## SUMMARY:

Notification that an Environmental Impact Statement (EIS) was to be prepared, known as an Environmental Impact Statement Preparatory Notice (EISPN), was published in the Environmental Review Program's The Environmental Notice on March 23, 2022 to solicit input on the scope and topics of interest of the Keauhou Bay Management Plan. Kamehameha Schools (KS) and G70 hosted a public scoping meeting to fulfill the consultation requirements as promulgated in Hawai'i Revised Statutes §11-200.1-23(d). Due to the ongoing COVID-19 pandemic, the meeting was held virtually on April 12, 2022, from 6:00-8:30pm via Zoom.

Kaimana Barcarse (KS) opened the meeting with a pule. Marissa Harmon (KS), Emily Davids (KS), and Kawika McKeague (G70) presented a slide deck describing the purpose and need for the plan, entitlements process, the scope of the EIS, the plans management goals and strategies, and preliminary design elements. After the presentation, participants were provided with an opportunity to ask questions and provide comments regarding the scope of the project. A summary of the comments provided is provided in the following section.

Commenters Name	Comment	Response
Rebecca	<ul style="list-style-type: none"> <li>• Land used and enjoyed by locals</li> <li>• Traffic issue throughout the bay</li> <li>• There is a hotel in Keauhou already. The bay doesn't need another one a block away.</li> <li>• Concern about traffic, crowding, and noise that will take away from the beauty of the bay</li> <li>• KS should focus on offering affordable housing to residents</li> <li>• I don't understand the educational point</li> </ul>	Old Kona Road designed to help alleviate congestion. The plan is focused on bringing students and kupa'āina to the bay.
Kimmy Gay	<ul style="list-style-type: none"> <li>• We play volleyball in a league down there.</li> <li>• Are you removing the volleyball court?</li> <li>• What are the kids going to do? There is no other place to play. There are only 3 volleyball courts in West Hawaii. Kids will go back to the streets instead of having a healthy outlet</li> </ul>	The volleyball court is not in KS's present vision.
Ulu Ching	<ul style="list-style-type: none"> <li>• Mahalo for providing access</li> <li>• How much emphasis is being made on business that is not orientated towards tourism.</li> </ul>	KS has not leased any spaces yet. Targeted towards local market. There will be two commercial tenants who currently operate tours in the bay. Open to general retail / commercial businesses including a restaurant. Leases will be negotiated with KS.
Lew Brentano	<ul style="list-style-type: none"> <li>• What are you anticipating for ADA compliance? Is accessibility built into this plan?</li> <li>• What is the status on Old Kona Road? Old Kona road is a good conduit as long as it's a safe ADA route.</li> </ul>	The plan intends to increase connectivity and access throughout the bay. Specific details will be evaluated as part of the DEIS.
Shakti Stream	<ul style="list-style-type: none"> <li>• Grew up playing volleyball on that court- still go and play volleyball, so does son; VP of the volleyball association</li> <li>• Last untouched place of Kona</li> <li>• Not opposed to change, but as a cultural center, there should be something for the community, not just retail space-- volleyball court is a significant space for the community; could be more beneficial than a retail area</li> </ul> <p>Court could move. It could be placed near commercial area like at Coconut Grove in Kona. The court could benefit the area more than a retail space. Court could benefit project.</p>	KS will commit to working with the association and elected officials to find another location. We realize the importance of recreation and healthy lifestyles at the bay.
Peter M	<ul style="list-style-type: none"> <li>• Applauding educational mission and efforts to provide respect for cultural significance of area. The birth site faces the dumpster and bathrooms. Needs to be cleaned up to pay respect to ali'i.</li> </ul>	KS's objective is to steward the land in perpetuity. There are no existing revenue generating uses at Bay to fund the needed stewardship. We don't want to drain on other endowment funds set

	<ul style="list-style-type: none"> <li>• Volleyball takes up a lot of real estate but not exclusive amount. Brings opportunity to folks who don't have other opportunities. It serves families of all economic spectrum.</li> <li>• Water quality is an issue (don't jump in with a cut).</li> <li>• Bridge to beach is rickety.</li> <li>• Restrooms have been closed for years. Good things are already happening.</li> <li>• If the intent is to increase kama'āina and kupu'āina access, why is this being accomplished by putting in hotel rooms and fine dining?</li> <li>• Voicing concerns about tourists overrunning one of the last places on the coasts where locals have access.</li> <li>• Proposal doesn't make sense to include resort. What are financial metrics to meet successful mission at Keauhou Bay. Is it the same for all properties. Could bungalows at another KS owned site be used to provide financial returns needed.</li> </ul>	<p>aside for education. Acceptable rate of returns have been studied. We looked at appropriate land uses as guided by General Plan and Community Development Plan and others.</p>
Moto- Sara	<ul style="list-style-type: none"> <li>• Lives above the project</li> <li>• Concern of removing a canopy of trees/shrubs/veg and replacing with pavement.</li> <li>• Concern for contamination to aquifer and increased heat.</li> </ul>	<p>These concerns will be evaluated and addressed as part of the environmental review process.</p>
David Smith	<ul style="list-style-type: none"> <li>• Director of the Keauhou Volleyball Association, son plays and got a scholarship to college-- many other students do as well.</li> <li>• The association is interested in obtaining a lease with KS.</li> <li>• Has KS considered income generation from Volleyball tournaments / workshops?</li> <li>• Can we get a written commitment that club can use court in future? Not an exclusive use. Coexists.</li> </ul>	<p>KS does not negotiate formal agreements in public settings. There is an issue with the County right-of-way that is located under the volleyball court. KS does not own all the land.</p>
Ryan Roberts	<ul style="list-style-type: none"> <li>• Concern for public / shoreline access being affected throughout the process.</li> <li>• What insurances does public have that access will be provided throughout the process.</li> <li>• Concern about access to He'eia Bay.</li> </ul>	<p>Access to the shoreline will not be disrupted during construction. The management plan will increase access. He'eia Bay is outside the project area.</p>
Kathy McMillen	<ul style="list-style-type: none"> <li>• Just because you have zoning for resort use doesn't mean it's appropriate.</li> <li>• Concerned with water quality; several oceanfront parcels on cesspool. Resort will only add to problem.</li> </ul>	<p>Impacts to traffic, drainage, and water resources will be evaluated as part of the DIES.</p>

	<ul style="list-style-type: none"> <li>• Parking will be an issue. Vendors taking up parking spaces. People will start parking on road.</li> </ul>	
Ben Rice	<ul style="list-style-type: none"> <li>• Concerned about noise, pollution and parking and how these things will be mitigated</li> <li>• More effort should be put in outreach. Many people didn't know about meeting tonight.</li> </ul>	Noise, pollution, and parking issues will be evaluated as part of the DEIS.
Mikahala	<ul style="list-style-type: none"> <li>• First restored temple in Keauhou. Serves as Kahu.</li> <li>• KS is premature in effort. Lands are sacred. Important to all mankind.</li> </ul>	KS agrees that the cultural resources in the bay are important and should be protected. This plan is designed to preserve and emphasize important resources for education.
Ulu Ching (2nd question)	<ul style="list-style-type: none"> <li>• Appreciate that KS is creating space for parking. How would fishers access the ramp? Southside boat parking is far from boat ramp.</li> </ul>	The plan is designed to open up the bayfront area and bring the focus to the cultural heritage of the bay. The designated boat parking is the most appropriate site that was identified.
BC	<ul style="list-style-type: none"> <li>• What are the plans for the canoe club? Will the Halau will be moved?</li> </ul>	KS will engage the club with a new lease. Halau will remain in place and the club will continue to have a presence at the bay.
Sally Rankin	<ul style="list-style-type: none"> <li>• Previous resident from North side of bay off Kamehameha III. Chose to move out of the area before construction started.</li> <li>• Attended previous meetings. It was obvious that no one was listening and that our quality of life would change.</li> <li>• Only way to find out about meetings is to read the newspaper, talk to neighbors, etc.</li> <li>• Concern for increased traffic. Northside paying burden for Southside congestion. Do not connect Old Kona Road across bay.</li> <li>• Retail at Keauhou Shopping Center is half empty.</li> </ul>	A traffic study is being conducted to evaluate impacts to circulation and congestion.
Leiola	<ul style="list-style-type: none"> <li>• I see this plan as overuse of the bay.</li> <li>• Water quality has diminished. The fish are no longer there.</li> <li>• Are there plans to restore the spring?</li> <li>• Honor the mauka makai trail and the hōlua slide</li> <li>• Put something in the plan with mo'olelo, pre-contact moolelo</li> <li>• Am a beneficiary of the trust, understand the economic need, but questions if this development is the right way to achieve economic needs.</li> </ul>	All the project components must work together for the plan to be successful. The resort component is important to generate revenue to fund the KS mission to preserve cultural heritage and provide educational opportunities.

The meeting concluded at approximately 8:30pm.

**Chat (screencaps):**

Peter M to Everyone

07:04 PM

PM

Hooray for Kimmy. She truly delivers Aloha to these young children who likely otherwise will be left behind. I see her working productively with these kids: they are doing healthy exercise, there's no swearing or drugs, etc.—she volunteers time for community benefit.

bc to Everyone

B

Also wondering how commercial hotel and retail space is connected to and beneficial for furthering 'educational' aspects of this development ?

David E. Smith to Everyone

07:10 PM

DE

volleyball play and through the sport community gathering has occurred at the bay for several generations (60 to 70 years ).

bc to Everyone

B

Also as a member of Keauhou Canoe Club, will the canoes be able to remain on the beach where they currently are close to the ramp for launching ?

Lisa's computer to Everyone

I believe Kimmy provides transportation to keiki from La'i'opua and other residential areas who have no way to access their cultural lands — are they not a priority over tourists? Obviously they cannot generate income the way visitors can...

Lisa's computer to Everyone

07:31 PM

Cannot the Keauhou Shopping Center be more profitable? So many underused areas... ! Why does a Royal Birthplace have to generate income?

Lisa and Brent Sterritt to Everyone

LA

Can we please move beyond the volleyball topic so we can all ask our questions?

Kimmy Gay to Everyone

KG

volleyball is important to our keiki

moto g(7) play to Everyone

MG

comment to the county at [planning@hawaiicounty.gov](mailto:planning@hawaiicounty.gov)

Lisa and Brent Sterritt to Everyone

LA

Understood - and we have heard that from several individuals -

Alice Ray to Everyone

a

Integration of cultural education with sports education and participation - not limited to volleyball, but including kayaking, paddle board, swimming, would all rightly be consistent with your mission

Lisa's computer to Everyone

Am I hearing that KS is limiting access to He'eia Bay? And that if we who live here don't like the (now blocked? Is this true?) ability to get to the shoreline, it is the County's fault? Very confused here.

moto g(7) play to Everyone

MG

yes KS has limited access to the beach at H Bay.

David E. Smith to Everyone

DE

With all respect KS' proposed development plan is NOT taking into account the historic and customary usage and rights of locals who have continuously used Keauhou bay for recreational and cultural purposes over at least the last 60 or 70 years.

Jessie to Everyone

J

The access path to He'eia Bay is open. The water is accessible. Non-native plants have been cleared out so the overgrowth is not as lush - but beach access is there.

Alice Ray to Everyone

a

the historic path along the shoreline that has been active used for at least 60 years, was recently covered up by KSBE, treating a tremendous amount of anger against the Trust, that had otherwise begin to gather appreciation of the community. I have not seen anyone tear up the naupaka, bu have seen people stumble on the new barriers, including a mom who had to leave the stroller behind, and was in jeopardy of seriously injuring her one year old baby. We have a serious difference of opinion on what is public shoreline and what is KSBE property. The EIS and shoreline survey should help straighten it out, meanwhile, let's just hope there is no serious injury to the the recent barriers being "restored" — when they have not been there for sixty years at least.

Lisa's computer to Everyone

0

I will go see, thank you Alice. This is very concerning, and makes me wonder what will happen with this proposed project.

Jessie to Everyone

To clarify, the paved access path from the road to H Bay is not blocked. The long-time path along the shore has been covered over with rock.

Alice Ray to Everyone

Yes, that is correct.

Rebecca to Everyone

Love you Mikahala! You are beautiful! Your words are true! Thank You!

Ulu Ching to Everyone

Aloha mai, will the slide deck be put on the website? Mahalo!

Ryan Roberts to Everyone

please do a safety assessment of moving boat trailer parking further from boat ramp. DLNR access and the boat trailer parking should be adjacent as is the case in other boat harbors across the state...

David E. Smith to Everyone 08:10 PM

DE Is it possible for us participants to obtain a copy of this recording ?

Emily Davids to Everyone 08:11 PM

ED Aloha Ryan, just wanted to clarify that we do not have control over the land where the existing boat trailer spaces are now nor do we have any intent in lobbying to move it. The new boat trailer spaces you see on this plan would be something that could be a potential partnership with DOBOR to provide additional boat trailer spaces, if they wish to pursue it.

Ryan Roberts to Everyone 08:12 PM

RR thanks for clarifying relative to the boat trailer parking.

Rebecca to Everyone

R Agreed, there are a lot of empty stores in Keauhou Shopping Center. Great point!

Ryan Roberts to Everyone

RR

will county/public works be upsized to deal with wastewater from proposed addition? ocean water quality... same with rainwater runoff from 210 proposed additional parking spaces (150 + 60)....

Rebecca to Everyone

R

This plan is not for the people who live here on island and in Keauhou bay. There is a hotel at the point of Keauhou already and Time Shares as well. 150 more basically hotel houses is not needed, especially when there is already hotels there.

BEN RICE to Everyone

B

If anyone who is interested in staying in touch about this proposal wants to start an email chain please contact me. If such a group already exists, please let me know as I am putting together such a list at Keauhou Resort. Ben at: benricelaw@gmail.com together

Kathy McMillen to Everyone

KM

Leila, spot on comments. Just in 30 years water quality has gotten significantly worse. That doesn't get better if we continue with stats quo.

Comments	Commenter	Responses
<b>Agencies</b>		
<p>NPS Ala Kahakai NHT</p>	<p>Thank you for providing the Ala Kahakai National Historic Trail with the opportunity to submit comments on Prep Notice (EISPN) for the Proposed Keauhou Bay Management Plan Project, Keauhou Bay, North Kona District, Island of Hawai'i, State of Hawai'i. The National Park Service (NPS) administers the Ala Kahakai National Historic Trail (NHT), added to the National Trails System by the U.S. Congress on November 13, 2000 (Public Law 106-509). In January 2009, the Ala Kahakai NHT Comprehensive Management Plan (CMP) and EIS were adopted as policy and listed in the Federal Register. The legislation authorizing the Ala Kahakai NHT identifies an approximately 175-mile portion of prehistoric ala loa, and other trails on or parallel to the seacoast extending from Upolu Point on the northern tip of Hawaii Island down the west coast of the island around South Point to the east boundary of Hawaii Volcanoes National Park. The Ala Kahakai National Historic Trail combines surviving elements of the ala loa with segments of later alanui aupuni, which was developed on or parallel to traditional routes, mauka-makai trails, and more recent pathways and roads that create links between the historic segments. The preservation and protection of natural and cultural resources and landscapes, as well as viewscapes, are vital to the mission of the Ala Kahakai National Historic Trail.</p> <p>Ala Kahakai National Historic Trail was established to administer the preservation and protect, reestablish as necessary, and maintain the ancient coastal ala loa and associated resources and values, along with linking trails on or parallel to the shoreline. The goal is to provide high quality experience, enjoyment and education guided by Native Hawaiian protocol and etiquette while protecting the trail's natural and cultural heritage and respecting private and community interests. The 175 mile trail corridor includes those ancient and historic trail alignments found within the Keauhou Bay Project Area.</p> <p>The Keauhou Bay Management Plan Project area is located near the southern end of Ali'i Drive in North Kona. As described in the EISPN, Keauhou Bay is a small bay along the Kona Coast traditionally known as a place of ali'i residence and of pastimes such hōlua sledding and surfing. Keauhou Bay is</p>	<p>Thank you for your letter dated April 22, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan prepared pursuant to Hawai'i Revised Statutes Chapter 343.</p> <p>We appreciate the resources and information shared. Based on recommendations in your letter as well as during the subsequent consultation meeting and site visit on October 7, 2022, two areas within the TMK: 7-8-010:044 portion of the Project Area, totaling 1.97-acres, were re-examined by Haun &amp; Associates in October, 2022, in order to locate the remains of two historic trails (Keauhou Trail: Sites 15243 and Kainaliu Trail: Site 24259). The findings of the survey are included in the 2022 Haun &amp; Associates' ARS and Site Condition Update (Appendix B) and summarized in DEIS Chapter 4.1.2.3. The historical background of these trails in relation to the overall development of the bay over time is discussed in DEIS Chapter 4.1.1.</p> <p>The two subject trails are depicted on historic maps of the area as far</p>

**Table 7.2 DEA Summary of Comments and Responses**

Comments	Commenter	Responses
	<p>perhaps most well known as the birth site and resuscitation site of Kauikeaouli Kaleiopapa Kuakamanalani Mahinalani Kalaninuiwaiakua Keaweawe‘ulaokalani, also known as Kamehameha III, who was the son of Kamehameha ‘Ekahi and Keōpūolani. Keauhou Bay is called out in the County General Plan as a location of natural beauty and an important coastal destination for residents and visitors alike. This is a special place.</p> <p>The primary route for the Ala Kahakai NHT from Kailua-Kona to Keauhou is Ali‘i Drive, the location of the ancient <i>ala loa/alanui aupuni</i>. Previous development of the Keauhou Bay area rerouted Ali‘i Drive from its original location to the current alignment further inland. The preferred route of the Ala Kahakai NHT in this area includes Kamehameha III Road from Ali‘i Drive to Keauhou Bay connecting back to the current Ali‘i Drive alignment via Kaleopapa Street. Ala Kahakai NHT will work with the County, Kamehameha Schools, and other stakeholders to mark this route as the Ala Kahakai NHT.</p> <p>Ala Kahakai NHT requests that the applicant acknowledges, preserves, and protects the existing ancient and historic trails within the project area and discusses the findings in the forthcoming DEIS. The alignments of the Old Government Road (OGR), The Old Road to Kainaliu, and the Keauhou Trail are known significant trails present within the project area.</p> <p><b>Old Government Road (Beach Road)</b></p> <p>Recommendation: Honor the alignment of the Old Government Road by designing better continuity for pedestrian access flow, connecting Kamehameha III Road and Kaleiopapa Road.</p> <p>Recommendation: As part of the project area trail network discussed in the EISPN and community meeting, please consider including the interpretation of the <i>alanui aupuni (OGR)/ala loa</i> as part of the overall interpretation of this special place.</p> <p><b>Old Kona Road and Old Cart Road to Kainaliu (SHPD site No. 24259)</b></p> <p>Recommendation: Verify archaeological evidence for any remnant precursor trail that escaped the construction of the Old Kona Road, combined with historical map references. Include onsite consultation with Nā Ala Hele and Ala Kahakai NHT staff.</p>	<p>back as 1885. Aerial imagery of the Keauhou Bay area taken in 1954 show that these trails alignments had remained intact until at least that time. However, the trails do not appear in any subsequent aerial images likely due to the Project Area having been mechanically disturbed and overgrown with vegetation. Using the 1954 aerial imagery, the locations of the two historic trail alignments were cleared of vegetation and systematically examined by Haun &amp; Associates archaeologists.</p> <p>An approximately 1.26-acre corridor was cleared of vegetation and surveyed along the historic Keauhou Trail alignment (Site 15243). The ground surface within this corridor showed evidence of past mechanical grubbing and no remnants of the Keauhou Trail were present.</p> <p>An approximately .71-acre corridor encompassing the alignment of the historic Kainaliu Trail (Site 24259) was cleared of vegetation and surveyed. This corridor also showed evidence of grubbing with the presence of several linear mounds created by bulldozer blades. No</p>

**Table 7.2 DEA Summary of Comments and Responses**

Comments	Commenter	Responses
	<p>Recommendation: Verify archaeological evidence for the remains of the Old Cart Road to Kainaliu, combined with historical map references. Consider incorporating the trail alignment into the interpretive path network.</p> <p><b>Keauhou Trail (SHPD site No. 15243)</b></p> <p>Recommendation: Verify archaeological evidence for any trail remains, combined with historical map references. Include onsite consultation with Nā Ala Hele and Ala Kahakai NHT staff.</p> <p>Recommendation: Honor the alignment of the Keauhou Trail, even if archaeological evidence has been displaced. Consider utilizing the trail corridor as a pedestrian access incorporated into the interpretive path network.</p> <p>The National Park Service thanks the Group 70 and the Kamehameha Schools for recognizing Ala Kahakai NHT in the forthcoming Keauhou Bay Management Plan DEIS. Ala Kahakai NHT is looking forward to working with the landowners and communities of North Kona to continue managed access along this unique and important section of the Ala Kahakai NHT corridor.</p> <p>Thank you for the opportunity to provide these comments. We look forward to our continuing communication on this proposed project. Please contact me, 808-217-0307, or our resource staff archeologist, Rick Gmirkin, at 808-430-5213 to discuss any questions you may have on our comments.</p>	<p>remnant of the Kainaliu Trail was observed.</p> <p>The KBMP includes actions to honor the alignments of historic trails throughout the property. The planned network of new and improved walking paths throughout the Project Area will increase pedestrian access and provide an intact north-south pathway through the entire site to help recreate the experience of walking along the historic Old Government Road. The KBMP also calls for the re-establishment of the Old Kona Road as a public access vehicular easement, thereby re-opening a historic path that had become overgrown with vegetation and fallen into disuse. The mauka-makai walking experience of the historic Keauhou Trail will also be honored through the establishment of the recreation corridor. This open space corridor area will allow for bay visitors to freely walk from the coastline up to the Old Kona Road. The open space recreation corridor also connects to the network of walking paths situated both above and below 'Ahu'ula Cliff. The history and significance of the known historic trails will be incorporated</p>

Comments	Commenter	Responses
	<p>to 13-171. These documents are available via the Internet at <a href="http://dlnr.hawaii.gov/cwrm">http://dlnr.hawaii.gov/cwrm</a>.</p> <p>Our comments related to water resources are checked off below.</p> <ul style="list-style-type: none"> <li>• We recommend coordination with the county to incorporate this project into the county's Water Use and Development Plan. Please contact the respective Planning Department and/or Department of Water Supply for further information.</li> <li>• We recommend that water efficient fixtures be installed and water efficient practices implemented throughout the development to reduce the increased demand on the area's freshwater resources. Reducing the water usage of a home or building may earn credit towards Leadership in Energy and Environmental Design (LEED) certification. More information on LEED certification is available at <a href="http://www.usgbc.org/leed">http://www.usgbc.org/leed</a>. A listing of fixtures certified by the EAP as having high water efficiency can be found at <a href="http://www.epa.gov/watersense">http://www.epa.gov/watersense</a>.</li> <li>• We recommend the use of best management practices (BMP) for stormwater management to minimize the impact of the project to the existing area's hydrology while maintaining on-site infiltration and preventing polluted runoff from storm events. Stormwater management BMPs may earn credit toward LEED certification. More information on stormwater BMPs can be found at <a href="http://planning.hawaii.gov/czm/initiatives/low-impact-development/">http://planning.hawaii.gov/czm/initiatives/low-impact-development/</a></li> <li>• We recommend the use of alternative water sources, wherever practicable.</li> <li>• We recommend participating in the Hawaii Green Business Program, that assists and recognizes businesses that strive to operate in an environmentally and socially responsible manner. The program description can be found online at <a href="http://energy.hawaii.gov/green-business-program">http://energy.hawaii.gov/green-business-program</a>.</li> <li>• We recommend adopting landscape irrigation conservation best management practices endorsed by the Landscape Industry Council of Hawaii. These practices can be found online at</li> </ul>	<p>Potential land erosion due to the implementation of the KBMP has been addressed in the Draft Environmental Impact Statement (DEIS). DEIS Section 4.5, describes stormwater runoff peak flow estimates for both existing conditions and with project implementation. At present, portions of the KS properties at Keauhou Bay are unmanaged and susceptible to runoff and erosion. The Project is expected to result in long-term benefits as permanent sediment control measures and stormwater infrastructure would minimize runoff and erosion. Those strategies may include but are not limited to detaining, retaining and infiltrating runoff into the ground.</p> <p>Although an operator for the resort has not yet been identified, KS will encourage the use of water efficient practices and alternative water sources whenever practical. Water conservation measures will be implemented in design of the Project and may include, but not be limited to, the following: efficient irrigation systems such a drip system and moisture sensors, utilization of non-potable water for irrigation, drought tolerant plants,</p>

	<p><a href="http://www.hawaiiscape.com/wp-content/uploads/2013/04/LICH_Irrigation_Conservation_BMPs.pdf">http://www.hawaiiscape.com/wp-content/uploads/2013/04/LICH_Irrigation_Conservation_BMPs.pdf</a></p> <p>There may be the potential for ground or surface water degradation/contamination and recommend that approvals for this project be conditioned upon a review by the State Department of Health and the developer's acceptance of any resulting requirements related to water quality.</p>	<p>and the use of Water Sense-labeled ultra-low flow water fixtures and toilets. The County Department of Water Supply (DWS) will continue to be consulted as the Project design progresses. Final construction drawings will be reviewed and approved by DWS and the Hawai'i Fire Department.</p> <p>Thank you for your participation in the environmental review process.</p>
<p>State DLNR DOBOR</p>	<p>We have no objections.</p>	<p>Thank you for your letter dated April 21, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan prepared pursuant to Hawai'i Revised Statutes Chapter 343.</p> <p>We acknowledge that the Department of Boating and Ocean Recreation has no objections at this time.</p> <p>Thank you for your participation in the environmental review process.</p>
<p>State DLNR DOFAW</p>	<p>The Department of Land and Natural Resources, Division of Forestry and Wildlife (DOFAW) has received your request for comments on the EISPN regarding the proposed KBMP for the subject parcels located in Keauhou, on the island of Hawai'i; TMK: (3) 7-8-012:Various &amp; (3) 7-8-010:Various. The proposed project consists of reorienting uses at the bay and establishing new place-based cultural education and revenue-generating opportunities. Management strategies include establishing a Heritage Management Corridor, repositioning and developing commercial bayfront areas and</p>	<p>Thank you for your letter dated April 25, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan (KBMP) prepared pursuant to Hawai'i Revised Statutes Chapter 343.</p>

**Table 7.2 DEA Summary of Comments and Responses**

Comments	Commenter	Responses
	<p>appropriate density resort area, reorienting recreational and community use, maintaining and establishing new place-based cultural-educational areas, and managing vehicle, boat, and pedestrian circulation and wayfinding.</p> <p>The State listed Hawaiian Hoary Bat or 'Ōpe'ape'a (<i>Lasiurus cinereus semotus</i>) could potentially occur in the vicinity of the project and may roost in nearby trees. Any required site clearing should be timed to avoid disturbance to bats during their birthing and pup rearing season (June 1 through September 15). During this period woody plants greater than 15 feet (4.6 meters) tall should not be disturbed, removed, or trimmed. Barbed wire should also be avoided for any construction because bats can become ensnared and killed by such fencing during flight.</p> <p>Artificial lighting can adversely impact seabirds that may pass through the area at night by causing disorientation. This disorientation can result in a collision with manmade structures or the grounding of birds. For nighttime work that might be required, DOFAW recommends that all lights used to be fully shielded to minimize the attraction of seabirds. Nighttime work that requires outdoor lighting should be avoided during the seabird fledging season from September 15 through December 15. This is the period when young seabirds take their maiden voyage to the open sea. Permanent lighting also poses a risk of seabird attraction, and as such should be minimized or eliminated to protect seabird flyways and preserve the night sky. For illustrations and guidance related to seabird-friendly light styles that also protect seabirds and the dark starry skies of Hawai'i please visit <a href="https://dlnr.hawaii.gov/wildlife/files/2016/03/DOC439.pdf">https://dlnr.hawaii.gov/wildlife/files/2016/03/DOC439.pdf</a>.</p> <p>State listed waterbirds such as the Hawaiian Duck (<i>Anas wyvilliana</i>), Hawaiian Stilt (<i>Himantopus mexicanus knudseni</i>), Hawaiian Coot (<i>Fulica alai</i>), and Hawaiian Goose or Nēnē (<i>Branta sandvicensis</i>) the potential to occur in the vicinity of the proposed project site. It is against State law to harm or harass these species. If any of these species are present during construction activities, then all activities within 100 feet (30 meters) should cease, and the bird should not be approached. Work may continue after the bird leaves the area of its own accord. If a nest is discovered at any point, please contact the Hawai'i Island Branch DOFAW Office at (808) 974-4221.</p>	<p>We appreciate the references you have provided relating to endangered species. A Natural Resource Assessment was conducted for the Draft EIS (DEIS) by AECOS (Appendix C). Please refer to Section 4.6 of the DEIS for discussion of native species, endangered species, and critical habitat in relation to the KBMP. The Project Area has been heavily infiltrated by non-native and invasive species. As discussed in the Natural Resource Assessment, no species listed as threatened or endangered by state or federal statutes were identified on any of the project parcels at Keauhou Bay. The potential exists that several listed species might transit or utilize the general area on occasion. For further discussion on potential impacts and mitigation measures, please refer to section 4.6 of the DEIS.</p> <p>Methods for removal of non-native species and native plant restoration along with appropriate mitigation measures for the protection of endangered species are identified in the study.</p> <p>Short-term construction related activity will involve clearing and</p>

**Table 7.2 DEA Summary of Comments and Responses**

Comments	Commenter	Responses
	<p>The State listed Hawaiian Hawk or 'lo (<i>Buteo solitarius</i>) may occur in the project vicinity. DOFAW recommends surveying the area to ensure no Hawaiian Hawk nests are present if trees are to be cut. 'lo nests may be present during the breeding season from March to September.</p> <p>The State endangered Hawaiian Monk Seal (<i>Monachus schauinslandi</i>) and threatened Green Sea Turtle (<i>Chelonia mydas</i>) may potentially occur or haul out on shore within the vicinity of the proposed project site. If either species is detected within 100 meters of the project area all nearby construction operations should cease and not continue until the focal animal has departed the area on its own accord.</p> <p>The project area falls within or is encompassed the historic range of the State listed Blackburn's Sphinx Moth (BSM; <i>Manduca blackburni</i>). Larvae of BSM feed on many nonnative hostplants that include tree tobacco (<i>Nicotiana glauca</i>) which grows in disturbed soil. We recommend contacting our Hawai'i Island Branch DOFAW office at (808) 974-4221 for further information about where BSM may be present and whether a vegetation survey should be conducted to determine the presence of plants preferred by BSM. DOFAW recommends removing plants less than one meter in height or during the dry time of the year to avoid harm to BSM. If you intend to either remove tree tobacco over one meter in height or to disturb the ground around or within several meters of these plants, they must be thoroughly inspected by a qualified biologist for the presence of BSM eggs and larvae.</p> <p>The proposed project work near Ho'okūkū Pond and the Kūhalalua Spring could affect State endangered native Hawaiian damselflies (<i>Megalagrion</i> spp.) and anchialine shrimp species that might potentially occur in these water features within the project site. Therefore, DOFAW recommends that a survey be conducted by a qualified entomologist to determine if listed damselflies and anchialine shrimps are present in the project area and to assess any potential impacts to those species.</p> <p>DOFAW recommends minimizing the movement of plant or soil material between worksites, such as in fill. Soil and plant material may contain invasive fungal pathogens (e.g., Rapid 'Ōhi'a Death), vertebrate and invertebrate pests (e.g., Little Fire Ants, Coconut Rhinoceros Beetles), or</p>	<p>preparing the Project Area for the phased build out of the Project. Plant species identified within the Project Area are consistent with those found in urban environments which are common non-native introduced species and scattered weedy growth. To avoid the unintentional introduction or transportation of invasive plant species during the short-term construction period, construction equipment, materials, and personnel will be cleaned of excess soil and debris to minimize the risk of spreading invasive species. The Project has been designed to ensure that the physical attributes of new development are compatible with the existing landscape. The landscape design integrates native plants and landscaping elements that are representative of the natural and cultural landscape. The landscape design also incorporates xeriscape techniques that complements the dry climate, pays tribute to the region's agricultural past, and incorporates planting of native vegetation.</p>

**Table 7.2 DEA Summary of Comments and Responses**

Comments	Commenter	Responses
	<p>invasive plant parts that could harm our native species and ecosystems. We recommend consulting the Big Island Invasive Species Committee (BIISC) at (808) 933-3340 in planning, design, and construction of the project to learn of any high-risk invasive species in the area and ways to mitigate spread. All equipment, materials, and personnel should be cleaned of excess soil and debris to minimize the risk of spreading invasive species. Gear that may contain soil, such as work boots and vehicles, should be thoroughly cleaned with water and sprayed with 70% alcohol solution to prevent the spread of Rapid 'Ōhi'a Death and other harmful fungal pathogens.</p> <p>To prevent the spread of Rapid 'Ōhi'a Death (ROD), if 'ōhi'a trees are present and will be removed, trimmed, or potentially injured DOFAW requests that the information and guidance at the following website be reviewed and followed: <a href="https://cms.ctahr.hawaii.edu/rod">https://cms.ctahr.hawaii.edu/rod</a>.</p> <p>DOFAW is concerned about attracting vulnerable birds to areas that may host nonnative predators such as cats, rodents, and mongoose. Additionally, improvements to the bay area are likely to increase the number of users and may generate more trash. We recommend taking action to minimize predator presence; remove cats, place bait stations for rodents and mongoose, and provide covered trash receptacles.</p> <p>DOFAW recommends using native plant species for landscaping that are appropriate for the area (i.e. climate conditions are suitable for the plants to thrive, historically occurred there, etc.). Please do not plant invasive species. DOFAW recommends consulting the Hawai'i-Pacific Weed Risk Assessment website to determine the potential invasiveness of plants proposed for use in the project (<a href="https://sites.google.com/site/weedriskassessment/home">https://sites.google.com/site/weedriskassessment/home</a>). We recommend that you refer to <a href="http://www.plantpono.org">www.plantpono.org</a> for guidance on selection and evaluation for landscaping plants.</p> <p>We appreciate your efforts to work with our office for the conservation of our native species. Should the scope of the project change significantly, or should it become apparent that threatened or endangered species may be impacted, please contact our staff as soon as possible. If you have any questions,</p>	<p>Thank you for your participation in the environmental review process.</p>

	<p>please contact Paul Radley, Protected Species Habitat Conservation Planning Coordinator at (808) 295-1123 or paul.m.radley@hawaii.gov.</p>	
<p>State DLNR DOFAW – Na Ala Hele</p>	<p>The Nā Ala Hele Trails and Access Program within the Division of Forestry and Wildlife, Department of Land and Natural Resources, thanks you for the opportunity to comment on the subject EISPN for the Keauhou Bay Management Plan. We are pleased to see Kamehameha Schools taking actions to protect the sensitive heritage sites in the area and provide interpretation while at the same time easing the congestion and overuse of the area.</p> <p>As the project proposal will potentially impact several historic features, including trails, as well as impact public access, our recommendations are as follows:</p> <p><b>Keauhou Trail (SHPD site No. 15243):</b></p> <p>The Keauhou Trail is a historic trail that has served as one of the main mauka-makai access trails for the Keauhou ahupua‘a for centuries, as shown on boundary survey maps of the mid-1800s and even earlier though oral histories. As such, per the Highways Act of 1892 (codified into State law, HRS 264), the trail alignment continues to be owned by the State of Hawai‘i (with the exception of the portions realigned in 2003 for the Bay View Estates project). Within the subject project area, there are various historical alignments, some depicting the trail running straight, and others depicting the trail curving south above the Old Kona Road before heading mauka again. The Management Plan recommendation B4 for a “commercial kīpuka” is concerning due to the potential impacts to the trail alignment and its continual use as publicly accessible land. Additionally, there is historical record of a “Kau Cemetery” area in that same B4 zone. (See Exhibit A and B.)</p> <p><u>Recommendation:</u> Verify any archaeological evidence for any trail remains, combined with historical map references. Include onsite consultation with Nā Ala Hele staff.</p> <p><u>Recommendation:</u> Honor the alignment of the Keauhou Trail, even if archaeological evidence has been displaced. Consider utilizing the trail</p>	<p>Thank you for your letter dated April 22, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan prepared pursuant to Hawai‘i Revised Statutes Chapter 343.</p> <p>We appreciate the resources and information shared. Based on recommendations in your letter as well as during the subsequent consultation meeting and site visit on October 7, 2022, two areas within the TMK: 7-8-010:044 portion of the Project Area, totaling 1.97-acres, were re-examined by Haun &amp; Associates in October, 2022, in order to locate the remains of two historic trails (Keauhou Trail: Sites 15243 and Kainaliu Trail: Site 24259). The findings of the survey are included in the 2022 Haun &amp; Associates’ ARS and Site Condition Update (Appendix B) and summarized in DEIS Chapter 4.1.2.3. The historical background of these trails in relation to the overall development of the bay over time is discussed in DEIS Chapter 4.1.1.</p>

**Table 7.2 DEA Summary of Comments and Responses**

Comments	Commenter	Responses
	<p>corridor as a pedestrian access incorporated into the interpretive path network. Consult with Nā Ala Hele staff on interpretive signage content.</p> <p><u>Recommendation:</u> As part of the re-establishment of the Old Kona Road, mark the crossing of the Keauhou Trail with inlaid natural, native stone pavers.</p> <p><b>Old Kona Road and Old Cart Road to Kainaliu (SHPD site No. 24259):</b></p> <p>Management Plan recommendation E3 proposes to re-establish the Old Kona Road. While this will indeed alleviate vehicular congestion near the coastal sites, special care should be taken in this endeavor as a portion of this road is also a historic trail (site 24259) documented in maps as early as 1885. (See Exhibit C.) We acknowledge that the portion of this trail within the subject project area was sold by the State to Kamehameha Schools via quitclaim deed in 1969, however, the portion mauka of Ali'i Drive to the upland Kainaliu village continues to be owned by the State of Hawai'i, per the Highways Act of 1892 (codified into State law, HRS 264).</p> <p><u>Recommendation:</u> Verify any archaeological evidence for any remnant precursor trail that escaped the construction of the Old Kona Road, combined with historical map references. Include onsite consultation with Nā Ala Hele staff.</p> <p><u>Recommendation:</u> Include the re-established Old Kona Road as a public access vehicular easement.</p> <p>Just past the junction with the Keauhou Trail, the alignment of site 24259 continues mauka at a diagonal up to the old mauka village of Kainaliu, where the Old Kona Road continues to round the bay. (See Exhibits A, B, and C.). The "Boutique Resort" (Management Plan recommendation B3) will therefore impact this alignment. With modern County building codes, even with a post-and-pier design, there will need to be substantial grading to create the "Boutique Resort" and its associated infrastructure.</p> <p><u>Recommendation:</u> Honor the alignment of the Kainaliu Trail, even if archaeological evidence has been displaced. Consider incorporating the trail alignment into the interpretive path network.</p>	<p>The two subject trails are depicted on historic maps of the area as far back as 1885. Aerial imagery of the Keauhou Bay area taken in 1954 show that these trails alignments had remained intact until at least that time. However, the trails do not appear in any subsequent aerial images likely due to the Project Area having been mechanically disturbed and overgrown with vegetation. Using the 1954 aerial imagery, the locations of the two historic trail alignments were cleared of vegetation and systematically examined by Haun &amp; Associates archaeologists.</p> <p>An approximately 1.26-acre corridor was cleared of vegetation and surveyed along the historic Keauhou Trail alignment (Site 15243). The ground surface within this corridor showed evidence of past mechanical grubbing and no remnants of the Keauhou Trail were present.</p> <p>An approximately .71-acre corridor encompassing the alignment of the historic Kainaliu Trail (Site 24259) was cleared of vegetation and surveyed. This corridor also showed evidence of grubbing with the presence of several linear mounds</p>

**Table 7.2 DEA Summary of Comments and Responses**

Comments	Commenter	Responses
	<p>Incorporate the alignment as part of the pedestrian infrastructure for “Boutique Resort”. Consult with Nā Ala Hele staff on interpretive signage content.</p> <p><b>Old Government Road (Beach Road)</b></p> <p>The Old Government Road along the bay of Keauhou is an ancient trail that linked the many villages along the coast, as evidenced by many early maps, archeological features, and oral histories. Certain sections have “evolved” into modern roads (like Ali’i Drive through Kailua), while other sections are remarkably preserved (like through Kuamo’o). Within the subject area, the continuous access from north to south along this trail corridor has been obscured by auxiliary activities.</p> <p><u>Recommendation:</u> Honor the alignment of the Old Government Road by designing better continuity for pedestrian access flow, connecting Kamehameha III Road and Kaleiopapa Road. Uphold the commitments of the 2003 MOA and the resulting Cultural Trails Plan. Include onsite consultation with Nā Ala Hele staff.</p> <p><b>Consulted Parties</b></p> <p>Chapter 8 of the EISPN lists the proposed agencies to be consulted in the drafting of the DEIS. Per HRS 198-D, the Nā Ala Hele Trail and Access Program “shall serve as the centralized information agency for matters relating to the trail and access program.” Additionally, per a 2003 MOA between the DLNR and Kamehameha Schools, “NAH has a compelling public purpose to collaborate with [Kamehameha Schools] on the design, landscaping and buffer treatments, and public access for the Keauhou Historic Trail System” and “[Kamehameha Schools] will consult with the Nā Ala Hele staff and the Advisory Council as they develop the overall trail plan for the Resort.”</p> <p><u>Recommendation:</u> Add the Nā Ala Hele Trail and Access Program to the list of consulting agencies, under the Department of Land and Natural Resources. Correspondence and notifications can be directed to Jackson Bauer, Hawai’i Island Trail and Access Program Manager, as detailed below.</p>	<p>created by bulldozer blades. No remnant of the Kainaliu Trail was observed.</p> <p>The KBMP includes actions to honor the alignments of historic trails throughout the property. The planned network of new and improved walking paths throughout the Project Area will increase pedestrian access and provide an intact north-south pathway through the entire site to help recreate the experience of walking along the historic Old Government Road. The KBMP also calls for the re-establishment of the Old Kona Road as a public access vehicular easement, thereby re-opening a historic path that had become overgrown with vegetation and fallen into disuse. The mauka-makai walking experience of the historic Keauhou Trail will also be honored through the establishment of the recreation corridor. This open space corridor area will allow for bay visitors to freely walk from the coastline up to the Old Kona Road. The open space recreation corridor also connects to the network of walking paths situated both above and below ‘Ahu’ula Cliff. The history and significance of the known</p>

		<p>be needed to find out if any capital improvements of the WWRF and facilities leading up to it will need improvements with this increase in flow. All wastewater plans will conform to applicable provisions of the Hawaii Administrative Rules, Chapter 11-62, "Wastewater Systems."</p> <p>Thank you for your participation in the environmental review process.</p>
<p>State Office of Planning and Sustainable Development</p>	<p>Thank you for the opportunity to provide comments on the Environmental Impact Statement Preparation Notice (EISPN) for the Keauhou Bay Management Plan.</p> <p>The notification request was sent via memo dated March 18, 2022. It is our understanding that Kamehameha Schools (KS) proposes a Keauhou Bay Management Plan (KBMP) on approximately 29 acres at Keauhou Bay, Hawai'i Island. The KBMP proposes a place-based cultural educational center. In the management plan, the existing commercial operations will be relocated to new facilities in more appropriate locations. The proposed management plan will focus on cultural stewardship, bayfront access for the public, and educational opportunities.</p> <p>The Office of Planning and Sustainable Development (OPSD) has reviewed the transmitted material, and has the following comment to offer:  <u>Shoreline Setback Certification and Variances</u></p> <p>The EISPN lists the need for a SMA Use Permit from the County of Hawai'i. Based on the limited amount of information in the review material, it is unclear if any of the proposed actions will involve actions near or within the shoreline. We recommend that KS consult with the County of Hawai'i Planning Department for shoreline setback requirements regarding proposed activities, if any, that may be located in the shoreline area.</p> <p>If you have any questions or concerns regarding this comment letter, please</p>	<p>Thank you for your letter dated March 18, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan prepared pursuant to Hawai'i Revised Statutes (HRS) Chapter 343. The following responses are offered to your comments.</p> <p>Chapter 3 of the Draft Environmental Impact Statement (DEIS) provides a detailed description of the proposed Project and describes actions occurring near or within the shoreline area. All proposed activities will be completed in accordance with HRS 205A, Coastal Zone Management, and County of Hawai'i SMA guidelines. KS will continue to consult with the County of Hawai'i Planning Department throughout</p>

	<p>contact Joshua Hekekoa of our office at (808) 587-2845.</p>	<p>the HRS 343 and SMA process to determine if any development activities require a shoreline setback variance.</p> <p>Thank you for your participation in the environmental review process.</p>
<p>County Department of Water Supply</p>	<p>We have re viewed the subject Environmental Impact Statement Preparation Notice and have the following comments.</p> <p>Please be informed that there is an existing 12-inch waterline along Kaleiopapa Street. There are four (4) existing services for some of the subject parcels (Account Nos. 850-1110, 850-11350, 850-11360, and 850-11c 90). Each service has a 5/8-inch meter, which allows an average daily usage of 400 gallons. The Department will note that the average daily water' usage for each service, over the past two (2) years, is more than the allowed amount and exceeds the capacity of the existing meter. Any usage beyond the allowed use will need to be accounted as additional water needed for the project.</p> <p>Please be informed that the applicant has assigned 101 units of water to TMK 7-8-010:044 through an executed Water Agreement with the Water Board, dated April 4, 2012. Additional water could be made available subject to the Water Board's approval.</p> <p>The Department requests that the applicant submit more detailed estimated average daily water demand calculations. The calculations must be prepared by a professional engineer licensed in the State of Hawai'i and should include the number of fixture units (and corresponding gallons per minute demand) for the proposed facilities, as recommended by the adopted Uniform Plumbing Code. The calculations should also include the total estimated average daily water demand (GPD) for the proposed facilities by each service.</p> <p>Based on the calculations provided, the Department will determine the appropriate service connection size(s), facilities charges due, and other requirements for water service.</p>	<p>Thank you for your letter dated April 20, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan prepared pursuant to Hawai'i Revised Statutes (HRS) Chapter 343. The following responses are offered to your comments.</p> <p>Thank you for the information regarding the existing water utilities. Section 4.12.1 of the Draft Environment Impact Statement (DEIS) provides detailed estimates of the average daily water demand for the various project components. In total, the Project will result in an average water demand of approximately 97,466.2 GPD which is equivalent to 240 water credits from DWS.</p> <p>KS understands the current assigned water credits designated for the property and is working with</p>

**Table 7.2 DEA Summary of Comments and Responses**

Comments	Commenter	Responses
	<p>We will also require that plans be submitted. prepared by a professional engineer licensed in the State of Hawai i, showing the appropriate service lateral installation(s). A reduced pressure type backflow prevention assembly must be installed within five (5) feet of the meter(s) on private property and the installation shall be inspected and approved before water service can be activated.</p> <p>Please note that the Department of Water Supply acknowledges that potable water is Hawai Island's most precious resource and encourages our communities to promote water conservation and reserve the highest equality of water for the most valuable end use, which is the sustenance of life.</p> <p>The Department recommends that the applicant consider appropriate landscape so that additional potable water is not required. Water for landscape irrigation should be provided by alternate methods (i.e. rainwater' catchment, reclaimed or reuse water). The County of Hawai'i, Department of Public Works, and/or State of Hawai'i, Department of Health has guidelines, recommendations. or regulations. regarding these types of systems.</p> <p>Should there be any questions, please contact Mr. Ryan Quitoriano of our Water Resources and Planning Branch at (808) 961-8070, extension 256.</p>	<p>DWS to allocate the necessary water credits for this project.</p> <p>Water conservation measures will be implemented in design of the Project and may include, but not be limited to, the following: efficient irrigation systems such a drip system and moisture sensors, utilization of nonpotable water for irrigation, drought tolerant plants, and the use of Water Sense-labeled ultra-low flow water fixtures and toilets.</p> <p>The County of Hawai'i DWS will continue to be consulted as the Project design progresses. Concept drawings will be included in Appendix H of the DEIS and also provided to DWS and HFD for review and comment. Construction documents, including construction plans and calculations of fixture units, will be submitted to DWS and HFD for review and approval after Final EIS and Special Management Area (SMA) approval.</p> <p>Thank you for your participation in the environmental review process.</p>

	<p>Kamehameha Schools (KS) Keauhou Bay Management Plan Keauhou, Hawai'i has been reviewed and we offer no comments at this time.</p> <p>Should you have questions, please contact Captain Gilbert Gaspar Jr., Commander of the Kona District, at (808) 326-4646, extension 299, or via email at <a href="mailto:gilbert.gaspar@hawaiicounty.gov">gilbert.gaspar@hawaiicounty.gov</a>.</p>	<p>Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan prepared pursuant to Hawai'i Revised Statutes Chapter 343.</p> <p>We acknowledge that the County Police Department has no comments at this time.</p> <p>Thank you for your participation in the environmental review process.</p>
Organizations		
<p>Daughters of Hawai'i</p>	<p>Thank you for the opportunity to submit comments regarding the Environmental Impact Statement Preparation Notice for the Proposed Keauhou Bay Management Plan Project by Kamehameha Schools.</p> <p>For over a hundred years the Daughters of Hawai'i, a nonprofit 501(c)(3) organization, has upheld our mission of historic preservation, preserving and protecting places of historical and cultural significance in Hawai'i and increasing awareness of the importance of historical preservation. Since 1903, we have drawn attention to and saved from oblivion historical sites and wahi pana such as the Nu'uuanu Pali on O'ahu to commemorate the Battle of Nu'uuanu, Kūkaniloko on O'ahu one of the two birthing places throughout the islands reserved for the highest-ranking ali'i, and Ka'iulani's Banyan marking the home of Princess Ka'iulani—Hawai'i's last heir to the throne. Today, we are the caretakers of three historic sites, listed on the State and National Registers of Historic Places. Two of the sites are managed and operated as historic house museums, Hulihe'e Palace in Kailua-Kona on Hawai'i Island and Hānaiakamalama—the Queen Emma Summer Palace in Nu'uuanu, O'ahu. Our third site, Kauikeaouli Stone, the birth site of Kauikeaouli, King Kamehameha III lies within the boundaries of the proposed project area identified by the Keauhou Bay Management Plan.</p>	<p>Thank you for your letter dated April 22, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan prepared pursuant to Hawai'i Revised Statutes Chapter 343.</p> <p>We thank you for your continued commitment in the protection and preservation of Kauikeaouli's birth site. We agree that this site is a special wahi pana that should be cared for in a way that honors the history and legacy of the ali'i who once resided at Keauhou Bay. KS is committed to the continued collaboration with Daughters of Hawai'i and will continue to consult with your leadership throughout this planning process.</p>

Comments	Commenter	Responses
	<p>We are very interested in the Kamehameha Schools proposed development in this area at Keauhou Bay. The Daughters of Hawai'i has been an active and involved community member of the bay since 1911. In 1914, the Daughters with support from Queen Lili'uokalani, held a ceremony to mark the 100<sup>th</sup> anniversary of Kauikeaouli's birth and erect a bronze tablet to officially mark and preserve this historic site, a very important cultural and historical asset. This project proposes a significant change to the bay area and to the landscape and the surrounding areas of the birth site, which we have cared for and stewarded for over one hundred years, and will continue to care for today and in the future. We are taking our time to review the proposed development plan, to understand the process by which we can continue to engage in it, and to better understand how it will impact and affect the birth site and the surrounding areas.</p> <p>The Daughters of Hawai'i has a long history and a standing partnership with Kamehameha Schools. We applaud their extensive work throughout the islands and beyond to uphold the legacy of Princess Bernice Pauahi and our ali'i. Thank you for providing this opportunity to comment, we look forward to continue engaging with Kamehameha Schools to continue the preservation and commemoration of Kauikeaouli's birth site and his legacy.</p>	<p>Thank you for your participation in the environmental review process.</p>
<p>Keauhou Resort Condo AOA</p>	<p>We are writing you to share our views as neighbors at Keauhou Bay in regards to the new version of the KBMP.</p> <p>While we understand that you are working with the county of Hawaii, under the requirements to having two Tsunami Evacuation Roads out of Keauhou Bay in your plan, we would greatly appreciate your consideration on how these plans are going to irreversibly and negatively change the quality of our lives and homes, with large increases in traffic, overcrowding, and penetrating noise in such close proximity.</p> <p>We had hoped for a more open and transparent line of communication from Kamehameha Schools in the planning process, and feel as though our objections are being overlooked. Your response and cooperation in our concerns would be greatly appreciated.</p>	<p>Thank you for your letter dated April 22, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan prepared pursuant to Hawai'i Revised Statutes Chapter 343.</p> <p>We understand that parking and circulation has been challenging in residential neighborhoods surrounding Keauhou Bay. Street capacity and traffic circulation was taken into consideration during the development of alternatives. The</p>

**Table 7.2 DEA Summary of Comments and Responses**

Comments	Commenter	Responses
		<p>Project involves multiple design elements to improve overall circulation and alleviate congestion. The Project proposes to improve the Old Kona Road to support multi-model transportation options while also providing a linkage across the two sides of the Bay. The roadway is intended to be pedestrian orientated to serve as a key walking route for residents and resort guests to access the dining, commercial, and recreational activities throughout the area.</p> <p>The Draft Environmental Impact Statement (DEIS) provides an analysis of potential traffic impacts in Section 4.11. A Mobility Analysis Report (MAR) was prepared by Fehr &amp; Peers to identify and assess existing and future mobility option as well as potential traffic impacts generated by the Project (<i>Appendix E</i>).The MAR found that the implementation of the Project would not result in significant traffic impacts.</p> <p>An Acoustic Study was conducted for the DEIS by Y. Ebisu and Associates (<i>Appendix F</i>). Overall, the results of the Noise Assessment indicate that no significant increases in noise levels are</p>

**Table 7.2 DEA Summary of Comments and Responses**

Comments	Commenter	Responses
		<p>predicted to occur as a result of traffic following the full buildout of the Project. Short-term noise impacts associated with Project construction activities may occur during the earthwork and excavation phases, when site preparation work and/or roadway construction occur. In addition to the anticipated application of State Department of Health noise permit requirements and procedures during noisy construction activities, the use of quieted portable engine generators and diesel equipment will be specified for use within 500 ft of noise sensitive properties. Heavy truck and equipment staging areas will also be located at areas which are at least 500 ft from noise sensitive properties. For further discussion, please refer to section 4.13 of the DEIS.</p> <p>KS is committed to continuing to engage with the Keauhou Resort Condo AOA and area residents throughout the planning process. You will be notified of the next public meeting for the Project as well as the opportunity to review and provide comments for the DEIS. Thank you for your participation in the environmental review process.</p>

<p>Royal Order of Kamehameha</p>	<p>The Royal Order of Kamehameha I - Kona Chapter has reviewed the 84 page EISPN document. We have a few comments and concerns to share regarding the project of revitalizing Keauhou Bay and the Project Parcel area.</p> <p>We understand the need to develop the area, to be able to share the rich history of this location. Also the improvements recommended are important due to the frequent visits of community members and tourists in the area. In reviewing the EISPN and its alternative plans, the document frequently mentions the need for creating and maintaining the cultural significance of the area. Also providing a space for those to engage in place-based learning. We find the pursuit of maintaining our wahi pana and connection with our community, a worthy cause for development.</p> <p>With the focus on culture and education mentioned throughout the EISPN, we are looking for assurances that as the project progresses, the project as a whole and business ventures/expansions planned, do not become the center focus with our cultural sites becoming mere museum displays or tourist attractions. Education and place-based learning should be the focus, not a part of a shopping center. We already have that, Keauhou Shopping Center. To clarify, we have no issues with Keauhou Shopping Center, but the outcome of the Project Parcel area should not be a shopping center.</p> <p>Developing this parcel of land will no doubt receive comments by our community and organizations. Section 3.3 Archaeological and Cultural Resources, Page 34, states “despite the many changes to Keauhou Bay since 1946, the area remains significant as part of a larger indigenous cultural landscape. There are opportunities within the Project Area to reconnect the few remaining indigenous features or to restore those that have been covered or filled and ultimately enhance the integrity of the indigenous cultural landscape.” This is most important to us, the revitalization and reconnection to the land and historic sites. If the project stays true to this, it will be for the good of the community and our wahi pana. We ask that the Royal Order of Kamehameha I -Moku O Kona continue to be consulted as this project moves forward.</p> <p>The Royal Order of Kamehameha I was founded on April 11, 1865 by decree of Kamehameha V Lot Kapuaiwa in honor of his grandfather Kamehameha I.</p>	<p>Thank you for your letter dated April 22, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan prepared pursuant to Hawai'i Revised Statutes Chapter 343.</p> <p>The mission of KS is to create educational opportunities in perpetuity to improve the capability and well-being of people of Hawaiian ancestry. KS' Vision 2040 Vision seeks to improve the well-being of 'āina and the lāhui within one generation. In that light, the lands bestowed upon Ke Ali'i Pauahi, and subsequently endowed to KS, enhance a sense of Native Hawaiian identity by maintaining its ancestrally mandated obligations and responsibility to past, present, and future.</p> <p>Moreover, KS, as the haku 'āina, has an obligation to care for these legacy lands in a manner conducive to not just fostering this relationship between kānaka and 'āina but to also ensure their long-range economic vitality as to positively meet the needs of the communities the institution invariably serves. To fulfill its mission, KS seeks to utilize its landholdings and resources to</p>

	<p>We continue to honor and celebrate his legacy as chiefs of the Royal Order of Kamehameha I. The Royal Order of Kamehameha I is devoted to the continued preservation and perpetuation of the ancient culture, customs, and traditions of Hawai'i. As well as continuing to uplift the Hawaiian people through supporting projects that align with our values.</p>	<p>achieve a balanced state between educational, cultural, environmental, economic and community returns. KS recognizes that a thriving lāhui is not solely achievable through financial gains but is equally dependent upon the well-being of its learners, the greater community, and the 'āina as a whole.</p> <p>KS is committed to continuing to engage with The Royal Order Of Kamehameha I throughout the planning process. You will be notified of the next public meeting for the Project as well as the opportunity to review and provide comments for the DEIS. Thank you for your participation in the environmental review process.</p>
<p>Businesses</p>		
<p>Fair Wind Cruises</p>	<p>We have enjoyed living and working in Keauhou Bay Small Boat Harbor over the past 50 years. During the 1970's Guido Giacometti was the President of KIC and managed Keauhou with real aloha. He respected and loved the area and the people in it. He jogged through the area daily and his mother lived in a home on the bay. Once he left the position, others who took that position did not have the same aloha and were seldom if ever seen in Keauhou Bay. Soon the nursery guys who took such good care of the landscaping were no longer holding those jobs and the area started to look in shambles. The Kona Lagoon Hotel stood empty for 13 years before it was taken down. The</p>	<p>Thank you for your letter dated April 22, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan prepared pursuant to Hawai'i Revised Statutes Chapter 343. We offer the following responses.</p>

**Table 7.2 DEA Summary of Comments and Responses**

Comments	Commenter	Responses
	<p>Keauhou Gardens, a planted garden with acres of plants marked by their names and uses in Hawaiian medicine and culinary went to weeds. Kamehameha Schools have left this development with little to no care for decades. Their leadership is in Honolulu and the representatives here in Kona have not had Malama 'Aina on their minds.</p> <p>As heartbreaking as this all is to those who truly love Keauhou, it is past time to give some aloha to "Keauhou The Crowned Lands". It is past time that Kamehameha Schools Malama 'aina, invested energy to maintain the grounds and make the area beautiful again. Statewide everyone else seems to be working on taking care of the land, and ocean. KS wants to build a hotel? They want a hotel now, again, why did the Keauhou Beach Hotel need to be torn down and 300 jobs taken away? Who will be given the management contract for this boutique hotel? Where do they think they are going to get employees? There are not enough employees for the jobs needing to be filled now. What we need is housing. Without housing, Hawaii Island Planning Dept should not allow or approve building permits for a hotel anywhere in Kona. We have a housing crisis and it is apparent with this development plan, KS is not thinking of the community's needs. The Executive Board needs to come here and see what their "Crowned Lands" look like and take care of this forgotten development today. The shopping center is partially empty filled mostly with medical offices, not what anyone thinks of as a shopping center.</p> <p>This plan speaks of opening the bay to more residents, but when has a hotel ever opened its oceanfront area to the public more than Keauhou is now? ..... never! There are a lot of residents using this bay, beach, and harbor. But no one from KS is ever here to know this.</p> <p>The Maui Arts and Cultural Center is something I believe could be replicated here in Keauhou in place of the "boutique hotel". A smaller version of the MACC could work and bring a rich addition to our Kona community. A place open to the public sharing family fun, arts, film, and dance. MACC is funded by grants and fees generated from some of the events they host. Maui citizens participate and enjoy the learning and culturally rich opportunities</p>	<p>We agree that greater investments are needed to maintain the grounds and make the Keauhou Bay area beautiful again. KS plans to reinvigorate and transform its lands fronting the Keauhou Bay area to become a place where culture and education is celebrated and highlighted amidst viable commercial operations, which will be repositioned but are essential to fund the cultural and educational programming within the immediate area. As described in Section 3.2.1 in the Draft Environmental Impact Statement (DEIS), the Project will establish a heritage management corridor along the bayfront. The Project will enhance the cultural landscape and history associated with the heritage corridor through enhanced physical and visual access, restoration, and interpretation. The improvements include restorative actions to ensure historic integrity and longevity of the natural and cultural resources. Improved landscaping throughout the heritage corridor will be compatible with the historic character of the bay or suitable to coastal regimes typical of the Kona area. Landscaping may also include the use of native plants that could</p>

	<p>offered them at MACC as would Kona citizens if Kamehameha Schools could have the vision to add something missing in Kona!</p> <p>I agree with the Marine Activity Business building built nearby with parking and restrooms for the marine activity customers. We along with a few other marine businesses in Keauhou had been leasing a parking lot for our customers to park in but since covid Kamehameha Schools has not made that available for lease again, and all of these customers, 250 or so are parking along the street every day. We need public parking for the commercial users and residents that come down to the harbor.</p> <p>The state pier and parking area on the pier are necessary for mechanical equipment to have access and deliver supplies and fuel to the vessels that are permitted to moor in the harbor. We have USACE permitted moorings in this harbor. The KS plans to relocate commercial operators away from culturally sensitive areas need to accommodate the DLNR/DOBOR permittees for access to their vessels. The harbor area is a state harbor with USCG navigational lights. This is not up to KS to redesign.</p>	<p>be utilized for select cultural demonstrations and practices related to hōlua sledding, fishing, healing practices, or hula. As part of the management of this heritage corridor, KS will strive to foster collaborations with lineal descendants, cultural practitioners, and community volunteers to cultivate opportunities for KS students and the public to engage in ‘āina based restorative efforts. Implementation of the plan will in no way limit access to the shoreline. In fact, the plan will increase the amount of open public space and improve overall access to the shoreline.</p> <p>In regards to the management of the boutique resort, KS is presently looking for a resort operator that is committed to community and place and the vision that KS and its stakeholders has established for Keauhou. KS is dedicated to implementing a new model of destination management focused on Native Hawaiian regenerative tourism and traditional models of ho’okipa. Please refer to DEIS Section 3.2.2 for information on the boutique resort.</p>

<p>Alice Ray</p>	<p>Aloha,                      I appreciate the major effort that has already gone into planning this next step in the life of Keauhou Bay. The Kamehameha Schools Trust has clearly tried to solicit input from many directions in order to come to the proposed plan. Nonetheless, I believe it is clearly flawed in the most fundamental way and will have a negative impact on the very people in whose interest it purports to be acting, low income Native Hawaiian people.                      It purports to be aligned with the KSBE Trust's mission "to improve the capability and well-being of people of Hawaiian ancestry." Kuhanauna, KSBE's important document of organizational intent through 2040 clearly states "We will steward our 'āina to support resilient economies, cultural landscapes, diverse learning, and career pathways (for Native Hawaiians)." Yet the plan for a 150 unit high end hotel and restaurant betrays this commitment. People of Native Hawaiian ancestry have a poverty rate almost 50% higher than the state as a whole. They have the highest employment rates, yet the lowest family income rates of any group. One big reason is dead end jobs in the hospitality industry, which loves to have Hawaiian people on display, but not to pay them a living wage. Investing in another high end restaurant and fancy hotel does not create many career pathways to the kinds of jobs that produce a resilient economy. It locks more people in poverty. And these are not the kind of places low income people, Hawaiian or not, can afford to frequent. Without a doubt the tremendous financial assets the Trust has been bequeathed need to be invested wisely to ensure fulfilling its long term</p>	<p>Thank you for your letter dated April 22, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan (KBMP) prepared pursuant to Hawai'i Revised Statutes Chapter 343.</p> <p>As the steward of approximately 54 acres at Keauhou Bay, Kamehameha Schools (KS) has specific commitments to maintain and support the management of the bay and its resources. 	<p>mission. But the current proposal makes a huge investment in two very risky businesses with little chance of a proportionately high reward, either cultural or financial. 60% of new restaurants fail within a year, 80% within five years. Location is a key factor; several have failed already at the Keauhou Bay site. If the Trust is willing to take on such a high level of risk, why not instead create an equity fund in the fast growing space of social enterprises?</p> <p>Entrepreneurial businesses led by Hawaiians and/or creating professional level careers for Hawaiians, with a double bottom line, explicitly creating social as well as financial value for the community, would seem to be a much better bet - and could be done without disrupting the aina at Keauhou Bay.</p> <p>As for the proposed road: Why not start with the much less expensive option of a semi-paved walking path between the two sides of the Bay, and then measure its utility before committing to the much greater expense, and predictably more unintended negative impacts of a county road.</p> <p>Please deny this permit. While it has been submitted by an organization with a formal commitment to protect the interests of Native Hawaiians, the actual impact on native people is more likely to perpetuate systemic economic injury and injustice to them.</p>	<p>members it was determined that doing nothing is not a viable option. <p>Alysia Fischer</p>	<p>As an archaeologist who worked on site in Keauhou Bay for multiple impact assessment and tsunami mitigation projects, I am vehemently opposed to any development that would add more commercial or residential impact to the area. Along with the uncontrolled sea level rising, any further development would negatively impact the invaluable historical and cultural resources of the area. Kamehameha Schools, the county, and the state can do better with “fundraising” for education and the preservation of this area instead of hiding it within the guise of obtaining the funds through further “for profit” development. Preservation and improvement projects are always welcome and encouraged, but it shouldn’t come at the high cost of changing the physical and cultural landscape to this extent.</p>	<p>Thank you for your letter dated April 22, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan (KBMP) prepared pursuant to Hawai‘i Revised Statutes Chapter 343.</p> <p>We acknowledge your concerns related to commercial or residential development at Keauhou Bay. 	<p>Into Kupalalua which is non existent today, along with our house that went out with the tidal wave.</p> <p>We shipped cattle out of the beach where the pier is. My mother used to rope and drag the pipi to the long boat with the rest of our family. We played and swam at the black sand beach where the pier is. I learned to swim in Keauhou and would take my horse in swimming.</p> <p>We could not drive from the north side to the south at high tide because there was at least a foot of water covering the road.</p> <p>The manta were always in the bay as we swam from sampan to sampan.</p> <p>Then Mr. Troy Post arrived right out of Texas. He immediately bulldozed the oldest Heiau to make a golf course. The remains are still there in the form of bougainvillea. Then came the massive “kitty litter” box also known as the volleyball court. Construction was also underway for the pier. That was the beginning of the end of beautiful Keauhou. Now Kilinehehe beach was obliterated The memory of Mary Hauanio crawling on the rocks catching opihi and aama is still etched in my mind. We watched Doc Hill build his home Now it was our turn and we built further out on the point in the 60s. We watched the Kona Surf go up as we were directly across the bay. We sold when the Bay got so crowded and run down.</p> <p>Now you folks want to restore the Historic Bay. What are you going to restore? Putting a Boutique where the canoe halau is is ridiculous . Tourist look for culture and history. A sand beach with canoes ready to go is in tune with old Hawaii, not a fancy boutique. Push the kitty litter box mauka, let the beach come back The Fair winds has totally destroyed that side of the Bay In 1973 the Daughters of Hawaii were given outright, the Kamehameha III birth place complete with open space, maintenance and the stipulation that not so much as a rock could be moved without first consulting us. That was good for a few years till a change of management went. From there it wasn't a rock being moved, it was truckloads and no contact with the Daughters. It was in the late 90s I Noticed the driveway into the Fair Winds and asked the the. CEO what happened. His response, “I guess we weren't paying attention. Which has been happening right along.</p>	<p>prepared pursuant to Hawai'i Revised Statutes Chapter 343.</p> <p>We thank you for sharing you and your family's history in the bay. 	<p>As has been shown time and again the water quality of this beautiful Bay is unacceptable ... from marginal to terrible. The water which runs off the golf course above the K.S. planned site already negatively impacts the Bay. It is alarming to think about what all the polluted water running off acres of concrete from the site will do. This spot on the Big Island is culturally significant and popular <i>because</i> of the Bay. What remediation will make the Bay safe for swimming, paddleboarding and other water sports? (The pollution impacts the adjacent surf spot at Heeia Bay as well).</p> <p>The K.S. stated desire to use the space to better honor the birth of King Kamehameha III and provide a place for Hawaiian heritage to be celebrated and honored is a clever hypocrisy. The people who will take over this beautiful Bay will be the well to do who inhabit the 150 units and enjoy the “fine dining” restaurant. Few will be native Hawaiians. Another takeover of one of the last important cultural sites of this beautiful Island.</p> <p>Thank you for addressing the foregoing concerns. This is my request for additional work. Please respond to my queries as part of your public review process and to me by email.</p>	<p>Bay Management Plan (KBMP) prepared pursuant to Hawai‘i Revised Statutes Chapter 343.</p> <p>As the steward of approximately 54 acres at Keauhou Bay, Kamehameha Schools (KS) has specific kuleana to maintain and support the management of the bay and its resources. <p>Betsy Gerace</p>	<p>As an owner of a condo on Kamehameha III Rd., I am writing to express my concern with the proposed development at the Bay, to include a 150 unit resort. As this is essentially a five minute walk from my house I envision a changed environment outside my door. The development of a resort in this pristine and special place does not add to our community rather it will attract hordes of visitors and all that comes with that-traffic, noise, wear and tear on our roads, over use of our waters, to name a few. I support the cultural aspects of the plan, but do not see how a resort fits in. There is already a large hotel in the vicinity-The Outrigger. Why is there a need for more hotel space?</p> <p>I appreciate that the opportunity to share during this public comment period and hope that my objections are weighed along with all the comments.</p>	<p>Thank you for your letter dated April 22, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan (KBMP) prepared pursuant to Hawai'i Revised Statutes Chapter 343.</p> <p>We acknowledge your concerns related to the boutique resort. Booey Hodgins Garcia	<p>What Kam Schools/Development is planning for Keauhou Bay is nothing short of rape. For Hawaiians who care about their aina and history, I am shocked and disgusted. I grew up on that bay. Back then the coral, wana/vana sp?, little shrimp on the buoys, opihi and a'ama on the rocks, and crystal clear water.</p> <p>Even now with what is currently on the bay, is a total disgrace and lacks any foresight whatsoever. Just like the mauka side of Ali'i Drive. I remember about 16 homes on the ocean in the 50s. (Could have been more. I was young. ). You could see the ocean and who was fishing.</p> <p>Don't let the same thing happen to Keauhou. Please.</p>	<p>Thank you for your letter dated April 8, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan (KBMP) prepared pursuant to Hawai'i Revised Statutes Chapter 343.</p> <p>We acknowledge your comments related to the KBMP. As the steward of approximately 54 acres at Keauhou Bay, Kamehameha Schools (KS) has specific kuleana to maintain and support the management of the bay and its resources. The significant demand and utilization of the bay can and often does create congestion which leads to user conflicts along the bayfront. KS lands at the bay are also significantly impacted by unauthorized uses, trespassing, vandalism, and other unsanctioned activities. Through consultation with lineal descendants and community members it was determined that doing nothing is not a viable option. Guided by KS' mission and vision, the Project aligns with the current KS Strategic Map 2025 which is a strategic planning document aimed</p>

		<p>to achieve the goal of developing resilient communities by stewarding the 'āina to support resilient economies, cultural landscapes, diverse learning, and career pathways. The Project aims to achieve this goal by reorienting uses and directing new development in appropriate areas around Keauhou Bay based upon community and organizational values that were identified during the KBMP process.</p> <p>Thank you for your participation in the environmental review process.</p>
<p>Bridget K Butler</p>	<p>I want to mahalo you for the invite to comment on this proposed development for beloved Keauhou Bay. I took time to pule, to noho, to ho'olohe, and here is my mana'o:</p> <p>We all deeply love Pauahi and her dying wishes for her po'e Hawai'i, this love expressed for nā keiki of Hawai'i through the forming of Kamehameha Schools &amp; Bishop Estates. It's a wonderful legacy that she left- quite a remarkable woman she is and inspires many of us to be. Pauahi had a vision to see the generations after her to ho'oulu thrive and she put her money where her heart was and left it all to her beloved nāpua. Many keiki who are kanaka maoli have been greatly enriched and been given wonderful opportunities and an education that couldn't have been afforded elsewhere to push them towards success. For that we are all grateful.</p> <p>My concern is that although these keiki have been well educated by Kamehameha Schools for a few generations now, and many have thrived because of KS, this upcoming generation faces new challenges, and as well educated as they might be with competitive paying jobs and careers, still cannot financially afford to buy land, own a home in their own ke 'one hānau-</p>	<p>Thank you for your letter dated April 21, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan (KBMP) prepared pursuant to Hawai'i Revised Statutes Chapter 343.</p> <p>We acknowledge your concerns regarding the boutique resort. As the steward of approximately 54 acres at Keauhou Bay, Kamehameha Schools (KS) has specific kuleana to maintain and support the management of the bay and its resources. 	<p>especially right here in the district of Kona. It grieves me as I know it does others that with all the rich resources that Bernice Pauahi left for this dream of hers, the best we seem to know how to do with it in order to generate income, is continue to build hotels. Hotels, surrounded by retail space that is targeted for malihini with the hopes of off-setting it with creating space for cultural areas within the development. While we can all appreciate the cultural preservation and aspect of this proposal, as we all know, Hawai'i is in a housing crisis. There is a plethora of hotels, condos, vrbo's and now million dollar homes for malihini to invest into- but what is there for the desendants of Pauahi? Where do they noho? Where is their ku'una- their wahi pana for recreation? Is another hotel and commercial retail space really in their best interest? If Pauahi was sitting with us today- would she approve another hotel to go up on one of the last rural areas on Ali'i Drive between Keauhou Bay and Kamakahonu knowing todays challenges for her lāhui?</p> <p>Whether we are koko Hawai'i or koko Haole, if we call Hawai'i home than we have kuleana to mālama i ka 'āina, ke kai, a kekahi i kekahi me ke aloha nui. With all due respect, perhaps we need to re-evaluate if another multi million dollar development for tourism is really in the best interest for kanaka at this time and for Keauhou Bay itself and all life that sustains within her. Perhaps it is time to focus on development that is generated to preserving a lāhui and its 'ike nohona before another hotel?</p>	<p>planning document aimed to achieve the goal of developing resilient communities by stewarding the 'āina to support resilient economies, cultural landscapes, diverse learning, and career pathways. 		<p>surrounding environment, particularly with regards to view planes, infrastructure, traffic, recreational activities, and open space. Additionally, the provision of housing would not be cost effective for KS to develop at this location and could be cost prohibitive for local buyers.</p> <p>Thank you for your participation in the environmental review process.</p>
<p>Bryce Groark</p>	<p>I am a business owner and our family has lived the past 20 years in Keauhou. We beg you to not push forward with this proposal that would ruin such an important place. It deserves to be cherished, not destroyed.</p> <p>We would support you in any form of stewardship in Keauhou and increasing access to its cultural significance - but for as long as we can remember, Keauhou has been perpetually neglected by KSBE.</p> <p>KSBE just tore down the hotel at Kahalu'u - admitting it should never have been built. Why repeat that mistake? How about something to actually benefit the community and children? Something towards your mission? This is a move backwards.</p> <p>Destroying the natural habitat, laying more concrete, adding more challenges to the ocean and bringing in more tourists is not in any way what Keauhou needs. And is not anywhere in line with the KS mission.</p> <p>Please reconsider and know that we are building a very public, monolithic coalition to fight this to the end if it moves forward.</p> <p><b><i>"Kamehameha Schools' mission is to fulfill Pauahi's desire to create educational opportunities in perpetuity to improve the capability and well-being of people of Hawaiian ancestry."</i></b></p> <p>Mahalo for allowing us to comment on this.</p>	<p>Thank you for your letter dated April 22, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan (KBMP) prepared pursuant to Hawai'i Revised Statutes Chapter 343.</p> <p>We acknowledge your comments related to the KBMP. 		Thank you for your participation in the environmental review process.
Charles Keaoloha Leslie	<p>It has come to our attention at the last minute that KSBE is planning to build a "boutique" hotel and additional commercial, tourist-oriented structures and areas related to recreational use at Keauhou.</p> <p>We agree with any plans that look to create a cultural site, especially a wahi so steeped in mo'olelo, history and historical significance as the birthplace of Kauikeaouli. We would have hoped that KSBE would be a little bit more judicious in its use of land and funds after having to tear down two hotels at Kahalu'u which it admits should never have been built.</p> <p>Why are you planning to go backwards? As members of the Kai Kuleana network, Kealakekua Bay Cultural Advisory 'Ohana and cultural practitioners of lawai'a traditions based at Ka'awaloa, Nāpo'opo'o and Pu'u 'Ohau we are shocked and disappointed. We are currently engaged in a Community Action Plan process at Kealakekua Bay MLCD/State Historic Park with the state, the county, federal and community members to reverse this type of thought related to our wahi. All of our Kona Hema communities (Miloli'i, Ho'okena, Hōnaunau and Nāpo'opo'o) are working to huli how our wahi are being used. The plans to return to action based on 'ike kupuna guides us in our endeavors and we hope would lead you as well.</p> <p>The cultural knowledge held in our kaiaulu kanaka maoli which also holds environmental preservation inherently within its base, needs to take precedence over this mindset that more tourism-oriented action should be happening. Why not build some affordable housing down there for kanaka maoli? That, to us, would be more along the guidelines of Pauahi Bishop's love for her people and the future of our 'ōpio.</p>	<p>Thank you for your letter dated April 22, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan (KBMP) prepared pursuant to Hawai'i Revised Statutes Chapter 343.</p> <p>We acknowledge your comments related to the KBMP. 		<p>KBMP proposes to establish a new cultural heritage corridor with the aim to preserve and protect the most culturally significant and vulnerable sites while enhancing opportunities for the public to engage and learn about their importance. Implementation of the Project is anticipated to generate long-term benefits by preserving sensitive archaeological sites and implementing a plan to steward the sites in perpetuity.</p> <p>Based on recommendations during consultation with Nā Ala Hele Hawai'i Trail and Access System within the DLNR Division of Forestry and Wildlife (DOFAW) and the National Park Service Ala Kahakai National Historic Trail, two areas within the TMK: 7-8-010:044 portion of the Project Area, totaling 1.97-acres, were re-examined by Haun &amp; Associates in October, 2022, in order to locate the remains of two historic trails (Keauhou Trail: Sites 15243 and Kainaliu Trail: Site 24259). The findings of the survey are included in the 2022 Haun &amp; Associates' ARS and Site Condition Update (Appendix B) and summarized in DEIS Chapter 4.1.2.3. The historical background</p>

**Table 7.2 DEA Summary of Comments and Responses**

Comments	Commenter	Responses
		<p>of these trails in relation to the overall development of the bay over time is discussed in DEIS Chapter 4.1.1.</p> <p>The two subject trails are depicted on historic maps of the area as far back as 1885. Aerial imagery of the Keauhou Bay area taken in 1954 show that these trails alignments had remained intact until at least that time. However, the trails do not appear in any subsequent aerial images likely due to the Project Area having been mechanically disturbed and overgrown with vegetation. Using the 1954 aerial imagery, the locations of the two historic trail alignments were cleared of vegetation and systematically examined by Haun &amp; Associates archaeologists.</p> <p>An approximately 1.26-acre corridor was cleared of vegetation and surveyed along the historic Keauhou Trail alignment (Site 15243). The ground surface within this corridor showed evidence of past mechanical grubbing and no remnants of the Keauhou Trail were present.</p> <p>An approximately .71-acre corridor encompassing the alignment of the historic Kainaliu Trail (Site 24259)</p>

**Table 7.2 DEA Summary of Comments and Responses**

<b>Comments</b>	<b>Commenter</b>	<b>Responses</b>
		<p>was cleared of vegetation and surveyed. This corridor also showed evidence of grubbing with the presence of several linear mounds created by bulldozer blades. No remnant of the Kainaliu Trail was observed.</p> <p>The KBMP includes actions to honor the alignments of historic trails throughout the property. The planned network of new and improved walking paths throughout the Project Area will increase pedestrian access and provide an intact north-south pathway through the entire site to help recreate the experience of walking along the historic Old Government Road. The KBMP also calls for the re-establishment of the Old Kona Road as a public access vehicular easement, thereby re-opening a historic path that had become overgrown with vegetation and fallen into disuse. The mauka-makai walking experience of the historic Keauhou Trail will also be honored through the establishment of the recreation corridor. This open space corridor area will allow for bay visitors to freely walk from the coastline up to the Old Kona Road. The open space recreation corridor</p>

		<p>values that were identified during the KBMP process.</p> <p>Thank you for your participation in the environmental review process.</p>
<p>David S. Case</p>	<p>My name is David Case, and I have been a Hawai'i resident for a little over 10 years. My wife and I can see Keauhou Bay from our lanai. I steer, and paddle outrigger canoes several times per week in and around the bay in various outrigger related racing and recreational activities. I am writing this in my personal capacity and do not represent the views of any organization.</p> <p>Kamehameha Schools ("KS") is to be lauded for its planning and expenditures to create and implement the Keauhou Bay Management Plan (KBMP), which appears to dovetail with plans to develop the area around Kahalu'u Beach Park as part of a larger cultural and educational corridor between Kahalu'u and Keauhou.</p> <p>My concern is that the EISPN contains a couple of erroneous assumptions and in other respects may lead to an EIS that does not take a "hard look" and some important issues. These are discussed below.</p> <p>A. <u>Erroneous Assumptions</u></p> <p>1. <u>"Very Low Rainfall and Runoff"</u> (EISPN 3'16). The EISPN assumes that because rainfall reaches "a maximum average of 35 inches per year" that there is "very low rainfall and runoff" into the bay. This is based on a 2016 NOAA analysis and does not account for any changes in those averages in the last eight years. This must be reconsidered in light of the rapid changes brought on by climate warming. This assumption also appears to be internally inconsistent with other statements in the EISPN. See, notably EISPN 4-4 at Paragraph 11 acknowledging that "Portions of the Project Area are also located within the AE and VE Flood Zones."</p> <p>In my experience, regardless of the historic maximum rainfall average, there are several heavy rains each year that flood across the Old Kona Road onto the adjoining downslope to the bay. The force of the water is sufficient to dig a noticeable trench</p>	<p>Thank you for your letter dated April 22, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan (KBMP) prepared pursuant to Hawai'i Revised Statutes Chapter 343. We offer the following responses.</p> <p>Potential land erosion due to the implementation of the KBMP has been addressed in the Draft Environmental Impact Statement (DEIS). DEIS Section 4.5, describes stormwater runoff peak flow estimates for both existing conditions and with project implementation. At present, portions of the KS properties at Keauhou Bay are unmanaged and susceptible to runoff and erosion. The Project is expected to result in long-term benefits as permanent sediment control measures and stormwater infrastructure would minimize runoff and erosion. Those strategies may include but are not limited to detaining, retaining and infiltrating runoff into the ground.</p>

**Table 7.2 DEA Summary of Comments and Responses**

Comments	Commenter	Responses
	<p>across the road and into the downslope to the bay carrying rocks and dirt from the road with it.</p> <p>The flooding also flows down Kamehameha III Hwy sufficient to overflow the curb at the end of the road, dumping silty water directly into Keauhou Bay. The bay water turns brown and is unattractive for swimming following these events. See, photo attached electronically as Exhibit A to this letter. Others are available on request.</p> <p>2. <u>No Rare, Threatened, or Endangered Species or Habitats</u> (EISPN at Paragraph 9)</p> <p>The EISPN notes that: “The Project is not expected to affect any rare, threatened, or endangered species or habitats.” I should be noted that Monk Seals have been known to haul out to rest on the old Keauhou boat ramp, south of the rock wall on the north side of the bay. See, photo attached electronically as Exhibit 8 to this letter.</p> <p>B. <u>Silt Accumulation in the Bay</u></p> <p>The federal National Oceanographic and Atmospheric Administration (“NOAA”) has listed Keauhou Bay One as a “Marine Protected Area” that is to be “permanently protected year-round” and that such “protection be in perpetuity”.<sup>1</sup> Historically, the federal Environmental Protection Agency (“EPA”) also performed a water quality analysis of various bodies of water every four years. In 2006 and 2010 the EPA found that the water in Keauhou Bay was “good”, but in 2014 it concluded that it was “good” for recreational use, it was “impaired” due to “turbidity” as it relates to “Fish, Shellfish, And Wildlife Protection and Propagation.”<sup>2</sup></p> <p>C. <u>Nitrogen Pollution.</u> An undated research study in about 2015 out of the University of Hawai’i, Manoa, Department of Botany, found that: “[O]f all the West Coast of the Big Island, the highest average percentage of tissue N [Nitrogen] and predicted N concentration was found in the surface samples of Keauhou Bay.” This study was</p>	<p>A Natural Resource Assessment was conducted for the Draft EIS (DEIS) by AECOS (Appendix C). Please refer to Section 4.6 of the DEIS for discussion of native species, endangered species, and critical habitat in relation to the KBMP. As discussed in the Natural Resource Assessment, no species listed as threatened or endangered by state or federal statutes were identified on any of the project parcels at Keauhou Bay. The potential exists that several listed species might transit or utilize the general area on occasion. The endangered Hawaiian monk seals (<i>Monarchus schauinslandi</i>) has been regularly reported from Kona waters. As stated in DEIS Section 4.6, if monk seals are detected within 300 ft of ongoing project construction, operations must cease and not continue until the animal has departed the area on its own accord.</p> <p>We are aware of the concerns related to wastewater contamination in the bay. A wastewater flow analysis has been conducted as part of the analysis for the DEIS. The flow projections are based on land use areas, unit</p>

	<p>comprehensive and included the full West coast of the Island of Hawaii from the North tip to South Point.</p> <p>The study discusses Keauhou Bay in part as follows:</p> <p>Keauhou Bay nutrient-rich groundwater plumes demonstrated high values for nitrogen (5.0 to 5.9 615N values and high ulva (green algae) abundance in the bay. Ecologically successful green algae like <i>U. fasciata</i> are potentially invasive. Coastal waters near harbors, industrial complexes, and residential areas with nutrient- rich and/or fresh water input often have blooms of <i>Ulva</i> species that coat ships' hulls, cover pilings and shorelines, and restrict outflow pipes. <i>U. fasciata</i> is classified as a marine fouling organism, and studies in control and eradication are presently underway.</p> <p>The study further noted that:</p> <p>In Keauhou Bay the potential sources of anthropogenic nutrients include leaching cesspools, surface road and field runoff during rain events, fish biomass, golf course contribution and vessel borne and bilged biomass.<sup>3</sup></p> <p>These government and University of Hawaii analyses are admittedly dated, but as a frequent observer of Keauhou Bay and given the exhibits attached to this letter I would have to say the situation in Keauhou Bay has not improved and if anything worsened over the last eight years. The EIS should take a "hard look" at these problems and transparently assess them.</p> <p>D. <u>User Conflicts</u>. KS has developed the Keauhou Bay Management Plan ("KBMP") to "reorient uses at the bay and establish new place-based cultural education and revenue generating opportunities." The EISPN recognizes that Keauhou Bay is "highly used by residents, visitors, and community groups, which creates congestion and competing interests." KS then describes the purpose of the Project that is the subject of the EISPN is to: "develop resilient communities by stewarding the 'aina to support resilient economies, cultural landscapes, diverse learning, and career pathways." Concluding that:</p>	<p>counts and estimated population using demand rates from the State HAR Chapter 11-62, Appendix D. As described in DEIS Section 4.12.2, the Project is expected to generate an average daily flow of 50,925 gallons per day (GPD). It is expected that the He'eia Wastewater Treatment Plant (WWTP) will have capacity to accommodate the increase in wastewater flows. The All wastewater plans will conform to applicable provisions of the Hawaii Administrative Rules, Chapter 11-62, "Wastewater Systems."</p> <p>Thank you for your participation in the environmental review process.</p>

	<p>“The Project aims to achieve this goal by reorienting uses and directing new development in appropriate areas around Keauhou Bay based upon community and organizational values that were identified during the Management Plan process.” (EISPN 1-1)</p> <p>Pregnant in all of this is the potential for renewed conflicts between the customers of a 156-unit “Appropriate Boutique Resort.” Estimating an average of two to four people per unit could mean a daily occupancy of between some 300 to 600 guests. These people would come from very different backgrounds and have purposes in coming to Hawai’i that could well conflict with and overwhelm the residents of Hawai’i who now use Keauhou Bay for very different purposes. The EIS must take a “hard look” at these potential conflicts and offer transparent and effective alternatives to address them, including “no action” on the resort development.</p> <p>E. <u>Wastewater</u>. The EISPN briefly describes existing KS controlled sewage system. (EISPN 3-19 at Paragraph 3.19). It also describes the potential for “Unavoidable and Unresolved Impacts. (EISPN 4-2 at Paragraph 4.6). I will just note that when we paddle canoes past the condos north of the bay we can smell and see evidence of sewage effluent in the ocean. When we paddled south we now have the benefit of a similar experience off shore from the new million-dollar homes constructed a few years ago. The EIS should take a “hard look” at the effect a 156-unit resort will have on sewage entering Keauhou Bay.</p> <p><sup>1</sup> See, National Oceanic and Atmospheric Administration, NOAA’s National Ocean Service, Management &amp; Budget Office, Coral Reef Habitat Assessment for U.S. Marine Protected Areas: State of Hawaii: NW and Main Hawaiian Islands, Special Projects (February 2009). <p>David and Jeanne Markley</p>	<p>Thank you for the opportunity to comment on the Keauhou Bay Management Plan Environmental Impact Statement Preparation Notice.</p> <p>We own a condominium unit in the Keauhou Resort that we use personally a substantial portion of the year and rent out as a STVR during the remaining time. We purchased this unit with the intent of making this our primary residence.</p> <p>We are strongly opposed to the proposed development associated with the Keauhou Bay Master Plan because we believe it will result in significant adverse impacts on living conditions for ourselves and our neighbors. While we understand the Kamehameha School's desire to gain higher and better use of their property, we believe the proposed development, particularly the construction of the Old bona Road as a through road connecting Kamehameha III Road (Kam III Road) with KaleioPapa Street will result in significant adverse traffic, parking, pedestrian circulation, safety, air quality and noise impacts on us and our immediate neighbors, as well as residents west of Ali'i Drive in this area.</p> <p>We oppose this development because we feel the proposed changes and uses are incompatible with the residential character of our neighborhood, particularly areas west of Ali'i Drive. We believe the tourist- based uses proposed in this plan will overwhelm the existing neighborhood and compound existing problems. We believe the construction of Old Kona Road to connect Kam III Road with KaleioPapa Street will result in a major shift in traffic volume away from KaleioPapa Street to Kam III Road with the associated panting, safety, noise and air quality impacts. This action would significantly erode the residential character of our neighborhood. We believe the impacts associated with these elements will result in impacts that will be significant even with typical levels of mitigation.</p> <p>Accordingly, we have reviewed the Keauhou Bay Master Plan Preparation Notice. Based on this review, we find that the current description of the</p>	<p>Thank you for your letter dated April 20, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan (KBMP) prepared pursuant to Hawai'i Revised Statues Chapter 343.</p> <p>We acknowledge your comments related to the KBMP. As the steward of approximately 54 acres at Keauhou Bay, Kamehameha Schools (KS) has specific kuleana to maintain and support the management of the bay and its resources. The significant demand and utilization of the bay can and often does create congestion which leads to user conflicts along the bayfront. KS lands at the bay are also significantly impacted by unauthorized uses, trespassing, vandalism, and other unsanctioned activities. Through consultation with lineal descendants and community members it was determined that doing nothing is not a viable option. Guided by KS' mission and vision, the Project aligns with the current KS Strategic Map 2025 which is a strategic planning document aimed</p>

	<p>project and proposed environmental analysis is vague and insufficiently detailed to result in an adequate assessment of impacts and mitigation. Without this added detail, we consider the level of any environmental analysis to be programmatic. As such, further environmental analysis and mitigation will be required from the developer/contractor prior to moving forward with actual construction of any element of this master plan.</p> <p>Assuming that Kamehameha School intends to move forward with the current plan, we request that the project description be refined, the scope of environmental analysis be substantially expanded, and mitigation measures be developed and analyzed for effectiveness. This level of detail is necessary because our neighborhood incorporates a unique mix of activity. Attached is a summary of our request.</p> <p>Thank you for considering our request for additional work. Please respond to our comments as part of your public review process and to us by email.</p>	<p>to achieve the goal of developing resilient communities by stewarding the ‘āina to support resilient economies, cultural landscapes, diverse learning, and career pathways. The Project aims to achieve this goal by reorienting uses and directing new development in appropriate areas around Keauhou Bay based upon community and organizational values that were identified during the KBMP process.</p> <p>We understand that parking and circulation has been challenging in residential neighborhoods surrounding Keauhou Bay. Street capacity and traffic circulation was taken into consideration during the development of alternatives. The Project involves multiple design elements to improve overall circulation and alleviate congestion. The Project proposes to improve the Old Kona Road to support multi-model transportation options while also providing a linkage across the two sides of the Bay. The roadway is intended to be pedestrian orientated to serve as a key walking route for residents and resort guests to access the dining,</p>

		<p>commercial, and recreational activities throughout the area.</p> <p>The Draft Environmental Impact Statement (DEIS) provides an analysis of potential traffic impacts in Section 4.11. A Mobility Analysis Report (MAR) was prepared by Fehr &amp; Peers to identify and assess existing and future mobility option as well as potential traffic impacts generated by the Project (<i>Appendix E</i>).The MAR found that the implementation of the Project would not result in significant traffic impacts.</p> <p>Thank you for your participation in the environmental review process.</p>
<p>Emma Chandler</p>	<p>This is a letter in opposition to planned development in Keauhou Bay. The waters of the bay cannot sustain a surrounding growth as what is being proposed. It is having a hard time with sustaining the current usage.</p> <p>Keauhou Bay is culturally significant and deserves to be preserved as historically honored, not to be commercialized. The Bay hosts as a gathering place for our local community: fisherman, paddlers, divers and thriving volleyball community. All of these activities foster our youth development in positive ways.</p> <p>The list goes on as far as opposition goes. I personally have grown up in Keauhou Bay and have a deep gratitude and Love for the place and its consistently unchanged atmosphere. I have shared it with my family, and now my children enjoy the Bay.</p>	<p>Thank you for your letter dated April 22, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan (KBMP) prepared pursuant to Hawai'i Revised Statutes Chapter 343.</p> <p>We acknowledge your comments related to the KBMP. <p>Holly Hokenson</p>	<p>I frequently go shore diving and freediving at Keauhou Bay. That is because I am a masters student studying environmental science and I am currently starting an observational study on the reef manta rays of Kona. Keauhou Bay has the most frequented cleaning station for manta rays that I have witnessed in the many countries I have been to observing manta rays. This is the original manta site in Kona and is therefore a crucial part of that community. But that is not all it is. Last time I went to Keahou I witnessed several families spread out across the grass hosting an Easter egg hunt for their children. At what point will we have no more public green spaces to share with our families in that manner? I ask you, please. Do not build more resorts, do not build a through road, do not pave over more living things. Any of these actions will definitely negatively impact this incredibly special ecosystem in the bay as well as the incredibly important system of our community.</p>	<p>Thank you for your letter dated April 26, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan (KBMP) prepared pursuant to Hawai'i Revised Statutes Chapter 343.</p> <p>We acknowledge your comments related to the KBMP. <p>Jane Schmitt and Richard Crack</p>	<p>Keauhou Bay is a precious natural resource that provides recreation for countless ocean enthusiasts, including: fishers, paddlers, paddle boarders, snorkelers, divers, &amp; ocean recreation for local children &amp; their families. To sully this pristine bay with dwindling water quality, heavy traffic, run-off and an overload of humans- is nothing short of a travesty. Planning for another resort -catering to monied tourists- no matter how “boutique” it claims to be, is the antithesis of what K.S.’s management of Keauhou bay should be doing. Many of the homes and condos on the north side of Keauhou Bay have cesspools, or septic tanks with inadequate leach fields- that allow human waster to seep into the Bay. This alone needs to be rectified before any consideration of any further development next to Keauhou Bay.</p> <p>When is the appropriate time for Kamehameha Schools administration to declare that enough development has taken place on this small - but outstanding- bay? K.S. Trust is already the tenth richest charity in the U.S. (by some accounts); can you not be satisfied with all of the Hawaii holdings you already possess? Please carefully consider the long-term detrimental impacts that a 150 room resort would have on the quality of life for the residents who utilise this bay on a regular basis and for the varied marine life that call it home.</p>	<p>Thank you for your letter dated April 13, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan (KBMP) prepared pursuant to Hawai’i Revised Statues Chapter 343.</p> <p>We acknowledge your comments related to the KBMP. <p>Jeff Caufield</p>	<p>Thank you for the opportunity to provide comments. My name is Jeff Caufield and I am the owner of the house located at 78-7106 Kamehameha III Drive and as such we are the closest house to the proposed activities. Unfortunately, as I was coaching volleyball during the zoom meeting, I am submitting written comments.</p> <p>I’d first like to go into my background. I have an undergraduate degree in environmental studies from the University of California, Santa Barbara. During college I worked for the Santa Barbara redevelopment agency wherein I assisted in the redevelopment design and planning of the lower State Street in Santa Barbara. Also during undergrad and law school I worked for an environmental consulting firm. I graduated from law school in 1993. During law school I interned in the legal counsel’s office at the U.S. Department of Interior. For the past 29 years my practice has specialized in environmental law, which includes an emphasis of environmental impact statements and reports. Prior Court rulings have acknowledged my expertise</p>	<p>Thank you for your letter dated April 12, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan (KBMP) prepared pursuant to Hawai‘i Revised Statutes Chapter 343.</p> <p>We acknowledge your comments related to the KBMP. 	<p>in this area and that over the last 22 years I have never lost of case related to an environmental impact statement or report. I also lecture both nationally and internationally on various environmental topics, including lectures related to environmental impact reports and statements. You can access my law firm website at <a href="http://www.caufieldjames.com">www.caufieldjames.com</a>. In sum, I both have the education, experience and Court recognized expertise in the subjects I am addressing herein.</p> <p><b>I. THE PROJECT WILL CAUSE SIGNIFICANT NEGATIVE TRAFFIC IMPACTS</b></p> <p>With the addition of 150 resort bungalows, that average 1,800 square feet in size, and assuming, at a minimum, one to two cars per bungalow that translates to an additional 150-300 cars per day on lower Kamehameha III Drive. (Note: referring to a 1,800 square foot structure as a “bungalow” is misleading as they are significantly larger than most local 3 bedroom homes, in reality the proposal is to build 150 homes attached to a resort.) As with most vacationers, the number of car trips to/from the bungalow will typically average a minimum of 2 trips (4 going/coming) per car per day. Thus, the resort bungalows will result in a negative impact of between 600/1,200 additional cars per day on lower Kamehameha III road. Assuming that the car trips will be concentrated during primarily daylight hours (assuming 16 hour primary concentration period) the increase in vehicular traffic on Kamehameha III Drive will average between 37.5 – 75 cars per hour. In sum, the project proposes to add, at a minimum one additional car per minute everyday for 16 hours a day on lower Kamehameha III Drive. Additionally, the project proposes a further significant increase in traffic by paving and extending Old Kona Road and opening it to major vehicular traffic. Currently, boats seeking to launch and/or visitors at the Outrigger Hotel have to completely drive around the Keauhou Bay to access the intersection of Alii Drive and Kamehameha III road. The project proposes to create a “short cut” that will channel existing vehicular traffic from the south side of the bay to lower Kamehameha III Drive that will likely increase vehicular traffic substantially. With the addition of new commercial and dining in the area, the traffic will only be worse. In sum, while the project proposes to address</p>	<p>and utilization of the bay can and often does create congestion which leads to user conflicts along the bayfront. KS lands at the bay are also significantly impacted by unauthorized uses, trespassing, vandalism, and other unsanctioned activities. Through consultation with lineal descendants and community members it was determined that doing nothing is not a viable option. Guided by KS’ mission and vision, the Project aligns with the current KS Strategic Map 2025 which is a strategic planning document aimed to achieve the goal of developing resilient communities by stewarding the ‘āina to support resilient economies, cultural landscapes, diverse learning, and career pathways. The Project aims to achieve this goal by reorienting uses and directing new development in appropriate areas around Keauhou Bay based upon community and organizational values that were identified during the KBMP process.</p> <p>We understand that parking and circulation has been challenging in residential neighborhoods surrounding Keauhou Bay. Street capacity and traffic circulation was</p>

**Table 7.2 DEA Summary of Comments and Responses**

Comments	Commenter	Responses
	<p>fictional “congestion” the project does the exact opposite by likely increasing vehicular traffic on lower Kamehameha III Drive by likely an order of magnitude, if not more. As for vehicle “congestion” purportedly around boat launch area, there is very little “congestion” aside from early mornings when boats are lined up to launch. That is typically of any launch and the project cannot and does not propose to address this issue. Thus, the “scope” and notice of preparation is extremely misleading to public in what it purports to accomplish.</p> <p><b>II. THE PROJECT WILL CREATE SIGNIFICANT CONGESTION OF PEOPLE IN AND AROUND KEAUHOU BAY</b></p> <p>Having lived in the house closest to the project for the past 5 years and visited Keauhou Bay fairly regularly for the past 18 years the representation that there exists “congestion” at the Keauhou Bay from people is simply untrue and misleading. Currently, the canoe club generally has practices in the mornings at which time there may be 10-20 people that generally meet, launch canoes and paddle out within 15-20 minutes of arrival. When the paddlers return, they typically are gone within 20 minutes. On average during a typical summer day, there may be 2-4 people swimming/paddling in Keauhou Bay and maybe one or two people on the shore. It is not unusual to not see anyone on the bay or shore for several hours each day. A time when the number of visitors to the bay may increase is typically during the loading/unloading of the Fairwinds. However, the guests typically arrive roughly 30 minutes before launch, line up about 5 minutes before launch and then are gone for hours. When they return, they are typically gone within 10-15 minutes. The guests do not potentially impact cultural resources nor do they cause “congestion” of uses at the bay. Off the water there is usually adults/kids playing volleyball on the single sand court in the afternoon, people fishing from the dock area and paddling practice in the afternoons. After observing the current usage on a daily, weekly and monthly basis there is no “congestion” around the bay. Occasionally, primarily on weekends, local families due host BBQs at the south side park and that may increase the number of people using the bay. However, this should not be considered to be “congestion” but simply typical local usage and enjoyment of</p>	<p>taken into consideration during the development of alternatives. The Project involves multiple design elements to improve overall circulation and alleviate congestion. The Project proposes to improve the Old Kona Road to support multi-model transportation options while also providing a linkage across the two sides of the Bay. The roadway is intended to be pedestrian orientated to serve as a key walking route for residents and resort guests to access the dining, commercial, and recreational activities throughout the area.</p> <p>The Draft Environmental Impact Statement (DEIS) provides an analysis of potential traffic impacts in Section 4.11. A Mobility Analysis Report (MAR) was prepared by Fehr &amp; Peers to identify and assess existing and future mobility options as well as potential traffic impacts generated by the Project (<i>Appendix E</i>). The MAR found that the implementation of the Project would not result in significant traffic impacts.</p> <p>The mauka / makai corridor is proposed to improve public access and to enhance the areas for educational and cultural activities.</p>

**Table 7.2 DEA Summary of Comments and Responses**

Comments	Commenter	Responses
	<p>the bay. The project proposes to add 150 bungalows, a restaurant and commercial vendors at the bay. Assuming that each bungalow has only 4 people (which is probably low based on the square footage) you'll likely have a minimum of another 600 people per day potentially in and around the bay. This will, at a minimum, at least double or quadruple the daily usage around the bay (not counting the additional crowds using the restaurant and commercial venues.) Thus, the project as proposed can only create congestion comparable to what you can see every weekend at Magic Sands but on a daily basis.</p> <p><b>III. THE MAUKA/MAKAI OPEN SPACE</b></p> <p>The Keauhou Canoe Club was built by the local volleyball players that enjoyed paddling around 40 years ago. Both the Keauhou Canoe Club and the volleyball players have paid out of pocket for 40 plus years to maintain the park area where the canoe club is located and for maintenance of the sand volleyball courts. To this day the volleyball players are always willing to help the club move canoes and many of the paddlers, and in particular the kids, will stay and play on the volleyball courts after practice. Some of the best local paddlers such as Kua Nolan grew up paddling on the bay and then playing volleyball on the sand courts right after practice. It would appear that the plan is to "reorient" the canoe club but provides no specificity upon which comment can be made. For the past 40 plus years there has been two sand volleyball courts on the east end of the bay below the canoe club. Due to both the tsunami and an episodic rainfall the western sand volleyball court was damaged and is in need of repair. Currently, the remaining sand volleyball court is used on a daily basis by locals. In particular, there are volleyball classes for the local kids on almost a daily basis. Any plan that would not include restoring both volleyball courts would be devastating to the local community and in particular the kids that are learning how to play volleyball on the court. In Kona, there is a sand volleyball court at Coconut Grove that extremely heavily used by the locals, a sand volleyball court that is primarily used by tourists at Magic Sands and the sand courts at Keauhou. Thus, it is absolutely vital for the sand volleyball courts to be restored or else the local community, and in particular the kids, would lose</p>	<p>DEIS Section 3.2.3 describes the Project's aim to visually and spatially consolidate the mauka and makai recreation areas to create an expanded shoreline park through landscape improvements. Improvements aim to expand public access to the shoreline through KS-managed lands by establishing a mauka to makai recreation corridor adjacent to the existing canoe hālau; this will require a reconfiguration of the existing sprawling canoe uses and volleyball enthusiasts along the immediate bayfront area. Improvements include the removal (and potential relocation) of the unsanctioned sand volleyball court to provide a walkway with native landscaping accenting and open recreational space. The repurposed sandy volleyball area mauka of the main seawall will be regraded and planted with an irrigated grass lawn to limit erosion and create a more sustainable open-lawn environment. At present, KS does not have an agreement with any entity for use of the volleyball court. Further complicating the matter, a portion of the land underneath the court is within the County right-of-way and</p>

**Table 7.2 DEA Summary of Comments and Responses**

Comments	Commenter	Responses
	<p>one of the few places they can learn and play. In areas like California, sand volleyball is a boys and girls high school sport. If the courts were to be repaired and restored, the local high schools could host matches on the Courts. This is particularly critical in that girls beach volleyball is now a collegiate sport such that girls wanting to play beach volleyball in college need a place to play and train. Currently, there is no place for the high school kids to play and train on a regular basis other than the Keauhou Courts. Hawaiian volleyball players have enjoyed success on the national and international level, including gold medals at the Olympics and it is deeply ingrained in the modern hawaiian culture. The volleyball players are always very welcoming to other locals and visitors that want to join in and play. However, in the past when there were two courts it enabled different levels of players to play at the same time with the people that wanted to play in groups on one court and the players that wanted to play more competitive doubles and/or four verses four playing on the other court. On most weekends, local families host barbeques on the east side grass park and both use the bay and the sand volleyball court. Currently, with only one court there can be a couple of players waiting to play at times. The scoping document asserts, without evidence, the following:</p> <p>“Although there is legal public access to the shoreline, canoe and volleyball activities dominate the shoreline area and create a perception of exclusivity. This, coupled with the hustle and bustle of ocean commercial operations catering mainly to visitors cause many local families, with some long-standing generational ties to the bay, to no longer feel welcomed - ultimately disconnecting them from the wahi pana.” (pg. 2-6.)</p> <p>The proposal to at least quadruple the number of visitors accessing Keauhou Bay through the 150 bungalows, new commercial venues and restaurant would take the usage, which currently is largely locals, and shift it to commercial visitor access will worsen the perceived problem, not improve it. Currently, every weekend there are local barbeques and local parties at the grassy park on the north side of the bay. In the past when the 2<sup>nd</sup> sand court was present, and there was nice sand behind the wall, there was always people setting up picnics on the weekends along the wall. However, with the</p>	<p>therefore outside of KS ownership. KS is committed to the continued consultation with elected officials and representatives of the Kona area to discuss how outdoor recreational activities such as volleyball can be planned in more appropriate areas.</p> <p>We acknowledge your concern that additional parking is needed for commercial users and residents. One objective of the Project is to improve existing parking areas to enhance their capacity, safety, and security. DEIS Section 3.2.5 discusses the Project’s proposed parking improvements. After full build out of the Project, the supply of parking for both the general public and for boat trailers is expected to increase (88 new parking stalls and 23 new boat trailer parking stalls).</p> <p>Potential land erosion due to the implementation of the KBMP has been addressed in the Draft Environmental Impact Statement (DEIS). DEIS Section 4.5, describes stormwater runoff peak flow estimates for both existing conditions and with project implementation. At present, portions of the KS properties at</p>

**Table 7.2 DEA Summary of Comments and Responses**

Comments	Commenter	Responses
	<p>sand largely gone and sharp gravel on top of the hard packed ground, the locals no longer use the area behind the wall as frequently for picnics (although there typically is at least 1 family that may use the sand/gravel area behind the east end by the volleyball court on the weekends.) If sand is brought back in and the 2<sup>nd</sup> court placed nearer to the existing court, there will be a nice 40' x 100' area behind the wall on the east end for local families to enjoy. In sum, the plan needs to re-fill in the sand area behind the south break water wall, rebuild both volleyball courts and create a nice sand/picnic area behind the wall.</p> <p><b>IV. PARKING CONGESTION IS ONLY GOING TO GET WORSE</b></p> <p>Currently, parking on the south side of the bay can be congested due in large part to the lack of parking for vehicles with boat trailers. Development of a vehicle/trailer parking lot on the south side is long overdue. The number of tourists parking on the south side is comparatively limited. On the north side of the bay there is generally street parking off Kamehameha III Drive and there is designated parking for the Fairwinds tours in an unimproved lot on the south side of the bay. The parking on the north side became more limited when someone made the decision to restripe the cul-de-sac and have only parking for 5 cars when the cul-de-sac used to regularly park 10+ vehicles. Nevertheless, even on the weekends when there are large barbeques at the park the parking on Kamehameha III Drive rarely requires parking more than a block to the water. However, with the addition of a least 300 cars through the bungalows and new commercial venues parking is going to get a lot worse. As has been experienced with the other hotels that charge \$20 or more per day for parking, guests at the hotels simply look for on-street parking to save money. Thus, while the average number of cars parked everyday on Kamehameha III drive is probably less than 10, the plan will likely place another 50-100 cars per day parking on Kamehameha III Drive with bungalow guests looking to save money on parking. As a result, the plan, as currently proposed can only lead to significantly worse parking issues on the north side of the bay.</p> <p><b>V. INCREASED POLLUTION KEAUHOU BAY</b></p>	<p>Keauhou Bay are unmanaged and susceptible to runoff and erosion. The Project is expected to result in long-term benefits as permanent sediment control measures and stormwater infrastructure would minimize runoff and erosion. Those strategies may include but are not limited to detaining, retaining and infiltrating runoff into the ground.</p> <p>DEIS Chapter 3 provides a detailed description of the Project inclusive of restoration activities of Ho'okūkū Pond. As part of the improvements in the heritage corridor, the Project will expand the remnant anchialine pond and restore ecological systems within Ho'okūkū Pond to enhance conditions for native species to thrive. DEIS Section 4.5 describes potential impacts and mitigation measures to protect surface water at the Project Area.</p> <p>Thank you for your participation in the environmental review process.</p>

**Table 7.2 DEA Summary of Comments and Responses**

Comments	Commenter	Responses
	<p>The project proposes to add significant numbers of both people and vehicles in and around Keauhou Bay. This includes large paved parking lots for both the bungalows and other parking. Currently, other than the few cars that park on the street, the cars that park to use the Fairwinds park in unimproved lots. When it rains, the unimproved lots can be a non-point source of pollutants that likely should have some runoff controls. However, the majority of time it rains there is no runoff from the existing unimproved parking as the water simply soaks into the ground. The addition of acres of paved parking lots, which are well documented sources of non-point source pollutants such as heavy metals and hydrocarbons that will be channeled into the bay is not even mentioned in the scoping document and should not be ignored.</p> <p><b>VI. THE PROJECT PROPOSES TO POTENTIAL DESTROY IMPORTANT FRESHWATER CULTURAL RESOURCES</b></p> <p>Historically, Keauhou Bay was used by the original Hawaiians, in part, due to the presence of freshwater resources from springs in the area. Springs are naturally recharged by rainwater soaking into the ground. Very little of the project area is currently paved such that the freshwater springs continue to be recharged by rainfall. However, with the addition of many acres of impervious surfaces through the resort and acres of parking lots, the potential recharge sources may be eliminated and the springs negatively impacted. The scoping document does not propose to address the negative impacts to the local springs from the project.</p> <p><b>VII. TRAFFIC IS BEING CHANNELED INTO CULTURALLY SENSITIVE AREAS</b></p> <p>The Old Kona Road paving and extension will funnel traffic directly into the areas of the project that are deemed to be culturally sensitive. Nothing in the proposed scoping document purports to address the fact that vehicular traffic is being funneled into culturally sensitive areas.</p> <p><b>VIII. CONCLUSION</b></p> <p>The scoping document appears to be very misleading in stating purported “issues” as if they were facts and then purporting to “solve” the problem when in fact the project, as proposed, will only create problems where none</p>	

**Table 7.2 DEA Summary of Comments and Responses**

Comments	Commenter	Responses
	<p>exist. The foregoing comments are just the “tip of the iceberg” with respect to the problems with the scoping document and the many misrepresentation and misleading statements.</p>	
<p>Jenn Murphioka</p>	<p>Please do not build at Keauhou Bay. There is already a resort and many timeshares down in Keauhou. Keauhou Bay is important to my family. We spend so much of our time here. It is the perfect place to cruise with my family - the beach access is perfect for children. On Sundays, we take out the paddleboard and OC-1. It is our home away from home. I paddle for Keauhou Canoe Club. Our hālau is here. I spend at least 3 days here each week. I love seeing my students and their families enjoying the beach and water at Keauhou Bay.</p> <p>I do not want to see beach "bungalows" where our hālau currently stands. We do not need anymore oceanfront beach bungalows - visitors have plenty of other beachfront options, if that is what they are looking for.</p> <p>Do not build another resort. There is one right around the corner. Stand up for the people that live here. Let our voices be heard.</p>	<p>Thank you for your letter dated April 22, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan (KBMP) prepared pursuant to Hawai'i Revised Statutes Chapter 343.</p> <p>We acknowledge your concerns related to the boutique resort. As the steward of approximately 54 acres at Keauhou Bay, Kamehameha Schools (KS) has specific kuleana to maintain and support the management of the bay and its resources. <p>Julia Benkofsky-Webb</p>	<p>I have recently learned that the continuation of one of our community treasures in West Hawaii is in jeopardy. It has been announced that Kamehameha Schools' plans to “reinvigorate and transform” 29 acres at Keauhou Bay will include the removal of the much used and loved beach volleyball court in this area.</p> <p>It is clear to me, from speaking with friends who play weekly at this court—one of whom has been using the facility for 30 years—that this would be a huge loss to the community. Residents of all ages play at this court daily, and tournaments have been held there. Additionally, the sand courts at Keauhou are currently being used by several different coaches to run clinics and to train children that are seeking college scholarships in beach volleyball.</p> <p>The information contained in <i>The Environmental Notice</i> of March 23 offers several ways that the proposed changes to the 29 acres at Keauhou Bay will be beneficial to the community, including: “The new reconfiguration will. . . promote high quality educational experiences for all.” The volleyball court has been providing high quality educational experiences—on the physical, mental and spiritual levels—for over five decades. I implore you to consider how you may save the court at its present location or to move it where it may continue to serve untold numbers of our residents.</p>	<p>Thank you for your letter dated April 3, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan (KBMP) prepared pursuant to Hawai‘i Revised Statutes Chapter 343.</p> <p>At present, KS does not have an agreement with any entity for use of the volleyball court. Further complicating the matter, a portion of the land underneath the court is within the County right-of-way and therefore outside of KS ownership. KS is committed to the continued consultation with elected officials and representatives of the Kona area to discuss how outdoor recreational activities such as volleyball can be planned in more appropriate areas.</p> <p>Thank you for your participation in the environmental review process.</p>
<p>Ka'eo Bertelmann</p>	<p>Great Job folks!</p> <p>I think you're on to something truly special, and I applaud your endeavors for Keauhou.</p>	<p>Thank you for your letter dated April 22, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan prepared pursuant to Hawai‘i Revised Statutes Chapter 343.</p> <p>We appreciate your support of the Project. 		participation in the environmental review process.
Kathleen McMillen	<p>I find it questionable that Kamehameha Schools is wrapping the development of a high-end resort in the envelope of honoring the Kamehameha III birthplace. It is smart of them to get the buy-in of the Daughters of Hawaii, who are the stewards of the Kamehameha III monument. I wonder if it was mentioned to the Daughters that once the land clearing starts for the resort area, one good rain will cause silt and debris to flow over the cliff onto the sacred monument and park, and, quite conceivably, into the adjoining ocean, fouling the already fragile waters of Keauhou Bay. There will be promises of erosion control and other mitigations but then a big rain comes along and excuses will be made that it was a 50-year or 100-year storm, so it couldn't be helped. Many times over the last 30 years I have seen failed erosion controls and silting of shoreline waters from construction projects.</p> <p>May I remind you that several waterfront homes on the north side of this bay have only cesspools. And even the few that have septic tanks are at too low an elevation and likely are too close to the ocean to have adequate leach fields, thus adding to the bacteria levels in the ocean. This problem is compounded by runoff after it rains. Absolutely no improvements should be made near Keauhou Bay until the sewage problem is resolved by getting these parcels connected to the nearby local private sewer system or the County sewer lines, if the private system is not workable.</p> <p>Recreational use of Keauhou Bay is heavy. Parking is a disaster for individuals who live in the community. The plan put forth develops slightly better boat parking but nothing specific for vehicles of the commercial boat patrons, nor locals. Many boats, both commercial and personal, launch there every day. Take a look at the boats and people who flock there between 6 and 10 am. Many outrigger canoes, paddleboarders, and swimmers use this bay every day. The State Clean Water Branch does occasional monitoring of the bay waters showing average bacteria counts are rising over the years. After very heavy rains the bay occasionally turns green from algae blooms creating unhealthy conditions for users of the bay. Added development stresses to</p>	<p>Thank you for your letter dated April 7, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan (KBMP) prepared pursuant to Hawai'i Revised Statutes Chapter 343.</p> <p>We acknowledge your comments related to the KBMP. As the steward of approximately 54 acres at Keauhou Bay, Kamehameha Schools (KS) has specific kuleana to maintain and support the management of the bay and its resources. The significant demand and utilization of the bay can and often does create congestion which leads to user conflicts along the bayfront. KS lands at the bay are also significantly impacted by unauthorized uses, trespassing, vandalism, and other unsanctioned activities. Through consultation with lineal descendants and community members it was determined that doing nothing is not a viable option. Guided by KS' mission and vision, the Project aligns with the current KS Strategic Map 2025 which is a strategic planning document aimed</p>

	<p>this bay may reverse its health permanently. Do we really want to add to the already fragile and congested conditions with a resort that only one-percenters can afford to enjoy? At least the old Keauhou Beach Hotel provided affordable rooms for Kama’aina on island and for family visiting from other islands. It also was an inappropriate land use but at least it provided some benefit. Can we not learn from why the Keauhou Beach Hotel and Kona Lagoon Hotel were eventually demolished? Just because you have the zoning for resort use, doesn’t mean it is the best use of the land.</p> <p>In 2008, Kamehameha Schools said this when demolishing these hotels to add a more appropriate cultural park: “Our charter for future development here is to make things pono, or right, to solve the mistakes of the past and move ahead. We want to make sure that any and all future development in Keauhou, first and foremost, is culturally correct.” Kamehameha Schools, please put your money where your mouth is.</p> <p>I say to Kamehameha Schools, advocate for getting those parcels on the north side of the bay onto a local sewer system and then implement the management plan without building the resort. Honor the Kamehameha III monument, be good stewards of the land and ocean but find a more appropriate use of the vacant resort zoned land that honors the Hawaiian children you represent.</p> <p>Source of Kamehameha Schools quote:  <a href="https://www.travelweekly.com/Hawaii-Travel/Preservation-key-goal-in-Keauhou-redevelopment">https://www.travelweekly.com/Hawaii-Travel/Preservation-key-goal-in-Keauhou-redevelopment</a></p>	<p>to achieve the goal of developing resilient communities by stewarding the ‘āina to support resilient economies, cultural landscapes, diverse learning, and career pathways. The Project aims to achieve this goal by reorienting uses and directing new development in appropriate areas around Keauhou Bay based upon community and organizational values that were identified during the KBMP process.</p> <p>We are aware of the issues related to contamination caused by cesspools in the vicinity of the bay. All new facilities associated with the Project will be serviced by sewer utilizes and treated at the He’eia Wastewater Treatment Plant. Please refer to Section 4.12.3 for further discussion of wastewater.</p> <p>Potential land erosion due to the implementation of the KBMP has been addressed in the Draft Environmental Impact Statement (DEIS). DEIS Section 4.5, describes stormwater runoff peak flow estimates for both existing conditions and with project implementation. At present, portions of the KS properties at Keauhou Bay are unmanaged and</p>

		<p>susceptible to runoff and erosion. The Project is expected to result in long-term benefits as permanent sediment control measures and stormwater infrastructure would minimize runoff and erosion. Those strategies may include but are not limited to detaining, retaining and infiltrating runoff into the ground.</p> <p>We acknowledge your concern that additional parking is needed. One objective of the Project is to improve existing parking areas to enhance their capacity, safety, and security. DEIS Section 3.2.5 discusses the Project’s proposed parking improvements. After full build out of the Project, the supply of parking for both the general public and for boat trailers is expected to increase (88 new parking stalls and 23 new boat trailer parking stalls).</p> <p>Thank you for your participation in the environmental review process.</p>
Kathy Roney	<p>I am a resident of Keauhou Bay and would like to share with you my concerns about the revised KBMP.</p> <p>For many years Kamehameha Schools has been a very poor steward of the land and irreplaceable priceless cultural heritage sites along the Keauhou/Kahaluu corridor and it bothers me that instead of changing that, you are moving on to new lands, not taking care of and managing the existing commercial space that isn’t overly success to date.</p>	<p>Thank you for your letter dated April 22, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan (KBMP) prepared pursuant to Hawai’i Revised Statues Chapter 343.</p>

	<p>It is clear that this plan does not take in account the same Hawaiian values and kuleana that my Kupuna taught and ingrained in my being. In my lifetime, I went from camping at Turtle Bay with my Uncle Kaukau to watching greed pave every inch of `Oahu. I do not want to see the last peaceful island disappear and become just another Waikiki.</p> <p>What are we teaching our keiki, when we continue to cater to tourist, taking the last bay in Kona that is not overdeveloped and making it another overcrowded tourist attraction. Where does it stop? At what point does 'underachieving financially' take a back seat to our kuleana to the land, our keiki and to our future as Hawaiians.</p>	<p>We acknowledge your comments related to the KBMP. As the steward of approximately 54 acres at Keauhou Bay, Kamehameha Schools (KS) has specific kuleana to maintain and support the management of the bay and its resources. <p>Kilihea Inaba</p>	<p>My name is Kilihea Inaba, I am from Kaloko, Kona. I was hoping you could answer a few questions for me regarding the KS Keauhou Bungalows project set to go to the LPC:</p> <p>1) Where exactly is this proposed to be built? And how large is the area of which it will occupy?</p> <p>2) What are the waste/ sewage plans for these bungalows?</p> <p>3) Has no other project been proposed by KS or to KS of how to generate income in this region without having to develop more land that will likely not be utilized by kanaka/ the local population?</p>	<p>Thank you for your letter dated April 19, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan (KBMP) prepared pursuant to Hawai'i Revised Statutes Chapter 343. The Project Area spans two ahupua'a (traditional Hawaiian land division typically extending from mountain to sea): Keauhou 1 (located to the north) and Keauhou 2 (located to the south) in the North Kona District of the Island of Hawai'i.</p> <p>A wastewater flow analysis has been conducted as part of the analysis for the Draft Environmental Impact Statement (DEIS). As described in DEIS Section 4.12.2, the Project is expected to generate</p>

Kimmy Gay	<p>My name is Kimmy Gay and I have been playing volleyball at Keauhou Harbor since 1988. For the past 2 years I have been organizing a free quads league for teenagers 4 days a week (Sunday, Monday, Thursday, and Fridays). I pick up a lot of the kids who have no transportation. I have over 100 kids in my league consisting of ten different nationalities, but the majority of the kids are of Hawaiian descent. Sometimes we have up to 30 kids there in one day. I wonder how many of these kids would be on the streets getting into trouble if they didn't have these types of healthy outlets after school and on the weekends. I also coach a women's volleyball group on Mondays for mom's. I currently have 30 mom's signed up. They find babysitters to watch their kids so they can play volleyball once a week. They constantly thank me and tell me how much they need this outlet. They get a break from their kids and have so much fun. There is another group that plays there every Wednesday, and a doubles group that plays there on Tuesday and Saturdays. I also understand that people in the community have played volleyball at this location for over 60 years, if not longer. If you remove the volleyball courts at Keauhou Bay it will create a huge vacuum in the local community and all the kids that have been participating in daily volleyball training and play will have nowhere else to go to play and learn in a safe family atmosphere. Please feel free to call me if you have any questions 808-938-4707. I am hoping and praying that you will reconsider taking down the volleyball court at Keauhou Harbor. It is truly an asset to this community.</p>	<p>Thank you for your letter dated April 11, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan (KBMP) prepared pursuant to Hawai'i Revised Statutes Chapter 343.</p> <p>We applaud you for your service to the community and helping to improve so many young peoples lives. Guided by KS' mission and vision, the Project aligns with the current KS Strategic Map 2025 which is a strategic planning document aimed to achieve the goal of developing resilient communities by stewarding the 'āina to support resilient economies, cultural landscapes, diverse learning, and career pathways. The Project aims to achieve this goal by reorienting uses and directing new development in appropriate areas around Keauhou Bay based upon community and organizational values that were identified during the KBMP process.</p> <p>Thank you for your participation in the environmental review process.</p>
<p>Louis Putzel</p>	<p>I oppose the further development of Keauhou Bay. Enough of the space around it has already been converted to luxury resort space. KS surely has enough money to take better care of the area in the public interest and in the name of conserving Hawaiian cultural heritage without adding more resort accommodations. Efforts should be made to do a better job of taking care of the land behind the Bay, e.g. as a PUBLIC park. ALLOW some small food concessions and shops in the park to generate rental income, something everyone can enjoy. The canoe club is obviously important to the local</p>	<p>Thank you for your letter dated April 21, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan (KBMP) prepared pursuant to Hawai'i Revised Statutes Chapter 343.</p>

<p>Marianne Bickett</p>	<p>We have family on Oahu and Big Island and visit often. We love Keauhou Bay and are shocked that you are considering to develop this area. Have we not learned from the past that we must stop the insanity of development for greed and gain when the environment, and ultimately us, suffer?</p> <p>Even though you say you will provide shoreline access, you will destroy the natural beauty of this place. You will negatively impact the ecosystem and this harm is too high a price to pay for your profits.</p> <p>Please reconsider this decision. Please. What kind of a world do you want to leave for YOUR grandchildren? Can you not preserve it and develop elsewhere? We need to shift our thinking from profits/greed/growth to preservation/cooperation/health of ourselves and our planet. Especially today, Earth Day, can you not reconsider?</p>	<p>Thank you for your letter dated April 22, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan (KBMP) prepared pursuant to Hawai'i Revised Statutes Chapter 343.</p> <p>We acknowledge your comments related to the KBMP. As the steward of approximately 54 acres at Keauhou Bay, Kamehameha Schools (KS) has specific kuleana to maintain and support the management of the bay and its resources. The significant demand and utilization of the bay can and often does create congestion which leads to user conflicts along the bayfront. KS lands at the bay are also significantly impacted by unauthorized uses, trespassing, vandalism, and other unsanctioned activities. Through consultation with lineal descendants and community members it was determined that doing nothing is not a viable option. Guided by KS' mission and vision, the Project aligns with the current KS Strategic Map 2025 which is a strategic planning document aimed to achieve the goal of developing resilient communities by stewarding the 'āina to support resilient</p>

		<p>economies, cultural landscapes, diverse learning, and career pathways. The Project aims to achieve this goal by reorienting uses and directing new development in appropriate areas around Keauhou Bay based upon community and organizational values that were identified during the KBMP process.</p> <p>Thank you for your participation in the environmental review process.</p>
<p>Marjorie Bryant</p>	<p>I strongly object to Kamehameha Schools' plans for Keauhou Bay. Kamehameha III's birthplace is not the right place for a new resort, more commercial space, and a new road.</p> <p>Before I begin listing my concerns, I thank you, the authorities of Hawaii County, for listening to them. I realize that, because my Keauhou condo is my vacation home and not my permanent residence, my opinion may not count as much as others. But I intend to make my Keauhou condo my permanent home someday, and this proposed development will impact me greatly.</p> <p>If this planned development goes through, it will negatively impact my viewshed, my quality of life, and the value of my property, which overlooks this site. I will suffer from more traffic noise and toxic exhaust coming in my windows both during construction and after, from years of construction noise and dust, and from a hotter and drier local climate when the applicant removes all vegetation on site and replaces it with acres of asphalt and buildings.</p> <p>Thirteen additional reasons I object to the development of Keauhou Bay:</p> <p>(1) It will further endanger pedestrian safety on already-unsafe Kaleiopapa St. This is because Kaleiopapa has no sidewalk, and its shoulders are only wide enough to accommodate a parked car. And both shoulders are routinely filled with cars – sometimes the entire 1/3 mile up to Ali'i Dr is completely full, both</p>	<p>Thank you for your letter dated April 22, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan (KBMP) prepared pursuant to Hawai'i Revised Statutes Chapter 343. We offer the following responses to your comments.</p> <p>We understand that parking and circulation has been challenging in residential neighborhoods surrounding Keauhou Bay. Street capacity and traffic circulation was taken into consideration during the development of alternatives. The Project involves multiple design elements to improve overall circulation and alleviate congestion. The Project proposes to improve the Old Kona Road to support multi-</p>

	<p>sides. This is especially acute on Wednesday market days, and at night, when manta tours operate. Because the shoulders are filled, folks walk on the road with the traffic – with the trucks towing boats and SUVs and cars and semis speeding up and down the hill (trucks and other lifted vehicles race over the speed humps and do not slow). In the daylight, this is hazardous. In the dark, for manta customers walking on the road, often til midnight and beyond, it is treacherous. No amount of parking in the space available will accommodate the additional traffic this development will bring, let alone the existing traffic. Plus, the tour operators currently operating roadside on Kaleiopapa: they aren't going to lease commercial space. Why would they, when they can operate roadside for free? So, for these reasons, the roadsides will stay crowded, despite the parking lots proposed. And pedestrians will continue to have to walk in the roadway with the traffic – way more traffic than now. Adding years of construction vehicles to this mix is only going to make it even more treacherous. People are going to get hurt or die. And, when that happens, they will sue Hawaii County for allowing this unsafe situation to exist on its road.</p> <p>(2) This development will increase traffic by hundreds of cars/day on our already clogged local roads and highways. Kailua-Kona does not need more traffic.</p> <p>(3) Kailua-Kona, and Keauhou in particular, does not need more tourist accommodations. Kailua-Kona is jammed to capacity with tourists as-is. What Kailua-Kona needs is more affordable housing, so the jobs created by its already thriving tourist industry can be filled.</p> <p>(4) This development will take a green, lush area of trees and shrubs and flowers, and replace it with pavement and buildings, permanently and negatively altering the gorgeous scenery along Keauhou Bay, as viewed from both the water and the land.</p> <p>(5) Removing the vegetation from this extensive area will also make the area hotter and less likely to attract replenishing rain. Which will over time dry up natural springs in the area. Scientific studies have proven that trees bring rainfall. And pavement and hardscape raise temperatures.</p>	<p>model transportation options while also providing a linkage across the two sides of the Bay. The roadway is intended to be pedestrian orientated to serve as a key walking route for residents and resort guests to access the dining, commercial, and recreational activities throughout the area.</p> <p>The Draft Environmental Impact Statement (DEIS) provides an analysis of potential traffic impacts in Section 4.11. A Mobility Analysis Report (MAR) was prepared by Fehr &amp; Peers to identify and assess existing and future mobility option as well as potential traffic impacts generated by the Project (<i>Appendix E</i>).The MAR found that the implementation of the Project would not result in significant traffic impacts.</p> <p>The provision of housing on the KS owned lands at Keauhou Bay was considered as an alternative and discussed in DEIS Section 6.3. Based on the analysis of alternatives, the Housing Alternative would fail to meet the objectives of the Project. Under this scenario, the KS lands would improve income generation opportunities to support area programming, however, a</p>

**Table 7.2 DEA Summary of Comments and Responses**

Comments	Commenter	Responses
	<p>(6) This development will burden the local water supply during our era of unremitting drought and increasing fires.</p> <p>(7) This development will create significant extra energy demand on an island that is completely reliant on imported oil for its electricity – during a worldwide oil shortage that has already driven up electric bills here.</p> <p>(8) This development will cause light pollution in an area treasured for its dark skies.</p> <p>(9) This applicant has already demonstrated that it is no longer interested in being a good neighbor. In Feb and March of this year, the applicant took steps to block public access to the shoreline at H Bay (which in their Keauhou Management Plan they call Pebble Beach). H Bay is shoreline public access, and its shoreline is a longstanding local surfing and fishing spot. Neighbors, with the applicant's explicit written permission, had been maintaining the grounds of H Bay and had restored its endangered pond. They were summarily told to cease. At the same time, the longstanding path along the shore was covered with rocks, and a "no trespassing under threat of prosecution" sign placed along the shore.</p> <p>(10) The applicant doesn't listen and respond kindly to community concerns, as evidenced by the April 11, 2022, meeting, which I attended. There, the applicant summarily dismissed volleyball players' and neighbors' concerns. And summarily dismissed Native Hawaiians' concerns. The applicant did not post on its website its slides from the meeting – as promised in the meeting. And the applicant never invited neighbors to participate in its planning process ahead of the meeting – only special interest groups.</p> <p>(11) The applicant is not being forthright; they are not publicizing pertinent information about their plans, nor are they directing public comments to the Hawaii County Planning Department. It is my understanding that the EIS process, and the permitting process for such projects as this, require the applicant to provide the public – especially project neighbors – with a county planning email address, so project neighbors and interested members of the public may comment on the project to the appropriate governing body during appropriate time periods. In its notice to neighbors that I received, no such email address was provided. Only the applicant's email address and their</p>	<p>residential development may result in adverse impacts to the surrounding environment, particularly with regards to view planes, infrastructure, traffic, recreational activities, and open space. Additionally, the provision of housing would not be cost effective for KS to develop at this location and could be cost prohibitive for local buyers.</p> <p>As discussed in DEIS Section 4.15, a visual analysis was conducted by G70 to identify potential impacts to known visual corridors and associations within and adjacent to the Project Area. This analysis was based upon the conceptual layout of all facilities and proposed uses. The bungalow units themselves are designed to nestle into the natural landscape by aligning the structures along the natural sloping topography. Each unit, with a height of approximately 25 feet, is well below the 90-foot height limit allowed under the County zoning code.</p> <p>Section 4.12.1 of the Draft Environment Impact Statement (DEIS) provides detailed estimates of the average daily water demand for the various project components.</p>

**Table 7.2 DEA Summary of Comments and Responses**

Comments	Commenter	Responses
	<p>developer's email address were provided. And no such county planning email address is provided on the applicant's website for this project. What's more, the applicant's notice to me contained no specifics on the extent of this development. And the applicant's publicly available maps continue to show no specifics for this development – even though the applicant already has very specific plans they unveiled in the April 22 meeting. Anyone who missed the April 22 meeting has no idea how dense and disruptive the applicant's development plans are.</p> <p>(12) This applicant claims its project will create jobs, but where will its employees come from, when local businesses like KTA Keauhou, Longs Keauhou, Aloha Gas Keauhou, Subway Keauhou, Kenichi restaurant, etc. are all understaffed, trying to hire – even offering hiring bonuses – but still can't find enough employees? Who can afford to live locally and work on a hotel housekeeper's salary?</p> <p>(13) And lastly, but most importantly, I believe that building a hotel, commercial space, and a new road is not preserving Kamehameha III's birthplace, but destroying it.</p> <p>I am not sending this letter to the applicant, Kamehameha Schools, on purpose. They have demonstrated to me that they do not genuinely care about anything anyone has to say. Sharing my views with them is pointless. They are not listening. I am sending this letter to you, Alex Roy and Rebecca Villegas, because I know it is your job to care about the county's environment and people and fairly administer the laws of the land, so that the people's voice may be heard, and not just powerful, rich organizations like Kamehameha Schools.</p>	<p>In total, the Project will result in an average water demand of approximately 97,466.2 GPD. Based on these estimates, impacts to the public water supply are not expected.</p> <p>DEIS Section 4.12.4 provides a detailed description of the Projects estimated energy demand. The total electrical demand for the Project is anticipated to be 3,181.86 kiloVolt Amperes (kVA). Provisions of additional electrical services are not expected to effect existing utility services in the greater Kailua-Kona Region.</p> <p>The Project includes several components aiming to conserve overall energy usage and will strive to meet a LEED silver minimum. The Project will also be implementing elements from the USEPA Energy Star Program such as efficient insulation, high performance windows, compact construction, efficient ventilation systems, or energy saving lighting and appliances.</p> <p>Various areas throughout the Project Area will be equipped with new lighting to improve nighttime safety and security. The Old Kona Road and associated walking paths</p>

**Table 7.2 DEA Summary of Comments and Responses**

Comments	Commenter	Responses
		<p>will be equipped with appropriate lighting. As of June 2021, the Hawai'i County Street Light Standards has a list of approved Light Emitting Diode (LED) roadway luminaires that are acceptable for installation within Hawai'i County. Roadway lighting system will be energized through metered electrical connections to HELCO secondary power sources situated along Old Kona Road. All roadway lighting will consist of fully shielded light fixtures and comply with Hawai'i's Outdoor Lighting Ordinances and Dark-Sky regulations.</p> <p>Consultation with community groups and stakeholders has been ongoing since 2016. KS takes the concerns of its neighbors seriously. Input from community has guided this planning process from the beginning and will continue to do so throughout the HRS 343 Environmental Review Process. A recording of the EISPN scoping meeting was posted to the Project Website for participants to view following the meeting.</p> <p>DEIS Section 4.14 assess economic impacts of the Project. An Economic Impact Report (EIR) was prepared</p>

**Table 7.2 DEA Summary of Comments and Responses**

Comments	Commenter	Responses
		<p>by Environment &amp; Economics for the Project and included in <i>Appendix G</i>. The EIR estimates that there would be an estimated total of 159 jobs generated or sustained from Project operations annually. These jobs would primarily be in service industries such as the hotel industry (e.g., building maintenance and clerks), retail industry (e.g., retail sales), and restaurant industry (e.g., food and beverage service and cooks). Employment opportunities within the Project Area will continue to diversify and increase employment opportunities in the Kailua-Kona Region.</p> <p>DEIS Section 4.1 discusses cultural, archaeological, and historic resources within the Project Area. The KBMP proposes to establish a new cultural heritage corridor with the aim to preserve and protect the most culturally significant and vulnerable sites while enhancing opportunities for the public to engage and learn about their importance. Implementation of the Project is anticipated to generate long-term benefits by preserving sensitive archaeological sites and implementing a plan to steward the sites in perpetuity.</p>

<p>Megan Spelman</p>	<p>Aloha to county planners and developers,</p> <p>Our family has owned a home on Manukai Street near Keauhou Bay for nearly 30 years. It breaks our heart to think of another resort developed above Keauhou Bay. The bay and neighborhood can hardly manage the amount of visitors and locals using the bay as is. Please no more development! I think we should concentrate on management and letting commercial spaces open in current buildings. Through traffic to the bay via Kam III would ruin our quiet neighborhood we all treasure. Please NO MORE DEVELOPMENT at Keauhou Bay. We already have a huge resort and many commercial businesses running out of the bay. We can't handle more. Kamehameha School will have to find another income generator on their many properties. I am sure there are options. Keauhou Bay can't manage another resort! We don't need it or want it.</p>	<p>Thank you for your letter dated April 22, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan (KBMP) prepared pursuant to Hawai'i Revised Statutes Chapter 343.</p> <p>We acknowledge your comments related to the KBMP. <p>Meredith Stapp Ozbil</p>	<p>I am writing to you as I am a user of Keaukou Bay, a paddler and member of KCC, a resident of Kailua-Kona and a constituent and I oppose the redevelopment project.</p> <p>1st, does the region need more Boutique Hotels? Waikoloa Resort was just approved in adding a vast number of vacation accommodations (with Zero much needed affordable housing.) Do we need more? The Earth is already in a climate crisis. Are vacancy rates at an all time low? Are we as a community taking car of what we already have?</p> <p>Second, Kamehameha Schools does not have the greatest reputation in completing projects. Per their own website the redevelopment at Kahalu'u Ma Kai has been in "final stages" since September 2020. It is still incomplete. The construcion fencing and incomplete projects are becoming an eyesore.</p> <p>Furthermore, at that same Kahalu'u site they already demo'd a hotel. Apparently to honor the cultural footprint in that location and mitigate</p>	<p>Thank you for your letter dated April 22, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan (KBMP) prepared pursuant to Hawai'i Revised Statues Chapter 343.</p> <p>We acknowledge your comments related to the KBMP. 	<p>financial risk of rehabilitation. One could easily argue the cultural footprint at Keauhou's is far greater. And I am not sure how a Boutique Hotel would have less financial risk in 40 years (approx. age of the Keauhou Beach Hotel when demolished) at a time when it would also need rehabilitation. Hotels are not commodities to be thrown away in a landfill creating huge environmental waste on a small island.</p> <p>It leaves me questioning:</p> <p>Is the construction and demolition and long term maintenance of buildings owned and managed by Kamehameha Schools at the whim of whom ever is on the board at the time?</p> <p>Are they maintaining thier buildings or deferring maintenance until the buildings cease to make money and are too expensive to rehabilitate? Is that something an Island community can afford to perpetuate?</p> <p>There are already 2 derelict hotels in Downtown Kona (Kona Inn and Uncle Billy) in the future Do we need another? There are already 2 roped off, fenced in parks and cultural sites that are incomplete, overgrown, littered, and unused (Kahalu'u Ma Kai and La'aloa) Do we need more incomplete projects lingering indefinitely?</p>	<p>and utilization of the bay can and often does create congestion which leads to user conflicts along the bayfront. 		<p>previous hotel structure. The income generated from activities at Keauhou Bay will be used to support KS' mission as well as the educational and cultural components of the Keauhou Bay Management Plan.</p> <p>Thank you for your participation in the environmental review process.</p>
<p>Michael Herbert</p>	<p>My name is Michael Herbert and I live in the Keauhou makai area with my wife and our two children. My wife and I have owned a home in Keauhou since 2004. We were married at the Keauhou hotel (when it was the Sheraton) in 2009. We are raising our two young children here in Keauhou, and our family benefits daily from the many special features of this place. I am very happy to see that Kamehameha Schools (KS) is looking at ways to restore cultural sites in this very special area and reverse some of the land use planning decisions of the past that are not consistent with the rich cultural heritage of the area. I have some suggestions that I think would improve on the current plan and better balance the proposed restoration and development activities. I respectfully encourage KS to consider these ideas and incorporate them into the next stage of your planning work:</p> <p>From North to South, I suggest:</p> <p><b>1. Restore and rebuild the holua (North).</b></p> <p>We often walk with our children and point out to them the magnificent Royal Holua. I cannot help but imagine the intense speeds obtained descending the slide and admire the bravery of those who participated in the sport. Equally impressive is the amount of resource and social coordination needed by the Hawaiian community here at Keauhou to build the slide.</p> <p>The Royal Holua should be restored as completely as possible, and should once again be a place for people to practice the sport and for spectators to enjoy it. The proposed redevelopment of this area presents a once-in-a-generation opportunity to make bold moves to reclaim this magnificent</p>	<p>Thank you for your letter dated April 22, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan (KBMP) prepared pursuant to Hawai'i Revised Statutes Chapter 343.</p> <p>We appreciate your suggestions to restore the hōlua slide. Although there is no extant remains of the hōlua slide in the Project Area, the development footprint was designed to preserve the alignment of the original corridor for open space and preservation in the future. The concept behind this area is to create a physical and visual memorial to Hōlua o Kāneaka, the monumental stone slide requisitioned by Kamehameha I at the time of the birth of his son, Kauikeaouli. Interpretive signage will be included to tell the story of the hōlua and other stories. KS will</p>

**Table 7.2 DEA Summary of Comments and Responses**

Comments	Commenter	Responses
	<p>feature and revive traditions surrounding holua sled racing. Keauhou Bay could become the epicenter for the revival of the Holua. I urge KS to take advantage of the opportunity and act more fully on the vision to restore this area by bringing back the Royal Holua.</p> <p><b>2. Restore the birthplace of Kauikeaouli/Kamehameha III (Bayfront).</b></p> <p>The map excerpts and comments below are taken from Henry E.P. Kekahuna’s masterful maps of Keauhou Bay from 1949 - 1955. Kekahuna’s detailed renderings show how the birthplace used to look and his historical comments directly tie to the birth story of Kauikeaouli/Kamehameha III. Preserving his birth story was undoubtedly a strong motivation for the creation of these maps.</p> <p>Existing commercial development has paved over and covered up many remarkable features of the area. In addition to realigning the access and relocating the commercial business, I urge KS to remove the pavement and uncover the springs and birthing pool shown on the maps so that the fuller story of the birth of Kauikeaouli/Kamehameha III can be seen and appreciated, and the area stewarded in ways more fitting for such an important leader in Hawaiian history and culture. Interpretive signage would be beneficial in educating visitors to be respectful of this sacred birthplace.</p> <p>Links to KeKahuna’s Maps:  <a href="http://data.bishopmuseum.org/Kekahuna/kekahuna.php?b=closeup&amp;ID=15">hBp://data.bishopmuseum.org/Kekahuna/kekahuna.php?b=closeup&amp;ID=15</a>  <a href="http://data.bishopmuseum.org/Kekahuna/kekahuna.php?b=closeup&amp;ID=14">hBp://data.bishopmuseum.org/Kekahuna/kekahuna.php?b=closeup&amp;ID=14</a></p> <p><b>3. Focus commercial development activity on the South end of Keauhou Bay and above the cliffs. Do not include commercial activity on the North end of Keauhou Bay (South).</b></p> <p>To maximize enjoyment of the north and bayfront proposed open spaces by visitors, residents, and cultural practitioners, I strongly urge KS to consolidate the development to one area on the south side of the bay so that cars, parking, boats and commercial activity is concentrated in the area near the current Outrigger Resort and where the newer commercial harbor activities will be relocated. Doing so would create an experience where the north end of the bay, near the proposed redeveloped Royal Holua and over to the birthplace</p>	<p>also seek collaboration with community partners interested in the restoration and utilization of the corridor to reinvigorate Keauhou as an epicenter for hōlua.</p> <p>DEIS Chapter 3 provides a detailed description of the Project inclusive of restoration activities of Ho’okūkū Pond. As part of the improvements in the heritage corridor, the Project will expand the remnant anchialine pond and restore ecological systems within Ho’okūkū Pond to enhance conditions for native species to thrive. DEIS Section 4.5 describes potential impacts and mitigation measures to protect surface water at the Project Area.</p> <p>DEIS Chapter 3 also provides a detailed description of the proposed commercial spaces and boutique resort. The boutique resort will be located above ‘Ahu’ula Cliff. The area below the cliff is proposed for preservation as a heritage corridor. The new commercial facilities will be located south of the bayfront on the northwest corner of Kaleiopapa Street and Ehukai Street.</p> <p>We understand that parking and circulation has been challenging in areas surrounding Keauhou Bay. Street capacity and traffic</p>

**Table 7.2 DEA Summary of Comments and Responses**

Comments	Commenter	Responses
	<p>can serve as quieter, pedestrian friendly shoreline access, restored cultural sites, and quieter recrea.on including the canoe club. On the south end near the existing hotel is where any commercial development, new roadways, and new parking should be concentrated.</p> <p>Do not make the old road a thoroughfare. Extend it from the south side of the bay just as far as is needed to serve the development above the cliffs and no farther. Land use on the north end of Keauhou Bay should be focused on the physical and cultural revival of the Royal Holua.</p> <p>I strongly encourage KS to include in any proposed new commercial or hotel development a more contemporary mixed use approach, with retail on the ground floor, including holua sled builder and shop, surf/paddleboard shop with rentals, places for classes and educa.on, and tour operators on the ground floor so that guests can conveniently book activities. Throw in a couple of restaurants serving locally grown food, as well.</p> <p>I'd also strongly encourage KS to include a mix of high end and affordable residential units with any planned boutique hotel. These units could function as permanent rental units that generate revenue for KS, but also allow for the bayfront not to become dominated with visitors. Ideally, more affordable rental units could be mixed in as well, allowing local families an opportunity to live at Keauhou Bay.</p> <p>Many visitors have moved beyond the mindset when resorts nodes were developed to exclude local people; these visitors seek enriching social experiences that, while comfortable, allow an opportunity to interact with locals and feel a part of the community during their stay. The new development should reflect that evolution in the visitor industry. Similarly, most local residents are tired of being priced out of areas that are special for all of us. Local families deserve opportunities to live where they want to. KS has truly remarkable resources and the ability to realize an inclusive and transformative vision for this place.</p> <p>I would be happy to talk further with KS about any of these ideas. I plan to stay in this area and want to help make it the best it can be for present and</p>	<p>circulation was taken into consideration during the development of alternatives. The Project involves multiple design elements to improve overall circulation and alleviate congestion. The Project proposes to improve the Old Kona Road to support multi-model transportation options while also providing a linkage across the two sides of the Bay. The roadway is intended to be pedestrian orientated to serve as a key walking route for residents and resort guests to access the dining, commercial, and recreational activities throughout the area.</p> <p>The provision of housing on the KS owned lands at Keauhou Bay was considered as an alternative and discussed in DEIS Section 6.3. Based on the analysis of alternatives, the Housing Alternative would fail to meet the objectives of the Project. Under this scenario, the KS lands would improve income generation opportunities to support area programming, however, a residential development may result in adverse impacts to the surrounding environment, particularly with regards to view planes, infrastructure, traffic,</p>

	<p>future generations. The land and waters of Keauhou Bay have a powerful story to tell; let the story be told.</p>	<p>recreational activities, and open space. Additionally, the provision of housing would not be cost effective for KS to develop at this location and could be cost prohibitive for local buyers.</p> <p>This Project aims to purposefully pursue the ‘Āina Aloha Economic Futures Declaration with a specific focus to “assert collective kuleana to restore degraded environments, sustainably managed human-occupied spaces, and protect the vibrancy of intact ecosystems.”</p> <p>However, KS further acknowledges that one aspect of Project will require an innovative approach to redefine the role of ho’okipa (to welcome others with hospitality) in the region. The development will strive to be a destination where both local residents and visitors alike will feel welcome.</p> <p>Thank you for your participation in the environmental review process.</p>
<p>Mike Morgan</p>	<p>Im writing in strong objection to the proposed development of Keauhou. Over the last 20 years I have enjoyed the bay and pier as a place of natural and cultural beauty. It invokes what Hawaii is, and should be. The calm and quiet of the bay is a true gift to Big Island.</p> <p>Over the last 5 years Ive seen the mismanagement of the bay and resources decline. There is no longer a trash can by the beach park, the benches on the historic walking path are rotten with metal spikes sticking out of them. If the</p>	<p>Thank you for your letter dated March 30, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan (KBMP) prepared pursuant to Hawai‘i Revised Statues Chapter 343.</p>

<p>Pamela Myers</p>	<p>I just read through some of the above plan and was astounded and appalled! I am a member of Keauhou Canoe Club and spend a considerable amount of time in the area. The area is lovely, not congested, and the current amount of development seem quite appropriate for the size of the bay and neighborhood.</p> <p>The proposal even says that the bay is highly used by visitor and commercial groups. The above proposal would mean MORE USE! I thought that Kamehameha Schools is supposed to PROTECT not destroy their land. With guise of an education center this proposal is WAY TO LARGE AND INAPPROPRIATE FOR THIS SPECIAL HISTORIC AREA.</p> <p>If I lived in that neighborhood I would be up in arms as this will create a completely different environment. I truly hope this DOES NOT GO THROUGH. It definitely sounds like KS has sold out for money!</p> <p>I am completely opposed to this as written. A small cultural center would be fine. But not this monstrosity!</p>	<p>Thank you for your letter dated April 13, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan (KBMP) prepared pursuant to Hawai'i Revised Statutes Chapter 343.</p> <p>We acknowledge your comments related to the KBMP. <p>Patrick Badley</p>	<p>I have reviewed the Keauhou plans for the future and consider them absurd. Let's remember 5 years ago when DLNR proposed 8 new mooring balls for the bay. They completed a \$100,000 Environmental review and found no impact. That's when things went crazy...</p> <p>In the public hearing we heard at least 50 people say:</p> <ol style="list-style-type: none"> <li>1. the bay is already too crowded with boats, kayaks, swimmers, snorkelers, and outrigger canoes from the Keauhou Canoe Club</li> <li>2. Parking areas are full now and there is no more availability in the area</li> <li>3. The local natural resources are sensitive and will be damaged</li> <li>4. The local historical resources will be affected, damaged, and insulted</li> <li>5. Keauhou Bay is a historical monument to Hawaiian history - why add restaurants, condos, kiosks, shopping, and hundreds of tourists?</li> <li>6. Traffic in the area is bad now. At night with manta ray tourists it is even worse. DLNR is adding more manta viewing mooring balls and traffic and parking will be worse.</li> </ol> <p>If adding a few mooring balls to the Bay was rejected, then this massive project idea should be rejected. The whole idea makes no sense and will destroy Keauhou Bay as we know it. Why keep adding tourist areas?</p>	<p>Thank you for your letter dated April 4, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan (KBMP) prepared pursuant to Hawai'i Revised Statutes Chapter 343.</p> <p>We acknowledge your comments related to the KBMP. 	<p>don't see any cultural improvements justifying such environmental degradation. Most specifically, we're writing because, if approved, the increased traffic from this project only exacerbates the health and safety issues we are facing from the insufficiently mitigated "bypass", now called "Alii Highway" and it's effect on our complex.</p> <p>We live on the third floor of southeast corner of the building closest to Alii Dr. (Bldg.2) at the Keauhou Akahi. Since the bypass was opened the county has consistently removed the hedge/vegetation that was previously maintained to the guardrail which is exposing us and other residents to vehicular exhaust, noise and road dirt and added access to our property.</p> <p>1). If functional vegetation cannot be maintained as a barrier here with assistance from the county, a functional wall will be needed for mitigation purposes</p> <p>The speeding along this section of Alii Dr./Hwy makes it extremely dangerous to enter Alii Dr. from our complex.</p> <p>2). At the least, the speed limit along this section needs to be reduced and enforced.</p> <p>The corners of Alii Dr./Hwy and Kaleiopapa are not curbed. There are a lot of pedestrians using these corner.s. Cars and vehicles with boat trailers cut the corner and pedestrians waiting at the crosswalk or turning the corner are in danger of being injured. The speed limit goes from 35 to 25.</p> <p>3). The west sides of Kaleiopapa and Alii need to be curbed. And the speed limit needs to be reduced on Alii.</p> <p>4). If the old road below the golf course is to be used as a through road, it needs to be open to the public....including vehicles with boat trailers coming from the trailer storage to the boat ramp....not just hotel patrons.</p> <p>Thanks for the opportunity to comment.</p>	<p>Preparation Notice for the Keauhou Bay Management Plan (KBMP) prepared pursuant to Hawai'i Revised Statutes Chapter 343.</p> <p>We acknowledge your comments related to the KBMP. As the steward of approximately 54 acres at Keauhou Bay, Kamehameha Schools (KS) has specific kuleana to maintain and support the management of the bay and its resources. The significant demand and utilization of the bay can and often does create congestion which leads to user conflicts along the bayfront. KS lands at the bay are also significantly impacted by unauthorized uses, trespassing, vandalism, and other unsanctioned activities. Through consultation with lineal descendants and community members it was determined that doing nothing is not a viable option. Guided by KS' mission and vision, the Project aligns with the current KS Strategic Map 2025 which is a strategic planning document aimed to achieve the goal of developing resilient communities by stewarding the 'āina to support resilient economies, cultural landscapes, diverse learning, and career pathways. The Project aims to</p>

**Table 7.2 DEA Summary of Comments and Responses**

Comments	Commenter	Responses
		<p>achieve this goal by reorienting uses and directing new development in appropriate areas around Keauhou Bay based upon community and organizational values that were identified during the KBMP process.</p> <p>We understand that parking and circulation has been challenging in residential neighborhoods surrounding Keauhou Bay. Street capacity and traffic circulation was taken into consideration during the development of alternatives. The Project involves multiple design elements to improve overall circulation and alleviate congestion. The Project proposes to improve the Old Kona Road to support multi-modal transportation options while also providing a linkage across the two sides of the Bay. The roadway is intended to be pedestrian orientated to serve as a key walking route for residents and resort guests to access the dining, commercial, and recreational activities throughout the area.</p> <p>The Draft Environmental Impact Statement (DEIS) provides an analysis of potential traffic impacts in Section 4.11. A Mobility Analysis Report (MAR) was prepared by Fehr</p>

		<p>&amp; Peers to identify and assess existing and future mobility option as well as potential traffic impacts generated by the Project (<i>Appendix E</i>).The MAR found that the implementation of the Project would not result in significant traffic impacts.</p> <p>We understand your concerns related to speed and safety along roadways within the vicinity of the Project Area. As these roadways are under the jurisdiction of the County, KS does not have the authority to install traffic calming devices or other speed controls.</p> <p>Thank you for your participation in the environmental review process.</p>
<p>Peter Matlock</p>	<p>I thoroughly applaud the educational mission of Kamehameha Schools, and its concern to bring appropriate respect to the birthplace of Kamehemeha III. That said, the proposed plan for Keauhou Bay is not appropriate.</p> <p>A stated and major rationale for the plan is to increase access to the Bay for kupu'aina and kama'aina. In fact, the plan will do the exact opposite.</p> <p>Building approximately 150 bungalow-style hotel units, adding a 3,000 square foot "fine dining" restaurant, and increasing commercial outlets will crowd out and drive away the very people those promoting this plan say they want to help.</p> <p>Keauhou Bay is used daily by a wide range of people, including many from the lower-income end of the economic spectrum, and many, many locals—from keiki to kupuna. The proposed plan will prevent them from enjoying this treasured local resource, as the area will be flooded with tourists.</p>	<p>Thank you for your letter dated April 22, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan (KBMP) prepared pursuant to Hawai'i Revised Statutes Chapter 343.</p> <p>We acknowledge your comments related to the KBMP. 	<p>for family gatherings, funeral services, baptisms, volleyball, paddling canoe, bbq's with the family, and... it is an extremely historical and special, not crowded Bay for everyone.</p> <p>Can you please be aware that if you build those 150 bungalows it will take this land away from the locals and visitors and bring in a huge crowd to this extremely small, historical, and sacred area can not handle because it is so very small? It will never be the special place that it is today. It will honestly take away from the quiet, loving, mother nature feel of this special bay.</p> <p>Building a cultural center for the Hawaiian people and everyone to enjoy would be very special. Updating the commercial buildings that are already there would be good and creating a walkway so the disabled can get from one side to the other side of the way would be extremely welcomed as well. All of this supports the feel of staying small and local and giving Aloha to the land and the people.</p> <p>Please, your company listened to us when your company wanted to build a new resort at Kahalu'u and you decided to build a park for everyone to enjoy instead. You heard us then, please, hear us now.</p> <p>Please, understand how special this possibly last historical place on the Big Island is to all the locals who live here, and especially the Hawaiian people.</p> <p>I know your company does the right thing because you did the right thing at Kahalu'u beach back in 2016.</p> <p>The Hawaiian people have had so much taken away from them, please let them keep this last sacred bay, the birthplace of their King Kamehameha III, and please keep it special for the rest of us who moved here as well.</p> <p>This bay needs to be preserved for generations to be able to enjoy it without a resort crowd that's like Hapuna beach. This bay is not even a quarter the size of Hapuna, it is so very small, it just can't handle a big resort crowd. It would be very uncomfortable for all of everyone, including the new crowd that would come because everyone laying out their towels to sunbathe, there's just not enough space and I honestly don't think King Kamehameha III would really have wanted his birthplace to be a crowded tourist area. I would think he would want to keep it for his people and the people who love the island.</p>	<p>maintain and support the management of the bay and its resources. 	<p>My petition's name is <a href="https://change.org/savetheland">change.org/savetheland</a>, in 8 days, this short amount of time has over 1,681 (and climbing) people agree to please keep this bay as it's been for decades, with just a few changes that would benefit everyone, the land included. So the locals and visitors can fully enjoy it without a resort crowd for generations more.</p> <p>I know your job must be very challenging. You have to see both sides and make a good decision about what is good for the island and the people who live here. You are Kamehameha Schools, that name represents the King who was born in Keauhou Bay. It represents the preservation of the land and the Hawaiian people's history and that is what Keauhou Bay represents. If you take this land away and give it to a crowd of tourists that will come with the 150 bungalows, it is not preserving the land for the next generations of the Hawaiian people that are to come, and the people who love this island, like me, it will take away one of the last historical areas that is fully enjoyed and loved as is by everyone.</p> <p>Plus, if you take out all those trees that help keep the temperature down by providing shade, and help keep erosion down by holding on to the land, the bay could become even more muddy after storms and throughout every day, because those trees provide safety for the bay to not have as much mud. The trees help the bay is many different ways.</p> <p>Adding more commercial builds to this small bay, especially when there are many For Lease signs in Keauhou Shopping Center, is not being sustainable and using what we already have. People don't really shop in this area and I understand wanting to add commercial boutiques for the tourists to shop who would stay in the bungalows but can't you see how this would turn this precious bay into a shopping craze and be like the island of Oahu? It would take away from the beautiful feel of The Big Island. Isn't this nature feel of The Big Island worth saving?</p> <p>I understand making a profit is important and there are many ways to make a profit besides building bungalows in one of the last historical places on the island. There must be a way to turn a profit without taking away from the land, taking away from the Hawaiian people, and everyone who loves and uses this bay daily without a crowd.</p>	<p>invasive species. The KBMP has been designed to ensure that the physical attributes of new development are compatible with the existing landscape. The landscape design integrates native plants and landscaping elements that are representative of the natural and cultural landscape. The landscape design also incorporates xeriscape techniques that complements the dry climate, pays tribute to the region's agricultural past, and incorporates planting of native vegetation.</p> <p>Potential land erosion due to the implementation of the KBMP has been addressed in the Draft Environmental Impact Statement (DEIS). DEIS Section 4.5, describes stormwater runoff peak flow estimates for both existing conditions and with project implementation. At present, portions of the KS properties at Keauhou Bay are unmanaged and susceptible to runoff and erosion. The Project is expected to result in long-term benefits as permanent sediment control measures and stormwater infrastructure would minimize runoff and erosion. Those strategies may include but are not</p>

	<p>I appreciate you taking the time to hear us and consider our side.</p>	<p>limited to detaining, retaining and infiltrating runoff into the ground. Thank you for your participation in the environmental review process.</p>
<p>Rebecca Melendez (Petition)</p>	<p>Donating \$ after you sign ONLY goes to promoting this petition. We will have a non-profit business to help this cause more soon.</p> <p>Keauhou Bay is historical sacred land. It's also a small commercial and quiet residential area, with a local canoe club that uses the bay daily, local volleyball groups that play there daily, families BBQ every weekend, hold funeral services, baptisms local kids enjoy swimming, and visitors enjoy paddle boarding and kayaking all the time without a crowd.</p> <p>Read their information on this link <a href="https://www.ksbe.edu/keauhou_bay/">https://www.ksbe.edu/keauhou_bay/</a></p> <p>It's possibly the last untouched historical area that has not been seriously developed and it has been a comfortable and quiet bay for locals and visitors alike for many years without a big resort crowd.</p> <p>The beach is just over the size of one volleyball court that is there, with an even smaller park on the other side. It doesn't have a crowded feel and it's not big enough to become a resort area.</p> <p>It is also the historical site of the birthplace of the Hawaiian people's King Kamehameha III. The area holds much history and is a very sacred area to everyone, especially the Hawaiian people.</p> <p>Developers are considering building this area up and putting 150 Resort-style bungalows in this very historical, quiet, charming, and small commercial and residential area that many people have enjoyed as it is for many decades.</p> <p>Not only is the area not big enough for a new resort, but there is already a nice hotel at the point of this bay and Time Share homes right next to that.</p> <p>Both of those work very well with this area and offer tourists a lot of fun places to stay without taking away from the land, its history, quietness, all the local activities, and the small commercial buildings that have been there for many years.</p>	<p>Thank you for your letter dated April 22, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan (KBMP) prepared pursuant to Hawai'i Revised Statutes Chapter 343.</p> <p>We acknowledge your comments related to the KBMP. 	<p>Updating the commercial builds that are already there would be great, and adding a nice cultural center there would be nice for everyone as well, not just tourists having bungalows.</p> <p>To have a cultural center where people can learn more about the land, and the Hawaiian people can have a place of their own at King Kamehameha III's birthplace would be great.</p> <p>Creating a walkway so the disabled can get from the Northside to the Southside would be another great add, but NOT building 150 new bungalows for a lot of people who don't even live here, who will then crowd the bay because the bay will be the focus for them staying there.</p> <p>Now, besides putting another resort in this area, they want to open up the old road that has been beautifully overgrown with native plants and is located just above the canoe club and goes right through King Kamehameha III's birth site.</p> <p>This will bring a lot of traffic right through this beautiful historical place where many locals hold family funerals, baptisms, birthday parties... It will overcrowd this very small special area that locals and visitors have been using for many decades, in many different loving ways.</p> <p>Putting a road in could also increase the temperature there because of the pavement, and the traffic that will then pass through this beautiful, historical, sacred, and quiet area will be huge.</p> <p>Trees shade this area right now very well and also help keep the erosion down by helping stop a lot of mud and debries from going into the ocean after big tropical storms that the island has sometimes. Without trees the bay could be extra muddy.</p> <p>Plus, they want to add more commercial shops to Keauhou Bay, and Keauhou Shopping Center has a lot of empty For Lease stores available. To create more shops when there are shops empty and For Lease in Keauhou Shopping Center just above the bay, is not being sustainable and using what we already have.</p> <p>Please HELP SAVE Keauhou Bay from becoming a big Resort area. It is one of the last historically untouched areas on the island that has not been</p>	<p>strategic planning document aimed to achieve the goal of developing resilient communities by stewarding the 'āina to support resilient economies, cultural landscapes, diverse learning, and career pathways. <p>Richard (Rick) Bennett</p>	<p>As Na Maka o ke Kai for Kona and a 20-year resident, we have been closely tracking the challenges of the tiny inlet, Keauhou Bay. I am responding in the comment period noticed in the EISPN for the bay.</p> <p>For over a decade, the bay water has been subject to algae and limu blooms that significantly increase turbidity and limit visibility. Keauhou Bay is currently listed as Impaired under section 303(D) of the Clean Water Act. As such, landowners, and government agencies must act to limit and resolve the impairment. To date, no action has been taken by the HDOH Clean Water Branch, The County of Hawaii, or local landowners. The Clean Water Act requires a nutrient budget or TMDL for the bay, however, the state does not enforce this provision under authority granted by the EPA.</p> <p>These blooms are associated with increases in nitrate and phosphate in the water column. Phosphates are bound to soil particles and nitrates are freely water-soluble.</p> <p>The recent Lyngbia blooms in the bay suggest that rate-limiting concentrations of phosphate have been exceeded. Lyngbia is a</p>	<p>Thank you for your letter dated April 21, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan (KBMP) prepared pursuant to Hawai'i Revised Statutes Chapter 343.</p> <p>Thank you for sharing this information related to water quality and monitoring. Potential land erosion due to the implementation of the KBMP has been addressed in the Draft Environmental Impact Statement (DEIS). DEIS Section 4.5, describes stormwater runoff peak</p>																																																																				

**Table 7.2 DEA Summary of Comments and Responses**

Comments	Commenter	Responses
	<p>Cyanobacteria that can fix nitrogen from the atmosphere but requires phosphates to do so.</p> <p>Nitrates leach into the sea from regional cesspits and septic systems. In contrast, phosphates move into the bay on sediments. For the most part, sediment transfer into the nearshore waters is limited by the lack of soil along the Kona Coast. However, in the case of Keauhou Bay, sediments and fine soils are eroding from land and parking areas adjacent to Kamehameha III and the cul-d-sac end of the road. The dry well drain is commonly overwhelmed by heavy rains, and sediment flows into the well, causing the well to cease working and overflow. The overflows with significant erosive force further move sediments into the bay. The shallow end of the bay has a thick layer of sediment and no viable corals.</p> <p>I enclose a series of photos and a link to a Youtube video documenting the issue. I trust the EIS will thoroughly examine the impacts of regional land uses on the water quality of Keauhou Bay.</p> <p><a href="https://www.youtube.com/watch?v=auNHb4FK518">https://www.youtube.com/watch?v=auNHb4FK518</a></p>	<p>flow estimates for both existing conditions and with project implementation. At present, portions of the KS properties at Keauhou Bay are unmanaged and susceptible to runoff and erosion. The Project is expected to result in long-term benefits as permanent sediment control measures and stormwater infrastructure would minimize runoff and erosion. Those strategies may include but are not limited to detaining, retaining and infiltrating runoff into the ground.</p> <p>Thank you for your participation in the environmental review process.</p>
<p>Robbie K</p>	<p>Please please please do not touch keauhou. Resident here my my whole life...</p> <p>I'm a full time commercial fisherman an I have been accessing the ramp for over a decade. With the manta dives an the influx of tourist, there has been no parking for us fisherman .To make a bungalo style resort would only take away from the people here an add money to your pockets. This is a cultural no no...some days I can't even get my trailer to the ramp because of overcrowding tourist.</p> <p>Now how dangerous has the bay become? People swimming in the boat ramp , people with no red flags or bouys. Sharks ,</p> <p>We have a canoe club that has been there for longer than I have been alive.</p> <p>The influx of cars parking on the road is crazy.. we have a farmers market on certain days at the outrigger an the cars are strewd out all the way up the shoulder.. some are parked illegally because theres no where to go.. in the</p>	<p>Thank you for your letter dated April 19, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan (KBMP) prepared pursuant to Hawai'i Revised Statues Chapter 343.</p> <p>We acknowledge your comments related to the KBMP. As the steward of approximately 54 acres at Keauhou Bay, Kamehameha Schools (KS) has specific kuleana to maintain and support the management of the bay and its resources. The significant demand</p>

	<p>last ten years I've seen keauhou go from a beautiful bay , to an over crowded(rich privileged) area.</p> <p>I can tell you that nobody local will be happy with this plan. Its absurd to even mention such a thing.</p> <p>Now, what's needed at keahou, better access and regulated swimming area. more parking for trailers , less tourist. Less manta boats. More ramp wash down because we wait for 30 minutes sometimes because theres only 4 spickets of water.</p> <p>With all of this being said I'll pray you folks dont touch this area because you had an idea of change. We dont need change. We need help. So help everyone that uses the beautiful bay of keauhou be able to use it in the future without another 1000 people down there. I also no for a fact that whoever's in on this has not seen how many people are already down there on a manta night .. this is not Oahu an let's keep it that way.</p> <p>NO To Keauhou bay !</p>	<p>and utilization of the bay can and often does create congestion which leads to user conflicts along the bayfront. KS lands at the bay are also significantly impacted by unauthorized uses, trespassing, vandalism, and other unsanctioned activities. Through consultation with lineal descendants and community members it was determined that doing nothing is not a viable option. Guided by KS' mission and vision, the Project aligns with the current KS Strategic Map 2025 which is a strategic planning document aimed to achieve the goal of developing resilient communities by stewarding the 'āina to support resilient economies, cultural landscapes, diverse learning, and career pathways. 		<p>enhance their capacity, safety, and security. DEIS Section 3.2.5 discusses the Project’s proposed parking improvements. After full build out of the Project, the supply of parking for both the general public and for boat trailers is expected to increase (88 new parking stalls and 23 new boat trailer parking stalls).</p> <p>Thank you for your participation in the environmental review process.</p>
Russell K Laros III	<p>I am writing to express my support for the Keauhou Bay Management Plan Project as it was presented to the Economic Development Committee of the Kona-Kohala Chamber of Commerce.</p>	<p>Thank you for your letter dated April 25, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan (KBMP) prepared pursuant to Hawai’i Revised Statutes Chapter 343.</p> <p>We greatly appreciate your support of the Project. Thank you for your participation in the environmental review process.</p>
Sally Ann Rankin	<p>Many years ago when Kamehameha Schools held some the first ‘community meetings’ regarding the KBMP I found out through the coconut wireless, ended up attending, voiced my opinion, which sadly came upon mostly deaf ears as the updated plan did not take any of the concerns of the neighbors into real consideration.</p> <p>While community organizations were consulted and invited, there was a lack of any real effort to communicate or listen to the residents of Keauhou Bay. 	<p>not aware, and the ones that are, oppose, I would hope as Hawaiians, you would feel some obligation to care and have a real responsibility to listen, wether mandated by law or not.</p> <p>The KBMP clearly does not establish a responsible stewardship or nurture a positive and enduring relationship when you insist on adding another 150 hotel rooms, more commercial space, creating through traffic in a quiet residential area, and paving multiple parking lots to an already fragile bay.</p> <p>Beginning to properly manage the existing commercial space and cultural heritage sites, which you've acknowledge has been poorly taken care of, in and around Keauhou Bay, would seem much more urgent than overdeveloping and overburdening the bay. Once you develop this 'aina, it will never be the same, and it can never be recovered.</p> <p>The only thing I can see that this development, in its current proposal, has accomplished and perpetuated is creating more extractive industry.</p> <p>Na'u me ke mahalo,</p>	<p>of approximately 54 acres at Keauhou Bay, Kamehameha Schools (KS) has specific kuleana to maintain and support the management of the bay and its resources. 	<p>the bay. The small beach suits us for its proximity to our home, the respect the canoers and boaters give each other.</p> <p>I have read of some of the plans to develop the area. You should also know that I am a real estate agent, and have sold many homes in the Keauhou area. The value to most people is in its uniqueness, smallness, closeness and historical character. People value the unique character of Keauhou. I understand the challenge to be good stewards of the land, make the best use of it, but also, understand that large changes aren't usually welcomed, and in fact ends up destroying what people love about Keauhou Bay. I've watched the Kamehameha Schools act in many different ways towards this land .....once keeping the roadsides trimmed, and providing maintenance, now I among others pick up the trash along the roadway to the harbor. The citizens and small business owners here (already existing hotel Outrigger being one) take responsibility for maintaining the character and honor the nature of the place. It is with a sense of horror I think about what a second large hotel here might do. I can't pick up after any more people!!</p> <p>This letter is to ask for reconsideration of the increased thoroughfare , as traffic does not result in a better quality of the environment, and to ask for reconsideration of the proposed large hotel just above the Bay. We have adequate rental rooms with the Outrigger....who are welcomed as the next stewards of the point. Any plans should seek to minimize impact, and drawing 150 new people a day to the Bay will not minimize the impact...</p> <p>It is not lost on me that today is Earth Day....begun so long ago to remind us all that we only have one planet...one Keauhou Bay....one chance to get it right...so my unborn as yet great grandchildren can learn to paddle, and swim, and sit by the rocks some day too.</p>	<p>We acknowledge your comments related to the KBMP. As the steward of approximately 54 acres at Keauhou Bay, Kamehameha Schools (KS) has specific kuleana to maintain and support the management of the bay and its resources. The significant demand and utilization of the bay can and often does create congestion which leads to user conflicts along the bayfront. KS lands at the bay are also significantly impacted by unauthorized uses, trespassing, vandalism, and other unsanctioned activities. Through consultation with lineal descendants and community members it was determined that doing nothing is not a viable option. Guided by KS' mission and vision, the Project aligns with the current KS Strategic Map 2025 which is a strategic planning document aimed to achieve the goal of developing resilient communities by stewarding the 'āina to support resilient economies, cultural landscapes, diverse learning, and career pathways. The Project aims to achieve this goal by reorienting uses and directing new development in appropriate areas around Keauhou Bay based upon community and organizational</p>

		<p>values that were identified during the KBMP process.</p> <p>Thank you for your participation in the environmental review process.</p>
<p>Steve Oliver</p>	<p>I want to voice my opposition to further development in the bay as proposed by kamehameha schools trust. This has not had enough time for public input nor adequate awareness made of what's proposed. I feel this is being rushed through with input or fine tuning from the public. We need to focus on adequate infrastructure being provided by the increased resort traffic and its affect on local residents and the greater good for the non resort using public. Kamehameha schools has unlimited resources and a deep history of corruption. I believe that's mostly in the past but Hawaii is famous for shady deals with developers and politicians and appearances are that this is more of the same. Appearances and perceptions count. KS has taken far too long to develop the other Alii drive properties and this is not good stewardship. They have the money finish these developments in short order but the drag their feet. This is not evidence of good faith for future development.</p> <p>Thanks for your consideration and please vote no or at the least allow more time for debate and modifications. KS is in a hurry to get approval but won't hurry on completion disrupting the entire neighborhood for years maybe decades.</p>	<p>Thank you for your letter dated April 21, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan (KBMP) prepared pursuant to Hawai'i Revised Statutes Chapter 343.</p> <p>We acknowledge your comments related to the KBMP. 		<p>strategies may include but are not limited to detaining, retaining and infiltrating runoff into the ground.</p> <p>DEIS Section 4.7.3 discusses flood hazards and mitigation measures. New construction and substantial site improvements will require compliance with the County's floodplain management regulations (Section 27 of the County Code). Therefore, the risk of potential damage from these flood hazards should be minimized by compliance with County requirements.</p> <p>Portions of the project site will experience passive flooding as a result of 3.2 feet of global sea level rise predicted by 2100. KS is committed to proactively planning and designing the Project to be resilient to ensure the ongoing successful, safe, and sustainable operation of the bay for the foreseeable future.</p> <p>A Natural Resource Assessment was conducted for the Draft EIS (DEIS) by AECOS (Appendix C). Please refer to Section 4.6 of the DEIS for discussion of native species, endangered species, and critical habitat in relation to the KBMP. The Project Area has been heavily infiltrated by non-native and</p>

**Table 7.2 DEA Summary of Comments and Responses**

Comments	Commenter	Responses
		<p>invasive species. As discussed in the Natural Resource Assessment, no species listed as threatened or endangered by state or federal statutes were identified on any of the project parcels at Keauhou Bay. The potential exists that several listed species might transit or utilize the general area on occasion. Please refer to DEIS Section 4.6 for further discussion on potential impacts and mitigation measures.</p> <p>At present, KS does not have an agreement with any entity for use of the volleyball court. Further complicating the matter, a portion of the land underneath the court is within the County right-of-way and therefore outside of KS ownership. KS is committed to the continued consultation with elected officials and representatives of the Kona area to discuss how outdoor recreational activities such as volleyball can be planned in more appropriate areas.</p> <p>The KBMP proposes to create a mauka / makai corridor to improve public shoreline access and to enhance the area for educational, recreational, and cultural activities. Draft Environmental Impact Statement (DEIS) Section 3.2.3</p>

**Table 7.2 DEA Summary of Comments and Responses**

<p>Tom Fetter</p>	<p>Thank you for providing both the EISPN Document and for hosting the informative virtual public meeting on April 11,2022. The public outreach is appreciated.</p> <p>My wife and I have owned a home at 78-120 Holua Rd, on the north side of Keauhou Bay since 2013. This has allowed us to observe the use and issues involving the Bay first hand. Our comments and opinions follow:</p> <p>As you are well aware, Keauhou Bay is an historic and unique site. It is also heavily used by tourist-serving ocean activities. The three primary commercial vessels, the Holu Nui, Tradewinds II, and the Hula Kai may average a total of as many as 100 passengers a day. The boat ramp is very active with fishing boats, fishing rental trips, group kayak excursions and inflatable boats taking passengers daily on snorkeling and diving excursions. The Bay access is used by paddle boarders, kayakers, surfers, snorkelers, swimmers and canoe paddlers from the Keauhou Canoe Club and the local high school teams. Attracting substantially more users will diminish the enjoyment of all.</p> <p>Based on its limited size one could easily conclude that the Bay is near capacity for recreational users.</p>	<p>Thank you for your letter dated April 17, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan (KBMP) prepared pursuant to Hawai’i Revised Statutes Chapter 343.</p> <p>We acknowledge your concerns related to the boutique resort. Comments	Commenter	Responses
	<p>The historical significance of the site is appropriately noted in the EISPN. The Royal Birthplace deserves to be appropriately honored and improved. Ideally this would be accomplished not only by the improvements outlined in the EISPN but also by replacing most of the parking the lot adjacent to the pier (on the waterfront) with grass. Obviously a small loading/unloading zone adjacent the pier for the commercial vessels would be necessary as well as a few ADA parking spaces, but ideally most of this area would be turned into a grassy park to further enhance the area around the Royal Birthplace. As you have suggested present office and retail spaces that crowd the landing area could be relocated.</p> <p>KS does own land here with potential economic value, provided that it could be developed without detriment to the public. In our opinion, the proposed resort hotel and commercial development that KS plans would in fact constitute a severe negative impact as a result of overcrowding this tight site. The resort hotel should not be approved or allowed by the County in order to protect the Public's interests.</p> <p>The mission of KS should be fulfilled by maximizing income from other properties where there will be a greater return on investment and less detriment to the public. These opportunities exist.</p>	<p>achieve the goal of developing resilient communities by stewarding the 'āina to support resilient economies, cultural landscapes, diverse learning, and career pathways. The Project aims to achieve this goal by reorienting uses and directing new development in appropriate areas around Keauhou Bay based upon community and organizational values that were identified during the KBMP process. The income generated from activities at Keauhou Bay – including the resort – will be used to support KS' mission as well as the educational and cultural components of the Keauhou Bay Management Plan.</p> <p>We acknowledge your concern that additional parking is needed for commercial users and residents. One objective of the Project is to improve existing parking areas to enhance their capacity, safety, and security. DEIS Section 3.2.5 discusses the Project's proposed parking improvements. After full build out of the Project, the supply of parking for both the general public and for boat trailers is expected to increase (88 new</p>

**Table 7.2 DEA Summary of Comments and Responses**

Comments	Commenter	Responses
		<p>parking stalls and 23 new boat trailer parking stalls).</p> <p>DEIS Section 4.1 discusses cultural, archaeological, and historic resources within the Project Area. Several recorded archaeological sites within the Project Area are in areas with overgrown vegetation and not easily accessible. The KBMP proposes to establish a new cultural heritage corridor with the aim to preserve and protect the most culturally significant and vulnerable sites while enhancing opportunities for the public to engage and learn about their importance. Implementation of the Project is anticipated to generate long-term benefits by preserving sensitive archaeological sites and implementing a plan to steward the sites in perpetuity.</p> <p>Thank you for your participation in the environmental review process.</p>
<p>Tony Tate</p>	<p>Aloha - I am opposed to the Keauhou Bay Management Plan as presented in the recommendations. I am greatly in FAVOR of restoring the cultural landscape and creating pedestrian areas and areas for all persons in Hawaii to educate themselves on the history of the Hawaiian people. I am OPPOSED to the recommendations of creating a boutique resort, new commercial areas, and new automobile roadways.</p> <p>As one of the few ocean bays on the west side of Hawaii that is not developed, it is imperative that this bay and surrounding area be preserved.</p>	<p>Thank you for your letter dated April 21, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan (KBMP) prepared pursuant to Hawai'i Revised Statutes Chapter 343.</p>

<p>Wendy Malabuyo</p>	<p>I listened tonight and I am excited to see improvement plans for this special and historic site.</p> <p>Given the popularity of the volleyball court and the positive impact it has on the local community, it seems like a very low-cost feature that can provide goodwill and bring in money. Maybe relocate to a different spot from the current space.</p> <p>Anyway, you all have a challenging road ahead from the sound of the feedback but I am very excited to see the improvements.</p> <p>Appreciate your time to reading my comments.</p>	<p>Thank you for your letter dated April 11, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan (KBMP) prepared pursuant to Hawai'i Revised Statutes Chapter 343.</p> <p>At present, KS does not have an agreement with any entity for use of the volleyball court. Further complicating the matter, a portion of the land underneath the court is within the County right-of-way and therefore outside of KS ownership. KS is committed to the continued consultation with elected officials and representatives of the Kona area to discuss how outdoor recreational activities such as volleyball can be planned in more appropriate areas.</p> <p>Thank you for your participation in the environmental review process.</p>
<p>Whit and Jo Parker</p>	<p>We have carefully reviewed the EISPN for Keauhou Bay and have concerns about this development. We currently spend a few months in Kona and are considering retiring to our Keahou Akahi condo full-time this year. However, should the development be approved, we would need to reconsider the decision to reside here full time and will likely sell and find a home out of this impact zone.</p> <p>One of the reasons we love the area is that it's relaxed and non-resort-like, despite being a stones-throw from the Outrigger, which does not impact our quality of life – they have sufficient parking, a massive grass area...something</p>	<p>Thank you for your letter dated April 7, 2022, concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan (KBMP) prepared pursuant to Hawai'i Revised Statutes Chapter 343.</p> <p>We acknowledge your comments related to the KBMP. 	<p>the Keauhou Bay developers are not adequately planning for. The last thing we need is more cars and more overnight lodging. Add to that the gigantic restaurant, tacky tourist sales huts and more, and it's a bad plan.</p> <p>As we are certain others will address the myriad issues wrong with the proposed development, we offer the following for consideration:</p> <ul style="list-style-type: none"> <li>- Does Kamehameha Schools need this sort of investment vehicle to meet its mission?</li> <li>- Is a resort development in the shadow of King Kamehameha III's birthplace any way to honor his legacy and the heritage of the Hawaiian people? (Seems to us he'd be rolling over in his grave with this plan)</li> </ul> <p>We urge the Planning Commission to rule on the side of true preservation and work toward development plans focused on protecting a community gathering area and not creating another resort.</p>	<p>of approximately 54 acres at Keauhou Bay, Kamehameha Schools (KS) has specific kuleana to maintain and support the management of the bay and its resources. 		<p>values that were identified during the KBMP process.</p> <p>We acknowledge your concern that additional parking is needed for commercial users and residents. One objective of the Project is to improve existing parking areas to enhance their capacity, safety, and security. DEIS Section 3.2.5 discusses the Project's proposed parking improvements. After full build out of the Project, the supply of parking for both the general public and for boat trailers is expected to increase (88 new parking stalls and 23 new boat trailer parking stalls).</p> <p>DEIS Section 4.1 discusses cultural, archaeological, and historic resources within the Project Area. The KBMP proposes to establish a new cultural heritage corridor with the aim to preserve and protect the most culturally significant and vulnerable sites while enhancing opportunities for the public to engage and learn about their importance. Implementation of the Project is anticipated to generate long-term benefits by preserving sensitive archaeological sites and implementing a plan to steward the sites in perpetuity.</p>

Eliza Wille	This area does not have the infrastructure to support more development and run off into the bay will further compromise the reef and water quality.	<p>Mahalo for your comment in the petition concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan (KBMP) prepared pursuant to Hawai'i Revised Statutes Chapter 343. Your comments have been administratively recorded.</p> <p>Potential land erosion due to the implementation of the KBMP has been addressed in the Draft Environmental Impact Statement (DEIS). DEIS Section 4.5, describes stormwater runoff peak flow estimates for both existing conditions and with project implementation. At present, portions of the KS properties at Keauhou Bay are unmanaged and susceptible to runoff and erosion. The Project is expected to result in long-term benefits as permanent sediment control measures and stormwater infrastructure would minimize runoff and erosion. Those strategies may include but are not limited to detaining, retaining and infiltrating runoff into the ground.</p> <p>Thank you for your participation in the environmental review process.</p>

<p>Susan Girouard</p>	<p>I'm concerned about the increased traffic on lower Kam III, and what will be done to protect existing residents from the increased noise.</p>	<p>Mahalo for your comment in the petition concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan (KBMP) prepared pursuant to Hawai'i Revised Statutes Chapter 343. Your comments have been administratively recorded.</p> <p>We understand that parking and circulation has been challenging in residential neighborhoods surrounding Keauhou Bay. Street capacity and traffic circulation was taken into consideration during the development of alternatives. The Project involves multiple design elements to improve overall circulation and alleviate congestion. The Project proposes to improve the Old Kona Road to support multi-modal transportation options while also providing a linkage across the two sides of the Bay. The roadway is intended to be pedestrian orientated to serve as a key walking route for residents and resort</p>

		<p>prepared pursuant to Hawai'i Revised Statutes Chapter 343. Your comments have been administratively recorded.</p> <p>The provision of housing on the KS owned lands at Keauhou Bay was considered as an alternative and discussed in DEIS Section 6.3. Based on the analysis of alternatives, the Housing Alternative would fail to meet the objectives of the Project. Under this scenario, the KS lands would improve income generation opportunities to support area programming, however, a residential development may result in adverse impacts to the surrounding environment, particularly with regards to view planes, infrastructure, traffic, recreational activities, and open space. Additionally, the provision of housing would not be cost effective for KS to develop at this location and could be cost prohibitive for local buyers.</p> <p>Thank you for your participation in the environmental review process.</p>
Trina Alapai	Enough is enough!!! Listen to the Hawaiian people and do right by them. Respect. 🙌	Mahalo for your comment in the petition concerning the Environmental Impact Statement Preparation Notice for the Keauhou Bay Management Plan (KBMP)

<b>Archaeological and Cultural Resources</b>		
I really like the idea of the historical sites being cleaned up and believe this would provide a wonderful educational opportunity for the students to undertake this mission. I've heard that the KS would also restore the cave there, which I believe would be wonderful as well.	Jessica Kuzmier	As part of Kamehameha School's continued stewardship commitment, the KBMP has been developed to build upon existing and ongoing cultural stewardship efforts at Keauhou Bay. The KBMP is anticipated to result in beneficial impacts designed to honor and perpetuate the wahi pana for present and future generations.
Kamehameha Schools EIS needs to be rejected because Kamehameha Schools has not contacted hundreds of Hawaiian people, especially descendants from Keauhou Bay and spoken with them about how they would feel about their Endowed land that was given to Kamehameha Schools as trustees by Princess Bernice Pauahi Bishop for the Hawaiian people to benefit from and under Cultural Impact Law these people MUST BE CONTACTED. Here is a video by Kupuna Kumy Lily Kong and she states that her and her mother are against development. She was born in Keauhou Bay and SHE has the right to be heard	Rebecca Melendez	<p>In 2010, Kamehameha Schools initiated consultation with lineal descendants of Keauhou and Kahalu'u, which consultation continues today. During an early consultation meeting in the Fall of 2016, 'ohana of Keauhou and Kahalu'u shared concerns about long-standing issues in the area. They cited congestion, limited access, and the impact of inappropriate commercial and recreational activities that have eroded the bay's historical and cultural identity. Please refer to Chapter 7 of the FEIS, detailing the level of consultation conducted with lineal descendants as well as other stakeholder groups.</p> <p>Input from lineal descendants and the community guided the formation of the Keauhou Bay Management Plan (KBMP) and identification of the plan's management strategies. Multiple listening sessions and project updates, including presentations of concepts, were provided throughout the planning process. Kamehameha Schools continues to be open to meeting with other lineal descendants that decide to come forward.</p> <p>Lineal descendants were notified of the publication of the KBMP Environmental Impact Statement Preparation Notice (EISPN) and Draft Environmental Impact Statement (DEIS). Lineal descendants were also provided individual copies of the Draft EIS to ensure their access to the document and ability to review at their convenience.</p>
I'm also worried about what your develop plan will do to the special place where there are some old ruins of old Hawaiian settlement and shoreline on the south/end tip of the bay, and also the small beach area, and end of Slide. Also, the King's Birthplace area. I believe injecting this amount of	Paul Koenigshofer	As part of Kamehameha School's continued stewardship commitment, the KBMP has been developed to build upon existing and ongoing cultural stewardship efforts at Keauhou Bay. 		continued restoration of cultural landscapes, which will help preserve the Bay's environment, educate the public about the historic legacy of the bay, and improve connection to place.
Justify putting a road through Kamehameha III's birth site. Specify how cultural and historic preservation will be accomplished.	Cory (no last name provided)	<p>The KBMP calls for the rehabilitation of the Old Kona Road, which historically connected the north and south ends of the bay. This existing road, currently unused, runs along the plateau mauka of the birth site of Kamehameha III, Kauikeaouli—meaning no new road will be constructed through the birth site.</p> <p>Restoring this road is a key component of the KBMP, ensuring responsible public access while directing traffic away from the bayfront to preserve the bay's cultural, ecological, and educational significance. This road will also facilitate emergency evacuation from the area in times of tsunami events.</p> <p>Kamehameha Schools understands that this site is not just a historic landmark; it is an integral part of our Hawaiian cultural landscape, and Kamehameha Schools will treat the lands KS stewards with the utmost respect. To minimize any potential negative impacts on this sacred area, the KBMP includes several key measures aimed at protecting and preserving the site's historical, cultural, and environmental integrity.</p> <p>Several key historic properties, including Kauikeaouli's birthstone, Kaopa Pond, Ho'okūkū Pond, and Mo'ikeha Cave, have been integrated into preservation plans already approved by the State Historic Preservation Division (SHPD).</p> <p>Preservation will involve the establishment of buffer zones, fencing, and interpretive signage to protect these sites from unintended impacts during construction and public use. Restoration efforts will continue to prioritize the cultural and ecological integrity of the landscape.</p> <p>Future opportunities with Kamehameha Schools community partners include interpretation, educational learning, and appropriate cultural use inclusive of, but not limited to, restoring cultural landscapes, caring for the ponds, and potentially</p>

<p>I came to Keauhou Bay because it contained so much history of the Hawaiian people and was a quiet reserved place. The birthplace of King Kamehameha III cannot remain intact and a place of reverence when it is overrun by tourists. What about the slide? Keauhou Bay has always been a quiet place to make offerings to the great king on his birthday and other times of the year. A place to reflect on the island culture and ancestors. This is not a place for a resort overrun by 300+ tourists. Now, if you could provide me with actual readable maps. I will further give you comments.</p>	<p>Cheri Uno</p>	<p>As part of Kamehameha School's continued stewardship commitment, the KBMP has been developed to build upon existing and ongoing cultural stewardship efforts at Keauhou Bay. The KBMP is anticipated to result in beneficial impacts designed to honor and perpetuate the wahi pana for present and future generations.</p> <p>Kamehameha Schools recognizes that Keauhou Bay and its surrounding areas have long been used for ceremonial practices, voyaging traditions, and community gatherings—serving as a vibrant piko or center for cultural and community engagement, with deep connections to Hawaiian history and traditions. The KBMP honors the legacy of Kamehameha III, Kauikeaouli, by prioritizing the preservation of cultural sites and fostering place-based education. The approach integrates cultural preservation with responsible development, aiming to restore and protect the bay while offering educational opportunities for the Native Hawaiian community and the public.</p> <p>The mitigation measures outlined in Section 4.1 of the Environmental Impact Statement (EIS) reflect the extensive archaeological research, data recovery efforts, and ongoing preservation commitments that have shaped the Project.</p> <p>As part of the KBMP, Kamehameha Schools has identified and integrated significant cultural properties, such as those you've mentioned, into the Project's preservation plans. 		<p>ensuring that the area remains accessible for future generations. This includes the continued restoration of cultural landscapes to preserve the bay's historic environment, along with improving public and managed access to the shoreline.</p> <p>Kamehameha Schools understands and respects the desire to keep this place as-is. However, the current state is not viable for a thriving community. The goal is to foster reverent, low-impact use and create an approach that minimizes disruption while honoring the bay's historical and cultural significance.</p> <p>The KBMP will introduce visitor accommodations in a way that preserves the quiet, reflective nature of Keauhou Bay while also offering opportunities for cultural education and engagement. Kamehameha Schools is committed to managing visitor numbers, focusing on guest experiences that prioritize cultural respect and environmental sustainability.</p> <p>Several maps are provided throughout the EIS. Please refer to Figure 3-1 for Existing Conditions Map, Figure 3-35 for Improvement Plan, and Figure 3-34 for Overall Management Plan Map.</p> <p>If you are still having difficulty accessing images within the EIS online, hard copies are available for review at the Kailua-Kona Public Library, Kamehameha Schools' Keauhou Office, and the Hawai'i State Library.</p>
<p>"Integrity of Natural and Cultural Resources are Threatened"                      "Cultural resources include the tangible and intangible places and landscapes that our kūpuna once lived, worked, played, and passed. For Native Hawaiians, these places provide a spiritual connection to the practices and knowledge of their kūpuna (ancestors/elders) and continue to contribute to a sense of identity and well-being..." It makes no sense to increase commercial development specifically intended to be marketed for high-end tourism in order for this place to provide spiritual connection, unless one is worshipping the almighty dollar. It is baffling at best</p>	<p>Janet Matlock</p>	<p>As part of Kamehameha School's continued stewardship commitment, the KBMP has been developed to build upon existing and ongoing cultural stewardship efforts at Keauhou Bay. The KBMP is anticipated to result in beneficial impacts designed to honor and perpetuate the wahi pana for present and future generations.</p> <p>For Native Hawaiians, these places are not just historical sites, but living, spiritual spaces that continue to provide a sense of identity and well-being.</p>

Summary of Draft EIS Comments and Responses		
Comments	Commenter	Responses
<p>that Kamehameha Schools sees this sacred wahi pana first and foremost as a source of income. KS's website states the current endowment is \$14.6 Billion and the investment portfolio is reported at \$9.6 Billion, with the smallest portion of that portfolio being real assets. (see attached file) How much of a rounding error would the Keauhou Bay proposed development be? And at what intangible price to the 'āina? During the April 2022 talk story, one participant asked, "...If the intent is to increase kama'āna and kupu'āina access, why is this being accomplished by putting in hotel rooms and fine dining? What are financial metrics to meet successful mission at Keauhou Bay. Is it the same for all properties. Could bungalows at another KS owned site be used to provide financial returns needed." The response was, "KS's objective is to steward the land in perpetuity. There are no existing revenue generating uses at Bay to fund the needed stewardship. We don't want to drain on other endowment funds set aside for education. Acceptable rate of returns have been studies." (sic) So: KS holds a \$14.6 Billion endowment with a \$9.6 Billion investment portfolio, yet believes it does not have enough money to fund the proposed "educational centers" (and additional commercial developments) proposed for Keauhou Bay? This does not make sense. If I had control of this endowment, I would be building more schools and educating more Hawaiian keiki, not causing environmental degradation in order to develop yet another high-end "bungalow" resort. KS already owns land leased for multiple resort properties, including one on Keauhou Bay that seems to be "under-performing." Given KSBE's track record with hotels in this ahupua'a, perhaps caretaking the one already on-site might be a better approach? I would like to close by referencing a submission contained in Appendix B, EISPN Comment Letters, by Alysia Fischer (KS's response was boilerplate): "As an archaeologist who worked on site in Keauhou Bay for multiple impact assessment and tsunami mitigation projects, I am vehemently opposed to any development that would add</p>		<p>Kamehameha Schools is committed to a project approach that starts with honoring our cultural landscapes, natural systems, mo'olelo (oral histories or stories), and community. Comments	Commenter	Responses
<p>more commercial or residential impact to the area. Along with the uncontrolled sea level rising, any further development would negatively impact the invaluable historical and cultural resources of the area. Kamehameha Schools, the county, and the state can do better with "fundraising" for education and the preservation of this area instead of hiding it within the guise of obtaining the funds through further "for profit" development. Preservation and improvement projects are always welcome and encouraged, but it shouldn't come at the high cost of changing the physical and cultural landscape to this extent." I completely agree. It is simply not fathomable that KS cannot allocate funds to accomplish appropriate stewardship goals without bulldozing, paving, and commercializing via exclusive tourism this fragile and already-impacted little bay.</p>		
<p>2. The Plan quotes Dr. Konia Freitas, the "noted Native Hawaiian scholar from the Kamakakūokalani Center for Hawaiian Studies, [who] explains spatial legitimacy as a need to respond and challenge certain assumptions that Native Hawaiian values cannot be authenticated in the contemporary urban form. The persistence of these assumptions 'bolsters the colonial construct of indigenous life as incompatible with modernity and cedes the urban realm as a perpetually colonized space' (Koh and Freitas, 2018). Dr. Freitas postulates that planning for places that are inclusive of Native Hawaiian perspectives, in response to these questionable assumptions, must begin through an inclusive framework that goes beyond an aesthetic response but seeks to be 'generative of social, economic, and political meaning.' This KBMP also aims to purposefully pursue the 'Āina Aloha Economic Futures Declaration (AAEF) with a specific focus to 'assert collective kuleana to restore degraded environments, sustainably managed human-occupied spaces, and protect the vibrancy of intact ecosystems.'" (pg. 2-4) It is admirable that KS seeks to incorporate Hawaiian perspectives and kuleana in management of its spaces, but—frankly—nothing seems to</p>	<p>Peter Matlock</p>	<p>The KBMP proposes low-impact lodging that reflects Kamehameha Schools' commitment to natural and cultural resource stewardship and sustainable tourism. Rather than developing a large resort complex, as would be allowed under current resort zoning, the project is intentionally designed to limit its physical footprint and minimize disturbance to the land. This responsible development approach seeks to honor the cultural significance of Keauhou, preserve its natural and historical resources, and support a vision of tourism that is deeply rooted in place and community.</p> <p>The lodging is not being created for the typical luxury traveler, but rather for visitors who value meaningful, educational, and culturally respectful experiences. In alignment with the values of Kamehameha Schools, the project prioritizes sustainability over profit and is seen as a key component in a broader sustainable tourism model. Importantly, revenue generated by the lodging is necessary to help fund the long-term management, protection, and stewardship of the broader Keauhou property and its significant cultural resources.</p> <p>Kamehameha Schools will select an operator for the lodging who aligns with its mission and vision for Keauhou, ensuring that operations remain consistent with the institution's values.</p>

Summary of Draft EIS Comments and Responses		
Comments	Commenter	Responses
exude colonialism more than high-end luxury hotels and resort retail, and it is difficult to understand how more development, run-off, and pressure on already-stressed Keauhou Bay will "protect the vibrancy of intact ecosystems."		Ultimately, the goal is not to maximize development, but to create a thoughtful, sustainable approach that supports both the land and the well-being of the Native Hawaiian community for generations to come.
3. The Plan asserts "Many consulted parties described commercial activities at the bayfront as incompatible with and disrespectful to the significant cultural landmark. The abundant commercial activity at the bayfront area has also caused a perception of exclusivity that some feel lacks true inclusivity of Native Hawaiian and kama'āina residents to the area. Long-time Keauhou residents express the sentiment that the bayfront is too commercialized and the feeling expressed is that many Native Hawaiian families are no longer welcomed. The KBMP is a reinvestment and application of key foundational principles and values that promote an inclusive cultural/community space at Keauhou Bay." (pg. 2-9) If we understand correctly, KS acknowledges that Keauhou Bay is currently too commercial, and then asks us to accept that its solution to this is yet MORE commercial activity. This is self-contradictory.	Peter Matlock	<p>The KBMP is designed to reorganize the uses and activities within the bay to better reflect the cultural significance of the area and to support a more harmonious relationship between users, place, and purpose. Central to this reorganization is the concept of directing new growth to appropriate areas while preserving others, ensuring that future development does not come at the expense of cultural integrity or environmental health. To resolve long-standing conflicts between incompatible uses, the KBMP proposes relocating certain commercial operations, particularly those that are currently situated near sensitive cultural sites, to more suitable areas above the 'Ahu'ula cliff and along Kaleiopapa Street. By moving these uses away from the bayfront and heritage zones, the plan protects sacred spaces and allows for cultural practices to thrive without interference.</p> <p>At the heart of the KBMP is the designation of a cultural heritage area that will serve as the piko, or spiritual and cultural center, for cultural and educational activities. This area honors the legacy of Hawaiian royalty and the historical importance of Keauhou Bay, and it is intended to be a gathering place where traditions can be celebrated and passed down. In shifting the bay's focus toward its cultural heritage, the plan aims to reestablish Keauhou as a place of learning, respect, and connection. By making space for Native Hawaiian practices and fostering a welcoming environment for kama'āina, the KBMP creates a foundation for healing, inclusion, and long-term stewardship of the bay.</p>
I am unequivocally against any resort development in Keauhou Bay. Keauhou Bay should not be viewed as a profit center for Kamehameha Schools but a historic and sacred place to be respected and protected. Overrunning sacred sites with tourists just to make money is not pono, it is not aloha.	Paul-Richard McCullough	The KBMP proposes low-impact lodging that reflects Kamehameha Schools' commitment to natural and cultural resource stewardship and sustainable tourism. The development approach seeks to honor the cultural significance of Keauhou, preserve its natural and historical resources, and support a vision of tourism that is deeply rooted in place and community.

<p>I am disappointed that the restoration of the Holua was not included in your plan. To respond, I've hand drawn a 3.5 foot by 6.5 foot map for a Holua Cultural Park that I can envision (jpeg file attached). I also made a brief video to clearly explain the Holua Cultural Park map. Here is a link to my video: <a href="https://youtu.be/3B_MiBFyMcE">https://youtu.be/3B_MiBFyMcE</a> My wife and I have owned a home in Keauhou since 2004. We were married at the Keauhou hotel (when it was the Sheraton) in 2009. We are raising our two young children here in Keauhou, and our family benefits daily from the many special features of this place. I have reviewed the Keauhou Bay Conceptual Plan. I am pleased that commercial development is being confined to the cliff top (proposed resort area) and south end of the bay. The inclusion of the Heritage Center, restoration of anchialine ponds and foot pathways by the Mo'ikeha cave are excellent. The proposed additions of quality picnic &amp; grill areas to the north end of the Bay will be enjoyed by locals and visitors. Seeing the Keauhou Canoe Club incorporated into the plan was also a relief.</p> <p>Restore and rebuild the holua (North). We often walk with our children, neighbors, and visitors and point out to them the magnificent Royal Holua. I cannot help but imagine the intense speeds attained descending the slide and admire the bravery of those who participated in the sport. Equally impressive is the amount of resources and social coordination needed by the Hawaiian community here at Keauhou to build the hole. The Royal Holua should be restored as completely as possible, and should once again be a place for people to practice the sport and for spectators to enjoy it. The proposed redevelopment of this area</p>	Michael Herbert	<p>Mahalo for sharing your suggestions and recommendations for the Hōlua slide at Keauhou Bay. Although the Project does not have specific plans to restore Kaneaka Hōlua slide at present, the alignment of the slide corridor is being preserved as open space for potential future educational and cultural uses. Your video and images have been recorded and shared with Kamehameha Schools' cultural resource division.</p> <p>Kamehameha Schools recognizes the significance of this place and is open to further consultation with 'ohana such as yours to guide future actions that honor its legacy. Kamehameha Schools welcomes recommendations on meaningful ways to care for and recognize the Hōlua slide.</p> <p>As part of Kamehameha School's continued stewardship commitment, the KBMP has been developed to build upon existing and ongoing cultural stewardship efforts at Keauhou Bay. The KBMP is anticipated to result in beneficial impacts designed to honor and perpetuate the wahi pana for present and future generations.</p>

<p>presents a once-in-a-generation opportunity to make bold moves to reclaim this magnificent feature and revive traditions surrounding holua sled racing. Keauhou Bay could become the epicenter for the revival of the Holua. I urge KS to take advantage of the opportunity and act more fully on the vision to restore this area by bringing back the Royal Holua. I have a clear concept for a Holua Cultural Park. I attached a picture of a hand-drawn map and have made a short video explaining the map. Here again is a link to my brief Holua Cultural Park video:  <a href="https://youtu.be/3B_MiBFyMcE">https://youtu.be/3B_MiBFyMcE</a></p>		
<p>I believe the portion of our property that the house was built on was actually a he'e'au. If this is true, I see nothing in your plans for this.</p>	<p>Booey Hodgins Garcia</p>	<p>The landscape around Keauhou Bay has been substantially altered due to changes in land use and development over time, leading to the loss of many archaeological sites previously documented in the area. The Cultural Impact Assessment (Appendix H) provides a good faith effort to record archaeological sites known historically, although the specific circumstances resulting in their destruction or damage are often unknown. Additionally, inadequate historical record keeping has complicated efforts to pinpoint exact locations of certain culturally significant sites, such as historic Heiau, whose precise location remains uncertain and has varied in historical accounts, as summarized in Table 7 of the assessment.</p> <p>An Archaeological Reconnaissance Survey (ARS) and Site Condition Update conducted by Haun &amp; Associates in May 2022, included in Appendix I, reviewed existing archaeological and historical documents related to the Project Area and its surroundings. Haun &amp; Associates revisited the area to relocate previously recorded sites, assess their current condition, identify potential natural or anthropogenic threats, and document newly discovered sites for significance evaluation and appropriate treatment, such as preservation or data recovery. A comprehensive summary of these findings from the ARS is detailed in section 4.1 of the Environmental Impact Statement (EIS).</p>

		heritage in the very places where their ancestors once lived, worked, and practiced.
<p>We claim it as historical, and so we should treat it as such, and respect it and keep it "less developed ", as it is developed to a degree already of course, with businesses at the Bay and accommodation at Outrigger. And further development would be in contrast to the goals of Kamaehama Schools goal of sustaining the land. Their goal of educating on the history of King Kamehameha's birth site can still continue as even the Outrigger has a historical walk to educate tourists. We do not need to put our Bay and this historical site at risk through this development. Thank you for your time and consideration, I will eagerly look to your decision to deny this request for development. Any other decision will bring great consternation from the community.</p>	Heather Laursen	<p>Kamehameha Schools understands and respects the desire to keep Keauhou Bay as-is. However, the current state is not viable for a thriving wahi pana.</p> <p>The KBMP is designed to reorganize the uses and activities within the bay to better reflect the cultural significance of the area and to support a more harmonious relationship between users, place, and purpose. Central to this reorganization is the concept of directing new growth to appropriate areas while preserving others, ensuring that future development does not come at the expense of cultural integrity or environmental health. To resolve long-standing conflicts between incompatible uses, the KBMP proposes relocating certain commercial operations, particularly those that are currently situated near sensitive cultural sites, to more suitable areas above the 'Ahu'ula cliff and along Kaleiopapa Street. By moving these uses away from the bayfront and heritage zones, the plan protects sacred spaces and allows for cultural practices to thrive without interference.</p> <p>As part of Kamehameha School's continued stewardship commitment, the KBMP has been developed to build upon existing and ongoing cultural stewardship efforts at Keauhou Bay. The KBMP is anticipated to result in beneficial impacts designed to honor and perpetuate the wahi pana for present and future generations.</p>
<p>While the zoning and laws may allow Kamehameha Schools to proceed with this project, should there not be respect for an area full of sacred and culturally significant sites that need to be protected. Do we not look back and learn from past mistakes, as we watch the rebuilding and restoration at Kahalu'u within the same corridor, at the cost of millions of dollars, because of a decision just like this one, building more hotels, when really preservation should be most important.</p>	Sally Rankin	<p>As part of Kamehameha School's continued stewardship commitment, the KBMP has been developed to build upon existing and ongoing cultural stewardship efforts at Keauhou Bay. The KBMP is anticipated to result in beneficial impacts designed to honor and perpetuate the wahi pana for present and future generations.</p>

At 70 years old and a former resident of Keauhou Bay, I've seen decisions made by Kamehameha Schools adversely effect our water, our land, sacred and culturally significant sites, and our community not only islands wide but especially throughout the Kahalu'u/Keauhou Corridor.	Kathy Rony	The KBMP is designed to improve environmental conditions by establishing a model of long-term stewardship that prioritizes the health of the land and ocean. Commercial activities within the project area are designed to support and sustain cultural and environmental preservation efforts. Through responsible planning, relocation of incompatible uses, and a strong emphasis on cultural values, the KBMP directs future activity at Keauhou to contribute to the protection and care of its unique ecosystem and heritage.
Volume I section 3.1.5 paragraph 4 talks of the the Kau cemetery, which was where my great grandfather and other family members along with other families that inhabited the bay were laid to rest. Also, volume II page 112 and 113 notes that Ilina (burial sites) and 'Iwi (bones) should be left in place. I appreciated Malay and Malay's recommendation to follow my kupuna's wishes to leave any Ilina and 'iwi in place. However, even though my family's Ilina located mauka of the current volleyball court and mauka of the old Kona road has since been bulldozed by Mr. Post from Texas to build his golf course and our ohana's 'Iwi has since, without our approval, been relocated. My immediate ohana and I wish that the Ilina Kau to no longer be used as a golf course and to be further left alone. It does seem that figure 3-34 and figure 3-35 honors those wishes and that no further development would take place in that area.	Leiola Augustine	<p>Mahalo for sharing such a personal perspective regarding the treatment of your family's Ilina in the area surrounding Keauhou Bay. Kamehameha Schools understands the deep cultural and emotional significance of these sites to you and your 'ohana.</p> <p>The Keauhou Bay Master Plan (KBMP) does not include any plans for development within the historic footprint of the Kau Cemetery. As you pointed out, Figures 3-34 and 3-35 in the KBMP designates this area for open space.</p> <p>Kamehameha Schools recognizes the significance of this place and is open to further consultation with 'ohana such as yours to guide future actions that honor its legacy. Kamehameha Schools welcomes recommendations on meaningful ways to care for and recognize the cemetery, such as creating a cultural garden, restoring the cemetery wall, or installing a memorial plaque that reflects the history and importance of the site.</p>
I cannot believe the KS is even considering plans to develop this small area and this tiny, beautiful bay that is the site of Kamehameha's birthplace. Every morning and evening, looking down at Keauhou Bay, the phrase, 'Malama the aina' is the refrain that runs through my mind. With this outrageous proposal to develop this sacred land, KS threatens to fail to uphold the pledge to 'malama the aina.' I fervently hope that this devastating plan does not come to fruition.	Jeanne Isola	<p>The KBMP is rooted in the principle of mālama 'āina, reflecting Kamehameha Schools' deep commitment to caring for the land through a cultural, environmental, and educational lens. The plan embraces a long-term stewardship approach that prioritizes the protection and revitalization of both natural and cultural resources within the project area. The KBMP focuses on low-impact design, carefully locating future uses to minimize disturbance, preserving sensitive habitats, and protecting culturally significant sites.</p> <p>Environmental stewardship is also expressed through restoration of native vegetation, landscape design, and preservation of natural water features such as springs and anchialine ponds, which</p>

		support unique ecological systems. Long-term management of these resources is made possible through a sustainable tourism model that uses revenue from low-impact lodging and commercial operations to fund ongoing stewardship, maintenance, and educational programming.
<p>As a proud graduate of Kamehameha Schools, I am writing to express my strong support for the Keauhou Bay Management Plan Draft Environmental Impact Statement (EIS). The proposed improvements reflect a deep understanding and respect for our cultural heritage and the environment. Keauhou Bay holds significant cultural and historical importance, not only to our local community but also to the broader Native Hawaiian community. The initiatives outlined in the management plan, such as improved facilities, enhanced conservation efforts, and increased educational opportunities, are vital for preserving the bay's natural beauty and cultural significance for future generations. The EIS provides a thorough assessment of potential environmental impacts and demonstrates a commitment to sustainable development. The heritage corridor will bring much needed care to the wahi pana sites found at Keauhou Bay, while also providing an opportunity to educate those who come to the bay. The 10+year long-range timing of developing the 150+ low impact lodging units mauka of the bay area gives planners and Kamehameha Schools time to fully realize the model such sustainable lodging could be for Hawaii. It's time to embrace sustainable lodging practices for our visitor industry. I commend the planners for their thoughtful approach and encourage the swift adoption and implementation of this plan. It is through such efforts that we honor our past, protect our present, and ensure a thriving future for Keauhou Bay and its surrounding community. Mahalo nui loa for your dedication and hard work.</p>	Cari Coleman	<p>Kamehameha Schools appreciates your endorsement of the KBMP and the Environmental Impact Statement. Your insights reflect a shared vision of preserving Keauhou Bay's cultural richness while embracing sustainable development that benefits future generations.</p> <p>As part of Kamehameha School's continued stewardship commitment, the KBMP has been developed to build upon existing and ongoing cultural stewardship efforts at Keauhou Bay. The KBMP is anticipated to result in beneficial impacts designed to honor and perpetuate the wahi pana for present and future generations.</p> <p>The KBMP provides a comprehensive framework for sustainable development that carefully balances the protection of cultural resources, the promotion of education, and the enhancement of local stewardship. The heritage corridor is a critical part of the plan and will help preserve the sacred sites of Keauhou Bay while making them accessible for cultural learning and honoring their significance.</p> <p>The plan also seeks to address ongoing challenges related to the environmental health of the bay. With enhanced conservation measures, there is an emphasis on protecting the ecosystem while offering opportunities for education and cultural engagement through interpretive programs, cultural practices, and community involvement. The balance between conservation and development is vital for ensuring the long-term sustainability of this wahi pana.</p>
<p>Regarding the "underutilized" portion of the above statement I do feel as though we should leave some of these areas as</p>	Kaleiolani Pasciuta	<p>Mahalo for taking the time to share your family's history and deeply felt concerns about the proposed project at Keauhou Bay.</p>

<p>just that. Not utilized at all. I do believe and appreciate that our cultural sites are to be preserved with this new plan but want to ensure that KS recognizes and understands that there is increasing sensitivity amongst indigenous Hawaiians as to not market our culture for financial gain or for our culture to be on display as a novelty. As a suggestion, let the families or those organizations that bear the responsibility of maintaining those sites or take ownership of the cultural significance of those sites, the freedom to choose who, how and if those sites, customs and history shall be shared.</p> <p>Volume I section 3.1.5 paragraph 4 talks of the the Kau cemetery, which was where my great grandfather and other family members along with other families that inhabited the bay were laid to rest. Also, volume II page 112 and 113 notes that Iliina (burial sites) and 'Iwi (bones) should be left in place. I appreciated Malay and Malay's recommendation to follow my kupuna's wishes to leave any Iliina and 'Iwi in place. However, even though my family's Iliina located mauka of the current volleyball court and mauka of the old Kona road has since been bulldozed by Mr. Post from Texas to build his golf course and our ohana's 'Iwi has since, without our approval, been relocated. My immediate ohana and I wish that the Iliina Kau to no longer be used as a golf course and to be further left alone. It does seem that figure 3-34 and figure 3-35 honors those wishes and that no further development would take place in that area. In case I was not clear before, the restrooms/comfort station at Kailiilinehe beach must be relocated to allow for the spring can flow. IFurthermore, to any party who is using my ohana's mo'olele for commercial or monetary advancement or to further advance your position we ask you to stop. My tutu willingly and freely shared her mo'olelo and mana'o so it would not be lost, but that does not mean that permission was granted to be used in connection with individual gain. Her mo'olelo and her mana'o live through us, her living descendants. I'd like to commend KS on its willingness to listen to and include community and kupa'aina involvement as this is only</p>		<p>Kamehameha Schools hears and understands the sensitivity surrounding the cultural sites, mo'olelo, and Iliina that are so closely tied to your 'ohana and to the community's collective history.</p> <p>The Keauhou Bay Master Plan (KBMP) does not include any plans for development within the historic footprint of the Kau Cemetery. As you pointed out, Figures 3-34 and 3-35 in the KBMP designates this area for open space.</p> <p>Kamehameha Schools recognizes the significance of this place and is open to further consultation with 'ohana such as yours to guide future actions that honor its legacy. Kamehameha Schools welcomes recommendations on meaningful ways to care for and recognize the cemetery, such as creating a cultural garden, restoring the cemetery wall, or installing a memorial plaque that reflects the history and importance of the site.</p> <p>Regarding future programming at the site, Kamehameha Schools is committed to working directly with lineal descendants, cultural practitioners, and educators to shape future programs that are appropriate for Keauhou and respectful of the 'ohana who have ancestral ties to this place. Recognizing the deep concern about the commercialization or misrepresentation of Hawaiian culture, Kamehameha Schools will not support programs that treat culture as a novelty or use it solely for financial gain. Future educational tenants will be carefully vetted to reflect these values, with priority given to those who have historic and cultural ties to the area, and who can help perpetuate a meaningful, place-based approach rooted in respect and authenticity.</p> <p>KS acknowledges your concern about the Kaili'ilinehe comfort station. The KBMP has no plans to relocate the facility at this time.</p> <p>Your 'ohana's legacy, especially the lasting contributions of your beloved grandmother, is deeply respected and remembered. She was truly a pillar of the community, and it brings Kamehameha Schools great joy to see you carry her legacy forward by continuing to mālama 'āina in Keauhou and beyond.</p>

the second time (that I am aware of) a landowner in the bay has sought out the opinion of those with interests in the bay. We mahalo you for including us and ask that our ohana continue to be consulted as the progress of this project		
<p>O Clare kou Inoa. Noho au Honokohauiki, Mokuokeawe. I am an Indigenous Practitioner of over 50 years, working with Customary Traditional and Cultural Practices, last thirty years with Hawaiian lineal Descendants. There are at least 20 SIHP sites and hundreds of burials which you all should be aware of in this “ Keauhou Bay Management Draft EIS.” In Hawaiian thinking sustainability is where and what we come from and instead of creating it, we are returning to it. This is the approach with our na keiki, to become green and sustainable. This testimony is in regard to the Keauhou Bay Management Plan Draft of EIS. The Kona Field System, is part of the Keauhou ahupuaa and essential to “Native Hawaiian rights HRS 7-1. Protect water rights and Act 50 states.....need to clarify that the preparation of environments assessments or environmental impact statement should identify and address effects on Hawaii’s culture and traditional and customary rights. (HB No.2060). I was honored from 2000-2015 to help bring back this Native Hawaiian cultural traditional practice at Ka Mala o Ehunuikaimalino. Article XII, Section 7 of the Hawai’i Constitution obligates the State Land Use Commission (LUC) to protect the reasonable exercise of customarily and traditionally exercised rights of native Hawaiians to the extent feasible when granting a petition for reclassification of district boundaries. In order to effectuate the State’s obligation to protect native Hawaiian customary and traditional practices while reasonably accommodating competing private interests, the Hawai’i Supreme provided the following analytical framework as an outcome of Ka Pa ‘akai O Ka ‘a/na v. Land Use Commission (94 Hawai’i 3], 7 P.3d 1068, September 1], 2000,). Section 711 711-1107 deals more generally with all acts of desecration; i.e., acts of physical damage to or mistreatment of venerated places and</p>	Clare Loprinzi	<p>Mahalo for your testimony and for sharing your extensive knowledge and experience as an Indigenous Practitioner committed to the protection and revitalization of Native Hawaiian cultural practices. Kamehameha Schools understands the importance of Keauhou Bay, the Kona Field System, and the broader Keauhou ahupua’a as sacred lands and sites of cultural significance for Native Hawaiians. Your perspective is invaluable, and Kamehameha Schools appreciates your insight into the significance of cultural sustainability, customary practices, and traditional rights in relation to the proposed KBMP.</p> <p>As part of the planning process, a Cultural Impact Assessment was developed by ASM Affiliates, Inc in February 2023 and included in Appendix H. The CIA was prepared in accordance with the regulatory requirements of HRS Chapter 343 as amended by H.B. No. 2895, H.D. 1 of the State of Hawai’i Twentieth Legislature and approved as Act 50 (2000). Act 50 requires consideration of a proposed Project’s effects on cultural practices and resources as part of a State environmental review.</p> <p>The CIA was part of the broader KBMP planning process initiated by Kamehameha Schools between 2016 and 2019. This effort involved extensive consultation with stakeholders including cultural practitioners, lineal descendants, community groups, and organizations such as the Daughters of Hawai’i and the Keauhou Canoe Club.</p> <p>Cultural resources were identified as vulnerable due to incompatible uses, commercial overreach, and lack of long-term management, prompting a need for proactive strategies to ensure their protection and revitalization.</p> <p>In response, the KBMP includes a comprehensive set of strategies centered around the creation of a Heritage Management Corridor.</p>

<p>and its agencies is to preserve, protect, and prevent interference with the traditional and customary rights of native Hawaiians. Article XII, Section 7 requires the State to “protect all rights, customarily and traditionally exercised for subsistence, cultural and religious purposes and possessed by ahupua’a tenants who are descendants of native Hawaiians who inhabited the Hawaiian Islands prior to 1778” (2000). In spite of the establishment of the foreign concept of private ownership and western-style government, Kamehameha III (Kauikeaouli) preserved the peoples traditional right to subsistence. As a result in 1850, the Hawaiian Government confirmed the traditional access rights to native Hawaiian ahupua’a tenants to gather specific natural resources for customary uses from undeveloped private property and waterways under the Hawaiian Revised Statutes (HRS) 7-1. In 1992, the State of Hawai’i Supreme Court, reaffirmed HRS 7-1 and expanded it to include, “native Hawaiian rights...may extend beyond the ahupua’a in which a native Hawaiian resides where such rights have been customarily and traditionally exercised in this manner” (Pele Defense Fund v. Paty, 73 Haw.578, 1992). Act 50, enacted by the Legislature of the State of Hawaii (2000) with House Bill 2895, relating to Environmental Impact Statements, proposes that: ...there is a need to clarify that the preparation of environmental assessments or environmental impact statement should identify and address effects on Hawaii’s culture, and traditional and customary rights...[H.B. NO. 2895] Act 16, enacted by the Legislature of the State of Hawaii (2020) with S.B. No. 2060 Section 3; (2) Historic resources; (A) Protect, preserve, and where desirable, restore those natural and manmade historic and prehistoric resources in the coastal zone management area that are significant in Hawaiian and American history and culture. that defendant knows will outrage the sensibilities of persons likely to observe or discover the defendant's action. Therefore, Applicant in all due respect should not build and destroy what is still beautiful.		
There are archeological considerations to contend with. As a landing spot of the original Hawaiian people, there are artifacts scattered throughout the area.	Pamela Small	<p>As part of the planning process for the KBMP, an Archaeological Reconnaissance Survey (ARS) and Site Condition Update was prepared by Haun &amp; Associates in May 2022 and is included in Appendix I. The survey included a review of existing archaeological and historic documentary literature relating to the Project Area and its immediate vicinity. Haun &amp; Associates also revisited the Project Area to relocate previously identified sites and conduct a conditions assessment of known sites and a reconnaissance survey of undeveloped areas that have not been previously surveyed. The integrity of previously identified sites was assessed to compare the existing condition compared to the last known recordation to see if there are any threats, natural or man-made, that have occurred and if so, to document the extent of those threats. Newly identified sites were also documented and evaluated for significance and appropriate treatment (i.e. preservation or data recovery). A summary of the findings from the ARS are provided in section 4.1 of the EIS.</p> <p>Based on the findings of the ARS, there is a potential for encountering subsurface cultural material during ground-disturbing activities associated with the project. To mitigate potential impacts, Kamehameha Schools proposes archaeological monitoring during all ground disturbing activities as both a means for mitigation and further identification because of the high concentration of sites within the Project Area as well as abundant archaeological sites nearby that were found in previous studies.</p> <p>As part of Kamehameha School's continued stewardship commitment, the KBMP has been developed to build upon existing and ongoing cultural stewardship efforts at Keauhou Bay. The KBMP is anticipated to result in beneficial impacts designed to honor and perpetuate the wahi pana for present and future generations.</p>

<p>new development in Ka 'Āina Kapu Kanahā. There are to be no disturbances to Pu'u o Kaluaokalani; no new construction or building of dwellings. Akua calls for the appreciation and obedience of all expressions of the Ancestors of 'Ōiwi and Divine Servants of the Ancestors. Hālau No'eau Kahelemauna now here presents KS KBMP with a proposal that follows the guidance of Akua that has been received pertinent to the greatest care of Pu'u o Kaluaokalani. By Akua has come the declaration that Kamakahonu now includes all of the sacred lands of Pu'u o Kaluaokalani. The Capital of the Restored Kingdom of Hawai'i and the First Home of Kamakahonu is Hālau No'eau Kahelemauna. Plans by the Royal Family of the Restored Kingdom of Hawai'i include plans to purchase the lands that began as a lease of Ali'i David K. Roy, Jr. and Ali'iwahine Verda L. Vida - Roy spoken of by the Ancestors of 'Ōiwi. Obedience to Akua lays the planning for all activity to take place. A full Restoration of the First Home of Kamakahonu is planned. Obedience to Akua lays the planning for the planting of the Garden Mala'ai Pilihonua where all of the first plants of Kaluaokalani are to be planted. Obedience to Akua lays the planning for the loving and nurturing of holoholona here for outcomes of lives in peace and harmony. This is the restored vibration of Kaluaokalani. The first holoholona are to be pua'a (pigs), moa (chickens), kao (goats). 3 At Hālau No'eau Kahelemauna, the Divine Work of Inquiry with Akua continues for the abiding success of the care of all of Pu'u o Kaluaokalani beginning with the Divine Guidance for the success of the care of Keauhou Bay. Other successes underway include the safekeeping by PONC purchase 68.84 acres; the lands identified as TAX MAP KEYS: 7- 6- 021: 016 AND 017, SITUATED IN HOLUALOA, DISTRICT OF NORTH KONA. Ongoing Divine Inquiry at Hālau No'eau Kahelemauna will bring forth success for all planning at Keauhou. The strongest collaboration is anticipated of Guidance Teams for Kamehameha Schools and Guidance Teams serving Divine Ones of Hālau No'eau Kahelemauna for the Restored</p>		<p>Kamehameha Schools acknowledges your testimony which reflects a deep commitment to cultural and spiritual restoration. The shared kuleana we uphold, rooted in mutual goals and a collaborative spirit, strengthens our collective efforts to honor and care for these cherished places.</p>

<p>Kingdom of Hawai'i for complete success. Presently there is a request for collaboration to start immediately. Presently, here is a request that I meet in Kona with KSBE and Group 70 representatives as soon as possible. The outcomes of this collaboration can mean the gathering of immediate support from the Kona and Hawaii communities. Economic development for KSBE will soon be proven as success follows Akua's planning. This collaboration also lays the strongest foundation for the success of Kamehameha Schools Bernice Pauahi Bishop Estate to continue to be the conduit of verification that Bernice Pauahi Bishop, by founding the Kamehameha Schools, intended to establish institutions that would be of lasting benefit to her country; and to honor the name of Kamehameha-TheGreat. This collaboration will ensure success in the understanding of the first faith of Hawai'i and the origins of 'Ōiwi. This collaboration will ensure the success of 'Ōiwi to know their past for success in their futures. This collaboration will support the intention for fullest success by Akua for all involved. Collaboration of Guidance Teams also include the planning for the identification of all of the best supporters of the Kingdom, workers in Kamehameha Schools and all public workers known and yet to be discovered by best collaborations. The following Kauoha o Ke Akua (Instructions of Akua) provide all 'Ōiwi and all mankind with understanding: BE IT KNOWN 4 The Ancestors of 'Ōiwi teach all on Earth that Ahu'ena Heiau is the First Temple of Spiritual Worship built by mankind on the planet. Ahu'ena Heiau was built by the Firstborn of Akua, ka 'Ōiwi. In 1975, Ahu'ena Heiau was restored by 'Ōiwi led by Ali'i &amp; Kahu David Keli'ihelemauna Roy, Jr. – the Restorer of Ahu'ena Heiau. In gratitude to Akua, in commemoration of the great progress made for 'Ōiwi and mankind by the restoration of Ahu'ena Heiau, the 'Aha'āina Kumu Pono (Gathering for True Foundations), the community feast, was held at Kamakahonu. The Kauoha Ka Māmaka o Ka Lama was declared following the passing of Ali'iwahine Verda Leialoha</p>

<p>tracks for what became all faiths of the Earth. The motherland sank into the sea leaving her remnants that still call forth the essence of life of like nature – PEACE. The Age of Light, Keaulama, for the planet has dawned and begun in Hawai’i of the Pacific for the life, healing and hope for the planet and all of humanity. IN THE AGE OF LIGHT, AKUA PROMISES TO HEAL THE PLANET AND ALL LIFE UPON THE PLANET. By learning the cosmology of the first faith of ‘Ōiwi in the Pacific, Divine Creator intends to heal the planet and all life upon the planet. Hālau No’eau Kahelemauna will be the first and key location in Hawai’i to teach others from other world centers the way to derive and to learn 7 healing by Akua. Akua requires the land lease begun with the restorer of Ahu’ena Heiau, Kahu David Keli’ihelemauna Roy, Jr and his wife Verda Leialoha Roy be purchased from Kamehameha Schools / Bishop Estate by the One who inherits the purposes and authority of the station of Kahu as the Divine Servant of the Royal and Sacred Temple of the Hawaiian Islands and of the Ancestors of Hawaii under Ke Akua Manamana Loa, Divine Creator. The conviction to hold all lands that are a part of the Bernice Pauahi Bishop Estate holds the virtue extending from the heart of Ka Mō‘ī Kamehameha the Great. He is among those here who convey to you these Words of Light upon the Path of Light of the Ancestors of ‘Ōiwi. The present Trustees of the Bishop Estate are asked to hear and grant this request of Akua by the Ancestors of ‘Ōiwi. To do so will be the sound and virtuous act that demonstrates their true continuing prayer, ka mihi, begun by Trustees of Bishop Estate who gathered at Kahalu’u in ceremony asking forgiveness of Akua for acts upon the lands of Kahalu’u, the same ahupua’a where Hālau No’eau Kahelemauna is to be begun.</p>		
<p>Relating to the above - cited instance confirmed by video submitted by an 'Oiwi Leader of Cultural Religious Practices, Mr. Jim Medeiros, Sr. of Hōnaunau, I wish to include this content in with the content submitted relating to the NPS at Kaloko-Honokōhau. A. Both parks lie in the Kapu Kanahā. B.</p>	<p>Lamakū Mikahala Roy</p>	<p>Your message conveys a deep spiritual conviction and a strong call to honor the sacredness of Hawaiian lands, particularly the lands within the Kapu Kanahā and the sites surrounding Kaloko-Honokōhau and Hōnaunau, as well as the larger 40-mile sacred zone that you refer to as Kaluaokalani. It emphasizes that these</p>

<p>Both parks present the belief that the laws of the U.S. govern &amp; prevail over the religious practices of 'Ōiwi of Akua Manamanaloa of the Restored Kingdom of Hawai'i of Ali'i Nui Mō'i Edmund K. Pākī -Silva, II. Nothing could be further from the truth. The lands from Kaloko-Hōnaunau are KAPU as declared by Akua Manamanaloa. It is known there are numerous Heiau, sacred sites, burials of high importance, unique resonance and unique essence of quality of reverberating peace in the lands. Further, all wildlife over the many years through the present tell their stories by their lives as part of the Sacred Whole of each Ahupua'a. For example, the sacred practices taught to 'Oiwī by their royal parents are alive and well. The sacred life of the sea is especially important to 'Oiwī and many uphold spiritual practices taught by their elders in the sanctity, peace, and harmony of Akua 2 manamanaloa. Name each &amp; every ahupua'a throughout Kapu Kanahā. 2. Relating to the NPS Kaloko-Honokohau advisory, here is an instance of an actual instance where Divine World engaged with us at Kaloko at the occasion of a landscapeclearing episode. Where the Divine World speaks to 'Ōiwi and all, here is a precedent. The event that happened on 3 November 2014 was the spiritual conveyance written in gold letters upon a PDF page. It was a great event that that happened and can happen again – and again. It may happen at any time concerning any lands of Hawai'i &amp; the Pacific especially within the Kapu Kanahā (the 40 miles of especially sacred lands) in Kaluaokalani. Now that we are fully appreciative and aware of the great gifts of Spirit arriving from our Ancestors and from Akua, we know that here at Ahu'ena Heiau and throughout the entire 40-mile perimeter outlined by Akua, known as the Kapu Kanahā, we are to be spiritually alert and awake to God's messages for mankind.</p>		<p>lands are under the protection of Akua Manamanaloa (the Divine Creator) and that spiritual engagement, particularly with 'Ōiwi (Native Hawaiians), is vital in preserving the sacred integrity of these places.</p> <p>Kamehameha Schools acknowledges your testimony and video submission which reflects a deep commitment to cultural restoration and maintaining access. The shared kuleana we uphold, rooted in mutual goals and a collaborative spirit, strengthens our collective efforts to honor and care for these cherished places.</p>
<p>I recognize that the proposed management plan intends to enhance many cultural aspects of the area, but I fear that the overall impact of the management plan will be negative (and permanent) as the plan adds more resort condos,</p>	<p>Laurel Terry</p>	<p>Kamehameha Schools is committed to a project approach that starts with honoring our cultural landscapes, natural systems, mo'olelo (oral histories or stories), and community. <p>additional paved parking, a new road, and competition for a scarce resource.</p>		<p>ensuring that the area remains accessible for future generations. This includes the continued restoration of cultural landscapes to preserve the bay's historic environment, along with improving public and managed access to the shoreline.</p> <p>The KBMP proposes low-impact lodging that reflects Kamehameha Schools' commitment to natural and cultural resource stewardship and sustainable tourism. Rather than developing a large resort complex, as would be allowed under current resort zoning, the project is intentionally designed to limit its physical footprint and minimize disturbance to the land. This development approach seeks to honor the cultural significance of Keauhou, preserve its natural and historical resources, and support a vision of tourism that is deeply rooted in place and community.</p> <p>As part of Kamehameha School's continued stewardship commitment, the KBMP has been developed to build upon existing and ongoing cultural stewardship efforts at Keauhou Bay. The KBMP is anticipated to result in beneficial impacts designed to honor and perpetuate the wahi pana for present and future generations.</p>
<p>Thousands of people's lives are intertwined with Keauhou Bay—often for generations— many of whom are among the 700 members of Keauhou Canoe Club. It is where they have learned to swim, paddle canoes, fish and snorkel in its still relatively vibrant ecosystems. It is also the source of livelihoods for fishermen and several ocean resource tourist businesses with long histories in the Bay. The DEIS describes Keauhou Bay as a “small bay along the Kona Coast” (DEIS 1.2 at 1-11). The Bay is the seaward end of both the Keauhou I and Keauhou II Ahupua`a. See, DEIS Figure 1-2 at 1-4 (“Ahupua`a Map”) (Showing the Keauhou I and II Ahupua`a boundaries.) A dry stack, stone wall marks the southern boundary of the current KS/KCC lease. Keauhou Bay's lengthy history is “entwined with generations of Hawaiian royalty” beginning with `Umialiloa (also `Umi-a-Liloa) (DEIS 2.3 at 2-2.) See also, S. M. KAMAKAU, RULING CHIEFS OF HAWAII REVISED EDITION, Kamehameha School</p>	<p>Carolyn Leilani Carter</p>	<p>Kamehameha Schools appreciates the Keauhou Canoe Club (KCC) for its thoughtful and collaborative engagement in the planning process for the KBMP and its support for preserving the unique heritage of the Bay and surrounding `āina. It is encouraging to know that KCC shares a common interest in protecting Keauhou Bay as a cultural and historical treasure, while recognizing the value of canoe paddling and racing as central to the Hawaiian cultural practices that are intrinsically tied to this sacred space.</p> <p>As part of Kamehameha School's continued stewardship commitment, the KBMP has been developed to build upon existing and ongoing cultural stewardship efforts at Keauhou Bay. The KBMP is anticipated to result in beneficial impacts designed to honor and perpetuate the wahi pana for present and future generations.</p>

<p>Press, Honolulu (1992), Chapter 1, “The Story of `Umi.” It is also the birthplace of Kauikeaouli (Kamehameha III), who was stillborn and brought to life on Keauhou’s shore. (DEIS 2.3 at 2-2 &amp; 2-3.) Prominent Ali`i lived around the bay and used it from the days of `Umi until the late 19th Century. (DEIS 2.3 at 2-2 thru 2-5 and 4.1.1 at 4-6.) During the 1848 Māhele `Āina the Keauhou Ahupua`a was divided in two. Victoria Kamāmalu and Lot Kapuāiwa were awarded the newly created Keauhou 1 and Keauhou 2 Ahupua`a, respectively. Lot Kapuāiwa would go on to become King Kamehameha V. See, DEIS 4.1.1 at 4-7, and Appendix C, AMS Cultural Impact Assessment for Kamehameha Schools’ Keauhou Bay Management Plan at 39</p>		<p>Kamehameha Schools is pleased to hear that KCC recognizes the importance of Keauhou Bay not only as a hub for traditional practices such as outrigger canoe paddling but also as a focal point for Hawaiian history and culture education. The proposed project under the KBMP aims to provide ongoing support for local cultural education, as well as preservation of Hawaiian traditions. This includes access to the Bay for cultural practitioners, youth paddling programs, and the continued use of the waters for traditional Hawaiian maritime practices.</p>
<p>My name is Charles Young. I reside in the Ahupua`a of Kealia 11 South Kona. As the current Po`o of the Hawaii Island `Aha Moku I am pleased to submit the following comments on the Kamehameha Schools, Keauhou Bay Management Plan Draft Environmental Impact Statement. The `Aha Moku was created by the Hawaii State Legislature under act 288, which recognized that Hawaii has suffered through extensive changes to the Native Hawaiian Culture, Language, Values and Land Tenure system resulting in the following</p> <ul style="list-style-type: none"> <li>• Overdevelopment of coastlines</li> <li>• Alterations of freshwater streams</li> <li>• Destruction of watersheds o Decimation of coral reefs</li> <li>• The decline of endemic marine and terrestrial species</li> </ul> <p>The `Aha Moku serves in an advisory capacity to the Chairperson of the Hawaii State Department of Land and Natural Resources (DLNR) so regional concerns from individual communities can be brought to the DLNR and issues can be addressed and if needed, mitigated. In serving their individual communities the Island `Aha Moku seek to</p>	<p>Charles Young</p>	<p>Mahalo for providing a comment on the KBMP. Kamehameha Schools acknowledges and appreciates the support of the `Aha Moku and values your shared vision for the future of Keauhou Bay. This alignment is vital to the success of the KBMP, which seeks to provide improved management of the bay through a comprehensive strategy that reorganizes uses and realigns the area’s focus toward its rich cultural and historical heritage.</p> <p>At its core, the KBMP aims to reestablish a sense of place and perpetuate Native Hawaiian traditional practices by creating a sustainable model of long-term stewardship. This includes a balanced approach where appropriate commercial activity supports the cultural and educational programming envisioned for the bay. Improved access, educational opportunities, and environmental care are integral elements of the plan, alongside the purposeful reorganization of circulation, traffic, and parking to reduce congestion and relieve pressure on significant cultural sites. Commercial activities will be relocated away from the heart of the bay, and future development is planned for more appropriate areas above the `Ahu’ula Cliff and along Kaleiopapa Street, maintaining the integrity and sanctity of the bayfront.</p> <p>Kamehameha Schools understands that the `Aha Moku hopes to be part of a longer-term visioning process for Keauhou Bay, and remains committed to ongoing collaboration and consultation</p>

<ul style="list-style-type: none"> <li>Integrate indigenous resource management practices with western management.</li> <li>Identify a comprehensive set of indigenous practices for natural resource management.</li> <li>Foster understanding and practical use of Native Hawaii resource knowledge, methodology, and expertise</li> <li>Sustain the State's marine, land, outural, agrioutural, and natural resources</li> <li>Provide community education and foster cultural awareness of the `Aha Moku system.</li> </ul> <p>When striving to meet its goals the `Aha Moku is also guided by the Hawaii Supreme Courf's 2000 decision in the Ka Pa`akai O Ka [Aina vs State Land Use Commission decision which requires the State and its agencies to 1. Identity and scope of valued cultural historical, or natural resources in the...area, including the extent to which traditional customary native Hawaiian rights are exercised in the. . . area; 2. Determine the Extent to which those resources - including traditional and customary Native Hawaiian rights - will be affected or impaired by the proposed action; and 3. Feasible action, if any, to be taken by the agency to reasonably protect such practices if they are found to exist. The Hawaii Island 'Aha Moku appreciates the unique significance Of the area and supports having a comprehensive management plan in place for all the reasons stated above. In its introduction Section 1.2 the applicant, Kamehameha Schools states "Keauhou Bay is perhaps most well known as the birthsite and resuscitation site of KingKauikeaouli Kaleiopapa Kuakamanolani Mahinalani Kalaninuiwaiakua Keaweawe`ulaokalani (Kamehameha III), who was the son of Kamehameha `Ekahi (Kamehameha I) and Kepeolani." The `Aha Moku supports the above premise as fundamental to the success of any well thought out management plan for the area. When creating the `Aha Moku under Act 288 the Legislature</p>		<p>throughout planning and development. The concern shared by the `Aha Moku that past development in the bay has not addressed longstanding challenges is acknowledged.</p> <p>KS is actively coordinating with the Department of Water Supply (DWS) to help align the agencies responsible for providing the freshwater necessary to meet the KBMP's objectives. New water infrastructure is included as part of the planned improvements, which will connect to the existing DWS systems.</p> <p>Kamehameha Schools also acknowledges the `Aha Moku's interest in a comprehensive nearshore monitoring program, however, the KBMP does not propose actions in the offshore environment. The KBMP proposes on-site drainage improvements and long-term best management practices expected to benefit water quality in the bay.</p> <p>KS appreciates that the `Aha Moku has consulted with kama`āina and is encouraged to hear that many support the overarching goals of the KBMP. Concerns about potential housing development and increased outside investment are also understood; however, it is important to clarify that the KBMP does not propose any new housing.</p> <p>Kamehameha Schools remains grateful for the continued guidance of the `Aha Moku and looks forward to further collaboration in honoring and restoring the cultural legacy of Keauhou Bay.</p>

<p>"recognized that Hawaii suffered through extensive changes to the Native Hawaiian Culture, Language, Values and Land Tenure system . . ." Kamehameha III ruled during a period of major change and set in motion the most significant Land Tenure changes in Hawaii's history. Many agree that was the most impactful to Native Hawaiian Culture. The Keauhou Bay that we see today is a legacy Of that history AND we should not ignore that the proposed management plan must be a better version. Native Hawaiian rights and practices are driven by our natural environment. Our beliefs on the origins of kanaka maoli are rcoted in nature and we see ourselves as part of nature and the health of our natural environment as a reflection of our own health. The Aha Moku is concerned that to date the development and growth of Keauhou Bay has not sufficiently addressed any Of the 'Aha Moku's challenges as stated above and the 'Ana Moku hopes to be part of a longer-term revisioning for Keauhou Bay. The Aha Moku would first encourage the applicant to work to align all the agencies responsible for supplying the fresh water necessary to meet the plan's objectives. Water is a finite resource and relies on healthy watersheds to capture, filter, and distribute our life-giving water. Private, State and County agencies who are responsible for granting permits to access, distribute, use, and return water to the 'Aina should be encouraged to assure its purity. These same agencies should be encouraged to monitor the effects that diverting fresh water from their natural channels is having on our near shore resources like limu, reefs and reef fish. The 'Aha Moku is unaware Of any comprehensive monitoring program on the near shore resources of Keauhou Bay and believes that it would be Of great benefit to know the present health Of the Bay, the cumulative impacts of current use and what improvements can be projected if any by the proposed Management Plan. Before providing comment the 'Aha Moku reached out to several kama'aina families from the area. Understandably, there exists some disappointment with past performance however, most look forward to</p>

<p>reenvisioning Keauhou Bay as a place of practice and learning and less so a place of congestion and commerce. The Bay outTently serves as a launching point for commercial and/or on ocean reereational activities. The 'Aha Moku notes that there has been a significant increase of permitted commercial activities at Keauhou that have had far reaching effects on Kona Hema. Known for its marine resources, Kona Hema is now a focal point for commercial tour boat operators and an ever-increasing number of tourists drawn to its natural habitats. These activities need better management from end to end. Communities like Kealakekua, Napo'opo'o, Honaunau and Ho'okena are experiencing significant negative impacts to their communities and their resources due to the increasing numbers of tourists. The `Aha Moku supports a management plan that truly manages the use of Keauhou Bay which presently serves as an unfettered gateway to Kona Hema. Kama`aina also expressed some concern about the development of housing that may invite more offshore interest/investment and not fulfill a more pressing need for kama`aina. When considering outlural impacts, the Aha Moku must consider the importance that housing plays on the stability of a family. The most common concern was how will our future generations be able to live and prosper in our homeland, practice our culture and pass on our learnings to future generations if we cannot afford to live here. The Aha Moku recognizes that this is a much larger issue than any single management plan can address and fully appreciates that Kamehameha Schools was founded on the above cultural aspirations. The current processes for development, do not incorporate the necessary collaboration amongst the State, County and Private sectors particularly wlien it comes to resource management. As noted above Keauhou is the birthplace of Kamehameha III, one of Hawaii`s most prominent rulers. The Aha Moku appreciates the cultural legacy Of the area and the Kuleana of Kamehameha Schools and encourages the State and/or</p>

County agencies to promote the same values of making the area a welcoming and uniquely Hawaiian place. The Aha Moku appreciates this opportunity to provide comments on the Keauhou Bay Management plan.		
<p>Please reject this EIS because Kamehameha Schools has NOT ACKNOWLEDGED OR ASKED thousands of Hawaiians, or Hawaiian Descendants from Keauhou Bay how they feel about developing this land, Keauhou Bay. They have asked ONLY a few families on an island that has thousands of Hawaiian people and here is video testimony from Kupuna Kumu Lily Kong who is a Keauhou Bay descendants and her and her mother OPPOSE DEVELOPMENT! Kupuna Kumu Lily Kong who was born in Keauhou Bay and she states that she is against development. She also states that her mother was against development as well. Please listen to her words in her testimonial video about Keauhou Bay on this link and know that this proves that descendant directly from Keahou Bay OPPOSE THIS DEVELOPMENT and it is CULTURAL LAW THEY MUST BE HEARD AND ACKNOWLEDGED! These laws were created, "After these legal victories, the Kohanaiki 'Ohana worked to create a new law in the state of Hawaii to require Cultural Impact Statements along with Environmental Impact Statements for all future large-scale development. Act 50, the Cultural Impact Statement Law was adopted in 2000." Kupuna Kumu Lily Kong also states that there are burial grounds on the land that Kamehameha Schools wants to clear and it is told that Kamehameha Schools has bulldozed sacred land in the past and Keauhou Bay's burial grounds MUST BE RESPECTED AND NOT DISTURBED! Hawaiians locals have said that there were bones in the small cave that is at the base of Keauhou Bay. These burials need to take priority over a Bungalow Resort Development. There are over 6,219 signatures as of Aug. 5th (these signatures grow daily) and these signatures are Hawaiians, locals and tourist and some of these Hawaiians have left comments on why they are opposing this development. ALL OF THESE PEOPLE HAVE A RIGHT TO BE</p>	Michael Hanly	<p>Kamehameha Schools recognize and respect the deep cultural significance that Keauhou Bay holds for many within the Hawaiian community, including those who have raised concerns regarding the KBMP. The intent of the KBMP is to promote responsible and sustainable stewardship of the land while respecting the history, culture, and traditions of the Hawaiian people.</p> <p>In 2010, Kamehameha Schools initiated consultation with lineal descendants of Keauhou and Kahalu'u, which consultation continues today. During an early consultation meeting in the Fall of 2016, 'ohana of Keauhou and Kahalu'u shared concerns about long-standing issues in the area. They cited congestion, limited access, and the impact of inappropriate commercial and recreational activities that have eroded the bay's historical and cultural identity. Please refer to Chapter 7 of the FEIS, detailing the level of consultation conducted with lineal descendants as well as other stakeholder groups.</p> <p>Input from lineal descendants and the community guided the formation of the KBMP and identification of the plan's management strategies. Multiple listening sessions and project updates, including presentations of concepts, were provided throughout the planning process. Kamehameha Schools continues to be open to meeting with other lineal descendants that decide to come forward.</p> <p>As part of Kamehameha School's continued stewardship commitment, the KBMP has been developed to build upon existing and ongoing cultural stewardship efforts at Keauhou Bay. The KBMP is anticipated to result in beneficial impacts designed to honor and perpetuate the wahi pana for present and future generations.</p>

<p>ACKNOWLEDGED AND THEIR VOICES HAVE VALUE TO BE HEARD, THESE PEOPLE MATTER AND IT IS CULTURAL LAW THEY MUST BE ACKNOWLEDGED! Please reject this EIS because under Princess Bernice Pauahi Bishop’s Will it states Kamehameha Schools are her trustees and they have a “fiduciary duty” to do what is best for THEIR BENEFICIARIES (the Hawaiian people’s) and a Bungalow Resort is BEST FOR TOURISTS NOT THE HAWAIIAN PEOPLE BECAUSE THOUSANDS OF HAWAIIAN PEOPLE SINGED THE ABOVE PETITION OPPOSING KAMEAHMEHA SCHOOLS BUNGALOW RESORT. Please reject this EIS because the Big Island DOES NOT HAVE THE RESOURCES TO PROVIDE FOR ANOTHER BIG RESORT ON ISLAND and there are 445 signatures with many comments that agree with this fact because of the factual reported articles in the Help Prioritize Big Island Developments to Keep Island’s Resources Safe for ALL petition.</p>		<p>Regarding archaeological resources, an Archaeological Reconnaissance Survey (ARS) and Site Condition Update was prepared by Haun &amp; Associates in May 2022 and is included in Appendix I. The survey included a review of existing archaeological and historic documentary literature relating to the Project Area and its immediate vicinity. Haun &amp; Associates also revisited the Project Area to relocate previously identified sites and conduct a conditions assessment of known sites and a reconnaissance survey of undeveloped areas that have not been previously surveyed. The integrity of previously identified sites was assessed to compare the existing condition compared to the last known recordation to see if there are any threats, natural or man-made, that have occurred and if so, to document the extent of those threats. Newly identified sites were also documented and evaluated for significance and appropriate treatment (i.e. preservation or data recovery). A summary of the findings from the ARS are provided in section 4.1 of the EIS.</p> <p>Based on the findings of the ARS, there is a potential for encountering subsurface cultural material during ground-disturbing activities associated with the project. To mitigate potential impacts, Kamehameha Schools proposes archaeological monitoring during all ground disturbing activities as both a means for mitigation and further identification.</p> <p>Kamehameha Schools remains committed to ensuring that the KBMP aligns with the principles of cultural respect, environmental stewardship, and community benefit. Kamehameha Schools understands the concerns that have been raised, and we welcome continued dialogue with those who wish to engage further in the planning and project process. Through collaboration and ongoing consultation, we believe that we can create a plan that honors the sacredness of the land while meeting the needs of both local residents and future generations.</p>

<p>ethnographer as defined by the state historic preservation division to determine whether an action may have a significant effect on cultural practices, particularly native Hawaiian traditional and customary practices expressly protected under article XII, section 7, of the state constitution. "Cultural impact assessment" means an ethnographic study prepared in accordance with the rules adopted pursuant to this chapter by a qualified ethnographer as defined by the state historic preservation division, which shall disclose any cultural effects of a proposed action, including the cultural practices of the community and State, proposed measures to minimize adverse effects, and alternatives to the action and its cultural effects. Please reject this EIS because it has NO reports on Hawaiian or community cultural practices in the bay that will be affected during this development and after it is finished. Please reject this EIS because it has NO interviews with the Hawaiian people and community locals who use this bay, to learn how this bay is used daily by the Hawaiian people and locals in the bay, and under the Cultural Impact Statement Law this needs to be done to fully understand how this development will impact the Hawaiian people and community local's cultural practices. 2 Hawaiian cultural practices are canoe paddling and by creating this bungalow resort you will be taking away all the one man canoes that are at the bay to make room for tourists. This is not honoring Hawaiian canoe traditional practices and is going against the Cultural Impact Statement Law. Hawaiian cultural practices are also fishing and if you allow this bungalow resort to be developed there will be hundreds of tourists in the bay preventing Hawaiian fishermen from safely fishing without accidentally hooking a tourist who is swimming by. This goes against the Cultural Impact Statement Law because there won't be any room for fishermen to enjoy fishing at the bay because the bay is so small that having more paddle boards, more kayaks, more people swimming...will take away from Hawaiian cultural</p>		<p>regulatory requirements of HRS Chapter 343 as amended by H.B. No. 2895, H.D. 1 of the State of Hawai'i Twentieth Legislature and approved as Act 50 (2000). Act 50 requires consideration of a proposed Project's effects on cultural practices and resources as part of a State environmental review.</p> <p>The CIA was part of the broader KBMP planning process initiated by Kamehameha Schools between 2016 and 2019. This effort involved extensive consultation with stakeholders including cultural practitioners, lineal descendants, community groups, and organizations such as the Daughters of Hawai'i and the Keauhou Canoe Club.</p> <p>Cultural resources were identified as vulnerable due to incompatible uses, commercial overreach, and lack of long-term management, prompting a need for proactive strategies to ensure their protection and revitalization.</p> <p>In response, the KBMP includes a comprehensive set of strategies centered around the creation of a Heritage Management Corridor. This corridor is intended to reconnect these cultural sites through restored landscapes, interpretive walkways, and educational signage, promoting both the protection and public understanding of the area's cultural significance. Restoration plans include the visual and ecological rehabilitation of sites such as the 'Ahu'ula Cliff and Ho'okūkū Pond, the latter of which will be expanded and ecologically revived to support native species. The cultural impact assessment emphasized the importance of long-term stewardship and community engagement, noting that organizations like the Daughters of Hawai'i will continue to play a key role in caring for the Kauikeaouli birth site under a 75-year agreement with Kamehameha Schools.</p> <p>Please be aware that the KBMP does not include actions involving removal of canoe facilities or practices from the bay. On the contrary, the Project actively supports these practices by formalizing a dedicated space for traditional Hawaiian canoe activities within the open space corridor. Hawaiian canoe practices are recognized as significant cultural traditions and are fully</p>

<p>practice of being able to fish safely in Keauhou Bay and this goes against the Cultural Impact Statement Law. This EIS has not done any studies on "cultural practices of the community" and there are many baptisms and funeral services held in the bay and creating a bungalow resort in this area would create a tourists destination with hundreds of tourists all over this bay and baptisms and funeral services will become challenging to have for the community in this small historical bay because tourists will be there sunbathing everywhere and this will go against the Cultural Impact Statement Law for the community who have enjoyed this small historical bay to perform their cultural practices of baptisms and funeral services. Please reject Kamehameha Schools EIS because a bungalow resort development will go against the Hawaiian cultural practices, as well as the communities cultural practices and this goes AGAINST the Cultural Impact Statement Law SB #3152.</p>		<p>compatible with KBMP's goal of highlighting and preserving the historical and cultural heritage of the bay.</p> <p>An important objective of the KBMP is to enhance access to the bay, addressing historical challenges such as congestion, insufficient parking, and inadequate pedestrian and vehicular circulation. Consultations with residents highlighted these issues as significant barriers to practicing traditional ocean activities and customs. By improving shoreline access, the KBMP aims to support fishermen and other practitioners of traditional ocean rituals. The plan includes installing new pedestrian walkways, upgrading existing parking areas, developing additional parking spaces, and reopening Old Kona Road to alleviate congestion at the bayfront.</p> <p>Upon implementation of the Project's management goals, it is expected that cultural resources will be improved through preservation and stewardship measures and that opportunities for traditional practices will be expanded; thereby enhancing ancestral connection to place. The findings and recommendations from the Cultural Impact Analysis are detailed in Chapter 4.1 of the EIS.</p>
<p>KCC and KS share a common interest in the preservation of Keauhou Bay, the adjacent `āina and its unique heritage and the cultural practices associated with that heritage. Outrigger canoe paddling and racing are prominent features of those practices and that heritage. KCC's shared interest also includes the education of KCC's adult, youth, and keiki members in Hawaiian history and culture, specifically as it relates to Keauhou Bay and the nearby `āina. KCC also supports the KBMP as it relates to the management of Keauhou Bay and its surrounding `āina to prevent conflicts and enhance enjoyment among the users of Keauhou Bay. KCC is motivated and would be grateful to be an active participant in that effort.</p>	<p>Carolyn Leilani Carter</p>	<p>Kamehameha Schools appreciates the Keauhou Canoe Club (KCC) for its thoughtful and collaborative engagement in the planning process for the KBMP and its ongoing support towards preserving the unique heritage of the Bay and surrounding `āina. It is encouraging to know that KCC shares a common interest in protecting Keauhou Bay as a cultural and historical treasure, while recognizing the value of canoe paddling and racing as central to the Hawaiian cultural practices that are intrinsically tied to this sacred space. Kamehameha Schools looks forward to continued partnership with KCC towards these efforts.</p>
<p>While economic sustainability is essential to the applicant and the applicant has been very successful in increasing economic health and well-being, the most appropriate redevelopment actions for the wahi pana under the</p>	<p>Sierra Club</p>	<p>Kamehameha Schools agrees that the most appropriate redevelopment actions for the wahi pana are those centered on restoration, preservation, and the perpetuation of culture. These tenets were the driving force behind the KBMP and its</p>

ownership and management of the applicant are ones in which restoration, preservation, and perpetuation of culture are the primary strategy.		management goals. Ensuring the long-term, sustainable management of the bay in perpetuity is the KBMP's primary objective. The economic model presented within the plan allows the lands at Keauhou to sustain themselves financially, with income generated through commercial activities directly supporting the protection and preservation of natural and cultural resources, maintenance of access and infrastructure, and the creation of educational and cultural opportunities central to Kamehameha Schools' mission.
The description of these zones contain a litany of damage and destruction, much of it occurring after plan approvals that were opposed by lineal and cultural descendants. This supports a proposed action in which the true nature of these properties as a wahi pana is recognized and additional tourism-related development does not occur is the most appropriate one.	Sierra Club	<p>The KBMP is designed to reorganize the uses and activities around the bayfront to better reflect the cultural heritage of the area and to support a more harmonious relationship between users, place, and purpose. Central to this reorganization is the concept of directing new growth to appropriate areas while preserving others. To resolve long-standing conflicts between incompatible uses, the KBMP proposes relocating commercial operations, particularly those that are currently situated near sensitive cultural sites near the shoreline, to more suitable areas above the 'Ahu'ula cliff and along Kaleiopapa Street. By moving these uses away from the bayfront and heritage zones, the plan protects sacred spaces and allows for cultural practices to thrive without interference.</p> <p>The KBMP proposes low-impact lodging that reflects Kamehameha Schools' commitment to natural and cultural resource stewardship and sustainable tourism. Rather than developing a large resort complex, as would be allowed under current resort zoning, the project is intentionally designed to limit its physical footprint and minimize disturbance to the land. This development approach seeks to honor the cultural significance of Keauhou, preserve its natural and historical resources, and support a vision of tourism that is deeply rooted in place and community.</p> <p>The lodging is not being created for the typical luxury traveler, but rather for visitors who value meaningful, educational, and culturally respectful experiences. In alignment with the values of Kamehameha Schools, the project prioritizes sustainability over profit and is seen as a key component in a broader sustainable tourism model. Importantly, revenue generated by the lodging is</p>

based upon Hawaiian cultural beliefs. This determination provides further justification for this wahi pana to be redeveloped and restored in a manner consistent with the traditional and customary practices associated with this wahi pana.		once stood within the vicinity of Keauhou Bay are no longer physically present and their precise locations remain unknown, Kamehameha Schools recognizes the continued importance of honoring their intangible spiritual presence. To achieve this, Kamehameha Schools is implementing the KBMP, which aims to reorganize the bay area by establishing a cultural heritage corridor between the shoreline and the 'Ahu'ula cliff. This plan emphasizes reverence for both tangible and intangible cultural sites through active preservation initiatives, educational efforts, and cultural programming, ensuring that the sacred essence of these sites continues to be respected and remembered despite the physical loss.
Appendix C, Cultural Impact Assessment, April 2022 (Revised November 2022): CIA only contains four interviews. The CIA consultant outreach effort only met minimal requirements for public notice and outreach. CIA consultant did not reach out to individuals and organizations that participated in 4/12/22 EISPN Scoping Meeting and/or submitted EISPN comment letters prior to the CIA's publication in November 2022 who identified themselves in as being parties related to the project as cultural/lineal descendants or traditional and customary practitioners.	Sierra Club	<p>This Cultural Impact Assessment was conducted in compliance with the Environmental Review Program (formerly known as the Office of Environmental Quality Control [OEQC]) Guidelines for Assessing Cultural Impacts, adopted by the Environmental Council, State of Hawai'i, on November 19, 1997 (OEQC 1997).</p> <p>To identify individuals knowledgeable about traditional cultural practices and/or uses associated with the current project and study areas, three public notices were published. All notices contained (a) locational information about the project area, (b) a brief description of the proposed project, and (c) contact information. A public notice was submitted to the Office of Hawaiian Affairs (OHA) on January 13, 2022, for publication in their monthly newspaper, Ka Wai Ola. This notice was published in the February edition of Ka Wai Ola. No responses were received from this public notice. Two additional notices were published on January 23, 2022, in two local newspapers, the Hawaii Tribune-Herald and the West Hawaii Today. Similarly, no responses were received from these notices.</p> <p>Additionally, ASM staff attempted to contact twelve individuals via email and/or phone. These individuals were identified as persons who were long-time residents of the area and believed to have knowledge of past land use, history, or cultural information. Of the twelve people contacted, five agreed to participate in this study. Of</p>

		the five, only four were able to review their interview summary and provided written or verbal approval for inclusion in the CIA.
<p>This site [Site 24215] was destroyed “from recent bulldozing activities”. Did the applicant submit a permit for this activity? If not, has the applicant taken action against the bulldozer operator? The destruction of this site and many others provides further support for a proposed action that ho’oponopono the destruction in this wahi pana..</p>	Sierra Club	<p>A 1.08 acre parcel corresponding to TMK (3) 7-8-012:098 was the subject of an AIS completed in 2004 by Haun and Associates for the Kamehameha Investment Corporation. The TMK parcel forms a portion of the 2.6-acre Kaimuki Zone.</p> <p>The eastern portions of the surveyed parcel had been bulldozed and at the time were occupied by the Hawaiiana Boat Rental facility. The maintained lawn adjacent to the parcel to the south was planted with coconut trees along its northern boundary and a large, mortared stone foundation for a sign was located at its eastern end. An area of pushed boulders and soil was located along the boundary between the lawn and the surveyed area. This evidence of ground disturbance would suggest that most of TMK (3) 7-8-010:049 has been bulldozed.</p> <p>The 2004 survey identified two historic properties containing six distinct features. SIHP Site number 50-10-37-24215 consists of a small, modified lava overhang, while SIHP Site number 50-10-37-24216 is a post-contact complex composed of two stacked stone walls, a modified outcrop, a retaining wall, and a walled overhang.</p> <p>Site 24216 was interpreted as forming part of a post-Contact house lot. The structures do not appear on the 1928 USGS Quadrangle of the area but do correspond to two structures depicted on Kekahuna’s 1954 map of Keauhou Bay. According to Kekahuna’s map, this property was owned by Mrs. E. P. Hodgins. The house itself, which appears to have been constructed at some time between 1928 and 1954, was torn down in the late 1990s. Construction related to the Hawaiiana Boat Rental facility and its associated driveway and parking area likely demolished portions of features associated with the site. The specific circumstances surrounding the condition of the site prior to 2004, as well as details regarding any permits or approvals obtained to carry out Hawaiiana Boat Rental construction activities, are currently unknown.</p>

Summary of Draft EIS Comments and Responses		
Comments	Commenter	Responses
		<p>The report of the 2004 survey noted that mapping, written descriptions, photography, and test excavations conducted at both SIHP Site 50-10-37-24215 and SIHP Site 50-10-37-24216 adequately documents their features. No further archaeological work was recommended as both sites were determined to be significant solely for their information content and the survey had adequately documented them. The two identified sites were evaluated as not warranting preservation (Haun and Henry 2007:30). The 2007 report of the 2004 survey was reviewed and accepted by the Hawai'i State Historic Preservation Division (SHPD).</p> <p>As part of Kamehameha School's continued stewardship commitment, the KBMP has been developed to build upon existing and ongoing cultural stewardship efforts at Keauhou Bay. The KBMP is anticipated to result in beneficial impacts designed to honor and perpetuate the wahi pana for present and future generations.</p>
<p>The DEIS should provide further information about the destruction of the cemetery, the impact on iwi kupuna, and what, if any, mitigation occurred. The destruction of these sites and many others provides further support for a proposed action that ho'oponopono the destruction in this wahi pana and that further resort- and tourism-related development is inappropriate.</p>	<p>Sierra Club (Moku Loa Hawaii Island)</p>	<p>The circumstances involving the Kau Cemetery are not well documented; however, it is likely that the cemetery was decommissioned during the implementation of the Kuleana Acquisition Program. In 1964, the Keauhou Development Corporation (KDC) initiated this program, resulting in the displacement of Native Hawaiian 'ohana from lands they owned at Keauhou Bay to facilitate future planned development. This process included the exhumation and relocation of iwi (ancestral remains) from the cemetery to another site. Kamehameha Schools acknowledges the pain and ongoing sense of displacement caused by these historical actions and recognizes the importance of healing through an honest acknowledgment of past wrongs. The KBMP aims to support this healing by reconnecting 'ohana to the 'āina through improved access, new place-based cultural and educational programming, and long-term stewardship of the area's natural and cultural resources, ensuring a more culturally sensitive and inclusive future for Keauhou Bay.</p>

		is designed to better separate traffic flows and parking areas to help reduce congestion and reduce delays.
Resort Access Traffic Light I understand easy resort access for your guests may be a priority, but don't take this too far. Limit vehicular resort access to the intersection of Old Kona Road and Kaleiopapa Street. At this new paved intersection, install a traffic light that is triggered by pressure plates on Old Kona Road's stop line. A pressure-plate controlled stop light will manage traffic at the intersection of Old Kona Road, Kaleiopapa Street and Ehukai Street, which would serve the Outrigger Resort, Keauhou Pier, as well as the proposed Keauhou Bay front retail and cliff top resort.	Michael Herbert	<p>Mahalo for the suggestion. A substantive goal of the Project is to improve overall traffic conditions and safety.</p> <p>Kaleiopapa Street is owned by the County and traffic control infrastructure would be under their purview. Kamehameha Schools appreciates your recommendation and will include it in the ongoing discussions regarding traffic management strategies for the Project.</p>
It is so obvious that the plan would add traffic, congestion, people, pollution and trash in addition to taxing overburdened water treatment facilities.	Amy Gillum	<p>Appendix M to the EIS includes a detailed mobility analysis report that analyzes the project's potential impacts to traffic operations.</p> <p>The traffic analysis shows that the addition of project-generated traffic would not result in significant roadway operations impacts under typical peak hour conditions. Additionally, the Project layout is designed to better separate traffic flows and parking areas to help reduce congestion and reduce delays.</p> <p>The Project will implement best management practices (BMPs) to minimize pollution and debris generated at the site. This includes controlling dust, dirt, and stormwater runoff, as well as providing adequate waste disposal systems for both construction and operational phases.</p>
Generally, any development of this size in this area would bring so much more traffic on the streets surrounding the area which they are not currently able to handle. I live less than 100 yards from Alii and Kaleiopapa intersection where the traffic noise is already unbearable during the daytime and some nights. From ten PM to 4:30 AM, we have some quiet time. As you know, Kaleiopapa has a steep incline at the top where people need to rev their engines to get up. The trucks are the worst going up and down that steep hill . With a "Resort" the truck traffic would be increased 20 or	Cheri Uno	<p>Appendix M to the EIS includes a detailed mobility analysis report that analyzes the project's potential impacts to traffic operations.</p> <p>The traffic analysis shows that the addition of project-generated traffic would not result in significant roadway operations impacts under typical peak hour conditions. <p>more times a day from making deliveries to the resort, restaurants/bars and shops. Then, there are the tourist staying there. I'm assuming with 150 units that would be 300 people (conservative estimate since people usually come with family of 4 not just 2 people as honeymoon couples). They will be coming and going all day long up and down the streets. There is not much for them to do right here. It is off to volcanos, water falls, botanical gardens, zip lines and snorkel beaches. This area cannot handle that much traffic – I prefer the smell of fresh air to that of hundreds of cars/trucks exhaust. I also frequently hear the screeching of tires from people not knowing the area and missing the turn for Kaleiopapa and at least once a month a near miss accident. The speed limit on Alii is 35 but most people travel about 45 or more. There are two condo complexes on Alii with blind driveways on to the street because of hills and curves on Alii – Country Club Villas and Keauhou Akahi. They have a hard time now getting out of their complexes now. With increased traffic, this would make it impossible without endangering their lives . This is going to cause noise, air and traffic pollution to Keauhou area. Current infrastructure cannot handle a resort here.</p>		<p>exacerbated by the addition of vehicles from this project or other development in the area.</p>
<p>Has there been a detailed traffic study for the increase in cars that will be added to this already severely traffic area? the island has severe traffic issues already with increased death tolls rising, and a resort development in Keauhou Bay will totally increase even more traffic in these already severely congested traffic areas.</p>	<p>Donna Cherrier</p>	<p>Appendix M to the EIS includes a detailed mobility analysis report that analyzes the project's potential impacts to traffic operations.</p> <p>The traffic analysis shows that the addition of project-generated traffic would not result in significant roadway operations impacts under typical peak hour conditions. congestion as Hilo, with the exact same problems. Traffic is extremely slow already.		
With another resort the amount of people in this bay will fully increase.	Rebekah Macquarrie	Kamehameha Schools understands your concerns about the increase in visitors and the potential strain on Keauhou Bay. The KBMP has been designed to strategically redirect growth and commercial activities away from sensitive shoreline and cultural areas to appropriate inland locations above 'Ahu'ula cliff and along Kaleiopapa Street. The proposed lodging is intentionally designed as a low-impact facility catering to visitors who prioritize meaningful cultural and educational experiences. The Project intentionally limits the lodging's physical footprint compared to what current resort zoning would otherwise permit. Through this approach, the presence of additional lodging units aligns with the goals of environmental sustainability and cultural stewardship, while revenues generated directly support ongoing conservation efforts and responsible management of the area's resources.
Traffic Impacts the Project proposes to build a resort with 43 multi-bedroom houses, commercial kiosks, a cultural center, a commercial/retail center, as well as a road connecting the north and south ends of the Bay. This will result in a large amount of vehicle trips per day, however there is no study analyzing traffic impacts. There is also no evidence of what the amount of reduction on the existing roadways would be with construction of a new road. The DEIS also fails to address how the Project would mitigate increased traffic impacts. Lastly the DEIS claims that the Project will reduce traffic impacts but does not provide any substantiation or studies to support its conclusions	Jennie Shield	<p>Appendix M to the EIS includes a detailed mobility analysis report that analyzes the project's potential impacts to traffic operations.</p> <p>The Mobility Analysis Report concluded that the Project would not result in significant traffic impacts. Although the Project is estimated to generate approximately 1,928 new daily weekday vehicle trips, the construction of Old Kona Road, between Kamehameha III Road and Kaleiopapa Street, is expected to significantly improve overall access and connectivity, mitigating the potential for congestion on existing roads. This roadway improvement, along with a shared-use path for bicycles and pedestrians, will enhance multimodal connectivity, reduce reliance on current roadway alignments, and consequently decrease traffic burdens in the vicinity.</p> <p>Traffic analysis indicates that intersections in the area will continue to operate at desirable levels (LOS D or better) even with the increased traffic volumes forecasted for 2035, indicating that no substantial shifts or additional congestion would result from the Project. The report highlights specific mitigation measures, including internalizing traffic flows within the development and</p>

		<p>providing formalized off-street parking to reduce intrusion into surrounding neighborhoods.</p> <p>These conclusions are substantiated by detailed analyses documented within the report, which utilize standard methods from the Highway Capacity Manual and account for future growth scenarios to ensure accurate projections.</p>
<p>To whom it may concern, As a condo owner on Kamehameha III Road... I object to further development of Keauhou Bay...for all the scientific reasons listed below and for the increased traffic ( read pollution and quality of life) on Kam III, ... and the concern that there is not plan for a route should we have another tsunami.</p>	Deborah Green	<p>Appendix M to the EIS includes a detailed mobility analysis report that analyzes the project's potential impacts to traffic operations.</p> <p>The traffic analysis shows that the addition of project-generated traffic would not result in significant roadway operations impacts under typical peak hour conditions. Additionally, the Project layout is designed to better separate traffic flows and parking areas to help reduce congestion and reduce delays.</p> <p>The KBMP is designed to mitigate tsunami threats by improving connectivity and emergency access through infrastructure enhancements. The construction of Old Kona Road, linking Kamehameha III Road and Kaleiopapa Street, provides a crucial alternative evacuation route, significantly enhancing emergency responsiveness and accessibility during tsunami events. In the event of a tsunami or other natural disaster, the Project is designed to avoid creating barriers to emergency access or hindering evacuation routes.</p>
<p>The Project Provides No Support Of How It Will Alleviate "Congestion" Use Conflicts First, the EIS creates a straw man argument that Keauhou Bay suffers from "congestion" and conflicts with incompatible uses. There is no supporting study analyzing the existing number of users on a daily, weekly, monthly and/or annual basis nor the type and timing of the usage. Without such an analysis, the statement that there is a problem with "congestion" and/or "incompatible uses" is simply unsupported by any evidence. There are one or two photographs depicting people standing around the publicly owned dock area, which as people are congregating in publicly owned spaces the report fails to explain how the</p>	Jeff Caufield	<p>Appendix M to the DEIS includes a detailed mobility analysis report that analyzes the project's potential impacts to traffic operations. The report includes forecasted traffic conditions with the implementation of the Project. The traffic analysis shows that the addition of project-generated traffic would not result in any significant roadway operations impacts under typical peak hour conditions.</p> <p>As part of the planning process for the KBMP, Kamehameha Schools engaged with a wide range of stakeholders and has incorporated community concerns, including firsthand observations</p>

Summary of Draft EIS Comments and Responses		
Comments	Commenter	Responses
<p>Project will prevent the public from congregating on publicly owned land. There is also Figure 3-13 which depicts a picture of the bay with ZERO people present, which directly contradicts any claim of congestion. Other than reducing access to publicly owned space, the project provides no analysis of how it will reduce the existing number of users nor the purported "incompatible" uses. Without underlying research, study and analysis the statements that the project would reduce "congestion" and/or use conflicts is unsupported and the EIS must be rejected on this basis alone. In fact, it would be reasonable to conclude that the project would substantially increase congestion and use conflicts at Keauhou Bay. For example, with the construction of 43 housing structures containing 150 housing units, which will each likely have 2 cars, with a minimum average of 4 car trips per vehicle per day, the housing units alone will likely add OVER 600 vehicles trips per day. (Based on my observations, the housing units alone will more than likely, on their own, double or triple the amount of traffic in the area.) Plus, you are adding hundreds of new visitors staying in the new housing on the bay, which presumably those new visitors will visit and use the bay. With the proposed cultural center, commercial center, commercial kiosks and employees/workers at the new proposed resort, there obviously will be a substantial increase in the number of additional vehicle trips per day. I'd note that the nearby Pu'uhonua o Hōnaunau National Historical Park ("City of Refuge") reports over 300,000 visitors per year to the site and cultural center. (Volcanoes National Park attracts over a million visitors per year.) Will the new proposed cultural center (located substantially closer to the City of Kailua-Kona so it will be much easier for visitors to access) attract a comparable number of visitors per year to the City of Refuge? The EIS provides no projections based on increased numbers from the cultural center. Even assuming the new cultural center only attracts 100,000 visitors per year (which is less than 33% the number that visit the City of Refuge),</p>		<p>about pedestrian safety, traffic congestion, and the impact of incompatible activities at the bayfront.</p> <p>Stakeholders highlighted several pressing issues, notably the absence of sidewalks along Kaleiopapa Street, which forces pedestrians to walk on the roadway alongside vehicle and boat trailer traffic. The limited turnaround space at the end of Kaleiopapa Street further exacerbates congestion. It has also been cited that when cultural ceremonies occur, such as those at the Kauikeaouli birthsite, participants often occupy the roadway, leading to conflicts with vehicular traffic, noise, and a diminished experience for those involved in spiritual or ceremonial observances.</p> <p>The KBMP is designed to address these challenges through its comprehensive management strategies. These include the proposed development of pedestrian-oriented infrastructure and improved circulation patterns to enhance safety and efficiency. Importantly, the plan proposes reactivating the historic Old Kona Road as a throughway to better manage traffic flow and redirect it away from sensitive cultural areas.</p> <p>A significant component of the project also includes increasing parking capacity at the existing northern parking lot as well as providing more parking spaces than required at the new commercial center. This will relieve pressure on informal roadside parking. Pedestrian pathways will offer direct, safe access from the parking area to community spaces along the bayfront. Clear signage, well-marked crosswalks, and other visual cues will further support intuitive wayfinding and discourage walking along the roadway.</p> <p>The Project will comply with County parking requirements as required. Please refer to EIS Section 3.2.5 for more information on parking and pedestrian circulation.</p> <p>It is important to clarify that the KBMP does not propose any new housing as your comment suggests. Please refer to Chapter 3 of the EIS for a detailed description of the Project.</p>

Summary of Draft EIS Comments and Responses		
Comments	Commenter	Responses
<p>that equates to nearly 30,000 additional vehicles trips alone per year. (Note: the City of Refuge Parking lot has 75 parking spots plus there are usually 20 plus cars parked outside the gate, meaning that with staff there are 100 plus parking spots associated with the City of Refuge that are frequently full. The Project proponent has ZERO parking spots in the EIS for the "cultural center" beyond the existing parking.) The kiosks at Alii Marketplace have approximately 40 parking spots that are largely full most of the time. Accordingly, one would anticipate the "kiosks" at the Project will require comparable parking (if not more because kayak and SUP rentals are likely going to stay longer than visitors to Alii Marketplace.) Accordingly, it may be reasonable to conclude that the Project will add a demand for upwards of 140 parking spots to the existing parking demands. There is no study of the existing parking requirements not assessment of the future parking requirements should the project be implemented. Plus, the EIS identifies the launch ramp area as the area of purported greatest congestion and yet the project proposes to ADD substantial numbers of visitors and vehicles to the area of alleged greatest congestion. The launch ramp cue (i.e. greatest congestion and yet the project proposes to ADD substantial numbers of visitors and vehicles to the area of alleged greatest congestion. The launch ramp cue (i.e. Vehicles/trailers waiting to launch and/or pull-out boats) is noted as an area of greatest congestion. The cultural center is proposed to be built in the area of greatest congestion. The Project fails to explain how adding thousands (if not tens of thousands) of more people and vehicles to the area identified as having the greatest congestion will be reduced by the Project. Particularly, the EIS fails to contain projections as to the increase in number of visitors and vehicles to the area and the extent to which the Project will impact those levels. (Note: With 43 houses and 150 units being built on the bay likely housing 250+ tourists each day plus commercial kiosks with kayak and SUP rentals, the bay daily usage will also likely substantially</p>		<p>Section 4.6 of the EIS addresses Biological Resources. A <i>Natural Resource Assessment</i>, provides detailed information on the biological conditions of Project Area and is included as Appendix K of the EIS. The KBMP is designed to improve environmental conditions by establishing a model of long-term stewardship that prioritizes the health of the land and ocean. Commercial activities within the project area are designed to support and sustain cultural and environmental preservation efforts. Through responsible planning, relocation of incompatible uses, and a strong emphasis on cultural values, the KBMP directs future activity at Keauhou to contribute to the protection and care of its unique ecosystem and heritage.</p> <p>Environmental stewardship is also expressed through restoration of native vegetation, landscape design, and preservation of natural water features such as springs and anchialine ponds, which support unique ecological systems. Long-term management of these resources is made possible through a sustainable tourism model that uses revenue from low-impact lodging and commercial operations to fund ongoing stewardship, maintenance, and educational programming.</p> <p>While Kamehameha Schools does not have jurisdiction over the enforcement of ocean safety regulations, it may contribute to ocean safety and minimizing conflicts between boaters and swimmers through educational initiatives and strategically placed signage.</p>

Comments	Commenter	Responses
<p>increase and yet there is no estimate of that impact.) There is NO analysis of the impact on local flora and fauna from the likely increase usage of the bay arising from the project. Moreover, with the addition of SUP and kayak rentals on the bay, the Project is likely to increase conflicts with the existing boating usage of the bay for ingress and egress to the loading ramp and dock area. There is no analysis of the future impacts on existing uses of the bay with the addition of rental kayaks and SUP to the bay. For the foregoing reasons, the EIS must be rejected for failing to provide supporting evidence and documentation.</p>		
<p>This is a supplement to my prior comments on the Draft EIS. My comment regarding the "traffic" study and the need to conduct a traffic study should be clarified. I do understand that a limited traffic study was conducted in September 2021 at intersections near the Project. However, that was far from the comprehensive traffic study needed. First, the "study" was of very limited hours and based on the assumption that highest traffic loads would only occur during limited time periods without taking into consideration the usage of the bay. Second, the traffic study was conducted in late September, which has the lowest number of tourists on island and would consequently have the fewest number of vehicle trips. One would suspect that the time period that was selected was to pick the period of time with the fewest number of vehicle trips rather than during busy and/or peak periods of the year. (In many instances, some of the snorkel boats don't even run two trips per day due to the lack of tourists in late September and the boats that do run are far from full.) A traffic study should be conducted during peak periods such as the June/July time period when the snorkel boats, fishing charters and other vehicle uses are at the maximum. Third, the traffic study would, without citation to any evidence, randomly consider the proposed cultural center to be similar to a "library" and assign a limited number of trips. As there are nearby cultural centers such as the City of Refuge, which receives 370,000</p>	<p>Jeff Caufield</p>	<p>It is important to clarify that the KBMP does not propose any new housing as your comment suggests. Please refer to Chapter 3 of the EIS for a detailed description of the Project.</p> <p>Appendix M to the EIS includes a detailed mobility analysis report that analyzes the project's potential impacts to traffic operations.</p> <p>The Mobility Analysis Report concluded that the Project would not result in significant traffic impacts. Although the Project is estimated to generate approximately 1,928 new daily weekday vehicle trips, the construction of Old Kona Road, between Kamehameha III Road and Kaleiopapa Street, is expected to significantly improve overall access and connectivity, mitigating the potential for congestion on existing roads. This roadway improvement, along with a shared-use path for bicycles and pedestrians, will enhance multimodal connectivity, reduce reliance on current roadway alignments, and consequently decrease traffic burdens in the vicinity.</p> <p>Traffic analysis indicates that intersections in the area will continue to operate at desirable levels (LOS D or better) even with the increased traffic volumes forecasted for 2035, indicating that no substantial shifts or additional congestion would result from the Project. The report highlights specific mitigation measures, including internalizing traffic flows within the development and providing formalized off-street parking to reduce intrusion into surrounding neighborhoods.</p>

<p>visitors per year, the vehicle trips selected should be based on nearby real world numbers. Fourth, a traffic study should also account for the yearly variation in usage of the bay. During the summer months, including September, because it gets darker later the loading/unloading of the manta snorkel boats generally does not occur until after 6:30 p.m. However, during the winter months, the loading/unloading of the manta boats occurs around 5-6 p.m. (Manta trips occur after dark.) The manta snorkel trips typically have, a minimum of 200-300 guests (roughly 100 vehicles) at a single time. That puts roughly 200-300 extra vehicle trips through the stoplights etc... during what the traffic study considers to be peak periods that were not accounted for in the current study, nor apparently mentioned. (One wonders why the authors failed to address seasonal traffic patterns nor season variations in usage other than picking the lowest usage period for their purported study.) Further, with 150 rooms, it is likely that there will be roughly 150 vehicles, plus staff vehicles from the resort (30+). Accordingly, you are likely looking at a minimum of 4-6 trips per day per vehicle meaning that you are probably looking at 600-900+ vehicle trips per day from the resort alone that needs to be considered. (Seasonally, the number of trips would vary with darkness as visitors would presumably go out to dinner earlier when it gets dark earlier and may impact peak traffic.) Finally, the traffic study fails to analyze the impact on traffic at and/or around the boat ramp increase and particularly the impact of channeling the pedestrian traffic across and active boat ramp. This is likely to cause localized congestion at the ramp.</p> <p>2. The Report Fails To Analyze Traffic Impacts As discussed supra, the Project proposes to build a resort with 43 housing structures with 150 housing units (Note: the term "bungalow" seems to be an attempt to mislead the public in to believing that what is being proposed are not in fact large multi-bedroom homes), commercial kiosks, cultural center and commercial/retail center. It also proposes to build a</p>		<p>These conclusions are substantiated by detailed analyses documented within the report, which utilize standard methods from the Highway Capacity Manual and account for future growth scenarios to ensure accurate projections.</p> <p>The intersection analysis study time periods correspond to the times when traffic volumes on the road are typically the highest. The traffic counts used in the mobility analysis were collected at the time the analysis was initiated, and the month the counts were conducted was not selected based on the time of year.</p> <p>A comparison of historic traffic data from the State of Hawaii Department of Transportation shows that September traffic volumes are roughly 7% lower than July volumes. Even if the volumes in the traffic analysis were increased by that amount, all of the study locations would still operate at a desirable level.</p> <p>The use of library trip rate was based on engineering judgement and accounts for a facility that has a more even distribution over the course of a day.</p> <p>The additional trips associated with the manta snorkel boats in the summer months occur well after PM peak hour traffic conditions, when volumes decrease substantially. As such, operations at the study intersections would likely be the same as or better than reported in the mobility analysis.</p> <p>Regarding the visitor trips, the trip rate accounts for both visitor and employee vehicle trips, as well as the temporal distribution of trips during the day. The number of trips at these types of facilities accounts for all types of trips, including staying at the low-impact lodging site all day, making multiple trips, and making one outbound trip and one inbound trip after completing multiple visits to sites elsewhere.</p> <p>The Project does not involve channeling pedestrian traffic across an active boat ramp as stated. The KBMP includes significant pedestrian improvements along Kaleiopapa Street aimed at enhancing safety, connectivity, and reducing congestion. By reopening Old Kona Road, the Project establishes a crucial link</p>

<p>new road connecting the north and south ends of the bay. As discussed supra, the Project will likely result in a minimum of hundreds, if not thousands, of additional vehicle trips per day. There is no study of the what the current number of vehicle trips per day are on the surrounding public roads, the level of impact of the existing stop lights nor the number of vehicles that travel from the south-north and/or north-south on the existing roadways that would conceivably use the new road. Accordingly, there is no evidence of what, if any, the amount of reduction on the existing roadways would be by the construction of a new road. Moreover, there is no analysis of the additional vehicle trips that would be created by the Project and what those impacts would be on existing traffic conditions nor existing parking. (Note: the impact of toxics on the bay from the Project will be discussed separately.) Moreover, the EIS fails to address how the Project proposes to mitigate the increased traffic impacts. Finally, the EIS asserts that the Project will reduce traffic impacts, without the citation to any evidence and/or study supporting that conclusion.</p> <p>Finally, the traffic study and parking study fails to consider the loading dock area and the fact that boats will continue to load from the dock area for snorkel trips and manta trips after the project is constructed. I had considered the traffic study to be so inadequate and below industry standards that it should not be considered a study such that a real traffic study needs to be considered with traffic impacts considered both seasonally and by all times of the day.</p>		<p>across the bayfront, creating safer and more efficient access between Kamehameha III Road and Kaleiopapa Street, thereby reducing pedestrian-vehicle conflicts in heavily trafficked areas like the boat ramp. To further enhance pedestrian safety, the project proposes the use of 'ili (stone pebble) treatments for roadway crosswalks. This textured and visually distinct material serves as a tactile and visible cue to drivers, effectively slowing traffic and clearly marking pedestrian crossing areas.</p>
<p>If it does anything at all to mitigate traffic congestion, I believe it will be offset by the additional traffic that the resort will create and all the additional parking services that will be entailed.</p>	Jessica Kuzmier	<p>Appendix M to the EIS includes a detailed mobility analysis report that analyzes the project's potential impacts to traffic operations.</p> <p>The traffic analysis shows that the addition of project-generated traffic would not result in significant roadway operations impacts under typical peak hour conditions. Additionally, the Project layout is designed to better separate traffic flows and parking areas to help reduce congestion and reduce delays.</p>

<p>I do NOT believe more housing is needed in this area... that will simply add to the congestion, pollution and disruption to this lovely area.</p>	<p>Johanne Parker</p>	<p>The proposed project does not include the development of homes but does include low-impact lodging units mauka of Old Kona Road.</p> <p>Appendix M to the FEIS includes a detailed mobility analysis report that analyzes the project's potential impacts to traffic operations. The traffic analysis shows that the addition of project-generated traffic would not result in significant roadway operations impacts under typical peak hour conditions.</p>
<p>The DEIS adversely and significantly impacts congestion, traffic, and noise in this area: The construction trucks needed to implement this plan alone will add dust, traffic, and noise to otherwise quiet neighborhood. The DEIS concedes this point. Once the 150-unit resort is built, assuming at least a two-person occupancy rate per unit with one rental car per unit, congestion will be magnified. The resort will also have employees- additional persons. The DEIS states: “An increase in visitor accommodations will result in an increase in water consumption, wastewater disposal, and solid waste generation. Therefore, there will be increased demand on existing utilities and infrastructure.” (DEIS at 4.16) However, there is an inadequate discussion of how these people will impact the area, specifically, their foot traffic and their access to and use of this tiny Bay. Congestion already exists due to various users of the Bay: Outrigger Kona Resort &amp; Spa guests, the popular Ho’oulu Community Farmers Market visitors, the Canoe Club members, tourists visiting cultural sites, customers of Fair Wind Cruises, Dolphin Discoveries, and Sea Quest, kayakers, fishermen, divers, paddlers, snorkelers, swimmers, and park goers. This congestion will be amplified by those visiting and working at the proposed 150-unit resort, the restaurant, the retail center, and the cultural/educational center. The DEIS accurately states that the area is already congested: “High demand among the Keauhou Bay user groups has resulted in vehicle, pedestrian, and in-water congestion and conflicts.” (DEIS at 2.6.3) The DEIS goes on to state:</p>	<p>Tamyra Rice</p>	<p>Appendix M to the EIS includes a detailed mobility analysis report that analyzes the project's potential impacts to traffic operations.</p> <p>The Mobility Analysis Report concluded that the Project would not result in significant traffic impacts. Comments	Commenter	Responses
<p>“Existing vehicle and pedestrian circulation patterns across Keauhou Bay have evolved over time to serve a variety of changing land uses within a small, constrained area. The current situation presents both functional and hazardous conflicts between pedestrians, bicyclists, and vehicles (cars, buses, delivery trucks, and boat trailers), as well as wayfinding challenges along the immediate 7 bayfront.” (DEIS at 2.6.5) Yet, the DEIS only offers to add more bodies, buildings, noise, and vehicles to the equation. The DEIS does not use current numbers to describe populations, but 2020 numbers. This leads to inaccurate conclusions. The proposal includes the rebuilding of Old Kona Road which lies behind the small beach at Keauhou Bay. How will the construction trucks that need to access Old Kona Road impact traffic on Ali’i Drive, Kaleiopapa Street, and Kamehameha III Road? How will the influx of approximately 300 resort guests impact traffic patterns on those routes? With regard to traffic counts, the DEIS states: “The County recognizes LOS D as the minimum acceptable LOS for its intersections in most urban areas, as the minimum acceptable level (County of Hawai’i Chapter 25, Article 2, Division 4, Section 46).” (DEIS at 4.11) The DEIS cites traffic counts applicable to urban areas, but the adjacent neighborhoods are not urban. Thus, the traffic analyses are faulty. Additionally, the traffic studies do not indicate in which months they were undertaken. Certain times of year have a dramatic impact on traffic.</p>		<p>maintenance of safe pedestrian, bicycle, and vehicle access. Traffic Control Plans (TCPs) will be phased and coordinated to prevent overlapping closures, with work primarily occurring between 8:30 a.m. and 3:00 p.m. Measures will also include roadway condition documentation, street usage permits, coordination with transit agencies, and ADA-compliant pedestrian accommodations. These strategies aim to minimize disruptions and ensure public safety throughout construction. Please refer to EIS Section 4.11 for a fuller discussion on proposed mitigations.</p> <p>The EIS uses 2020 population data because it is the most recent and accurate information available from the U.S. Census Bureau. The Project Area lies within the Kahalu’u-Keauhou census-designated place (CDP), and uses 2020 Census data for consistency and reliability in analyzing potential impacts. The decennial census, conducted every 10 years, is the most comprehensive and precise source. Since the Draft EIS was published in 2024, the 2020 Census remains the most authoritative dataset for population analysis.</p> <p>According to the State Land Use Designation Map (Figure 1-4), the entire Project Area and its surrounding vicinity are designated as Urban. This designation reflects an area primarily characterized by a mix of residential, apartment, condominium, retail, and resort developments. The project is in alignment with the established urban landscape and is consistent with the goals and planning objectives for urban development in this area.</p>
<p>We request an updated traffic analysis (and other related noise and air quality analyses) to include this expanded study area. Redistribution of Traffic Volume - The construction of Old Kona Road to connect Kamehameha III Road with Kaleiopapa Street will result in a major shift in traffic volume away from Kaleiopapa Street to Kamehameha III Road with associated parking, safety, noise and air quality impacts. The traffic analysis states the traffic forecasts considered such a redistribution of traffic, but this statement is not supported by the numerical analysis. Consideration of</p>	David Markley	<p>The study locations were selected based on the number of trips added to each turning movement at the intersections in the vicinity of the project site. The potential impact of traffic added to the requested intersections is expected to be less than significant during the study peak hours based on typical traffic operations. The through road connection of Old Kona Road is proposed as a low-speed, low-volume roadway with traffic calming devices (e.g., speed humps) that will provide local access and circulation to uses within the site but discourage use of the road as a cut-through facility. The project’s on-site parking supply is distributed in such a</p>

<p>redistribution of volume was limited to the project-generated volumes only but did not reflect the redistribution of existing and non-project growth in traffic volume. The effect of the proposed through-road connection on future traffic volumes will have a greater impact than the project trip generation. It is reasonable to expect that 65% to 75% of all traffic (current volumes, other non-project traffic volume increases and future traffic from the proposed development) will use Kamehameha III Road to access the proposed project. This is because most of the population density, commercial opportunities, tourist and entertainment destinations, and transportation services are north of the proposed development. This shift in background traffic will significantly erode the residential character of neighborhoods currently relying on Kamehameha III Road as primary access. We request a revised traffic study that includes a figure showing the 2035 traffic volume forecast with the proposed through road connection but without the proposed development. This would show that 2035 volumes will shift from the existing pattern to a pattern where the majority of the non-project traffic enters and leaves the Keauhou via Kamehameha III Road.</p>		<p>way that will take advantage of the two access roadways (Kamehameha III Road and Kaleiopapa Street), but substantial redistribution of existing traffic (i.e., boat trailers) is not anticipated because of the Old Kona Road design to slow traffic through the site.</p>
<p>The additional to this area is not sustainable unless roads are improved.</p>	<p>Jon Jokiel</p>	<p>Appendix M to the DEIS includes a detailed mobility analysis report that analyzes the project's potential impacts to traffic operations. The traffic analysis shows that the addition of project-generated traffic would not result in any significant roadway operations impacts under typical peak hour conditions. The Project includes improvements to Old Kona Road, between Kamehameha III Road and Kaleiopapa Street, which are expected to significantly enhance overall access and connectivity, helping to mitigate potential congestion on existing roads. These roadway improvements, along with a shared-use path for bicycles and pedestrians, will enhance multimodal connectivity, reduce reliance on current roadway alignments, and consequently decrease traffic burdens in the area.</p>

sustain. For anyone curious as to what that may look like, visit Hanauma Bay. Even though it isn't developed, far too many people are allowed to visit, and locals can see the results. It's a depressing place if you love marine life and nature.		KBMP has been designed to strategically redirect growth and commercial activities away from sensitive shoreline and cultural areas to appropriate inland locations above 'Ahu'ula cliff and along Kaleiopapa Street. The Project intentionally limits the lodging's physical footprint compared to what current resort zoning would otherwise permit. Through this approach, the presence of additional lodging units aligns with the goals of environmental sustainability and cultural stewardship, while revenues generated directly support ongoing conservation efforts and responsible management of the area's resources.
My second concern relates to increased traffic. How will you mitigate the extra noise and air pollution from construction truck traffic along Ali'i Dr and Kaleiopapa St by my condo (Keauhou Akahi 78-7030 Ali'i Dr)? And also to/from your resort and commercial area once built?	Marjorie Bryant	To mitigate construction-related traffic impacts to surrounding neighborhoods, the Project will implement a comprehensive Construction Management Plan (CMP) that includes Best Management Practices (BMPs) such as designated parking and staging areas, traffic monitoring, off-peak material deliveries, and maintenance of safe pedestrian, bicycle, and vehicle access. Traffic Control Plans (TCPs) will be phased and coordinated to prevent overlapping closures, with work primarily occurring between 8:30 a.m. and 3:00 p.m. Measures will also include roadway condition documentation, street usage permits, coordination with transit agencies, and ADA-compliant pedestrian accommodations. These strategies aim to minimize disruptions and ensure public safety throughout construction. Please refer to EIS Section 4.11 for a fuller discussion on proposed traffic mitigations.
This small bay does not need a new 105 room resort, there is already too many people and traffic. Bringing even more people to this small area will add to too big of a burden on the land and bay.	Barbara Garcia	Kamehameha Schools understands your concerns about the increase in visitors and the potential strain on Keauhou Bay. The KBMP has been designed to strategically redirect growth and commercial activities away from sensitive shoreline and cultural areas to appropriate inland locations above 'Ahu'ula cliff and along Kaleiopapa Street. <p>polluted runoff is unavoidable, which will harm marine life. The community deserves a better study on how vehicle and foot traffic will be moving through this area together, and how many more people and vehicles are likely to impact the area over many years.</p>		<p>is designed to better separate traffic flows and parking areas to help reduce congestion and reduce delays.</p>
<p>Traffic Analysis fails to account for tsunami and emergency evacuations. Keauhou Bay is frequented by a wide array of users (e.g., fishers, divers, swimmers, boat operators, paddlers) including 'ohana with keiki and elderly. The entirety of the proposed project sits within a tsunami evacuation zone. With existing traffic the roads are already congested. Yet, the Traffic Analysis fails analysis shows little impact and too fails to assess how additional vehicles and populations will impact traffic during emergency evacuations. Public safety and evacuations during an emergency situation should be prioritized and assessed to provide realistic projections of traffic and added population impacts. This is mandatory, not optional. How you going bring all this added traffic and users then not assess emergency evacuation scenario? What happens when people die cause they cannot get out with gridlocked systems? Why not prevent this kine catastrophe? The DEIS should provide this analysis to ensure that public safety is considered and current and proposed roads can indeed ensure safe evacuations. I have the following questions: How will added vehicular and pedestrian traffic impact emergency evacuations? What is the traffic assessment for emergency evacuation scenarios?</p>	<p>Loke Aloua</p>	<p>The KBMP is designed to mitigate tsunami threats by improving connectivity and emergency access through infrastructure enhancements. The construction of Old Kona Road, linking Kamehameha III Road and Kaleiopapa Street, provides a crucial alternative evacuation route, significantly enhancing emergency responsiveness and accessibility during tsunami events. In the event of a tsunami or other natural disaster, the Project is designed to avoid creating barriers to emergency access or hindering evacuation routes. The design of the project will prioritize unimpeded access for emergency vehicles including ambulances, fire trucks, and police vehicles to critical areas.</p> <p>For further details please refer to the EIS Section 4.7.5, which includes a discussion on tsunami mitigation plans.</p>
<p>Regarding traffic (and evacuation safety), Ali'i Drive is already completely impassable at several times during the day. How can the area support another such influx of population?</p> <p>The historical value of this law should be enough to help make Big Island roads become safer, and not adding to the traffic and issues of our already dangerous roads.</p>	<p>Michael Hanly</p>	<p>Appendix M to the EIS includes a detailed mobility analysis report that analyzes the project's potential impacts to traffic operations. The traffic analysis shows that the addition of project-generated traffic would not result in significant roadway operations impacts under typical peak hour conditions. Additionally, the Project layout is designed to better separate traffic flows and parking areas to help reduce congestion and reduce delays.</p>

<p>A Resort Development WILL Increase Traffic on Already Severely Trafficked Roads. Are there traffic study reports for this EIS? A development with 150 rooms comes with over 150+ cars. Employees, guests, and visitors will all have cars, plus the regular locals who go there to paddle and enjoy the bay. All this could range in over 300 cars a day because of this resort development. The Big Island already has a serious traffic issue due to a lack of infrastructure. This is in part due to poor planning, and in part due to geography challenges. The articles below by different NEWS companies highlight the point that many traffic issues stem from lack of infrastructure and resources. Adding more cars to the road by building another resort in an area that is already stressed, will only increase the already mounting problems with traffic. This NEWS article by Hawai'i News Now, "Report shows alarming surge in Hawaii Island traffic deaths The Hawaii Police Department's Traffic Services Section released a new report showing a dramatic increase in both major crashes and fatal accidents from last year. The startling statistics show a dramatic increase in the number of year-over-year traffic fatalities on the Island of Hawaii, revealing major crashes are up more than 12% and traffic fatalities are up more than 100%." Watch the video on their link below as it is a professional report on Big Island traffic problems. With more tourists there will be more accidents, more traffic, and more traffic deaths. Please read this article by KHON 2 NEWS, "Hawaii Island has most traffic fatalities in state. This time last year Hawaii Island was at five traffic deaths, as of April 1, 2024, they're at 14. Seven of which happened in the last two weeks. Chief Moszkowicz said the police force is small compared to the size of the island and response times can take 15 to 20 minutes. "We don't have the resources like in the small space of Oahu where you can saturate an area to control speeding, that just doesn't exist here," he added. The traffic on Big Island has increased drastically and safety issues and infrastructure needs to be addressed before adding more resort developments. 14 Please read</p>	<p>Michael Hanly Jennifer Ball</p>	<p>Appendix M to the EIS includes a detailed mobility analysis report that analyzes the project's potential impacts to traffic operations. The traffic analysis shows that the addition of project-generated traffic would not result in any significant roadway operations impacts under typical peak hour conditions.</p> <p>According to data from the Hawaii Department of Transportation (2025), while the number of island wide traffic fatalities through April 1, 2025 (10) is lower compared to the same period in 2024 (14), the number of annual fatalities has varied between 15 and 33 between 2018 and 2024 with no consistent trend up or down.</p> <p>Increased traffic volume does not necessarily correlate to an increase in traffic fatalities because many factors contribute to vehicle crashes. Per Hawai'i Department of Transportation, Highways Program Status data, five fatal crashes occurred within a two-mile radius of the Project Area between 2013 and 2025, with two on Ali'i Drive to the north and the remainder on Kuakini Highway to the east. Of these five fatal crashes, all involved drugs or alcohol as a primary contributing factor.</p> <p>The Project includes various traffic mitigation strategies and design features intended to reduce congestion, enhance safety, and support the area's existing infrastructure.</p> <p>The KBMP is also designed to mitigate tsunami threats by improving connectivity and emergency access through infrastructure enhancements. The construction of Old Kona Road, linking Kamehameha III Road and Kaleiopapa Street, provides a crucial alternative evacuation route, significantly enhancing emergency responsiveness and accessibility during tsunami events. In the event of a tsunami or other natural disaster, the Project is designed to avoid creating barriers to emergency access or hindering evacuation routes. The design of the project will prioritize unimpeded access for emergency vehicles including ambulances, fire trucks, and police vehicles to critical areas.</p> <p>For further details please refer to the EIS Section 4.7.5, which includes a discussion on tsunami mitigation plans.</p>

Comments	Commenter	Responses
<p>this article because what it says about Oahu is a mirror for Big Island. The traffic problems they discuss are the same issues here on Big Island; and it also gives one Big Island example, "On the Big Island, the mayor had to issue an emergency order shutting down Waipio Valley Road due to overuse and poor prior maintenance." All of these roads only have two lanes! There are two developments already on Alii Drive being built as of today; and more are scheduled for this road in the near future. Alii Drive and Queen K Highway are the roads Kamehameha Schools Bungalow Resort will be using if approved, and they are already seriously congested. These roads have the exact same traffic congestion as Hilo, with the exact same problems. Traffic is extremely slow because of so many people who now live here and all the visitors that come yearly. In addition, the concern on Kona side is tsunami evacuations rather than lava evacuations. In this kind of traffic, not everyone will be able to get to safer ground, especially if you allow another resort to be developed in this area when traffic is already at a crawl every weekday and often on weekends as well. Here is the news article by KITV NEWS that highlights the traffic issues discussed above: "Hawaii Island traffic jams could have safety impact. In the event of an evacuation, Mayor Mitch Roth acknowledges that will make the Traffic Jam up even worse. But says, he is working with The State on a solution." There was a crash recently on Alii Drive (see video below). When there is an accident on Alii Drive, it turns the already small two-lane road into only one lane that requires a flagger to help direct traffic. Kamehameha Schools wants to add a resort on this tiny road that will increase the traffic by hundreds of cars.. It seems that not a day goes by without the news reporting on a traffic crash on Hawai'i Island... Here are some other statistics that are even more staggering: -28% of roadside crashes were the result of someone leaving the roadway and going into barriers or trees -13% of pedestrians hit at 20 mph actually suffer fatality -73% of pedestrians hit at 40 mph suffer fatality -</p>

<p>25% of fatal crashes were the result of distracted driving... So PLEASE put those cell phones away and pay attention to the road! -56% of fatal crashes were the result of alcohol or drugs -41% of fatal crashes occurred in light trucks and vans -49% of crashes occur during the day, outside of peak traffic hours -Of all the crash fatalities, most were males between 20 to 24-years old. "That's just Big Island traffic," is a common sentiment. But what if we didn't have to accept this endangerment of vehicle drivers, motorcyclists, and pedestrians as a way of life?"</p>		
<p>There was a crash on Alii Dr. and when there is an accident on this road, it turns into only one lane that needs a flagger to help direction traffic. and that adds even more traffic to this already seriously congestion road, and Kamehameha Schools wants to add a resort on this road, and that will increase the traffic even more. Here is the Island News video on the crash on Alii Dr. <a href="https://www.youtube.com/watch?v=FQSnPDji8">https://www.youtube.com/watch?v=FQSnPDji8</a> Please see from these articles that traffic on Big Island is deadly already and adding another resort will be devastating to the island. Please read this Path article, HAWAI'I COUNTY'S VISION ZERO INITIATIVE A motorcyclist is in critical condition after a collision with a car. A driver accidentally hits and kills a pedestrian. It seems that not a day goes by without the news reporting on a traffic crash on Hawai'i Island. "That's just Big Island traffic," is a common sentiment. But what if we didn't have to accept this endangerment of vehicle drivers, motorcyclists, and pedestrians as a way of life?" This was taken from Path as well as The Law of the Splintered Paddle below <a href="https://pathhawaii.org/hawaii-countys-vision-zero-initiative">https://pathhawaii.org/hawaii-countys-vision-zero-initiative</a></p>	<p>Donna Cherrier</p>	<p>Appendix M to the EIS includes a detailed mobility analysis report that analyzes the project's potential impacts to traffic operations. The traffic analysis shows that the addition of project-generated traffic would not result in any significant roadway operations impacts under typical peak hour conditions.</p> <p>According to data from the Hawaii Department of Transportation (2025), while the number of island wide traffic fatalities through April 1, 2025 (10) is lower compared to the same period in 2024 (14), the number of annual fatalities has varied between 15 and 33 between 2018 and 2024 with no consistent trend up or down.</p> <p>Increased traffic volume does not necessarily correlate to an increase in traffic fatalities because many factors contribute to vehicle crashes. Per Hawai'i Department of Transportation, Highways Program Status data, five fatal crashes occurred within a two-mile radius of the Project Area between 2013 and 2025, with two on Ali'i Drive to the north and the remainder on Kuakini Highway to the east. Of these five fatal crashes, all involved drugs or alcohol as a primary contributing factor.</p> <p>The Project includes various traffic mitigation strategies and design features intended to reduce congestion, enhance safety, and support the area's existing infrastructure.</p>
<p>Traffic Safety If opened, the Old Kona Road would pass right next to the proposed picnic and grill areas. Children will likely be running around and playing in the area. Vehicle</p>	<p>Michael Herbert</p>	<p>The through road connection of Old Kona Road is proposed as a low-speed, low-volume roadway with traffic calming devices (e.g., speed humps) that will provide local access and circulation to uses</p>

Summary of Draft EIS Comments and Responses		
Comments	Commenter	Responses
<p>traffic to the proposed resort including visitors, employees, and delivery trucks would be passing by the picnic areas constantly. This is unsafe. The current plan does not properly balance residents' safety and enjoyment of the proposed added picnic areas with visitors' resort access. Access to the resort should only be allowed via Kalieopapa Street, where all other Keauhou Bay commercial and resort activity is currently concentrated.</p>		<p>within the site but discourage use of the road as a cut-through facility. The project's on-site parking supply is distributed in such a way that will take advantage of the two access roadways (Kamehameha III Road and Kaleiopapa Street), but substantial redistribution of existing traffic (i.e., boat trailers) is not anticipated because of the Old Kona Road design to slow traffic through the site.</p>
<p>The "Existing Conditions" paragraph on page 4-117 states: "The Project Area is in (a) congested area with a high volume of pedestrian and vehicular traffic. This has resulted in functional hazardous conflicts between pedestrians, bicyclists, and vehicles (cars, buses, delivery trucks, and boat trailers." This sounds like a demolition derby, yet there is no documentation of existing traffic safety conditions in the traffic analysis, sources of the safety issues, forecast of continuation of the unsafe trend, and/or how such impacts would be mitigated with the proposed development.</p> <p>One specific example is the conflict between motor vehicle traffic and pedestrians along Kalieopapa Street. It is noted that there is substantial parking along the lower portion of this road where no sidewalks exist. Yet Figure 4-42 – Proposed Circulation, shows this road as a "Vehicles Only" road. The pedestrian paths are nice, but pedestrians who park along Kalieopapa Street will follow the path of least resistance and will walk along the road as they make their way to and from Keauhou Bay. There needs to be a sidewalk at least on one side of the road so pedestrians are not forced to walk in the street. We request documentation of safety impacts in the study area forecast of future conditions with the new through road connection and proposed development, and effective mitigation including sidewalks on both sides of these roads, bike lanes, and traffic calming/speed reduction measures to reduce the frequency and severity of this problem.</p>	<p>David Markley</p>	<p>Appendix M to the EIS includes a detailed mobility analysis report that analyzes the project's potential impacts to traffic operations. The report includes forecasted traffic conditions with the implementation of the Project. The traffic analysis shows that the addition of project-generated traffic would not result in any significant roadway operations impacts under typical peak hour conditions.</p> <p>As part of the planning process for the KBMP, Kamehameha Schools engaged with a wide range of stakeholders and has incorporated community concerns, including firsthand observations about pedestrian safety, traffic congestion, and the impact of incompatible activities at the bayfront.</p> <p>Stakeholders highlighted several pressing issues, notably the absence of sidewalks along Kaleiopapa Street, which forces pedestrians to walk on the roadway alongside vehicle and boat trailer traffic. The limited turnaround space at the end of Kaleiopapa Street further exacerbates congestion. It has also been cited that when cultural ceremonies occur, such as those at the Kauikeaouli birthsite, participants often occupy the roadway, leading to conflicts with vehicular traffic, noise, and a diminished experience for those involved in spiritual or ceremonial observances.</p> <p>The KBMP is designed to address these challenges through its comprehensive management strategies. These include the proposed development of pedestrian-oriented infrastructure and improved circulation patterns to enhance safety and efficiency. Importantly, the plan proposes reactivating the historic Old Kona</p>

<p>Also, our driveway is just past a blind corner on Ali'i Dr where the speed limit of 35 mph is regularly ignored by drivers, most of whom speed by at 45+ mph. How will you mitigate the increased danger turning left (or right) out of my condo onto Ali'i Dr as a consequence of your increased traffic? Also, how will you ensure pedestrian safety in this area with your increased traffic? It's a popular walking, running and biking route. I use it regularly. I suggest lowering the speed limit to 25 mph on Ali'i in our area and installing speed bumps on Ali'i in our area to mitigate both these factors. But drivers regularly drive around the speed bumps on Kaleiopapa St, so this won't be enough. For the latter reason, I also suggest an actual physical barrier - like a low white curb or posts along the white line that denotes the shoulder - be installed on both Ali'i Dr in our area and Kaleiopapa St to protect pedestrians. I wouldn't want your</p>	<p>Marjorie Bryant</p>	<p>The Project includes various traffic mitigation strategies and design features intended to reduce congestion, enhance safety, and support the area's existing infrastructure. Kamehameha Schools can only regulate and manage aspects within the boundaries of the Project Area itself.</p> <p>Please refer to EIS Section 3.2.5 for more information on parking and pedestrian circulation.</p>
<p>4. The public access parking area on your land on Ehukai St is embarrassing. Can you please pave it, mark the spaces, pick up the trash, and start maintaining it? There was a derelict van with long expired tags parked there for 4 weeks until last week. I waited for the Outrigger to do something about it. They didn't. When I finally called the police, they told me mine was the first report about this vehicle. That is absurd. This is on your land that the Outrigger leases. The Outrigger staff seems to think the public access areas are someone else's responsibility. It is your land!</p> <p>6. Please consider ending Kaleiopapa St at the County boat ramp and not continuing it as it is now past Fair Winds Snorkel Cruises. There are only eight parking spaces there now at the end so it would have a negligible impact on parking. It would open up the area more to recreation, improve pedestrian safety, and allow for more green space around the significant cultural monuments and the cave</p>	Peter McCormick	<p>Parking areas along Ehukai Street are outside of the KBMP Project Area. Enforcement and maintenance issues in the public right-of-way are the responsibility of the County. However, the project does propose improvements for a new parking area along Kamehameha III Road.</p> <p>An existing parking lot north of the bay along Kamehameha III Road is unimproved and without marked stalls or lighting. Planned improvements include paving the existing gravel lot, providing marked stalls and lighting. Please refer to EIS Section 3.2.5 for a discussion on parking and pedestrian circulation.</p> <p>It's important to note that Kaleiopapa Street is owned by the County, not Kamehameha Schools. Therefore, Kamehameha Schools has no jurisdiction in ending the road at the county boat ramp. Kamehameha Schools can only regulate and manage aspects within the boundaries of the Project Area itself.</p>
1. Most of Ehukai St is already designated by the County and marked as no parking but this is rarely enforced, even when the police are called. Illegal parking creates a safety hazard for pedestrians along this street. In cooperation with the County, please consider adding sidewalks with curbs along both sides of Ehukai St and eliminate all parking along the street.	Peter McCormick	<p>A significant component of the Project includes increasing parking capacity to relieve pressure on informal roadside parking. Pedestrian pathways will offer direct, safe access from the parking area to community spaces along the bayfront. Clear signage, well-marked crosswalks, and other visual cues will further support intuitive wayfinding and discourage walking along the roadway.</p>

<p>Lastly, please clarify the issue of the potential new boat trailer parking illustrated in Figure 1-10 of the document. This is the only graphic that lists this as a “potential” use. All other figures - Figure 3-34, 3-35, and 3-47 - show this as a feature that would be established, and not a “potential” use.</p>	<p>Elizabeth Dunn</p>	<p>The boat trailer parking proposed for the south end of the bay is noted as "potential" because its development is contingent upon future market conditions and lease negotiations. While the site has been identified as a suitable location to alleviate congestion and better organize trailer storage, its implementation depends on evolving operational needs and the successful establishment of agreements with future tenants or users.</p>
<p>Our observation is that Keauhou Bay is currently utilized almost to capacity in the following areas: - Automobile parking - Boat storage (some of which is long-term and need not be adjacent to the water) - Permanent moorings in the Bay - Launch ramp capacity and trailer parking - Commercial boat operations to provide visitor trips to Kealakekua Bay and Manta Ray experience (these involve up to 200 or more people a day)</p>	<p>Tom Fetter</p>	<p>The existing vehicular and boat parking capacity at Keauhou Bay is limited, leading to overcrowding, informal parking practices, and circulation challenges. This shortage of organized parking space contributes to user conflicts and diminishes overall safety and accessibility. To address these issues, the KBMP includes improvements such as expanding and formalizing existing boat trailer and parking areas along Kamehameha III Road. These upgrades will include paving, stall delineation, and lighting, designed to improve both capacity and safety. Additionally, a new boat trailer parking area is proposed on the south end of the bay. Please refer to EIS Section 3.2.5 for more information on parking and pedestrian circulation.</p>
Influx of Visitors During IRONMAN		
<p>Does this EIS have any reports on their resort adding to the population increase that happens during IRONMAN? "On average, each Ironman racer brings three people with them to the Big Island. Counting members of the media, VIPs who come from around the globe to watch and the triathlons partners, there likely be more than 6,300 people descending on Kona..." Where are the EIS reports on human density? There is nothing Kamehameha Schools can do to their development that can stop the guests of this possible Bungalow Resort from going to Keauhou Bay. Human traffic WILL seriously increase if this resort is allowed to be built and the marine life will be negatively affected by it.</p>	<p>Donald                      Robert Berger                      Stephen                      Goudreau                      Sara Irwin                      Goudreau                      Lucia Kaplan                      Rebecca                      Melendez                      Sherina Ong</p>	<p>Kamehameha Schools acknowledges that the Ironman Triathlon is an event that brings visitors to Hawai'i Island. The additional lodges created by the KBMP could assist in accommodating the influx of visitors during these peak travel periods.</p> <p>The route of the Ironman Triathlon does not pass through Keauhou Bay, and as such, direct race-related closures will not affect the area. While some traffic may be diverted from surrounding roads during the event, it is not anticipated to significantly impact circulation or access within Keauhou Bay.</p> <p>An increase in visitor numbers does not inherently lead to environmental degradation; rather, it is the effectiveness of space management that determines environmental outcomes. The KBMP proposes a comprehensive, long-term management strategy to better organize activities and uses throughout the bay. By</p>

<b>Congestion in the Bay</b>		
<p>Congestion and Use Conflict The DEIS argues that Keauhou Bay (Bay) suffers from “congestion” and conflicts with incompatible uses, however there is no study analyzing congestion (i.e., number of users over a given time span such as daily, weekly, monthly, etc. basis). Additionally, the DEIS does not evaluate how the Project, implementation of the Keauhou Bay Management Plan on approximately 29 acres of Keauhou Bay, would reduce the existing number of users or implied incompatible uses, other than reducing access to publicly owned space. Without the required analysis, the claim that the Project would reduce congestion and/or use conflicts is unsupported. In actuality, it may be reasonable to conclude that the Project would increase congestion and use conflicts at Keauhou Bay with the proposed construction of 43 homes, cultural center, commercial center, and commercial kiosks. The DEIS identifies the launch ramp stretch as an area of greatest congestion, however it proposes to add a substantial number of visitors and vehicles to that area, thereby increasing congestion further. The DEIS fails to provide any explanation as to how adding thousands of people and vehicles to areas identified as having the greatest congestion will be reduced by the Project. There is also no analysis in the DEIS of the impact on local plants or wildlife from the likely increased usage of the Bay because of the Project. Lastly, there is no analysis of future impacts on the existing uses of the Bay with the addition of rental kayaks and stand-up paddle boards to the Bay. The reasons listed above demonstrate that the DEIS has failed to provide the required analyses and supporting evidence.</p>	<p>Jennie Shield</p>	<p>An increase in visitor numbers does not inherently lead to environmental degradation; rather, it is the effectiveness of space management that determines environmental outcomes. The KBMP proposes a comprehensive, long-term management strategy to better organize activities and uses throughout the bay. By improving infrastructure, guiding visitor behavior, and protecting sensitive cultural and natural resources, the KBMP will help reduce impacts on the environment and promote sustainable use of the area. As a result, the project is expected to have beneficial long-term effects on environmental stewardship and resource conservation.</p> <p>As part of the planning process for the KBMP, Kamehameha Schools engaged with a wide range of stakeholders and has incorporated community concerns, including firsthand observations about pedestrian safety, traffic congestion, and the impact of incompatible activities at the bayfront.</p> <p>Stakeholders highlighted several pressing issues, notably the absence of sidewalks along Kaleiopapa Street, which forces pedestrians to walk on the roadway alongside vehicle and boat trailer traffic. 		<p>A significant component of the project also includes increasing parking capacity at the existing northern parking lot as well as providing more parking spaces than required at the new commercial center. This will relieve pressure on informal roadside parking. Pedestrian pathways will offer direct, safe access from the parking area to community spaces along the bayfront. Clear signage, well-marked crosswalks, and other visual cues will further support intuitive wayfinding and discourage walking along the roadway.</p> <p>Furthermore, the project will maintain public beach access and support the continuation of traditional cultural practices, such as outrigger canoe use and fishing, without disruption.</p> <p>Appendix M to the EIS includes a detailed mobility analysis report that analyzes the project's potential impacts to traffic operations. The traffic analysis shows that the addition of project-generated traffic would not result in any significant roadway operations impacts under typical peak hour conditions.</p>
<p>The DEIS concludes that: “The Project will not significantly impact the availability of recreation opportunities in the Kona District”. This may be true except for the potential of increased motorized small boat and other motorized marine recreation equipment, such as ski-dos and motorized paddle or sail boards on the waters of the bay. Unlike the larger vessels moored in the bay, these Vessels Moored Elsewhere (VME) are often operated by less experienced individuals and can move at high speeds. Both of which pose hazards to those operating without motors in the bay. These include not only outrigger canoe paddlers, but swimmers, snorkelers, scuba divers, fisherman, Honu, Nai ‘a and Hahalua. I have been out on my OC1 and with paddlers from KCC and been surprised by fast moving motorized vessels, some of whom do not observe the “No Wake” zone in the bay. I realize that the DEIS focuses on the KBMP which is primarily a plan to develop, manage and maintain KS uplands in the vicinity of Keauhou Bay, not the waters of the bay itself. Yet some of</p>	<p>Joanne (Jody) Wheeler                      Carolyn Leilani Carter</p>	<p>There is currently a shortage of boat trailer parking in the Keauhou Bay area, with demand exceeding the available supply. To address this issue, improvements to the existing boat trailer parking area has been proposed to accommodate 34 boat trailers (an increase by 15). This addition aims to alleviate the existing parking deficiency and better serve the boaters who already use the bay. It is not expected that the availability of these new stalls will significantly increase the number of boaters using the dock, as the improvement is intended primarily to meet current needs rather than expand capacity.</p> <p>The improved lot is expected to continue to be used for storage and long-term vessel parking, not day use.</p> <p>It is important to note that the authority and responsibility for enforcing boating safety and ocean regulations does not fall under Kamehameha Schools jurisdiction. In Hawai‘i, these responsibilities are managed by the Department of Land and Natural Resources (DLNR), through its Division of Boating and</p>

<p>what is done on the uplands surrounding the bay can affect those who use the waters of the bay. The potential infrastructure issues discussed below are among those. So are the adverse effects of adding 15 more onshore parking spaces to accommodate trailers for VME's. (DEIS 3.2.5 at page 3-78, Table 3.2 at page 3-79 and Fig. 3-64 at page 3-8). Before allowing more parking for VME trailers, the DEIS must examine the potential safety issues arising out of allowing more motorized VME's unlimited access to Keauhou Bay.</p>		<p>Ocean Recreation and Division of Conservation and Resources Enforcement. Kamehameha Schools is committed to further collaboration with DLNR to explore future solutions.</p>
<p>Tourists will inevitably want to swim in the bay, which will create dangerous conflicts with boats that use the small bay year-round.</p>	<p>Aaron Chang</p>	<p>The KBMP is intended to enhance shoreline access to Keauhou Bay, providing visitors with improved entry to public recreational areas and the ocean. While Kamehameha Schools does not have jurisdiction over the enforcement of ocean safety regulations, it may contribute to ocean safety and minimizing conflicts between boaters and swimmers through educational initiatives and strategically placed signage.</p>
<p>They claim that their 150 new bungalows, a high-end restaurant, and shops will lead to more native Hawaiian children enjoying the beach. This claim is false and outrageous. The narrow Bay and tiny beach can't comfortably hold more than 50 people. The nearby Outrigger Kona Resort &amp; Spa, with its 508 rooms, doesn't have a beach, and if Keauhou makes the beach "nicer," the guests there will want to enjoy it, too. Who do we think will wind up enjoying the tiny beach?</p>	<p>Ben Rice</p>	<p>In 2010, Kamehameha Schools initiated consultation with lineal descendants of Keauhou and Kahalu'u, which consultation continues today. During an early consultation meeting in the Fall of 2016, 'ohana of Keauhou and Kahalu'u shared concerns about long-standing issues in the area. They cited congestion, limited access, and the impact of inappropriate commercial and recreational activities that have eroded the bay's historical and cultural identity. Please refer to Chapter 7 of the FEIS, detailing the level of consultation conducted with lineal descendants as well as other stakeholder groups.</p> <p>Input from lineal descendants and the community guided the formation of the KBMP and identification of the plan's management strategies. Multiple listening sessions and project updates, including presentations of concepts, were provided throughout the planning process. Kamehameha Schools continues to be open to meeting with other lineal descendants that decide to come forward.</p>

Summary of Draft EIS Comments and Responses		
Comments	Commenter	Responses
		<p>The KBMP has been designed to address the concerns raised by reorienting the focus of the bay toward its cultural legacy and ensuring sustainable management of the land. Strategies include restoring cultural sites, historic landscape restoration, enhancing facilities, improving access, and creating heritage corridors that connect people to place through education and cultural storytelling. The KBMP also expands public shoreline areas by removing the informal volleyball court and clearly defining the extents of canoe use areas.</p> <p>Though the KBMP may result in a nominal increase in daily users at the bayfront, the plan is designed to support sustainable use and to protect the bay's sensitive environmental and cultural resources. By re-centering Keauhou as a wahi pana (sacred place) and a hub for cultural education and community connection, the KBMP aims to bring families back to a place that once played a vital role in Hawaiian history.</p>
<p>Another concern I have is congestion in Keauhou Bay. There are times when launching and landing personal watercraft is difficult due to the volume of others using the Bay. Maneuvering through swimmers, families enjoying the water, and other personal watercraft can be difficult at times. I feel the addition of a resort will only exacerbate the congestion in Keauhou Bay and escalate safety issues.</p>	Linda Churches	<p>The existing conditions at Keauhou Bay are marked by significant congestion as noted by community stakeholders. Conflicts between pedestrians, vehicles, and commercial activities create safety concerns and diminish the overall experience. The KBMP is specifically designed to address these issues by reorganizing land uses and implementing a more intentional management approach. By relocating commercial operations away from sensitive cultural areas, redesigning circulation routes, and establishing designated zones for recreational and community activities, the plan is designed to reduce user conflicts and enhance overall circulation throughout the bayfront. These strategies aim to alleviate congestion while preserving the bay's cultural integrity and improving accessibility for all.</p> <p>The low-impact lodging has been intentionally sited mauka of Old Kona Road, above 'Ahu'ula Cliff. This location provides a physical and visual setback from the bayfront, avoiding direct shoreline development.</p> <p>While Kamehameha Schools does not have jurisdiction over the enforcement of ocean safety regulations, it may contribute to</p>

		ocean safety and minimizing conflicts between boaters and swimmers through educational initiatives and strategically placed signage. Kamehameha Schools is committed to further collaboration with DLNR to explore future solutions.
<b>Evacuation Challenges</b>		
The worry on Kona side is tsunami evacuations rather than lava evacuations, and in this kind of traffic, not everyone will be able to get to safer ground, especially if you allow another resort to be developed in this area when traffic is already at a crawl every week day and sometimes on weekends as well. See the photo below that proves this point in Kona, and here is the NEWS article by KITV NEWS that talks about Hilo and the same thing is happening in Kona on the roads Kamehameha Schools wants to develop their resort, "Hawaii Island traffic jams could have safety impact. In the event of an evacuation, Mayor Mitch Roth acknowledges that will make the Traffic Jam up even worse. But says, he is working with The State on a solution."	Donna Cherrier	Appendix M to the EIS includes a detailed mobility analysis report that analyzes the project's potential impacts to traffic operations. The traffic analysis shows that the addition of project-generated traffic would not result in any significant roadway operations impacts under typical peak hour conditions, when traffic volumes are highest.  The KBMP is designed to mitigate tsunami threats by improving connectivity and emergency access through infrastructure enhancements. The construction of Old Kona Road, linking Kamehameha III Road and Kaleiopapa Street, provides a crucial alternative evacuation route, significantly enhancing emergency responsiveness and accessibility during tsunami events. In the event of a tsunami or other natural disaster, the Project is designed to avoid creating barriers to emergency access or hindering evacuation routes. The design of the project will prioritize unimpeded access for emergency vehicles including ambulances, fire trucks, and police vehicles to critical areas.

		designed to avoid creating barriers to emergency access or hindering evacuation routes. The design of the project will prioritize unimpeded access for emergency vehicles including ambulances, fire trucks, and police vehicles to critical areas.
<b>Boat Trailer Parking</b>		
<p>The project also proposes to relocate the existing commercial snorkel boat vendors to the other side of the launch ramp, which means the snorkelers will have to walk across the purportedly congested boat ramp to get to the dock area and load on the snorkel boats. (Note: With the current buildings next to the dock, the snorkel visitors don't have to walk across the busy double-lane boat launch ramp. (One can just imagine how many people will get run over by people either trying to launch and/or pull boats from the water during the day and at night.) On this basis alone, the EIS must be rejected and further studies conducted.</p>	<p>Jeff Caufield</p>	<p>The KBMP is designed to reorganize uses and activities within the Project Area to better reflect the cultural significance of the area and to support a more harmonious relationship between users, place, and purpose. Central to this reorganization is the concept of directing new growth to more appropriate areas. To resolve long-standing conflicts between incompatible uses, the KBMP proposes relocating commercial activities that are currently situated near sensitive cultural sites, to more suitable areas along Kaleiopapa Street. By moving these uses away from the bayfront and heritage zones, the plan protects sacred spaces and allows cultural practices to thrive without interference.</p> <p>The existing ocean recreation vendors currently occupying the buildings along the bayfront will have an opportunity to relocate their operations to the proposed retail center at the corner of Kaleiopapa Street and Ehukai Street. This site was selected as a more suitable location due to its setback from the bayfront and its compatibility with adjacent resort uses (Outrigger Kona Resort and Spa).</p> <p>The relocation of commercial vendors and the addition of dedicated parking facilities will significantly improve pedestrian safety and overall visitor experience. Currently, the lack of adequate parking at the existing bayfront buildings results in visitors parking along informal, unsafe spaces on Kaleiopapa Street, exacerbating congestion and safety hazards. The absence of sidewalks along Kaleiopapa Street compounds the issue, forcing pedestrians to navigate directly within the travel lanes alongside vehicles and boat trailers.</p> <p>A significant component of the Project includes increasing parking capacity to relieve pressure on informal roadside parking.</p>

Summary of Draft EIS Comments and Responses		
Comments	Commenter	Responses
		<p>Additionally, the retail center will feature ample parking designed to accommodate visitors and customers effectively. Pedestrian pathways connecting these parking areas to community spaces along the bayfront will ensure direct, safe, and convenient access. Strategic placement of clear signage, well-marked crosswalks, and intuitive visual cues will reinforce safe wayfinding practices and encourage pedestrians to avoid walking roadways.</p>
<p>I am a private boater, residing in Kailua Kona, a little under 5 miles from Keauhou Bay. For the last 27 years I have launched my small boat at the boat ramps there. My concern about this plan is my ability to continue to make use of this state-owned facility. Even without the massive new development proposed in this plan, these two small boat ramps and the associated trailer parking area and wash-down area are often over-utilized, requiring a wait to launch, a wait to wash down, and sometimes a long drive to park along the shoulder of Kaleiopapa Rd. when the 16 provided trailer parking stalls are occupied. The Kamehameha Schools documents are vague, perhaps deliberately, regarding the fate of these critical trailer stalls in their plans, as well as on the continued availability of road shoulder trailer parking. The 2021 conceptual plan drawing shows these 16 stalls sort of blurred out, implying that they may be eliminated. It shows 8 new stalls a little further up the road. Without further clarification I can only assume that KS intends to cut the boat trailer parking in half. This would change the situation from a condition of frequently inadequate trailer parking to one of guaranteed frustration, aggravation, and user conflict. It's not clear if KS intends to change the current long-term boat storage area on the north side of the bay to short-term trailer parking, as it is labeled "boat trailer storage" on their drawing, but this is not a feasible solution to the day-use trailer parking problem. After parking the trailer at the north end of the bay, the boater would have to walk all the way around the bay back to the boat ramp, where there would be a line of angry boaters waiting to launch at the ramp occupied by his boat. The net</p>	<p>Douglas Perrine</p>	<p>Contrary to your concern, the implementation of the Project will not reduce the number of available parking spaces. Instead, it will improve access to parking for boaters, ensuring they have more reliable spaces near the launch ramps.</p> <p>For clarity, it is important to emphasize two key points: firstly, Kamehameha Schools does not own or control the location of the existing 16 trailer stalls. This area is not shown on the project's site plans as these lie outside the Project Area boundaries and are beyond KS's jurisdiction. Secondly, Kamehameha Schools does not own Kaleiopapa Street and therefore has no authority to regulate or enforce parking restrictions, including any potential limitations regarding trailer parking along the roadway.</p> <p>Recognizing the importance of boat trailer parking, the KBMP explicitly aims to enhance parking availability in the vicinity. This includes the expansion and resurfacing of the existing north-side trailer parking lot along Kamehameha III Road, increasing its capacity to a total of 34 stalls, an addition of 15 spaces over its current count. Kamehameha Schools' intention is to continue the existing use as storage and long-term vessel parking.</p> <p>Additionally, the KBMP proposes creating a new trailer parking area south of the bay along Kaleiopapa Street, adding an additional 8 trailer parking stalls.</p> <p>These enhancements collectively demonstrate Kamehameha Schools' commitment to providing adequate, safe, and accessible parking for boaters utilizing the bayfront area.</p>

Summary of Draft EIS Comments and Responses		
Comments	Commenter	Responses
<p>effect of cutting the number of trailer parking slots near the ramp in half, for me, would be that I would be denied use of the launching ramps I have used for over a quarter of a century now. I could not justify navigating my trailer through morning rush hour traffic to reach Keauhou Bay only to find that all the trailer parking was occupied or that there was a huge line of boats waiting for the owners of the boats ahead of them to make the long walk back from the north side of the bay. Please note that the 8 proposed new stalls occupy an area of shoulder that is currently available for trailer parking, so the net gain is perhaps only 6 stalls. Presumable KS will also block or ban parking on the remaining shoulders of Kaleiopapa, eliminating at least 6 potential parking spots for a boat trailer. This would mean the net number of available trailer stalls will decrease from about 24 to 8, or a third of what is presently not quite adequate. If KS presents a plan that guarantees an increase of available boat trailer parking close to the ramp, then I will not be personally adversely affected by their development plans, as far as I can tell, but if they actually reduce the available trailer parking from 16 stalls plus shoulder parking to only 8 stalls, as implied in their diagram, I will be cut off from a cherished part of my life. All private boaters and probably most commercial operators using the Keauhou boat ramps will likewise be severely adversely affected. We can expect that some companies might go out of business, and that some boaters might become victims of the violence that sometimes occurs when alcohol mixes with boating and there is some disagreement about how much time someone is taking at a boat launch or wash down area.</p>		
<p>However, DOBOR has concerns about the proposed relocation of boat trailer parking. The DEIS calls for the expansion of the boat trailer parking on KSBE's lands in Vol. 1, page 1-15, page 3-25, figure 3-24 &amp; Vol. II, Preliminary Engineering Report, page 1-1, while also calling for relocation of existing boat trailer parking from the current</p>	<p>Meghan Statts (DLNR)</p>	<p>Mahalo for your continued collaboration on this important effort. Kamehameha Schools acknowledges DOBOR's position that leasing property within the Project Area for boat trailer parking expansion would not be feasible or desired. Accordingly, the FEIS has updated text regarding the potential relocation of existing DOBOR boat trailer parking facilities.</p>

Summary of Draft EIS Comments and Responses		
Comments	Commenter	Responses
<p>location under the DOBOR jurisdiction along Kaleiopapa St. (Vol. 1, page 1-13).</p> <p>In previous conversations with KSBE, DOBOR's Administrations has made it clear that DOBOR would not be interested in leasing property from KSBE to construct and relocate the boat trailer parking. DOBOR would not object KSBE expanding and/or relocating boat trailer parking within KSBE property.</p> <p>In addition to DOBOR's concerns regarding relocating existing boat trailer parking, the new parking area as proposed may not provide adequate room to maneuver vehicles with trailers attached and would be further back from the boat ramp than the existing parking area, which may negatively affect boaters' ability to launch and retrieve their boats. DOBOR operates the boat ramp at TMK: (3) 7-8-012:008 and needs to provide trailer parking for recreational boaters. The existing boat trailer parking area located at TMK: (3) 7-8-010:072 is the only DOBOR property capable of accommodating this use.</p>		<p>Kamehameha Schools also understands that DOBOR would not object to Kamehameha Schools expanding and boat trailer parking within the Project Area. Kamehameha Schools intends to proceed with entitlements for the proposed boat trailer parking area located south of the bay and may pursue options for a qualified third-party operator to manage the facility.</p> <p>Kamehameha Schools acknowledges DOBOR's concern about the configuration and location of the proposed new boat trailer area. Consultation and discussions with DOBOR will continue during land use approvals and during design review and approval of construction plans.</p>
<b>Opposing Old Kona Road</b>		
<p>I am also against the development of Old Kona Road, as this also seems to be carved right into a fragile ecosystem. If it does anything at all to mitigate traffic congestion I believe it will be offset by the additional traffic that the resort will create and all the additional parking services that will be entailed.</p>	Jessica Kuzmier	<p>The KBMP proposes reactivating the historic Old Kona Road as a throughway to better manage traffic flow and redirect it away from sensitive cultural areas. The through road connection of Old Kona Road is proposed as a low-speed, low-volume roadway with traffic calming devices (e.g., speed humps) that will provide local access and circulation to uses within the site.</p> <p>Appendix M to the EIS includes a detailed mobility analysis report that analyzes the project's potential impacts to traffic operations. The traffic analysis shows that the addition of project-generated traffic would not result in significant roadway operations impacts under typical peak hour conditions. Additionally, the Project layout is designed to better separate traffic flows and parking areas to help reduce congestion and reduce delays.</p>

Summary of Draft EIS Comments and Responses		
Comments	Commenter	Responses
		The Biological Assessment, detailed in Appendix K, determined that the area mauka of ‘Ahu’ula Cliff along Old Kona Road is predominantly covered by invasive plant species, including haole koa ( <i>Leucaena leucocephala</i> ), kiawe ( <i>Prosopis pallida</i> ), and fountain grass ( <i>Pennisetum setaceum</i> ). The KBMP proposes ecological restoration efforts involving the removal of invasive species, re-establishing native vegetation, and providing long-term stewardship of the cultural landscape to revitalize the environmental and cultural integrity of the area.
2. DO NOT make the Old Kona Road a thoroughfare. Land use on the north end of Keauhou Bay should focus on the physical and cultural revival of the Hōlua. Do not use Old Kona Road as a connector between Kamehameha III Road and Kalieopapa Road, as this would abolish all hopes of restoring the Hōlua. Extend Old Kona Road from its joint with Kalieopapa on the south side of the bay and pave just as far as is needed to serve the resort development above the cliffs and no farther.	Michael Herbert	<p>The KBMP proposes reactivating the historic Old Kona Road as a throughway to better manage traffic flow and redirect it away from sensitive cultural areas. The through road connection of Old Kona Road is proposed as a low-speed, low-volume roadway with traffic calming devices (e.g., speed humps) that will provide local access and circulation to uses within the site.</p> <p>The KBMP recognizes the Hōlua slides’ cultural and historical importance. The exact historic alignment of the Hōlua slides is unknown; however, the project seeks to honor its projected course by preserving open spaces along the areas where the slide may have traversed. Additionally, the project proposes installing an ‘ili (stone pebble) treatment along the Old Kona Road, marking the potential crossing location of the hōlua to further commemorate this culturally significant feature.</p>
<b>Infrastructure and Utilities</b>		
Has the EIS done any research or reports on the Resources and Infrastructure it will need for a bungalow resort? Has Kamehameha Schools EIS done any kind of reports or surveys to know if Big Island has the Resources and Infrastructures for their resort development? As of now, the Big Island’s Resources and Infrastructure are having serious negative issues and many more developments that have been approved are not even completed as of yet, which means these resources and infrastructures will be taxed even more in the near future.	Donald Robert Berger Stephen Goudreau Sara Irwin Goudreau Lucia Kaplan	<p>Section 4.12 of the EIS includes detailed evaluations of the existing infrastructure capacities at Keauhou Bay, such as water, wastewater, solid waste, power, and telecommunications, along with potential impacts, and the necessary upgrades to support the KBMP.</p> <p>The EIS includes thorough analysis to verify that Hawai’i Island’s infrastructure systems can accommodate the proposed KBMP. <p>see this survey report on this link  <a href="https://kohalacenter.org/archive/pdf/Research_BI_ResourceUseWasteGenerationTourism.pdf">https://kohalacenter.org/archive/pdf/Research_BI_ResourceUseWasteGenerationTourism.pdf</a>This is in the Introduction, "The tourism industry annually attracts about 6 million visitors to the state of Hawaii (Hawaii Tourism Authority 2010), and it accounts for one-quarter of the state's gross domestic product and one-third of its jobs (DBEDT 2010; Thomas 2009). The island of Hawaii (the Big Island) welcomes more than one million tourists annually. The highest growth (67%) in daily visitors on the Big Island was registered between 1990 and 2007 (DBEDT 2008). It is widely known that the tourism industry is an economic engine for the Big Island. Tourism utilizes a significant share of the total electricity and fuel used on the island; however, the total amount and detailed breakdowns have not been quantified. The economic growth of the island must be carefully assessed and managed to mitigate negative impacts on its environment and sustainability." This information is on page 8 under Summary and Conclusion, "The estimates show that the tourism sector surveyed for this study accounts for 21.7% of the island's total energy consumption, 44.7% of the islandwide water consumption, and 10.7% of the island-wide waste generation." The above information is a report that shows around what the tourism industry consumed in island resources 11 years ago. Does Kamehameha Schools EIS have any kind of report like this one, because it needs to be shown that Big Island has the resources for this kind of resort development.</p> <p>The articles below will show that Big Island DOES NOT have the resources and infrastructure for another resort development and for this you must reject this EIS and show that it WILL HAVE NEGATIVE IMPACT on Big Island.</p> <p>Big Island Now poll No.27 results: More than one solution needed to help extend life of West Hawai'i landfill September 17, 2023 The West Hawai'i Sanitary Landfill, the only</p>

<p>remaining landfill on the Big Island, is forecast to reach capacity within the next 20 to 25 years. (File photo) Of the 900 total votes in our most recent poll, which asked people to weigh in on the best way to extend the life of the Big Island's only remaining landfill, all of the above was the most popular answer, garnering 274 votes, or 30%. The West Hawai'i landfill became the island's only one after the Hilo Landfill closed three years ago. It only has about 20 to 25 years left before it can no longer be used to store rubbish. A county commission drafts ordinance aiming to ban recyclables at West Hawai'i landfill By Megan Moseley</p> <p>September 6, 2023 Hawai'i County's Environmental Management Commission is developing an ordinance that aims to prohibit the amount of recyclable materials ending up in the island's only working landfill. During a commission meeting on July 26, Ramzi Mansour, Hawai'i County Director of Environmental Management, told commissioners the West Hawai'i Sanitary Landfill only has 20 to 25 years left before it reaches capacity. With the Hilo Landfill permanently closed in 2020, the clock is ticking for the island's sole dump. Commission chairperson Georjean Adams said it's a good time to start looking into solutions. Adams said the proposed ordinance is in its early stages and is more about getting the conversation started about how to prevent unnecessary, or recyclable items — green waste, metals, plastics, paper, paperboard and glass — from ending up in the rubbish dump, located off Queen Ka'ahumanu Highway in Waikōloa. "Trying to site a new landfill is close to impossible," Adams said. "So what are we going to do? So I was looking around, and the commission agreed, to look deeply into the idea of diverting the recyclables out and at least slow the filling up of the landfill." The proposed ordinance refers to the 2019 Integrated Solid Waste Management Plan that commits the county to "divert, as much as feasible, commercial and municipal solid waste, including but not limited to green waste, metals, plastics, paper, paperboard, and glass to help</p>

<p>will likely persist well into spring 2024 years have seen compounding problems: less rain, leading to significant droughts, and repeated jet fuel leaks and PFAS chemical spills contaminating watersystems. All of this significantly limits available water use for locals, many of whom say tourism is only worsening the situation. Just months ago, the world's largest surfing wave pool opened up on the island —filled with freshwater."They're not using it to drink or to support life, they're using it to make money. They're commodifying it," said Healani Sonoda-Pale, who is Native Hawaiian and a member of advocacy group O'ahu Water Protectors. "... We are on the verge of a greater catastrophe." "We are in a water crisis, that has to be made very clear," Wayne Tanaka, director of Sierra Club of Hawai'i, told CBS News, saying that if the reasons for this crisis aren't soon addressed, "We may come to a point where we have to decide ... who gets water and who doesn't. Because this is an island parts need to be shipped and the power plant has generators that are not working and because of this, and other reasons, the Big Island needs to seriously conserve power so that everyone will have power, and if this can happen once it can happen again. , Hawaii — Hawaiian Electric continues to urge Hawaii Island customers to reduce their electricity use to prevent the need for rolling outages. In a news release Tuesday afternoon, the utility stated that Monday saw a reduced demand of approximately 5 megawatts. That, combined with increased wind and solar battery storage prevented the need for rolling blackouts on Monday. HECO credited conservation efforts, particularly those by large businesses and government customers, for the reduction in electricity demand. "We're grateful for our customers' efforts to conserve electricity, especially between 5 to 9 p.m., when electricity use is highest, because it does make a difference," said Hawaiian Electric spokesperson Kristen Okinaka. "By working together, we're helping to ensure that enough power can be available for all customers and prevent or minimize the impacts of rolling</p>

<p>outages."Hawaiian Electric announced Mondayafternoon that it may initiate rolling outages in parts of Hawaii Islandbecause of the unavailability of several generators and lower than normal windand solar resources.In a news release, the utility saidthat outages could start as early as 6:30 p.m. and rotate around the island for30-minute intervals. The impacted areas and the timing of the outages will bebased on wind generation and the amount of electric demand that needs to bereduced. Individuals who are dependent on electrically powered life supportmedical equipment are advised to arrange for a backup power supply.The outages are being done to prevent power loss to even more customers, who are all being asked to conserve electricity throughout the month. Big power supply problems continue to plague Hawaii island Apr 8, 2024 The company has been facing an unusual situation with mechanical problems at three of the island's five largest power plants whilepart of the largest plant undergoes an annual overhaul. All four of theseaffected power plants are owned by the utility or an affiliate of its parentcompany.Also contributing to thetrouble is lower output from a geothermal plant, which has the third-largestgeneration capacity on the island and is owned by an independent operator."This is an unusualsituation, driven mainly by the unavailability of several large generators thathave experienced mechanical problems, are at reduced output, or are undergoingmaintenance, " HawaiianElectric said in its March25 announcement asking customers to use less electricity,especially on weekdays from 5to 9 p.m.The company explainedthat it faces an "extremely tight " supply of power at peak useperiods, especially when production from wind, solar and hydroelectricfacilities is lower than normal. Those sources of variable, renewable energycan supply up to 15 % of electricity needs on the island."Without enoughsupply to meet electricity demand, the company may initiate rolling outages ofup to an hour around the island, " the March25 announcement</p>

<p>said. <a href="https://energycentral.com/news/big-power-supply-problems-continue-plague-hawaii-island">https://energycentral.com/news/big-power-supply-problems-continue-plague-hawaii-island</a> COMMUNITYHawaii Island customers urged to reduce electricity use through April</p> <p>BY SARAHYAMANAKA HILO PUBLISHED 9:00 AM ET MAR. 26, 2024 What You Need To Know Hawaii Island customers may see alerts asking them to conserve energy, especially on days when there isn't much wind that generates up to 15% of electricity</p> <p>When alerts are issued, Hawaiian Electric is asking customers to take immediate action to minimize electricity use</p> <p>Even when no alerts are issued, customers – including hotels and large retailers – are urged to reduce electricity use as much as possible, especially between 5 and 9 p.m. on weekdays</p> <p>If there is not enough electricity to meet demand, Hawaiian Electric may initiate rolling outages of up to an hour around the island</p>		
<p>Another pressing issue for this area is water and sewage. Every late summer and fall, we have had to conserve water in the Keauhou/Kona area. Where are they going to get the extra water for 300 people? Resort people are not going to restrict their use of water. They are on vacation and need 2-3 showers a day not being accustomed to this hot humid weather. You're calling this an ECO-Resort – does that mean they expect to conserve water their entire vacation and flush just once a day. Tell that to the Japanese and they will laugh at you. (I have had that happen to me.) Where is the sewage going to go? Septic tanks for each unit. What about an overflow? Does that go downhill into the bay? Then, all water sports will be halted in Keauhou Bay for weeks or months? Bringing more people into an area can never be good for the Ecology? Who are you trying to fool? Current infrastructure cannot handle a resort here. I know this area is zoned for resorts. Right now, we have one resort</p>	Cheri Uno	<p>Section 4.12 of the EIS includes detailed evaluations of the existing infrastructure capacities at Keauhou Bay, such as water, wastewater, solid waste, power, and telecommunications, along with potential impacts, and the necessary upgrades to support the KBMP. Specifically, details concerning Water Supply can be found in Section 4.12.1 and Wastewater Treatment and Disposal are discussed in Section 4.12.2.</p> <p>The EIS includes analysis to verify that Hawai'i Island's infrastructure systems can accommodate the proposed KBMP. The Project is designed to mitigate potential impacts on local resources through strategic planning, infrastructure upgrades, and sustainable design practices. With the implementation of these actions, the Project is anticipated to contribute positively to the region's growth while minimizing adverse impacts on the island's resources and infrastructure.</p>

<p>the Outrigger on the edge of Keauhou Bay. It has been here before I came here in 1979. Before people realized the Hawaiian historic area that this is. I came here for the beauty and quiet of this historical area. Resorts are better kept to the northern end of the island where everyone expects to be on vacation with people in the pool playing Marco Polo and partying to the max. That was what I saw when looking for a place in Maui in 1978.</p>		<p>The EIS outlines the Project's intent to connect to existing water infrastructure managed by the Department of Water Supply (DWS). Ongoing consultation with DWS is underway to ensure that the Project's water demand remains within allocated limits. According to Section 4.12.1, the Project's estimated average water demand will be approximately 95,879 gallons per day (GPD). This is within Kamehameha Schools existing allocated water entitlement.</p> <p>To mitigate water usage, the Project incorporates water conservation strategies into its design, including efficient irrigation methods such as drip systems and moisture sensors, the utilization of non-potable water sources for irrigation, the planting of drought-tolerant species, and the installation of ultra-low-flow fixtures and toilets. Coordination with the County DWS will continue as the project design progresses.</p> <p>EIS Section 4.12.2 discusses wastewater treatment and disposal. The project does not propose septic tanks for each unit. Instead, the wastewater generated by the Project will be conveyed through a sewer main along Old Kona Road, which will connect to the existing sewer infrastructure. The wastewater will then be conveyed to the He'eia Wastewater Reclamation Facility (WWRF), where it will be treated. Further study will be needed to determine if any capital improvements of the WWRF and facilities leading to it will be required to accommodate an increase in flow from the Project.</p>
<p>As a resident, I am also concerned about further stressing the infrastructure in the Kona area. We have regular power outages, low hospital capacity, water system failures, sewage spills, and already inadequate road systems, especially in tsunami evacuation areas. Creating another tourism area in an already stressed bay at a time when the state is trying to shut down vacation rentals, which disperse the impact of tourism more widely, makes no sense. Let's take care of the land and water and people already here then talk about more tourist development. We don't want to be another Waikiki.</p>	Keri Jones	<p>Section 4.12 of the EIS includes detailed evaluations of the existing infrastructure capacities at Keauhou Bay, such as water, wastewater, solid waste, power, and telecommunications, along with potential impacts, and the necessary upgrades to support the KBMP.</p> <p>The EIS includes analysis to verify that Hawai'i Island's infrastructure systems can accommodate the proposed KBMP. 		region’s growth while minimizing adverse impacts on the island’s resources and infrastructure.
What are the specifics on the launching ramps? Moved, updated, increased to three?	Randy Williams	The launch ramps mentioned are located outside of the project area and therefore, there are no plans for moving, updating, or increasing the ramps. These ramps are owned and operated by the State of Hawai’i.
Also consider that most tourists want to be near Waikoloa where the infrastructure supports their needs	Pamela Wang	Keauhou Bay offers a different, yet equally valuable, opportunity for visitors that prioritize sustainable development and cultural sensitivity. The project’s infrastructure is designed to meet the needs of users without overburdening local resources.
Water Supply at page 4-136: The water main that will supply the Project passes through the near shore area. The DEIS acknowledges that this area will be impacted by sea level rise but does not propose any future action. A potable water main break will have minimal effect on the bay but would severely affect all the tenants and users of the bay. This main has broken in the past and our unit was without water for a significant period. This risk might be mitigated by relocating the water main to the Old Kona Road	Joanne (Jody) Wheeler	<p>The EIS outlines the Project’s intent to connect to existing water infrastructure managed by the Department of Water Supply (DWS) to minimize the extent of ground disturbance required for construction. As the DWS currently owns and manages the area’s water system, Kamehameha Schools will continue to coordinate closely with DWS, facilitating necessary access and supporting ongoing maintenance of the water supply infrastructure.</p> <p>Kamehameha Schools acknowledge the threat that sea level rise poses on existing infrastructure and will continue to collaborate with the County to explore proactive solutions to strengthen the overall system’s resilience against future climate challenges.</p>
Infrastructure Strain: Adding high-end vacation rentals and commercial spaces could strain local infrastructure, primarily the archaic sewage and waste management systems that are currently in place and perpetually challenged	Bryce Groark	<p>Section 4.12 of the EIS includes detailed evaluations of the existing infrastructure capacities at Keauhou Bay, such as water, wastewater, solid waste, power, and telecommunications, along with potential impacts, and the necessary upgrades to support the KBMP. Specifically, details concerning Wastewater Treatment and Disposal are discussed in Section 4.12.2.</p> <p>The EIS includes analysis to verify that Hawai’i Island’s infrastructure systems can accommodate the proposed KBMP. 		<p>region’s growth while minimizing adverse impacts on the island’s resources and infrastructure.</p> <p>Wastewater generated by the Project will be conveyed through a sewer main along Old Kona Road, which will connect to the existing sewer infrastructure. The wastewater will then be conveyed to the He’eia Wastewater Reclamation Facility (WWRF), where it will be treated. Further study will be needed to determine if any capital improvements of the WWRF and facilities leading to it will be required to accommodate an increase in flow from the Project.</p>
<p>This involves creating the roadway, sewer, utilities, plus construction and furnishings. Financing to renovate and upgrade the Outrigger might be a far safer ROI for KS. I also question that the claim cited in the first paragraph of section 2.1.3 “the hustle and bustle of ocean commercial operations catering mainly to visitors cause many local families, with some long-standing generational ties to the bay, to no longer feel welcomed”. While this may be true in the case of a very few individuals, it doesn't substantiate the investment to solve their feelings.</p>	Tom Fetter	<p>In 2010, Kamehameha Schools initiated consultation with lineal descendants of Keauhou and Kahalu’u, which continues today. During an early consultation meeting in the Fall of 2016, ‘ohana of Keauhou and Kahalu’u shared concerns about long-standing issues in the area. They cited congestion, limited access, and the impact of inappropriate commercial and recreational activities that have eroded the bay’s historical and cultural identity. Please refer to Chapter 7 of the FEIS, detailing the level of consultation conducted with lineal descendants as well as other stakeholder groups. Input from lineal descendants and the community guided the formation of the KBMP and identification of the plan’s management strategies.</p> <p>The Outrigger is making their own investment on upgrades to their leasehold property and is not a KS expense. The low-impact lodging property offers the a unique and different product type than the Outrigger accommodations.</p>
<p>The number one problem at Keauhou Bay has always been the sewage system. I find it alarming that the state does not address our sewage pipe problems that run into our oceans and easily passes that off to development companies. To remain triple AAA waters without periodic alerts of high bacteria counts not only in Kona but all islands. I also beg the state to apply for the ‘Infrastructure Act’ to ensure all islands can renew a safe transition to a modern healthy sewage pipe system.</p>	Jan Brinkman	<p>Section 4.12 of the EIS includes detailed evaluations of the existing infrastructure capacities at Keauhou Bay, such as water, wastewater, solid waste, power, and telecommunications, along with potential impacts, and the necessary upgrades to support the KBMP. <p>the bay. This main has broken in the past. This risk could be mitigated by relocating the water main to the Old Kona Road.</p> <p>Electrical and Telecommunications lines also pass through the near shore area. The EIS acknowledges that this area will be affected by SLR but does not propose moving these lines. This risk should be totally mitigated by relocating the electrical and telecommunications lines to the Old Kona Road.</p>		<p>closely with DWS, facilitating necessary access and supporting ongoing maintenance of the water supply infrastructure.</p> <p>The KBMP proposes to provide electrical and telecommunication services to the Project Area via existing underground distribution systems. As part of this KBMP's planning process, HELCO completed a preliminary engineering analysis of their existing system to determine if any improvements would be needed to accommodate the Project. The analysis concluded that upgrades to HELCO's existing underground distribution system may be needed to provide power to the various Project uses. The recommendations are outlined in Section 4.12.4.1 of the EIS. The analysis did not result in a recommendation to relocate existing systems to Old Kona Road.</p> <p>Kamehameha Schools acknowledge the threat that sea level rise poses on existing infrastructure and will continue to collaborate with the County and HELCO to explore proactive solutions to strengthen the overall system's resilience against future climate challenges. Kamehameha Schools is willing to cooperate with the various utility providers should they choose to relocate services in the future as part of their mitigation plans for seal level rise</p>
<p>Also, further tourist influx will add to the island's electrical needs which are barely serving our current population now. Contending with waste from a larger tourist influx also puts added stress on West Hawaii's waste management where we already take on the trucked waste from the East side of the island. Water conservation and mandatory lessening of water usage from residents is unfair if we allow tourist or further planned development to use water freely and largely while locals are called to conserve.</p>	Nancy Vidana	<p>Section 4.12 of the EIS includes detailed evaluations of the existing infrastructure capacities at Keauhou Bay, such as water, wastewater, solid waste, power, and telecommunications, along with potential impacts, and the necessary upgrades to support the KBMP.</p> <p>The EIS includes analysis to verify that Hawai'i Island's infrastructure systems can accommodate the proposed KBMP. The Project is designed to mitigate potential impacts on local resources through strategic planning, infrastructure upgrades, and sustainable design practices. Comments	Commenter	Responses
<p>My biggest concern with the Kamehameha Schools (KS) proposed project is the already fragile water quality of the bay. There should be no development of any kind near Keauhou Bay until the sewer situation is resolved in the area. Several waterfront homes on the north side of this bay have only cesspools. And even the few that have septic tanks are at too low an elevation and are too close to the ocean to have adequate leach fields, thus increasing the bacteria levels in the bay. These lots need to be connected to the nearby local private sewer system or the County sewer lines, if the private system is not available. KS's lazy response to this issue in the April 2022 meeting was the area is out of their jurisdiction. Hmm, I bet they would find a way to make it happen if approval of their proposed resort was predicated on getting all the bayfront homes on sanitary sewer line. It would require some work with the local private system and the County DPW, but it is doable. And if the County doesn't have the will to disapprove of this project, the County should make sure the bayfront lots are connected to a sewer line before allowing development of the resort or anything else in the vicinity of Keauhou Bay.</p>	<p>Kathleen McMillen</p>	<p>The Project design incorporates best management practices (BMPs) to mitigate potential impacts on water quality during both construction and ongoing operations. These BMPs are intended to minimize erosion, sedimentation, and runoff that could affect local water quality, particularly in sensitive areas like Keauhou Bay. The design will include measures such as sediment control, stormwater management systems, and proper waste disposal methods to prevent contamination and maintain the integrity of the surrounding ecosystem. These practices will be regularly monitored and adjusted as needed to maintain water quality standards throughout the life of the Project.</p> <p>EIS Section 4.12.2 discusses wastewater treatment and disposal. Wastewater generated by the Project will be conveyed through a sewer main along Old Kona Road, which will connect to the existing sewer infrastructure. The wastewater will then be conveyed to the He'eia Wastewater Reclamation Facility (WWRF), where it will be treated.</p> <p>While Kamehameha Schools may not have direct authority over the wastewater infrastructure serving nearby properties, the Project's commitment to environmental stewardship and water quality improvement will contribute positively to the broader goal of enhancing the health of Keauhou Bay. Kamehameha Schools appreciates your feedback and will continue to engage with relevant stakeholders to protect the sustainable future of the area.</p>
<p>Please state in your report that a Bungalow Resort WILL have a SERIOUS NEGATIVE IMPACT in Keauhou Bay as stated in all the different researched articles below. Please, Do NOT risk polluting the water in Keauhou Bay by allowing Kamehameha Schools to develop their bungalow resort project, because it is scientifically proven that developments pollute nearby waters constantly during development and after.</p>	<p>Donald Robert Berger                      Stephen Goudreau                      Sara Irwin Goudreau                      Lucia Kaplan</p>	<p>It is not always the case that development inevitably leads to pollution of nearby ocean waters. The impact of development on water quality largely depends on the type of development, quality of infrastructure, and the effectiveness of long-term management practices, as well as responsible construction methods in the short term. EIS Section 4.5 discusses Project stormwater management and drainage improvements.</p> <p>The Project proposes stormwater and drainage improvements designed to minimize runoff entering Keauhou Bay. These improvements include the introduction of permanent Best</p>

I also worry what all these cars will do to the water quality. The oil, and the tire dust that will run into the bay when it rains. This will be devastating	Paul Koenigshofer	<p>The project's stormwater management plan and long-term Best Management Practices (BMPs) are designed to safeguard Keauhou Bay's water quality both during and after development. EIS Section 4.5 discusses Project stormwater management and drainage improvements.</p> <p>Currently, the lands surrounding Keauhou Bay lack adequate stormwater and drainage infrastructure. As a result, rainfall events can cause untreated runoff and contaminants from roadways and other surfaces to enter directly into the bay. To address this issue, the Project proposes a comprehensive stormwater management system designed to capture and treat stormwater runoff on-site. This infrastructure will significantly reduce pollutants reaching the ocean, helping to maintain and enhance water quality in Keauhou Bay.</p>
The bay and beach are already overcrowded. The last thing needed is 100 haole tourists dripping sun lotion in the already contaminated oil fuel filled water.	Jun Sogi	<p>Kamehameha Schools is dedicated to developing the project with a focus on the long-term protection of Keauhou Bay and its water quality. While the project will introduce a controlled increase in visitor accommodations, it will implement measures such as active resource management, signage, and educational programs designed to preserve the integrity of natural resource for future generations.</p>
ENGINE POLLUTION CAUSES ISSUES IN THE OCEAN Does this EIS have any detailed traffic studies for the increase in cars that will be added to this already severely traffic area they want to build their 150 room bungalow resort in? Have they done any studies on the pollution these cars WILL have in Keauhou Bay? Because this Bungalow Resort could have over 150 extra cars and over 300 or more extra people in and out of Keauhou Bay, what traffic and increased population studies have they done? There will be employees with cars, guests with cars, visitors with cars. At times this would range to over 200 cars (likely more), coming in and out of, and parking above Keauhou Bay thereby causing serious car population issues because of all these added cars right next to the bay. The article below is from NOAA	Michael Hanly	<p>Appendix M to the DEIS includes a detailed mobility analysis report that analyzes the project's potential impacts to traffic operations. According to the report, the Project is estimated to generate approximately 1,928 new daily weekday vehicle trips.</p> <p>The project's stormwater management plan and long-term Best Management Practices (BMPs) are designed to safeguard Keauhou Bay's water quality both during and after development. EIS Section 4.5 discusses Project stormwater management and drainage improvements.</p> <p>Currently, the lands surrounding Keauhou Bay lack adequate stormwater and drainage infrastructure. As a result, rainfall events can cause untreated runoff and contaminants from roadways and other surfaces to enter directly into the bay. To address this issue,</p>

<p>regarding motor vehicle engines and pollution to the sea. What is the biggest source of pollution in the ocean? Most ocean pollution begins on land. "Millions of motor vehicle engines drop small amounts of oil each day onto roads and parking lots. Much of this, too, makes its way to the sea. Some water pollution actually starts as air pollution, which settles into waterways and oceans. Dirt can be a pollutant. Top soil or silt from fields or construction sites can run off into waterways, harming fish and wildlife habitats." Land-Based Runoff Remains Top Source of Oil in the Ocean, Says New Report Oil in the Sea: Inputs, Fates, and Effects News Release September 28, 2022 WASHINGTON — Oil in runoff, primarily from cities and vehicles, is the top source of oil entering the ocean, says a new report from the National Academies of Sciences, Engineering, and Medicine. In North American waters, estimated ocean oil pollution from land-based runoff is up to 20 times higher than it was 20 years ago, and oil spills, natural oil seeps, and discharge from oil and gas operations remain major sources of pollution. The report recommends actions that government and others should take to minimize oil pollution, and calls for sustained research funding to better understand how oil reaches and affects ocean environments. The Impact Of Stormwater – Car Emissions "Car emissions are not limited to exhaust fumes that contribute to air pollution. They can also leak automotive fluid and release heavy metals that can contribute to stormwater pollution, contaminating local waterways."</p>		<p>the Project proposes a comprehensive stormwater management system designed to capture and treat stormwater runoff on-site. This infrastructure will significantly reduce pollutants reaching the ocean, helping to maintain and enhance water quality in Keauhou Bay.</p> <p>The project's detailed drainage analysis and design will require design review and approval by the County for land use approvals and construction plan approvals subsequent to the Final EIS. The proposed improvements will be designed to comply with the County drainage standards, which include the design requirements and regulations to address stormwater impacts within the County of Hawai'i.</p>
<p>As a resident and homeowner here in Kailua Kona I often paddle in Keauhou Bay.</p> <p>I believe your proposed development there will pollute the bay and destroy it for generations to come. I urge you to stop this development!</p>	John Phillips	<p>The project's stormwater management plan and Best Management Practices (BMPs) are designed to safeguard Keauhou Bay's water quality both during and after development. EIS Section 4.5 discusses Project stormwater management and drainage improvements. 		reaching the ocean, helping to maintain and enhance water quality in Keauhou Bay.
NO!!! Perhaps upgrading the area for boats and trailers but NO to the development of the resort cottages. The impact to this pristine area would be devastating, Most disturbed would be the water quality and negative environmental impact to the wildlife in the bay from runoff. Really? Is this what our ancestors would have wanted?	Myland Hui	The project's stormwater management plan and Best Management Practices (BMPs) are designed to safeguard Keauhou Bay's water quality and marine resources both during and after development. EIS Section 4.5 discusses Project stormwater management and drainage improvements. The Project proposes a comprehensive stormwater management system designed to capture and treat stormwater runoff on-site. This infrastructure will significantly reduce pollutants reaching the ocean, helping to maintain and enhance water quality in Keauhou Bay.
Toxicity and Eutrophication The Project fails to study, analyze, and/or provide projection as to increased toxicity and eutrophication impacts to Keauhou Bay. The decision to position the roadway closer to the Bay increases the potential for toxic pollutants entering the Bay and impacting the Bay's ecosystem. There is no study on the existing toxicity of runoff to the Bay from nearby roadways nor is there a study or projection of the concentration or ecological impact of the Project on future runoff to the Bay. Projects such as resorts with houses, pools, lawns etc. have increased runoff of nitrates and phosphates, which are known to cause eutrophication to water bodies. Golf courses have the potential to release substantial amounts of nitrates and phosphates through runoff. The forested area that the golf course drains into is proposed to be removed by the Project. The DEIS fails to analyze existing conditions as well as impacts of removal of the forest and the construction of the resort and roads on future releases of eutrophic chemical to the Bay. The DEIS is failing to provide the supporting evidence and documentation required in a DEIS	Jennie Shield	<p>EIS Section 4.5 discusses Project stormwater management and drainage improvements. An analysis of existing drainage conditions, proposed infrastructure improvements, and mitigation measures is provided. Estimates of existing and projected stormwater runoff peak flows are also provided.</p> <p>To mitigate stormwater runoff, the Project proposes stormwater and drainage improvements designed to minimize runoff entering Keauhou Bay. These improvements include the introduction of permanent Best Management Practices (BMPs), such as sediment control mechanisms and effective stormwater management systems. In the long term, the proposed drainage system, permanent BMPs, and new native landscaping will help capture and treat runoff from the Project Area and upslope areas, decreasing sediment, nutrient, and pollutant levels that might otherwise flow toward Keauhou Bay.</p> <p>Additionally, the Project is adopting Low-Impact Development (LID) practices, which emphasize conserving natural features and employing localized, small-scale stormwater systems that mimic natural hydrologic processes. <p>existing traffic that is currently roughly more than a ½ mile away and that currently drains to an existing golf course and forest area. Roadways are well known for the ability to accumulate and dispense toxic pollutants during rainfall events. Thus, by positioning the roadway closer to the bay there is the potential for an increase in toxic pollutants entering the bay and impacting existing flora and fauna. There is NO study and/or analysis of the existing toxicity of runoff to the bay from nearby roadways. Additionally, there is NO analysis or projection of the concentration and ecological impact of the project and additional roadway on future runoff to the bay arising from the Project. Not only do roadways accumulate toxicants that runoff the roadways during rainfall events, but projects such as resorts with houses, pools, lawns etc... also have increased runoff of nitrates and phosphates. Nitrates and phosphates, among similar chemicals, are well known to cause eutrophication to water bodies. Golf courses also have the potential to release substantial amounts of nitrates and phosphates through runoff. Currently, the golf course to the east of the bay drains into the forest area, which the Project proposes to remove. The forest area likely acts as buffer that absorbs nitrates and phosphates that are captured by the existing forest area. At times, after heavy rainfall, the end of the bay closest to Project proponent's property can appear slightly green and with surface scum, which suggests that under current conditions there may be nutrient issues with the current runoff. Not only does the EIS fail to analyze existing conditions but also the impact of the removal of the forest, construction of the road and construction of the resort on the future release of eutrophic chemicals to the bay. On this basis alone, the EIS must be rejected and further study conducted</p>		<p>Report, which includes both the 303(d) list of impaired waters and the 305(b) report on overall water quality.</p> <p>Additionally, the DOH Clean Water Branch (CWB) implements a beach monitoring program, which focuses on detecting bacterial contamination in Hawai'i's recreational coastal waters. The program is supported by annual federal funding through the Beaches Environmental and Coastal Health (BEACH) Act and is designed to reduce the risk of illness among beach users. As part of this program, the CWB conducts routine monitoring at public beaches statewide.</p> <p>According to CWB's dataset on Exceedances During Rain Events (1999–2021), Keauhou Bay recorded one exceedance in May 2005. More recently, in February 2023, a beach advisory was issued due to a high bacteria count detected during routine monitoring, with levels reported at 137 colony-forming units per 100 mL. The cause of the exceedance was undetermined. The DOH noted that Keauhou Bay has historically met acceptable beach threshold levels and that no known sources of fecal contamination were identified.</p> <p>The EIS notes that the 2024 State of Hawai'i Water Quality Monitoring and Assessment (Integrated Report), identifies Keauhou Bay as an impaired water body. 		<p>decreasing sediment, nutrient, and pollutant levels that might otherwise flow toward Keauhou Bay.</p> <p>Additionally, the Project is adopting Low-Impact Development (LID) practices, which emphasize conserving natural features and employing localized, small-scale stormwater systems that mimic natural hydrologic processes. Prior to construction, a detailed drainage masterplan will be developed to integrate these strategies, including criteria for infiltration systems, stormwater detention and retention, flood analysis, and drainage system schematics.</p> <p>The project's detailed drainage analysis and design will require design review and approval by the County for land use and construction plan approvals subsequent to the FEIS. The Project will be designed to comply with the County Drainage Standards, which include design requirements and regulations to address stormwater impacts within the County of Hawai'i.</p> <p>All construction activities will be confined to land, with no work planned in ocean waters, thereby limiting potential direct impacts on the bay's water quality. The Project will comply with all NPDES permit requirements and follow established practices to prevent sediment and pollutants from reaching nearby water bodies during construction.</p>
<p>The following comments pertain specifically to water quality issues affecting Keauhou Bay. The draft EIS does not address these nor accounts for the fact that the State and the EPA list Keauhou Bay as an Impaired Water Body under section 303 D of the Clean Water Act (CWA). That law requires that impacts to the Bay be mitigated and that further impairment does not occur. This requirement under the law has not been met. Any development in the watershed needs to be conducted by a careful evaluation of this fact. Under the law, remediation begins by conducting a Total, Maximum Daily Loading study known as a TMDL. The Bay is listed as impaired for exceeding the limits for turbidity. Turbidity has several causes in near-shore waters, such as</p>	<p>Michael Bennett Richard Bennett</p>	<p>The Hawai'i Department of Health (DOH) conducts water quality monitoring as part of its responsibilities under the Clean Water Act on a biennial (two-year) cycle. This assessment evaluates the condition of surface waters across the state, including the identification of impaired water bodies, and supports reporting to the U.S. Environmental Protection Agency through the Integrated Report, which includes both the 303(d) list of impaired waters and the 305(b) report on overall water quality.</p> <p>Additionally, the DOH Clean Water Branch (CWB) implements a beach monitoring program, which focuses on detecting bacterial contamination in Hawai'i's recreational coastal waters. <p>runoff water with fine sediments and phytoplankton. Our research shows that turbidity is a problem in Keauhou Bay in the absence of surf events. The turbidity is also due to the overgrowth of marine phytoplankton. Our studies show that turbidity declines along a line moving offshore. The inner Bay has very poor circulation and is where most sediments and other factors causing turbidity arise. Phytoplankton grow in response to increased temperature and nutrient loading in the Bay. The lack of adequate circulation amplifies the problem. The photo was taken in the summer of 2007 in response to concerns about the greening of Keauhou Bay. The brand name on the canoe paddle is not legible. (photo credit Bennett). 2 Figure 1. Nine-month summary of turbidity data for the Bay. (Bennett 2002) The nine-month summary chart above shows that turbidity is worse at the shoreline and decreases non-linearly in waters offshore. The slight rise in turbidity at 250 meters may be more of a phytoplankton effect than sediment. The DEIS makes the following statement regarding groundwater. Due to the low frequency of substantial rainfall and high permeability of the soils throughout the Project In this area, surface runoff generally does not occur in the typical rainfall occurrence. Runoff either percolates into the underlying groundwater or evaporates into the atmosphere. There are no drainage reports or calculations on file with the County of Hawai'i or DOT for the adjacent public roadways or surrounding developed properties. However, existing stormwater runoff peak flow estimates for the three (3) drainage basis within the Project Area are presented in Table 4-4. The draft EIS fails to account for surface water runoff from Kamehameha III Road. At the Bayside terminus of the road is a dry well. It is typically loaded with sediment and unable to handle the storm flows that come down the length of the road. Thereafter, water overflows the curb and goes down the driveways and the slope into the Bay. As it does, it picks up considerable sediment and delivers it to the near-shore waters, increasing the turbidity problem (Fig 3). 3 Figure 2.</p>		<p>Beaches Environmental and Coastal Health (BEACH) Act and is designed to reduce the risk of illness among beach users. As part of this program, the CWB conducts routine monitoring at public beaches statewide, including Keauhou Bay.</p> <p>According to CWB's dataset on Exceedances During Rain Events (1999–2021), Keauhou Bay recorded one exceedance in May 2005. <p>Rain catchment area and water volume estimate. (Bennett 2002) As calculated above, a one-inch rain can produce over five hundred thousand gallons of water, with most of the flow eroding fine sediments as it enters the Bay (Figure 3). The County of Hawai'i was made aware of this dry well failure four years ago. Some of this water comes off of Kamehameha Schools land. The DEIS statement that rainwater percolates to groundwater suggests groundwater is the terminus and the water does not flow to the sea. For at least 25 years, it was the position of the State that groundwater under the land does not communicate with the sea. Considerable research, such as Knee (2010), Dulai (2020), Peterson (2009), and others, shows that the State's policy is specious and not science-based. The State's anchialine system is a subterranean estuary (Bishop 2015). Consequently, the DEIS must reconsider the implication that the local groundwater is an inconsequential endpoint for fresh and waste water flows. A recent US Supreme Court decision held that wastewater disposal to the nearshore groundwater without the necessary permit was a violation of the CWA (see footnote page 7). 4 Figure 3. Stormwater and sediment Flow into the Bay. The photos suggest considerable sediment erosion into the Bay. Nutrient Degradation and Impairment of the Bay. The draft EIS does not account for the elevated levels of nutrients in the Bay. Again, our research shows that nitrogen and phosphorus exceed state standards. Unlike other locations, it is unfortunate that the Hawai'i Department of Health fails to measure these nutrients in the Bay. Thus, conducting a nutrient analysis of the Bay waters was necessary. That analysis is provided below. 5 Table 1. Nutrient analysis along transects over three quarters of 2019 Note: The NELHA Lab has multiple certifications, including the State Department of Health None of the nutrient values for water collected as shown above met state standards. The elevated nutrients in the Keauhou Bay watershed come from various sources. A common misconception is that fertilizers applied to private</p>		<p>by the HPUC. It is expected that the He'eia WWRF will have capacity to accommodate the increase in wastewater flows.</p> <p>Further study is needed to determine the capacity of the individual components of the existing Keauhou sewer system. Hawaii Water Service, as the operator, will review and determine the need for any improvements or expansions to the existing system to ensure adequate capacity and compliance with regulatory requirements. However, this evaluation typically occurs during the County permitting process, when more detailed project designs are submitted for review and approval. Kamehameha Schools remains open to cooperating with utility providers should they decide to replace or relocate infrastructure in the future as part of their mitigation strategies.</p> <p>EIS Section 4.5 discusses Project stormwater management and drainage improvements. An analysis of existing drainage conditions, proposed infrastructure improvements, and mitigation measures are evaluated. Estimates of existing and projected stormwater runoff peak flows are also provided.</p> <p>To mitigate stormwater runoff, the Project proposes stormwater and drainage improvements designed to minimize runoff entering Keauhou Bay. These improvements include the introduction of permanent Best Management Practices (BMPs), such as sediment control mechanisms and effective stormwater management systems. In the long term, the proposed drainage system, permanent BMPs, and new native landscaping will help capture and treat runoff from the Project Area and upslope areas, decreasing sediment, nutrient, and pollutant levels that might otherwise flow toward Keauhou Bay.</p> <p>Additionally, the Project is adopting Low-Impact Development (LID) practices, which emphasize conserving natural features and employing localized, small-scale stormwater systems that mimic natural hydrologic processes. Prior to construction, a detailed drainage masterplan will be developed to integrate these strategies, including criteria for infiltration systems, stormwater</p>

<p>properties and the local golf course are the significant sources. However, research shows that nutrient leaching from the Mauna Kea and Keauhou golf courses is minor compared to the nearby homes on Puako Drive (Dialer 2011). The likely source is the myriad cesspools in the watershed. Some homes on the North peninsula of the Bay are connected to sewers, but most homes are not. The elevated levels of ammonia suggest a water connection to fresh sources of animal and human waste. Ammonia in marine water is quickly converted to nitrate. Our data also shows the nitrogen and phosphorus levels exceed state standards for the Bay. Had the State collected this data, the EPA would declare water Impairment from these nutrients. These elevated nutrients can cause the seasonal "greening" of the marine waters (Smith 2020). The draft EIS makes no mention of nutrient pollution issues and implies that all new developments will be connected to the sewer line that transmits raw sewage to the Heeia wastewater treatment plant. The treated wastewater containing most of the nutrients in human waste is conveyed to the golf course to irrigate the golf course. It is not known the extent to which those nutrients leech into the groundwater and the Bay. It is also not known how much more water the golf course will utilize in the future. Several residences and perhaps some commercial facilities in the proposed development area use cesspools or septic systems for human waste management. The impact on the Bay is significant and needs to be described and mitigated. However, this problem is not mentioned in 6 the DEIS. It is more than advisable that the Project connect all waste systems to the regional sewer. It is well established that sewer lines leak, which is a function of many factors such as piping class and age (Rutch 2006). In the project area, some sewer lines are quite old. One such line on the East shore of the Bay broke during a significant tidal event. The DEIS does not account for sewer line leakage or the risk from extreme tidal events. This problem needs to be evaluated, and where sewer lines are at risk</p>		<p>detention and retention, flood analysis, and drainage system schematics.</p> <p>The project's detailed drainage analysis and design will require design review and approval by the County for land use and construction plan approvals subsequent to the FEIS. The Project will be designed to comply with the County Drainage Standards, which include design requirements and regulations to address stormwater impacts within the County of Hawai'i.</p> <p>All construction activities will be confined to land, with no work planned in ocean waters, thereby limiting potential direct impacts on the bay's water quality. The Project will comply with all NPDES permit requirements and follow established practices to prevent sediment and pollutants from reaching nearby water bodies during construction.</p> <p>It is important to note that Kamehameha Schools does not own or maintain Kamehameha III Road or Kaleiopapa Street. Both roadways are under the jurisdiction of the County of Hawai'i, which is responsible for their upkeep, including any upgrades or modifications to pavement, drainage systems, or related infrastructure. Kamehameha Schools does not have the authority to implement improvements within the public right-of-way or make changes to stormwater systems located within these County-owned corridors. However, implementation of the Project will not increase stormwater runoff to these roads. The existing Project Area is unmanaged and lacks stormwater infrastructure, leading to uncontrolled runoff that may flow toward Kamehameha III Road, occasionally pooling in the cul-de-sac and contributing to overflow toward the ocean. With Project implementation, on-site drainage improvements and best management practices will be incorporated to capture, retain, and treat stormwater within the Project Area, thereby reducing uncontrolled flow onto Kamehameha III Road.</p> <p>Similarly, the existing boat ramp and washdown facilities are owned and managed by the State of Hawai'i. As such, Kamehameha School's has no jurisdiction or authority to regulate</p>

<p>and need to be replaced by resilient lines such as High-Density Polyethylene (HDPE). Figure 4. Nitrogen (delta N 15) signatures along the Keauhou Region shoreline (Dailer 2011) Nitrogen Signatures in the Keauhou Area The magnitude of the delta N 15 value indicates the greater contribution of human (animal) waste nitrogen. Raw sewage water is currently conveyed from the hotel at the Bay to the Heeia Wastewater Treatment Plant (HWWTP). The Secondary treated wastewater (WW) is provided to the local golf course for irrigation. How much water the golf course needs or could utilize is unknown. Casual observation of the course suggests that it is under-irrigated. Nutrients in the WW are not removed but beneficial to the grass. Delta N 15 data indicates that the golf course contributes negligible human (animal) nitrogen to the near-shore waters. In contrast, the Delta N 15 values are higher in the Bay proper. The source is likely human waste from cesspools in the immediate region. Less than half of the homes are connected to sewer. It is imperative that the DEIS account for these sources and provide sewer design criteria for all new developments to be connected to the HWWTP. 7 Figure 5. Non-permitted wastewater discharge to the Bay Some years ago, federal funds were provided to upgrade the Bay boat launch facilities. Before the upgrade, boat wash water flowed over the surface and into the Bay. A dry well was installed, and it drained to surface water only a few feet below the drain. Boat wash water is potable water. The wash water contains fish liquids, blood, and particulate fish waste. This wastewater may be a source of ammonia in the Bay. Washed bilge water often contains oil products. The data in Figure 5 is from the wash water surface drain at Honokohau Harbor. Since it is obvious this wash water flows into the Bay in the groundwater, the State should have applied for an NPDES permit. Such a permit is required for any ocean discharge of wastewater, especially in waters known to be Impaired under the CWA. This requirement has been affirmed by the Supreme Court. Conclusions The surface</p>		<p>practices occurring at these facilities. Implementation of the Project is expected to reduce stormwater flow from unmanaged lands which may flow toward the State owned dry well.</p>

<p>water and groundwater flows from the proposed development and those in the upper watershed need to be considered to ensure that further degradation of this impaired water body does not occur. This is referred to herein as a TMDL. Given the environmental ethics of Kamehameha Schools and the legal history of the Public Trust Doctrine of the State Constitution, we suggest that these environmental impacts described above be studied for the project design and mitigated.</p>		
<p>Please reject Kamehameha Schools EIS for Keauhou Bay to become a Bungalow Resort. This is a VERY small bay and the added footprint of a 105 room Resort, that will include excess traffic, will have a serious negative impact in Keauhou Bay.</p> <p>Please, Do NOT risk polluting the water in Keauhou Bay by allowing Kamehameha Schools to develop their bungalow resort project. Research has shown that developments pollute nearby waters constantly during development and after.</p> <p>Developments have ALWAYS polluted the water in every near coastal development area. An article entitled, "What is the biggest source of pollution in the ocean?" by NOAA, National Oceanic and Atmospheric Administration, states, "When large tracts of land are plowed, the exposed soil can erode during rainstorms. Much of this runoff flows to the sea, carrying with it agricultural fertilizers and pesticides." It also states, "Eighty percent of pollution to the marine environment comes from the land. One of the biggest sources is called, nonpoint source pollution, which occurs as a result of runoff."</p> <p>The trees you want to take down keep the runoff pollution from the golf course from going into the Bay. According to the National Library of Medicine, in their article, "Putting the Earth in Play: Environmental Awareness and Sports," shares that the golf industry uses approximately 50 pesticide active</p>	<p>Nancy Thornes                      Danica Ann Barretto                      Sandra Lee                      Jasmin McCracken                      Jan Salemo</p>	<p>It is not always the case that development inevitably leads to pollution of nearby ocean waters. The impact of development on water quality largely depends on the type of development, quality of infrastructure, and the effectiveness of long-term management practices, as well as responsible construction methods in the short term.</p> <p>The project's stormwater management plan and Best Management Practices (BMPs) are designed to safeguard Keauhou Bay's water quality and marine resources both during and after development. EIS Section 4.5 discusses Project stormwater management and drainage improvements. The Project proposes a comprehensive stormwater management system designed to capture and treat stormwater runoff on-site. This infrastructure will significantly reduce pollutants reaching the ocean, helping to maintain and enhance water quality in Keauhou Bay.</p>

<p>product used extensively by commercial fishermen (often late at night) is Clorox bleach, which is essential to sanitizing fish boxes to minimize the proliferation of bacteria, and its transfer to the next catch. There are very few 2-stroke motors (lubricating oil is injected into the gasoline) left in the fleet, but those that remain most likely account for the majority of the oil that gets in the water especially when the engines are being flushed in the washdown area. The DEIS fails to discuss these current negative practices. Mitigation efforts might include stopping the use of the current area for washdown and installing a completely new washdown area for boats- one that is fully isolated and prevents wastewater from entering the Bay</p>		
<p>I strongly oppose any development that will have a detrimental effect on the bay and its fragile ecosystem. Also it is shameful that a hotel is being planned to be built there.</p> <p>From the testimony of Richard Bennet, MS, Phd: Keauhou Bay is a small bay inlet on Hawai'i Island and, as such, is subject to much more degradation than the open shore area of West Hawai'i. As such, the Bay requires special protections. The following comments pertain specifically to water quality issues affecting Keauhou Bay. The Bay is listed as impaired for exceeding the limits for turbidity. Turbidity has several causes in near-shore waters, such as runoff water with fine sediments and phytoplankton. Our research shows that turbidity is a problem in Keauhou Bay in the absence of surf events. The turbidity is also due to the overgrowth of marine phytoplankton. Our studies show that turbidity declines along a line moving offshore. The inner Bay has very poor circulation and is where most sediments and other factors causing turbidity arise. Phytoplankton grow in response to increased temperature and nutrient loading in the Bay. The lack of adequate circulation amplifies the problem.</p>	Sylvie Madison	<p>The project's stormwater management plan and Best Management Practices (BMPs) are designed to safeguard Keauhou Bay's water quality and marine resources both during and after development. EIS Section 4.5 discusses Project stormwater management and drainage improvements. <p>coastal development area. An article entitled, "What is the biggest source of pollution in the ocean?" by NOAA, National Oceanic and Atmospheric Administration, states, "When large tracts of land are plowed, the exposed soil can erode during rainstorms. Much of this runoff flows to the sea, carrying with it agricultural fertilizers and pesticides." It also states, "Eighty percent of pollution to the marine environment comes from the land. One of the biggest sources is called nonpoint source pollution, which occurs as a result of runoff." The trees you want to take down keep the runoff pollution from the golf course from going into the Bay. According to the National Library of Medicine, in their article, "Putting the Earth in Play: Environmental Awareness and Sports," shares that the golf industry uses approximately 50 pesticide active ingredients, including chlorpyrifos—an insecticide that is banned for residential use by the EPA due to developmental hazards. These pollutions and more are being held off from running into the Bay by the very trees you want to take down.</p>		<p>The project's stormwater management plan and Best Management Practices (BMPs) are designed to safeguard Keauhou Bay's water quality and marine resources both during and after development. EIS Section 4.5 discusses Project stormwater management and drainage improvements. The Project proposes a comprehensive stormwater management system designed to capture and treat stormwater runoff on-site. This infrastructure will significantly reduce pollutants reaching the ocean, helping to maintain and enhance water quality in Keauhou Bay.</p>
<p>Over the last decade we have consistently heard from others; past neighbors, environmentalists and scientist studying the long term effects of development at Keauhou Bay being concerned about the quality of water. Currently affected by the existing roadways, the golf course, cesspools and extractive tourism, we believe that this concern has not been adequately addressed. This development plan is misguided and has not sufficiently taken in account the current residential neighborhood or the negative effects on such a small bay that is easily subject to further degradation.</p>	Sally Rankin	<p>The EIS notes that the 2020 State of Hawai'i Water Quality Monitoring and Assessment Report, known as the Integrated Report (IR), identifies Keauhou Bay as an impaired water body. Turbidity was the leading cause of impairment. Nonpoint sources of pollution in the State primarily consist of cesspools, agricultural land use, urban land use, and feral ungulate destruction and soil erosion in conservation lands.</p> <p>A significant number of non-Kamehameha Schools properties in the vicinity of Keauhou Bay remain on cesspool systems. The Project, however, will manage wastewater by directing all generated wastewater through a new sewer main along Old Kona Road. This main will connect to the existing sewer infrastructure, allowing for proper treatment and reducing the potential for pollutants to reach the ocean. EIS Section 4.12.2 discusses wastewater treatment and disposal.</p> <p>EIS Section 4.5 discusses Project stormwater management and drainage improvements. An analysis of existing drainage</p>

Comments	Commenter	Responses
<p>Environmental Concerns: The proposed development poses several environmental risks. Increased construction/roads and land use will lead to significant ecological disruption in the Keauhou Bay area, which is already challenged. Ocean water quality is bad in and around the Keauhou and He'eia Bay area due to poor land management practices. Increased issues with your development such as habitat destruction, increased runoff, and pollution will add even more detrimental effects on local wildlife and marine ecosystems.</p> <p>Excessive Concrete and Pollution: The expansion of concrete parking lots and other infrastructural elements will 100% lead to increased pollution and harm the environment. Building a retail center in Keauhou Bay with all those parking spots is totally irresponsible - destroying nature for everyone so that KS can attempt to make a profit.</p>	Bryce Groark	<p>The project's stormwater management plan and Best Management Practices (BMPs) are designed to safeguard Keauhou Bay's water quality and marine resources both during and after development. <p>Please, Do NOT risk polluting the water in Keauhou Bay by allowing Kamehameha Schools to develop their bungalow resort project. Research has shown that developments pollute nearby waters constantly during development and after. Developments have ALWAYS polluted the water in every near coastal development area. An article entitled, "What is the biggest source of pollution in the ocean?" by NOAA, National Oceanic and Atmospheric Administration, states, "When large tracts of land are plowed, the exposed soil can erode during rainstorms. Much of this runoff flows to the sea, carrying with it agricultural fertilizers and pesticides." It also states, "Eighty percent of pollution to the marine environment comes from the land. <p>I am voicing my concerns with the proposed development of Keauhou Bay. During my 13 years of standup paddleboarding and paddling, Keauhou Bay has been the primary location for my water activities. During this time, I have witnessed periods of water degradation and numerous algae blooms. I am concerned with the water quality in Keauhou Bay and feel the water will only be further degraded with the addition of a resort.</p>	<p>Linda Churches</p>	<p>The project's stormwater management plan and Best Management Practices (BMPs) are designed to safeguard Keauhou Bay's water quality and marine resources both during and after development. <p>The second example in the DEIS attests to a degraded environment in Ho’okuku Pond (KBMP Section 4.6). The report cites deep organic sediments and dense filamentous algae mats and includes photodocumentation of such (Figure 4-32). These characteristics suggest that runoff carries at least sediment from upland towards the shore (albeit perhaps from a small subwatershed). Surface runoff may also carry excessive nutrients, as evidenced by the algae mats, though the source of nutrients may be the cited “good connection to the basal aquifer and a subterranean pathway to the marine environment” (see also Figure 4-31). Finally, the suggestion that Ho’okuku Pond might be affected by harmful bacteria suggest that Keauhou Bay is at least at risk of such contamination. There is no documentation suggesting that the sedimentation or excessive nutrients (or potentially pathogenic bacteria) are limited to Ho’okuku Pond, and the condition of Ka’ili’ilinehe Beach suggests sedimentation impacts are more widespread. Furthermore, sediment and nutrients are well known examples of development-related impacts to marine environments generally, and corals specifically (for nutrients see Silber et al. 2018 and DiAngelo &amp; Wiedenmann 2014; for sedimentation see Rogers 1990 and Tuttle &amp; Donahue 2022). The DEIS assesses potential impacts of sedimentation by asserting that infiltration is adequate in general, and “strategies...will be implemented.” However, there is no comparison between the current impervious</p>	Nicholas Buhbe	<p>The EIS notes that the 2020 State of Hawai’i Water Quality Monitoring and Assessment Report, known as the Integrated Report (IR), identifies Keauhou Bay as an impaired water body. <p>surface coverage and that proposed, and as such there is no data presented on which to develop an appropriate level of mitigation. Current conditions at Ho'okuku Pond document that infiltration has been insufficient at a lower degree of development than that proposed, and no evidence is provided which documents that existing runoff is safely accommodated in uplands or by Keauhou Bay. Furthermore, while infiltration may be a good strategy to prevent sedimentation (if low impact development practices are implemented and maintained), the hydrological connectivity of the site produces a potential nutrient, bacteria, and contaminant transport pathway from the Project development area to the shoreline. The reduction in vegetative cover and replacement of those areas with hardscape or irrigated/horticulturally maintained areas promote such transport and may increase exposure of and effects on downgradient marine environmental resources. Such sensitive resources, considering their innate and cultural value, deserve at least as much attention as the assessment of flora and avian species in Section 4.6.</p>		<p>systems. 		quality conditions in Keauhou Bay are not expected to worsen and may improve through reduced sediment and pollutant loading.
<p>"The following comments pertain specifically to water quality issues affecting Keauhou Bay. The draft EIS does not address these nor accounts for the fact that the State and the EPA list Keauhou Bay as an Impaired Water Body under section 303 D of the Clean Water Act (CWA). 3 That law requires that impacts to the Bay be mitigated and that further impairment does not occur. This requirement under the law has not been met." Please reject Kamehameha Schools EIS because Keauhou Bay is listed as Impaired under the Environmental Protection Act for Clean Water and this development will add more pollution into the bay. "The Clean Water Act (CWA) is the primary Federal statute regulating the protection of the nation's water. The CWA aims to prevent, reduce, and eliminate pollution in the nation's water in order to "restore and maintain the chemical, physical, and biological integrity of the Nation's waters", as described in CWA section 101(a). A stated goal of the CWA is to eliminate discharge of pollutants into navigable waters, as that term is defined in CWA § 502(7) and corresponding case law." I have attached a screenshot of Keauhou Bay on the EPA Impaired water list and here is the link for Keauhou Bay (Kona) Assessment Unit ID: HI713293 <a href="https://mywaterway.epa.gov/waterbody-report/21HI/HI713293/2020">https://mywaterway.epa.gov/waterbody-report/21HI/HI713293/2020</a> The goal of the Clean Water Act (CWA) is "to restore and maintain the chemical, physical, and biological integrity of the Nation's waters" (33 U.S.C §1251(a)) and Kamehameha Schools Bungalow Resort will devastate the entire ecosystem in Keauhou Bay.</p>	<p>Rebecca Melendez</p>	<p>The EIS notes that the 2020 State of Hawai'i Water Quality Monitoring and Assessment Report, known as the Integrated Report (IR), identifies Keauhou Bay as an impaired water body. <p>This requirement under the law has not been met. Any development in the watershed needs to be conducted by a careful evaluation of this fact. Under the law, remediation begins by conducting a Total, Maximum Daily Loading study known as a TMDL. The Bay is listed as impaired for exceeding the limits for turbidity. Turbidity has several causes in near-shore waters, such as runoff water with fine sediments and phytoplankton. Our research shows that turbidity is a problem in Keauhou Bay in the absence of surf events. The turbidity is also due to the overgrowth of marine phytoplankton. Our studies show that turbidity declines along a line moving offshore. The inner Bay has very poor circulation and is where most sediments and other factors causing turbidity arise. Phytoplankton grow in response to increased temperature and nutrient loading in the Bay. The lack of adequate circulation amplifies the problem.</p> <p>The nine-month summary chart above shows that turbidity is worse at the shoreline and decreases non-linearly in waters offshore. The slight rise in turbidity at 250 meters may be more of a phytoplankton effect than sediment. The DEIS makes the following statement regarding groundwater. Due to the low frequency of substantial rainfall and high permeability of the soils throughout the Project In this area, surface runoff generally does not occur in the typical rainfall occurrence. Runoff either percolates into the underlying groundwater or evaporates into the atmosphere. There are no drainage reports or calculations on file with the County of Hawai'i or DOT for the adjacent public roadways or surrounding developed properties. However, existing stormwater runoff peak flow estimates for the three (3) drainage basis within the Project Area are presented in Table 4-4. The draft EIS fails to account for surface water runoff from Kamehameha III Road. At the Bayside terminus of the road is a dry well. It is typically loaded with sediment and unable to handle the storm flows that come down the length of the road. Thereafter, water overflows the curb and goes down the driveways and the slope into the Bay. As it does, it</p>		<p>land use, urban land use, and feral ungulate destruction and soil erosion in conservation lands.</p> <p>A significant number of non-Kamehameha Schools properties in the vicinity of Keauhou Bay remain on cesspool systems. <p>picks up considerable sediment and delivers it to the near-shore waters, increasing the turbidity problem (Fig 3). 3 Figure 2. Rain catchment area and water volume estimate. (Bennett 2002) As calculated above, a one-inch rain can produce over five hundred thousand gallons of water, with most of the flow eroding fine sediments as it enters the Bay (Figure 3). The County of Hawai'i was made aware of this dry well failure four years ago. Some of this water comes off of Kamehameha Schools land. The DEIS statement that rainwater percolates to groundwater suggests groundwater is the terminus and the water does not flow to the sea. For at least 25 years, it was the position of the State that groundwater under the land does not communicate with the sea. Considerable research, such as Knee (2010), Dulai (2020), Peterson (2009), and others, shows that the State's policy is specious and not science-based. The State's anchialine system is a subterranean estuary (Bishop 2015). Consequently, the DEIS must reconsider the implication that the local groundwater is an inconsequential endpoint for fresh and waste water flows. A recent US Supreme Court decision held that wastewater disposal to the nearshore groundwater without the necessary permit was a violation of the CWA (see footnote page 7). 4 Figure 3. Stormwater and sediment Flow into the Bay. The photos suggest considerable sediment erosion into the Bay. Nutrient Degradation and Impairment of the Bay. The draft EIS does not account for the elevated levels of nutrients in the Bay. Again, our research shows that nitrogen and phosphorus exceed state standards. Unlike other locations, it is unfortunate that the Hawai'i Department of Health fails to measure these nutrients in the Bay. Thus, conducting a nutrient analysis of the Bay waters was necessary. That analysis is provided below. 5 Table 1. Nutrient analysis along transects over three quarters of 2019 Note: The NELHA Lab has multiple certifications, including the State Department of Health None of the nutrient values for water collected as shown above met state standards. The elevated nutrients in</p>		<p>construction plan approvals subsequent to the FEIS. The Project will be designed to comply with the County Drainage Standards, which include design requirements and regulations to address stormwater impacts within the County of Hawai'i.</p> <p>All construction activities will be confined to land, with no work planned in ocean waters, thereby limiting potential direct impacts on the bay's water quality. The Project will comply with all NPDES permit requirements and follow established practices to prevent sediment and pollutants from reaching nearby water bodies during construction.</p> <p>It is important to note that Kamehameha Schools does not own or maintain Kamehameha III Road or Kaleiopapa Road. Both roadways are under the jurisdiction of the County of Hawai'i, which is responsible for their upkeep, including any upgrades or modifications to pavement, drainage systems, or related infrastructure. Kamehameha Schools does not have the authority to implement improvements within the public right-of-way or make changes to stormwater systems located within these County-owned corridors. However, implementation of the Project will not increase stormwater runoff to these roads. The existing Project Area is unmanaged and lacks stormwater infrastructure, leading to uncontrolled runoff that may flow toward Kamehameha III Road, occasionally pooling in the cul-de-sac and contributing to overflow toward the ocean. With Project implementation, on-site drainage improvements and best management practices will be incorporated to capture, retain, and treat stormwater within the Project Area, thereby reducing uncontrolled flow onto Kamehameha III Road.</p> <p>Similarly, the existing boat ramp and washdown facilities are owned and managed by the State of Hawai'i. As such, Kamehameha School's has no jurisdiction or authority to regulate practices occurring at these facilities.</p> <p>The existing Project Area lacks active management and does not contain infrastructure to capture or treat stormwater, resulting in untreated runoff that may flow toward the ocean. With</p>

<p>the Keauhou Bay watershed come from various sources. A common misconception is that fertilizers applied to private properties and the local golf course are the significant sources. However, research shows that nutrient leaching from the Mauna Kea and Keauhou golf courses is minor compared to the nearby homes on Puako Drive (Dialer 2011). The likely source is the myriad cesspools in the watershed. Some homes on the North peninsula of the Bay are connected to sewers, but most homes are not. The elevated levels of ammonia suggest a water connection to fresh sources of animal and human waste. Ammonia in marine water is quickly converted to nitrate. Our data also shows the nitrogen and phosphorus levels exceed state standards for the Bay. Had the State collected this data, the EPA would declare water Impairment from these nutrients. These elevated nutrients can cause the seasonal "greening" of the marine waters (Smith 2020). The draft EIS makes no mention of nutrient pollution issues and implies that all new developments will be connected to the sewer line that transmits raw sewage to the Heeia wastewater treatment plant. The treated wastewater containing most of the nutrients in human waste is conveyed to the golf course to irrigate the golf course. It is not known the extent to which those nutrients leech into the groundwater and the Bay. It is also not known how much more water the golf course will utilize in the future. Several residences and perhaps some commercial facilities in the proposed development area use cesspools or septic systems for human waste management. The impact on the Bay is significant and needs to be described and mitigated. However, this problem is not mentioned in 6 the DEIS. It is more than advisable that the Project connect all waste systems to the regional sewer. It is well established that sewer lines leak, which is a function of many factors such as piping class and age (Rutch 2006). In the project area, some sewer lines are quite old. One such line on the East shore of the Bay broke during a significant tidal event. The DEIS does not account for sewer line</p>		<p>implementation of the Project, drainage improvements and best management practices will be introduced to capture and treat runoff on site. <p>leakage or the risk from extreme tidal events. This problem needs to be evaluated, and where sewer lines are at risk and need to be replaced by resilient lines such as High-Density Polyethylene (HDPE). Figure 4. Nitrogen (delta N 15) signatures along the Keauhou Region shoreline (Dailer 2011) Nitrogen Signatures in the Keauhou Area The magnitude of the delta N 15 value indicates the greater contribution of human (animal) waste nitrogen. Raw sewage water is currently conveyed from the hotel at the Bay to the Heeia Wastewater Treatment Plant (HWWTP). The Secondly treated wastewater (WW) is provided to the local golf course for irrigation. How much water the golf course needs or could utilize is unknown. Casual observation of the course suggests that it is under-irrigated. Nutrients in the WW are not removed but beneficial to the grass. Delta N 15 data indicates that the golf course contributes negligible human (animal) nitrogen to the near-shore waters. In contrast, the Delta N 15 values are higher in the Bay proper. The source is likely human waste from cesspools in the immediate region. Less than half of the homes are connected to sewer. It is imperative that the DEIS account for these sources and provide sewer design criteria for all new developments to be connected to the HWWTP. 7 Figure 5. Non-permitted wastewater discharge to the Bay Some years ago, federal funds were provided to upgrade the Bay boat launch facilities. Before the upgrade, boat wash water flowed over the surface and into the Bay. A dry well was installed, and it drained to surface water only a few feet below the drain. Boat wash water is potable water. The wash water contains fish liquids, blood, and particulate fish waste. This wastewater may be a source of ammonia in the Bay. Washed bilge water often contains oil products. The data in Figure 5 is from the wash water surface drain at Honokohau Harbor. Since it is obvious this wash water flows into the Bay in the groundwater, the State should have applied for an NPDES permit. Such a permit is required for any ocean discharge of wastewater, especially in waters known to be</p>

<p>Impaired under the CWA. This requirement has been affirmed by the Supreme Court<sup>1</sup>. Conclusions The surface water and groundwater flows from the proposed development and those in the upper watershed need to be considered to ensure that further degradation of this impaired water body does not occur. This is referred to herein as a TMDL. Given the environmental ethics of Kamehameha Schools and the legal history of the Public Trust Doctrine of the State Constitution<sup>2</sup>, we suggest that these environmental impacts described above be studied for the project design and mitigated. <sup>1</sup> County of Maui, Hawaii v. Hawaii Wildlife Fund, 140 S. Ct. 1462, 590 U.S. 165, 206 L. Ed. 2d 640 (2020). <sup>2</sup> Kelly v. 1250 Oceanside Partners, 140 P.3d 985, 111 Haw. 205 (2006). <sup>8</sup> Keauhou Bay is a small bay inlet on Hawai'i Island and, as such, is subject to much more degradation than the open shore area of West Hawai'i. As such, the Bay requires special protections. Sincerely, /s R.H. Bennett MS, PhD, Presiden</p>		
<p>To whom it may concern an occasional visitor, No to the proposed development. Building always pollutes sensitive water areas. Please reject Kamehameha Schools EIS for Keauhou Bay to become a Bungalow Resort. This is a VERY small bay and the added footprint of a 105 room Resort, that will include excess traffic, will have a serious negative impact in Keauhou Bay. Please, Do NOT risk polluting the water in Keauhou Bay by allowing Kamehameha Schools to develop their bungalow resort project. Research has shown that developments pollute nearby waters constantly during development and after. Developments have ALWAYS polluted the water in every nearby coastal development area. An article entitled, "What is the biggest source of pollution in the ocean?" by NOAA, National Oceanic and Atmospheric Administration, states, "When large tracts of land are plowed, the exposed soil can erode during rainstorms. Much of this runoff flows to the sea, carrying with it agricultural fertilizers and pesticides." It also states, "Eighty percent of pollution to the marine environment</p>	Sharon Vollmuth	<p>It is not always the case that development inevitably leads to pollution of nearby ocean waters. <p>comes from the land. One of the biggest sources is called, nonpoint source pollution, which occurs as a result of runoff." The trees you want to take down keep the runoff pollution from the golf course from going into the Bay. According to the National Library of Medicine, in their article, "Putting the Earth in Play: Environmental Awareness and Sports," shares that the golf industry uses approximately 50 pesticide active ingredients, including chlorpyrifos—an insecticide that is banned for residential use by the EPA due to developmental hazards. This pollution and more are being held off from running into the Bay by the very trees you want to take down. Let's not forget the marine life that will be threatened by excess pollution and traffic. Keauhou Bay is the monk seals and the green sea turtle's habitat. More pollution and people will endanger these species. This Bay is worth protecting. Please do not put a resort in such a small area. Future generations will be deprived of what it currently is, and it could never be replaced. My friends and associates have written a good letter, so I am replicating it.</p>		<p>will be designed to comply with the County Drainage Standards, which include design requirements and regulations to address stormwater impacts within the County of Hawai'i.</p> <p>All construction activities will be confined to land, with no work planned in ocean waters, thereby limiting potential direct impacts on the bay's water quality. The Project will comply with all NPDES permit requirements and follow established practices to prevent sediment and pollutants from reaching nearby water bodies during construction.</p>
<p>Pleaes reject Kamehameha Schools EIS because Keauhou Bay is declared Impaired water HI713293 by the EPA Clean Water Act. This bay needs to be preserved because it is a natural resource that is very sensitve.</p> <p>"The State of Hawaii Conservation District is a designated land area managed by the Department of Land and Natural Resources (DLNR) through the Office of Conservation and Coastal Lands (OCCL). This district was established to protect Hawaii's natural resources and encompasses various land types including watersheds, scenic areas, parklands, wilderness areas, beach reserves, and habitats for endemic plants and wildlife. The Conservation District also includes submerged lands makai of the shoreline."  <a href="https://dlnr.hawaii.gov/occl/conservation-district/">https://dlnr.hawaii.gov/occl/conservation-district/</a></p> <p>Keauhou Bay is a natural resource and NEEDS TO BE PROTECTED. <p>It is my understanding that the purpose of an EIS is to conduct sufficient research and studies to inform the public of existing conditions in a Project area and provide assessments of Project impacts to the public and regulatory agencies. As part of this assessment, mitigation measures should be considered to reduce Project impacts. In this instance, it does not appear that adequate review of existing data from Keauhou Bay has been undertaken despite evidence of sedimentation, excessive nutrients, and potential bacteria issues. Additional work is necessary to assess existing conditions and analyze the potential impacts from the Project. An adequate assessment of mitigation measures is also necessary not only to complete the DEIS,</p>	Nicholas Buhbe	<p>The EIS notes that the 2020 State of Hawai'i Water Quality Monitoring and Assessment Report, known as the Integrated Report (IR), identifies Keauhou Bay as an impaired water body. Turbidity was the leading cause of impairment. Nonpoint sources of pollution in the State primarily consist of cesspools, agricultural land use, urban land use, and feral ungulate destruction and soil erosion in conservation lands.</p> <p>A significant number of non-Kamehameha Schools properties in the vicinity of Keauhou Bay remain on cesspool systems. The Project, however, will manage wastewater by directing all generated wastewater through a new sewer main along Old Kona Road. This main will connect to the existing sewer infrastructure,</p>

The Project will comply with all NPDES permit requirements and follow established practices to prevent sediment and pollutants from reaching nearby water bodies during construction.</p> <p>It is important to note that Kamehameha Schools does not own or maintain Kamehameha III Road or Kaleiopapa Road. Both roadways are under the jurisdiction of the County of Hawai'i, which is responsible for their upkeep, including any upgrades or modifications to pavement, drainage systems, or related infrastructure. Kamehameha Schools does not have the authority to implement improvements within the public right-of-way or make changes to stormwater systems located within these County-owned corridors. However, implementation of the Project will not increase stormwater runoff to these roads. The existing Project Area is unmanaged and lacks stormwater infrastructure, leading to uncontrolled runoff that may flow toward Kamehameha III Road, occasionally pooling in the cul-de-sac and contributing to overflow toward the ocean. With Project implementation, on-site drainage improvements and best management practices will be incorporated to capture, retain, and treat stormwater within the Project Area, thereby reducing uncontrolled flow onto Kamehameha III Road.</p>

<p>The draft EIS does not address these nor accounts for the fact that the State and the EPA list Keauhou Bay as an Impaired Water Body under section 303 D of the Clean Water Act (CWA). That law requires that impacts to the Bay be mitigated and that further impairment does not occur. This requirement under the law has not been met. Any development in the watershed needs to be conducted by a careful evaluation of this fact. Under the law, remediation begins by conducting a Total, Maximum Daily Loading study known as a TMDL.</p>	<p>Sylvie Madison</p>	<p>The EIS notes that the 2020 State of Hawai'i Water Quality Monitoring and Assessment Report, known as the Integrated Report (IR), identifies Keauhou Bay as an impaired water body. by the EPA due to developmental hazards. These pollutions and more are being held off from running into the Bay by the trees that would be destroyed and removed if this project were to be allowed.		
<p>Please see that developing Kamehameha Schools Bungalow Resort in Keauhou Bay WILL threaten endangered species due to the unavoidable development and golf course pollution runoff that would happen a lot more often due to taking out the natural pollution filter, that is the trees and the land that is there now. These pesticides will be in the pollution runoff that will enter Keauhou Bay more severely because of the bungalow resort development's pavement. As of right now the trees and land that this development wants to clear and develop into a bungalow resort is a Natural Pollution Filter. It's the pavement that this development wants to put in that will cause a lot of pollution to runoff into Keauhou Bay because this top land that is directly below the golf course (that they want to clear) soaks in the golf course pesticides, fertilizer, weed killer... and is the BEST AND ONLY PROTECTION POLLUTION FILTER Keauhou Bay has from the golf course pollution. These trees and land are saving monk seals and green sea turtles habitat from the golf course pollution and this land MUST BE PRESERVED and CONSERVED as the natural protector for Keauhou Bay hence, for these endangered species habitat. Under Section 2 (b) of the Endangered Species Act - Keauhou Bay MUST BECOME a CONSERVATION AREA for these endangered species because it is their habitat as of today, and to allow a resort development to be built above this bay would threaten the very lives of these endangered species because it will allow golf course toxic pollution and development pollution to run into these species natural habitat, which is Keauhou Bay. Keauhou Bay has trees and land just under the golf course (that Kamehameha Schools wants to clear for their bungalow resort) that protects Keauhou Bay from a lot of algae blooms because it soaks up pollution that is runoff from fertizler, weed killer... in the golf</p>	<p>Donald                      Robert Berger                      Stephen Goudreau                      Sara Irwin Goudreau                      Lucia Kaplan                      Rebecca Melendez                      Roslyn Patrick-Sunnes                      Deborah Sevy                      Mayari Sherina Ong                      Lisa Thatcher                      Rayann Ebreo                      Riley Reynolds                      Sharron Rudolph                      Curt and Ellen Winningham</p>	<p>EIS Section 4.5 discusses Project stormwater management and drainage improvements. <p>course, and unfortunately when there is a severely heavy rain storm the land up on top of the bay has a greater runoff than normal from the golf course pollution, and pollution foam and alga blooms happen because of it.</p> <p>If you allow a Bungalow Development in Keauhou Bay you WILL be agreeing to pollute this bay for years to come and COMPLETELY CHANGING KEAUHOU BAY'S ECOSYSTEM because the golf course runoff won't have the best protection which is the natural trees and land that can soak up the polluted water most of the year and polluted foam algae blooms will happen a lot more often. Does this EIS have any studies or reports on the extra runoff pollution due to clearing land and adding pavement? This needs to be fully known because you will be changing an entire ecosystem to build a bungalow resort. Because it rains in Keauhou Bay many nights out of the year and the land they want to clear absorbs the golf course toxins so this bay is not as severely polluted as it will be with pavement and development, and when serious storms come Keauhou Bay won't stand a chance because the land can't keep ALL golf course pollutions out during this time and pavement won't even come close. If you clear this land, this kind of algae bloom will happen a lot more often and end up killing a lot of coral and marine life as stated in the many articles that will follow. One of these articles is in the Global Coral Reef Alliance. They researched the reef before and after a golf course development, and even though this development is not a golf course development, it is still a development and it will also be located just under a golf course and this will allow the pollution from the golf course to come down to the bay a lot more often because the natural land that soaks up this pollution will be gone. Has this EIS done any kind of research about the alga blooms that happen after a serious storm because of the golf course runoff pollution?</p>		<p>benefits. The Project does not propose the removal of native forests.</p> <p>The project's stormwater management plan and Best Management Practices (BMPs) are designed to safeguard Keauhou Bay's water quality and marine resources both during and after development. <p>phase of this enormous project. GOLF COURSE POLLUTION KILLS MARINE LIFE AND DRASTICALLY CHANGES ECOSYSTEMS. These pesticides will be in the pollution runoff that will enter Keauhou Bay more severely should the natural habitat of the trees be removed and replaced with pavement. This is unavoidable! The pavement from this development will cause pollution to runoff into Keauhou Bay because this treed land that will become a housing development is situated directly between the golf course and the Bay. These trees, which absorb all the pollution from the golf course is the BEST AND ONLY PROTECTION POLLUTION FILTER Keauhou Bay has from the golf course pesticides, fertilizer and weed killer. These trees and land are saving monk seals and green sea turtles habitat from the golf course pollution and this land MUST BE PRESERVED and CONSERVED as the natural protector for Keauhou Bay and for these endangered species habitat. Under Section 2 (b) of the Endangered Species Act - Keauhou Bay MUST BECOME A CONSERVATION AREA for these endangered species. It is currently their habitat, and to allow a large resort development to be built above this bay clearly threatens the lives of these endangered species by allowing golf course toxic pollution and development pollution to run into these species natural habitat of Keauhou Bay. Though this development is not a golf course development, it is located just below a golf course and exposes the bay to the pollution from the golf course by removing the proven natural filter of the trees and natural ecosystem. Has this EIS done any kind of research about the algae blooms that happen after a serious storm because of the golf course runoff pollution? If you allow a Bungalow Development in Keauhou Bay you WILL be agreeing to pollute this bay for years to come and COMPLETELY CHANGING and possibly DESTROYING KEAUHOU BAY'S ECOSYSTEM. Does this EIS have any studies or reports on the extra runoff pollution due to clearing land and adding pavement? This needs to be fully assessed because you will be changing an entire ecosystem</p>	<p>Kaleihua Kamaka                      Kellie Kilcuo                      William Lim                      Jenni Lund                      Rebecca Melendez                      Alicia Morrier                      Belinda Pate                      Jo Quinn                      Jason Rigmaiden                      Bryn Stites                      Wim Verkaok                      Jyn Watson                      Celia Murry                      Maebrie Bettinardi</p>	<p>conditions, proposed infrastructure improvements, and mitigation measures are evaluated. Estimates of existing and projected stormwater runoff peak flows are also provided.</p> <p>To mitigate stormwater runoff, the Project proposes stormwater and drainage improvements designed to minimize runoff entering Keauhou Bay. These improvements include the introduction of permanent Best Management Practices (BMPs), such as sediment control mechanisms and effective stormwater management systems. In the long term, the proposed drainage system, permanent BMPs, and new native landscaping will help capture and treat runoff from the Project Area and upslope areas, decreasing sediment, nutrient, and pollutant levels that might otherwise flow toward Keauhou Bay.</p> <p>Due to the low frequency of substantial rainfall and high permeability of the soils throughout the Project Area, surface runoff generally does not occur in the typical rainfall occurrence. As a result, the Project Area does not contain any visible natural gulches or waterways. Runoff typically either percolates into the underlying groundwater or evaporates into the atmosphere.</p> <p>Kamehameha Schools acknowledges the potential for runoff from the golf course (not owned by Kamehameha Schools) located mauka of the Project Area during heavy rain events. Fertilizers and other nutrient pollutants can be harmful to coastal marine environments by promoting algae growth, which can disrupt marine ecosystems.</p> <p>Currently, the portion of the Project Area between 'Ahu'ula cliff and the golf course is dominated by invasive Guinea grass and koa haole trees, which provide limited ecological or erosion control benefits. The Project does not propose the removal of native forests.</p> <p>The project's stormwater management plan and Best Management Practices (BMPs) are designed to safeguard Keauhou Bay's water quality and marine resources both during and after development. <p>Please, Do NOT risk polluting the water in Keauhou Bay by allowing Kamehameha Schools to develop their bungalow resort project. Research has shown that developments pollute nearby waters constantly during development and after. Developments have ALWAYS polluted the water in every near coastal development area. The trees you want to take down keep the runoff pollution from the golf course from going into the Bay. These pollutions and more are being held off from running into the Bay by the very trees you want to take down. Let's not forget the marine life that will be threatened by excess pollution and traffic.</p>	<p>Danica Ann Barretto                      Susie Jenkins                      Nawahine Kahoopii                      Veronique Leferink                      Ellen Manko                      Heather Masunaga                      Jasmin McCracken                      Michelle Melendez</p>	<p>It is not always the case that development inevitably leads to pollution of nearby ocean waters. This problem is compounded by runoff after it rains. The drainage maps in the DEIS show it all flows toward the bay. Some is surface runoff and much is runoff just below the surface and it is particularly significant after a heavy rain. After very heavy rains the bay occasionally turns green from algae blooms creating very unhealthy conditions for users of the bay. Added development will add stress to this bay and may reverse its health permanently. The State Clean Water Branch does occasional monitoring of the bay waters and shows average bacteria counts are rising over the years.	Kathleen McMillen	EIS Section 4.5 discusses Project stormwater management and drainage improvements. An analysis of existing drainage conditions, proposed infrastructure improvements, and mitigation measures are evaluated. Estimates of existing and projected stormwater runoff peak flows are also provided.  Due to the low frequency of substantial rainfall and high permeability of the soils throughout the Project Area, surface runoff generally does not occur in the typical rainfall occurrence. <p>Dear County of Hawai'i Planning, Please, Do NOT risk polluting the water in Keauhou Bay by allowing Kamehameha Shoals to develop their bungalow project, because it is proven that developments will ALWAYS have rain runoff that will pollute the bay constantly during development and after. "An ecosystem under threat Hawai'i's reefs face major global and local threats including climate change, overfishing, and sediment and nutrient pollution caused by sewage and stormwater runoff... When it rains, flash floods carry stormwater and large amounts of sediment downstream to the ocean. Just offshore, once-thriving coral reefs are now struggling to survive." Another question important to marine and human life is how toxins and pollution will affect this crucial link in the food chain". Non-point sources, such as automobile exhausts, add appreciable amounts of pollutants to air that may enter aquatic systems in rainfall or dry fall-out. These sources add pesticides, heavy metals, oil, petroleum products, and a large number of organic and inorganic compounds to water. Lake sand oceans serve as sinks for many pollutants. Water quality is impacted by urban runoff, failing sewage systems, unpaved roads, farms, land clearing, and development." If it's being drastically hurt by runoff water, Keauhou Bay waters won't stand a chance if development above the bay is allowed because this bay is very small. If the draining water doesn't evaporate or soak into the ground where it can be filtered, it flushes straight into local creeks, rivers, and the Chesapeake Bay, adversely affecting water quality and aquatic life. Only 10 to 20 percent of rain that falls in forests, fields, and other natural areas runs off, with the rest absorbed by soil and plants, where it is filtered before reaching aquifers or local waterways. (Right now Keauhou Bay has a lot of trees and is very natural, this is what helps stop runoff.) By contrast, close to 100 percent of the rain that falls on concrete and other hard surfaces produces runoff. One inch of rain falling on an acre of hardened surface produces 27,000 gallons of runoff. All developments</p>	<p>Rebecca Meledez                      Sarah Dahm                      Melanie Diehl                      Claudia Kane                      Heather Tribolet                      Donna Cherrier</p>	<p>It is not always the case that development inevitably leads to pollution of nearby ocean waters. <p>Reason #1 It's Been Proven Developments Severely Pollute Nearby Waters</p> <p>Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Coral Bleaching is occurring more frequently in Hawai'i. Across the Hawaiian Archipelago, coral bleaching has increased in frequency and severity since 1996. The last major bleaching event in 2014-2015 had catastrophic Impacts state-wide...</p> <p>This was the third major bleaching episode in Hawai'i over the last 6 years. The frequency of these events is unprecedented in the archipelago. NOAA scientists and partners have determined that the key drivers of the bleaching were environmental factors (such as heat stress, depth, and surface light) and human impacts (sewage effluent and urban run-off). "</p>	<p>Sarah Dahm</p>	<p>The EIS notes that the 2020 State of Hawai'i Water Quality Monitoring and Assessment Report, known as the Integrated Report (IR), identifies Keauhou Bay as an impaired water body. Turbidity was the leading cause of impairment. Nonpoint sources of pollution in the State primarily consist of cesspools, agricultural land use, urban land use, and feral ungulate destruction and soil erosion in conservation lands.</p> <p>A significant number of non-Kamehameha Schools properties in the vicinity of Keauhou Bay remain on cesspool systems. The Project, however, will manage wastewater by directing all generated wastewater through a new sewer main along Old Kona Road. This main will connect to the existing sewer infrastructure, allowing for proper treatment and reducing the potential for pollutants to reach the ocean. EIS Section 4.12.2 discusses wastewater treatment and disposal.</p>

		<p>reduce pollutants reaching the ocean, helping to maintain and enhance water quality in Keauhou Bay.</p> <p>The Project will comply with all applicable federal, state and County regulations related to the use of herbicides or pesticides that may be used for landscaping or managing invasive vegetation.</p>
<p>Historical Runoff Issues The DEIS does not address how the Project will address manage flooding on Kamehameha II Drive caused by Project lands. The DEIS does not address that there were two sand volleyball courts historically. The second court was located in the publicly owned land between the seawall and existing volleyball court. When the Project proponent cleared lands to construct the existing parking lot and boat storage area, stormwater drainage was considerably affected. As a note, the DEIS fails to address the permit status of the existing boat storage and parking lot. The Project proponent failed to make repairs to the second sand volleyball court and the EIS fails to address what appears to be unpermitted development of the current northern parking lot and boat storage lot, or their environmental impacts. The DEIS does not address the historical catchment area north of the sand volleyball court, which historically helped to capture runoff from the northern area where the new parking lots and boat storage were added. The Project proponent has failed to maintain the catchment, which has caused excess runoff from the area resulting in damage to publicly-owned property. The DEIS needs to address the permit status of the apparently illegally constructed parking and boat parking lots including the lack of environmental review, the historical runoff issues from the Project proponent lands that have damaged publicly owned property, and the strategy to mitigate existing issues.</p> <p>Runoff Impacts from Increased Hardscape The Project fails to address additional runoff impacts from increased hardscape. The Project proposes to remove existing native vegetation in favor of construction of the resort, commercial kiosks, and commercial/retail spaces. According to the</p>	Jennie Shield	<p>Kamehameha Schools does not have an agreement with any entity for use of the volleyball court. <p>Project maps, it appears that about 15-20 acres of native vegetation will be removed and replaced with mostly hardscape. There is no analysis of the current conditions or of the increased flow and rate of runoff from the increased hardscape. The same conclusion can be drawn here – that the DEIS has failed to provide the appropriate analysis and documentation to support its conclusion</p>		<p>detention and retention, flood analysis, and drainage system schematics.</p> <p>The project's detailed drainage analysis and design will require design review and approval by the County for land use and construction plan approvals subsequent to the FEIS. The Project will be designed to comply with the County Drainage Standards, which include design requirements and regulations to address stormwater impacts within the County of Hawai'i.</p> <p>All construction activities will be confined to land, with no work planned in ocean waters, thereby limiting potential direct impacts on the bay's water quality. The Project will comply with all NPDES permit requirements and follow established practices to prevent sediment and pollutants from reaching nearby water bodies during construction.</p> <p>It is important to note that Kamehameha Schools does not own or maintain Kamehameha III Road or Kaleiopapa Road. Both roadways are under the jurisdiction of the County of Hawai'i, which is responsible for their upkeep, including any upgrades or modifications to pavement, drainage systems, or related infrastructure. Kamehameha Schools does not have the authority to implement improvements within the public right-of-way or make changes to stormwater systems located within these County-owned corridors. However, implementation of the Project will not increase stormwater runoff to these roads. The existing Project Area is unmanaged and lacks stormwater infrastructure, leading to uncontrolled runoff that may flow toward Kamehameha III Road, occasionally pooling in the cul-de-sac and contributing to overflow toward the ocean. With Project implementation, on-site drainage improvements and best management practices will be incorporated to capture, retain, and treat stormwater within the Project Area, thereby reducing uncontrolled flow onto Kamehameha III Road.</p>
<p>The project proposes to remove a large amount of existing historical forest area that may be capturing pollutants from the golf course and preventing them from entering the bay.</p>	<p>Ioana Petrisor</p>	<p>EIS Section 4.5 discusses Project stormwater management and drainage improvements. An analysis of existing drainage conditions, proposed infrastructure improvements, and mitigation</p>

Summary of Draft EIS Comments and Responses		
Comments	Commenter	Responses
<p>Moreover, locals have reported that the East end of the bay has gotten noticeably shallower in recent years, suggesting that sedimentation of the bay is occurring. Overall, there appears to be evidence that historical land clearing in the area has led to increased runoff from the Project area. Moreover, the project proposes to remove 10+ acres of heavily forested land and replace it with roads, parking lots, buildings and other hardscape. That forested land receives runoff from the golf course area uphill of the forested area. One would expect forested area to slow down rainfall and reduce runoff the upper portions of the project area and golf course.</p>		<p>measures are evaluated. Estimates of existing and projected stormwater runoff peak flows are also provided.</p> <p>To mitigate stormwater runoff, the Project proposes stormwater and drainage improvements designed to minimize runoff entering Keauhou Bay. These improvements include the introduction of permanent Best Management Practices (BMPs), such as sediment control mechanisms and effective stormwater management systems. In the long term, the proposed drainage system, permanent BMPs, and new native landscaping will help capture and treat runoff from the Project Area and upslope areas, decreasing sediment, nutrient, and pollutant levels that might otherwise flow toward Keauhou Bay.</p> <p>Due to the low frequency of substantial rainfall and high permeability of the soils throughout the Project Area, surface runoff generally does not occur in the typical rainfall occurrence. As a result, the Project Area does not contain any visible natural gulches or waterways. Runoff typically either percolates into the underlying groundwater or evaporates into the atmosphere.</p> <p>Kamehameha Schools acknowledges the potential for runoff from the golf course (not owned by Kamehameha Schools) located mauka of the Project Area during heavy rain events. Fertilizers and other nutrient pollutants can be harmful to coastal marine environments by promoting algae growth, which can disrupt marine ecosystems.</p> <p>Currently, the portion of the Project Area between 'Ahu'ula cliff and the golf course is dominated by invasive Guinea grass and koa haole trees, which provide limited ecological or erosion control benefits. The Project does not propose the removal of native forests.</p> <p>The project's stormwater management plan and Best Management Practices (BMPs) are designed to safeguard Keauhou Bay's water quality and marine resources both during and after development. EIS Section 4.5 discusses Project stormwater management and drainage improvements. The Project proposes a comprehensive stormwater management system designed to capture and treat</p>

		<p>stormwater runoff on-site. This infrastructure will significantly reduce pollutants reaching the ocean, helping to maintain and enhance water quality in Keauhou Bay.</p> <p>Additionally, the Project is adopting Low-Impact Development (LID) practices, which emphasize conserving natural features and employing localized, small-scale stormwater systems that mimic natural hydrologic processes. Prior to construction, a detailed drainage masterplan will be developed to integrate these strategies, including criteria for infiltration systems, stormwater detention and retention, flood analysis, and drainage system schematics.</p> <p>The project's detailed drainage analysis and design will require design review and approval by the County for land use and construction plan approvals subsequent to the FEIS. The Project will be designed to comply with the County Drainage Standards, which include design requirements and regulations to address stormwater impacts within the County of Hawai'i.</p>
<p>A study needs to be done to assess existing pollutant loading to the bay from the surrounding properties. This would likely include sampling any runoff to the bay, including from the golf course and runoff from the existing parking lots, as well as core sampling within the bay to assess the level of pollutants within the sediment and to evaluate the historical pollutant loading in the bay that are currently impacting flora and fauna (and water quality) within the bay. Note that while the EIS suggests that rainfall on the project site may percolate in the subsurface rather than running into the bay, it is my understanding (based on discussion with locals) that there is current flooding experienced on nearby Kamehameha III drive during rain events (with part of the flooding potentially originating from Project lands) and in the past rain events have washed out the 2nd volleyball court that was located to the west of the remaining court. It appears that, at least at times, runoff does get into the bay and that should be considered.</p>	<p>Ioana Petrisor</p>	<p>The EIS notes that the 2020 State of Hawai'i Water Quality Monitoring and Assessment Report, known as the Integrated Report (IR), identifies Keauhou Bay as an impaired water body. Turbidity was the leading cause of impairment. Nonpoint sources of pollution in the State primarily consist of cesspools, agricultural land use, urban land use, and feral ungulate destruction and soil erosion in conservation lands.</p> <p>A significant number of non-Kamehameha Schools properties in the vicinity of Keauhou Bay remain on cesspool systems. The Project, however, will manage wastewater by directing all generated wastewater through a new sewer main along Old Kona Road. This main will connect to the existing sewer infrastructure, allowing for proper treatment and reducing the potential for pollutants to reach the ocean. Further study will be needed to determine if any capital improvements of the He'eia Waste Water Reclamation Facility WWRF or facilities leading up to it will require improvements with the KBMP's projected increase in flow. EIS Section 4.12.2 discusses wastewater treatment and disposal.</p>

<p>As Kailua-Kona receives rainfall from periodic tropical storms and/or remnants of hurricanes where several inches of rain can fall within a couple of days, the project needs to study rainfall from large episodic events and the impact on the bay. In particular, with the forest gone and replaced by roads, parking lots, buildings and other hardscape, that water can no longer percolate and will be added runoff. None of this analysis was apparently conducted. An assessment should then include projections as to the amount of the potential increases in the quantity of pollutants entering the bay from the Project, assess potential mitigation measures and assess the ecological impact from the runoff. In conclusion, the EIS as written fails to include studies necessary to assess historical and ongoing impacts to the bay, future impacts to the bay from the Project, and potential mitigation measures to address historical issues caused by Proponents lands, if any, and future impacts from the proposed Project</p>		<p>EIS Section 4.5 discusses Project stormwater management and drainage improvements. An analysis of existing drainage conditions, proposed infrastructure improvements, and mitigation measures are evaluated. Estimates of existing and projected stormwater runoff peak flows are also provided.</p> <p>To mitigate stormwater runoff, the Project proposes stormwater and drainage improvements designed to minimize runoff entering Keauhou Bay. These improvements include the introduction of permanent Best Management Practices (BMPs), such as sediment control mechanisms and effective stormwater management systems. In the long term, the proposed drainage system, permanent BMPs, and new native landscaping will help capture and treat runoff from the Project Area and upslope areas, decreasing sediment, nutrient, and pollutant levels that might otherwise flow toward Keauhou Bay.</p> <p>Additionally, the Project is adopting Low-Impact Development (LID) practices, which emphasize conserving natural features and employing localized, small-scale stormwater systems that mimic natural hydrologic processes. Comments	Commenter	Responses
		<p>The existing Project Area lacks active management and does not contain infrastructure to capture or treat stormwater, resulting in untreated runoff that may flow toward the ocean. With implementation of the Project, drainage improvements and best management practices will be introduced to capture and treat runoff on site. These measures will reduce the potential for stormwater-related impacts, improving current conditions.</p> <p>The Project will be constructed entirely on land and does not include any direct discharges to coastal waters. As a result, water quality conditions in Keauhou Bay are not expected to worsen and may improve through reduced sediment and pollutant loading.</p>
<p>The Report Fails To Address Historical Runoff Issues                  Currently, Kamehameha III Drive experiences flooding after even an average rainstorm. (Personal observations over the last 20 years.) Portions of the flooding appears to originate from Project lands and nothing in the EIS addresses how the Project will address existing flooding on Kamehameha III Drive caused by Project lands. The EIS also fails to address the fact that historically there were two sand volleyball courts. The 2 nd court was situated in the publicly owned land between the seawall and the existing volleyball court. When the project proponent cleared lands (it appears illegally and without an EIS and/or other permit) to construct the existing parking lot and boat storage area the drainage was substantially effected and the rather than have vegetation slow the water flow, the surface flow rate dramatically increased and the 2 nd sand volleyball court was washed out along with portions of the remaining volleyball court. (Personal observation.) Note: The EIS fails to address the permit status of the existing boat storage and parking lots on the northern side of Keauhou Bay and I could not find any permit with the County for the construction nor corresponding environmental documentation. Accordingly, it appears that the boat parking lot and other parking lot may be unpermitted. The Project proponent failed to make repairs to the 2 nd sand volleyball court located on public</p>	<p>Jeff Caufield</p>	<p>Kamehameha Schools does not have an agreement with any entity regarding the use of the existing or former volleyball court. The volleyball courts represent an informal and unapproved use of Kamehameha Schools' property. While residents have enjoyed the privilege of utilizing the courts in the past, Kamehameha Schools has no obligation to maintain, reconstruct, or provide improved facilities for this purpose. Future use and management of the area will be aligned with the goals and strategies outlined in the KBMP.</p> <p>The KBMP includes improvements to expand and formalize existing boat trailer and parking areas north of the bay. These upgrades will include paving, stall delineation, lighting, and drainage designed to improve both capacity and safety.</p> <p>The existing boat trailer parking area was originally constructed in the 1960s, prior to the establishment of the current zoning and permitting frameworks. As such, it is considered a nonconforming use. The SMA permit requirement was established in 1975 with the enactment of Act 176, also known as the Shoreline Protection Act, which created a regulatory process for development within coastal areas.</p> <p>In 2022, Sea Quest Hawai'i, a tenant of Kamehameha Schools, applied for and received SMA Minor permit related to ongoing boat trailer storage operations. The permit was approved on November 16, 2022 (Keauhou Marine Boat Park; TMK (3) 7-8-010:044;</p>

Comments	Commenter	Responses
<p>lands and existing sand volleyball court that its apparently illegal development destroyed. The EIS fails to address the apparent illegal development of the current northern parking lot and boat storage lot nor the environmental impacts therefrom. Notably, the EIS fails to also address that to the North of the sand volleyball court is a historical catchment area that helped capture runoff from the northern area where the new parking lots and boat storage were added. (Personal observation and interview of locals.) The Project proponent has failed to maintain the catchment, which has contributed to excess runoff from the area that has damaged publicly owned property. In interview of locals, in the past there have been attempts by the locals to keep the catchment clear so as to reduce flooding from the upper areas. The EIS must address the permit status (or lack thereof) of the apparently illegally constructed parking and boat parking lots including the lack of environmental review thereof, the historical runoff issues from the Project proponent lands that have caused damage to publicly owned property and how the project will mitigate existing issues. For this basis alone, the EIS must be rejected and further studies and assessments conducted. 6. The Project Fails To Address Additional Runoff Impacts From Increased Hardscape The project proposes to take existing native vegetation areas and tear them out in favor of building the resort, commercial kiosks and commercial/retail. Based on the review of project maps, it appears that roughly 15-20 acres of native vegetation will be removed and replaced with mostly hardscape. There is NO analysis of the existing runoff from the "as is" condition of the properties and project area. There is also no study/analysis and/or projection of the increase flow and rate of runoff from the increased hardscape. The potential increased flow has the potential to alter the fresh/saltwater balance within the eastern end of the bay, which could impact fish and coral. This is a requirement of the EIS. The failure to include such an analysis mandates that the EIS be rejected and further</p>		<p>County SMA permit: PL-SAA-2022-000101 and PL-SMM-2022-000031). The approved scope included the installation of a new entry gate, security cameras, fencing, signage, and lighting, as well as maintenance of the existing parking lots and removal of overgrown vegetation and one tree located within the parking area.</p> <p>As part of the KBMP, Kamehameha Schools intends to pursue a comprehensive SMA permit to formalize and entitle both existing and proposed uses within the Project Area. This approach will address legacy uses that predate the permitting requirements and provide a regulatory pathway for new improvements consistent with the KBMP.</p> <p>EIS Section 4.5 discusses Project stormwater management and drainage improvements. An analysis of existing drainage conditions, proposed infrastructure improvements, and mitigation measures are evaluated. Estimates of existing and projected stormwater runoff peak flows are also provided.</p> <p>To mitigate stormwater runoff, the Project proposes stormwater and drainage improvements designed to minimize runoff entering Keauhou Bay. These improvements include the introduction of permanent Best Management Practices (BMPs), such as sediment control mechanisms and effective stormwater management systems. <p>The EIS mentions the value of Keauhou's reef, citing coral cover as high as 62% (which is considerably higher than the statewide average; Rodgers et al. 2015), but maintains that impacts to reefs will be minimal because the development will occur only on land. This is shortsighted, because coral reefs are directly impacted by land-based sources of pollution. Furthermore, the EIS does not propose a convincing plan for dealing with wastewater and stormwater</p>	<p>Orion McCarthy</p>	<p>Section 4.12 of the EIS includes detailed evaluations of the existing infrastructure capacities at Keauhou Bay, such as water, wastewater, solid waste, power, and telecommunications, along with potential impacts, and the necessary upgrades to support the KBMP. Specifically, details concerning Wastewater Treatment and Disposal are discussed in Section 4.12.2.</p> <p>Wastewater generated by the Project will be conveyed through a sewer main along Old Kona Road, which will connect to the existing</p>

<p>As noted below, my overall conclusion is that the EIS lacks many of the basic foundational studies of existing conditions within the bay necessary to assess the potential impacts of the project and also assess potential mitigation measures. In particular, studies are needed of the existing sediments (quality and quantity) within the bay to quantify existing ecological health and credible projections are needed of potential project impacts in order to incorporate appropriate mitigation measures.</p> <p>The Project proposes to remove acres of forest surrounding Keauhou Bay.to construct a resort comprised of 43 homes with 150 bedrooms, build a new road connecting the north and south ends of the bay, build commercial kiosks, construct a cultural center and construct a commercial/retail center on the eastern end of the bay. As</p>	James Wells	<p>The EIS notes that the 2020 State of Hawai’i Water Quality Monitoring and Assessment Report, known as the Integrated Report (IR), identifies Keauhou Bay as an impaired water body. Comments	Commenter	Responses
<p>you are aware, coral, fish and other flora and fauna can be particularly susceptible to harm from excess sediment, salinity balances, toxic pollutants and nutrient loading in shallow water bodies like Keauhou Bay. In order to determine what the potential ecological impacts to the bay might be there needs to be a baseline study conducted of the existing sediments within the bay to determine the historical sedimentation rate, quantify the existing pollutant and nutrient loads within those sediments, identify the source(s) of sediments/pollutants/nutrients. In turn, this baseline analysis would contribute to the necessary analysis of potential impacts from the Project, including an analysis of mitigation measures, if any, that might be needed to protect sensitive flora and fauna within the bay, including coral communities. Once the baseline study is conducted the EIS should provide predictions of Project impacts to the bay, including impacts from the removal of the forest, increased hardscape, and increased potential for pollutants and sediment to enter the bay from both construction activities but also new roads and housing. Once the potential impacts are analyzed, mitigation measures should then be assessed and required, if necessary) that could minimize the impact on the bay. Without the foregoing analysis, I do not believe the EIS can meet its obligation of determining the magnitude of potential Project impacts on the ecology, nor identify mitigation measures that could bring the impacts down to an acceptable level, if needed.</p> <p>The purpose of an EIS is to conduct sufficient research and studies to inform decision-makers and the public of potential Project impacts. This clearly requires an understanding of baseline conditions. In this instance, it does not appear that adequate studies have been conducted of the bay to assess existing conditions nor analyze the potential impacts from the Project so as to both assess potential mitigation measures but also inform the public and regulatory agencies of the Project impacts.</p>		<p>Reclamation Facility WWRF or facilities leading up to it will require improvements with the KBMP's projected increase in flow. <p>The DEIS description of “Storm Water Runoff, Drainage” at DEIS 4-81 does not correspond with my observations of these events. When we have heavy rainfall there is significant unregulated draining on the grounds currently used by Keauhou Canoe Club and into Keauhou Bay. Runoff onto the grounds is sufficient to wash gravel down from the Old Kona Road onto the KCC grounds. But more significant is the runoff that flows down Kamehameha Road and pools at the end of the cul-de-sac and then overflows into the bay. The mitigation measures discussed at DEIS 4-86 do not account for this level of runoff, much less its effect on Keauhou Bay. More mitigation measures should be considered.</p>	<p>Joanne (Jody) Wheeler</p>	<p>EIS Section 4.5 discusses Project stormwater management and drainage improvements. Estimates of existing and projected stormwater runoff peak flows are also provided.</p> <p>To mitigate stormwater runoff, the Project proposes stormwater and drainage improvements designed to minimize runoff entering Keauhou Bay. These improvements include the introduction of permanent Best Management Practices (BMPs), such as sediment control mechanisms and effective stormwater management systems. In the long term, the proposed drainage system, permanent BMPs, and new native landscaping will help capture and treat runoff from the Project Area and upslope areas, decreasing sediment, nutrient, and pollutant levels that might otherwise flow toward Keauhou Bay.</p>
<p>The stretch of trees adjacent to the golf course has provided a barrier of protection from runoff of the chemicals from reaching the Bay, this development project would remove this barrier, and with development work overall, there will be harmful runoff into the Bay effecting marine life including our fast-disappearing corals. My daughter attended WHEA and studied coral reefs for many years and she and her friends are greatly concerned to observe our coral reef and ecosystem in dire situation. Please take responsibility...this development will be vastly harmful to all that we love about being here in such a sacred place.</p> <p>I have worked in Keauhou Bay and swam in the waters for 16 years, it is a relatively pristine bay, compared to areas on the island where heavy development has affected the area. I recall at Keauhou swimming with my daughter after an occasion of heavy precipitation causing runoff from the golf courses, we were concerned with the degree of foaming, the algae blooms in the waters. My daughter and I were concerned and confused at the time, but then as we've become more educated we understand that it was because of the golf course polluting, with the trees removed in the furthering of development we will expect these waters to be</p>	Heather Laursen	<p>EIS Section 4.5 discusses Project stormwater management and drainage improvements. 		decreasing sediment, nutrient, and pollutant levels that might otherwise flow toward Keauhou Bay.
<p>I want more intricate details of protection for water run-off. Working in the evening at the bay it was very common to have sudden heavy rains. Keauhou rain belt is 35" a year. The first phase of the project with the sewage system and trailer parking remains a big threat to our bay with coral kill from silt and sediment. The Red Hill 1250 project was very destructive and damaging to our ocean and marine livelihood. Robert Kim directed me as a witness in court against Bud Quitiquit and four mainland lawyers. I remained giving my testimony for over an hour. The court gave me a copy of the testimony that I did daily trips to Red Hill and my underwater experience of damaging changes that I observed. If anyone would like to read what I witnessed during that construction time and the lawyers' questions please contact me to review the unnecessary stress and permanent damage that affected the Red Hill area. A reminder of one inch of rain per acre 27,154 gallons with a weight of 113 tons, not including the grade or slope, no containment walls, water guides or barriers can contain this situation. Plans should be made for construction during dry season along with the daily burden of removing any disrupted soil to another location. Tested soils on all acres are crucial to foresee areas that need extra care and replanting. The 2 primary soils are Waiaha cobble medial silt loam and Waiaha medial silt loam</p>	Jan Brinkman	<p>EIS Section 4.5 discusses Project stormwater management and drainage improvements. <p>The Issue of Turbidity: In his July 24, 2024 Comment Letter, Dr. Bennett states: "The Bay is listed as impaired for exceeding the limits for turbidity. Turbidity has several causes in near-shore waters, such as runoff water with fine sediments and phytoplankton. Our research shows that turbidity is a problem in Keauhou Bay in the absence of surf events. The inner Bay has very poor circulation and is where most sediments and other factors causing turbidity arise. Phytoplankton grow in response to increased temperature and nutrient loading in the Bay. The lack of adequate circulation amplifies the problem." As shown by the photographs in Dr. Bennett's Comment Letter, I have witnessed street runoff spilling over the street curb and pathway at the end of Kamehameha III Road and dumping muddy water from the boat storage facility into the Bay. The federal National Oceanographic and Atmospheric Administration ("NOAA") has listed Keauhou Bay One as a "Marine Protected Area" that is to be "permanently protected year-round" and that such "protection be in perpetuity." In 2014, the federal Environmental Protection Agency ("EPA") concluded that the Bay was "good" for recreational use, but "impaired" due to "turbidity" as it relates to "Fish, Shellfish, And Wildlife Protection and Propagation." Unfortunately, more up-to-date information is</p>	Tamyra Rice	<p>The EIS notes that the 2020 State of Hawai'i Water Quality Monitoring and Assessment Report, known as the Integrated Report (IR), identifies Keauhou Bay as an impaired water body. Turbidity was the leading cause of impairment. Nonpoint sources of pollution in the State primarily consist of cesspools, agricultural land use, urban land use, and feral ungulate destruction and soil erosion in conservation lands.</p> <p>A significant number of non-Kamehameha Schools properties in the vicinity of Keauhou Bay remain on cesspool systems. The Project, however, will manage wastewater by directing all generated wastewater through a new sewer main along Old Kona Road. This main will connect to the existing sewer infrastructure, allowing for proper treatment and reducing the potential for pollutants to reach the ocean. EIS Section 4.12.2 discusses wastewater treatment and disposal.</p> <p>EIS Section 4.5 discusses Project stormwater management and drainage improvements. An analysis of existing drainage conditions, proposed infrastructure improvements, and mitigation measures are evaluated. Estimates of existing and projected stormwater runoff peak flows are also provided.</p> <p>To mitigate stormwater runoff, the Project proposes stormwater and drainage improvements designed to minimize runoff entering</p>

My concern with the EIS is related to Section 4.5. I swim in the bay each week. We enter at the "beach" which is on the North side of the end of the rock wall, and at the end of Kamehameha III Rd. If there is a heavy rain, which is common for Keauhou, the water there becomes cloudy from the runoff from the water flowing down this road and bringing the dirt and debris. The drainage opening at the end of Kam III in the circular turnaround area becomes backed up and floods the whole end of the road. Mitigating this runoff problem must be in the future plans.	Dorothy Case	<p>EIS Section 4.5 discusses Project stormwater management and drainage improvements. Removal of Vegetation Buffer: The proposed development plans to remove the last buffer zone of vegetation that protects Keauhou Bay from runoff. This vegetation is essential for filtering pollutants, reducing erosion, and maintaining the bay's water quality. Its removal could lead to increased runoff, pollution, and sedimentation, negatively impacting the marine ecosystem. Recommendation: Retain and enhance the existing vegetation buffer zone by removing the invasive vegetation and restoring a native dryland forest. Profit generated from the new recreation services and restaurant proposed in the project management plan could support the restoration of this native dryland forest and provide conservation jobs and educational opportunities for the youth and residents of Kona. Regular monitoring of water quality should be mandated to ensure that the development of the other project components do not adversely impact the bay.	Alexa Kerver	<p>Mahalo for the recommendation regarding the restoration of the land as a native dryland forest. The economic model presented within the KBMP allows the lands at Keauhou to sustain themselves financially, with income generated through commercial activities directly supporting the protection and preservation of natural and cultural resources, maintenance of access and infrastructure, and the creation of educational and cultural opportunities central to Kamehameha Schools' mission.</p> <p>As part of Kamehameha Schools' long-term land management commitments, invasive plant species within the Project Area will be removed to support the health of the local ecosystem. Native plants appropriate for the Keauhou region will also be planted and maintained. These efforts will be supported by ongoing stewardship and regular groundskeeping to promote ecological resilience and cultural integrity across the landscape.</p>

and more are being held off from running into the Bay by the trees that would be destroyed and removed if this project were to be allowed.		
Please reject Kamehameha Schools Bungalow Resort project. Firstly, please, do not risk polluting the water in Keauhou Bay by allowing development. It is a proven fact that developments always pollute nearby waters due to constant runoff (especially during heavy rain or storms). An article by NOAA entitled, What is the biggest source of pollution in the ocean? states "... this runoff flows to the sea, carrying with it agricultural fertilizers and pesticides." It also states "Eighty percent of pollution to the 2 marine environment comes from the land. One of the biggest sources is called non-point source pollution which occurs as a result of runoff." Also, cutting the trees down will automatically change this small, yet very important eco-system. This would allow the runoff pollution from the golf course easy access to the Bay. According to the National Library of Medicine, in their article, Putting the Earth in Play: Environmental Awareness and Sports, it says that "the golf industry uses approximately 50 pesticide active ingredients," all of which are toxic and detrimental to near shore waters and their inhabitants.	Marie LeBoeuf	<p>It is not always the case that development inevitably leads to pollution of nearby ocean waters. The impact of development on water quality largely depends on the type of development, quality of infrastructure, and the effectiveness of long-term management practices, as well as responsible construction methods in the short term.</p> <p>The project's stormwater management plan and Best Management Practices (BMPs) are designed to safeguard Keauhou Bay's water quality and marine resources both during and after development. EIS Section 4.5 discusses Project stormwater management and drainage improvements. The Project proposes a comprehensive stormwater management system designed to capture and treat stormwater runoff on-site. This infrastructure will significantly reduce pollutants reaching the ocean, helping to maintain and enhance water quality in Keauhou Bay.</p>
The tree and natural landscape canopy that lies just mauka of the bay acts like a filter before any runoff from housing and golf course above it reaches the ocean	Yasmin Vatter	<p>EIS Section 4.5 discusses Project stormwater management and drainage improvements. An analysis of existing drainage conditions, proposed infrastructure improvements, and mitigation measures are evaluated. Estimates of existing and projected stormwater runoff peak flows are also provided.</p> <p>To mitigate stormwater runoff, the Project proposes stormwater and drainage improvements designed to minimize runoff entering Keauhou Bay. These improvements include the introduction of permanent Best Management Practices (BMPs), such as sediment control mechanisms and effective stormwater management systems. In the long term, the proposed drainage system, permanent BMPs, and new native landscaping will help capture</p>

		and treat runoff from the Project Area and upslope areas, decreasing sediment, nutrient, and pollutant levels that might otherwise flow toward Keauhou Bay.
<p>The DEIS description of “Storm Water Runoff, Drainage” (DEIS 4.5 at 4-81) does not correspond with KCC’s members’ observations of these events. In any heavy rainfall there is significant unregulated drainage both on the KCC leased grounds and into Keauhou Bay. The runoff onto the grounds is sufficient to wash gravel down from the Old Kona Road onto KCC’s leased lands. More significant is the runoff that flows down Kamehameha III Road and pools in the cul-de-sac—often for days. (Photo #1 below). At times it overflows the cul-de-sac and leaves a sludge in the bay (Photo # 2 below) The mitigation measures discussed at DEIS at 4-85 &amp; 86 do not account for this level of runoff, much less its effect on Keauhou Bay. More effective mitigation measures are needed, and the construction phase of this Project is an ideal time to implement them.</p>	<p>Carolyn Leilani Carter</p>	<p>EIS Section 4.5 discusses Project stormwater management and drainage improvements. An analysis of existing drainage conditions, proposed infrastructure improvements, and mitigation measures are evaluated. Estimates of existing and projected stormwater runoff peak flows are also provided.</p> <p>To mitigate stormwater runoff, the Project proposes stormwater and drainage improvements designed to minimize runoff entering Keauhou Bay. 		<p>The Project will comply with all NPDES permit requirements and follow established practices to prevent sediment and pollutants from reaching nearby water bodies during construction.</p> <p>It is important to note that Kamehameha Schools does not own or maintain Kamehameha III Road. The roadway is under the jurisdiction of the County of Hawai'i, which is responsible for its upkeep, including any upgrades or modifications to pavement, drainage systems, or related infrastructure. Kamehameha Schools does not have the authority to implement improvements within the public right-of-way or make changes to stormwater systems located within these County-owned corridors. However, implementation of the Project will not increase stormwater runoff to the road. The existing Project Area is unmanaged and lacks stormwater infrastructure, leading to uncontrolled runoff that may flow toward Kamehameha III Road, occasionally pooling in the cul-de-sac and contributing to overflow toward the ocean. With Project implementation, on-site drainage improvements and best management practices will be incorporated to capture, retain, and treat stormwater within the Project Area, thereby reducing uncontrolled flow onto Kamehameha III Road.</p>
<p>A. Erroneous Assumptions 1. "Very Low Rainfall and Runoff" (EISPN 3'16). The EISPN assumes that because rainfall reaches "a maximum average of 35 inches per year" that there is "very low rainfall and runoff" into the bay. This is based on a 2016 NOAA analysis and does not account for any changes in those averages in the last eight years. This must be reconsidered in light of the rapid changes brought on by climate warming. This assumption also appears to be internally inconsistent with other statements in the EISPN. See, notably EISPN 4-4 at Paragraph 11 acknowledging that "Portions of the Project Area are also located within the AE and VE Flood Zones." In my experience, regardless of the historic maximum rainfall average, there are several heavy rains each year that flood across the Old Kona Road onto the adjoining downslope to the bay. The force of the water is sufficient to dig a noticeable trench across the road and into</p>	<p>Rebecca Melendez</p>	<p>EIS Section 4.5 discusses Project stormwater management and drainage improvements. <p>Management Commission is developing an ordinance that aims to prohibit the amount of recyclable materials ending up in the island’s only working landfill. During a commission meeting on July 26, Ramzi Mansour, Hawai’i County Director of Environmental Management, told commissioners the West Hawai’i Sanitary Landfill only has 20 to 25 years left before it reaches capacity. With the Hilo Landfill permanently closed in 2020, the clock is ticking for the island’s sole dump. Commission chairperson Georjean Adams said it’s a good time to start looking into solutions. Adams said the proposed ordinance is in its early stages and is more about getting the conversation started about how to prevent unnecessary, or recyclable items – green waste, metals, plastics, paper, paperboard and glass – from ending up in the rubbish dump, located off Queen Ka’ahumanu Highway in Waikōloa. “Trying to site a new landfill is close to impossible,” Adams said. “So what are we going to do? So I was looking around, and the commission agreed, to look deeply into the idea of diverting the recyclables out and at least slow the filling up of the landfill.” The proposed ordinance refers to the 2019 Integrated Solid Waste Management Plan that commits the county to “divert, as much as feasible, commercial and municipal solid waste, including but not limited to green waste, metals, plastics, paper, paperboard, and glass to help achieve goals related to climate resiliency, renewable energy, sustainable agriculture, and zero waste.” Time’s Up For Landfills ‘Gentle’ demolition strategies can help preserve resources PAULA BENDER April 2, 2024 As Hawai’i government officials grapple with the challenge of limited landfill space statewide, federal restrictions set in place by the Environmental Protection Agency are ruling out possible locations that were once considered for new landfills. Hawaii Act 73 states landfills must be located at least half a mile from residential areas; are prohibited from being located in areas with heavy rain and steep slopes, as well as agricultural and/or conservation lands; above aquifers; 300</p>		<p>through the design phase, with final construction plans to be reviewed and approved by DWS and the Hawai’i Fire Department.</p> <p>No significant impacts to the Keauhou aquifer system are anticipated, including when considering cumulative effects from other authorized or planned uses.</p> <p>Section 4.12.4.1 of the EIS evaluates electrical utility requirements for the KBMP. The Project’s total electrical demand is estimated at approximately 3,181.86 kVA. The Hawai’i Electric Light Company conducted a preliminary engineering assessment and determined that the Kahalu’u substation has sufficient capacity to meet the Project’s needs, with no substation upgrades required. However, improvements to HELCO’s existing underground distribution system are necessary to support power delivery and have been integrated into the Project’s utility design plans.</p> <p>The additional electrical load is not expected to impact existing utility services in the greater Kailua-Kona region. The Project will incorporate energy conservation measures and targets LEED Silver certification. Energy efficiency will be further supported by implementation of EPA Energy Star Program components, including efficient insulation, high-performance windows, compact building design, enhanced ventilation systems, and energy-saving lighting and appliances.</p>

feet beyond streams; and 1,000 feet beyond the ocean. New landfills are also now prohibited from being created in tsunami inundation zones, 100-year flood zones and wetlands. There are also concerns that landfills near airports will attract birds, resulting in damage to aircraft and fatalities among pilots and passengers. The City & County of Honolulu is in the process of identifying its next landfill and it doesn't want one any bigger or more active than absolutely necessary. Does this EIS have any reports about how this development will safely add to the land fill on Big Island, and are there reports proving the island has enough water for another big resort, what about reports on how much power this resort will use because the Big Island already has serious resource and infrastructure issues.		
<b>Wastewater</b>		
E. Wastewater. The EISPN briefly describes the existing KS controlled sewage system. (EISPN 3-19 at Paragraph 3.19). It also describes the potential for “Unavoidable and Unresolved Impacts. (EISPN 4-2 at Paragraph 4.6). I will just note that when we paddle canoes past the condos north of the bay we can smell and see evidence of sewage effluent in the ocean. When we paddled south, we now have the benefit of a similar experience offshore from the new million-dollar homes constructed a few years ago. The EIS should take a “hard look” at the effect a 156-unit resort will have on sewage entering Keauhou Bay	Rebecca Melendez	<p>The EIS notes that the 2020 State of Hawai'i Water Quality Monitoring and Assessment Report, known as the Integrated Report (IR), identifies Keauhou Bay as an impaired water body. Turbidity was the leading cause of impairment. Nonpoint sources of pollution in the State primarily consist of cesspools, agricultural land use, urban land use, and feral ungulate destruction and soil erosion in conservation lands.</p> <p>A significant number of non-Kamehameha Schools properties in the vicinity of Keauhou Bay remain on cesspool systems.</p> <p>The Project, however, will manage wastewater by directing all generated wastewater through a new sewer main along Old Kona Road. This main will connect to the existing sewer infrastructure, allowing for proper treatment and reducing the potential for pollutants to reach the ocean. 		significantly reduce pollutants reaching the ocean, helping to maintain and enhance water quality in Keauhou Bay.
<p>The Issue of Nutrient Degradation and Sewer Connections:                      As pointed out in Dr. Bennett’s July 24, 2024 Comment Letter: “The draft EIS makes no mention of nutrient pollution issues and implies that all new developments will be connected to the sewer line that transmits raw sewage to the Heeia wastewater treatment plant. The treated wastewater containing most of the nutrients in human waste is conveyed to the golf course to irrigate the golf course. It is not known the extent to which those nutrients leech into the groundwater and the Bay. It is also not known how much more water the golf course will utilize in the future. Several residences and perhaps some commercial facilities in the proposed development area use cesspools or septic systems for human waste management. The impact on the Bay is significant and needs to be described and mitigated. However, this problem is not mentioned in the DEIS. It is more than advisable that the Project connect all waste systems to the regional sewer. It is well established that sewer lines leak, which is a function of many factors such as piping class and age (Rutch 2006). In the project area, 5 some sewer lines are quite old. One such line on the East shore of the Bay broke during a significant tidal event. The DEIS does not account for sewer line leakage or the risk from extreme tidal events. This problem needs to be evaluated, and where sewer lines are at risk and need to be replaced by resilient lines such as High-Density Polyethylene (HDPE).” Mitigation measures would thus entail an assessment and possible upgrading of the sewer lines currently under the project area. The DEIS does not discuss the possible overloading of the current wastewater discharge or the leeching potential. Mitigation measures would also include a study to ascertain whether the addition of a 150-unit resort and other buildings would overload the current wastewater discharge used to irrigate the nearby golf</p>	Tamyra Rice	<p>The EIS notes that the 2020 State of Hawai‘i Water Quality Monitoring and Assessment Report, known as the Integrated Report (IR), identifies Keauhou Bay as an impaired water body. course and whether there is leeching into the groundwater and the Bay.		and to explore proactive solutions that enhance long-term system resilience. Kamehameha Schools remains open to cooperating with utility providers should they decide to replace or relocate infrastructure in the future as part of their mitigation strategies.
<p>The other issue I am very concerned about is how the wastewater is going to be taken care of. Sewage has always leaked into the Bay. For many years one of the members of the Keauhou canoe club, Dennis McHalta, collected samples of the water in the bay very scientifically. There was an OC 16 TV program made about this showing how after a rain, the water becomes turbid. He proved that sewage was leaked as well. My understanding is that there are very old pipes for sewage, water, electric, and telecommunications lines running along the shoreline that are at risk or are already compromised. The first thing that MUST be done before any construction or development is done, is to relocate these lines to a safer place. We already are experiencing higher tides and king tides that tell us the seas are rising. This is an opportunity to correct these issues of water lines, sewer lines, communication lines, to protect the fragile waters of the bay.</p> <p>The proper authorities must be involved to correct these issues. When we first moved to Keauhou in 2011, I remember snorkeling in this bay and seeing beautiful coral of all colors. There were 50-60 manta rays on the night tours. Yellow tang were everywhere. And now when we swim, we do not see any tropical fish or any beautiful coral. And after a rain, the water is cloudy and sometimes smelly. I implore you to take care of the basic needs of the bay first, before going forward on any new development.</p>	Dorothy Case	<p>The EIS notes that the 2020 State of Hawai'i Water Quality Monitoring and Assessment Report, known as the Integrated Report (IR), identifies Keauhou Bay as an impaired water body. 		collected via a sewer main along Old Kona Road and conveyed through existing infrastructure to the He'eia Wastewater Reclamation Facility (WWRF) for treatment. Hawai'i Water Service has confirmed that capacity exists to accommodate the Project's estimated flow. Further evaluation will determine whether any capital improvements to the County wastewater conveyance systems are necessary to support increased flow.
<p>Wastewater facility capacity needs updated capacity for 2024 and the improvement analysis is incomplete. The DEIS states, "He'eia WWRF will have capacity to accommodate the increase in wastewater flows based on the information from 2016. Further study will be needed to find out if any capital improvements of the WWRF and facilities leading up to it will need improvements with this increase in flow" (7-12). The DEIS should provide updated pumpage capacity for the He'eia WWRF. Pumpage estimates used for this project are almost a decade old. Furthermore, wastewater analysis should assess whether or not capital improvements are needed before the project plans are accepted. If the project requires capital improvements then those plans should be provided in this DEIS for public review. Capital improvements are major projects that have the potential to cause adverse impact or require further funds that should not be of the taxpayers. I have the following questions: What is the He'eia WWRF pumping capacity as of 2024? Considering current data for the He'eia WWRF can this facility receive the wastewater produced from this site? What are the capital improvement projects needed to ensure that the wastewater can be received by the He'eia WWRF? Can the current sewage line system receive the waste and transfer it to the He'eia WWRF?</p>	Loke Aloua	<p>Section 4.12.2 of the EIS addresses wastewater treatment and disposal for the KBMP. Wastewater generated by the Project will be collected via a sewer main along Old Kona Road and conveyed through existing infrastructure to the He'eia Wastewater Reclamation Facility (WWRF) for treatment.</p> <p>The Hawai'i Water Service Company Inc. is certified by the Hawaii Public Utilities Commission (HPUC) to provide sewer service to the Keauhou area. A sewer service request was submitted for the Project for the estimated wastewater flow projection of 50,925 gallons per day. The Hawai'i Water Service Company Inc. confirmed that the Project will be served. Sewer services will be provided in accordance with the Rules and Regulations and at rates approved by the HPUC.</p> <p>It is expected that the He'eia WWRF will have capacity to accommodate the increase in wastewater flows based on the system capacity information from 2016.</p> <p>Further study is needed to determine the capacity of the individual components of the existing Keauhou sewer system. Hawaii Water Service, as the operator, will review and determine the need for any improvements or expansions to the existing system to ensure adequate capacity and compliance with regulatory requirements. However, this evaluation typically occurs during the County permitting process, when more detailed project designs are submitted for review and approval.</p> <p>Kamehameha Schools remains open to cooperating with utility providers should they decide to replace or relocate infrastructure in the future as part of their mitigation strategies.</p>

<b>Wildfire Management</b>		
<p>I am providing these written comment pursuant to the Keauhou Bay Management (KBM) Plan Environmental Impact Statement (EIS) Notice; KBM Plan dated March 2022. Issued by Kamehameah Schools Bishop Estates (KSBE) Applicant.</p> <p>My husband, Brian, and I are community members of the Bayview Estates of Keahou, a subdivision whose community borders the KSBE properties. As neighbors for over a decade, we hold deep respect, appreciation and reverence for KSBE and all that it does for our Hawaii Island Community.</p> <p>We are also completely aligned/and support the KBM Plan and wholeheartedly support KSBE efforts to build cultural awareness and "ohana" for all.</p> <p>I am also grateful for the opportunity to comment on the KBM Plan.</p> <p>With the KBM Plan EIS Notice dated March 2022, it is recommended that Section 3.4.6 Wild Land Fires be updated and revised to reflect wild fire safety mitigation efforts being recognized throughout the state of Hawaii in the aftermath of last summer's August 2023 tragic Lahaina/Maui fire. As you are likely aware, the Big Island experienced wild fires along the Kohala Coast as a result of the same wind conditions experienced in the August 2023 Maui fire.</p>	<p>Leslie Schmitz</p>	<p>Mahalo for your recommendations to incorporate Firewise Safety strategies into the KBMP. Firewise communities play a critical role in reducing wildfire risk, particularly in areas where development borders wildland vegetation.</p> <p>Kamehameha Schools acknowledges the heightened awareness around wildfire risks, particularly in the aftermath of recent wildfire events across the State. These events have underscored the importance of comprehensive and proactive wildfire mitigation measures to protect communities, homes, and natural resources.</p> <p>Kamehameha Schools understands the concerns raised regarding the potential for wildfires to threaten both new development and neighboring communities, including Bayview Estates. The addition of new structures within the Project Area requires a proactive approach to integrate fire safety into the design and implementation of the management plan. The Project will be reviewed by the County and comply with all County fire code requirements.</p> <p>Although the Project does not include the construction of homes or the presence of full-time residents, at Kamehameha Schools, stewarding our 'āina to support the resiliency and safety of our communities is our top priority.</p> <p>Protecting Hawai'i from wildfire is a shared kuleana – one that requires the collaboration of government, Hawaiian Electric, landowners, businesses, and homeowners alike.</p>

		<p>allocated and entitled credits not dependent on new water source development.</p> <p>According to the 2017 Hawai'i Water Use and Development Plan Update, projected demand, including authorized planned uses such as the KBMP, remains below the sustainable yield threshold for the Keauhou Aquifer System, indicating that water withdrawals associated with the Project are not expected to result in adverse cumulative impacts.</p> <p>Water conservation measures will be incorporated into Project design and may include efficient irrigation systems such as drip irrigation and moisture sensors, use of non-potable water for irrigation, drought-tolerant landscaping, and ultra-low flow fixtures and toilets.</p> <p>Coordination with the County DWS will continue through the design phase, with final construction plans to be reviewed and approved by DWS and the Hawai'i Fire Department.</p>
<p>Drought Conditions and Water Consumption Limits: Kona is experiencing significant drought conditions, and residents are frequently subject to water consumption limits. Introducing another resort in this area, which already has substantial resort development, will place further strain on our limited water resources. This development will likely, in the long term, prioritize water use for tourists over residents, exacerbating existing water shortages. Recommendation: Develop a comprehensive water management plan that prioritizes conservation and sustainable use. This should include advanced water-saving technologies such as greywater recycling, rainwater catchment, and low-flow fixtures. Additionally, the project should commit to offsetting its water use by contributing to community water conservation initiatives and infrastructure improvements.</p>	Alexis Kerver	<p>Section 4.12.1 of the EIS evaluates water supply needs for the KBMP. The County of Hawai'i DWS has confirmed that Kamehameha Schools' water credits are sufficient to support the Project. The credits being utilized for the Project are existing allocated and entitled credits not dependent on new water source development.</p> <p>According to the 2017 Hawai'i Water Use and Development Plan Update, projected demand, including authorized planned uses such as the KBMP, remains below the sustainable yield threshold for the Keauhou Aquifer System, indicating that water withdrawals associated with the Project are not expected to result in adverse cumulative impacts.</p>

Summary of Draft EIS Comments and Responses		
Comments	Commenter	Responses
		<p>Water conservation measures will be incorporated into Project design and may include efficient irrigation systems such as drip irrigation and moisture sensors, use of non-potable water for irrigation, drought-tolerant landscaping, and ultra-low flow fixtures and toilets.</p> <p>Coordination with the County DWS will continue through the design phase, with final construction plans to be reviewed and approved by DWS and the Hawai'i Fire Department.</p>
<p>Proposed project lacks necessary water credits The DEIS states that the proposed project will require 146,199.2 GPD as its max daily demand, 487,330.8 GPD for total peak hour demand, and 97,466.2 GPD total average daily demand (5-10, Table 5.2). Yet, the average water demand is assumed to be 86,385 GPD which is equivalent to 240 water credits which is significantly less. All of the three water projections for max daily demand, total average daily demand, and total peak hour demand are well beyond the equivalent water credits. Each water credit is equivalent to 400 GPD. The total peak hour demand requires 1,218 water credits, total peak hour, 365 water credits for max daily demand, and 243 water credits for the total average daily demand. Comments submitted by the DWS in Table 7.2 clarify that, "Please be informed that the applicant has assigned 101 units of water to TMK 7-8-010:044 through an executed Water Agreement with the Water Board, dated April 4, 2012. Additional water could be made available subject to the Water Board's approval." Thus, the proposed project does not have necessary water credits for the project to proceed. How can this project proceed when it does not have the necessary water credits that it is estimated to use? Repeatedly, the DEIS states that KS will work with DWS when the necessary water credits are not confirmed available for this proposed project. The project should be denied until such credits are obtained by DWS and necessary impacts to ecosystems and cultural practices analyzed with full consultations. Kona has major water</p>	<p>Loke Aloua</p>	<p>The water for the KBMP will be sourced from the existing County of Hawai'i Department of Water Supply (DWS) Kona Water System, which draws from the Kahalu'u Shaft Wells. These wells supply water to the region, including the Keauhou Bay area, and are designed to support growth and development within the local infrastructure.</p> <p>Section 4.12.1 of the EIS evaluates water supply needs for the KBMP. Water demand calculations were updated for the Final EIS and estimate an average daily demand of approximately 95,879 gallons, accounting for both potable and irrigation uses. The revised estimate reflects a reduction in demand, primarily due to adjustments in landscape irrigation projections. Final landscape and irrigation plans have not yet been developed and will be prepared during the detailed design phase. Irrigation system design will be based on the Project's existing allocated water supply. Coordination with the County Department of Water Supply (DWS) will continue throughout the design phase. Final construction plans will be submitted to DWS for review and approval.</p> <p>Kamehameha Schools holds an existing allocation of 240 water credits for the Project Area through an agreement with the County of Hawai'i Water Board. The County of Hawai'i DWS has confirmed that Kamehameha Schools' water credits are sufficient to support the Project. The credits being utilized for the Project are existing allocated and entitled credits not dependent on new water source development.</p>

<p>issues. This is the dryside of the island and everyone is developing like freshwater is infinite. KS claims this project has been scaled back but really it is still too big even for the amount of water that is available for this parcel. 101 credits translates to approximately 40,400 GPD. Where is the development for this type of allotted water use? I have the following questions: How many water credits does KS have in possession for this proposed development? How will KS acquire additional water credits? Are additional water credits available? Where will the well for the project be supplying the development with water be located? What are the environmental impacts of withdrawal on groundwater dependent species, near and deep shore fisheries? What are the impacts of water use on traditional and customary practices? What ahupua'a will be supplying this proposed project with its potable water?</p>		<p>According to the 2017 Hawai'i Water Use and Development Plan Update, projected demand, including authorized planned uses such as the KBMP, remain below the sustainable yield threshold for the Keauhou Aquifer System, indicating that water withdrawals associated with the Project are not expected to result in adverse cumulative impacts to the aquifer.</p> <p>Water conservation measures will be incorporated into Project design and may include efficient irrigation systems such as drip irrigation and moisture sensors, use of non-potable water for irrigation, drought-tolerant landscaping, and ultra-low flow fixtures and toilets.</p> <p>Coordination with the County DWS will continue through the design phase, with final construction plans to be reviewed and approved by DWS and the Hawai'i Fire Department.</p> <p>The Project does not propose the development of a new water well, as it will rely on existing allocated water credits for its operational needs. Because no additional groundwater withdrawals are planned, there are no anticipated impacts to groundwater-dependent species, including nearshore or deepwater fisheries resulting from such withdrawals. The use of pre-existing water allocations also eliminates potential adverse effects to cultural practices associated with traditional and customary uses. For a detailed analysis of cultural resources, refer to Section 4.1 of the FEIS.</p>
<p>What is more, freshwater supplies are not guaranteed in this dry region, so one wonders how existing wells will handle an increase in demand.</p> <p>Drought Conditions On Hawai'i Island Prompt Water Supply Message With moderate to severe drought conditions being reported across Hawai'i island, local water department officials issued a statement this week on the need for customers to use drinking water wisely. Most of Hawai'i island is under "Moderate Drought" conditions, according to the latest information from the U.S. Drought Monitor. There</p>	Michael Hanly	<p>Section 4.12.1 of the EIS evaluates water supply needs for the KBMP. <p>is an area under “Abnormally Dry” conditions in South Kona, however there are other, small pockets on the Big Island that are under “Severe Drought”. There is even a small spot of “Extreme Drought” in the South Point area of Ka’ū. 12 “The National Weather Service’s forecast calls for the existing drought conditions to expand over the entire island and intensify over the upcoming months due to the ongoing El Niño event,” reported the Hawai’i County Department of Water Supply. “Peak dryness is expected to occur from around January through February 2024. The El Niño event will likely persist well into spring 2024.” From the Water. Hawaii is "on the verge of a greater catastrophe," locals say, as water crisis continues By Li Cohen And recent years have seen compounding problems: less rain, leading to significant droughts, and repeated jet fuel leaks and PFAS chemical spills contaminating water systems. All of this significantly limits available water use for locals, many of whom say tourism is only worsening the situation. Just months ago, the world's largest surfing wave pool opened up on the island – filled with freshwater. "They're not using it to drink or to support life, they're using it to make money. They're commodifying it," said Healani Sonoda-Pale, who is Native Hawaiian and a member of advocacy group O'ahu Water Protectors. "... We are on the verge of a greater catastrophe." "We are in a water crisis, that has to be made very clear," Wayne Tanaka, director of Sierra Club of Hawai'i, told CBS News, saying that if the reasons for this crisis aren't soon addressed, "We may come to a point where we have to decide ... who gets water and who doesn't."</p>		<p>According to the 2017 Hawai’i Water Use and Development Plan Update, projected demand, including authorized planned uses such as the KBMP, remains below the sustainable yield threshold for the Keauhou Aquifer System, indicating that water withdrawals associated with the Project are not expected to result in adverse cumulative impacts to the aquifer.</p> <p>Water conservation measures will be incorporated into Project design and may include efficient irrigation systems such as drip irrigation and moisture sensors, use of non-potable water for irrigation, drought-tolerant landscaping, and ultra-low flow fixtures and toilets.</p>
<b>Natural and Manmade Hazards</b>		
<p>13. The EIS Fails To Consider Tsunami Impacts On The Cultural Center Presumably, the proposed "Cultural Center" would contain hawaiian artifacts etc... However, the buildings that Project proponent proposes to utilize as a "Cultural Center" were badly damaged during the last tsunami (which was a relatively small tsunami.) If the Culture</p>	<p>Jeff Caufield</p>	<p>The Project includes the adaptive reuse of the two historic bayfront buildings for a new cultural education and heritage center.</p> <p>Section 4.7.5 of the EIS addresses tsunami inundation. The entire Project Area, including the proposed cultural education and heritage center, lies within the Hawai’i County Civil Defense Agency’s designated Tsunami Evacuation Zone. These structures</p>

Summary of Draft EIS Comments and Responses

<p>Center had been in operation during the last tsunami, precious artifacts would have been lost and/or destroyed. Instead, as the buildings housed snorkel tour businesses, all that was damaged was the buildings and their easy to replace contents. It is inconceivable that any entity that purports to be charged with a duty to protect cultural heritage would place a Culture Center at one of the highest at risk locations on the islands. (Due to Keauhou Bay's triangular shape and rapidly rising depths, a tsunami wave from a westerly direction is channeled, funneled and magnified by the shape of the bay.) This makes Keauhou Bay one of the locations on the western side of the island most likely to experience the largest tsunami impacts. The report fails to mention that entire buildings adjacent to the proposed Culture Center were destroyed by the last tsunami nor are any mitigation measures proposed. Without any information in the EIS it is unclear what if any protection would exist for the Cultural Center and any artifacts inside.</p>		<p>are also situated in a FEMA-designated VE coastal flood zone with velocity hazard. Any improvements or modifications will be subject to applicable building codes and permit requirements, including those related to flood hazard areas.</p> <p>New construction and substantial site improvements will require compliance with the County's floodplain management regulations (Section 27 of the County Code). Therefore, the risk of potential damage from these flood hazards should be minimized by compliance with County requirements.</p> <p>The repurposed cultural education heritage center buildings may be retrofitted to help mitigate storm surge and tsunami risks by applying external coatings to the walls that are impervious to water and providing temporary flood shields at openings and doors. Low flood walls and berms could also be integrated around the buildings that can help divert the storm surge around the buildings. Additional design improvements will be included as required by the County during design and building permit review and approval for the Project.</p> <p>Artifacts will not be stored in the cultural and heritage center.</p>
<p>The DEIS adversely and significantly impacts the effects caused by climate change already felt in this area: As the November 2nd U.S. Drought Monitor detailed, most of the Big Island is under a D2 Severe Drought, with a few spots of D3 Extreme Drought. By constructing a 150-unit resort, 188 resort parking spaces, 60 more parking spaces for the retail center, more commercial spaces, a restaurant, and a cultural/educational center, the DEIS proposes to replace forested lands with hardscape. When deforestation occurs, much of the carbon stored by trees is released back into the atmosphere as carbon dioxide. This in turn influences local temperature and climate, which in turn creates more drought conditions, severe weather events, and sea level rise.</p>	Tamyra Rice	<p>The Project does not propose the removal of native forests. A portion of the Project Area mauka of Old Kona Road will be developed for the low-impact lodging. Currently, this portion of the Project Area above 'Ahu'ula cliff is dominated by invasive Guinea grass and koa haole trees, which provide limited ecological or carbon sequestration benefits. The Project does not propose the removal of native forests.</p> <p>Landscaping improvements throughout the Project Area will include native plant restoration, replacing certain areas currently dominated by invasive species. These efforts will support carbon sequestration, improve biodiversity, and enhance ecosystem function. In addition, the implementation of a comprehensive management plan will result in more active stewardship of landscaped areas, including invasive species removal and ongoing</p>

Comments	Commenter	Responses
<p>“Reduced rainfall from climate change reduces submarine groundwater discharge and increases salinity of nearshore waters. Future urban development coupled with elevated water demand will likely further decrease submarine groundwater discharge and increase salinity in coastal springs. Protecting native forests prevents the further loss of freshwater and further increases in salinity.” “As it is critical to incorporate an imminent rise in sea level and other climate change effects into plans for future development, these impacts should also be considered when drafting an EIS.” The DEIS states: “The project would not affect climatic conditions; therefore, no mitigation measures are required. The KBMP may add activities that result in minimal greenhouse gas emissions (GHGs), which are known to warm global climate....” (DEIS at 4.2.1) The DEIS fails to consider the negative impact of deforestation caused by the project and fails to adequately assess its contribution to climate change. One mitigation measure might be to forego the building of the 150-unit resort to reduce deforestation.</p>		<p>maintenance, further promoting long-term environmental resilience and climate mitigation benefits.</p> <p>The Project integrates Low-Impact Development (LID) principles to manage stormwater through strategies that replicate natural hydrologic processes. These practices, such as infiltration and retention systems, will reduce runoff and support localized water recharge. Impacts to the water table and ability for groundwater to discharge to the bay are not anticipated. The project’s detailed drainage analysis and design will require design review and approval by the County for land use and construction plan approvals subsequent to the FEIS. The Project will be designed to comply with the County Drainage Standards, which include design requirements and regulations to address stormwater impacts within the County of Hawai’i.</p> <p>A discussion of climate and rainfall is included in Section 4.2.1 of the EIS. A discussion on air quality is included in Section 4.2.2. Climate change and sea level rise is discussed in Section 4.7.6 of the EIS.</p> <p>Emissions from construction are anticipated to be minimal and temporary due to the low intensity and limited scale of construction activities. Compliance with HAR §11-60.1-33, and implementation of a dust control management plan, including Best Management Practices such as dust suppression and vegetative cover replacement, will help minimize short-term air quality impacts. While operational activities may result in minor increases in criteria pollutants and GHG emissions, these are not expected to significantly affect surrounding air quality or regional climate conditions.</p>
<b>Air Quality</b>		
<p>Air Impacts The DEIS fails to address air impacts from the Project. As mentioned previously, a large number of additional motorized vehicles and vessels will be added to the area. However, there have been no studies of existing air</p>	Jennie Shield	<p>Section 4.2.2 of the EIS addresses air quality impacts associated with the KBMP and provides an assessment of the potential air quality impacts associated with both construction and operational phases of the project.</p>

		<p>enough to adversely affect surrounding air quality, and no mitigation measures are proposed.</p> <p>Appendix M to the DEIS includes a detailed mobility analysis report that analyzes the Project’s potential impacts to traffic operations. According to the report, the Project is estimated to generate approximately 1,928 new daily weekday vehicle trips. This minimal increase in vehicle activity is not expected to result in significant impacts to air quality or contribute to a measurable degradation of ambient air conditions.</p> <p>The Project will adhere to local, state, and federal air quality regulations. Given the small scale of the development and the relatively low intensity of proposed operations, the impacts on regional air quality are expected to remain within acceptable limits.</p>
<p>Since the traffic forecasts are erroneous, all air quality and noise analysis are also in error. The noise disruption from traffic along Kamehameha III Road is already disruptive. As noted above, the majority of both background traffic volume and project generated traffic volume will use Kamehameha III Road. Traffic congestion, noise (duration and intensity), and air quality impacts will significantly worsen, particularly for residents adjacent to this section of the road. We request that Air Quality and Noise studies be revised to reflect the significant shift in traffic volume associated with the development and through road connection that is part of the proposed action. In summary, we request that a Supplemental DEIS be prepared for public review to address an updated traffic analysis addressing the items noted above, any associated Noise and Air Quality analyses, and other non-traffic issues.</p>	<p>David Markley</p>	<p>Section 4.2.2 of the EIS provides an assessment of potential air quality impacts associated with the KBMP, addressing both construction and operational phases of the Project.</p> <p>The DEIS references data from the Hawai’i Department of Health’s (DOH) Clean Air Branch (CAB), which monitors air quality at various locations across the island. 		criterion of 15 dB. Planned resort and construction activities will be required to comply with local Department of Health noise regulations to avoid adverse impacts.
How will you mitigate the extra noise and air pollution from construction truck traffic along Ali'i Dr and Kaleiopapa St by my condo (Keauhou Akahi 78-7030 Ali'i Dr)? I don't know what to suggest for the air pollution, but I hope your bright minds can come up with something.	Marjorie Bryant	<p>Section 4.2.2 of the EIS evaluates air quality impacts associated with both construction and operational phases of the KBMP. Based on monitoring data from the nearest air quality station in Kona, the area is generally in attainment of National Ambient Air Quality Standards, aside from occasional exceedances due to volcanic activity. Construction activities such as grading and paving are expected to produce minimal and temporary emissions of criteria pollutants and greenhouse gases. These impacts will be managed through compliance with fugitive dust regulations and the implementation of a dust control management plan and Best Management Practices. Operational emissions from on-site sources and traffic are anticipated to be minor and are not expected to result in significant degradation of air quality.</p> <p>Section 4.13 of the EIS addresses noise impacts and is supported by a detailed Noise Assessment. Construction activities may temporarily elevate noise levels for nearby uses, while long-term sources include increased traffic and programmatic activities associated with hospitality, cultural, and educational uses. Although noise levels are expected to rise slightly, particularly in undeveloped areas along Old Kona Road, projected increases remain within regulatory thresholds. No exceedances of FHA/HUD or Hawai'i Department of Transportation noise standards are anticipated, and all construction and operational activities will be required to comply with Department of Health noise regulations.</p>
<b>ADA</b>		
<p>The general area of concern is that of ADA compliant access for persons with disabilities for all elements of the proposed management plan.</p> <p>It is apparent that the most recent plan does address some of the accessibility issues that I and others raised in the initial comments. And for that, those both with disabilities</p>	Lewis Brentano	A key goal of the KBMP is to improve accessibility throughout the Project Area in accordance with the Americans with Disabilities Act (ADA). Accessibility improvements will be included as required by the County of Hawai'i and the State Disability and Communication Access Board during design and building permit review and approval for the project.

Summary of Draft EIS Comments and Responses		
Comments	Commenter	Responses
<p>are grateful. However, there are at least five other areas that appear inadequately addressed or not addressed at all in terms of ADA compliant access in the plan.</p> <p>1. ADA compliant access from the north side of the KOA to the south side - A first area of concern is the access for disabled people from the north side of Keauhou Bay to the south provide access to all the facilities on the southside, Today, anyone in a wheelchair or with mobility challenges has to go to Ali'i Drive and walk all the way to the Outrigger hotel to get to the south side of bay - a distance of over mile and a half on a busy road. It appears from the renderings of the improvements to Old Kona Road that there will be a multi-use pathway parallel to the road itself that would go from north side of the bay to the south side, but it still appears to be a long distance compared to providing ADA compliant access from the Kamehameha III road cul-de-sac, directly across the area above the beach on the bay, to the South side. I do not see in the plan any indication of pedestrian access from the cul-de-sac to the other side of the bay where the heritage center would be.</p> <p>2. ADA compliant access to the lobby of the lodging area. There is no evidence or statement about making the lodging lobby accessible – all the rendering drawings and comments show two different sets of steps to go from street level to the lobby entrance. If such accessibility is intended, it needs to be stated directly in obviously in your plan.</p> <p>3. ADA Compliant access to lodging units. The third area would be the lodging units themselves as depicted at best 1/3 of the units would be accessible in terms of entry, and there is no mention of building accessible, bathrooms, bedrooms, etc., in the actual units. This seems to be an issue that must be addressed early on in the design phase.</p> <p>4. Too few ADA complaint Handicapped Parking places The area of accessibility is related to number accessible. Parking places stated in the document and in the plans – – you</p>		<p>The Project includes enhancements to Old Kona Road, which serves as a vital connection between the north and south sides of Keauhou Bay. The road will be improved to function as the primary pedestrian and vehicular linkage, and a promenade along this corridor will be designed to meet ADA and County standards.</p> <p>Planned facilities, including the cultural education and heritage center buildings and the lobby and units of the low-impact lodging, will be constructed to ensure ADA accessibility. Additionally, the Project will comply with County parking requirements and include designated handicap parking stalls as required.</p>

Summary of Draft EIS Comments and Responses		
Comments	Commenter	Responses
<p>know that you will build 126 parking places for the retail area, but only five handicap places this is too small, a percentage of spaces, especially given likelihood that a good number of visitors and tourists would most likely be senior citizens. I'm sure there are ADA guidelines on percentages of handicap, parking places, but would it seem 15 to 20% of spaces should be a minimum out of the 126 total.</p> <p>5. ADA compliant access to Heritage Center. In the rendering and description of the heritage center there is no indication of ADA compliant access to the building. The rendering only shows a stair entry and no indication of a ramp or lift.</p>		
<b>Sea-Level Rise</b>		
<p>“The queen-mother [Keōpūolani] had just bathed in the cold water near the southern extremity of Ke-au-hou’s formerly picturesque white sand-beach, and a few steps into the sea, where slowly gushed the now mostly destroyed sea-spring of Ku-hala-lua.” A comparison of this passage to the current Ka’ili’ilinehe Beach shoreline (see Figures 3-12 and 3- 13) shows a heavily modified shoreline and very little, if any, of a white sand beach. I observe that the existing beach sand is at best mixed with volcanic/basalt cobbles (and aesthetically dissimilar) and at worst contaminated with runoff-generated sediment and asphalt (no technical evaluation has been conducted). The proposed Project, despite attesting to improving the “shoreline access” acknowledges that no project elements are at the shoreline, and thus the project indirectly preserves the degraded beach while proposing elements which may further degrade the beach and shoreline more broadly (through additional stormwater/runoff generated sedimentation due to increase in hardscape/imperious surfaces [Figure 3-35] and potential nutrient/contaminant/bacteria transport via groundwater, for example, as discussed below).</p>	Nicholas Buhbe	<p>The Project does not propose any improvements to the shoreline. Ka’ili’ilinehe Beach remains a public shoreline area, and the KBMP preserves access to this location. The adjacent area within the Project Area is designated for passive recreation and open space, supporting continued cultural and recreational use while maintaining the natural shoreline setting.</p> <p>The Project’s stormwater management plan and long-term Best Management Practices (BMPs) are designed to safeguard Keauhou Bay’s water quality both during and after development. EIS Section 4.5 discusses Project stormwater management and drainage improvements.</p> <p>Currently, the lands surrounding Keauhou Bay lack adequate stormwater and drainage infrastructure. As a result, rainfall events can cause untreated runoff and contaminants from roadways and other surfaces to enter directly into the bay. To address this issue, the Project proposes a comprehensive stormwater management system designed to capture and treat stormwater runoff on-site. This infrastructure will significantly reduce sediments and pollutants reaching the shoreline and Ka’ili’ilinehe Beach.</p>

Summary of Draft EIS Comments and Responses

<p>4.7.6 Climate Change and Sea Level Rise: The DEIS acknowledges that a significant amount of sea level rise is expected in the project area and plans for up to 4 feet by 2100. “The primary means of mitigation for the KBMP is avoidance.” “Potential Impacts and Mitigation Measures” at page 4-109. As discussed below (DEIS 4.12” Infrastructure and Utilities”), the water and sewer force mains along with telecommunications and electrical lines are in the Ka’ili’ilinehe Recreation Corridor at the water’s edge, buried behind the long-standing seawall. The KBMP acknowledges that a “a select portion” of the Project Area may experience passive flooding caused by sea level rise (SLR). (DEIS 4.16.5 “Adverse Effects that Cannot be Avoided”) The DEIS should acknowledge that SLR will affect the Ka’ili’ilinehe Recreation Corridor and in particular the water, wastewater, power and telecommunications infrastructure that are now located in the corridor.</p>	<p>Joanne (Jody) Wheeler</p>	<p>Kamehameha Schools does not own the buried infrastructure systems along the shoreline and therefore cannot initiate relocation. However, Kamehameha Schools acknowledges the potential impacts of sea level rise on this infrastructure and will collaborate with the County and utility companies to explore proactive solutions that enhance long-term system resilience. Kamehameha Schools remains open to cooperating with utility providers should they decide to relocate infrastructure in the future as part of their mitigation strategies.</p>
<p>Power and Telecommunications on page 4-144. Electrical and Telecommunications lines also pass through the near shore area. The DEIS acknowledges that this area will be affected by sea level rise but does not propose moving these lines. This risk should be mitigated (in fact avoided) by relocating the electrical and telecommunications lines to the Old Kona Road</p>	<p>Joanne (Jody) Wheeler</p>	<p>Kamehameha Schools does not own the buried infrastructure systems along the shoreline and therefore cannot initiate relocation. However, Kamehameha Schools acknowledges the potential impacts of sea level rise on this infrastructure and will collaborate with the County and utility companies to explore proactive solutions that enhance long-term system resilience. Kamehameha Schools remains open to cooperating with utility providers should they decide to relocate infrastructure in the future as part of their mitigation strategies.</p>
<p>Section 4.16.5, Adverse Environmental Effects that Cannot Be Avoided, identifies long and short term impacts. Pursuant to this section, these impacts are:</p> <p>Long-term Effects</p> <ul style="list-style-type: none"> <li>• A select portion of the Project Area may experience passive flooding as a result of 3.2 ft. of global SLR predicted by 2100. Kamehameha Schools is committed to proactively planning and designing the Project to be resilient to ensure</li> </ul>	<p>Elizabeth Dunn</p>	<p>EIS Section 4.16.1 discusses Cumulative Impacts. The Project’s sustainable tourism model is expected to generate beneficial cumulative impacts by fostering a respectful and reciprocal interaction between visitors, local communities, and the natural and cultural resources of Keauhou. The coordinated development approach, compliance with infrastructure standards, and careful resource management within the framework of county and community development plans mitigate potential impacts. Kamehameha Schools will continue to work with local utilities and</p>

<p>the ongoing successful, safe, and sustainable operation of the bay for the foreseeable future.</p> <ul style="list-style-type: none"> <li>• In the long term, traffic volumes in the immediate area are expected to remain similar to without Project conditions. Improved parking and site circulation is expected to have long-term beneficial effects on traffic and public safety.</li> <li>• An increase in visitor accommodations will result in an increase in water consumption, wastewater disposal, and solid waste generation. Therefore, there will be increased demand on existing utilities and infrastructure. Where practical and feasible, sustainable design practices and technology will be utilized to reduce demand requirements.</li> </ul> <p>There are numerous Planning projects that have been approved, and not built to fully understand how the Keauhou Bay proposal will further add to the cumulative negative impacts of this proposal on the community, such as traffic, whether there is water to provide to the proposal, and dealing with sewage. I've read the information in the DEIS; I find it hard to rely upon it given what the public knows about human error at wastewater treatment facilities, the amount of brown water alerts to avoid swimming at local west side beaches, and the inability to rely upon capacity issues at these facilities. I am skeptical.</p> <p>And this is before the issue climate change and Sea Level Rise (SLR). It is ill-advised to spend the money KS anticipates to build such a project when it is adjacent to a bay that had and will continue to experience the negative effects of sea level rise.</p>		<p>agencies to address any further needs, ensuring that the infrastructure demands from these combined projects are effectively managed and aligned with regional growth projections.</p> <p>Section 4.12 of the EIS includes detailed evaluations of the existing infrastructure capacities at Keauhou Bay, such as water, wastewater, solid waste, power, and telecommunications, along with potential impacts, and the necessary upgrades to support the KBMP.</p> <p>The EIS includes analysis to verify that Hawai'i Island's infrastructure systems can accommodate the proposed KBMP. The Project is designed to mitigate potential impacts on local resources through strategic planning, infrastructure upgrades, and sustainable design practices. With the implementation of these actions, the Project is anticipated to contribute positively to the region's growth while minimizing adverse impacts on the island's resources and infrastructure.</p> <p>Proposed development within the projected 3.2 seal level rise inundation area includes the adaptive reuse of the two historic bayfront buildings for a new cultural education and heritage center.</p> <p>Section 4.7 of the EIS addresses sea level rise, flooding, and tsunami inundation. The entire Project Area, including the proposed cultural education and heritage center, lies within the Hawai'i County Civil Defense Agency's designated Tsunami Evacuation Zone. These structures are also situated in a FEMA-designated VE coastal flood zone with velocity hazard.</p> <p>The repurposed cultural education heritage center buildings may be retrofitted to help mitigate storm surge risks by applying external coatings to the walls that are impervious to water and providing temporary flood shields at openings and doors. Low flood walls and berms could also be integrated around the buildings that can help divert the storm surge around the buildings. Additional design improvements will be included as required by the County during design and building permit review and approval for the Project.</p>

Summary of Draft EIS Comments and Responses		
Comments	Commenter	Responses
		The Project will allow for the continued use of existing bayfront facilities, with planned retrofits designed to support their ongoing function and enhance resilience to future sea level rise. These improvements will enable the structures to remain in use while adapting to changing coastal conditions.
The EIS acknowledges that a significant amount of sea level rise is expected in the project area and plans for up to 3.2 feet by 2100. See, DEIS 4.7.6 “Climate Change and Sea Level Rise” at 4-107. “The primary means of mitigation for the KBMP is avoidance.” Id. “Potential Impacts and Mitigation Measures” at 4-109. As discussed below (DEIS 4.12 “Infrastructure and Utilities”), the water and sewer infrastructure along with telecommunications and electrical lines are located in the Ka`ili`ilinehe Recreation Corridor, buried behind the old seawall in the center of the photo below. See, Fig. 3-13 at 3-19. The KBMP acknowledges that “a select portion” of the Project Area may experience passive flooding caused by sea level rise (“SLR”). (DEIS 4.16.5 at 4- 180, “Adverse Environmental Effects that Cannot be Avoided”) The DEIS should acknowledge that SLR will affect the Ka`ili`ilinehe Recreation Corridor and in particular the water, wastewater, power and telecommunications infrastructure that are now located in the corridor.	Carolyn Leilani Carter	Kamehameha Schools does not own the buried infrastructure systems along the shoreline and therefore cannot initiate relocation. However, Kamehameha Schools acknowledges the potential impacts of sea level rise on this infrastructure and will collaborate with the County and utility companies to explore proactive solutions that enhance long-term system resilience. Kamehameha Schools remains open to cooperating with utility providers should they decide to relocate infrastructure in the future as part of their mitigation strategies.
Has KS limited lateral access along the shoreline to He`eia Bay by hardening the shoreline with rocks? Please provide the permits and approvals for that.	Claudia Rohr	He`eia Bay is not located within the Project Area. As such, no actions related to shoreline armoring are proposed as part of the KBMP.  Kamehameha Schools did conduct some limited natural resource and cultural resource management work at Heeia bay under Permit SAA-21-001817 and SMM-21-000442 AMENDED) approved on June 8, 2022. That work did not include any hardening of the shoreline.  There is an established shoreline public access easement to He`eia bay. More information can be found on the County's website:

<b>Heat (Temperature) Increase</b>		
<p>My third concern is the increased heat and lowered precipitation in my local climate that will be caused by your proposed development, because you will be razing a majority of 29 acres of trees and vegetation and replacing it with black pavement and other hardscape. The science behind this concern is well documented. From <a href="https://www.epa.gov/heatislands">https://www.epa.gov/heatislands</a>: "Conventional paving materials can reach peak summertime temperatures of 120–150 °F (48–67 °C), transferring excess heat to the air above them and heating stormwater as it runs off the pavement into local waterways." Trees make rain, and razing forests decreases rain (supporting science for this sentence is listed at end of this letter and marked by *). Our area has been in a drought for years. It is not a good idea to decrease precipitation in an area of drought. And of course we all know mature trees provide cooling shade. Increased heat from your proposed development will radiate up to my condo, which is right across the golf course above the project site. This will affect my health, and that of my neighbors, most of whom are kupuna like me - not only when we're at home, but when we go out for our daily walks down to Keauhou Bay. Further, it is a documented scientific fact that our climate and oceans are warming increasingly rapidly. Your development will exacerbate this locally. It's going to heat not only the air but the water in the bay. I do not believe this impact - the extra heat and what it will do to our health and the health of the bay and the health of our local ecosystem - can be successfully mitigated. That said, here are some suggestions. I suggest using alternate paving materials that do not generate heat. I also suggest leaving mature shade trees on site in place - and intact. And I suggest planting shade trees (at a maximum distance of 30 ft apart) in your parking lots - and all over your property,</p>	<p>Marjorie Bryant</p>	<p>Mahalo for your recommendations to mitigate urban heat. The Project will mitigate the impacts of extreme heat and urban heat islands through strategic landscaping and restoration efforts.</p> <p>A portion of the Project Area mauka of Old Kona Road will be developed for the low-impact lodging. Currently, this portion of the Project Area above 'Ahu'ula cliff is dominated by invasive Guinea grass and koa haole trees, which provide limited ecological or atmospheric cooling benefits. The Project does not propose the removal of native forests.</p> <p>While some larger tree removal may be necessary elsewhere throughout the project area, efforts will be made to restore and enhance native plant communities, including trees, shrubs, and groundcover, in strategic areas. Native plants have a much higher resilience to local climate conditions and play a crucial role in maintaining moisture levels in the environment, which can positively impact local rainfall patterns.</p> <p>Landscaping improvements throughout the Project Area will support carbon sequestration, biodiversity, and improved microclimate conditions. Trees will also be planted in parking areas to increase shade and reduce heat absorption from paved surfaces. These measures, combined with active management of invasive species and maintenance of vegetation, will help moderate local temperatures and mitigate heat island effects.</p>

Summary of Draft EIS Comments and Responses		
Comments	Commenter	Responses
including the commercial/retail areas on Ehukai St and Kaleiopapa St. And I suggest planting greenscape on the roofs of your buildings - all buildings, including the commercial/retail areas on Ehukai St and Kaleiopapa St.		
<b>Flood Hazard</b>		
<p>The rules and regulations of the National Flood Insurance Program (NFIP), Title 44 of the Code of Federal Regulations (44CFR), are in effect when development falls within a Special Flood Hazard Area (high-risk areas). Be advised that 44CFR, Chapter 1, Subchapter B, Part 60 reflects the minimum standards as set forth by the NFIP. Local community flood ordinance may stipulate higher standards that ca be more restrictive and would take precedence over the minimum NFIP standards.</p> <p>The owner of the project property and/or their representative is responsible for researching the Flood Hazard Zone designation for the project. Flood zones subject to NFIP requirements are identified on FEMA's Flood Insurance Rate Maps (FIRM). The official FIRMs can be accessed through FEMA's Map Service Center (<a href="http://msc.fema.gov">msc.fema.gov</a>). Our Flood Hazard Assessment Tool (FHAT) (<a href="http://fhat.hawaii.gov">fhat.hawaii.gov</a>) could also be used to research flood hazard information.</p>	Carty Chang	<p>Kamehameha Schools acknowledge the requirements outlined in 44CFR Chapter 1, Subchapter B, Part 60 of the NFIP, which establishes minimum standards for development in Special Flood Hazard Areas (SFHA). Kamehameha Schools also recognizes that local ordinances may have more restrictive standards and will follow the more stringent of the two to comply with all flood management regulations.</p> <p>Kamehameha Schools will coordinate with the relevant authorities and regulatory agencies to obtain required floodplain permits or implement flood hazard mitigation measures as part of the detailed design process.</p>
<b>Beach Restoration</b>		
<p>The existing rock seawall between the two shoreline access points in the Ka`ili`ilinehe Recreation Corridor (Figure 3-13 above) is in poor condition, and the makai side is continually eroded in high surf events. If the water, wastewater, power, and telecommunications lines running behind the wall are relocated to a safer and more resilient location along Old Kona Road then this wall might be removed. The shoreline could then be restored as the beach that existed prior to the wall being built. This would likely be more resilient and provide an improved amenity for bay users. It would also be</p>	<p>Carolyn Leilani                      Joanne (Jody) Wheeler</p>	<p>The Project does not propose any improvements to the shoreline. Ka`ili`ilinehe Beach remains a public shoreline area, and the KBMP preserves access to this location. The adjacent area within the Project Area is privately owned and managed by Kamehameha Schoos via permit. The park is designated for passive recreation and open space, supporting continued cultural and recreational use while maintaining the natural shoreline setting.</p> <p>Kamehameha Schools does not own the buried infrastructure systems along the shoreline and therefore cannot initiate relocation. However, Kamehameha Schools acknowledges the potential impacts of sea level rise on this infrastructure and will</p>

a step toward recovering what Keauhou Bay used to be for the whole community		collaborate with the County and utility companies to explore proactive solutions that enhance long-term system resilience. Kamehameha Schools remains open to cooperating with utility providers should they decide to relocate infrastructure in the future as part of their mitigation strategies.
<b>Effects on Nearby Businesses</b>		
My grandson also works w the manta ray dives at Keauhou harbor and believe that this would negatively affect that business.	Helene Spencer	Economic impacts are discussed in Section 4.14 of the Final EIS and include information on the beneficial economic impacts of spending by visitors staying at the proposed low-impact lodging. The Proposed Action would provide a new retail space to accommodate existing ocean recreation commercial activities. Increased visitation to Keauhou Bay is also anticipated due to improved amenities and the proposed low-impact lodging. It is expected that the KBMP would be beneficial to existing business at Keauhou Bay and the Hawai'i County economy overall.
Justify building more shops when there are empty shop spaces for lease nearby.	Cory (no last name provided)	The Project would provide additional space to accommodate existing businesses, therefore some of the additional retail space would have some built-in tenancy. Also, increased visitation to Keauhou Bay is anticipated due to improved amenities and the increased tourism associated with the new low impact lodging. The increased visitor spending in the area, associated with visitors to the new low impact lodging, would improve retail spending in the area and could potentially lead to increased retail occupancy at existing retail spaces outside of the project area. Additional information has been added to Appendix P on the anticipated economic benefits associated with visitor spending associated with guests of the proposed low impact lodging.
I think relocating the existing commercial vendors and adding limited small-scale vendors and kiosks could be appropriate for the space. If these provide opportunities for local and native businesses, then I would be supportive. If the businesses catered to both the community and visitors, then I would be supportive. I am not supportive of any development that is targeted for visitors only, I am only	Lillie Makaila	As indicated in Section 1.5 of the EIS, the Project would accommodate the relocation of two existing commercial operators from the bay front area, complementary retail uses, and potentially allow space for other tenants, which can include both local and native businesses. Furthermore, it is anticipated that both low-impact lodging visitors and local residents would attend project-

supportive of development that supports the local and native communities.		related amenities as current facilities utilized by residents would be improved and enhanced for community use.
Commercial & Recreational Tenant Selection - I would like to see more clarity on the criteria for use and tenant selection in commercial and recreational spaces. Priority should be given to tenants who have a low impact on the bay and are inclusive of indigenous customers/participants, rather than those with a high impact and culturally exclusive practices. The same low impact and culturally inclusive criteria should be applied to recreational tenants, favoring those who are sensitive to cultural considerations over those who are high impact and exclusive.	Kaleiolani Pasciuta	<p>All future tenants and operators within the Project Area will be vetted by Kamehameha Schools to align with the vision, management strategies, and values set forth in the KBMP. This includes commercial operators, retail tenants, ocean recreation service providers, and cultural education partners.</p> <p>Kamehameha Schools has not yet identified an operator for the proposed low-impact lodging. However, the KBMP provides the entitlements and strategic framework to support future partnerships, with any selected operator required to adhere to the principles and intent of the KBMP.</p>
This development will negatively impact a sacred place, residents, current business owners, and the magnificent marine life in the area.	M. Kekoa Aukai-Richardson	<p>As indicated in Section 4.1 of the DEIS, upon implementation of the Project's management goals, it is expected that cultural resources will be improved through preservation and stewardship measures and that opportunities for traditional practices will be expanded; thereby enhancing ancestral connection to place, and, the Project is anticipated to generate long-term benefits by preserving sensitive archaeological sites and implementing a long-term commitment and plan of appropriate stewardship.</p> <p>It is anticipated that upon completion of new retail space, existing commercial bayfront businesses would move their operations into newly assigned retail spaces (i.e., priority would be to existing tenants). The new facilities are expected to be beneficial to these businesses. Additionally, Appendix P indicates that there would be substantial economic benefits associated with the project, including new information on the beneficial impacts of spending by guests of the new low impact lodging.</p> <p>While the Project does not propose any direct activities within the immediate nearshore areas of Keauhou Bay and no specific impacts to marine life were identified in the EIS, Table 4-9 of the DEIS outlines potential actions that could be taken to improve conditions for marine life in Ho'okūkū Pond within the Project Area.</p>

<b>Retail</b>		
I DO NOT support additional retail activities. Keauhou Shopping Center serves as the area's retail hub. Until all the medical service providers leased space there, retail space sat empty for years. There is not a need for more retail.	Mary Cowen	The Project will provide additional space to accommodate existing businesses relocating from the bay front area, therefore some of the additional retail space would have some built-in tenancy. Also, increased visitation to Keauhou Bay is anticipated due to improved amenities and the new low-impact lodging. The increased visitor spending in the area, associated with visitors to the new low impact lodging, would improve retail spending in the area and could potentially lead to increased retail occupancy at existing retail spaces. Additional information has been added to Appendix P of the Final EIS on the anticipated economic benefits associated with visitor spending of guests at the proposed low-impact lodging.
<p>First off, we do not need another shopping/cultural center in the keauhou bay.</p> <p>The people of Kona have fought to protect their cultural cites, and you think they want housing and shopping in an area where the local ohana's already go, and could possibly loss or diminish access due to new development. We Do not support this nor will we ever support building down in Keauhou.</p>	Jakob Cox	<p>The Purpose and Need set forth in Section 2.7 of the EIS indicates a need to strategically reorient and establish new opportunities for place-based cultural educational programming; create passive and active recreational activities; manage circulation and parking; define appropriate commercial and resort-zoned uses; generate revenue that will go back into the long-term operations and maintenance of Keauhou Bay and as well as any excess revenue to support the general mission of Kamehameha Schools. The Project meets this need by providing an opportunity to redefine notions of hospitality, placekeeping, and placemaking in harmonious balance with ensuring all associated improvement costs as a result of this plan's implementation can be self-sustaining. Long-term management of the bay's natural and cultural resources is made possible through a sustainable tourism model that uses revenue from the low-impact lodging and commercial operations to fund ongoing stewardship, maintenance, and educational programming.</p> <p>The KBMP does not include the establishment of new residential housing. The Project will provide additional space to accommodate existing retail businesses that will be relocated away from cultural sites at the bay.</p>
Keauhou shopping center is really just a 'small kine" local center, not at all geared to the high end outcome you seek,	Pamela Wang	The Project will provide additional space to accommodate two existing businesses that will need to relocate away from the bay.

especially with the outrageous rents charged there. Also consider the so called "disastrous" tourist season of 2024		New retail may space may be built to accommodate additional retail demand in the future. Additional information on the beneficial economic impacts of visitor spending of low-impact lodging guests has been added to Appendix P. Also, Additional information has been added as Section 3 of Appendix P of the Final EIS that indicates visitors to the area do appear to have declined from 2023 to 2024 though that is a decline from 2023 levels, which were the highest levels of visitation on record.
Socioeconomics & Environmental Justice		
The kids currently graduating from Kamehameha schools may never get to live and thrive in their ancestral lands because of development like this. And they all didn't go to a prestigious school to work at a resort that will pay them no more than 17\$ an hour which couldn't even find their rent let alone a future mortgage. And the unfortunate who couldn't afford Kamehameha or pass the requirements for admittance get an even shorter stick in all of this. Where's the development for the Hawaiian people? I don't even need to read the environmental impact because it's the big picture I'm looking at. That once again Hawaiians are selling out, that money is more important than the people. That tourism is more important than reconnecting with Hawaiian roots. Why not turn this area into a place that benefits people, feeds people, heals people, instead of a place that only heightens tensions, limits resources further and pushes Hawaii and it's people further from its heart.	Lindsey Caldwell	<p>As indicated in Section 2.2 of the EIS, the mission of Kamehameha Schools is to create educational opportunities in perpetuity to improve the capability and well-being of people of Hawaiian ancestry. Kamehameha Schools' Vision 2040 seeks to improve the well-being of 'āina (land) and the lāhui (Hawaiian people) within one generation. In that light, the lands bestowed upon Ke Ali'i Pauahi, and subsequently endowed to Kamehameha Schools, enhance a sense of Native Hawaiian identity by maintaining its ancestrally mandated obligations and responsibility to past, present, and future. Kamehameha Schools, as the Haku 'āina (proprietors of the land), has a responsibility to care for these legacy lands in a way that fosters the relationship between kānaka (humans) and 'āina, while also ensuring their long-term economic vitality to positively meet the needs of the communities the institution serves. To fulfill the mission, Kamehameha Schools seeks to utilize its landholdings and resources to achieve a balanced state between educational, cultural, environmental, economic and community returns. Kamehameha Schools recognizes that a thriving lāhui is not solely achievable through financial gains but is equally dependent upon the wellbeing of its learners, the greater community, and the 'āina as a whole.</p> <p>The KBMP is based on a framework established through extensive community engagement, it incorporates the foundational ideas of 'Ike Kupuna, Aloha 'Āina, Mālama and Kuleana, and it does so in a way that supports resilient economies, cultural landscapes, diverse learning, and career pathways. Because the Project is expected to provide extensive economic benefits to the community in a way</p>

		that would also improve heritage and cultural engagement, as indicated in Section 4.14 of the EIS, socioeconomic impacts are expected to be beneficial.
<p>Economical: Another Resort in this area will fail. Majority of Tourists head north of the Airport. Note the failed Resorts of the past in this area, Kahaluu in particular. What guarantee/demand does KSBE have that a resort development in this area will be successful in 15-20 years? KSBE track record for developing resort ready operations is not a sure success. In this case, the KSBE property has been poorly managed over a very long time. Now, Kamehameha Schools wants to justify this mismanagement by including a “hail mary” for income production, e.g. A Resort. A philosophy change at KSBE is needed, especially in these rural settings. Instead of Resort Thinking: What investment would benefit our graduating students the most? (hint, not a another resort). What investment would help stem the loss of talented young people from our island? What investment ensures a future, long term economic benefit? What investment is best for talent retention on the Big Island? Even, attract young talent from outside the Big Island. KSBE with its considerable resources should be a SOURCE of inspiration, research, and teaching. You have the connections to properly develop a longer thinking set of objectives for the Big Island. KSBE is based in Oahu, so it’s natural that it would focus its attention there. Yet, investment on the Big Island COULD be such that young people (our future) from Oahu, Maui, Kauai would WANT to move to the Big Island. As Ms. Harman at KSBE quoted that “change can be difficult”, changing KSBE’s mission to actually support its student by doing the right thing for the long term will perhaps be difficult for KSBE, but the right thing at this time. A resort does not provide an incentive for young talent to remain on the Big Island. Surely an entity like KSBE can imagine BETTER than the plan presented for Keauhou Bay improvements/development. Nor does a</p>	<p>Rollin Stonebraker-Soles</p>	<p>It is certainly true that the long-term success of any economic endeavor is never a certainty. Extensive community engagement has taken place to develop the conceptual framework for the KBMP. The Purpose and Need set forth in Section 2.7 of the DEIS indicates a need to strategically reorient and establish new opportunities for place-based cultural educational programming; create passive and active recreational activities; define appropriate commercial and resort-zoned uses; generate revenue that will go back into the long-term operations and maintenance of Keauhou Bay and manage circulation and parking. The Project meets this need by providing an opportunity to redefine notions of hospitality, placekeeping, and placemaking in harmonious balance with ensuring all associated improvement costs as a result of this plan’s implementation can be self-sustaining. Additional information has been added to Appendix P of the Final EIS on the anticipated economic benefits associated with visitor spending associated with guests of the proposed low-impact lodging.</p>

Resort improve the environmental health of this valuable cultural site.		
The Bay also clearly has historical significance and is a site which deserves recognition. In its present state, the Bay and its immediate surrounding area are heavily utilized already. I question the assumption that there is room for significant economic growth.	Tom Fetter	<p>As indicated in Section 1.4 of the EIS, the Project Area includes several historically significant places located along the base of 'Ahu'ula Cliff, including the birthplace of Kauikeaouli, marked by a commemorative plaque and remnants of Ho'okūkū Pond. The birth site is maintained through an agreement between Kamehameha Schools and the Daughters of Hawai'i, an eleemosynary corporation committed to historic preservation.</p> <p>Improvements to the Project Area, associated with the Proposed Action, are anticipated to increase utilization of the area due to the availability of improved facilities and access. Additional utilization, and associated economic benefits, are anticipated in association with new low impact lodging operations. Additional information on the economic impacts of visitor spending of low impact lodging guests has been added to Appendix P of the Final EIS.</p>
Volume I section 6.1 states: "Without comprehensive improvements, the Kamehameha Schools-owned properties would remain underutilized and underperforming financially". It might be helpful for those who oppose this development to understand that KS and the trustees are bound by the trust to financially increase the endowment for our lahui. I welcome those opposed to this development and KS to think outside the box and offer another avenue for these lands that will achieve the desired financial benchmark other than a commercial and resort development. Those opposed, please understand that without meeting this financial benchmark or offering some other source of educational or financial support, you are continuing to displace indigenous Hawaiians and taking away from our lahui.	Kaleirolani Pasciuta	<p>The KBMP aims to economically sustain the Keauhou Bay area by generating income from appropriate retail and lodging activities. These activities are intended to support long-term stewardship efforts, including the care, protection, and revitalization of the bay's cultural and natural resources. The revenue model is designed to align with Kamehameha Schools' broader mission to create educational opportunities in perpetuity and promote a thriving Native Hawaiian community. Income derived from these commercial uses will directly contribute to ongoing operations, cultural programming, and site maintenance within the project area.</p> <p>The EIS considers the No Action Alternative and indicates that it would not meet the purpose and need for the proposed action. Table 6-1 of the EIS provides a detailed evaluation of the No Action Alternative.</p>
The economics of this plan don't work: not for jobs, not for justice, not for financial return People of Hawaiian heritage are leaving the island at greater rates than any other ethnic	Alice Ray	Extensive community engagement has taken place to develop the conceptual framework for the KBMP. The Purpose and Need set forth in Section 2.7 of the DEIS indicates a need to strategically

<p>group, Why? Wages for hospitality industry service workers are too low to make even modest housing affordable. A resort hotel and high end restaurant would perpetuate a business model that depends on low paying service jobs and would reinforce cultural stereotypes of Hawaiians as entertainment features and/or servants for more affluent visitors. Ownership of Hawaii hotels by private equity investment companies has gone from 4% twenty years ago, to 29% this year. 27% of hotels on this island are already owned not by hoteliers, but by investment companies, who use debt to acquire distressed properties (like the nearby Sheraton/Outrigger), rennovate them enough to jack up prices, then squeeze labor in the name of “operational efficiencies” at the expense of working conditions and the aloha spirit. All in order to flip the property to another debt-financed buyer, or refinance with more debt, used to pay off investors and raise rates again, but not raise up their workers. The competitive landscape for both workers and customers - for a high-end restaurant in this location is not good either. Two high end restauants within a quarter mile have failed. Economics haven’t work in the off season. Owners can’t afford to keep good help. Chef’s leave, making it hard to control quality. As for customers, a planned huge new Duke’s restaurant at the Outrigger (practically next door), with positive brand recognition, tested staff and a profitable business model, will open in 2025, taking significant market share. KS asserts the hotel/restaurant project is needed to finance their educational initiatives, but the numbers don’t work. It would need to generate \$5 million in operational profits each year just to match the cash return from keeping the proposed \$100 million investment (hotel and restaurant only) in a safe CD. But with the number of high end rooms (including VRBO) already exceeding visitors to fill them, risk is high. Transferring the risk to a management company increases pressure to maximize efficiencies at the expense of worker well-being,</p>		<p>reorient and establish new opportunities for place-based cultural educational programming; create passive and active recreational activities; define appropriate commercial and resort-zoned uses; generate revenue that will go back into the long-term operations and maintenance of Keauhou Bay and manage circulation and parking. often including loss of health care benefits, less secure paid hours, and loss of seniority.		
Commercial & Recreational Tenant Selection - I would like to see more clarity on the criteria for use and tenant selection in commercial and recreational spaces. Priority should be given to tenants who have a low impact on the bay and are inclusive of indigenous customers/participants, rather than those with a high impact and culturally exclusive practices. The same low impact and culturally inclusive criteria should be applied to recreational tenants, favoring those who are sensitive to cultural considerations over those who are high impact and exclusive.	Leiola Augustine	All future tenants and operators within the Project Area will be vetted by Kamehameha Schools to align with the vision, management strategies, and values set forth in the KBMP. This includes commercial operators, retail tenants, ocean recreation service providers, and cultural education partners.  Kamehameha Schools has not yet identified an operator for the proposed low-impact lodging. However, the KBMP provides the entitlements and strategic framework to support future partnerships, with any selected operator required to adhere to the principles and intent of the KBMP.
Section 2.6.2 claims: "Lands are Underperforming Economically" "The Kamehameha Schools properties are prime properties that could generate significant revenues from appropriate development to support the management of Kamehameha Schools assets and provide long-term economic returns. However, these lands are currently underutilized, and do not yield equitable returns or market-based rent revenues for the organization. A key component of the plan is to ensure its economic sustainability. Revenue generated from commercial lease rent will be redirected to support the KBMP's desired educational and cultural resource management priorities..." This assumption, that Keauhou Bay is a "prime property that could generate significant revenues," flies directly in the face of section 2.6.1:	Janet Matlock	Extensive community engagement has taken place to develop the conceptual framework for the KBMP. The Purpose and Need set forth in Section 2.7 of the DEIS indicates a need to strategically reorient and establish new opportunities for place-based cultural educational programming; create passive and active recreational activities; define appropriate commercial and resort-zoned uses; generate revenue that will go back into the long-term operations and maintenance of Keauhou Bay and manage circulation and parking. The Project meets this need by providing an opportunity to redefine notions of hospitality, placekeeping, and placemaking in harmonious balance with ensuring all associated improvement costs as a result of this plan's implementation can be self-sustaining. Additional information has been added to Appendix P of the Final EIS on the anticipated economic benefits associated with visitor spending associated with guests of the proposed low-impact lodging.
What kind of credibility can Native Hawaiian organizations have when they are placing more importance on monetary gain than on preserving a sacred place that holds value far beyond any dollar amount to Native Hawaiians themselves? Why should anyone listen to Native Hawaiians who say the cost of living here is too high, there's too much development	M. Kekoa Aukai-Richardson	As indicated in Section 2.2 of the DEIS, the mission of Kamehameha Schools is to create educational opportunities in perpetuity to improve the capability and well-being of people of Hawaiian ancestry. Kamehameha Schools' Vision 2040 seeks to improve the well-being of 'āina (land) and the lāhui (Hawaiian people) within one generation. In that light, the lands bestowed

		<p>cultural heritage, the plan aims to reestablish Keauhou as a place of learning, respect, and connection.</p> <p>The KBMP is based on a framework established through extensive community engagement, it incorporates the foundational ideas of 'Ike Kupuna, Aloha 'Āina, Mālama and Kuleana, and it does so in a way that supports resilient economies, cultural landscapes, diverse learning, and career pathways. Because the Proposed Action would provide extensive economic benefits to the community in a way that would also improve heritage and cultural engagement, as indicated in Section 4.14 of the EIS, socioeconomic impacts are expected to be beneficial.</p> <p>The number of jobs that would be generated by the Project is provided in Section 4.14 and Appendix P of the EIS. The EIS estimates that there would be an estimated total of 2,619 jobs generated or sustained from Project construction and 169 jobs generated or sustained from project operations annually.</p> <p>Information on the size of the Hawai'i County construction industry, in terms of employment, has been added to Appendix P. Given the size of the local workforce as well as the timeframe and scale of construction, it is not anticipated that workforce housing would not be required. The construction work would primarily utilize on-island construction labor, though some construction workers from other islands (primarily O'ahu) would likely be needed for specialty trades work. Workers from other islands are expected to stay at lodging establishments near the Project Area, and dedicated workforce housing would not be required.</p>
<p>Section 4.14.2, Economic and Fiscal Impacts, discusses that 1,484 short term construction and project related jobs would be created by this proposal. Slightly more than 10% of that, 159 jobs, would be permanent jobs. That hardly seems like a trade-off for the community. That few new jobs for the physical disruption to the area, let alone the heartache for what this proposal intends to create?</p>	<p>Elizabeth Dunn</p>	<p>Section 4.14 of the EIS and Appendix P have been updated with revised construction job estimates, information on the size of Hawai'i Island construction industry in terms of employment, and additional details on construction timeline projections. Construction jobs tend to be classified as short-term because construction projects come to completion. As such, in order to maintain long-term employment, construction workers work on multiple projects over the course of time. Relatively large construction projects such as the Project do a great deal to support</p>

Summary of Draft EIS Comments and Responses		
Comments	Commenter	Responses
Where are the short term workers coming from? What roads are they using? Will they be housed locally? Will a construction staging area be built for the parking for these workers as well as the storage of construction equipment?		<p>a steady stream of project work and therefore greatly improve the chances that a particular construction worker can maintain long-term steady employment. Long term steady employment for construction workers ensures that the workers earn incomes for themselves and their families and generates personal spending in the local economy (as illustrated by construction related induced economic impacts). Furthermore, larger construction projects, which improve the chances for construction workers to maintain steady employment, allow for stability in the local construction industry. Stability in the local construction industry reduces the likelihood that off-island construction firms and employees are needed for construction work and therefore allowing benefits to stay on-island and limiting potential adverse effects related to visiting workers.</p> <p>Construction would take place over a number of years. Given the size of the local workforce as well as the timeframe and scale of construction, it is anticipated that workforce housing would not be required. The construction work would primarily utilize on-island construction labor, though some construction workers from other islands (primarily O’ahu) would likely be needed for specialty trades work. Workers from other islands are expected to stay at lodging establishments near the project site and dedicated workforce housing would not be required. Furthermore, it is anticipated that construction staging and parking would take place within the Project Area.</p> <p>Appendix P has been updated with estimates of economic impacts from visitor spending. Jobs generated from visitor spending are typically classified as long-term or permanent.</p>
<b>Affordable Housing Demand</b>		
Local Housing Needs: The focus on high-end vacation rentals and other revenue generating developments is exactly what the Keauhou community does not need.	Bryce Groark	The Purpose and Need set forth in Section 2.7 of the EIS indicates a need to strategically reorient and establish new opportunities for place-based cultural educational programming; create passive and active recreational activities; manage circulation and parking; define appropriate commercial and resort-zoned uses; generate revenue that will go back into the long-term operations and

struggle with housing, high energy costs and goods and services priced out of their reach.		that the KBMP would be beneficial to existing business at Keauhou Bay and the Hawai'i County economy overall. Updated economic impact information has been added to Section 4.14 and Appendix P of the Final EIS to include new information on the beneficial economic impacts of spending by visitors staying at the proposed low impact lodging. The Project is not anticipated to impact the affordability of housing in the region, however, the additional jobs and incomes associated with the Project would contribute to residents' ability to pay for housing needs.
<b>Medical Facilities</b>		
Current and added capacity of the proposed development on existing medical facilities unassessed The DEIS provides a list of medical facilities near this proposed development, yet fails to provide any substantive analysis of how population increases will impact existing medical facilities. Kona is in dire need of a second hospital and upgrades to the existing facility. Identifying them as a medical facility is not an assessment. Identifying additional facilities that the existing community relies on like Urgent Care and West Hawaii Community Health Center is also inadequate. These are primary care facilities for our 'ohana on the west side. The DEIS fails to assess how added population will add stress to these existing facilities. It is so careless to assume that there will be no impact and that listing them is enough; it is not. 'Ohana already wait hours if not days to get into these overloaded facilities. Have some decency and get it together. Provide a thorough analysis. Listing medical facilities by name is not an analysis, it's a list. I have the following questions: What is the current capacity of medical facilities listed in the DEIS? How will the proposed project impact the carrying capacities of the medical facilities listed as available? What is the assessment of impacts of population on the West Hawai'i medical facilities?	Loke Aloua	<p>Additional information on anticipated impacts to medical services has been added to Section 4.9.2 of the Final EIS. A less than significant impact to medical services is anticipated in association with visitor population at the proposed low-impact lodging.</p> <p>An analysis of the proposed Project's potential impact on the local healthcare system suggests that it would not significantly exacerbate existing challenges. The proposed low-impact lodging with an estimated population of 250 guests at any given time (based on 150 rooms with an average occupancy of 2.25 people per room at a 74% occupancy rate), is expected to place minimal additional demand on West Hawai'i's medical facilities.</p> <p>The low intensity and limited scale of the Project's operational profile are not anticipated to substantially impact the availability of medical resources in the area, as the relatively small increase in transient population is unlikely to drive considerable demand for local health services.</p>

<b>Biological Resources</b>		
<p>Do NOT risk polluting the water in Keauhou Bay by allowing Kamehameha Shoals to develop their bungalow project, because it is proven that developments will ALWAYS have rain runoff that will pollute the bay constantly during development and after. If you allow this bay to be development you will be allowing all types of marine life to die and there is NO WAY to stop this from happening because runoff water from development can't be stopped. It is what happens in ALL coastal developments. Development of Keauhou Bay WILL hurt plankton life in the area because of the pollutant runoff that WILL happen during the development and after, and if this happens this will cause the manta ray food source to disappear. This will be devastating for the manta rays eating habits, as well as cause the manta rays to not show up in this area, in turn taking away many lively hoods from locals on the island that depend on this tour to survive. Reason #2 a Resort Development WILL Kill Marine Life The manta rays go to Keauhou Bay every night to eat zooplankton and if you allow this development that WILL have runoff water, you WILL be causing zooplankton to be seriously affected. Reason #3 a Resort Development WILL Increased Human Traffic In Keauhou Bay Easily visible trends in human population dynamics combined with well-established and tested ecological theory give a clear, intuitive, yet quantifiable guide to the severity of survival challenges faced by coral reefs. If you allow this resort to be developed, you will be destroying the coral reefs in the bay because this bay is extremely small and used by a lot of locals already for fishing, canoing, swimming, snorkeling, paddle boarding, surfing, boating...it can't afford more use by many thousands more people yearly. A resort development will damage Keauhou Bay coral and marine life and, Big Island resources and infrastructure are currently being negatively affected from the development that is on island already, and there are years of new development that have already been</p>	<p>Sarah Dahm                      Melanie Diehl                      Claudia Kane                      Rebecca Melendez                      Heather Tribolet</p>	<p>It is not always the case that development inevitably leads to pollution of nearby ocean waters. The impact of development on water quality largely depends on the type of development, quality of infrastructure, and the effectiveness of long-term management practices, as well as responsible construction methods in the short term. EIS Section 4.5 discusses Project stormwater management and drainage improvements.</p> <p>All construction activities will be confined to land, with no work planned in ocean waters, thereby limiting potential direct impacts on the bay's water quality. The Project will comply with all NPDES permit requirements and follow established practices to prevent sediment and pollutants from reaching nearby water bodies during construction.</p> <p>The Project proposes stormwater and drainage improvements designed to minimize runoff entering Keauhou Bay. These improvements include the introduction of permanent Best Management Practices (BMPs), such as sediment control mechanisms and effective stormwater management systems. In the long term, the proposed drainage system, permanent BMPs, and new native landscaping will help capture and treat runoff from the Project Area and upslope areas, decreasing sediment, nutrient, and pollutant levels that might otherwise flow toward Keauhou Bay.</p> <p>Additionally, the Project is adopting Low-Impact Development (LID) practices, which emphasize conserving natural features and employing localized, small-scale stormwater systems that mimic natural hydrologic processes. Prior to construction, a detailed drainage masterplan will be developed to integrate these strategies, including criteria for infiltration systems, stormwater detention and retention, flood analysis, and drainage system schematics.</p> <p>The Project's detailed drainage analysis and design will require design review and approval by the County for land use and</p>

<p>zooplankton from the Manta Ray tours at night, and eat it during the day as well because they need to eat 5 times their body weight in zooplankton daily. If you allow this bay to be development you will be allowing all types of marine life to die and there is NO WAY to stop this from happening because runoff water from development can't be stopped. It is what happens in ALL coastal developments. Reason #2 a Resort Development WILL Kill Marine Life The manta rays go to Keauhou Bay every night to eat zooplankton and if you allow this development that WILL have runoff water, you WILL be causing zooplankton to be seriously affected because as this article by MarinBIO states, "Zooplankton are also sensitive to their environment and like phytoplankton—a change in zooplankton concentration can indicate a subtle environmental change. Zooplankton are highly responsive to nutrient levels, temperatures, pollution, food that is not nutritious, levels of light, and increases in predation. As well as providing an essential link in the marine food chain (which is an understatement), the diversity of species, amount of biomass and abundance of zooplankton communities can be used to determine the health of an ecosystem... Zooplankton are also affected by levels of pH, heavy metals, calcium, and aluminum. Nutrients like nitrogen and phosphorus will affect the prey of zooplankton (like algae, protozoa and bacteria), indirectly affecting zooplankton survival. Scientists are still putting together pieces of the zooplankton puzzle. Some questions include how nutrient levels found in algae can influence the growth and behavior of zooplankton.</p> <p>The development of Keauhou Bay WILL hurt plankton life in the area because of the pollutant runoff that WILL happen during the development and after, and if this happens this will cause the manta ray food source to disappear. 		values, the KBMP directs future activity at Keauhou to contribute to the protection and care of its unique ecosystem and heritage.
Explain how erosion will be prevented after trees are cut down.	Cory (No last name provided)	<p>EIS section 4.3 discusses erosion impacts. Project related construction activities such as clearing, grading, and excavation during phased development may cause minor short-term soil erosion. Efforts will be made to balance cut and fill to reduce the need for material import or export.</p> <p>Required permits from the County Department of Public Works and a National Pollutant Discharge Elimination System (NPDES) permit from the State will be obtained. Best Management Practices (BMPs) will be used to manage erosion and sedimentation, including sediment basins, silt fences, and dust control measures. Upon completion, landscape plantings and permanent sediment controls will stabilize the site. The Project is not expected to cause long-term significant impacts to geology or topography.</p>
Existing And Future Impacts On The Coral In The Bay Are Ignored The USEPA considers sedimentation, pollutants and nutrients to be some of the primary threats to coral communities. A healthy coral community is key to maintain a healthy aquatic environment. The status of the health of the coral reefs within Keauhou Bay and the impact of existing sedimentation, toxics and nutrients has not been assessed. Current impacts from Project proponent's properties to the health of the coral reefs has not been studied nor assessed. The EIS fails to quantify the potential amount of sediment, pollutants and nutrients that may be generated from its construction activities nor from the Project. The EIS analyzes no potential mitigation measures that may be adopted to address past and current impacts to the bay from Project proponent's properties nor future impacts to the bay from the Project. As a result, the EIS is facially deficient and rejected so that the appropriate studies of the baseline conditions of the bay are studied and future project impacts are assessed and appropriate mitigation measures adopted to ensure the health of Keauhou Bay.	Jeff Caufield	<p>The EIS notes that the 2020 State of Hawai'i Water Quality Monitoring and Assessment Report, known as the Integrated Report (IR), identifies Keauhou Bay as an impaired water body. Turbidity was the leading cause of impairment. Nonpoint sources of pollution in the State primarily consist of cesspools, agricultural land use, urban land use, and feral ungulate destruction and soil erosion in conservation lands.</p> <p>A significant number of non-Kamehameha Schools properties in the vicinity of Keauhou Bay remain on cesspool systems. The Project, however, will manage wastewater by directing all generated wastewater through a new sewer main along Old Kona Road. This main will connect to the existing sewer infrastructure, allowing for proper treatment and reducing the potential for pollutants to reach the ocean. Further study will be needed to determine if any capital improvements of the He'eia Waste Water Reclamation Facility WWRF or facilities leading up to it will require improvements with the KBMP's projected increase in flow. EIS Section 4.12.2 discusses wastewater treatment and disposal.</p>

		<p>The existing Project Area lacks active management and does not contain infrastructure to capture or treat stormwater, resulting in untreated runoff that may flow toward the ocean. With implementation of the Project, drainage improvements and best management practices will be introduced to capture and treat runoff on site. These measures will reduce the potential for stormwater-related impacts, improving current conditions.</p> <p>The Project will be constructed entirely on land and does not include any direct discharges to coastal waters. As a result, water quality conditions in Keauhou Bay are not expected to worsen and may improve through reduced sediment and pollutant loading.</p> <p>While the Project does not propose any direct activities within the immediate nearshore areas of Keauhou Bay and no specific impacts to marine life were identified in the EIS, Table 4-9 of the DEIS outlines potential actions that could be taken to improve conditions for marine life in Ho'okūkū Pond within the Project Area.</p>
<p>To whom it may concern, Heavy storms can come in and serious toxins from the golf course are able to run into Keauhou Bay causing Algae Blooms and Sea Foam, even with the best filter that is trees and land because at times tropical storms are more than any land can absorb. This doesn't happen that often but if you allow this Bungalow Resort development in Keauhou bay, algae blooms and sea foam will happen more often because fertilizer, pesticides, waste...will be allowed to runoff into the bay because the natural pollution filter, the trees and land will be gone and pavement can't hold as much runoff as the natural trees and land. "If there are toxic algal blooms, like red tide, or man-made contaminants, like pesticides or detergents in the water, those toxins are contained within the bubbles of sea foam. When those bubbles pop, the toxins can become airborne and compromise the air that is breathed in that location. This is not that often because the natural trees and land hold most of the toxic pollution from the golf course back when it rains. Also, The Green Sea Turtle is protected</p>	<p>Rebecca Melendez</p>	<p>The EIS notes that the 2020 State of Hawai'i Water Quality Monitoring and Assessment Report, known as the Integrated Report (IR), identifies Keauhou Bay as an impaired water body. often due to taking out the natural pollution filter, that is the trees and the land.		While the Project does not propose any direct activities within the immediate nearshore areas of Keauhou Bay and no specific impacts to marine life were identified in the EIS, Table 4-9 of the DEIS outlines potential actions that could be taken to improve conditions for marine life in Ho'okūkū Pond within the Project Area.
Pleaes reject Kamehameha Schools EIS because Keauhou Bay is declared Impaired water HI713293 by the EPA Clean Water Act. This bay needs to be preserved because it is a natural resource that is very sensitve. "The State of Hawaii Conservation District is a designated land area managed by the Department of Land and Natural Resources (DLNR) through the Office of Conservation and Coastal Lands (OCCL). This district was established to protect Hawaii's natural resources and encompasses various land types including watersheds, scenic areas, parklands, wilderness areas, beach reserves, and habitats for endemic plants and wildlife. The Conservation District also includes submerged lands makai of the shoreline." Keauhou Bay is a natural resource and NEEDS TO BE PROTECTED. Under the EPA Clean Water Act it is Impaired water area and DLNR it should be conserved because it is an extremely sensitive area. <a href="https://dlnr.hawaii.gov/occl/conservation-district/">https://dlnr.hawaii.gov/occl/conservation-district/</a> The district is divided into five subzones: Protective: The most environmentally sensitive areas. Limited: Areas with some environmental sensitivity. Resource: Areas designated for resource conservation. General: The least environmentally sensitive areas. Special: Areas with unique land uses	Rebecca Melendez	<p>The EIS notes that the 2020 State of Hawai'i Water Quality Monitoring and Assessment Report, known as the Integrated Report (IR), identifies Keauhou Bay as an impaired water body. This infrastructure will significantly reduce pollutants reaching the ocean, helping to maintain and enhance water quality in Keauhou Bay.</p>
"The number of people living on the coasts has rapidly increased in recent decades, causing significant development of coastal areas. Coastal development can negatively impact the ocean through the destruction of coastal marine habitat and through run-off of sediments and pollution. Coastal development involves activities such as the creation of harbors, stabilization of shorelines, and aquaculture that involve the destruction of sensitive marine habitats such as mangroves, coral reefs, and seagrass beds.	Rebecca Melendez Donna Cherrier Robert Gay	<p>While the Project does not propose any direct activities within the immediate nearshore areas of Keauhou Bay and no specific impacts to marine life were identified in the EIS, Table 4-9 of the DEIS outlines potential actions that could be taken to improve conditions for marine life in Ho'okūkū Pond within the Project Area.</p> <p>The project's stormwater management plan and Best Management Practices (BMPs) are designed to safeguard Keauhou Bay's water quality and marine resources both during and after development.</p>

		<p>To mitigate stormwater runoff, the Project proposes stormwater and drainage improvements designed to minimize runoff entering Keauhou Bay. These improvements include the introduction of permanent Best Management Practices (BMPs), such as sediment control mechanisms and effective stormwater management systems. In the long term, the proposed drainage system, permanent BMPs, and new native landscaping will help capture and treat runoff from the Project Area and upslope areas, decreasing sediment, nutrient, and pollutant levels that might otherwise flow toward Keauhou Bay.</p> <p>Currently, the portion of the Project Area between 'Ahu'ula cliff and the golf course is dominated by invasive Guinea grass and koa haole trees, which provide limited ecological or erosion control benefits. The Project does not propose the removal of native forests.</p> <p>With the implementation of the Project, native landscape plantings and active land management will help stabilize soils at the Project Area.</p>
<p>Hawaiian coral reefs are culturally, economically, and ecologically important, and have been identified as hotspots of coral resilience (Sully et al. 2022). However, coral cover in the state of Hawai'i has declined over the past few decades (Rodgers et al. 2015; Asner et al. 2022), due in part to chronic impacts from nearshore development. A recent study focused on coral reefs in Kona found that reefs with healthy fish populations and reduced exposure to wastewater and urban runoff were better able to recover after bleaching events than reefs exposed to elevated land-based impacts (Gove et al. 2023). This matches other findings from elsewhere in the Pacific (Donovan et al. 2021), which have consistently found a negative impact of elevated nutrients and wastewater on corals, especially as they struggle to adapt to bleaching events and other climate impacts.</p>	<p>Orion McCarthy</p>	<p>The project's stormwater management plan and Best Management Practices (BMPs) are designed to safeguard Keauhou Bay's water quality and marine resources both during and after development. 		<p>maintenance of Keauhou Bay and as well as any excess revenue to support the general mission of Kamehameha Schools. The Project meets this need by providing an opportunity to redefine notions of hospitality, placekeeping, and placemaking in harmonious balance with ensuring all associated improvement costs as a result of this plan's implementation can be self-sustaining. Long-term management of the bay's natural and cultural resources is made possible through a sustainable tourism model that uses revenue from the low-impact lodging and commercial operations to fund ongoing stewardship, maintenance, and educational programming.</p>
<p>Please, Do NOT risk polluting the water in Keauhou Bay by allowing Kamehameha Schools to develop their bungalow resort project. Research has shown that developments pollute nearby waters constantly during development and after. The fertilizers and pesticides alone will drain down into the ocean and have a serious impact on the fish and flora. Developments have ALWAYS polluted the water in every near coastal development area. An article entitled, "What is the biggest source of pollution in the ocean?" by NOAA, National Oceanic and Atmospheric Administration, states, "When large tracts of land are plowed, the exposed soil can erode during rainstorms. Much of this runoff flows to the sea, carrying with it agricultural fertilizers and pesticides." It also states, "Eighty percent of pollution to the marine environment comes from the land. One of the biggest sources is called, nonpoint source pollution, which occurs as a result of runoff." The trees you want to take down keep the runoff pollution from the golf course from going into the Bay. According to the National Library of Medicine, in their article, "Putting the Earth in Play: Environmental Awareness and Sports," shares that the golf industry uses approximately 50 pesticide active ingredients, including chlorpyrifos—an insecticide that is banned for residential use by the EPA due to developmental hazards. These pollutions and more are being held off from running into the Bay by the very trees you want to take down. Let's not forget the marine life that will be</p>	<p>Diane Mistler</p>	<p>It is not always the case that development inevitably leads to pollution of nearby ocean waters. 		<p>possible through a sustainable tourism model that uses revenue from the low-impact lodging and commercial operations to fund ongoing stewardship, maintenance, and educational programming.</p> <p>The project's stormwater management plan and Best Management Practices (BMPs) are designed to safeguard Keauhou Bay's water quality and marine resources both during and after development. EIS Section 4.5 discusses Project stormwater management and drainage improvements. The Project proposes a comprehensive stormwater management system designed to capture and treat stormwater runoff on-site. This infrastructure will significantly reduce pollutants reaching the ocean, helping to maintain and enhance water quality in Keauhou Bay.</p>
<p>The Project proposes to remove acres of forest to construct a resort comprised of 43 homes with 150 bedrooms, build a new road connecting the north and south ends of the bay, build commercial kiosks, construct a cultural center and construct a commercial/retail center on the eastern end of Keauhou Bay. As you and the State of Hawaii are aware, coral, fish and other flora and fauna can be particularly susceptible to harm from excess sediment, toxic pollutants and nutrient loading in shallow bays like Keauhou Bay. In order to determine what the potential ecological impacts to Keauhou Bay are, at minimum the past studies cited should be reviewed to determine if shoreline communities are potentially affected by the current level of development and sedimentation/nutrient impacts apparent at Ho'okuku Pond ("KBOM DEA, Feb 2016" was cited vaguely in the text as a bay-wide assessment, but was not included in the DEIS references, nor in Appendices F or G). The 2016 study might be appropriate to consider as a baseline study, which is particularly important to assess conditions and impacts (see Rogers 1990). In this case, the 2016 study could be reviewed to consider the spatial distribution of coral cover (for example), and additional assessments might be undertaken at a similar intensity to those prioritized for Ho'okuku Pond (Table 4-9). Surveys before development</p>	<p>Nicholas Buhbe</p>	<p>The EIS notes that the 2020 State of Hawai'i Water Quality Monitoring and Assessment Report, known as the Integrated Report (IR), identifies Keauhou Bay as an impaired water body. Turbidity was the leading cause of impairment. Nonpoint sources of pollution in the State primarily consist of cesspools, agricultural land use, urban land use, and feral ungulate destruction and soil erosion in conservation lands.</p> <p>A significant number of non-Kamehameha Schools properties in the vicinity of Keauhou Bay remain on cesspool systems. The Project, however, will manage wastewater by directing all generated wastewater through a new sewer main along Old Kona Road. This main will connect to the existing sewer infrastructure, allowing for proper treatment and reducing the potential for pollutants to reach the ocean. Further study will be needed to determine if any capital improvements of the He'eia Waste Water Reclamation Facility WWRF or facilities leading up to it will require improvements with the KBMP's projected increase in flow. EIS Section 4.12.2 discusses wastewater treatment and disposal.</p> <p>EIS Section 4.5 discusses Project stormwater management and drainage improvements. An analysis of existing drainage conditions, proposed infrastructure improvements, and mitigation measures are evaluated. Estimates of existing and projected stormwater runoff peak flows are also provided.</p>

<p>should be undertaken (to confirm 2016 conditions), after the development activity is complete (to assess impacts from grading, concrete pouring, road construction, etc.), and thereafter on a periodic basis (to evaluate impacts of the cumulative 'built-out' conditions). Additional study elements might include analysis of the health of the coral, an assessment to determine what the historical sedimentation rate is within the bay, quantify pollutants and nutrients within sediments or groundwater flowing into the bay, a bacteriological assessment, and identifying potential sources of impacts. Such a study should include a comparison of Keauhou Bay conditions to a nearby reference site to determine the relative degree of environmental change over time (or lack thereof). The study should analyze the potential impacts from the development, and analyze what mitigation measures, if any, might be needed to protect recreational users of Keauhou Bay as well as sensitive flora and fauna within the bay (including coral and fish populations) prior to or during construction, or if additional measures are necessary for various development components. For example, the questions: "What acreage of infiltration basins are necessary to accommodate runoff from X acres of impervious surfaces?" and "Will additional groundwater flows result in worse water quality in a restored Ho'okuku Pond or along the Keauhou Bay recreational shoreline?" might be addressed. Such studies would not only inform the public and regulatory agencies of the project impacts, but also inform the design of potential mitigation measures. Depending on the results of initial studies, alternative levels of development and/or mitigation measures might be evaluated. However, without the foregoing analysis, it is nearly impossible to determine the extent of project impacts on Keauhou Bay marine resources</p>		<p>To mitigate stormwater runoff, the Project proposes stormwater and drainage improvements designed to minimize runoff entering Keauhou Bay. These improvements include the introduction of permanent Best Management Practices (BMPs), such as sediment control mechanisms and effective stormwater management systems. In the long term, the proposed drainage system, permanent BMPs, and new native landscaping will help capture and treat runoff from the Project Area and upslope areas, decreasing sediment, nutrient, and pollutant levels that might otherwise flow toward Keauhou Bay.</p> <p>Additionally, the Project is adopting Low-Impact Development (LID) practices, which emphasize conserving natural features and employing localized, small-scale stormwater systems that mimic natural hydrologic processes. Prior to construction, a detailed drainage masterplan will be developed to integrate these strategies, including criteria for infiltration systems, stormwater detention and retention, flood analysis, and drainage system schematics.</p> <p>The project's detailed drainage analysis and design will require design review and approval by the County for land use and construction plan approvals subsequent to the FEIS. The Project will be designed to comply with the County Drainage Standards, which include design requirements and regulations to address stormwater impacts within the County of Hawai'i.</p> <p>All construction activities will be confined to land, with no work planned in ocean waters, thereby limiting potential direct impacts on the bay's water quality. The Project will comply with all NPDES permit requirements and follow established practices to prevent sediment and pollutants from reaching nearby water bodies during construction.</p> <p>The existing Project Area lacks active management and does not contain infrastructure to capture or treat stormwater, resulting in untreated runoff that may flow toward the ocean. With implementation of the Project, drainage improvements and best management practices will be introduced to capture and treat</p>

		<p>runoff on site. These measures will reduce the potential for stormwater-related impacts, improving current conditions.</p> <p>The Project will be constructed entirely on land and does not include any direct discharges to coastal waters. As a result, water quality conditions in Keauhou Bay are not expected to worsen and may improve through reduced sediment and pollutant loading.</p> <p>While the Project does not propose any direct activities within the immediate nearshore areas of Keauhou Bay and no specific impacts to marine life were identified in the EIS, Table 4-9 of the DEIS outlines potential actions that could be taken to improve conditions for marine life in Ho'okūkū Pond within the Project Area</p>
<p>Please do not allow Kam Schools to put a resort in Keauhou bay. We have plenty of resorts and hotels in Hawaii. We need to halt any new resorts and focus on preserving the precious natural resources of hawaii and make safe sustainable access to these natural wonders for local residents and visitors to enjoy with respect. That does not require more resorts. There are plenty of places for visitors to stay. Please protect this bay and do not develop it.</p>	<p>Rebecca Corby</p>	<p>The Purpose and Need set forth in Section 2.7 of the EIS indicates a need to strategically reorient and establish new opportunities for place-based cultural educational programming; create passive and active recreational activities; manage circulation and parking; define appropriate commercial and resort-zoned uses; generate revenue that will go back into the long-term operations and maintenance of Keauhou Bay and as well as any excess revenue to support the general mission of Kamehameha Schools. The Project meets this need by providing an opportunity to redefine notions of hospitality, placekeeping, and placemaking in harmonious balance with ensuring all associated improvement costs as a result of this plan's implementation can be self-sustaining. Long-term management of the bay's natural and cultural resources is made possible through a sustainable tourism model that uses revenue from the low-impact lodging and commercial operations to fund ongoing stewardship, maintenance, and educational programming.</p>
<p>While I acknowledge and agree with the need for reorganization of existing infrastructure and activities, and the potential economic benefits of this project, I have significant concerns regarding the environmental and social impacts of the proposed bungalow resort, particularly related to water usage and environmental protection.</p>	<p>Alexis Kerver</p>	<p>The KBMP is designed to improve environmental conditions by establishing a model of long-term stewardship that prioritizes the health of the land and ocean. Commercial activities within the project area are designed to support and sustain cultural and environmental preservation efforts. Through responsible planning, relocation of incompatible uses, and a strong emphasis on cultural</p>

		<p>values, the KBMP directs future activity at Keauhou to contribute to the protection and care of its unique ecosystem and heritage.</p> <p>Section 4.12 of the EIS includes detailed evaluations of the existing infrastructure capacities at Keauhou Bay, such as water, wastewater, solid waste, power, and telecommunications, along with potential impacts, and the necessary upgrades to support the KBMP.</p> <p>The EIS includes analysis to verify that Hawai'i Island's infrastructure systems can accommodate the proposed KBMP. The Project is designed to mitigate potential impacts on local resources through strategic planning, infrastructure upgrades, and sustainable design practices. With the implementation of these actions, the Project is anticipated to contribute positively to the region's growth while minimizing adverse impacts on the island's resources and infrastructure.</p>
<p>There will be more traffic, resort housing that does not help alleviate the affordable housing crisis on the island, excess commercial space, and permanent negative impacts on the land and sea. Once lost this is unlikely to be regained.</p>	<p>Laurel Terry</p>	<p>The KBMP is designed to improve environmental conditions by establishing a model of long-term stewardship that prioritizes the health of the land and ocean. Commercial activities within the project area are designed to support and sustain cultural and environmental preservation efforts. Through responsible planning, relocation of incompatible uses, and a strong emphasis on cultural values, the KBMP directs future activity at Keauhou to contribute to the protection and care of its unique ecosystem and heritage.</p> <p>The Project does not involve the development of new residential housing units. The additional jobs and incomes associated with the Project would contribute to residents' ability to pay for housing needs. A housing alternative is considered in the EIS however, housing uses would require more parking and infrastructure demands than low-impact lodging uses and would thereby result in increased traffic-related impacts and potentially utility demands. Due to the location and topography, the construction of housing units would be comparatively much more expensive to build, limiting their affordability for local residents in the region. Table 6-1 of the EIS provides a detailed evaluation of the Housing Alternative.</p>

<p>But a more likely outcome is more stores, more congestion, more strain on water resources, and less access to the beautiful Bay.</p>	<p>Howard Warshaw</p>	<p>The Purpose and Need set forth in Section 2.7 of the EIS indicates a need to strategically reorient and establish new opportunities for place-based cultural educational programming; create passive and active recreational activities; manage circulation and parking; define appropriate commercial and resort-zoned uses; generate revenue that will go back into the long-term operations and maintenance of Keauhou Bay and as well as any excess revenue to support the general mission of Kamehameha Schools. The Project meets this need by providing an opportunity to redefine notions of hospitality, placekeeping, and placemaking in harmonious balance with ensuring all associated improvement costs as a result of this plan’s implementation can be self-sustaining. Long-term management of the bay’s natural and cultural resources is made possible through a sustainable tourism model that uses revenue from the low-impact lodging and commercial operations to fund ongoing stewardship, maintenance, and educational programming.</p>
<p>Impacts to Keauhou Bay from increased users unassessed. This proposed project will be increasing user density of the area. The impacts of this increased user density on Keauhou Bay should be assessed. It is ridiculous to propose this development which is directly seaside without having any safety measures in place for the biodiversity of the bay. This includes consideration for endangered and non-endangered species both terrestrial and marine. This project is premised by the assumption that this development will improve the area, yet it fails to actually consider the ecosystem of the Keauhou Bay, how ridiculous. It is so shameful to bring this type of project in and not actually consider the impacts to the bay and the marine life. How shame. More than 400 pages written with fancy graphs, pictures, and headings then no analysis on the impacts to the bay. KS will be responsible for bringing hundreds to thousands more people to Keauhou Bay. Where is the accountability for the health of the place? The impacts are beyond those of the project site. This old school all I gotta do is look at the boundaries of the land I like develop is pau. There are impacts beyond that need to</p>	<p>Loke Aloua</p>	<p>The proposed low-impact lodging component of the KBMP is intentionally located away from the shoreline to minimize its physical and visual impact on the bayfront. It is sited over 350 feet away from the shoreline and mauka of Old Kona Road above ‘Ahu’ula Cliff, placing it well outside the immediate bayfront area. This location helps preserve the integrity of the cultural landscape and allows the bayfront to remain focused on cultural, recreational, and community-oriented uses.</p> <p>An analysis of the proposed Project’s potential population impact suggests that it would not significantly impact coastal ecosystems. The proposed low-impact lodging with an estimated population of 250 guests at any given time (based on 150 rooms with an average occupancy of 2.25 people per room at a 74% occupancy rate), represents a relatively small increase. This limited scale of visitor accommodation is not expected to significantly affect marine life, as not all guests will use the bay simultaneously.</p> <p>Although Kamehameha Schools does not regulate marine wildlife interactions, it has committed to promoting ocean conservation through education and signage. Kamehameha Schools is</p>

<p>Keauhou Bay is already stressed, to the detriment of marine life. Those who use Keauhou Bay know not to enter it with an open cut, which is a sad reversal from when Native Hawaiians and others would seek out ocean saline water to heal wounds. Studies show Keauhou Bay water has high, if not the highest, levels of fecal bacteria along the Kona Coast. We know development and paving over more areas for buildings and parking increases runoff, which causes further water degradation. Increased development under this Plan undermines our ability to rejuvenate a healthy bay, also undermining key relationships among land, ocean, and people.</p>	<p>Peter Matlock</p>	<p>The EIS notes that the 2020 State of Hawai'i Water Quality Monitoring and Assessment Report, known as the Integrated Report (IR), identifies Keauhou Bay as an impaired water body. Turbidity was the leading cause of impairment. Nonpoint sources of pollution in the State primarily consist of cesspools, agricultural land use, urban land use, and feral ungulate destruction and soil erosion in conservation lands.</p> <p>A significant number of non-Kamehameha Schools properties in the vicinity of Keauhou Bay remain on cesspool systems. The Project, however, will manage wastewater by directing all generated wastewater through a new sewer main along Old Kona Road. This main will connect to the existing sewer infrastructure, allowing for proper treatment and reducing the potential for pollutants to reach the ocean. Further study will be needed to determine if any capital improvements of the He'eia Waste Water Reclamation Facility WWRF or facilities leading up to it will require improvements with the KBMP's projected increase in flow. EIS Section 4.12.2 discusses wastewater treatment and disposal.</p> <p>EIS Section 4.5 discusses Project stormwater management and drainage improvements. An analysis of existing drainage conditions, proposed infrastructure improvements, and mitigation measures are evaluated. Estimates of existing and projected stormwater runoff peak flows are also provided.</p> <p>To mitigate stormwater runoff, the Project proposes stormwater and drainage improvements designed to minimize runoff entering Keauhou Bay. These improvements include the introduction of permanent Best Management Practices (BMPs), such as sediment control mechanisms and effective stormwater management systems. In the long term, the proposed drainage system, permanent BMPs, and new native landscaping will help capture and treat runoff from the Project Area and upslope areas, decreasing sediment, nutrient, and pollutant levels that might otherwise flow toward Keauhou Bay.</p> <p>Additionally, the Project is adopting Low-Impact Development (LID) practices, which emphasize conserving natural features and</p>

<p>The articles cited in this letter, many by some of the most esteemed scientists in the world, show with clarity that allowing this development is going to cause devastating, lasting, effects on the Eco-system in Keauhou Bay and "The Endangered Species Act of 1973 (ESA or "The Act"; 16 U.S.C. § 1531 et seq.) is the primary law in the United States for protecting and conserving imperiled species. Designed to protect critically imperiled species from extinction as a "consequence of economic growth and development untempered by adequate concern and conservation", the ESA was signed into law by President Richard Nixon on December 28, 1973. The Supreme Court of the United States described it as "the most comprehensive legislation for the preservation of endangered species enacted by any nation".[1]"</p> <p><a href="https://en.wikipedia.org/wiki/Endangered_Species_Act_of_1973">https://en.wikipedia.org/wiki/Endangered_Species_Act_of_1973</a> 18 This location, currently acting as a natural filter, is especially vulnerable due to having a golf course on one side</p>	Michael Hanly	<p>The KBMP is designed to reorganize the uses and activities within the bay to better reflect the cultural significance of the area and to support a more harmonious relationship between users, place, and purpose. Central to this reorganization is the concept of directing new growth to appropriate areas while preserving others, ensuring that future development does not come at the expense of cultural integrity or environmental health. To resolve long-standing conflicts between incompatible uses, the KBMP proposes relocating certain commercial operations, particularly those that are currently situated near sensitive cultural sites, to more suitable areas above the 'Ahu'ula cliff and along Kaleiopapa Street. By moving these uses away from the bayfront and heritage zones, the plan protects sacred spaces and allows for cultural practices to thrive without interference.</p> <p>EIS Section 4.5 discusses Project stormwater management and drainage improvements. An analysis of existing drainage conditions, proposed infrastructure improvements, and mitigation</p>

<p>and a natural treasure like Keauhou Bay on the other. This land MUST be conserved in order to keep Keauhou Bay safe for all the marine life to be able to live there for years to come. In addition to the natural disaster this will cause, Hawai'i Island is already having serious infrastructure and resource issues that have yet to be solved. These issues MUST be solved before considering another resort development on Big Island. We need to work in harmony with the land and the people before pushing forward with new developments, especially in sacred and special places like Keauhou Bay, the birthplace of King Kamehameha III. Keauhou Bay is a small, fragile Eco-system, that is already pressured by boating, golfing, population issues, and hotels that are all around the entire bay. The trees that currently stand on the land that is threatened to be developed clearly protects the marine life and environment from further damage. The location is NOT suitable for this kind of development for both environmental and infrastructure reasons. The cost of what stands to be lost is far too high to allow this to happen. Please save Keauhou Bay's marine life and help the island's resources by saying NO to a Bungalow Resort built by Kamehameha Schools.</p>		<p>measures are evaluated. Keauhou Bay is in fact a clean environment where swimmers exercise, tourists and local residents view manta rays and enjoy the bay by kayak, boat and canoe for snorkeling, diving and fishing. The bay waters are circulated hourly with fresh ocean waters and this keeps the bay environment clean and healthy for all things biological. If what the detractors say of this new resort development was true, then we would currently see very sick dolphins, ailing manta rays, polluted monk seals, tumor infested green sea turtles and reduced plankton populations and serious coral issues. But we are not experiencing a decline in species or their health.	G Hand	<p>The EIS notes that the 2020 State of Hawai'i Water Quality Monitoring and Assessment Report, known as the Integrated Report (IR), identifies Keauhou Bay as an impaired water body. <p>fishing activities. NOAA estimates total economics value of Hawaiian coral reefs at 33.57 billion dollars. Our reef protect our shorelines and provide recreation and livelihood to the tourist industry. I am sadly humbled at the sight of tourists excitement to see nothing but empty skeletons of these coral animals. The Hawaiian Chants of Kumu Lipo clarifies that life began with the emergence of a coral polyp, it became more complex and developed into a community. Science also supports coral polyps were the first of life. Our coral reefs and reefs through out the world are threatened with extinction by 2050. Hawaii has 80% of the coral reefs in the USA. Causing further accelerated coral loss is elevated by carbon dioxide levels on this planet. Reef ecosystem destruction result with 25% of all marine species being at risk, while the assisted economic loss will expose people to decreased food resources and security of sustainability.</p> <p>Having a 100-ton Master Coast Guard Captain License for over 40 years I was blessed with over a dozen years Captaining out of Keauhou Bay. I also had the pleasure of logging over 10,000 scuba dives along the Kona Coast and also exploring Palau and New Zealand. In the 90's we had a Keauhou Bay clean-up, being active with this project I had my daughter and many other school students that were eagerly efficient. In the 70's our storms caused damage to our corals and we, the dive company would replace and replant coral of many species even if it was the gesture was turning them upright so the polyps could feed. January 80 storm was devastating and we took the 'build and they will come' hold true to marine life. Even though displacement occurred the fish would move to the coral heads, egg cases continued to be laid, protection was contained for molting crabs and lobsters, eels, shells and nudibranch could also take shelter. The most important was the coral polyp could survive and there circle of replenishment continued through displacement. We also placed fragile pieces of coral into lobe coral for support and actually they gave great support and seemed to fuse around the bases. Through hurricane</p>		<p>to exploring partnerships with other marine conservation organizations to steward coastal resources.</p>

<p>Iwa and Iniki our ecosystem was already stressed as we went through great development along the Kona coast with construction, pollution, population and more water activity stress. The ocean acidification with warmer waters have left us in dire need. It is my vision and dream to have Senator Dr. Tim Richards present a bill to the floor to aid and assist our oceans with any coastal development making replenishment and restoring critical habitat mandatory. We must ask more from all coastal resorts to be participators in ocean projects and reform including tourist attractions participation. I am here to ask everyone for 'more' in this critical time for our coral reefs and oceans. Our obligation to our future generation is that they are equally entitled to our natural resources. Keauhou Bay and the surrounding land could also be embraced for our future generations to decide what is best for their future generation.</p>		
<p>, I am concerned about the nēnē who hang out on the golf course, in an area adjacent to this proposed development (the first/ninth fairway and the far end of the driving range on Kona Country Club). I am attaching pictures, which I also sent to nēnē.org a while back. I and my neighbors first observed the nēnē there in fall 2023. They seem to hang out there every day, Fall through Spring. How will you ensure that the nēnē do not get disturbed during your years of construction activities? I don't know what to suggest to mitigate this. All I know is nēnē need all the help they can get to expand their range.</p>	<p>Marjorie Bryant</p>	<p>Section 4.6 of the EIS addresses Biological Resources. A <i>Natural Resource Assessment</i>, provides detailed information on the biological conditions of Project Area and is included as Appendix K of the EIS.</p> <p>Although the Nēnē (Hawaiian Goose) was reclassified from endangered to threatened status in 2019, there is still a need for continued protection. The Hawai'i Department of Land and Natural Resources (DLNR) recommends the installation of a construction barrier to prevent Nēnē from entering active construction zones. Key limiting factors affecting the recovery of the species include predation by introduced mammals, limited nutritional resources for breeding females and goslings, restricted availability of suitable habitat, and disturbance or mortality caused by human activity. The Project will implement BMPs to mitigate potential impacts during project construction activities. Additionally, habitat enhancement efforts, such as native plant restoration and invasive species control could provide further support for the nēnē in the area.</p>

<b>Marine Life in Bay</b>		
<p>First, does this EIS have any kind of reports and studis on how the endangered species and marine life will handle the extra pollution due to development and golf course runoff because Keauhou Bay is their habitat and this development WILL be changing an entire ecosystem. In the Endangered Species Act of 1973 Under Section 2 (b), "to provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved." This would be Keauhou Bay. The Green Sea Turtle swims in Keauhou Bay weekly and the monk seal has also been seen swimming and resting in Keauhou Bay. Both of these marine animals are on the endangered species list. The Green Sea Turtle is protected by more than one law. "All sea turtles in Hawai'i are protected by the Endangered Species Act (ESA) and additionally protected by Hawai'i Revised Statutes Chapter 195D (HRS) and Hawai'i Administrative Rules (HAR) 13-124." "Hawaiian monk seals are protected federally by the ESA and the Marine Mammal Protection Act (MMPA), as well as locally by Hawai'i Revised Statutes (HRS) Chapter 195D and Hawai'i Administrative Rules (HAR) 13-124." ENDANGERED SPECIES CONSERVATION Endangered Species Act "Section 2. Findings, Purposes, and Policy (4) the United States has pledged itself as a sovereign state in the international community to conserve to the extent practicable the various species of fish or wildlife and plants facing extinction, pursuant to— (b) PURPOSES.—The purposes of this Act are to provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved, to provide a program for the conservation of such endangered species and threatened species, and to take such steps as may be appropriate to achieve the purposes of the treaties and conventions set forth in subsection (a) of this section." <p>Keauhou Bay, that is these endangered species habitat, is to threaten these endangered species habit with golf course runoff pollution, as well as development pollution and hence, threaten their habitat, hence their lives, and goes completely against the Endangered Species Act of 1973. The words in the Endangered Species Act states, "to conserve" and conserving the endangered species that enter into Keauhou Bay would be to NOT DEVELOP A BUNGALOW RESORT because this would cause serious pollution runoff that would pollute the bay and endanger these already endanagared species, the green sea turtle and the monk seal. Does this EIS have any reports on the endangered species that frequent Keauhou Bay because this is their habitat. Under the Conservation Program there should be research done on endangered species and their associated ecosystems, which is Keauhou Bay. Because this bungalow resort development WILL FOREVER CHANGE THIS ECOSYSTEM. "§195D-5 Conservation programs. (a) The department shall conduct research on indigenous aquatic life, wildlife, and land plants, and on endangered species and their associated ecosystems, and shall utilize the land acquisition and other authority vested in the department to carry out programs for the conservation, management, and protection of such species and their associated ecosystems. Also, under this same Conservation program, "(2) Taking such action as may be necessary to ensure that actions authorized, funded, or carried out by them do not jeopardize the continued existence of threatened or endangered species."</p> <p>If you allow this development it WILL POLLUTE Keauhou Bay as the above article (that was written in 2014 because runoff water from developments were polluting the ocean even then) states, and this bay holds many sea creatures such as the protected green sea turtle, spotted eagle rays, manta rays, octopus, dolphins, fish, coral, monk seals that have rested on the dock before and...that will ALL be harmed by the more sever pollution runoff that WILL happen</p>		<p>drainage masterplan will be developed to integrate these strategies, including criteria for infiltration systems, stormwater detention and retention, flood analysis, and drainage system schematics.</p> <p>The project's detailed drainage analysis and design will require design review and approval by the County for land use and construction plan approvals subsequent to the FEIS. The Project will be designed to comply with the County Drainage Standards, which include design requirements and regulations to address stormwater impacts within the County of Hawai'i.</p> <p>The existing Project Area lacks active management and does not contain infrastructure to capture or treat stormwater, resulting in untreated runoff that may flow toward the ocean. With implementation of the Project, drainage improvements and best management practices will be introduced to capture and treat runoff on site. These measures will reduce the potential for stormwater-related impacts, improving current conditions.</p> <p>The Project will be constructed entirely on land and does not include any direct discharges to coastal waters. As a result, water quality conditions in Keauhou Bay are not expected to worsen and may improve through reduced sediment and pollutant loading.</p> <p>The KBMP is intended to enhance shoreline access to Keauhou Bay, providing users with improved entry to public recreational areas and the ocean. While Kamehameha Schools does not have jurisdiction over the enforcement of marine wildlife interaction regulation, it may contribute to ocean conservation through educational initiatives and strategically placed signage.</p> <p>Although Kamehameha Schools does not have jurisdiction to manage lands in ocean waters owned by the State, there are opportunities for the Project to support marine conservation through place-based educational programming. Project facilities could host visiting researchers and support student engagement through hands-on learning experiences, cultural education, and direct involvement in conservation initiatives. Additionally,</p>

<p>because developments can't help but pollute the water nearby. Keauhou Bay is known as a RESTING AREA for the ENDANGERED MONK SEAL, and if a resort is allowed to be built, that will bring a lot more people down to Keauhou Bay and if a monk seal is resting they most likely will disturb the monk seal with their selfies because it is fully known this is now a SELFIE CULTURE. Federally Protected Green Sea Turtle Swim in Keauhou Bay Often The green sea turtle that is federally protected and can be seen in Keuhou Bay weekly. Has the EIS done any research on what a high population would do in such a small area, and what will happen to the endangered species that live there because it's their habitat and a high population will change this bay forever? Are there any reports in this EIS about what the impact to the coral, marine life, plankton especially zooplankton will be because of this development? Because the studies below show developments kill coral, marine life and zooplankton are kill and negatively affected as well, and zooplankton is the manta ray food. Manta rays are in this bay every night to eat zooplankton and sometimes they are in this bay during the day time too. If you allow this bay to be development you will be allowing all types of marine life to die and there is NO WAY to stop this from happening because polluted runoff rain water from developments can't be fully stopped. It is what has happened in ALL coastal develoments. The coral all over Hawai'i has had extremely high mortality rates, due to developments near ocean areas throughout the years, and development in Keauhou Bay will be devastating to the coral, reef fish, and all Aquatic Life there, and even the Manta Rays that go there to eat zooplankton from the Manta Ray tours at night, and they eat it during the day in that area as well because they need to eat 5 times their body weight in zooplankton daily. It's Been Proven Resort Developments KILL Marine Life The manta rays go to Keauhou Bay every night to eat zooplankton and if you allow this development that WILL have runoff water, you WILL be causing zooplankton to be seriously affected.</p>		<p>Kamehameha Schools is open to exploring partnerships with other marine conservation organizations to steward coastal resources.</p> <p>While the Project does not propose any direct activities within the immediate nearshore areas of Keauhou Bay and no specific impacts to marine life were identified in the EIS, Table 4-9 of the EIS outlines potential actions that could be taken to improve conditions for marine life in Ho'okūkū Pond within the Project Area.</p>

<p>Development of Keauhou Bay WILL hurt plankton life in the area because of the pollutant runoff that WILL happen during the development and after, and if this happens this could cause the manta ray food source to disappear and that will be devastating for the manta rays eating habits, as well as cause the manta rays to not show up in this area, in turn taking away many lively hoods from locals on the island that depend on the manta ray tour for their income. Where are the EIS reports on human density because this resort will increase this area in population by hundreds. Below are reports that human population destroy coral reefs. If you allow this resort to be developed, you will be destroying the coral reefs in the bay because this bay is extremely small and used by a lot of locals already for fishing, canoing, swimming, snorkeling, paddle boarding, surfing, boating...it can't afford more use by many thousands more people yearly. If you allow Keauhou Bay to be development there will be a higher population in the bay and that will hurt the coral in the bay as well. There is nothing Kamehameha Schools can do to their development that can stop the guests of this possible Bungalow Resort from going to Keauhou Bay. Human traffic WILL seriously increase if this resort is allowed to be built and the marine life will be negatively affected by it. Marine life will suffer from this development as stated in this letter in many different scientific reported articles. If you allow this resort the amount of people in this bay will fully increase. It's Been Proven an Increase in Human Population Destroys Coral Reefs If a Bungalow Resort is allowed to be built in Keauhou Bay, it will forsure bring a serious increase in human traffic.</p>		
<p>The Green Sea Turtle swims in Keauhou Bay weekly and the monk seal has also been seen swimming and resting in Keauhou Bay. Both of these marine animals are on the endangered species list. <p>"to conserve" would be to protect the land around Keauhou Bay from developments that destroy the habitat of these endangered species with pollution and runoff. Does this EIS have any reports on the endangered species that frequent Keauhou Bay? This is their habitat and it needs to be "conserved". Please consider that developing a Kamehameha Schools Bungalow Resort in Keauhou Bay WILL threaten endangered species due to the unavoidable development and golf course pollution runoff that would be caused by removing the all the trees that currently serving as a natural pollution filter, and replacing the land with housing, cars, humans, and waste. Are there any reports in this EIS about what the impact to the coral, marine life, plankton especially zooplankton will be because of this development? Zooplankton are part of this marine life and they are also killed and negatively affected. Zooplankton are food for manta rays. Manta rays are in Keauhou Bay every night to eat zooplankton, and are often seen here during the day as well. Allowing this bay developed will also be a death sentence for many types of marine life including planktons. There is NO WAY to stop this from happening due to the fact that polluted runoff rain water from developments can't be fully stopped. This has been shown to happen in ALL coastal developments. It's Been Proven an Increase in Human Population Destroys Coral Reefs If a Bungalow Resort is allowed to be built in Keauhou Bay, it will bring a serious increase in human traffic. By allowing this development you are stressing an already fragile Eco-system. The small bay is currently used by many locals for boating, fishing, canoeing, paddle boarding, snorkeling, manta night dives, surfing, and swimming. The area simply cannot afford or support this development. The coral all over Hawai'i has had extremely high mortality rates, due to developments near ocean areas throughout the years, and development in Keauhou Bay will be devastating to the coral, reef fish, and all aquatic life there. Manta Rays need to eat 5 times their body weight in zooplankton daily. <p>The DEIS adversely and significantly impacts marine life and other wildlife. 8 Keauhou Bay is home to certain species of sea turtles, dolphins, whales, manta rays, sharks, monk seals, corals, and seaweed which are all threatened or endangered. The DEIS states: “Both endangered Hawaiian monk seals (<i>Monarchus schauinslandi</i>) and the threatened Pacific green sea turtle (<i>Chelonia mydas</i>) are regularly reported from Kona waters (David, 2022). Although unlikely, either species could haul out along the shoreline close to the dock or by the beach landing. If either species is detected within 300 ft of ongoing construction, operations must cease and not continue until the animal has departed the area on its own accord.” (DEIS 4.6) Such mitigation measures address only part of the problem, namely what happens during the construction phase of the project. The DEIS states: “The Project involves the establishment of a recreation corridor, expansion of open space, and improved access to the shoreline.” (DEIS at 4.10) After the construction of the 150-unit resort, what impact will the</p>	Tamyra Rice	<p>Kamehameha Schools understands the significance of Keauhou Bay as a habitat for native marine life. <p>additional tourist population (approximately 300 persons at any given time), who have improved access to the shoreline, have on these species when they are on the beach? Case in point: in a 2019 study, NOAA scientists used social media to monitor human activities around endangered Hawaiian monk seals and they discovered that human disturbance is more common than they thought. Additionally, the DEIS misconstrues the legal standard regarding threatened species. The legal standard is not whether there is “any existing habitat...[that] is essential for the continued survival of listed species” but whether there is a “taking” (a threat to endangered species). 9 If there is a “taking” then a federal permit and a Habitat Conservation Plan is required. The DEIS does not mention this requirement. The DEIS states: “Nēnē (<i>Branta sandvicensis</i>) is present in North Kona, but so far not seen in the Keauhou area (David, 2022).” (DEIS at 4.6) Nēnē has recently been sighted and photographed at the project area. Nēnē is listed as endangered by the State of Hawaii and federally listed as threatened. They are protected under the federal Migratory Bird Treaty Act. The DEIS does not contemplate this finding. The DEIS substantially affects these threatened and endangered species, and their habitat in the ways enumerated above, namely by increasing the number of tourists interfacing with these species and by worsening climate change effects and the Bay’s water quality.</p>		<p>Kamehameha Schools is also committed to continued collaboration with the Department of Land and Natural Resources to explore future marine stewardship strategies.</p> <p>An analysis of the proposed Project’s potential population impact suggests that it would not significantly impact coastal ecosystems. The proposed low-impact lodging with an estimated population of 250 guests at any given time (based on 150 rooms with an average occupancy of 2.25 people per room at a 74% occupancy rate), represents a relatively small increase. This limited scale of visitor accommodation is not expected to significantly affect marine life, as not all guests will use the bay simultaneously.</p> <p>Although Kamehameha Schools does not have jurisdiction to manage lands in ocean waters owned by the State, there are opportunities for the Project to support marine conservation through place-based educational programming. Project facilities could host visiting researchers and support student engagement through hands-on learning experiences, cultural education, and direct involvement in conservation initiatives. Additionally, Kamehameha Schools is open to exploring partnerships with other marine conservation organizations to steward coastal resources.</p> <p>Section 4.6 of the EIS addresses Biological Resources. A <i>Natural Resource Assessment</i>, provides detailed information on the biological conditions of Project Area and is included as Appendix K of the EIS.</p> <p>Although the Nēnē (Hawaiian Goose) was reclassified from endangered to threatened status in 2019, there is still a need for continued protection. The Hawai’i Department of Land and Natural Resources (DLNR) recommends the installation of a construction barrier to prevent Nēnē from entering active construction zones. Key limiting factors affecting the recovery of the species include predation by introduced mammals, limited nutritional resources for breeding females and goslings, restricted availability of suitable habitat, and disturbance or mortality caused by human activity. The Project will implement BMPs to mitigate potential impacts during project construction activities. Additionally, habitat enhancement</p>

<p>However, with urban and agricultural development, less and less of the pollution gets pulled into the soil, and more of it gets washed out into storm drains. From there, the pollutants make their way to streams, rivers and the ocean that surrounds Hawaii. According to the state agency, most of these contaminants are nutrients from fertilizer, bacteria from animal waste, oil, garbage and yard waste... If polluted runoff reaches the ocean, it can wreak havoc on marine life, including endangered green sea turtles." Taken from <a href="https://www.chemservice.com/news/pollutedrunoff-in-hawaii-endangers-green-sea-turtles/">https://www.chemservice.com/news/pollutedrunoff-in-hawaii-endangers-green-sea-turtles/</a> Allowing this development WILL POLLUTE Keauhou Bay. The above article, written in 2014 (because runoff water from developments were polluting the ocean even then!!!) states this fact clearly. Keauhou Bay is home to countless sea creatures such as the protected green sea turtle, spotted eagle rays, manta rays, octopus, dolphins, fish, coral, monk seals, and more and that will ALL be harmed by the severe pollution runoff that WILL happen because developments have been shown to ALWAYS pollute the water is that is nearby. The Green Sea Turtle is protected by more than one law. "All sea turtles in Hawai'i are protected by the Endangered Species Act (ESA) and additionally protected by Hawai'i 3 Revised Statutes Chapter 195D (HRS) and Hawai'i Administrative Rules (HAR) 13-124." This information was taken from this site <a href="https://dlnr.hawaii.gov/dar/species/sea-turtles/">https://dlnr.hawaii.gov/dar/species/sea-turtles/</a> THE ENDANGERED MONK SEAL WILL BE AFFECTED Keauhou Bay is known as a RESTING AREA for the ENDANGERED MONK SEAL. If another resort is allowed to be built, in addition to the pollution, it will also bring a lot more people down to Keauhou Bay. This increases the chances of a resting monk seal being disturbed by humans trying to get close, take "selfie" photos, and being generally uninformed and harmful. Please see article on Selfie Culture and its harmful effects below. Has the EIS done any research on what an increased population would do in such a small area, and</p>		<p>Additionally, the Project is adopting Low-Impact Development (LID) practices, which emphasize conserving natural features and employing localized, small-scale stormwater systems that mimic natural hydrologic processes. Prior to construction, a detailed drainage masterplan will be developed to integrate these strategies, including criteria for infiltration systems, stormwater detention and retention, flood analysis, and drainage system schematics.</p> <p>The project's detailed drainage analysis and design will require design review and approval by the County for land use and construction plan approvals subsequent to the FEIS. The Project will be designed to comply with the County Drainage Standards, which include design requirements and regulations to address stormwater impacts within the County of Hawai'i.</p> <p>The KBMP is intended to enhance shoreline access to Keauhou Bay, providing users with improved entry to public recreational areas and the ocean. While Kamehameha Schools does not have jurisdiction over the enforcement of marine wildlife interaction regulation, it may contribute to ocean conservation through educational initiatives and strategically placed signage. Kamehameha Schools is also committed to continued collaboration with the Department of Land and Natural Resources to explore future marine stewardship strategies.</p> <p>An analysis of the proposed Project's potential population impact suggests that it would not significantly impact coastal ecosystems. The proposed low-impact lodging with an estimated population of 250 guests at any given time (based on 150 rooms with an average occupancy of 2.25 people per room at a 74% occupancy rate), represents a relatively small increase. This limited scale of visitor accommodation is not expected to significantly affect marine life, as not all guests will use the bay simultaneously.</p> <p>The Project will follow all federal and state guidelines regarding the protection of endangered species, and Kamehameha Schools will continue to work with conservation experts to monitor and mitigate potential impacts.</p>

Summary of Draft EIS Comments and Responses		
Comments	Commenter	Responses
<p>what will happen to the endangered species that live there? With a significantly increased population their habitat of Keauhou Bay will likely be changed forever. This information is from a NOAA Scientist; "Study shows selfie culture impacts how people behave when posting images of an endangered species on social media. There's a seal on the beach! Let's go get a 'selfie'!" That must have been what nearly 18 percent of people on Instagram thought before approaching an endangered species. In a recent study, NOAA scientists used social media to monitor human activities around endangered Hawaiian monk seals. They discovered that human disturbance is more common than they thought." NOAA clearly states a high population in a place where monk seals and sea turtles habitat can be a serious disturbance for these endangered species. "Hawaiian monk seals are protected federally by the ESA and the Marine Mammal Protection Act (MMPA), as well as locally by Hawai'i Revised Statutes (HRS) Chapter 195D and Hawai'i Administrative Rules (HAR) 13-124." This was taken from Keauhou Bay is the monk seals and the green sea turtle's habitat. Allowing a bungalow resort to be developed in Keauhou Bay, the habitat of these endangered species, is to threaten their life and habitat with golf course runoff pollution, as well as development pollution. By threatening their habitat, and hence their lives, this development goes completely against the Endangered Species Act of 1973. The verbiage in the Endangered Species Act states, "to conserve". In this case, "to conserve" would be to protect the land around Keauhou Bay from developments that destroy the habitat of these endangered species with pollution and runoff. 4 Does this EIS have any reports on the endangered species that frequent Keauhou Bay? This is their habitat and it needs to be "conserved". Under the Conservation Program there should be research done on endangered species and their associated ecosystems. A large bungalow resort development WILL FOREVER CHANGE THIS ECOSYSTEM. "§195D-5 Conservation programs. (a) The department shall</p>

<p>conduct research on indigenous aquatic life, wildlife, and land plants, and on endangered species and their associated ecosystems, and shall utilize the land acquisition and other authority vested in the department to carry out programs for the conservation, management, and protection of such species and their associated ecosystems." Also, under this same Conservation program, "(2) Taking such action as may be necessary to ensure that actions authorized, funded, or carried out by them do not jeopardize the continued existence of threatened or endangered species." Please consider that developing a Kamehameha Schools Bungalow Resort in Keauhou Bay WILL threaten endangered species due to the unavoidable development and golf course pollution runoff that would be caused by removing the all the trees that currently serving as a natural pollution filter, and replacing the land with housing, cars, humans, and waste. There would also be tremendous runoff damage into Keauhou Bay and the surrounding area during the building phase of this enormous project.</p>		
<p>This development will negatively impact a sacred place, residents, current business owners, and the magnificent marine life in the area.</p>	<p>M. Kekoa Aukai-Richardson</p>	<p>The KBMP is designed to improve environmental conditions by establishing a model of long-term stewardship that prioritizes the health of the land and ocean. Commercial activities within the project area are designed to support and sustain cultural and environmental preservation efforts. Through responsible planning, relocation of incompatible uses, and a strong emphasis on cultural values, the KBMP directs future activity at Keauhou to contribute to the protection and care of its unique ecosystem and heritage.</p>
<p>If you were to snorkel there you will see dead coral and very few fish or na honu. During COVID restrictions, when Hanauma Bay was closed, the marine life there started to bounce back. The evidence is clear: the more people in an area, the worse the environment will be. This is especially true in Hawaii because, unlike in some other places, the state and counties do very little to enforce laws on the books regarding marine life, and are not acting fast enough to</p>	<p>M. Additionally, Kamehameha Schools is open to exploring partnerships with other marine conservation organizations to steward coastal resources.</p>
<p>Anecdotally and as a long-time snorkeler, one of the things I've noticed over the years is how the color of some of the tropical fish has changed, as they and their food chain are forced to eat more algae and eat fewer varieties of coral. Another example - I used to call Kahalu'u turtle beach because of the number of turtles we would see there on every snorkel, including on the beach. That number is now severely reduced. I fear the same will happen at Keauhou Bay. The ocean and sea-life are already stressed – the management plan would certainly add to the stressors facing the Bay and the ocean.</p>	Laurel Terry	<p>Kamehameha Schools understands the significance of Keauhou Bay as a habitat for native marine life. <p>And most importantly, for me, is the marine life that will be threatened, not only by the excess pollution but by the sheer number of people- normally not there- that would be using the Bay. Keauhou Bay is a monk seal and green sea turtle habitat. More pollution and people will further endanger these (already endangered!) animals, not to mention the toxicity to the reef and fish. I'm not quite sure I understand how a resort here could be culturally helpful. The eco-system of the Bay would change forever (and not for the better). Seems to me to be nothing more than a way to make money. Can't they find a less intrusive place to develop?</p>	<p>Marie LeBoeuf</p>	<p>Kamehameha Schools understands the significance of Keauhou Bay as a habitat for native marine life. <p>sea turtle (<i>Eretmochelys imbricata</i>), and • Blackburn’s sphinx moth (<i>Manduca blackburni</i>).</p> <p>A biological survey conducted by AECOS in 2021 did not record any federally listed plants, birds, or mammals in the proposed project area, however; we recommend that the project implement the U.S. Fish and Wildlife Service (Service) Avoidance and Minimization Measures provided below to avoid impacts to federally listed species. We have attached additional recommendations for Invasive Species Biosecurity Protocols (Attachment A) and Best Management Practices For Work In or Around Aquatic Environments (Attachment B). ‘Ōpe‘ape‘a The Hawaiian hoary bat roosts in woody vegetation across all islands and will leave their young unattended in trees and shrubs when they forage. If trees or shrubs 15 feet or taller are cleared during the pupping season, June 1 through September 15, there is a risk that young bats could inadvertently be harmed or killed, since they are too young to fly or move away from disturbance. Hawaiian hoary bats forage for insects from as low as 3 feet to higher than 500 feet above the ground and can become entangled in barbed wire used for fencing. In the DEIS, it stated that a qualified biologist would survey any trees taller than 15 ft during the bat breeding season prior to any disturbance to the tree. The Service does not recommend this method as roosting bats and pups are difficult to detect; therefore, woody plants should not be disturbed, removed, or trimmed during the bat birthing and pup rearing season. To avoid and minimize impacts to the endangered Hawaiian hoary bat we recommend you incorporate the following applicable measures into your project description: • Do not disturb, remove, or trim woody plants greater than 15 feet tall during the bat birthing and pup rearing season (June 1 through September 15). • Do not use barbed wire for fencing. Nēnē Nēnē are observed in a variety of habitats, but prefer open areas, such as pastures, golf courses, wetlands, natural grasslands and shrublands, and lava flows. Nēnē presence is unlikely at the</p>		

Summary of Draft EIS Comments and Responses

Comments	Commenter	Responses
<p>inform project personnel and contractors about the presence of endangered species on-site. • If water resources are located within or adjacent to the project site, incorporate applicable best management practices regarding work in aquatic environments into the project design (see enclosure). • Have a biological monitor that is familiar with the species' biology conduct Hawaiian waterbird nest surveys where appropriate habitat occurs within the vicinity of the proposed project site prior to project initiation. Repeat surveys again within 3 days of project initiation and after any subsequent delay of work of 3 or more days (during which the birds may attempt to nest). If a nest or active brood is found: o Contact the Service within 48 hours for further guidance. o Establish and maintain a 100-foot buffer around all active nests and/or broods until the chicks/ducklings have fledged. Do not conduct potentially disruptive activities or habitat alteration within this buffer Have a biological monitor that is familiar with the species' biology present on the project site during all construction or earth moving activities until the chicks/ducklings fledge to ensure that Hawaiian waterbirds and nests are not adversely impacted.</p> <p>Hawaiian seabirds Hawaiiaian seabirds may traverse the project area at night during the breeding, nesting, and fledging seasons (March 1 to December 15). Outdoor night lighting can cause seabird disorientation, fallout, and injury or mortality when seabirds are attracted to lights and after circling the lights, they may become exhausted and collide with nearby wires, buildings, or other structures or they may land on the ground. Fledglings are particularly vulnerable to light attraction when they are traversing the project area between September 15 and December 15, as they are making their first flights from their mountain nests to the sea. Downed seabirds are subject to increased mortality due to collision with automobiles, starvation, and predation by dogs, cats, and other predators. To avoid and minimize potential project impacts to seabirds we recommend you</p>		

Summary of Draft EIS Comments and Responses		
Comments	Commenter	Responses
<p>incorporate the following measures into your project description: • Fully shield all outdoor lights so the bulb can only be seen from below. • Install automatic motion sensor switches and controls on all outdoor lights or turn off lights when human activity is not occurring in the lighted area. • Avoid nighttime construction during the seabird fledging period, September 15 through December 15. Hawaiian sea turtles The Service consults on sea turtles and their use of terrestrial habitats (beaches where nesting and/or basking is known to occur), whereas the National Oceanic and Atmospheric Administration (NOAA) Fisheries consults on sea turtles in aquatic habitats. We recommend that you consult with NOAA Fisheries regarding the potential impacts from the proposed project if it may affect offshore or open ocean habitats. Green sea turtles may nest on any sandy beach area in the Pacific Islands. Hawksbill sea turtles exhibit a wide tolerance for nesting substrate (ranging from sandy beach to crushed coral) with nests typically placed under vegetation. Both species exhibit strong nesting site fidelity. Nesting occurs on beaches from May through September, peaking in June and July, with hatchlings emerging through November and December. Construction on, or in the vicinity of, beaches can result in sand and sediment compaction, sea turtle nest destruction, beach erosion, contaminant and nutrient runoff, and an increase in direct and ambient light pollution which may disorient hatchlings or deter nesting females. Off-road vehicle traffic may result in direct impacts to sea turtles or nests, and also contributes to habitat degradation through erosion and compaction. To avoid and minimize project impacts to sea turtles and their nests we recommend you incorporate the following measures into your project description: • No vehicle use on or modification of the beach/dune environment during the sea turtle nesting or hatching season (May to December). • Do not remove native dune vegetation. • Incorporate applicable best management practices regarding Work in Aquatic Environments (see</p>

Comments	Commenter	Responses
<p>enclosed) into the project design. • Have a biologist familiar with sea turtles conduct a visual survey of the project site to ensure no basking sea turtles are present. o If a basking sea turtle is found within the project area, cease all mechanical or construction activities within 100 feet until the animal voluntarily leaves the area. o Cease all activities between the basking turtle and the ocean. • Remove any project-related debris, trash, or equipment from the beach or dune if not actively being used. • Do not stockpile project-related materials in the intertidal zone, reef flats, sandy beach and adjacent vegetated areas, or stream channels. Optimal sea turtle nesting habitat is a dark beach free of barriers that restrict sea turtle movement. Nesting turtles may be deterred from approaching or laying successful nests on lighted or disturbed beaches. They may become disoriented by artificial lighting, leading to exhaustion and placement of a nest in an inappropriate location (such as at or below the high tide line). Hatchlings that emerge from nests may also be disoriented by artificial lighting. Inland areas visible from the beach should be sufficiently dark to allow for successful navigation by hatchlings to the ocean. To avoid and minimize project impacts to sea turtles from lighting we recommend incorporating the following applicable measures into your project description: • Avoid nighttime work during the nesting and hatching season (May to December). • Minimize the use of lighting on or near beaches and shield all project-related lights so the light is not visible from any beach. o If lights can't be fully shielded or if headlights must be used, fully enclose the light source with light filtering tape or filters. • Incorporate design measures into the construction or operation of buildings adjacent to the beach to reduce ambient outdoor lighting such as: o tinting or using automatic window shades for exterior windows that face the beach; o reducing the height of exterior lighting to below 3 feet and pointed downward or away from the beach; and o minimize light intensity to the lowest level feasible and, when possible, include timers and motion sensors.</p>

<p>Blackburn’s sphinx moth The adult Blackburn’s sphinx moth feeds on nectar from native plants, including beach morning glory (<i>Ipomoea pes-caprae</i>), ‘ilie’e (<i>Plumbago zeylanica</i>), maiapilo (<i>Capparis sandwichiana</i>), and others. Blackburn’s sphinx moth larvae feed on non-native tree tobacco (<i>Nicotiana glauca</i>). and native ‘aiea (<i>Nothocestrum</i> spp.). To pupate, the larvae burrow into the soil and can remain in a state of torpor for a year or more before emerging from the soil. Soil disturbance can result in death of the pupae. The DEIS reported that field surveys conducted in 2021 by AECOS biologists did not find any host plants species for the moth. The Service does recommend conducting pre-construction surveys as the non-native tree tobacco is commonly found throughout the North Kona area and often establishes in disturbed areas, such as construction sites. We offer the following survey recommendations to assess whether the Blackburn’s sphinx moth occurs within the project area:</p> <ul style="list-style-type: none"> <li>• A biologist familiar with the species should survey areas of proposed activities for Blackburn’s sphinx moth and its larval host plants prior to work initiation.</li> <li>o Surveys should be conducted during the wettest portion of the year (usually November-April or several weeks after a significant rain) and within 4-6 weeks prior to construction.</li> <li>o Surveys should include searches for adults, eggs, larvae, and signs of larval feeding (chewed stems, frass, or leaf damage).</li> <li>o If moths, eggs, larvae, or native ‘aiea or tree tobacco over 3 feet tall, are found during the survey, please contact the Service for additional guidance to avoid impacts to this species. If no Blackburn’s sphinx moth, ‘aiea, or tree tobacco are found during surveys, it is imperative that measures be taken to avoid attraction of Blackburn’s sphinx moth to the project location and prohibit tree tobacco from entering the site. Tree tobacco can grow greater than 3 feet tall in approximately 6 weeks. If it grows over 3 feet, the plants may become a host plant for Blackburn’s sphinx moth. We therefore recommend that you:</li> <li>• Remove any tree tobacco less than 3 feet tall.</li> <li>• Monitor the site every 4-</li> </ul>		

Summary of Draft EIS Comments and Responses		
Comments	Commenter	Responses
6 weeks for new tree tobacco growth before, during, and after the proposed ground-disturbing activity. o Monitoring for tree tobacco can be completed by any staff, such as groundskeeper or regular maintenance crew, provided with picture placards of tree tobacco at different life stages.		
<p>The Bungalow Resort WILL have a Much Needed Positive IMPACT on the Keauhou Bay and does NOT hurt or impair the very healthy Keauhou Bay ocean ecosystem.</p> <p>Habitat Health at Keauhou Bay:</p> <p>Please, DO NOT believe the detractors of the development who claim the development will pollute, endanger specie and create greater congestion in the area. The bay is a very resilient body of water with natural ocean wave action keeping the bay clean and healthy for humans, ocean organisms and habitats. The bay over the past 25 years I've worked here, has not shown signs of degradation as would be predicted if what detractors say was true about runoff, pollution and harm to sea turtles and monk seals. The Keauhou Bay is not home to many green sea turtles or monk seals - they are very rare in this bay. Yet resort detractors claim these endangered species will be harmed if the resort built. This is a weak and unsupported claim as anyone who visits the bay knows. This is simply not a regular habitat of either turtles or monk seals and never has been one.</p> <p>Keauhou Bay is in fact a clean environment where swimmers exercise, tourists and local residents view manta rays and enjoy the bay by kayak, boat and canoe for snorkeling, diving and fishing. The bay waters are circulated hourly with fresh ocean waters and this keeps the bay environment clean and healthy for all things biological. If what the detractors say of this new resort development was true, then we would currently see very sick dolphins, ailing manta rays, polluted monk seals, tumor infested green sea turtles and reduced plankton populations and serious coral</p>	G Hand	The KBMP is designed to improve environmental conditions by establishing a model of long-term stewardship that prioritizes the health of the land and ocean. Commercial activities within the project area are designed to support and sustain cultural and environmental preservation efforts. Through responsible planning, relocation of incompatible uses, and a strong emphasis on cultural values, the KBMP directs future activity at Keauhou to contribute to the protection and care of its unique ecosystem and heritage.

issues. But we are not experiencing a decline in species or their health.		
<p>Attachment A: Invasive Species Biosecurity Protocols: Hawai'i Island Biosecurity Protocols The following biosecurity protocol (based on National Park Service, State of Hawai'i, U.S. Fish and Wildlife, U.S. Geological Survey, and the DOI Office of Native Hawaiian Relations guidance) should be followed when operating on Hawai'i Island to prevent the introduction of harmful invasive species including frogs, ants, weeds, and fungi into local natural areas (e.g., Hawai'i Volcanoes National Park, Hakalau Forest National Wildlife Refuge, State of Hawai'i "Natural Areas") and areas with native habitat (habitat that is primarily composed of native vegetation), other islands in Hawaiian archipelago, or the U.S. mainland. The protocol also includes suggestions for keeping field staff safe from certain invasive species.</p> <p>1. All work vehicles, machinery, and equipment should be cleaned, inspected by its user, and found free of mud, dirt, debris and invasive species prior to entry into the natural areas or native habitat. a. Vehicles, machinery, and equipment must be thoroughly pressure washed in a designated cleaning area and visibly free of mud, dirt, plant debris, insects, frogs (including frog eggs) and other vertebrate species such as rats, mice and non-vegetative debris. A hot water wash is preferred. Areas of particular concern include bumpers, grills, hood compartments, areas under the battery, wheel wells, undercarriage, cabs, and truck beds (truck beds with accumulated material (intentionally placed or fallen from trees) are prime sites for hitchhikers). b. The interior and exterior of vehicles, machinery, and equipment must be free of rubbish and food. The interiors of vehicles and the cabs of machinery must be vacuumed clean. Floor mats shall be sanitized with a solution of &gt;70% isopropyl alcohol or a freshly mixed 10% bleach solution. c. Any machinery, vehicles, equipment, or other supplies found to be infested with ants (or other</p>	<p>Colleen Cole (US Fish and Wildlife Service, Pacific Islands Fish and Wildlife Office)</p>	<p>Mahalo for providing the recommended mitigation measures. Your comments have been administratively recorded and incorporated where appropriate in Section 4.6 of the Final EIS.</p> <p>The proposed development at Keauhou Bay is designed to be in harmony with the existing ecosystem, and significant measures will be taken to protect the bay and its surrounding environment. Kamehameha Schools recognizes the importance of preserving native habitats, including the protection of endangered species and the prevention of invasive species. As such, construction activities will adhere to applicable State and County standards for biosecurity protocols to prevent the introduction of harmful species, including little fire ants, invasive fungi, and other pests. This includes thorough cleaning and inspection of all vehicles, machinery, and equipment before entering the project area, as well as the implementation of appropriate pest control measures.</p>

<p>invasive species) must not enter natural areas or native habitat. Treatment is the responsibility of the equipment or vehicle owner and operator.</p> <p>2. Little Fire Ants – All work vehicles, machinery, and equipment should be inspected for invasive ants prior to entering the natural areas or native habitat. a. A visual inspection for little fire ants should be conducted prior to entry into natural areas or native habitat. b. Hygiene is paramount but even the cleanest vehicle can pick up a little fire ant. Place MaxForce Complete Brand Granular Insect Bait (1.0% HydramethylInon; <a href="http://littlefireants.com/Maxforce%20Complete.pdf">http://littlefireants.com/Maxforce%20Complete.pdf</a>) into refillable tamper resistant bait stations. An example of a commercially available refillable tamper resistant bait station is the Ant Café Pro (<a href="https://www.antcafe.com/">https://www.antcafe.com/</a>). Place a bait station (or stations) in vehicle. Note larger vehicles, such as trucks, may require multiple stations. Monitor bait stations frequently (every week at a minimum) and replace bait as needed. If the station does not have a sticker to identify the contents, apply a sticker listing contents to the station. c. Any machinery, vehicles, equipment, or other supplies found to be infested with ants (or other invasive species) must not enter natural areas or native habitat until it is sanitized and re-tested following a resting period. Infested vehicles must be sanitized following recommendations by the Hawaii Ant Lab (<a href="http://www.littlefireants.com/">http://www.littlefireants.com/</a>) or other ant control expert and in accordance with all State and Federal laws. Treatment is the responsibility of the equipment or vehicle owner. d. Gravel, building materials, or other equipment such as portable buildings should be baited using MaxForce Complete Brand Granular Insect Bait (1.0% HydramethylInon; <a href="http://littlefireants.com/Maxforce%20Complete.pdf">http://littlefireants.com/Maxforce%20Complete.pdf</a>) or AmdroPro (0.73% HydramethylInon; <a href="http://littlefireants.com/Amdro%20Pro.pdf">http://littlefireants.com/Amdro%20Pro.pdf</a>) following label guidance. e. Storage areas that hold field tools, especially tents, tarps, and clothing should be baited using MaxForce</p>

<p>going into the field, visually inspect and clean your clothes, boots, pack, radio harness, tools and other personal gear and equipment, for seeds, soil, plant parts, insects, and other debris. A small brush is handy for cleaning boots, equipment and gear. Soles of shoes should be sanitized using a solution of &gt;70% isopropyl alcohol or a freshly mixed 10% bleach solution. b. Immediately before leaving the field, visually inspect and clean your clothes, boots, pack, radio harness, tools, and other personnel gear and equipment, for seeds, soil, plant parts, insects, and other debris. Soles of shoes should be sanitized using a solution of &gt;70% isopropyl alcohol or a freshly mixed 10% bleach solution. c. Little fire ants nest in trees. If you are under a tree and that tree is bumped or somehow stressed, the threat response of the ants is to fall from the leaves and sting the person under the tree. If you are subject to an ant attack, do not panic. The ants are extremely small, but their stings are painful so make sure you remove all ants from your body and clothing. The stings cause inch long welts that are itchy and painful and can last for weeks. Treat stings as you would other insect stings. In some persons stings can produce life threatening reactions. Stocking antihistamine in the first aid kit is a reasonable precaution. d. Rat Lungworm disease is caused by a parasite that can infect humans who consume raw or undercooked infected snails or slugs or consume raw produce that contains a small infected snail or slug. Infection is rare but can be serious. Symptoms can include severe headache, neck stiffness, low grade fever, nausea, and vomiting anywhere from 1-6 weeks after exposure. The disease is not spread person to person. Anyone who handles snails or slugs should wear gloves and/or wash hands. Eating unwashed produce is discouraged.</p>

Summary of Draft EIS Comments and Responses		
Comments	Commenter	Responses
marine life. How would development affect current water temperatures from spot to spot within the Bay?		EIS Section 4.5 discusses Project stormwater management and drainage improvements. The Project integrates Low-Impact Development (LID) principles to manage stormwater through strategies that replicate natural hydrological processes. These practices, such as infiltration and retention systems, will reduce runoff and support localized water recharge. Impacts to the water table and ability for groundwater to discharge to the bay are not anticipated. As such, water temperatures in the bay are not anticipated to change as a result of the Project.
<b>Noise</b>		
Does this EIS have any reports on the noise pollution that will happen and what it could do to marine life in Keauhou Bay during development? Because if you allow this Bungalow Resort to be developed you will increase constant noise in this bay for years to come and, "Noise Pollution Research shows that underwater noise from construction, shipping and naval vessels significantly impacts the natural behaviour of cetaceans and many other marine species. This can be seen when mass beaching events occur or breeding success is diminished." What is ocean noise? "Ocean noise refers to sounds made by human activities that can interfere with or obscure the ability of marine animals to hear natural sounds in the ocean. Many marine organisms rely on their ability to hear for their survival. Sound is a highly efficient means of communication underwater and is the primary way that many marine species gather and understand information about their environment. Many aquatic animals use sound to find prey, locate mates and offspring, avoid predators, guide their navigation and locate habitat, as well as to listen and communicate with each other. Over the last century, human activities such as shipping, recreational boating, and energy exploration have increased along our coasts, offshore, and deep ocean environments. Noise from these activities can travel long distances underwater, leading to increases and changes in ocean noise levels in many coastal and offshore habitats. These rising noise	Donald Robert Berger Stephen Goudreau Sara Irwin Goudreau Lucia Kaplan Rebecca Melendez Sherina Ong Roslyn Patrick-Sunnes Deborah Sevy Mayari Sherina Ong Lisa Thatcher David Hill Kaleihua Kamaka Kellie Kilcua	The Project does not propose any direct activities within the immediate nearshore areas of Keauhou Bay and no specific impacts on marine life were identified in the EIS.  Section 4.13 of the EIS addresses potential noise impacts associated with the KBMP, supported by a detailed Noise Assessment included in Appendix O. The assessment evaluates both short-term and long-term noise conditions. Short-term impacts may result from construction-related activities, which could temporarily affect nearby residences and uses due to increased frequency and exposure to noise. Long-term impacts could include increased noise from traffic, commercial operations, and cultural or educational programming within the Project Area.  While future noise levels are expected to increase slightly due to construction and traffic, the assessment concludes that overall noise levels will remain within acceptable thresholds. The most notable increases, ranging from 11 to 13 dB, are projected in currently undeveloped areas along Old Kona Road but are not anticipated to exceed FHA/HUD standards of 65 DNL or the Hawai'i Department of Transportation's significant increase criterion of 15 dB. The Project will comply with local Department of Health noise regulations to avoid adverse impacts.  Risks of noise impacts on marine species are considered to be negligible as offshore construction is not proposed.

<p>Since the traffic forecasts are erroneous, all air quality and noise analysis are also in error. The noise disruption from traffic along Kamehameha III Road is already disruptive. As noted above, the majority of both background traffic volume and project generated traffic volume will use Kamehameha III Road. Traffic congestion, noise (duration and intensity), and air quality impacts will significantly worsen, particularly for residents adjacent to this section of the road. We request that Air Quality and Noise studies be revised to reflect the significant shift in traffic volume associated with the development and through road connection that is part of the proposed action. In summary, we request that a Supplemental DEIS be prepared for public review to address an updated traffic analysis addressing the items noted above, any associated Noise and Air Quality analyses, and other non-traffic issues.</p>	David Markley	<p>Section 4.13 of the EIS addresses potential noise impacts associated with the KBMP, supported by a detailed Noise Assessment included in Appendix O. 		criterion of 15 dB. The Project will comply with local Department of Health noise regulations to avoid adverse impacts.
And a concern that cannot be addressed in the DEIS is the noise level during construction and rebuilding of the parking lot and Old Kona Road as it is directly across the street from our building and the addition of kiosks for commercial use directly across the street of our building.	Joanne (Jody) Wheeler	<p>Section 4.13 of the EIS addresses potential noise impacts associated with the KBMP, supported by a detailed Noise Assessment included in Appendix O. The assessment evaluates both short-term and long-term noise conditions. Short-term impacts may result from construction-related activities, which could temporarily affect nearby residences and uses due to increased frequency and exposure to noise. Long-term impacts could include increased noise from traffic, commercial operations, and cultural or educational programming within the Project Area. Risks of noise impacts on marine species are considered to be minimal as offshore construction is not proposed.</p> <p>While future noise levels are expected to increase slightly due to construction and traffic, the assessment concludes that overall noise levels will remain within acceptable thresholds. The most notable increases, ranging from 11 to 13 dB, are projected in currently undeveloped areas along Old Kona Road but are not anticipated to exceed FHA/HUD standards of 65 DNL or the Hawai'i Department of Transportation's significant increase criterion of 15 dB. The Project will comply with local Department of Health noise regulations to avoid adverse impacts.</p>
With regard to noise, the DEIS states: "The noise levels around Keauhou Bay are consistent with noise levels found in typical urban areas." (DEIS at 4.13) However, to reiterate--the project area is not urban. Thus, the results of the noise study performed are inapplicable here. Possible mitigation measures include foregoing the construction of a 150-unit resort, performing traffic studies and ambient noise level studies at the busiest times of the year that accurately address the impacts on adjacent neighborhoods and streets.	Tamyra Rice	<p>According to the State Land Use Designation Map (Figure 1-4), the entire Project Area and its surrounding vicinity are designated as Urban. This designation reflects an area primarily characterized by a mix of residential, apartment, condominium, retail, and resort developments. The project is in alignment with the established urban landscape and is consistent with the goals and planning objectives for urban development in this area.</p> <p>Section 4.13 of the EIS addresses potential noise impacts associated with the KBMP, supported by a detailed Noise Assessment included in Appendix O. The assessment evaluates both short-term and long-term noise conditions. 		<p>Hawai'i Department of Transportation's significant increase criterion of 15 dB. The Project will comply with local Department of Health noise regulations to avoid adverse impacts.</p> <p>The State DOH currently regulates noise from construction activities under a permit system. Under current permit procedures, noisy construction activities are restricted to hours between 7:00 a.m. and 6:00 p.m., from Monday through Friday, and exclude certain holidays. Noisy construction activities are normally restricted to the hours of 9:00 a.m. to 6:00 p.m. on Saturdays, with construction not permitted on Sundays. These restrictions minimize construction related noise impacts.</p>
<p><b>NOISE POLLUTION'S HARMFUL EFFECT ON MARINE LIFE</b>                  Does this EIS have any reports on the noise pollution that will happen and what it could do to marine life in Keauhou Bay during development? Because if you allow this Bungalow Resort to be developed you will increase constant noise in this bay for years to come and, "Noise Pollution Research shows that underwater noise from construction, shipping and naval vessels significantly impacts the natural behavior of cetaceans and many other marine species. This can be seen when mass beaching events occur or breeding success is diminished." The above information was taken from the Ocean Conservation Trust  <a href="https://oceanconservationtrust.org/ocean-advocacy/think-ocean/ways-to-think-ocean/">https://oceanconservationtrust.org/ocean-advocacy/think-ocean/ways-to-think-ocean/</a> How Does Noise Pollution Harm Marine Species? "However, over the past few decades, noise pollution in the marine environment has increased dramatically and is threatening the natural soundscape of the marine environment. Ships, seismic surveys, explosions, construction, and sonar devices have made the once peaceful environment into a loud, chaotic home which is extremely damaging for marine wildlife. This type of pollution is often overlooked in comparison to others but its impacts are now being documented across all types of marine ecosystems." <a href="https://earth.org/noise-pollution-in-the-ocean/">https://earth.org/noise-pollution-in-the-ocean/</a>                  If you allow this resort the amount of people in this bay will</p>	<p>Michael Hanly</p>	<p>The Project does not propose any direct activities within the immediate nearshore areas of Keauhou Bay and no specific impacts on marine life were identified in the EIS.</p> <p>Section 4.13 of the EIS addresses potential noise impacts associated with the KBMP, supported by a detailed Noise Assessment included in Appendix O. <p>fully increase and, "Hawai'i's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally, management of the resource should balance the needs of different user groups, but the welfare of the marine environment on which its inhabitants depend must be the most important consideration." This was taken from Hawaii's own Division of Aquatic Resources What is ocean noise? "Ocean noise refers to sounds made by human activities that can interfere with or obscure the ability of marine animals to hear natural sounds in the ocean. Many marine organisms rely on their ability to hear for their survival. Sound is a highly efficient means of communication underwater and is the primary way that many marine species gather and understand information about their environment. Many aquatic animals use sound to find prey, locate mates and offspring, avoid predators, guide their navigation and locate habitat, as well as to listen and communicate with each other. Over the last century, human activities such as shipping, recreational boating, and energy exploration have increased along our coasts, offshore, and deep ocean environments. Noise from these activities can travel long distances underwater, leading to increases and changes in ocean noise levels in many coastal and offshore habitats. These rising noise levels can negatively impact ocean animals and ecosystems. Higher noise levels can reduce the ability of animals to communicate with potential mates, other group members, their offspring, or feeding partners. Noise can also reduce an ocean animal's ability to hear environmental cues that are vital for survival, including those key to avoiding predators, finding food, and navigating to preferred habitats."</p>		<p>Risks of noise impacts on marine species are considered to be negligible as offshore construction is not proposed.</p>

<p>clear to me and many others present that KS had already made up their minds on the scope of the project and were only there because the meeting is a requirement of the EIS legal process. Volume II of the most recent Draft EIS Appendix A and B summarizes the public input at the 2022 meeting and the inadequate answers by KS. The latter part of Appendix B shows many comments of community individuals who disagreed with the proposed the project. Just about every single one of those comments was answered by KS with the exact same long boiler plate answer. That is so lazy on the part of KS and their consultant, but more importantly, insulting and disrespectful to the community. KS didn't even try to pretend to care what the community thought. I have seen better responses to proposed development in Kona from outside profit driven private developers.</p>		<p>in Section 11-200.1-23(b), including the county agency responsible for implementing the county's general plan, agencies having jurisdiction or expertise, and other citizen groups and concerned individuals, were consulted in preparation of the Draft EIS. The scoping meeting held in 2022 allowed for agencies and the public to assist Kamehameha Schools in determining the range of actions, alternatives, impacts, significant issues and proposed mitigation to be considered in the Draft EIS.</p> <p>Planning for the KBMP involved extensive stakeholder outreach beyond the statutory requirements for Environmental Impact Statements. Kamehameha Schools proactively engaged a wide range of stakeholders, including lineal descendants, cultural practitioners, community organizations, ocean users, nearby residents, commercial operators, educational groups, and government agencies. This approach reflected a commitment to building a management plan grounded in the values and needs of the community and the cultural significance of Keauhou Bay. A full detailing of consultation efforts and input received is provided in Chapter 7 of this document.</p>
<p>The EIS is a true sham filled with empty platitudes. Its BS. No more tourists! No more hotels!</p>	<p>Jun Sogi</p>	<p>The Purpose and Need set forth in Section 2.7 of the EIS indicates a need to strategically reorient and establish new opportunities for place-based cultural educational programming; create passive and active recreational activities; manage circulation and parking; define appropriate commercial and resort-zoned uses; generate revenue that will go back into the long-term operations and maintenance of Keauhou Bay and as well as any excess revenue to support the general mission of Kamehameha Schools. The Project meets this need by providing an opportunity to redefine notions of hospitality, placekeeping, and placemaking in harmonious balance with ensuring all associated improvement costs as a result of this plan's implementation can be self-sustaining. Long-term management of the bay's natural and cultural resources is made possible through a sustainable tourism model that uses revenue from the low-impact lodging and commercial operations to fund ongoing stewardship, maintenance, and educational programming.</p>

<p>The analysis presented to support the claims made in the DEIS is insufficient, therefore the DEIS should not be certified until substantial evidence to support these claims is provided in a supplemental DEIS to meet the requirements and rules of NEPA (CEQ Regulations (40 CFR 1502.9(b))) for certification</p>	Jennie Shield	<p>The Project does not involve a federal action, including the use of federal lands or funds. Therefore, the Project is not subject to the National Environmental Policy Act review process. The Project complies with the State of Hawai'i's requirements for environmental review and has been prepared in accordance with Hawai'i's Environmental Policy Act (HEPA), as established under Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Chapter 11-200.1.</p>
<p>The EIS Report Fails To Address Adequate Project Alternatives The EIS and the Project proponent infer that there is a "need" for greater economic development and use of the property. However, the EIS fails to disclose the current income levels from the current uses of the properties. Moreover, the EIS fails to address any "smaller" project alternatives. As everyone is aware, Project proponent has spent over a decade in construction of the Kahalu'u Ma Kai Project located on 22 acres nearby. (The hotel closed in 2012.) As that project historically operated a resort and was fully developed, logic would dictate that if Project proponent was concerned about income that property would an ideal location for a resort. Currently, there is apparently no economic use being made of the Kahalu'u Ma Ka property and very little use for educational purposes. According to the locals, the primary use appears to be for private barbeques and events for select locals connected to Project proponent. (Notably, there seems to be very little to anything "cultural" about 22 acres of non-native mowed bermuda grass, which is a post-european contact non-native species.) Accordingly, if the income from the Keauhou properties is such a great concern, where they are currently making money, and Kahalu'u Ma Kai is making zero income, shouldn't the project be built on Kahalu'u Ma Kai and a more limited project build at Keauhou? The EIS does NOT explore that alternative. Moreover, across the street from Kahalu'u Ma Kai is, from my understanding, a former "cultural center" and botanical garden that was closed by Project proponent and</p>	Jeff Caufield	<p>Kamehameha Schools understands and respects the desire to keep Keauhou Bay as-is. However, the current state is not viable for a thriving wahi pana. The EIS considers the No Action Alternative and indicates that it would not meet the purpose and need for the proposed action. Table 6-1 of the EIS provides a detailed evaluation of the No Action Alternative.</p> <p>Kamehameha Schools, as a private Native Hawaiian landowner, retains the right to use the lands endowed by Princess Bernice Pauahi Bishop in a manner that supports its mission and organizational needs. These lands may be utilized to the highest and best use as permitted under applicable regulations.</p> <p>The lands owned by Kamehameha Schools at Keauhou Bay are private lands, not public lands. Public access to these lands has historically been allowed voluntarily by Kamehameha Schools. However, providing this access has required Kamehameha Schools to absorb the full costs of maintenance, security, and operations typically associated with public parks, without the benefit of taxpayer funding or public subsidies.</p> <p>The current operational model at Keauhou Bay is financially unsustainable. Kamehameha Schools is not generating sufficient income from existing tenants to cover the costs associated with managing and maintaining the area. As a result, funds must be redirected from the institution's broader endowment to subsidize stewardship activities at Keauhou Bay. Reliable revenue generation is critical to support the ongoing management of community spaces, maintain safe access, protect natural</p>

<p>appears to generate zero income. The EIS fails to analyze a situation where the resort would be constructed on that property and a smaller project constructed on the Keauhou properties. Again, the EIS should consider reasonable alternatives where Project proponents use underutilized properties near the Keauhou properties, and a smaller project be built on the Keauhou properties. Conclusion It would be hard to find a more defective and deficient EIS. In the last 30+ years I've yet to see a more facially defective and deficient EIS. The EIS reads like an advertising brochure with a bunch of unsupported claims and conclusory statements. The EIS appears to be written with the goal of misleading the public and regulatory agencies rather than informing them of potential impacts and setting out appropriate mitigation measures. There were virtually no studies conducted of the existing environmental conditions at, near and/or inside Keauhou Bay. Most of the summary conclusory statements have zero evidentiary support. In fact, most statements related to project impacts appear by use of simply common sense to be likely untrue, misleading and false. The Project proponent has the burden to conduct adequate studies of existing conditions and provide an assessment of future conditions, which is has failed to even remotely attempt to do so. The EIS should also assess mitigation measures to reduce the project impacts, which can then be adopted as conditions to the Project approval. Thus, if the mitigation measures and maintenance requirements be adopted as conditions of approval, they become enforceable by the County. The County of Hawaii legally cannot "weigh" expert opinion in deciding whether to approve an EIS. As there are no studies to support the conclusions in the report and multiple expert opinions pointing out the deficiencies in the lack of appropriate studies, projections and mitigation measures the County cannot legally approve of the EIS as drafted.</p>		<p>resources, restore ecosystems, perform regular groundskeeping, conduct routine repairs and maintenance, and implement necessary improvements to facilities and infrastructure. Additionally, funding is essential to preserve significant cultural sites and expand cultural and educational programming envisioned under the KBMP.</p> <p>The Purpose and Need set forth in Section 2.7 of the EIS indicates a need to strategically reorient and establish new opportunities for place-based cultural educational programming; create passive and active recreational activities; manage circulation and parking; define appropriate commercial and resort-zoned uses; generate revenue that will go back into the long-term operations and maintenance of Keauhou Bay and as well as any excess revenue to support the general mission of Kamehameha Schools. The Project meets this need by providing an opportunity to redefine notions of hospitality, placekeeping, and placemaking in harmonious balance with ensuring all associated improvement costs as a result of this plan's implementation can be self-sustaining. Long-term management of the bay's natural and cultural resources is made possible through a sustainable tourism model that uses revenue from the low-impact lodging and commercial operations to fund ongoing stewardship, maintenance, and educational programming.</p> <p>The location of the KBMP is ideal for the proposed low-impact lodging due to its existing land use designations and surrounding amenities. The Project Area is designated as Urban under the State Land Use District Map (Figure 1-4), which supports resort, retail, and mixed-use developments. The proposed low-impact lodging aligns with this established urban framework and supports the area's planned growth objectives. Additionally, the specific portion of the Project Area designated for lodging is zoned V-.75: Resort-Hotel District under the County of Hawai'i Zoning Code (Figure 1-6), making resort use a compatible and appropriate land use. The surrounding context, including the Outrigger Kona Resort and Spa, residential condominiums, the Kona Country Club golf course, the Keauhou Shopping Center, vacation rentals, and ocean recreation and tour operators, further reinforces the suitability of the site for a</p>

		<p>low-impact lodging that complements and supports existing community and visitor-serving uses.</p> <p>The proposed lodging is intentionally designed as low-impact, with a low-profile and low-density layout that is well below the maximum development intensity allowed under current County of Hawai'i zoning. Rather than maximizing building heights, unit counts, or commercial intensity permitted in the V-75 Resort-Hotel District, the design emphasizes small-scale bungalow-style lodging that integrates with the surrounding cultural landscape.</p> <p>As noted, Kahalu'u Ma kai is located outside of the Project Area. An alternative for developing a lodging at Kahalu'u Ma Kai was not considered as it is outside the scope and would not meet the established Purpose and Need as set forth in Section 2.7 of the EIS. It is not a reasonable alternative to locate the KBMP outside of Keauhou Bay.</p>
I question whether some aspects of the plan align with this vision, specifically the plan to develop a resort adjacent to Keauhou Bay.	Orion McCarthy	<p>The KBMP is designed to reorganize the uses and activities within the bay to better reflect the cultural significance of the area and to support a more harmonious relationship between users, place, and purpose. Central to this reorganization is the concept of directing new growth to appropriate areas while preserving others, ensuring that future development does not come at the expense of cultural integrity or environmental health. To resolve long-standing conflicts between incompatible uses, the KBMP proposes relocating certain commercial operations, particularly those that are currently situated near sensitive cultural sites, to more suitable areas above the 'Ahu'ula cliff and along Kaleiopapa Street. By moving these uses away from the bayfront and heritage zones, the plan protects sacred spaces and allows for cultural practices to thrive without interference.</p>
Having worked in the medical field and precisely for Pfizer, I caution against the applicant doing its own EIS. This WILL be a disaster. Ever since pharmaceutical companies have been allowed to assess their own product safety (circa 1982), deaths and injuries from pharmacological interventions have skyrocketed. In other words, "properly prescribed"	Adrienne Hew	<p>The EIS was conducted pursuant to State of Hawai'i's requirements for environmental review and has been prepared in accordance with Hawai'i's Environmental Policy Act (HEPA), as established under Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Chapter 11-200.1.</p>

<p>medications are the leading cause of death since at least the year 2000. An EIS MUST be done by an INDEPENDENT and truly neutral 3rd party, with no financial incentives to rule in one direction or another. If this is not done, Kamehameha Schools will be recognized as a pariah on the Hawaiian people and culture, with a leadership that considers its own personal leadership above the people and the 'aina. KS was once considered a beacon of hope, particularly where the environment is concerned, but perhaps those interested in doing so have been bought out by offshore funds.</p>		
<p>I appreciate the thorough review of public policy documents, clarity and transparency about goals in the KS Strategic Map for 2025, and good faith efforts to make community input an important part of the planning process. However, this plan fails on many levels. My focus here is the lack of consideration potentially superior alternatives for use of the mauka plot planned for a high end hotel. Many alternatives align better with the 2025 KS Strategic Map to “develop resilient economies, cultural landscapes, diverse learning and career pathways” - and get a return on investment in the process. The focus here is on economics and diverse learning.</p>	<p>Alice Ray</p>	<p>The Purpose and Need set forth in Section 2.7 of the EIS indicates a need to strategically reorient and establish new opportunities for place-based cultural educational programming; create passive and active recreational activities; manage circulation and parking; define appropriate commercial and resort-zoned uses; generate revenue that will go back into the long-term operations and maintenance of Keauhou Bay and as well as any excess revenue to support the general mission of Kamehameha Schools. I do not believe your environmental impact study goes far enough in addressing these issues. It appears to be only the bare minimum, and that feels very wrong from a company that is supposed to hold Hawaiian environmental sensibilities.	James Plant	The EIS was conducted pursuant to State of Hawai'i's requirements for environmental review and has been prepared in accordance with Hawai'i's Environmental Policy Act (HEPA), as established under Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Chapter 11-200.1.
<p>I do not believe that the alternatives suggested in this Draft EIS are genuinely suggested as potential alternatives. I believe that each is offered as a strategy to make your proposed development more palatable. And, as a scare tactic saying "doesn't 172- units sound better than 745- units, cuz we could do that ya know". And it is pushing the narrative that if "we" don't support the proposed development, "worse" could happen. Each of your alternatives suggest maximum development conditions, no lower-density alternatives are included aside from "no action" which suggests that as the landowner, KS will leave things to continue to be unmanaged, including the sacred sites identified. Please include a lower-density alternative. Here is a suggestion: Uncle Bobby Camara commented that instead of 1800 sf bungalows, look at small hale catered to local families and visitors for short-term rentals units. A smaller scale, more simple short-term rental development geared towards local people might have HALF the units, at 86-units. These could be very simple construction and priced at \$100/night with State ID for each guest. This would generate at least \$3M in revenue annually. If the goal is for this area to be self-sufficient and be able to sustain the cost of operation and maintenance, isn't \$3M enough? These types of lower density alternative should have been included.</p> <p>The document suggests that the landowner seeks to ensure that the long-term operation and maintenance does not take from resources meant for its educational spending, but the endowment for the trust is \$14.6B and last year alone the trust spent almost half a billion dollars. I do not believe that the funds needed to maintain the wahi pana and community</p>	Lillie Makaila	<p>Planning for the KBMP involved extensive stakeholder outreach beyond the statutory requirements for Environmental Impact Statements. Kamehameha Schools proactively engaged a wide range of stakeholders, including lineal descendants, cultural practitioners, community organizations, ocean users, nearby residents, commercial operators, educational groups, and government agencies. <p>spaces even compares to what is already spent by the trust. It is however the kuleana of the landowner to property steward its lands, and these are the costs of doing so.</p> <p>KS owns 364,000 acres across the pae 'āina, and stewardship of those lands is the kuleana of the landowner. Proposing that \$100M of resort and commercial development is a REQUIREMENT needed to maintain the lands at Keauhou is simply false. And as such, KS should reconsider these components of the proposed development and instead look for less impactful long-term uses that better support the community. Based on your breakdown of costs, instead of the proposed \$124M development, remove the proposed resort and commercial/retail/dining components, save yourself \$100M, and invest \$24M in appropriate stewardship and management of the 'āina at Keauhou.</p> <p>The consultation for this project appears to only be completed to “check a box” and does not meaningfully incorporate the concerns expressed by kūpuna and kama'āina. DEIS for the Keauhou Bay Management Plan Comment August 4, 2024 Page 3 of 3 A huge majority of the comments received are from folks who do not support the proposed resort and commercial development and ask for other alternatives that better support the local community. Meaningful consultation means that you will act on the major themes expressed by those you have consulted with and that their mana'o will be used to alter the plan as needed. You have not done this. The incorporation of the “Housing Alternative” is an excellent example of not meaningfully incorporating mana'o of participants. You took their suggestion to look at a housing alternative for local families needing homes, and looked at the highest density development option for housing. Meaningful exploration of the intention of that suggested alternative would have looked at low-density single-family homes or multi-family development at least of similar density to the proposed</p>		<p>updates, including presentations of concepts, were provided throughout the planning process.</p> <p>Under Hawai'i Administrative Rules Section 11-200.1-23, consultation is a required element prior to filing a Draft EIS. Kamehameha Schools complied with this requirement in preparation by consulting appropriate government agencies, citizen groups, and concerned individuals.</p> <p>An EISPN was published for the Project on March 23, 2022. As part of the consultation and public scoping process, a virtual community meeting and presentation was conducted on April 11, 2022. The scoping meeting served as an opportunity for the public and agencies to contribute ideas about the range of actions, alternatives, and mitigation measures to be studied. Publication of the EISPN was also followed by a 30-day public comment period. Substantive comments received were reviewed and considered as part of the DEIS.</p> <p>Commenters perspectives are important for shaping the final decision-making process, although submitting comments does not equate to voting for or against the project.</p> <p>Feedback received during the consultation process directly influenced the refinement of the KBMP. For example, community input guided the incorporation of sustainable tourism framework that emphasizes visitor experiences that actively contribute to the restoration and enhancement of Keauhou Bay's cultural, environmental, and community health. Strategies to honor historic trail alignments were also developed, with plans to recognize these important historical pathways through interpretive design and landscape improvements. In response to concerns about housing needs, a housing alternative was evaluated in the EIS, although ultimately dismissed due to potential environmental and feasibility challenges. Additionally, based on community feedback, the KBMP includes considerations to support the relocation of volleyball activities to a more appropriate alternate location.</p> <p>As part of the environmental review process, a Cultural Impact Assessment was developed by ASM Affiliates, and included in</p>

<p>resort development not looking at the highest possible build out. What a missed opportunity to really listen to those you have consulted and genuinely explore their suggested alternative.</p> <p>In light of the lack of meaningful effort put to potential alternatives, I find this DEIS incomplete and ask that you revise and try again. Perhaps more consultation would be a good thing, especially since the kūpuna who you relied on to complete your CIA have expressed in their comments their lack of support for the proposed resort and commercial development components as well.</p>		<p>Appendix H. Cultural resources were identified as vulnerable due to incompatible uses, commercial overreach, and lack of long-term management, prompting a need for proactive strategies to ensure their protection and revitalization. Upon implementation of the Project’s management goals, it is expected that cultural resources will be improved through preservation and stewardship measures and that opportunities for traditional practices will be expanded; thereby enhancing ancestral connection to place. The findings and recommendations from the Cultural Impact Analysis are detailed in Chapter 4.1 of the EIS.</p> <p>Alternatives to the Proposed Action are discussed in Chapter 6 of the EIS.</p> <p>The lands owned by Kamehameha Schools at Keauhou Bay are private lands, not public lands. Public access to these lands has historically been allowed voluntarily by Kamehameha Schools. However, providing this access has required Kamehameha Schools to absorb the full costs of maintenance, security, and operations typically associated with public parks, without the benefit of taxpayer funding or public subsidies.</p> <p>The current operational model at Keauhou Bay is financially unsustainable. Kamehameha Schools is not generating sufficient income from existing tenants to cover the costs associated with managing and maintaining the area. As a result, funds must be redirected from the institution’s broader endowment to subsidize stewardship activities at Keauhou Bay. This is viewed as unacceptable by Kamehameha Schools.</p> <p>Reliable revenue generation is critical to support the ongoing management of community spaces, maintain safe access, protect natural resources, restore ecosystems, perform regular groundskeeping, conduct routine repairs and maintenance, and implement necessary improvements to facilities and infrastructure. Additionally, funding is essential to preserve significant cultural sites and expand cultural and educational programming envisioned under the KBMP.</p>

		<p>The Purpose and Need set forth in Section 2.7 of the EIS indicates a need to strategically reorient and establish new opportunities for place-based cultural educational programming; create passive and active recreational activities; manage circulation and parking; define appropriate commercial and resort-zoned uses; generate revenue that will go back into the long-term operations and maintenance of Keauhou Bay and as well as any excess revenue to support the general mission of Kamehameha Schools. The Project meets this need by providing an opportunity to redefine notions of hospitality, placekeeping, and placemaking in harmonious balance with ensuring all associated improvement costs as a result of this plan’s implementation can be self-sustaining. Long-term management of the bay’s natural and cultural resources is made possible through a sustainable tourism model that uses revenue from the low-impact lodging and commercial operations to fund ongoing stewardship, maintenance, and educational programming.</p> <p>The proposed lodging is intentionally designed as low-impact, with a low-profile and low-density layout that is well below the maximum development intensity allowed under current County of Hawai’i zoning. Rather than maximizing building heights, unit counts, or commercial intensity permitted in the V-.75 Resort-Hotel District, the design emphasizes small-scale bungalow-style lodging that integrates with the surrounding cultural landscape.</p> <p>As mentioned, a housing alternative is considered in the EIS however, housing uses would require more parking and infrastructure demands than low-impact lodging uses and would thereby result in increased traffic-related impacts and utility demands. Due to the location and topography, the construction of housing units would be comparatively much more expensive to build, limiting their affordability for local residents in the region. Table 6-1 of the EIS provides a detailed evaluation of the Housing Alternative.</p> <p>The density of units was considered during the alternatives analysis. A low density development of single-family housing would not meet the Purpose and Need because it would not generate sufficient revenue to support the long-term management of the</p>

		<p>Project Area. A housing density similar to or greater than the proposed low-impact lodging would also not meet the Purpose and Need, as the associated environmental impacts, infrastructure demands, and development costs would make it financially and operationally infeasible.</p> <p>The purpose of the EIS is to assess the potential impacts associated with the proposed maximum development allowed under the KBMP. This approach provides a comprehensive evaluation of environmental, cultural, and infrastructure considerations. A smaller-scale resort could be developed if Kamehameha Schools elects to pursue this option based on prevailing market conditions.</p>
<p>My personal experience at Keauhou Bay was one of enjoyment, but also disappointment at the state of the “beach” shoreline and marine biological resources thereby. On a cursory level, these appear degraded. Based on my visual observations, conditions dramatically improved toward the mouth of the Bay as one would expect with increasing water circulation, but the patter also suggests that existing developments adjacent to Ka’ili’ilinehe Beach impact the quality of marine biological resources. As noted above, my overall conclusion is that the DEIS lacks key basic foundational studies of existing conditions within the bay necessary to assess the potential impacts of the project, and the KBMP therefore also fails to assess potential mitigation measures appropriately. Finally, the KBMP makes statements regarding ‘sustainability,’ but is clearly focused on commercial development and an expanded footprint of development. While the Project might generally improve the human experience of cultural resources in particular (which I applaud), other sustainability elements of the KBMP are lacking, especially considering that the shoreline has already been highly modified by development and, in my opinion, has been in a state of degradation for decades. 2 Two parts of the KBMP provide documented cases of degradation:</p>	Nicholas Buhbe	<p>The current operational model at Keauhou Bay is financially unsustainable. Section 2.3 of the document cites a 1954 account of Kauikeaouli's birth		<p>with ensuring all associated improvement costs as a result of this plan's implementation can be self-sustaining. Long-term management of the bay's natural and cultural resources is made possible through a sustainable tourism model that uses revenue from the low-impact lodging and commercial operations to fund ongoing stewardship, maintenance, and educational programming.</p> <p>The proposed lodging is intentionally designed as low-impact, with a low-profile and low-density layout that is well below the maximum development intensity allowed under current County of Hawai'i zoning. Rather than maximizing building heights, unit counts, or commercial intensity permitted in the V-.75 Resort-Hotel District, the design emphasizes small-scale bungalow-style lodging that integrates with the surrounding cultural landscape.</p> <p>The project's stormwater management plan and Best Management Practices (BMPs) are designed to safeguard Keauhou Bay's water quality and marine resources both during and after development. EIS Section 4.5 discusses Project stormwater management and drainage improvements. The Project proposes a comprehensive stormwater management system designed to capture and treat stormwater runoff on-site. This infrastructure will significantly reduce pollutants reaching the ocean, helping to maintain and enhance water quality in Keauhou Bay.</p>
In sum, the DEIS enumerates impacts and mitigation measures, but those are either inaccurate or only half of the story. The DEIS fails to contain: 1) an accurate description of the probable impacts of the project including the direct, indirect and cumulative impacts, as well as impacts on both the natural and human environments; 2) a sufficient statement of the unavoidable environmental impacts caused by the project and a rationale for proceeding with the project in light of these impacts; and 3) consideration of all mitigation measures proposed to avoid, minimize, rectify, or reduce the project's adverse impacts. (See Hawai'i Revised Statutes Chapters 343 and 344; Hawai'i Administrative Rules 11-200.1.)	Tamyra Rice	<p>The EIS was conducted pursuant to State of Hawai'i's requirements for environmental review and has been prepared in accordance with Hawai'i's Environmental Policy Act (HEPA), as established under Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Chapter 11-200.1.</p> <p>Chapter 4 the EIS describes the existing environmental conditions and discusses potential impacts of the Proposed Action. Strategies to minimize impacts and to mitigate any significant impacts are identified.</p> <p>Cumulative impacts associated with the KBMP are discussed in EIS Section 4.16.1. The Project's sustainable tourism model is expected to generate beneficial cumulative impacts by fostering a</p>

<p>that the development does not exacerbate water scarcity for residents. I understand you may read the above statement pertaining to water and think about the numerous operations in Kona already using limited water resources and say "everyone else is doing it why not us", however, for this exact reason it is every more pertinent that Kamehameha Schools leads by an example in the area of development and considers these broader impacts often overlooked by foreign developers more deeply. A precedent of over-development in coastal regions has already been set by existing development projects (for example, Hokuli'a and Kohanaiki). Kamehameha Schools has the opportunity to exemplify pono development and restore the area being considered for a bungalow resort to a native dryland forest that truly protects and preserves Keauhou Bay and provides meaningful opportunities for our youth. While the proposed bungalow resort development by Kamehameha Schools in Keauhou Bay may offer economic benefits, the removal of the vegetation buffer and the increased demand for water in an area already struggling with drought conditions are significant concerns. As established care-takers of 'āina with an endowment valued at 14.7 Billion (Google Financial, 2021), I trust that Kamehameha Schools and project leaders will 1) understand fully the potential irreversible environmental damage a resort development will have on Keauhou Bay, 2) deeply consider the "opportunities" this provides for our keiki and local residents, and 3) provide the community with a robust and complete EIS statement, including a SMA Permit Application, prior to making any decisions to move forward. I feel the Keauhou Bay Management Plan is well intentioned and mostly provides a great vision for reorganizing the existing activities and providing some new opportunities and revenue streams. I absolutely and firmly oppose the development of the bungalow resort and encourage Kamehameha Schools to reconsider this component of the plan. Mahalo for considering my commentary and recommendations.</p>		<p>with ensuring all associated improvement costs as a result of this plan's implementation can be self-sustaining. Long-term management of the bay's natural and cultural resources is made possible through a sustainable tourism model that uses revenue from the low-impact lodging and commercial operations to fund ongoing stewardship, maintenance, and educational programming.</p> <p>Section 4.12.1 of the EIS evaluates water supply needs for the KBMP. Estimated average water demand is approximately 95,879 gallons per day, based on projected potable and irrigation use.</p> <p>Kamehameha Schools holds an existing allocation of 240 water credits for the Project Area through an agreement with the County of Hawai'i Water Board. The County of Hawai'i DWS has confirmed that Kamehameha Schools' water credits are sufficient to support the Project. The credits being utilized for the Project are existing allocated and entitled credits not dependent on new water source development.</p> <p>According to the 2017 Hawai'i Water Use and Development Plan Update, projected demand, including authorized planned uses such as the KBMP, remains below the sustainable yield threshold for the Keauhou Aquifer System, indicating that water withdrawals associated with the Project are not expected to result in adverse cumulative impacts.</p> <p>Water conservation measures will be incorporated into Project design and may include efficient irrigation systems such as drip irrigation and moisture sensors, use of non-potable water for irrigation, drought-tolerant landscaping, and ultra-low flow fixtures and toilets.</p> <p>Coordination with the County DWS will continue through the design phase, with final construction plans to be reviewed and approved by DWS and the Hawai'i Fire Department.</p>

Summary of Draft EIS Comments and Responses		
Comments	Commenter	Responses
<p>Please review the many environmental letters filed with the county complaining that the “studies” Kamehameha Schools rely on are far short of what is demanded under State and Federal law.</p>	<p>Ben Rice</p>	<p>The EIS was conducted pursuant to State of Hawai‘i’s requirements for environmental review and has been prepared in accordance with Hawai‘i’s Environmental Policy Act (HEPA), as established under Hawai‘i Revised Statutes (HRS) Chapter 343 and Hawai‘i Administrative Rules (HAR) Chapter 11-200.1.</p> <p>Chapter 4 the EIS describes the existing environmental conditions and discusses potential impacts of the Proposed Action. Strategies to minimize impacts and to mitigate any significant impacts are identified.</p> <p>The studies referenced in the EIS were conducted by qualified professionals in consultation with relevant agencies.</p>
<p>We take issue with the conclusion that the project developer felt they met the standard stated in the early pages of the document: "HRS Section 343-5(e), enacted by Act 172 (2012), allows an applicant to prepare an EIS rather than an environmental assessment if the approving agency determines, through its judgment and experience, that an EIS is the acceptable level of environmental review." Kamehameha Schools stewards approximately 54 acres at Keauhou Bay, a relatively small area that is utilized in a variety of ways by tourists and residents alike. Historically, the significant demand and utilization of this area can and often creates congestion which leads to user conflicts along the bayfront. This unique and culturally significant area demands more time and consideration of factors than just more increase of profitability of the Kamehameha Schools investment of over \$100 million dollars. We encourage you to complete a proper and full environmental assessment of this project. This area is too historical, too valuable, and too cultural to give the developer this easy pass with an EIS. Do the full environmental assessment of this project.</p>	<p>Bill and Cindy Armer</p>	<p>In consultation with relevant agencies and based on the scope and complexity of the proposed project, the determination was made that an EIS was warranted for this project due to its potential environmental, cultural, and social implications.</p> <p>It is important to note that an EIS is considered a more detailed and comprehensive document compared to an EA, as it analyzes the potential environmental, cultural, and socio-economic impacts of a proposed action and its alternatives. It identifies mitigation measures and provides decision-makers and the public with a deeper understanding of the project's effects. The EIS process also includes broader consultation requirements, longer public review periods, and more rigorous documentation compared to an EA.</p>
<p>Where is the certified shoreline survey, a prerequisite to applying for a SMA permit and shoreline setback variance? Why is it not included in this DEIS?</p>	<p>Claudia Rohr</p>	<p>Please refer to EIS Section 1.9 for a discussion of required government permits and approvals.</p>

		<p>construction of Old Kona Road, linking Kamehameha III Road and Kaleiopapa Street, provides a crucial alternative evacuation route, significantly enhancing emergency responsiveness and accessibility during fire events.</p> <p>Removal of invasive Guinea grass and koa haole trees was required to conduct the archaeological survey of historic trails on the site. A grubbing permit was not needed as the clearing activity involved less than one-acre.</p> <p>A separate wildlife conservation management plan is not proposed as it is not required to satisfy the Purpose and Need set forth in EIS Section 2.7. The KBMP is a comprehensive management plan which includes wildfire considerations. Implementation of the KBMP will provide active stewardship of the Project Area and reduce the likelihood of wildfire occurrence.</p> <p>Section 404 and 10 permits from the Army Corps of engineers may be required as part of planned restoration of Ho'okūkū pond. Further consultation with the Army Corps will verify what specific permits and approvals are required.</p>
<p>KCC is concerned, however, that the DEIS does not adequately address four significant issues, some of which could undercut or nullify the other benefits of the KBMP. The first relates to storm water runoff, which the DEIS concludes is not an issue because it has not been reported to the County or DOT. (See, DEIS 4.5 at 4-81.) The second relates to infrastructure, specifically the relocation of the existing near shore water and sewer infrastructure and associated electrical and telecom munications lines. Ongoing and future climate change is likely to result in flooding and breaching of this infrastructure with catastrophic consequences to all the good that KS hopes to accomplish. The third significant issue not addressed in the DEIS is the safety and ongoing traditional use of Keauhou Bay by the lāhui and other local residents due to the unregulated increase of motorized vessels using Keauhou Bay. The fourth is how the plan might affect KCC's practical operations and the potential for KCC</p>	<p>Carolyn Leilani Carter</p>	<p>The project's stormwater management plan and Best Management Practices (BMPs) are designed to safeguard Keauhou Bay's water quality and marine resources both during and after development. KS Mission & Purpose and Need		
Kamehameha Schools is using this project development strictly to make profits for themselves on the back of the environment and long time residents of this island. The plan is short-sighted as it will be detrimental in the long run to our island habitat and the people that live here, and have lived here for years and generations.	Nancy Vidana	The KBMP is rooted in the principle of mālama ‘āina, reflecting Kamehameha Schools’ deep commitment to caring for the land through a cultural, environmental, and educational lens. The plan embraces a long-term stewardship approach that prioritizes the protection and revitalization of both natural and cultural resources within the project area. The KBMP focuses on low-impact design, carefully locating future uses to minimize disturbance, preserving sensitive habitats, and protecting culturally significant sites.  The KBMP is designed to improve environmental conditions by establishing a model of long-term stewardship that prioritizes the health of the land and ocean. Commercial activities within the project area are designed to support and sustain cultural and environmental preservation efforts. Through responsible planning, relocation of incompatible uses, and a strong emphasis on cultural values, the KBMP directs future activity at Keauhou to contribute to the protection and care of its unique ecosystem and heritage.

Summary of Draft EIS Comments and Responses		
Comments	Commenter	Responses
		Environmental stewardship is also expressed through restoration of native vegetation, landscape design, and preservation of natural water features such as springs and anchialine ponds, which support unique ecological systems. Long-term management of these resources is made possible through a sustainable tourism model that uses revenue from low-impact lodging and commercial operations to fund ongoing stewardship, maintenance, and educational programming.
Mahalo for this opportunity to comment on the Keauhou Bay Management Plan Draft Environmental Impact Statement. Reading this Draft EIS is an exercise in cognitive dissonance. Critical objectives of the KS mission and intent for Keahou Bay are directly undermined by the planned development. Furthermore, it lacks creativity by perpetuating "same old" approaches for Hawai'i economic development and will further deteriorate the already fragile nature of Keauhou Bay and its marine health. The current plan does not meet stated KS and project objectives, and is worse than the "No Action Alternative." That said, the current plan does not meet stated KS and project objectives, and is worse than the "No Action Alternative."	Peter Matlock	<p>Kamehameha Schools understands and respects the desire to keep Keauhou Bay as-is. However, the current state is not viable for a thriving wahi pana.</p> <p>The DEIS considers the No Action Alternative and indicates that it would not meet the purpose and need for the proposed action. Table 6-1 of the EIS provides a detailed evaluation of the No Action Alternative.</p> <p>The KBMP is designed to improve environmental conditions by establishing a model of long-term stewardship that prioritizes the health of the land and ocean. Commercial activities within the project area are designed to support and sustain cultural and environmental preservation efforts. Through responsible planning, relocation of incompatible uses, and a strong emphasis on cultural values, the KBMP directs future activity at Keauhou to contribute to the protection and care of its unique ecosystem and heritage.</p>
The Plan states "The mission of Kamehameha Schools is to create educational opportunities in perpetuity to improve the capability and well-being of people of Hawaiian ancestry. Kamehameha Schools' Vision 2040 seeks to improve the well-being of 'āina (land) and the lāhui (Hawaiian people) within one generation." (pg. 2-2) This is an eminently laudable objective. With approximately 55% of Native Hawaiians now living outside of the Hawai'i Islands, improving Hawaiian well-being is more critical than ever. However, this Plan fails to address this concern, is itself risky (note history of prior hotels at Kahalu'u), and undermines	Peter Matlock	<p>Kamehameha Schools promotes the integration of culture and place-based education to foster kinship and kuleana between kānaka and 'āina. By bridging resource management and education, Kamehameha Schools campus and community students actively engage in Hawaiian culture and history, instilling a sense of pride in their heritage and connecting them to communities in meaningful ways. Keauhou Bay offers a unique opportunity to infuse culture and education in a historically significant location.</p> <p>The lands at Keauhou Bay are currently underutilized for educational programming and therefore insufficient for supporting</p>

protect the land, I fear that the overwhelming impact will be negative.		
<p>I, however, do not support the proposal by Kamehameha Schools (KS) at this location. It is hard to accept the proposal and its re-sculpting of the land, reorganization of uses, and “need” to create a retail center, and 172 (or 189 with @10% of the units as a suite mix if I am understanding this correctly) bungalows with the mission and values that are promoted by KS (see Chapter 2, Purpose and Need for the Proposed Action). Please support Option 1, the No-Action Alternative, as this is the only solution that feels appropriate of this area.</p> <p>I am not one to count other people’s money, but please tell me how an organization that has assets totaling approximately \$14 Billion dollars “needs” to re-invigorate an area it feels is “underperforming economically”. This is greed, pure and simple. I am not swayed by the \$125 Million dollars in costs to construct such a proposal. I do not see how the mission and values of KS align with the butchering of this special area.</p> <p>Chapter 6 discusses the Alternatives to the Proposed Action. I am familiar with this section of the DEIS, as this is a requirement in a draft Environmental Impact Report (DEIR) in California where I worked as a Planning Director or Manager. Option 4, Conveyance Alternative, reads like a gut punch. If you don’t like this proposal, KS could sell the land to a developer who would pursue its own highest and best use. Please do not threaten the community, KS. Continue to work with the people you claim you support.</p> <p>Please choose Option 1, the No-Action Alternative, for this proposal. KS has not made a compelling case to re-sculpt, reorganize, and financially supercharge the uses at this location. This organization continues the story of “Broken Trust” when it uses the phrase that this area of Keauhou Bay and its management plan “underperforms</p>	Elizabeth Dunn	<p>Kamehameha Schools understands and respects the desire to keep Keauhou Bay as-is. However, the current state is not viable for a thriving wahi pana. The EIS considers the No Action Alternative and indicates that it would not meet the purpose and need for the proposed action. Table 6-1 of the EIS provides a detailed evaluation of the No Action Alternative.</p> <p>Kamehameha Schools, as a private Native Hawaiian landowner, retains the right to use the lands endowed by Princess Bernice Pauahi Bishop in a manner that supports its mission and organizational needs. These lands may be utilized to the highest and best use as permitted under applicable regulations.</p> <p>The lands owned by Kamehameha Schools at Keauhou Bay are private lands, not public lands. Public access to these lands has historically been allowed voluntarily by Kamehameha Schools. 		<p>commercial intensity permitted in the V-.75 Resort-Hotel District, the design emphasizes small-scale bungalow-style lodging that integrates with the surrounding cultural landscape.</p> <p>Alternatives to the proposed action are discussed in Chapter 6 of the EIS. As stated in Section 6.4, the disposition of Kamehameha Schools' resort-zoned land at Keauhou Bay under the Conveyance Alternative would be contrary to its goal of holding legacy lands in perpetuity for the purpose of Ke Ali'i Pauahi's mission. Although this alternative would result in short-term revenue generation for Kamehameha Schools, it would result in greater environmental impact, and Kamehameha Schools would relinquish its ability to guide development to ensure the long-term care for the bays natural and cultural resources. For these reasons, this alternative was dismissed from further consideration.</p>
<p>Section 4.17, Unresolved Issues, identifies Potential unresolved issues associated with the Proposed Project, which include:</p> <ul style="list-style-type: none"> <li>• Identifying long-term programming of cultural heritage area</li> <li>• Identification of a developer and operator for the low-impact lodging</li> <li>• Agreement with the County to coordinate treatment of walkways over County rights-of way</li> <li>• Coordination with County/Potential Licensee for the removal and possible relocation of the volleyball court</li> <li>• Potential partnership with DOBOR to manage boat trailer parking areas</li> </ul> <p>I believe that all of these issues can be worked through, without having to economically supercharge this area of Keauhou Bay. Identifying a developer and operator of a luxury boutique/curated resort vacation experience is a phantom issue and one that is created by KS because of this proposal.</p>	Elizabeth Dunn	<p>The "Unresolved Issues" section of the EIS identifies outstanding matters that require further coordination, consultation, or negotiation before full implementation of the proposed action. Section 4.17 outlines potential unresolved issues associated with the project.</p> <p>These issues have been identified as unresolved at the time of EIS publication. They largely involve future programmatic decisions that will be addressed following construction and are pending due to the need to identify future tenants, licensees, and educational partners. Many of these matters will be resolved through ongoing negotiations during the issuance of licenses and leases.</p> <p>Specific issues such as the ili'ili surfacing treatment over County-owned crosswalks will be addressed during the County's review of land use approvals and the design review process for construction plans.</p> <p>Consultation with the County and DOBOR is expected to continue through project implementation to coordinate responsibilities for boat trailer parking.</p> <p>The inclusion of this section allows agencies and the public to understand the remaining procedural steps while recognizing that</p>

		these unresolved issues do not present significant barriers to proceeding with the Proposed Action. Rather, they represent future operational considerations that will be managed as part of Project implementation.
Surely the four other key concerns in Section 2.6 Key Issues and Concerns - 1) the integrity of natural and cultural resources is threatened in the absence of a long term comprehensive management plan; 2) incompatible uses at the bayfront create conflicts between users and disrespect for wahi pana; 3) Kamehameha Schools lands at Keauhou Bay are underutilized for educational programming; and 4) existing circulation patterns create congestion and safety concerns - can be accommodated and completed without the “need” to establish nearly 190 luxury hotel rooms.	Elizabeth Dunn	<p>The KBMP identifies five integrated management strategies to guide Kamehameha Schools’ stewardship of Keauhou Bay. These strategies are designed to work in unison, forming a comprehensive and interconnected approach that balances cultural, educational, environmental, recreational, and economic objectives.</p> <p>The KBMP is designed to improve conditions at the bay by establishing a model of long-term stewardship that prioritizes the health of the land and ocean. Kamehameha Schools is rightly famous for its faithful stewardship of the historical sites at Kahalu’u Manowai and elsewhere. Their proposal to develop the open lands above Keauhou Bay seems contradictory to the philosophy represented by that stewardship.	Michael Hanly	The Purpose and Need set forth in Section 2.7 of the EIS indicates a need to strategically reorient and establish new opportunities for place-based cultural educational programming; create passive and active recreational activities; manage circulation and parking; define appropriate commercial and resort-zoned uses; generate revenue that will go back into the long-term operations and maintenance of Keauhou Bay and as well as any excess revenue to support the general mission of Kamehameha Schools. The Project meets this need by providing an opportunity to redefine notions of hospitality, placekeeping, and placemaking in harmonious balance with ensuring all associated improvement costs as a result of this plan’s implementation can be self-sustaining. <b>Land Management</b>		
<p>Before you destroy Keauhou Bay and strip the community of another beach access, I suggest you complete the work at the former Keauhou Beach Hotel, which is essentially inaccessible to the community. It saddens me the Kamehameha Schools is willing to continue decimating community access to resources.</p>	Marta Derieg	<p>The KBMP will improve shoreline access by establishing new pedestrian pathways that connect parking areas to the bayfront and by expanding Ka'ili'ilinehe Beach Park through the creation of a mauka-makai open space corridor. Relocation of commercial activities away from the shoreline will open the bayfront for cultural, recreational, and community use, enhancing access and connectivity. Refer to EIS Section 3.2 for a description of the proposed action.</p>
<p>Keauhou Bay represents not only a revered community gathering place, but more importantly a living artifact of Native Hawaiian history. As birthplace of Kauikeaouli, would later become Kamehameha III and Mō'i o Ke Aupuni 'o Hawai'i in 1814, Keauhou, in the ahupua'a of Kahalu'u, holds some of our most culturally significant ancient sites and historic event locations that forever changed Hawai'i's history.</p> <p>With the high-use of Keauhou Bay by residents, visitors, and community groups in present times, I see much value in devising comprehensive management plan that aims to address the challenges that have resulted from these multiple uses that sometimes conflict with one another in a relatively confine geographic space. To this regard, I appreciate KS' reorientation of commercial activities away from culturally sensitive areas, as well as their intent to establish a place-based cultural education center.</p> <p>Furthermore, I trust that KS will continue to engage the community throughout the entire process, especially concerning the proposed lodging in the resort-zoned plateau mauka of Keauhou Bay. Ensuring ongoing dialogue and collaboration will be crucial to balancing development with the preservation of cultural and historical integrity, benefiting both current and future generations.</p>	Dru Mamo Kanuha	<p>The KBMP is designed to reorganize the uses and activities within the bay to better reflect the cultural significance of the area and to support a more harmonious relationship between users, place, and purpose. Central to this reorganization is the concept of directing new growth to appropriate areas while preserving culturally sensitive areas near the shoreline. To resolve long-standing conflicts between incompatible uses, the KBMP proposes relocating certain commercial operations, particularly those that are currently situated near sensitive cultural sites, to more suitable areas above the 'Ahu'ula cliff and along Kaleiopapa Street. By moving these uses away from the bayfront and heritage zones, the plan protects sacred spaces and allows for cultural practices to thrive without interference.</p> <p>Kamehameha Schools</p>

<p>The EIS Fails To Take In To Consideration The Historical Failure Of Proponent To Maintain Existing Facilities. The EIS fails to analyze the long history of the failure of the Project proponent to provide maintenance to the existing properties. The EIS vaguely references the long-term maintenance issues related to Project proponent's properties and then suggests that the maintenance failure is due to the lack of income from the properties and that in the future the maintenance will improve. Such a suggestion by Project proponent is misleading at best and verges on being an outright fraudulent misrepresentation. Project proponent is a \$14.6 billion dollar entity according to its website. Thus, the suggestion that the lack of maintenance was due to the lack of funds is outright untrue as the Project proponent for all intents and purposes has an unlimited amount of funding available in which to conduct maintenance. Moreover, Project proponent has historically received funding from the Keauhou properties through the boat yard rental, parking, canoe club and building rentals such that the failure to conduct maintenance is inexcusable. For example, the existing seawall owned by Project proponent has been in serious disrepair for over a decade, with the wall having large pieces falling off into the ocean and no repairs have been made. Similarly, after Project proponent's construction of the apparently unpermitted northern parking lots occurred and the sand volleyball court built on public lands was washed away, Project proponent failed to attempt to any repair. Project proponent failed to maintain existing drainage structures to the north of the existing volleyball court. Moreover, the cultural heritage corridor (which they supposedly they care about) has been allowed to fail into disrepair, with broken benches for sitting, peeling paint, overgrown plants and trash that have largely gone unrepaired and neglected for the last decade or more. (Personal observation.) Thus, there is ZERO evidence to support that if the Project is approved that the Project proponent will suddenly and magically start to actually do</p>	<p>Jeff Caufield</p>	<p>The lands owned by Kamehameha Schools at Keauhou Bay are private lands, not public lands. <p>maintenance on its' properties. As a result, the EIS MUST consider that the Project proponent will act EXACTLY as it has in the past and continue to fail to maintain its' properties and what the implications will be on the future for the Project based on the last many decades of neglect by the Project proponent. Moreover, the EIS fails to disclose and discuss the long history of scandal and abuse associated with Project proponents organization and what transparency will exist to ensure that the Project will do what it is supposed to do. The EIS mentions nothing of other "projects" such as the cultural center and botanical gardens along Alii Drive that Project proponent has abandoned and failed to maintain in the past and currently. There is NOTHING in the EIS that provides any checks and balances to ensure that the Project will actually be maintained and based on history on the Project properties and nearby failed projects by the Project proponent, it is unlikely that the Project will meet its' promises. Moreover, the EIS, based on the poor maintenance history by the Project proponent on these and other nearby properties needs to consider the impacts of the Project proponent continuing to conduct basic maintenance on the Project properties as it has done for decades. In other words, the EIS needs to address not only the lack of historical maintenance, other failed nearby projects, and the impact of the failure to maintain the Project in the future. (Typically, a Project such as this will have a detailed maintenance and upkeep schedule of the Project and mitigation measures that then can be adopted as conditions of the Project approval and be enforceable by regulatory agencies.)</p>		<p>the existing or former volleyball court. The volleyball courts represent an informal and unapproved use of Kamehameha Schools' property. While residents have enjoyed the privilege of utilizing the courts in the past, Kamehameha Schools has no obligation to maintain, reconstruct, or provide improved facilities for this purpose. Future use and management of the area will be aligned with the goals and strategies outlined in the KBMP.</p> <p>The KBMP includes improvements to expand and formalize existing boat trailer and public parking areas north of the bay. These upgrades will include paving, stall delineation, lighting, and drainage designed to improve both capacity and safety.</p> <p>The existing boat trailer parking area was originally constructed in the 1960s, prior to the establishment of the current zoning and permitting frameworks. As such, it is considered a nonconforming use. The SMA permit requirement was established in 1975 with the enactment of Act 176, also known as the Shoreline Protection Act, which created a regulatory process for development within coastal areas.</p> <p>In 2022, Sea Quest Hawai'i, a tenant of Kamehameha Schools, applied for and received SMA Minor permit related to ongoing boat trailer storage operations. The permit was approved on November 16, 2022 (Keauhou Marine Boat Park; TMK (3) 7-6-010:044; County SMA permit: PL-SAA-2022-000101 and PL-SMM-2022-000031). The approved scope included the installation of a new entry gate, security cameras, fencing, signage, and lighting, as well as maintenance of the existing parking lots and removal of overgrown vegetation and one tree located within the parking area.</p> <p>As part of the KBMP, Kamehameha Schools intends to pursue a comprehensive SMA permit to formalize and entitle both existing and proposed uses within the Project Area. This approach will address legacy uses that predate the permitting requirements and provide a regulatory pathway for new improvements consistent with the KBMP.</p> <p>It is important to note that Kamehameha Schools does not own or maintain Kamehameha III Road. The roadway is under the</p>

		<p>jurisdiction of the County of Hawai'i, which is responsible for its upkeep, including any upgrades or modifications to pavement, drainage systems, or related infrastructure. Kamehameha Schools does not have the authority to implement improvements within the public right-of-way or make changes to stormwater systems located within these County-owned corridors. However, implementation of the Project will not increase stormwater runoff onto the road. The existing Project Area is unmanaged and lacks stormwater infrastructure, leading to uncontrolled runoff that may flow toward Kamehameha III Road, occasionally pooling in the cul-de-sac and contributing to overflow toward the ocean. With Project implementation, on-site drainage improvements and best management practices will be incorporated to capture, retain, and treat stormwater within the Project Area, thereby reducing uncontrolled flow onto Kamehameha III Road.</p> <p>EIS Section 4.5 discusses Project stormwater management and drainage improvements. The project's detailed drainage analysis and design will require design review and approval by the County for land use and construction plan approvals subsequent to the FEIS. The Project will be designed to comply with the County Drainage Standards, which include design requirements and regulations to address stormwater impacts within the County of Hawai'i.</p> <p>The Project will comply with all NPDES permit requirements and follow established practices to prevent sediment and pollutants from reaching nearby water bodies during construction.</p> <p>The KBMP does not propose any alterations to the existing seawall along the Keauhou Bay shoreline. There are no planned uses or developments in the immediate vicinity that would require alterations to the seawall or affect its current function.</p> <p>The comment regarding other projects, including the "cultural center and botanical gardens along Ali'i Drive", is noted. The site referenced is the Kahalu'u Ma Kai property, which is a separate area distinct from the KBMP. Kamehameha Schools has a proven track record of long-term land stewardship throughout Hawai'i,</p>

<p>responsive, but it is an ongoing problem that requires more than a reactionary approach to one of the few full-time residents in the area.</p> <p>Your lots in the area on Ehukai St, Kaleiopapa St, and Kamehameha III Rd are not zoned to be storage yards or boat yards but that is how they are being used now. Your tenants illegally store derelict cars, trailers, boats, and heavy equipment and make boat repairs. All of this looks terrible and leads to environmental damage to the land and the bay. Please clean this up immediately and factor this in for future plans.</p>		<p>The KBMP includes improvements to expand and formalize existing boat trailer and parking areas north of the bay. Kamehameha Schools’ intention is to continue the existing use as storage and long-term vessel parking. These upgrades will include paving, stall delineation, lighting and drainage, designed to improve both capacity and safety. Kamehameha Schools will obtain all necessary permits and approvals prior to construction.</p> <p>The area mentioned at the intersection of ‘Ehukai Street, Kaleiopapa Street will be improved for the proposed retail center. Please refer to EIS Section 3.2 for a description of the Proposed Action.</p>
<p>Proponents Failure to Maintain Existing Facilities the DEIS does not analyze the long history of the Project proponent’s failure to maintain existing properties. The DEIS suggests that the long-term maintenance issues related to the Project proponent’s properties are due to lack of income from the properties and that in the future, maintenance will improve. According to the Project proponent’s website their endowment is valued at \$14.6 billion suggesting lack of funds should not be an issue contributing to lack of maintenance. Additionally, the Project proponent has historically received funds from the Keauhou properties through the boat yard rental, parking, canoe club, and building rentals. There is little evidence to support that if the Project is approved, the Project proponent would conduct the required maintenance. An example is the existing seawall owned by the Project proponent, which has been in serious disrepair for over a decade with pieces falling into the ocean and no repairs made. As a result, the DEIS should consider the very likely scenario that the Project proponent may continue to act as it has historically and fail to maintain its properties</p>	Jennie Shield	<p>The lands owned by Kamehameha Schools at Keauhou Bay are private lands, not public lands. Public access to these lands has historically been allowed voluntarily by Kamehameha Schools. However, providing this access has required Kamehameha Schools to absorb the full costs of maintenance, security, and operations typically associated with public parks, without the benefit of taxpayer funding or public subsidies.</p> <p>The current operational model at Keauhou Bay is financially unsustainable. Kamehameha Schools is not generating sufficient income from existing tenants to cover the costs associated with managing and maintaining the area. As a result, funds must be redirected from the institution’s broader endowment to subsidize stewardship activities at Keauhou Bay. Reliable revenue generation is critical to support the ongoing management of community spaces, maintain safe access, protect natural resources, restore ecosystems, perform regular groundskeeping, conduct routine repairs and maintenance, and implement necessary improvements to facilities and infrastructure. Additionally, funding is essential to preserve significant cultural sites and expand cultural and educational programming envisioned under the KBMP.</p> <p>The KBMP is designed to improve conditions at the bay by establishing a model of long-term stewardship that prioritizes the health of the land and ocean. Commercial activities within the</p>

		Project Area are designed to support and sustain cultural and environmental preservation efforts. Through responsible planning, relocation of incompatible uses, and a strong emphasis on cultural values, the KBMP directs future activity at Keauhou to contribute to the protection and care of its unique ecosystem and heritage. Implementation of the Project will also allow Kamehameha Schools to make necessary upgrades and repairs to its facilities and infrastructure.
<p>History of Failed Stewardship: KS has demonstrated a troubling lack of stewardship with the land already under its care in Keauhou, evident from ongoing issues such as broken toilets, persistent water wastage, use of chemical poisons near the coastline for weeds, and totally inadequate management of homelessness and drug-related problems. Given this poor track record of stewardship, we have skepticism about KS's ability and care to effectively manage new developments while never addressing basic existing challenges.</p> <p>Previous Failures in Retail and Dining: There is a historical precedent of failed retail and dining ventures in Keauhou which suggests that similar developments most likely will not achieve the anticipated success</p>	Bryce Groark	<p>The KBMP is designed to improve conditions at the bay by establishing a model of long-term stewardship that prioritizes the health of the land and ocean. Commercial activities within the Project Area are designed to support and sustain cultural and environmental preservation efforts. Implementation of the Project will also allow Kamehameha Schools to make necessary upgrades and repairs to its facilities and alleviate issues of illegal camping and litter.</p> <p>The Project will comply with all applicable federal, state and County regulations related to the use of herbicides or pesticides that may be used for landscaping or managing invasive vegetation.</p> <p>It is certainly true that the long-term success of any economic endeavor is never a certainty. Extensive community engagement has taken place to develop the conceptual framework for the Proposed Action. Additional information has been added to Appendix P of the Final EIS on the anticipated economic benefits associated with visitor spending associated with guests of the proposed low impact lodging.</p>
<p>I walk down to and through the Bay by the Canoe Club every day. I believe that it needs serious clean-up, restructuring of the parking, congestion and some enhancements. I do NOT believe more housing is needed in this area... that will simply add to the congestion, pollution and disruption to this lovely area. It's wonderful to have a place that does NOT feel like a resort. It does however need care. Perhaps Kamehameha</p>	Johanne Parker	<p>The Purpose and Need set forth in Section 2.7 of the EIS indicates a need to strategically reorient and establish new opportunities for place-based cultural educational programming; create passive and active recreational activities; manage circulation and parking; define appropriate commercial and resort-zoned uses; generate revenue that will go back into the long-term operations and maintenance of Keauhou Bay and as well as any excess revenue to support the general mission of Kamehameha Schools. The Project meets this need by providing an opportunity to redefine notions of</p>

Schools should focus on caring for what it already has, instead of creating what we don't need. Thank you.		<p>hospitality, placekeeping, and placemaking in harmonious balance with ensuring all associated improvement costs as a result of this plan's implementation can be self-sustaining. Long-term management of the bay's natural and cultural resources is made possible through a sustainable tourism model that uses revenue from the low-impact lodging and commercial operations to fund ongoing stewardship, maintenance, and educational programming.</p> <p>The Project does not involve the development of new residential housing units. The additional jobs and incomes associated with the Project would contribute to residents' ability to pay for housing needs. A housing alternative is considered in the EIS however, housing uses would require more parking and infrastructure demands than low-impact lodging uses and would thereby result in increased traffic-related impacts and potentially utility demands. Due to the location and topography, the construction of housing units would be comparatively much more expensive to build, limiting their affordability for local residents in the region. Table 6-1 of the EIS provides a detailed evaluation of the Housing Alternative.</p>
Another development in this special area will only serve to enrich developers and Kamehameha Schools' pocketbooks...there is nothing in this proposal that benefits those of us who live here. I walk and use the bay every day and what strikes me as odd is the lack of care and respect for the area by the owner...Kamehameha Schools. Do something about the parking lot, the toxic trash can in the boat parking area, but don't give us more STVR/vacation rentals - ENOUGH VACATION RENTALS. Use your \$14 Billion in assets for educating the locals and give them a chance at a better life - not one working in hospitality you want to build! Keep Keauhou Bay old-school.	Stuart Parker	<p>The Purpose and Need set forth in Section 2.7 of the EIS indicates a need to strategically reorient and establish new opportunities for place-based cultural educational programming; create passive and active recreational activities; manage circulation and parking; define appropriate commercial and resort-zoned uses; generate revenue that will go back into the long-term operations and maintenance of Keauhou Bay and as well as any excess revenue to support the general mission of Kamehameha Schools. The Project meets this need by providing an opportunity to redefine notions of hospitality, placekeeping, and placemaking in harmonious balance with ensuring all associated improvement costs as a result of this plan's implementation can be self-sustaining. Long-term management of the bay's natural and cultural resources is made possible through a sustainable tourism model that uses revenue from the low-impact lodging and commercial operations to fund ongoing stewardship, maintenance, and educational programming.</p>

<p>Sadly, we are faced with a choice today, we have the power to consume everything and we have for centuries-but for the 1st time in our history we are faced with the repercussions of that behavior. We have so little left to replenish and we need to ensure sustainability for future generations. I am here to ask for more, encouraging KS to over see the stewardship of proper management reform. I am asking KS to get ahead of the imprint of construction and development to off set, guard against {Kahu} and prepare ahead for hazards to replenish unknown damages and lead as an example. KS has exceptional leadership and resources with the ability to pool resources with the state, federal government and scientists for ocean policies. I'm here to ask for more.</p>	<p>Jan Brinkman</p>	<p>The KBMP is rooted in the principle of mālama ‘āina, reflecting Kamehameha Schools’ deep commitment to caring for the land through a cultural, environmental, and educational lens. The plan embraces a long-term stewardship approach that prioritizes the protection and revitalization of both natural and cultural resources within the project area. The KBMP focuses on low-impact design, carefully locating future uses to minimize disturbance, preserving sensitive habitats, and protecting culturally significant sites.</p> <p>The KBMP is designed to improve environmental conditions by establishing a model of long-term stewardship that prioritizes the health of the land and ocean. Commercial activities within the project area are designed to support and sustain cultural and environmental preservation efforts. Through responsible planning, relocation of incompatible uses, and a strong emphasis on cultural values, the KBMP directs future activity at Keauhou to contribute to the protection and care of its unique ecosystem and heritage.</p> <p>Environmental stewardship is also expressed through restoration of native vegetation, landscape design, and preservation of natural water features such as springs and anchialine ponds, which support unique ecological systems. Long-term management of these resources is made possible through a sustainable tourism model that uses revenue from low-impact lodging and commercial operations to fund ongoing stewardship, maintenance, and educational programming.</p>
<p>The lodging capacity at the former Sheraton Hotel, now the Outrigger, is far from fully utilized. I question the KS assumption that an adequate Return on Investment can be generated from the development of 150 boutique short-term rental units as proposed.</p>	<p>Tom Fetter</p>	<p>Extensive community engagement has taken place to develop the conceptual framework for the Proposed. Additional information has been added to Appendix P of the Final EIS on the anticipated economic benefits associated with visitor spending associated with guests of the proposed low impact lodging.</p>
<p>And...in addition to everything else, putting in new commercial space when there are so many vacant spaces around town seems wasteful. Please note the number of empty stores in the Keauhou Shopping Center, which is less than one mile away and which the Kamehameha Schols also</p>	<p>Laurel Terry</p>	<p>The Project will provide additional space to accommodate existing businesses relocating from the bay front area, therefore some of the additional retail space would have some built-in tenancy. Also, increased visitation to Keauhou Bay is anticipated due to improved amenities and the new low-impact lodging. The increased visitor</p>

owns and manages. Similar to the conversion of the leasehold interest condos to fee simple condos, once this change is made, it cannot be undone.		spending in the area, associated with visitors to the new low impact lodging, would improve retail spending in the area and could potentially lead to increased retail occupancy at existing retail spaces. Additional information has been added to Appendix P of the Final EIS on the anticipated economic benefits associated with visitor spending of guests at the proposed low-impact lodging.
In Chapter 2, Purpose and Need for the Proposed Action, this language is used: “However, Kamehameha Schools does not have control over all external forces that create these conflicts (e.g. other bay landowners, use and access by the general public, or government regulations). Kamehameha Schools lands at the bay are also significantly impacted by unauthorized uses, trespassing, vandalism, and other unsanctioned activities. I don’t see how such “conflicts” are the catalyst for such a drastic change, and one that many in the community don’t want.	Elizabeth Dunn	<p>As part of the planning process for the KBMP, Kamehameha Schools engaged with a wide range of stakeholders and has incorporated community concerns, including firsthand observations about pedestrian safety, traffic congestion, and the impact of incompatible activities at the bayfront.</p> <p>Stakeholders highlighted several pressing issues, notably the absence of sidewalks along Kaleiopapa Street, which forces pedestrians to walk on the roadway alongside vehicle and boat trailer traffic. The limited turnaround space at the end of Kaleiopapa Street further exacerbates congestion. It has also been cited that when cultural ceremonies occur, such as those at the Kauikeaouli birthsite, participants often occupy the roadway, leading to conflicts with vehicular traffic, noise, and a diminished experience for those involved in spiritual or ceremonial observances.</p> <p>The KBMP is designed to address these challenges through its comprehensive management strategies. These include the proposed development of pedestrian-oriented infrastructure and improved circulation patterns to enhance safety and efficiency. Importantly, the plan proposes reactivating the historic Old Kona Road as a throughway to better manage traffic flow and redirect it away from sensitive cultural areas.</p> <p>A significant component of the project also includes increasing parking capacity at the existing northern parking lot as well as providing more parking spaces than required at the new commercial center. This will relieve pressure on informal roadside parking. Pedestrian pathways will offer direct, safe access from the parking area to community spaces along the bayfront. Clear signage, well-marked crosswalks, and other visual cues will further</p>

Comments	Commenter	Responses
trespassing. The high-water mark is below the cliff level. There is no public right of passage in this area. It is not a beach access corridor nor has the County taken the necessary steps to condemn and buy the land to form a public right of way. Therefore, we would like you to take immediate action to address this issue and incorporate this into your development plans. Signage, physical barriers, and plantings would all help.		
The Project appears to block public access across publicly owned property. According to the maps attached to the EIS, there is publicly owned property extending from the end of Kamehameha III Drive to the boat dock area. There is currently a path that extends from the end of Kamehameha III Drive to the boat dock area that allows access to the boat dock area, however, the Project proposal maps appear to block the publicly owned path. It appears that the Project proposes to block access to the public across publicly owned property.	Jennie Shield	<p>The KBMP is designed to preserve and enhance access throughout the Project Area. Please refer to EIS Section 3.2 for a discussion of the Proposed Action and upgrades to pedestrian infrastructure. Figure 3-35 illustrates the network of pedestrian pathways connecting the north and south sides of the bay.</p> <p>The right of access to Hawai'i's shorelines includes the right of transit along the shoreline and within beach transit corridors. Beach transit corridors are defined as the areas extending seaward of the shoreline and these areas are considered public property (HRS §115-5, HRS §205A-1). Public shoreline access will remain preserved throughout project implementation. There are no actions proposed to block access across publicly owned property.</p>
The Project Blocks Public Access Across Publicly Owned Property Based on the maps attached to the EIS, there is publicly owned property extending from the end of Kamehameha III Drive to the boat dock area. Currently, there is a path that extends from the end of Kamehameha III Drive to the boat dock area that allows access to the boat dock area. (Personal observation and use.) However, the project proposal maps appear to block existing publicly owned path from the end of Kamehameha III Drive to the dock area. Project proponent misleading fails to identify the existing path and access across publicly owned property. Nevertheless, the Project proponent proposes to block access to the public across publicly owned property, which is illegal. As a result, the EIS must be rejected and the current	Jeff Caufield	<p>The KBMP is designed to preserve and enhance access throughout the Project Area. public access preserved in future versions should be Project wish to move forward.		
Please also address for me: how will you ensure dedicated public access to the shoreline during construction? And how do you aim to preserve the peaceful and shady nature of the shoreline on site, both during construction and after, so local people like myself can continue to enjoy it? Because it is not true that local folks are uncomfortable there. Lots of local folks (both Hawaiian and non Hawaiian) go daily, to fish and cool in the water and paddle and picnic and play volleyball. And on the weekends it's crowded with local folk. I see this with my own eyes. Everyone parks on the north side of the bay on Kamehameha III Rd, where there is plenty of parking, always.	Marjorie Bryant	The KBMP is designed to preserve and enhance access throughout the Project Area. Please refer to EIS Section 3.2 for a discussion of the Proposed Action and upgrades to pedestrian infrastructure. Figure 3-35 illustrates the network of pedestrian pathways connecting the north and south sides of the bay.  The right of access to Hawai'i's shorelines includes the right of transit along the shoreline and within beach transit corridors. Beach transit corridors are defined as the areas extending seaward of the shoreline and these areas are considered public property (HRS §115-5, HRS §205A-1). Public shoreline access will remain preserved throughout project implementation.
Will He'eia Bay be accessed through this project area? How?	Claudia Rohr	He'eia Bay is not located within the Project Area. As such, no actions to connect the Project Area to He'eia Bay are proposed.
<b>Volleyball</b>		
I have been running a free volleyball league at Keauhou Bay for almost 40 years, consisting of 120 local youth members. These kids will have nowhere to go to play volleyball if this resort is built there.	Kimberly Gay	The Project involves the establishment of a recreation corridor, expansion of open space, and improved access to the shoreline. To implement all the elements of the KBMP, specific decisions related to redefining uses of spaces resulted in a need to consider the relocation of the volleyball court. Kamehameha Schools has consulted with the County of Hawai'i Planning Department, elected officials, and representatives of the Kona area to discuss how outdoor recreational activities such as volleyball can be planned in more appropriate areas.
Destruction of the Sand Volleyball Courts There were two sand volleyball courts located on the east end of Keauhou Bay historically. According to locals, the existing volleyball court located at the western edge of the Project proponent's property has been in continuous use by the public. Due to the limited availability of volleyball courts locally, this is the primary one used by local adults and children. Until the Project proponent cleared land to create the northern	Jennie Shield	EIS Section 4.10 discusses recreational resources. The Project involves the establishment of a recreation corridor, expansion of open space, and improved access to the shoreline. The uses proposed are compatible with standard beach parks. To implement all the elements of the KBMP, specific decisions related to redefining uses of spaces resulted in a need to consider the relocation of the volleyball court.

Summary of Draft EIS Comments and Responses		
Comments	Commenter	Responses
<p>parking lot and boat parking, there was a second court that was similarly used. The Project proponent proposes to eliminate both volleyball courts and instead plant grass in the area as “open space.” The DEIS does not analyze the impacts of eliminating the existing volleyball court nor the impact on the local community who enjoy it. The Project does not include replacing the second volleyball court that was damaged by the excess runoff caused by prior land clearing. Lastly, a large grassy area is incompatible with historical and current uses of that area. Historical photographs show the East end of Keauhou Bay as sandy beach all the way up to the base of the hill to the East of the existing volleyball court.</p>		<p>Kamehameha Schools does not have an agreement with any entity regarding the use of the existing or former volleyball court. The volleyball courts represent an informal and unapproved use of Kamehameha Schools’ property. While residents have enjoyed the privilege of utilizing the courts in the past, Kamehameha Schools has no obligation to maintain, reconstruct, or provide improved facilities for this purpose. Future use and management of the area will be aligned with the goals and strategies outlined in the KBMP.</p> <p>Kamehameha Schools has consulted with the County of Hawai’i Planning Department, elected officials, and representatives of the Kona area to discuss how outdoor recreational activities such as volleyball can be planned in more appropriate areas.</p>
<p><b>Destruction Of The Sand Volleyball Courts Violates Proponents Charter As Well As Access To Publicly Owned Property</b> Historically, there were two sand volleyball courts located on the east end of Keauhou Bay. One of the sand volleyball courts was located at the western edge of Project proponents' property, which is the existing volleyball court. According to locals, the existing volleyball court has been in continuous use by the public, including locals and in particular local kids for at least 35+ years. Dozens of comments have been submitted stressing the importance of the sand volleyball courts to the local community. With the limited number of sand volleyball courts available locally, this is the primary sand volleyball court used by local kids who want to learn how to play sand volleyball. As women's sand volleyball is now a collegiate sport and men's sand volleyball is also poised to become a men's collegiate sport, the existing volleyball court is a critical resource for local kids hoping to not only learn how to play volleyball, but also pursue potential college scholarship opportunities. Notably, sand volleyball is one of the sports that most represented by local Hawaiians in the Olympics. Up until Project proponent cleared land to create the northern parking lot and boat parking, there was second sand volleyball court that was similarly used by locals. Project proponent proposes to</p>	<p>Jeff Caufield</p>	<p>EIS Section 4.10 discusses recreational resources. Comments	Commenter	Responses
<p>eliminate BOTH volleyball courts and instead grass in the area as "open space." There is no analysis as to the impact of eliminating the existing volleyball court nor the impact on the local community and uses. Currently, there is roughly 10-20+ adults and kids that utilize the existing volleyball court on a daily basis. Accordingly, Project proponent should be required to analyze the impact of eliminating the existing volleyball court. There is nothing in the Project that would replace the 2 nd court that was damaged by the excess runoff caused by land prior land clearing activities. At a minimum, the Project should be required to replace the 2 nd volleyball court that was damaged by Project proponent's activities and to ensure that future runoff is controlled so it does not impact the sand volleyball court. Notably, historical photographs (See attached historical photograph from 1890) show that the East end of Keauhou Bay was a sandy beach ALL of the way up to the base of the hill to the East of the existing volleyball court. The seawall appears to be a late addition built within the existing high tide area. (See historical nautical chart dated 1949, which does not note the presence of any seawall.) Based on the 1949 chart, the seawall itself appears to have been constructed below the mean high tide line, which appears to be publicly owned land. Thus, a large grassy area constructed on Project proponents' property and on the publicly owned lands is incompatible with both historical and current uses. There is no analysis of the impact of the removal on historic cultural uses and current uses. To be consistent with historical uses on both the public lands and lands within the historical mean high tide, Project proponent should be required replace the sand that has been lost and to ensure that it cannot be washed away by excess runoff. Due to the failure to analyze the impacts of the sand volleyball court removal, proposed construction on publicly owned lands and within the mean high tide and the failure to consider future impacts, the EIS should be rejected. (Not to mention the failure to address seawall that is falling down.) Moreover, if</p>		<p>developments in the immediate vicinity that would require alterations to the seawall or affect its current function.</p> <p>The project's stormwater management plan and Best Management Practices (BMPs) are designed to safeguard Keauhou Bay's water quality and marine resources both during and after development. EIS Section 4.5 discusses Project stormwater management and drainage improvements. The Project proposes a comprehensive stormwater management system designed to capture and treat stormwater runoff on-site. This infrastructure will significantly reduce pollutants reaching the ocean, helping to maintain and enhance water quality in Keauhou Bay.</p>

<p>Project proponent should consider moving forward in the future, the sand volleyball courts should both be replaced, the drainage fixed and maintained by Project proponent. All of the above should be supported by adequate usage and projection studies.</p> <p>The EIS Fails To Address Congestion Caused Elsewhere By The Removal Of The Sand Volleyball Courts. It is my understanding that literally dozens of comments have been received outlining the usage of the volleyball court and negative impact from its removal. The remaining court is utilized on a daily basis by the public and local kids. It is a long-standing tradition that family's barbeque locally and play on the volleyball courts every weekend. With the removal of the remaining court, the usage will be transferred to already congested sand courts at Magic Sands Beach and Coconut Grove creating both congestion and usage conflicts elsewhere. The EIS fails to analyze existing usage nor where the existing usage would be relocated. It fails to address potential congestion caused at the other locations by the court removal. A study needs to be conducted of existing usage and the impact of shifting that usage to the 2 remaining sand volleyball courts in the area.</p>		
<p>inter alia irreversible environmental damage, loss of native flora and fauna on land and sea, the local people's peaceful enjoyment of swimming, sailing, canoeing, volleyball will be lost.</p>	Theresa Coe	<p>The KBMP is designed to reorganize the uses and activities within the bay to better reflect the cultural significance of the area and to support a more harmonious relationship between users, place, and purpose. Central to this reorganization is the concept of directing new growth to appropriate areas while preserving culturally sensitive areas near the shoreline. To resolve long-standing conflicts between incompatible uses, the KBMP proposes relocating certain commercial operations, particularly those that are currently situated near sensitive cultural sites, to more suitable areas above the 'Ahu'ula cliff and along Kaleiopapa Street. By moving these uses away from the bayfront and heritage zones, the plan protects sacred spaces and allows for cultural practices to thrive without interference.</p>

		The Project will result in enhanced shoreline access for activities like swimming, sailing, and canoeing. The Project involves the establishment of a recreation corridor, expansion of open space, and improved access to the shoreline. To implement all the elements of the KBMP, specific decisions related to redefining uses of spaces resulted in a need to consider the relocation of the volleyball court. Kamehameha Schools has consulted with the County of Hawai'i Planning Department, elected officials, and representatives of the Kona area to discuss how outdoor recreational activities such as volleyball can be planned in more appropriate areas.
<b>Recreational Activities</b>		
Keauhou Bay holds a special old time feeling with its canoe club under the trees, a sweet stretch of beach and the small bay. The pier and the various boats complete the picture. If development goes ahead, all of this will be lost as these activities will be relocated and with them will go the history of the area.	Pamela Wang	The KBMP does not proposed to relocate canoe facilities. The Project aims to increase access to the shoreline by providing new recreational opportunities, improved pedestrian infrastructure, and better access points for ocean activities. The recreation corridor, enhanced shoreline paths, and preserved open space will help maintain the diverse activities currently enjoyed by the community, including canoe paddling, fishing, swimming, and other water sports.
Many others will provide additional details on Draft EIS deficiencies. Selected comments are: 1. The Plan claims to increase access to Keauhou Bay by Kama'aina and Kupu'aina ("create a greater sense of inclusivity at the bayfront", pg. 1-14), yet development of high-end hotels and commercial activity (which is the essence of this Plan) elsewhere in the Islands has previously and consistently resulted in the exact opposite effect. Keauhou Bay provides one of the few areas for ocean access in Kona and is used heavily by Hawaiians, other locals, visitors, families, churches, community groups, fishermen, swimmers, bobbers, paddlers, those on SUPs, kayakers, local volleyball	Peter Matlock	The KBMP is designed to reorganize the uses and activities within the bay to better reflect the cultural significance of the area and to support a more harmonious relationship between users, place, and purpose. <p>communities by stewarding the ‘aina to support resilient economies, cultural landscapes, diverse learning, and career pathways.” Concluding that: “The Project aims to achieve this goal by reorienting uses and directing new development in appropriate areas around Keauhou Bay based upon community and organizational values that were identified during the Management Plan process.” (EISPN 1-1) Pregnant in all of this is the potential for renewed conflicts between the customers of a 156-unit “Appropriate Boutique Resort.” Estimating an average of two to four people per unit could mean a daily occupancy of between some 300 to 600 guests. These people would come from very different backgrounds and have purposes in coming to Hawai’i that could well conflict with and overwhelm the residents of Hawai’i who now use Keauhou Bay for very different purposes. The EIS must take a “hard look” at these potential conflicts and offer transparent and effective alternatives to address them, including “no action” on the resort development.</p>		<p>meets this need by providing an opportunity to redefine notions of hospitality, placekeeping, and placemaking in harmonious balance with ensuring all associated improvement costs as a result of this plan’s implementation can be self-sustaining. Long-term management of the bay’s natural and cultural resources is made possible through a sustainable tourism model that uses revenue from the low-impact lodging and commercial operations to fund ongoing stewardship, maintenance, and educational programming.</p> <p>The DEIS considers the No Action Alternative and indicates that it would not meet the purpose and need for the proposed action. Table 6-1 of the EIS provides a detailed evaluation of the No Action Alternative.</p> <p>The KBMP is designed to improve environmental conditions by establishing a model of long-term stewardship that prioritizes the health of the land and ocean. Commercial activities within the project area are designed to support and sustain cultural and environmental preservation efforts. Through responsible planning, relocation of incompatible uses, and a strong emphasis on cultural values, the KBMP directs future activity at Keauhou to contribute to the protection and care of its unique ecosystem and heritage.</p>
<p>Many visitors have moved beyond the mindset when resorts nodes were developed to exclude local culture; visitors seek enriching experiences that, while comfortable, allow an opportunity to learn about and celebrate local, and especially indigenous culture. The new development should reflect that evolution in the visitor industry. KS has truly remarkable resources and the ability to realize an inclusive, restorative, and transformative vision for this place. I strongly urge you to reconsider you plan and restore the Royal Holua. It was already overrun and abandoned once before. Second chances don’t come often. If you proceed as planned, the Holua will be lost. I would be happy to talk further with KS about any of these ideas. I plan to stay in this area and want to help make it the best it can be for present</p>	<p>Michael Herbert</p>	<p>The Purpose and Need set forth in Section 2.7 of the EIS indicates a need to strategically reorient and establish new opportunities for place-based cultural educational programming; create passive and active recreational activities; manage circulation and parking; define appropriate commercial and resort-zoned uses; generate revenue that will go back into the long-term operations and maintenance of Keauhou Bay and as well as any excess revenue to support the general mission of Kamehameha Schools. and future generations. The land and waters of Keauhou Bay have a powerful story to tell; let the story be told		<p>from the low-impact lodging and commercial operations to fund ongoing stewardship, maintenance, and educational programming.</p> <p>In 2010, reactivation of Kāneaka Hōlua was initiated through vegetation clearing and community-based mapping programs. This initial effort sought to reestablish the site as a prominent landmark across the Keauhou-Kahalu'u landscape, with the mapping programs offering opportunities for descendants and students to reconnect to place and celebrate the heritage of Keauhou.</p> <p>In 2019, a 3D model of Kāneaka Hōlua was created for inclusion on the Kamehameha Schools cultural heritage website. The goal was to digitally preserve existing conditions of the hōlua and to provide a venue to share the grand architecture and mo'olelo of Kāneaka to a broader audience.</p> <p>The KBMP recognizes the Hōlua slides' cultural and historical importance. The exact historic alignment of the Hōlua slides is unknown; however, the project seeks to honor its projected course by preserving open spaces along the areas where the slide may have traversed. Additionally, the project proposes installing an 'ili (stone pebble) treatment along the Old Kona Road, marking the potential crossing location of the hōlua to further commemorate this culturally significant feature.</p> <p>As part of Kamehameha School's continued stewardship commitment, the KBMP has been developed to build upon existing and ongoing cultural stewardship efforts at Keauhou Bay. The KBMP is anticipated to result in beneficial impacts designed to honor and perpetuate the wahi pana for present and future generations.</p>
This is not right I'm for restoring the land, and the history, and the culture and the heritage. it is not right that you guys say it's for the people and for the land when all I can see is a big outline that says resort, we do not need another resort we do not want another resort. you guys need to do better on the behalf of the Hawaiian people. They should be Hawaiian homes so Hawaiian don't have to keep moving	Mesepa Gomes	The Purpose and Need set forth in Section 2.7 of the EIS indicates a need to strategically reorient and establish new opportunities for place-based cultural educational programming; create passive and active recreational activities; manage circulation and parking; define appropriate commercial and resort-zoned uses; generate revenue that will go back into the long-term operations and maintenance of Keauhou Bay and as well as any excess revenue to

<p>It is with a heavy heart that I write my response to the EIS below. I was fortunate enough to be born as the granddaughter to a very special wahine, Tutu or aunty Lily Kong who was the last person to be born and raised in Keauhou Bay. She dedicated her life to the preservation of the bay and through her I learned about our cultural heritage as Hawaiians and the rich history and culture of Keauhou Bay. There is no place that still exists like Keauhou Bay. Having been the birth site and home site to many of our ali'i signifies its importance to Hawaiian culture and indigenous people. Its ability to self-sustain its population and those of neighboring ahupua'a through recent history makes this a very special place that could be lost if KS chose to develop the property to its full capacity of 700+ units vs the 150 units it proposes. Contrary to what some people have recently said of my grandmother, she was not against development. She was against certain developments and development in ways that did not properly care for the land, preserve cultural and historical sites and displaced indigenous people. She knew, with no modern industry other</p>	<p>Leiola Augustine                      Kaleiolani                      Pasciuta</p>	<p>The Purpose and Need set forth in Section 2.7 of the EIS indicates a need to strategically reorient and establish new opportunities for place-based cultural educational programming; create passive and active recreational activities; manage circulation and parking; define appropriate commercial and resort-zoned uses; generate revenue that will go back into the long-term operations and maintenance of Keauhou Bay and as well as any excess revenue to support the general mission of Kamehameha Schools. <p>than tourism, that development was inevitable in Kona. Without development such as all the condos, hotels and vacation rentals that surround Keauhou bay where would people who wanted to vacation here stay? Where would people who wanted to move here live? Without the economic contributions of those people how would future generations live in this modern, technological society? She knew that in order for the following generations to thrive in a modern world that new skills through education would be required, but how are indigenous keiki going to be educated? How would they obtain the skills and resources to make a life among outsiders who had more economic and educational resources than we had here? Our princess Pauahi, through her schools and education programs are one of the few ways keiki would be able to learn those skills. She understood, and I currently live, the complex and complicated dichotomy of preserving our 'aina and culture while living in a modern world. I'd like to make it clear that my preference is to see no further development in the bay and to actually remove certain features such as the seawalls that cover the beach and the restroom at Kailiilinehe that covers the spring and stop all commercial activity in the bay so the bay can return to its natural state. However, I also know that some of this is not realistic and therefore appreciate a private landowner who is willing to work with the community to ensure the property is developed with community involvement and with as much integrity as possible. Volume I section 6.1 states: "Without comprehensive improvements, the Kamehameha Schools-owned properties would remain underutilized and underperforming financially". It might be helpful for those who oppose this development to understand that KS and the trustees are bound by the trust to financially increase the endowment for our lahui. I welcome those opposed to this development and KS to think outside the box and offer another avenue for these lands that will achieve the desired financial benchmark other than a commercial and resort development. Those opposed, please understand that</p>

without meeting this financial benchmark or offering some other source of educational or financial support, you are continuing to displace indigenous Hawaiians and taking away from our lahui. Regarding the "underutilized" portion of the above statement I do feel as though we should leave some of these areas as just that. Not utilized at all. I do believe and appreciate that our cultural sites are to be preserved with this new plan, but want to ensure that KS recognizes and understands that there is increasing sensitivity amongst indigenous Hawaiians as to not market our culture for financial gain or for our culture to be on display as a novelty. As a suggestion, let the families or those organizations that bear the responsibility of maintaining those sites or take ownership of the cultural significance of those sites, the freedom to choose who, how and if those sites, customs and history shall be shared.		
I strongly oppose the plan of Kamehameha Schools as they should be preserving this important cultural area as open land and cultural center to educate as they promise. They have an abundance of other commercial properties they can profit from. This area should be preserved w no housing for the affluent!	Helene Spencer	<p>The Purpose and Need set forth in Section 2.7 of the EIS indicates a need to strategically reorient and establish new opportunities for place-based cultural educational programming; create passive and active recreational activities; manage circulation and parking; define appropriate commercial and resort-zoned uses; generate revenue that will go back into the long-term operations and maintenance of Keauhou Bay and as well as any excess revenue to support the general mission of Kamehameha Schools. 		hospitality, placekeeping, and placemaking in harmonious balance with ensuring all associated improvement costs as a result of this plan's implementation can be self-sustaining. Long-term management of the bay's natural and cultural resources is made possible through a sustainable tourism model that uses revenue from the low-impact lodging and commercial operations to fund ongoing stewardship, maintenance, and educational programming.
To ensure the future resilience of Keauhou Bay's coral reefs, the Keauhou Bay Management Plan should bolster plans to deal with wastewater and stormwater impacts and reconsider development of the proposed resort at Keauhou Bay. On an island with such high housing costs and tourism impacts, it is questionable why a resort is being built here at all, instead of low-income housing reserved for locals and not tourists. Locals are the ones who use and appreciate Keauhou Bay's coastal resources year-round, and these resources should not be further degraded by development in support of tourism.	Orion McCarthy	<p>The Purpose and Need set forth in Section 2.7 of the EIS indicates a need to strategically reorient and establish new opportunities for place-based cultural educational programming; create passive and active recreational activities; manage circulation and parking; define appropriate commercial and resort-zoned uses; generate revenue that will go back into the long-term operations and maintenance of Keauhou Bay and as well as any excess revenue to support the general mission of Kamehameha Schools. 		operations to fund ongoing stewardship, maintenance, and educational programming.
Please reject Kamehameha Schools EIS for Keauhou Bay to become a Bungalow Resort. This is a VERY small bay and the added footprint of a 105 room Resort, that will include excess traffic, will have a serious negative impact in Keauhou Bay.	Caroline Visser	Appendix M to the EIS includes a detailed mobility analysis report that analyzes the project's potential impacts to traffic operations.  The traffic analysis shows that the addition of project-generated traffic would not result in significant roadway operations impacts under typical peak hour conditions. Additionally, the proposed project layout is designed to better separate traffic flows and parking areas to help reduce congestion and reduce delays.
The Environmental Impact Statement (EIS) for the proposed development of Keauhou Bay raises significant concerns. The bay is a cherished local haven, heavily utilized by residents for a variety of water sports, and is one of the few areas not yet overrun by tourist-centric development. The current restriction of cars has successfully preserved the bay's unique character, making it less congested and more enjoyable compared to other areas in the Kona district. It's crucial to consider that the introduction of additional housing and/or retail spaces for tourists could disrupt the local ecosystem and the community's way of life. Instead of yielding to development pressures, alternative strategies such as establishing an endowment could be explored to enhance Kamehameha Schools' income without sacrificing the bay's integrity. Preserving Keauhou Bay as it is, while focusing on infrastructure improvements, would ensure that this natural gem remains a sanctuary for local culture and recreation for decades to come	Polly and Mark Petersen	The Purpose and Need set forth in Section 2.7 of the EIS indicates a need to strategically reorient and establish new opportunities for place-based cultural educational programming; create passive and active recreational activities; manage circulation and parking; define appropriate commercial and resort-zoned uses; generate revenue that will go back into the long-term operations and maintenance of Keauhou Bay and as well as any excess revenue to support the general mission of Kamehameha Schools. The Project meets this need by providing an opportunity to redefine notions of hospitality, placekeeping, and placemaking in harmonious balance with ensuring all associated improvement costs as a result of this plan's implementation can be self-sustaining. Long-term management of the bay's natural and cultural resources is made possible through a sustainable tourism model that uses revenue from the low-impact lodging and commercial operations to fund ongoing stewardship, maintenance, and educational programming.
Keauhou Bay is a special place that should be preserved and protected. I do not feel that the addition of a resort would accomplish this.	Linda Churches	The Purpose and Need set forth in Section 2.7 of the EIS indicates a need to strategically reorient and establish new opportunities for place-based cultural educational programming; create passive and active recreational activities; manage circulation and parking; define appropriate commercial and resort-zoned uses; generate revenue that will go back into the long-term operations and maintenance of Keauhou Bay and as well as any excess revenue to

I am not in support of the proposed "low-density, sustainable bungalow" type resort development. I think the use of the terms "low-density" and "sustainable" are misleading, and only make sense when compared to a potential 745-unit, 7-9 story resort development. However, that comparison is based on the existing resort-zoning, a remnant of a time in Hawai'i when aggressive development rampaged unchecked without consideration of our 'āina or our communities. We have moved on from that, and the development of that type of high-density resorts will be challenged by the people of Hawai'i today, myself included. • I am not in support of the	Lillie Makaila	The Purpose and Need set forth in Section 2.7 of the EIS indicates a need to strategically reorient and establish new opportunities for place-based cultural educational programming; create passive and active recreational activities; manage circulation and parking; define appropriate commercial and resort-zoned uses; generate revenue that will go back into the long-term operations and maintenance of Keauhou Bay and as well as any excess revenue to support the general mission of Kamehameha Schools. <p>proposed Kaimukī Retail/Dining component. Firstly, just because you have given inoa Hawai'i to the development zones does not make the zones Hawai'i. They are components of a plan, and the use of inoa Hawai'i seems strategic. Secondly, I do not support commercial development in this special place. The 29-acre site is surrounded by extensive development including commercial and retail spaces. The Keauhou Shopping center is located nearby and is a KS development and source of revenue for the trust. I do not believe that KS needs MORE retail and commercial spaces.</p>		<p>plan's implementation can be self-sustaining. Long-term management of the bay's natural and cultural resources is made possible through a sustainable tourism model that uses revenue from the low-impact lodging and commercial operations to fund ongoing stewardship, maintenance, and educational programming.</p> <p>The location of the KBMP is ideal for the proposed low-impact lodging due to its existing land use designations (Resort) and surrounding amenities. The Project Area is designated as Urban under the State Land Use District Map (Figure 1-4), which supports resort, retail, and mixed-use developments. The proposed low-impact lodging aligns with this established urban framework and supports the area's planned growth objectives. Additionally, the specific portion of the Project Area designated for lodging is zoned V-.75: Resort-Hotel District under the County of Hawai'i Zoning Code (Figure 1-6), making resort use a compatible and appropriate land use. The surrounding context, including the Outrigger Kona Resort and Spa, residential condominiums, the Kona Country Club golf course, the Keauhou Shopping Center, vacation rentals, and ocean recreation and tour operators, further reinforces the suitability of the site for a low-impact lodging that complements and supports existing community and visitor-serving uses.</p> <p>The proposed lodging is intentionally designed as low-impact, with a low-profile and low-density layout that is well below the maximum development intensity allowed under current County of Hawai'i zoning. Rather than maximizing building heights, unit counts, or commercial intensity permitted in the V-.75 Resort-Hotel District, the design emphasizes small-scale bungalow-style lodging that integrates with the surrounding cultural landscape.</p>
<p>Vote No on Proposed development of Keahou Bay- leave bay as it is</p>	<p>Pat Aarhus</p>	<p>Kamehameha Schools understands and respects the desire to keep Keauhou Bay as-is. Please don't destroy the unique combination of history and community that is Keauhou Bay. Please don't turn Keauhou Bay into another tourist area. There are plenty of tourist areas. This Bay is a unique and individual space that supports local livelihoods. It is the first place some children learn to swim or fish. It is the first place others learn to canoe. By creating "Low-impact housing" on the "resort-zoned plateau" there will be an entire destruction of the pristine natural landscape and a down flow of debris into what the plan calls a "culturally sensitive area." Given that there are already viable housing and recreation areas	Robin Williams	<p>The KBMP is rooted in the principle of mālama 'āina, reflecting Kamehameha Schools' deep commitment to caring for the land through a cultural, environmental, and educational lens. affordable housing for the community but that doesn't seem to be the case.		maintenance of Keauhou Bay and as well as any excess revenue to support the general mission of Kamehameha Schools. The Project meets this need by providing an opportunity to redefine notions of hospitality, placekeeping, and placemaking in harmonious balance with ensuring all associated improvement costs as a result of this plan's implementation can be self-sustaining. Long-term management of the bay's natural and cultural resources is made possible through a sustainable tourism model that uses revenue from the low-impact lodging and commercial operations to fund ongoing stewardship, maintenance, and educational programming.
<p>But the current plan is still too much, and will alter the environment, the community, and the character of this place with such significance that we are assured of losing it to becoming another over-used tourist destination, populated mostly by people from outside Hawai'i, with locals once again priced out of the area. What KS calls "low-impact" is only low-impact" compared to what it could do in this resort zoned area, but when you look at the proposal the impact will actually be quite high, and much more significant than the public is being told. For this small area, to build 150 bedrooms in bungalow-style lodgings, along with commercial buildings, vendor kiosks, restaurants, ocean sports rentals, etc., will result in substantial increases in congestion of both vehicles and people, all trying to utilize this small geographic area. Currently Keauhou Bay is a relatively quiet, relaxing place, a remnant of what Hawai'i Island used to be, a reminder of what Hawai'i Island has lost so much of, an experience which is so rare, unique, and special in all the world, that people come from all over the planet to visit it.</p> <p>Any new development should include a maintenance plan to protect the bay environment and maintain nice facilities for the community. To preserve the character and cultural significance of Keauhou Bay and overall region, the community would deeply appreciate KS withdrawing this plan, and returning with one that is more limited in scope, and truly takes into account the needs of our residents.</p>	Aaron Chang	<p>The Purpose and Need set forth in Section 2.7 of the EIS indicates a need to strategically reorient and establish new opportunities for place-based cultural educational programming; create passive and active recreational activities; manage circulation and parking; define appropriate commercial and resort-zoned uses; generate revenue that will go back into the long-term operations and maintenance of Keauhou Bay and as well as any excess revenue to support the general mission of Kamehameha Schools. <p>Aloha Gas and other businesses at Keauhou Shopping Center like Kenichi Pacific restaurant and KTA grocery and Longs Drugs can't even find enough employees (they are all short-staffed and have cut operating hours and have had constant help wanted signs out for years now and even offer hiring bonuses) - so there isn't anyone to fill the jobs you will create? Are parking lots and new buildings and roads really a fitting way to honor Kamehameha III's birth site?</p> <p>This latter question is a genuine question, not meant to be provocative. It seems to me that there are three problems at Keauhou Bay that your organization is trying to solve, and frankly they aren't all your responsibility to solve. But they all have simpler, less costly and less environmentally detrimental solutions.</p> <p>One problem is: street-based manta tour operators on Kaleiopapa St operate illegally with no overhead and thus have an unfair competitive advantage over legitimate manta tour operators like Sea Quest who are based in bayside buildings on your property. I'd like to make the point that it is the County of Hawaii whose responsibility it is to solve this problem. Doing business on the side of the road has always been prohibited by Hawaii state law, but in the past, it was not commonly enforced. The State of Hawaii, however, now has an explicit law on the books and has begun to expect enforcement: Hawaii Revised Statute 264-101 (2023). The County of Hawaii should be sending enforcement folks down to Kaleiopapa St each night to enforce this law, until the problem goes away.</p> <p>The second problem at Keauhou Bay it seems you are trying to solve: the volume of cars parked on Kaleiopapa St (going on snorkel tours during the day and manta tours at night) cause that busy street (which is gateway to the state boat ramp and The Outrigger Resort) to be unsafe for pedestrians. This safety problem also has a simple solution: the County of Hawaii should make Kaleiopapa St a no parking zone. Keauhou Bay business patrons could then be</p>		<p>hospitality, placekeeping, and placemaking in harmonious balance with ensuring all associated improvement costs as a result of this plan's implementation can be self-sustaining. Long-term management of the bay's natural and cultural resources is made possible through a sustainable tourism model that uses revenue from the low-impact lodging and commercial operations to fund ongoing stewardship, maintenance, and educational programming.</p> <p>To resolve long-standing conflicts between incompatible uses, the KBMP proposes relocating certain commercial operations, particularly those that are currently situated near sensitive cultural sites, to more suitable areas along Kaleiopapa Street. By moving these uses away from the bayfront and heritage zones, the plan protects sacred spaces and allows for cultural practices to thrive without interference.</p> <p>Relocating the existing commercial bayfront tenants at the Keauhou Shopping Center would not meet the objectives of the KBMP. The KBMP identifies five integrated management strategies to guide Kamehameha Schools' stewardship of Keauhou Bay. These strategies are designed to work in unison, forming a comprehensive and interconnected approach that balances cultural, educational, environmental, recreational, and economic objectives. Additionally, the Keauhou Shopping Center was not designed to support ocean recreation activities.</p> <p>The location of the KBMP is ideal for the proposed low-impact lodging and retail uses due to its existing land use designations and surrounding amenities. The Project Area is designated as Urban under the State Land Use District Map (Figure 1-4), which supports resort, retail, and mixed-use developments. The proposed low-impact lodging aligns with this established urban framework and supports the area's planned growth objectives. Additionally, the specific portion of the Project Area designated for lodging is zoned V-.75: Resort-Hotel District under the County of Hawai'i Zoning Code (Figure 1-6), making resort use a compatible and appropriate land use. The surrounding context, including the Outrigger Kona Resort and Spa, residential condominiums, the Kona Country Club golf course, the Keauhou Shopping Center,</p>

<p>directed to park in the large grassy area at the corner of Ehukai St and Keleiopapa St, which your organization owns and characterizes as a parking area. And patrons could also be directed to park on Kamehameha III Rd in one of the several dirt parking lots your organization owns over there on the north side of the bay, where many folks already do park, and to park on Kamehameha III Rd itself, which has sidewalks for pedestrians. It seems to me that your organization could charge for these parking privileges in its existing lots and make money.</p> <p>Third problem it seems you are trying to solve is: the buildings you own by the bay (where Sea Quest operates) regularly flood during tsunamis and king tides with high surf. Perhaps all that is necessary to solve this problem is to build a reinforced wall around the structures, to keep the sea out, rather than build brand new structures elsewhere. There may be other problems at the bay you are trying to solve too, and whatever they are, I suggest finding a less environmentally destructive way to solve them, because no one wins when we destroy the one thing we rely on for life: our environment, our land and sea. In any case, it seems to me that these three solutions I suggest are much more cost effective - and less environmentally destructive - than your current proposal. Razing forests and building more parking lots and buildings seems the least cost effective and most destructive and detrimental to everyone's future.</p>		<p>vacation rentals, and ocean recreation and tour operators, further reinforces the suitability of the site for a low-impact lodging that complements and supports existing community and visitor-serving uses.</p> <p>The proposed lodging is intentionally designed as low-impact, with a low-profile and low-density layout that is well below the maximum development intensity allowed under current County of Hawai'i zoning. Rather than maximizing building heights, unit counts, or commercial intensity permitted in the V-.75 Resort-Hotel District, the design emphasizes small-scale bungalow-style lodging that integrates with the surrounding cultural landscape.</p> <p>Increased visitation to Keauhou Bay is anticipated due to improved amenities and the new low-impact lodging. The increased visitor spending in the area, associated with visitors to the new low impact lodging, would improve retail spending in the area and could potentially lead to increased retail occupancy at existing retail spaces. Additional information has been added to Appendix P of the Final EIS on the anticipated economic benefits associated with visitor spending of guests at the proposed low-impact lodging.</p> <p>As part of the planning process for the KBMP, Kamehameha Schools engaged with a wide range of stakeholders and has incorporated community concerns, including firsthand observations about pedestrian safety, traffic congestion, and the impact of incompatible activities at the bayfront.</p> <p>Stakeholders highlighted several pressing issues, notably the absence of sidewalks along Kaleiopapa Street, which forces pedestrians to walk on the roadway alongside vehicle and boat trailer traffic. The limited turnaround space at the end of Kaleiopapa Street further exacerbates congestion. It has also been cited that when cultural ceremonies occur, such as those at the Kauikeaouli birthsite, participants often occupy the roadway, leading to conflicts with vehicular traffic, noise, and a diminished experience for those involved in spiritual or ceremonial observances.</p>

Comments	Commenter	Responses
		<p>The KBMP is designed to address these challenges through its comprehensive management strategies. These include the proposed development of pedestrian-oriented infrastructure and improved circulation patterns to enhance safety and efficiency. Importantly, the plan proposes reactivating the historic Old Kona Road as a throughway to better manage traffic flow and redirect it away from sensitive cultural areas.</p> <p>A significant component of the project also includes increasing parking capacity at the existing northern parking lot as well as providing more parking spaces than required at the new commercial center. This will relieve pressure on informal roadside parking. Pedestrian pathways will offer direct, safe access from the parking area to community spaces along the bayfront. Clear signage, well-marked crosswalks, and other visual cues will further support intuitive wayfinding and discourage walking along the roadway.</p> <p>It's important to note that Kaleiopapa Street is owned by the County, not Kamehameha Schools. As such, Kamehameha Schools does not have the authority to enforce parking restrictions or implement pedestrian safety improvements. Kamehameha Schools can only regulate and manage aspects within the boundaries of the Project Area itself.</p> <p>Please refer to EIS Section 3.2.5 for more information on parking and pedestrian circulation.</p> <p>The Project also includes the adaptive reuse of the two historic bayfront buildings for a new cultural education and heritage center.</p> <p>Section 4.7 of the EIS addresses flooding and tsunami inundation. The entire Project Area, including the proposed cultural education and heritage center, lies within the Hawai'i County Civil Defense Agency's designated Tsunami Evacuation Zone. These structures are also situated in a FEMA-designated VE coastal flood zone with velocity hazard. Any improvements or modifications will be subject to applicable building codes and permit requirements, including those related to flood hazard areas.</p>

Comments	Commenter	Responses
		<p>New construction and substantial site improvements will require compliance with the County’s floodplain management regulations (Section 27 of the County Code). Therefore, the risk of potential damage from these flood hazards should be minimized by compliance with County requirements.</p> <p>The repurposed cultural education heritage center buildings may be retrofitted to help mitigate storm surge and tsunami risks by applying external coatings to the walls that are impervious to water and providing temporary flood shields at openings and doors. Low flood walls and berms could also be integrated around the buildings that can help divert the storm surge around the buildings. Additional design improvements will be included as required by the County during design and building permit review and approval for the Project.</p>
Parking lots and retail buildings are NOT what Keauhou needs.	Pamela Small	<p>Kamehameha Schools understands and respects the desire to keep Keauhou Bay as-is. However, the current state is not viable for a thriving wahi pana.</p> <p>The DEIS considers the No Action Alternative and indicates that it would not meet the purpose and need for the proposed action. Table 6-1 of the EIS provides a detailed evaluation of the No Action Alternative.</p> <p>The KBMP is designed to improve environmental conditions by establishing a model of long-term stewardship that prioritizes the health of the land and ocean. The Project meets this need by providing an opportunity to redefine notions of hospitality, placekeeping, and placemaking in harmonious balance with ensuring all associated improvement costs as a result of this plan's implementation can be self-sustaining. Long-term management of the bay's natural and cultural resources is made possible through a sustainable tourism model that uses revenue from the low-impact lodging and commercial operations to fund ongoing stewardship, maintenance, and educational programming.</p> <p>The proposed lodging is intentionally designed as low-impact, with a low-profile and low-density layout that is well below the maximum development intensity allowed under current County of Hawai'i zoning. Rather than maximizing building heights, unit counts, or commercial intensity permitted in the V-.75 Resort-Hotel District, the design emphasizes small-scale bungalow-style lodging that integrates with the surrounding cultural landscape.</p> <p>A portion of the Project Area mauka of Old Kona Road will be developed for the low-impact lodging. Currently, this portion of the Project Area above 'Ahu'ula cliff is dominated by invasive Guinea grass and koa haole trees, which provide limited ecological or carbon sequestration benefits. The Project does not propose the removal of native forest. Landscaping improvements throughout the Project Area will include native plant restoration, replacing areas currently dominated by invasive species.</p>

		The project's stormwater management plan and Best Management Practices (BMPs) are designed to safeguard Keauhou Bay's water quality and marine resources both during and after development. EIS Section 4.5 discusses Project stormwater management and drainage improvements. The Project proposes a comprehensive stormwater management system designed to capture and treat stormwater runoff on-site. This infrastructure will significantly reduce pollutants reaching the ocean, helping to maintain and enhance water quality in Keauhou Bay.
<p>All in all, it seems that now is not the right time to place additional burdens on these systems that a new road and new resort area would add. As a visitor who has been staying in the Keauhou Bay/Kam3 area for more than 20 years, I enjoy watching the local volleyball teams practice, the canoes, the families who fish and play in the water - especially on weekends - and the relative lack of development.</p> <p>I hope the County denies the special use permit (and that the KS Trustees reconsider this plan.)</p>	Laurel Terry	<p>Kamehameha Schools understands and respects the desire to keep Keauhou Bay as-is. However, the current state is not viable for a thriving wahi pana.</p> <p>The DEIS considers the No Action Alternative and indicates that it would not meet the purpose and need for the proposed action. Table 6-1 of the EIS provides a detailed evaluation of the No Action Alternative.</p> <p>The KBMP is designed to improve environmental conditions by establishing a model of long-term stewardship that prioritizes the health of the land and ocean. Commercial activities within the project area are designed to support and sustain cultural and environmental preservation efforts. Through responsible planning, relocation of incompatible uses, and a strong emphasis on cultural values, the KBMP directs future activity at Keauhou to contribute to the protection and care of its unique ecosystem and heritage.</p>
<p>This is not an appropriate development for this area. While the area should be cared for to bring to life the cultural significance of the area, this development does the opposite. This kind of project can be done by the people no need this fancy project that kills the spirit of this place. Why bring more tourists who will wreckreate in this space? Why not put kānaka back on 'āina to put back what was forcibly removed? Even KS has a history of evictions and wrongful treatment of Native tenants? Why not use your folks resources for be one example, put Hawaiians on the land,</p>	Loke Aloua	<p>Kamehameha Schools understands and respects the desire to keep Keauhou Bay as-is. I am opposed to Kamehameha School's EIS regarding development at Keauhou Bay. Development will affect and displace many who presently enjoy and /or make a living at the Bay. This is a fragile ecosystem that is already feeling the impacts of development in the surrounding area. I implore you, PLEASE, do NOT destroy the most beautiful and ALREADY ACCESSIBLE community and cultural resource that we have along the Kona Coastline that supports the needs of our families and visitors alike.	Robert Vatter	<p>Kamehameha Schools understands and respects the desire to keep Keauhou Bay as-is. <b>Suggestions</b>		
<p>one such idea I propose is creating camping spots and charging for permits on land that is already fit for camping. sites like hipcamp allow you to easily monetize existing spaces to charge guests for camping and making enjoyment of the outdoors available now and for years to come. i implore you to please consider the long term impact of such a selfish decision, not just for the aina, but for the people for generations to come.</p>	Brianna Leever	<p>On-site camping is not included in the Proposed Action. As an alternative to low-impact lodging, camping does not meet the Purpose and Need of the project as defined in Section 2.7 of the EIS. The low-impact lodging component is designed to generate consistent revenue to support long-term management of the Project Area and fund cultural and educational programming. Camping would not provide the financial sustainability required to achieve these goals.</p>
<p>The Plan shows a lack of creativity by proposing more of the "same old" for economic development. The history of KS hotels in Kahalu'u shows two that were ultimately taken down. Building hotels is not without risk. Why not, for example, instead move all boating check-in activities to Keauhou Shopping Center storefronts and bus visitors to the bay (allowing the opportunity for cultural education). This would facilitate construction of cultural venues at the bay, preclude the need for more environmentally damaging development and additional parking along the bay, and increase foot traffic at the under-utilized shopping mall—hence increasing KS revenues from existing infrastructure. It could likely be that this approach has a greater return on</p>	Peter Matlock	<p>The Purpose and Need set forth in Section 2.7 of the EIS indicates a need to strategically reorient and establish new opportunities for place-based cultural educational programming; create passive and active recreational activities; manage circulation and parking; define appropriate commercial and resort-zoned uses; generate revenue that will go back into the long-term operations and maintenance of Keauhou Bay and as well as any excess revenue to support the general mission of Kamehameha Schools. The Project meets this need by providing an opportunity to redefine notions of hospitality, placekeeping, and placemaking in harmonious balance with ensuring all associated improvement costs as a result of this plan's implementation can be self-sustaining. Long-term management of the bay's natural and cultural resources is made</p>

<p>investment than a risky hotel development. Or, why not take the bold move of seeking to preserve as much land as possible in an undeveloped state, while restoring Native Hawaiian archaeological remains (as is being done in Kahalu'u), so that future generations can learn directly from this historically rich area that once featured seven royal centers?</p>		<p>possible through a sustainable tourism model that uses revenue from the low-impact lodging and commercial operations to fund ongoing stewardship, maintenance, and educational programming.</p> <p>To resolve long-standing conflicts between incompatible uses, the KBMP proposes relocating certain commercial operations, particularly those that are currently situated near sensitive cultural sites, to more suitable areas along Kaleiopapa Street. By moving these uses away from the bayfront and heritage zones, the plan protects sacred spaces and allows for cultural practices to thrive without interference.</p> <p>Relocating the existing commercial bayfront tenants at the Keauhou Shopping Center would not meet the objectives of the KBMP. The KBMP identifies five integrated management strategies to guide Kamehameha Schools' stewardship of Keauhou Bay. These strategies are designed to work in unison, forming a comprehensive and interconnected approach that balances cultural, educational, environmental, recreational, and economic objectives. Additionally, the Keauhou Shopping Center was not designed to support ocean recreation activities.</p> <p>The location of the KBMP is ideal for the proposed low-impact lodging and retail uses due to its existing land use designations and surrounding amenities. The Project Area is designated as Urban under the State Land Use District Map (Figure 1-4), which supports resort, retail, and mixed-use developments. The proposed low-impact lodging aligns with this established urban framework and supports the area's planned growth objectives. Additionally, the specific portion of the Project Area designated for lodging is zoned V-.75: Resort-Hotel District under the County of Hawai'i Zoning Code (Figure 1-6), making resort use a compatible and appropriate land use. The surrounding context, including the Outrigger Kona Resort and Spa, residential condominiums, the Kona Country Club golf course, the Keauhou Shopping Center, vacation rentals, and ocean recreation and tour operators, further reinforces the suitability of the site for a low-impact lodging that complements and supports existing community and visitor-serving uses.</p>

Summary of Draft EIS Comments and Responses		
Comments	Commenter	Responses
		The proposed lodging is intentionally designed as low-impact, with a low-profile and low-density layout that is well below the maximum development intensity allowed under current County of Hawai'i zoning. Rather than maximizing building heights, unit counts, or commercial intensity permitted in the V-.75 Resort-Hotel District, the design emphasizes small-scale bungalow-style lodging that integrates with the surrounding cultural landscape.
Security Opening the Old Kona Road to connect the north end of the Bay to the proposed resort could introduce security concerns for your guests. We live down here in the condos off Kamehameha III Rd. At night, some of the people who meet up in the dark north end of the bay are unstable. My family usually avoids the area after dark. Connecting Old Kona Road as a primary entrance to your resort's main parking lot would grant anyone easy access and diminish the security of your property. Keep your Resort property physically cut off from the north end of the bay. I suggest simply creating a turnaround in your resort parking lot that loops into a section of Old Kona road. In addition, if the Holua is restored, another strong and beautiful physical barrier would be created that offers even greater separation. The Holua would cleanly break away the proposed resort from the day use grill and picnic areas in the North. I'm sure your guests will enjoy the added security and seclusion that this plan offers.	Michael Herbert	Limiting access to Old Kona Road exclusively from Kaleiopapa Street does not meet the Purpose and Need outlined in EIS Section 2.7. This configuration would fail to establish a continuous connection between the north and south ends of the bay. The KBMP prioritizes improved vehicular and pedestrian circulation to alleviate congestion, enhance overall connectivity, support emergency evacuation routes, and improve accessibility throughout the Project Area. Full connectivity along Old Kona Road is a key component of achieving these objectives.
I would suggest a 2.3.4 Alternative Action which would address the Heritage area improvements, the parking, boat storage (again for short-term storage only), congestion at the Pier area and repositioning the commercial bayfront activity from the pier area to the corner of Old Government Road and Ehukai St. I think this would provide a much better ROI for the Trust and at the same time accomplish its heritage goals.	Tom Fetter	The Purpose and Need set forth in Section 2.7 of the EIS indicates a need to strategically reorient and establish new opportunities for place-based cultural educational programming; create passive and active recreational activities; manage circulation and parking; define appropriate commercial and resort-zoned uses; generate revenue that will go back into the long-term operations and maintenance of Keauhou Bay and as well as any excess revenue to support the general mission of Kamehameha Schools. The Project meets this need by providing an opportunity to redefine notions of hospitality, placekeeping, and placemaking in harmonious balance with ensuring all associated improvement costs as a result of this

There is a better, less risky alternative for social, economic, learning and career goals Good paying jobs of the future will build on Hawaiian heritage, not by making the past an object for tourists to consume, but by re-imagining how the wisdom and technologies of the ancestors can inform and be informed by today's technologies and today's people. That goal can be met by focusing development of the targeted mauka space on the fourth of five primary KS management strategies: Maintain and Establish New Place-based Cultural Education Areas. Cultural Education is about looking forward as well as back. It is about honoring today's workers, not just yesterday's royalty - having an accessible place for kupuna to share their history, kanaka to share work and play experience, and keiki to begin writing the next chapter of shared history. It is recognizing that play and sports have long been part of Hawaiian culture. They are effective, evidence-based means of education as well as entertainment. The proposed alternative plan for this location would maintain several acres of vegetation up mauka, as a barrier to golf course runoff. The remaining acres would become a state of the art Play and Learn Center, with no-tech, low-tech and high-tech options. Operations would be funded by a combination of tiered, pay-to-play fees that favor local families with generational ties, then kama'aina, then visitors. It could include paid sponsorship of some spaces, with limited advertising; and grant funding for continuing innovation. No tech: Demand focused, small footprint, shaded • Sports courts for Volleyball, Pickleball, Ulu Maika (rolling stone disks) • Picnic areas with tables and large barbecue grills, shaded viewing benches Low tech: Leveraging ubiquitous smart phones and	Alice Ray	<p>The Purpose and Need set forth in Section 2.7 of the EIS indicates a need to strategically reorient and establish new opportunities for place-based cultural educational programming; create passive and active recreational activities; manage circulation and parking; define appropriate commercial and resort-zoned uses; generate revenue that will go back into the long-term operations and maintenance of Keauhou Bay and as well as any excess revenue to support the general mission of Kamehameha Schools. <p>activities at the pier and adjacent facilities. • Create new wayfinding throughout the area, inclusive of landscaping, signage, reflection points and an entry feature.</p> <p>All five Management Strategies must operate in tandem for the KBMP to be holistically successful. Accordingly, the Proposed Action is defined as the implementation of the five Management Strategies at Keauhou Bay."</p>		
<p>Also mentioned was Blue Carbon, which is on the financial market to sustain projects of restoration. I mentioned to KS with all their coastal access through their land holdings Blue Carbon could make these types of projects feasible using their school to educate with restoration projects along our coastal waters using carbon credits. 83% recycle of carbon is in our oceans. Other examples I touched on were Maui aquarium which has the seeding ability for Keauhou Bay and Waikiki aquarium has also pioneered efforts to cultivate coral and have shipped over 5,000 corals grown in Hawaii. We just recently welcomed a new coral restoration project at Otec. NOAA and volunteers have projects in Kane'ohē Bay, Mauna Loa Bay and South shore waters. Besides NOAA and many other state and federal programs to pool resources with KS, I know this can be done. Puerto Rico collected 10,000 pieces of broken coral and replanted with a 90% success rate after their 2017 hurricane.</p>	Jan Brinkman	<p>Although Kamehameha Schools does not have jurisdiction to manage lands in ocean waters, there are opportunities for the Project to support marine conservation through place-based educational programming. Project facilities could host visiting researchers and support student engagement through hands-on learning experiences, cultural education, and direct involvement in conservation initiatives. Additionally Kamehameha Schools is open to exploring partnerships with other marine conservation organizations to steward coastal resources.</p>
<b>Support</b>		
<p>Very Supportive of this project! Believe this is the best use of land to provide resources for protecting historical landmarks and the Bay Area. Would rather see this type of development than more homes for high wealth families who are not local to the island. We need to preserve and continually educate the tourists and local residents who use this great asset.</p>	Claude Acoba	<p>Mahalo for your support of the KBMP.</p>
<p>At this time, I have been pleased with Kamehameha Schools' (KS) emphasis on community engagement throughout this process, including with my Senate office, to</p>	Dru Mamo Kanuha	<p>Community and stakeholder outreach has been integral to the KBMP since planning began in 2016. ensure that all community members have a chance to provide their mana'o on the impacts of KS' plans for the future.		commercial operators, and agencies to identify key issues and guide land use decisions. Feedback from this outreach shaped the KBMP's focus on cultural preservation, reduced user conflicts, and enhanced educational and recreational opportunities. Kamehameha Schools welcomes the opportunity for continued dialogue with your office.
Upon my thorough review and analysis of the Draft EIS and supporting documents, a very well informative and complete document covering (no doubt) a wide variety of 'sensitive' // 'concerning' areas of interest. Clearly, the documents demonstrate a high level of awareness and mitigation measures, that realistically reassures the public that KS has a great development in the best interest for Kona.  Therefore, it's my opinion that this is a worthy project endeavor that has my full support and endorsement.	Rob Bussel	Mahalo for your support of the KBMP.
I support Kamehameha Schools (KS) comprehensive plan to improve Keauhou Bay. This sacred and historical place has been sorely neglected for too many years. Too many Hawaiian historic and sacred lands have vanished due to poor management and limited forethought. KS's Keauhou plan is almost a decade in the making and hasn't been without community and stakeholder input. For those that have read the plan will understand this project is meticulously detailed to honor the legacy of Kauikeaouli and the future of the Kānaka 'Ōiwi.  The plan itself is based in stewardship and education. The plan highlights Kauikeaouli's birth site and utilizing current commercial buildings to increase cultural education. The restoration of Ho'okūkū Pond, Mo'ikeha Cave, and removal of invasive plants and reseeding only native plants should be commended by all. Additionally, rerouting and relocating commercial activities away from sensitive cultural sites will create a more harmonious and balanced use of the area.	Shelley Carey	Mahalo for your support of the KBMP.

<p>Due to current limited infrastructure, there are limited community and recreational opportunities, the new plan will increase use of the shoreline, improve parking, and route vehicle traffic to the old Kona Rd. Additionally, an increase of revenue from low impact lodging and commercial center will further increase the KS educational mission. The KS Keauhou Bay Plan should be approved without reservation.</p>		
<p>My name is Dale Fergerstrom and I am in favor of Kamehameha Schools Management Plan for its lands surrounding Keauhou Bay in Kona. I was born in Laupahoehoe Hawai'i island in 1952 and have lived my whole life on this island. I am a retired police officer with the Hawai'i County Police Department with my last assignment being the District Commander for Kona.</p> <p>I am heavily involved in perpetuating the traditions and practices of the Traditional Hawaiian Canoe and visit Keauhou Bay on a regular basis for the past 23 years. I am pleased with Kamehameha Schools effort to bring some order to the commercial over-exploitation of Keauhou by setting forth a plan that will move a significant amount of this commercial activity away from the head of the bay and away from the Birth Site of Ali'i Kauikeaouli (Kamehameha III). This move will bring some dignity back to this important Historical site.</p> <p>I would like to note that some of the behavior of visitors in and around this birth site would not be tolerated by the community or the government if it were to take place at the Lincoln Memorial or the Birth Site of any of the past American Presidents.</p> <p>And while this plan calling for the construction of a modest hotel on the upper sections of Kamehameha School lands mauka of the bay seems to contradict the premise of reducing commercial congestion and has raised concern in the community, it must be remembered that this whole infrastructure fix is being paid for solely by Kamehameha</p>	Dale Fergerstrom	Mahalo for your support of the KBMP.

<p>Schools. Kamehameha Schools will receive no financial or other help from anyone in creating or maintaining the infrastructure being proposed here. Unlike Government, KS must be able to make this endeavor self-supporting.</p> <p>And no one has pointed out that much of the commercial congestion of Keauhou Bay has been caused by the State of Hawai'i. The State's mismanagement of commercial ocean permits for this bay has played a significant role in the problems facing Keauhou and they have not been caused by Kamehameha Schools or any of its programs.</p> <p>In addition Kamehameha Schools, in this plan, is trying to bring some relief to the congestion of private small boat fishermen who are forced to use Keauhou bay because of the shutting down the Kailua Pier Boat ramp to private boat owners after the 9-11 attack on New Your City 13 years ago. The State has known full well the pressure this closure has placed on Keauhou Bay and has done little to address it.</p> <p>Again Kamehameha schools is attempting to address problems significantly caused by Government Mismanagement of this resource while receiving no financial assistance from anyone. I also feel that Kamehameha Schools commitment to the concept of "Aloha 'Aina" will ensure it will work diligently to address any environmental issues not addressed in the Environmental Impact Statement should they arise. And if they don't you can be assured that Hawaiians will hold KS accountable as We have done in the not too distant past.</p>		
<p>I have reviewed the Keauhou Bay Management Plan and want to provide my input and support in favor of it moving forward.</p> <p>I am a resident and descendant of the Nahale Ohana, who's roots emanate from Kahaluu N. Kona. I have seen the pristine beaches and ocean accessibility disappear over my lifetime, due to commercial, luxury residential and resort</p>	Charles Nahale	Mahalo for your support of the KBMP.

<p>development. The significance and history of Kahaluu, Keauhou and surrounding lands have been ignored, destroyed and pilfered as a result of lack of respect and greed of quick development and profitable exit. The once abundant ocean resources and access, which afforded a subsistence lifestyle for our Kamaaina is no longer a viable means to support a growing family. We must look at alternatives ways to maintain and support our families,</p> <p>We still have a responsibility to malama and restore our heritage, culture, history, and access of this Aina, in perpetuity.</p> <p>The Keauhou Bay Management Plan addresses these issues regarding restoring access, creating public access and facility use, consolidating commercial facilities, restoring significant historical and critical habitat, providing education and collaborative development and stewardship. This is an opportunity for our community to see a development that is perpetuating the historical preservation of Keauhou bay, its surrounding lands, its culture and inclusion of our Opio's.</p> <p>I am in support of this project</p>		
<p>I admire the insight to move the commercial activities out of the bay and over to a new section to ease both the traffic, while enhancing the historic and cultural value of the deep Hawaiian Culture that has long been missing in the bay over time. To bring these historic sites, such as the Holua Slide, the Kamehameha Birthplace marker and Mo`ikeha Cave, and Ka`Ili`ilinehe Park as preserved points of interest is much needed. These treasured places must be saved and revered. I fully support the efforts that Kamehameha Schools is taking in this very well thought out plan for Keauhou Bay and see how it will only enhance safety, pleasure, and understanding of its cultural significance for both residents and visitors to the area.</p>	Nancy Sakamoto	Mahalo for your support of the KBMP.

I appreciate Kamehameha Schools (KS) for maintaining its awareness of what makes Keauhou Bay and the surrounding lands and coastal resources so special in all the world, and commend KS for its willingness to envision a development of lower-density than it could build (e.g., a 700-room hotel or resort)	Aaron Chang	The proposed lodging is intentionally designed as low-impact, with a low-profile and low-density layout that is well below the maximum development intensity allowed under current County of Hawai'i zoning. Rather than maximizing building heights, unit counts, or commercial intensity permitted in the V-75 Resort-Hotel District, the design emphasizes small-scale bungalow-style lodging that integrates with the surrounding cultural landscape.
I applaud most of the proposed development activities in the Keauhou Bay Management Plan to "reorient commercial activities away from culturally sensitive areas to alleviate congestion and establish a new place-based cultural educational center."  I support this opportunity to develop a scenic and open space heritage corridor that protects habitats, maintains biodiversity, and promotes outdoor recreation with trails, picnic tables and bathrooms. · Restore the cultural landscape with physical features, trees, pathways, and pavilions, that express the historical significance of his birthplace. · Restore the Old Kona Road and Keauhou Trail to provide access mainly for pedestrians, bicycles, the handicapped and parking.	Marcie Ide	The KBMP identifies five integrated management strategies to guide Kamehameha Schools' stewardship of Keauhou Bay. These strategies are designed to work in unison, forming a comprehensive and interconnected approach that balances cultural, educational, environmental, recreational, and economic objectives.
I support the needed upgrades for public use and cultural preservation + education.	Shantee Brown	The KBMP identifies five integrated management strategies to guide Kamehameha Schools' stewardship of Keauhou Bay. These strategies are designed to work in unison, forming a comprehensive and interconnected approach that balances cultural, educational, environmental, recreational, and economic objectives.
KCC supports the KBMP Proposed Action as it relates to the "long-term operations and maintenance of Keauhou Bay", the "opportunity to support and revitalize cultural events and traditional practices", and to "preserve and support a range of passive and active recreational activities" (DEIS 2.7 at 2-11), including specifically outrigger canoe paddling and racing	Carolyn Leilani Carter	The KBMP identifies five integrated management strategies to guide Kamehameha Schools' stewardship of Keauhou Bay. These strategies are designed to work in unison, forming a comprehensive and interconnected approach that balances cultural, educational, environmental, recreational, and economic objectives.

<p>Aloha, I am writing to express my support for the Keauhou Bay Management Plan and the draft EIS. I have been scuba diving at Keauhou since I logged my first manta ray night dive on August 13, 1985. In the intervening 38 years, and over 14,500 logged scuba dives, I've seen very few improvements to the infrastructure surrounding the bay despite a giant increase in the recreational and commercial use of the bay. I have been fortunate to see the Kamehameha presentation of their proposed plans to improve the shore facilities twice. They display a commitment to improving the area culturally, structurally, recreationally and commercially. I think they seem to have a good plan to greatly improve the land around Keauhou Bay for the community, the environment and Kamehameha schools. Please advance the proposed improvements to Keauhou Bay. Thank you. Sincerely Keller Laros Chair Manta Pacific Research Foundation</p>	<p>Keller Laros</p>	<p>Mahalo for your support of the KBMP.</p>
<p>Failing to permit Kamehameha Schools (KS) to provide leadership on this development also may ultimately prove a disservice to the Keauhou Bay community. The leadership of Kamehameha Schools has resulted in a resort with lower density rather than a high rise development with double the number of rooms and visitors, as permitted by County planning. KS theoretically could sell the property to another developer that may not hold community interests as high as KS. This reason alone is reason to Support the EIS and the KS Resort Development. Since KS corporate goals are multifaceted there is not the sole goal of financial gain as most developers would hold. KS goals include promote goodwill in the community, education of the public, and encouraging local residents to have pride in their community and history. I have witnessed first hand, very good leadership decisions made by KS as demonstrated in their resort development plan's low density housing, this EIS in mitigating impacts on the health of the bay, their holding so</p>	<p>G Hand</p>	<p>Mahalo for your support of the KBMP.</p>

Summary of Draft EIS Comments and Responses		
Comments	Commenter	Responses
<p>many community hearings and meetings with stakeholders at the bay in developing their plan for the area.</p> <p>This is also not only a resort development plan but also a major change and improvements for the area in adding badly needed infrastructure (streets and traffic flow) to handle existing traffic and to ease congestion. The success of the resort development is part of the funding for the improvements that will benefit the entire local community who utilize the Keauhou Bay for business, leisure and residents. Having worked in this area for many years, the congestion continues to grow and there is no end in sight, except for the resort development and redevelopment of the waterfront and roads by KS. In Conclusion: Please support the EIS, KS Resort Development, and redevelopment plans for Keauhou Bay. It's important to be practical and accepting the fact that to build the roads and infrastructure at Keauhou Bay there needs to be a plan that will generate sufficient income to pay for the infrastructure. This is a good blend of low density housing, infrastructure and street improvements paid by income from the KS resort development. As far as I know, money doesn't grow on trees and the roads we need to reduce congestion at Keauhou Bay can be funded through this resort development. Let's get behind this plan and see the vacant land behind the bay developed into a beautiful resort that enhances the Keauhou Bay overall and helps improve everyone's experience visiting the bay with better roads and traffic flow.</p>

Listed species in accordance with section 7 of the ESA. Our data indicate the following species may occur or transit through the vicinity of the proposed project area:

- 'Ope'ape'a or Hawaiian hoary bat (*Lasiurus cinereus semotis*),
- Nēnē or Hawaiian goose (*Branta sandvicensis*),
- Hawaiian waterbirds, including ae'o or Hawaiian stilt (*Himantopus mexicanus knudseni*), 'alae ke'oke'o or Hawaiian coot (*Fulica alai*), and koloa maoli or Hawaiian duck (*Anas wyvilliana*),
- Hawaiian seabirds, including Hawai'i Distinct Population Segment of the 'akē'akē or band-rumped storm-petrel (*Hydrobates castro*), 'ā'o or Newell's shearwater (*Puffinus newelli*), and 'ua'u or Hawaiian petrel (*Pterodroma sandvichensis*),
- Sea turtles, including the Honu or green sea turtle (*Chelonia mydas*) and the honu'ea or Hawksbill sea turtle (*Eretmochelys imbricata*), and
- Blackburn's sphinx moth (*Manduca blackburni*).

A biological survey conducted by AECOS in 2021 did not record any federally listed plants, birds, or mammals in the proposed project area, however; we recommend that the project implement the U.S. Fish and Wildlife Service (Service) Avoidance and Minimization Measures provided below to avoid impacts to federally listed species. We have attached additional recommendations for Invasive Species Biosecurity Protocols (Attachment A) and Best Management Practices For Work In or Around Aquatic Environments (Attachment B).

'Ope'ape'a

The Hawaiian hoary bat roosts in woody vegetation across all islands and will leave their young unattended in trees and shrubs when they forage. If trees or shrubs 15 feet or taller are cleared during the pupping season, June 1 through September 15, there is a risk that young bats could inadvertently be harmed or killed, since they are too young to fly or move away from disturbance. Hawaiian hoary bats forage for insects from as low as 3 feet to higher than 500 feet above the ground and can become entangled in barbed wire used for fencing.

In the DEIS, it stated that a qualified biologist would survey any trees taller than 15 ft during the bat breeding season prior to any disturbance to the tree. The Service does not recommend this method as roosting bats and pups are difficult to detect; therefore, woody plants should not be disturbed, removed, or trimmed during the bat birthing and pup rearing season.

To avoid and minimize impacts to the endangered Hawaiian hoary bat we recommend you incorporate the following applicable measures into your project description:

- Do not disturb, remove, or trim woody plants greater than 15 feet tall during the bat birthing and pup rearing season (June 1 through September 15).
- Do not use barbed wire for fencing.

Nēnē

Nēnē are observed in a variety of habitats, but prefer open areas, such as pastures, golf courses, wetlands, natural grasslands and shrublands, and lava flows. Nēnē presence is unlikely at the

Subject: Comments on the Draft Environmental Impact Statement for the Kamehameha Schools Keaouhou Bay Management Plan, Keaouhou, Hawai'i Island, Hawai'i

Dear Kawika McKeague,

Thank you for your June 23, 2024, letter requesting technical assistance for the Draft Environmental Impact Statement (DEIS) for the Kamehameha Schools Keaouhou Bay Management Plan in Keaouhou, Hawai'i. The Project encompasses Kamehameha Schools owned lands along Keaouhou Bay totaling approximately 29 acres in size and presently identified by Tax Map Key (TMK) numbers: (3)-7-8-012:098; (3)-7-8-012:101; (3)-7-8-012:048; (3)-7-8-010:044; (3)-7-8-012:027; (3)-7-8-012:004; (3)-7-8-012:013; (3)-7-8-012:014; (3)-7-8-012:054; (3)-7-8-012:061; (3)-7-8-012:065; (3)-7-8-012:007; (3)-7-8-010:049; and (3)-7-8-012:103. The site is also located within the Special Management Area. Kamehameha Schools proposes to implement the Keaouhou Bay Management Plan, which includes establishing a heritage management corridor, developing new commercial areas and retail areas, developing a resort area with lodging, and consolidating and reorienting recreational and community use areas. The project is expected to start between 2025 and 2026 and will be implemented in phases. Some project actions will occur in the near term (2-5 years) while others will be mid-term (5-10 years) and longer-term (>10 years).

Our letter has been prepared under the authority of and in accordance with provisions of the Endangered Species Act of 1973 (16 U.S.C. 1531 *et seq.*), as amended (ESA). We have reviewed the information you provided and pertinent information in our files, as it pertains to federally

### PACIFIC REGION 1

IDAHO, OREGON\*, WASHINGTON,  
AMERICAN SÁMOA, GUAM, HAWAII, NORTHERN MARIANA ISLANDS  
\*PARTIAL

project site but nēnē may occasionally loaf or be attracted to areas during construction activities, especially if clearings are made or standing water is created. Nēnē are vulnerable to vehicular strikes, human presence, and construction activities because nēnē enter roadways, and foot traffic and equipment can crush nests hidden in vegetation. Human presence and disturbance can keep adults from protecting and provisioning vulnerable young in nests.

To avoid and minimize potential project impacts to nēnē we recommend you incorporate the following measures into your project description:

- Do not approach, feed, or disturb nēnē.
- If nēnē are observed loafing or foraging within the project area during the breeding season (September through April), have a biologist familiar with nēnē nesting behavior survey for nests in and around the project area prior to the resumption of any work. Repeat surveys after any subsequent delay of work of 3 or more days (during which the birds may attempt to nest).
- Cease all work immediately and contact the Service for further guidance if a nest is discovered within a radius of 150 feet of proposed project, or a previously undiscovered nest is found within the 150-foot radius after work begins.
- In areas where nēnē are known to be present, post and implement reduced speed limits, and inform project personnel and contractors about the presence of endangered species on-site.

#### *Hawaiian waterbirds*

Hawaiian waterbirds are currently found in a variety of wetland habitats including freshwater marshes and ponds, coastal estuaries and ponds, artificial reservoirs, kalo or taro (*Colocasia esculenta*) lo'i or patches, irrigation ditches, sewage treatment ponds, and in the case of the Hawaiian duck, montane streams and marshlands. Hawaiian stilts may also be found wherever ephemeral or persistent standing water may occur.

To avoid and minimize potential project impacts to Hawaiian waterbirds we recommend you incorporate the following measures into your project description:

- In areas where waterbirds are known to be present, post and implement reduced speed limits, and inform project personnel and contractors about the presence of endangered species on-site.
- If water resources are located within or adjacent to the project site, incorporate applicable best management practices regarding work in aquatic environments into the project design (see enclosure).
- Have a biological monitor that is familiar with the species' biology conduct Hawaiian waterbird nest surveys where appropriate habitat occurs within the vicinity of the proposed project site prior to project initiation. Repeat surveys again within 3 days of project initiation and after any subsequent delay of work of 3 or more days (during which the birds may attempt to nest). If a nest or active brood is found:
  - Contact the Service within 48 hours for further guidance.
  - Establish and maintain a 100-foot buffer around all active nests and/or broods until the chicks/ducklings have fledged. Do not conduct potentially disruptive activities or habitat alteration within this buffer.

- Have a biological monitor that is familiar with the species' biology present on the project site during all construction or earth moving activities until the chicks/ducklings fledge to ensure that Hawaiian waterbirds and nests are not adversely impacted.

#### *Hawaiian seabirds*

Hawaiian seabirds may traverse the project area at night during the breeding, nesting, and fledging seasons (March 1 to December 15). Outdoor night lighting can cause seabird disorientation, fallout, and injury or mortality when seabirds are attracted to lights and after circling the lights, they may become exhausted and collide with nearby wires, buildings, or other structures or they may land on the ground. Fledglings are particularly vulnerable to light attraction when they are traversing the project area between September 15 and December 15, as they are making their first flights from their mountain nests to the sea. Downed seabirds are subject to increased mortality due to collision with automobiles, starvation, and predation by dogs, cats, and other predators.

To avoid and minimize potential project impacts to seabirds we recommend you incorporate the following measures into your project description:

- Fully shield all outdoor lights so the bulb can only be seen from below.
- Install automatic motion sensor switches and controls on all outdoor lights or turn off lights when human activity is not occurring in the lighted area.
- Avoid nighttime construction during the seabird fledging period, September 15 through December 15.

#### *Hawaiian sea turtles*

The Service consults on sea turtles and their use of terrestrial habitats (beaches where nesting and/or basking is known to occur), whereas the National Oceanic and Atmospheric Administration (NOAA) Fisheries consults on sea turtles in aquatic habitats. We recommend that you consult with NOAA Fisheries regarding the potential impacts from the proposed project if it may affect offshore or open ocean habitats.

Green sea turtles may nest on any sandy beach area in the Pacific Islands. Hawksbill sea turtles exhibit a wide tolerance for nesting substrate (ranging from sandy beach to crushed coral) with nests typically placed under vegetation. Both species exhibit strong nesting site fidelity. Nesting occurs on beaches from May through September, peaking in June and July, with hatchlings emerging through November and December.

Construction on, or in the vicinity of, beaches can result in sand and sediment compaction, sea turtle nest destruction, beach erosion, contaminant and nutrient runoff, and an increase in direct and ambient light pollution which may disorient hatchlings or deter nesting females. Off-road vehicle traffic may result in direct impacts to sea turtles or nests, and also contributes to habitat degradation through erosion and compaction.

To avoid and minimize project impacts to sea turtles and their nests we recommend you incorporate the following measures into your project description:

- No vehicle use on or modification of the beach/dune environment during the sea turtle nesting or hatching season (May to December).
- Do not remove native dune vegetation.
- Incorporate applicable best management practices regarding Work in Aquatic Environments (see enclosed) into the project design.
- Have a biologist familiar with sea turtles conduct a visual survey of the project site to ensure no basking sea turtles are present.
  - If a basking sea turtle is found within the project area, cease all mechanical or construction activities within 100 feet until the animal voluntarily leaves the area.
  - Cease all activities between the basking turtle and the ocean.
- Remove any project-related debris, trash, or equipment from the beach or dune if not actively being used.
- Do not stockpile project-related materials in the intertidal zone, reef flats, sandy beach and adjacent vegetated areas, or stream channels.

Optimal sea turtle nesting habitat is a dark beach free of barriers that restrict sea turtle movement. Nesting turtles may be deterred from approaching or laying successful nests on lighted or disturbed beaches. They may become disoriented by artificial lighting, leading to exhaustion and placement of a nest in an inappropriate location (such as at or below the high tide line). Hatchlings that emerge from nests may also be disoriented by artificial lighting. Inland areas visible from the beach should be sufficiently dark to allow for successful navigation by hatchlings to the ocean.

To avoid and minimize project impacts to sea turtles from lighting we recommend incorporating the following applicable measures into your project description:

- Avoid nighttime work during the nesting and hatching season (May to December).
- Minimize the use of lighting on or near beaches and shield all project-related lights so the light is not visible from any beach.
  - If lights can't be fully shielded or if headlights must be used, fully enclose the light source with light filtering tape or filters.
- Incorporate design measures into the construction or operation of buildings adjacent to the beach to reduce ambient outdoor lighting such as:
  - tinting or using automatic window shades for exterior windows that face the beach;
  - reducing the height of exterior lighting to below 3 feet and pointed downward or away from the beach; and
  - minimize light intensity to the lowest level feasible and, when possible, include timers and motion sensors.

#### *Blackburn's sphinx moth*

The adult Blackburn's sphinx moth feeds on nectar from native plants, including beach morning glory (*Ipomoea pes-caprae*), 'ilie'e (*Plumbago zeylanica*), maiapilo (*Capparis sandwichiensis*), and others. Blackburn's sphinx moth larvae feed on non-native tree tobacco (*Nicotiana glauca*)

and native 'aiea (*Nolhocestrum* spp.). To pupate, the larvae burrow into the soil and can remain in a state of torpor for a year or more before emerging from the soil. Soil disturbance can result in death of the pupae.

The DEIS reported that field surveys conducted in 2021 by AECOS biologists did not find any host plants species for the moth. The Service does recommend conducting pre-construction surveys as the non-native tree tobacco is commonly found throughout the North Kona area and often establishes in disturbed areas, such as construction sites. We offer the following survey recommendations to assess whether the Blackburn's sphinx moth occurs within the project area:

- A biologist familiar with the species should survey areas of proposed activities for Blackburn's sphinx moth and its larval host plants prior to work initiation.
  - Surveys should be conducted during the wettest portion of the year (usually November-April or several weeks after a significant rain) and within 4-6 weeks prior to construction.
  - Surveys should include searches for adults, eggs, larvae, and signs of larval feeding (chewed stems, frass, or leaf damage).
  - If moths, eggs, larvae, or native 'aiea or tree tobacco over 3 feet tall, are found during the survey, please contact the Service for additional guidance to avoid impacts to this species.

If no Blackburn's sphinx moth, 'aiea, or tree tobacco are found during surveys, it is imperative that measures be taken to avoid attraction of Blackburn's sphinx moth to the project location and prohibit tree tobacco from entering the site. Tree tobacco can grow greater than 3 feet tall in approximately 6 weeks. If it grows over 3 feet, the plants may become a host plant for Blackburn's sphinx moth. We therefore recommend that you:

- Remove any tree tobacco less than 3 feet tall.
- Monitor the site every 4-6 weeks for new tree tobacco growth before, during, and after the proposed ground-disturbing activity.
  - Monitoring for tree tobacco can be completed by any staff, such as groundskeeper or regular maintenance crew, provided with picture placards of tree tobacco at different life stages.

We appreciate your efforts to conserve protected species. If you have questions regarding this response, please contact Colleen Cole, Fish and Wildlife Biologist (phone: 808-460-7697, email: [Colleen\\_Cole@fws.gov](mailto:Colleen_Cole@fws.gov)).

Sincerely,

**CHELSEIE**

**Attachments: A: Invasive Species Biosecurity Protocols**  
**B: BMPs For Work In or Around Aquatic Environment**

## Attachment A: Invasive Species Biosecurity Protocols: Hawai'i Island Biosecurity Protocols

The following biosecurity protocol (based on National Park Service, State of Hawai'i, U.S. Fish and Wildlife, U.S. Geological Survey, and the DOI Office of Native Hawaiian Relations guidance) should be followed when operating on Hawai'i Island to prevent the introduction of harmful invasive species including frogs, ants, weeds, and fungi into local natural areas (e.g., Hawai'i Volcanoes National Park, Hakalau Forest National Wildlife Refuge, State of Hawai'i "Natural Areas") and areas with native habitat (habitat that is primarily composed of native vegetation), other islands in Hawaiian archipelago, or the U.S. mainland. The protocol also includes suggestions for keeping field staff safe from certain invasive species.

### 1. All work vehicles, machinery, and equipment should be cleaned, inspected by its user, and found free of mud, dirt, debris and invasive species prior to entry into the natural areas or native habitat.

- Vehicles, machinery, and equipment must be thoroughly pressure washed in a designated cleaning area and visibly free of mud, dirt, plant debris, insects, frogs (including frog eggs) and other vertebrate species such as rats, mice and non-vegetative debris. A hot water wash is preferred. Areas of particular concern include bumpers, grills, hood compartments, areas under the battery, wheel wells, undercarriage, cabs, and truck beds (truck beds with accumulated material (intentionally placed or fallen from trees) are prime sites for hitchhikers).
- The interior and exterior of vehicles, machinery, and equipment must be free of rubbish and food. The interiors of vehicles and the cabs of machinery must be vacuumed clean. Floor mats shall be sanitized with a solution of >70% isopropyl alcohol or a freshly mixed 10% bleach solution.
- Any machinery, vehicles, equipment, or other supplies found to be infested with ants (or other invasive species) must not enter natural areas or native habitat. Treatment is the responsibility of the equipment or vehicle owner and operator.

### 2. Little Fire Ants – All work vehicles, machinery, and equipment should be inspected for invasive ants prior to entering the natural areas or native habitat.

- A visual inspection for little fire ants should be conducted prior to entry into natural areas or native habitat.
- Hygiene is paramount but even the cleanest vehicle can pick up a little fire ant. Place MaxForce Complete Brand Granular Insect Bait (1.0% Hydramethylnon; <http://littlefireants.com/Maxforce%20Complete.pdf>) into refillable tamper resistant bait stations. An example of a commercially available refillable tamper resistant bait station is the [Ant Café Pro](https://www.antcafe.com/) (<https://www.antcafe.com/>). Place a bait station (or stations) in vehicle. Note larger vehicles, such as trucks, may require multiple stations. Monitor bait stations frequently (every week at a minimum) and replace bait as needed. If the station does not have a sticker to identify the contents, apply a sticker listing contents to the station.

- Any machinery, vehicles, equipment, or other supplies found to be infested with ants (or other invasive species) must not enter natural areas or native habitat until it is sanitized and re-tested following a resting period. Infested vehicles must be sanitized following recommendations by the Hawaii Ant Lab (<http://www.littlefireants.com/>) or other ant control expert and in accordance with all State and Federal laws. Treatment is the responsibility of the equipment or vehicle owner.

d. Gravel, building materials, or other equipment such as portable buildings should be baited using MaxForce Complete Brand Granular Insect Bait (1.0% Hydramethylnon; <http://littlefireants.com/Maxforce%20Complete.pdf>) or AmdroPro (0.73% Hydramethylnon; <http://littlefireants.com/Amdro%20Pro.pdf>) following label guidance.

- Storage areas that hold field tools, especially tents, taps, and clothing should be baited using MaxForce Complete Brand Granular Insect Bait (1.0% Hydramethylnon; <http://littlefireants.com/Maxforce%20Complete.pdf>) or AmdroPro (0.73% Hydramethylnon; <http://littlefireants.com/Amdro%20Pro.pdf>) following label guidance.

### 3. Base yards and staging areas inside and outside areas must be kept free of invasive species.

- Base yards and staging areas should be inspected at least weekly for invasive species, and any found invasive removed immediately. Pay particular attention to where vehicles are parked overnight, keeping areas within 10-meters of vehicles free of debris. Parking on pavement and not under trees, while not always practical is best.
- Project vehicles or equipment stored outside of a base yard or staging area, such as a private residence, should be kept in a pest free area.

### 4. All cutting tools must be sanitized to prevent the Rapid 'Ōhi'a Death (ROD) fungus.

- Avoid wounding 'ōhi'a trees and roots with mowers, chainsaws, weed eaters, and other tools. Cut only the minimum number of trees and branches as approved for the project.
  - All cutting tools, including machetes, chainsaws, and loppers must be sanitized to remove visible dirt and other contaminants prior to entry into natural areas or areas with native habitat, and when moving to a new project area within the native habitat area. Tools may be sanitized using a solution of >70% isopropyl alcohol or a freshly mixed 10% bleach solution. One minute after sanitizing, you may apply an oil based lubricant to chainsaw chains or other metallic parts to prevent corrosion.
  - Only dedicated tools and chainsaws should be used to sample known or suspected ROD infected trees.
  - Vehicles, machinery, and equipment must be cleaned as described in (1) above.
- 5. Imported firewood, logs, and 'ōhi'a parts:**
- 'Ōhi'a firewood, 'ōhi'a logs, and 'ōhi'a parts should not be transported.

**6. For individuals working in the field:**

- a. **Before going into the field**, visually inspect and clean your clothes, boots, pack, radio harness, tools and other personal gear and equipment, for seeds, soil, plant parts, insects, and other debris. A small brush is handy for cleaning boots, equipment and gear. Soles of shoes should be sanitized using a solution of >70% isopropyl alcohol or a freshly mixed 10% bleach solution.
- b. **Immediately before leaving the field**, visually inspect and clean your clothes, boots, pack, radio harness, tools, and other personnel gear and equipment, for seeds, soil, plant parts, insects, and other debris. Soles of shoes should be sanitized using a solution of >70% isopropyl alcohol or a freshly mixed 10% bleach solution.
- c. **Little fire ants nest in trees**. If you are under a tree and that tree is bumped or somehow stressed, the threat response of the ants is to fall from the leaves and sting the person under the tree. If you are subject to an ant attack, do not panic. The ants are extremely small, but their stings are painful so make sure you remove all ants from your body and clothing. The stings cause inch long welts that are itchy and painful and can last for weeks. Treat stings as you would other insect stings. In some persons stings can produce life threatening reactions. Stocking antihistamine in the first aid kit is a reasonable precaution.
- d. **Rat Lungworm disease** is caused by a parasite that can infect humans who consume raw or undercooked infected snails or slugs or consume raw produce that contains a small infected snail or slug. Infection is rare but can be serious. Symptoms can include severe headache, neck stiffness, low grade fever, nausea, and vomiting anywhere from 1-6 weeks after exposure. The disease is not spread person to person. Anyone who handles snails or slugs should wear gloves and/or wash hands. Eating unwashed produce is discouraged.

**Attachment B: BMPs For Work In or Around Aquatic Environment**

**U.S. Fish and Wildlife Service  
Recommended Standard Best Management Practices (BMPs)**

The U.S. Fish and Wildlife Service (Service) recommends the following measures are incorporated into project planning to avoid or minimize impacts to fish and wildlife resources. Incorporation of these BMPs may reduce negative impacts to aquatic habitats from project construction-related activities. These BMPs are recommended in addition to, and do not over-ride any terms, conditions, or other recommendations prepared by the Service, other Federal, state, or local agencies. Please contact the Service Aquatic Ecosystems Conservation Program at 808-792-9400 with any questions.

1. Authorized dredging and filling-related activities that may result in the temporary or permanent loss of aquatic habitats should be designed to avoid indirect, negative impacts to aquatic habitats that extend beyond the planned project area.
2. Dredging/filling in the marine environment should be scheduled to avoid coral spawning and recruitment periods, and sea turtle nesting and hatching periods. Because these periods vary throughout the Pacific islands, we recommend contacting the relevant local, state, or Federal fish and wildlife resource agency for site specific guidance.
3. Turbidity and siltation from project-related work should be minimized and contained within the project area by silt containment devices and curtailment work during flooding or adverse tidal and weather conditions. The BMPs should occur for the life of the construction period until turbidity and siltation within the project area is stabilized. All project construction-related debris and sediment containment devices should be removed and disposed of at an approved site.
4. All project construction-related materials and equipment (i.e., dredges, vessels, backhoes, silt curtains, etc.) to be placed in an aquatic environment should be inspected for pollutants including, but not limited to: marine fouling organisms, grease, oil, etc., and cleaned to remove pollutants prior to use. Project related activities should not result in any debris disposal, non-native species introductions, or attraction of non-native pests to the affected or adjacent aquatic or terrestrial habitats. Implementing both a litter-control plan and a Hazard Analysis and Critical Control Point plan (HACCP – see <https://www.fws.gov/policy/AI/50fwj.html>) can prevent attraction and introduction of non-native species.
5. Project construction-related materials (i.e., fill, revetment rock, pipe, etc.) should not be stockpiled in, or in close proximity to aquatic habitats and should be protected from erosion (e.g., with filter fabric, etc.), to prevent materials from being carried into waters by wind, rain, or high surf.
6. Fueling of project-related vehicles and equipment should occur away from the aquatic environment and a contingency plan to control petroleum products accidentally spilled during the project should be developed. The plan should be retained on site with the person responsible for compliance with the plan. Absorbent pads and containment booms should be stored on-site to facilitate the clean-up of accidental petroleum releases.
7. All deliberately exposed soil or under-layer materials used in the project near water should be protected from erosion and stabilized as soon as possible with geotextile, filter fabric or native or non-invasive vegetation matting, hydro-seeding, etc.

**State of Hawai'i**

## Department of Land and Natural Resources, Hawaii State Aha Moku

My name is Charles Young. I reside in the Ahupua`a of Kealia, I I South Kona. As the current Po`o of the Hawaii Island `Aha Moku I am pleased to submit the following comments on the Kamehameha Schools, Keaouhou Bay Management Plan Draft Environmental Impact Statement. The `Aha Moku was created by the Hawaii State Legislature under act 288, which recognized that Hawaii has suffered through extensive changes to the Native Hawaiian Culture, Language, Values and Land Tenure system resulting in the following o Overdevelopment of coastlines o Alterations of freshwater streams o Destruction of watersheds o Decimation of coral reefs o The decline of endemic marine and terrestrial species The `Aha Moku serves in an advisory capacity to the Chairperson of the Hawaii State Department of Land and Natural Resources (DLNR) so regional concerns from individual communities can be brought to the DLNR and issues can be addressed and if needed, mitigated. In serving their individual communities the Island `Aha Moku seek to • Integrate indigenous resource management practices with western management. • Identify a comprehensive set of indigenous practices for natural resource management. • Foster understanding and practical use of Native Hawaii resource knowledge, methodology, and expertise • Sustain the State's marine, land, cultural, agricultural, and natural resources • Provide community education and foster cultural awareness of the benefits of the `Aha Moku system. Vhen striving to meet its goals the `Aha Moku is also guided by the Hawaii Supreme Court's 2000 decision in the Ka Pa`akai 0 Ka |Aina vs State Land Use Commission decision which requires the State and its agencies to 1. Identity and scope of valued cultural historical, or natural resources in the...area, including the extent to which traditional customary native Hawaiian rights are exercised in the. . . area; 2. Determine the Extent to which those resources -including traditional and customary Native Hawaiian rights -will be affected or impaired by the proposed action; and 3. Feasible action, if any, to be taken by the agency to reasonably protect such practices if they are found to exist. The Hawaii Island `Aha Moku appreciates the unique significance Of the area and supports having a comprehensive management plan in place for all the reasons stated above. In its introduction Section 1.2 the applicant,

Kamehameha Schools states  
"Keaouhou Bay is perhaps most well known as the birth site and residence of King Kamehameha I (Kamehameha III), who was the son of Kamehameha `Ekahi (Kamehameha I) and Keopuolani." The tAha Moku suffers the above premise as fundamental to the success of any well thought out management plan for the area. Vhen creating the `Aha Moku under Act 288 the Legislature "recognized that Hawaii Tenure system. . . ." Kamehameha III ruled during a period of major change and set in motion the most significant Land Tenure changes in Hawaii's history. Many agree that was the most impactful to Native Hawaiian Culture. The Keaouhou Bay that we see today is a legacy Of that history. AND we should not ignore that the proposed management plan must be a better version. Native Hawaiian rights and practices are driven by our natural environment. Our beliefs on the origins of kanaka maoli are rooted in nature and we see ourselves as part of nature and the health of our natural environment as a reflection of our own health. The Aha Moku is concerned that to date the development and growth of Keaouhou Bay has not sufficiently addressed any Of the `Aha Moku's challenges as stated above and the `Ana Moku hopes to be part of a longer-term revisiting for

Keaouhou Bay. The Aha Moku would first encourage the applicant to work to align all the agencies responsible for supplying the fresh water necessary to meet the plan's objectives. Water is a finite resource and relies on healthy watersheds to capture, filter, and distribute our life-giving water. Private, State and County agencies who are responsible for granting permits to access, distribute, use, and return water to the `Aina should be encouraged to assure its purity. These same agencies should be encouraged to monitor the effects that diverting fresh water from their natural channels is having on our near shore resources like limu, reefs and reef fish. The `Aha Moku is unaware Of any comprehensive monitoring program on the near shore resources of Keaouhou Bay and believes that it would be Of great benefit to know the present health Of the Bay, the cumulative impacts of current use and what improvements can be projected if any by the proposed Management Plan. Before providing comment the `Aha Moku reached out to several kama`aina families from the area. Understandably, there exists some disappointment with past performance however, most look forward to reenvisioning Keaouhou Bay as a place of practice and learning and less so a place of congestion and commerce. The Bay outTently serves as a launching point for commercial and/or on ocean recreational activities. The `Aha Moku notes that there has been a significant increase of permitted commercial activities at Keaouhou that have had far reaching effects on Kona Hema. Known for its marine resources, Kona Hema is now a focal point for commercial tour boat operators and an ever-increasing number of tourists drawn to its natural habitats. These activities need better management from end to end. Communities like Kealakua, Napo`opo`o, Honaunau and Ho`okena are experiencing significant negative impacts to their communities and their resources due to the increasing numbers of tourists. The `Aha Moku supports a management plan that truly manages the use of Keaouhou Bay which presently serves as an unfettered gateway to Kona Hema. Kama`aina also expressed some concern about the development of housing that may invite more offshore interest/investment and not fulfill a more pressing need for kama`aina. Vhen considering cultural impacts, the Aha Moku must consider the importance that housing plays on the stability of a family. The most common concern was how will our future generations be able to live and prosper in our homeland, practice our culture and pass on our learnings to future generations if we cannot afford to live here. The Aha Moku recognizes that this is a much larger issue than any single management plan can address and fully appreciates that Kamehameha Schools was founded on the above cultural aspirations. The current processes for development, do not incorporate the necessary collaboration amongst the State, County and Private sectors particularly when it comes to resource management. As noted above Keaouhou is the birthplace of Kamehameha III, one of Hawaii` s most prominent rulers. The Aha Moku appreciates the cultural legacy Of the area and the Kuleana of Kamehameha Schools and encourages the State and/or County agencies to promote the same values of making the area a welcoming and uniquely Hawaiian place. The Aha Moku appreciates this opportunity to provide comments on the Keaouhou Bay Management plan.

Department of Land and Natural Resources  
 Hawaii State Aha Moku  
 State of Hawaii  
 Post Office Box 621  
 Honolulu, Hawaii 96809

Aloha:

My name is Charles Young. I reside in the Ahupua'a of Kealia II South Kona. As the current Po'o of the Hawaii Island 'Aha Moku I am pleased to submit the following comments on the Kamehameha Schools, Keauhou Bay Management Plan Draft Environmental Impact Statement.

The 'Aha Moku was created by the Hawaii State Legislature under act 288, which recognized that Hawaii has suffered through extensive changes to the Native Hawaiian Culture, Language, Values and Land Tenure system resulting in the following

- o Over-development of coastlines
- o Alterations of freshwater streams
- o Destruction of watersheds
- o Decimation of coral reefs
- o The decline of endemic marine and terrestrial species

The 'Aha Moku serves in an advisory capacity to the Chairperson of the Hawaii State Department of Land and Natural Resources (DLNR) so regional concerns from individual communities can be brought to the DLNR and issues can be addressed and if needed, mitigated. In serving their individual communities the Island 'Aha Moku seek to

- Integrate indigenous resource management practices with western management.
- Identify a comprehensive set of indigenous practices for natural resource management.
- Foster understanding and practical use of Native Hawaii resource knowledge, methodology, and expertise
- Sustain the State's marine, land, cultural, agricultural, and natural resources
- Provide community education and foster cultural awareness of the benefits of the 'Aha Moku system.

When striving to meet its goals the 'Aha Moku is also guided by the Hawaii Supreme Court's 2000 decision in the Ka Paakai O Ka 'Aina vs State Land Use Commission decision which requires the State and its agencies to

1. Identify and scope of valued cultural historical, or natural resources in the...area, including the extent to which traditional customary native Hawaiian rights are exercised in the...area;
2. Determine the Extent to which those resources – including traditional and customary Native Hawaiian rights – will be affected or impaired by the proposed action; and
3. Feasible action, if any, to be taken by the agency to reasonably protect such practices if they are found to exist.

*Moku O Keawe (Hawaii Island), Moku O Pihlani (Maui), Moku O Kanaloa (Kahooolawe), Nana'i Kauia (Lanai), Molokai Puile Oo (Molokai), Moku O Kakauihewa (Oahu), Manokalanipo (Kauai), Ka Aina O Kowelonaakala (Niihau), Kalamimoku Bldg., DLNR, 1151 Punchbowl Street, Room 130, Honolulu, HI 96813*

Department of Land and Natural Resources  
 Hawaii State Aha Moku  
 State of Hawaii  
 Post Office Box 621  
 Honolulu, Hawaii 96809

The Hawaii Island 'Aha Moku appreciates the unique significance of the area and supports having a comprehensive management plan in place for all the reasons stated above. In its introduction Section 1.2 the applicant, Kamehameha Schools states

**"Keauhou Bay is perhaps most well known as the birth site and resuscitation site of Ka Mō'ī (King) Kaulikeaouli Kaleiopapa Kuakamanolani Mahinalani Kalaninuiwaikua Keaweawe 'ulaokalani (Kamehameha III), who was the son of Kamehameha 'Ekahi (Kamehameha I) and Keōpūolani."**

The 'Aha Moku supports the above premise as fundamental to the success of any well thought out management plan for the area. When creating the 'Aha Moku under Act 288 the Legislature "recognized that Hawaii suffered through extensive changes to the Native Hawaiian Culture, Language, Values and Land Tenure system...". Kamehameha III ruled during a period of major change and set in motion the most significant Land Tenure changes in Hawaii's history. Many agree that was the most impactful to Native Hawaiian Culture. The Keauhou Bay that we see today is a legacy of that history AND we should not ignore that the proposed management plan must be a better version.

Native Hawaiian rights and practices are driven by our natural environment. Our beliefs on the origins of kanaka maoli are rooted in nature and we see ourselves as part of nature and the health of our natural environment as a reflection of our own health.

The Aha Moku is concerned that to date the development and growth of Keauhou Bay has not sufficiently addressed any of the 'Aha Moku's challenges as stated above and the 'Aha Moku hopes to be part of a longer-term revisioning for Keauhou Bay.

The Aha Moku would first encourage the applicant to work to align all the agencies responsible for supplying the fresh water necessary to meet the plan's objectives. Water is a finite resource and relies on healthy watersheds to capture, filter, and distribute our life-giving water. Private, State and County agencies who are responsible for granting permits to access, distribute, use, and return water to the 'Aina should be encouraged to assure its purity.

*Moku O Keawe (Hawaii Island), Moku O Pihlani (Maui), Moku O Kanaloa (Kahooolawe), Nana'i Kauia (Lanai), Molokai Puile Oo (Molokai), Moku O Kakauihewa (Oahu), Manokalanipo (Kauai), Ka Aina O Kowelonaakala (Niihau), Kalamimoku Bldg., DLNR, 1151 Punchbowl Street, Room 130, Honolulu, HI 96813*

Department of Land and Natural Resources  
 Hawaii State Aha Moku  
 State of Hawaii  
 Post Office Box 621  
 Honolulu, Hawaii 96809

These same agencies should be encouraged to monitor the effects that diverting fresh water from their natural channels is having on our near shore resources like limu, reefs and reef fish. The 'Aha Moku is unaware of any comprehensive monitoring program on the near shore resources of Keaouhou Bay and believes that it would be of great benefit to know the present health of the Bay, the cumulative impacts of current use and what improvements can be projected if any by the proposed Management Plan.

Before providing comment the 'Aha Moku reached out to several kama'aina families from the area. Understandably, there exists some disappointment with past performance however, most look forward to re-envisioning Keaouhou Bay as a place of practice and learning and less so a place of congestion and commerce. The Bay currently serves as a launching point for commercial and/or on ocean recreational activities. The 'Aha Moku notes that there has been a significant increase of permitted commercial activities at Keaouhou that have had far reaching effects on Kona Hema. Known for its marine resources, Kona Hema is now a focal point for commercial tour boat operators and an ever-increasing number of tourists drawn to its natural habitats. These activities need better management from end to end. Communities like Kealakekua, Napo'opo'o, Honaunau and Ho'okena are experiencing significant negative impacts to their communities and their resources due to the increasing numbers of tourists. The 'Aha Moku supports a management plan that truly manages the use of Keaouhou Bay which presently serves as an unfettered gateway to Kona Hema. Kama'aina also expressed some concern about the development of housing that may invite more offshore interest/investment and not fulfill a more pressing need for kama'aina. When considering cultural impacts, the Aha Moku must consider the importance that housing plays on the stability of a family. The most common concern was how will our future generations be able to live and prosper in our homeland, practice our culture and pass on our learnings to future generations if we cannot afford to live here. The Aha Moku recognizes that this is a much larger issue than any single management plan can address and fully appreciates that Kamehameha Schools was founded on the above cultural aspirations.

The current processes for development, do not incorporate the necessary collaboration amongst the State, County and Private sectors particularly when it comes to resource management. As noted

*Moku O Keawe (Hawaii Island), Moku O Pihlani (Maui), Moku O Kanaloa (Kahooolawe), Nana'i Kaula (Lanai)

Thank you for the opportunity to review the subject document. The Commission on Water Resource Management (CWRM) is the agency responsible for administering the State Water Code (Code). Under the Code, all waters of the State are held in trust for the benefit of the citizens of the State, therefore all water use is subject to legally protected water rights. CWRM strongly promotes the efficient use of Hawaii's water resources through conservation measures and appropriate resource management. For more information, please refer to the State Water Code, Chapter 174C, Hawaii Revised Statutes, and Hawaii Administrative Rules, Chapters 13-167 to 13-171. These documents are available via the internet at <http://dlnr.hawaii.gov/cwrm>.

Our comments related to water resources are checked off below.

- 1. We recommend coordination with the county to incorporate this project into the county's Water Use and Development Plan. Please contact the respective Planning Department and/or Department of Water Supply for further information.
- 2. We recommend coordination with the Engineering Division of the State Department of Land and Natural Resources to incorporate this project into the State Water Projects Plan.
- 3. We recommend coordination with the Hawaii Department of Agriculture (HDOA) to incorporate the reclassification of agricultural zoned land and the redistribution of agricultural resources into the State's Agricultural Water Use and Development Plan (AWUDP). Please contact the HDOA for more information.
- 4. We recommend that water efficient fixtures be installed and water efficient practices implemented throughout the development to reduce the increased demand on the area's freshwater resources. Reducing the water usage of a home or building may earn credit towards Leadership in Energy and Environmental Design (LEED) certification. More information on LEED certification is available at <http://www.usgbc.org/leed>. A listing of fixtures certified by the EAP as having high water efficiency can be found at <http://www.epa.gov/watersense>.
- 5. We recommend the use of best management practices (BMP) for stormwater management to minimize the impact of the project to the existing area's hydrology while maintaining on-site infiltration and preventing polluted runoff from storm events. Stormwater management BMPs may earn credit toward LEED certification. More information on stormwater BMPs can be found at <http://planning.hawaii.gov/cwrm/initiatives/low-impact-development/>
- 6. We recommend the use of alternative water sources, wherever practicable.
- 7. We recommend participating in the Hawaii Green Business Program, that assists and recognizes businesses that strive to operate in an environmentally and socially responsible manner. The program description can be found online at <http://energy.hawaii.gov/green-business-program>.
- 8. We recommend adopting landscape irrigation conservation best management practices endorsed by the Landscape Industry Council of Hawaii. These practices can be found online at [http://www.hawaiilandscape.com/wp-content/uploads/2013/04/LICH\\_Irrigation\\_Conservation\\_BMPs.pdf](http://www.hawaiilandscape.com/wp-content/uploads/2013/04/LICH_Irrigation_Conservation_BMPs.pdf).

Page 2  
July 29, 2024

- 9. There may be the potential for ground or surface water degradation/contamination and recommend that approvals for this project be conditioned upon a review by the State Department of Health and the developer's acceptance of any resulting requirements related to water quality.
- 10. The proposed water supply source for the project is located in a designated water management area, and a Water Use Permit is required prior to use of water. The Water Use Permit may be conditioned on the requirement to use dual line water supply systems for new industrial and commercial developments.
- 11. The Hawaii Water Plan is directed toward the achievement of the utilization of reclaimed water for uses other than drinking and for potable water needs in one hundred per cent of State and County facilities by December 31, 2045 (§174C-31(g)(6), Hawaii Revised Statutes). We strongly recommend that this project consider using reclaimed water for its non-potable water needs, such as irrigation. Reclaimed water may include, but is not limited to, recycled wastewater, gray water, and captured rainwater/stormwater. Please contact the Hawaii Department of Health, Wastewater Branch, for more information on their reuse guidelines and the availability of reclaimed water in the project area.
- 12. A Well Construction Permit(s) is (are) are required before the commencement of any well construction work.
- 13. A Pump Installation Permit(s) is (are) required before ground water is developed as a source of supply for the project.
- 14. There is (are) well(s) located on or adjacent to this project. If wells are not planned to be used and will be affected by any new construction, they must be properly abandoned and sealed. A permit for well abandonment must be obtained.
- 15. Ground-water withdrawals from this project may affect streamflows, which may require an instream flow standard amendment.
- 16. A Stream Channel Alteration Permit(s) is (are) required before any alteration can be made to the bed and/or banks of a stream channel.
- 17. A Stream Diversion Works Permit(s) is (are) required before any stream diversion works is constructed or altered.
- 18. A Petition to Amend the Interim Instream Flow Standard is required for any new or expanded diversion(s) of surface water.
- 19. The planned source of water for this project has not been identified in this report. Therefore, we cannot determine what permits or petitions are required from our office, or whether there are potential impacts to water resources.
- OTHER:

If you have any questions, please contact Ryan Imata of the Regulation Branch at (808) 587-0225 or Katie Roth of the Planning Branch (808) 587-0216.

**COMMENTS**

The rules and regulations of the National Flood Insurance Program (NFIP), Title 44 of the Code of Federal Regulations (44CFR), are in effect when development falls within a Special Flood Hazard Area (high-risk areas). Be advised that 44CFR, Chapter 1, Subchapter B, Part 60 reflects the minimum standards as set forth by the NFIP. Local community flood ordinances may stipulate higher standards that can be more restrictive and would take precedence over the minimum NFIP standards.

The owner of the project property and/or their representative is responsible for researching the Flood Hazard Zone designation for the project. Flood zones subject to NFIP requirements are identified on FEMA's Flood Insurance Rate Maps (FIRM). The official FIRMs can be accessed through FEMA's Map Service Center ([msc.fema.gov](http://msc.fema.gov)). Our Flood Hazard Assessment Tool (FHAT) ([that.hawaii.gov](http://that.hawaii.gov)) could also be used to research flood hazard information.

If there are questions regarding the local flood ordinances, please contact the applicable County NFIP coordinating agency below:

- o Oahu: City and County of Honolulu, Department of Planning and Permitting (808) 768-8098.
- o Hawaii Island: County of Hawaii, Department of Public Works (808) 961-8327.
- o Maui/Molokai/Lanai County of Maui, Department of Planning (808) 270-7139.

## Department of Health, Solid & Hazardous Waste Branch

### Solid Waste Section:

Chapters 342H and 342I, HRS, and chapter 11-58.1, HAR, "Solid Waste Management Control" requires the proper management of solid wastes. Generators of solid waste are required to ensure that their wastes are properly delivered to permitted solid waste management facilities. Project managers should require their waste contractors to submit disposal (and recycling) receipts and invoices to ensure proper disposal (or recycling) of wastes.

### OSWM:

Chapter 342G, HRS, encourages the reduction of waste generation, reuse of discarded materials, and the recycling of solid waste. The project developer is highly encouraged to develop a solid waste management plan for each construction project to ensure proper handling of wastes and divert recyclables from being landfilled. Ideally, the plan would seek to maximize waste diversion and minimize disposal. Such plans should include designated areas to promote the collection of reusable and recyclable materials.

MEMORANDUM

TO: Russell Y. Tsuji, Administrator  
Land Division

FROM: Meghan L. Statts, Administrator  
Division of Boating and Ocean Recreation

SUBJECT: KSBE Keaou Bay Management Plan Draft Environmental Impact Statement

Below please find the Division of Boating and Ocean Recreation ("DOBOR") comments on the Draft Environmental Impact Statement ("DEIS") of the Kamehameha Schools ("KSBE") Keaou Bay Management Plan.

DOBOR appreciates KSBE's plans to develop lands around Keaou Bay to enhance the cultural heritage and community engagement on these properties.

However, DOBOR has concerns about the proposed relocation of boat trailer parking. The DEIS calls for the expansion of the boat trailer parking on KSBE's lands in Vol. I, page 1-15, page 3-35, figure 3-24 & Vol. II, *Preliminary Engineering Report*, page 1-1, while also calling for relocation of existing boat trailer parking from the current location under DOBOR jurisdiction along Kaleiopapa St. (Vol. I, page 1-13).

In previous conversations with KSBE, DOBOR's Administration has made it clear that DOBOR would not be interested in leasing property from KSBE to construct and relocate the boat trailer parking. DOBOR would not object to KSBE expanding and/or relocating boat trailer parking within KSBE property.

In addition to DOBOR's concerns regarding relocating existing boat trailer parking, the new parking area as proposed may not provide adequate room to maneuver vehicles with trailers attached and would be further from the boat ramp than the existing parking area, which may negatively affect boaters' ability to launch and retrieve their boats. DOBOR operates the boat ramp at TMK: (3) 7-8-012:008 and needs to provide trailer parking for recreational boaters. The existing boat trailer parking area located at TMK: (3) 7-8-010:072 is the only DOBOR property capable of accommodating this use.

# **Community Organizations**

## Adventures in Paradise

To Whom It May Concern,

Please read the comments below and ACCEPT Kamehameha Schools (KS) Environment Impact Statement (EIS) for Keauhou Bay to become a Bungalow Resort.

The Bungalow Resort WILL have a Much Needed Positive IMPACT on the Keauhou Bay and does NOT hurt or impair the very healthy Keauhou Bay ocean ecosystem.

Habitat Health at Keauhou Bay:

Please, DO NOT believe the detractors of the development who claim the development will pollute, endanger specie and create greater congestion in the area. The bay is a very resilient body of water with natural ocean wave action keeping the bay clean and healthy for humans, ocean organisms and habitats. The bay over the past 25 years I've worked here, has not shown signs of degradation as would be predicted if what detractors say was true about runoff, pollution and harm to sea turtles and monk seals. The Keauhou Bay is not home to many green sea turtles or monk seals - they are very rare in this bay. Yet resort detractors claim these endangered species will be harmed if the resort built. This is a weak and unsupported claim as anyone who visits the bay knows. This is simply not a regular habitat of either turtles or monk seals and never has been one.

Keauhou Bay is in fact a clean environment where swimmers exercise, tourists and local residents view manta rays and enjoy the bay by kayak, boat and canoe for snorkeling, diving and fishing. The bay waters are circulated hourly with fresh ocean waters and this keeps the bay environment clean and healthy for all things biological. If what the detractors say of this new resort development was true, then we would currently see very sick dolphins, ailing manta rays, polluted monk seals, tumor infested green sea turtles and reduced plankton populations and serious coral issues. But we are not experiencing a decline in species or their health.

Since the Keauhou Bay is already surrounded by all the "problems" currently detractors say will harm the bay then the existing Outrigger resort, numerous condominium complexes, many private residences, a golf course, a biweekly farmers market and marina should have caused all these problems to exist now: But they don't. In fact to the contrary, the bay has proven itself, over time, not to be affected by these "potential problems". The healthy presence of plankton in Keauhou Bay is one more piece of evidence demonstrating the healthy ecosystem found at Keauhou Bay.

The long list of "scientific proofs" provided by some detractors of this development is far from scientific and in most cases rarely even cogent to the discussion of real issues in this resort developments EIS. The reality is Keauhou Bay is blessed with good circulation which mitigates much of the problems that could become harmful if there did not exist a regular circulation of the ocean waters.

Opportunities lost:

Failing to permit Kamehameha Schools (KS) to provide leadership on this development also may ultimately prove a disservice to the Keauhou Bay community. The leadership of Kamehameha Schools has resulted in a resort with lower density rather than a high rise development with double the number of rooms and visitors, as permitted by County planning. KS theoretically could sell the property to another developer that may not hold community interests as high as KS. This reason alone is reason to Support the EIS and the KS Resort Development. Since KS corporate goals are multifaceted there is not the sole goal of financial gain as most developers would hold. KS goals include promote goodwill in the community, education of the public, and encouraging local residents to have pride in their community and history.

I have witnessed first hand, very good leadership decisions made by KS as demonstrated in their resort development plan's low density housing, this EIS in mitigating impacts on the health of the bay, their holding so many community hearings and meetings with stakeholders at the bay in developing their plan for the area.

The Bigger Picture:

This is also not only a resort development plan but also a major change and improvements for the area in adding badly needed infrastructure (streets and traffic flow) to handle existing traffic and to ease congestion. The success of the resort development is part of the funding for the improvements that will benefit the entire local community who utilize the Keauhou Bay for business, leisure and residents. Having worked in this area for many years, the congestion continues to grow and there is no end in sight, except for the resort development and redevelopment of the waterfront and roads by KS.

In Conclusion:

Please support the EIS, KS Resort Development, and redevelopment plans for Keauhou Bay. It's important to be practical and accepting the fact that to build the roads and infrastructure at Keauhou Bay there needs to be a plan that will generate sufficient income to pay for the infrastructure. This is a good blend of low density housing, infrastructure and street improvements paid by income from the KS resort development. As far as I know, money doesn't grow on trees and the roads we need to reduce congestion at Keauhou Bay can be funded through this resort development. Let's get behind this plan and see the vacant land behind the bay developed into a beautiful resort that enhances the Keauhou Bay overall and helps improve everyone's experience visiting the bay with better roads and traffic flow.

Email: [ContactKeaunohuCanoeClub@gmail.com](mailto:ContactKeaunohuCanoeClub@gmail.com)

**COMMENTS**

**ON KAMEHAMEHA SCHOOLS' DRAFT ENVIRONMENTAL**

**IMPACT STATEMENT FOR THE KEAUHOU BAY**

**MANAGEMENT PLAN**

**PUBLISHED JUNE 23, 2024**

**A. BACKGROUND**

On June 23, 2024, the Hawai'i Environmental Review Program ("ERP") published the *Draft Environmental Impact Statement* ("DEIS") as submitted by Kamehameha Schools for its Keaunohu Bay Management Plan ("KBMP"). The DEIS comment deadline is August 7, 2024. The DEIS was prepared according to the Hawai'i Environmental Policy Act (HRS 343, "HEPA") and the related Hawai'i Administrative Rules ("HAR") Chapter 11-200.1 (DEIS 1.2 at 1-11).

The Hawai'i Supreme Court has described HEPA as establishing: "a system of environmental review which will ensure that environmental concerns are given appropriate consideration in decision making along with economic and technical considerations." *Kepe 'o v. Watson (Kepe 'o I)*, 87 Haw. 91, 952 P.2d 379 at 388 (1998). (Citation omitted.) The analysis of an EIS is in turn guided by HAR §11-200.1-13 defining 13 "Significance Criteria" to be considered in the analysis of any EIS.

These comments have been formulated by the Keaunohu Canoe Club ("KCC") "KBMP Working Group Committee", a special committee authorized by the KCC Board of Directors. They are submitted on behalf of KCC as authorized by KCC's Board of Directors. Individual KCC members may submit their own comments in their individual capacity. Individual member comments may agree or disagree with or take no position on KCC's comments. Individuals may identify themselves as KCC members, but these are the only official comments of the Keaunohu Canoe Club.

**B. COMMENT SUMMARY**

1) KCC supports the KBMP Proposed Action as it relates to the "long-term operations and maintenance of Keaunohu Bay", the "opportunity to support and revitalize cultural events and traditional practices", and to "preserve and support a range of passive and active recreational activities" (DEIS 2.7 at 2-11), including specifically outrigger canoe paddling and racing.

2) KCC has no comments on development proposed mauka of the Old Kona Road.

Keaunohu Canoe Club  
Comments to KBMP DEIS  
SIGNED (8/5/2024)

1

3) The KBMP could be improved by addressing:

- a) Runoff from Kamehameha III Road and land mauka of the road.
- b) The effect of climate change on near shore infrastructure
- c) Safety on the Bay
- d) A long-term partnership with KCC

**C. PROJECT AREA AND PURPOSES**

The Proposed Project Area is illustrated in DEIS Figure 1-10 at Page 1-18, comprising approximately 29 acres of the approximately 54 acres KS owns adjacent to Keaunohu Bay. The "Purpose and Need" for the Project are described more fully in DEIS Section 2.7 at Page 2-11.

**D. KEAUHOU BAY**

Thousands of people's lives are intertwined with Keaunohu Bay--often for generations--many of whom are among the 700 members of Keaunohu Canoe Club. It is where they have learned to swim, paddle canoes, fish and snorkel in its still relatively vibrant ecosystems. It is also the source of livelihoods for fishermen and several ocean resource tourist businesses with long histories in the Bay.

The DEIS describes Keaunohu Bay as a "small bay along the Kona Coast" (DEIS 1.2 at 1-11). The Bay is the seaward end of both the Keaunohu I and Keaunohu II Ahupua'a. See, DEIS Figure 1-2 at 1-4 ("Ahupua'a Map") (Showing the Keaunohu I and II Ahupua'a boundaries.) A dry stack, stone wall marks the southern boundary of the current KS/KCC lease.

Keaunohu Bay's lengthy history is "entwined with generations of Hawaiian royalty" beginning with 'Umiāfihoa (also 'Umi-a-Lihoa) (DEIS 2.3 at 2-2.) See also, S. M. KAMAKAU, *RULING CHIEFS OF HAWAII REVISED EDITION*, Kamehameha School Press, Honolulu (1992), Chapter 1, "The Story of 'Umi." It is also the birthplace of Kauikeaouli (Kamehameha III), who was stillborn and brought to life on Keaunohu's shore. (DEIS 2.3 at 2-2 & 2-3.)

Prominent Ali'i lived around the bay and used it from the days of 'Umi until the late 19<sup>th</sup> Century. (DEIS 2.3 at 2-2 thru 2-5 and 4.1.1 at 4-6.) During the 1848 Māhele 'Āina the Keaunohu Ahupua'a was divided in two. Victoria Kamāmalu and Lot Kapuāiwa were awarded the newly created Keaunohu I and Keaunohu 2 Ahupua'a, respectively. Lot Kapuāiwa would go on to become King Kamehameha V. See, DEIS 4.1.1 at 4-7, and Appendix C, *AMS Cultural Impact Assessment for Kamehameha Schools' Keaunohu Bay Management Plan* at 39.

#### E. KAMEHAMEHA SCHOOLS (“KS”)

Kamehameha Schools is forever linked to the vast land legacy of Princess Kamehameha I. Bernice Pauahi Bishop (Āina Pauahi), the great granddaughter of Kamehameha I. Her legacy of some 375,000 acres of land helped establish Kamehameha Schools “forever linking the institution with its ancestral lineage [and the] responsibility to steward these lands.” (DEIS 2.1 at 2-1). The KS mission is to “create educational opportunities in perpetuity to improve the capability and well-being of people of Hawaiian ancestry. . . . [and] to improve the well-being of āina (land) and the lāhui (Hawaiian people) within one generation.” KS “as the haku āina (proprietors of the land), has an obligation to care for these legacy lands [in order to foster the] relationship between kānaka (humans) and āina [as well as] their long range economic vitality.” To fulfill this mission, KS wants to “utilize its landholdings and resources to achieve a balanced state between educational, cultural, environmental, economic and community returns.” (DEIS 2.2 at 2-2.)

#### F. KEAHOHU CANOE CLUB (“KCC”)

Louis K. and Mary Jane Kahanamoku formed KCC in 1980 (DEIS 4.1.1 at 4-23 and 4.10 at 4-115.) Other founders included Sam A. Kahanamoku, Herb Kane, Kelly Greenwell and other leaders in the Keaouhou outrigger canoe racing community. See, 1980 KCC original Articles of Incorporation filed of record on October 20, 1980, as “Honokohau Canoe Club” (should be “Honokōhau”). The KBMP DEIS recognizes that:

The traditional cultural practice of outrigger canoe paddling is actively practiced, as embodied by the core of native Hawaiian instructors with the Keaouhou Canoe Club and perpetuating the vision of its founders (Louis and Mary Jane Kahanamoku). The club strives to educate youth, club members, and the community at large about Hawaiian culture, values, and traditions associated with Hawaiian outrigger canoeing. (DEIS 4.1.1 at 4-23.)

KCC appreciates this description. It is consistent with KCC’s purposes described in its 1980 Articles of Incorporation, which state in pertinent part that KCC’s purposes are to:

*Engage in, promote, encourage participation in and provide education and instruction in Hawaiian and Polynesian culture through canoeing and other related activities. To encourage participation in civic and community activities within the club membership. Promote competitive inter-club and inter-island and international Hawaiian outrigger racing. Foster, encourage and promote interest in the sport of and science of canoe racing and canoeing in the entire State of Hawaii. (Emphasis added.)*

#### G. KCC’S INTEREST IN THE PROJECT

KCC and KS share a common interest in the preservation of Keaouhou Bay, the adjacent āina and its unique heritage and the cultural practices associated with that heritage. Outrigger canoe paddling and racing are prominent features of those practices and that heritage. KCC’s shared interest also includes the education of KCC’s adult, youth, and keiki members in Hawaiian history and culture, specifically as it relates to Keaouhou Bay and the nearby āina. KCC also supports the KBMP as it relates to the management of Keaouhou Bay and its surrounding āina to prevent conflicts and enhance enjoyment among the users of Keaouhou Bay. KCC is motivated and would be grateful to be an active participant in that effort.

#### H. COMMENT SUMMARY

KCC is concerned, however, that the DEIS does not adequately address four significant issues, some of which could undercut or nullify the other benefits of the KBMP. The first relates to storm water runoff, which the DEIS concludes is not an issue because it has not been reported to the County or DOT. (See, DEIS 4.5 at 4-81.) The second relates to infrastructure, specifically the relocation of the existing near shore water and sewer infrastructure and associated electrical and telecommunications lines. Ongoing and future climate change is likely to result in flooding and breaching of this infrastructure with catastrophic consequences to all the good that KS hopes to accomplish. The third significant issue not addressed in the DEIS is the safety and ongoing traditional use of Keaouhou Bay by the lāhui and other local residents due to the unregulated increase of motorized vessels using Keaouhou Bay. The fourth is how the plan might affect KCC’s practical operations and the potential for KCC playing a supporting role in the implementation of the KBMP.

#### I. DISCUSSION

KCC’s Comments are aligned with the Sections and pages of the DEIS to which they pertain.

#### 4.5 Groundwater, Surface Water, and Drainage at 4-77

The DEIS description of “Storm Water Runoff, Drainage” (DEIS 4.5 at 4-81) does not correspond with KCC’s members’ observations of these events. In any heavy rainfall there is significant unregulated drainage both on the KCC leased grounds and into Keaouhou Bay. The runoff onto the grounds is sufficient to wash gravel down from the Old Kona Road onto KCC’s leased lands. More significant is the runoff that flows down Kamehameha III Road and pools in the cul-de-sac—often for days. (Photo #1 below). At times it overflows the cul-de-sac and leaves a sludge in the bay (Photo #2 below).

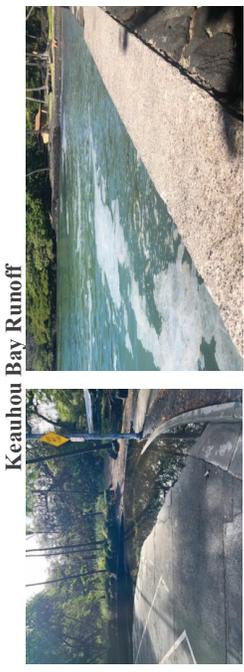

The KBMP acknowledges that “a select portion” of the Project Area may experience passive flooding caused by sea level rise (“SLR”). (DEIS 4.16.5 at 4-180, “Adverse Environmental Effects that Cannot be Avoided”) The DEIS should acknowledge that SLR will affect the Ka`i`i linehe Recreation Corridor and in particular the water, wastewater, power and telecommunications infrastructure that are now located in the corridor.

**4.10 Recreation at 4-114**  
 The DEIS concludes that: “The Project will not significantly impact the availability of recreation opportunities in the Kona District.” This may be true except for the potential of increased motorized small boat and other motorized marine recreation equipment, such as ski-dos and motorized paddle boards on the waters of the bay. Unlike the larger vessels moored in the bay, these Vessels Moored Elsewhere (“VME”) are often operated by less experienced individuals and can move at high speeds. Both of which pose hazards to those operating without motors in this admittedly “small” bay. (DEIS 1.2 at 1-11). These include not only outrigger canoe paddlers, but also swimmers, snorkelers, scuba divers, fishermen, honu, nai a, hāhālua, and `ilio holo i ka uaua.

Sometimes KCC can put as many as 10 hulls on the water, and on race days it’s considerably more. Our practices include keiki between 8 and 11 years old and youth up to 18 years of age. KCC steersmen and coaches report being surprised by fast moving, motor vessels, some of whom do not observe the “no wake” zone in the bay. A collision with a motorboat could be especially tragic for these young paddlers and their families.

The DEIS understandably focuses on the KBMP, which is primarily a plan to develop, manage and maintain KS uplands in the vicinity of Keauhou Bay—not the waters of the bay itself. Yet some (perhaps much) of what is done on the uplands surrounding the bay can affect those who use the waters of the bay. The potential infrastructure issues discussed below are among those.

So are the adverse effects of adding 15 more onshore parking spaces to accommodate trailers for motorized VMEs. See, DEIS 3.2.5 at 3-78, Table 3.2 at 3-79, and Fig. 3-64 at 3-81. (Describing 7 new boat trailer parking spaces in the current boatyard on the north end of the Project Area) and Fig. 3-65 at 3-82 (Describing plans for 8 more on the south end of the Project Area.) Before allowing more parking of VME trailers, the DEIS should examine the potential safety issues arising out of allowing more motorized VMEs unlimited access to Keauhou Bay and the conflicts that poses to traditional, non-motorized uses of this confined bay.

**Photo #1 Cul-de-Sac (July 31, 2024)**  
**Photo #2 Ka`i`i linehe Corridor Wall (December 4, 2020)**

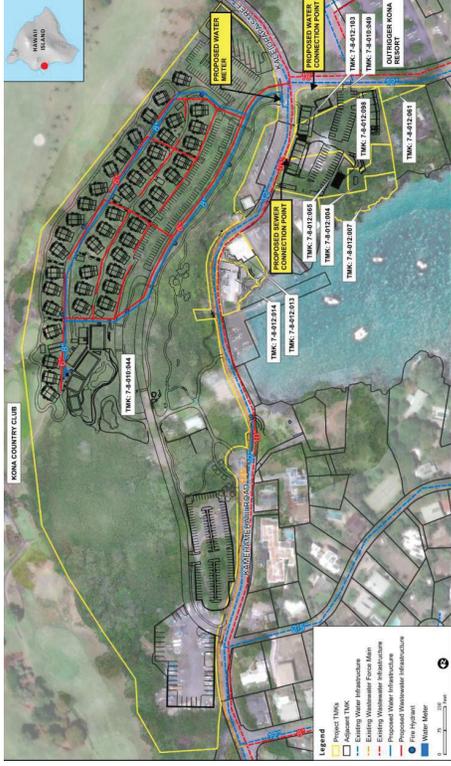

The mitigation measures discussed at DEIS at 4-85 & 86 do not account for this level of runoff, much less its effect on Keauhou Bay. More effective mitigation measures are needed, and the construction phase of this Project is an ideal time to implement them.

**4.7 Natural Hazards at 4-107**  
**4.7.6 Climate Change and Sea Level Rise**  
 The EIS acknowledges that a significant amount of sea level rise is expected in the project area and plans for up to 3.2 feet by 2100. See, DEIS 4.7.6 “Climate Change and Sea Level Rise” at 4-107. “The primary means of mitigation for the KBMP is avoidance.” *Id.* “Potential Impacts and Mitigation Measures” at 4-109. As discussed below (DEIS 4.12 “Infrastructure and Utilities”), the water and sewer infrastructure along with telecommunications and electrical lines are located in the Ka`i`i linehe Recreation Corridor, buried behind the old seawall in the center of the photo below. See, Fig. 3-13 at 3-19.

**Figure 3-13 Ka`i`i linehe Recreation Corridor**  
 Keauhou Canoe Club  
 Comments to KBMP DEIS  
 SIGNED (8/5/2024) 5

**4.12 Infrastructure and Utilities**

**Figure 4-43 at 4-139 "Water & Wastewater Infrastructure Map"**

**4.12.1 Water Supply** at 4-136  
 The existing water main that will supply the Project passes through the near shore area. (See, Dashed blue line in Fig. 4-43 above.) The EIS acknowledges that this area will be impacted by SLR but does not propose any future action. A potable water main break will have minimal effect on the bay but would severely affect all of the tenants and users of the bay. This main has broken in the past. This risk could be mitigated by relocating the water main to the Old Kona Road.

**4.12.2 Wastewater Treatment and Disposal** at 4-142  
 A wastewater force main and other wastewater infrastructure also pass through the near shore area. (See, Dashed orange (force main) and red (other infrastructure) lines in Fig. 4-43 above.) The EIS acknowledges that this area will be affected by SLR but does not propose any future action other than increasing the amount of sewage that will be flowing through the sewer line. (See, DEIS 4.12.2 at 4-142.) A SLR induced wastewater line break in this area is predictable. It will have a devastating impact on the bay and will severely affect all of the tenants and users of the bay—perhaps shutting down the commercial operations for months. The potential liability is likely to be substantial. In the recent past the wastewater force main has been exposed by high surf events. This risk should be mitigated (in fact avoided) by relocating the wastewater force main and other wastewater infrastructure to the Old Kona Road.

**4.12.4 Power and Telecommunications** at 4-144

Electrical and Telecommunications lines also pass through the near shore area. The EIS acknowledges that this area will be affected by SLR but does not propose moving these lines. This risk should be totally mitigated by relocating the electrical and telecommunications lines to the Old Kona Road.

**4.12.6 Beach Restoration (New)**

The existing rock seawall between the two shoreline access points in the Ka'i'i Ilihehe Recreation Corridor (Figure 3-13 above) is in poor condition, and the makai side is continually eroded in high surf events. If the water, wastewater, power, and telecommunications lines running behind the wall are relocated to a safer and more resilient location along Old Kona Road then this wall might be removed. The shoreline could then be restored as the beach that existed prior to the wall being built. This would likely be more resilient and provide an improved amenity for bay users. It would also be a step toward recovering what Keauhou Bay used to be for the whole community.

**4.16 Probable Impacts and Other Considerations**

**Under HAR II-200.1**

**4.16.1 Cumulative Impacts** at 4-176

As already discussed, the potential for increased conflict between motorized and non-motorized use of the bay is a cumulative impact that the DEIS should more fully consider before increasing the parking areas for VMEs.

**4.16.5 Adverse Environmental Effects that Cannot be Avoided** at 4-180  
 This section states "Upon completion of the Project environmental accidents are not anticipated, however if an environmental accident is to occur, DOH will be notified immediately." When the wastewater force main breaks it will be too late for DOH to do anything to save the bay. The EIS has acknowledged a 3.2ft. sea level rise. These are predictable adverse effects that can be avoided by moving wastewater infrastructure further from the shoreline. Reconstruction of the Old Kona Road seems like an ideal and more cost-effective time to undertake this important mitigation instead of in response to a predictable environmental disaster.

**4.17 Unresolved Issues** at 4-180

**Keauhou Canoe Club Specific Issues**

KCC would like to explore ways in which it might have a supporting role to play in the implementation of the KPMB. Figure 3-35 below at 3-36 of the DEIS is a comprehensive rendering of the Project Area illustrating the approximate location of KCC's hālau, boat racks, and canoes. The hālau is the sizable blue rectangle mauka of the bay in a green field with a proposed expansion area adjacent to the

northeast. The existing boat racks are sketched at the rear of the hālau, and canoes are sketched makai and downslope from the hālau near the bay.

**Figure 3-35 Proposed Keaouhou Bay Improvement Plan (2023) at 3-36**

Keaouhou Canoe Club is grateful for being included in the KBMP. KCC also knows that Kamehameha Schools has put extraordinary thought, effort and expense into producing the KBMP and the DEIS. We also express our appreciation for the several ways in which the DEIS recognizes the role KCC has played in the life of Keaouhou Bay.

We do have the following specific questions; although, they are not raised by the EIS. The KCC KBMP Working Group Committee would be very grateful for an opportunity to meet with KS to discuss the following questions and others that may arise.

- 1) Are there ways in which KCC might more actively promote the KBMP goals in closer cooperation with KS?
- 2) How will increased tourist activity and reconfiguration of KCC's footprint affect KCC's access to the bay?
- 3) How will the KBMP affect race practices, other training, canoe races, and use of the imu for club gatherings and pā'ina?

**4) Operational Matters**

- a) Will the KCC hālau remain where it is, or will it have to be moved?
- b) Will KCC be required to construct a "compliant" hālau structure?
- c) Will KCC have access to a secure place on site to store and repair canoes?

These Comments may be signed and submitted electronically and as originals or copies, which shall all be treated the same as originals.

**RESPECTFULLY SUBMITTED  
KEAOUHOU CANOE CLUB**

## Manta Pacific Research Foundation

Aloha, I am writing to express my support for the Keauhou Bay Management Plan and the draft EIS. I have been scuba diving at Keauhou since I logged my first manta ray night dive on August 13, 1985. In the intervening 38 years, and over 14,500 logged scuba dives, I've seen very few improvements to the infrastructure surrounding the bay despite a giant increase in the recreational and commercial use of the bay. I have been fortunate to see the Kamehameha presentation of their proposed plans to improve the shore facilities twice. They display a commitment to improving the area culturally, structurally, recreationally and commercially. I think they seem to have a good plan to greatly improve the land around Keauhou Bay for the community, the environment and Kamehameha schools. Please advance the proposed improvements to Keauhou Bay. Thank you.  
Sincerely Keller Laros Chair Manta Pacific Research Foundation

Re: Comments on Kamehameha Schools, Keaouh Bay Management Plan, Draft Environmental Impact Statement

Aloha,

The Sierra Club of Hawaii, Hawaii Island Group is providing comments on the applicant's Draft Environmental Impact Statement.

#### Summary

Keaouh Bay is one of seven royal centers located on the Kona coast and, therefore, one of the most historically and culturally significant wahi pana in the state of Hawaii.

The applicant acquired the properties associated with this DEIS in 1887. In the ensuing years until the present time, an immense amount of damage and destruction has occurred to the historic, cultural, and environmental resources of this wahi pana. The kanaka maoli 'ohana of this ahupua'a have suffered great harm and disenfranchisement from this 'aina and the traditional and customary practices developed over several centuries.

For instance, the DEIS states: "Beginning in the 1960s to current, residential, resort, golf-course, and other tourist-related development in the Keaouh area have drastically changed the landscape. Additionally, other key events such as the Kuleana Acquisition Program initiated in 1964 by Kamehameha Schools predecessors resulted in the unfortunate displacement of Native Hawaiian families from Keaouh Bay".

Because of the cultural significance of this wahi pana and the history of damage, harm, and destruction that has been inflicted upon it as a result of prior tourism-related development and other past actions, the management strategies related to the perpetuation of tourism-related development are inappropriate.

The DEIS states, "The EIS will consider four alternatives to the Proposed Action:

1. No-Action Alternative
2. Higher Density Development Alternative (also known as Highest and Best Use (HBU))
3. Housing Alternative
4. Conveyance Alternative"

None of these four alternatives are appropriate, given the history of and existing conditions on and around this wahi pana.

The most appropriate proposed action would be one which perpetuates ho'oponopono between the past, the present, and the future.

Such a proposed action would:

- 1) remove tourism-related development strategies,
- 2) remove economics as a primary evaluation criteria, and
- 3) change the paradigm of this wahi pana being a commercial property to a center for cultural restoration and perpetuation.

Please respect and honor the memory and mana'o of kupuna Lily Makuahine Namakaokaia Haatio Kong: <https://vimeo.com/manage/videos/994680462/privacy>

#### DEIS

##### "2.6 Key Issues and Concerns

The following critical issues were identified between 2016 and 2019 during the planning process for the KBMP and are further described in this section: 1. The integrity of natural and cultural resources is threatened in the absence of a long-term comprehensive management plan. 2.

Kamehameha Schools properties at Keaouh Bay are underperforming economically. 3. Incompatible uses at the bayfront create conflicts between users and disrespect for wahi pana. 4. Kamehameha Schools lands at Keaouh Bay are underutilized for educational programming. 5. Existing circulation patterns create congestion and safety concerns.

2.6.2 Lands are Underperforming Economically. The Kamehameha Schools properties are prime properties that could generate significant revenues from appropriate development to support the management of Kamehameha Schools assets and provide long-term economic returns. However, these lands are currently underutilized, and do not yield equitable returns or market-based rent revenues for the organization. A key component of the plan is to ensure its economic sustainability. Revenue generated from commercial lease rent will be redirected to support the KBMP's desired educational and cultural resource management priorities.

## 2.8 Evaluation Criteria

2. Develop revenue generation opportunities that are appropriate in scale, function, and location and that align with the overall focus on the history of the bay.”

### Comment

While economic sustainability is essential to the applicant and the applicant has been very successful in increasing economic health and well-being, the most appropriate redevelopment actions for the wahi pana under the ownership and management of the applicant are ones in which restoration, preservation, and perpetuation of culture are the primary strategy.

### DEIS

#### 3.1.1 Kamohoali'i

The Kamohoali'i Zone (Figure 3-5) gets its name from a historic heiau that was once found at the bayfront. Although the heiau is no longer extant, Kamohoali'i continues to be a place of ceremonial and spiritual use. Ceremonial use is primarily associated with the birth of Kauhikaouli in 1814. His birth was honored with the construction of one (possibly two) heiau and the largest hōlua in the Hawaiian Islands, Hōlua Kāneaka. Commemoration of Kauhikaouli's birth is carried out at his birth place, recognized officially as a historic site (Figure 3-3). Multiple versions of his birth story indicate that the birth of Kauhikaouli, from the time Queen Ke'ōpūlani went into labor to the time she gave birth and until the infant was resuscitated by a kahuna, occurred in the vicinity of the birthstone site. In addition to the birthstone, the Kamohoali'i zone includes other significant cultural features such as Kūhalalua/Kaopa Spring, Ho'okūkū Pond, the cliff walls of 'Ahu'ula, as well as amenities such as the lānai and platform adjacent to the spring where the infant Kauhikaouli was cared for following his revival.

#### 3.1.2 Kāmau'ai

The Kāmau'ai Zone (Figure 3-9) gets its name from a traditional heiau, Kāmau'ai that is believed to have been located at the top of the 'Ahu'ula cliff (Figure 3-10). The heiau was associated with the akua Kane and his introduction of food plants to the region. The heiau is no longer extant, however the place name has endured as well as the cultural understanding that certain places continued to hold mana (ancestral power). The name is used as the physical boundary between Keauhōu 1 and Keauhōu 2 āhupua'a. The place name 'Ahu'ula refers to the feather cloaks worn by the ali'i and to the strict kapu enforced in the vicinity of 'Ahu'ula Cliff, which was reserved only for the ali'i and their retainers who resided there. As a chief of the highest rank, such as Ke'ōpūlani, commoners could not be caught in the path of her shadow due to certain kapu. During the morning when the sun cast a shadow seaward towards the pali of 'Ahu'ula, travelers were directed to swim across Keauhōu Bay. In the afternoon, when shadows fell inland, travelers could pass the area on foot, as long as they kept a respectful distance behind the pali. The Kāmau'ai Zone encompasses the land atop the 'Ahu'ula cliff to Old Kona Road, a private road owned by Kamehameha Schools, that travels north to south. Though full of scrub vegetation today, this area afforded more open panoramic views in the mauka and makai directions. The terrain is near 50 ft. elevation and is undulating and slopes gently toward the ocean. During the Māhele, there was at least one kuleana house lot on the topside cliff, and archaeological remains suggest there may have been more. The house lots were defined by rock

walls and had “kuleana vegetation.” Kuleana vegetation refers to vegetation that was documented growing within house lots at Keauhōu Bay in the mid-1800s. Kuleana vegetation can include trees known to have been planted as useful household vegetation such as niu (Cocos nucifera), kou (Cordia subcordata), loulu (Pritchardia spp.), hala (Pandanus tectorius), hau (Hibiscus tiliaceus), and noni (Morinda citrifolia). Remnants of house foundations and walls from these house lots were disturbed during construction of the golf course mauka of the Old Kona Road.

#### 3.1.3 Ka'ili'i'ilinehe

The Ka'ili'i'ilinehe Zone (Figure 3-11) takes its name from the Ka'ili'i'ilinehe Beach that is nestled into the head of the bay. Traditionally, Keauhōu Bay was known for its 'ili'i (pebbles) that roll with the motion of the waves. As such the famed saying “ka'ili'i'ilinehe o Keauhōu” or “inhe 'ili'i o Keauhōu” translated roughly as the rustling pebbles of Keauhōu was used as a term of endearment to refer to Keauhōu's youth (Kahoiwai 1888; Kalawaiapūma 1888).

Ka'ili'i'ilinehe Beach once extended along the entire bayfront. What remains today is a small remnant of that early natural pebbled beach as portions of the shoreline have been hardened with seawalls, wharf, and piers (Figure 3-12 and Figure 3-13).

Adjacent to the sandy beach area today is Ka'ili'i'ilinehe Beach Park, a privately Kamehameha Schools managed and maintained park with picnic tables, barbecue pits, and a comfort station for public use. The Ka'ili'i'ilinehe zone is also home to the Keauhōu Canoe Club, who entered a lease agreement with Kamehameha Schools for the use of the area for their club operations and canoe storage (Figure 3-14). The club has an open-air wooden pavilion for storing canoes and holding special events. Access to the pavilion is via the Old Kona Road from the north via Kamehameha III Road to an unimproved parking area. A portion of this zone is also used for volleyball activities by various users (Figure 3-15).

#### 3.1.4 Kaimukī

The Kaimukī Zone (Figure 3-16 and Figure 3-17) is named for a pit known as Kaimukī. Kaimukī translates to “the oven for ti root”. This area was known as the birth site of the celebrated medical kahuna Kamali'ikane, of the class that skillfully diagnose by feeling over the body (kahuna hāhā).

The Kaimukī Zone is a 2.72-acre area bordered on the east by Kaleiopapa Road and on the south by 'Ehukai Street (Figure 3-16). The western portion of the parcel has been bulldozed and is currently occupied by Adventures in Paradise as a storage facility. The southeastern corner of the parcel contains a maintained lawn planted with coconut trees and a large, mortared stone foundation for a welcoming sign to the hotel and the bay.

#### 3.1.5 Kāneaka

The Kāneaka Zone (Figure 3-18, 3-19, and 3-20) takes its name from the Hōlua Kāneaka Slide. He'e hōlua, or land sledging, was a favorite sport of the ali'i. It was typically performed on the slope of a hill over a course either laid out on the ground or artificially built up. The course was covered with stalks of pili grass stripped of the blade and laid evenly and then lubricated with kukui (Aleurites moluccanus) oil. Midday was the favorite time for the sport when the heat of the

sun made the grass slippery, and the sled could then attain terrific speed. The Hōlua Kāneaka Slide at Keaouhou is the largest and best-preserved slide in the State of Hawai'i. The hōlua slopes downward for approximately 1,300 ft., from the top of a hill and terminates at Ali'i Highway. Although there is no evidence of the Hōlua Kāneaka within the Project Area today, archeologists estimate the hōlua once spanned 4,000 ft. and traversed the Kāneaka Zone to deposit riders into He'ia or Keaouhou Bay. The Kāneaka Zone is bordered by the Kona County Club in the mauka direction and the Old Kona Road in the makai direction. An approximately 11,040 sf. portion of the golf course's greens encroach onto Kamehameha Schools property at the mauka most portion of this zone (Figure 3-1). The Old Kona Road at one time provided a thoroughfare across the bay. Presently, only the northern portion of the road is in use and access is managed by the Keaouhou Canoe Club (Figure 3-21). The southern portion of the road has essentially been abandoned and overgrown with vegetation (Figure 3-22). Portions of the Kāneaka Zone have been previously disturbed by the construction of the Kona County Club's golf course which was constructed in 1966. The area today is primarily dominated by invasive guinea grass (*Megathyrsus maximus*) and koa haole (*Leucaena leucocephala*) (Figure 3-23). A portion of the historic Kau Cemetery was also once located in the Kāneaka Zone to the north of the hōlua alignment. No evidence of this cemetery remains today. The burials may have been relocated during the 1964 Kuleana Acquisition Program in which Native Hawaiians were displaced and burials relocated. The cemetery may also have been relocated as part of the golf course construction. At the northern end of the Kāneaka Zone is an existing approximately 14,500 sf. unimproved parking lot used for boat trailer storage and visitor parking (Figure 3-24). Kamehameha Schools has entered a license agreement with a commercial tenant who manages this lot and charges a fee for boat storage/parking use."

**Comment:**

The description of these zones contain a litany of damage and destruction, much of it occurring after plan approvals that were opposed by lineal and cultural descendants. This supports a proposed action in which the true nature of these properties as a wahi pana is recognized and additional tourism-related development does not occur is the most appropriate one.

**DEIS**

"Specific planning strategies and key targeted actions were developed that ultimately provided the decision-making framework that guided the completion of the KBMP. The KBMP is organized into five (5) primary Management Strategies as presented below:

1. Establish a Heritage Management Corridor • Relocate existing commercial activities fronting the birth site and repurpose existing facilities for cultural and educational activities. • Protect cultural lines of sight and view planes from the birth site area and 'Ahu'ula Cliff. • Continue a walking path to extend from the current birth site area towards Mo'ikeha Cave. • Maintain a buffer and open space corridor within the alignment of Kāneaka Hōlua path.
2. ~~Reposition and Development of New~~ Commercial Bayfront Areas & ~~Appropriate Density~~ • Develop several low-rise buildings to encompass a total of approximately 14,000 SF retail/dining space to accommodate the relocation of commercial operators from the bay front area, possible complementary retail uses, and potentially allow space for existing ocean recreation operators who currently do not have a physical presence or

official check-in location at the bay. • Address the opportunity gap within Kona's existing visitor accommodation inventory through the provision of an appropriately defined density for a low-impact lodging on the upper mauka plateau of 'Ahu'ula Cliff. Reorient Recreational and Community Use • Reorient the area of use by the Keaouhou Canoe Club to re-organize the extent of formal and informal recreational uses of the area. • Establish a new 200-foot-wide open space corridor running mauka-makai from the Old Kona Road and upper 'Ahu'ula Cliff overhang to the beach front. • Expand the Ka'ili'ilinche Beach Park to connect to the mauka-makai corridor. • Provide improved parking for recreational users north of Kamehameha III Road. • Maintain passive open space along the top of the 'Ahu'ula Cliff plateau by establishing a pedestrian promenade along the Old Kona Road. • Establish a future community use area adjacent to Keaouhou Canoe Club. • Improve shoreline access for cultural and recreational activities. • Create a greater sense of inclusivity at the bayfront.

4. Maintain Existing and Establish New Place-Based Cultural Educational Areas • Repurpose the existing buildings adjacent to the birth site area to become a part of a cultural learning center and heritage center. Keaouhou Bay Management Plan Draft Environmental Impact Statement 1-15
5. Manage Vehicle, Boat and Pedestrian Circulation Through the Bayfront Village • Provide improved parking areas for recreational users, local residents, and area visitors with clear points of access. • Revitalize Old Kona Road to relieve congestion at the bayfront and provide a north-south connection. • Seek to collaborate with State Department of Land and Natural Resources (DLNR) Division of Boating and Ocean Recreation (DOBOR) to consider additional boat-trailer parking during active use. • Consider an agreement with DOBOR and Hawai'i County to manage vehicle loading and unloading activities at the pier and adjacent facilities. • Create new wayfinding throughout the area, inclusive of landscaping, signage, reflection points and an entry feature.

All five Management Strategies must operate in tandem for the KBMP to be holistically successful. Accordingly, the Proposed Action is defined as the implementation of the five Management Strategies at Keaouhou Bay."

**Comment:**

The most appropriate proposed action would remove the stuck-through language from the five Management Strategies.

**Comment:**

The DEIS, Volumes I&II contain numerous descriptions of sites that have been destroyed or damaged over the years, many of them fairly recently. A comprehensive list of sites that have been destroyed and their location should be presented in the DEIS. The circumstances that resulted in the destruction and/or damage should be presented. For instance, Site 1660 location of Site 1660 is not listed in Vol. I. The date and circumstances surrounding the destruction of the Kamau'ai Heiau are not presented.

Comment:

In 2009, the State Historic Preservation Board refused to delist the Pua'u II complex in Wai'alea from the state and National Register of Historic Places because it still existed based upon Hawaiian cultural beliefs. This determination provides further justification for this wahi pana to be redeveloped and restored in a manner consistent with the traditional and customary practices associated with this wahi pana.

DEIS Volume II, Appendices

Comment:

There is no Table of Contents for Volume II.. Users must "seek-and-find" the Appendix.

Comment:

Appendix A, EISPN Scoping Meeting Minutes, 4/12/22:  
Summary does not include whether or participant was cultural/lineal descendant. Does not include comments opposing resort hotel for cultural/historic reasons.

Comment:

Appendix B= EISPN Comment Letters:

No summary listing of comment letters

No page numbers.

No determination of whether commenters are cultural/lineal descendant.

Comment:

Appendix C, Cultural Impact Assessment, April 2022 (Revised November 2022):  
CIA only contains four interviews. The CIA consultant outreach effort only met minimal requirements for public notice and outreach. CIA consultant did not reach out to individuals and organizations that participated in 4/12/22 EISPN Scoping Meeting and/or submitted EISPN comment letters prior to the CIA's publication in November 2022 who identified themselves in as being parties related to the project as cultural/lineal descendants or traditional and customary practitioners.

DEIS Appendix C, p. 95, "Between July and September of 2022, SWCA Environmental Consultants completed the fieldwork for a supplemental archaeological inventory survey (Reeve 2022) for Land Area 6, comprised of seven TMKs: (3) 7-8- 010:049, (3) 7-8-12:004, 007, 061, 065, 098, and 103 and makes up the westernmost section of the project area (see Figure 62). A portion of their survey area was previously investigated by Haun and Henry (2005b) who documented two sites, Site 24215, a modified overhang and Site 24216, a historic habitation complex. As a result of SWCA'S fieldwork, Site 24215 was not relocated due to a dense ground cover of night blooming cereus and only four of the five features originally associated with Site 24216 was relocated. **Reeve (2022) concluded that the unlocated feature was likely destroyed**

**from recent bulldozing activities.** Furthermore, Reeve (2022) found that Site 24216 forms part of a larger historic residential complex and recorded six additional sites, which they assigned temporary site numbers. The newly recorded sites include a property boundary wall (Keaouhou-001), a historic cement slab foundation (Keaouhou-002), baitcups (Keaouhou-003), a platform and wall (Keaouhou-005), another cement slab foundation likely associated with habitation or commercial activities (Keaouhou0006), and another property boundary wall (Keaouhou007). Two test units were also excavated in which marine shell midden, lithic debitage, small waterworn pebbles, modern debris, historic glass, ceramic artifacts, and volcanic glass fragments were recovered. Detailed analysis and report finalization has yet to be completed."

Comment:

This site was destroyed "from recent bulldozing activities". Did the applicant submit a permit for this activity? If not, has the applicant taken action against the bulldozer operator? The destruction of this site and many others provides further support for a proposed action that ho'oponopono the destruction in this wahi pana..

DEIS, Appendix C, p. 97-"Their study resulted in the identification of three newly identified sites (Sites 1608.1, 1608.2, and 1608.3; all identified during the 2021 fieldwork), the relocation of three preservation sites (Sites 4348, 24263, and 24264), and two of three data recovery sites (Sites 24261 and 24266). The third data recovery site (Site 5674) was not relocated due to dense and impenetrable vegetation. The location of these sites are shown above in Haun et al. (2021) site location map (see Figure 66). Site 1608.1 and 1608.2 were preliminarily interpreted as historic habitations with associated features and Site 1608.3 as a historic cattle wall. Haun et al. (2022:55) found these sites to be in poor condition and tentatively assessed them as significant under Criterion d and noted the "following [AIS-level] documentation these sites will likely be recommended for no further work. Site 4348 (Kauikeaouli Birth Stone), Site 24263 (Ho'okūkū Pond), and Site 24264 (Mo'ikeha Cave) were previously recommended for preservation by Haun and Henry (2005a). All three sites were considered significant under Criteria d, and e; Site 4348 was also considered significant under Criterion b and Site 24263 under Criterion c. Site 24261 and 24266 were recommended for data recovery by Haun and Henry (2005a), found to be in fair condition and were assessed as significant under Criterion d. **Although the third data recovery site (Site 5674) was not relocated during this survey, it was assessed by Haun and Henry (2005a) as significant under Criterion d. Concerning the Trail to Keaouhou (Site 15243), no surface remains identified and Haun et al. (2022) noted that the ground surface in this area had been mechanically grubbed. Similarly, Haun et al. (2022) did not identify any remnants of Trail to Kainaliu (Site 24259). Regarding the Kau Cemetery, Haun et al. (2022:20,29) noted that "[t]he remains of the cemetery appear to be situated on a small rocky knoll, with the eastern two thirds of the cemetery having been destroyed by the construction of the adjacent golf course. A section of formed concrete, believed to have been a portion of a disturbed grave, possibly a capstone fragment, was also identified in the**

**Kau Cemetery area. Furthermore, Haun et al. (2022) hypothesized that Site 24261, which was described as a permanent habitation structure, may actually be associated with the Kau Cemetery.”**

Comment:

The DEIS should provide further information about the destruction of the cemetery, the impact on iwi kupuna, and what, if any, mitigation occurred. The destruction of these sites and many others provides further support for a proposed action that ho’oponopono the destruction in this wahi pana and that further resort- and tourism-related development is inappropriate.

Comment:

DEIS Appendix D: “Archaeological Reconnaissance Survey” is improperly titled. Appropriate legal title is “Archaeological Inventory Survey”. Report has no table of contents or page numbers and is improperly presented.

These comments were the result of HIG volunteers and do not represent a complete review of the DEIS.

Mahalo for this opportunity to comment.

## West Hawaii Surfing Association

Keauhou Bay is still worth saving for once destroyed it won't be the same. Aunty Lily Ha'ano Kona who was born here spoke the same, we don't want Waikiki.  
Keep it special open and respect our lands and let it be.  
For the now and next generation for our Keiki's.

**Individuals**

## Pat Aarhus

Vote No on Proposed development of Keahou Bay- leave bay as it is- Pleade & Thanks, Pat Aarhus

## Alexia Aberee

Kamehameha School's Bungalow Resort Development will clear land that has been protecting Keahou Bay from golf course runoff pollution for years, and the development will kill an entire ecosystem.

The "Natural Ground Cover has 10% runoff, where as development has 55% runoff..." This was taken from NOAA's website and it proves the natural land has been soaking up the above golf course pollutions before it runs into the bay for years.

"Golf courses kill coral reefs and fisheries: harmful algae blooms and disease cause by nutrient runoff from golf course development..." This info was taken from Global Coral's website.

"Coastal development and runoff lead to sedimentation, which directly impacts coral recruitment, growth, mortality, and ecosystem services that coral reefs provide." This info is from Environmental Evidence Journal website and proves the development will kill coral and marine life.

Kamehameha Schools say they need money and that's why they want to Develop a Big Bungalow Resort in small, historical Keahou Bay. They have already developed lands they could use to make money from that they hardly use, but for their Private Events. Please watch the videos at the bottom to learn more about this.

Listen to Kupuna Kumu Lily Kong's video below. She is a Keahou Bay Hawaiian descendant who opposes development. Stand with her by giving your time to 5 Easy Steps below and HELP Save Keahou Bay.  
MAHALO!!

Claude Acoba

Very Supportive of this project! Believe this is the best use of land to provide resources for protecting historical landmarks and the Bay Area. Would rather see this type of development than more homes for high wealth families who are not local to the island. We need to preserve and continually educate the tourists and local residents who use this great asset.

Lillian Ah Nee

To Whom it May Concern,  
Please REJECT Kamehameha Schools Environment Impact Statement (EIS) for Keaouhou Bay to become a Bungalow Resort.  
Please acknowledge that a Bungalow Resort WILL have a SERIOUS NEGATIVE IMPACT on Keaouhou Bay as stated in all the different researched articles below.  
Please, DO NOT risk polluting the water in Keaouhou Bay by allowing Kamehameha Schools to develop their bungalow resort project. It is scientifically proven that developments pollute nearby waters both during and after development.  
I am in full agreement with the National Oceanic and Atmospheric Administration (NOAA), Global Coral Reef Alliance, Hawaii Government, and many other professional organizations, that have studied and shown that developments have ALWAYS polluted the water in EVERY coastal development area.

Please see attached PDF for detailed letter on the multitude of negative impacts facing Keaouhou Bay from this proposed development.

Mahalo for your time and consideration,  
Lillian Ah Nee

To Whom it May Concern,

Please **REJECT** Kamehameha Schools Environment Impact Statement (EIS) for Keaouhou Bay to become a Bungalow Resort.

Please acknowledge that a Bungalow Resort WILL have a **SERIOUS NEGATIVE IMPACT** on Keaouhou Bay as stated in all the different researched articles below.

Please, DO NOT risk polluting the water in Keaouhou Bay by allowing Kamehameha Schools to develop their bungalow resort project. It is scientifically proven that developments pollute nearby waters both during and after development.

I am in full agreement with the National Oceanic and Atmospheric Administration (NOAA), Global Coral Reef Alliance, Hawaii Government, and many other professional organizations, that have studied and shown that developments have ALWAYS polluted the water in EVERY coastal development area.

#### ENDANGERED SPECIES CONSERVATION IMPACTED BY DEVELOPMENT

In the Endangered Species Act of 1973 Under Section 2 (b), "To provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved." This would be Keaouhou Bay.

The Green Sea Turtle swims in Keaouhou Bay weekly and the monk seal has also been seen swimming and resting in Keaouhou Bay. Both of these marine animals are on the endangered species list.

#### Endangered Species Act

"Section 2. Findings, Purposes, and Policy

(4) the United States has pledged itself as a sovereign state in the international community to conserve to the extent practicable the various species of fish or wildlife and plants facing extinction, pursuant to—

(b) PURPOSES.—The purposes of this Act are to provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved, to provide a program for the conservation of such endangered species and threatened species, and to take such steps as may be appropriate to achieve the purposes of the treaties and conventions set forth in subsection (a) of this section."

This was taken from

<https://www.fisheries.noaa.gov/national/endangered-species-conservation/endangered-species-ac>

#### FEDERALLY PROTECTED GREEN SEA TURTLES WILL BE AFFECTED

The green sea turtle is federally protected and can be seen in Keaouhou Bay weekly.

The following article that states: "POLLUTED RUNOFF IN HAWAII ENDANGERS GREEN SEA TURTLES"

Why does Hawaii have a runoff problem?

Historically, in the tropics of Hawaii, precipitation was absorbed into the soil, according to the Clean Water Branch of Hawaii's Department of Health. Any potential pollution or contaminants on the ground surface would get pushed into the soil by the rain, and plant roots and microbes would help break down the pollution into less dangerous components. However, with urban and agricultural development, less and less of the pollution gets pulled into the soil, and more of it gets washed out into storm drains. From there, the pollutants make their way to streams, rivers and the ocean that surrounds Hawaii. According to the state agency, most of these contaminants are nutrients from fertilizer, bacteria from animal waste, oil, garbage and yard waste...

If polluted runoff reaches the ocean, it can wreak havoc on marine life, including endangered green sea turtles." Taken from <https://www.chemservice.com/news/polluted-runoff-in-hawaii-endangers-green-sea-turtles/>

**Allowing this development WILL POLLUTE Keaouhou Bay.** The above article, written in 2014 (because runoff water from developments were polluting the ocean even then!!) states this fact clearly, Keaouhou Bay is home to countless sea creatures such as the protected green sea turtle, spotted eagle rays, mania rays, octopus, dolphins, fish, coral, monk seals, and more and that will ALL be harmed by the severe pollution runoff that WILL happen because developments have been shown to ALWAYS pollute the water is that is nearby.

The Green Sea Turtle is protected by more than one law. "All sea turtles in Hawai'i are protected by the Endangered Species Act (ESA) and additionally protected by Hawai'i Revised Statutes Chapter 195D (HRS) and Hawai'i Administrative Rules (HAR) 13-124." This information was taken from this site <https://dlnr.hawaii.gov/dar/species/sea-turtles/>

## THE ENDANGERED MONK SEAL WILL BE AFFECTED

Keauhou Bay is known as a RESTING AREA for the ENDANGERED MONK SEAL. If another resort is allowed to be built, in addition to the pollution, it will also bring more people down to Keauhou Bay. This increases the chances of a resting monk seal being disturbed by humans trying to get close, take "selfie" photos, and being generally uninformed and harmful.

Has the EIS done any research on what an increased population would do in such a small area, and what will happen to the endangered species that live there? With a significantly increased population their habitat of Keauhou Bay will likely be changed forever.

This information is from a NOAA Scientist: "Study shows selfie culture impacts how people behave when posting images of an endangered species on social media. There's a seal on the beach! Let's go get a 'selfie!'" That must have been what nearly 18 percent of people on Instagram thought before approaching an endangered species.

In a recent study, NOAA scientists used social media to monitor human activities around endangered Hawaiian monk seals. They discovered that human disturbance is more common than they thought."  
<https://www.fisheries.noaa.gov/feature-story/endangered-hawaiian-monk-seals-cry-four-over-selfies>

NOAA clearly states a high population in a place where monk seals and sea turtles habitat can be a serious disturbance for these endangered species.

"Hawaiian monk seals are protected federally by the ESA and the Marine Mammal Protection Act (MMPA), as well as locally by Hawai'i Revised Statutes (HRS) Chapter 195D and Hawai'i Administrative Rules (HAR) 13-124." This was taken from <https://dlnr.hawaii.gov/dar/hawaiian-monk-seal/>

Keauhou Bay is the monk seal and the green sea turtle's habitat. Allowing a bungalow resort to be developed in Keauhou Bay, the habitat of these endangered species, is to threaten their life and habitat with golf course runoff pollution, as well as development pollution. By threatening their habitat, and hence their lives, this development goes completely against the Endangered Species Act of 1973.

The verbiage in the Endangered Species Act states, "to conserve". In this case, "to conserve" would be to protect the land around Keauhou Bay from developments that destroy the habitat of these endangered species with pollution and runoff.

Does this EIS have any reports on the endangered species that frequent Keauhou Bay? This is their habitat and it needs to be "conserved".

Under the Conservation Program there should be research done on endangered species and their associated ecosystems. A large bungalow resort development WILL FOREVER CHANGE THIS ECOSYSTEM.

"§195D-5 Conservation programs. (a) The department shall conduct research on indigenous aquatic life, wildlife, and land plants, and on endangered species and their associated ecosystems, and shall utilize the land acquisition and other authority vested in the department to carry out programs for the conservation, management, and protection of such species and their associated ecosystems."  
[https://www.capitol.hawaii.gov/hrscurrent/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hrscurrent/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm)

Also, under this same Conservation program, "(2) Taking such action as may be necessary to ensure that actions authorized, funded, or carried out by them do not jeopardize the continued existence of threatened or endangered species."  
[https://www.capitol.hawaii.gov/hrscurrent/Vol03\\_Ch0121-0200D/HRS0195D/HRS\\_0195D-0005.htm](https://www.capitol.hawaii.gov/hrscurrent/Vol03_Ch0121-0200D/HRS0195D/HRS_0195D-0005.htm)

Please consider that developing a Kamehameha Schools Bungalow Resort in Keauhou Bay WILL threaten endangered species due to the unavoidable development and golf course pollution runoff that would be caused by removing all the trees that currently serving as a natural pollution filter, and replacing the land with housing, cars, humans, and waste. There would also be tremendous runoff damage into Keauhou Bay and the surrounding area during the building phase of this enormous project.

GOLF COURSE POLLUTION KILLS MARINE LIFE AND DRASTICALLY CHANGES ECOSYSTEMS

"The golf industry uses approximately 50 pesticide active ingredients, including chlorpyrifos—an insecticide that is banned for residential use by the EPA due to developmental hazards. Having to trim golf turf to low heights also makes it even more vulnerable to pests, which leads to more pesticide use."  
<https://rainorshinegolf.com/pages/the-environmental-impact-of-golf-courses>

These pesticides will be in the pollution runoff that will enter Keauhou Bay more severely should the natural habitat of the trees be removed and replaced with pavement. This is unavoidable!

Most drains have a single large exit at their point of discharge (often covered by a grating) into a canal, river, lake, reservoir, sea or ocean. Other than catch basins, typically there are no treatment facilities in the piping system.

The pavement from this development will cause pollution to runoff into Keauhou Bay because this treed land that will become a housing development is situated directly between the golf course and the Bay. These trees, which absorb all the pollution from the golf course is the BEST AND ONLY PROTECTION POLLUTION FILTER Keauhou Bay has from the golf course pesticides, fertilizer and weed killer. See the below paragraph for further references.

See page 2 at:

<https://health.hawaii.gov/epo/files/2013/09/Stormwater-MS4-Presentation-HEF-7.15.14.pdf> where the Hawai'i government states that Natural Ground Cover has 10% runoff, where has development has 55% runoff. So, even if you have storm drains the pavement this development will create will cause more runoff into Keauhou Bay than the Natural Ground Cover that is has now, that has been protecting the bay from golf course pollution for years.

These trees and land are saving monk seals and green sea turtles habitat from the golf course pollution and this land MUST BE PRESERVED and CONSERVED as the natural protector for Keauhou Bay and for these endangered species habitat.

Under Section 2 (b) of the Endangered Species Act - Keauhou Bay MUST BECOME A CONSERVATION AREA for these endangered species. It is currently their habitat, and to allow a large resort development to be built above this bay clearly threatens the lives of these endangered species by allowing golf course toxic pollution and development pollution to run into these species natural habitat of Keauhou Bay.

#### ALGAE BLOOMS KILL CORAL AND MARINE LIFE

The trees that are slated to be cleared for the development further protect Keauhou Bay from algae blooms that have been proven to be caused by pollution that is runoff from fertilizer and weed killer.

When there is heavy rain the land above the bay has a greater runoff than normal. Without the trees, the runoff from the golf course pollution will pour into the Bay likely causing frequent algae blooms.

Algae blooms have been shown to kill coral and marine life as stated in the many articles that will follow.

One of these articles is from the Global Coral Reef Alliance. They have researched the effects on reefs before and after a golf course developments. Though this development is not a golf course development, it is located just below a golf course and exposes the bay to the pollution from the golf course by removing the proven natural filter of the trees and natural ecosystem.

Has this EIS done any kind of research about the algae blooms that happen after a serious storm because of the golf course runoff pollution?

This information was taken from Global Coral Reef Alliance and it is an actual study on the how coral and marine life are affected before and after development. It's titled, "Golf courses kill coral reefs and fisheries: harmful algae blooms and disease cause by nutrient runoff from golf course development on Guana Cay, Abaco, Bahamas

Introduction: Bahamas coral reef deterioration

This study is thought the first ever to evaluate the health of coral reef ecosystems and fisheries before and after a golf course development..The vast majority of corals have died from a combination of factors including global warming, new diseases, land-based sources of pollution. . . "  
<https://www.globalcoral.org/golf-courses-kill-coral-reefs-and-fisheries-harmful-algae-blooms-and-disease-caused-by-nutrient-runoff-from-golf-course-development-on-guana-cay-abaco-bahamas/>

If you allow a Bungalow Development in Keauhou Bay you WILL be agreeing to pollute this bay for years to come and COMPLETELY CHANGING and possibly DESTROYING KEAUHOU BAY'S ECOSYSTEM.

Another study by the Coral Reef Alliance titled, "Golf course fertilizer runoff causes nutrient enrichment leading to harmful algae blooms on a Bahamian coral reef.

"...After construction new algae blooms appeared nearest the golf course green, smothering corals in adjacent reefs, along with sharply increased coral diseases..."

<https://www.globalcoral.org/golf-course-fertilizer-runoff-causes-nutrient-enrichment-leading-to-harmful-algae-blooms-on-a-bahamian-coral-reef>

Does this EIS have any studies or reports on the extra runoff pollution due to clearing land and adding pavement?

This needs to be fully assessed because you will be changing an entire ecosystem to build a bungalow resort. It rains in Keauhou Bay many nights out of the year and this kind of pollution will kill the beautiful and necessary coral in the Bay.

**FURTHERMORE:** "If there are toxic algal blooms, like red tide, or man-made contaminants, like pesticides or detergents in the water, those toxins are contained within the bubbles of sea foam. When those bubbles pop, the toxins can become airborne and compromise the air that is breathed in that location."  
<https://oceanconservancy.org/blog/2023/03/31/what-sea-foam/>

#### ENGINE POLLUTION CAUSES ISSUES IN THE OCEAN

Does this EIS have any detailed traffic studies for the increase in cars that will be added to this already severely traffic area they want to build their 150 room bungalow resort in? Have they done any studies on the pollution these cars WILL have in Keauhou Bay?

Because this Bungalow Resort could have over 150 extra cars and over 300 or more extra people in and out of Keauhou Bay, what traffic and increased population studies have they done? There will be employees with cars, guests with cars, visitors with cars. At times this would range to over 200 cars (likely more), coming in and out of, and parking above Keauhou Bay thereby causing serious car population issues because of all these added cars right next to the bay.

The article below is from NOAA regarding motor vehicle engines and pollution to the sea.

What is the biggest source of pollution in the ocean?

Most ocean pollution begins on land.

"Millions of motor vehicle engines drop small amounts of oil each day onto roads and parking lots. Much of this, too, makes its way to the sea.

Some water pollution actually starts as air pollution, which settles into waterways and oceans. Dirt can be a pollutant. Top soil or silt from fields or construction sites can run off into waterways, harming fish and wildlife habitats."  
<https://oceanservice.noaa.gov/facts/pollution.html#:~:text=Millions%20of%20motor%20vehicle%20engines,Dirt%20can%20be%20a%20pollutant.>

Land-Based Runoff Remains Top Source of Oil in the Ocean, Says New Report Oil in the Sea: Inputs, Fates, and Effects

News Release September 28, 2022

WASHINGTON — Oil in runoff, primarily from cities and vehicles, is the top source of oil entering the ocean, says a new report from the National Academies of Sciences, Engineering, and Medicine. In North American waters, estimated ocean oil pollution from land-based runoff is up to 20 times higher than it was 20 years ago, and oil spills, natural oil seeps, and discharge from oil and gas operations remain major sources of pollution. The report recommends actions that government and others should take to minimize oil pollution, and calls for sustained research funding to better understand how oil reaches and affects ocean environments.

<https://www.nationalacademies.org/news/2002/05/oil-in-the-sea-inputs-fates-and-effects#:~:text=WASHINGTON%20%2D%20Nearly%2085%20percent,pipeline%20spills%2C%20says%20a%20new>

#### The Impact Of Stormwater – Car Emissions

"Car emissions are not limited to exhaust fumes that contribute to air pollution. They can also leak automotive fluid and release heavy metals that can contribute to stormwater pollution, contaminating local waterways."

<https://www.stormwatershepherds.org.au/blog/the-impact-of-stormwater-car-emissions/>

#### NOISE POLLUTION'S HARMFUL EFFECT ON MARINE LIFE

Does this EIS have any reports on the noise pollution that will happen and what it could do to marine life in Keauhou Bay during development?

Because if you allow this Bungalow Resort to be developed you will increase constant noise in this bay for years to come and, "Noise Pollution Research shows that

underwater noise from construction, shipping and naval vessels significantly impacts the natural behavior of cetaceans and many other marine species. This can be seen when mass beaching events occur or breeding success is diminished."

The above information was taken from the Ocean Conservation Trust  
<https://oceanconservationtrust.org/ocean-advocacy/think-ocean/ways-to-think-ocean/>

How Does Noise Pollution Harm Marine Species?

"However, over the past few decades, noise pollution in the marine environment has increased dramatically and is threatening the natural soundscape of the marine environment. Ships, seismic surveys, explosions, construction, and sonar devices have made the once peaceful environment into a loud, chaotic home which is extremely damaging for marine wildlife. This type of pollution is often overlooked in comparison to others but its impacts are now being documented across all types of marine ecosystems." <https://earth.org/noise-pollution-in-the-ocean/>

If you allow this resort the amount of people in this bay will fully increase and, "Hawaii's recent history has shown that the state's growing population can have an adverse effect on nearshore fish populations. Protecting this important resource for the enjoyment of future generations is essential. Ideally, management of the resource should balance the needs of different user groups, but the welfare of the marine environment on which its inhabitants depend must be the most important consideration." This was taken from Hawaii's own Division of Aquatic Resources  
<https://dlnr.hawaii.gov/dar/marine-managed-areas/hawaii-marine-life-conservation-districts/#:~:text=Snorkeling%20and%20SCUBA%20diving%20are,effect%20on%20nearshore%20fish%20populations.>

What is ocean noise?

"Ocean noise refers to sounds made by human activities that can interfere with or obscure the ability of marine animals to hear natural sounds in the ocean.

Many marine organisms rely on their ability to hear for their survival. Sound is a highly efficient means of communication underwater and is the primary way that many marine species gather and understand information about their environment. Many aquatic animals use sound to find prey, locate mates and offspring, avoid predators, guide their navigation and locate habitat, as well as to listen and communicate with each other.

Over the last century, human activities such as shipping, recreational boating, and energy exploration have increased along our coasts, offshore, and deep ocean environments. Noise from these activities can travel long distances underwater, leading to increases and changes in ocean noise levels in many coastal and offshore habitats.

These rising noise levels can negatively impact ocean animals and ecosystems. Higher noise levels can reduce the ability of animals to communicate with potential mates, other group members, their offspring, or feeding partners. Noise can also reduce an ocean animal's ability to hear environmental cues that are vital for survival, including those key to avoiding predators, finding food, and navigating to preferred habitats." <https://oceanservice.noaa.gov/facts/ocean-noise.html>

LEARN FROM OTHERS:  
RUN-OFF FROM DEVELOPMENT KILLS

The Chesapeake Bay has a foundation that is trying to save their bay due to runoff pollution that was caused by developments. Chesapeake Bay is a lot bigger than Keauhou Bay. If it's being drastically hurt by runoff water from developments, Keauhou Bay waters won't stand a chance if development above the bay is allowed. Keauhou Bay is a much smaller ecosystem.

This Article is by the Chesapeake Bay Foundation, Saving a National Treasure states, "...runoff is a significant source of harmful nitrogen pollution that continues to grow..."

As rainwater and snowmelt run off our streets, parking lots, lawns, and other surfaces, they pick up pet waste, pesticides, fertilizer, oil, and other contaminants. If the draining water doesn't evaporate or soak into the ground where it can be filtered, it flushes straight into local creeks, rivers, and the Chesapeake Bay, adversely affecting water quality and aquatic life.

Only 10 to 20 percent of rain that falls in forests, fields, and other natural areas runs off, with the rest absorbed by soil and plants, where it is filtered before reaching aquifers or local waterways. (Right now Keauhou Bay has a lot of trees and is very natural, this is what helps stop runoff.) By contrast, close to 100 percent of the rain that falls on concrete and other hard surfaces produces runoff. One inch of rain falling on an acre of hardened surface produces 27,000 gallons of runoff.

Stormwater runoff pollution threatens Chesapeake Bay and its rivers and streams...Polluted runoff is one of the most harmful sources of pollution to the Bay and

its waters. And much of it starts right in the urban and suburban neighborhoods where we live."

<https://www.cbf.org/issues/polluted-runoff/index.html#:~:text=Besides%20carrying%20pollutants%20that%20harm,them%20are%20placed%20in%20jeopardy.>

If that is what runoff is doing to the Chesapeake Bay, the effects of runoff will be even more devastating to Keauhou Bay due to its size and fragility.

#### MANTA RAY HABITAT, CORAL REEF BLEACHING, & MARINE LIFE ~ THE DEVASTATING EFFECTS OF DEVELOPMENT ON THE OCEAN

Are there any reports in this EIS about what the impact to the coral, marine life, plankton especially zooplankton will be because of this development?

The studies below show that developments kill coral, and marine life. Zooplankton are part of this marine life and they are also killed and negatively affected. Zooplankton are food for manta rays. Manta rays are in Keauhou Bay every night to eat zooplankton, and are often seen here during the day as well.

Allowing this bay developed will also be a death sentence for many types of marine life including planktons. There is NO WAY to stop this from happening due to the fact that polluted runoff rain water from developments can't be fully stopped. This has been shown to happen in ALL coastal developments.

Please read the Scientific articles below.

It's Been Proven Developments Severely Pollute Nearby Waters

Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Coral Bleaching is occurring more frequently in Hawaii. Across the Hawaiian Archipelago, coral bleaching has increased in frequency and severity since 1996. The last major bleaching event in 2014-2015 had catastrophic impacts state-wide ..."

This was the third major bleaching episode in Hawaii over the last 6 years. The frequency of these events is unprecedented in the archipelago. NOAA scientists and partners have determined that the key drivers of the bleaching were environmental factors (such as heat stress, depth, and surface light) and human impacts (sewage effluent and urban run-off)."

<https://www.fisheries.noaa.gov/feature-story/cautionary-tale-2019-coral-bleaching-event>

-hawaii#:~:text=Coral%20Bleaching%20is%20Occurring%20more,had%20catastrophic%20impacts%20state%20wide.

This article is by the Coral Reef Alliance here in Hawaii. "An ecosystem under threat Hawaii's reefs face major global and local threats including climate change, overfishing, and sediment and nutrient pollution caused by sewage and stormwater runoff..."

When it rains, flash floods carry stormwater and large amounts of sediment downstream to the ocean. Just offshore, once-thriving coral reefs are now struggling to survive." <https://coral.org/en/where-we-work/hawaiian-islands#:~:text=Hawai%CA%BBi's%20reefs%20face%20major%20global,into%20Hawai%CA%BBi's%20waterways%20every%20day.>

This article states that runoff is a leading source in coral degradation. Article by National Oceanic and Atmospheric Administration, AKA NOAA, "Land-based sources of pollution are a leading cause of coral reef degradation in the Main Hawaiian Islands. Water quality is impacted by urban runoff, failing sewage systems, unpaved roads, farms, land clearing, and development." [https://www.coris.noaa.gov/monitoring/status\\_report/docs/Hawaii\\_status\\_report\\_forweb.pdf](https://www.coris.noaa.gov/monitoring/status_report/docs/Hawaii_status_report_forweb.pdf)

This article is a Research Article by PLOS ONE and their motto is, "We're driving change in research integrity and publication ethics." This is some of their article information, "Coral taxonomy and local stressors drive bleaching prevalence across the Hawaiian Archipelago in 2019..."

We found little evidence for acclimation by reefs to thermal stress in the main Hawaiian Islands. Moreover, our findings illustrate how detrimental effects of local anthropogenic stressors, such as tourism and urban run-off, may be exacerbated under high thermal stress. In light of the forecasted increase in severity and frequency of bleaching events, future mitigation of both local and global stressors is a high priority for the future of corals in Hawaii." <https://journals.plosone.org/plosone/article?id=10.1371/journal.pone.0269068>

The coral all over Hawaii has had extremely high mortality rates, due to developments near ocean areas throughout the years, and development in Keauhou Bay will be devastating to the coral, reef fish, and all aquatic life there. Manta Rays need to eat 5 times their body weight in zooplankton daily. Their population will be severely affected should the plankton die. Please see the cited information below.

"SO, HOW MUCH PLANKTON DOES YOUR AVERAGE MANTA RAY EAT? 19,200,000. Nineteen million two hundred thousand, give or take a few thousand.

That is the number of plankton pieces a ten-foot manta ray must consume weekly to stay alive."

The above information was taken from Manta Ray Advocates <https://mantarayadvocates.com/how-much-plankton-do-mantas-eat/>

Coral reefs are known to be highly negatively impacted by developments because, "Impacts from land-based sources of pollution including coastal development,...can impede coral growth and reproduction, disrupt overall ecological function, and cause disease and mortality in sensitive species." <https://oceanservice.noaa.gov/facts/coral-pollution.html#:~:text=Impacts%20from%20land%2Dbased%20sources,and%20mortality%20in%20sensitive%20species.>

Article by Environmental Evidence, "Coastal development and runoff lead to sedimentation, which directly impacts coral recruitment, growth, mortality, and ecosystem services that coral reefs provide." <https://environmentalevidencejournal.biomedcentral.com/articles/10.1186/s13750-020-0200-0#:~:text=Coastal%20development%20and%20runoff%20lead,services%20that%20coral%20reefs%20provide.>

Developments can't fully stop polluting because runoff is from rain during development and after. Article by NOAA, "One of the most significant threats to reefs is pollution. Land-based runoff and pollution discharges can result from dredging, coastal development... This runoff may contain sediments, nutrients, chemicals, insecticides, oil and debris.

When some pollutants enter the water, nutrient levels can increase, promoting the rapid growth of algae and other organisms that can smother coral." [https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,organisms%20that%20can%20smother%20corals.](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,organisms%20that%20can%20smother%20corals.)

Another article by NOAA, "Coral reefs also are affected by leaking fuels, anti-fouling paints and coatings, and other chemicals that enter the water... (All of those are show up in every development project.)

Among the most damaging pollutants on coral reefs is sediment, which can remain suspended in the water or be deposited on the coral surface (i.e., turbidity and

sedimentation, respectively) and can contain toxicants, pathogens, and nutrients, all of which impact coral growth, recruitment, and survival" [https://oceanservice.noaa.gov/education/tutorial\\_corals/coral09\\_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days.](https://oceanservice.noaa.gov/education/tutorial_corals/coral09_humanthreats.html#:~:text=This%20runoff%20may%20contain%20sediments,into%20the%20atmosphere%20within%20days.)

It's Been Proven Resort Developments Kill Marine Life
