-system in Keauhou Bay and "The Endangered Species Act of 1973 (ESA or "The Act"; 16 U.S.C. § 1531 et seq.) is the primary law in the United States for protecting and conserving imperiled species. Designed to protect critically imperiled species from extinction as a "consequence of economic growth and development untempered by adequate concern and conservation", the ESA was signed into law by President Richard Nixon on December 28, 1973. The Supreme Court of the United States described it as "the most comprehensive legislation for the preservation of endangered species enacted by any nation".<sup>[1]</sup>" Endangered Species Act of 1973 - Wikipedia

This location, currently acting as a natural filter, is especially vulnerable due to having a golf course on one side and a natural treasure like Keauhou Bay on the other. This land MUST be conserved in order to keep Keauhou Bay safe for all the marine life to be able to live there for years to come.

In addition to the natural disaster this will cause, Hawai'i Island is already having serious infrastructure and resource issues that have yet to be solved. These issues MUST be solved before considering another resort development on Big Island.

We need to work in harmony with the land and the people before pushing forward with new developments, especially in sacred and special places like Keauhou Bay, the birthplace of King Kamehameha III. Keauhou Bay is a small, fragile Eco-system, that is already pressured by boating, golfing, population issues, and hotels that are all around the entire bay.

The trees that currently stand on the land that is threatened to be developed clearly protects the marine life and environment from further damage. The location is NOT suitable for this kind of development for both environmental and infrastructure reasons.

The cost of what stands to be lost is far too high to allow this to happen.

Please save Keauhou Bay's marine life and help the island's resources by saying NO to a Bungalow Resort built by Kamehameha Schools.

Mahalo,

Wim and Nan Verkaik

The Endangered Species Act of 1973 (ESA or "The Act"; 16 U.S.C. § 1531 et seq.) is the primary law in the United....

Sincerely,  
Nancy Vidana

**Subject:** Kamehameha Schools IES Draft for Keaouhou Bay WILL HAVE NEGATIVE IMPACT

To whom it may concern  
(Kamehameha Schools, Planning Department, Zendo Kern, State/County/Local representatives,...

I am a resident of the Big Island since 1990. I am writing to oppose the Kamehameha School's KBMP plan and Bungalow Resort "falsely called 'low impact lodging'" at Keaouhou Bay. Environmentally this will harm the bay as run off from the golf course above into the bay, after trees are cut down for the project, will impact the harbor. This will leave way for less natural ground cover to protect the flow of runoff chemicals into the harbor. Such chemicals and run off sediment cause harm and death to corals and marine life, including endangered species such as sea turtles and monk seals. Runoff from chemicals also can kill plankton that is the essential food source for Manta Rays who are both beautiful and a source of income for local tour guides.

Further, guests at the Bungalow Resort will bring their increased activities to the Bay causing distress to the marine life which is revered and respected by locals who use this Bay. Guests don't have a vested interest in the environment at the Bay as do locals who live here. Even with education programs for visitors, the Resort itself will increase distress to the ocean and land due to more usage. Increased vehicles will also add to more pollution in this area. Construction activity and noise will further disturb marine life.

Also, further tourist influx will add to the island's electrical needs which are barely serving our current population now. Contending with waste from a larger tourist influx also puts added stress on West Hawaii's waste management where we already take on the trucked waste from the East side of the island. Water conservation and mandatory lessening of water usage from residents is unfair if we allow tourist or further planned development to use water freely and largely while locals are called to conserve.

Kamehameha Schools is using this project development strictly to make profits for themselves on the back of the environment and long time residents of this island. The plan is short-sighted as it will be detrimental in the long run to our island habitat and the people that live here, and have lived here for years and generations.

**Amanda Vincent**

I do not want any development of Keauhou Bay. It will damage the ecosystem and destroy our manta rays.

**Carolina Visser**

Please reject Kamehameha Schools EIS for Keauhou Bay to become a Bungalow Resort. This is a VERY small bay and the added footprint of a 105 room Resort, that will include excess traffic, will have a serious negative impact in Keauhou Bay.

## Sharon Vollmuth

To whom it may concern from an occasional visitor, No to the proposed development. Building always pollutes sensitive water areas. Please reject Kamehameha Schools EIS for Keaouhou Bay to become a Bungalow Resort. This is a VERY small bay and the added footprint of a 105 room Resort, that will include excess traffic, will have a serious negative impact in Keaouhou Bay. Please, Do NOT risk polluting the water in Keaouhou Bay by allowing Kamehameha Schools to develop their bungalow resort project. Research has shown that developments pollute nearby waters constantly during development and after. Developments have ALWAYS polluted the water in every near coastal development area. An article entitled, "What is the biggest source of pollution in the ocean?" by NOAA, National Oceanic and Atmospheric Administration, states, "When large tracts of land are plowed, the exposed soil can erode during rainstorms. Much of this runoff flows to the sea, carrying with it agricultural fertilizers and pesticides." It also states, "Eighty percent of pollution to the marine environment comes from the land. One of the biggest sources is called, nonpoint source pollution, which occurs as a result of runoff." The trees you want to take down keep the runoff pollution from the golf course from going into the Bay. According to the National Library of Medicine, in their article, "Putting the Earth in Play: Environmental Awareness and Sports," shares that the golf industry uses approximately 50 pesticide active ingredients, including chlorpyrifos—an insecticide that is banned for residential use by the EPA due to developmental hazards. These pollutants and more are being held off from running into the Bay by the very trees you want to take down. Let's not forget the marine life that will be threatened by excess pollution and traffic. Keaouhou Bay is the monk seals and the green sea turtle's habitat. More pollution and people will endanger these species. This Bay is worth protecting. Please do not put a resort in such a small area. Future generations will be deprived of what it currently is, and it could never be replaced. My friends and associates have written a good letter so I am replicating it.

Keaouhou Bay holds a special old time feeling with its canoe club under the trees, a sweet stretch of beach and the small bay. The pier and the various boats complete the picture. If development goes ahead, All of this will be lost as these activities will be relocated and with them will go the history of the area.

If the proposed development were a small scale cultural and historic museum, I could imagine it, however, the plan for high end tourist development with the new roads and additional traffic really makes me question WHY HERE? You already tore down the old hotels just to the north near Kaha'u'u to return them to how they were before, so WHY is there this urgency to build in Keaouhou, when you have so many other properties available? Please consider a location where you would not be causing poisonous run off and pollution of a small pristine bay. All I can see is dollar signs and the destruction of critical habitat for protected Monk Seals and Honu, as well as the Manta Rays that live right at the edge of the bay. Consider how difficult traffic will be, and add to that the next tsunami and how already difficult it is to evacuate the coastal area. Also consider that most tourists want to be near Waikoioa where the infrastructure supports their needs. Keaouhou shopping center is really just a 'small kine' local center, not at all geared to the high end outcome you seek, especially with the outrageous rents charged there. Also consider the so called "disastrous" tourist season of 2024. We always feel that people in far away offices are making these plans with little interest in the reality of the people living in the area, but in this case, you trespass and infringe on the wildlife that your potential customers come to expect. If I had a vote, I'd say not this, not here.

## Howard Warshaw

To Whom It May Concern,

My wife and I have spent time in the Keaouhou Bay area for 23 of the past 25 years. Initially we'd come for 2-3 weeks in the summer, but as we grew to love our time here, the amount of time we spent here expanded. For the past three years we've come for 2.5 months.

On our current trip, we were disappointed to hear about the proposal by Kamehameha Schools to further develop Keaouhou Bay. We have always found the Keaouhou Bay area to be an important part of the charm of the west side of the Big Island. A project of this magnitude seems certain to strain resources and add to the ever-growing congestion problems. I fear that this project, if approved, will mean we will be looking at years of disruptive construction in an area that is already providing a meaningful experience to locals and visitors alike. If the project would clearly result in an improvement, then perhaps the years of disruption would be worth it. But a more likely outcome is more stores, more congestion, more strain on water resources, and less access to the beautiful Bay.

I hope the plan is NOT approved.

Sincerely yours,  
Howard Warshaw

**Subject:** Serious Negative Impact on Keaouhou Bay!

**Categories:** Yellow Category

To Whom It May Concern, Please read the scientific proof in this letter and REJECT Kamehameha Schools Environment Impact Statement (EIS) for Keaouhou Bay to become a Bungalow Resort. Please state in your report that a Bungalow Resort WILL have a SERIOUS NEGATIVE IMPACT on Keaouhou Bay as stated in all the different researched articles below. Please, DO NOT risk polluting the water in Keaouhou Bay by allowing Kamehameha Schools to develop their bungalow resort project. It is scientifically proven that developments pollute nearby waters both during and after development. Below are scientific articles written by the National Oceanic and Atmospheric Administration (NOAA), Global Coral Reef Alliance, Hawaii Government, and many other professional organizations, that have studied and shown that developments have ALWAYS polluted the water in EVERY coastal development area. Does this EIS (Environmental Impact Statement) have any kind of reports and studies on how the endangered species and marine life will handle the extra pollution due to development, and the golf course runoff? Keaouhou Bay is their habitat and this development WILL BE CHANGING an Entire Ecosystem. ENDANGERED SPECIES CONSERVATION IMPACTED BY DEVELOPMENT In the Endangered Species Act of 1973 Under Section 2 (b), "To provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved." This would be Keaouhou Bay. The Green Sea Turtle swims in Keaouhou Bay weekly and the monk seal has also been seen swimming and resting in Keaouhou Bay. Both of these marine animals are on the endangered species list. Endangered Species Act "Section 2. Findings, Purposes, and Policy (4) the United States has pledged itself as a sovereign state in the international community to conserve to the extent practicable the various species of fish or wildlife and plants facing extinction, pursuant to— (b) PURPOSES.—The purposes of this Act are to provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved, to provide a program for the conservation of such endangered species and threatened species, and to take such steps as may be appropriate to achieve the purposes of the treaties and conventions set forth in subsection (a) of this section." This was taken from <https://www.fisheries.noaa.gov/national/endangered-species-conservation/endangered-species-act> (act) FEDERALLY PROTECTED GREEN SEA TURTLES WILL BE AFFECTED The green sea turtle is federally protected and can be seen in Keaouhou Bay weekly. The following article that states: "POLLUTED RUNOFF IN HAWAII ENDANGERS GREEN SEA TURTLES" Why does Hawaii have a runoff problem? Historically, in the tropics of Hawaii, precipitation was absorbed into the soil, according to the Clean Water Branch of Hawaii's Department of Health. Any potential pollution or contaminants on the ground surface would get pushed into the soil by the rain, and plant roots and microbes would help break down the pollution into less dangerous components. However, with urban and agricultural development, less and less of the pollution gets pulled into the soil, and more of it gets washed out into storm drains. From there, the pollutants make their way to streams, rivers and the ocean that surrounds Hawaii. According to the state agency, most of these contaminants are nutrients from fertilizer, bacteria from animal waste, oil, garbage and yard waste... If polluted runoff reaches the ocean, it can wreak havoc on marine life,

including endangered green sea turtles." Taken from <https://www.chemservice.com/news/polluted-runoff-in-hawaii-endangers-green-sea-turtles/> (https://www.chemservice.com/news/polluted-runoff-in-hawaii-endangers-green-sea-turtles/) Allowing this development WILL POLLUTE Keaouhou Bay. The above article, written in 2014 (because runoff water from developments were polluting the ocean even then!!) states this fact clearly. Keaouhou Bay is home to countless sea creatures such as the protected green sea turtle, spotted eagle rays, manta rays, dolphins, fish, coral, monk seals, and more and that will ALL be harmed by the severe pollution runoff that WILL happen because developments have been shown to ALWAYS pollute the water in that is nearby. The Green Sea Turtle is protected by more than one law. "All sea turtles in Hawai'i are protected by the Endangered Species Act (ESA) (<https://www.fisheries.noaa.gov/national/endangered-species-conservation/endangered-species-act>) and additionally protected by Hawai'i Revised Statutes Chapter 195D (HRS) ([https://www.capitol.hawaii.gov/hrs/current/Vol03\\_Ch0121\\_02000D/HRS0195D/HRS\\_0195D-.htm](https://www.capitol.hawaii.gov/hrs/current/Vol03_Ch0121_02000D/HRS0195D/HRS_0195D-.htm)) and Hawai'i Administrative Rules (HAR) 13-124 (<https://dlnr.hawaii.gov/dofaw/files/2013/09/Chap12.4a.pdf>)." This information was taken from this site <https://dlnr.hawaii.gov/dofaw/files/2013/09/Chap12.4a.pdf>. (<https://dlnr.hawaii.gov/dar/species/sea-turtles/>) THE ENDANGERED MONK SEAL WILL BE AFFECTED Keaouhou Bay is known as a RESTING AREA for the ENDANGERED MONK SEAL. If another resort is allowed to be built, in addition to the pollution, it will also bring a lot more people down to Keaouhou Bay. This increases the chances of a resting monk seal being disturbed by humans trying to get close, take "selfie" photos, and being generally uninformed and harmful. Please see article on Selfie Culture and its harmful effects below. Has the EIS done any research on what an increased population would do in such a small area, and what will happen to the endangered species that live there? With a significantly increased population their habitat of Keaouhou Bay will likely be changed forever. This information is from a NOAA Scientist; "Study shows selfie culture impacts how people behave when posting images of an endangered species on social media. There's a seal on the beach! Let's go get a 'selfie!'" That must have been what nearly 18 percent of people on Instagram thought before approaching an endangered species. In a recent study (<https://www.fisheries.noaa.gov/resource/peer-reviewed-research/social-media-data-resource-monkseal-conservation>), NOAA scientists used social media to monitor human activities around endangered Hawaiian monk seals (<https://www.fisheries.noaa.gov/species/hawaiian-monk-seal>). They discovered that human disturbance is more common than they thought." <https://www.fisheries.noaa.gov/feature-story/endangered-hawaiian-monk-seals-cry-foul-over-selfies> (<https://www.fisheries.noaa.gov/feature-story/endangered-hawaiian-monk-seals-cry-foul-over-selfies>) NOAA clearly states a high population in a place where monk seals and sea turtles habitat can be a serious disturbance for these endangered species. "Hawaiian monk seals are protected federally by the ESA and the Marine Mammal Protection Act (MMPA) (<https://www.fisheries.noaa.gov/national/marine-mammal-protection/marine-mammal-protection-act-policies-guidance-and-regulations>), as well as locally by Hawai'i Revised Statutes (HRS) Chapter 195D ([https://www.capitol.hawaii.gov/hrs/current/Vol03\\_Ch0121\\_02000D/HRS0195D/HRS\\_0195D-.htm](https://www.capitol.hawaii.gov/hrs/current/Vol03_Ch0121_02000D/HRS0195D/HRS_0195D-.htm)) and Hawai'i Administrative Rules (HAR) 13-124 (<https://dlnr.hawaii.gov/dofaw/files/2013/09/Chap12.4a.pdf>)." This was taken from <https://dlnr.hawaii.gov/dar/hawaiian-monk-seal/> (<https://dlnr.hawaii.gov/dar/hawaiian-monk-seal/>) Keaouhou Bay is the monk seals and the green sea turtle's habitat. Allowing a bungalow resort to be developed in Keaouhou Bay, the habitat of these endangered species, is to threaten their life and habitat with golf course runoff pollution, as well as development pollution. By threatening their habitat, and hence their lives, this development goes completely against the Endangered Species Act of 1973. The verbiage in the Endangered Species Act states, "to conserve". In this case, "to conserve" would be to protect the land around Keaouhou Bay from developments that destroy the habitat of these endangered species with pollution and runoff. Does this EIS have any reports on the endangered species that

frequent Keauhou Bay? This is their habitat and it needs to be "conserved". Under the Conservation Program there should be research done on endangered species and their associated ecosystems. A large bungalow resort development WILL FOREVER CHANGE THIS ECOSYSTEM. "§195D-5 Conservation programs. (a) The department shall conduct research on indigenous aquatic life, wildlife, and land plants, and on endangered species and their associated ecosystems, and shall utilize the land acquisition and other authority vested in the department to carry out programs for the conservation, management, and protection of such species and their associated ecosystems." [https://www.capitol.hawaii.gov/hiscurrent/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hiscurrent/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm) ([https://www.capitol.hawaii.gov/hiscurrent/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hiscurrent/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm)) Also, under this same Conservation program, "(2) Taking such action as may be necessary to ensure that actions authorized, funded, or carried out by them do not jeopardize the continued existence of threatened or endangered species." [https://www.capitol.hawaii.gov/hiscurrent/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hiscurrent/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm) ([https://www.capitol.hawaii.gov/hiscurrent/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hiscurrent/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm)) Please consider that developing a Kamehameha Schools Bungalow Resort in Keauhou Bay WILL threaten endangered species due to the unavoidable development and golf course pollution runoff that would be caused by removing the all the trees that currently serving as a natural pollution filter, and replacing the land with housing, cars, humans, and waste. There would also be tremendous runoff damage into Keauhou Bay and the surrounding area during the building phase of this enormous project. GOLF COURSE POLLUTION KILLS MARINE LIFE AND DRASTICALLY CHANGES ECOSYSTEMS "The golf industry uses approximately 50 pesticide active ingredients (<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC1459948/>), including chlorpyrifos—an insecticide that is banned for residential use by the EPA due to developmental hazards. Having to trim golf turf to low heights also makes it even more vulnerable to pests, which leads to more pesticide use." <https://rainorshinegolf.com/pages/the-environmental-impact-of-golf-courses> (<https://rainorshinegolf.com/pages/the-environmental-impact-of-golf-courses>) These pesticides will be removed and replaced with pavement. This is unavoidable! Please read from Wikipedia, " Most drains have a single large exit at their point of discharge (often covered by a grating (<https://en.wikipedia.org/wiki/Grating>)) into a canal (<https://en.wikipedia.org/wiki/Canal>), river, lake, reservoir (<https://en.wikipedia.org/wiki/Reservoir>), sea or ocean. Other than catch basins, typically there are no treatment facilities in the piping system." [https://en.wikipedia.org/wiki/Storm\\_drain#:-:text=Most%20drains%20have%20a%20single,discharge%20into%20individual%20dry%20wells](https://en.wikipedia.org/wiki/Storm_drain#:-:text=Most%20drains%20have%20a%20single,discharge%20into%20individual%20dry%20wells)) The pavement from this development will cause pollution to runoff into Keauhou Bay because this treed land that will become a housing development is situated directly between the golf course and the Bay. These trees, which absorb all the pollution from the golf course is the BEST AND ONLY PROTECTION POLLUTION FILTER Keauhou Bay has from the golf course pesticides, fertilizer and weed killer. See the below paragraph for further references. See page 2 at: <https://health.hawaii.gov/epo/files/2013/09/Stormwater-MS4-Presentation-HEE-7.15.14.pdf> (<https://health.hawaii.gov/epo/files/2013/09/Stormwater-MS4-Presentation-HEE-7.15.14.pdf>) where the Hawai'i government states that Natural Ground Cover has 100% runoff, where has development has 55% runoff. So, even if you have storm drains the pavement this development will create will cause more runoff into Keauhou Bay than the Natural Ground Cover that is has now, that has been protecting the bay from golf course pollution for years. These trees and land are saving monk seals and green sea turtles habitat from the golf course pollution and this land MUST BE PRESERVED and CONSERVED as the natural protector for Keauhou Bay and for these endangered species habitat. Under

Section 2 (b) of the Endangered Species Act - Keauhou Bay MUST BECOME A CONSERVATION AREA for these endangered species. It is currently their habitat, and to allow a large resort development to be built above this bay clearly threatens the lives of these endangered species by allowing golf course toxic pollution and development pollution to run into these species natural habitat of Keauhou Bay. ALGAE BLOOMS KILL CORAL AND MARINE LIFE The trees that are slated to be cleared for the development further protect Keauhou Bay from algae blooms that have been proven to be caused by pollution that is runoff from fertilizer and weed killer. When there is heavy rain the land above the bay has a greater runoff than normal. Without the trees, the runoff from the golf course pollution will pour into the Bay likely causing frequent algae blooms. Algae blooms have been shown to kill coral and marine life as stated in the many articles that will follow. One of these articles is from the Global Coral Reef Alliance. They have researched the effects on reefs before and after a golf course developments. Though this development is not a golf course development, it is located just below a golf course and exposes the bay to the pollution from the golf course by removing the proven natural filter of the trees and natural ecosystem. Has this EIS done any kind of research about the algae blooms that happen after a serious storm because of the golf course runoff pollution? This information was taken from Global Coral Reef Alliance and it is an actual study on the how coral and marine life are affected before and after development. It's titled, "Golf courses kill coral reefs and fisheries: harmful algae blooms and disease cause by nutrient runoff from golf course development on Guana Cay, Abaco, Bahamas Introduction: Bahamas coral reef deterioration This study is thought the first ever to evaluate the health of coral reef ecosystems and fisheries before and after a golf course development. The vast majority of corals have died from a combination of factors including global warming, new diseases, land-based sources of pollution..." <https://www.globalcoral.org/golf-courses-kill-coral-reefs-and-fisheries-harmful-algae-bahamas/> (<https://www.globalcoral.org/golf-courses-kill-coral-reefs-and-fisheries-harmful-algae-bahamas/>) If you allow a Bungalow Development in Keauhou Bay you WILL be agreeing to pollute this bay for years to come and COMPLETELY CHANGING and possibly DESTROYING KEAUHOU BAY'S ECOSYSTEM. Another study by the Coral Reef Alliance titled, "Golf course fertilizer runoff causes nutrient enrichment leading to harmful algae blooms on a Bahamian coral reef. "...After construction new algae blooms appeared nearest the golf course green, smothering corals in adjacent reefs, along with sharply increased coral diseases..." <https://www.globalcoral.org/golf-course-fertilizer-runoff-causes-nutrient-enrichment-leading-to-harmful-algae-blooms-on-a-bahamian-coral-reef> (<https://www.globalcoral.org/golf-course-fertilizer-runoff-causes-nutrient-enrichment-leading-to-harmful-algae-blooms-on-a-bahamian-coral-reef>) Does this EIS have any studies or reports on the extra runoff pollution due to clearing land and adding pavement? This needs to be fully assessed because you will be changing an entire ecosystem to build a bungalow resort. It rains in Keauhou Bay many nights out of the year and this kind of pollution will kill the beautiful and necessary coral in the Bay. FURTHERMORE: "If there are toxic algal blooms (<https://oceanconservancy.org/protecting-florida/harmful-algal-blooms/>), like red tide, or man-made contaminants, like pesticides or detergents in the water, those toxins are contained within the bubbles of sea foam. When those bubbles pop, the toxins can become airborne and compromise the air that is breathed in that location." <https://oceanconservancy.org/blog/2023/03/31/what-sea-foam/> (<https://oceanconservancy.org/blog/2023/03/31/what-sea-foam/>) ENGINE POLLUTION CAUSES ISSUES IN THE OCEAN Does this EIS have any detailed traffic studies for the increase in cars that will be added to this already severely traffic area they want to build their 150 room bungalow resort in? Have they done any studies on the pollution these cars WILL have in Keauhou Bay? Because this Bungalow Resort could have over 150 extra cars and over 300 or more extra people in and out of Keauhou Bay, what traffic and increased population studies have they done? There will be employees with cars, guests with

and marine life. Zooplankton are part of this marine life and they are also killed and negatively affected. Zooplankton are food for manta rays. Manta rays are in Keahou Bay every night to eat zooplankton, and are often seen here during the day as well. Allowing this bay development will also be a death sentence for many types of marine life including planktons. There is NO WAY to stop this from happening due to the fact that polluted runoff rain water from developments can't be fully stopped. This has been shown to happen in ALL coastal developments. Please read the Scientific articles below. It's Been Proven Developments Severely Pollute Nearby Waters Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Coral Bleaching is occurring more frequently in Hawaii". Across the Hawaiian Archipelago, coral bleaching has increased in frequency and severity since 1996. The last major bleaching event in 2014-2015 had catastrophic impacts state-wide... This was the third major bleaching episode in Hawaii over the last 6 years. The frequency of these events is unprecedented in the archipelago. NOAA scientists and partners have determined that the key drivers of the bleaching were environmental factors (such as heat stress, depth, and surface light) and human impacts (sewage effluent and urban run-off). " <https://www.fisheries.noaa.gov/feature-story/cautionary-tale-2019-coral-bleaching-event>.

[hawaii#:~:text=Coral%20bleaching%20is%20occurring%20more,had%20catastrophic%20impacts%20state%20wide.](https://www.fisheries.noaa.gov/feature-story/cautionary-tale-2019-coral-bleaching-event) ( <https://www.fisheries.noaa.gov/feature-story/cautionary-tale-2019-coral-bleaching-event>.)

[hawaii#:~:text=Coral%20bleaching%20is%20occurring%20more,had%20catastrophic%20impacts%20state%20wide](https://www.fisheries.noaa.gov/feature-story/cautionary-tale-2019-coral-bleaching-event)) This article is by the Coral Reef Alliance here in Hawaii. "An ecosystem under threat Hawaii's reefs face major global and local threats including climate change, overfishing, and sediment and nutrient pollution caused by sewage and stormwater runoff... When it rains, flash floods carry stormwater and large amounts of sediment downstream to the ocean. Just offshore, once-thriving coral reefs are now struggling to survive." <https://coral.org/en/wherewe-work/hawaiian-islands/#:~:text=Hawai%20reefs%20face%20major%20global,into%20Hawai%20CA%20BBIS%20waterways%20every%20day> (<https://coral.org/en/wherewe-work/hawaiian-islands/#:~:text=Hawai%20reefs%20face%20major%20global,into%20Hawai%20CA%20BBIS%20waterways%20every%20day>).

This article states that runoff is a leading source in coral degradation. Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Land-based sources of pollution are a leading cause of coral reef degradation in the Main Hawaiian Islands. Water quality is impacted by urban runoff, failing sewage systems, unpaved roads, farms, land clearing, and development." [https://www.coris.noaa.gov/monitoring/status\\_report/docs/Hawaii\\_status\\_report\\_forweb\\_b.pdf](https://www.coris.noaa.gov/monitoring/status_report/docs/Hawaii_status_report_forweb_b.pdf) ([https://www.coris.noaa.gov/monitoring/status\\_report/docs/Hawaii\\_status\\_report\\_forweb\\_b.pdf](https://www.coris.noaa.gov/monitoring/status_report/docs/Hawaii_status_report_forweb_b.pdf))

This article is a Research Article by PLOS ONE and their motto is, "We're driving change in research integrity and publication ethics." This is some of their article information, "Coral taxonomy and local stressors drive bleaching prevalence across the Hawaiian Archipelago in 2019... We found little evidence for acclimation by reefs to thermal stress in the main Hawaiian Islands. Moreover, our findings illustrate how detrimental effects of local anthropogenic stressors, such as tourism and urban run-off, may be exacerbated under high thermal stress. In light of the forecasted increase in severity and frequency of bleaching events, future mitigation of both local and global stressors is a high priority for the future of corals in Hawaii". <https://journals.plos.org/plosone/article?id=10.1371/journal.pone.0269068> (<https://journals.plos.org/plosone/article?id=10.1371/journal.pone.0269068>)

The coral all over Hawaii has had extremely high mortality rates, due to developments near ocean areas throughout the years, and development in Keahou Bay will be devastating to the coral, reef fish, and all aquatic life there. Manta Rays need to eat 5 times their body weight in zooplankton daily. Their population will be severely affected should the plankton die. Please see the cited information below. "SO, HOW MUCH PLANKTON DOES YOUR AVERAGE MANTARAY EAT? 19,200,000. Nineteen million two hundred thousand, give or take a few thousand. That is the number of plankton pieces a ten-foot manta ray must consume weekly to stay

alive." The above information was taken from Manta Ray Advocates <https://mantarayadvocates.com/how-much-plankton-do-mantas-eat/> (<https://mantarayadvocates.com/how-much-plankton-do-mantas-eat/>) Coral reefs are known to be highly negatively impacted by developments because, "Impacts from land-based sources of pollution including coastal development,... can impede coral growth and reproduction, disrupt overall ecological function, and cause disease and mortality in sensitive species." <https://oceanservice.noaa.gov/facts/coral-pollution.html#:~:text=Impacts%20from%20land%20based%20sources,and%20mortality%20in%20sensitive%20species> (<https://oceanservice.noaa.gov/facts/coral-pollution.html#:~:text=Impacts%20from%20land%20based%20sources,and%20mortality%20in%20sensitive%20species>). Article by Environmental Evidence, "Coastal development and runoff lead to sedimentation, which directly impacts coral recruitment, growth, mortality, and ecosystem services that coral reefs provide." <https://environmentalevidencejournal.biomedcentral.com/articles/10.1186/s13750-020-00200-0> (<https://environmentalevidencejournal.biomedcentral.com/articles/10.1186/s13750-020-00200-0>)

[0#:~:text=Coastal%20development%20and%20runoff%20lead,services%20that%20coral%20reefs%20provide](https://environmentalevidencejournal.biomedcentral.com/articles/10.1186/s13750-020-00200-0) (<https://environmentalevidencejournal.biomedcentral.com/articles/10.1186/s13750-020-00200-0>)

[0#:~:text=Coastal%20development%20and%20runoff%20lead,services%20that%20coral%20reefs%20provide](https://environmentalevidencejournal.biomedcentral.com/articles/10.1186/s13750-020-00200-0)). Developments can't fully stop polluting because runoff is from rain during development and after. Article by NOAA, "One of the most significant threats to reefs is pollution. Land-based runoff and pollution discharges can result from dredging, coastal development... This runoff may contain sediments, nutrients, chemicals, insecticides, oil and debris. When some pollutants enter the water, nutrient levels can increase, promoting the rapid growth of algae and other organisms that can smother coral." [https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humanthreats.html#:~:text=It%20runoff%20may%20contain%20sediments,organisms%20that%20can%20smother%20corals.](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humanthreats.html#:~:text=It%20runoff%20may%20contain%20sediments,organisms%20that%20can%20smother%20corals.) ([https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humanthreats.html#:~:text=It%20runoff%20may%20contain%20sediments,organisms%20that%20can%20smother%20corals.](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humanthreats.html#:~:text=It%20runoff%20may%20contain%20sediments,organisms%20that%20can%20smother%20corals.)) Another article by NOAA, "Coral reefs also are affected by leaking fuels, anti-fouling paints and coatings, and other chemicals that enter the water... (All of those are show up in every development project.) Among the most damaging pollutants on coral reefs is sediment, which can remain suspended in the water or be deposited on the coral surface (i.e., turbidity and sedimentation, respectively) and can contain toxicants, pathogens, and nutrients, all of which impact coral growth, recruitment, and survival" [https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days) ([https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days)). It's Been Proven Resort Developments KILL Marine Life This article by MarinBIO states, "Zooplankton are also sensitive to their environment and like phytoplankton—a change in zooplankton concentration can indicate a subtle environmental change. Zooplankton are highly responsive to nutrient levels, temperatures, pollution, food that is not nutritious, levels of light, and increases in predation (<https://en.wikipedia.org/wiki/Predator>). As well as providing an essential link in the marine food chain (which is an understatement), the diversity of species, amount of biomass and abundance of zooplankton communities can be used to determine the health of an ecosystem... Here is another article that shocking shows that in a very short time, big changes can occur due to runoff. A development will hurt and kill plankton, by Frontiers in Marine Science, "Effects of an experimental terrestrial runoff on the components of the plankton food web in a Mediterranean coastal lagoon The main result observed in the present study was that the effects of the simulated terrestrial runoff spread along the plankton food web,

significantly affecting all trophic levels of the natural plankton community studied. This occurred in a relatively short time considering that the experiment lasted less than three weeks. The lower light availability in the terrestrial runoff treatment compared to the control resulted in a net decrease of approximately one-third of Chl-a concentration and phytoplankton abundance over the entire experiment." <https://www.frontiersin.org/journals/marine-science/articles/10.3389/fmars.2023.1200757/full> (https://www.frontiersin.org/journals/marine-science/articles/10.3389/fmars.2023.1200757/full) The ecosystem is fragile and interconnected as is stated in this article: "Zooplankton are also affected by levels of pH, heavy metals, calcium, and aluminum. Nutrients like nitrogen and phosphorus will affect the prey of zooplankton (like algae, protozoa and bacteria), indirectly affecting zooplankton survival. Scientists are still putting together pieces of the zooplankton puzzle. Some questions include how nutrient levels found in algae can influence the growth and behavior of zooplankton. Another question important to marine and human life is how toxins and pollution will affect this crucial link in the food chain" This information is in article by MarineBIO. <https://www.marinebio.org/creates/zooplankton/#:~:text=Zooplankton%20are%20also%20sensitive%20to,light%2C%20and%20increases%20in%20predation> (https://www.marinebio.org/creates/zooplankton/#:~:text=Zooplankton%20are%20also%20sensitive%20to,light%2C%20and%20increases%20in%20predation,). A research article by Environmental Research Laboratory, United States Environmental Protection Agency that discusses, "Toxic Effects of Pollutants on Plankton: There are four main sources of aquatic pollution: industrial wastes, municipal wastes, agricultural run-off, and accidental spillage. Non-point sources, such as automobile exhausts, add appreciable amounts of pollutants to air that may enter aquatic systems in rainfall or dry fall-out. These sources add pesticides, heavy metals, oil, petroleum products, and a large number of organic and inorganic compounds to water. Lakes and oceans serve as sinks for many pollutants. Plankton comprise a large portion of the living matter in natural waters and function in biogeochemical cycles. They are affected by pollutants, transfer them to sediments and other organisms, and function in their biological transformation." [https://scope.dge.carnegiescience.edu/SCOPE\\_12/SCOPE\\_12\\_3.6\\_chapter12\\_257-274.pdf](https://scope.dge.carnegiescience.edu/SCOPE_12/SCOPE_12_3.6_chapter12_257-274.pdf) (https://scope.dge.carnegiescience.edu/SCOPE\_12/SCOPE\_12\_3.6\_chapter12\_257-274.pdf) All the above articles show that development of Keahou Bay WILL hurt plankton life and marine life in the bay because pollutant runoff is inevitable and unavoidable during construction and afterwards. The manta ray food source will likely disappear. This will be devastating for the manta ray populations. Furthermore, if manta rays die or leave the area, the loss will in turn affect many lively hoods from locals on the island who depend on the manta ray tour for their income. HUMAN POPULATION INCREASES LINKED DIRECTLY TO CORAL DEATH Does this EIS have any reports on their resort adding to the population increase that happens during IRONMAN? "On average, each Ironman racer brings three people with them to the Big Island. Counting members of the media, VIPs who come from around the globe to watch and the triathletes partners, there likely be more than 6,300 people descending on Kona..." <https://bigislandnow.com/2023/10/07/ironman-2023-in-kona-shines-spotlight-on-some-of-best-women-triathletes-in-the-world/> (https://bigislandnow.com/2023/10/07/ironman-2023-in-kona-shines-spotlight-on-some-of-best-women-triathletes-in-the-world/) And "Resident dissatisfaction with tourists is multifaceted: The overwhelming majority (92%) of locals felt visitors were not educated enough on protecting Hawaii's natural environment and local resources; other factors include the impact of the vacation rental industry and ignorance of the residents' quality of life." <https://www.triathlete.com/culture/news/kona-locals-ask-ironman-visitors-for-respect/> (https://www.triathlete.com/culture/news/kona-locals-ask-ironman-visitors-for-respect/) Where are the EIS reports on human density? Below are reports that show human population destroys coral reefs. "The number of people living on the coasts has rapidly increased in recent decades, causing significant development of coastal areas. Coastal development can negatively impact the ocean through the destruction of coastal marine habitat and through run-off of sediments and pollution. -Coastal

development involves activities such as the creation of harbors, stabilization of shorelines, and aquaculture that involve the destruction of sensitive marine habitats such as mangroves, coral reefs, and seagrass beds. -Coastal development may cause the run-off of sediments into coastal habitats, which can smother corals or seaweeds and reduce the amount of light available for photosynthesis. Losses of primary producers and important habitat-forming species such as corals can negatively impact entire food webs." The above information was taken from the Education Development Center, INC, from their Coastal Development page called Ocean Tracks <https://oceantracks.org/library/human-impacts/coastal-development#:~:text=Coastal%20development%20may%20cause%20the,negatively%20impact%20entire%20food%20webs> (https://oceantracks.org/library/human-impacts/coastal-development#:~:text=Coastal%20development%20may%20cause%20the,negatively%20impact%20entire%20food%20webs,). There is nothing Kamehameha Schools can do to their development that can stop the guests of this possible Bungalow Resort from going to Keahou Bay. Human traffic WILL seriously increase if this resort is allowed to be built and the marine life will be negatively affected by it. Marine life will suffer from this development as stated in this letter in many different scientific reported articles. If you allow this resort the amount of people in this bay will fully increase and, "Hawai'i's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally, management of the resource should balance the needs of different user groups, but the welfare of the marine environment on which its inhabitants depend must be the most important consideration." This was taken from Hawaii's own Division of Aquatic Resources <https://dlnr.hawaii.gov/dar/marine-managed-areas/hawaii-marine-life-conservation-districts/#:~:text=Snorkeling%20and%20SCUBA%20diving%20are,effect%20on%20nearshore%20fish%20populations>. It's Been Proven an Increase in Human Population Destroys Coral Reefs If a Bungalow Resort is allowed to be built in Keahou Bay, it will bring a serious increase in human traffic. "Easily visible trends in human population dynamics combined with well-established and tested ecological theory give a clear, intuitive, yet quantifiable guide to the severity of survival challenges faced by coral reefs. Management challenges and required actions can be clearly shown and, contrary to frequent claims, no scientific ambiguity exists with regard to the serious threat posed to coral reefs by humankind's continued numerical increase." This is in the article by National Library of Medicine National center for Biotechnology Information PubMed. <https://pubmed.ncbi.nlm.nih.gov/33293007/#:~:text=Deniser%20coastal%20populations%20and%20greater,to%20more%20runoff%20and%20siltation> (https://pubmed.ncbi.nlm.nih.gov/33293007/#:~:text=Deniser%20coastal%20populations%20and%20greater,to%20more%20runoff%20and%20siltation). This article is by ABC NEWS, "This is how tourists are destroying coral reefs in Hawaii. The less people at a certain site, the more coral there are, the research found. The millions of tourists who flock to the shores of Hawaii (https://abcnews.go.com/alerts/environment) -- especially the coral reefs, which are at risk all over the world, a new study said. The most popular coral reefs on the Hawaiian islands are likely being degraded by the very visitors they attract, according to a study published Monday in Nature Sustainability (https://www.nature.com/articles/s41893-022-01021-4)." <https://abcnews.go.com/US/hawaiian-coral-reefs-degrading-popular-tourist-sites-scientists/story?id=96308858#:~:text=The%20less%20people%20at%20a,there%20are%2C%20the%20research%20found.&text=The%20millions%20of%20tourists%20who,world%2C%20a%20new%20stud>y%20said. (https://abcnews.go.com/US/hawaiian-coral-reefs-degrading-popular-tourist-sites-

scientists/story?id=96308858#:~:text=The%20less%20people%20at%20a,there%20are%2C%20the%20research%20found.&text=The%20millions%20of%20tourists%20who,write%2C%20a%20new%20stud%20said.) By allowing this development you are stressing an already fragile Eco-system. The small bay is currently used by many locals for boating, fishing, canoeing, paddle boarding, snorkeling, manta night dives, surfing, and swimming. We know, and research shows, that more people cause more damage. The area simply cannot afford or support this development. "Denser coastal populations and greater wealth will lead to reef degradation by coastal construction. Denser populations inland will lead to more runoff and siltation. Effects of human perturbations can be explored with meta-population theory since they translate to increases in patch-mortality and decreases in patch-colonization (= regeneration). All such changes will result in a habitat with overall fewer settled patches, so fewer live reefs." This information was taken from Science

Direct <https://www.sciencedirect.com/science/article/abs/pii/S0065288120300328#:~:text=Aquacultur%20will%20alleviate%20some%20fishing,to%20more%20runoff%20and%20siltation> (<https://www.sciencedirect.com/science/article/abs/pii/S0065288120300328#:~:text=Aquaculture%20will%20alleviate%20some%20fishing,to%20more%20runoff%20and%20siltation>). Another article by Nature Sustainability, "Coral reefs and coastal tourism in Hawaii Coral reefs are popular for their vibrant biodiversity. By combining web-scraped Instagram data from tourists and high-resolution live coral cover maps in Hawaii, we find that, regionally, coral reefs both attract and suffer from coastal tourism. Higher live coral cover attracts reef visitors, but that visitation contributes to subsequent reef degradation. Such feedback loops threaten the highest quality reefs, highlighting both their economic value and the need for effective conservation management." <https://www.nature.com/articles/s41893-022-01021-4>

There are many big housing developments currently under construction in Kailua Kona, Waikoloa Village, Hilo, Puna, Ocean View and Volcano. The entire Big Island has construction projects already in progress. Has Kamehameha Schools EIS done any kind of reports or surveys to know if Big Island has the Resources and Infrastructures for their resort development? "Hotel waste management refers to all the practices and processes that hotels implement to handle and dispose of the multiple types of waste generated on their premises. Worldwide, hotels produce almost 300,000 tonnes of waste ([https://www.emerald.com/insight/content/doi/10.1108/TRC-04-2022-0010/full/html#:~:year="](https://www.emerald.com/insight/content/doi/10.1108/TRC-04-2022-0010/full/html#:~:year=) <https://www.homebiogas.com/blog/hotels-waste-management/>).

and Infrastructure are having serious negative issues and many more developments that have been approved are not even completed as of yet, which means our island's resources and infrastructure will be taxed even more severely in the near future. Please read the below articles that prove Big Island does not have the resources or infrastructure for a 143-Unit Bungalow Resort Development at Keauhou Bay. On Hawaii Island, we are already struggling to meet the increasing need for resources and infrastructure. Big Island Now poll No. 27 results: More than one solution needed to help extend life of West Hawaii Island, September 17, 2023. The West Hawaii Sanitary Landfill, the only remaining landfill on the Big Island, is forecast to reach capacity within the next 20 to 25 years. The West Hawaii landfill

became the island's only one after the Hilo Landfill closed three years ago. It only has about 20 to 25 years left before it can no longer be used to store rubbish. <https://bigislandnow.com/2023/09/17/big-island-now-poll-no-27-results-more-than-one-solution-needed-to-help-extend-life-of-west-hawaii-landfill/> (<https://bigislandnow.com/2023/09/17/big-island-now-poll-no-27-results-more-than-one-solution-needed-to-help-extend-life-of-west-hawaii-landfill/>) A County commission drafts ordinance aiming to ban recyclables at West Hawaii Island landfill By Megan Moseley (<https://bigislandnow.com/2023/09/06/new-draft-ordinance-aims-to-ban-recyclables-at-west-hawaii-landfill/#author>)

September 6, 2023 Hawaii County's Environmental Management Commission is developing an ordinance that aims to prohibit the amount of recyclable materials ending up in the island's only working landfill. During a commission meeting on July 26, Ramzi Mansour, Hawaii County Director of Environmental Management, told commissioners the West Hawaii Sanitary Landfill only has 20 to 25 years left before it reaches capacity. With the Hilo Landfill permanently closed in 2020, the clock is ticking for the island's sole dump. Commission chairperson Georjean Adams said it's a good time to start looking into solutions. Adams said the proposed ordinance is in its early stages and is more about getting the conversation started about how to prevent unnecessary, or recyclable items — green waste, metals, plastics, paper, paperboard and glass — from ending up in the rubbish dump, located off Queen Ka'ahumanu Highway in Waikōloa. "Trying to site a new landfill is close to impossible," Adams said. "So what are we going to do? So I was looking around, and the commission agreed, to look deeply into the idea of diverting the recyclables out and at least slow the filling up of the landfill." The proposed ordinance refers to the 2019 Integrated Solid Waste Management Plan that commits the county to "divert, as much as feasible, commercial and municipal solid waste, including but not limited to green waste, metals, plastics, paper, paperboard, and glass to help achieve goals related to climate resiliency, renewable energy, sustainable agriculture, and zero waste." <https://bigislandnow.com/2023/09/06/new-draft-ordinance-aims-to-ban-recyclables-at-west-hawaii-landfill/> (<https://bigislandnow.com/2023/09/06/new-draft-ordinance-aims-to-ban-recyclables-at-west-hawaii-landfill/>)

Time's Up For Landfills' Gentle' demolition strategies can help preserve resources PAULA BENDER April 2, 2024 As Hawaii's government officials grapple with the challenge of limited landfill space statewide, federal restrictions set in place by the Environmental Protection Agency are ruling out possible locations that were once considered for new landfills. Hawaii Act 73 states landfills must be located at least half a mile from residential areas; are prohibited from being located in areas with heavy rain and steep slopes, as well as agricultural and/or conservation lands; above aquifers; 300 feet beyond streams; and 1,000 feet beyond the ocean. New landfills are also now prohibited from being created in tsunami inundation zones, 100-year flood zones and wetlands. There are also concerns that landfills near airports will attract birds, resulting in damage to aircraft and fatalities among pilots and passengers. The City & County of Honolulu is in the process of identifying its next landfill and it doesn't want one any bigger or more active than absolutely necessary. <https://buildingindustryhawaii.com/2024/04/times-up-for-landfills/> (<https://buildingindustryhawaii.com/2024/04/times-up-for-landfills/>)

On Hawaii Island Prompt Water Supply Message by Big Island Video News on Oct 5, 2023 at 3:59 pm (BIVN) – With moderate to severe drought conditions being reported across Hawaii Island, local water department officials issued a statement this week on the need for customers to use drinking water wisely. Most of Hawaii Island is under "Moderate Drought" conditions, according to the latest information from the U. S. Drought Monitor (<https://droughtmonitor.unl.edu/CurrentMap/StateDroughtMonitor.aspx?HI>). There is an area under "Abnormally Dry" conditions in South Kona, however there are other, small pockets on the Big Island that are under "Severe Drought". There is even a small spot of "Extreme Drought" in the South Point area of Ka'u. "The National Weather Service's forecast calls for the existing drought conditions to expand over the entire island and intensify over the upcoming months due to the ongoing El Niño event," reported the Hawaii County Department of Water Supply. "Peak dryness is expected to occur from around January

[hawaii-island-in-march/](#)) The traffic on Big Island has increased drastically and safety issues and infrastructure needs to be addressed before adding more resort developments. Please read this article because what it says about Oahu is a mirror for Big Island. The traffic problems they discuss are the same issues here on Big Island; and it also gives one Big Island example, "On the Big Island, the mayor had to issue an emergency order (<https://www.civilbeat.org/2022/03/the-big-island-mayors-decision-to-close-waipio-valley-road-frankles-residents/>) shutting down Waipio Valley Road due to overuse and poor prior maintenance." This is happening all over Big Island. <https://www.civilbeat.org/2024/02/angry-over-island-traffic-jams-tets-talk-about-solutions/> (<https://www.civilbeat.org/2024/02/angry-over-island-traffic-jams-tets-talk-about-solutions/>) The news video below shows aerial footage in Hilo. The footage shown is the same thing that is happening on Alii Drive and Queen K Highway, and for all the same reasons: All of these roads only have two lanes! There are two developments already on Alii Drive being built as of today; and more are scheduled for this road in the near future. Alii Drive and Queen K Highway are the roads Kamehameha Schools Bungalow Resort will be using if approved, and they are already seriously congested. These roads have the exact same traffic congestion as Hilo, with the exact same problems. Traffic is extremely slow because of so many people who now live here and all the visitors that come yearly. In addition, the concern on Kona side is tsunami evacuations rather than lava evacuations. In this kind of traffic, not everyone will be able to get to safer ground, especially if you allow another resort to be developed in this area when traffic is already at a crawl every weekday and often on weekends as well. Here is the news article by KITV NEWS that highlights the traffic issues discussed above: "Hawaii Island traffic jams could have safety impact. In the event of an evacuation, Mayor Mitch Roth acknowledges that will make the Traffic Jam up even worse. But says, he is working with The State on a solution." [https://www.kitv.com/news/local/hawaii-island-traffic-jams-could-have-safety-8313ef8c4c19.html](https://www.kitv.com/news/local/hawaii-island-traffic-jams-could-have-safety-impact/article_b06a5374-5a6a-11ed-8423-8313ef8c4c19.html) ([https://www.kitv.com/news/local/hawaii-island-traffic-jams-could-have-safety-8313ef8c4c19.html](https://www.kitv.com/news/local/hawaii-island-traffic-jams-could-have-safety-impact/article_b06a5374-5a6a-11ed-8423-8313ef8c4c19.html)) There was a crash recently on Alii Drive (see video below). When there is an accident on Alii Drive, it turns the already small two-lane road into only one lane that requires a flagger to help direct traffic. Kamehameha Schools wants to add a resort on this tiny road that will increase the traffic by hundreds of cars. Here is the Island News video on the crash on Alii Dr. <https://www.youtube.com/watch?v=FQSSnPdJi8> (<https://www.youtube.com/watch?v=FQSSnPdJi8>) Please see from these articles that traffic on Big Island is deadly already and adding another resort will be devastating to the island. Read this Path article, HAWAII! COUNTY'S VISION ZERO INITIATIVE: A motorcyclist is in critical condition after a collision with a car. A driver accidentally hits and kills a pedestrian. It seems that not a day goes by without the news reporting on a traffic crash on Hawaii Island... Here are some other statistics that are even more staggering: -28% of road-side crashes were the result of someone leaving the roadway and going into barriers or trees -13% of pedestrians hit at 20 mph actually suffer fatality -73% of pedestrians hit at 40 mph suffer fatality -25% of fatal crashes were the result of distracted driving... So PLEASE put those cell phones away and pay attention to the road! -56% of fatal crashes were the result of alcohol or drugs -41% of fatal crashes occurred in light trucks and vans -49% of crashes occur during the day, outside of peak traffic hours -Of all the crash fatalities, most were males between 20 to 24-years old. "That's just Big Island traffic," is a common sentiment. But what if we didn't have to accept this endangerment of vehicle drivers, motorcyclists, and pedestrians as a way of life? This was taken from Path <https://pathhawaii.org/hawaii-countys-vision-zero-initiative/> (<https://pathhawaii.org/hawaii-countys-vision-zero-initiative/>) MORE ARTICLES HIGHLIGHTING INFRASTRUCTURE AND RESOURCE DEFICITS, INCLUDING WATER, TRASH, ELECTRIC AND WASTEWATER: 1) Hawaii Deals with Burgeoning Waste Management Problem As Landfills Face Closure and Waste-to-Energy Projects Stall, various counties in Hawaii are dealing with waste management issues. Waste360 Staff January 10, 2020 "Hawaii Island is in the enviable position of having a landfill with anywhere from 20 to 100 years of capacity left to

take in trash. But the island still wrestles with significant issues like plastic products that are no longer being recycled." <https://www.waste360.com/landfill/hawaii-deals-with-burgeoning-waste-management-problem> (<https://www.waste360.com/landfill/hawaii-deals-with-burgeoning-waste-management-problem>) 2) "Big Island Now readers seem to agree that there's likely no single solution for slowing down the timeline of the West Hawaii'i Sanitary Landfill reaching capacity. The West Hawaii'i Sanitary Landfill, the only remaining landfill on the Big Island, is forecast to reach capacity within the next 20 to 25 years." <https://bigislandnow.com/2023/09/17/big-island-now-poll-no-27-results-more-than-one-solution-needed-to-help-extend-life-of-west-hawaii-landfill> (<https://bigislandnow.com/2023/09/17/big-island-now-poll-no-27-results-more-than-one-solution-needed-to-help-extend-life-of-west-hawaii-landfill>) 3) Hawaii Island Has Decades of Landfill Space But Still Faces Challenges In Dealing With Its Waste Hawaii'i Public Radio Published January 9, 2020 at 5:00 AM HST "Hawaii Island is in the enviable position of having a landfill with anywhere from 20 to 100 years of capacity left to take in trash. But the island still wrestles with significant issues like plastic products that are no longer being recycled. For the past four decades, trash from the East side of Hawaii Island has been dumped in a landfill outside of Hilo. But now trash from all parts of the island is being trucked to a facility north of Kona." <https://www.hawaiipublicradio.org/local-news/2020-01-09/hawaii-island-has-decades-of-landfill-space-but-still-faces-challenges-in-dealing-with-its-waste> (<https://www.hawaiipublicradio.org/local-news/2020-01-09/hawaii-island-has-decades-of-landfill-space-but-still-faces-challenges-in-dealing-with-its-waste>) 4) "What happens to Hawaii Island's trash and recyclables? BY MICHELLE BRODER VANDYKE HAWAII ISLAND PUBLISHED 11:30 AM ET DEC. 17, 2022 By Michelle Broder Vandyke Hawaii Island PUBLISHED 11:30 AM ET Dec. 17 The future of the landfill The West Hawaii Landfill will be full in about 20 years. Finding a location for the next landfill is a concern, according to the DEM officials. They said it will be challenging to find a location for a future landfill because of stringent regulations and costs related to planning, environmental regulations, design and construction that will take many years to complete. It will also require community support." <https://spectrlocalnews.com/hi/hawaii/news/2022/12/15/what-happens-to-hawaii-island-to-hawaii-island-s-trash-and-recyclables-3> (<https://spectrlocalnews.com/hi/hawaii/news/2022/12/15/what-happens-to-hawaii-island-to-hawaii-island-s-trash-and-recyclables-3>) 5) "The overwhelming plastic waste Hawaii visitors leave behind By Natasha Bourlin Aug 24, 2023 Hawaii saw more than 9 million visitors last year. Those tourists' first stops are often big-box and convenience stores, where they buy bottled water, plastic sand toys, single-use bodyboards, noodles, floaties and inner tubes for their trips." <https://www.sfgate.com/hawaii/article/plastic-waste-hawaii-visitors-leave-behind-18286076.php> (<https://www.sfgate.com/hawaii/article/plastic-waste-hawaii-visitors-leave-behind-18286076.php>) 6) "A County commission drafts ordinance aiming to ban recyclables at West Hawaii'i landfill By Megan Moseley September 6, 2023 · 1:00 AM HST \* Updated September 6, 2023 · 2:02 PM Hawaii'i County's Environmental Management Commission is developing an ordinance that aims to prohibit the amount of recyclable materials ending up in the island's only working landfill." <https://bigislandnow.com/2023/09/06/new-draft-ordinance-aims-to-ban-recyclables-at-west-hawaii-landfill> (<https://bigislandnow.com/2023/09/06/new-draft-ordinance-aims-to-ban-recyclables-at-west-hawaii-landfill>) 7) "Hawaii'i County issues mandatory 25% water restriction for North Kona August 7, 2023 · 5:21 PM HST A mandatory 25% water restriction has been issued for various communities in North Kona due to the failure of the Honokōhau Deepwell over the weekend." <https://bigislandnow.com/2023/08/07/hawaii-county-issues-mandatory-25-water-restriction-for-north-kona/> (<https://bigislandnow.com/2023/08/07/hawaii-county-issues-mandatory-25-water-restriction-for-north-kona/>) 8) "Hawaii'i Water Supply Closely Monitored As Severe Drought Continues by Big Island Video Newson Nov 6, 2023 at 3:28 pm STORY SUMMARY HAWAII! COUNTY - Officials say a special focus will be placed on the South Kohala Water System, which is more susceptible to drought conditions." <https://www.bigislandvideonews.com/2023/11/06/water-supply>

Hawaii, one of the most important sayings is *ola i ka wai*, "water is life" — a phrase that not only sums up what it means to exist on an island, but what it means to live, period. But now, one of the largest of the island chain's land masses is facing a triple threat to its sole freshwater source, and if it isn't addressed soon, one community member says, "We're in deep trouble." <https://www.cbsnews.com/news/hawaii-water-crisis-climate-change/> (https://www.cbsnews.com/news/hawaii-water-crisis-climate-change/)

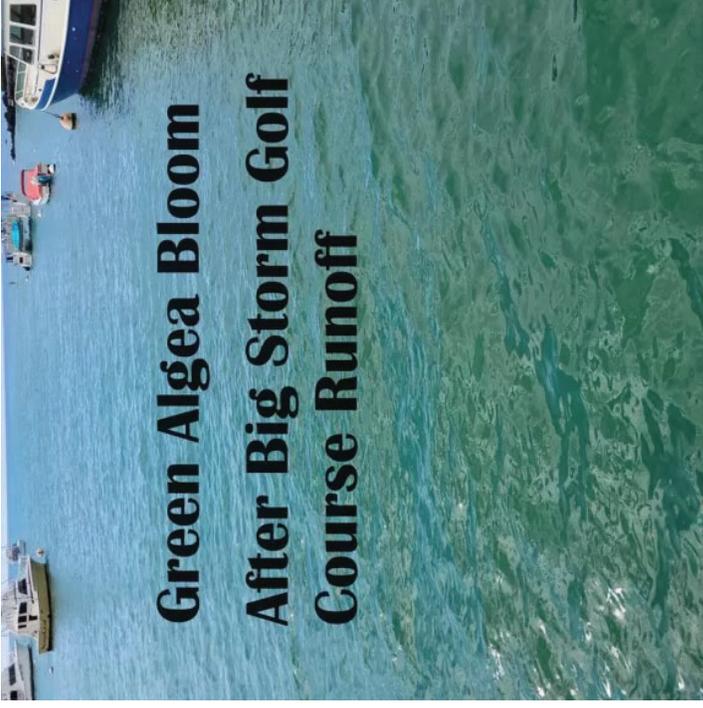

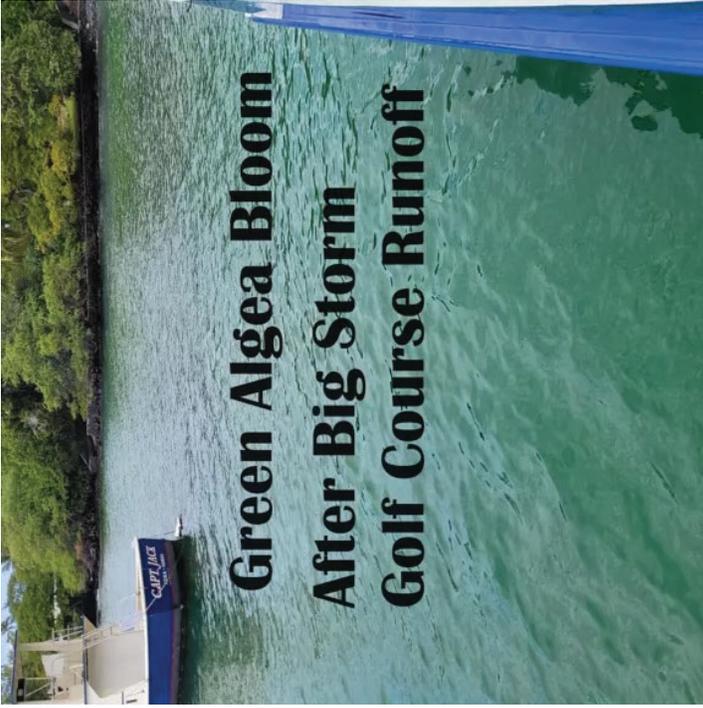

17) News Hawaii County issues mandatory 25% water restriction for North Kona August 7, 2023 - 5:21 PM HSA mandatory 25% water restriction has been issued for various communities in North Kona due to the failure of the Honokohau Deepwell over the weekend. <https://bigislandnow.com/2023/08/07/hawaii-county-issues-mandatory-25-water-restriction-for-north-kona/> (https://bigislandnow.com/2023/08/07/hawaii-county-issues-mandatory-25-water-restriction-for-north-kona/) 18) Hawaii Water Supply Closely Monitored As Severe Drought Continues by Big Island Video News on Nov 6, 2023 at 3:28 pm (BIVN) – With an ongoing drought on the island of Hawaii, the Hawaii County Department of Water Supply says it is closely monitoring its 23 public water systems, with a "special focus" placed on the South Kohala Water System. <https://www.bigislandvideonews.com/2023/11/06/water-supply-closely-monitored-as-hawaii-ca%BBi-under-severe-drought/> (https://www.bigislandvideonews.com/2023/11/06/water-supply-closely-monitored-as-hawaii-ca%BBi-under-severe-drought/) This is a map of Power Outages on the Big Island. This map wouldn't have been created if Power Outages were not a problem. <https://www.hawaiianelectric.com/safety-and-outages/power-outages/hawaii-island-outage-map> (https://www.hawaiianelectric.com/safety-and-outages/power-outages/hawaii-island-outage-map) Please, give Tax Breaks to all homes that provide solar and/or wind turbine to there homes to help with power issues on the island. 19) "Hawaiian Electric is reporting that several large generators on the Big Island are experiencing a range of issues and may lead to the need for rolling outages if supply does not meet demand." [https://www.reddit.com/r/Bigisland/comments/1bnuar3/hawaiian\\_electric\\_is\\_reporting\\_that\\_several\\_large\\_generators/](https://www.reddit.com/r/Bigisland/comments/1bnuar3/hawaiian_electric_is_reporting_that_several_large_generators/) (https://www.reddit.com/r/Bigisland/comments/1bnuar3/hawaiian\_electric\_is\_reporting\_that\_several\_large\_generators/) 20) "Hawaiian Electric asking Big Island customers to conserve power due to down generators March 25, 2024 - 11:49 AM HST According to the utility company, this is an usual situation as the large generators are experiencing mechanical problems resulting in a reduced output. The largest generator, an independent power producer that sells electricity to Hawaiian Electric, is offline with significant mechanical issues. The plant generates 60 megawatts or nearly one-third of the typical peak demand of 180 megawatts on the island." <https://bigislandnow.com/2024/03/25/hawaiian-electric-asking-big-island-customers-to-conserve-power-due-to-down-generators/> (https://bigislandnow.com/2024/03/25/hawaiian-electric-asking-big-island-customers-to-conserve-power-due-to-down-generators/) All the articles above show that a resort development will further deplete and stress resources and infrastructure on an island already struggling. There are years of new development that have already been approved but not completed. It is not responsible or prudent to continue to develop this resort under these current conditions. HISTORICAL AND CULTURAL SIGNIFICANCE: The Law of the Splintered Paddle Hawaiian history tells us that young Kamehameha was once an aggressive chief. The story goes that the young chief even chased after two fishermen in a Puna fishing village. While pursuing them, his foot got stuck in a crevice, and one of the fishermen struck Kamehameha over the head with his paddle in defense, which splintered into pieces. After the incident, Kamehameha recognized that it was wrong to misuse his power and learned compassion. Years later, Kamehameha declared a new law "Ke Kānāwai Māmalahoe" or "the Law of the Splintered Paddle." Meant to protect the innocent and vulnerable from unprovoked attacks, this law proclaimed that the defenseless, especially kupuna and keiki, be able to sleep safely on the side of the road, unharmed. The law provided for the safety of non-warriors during wartime and became the first written law of the

But what does the power grid have to do with the water supply? It is impossible to separate Hawaii's power system from its water system, said Kawika Uyebara, deputy director of Hawaii County's Department of Water Supply." <https://www.hawaiipublicradio.org/local-news/2024-02-13/residents-on-hawaii-island-and-oahu-are-asked-to-conserve-water-amid-power-outages> (https://www.hawaiipublicradio.org/local-news/2024-02-13/residents-on-hawaii-island-and-oahu-are-asked-to-conserve-water-amid-power-outages) 16) US Hawaii is "on the verge of a greater catastrophe," locals say, as water crisis continues By Li Cohen Updated on: April 11, 2024 / 8:23 AM EDT / CBS News In

Kingdom of Hawai'i. After being added back in 1978, the law is part of Hawai'i's State Constitution today. It is symbolic of servant leadership, reinforcing the importance of -Caring for and serving one's people - Knowing and doing what is pono (right) -Standing for the principle that leadership privilege is earned - Taking kuleana (responsibility) for those we serve -Doing so with compassion, love, and respect "We take that to mean that anyone who uses our roadways should be able to do so without fear of harm," explains Tina." The Law of the Splintered Paddle is also on Kamehameha Schools website. The historical value of this law should be enough to help make Big Island roads become safer, and not adding to the traffic and issues of our already dangerous roads. <https://www.ksbe.edu/article/the-lessons-of-the-law-of-the-splintered-paddle-ring-true-200-years-after-k> (<https://www.ksbe.edu/article/the-lessons-of-the-law-of-the-splintered-paddle-ring-true-200-years-after-k>) Does this EIS have any reports about how this development will safely add to the land fill on Big Island, and are there reports proving the island has enough water for another big resort, what about reports on how much power this resort will use because the Big Island already has serious resource and infrastructure issues. IN CONCLUSION The articles cited in this letter, many by some of the most esteemed scientists in the world, show with clarity that allowing this development is going to cause devastating, lasting, effects on the Eco-system in Keauhou Bay and "The Endangered Species Act of 1973 (ESA or "The Act"; 16 U.S.C. § 1531 et seq. ([https://en.wikipedia.org/wiki/Et\\_seq.](https://en.wikipedia.org/wiki/Et_seq.))) is the primary law in the United States for protecting and conserving imperiled species . Designed to protect critically imperiled species from extinction (<https://en.wikipedia.org/wiki/Extinction>) as a "consequence of economic growth and development untempered by adequate concern and conservation", the ESA was signed into law by President Richard Nixon ([https://en.wikipedia.org/wiki/Presidency\\_of\\_Richard\\_Nixon#Environmental\\_policy](https://en.wikipedia.org/wiki/Presidency_of_Richard_Nixon#Environmental_policy)) on December 28, 1973. The Supreme Court of the United States ([https://en.wikipedia.org/wiki/Supreme\\_Court\\_of\\_the\\_United\\_States](https://en.wikipedia.org/wiki/Supreme_Court_of_the_United_States)) described it as "the most comprehensive legislation for the preservation of endangered species enacted by any nation". [1]" ([https://en.wikipedia.org/wiki/Endangered\\_Species\\_Act\\_of\\_1973#cite\\_note-0](https://en.wikipedia.org/wiki/Endangered_Species_Act_of_1973#cite_note-0))

1) [https://en.wikipedia.org/wiki/Endangered\\_Species\\_Act\\_of\\_1973](https://en.wikipedia.org/wiki/Endangered_Species_Act_of_1973) This location, currently acting as a natural filter, is especially vulnerable due to having a golf course on one side and a natural treasure like Keauhou Bay on the other. This land MUST be conserved in order to keep Keauhou Bay safe for all the marine life to be able to live there for years to come. In addition to the natural disaster this will cause, Hawai'i Island is already having serious infrastructure and resource issues that have yet to be solved. These issues MUST be solved before considering another resort development on Big Island. We need to work in harmony with the land and the people before pushing forward with new developments, especially in sacred and special places like Keauhou Bay, the birthplace of King Kamehameha III. Keauhou Bay is a small, fragile Eco-system, that is already pressured by boating, golfing, population issues, and hotels that are all around the entire bay. The trees that currently stand on the land that is threatened to be developed clearly protects the marine life and environment from further damage. The location is NOT suitable for this kind of development for both environmental and infrastructure reasons. The cost of what stands to be lost is far too high to allow this to happen. Please save Keauhou Bay's marine life and help the island's resources by saying NO to a Bungalow Resort built by Kamehameha Schools.

This Kind of Runoff Pollution

**WILL Happen More OFTEN  
With Development.**

Swimming Green Sea Turtle

**Subject:** Kamehameha Schools EIS Draft For Keauhou Bay WILL HAVE NEGATIVE IMPACT!  
**Categories:** Yellow Category

**Subject:** Kamehameha Schools EIS Draft For Keauhou Bay WILL HAVE NEGATIVE IMPACT!

To whom it may concern,

Please, reject Kamehameha Schools' EIS for Keauhou Bay to become a Bungalow Resort. This is a VERY small Bay and the added footprint of a 105 room Resort, which will include excess traffic, will have a **serious negative impact** in Keauhou Bay.

Please, Do NOT risk polluting the water in Keauhou Bay by allowing Kamehameha Schools to develop their bungalow resort project. Research has shown that developments pollute nearby waters constantly during development and after development.

Developments have ALWAYS polluted the water in every near-coastal development area. An article entitled, "What is the biggest source of pollution in the ocean?" by NOAA, National Oceanic and Atmospheric Administration, states, "When large tracts of land are plowed, the exposed soil can erode during rainstorms. Much of this runoff flows to the sea, carrying with it agricultural fertilizers and pesticides." It also states, "Eighty percent of pollution to the marine environment comes from the land. One of the biggest sources is called, nonpoint source pollution, which occurs as a result of runoff."

The trees, you want to take down, keep the runoff pollution from the golf course from going into the Bay. According to the National Library of Medicine, in their article, "Putting the Earth in Play: Environmental Awareness and Sports," shares that the golf industry uses **approximately 50 pesticide active ingredients**, including chlorpyrifos—an insecticide that is banned for residential use by the EPA due to developmental hazards. This pollution and more are **being held off** from running into the Bay by the very trees you want to take down.

Let's not forget the marine life that will be threatened by excess pollution and traffic. Keauhou Bay is the monk seal's and the green sea turtle's habitat. More pollution and people will endanger these species.

This Bay is worth protecting. Please, do not put a resort in such a small area. Future generations will be deprived of what it currently is, and it could never be replaced.

Kind Regards,

JOANNA WEBER

Aloha e Joanna,

Thank you for your comments concerning the Keauhou Bay Management Plan, Draft Environmental Impact Statement. Your comments have been received and administratively recorded.

Comments received during the 45-day public comment period will be reproduced in the Final Environmental Impact Statement, and substantive comments addressed.

The County of Hawai'i and our planning consultant, G70, are copied here on this email so that they receive a copy of your feedback.

We appreciate your involvement and contribution to the environmental review process. Your input is invaluable in helping us develop a management plan that reflects the needs and concerns of our community.

Thank you once again for your engagement and commitment to the future of Keauhou Bay.

Mahalo,

The Keauhou Bay Project Team

Re: Kamehameha Schools, Keauhou Bay Management Plan Draft Environmental Impact Statement

To County of Hawaii, Planning Department,

I am submitting these comments to the Kamehameha School, Keauhou Bay Management Plan Draft Environmental Impact Statement (the "Project"). As an initial matter, I have over 30 years experience as an environmental hydrogeologist including extensive work on environmental impact assessments including impact of contaminants and sedimentation of water bodies. I have previously rented a house located on the bay and visited the bay numerous times such that my comments include personal observations. The focus of my comments is on the substantial lack of the necessary foundational studies upon which to base an assessment of the Project impact. My comments are as follows:

**A. Background Expertise**

Currently, I am President of LEA Environmental, Inc., an environmental hydrogeology and remediation company. I have over 30 years of experience in environmental science, hydrogeology and surface water, groundwater and soil contamination.

During the course of my career, I have evaluated groundwater and surface water quality at more than 200 sites around the country. My professional work experience includes conducting site investigations to define the causes, nature and extent of contamination, groundwater and surface water modeling, conducting contaminant fate and transport studies, evaluating pathways for human exposure and assessing remediation strategies. My technical expertise includes the evaluation of fate and transport of chemicals of concern in multiple phases in the environment.

I am a Professional Geologist (CA PG #7212), licensed by the California Board for Professional Engineers, Surveyors and Geologists. I earned a PhD in Geological Sciences from the University of Washington in 1990. I earned a Master's of Science Degree in Geological Sciences from the University of Washington in 1986. I earned a Bachelor's Degree in Earth Sciences from Dartmouth College in 1981.

I am a member of the Editorial Board of the journal, Environmental Forensics, a quarterly peer-reviewed scientific journal of national and international circulation. In this role, I evaluate the work of others through peer-review of manuscripts submitted for publication to the journal. I also participate in publication decisions, as well as establishing and maintaining the editorial direction of the journal. I was appointed by the State of California Department of Toxic Substances Control ("DTSC") and South Coast Air Quality Management District ("AQMD") to serve as the Technical Advisor to the Exide Community Advisory Group. In this capacity, I serve as technical liaison between community stakeholders and state regulators for the Exide Residential Cleanup Project involving evaluation and cleanup of up to 10,000 homes impacted by lead emissions from a secondary lead smelter. The Exide residential cleanup is the largest soil remediation project ever undertaken in California. I have provided expert testimony on the Exide case before a legislative hearing at the state capitol in Sacramento. I have

July 19, 2024  
Page 2 of 2

also testified twice before the U.S. House of Representatives' Committee on Natural Resources on environmental matters. My team at LEA and I currently serve as Third Party Monitors for the Exide cleanup. A copy of my resume is provided as an attachment to this letter.

**B. Substantive Comments**

As noted below, my overall conclusion is that the EIS lacks many of the basic foundational studies of existing conditions within the bay necessary to assess the potential impacts of the project and also assess potential mitigation measures. In particular, studies are needed of the existing sediments (quality and quantity) within the bay to quantify existing ecological health and credible projections are needed of potential project impacts in order to incorporate appropriate mitigation measures

The Project proposes to remove acres of forest surrounding Keauhou Bay, to construct a resort comprised of 43 homes with 150 bedrooms, build a new road connecting the north and south ends of the bay, build commercial kiosks, construct a cultural center and construct a commercial/retail center on the eastern end of the bay. As you are aware, coral, fish and other flora and fauna can be particularly susceptible to harm from excess sediment, salinity balances, toxic pollutants and nutrient loading in shallow water bodies like Keauhou Bay. In order to determine what the potential ecological impacts to the bay might be there needs to be a baseline study conducted of the existing sediments within the bay to determine the historical sedimentation rate, quantify the existing pollutant and nutrient loads within those sediments, identify the source(s) of sediments/pollutants/nutrients. In turn, this baseline analysis would contribute to the necessary analysis of potential impacts from the Project, including an analysis of mitigation measures, if any, that might be needed to protect sensitive flora and fauna within the bay, including coral communities.

Once the baseline study is conducted the EIS should provide predictions of Project impacts to the bay, including impacts from the removal of the forest, increased hardscape, and increased potential for pollutants and sediment to enter the bay from both construction activities but also new roads and housing. Once the potential impacts are analyzed, mitigation measures should then be assessed and required, if necessary that could minimize the impact on the bay. Without the foregoing analysis, I do not believe the EIS can meet its obligation of determining the magnitude of potential Project impacts on the ecology, nor identify mitigation measures that could bring the impacts down to an acceptable level, if needed.

**C. Conclusion**

The purpose of an EIS is to conduct sufficient research and studies to inform decision-makers and the public of potential Project impacts. This clearly requires an understanding of baseline conditions. In this instance, it does not appear that adequate studies have been conducted of the bay to assess existing conditions nor analyze the potential impacts from the Project so as to both assess potential mitigation measures but also inform the public and regulatory agencies of the Project impacts.

Thank you for considering these comments and concerns.  
Sincerely,

James T. Wells, PG, PhD

### Representative Project Experience

**San Roque Cleanup Fund – Groundwater Remediation, Santa Barbara, CA.** Groundwater and soil vapor monitoring, vapor intrusion mitigation, and in-situ groundwater remediation at a site with comingled plumes from four different dry cleaners. Developed conceptual site model and collected corroborating data to persuade Regional Water Quality Control Board to name additional responsible parties.

**CA Department of Toxic Substances Control (DTSC) – Exide Technical Advisor, Vernon, CA.** Appointed by DTSC and South Coast Air Quality Management District to serve as the Technical Advisor to the Exide Technologies Advisory Group. Has served since 2015 as technical liaison between community stakeholders and state regulators for this project involving evaluation and cleanup of up to 10,000 homes impacted by lead emissions from a secondary lead smelter. In addition to speaking at many community meetings, Dr. Wells provided expert testimony on the Exide case before a legislative hearing at the state capitol in Sacramento.

**Hope Ranch Air Quality Assessment, Santa Barbara, CA.** Tested indoor and outdoor air quality, sampled source area emissions at a unique phenomenon involving spontaneous combustion of organic matter in marine sediments exposed along Santa Barbara's coastal bluffs. Determined the smoldering rocks were emitting problematic levels of benzene and other VOCs which reached nearby homes, constituting a nuisance and a potential health risk.

**Magnolia Elementary School – Litigation Support, El Cajon, CA.** Combined monitoring data and modeling to reconstruct historical groundwater and indoor air impacts at an elementary school adjacent to aerospace parts manufacturer.

**SIMA Corporation – Chlorinated Solvents, Camarillo, CA.** Conducted site characterization, subsurface remediation, regulatory negotiation for PCE in soil, soil vapor and groundwater at this dry cleaner site, with special emphasis on the potential for vapor intrusion into nearby commercial buildings.

**Earthjustice – Evaluation of Neighborhood Lead Impacts, City of Industry, CA.** Worked with the nonprofit environmental law organization, Earthjustice, to identify deficiencies in soil sampling plans and statistical analyses that were

*Applies expertise in geo-chemistry and hydrogeology to solve environmental problems*

Dr. Wells is an environmental geologist with over 30 years of experience in hydrogeology and geochemistry and is a Professional Geologist, licensed by the California Board for Engineers, Land Surveyors and Geologists. Dr. Wells is President of LEA Environmental, Inc., an environmental hydrogeology and remediation company. He earned his PhD in Geological Sciences from the University of Washington in 1990; Masters of Science Degree in Geological Sciences from the University of Washington in 1986; and his Bachelor's Degree in Earth Sciences from Dartmouth College in 1981.

During the course of his career, Dr. Wells has evaluated soil, soil vapor and groundwater at dozens of sites around the country. His professional work experience includes conducting subsurface investigations to define the nature and extent of contamination in soil, soil vapor and groundwater, groundwater modeling, conducting contaminant fate and transport studies, and evaluating remediation strategies. He has extensive experience in groundwater and vadose zone computer modeling, as well as in the statistical analysis of hydrogeological systems. Dr. Wells is regularly asked to serve as an expert witness in environmental lawsuits involving subsurface contamination.

Dr. Wells is a member of the Editorial Board of the journal, Environmental Forensics, a quarterly peer-reviewed scientific journal of national and international circulation. In this role, he evaluates the work of others through peer-review of manuscripts submitted for publication to the journal. He also participates in publication decisions, as well as establishing and maintaining the editorial direction of the journal. He has given technical presentation and guest lectures at scientific conferences and universities and is author and coauthor of numerous scientific publications, including the forensic review articles in Environmental Science & Technology (U.K. Edition) Special Issue dedicated to Environmental Forensics.

In 2015, Dr. Wells was appointed by the State of California Department of Toxic Substances Control and South Coast Air Quality Management District to serve as the Technical Advisor to the Exide Community Advisory Group. In this capacity, he serves as technical liaison between community stakeholders and state regulators for this project involving evaluation and cleanup of up to 10,000 homes impacted by lead emissions from a secondary lead smelter. Dr. Wells has provided expert testimony on the Exide case before a legislative hearing at the state capitol in Sacramento. He has also twice testified before the U.S. House of Representatives Natural Resource Committee on environmental matters.

meant to measure lead impacts due to emissions from the Quemetco Secondary Lead Smelter to soil in surrounding residential neighborhoods.

**Elem Indian Colony – Mercury and Arsenic-Bearing Mine Waste, Clearlake, CA.** Served as independent technical advisor to the Elem Indian Colony regarding remediation plans for the Sulphur Bank Mercury Mine Superfund Site. Provided assistance through EPA's TASC (Technical Assistance Services for Communities) program.

**Humphrey, Farrington & McClain – Radionuclides in West Lake Landfill Superfund Site, St. Louis, MO.** Provided expert opinions on threats to human health and the environment from radioactive waste and other contaminants that had been improperly disposed of in this landfill in the early 1970s. The material consisted of uranium-ore-processing residues that had been generated in St. Louis as part of the Manhattan Project in the 1940s.

**Reedley Remediation Trust – Chlorinated Solvents, Reedley, CA.** Provided site characterization and remediation planning advice for this contaminated groundwater plume. Also advised on the formation of a remediation trust to insure adequate resources for a long-term cleanup program.

**Isola Law Group – Rialto-Colton Superfund Site, San Bernardino County, CA.** Provided litigation support in complex, multi-party lawsuit concerning cost allocation, contaminant fate and transport and remediation technologies for large (5-mile long) perchlorate and TCE groundwater plume.

**San Carlos Apache Tribe – Technical Advice on Proposed Copper Mine, Superior, AZ.** Advised the Tribe on environmental aspects of large proposed copper mine project which the Tribe opposed. This work involved meetings and negotiations with mining company and officials of the US Forest Service regarding intergovernmental consultations and the EIS process, expert testimony in an administrative hearing, presentations at Tribal Council meetings, meetings in Washington DC with Council on Environmental Quality, EPA, USDA and Congressional staff. Testified before the U.S. House of Representatives Committee on Natural Resources.

**KB Gardena – Litigation Support & Subsurface Remediation, Gardena, CA.** Provided attorneys with technical advice and assistance with cost allocation strategy for multi-million dollar case with multiple PRPs. Conducted site remediation under existing warehouse for PCE, metals and other VOCs.

**Pacific Gas & Electric Company – Forensic Geochemistry, Chico, CA.** Analyzed high-resolution petroleum hydrocarbon data, including PIANO analysis, relative solubility and hydrocarbon weathering assessments to evaluate the theory that contamination discovered on client's property originated from off-site sources and was not due to on-site releases. PIANO analysis is a forensic technique for complex hydrocarbon mixtures using gas chromatography to speculate individual hydrocarbon compounds and group the compounds into their molecular classifications: paraffins (P), isoparaffins (I), aromatics (A), naphthalenes (N) and olefins (O).

LEA

**Rand Family Trust – Petroleum Hydrocarbons, Santa Barbara, CA.** Conducted site characterization and site remediation for a commercial site in Santa Barbara, California that was impacted with legacy contamination from a sawmill operation from the late 1800's. Achieved closure of this case from the local regulatory agency.

**U.S. EPA – Del Amo and Montrose Superfund Sites, Los Angeles County, CA.** Provided independent technical analysis and advice to community group affected by two adjacent Superfund sites. Analysis of potential exposure scenarios and efficacy of remediation plans from PCBs, metals and VOCs from Superfund sites in Los Angeles under EPA's TASC program (Technical Assistance Services for Communities).

**Terracon, Inc. – Groundwater Modeling and Litigation Support, Weld County, CO.** Complex construction defect case involving claims of \$60 million in damage allegedly due to soil expansion caused by rising groundwater from irrigation of nearby golf course and residential areas. Opposing experts spent two years and \$2 million on groundwater modeling which was eventually excluded from trial after we demonstrated unreliability and lack of relevance to judge.

**Wagstaff & Cartmell – Chromium in Tannery Waste, St. Joe, MO.** Provided litigation support for case in which tannery waste had been spread as a soil amendment over approximately 56,000 acres of agricultural land. It had been known that the sludge contained elevated levels of metals, including chromium. It was apparently not known that some of the chromium was in the form of toxic Cr(VI) which posed a serious risk to human health and the environment.

**EPA/State of Idaho – Soil Remediation Pilot Study for Metal Stabilization, Coeur d'Alene, ID.** Conducted field pilot study on metal stabilization along the Coeur d'Alene River. The river feeds Lake Coeur d'Alene which is highly-impacted by the cumulative effects of 100 years of mining in the watershed and is the primary source of drinking water for over 50,000 residents of northern Idaho. Work was sponsored by the U.S. Environmental Protection Agency (EPA) and State of Idaho in an effort to find a cost-effective means of addressing widespread soil contamination along a 30 mile stretch of the Coeur d'Alene River.

**Koch Oil – Forensic Geochemistry, Oklahoma.** Conducted forensic geochemical evaluation on naturally-occurring compounds in groundwater to assess whether historical groundwater concentration trends constituted natural background variability or potential releases from client's brine impoundments.

**Tri-County Public Airport – Forensic Geochemistry Herington, KS.** Conducted oxygen, deuterium, chlorofluorocarbon (CFC), carbon isotope analysis of groundwater and chlorinated contaminants in order to evaluate contaminant fate and transport at a former military facility.

**Gonzalez & Robinson – Groundwater Modeling, Santa Rosa, CA.** Used groundwater computer modeling to simulate groundwater flow in a residential region of Sonoma County, California.

LEA

*His area of expertise includes environmental forensics and fate and transport of organic and inorganic contaminants in soil and groundwater*

**Weitz, Luxenberg – Environmental Forensics for Chlorinated Solvents, Grand Island, NE.** Conducted forensic analysis of chlorinated solvent contamination extending in groundwater over two miles under a community. The site involved multiple releases from multiple locations and complex hydrogeology and attenuation histories.

**Kimberly-Clark – Forensic Geochemistry, Ohio.** Conducted forensic geochemical analysis to demonstrate that significant component of groundwater contamination under client's site had migrated from an off-site source. Utilized compound-specific carbon isotope analysis of chlorinated compounds and daughter product abundance. This analysis was complicated by the fact that there were low levels of residual contamination from an old on-site release, which needed to be definitively differentiated from the larger off-site flux of contaminants.

**Western States Petroleum Association – Risk-Based Clean-up Studies.** Conducted a study to develop risk-based clean-up standards for crude-oil-impacted soils, including studies of the comparative environmental risks posed by crude oil, gasoline, and diesel oil in the subsurface. Applied leaking underground fuel tank evaluation methods to crude oil sites and developed cost-effective site assessment strategies.

**Tesoro Petroleum Company – MTBE Groundwater Plume, San Fernando Valley, CA.** Managed a project in Southern California to delineate and clean-up a large release of methyl tert-butyl ether (MTBE) to soil and groundwater. A particular challenge of this project was to account for the presence of multiple high-volume water supply wells near the project site, a situation involving extensive regulatory negotiation with California Regional Water Quality Control Board and Upper Los Angeles River Area Watermaster.

**Gallagher & Kennedy – Perchlorate and Chlorinated Solvents, Santa Clarita, CA.** Provided litigation support for a lawsuit involving a 996-acre brownfield site. The site, used since the 1930s for munitions manufacturing, had soil and groundwater contamination from historic releases of metals, perchlorate and chlorinated solvents. When the local municipality took 13 acres of the property by eminent domain to build a new regional highway, the property owner sued to recoup the cost of the land. The municipality estimated a cleanup cost of \$220 million and, based on this, valued the land at only \$142,000. With colleagues, developed a soil and groundwater remediation plan and cost estimate. Through extensive soil and groundwater data analysis and 3D modeling, we developed an alternative remediation plan that dovetailed with extensive pre-development grading and employed state-of-the-art remediation technologies for perchlorate at a cost \$27 million. A jury accepted the accuracy of our remediation estimate and awarded the owner over \$12 million for land value and severance damages.

**ContiGroup Companies – Groundwater Remediation, Stockton, CA.** Completed subsurface characterization and designed a remediation strategy for this grain elevator site with carbon tetrachloride and other volatile organic

compounds in groundwater. Due to the complex stratigraphy and heterogeneous distribution of contaminant throughout the aquifer, an in-situ chemical treatment strategy was designed for this site coupled with an initial, short-term phase of groundwater extraction to achieve containment of the contaminant plume.

**The Boeing Company – Service Delivery Leader, California.** Served as Service Delivery Leader, responsible for coordinating quality and consistency for a project team located in six offices and providing environmental services simultaneously on up to ten large projects. Also conducted vadose zone computer modeling to evaluate clean-up standards for soil that would be protective of future groundwater quality.

**Northrop-Grumman Corporation – Remediation Planning, Hawthorne, CA.** Provided analysis of environmental data and regulatory requirements for large site with multiple occurrences of contamination in soil and groundwater. Advised client on cost-effective strategies and technologies for resolving environmental impairment.

**Tesoro Petroleum Company – Groundwater Contamination at Refinery, Kenai, AK.** Conducted a feasibility study for containment and remediation of a large plume of free phase petroleum at a refinery in Kenai, Alaska. Migration of the light non-aqueous phase liquid was influenced by complex fluvio-glacial stratigraphy and by fluctuating groundwater levels.

**Exxon Company, U.S.A. – Remediation Planning, Los Angeles, CA.** Developed remediation and regulatory strategies for the closure of a large urban oil field in California consisting of over 500 production sites over four square miles of residential and commercial districts. The proposed strategy was a risk-based approach addressing such factors as cost, schedule, future liability and land use.

**The Boeing Company – Aircraft Manufacturing Site Redevelopment Environmental Program, Long Beach, CA.** Team member for comprehensive subsurface investigation program for 343-acre former manufacturing facility. This complex project involved over 1500 soil borings, web-based data repository, risk-based formulation of clean-up standards, production of data reports specifically designed for use by potential buyers and other stakeholders and close coordination with redevelopment staff.

**Nestlé, U.S.A. – Aquifer Remediation, Palm Desert, CA.** Working with Nestlé technical staff, developed a technical strategy and gained regulatory acceptance of a passive bioremediation approach at an underground storage tank site which contained hydrocarbon contamination in groundwater in a beneficial-use aquifer.

**County of San Luis Obispo Water Supply – Nitrate in Groundwater, Los Osos, CA.** Conducted a study of nitrate contamination in shallow groundwater at Los Osos, California, a community that relies solely on groundwater for its municipal water supply. The study incorporated site-specific data on the transport and transformation of nitrogen in the subsurface to develop a nitrogen mass balance for all significant nitrate sources. This work resulted in quantitative

estimates of the contribution of septic system effluent to nitrate levels in groundwater.

**U.S. Navy – Groundwater Investigations and Remediation Planning, San Diego County, CA.** Managed site investigations, feasibility studies and remediation planning at eight contaminated sites overlying the sole-source aquifer at Camp Pendleton Marine Corps Base.

**Santa Barbara Historical Society – Manufactured Gas Plant Contamination, Santa Barbara, CA.** Provided environmental consulting services, advocacy and participated in negotiations with Southern California Edison (the responsible party) on behalf of Santa Barbara nonprofit organization. This work focused on soil and groundwater investigations, remediation plans and associated risks related to soil and groundwater contamination at a former manufactured gas plant on the nonprofit's property.

**Squoia Voting Systems – Groundwater Investigations, Exeter, CA.** Managed a project involving chlorinated compounds in groundwater and developed strategy to suspend active remediation on the grounds of natural contaminant of the chlorinated plume. Our approach was approved by the state.

**Los Angeles Metropolitan Transportation Authority – Comprehensive Environmental Services.** Project manager for comprehensive hazardous waste assessment contract with the LACMTA. For this project, we provided environmental services in support of land acquisition and construction for a light-rail commuter line in the Los Angeles area.

**State of California – Soil and Groundwater Remediation, Camarillo, CA.** Implemented an air sparging/soil vapor extraction soil and groundwater remediation system for extensive vadose zone and dissolved groundwater petroleum plumes at the future site of a Cal State University campus.

**Various Clients – Geostatistical Programs.** Developed programs for the statistical analysis of groundwater monitoring data for a mining facility, petroleum refinery, wastewater reclamation operation and a municipal waste landfill, all in Central California. Projects involved the implementation of EPA-approved statistical techniques to evaluate the differences between background and downgradient concentrations of groundwater contaminants.

**Subject:** Kamehameha Schools EIS Draft For Keaouhou Bay WILL HAVE NEGATIVE IMPACT!  
**Categories:** Yellow Category

To whom it may concern,

Please reject Kamehameha Schools EIS for Keaouhou Bay to become a Bungalow Resort. This is a VERY small bay and the added footprint of a 105 room Resort, that will include excess traffic, will have a **serious negative impact** in Keaouhou Bay.

Please, Do NOT risk polluting the water in Keaouhou Bay by allowing Kamehameha Schools to develop their bungalow resort project. Research has shown that developments pollute nearby waters constantly during development and after.

Developments have ALWAYS polluted the water in every near coastal development area. An article entitled, "*What is the biggest source of pollution in the ocean?*" by NOAA, *National Oceanic and Atmospheric Administration*, states, "*When large tracts of land are plowed, the exposed soil can erode during rainstorms. Much of this runoff flows to the sea, carrying with it agricultural fertilizers and pesticides.*" It also states, "*Eighty percent of pollution to the marine environment comes from the land. One of the biggest sources is called, nonpoint source pollution, which occurs as a result of runoff.*"

The trees you want to take down keep the runoff pollution from the golf course from going into the Bay. According to the National Library of Medicine, in their article, "*Putting the Earth in Play: Environmental Awareness and Sports*," shares that the golf industry uses [approximately 50 pesticide active ingredients](#), including chlorpyrifos—an insecticide that is banned for residential use by the EPA due to developmental hazards. These pollutions and more are **being held off** from running into the Bay by the very trees you want to take down.

Let's not forget the marine life that will be threatened by excess pollution and traffic. Keaouhou Bay is the monk seals and the green sea turtle's habitat. More pollution and people will endangered these species.

This Bay is worth protecting. Please do not put a resort in such a small area. Future generations will be deprived of what it currently is, and it could never be replaced.

Kind Regards,

Nathalie Westerberg

Rich and I have been residents of the Keaou Kai Condominiums for 10 years and have own our condo since 2014. We have always felt an emotional and spiritual connection to the land surrounding Keaou Bay and respect the cultural significance of the area. I am a member of the Keaou Canoe Club and have learned and enjoyed the paddling culture. This is a very special place to both of us.

**Comments:**

1. In general, we support the KBMP as it relates to the "long-term operations and maintenance of Keaou Bay", the opportunity to support and revitalize cultural events and traditional practices and to "preserve and support a range of passive and active recreational activities (DEIS 2.7 at 2-11).
2. We are concerned about the impact that the development proposed mauka of the Old Kona Road will have with more people/traffic in the area and the infrastructure of the current utilities.
3. And a concern that cannot be addressed in the DEIS is the noise level during construction and rebuilding of the parking lot and Old Kona Road as it is directly across the street from our building and the addition of kiosks for commercial use directly across the street of our building.

**Concerns:**

We are concerned that the DEIS does not adequately address four areas of concern:

1. Storm water runoff, which the DEIS concludes is not an issue because it hasn't been reported to the County.
2. Infrastructure, specifically relating to the existing near shore water and force main sewage lines and the associated electrical and telecommunications lines.
3. The safety and ongoing traditional use of Keaou Bay by Lahui and other residents due to the unregulated increase of motorized vessels using Keaou Bay.
4. How the plan will impact the lifestyle of current residents particularly during the construction.

**Discussion: Comments aligned with the sections and pages of the DEIS**

**4.5 Groundwater, Surface Water, and Drainage:**

The DEIS description of "Storm Water Runoff, Drainage" at DEIS 4-81 does not correspond with my observations of these events. When we have heavy rainfall there is significant unregulated draining on the grounds currently used by Keaou Canoe Club and into Keaou Bay. Runoff onto the grounds is sufficient to wash gravel down from the Old Kona Road onto the KCC grounds. But more significant is the runoff that flows down Kamehameha Road and pools at the end of the cul-de-sac and then overflows into the bay. The mitigation

measures discussed at DEIS 4-86 do not account for this level of runoff, much less its effect on Keaouhou Bay. More mitigation measures should be considered.

#### 4.7 Natural Hazards

4.7.6 Climate Change and Sea Level Rise: The DEIS acknowledges that a significant amount of sea level rise is expected in the project area and plans for up to 4 feet by 2100. "The primary means of mitigation for the KBMP is avoidance." "Potential Impacts and Mitigation Measures" at page 4-109. As discussed below (DEIS 4.12 "Infrastructure and Utilities"), the water and sewer force mains along with telecommunications and electrical lines are in the Ka'ilili/linehe Recreation Corridor at the water's edge, buried behind the long-standing seawall. The KBMP acknowledges that a "select portion" of the Project Area may experience passive flooding caused by sea level rise (SLR). (DEIS 4.16.5 "Adverse Effects that Cannot be Avoided") The DEIS should acknowledge that SLR will affect the Ka'ilili/linehe Recreation Corridor and in particular the water, wastewater, power and telecommunications infrastructure that are now located in the corridor.

#### 4.10 Recreation

The DEIS concludes that: "The Project will not significantly impact the availability of recreation opportunities in the Kona District". This may be true except for the potential of increased motorized small boat and other motorized marine recreation equipment, such as ski-dos and motorized paddle or sail boards on the waters of the bay. Unlike the larger vessels moored in the bay, these Vessels Moored Elsewhere (VME) are often operated by less experienced individuals and can move at high speeds. Both of which pose hazards to those operating without motors in the bay. These include not only outrigger canoe paddlers, but swimmers, snorkelers, scuba divers, fisherman, Honu, Nai 'a and Hahaione.

I have been out on my OC1 and with paddlers from KCC and been surprised by fast moving motorized vessels, some of whom do not observe the "No Wake" zone in the bay.

I realize that the DEIS focuses on the KBMP which is primarily a plan to develop, manage and maintain KSL uplands in the vicinity of Keaouhou Bay, not the waters of the bay itself. Yet some of what is done on the uplands surrounding the bay can affect those who use the waters of the bay. The potential infrastructure issues discussed below are among those. So are the adverse effects of adding 15 more onshore parking spaces to accommodate trailers for VME's. (DEIS 3.2.5 at page 3-78, Table 3.2 at page 3-79 and Fig. 3-64 at page 3-8). Before allowing more parking for VME trailers, the DEIS must examine the potential safety issues arising out of allowing more motorized VME's unlimited access to Keaouhou Bay.

#### 4.12 Infrastructure and Utilities (Figure 4-43 at page 4-139 "Water and Wastewater Infrastructure Map")

4.12.1 Water Supply at page 4-136: The water main that will supply the Project passes through the near shore area. The DEIS acknowledges that this area will be impacted by sea level rise but does not propose any future action. A potable water main break will have minimal effect on the bay but would severely affect all the tenants and users of the bay. This main has broken in the past and our unit was without water for a significant period. This risk might be mitigated by relocating the water main to the Old Kona Road.

4.12.2 Wastewater Treatment and Disposal at page 4-142. A wastewater force main passes through the near shore area. The DEIS acknowledges that this area will be affected by sea level rise but does not propose any future action other than increasing the amount of sewage that will be flowing through this line. A SLR induced wastewater force main break in this area is not "if it happens...but when it happens". It will have a devastating impact on the Bay and will severely affect all the tenants and users of the bay. In the recent past the wastewater force main has been exposed by high surf events. This risk should be mitigated (in fact avoided) by relocating the force main to the Old Kona Road.

4.12.4 Power and Telecommunications on page 4-144. Electrical and Telecommunications lines also pass through the near shore area. The DEIS acknowledges that this area will be affected by sea level rise but does not propose moving these lines. This risk should be mitigated (in fact avoided) by relocating the electrical and telecommunications lines to the Old Kona Road.

#### 4.12.5 Beach Restoration (NEW)

The existing rock seawall between the two shoreline access points is in poor condition and the back side is continually eroded in high surf events. The EIS acknowledges 3.2 ft of sea level rise but does not directly address the problems that will cause at this seawall. If the water, wastewater, power and telecommunications lines that currently pass through the near shore area are relocated to a safer and more resilient location along Old Kona Road then this wall might be removed. The shoreline could then be restored as the beach that existed prior to the wall being built. This would potentially be more resilient and provide increased amenity for bay users. It would be a step toward recovering what Keaouhou Bay used to be for the whole community.

#### 4.16 Probable Impacts and Other Considerations Under 11-2000.1 page 4-176

4.16.1 Cumulative Impacts page 4-176. The potential for increased conflict between motorized and non-motorized use is a cumulative impact that the DEIS should more fully consider before increasing the parking areas for VME.

4.16.5 Adverse Environmental Effects that Cannot be Avoided page 4-180. This section states "Upon completion of the Project environmental accidents are not anticipated, however if an environmental accident is to occur, DOH will be notified immediately." When the wastewater force main breaks it will be too late for DOH to do anything to save the bay. The DEIS has acknowledged 3.2 ft of sea level rise. These are predictable adverse effects that can be avoided by moving wastewater force main further from the shoreline. Reconstruction of the Old Kona Road seems like an ideal and cost-effective time to undertake this important mitigation.

In conclusion Rich and I recognize Kamehameha Schools for the extraordinary thought, effort, and expense the has gone into the DEIS. Although not native to this land, we have always felt a deep spiritual connection to Keaouhou Bay.

Linda Wilkins-Pierce

Please don't do this. It's a beautiful peaceful quiet bay. Let the ancestors lay in peace

Randy Williams

what are the specifics on the launching ramps? Moved, updated, increased to three?

Barry Willis

Don't you dare interfere with the Keauhou Canoe Club! It meets all the criterion for the items you mentioned are important for this project.

**Subject:** KBMP Draft EIS Comments

**Categories:** Yellow Category

In response to the Kamehameha Schools - Keauhou Bay Management Plan--Draft EIS Comment period sent 8/6/2024

Hello,

Please don't destroy the unique combination of history and community that is Keauhou Bay. Please don't turn Keauhou Bay into another tourist area. There are plenty of tourist areas. This Bay is a unique and individual space that supports local livelihoods. It is the first place some children learn to swim or fish. It is the first place others learn to canoe. By creating "Low-impact housing" on the "resort-zoned plateau" there will be an entire destruction of the pristine natural landscape and a down flow of debris into what the plan calls a "culturally sensitive area." Given that there are already viable housing and recreation areas nearby, how can a responsible project address this devastation? By demolishing the current 'ohana of the culture of the Keauhou Bay, this proposal will do a disservice to the entire area. 'Āina should be important for a project that proposes to do so much to "improve the bay." And yet the first goal will be to destroy the beautiful and mature plants and trees living there and displace all the people who currently call Keauhou Bay home away from home.

Please, from the bottom of our hearts, reconsider.

Earth and family are irreplaceable.

The Williams Family

**Subject:** Kamehameha Schools EIS Draft For Keaouhou Bay WILL HAVE NEGATIVE IMPACT

**Categories:** Yellow Category

To Whom It May Concern,

Please read the scientific proof in this letter and REJECT Kamehameha Schools Environment Impact Statement (EIS) for Keaouhou Bay to become a Bungalow Resort.

Please state in your report that a Bungalow Resort WILL have a SERIOUS NEGATIVE IMPACT on Keaouhou Bay as stated in all the different researched articles below.

Please, DO NOT risk polluting the water in Keaouhou Bay by allowing Kamehameha Schools to develop their bungalow resort project. It is **scientifically proven** that developments pollute nearby waters both **during and after development**.

Below are scientific articles written by the National Oceanic and Atmospheric Administration (NOAA), Global Coral Reef Alliance, Hawaii Government, and many other professional organizations, that have studied and shown that developments have **ALWAYS** polluted the water in **EVERY** coastal development area.

Does this EIS (Environmental Impact Statement) have any kind of reports and studies on how the endangered species and marine life will handle the extra pollution due to development, and the golf course runoff? Keaouhou Bay is their habitat and this development **WILL be CHANGING an Entire Ecosystem**.

#### **ENDANGERED SPECIES CONSERVATION IMPACTED BY DEVELOPMENT**

In the Endangered Species Act of 1973 Under Section 2 (b), "To provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved." This would be Keaouhou Bay.

The Green Sea Turtle swims in Keaouhou Bay weekly and the monk seal has also been seen swimming and resting in Keaouhou Bay. Both of these marine animals are on the endangered species list.

#### **Endangered Species Act**

"Section 2. Findings, Purposes, and Policy

(4) the United States has pledged itself as a sovereign state in the international community to conserve to the extent practicable the various species of fish or wildlife and plants facing extinction, pursuant to—

(b) PURPOSES.—The purposes of this Act are to provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved, to provide a program for the conservation of such endangered species and threatened species, and to take such steps as may be appropriate to achieve the purposes of the treaties and conventions set forth in subsection (a) of this section."

This was taken from <https://www.fisheries.noaa.gov/national/endangered-species-conservation/endangered-species-ac>

#### **FEDERALLY PROTECTED GREEN SEA TURTLES WILL BE AFFECTED**

The green sea turtle is federally protected and can be seen in Keaouhou Bay weekly.

The following article states: **"POLLUTED RUNOFF IN HAWAII ENDANGERS GREEN SEA TURTLES"**

#### **Why does Hawaii have a runoff problem?**

Historically, in the tropics of Hawaii, precipitation was absorbed into the soil, according to the Clean Water Branch of Hawaii's Department of Health. Any potential pollution or contaminants on the ground surface would get pushed into the soil by the rain, and plant roots and microbes would help break down the pollution into less dangerous components. However, with urban and agricultural development, less and less of the pollution gets pulled into the soil, and more of it gets washed out into storm drains. From there, the pollutants make their way to streams, rivers and the ocean that surrounds Hawaii. According to the state agency, most of these contaminants are nutrients from fertilizer, bacteria from animal waste, oil, garbage and yard waste...

If polluted runoff reaches the ocean, it can wreak havoc on marine life, including endangered green sea turtles." Taken from <https://www.chemservice.com/news/polluted-runoff-in-hawaii-endangers-green-sea-turtles/>

**Allowing this development WILL POLLUTE Keaouhou Bay.** The above article, written in 2014 (because runoff water from developments were polluting the ocean even then!!) states this fact clearly: Keaouhou Bay is home to countless sea creatures such as the protected green sea turtle, spotted eagle rays, manta rays, octopus, dolphins, fish, coral, monk seals, and more and that will ALL be harmed by the severe pollution runoff that WILL happen **because developments have been shown to ALWAYS pollute the water is that is nearby.**

The Green Sea Turtle is protected by more than one law. "All sea turtles in Hawaii are protected by the Endangered Species Act (ESA) and additionally protected by Hawaii Revised Statutes Chapter 195D (HRS) and Hawaii Administrative Rules (HAR) 13-124." This information was taken from this site <https://dlnr.hawaii.gov/dar/species/sea-turtles/>

## THE ENDANGERED MONK SEAL WILL BE AFFECTED

Keaouhou Bay is known as a RESTING AREA for the ENDANGERED MONK SEAL. If another resort is allowed to be built, in addition to the pollution, it will also bring a lot more people down to Keaouhou Bay. This increases the chances of a resting monk seal being disturbed by humans trying to get close, take "selfie" photos, and being generally uninformed and harmful. Please see article on Selfie Culture and its harmful effects below.

**Has the EIS done any research on what an increased population would do in such a small area, and what will happen to the endangered species that live there? With a significantly increased population their habitat of Keaouhou Bay will likely be changed forever.**

This information is from a NOAA Scientist; **"Study shows selfie culture impacts how people behave when posting images of an endangered species on social media. There's a seal on the beach! Let's go get a 'selfie'!"** That must have been what nearly 18 percent of people on Instagram thought before approaching an endangered species.

In a [recent study](#), NOAA scientists used social media to monitor human activities around endangered [Hawaiian monk seals](#). They discovered that human disturbance is more common than they thought." <https://www.fisheries.noaa.gov/feature-story/endangered-hawaiian-monk-seals-civ-foul-over-selfies>

NOAA clearly states a high population in a place where monk seals and sea turtles habitat can be a serious disturbance for these endangered species.

"Hawaiian monk seals are protected federally by the ESA and the [Marine Mammal Protection Act \(MMPA\)](#), as well as locally by Hawai'i Revised Statutes (HRS) [Chapter 195D](#) and Hawai'i Administrative Rules (HAR) [13-124](#)." This was taken from <https://dlnr.hawaii.gov/dar/hawaiian-monk-seal/>

**Keaouhou Bay is the monk seals and the green sea turtle's habitat.** Allowing a bungalow resort to be developed in Keaouhou Bay, the habitat of these endangered species, is to threaten their life and habitat with golf course runoff pollution, as well as development pollution. **By threatening their habitat, and hence their lives, this development goes completely against the Endangered Species Act of 1973.**

The verbiage in the Endangered Species Act states, "to conserve". In this case, "to conserve" would be to **protect the land around Keaouhou Bay** from developments that destroy the habitat of these endangered species with pollution and runoff.

**Does this EIS have any reports on the endangered species that frequent Keaouhou Bay? This is their habitat and it needs to be "conserved".**

Under the **Conservation Program** there should be research done on endangered species and their associated ecosystems. A large bungalow resort development WILL FOREVER CHANGE THIS ECOSYSTEM.

"§195D-5 Conservation programs. (a) The department shall conduct research on indigenous aquatic life, wildlife, and land plants, and on endangered species and their associated ecosystems,

and shall utilize the land acquisition and other authority vested in the department to carry out programs for the conservation, management, and protection of such species and their associated ecosystems." [https://www.capitol.hawaii.gov/hrscurrent/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hrscurrent/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm).

Also, under this same Conservation program, "(2) Taking such action as may be necessary to ensure that actions authorized, funded, or carried out by them do not jeopardize the continued existence of threatened or endangered species." [https://www.capitol.hawaii.gov/hrscurrent/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hrscurrent/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm)

Please consider that developing a Kamehameha Schools Bungalow Resort in Keaouhou Bay WILL threaten endangered species due to the unavoidable development and golf course pollution runoff that would be caused by removing the all the trees that currently serving as a natural pollution filter, and replacing the land with housing, cars, humans, and waste. There would also be tremendous runoff damage into Keaouhou Bay and the surrounding area during the building phase of this enormous project.

## GOLF COURSE POLLUTION KILLS MARINE LIFE AND DRASTICALLY CHANGES ECOSYSTEMS

"The golf industry uses [approximately 50 pesticide active ingredients](#), including chlorpyrifos—an insecticide that is banned for residential use by the EPA due to developmental hazards. Having to trim golf turf to low heights also makes it even more vulnerable to pests, which leads to more pesticide use." <https://rainorshinegolf.com/pages/the-environmental-impact-of-golf-courses>

These pesticides will be in the pollution runoff that will enter Keaouhou Bay more severely should the natural habitat of the trees be removed and replaced with pavement. This is unavoidable!

Please read from Wikipedia, "

Most drains have a single large exit at their point of discharge (often covered by a [grating](#)) into a [canal](#), river, lake, [reservoir](#), sea or ocean. Other than catch basins, typically there are no treatment facilities in the piping system." [https://en.wikipedia.org/wiki/Storm\\_drain#:~:text=Most%20drains%20have%20a%20single,dishcharge%20into%20individual%20driv%20wells](https://en.wikipedia.org/wiki/Storm_drain#:~:text=Most%20drains%20have%20a%20single,dishcharge%20into%20individual%20driv%20wells)

The pavement from this development will cause pollution to runoff into Keaouhou Bay because this treed land that will become a housing development is situated directly between the golf course and the Bay. These trees, which absorb all the pollution from the golf course is the BEST AND ONLY PROTECTION POLLUTION FILTER Keaouhou Bay has from the golf course pesticides, fertilizer and weed killer. See the below paragraph for further references.

See page 2 at: <https://health.hawaii.gov/epo/files/2013/09/Stormwater-MS4-Presentation-HEF-7.15.14.pdf> where **the Hawaii government states that Natural Ground Cover has 10% runoff, where has development has 55% runoff. So, even if you have storm drains the pavement this development will create will cause more runoff into Keaouhou Bay than the Natural Ground Cover that is has now, that has been protecting the bay from golf course pollution for years.**

**These trees and land are saving monk seals and green sea turtles habitat from the golf course pollution and this land MUST BE PRESERVED and CONSERVED as the natural protector for Keauhou Bay and for these endangered species habitat.**

Under Section 2 (b) of the Endangered Species Act - **Keauhou Bay MUST BECOME A CONSERVATION AREA for these endangered species.** It is currently their habitat, and to allow a large resort development to be built above this bay clearly threatens the lives of these endangered species by allowing golf course toxic pollution and development pollution to run into these species natural habitat of Keauhou Bay.

### **ALGAE BLOOMS KILL CORAL AND MARINE LIFE**

The trees that are slated to be cleared for the development further protect Keauhou Bay from algae blooms that have been proven to be caused by pollution that is runoff from fertilizer and weed killer.

When there is heavy rain the land above the bay has a greater runoff than normal. Without the trees, the runoff from the golf course pollution will pour into the Bay likely causing frequent algae blooms.

**Algae blooms have been shown to kill coral and marine life as stated in the many articles that will follow.**

One of these articles is from the Global Coral Reef Alliance. They have researched the effects on reefs before and after a golf course developments. Though this development is not a golf course development, it is located just below a golf course and exposes the bay to the pollution from the golf course by removing the proven natural filter of the trees and natural ecosystem.

**Has this EIS done any kind of research about the algae blooms that happen after a serious storm because of the golf course runoff pollution?**

This information was taken from Global Coral Reef Alliance and it is an actual study on the how coral and marine life are affected before and after development. It's titled, "Golf courses kill coral reefs and fisheries: harmful algae blooms and disease cause by nutrient runoff from golf course development on Guana Cay, Abaco, Bahamas

Introduction: Bahamas coral reef deterioration

This study is thought the first ever to evaluate the health of coral reef ecosystems and fisheries before and after a golf course development.. The vast majority of corals have died from a combination of factors including global warming, new diseases, land-based sources of pollution.. "<https://www.globalcoral.org/golf-courses-kill-coral-reefs-and-fisheries-harmful-algae-blooms-and-disease-caused-by-nutrient-runoff-from-golf-course-development-on-guana-cay-abaco-bahamas/>

If you allow a Bungalow Development in Keauhou Bay you WILL be agreeing to pollute this bay for years to come and COMPLETELY CHANGING and possibly DESTROYING KEAUHOU BAY'S ECOSYSTEM.

Another study by the Coral Reef Alliance titled, "Golf course fertilizer runoff causes nutrient enrichment leading to harmful algae blooms on a Bahamian coral reef.

"...After construction new algae blooms appeared nearest the golf course green, smothering corals in adjacent reefs, along with sharply increased coral diseases..." <https://www.globalcoral.org/golf-course-fertilizer-runoff-causes-nutrient-enrichment-leading-to-harmful-algae-blooms-on-a-bahamian-coral-reef>

**Does this EIS have any studies or reports on the extra runoff pollution due to clearing land and adding pavement?**

This needs to be fully assessed because **you will be changing an entire ecosystem** to build a bungalow resort. It rains in Keauhou Bay many nights out of the year and this kind of pollution will kill the beautiful and necessary coral in the Bay.

**FURTHERMORE:** "If there are [toxic algal blooms](#), like red tide, or man-made contaminants, like pesticides or detergents in the water, those toxins are contained within the bubbles of sea foam. When those bubbles pop, the toxins can become airborne and compromise the air that is breathed in that location." <https://oceanconservancy.org/blog/2023/03/31/what-sea-foam/>

### **ENGINE POLLUTION CAUSES ISSUES IN THE OCEAN**

**Does this EIS have any detailed traffic studies for the increase in cars that will be added to this already severely traffic area they want to build their 150 room bungalow resort in? Have they done any studies on the pollution these cars WILL have in Keauhou Bay?**

Because this Bungalow Resort could have over 150 extra cars and over 300 or more extra people in and out of Keauhou Bay, what traffic and increased population studies have they done? There will be employees with cars, guests with cars, visitors with cars. At times this would range to over 200 cars (likely more), coming in and out of, and parking above Keauhou Bay thereby causing serious car population issues because of all these added cars right next to the bay.

**The article below is from NOAA regarding motor vehicle engines and pollution to the sea.**

What is the biggest source of pollution in the ocean?

Most ocean pollution begins on land.

"Millions of motor vehicle engines drop small amounts of oil each day onto roads and parking lots. Much of this, too, makes its way to the sea.

Some water pollution actually starts as air pollution, which settles into waterways and oceans. Dirt can be a pollutant. Top soil or silt from fields or construction sites can run off into waterways, harming fish and wildlife habitats." <https://oceanservice.noaa.gov/facts/pollution.html#:~:text=Millions%20of%20motor%20vehicle%20engines,Dirt%20can%20be%20a%20pollutant.>

**Land-Based Runoff Remains Top Source of Oil in the Ocean, Says New Report Oil in the Sea: Inputs, Fates, and Effects**

News Release September 28, 2022

WASHINGTON — Oil in runoff, primarily from cities and vehicles, is the top source of oil entering the ocean, says a [new report](#) from the National Academies of Sciences, Engineering, and Medicine. In North American waters, estimated ocean oil pollution from land-based runoff is up to 20 times higher than it was 20 years ago, and oil spills, natural oil seeps, and discharge from oil and gas operations remain major sources of pollution. The report recommends actions that government and others should take to minimize oil pollution, and calls for sustained research funding to better understand how oil reaches and affects ocean environments. <https://www.nationalacademies.org/news/2002/05/oil-in-the-sea-inputs-fates-and-effects/#:~:text=WASHINGTON%20%2D%2D%20Neatly%2085%20percent,pipeline%20spills%2C%20sa%20a%20new>

### **The Impact Of Stormwater – Car Emissions**

"Car emissions are not limited to exhaust fumes that contribute to air pollution. They can also leak automotive fluid and release heavy metals that can contribute to stormwater pollution, contaminating local waterways." <https://www.stormwatershepherds.org.au/blog/the-impact-of-stormwater-car-emissions/>

### **NOISE POLLUTION'S HARMFUL EFFECT ON MARINE LIFE**

**Does this EIS have any reports on the noise pollution that will happen and what it could do to marine life in Keauhou Bay during development?**

Because if you allow this Bungalow Resort to be developed you will increase constant noise in this bay for years to come and, "Noise Pollution Research shows that underwater noise from construction, shipping and naval vessels significantly impacts the natural behavior of cetaceans and many other marine species. This can be seen when mass beaching events occur or breeding success is diminished."

The above information was taken from the Ocean Conservation Trust <https://oceanconservationtrust.org/ocean-advocacy/think-ocean/ways-to-think-ocean/>

### **How Does Noise Pollution Harm Marine Species?**

"However, over the past few decades, noise pollution in the marine environment has increased dramatically and is threatening the natural soundscape of the marine environment. Ships, seismic surveys, explosions, construction, and sonar devices have made the once peaceful environment into a loud, chaotic home which is extremely damaging for marine wildlife. This type of pollution is often overlooked in comparison to others but its impacts are now being documented across all types of marine ecosystems." <https://earth.org/noise-pollution-in-the-ocean/>

If you allow this resort the amount of people in this bay will fully increase and, "Hawaii's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally, management of the resource should balance the needs of different user groups, but the

7

welfare of the marine environment on which its inhabitants depend must be the most important consideration." This was taken from Hawaii's own Division of Aquatic Resources <https://dlnr.hawaii.gov/dar/marine-managed-areas/hawaii-marine-life-conservation-districts/#:~:text=Snorkeling%20and%20SCUBA%20diving%20are,effect%20on%20nearshore%20fish%20populations.>

### **What is ocean noise?**

"Ocean noise refers to sounds made by human activities that can interfere with or obscure the ability of marine animals to hear natural sounds in the ocean.

Many marine organisms rely on their ability to hear for their survival. Sound is a highly efficient means of communication underwater and is the primary way that many marine species gather and understand information about their environment. Many aquatic animals use sound to find prey, locate mates and offspring, avoid predators, guide their navigation and locate habitat, as well as to listen and communicate with each other.

Over the last century, human activities such as shipping, recreational boating, and energy exploration have increased along our coasts, offshore, and deep ocean environments. Noise from these activities can travel long distances underwater, leading to increases and changes in ocean noise levels in many coastal and offshore habitats.

These rising noise levels can negatively impact ocean animals and ecosystems. Higher noise levels can reduce the ability of animals to communicate with potential mates, other group members, their offspring, or feeding partners. Noise can also reduce an ocean animal's ability to hear environmental cues that are vital for survival, including those key to avoiding predators, finding food, and navigating to preferred habitats." <https://oceanservice.noaa.gov/facts/ocean-noise.html>

### **LEARN FROM OTHERS: RUN-OFF FROM DEVELOPMENT KILLS**

The Chesapeake Bay has a foundation that is trying to save their bay due to runoff pollution that was caused by developments. Chesapeake Bay is **a lot bigger** than Keauhou Bay. If it's being drastically hurt by runoff water from developments, Keauhou Bay waters won't stand a chance if development above the bay is allowed. Keauhou Bay is a much smaller ecosystem.

**This Article is by the Chesapeake Bay Foundation, Saving a National Treasure states,** "...runoff is a significant source of harmful nitrogen pollution that continues to grow...

As rainwater and snowmelt run off our streets, parking lots, lawns, and other surfaces, they pick up pet waste, pesticides, fertilizer, oil, and other contaminants. If the draining water doesn't evaporate or soak into the ground where it can be filtered, it flushes straight into local creeks, rivers, and the Chesapeake Bay, adversely affecting water quality and aquatic life.

Only 10 to 20 percent of rain that falls in forests, fields, and other natural areas runs off, with the rest absorbed by soil and plants, where it is filtered before reaching aquifers or local waterways. (Right now Keauhou Bay has a lot of trees and is very natural, this is what helps stop runoff.) By contrast, close to 100 percent of the rain that falls on concrete and other hard surfaces produces runoff. One inch of rain falling on an acre of hardened surface produces 27,000 gallons of runoff.

8

Stormwater runoff pollution threatens Chesapeake Bay and its rivers and streams... Polluted runoff is one of the most harmful sources of pollution to the Bay and its waters. And much of it starts right in the urban and suburban neighborhoods where we live." <https://www.cbf.org/issues/polluted-runoff/index.html#:~:text=Besides%20carrying%20pollutants%20that%20harm,them%20are%20placed%20in%20leopardy.>

If that is what runoff is doing to the Chesapeake Bay, the effects of runoff will be even more devastating to Keauhou Bay due to its size and fragility.

### **MANTA RAY HABITAT, CORAL REEF BLEACHING, & MARINE LIFE ~ THE DEVASTATING EFFECTS OF DEVELOPMENT ON THE OCEAN**

**Are there any reports in this EIS about what the impact to the coral, marine life, plankton especially zooplankton will be because of this development?**

The studies below show that developments kill coral, and marine life. Zooplankton are part of this marine life and they are also killed and negatively affected. Zooplankton are food for manta rays. Manta rays are in Keauhou Bay every night to eat zooplankton, and are often seen here during the day as well.

Allowing this bay developed will also be a death sentence for many types of marine life including planktons. There is NO WAY to stop this from happening due to the fact that polluted runoff rain water from developments can't be fully stopped. This has been shown to happen in ALL coastal developments.

Please read the Scientific articles below.

#### **It's Been Proven Developments Severely Pollute Nearby Waters**

Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Coral Bleaching is occurring more frequently in Hawaii". Across the Hawaiian Archipelago, coral bleaching has increased in frequency and severity since 1996. The last major bleaching event in 2014-2015 had catastrophic impacts state-wide...

This was the third major bleaching episode in Hawaii over the last 6 years. The frequency of these events is unprecedented in the archipelago. NOAA scientists and partners have determined that the key drivers of the bleaching were environmental factors (such as heat stress, depth, and surface light) and human impacts (sewage effluent and urban runoff). " <https://www.fisheries.noaa.gov/feature-story/cautionary-tale-2019-coral-bleaching-event>.  
<http://hawaii.gov/2019/03/20/bleaching-2019-is-occurring-more-had-20-catastrophic-20-impacts-20-state-20-wide>.

**This article is by the Coral Reef Alliance here in Hawaii.** "An ecosystem under threat Hawaii's reefs face major global and local threats including climate change, overfishing, and sediment and nutrient pollution caused by sewage and stormwater runoff..."

When it rains, flash floods carry stormwater and large amounts of sediment downstream to the ocean. Just offshore, once-thriving coral reefs are now struggling to survive." <https://coral.org/en/where-we-work/hawaiian->

[islands#:~:text=Hawaii%20reefs%20face%20major%20global%20into%20Hawaii%20CA%20BBIs%20waterways%20ever%20day.](https://islands.gizmodo.com/BBIs%20reefs%20face%20major%20global%20into%20Hawaii%20CA%20BBIs%20waterways%20ever%20day)

This article states that runoff is a leading source in coral degradation. Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Land-based sources of pollution are a leading cause of coral reef degradation in the Main Hawaiian Islands. Water quality is impacted by urban runoff, failing sewage systems, unpaved roads, farms, land clearing, and development." [https://www.cofis.noaa.gov/monitoring/status\\_report/docs/Hawaii\\_status\\_report\\_forweb.pdf](https://www.cofis.noaa.gov/monitoring/status_report/docs/Hawaii_status_report_forweb.pdf)

This article is a Research Article by PLOS ONE and their motto is, "We're driving change in research integrity and publication ethics." This is some of their article information, "**Coral taxonomy and local stressors drive bleaching prevalence across the Hawaiian Archipelago in 2019...**

**We found little evidence for acclimation by reefs to thermal stress in the main Hawaiian Islands. Moreover, our findings illustrate how detrimental effects of local anthropogenic stressors, such as tourism and urban run-off, may be exacerbated under high thermal stress.** In light of the forecasted increase in severity and frequency of bleaching events, future mitigation of both local and global stressors is a high priority for the future of corals in Hawaii." <https://journals.plos.org/plosone/article?id=10.1371/journal.pone.0269068>

The coral all over Hawaii has had extremely high mortality rates, due to developments near ocean areas throughout the years, and development in Keauhou Bay will be devastating to the coral, reef fish, and all aquatic life there. Manta Rays need to eat 5 times their body weight in zooplankton daily. Their population will be severely affected should the plankton die. Please see the cited information below.

**"SO, HOW MUCH PLANKTON DOES YOUR AVERAGE MANTA RAY EAT? 19,200,000. Nineteen million two hundred thousand, give or take a few thousand.**

That is the number of plankton pieces a ten-foot manta ray must consume weekly to stay alive."

The above information was taken from Manta Ray Advocates <https://mantarayadvocates.com/how-much-plankton-do-mantas-eat/>

**Coral reefs are known to be highly negatively impacted by developments because, "Impacts from land-based sources of pollution including coastal development,...can impede coral growth and reproduction, disrupt overall ecological function, and cause disease and mortality in sensitive species."** <https://oceanservice.noaa.gov/facts/coral-pollution.html#:~:text=Impacts%20from%20land%20based%20sources,andy%20mortality%20in%20sensitive%20species.>

Article by Environmental Evidence, "**Coastal development and runoff lead to sedimentation, which directly impacts coral recruitment, growth, mortality, and ecosystem services that coral reefs provide.**" <https://environmentalevidencejournal.biomedcentral.com/articles/10.1186/s13750-020-00200-0#:~:text=Coastal%20development%20and%20runoff%20lead,services%20that%20coral%20reefs%20provide.>

Developments can't fully stop polluting because runoff is from rain during development and after. Article by NOAA, "One of the most significant threats to reefs is pollution. **Land-based runoff and**

**pollution discharges can result from dredging, coastal development... This runoff may contain sediments, nutrients, chemicals, insecticides, oil and debris.**

When some pollutants enter the water, nutrient levels can increase, promoting the rapid growth of algae and other organisms that can smother coral." [https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,organisms%20that%20can%20smother%20corals,](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,organisms%20that%20can%20smother%20corals,)

Another article by NOAA, "Coral reefs also are affected by leaking fuels, anti-fouling paints and coatings, and other chemicals that enter the water... (All of those are show up in every development project.)

**Among the most damaging pollutants on coral reefs is sediment, which can remain suspended in the water or be deposited on the coral surface (i.e., turbidity and sedimentation, respectively) and can contain toxicants, pathogens, and nutrients, all of which impact coral growth, recruitment, and survival"** [https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days.](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days.)

#### **It's Been Proven Resort Developments KILL Marine Life**

This article by MarinBIO states, "Zooplankton are also sensitive to their environment and like phytoplankton—a change in zooplankton concentration can indicate a subtle environmental change. Zooplankton are highly responsive to nutrient levels, temperatures, pollution, food that is not nutritious, levels of light, and increases in predation. As well as providing an essential link in the marine food chain (which is an understatement), the diversity of species, amount of biomass and abundance of zooplankton communities can be used to determine the health of an ecosystem..."

Here is another article that shocking shows that in a very short time, big changes can occur due to runoff. A development will hurt and kill plankton, by Frontiers in Marine Science, "Effects of an experimental terrestrial runoff on the components of the plankton food web in a Mediterranean coastal lagoon The main result observed in the present study was that the effects of the simulated terrestrial runoff spread along the plankton food web, significantly affecting all trophic levels of the natural plankton community studied. **This occurred in a relatively short time considering that the experiment lasted less than three weeks.** The lower light availability in the terrestrial runoff treatment compared to the control resulted in a net decrease of approximately one-third of Chl-a concentration and phytoplankton abundance over the entire experiment." <https://www.frontiersin.org/journals/marine-science/articles/10.3389/fmars.2023.1200757/full>

**The ecosystem is fragile and interconnected as is stated in this article:** "Zooplankton are also affected by levels of pH, heavy metals, calcium, and aluminum. Nutrients like nitrogen and phosphorus will affect the prey of zooplankton (like algae, protozoa and bacteria), indirectly affecting zooplankton survival. Scientists are still putting together pieces of the zooplankton puzzle. Some questions include how nutrient levels found in algae can influence the growth and behavior of zooplankton. Another question important to marine and human life is how toxins and pollution will affect this crucial link in the food chain" This information is in article by MarineBIO. <https://www.marinebio.org/creatures/zooplankton/#:~:text=Zooplankton%20are%20also%20sensitive%20to,light%20and%20increases%20in%20predation.>

A research article by Environmental Research Laboratory, United States Environmental Protection Agency that discusses, "**Toxic Effects of Pollutants on Plankton: There are four main sources of aquatic pollution: industrial wastes, municipal wastes, agricultural run-off, and accidental spillage.** Non-point sources, such as automobile exhausts, add appreciable amounts of pollutants to air that may enter aquatic systems in rainfall or dry fall-out. These sources add pesticides, heavy metals, oil, petroleum products, and a large number of organic and inorganic compounds to water. Lakes and oceans serve as sinks for many pollutants. Plankton comprise a large portion of the living matter in natural waters and function in biogeochemical cycles. They are affected by pollutants, transfer them to sediments and other organisms, and function in their biological transformation."

[https://scope.dge.camegiescience.edu/SCOPE\\_12\\_3\\_6\\_chapter12\\_257-274.pdf](https://scope.dge.camegiescience.edu/SCOPE_12_3_6_chapter12_257-274.pdf)

All the above articles show that development of Keauhou Bay WILL hurt plankton life and marine life in the bay because pollutant runoff is inevitable and unavoidable during construction and afterwards. The manta ray food source will likely disappear. This will be devastating for the manta ray populations. Furthermore, if manta rays die or leave the area, the loss will in turn affect many lively hooders from locals on the island who depend on the manta ray tour for their income.

#### **HUMAN POPULATION INCREASES LINKED DIRECTLY TO CORAL DEATH**

**Does this EIS have any reports on their resort adding to the population increase that happens during IRONMAN?**

"On average, each Ironman racer brings three people with them to the Big Island. Counting members of the media, VIPs who come from around the globe to watch and the triathlons partners, there likely be more than 6,300 people descending on Kona..." <https://bigislandnow.com/2023/10/07/ironman-2023-in-kona-shines-spotlight-on-some-of-best-women-triathletes-in-the-world/>

And "Resident dissatisfaction with tourists is multifaceted: **The overwhelming majority (92%) of locals felt visitors were not educated enough on protecting Hawaii's natural environment and local resources; other factors include the impact of the vacation rental industry and ignorance of the residents' quality of life.**" <https://www.triathlete.com/culture/news/kona-locals-ask-ironman-visitors-for-respect/>

**Where are the EIS reports on human density? Below are reports that show human population destroys coral reefs.**

"The number of people living on the coasts has rapidly increased in recent decades, causing significant development of coastal areas. Coastal development can negatively impact the ocean through the destruction of coastal marine habitat and through run-off of sediments and pollution.

-Coastal development involves activities such as the creation of harbors, stabilization of shorelines, and aquaculture that involve the destruction of sensitive marine habitats such as mangroves, coral reefs, and seagrass beds.

-Coastal development may cause the run-off of sediments into coastal habitats, which can smother corals or seaweeds and reduce the amount of light available for photosynthesis. Losses of primary producers and important habitat-forming species such as corals can negatively impact entire food webs."

The above information was taken from the Education Development Center, INC, from their Coastal Development page called Ocean Tracks <https://oceantracks.org/library/human-impacts/coastal-development/#:~:text=Coastal%20development%20may%20cause%20the,negative%20impact%20enrire%20food%20webs.>

There is nothing Kamehameha Schools can do to their development that can stop the guests of this possible Bungalow Resort from going to Keauhou Bay. **Human traffic WILL seriously increase if this resort is allowed to be built and the marine life will be negatively affected by it.** Marine life will suffer from this development as stated in this letter in many different scientific reported articles.

If you allow this resort the amount of people in this bay will fully increase and, "Hawaii's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally, management of the resource should balance the needs of different user groups, but the welfare of the marine environment on which its inhabitants depend must be the most important consideration." This was taken from Hawaii's own Division of Aquatic Resources <https://dlnr.hawaii.gov/dar/marine-managed-areas/hawaii-marine-life-conservation-districts/#:~:text=Snorkeling%20and%20SCUBA%20diving%20are,effect%20on%20nearshore%20fish%20populations.>

#### It's Been Proven an Increase in Human Population Destroys Coral Reefs

If a Bungalow Resort is allowed to be built in Keauhou Bay, it will bring a serious increase in human traffic. **"Easily visible trends in human population dynamics combined with well-established and tested ecological theory give a clear, intuitive, yet quantifiable guide to the severity of survival challenges faced by coral reefs.** Management challenges and required actions can be clearly shown and, contrary to frequent claims, no scientific ambiguity exists with regard to the serious threat posed to coral reefs by humankind's continued numerical increase." This is in the article by National Library of Medicine National Center for Biotechnology Information PubMed. <https://pubmed.ncbi.nlm.nih.gov/33293007/#:~:text=Denser%20coastal%20populations%20and%20greater,to%20more%20runoff%20and%20siltation.>

This article is by ABC NEWS, **"This is how tourists are destroying coral reefs in Hawaii. The less people at a certain site, the more coral there are, the research found.** The millions of tourists who flock to the shores of Hawaii every year are wreaking havoc on its natural environment – especially the coral reefs, which are at risk all over the world, a new study said. The most popular coral reefs on the Hawaiian islands are likely being degraded by the very visitors they attract, according to a study published Monday in Nature Sustainability." <https://abcnews.go.com/US/hawaiian-coral-reefs-degrading-popular-tourist-sites-scientists/story?id=96308858#:~:text=The%20less%20people%20at%20a,there%20are%2C%20the%20research%20found.&text=The%20millions%20of%20tourists%20who,world%2C%20a%20new%20study%20said.>

By allowing this development you are stressing an already fragile Eco-system. The small bay is currently used by many locals for boating, fishing, canoeing, paddle boarding, snorkeling, manta night dives, surfing, and swimming. We know, and research shows, that more people cause more damage. The area simply cannot afford or support this development.

**"Denser coastal populations and greater wealth will lead to reef degradation by coastal construction.** Denser populations inland will lead to more runoff and siltation. Effects of human perturbations can be explored with meta-population theory since they translate to increases in patch-

mortality and decreases in patch-colonization (= regeneration). All such changes will result in a habitat with overall fewer settled patches, so fewer live reefs.' This information was taken from Science <https://www.sciencedirect.com/science/article/abs/pii/S0065288120300328#:~:text=Aquacultur,e%20will%20alleviate%20some%20fishing,to%20more%20runoff%20and%20siltation.>

Another article by Nature Sustainability, **"Coral reefs and coastal tourism in Hawaii Coral reefs are popular for their vibrant biodiversity.** By combining web-scraped Instagram data from tourists and high-resolution live coral cover maps in Hawaii, we find that, regionally, coral reefs both attract and suffer from coastal tourism. Higher live coral cover attracts reef visitors, but that visitation contributes to subsequent reef degradation. Such feedback loops threaten the highest quality reefs, highlighting both their economic value and the need for effective conservation management." [https://www.nature.com/articles/s41893-022-01021-4.epdf?sharing\\_token=wsakgQNhaJhJAnWAq453TRqNDjAWel9mR3ZoTv0PvGzA5lc\\_H001zeHNIP3ASnhccKRv6\\_vKLPw49dbmBYoXSq3Y1MqQIGBZsappdGUH7O1SLbu9x5P3xED4Kx4T0sJlvQ1a72ZR3tUbraxpodJq2AoNlSmWSuxB7JlEDqbj8OGJpx71TJw6CfXFKJZYeNdcJ3Sw\\_dnaU65ZlhcIPBDlmmahH15vqT5Q%3D&tracking\\_referrer=abcnews.go.com](https://www.nature.com/articles/s41893-022-01021-4.epdf?sharing_token=wsakgQNhaJhJAnWAq453TRqNDjAWel9mR3ZoTv0PvGzA5lc_H001zeHNIP3ASnhccKRv6_vKLPw49dbmBYoXSq3Y1MqQIGBZsappdGUH7O1SLbu9x5P3xED4Kx4T0sJlvQ1a72ZR3tUbraxpodJq2AoNlSmWSuxB7JlEDqbj8OGJpx71TJw6CfXFKJZYeNdcJ3Sw_dnaU65ZlhcIPBDlmmahH15vqT5Q%3D&tracking_referrer=abcnews.go.com)

#### INFRASTRUCTURE AND RESOURCES ON AN ISLAND ALREADY HIGHLY IMPACTED AND STRUGGLING FOR ANSWERS

**Has the EIS done any research or reports on the Resources and Infrastructure it will need for a bungalow resort?**

There are many big housing developments currently under construction in Kailua Kona, Waikoloa Village, Hilo, Puna, Ocean View and Volcano. The entire Big Island has construction projects already in progress.

**Has Kamehameha Schools EIS done any kind of reports or surveys to know if Big Island has the Resources and Infrastructures for their resort development?**

"Hotel waste management refers to all the practices and processes that hotels implement to handle and dispose of the multiple types of waste generated on their premises. **Worldwide, hotels produce almost 300,000 tonnes of waste each year.**" <https://www.homebiogas.com/blog/hotels-waste-management/>

As of now, the Big Island's Resources and Infrastructure are having serious negative issues and many more developments that have been approved are not even completed as of yet, which means our island's resources and infrastructure will be taxed even more severely in the near future.

Please read the below articles that prove Big Island does not have the resources or infrastructure for a 143-Unit Bungalow Resort Development at Keauhou Bay. On Hawaii Island, we are already struggling to meet the increasing need for resources and infrastructure.

**Big Island Now poll No. 27 results: More than one solution needed to help extend life of West Hawai'i landfill**

September 17, 2023

The West Hawai'i Sanitary Landfill, the only remaining landfill on the Big Island, is forecast to reach capacity within the next 20 to 25 years.

The West Hawai'i landfill became the island's only one after the Hilo Landfill closed three years ago. It only has about 20 to 25 years left before it can no longer be used to store rubbish.

<https://bigislandnow.com/2023/09/17/big-island-now-poll-no-27-results-more-than-one-solution-needed-to-help-extend-life-of-west-hawaii-landfill/>

### **A County commission drafts ordinance aiming to ban recyclables at West Hawai'i landfill**

By [Megan Moseley](#), September 6, 2023

Hawai'i County's Environmental Management Commission is developing an ordinance that aims to prohibit the amount of recyclable materials ending up in the island's only working landfill.

During a commission meeting on July 26, Ramzi Mansour, Hawai'i County Director of Environmental Management, told commissioners the West Hawai'i Sanitary Landfill only has 20 to 25 years left before it reaches capacity.

With the Hilo Landfill permanently closed in 2020, the clock is ticking for the island's sole dump. Commission chairperson Georjean Adams said it's a good time to start looking into solutions.

Adams said the proposed ordinance is in its early stages and is more about getting the conversation started about how to prevent unnecessary, or recyclable items — green waste, metals, plastics, paper, paperboard and glass — from ending up in the rubbish dump, located off Queen Ka ahumanu Highway in Waikōloa.

"Trying to site a new landfill is close to impossible," Adams said. "So what are we going to do? So I was looking around, and the commission agreed, to look deeply into the idea of diverting the recyclables out and at least slow the filling up of the landfill."

The proposed ordinance refers to the 2019 Integrated Solid Waste Management Plan that commits the county to "divert, as much as feasible, commercial and municipal solid waste, including but not limited to green waste, metals, plastics, paper, paperboard, and glass to help achieve goals related to climate resiliency, renewable energy, sustainable agriculture, and zero waste."

<https://bigislandnow.com/2023/09/06/new-draft-ordinance-aims-to-ban-recyclables-at-west-hawaii-landfill/>

### **Time's Up For Landfills**

'Gentle' demolition strategies can help preserve resources

PAULA BENDER April 2, 2024

As Hawai'i government officials grapple with the challenge of limited landfill space statewide, federal restrictions set in place by the Environmental Protection Agency are ruling out possible locations that were once considered for new landfills.

Hawaii Act 73 states landfills must be located at least half a mile from residential areas; are prohibited from being located in areas with heavy rain and steep slopes, as well as agricultural and/or conservation lands; above aquifers; 300 feet beyond streams; and 1,000 feet beyond the ocean.

New landfills are also now prohibited from being created in tsunami inundation zones, 100-year flood zones and wetlands. There are also concerns that landfills near airports will attract birds, resulting in damage to aircraft and fatalities among pilots and passengers.

The City & County of Honolulu is in the process of identifying its next landfill and it doesn't want one any bigger or more active than absolutely necessary.

### **Drought Conditions On Hawai'i Island Prompt Water Supply Message**

by Big Island Video News  
on Oct 5, 2023 at 3:59 pm

(BIVN) – With moderate to severe drought conditions being reported across Hawai'i island, local water department officials issued a statement this week on the need for customers to use drinking water wisely.

Most of Hawai'i island is under "Moderate Drought" conditions, according to the latest information from the [U.S. Drought Monitor](#). There is an area under "Abnormally Dry" conditions in South Kona, however there are other, small pockets on the Big Island that are under "Severe Drought". There is even a small spot of "Extreme Drought" in the South Point area of Ka'u.

"The National Weather Service's forecast calls for the existing drought conditions to expand over the entire island and intensify over the upcoming months due to the ongoing El Niño event," reported the Hawai'i County Department of Water Supply. "Peak dryness is expected to occur from around January through February 2024. The El Niño event will likely persist well into spring 2024."

### **From a Water Supply news release:**

### **Hawaii is "on the verge of a greater catastrophe," locals say, as water crisis continues**

By [Li Cohen](#)

Updated on: April 11, 2024 / 8:23 AM EDT / CBS News

And recent years have seen compounding problems: less rain, leading to [significant droughts](#), and repeated jet fuel leaks and PFAS chemical spills contaminating water systems. All of this significantly limits available water use for locals, many of whom say tourism is only worsening the situation. Just months ago, the [world's largest surfing wave pool](#) opened up on the island — filled with freshwater.

"They're not using it to drink or to support life, they're using it to make money. They're commodifying it," said Healani Sonoda-Pale, who is Native Hawaiian and a member of advocacy group O'ahu Water Protectors. "... We are on the verge of a greater catastrophe."

**"We are in a water crisis, that has to be made very clear."** Wayne Tanaka, director of Sierra Club of Hawaii, told CBS News, saying that if the reasons for this crisis aren't soon addressed, "We may come to a point where we have to decide ... who gets water and who doesn't."

<https://www.cbsnews.com/news/hawaii-water-crisis-climate-change/>

Because this is an island, parts need to be shipped. The power plant currently has generators that are not working, and because of this (and other reasons), the Big Island needs to seriously conserve power so that everyone will have power. If this problem of shipping parts can happen once, it can and will happen again.

#### **UPDATE: HELCO asks for continued energy conservation**

BY SPECTRUM NEWS STAFF HAWAII ISLAND

UPDATED 6:28 PM ET APR. 16, 2024 PUBLISHED 9:05 AM ET APR. 15, 2024

HILO, Hawaii — Hawaiian Electric continues to urge Hawaii Island customers to reduce their electricity use to prevent the need for rolling outages.

In a news release Tuesday afternoon, the utility stated that Monday saw a reduced demand of approximately 5 megawatts. That, combined with increased wind and solar battery storage prevented the need for rolling blackouts on Monday. HELCO credited conservation efforts, particularly those by large businesses and government customers, for the reduction in electricity demand.

"We're grateful for our customers' efforts to conserve electricity, especially between 5 to 9 p.m., when electricity use is highest, because it does make a difference," said Hawaiian Electric spokesperson Kristen Okinaka. "By working together, we're helping to ensure that enough power can be available for all customers and prevent or minimize the impacts of rolling outages."

**Hawaiian Electric announced Monday afternoon that it may initiate rolling outages in parts of Hawaii Island because of the unavailability of several generators and lower than normal wind and solar resources.**

In a news release, the utility said that outages could start as early as 6:30 p.m. and rotate around the island for 30-minute intervals. The impacted areas and the timing of the outages will be based on wind generation and the amount of electric demand that needs to be reduced. Individuals who are dependent on electrically powered life support medical equipment are advised to arrange for a backup power supply.

The outages are being done to prevent power loss to even more customers, who are all being asked to conserve electricity throughout the month.

#### **Big power supply problems continue to plague Hawaii Island**

Apr 8, 2024

The company has been facing an unusual situation with mechanical problems at three of the island's five largest power plants while part of the largest plant undergoes an annual overhaul. All four of these affected power plants are owned by the utility or an affiliate of its parent company.

Also contributing to the trouble is lower output from a geothermal plant, which has the third-largest generation capacity on the island and is owned by an independent operator.

"This is an unusual situation, driven mainly by the unavailability of several large generators that have experienced mechanical problems, are at reduced output, or are undergoing maintenance," Hawaiian Electric said in its March 25 announcement asking customers to use less electricity, especially on weekdays from 5 to 9 p.m.

**The company explained that it faces an "extremely tight" supply of power at peak use periods, especially when production from wind, solar and hydroelectric facilities is lower than normal.** Those sources of variable, renewable energy can supply up to 15% of electricity needs on the island.

"Without enough supply to meet electricity demand, the company may initiate rolling outages of up to an hour around the island," the March 25 announcement said.

<https://energycentral.com/news/big-power-supply-problems-continue-plague-hawaii-island>

#### **Hawaii Island customers urged to reduce electricity use through April**

BY SARAH YAMANAKA HILO PUBLISHED 9:00 AM ET MAR. 26, 2024

What You Need To Know

-Hawaii Island customers may see alerts asking them to conserve energy, especially on days when there isn't much wind that generates up to 15% of electricity

-When alerts are issued, Hawaiian Electric is asking customers to take immediate action to minimize electricity use

-Even when no alerts are issued, customers — including hotels and large retailers — are urged to reduce electricity use as much as possible, especially between 5 and 9 p.m. on weekdays

**-If there is not enough electricity to meet demand, Hawaiian Electric may initiate rolling outages of up to an hour around the island**

<https://spectrumlocalnews.com/hi/hawaii/news/2024/03/25/hawaii-island-customers-urged-to-reduce-electricity-use-through-april>

## **FURTHERMORE: TRAFFIC, LACK OF RESOURCES, AND FATALITIES**

### **A Resort Development WILL Increase Traffic on Already Severely Trafficked Roads. Are there traffic study reports for this EIS?**

A development with 150 rooms comes with over 150+ cars. Employees, guests, and visitors will all have cars, plus the regular locals who go there to paddle and enjoy the bay. All this could range in over 300 cars a day because of this resort development.

The Big Island already has a serious traffic issue due to a lack of infrastructure. This is in part due to poor planning, and in part due to geography challenges.

The articles below by different NEWS companies highlight the point that many traffic issues stem from lack of infrastructure and resources. Adding more cars to the road by building another resort in an area that is already stressed, will only increase the already mounting problems with traffic.

This NEWS article by Hawai'i News Now, "Report shows alarming surge in Hawaii Island traffic deaths The Hawaii Police Department's Traffic Services Section released a new report showing a dramatic increase in both major crashes and fatal accidents from last year.

The startling statistics show a dramatic increase in the number of year-over-year traffic fatalities on the Island of Hawaii, revealing major crashes are up more than 12% and traffic fatalities are up more than 100%." Watch the video on their link below as it is a professional report on Big Island traffic problems. <https://www.hawaiinewsnow.com/2024/05/18/new-report-shows-hawaii-island-traffic-fatalities-are-up-over-100-last-year/>

With more tourists there will be more accidents, more traffic, and more traffic deaths. Please read this article by KHON 2 NEWS, "**Hawaii Island has most traffic fatalities in state**". This time last year Hawaii Island was at five traffic deaths, as of April 1, 2024, they're at 14.

Seven of which happened in the last two weeks.

Chief Moszkowicz said the police force is small compared to the size of the island and response times can take 15 to 20 minutes.

**"We don't have the resources like in the small space of Oahu where you can saturate an area to control speeding, that just doesn't exist here,"** he added. "<https://www.khon2.com/local-news/traffic-fatalities-for-hawaii-island-in-march/>

**The traffic on Big Island has increased drastically and safety issues and infrastructure needs to be addressed before adding more resort developments.**

Please read this article because what it says about Oahu is a mirror for Big Island. The traffic problems they discuss are the same issues here on Big Island; and it also gives one Big Island example, "On the Big Island, the mayor had to issue an emergency order shutting down Waipio Valley Road due to overuse and poor prior maintenance." This is happening all over Big Island. <https://www.civilbeat.org/2024/02/angry-over-island-traffic-jams-lets-talk-about-solutions/>

The news video below shows aerial footage in Hilo. The footage shown is the same thing that is happening on Alii Drive and Queen K Highway, and for all the same reasons: **All of these roads only have two lanes!**

There are two developments already on Alii Drive being built as of today; and more are scheduled for this road in the near future. Alii Drive and Queen K Highway are the roads Kamehameha Schools Bungalow Resort will be using if approved, and they are already seriously congested.

These roads have the exact same traffic congestion as Hilo, with the exact same problems. Traffic is extremely slow because of so many people who now live here and all the visitors that come yearly.

In addition, the concern on Kona side is tsunami evacuations rather than lava evacuations. In this kind of traffic, not everyone will be able to get to safer ground, especially if you allow another resort to be developed in this area when traffic is already at a crawl every weekday and often on weekends as well.

Here is the news article by KITV NEWS that highlights the traffic issues discussed above: "Hawaii Island traffic jams could have safety impact. In the event of an evacuation, Mayor Mitch Roth acknowledges that will make the Traffic Jam up even worse. But says, he is working with The State on a solution." [https://www.kitv.com/news/local/hawaii-island-traffic-jams-could-have-safety-impact/article\\_b06a5374-5a6a-11ed-8d23-8313ef8c4c19.html](https://www.kitv.com/news/local/hawaii-island-traffic-jams-could-have-safety-impact/article_b06a5374-5a6a-11ed-8d23-8313ef8c4c19.html)

There was a crash recently on Alii Drive (see video below). When there is an accident on Alii Drive, it turns the already small two-lane road into only one lane that requires a flagger to help direct traffic. Kamehameha Schools wants to add a resort on this tiny road that will increase the traffic by hundreds of cars.

Here is the Island News video on the crash on Alii Dr. <https://www.youtube.com/watch?v=FQSnPDii8>

**Please see from these articles that traffic on Big Island is deadly already and adding another resort will be devastating to the island.**

**Read this Path article, HAWAII COUNTY'S VISION ZERO INITIATIVE:**

A motorcyclist is in critical condition after a collision with a car. A driver accidentally hits and kills a pedestrian. It seems that not a day goes by without the news reporting on a traffic crash on Hawaii Island...

Here are some other statistics that are even more staggering:

-28% of roadside crashes were the result of someone leaving the roadway and going into barriers or trees

-13% of pedestrians hit at 20 mph actually suffer fatality

-73% of pedestrians hit at 40 mph suffer fatality

-25% of fatal crashes were the result of distracted driving... So PLEASE put those cell phones away and pay attention to the road!

-56% of fatal crashes were the result of alcohol or drugs

-41% of fatal crashes occurred in light trucks and vans

-49% of crashes occur during the day, outside of peak traffic hours

-Of all the crash fatalities, most were males between 20 to 24-years old.

**“That’s just Big Island traffic,”** is a common sentiment. But what if we didn’t have to accept this endangerment of vehicle drivers, motorcyclists, and pedestrians as a way of life?”

This was taken from Path <https://pathhawaii.org/hawaii-countys-vision-zero-initiative/>

#### 16) US Hawaii is "on the verge of a greater catastrophe," locals say, as water crisis continues

By Li Cohen

Updated on: April 11, 2024 / 8:23 AM EDT / CBS News

In Hawaii, one of the most important sayings is *ola i ka wai*, "water is life" — a phrase that not only sums up what it means to exist on an island, but what it means to live, period. But now, one of the largest of the island chain's land masses is facing a triple threat to its sole freshwater source, and if it isn't addressed soon, one community member says, "We're in deep trouble."

<https://www.cbsnews.com/news/hawaii-water-crisis-climate-change/>

#### 17) News Hawaii'i County issues mandatory 25% water restriction for North Kona August 7, 2023 · 5:21 PM HS

A mandatory 25% water restriction has been issued for various communities in North Kona due to the failure of the Honokōhau Deepwell over the weekend.

<https://bigislandnow.com/2023/08/07/hawaii-county-issues-mandatory-25-water-restriction-for-north-kona/>

#### 18) Hawaii'i Water Supply Closely Monitored As Severe Drought Continues

by Big Island Video News  
on Nov 6, 2023 at 3:28 pm

(BIVN) – With an ongoing drought on the island of Hawaii, the Hawaii County Department of Water Supply says it is closely monitoring its 23 public water systems, with a "special focus" placed on the South Kohala Water System.

<https://www.bigislandvideonews.com/2023/11/06/water-supply-closely-monitored-as-hawaii-ca-bbi-under-severe-drought/>

This is a map of Power Outages on the Big Island. This map wouldn't have been created if Power Outages were not a problem. <https://www.hawaiianelectric.com/safety-and-outages/power-outages/hawaii-island-outage-map>

Please, give Tax Breaks to all homes that provide solar and/or wind turbine to their homes to help with power issues on the island.

#### 19) "Hawaiian Electric is reporting that several large generators on the Big Island are experiencing a range of issues and may lead to the need for rolling outages if supply does not meet demand."

[https://www.reddit.com/r/BigIsland/comments/1bnuar3/hawaiian\\_electric\\_is\\_reporting\\_that\\_several\\_larger/?rdt=52660](https://www.reddit.com/r/BigIsland/comments/1bnuar3/hawaiian_electric_is_reporting_that_several_larger/?rdt=52660)

#### 20) "Hawaiian Electric asking Big Island customers to conserve power due to down generators

March 25, 2024 · 11:49 AM HST

24

According to the utility company, this is an usual situation as the large generators are experiencing mechanical problems resulting in a reduced output. The largest generator, an independent power producer that sells electricity to Hawaiian Electric, is offline with significant mechanical issues.

The plant generates 60 megawatts or nearly one-third of the typical peak demand of 180 megawatts on the island."

<https://bigislandnow.com/2024/03/25/hawaiian-electric-asking-big-island-customers-to-conserve-power-due-to-down-generators/>

All the articles above show that a resort development will further deplete and stress resources and infrastructure on an island already struggling. There are years of new development that have already been approved but not completed. It is not responsible or prudent to continue to develop this resort under these current conditions.

### **HISTORICAL AND CULTURAL SIGNIFICANCE:**

#### **The Law of the Splintered Paddle**

Hawaiian history tells us that young Kamehameha was once an aggressive chief. The story goes that the young chief even chased after two fishermen in a Puna fishing village. While pursuing them, his foot got stuck in a crevice, and one of the fishermen struck Kamehameha over the head with his paddle in defense, which splintered into pieces.

After the incident, Kamehameha recognized that it was wrong to misuse his power and learned compassion. Years later, Kamehameha declared a new law "Ke Kānāwai Māmalahoe" or "the Law of the Splintered Paddle." Meant to protect the innocent and vulnerable from unprovoked attacks, this law proclaimed that the defenseless, especially kupuna and keiki, be able to sleep safely on the side of the road, unharmed.

The law provided for the safety of non-warriors during wartime and became the first written law of the Kingdom of Hawai'i. After being added back in 1978, **the law is part of Hawai'i's State Constitution today.**

It is symbolic of servant leadership, reinforcing the importance of:

- Caring for and serving one's people
- Knowing and doing what is pono (right)
- Standing for the principle that leadership privilege is earned
- Taking kuleana (responsibility) for those we serve
- Doing so with compassion, love, and respect

**"We take that to mean that anyone who uses our roadways should be able to do so without fear of harm," explains Tina."**

**The Law of the Splintered Paddle is also on Kamehameha Schools website.** The historical value of this law should be enough to help make

Big Island roads become safer, and not adding to the traffic and issues of our already dangerous roads. <https://www.ksbe.edu/article/the-lessons-of-the-law-of-the-splintered-paddle-rmq-true-200-years-after-k>

**Does this EIS have any reports about how this development will safely add to the land fill on Big Island, and are there reports proving the island has enough water for another big resort, what about reports on how much power this resort will use because the Big Island already has serious resource and infrastructure issues.**

### **IN CONCLUSION**

The articles cited in this letter, many by some of the most esteemed scientists in the world, show with clarity that allowing this development is going to cause devastating, lasting, effects on the Eco-system in Keauhou Bay and "The Endangered Species Act of 1973 (ESA or "The Act"; 16 U.S.C. § 1531 et seq.) **is the primary law in the United States for protecting and conserving imperiled species.** Designed to protect critically imperiled species from extinction as a "consequence of economic growth and development untempered by adequate concern and conservation", the ESA was signed into law by President Richard Nixon on December 28, 1973. The Supreme Court of the United States described it as "the most comprehensive legislation for the preservation of endangered species enacted by any nation".<sup>[1]</sup> [Endangered Species Act of 1973 - Wikipedia](#)

This location, currently acting as a natural filter, is especially vulnerable due to having a golf course on one side and a natural treasure like Keauhou Bay on the other. This land **MUST** be conserved in order to keep Keauhou Bay safe for all the marine life to be able to live there for years to come.

In addition to the natural disaster this will cause, Hawai'i Island is already having serious infrastructure and resource issues that have yet to be solved. These issues **MUST** be solved before considering another resort development on Big Island.

We need to work in harmony with the land and the people before pushing forward with new developments, especially in sacred and special places like Keauhou Bay, the birthplace of King

Kamehameha III. Keauhou Bay is a small, fragile Eco-system, that is already pressured by boating, golfing, population issues, and hotels that are all around the entire bay.

The trees that currently stand on the land that is threatened to be developed clearly protects the marine life and environment from further damage. The location is NOT suitable for this kind of development for both environmental and infrastructure reasons.

The cost of what stands to be lost is far too high to allow this to happen.

Please save Keauhou Bay's marine life and help the island's resources by saying NO to a Bungalow Resort built by Kamehameha Schools.

Mahalo,

Curt & Ellen Winningham

## Cory Anonymous

Justify putting a road through Kamehameha III's birth site. Specify how cultural and historic preservation will be accomplished. Justify building more shops when there are empty shop spaces for lease nearby. Explain how erosion will be prevented after trees are cut down. Justify building a resort that will benefit a few while severely impacting the community by the loss of one of the last historically untouched areas on the island that has not been overdeveloped and has been beloved by locals and visitors for many decades.

**Subject:** REJECT Kamehameha Schools EIS for Keauhou Bay to become a Bungalow Resort.

**Categories:** Green Category

To whom it may concern,

Please read the scientific proof in this letter and REJECT Kamehameha Schools EIS for Keauhou Bay to become a Bungalow Resort.

Please state in your report that a Bungalow Resort WILL have a SERIOUS NEGATIVE IMPACT in Keauhou Bay as stated in all the different researched articles below.

Please, Do NOT risk polluting the water in Keauhou Bay by allowing Kamehameha Shoals to develop their bungalow resort project, because it is scientifically proven that developments pollute nearby waters constantly during development and after.

Please read these Scientific articles written by NOAA, National Oceanic and Atmospheric Administration and many other professional organizations, that have studied and proved that developments has ALWAYS polluted the water in every near coastal developed area.

**First, does this EIS have any kind of reports and studies on how the endangered species and marine life will handle the extra pollution due to development and golf course runoff because Keauhou Bay is their habitat and this development WILL be CHANGING an Entire Ecosystem.**

**In the Endangered Species Act of 1973 Under Section 2 (b), "to provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved." This would be Keauhou Bay.**

The Green Sea Turtle swims in Keauhou Bay weekly and the monk seal has also been seen swimming and resting in Keauhou Bay. Both of these marine animals are on the endangered species list.

The Green Sea Turtle is protected by more than one law. "All sea turtles in Hawai'i are protected by the Endangered Species Act (ESA) and additionally protected by Hawai'i Revised Statutes Chapter 195D (HRS) and Hawai'i Administrative Rules (HAR) 13-124." This information was taken from this site <https://dlnr.hawaii.gov/dar/species/sea-turtles/>

"Hawaiian monk seals are protected federally by the ESA and the Marine Mammal Protection Act (MMPA), as well as locally by Hawai'i Revised Statutes (HRS) Chapter 195D and Hawai'i Administrative Rules (HAR) 13-124." This was taken from <https://dlnr.hawaii.gov/dar/hawaiian-monk-seal/>

#### ENDANGERED SPECIES CONSERVATION

Endangered Species Act

#### **"Section 2. Findings, Purposes, and Policy**

**(4) The United States has pledged itself as a sovereign state in the international community to conserve to the extent practicable the various species of fish or wildlife and plants facing extinction, pursuant to—**

**(b) PURPOSES.—The purposes of this Act are to provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved, to provide a program for the conservation of such endangered species and threatened species, and to take such steps as may be appropriate to achieve the purposes of the treaties and conventions set forth in subsection (a) of this section.** " This was taken from <https://www.fisheries.noaa.gov/national/endangered-species-conservation/endangered-species-act>

Keaouhou Bay IS the monk seals and the green sea turtle's habitat and to allow a bungalow resort to be developed in Keaouhou Bay, that is these endangered species habitat, is to threaten these endangered species habit with golf course runoff pollution, as well as development pollution and hence, threaten their habitat, hence their lives, and goes completely against the Endangered Species Act of 1973.

The words in the Endangered Species Act states, "to conserve" and conserving the endangered species that enter into Keaouhou Bay would be to NOT DEVELOP A BUNGALOW RESORT because this would cause serious pollution runoff that would pollute the bay and endanger these already endangered species, the green sea turtle and the monk seal.

**Does this EIS have any reports on the endangered species that frequent Keaouhou Bay because this is their habitat.**

**Under the Conservation Program there should be research done on endangered species and their associated ecosystems, which is Keaouhou Bay. Because this bungalow resort development WILL FOREVER CHANGE THIS ECOSYSTEM.**

**"§195D-5 Conservation programs. (a) The department shall conduct research on indigenous aquatic life, wildlife, and land plants, and on endangered species and their associated ecosystems, and shall utilize the land acquisition and other authority vested in the department to carry out programs for the conservation, management, and protection of such species and their associated**

**ecosystems."** [https://www.capitol.hawaii.gov/hrs/current/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hrs/current/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm)

**Also, under this same Conservation program, "(2) Taking such action as may be necessary to ensure that actions authorized, funded, or carried out by them do not jeopardize the continued existence of threatened or endangered species."** [https://www.capitol.hawaii.gov/hrs/current/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hrs/current/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm)

Please see that developing Kamehameha Schools Bungalow Resort in Keaouhou Bay WILL threaten endangered species due to the unavoidable development and golf course pollution runoff that would happen a lot more often due to taking out the natural pollution filter, that is the trees and the land that is there now.

"The golf industry uses approximately 50 pesticide active ingredients, including chlorpyrifos—an insecticide that is banned for residential use by the EPA due to developmental hazards. Having to trim golf turf to low heights also makes it even more vulnerable to pests, which leads to more pesticide use." <https://rainorshinogolf.com/pages/the-environmental-impact-of-golf-courses>

These pesticides will be in the pollution runoff that will enter Keaouhou Bay more severely because of the bungalow resort development's pavement. As of right now the trees and land that this development wants to clear and develop into a bungalow resort is a Natural Pollution Filter.

Please read from Wikipedia "

**Most drains have a single large exit at their point of discharge (often covered by a grating) into a canal, river, lake, reservoir, sea or ocean. Other than catchbasins, typically there are no treatment facilities in the piping system."** [https://en.wikipedia.org/wiki/Storm\\_drain#:~:text=Most%20drains%20have%20a%20single%20discharge%20into%20individual%20dry%20wells](https://en.wikipedia.org/wiki/Storm_drain#:~:text=Most%20drains%20have%20a%20single%20discharge%20into%20individual%20dry%20wells)

It's the pavement that this development wants to put in that will cause a lot of pollution to runoff into Keaouhou Bay because this top land that is directly below the golf course (that they want to clear) soaks in the golf course pesticides, fertilizer, weed killer... and is the BEST AND ONLY PROTECTION POLLUTION FILTER Keaouhou Bay has from the golf course pollution.

Please see this site at <https://health.hawaii.gov/epo/files/2013/09/Stormwater-MS4-Presentation-HEE-7.15.14.pdf> because on page 2 it states from the Hawai'i government that Natural Ground Cover has 10% runoff, where has development has 55% runoff.

These trees and land are saving monk seals and green sea turtles habitat from the golf course pollution and this land **MUST BE PRESERVED and CONSERVED** as the natural protector for Keaouhou Bay hence, **for these endangered species habitat.**

**Under Section 2 (b) of the Endangered Species Act** - Keauhou Bay MUST BECOME a CONSERVATION AREA for these endangered species because it is their habitat as of today, and to allow a resort development to be built above this bay would threaten the very lives of these endangered species because it will allow golf course toxic pollution and development pollution to run into these species natural habitat, which is Keauhou Bay.

Keauhou Bay has trees and land just under the golf course (that Kamehameha Schools wants to clear for their bungalow resort) that protects Keauhou Bay from a lot of algae blooms because it soaks up pollution that is runoff from fertilizer, weed killer... in the golf course, and unfortunately when there is a severely heavy rain storm the land up on top of the bay has a greater runoff than normal from the golf course pollution, and pollution foam and algae blooms happen because of it.

If you clear this land, this kind of algae bloom will happen a lot more often and end up killing a lot of coral and marine life as stated in the many articles that will follow.

One of these articles is in the Global Coral Reef Alliance. They researched the reef before and after a golf course development, and even though this development is not a golf course development, it is still a development and it will also be located just under a golf course and this will allow the pollution from the golf course to come down to the bay a lot more often because the natural land that soaks up this pollution will be gone.

**Has this EIS done any kind of research about the algae blooms that happen after a serious storm because of the golf course runoff pollution?**

This information was taken from Global Coral Reef Alliance and it is an actual study on the how coral and marine life are affected before and after development. It's titled, "Golf courses kill coral reefs and fisheries: harmful algae blooms and disease cause by nutrient runoff from golf course development on Guana Cay, Abaco, Bahamas

Introduction: Bahamas coral reef deterioration

This study is thought the first ever to evaluate the health of coral reef ecosystems and fisheries before and after a golf course development..The vast majority of corals have died from a combination of factors including global warming, new diseases, land-based sources of pollution.. " <https://www.globalcoral.org/golf-courses-kill-coral-reefs-and-fisheries-harmful-algae-blooms-and-disease-caused-by-nutrient-runoff-from-golf-course-development-on-guana-cay-abaco-bahamas/>

If you allow a Bungalow Development in Keauhou Bay you WILL be agreeing to pollute this bay for years to come and COMPLETELY CHANGING KEAUHOU BAY'S ECOSYSTEM because the golf course runoff won't have the best protection which is the natural trees and land that can soak up the polluted water most of the year and polluted foam algae blooms will happen a lot more often.

Here is another study by the Coral Reef Alliance titled. "Golf course fertilizer runoff causes nutrient enrichment leading to harmful algae blooms on a Bahamian coral reef

...After construction new algae blooms appeared nearest the golf course green, smothering corals in adjacent reefs, along with sharply increased coral diseases..." <https://www.globalcoral.org/golf-course-fertilizer-runoff-causes-nutrient-enrichment-leading-to-harmful-algae-blooms-on-a-bahamian-coral-reef>

**Does this EIS have any studies or reports on the extra runoff pollution due to clearing land and adding pavement?**

This needs to be fully known because you will be changing an entire ecosystem to build a bungalow resort. Because it rains in Keauhou Bay many nights out of the year and the land they want to clear absorbs the golf course toxins so this bay is not as severely polluted as it will be with pavement and development, and when serious storms come Keauhou Bay won't stand a chance because the land can't keep ALL golf course pollutions out during this time and pavement won't even come close.

"If there are **toxic algal blooms**, like red tide, or man-made contaminants, like pesticides or detergents in the water, those toxins are contained within the bubbles of sea foam. When those bubbles pop, the toxins can become airborne and compromise the air that is breathed in that location." <https://oceanconservancy.org/blog/2023/03/31/what-sea-foam/>

**Federally Protected Green Sea Turtle Swim in Keauhou Bay Often**

The green sea turtle that is federally protected and can be seen in Keauhou Bay weekly. Please see the following article that states "POLLUTED RUNOFF IN HAWAII ENDANGERS GREEN SEA TURTLES

**Why does Hawaii have a runoff problem?**

Historically, in the tropics of Hawaii, precipitation was absorbed into the soil, according to the Clean Water Branch of Hawaii's Department of Health. Any potential pollution or contaminants on the ground surface would get pushed into the soil by the rain, and plant roots and microbes would help break down the pollution into less dangerous components. However, with urban and agricultural development, less and less of the pollution gets pulled into the soil, and more of it gets washed out into storm drains. From there, the pollutants make their way to streams, rivers and the ocean that surrounds Hawaii. According to the state agency, most of these contaminants are nutrients from fertilizer, bacteria from animal waste, oil, garbage and yard waste...

If polluted runoff reaches the ocean, it can wreak havoc on marine life, including endangered green sea turtles." Taken from <https://www.chemservice.com/news/polluted-runoff-in-hawaii-endangers-green-sea-turtles/>

If you allow this development it WILL POLLUTE Keauhou Bay as the above article (that was written in 2014 because runoff water from developments were polluting the ocean even

them) states, and this bay holds many sea creatures such as the protected green sea turtle, spotted eagle rays, manta rays, octopus, dolphins, fish, coral, monk seals that have rested on the dock before and...that will ALL be harmed by the more severe pollution runoff that WILL happen because developments can't help but pollute the water nearby.

Keauhou Bay is known as a RESTING AREA for the ENDANGERED MONK SEAL, and if a resort is allowed to be built, that will bring a lot more people down to Keauhou Bay and if a monk seal is resting they most likely will disturb the monk seal with their selfies because it is fully known this is now a SELFIE CULTURE.

**Has the EIS done any research on what a high population would do in such a small area, and what will happen to the endangered species that live there because it's their habitat and a high population will change this bay forever?**

This information is by NOAA Scientist. "Study shows selfie culture impacts how people behave when posting images of an endangered species on social media.

There's a seal on the beach! Let's go get a 'selfie'!" That must have been what nearly 18 percent of people on Instagram thought before approaching an endangered species. In a recent study, NOAA scientists used social media to monitor human activities around endangered Hawaiian monk seals. They discovered that human disturbance is more common than they thought." <https://www.fisheries.noaa.gov/feature-story/endangered-hawaiian-monk-seals-cry-foul-over-selfies>

NOAA clearly states a high population in a place where monk seals and sea turtles habitat can be a serious disturbance for these endangered species.

**Has the EIS done any research or reports on the Resources and Infrastructure it will need for a bungalow resort?**

There are many big housing developments currently under construction in Kailua Kona, Waikoloa Village, in Hilo, Puna, and there are Ocean View and Volcano housing construction projects as well. The entire Big Island has construction projects all over.

**Has Kamehameha Schools EIS done any kind of reports or surveys to know if Big Island has the Resources and Infrastructures for their resort development?**

Because, "Hotel waste management refers to all the practices and processes that hotels implement to handle and dispose of the multiple types of waste generated on their premises.

Worldwide, hotels produce almost 300,000 tonnes of waste each year." <https://www.homebiogas.com/blog/hotels-waste-management/>

As of now, the Big Island's Resources and Infrastructure are having serious negative issues and many more developments that have been approved are not even completed as of yet,

which means these resources and infrastructures will be taxed even more in the near future.

Please read the below articles that prove that Big Island doesn't have the resources or infrastructure for a Bungalow Resort Development because it will increase the need for resources and infrastructure that the island doesn't have as of today.

**Big Island Now poll No. 27 results: More than one solution needed to help extend life of West Hawai'i landfill**

September 17, 2023

The West Hawai'i Sanitary Landfill, the only remaining landfill on the Big Island, is forecast to reach capacity within the next 20 to 25 years. (File photo)

Of the 900 total votes in our most recent poll, which asked people to weigh in on the best way to extend the life of the Big Island's [only remaining landfill](#), all of the above was the most popular answer, garnering 274 votes, or 30%.

The West Hawai'i landfill became the island's only one after the Hilo Landfill closed three years ago. It only has about 20 to 25 years left before it can no longer be used to store rubbish.

<https://bigislandnow.com/2023/09/17/big-island-now-poll-no-27-results-more-than-one-solution-needed-to-help-extend-life-of-west-hawaii-landfill/>

**A county commission drafts ordinance aiming to ban recyclables at West Hawai'i landfill**

By [Megan Moseley](#) September 6, 2023

Hawai'i County's Environmental Management Commission is developing an ordinance that aims to prohibit the amount of recyclable materials ending up in the island's only working landfill.

During a commission meeting on July 26, Ramzi Mansour, Hawai'i County Director of Environmental Management, told commissioners the West Hawai'i Sanitary Landfill only has 20 to 25 years left before it reaches capacity.

With the Hilo Landfill permanently closed in 2020, the clock is ticking for the island's sole dump. Commission chairperson Georjean Adams said it's a good time to start looking into solutions.

Adams said the proposed ordinance is in its early stages and is more about getting the conversation started about how to prevent unnecessary, or recyclable items — green

waste, metals, plastics, paper, paperboard and glass — from ending up in the rubbish dump, located off Queen Ka'ahumanu Highway in Waikōloa.

"Trying to site a new landfill is close to impossible," Adams said. "So what are we going to do? So I was looking around, and the commission agreed, to look deeply into the idea of diverting the recyclables out and at least slow the filling up of the landfill."

The proposed ordinance refers to the 2019 Integrated Solid Waste Management Plan that commits the county to "divert, as much as feasible, commercial and municipal solid waste, including but not limited to green waste, metals, plastics, paper, paperboard, and glass to help achieve goals related to climate resiliency, renewable energy, sustainable agriculture, and zero waste."

<https://bigislandnow.com/2023/09/06/new-draft-ordinance-aims-to-ban-recyclables-at-west-hawaii-landfill/>

#### Time's Up For Landfills

**'Gentle' demolition strategies can help preserve resources**

PAULA BENDER April 2, 2024

As Hawai'i government officials grapple with the challenge of limited landfill space statewide, federal restrictions set in place by the Environmental Protection Agency are ruling out possible locations that were once considered for new landfills.

Hawaii Act 73 states landfills must be located at least half a mile from residential areas; are prohibited from being located in areas with heavy rain and steep slopes, as well as agricultural and/or conservation lands; above aquifers; 300 feet beyond streams; and 1,000 feet beyond the ocean.

New landfills are also now prohibited from being created in tsunami inundation zones, 100-year flood zones and wetlands. There are also concerns that landfills near airports will attract birds, resulting in damage to aircraft and fatalities among pilots and passengers.

The City & County of Honolulu is in the process of identifying its next landfill and it doesn't want one any bigger or more active than absolutely necessary.

<https://buildingindustryhawaii.com/2024/04/times-up-for-landfills/>

**Drought Conditions On Hawai'i Island Prompt Water Supply Message**

by Big Island Video News  
on Oct 5, 2023 at 3:59 pm

**(BIVN)** – With moderate to severe drought conditions being reported across Hawai'i island, local water department officials issued a statement this week on the need for customers to use drinking water wisely.

Most of Hawai'i island is under "Moderate Drought" conditions, according to the latest information [from the U.S. Drought Monitor](#). There is an area under "Abnormally Dry" conditions in South Kona, however there are other, small pockets on the Big Island that are under "Severe Drought". There is even a small spot of "Extreme Drought" in the South Point area of Ka'ū.

"The National Weather Service's forecast calls for the existing drought conditions to expand over the entire island and intensify over the upcoming months due to the ongoing El Niño event," reported the Hawai'i County Department of Water Supply. "Peak dryness is expected to occur from around January through February 2024. The El Niño event will likely persist well into spring 2024."

From a Water Supply news release:

<https://www.bigislandvideonews.com/2023/10/05/drought-conditions-on-hawaii%CA%BB-i-island-prompt-water-supply-message/>

U.S.

**Hawaii is "on the verge of a greater catastrophe," locals say, as water crisis continues**

By [Li Cohen](#)

Updated on: April 11, 2024 / 8:23 AM EDT / CBS News

And recent years have seen compounding problems: less rain, leading to [significant droughts](#), and repeated jet fuel leaks and PFAS chemical spills contaminating water systems. All of this significantly limits available water use for locals, many of whom say tourism is only worsening the situation. Just months ago, the [world's largest surfing wave pool](#) opened up on the island — filled with freshwater.

"They're not using it to drink or to support life, they're using it to make money. They're commodifying it," said Healani Sonoda-Pale, who is Native Hawaiian and a member of advocacy group O'ahu Water Protectors. " ... We are on the verge of a greater catastrophe."

"We are in a [water crisis](#), that has to be made very clear," Wayne Tanaka, director of Sierra Club of Hawai'i, told CBS News, saying that if the reasons for this crisis aren't soon addressed, "**We may come to a point where we have to decide ... who gets water and who doesn't.**"

<https://www.cbsnews.com/news/hawaii-water-crisis-climate-change/>

Because this is an island parts need to be shipped and the power plant has generators that are not working and because of this, and other reasons, the Big Island needs to seriously conserve power so that everyone will have power, and if this problem of shipping parts can happen once it can happen again.

#### UTILITIES

UPDATE: HECO asks for continued energy conservation

BY SPECTRUM NEWS STAFF HAWAII ISLAND

UPDATED 6:28 PM ET APR. 16, 2024 PUBLISHED 9:05 AM ET APR. 15, 2024

HILO, Hawaii — Hawaiian Electric continues to urge Hawaii Island customers to reduce their electricity use to prevent the need for rolling outages.

In a news release Tuesday afternoon, the utility stated that Monday saw a reduced demand of approximately 5 megawatts. That, combined with increased wind and solar battery storage prevented the need for rolling blackouts on Monday. HECO credited conservation efforts, particularly those by large businesses and government customers, for the reduction in electricity demand.

"We're grateful for our customers' efforts to conserve electricity, especially between 5 to 9 p.m., when electricity use is highest, because it does make a difference," said Hawaiian Electric spokesperson Kristen Okinaka. "By working together, we're helping to ensure that enough power can be available for all customers and prevent or minimize the impacts of rolling outages."

Hawaiian Electric announced Monday afternoon that it may initiate rolling outages in parts of Hawaii Island because of the unavailability of several generators and lower than normal wind and solar resources.

In a news release, the utility said that outages could start as early as 6:30 p.m. and rotate around the island for 30-minute intervals. The impacted areas and the timing of the outages will be based on wind generation and the amount of electric demand that needs to be reduced. Individuals who are dependent on electrically powered life support medical equipment are advised to arrange for a backup power supply.

The outages are being done to prevent power loss to even more customers, who are all being asked to conserve electricity throughout the month.

<https://spectrumlocalnews.com/hi/hawaii/news/2024/04/15/heco-customers-on-hawaii-island-asked-to-conserve-power>

**Big power supply problems continue to plague Hawaii island**

Apr 8, 2024

The company has been facing an unusual situation with mechanical problems at three of the island's five largest power plants while part of the largest plant undergoes an annual overhaul. All four of these affected power plants are owned by the utility or an affiliate of its parent company.

**Also contributing to the trouble is lower output from a geothermal plant, which has the third-largest generation capacity on the island and is owned by an independent operator.**

"This is an unusual situation, driven mainly by the unavailability of several large generators that have experienced mechanical problems, are at reduced output, or are undergoing maintenance," Hawaiian Electric said in its March 25 announcement asking customers to use less electricity, especially on weekdays from 5 to 9 p.m.

The company explained that it faces an "extremely tight" supply of power at peak use periods, especially when production from wind, solar and hydroelectric facilities is lower than normal. Those sources of variable, renewable energy can supply up to 15 % of electricity needs on the island.

"Without enough supply to meet electricity demand, the company may initiate rolling outages of up to an hour around the island," the March 25 announcement said.

<https://energycentral.com/news/big-power-supply-problems-continue-plague-hawaii-island>

Hawaii Island customers urged to reduce electricity use through April

BY SARAH YAMANAKA HILO PUBLISHED 9:00 AM ET MAR. 26, 2024

#### What You Need To Know

**-Hawaii Island customers may see alerts asking them to conserve energy, especially on days when there isn't much wind that generates up to 15% of electricity**

-When alerts are issued, Hawaiian Electric is asking customers to take immediate action to minimize electricity use

-Even when no alerts are issued, customers — including hotels and large retailers — are urged to reduce electricity use as much as possible, especially between 5 and 9 p.m. on weekdays

-If there is not enough electricity to meet demand, Hawaiian Electric may initiate rolling outages of up to an hour around the island

<https://spectrumlocalnews.com/hi/hawaii/news/2024/03/25/hawaii-island-customers-urged-to-reduce-electricity-use-through-april>

**Does this EIS have any detailed traffic studies for the increase in cars that will be added to this already severely traffic area they want to build their 150 room bungalow resort in? Have they done any studies on the pollution these cars WILL have in Keaouhu Bay?**

**Because this Bungalow Resort could have over 150 extra cars and over 300 or more extra people in and out of Keaouhu Bay, what traffic and increased population studies have they done? Because they will have employees with cars, guests with cars, visitors with cars and this would range at times at least over 200 cars or more, parking above Keaouhu Bay causing serious car population because of all these added cars right next to the bay.**

Article below is from NOAA.

**What is the biggest source of pollution in the ocean?**

**Most ocean pollution begins on land.**

"Millions of motor vehicle engines drop small amounts of oil each day onto roads and parking lots. Much of this, too, makes its way to the sea.

Some water pollution actually starts as air pollution, which settles into waterways and oceans. Dirt can be a pollutant. Top soil or silt from fields or **construction sites can run off** into waterways, harming fish and wildlife habitats." <https://oceanservice.noaa.gov/facts/pollution.html#:~:text=Millions%20of%20motor%20vehicle%20engines,Dirt%20can%20be%20a%20pollutant.>

Land-Based Runoff Remains Top Source of Oil in the Ocean, Says New Report Oil in the Sea: Inputs, Fates, and Effects

**News Release September 28, 2022**

WASHINGTON — Oil in runoff, primarily from cities and vehicles, is the top source of oil entering the ocean, says a [new report](#) from the National Academies of Sciences, Engineering, and Medicine. In North American waters, estimated ocean oil pollution from land-based runoff is up to 20 times higher than it was 20 years ago, and oil spills, natural oil seeps, and discharge from oil and gas operations remain major sources of pollution. The report recommends actions that government and others should take to minimize oil pollution, and calls for sustained research funding to better understand how oil reaches and affects ocean environments. <https://www.nationalacademies.org/news/2002/05/oil-in-the-sea-inputs-fates-and-effects#:~:text=WASHINGTON%20%2D%20early%2085%20percent,pipeline%20sills%2C%20savs%20a%20new>

The Impact Of Stormwater – Car Emissions

"Car emissions are not limited to exhaust fumes that contribute to air pollution. They can also leak automotive fluid and release heavy metals that can contribute to stormwater pollution, contaminating local waterways." <https://www.stormwatershepherds.org.au/blog/the-impact-of-stormwater-car-emissions/>

**Does this EIS have any reports on the noise pollution that will happen and what it could do to marine life in Keaouhu Bay during development?**

Because if you allow this Bungalow Resort to be developed you will increase constant noise in this bay for years to come and, "Noise Pollution Research shows that underwater noise from construction, shipping and naval vessels significantly impacts the natural behaviour of cetaceans and many other marine species. This can be seen when mass beaching events occur or breeding success is diminished."

The above information was taken from the Ocean Conservation Trust <https://oceanconservationtrust.org/ocean-advocacy/think-ocean/ways-to-think-ocean/>

[OCEANS POLLUTION](#)

How Does Noise Pollution Harm Marine Species?

"However, over the past few decades, noise pollution in the marine environment has increased dramatically and is threatening the natural soundscape of the marine environment. Ships, seismic surveys, explosions, construction, and sonar devices have made the once peaceful environment into a loud, chaotic home which is extremely damaging for marine wildlife. This type of pollution is often overlooked in comparison to others but its impacts are now being documented across all types of marine ecosystems." <https://earth.org/noise-pollution-in-the-ocean/>

If you allow this resort the amount of people in this bay will fully increase and, "Hawaii's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally, management of the resource should balance the needs of different user groups, but the welfare of the marine environment on which its inhabitants depend must be the most important consideration." This was taken from Hawaii's own Division of Aquatic Resources <https://dlnr.hawaii.gov/dar/marine-managed-areas/hawaii-marine-life-conservation-districts/#:~:text=Snorkeling%20and%20SCUBA%20diving%20are,effect%20on%20nearshore%20fish%20populations.>

**What is ocean noise?**

"Ocean noise refers to sounds made by human activities that can **interfere with or obscure** the ability of marine animals to **hear natural sounds in the ocean**.

Many marine organisms rely on their ability to hear for their survival. Sound is a highly efficient means of communication underwater and is the primary way that many marine species gather and understand information about their environment. Many aquatic animals use sound to find prey, locate mates and offspring, avoid predators, guide their navigation and locate habitat, as well as to listen and communicate with each other.

Over the last century, human activities such as shipping, recreational boating, and energy exploration have increased along our coasts, offshore, and deep ocean environments. Noise from these activities can travel long distances underwater, leading to increases and changes in ocean noise levels in many coastal and offshore habitats.

These rising noise levels can negatively impact ocean animals and ecosystems. Higher noise levels can reduce the ability of animals to communicate with potential mates, other group members, their offspring, or feeding partners. Noise can also reduce an ocean animal's ability to hear environmental cues that are vital for survival, including those key to avoiding predators, finding food, and navigating to preferred habitats."

<https://oceanservice.noaa.gov/facts/ocean-noise.html>

**The Chesapeake Bay has a foundation that is trying to save it due to runoff pollution that was caused by developments, and the Chesapeake Bay is a lot bigger than Keauhou Bay.** If it's being drastically hurt by runoff water from developments, Keauhou Bay waters won't stand a chance if development above the bay is allowed because this bay is very small.

This Article is by the Chesapeake Bay Foundation, Saving a National Treasure states, "**...runoff is a significant source of harmful nitrogen pollution that continues to grow ...**

As rainwater and snowmelt run off our streets, parking lots, lawns, and other surfaces, they pick up pet waste, pesticides, fertilizer, oil, and other contaminants. If the draining water doesn't evaporate or soak into the ground where it can be filtered, it flushes straight into local creeks, rivers, and the Chesapeake Bay, adversely affecting water quality and aquatic life.

**Only 10 to 20 percent of rain that falls in forests, fields, and other natural areas runs off, with the rest absorbed by soil and plants, where it is filtered before reaching aquifers or local waterways. (Right now Keauhou Bay has a lot of trees and is very natural, this is what helps stop runoff.) By contrast, close to 100 percent of the rain that falls on concrete and other hard surfaces produces runoff. One inch of rain falling on an acre of hardened surface produces 27,000 gallons of runoff.**

Stormwater runoff pollution threatens Chesapeake Bay and it's rivers and streams....Polluted runoff is one of the most harmful sources of pollution to the Bay and its waters. And much of it starts right in the urban and suburban neighborhoods where we

live." <https://www.cbf.org/issues/polluted-runoff/index.html#:~:text=Besides%20carrying%20pollutants%20that%20harm,them%20are%20placed%20in%20eopardy.>

**If that is what runoff is doing to the Chesapeake Bay, the effects of runoff will be even more devastating to Keauhou Bay because it is so much smaller than the Chesapeake Bay.**

**Are there any reports in this EIS about what the impact to the coral, marine life, plankton especially zooplankton will be because of this development?**

**Because the studies below show developments kill coral, marine life and zooplankton are kill and negatively affected as well, and zooplankton is the manta ray food. Manta rays are in this bay every night to eat zooplankton and sometimes they are in this bay during the day time too.**

If you allow this bay to be development you will be allowing all types of marine life to die and there is NO WAY to stop this from happening because polluted runoff rain water from developments can't be fully stopped. It is what has happened in ALL coastal developments.

Please read the Scientific proof below.

It's Been Proven Developments Severely Pollute Nearby Waters

Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Coral Bleaching is occurring more frequently in Hawai'i. Across the Hawaiian Archipelago, coral bleaching has increased in frequency and severity since 1996. The last major bleaching event in 2014-2015 had catastrophic Impacts state-wide..."

This was the third major bleaching episode in Hawai'i over the last 6 years. The frequency of these events is unprecedented in the archipelago. NOAA scientists and partners have determined that the key drivers of the bleaching were environmental factors (such as heat stress, depth, and surface light) and human impacts (sewage effluent and urban runoff). "<https://www.fisheries.noaa.gov/feature-story/cautionary-tale-2019-coral-bleaching-event-hawaii#:~:text=Coral%20bleaching%20is%20occurring%20more,hard%20catastrophic%20impacts%20state%20wide.>

This article is by the Coral Reef Alliance here in Hawai'i. "An ecosystem under threat Hawai'i's reefs face major global and local threats including climate change, overfishing, and sediment and nutrient pollution caused by sewage and stormwater runoff..."

When it rains, flash floods carry stormwater and large amounts of sediment downstream to the ocean. Just offshore, once-thriving coral reefs are now struggling to survive." <https://coral.org/en/where-we-work/hawaiian->

[islands/#:~:text=Hawai%CA%BBi,s%20reefs%20face%20major%20lobal,into%20Hawai%CA%BBi,s%20waterways%20every%20day.](#)

This article states that runoff is a leading source in coral degradation. Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Land-based sources of pollution are a leading cause of coral reef degradation in the Main Hawaiian Islands. Water quality is impacted by urban runoff, failing sewage systems, unpaved roads, farms, land clearing, and development." [https://www.coris.noaa.gov/monitoring/status\\_report/docs/Hawaii\\_status\\_report\\_forweb.pdf](https://www.coris.noaa.gov/monitoring/status_report/docs/Hawaii_status_report_forweb.pdf)

This article is a Research Article by PLOS ONE and their motto is, "We're driving change in research integrity and publication ethics." This is some of their article information, "Coral taxonomy and local stressors drive bleaching prevalence across the Hawaiian Archipelago in 2019..."

We found little evidence for acclimation by reefs to thermal stress in the main Hawaiian Islands. **Moreover, our findings illustrate how detrimental effects of local anthropogenic stressors, such as tourism and urban run-off, may be exacerbated under high thermal stress.** In light of the forecasted increase in severity and frequency of bleaching events, future mitigation of both local and global stressors is a high priority for the future of corals in Hawaii!" <https://journals.plos.org/plosone/article?id=10.1371/journal.pone.0269068>

The coral all over Hawai'i has had extremely high mortality rates, due to developments near ocean areas throughout the years, and development in Keauhou Bay will be devastating to the coral, reef fish, and all Aquatic Life there, and even the Manta Rays that go there to eat zooplankton from the Manta Ray tours at night, and they eat it during the day in that area as well because they need to eat 5 times their body weight in zooplankton daily. Please see the cited information below.

**"SO, HOW MUCH PLANKTON DOES YOUR AVERAGE MANTA RAY EAT? 19,200,000. Nineteen million two hundred thousand, give or take a few thousand.**

That is the number of plankton pieces a ten-foot manta ray must consume weekly to stay alive."

The above information was taken from Manta Ray Advocates <https://mantarayadvocates.com/how-much-plankton-do-mantas-eat/>

**Coral reefs are known to be highly negatively impacted by developments because, impacts from land-based sources of pollution including coastal development,...can impede coral growth and reproduction, disrupt overall ecological function, and cause disease and mortality in sensitive species."** <https://oceanservice.noaa.gov/facts/coral-pollution.html#:~:text=Impacts%20from%20land%20based%20sources,and%20mortality%20in%20sensitive%20species.>

Article by Environmental Evidence, "Coastal development and runoff lead to sedimentation, which directly impacts coral recruitment, growth, mortality, and ecosystem services that coral reefs

provide." <https://environmentalevidencejournal.biomedcentral.com/articles/10.1186/s13750-020-00200-0>  
0#:~:text=Coastal%20development%20and%20runoff%20lead,services%20that%20coral%20reefs%20provide.

Developments can't fully stop polluting because runoff is from rain during development and after. Article by NOAA, "One of the most significant threats to reefs is pollution. Land-based runoff and pollution discharges can result from dredging, coastal development...This runoff may contain sediments, nutrients, chemicals, insecticides, oil and debris.

When some pollutants enter the water, nutrient levels can increase, promoting the rapid growth of algae and other organisms that can smother coral." [https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,organisms%20that%20can%20smother%20corals.](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,organisms%20that%20can%20smother%20corals.)

Another article by NOAA, "Coral reefs also are affected by leaking fuels, anti-fouling paints and coatings, and other chemicals that enter the water... (All of those are show up in every development project)

Among the most damaging pollutants on coral reefs is sediment, which can remain suspended in the water or be deposited on the coral surface (i.e., turbidity and sedimentation, respectively) and can contain toxicants, pathogens, and nutrients, all of which impact coral growth, recruitment, and survival" [https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days.](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days.)

It's Been Proven Resort Developments KILL Marine Life

The manta rays go to Keauhou Bay every night to eat zooplankton and if you allow this development that WILL have runoff water, you WILL be causing zooplankton to be seriously affected because as this article by MarinBIO states, "Zooplankton are also sensitive to their environment and like phytoplankton—a change in zooplankton concentration can indicate a subtle environmental change. Zooplankton are highly responsive to nutrient levels, temperatures, pollution, food that is not nutritious, levels of light, and increases in predation. As well as providing an essential link in the marine food chain (which is an understatement), the diversity of species, amount of biomass and abundance of zooplankton communities can be used to determine the health of an ecosystem..."

Here is another article that proves runoff from development in this area will hurt and kill plankton, by **Frontiers in Marine Science, "Effects of an experimental terrestrial runoff on the components of the plankton food web in a Mediterranean coastal**

lagoon The main result observed in the present study was that the effects of the simulated terrestrial runoff spread along the plankton food web, significantly affecting all trophic levels of the natural plankton community studied. This occurred in a relatively short time considering that the experiment lasted less than three weeks. The lower light availability in the terrestrial runoff treatment compared to the control resulted in a net decrease of approximately one-third of Chl-*a* concentration and phytoplankton abundance over the entire experiment." <https://www.frontiersin.org/journals/marine-science/articles/10.3389/fmars.2023.1200757/full>

"Zooplankton are also affected by levels of pH, heavy metals, calcium, and aluminum. Nutrients like nitrogen and phosphorus will affect the prey of zooplankton (like algae, protozoa and bacteria), indirectly affecting zooplankton survival. Scientists are still putting together pieces of the zooplankton puzzle. Some questions include how nutrient levels found in algae can influence the growth and behavior of zooplankton. Another question important to marine and human life is how toxins and pollution will affect this crucial link in the food chain" This information is in article by MarineBIO. <https://www.marinebio.org/creatures/zooplankton/#:~:text=Zooplankton%20are%20a%20sensitive%20to,light%20and%20increases%20in%20predation.>

Here is a research article by Environmental Research Laboratory, United States Environmental Protection Agency that discusses, "**Toxic Effects of Pollutants on Plankton** There are four main sources of aquatic pollution: industrial wastes, municipal wastes, agricultural run-off, and accidental spillage. Non-point sources, such as automobile exhausts, add appreciable amounts of pollutants to air that may enter aquatic systems in rainfall or dry fall-out. These sources add pesticides, heavy metals, oil, petroleum products, and a large number of organic and inorganic compounds to water. Lakes and oceans serve as sinks for many pollutants. Plankton comprise a large portion of the living matter in natural waters and function in biogeochemical cycles. They are affected by pollutants, transfer them to sediments and other organisms, and function in their biological transformation." [https://scope.dge.carnegiescience.edu/SCOPE\\_12/SCOPE\\_12\\_3.6\\_chapter12\\_257-274.pdf](https://scope.dge.carnegiescience.edu/SCOPE_12/SCOPE_12_3.6_chapter12_257-274.pdf)

The above articles show that development of Keauhou Bay WILL hurt plankton life in the area because of the pollutant runoff that WILL happen during the development and after, and if this happens this could cause the manta ray food source to disappear and that will be devastating for the manta rays eating habits, as well as cause the manta rays to not show up in this area, in turn taking away many lively hoods from locals on the island that depend on the manta ray tour for their income.

**Does this EIS have any reports on their resort adding to the population increase that happens during IRONMAN?**

"On average, each Ironman racer brings three people with them to the Big Island. Counting members of the media, VIPs who come from around the globe to watch and the triathlons

partners, there likely be more than 6,300 people descending on Kona." <https://bigislandnow.com/2023/10/07/ironman-2023-in-kona-shines-spotlight-on-some-of-best-women-triathletes-in-the-world/>

And "Resident dissatisfaction with tourists is multifaceted: The overwhelming majority (92%) of locals felt visitors were not educated enough on protecting Hawaii's natural environment and local resources; other factors include the impact of the vacation rental industry and ignorance of the residents' quality of life." <https://www.triathlete.com/culture/news/kona-locals-ask-ironman-visitors-for-respect/>

**Where are the EIS reports on human density because this resort will increase this area in population by hundreds. Below are reports that human population destroy coral reefs.**

"The number of people living on the coasts has rapidly increased in recent decades, causing significant development of coastal areas. Coastal development can negatively impact the ocean through the destruction of coastal marine habitat and through run-off of sediments and pollution.

-Coastal development involves activities such as the creation of harbors, stabilization of shorelines, and aquaculture that involve the **destruction of sensitive marine habitats** such as mangroves, coral reefs, and seagrass beds.

-Coastal development may cause the run-off of **sediments** into coastal habitats, which can smother corals or seaweeds and reduce the amount of light available for photosynthesis. Losses of primary producers and important habitat-forming species such as corals can negatively impact entire food webs."

The above information was taken from the Education Development Center, INC, from their Coastal Development page called Ocean Tracks <https://oceantracks.org/library/human-impacts/coastal-development#:~:text=Coastal%20development%20may%20cause%20the,negatively%20impact%20entire%20food%20webs.>

There is nothing Kamehameha Schools can do to their development that can stop the guests of this possible Bungalow Resort from going to Keauhou Bay. Human traffic WILL seriously increase if this resort is allowed to be built and the marine life will be negatively affected by it. Marine life will suffer from this development as stated in this letter in many different scientific reported articles.

If you allow this resort the amount of people in this bay will fully increase and, "Hawaii's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally, management of the resource should balance the needs of different user groups, but the welfare of the marine environment on which its inhabitants

depend must be the most important consideration." This was taken from Hawaii's own Division of Aquatic Resources <https://dlnr.hawaii.gov/dar/marine-managed-areas/hawaii-marine-life-conservation-districts/#~:text=Snorkeling%20and%20SCUBA%20diving%20are,effect%20on%20near shore%20fish%20populations.>

It's Been Proven an Increase in Human Population Destroys Coral Reefs

If a Bungalow Resort is allowed to be built in Keauhou Bay, it will force bring a serious increase in human traffic. "Easily visible trends in human population dynamics combined with well-established and tested ecological theory give a clear, intuitive, yet quantifiable guide to the severity of survival challenges faced by coral reefs. Management challenges and required actions can be clearly shown and, contrary to frequent claims, no scientific ambiguity exists with regards to the serious threat posed to coral reefs by humankind's continued numerical increase." This is in the article by National Library of Medicine National center for Biotechnology Information PubMed. <https://pubmed.ncbi.nlm.nih.gov/33293007/#:~:text=Denser%20coastal%20populations%20and%20greater,0%20more%20runoff%20and%20siltation.>

This article is by ABC NEWS, "This is how tourists are destroying coral reefs in Hawaii The less people at a certain site, the more coral there are, the research found. The millions of tourists who flock to the shores of Hawaii every year are wreaking havoc on its natural environment -- especially the coral reefs, which are at risk all over the world, a new study said. The most popular coral reefs on the Hawaiian islands are likely being degraded by the very visitors they attract, according to a study published Monday in Nature Sustainability." <https://abcnews.go.com/US/hawaiian-coral-reefs-degrading-popular-tourist-sites-scientists/story?id=96308858#:~:text=The%20less%20people%20at%20there%20are%20the%20the%20research%20found.&text=The%20millions%20of%20tourists%20who,world%20the%20new%20study%20said.>

If you allow this resort to be developed, you will be destroying the coral reefs in the bay because this bay is extremely small and used by a lot of locals already for fishing, canoeing, swimming, snorkeling, paddle boarding, surfing, boating...it can't afford more use by many thousands more people yearly.

If you allow Keauhou Bay to be development there will be a higher population in the bay and that will hurt the coral in the bay as well, because it's known that, "Denser coastal populations and greater wealth will lead to reef degradation by coastal construction. Denser populations inland will lead to more runoff and siltation. Effects of human perturbations can be explored with metapopulation theory since they translate to increases in patch-mortality and decreases in patch-colonization (= regeneration). All such changes will result in a habitat with overall fewer settled patches, so fewer live reefs." This information was taken from Science

Direct <https://www.sciencedirect.com/science/article/abs/pii/S00065288120300328#:~:>

[ex=EaQuaculture%20will%20allviate%20some%20fishing,0%20more%20runoff%20and%20siltation.](https://www.abcnews.com/US/hawaiian-coral-reefs-degrading-popular-tourist-sites-scientists/story?id=96308858#:~:text=The%20less%20people%20at%20there%20are%20the%20the%20research%20found.&text=The%20millions%20of%20tourists%20who,world%20the%20new%20study%20said.)

Another article by Nature Sustainability, "Coral reefs and coastal tourism in Hawaii Coral reefs are popular for their vibrant biodiversity. By combining web-scraped Instagram data from tourists and high-resolution live coral cover maps in Hawaii, we find that, regionally, coral reefs both attract and suffer from coastal tourism. Higher live coral cover attracts reef visitors, but that visitation contributes to subsequent reef degradation. Such feedback loops threaten the highest quality reefs, highlighting both their economic value and the need for effective conservation management." [https://www.nature.com/articles/s41893-022-01021-4.pdf?sharing\\_token=wsakeONhalhliAnWAq453tRgNOIAWle9mR3ZcTv0PvGzA5Jc\\_H00Lz4HNIP3ASnhcgKRv6\\_vfKLPw49d4mbY0xSg3Y1Mg0IGBZsapdGUH701SLbu9x5Pr3xEd4Kxl4T0silvg01aZ7ZRT3Hbraxp0d1d2AoNlSmW5uxB7HEDdJl80G1px7L1TWdGXvFKIIZYeNdcJf3Sw\\_dnaJg5ZlhcqPBDImmaH15yqT50%3D&tracking\\_referrer=abcnews.go.com](https://www.nature.com/articles/s41893-022-01021-4.pdf?sharing_token=wsakeONhalhliAnWAq453tRgNOIAWle9mR3ZcTv0PvGzA5Jc_H00Lz4HNIP3ASnhcgKRv6_vfKLPw49d4mbY0xSg3Y1Mg0IGBZsapdGUH701SLbu9x5Pr3xEd4Kxl4T0silvg01aZ7ZRT3Hbraxp0d1d2AoNlSmW5uxB7HEDdJl80G1px7L1TWdGXvFKIIZYeNdcJf3Sw_dnaJg5ZlhcqPBDImmaH15yqT50%3D&tracking_referrer=abcnews.go.com)

#### A Resort Development WILL Increase Traffic on Already Severely Trafficed Roads.

**Where are the traffic study reports for this EIS because with 150 rooms comes over 150 cars because you must include employee cars, as well as visitors for the people staying in the resort, and what if the guests have more than one car?**

The Big Island already has a serious problem with traffic on the island because of a lack of infrastructure that in places a bigger road can't be built due to cliffs on one side and homes on the other side.

Allowing another resort to be developed will bring more cars that will lead to a lot more traffic that the island can not handle, please read the articles below by different NEWS companies that prove this point.

This NEWS article by Hawai'i News Now, "Report shows alarming surge in Hawaii Island traffic deaths The Hawaii Police Department's Traffic Services Section released a new report showing a dramatic increase in both major crashes and fatal accidents from last year.

The startling statistics show a dramatic increase in the number of year-over-year traffic fatalities on the Island of Hawaii, revealing major crashes are up more than 12% and traffic fatalities are up more than 100%." Please watch their video on their link below because it is a professional report on Big Island traffic problems. <https://www.hawaiinewsnow.com/2024/05/18/new-report-shows-hawaii-island-traffic-fatalities-are-up-over-100-last-year/>

With more tourists comes more accidents, more traffic, and more traffic deaths. Please read this article by KHON 2 NEWS, "Hawaii Island has most traffic fatalities in state, This time last year Hawaii Island was at five traffic deaths, as of April 1, 2024, they're at 14.

Seven of which happened in the last two weeks...

Chief Moszkowicz said the police force is small compared to the size of the island and response times can take 15 to 20 minutes.

"We don't have the resources like in the small space of Oahu where you can saturate an area to control speeding, that just doesn't exist here," he added." <https://www.khon2.com/local-news/7-traffic-fatalities-for-hawaii-island-in-march/>

The traffic on Big Island has increased drastically and safety issues and infrastructure needs to be addressed before adding more resort developments.

Please read this article because what it says about Oahu is the same for Big Island. The traffic problems they talk about are the same issues here on Big Island, and this article also gives one Big Island example, "On the Big Island, the mayor had to issue an emergency order shutting down Waipio Valley Road due to overuse and poor prior maintenance." This is happening all over Big Island. <https://www.civilbeat.org/2024/02/angry-over-island-traffic-iams-lets-talk-about-solutions/>

Please, watch the NEWS video below on aerial footage in Hilo because the footage shown is the same thing that is happening on Alii Drive and Queen K HWY, and for the same reasons, all of these roads only have 2 lanes.

There are 2 developments already on Alii Dr. being built as of today, and more are scheduled for this road in the near future, and Alii Dr. and Queen K HWY are the roads Kamehameha Schools Bungalow Resort will be using if approved and they are already seriously congested.

These roads have the exact same traffic congestion as Hilo, with the exact same problems, traffic is extremely slow because of so many people who now live here and all the visitors that come year ly.

The worry on Kona side is tsunami evacuations rather than lava evacuations, and in this kind of traffic, not everyone will be able to get to safer ground, especially if you allow another resort to be developed in this area when traffic is already at a crawl every week day and sometimes on weekends as well.

See the photo below that proves this point in Kona, and here is the NEWS article by KITV NEWS that talks about Hilo and the same thing is happening in Kona on the roads Kamehameha Schools wants to develop their resort, "Hawaii Island traffic jams could have safety impact. In the event of an evacuation, Mayor Mitch Roth acknowledges that will make the Traffic Jam up even worse. But says, he is working with The State on a solution." [https://www.kitv.com/news/local/hawaii-island-traffic-iams-could-have-safety-impact/article\\_b06a5374-5a6a-11ed-8d23-8313ef8c4c19.html](https://www.kitv.com/news/local/hawaii-island-traffic-iams-could-have-safety-impact/article_b06a5374-5a6a-11ed-8d23-8313ef8c4c19.html)

There was a crash on Alii Dr. and when there is an accident on this road, it turns into only one lane that needs a flagger to help direct traffic. and that adds even more traffic to this

already seriously congestion road, and Kamehameha Schools wants to add a resort on this road that will increase the traffic by 100's of cars.

Here is the Island News video on the crash on Alii Dr. <https://www.youtube.com/watch?v=FO5snPDii8>

Please see from these articles that traffic on Big Island is deadly already and adding another resort will be devastating to the island.

Please read this Path article, HAWAII COUNTY'S VISION ZERO INITIATIVE

A motorcyclist is in critical condition after a collision with a car. A driver accidentally hits and kills a pedestrian. It seems that not a day goes by without the news reporting on a traffic crash on Hawai'i Island...

Here are some other statistics that are even more staggering:

-28% of roadside crashes were the result of someone leaving the roadway and going into barriers or trees

-13% of pedestrians hit at 20 mph actually suffer fatality

-73% of pedestrians hit at 40 mph suffer fatality

-25% of fatal crashes were the result of distracted driving... So PLEASE put those cell phones away and pay attention to the road!

-56% of fatal crashes were the result of alcohol or drugs

-41% of fatal crashes occurred in light trucks and vans

-49% of crashes occur during the day, outside of peak traffic hours

-Of all the crash fatalities, most were males between 20 to 24-years old.

"That's just Big Island traffic," is a common sentiment. But what if we didn't have to accept this endangerment of vehicle drivers, motorcyclists, and pedestrians as a way of life?"

This was taken from Path as well as The Law of the Splintered Paddle below <https://pathhawaii.org/hawaii-countys-vision-zero-initiative/>

### **The Law of the Splintered Paddle**

Hawaiian history tells us that young Kamehameha was once an aggressive chief. The story goes that the young chief even chased after two fishermen in a Puna fishing village. While

pursuing them, his foot got stuck in a crevice, and one of the fishermen struck Kamehameha over the head with his paddle in defense, which splintered into pieces.

After the incident, Kamehameha recognized that it was wrong to misuse his power and learned compassion. Years later, Kamehameha declared a new law, "[Kūhūwāiʻāmalahoe](#)" or "the Law of the Splintered Paddle." Meant to protect the innocent and vulnerable from unprovoked attacks, this law proclaimed that the defenseless (especially kūpuna and keiki) across Hawai'i be able to sleep safely on the side of the road, unharmed.

The law provided for the safety of non-warriors during wartime and became the first written law of the Kingdom of Hawai'i. After being added back in 1978, the law is part of Hawai'i's State Constitution today.

It is symbolic of servant leadership, reinforcing the importance of:

- Caring for and serving one's people
- Knowing and doing what is pono (right)
- Standing for the principle that leadership privilege is earned
- Taking kuleana (responsibility) for those we serve
- Doing so with compassion, love, and respect

"We take that to mean that anyone who uses our roadways should be able to do so without fear of harm," explains Tina."

**The Law of the Splintered Paddle is also on Kamehameha Schools website**, so they should want to help make Big Island roads become safer and not add to the traffic and possible traffic death toll problem. <https://www.ksbe.edu/article/the-lessons-of-the-law-of-the-splintered-paddle-rng-true-200-years-after-k>

**Does this EIS have any reports about how this development will safely add to the land fill on Big Island, and are there reports proving the island has enough water for another big resort, what about reports on how much power this resort will use because the Big Island already has serious Resource and Infrastructure issues. Please read the articles below.**

**The Big Island Doesn't Have the Resources and Infrastructure for Another Resort**

Please see the articles below because the Big Island doesn't have the resources or infrastructure to safely add another resort development on island and these other NEWS and Research articles prove this point.

- 1) Hawaii Deals with Burgeoning Waste Management Problem

As landfills face closure and waste-to-energy projects stall, various counties in Hawaii are dealing with waste management issues. Waste360 Staff January 10, 2020

"Hawaii Island is in the enviable position of having a landfill with anywhere from 20 to 100 years of capacity left to take in trash. But the island still wrestles with significant issues like plastic products that are no longer being recycled." <https://www.waste360.com/landfill/hawaii-deals-with-burgeoning-waste-management-problem>

- 2) "Big Island Now readers seem to agree that there's likely no single solution for slowing down the timeline of the West Hawai'i Sanitary Landfill reaching capacity.

The West Hawai'i Sanitary Landfill, the only remaining landfill on the Big Island, is forecast to reach capacity within the next 20 to 25 years." <https://bigislandnow.com/2023/09/17/big-island-now-noll-no-27-results-more-than-one-solution-needed-to-help-extend-life-of-west-hawaii-landfill/>

- 3) Hawaii Island Has Decades of Landfill Space But Still Faces Challenges In Dealing With Its Waste Hawai'i Public Radio Published January 9, 2020 at 5:00 AM HST

"Hawaii Island is in the enviable position of having a landfill with anywhere from 20 to 100 years of capacity left to take in trash. But the island still wrestles with significant issues like plastic products that are no longer being recycled.

For the past four decades, trash from the east side of Hawaii Island has been dumped in a landfill outside of Hilo. But now trash from all parts of the island is being trucked to a facility north of Kona." <https://www.hawaiipublicradio.org/local-news/2020-01-09/hawaii-island-has-decades-of-landfill-space-but-still-faces-challenges-in-dealing-with-its-waste>

- 4) "What happens to Hawaii Island's trash and recyclables? BY MICHELLE BRODER VANDYKE HAWAII ISLAND PUBLISHED 11:30 AM ET DEC. 17, 2022 By Michelle Broder Vandyke HAWAII ISLAND PUBLISHED 11:30 AM ET Dec. 17, 2022

The West Hawaii Landfill will be full in about 20 years. Finding a location for the next landfill is a concern, according to the DEM officials. They said it will be challenging to find a location for a future landfill because of stringent regulations and costs related to planning, environmental regulations, design and construction that will take many years to complete. It will also require community

support." <https://spectrumlocalnews.com/hi/hawaii/news/2022/12/15/what-happens-to-hawaii-island-s-trash-and-recyclables->

- 5) "The overwhelming plastic waste Hawaii visitors leave behind By Natasha Bourlin Aug 24, 2023

Hawaii saw more than 9 million visitors last year. Those tourists' first stops are often big-box and convenience stores, where they buy bottled water, plastic sand toys, single-use bodyboards, noodles, floaties and inner tubes for their trips." <https://www.sfgate.com/hawaii/article/plastic-waste-hawaii-visitors-leave-behind-18286076.php>

6) "A county commission drafts ordinance aiming to ban recyclables at West Hawai'i landfill By Megan Moseley September 6, 2023 · 1:00 AM HST

\* Updated September 6, 2023 · 2:02 PM

Hawai'i County's Environmental Management Commission is developing an ordinance that aims to prohibit the amount of recyclable materials ending up in the island's only working landfill." <https://bigislandnow.com/2023/09/06/new-draft-ordinance-aims-to-ban-recyclables-at-west-hawaii-landfill/>

HECO issues rolling power outages around Big Island by: Emily Cervantes Posted: Feb 13, 2024 / 05:11 PM HST Updated: Feb 13, 2024 / 09:12 PM HST Hawaiian Electric initiated rolling outages for Big Island after several large generators became unavailable and reduced output Tuesday night." <https://www.khon2.com/local-news/heco-releases-conservation-alert-for-big-island/>

15) "Here's how power outages can have repercussions for Hawai'i's water supply Hawai'i Public Radio | By Savannah Harriman-Pote Published February 13, 2024 at 10:59 AM HST

Water departments on O'ahu and Hawai'i Island have advised customers to conserve water ahead of possible storm-related power outages this month.

But what does the power grid have to do with the water supply?

It is impossible to separate Hawai'i's power system from its water system, said Kawika Uyehara, deputy director of Hawai'i County's Department of Water Supply. " <https://www.hawaiipublicradio.org/local-news/2024-02-13/residents-on-hawaii-island-and-oahu-are-asked-to-conserve-water-amid-power-outages>

16) U.S. Hawaii is "on the verge of a greater catastrophe," locals say, as water crisis continues  
By Li Cohen

Updated on: April 11, 2024 / 8:23 AM EDT / CBS News

In Hawaii, one of the most important sayings is *ola i ka wai*, "water is life" — a phrase that not only sums up what it means to exist on an island, but what it means to live, period. But now, one of the largest of the island chain's land masses is facing a triple threat to its sole freshwater source, and if it isn't addressed soon, one community member says, "we're in deep trouble."

<https://www.cbsnews.com/news/hawaii-water-crisis-climate-change/>

17) NewsHawai'i County issues mandatory 25% water restriction for North Kona  
August 7, 2023 · 5:21 PM HS

A mandatory 25% water restriction has been issued for various communities in North Kona due to the failure of the Honokōhau Deepwell over the weekend.

18) Hawai'i Water Supply Closely Monitored As Severe Drought Continues

by Big Island Video News  
on Nov 6, 2023 at 3:28 pm

(BIVN) – With an ongoing drought on the island of Hawai'i, the Hawai'i County Department of Water Supply says it is closely monitoring its 23 public water systems, with a "special focus" placed on the South Kohala Water System.

<https://www.bigislandvideonews.com/2023/11/06/water-supply-closely-monitored-as-hawai%CA%BB-under-severe-drought/>

This is a map of Power Outages on the Big Island. This map wouldn't have been created if Power Outages were not a problem. <https://www.hawaiianelectric.com/safety-and-outages/power-outages/hawaii-island-outage-map>

Please, give Tax Breaks to all homes that provide solar and/or wind turbine to there homes to help with power issues on the island.

20) "Hawaiian Electric is reporting that several large generators on the Big Island are experiencing a range of issues and may lead to the need for rolling outages if supply does not meet demand."

[https://www.reddit.com/r/BigIsland/comments/1bnuar3/hawaiian\\_electric\\_is\\_reporting\\_that\\_several\\_large/?rdt=52660](https://www.reddit.com/r/BigIsland/comments/1bnuar3/hawaiian_electric_is_reporting_that_several_large/?rdt=52660)

21) "NewsHawaiian Electric asking Big Island customers to conserve power due to down generators

March 25, 2024 · 11:49 AM HST

According to the utility company, this is an usual situation as the large generators are experiencing mechanical problems resulting in a reduced output. The largest generator, an independent power producer that sells electricity to Hawaiian Electric, is offline with significant mechanical issues.

The plant generates 60 megawatts or nearly one-third of the typical peak demand of 180 megawatts on the island."

<https://bigislandnow.com/2024/03/25/hawaiian-electric-asking-big-island-customers-to-conserve-power-due-to-down-generators/>

All the articles above show that a resort development will damage Keauhou Bay coral and marine life and, Big Island resources and infrastructure are currently being negatively affected from the development that is on island already, and there are years of new development that have already been approved, before having safe resources and infrastructures for new developments.

With these scientifically proven articles by some of the most professional scientists in the world, they say the a serious population increase, as well as development and resort runoff that happens because of parking lots, and... with all coastal developments, it will be dangerous for Keauhou Bay to be development because it will damage the marine ecosystems in the area.

Please, save Keauhou Bay's marine life and help the island's resources by saying NO to a Bungalow Resort built by Kamehameha Schools because all of these articles prove it would be extremely damaging to the waters at Keauhou Bay.

Thank you,

Sincerely,

Appendix E

**Subject:** Courtesy Notification for a Planned Publication of a Draft Environmental Impact Statement (DEIS) for the Kamehameha Schools Keauhou Bay Management Plan Keauhou, Hawai'i Island, Hawai'i

Dear Participant:

On behalf of Kamehameha Schools, G70 is notifying you of the availability of the Draft Environmental Impact Statement (EIS) for the Keauhou Bay Management Plan located in Keauhou, Hawai'i Island, Hawai'i.

Pursuant to Chapter 343, Hawai'i Revised Statutes and Hawai'i Administrative Rules, (Environmental Impact Statement Rules), Sections 11-200.1, an EIS is required as the project requires a County Special Management Area Use Permit.

The EIS process is designed to assist agency decision-making by establishing a review that is informed and balanced in its analysis. The process is also intended to increase public participation by integrating a public comment period as well as community meetings with various stakeholders. Accordingly, it is important for this project to undertake a comprehensive consultation approach throughout the EIS process. This notification of a pending Draft EIS is Kamehameha Schools' effort to be inclusive as we commence the review.

The Draft EIS document can be downloaded from the Kamehameha Schools website at this link: [https://www.ksbe.edu/keauhou\\_bay/](https://www.ksbe.edu/keauhou_bay/).

Interested parties are welcome to submit comments to the DEIS within 45 days of the publication date. The 45-day comment period begins on June 23, 2024, and concludes on August 7, 2024. Comments may be submitted online at the Kamehameha Schools project website: [https://www.ksbe.edu/keauhou\\_bay/](https://www.ksbe.edu/keauhou_bay/). Comments may also be mailed to:

Group 70 International, Inc., dba G70  
111 S. King Street, Suite 170

www.g70.design

**Subject:** Courtesy Notification for a Planned Publication of a Final Environmental Impact Statement (FEIS) for the Kamehameha Schools Keauhou Bay Management Plan Keauhou, Hawai'i Island, Hawai'i

Dear Participant:

On behalf of Kamehameha Schools, G70 is providing this courtesy notification of the publication and availability of the Final Environmental Impact Statement (EIS) for the Keauhou Bay Management Plan, located in Keauhou, Hawai'i Island, Hawai'i. The Final EIS was published in *The Environmental Notice* on September 8, 2025.

Pursuant to Chapter 343, Hawai'i Revised Statutes and Hawai'i Administrative Rules, (Environmental Impact Statement Rules), Title 11 Chapter 200.1, an EIS is required as the project requires a County Special Management Area Use Permit and proposes certain uses within the shoreline area. The Final EIS document can be downloaded from the Environmental Review Program's website at this link: <https://planning.hawaii.gov/erp/>.

The Draft EIS was published in *The Environmental Notice* on June 23, 2024, followed by a 45-day public comment period. Substantive comments received during this period informed the development of the Final EIS. Revisions made in the Final EIS are noted in the Ramseyer format. Ramseyer is a technique of drafting by which changes to the document from a previous version are indicated by underscoring added material and highlighting deleted material.

Please see Section 7.0 of the Final EIS for a list of agencies and individuals who provided written comments on the Draft EIS, and the responses provided to substantive comments in Volume II, Appendix C. Comments are grouped by topic headings in accordance with Hawai'i Administrative Rules § 11-200.1-26(b)(1). A complete list of comment letters submitted is provided in Final EIS Volume II. To locate responses to your substantive comments in the Final EIS, please follow these instructions:

- Download the PDF version of the document.
- Once open, use the search function by pressing both the Control (CTRL) and then the letter "F" buttons on your keyboard.
- A separate search box will appear (usually located in the bottom left-hand corner of your screen).
- Type your name into the search bar to navigate to the page(s) where your comments are listed.
- In the FEIS, comments are organized in a table format, with your comment appearing in the left-hand column and the corresponding response in an adjacent column.
- Be sure to review each instance where your name appears to see all the relevant responses.
