4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

Mobile source emissions results are presented in Sections 2.6. No further detailed breakdown of emissions is available.

4.1.2. Mitigated

Mobile source emissions results are presented in Sections 2.5. No further detailed breakdown of emissions is available.

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	5.68	annual days of extreme heat
Extreme Precipitation	5.50	annual days with precipitation above 20 mm

Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A

Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	45.0
AQ-PM	66.1
AQ-DPM	96.2
Drinking Water	52.7
Lead Risk Housing	24.4
Pesticides	0.00
Toxic Releases	79.2
Traffic	68.7
Effect Indicators	—

CleanUp Sites	0.00
Groundwater	25.1
Haz Waste Facilities/Generators	44.7
Impaired Water Bodies	66.7
Solid Waste	42.3

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	39.0
Healthy Places Index Score for Project Location (b)	60.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Characteristics: Project Details	adjusted project details to match project location
Characteristics: Utility Information	using statewide average electricity factors
Construction: Construction Phases	updated construction schedule to match project needs
Construction: Off-Road Equipment	adjusted construction equipment mix to match project needs
Construction: Trips and VMT	updated trips and vmt to match anticipated project needs
Operations: Water and Waste Water	Adjusted electric intensity factor for Maui

5.18.2.2. Mitigated

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

6.2. Initial Climate Risk Scores

6.3. Adjusted Climate Risk Scores

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

7.2. Healthy Places Index Scores

7.3. Overall Health & Equity Scores

7.4. Health & Equity Measures

7.5. Evaluation Scorecard

7.6. Health & Equity Custom Measures

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Makena Mauka - Operations
Operational Year	2050
Lead Agency	—
Land Use Scale	Plan/community
Analysis Level for Defaults	Statewide
Windspeed (m/s)	15.0
Precipitation (days)	113
Location	34.022579521235755, -118.40535118073069
County	Los Angeles-South Coast
City	Los Angeles
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	4454
EDFZ	16
Electric Utility	Statewide Average
Gas Utility	Southern California Gas
App Version	2022.1.1.29

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Apartments Mid Rise	94.0	Dwelling Unit	2.47	90,240	0.00	—	278	affordable housing

Single Family Housing	15.0	Dwelling Unit	4.87	29,250	175,693	—	44.0	affordable housing
Apartments Mid Rise	363	Dwelling Unit	9.55	348,480	0.00	—	1,074	multi-family housing
Strip Mall	3.00	1000sqft	0.07	3,000	0.00	—	—	retail spaces
Office Park	46.0	1000sqft	1.06	46,000	0.00	—	—	offices
Single Family Housing	180	Dwelling Unit	58.4	351,000	2,108,314	—	533	single family housing
High Turnover (Sit Down Restaurant)	48.0	1000sqft	1.10	48,000	0.00	—	—	Restaurant, Clubhouse, Kitchen, Locker Rooms, Fitness, Back of House

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Energy	E-12-A	Install Alternative Type of Water Heater in Place of Gas Storage Tank Heater in Residences
Energy	E-12-B	Install Electric Space Heater in Place of Natural Gas Heaters in Residences
Energy	E-13	Install Electric Ranges in Place of Gas Ranges

2. Emissions Summary

2.4. Operations Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	5.68	annual days of extreme heat
Extreme Precipitation	5.50	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	45.0
AQ-PM	66.1
AQ-DPM	96.2
Drinking Water	52.7
Lead Risk Housing	24.4
Pesticides	0.00
Toxic Releases	79.2
Traffic	68.7
Effect Indicators	—
CleanUp Sites	0.00
Groundwater	25.1
Haz Waste Facilities/Generators	44.7
Impaired Water Bodies	66.7
Solid Waste	42.3
Sensitive Population	—
Asthma	35.8
Cardio-vascular	47.2
Low Birth Weights	7.17
Socioeconomic Factor Indicators	—

Education	20.9
Housing	50.7
Linguistic	30.0
Poverty	42.6
Unemployment	45.8

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	66.05928397
Employed	97.78005903
Median HI	50.49403311
Education	—
Bachelor's or higher	85.98742461

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	39.0
Healthy Places Index Score for Project Location (b)	60.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Characteristics: Project Details	Adjusted project characteristics based on project area
Characteristics: Utility Information	adjusted project utility info based on project area
Operations: Hearths	removed hearths, not included in plans
Operations: Water and Waste Water	adjusted electricity intensity factor for Maui
Operations: Vehicle Data	Adjusted traffic data based on TIAR

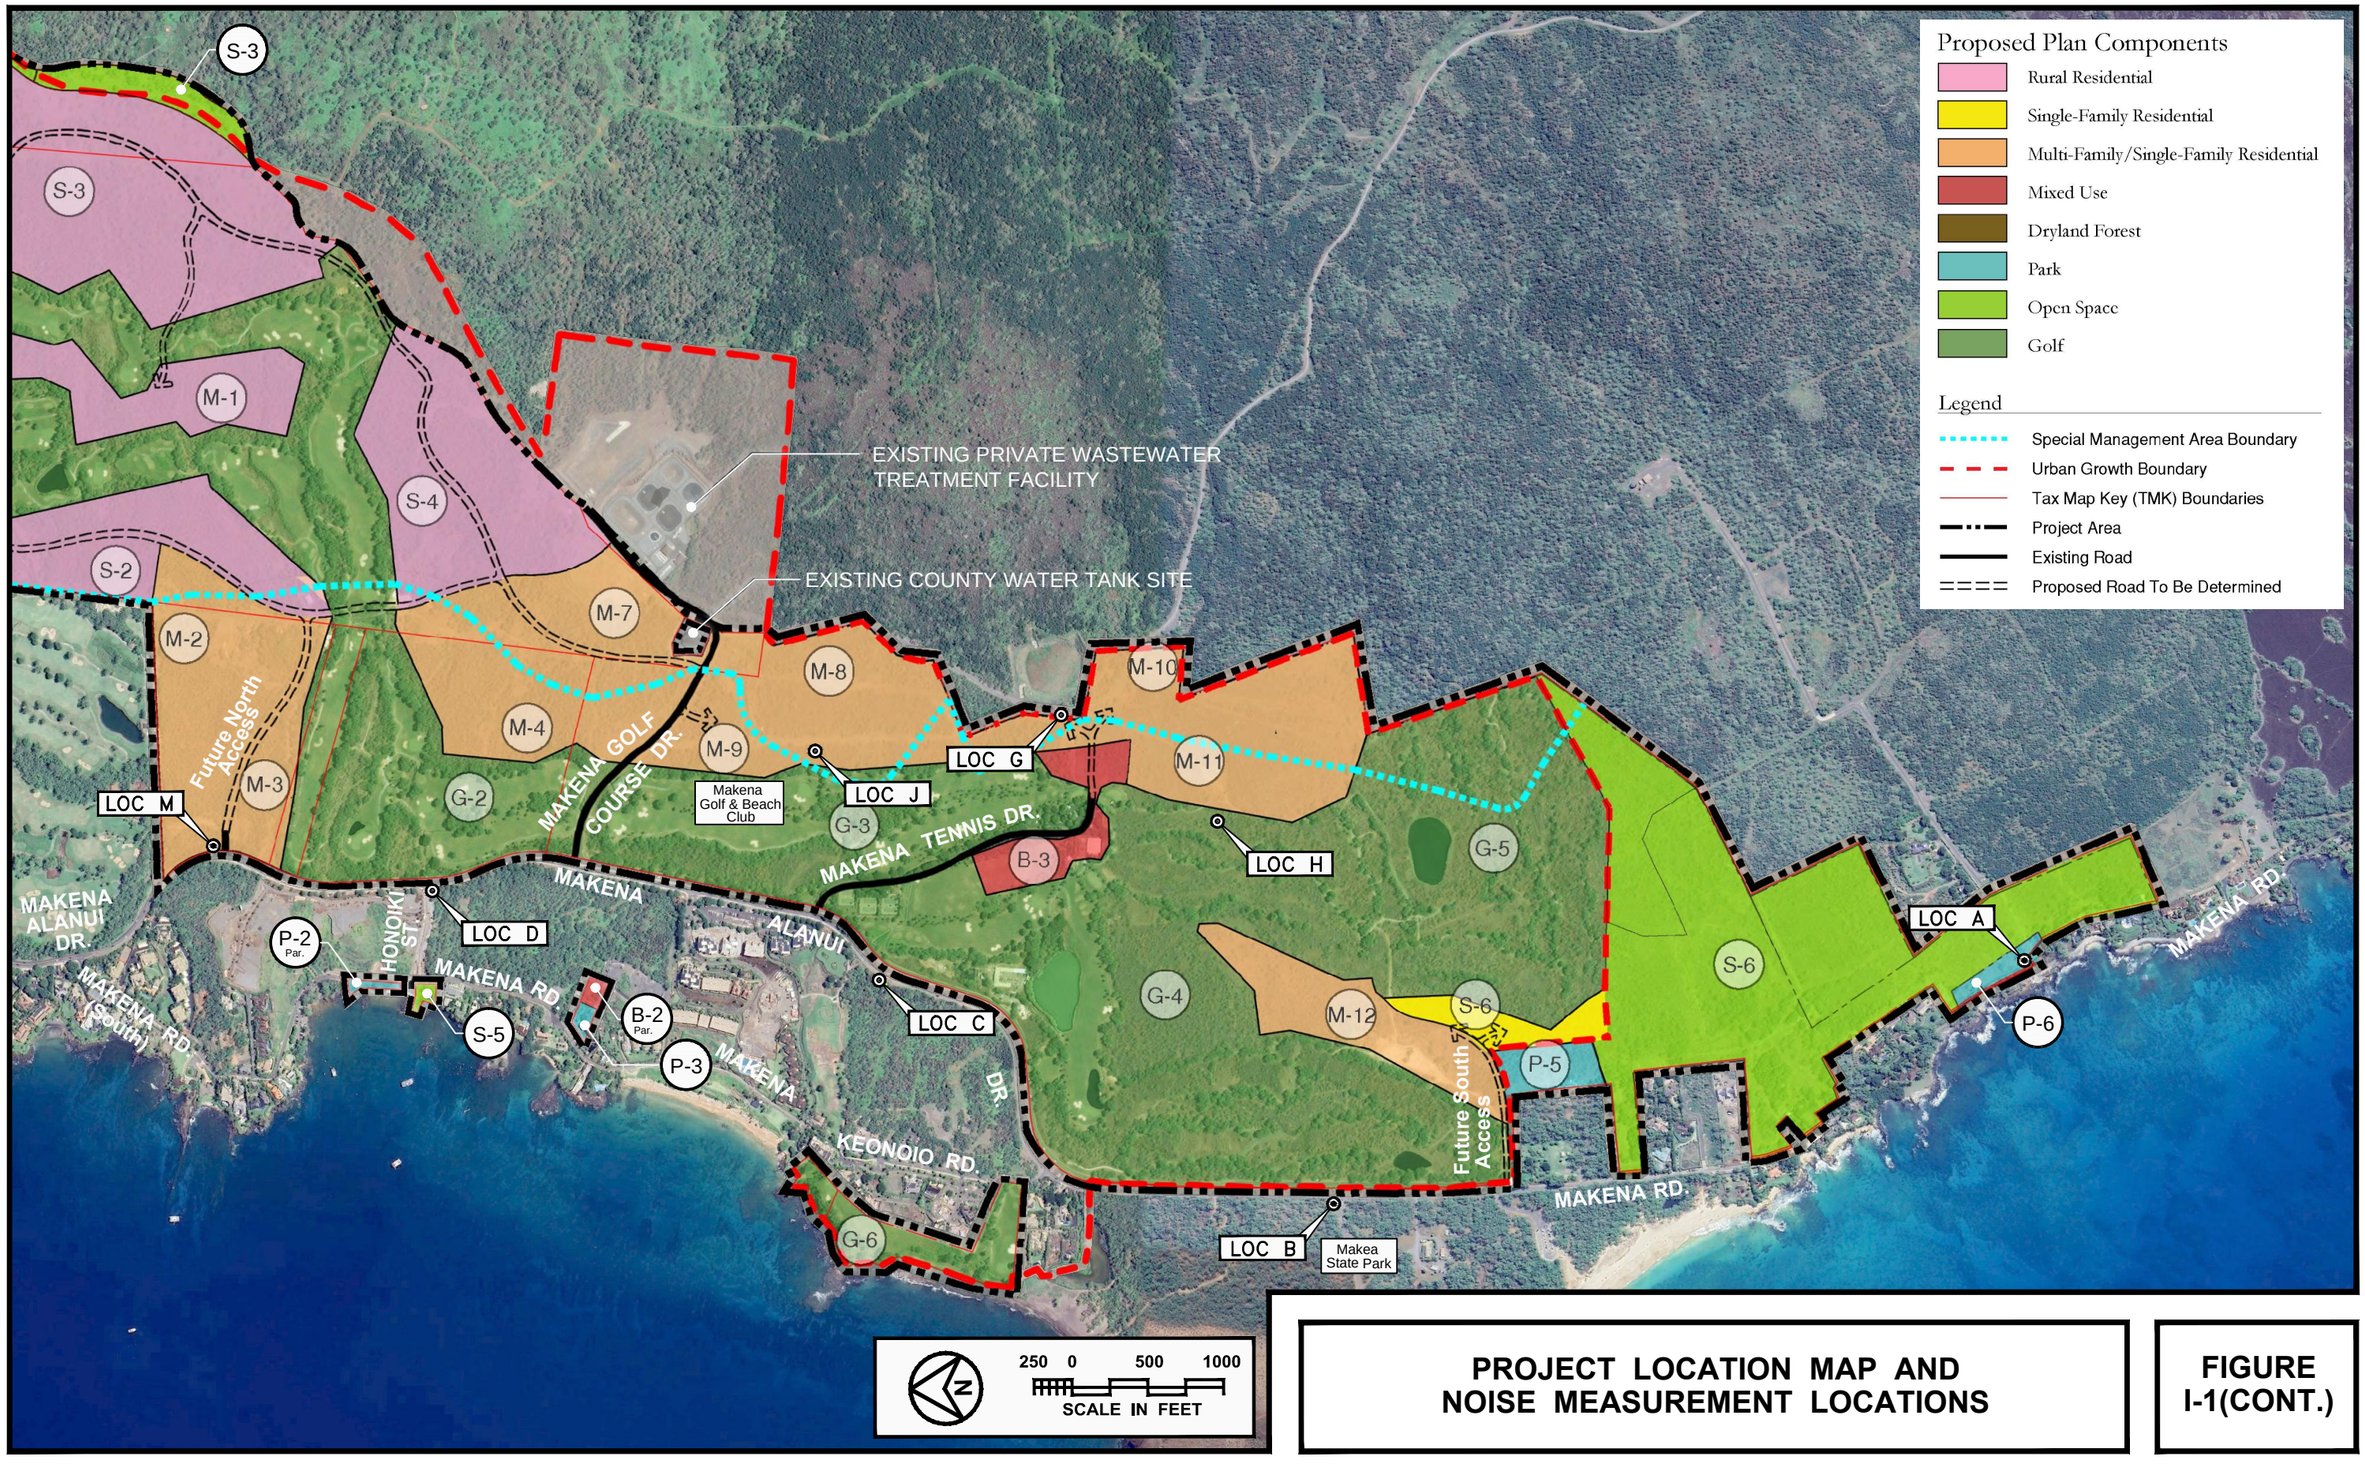
CHAPTER 1. SUMMARY

Proposed Action. Mâkena Mauka is a low-density master-planned residential community that will offer market rate housing together with residential workforce housing, with a mixture of rural and single-family lots and multifamily residential units, within an area that has largely been planned for such uses for decades. The project will incorporate the existing 18-hole Mâkena North Golf Course and the 18-hole Mâkena South Golf Course (to be renovated as part of the land plan), together with a community gathering place, hiking trails, programs to support connectivity, walking, bicycling, and golf cart paths, beach parking for the public, areas reserved for conservation/open space, and areas reserved for public beach access. The Applicant's current vision for the Mâkena Mauka land plan includes 652 housing units, including 109 on-site residential workforce housing units, and approximately 135,000 square feet of operational support buildings, which include golf maintenance, staff offices, restaurants, back of house, golf operations and other uses; within the approximately 1,043.71 acre total project area which includes approximately 473 acres of parcels proposed for residential development.

The existing and future traffic noise levels in the vicinity of the proposed Mâkena Mauka Project were evaluated for their potential impact on present and future noise sensitive areas. Figure I-1 depicts the location of the project site. The dates of the measurements included days in July 2023, October 2023, and August 2024. The future traffic noise levels along the primary access roadways to the project were calculated for the year 2058.



Along Makena Alanui Drive, traffic noise levels were expected to increase by 3.5 to 5.1 DNL (Day-Night Average Sound Level) between CY (Calendar Year) 2024 and CY 2058 as a result of both project and non-project traffic. Traffic noise increases due to project traffic were predicted to range from 0.4 to 1.2 DNL which was much lower than the range of the noise increases caused by non-project traffic (3.1 to 4.2 DNL) on Makena Alanui Drive. While these DNL changes may seem moderate to large, the 34-year forecast period for this project is relatively long when compared to other 10 to 20 year forecast periods. On an annual averaged basis (without compounding), the annual project traffic noise contribution is anticipated to increase by 3.2 to 3.9 percent per year, and the annual non-project traffic noise contribution is anticipated to increase by 6.0 to 7.7 percent per year. Project traffic noise level increases were considered to be well below anticipated non-project traffic noise level increases.

Along Wailea Alanui Drive, Wailea Ike Drive, and Piilani Highway, traffic noise levels were expected to increase by 1.6 to 6.1 DNL between CY 2024 and CY 2058 as a result of both project and non-project traffic, with traffic noise increases due to project and non-project traffic predicted to range from 0.3 to 0.9 DNL and 1.2 to 5.2 DNL, respectively. On an annual averaged basis (without compounding), the annual project traffic noise contribution is anticipated to increase by 3.2 to 3.6 percent per year, and the annual non-project traffic noise contribution is anticipated to increase by 3.9 to 9.7

PROJECT LOCATION MAP AND NOISE MEASUREMENT LOCATIONS

FIGURE I-1

PROJECT LOCATION MAP AND NOISE MEASUREMENT LOCATIONS

FIGURE I-1(CONT.)

percent per year. For this reason, project traffic noise level increases were also considered to be well below anticipated non-project traffic noise level increases.

At future residences on parcels M-2 and M-3 of the project (see Figure I-1), traffic noise mitigation measures may be required if adequate setback distances in the order of 83 to 94 FT from the centerline of Makena Alanui Drive cannot be provided. If required, the use of sound attenuating walls may be possible for ground floor receptors, but if multistory residences are provided, the closure and air conditioning of the upper floors will probably be required.

Unavoidable, but temporary, noise impacts may occur during the construction of the proposed project. Because construction activities may be audible at existing and planned developed properties within the project environs (or area), the acoustic environment may be degraded during periods of construction. Mitigation measures to reduce construction noise to inaudible levels will not be practical in all cases. For this reason, the use of quiet equipment and construction curfew periods as required under the State Department of Health (DOH) noise regulations are recommended to minimize construction noise impacts.

CHAPTER II. PURPOSE

The objectives of this study were to describe and evaluate the existing and future traffic noise environment in the environs of the proposed Mâkena Mauka Project at Makena on the island of Maui. Traffic noise level increases and impacts associated with the proposed project were to be determined within the project site as well as along the public roadways expected to service the project traffic. A specific objective was to determine the future traffic noise level increases associated with both project and non-project traffic, and the potential noise impacts associated with these increases. Assessments of possible impacts from short term construction noise at the project site were also included in the noise study objectives. Recommendations for minimizing these noise impacts were also to be provided as required.

CHAPTER III. NOISE DESCRIPTORS AND THEIR RELATIONSHIP TO LAND USE COMPATIBILITY

The noise descriptor currently used by federal agencies to assess environmental noise is the Day-Night Average Sound Level (DNL or Ldn). This descriptor incorporates a 24-hour average of instantaneous A-Weighted sound levels as read on a standard Sound Level Meter. The maximum A-Weighted sound level occurring while a noise source such as a heavy truck or aircraft is moving past a listener (i.e., the maximum sound level from a "single event") is referred to as the "Lmax value". The mathematical product (or integral) of the instantaneous sound level times the duration of the event is known as the "Sound Exposure Level", or Lse, which is analogous to the energy of the time-varying sound levels associated with a single event.

The DNL values represent the average noise during a typical day of the year. DNL exposure levels of 55 or less are typical of quiet rural or suburban areas. DNL exposure levels of 55 to 65 are typical of urbanized areas with medium to high levels of activity and street traffic. DNL exposure levels above 65 are representative of densely developed urban areas and areas fronting high volume roadways.

By definition, the minimum averaging period for the DNL descriptor is 24 hours. Additionally, sound levels which occur during the nighttime hours of 10:00 PM to 7:00 AM are increased by 10 decibels (dB) prior to computing the 24-hour average by the DNL descriptor. Because of the averaging used, DNL values in urbanized areas typically range between 50 and 75 DNL. In comparison, the typical range of intermittent noise events may have maximum Sound Level Meter readings between 75 and 105 dBA. A more complete list of noise descriptors is provided in Appendix B to this report. In Appendix B, the Ldn descriptor symbol is used in place of the DNL descriptor symbol.

Table III-1, extracted from Reference 1, categorizes the various DNL levels of outdoor noise exposure with severity classifications. Figure III-1, extracted from Reference 2, presents suggested land use compatibility guidelines for residential and nonresidential land uses. A general consensus among federal agencies has developed whereby residential housing development is considered acceptable in areas where exterior noise does not exceed 65 DNL. This value of 65 DNL is used as a federal regulatory threshold for determining the necessity for special noise abatement measures when applications for federal funding assistance are made.

As a general rule, noise levels of 55 DNL or less occur in rural areas, or in areas which are removed from high volume roadways. In urbanized areas which are shielded from high volume streets, DNL levels generally range from 55 to 65 DNL, and are usually controlled by motor vehicle traffic noise. Residences which front major roadways are generally exposed to levels of 65 DNL, and as high as 75 DNL when the roadway is a high speed freeway. Due to noise shielding effects from intervening structures, interior lots are usually exposed to 3 to 10 DNL lower noise levels than the

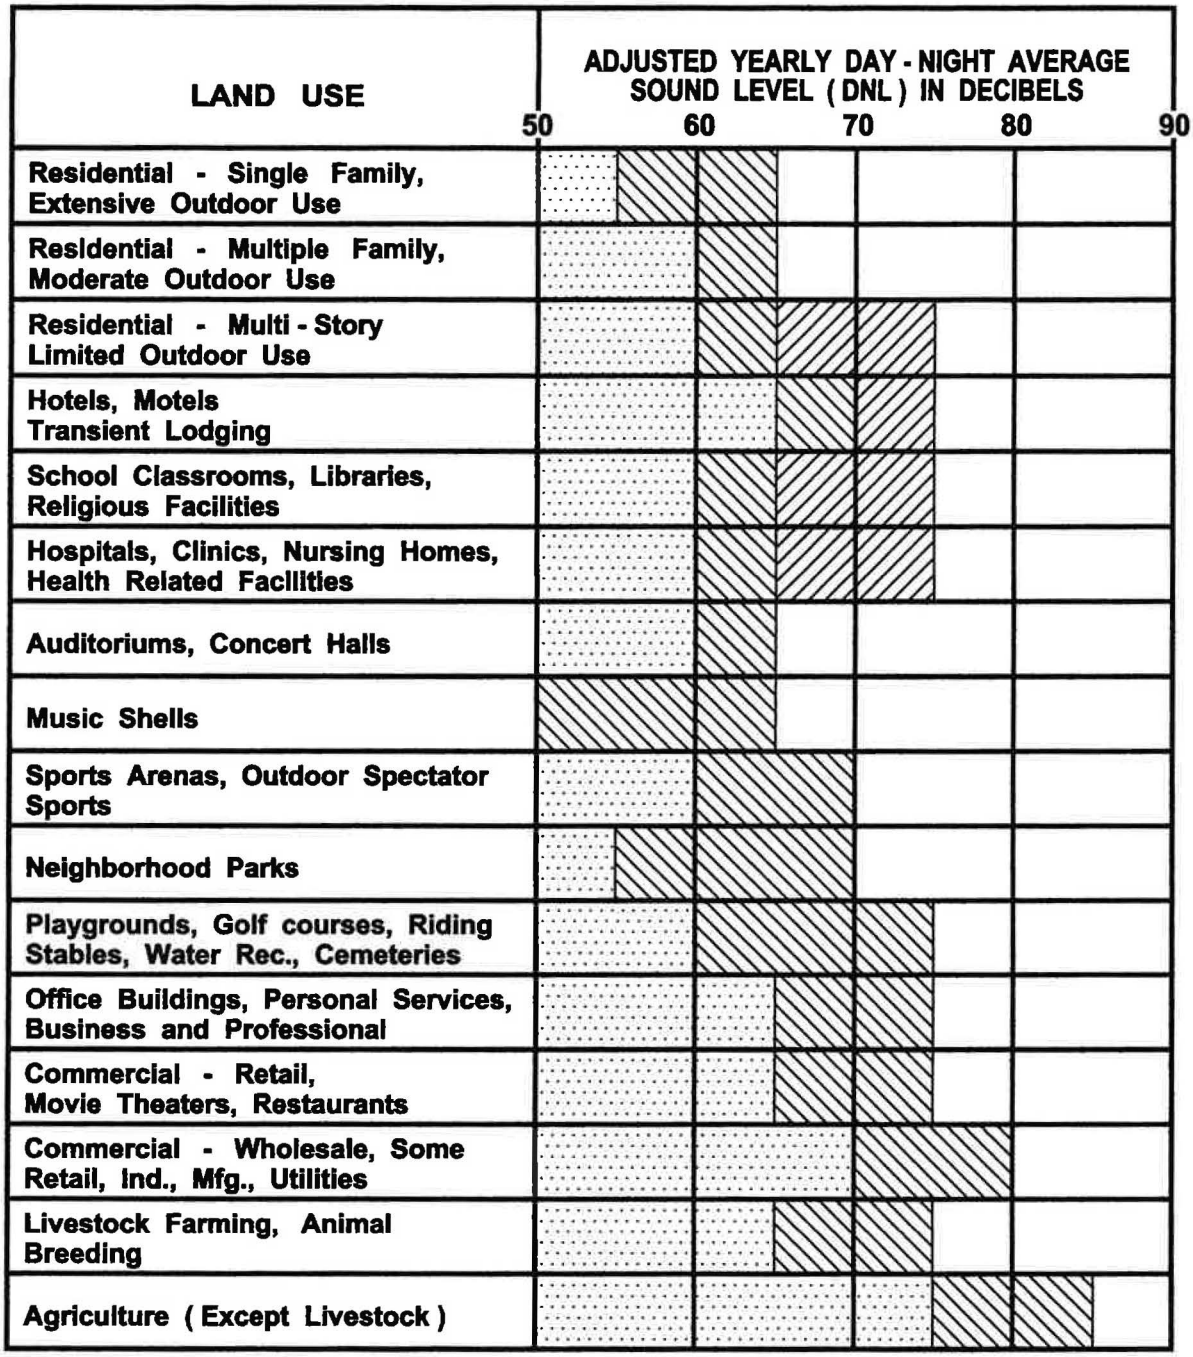


TABLE III-1

EXTERIOR NOISE EXPOSURE CLASSIFICATION (RESIDENTIAL LAND USE)

NOISE EXPOSURE CLASS	DAY–NIGHT SOUND LEVEL	EQUIVALENT SOUND LEVEL	FEDERAL (1) STANDARD
Minimal Exposure	Not Exceeding 55 DNL	Not Exceeding 55 Leq	Unconditionally Acceptable
Moderate Exposure	Above 55 DNL But Not Above 65 DNL	Above 55 Leq But Not Above 65 Leq	Acceptable(2)
Significant Exposure	Above 65 DNL But Not Above 75 DNL	Above 65 Leq But Not Above 75 Leq	Normally Unacceptable
Severe Exposure	Above 75 DNL	Above 75 Leq	Unacceptable

Notes: (1) Federal Housing Administration, Veterans Administration, Department of Defense, and Department of Transportation.

(2) Federal Highway Administration (FHWA) uses the Equivalent Sound Level (Leq) instead of the DNL descriptor. For planning purposes, both are equivalent if: (a) heavy trucks do not exceed 10 percent of total traffic flow in vehicles per 24 hours, and (b) traffic between 10:00 PM and 7:00 AM does not exceed 15 percent of average daily traffic flow in vehicles per 24 hours. The noise mitigation threshold used by FHWA for residences is 67 Leq.

LAND USE COMPATIBILITY WITH YEARLY AVERAGE DAY - NIGHT SOUND LEVEL (DNL) AT A SITE FOR BUILDINGS AS COMMONLY CONSTRUCTED.
(Source: American National Standards Institute S12.9 - 1988/Part 5)

FIGURE III-1

front lots which are not shielded from the traffic noise.

For the purposes of determining noise acceptability for funding assistance from federal agencies, an exterior noise level of 65 DNL or lower is considered acceptable. These federal agencies include the Federal Aviation Administration (FAA), Department of Defense (DOD); Federal Housing Administration, Housing and Urban Development (FHA/HUD), and Veterans Administration (VA). This standard is applied nationally (see Reference 3), including Hawaii.

Because of our open-living conditions, the predominant use of naturally ventilated dwellings, and the relatively low exterior-to-interior sound attenuation afforded by these naturally ventilated structures, an exterior noise level of 65 DNL does not eliminate all risks of noise impacts. Because of these factors, a lower level of 55 DNL is considered as the "Unconditionally Acceptable" (or "Near-Zero Risk") level of exterior noise (see Reference 4). For typical, naturally ventilated structures in Hawaii, an exterior noise level of 55 DNL results in an interior level of approximately 45 DNL, which is considered to be the "Unconditionally Acceptable" (or "Near-Zero Risk") level of interior noise. However, after considering the cost and feasibility of applying the lower level of 55 DNL, government agencies such as FHA/HUD and VA have selected 65 DNL as a more appropriate regulatory standard.

For commercial, industrial, and other non-noise sensitive land uses, exterior noise levels as high as 75 DNL are generally considered acceptable. Exceptions to this occur when naturally ventilated office and other commercial establishments are exposed to exterior levels which exceed 65 DNL.

In the State of Hawaii, the State Department of Health (DOH) regulates noise from on-site activities. State DOH noise regulations are expressed in maximum allowable property line noise limits rather than DNL (see Reference 5). The noise limits apply on all islands of the State, including the island of Maui. Although they are not directly comparable to noise criteria expressed in DNL, State DOH noise limits for preservation/residential, apartment/commercial, and agricultural/industrial lands equate to approximately 55, 60, and 76 DNL, respectively.

Because the proposed project site is located on lands primarily designated for residential uses, DOH noise limits would be applicable along the lot boundary lines or at receptor locations for any stationary machinery, or equipment related to residential activities. These property line limits range between 60 dBA and 45 dBA during the daytime and nighttime periods, respectively, for lots zoned for residential use. These noise limits cannot be exceeded for more than 2 minutes in any 20-minute time period under the State DOH noise regulations. The State DOH noise regulations do not apply to aircraft or motor vehicles. During construction activities, the DOH noise regulations allow for exceedances of the property line noise limits through the use of a noise permit system, where noisy construction activities are permitted only during the daytime hours on weekdays (excluding holidays) and on Saturdays.

CHAPTER IV. GENERAL STUDY METHODOLOGY

Existing traffic and background ambient noise levels were measured at nine locations in the project environs in August 2024 to provide a basis for developing the existing and future traffic noise levels along Makena Alanui Drive and the other project access roads, and for determining the existing background ambient noise levels in the project area. Earlier traffic noise measurements obtained in October 2023 along Wailea Ike Drive and Wailea Alanui Drive were also used for this project. The locations of the noise measurement sites are shown in Figure I-1. The traffic noise measurement results, and their comparisons with computer model predictions of existing traffic noise levels are summarized in Table IV-1. The results of the traffic noise measurements were compared with calculations of existing traffic noise levels to validate the computer model used. Where only background noise measurements were obtained, such as at Locations G, H, and K, which were removed from existing roadways, traffic volumes and predicted noise levels were not shown in Table IV-1.

Traffic noise calculations for the existing conditions as well as noise predictions for the future conditions with and without the project were performed using the Federal Highway Administration (FHWA) Noise Prediction Model, Version 2.5 (Reference 6). Traffic data entered into the noise prediction model were: hourly traffic volumes, average vehicle speeds, estimates of traffic mix, and loose or hard soil propagation loss factors. The traffic assignments for the project (Reference 7) and Hawaii State Department of Transportation (HDOT) counts on Wailea Alanui Drive (Reference 8) and Wailea Ike Drive (Reference 9) were the primary sources of data inputs to the model. Appendix C summarizes the existing and future projections of AM and PM peak hour traffic volumes which were available from Reference 7.

For existing and future traffic, it was assumed that the average noise levels, or Leq(h), during the weekday PM peak hour were equal to the weekday 24-hour DNL along Wailea Ike Drive, 0.4 dB less than the weekday 24-hour DNL along Piilani Highway, and 0.8 dB greater than the weekday 24-hour DNL along the other roadway segments in the project environs. The assumptions were based on computations of the weekday hourly Leq's and the 24-hour DNL's of traffic noise on Wailea Ike Drive and Wailea Alanui Drive contained in the HDOT traffic counts of References 8 and 9 following the COVID-19 crisis (see Figures IV-1 and IV-2).

Traffic noise calculations for both the existing and future conditions in the project environs were developed for ground level receptors without the benefit of noise shielding effects from buildings or natural terrain features. Traffic assignments with and without the project were obtained from the project's traffic turning movements (Reference 7). The forecasted increases in traffic noise levels over existing levels were calculated for both scenarios, and noise impact risks evaluated. The relative contributions of non-project and project related traffic to the total noise levels were also calculated, and an evaluation was made of possible traffic noise impacts resulting from the project.

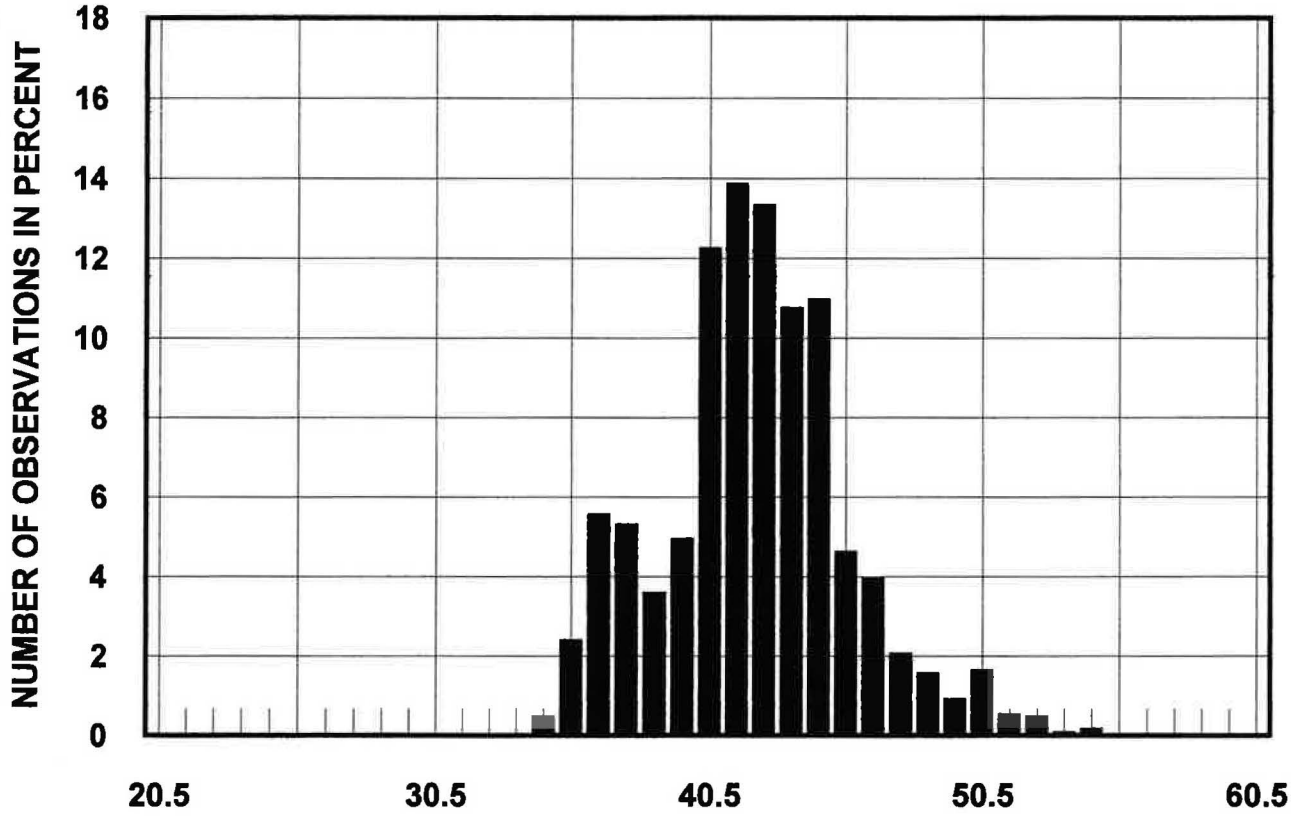
Evaluations of potential construction noise impacts and mitigation measures were included in this study.

CHAPTER V. EXISTING NOISE ENVIRONMENT

The existing traffic noise levels in the project environs are controlled by traffic along Wailea Ike Drive, Wailea Alanui Drive, and Makena Alanui Drive. Within the Mâkena Mauka Project lands, existing background noise levels along the mauka boundaries are controlled by distant traffic on Makena Alanui Drive, construction vehicles and activities, aircraft flybys, birds, golf course activities, and wind moving foliage. Along the makai boundaries of the project lands, traffic along Makena Alanui Drive, local street traffic, aircraft flybys, birds, golf course and tennis court activities, construction, surf, wind moving foliage, and landscaping activities control the background ambient noise levels.

Traffic and background noise measurement locations are shown in Figure I-1. Figures V-1, V-2, and V-3 are histograms of short term background noise levels measured at Locations G, H, and J on the project site. The intermittent noise events from local motor vehicle traffic were deleted (or parsed) from the histograms of Locations G and J as noted in Table IV-1. Distant aircraft noise events contributed to the higher measured noise levels at Location H. Existing background noise levels on the project site probably range from 35 to 45 DNL in areas which are removed from local motor vehicle traffic or human activities.



Calculations of existing traffic noise levels during the weekday PM peak traffic hours are presented in Table V-1. The hourly Leq (or Equivalent Sound Level) contribution from various roadway sections in the project environs were calculated for comparison with forecasted traffic noise levels with and without the project. The PM peak hour Leq's for a weekday were calculated using traffic data from Reference 7. The existing setback distances from the roadways' centerlines to their associated 65, 70, and 75 DNL contours were also calculated as shown in Table V-2. The contour line setback distances do not take into account noise shielding effects or the additive contributions of traffic noise from intersecting street sections. Based on the results of Table V-2, it was concluded that the existing 65 DNL traffic noise contour is located approximately 46 to 92 FT from the centerline of Wailea Ike Drive, and approximately 32 to 52 FT from the centerlines of Wailea Alanui Drive and Makena Alanui Drive.

Existing noise sensitive receptors in the project environs are probably not exposed to traffic noise levels of 65 DNL or higher in CY 2024. The existing background noise levels at noise sensitive receptors were probably in the Minimal to Moderate Exposure, Unconditionally Acceptable or Acceptable categories (see Table III-1). In the large project mauka areas designated for future residential use, existing background noise levels are relatively low because of the large setback distances from Makena Alanui Drive, and due to the undeveloped character of the land. Along the makai boundaries of the project area, existing background noise levels probably ranged from 45 to 65 DNL due to existing traffic along Makena Alanui Drive, existing residential activities, and due to the natural sounds associated with the surf along the shoreline.

Existing background noise levels at the planned residential units on the project

Notes:

(1) All setback distances are from the roadways' centerlines.
(2) See Tables V-1 and VI-1 for traffic volume, speed, and mix assumptions.
(3) Setback distances are for ground level receptors.

M-2 and M-3 parcels fronting Makena Alanui Drive are currently exposed to traffic noise levels of approximately 63 DNL at 50 feet setback distance from the roadway's centerline. These parcels are the only project area which is planned for residential use at which future traffic noise levels could exceed the 65 DNL FHA/HUD threshold. At all other project lands planned for residential use, sufficient buffer distances appear to exist from Makena Alanui Drive and Makena Road.

At the south end of the project, where Makena Road approaches the shoreline, existing background noise levels are controlled by surf conditions, and were measured at Location A at 52.9 Leq, at approximately 102 FT from the roadway centerline and 240 FT from the rocky shoreline. A histogram of the measured sound levels at Location A is shown in Figure V-4. Traffic noise levels of the low speed vehicle passby events were estimated to be less than 50 Leq.

CHAPTER VI. FUTURE NOISE ENVIRONMENT

Figure I-1 depicts the proposed Mâkena Mauka Land Use Plan, which includes the residential uses on the mauka side of Makena Alanui Drive and on the mauka side of Makena Road. The parcels identified with B-1, B-3, F-1, M, and S (excluding S-5) are those proposed for residential lots. The future traffic noise levels and potential traffic noise impacts associated with the proposed plan were examined by calculating future traffic noise levels in CY 2058; along Piilani Highway north of Wailea Ike Drive, along Wailea Ike Drive west of Piilani Highway and east of Wailea Alanui Drive, along Wailea Alanui Drive south of Okolani Drive and north of Kaukahi Street, and along Makena Alanui Drive south of Kuakahi Street; with the proposed plan. Future traffic noise levels under the Proposed Action and Do Nothing Alternatives were compared with each other as well as with the existing traffic noise levels described in the previous chapter.

Predictions of future traffic noise levels were made using the traffic volume assignments of Reference 7 for CY 2058 with and without the Proposed Action. The future assignments of project plus non-project traffic on the roadway sections which would service the project are shown in Table VI-1 for the weekday PM peak hour of traffic. Table VI-2 provides the predicted changes in future traffic noise levels along these roadways which are attributable to non-project and project traffic. As indicated in Table VI-2, by CY 2058 and following completion of the Proposed Action, traffic noise levels along Makena Alanui Drive in the project environs are predicted to increase by 3.5 to 5.1 DNL, with 3.17 to 4.2 DNL increase attributable to non-project traffic, and 0.4 to 1.2 DNL attributable to project traffic. Along the other roadway sections shown in Table VI-2, future traffic noise level increases attributable to the project were similar and ranged from 0.3 to 0.9 DNL.

Table IV-2 presents the future setback distances to the 65 DNL traffic noise contours for receptors with unobstructed fields of view to the traffic lanes. Based on the setback distances shown in Table IV-2, the northernmost building of the existing Makalii development is predicted to be located within the Year 2058 65 DNL traffic noise contour. While existing Maui Meadows residences along Piilani Highway between Okolani Drive and Wailea Ike Drive are within the indicated 95 FT setback distance to the 65 DNL contour, the noise shielding effects of the highway cut in that area provides adequate noise shielding effects (see Reference 10), and the predicted increase in traffic noise by 2058 should not result in exceedances of the 65 DNL FHA/HUD standard at those residences.

On the M-2 and M-3 residential parcels shown in Figure I-1, minimum setback distances in the order of 83 to 94 FT of the residential buildings may be required to avoid encroaching into the 65 DNL contour (see Table V-2). A final determination of the required setback distances will depend upon the final grading plans of these parcels and the anticipated number of floors of the residential buildings fronting Makena Alanui Drive. On the S-6 single family residential parcel shown in Figure I-1, anticipated

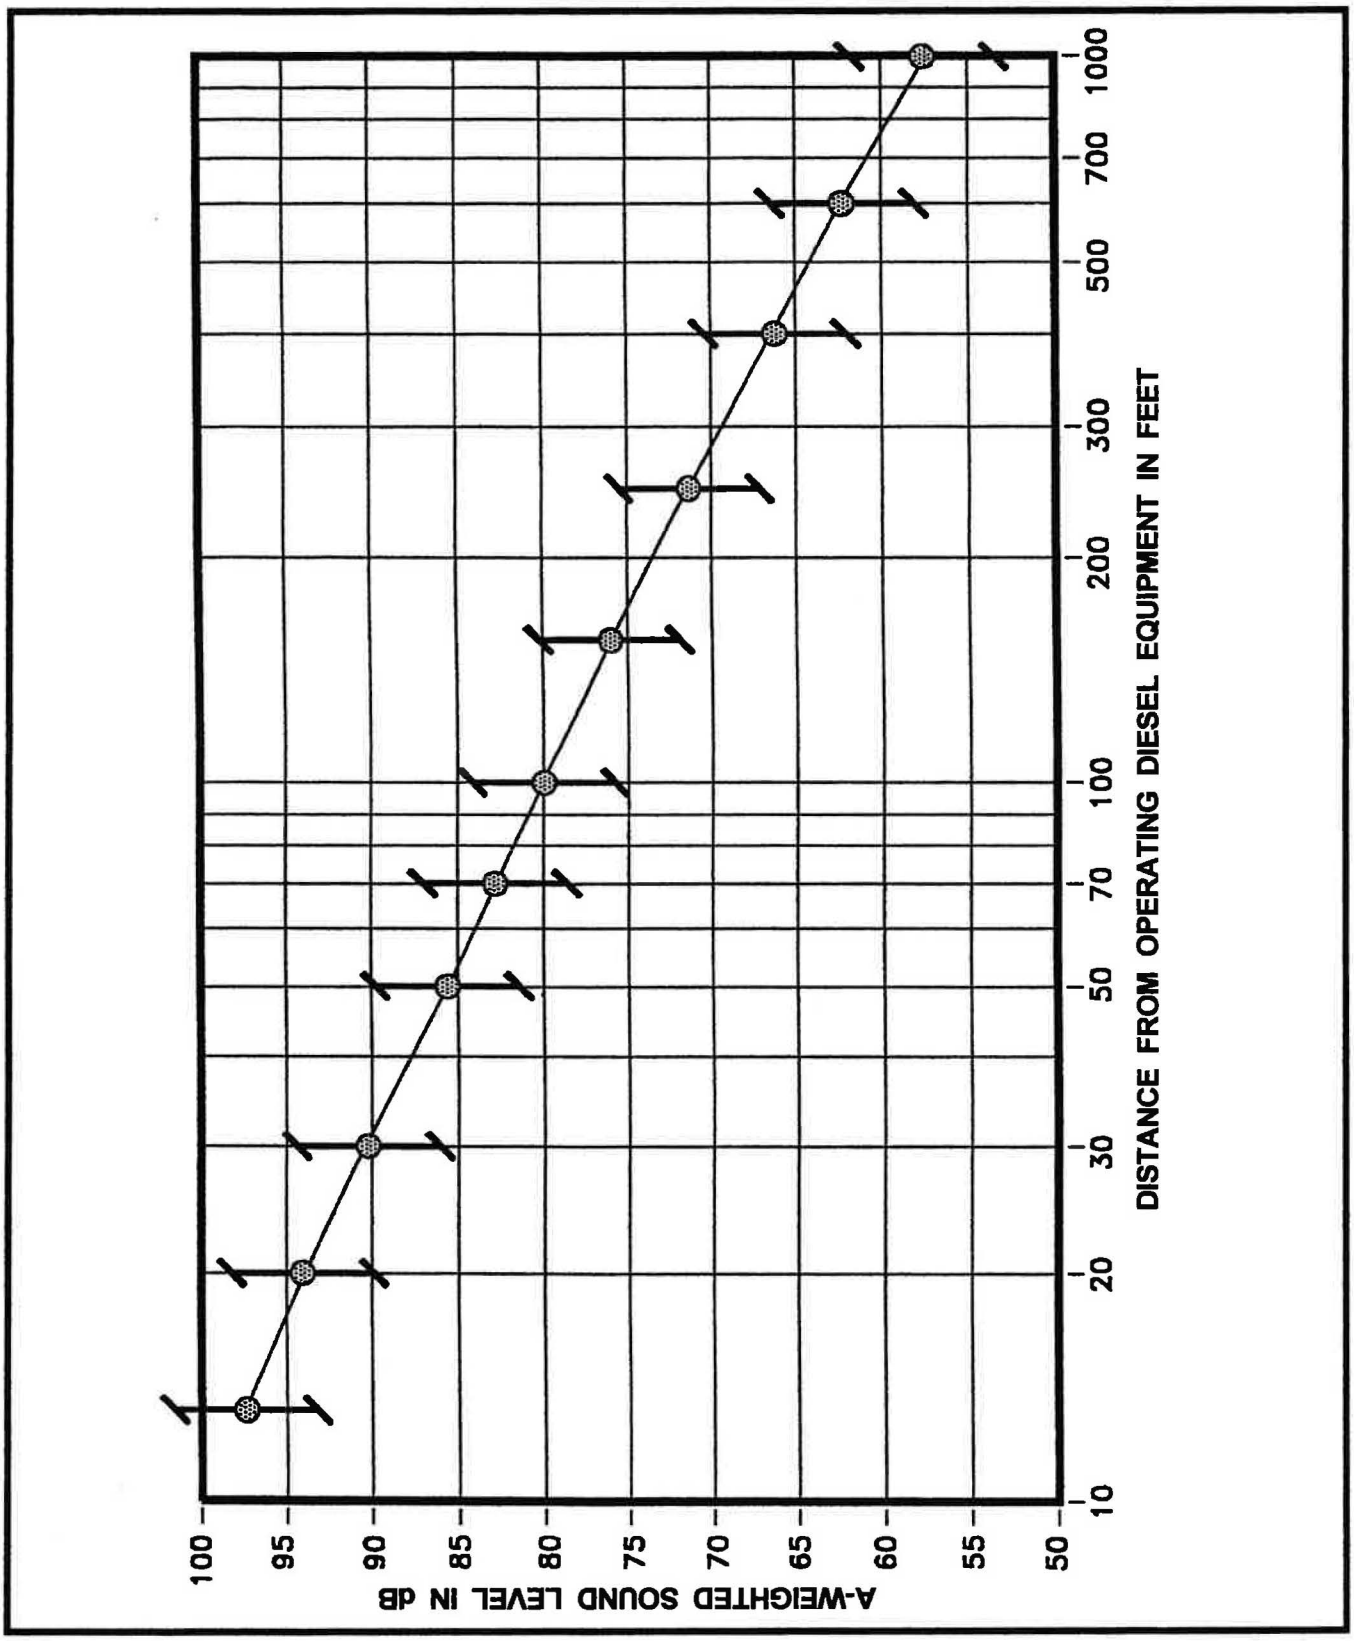
minimum setback distance to the 65 DNL traffic noise contour is 21 FT from the Makena Road centerline, although traffic data for this area was not provided in Reference 7.

If adequate buffer distances from Makena Alanui Drive are not available between the future residences on parcel M-2 and M-3 and the roadway centerline, the use of a sound attenuating wall for single story buildings may be an appropriate noise mitigation measure. If adequate buffer distances are not available, and the residential buildings are taller than single story buildings, the use of closure and air conditioning will probably be required at the upper floors.

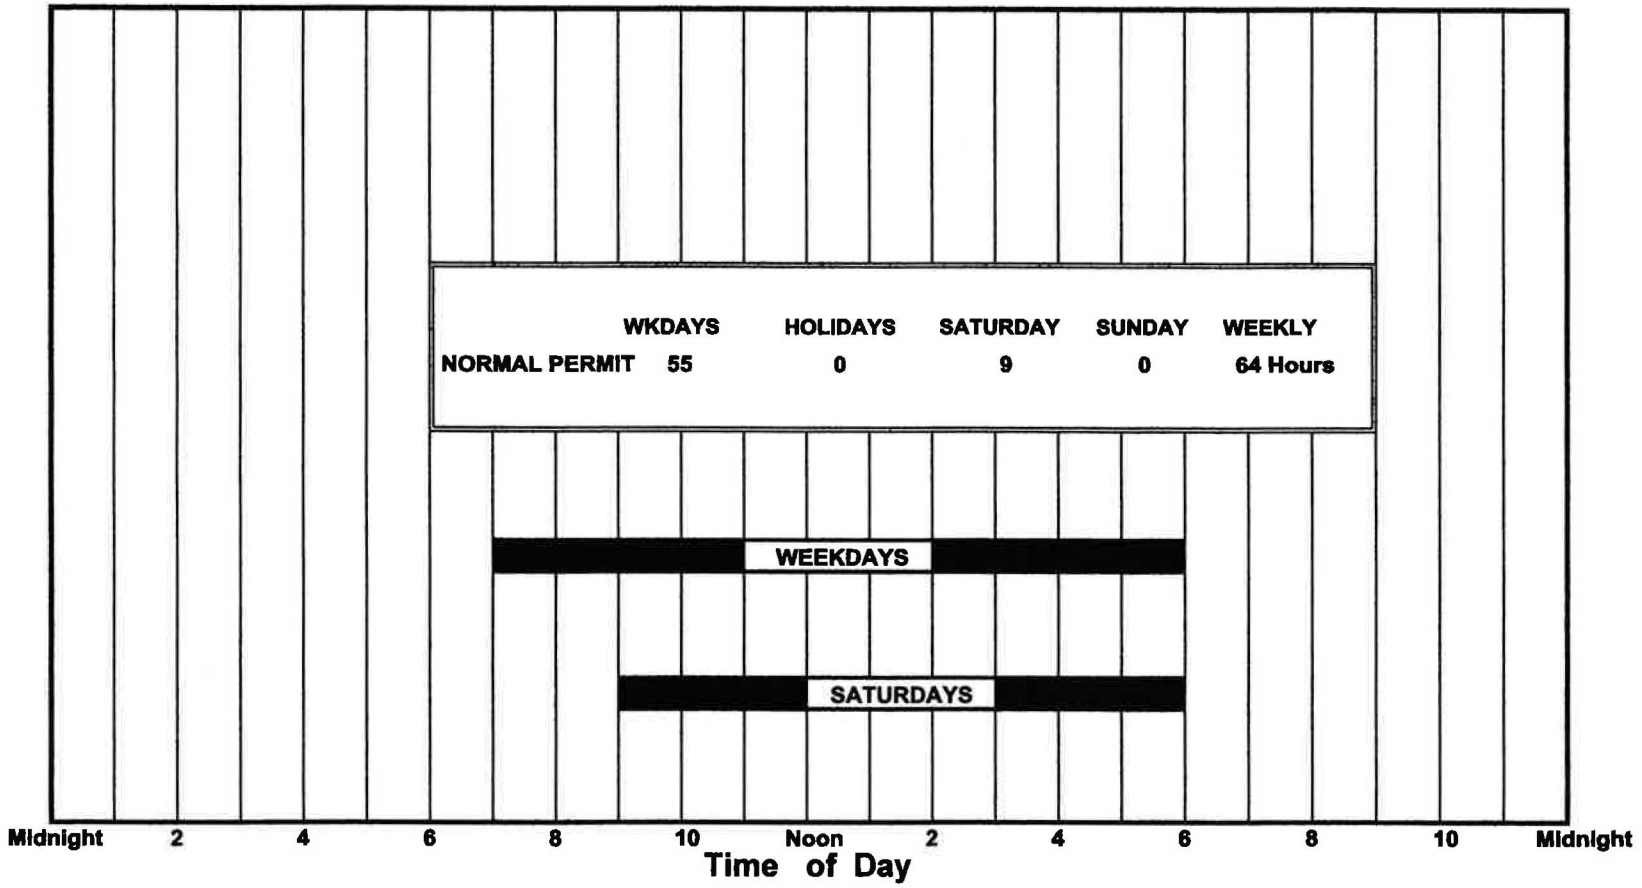
Future traffic noise levels at existing noise sensitive locations along Makena Alanui Drive in the project environs are not expected to exceed 65 DNL. The northernmost existing residents at Makalii located along Wailea Alanui Drive and north of Kaukahi Street are predicted to experience future traffic noise levels greater than 65 DNL as a result of future increases in both project and non-project traffic. Along public roadways, traffic noise mitigation measures implemented after the roadway is constructed is normally performed by the affected lot owner if the building permit was obtained after the roadway was constructed or last improved. When a roadway is first built or when its capacity is later increased, traffic noise mitigation measures at preexisting residences are considered for inclusion into the roadway construction project, so that the affected lot owner may not need to provide the traffic noise mitigation measure.



CHAPTER VII. CONSTRUCTION NOISE IMPACTS

Short-term noise impacts associated with construction activities anticipated in the project planning areas shown in Figure I-1 may occur on the mauka side of Makena Alanui Drive. The greatest impacts are expected during the earthwork and excavation phases, when site preparation work and/or roadway construction occur. Anticipated noise levels during construction activities of these types are shown in Figure VII-1. Noise levels of diesel powered construction equipment typically range from 80 to 90 dBA at 50 FT distance. The maximum impulsive noise levels of rock breaking equipment (such as hoe rams) can be 5 to 8 dBA greater than those shown in Figure VII-1. During the building erection phase, average construction noise levels are estimated to be 13 dB lower than those shown in Figure VII-1. The total duration of the construction period for the proposed project is not known, but noise exposure from construction activities at any one receptor location is not expected to be continuous during the total construction period.

Construction noise levels at the closest existing residences adjacent to the S-6 parcel may exceed 65 to 70 dBA when earthwork is being performed within 750 to 500 feet of the residence. These noise levels are expected to be intermittent and not continuous. These noise levels associated with construction are expected to be unavoidable at these buffer distances. The State Department of Health currently regulates noise from construction activities under a permit system (Reference 5). Under current permit procedures (see Figure VII-2), noisy construction activities are restricted to hours between 7:00 AM and 6:00 PM, from Monday through Friday, and exclude certain holidays. Noisy construction activities are normally restricted to the hours of 9:00 AM to 6:00 PM on Saturdays, with construction not permitted on Sundays. These restrictions minimize construction noise impacts on noise sensitive receptors (such as residences), and have generally been successfully applied. In this way, construction noise impacts on noise sensitive receptors can be minimized.



Adverse impacts from construction noise are not expected to be in the "public health and welfare" category due to the temporary nature of the work and due to the administrative controls available for its regulation. Instead, these impacts will probably be limited to the temporary degradation of the quality of the acoustic environment in the immediate vicinity of the project work areas.

In addition to the anticipated application of State DOH noise permit requirements and procedures during noisy construction activities, the use of quieted portable engine generators and diesel equipment should be specified for use within 500 FT of noise sensitive properties. Heavy truck and equipment staging areas should also be located at areas which are at least 500 FT from noise sensitive properties whenever possible. Truck routes which avoid residential communities should be identified wherever possible.

ANTICIPATED RANGE OF CONSTRUCTION NOISE LEVELS VS. DISTANCE

FIGURE VII-1

AVAILABLE WORK HOURS UNDER DOH PERMIT PROCEDURES FOR CONSTRUCTION NOISE

FIGURE VII-2

CHAPTER VIII. CUMULATIVE AND SECONDARY NOISE IMPACTS

Future traffic noise impacts with the project in 2058 should be considered as cumulative; i.e., total impacts change with time and with the addition of existing plus both future project and non-project traffic. The traffic noise study identified Makalii as the only existing location where future traffic noise levels will probably exceed the 65 DNL noise impact criteria level as a result of both project and non-project traffic along Wailea Alanui Drive. From report Table V-2, the 65 DNL contour was predicted to increase from 39 feet to 68 feet from the centerline of Wailea Alanui Drive by CY 2058 following project buildout, which will place the northernmost Makalii building within the 65 DNL contour. From report Appendix C, the non-project traffic increase of 583 vph and project traffic increase of 248 vph, singly, could not place the Makalii building within the 65 DNL traffic noise contour, since from report Table V-1, 705 vph of existing traffic along Wailea Alanui Drive does not cause the existing 65 DNL traffic noise contour to enclose the Makalii building of interest. By CY 2058, without the project, the forecasted total non-project traffic of 1,288 vph is predicted to place the Makalii building within the 65 DNL traffic noise contour. By CY 2058, without the 705 vph growth of non-project traffic, project traffic should not place the Makalii building within the 65 DNL traffic noise contour. So, the cumulative effects of existing, plus future non-project traffic will result in the exceedance of the 65 DNL noise impact criteria at Makalii. Stated in another way, if project buildout was to occur with the near future, the Makalii building should remain outside the 65 DNL traffic noise contour. Unfortunately, these cumulative traffic noise impacts are not preventable unless traffic noise mitigation measures (such as adequate setback distances from Wailea Alanui Drive and/or air conditioning of the building) have been or could be built into the Makalii residential units.

Construction noise impacts could be considered as secondary impacts over which the developer has some control. Some of these noise impacts are unavoidable, and recognizing this, the State DOH regulates construction noise separately using a noise permit and noise curfew system.

The potential traffic noise impacts on future project residences along Makena Alanui Drive at parcels M-2 and M-3 may be candidates for examples of secondary noise impacts over which the developer may have some control. Possible traffic noise mitigation measures are discussed in report Chapter VI. There are probably other many secondary traffic noise impacts along all public roadways identified in the TIAR where future project traffic is non-zero, and where the future 65 DNL traffic noise contours will grow in size in accordance with report Table V-2.

CHAPTER IX. NOISE STUDY CONCLUSIONS

Existing noise sensitive receptors in the project environs were probably not exposed to traffic noise levels which exceed the Normally Acceptable level of 65 DNL in 2024. The existing background noise levels at noise sensitive receptors were probably in the Minimal to Moderate Exposure, Unconditionally Acceptable or Acceptable categories. In the large project mauka areas designated for future residential use, existing background noise levels are relatively low because of the large setback distances from Makena Alanui Drive, and due to the undeveloped character of the land. Along the makai boundaries of the project area, existing background noise levels probably ranged from 45 to 65 DNL due to existing traffic along Makena Alanui Drive, existing residential activities, and due to the natural sounds associated with the surf along the shoreline.

Future traffic noise levels at existing noise sensitive locations along Makena Alanui Drive in the project environs are not expected to exceed 65 DNL. Only the northernmost existing residents at Makalii located along Wailea Alanui Drive and north of Kaukahi Street are predicted to experience future traffic noise levels greater than 65 DNL as a result of future increases in both project and non-project traffic. At Makalii, exceedance of the 65 DNL threshold are predicted to occur by 2058 by non-project traffic, with or without the project. The cumulative effects of existing, plus future non-project, plus future project generated traffic will be the cause of the exceedance of the 65 DNL noise impact criteria at Makalii. Unfortunately, these cumulative traffic noise impacts are not preventable unless traffic noise mitigation measures have been or could be built into the Makalii residential units.

APPENDIX B

EXCERPTS FROM EPA'S ACOUSTIC TERMINOLOGY GUIDE

Descriptor Symbol Usage

The recommended symbols for the commonly used acoustic descriptors based on A-weighting are contained in Table I. As most acoustic criteria and standards used by EPA are derived from the A-weighted sound level, almost all descriptor symbol usage guidance is contained in Table I.

Since acoustic nomenclature includes weighting networks other than "A" and measurements other than pressure, an expansion of Table I was developed (Table II). The group adopted the ANSI descriptor-symbol scheme which is structured into three stages. The first stage indicates that the descriptor is a level (i.e., based upon the logarithm of a ratio), the second stage indicates the type of quantity (power, pressure, or sound exposure), and the third stage indicates the weighting network (A, B, C, D, E.....). If no weighting network is specified, "A" weighting is understood. Exceptions are the A-weighted sound level and the A-weighted peak sound level which require that the "A" be specified. For convenience in those situations in which an A-weighted descriptor is being compared to that of another weighting, the alternative column in Table II permits the inclusion of the "A". For example, a report on blast noise might wish to contrast the LCdn with the LAdn.

Although not included in the tables, it is also recommended that "Lpn" and "LepN" be used as symbols for perceived noise levels and effective perceived noise levels, respectively.

It is recommended that in their initial use within a report, such terms be written in full, rather than abbreviated. An example of preferred usage is as follows:

The A-weighted sound level (LA) was measured before and after the installation of acoustical treatment. The measured LA values were 85 and 75 dB respectively.

Descriptor Nomenclature

With regard to energy averaging over time, the term "average" should be discouraged in favor of the term "equivalent". Hence, Leq, is designated the "equivalent sound level". For Ld, Ln, and Ldn, "equivalent" need not be stated since the concept of day, night, or day-night averaging is by definition understood. Therefore, the designations are "day sound level", "night sound level", and "day-night sound level", respectively.

The peak sound level is the logarithmic ratio of peak sound pressure to a reference pressure and not the maximum root mean square pressure. While the latter is the maximum sound pressure level, it is often incorrectly labelled peak. In that sound level meters have "peak" settings, this distinction is most important.

"Background ambient" should be used in lieu of "background", "ambient", "residual", or "indigenous" to describe the level characteristics of the general background noise due to the contribution of many unidentifiable noise sources near and far.

With regard to units, it is recommended that the unit decibel (abbreviated dB) be used without modification. Hence, DBA, PNdB, and EPNdB are not to be used. Examples of this preferred usage are: the Perceived Noise Level (Lpn was found to be 75 dB. Lpn = 75 dB). This decision was based upon the recommendation of the National Bureau of Standards, and the policies of ANSI and the Acoustical Society of America, all of which disallow any modification of bel except for prefixes indicating its multiples or submultiples (e.g., deci).

Noise Impact

In discussing noise impact, it is recommended that "Level Weighted Population" (LWP) replace "Equivalent Noise Impact" (ENI). The term "Relative Change of Impact" (RCI) shall be used for comparing the relative differences in LWP between two alternatives.

Further, when appropriate, "Noise Impact Index" (NII) and "Population Weighed Loss of Hearing" (PHL) shall be used consistent with CHABA Working Group 69 Report Guidelines for Preparing Environmental Impact Statements (1977).

APPENDIX B (CONTINUED)

TABLE I

A-WEIGHTED RECOMMENDED DESCRIPTOR LIST

	TERM	SYMBOL
1.	A-Weighted Sound Level	L_A
2.	A-Weighted Sound Power Level	L_{WA}
3.	Maximum A-Weighted Sound Level	L_{max}
4.	Peak A-Weighted Sound Level	L_{Apk}
5.	Level Exceeded x% of the Time	L_x
6.	Equivalent Sound Level	L_{eq}
7.	Equivalent Sound Level Over Time (T) (1)	$L_{eq(T)}$
8.	Day Sound Level	L_d
9.	Night Sound Level	L_n
10.	Day-Night Sound Level	L_{dn}
11.	Yearly Day-Night Sound Level	$L_{dn(Y)}$
12.	Sound Exposure Level	L_{SE}

(1) Unless otherwise specified, time is in hours (e.g. the hourly equivalent level is $L_{eq(1)}$). Time may be specified in non-quantitative terms (e.g., could be speficied as $L_{eq(WASH)}$ to mean the washing cycle noise for a washing machine).

APPENDIX B (CONTINUED)

TABLE II

RECOMMENDED DESCRIPTOR LIST

	TERM	A-WEIGHTING	ALTERNATIVE[1] A-WEIGHTING	OTHER[2] WEIGHTING	UNWEIGHTED
1.	Sound (Pressure)[3] Level	L_A	L_{pA}	L_B, L_{pB}	L_p
2.	Sound Power Level	L_{WA}		L_{WB}	L_W
3.	Max. Sound Level	L_{max}	L_{Amax}	L_{Bmax}	L_{pmax}
4.	Peak Sound (Pressure) Level	L_{Apk}		L_{Bpk}	L_{pk}
5.	Level Exceeded x% of the Time	L_x	L_{Ax}	L_{Bx}	L_{px}
6.	Equivalent Sound Level	L_{eq}	L_{Aeq}	L_{Beq}	L_{peq}
7.	Equivalent Sound Level[4] Over Time(T)	$L_{eq(T)}$	$L_{Aeq(T)}$	$L_{Beq(T)}$	$L_{peq(T)}$
8.	Day Sound Level	L_d	L_{Ad}	L_{Bd}	L_{pd}
9.	Night Sound Level	L_n	L_{An}	L_{Bn}	L_{pn}
10.	Day-Night Sound Level	L_{dn}	L_{Adn}	L_{Bdn}	L_{pdn}
11.	Yearly Day-Night Sound Level	$L_{dn(Y)}$	$L_{Adn(Y)}$	$L_{Bdn(Y)}$	$L_{pdn(Y)}$
12.	Sound Exposure Level	L_S	L_{SA}	L_{SB}	L_{Sp}
13.	Energy Average Value Over (Non-Time Domain) Set of Observations	$L_{eq(e)}$	$L_{Aeq(e)}$	$L_{Beq(e)}$	$L_{peq(e)}$
14.	Level Exceeded x% of the Total Set of (Non-Time Domain) Observations	$L_{x(e)}$	$L_{Ax(e)}$	$L_{Bx(e)}$	$L_{px(e)}$
15.	Average L_x Value	L_x	L_{Ax}	L_{Bx}	L_{px}

(1) "Alternative" symbols may be used to assure clarity or consistency.

(2) Only B-weighting shown. Applies also to C,D,E,.....weighting.

(3) The term "pressure" is used only for the unweighted level.

(4) Unless otherwise specified, time is in hours (e.g., the hourly equivalent level is Leq(1). Time may be specified in non-quantitative terms (e.g., could be specified as Leq(WASH) to mean the washing cycle noise for a washing machine.

Draft EIS Land Plan

Makena Mauka

MĀKENA GOLF & BEACH CLUB

Discovery LAND COMPANY

VITA PLANNING | LANDSCAPE ARCHITECTURE | ARCHITECTURE

LOCATION 1

Proposed Rendering

As seen from this perspective looking makai from Kula Hwy near the Ulupalakua Ranch Store, there remain unobstructed views looking out onto the 'Alalakeiki Channel with Molokini and Kaho'olawe in the distance. The multi-family buildings are proposed to be 45' tall while the single-family buildings are proposed to include both one and two-story design. The visual impact of the proposed development is mitigated by their recessive earth-tone material palette and colors set amongst the landscape.

LOCATION 2

Proposed Rendering

The existing terrain of a gradual upslope ~10' from the entry drive along with existing landscaping of kiawe and monkeypod trees ranging from 15'-25' in height, prevent most of the mauka facing views of the slopes of Haleakala. The existing hale structure on the left measures 22' in height and is 100' from Makena Alanui. The proposed gathering pavilion towards the center of the rendering will be approximately 15' in height. Further up the entry driveway is the proposed workforce housing building which will be a two-story 30' high building. The new native species-dominant landscaping along both Makena Alanui and the entry drive will mitigate the visual impacts of the proposed structures and the workforce housing buildings.

LOCATION 3

Proposed Rendering

As seen from this rendering perspective from Makena Keonioio Road nearby to Makena Landing, the unobstructed mauka views to Haleakala remain intact. The visual impact of the taller multi-family buildings are mitigated by their recessive exterior colors and landscape. The proposed multi-family buildings are 45' tall and located above Makena Alanui and a portion of the North Golf Course. Their physical massing away from the ocean allows for a less impactful shoreline perspective that is in alignment with the Maui Island Plan. Single-family buildings, which are proposed to be one and two-stories tall, are located along the North Golf Course.

LOCATION 4

Proposed Rendering

As seen from this rendering perspective from Makena Alanui, Haleakala is not visible in the current location. The proposed greeter hale is 16' tall and is set back approximately 110' from Makena Alanui. 45' tall multi-family and one and two-story single-family buildings are nestled into the hillside along the left side of the entry drive. The visual impacts are mitigated with their recessive earth-toned exterior colors and materials. The entry drive landscaping will include a plant palette inclusive of native species that will surround the both the drive aisles and the greeter hale.

LOCATION 5

Proposed Rendering

As seen from this perspective looking mauka from Maluaka Beach Park, there remain unobstructed views of the slopes of Haleakala. The multi-family buildings are proposed to be 45' tall while the single-family buildings are proposed to include both one and two-story design. The visual impact of the proposed development is mitigated by their recessive earth-tone material palette and colors set amongst the landscape.

LOCATION 6

Proposed Rendering

As seen from this perspective looking mauka from Makena Alanui, there remain unobstructed views of the slopes of Haleakala. The multi-family buildings are proposed to be 45' tall. The proposed new sidewalk and landscaping are depicted here on the mauka side of Makena Alanui to offer a pedestrian-friendly connector route South towards Makena State Park. The visual impact of the proposed development is mitigated by the residential buildings' recessive earth-tone material palette and colors set amongst the landscape.

LOCATION 7

Proposed Rendering

As seen from this perspective looking mauka from Makena Road, no views of Haleakala are seen due to the existing kiawe-dominated landscape and the low angle of perspective. From this location towards the South end of the project directly across the first entrance to Makena State Park, no multi-family or single-family buildings can be seen. The proposed new sidewalk and landscaping are depicted here on the mauka side of Makena Alanui to offer a pedestrian friendly connector route south towards Makena State Park.

LOCATION 8

Proposed Rendering

As seen from this perspective looking mauka from Makena Road, no views of Haleakala are seen due to the existing kiawe-dominated landscape and the low angle of perspective. From this location at the south end of the project, no multi-family or single-family buildings can be seen.

LOCATION 9

Proposed Rendering

As seen from this perspective looking mauka from ocean directly seaward of the proposed project, there remain unobstructed views of the slopes of Haleakala. The multi-family buildings are proposed to be 45' tall while the single-family buildings are proposed to include both one and two-story design. The visual impact of the proposed development is mitigated by their recessive earth-tone material palette and colors set amongst the landscape.

Note on Hawaiian language usage

In keeping with other Hawaiian scholars, we do not italicize Hawaiian words. Hawaiian is both the native language of the pae ʻāina of Hawaiʻi and an official language of the State of Hawaiʻi. Some authors will leave Hawaiian words italicized if part of a quote; we do not. In the narrative, we use diacritical markings to assist our readers, except in direct quotes, in which we keep the markings used in the original text. We provide translations contextually when appropriate.

Executive Summary

This Cultural Impact Assessment (CIA) was prepared by Honua Consulting, LLC for the proposed Mākena Mauka Project on behalf of AREG AC Mākena Propco, LLC, doing business as Mākena Golf & Beach Club Owners. The proposed project encompasses approximately 1,041.47 acres across the ahupuaʻa of Keauhou, Kalihi, Waipao, Pāpaʻanui, Kāʻeo, Maluaka, Mooiki, Mooloa, and Moomuku in the moku of Honuaʻula, South Maui. The project is a low-density, master-planned residential community that includes 652 housing units, infrastructure upgrades, recreational amenities, and areas designated for conservation and public beach access.

The assessment involved in-depth archival research, biological and archaeological studies, and interviews with cultural descendants and community practitioners. These efforts identified a broad range of tangible and intangible cultural resources, including wahi pana (storied places), historic trails, culturally significant flora and fauna, and practices related to fishing, limu gathering, lāʻau lapaʻau, kilo (environmental observation), and ceremonial traditions. Resources of specific concern include endemic species such as wiliwili, ʻōpeʻapeʻa, and limu varieties central to traditional diets and ceremonies.

Community interviews, particularly with kūpuna and descendants with multi-generational ties to the region, provided a critical lens for evaluating project impacts. Interviewees expressed deep concern over continued disruption of access to traditional gathering and fishing areas, the degradation of marine resources due to coastal development, and the potential erasure of cultural memory embedded in the land. Several noted the cumulative impacts of historical land dispossession and increasing tourism pressure, which have already strained practices such as subsistence fishing and lāʻau lapaʻau. Some resources and practices, such as lei-making, kilo, and ceremonial observation, depend on visual viewplanes and specific species.

The applicant has already implemented an extensive cultural and natural resource program that begins to redress some of the cumulative impacts identified by area descendants and kūpuna. These programs exist independently from this project but may be enhanced as part of the project mitigation.

This CIA finds that the project has the potential to cause significant adverse effects on cultural resources and practices, but these impacts are mitigable. The project will continue to refine mitigation strategies throughout the planning and entitlement processes. Some of these strategies include, but may not be limited to:

- Avoidance of known historic properties through project redesign, in coordination with SHPD;

- Preservation and restoration of native and culturally significant flora, including limu and wiliwili;
- Enhancement of public access to shoreline areas used for cultural fishing and gathering;
- Enhancement of cultural stewardship programming that integrates descendant and practitioner input;
- Enhancement of interpretive signage and traditional ecological education tied to site-specific moʻolelo.

The integrity of cultural practices relies on the continued availability of sites and species, many of which fall within or adjacent to the project boundaries. While HRS Chapter 6E and HAR §13-284 will guide formal consultation and archaeological review, it is recommended that the project's entitlements include enforceable cultural resource protection plans developed in partnership with Native Hawaiian stakeholders.

This report affirms that cultural practice in Honuaʻula is a living, evolving continuum. As such, protection of access and descendant engagement will not only serve as mitigation but also implement constitutional protections for Native Hawaiian traditional and customary rights.

1.0 Project Description

At the request of AREG AC Mākena Propco, LLC doing business as Mākena Golf & Beach Club Owners, Honua Consulting, LLC prepared a Cultural Impact Assessment (CIA) of the Proposed Mākena Mauka Project, Tax Map Keys (TMKs): (2)2-1-005:108; (2)2-1-006:036; (2)2-1-006:057; (2)2-1-007:068; (2)2-1-007:092; (2)2-1-007:093; (2)2-1-008:078; (2)2-1-008:079; (2)2-1-008:081; (2)2-1-008:090; (2)2-1-031:036 (por.). The project traverses the ahupuaʻa (land division usually extending from mauka (uplands) to makai (seaward)) of Keauhou, Kalihi, Waipao, Pāpaʻanui, Kāʻeo, Maluaka, Mooiki, Mooloa, and Moomuku in the moku (traditional land district) of Honuaʻula in South Maui.

The proposed project consists of the development of Mākena Mauka, a low-density master-planned residential community within the Makena area of South Maui[1]. Mākena Mauka will offer market rate housing combined with residential workforce housing, with a mixture of rural and single-family lots and multi-family residential units, within an area that has largely been planned for such uses for decades. The project will incorporate the existing 18-hole Mākena North Golf Course and the 18-hole Mākena South Golf Course (to be renovated as part of the land plan), together with a community gathering place, hiking trails, walking, bicycling, and golf cart paths, programs to support connectivity, beach parking areas for the public, areas reserved for conservation/open space, and areas reserved for public beach access. Access to the project area will be provided from Mākena Alanui Road with an internal roadway network connecting to the individual communities within the land plan. The Applicant's current vision for the Mākena Mauka land plan includes 652 housing units, 109 of which are onsite residential workforce housing units, and approximately 135,000 square feet of operational support buildings, including golf maintenance and operations, staff offices, restaurants, back of house, and other uses. The total project area is approximately 1,041.47 acres, which includes approximately 473 acres of parcels proposed for residential development. The Applicant is seeking to minimize environmental and cultural impacts by carefully inventorying the

[1] Descendants differ on the preferred modern spelling of Makena. Some prefer Makena without the kahakō, while others prefer it spelled Mākena with the kahakō. Before Western contact, Native Hawaiians preserved their rich cultural knowledge through an exclusively oral tradition. Knowledge transfer occurred through chants, genealogies, and stories passed down through generations by memory and precise verbal transmission. When American missionaries arrived in the 1820s, they developed a written Hawaiian alphabet, introducing diacritical marks to capture the language's unique sounds: the kahakō (macron) elongates vowels, while the ʻokina (glottal stop) represents a consonant sound. These marks assist in distinguishing between words with different meanings but similar spellings, but were omitted from early publications, resulting in ambiguity as to the traditional spelling of Makena. These distinctions are further discussed in Section 3.0. Proper names that use Mākena are left unchanged. kahooa

natural and cultural environment and avoiding any significant archaeological sites, cultural resources, and sensitive species.

1.1 Description of the Project Area

The project includes sections of multiple ahupuaʻa: Keauhou, Kalihi, Waipao, Pāpaʻanui, Kāʻeo, Maluaka, Mooiki, Mooloa, and Moomuku. It occurs exclusively in the moku of Honuaʻula and largely in the land area known as Mākena. While not an ahupuaʻa in its own right, Mākena (literally, "abundance") is widely known as a village and bay. The extent of the Project Area is provided in the following figures.

(This section intentionally left blank.)

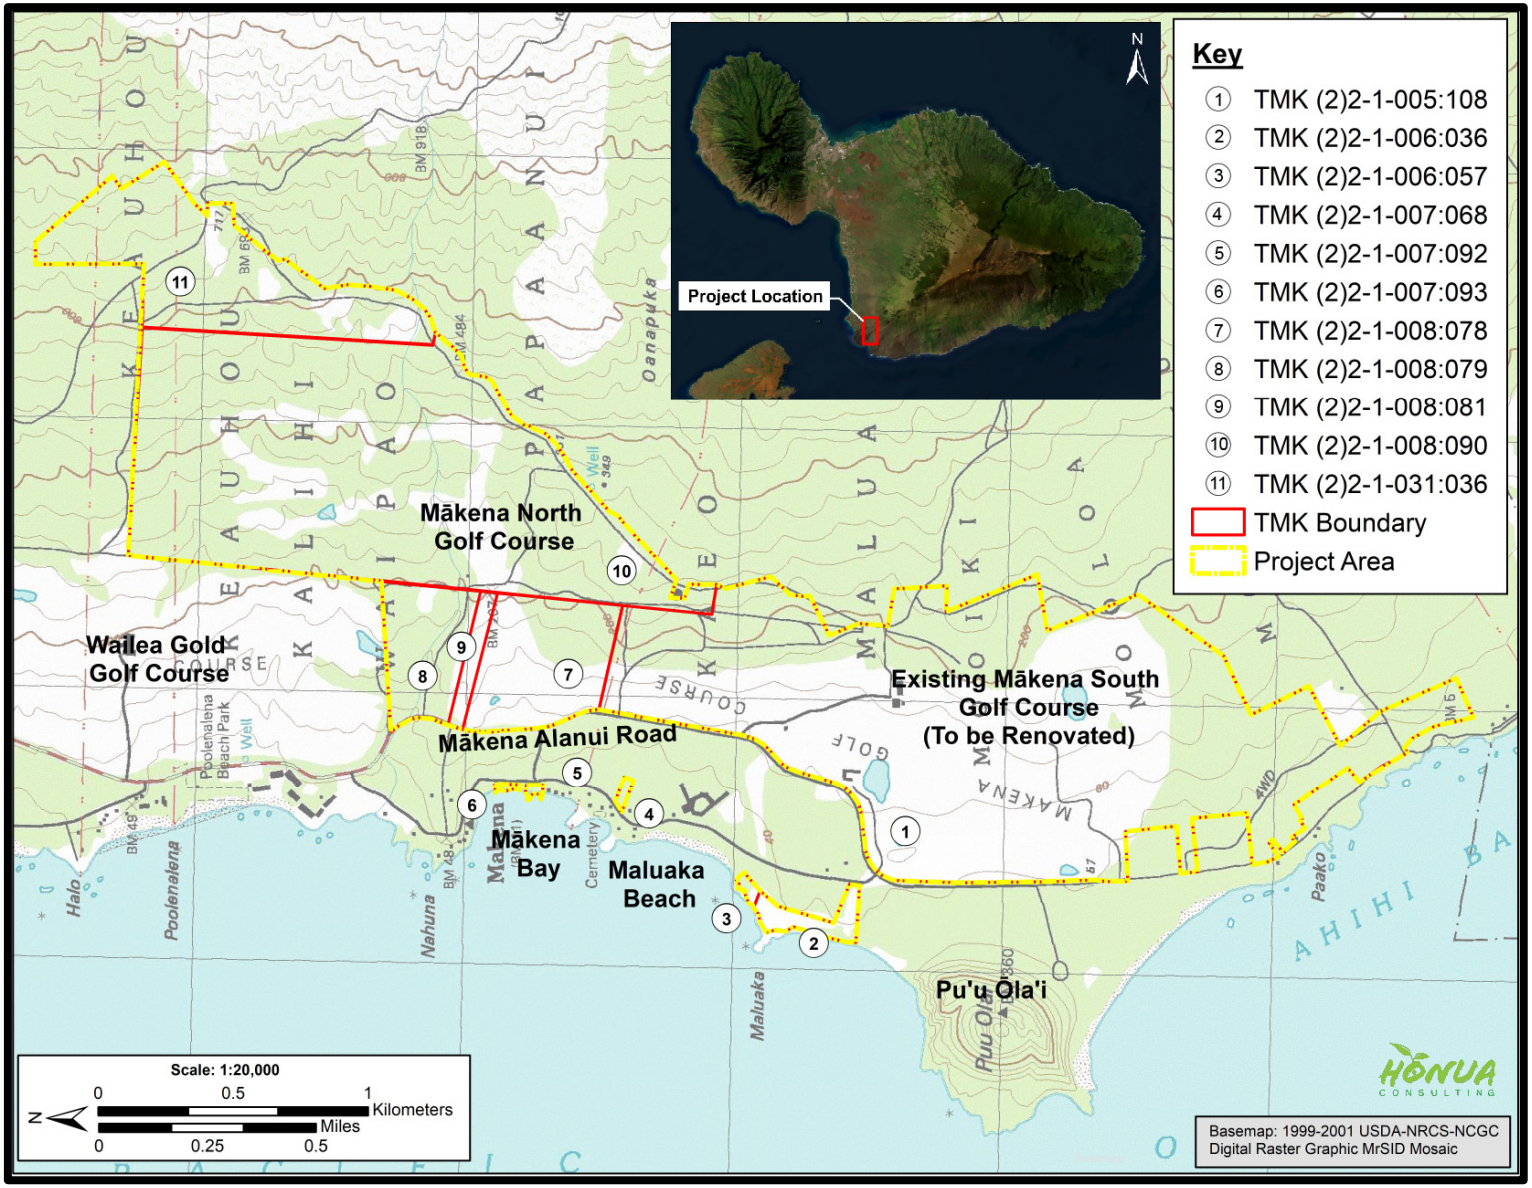

Figure 1. Project Area and TMK Boundaries on 1999-2001 USDA-NRCS-NCGC Regional Map (Honua Consulting)

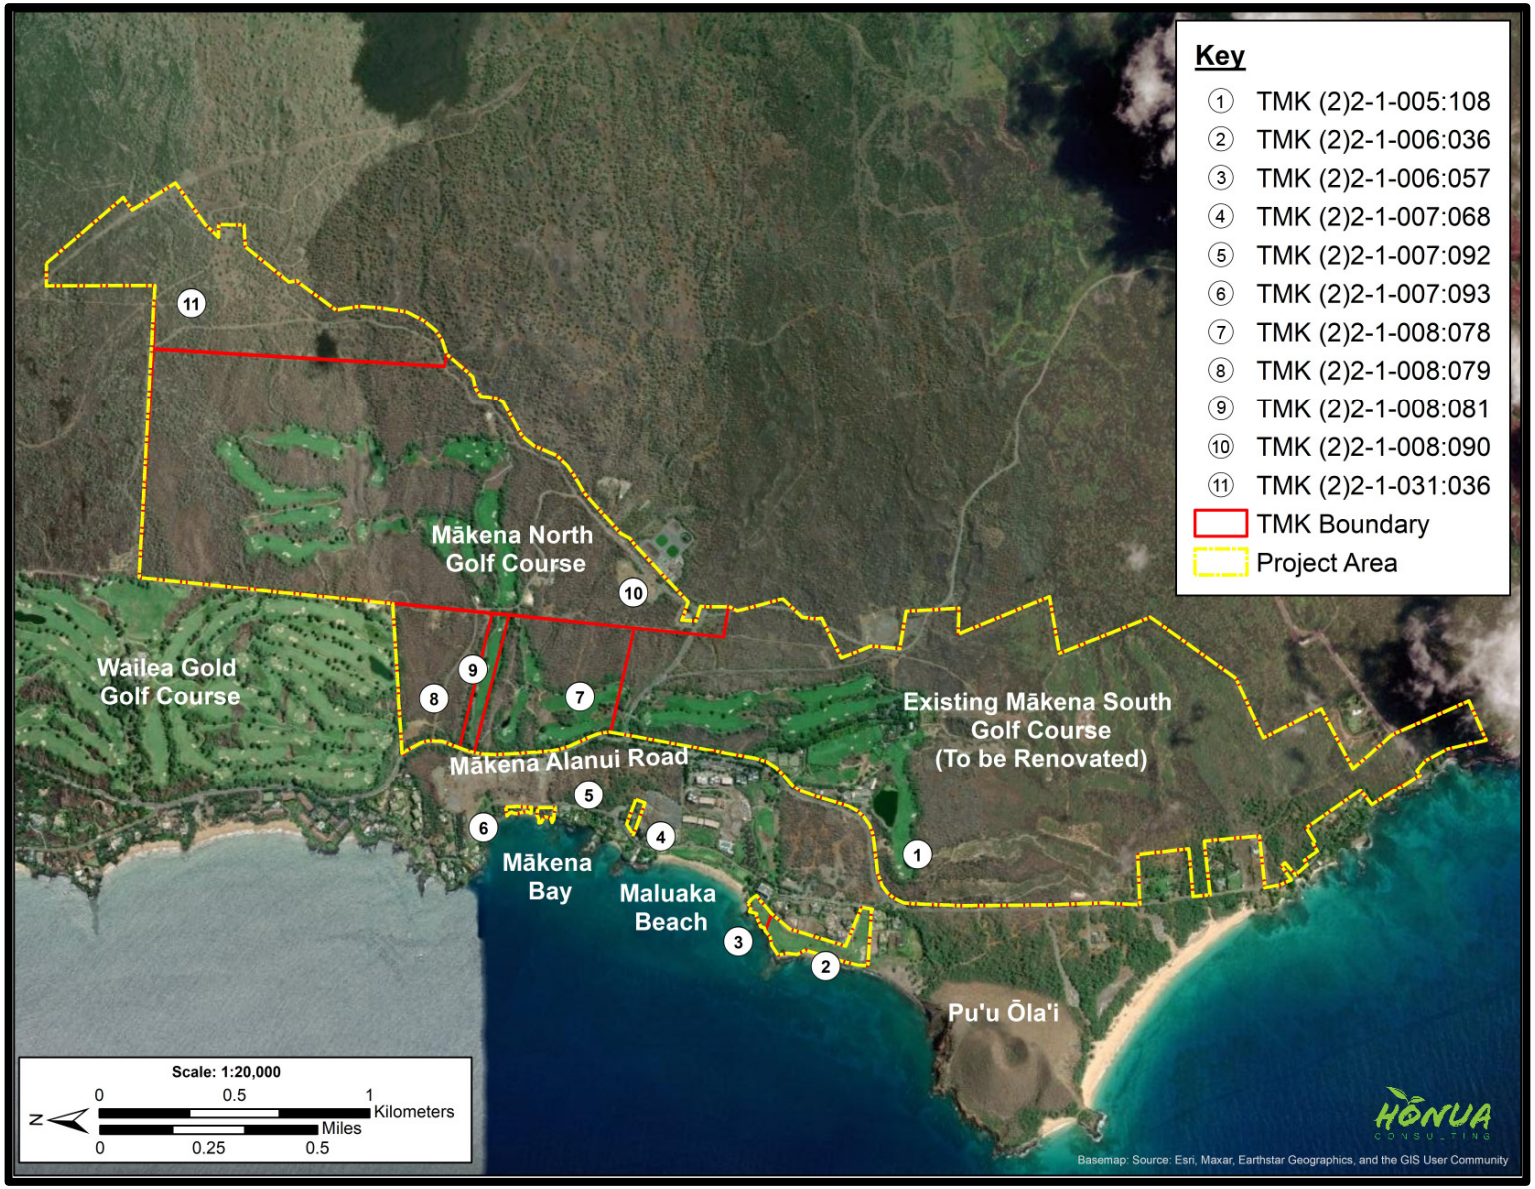

Figure 2. Project Area and TMK Boundaries on Aerial Map (Honua Consulting)

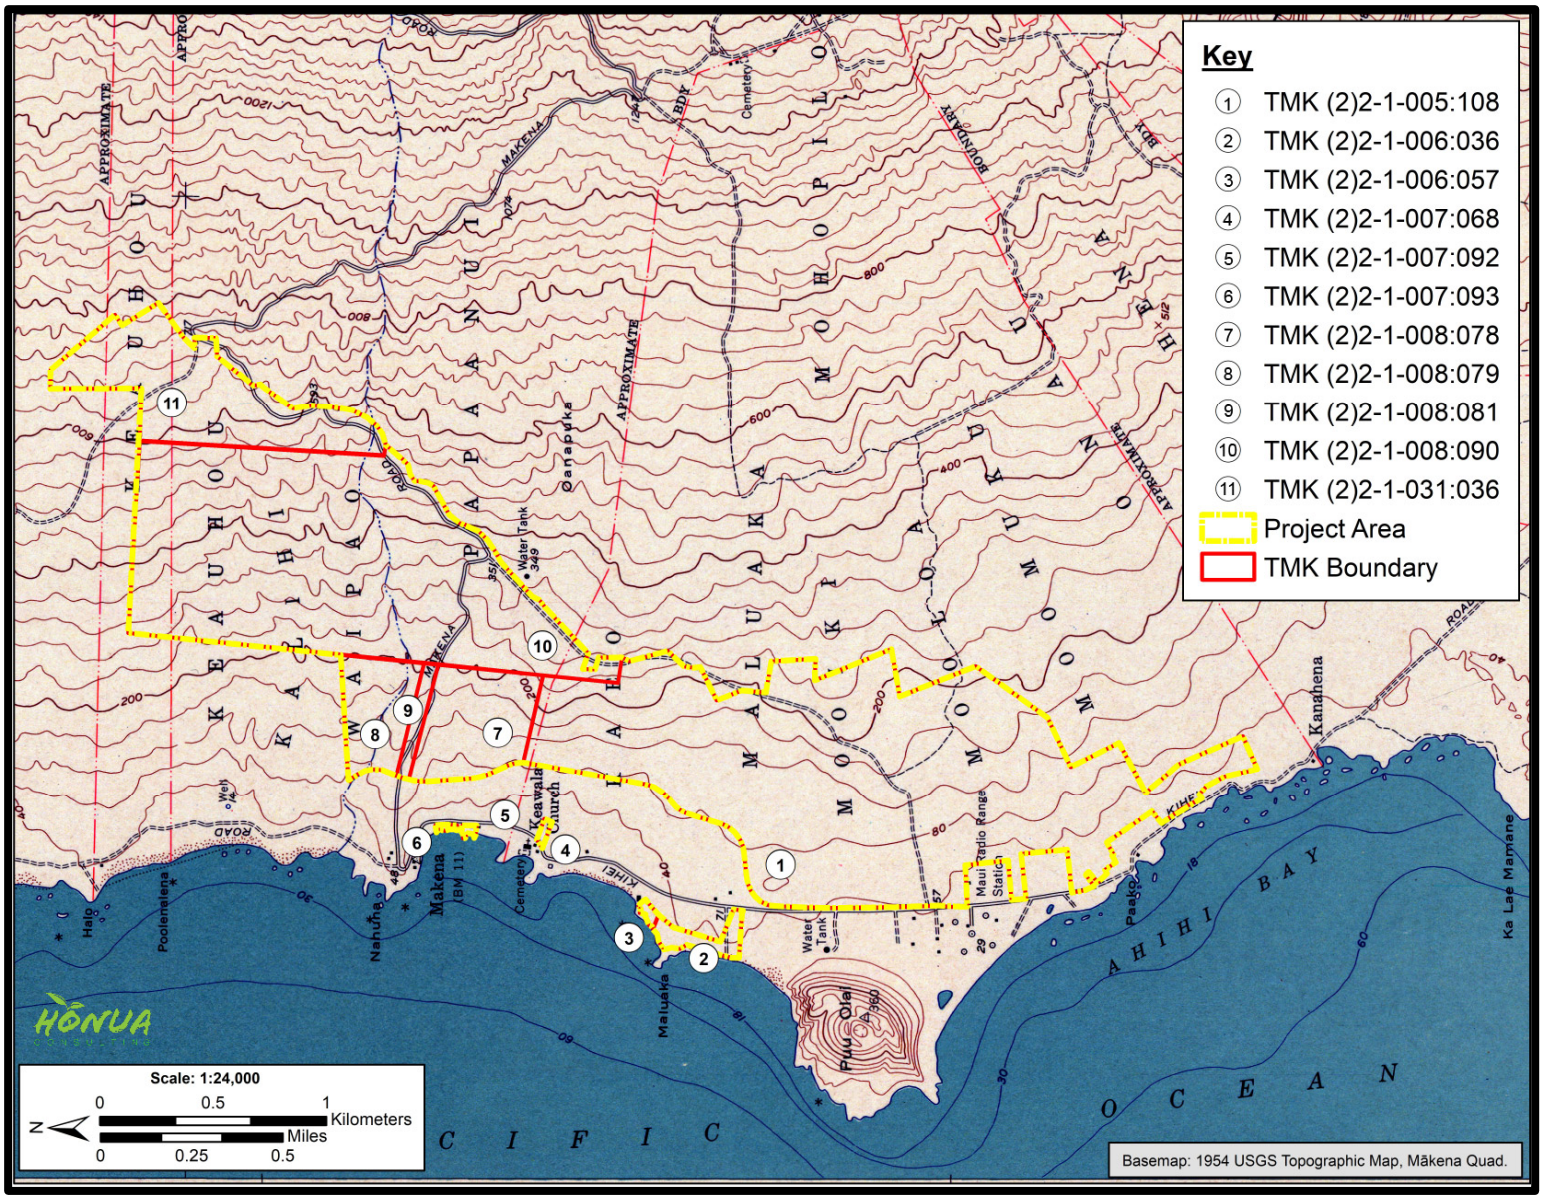

Figure 3. Project Area and TMK Boundaries on 1954 USGS Topography Map (Honua Consulting)

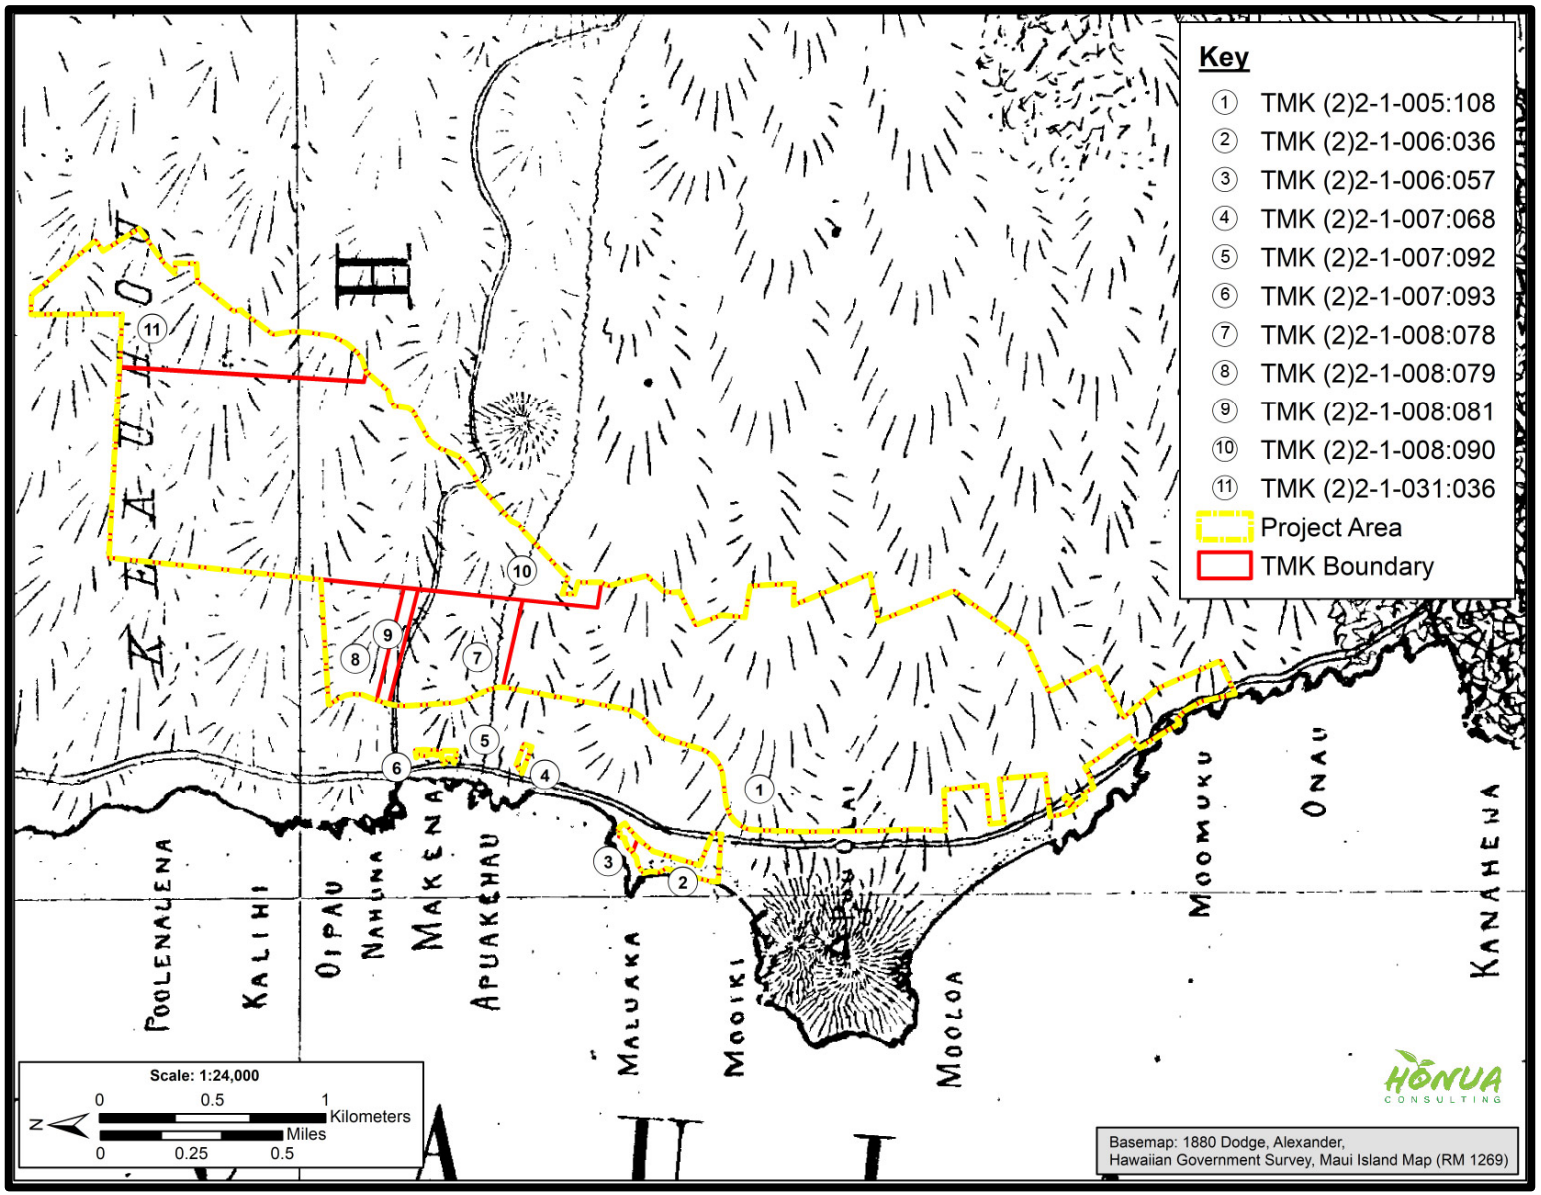

Figure 4. Project Area and TMK Boundaries on 1880 Registered Map 1269 (Honua Consulting)

1.2 Background

State and County agencies have an affirmative obligation to preserve and protect Native Hawaiians' customarily and traditionally exercised rights to the extent feasible.[2] State law further recognizes that the cultural landscapes provide living and valuable cultural resources where Native Hawaiians have and continue to exercise traditional and customary practices, including hunting, fishing, gathering, and religious practices. In *Ka Pa'akai*, the Hawai'i Supreme Court provided government agencies an analytical framework to ensure the protection and preservation of traditional and customary Native Hawaiian rights while reasonably accommodating competing private development interests. This is accomplished through:

1) The identification of valued cultural, historical, or natural resources in the project area, including the extent to which traditional and customary Native Hawaiian rights are exercised in the project area;
2) The extent to which those resources—including traditional and customary Native Hawaiian rights—will be affected or impaired by the proposed action; and
3) The feasible action, if any, to be taken to reasonably protect Native Hawaiian rights if they are found to exist.

The appropriate information concerning the project area has been collected, focusing on areas near or adjacent to the project area. A thorough analysis of this project and potential impacts to cultural resources, historical resources, and archaeological sites is included in this survey.

This CIA provides an overview of cultural and historic resources in the project area using thorough literature review, community and cultural practitioner consultation, and high-level, project-specific surveys. This CIA focuses on identifying areas in which disturbance should be avoided or minimized to reduce impacts to historic properties or culturally important features. The paramount goal is to prevent impacts through avoidance of sensitive areas and mitigating for impacts only if avoidance is not possible.

1.3 Geographic Extent

The geographic extent for impacts to cultural resources and historic properties includes the project area and localized surroundings. This CIA also reviews some of the resources primarily covered by the regulatory review. It primarily researches and reviews the range of biocultural[3] resources identified through historical documents, traditional knowledge,

[2] Article XII, Section 7 of the Hawai'i State Constitution, *Ka Pa'akai O Ka 'Āina v. Land Use Commission*, 94 Haw. 31 [2000] (Ka Pa'akai), Act 50 SLH 2000

[3] Honua Consulting uses the term "biocultural" to refer to natural and cultural resources.

information found in the Hawaiian language historical cache, and oral histories and knowledge collected from cultural practitioners and experts.

The best practice for CIAs is to define a geographic extent beyond the identified or typical boundaries of the geographic project area. The recommended area is typically the size of the traditional land area (ahupua‘a) or region (moku), but this can be larger or smaller depending on what best helps to identify the resources appropriately.

1.4 Goal of Cultural Impact Assessments

This survey, along with the archaeological work being conducted by ASM, looks to fulfill the requirement of taking into account the Project’s potential impacts on historic and cultural resources and, at a minimum, describe: a) any valued cultural, historic, or natural resources in the area in question, including the extent to which traditional and customary Native Hawaiian rights are exercised in the area; b) the extent to which those resources – including traditional and customary Native Hawaiians rights – will be affected or impaired by the Project; and c) the feasible action, if any, to be taken to reasonably protect native Hawaiian rights if they are found to exist.

(This area intentionally left blank.)

2.0 Methodology

Numerous studies have been conducted on this area, but few have effectively utilized Hawaiian language resources and Hawaiian knowledge. This appears to have impacted modern understanding of this location, as many of the relevant documents are native testimonies given by Kanaka Hawai‘i (Hawaiians) who lived on this land.

While hundreds of place names and primary source historical accounts (from both Hawaiian and English language narratives) are cited in this document, it is impossible to glean the whole story of these lands from any given manuscript. These primary source historical accounts cover a range of history spanning generations. Importantly, the resources herein are a means of connecting people with the history of their communities and validating that they are part of that history. Knowledge of place will, in turn, promote appreciation for place and encourage acts of stewardship for the valued resources that we pass on to the future.

Background research was conducted using materials obtained from the State Historic Preservation Division (SHPD) library in Kapolei and the Honua Consulting, LLC report library. On-line materials consulted included the Ulukau Electronic Hawaiian Database (www.ulukau.com), Papakilo Database (www.papakilodatabase.com), the State Library on-line (http://www.librarieshawaii.org/Serials/databases.html), and Waihona ‘Āina Māhele database (http://www.waihona.com). Hawaiian terms and place names were translated using the on-line Hawaiian dictionaries (Nā Puke Wehewehe ‘Ōlelo Hawai‘i) (www.wehewehe.com), *Place Names of Hawai‘i* (Pukui et al., 1976), and *Hawai‘i Place Names* (Clark, 2002). Historic maps were obtained from the State Archives, State of Hawai‘i Land Survey Division website (http://ags.hawaii.gov/survey/map-search/), UH-Mānoa Maps, Aerial Photographs, and GIS (MAGIS) website (http://guides.library.manoa.hawaii.edu/magis). Maps were geo-referenced for this report using ArcGIS 10.3. GIS is not 100% precise and historic maps were created with inherent flaws; therefore, geo-referenced maps should be understood to have some built-in inaccuracies.

While conducting the research, primary references included, but were not limited to: land use records, including the Hawaiian Land Commission Awards (LCA) records from the Māhele ‘Āina (Land Division) of 1848; the Boundary Commission Testimonies and Survey records of the Kingdom and Territory of Hawai‘i; and historical texts authored or compiled by numerous native and foreign writers. The study also includes several native accounts from Hawaiian language newspapers (primarily compiled and translated from Hawaiian to English by Kepā Maly), and historical records authored by nineteenth century visitors and residents of the region.

Historical and archival resources were located in the collections of the Hawai‘i State Archives, Survey Division, Land Management Division, Survey Division, and Bureau of Conveyances; the Bishop Museum Library and Archives; the Hawaiian Historical Society and the Hawaiian Mission Children’s Society Library; University of Hawai‘i-Hilo Mo‘okini Library; the National Archives and Records Administration, Maryland; the Library of Congress, Washington D.C.; the National Oceanic and Atmospheric Administration National Library, Maryland; the Smithsonian Institution Natural History and National Anthropological Archives libraries, Washington, D.C.; the Houghton Library at Harvard; the United States Geological Survey (USGS) Library, Denver; private family collections; and in the collection of Kumu Pono Associates LLC. This information is generally cited in categories by chronological order of the period depicted in the narratives.

M.P. Nogelmeier (2010) discusses the adverse impacts of methodology that fails to properly research and consider Hawaiian language resources. He strongly cautions against a mono-rhetorical approach that marginalizes important native voices and evidence from consideration, specifically in the field of archaeology. For this reason, Honua Consulting consciously employs a poly-rhetorical approach, whereby all data, regardless of language, is researched and considered. To fail to access these millions of pages of information within the Hawaiian language cache could arguably be a violation of Act 50, as such an approach would fundamentally fail to gather the best information available, especially considering the voluminous amounts of historical accounts available for native tenants in the Hawaiian language.

Hawaiian culture views natural and cultural resources as largely inextricable: without the resources provided by nature, cultural resources could and would not be procured. From a Hawaiian perspective, all natural and cultural resources are interrelated, and all natural and cultural resources are culturally significant. Kepā Maly (2001), ethnographer and Hawaiian language scholar, points out, “In any culturally sensitive discussion on land use in Hawai‘i, one must understand that Hawaiian culture evolved in close partnership with its natural environment. Thus, Hawaiian culture does not have a clear dividing line of where culture ends and nature begins” (p. 1). As leading researchers and scholars on Hawaiian culture, Maly and his wife, Onaona, have conducted numerous ground-breaking studies on cultural histories throughout Hawai‘i. A substantial part of the archival research utilized in this study was previously compiled and published by Kepā and Onaona Maly, who have granted their permission to use this important work and are identified properly as associated authors and researchers to this study.

This study also specifically looks to identify intangible resources. Tangible and intangible heritage are inextricably linked (Bouchenaki, 2003). Intangible cultural resources, also identified as intangible cultural heritage (ICH), are resources without a physical form, such as hula or mele (song). These resources are critical to the perpetuation of cultures

globally. International and human rights law professor Federico Lenzerini (2011) notes that, “At present, we are aware on a daily basis of the definitive loss—throughout the world—of language, knowledge, knowhow, customs, and ideas, leading to the progressive impoverishment of human society” (p. 12). Lenzerini (2011) goes on to warn that:

> The rich cultural variety of humanity is progressively and dangerously tending towards uniformity. In cultural terms, uniformity means not only loss of cultural heritage—conceived as the totality of perceptible manifestations of the different human groups and communities that are exteriorized and put at the others’ disposal—but also standardization of the different peoples of the world and of their social and cultural identity into a few stereotyped ways of life, of thinking, and of perceiving the world. Diversity of cultures reflects diversity of peoples; this is particularly linked to ICH, because such a heritage represents the living expression of the idiosyncratic traits of the different communities. Preservation of cultural diversity, as emphasized by Article 1 of the UNESCO Universal Declaration on Cultural Diversity, ‘is embodied in the uniqueness and plurality of the identities of the groups and societies making up humankind’. Being a ‘source of exchange, innovation and creativity’, cultural diversity is vital to humanity and is inextricably linked to the safeguarding of ICH. Mutual recognition and respect for cultural diversity—and, *a fortiori*, appropriate safeguarding of the ICH of the diverse peoples making up the world—is essential for promoting harmony in intercultural relations, through fostering better appreciation and understanding of the differences between human communities. (p. 103)

Therefore, tradition and practice, as elements of Hawaiian ICH, are essential to the protection of Hawaiian rights, the perpetuation of the Hawaiian culture, and the preservation of cultural diversity as a whole.

2.1 Identifying Traditional or Customary Practices

Through the contextual lens of tradition and practice serving as elements of Hawaiian ICH, Honua Consulting developed a framework to define traditional or customary practices (Figure 5).

The first element, knowledge, has been referred to as traditional ecological knowledge (TEK), Indigenous local knowledge, or ethnoscience. In the context of this study, knowledge is the information, data, or expertise Native Hawaiians or local communities possessed or possess about an area’s environment. In a traditional context, this would have included information Hawaiians possessed to have the skills to utilize the area’s resources for a range of purposes, including, but not limited to, travel, food, worship or habitation. This element is largely intangible.

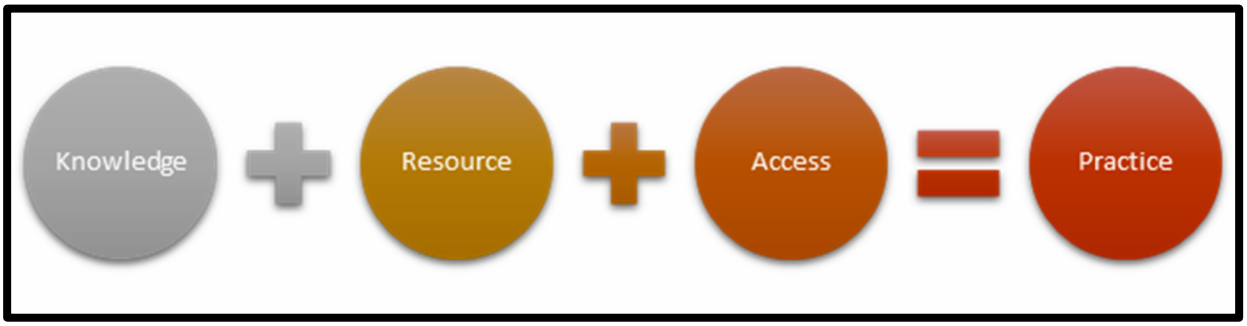

Figure 5. Diagram of Elements that Contribute to Traditional or Customary Practices

The second element is the resources themselves. These are primarily tangible resources, either archaeological resources (e.g., habitation structures, walls, etc.) or natural resources (e.g., plants, animals, etc.). Resources can also be places or geographic features, such as a wahi pana (legendary places) or sacred/culturally important sites. While wahi pana may sometimes be construed as general locations, their importance and value need not be diminished. It is important to recognize that potential eligibility as a "historic site" on the National Register of Historic Places would require identifiable boundaries of a site.

The third element is access. Access serves as the important catalyst through which the first two elements, knowledge and resource, can be operationalized for traditional and customary practices to take place. In this way, practitioners must have access to the resource to practice their traditional customs. Importantly, access as defined here expands beyond mere physical access but also includes the ability to access resources. For example, if a particular plant species is used for medicinal purposes, a sufficient population of that plant species must be accessible to practitioners for use. In this example, an action that would adversely impact the population of the culturally important plant species would impact practitioners' ability to access that plant. By extension, the action would also adversely impact the traditional or customary practice.

Traditional or customary practices are, therefore, the combination of knowledge, resource(s), and access. Each of these individual elements should be researched and identified in assessing any potential practices or impacts to said practices.

2.2 Traditional Knowledge and the Identification of Cultural Resources

Traditional Native Hawaiian practitioners were scientists and expert natural resource managers by necessity. Without modern technological conveniences to rely upon, Hawaiians developed and maintained prosperous and symbiotic relationships with their natural environment for at least a thousand years. Their environments were their families, their homes, and their laboratories. They knew the names of every wind and every rain. The elements taught and inspired. The ability of Indigenous people to combine spirituality

and science led to the formation of unique land-based methodologies that spurred innovation. Therefore, identifying significant places requires a baseline understanding of what made places significant for Hawaiians.

Native Hawaiians reinforced the biodiversity that continues to exist in Hawai‘i today through their customary traditional natural resource management practices. Hawaiians were both settlers and explorers. Krauss (1993) explains: “Exploration of the forests revealed trees, the timber of which was valuable for building houses and making canoes. The forests also yielded plants that could be used for making and dying tapa, for medicine, and for a variety of other artifacts” (p. 1). Analysis of native plants and resource management practices reveals the depth to which Hawaiians excelled in their environmental science practices:

> [Hawaiians] demonstrated great ability in systematic differentiation, identification, and naming of the plants they cultivated and gathered for use. Their knowledge of the gross morphology of plants, their habits of growth, and the requirements for greatest yields is not excelled by expert agriculturists of more complicated cultures. They worked out the procedures of cultivation for every locality, for all altitudes, for different weather conditions and exposures, and for soils of all types. In their close observations of the plants they grew, they noted and selected mutants (spores) and natural hybrids, and so created varieties of the plants they already had. Thus over the years after their arrival in the Islands, the Hawaiians added hundreds of named varieties of taro, sweet potatoes, sugarcane, and other cultivated plants to those they had brought with them from the central Pacific. (Krauss, 1993, p. 3)

The present analyses of archival documents, oral traditions (oli [chants], mele, and/or hula dances and ha‘i [storytelling performances]), and Hawaiian language sources including books, manuscripts, and newspaper articles, are focused on identifying recorded cultural resources present on the landscape, including: Hawaiian and non-Hawaiian place names; landscape features (ridges, gulches, cinder cones); archaeological features (kuleana parcel walls, house platforms, shrines, heiau [places of worship], etc.); culturally significant areas (viewsheds, unmodified areas where gathering practices and/or rituals were performed); and significant biological, physiological, or natural resources. This research also looks to document the wide range of Hawaiian ethnoscience that existed within the geographic extent.

2.3 Mo‘olelo ‘Āina: Native Traditions of the Land

Among the most significant sources of native mo‘olelo (history, narrative, story) are the Hawaiian language newspapers which were printed between 1838 and 1948, and the early writings of foreign visitors and residents. Most of the accounts that were submitted to the papers were penned by native residents of areas being described and noted native

historians. Over the last 30 years, Kepā Maly has reviewed and compiled an extensive index of articles published in the Hawaiian language newspapers, with particular emphasis on those narratives pertaining to lands, customs, and traditions. Many traditions naming places around Hawai‘i are found in these early writings. Many of these accounts describe native practices, the nature of land use at specific locations, and native mo‘olelo. Thus, we are given a means of understanding how people related to their environment and sustained themselves on the land.

2.4 Historic Maps

There are also numerous, informative historic maps for the region. Surveyors of the nineteenth century were skilled in traversing land areas and capturing important features and resources throughout Hawai‘i’s rich islands. Historic maps were carefully studied, and the features detailed therein were aggregated and categorized to help identify specific places, names, features, and resources throughout the study area. From these, among other documents, new maps were created that more thoroughly capture the range of resources in the area.

2.5 Archaeological and Biological Studies

ASM Affiliates conducted an archaeological literature review and surface survey. The findings have been incorporated into **Section 4.1 (Historic Properties and Cultural Sites)**, along with a discussion of other cultural resources known in the area.

A biological field study was completed by Rick Barboza. The findings are discussed in **Section 4.2.1 (Flora)** and **Section 4.2.2 (Fauna).**

2.6 Ethnographic Methodology

Information from lineal and cultural descendants is instrumental in procuring information about the project area’s transformation over time and its changing uses. Information gathered through research helped to focus the interview questions. In general, interviewees are asked to provide the following information: 1) cultural, generational, or personal ties to the project area and its vicinity; 2) cultural resources (i.e., flora, fauna, water features) that are currently known to them within the project area; 3) traditions and customs that have taken place in the past or are currently taking place within the project area and immediate vicinity; 4) any foreseen potential impacts to resources and traditions, as well as concerns they have about the proposed project activities; and 5) recommendations to mitigate potential impacts, if any, as a result of the project.

Descendants and cultural practitioners from the area were contacted and interviewed for this CIA; these interview summaries are included in **Section 5.0 (Oral Records, Interviews, and Consultations)**.

2.7 Additional Consultation Outside the CIA

Separate, and extensive, community consultation was offered for this DEIS. The Social Impact Assessment (SIA) for the Mākena Mauka project provides a detailed account of the multiple ways in which the community has been consulted throughout the environmental review process. Rooted in the requirements of Hawai‘i’s Environmental Impact Statement (EIS) law and informed by both formal procedure and culturally appropriate engagement strategies, the consultation process has involved a broad array of opportunities for community voices to be heard and considered. The formal consultation began with the publication of the EIS Preparation Notice (EISPN) on June 8, 2024, followed by a republished version on June 23, 2024, which extended the public comment period and added a second scoping meeting. These public scoping meetings were held on July 1 and July 30, 2024, in Kīhei, Maui, and allowed residents and stakeholders to provide oral and written testimony regarding the proposed development. Concerns raised in these forums included housing affordability, public access, environmental degradation, and cultural erasure. Many community members opposed the project altogether, expressing distrust in developers and concern about the long-term implications for the land and local residents.

Recognizing that not all impacted individuals were able to attend these meetings, the SIA team developed a targeted, confidential online survey to capture a broader range of perspectives. The survey, which ran from January 31 to February 10, 2025, was distributed to nearly 600 individuals, including Native Hawaiian cultural practitioners, lineal descendants of the area, local residents, business owners, nonprofit representatives, and individuals who had previously testified. The survey consisted of demographic questions, inquiries into participants’ relationships with Mākena Mauka, and open-ended questions about their perceptions of the project and recommendations for mitigation. Anonymity and voluntary participation were emphasized to ensure respondents could speak freely and without fear of reprisal. The survey yielded 161 responses, representing a diversity of age, ethnicity, and connection to the project area, and analysis revealed saturation in the qualitative data, meaning no new themes emerged from additional responses, validating the sufficiency of the dataset.

To enhance transparency and build trust, the SIA team conducted a “member checking” process in which preliminary findings were shared with the 55 individuals who had volunteered to remain engaged. These individuals were invited to review and provide feedback on the draft results, affirming whether the themes reflected their views and whether their voices had been accurately represented. The response rate for this validation effort was consistent with best practices in qualitative research, and the

feedback was overwhelmingly supportive of the identified themes, which included distrust in mitigation promises, concerns about displacement, a desire to prioritize Native Hawaiian needs and rights, and frustration over historical patterns of exclusion and exploitation in development. Participants appreciated the opportunity to review the findings and offered nuanced insights to further inform the analysis.

In addition to these initial rounds of engagement, the SIA outlines a path for continued consultation through the organization of community focus groups. These focus groups are intended to bring together residents, lineal descendants, cultural practitioners, and other stakeholders to further refine and prioritize mitigation strategies. They aim to provide a space for deeper dialogue, relationship-building, and the co-development of culturally appropriate solutions. Focus groups will serve as a platform for residents to advocate for their needs in areas such as emergency evacuation planning, workforce housing, environmental protection, and the preservation of public access to trails, beaches, and cultural sites.

Throughout the SIA process, a range of community-informed mitigation strategies have emerged. These include the institutionalization of cultural resource management roles for lineal descendants, expansion of employment opportunities for local residents, creation of regenerative farming and educational programs, and commitments to conservation and public infrastructure improvements. The SIA also proposes establishing a Community Advisory Group, endowing scholarships for Native Hawaiian students, and supporting ongoing programs such as community archaeology initiatives and local food distribution efforts. While many of these strategies are commendable, the report also acknowledges persistent skepticism among residents, who question whether developers will follow through on their promises and whether systemic inequities will truly be addressed.

The Mākena Mauka SIA demonstrates a comprehensive and culturally responsive approach to community consultation. Through formal public hearings, anonymous surveys, follow-up validation, and plans for ongoing engagement, the process has provided multiple avenues for residents and stakeholders to voice their concerns and influence the project's trajectory. However, the report also makes clear that consultation is not enough if not coupled with genuine accountability and long-term partnerships that honor the relationships between people, land, and culture. Going forward, the success of the Mākena Mauka project will hinge not only on its compliance with environmental law but on its ability to build and sustain trust with the people of Honua‘ula and Maui.

In addition to the extensive public scoping process, targeted community surveys, and follow-up validation efforts detailed in the Social Impact Assessment (SIA), ongoing consultation on the Mākena Mauka project has been significantly shaped by two groups: the 2017 *Settlement Agreement* between ATC and several plaintiff organizations, and the

Cultural Focus Group (CFG). Together, these consultation processes reflect institutionalized long-term mechanisms for community participation, cultural protection, and environmental stewardship, and establish consultation frameworks that embed Native Hawaiian voices in the governance of the Mākena region.

The 2017 *Settlement Agreement* was the result of legal action brought by Hoʻoponopono o Mākena, the Sierra Club, and Maui Tomorrow Foundation, who challenged the Environmental Assessment and development proposals associated with the Mākena M-5/M-6/S-7/B-2 (MSB) project. This agreement outlines a series of enforceable commitments by ATC that arose from that litigation, including significant reductions in unit counts, restrictions on accessory dwellings and zoning changes, and binding agreements to protect environmentally and culturally sensitive areas. Crucially, the plaintiffs agreed to withdraw their objections in exchange for ATC's formal commitment to mitigation measures, including funding water quality monitoring, ensuring long-term wastewater treatment access for local families, and limiting the overall development to 1,100 units across the entire Mākena resort property.

Incorporated within the *Settlement Agreement* is the formation of the Makena Community Benefit Fund, jointly governed by ATC and the plaintiff groups. This fund is structured to support land conservation, trail and shoreline restoration, cultural programming, and other community-based initiatives. Its creation embeds an enduring community oversight role in the future development of Mākena. The agreement also codifies the obligation to provide 60 affordable housing units—32 within the Mākena area and 28 elsewhere—under the supervision of a community land trust and with priority given to Native Hawaiian and long-time Maui residents. This prioritization was designed to address the displacement concerns raised during the environmental review and to support equitable access to housing in the face of luxury development pressures. The 2017 agreement laid the foundation for structural consultation with environmental and community organizations, but it is important to note that it is largely driven by individuals who are not direct, living descendants of the Mākena area.

The Cultural Focus Group (CFG) plays a vital and ongoing role in the Mākena Mauka project, serving as a core mechanism for ensuring that community voices, particularly those of descendant families and cultural practitioners, guide the planning and entitlement process. Established over a decade ago, the CFG consists of five long-rooted Native Hawaiian families from Mākena: Chang, DeLima, Kuloloio, Luʻuwai, and Hall. These families bring a wealth of ancestral knowledge and cultural expertise, including marine stewardship, land restoration, traditional agriculture, ceremony, and historic preservation. Their multi-generational ties to the land and deep cultural practices position them as trusted stewards, uniquely equipped to drive mitigation strategies that are meaningful, effective, and place-based.

Throughout the planning and entitlement phases of the project, the CFG has operated as more than a consultative body—they have functioned as cultural leaders, educators, and advocates for systems of mitigation grounded in Hawaiian values. The group has worked closely with the applicant to identify key priorities for resource management, develop culturally informed recommendations, and propose frameworks for community access, restoration, and protection. Their insights are shaping proposed approaches for managing water and ocean resources, cultural sites, and wildfire risk, and for restoring dryland forests and other ecological systems essential to the cultural and environmental health of the region.

A central goal of this work is the development of a formal, long-term agreement between ATC Makena and the CFG that would institutionalize this collaborative relationship moving forward. Drawing inspiration from successful models such as the agreements developed by cultural practitioners working on Kahoʻolawe, this effort seeks to create a living document that reflects the values, concerns, and priorities of the descendant community and embeds those into the framework of project governance. While this effort is still in progress, its development reflects a commitment to iterative engagement—one built on trust, transparency, and a shared vision of stewardship.

Even without a finalized agreement, the CFG is already deeply engaged in driving mitigation programming. They are helping to shape the development of integrated planning documents, including resource management strategies and cultural access plans. Their work ensures that mitigation efforts are not simply reactive but proactive—addressing long-term ecological and cultural resilience. This includes ensuring that cultural protocols are followed in site access, that native plant and marine species are protected and restored, and that cultural observation sites such as kilo points and heiau are maintained and respected.

The CFG also plays a key role in shaping public benefits and ensuring community inclusion throughout the development. Their involvement in discussions around fire evacuation planning, shoreline protection, and community gathering spaces has helped align proposed mitigation measures with real, lived community needs. Their contributions are critical in balancing development with the protection of cultural identity, local knowledge, and community health.

Ultimately, the ongoing work of the CFG is a powerful example of what meaningful consultation looks like in practice. It is iterative, place-based, and deeply relational. As the project continues to evolve, the CFG will remain central to its success—ensuring that the vision for Mākena Mauka remains rooted in mālama ʻāina, kuleana, and the continuity of cultural life for generations to come.

This structured and institutionalized relationship between ATC, the CFG, and the broader community represents the applicant's approach to consultation that blends legal obligation, cultural knowledge, and community accountability. The SIA recognizes that consultation is about creating systems for co-management, honoring the kūpuna and their knowledge, and ensuring that generational residents retain the right to shape the future of their homeland.

Together, the ongoing work emerging from the Settlement Agreement, the CFG, and the SIA itself offers a layered and evolving framework of community consultation. It begins with litigation and formal public hearings, deepens through cultural alignment and structured memoranda of agreement, and will continue into the future through ongoing engagement, resource management, cultural education, and cultural site access. The ultimate measure of success will not be in the documents signed, but in whether this consultation results in a project that genuinely reflects the values, priorities, and lived realities of the people of Honua'ula. For that to happen, ongoing accountability to these agreements—and not just symbolic inclusion—must guide the next phases of the Mākena Mauka development.

3.0 Historic Background

An extensive historical background of Honuaʻula moku, where the Project Area is located, is provided in this section, beginning with an overview of Maui generally and then focusing on Honuaʻula. This first section provides an overview of the ahupuaʻa identified in the draft Environmental Impact Statement. It then further refines to focus on the ahupuaʻa of Kaʻeo and the ʻili of Mākena.

Maui has a unique geography because it is "made up of two distinct mountain masses joined by a low flat isthmus" (Sterling, 1998, p. 3). The land divisions on Maui are also unlike those on other islands. Ancient names for Maui include Ihikapalaumaewa and Kulua (Sterling, 1998, p. 2).

In Hawaiian culture, natural and cultural resources – the honua ola (biocultural landscape) – are one and the same. Native traditions describe the formation of the Hawaiian Islands and the presence of life on and around them in the context of genealogical accounts. All forms of the honua ola, including the heavens, mountain peaks, barren lava flows, watered valleys, plains, shores, and the ocean depths, are the kinolau (myriad body forms) of Hawaiian gods, goddesses, and other deities. Hawaiian genealogical accounts reveal that various gods, goddesses, and creative forces of nature gave birth to the Hawaiian Islands. Among them are Wākea (the expanse of the sky, the father) and Papa-hānau-moku (Strata-earth who gave birth to the islands, the mother[4]). Hawaiʻi was the largest and first-born of these island children, followed by Kahoʻolawe or Kanaloa, born as a miscarriage, and then Maui. These same god-beings – or creative forces of nature who gave birth to the islands, stretching from Hawaiʻi to the Moku Papapa,[5] – were also the parents of the first man, Hāloa, the ancestor from which all Hawaiian people are descended. It was in this context of kinship, that the ancient Hawaiians addressed their environment, and it is the basis of the Hawaiian system of land use.

3.1 Overview of Honuaʻula Moku

The moku of Honuaʻula on Maui carries significant historical importance dating back to the early settlement of Hawaiʻi. The naming of Honuaʻula is connected to the aliʻi nui (high chief) Moʻikeha and his brother, Olopana, who "sailed to Tahiti where they lived for a while until Moʻikeha became tired with the situation and decided to return to Hawaii" (Fornander in Sterling, 1998, p. 215). Upon their return, Kamahuaele, Moʻikeha's astrologer and seer, accompanied them along with chiefs, retainers, and relatives. Historical accounts agree that numerous places in the Hawaiian Islands were named after the followers of Moʻikeha. As the fleet traveled along the island shores, Moikeha's companions established

[4] Also Haumea-nui-hānau-wā-wā (Great Haumea—Woman-earth born time and time again).
[5] The distant atolls and pinnacle-islets of the Northwestern Hawaiian Island Chain.

themselves in different locations and named these areas accordingly. The district of Honuaʻula on Maui was among these named places, reflecting this early settlement history.

Sterling (1998) notes ambiguity in the exact meaning of Honuaʻula, suggesting it could refer to the heiau (temple) at the base of Kaʻuiki Hill rather than the entire district, which is some distance from Hana.

The physical geography of Honuaʻula is characterized by distinctive environmental zones and volcanic landscapes. Honuaʻula originally had a much lower forest zone with greater rainfall before the introduction of cattle. The forest zone plants were cultivated in the lower uplands above inhabited areas.

The geology of the region was marked by lava flows. Sterling (1998) notes that "the eastern and coastal portion of Honuaʻula was cultivated by Hawaiian planters until recent years" despite two relatively recently lava flows "which erupted from fissures below the crater and only a few miles inland and which covered many square miles of land" (p. 215).

The eastern and coastal portions were historically cultivated, though by the time of documentation, few homes were still standing at Kanaio, where upper road travel eastward was possible. Several Hawaiian families worked at Ulupalakua Ranch and maintained homes near the ranch house, cultivating dry taro.

Honuaʻula is comprised of at least 20 ahupuaʻa on the slopes of Haleakalā—the district also includes the islands of Kahoʻolawe and Molokini. It is likely that many traditions, particularly those associated with various place names, once existed, but the significant decline of the native population that began immediately after Western contact and continued through the 1890s contributed to a loss of ʻike kūpuna (ancestral knowledge).

Notable place names include but are not limited to:

- Nuʻukauila Kahimanini, Mōkapu and Waileʻa (along the coast)
- Haleolono, Piliwale, Hao, Kaʻōhai, Nena, Keahuaaao (the kula lands)
- Puʻu ʻIo (at the 2,840 foot elevation); Nupawai o Kukui o Piʻikea (ca. 3,100 foot elevation)

Honuaʻula witnessed significant historical conflicts. One such conflict is described by historian S.M. Kamakau (1992), highlighting Honuaʻula's role in Hawaiian political conflicts and warfare:

> In the year 1776 Ka-lani-ʻopuʻu and the chiefs returned to war on Maui, and in the battle with Ka-hekiliʻs forces at Wailuku were completely overthrown. The army landed at Keoneʻoʻio, their double canoes extending to Makena at Honuaʻula.

> There they ravaged the countryside, and many of the people of Honuaʻula fled to the bush. (p. 85)

Within Honuaʻula lies Makena. Makena is a significant place name in south Maui that exists as an ʻili, which is a smaller traditional Hawaiian land division, but there is no documentation of Makena constituting its own ahupuaʻa, although the name is widely known and utilized. The Makena ʻili is part of the larger Honuaʻula moku, demonstrating the nested nature of Hawaiian land organization systems.

Makena served as a small but important fishing settlement and village before Western contact. Its residents specialized in nearshore fishing techniques, utilizing the abundant marine resources of the protected bay area. The village site featured traditional Hawaiian residential structures and a significant religious complex that included several heiau (temples).

Makena also encompasses a coastal region with distinctive black lava fields, white sand beaches, and kīawe forests. Its boundaries were traditionally defined by natural landmarks rather than strict geometric measurements, reflecting indigenous Hawaiian spatial conceptualization that integrated cultural, ecological, and spiritual elements into land management practices.

As a place name, Makena carries meaning in Hawaiian language - "makena" translates to "abundance" or alternatively, some interpretations suggest it means "the mourning" or "the wailing," possibly referencing the sound of winds that frequent the area. This nomenclature reflects Hawaiian practices of naming places according to their natural characteristics or historical events. As noted, area descendants have different preferences as to the name and meaning.

The reason for these different interpretations traces back to how Hawaiian knowledge evolved and became preserved over time. Before Western contact, Native Hawaiians preserved their rich cultural knowledge through an exclusively oral tradition. Knowledge transfer occurred through chants, genealogies, and stories passed down through generations by memory and precise verbal transmission.

When American missionaries arrived in the 1820s, they developed a written Hawaiian alphabet, introducing diacritical marks to capture the language's unique sounds: the kahakō (macron) elongates vowels, while the ʻokina (glottal stop) represents a consonant sound. These marks are crucial for distinguishing between words with different meanings but similar spellings.

Despite their importance, these marks were often omitted in early publications. The Hawaiian Renaissance of the 1970s sparked renewed interest in language preservation, leading to standardization of these markings. Today, use of kahakō and ʻokina is commonly used in Hawaiian-language education, which blends traditional oral pedagogical methods with modern written instruction, honoring both the spoken traditions central to Hawaiian identity and the written forms that help preserve the language for future generations.

These differing interpretations are consistent with Hawaiian epistemology or ʻike Hawaiʻi. In Hawaiian epistemology, the concept of makawalu—meaning "numerous" or "many"—embodies a perspective that values multiple viewpoints and approaches to understanding. Literally translated as "eight eyes," makawalu encourages examining situations from diverse perspectives to develop comprehensive understanding. This philosophy complements the ʻōlelo noʻeau (Hawaiian proverb): "ʻAʻohe pau ka ʻike i ka hālau hoʻokahi."

This proverb translates to "All knowledge is not taught in the same school" and "One can learn from many sources." As one cultural practitioner reflects, this wisdom acknowledges that different "houses" of knowledge offer distinct but equally valid perspectives—whether in hula traditions where different halau (schools) teach unique styles, or in broader life contexts.

Mary Kawena Pukui documented this saying as ʻŌlelo Noʻeau #203, noting it serves as a reminder that there are many ways of practicing and engaging with knowledge. Together, these concepts affirm that diverse knowledge systems can coexist and complement one another, creating a richer tapestry of understanding through their intersection.

Before Western contact, Native Hawaiians preserved their rich cultural knowledge through an exclusively oral tradition. Knowledge transfer occurred through chants, genealogies, and stories passed down through generations by memory and precise verbal transmission.

When American missionaries arrived in the 1820s, they developed a written Hawaiian alphabet, introducing diacritical marks to capture the language's unique sounds: the kahakō (macron) elongates vowels, while the 'okina (glottal stop) represents a consonant sound. These marks are crucial for distinguishing between words with different meanings but similar spellings.

Despite their importance, these marks were often omitted in early publications. The Hawaiian Renaissance of the 1970s sparked renewed interest in language preservation, leading to standardization of these markings. Today, use of kahakō and ʻokina is

commonly used in Hawaiian-language education, which blends traditional oral pedagogical methods with modern written instruction, honoring both the spoken traditions central to Hawaiian identity and the written forms that help preserve the language for future generations.

3.1.1 Fishing Grounds of Honua‘ula

Fishing grounds were vital economic and subsistence resources throughout Honua‘ula. The following is detailed information about numerous fishing grounds, their landmarks, and navigation points used by local fishermen:

1. Pahua, located at Kanaio with Holu Point as its upper mark and Puwai as its lower mark, featured Ka-hope-o-ka-waa, a cave on the beach containing a stone resembling a man standing. When this cave appeared slightly toward the windward side, fishermen knew they were over the fishing ground, which was 40 or more fathoms deep.

2. Hiu, another fishing ground on the seaward side of Molokini, used the hill of Puuokali on the western side of Molokini as its identifying landmark.

3. Keahua used the sands of Nihomole on Molokini’s eastern side as its upper mark, with Pohaku-olu near Kaule Point at Kohe-o-Hala as its lower mark.

These detailed descriptions display the sophisticated geographical knowledge maintained by Hawaiian fishermen, who used visual triangulation methods to precisely locate productive fishing grounds in deep waters. The preservation of this knowledge represents valuable cultural documentation of traditional fishing practices in Honua‘ula moku.

The importance of fishing grounds in Honua‘ula was officially recognized in the kingdom’s legal framework. Under King Kamehameha III in 1839, the Hawaiian constitution and code of laws included specific provisions protecting traditional fishing grounds:

> 2. Respecting the tabooed fishing grounds. Those fishing grounds which are known by the people to have shoals of fish remaining upon them shall, at the proper season for fishing, be placed under the protective taboo of the tax officers for the King... On Maui, the kuikui of Honuaula and other places. (Sterling, 1998, p. 216)

This legal protection demonstrates the economic and cultural importance of these fishing grounds to the Hawaiian Kingdom and the recognition of traditional resource management practices within the emerging Western-influenced legal structure. Fishing

practices associated with the region are further detailed in **Section 6.13 (Fishing, Spearfishing, and Limu Picking)**.

3.1.2 Sacred Sites of Honua‘ula

Honua‘ula contained numerous sacred sites and places of power. A fishpond at Honua‘ula is mentioned in connection with Kane and Kanaloa, major deities in Hawaiian tradition:

> [When Kane and Kanaloa would travel around throughout Hawaii, if they came to a place that did not have drinking water Kane would thrust his stick into the ground and water would gush forth.] And thus were they wont to do, and thus did they break through a certain fish pond at Honuaula with their power. (Sterling, 1998, p. 216)

This account illustrates how natural features in Honua‘ula were integrated into spiritual narratives about the actions of gods, sanctifying the landscape.

Pohakueaea represented another spiritually significant location in Honua‘ula. According to A. Fornander (in Sterling, 1998), “Palila took a dislike to Molokai, so he again pushed out his war club and flew to Kaunolu, Lanai. From this place he crossed over to Kahoolawe and from there to Pohakueaea in Honuaula. At this place he sat down and rested” (p. 216). There is a rock off the point at the shore below Pu‘u Pimoe in Kanaio called Pōhaku Eaea, providing physical identification of this mythological site. The association with Palila, a legendary figure with supernatural abilities, elevated this natural landmark to cultural significance.

Honua‘ula contained numerous heiau serving different purposes. Three significant heiau noted by Sterling (1998, p. 217) include:

1. Na-hale-loulu-a-Kane, built for the prevention of epidemics and famine, dedicated to Kane.
2. Ka-ai-aea, built for multiplying and producing food.
3. Kahe-manini, built for multiplying fish.

These religious structures reflected the community’s priorities—disaster prevention, food security, and resource abundance—and illustrated how religious practice was integrated with resource management and community welfare.

Another sacred cultural site is the black sand beach of Kanaio. Sterling (1998) describes a conversation with Charlie Aikala, who called it Keawanaku and appeared hesitant to guide visitors there:

> Saw Charlie Aikala (from Keoneoio-LaPerouse) for a minute New Year's and asked him the name of "black sand beach." He called it Keawanaku. He was a little bit vague about things but was more than anxious to "run" me in and over the area. (p. 217)

The area seemed to be a kipuka (an older land area surrounded by newer lava flows), with evidence of old house sites, though the informant Charlie Aikala may have missed some features: "Doesn't look like he went further as he doesn't mention the dry pond and Ko'a or the cairns and enclosed heiau" (Sterling, 1998, p. 217). This account provides insight into both the physical landscape and the sometimes protective attitude of local knowledge keepers toward sacred or culturally significant sites.

Cultural sites are further discussed in the archaeological survey and in **Section 4.1 (Historic Properties and Cultural Sites)**.

3.1.3 Lava Flows in Honua'ula

The geological history of Honua'ula, particularly its lava flows, features prominently in historical sources detailing the area. The Kalua o Lapa flow narrative by E.D. Baldwin (1883, in Sterling, 1998) includes a traditional legend:

> Out in the sea near the middle of the Kalua o Lapa flow is a large rock or portion of this flow, called Pohaku o Paea. The natives told me an interesting legend about this rock. That it was once a woman who was raising chickens near where the Kalua o Lapa flow broke out and that she quarreled with Pele and that Pele in her wrath poured out the molten lava and chased her into the sea, finally catching her and turning her into this rock. (p. 224)

This account differs from another version by L.A. Thurston from 1924, illustrating how geological features became integrated into Hawaiian cultural narratives that could vary over time and between storytellers.

There is much debate about the dating of the last volcanic activity on Maui. Father Bailey's statement from 1879 (in Sterling, 1998) contradicts the popular belief that there had been no recent volcanic activity:

> "I was first stationed on Maui in 1841," said Father Bailey. "In my trips about the island I noticed a lava flow at Honuaula, at the south end of East Maui, which appeared much fresher than the other flows—much more so than it appears now (1879). I asked the natives if they knew when that flow occurred, and they told me that their grandparents saw it. They also told me that a woman and child were surrounded by the flow, but escaped after it cooled." (p. 224)

Thurston's subsequent investigation estimated this flow occurred around 1750-1790, based on calculations of generations and local testimonies, making it significantly more recent than previously believed. Sterling (1998) notes that "the government map of Maui shows three such flows, all in Honuaula and originating below the upper road around the island" (p. 224). The detailed description of this flow indicates it "begins about halfway down, between the upper road and the sea. It spreads to a width of a mile or so at the coast, having built quite a promontory out into the ocean... The lava is rough a-a, entirely devoid of vegetation, and looks as though it might have first seen daylight in the 20th instead of the 18th century" (Sterling, 1998, p. 224).

The region is also the site of important moʻolelo about Pele, the volcano goddess, who has connections to Honuaʻula. One significant story relates to Paea, a man from Kanaio, as collected by Sterling (1998):

> The story tells of Pele seeing a handsome man who lived in Kanaio near Puu Mahoe (Twin Hill) in the land of Honua-ula (Red Earth). Immediately she assumed the form of a gorgeous young woman and approached the man, Paea (Flint). Few men are immune to Pele's charms, and Paea was no exception. But he loved his sweetheart, Kalua (The enjoyment), and, wisely, recognized the goddess by her fiery eyes and wanted no part of any dalliance with the fire-eating beauty. (p. 227)

The narrative continues with their flight and eventual capture by Pele, who turned them to stone:

> Pele caught the two mortals just below Ana Muki (Cave of Whispering Spirits), near Puu Mahoe. Today Paea's head and torso form the Poʻo Kanaka (Mans Head) stone, which is shaped like the map of Maui and can be seen just above the road which leads from Ulupalakua to Kanaio Village. The rest of his body forms Pohaku Paea [Pohaku Paea] (Stone Paea) which is just next to the remains of the fish ponds at La Perouse Bay. (Sterling, 1998, p. 227)

These stories served multiple purposes in Hawaiian culture. They explained geological features, reinforced cultural values and warnings about respecting spiritual forces, and embedded places in the landscape with cultural meaning that helped people remember and navigate their environment.

3.2 Traditional Period

The ahupuaʻa within the moku of Honuaʻula represent a rich tapestry of Hawaiian history, culture, and natural resource management. From the naming origins connected to early Polynesian voyagers, through the religious structures dedicated to abundance and protection, to the fishing grounds that sustained communities, these land divisions

maintained their distinct identities while functioning as parts of an integrated cultural landscape.

The rich oral traditions, historical accounts, and archaeological remnants documented in Sterling's *Sites of Maui* provide valuable insights into how Hawaiians in this region understood their environment, managed resources, practiced their spiritual traditions, and maintained cultural knowledge across generations. The detailed documentation of place names, fishing grounds, heiau, and cultural narratives preserves critical information about traditional Hawaiian knowledge systems and resource management practices in Honua'ula that might otherwise have been lost to history.

Through these accounts, there is a better understand of how the people of Honua'ula's various ahupua'a developed sustainable lifeways adapted to the specific environmental conditions of this relatively dry, lava-covered region of Maui, creating a distinctive cultural landscape defined by their relationship with both the land and sea.

Much of the current project will occur specifically in the ahupua'a of Ka'eo and the broader Mākena region of South Maui, representing an area of profound historical and cultural significance in Hawaiian history. This CIA explores the rich tapestry of human settlement, cultural development, and historical transitions that have shaped this unique landscape from traditional Hawaiian times through the post-contact era and into modernity. Drawing from the comprehensive historical-cultural study by Kepā Maly and Onaona Maly (2005) "He Mo'olelo 'Āina No Ka'eo Me Kahi 'Āina E A'e Ma Honua'ula" and other primary resources, this section aims to provide a cohesive historical overview of a region that has witnessed centuries of human habitation and cultural evolution.

The significance of this historical narrative extends beyond mere academic interest. Understanding the rich cultural heritage of Ka'eo and Mākena informs contemporary land use decisions, cultural preservation efforts, and the perpetuation of Native Hawaiian traditions and practices. As modern development continues to transform the physical landscape of South Maui, documenting the historical record becomes increasingly important for maintaining cultural connections to place and ensuring that future generations can appreciate the depth of history embedded in this land.

This historical account draws heavily upon the methodical research conducted by Maly and Maly, whose work integrates diverse historical sources including Hawaiian language newspapers, land court testimonies, oral history interviews, missionary accounts, government records, and archaeological studies. Their holistic approach to documenting the cultural landscape of Ka'eo provides a solid foundation for understanding how this place has evolved over time while maintaining connections to its indigenous heritage.

3.2.1 Development of the Ahupua'a System

Over the period of several generations following settlement, the Hawaiians began to develop a sophisticated system of land- and resource-management practices, that were integrated into natural cycles of the environment around them. By ca. 1500, in the time of Kāka‘e and Kaka‘alaneo, the island (moku-puni) of Maui was divided into some eleven or twelve major districts (moku-o-loko), and smaller subdivisions, which were handed down through time. These (moku-o-loko or moku) included Honua‘ula, Kula, Lāhaina, Kā‘anapali, Nāpoko or Wailuku, Hāmākua Poko, Hāmākua Loa, Ko‘olau, Hāna, Kīpahulu, Kaupō, and Kahikinui. Some of these large districts were subdivided into smaller ‘okana or kalana (regions of land smaller than the moku-o-loko) yet comprising a number of smaller units of land (Lyons, 1875; Coulter, 1935).

The large districts (moku-o-loko) and sub-regions (‘okana and kalana) were further divided into manageable units of land, and were tended to by the maka‘āinana (people of the land). Of all the land divisions, perhaps the most significant management unit was the ahupua‘a. Ahupua‘a are subdivisions of land that were usually marked by an altar with an image or representation of a pig placed upon it (thus the name ahu-pua‘a or pig-altar). In their configuration, the ahupua‘a may generally be compared to wedge-shaped pieces of land that radiate out from the center of the island, extending to the ocean fisheries fronting the land unit. Their boundaries are defined by topographic or geological features such as pu‘u (hills), ridges, gullies, valleys, craters, or areas of a particular vegetation growth (cf. Malo, 1951, pp. 16-18; Lyons, 1875).

The ahupua‘a were also divided into smaller, manageable arable parcels of land (such as the ‘ili, kula, kō‘ele, māla, kīhāpai, mo‘o, and paukū). Generally, these small land units ran in a mauka-makai orientation and were often marked by stone wall alignments. In these smaller parcels, the native tenants tended fields and cultivated crops necessary to sustain their immediate families and the chiefly communities with which they were associated. As long as sufficient ho‘okupu (tribute) was offered and kapu (prohibitions) were observed, the common people living in a given ahupua‘a had access to most of the resources from mountain slopes to the ocean. These access rights were almost uniformly tied to residency on particular land and earned as a result of taking responsibility for stewardship of the natural environment and supplying the needs of one’s ali‘i (Malo, 1951, pp. 63-67; Kamakau, 1992).

Entire ahupua‘a, or portions of the land were generally under the jurisdiction of appointed konohiki (lesser chief-landlords) who answered to an ali‘i-‘ai-ahupua‘a (chief who controlled the ahupua‘a resources). The ali‘i-‘ai-ahupua‘a in turn, answered to an ali‘i ‘ai moku (chief who claimed the abundance of the entire district). Thus, ahupua‘a resources supported not only the maka‘āinana and ‘ohana (families) who lived on the land but also contributed to the support of the royal community of regional and/or island kingdoms. This form of district subdividing was integral to Hawaiian life and was the product of strictly

adhered to resources management planning. In this system, the land provided fruits and vegetables, and some meat in the diet, and the ocean provided a wealth of protein resources. Also, in communities with long-term royal residents, divisions of labor (with specializing in various occupations on land and in the procurement of marine resources-were strictly observed (Malo, 1951, pp. 63-67).

The ahupuaʻa of Kaʻeo is part of the larger Honuaʻula moku, which encompasses several ahupuaʻa along the southwestern slope of Haleakalā (Maly & Maly, 2005, p. 2). The boundaries of Kaʻeo were defined by natural features and marked by pōhaku (stones) at key points along its borders with neighboring ahupuaʻa such as Moʻoiki, Moʻoloa, and Papaka Kai. These traditional boundary markers, some of which were documented during kingdom-era land surveys, played a crucial role in delineating resource rights and jurisdiction within the indigenous land management system. Some of these boundary markers were recorded in the testimonies provided during the Māhele process, providing a glimpse into the traditional landscape organization (Maly & Maly, 2005, p. 4).

Mākena, located in the Honuaʻula district of Maui, was once a thriving Native Hawaiian village deeply rooted in the ahupuaʻa system, a sophisticated and sustainable land management practice. Mākena is not unto itself an ahupuaʻa. The ahupuaʻa of Kaʻeo, which encompassed the coastal and upland regions of Mākena, provided the foundation for a self-sufficient community that harmonized with its natural environment. In Kaʻeo, the coastal regions provided abundant marine resources, including fish, limu (seaweed), and shellfish, while the fertile uplands supported the cultivation of dryland crops such as ʻuala (sweet potato) and kalo (taro). Freshwater springs like ʻAʻawa played a critical role in sustaining both agriculture and the population, particularly during dry seasons.

3.2.2 Natural Environment

The physical geography of Kaʻeo and the greater Mākena area is characterized by a diverse landscape. The region features a generally arid climate with intermittent seasonal rainfall. The shoreline consists of sandy beaches and rocky outcroppings, while the uplands gradually ascend toward the slopes of Haleakalā. This varied terrain supported different types of traditional Hawaiian subsistence activities, with fishing and marine resource gathering along the coast and agricultural pursuits in the upland areas.

Geologically, the region is characterized by relatively young lava flows from Haleakalā, resulting in a landscape of ʻaʻā (rough) and pahoehoe (smooth) lava surfaces interspersed with patches of deeper soil suitable for cultivation. The coastline features several small bays and inlets, including the area now known as Mākena Landing, which provided access points for canoes and rich fishing grounds. Offshore, a fringing reef system

supports diverse marine resources that form a crucial component of the traditional subsistence economy (Maly & Maly, 2005, p. 5).

Freshwater resources, although limited compared to the windward regions of Maui, played a crucial role in the settlement patterns of Kaʻeo. The area features several traditional water sources, including pūnāwai (springs), intermittent streams, and locations where rainfall is collected in natural depressions. These water sources facilitated human habitation in an otherwise arid region and supported agricultural activities. Some springs near the coastline created brackish environments that were used for specific types of aquacultures, demonstrating the sophisticated environmental knowledge of traditional Hawaiian communities (Maly & Maly, 2005, p. 6). The importance of these water resources is further discussed in **Section 4.2.3 (Water Resources)**.

During periods of dry weather, the uplands residents relied upon the near-shore water sources. When the native forests were of greater scope, and extended further down the mountain slopes—in the centuries prior to the introduction of foreign cattle and other ungulates that destroyed vast forest regions—the kēhau (early morning dew), born on breezes from the mountain slopes, could be relied upon on a daily basis to keep native crops in the uplands (generally between the 2,000 to 4,000 foot elevation) supplied with water for regular growth (Handy, 1940).

Vegetation across the landscape was varied, and the land received approximately 20 to 30 inches of rain annually, with the rainfall increasing in the upper reaches of the ahupuaʻa. Based on interviews and field observations, the lowlands were once vegetated with such native- and Polynesian-introduced plant species as—ʻāhinahina, hala, hau, ʻilima, kou, maiapilo, milo, naupaka, niu, pili, ʻuhaloa, puakala, and wiliwili. Some species were confined to the near shore region, while others like naio, ʻōhiʻa, māmane, kukui and other species extended far to the mountain lands.

It is likely that prior to the introduction of cattle, goats, and other ungulates, and extreme modifications in land use and environmental conditions, a wide range of native plants once grew at various elevational zones of Honuaʻula. Today, the predominant tree growth is the introduced kīawe; with scattered pānini (an introduced cactus); the introduced koa haole; and ground cover comprised of alien grasses, with scattered ʻilima and ʻuhaloa, and the endemic wiliwili (*Erythrina sandwicensis*).

The native vegetation of Kaʻeo and surrounding areas was adapted to the arid conditions, with plant communities varying based on elevation and proximity to the coast. Traditional accounts mention various native plant species that were utilized for food, medicine, building materials, tools, and ceremonial purposes. The pre-contact vegetation regime was significantly altered by introduced species and land use changes following Western

arrival, though certain indicator species provide insights into the original plant communities of the region (Maly & Maly, 2005, p. 7). Makena was a vibrant traditional Hawaiian village, where the people practiced a subsistence lifestyle guided by a deep connection to the land and ocean.

Fishing was central to life in Makena. Fishermen employed traditional techniques, including kilo iʻa (fish observation), to study fish behavior and migration patterns. They built loko iʻa (fishponds) to ensure a sustainable harvest, and koʻa (fishing shrines) were maintained as sacred sites where prayers and offerings were made to Kūʻula, the Hawaiian god of fishing. These practices ensured that resources were used responsibly, allowing the community to thrive without depleting the ecosystem. Kilo practices are further discussed in **Section 6.7 (Kilo)** and fishing practices are further discussed in **Section 6.13 (Fishing, Spearfishing, and Limu Picking)**.

The uplands of Kaʻeo were equally important. Dryland farming systems supported the cultivation of staple crops, with families managing their plots communally. The villagers also gathered medicinal plants and other resources from the forests. The integration of agricultural and fishing practices within the ahupuaʻa reflected the Hawaiian worldview of interconnectedness, or aloha ʻāina (love and respect for the land). This philosophy underscored all aspects of life in Makena, where the health of the land and ocean directly correlated with the well-being of the people. Farming practices are further detailed in **Section 6.4 (Farming)**.

Spiritual practices were woven into the daily lives of Makena's residents. Sacred sites, such as heiau and koʻa, were used for ceremonies that honored the gods and sought their guidance. One such site was Kalani Heiau, located within the ahupuaʻa of Kaʻeo. While much of its history has been lost, it is believed to have been associated with fishing rituals and the spiritual well-being of the community. Oral traditions and archaeological findings have helped preserve fragments of its significance. Spiritual practices, as well as other ceremonial traditions, are further discussed in **Section 6.8 (Ceremonial Practices)**.

Makena's residents were skilled navigators and artisans. Canoe-building and toolmaking were common activities, with materials sourced sustainably from the surrounding environment. (Paddling and canoe-related traditions are further detailed in **Section 6.14: Paddling**.) Families lived in hale pili (houses made from pili grass) and passed down knowledge through oral traditions, ensuring that cultural practices and values were perpetuated across generations. As a central hub of residence and cultural practice in Honuaʻula, Makena's history is closely tied to that of the larger moku of Honuaʻula.

3.2.3 Ka Hoʻonoho Moku–Hawaiian Settlement of the Islands

Archaeologists and historians describe the inhabiting of the Hawaiian Islands in the context of settlement, which resulted from voyages taken in canoes across the open ocean. Archaeologists have proposed that early Polynesian settlement voyages between Kahiki (the ancestral homelands of the Hawaiian gods and people) and Hawai‘i were underway by ca. 400 A.D., with long distance voyages occurring fairly regularly through at least the thirteenth century (cf. Cordy, 2000). It has been generally reported that the island homes of the early Hawaiian population—the Hawaiian “Kahiki”—were the Marquesas and Society Islands (Emory in Tatar, 1982, pp. 16-18). Indeed, Kahikinui, the district neighboring Honua‘ula to the south, is named because from afar on the ocean, it resembled a larger form of Kahiki, the ancestral homeland.[6]

For several generations following initial settlement, communities were clustered along the watered, ko‘olau (windward) shores of the Hawaiian Islands. Along the ko‘olau slopes, streams flowed and rainfall was abundant, and agricultural production became established. The ko‘olau region also offered sheltered bays from which deep-sea fisheries could be easily accessed, and near shore fisheries, enriched by nutrients carried in the fresh water, could be maintained in fishponds and coastal fisheries. It was around these bays that clusters of houses where families lived could be found, and in these early times, the residents generally engaged in subsistence practices in the forms of agriculture and fishing (Handy et al., 1972, p. 287).

With the passing of time (ca. A.D. 800 to 1000), the ko‘olau region became more populated and perhaps crowded, and the Hawaiians began expanding out to and settling more remote areas, which had not been the first choices for settlement—based primarily on access to water. These kona (leeward) lands, like those of Honua‘ula moku, offered residents sheltered coves, rich fisheries, and access to forested uplands, where agricultural endeavors could be supported, and natural resources could be collected (cf. Haun & Henry, 2004).

Archaeological evidence suggests human settlement in the Mākena region dates back several centuries, with some of the earliest radiocarbon dates indicating Hawaiian presence by at least the 13th century. The archaeological record reveals a pattern of settlement that took advantage of the region’s natural resources, with habitation sites concentrated along the coastline and in areas with access to fresh water (Maly & Maly, 2005, p. 5). The settlement pattern of Ka‘eo reflected adaptations to local environmental conditions.

The documented archaeological sites include permanent habitation complexes, temporary fishing camps, agricultural features, religious structures, and burial areas. This

[6] “*Kaao Hooniua Puuwai no Ka-Miki*” (The Heart Stirring Story of Ka-Miki), published in the Hawaiian language newspaper *Ka Hoku o Hawaii* from 1914 to 1917

diversity of site types indicates a complex society that utilized resources from multiple ecological zones within the ahupua‘a system. Habitation sites were strategically positioned to balance access to marine resources, agricultural lands, and freshwater sources (Maly & Maly, 2005, p. 8).

Traditional Hawaiian cultural development in Ka‘eo and Mākena reflected adaptations to the local environment. Despite the relatively arid conditions of South Maui, Hawaiian settlers developed sophisticated agricultural systems. In upland areas, they cultivated sweet potatoes and dryland taro using techniques suited to the rainfall patterns and soil conditions of the region. Closer to the shore, coconut groves provided additional food resources (Maly & Maly, 2005, p. 6).

The ocean was a crucial resource for the traditional residents of Ka‘eo. Numerous fishing grounds were located off the Mākena coastline, each known for specific types of fish. Hawaiian fishing practices in the area were governed by traditional knowledge of lunar cycles, seasonal patterns, and resource management principles that ensured sustainable harvest of marine resources. Ko‘a were constructed at key locations along the coast where ceremonial offerings were made to ensure continued abundance (Maly & Maly, 2005, pp. 8-10).

Marine resource harvesting extended beyond fishing to include gathering of limu, honu (turtle), and various shellfish species. Specific harvesting locations along the Ka‘eo coastline were known for particular marine resources. TEK guided these harvesting activities, with specific protocols determining when, where, and how resources could be collected to ensure their continued abundance. This knowledge was passed down through generations, creating an accumulated body of environmental wisdom that facilitated sustainable resource use (Maly & Maly, 2005, p. 11).

The material culture of Ka‘eo's residents reflected both the available local resources and connections to broader Hawaiian cultural patterns. Archaeological investigations have recovered artifacts including fishing implements, stone tools, ornaments, and pottery that indicate participation in island-wide cultural traditions while also showing local adaptations. The presence of materials from other parts of Maui and potentially from other islands suggests that Ka‘eo's residents participated in exchange networks that connected communities across the archipelago (Maly & Maly, 2005, 12).

Social organization in traditional Ka‘eo likely followed patterns common throughout pre-contact Hawai'i, with communities organized around extended family groups (‘ohana) who collectively managed resources within the ahupua‘a system. While the report does not extensively document the specific social dynamics of Ka‘eo, land use patterns suggest a society with hierarchical elements (reflected in the presence of religious structures

associated with the elite classes) but also with substantial local community management of resources (evidenced by the distributed pattern of habitation and agricultural features) (Maly & Maly, 2005, 13).

3.2.4 Inoa ʻĀina (Place Names)

Honuaʻula (literally, Red-land or earth) is comprised of some twenty traditional ahupuaʻa, of which Paeahu is one. Fisheries—both near shore and in the deep sea—were also highly valued and managed. Though surface water was scarce—except for times of the Nāulu (southerly rain squalls)—potable water could often be found in ponds and springs near the shore. Among the named localities along the shore, known water sources are Waiaʻīlio, Waiala, Waiʻāpuka, Wai ʻAʻawa, Waipao, and Waileʻa; while in the Nupawai o Kukui o Piʻikea (above the 3,000 foot elevation), Waihou and Polipoli, still higher, are among the names that commemorate places where water was found.

The cultural landscape of Kaʻeo and Mākena is further revealed through the rich tapestry of place names preserved in oral traditions, chants, and historical documents. Maly and Maly's (2005) research uncovered numerous traditional place names within the ahupuaʻa, each carrying specific meanings that often referenced physical features, historical events, or resource characteristics (p. 18).

The name "Mākena" itself has been interpreted as "abundance," or alternatively "Makena" as "mourning," with differing traditional accounts explaining the origin of the name. One interpretation suggests that the abundance of marine resources in the area led to the name, while another account links it to a historical incident of great sadness or loss. This multiplicity of meanings reflects the layered nature of Hawaiian place names, which often carried multiple connotations and references that would be understood differently depending on the context and the knowledge of the listener (Maly & Maly, 2005, p. 20).

Maly & Maly (2005) document dozens of specific named locations within Kaʻeo and surrounding areas, creating a detailed indigenous cartography that embedded cultural knowledge directly in the landscape. These names referred to a variety of features including specific sections of coastline, fishing grounds, hills, plains, cultivation areas, water sources, and pathways. The density of place names indicates the intimate relationship between the Hawaiian community and their environment, with virtually every significant feature of the landscape incorporated into cultural consciousness through naming.

Some recorded place names referenced deities or legendary figures, connecting the physical landscape to the realm of mythology and ancestral narratives. Others described environmental characteristics, such as prevailing winds, water conditions, or plant communities. Still others commemorated historical events, ranging from battles to visits

by ali‘i (chiefs) and notable natural occurrences. This layering of references created a landscape rich in meaning, where physical geography and cultural memory were inextricably intertwined (Maly & Maly, 2005, p. 22).

Coastal features received particularly detailed naming, reflecting their importance in a community where marine resources played a crucial subsistence role. Individual sections of reef, underwater channels, fishing grounds, and coastal access points all carried specific names that communicated their characteristics and significance. These names served practical purposes as navigational aids and resource identifiers, while simultaneously preserving historical associations and cultural knowledge about each location (Maly & Maly, 2005, p. 23).

Water sources, particularly crucial in this relatively arid region, received special attention in traditional place naming. Springs, intermittent streams, and water collection areas were carefully named and remembered in oral tradition, underscoring their vital importance to human settlement in the area. The names often described the quality of water, its reliability across seasons, or historical incidents associated with the location (Maly & Maly, 2005, p. 22). Place names also served to mark boundaries between different land divisions and resource jurisdictions. Named boundary points helped define the limits of ahupua‘a and smaller land units, establishing the framework for traditional resource management and political organization. These boundary markers were committed to memory and passed down through generations, ensuring continuity in land stewardship and resource rights.

The cultural geography of Ka‘eo was further defined by networks of trails that connected different areas within the ahupua‘a and linked the community to neighboring regions. The report documents several traditional trail systems, including coastal paths that facilitated fishing and gathering activities, mauka-makai trails that connected different resource zones, and regional trails that linked Ka‘eo to other parts of Honua‘ula and beyond. These physical connections facilitated the movement of people and goods, enabling the integrated resource management that characterized the ahupua‘a system (Maly & Maly, 2005, p. 25).

Mo‘olelo associated with specific locations in Ka‘eo added another layer to the cultural landscape. These narratives, some of which were recorded in Hawaiian language newspapers and oral history interviews, connected physical places to legendary events, divine interactions, and historical occurrences. Through these stories, the landscape became a repository of cultural memory, with geographical features serving as mnemonic devices that helped preserve and transmit knowledge across generations (Maly & Maly, 2005, p. 26).

The retention and transmission of place names and their associated knowledge occurred through various cultural mechanisms, including oli, genealogies, and practical instruction in resource gathering and land management. There are examples of traditional oli that incorporate place names from Kaʻeo and surrounding areas, demonstrating how cultural geography was preserved through these formal verbal arts (see **Section 4.3.2: Mele** and **Section 6.9: Haku Mele, Haku Oli, and Hula**). Family traditions and specialized knowledge about particular locations were passed down through direct teaching and observation, ensuring continuity in cultural understanding of the landscape (Maly & Maly, 2005, p. 27). Examples of these family histories and traditions are exemplified in the ethnographic data of **Section 5.0**.

3.2.5 Governance During the Traditional Period

It is best to begin a genealogy of Maui's chiefs with Moʻoinanea, who appears in numerous moʻolelo throughout Hawaiian history. She is considered "the matriarch of all moʻo [(lizard)] gods and goddesses" (Pukui & Elbert, 1986, p. 394). Accounts detail her arrival from Kahiki "with the Kū and Hina family of gods" and that she was "the ancestor of the ʻUlu / Hemo linage of Maui" (Klieger, 1998, p. 8). Klieger (1998) explains:

> One of [Moʻoinanea's] descendants was Kelea (Keleanuinohoʻanaʻapiʻapi), a Maui chief and famous surfer of married Kalamakua, a prominent chief on Oʻahu. Maui was not yet a unified kingdom at the time, but soon the moʻo would be evoked for the unification of the island, and then the entire archipelago. Kelea was the daughter of Kahekili I, the alii nui of the kingdom of West Maui, and his wife Haukanuimakamaka. The moʻo lineage was most likely introduced through Kelea's mother. Kelea's paternal grandfather and great uncle were Kakaʻe and Kalaʻalaneo, alii nui of the Wailuku line who ruled West Maui and Lanai from Lele/Lahaina in the sixteenth century. (p. 8)

After Kahekili I passed, Kelea's brother, Kawaokaohele, gained control over his kingdom. Kawaokaohele was a popular aliʻi and the reign is known for its prosperity. Most importantly, it was during the reign of Kawaokaohele that East Maui (i.e., Hana) recognized the Wailuku aliʻi as being mōʻī (King) of Maui (Klieger, 1998, pp. 8-9).

Kawaokaohele's son, Piʻilani, is widely acknowledged to this day to be the greatest aliʻi in Maui's history. He ruled all of Maui from his base at Lahaina, which would eventually become the political center of the island and later the unified Hawaiian Kingdom. Piʻilani is known for creating a trail that circumnavigated the entire island (Klieger, 1998, p. 9). Piʻilani married his first cousin, Laieloheloheikawai, daughter of Kelea. Piʻilani and Laieloheloheikawai had at least four children: daughter Kihawahine Mokuhinia Kalamaula

Kalaaiheana, daughter Piʻikea, son Lono-a-Piʻilani,[7] and son Kiha-a-Piʻilani. These children, being the result of a piʻo union (marriage between two close relatives, sometimes a brother and sister), had a very strong lineage.

Upon her death, it is believed that Kihawahine transformed into a moʻo and became a guardian of sacred places on Maui, most notably fishponds, some of which bear her names. M.K. Pukui said that her home was Mauʻoni fishpond, located in Kahului (Klieger, 1998, p. 9), yet it is also said that Kihawahine possessed the ability to travel between islands and fishponds (Klieger, 1998, p. 9). Many fishponds to this day are associated with a moʻowahine (female lizard deity) that protects the pond. It is likely that this continued existence of moʻo deities originated with Kihawahine. For additional discussion on moʻo, see **Section 6.1.1 (Moʻo Traditions)**.

Historians estimate that Piʻilani ruled in the 16th century. It is important to note that Hawaiian chiefs demonstrated considerable savvy in politics. Chiefs commonly intermarried for political reasons. Piʻikea-a-Piʻilani, daughter of Piʻilani, married Umi-a-Liloa, the King of Hawaiʻi Island. When Piʻilani died, the Maui Kingdom went to his oldest son, Lono-a-Piʻilani. For many years, Lono-a-Piʻilani and his younger brother Kiha-a-Piʻilani (brothers to Piʻikea) co-existed peacefully. Eventually, Lono-a-Piʻilani and Kiha-a-Piʻilani had a falling out and the latter feared his brother, the King, would try to kill him, so Kiha-a-Piʻilani fled and lived on Lānaʻi. He eventually returned and stayed in the southern parts of Maui, as to not be found by his brother. His identity was eventually discovered, and he traveled to Hawaiʻi Island to stay with his sister, Piʻikea-a-Piʻilani and her husband, ʻUmi-a-Liloa (Kamakau, 1992, pp. 23-27). Kiha-a-Piʻilani joined with ʻUmi-a-Liloa, and together they planned to invade Maui. Lono-a-Piʻilani resided in Wailuku during this time.

Kiha-a-Piʻilani and ʻUmi-a-Liloa successfully invaded and conquered East Maui. Before they could reach Lono-a-Piʻilani in Wailuku, Lono-a-Piʻilani died. A prophet told Kiha-a-Piʻilani that the body of Lono-a-Piʻilani was “in Wailuku in a land called Paʻuniu” (Kamakau 1992: 31). Despite a wide search throughout Wailuku, the bones of Lono-a-Piʻilani were never found by Kiha-a-Piʻilani.

Kiha-a-Piʻilani ruled Maui in the 17th century. During ʻUmi-a-Liloa’s reign of Hawaiʻi Island, the two kingdoms remained close and peaceful thanks to the intermarrying of the chiefly families. It would be this history of strategically intermarrying that would help to engender the eventual unification of the islands. Kiha-a-Piʻilani’s descendant, Kekaulike, would become the Mōʻī of Maui in the 18th century.

[7] Children often bore the name of an ancestor, so names such as Lono-a-Piʻilani mean “Lono of Piʻilani.” Whenever historical figures’ names have this element, the name has been broken up with dashes in this report to help the reader follow genealogies and familial relationships.

As Kekaulike ruled on Maui, Keawe was a famed ruler on Hawai‘i Island (Kamakau, 1992, p. 64). Keawe’s half-sister was Ka-lani-kau-lele-ia-iwi, whose husband was Ka-uaua-nui-a-Mahi and to them was born Alapa‘i-nui-a-Kauaua (Alapa‘i) (Kamakau, 1992, p. 64). Kamakau (1992) notes that Keawe enjoyed travel and would travel to the other islands, including Maui. When Keawe died, he left Kohala and Kona to his son Ke‘eaumoku and Ka‘u to his son Kalaninui‘iamamao (Kamakau, 1992, p. 64).

Alapa‘i also lived on Maui during this time, moving there after Hilo chiefs killed his father, Ka-uaua-nui-a-Mahi. Alapa‘i’s half-sister, Keku‘iapoiwanui-a-Kalaninuikauleleiaiwi (Keku‘iapoiwanui), was the wife of Kekaulike (Kamakau, 1992, p. 65). After Keawe’s death, Alapa‘i returned to Hawai‘i Island. He first waged war against Ke‘eaumoku and gained control of Kohala and Kona. Kekaulike did not approve of this and took his own warriors to fight with Alapa‘i on Hawai‘i Island. Kekaulike was unsuccessful in this battle, and he slaughtered numerous commoners during his campaign in Kohala (Kamakau, 1992, pp. 65-66). Alapa‘i then unsuccessfully launched a campaign against Kekaulike on Maui.

Kekaulike had four biological children with his wife, Keku‘iapoiwanui: Kalola (wahine (female)), Kamehamehanui (kāne (male)), Kahekili II (kāne), and Kahu‘aimokuakama (wahine). Kalola bore children with three different men: Kalanikauōkikilokalaniakua (wahine) with her brother Kamehamehanui, Kīwala‘o (kāne) through her union with Kalani‘opu‘u, and Keku‘aipoiwa Liliha (wahine) from her union with Keōua. Kalanikauōkikilokalaniakua had many kapu on her due to her being the result of a pi‘o union between siblings, which Hawaiians believed gave a child a sacred status. Kalani‘opu‘u and Keōua are two sons of Keawe, both of which Alapa‘i brought up as leaders in his government.

Keōua had many wives. In addition to Kalola, he also married Keku‘aipoiwa, daughter of Kekela and Ha‘ae (not to be confused with Keku‘aipoiwa Liliha, daughter of Kalola, or Keku‘aipoiwanui, wife of Kekaulike). Keōua and Keku‘aipoiwa would become the parents of Kamehameha I (kāne), who was born as Alapa‘i launched his attack against Kekaulike on Maui.

Alapa‘i was a peaceful and prosperous chief; additional war between the two kingdoms of Maui and Hawai‘i Island was avoided for a period of time. On Maui, Wailuku had been the central location of power since the time of Pi‘ilani. Kekaulike moved it to Kaupō, likely in preparation of attacks on Hawai‘i Island. Kekaulike fell ill and never returned to Hawai‘i Island. Kekaulike turned over Maui to his son, Kamehamehanui (not to be confused with Kamehameha I).

In anticipation of an attack from Alapai’s forces, the weakened Kekaulike directed his family and governing officials to return to Wailuku, to Haleki‘i, “the royal residence of the

Maui ruling line near Wailuku" (Kirch, 2012, p. 240). There, Kekaulike died and after his death, "fearing the arrival of Alapa'i bent on war, the chiefs cut the flesh from the bones of Ke-kau-like in order to lighten the load in carrying the body to 'Iao" (Kamakau, 1992, p. 69).

Alapa'i arrived on Maui as anticipated. Yet, when Alapa'i heard of Kekaulike's death and of Kamehamehanui's rule, he relinquished his planned attack on the island and opted for peace between the kingdoms.

Kahekili II, the second son of Kekaulike, would become one of Maui's most famed ali'i. He was known to be a ferocious warrior and a staunch follower of the Hawaiian religious beliefs and protocols. He kept individuals for sacrifice at a place called Pua'anui, near the site of the Wailuku mill (Thrum, 1917, p. 60). It was during Kahekili II's reign that the great battle at Kakanilua occurred. Joseph Mokuohai Poepoe (1905, in Sterling, 1998) wrote of this great battle in Hawaiian language newspapers:

> As the Alapa[8] and Piipii proceeded to the plain of Kamaomao [from Kihei-puko'a] they met with no hindrance until they reached the southeastern side of a place called Kalua, close to the village of Wailuku.
>
> When the Alapa arrived there, the warriors of Kahekili concentrated upon them from many points, like sandcrabs running over the sand.
>
> A bitter fight was fought by the Alapa and Piipii armies of Kalaniopuu against the well trained warriors of Maui and those of Oahu under Kahahana…
>
> Kalaniopuu received the news on the evening of the day of the terrible battle. This battle in which the Alapa and Piipii were destroyed was called Ahulau ka Piipii i Kakanilua (completely slaughtered were the Piipii at Kakanilua). (p. 88)

Keku'aipoiwa Liliha (daughter of Keōua and Kalola) and her half-brother Kīwala'ō married and this nī'au pi'o union resulted in the birth of Keōpuōlani (wahine). Due to the half-sibling relationship between her parents and her royal lineage, Keōpuōlani was a chiefess of substantial status and rank. While Kamehameha I would eventually take many wives, none held as high a sacred status as Keōpuōlani and she would become known as Kamehameha's sacred wife. It is through their children, Liholiho (kāne), Kauikeaouli (kāne), and Nahi'ena'ena (wahine), that the Kamehameha Dynasty was established.

[8] "Alapa" in this case references the famed warrior company of Kalani'opu'u. The spelling of the term with diacritics is 'ālapa.

3.2.6 Early Chiefly Residents of Honua‘ula

Based on genealogical references, the association of ancient chiefs with the lands of Honua‘ula pre-date 1000 A.D. Preeminent Hawaiian scholar, David Malo—who in the 1840s, was also tied to the land of Paeahu and other localities in Honua‘ula—recorded events associated with the lives of various chiefs and their genealogies. One such account from Malo (1951), reported that the chief, “Aikanaka…died at Oneuli, Puuolai, Honuaula, and his bones were laid to rest at Iao…” (p. 246).

Abraham Fornander, who oversaw schools and served in the courts of the Kingdom, was married to a native woman of chiefly rank from Moloka‘i. Fornander took a keen interest in Hawaiian traditions and history, and among the accounts he collected was one which attributed the construction of the fishpond at Keone‘ō‘io to an early chief from the island of Hawai‘i (Fornander, 1919):

> Kauholanuimahu went to Honuaula, Maui, to reside, and while there he built the *loko* (fishpond) at Keoneoio. While he was living on Maui his wife remained on Hawaii and took another husband who revolted against Kauhola, who returned to Hawaii, beat his opponent and retook the government. (Vol. VI-2, p. 320)

Such accounts as those above, though brief, are followed by additional narratives, also cited in this study, of chiefly associations with lands of the Honua‘ula region. With these godly and chiefly events in history, we understand that a wide range of traditional sites, such as heiau, high-status residences, house sites of the native population, agricultural field systems, trails, wahi ilina (burial sites), and other sites are found across the land.

Mo‘olelo is the practice of storytelling and developing oral histories for the purpose of transmitting knowledge information and values intergenerationally. Mo‘olelo are particularly critical in protecting and preserving traditional culture in that they are the primary form through which information was transmitted over many generations in the Hawaiian Islands and particularly in the Native Hawaiian community. In a collection of essays about mo‘olelo, professors C.M. Kaliko Baker and Tammy Haili‘ōpua Baker (2023) explain:

> *Mo‘olelo*, loosely translated as stories and histories, are the *kūkulu* “pillars” that shoulder and chronicle Kanaka Maoli narratives and beliefs. The mo‘o, or successions, of *‘ōlelo* “words” are the foundation for the many genres of mo‘olelo which collectively represent the prowess of the Kanaka Maoli literary canon. (p. 2)

Storytelling, oral histories, and oration are widely practiced throughout Polynesia and important in compiling the ethnohistory of the area. The Native Hawaiian newspapers were particularly valued for their regular publication of different mo‘olelo about native

Hawaiian history. Were it not for the newspapers having the foresight to allow for the printing and publication of moʻolelo, far less information about the cultural history of the Hawaiian people would be available today.

3.2.6.1 Kiha-a-Piʻilani Lives in Hiding at Honuaʻula

Native historian Samuel M. Kamakau published a lengthy series of articles in the native language newspapers *Nupepa Kuokoa* and *Ke Au Okoa* in the 1860s and 1870s. Among the traditions he recorded was that of the famous Maui chief, Kiha-a-Piʻilani, who for a time lived in hiding at various localities, including at Honuaʻula (ca. mid 1500s). The following excerpts from Kamakau's (1992) texts were translated by M. Kawena Pukui:

> Piʻi-lani died at Lahaina, Maui, and the kingdom of Maui became Lono-a-Piʻi-lani's. He was Piʻi-lani's oldest son by Laʻie-lohelohe-i-ka-wai. Next to him came Piʻi-kea, then Ka-la-ʻai-heana and Kiha-a-Piʻi-lani. It was said that there were two heirs to the kingdom, Lono-a-Piʻilani and Kiha-a-Piʻi-lani, but the latter was not present at their father's death because Oahu was his birthplace, and there he was reared. Therefore the government went to Lono-a-Piʻi-lani. Piʻi-lani had commanded that the kingdom be his, and that Kiha-a-Piʻi-lani dwell under him in peace. In the first years of Lono-a-Piʻi-lani's reign all was well, and the people were content.
>
> Lono-a-Piʻi-lani took care of Kiha-a-Piʻi-lani, and the latter cared for the people by giving them food. Lono-a-Piʻi-lani became angry, for he felt Kiha-a-Piʻi-lani was doing it to seize the kingdom for himself… Lono-a-Piʻi-lani sought to kill Kiha, so he fled in secret to Molokai… (p. 22)

Kamakau (1992) reported that Kiha-a-Piʻilani later fled to Lānaʻi:

> From Lanai he sailed and landed at Kapoli in Maʻalaea and from thence to the upland of Honuaʻula. He was seen, and the matter was reported to Lono-a-Piʻi-lani, the enemy who greatly desired his death. When it was heard that he was in Lahaina, swift runners were sent to seek and kill him, but the mana of his prayers and the help of the god saved him.
>
> He and his wife descended by the rocky gulch of Kuanuʻu and went around to the back. They lived on the charity of others at the boundary of Honuaʻula and Kula, at a place named Keʻekeʻe. They lived with farmers in the remote country, and because of their poverty-stricken state, neither he nor his wife had any clothing. They had nothing and had no means of making coverings for their bare bodies, and so an idea came to Kiha-a-Piʻi-lani to seek ways of getting them some tapa cloth. Kiha-a-Piʻi-lani went to steal an anvil, a tapa beater, and beater for finishing, to help in making tapa. They had nothing at all. After Kiha-a-Piʻi-lani had stolen the anvil and other

implements for tapa-making, his wife made some skirts and coarse red malos for him, but they were poorly made. He and his wife were young, handsome, with perfect physique, but they were favorite chiefly children, unaccustomed to such work. They were undergoing a bitter experience in order to appreciate the blessings they were to receive in the future. They lived in poverty, but knew of the blessings to come. Thus it was that the ancestors of chiefs and commoners knew what it was to be without. His tapa-beating anvil was called "*puka helelei*" or "hole through which things fell out." The owners of the stolen anvil accused him, and feeling ashamed he and his companion went away in secret and lived close to the boundary of Kula and Makawao… (22-23)

3.2.6.2 The Tradition of Lāʻieikawai

In the generation following Kiha-a-Piʻilani, there was born a sacred chiefess of godly rank, by the name of Lāʻie-i-ka-wai (ca. early to middle 1500s). Her mother was Piʻikea, the daughter of Piʻilani. In 1862, S.N. Haleole published the account of this chiefess, and in it, observed that for a time the chief, ʻAiwohikupua, a suitor of Lāʻie-i-ka-wai resided at Keoneʻōʻio—waiting for the ocean to calm before the canoe fleet could cross to Hawaiʻi Island. Of the event, Haleole (1862) wrote:

> …pae i Mala, ma Lahaina, a haalele lakou ia wahi, hiki lakou i Keoneoio, ma Honuaula, a malaila i noho loihi ai ekolu anahulu. No ka mea, ua nui ka ino ma ka moana, a pau na la ino, alaila, ua ikeia mai ka maikai o ka moana. Ia manawa ko lakou haalele ana ia Honuaula, a holo aku la a hiki ma Kaelehuluhulu, ma Kona, Hawaii… (p. 1)
>
> …Having landed at Māla, at Lāhaina, they then departed from that place and arrived at Keoneʻōʻio, in Honuaʻula. There, they resided for a period of three *anahulu* (ten days to each *anahulu*, totaling thirty days). They did this because the sea was extremely rough. When the stormy days ended, they saw the ocean was good, and they then departed from Honuaʻula, and sailed on, until they arrived at Keʻelehuuluhulu, in Kona, Hawaiʻi… (Maly, translator)

3.2.6.3 The Tradition of Pikoiakaʻalalā

In the tradition of Pikoi-a-ka-ʻalalā (Pikoi-son-of-the-crow), there is another reference to Honuaʻula and the Keoneʻōʻio vicinity as a resting place for canoes traveling to the island of Hawaiʻi. Based on the genealogical references, the events described in this tradition took place sometime in the middle to late 1500s. The tradition was printed in the Hawaiian language newspaper, *Ka Nupepa Kuokoa*, having been submitted to the paper by S.M. Kaui (December 16th, 1865 to March 10th, 1866).

Pikoi-a-ka-ʻalalā was born to ʻAlalā and Koukou on the island of Kauaʻi, and his family were kūpua (beings with supernatural powers and multiple body-forms). Pikoi-a-ka-ʻalalā possessed exceptional sight and excelled in the Hawaiian art of pana pua (shooting with bow and arrow). Through the tradition of Pikoi-a-ka-ʻalalā (Pikoi), readers learn that many localities throughout the islands are named for places where he competed in matches with archers, shooting ʻiole (rats) and birds from great distances. During part of the journey, Pikoi was accompanied by a supernatural dog by the name of Puapualenalena. In the narratives below, Kaui (1866) describes the journey taken by Puapualenalena around the island of Maui, and references various localities in the district of Honuaʻula; also noting that the chiefly canoes sailed from Honuaʻula to Hawaiʻi:

> A mawaho ae o Lele, (Lahaina) lele hou no o Puapualenalena iuka, a poai hele ae la ia Maui, a puni o Maui ia la hookahi no, a hui ae la me na waa i ka Laeokaoio i Honuaula, a malaila kahi i ee hou ae ai o Puapualenalena, a he mea mau no hoi i ko luna poe ka ike ole ia no kona lele ana a me kona hoi ana mai… A mai Honuaula aku, holo loa na waa i Hawaii… (p. 1)
>
> > Outside of Lele (Lāhaina), Puapualenalena again leapt from the canoe, so that he could travel around Maui, which he did in one day. He met the canoes at Laeokaʻōʻio [Keoneʻōʻio (?)] at Honuaʻula, and it was there, that Puapualenalena, again boarded the canoe. This is how it was, the people on the canoe would not know when he was coming or going… And from Honuaʻula, the canoes then sailed to Hawaiʻi… (Maly translator)

3.2.6.4 The Tradition of Laukaʻieʻie

“He Moolelo Kaao Hawaii no Laukaieie…” (A Hawaiian Tradition of Laukaieie) was published in the native language newspaper, *Nupepa Ka Oiaio*, between January 5, 1894 to September 13, 1895. The moʻolelo was submitted to the paper by Moses Manu, a native of Kipahulu. The story is a rich and complex account with island-wide references to places, descriptions of place name origins, history, and mele, interspersed with accounts from other traditions and references to nineteenth-century events.

Laukaʻieʻie, her supernatural-formed brother, Makanikeoi, and their chiefly companions sailed in their canoes to various locations around the Hawaiian islands, referencing various storied places of old. The following narratives from Manu (1894-1895, K. Maly, trans.) are excerpted from the moʻolelo, and include brief references to localities in the Honuaʻula region, and the voyages of chiefly canoes between Maui and Hawaiʻi:

> **May 25, 1894** [Passing between Maui and Kahoolawe]:

Ia Makanikeoe, malaila e nanea nei, aia na manowaa mawaho ae o Keoneoio ma Honuaula, ke pii pono ala i ke alo makani. A eia no ka maka hope mawaho ae o Puuolai a ua hoomalu aku ka holo ana o na waa no ka moana kaulana o Alenuihaha me ka pii wahi ale ole o ua moana huhu ala on ale ahiu. Aia ke kiei iho la ke kuahiwi kamehai o Haleakala, a ke oni mai la o Maunakea me Maunaloa a me Hualalai, mamua pono me ko lakou kulana kilakila o ka nani…

Makanikeoe had the fleet of canoes rest at Keone‘ō‘io, in Honua‘ula, which rises up in the face of the wind. It is marked by Pu‘u ‘Ōla‘i, where on the side the canoes find shelter, before entering the famous sea of ‘Alenuihāhā, where there is no place that the angry and wild waves of the sea do not rise. From here [Honua‘ula], one may gaze upon the wondrous mountain of Haleakalā, as Mauna Kea, Mauna Loa and Hualālai appear to move before you, in their outstanding beauty…

[Makanikeoe traveled overland, crossing Honua‘ula]:

November 9, 1894

…He mea oiaio, ua hoea ‘ku o Makanikeoe ma Pohakueaea, ka lae ma ke Komohana Hema o Maui ma Honuaula, a ua hiki loa ‘ku oia mawaena of ke—a o Kuanunu ma Puuonole, a ua huli hou aku oia e nana i na mana maloko o keia lua.

It is true, Makanikeoe arrived at Pōhaku‘ea‘ea, the southwestern point of Maui, at Honua‘ula, he then arrived at the lava fields of Kuanunu at Puuonole, and he then turned to look into the divisions of this crater.

Aole no hoi i liuliu iho, ua komo hou oia ma kekahi wahi mana uuku loa me ke ano apuepue o kona hele ana malalo o ka honua, a ua puka koke aku no oia malalo aku o ke—a o Kuanunu he wahi kipuka lepo makai ma Auwahi.

In a short time, he entered into a very narrow area, where only with great difficulty was he able to travel below the earth. He came out below the rocky area of Kuanunu, at a soil *kīpuka* below Auwahi.

Aia ma kela wahi i hele maoli aku ai o Makanikeoe maluna o ka aina a hiki i ka palena o Honuaula a me Kahikinui, oia hoi o Keahuaiea.

Then Makanikeoe was able to travel on the land, to the boundary of Honua‘ula and Kahikinui, that is, at Keahuaiea.

A no kona awiwi no ma ka hele ana, ua hiki aku la keia maluna pono o na puu mahoe o Lualailua, a mai

Because of his swift travel, he arrived at the top of the twin hills of Luala‘ilua, and from there, he arrived at the gulch of

laila aku oia no ke kahawai o Waiahualele—a ma o iki aku, aia hoi, ua huli ae la oia a ike i kekahi ana e hamama mai ana makai o ke alanui…

Waiahualele—and a short distance from there, he turned and saw the opening below, where the travel was…

Aperila 26, 1895

[The naming of certain Puʻu ʻEhuhe at Honuaula… (cited in an account originating on Oʻahu)]:

…Malaila ka eueu ma Kapapakolea, a halawai oia me kekahi kupua, he Peelua e moe ana, a ma ka nana pono ana o ke Kamaeu i ke ano o keia mea onioni a puni kona kino i kona mau kakau pamo me ke ano malule, aka he mea ko nae i ka makau ke nana aku. A ma kona ano mana nui ua hiki loa ia Makanikeo ke koho aku i kona wahi i hele mai ai a me kona inoa ponoi.

This spirited one was at Kapapakolea (above Honolulu), and he met with a *kupua,* a sleeping Caterpillar. As this adept youth looked upon this quivering thing, he saw that his body was entirely surrounded by designs, much like on a shirt, except that it was fearful to look upon. Through his supernatural power, Makanikeoe detected where this being had come from and what its name was.

E hoakaaka ka mea kakau moolelo ma keia wahi. O keia Peelua e moe nei ma Kapapakolea, maluna aku o Huluamanu, o Kumuhea kona inoa. Ka mea i oleloia he kanaka ino. Ua hele mai oia mai Tahiti mai, oia hoi kela aina nui. A o ka lua o ka inoa o keia Peelua, oia o Keliikinolua, o kekahi hoi o keia on kanaka ui oi kelakela…a ua noi hoi na wahine maikai o keia Pae Moku i lilo aku i keia Peelua.

The writer of this story must explain something at this point. This Caterpillar that was sleeping at Kapapakolea, above Huluamanu, was named Kumuhea. It was said that he was an evil man. He came from Tahiti, that great land. And the second of the names of this Caterpillar was Keliʻikinolua, for one body was that of an exceptionally handsome man…and many beautiful women of these islands had asked to marry this Caterpillar-being.

A ua kamaaina keia Peelua ma Kau, Hawaii, a nona hoi ka inoa e o ala ma kela puu o Puuenuhe. Pela no ma Kula, Honuaula a me Kahikinui ma Maui, a ma Kalae i Molokai a ma keia wahi a

This Caterpillar was known at Kaʻū, Hawaiʻi, and the name by which he was known is there at the hill called Puʻu ʻEnuhe. It is the same at Kula, Honuaʻula and Kahikinui, on Maui, and at Kalaʻe on Molokaʻi, and it was at this place,

Makanikeoe i ike ihola ma Kapapakolea… | Kapapakolea, that Makanikeoe saw him…

3.2.6.5 Tradition of Pele and Waka

The honua ola of the Hawaiians is a reflection of the relationship between the akua (gods, goddesses and creative forces of nature) and kānaka (Hawaiians). One example of this ever-present relationship with the akua in the lands of Honua‘ula is discussed by Moses Manu. By the 1860s, Manu had relocated to O‘ahu where he worked with the native newspaper *Ke Au Okoa*. He returned to Kipahulu in the early 1880s, and from there he submitted several notable mo‘olelo, among which was “Ka Moolelo Kaao Hawaii – Ke Kaua Nui Weliweli Mawaena o Pele-Keahialoa a me Waka-Keakaikawai…” which includes passing references to Paeahu and wahi pana of the region.

As the title implies, the tradition relates the conflict between Pele (goddess of volcanoes and earth creation) and Waka (a goddess of the mo‘o or class of being associated with water, springs, fishponds and growing things), a mortal enemy of Pele. During her journey across the Hawaiian Islands, Pele stops on Maui and engages in several events and interactions with akua and kānaka. On September 16, 1899, Manu references Pele in Honua‘ula. The following excerpts from Manu (1899, K. Maly, trans.) relate to Pele’s visit to Paeahu, and the naming cultural-geographic features on the landscape:

> Na keia Pele no i hana, na puu mahoe ma Ulupalakua i kapaia ka inoa o Nahaleloulu e ku nei; a ua nee aku la ka Pele ma Paeahu, a oia hoi ka palena o ka pele ma Honuaula; a —— hiki i keia wa ma Maui. A ma ia ano —— E Ike No Ke Kamahele, ke na na [nānā] ma keia mau wahi a ka mea-kakau-moolelo e hoike nei; nolaila, a haalele iho a na kakou ia “Maui no ka oi.” Haalele ka Pele ia Maui no Hawaii…
>
> This is what Pele made, the [Pu‘u Māhoe] Twin Hills in Ulupalakua, which stand there and are known by the name Nahaleloulu [Nā-hale-loulu[9]]. Pele then moved to Paeahu, which is the boundary of the pele (lava flow) at Honuaula — up to this time on Maui. It is so even now —— Upon looking, the traveler shall see these places which the writer of this traditions makes know; so we shall now leave “Maui which is the best.” Pele leaves Maui for Hawaii…

Manu’s mo‘olelo continued, describing Pele’s travels, as she left Maui from Haleakalā:

> **“Walohia wale Haleakala—**

[9] Hale-loulu (Pritchardia palm leaf house) is a type of heiau that was made as a place to offer prayers to ward off epidemics, famine, and disasters. One would assume that such a name implied the presence of such a place of worship (see 4. “loulu” in Pukui & Elbert, 1986, p. 196).

O Maui no e ka oi."

"Sadness at departing from Haleakalā—
Maui is indeed the foremost."

Manu then reported that Pele and her large family departed from Pōhakuopele, beyond the distant Point, east of the bay of Keone'ō'io.

3.3 Foreign Settlers and Early Kingdom History

The arrival of European explorers in Hawaiian waters in the late 18th century marked the beginning of profound changes for Ka'eo and Mākena. Captain Cook's arrival in 1778, followed by increasing Western presence in the islands, introduced new diseases, technologies, economic systems, and cultural practices that would transform Hawaiian society (Maly & Maly, 2005, p. 30).

While Cook himself did not visit Mākena, early Western ships began to make contact with the South Maui coast by the 1790s. Accounts from early visitors who described the landscape and communities of the region. These early observations provide valuable snapshots of Ka'eo and surrounding areas during a period of initial cultural contact and change. European and American ships increasingly visited Hawaiian waters for provisioning, trade, and eventually as part of the sandalwood and whaling industries (Maly & Maly, 2005, p. 36).

One of the most devastating early impacts of Western contact was the introduction of foreign diseases to which Native Hawaiians had no immunity. Historic references show a population decline throughout the Hawaiian Islands, with epidemics of diseases such as smallpox, measles, and influenza causing significant mortality. While specific population figures for Ka'eo are not well documented, the general pattern of demographic collapse that affected all Hawaiian communities almost certainly impacted this region as well, disrupting traditional social structures and knowledge transmission (Maly & Maly, 2005, p. 37).

From 1800 to the 1840s, the ahupua'a of Ka'eo was governed under the traditional Hawaiian system by ali'i and konohiki appointed by them. This era, prior to the Māhele 'Āina of 1848 (Māhele), was a time when Native Hawaiian governance and resource management thrived, sustaining a vibrant community rooted in balance with the land and sea.

Honua'ula's land and resources were controlled by several prominent figures during this time. Moses Kekuaīwa, a high-ranking ali'i and grandson of Kamehameha I, held a position of great authority in the region due to his sacred status and lineage. Another

significant leader was John Young Kanehoa, a chief of mixed Hawaiian and European ancestry and a confidant to both Kamehameha II and III. As a trusted advisor to the monarchy, Kanehoa played a pivotal role in bridging traditional Hawaiian leadership with foreign influences. Pikanele, a lower-ranking aliʻi, also served as a land steward, managing the lands and assets of the aliʻi and ensuring that the ahupuaʻa's resources were allocated responsibly and sustainably.

By the early 19th century, Mākena had become an important port for provisioning whaling ships. The harbor at Mākena provided a sheltered anchorage, and local residents engaged in trade with foreign vessels. This commerce introduced Kaʻeo's residents to the Western cash economy and created new economic opportunities beyond traditional subsistence activities (Maly & Maly, 2005, p. 32).

The expanding maritime trade brought new goods and technologies to Kaʻeo, including metal tools, cloth, firearms, and various manufactured items. These introductions changed material culture and affected traditional practices. Metal fishing hooks began to supplement traditional bone and shell hooks, while new agricultural tools altered farming methods. Local communities selectively adopted these new technologies while maintaining many aspects of traditional practices, demonstrating active agency in navigating cultural change (Maly & Maly, 2005, p. 38).

The sandalwood trade, which flourished in Hawaiʻi between approximately 1790 and 1830, likely affected Kaʻeo and surrounding areas as well. Though not a primary sandalwood harvesting region, the economic and social impacts of this trade reverberated throughout the islands. The demands of the sandalwood industry diverted labor from traditional subsistence activities and contributed to political and economic changes that affected all Hawaiian communities. Residents of Kaʻeo may have participated in sandalwood harvesting in upland areas of Honuaʻula or been impacted by the broader economic changes associated with this trade (Maly & Maly, 2005, p. 39).

The whaling industry had more direct impacts on Kaʻeo and Mākena. By the 1820s-1840s, Mākena had emerged as a significant port for provisioning whaling ships. Local residents produced food and supplies for trade with these vessels, creating new economic opportunities but also increasing pressure on local resources. The harbor at Mākena facilitated this trade, becoming an important point of contact between the local Hawaiian community and the global maritime economy (Maly & Maly, 2005, p. 40).

The introduction of Christianity to the Hawaiian Islands in 1820 had significant impacts on Kaʻeo and Mākena. Missionary presence in the region led to the establishment of Keawakapu Church (later Keawalaʻi Church) in 1832, which became an important community institution. The adoption of Christianity by many residents represented a major

cultural shift, as traditional religious practices were increasingly abandoned or transformed (Maly & Maly, 2005, p. 35).

Protestant missionaries based in central Maui began visiting the Honua‘ula region in the 1820s and established an outstation at Keawakapu by the early 1830s. Maly & Maly documented excerpts from missionary journals and letters that describe the efforts of religious conversion in the area. These accounts offer valuable insights into the community and landscape of this period, although they should be read with an awareness of the cultural biases inherent in missionary perspectives (Maly & Maly, 2005, p. 41).

The construction of Keawakapu Church in 1832 established a permanent Christian presence in the area and created a new community focal point. The church building, constructed of local stone with coral lime mortar, represented both new architectural techniques and the growing influence of Christianity in local spiritual life. The congregation included both Native Hawaiian converts and, increasingly, foreign residents who had begun to settle in the area (Maly & Maly, 2005, p. 42).

Educational institutions associated with the missionary movement also appeared in Ka‘eo during this period. There was the establishment of a small school near Keawakapu Church where instruction was initially provided in the Hawaiian language. These schools introduced Western-style literacy and education while simultaneously serving as centers for religious instruction and cultural change. The introduction of literacy had profound implications for Hawaiian culture, as traditional oral knowledge systems began to be supplemented and sometimes replaced by written documentation.

Early government censuses conducted in the 1830s-1840s provide glimpses of the changing demographics of Ka‘eo and surrounding areas. These records indicate a declining but still substantial Native Hawaiian population alongside a small but growing presence of foreign residents. The household compositions documented in these censuses reflect both traditional extended family structures and emerging new household patterns influenced by Western models.

The early Western contact period also saw the beginning of changes in land use and agricultural practices. The introduction of new crops such as Irish potatoes, melons, and various vegetables that were grown for trade with visiting ships. Cattle, goats, and other livestock were introduced to the islands and began to appear in Ka‘eo, initially as free-ranging animals that often damaged native vegetation and traditional agricultural systems. These agricultural changes represented the beginning of a transition away from traditional subsistence farming toward market-oriented production (Maly & Maly, 2005, p. 45).

By the 1840s, the cumulative effects of these changes had significantly transformed the cultural landscape of Kaʻeo. Traditional religious practices had been largely supplanted by Christianity, the subsistence economy was increasingly integrated with market forces, Western diseases had altered community demographics, and new technologies had changed material culture and daily practices. Yet despite these profound changes, many aspects of traditional Hawaiian culture persisted, particularly in areas related to marine resource use, family structure, and cultural values.

However, by the late 1840s and early 1850s, this traditional system began to erode as foreigners secured land interests in Honuaʻula. Among these individuals were L. Torbert, William Wilcox, William Fredenberg, and Warren Goodale. Following Hawaiian customs, these foreigners were often recognized as konohiki, granting them authority over large tracts of land. This marked a significant shift in land management, as the primary focus under foreign stewardship became the development of business opportunities rather than the sustenance of local communities.

The introduction of foreign landowners and their commercial ventures disrupted the traditional land system of access. Large tracts of land in Honuaʻula were removed from the ahupuaʻa framework, limiting hoaʻāina's (native tenant) access to critical resources. These lands were repurposed for enterprises such as sugar plantations, ranching, and the cultivation of Irish potatoes (ʻuala haole), which were grown to supply the burgeoning whale trade. While these ventures were economically advantageous to the foreign landowners, they often came at the expense of the local Hawaiian population, who were displaced from their ancestral lands and forced into labor under new systems of governance.

This era marked the beginning of profound changes for Mākena and the ahupuaʻa of Kaʻeo. The interplay between traditional Hawaiian leadership and the encroaching influence of foreigners set the stage for the eventual privatization of land through the Māhele ʻĀina, which would further alter the cultural, economic, and environmental landscape of the region. The loss of communal access to land and resources disrupted the way of life for many Native Hawaiians, leaving lasting impacts on the community that are still felt today. Settler colonialism in Mākena introduced a cycle of dispossession and economic exploitation that displaced Native Hawaiians and entrenched foreign dominance. These early land acquisitions set the stage for the Māhele ʻĀina and the eventual commodification of Hawaiian lands, solidifying settler control over Mākena.

3.3.1 Naleipuleho on Native Residency in Honuaʻula

One of the earliest native accounts recorded for the Honuaʻula region, describing residency and practices of the natives in the years leading to the economic development of land interests, was published on June 8, 1836 in the Hawaiian language newspaper,

Ke Kumu Hawaii. In the account, native resident Naleipuleho described the region of Honua‘ula as one that was frequented by famines but where people in the uplands cultivated such crops as sweet potatoes, taro, and sugar cane, and those living on the shore focused primarily on fishing. The residents also traveled between the uplands and coastal lands to exchange products. Naleipuleho (1836, K. Maly, trans.) also reported that those people who lived on the shore, had easier access to regular supplies of potable water, than those people who lived in the uplands:

NO KA NOHO ANA O NA KANAKA MA HONUAULA MA MAUI.	**RESIDENCY OF THE PEOPLE OF HONUA‘ULA, MAUI**
Ke hai aku nei au ia oe i ke ano o keia aina, i ka noho ana o na kanaka.	I hereby tell you about the nature of this land and the residency of the people.
Eia ke ano. He aina wi, o Honuaula. O ka uwala ko laila ai, a me ka kalo, he ai pau wale no ia. Eia ka ai mau loa, he ko, he ki lau o ke aa, o ke ki lau a me ka muo, o na ai mau loa ia.	Here are the characteristics. Honua‘ula is a land of famines. The sweet potato is the food there, and the taro, but they are foods which do not last. Here are the foods which are always available, sugar cane, ti leaf roots, and the budding leaves of the ti are the steady foods.
Eia ke ano o ka noho ana o na kanaka; elua wahi noho. Ma kahakai, mauka mawaena o ka aina. O ke kii ana o ka ai a na kanaka ma kahakai he loihi loa. He kokoke ka wai o lakou. Pomaikai lakou i ke kokoke o ka wai a me ka ia. Poino ko lakou mau ai i ka loihi o ka ai.	Here is how the people live; there are two places of residency. Along the shore, and in the mid uplands of the land. The people who live on the shore, must travel a great distance to get vegetable foods. But, the fresh water is close to them. They are blessed to be near the drinking water and fish. Though they are greatly burdened in having to travel far for their other foods.
O na kanaka i noho mawaena o ka aina,—pomaikai lakou i ka ai i ke kokoke o ka ai. Poino lakou i ka wai i ka loihi o ke ana o ka wai. Aia no i kahakai ka wai e kii ai. Ina e kii iuka i ka wai, he loihi ke pii aku iluna, he naenae ka pii ana,—aia no i ka lae laau ka wai, i hoi mai he lole ke kuli i ka loihi o ka hoi ana mai, i ke kii ana	The people who reside in the middle of the land, are fortunate that their foods are close to them. But they are unfortunate because the fresh water is a great distance from them in the caves. There is water which they can get from the shore. If they travel to the uplands to get water, it is a great ascent, and fatiguing—the water is there in the forest groves; returning causes pain in the

o ka wai elua ipu nui e ukuhi ai i ka wai, a piha, hoi mai. Hooheehee i na huewai, liilii, a piha, a koe ke koena he wai auau, he wai hoopulu hana wauke, i mea kapa.	knees, for the great distance of the trip, and for only two large water containers in which to pour the water and return. The water gourds hang down, and there is a little that remains for bathing, and moistening the *wauke*, made into *kapa*.
Na I. Naleipuleho.	By I. Naleipuleho.

3.3.2 Plantations and Ranches Develop – Native Tenants of Honua‘ula Displaced by Roaming Cattle

In 1793, Captain Vancouver introduced cattle by “gifting” them to King Kamehameha I and asking that a kapu be placed on them to ensure that herds would grow and serve as a source of meat for visiting ships. As the number of ships calling on Hawaiian ports increased, there also grew new economic pressures. Hawaiian interest in foreign goods grew, and foreign desires for Hawaiian supplies and safe harbors grew as well. A radically different system of foreign economics progressed almost unchecked in the islands, generally to the disadvantage of the Hawaiians.

In 1820, Calvinist missionaries from America arrived and settled the islands. They brought with them not only their religious beliefs, but also their American values—among which were private property rights. By the middle 1820s, lands were being granted to the American Board of Commissioners for Foreign Missions (A.B.C.F.M.) for church, residency, schools, and the development of businesses with which to support the growing Sandwich Islands Mission. By the 1830s, other foreigners who had provided some service or other asset to the King or his landed chiefs, were also receiving lands for their use. Such property rights led to the development of sugar plantations and ranching interests. Ranching activities became an urgent need to control the growing herds of wild cattle and other ungulates left in the islands by Captain Vancouver and later shippers (see Kuykendall, 1968, pp. 40-41).

By the middle 1840s, King Kauikeaouli (Kamehameha III), under the tutelage of his missionary teachers, began to reorganize his Kingdom birth-right under an American system—a system which also incorporated many foreign office holders. From his land inventory, he set up a mechanism to lease out and eventually sell large tracts of land for the development of businesses, which it was hoped, would also benefit the kingdom. Interestingly, the uplands of Honua‘ula were among the early lands leased out to foreigners for plantation and ranching ventures. Two prominent participants in the Honua‘ula venture were Michael J. Nowlein and Linton L. Torbert, both of whom worked lands in the ‘Ulupalakua vicinity as sugar plantations. Nowlein operated the Kingdom (*Aupuni*) plantation and Torbert operated a leasehold plantation.

While these developments were occurring in government offices and land use, several native residents grew alarmed. In 1845 hundreds of native Hawaiians from Maui and Hawai‘i petitioned the King to “Permit no naturalized foreigner to hold any office. To allow no foreigners hereafter to become naturalized. To part with no lands to foreigners…” (*The Polynesian*, July 26, 1845, p. 40).

In December 1845 and January 1846, King Kamehameha III, Cabinet Members, and Ministers visited Maui to address the people on these matters. Kamehameha III, J.Y. Kānehoa, Governor of Maui (who a few years later would come to own nearly 4,800 acres of Paeahu), A. Pākī; and appointed Ministers met with Hawaiians in large gatherings at various locations. The following excerpts from *The Polynesian* summarize the thoughts of the King and others in his government on these matters and make specific reference to the “experiment” of dividing and granting fee-simple interest in properties at selected locations in the islands. It will be noted in the comments made below that the lands of Honua‘ula were specifically referenced and both sugar cane and Irish potatoes were deemed important monetary crops. By this time, wild cattle had already led to the abandonment of two districts on the island as well:

> **Honolulu, Saturday, Feb. 14, 1846**
> **His Majesty’s Late visit to Maui.**
>
> The royal party left this place on the 18th of December and arrived at Lahaina on the 20th… On the 12th January, His Majesty addressed several thousand of his subjects, at Wailuku, to the following effect:
>
> I have addressed you before with my *KUHINA*, who is gone. I alone am left. I now repeat the same, and urge you to support schools and cultivate the land.
>
> We are seeking the good of the country but the work is not done. We are making laws, but they are not *pohihihi* [bewildering]. If they are so to us they will be so to you. Your hereditary chiefs have been in trouble, and therefore have chosen some to aid them. They are the ministers of white skin, whom you see. This is according to the old system. They know more than we, and I have chosen them for the sake of their knowledge. You have heard of our trouble. I have seen it.
>
> Therefore we have chosen these helpers to help you. We have heard of your petitions. Should we consent to them, trouble would immediately follow—instantly—before night. I ask you therefore to put an end to your wish to promote that petition…
>
> …On the 14th, His Majesty addressed a large concourse of people at Makawao

with great effect. A large proportion of the assembly were melted into tears. The Premier followed, urging the people to attend to useful knowledge, agriculture and religion, as the king provided for his own children he provided for theirs. Mr. Judd then spoke of the new arrangement of selling lands in fee simple to the natives in that district, with which they were much gratified. After crossing Mauna Haleakala, sleeping on its summit, and examining the crater, the royal party stopped on the 16th at a romantic place called Mokulau…

…Agriculture on Maui is in a forward state, compared with Oahu. At Honuaula there are 178 acres under cultivation of sugar cane with a good sugar mill managed chiefly by natives. One farm, besides sugar, raises $5000 worth of Irish potatoes annually. There are 12 foreigners here, one of whom John White, arrived in 1799. On some parts of Maui the cattle have done much mischief by trespassing on the plantations, and driving the owners from their little farms. Two districts have in consequence been deserted…

3.3.3 Loss of Hawaiian Men to Whale Ships: Impacts on the Population of Honua‘ula

In 1846, Jonathan S. Green, a resident of Makawao, wrote a letter to the editor of *The Polynesian* in which he described the loss of people from some of the districts of Maui, including Honua‘ula. Green, who served the Sandwich Islands Mission between 1828 to 1842, had also spent several years in the Wailuku Station, from where he also worked the Honua‘ula out-station, centered at Keawakapu. Upon resignation in 1842, Green settled permanently in Makawao to run a Hawaiian boarding school. He was a key participant in the growing land “experiment” implemented by King Kamehameha III, in which natives and naturalized foreigners were permitted to gain fee-simple interest in land. In his position as headmaster, he watched the loss of native youth to the whaling venture:

May 23, 1846
The Polynesian
J.S. Green; to Editor, J.J. Jarves:

In speaking of Makawao, and of matters and things at our station, as I proposed doing, I shall first mention some facts which have an unfavorable bearing on the interests of the district—of course, on the prosperity of the nation—which not only threaten to frustrate our hope of seeing the experiment which we are making a successful one, but which fill our bosoms with sad forebodings as to the destiny of the Hawaiian nation. 1. The fact that the number of young men who leave home, and engage their services on board whale ships, is rapidly increasing, is one of the facts, so far as my people are concerned, which fills me with painful apprehension.

More or less of the Hawaiian youth, I am aware, have engaged in this business for many years, especially those living in the vicinity of Honolulu, Lahaina, Hilo and Kaawaloa. But of late the number of these has greatly increased—at least in our vicinity—so that the present season not a few of the most promising young men from Kula, Honuaula and Wailuku have gone to sea. During the three years past we have had an excellent native school at Makawao, taught by a graduate of Lahaina Seminary. Many of these young men had made good proficiency in their studies—had nearly completed their course of education, and some few of them had commenced teaching. Now that these youth were just ready to engage in labors for the good of the nation, they have nearly all gone on board whale ships, and thus our hopes of good to the nation through them is for the present, utterly blighted.

I wish to draw the attention of the King, Chiefs, and Foreign Officers of the Hawaiian Government, and of all the friends of this nation to this subject. I have written the King, suggesting some inquiries…

1. How many natives of your islands are now on board whale ships and merchantmen, as regular seamen?
2. How many of them have families?
3. How are their families supported in the absence of the husband and father? Do they often suffer, and in how many cases do they—the wives of seamen—sell themselves for the means of subsistence?
4. Do many native seamen find the business of going to sea profitable? More so than an industrious method of cultivating the soil, or engaging in other business would be?
5. Are native seamen often ill-treated on board foreign ships, flogged, or kicked about the deck?
6. What is generally the character of the influence exerted upon these men when on ship board? Are they allowed to observe the Sabbath, or are they required to work often as on other days? Do native seamen commonly leave a foreign ship as moral as when they went on board—or are they often profane and more skillful in mischief than before they came in contact with foreign seamen…?

Through accounts such as those above, we see that by the middle 1800s, the population of Honuaʻula was diminishing, and land tenure and land use practices were being Westernized.

3.4 Historical Events in the Lives of Native Residents of Honua‘ula

In an earlier section of this study, the important letter by I. Naleipuleho (**Section 3.3.1**) was cited. It was the earliest native account found as part of the research done, describing residency and subsistence practices in Honua‘ula. Besides this account and the traditional accounts cited previously, a number of historical descriptions of Honua‘ula were published by kama‘āina residents and visitors to the region. Selections from their writings are provided in the following sections.

3.4.1 Manō (Sharks) Worshipped and Feared at Honua‘ula

Oral historical accounts document that native residents of the Mākena-Keone‘ō‘io vicinity have shared a unique relationship with certain sharks of the region for generations. Such sharks are sometimes known as ‘aumakua (family gods and guardians). Not all sharks were of this class, which was also called manō kanaka (sharks of the people). The other class of sharks, manō i‘a (fish sharks), were the wild sharks of the sea and greatly feared by the Hawaiians. Traditionally, it was the manō i‘a that were hunted and, at times, made the play things of the fearless warriors and chiefs of old (pers. comm. M. Kawena Pukui; Maly notes, 1975).

In reviewing historical accounts related to the lands of the Honua‘ula District, research found that S.M. Kamakau, who held various government positions on the island of Maui, wrote about manō and the beliefs associated with them. Kamakau’s writings also include an account of shark attacks on fishers at Honua‘ula. Interestingly, one of these accounts by Kamakau (1968) references the period when Mahoe, a resident of nearby Kā‘eo, was a teacher in the district:

> In the country districts of Maui I have often seen persons who had been maimed by a shark—a foot cut off, a hand cut short, one side, or both, of the buttocks gone, the back badly scarred, the face marred, the eye and cheek torn away, and so forth. I saw one woman whom I pitied especially. She lived at Ma‘onakala in Kanahena, Honua‘ula, when Mahoe was the schoolteacher, in this era of writing (ke au palapala). She was nearly engulfed by a shark, and I saw the horrible scars made by the teeth of the shark on the back and front of her body. The woman had dived to set a fish trap, and after making it fast in the current, she returned to the coral head where her companion was chewing bait, took the bait, and dived again to put it into the trap. When she turned to go back to the coral head she saw a small shark pass in front of her; then she felt the sea warm about her feet and herself being gulped down. Her whole body was inside the mouth of a shark, and its top jaw was just closing over the lower jaw when the small shark crossed and held up the top jaw and pressed the lower jaw down on a rock. Her companion saw her and called out, “So-and-so is being eaten by a shark! Pau o Mea i ka

mano!" Here was the woman inside the shark, and the little shark circling above the large one. She saw an opening between the rows of sharp teeth and struggled out, with the help of that little shark who splashed and drove the other away. She was badly torn, and lay on the rock and fainted dead away; but she was still living. I first saw this woman at Lahaina in 1845 at the home of Mahoe and his wife Kealoha. Hoʻoikaika was her daughter, and they belonged to the household of the Reverend Mr. Baldwin. I actually saw the marks of the shark's teeth on her body; it was cut and ridged back and front from her head to her feet…

This is the main reason why the people of Maui worshiped sharks—in order to be saved from being eaten by a shark when they went fishing. At Kaupo, Kipahulu, Hana, Koʻolau, Hamakuapoko, Kaʻanapali, Lahaina, and Honuaʻula a fisherman was in danger of being devoured by a shark when he was out fishing with a dip net (ʻupena ʻakiʻikiʻi), or fishing for octopus with a lure (lawaiʻa luʻuheʻe), or setting traps for hinalea fish (hoʻoluʻuluʻu hinalea), or diving with a scoop net (lawaiʻa uluulu), or setting out fishnets (lawaiʻa ʻupena hoʻauʻau), or whichever kind of fishing a man would be doing alone. It would be better to stay ashore, but the fisherman craves fish to eat, and so might be devoured by a shark. Hence the people of that island worshiped sharks. Most of the people of that land do not eat shark even to this day; those who do are malihini—the kamaʻaina are afraid to eat shark. (pp. 75-78)

3.4.2 Mākena and Operations of Makee Plantation (ʻUlupalakua)

The native newspaper, *Ka Nupepa Kuokoa*, of April 11 and 23, 1863, published a letter from a writer who signed his name as "Who do you think?" (dated March 26, 1863). The letter provided details of agricultural developments, residency, and an account of the destruction of the forest resources in Honuaʻula and neighboring ʻāina. Excerpts from the letter, translated by K. Maly, are below:

April 11, 1863

Mākena, East Maui.
…I send to you one of the things I have written of my journey these past days, from Mākena to Makawao…

The Wheat Season of the Year 1863.
The appearance of the wheat fields from Kula and Makawao is good. It is not molested by the birds as I would have thought. The harvest for the past year is 27,000 bushels. The Honolulu Mill has processed 22,000 bushels, and the Wailuku Mill has processed 5,000 bushels…

The Sugar Season of East Maui in the Year 1863.

It is estimated that the total crop of sugar from all the plantation of East Maui totals:

Makee's plantation	400 tons.
Brewer's plantation	250 tons.
The Haiku plantation	400 tons.
The East Maui plantation	75 tons.
The Waiehu plantation (new land)—	
The Waihee plantation (new land)—	
The Wailuku plantation	250 tons.
Land of the Waikapu Mill	300 tons.
Land of the Hana Mill	125 tons.
The total being	1800 tons.
And if combined with the Lahaina crop	200 tons.
	2000 tons.

That is a total of 4,000,000 pounds, almost 1,000,000 pounds more than the previous year…

The Sugar Plantation of Makee.
Because it was extremely dry, the sugar lands of Makee produced 100 tons less of sugar than the previous year. But it is enough to take care of the poor families there. There is water that has flowed from the hills of Palauea these past months, and the Owner of the place (Capt. Makee) has sent some corrugated metal by which to catch the water. Capt. Makee has begun again, to plant on the lands he owns at Palauea, combining with the sugar lands purchased by Mr. Wilcox. Therefore, there will be adequate cane for milling from these lands, and he (Makee) is building a new mill on a high place, along the government road to Makawao, at Palauea, and above the house of Judge Saffery and Mr. Wilcox…

April 23, 1863

Remainder of the letter from Who do you Think?
…Palauea and Mākena.

Most of the people who lived near the shore, when Mr. W.H. Rogers was buying firewood from the lands behind, have departed at this time. I cannot express the regret I feel for the failure of their business. But I greatly regret seeing that all the good forest trees have been cut, leaving the land with nothing. There is nothing to shade the land from the heat of the sun, nothing which may again tame the daylight upon the land.

> Mākena has obtained prominence as a locality, as it is well equipped with a good pier, and in these days, it is filled with the people who follow after the whales, and the fish which supply the needs of the people. A result of the abundance of the oil, the needs of everyone, from the Minister to the children are met. The Church of the Rev. Mr. Nueku is there. It is a fine stone house. And I have heard that there will shortly be built, a new bell tower there, situated near the house of Rev. Mr. Nueku.
>
> If there is to again be a feast for donations for this thing, I will give five dollars, and two more to see the ladies of this place, jumping through the hoops along the road side. Leading the women to the feast, throwing coins to them along the way, and throwing kisses too. In my estimation, we must support Rev. Mr. Nueku in his work, and the failure to secure enough money would be through no fault of his own. Many ministers would do well to follow in his good works…

3.4.3 A kanikau for J.K. Samuela

In 1863, a kanikau (dirge-chant of lamentation) was contributed by Mele, commemorating the passing of J.K. Samuela. In her lament, she recounts places visited by them. The following excerpt (Mele, 1863, p. 1) from the kanikau describe the shores of Honua‘ula as being destitute of vegetable foods, and the hot plains that rise up to Ulupalakua:

Aloha kuu kane mai ke ala paa i ka Ohu o Kahikinui. A me ke kaha ai ole la o Honuaula. Hele aku kaua o ke kula wela i ka la o Ulupalakua. Iho aku o kaihona loa la o Kaluaihaloko. Hoi aku ka ihu o ka lio i Kalepolepo. Nana aku o ka piina ikiiki o Aalaloloa. Huli aku nana i na lehua o Liliau. Ka mea kaumaha o ka manao he kane — e.	Love to you my husband who has traveled the trail covered by the mist of Kahikinui, and the foodless shores of Honua‘ula. We have traveled the open plains of ‘Ulupalakua in the heat of the sun, and descended the slope of Kaluaihaloko, turning the nose of the horse to Kalepolepo. And glanced upon the difficult ascent of ‘A‘alaloloa. We have turned and gazed upon the *lehua* of Liliau. These are things which now grief me in thinking of my husband.

3.4.4 The Birth of Ha‘eha‘e Kukahiko

Of interest to members of the Kukahiko family of the Mākena region—descendants of “John” Kukahiko and Kamaka Kuhaulua (Kekuhaulua) Kukahiko, who also share familial ties with ‘ohana of Paeahu—is the notice of Ha‘eha‘e Kukahiko’s birth in 1865. The elder Kukahiko was a man of chiefly lineage who in the Māhele, received the ‘ili of Ka‘alawai at Waikīkī as his personal land. By some tie to Honua‘ula, Kukahiko also received his first

fee-simple interest to land at Moʻoiki, in 1854 (Royal Patent Grant No. 1495), situated on the mauka side of Puʻu ʻŌlaʻi. His wife, Kamaka Kuhaulua Kukahiko was a descendant of traditional families of the Honuaʻula region. In the notice below, John and Kamaka Kukahiko announced that on May 11th, 1865, their daughter, "Haehae," had been born.[10]

> ***Ka Nupepa Kuokoa***
> **July 6, 1865 (page 3)**
>
> Mei 11, ma Paeahu, Honuaula, hanau o Haehae w., na J. Kukahiko me Kamaka.
>
> May 11th, at Paeahu, Honuaula, Haehae f., was born to J. Kukahiko and Kamaka.

3.4.5 A Visit to ʻUlupalakua and Mākena in 1868: Hawaiian Riddle of the Kala Fish

On November 14, 1868, *Ka Nupepa Kuokoa* published a letter initialed: "M, of Born Hill, Lahaina." The letter informed readers of the meeting of church elders held in Wailuku and described the trip made from Lāhaina to various locations on Maui, including descriptions of ʻUlupalakua and Mākena with references to Reverend H. Manase and an account of a dream the writer had the night he slept at Mākena. By way of the dream, "M" (1868) shares a riddle that plays on the name of the kala (surgeonfish):

> On the afternoon of Thursday, Oct. 15th, we departed from Lāhaina, and went to Wailuku to attend the Elder's Meeting for the Island of Maui…
>
> [Having departed following the meeting to visit various locations, the author and party arrived at ʻUlupalakua.]
>
> **Rose Land ʻUlupalakua.**
> The nature of this land is like that of a rose garden filled with blossoms. The beautiful home of J. Makee, Esq., has no equal. We arrived there the evening of Tuesday, Oct. 20th. We were astonished by the gracious hospitality received by us from this kind foreigner. He inquired of us our names, what we did, where we resided, and what the purpose of our journey was, and H. Manase interpreted our discussion with him, into the English language. He then took us to visit his arboretum. The things grown there are like nothing else seen, there are beautiful flowers, and trees of all kinds. The road passes through the gardens, and to the large reservoir within the arboretum, it looks like a pond. (The visitors heart and thoughts greatly admire the fragrant upland, where flock together the birds.)

[10] Haʻehaʻe was the grandmother of interviewee Samuel K. Ponopake Chang, and great grandmother of interviewee Edward Chang, Jr. (in Maly & Maly, 2006).

When he finished showing us around the gardens, he took us to meet his lady (his wife), the one about whom visitors say, “She is the queen of the rose garden.” We visited at their house, and then departed from them, with *aloha* and appreciation.

J. Makee is a worshipful foreigner. He has built a chapel for his workers, and because the house is a small one, he is considering building even a larger one. The lands are truly good for sugar cane, should the owner be so inclined to mill it. The kingdom will benefit, as will the kingdom of our Lord, Jesus Christ of these Islands.

P.W. Ka‘awa remained here, and the three of us went to the shore of Mākena. It was dark by the time were reached Mākena.

Mākena.
We slept there that night, with the next day being Wednesday. During my sleep, I was startled by (dreaming of) the rustling of a fish net. The net being that of the fishermen, Peter and Andrew. It was very early in the morning, and I inquired of them what they were doing. They replied in their ancient place at Galilee, their elders fished with nets.

They set out their net three times, and drew up two fish. Here is the funny thing they said to me. “We two live by fishing, and you, who remains in the house, has nothing.” They then spoke to me in a riddle, asking me the name of the fish they had caught. It was thus, “Our fish is found in the sea is dark, where the waves crash on the shore, on the open lands where is grown the sweet potato, and where is heard the voice of the birds. So tell us the name of our fish, you who dwells in the house.”

My answer was thus. “Kala is the name of the fish. It is the kala fish that is there in the dark ocean; it is the limu kala that is there where the waves wash in; it is the puakala that is there on the plains where the sweet potatoes grow; and it is the ‘ākala that grows where the voices of the birds are heard.”

Their laughter resounded for my having understood their riddle, and thus that morning, I learned my lesson. If I were like the paddle makers in the uplands of Pu‘ukāpele, or if I were like the those fishermen of ancient times, who went fishing, I would get the fish, and I would then return to dwell in the house…”

When we finished our meal that morning, the thought arose that it was time to depart from Mākena, and from our companion, Rev. H. Manase. He dwells in solitude in this place with a heavy heart, and with pain, as he has no companion, but the people of the place. But praise be to God whose power is manifest in all

things, “It is his will that it be done, not ours.” We departed from Mākena on the Katy Lee. We boarded Katy Lee, when the clock struck 12 noon of Wednesday…

3.4.6 L. Kaiwi’s Report of the Church of God at Honua‘ula (1871)

L. Kaiwi (possibly a descendant of Kaiwi who was identified as a resident of Paeahu in Helu 10580 of Ohule) described the region of Honua‘ula and discussed various activities occurring between Paeahu to Kanaio:

> By the unchangeable grace of God in His bringing together His servant to associate with the older men, the older brothers of righteousness, greetings.
>
> The parish of Honuaula is a large one. Its northern boundary is Paeahu, its eastern side is Haleakala mountain, its southern side is Kanaio and its western side is the seacoast.
>
> **The status of the church.**
> We are pleased in hearing some things and sad in hearing other things. The members have associated in true spiritual life in these six months; we have not heard of commotion or liquor drinking and similar things. The meetings are well attended every Sunday. The evening meetings are continued in every district. The preacher visits the districts of Ulupalakua and Kanaio. The seaside districts do not unite because of the long distance there. The one head carries many heads. Likewise at Keoneoio and Kanahena. The head of the preacher carries many heads.
>
> Likewise at the church of Palauea. The preacher has gone to these above-mentioned districts on the first Sunday of every month and from those visits several persons have returned to the church on repentance and have joined the church, some have been baptized and some have been restored.
>
> **The Sunday Schools.**
> Sunday Schools have been held at three places—Ulupalakua, Keoneoio and Keawakapu. These schools have progressed in the six months and the preacher is the superintendent and he has some support behind him at Ulupalakua and Keoneoio. One Sunday School has held an exhibition this past month, that is, the school at Keawakapu. That school appointed a delegate to go to Honolulu. The Sunday School contributed $10.00 to the delegate for his expenses. There is one great deficiency in these schools, the lack of books.
>
> **Government schools.**
> There are four such schools in this district—three Protestant and one Episcopal in the English language…

Sugar mill.
There is one sugar mill in this parish. I am sad to tell you about this sugar mill when I went to the evening church service. I saw some persons working on Sunday—hanging out to dry, drawing and collecting lines, etc.; Chinese, Hawaiians and other racial groups working. I ask you fathers and older brothers, "Is this the way with other sugar mills in your parishes?" If it is not in your parishes then it is a great mischief at Ulupalakua.

Famine or drought in the parish.
Honuaula is a land of drought. The sun is very great and the cane is dry and is crawling, likewise the potatoes, pumpkins and bananas of people in the dryness. Our support these days is the nose of the horse and the wheel of the cart, looking at "the four-waters" [Wailuku, etc.].

Cotton planting.
The main job of several persons is planting cotton and some obtain money from it and are carrying on that work.

The houses of the church.
This church is supplied with lands and site for a church building, no lack there. There is one lack however, and that is a place for the preacher to live in. There is no suitable house. One house is out of repair; it is closed off with mats and full of holes. One house has loosened rafters. If this were a rainy land, then they would ask the preacher. If it were a land of strong gales, then it would turn one way or another. They had thought of repairing it, but it has not been done up to date.

The Lord's Supper.
W.P. Kahale, J.M. Kealoha and W. Kahookaumaha have cared for the church these three quarters… (Hawaiian Evangelical Association, Ms. Trans., by H.P. Judd)

3.4.7 "Na Hiohiona o Ulupalakua"– The Nature of the Land Around Ulupalakua

One of the most interesting native descriptions of lands of the Ulupalakua vicinity was penned by J. Kealohapauole in 1872. In his letter to the editor of the *Ka Nupepa Kuokoa*, Kealohapauole described several heiau, natural features of the lands, and development of the land under the ownership of "Kapena Ki" (Captain James Makee).

Of particular interest is the account of a heiau situated on Puʻu Keʻekeʻehia, from which Kealohapauole says, "You may indeed hear the voices of drums on the nights of Kane and Lono."

This description of the drums being heard is one that is also a common theme with the heiau at that location called “Po-kalani” by Handy’s informants (1940), and as being associated with the heiau by the name of “Kalani” at Kaʻeo, as recorded by Stokes (1916). Robert Kalani and Boogie Luʻuwai shared in their interviews (see Maly & Maly, 2006) that on certain nights when they were young, the sounds of drums could be heard coming from parcels of land neighboring what is now identified as “Kalani Heiau.”

Na Hiohiona o Ulupalaku	***The Appearance of Ulupalakua.***
Eia no keia kulanakauhale, mawaena o na kakai pii e hoopuni ana, a huli aku ia kona alo a nana ia Kahoolawe, a ma kona aoao akau ka puu o Keekeehia, aia maluna pono iho he heiau mai ka po mai, a e lohe ana no oe i ka leo o ka pahu i na po i o Kane a me Lono; a ma ke kua mai na puu o Kaeo a me Makakualele, he puu keia i kanuia me na laau haole a puni, a me na alanui kekee ma na aoao a puni, a he wahi makaikai nui ia e na malihini haole; a ma ka aoao hikina akau na puu o Nakalalua a me Puumahoe. Aia maluna o keia puu, na hale loulu a Kane ma; a aia ma ka aoao makai o ua puu nei, o Kukonakahale, he hale kaulana ia ia ka wa o na alii kahiko loa. Ina ka e nana ia mai e Wailuku, he kohu luakini ka ka nui, a he makaikai ia no kona kahie nei i keia wa. A ma koʻu nana ana, ua eha kaulahao a oi aku ke anapuni o kona kahua.	The village is between the rising cliffs which surround it, and it faces Kahoʻolawe. On the north side is the hill Keʻekeʻehia. There is atop that hill, a *heiau* from ancient times, and from which, on the nights of Kāne and Lono, may be heard the voices of the drums. Behind that, on the hills of Kaʻeo and Makakualele, are planted foreign trees, that surround the hills, and border the crooked road on all sides. It is a place visited by many foreigners. On the northeast are the hills of Nakalalua and Puʻu Māhoe. Atop this hill is a *hale loulu* (temple) of Kāne and companions. On the shoreward side of the hill is Kukonakahale, a famous house in the time of the ancient chiefs. If you have seen the church at Wailuku, it is of similar size. This place is still visited at this time. By my reckoning, the circumference of the platform is four or more chains.
No ka wai—Aole no he pilikia na ka wai e nohoia nei i keia wa, no ka mea, ua hoolako ia mai e Kapena Ki a ua lako pono, “aohe hua kii Kahiki.”	About water—Water is not a problem at this time, for Captain Makee supplied the place abundantly, “the fruit does not need to be brought from afar.”
Na paahana—He oia mau no ka kaikai o ke ola o na kanaka, Pake, Iapana a Borabora hoi. He maluhia, aole haunaele.	The workers—The life of the people is the same. There are Chinese, Japanese, and those from Borabora.

	There is peace, no commotion.
No ka wili-ko—Ke hoomau nei no ka wili ko i ka nau ana i na wahi ko i lukuia ai e kahi makani o ka 9 o Augate aku nei.	About the sugar mill—The mill remains the same, consuming the cane that was knocked down by the wind of this past August 9th.
Ke Kula Sabati—He ano pipi no ka holomua ana o ke Kula Sabati maanei. I kekahi la Sabati, nui na haumana hoopaanaau i na pauku Baibala, a i kekahi manawa hoi, emi hope mai la…	The Sunday School—The Sunday School is sort of like moving forward with cattle here. Some Sabbath days there are many students, who have remembered their Bible verses, and at other times, only a few…
Oiaio. J. Kealohapauole. (Okatoba 7, 1872.)	In Truth. J. Kealohapauole. (October 7, 1872.)

3.4.8 Famine at Honua‘ula Described in 1879

In 1879, *Ka Nupepa Kuokoa* published a letter penned by native D.H. Aukai describing the “great famine” of Honua‘ula as a result of harsh sunlight and drought:

Ko Honuaula mau Anoai. No ka La. Ua nui ka la i keia mau makahiki ekolu, aole wahi mea ua iho, owela ke kula ke nana aku. No ka Wi. Ma Honuaula nei, he nui ka wi, aia no ke ola i Wailuku, o ka poe mea lio hiki i Wailuku, o ka mea lio ole aole e loaa kahi pai ai, o ka uala no ko Honuaula nei ai mau a i keia manawa hoi nei.	**Greetings from Honua‘ula.** About the Sun. There has been much sunshine over these past three years, no drop of rain has fallen, the plains look as if they are blistered by the heat. About the Famine. There is a great famine here at Honua‘ula. Life may be found at Wailuku, for those people who have horses to get to Wailuku. Those who do not have horses cannot get the pa‘i ‘ai (poi bundles). The sweet potato is the regular food of the people at Honua‘ula at this time.
No ka la. O ka ia ka mea e loaa ai o ke pai, ekolu no manini hapalua.	About the Fish. With the fish one can get the *pa‘i* (*‘ai*), three *manini* for half [a bag].
No ke Kula Sabati. Ekolu Kula Sabati o Honuaula nei, ma Kanaio,	About the Sabbath School. There are three Sabbath Schools at Honua‘ula,

Ulupalakua a me Keawakapu, o ka mea e kakau nei oia ke Kahu Kula Sabati, aole no he nui o na haumana. No ka Ekalesia. O Rev. S. K. Kauwe ke Kahu o keia Ekalesia. He ikaika na hoahanau i ka huli dala e pau ai ko lakou pilikia, ua hiki no i keia Ekalesia ke malama iaia iho, me ke kaukai ole aku ia waho mai, ua lulu dala no ka luakini e paa ai, a ua kuai ia i ke pili laau, a ua lulu dala hou iho nei no, no ka hale noho o ke kahu, a ua loaa $200. aia i Honolulu he hiki mai koe o ka laau…	Kanaio, Ulupalakua, and Keawakapu. The author is the overseer of the Sabbath Schools, but there are not many students. About the Church. Rev. S.K. Kauwe is the minister of this Church. The brethren are strong in securing funds to end their troubles, and the church can take care of him (their Kahu), without relying upon others from outside. Donations for the *luakini* (church) have been secured, the wooden shingles have been purchased, and donations have been gotten to make the house for the minister. They got $200. They are awaiting the arrival of the lumber from Honolulu…
D. H. Aukai. (Honuaula, Maui, Aper. 25, 1879.)	D. H. Aukai. (Honuaula, Maui, Apr. 25, 1879.)

3.5 The Māhele ʻĀina and Kuleana Claims: Land Use, Native Tenant Displacement and Title to Land

This section covers several categories of land use, rights, and evolution of land tenure. The various categories are cited chronologically by subject matter. While quite detailed, the review is not exhaustive, but it gives us a context for understanding the landscape as it exists today.

3.5.1 1848-1855: Ka Māhele ʻĀina (The Land Division)

In pre-western contact Hawaiʻi, as previously mentioned, all land and natural resources were held in trust by the high chiefs (Aliʻi ʻai ahupuaʻa, Aliʻi ʻai moku, or Mōʻī). The use of lands and resources were given to the hoaʻāina at the prerogative of the aliʻi and their konohiki, who were generally lesser chiefs as well. Before the 1840s, the lands in the islands were reapportioned among the Aliʻi each time there was a new Mōʻī, while the hoaʻāina were generally allowed to retain use of the land they occupied or cultivated over many generations.

The mid-19th century witnessed a revolutionary transformation in Hawaiian land tenure through the process known as the Māhele. This system of land division, initiated under King Kamehameha III in 1848, privatized land ownership in Hawaiʻi for the first time. Maly & Maly (2005) document how this process affected Kaʻeo and neighboring ahupuaʻa in Makena (p. 40).

The Māhele represented a fundamental departure from traditional Hawaiian concepts of land stewardship, introducing Western notions of private property and fee simple ownership. This transformation was driven by a complex set of factors, including foreign pressure for land access, the Hawaiian monarchy's desire to secure national sovereignty by adopting Western legal frameworks, and internal economic and political changes within Hawaiian society. The implications of this shift were profound and continue to shape land tenure in Hawai'i today (Maly & Maly, 2005, p. 47).

On December 10, 1845, Mō'ī Kauikeaouli (Kamehameha III) signed into law, a joint resolution establishing and outlining the responsibilities of the Board of Commissioners to Quiet Land Titles. The actions called for, and laws to be implemented, were as follows:[11]

Article IV. – Of The Board Of Commissioners To Quiet Land Titles.

Section I. His Majesty shall appoint through the minister of the interior, and upon consultation with the privy council, five commissioners, one of whom shall be the attorney general of this kingdom, to be a board for the investigation and final ascertainment or rejection of all claims of private individuals, whether natives or foreigners, to any landed property acquired anterior to the passage of this act; the awards of which board, unless appealed from as hereinafter allowed, shall be binding upon the minister of the interior and upon the applicant.

Section II. Said commissioners shall, before acting, take and subscribe an oath to be administered to them by the minister of the interior in the following form:

We and each of us do solemnly swear that we will carefully and impartially investigate all claims to land submitted by private parties against the government of the Hawaiian Islands; and that we will equitably adjudge upon the title, tenure, duration and quantity thereof, according to the terms of article four of the seventh chapter of the first part of an act entitled "An act to organize the executive departments of the Hawaiian Island," passed at Honolulu, —— day of ——, 18—.

Subscribed and sworn to, this —— day of ——, 18—.
Before me, ———
Minister of the Interior.

Which oath, having been sworn to, shall remain on file in the interior department.

[11] *The Polynesian*, January 3, 1846, p. 140.

Section III. It shall be the duty of said board of commissioners to select one of their number as president…

Section IV. The president of said board shall, at least once in each month, from the date of their first convention, report their proceedings to the minister of the interior—the number of claims then pending before them—the number to that date confirmed or rejected, and the reasons for confirmation and rejection of any particular claim to land, with all the evidence adduced to and reduced before them.

Section V. It shall be the special duty of board to advertise in *The Polynesian* newspaper, during the continuance of their sessions the following public notice, viz.:

To All Claimants Of Land In The Hawaiian Islands.—The undersigned have been appointed by His Majesty the King, a board of commissioners to investigate and confirm or reject all claims to land arising previously to the __ day of__, 18__ [Dec. 10, 1845].

Patents in fee simple, or leases for terms of years, will be issued to those entitled to the same, upon the report of which we are authorized make, by testimony to be presented to us.

The board holds its stated meetings weekly at ——, in Honolulu, island of Oahu, to hear the parties or their counsel, in defense of their claims; and is prepared, every day to receive in writing, the claims and evidence of title which parties may have to offer, at the ——, in Honolulu between the hours of 9 o'clock A.M. and 3 o'clock P.M.

All persons are required to file with the board specifications of their claims to land, and to adduce the evidence upon which they claim title to any land in the Hawaiian Islands, before the expiration of two years from this date, or in default of doing so, they will after that time be forever barred of all right to recover same, in the courts of justice.

Section VI. The said board shall be in existence for the quieting of land titles during the two years from the first publication of the notice above required, and shall have the power to subpoena and compel the attendance of witnesses by discretionary fine; in like manner, when in session for the hearing of arguments, to punish for contempt; and they shall have the power to administer oaths to witnesses, and to perpetuate testimony in any case depending before them, which, when so perpetuated, shall be valid evidence in any court of justice created by the act to organize the judiciary.

Section VII. The decisions of said board shall be in accordance with the principles established by the civil code of this kingdom in regard to prescription, occupancy, fixtures, native usages in regard to landed tenures, water privileges and rights of piscary, the rights of women, the rights of absentees, tenancy and subtenancy, — primogeniture and rights of adoption; which decisions being of a majority in number of said board, shall be only subject to appeal to the supreme court, and when such appeal shall not have been taken, they shall be final.

Section VIII. All claims to land, as against the Hawaiian government, which are not presented to said board within the time, at the place and in the manner prescribed in the notice required to be given in the fifth section of this article, shall be deemed to be invalid, and shall be forever barred in law, unless the claimant be absent from this kingdom, and have no representative therein.

Section IX. The minister of the interior shall issue patents or leases to the claimants of lands pursuant to the terms in which the said board shall have confirmed their respective claims, upon being paid the fees of patenting or of leasing (as the case may be) prescribed in the third part of this act, unless the party entitled to a lease shall prefer to compound with the said minister in the succeeding section allowed.

Section X. The minister of the interior shall have power in concurrence with the privy council, and under the sanction of His Majesty, to issue to any lessee or tenant for life of lands so confirmed, being an Hawaiian subject, a patent in fee simple for the same, upon payment of a commutation to be agreed upon by his Majesty in privy council.

Section XI. The patents and lease issued in accordance with the award of said commissioners, shall be recorded at the expense of the patentee or lessee, as prescribed in the third part of this act, in a book to be kept for that purpose by the minister of the interior.

Section XII. The said board shall not have power to entertain any claims to lands set up by any private person or persons until the claimant shall have deposited with the minister of finance a bond conditioned to defray the costs and expenses incident to the proposed investigation, according to the rates of charge prescribed in the third part of this act; which costs and expenses, shall, after award rendered, be taxed by the president of said board, and a certificate thereof shall be given to the claimant who shall exhibit the same to the minister of finance, whose certificate of full payment, together with the award of the commissioners, shall authorize the delivery of the awarded patent or lease to such confirmed claimant, by the minister of the interior, and not without.

> Section XIII. The titles of all lands claimed of the Hawaiian government anterior to the passage of this act, upon being confirmed as aforesaid, in whole or in part by the board of commissioners, shall be deemed to be forever settled, as awarded by said board, unless appeal be taken to the Supreme Court, as already prescribed. And all claims rejected by said board, unless appeal be taken as aforesaid, shall be deemed to be forever barred and foreclosed, from the expiration of the time allowed for such appeal.

During the Māhele, portions of Kaʻeo were designated as Crown Lands, Government Lands, and Konohiki Lands (held by chiefs). Native tenants who had traditionally lived and worked on the land were eligible to make claims for kuleana (small land parcels). Maly and Maly's (2005) research identifies numerous LCAs granted within Kaʻeo to native Hawaiian residents, documenting their traditional land use patterns and agricultural practices (p. 42).

The testimony provided by claimants during the Māhele process offers valuable ethnographic information about traditional land use in Kaʻeo. Claimants typically described their parcels in terms of the crops they cultivated, the structures they had built, and the length of time their families had occupied the land. Common crops mentioned in these testimonies included sweet potatoes, dryland taro, gourds, sugarcane, bananas, and various trees including coconut, kukui, and ʻulu (breadfruit) (Maly & Maly, 2005, p. 49).

The report includes testimonies from kuleana claimants that provide valuable insights into traditional land use in Kaʻeo. These testimonies describe cultivated areas, house lots, and resource gathering areas that had been used by families for generations. The descriptions of land use from this period help to reconstruct the cultural landscape of Kaʻeo prior to the major changes of the late 19th and early 20th centuries (Maly & Maly, 2005, pp. 44-48).

Many of these testimonies also referenced boundaries defined by natural features or constructed markers, neighbor relationships, and traditional place names. This information not only helped establish the legitimacy of claims but also preserved aspects of indigenous geographic knowledge that might otherwise have been lost during the transition to Western land ownership systems. The integration of traditional place names and land use descriptions in these legal documents created a bridge between indigenous and Western conceptions of land (Maly & Maly, 2005, p. 50).

Witnesses who testified in support of kuleana claims often included neighbors, konohiki, and other community members familiar with traditional land use patterns. Their testimonies provide additional perspectives on land use and community relationships in Kaʻeo. The witness statements sometimes included information about historical events,

changes in land use over time, and customary resource rights that extended beyond the boundaries of individual parcels.

As the Māhele evolved, it defined the land interests of the Mōʻī (Kamehameha III), the Aupuni (Government), and approximately 252 high-ranking Aliʻi and Konohiki. Also included in the Māhele were numerous foreign residents who had served the Kamehamehas and representatives of the A.B.C.F.M. As a result of the Māhele, all land in the Kingdom of Hawaiʻi came to be placed in one of three categories: (1) Crown Lands (ʻĀina Lei Aliʻi) for the occupant of the throne; (2) Konohiki Lands (ʻĀina Konohiki) for notable chiefs and those who provided service to the Kingdom; and (3) Government Lands (ʻĀina Aupuni) to be used in support of public initiatives and as a means of providing land to those who did not acquire land in the Māhele.

The initial Māhele between the Mōʻī, the Konohiki, and Aupuni was recorded in the "*Buke Kakau Paa no ka Mahele Aina i hooholo ia iwaena o Kamehameha 3 a me na Lii a me na Konohiki ana*. Hale Alii Honolulu. Ianuari 1848" (*Buke Māhele*). Table 1 is excerpted from the *Buke Māhele* (1848) and is the record of settlement of original title for several ahupuaʻa within Honuaʻula Moku, as originally claimed by Moses Kekuaīwa, a grandson of Kamehameha I. High Chief Kekuaīwa relinquished Paeahu and other lands in the district to his uncle, Mōʻī Kamehameha III. Subsequently, the King conveyed his interest in Paeahu to the ʻĀina Aupuni inventory, from which four large sections were divided. The largest to James Young Kanehoa, a high chief and governor of Maui, and three foreigners (Warren Goodale, Wm. Wilcox and Wm. Fredenberg), with a few smaller parcels being awarded to several native tenants.

3.5.2 The "Kuleana Act"

On December 21, 1849, the "Enabling" or "Kuleana Act" of the Māhele further defined the framework by which hoa'āina could apply for and be granted fee-simple interest in "Kuleana" lands. The Kuleana Act also reconfirmed the rights of hoa'āina to access subsistence and collection of resources necessary to their life upon the land in their given ahupua'a. The Kuleana Act, which remains the foundation of laws pertaining to native tenant rights in the present-day sets forth the following conditions:

August 6, 1850

An Act confirming certain resolutions of the King and Privy Council passed on the 21st day of December 1849, granting to the common people allodial titles for their own lands and house lots, and certain other privileges. Be it enacted by the Nobles and Representatives of the People of the Hawaiian Islands in Legislative Council assembled.

That the following sections which were passed by the King in Privy Council on the 21st day of December A.D. 1849 when the Legislature was not in session, be, and are hereby confirmed, and that certain other provisions be inserted, as follows:

Section 1. Resolved. That fee simple titles, free of commutation, be and are hereby granted to all native tenants, who occupy and improve any portion of any Government land, for the land they so occupy and improve, and whose claims to said lands shall be recognized as genuine by the Land Commission; Provided, however, that the Resolution shall not extend to Konohikis or other persons having the care of Government lands or to the house lots and other lands, in which the Government have an interest, in the Districts of Honolulu, Lahaina and Hilo.

Section 2. By and with the consent of the King and Chiefs in Privy Council assembled, it is hereby resolved, that fee simple titles free of commutation, be and are hereby granted to all native tenants who occupy and improve any lands other than those mentioned in the preceding Resolution, held by the King or any chief or Konohiki for the land they so occupy and improve. Provided however, this Resolution shall not extend to house lots or other lands situated in the Districts of Honolulu, Lahaina and Hilo.

Section 3. Resolved that the Board of Commissioners to quiet Land titles be, and is hereby empowered to award fee simple titles in accordance with the foregoing Resolutions; to define and separate the portions belonging to different individuals; and to provide for an equitable exchange of such different portions where it can be done, so that each man's land may be by itself.

Section 4. Resolved that a certain portion of the Government lands in each Island shall be set apart and placed in the hands of special agents to be disposed of in lots of from one to fifty acres in fee simple to such natives as may not be otherwise furnished with sufficient lands at a minimum price of fifty cents per acre.

Section 5. In granting to the People, their House lots in fee simple, such as are separate and distinct from their cultivated lands, the amount of land in each of said House lots shall not exceed one quarter of an acre.

Section 6. In granting to the people their cultivated grounds, or Kalo lands, they shall only be entitled to what they have really cultivated, and which lie in the form of cultivated lands; and not such as the people may have cultivated in different spots, with the seeming intention of enlarging their lots; nor shall they be entitled to the wastelands.

Section 7. When the Landlords have taken allodial titles to their lands the people on each of their lands shall not be deprived of the right to take firewood, aho cord, thatch, or ti leaf from the land on which they live, for their own private use, should they need them, but they shall not have a right to take such articles to sell for profit. They shall also inform the Landlord or his agent, and proceed with his consent. The people shall also have a right to drinking water, and running water, and the right of way. The springs of water, and running water, and roads shall be free to all should they need them, on all lands granted in fee simple. Provided, that this shall not be applicable to wells and water courses which individuals have made for their own use. Done and passed at the Council House, Honolulu this 6th day of August 1850.[12]

Typically, one of the most important sources of documentation that describes Native Hawaiian residency, traditional and customary practice, and land-fishery uses—identifying specific residents, resource collections, types of land use, crops cultivated, and features on the landscape—is found in the records of the Māhele and the Native Tenant Kuleana Claims. While the Act gave the hoa‘āina an opportunity to acquire fee-simple property interest (kuleana) on land on which they lived and actively cultivated, the process required them to provide personal testimonies regarding their residency, right to claim, and land-use practices. As a result, kuleana records present first-hand accounts from native tenants generally spanning the period from 1778, just after Western contact, to 1855.

[12] Copied from original handwritten “*Enabling Act*,” Hawai‘i State Archives, DLNR 2-4. For additional information, see also “*Kanawai Hoopai Karaima no ko Hawaii Pae Aina*” (Penal Code) 1850.

The lands awarded to the hoa‘āina became known as “Kuleana Lands.” All of the claims and awards (LCAs) were given a Helu (number). Some Helu were repeated, necessitating the addition of alphabet letter(s) to the Helu. The LCA designations remain in use today to identify the original owners, as well as the metes and bounds of lands in Hawai‘i. The work of the Land Commission was ended on March 31, 1855. The program, directed by principles adopted on August 20, 1846, was met with mixed results. In its statement to the King, the Commissioners to Quiet Land Titles summarized events that had transpired during the life of the Commission:

> …The first award made by the Commission was that of John Voss on the 31st of March 1847.
>
> The time originally granted to the Board for the hearing and settlement of all the land claims in the kingdom was two years, ending the fourteenth day of February 1848.
>
> Before the expiration of that term, it became evident that a longer time would be required to perform a work.… Accordingly, the Legislature on the 26th day of August 1847, passed an Act to extend the duration of the Board to the 14th of February 1849, adding one year to the term first prescribed, not however, for the purpose of admitting fresh claims, but for the purposes of hearing, adjudicating and surveying those claims that should be presented by the 14th of February, 1848. It became apparent to the Legislature of 1848 that the labors of the Land Commission had never been fully understood, nor the magnitude of the work assigned to them properly appreciated, and that it was necessary again to extend the duration of the Board. An act was accordingly passed, wisely extending the powers of the Commissioners “for such a period of time from the 14th day of February 1849, as shall be necessary for the full and faithful examination, settlement and award upon all such claims as may have been presented to said Board.” …[T]he Board appointed a number of Sub-Commissioners in various parts of the kingdom, chiefly gentlemen connected with the American Mission, who from their intelligence, knowledge of the Hawaiian language, and well-known desire to forward any work which they believed to be for the good of the people, were better calculated than any other class of men on the islands to be useful auxiliaries to the Board at Honolulu.…
>
> During the ten months that elapsed between the constitution of the Board and the end of the year 1846, only 371 claims were received at the office; during the year 1847 only 2,460, while 8,478 came in after the first day of January 1848. To these are to be added 2,100 claims, bearing supplementary numbers, chiefly consisting of claims which had been forwarded to the Board, but lost or destroyed on the way.

> In the year 1851, 105 new claims were admitted, for Kuleanas in the Fort Lands of Honolulu, by order of the Legislature. The total number of claims, therefore, amounts to 13,514, of which 209 belonged to foreigners and their descendants. The original papers, as they were received at the office, were numbered and copied into the Registers of the Commission, a highly necessary part of the work, which entailed no small amount of labor.…
>
> The whole number of Awards perfected by the Board up to its dissolution is 9,337, leaving an apparent balance of claims not awarded of say 4,200. Of these, at least 1,500 may be ranked as duplicates, and of the remaining 2,700 perhaps 1,500 have been rejected as bad, while of the balance some have not been prosecuted by the parties interested; many have been relinquished and given up to the Konohikis, even after surveys were procured by the Board, and hundreds of claimants have died, leaving no legal representatives. It is probable also that on account of the dilatoriness of some claimants in prosecuting their rights before the Commission, there are even now, after the great length of time which has been afforded, some perfectly good claims on the Registers of the Board, the owners of which have never taken the trouble to prove them. If there are any such, they deserve no commiseration, for every pain has been taken by the Commissioners and their agents, by means of oft repeated public notices and renewed visits to the different districts of the Islands, to afford all and every of the claimants an opportunity of securing their rights.[13]

By the time of its closure, the total land area in the Hawaiian Islands awarded to hoa‘āina only came to approximately 28,658 acres.[14] Documenting the Māhele in 1848-1855 was a monumental task for the Land Commission and its agents. While the generations since the Māhele are fortunate to have the records, it is evident that there were many problems at the time of recordation. These problems present some questions that will never be answered and require educated assumptions to be made based on standard practices of residency and land use and requirements of the Māhele application process at the time, to better understand the recorded information.

Several important points should be kept in mind when reviewing the verbatim translations of Kuleana documents cited herein.[15] These include, but are not limited to, the following observations—

[13] George M. Robertson, March 31, 1855, Kingdom of Hawaii, Minister of Interior Report, Feb. 20, 1856, pp. 10-17 (Collection of the Hawaii State Archives).
[14] See Board of Commissioners, 1929, and Kame‘eleihiwa, 1992, p. 295.
[15] All Hawaiian language texts of the Paeahu kuleana claims were reviewed as a part of this study, and the translations prepared by Kepā Maly.

(1) Transcription Errors:

Original transcribers taking notes at the time of witness presentations were often confused about names they heard. In many instances, the English translation originally recorded in the volumes of the "Foreign Testimony" gave place names as personal names and personal names as places names. Additional layers of confusion were subsequently overlaid by the 1929, "*Indices of Awards Made by the Board of Commissioners to Quiet Land Titles in the Hawaiian Islands*", and once again by translators working at the Archives of Hawai'i (now Hawai'i State Archives - HSA).

No disrespect is meant in the following statements, but both document collections, which are the primary source for many researchers are problematic and often inaccurate when compared with the original Hawaiian language texts. Sadly, even some of the original texts include obvious discrepancies. These issues could have implications in land use classifications and land holding, or title issues. Examples of these issues are found in Paeahu as well, and include but are not limited to:

Named Hoa'āina:

- Kaneioholani, Kaneiholani and Kaniholani
- Ko'ukaina and Koukaina
- Kaakole and Kaakaole

Named 'Ili:

- Alamanini or Kahikamanini (shoreside village in Paeahu)
- Haka or Hakaa
- Paouou or Paauau
- Pohopoho o Hoa or Popohoa

Additionally, the 1929 Indices of Awards presents another weakness in that the publication focused on the awarded claims, leaving thousands of claims only identified by Helu, with no indication of who the claimant was, or the location(s) of the 'āina. This has significant consequences when archaeologists encounter cultural properties in the field, and cannot explain, "why?". Their review of the 1929 Indices, leads one to believe that a much smaller number of claimants existed and that only a limited number of features might be expected in any given area.

The HSA archivists also undertook the significant task of translating all Hawaiian documents of the Register and Testimony books, in order to help make the records more accessible. Relying on the original handwritten volumes as their source of information, but unfortunately another layer of errors was sometimes added to the record—most of which are simple typographical errors. Because the translated texts are those which receive the most use in present-day land history research, many

errors, which are not a part of the original records, are repeated as fact. These errors include discrepancies in the types of land use reported, and transposing of both people and land names, and in transposing Helu.

(2) Documentation is Vague or not Recorded:

There are many claims in the Register and Testimony that provide no verbal description of cultivation or residence. Based on the requirement of the Law (the Kuleana Act; Dec. 21, 1849), this should not be interpreted as the absence of such features or land use, but instead, a weakness in the original process of recordation. The Kuleana Act (cited above) specifically limited native tenant claims to ʻāpana (parcels or lots) of land which they actively cultivated, and on which they resided. Thus, such features would occur.

One notable discrepancy is found in a land use designation in many of the Paeahu – Honuaʻula District claims. Numerous Hawaiian applicants identified an ʻāpana as "kula." Unfortunately, the HSA translations used the historic translation of "pasture" when translating the word "kula." Ancient use of the word "kula" described an open land area and was also a term used across the islands to describe a dryland agricultural plot/field. This was sometimes further defined by describing a particular crop, like kula ʻuala, kalo, or kula ʻuala haole (field of Irish potatoes). As a result, countless claims suggest that the claimants had a "pasture," which leads one to assume that there are few, if any, other features on the land.

(3) Access:

While there are limited references to the native trails (ala hele) or historic "roadways" (e.g. mauka-makai trails, the larger Alaloa and Ala- or Alanui-Aupuni), documentation of trails is provided in the claims. Based on traditional and customary practices associated with residency and subsistence practices, the occurrence of trails across the cultural landscape may be observed. The rights of native tenants to access, both within their ahupuaʻa and to the larger public byways, are prescribed in both traditional and historic laws. In the case of the mauka-makai trails, the record of land use also tells us that such trails existed in each ahupuaʻa. This is substantiated by the descriptions of various kuleana parcels (claimed by individual tenants) that cross several land use and elevational zones (for example near the shore, then on the kula, and in the forest).

In 2000, the research team of Kumu Pono Associates, LLC digitized all of the records made a part of the Native and Foreign Register and Testimony volumes, the Māhele

Award Books and Royal Patents on Awards.[16] As a part of this study, we reviewed all of the records and found that at least sixteen (16) native tenants filed twenty-one (21) claims for land at Paeahu. Through our translations of the original Hawaiian texts, we seek to provide readers with a more accurate understanding of the nature of residency, land use, the types of features that may yet be encountered on the ʻāina. The documents also described events that led to the displacement of many native tenants of Paeahu. It is appropriate to share that the descendants of some of these early residents may be identified and may still wish to be a part of preservation and stewardship initiatives that will be planned for long-term management of the biocultural landscape within Paeahu.

3.5.3 Makee Family Land Tenure in Honuaʻula (1854-1920)

In 1854, Captain James Makee, acquired his first interest in the holdings of Linton Torbert's Ulupalakua Plantation, including portions of Kaʻeo. By 1858, Torbert's economic problems led him to convey all his remaining interests in the Honuaʻula lands to Makee, and from that time until his death in 1879, Makee ran the Ulupalakua holdings (Maly & Maly, 2005, p. 172).

On January 7, 1878, James and Catherine Makee conveyed a portion of their interests in lands of the "Rose Ranch" at Ulupalakua, to their son, Parker Makee. In September 1879, James Makee died, and shortly before his death, additional lands of the "Rose Ranch" were conveyed to the Makee children with additional interests conveyed in 1883 and 1885 (Maly & Maly, 2005, p. 172). Cultivation of sugar on the Ulupalakua lands ended in 1883 and the owners focused on ranching interests. In 1886, James Dowsett acquired interest in the ranch lands from heirs of the Makee estate, including his own daughter, Phoebe, who had married Charles Makee. Lands that made up Makee's "Rose Ranch" remained basically as described in the earlier conveyances to James Makee.

Under Dowsett's management, the ranch also acquired additional lands and continued to exercise its' leasehold interest in lands of the larger Honuaʻula District. One parcel acquired by Dowsett was the LCA awarded to Kohilae (Helu 2401), which was conveyed to Malie Aukai from her adoptive father, Wahinekane, in 1885. Malie Aukai sold the kuleana to Dowsett on May 16, 1896. Another parcel that was purchased by Dowsett was the lot and building at Mākena Landing that G. Akuna purchased from John Kukahiko in 1892. Akuna sold the parcel to Dowsett on March 14, 1898 (Maly & Maly, 2005, p. 172).

When James Dowsett died in 1898, his interests in lands of the "Rose Ranch" (Ulupalakua) were consolidated under the interests of his daughter Phoebe and husband

[16] Digital copies selected claims which provide details about the source of title and some features are included as unnumbered figures from the Paeahu claims. The full set of records has been transferred to Honua Consulting for future reference and program development.

Charles Makee. Upon the death of Charles Makee, Phoebe Dowsett-Makee married James H. Raymond, and the Raymond interests were established at Ulupalakua (Maly & Maly, 2005, p. 172).

On October 20, 1882, Palupalu, son and heir of Kanakahou, conveyed for $65.00 his inherited interest LCA Helu 2427 at Moʻoiki (on the boundary with Maluaka) and Royal Patent Grant No. 1289 (situated at Moʻoloa) to Kukahiko. Helu 2427 contains 10.90 acres and Royal Patent Grant No. 1289 contains 7.45 acres (Maly & Maly, 2005, p. 173).

3.5.4 Sampling of Conveyances Recorded in Records of the Bureau of Conveyances and Publications

While mapping of the kuleana in Paeahu and the larger Honuaʻula moku has been the subject of questions regarding "lost" lands, Registered Map No. 4131 (Figure 6) includes reference points for some of the kuleana and grant parcels of Paeahu. One of the more interesting reference points on the map includes the location of LCA 10,665 to Pipio (Piopio) and a rock wall identified as Boundary following along stone wall & fence, "generally near the boundary of Paeahu and Kamaʻole."[17] Further mauka on the same map are found references to LCA 5265-B Ap. 2 of Kaneioholani, and the boundaries of the grant lands sold to J.Y. Kanehoa, William Fredenberg, and William Wilcox.

> **March 1st, 1852**
> **Warren Goodale to David B. Lyman**
> **Mortgage Deed**
> **Covering 470 acres of land at Paeahu**
>
> Know all men by these presents, that I Warren Goodale of Honolulu, for and in consideration of the sum of Five Hundred dollars to me in had paid by D. B. Lyman of Hilo, Hawaii, receipt whereof I hereby confess and acknowledge, have granted, bargain sold, remised, released, aliened and formed… unto the said D. B. Lyman and to his heirs, executors, administrators & assigns all the certain piece or parcel of land situate at Pauahi, Honuaula, Island of Maui, Hawaiian Islands, known and escribed as follows, viz:
>
> Commencing at N.E. corner of Saffery's lands on border of Kamaole S. 75º E. 123 chains; thence along uppers side of forest, S. 38 ¼º W. 38.30 chains; Thence West 102 chains along Palauea; Then N. 15º E. .31 chains along Pikanele; Thence S. 70º E. 10.32 chains and North 15º East 20 chains and N. 75º W, 19 32 chains along Davida Malo's lands; Thence North 15º E. 2 chains & N. 75º W. 5.16 chains

[17] This boundary along the stone wall and fence was later found to be in error.

Figure 6. Registered Map No. 4131 Portion of Ulupalakua Ranch (July 31, 1964)

along Keohokaloles; thence N. 15º E. 20 chains along Saffery to place of Commencement. Containing 470 acres.

To have and to hold the said above described premises, together with all and singular tenements, hereditaments and appurtenances there unto belong to the said David B. Lyman, his heirs, executors and administrators or assigns forever.

These present are given upon this express condition however, that whereas the said David B. Lyman had loaned to the undersigned the said sum of Five hundred dollars for which the interest to accrue there on a promissory note of concurrent date has been given to which this mortgage is collateral.

Now if the said Warren Goodale…. Shall well and faithfully pay or cause to be paid the sum of Five hundred dollars, according to the tenor of the said note on or before the 1st day of March 1853, and the interest thereon at one per cent per month, then this indenture of mortgage to be void…

[Signed Warren Goodale and David B. Lyman]
[Release of Mortgage Deed]

In consideration of Five Hundred Dollars & all interest due in the promissory note made to me by Warren Goodale, I do hereby release & forever quit claim unto Warren Goodale all my right, title & interest in the land & premises described in the subject Deed of Mortgage & declare the same deed canceled… this 4th day of June A.D. 1859… (Mortgage Deed Book 1, pp. 552-553)

March 3, 1886
P. N. Makee et al. to J. I; Dowsett
Deed

This indenture made this 3rd day of March A.D. 1886 by and between Parker Norton Makee of Waihee… Wilhelmina H. Spalding and Z. S. Spalding her husband of Kapaa, Island of Kauai… Julia A. Kitchen and M. L. W. Kitchen her husband of New York… Helen G. Noonan and Dennis Noonan her husband of Chico, State of California… Alice C, Hasting and Fran P. Hastings, her husband of Honolulu… Charles B. Makee… Kate L. Makee and Phoebe K. Makee, Rose W. Makee of Ulupalakua… of the first part of James I. Dowsett of said Honolulu of the second part…

…Said parties of the first part for and in consideration of the sum of Eighty Four Thousand and Five Hundred Dollars ($84,500) to them paid… have given, granted, bargained, sold and conveyed… unto the party of the second part… All of those

tracts and parcels of land situated in the Districts of Kula and Honuaula… comprising all of the premises known as Rose Ranch, and more particularly described or referred to in the Schedule of Deed below written, marked Exhibit A and made a part hereof. Excepting and reserving however all of that tract of land situated at _____ [blank] in said District of Honuaula, described as follows…:

[Recital describes an area of 5.68 acres, excluding sugar mill equipment and other effects…]

Schedule "A" Deeds

(1) Deeds from Chas. Brewer 2d. to James Makee, dated March 7th, 1856 of record in Lib. 7 fol. 403.
(2) Deed from L.L. Torbert to James Makee dated Aug. 30th, 1858 of record in Liber 11 fol. 47.
(3) Deed from Chas. Brewer 2d. to James Makee dated Sept. 4, 1858 of record in Lib. 11 fol. 51.
(4) Deed from Hoomanawanui and Hikiau to James Makee dated Sept. 10, 1856 of record in Lib. 8 fol. 201.
(5) Deed from W.C. Parker Marshal of the Hawaiian Islands to James Makee dated Aug. 21, 1862 of record in Lib. 15 fol. 368. [Grant 3335]
(6) Deed from W.C. Parker Marshal of the Hawaiian Islands to James Makee dated Aug. 21, 1862 of record in Lib. 15 fol. 369.
(7) Deed from W. Wilcox to James Makee dated Jan. 22nd, 1863 of record in Lib. 16 fol. 291.
(8) Deed from Keohokalole to James Makee dated April 20, 1863 of record in Lib. 70 fol. 162. [Grant 547, Grant 449]
(9) Deed from Honolulu, Kahoopiopio and Kamalii to James Makee dated March 22, 1863 of record in Lib. 70 fol. 163.
(10) Deed from Honolulu, Kahoopiopio and Kamalii to James Makee dated March 22, 1863 of record in Lib. 70 fol. 164.
(11) Deed from James W. Austin to James Makee dated May 2d, 1864 of record in Lib. 21 fol. 13.
(12) Deed from A. Manaku and Maunahina Shaw Admrs. Est. of George Shaw to James Makee dated June 1st, 1866 of record in Lib. 28 fol. 270.
(13) Deed from Chas. C. Harris, Admr. Est. of L. Haalelea to James Makee dated Aug. 3, 1866 of record in Lib. 22 fol. 34.
(14) Deed from Thomas H. Hobron to James Makee dated July 24th, 1867 of record in Lib. 24 fol. 159.
(15) Deed from James Humphreys to James Makee dated Dec. 19, 1868 of record in Lib. 26 fol. 428 [482?].

(16) Deed from Makaiaweawe, Kalilike, Koliola, and Kaoi to James Makee dated May 30th, 1870 of record in Lib. 33 fol. 308.
(17) Deed from Kalili to James Makee dated May 9, 1870 of record in Lib. 33 fol. 274.
(18) Deed from Wainee to James Makee dated Nov. 3rd 1870. [Grant 1690]
(19) Deed from Paaluhi and Aiai his wife to James Makee dated Jan. 24, 1871 of record in Lib. 32 fol. 20.
(20) Royal Patent 3082 (Grant) to James Makee dated Mar. [?] 1871.
(21) Deed from Keaho to James Makee dated June 18th 1871 of record in Lib. 33 fol. 276.
(22) Deed from John Brown to James Makee dated June 18th, 1871 of record in Lib. 33 fol. 276.
(23) Deed from Emma M. Kapena and John M. Kapena to James Makee dated Oct. 23rd 1872 of record in Lib. 36 fol. 143
(24) Deed from H. R. Macfarlane Admr. Est. of J. S. Lemon to Catherine N. Makee dated June 13th, 1882 of record in Lib. 76 fol. 491.
(25) Deed from Kalua to Catherine Makee dated Sept. 30th 1882 of record in Lib. 75 fol. 468.
(26) Deed from Kalua to Catherine Makee dated Oct. 2nd 1882 of record in Lib. 75 fol. 469. [Grant 468]
(27) Deed from John Kukahiko to Catherine Makee dated Jan. 8, 1883 of record in Lib. 77 fol. 188-189.
(28) Deed from Frank Kaninau et al. to Catherine Makee dated Jan. 9th, 1883 of record in Lib. 78 fol. 194-195. [Grant 546]
(29) Deed from Maukaa and Wm Sylva to Catherine Makee dated Nov. 18th, 1882. [Unrecorded/Unidentified]
(30) Deed from S. Kaaiai et al to Catherine Makee dated Nov. 7th, 1882 of record in Lib. 76 fol. 459.
(31) Deed from P. Kaku to Catherine Makee dated May 18, 1883 of record in Lib. 81 fol. 118.
(32) Deed from Kauhi to P. N. Makee et al dated April 7th, 1885. [Unrecorded/Unidentified]
(33) All of the right, title and interest of the parties of the first part in and to the premises described in Royal Patents Nos. 1289, 2473 and 468 and in and to all Kuleanas in any of the premises above referred to…

Schedule “B” Leases.
(1) Lease from the Hawaiian Government of the Ahupuaa of Kanaio.

(2) Lease from John M. Kapena to James Makee dated Dec. 22nd, 1876, of record in Lib. 47 fol. 498-499… (Liber 101:200-206)[18]

The Hawaiian Gazette
August 26, 1890 (page 10)

Mortgagee's Notice of Foreclosure.

In accordance with the provisions of a certain mortgage made by S P Halama and Keliimahiai of Mākena, Island of Maui, to Mrs. Elizabeth Beckwith of Honolulu, Island of Oahu, dated October 12, 1888, recorded Liber 115, page 214; notice is hereby given that the mortgagee intends to foreclose the same for condition broken, to-wit: non payment of interest.

Notice is likewise given that after the expiration of three weeks from the date of this notice the property conveyed by said mortgage will be advertised for sale at public auction, at the auction rooms of Jas F Morgan, in Honolulu, on Monday, the 22nd day of September, 1890, at 12 o'clock noon of said day.

Further particulars can be had of W R Castle.
Dated Honolulu, August 26, 1890.
Mrs. Elizabeth Beckwith, Mortgagee.

The premises covered by said mortgage consist of:

1st—Of 75 89-100 acres situate in Honuaula, Island of Maui, near Puumahoe, conveyed to said S P Halama by deed of Poohina, recorded in Liber 52, page 247.

2nd—Of 17 acres situate in Paeahu, Honuaula, near the kula line, conveyed to the said mortgagor Halama, by deed of W Goodale, recorded in Liber 1, page 454.

December 2, 1891 (page 2)

Auction Sale of Valuable Real Estate!

The Sale of the Seal Property, advertised for Monday, Nov. 30th, has been postponed to

Saturday, Dec. 5, 1891

[18] On July 30th, 1886, J. I. Dowsett entered into a Mortgage Deed with Bishop & Company, in the amount of $50,000.00 on the purchase and agreements referred to in the instrument above; and recorded in Liber 101:206-212. The mortgage was paid in full on January 13th, 1900 (records over Liber 101:206).

At 12 Noon
At the Auction Room of Jas. F. Morgan, Queen Street, Honolulu.

…Also an undivided four-ninths interest in two pretty lots near the Waikapu Plantation buildings in Waikapu, Maui and also an undivided third in 69 acres in Paeahu, in Honuaula, Maui of which 19 acres are in one lot near the sea, and 50 acres are near the Kula road in three lots.

This land is all of the finest quality, and well worth anyone's attention either as an investment for future rise or present cultivation.

Further information will be furnished by
W.R. Castle.

Mortgagee's Notice of Foreclosure.

In accordance with the provisions of a certain mortgage made by M. Kealoha of Honuaula, Maui, to W.R. Castle, Trustee of Honolulu, Oahu, dated February 19th, 1891, recorded Liber 132, page 91, notice is hereby given that the mortgagee intends to foreclose the same for condition broken, to-wit: non-payment of both interest and principal.

Notice is likewise given that after the expiration of three weeks from the date of this notice, the property conveyed by said mortgage will be advertised for sale at public auction, at the auction rooms of Jas. F. Morgan, in Honolulu, on Monday, the 24th day of August, 1896, at 12 noon of said day.

Further particulars can be had of W.R. Castle.

Dated Honolulu, July 27, 1896.

W.R. Castle, Trustee, Mortgagee

The premises covered by said mortgage consist of:

All of those certain tracts or parcels of land situate in Honuaula, Island of Maui, described as follows:

1st. 75 89-100 acres in said Honuaula near Puumahoe, in R.P. L.C.A. conveyed to S.P. Halama by deed of Poohina, recorded in Liber 52, page 247.

2nd. 17 acres in Paeahu, Honuaula, conveyed to S.P. Halama by deed of W.G.

Goodale, recorded in Liber 1, page 454.

3rd. 11 3-10 acres in R.P. 1392 to Kapiina.

4th. 17 53-100 acres in R.P. 1233 to Kapiina.

5th. 36 9-10 acres in R.P. 1388 to Pahia.

6th. 5 5-10 acres in R.P. 6408 to Kila. All of the above mentioned premises being the same conveyed to M. Kealoha by deed of W.R. Castle, recorded in Liber 130, page 195.

Glanders is Spreading on Maui. More Than 300 Horses Have Been Stricken at Ulupalakua Ranch.

Maui, July 28, 1900.—Ulupalakua Ranch has suffered severely by the epidemic of glanders among its horses. Several years ago the ranch was one of the best on the islands for the raising and breeding of horse-flesh, but to-day it has scarcely enough saddle animals for the use of its manager and employees. During the past year it is estimated that about 300 horses have succumbed to the disease at Ulupalakua and vicinity and that the ranch has lost about $8,000 by the death of horses, one thorough-bred stallion alone being valued at $3000.

It is feared that the disease has been communicated to the horses of Kamaole, Keokea and Waiohuli. During the visit of Dr. Shaw four horses belonging to S. Ahmi of Kamaole were ordered killed.

The boundary line between Ulupalakua and Kula (Kamaole) is fenced excepting a gulch up the mountain through which it is possible for Kula horses to pass when on their way down from Polipoli spring higher up the slope. It is supposed in this manner Kula horses have mingled with the diseased animals of Ulupalakua and possibly become infected.

The Government should authorize some capable agent to thoroughly inspect the horses of Kamaole, Keokea, Waiohuli and vicinity.

Raymond Purchases Ulupalakua Ranch

The syndicate which recently bought the Kahikinui Ranch on Maui has through Dr. J. H. Raymond purchased the Ulupalakua ranch, formerly the property of the

Makee family and later on of the Dowsetts. If the ranches are well managed there is no reason why the investment should not prove a bonanza. The purchase price is $52,500, although James Dowsett paid $84,000 for the place some years ago.

The Evening Bulletin
December 28, 1901

They Want A Road

Editor Evening Bulletin:—I see by the Evening Bulletin that Mr. Boyd has been here and gone. We are disappointed. We did expect the promise of a road if nothing more. We live a little below the Ulupalakua ranch and there are a dozen or more families of small farmers near us that get to and from their places as best they can. The road from Mākena to Kula is up through the pasture land where there are very few people. As it is now it is of little use to the majority of the people. The government sells us land and taxes us but gives us no road. I have been acquainted more or less with Honualla [Honuaula] fifty-seven years and there has never been a road here to accommodate the people. Except for the school at Ulupalakua we are about as Captain Cook left us.

William S. Wilcox.
Ulupalakua, Maui, Dec. 24, 1901.

The Raymond interests had entered into a trustee agreement, but terminated the agreement on August 1st, 1910 when the Raymond interests were assigned to Hawaiian Trust Company, Limited, as trustees of mortgage (Bureau of Conveyances Liber 333, pp. 276-303). The instrument of transaction is important as it documents chain of title for land holdings of the ranch while also providing details on the extent of livestock controlled by the ranch at the time. Excerpts from the instrument are cited here:

August 1, 1910
James H., and Phoebe K. Raymond; to Hawaiian Trust Co. Ltd., Trustee
Description of Holdings of "Raymond Ranch:"

This Indenture, made and entered into this first day of August, 1910, by and between James H. Raymond and Phoebe K. Raymond, his wife, both of the City and County of Honolulu, Territory of Hawaii, who, among other things, are engaged in conducting and carrying on what is commonly known as and called the "Raymond Ranch," situate on the Island of Maui, said Territory of Hawaii, hereinafter throughout this instrument designated "Grantors;" and the Hawaiian Trust Company, Limited, an Hawaiian corporation, hereinafter throughout this instrument designated as "Trustee;" Witnesseth: that

Whereas, there is at the present time outstanding against said Raymond Ranch properties a bonded indebtedness amounting in the aggregate to the sum of One Hundred and Twenty Thousand Dollars, secured by Deed of Trust to the Henry Waterhouse Trust Company, Limited, as trustee; and

Whereas, there is also, at the present time unsecured indebtedness against said grantors amounting in the aggregate to approximately Fifteen Thousand Dollars; and

Whereas, with a view to providing means to refund and satisfy said existing indebtedness forthwith and simultaneously with the execution of these presents, said grantors propose to make and execute their joint and several bonds amounting in the aggregate to the sum of One Hundred and Thirty-five Thousand Dollars, thereby becoming indebted to such persons as may, from time to time become holders thereof; and, in order to secure the payment thereof, do join in executing and delivering to the Hawaiian Trust Company, Limited, as trustee for said bondholders this deed of trust or first mortgage upon all of the properties now and hereafter comprising said Raymond Ranch.

Now, therefore, in order to properly effectuate the premises, and carry out the full intent of all parties hereto in securing the bonded indebtedness last hereinabove referred to, said James H. Raymond and Phoebe K. Raymond, (grantors aforesaid) …in consideration of One Dollar to them in hand paid by said Hawaiian Trust Company, Limited, receipt whereof is acknowledged, do hereby grant, bargain, sell and convey unto said Hawaiian Trust Company, Limited, as Trustee aforesaid, for the uses and purposes in this instrument specified, all of the properties, real, personal or mixed, connected or having to do with or constituting a part of what is commonly known as and called the “Raymond Ranch,” situate on the Island of Maui, in the Territory of Hawaii, as well as all properties, real and personal, which from time to time hereafter during the life of this Deed of Trust, may be acquired by purchase or otherwise by or for said grantors, or either of them, and become part and parcel of or in anywise used in connection with said Raymond Ranch properties; portions of said Ranch properties being more particularly described by metes and bounds, and otherwise, as follows:

First: The estate situated on the Island of Maui, Territory of Hawaii, known as the “Rose Ranch,” being the same premises described in a deed from Parker M. Makee and others to James I. Dowsett, dated March 3, A.D. 1886, of record in Liber 101, page 200, and in a deed from the James I. Dowsett Estate, Limited, to the Dowsett Company, Limited, dated January 10, A.D. 1900, recorded in Liber 203, page 282, and in deed from J.M. Monsarrat, guardian of the estate of

Genevieve Dowsett and Marion C. Dowsett, minors, to The Dowsett Company, Limited, dated the 23rd day of March, A.D. 1900, recorded in Liber 201, page 469, and in a deed from David Dayton, guardian of the estate of Madeline C.K. Dowsett and Annie C.K. Dowsett, minors, to The Dowsett Company, Limited, dated the 23rd day of March, A.D. 1900, recorded in Liber 203, page 491, and having an area, according to the survey and estimate of M.D. Monsarrat, Surveyor, of fifteen thousand eight hundred seventy-six and 65/100 (15,876.65) acres, and being the same premises conveyed in a deed from The Dowsett Company, Limited, to said Phoebe K. Raymond, by deed dated August 13, A.D. 1901, recorded in Liber 225, page 218.

Second: The estate situated on said Island of Maui, Territory of Hawaii, known as the "Kahikinui Ranch," comprising the following pieces or parcels of land…

[Describes metes and bounds of Apana 1, an area containing 8.09 acres; Apana 2, containing 5.61 acres, "excepting the Kuleana of Natives;" as described in Royal Patent No. 2988 to Kuhina; and other lands in Kahikinui.]

Third: A certain indenture of Lease from Edward S. Boyd, Commissioner of Public Lands of the Territory of Hawaii, to James H. Raymond, numbered 541, and dated September 20, A.D. 1902, recorded in Liber 240, page 160, for the term of twenty-one (21) years from that date, of the land known as "Kahikinui," on the Island of Maui, as herein described, containing an area of twenty-five thousand (25,000) acres more or less. Intending to assign, transfer and set over the said lease and the premises thereby demised to the Hawaiian Trust Company, Limited, permission having been obtained therefore in accordance with said Lease.

Fourth: A certain license from Edward S. Boyd, Commissioner of Public Lands, to Henry Waterhouse and Company, trustees for James H. Raymond and Phoebe K. Raymond, dated August 12, A.D. 1901, and numbered 533, of a flowing spring known as "Polipoli" and the waters thereof, situated on the lands known as "Kamaole," and all the rights, privileges, and authority granted by said license, and which said license has been duly assigned to said grantors, and permission to assign the same to the grantors and to the trustee hereof having been granted in accordance with said license.

Also a further license granted by said Edward S. Boyd to the Henry Waterhouse and Company, trustees of said James H. Raymond and Phoebe K. Raymond, on the 20th day of September, A.D. 1902, of the Government Reservation of Kamaole for the term of twenty (20) years, and duly assigned to the said grantors; said license being for the purposes of entering upon all that tract of land known as the "Government Reservation of Kamaole," being the upper or *mauka* portion of the

land of Kamaole, Kula, Island of Maui, in said Territory, containing an approximate area of six hundred forty (640) acres, and bounded *mauka* by a line running along the top of the mountain ridge from Paeahu to Keokea; *makai* by land described in Grant 388 to Joseph White, Grant 545 Ap. 4 to Kekipi, and Grant 517 Ap. 1 to J. Sniffen; and lying between the lands of Paeahu and Keokea, and to explore, examine and survey the same or any part thereof below a contour line crossing said land at a level one hundred (100) feet below the Polipoli Spring on said land, for the purpose of developing water, conveying out and utilizing the same upon said land or elsewhere, and for these purposes to construct and maintain for the term of this license, reservoirs, dams, ditches, flumes, tunnels, pipe-lines and any and all other works, structures or appliances necessary or convenient for the accomplishment or effectuating of said purposes. Permission to assign which license has been granted in writing by the Commissioner of Public Lands of said Territory…

[Describes lands at Kanaio.]

Sixth: Those certain pieces or parcels of land containing in all an area of about fifty (50) acres, and being all the premises conveyed by the deed of W.H. Cornwell to Henry Waterhouse and Arthur B. Wood, trustees for James H. Raymond and Phoebe K. Raymond by deed dated September 21, A.D. 1903, recorded in Liber 254, page 472.

Seventh: All water rights and rights to water of every nature, character and description arising out of, appurtenant or relating to or connected with any of the lands mentioned or referred to in this deed of trust, and any other water rights or rights to water now or hereafter held or possessed or enjoyed by the said grantors, or either of them, in or on said Island of Maui.

Eighth: Any and all renewals of present leasehold interests in lands of said Raymond Ranch, or any new leases or leasehold interests in lands within the confines of or adjoining said Raymond Ranch property.

Ninth: And also the following lands situate on said Island of Maui and described in the following deeds, to wit:

(a) Deed from Kali Naluai (widow dated August 31st, 1908, recorded in Liber 305 Page 420 et seq., and conveying an undivided 5/12 of land at Kaeo, Honuaula, Maui, being portion of Grant 835 to Mahoe on the south side of wall known as “Torbert’s Wall;”

(b) Deed from John Sniffen dated September 8th, 1909, and recorded in said Registry in Liber 317 Page 365 et seq., and conveying a 1/12 interest in

land at Kaeo, Honuaula, being portion of Grant 835 to Mahoe on the south side of wall known as “Torbert’s Wall;”

(c) Deed from Julia I. Oneha and husband dated August 24, 1909, and recorded in said Registry in Liber 317 Page 318 et seq., and conveying land at Kalihi, Honuaula, as in Grant 1474 to Kaaua, and containing an area of 17.89 acres more or less.

(d) Deed from Geo. Sniffen dated September 13, 1909, and recorded in said Registry in Liber 317, Page 389 et seq., and conveying an undivided 1/12 interest in land at Kaeo, Honuaula, being portion of Grant 835 to Mahoe on south side of the wall known as Torbert’s Wall…”

…Eleventh: All the cattle, horses, wagons, harness, tools, pipe lines, troughs, reservoirs, tanks, wire fences, corrals, machinery and buildings, and all other articles, real, personal and mixed, upon or used in connection with and being a part of the said Raymond Ranch, including hereby, *inter alia*, also all personal property being or used upon or constituting a part of said Rose Ranch and said Kahikinui Ranch, of every name, character or description:

(1) And including without prejudice to the generality of the foregoing description two stallions and about sixty work horses, of all ages and twenty mules;

(2) And about 4,500 cattle, included in which are 25 Hereford bulls, 10 Angus bulls and 5 Short Horn bulls;

(3) And also all the increase from time to time of said livestock;

Together with the registered brand of said Raymond Ranch, including the brands of said Kahikinui and Rose Ranches namely; the Horseshoe brand, the W brand and the R R brand... [Also describing conditions and parties to agreement.] (Liber 333, pp. 276-302)

Honolulu Star-Bulletin

Dr. Raymond To Sell His Ranch To The Baldwins
Option Calls for Payment of $625,000 in Cash and Deal Will Soon Be Closed (Special Star-Bulletin Radio)

Wailuku, Maui, Nov. 20. Dr. James H. Raymond today confirmed a report, sent here by The Star-Bulletin for investigation, that he is preparing to sell his extensive ranch holdings on Maui.

The Baldwin interests have taken an option until January 1 for the purchase of Raymond's big cattle ranch, the price to be $625,000 in cash. It is certain that the deal will be closed.

The property involved is Raymond's Ulupalakua ranch, which includes the Rose ranch, formerly held by the Makee Sugar Co., and Auwahi, about 24,000 acres in all, purchased 20 years ago, and Kahikinui, comprising 12,655 acres of leased land on which renewals were obtained a few months ago.

There are about 5000 head of cattle on the ranch and much of the land is valuable for agricultural purposes, a considerable part of it now being under cultivation.

Frank F. Baldwin said that he and his associates are merely going from one land holding to another and that, having sold the island of Lanai to the Hawaiian Pineapple Co. for $1,100,000,00, they are now purchasing the Raymond property.

The Maui News
November 21, 1922

Frank Baldwin Is Prospective Buyer of Tract
Splendid Property Extends Up Slopes of Western And Southwestern Sides of Haleakala, 45,000 Acres

Frank F. Baldwin has secured an option for the purchase of the Raymond Ranch properties and a real estate deal second only in magnitude to the recent sale of Lanai may be expected to be completed between now and the first of the year. Confirmation of a report to that effect has been secured both from Mr. Baldwin and from Dr. J.H. Raymond. The purchase price is $625,000.

Great Area Included
Raymond Ranch, the property covered by the option is a vast and beautifully located, rich and fertile estate which is situated on the southwesterly and westerly slopes of Haleakala. The fee simple lands in the tract consist of Ulupalakua, Rose Ranch, purchased more than 20 years ago, lands formerly of the Makee Sugar Company and Auwahi, amounting in all to 24,719 acres. In addition to such fee simple lands there are included in the deal nearly 20,000 acres of leased lands. The largest tract of such lands is Kahikinui and comprises 12,655 acres. A renewal of the lease was secured a few months ago. Another large lease land area in Kanaio which contains some 7200 acres and on which the lease will not expire until in 1927.

In addition to the lands there will be included in the sale the livestock, it being estimated there are 5000 head of cattle on the range. They are mostly white faced Herefords but there are some short horns and Polled'angus.

Varied Topography and Soil

There is no better grazing land on Maui or in the Islands than some of that embraced in the territory under option and much of the land is available for agricultural purposes. Mr. Raymond has raised red beans, corn, fodder and other crops extensively but has not used nearly all of the area that would be available for such purposes if desired. There are ample sources of water supply and important water rights that will go with the property.

Frank F. Baldwin in confirming the report that he had secured an option on the property said that the purchase of the property would be simply going from one land investment into another as he and Harry A. Baldwin had sold Lanai and Hawaiian Pineapple Company had announced they would exercise their option for its purchase. In the Raymond Ranch deal, however, Harry Baldwin does not enter. It is purchased by Frank Baldwin individually.

Dr. Raymond Retiring

Dr. Raymond said that he had not determined upon what he will do if the sale be completed. Harvey Raymond is leaving soon to accept a position isin a large real estate concern on the mainland. He has been contemplating retiring from active participation in the ranch affairs for some time past and had contemplated incorporating and the formation of a company to handle the property and its interests. There have been numerous approaches made by various persons in the past looking to a possible purchase but in no instance was an option given.

Negitations (sic) [Negotiations] Succeed

Negotiations for the property have been in progress for several weeks past and have been conducted through the Hawaiian Trust Company in Honolulu. Dr. Raymond said yesterday that the payment for the option was made only three days ago. Prior to that time there had been rumors on the subject but he would not confirm such rumors until the option had actually been given and taken. He added that Mr. Baldwin has until January 1, to exercise his option.

Owing to the fact that nearly half of the premises is leasehold land it is impracticable to figure any price per acre in the transaction. It is agreed however, that the property is one of the most desirable that could be found anywhere in Hawaii nei.

Honolulu Star-Bulletin
July 26, 1924

(B.J. Bridgeford Reports on Experimental Pineapple Cultivation at Ulupalakua Ranch)

…He also reported that 50 acres planted in pineapples on Ulupalakua ranch for experimental purposes, to find out if they would grow, have produced pineapples as fine as those to be found anywhere.

"Conditions exactly opposite to those found at Haiku prevail at Ulupalakua and there was much doubt expressed as to how well pineapples would do there," Bridgeford said.

"The experimental field is at an elevation of about 2000 feet and the country is habitually dry though it participated in rains of last week which were of much benefit there, too." The crop will be hauled to one of the canneries on Maui.

In 1929, L.A. Henke (1929) of the University of Hawai'i published an account of livestock in Hawai'i, in which he included the following summary of history at Ulupalakua Ranch:

Ulupalakua Ranch, extending along the sea for twenty-five miles and up the southwestern slope of Haleakala on Maui, has an area of approximately 63,000 acres, 28,000 of which are held in fee simple and the balance is government leased lands. While the ranch extends to the crater of Haleakala, the elevation of which is 10,000 feet, no good grazing areas are found above 6,000 feet elevation.

Ulupalakua formerly had quite a problem getting enough water and large cisterns were built. Now much of the water is secure through the Kula pipe line.

The ranch carries about 5,000 Hereford cattle at the present time, and some wild cattle are still found on different parts of the ranch. Some 1,500 head, averaging three years of age and dressing out at 500 pounds, are marketed annually; about 500 are slaughtered on Maui for local consumption and the balance are shipped to Honolulu.

The ranch headquarters are beautifully located in the midst of giant trees largely planted about 1865 by Captain John [James] Makee, then owner of the place.

This ranch has some of the finest grazing lands in the Islands. In addition to the imported grasses, cactus (*Opuntia* spp.) and *Koahaole* (*Leucaena glauca*) are widely distributed over the pastures.

> Talbot [Torbert] and Wilcox about 1848 started a sugar plantation on part of these lands and this was purchased in 1853 by Captain James Makee, who continued it as a sugar plantation for a time, but sugar growing apparently was not entirely successful in this region under conditions then prevailing, and when J.I. Dowsett acquired these lands in the early eighties, he converted the place into a cattle ranch. According to some reports Shorthorn cattle were found on the ranch at this time. Mr. Dowsett took some Angus cattle there in 1885 but Angus blood never played a big role at Ulupalakua.
>
> Dr. Raymond, a son-in-law of Mr. Dowsett, acquired the ranch in 1900 and continued as owner till 1923, and it is probable that Hereford cattle—the present breed—were first introduced by him. J.H. MacKenzie was manager for Dr. Raymond from 1906-1907, at which time the ranch carried about 4,000 cattle, mostly Shorthorns. He was followed by Angus McPhee, who supervised operation for three years. After this A.C. Dowsett was manager for a time. Mr. McPhee returned as manager in 1921 and in 1923 the ranch was purchased by F.F. Baldwin, the present owner. Mr. McPhee continued as manager of the ranch till 1925, when Edward Baldwin took charge. (p. 60)

In 1963, ranchers C. Padee Erdman, Jr. and Mr. and Mrs. James Waggoner Corberely, Jr. purchased holdings at Ulupalakua Ranch. The details of these negotiations were provided in the *Honolulu Star-Bulletin* on May 20, 1963 (pp. 1 & 1-A)*:*

> **Mainland Group to Buy Maui Ranch.**
> **Negotiations for the sale on July 1 of all of the stock of Ulupalakua Ranch on Maui have been completed, J. Scott B. Pratt III, president of Hawaiian Trust Company, announced today.**
>
> The price was not disclosed.
>
> The Hawaiian Trust Company are co-executors of the estate of the late Frank F. Baldwin.
>
> All of the stock of Ulupalakua Ranch is being sold to settle the estate.
>
> The buyers are C. Pardee Erdman, Jr., rancher of Sheridan, Wyoming, and Reno, Nevada, and Mr. and Mrs. C. James Corberley, Jr., of Los Angeles, Texas and Mexico.
>
> Corberley is in the oil tool manufacturing business.
>
> Mrs. Corberley, formerly Jean Waggoner, is one of the fourth generation of the

famous W.T. Waggoner family which owns one of the largest cattle and horse outfits in the Southwest together with extensive oil holdings located on the ranches.

The Corberleys have rented the former Kaiser residence at 4607 Kahala Avenue in Honolulu, and with their two sons are spending the summer here.

Ulupalakua Ranch is located on the slopes of Haleakala and consists of two main areas—the headquarters unit running from the beach areas around Mākena to the 7,000-foot slope above Kula and the Kipahulu unit on the southeast slope of the mountain between Hana and Kaupo.

60,000 Acres
One of the largest ranches in Hawaii, the widespread operation covers about 60,000 acres of which over 27,000 are fee, the balance leased.

Some 9,000 head of cattle and 150 horses are included in the transaction.

The new owners will take occupancy July 1 when Erdman will move to the ranch and supervise all operations.

James Armitage has been retained as general manager. He was formerly associated with C. Brewer and Company and Parker Ranch.

The new owners plan to continue operating the ranch as it is now being run.

The buyers were represented by Hamilton McCaughey, ranch investment counselor from Reno. McCaughey is a former Honolulu resident.

(This area intentionally left blank.)

4.0 Cultural Resources

The following research and analyses appropriately study the history and cultural resources of the project area, focusing on the project area and the surrounding environment.

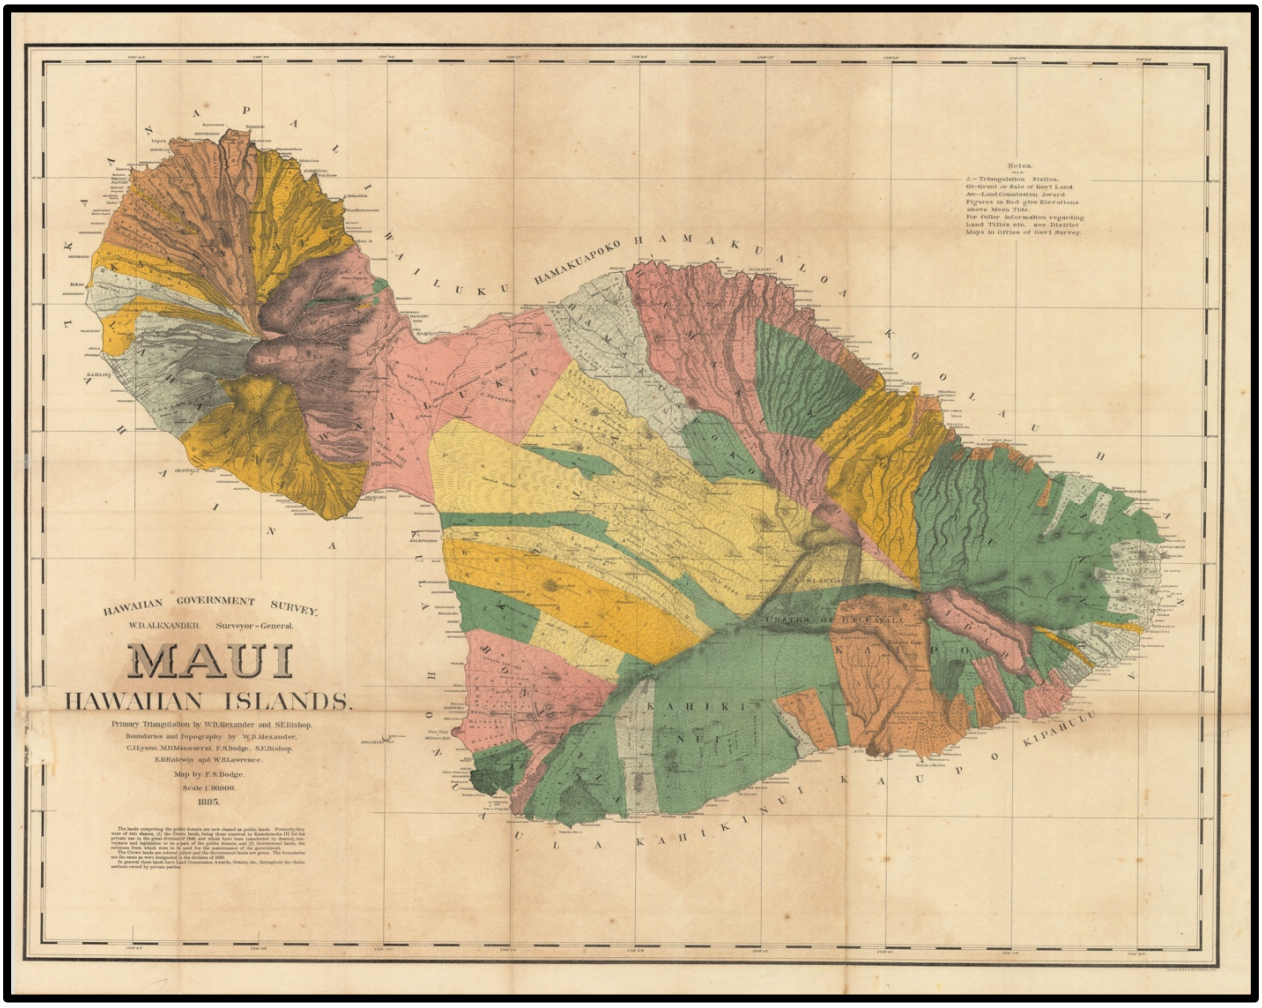

Figure 7. Map of Maui by W.D. Alexander and F.S. Dodge (1885)

4.1 Historic Properties and Cultural Sites

The cultural landscape of Ka‘eo and Mākena was marked by numerous religious and ceremonial sites that reflected the spiritual dimensions of traditional Hawaiian life. According to Maly and Maly’s (2005) research, several heiau were documented in the region, including both large complexes and smaller shrines dedicated to specific purposes such as agricultural fertility, fishing success, or family worship (p. 12).

One of the most significant religious sites in the area was Keawalaʻi Heiau, which continues to stand today. Archaeological descriptions of the heiau indicate a substantial stone platform with multiple architectural features including terraces, enclosures, and possible oracle towers. The size and complexity of Keawalaʻi Heiau suggest it served important religious functions for the broader community rather than just a single family group, potentially hosting seasonal ceremonies related to the agricultural cycle or important political events (Maly & Maly, 2005, p. 14).

Several smaller heiau and shrines were dispersed throughout Kaʻeo that served more specialized purposes, including koʻa positioned at strategic points along the coastline where offerings were made to ensure successful fishing expeditions and continued abundance of marine resources. Agricultural heiau were positioned within cultivation areas to promote crop fertility and protect against pests or adverse weather conditions. Kuahu (family shrines) associated with specific ʻohana provided spaces for household-level religious observances and ancestor veneration (Maly & Maly, 2005, p. 15).

Traditional religious practitioners in Kaʻeo included kahuna of various specialized orders who conducted ceremonies, maintained religious knowledge, and served as intermediaries between the community and the realm of the gods (akua) and ancestors (ʻaumākua). Certain families within Kaʻeo maintained specialized religious knowledge and responsibilities that were passed down through generations. These practitioners played crucial roles in community life, guiding decisions about resource use, healing the sick, and maintaining proper relationships with the spiritual world (Maly & Maly, 2005, p. 16).

Other religious sites included various ahu (stone cairns) marking significant locations or boundaries within the ahupuaʻa. These simpler structures often marked places of spiritual significance, served as boundary indicators, or commemorated important events or individuals. Pohaku o Kāne (stones dedicated to the god Kāne) were positioned near freshwater sources, reflecting the association between this deity and life-giving water (Maly & Maly, 2005, p. 17).

There are also numerous burial areas throughout Kaʻeo and neighboring ahupuaʻa, reflecting traditional Hawaiian burial practices. These included interments in sand dunes, within lava tube caves, and in stone-lined burial cists. The presence of these burials underscores the long history of human habitation in the area and the cultural importance of maintaining connections to ancestral grounds (Maly & Maly, 2005, p. 15).

Burial practices in traditional Hawaiian culture connected the living community to their ancestors and to the land itself. Burial locations were often kept as protected knowledge within families, reflecting the sacred nature of these sites and the desire to protect ancestral remains from disturbance. Some burial areas contained multiple interments,

suggesting use over generations, while others appeared to be individual burials. Grave goods documented in archaeological investigations included various items of material culture that accompanied the deceased into the afterlife, reflecting beliefs about the continued existence of the spirit after death (Maly & Maly, 2005, p. 18).

Natural features within the Kaʻeo landscape also held religious and cultural significance. Certain rock formations, caves, springs, and other distinctive landscape elements were recognized as manifestations of deities or as places where the veil between the human and spiritual worlds was particularly thin. These wahi pana were incorporated into local moʻolelo and religious practices, creating a landscape imbued with cultural and spiritual meaning (Maly & Maly, 2005, p. 19).

Traditional ceremonies and religious observances in Kaʻeo followed the rhythms of the Hawaiian lunar calendar, with specific rituals associated with different phases of the moon and seasons of the year. The Makahiki festival, a months-long period honoring the god Lono and celebrating harvest abundance, likely included community-wide observances in Kaʻeo as it did throughout the Hawaiian Islands. Other ceremonial cycles related to fishing, agriculture, and warfare would have punctuated the annual calendar, creating a structured religious life interwoven with subsistence activities and community events (Maly & Maly, 2005, 20).

ASM Affiliates have completed a literature and surface survey and will be overseeing the HRS Chapter 6E compliance process.

4.2 Natural Resources with Cultural Significance

To employ the Hawaiian landscape perspective and emphasize the symbiosis of natural and cultural resources, Honua Consulting uses the term “biocultural” to refer to natural and cultural resources, with additional sub-classifications by attributes.

Further, a brief discussion of environmental zones and traditional Hawaiian land management practices is necessary to understand the tangible and intangible aspects of the Hawaiian landscape. Additionally, it is important to specify again that in the Hawaiian landscape, all natural and cultural resources are interrelated and culturally significant. Natural unaltered landscape features such as rocky outcrops, cinder cones, intermittent streams, or an open plain can carry as much significance as a planted grove of wauke (*Broussonetia papyrifera*) or a boulder-lined ʻauwai (canal).

Maly (2001) presents a narrative of traditional Hawaiian land management strategies and the different environmental zones recorded in *Ka Hoku o Hawaii* (September 21, 1916):

Hawaiian customs and practices demonstrate the belief that all portions of the land and environment are related, like members of an extended family, each environmental zone was named, and their individual attributes were known. Acknowledging the relationship of one environmental zone (wao) to another, is rooted in traditional land management practices and values. Just as place names tell us that areas are of cultural importance, the occurrence of a Hawaiian nomenclature for environmental zones also tells us that there was an intimate relationship between Hawaiians and their environment.

The native tradition of Ka-Miki provides readers with a detailed account of Hawaiian land divisions and environmental zones. While competing in a riddling contest at the court of the chief, Palikū-a-Kīkoʻokoʻo, the hero, Ka-Miki sparred with Pīnaʻau, the foremost riddler of the district of Hilo Palikū (northern Hilo). The riddles covered topics describing regions from the mountain tips to the depths of the ocean, and descriptions of kalo (taro growth), the ala loa (trail systems), and nā mea lawaiʻa (fishing practices). As the contest unfolded, it was seen that each of the competitors were well matched. In one of the riddles, Ka-Miki described the various regions of the island of Hawaii, extending from the mountain to the sea. Ka-Miki then told his opponent, that if he could rise to the challenge of answering the riddle, his knowledge could be compared to one who has ascended to the summit of the "mauna o Paliahu" (mountain of Poliʻahu, or Mauna Kea) (in *Ka Hoku o Hawaii*, September 21, 1916).

Through one of the riddles [the] reader learn[s] about the traditional wao or regions of land, districts, and land divisions of the administrators who kept peace upon the land. The environmental zones include:

1 – Ke kuahiwi; 2 – Ke kualono; 3 – Ke kaumauna; 4 – Ke ku(a)hea; 5 – Ke kaolo; 6 – Ka wao; 7 – Ka wau maʻu kele; 8 – Ka wao kele; 9 – Ka wao akua; 10 – Ka wao lāʻau; 11 – Ka wao kānaka; 12 – Ka ʻamaʻu; 13 – Ka ʻāpaʻa; 14 – Ka paheʻe; 15 – Ke kula; 16 – Ka ʻilima; 17 – Ka puʻeone; 18 – Ka poʻina nalu; 19 – Ke kai kohola; 20 – Ke kai ʻele; 21 – Ke kai uli; 22 – Ke kai pualena; 23 – Kai Pōpolohua-a-Kāne-i-Tahiti.

1 – The mountain; 2 – The region near the mountain top; 3 – The mountain top; 4 – The misty ridge; 5 – The trail ways; 6 – The inland regions; 7 and 8 – The rain belt regions; 9 – The distant area inhabited by gods; 10 – The forested region; 11 – The region of people below; 12 – The place of ʻamaʻu (fern upland agricultural zone); 13 – The arid plains; 14 – The place of wet land planting; 15 – The plain or open country; 16 – The place of ʻilima growth (a seaward, and generally arid section of the kula; 17 – The dunes; 18 – The place covered by waves (shoreline);

> 19 – The shallow sea (shoreline reef flats); 20 – The dark sea; 21 – The deep blue-green sea; 22 – The yellow (sun-reflecting sea on the horizon); and 23 – The deep purplish black sea of Kāne at Tahiti. (p. 3)

This section discusses the natural resources within the project area, specifically those natural resources that may have cultural significance or use. These natural resources were identified through the biological assessment prepared for the project and through primary research into historic resources.

4.2.1 Flora

The botanical survey conducted in Makena between September and December 2024 provides a detailed assessment of an area spanning over 1,000 acres slated for future development. The survey, led by Rick Barboza, documents a landscape severely impacted by invasive species and ungulate pressure yet still retains important native Hawaiian plant communities and wildlife that merit conservation attention.

The survey findings paint a picture of a landscape dominated by invasive species, with native flora struggling to survive amid multiple environmental pressures. The primary vegetation is characterized by introduced trees, notably kīawe (*Prosopis pallida*) and koa haole (*Leucaena leucocephala*), which have outcompeted native species. The understory is similarly overwhelmed by non-native grasses and shrubs, creating a dense, dry fuel load that significantly increases wildfire risk (Barboza, 2025).

The survey documents an impressive diversity of species, with hundreds of plants, birds, mammals, reptiles, and insects cataloged. The species list includes a total 170 plant species, with the vast majority (approximately 81%) being alien species introduced after European contact (Barboza, 2025). The endemic (found only in Hawai‘i), indigenous, and Polynesian-introduced species total 32 of the 170 flora documented, illustrating a pattern of dominance by non-native species that is apparent across the Hawaiian Islands.

Though compromised, the native flora documented in the survey provides valuable insight into the original ecological character of the area. The most significant native tree is wiliwili (*Erythrina sandwicensis*), an endemic dry forest species that remains present but is struggling to regenerate. Wiliwili, once a dominant feature of Hawaiian lowland dry forests, faces multiple threats in the survey area. Though mature trees produce abundant seeds, virtually no seedling recruitment was observed throughout the entire site. The survey documented only a single wiliwili seedling in the entire study area. Additionally, hundreds of mature wiliwili trees were observed to be dead or in decline due to extreme drought conditions exacerbated by competition from invasive grasses, as well as physical damage from Axis deer (*Axis axis*) antlers and trampling.

Due to the lightweight nature of wiliwili, early Hawaiians frequently used the wood for the canoe ama (float), fishing gear, and surfboards (Hiroa, 1957; Abbott, 1992). Wiliwili surfboards were frequently reserved for aliʻi because large and suitable trees were difficult to locate (Krauss, 1993). Wiliwili flowers were used medicinally to treat venereal diseases, while both seeds and flowers were used in lei making (Kaʻaikamanu & Akina, 1972; McDonald & Weissich, 2003).

In addition to the endemic wiliwili, the indigenous ʻuhaloa (*Waltheria indica*), maʻo (*Abutilon incanum*), ʻilima (*Sida fallax*), and hala (*Pandanus tectorius*) were observed with relative frequency. Maiapilo (*Capparis sandwichiana*), an endemic coastal shrub, was present but in much lower numbers than would be expected in a healthy lowland dry forest ecosystem. The survey also documented single occurrences of some particularly rare native species, including the endemic puakala (prickly poppy, *Argemone glauca*), one patch of indigenous ʻalaʻala wai nui (*Peperomia blanda*), and one small area of indigenous ʻilieʻe (*Plumbago zeylanica*) (Barboza, 2025).

ʻUhaloa is primarily a medicinal plant; leaves, stems and roots were pounded and strained to be used as a gargle for sore throats, which is a practice that continues today (Abbott, 1992). ʻIlima is widely used to string lei, which are highly valued and prized because the flowers are very delicate and last only one day once picked. It takes roughly 500 flowers to produce a single lei in the kuʻi (sewn, joined) style (McDonald & Weissich, 2003). “Maʻo” translates to “green,” so it is apt that the leaves of this species were traditionally used to make green dye for kapa (Hiroa, 1957). Today, maʻo flowers can be used in lei making, as they last a few days after picking (McDonald & Weissich, 2003). Hala wood was used extensively by early Hawaiians for construction of homes, canoe rollers, and bowls, while the leaves (lau hala) were prepared for weaving mats, baskets, and thatch (Krauss, 1993).

Maiapilo was once used medicinally to treat fractures and broken bones; the whole plant was pounded and applied to body joints, while the milky sap was applied to externally treat boils (Neal, 1965). ʻAlaʻala wai nui, puakala and ʻilieʻe were all used medicinally by early Hawaiians for a range of issues (e.g., ulcers, asthma, aches, warts and sores), despite the latter two species being toxic (Kraus, 1993; Neal, 1965). Additionally, ʻalaʻala wai nui and ʻilieʻe were used to create gray/green and navy blue/black dyes, respectively, with the latter being used for tattoo dye in addition to kapa dye (Neal, 1965; Handy et al., 1972; Krauss, 1993).

Additional indigenous species include: ʻākulikuli (*Sesuvium portulacastrum*), a succulent groundcover found in coastal areas; kīpūkai (*Heliotropium curassavicum*), a perennial herb that thrives in salty soils; koali kuahulu (*Merremia aegyptia*), a native morning glory; naio (*Myoporum sandwicense*), a sprawling shrub whose branches were traditionally

used for rafters and thatching poles (Krauss, 1993); alena (*Boerhavia repens*), a perennial herb whose roots were used medicinally to treat musculoskeletal pain and edema (Neal, 1965); and pōpolo (*Solanum americanum*), a native nightshade whose flowers, berries and leaves were used medicinally to treat thrush and various aches and pains, while the berries were used to create a blackish purple dye (Krauss, 1993; Abbott, 1992).

The survey also identified native ferns, including kupukupu (*Nephrolepis cordifolia*), moa (*Psilotum nudum*), and the endemic kumuniu (*Doryopteris decipiens*). Kupukupu and moa fronds are fashioned into lei for the wrists, ankles, and head, both traditionally and in modern practice (McDonald & Weissich, 2003). In addition to adornment, moa was also used for recreation. Krauss (1993) describes a simple traditional game, moa nahele (cock fighting):

> Two children sat or stood facing one another, each holding a branched stem of moa. These they interlocked and then slowly pulled apart until the branches of one broke. The other child, without broken branches, was the winner and announced his victory by crowing like a rooster (moa). (p. 88)

Canoe plants—those brought by Polynesian settlers to Hawai‘i before Western contact—represent an important cultural resource. The survey identified several Polynesian introductions that remain in the area, including:

1. Kukui (*Aleurites moluccana*) – The candlenut tree, traditionally used for lighting, medicine, and dye.
2. Hau (*Hibiscus tiliaceus*) – A coastal tree with multiple uses including cordage and medicinal applications.
3. Milo (*Thespesia populnea*) – A valuable wood species used for bowls and other carved items.
4. Niu (*Cocos nucifera*) – The coconut palm, although its presence in the area is likely part of landscaping.
5. Kī or Tī leaf (*Cordyline fruticosa*) – A plant with diverse cultural uses from food wrapping to ceremonial purposes.
6. ‘Ape (*Alocasia macrorrhizos*) – A root crop grown for food in traditional Hawaiian agriculture.
7. Noni (*Morinda citrifolia*) – The Indian mulberry, traditionally used for medicine and dye.

Of the 32 endemic, indigenous, and Polynesian-introduced species identified in the biological survey, Barboza (2025) stressed the importance of establishing propagation programs for wiliwili, puakala, ‘ilima, ‘ilie‘e, maiapilo, and ‘ala‘ala wai nui to “safeguard these species, provide a genetic safety net for these populations and establish planting

stock for future restoration or landscaping efforts" (p. 7). The potential for ecological restoration is high in Mākena if restoration strategies are implemented that will mitigate the threats posed by the invasive flora and fauna found in the area.

4.2.2 Fauna

The fauna survey documented several native Hawaiian animal species of cultural and conservation importance. The ʻōpeʻapeʻa (Hawaiian hoary bat, *Lasiurus cinereus semotus*), Hawaiʻi's only endemic terrestrial mammal and an endangered species, was detected at two of the four sampling sites (Barboza, 2025). Additional mammals observed include Axis deer, domestic cattle (*Bos Taurus*), and mongoose (*Herpestes javanicus*). It is highly likely that introduced and invasive species such as house mice (*Mus musculus*), black rats (*Rattus rattus*), domesticated dogs (*Canis lupus familiaris*), feral cats (*Felis catus*), and pigs (*Sus scrofa*) utilize the project area.

Twenty-two bird species were observed during the survey, eightteen of which are non-native. Endemic birds include: the pueo (Hawaiian owl, *Asio flammeus*), a culturally significant species associated with ʻaumakua in Hawaiian tradition; the endangered aeʻo (Hawaiian stilt, *Himantopus mexicanus knudseni*), considered to be the kino lau of the god Kū in fisherman form; the endangered ʻalae keʻokeʻo (Hawaiian coot, *Fulica alai*), considered by early Hawaiians to be a deity; and the koloa maoli (Hawaiian duck, *Anas wyvilliana*), believed to have been the guide to Imaikalini, a fierce blind warrior king.

Indigenous migratory birds seen during the survey include: the kōlea (Pacific golden plover, *Pluvialis fulva*), the ʻaukuʻu (black-crowned night heron, *Nycticorax nycticorax hoactli*), the ʻūlili (wandering tattler, *Tringa incana*), and the ʻiwa (great frigate bird, *Fregata minor palmerstoni*). Beckwith (1970) describes the cultural significance of migratory birds in Hawaiian mythology:

> Birds are notably potential gods or spirit beings. In the machinery of romance migratory birds or those which nest in high cliffs are messengers for the high chiefs in the story. Thus plover (kolea), wandering tattler (ulili)… are sent by the divine chiefs… generally in pairs, to act as scouts or to carry messages from island to island. The plover, accompanied by the tattler, remains in Hawaii or flies on south from August until the following May or June, when it migrates to Alaska for nesting, leaving behind immature birds and cripples. (p. 90)

One such example of kōlea and ʻūlili acting as messengers is found in the moʻolelo of the Molokaʻi aliʻi Kapepeʻekauila, who dispatched these birds to reconnoiter before battle to recover his stolen wife, Hina, from her rescuer and son, Kana (Beckwith, 1970, p. 464). The ʻiwa also served as a guide for lost travelers in the Waiʻanae mountains at the behest

of Kaiona, the goddess of Ka‘ala (Pukui, 1983, p. 177). Aside from their cultural significance, these migratory birds are also protected under the Migratory Bird Treaty Act (MBTA), which prohibits the taking, possessing, importing, exporting, transporting, selling, purchasing, bartering, or any such offers of parts, nests, or eggs of any bird listed under the Act.

Two indigenous dragonflies referred to as pinao, the green darner (*Anax junius*) and globe skimmer (*Pantala flavenscens*), were frequently observed during the survey, but both species are widespread throughout the Hawaiian Islands and are not of conservational concern (Barboza, 2025).

4.2.3 Water Resources

Wai (fresh water) is of tremendous significance to Native Hawaiians. It is closely associated with a variety of Hawaiian gods. According to traditional accounts such as Westervelt (1915), “Ka-ne and Kanaloa were the water-finders, opening springs and pools over all the islands, each pool known now as Ka-Wai-a-ke-Akua (The water provided by a god)” (p. 38). Kāne is widely known to be closely associated with all forms of water, as outlined below in the mele “He Mele No Kane.”

There was no element more important or precious than water and there was no god more powerful than Kāne. Pua Kanahele (2011) recounts the oli “‘O Kāne, ‘o wai ia ali‘i o Hawai‘i?” and notes of the oli: “The chant begins with Kāne and focuses on this deity as the connective force of all the po‘e akua, or god family. All the entities mentioned in each paukū, or verse, are a manifestation of Kāne” (p. 24). The association between water and Kāne is logical considering certain interpretations of Hawaiian mythology identify Kāne as the most powerful of all the Hawaiian gods.

Further investigation into the relationship between Kāne and Pele would be appropriate and helpful. Some interpretations identify Kāne as Pele’s father (Westervelt, 1915). A full analysis of the different perspectives on Pele and Kāne would be helpful to refining an approach in developing community education programs for geothermal energy and culture. A brief analysis is provided below.

He Mele No Kane asks:

E ui aku ana au ia oe,	One question I ask of you:
Aia i hea ka Wai a Kane?	Where flows the water of Kane?
Aia i lalo, i ka honua, i ka Wai hu,	Deep in the ground, in the gushing spring,
I ka wai kau a Kane me Kanaloa-	In the ducts of Kane and Kanaloa,
He waipuna, he wai e inu,	A well spring of water, to quaff,
He wai e mana, he wai e ola,	A water of magic power- The water of life!

E ola no, ea! Life! O give us this life!

This mele and other moʻolelo are clear: Kāne is water. Fresh water as a resource is deeply valued by the Hawaiian people, both historically and at present. The only exceptions may be mist, known to be associated with Lilinoa, and snow, associated with Poliahu. There is an extensive body of traditional knowledge about the expeditions of Kāne and Kanaloa during which Kāne drove his ʻōʻō (digging stick) into the earth in search of water.

There is heightened sensitivity regarding water in South Maui. Contemporaneous protections around water as a "public trust resource" extend back to the Kingdom, where the concept of owning water contradicted Hawaiian cultural values and traditions. Under the monarchy, control of water was reserved for use by the people who lived on and worked the land. The use of surface water was strictly controlled through the kapu system to ensure that all land tenants enjoyed an abundant availability of water. Farming, particularly kalo, occurred regularly, especially in places with notably fertile lands like those found in the watersheds of East Maui. As early as 1839, the public use of water was codified by Kauikeaouli, Kamehameha III. His "Respecting Water for Irrigation" law stated:

> In all places which are watered by irrigation, those farms which have not formally received a division of water, shall, when this new regulation respecting lands is circulated, be supplied in accordance with this law, the design of which is to correct in full all those abuses which men have introduced. All those farms which were formally denied a division of water, shall receive their equal proportion. Those bounties which God has provided for the several places should be equally distributed, in order that there may be an equal distribution of happiness among all those who labor in those places" (Cited in *Reppun v. Board of Water Supply*, 656 P.2d 57, 1982).

This public right eventually found its way into existing law, where the Hawaii Water Code continues to recognize and protect traditional farming and mahi ʻai (farmers).

It is critical for this CIA to consider impacts to cultural practices, even when the practices may take place outside the project area if project activities within the project area have the potential to impact traditional practices and customs. It is appropriate to carefully consider the impact water usage may have on farmers and other practitioners within the watershed(s) from which the water for this project will be drawn. It should be noted that there are no users of groundwater downstream from the project, and the project's use of groundwater should not divert any resources from cultural and/or traditional use. Regardless, the project should remain mindful of its water consumption and ensure that its usage does not exceed the sustainable yield for any of the aquifers from which it draws water.

The Water Resource Report for the Mākena Mauka Project (June 2025) prepared by Akinaka & Associates presents a detailed analysis of the water supply requirements and sources for the Mākena Mauka Project. The water report outlines the water demand calculations, identifies water sources, and describes the proposed water system infrastructure needed to support these developments.

A key assumption in the report is that most of the development would be supplied by a "privately owned and operated water system," with the exception of the 109 workforce housing units in the M-2 and M-3 lots, which would be supplied by the Maui Department of Water Supply (MDWS) (p. 1). The water system design employs a dual-system approach: potable water produced through reverse osmosis (RO) treatment of slightly brackish groundwater, and irrigation water supplied by untreated brackish well water. This dual system is necessary because "a single system, with all of the irrigation water having to be RO treated, would require far more supply than the three wells could provide" (p. 10).

The water report identifies three primary wells that would supply both projects: ATC Makena 3 Well (State No. 3925-002, known as ATC-3), ATC Makena 7 Well (State No. 3925-003, known as ATC-7), and ATC-8 Well (State No. 3925-004). Each well was pump tested at over 350 gallons per minute (GPM), with ATC-3 and ATC-7 producing stable chlorides of 260 milligrams per liter (MG/L) and 368 MG/L, respectively. Each well will have a 350 GPM permanent pump. The water report notes that the "safe yield" calculation assumes that one well would be down for maintenance or repair, with the other two wells providing the water supply. Additionally, the Seibu 5 Well (State No. 3926-004) is identified as a potential backup connection for irrigation needs. This well has a 500 GPM pump.

For the Mākena Mauka Project (excluding workforce housing), the water report calculates a potable water requirement of 196,900 gallons per day (GPD) and an irrigation water requirement of 213,790 GPD.

The water system relies on RO treatment to convert the brackish well water into potable water. The water report assumes a 65% recovery rate in the RO treatment process, meaning that 35% of the water processed becomes concentrate (waste). Based on this recovery rate, the required maximum day well system supply for the Mākena Mauka project amounts to 775,070 GPD (equivalent to 538 GPM if pumped 24 hours a day). This is less than the safe yield from two of the three 350 GPM supply wells, which would be 700 GPM total.

A significant issue identified in the water report is the management of RO concentrate: "At full build out there would be a substantial volume of RO concentrate (about 190,000

GPD) for reuse or disposal. The State of Hawaii Department of Health's (DOH) current position is that the RO concentrate cannot be reused for irrigation" (p. 10). The report suggests that this concentrate is "likely to be too saline for irrigation in the two projects but may be appropriate for golf course irrigation" (p. 10). However, if the DOH position does not change, "a method of disposal would be required" and "a disposal well would ultimately need to be installed" (p. 10).

While the report focuses primarily on technical feasibility and infrastructure requirements, several aspects warrant consideration regarding potential impacts to freshwater resources. The three wells (ATC-3, ATC-7, and ATC-8) are drawing from a brackish aquifer with chloride levels ranging from 260-368 MG/L. This indicates that these wells are tapping into the transition zone between freshwater and saltwater in the basal aquifer. Excessive pumping from these wells could potentially increase saltwater intrusion into the freshwater lens, reduce the overall freshwater lens thickness, and affect the discharge of freshwater at the coastline. It is not believed that the water usage outlined in the report will affect other existing or potential water uses in the region, but the groundwater withdrawal of water may change groundwater discharge into the nearshore marine environment or the wetlands along the shoreline.

4.2.4 Rains

Akana & Gonzalez (2015) explain the significance of the wind and rain in Native Hawaiian culture:

> In the mind…of our Hawaiian kūpuna [(ancestors)], every being and every thing in the universe was born. Our kūpuna respected nature because we, as kānaka, are related to all that surrounds us – to plants and creatures, to rocks and sea, to sky and earth, and to natural phenomena, including rain and wind. This worldview is evident in a birth chant for Queen Emma, "Hānau ke aliʻi, hānau ka ua me ka makani" (The chiefess was born, the rain and wind, too, were born). Our kūpuna had an intimate relationship with the elements. They were keen observers of their environment, with all of its life-giving and life-taking forces. They had a nuanced understanding of the rains of their home. They knew that one place could have several different rains, and that each rain was distinguishable from another. They knew when a particular rain would fall, its color, duration, intensity, the path it would take, the sound it made on the trees, the scent it carried, and the effect it had on people. (p. xv).

To the Native Hawaiians, no two rains are ever the same. Rain can be distinguished based on its intensity, the way it falls, and its duration, among other things. Three rains are identified for the larger Honuaʻula region: Kēhau, Lanipaʻina, and Nāulu.

Kēhau is defined as a “dew, mist, dewdrop” and is frequently found on the Islands (Pukui & Elbert, 1986). Lanipa‘ina is a “sky crackling rain” specifically associated with ‘Ulupalakua: “Ka ua Lanipaina o Ulupalakua” (Inciong, 2003, p. 231). Nāulu is a sudden shower that is associated with places throughout the Hawaiian Islands; Nāūlu is also the name of a shower cloud and wind. In Hawaiian epistemology, sudden showers are associated with the akua Lono, whose domain is that of agriculture.

4.2.5 Winds

Hawaiian wind names hold significant cultural and practical importance in the Hawaiian Islands. Wind names in Hawaiian culture are deeply rooted in the traditional belief system and connection to the natural environment. Hawaiians have a profound respect for nature and its elements, and wind names reflect their reverence for the forces of nature. These names are a part of the rich cultural heritage and oral tradition of the Hawaiian people. The importance of Hawaiian wind names lies in their cultural, practical, and spiritual significance, connecting the people to their environment, enabling navigation, predicting weather, and preserving their cultural heritage.

Wind names also were important resources for understanding the surrounding environment. Hawaiian wind names are instrumental in navigation and wayfinding, particularly for voyaging canoes and seafaring traditions. Traditional Polynesian voyagers used their knowledge of the winds and stars to navigate across vast expanses of the Pacific Ocean. By knowing the characteristics and names of different winds, they could effectively chart their courses and find their way to distant islands.

Wind names are also crucial for predicting weather patterns in Hawai‘i. Hawaiians developed a deep understanding of the winds’ behavior and associated weather conditions based on their observations over generations. By identifying and naming different winds, they could anticipate changes in weather, ocean currents, and other natural phenomena, which was essential for agriculture, fishing, and daily activities.

The wind names reflect a close connection between the people and the environment. By acknowledging and naming specific winds, Hawaiians recognized the unique characteristics and qualities of each wind. This awareness promoted a harmonious relationship with nature and fostered a sense of responsibility for its preservation and sustainable use.

Today, some of the most important uses and preservation of Hawaiian wind names contribute to the retention and revitalization of the Hawaiian language, culture, and traditions. In a modern context, these names help to maintain and celebrate the unique cultural identity of the Hawaiian people, strengthening their sense of belonging and heritage.

The name Papa was identified as a wind associated with Honuaʻula. From the ʻōlelo noʻeau (proverbs) (**Section 4.3.1**), the Moaʻe wind is mentioned in association with Honuaʻula.

4.3 Intangible Cultural Resources

It is important to note that Honua Consulting's unique methodology divides cultural resources into two categories: biocultural resources and built environment resources. We define biocultural resources as elements that exist naturally in Hawaiʻi without human contact. These resources and their significance can be shown, proven, and observed through oral histories and literature. We define built environment resources as elements that exist through human interaction with biocultural resources whose existence and history can be defined, examined, and proven through anthropological and archaeological observation. Utilizing this methodology is critical in the preparation of a CIA as many resources, such as those related to akua, do not necessarily result in material evidence, but nonetheless are significant to members of the Native Hawaiian community.

4.3.1 ʻŌlelo Noʻeau

ʻŌlelo noʻeau are a vital source of cultural information about the area. ʻŌlelo noʻeau literally means "wise saying" and they encompass a wide variety of literary techniques and multiple layers of meaning common in the Hawaiian language. Considered to be the highest form of cultural expression in old Hawaiʻi, ʻōlelo noʻeau bring us closer to understanding the everyday thoughts, customs, and lives of those that created them.

The ʻōlelo noʻeau presented here relate to Honuaʻula. These ʻōlelo noʻeau are found in Pukui's *ʻŌlelo Noʻeau: Hawaiian Proverbs & Poetical Sayings* (1983). The number preceding each saying is provided.

88 ʻAi puaʻa a Kukeawe.
The pork eating of Kukeawe.

Said of a person who is not satisfied with the number of his own pigs and so robs his neighbors of theirs. Kukeawe was a friend of Kahekili who was allowed to help himself to any of Kahekili's pigs in Kula, Maui. But Kukeawe also took the pigs belonging to the people of Kula, Honuaʻula, and Kahikinui and plundered their possessions. These people rose in rebellion, led by ʻOpū, and surprised the followers of Kukeawe while they were ascending Haleakalā on the way to Kula. Kukeawe's party retreated but found their way blocked by other parties led by Kawehena, Kahoʻoluhina, and Kuheana. Kukeawe was killed and his body set up at Palauea.

1058 Honuaʻula, e pāluku ʻia ana na kihi poʻohiwi e na ʻale o ka Moaʻe.

Honua‘ula whose shoulders are pummeled by the Moa‘e wind.

A poetical expression for a person being buffeted by the wind. Honua‘ula, Maui, is a windy place.

1059 Honua‘ula kua la‘ola‘o.
Callous-backed Honua‘ula.

Said of the people of Honua‘ula, Maui, who were hard workers. The loads they carried often caused callouses on their backs.

4.3.2 Mele

Honua Consulting completed searches of mele written about the moku of Honua‘ula. Maui historian Inez Ashdown (1976) wrote about the importance of mele:

> The natives of Hawai‘i Ne‘i saw the Creator in everything and the Haku Mele or Music Masters delighted in presenting the chants and songs, mele and oli, to inspire the people. Such mele tell of God’s assistant spirits which, to the imaginative natives, represented the winds, rains, and so on. Each spirit of creation was depicted as male or female and was given a personality and a name indicative of purpose. Hence the name of the volcanic action creating and cleansing the earth. She is beautiful, alluring, desirable. She also is unpredictable because she is temperamental and usually full of fiery emotions. She is an old woman asking help when she lies to test mortals, and woe betide anyone who is rude or inconsiderate of this form of an older person to whom respect and Aloha must be given. (p. 3)

There are not a lot of mele about the ahupua‘a within Honua‘ula, especially when compared to other places throughout the islands. As such, only a handful of mele are provided. These are more about the region and Maui generally.

This first entry is an untitled epithalamium (the celebration of the mystery and bliss of the wedding night) for the marriage of a high chief and his high-born kapu sister. The marriage is between Wanahili, a princess of the mythological period who belonged to Puna, Hawai‘i, and Mana‘u, a mō‘ī of Hilo and the son of Kanehili, famous for his skill in spear throwing, maika rolling, and athletic exercises. The murmur of the breeze, the fury of the winds, the heat of the sun, the sacrificial ovens, all are symbols that set forth the emotions, experiences, and mysteries of the night (Emerson, 1998, pp. 99-101).

O Wanahili ka po loa ia Mana‘u	Wanahili bides the whole night with Manu‘a
O ka pu kau kama i Hawaii akea;	By trumpet hailed through broad Hawaii,
O ka pu leina kea a Kiha —	By the white vaulting conch of Kiha —
O Kiha nui a Pii-lani —	Great Kiha, offspring of Pii-lani,

O Kauhi kalana-honu-ʻa-Kama;	Father of eight-branched Kama-lala-walu
O ka maka iolena ke koohaulani iō!	The far-roaming eye now sparkles with joy,
O kela kanaka hoali mauna,	Whose energy erstwhile shook mountains,
O Ka Lani kuʻi hon oi ka moku.	The king who firm-bound the isles in one state,
I waihona kapuahi kanaka eha,	His glory, symboled by four human altars,
Aiʻi Kauai, i Oahu, i Maui,	Reaches Kauai, Oahu, Maui,
I Hawaii kahiko o Keawe enaena,	Hawaii the eld of Keawe,
Ke aʻā mai la me ke o-koko,	Whose tabu, burning with blood-red blaze,
Ke lapa-lapa la i ka makani,	Shoots flame-tongues that leap with the wind,
Makani kua, he Naulu.	The breeze from the mountain, the Naulu.
Kua ka Wainoa i ka Mikioi,	Waihoa humps its back, while cold Mikioi
Pu-ā ia lalo o Hala-liʻi,	Blows fierce and swift across Hala-liʻi.
Me he alii, alii, la no ka hele i Kekaha,	It vaunts like a king at Kekaha,
Ka hookiekie i ka liʻu-la,	Flaunting itself in the sun's heat,
Ka hele i ke alia-lia la, alia!	And lifts itself up in mirage,
Alia-lia laʻa-laau Kekaha.	Ghost-forms of woods and trees in Kekaha
Ke kaha o Kala-ihi, Wai-o-lono.	Sweeping o'er waste Kala-ihi, Water-of-Lono;
Ke olo la ke pihe a ka La, e!	While the sun shoots forth its fierce rays!
Ke nu la paha i Honua-ula.	Its heat, perchance, reaches to Honua-ula.

This next mele, "'Ulupalakua," was composed by John P. Watkins in 1947. An ancient Maui chief would send runners to Kipahulu for breadfruit. When they returned with the fruit, it was ripe. The chief called the district 'Ulupalakua or "breadfruit ripened on the back." Watkins visited 'Ulupalakua, in up-country Maui on the southwestern slopes of Haleakalā. He was so impressed by the cold mountain air, the scent of ginger, and the cowboys, he composed this mele to honor the district ("'Ulupalakua," n.d.).

'Ulupalakua – by John P. Watkins

Kaulana mai nei	Famous
Aʻo 'Ulupalakua	Is 'Ulupalakua
He 'īnikiniki ahiahi	The pangs of the cold evening air
Ka home aʻo paniolo	The home of the cowboys
E wehi e kuʻu lei	My lei is an adornment
Aʻo 'Ulupalakua	Of 'Ulupalakua
'Onaona me ka 'awapuhi	The sweet scent of ginger is
He nani maʻoli nō	Truly beautiful

Haʻina mai ka puana	Tell the refrain
Aʻo ʻUlupalakua	Of ʻUlupalakua
He ʻīnikiniki ahiahi	The pangs of the cold evening air
Ka home aʻo paniolo	The home of the cowboy

"Maui Nani E," written September 2, 2008, is about the changes of Maui due to the over development and overcrowding of foreigners, pushing out the kanaka Hawaiʻi from their homes and lands. The composer, Kealiʻi, is crying out to Maui to protect her kanaka Hawaiʻi in this mele ("Maui Nani E," n.d.).

Maui Nani E – by Kealiʻikaleoʻolaeanuikaumanamana VIII Blaisdell

Aloha kuʻu ʻāina	Love for my land,
ʻO Maui, nani e	Beautiful Maui
ʻĀina kaulana i ka nani	Land famed for its beauty
Heaku no wau e ō mai ʻoe	When I call to you, please answer
E ō mai e Maui	Respond O Maui!
Kēia ʻāina i aloha ai	This land that I love
E Maui ʻāina kaulana	Maui, famous land
Piha i ka nani kamahaʻo	You are filled with wondrous beauty
Heaku no wau e ō mai ʻoe	When I call to you, please answer
E ō mai e Maui	Respond O Maui!
Puʻuhonua nani a maikaʻi	A place of refuge, beautiful and good
He wahi mehameha nō ia	A place of solitude
He momi no ka Pākīpika	A pearl of the Pacific
Heaku no wau e ō mai ʻoe	When I call to you, please answer
E ō mai e Maui	Respond O Maui!
Haʻina ʻia mai ana ka puana	Told now is the song
ʻO Maui, nani e	Beautiful Maui
ʻĀina kaulana i ka nani	Land famed for its beauty
Heaku no wau e ō mai ʻoe	When I call to you, please answer
E ō mai e Maui	Respond O Maui!

Miriam Kekaulouhi, premier under Kamehameha III, established a penal colony for men on Kahoʻolawe in 1839. Women convicts were banished to Lānaʻi. Government supplies of food did not always arrive, and prisoners suffered from hunger, many dying of starvation. In March 1841, 15 men decided to swim to Maui for food. They prayed at Aikupau and when the tide ran towards Maui, they set out on their journey across the

Maui channel, landing at Puʻuolai near Mākena. They raided the coastline and loaded stolen canoes with provisions for their return to Kahoʻolawe. The canoes were then sent to Lānaʻi to bring the female prisoners to Kahoʻolawe. The penal colony was closed in 1857 (“Kahoʻolawe,” n.d.).

Kahoʻolawe – Words by Mary Heanu, Music by John Noble

Kaulana ka inoa o Kahoʻolawe lā	Famous is the name of Kahoʻolawe
Lei ana i ka pua o ka hinahina	And the lei of hinahina flowers
ʻOlelo kauoha no kuʻu aloha	It commands my love
Hina wau ika hewa mamuli oʻu	For you, engulfing me everafter
Mahea eke ala hiki aku ai	From whence comes this fragrance
Ko ae eke au i Kahoʻolawe	It comes to me from Kahoʻolawe
Ike ana ika nani oʻia ʻāina	I see the beauty of this land
Meke kai hone mai maka paia	Encompassed by sweetness from the surrounding sea
Noho aku hoi wau la hoʻolono	I will go to sit and listen
I kani hone mai leo o ka manu	To the pleasant chirping of the birds
Heaku no wau e ō mai ʻoe	When I call to you, please answer
Lei ana i ka pua o ka hinahina	Lei of the hinahina flowers

5.0 Oral Records, Interviews, and Consultations

An extensive body of ethnographic data was collected for this assessment. It includes previously conducted oral interviews from kūpuna of the area, as well as contemporaneously conducted interviews with practitioners familiar with the area.

5.1 Summary of Interviews in "He Moʻolelo ʻĀina No Kaʻeo…" (2006)

In 2006, co-authors of this study, Kepā Maly and Onaona Maly, conducted an extensive historical study for Sam and Jon Garcia entitled "He Moʻolelo ʻĀina No Kaʻeo…", which contained eight oral history interviews that were reviewed for this assessment. Interviewees included:

- Samuel Ponopake Kanaʻiaupuni Chang
- Marie Puanani Gomes-Olsen
- Eddie and Laurie Chang
- C.M. Kaʻōnohi Delima-Lee
- James Kapelakapuokakaʻe Kapohakimohewa (with Judy Kapohakimohewa)
- R. "Boogie" Luʻuwai
- Pardee Erdman
- Robert Lopaka Kalani

These oral history interviews provide invaluable insights into the cultural and historical landscape of the Mākena and Kaʻeo regions. These interviews were compiled as part of a broader effort to document traditional knowledge and personal recollections from kūpuna and kamaʻāina with generational ties to these lands. The primary focus of the interviews was the identification of cultural resources, land use patterns, fisheries, and changes in the landscape over time.

The interviewees, whose knowledge spans from oral traditions passed down through generations to personal experiences dating as far back as 1911, shared details about traditional land management, sacred sites, and the connections between families and their ancestral lands. The Kalani Heiau was a focal point of the discussions, as it was identified on the Garcia family property. While some interviewees had not heard of the heiau in their youth, others recalled learning about it later in life, often in connection with archaeological investigations. One interviewee, a member of the Lono-Kalani family, remembered learning about the heiau in childhood, associating it with family fishing customs.

Another significant element of the oral histories is the emphasis on Mākena's fisheries and shoreline resources. Many kūpuna described traditional fishing practices and the stewardship of marine resources, highlighting the importance of ʻĀpuakēhau Fishpond

and other coastal areas. The role of konohiki was also discussed, illustrating how resource management was once tightly controlled and tied to familial knowledge and community needs.

Several interviewees recalled the presence of huakaʻi pō (night marcher processions) in the area adjacent to the county facility and Keawalaʻi Church, reinforcing the continued spiritual presence in the region. One family reportedly abandoned an attempt to build a house in the area due to unexplained occurrences, believed to be related to the night marchers.

Regarding cultural preservation, all interviewees expressed strong support for the protection of Kalani Heiau and other cultural resources. Many emphasized the need for stewardship programs that integrate both community involvement and respect for indigenous knowledge systems. The Keawalaʻi Church, deeply rooted in the Mākena community, was identified as a key partner in preservation efforts.

The interviews also touched on land-use changes in Mākena and Kaʻeo, with kūpuna expressing concerns over increasing development and its impact on cultural sites. Many described how traditional pathways, old walls, and former habitation areas had been altered or lost over time, leading to a diminished sense of place. Despite these changes, the interviewees conveyed a deep commitment to passing on their knowledge to future generations, ensuring that the cultural landscape of Mākena and Kaʻeo remains recognized and respected.

“He Moʻolelo ʻĀina no Kaʻeo…” captures a wealth of oral history that underscores the intricate relationship between people, land, and culture in the Mākena-Kaʻeo region. Through their stories, the interviewees not only documented significant cultural resources but also advocated for their preservation. The continued collaboration between local families, the Garcia property owners, and organizations such as the Keawalaʻi Church is seen as essential in maintaining the integrity of these sacred and historical places.

5.2 Interview with Kaʻōnohi Lee

Interviewer: Matthew Sproat
Interviewee: Carol Maria Kaʻōnohi Lee

Summary

The interview conducted by Matthew Sproat with Carol Maria Kaonohi DeLima Lee, a retired state employee and native resident of the Mākena area, provides valuable insights into the cultural resources of Mākena and the potential impacts of the proposed Mākena Mauka Project. Kaonohi, who was born and raised in Oneloa, not far from the proposed development area, offers a unique perspective based on her familyʻs deep-rooted

connection to the land spanning multiple generations. Her family-owned land on both sides of the project area, with her father‘s family‘s land on one side and her mother‘s on the other. This generational connection to Mākena gives Kaonohi’s observations and concerns significant weight in understanding the cultural landscape and potential impacts of development. Kaonohi describes the Mākena of her childhood as very rural and rustic, primarily covered by kiawe (kiawe) forest. The community was small and spread out, with only a handful of residents including Maka’iwa (who lived in Keone`o`io), Auntie Kealohaaina Palenapa, Tutu Mary Auweloa, David Lono (who is related to CJ Elizares), and a few others after the church and near the landing. She explains that no one lived up on the Papa‘anui ridge at that time. This sparse population meant that the natural environment dominated the landscape, and daily life revolved around the resources provided by the land and sea. As children, Kaonohi and her siblings would either go to the beach or make up their own paniolo games, like making "stick horses" made from kiawe branches, using the kīawe trees as feeding stations and wiliwili seeds being salt for the “horse” in their imaginative play.

One of the significant cultural aspects Kaonohi discusses is the traditional relationship between the coastal communities of Mākena and the upland communities of Ulupalakua. She describes a symbiotic exchange system where upland communities would provide beef and vegetables, while the coastal communities provided ocean resources. This relationship was essential to both communities‘ survival and cultural practices. Kaonohi explains that her grandfather would go fishing, and the people in Ulupalakua would see this activity from their vantage point and gather their goods for exchange. When the fish were brought ashore, the communities would exchange their respective resources. This traditional system represented a holistic understanding of resource management across the ahupua‘a (traditional land division extending from the mountains to the sea).

Kaonohi expresses concern that modern development has severed this connection between upland and coastal communities, disrupting the traditional resource management system. She views the current development pattern, which cuts across multiple ahupua‘a rather than working within the traditional mauka-to-makai (mountain-to-sea) flow, as particularly problematic. She states, "When I look at this, I see obstruction of that. Not only in one ahupua’a, but across. And because they‘re going across and not up and down, that is even more of an impact." This observation highlights the cultural importance of land division patterns and how modern development often conflicts with traditional Hawaiian land management principles.

The marine resources of the Mākena area are identified as significant cultural resources that have already been impacted by development. Mali [do you mean Kepa Maly] describes Mākena Bay as historically "very rich" in resources. From her family home at the edge of the bay, they could once see abundant limu (seaweed), ‘opihi (limpets), and other marine life on the rocks. However, she laments that these resources are no longer visible, noting the occasional appearance of "white bubbles" in the water, which she finds disturbing. She attributes this resource decline to impacts "from land development and ocean activities," positioning the Mākena community "right in the middle" of these converging pressures. The interview reveals that golf course development has already

significantly impacted the marine environment, with Kaonohi referencing a Canadian science professor who conducted surveys in the area during her summers and linked the tumors once found on green sea turtles (honu) to runoff from the golf courses.

Kaonohi identifies several specific cultural resources and practices tied to the Mākena area. She mentions fishing as a central cultural practice, with her father primarily engaged in nearshore fishing using throw nets rather than pole fishing or deep-sea fishing (surround-net). When asked about target species, she indicates whatever was available at the time rather than targeting specific species, as "whatever fish is our dinner." Species mentioned include akule, uhu, weke (which was so tasty when her mother cooked it), and manini (which she considered too bony though everyone else enjoyed it). This opportunistic approach to fishing reflects a subsistence lifestyle where the ocean served as the community‘s "ice box," as Kaonohi puts it.

Traditional fishing methods included throw netting, spearfishing, free-deep sea diving and hukilau (a communal fishing method involving surrounding fish with a net). Kaonohi explains that hukilau was typically conducted for large gatherings such as the Kukahiko Reunion or church events. The area in front of the church and the landing areas being the best locations because there was area to stand on the shore and pull the nets. This indicates that fishing was not only a subsistence activity but also a communal practice that strengthened social bonds within the community.

The interview also touches on the importance of limu (seaweed) as a cultural resource. Kaonohi recalls spending entire days in the water swimming and eating limu for sustenance directly off the rocks, particularly mentioning the green "fat one" that could be eaten without cleaning because the water was so clean at that time. This personal memory highlights both the abundance of marine resources in the past and the cultural practice of harvesting and consuming limu, which has diminished with declining water quality and resource availability.

Springs and freshwater sources are identified as important cultural resources that have been impacted by development. Kaonohi mentions that some residents, including Tutu Mary and Aunty Kealoha’aina, who lived in Maluaka, had their own wells. Her family received water from Olinda through a county waterline, though her father had to build a tank to collect and store the water due to low pressure their distance from the source. She emphasizes the importance of freshwater sources not only for human use but also for the health of the marine ecosystem, particularly for limu cultivation. The interview suggests that development has disrupted the natural flow of freshwater to the ocean, impacting the balance of the coastal ecosystem.

The climate and weather patterns of Mākena are discussed as cultural resources that have been affected by land use changes. Kaonohi describes how the area experienced a daily "blessing of a rain cloud bank spanning from Ulupalakua to Kaho’olawe" in the afternoons, known as Na’ulu, which provided respite from the heat. She notes that this pattern had diminished during the 1970s through 1990s but is "starting to come back," which she attributes to the reforestation efforts on Kaho`olawe, Sumner Erdman,

Ulupalakua Ranch, and now, Art Medeiros in Auwahi and CJ in Makenaplanting native trees. This observation highlights the cultural significance of traditional weather patterns and how they are connected to vegetation and land management practices from ma uka i kai.

Kaonohi challenges the perception of Mākena as simply an arid area, explaining that while it is hot, the soil is rich "because of the lava filter." She recalls her grandfather growing various vegetables and fruits, including mangoes (common, and Pake or Chinese varieties) and even fig trees. This indicates that the land‘s agricultural potential is part of its cultural value, though this potential has been diminished by introduced species like kiawe, which Kaonohi notes "take all the water that‘s needed for the native plants."

Archaeological sites are acknowledged as significant cultural resources within the project area. When asked about the likelihood of finding iwi (ancestral remains) in the project area, Kaonohi suggests that while a formal burial ground might not be found, individual burials could be found because kupuna (ancestors) would sometimes bury `ohana where they lived. She expresses hope that archaeological investigations will provide a better understanding of the historical habitation patterns in the area, including "how long people lived in the area. When did they leave? Why did they leave?" This perspective emphasizes the value of archaeological sites not just as physical resources to be preserved but as sources of cultural knowledge and connection to the past.

The interview reveals that the surrounding landscape, particularly the native vegetation of the Kanaio area with its wiliwili trees and lehua, is considered a cultural resource. Kaonohi describes the beauty of hearing birds and feeling the "misty air" in the mornings, experiences that connected her to the natural environment during her childhood. She expresses concern that development will impact this connection between the honua (land) and the envirnomental elements, suggesting that the cultural value of the landscape extends beyond individual plants or sites to encompass the holistic experience of place and the connections between man and the different elements of the ecosystem; its life-cycle.

Regarding potential impacts from the Mākena Mauka Project, Kaonohi identifies several concerns. First, she worries about increased foot traffic, which she says is "already starting." This increased human presence could affect both the physical environment and the social landscape. She notes that the increased human foot traffic will likely come down to the beach areas near resident homes because they cannot access the private property within the development, thus concentrating impact in certain areas.

Kaonohi expresses concern about the cumulative impact of multiple developments in the area. She mentions that North and South Ka`eo are going to be "built out" between Makena Alanui and Makena Road, from the landing [Papa‘anui] to Honoiki [Ka`eo], with additional development planned from Honoiki to just before the church. She also reveals that there is another development planned adjacent to the Mākena Mauka Project called "Mākena Ranch Estates," which she describes as "gentlemen estates." This cumulative

development leads her to fear that local residents will be "squished" between developments and the ocean and further impact the ocean resources.

The interview highlights concerns about the impact of development on drainage patterns and water quality. Kaonohi notes that "drainage goes somewhere" and expects that unless landscaping is established quickly, the development will affect weather patterns and water flow. She sees the potential for development to exacerbate the existing impacts on the reef system, which she describes as already "decimated." While she acknowledges that mitigation measures like drainage systems are planned, she questions their effectiveness and emphasizes the need to consult true experts who understand the specific characteristics of the Mākena environment.

Community impact emerges as a central concern in the interview. Kaonohi observes that development is "dividing some of us," with younger generations particularly upset about the changes. She acknowledges the reality that local people cannot afford to buy the land in question, so the challenge becomes how to "build it in a way that is right for us, not just for those that are coming." She emphasizes the importance of creating a genuine community where different groups can interact comfortably, noting that in "the old day, from one community to the next, everybody knew each other." The current development pattern, with luxury homes in separate enclaves, fails to create this kind of integrated community: "The only time they‘re a community is when they have big gala events or golf tournament or whatever. It‘s not the community of old."

The interview discusses how property taxes and housing affordability present significant challenges for local residents. Ka‘onohi shares that before they received the Kuleana designation for their property, their annual property taxes were $40,000, an amount that local residents generally cannot afford. She explains that high property values driven by luxury developments make it difficult for local residents to remain in or return to the area, and she suggests that developers address this issue by creating a fund to offset tax burdens for affordable housing.

Additional concerns include ocean safety, with Ka‘onohi noting that Mākena State Park has the highest ocean activity injury rate. Shoreline erosion due to climate change, is occurring at locations like Oneloa, Maluaka, and Mākena Bay. She also expresses concern about Makena Road, comparing the situation at Olowalu where road improvements and realignment have been necessary due to erosion.

Despite these concerns, Ka‘onohi identifies some potential positive aspects of the development. She values the opportunity to "go back on the land", “reclaim space” that has been "off limits for us for generations," allowing community members to reconnect with their ancestral spaces, even if it comes "a little late." She also sees potential in reestablishing native plants in areas where kiawe is being removed, suggesting that if native plants flourish there, it could serve as a model for restoration in the larger project areas.

When asked about recommendations for best management practices, Kaonohi emphasizes the importance of understanding the land‘s natural systems, particularly identifying the "prominent streams", its source and exit, before development begins. This knowledge whould inform mitigation measures that would benefit both the project and the community, ultimately protecting the ocean resources that are also "a commodity that they sell." She suggests that developers should learn from past mistakes, such as the runoff issues and redirection or blockage of streams that occurred with previous developments, which have dried up freshwater sources and natural wetlands that used protect and fed the nearshore environment.

Ka‘onohi also recommends creating a fund to support the local community and focusing on "building community" by creating conditions that allow local people to "come back to their land." While she acknowledges that developers need to make a profit, she suggests this should not be "hand over fist" at the expense of a community’s well-being. Her final assessment reflects a pragmatic perspective: "You can‘t stop progress. No more enough kala (money) to buy all that land. So what‘s the alternative? Just help them build a good community."

The interview with Ka‘onohi Lee provides valuable insights into the cultural resources of Mākena and how the proposed development might impact these resources and the community. Her deep connection to the area and her understanding of both traditional and contemporary issues offers a nuanced perspective on the challenges and opportunities presented by the Mākena Mauka Project. Her recommendations emphasize the importance of understanding and respecting the land‘s natural systems, preserving cultural resources and practices, and working to build a genuine community that includes both long-time residents and newcomers. This perspective highlights the complex interplay between cultural preservation, environmental protection, and community development in the context of modern land use decisions in Hawaii.

5.3 Interview with Edward “Eddie” Chang

Interviewer: Matthew Sproat
Interviewee: Edward Chang

Summary

The interview with Edward Chang offers important insights into the cultural resources of Makena, including marine ecosystems, fishing practices, native species, traditional community structures, and subsistence patterns. His observations about the potential impacts of the Mākena Mauka Project highlight concerns about exclusivity, affordability, water management, and the loss of community character, while also suggesting the possibility of mitigating these impacts through engagement with developers. As a longtime resident with deep family ties to the area, Chang’s perspective provides an essential voice in understanding what is at stake in the development of Makena and how cultural resources might be protected amidst inevitable change.

Biography

Edward Chang, who was born in Wailuku in 1932 and has lived in Makena since he was three years old, offers a unique multigenerational connection to the area. As the oldest in his family, with a father who was a farmer, Chang's experiences span nearly nine decades of Makena's history, from before World War II to the present day. His mixed heritage (Chinese, Hawaiian, and Caucasian) and deep family connections to the area (his family has owned their land since 1883) provide him with a comprehensive understanding of the historical and cultural landscape of Makena.

Makena of the Past

Chang begins by describing the historical access to Makena, noting that in earlier times, the only way to reach the area was through the old Ulupalakua Road, which no longer exists today. He explains that Makena was once more developed, with a substantial church and an elementary school that his father attended. Chang recalls that when he was growing up in the 1940s, there were approximately 14 families living in the area from Kenai to Ulupalakua Road, though he notes that during his father's time, there may have been around 30 families. This historical context provides important insight into the demographic changes in Makena over time, from a more populous community with educational and religious institutions to a gradually depopulating area prior to modern resort development.

Chang discusses the interconnected community relationships that characterized traditional life in Makena. He explains that "almost all of us were related somehow or another" through intermarriage over generations, and even those not directly related had been in the area so long that "it's almost like we're related." He mentions several family names with historical connections to Makena, including the Kukahiko family (his own ancestors), Awaloa, Peters, Lono, Lema, and others. Chang explains how these families were interconnected through marriage, creating a close-knit community where resources and knowledge were shared. This social structure represents an important cultural resource that facilitates traditional resource management and cultural transmission.

Cultural Resources and Traditional Practices

The interview reveals several cultural resources in the Makena area, with particular emphasis on ocean resources and traditional practices. Chang emphasizes that approximately 70% of meals for Makena residents came from the ocean, indicating the crucial importance of marine resources to the community's subsistence and cultural practices. He describes a variety of fishing methods used by residents, including throw net fishing (known as "throw net") and spearfishing (referred to as "pie-pie"). Target species included uhu (parrotfish), kala, palani, neneue, and moi. Evening fishing was conducted for certain species, while daytime fishing targeted others. Chang notes that during his youth, the waters were exceptionally clean, and the beach areas were largely

accessible only to the few families that lived along the seven-mile stretch of coast, allowing residents intimate knowledge of "every fish hole, every manini hole, every moi hole, the best places to dive."

The interview highlights the dramatic changes in marine resources over time. Chang laments that many of the productive fishing areas "don't exist anymore because it's overpopulated," and that "the fish that we used to have is hardly any." He expresses concern about overfishing, noting that he often sees people taking more fish than they can eat, treating catches as "trophies." This observation speaks to changing relationships with marine resources and the impacts of increased population and tourism on traditional subsistence practices. Chang's comments reveal the degradation of a once-pristine marine ecosystem that served as the primary food source for local residents and was central to their cultural practices.

Traditional food preparation methods are mentioned as cultural practices associated with the area. Chang describes how residents would prepare manini (convict tang) by pouring hot water over them to make soup, a practice he suggests is now uncommon even among local residents on the island. He also mentions the consumption of dried fish, which was dried and then tenderized through the pulehu method (cooking over hot coals). Additionally, residents ate "jerk meat" (presumably dried beef), salmon, and butterfish (black cod). These food preparation practices represent important cultural knowledge tied to the subsistence patterns of Makena residents.

Freshwater resources are identified as a significant cultural resource, though historically limited in the area. Chang explains that during his father's and great-grandmother's generations, residents depended on wells for water, which were hand-drawn without mechanical pumps. He notes that water quality in Makena was poor, and that later, water was brought in primarily for cattle, with human residents benefiting secondarily. The interview reveals that these wells no longer exist, having collapsed or been covered over time. Chang also discusses periodic streams that flow during heavy rainfall, mentioning that Makena has "some streams that really has high flow, over a thousand cubic feet per second" between his home and Makena, including one that goes through his property. This information indicates the presence of significant, if intermittent, freshwater resources that have influenced settlement patterns and resource management in the area.

Chang identifies the Hawaiian hoary bat as an important native animal species in the area. When asked about native Hawaiian animals or birds in the area, he immediately mentions that "when I was a kid, there were a lot of bats here," and confirms that they can still be seen "fluttering around in the evening just before sunset." His description of the bats' distinctive flight pattern ("they flutter... like a big moth because they don't fly like a bird") demonstrates his observational knowledge of this endangered native species.

Additionally, Chang mentions that the area used to have numerous doves and quails, though the quail population has diminished significantly, which he attributes to predators and the fact that quail nest on the ground.

The wiliwili tree (*Erythrina sandwicensis*) is identified as an important native plant resource. Chang confirms that wiliwili "grows wild here" and notes that "if you got good rainfall, you'll start to see more young ones come up." He explains that the wood was traditionally used to make floats for nets, specifically for hukilau (a communal fishing method) floats and outrigger floats. This information connects the native flora directly to traditional fishing practices, demonstrating the integrated nature of terrestrial and marine resources in Hawaiian cultural practices.

The interview touches on land-based subsistence practices in Makena. Chang notes that among the 14 families that lived in the area during his youth, about six raised pigs for personal consumption, and many also raised chickens. His own father was "a big hog grazer" who at times had approximately 200 sows, with the total number of pigs sometimes reaching 700-800 or even 1,000. Chang mentions that before World War II, a delivery truck would come to sell vegetables, though this service stopped when the war began. These agricultural practices represent important aspects of the area's cultural landscape and food systems.

The interview reveals information about historical sites and settlement patterns. Chang states that "evidence of habitation is really sparse" once you move away from the shoreline, noting that more populated areas existed in Ulupalakua, Kula, and along parts of the shoreline. He attributes this settlement pattern primarily to water availability, explaining that "the water source was mostly close to the mountains." This observation provides context for understanding the archaeological record and traditional land use patterns in the area. Chang expresses skepticism about the significance of some identified archaeological sites, suggesting that "some of the archeology is overdone" and relating an anecdote about old cattle pens being misidentified as significant sites.

The interview addresses the changing nature of access to cultural resources. Chang notes that beaches that were once accessible primarily to locals are now heavily used by tourists and commercial operations. He expresses frustration about commercial activities that "take up all the parking that normal people will use" and states that "the beaches are actually overtaken by them." This concern about beach access represents a significant issue related to the continued practice of traditional activities and the maintenance of community connections to place.

Potential Impacts of the Project

Regarding potential impacts of the proposed Mākena Mauka Project, Chang expresses "mixed emotions." He notes that when he first returned to Maui after his retirement, locals

were allowed to use the golf courses at reasonable rates, but this practice has disappeared, with current golf fees around $200 per round compared to the $15 he used to pay. This change represents a shift from community accessibility to exclusivity that concerns him about future development. He laments that the area “has been privatized for five years now” and is “underused,” wishing for “a development that’s more mixed” rather than one designed exclusively for wealthy individuals.

Chang identifies several specific concerns about the proposed development’s impacts. He expresses disappointment that the development is aimed exclusively at “big money” buyers, creating “a specialty high price place for rich people.” He acknowledges the economic reality that “the property initially sold for so much that the developer can’t sell it for less,” but wishes for an approach to development that would include options for local residents. Chang suggests that “the locals should have an avenue to come to Makena, and it shouldn’t be priced like that,” proposing that developers should “give us 20 acres to run a Hawaiian community.”

Water management and runoff emerge as significant environmental concerns in the interview. Chang mentions that an earlier developer built “an eight-acre catchment to catch the water and let it slowly go into the ocean” to address the problem of heavy rainfall creating sudden runoff that muddies the ocean. He notes that the current developers have “a thousand acres, and he has three streams running through that thousand acres,” creating both responsibility and opportunity for proper water management. Chang expresses cautious optimism that the developers “are going to do something that will improve the runoff,” though he notes that previous mistakes, such as building “Honoiki Road right on top of an old stream bed” with only “a two-foot duck [duct]” as a substitute, have created ongoing problems.

The interview reveals concerns about the privatization of space and the loss of community character. Chang contrasts the close-knit, supportive community of his youth with the current trend toward gated communities and exclusive development. He expresses frustration that promises for community facilities often don’t materialize, noting that “top echelon heads keep changing” and “promises never stay true.” Chang mentions that there were plans for “a small shopping center” and community facilities in a particular area, but “they’re developing everything else, but they haven‘t talked about that yet.” This concern about broken promises suggests skepticism about developers’ commitments to community benefits.

Chang also expresses concern about the cumulative impacts of development and tourism on ocean resources. He notes that the beaches are “overpopulated, under-managed” and that “we’re not doing a very good job of replenishing” marine resources. He particularly identifies commercial beach activities as problematic, stating that “we get hurt more by

commercializing the beach than anything else" and describing how "kayaks, God's divers" occupy spaces that "normal people will use." This observation suggests that tourism management may be as significant a concern as development itself.

Despite these concerns, Chang acknowledges the inevitability of change and expresses a pragmatic approach to influencing development. He describes his philosophy as "I'd rather sit inside and have them listen to me" rather than opposing development entirely from the outside. He notes the importance of engaging with developers to encourage better practices, stating that his own insistence has led to improvements in runoff management plans. This approach represents a strategic response to development pressure that seeks to mitigate impacts rather than prevent change entirely.

The interview also touches on broader issues of housing affordability and community sustainability. Chang notes that "we're lacking some legislation to take care of our own people" and expresses concern about non-residents owning multiple properties while locals struggle to find housing. He reflects on the challenges faced by younger generations, stating, "I pity these kids that are my generation kids and their generation because I don't know what they're going to find" in terms of housing and employment opportunities on Maui. This perspective connects the specific development issues in Makena to island-wide concerns about sustainability and equity.

Throughout the interview, Chang provides a nuanced perspective on development that acknowledges both the need for change and the importance of preserving cultural resources and community access. While he expresses numerous concerns about the Mākena Mauka Project and similar developments, he also recognizes the potential for positive impacts if developers can be persuaded to incorporate community needs into their plans. His long history in the area provides valuable context for understanding both the historical significance of Makena's cultural resources and the complex challenges facing the community today.

5.4 Interview with Kalei Lu‘uwai

Interviewer: Matthew Sproat
Interviewee: Kalei Lu‘uwai

Summary

The interview with Kalei Lu‘uwai provides valuable insights into the cultural resources of Makena and the potential impacts of the proposed development project. He identifies marine resources, traditional fishing practices, archaeological sites, ranching infrastructure, and community relationships as key cultural resources in the area. His primary concerns about the project center on water management, including well drilling, runoff, and wastewater treatment; changes in beach access and use patterns; and the

transformation of community structure from reciprocal relationships to more transactional interactions. While acknowledging positive aspects of the developer's approach to cultural resource management and local hiring, Kalei ultimately questions whether the project aligns with cultural values and community needs. His perspective, informed by generational ties to the area and technical expertise as an engineer, offers important considerations for assessing the cultural impacts of the Mākena Mauka Project and developing appropriate mitigation measures.

Biography

Kalei Lu'uwai is a retired maintenance manager for Gracious City who previously worked for 34 years at the sugar mill. Kalei, who identifies as being from the Kukahiko family lineage, offers a perspective informed by his generational ties to Mākena and his experiences there as a child and young adult, particularly during visits to his grandparents' home. This interview illuminates the traditional landscape of Makena, customary practices that were once prevalent, and concerns about how modern development may affect both the cultural and natural resources of the area.

Kalei's connection to Makena is through his family's longstanding presence in the area. He explains that his family is part of the "ocean side of the Kukuhiko clan," with the Kukahiko family originating from Ulupalakua. This establishes his credentials as someone with lineal descendancy to the area, making his knowledge of cultural resources particularly relevant. While Kalei was born in Wailuku and did some traveling during his youth, including time in the South Seas and Honolulu, he frequently returned to Makena to stay with his grandparents during holidays and summers. These experiences grounded him in the traditional practices and environmental knowledge of the area, which he shares throughout the interview.

Makena of the Past

Kalei paints a vivid picture of Makena during his childhood, describing it as a rural area with "cattle guards, dust road, and only us." The infrastructure was minimal, with water lines coming from Ulupalakua that carried so much rust that residents had to place a Bull Durham tobacco bag on the water pipe to filter it. The limited water supply meant showers could only be taken during daylight hours when the water was warm enough. Telephone service was equally rudimentary, with a party line requiring users to wait until others had finished their calls before making their own. This description establishes the isolated, rustic character of traditional Makena before modern development transformed the area.

Cultural Resources and Traditional Practices

The ocean and its resources emerge as centrally important cultural resources in Kalei's account. He describes extensive fishing activities that were fundamental to subsistence in the area. His grandfather taught him fishing techniques from a young age, often taking

him fishing instead of having him work on building their house during the hot midday hours. Kalei mentions several traditional fishing methods practiced in Makena, including hukilau (a communal fishing technique using nets), paipai (fish netting), and tako (octopus fishing). The family also had a small boat that they used for fishing, catching kona crab. As he grew older and his father purchased larger boats, they began fishing at Kahoʻolawe, a practice he mentions they "still go Kahoʻolawe all the time," indicating the continuation of this cultural practice.

The maritime landscape Kalei describes is more complex than it might appear to visitors today. While acknowledging that parts of Makena's shoreline are sandy, he clarifies that it's not uniformly sandy but rather features "veins of sand that go out" amid areas of "sand rock." This mixed substrate supported diverse marine resources and fishing practices. Kalei also mentions that his grandfather engaged in moi fishing using nets, a practice that was once common in the area. These descriptions indicate the richness of marine resources that supported traditional subsistence practices and the intimate knowledge of the seascape held by residents.

Beyond fishing, Kalei describes cultural practices related to beach stewardship. He recalls that as children, they were required by his grandmother to "clean all the beaches first" before they could enjoy recreational activities. This involved raking away ʻopala (trash) left by visitors and burning it, as there were no garbage collection services at the time. They would also collect bottles along the roadsides. This practice reflects the cultural value of mālama ʻāina (caring for the land) and demonstrates how locals took responsibility for maintaining the coastal environment even as outsiders began to impact it.

The interview reveals information about cultural resources related to the cattle industry that once dominated the area. Kalei describes a "cow pen" near their house, explaining that this was a loading area where cattle were transferred from shore to ships. He notes that at Sandy Beach, to the right of their house on a round rock, there are still visible rust marks from chains used by whalers. The process involved anchoring offshore, sending a rope to the shore, and then using the rope to drag cattle by their horns out to the waiting boats. This infrastructure represents a significant historical and cultural resource related to the ranching era in Makena.

Kalei also mentions that aerial photographs of Makena show "all the old rock walls" that were constructed to "divert the cattle to the landing, to the cow pen." These rock walls represent important cultural landscape features that document the ranching history of the area. He notes that before the proliferation of kīawe trees, which he estimates occurred within the last 100 years, the upland areas were primarily "shrub land." This observation provides insight into vegetation changes that have occurred within living memory and

suggests that the current landscape of kīawe-dominated forest is relatively recent rather than a long-established ecosystem.

The interview identifies archaeological sites as significant cultural resources in the Makena area. Kalei states that “there’s a lot of sites up in that place,” specifically mentioning “house sites” and noting that “a lot of people used to live over there.” He attributes this settlement pattern to the presence of water, noting that “in the brackets, people get water.” This suggests that despite the arid appearance of the landscape, there were water sources that supported habitation in the past. Kalei stated that “I know it was a big community down there;” “big community" indicates that the archaeological record of habitation is likely more extensive than might be apparent from surface observations.

When asked about the likelihood of burials in the area, Kalei suggests that burial sites might be found in cave areas, noting, “if you get caved, you might get one burial.” However, he also speculates that ancient Hawaiians would have preferred to bury people in sandy areas rather than the rocky uplands because it would be “more easy” to dig in sand. This observation reflects traditional knowledge about burial practices and provides guidance for archaeological sensitivity during development. Kalei mentions that his son works for CJ [Elizares of Mākena Golf & Beach Club] on “site restoration and the replanting of native plants,” and that they occasionally find sites which they document but “don’t expose it because they don’t want other people finding it.” This suggests ongoing identification and management of archaeological resources in the area.

The interview touches briefly on changes in vegetation and the impact of introduced species. Kalei contrasts the current kīawe-dominated landscape with historical photographs showing fewer trees. He notes that as a child, he and his peers rarely ventured into the upland areas because “we never have slippers, we don’t have shoes” and the kīawe thorns made the area inaccessible. This kept their activities focused along the shoreline. This observation highlights how changing vegetation patterns have altered human use of the landscape and potentially obscured archaeological features. Joseph also mentions that deer are “really screwing things up” in the area, as they “eat the grass down to the nubs,” contributing to erosion and runoff issues during heavy rainfall.

Potential Impacts of the Project

Water resources emerge as a critical concern in Kalei’s discussion of potential project impacts. He identifies several water-related issues that could affect cultural resources. First, he expresses concern about the drilling of wells to supply the development, stating that this could divert water “that used to come up to the ocean.” Kalei explains that this could change the dynamics of the nearshore marine environment, affecting resources that depend on the freshwater input. He notes that the effects might not be immediately apparent but could manifest over “15, 20 years” as “it takes time for the water to progress

out." He emphasizes that "nobody's ever studied the long-term effects of drilling wells next to an arid land," highlighting a significant gap in environmental impact assessment.

Kalei also discusses concerns about runoff and sedimentation. He recalls that when the golf course was first built in the mid-1980s or early 1990s, a heavy rain event resulted in the entire bay being "filled out with mud for six months." While acknowledging that current regulations require more stringent mitigation measures, he notes that "you cannot stop a 100-year rain" and that the significant slopes in Makena will inevitably channel water to the ocean during extreme weather events. He observes that the current land cover of grazing lands contributes to this problem, particularly with deer reducing vegetation cover. These observations highlight the potential for development to exacerbate existing water quality issues that affect marine cultural resources.

A third water-related concern involves wastewater management. Kalei mentions that the development includes a sewage treatment plant and questions whether the effluent is treated to R1 standards (the highest level of wastewater treatment) and how it will be disposed of. He recommends that the effluent "should be potable" to minimize environmental impacts when it is returned to the land or used for irrigation. This concern reflects an understanding of how wastewater management can affect groundwater and eventually marine resources that are culturally significant.

The interview reveals concerns about impacts on community structure and access to cultural resources. Kalei states definitively that "it's going to be a gated community" because "discovery, that's all they build." This prediction raises issues about access to cultural sites and resources within the development area. He expresses skepticism about the developer's promises regarding affordable housing, questioning, "Who's going to afford the property tax?" even if the housing itself is subsidized. He notes that before securing ʻĀina Kūpuna status (a property tax relief program for long-term landowners), his family's property tax was "$30,000 a year," making it financially challenging to maintain their generational property despite their deep cultural connections to the place.

Kalei identifies changes in beach use patterns as a significant cultural impact. He recalls that in his youth, "only us was at Sandy, a little beach" where they would spend the entire day, only returning home for meals. The transformation of once-quiet beaches into crowded tourist destinations has altered traditional patterns of use. When asked about current fishing practices, Kalei responds, "we don't fish anymore," explaining that they occasionally "throw a pole in front of the house" but no longer engage in the more extensive fishing practices of the past. This change represents a significant loss of cultural practice directly attributable to development and increased population.

The interview also touches on the changing social dynamics in Makena. Kalei contrasts the traditional community where everyone knew and supported each other with the

anticipated influx of wealthy seasonal residents. He asks rhetorically, “You think it’ll be locals up there? Who can afford $10 million, one house?” and notes that for wealthy buyers, the homes will be a “second home for them. They don’t care. They come, enjoy, and they leave.” Meanwhile, “people that live here have to deal with all the consequences and all the issues that are created.” This observation speaks to the potential loss of community cohesion and the replacement of reciprocal social relationships with more transactional interactions.

Despite these concerns, Kalei acknowledges some positive aspects of the current development approach. He states that “discovery is very concerned about that. They got a really good outreach program. What they’re doing to preserve the native plants, the archeological sites is wonderful. And the reforestation is wonderful.” He appreciates that the developer has hired locals, including his own son and relatives of other community members, noting that “they smart those guys. They hire all the local kids. Their parents are not going to get too out of hand.” This suggests a strategic approach by the developer to build community relationships while proceeding with their plans.

Mitigation Measures and Recommendations

When asked for recommendations should the project proceed, Kalei reiterates the importance of water management, stating that developers need to “watch the water. What they’re drawing as a resource that they’re going to draw and what they do with it.” He emphasizes again that “their effluent should be potable” to minimize environmental impacts. Regarding affordable housing, he suggests that any such program should prioritize “lineal descendants,” stating that “they could help the linear descendants to live in the affordable housing.” This suggestion reflects a desire to maintain cultural continuity in the area by ensuring that families with historical ties can remain present.

Throughout the interview, Kalei’s perspective is pragmatic but concerned. When asked directly if the project is pono (righteous or proper), he responds, “I don’t think that’s pono, personally,” but acknowledges the economic realities driving development. He questions whether “Maui need 300 more luxury homes” but recognizes that the developers are “about making money.” This balanced perspective recognizes both the cultural impacts of the proposed development and the economic forces that make it difficult to prevent.

5.5 Interview with Kealahou Alika

Interviewer: Matthew Sproat
Interviewee: Kealahou Clifford Alika

The interview conducted by Matthew Sproat with Kealahou Clifford Alika provides significant insights into the cultural resources of Mākena and the potential impacts of the proposed Mākena Mauka Project. Alika, a retired United Church of Christ minister who

served at Keawalaʻi Congregational Church in Mākena from February 1991 until February 2020, offers a unique perspective that bridges traditional Hawaiian cultural values and Christian religious practices. His experiences at the church, which he describes as the one physical structure that remains is "the only thing left in Mākena from the early years," position him as a valuable informant on the communityʻs cultural resources and the changes he has witnessed over time.

Born in Kealakekua Hospital and raised in Keauhou Mauka on the Island of Hawaii, Kealahou draws parallels between South Maui and Kona, noting similarities in environment, resources, and cultural practices. He observes that "thereʻs something about South Maui thatʻs like Kona," particularly regarding the significance of fishing as a cultural practice. His childhood memory included days spent at Keauhou Bay. His maternal grandfather owned property upon which a lhouse had been built years earlier. The house had an outdoor concrete well with a water catchment system that was a defining characteristic of life in the area.

The area was surrounded by land owned by Bishop Estate. When the estate prepared plans to build a hotel, golf course and condominiums, long-time local residents and land owners were essentially compelled to sell their properties or accept a land exchange.

Kealahou's memories of the "beach" house reminded him of the conditions in early Mākena. This connection between the two areas, Kealahou and Mākena, informs his understanding of Mākena's cultural landscape and traditional practices.

The interview identifies Keawalaʻi Congregational Church itself as a significant cultural resource in Mākena. Founded in 1832, the church represents the intersection of Native Hawaiian culture and introduced Christian beliefs. Kealahou explains that while other historical features of Mākena—including Changʻs Store, a post office, and a school near Puʻu Ōlaʻi—have disappeared, the church remains as a tangible connection to the communityʻs past. This historical continuity makes the church not only a religious institution but also a repository of community memory and cultural practices. Alika shares an interesting detail about early church offerings, noting that historical records show contributions of "kaʻau opelu" (Hawaiian mackerel scad fish) rather than money, illustrating how traditional subsistence practices were integrated into the new religious context.

Kealahou discusses his efforts to harmonize Hawaiian cultural practices with Christian worship at the church, addressing the tensions between "ancestral knowledge and then what came with the missionaries." He recounts how he encouraged the incorporation of hula into church services despite initial resistance based on missionary-imposed taboos. When women were hesitant to dance on the altar, he encouraged them, saying "just dance," after which hula became accepted in the church without controversy. This integration of traditional Hawaiian cultural expressions into Christian worship represents an important aspect of cultural preservation and adaptation in the face of historical prohibitions.

The interview reveals the church's role as a community center and its function in maintaining social connections across generations and between resident groups. Kealahou describes how he performed marriages as well as memorial services for local families, baptized their children when they returned to visit, blessed their homes and maintained relationships even after families moved away. He notes that even now, families "still send Christmas cards" to the church, demonstrating the ongoing connections fostered by this cultural institution. This function of the church as a hub for community relationships represents a significant cultural resource that extends beyond religious practice to encompass social cohesion and cultural continuity.

The changing composition of the church reflects broader demographic shifts in Mākena. Kealahou explains that when he first arrived, the congregation included long-established local families like the Kawekane, DeLima, Poepoe, Kauai, Kapohakimohewa, Kanoho, Fernandez, Luʻuwai, Chang, and other families, who were primarily "makua or kupuna" (parents or elders). Over time, however, many of these Hawaiian family members died. Others, especially their mo'opuna moved away. The church began to include malihini residents, particularly those who came to Maui in an earlier wave of development, such as the families associated with McCoy Studio Theater and the Shaefer International Gallery at the Maui Arts & Cultural Center in Kahului. Others were residents of developments at Wailea Point and Mākena Surf

Kealahou distinguishes between some of the earlier malihini residents who "supported the church" and more importantly became part of the community, and newer arrivals associated with more recent developments. He is concerned that those who are now "coming in" see their presence as a real estate transaction "not as an investment in becoming part of the community."

The interview identifies fishing grounds and marine resources as essential cultural resources that have already been significantly impacted by development. Kealahou recalls childhood experiences fishing with bamboo poles, when children could "catch right away" and believe they were "the greatest fishermen around." He mentions specific marine resources like ʻalaʻihi (a red fish with many bones that his mother considered "junk"), upāpalu (a preferred fish species), and wana (sea urchin) that his mother would collect and prepare. These references to specific marine species and their cultural uses illustrate the detailed ecological knowledge embedded in traditional subsistence practices. Kealahou notes that these resources have diminished over time, stating that when he speaks with longtime Mākena residents, they report "no more limu, "no more the limu, no more the fish," attributing these changes to "development run off." This observation connects directly to concerns about how the proposed Mākena Mauka Project might further impact marine cultural resources.

The interview touches on archaeological resources in the area, particularly in relation to the church. Kealahou shares that during renovation work to address deteriorating coral mortar in the church's walls, an archaeologist noted that the rocks used to build the church may have come from a nearby heiau. Rather than viewing this as a desecration or appropriation, Kealahou offers a nuanced perspective that acknowledges both the

Hawaiian and Christian aspects of this material connection: "So it‘s not one over the other. It‘s that they‘re together now and it‘s okay." This insight reflects his approach to cultural resources as dynamic and interconnected rather than rigidly separated, suggesting that contemporary management of cultural resources should similarly recognize these complexities.

Kealahou identifies community itself as perhaps the most significant cultural resource threatened by development. He explains that traditional communities in Mākena were characterized by mutual knowledge and trust: "in the old days, everybody know everybody. No need lock, nothing. You go Mākena. You just go to house, right? Just go inside." In contrast, he expresses concern about gated communities being developed in the area, stating "it‘s telling us you don‘t belong in here. It‘s segregation." This observation highlights how physical barriers can reinforce social divisions and undermine the communal relationships that characterized traditional Hawaiian society.

The interview reveals Kealahou‘s perspective on the differing relationships to place demonstrated by various groups in Mākena. He draws a distinction between "being in Maui physically and Maui being in you," deeply concerned that many new property owners lack a deep connection to the place. He quotes the lyrics to the song “The Beauty of Mauna Kea” in which the composer recalls when someone moves away from Hawai‘i, a memory of a particular place will remain. “Now to any land you go she will be with you. If you love her like I do – O Mauna Kea.” The same could be said for Mākena.

Kealahou questions whether new residents in developments like Mākena Mauka will develop this kind of relationship or if “it’s only extraction… only money.” This cultural understanding of reciprocal relationships with place represents an important Hawaiian value system that informs how impacts to cultural resources are conceptualized and evaluated.

Regarding potential impacts of the Mākena Mauka Project on cultural resources, Kealahou suggests that many negative impacts on marine resources have "already happened." When asked if the project would have similar effects to what he witnessed in Keauhou, where development resulted in siltation that damaged coral reefs and fishing grounds, he responds that "the question isn‘t, is it going to happen? For me, the question is, how are they going to restore it?" This perspective shifts the focus from prevention to restoration and accountability, recognizing the cumulative impacts of development in the area over time.

Kealahou expresses concern about the increase in visitor numbers at Oneloa, One‘uli and Mākena landing, noting that he asked CJ Elizares, Director of ‘Ōiwi Resources & Stewardship at Mākena Golf & Beach Resort, about boat traffic. He learned from CJ that as many as “400 people" can be in the water offshore of Mākena Landing when tour boats arrive each morning from Molokini. This level of use also includes scuba divers and kayakers and represents a significant change from the traditional pattern of beach use and access, potentially affecting both the physical environment and cultural practices associated with these coastal areas. While not directly caused by the Mākena Mauka

Project, this existing pressure on beach resources provides context for understanding how additional development might compound these impacts.

The interview touches on how development changes the social dynamics of communities. Kealahou expresses concern that developments like Mākena Mauka create "a community that‘s artificial... not relational with neighbors." He notes that contemporary development in Hawaii "is not about living in a place and raising a family and growing up in a place," but rather about investment properties and second homes. This shift undermines the intergenerational connections and place-based knowledge that characterize traditional Hawaiian communities, representing a significant cultural impact beyond physical changes to the landscape.

Regarding the integration of Hawaiian values and practices within development contexts, Kealahou discusses the challenges of cultural education and engagement. He questions "how do we teach others? And do they want to learn? Or is it only extraction?" This raises important considerations about whether and how cultural resources can be protected when new residents may lack interest in or understanding of their significance. He suggests that creating opportunities for cultural engagement, such as through the recently completely construction of the hale pili (traditional Hawaiian structure) that was made possible with the kōkua of young adults who are lineal descendants of Mākena as well as new residents to the area might provide a mechanism for building relationships and cultural understanding among new residents.

When asked for recommendations should the project proceed, Kealahou emphasizes the importance of governance structures, particularly the Homeowners Association (HOA). He notes that while developers "can walk away" after the project is completed, the HOA will have ongoing influence over how the community engages with cultural resources and practices. This observation highlights the importance of incorporating cultural values and commitments into the institutional frameworks that will govern the development after construction is complete, rather than relying solely on the initial developer’s intentions.

Kealahou specifically recommends that someone like CJ Elizares, who manages ‘Ōiwi Resources and Stewardship and the hale pili, should maintain a role in the development. He praises CJ‘s knowledge of native plants and cultural practices, stating "he carries that knowledge" that connects care for the land with community well-being. This recommendation reflects the understanding that cultural resources require ongoing stewardship by individuals with appropriate knowledge and relationships, rather than simply being "preserved" as static objects. He also supports the development of communal spaces like an amphitheater where people could gather for music or meetings, suggesting that such spaces could foster community connections that might otherwise be lost in a development-oriented toward private property and exclusivity.

Throughout the interview, Kealahou’s perspective on cultural resources reflects his unique position bridging Hawaiian cultural values and Christian religious practices. Rather than treating these as opposed systems, he articulates a nuanced approach that seeks integration and mutual respect. This approach informs his assessment of how

developments like Mākena Mauka might impact cultural resources—not simply by altering physical features of the landscape, but by potentially undermining the relationships, practices, and community structures that give meaning to those features.

The interview reveals several key cultural resources in Mākena that could be affected by the proposed development: the church as a historical structure and community institution; marine resources that support traditional fishing and gathering practices; the traditional community structure characterized by mutual support and open access; and the cultural knowledge and practices that connect residents to the place through reciprocal relationships. Kealahou's insights suggest that impacts to these resources cannot be adequately mitigated through physical preservation alone, but require attention to social relationships, governance structures, and opportunities for cultural engagement and education.

Kealahou's recommendations for the Mākena Mauka Project emphasize the importance of institutional frameworks that center Hawaiian cultural values and knowledge, specifically highlighting the role of cultural practitioners like CJ Elizares in ongoing management decisions. He suggests that community spaces and cultural programs could help foster the relationships necessary for meaningful stewardship of cultural resources, while expressing concern that conventional development approaches centered on private property and exclusivity may undermine these efforts. His perspective offers important considerations for how cultural impact assessments might move beyond cataloging physical resources to address the living cultural systems that give them meaning and ensure their continuity across generations.

In conclusion, the interview with Kealahou Clifford Alika provides valuable insights into the cultural resources of Mākena and potential impacts from the proposed Mākena Mauka Project. His expertise as the former minister of Keawala'i Congregational Church, combined with his thoughtful navigation of both Hawaiian and Christian traditions, offers a nuanced perspective on how development affects not only physical cultural resources but also the community relationships and cultural practices that sustain them. His recommendations emphasize the importance of centering Hawaiian cultural knowledge and creating institutional frameworks that support ongoing community engagement with cultural resources, suggesting that meaningful mitigation of cultural impacts requires attention to governance structures, community spaces, and opportunities for relationship-building across diverse resident groups.

5.6 Interview with CJ Elizares

Interviewer: Matthew Sproat
Interviewee: CJ Elizares

Summary

The interview with CJ Elizares reveals the complex interplay between cultural resources, modern development, and efforts to maintain traditional practices in a changing landscape. While expressing concerns about broader patterns of development and

tourism, CJ indicated that the current project has the potential to be implemented with greater cultural sensitivity than previous developments in the area. He emphasized that maintaining Makena's cultural identity requires keeping local families connected to the area and ensuring that newcomers understand they are entering a place with deep cultural significance that extends beyond property boundaries. His perspective highlights the importance of considering not just physical and cultural sites but also the living cultural practices and knowledge systems that give them meaning.

Biography

CJ Elizares serves as the ʻŌiwi Resources and Stewardship Director for Mākena Golf & Beach Club. He provided extensive insights into the rich cultural resources and practices of the Makena/Honuaʻula region.

Cultural Resources and Traditional Practices

The marine environment represents one of the area's most significant cultural resources, with generations of Hawaiian families having relied on fishing practices centered around akule (bigeye scad), kala, and manini. Traditional fishing methods, particularly surround net techniques for akule, were highly specialized and knowledge-based, with fishermen knowing precisely when and where to harvest specific species based on seasonal patterns. CJ noted that these practices continue but have been altered by modern development and increased tourism, with akule now remaining further offshore except during periods of reduced human activity, as observed during COVID. The gathering of limu, especially limu kala, constitutes another important cultural practice that continues today, though primarily for ceremonial purposes rather than as a regular food source as in previous generations.

The hydrological resources of the area form another crucial cultural element, with underground freshwater that emerges through submarine springs creating unique microclimates that support traditional settlements. CJ identified three main springs in the bay that nurture distinctive marine ecosystems and remain visible to those who know where to look. These freshwater resources historically dictated settlement patterns, with cultural sites concentrated around water sources. The freshwater interfaces created a TEK system, establishing relationships between mauka communities with agricultural resources and makai communities with access to water and marine resources. These traditional exchange networks shaped cultural practices and social relationships that influenced the development of the entire moku.

Archaeological and cultural sites represent an extensive cultural resource, with CJ describing "kīpuka" areas containing up to 27 house sites along with their associated agricultural terraces. These sites, many dating back approximately 400 years, demonstrate sophisticated indigenous knowledge of the landscape, including water

catchment systems and terraced gardens designed to maximize limited rainfall. He indicated that these sites are scattered throughout the property, often appearing unexpectedly amid areas that have been disturbed by modern or historical land uses. CJ expressed concern about preserving these sites while acknowledging the developers' efforts to work with cultural practitioners to identify and protect significant areas. Traditional pathways, including those believed to be used by night marchers, cross through the project area, representing another cultural resource requiring respect and protection.

The botanical resources of the area constitute a significant cultural element that has undergone dramatic changes. CJ described a substantial Wiliwili forest that persists despite historical disruptions and serves multiple cultural functions, including providing wood for traditional floating devices used in hukilau fishing, which CJ helped revive after a 30-year lapse. Historical vegetation included Kalo, wiliwili, lama, ʻiliahi (sandalwood), koa, koaiʻa, koko, kopiko, possibly aiea, kauila, ʻohia, and various native grasses, though many have been lost due to the sandalwood trade, ranching, and modern development. Pili grass, traditionally used for thatching dwellings, is now rare in the area except where CJ has personally planted it. The interview revealed the cultural significance of these plants not just as ecological features but as resources intimately connected to traditional practices, material culture, and Hawaiian identity.

Native wildlife, particularly birds, represent important cultural resources with both practical and spiritual significance. CJ detailed the seasonal presence of ʻiwa birds (frigate birds) that use the area for training their young to ride thermal currents, Hawaiian hoary bats most visible in winter months, pueo (Hawaiian owl), aeʻo (Hawaiian stilt), kōloa (Hawaiian duck), nēnē, and ʻio (Hawaiian hawk). These species are significant in traditional cultural understandings of the landscape and feature in moʻolelo that connect the area to broader Hawaiian cosmology. Interestingly, CJ noted that golf course water features have unexpectedly created valuable habitats for some native birds, presenting a complex picture of how modern development can sometimes create unintended beneficial spaces for culturally significant species.

Traditional moʻolelo about the land constitute a critical cultural resource that gives meaning to the physical landscape. CJ shared stories connecting Puʻu Ōlaʻi and Molokini to Pele, describing how these landforms represent the body parts of a moʻo that was cut by Pele. He explained how these stories relate to observable natural phenomena such as cloud movements and rain patterns, demonstrating the sophisticated way traditional knowledge encoded environmental information within cultural narratives. The continued transmission of these stories represents an important cultural practice that helps maintain Hawaiian connections to place across generations. CJ expressed concern that

development could disrupt the contextual landscape within which these stories make sense.

Potential Impacts of the Project

Regarding impacts on cultural practices, CJ provided a nuanced perspective, noting that the most significant disruptions come not necessarily from the current development but from increased tourism, commercial operators, and changing demographics. Access to traditional fishing grounds and beaches has become more difficult due to crowds and what CJ described as "nīele" (nosy) tourists who question local families' presence at beaches that were once gathering places for Hawaiian families. These social pressures have pushed some cultural practices "into the shadows," with practitioners becoming reluctant to share knowledge of special gathering places to avoid them becoming commodified for tourism. The psychological impact of displacement was evident in CJ's description of family members who stay away from ancestral areas due to past trauma from development and who "cry at home and no say nothing."

Property taxes represent another significant threat to cultural practices, as increased land values driven by luxury development make it increasingly difficult for Hawaiian families to retain ancestral lands. CJ suggested that the county implement special tax rates for lineal descendants and kamaʻāina to help address this issue, emphasizing that maintaining cultural connections requires the physical presence of cultural practitioners. Having deliberated for three years before deciding to work with the developers, CJ now sees his role as helping to mitigate impacts by ensuring protection of native species, advocating for culturally appropriate landscaping, and designing lighting to minimize impacts on native wildlife. He expressed hope that development could potentially improve some aspects of the cultural landscape through native plant restoration and the creation of protected areas for culturally significant species.

5.7 Interview with Leahi Hall

Interviewer: Matthew Sproat
Interviewee: Leahi Hall

Summary

The interview with Leahi Hall provides a nuanced view of the potential impacts of the Mākena Mauka Project on cultural resources, suggesting that with proper consultation of cultural and lineal descendants and full compliance with SHPD protocols, integration of knowledge, and empowerment of cultural practitioners in decision-making processes, the project could potentially contribute to the restoration of both ecological and cultural relationships in Makena. Hall's perspective highlights the inseparable connection between natural and cultural resources in the Hawaiian worldview and emphasizes that preserving cultural resources requires attention to relationships and community structures as much as to physical sites and species.

Biography

Leahi Hall is the Community Engagement Director at Mākena Golf & Beach Club. She provides valuable insights into the cultural landscape of Makena, Hawai'i, and discusses potential impacts of the Mākena Mauka Project on the area's cultural resources. Hall, who was born and raised on Maui and spent considerable time in Makena with her parents who are active members of Hui Alanui o Makena, offers a perspective deeply rooted in both personal experience and cultural understanding of the area. Hui Alanui o Makena Hall's connection to Makena began through her parents' involvement in Hui Alanui o Makena, a community movement that formed in Makena following the Hui Alaloa movement on Moloka'i. A primary goal of the group was to keep the old road, the Alaloa, open in front of what would later become the Maui Prince Hotel. This led to a settlement agreement with Seibu, signed by twelve individuals, ten of whom were native to Honua'ula. Hall recalls memories of significant cultural figures from the area, including Auntie Alice Kuloloio, Uncle Eddie Chang Sr and Auntie Harriet, Kahu Kawika Ka'alakea, and Uncle Rene Sylva. Her experiences as a child accompanying her parents to various community activities and meetings fostered her understanding and connection to the place.

Hui Alanui o Makena

Hall's connection to Makena began through her parents' involvement in Hui Alanui o Makena, a community movement that formed following the Hui Alanui movement on Moloka'i. The group's primary goal was to keep the old road, the Alanui, open in front of what would later become the Maui Prince Hotel. This led to a settlement agreement with Seibu, signed by eleven individuals, nine of whom were native to Honua'ula. Hall recalls memories of significant cultural figures from the area, including Auntie Alice Kuloloio, Uncle Eddie Chang Sr, Auntie Harriet, Kahu Kawika Ka'alakea, and Uncle Rene Sylva. Her experiences as a child accompanying her parents to various community activities and meetings fostered her understanding and connection to the place.

Hall emphasizes the importance of the Hawaiian movement's focus on "activation," where people gather to rebalance themselves and the place in response to changes or threats to cultural sites. She describes how the Hui Alanui o Makena movement maintains multi-generational spaces, connection to Honua'ula, and preserves the role of kūpuna and native and locally significant plants in the community. This contrasts with the current situation where younger generations often work in the area but are too exhausted to participate in cultural practices or observations that traditionally occur during times like sunrise and sunset. Hall expresses concern that without comfortable living spaces for families, the traditional cultural relationships to the land and between generations cannot flourish.

Cultural Resources and Traditional Practices

The interview highlights the significance of community as a cultural resource. Hall explains communal nature of Hawaii's lifeways, and Makena being a communal area. When asked about changes she has observed in Makena from her childhood to present day, Hall notes a more recent historical reduction in panini (prickly pear) plants but also points out positive developments, such as the return of certain native plants. She

mentions that through the efforts of the Mākena ʻŌiwi Resources and Stewardship (ORS) team led by CJ [Elizares], native plants like Nehe and Maiapilo are returning to the area. This illustrates how cultural practitioners who are present on the land can recognize and nurture the "expression of the spirit of the place."

Hall identifies several native Hawaiian flora that should be considered cultural resources within the project area, including Wiliwili, Iliahi (sandalwood), Maiapilo, Nehe, and Akia. She emphasizes that beyond the plants themselves, the relationship between the people and these resources would benefit from nurturance. She mentions fishing families who have particular relationships to different types of fishing and specific spots used for triangulation that are important to maintain. This underscores the interconnected nature of cultural resources that extends beyond physical sites to include practices and relationships.

A significant concern raised by Hall is the potential impact of development on nearshore resources. She warns that if proper precautions are not taken, particularly regarding drainage and integration with flora and fauna considerations, the project could negatively impact the marine ecosystem. This would subsequently affect traditional fishing practices. Hall stresses the importance of engaging knowledgeable consultants who understand the specific environment of Mākena, not just general subject matter experts. She advocates for an integrated team approach and for empowering people who know the space well to coordinate and influence final decisions about mitigation measures.

The interview delves into traditional stories and cultural features of the area. Hall references the story of Inaina who becomes Puʻu Ōlaʻi, described as a moʻo in the tale. She mentions moʻolelo about water movement in the space, including intermittent springs near the shoreline. She discusses the Naulu wind current that carries clouds from Ulupalakua to Kahoʻolawe and how the ORS farm is designed to reflect this wind pattern, embodying the Hawaiian practice of creating resonance with natural phenomena. Hall also mentions traditional shark relationships in the area, including the shark ~~of~~ Kaʻalamikihau belonging to a particular Makena family and another at Palauea Beach belonging to a particular family.

Throughout the interview, Hall emphasizes that cultural resources are not just about physical sites or species but about relationships – between people and place, between generations, and within the ecosystem. She expresses hope that the project will contribute to the return of native species and Native Hawaiian people to Makena, allowing for the continuation and revitalization of cultural practices and relationships.

Potential Impacts of the Project

Regarding potential project impacts on cultural resources and practices, Hall expresses concern about the wells needed for the project. She explains that if the project uses wells without ensuring that the aquifer is recharged, it will impact the ecosystem and people's ability to practice traditional activities because the nearshore water won't percolate up,

affecting seaweed growth and the foundational level of the marine ecosystem. She also emphasizes the importance of careful decision-making regarding archaeological sites.

Mitigation Measures and Recommendations

Hall recommends that if archaeological evidence (iwi) is discovered during development, the project should comply with the SHPD process but also select archaeologists who are approved by the Cultural Focus Group, comprised of descendants and knowledgeable individuals of the area. She stresses that site-specific decisions should be made by people who understand how the Makena ecosystem is interconnected, not by those unfamiliar with the area's cultural and environmental complexities.

A recurring theme in Hall's interview is the importance of empowering the right people to make decisions about natural and cultural resources. She specifically mentions CJ and the ORS team as knowledgeable individuals who should be involved in decision-making processes. However, she worries that these individuals are becoming stressed and overworked because they are not adequately resourced to maintain both their cultural responsibilities and healthy family relationships.

Hall advocates for creating spaces where Native Hawaiian families can return to live in Makena. She envisions housing that would support multi-generational living, allowing kupuna and keiki to be together and providing the community support that families need. She suggests that such housing should be positioned to allow residents to observe traditional natural phenomena like sunrise and sunset, enabling them to continue cultural practices of observation. While acknowledging that workforce housing is planned for the area (60-100 units), she expresses concern that these homes need to be appealing and comfortable for families to want to move there.

The interview reveals Hall's deep concern for maintaining the balance between environmental protection and community well-being. She states that the land reflects the state of the people, and if solutions only address natural resources without considering human relationships, the cultural equation remains unsolved. Hall's perspective emphasizes that a culturally sensitive approach to development must consider both the preservation of native flora and fauna and the nurturing of human communities and their relationships to these resources.

In her closing remarks, Hall expresses gratitude for the kupuna of Makena who welcomed her mother and father . She voices concern about the current imbalance where primarily elderly residents remain in Makena, with younger generations unable to live there. She emphasizes the importance of finding ways to bring younger generations back to the area in a way that works for them, so they don't feel isolated while living and working in Makena.

(This area intentionally left blank.)

6.0 Traditional or Customary Practices Historically in the Study Area and Surrounding Area

This section is not intended to be a comprehensive list of all the practices that historically or contemporaneously occur in the project area, but instead is meant to show the range of traditional or customary practices that took place in the larger geographic extent. Many of these practices may not have taken place within the project area, although they may actively occur within the larger ahupuaʻa or within the moku of Honuaʻula.

6.1 Moʻolelo

There are moʻolelo about Honuaʻula and the geographic extent provided in **Sections 3.2 (Traditional Period)** and in **Section 4.0 (Cultural Resources)**.

6.1.1 Moʻo Traditions

In Hawaiian culture, moʻo serve as powerful bridges between the spiritual realm and the natural world. These divine guardians have profoundly shaped moʻolelo, documenting and preserving knowledge about the islands' natural landscapes through generations of oral storytelling.

Moʻo are typically depicted as powerful, shapeshifting beings that can appear as enormous lizards or beautiful women. They primarily inhabit freshwater environments like streams, springs, and fishponds, acting as fierce protectors of these precious resources. Through stories about these deities, Hawaiians have maintained detailed ecological knowledge and cultural connections to specific places.

Native Hawaiian scholar Marie Alohalani Brown (2022) explains:

> …the fearsome and fascinating Hawaiian gods known as moʻo who embody the life-giving and death-dealing properties of water, the element with which they are associated. Moʻo are not ocean dwellers. Instead, they live primarily in or near bodies of fresh water. As a class of deities, they vary greatly in size – as huge as mountain or as tiny as a house gecko. Many moʻo have alternate forms. Predominately female, those moʻo who masquerade as humans are often described as stunningly beautiful. Tradition holds that when you come across a body of fresh water in a secluded area and everything is eerily still, you should not linger for you have stumbled across the home of a moʻo. When the plants are yellowed and the water covered with a greenish-yellow froth, the moʻo is at home. (p. 3)

Brown (2022) also describes the specificity with which identifiable moʻo were associated with certain locations:

> Not withstanding the fact that moʻo akua are akua wai, there is no evidence in the extensive archive of Hawaiian belief narratives and historical treatises to support the idea that the majority of our ancestors believed that this class of deities, *as a whole*, could transform into water. That said, a few moʻo do have a water-related form such as fog, mist, a rainbow, a kind of rain, or the power to control clouds or water. As a rule, their relationship with water is most evidence in terms of where they live. Specifically, moʻo akua are generally associated with specific bodies of water or damp places and attributed with district dispositions that tend to parallel these locations. Thus, to better understand the ways that moʻo embody water, we should consider the physical attributes and cultural significance of their watery abodes. (p. 45, emphasis in original)

Numerous interviewees mentioned the importance of moʻo traditions to Mākena. One of the most striking examples in the tradition of moʻo is the moʻolelo of Puʻuoinaina, a massive moʻo whose body once stretched between the islands of Kahoʻolawe and Maui. Some reference the name of the moʻo in this area as Inaina, Brown identifies the moʻo as Puʻuoinaina. According to the tradition, this enormous deity created a physical bridge between the two islands until a fateful encounter with the volcano goddess Pele. In her wrath, Pele cut Puʻuoinaina in half, separating the islands and creating the channel known as ʻAlalākeiki. The severed portions of Puʻuoinaina's body transformed into prominent landforms still visible today – some say the head became Puʻu Koaʻe on Kahoʻolawe while the tail formed Puʻuōlaʻi near Mākena, Maui. Brown (2022) provides a variation on this:

> When Puʻuoinaina took Pele's lover, Lohiʻau, as her own [lover], Pele was furious. One day, while Puʻuoinaina was sleeping in her moʻo form, which stretched from Kahoʻolawe to Makena Point on Maui, Pele cut her in half. The hill known as Mākena Point on Maui is the remnant of her tail, and Moʻokini is her head. (p. 110)

This dramatic narrative explains not only the creation of the channel between islands but also documents specific geographical features and their relationship to each other, embedding geological knowledge within a memorable story.

Similarly, as previously discussed in this assessment, the famous moʻo Kihawahine, deified daughter of Maui chief Piʻilani, became the guardian of numerous fishponds and waterways throughout Maui. Her moʻolelo catalogs these water sources, effectively creating a cultural map of critical freshwater systems. These stories teach listeners about proper resource management and the consequences of disrespecting these sacred places.

Beyond their geographical significance, moʻo moʻolelo establish ethical relationships with the natural world. These stories emphasize kuleana (responsibility) toward natural resources by showing how moʻo reward respectful behavior and punish exploitation or

waste. When people honor water sources protected by moʻo, the narratives explain, they receive abundance; when they disrespect these places, consequences follow swiftly.

What makes these moʻolelo so effective as environmental documentation is their emotional resonance. By anthropomorphizing natural features through moʻo characters with personalities, desires, and histories, Hawaiian storytellers created memorable systems for transmitting biocultural knowledge. The story of Puʻuoinaina's bisection does not just explain the channel between Maui and Kahoʻolawe—it captures the dynamic geological processes that shaped the Hawaiian archipelago through a dramatic narrative of conflict between powerful deities.

Today, these traditional moʻolelo continue to inform cultural and environmental restoration efforts throughout Hawaiʻi. As communities work to protect wahi pana, moʻo narratives provide both spiritual motivation and practical guidance about natural systems. The recounting of these moʻolelo by area descendants in the ethnographic data demonstrates the important perpetuation of this tradition in Makena.

6.2 Habitation

The history of habitation in Makena is deeply intertwined with the broader history of the Honuaʻula moku. This region, characterized by its arid landscapes and proximity to the ocean, played a significant role in the settlement patterns and subsistence strategies of Native Hawaiians for centuries. Archaeological and historical records indicate that Kaʻeo and Makena were once thriving centers of Hawaiian life, featuring residential complexes, agricultural systems, and religious sites that reflected the cultural and environmental adaptations of their inhabitants.

6.2.1 Early Hawaiian Settlement and Land Use

The earliest recorded descriptions of habitation in Makena and Kaʻeo suggest that the region was occupied by native Hawaiian communities who practiced a blend of coastal and upland subsistence activities. The presence of extensive habitation sites, including house platforms, walls, and agricultural terraces, indicates that Native Hawaiians lived in these areas for generations, relying on both the land and the sea for sustenance.

Hawaiians lived extensively throughout the islands. Handy et al. (1972) identify how different kānaka and their ʻohana lived in accordance with what the authors termed "occupational contrasts" (p. 286), meaning that based on occupation (i.e., planter or fisherman, etc.), habitation systems differed. Handy et al. (1972) explain:

> The typical homestead or *kauhale*… consisted of the sleeping or common house, the men's house, women's eating house, and storehouse, and generally stood in

> relative isolation in dispersed communities. It was only when topography or the physical character of an area required close proximity of homes that villages exist. There was no term for village. Kauhale meant homestead, and when there were a number of kauhale close together the same term was used. The old Hawaiians, in other words, had no conception of village or town as a corporate social entity. The terrain and the subsistence economy naturally created the dispersed community of scattered homesteads. (p. 284)

The traditional Hawaiian home was known as a hale, which was a simple structure made of natural materials, such as wood, thatch, and lava rocks. The hale was typically rectangular in shape, with a sloping roof that was thatched with palm fronds or other accessible vegetation. The walls were made of woven mats or a framework of wooden poles covered with woven coconut leaves or bark. The floor was typically made of packed dirt or crushed coral.

6.2.2 Agricultural Practices and Habitation

In addition to traditional farming, the residents of Makena engaged in agroforestry, incorporating tree crops such as hala (*Pandanus tectorius*), niu (coconut), and wiliwili into their subsistence strategies. These trees not only provided food, but also served important cultural and practical functions, supplying materials for canoe building, cordage, and clothing. Agricultural practices are further discussed in **Section 6.4 (Farming)**.

6.2.3 Changes in Land Tenure and Residency

Under the Māhele, large portions of Makena were awarded to aliʻi and government officials, while some lands were made available to commoners through the Kuleana Act of 1850. By the late 19th century, ʻUlupalakua Ranch had acquired significant portions of Kaʻeo, shifting land use from traditional Hawaiian agriculture to cattle grazing. This transition had profound effects on the landscape, contributing to deforestation, soil erosion, and the decline of native plant species. The introduction of invasive species such as kīawe further altered the environment, making it more difficult for native flora and fauna to thrive.

6.2.4 Contemporary Preservation Efforts

The 20th century saw further changes in habitation patterns, with many Native Hawaiian families leaving the area due to economic pressures and limited access to land, which often resulted from histories of settler colonialism that impacted the islands. The development of tourism and real estate in the latter half of the century further transformed Makena, as resorts and luxury homes replaced traditional fishing villages and agricultural lands.

Despite these changes, efforts to preserve and revitalize the cultural heritage of Mākena have gained momentum in recent years. Community organizations, cultural practitioners, and researchers have worked to document historical sites, protect sacred places, and restore traditional land management practices. Programs aimed at reintroducing native plants, preserving archaeological sites, and educating the public about the history of the region are helping to reconnect people with the land.

Today, Makena remains an area of cultural and historical significance, reflecting the resilience of the Hawaiian people and their enduring connection to the ʻāina. While modernization and development continue to shape the landscape, efforts to honor and protect the rich history of habitation in the region ensure that the stories of past generations are not forgotten.

6.3 Travel and Trail Usage

The ability to travel was essential to Hawaiians and enabled their sustainability. Travel, and the freedom to move throughout different areas, had different names, including huakaʻi, kaʻapuni, or kaʻahele. Traveling by sea had distinct names as well, like ʻaumoana. Traveling through the mountains was sometimes referred to as hele mauna. Travel, and moving throughout various places and regions was an essential practice and way of life in traditional Hawaiʻi.

The freedom to travel safely was so important that Kamehameha I would come to pass a well-known law protecting travelers, Ke Kānāwai Māmalahoe (The Law of the Splintered Paddle). It is explained by the William S. Richardson School of Law as follows:

> As a young warrior chief, Kamehameha the Great came upon commoners fishing along the shoreline. He attacked the fishermen, but during the struggle caught his foot in a lava crevice. One of the fleeing fishermen turned and broke a canoe paddle over the young chief's head. The fisherman's act reminded Kamehameha that human life was precious and deserved respect, and that it is wrong for the powerful to mistreat those who may be weaker.
>
> Years later when Kamehameha became ruler of Hawaiʻi, he declared one of his first laws, *Ke Kānāwai Māmalahoe* (the Law of the Splintered Paddle), which guaranteed the safety of the highways to all. This royal edict was law over the entire Hawaiian kingdom during the reign of Kamehameha the Great. Considered one of the most important *kānāwai* (royal edict), the law gave the Hawaiian people an era of freedom from violent assault. ("Ke Kānāwai Māmalahoe," n.d.)

The kānāwai (law) reads:

E nā kānaka	O my people
E mālama ʻoukou i ke akua	Honor thy god
A e mālama hoʻi	Respect alike, the rights of
Ke kānaka nui a me kānaka iki	All men great and humble
E hele ka ʻelemakule	See to it that our aged,
Ka luahine, a me ke kama	Our women, and children
A moe i ke ala	Lie down to sleep by the roadside
Aʻohe mea nana e hoʻopilikia	Without fear of harm
Hewa no, make	Disobey, and die

The law would have such long-lasting resonance that it would be expressly incorporated into the Hawaiʻi State Constitution.[19]

As traveling through traditional trails was the primary means by which people traveled on land throughout most of Hawaiian history, the traditional trail system is particularly important throughout the Hawaiian Islands. Throughout the islands, there were numerous trails that allowed for people to access different locations. This trail system was critical not only for maintaining a healthy population and managing this population, but it was also important for the traditional economic system of bartering. The trail system allowed for different localized communities to engage and interact. This also allowed for the trade of goods throughout island communities.

There is no doubt that traditionally Hawaiians traveled through the project area, but more contemporaneously, this travel would have been limited by ranching activities that utilized fencing to keep cattle within property boundaries.

Within the project area of the Mākena Mauka development in Honuaʻula, Maui, several trails and trail-associated historic sites have been documented, reflecting both precontact Native Hawaiian and early historic uses of the landscape. These features provide crucial insight into the region's cultural and economic evolution over centuries.

One of the most historically prominent trails in the region is the alaloa, or the King's Trail, also known as the Hoapili Trail. This ancient footpath was constructed during the reign of the 16th-century aliʻi Piʻilani and continued by his sons. The trail once encircled the island of Maui, facilitating movement of goods, resources, and people, and improving intra-island communication. Portions of this extensive trail network, often paved with basalt stones and measuring four to six feet in width, extended inland and upland, connecting

[19] Article IX. Section 10 of the Hawaii State Constitution reads: "The law of the splintered paddle, mamala-hoe kanawai, decreed by Kamehameha I--Let every elderly person, woman and child lie by the roadside in safety--shall be a unique and living symbol of the State's concern for public safety."

coastal villages to agricultural areas, forest zones, and ceremonial sites, including Haleakalā and Puʻu Kukui. Where it intersected with large gulches, users employed vines, ropes, or canoes to traverse the terrain.

Torbert's Road is another significant historic trail-like feature within the project area. Constructed in 1849 by American settler Linton L. Torbert, the road was built to connect his upland plantation lands in Ulupalakua to the Mākena shoreline. This privately financed road served both agricultural and logistical purposes, enabling Torbert to transport sugarcane and Irish potatoes from the upland fields to his shipping point at the coast. A Royal Patent Land Grant (No. 223) later formalized ownership of this strip of land. The road was approximately three miles in length and ascended nearly 2,000 feet, with travelers recounting the strenuous nature of the climb and the use of oxen carts to haul cargo. Contemporary accounts from the mid-1800s describe the road as critical to Torbert's farming operations, and it later appears on historic maps into the early 20th century.

In addition to these larger historic thoroughfares, archaeological fieldwork has identified numerous traditional trails associated with transportation and intra-community movement across the project area. Within the designated preservation areas of Parcels S1/S3, M8/M9, and M10/M11, multiple precontact or early historic trails have been recorded (e.g., SIHP 1976, 1979, 7282, M10-10, M8-4). These trails are part of a broad landscape that also includes agricultural terraces, habitation enclosures, ceremonial features, and boundary walls. Their presence attests to the well-established indigenous land use systems that integrated mobility, subsistence, and spiritual practice across the diverse terrain of Honuaʻula.

Together, these traditional and historic trail features underscore the project area's significance as a nexus of cultural activity, both in the precontact period and during the transformative era of the Hawaiian Kingdom. Their preservation and interpretation provide valuable opportunities for understanding and honoring the rich human history of this region.

6.3.1 Nā Ala Hele, Alaloa me Alanui Aupuni: Traditional Byways, Regional Trails, and The Government Road System

Few communications were located in the Kingdom collections of the HSA, which described road work in the Honuaʻula moku. On August 1 and 8, 1834, two letters from Rev. John S. Green were published in the Hawaiian language newspaper, *Ka Lama Hawaii*, of the mission station. Green reported that he traveled through Honuaʻula and Kula, observing that the people were very poor, and also reported on conditions of the

trails and roads in the district, which were being worked on under Governor Hoapilikāne. Green (1834) wrote:

> I hereby forward to you the report of my tour to Honua‘ula and Kula, and Hamakua loa and Hamakua poko, to preach the word of the Lord and to observe the work of the teachers and their students.
>
> Saturday, May 3, 1834. In the morning, I went to see the people living in the back country… the road to Kawailepolepo is good, needing perhaps just a little work… From Kawailepolepo, I went to Kaluaihakoko, there is no school there, but some people were gathered together to hear the gospel of Jesus… Afterwards, I then went to the uplands, to Kula. The road is a bad one, rocky and overgrown. It can be made good, and it is a good land, but there is not much food grown there at this time, perhaps because of the laziness of the people… (p. 2)

Of the government records found, most described work on the upper road—from Kalepolepo on the shore, to ‘Ulupalakua passing through Fredenberg and Wilcox grant lands; and the upper Honua‘ula-Makawao Road from ‘Ulupalakua running just mauka of Pu‘u ‘Io, crossing through the Wilcox and Fredenberg grants. By the 1850s, the old ala loa, or Government (Hoapili) Road, was apparently all but abandoned by the government roads program, in preference of maintaining the mauka routes. Native residents of the region continued use of the old makai route, even caring for it, through the 1900s. Government Road communications of interest in Honua‘ula include but are not limited to the following selections.

> **December 31, 1854**
> **S. Kapihe, Road Supervisor of the District of Makawao, Maui; to Keoni Ana, Minister of the Interior:**
>
> …Here is my report on Government Roads for the year ending the 31st day of December, 1854.
>
> Money received in cash, five, for office supplies, paper, ink, brush. Here is the number of persons who came to work, 787 men.
>
> 1. Repairing the old Government Road from Koolau to Paeahu, at Honuaula;
> 2. Repairing the old Government Road from Keawakapu to Kamaole, in Kula, Maui;
> 3. Repairing the old Government Road from Kalepolepo to Keokea, in Kula, Maui;
> 4. Repairing the old Government Road from Kalepolepo to Waiohuli, at Kula, Maui…

This is the amount of time taken for the above roads, 42 days work… (HSA, Interior Department Misc. Box 146)

The following article by W. Kealoha (1865, K. Maly, trans.) details how Governor William Hoapili caused the road to be built through Honua‘ula, but the road was in disrepair and seldom traveled by 1865:

Ka Moolelo o William Hoapili k. He Wahi Haiolelo keia na Kekahi Keiki o Lahainaluna, e Pili ana i ka Hoike Kula, i ka La 5 iho Nei o Mei.	**This is a Little Story from the Youth of Lahainaluna, from the School Exhibition of the 5th day of May, Instant.**
O Hoapili k. oia ke kau wahi pua-alii o keia Pae Moku i ka wa kahiko; no ka mea, he mau alii kona mau makua, o Kameeiamoku kona makuakane, a o kona makuahine; o Keliiokahekili no ia.	Hoapili k. was one the royal descendants of this Island Group of olden times; for his parents were chiefs, Kame‘eiamoku being his father, and his mother being Keliiokahekili.
Ua hanau ia o Hoapili ma Kailua i Hawaii, i ka makahiki 1775. Eha mau makahiki ia mamua iho o ko Kapena Kuke ku mua ana mai ma keia Pae Moku, a ma ka makahiki 1840 kona make ana…	Hoapili was born at Kailua, Hawaii in the year 1775, four years before the arrival of Captain Cook at these Islands, and he died in 1840…
Eia hoi kona noho Kiaaina ana no Maui nei. I ka pau ana o keia mau kaua eha, noho oia i Kiaaina no Maui nei, a oia no hoi ka mua o ka noho ana ma ia oihana. Ia wa nae, aole he Lunakanawai maoli, e like me keia wa a kakou e noho nei. Iaia wale no ka mana hoopai, a hookuu aku paha i ka mea i hewa a pono paha, ua noho oia ma kana oihana me ka oluolu.	Here is something about his residency as Governor on Maui. At the end of the fourth battle (of Kamehameha), he was established as Governor of Maui, and this was the first position of its kind. In that time there was not a true Judgeship as there is in this time of us who reside here. Only he had the power to punish or to free, perhaps, the transgressor. He held his office with goodness.
E noho ana ia ma kana oihana nui, hoomaka oia e hana i ke alanui mai Honuaula, a hiki i Kaupo, e pili ana ma kahakai, malalo iho o ke kakai mauna	It was while he held this position that he had construction of the road from Honua‘ula to Kaupō begun, running along the shore, and along the mountain

o Haleakala, ma keia alanui i hanaia, he nui na a-a-wai, he alanui maikai ia i ko Hoapili wa e holo ana, ma ia alanui na kanaka e hele ai, a i keia wa, aole hele nui na kanaka no ka inoino, kapaia mai keia “Ko Hoapili alanui.” Ko Hoapili huna ana i na iwi o Kamehameha. I ka makahiki 1819…	cliffs of Haleakalā. Along this road was many stony beds, and it was a good road when Hoapili traveled it. Along this road, many people traveled, but in this time, there are not many people who travel it, for it is in disrepair. It is called, “Hoapili’s Road.” It was Hoapili who hid the bones of Kamehameha in 1819…
W. KEALOHA.	W. Kealoha

The occurrence and use of ala hele (trails), ala loa (ancient island trails), and Alanui Aupuni (Government Roads) were important resources through Makena.

6.4 Farming

The lands of the project area lie on the leeward slopes of Haleakalā and were integral to the agricultural traditions and sustenance of Native Hawaiian communities (see **Section 6.2** for additional discussion on habitation practices). The arid landscape, defined by its proximity to recent lava flows and relatively low annual rainfall, shaped the traditional farming methods in the region. Early Hawaiian agriculturalists developed ingenious systems for cultivating crops despite the dry conditions, relying on moisture-retaining techniques and the natural topography to sustain their fields.

One of the most notable farming techniques employed in Mākena was dryland agriculture, particularly the cultivation of ‘uala and other hardy crops. These were planted in the lower uplands above the primary residential areas, utilizing the morning dew (kēhau) and occasional rains to sustain growth. This form of agriculture was common throughout leeward Maui and reflected the adaptability of Hawaiian farmers to their environment. The kula lands were also used for seasonal planting, where scattered agricultural fields provided additional sustenance.

In addition to ‘uala, other crops included dry taro, wauke (paper mulberry), and various medicinal and fiber plants such as pōpolo (glossy nightshade), niu, kō (sugarcane), hala, olena (turmeric), and limu. The presence of wiliwili trees and neneleau (*Rhus sandwicensis*) in Honua‘ula indicates a once-thriving native ecosystem that supported both agricultural and cultural practices. Farmers also engaged in agroforestry, incorporating tree crops that could thrive in the uplands and coastal zones.

Since poi was the staple food for Native Hawaiians, it was of the utmost priority for the first settlers to establish lo‘i (irrigated terraces). Kalo’s prominence in the Hawaiian diet

derived from its nutritional value, but even more so from its mythological significance. According to Hawaiian traditions, the first human (male) was born from the taro plant:

> The first born son of Wakea and Papa was of premature birth and was given the name Haloa-naka. The little thing died, however, and its body was buried in the ground at one end of the house. After a while, a taro plant shot up from the child's body, the leaf of which was named lau-kapa-lili, quivering leaf; but the steam was given the name Haloa.
>
> After that another child was born to them, whom they called Haloa, from the stalk of the taro. He is the progenitor of all the peoples of the earth. (Malo, 1951, p. 244)

Handy et al. (1972) describe Honuaʻula:

> Despite two recent lava flows which erupted in about 1750 from fissures below the crater and only a few miles inland and which covered many square miles of land, the eastern and coastal portion of Honuaʻula was thicky populated by Hawaiian planters until recent years. A number of Hawaiian families whose men are employed at ʻUlupalakua Ranch have homes near the ranch house. About these native homes a little dry taro is cultivated. Formerly there was much dry taro in the forest zone. (p. 509)

Agricultural practices in Honuaʻula demonstrated ingenious adaptations to the local environment. The report documents various agricultural features including mounds, terraces, and walled fields that were used for cultivating ʻuala, maiʻa (banana), kō, and other crops. In areas with suitable soil depth, more intensive cultivation was possible, while rocky terrain was utilized for specific crops that could thrive in such conditions. The distribution of these agricultural features across the landscape reveals a sophisticated understanding of microenvironments and soil conditions (Maly & Maly, 2005, p. 9).

Traditional farmers also practiced various techniques to maximize productivity in an arid environment. These included mulching with stone to preserve soil moisture, creating windbreaks to protect crops, and timing plantings to coincide with seasonal rainfall patterns. Agricultural practices were guided by intimate knowledge of local weather patterns, including recognition of specific cloud formations that signaled changing conditions (Maly & Maly, 2005, p. 10).

The presence of deep planting pits, where soil was transported from more fertile regions to enable cultivation, further underscores the ingenuity of traditional Hawaiian farming practices. In these pits, crops such as kalo and kō were grown, with soil amendments helping retain nutrients and moisture in otherwise inhospitable landscapes.

Beyond staple food crops, farming in Honua‘ula was closely tied to broader social and economic systems. Hawaiians engaged in a reciprocal trade network, exchanging dryland crops with communities in wetter regions for taro and other water-intensive produce. This exchange ensured a balanced diet and reinforced inter-district relationships. Additionally, agricultural production supported the ali‘i system, with designated konohiki overseeing land management and resource distribution.

The land management system was structured within the ahupua‘a framework, ensuring access to both mountain and ocean resources. This allowed farmers to supplement their diets with fish and marine resources, complementing their cultivated foods. Fishing and farming were often practiced in tandem, with families maintaining both agricultural plots and coastal fishing grounds.

Spirituality and agriculture were deeply interconnected in traditional Hawaiian life. Temples and shrines dedicated to rain deities and agricultural fertility were common in the region. One such heiau, Po-kalani, located in the uplands of Pu‘u Ke‘eke‘ehia-Pu‘u Ka‘eo, was associated with ceremonies aimed at procuring rain. Agricultural rituals and offerings were made to ensure bountiful harvests, and knowledge of planting and harvesting cycles was preserved through oral tradition.

The introduction of cattle in the 19th century significantly altered the agricultural landscape of Honua‘ula. As cattle ranching expanded, traditional farming areas were reduced, and many native agricultural practices were disrupted. The introduction of non-native grasses and the trampling of cultivated lands by livestock led to changes in land use patterns, shifting the focus from subsistence agriculture to ranching and commercial enterprise.

Despite these transformations, elements of traditional farming practices persisted. Some Hawaiian families continued to cultivate ‘uala and dry taro in the uplands, adapting their methods to coexist with ranching activities. Oral histories and archival records document the resilience of native agriculturalists, who maintained their knowledge of planting cycles and sustainable land management even as economic and environmental pressures mounted.

In the present day, there is growing interest in restoring traditional agricultural practices in Honua‘ula. Efforts to revitalize Hawaiian farming methods emphasize sustainability, water conservation, and the reintroduction of native plants. By integrating modern ecological knowledge with traditional practices, contemporary farmers and cultural practitioners aim to restore the balance between land and people, honoring the agricultural legacy of the Honua‘ula region.

The history of farming in Honua‘ula reflects the deep knowledge and resourcefulness of Native Hawaiians in managing their land. From dryland farming techniques to inter-island trade networks, these practices sustained generations of residents and reinforced the cultural and spiritual connections between people and place. While colonial disruptions altered traditional land use, the persistence of Hawaiian agricultural knowledge continues to inform efforts to reclaim and revitalize these landscapes today.

6.5 Traditional Clothing (Clothes Making, Dyeing, and Lei Making)

Kapa (commonly known as barkcloth) was the traditional material made through a traditional method of gathering, treating, and beating plant fibers, often, but not limited to, wauke (*Broussonetia papyrifera*) to make fabric that was used to make lole (clothing). Pacific and Hawaiian kapa was known for its wide range of colors and the application of watermarks.

Furer (1981) describes the process for making kapa:

> The finest kapa came from the paper of the mulberry tree. These trees were cultivated on plantations and grew to heights of more than twelve feet. As the tree grew, the branches were nipped off along the main trunk, ensuring a long piece of bark which was easily peeled from the tree.
>
> The manufacture of kapa was an important occupation for women. After the bark had been peeled from the tree, the inner bark was separated and soaked in sea water to make it soft and pulpy. The softened bark was placed on an anvil and beaten with a cylindrical wooden beater. The first beating separated the fibers and produced strips about eight or nine feet long and ten to fourteen inches wide. These strips could be dried and stored until needed. When needed, the strips were soaked in water, placed in layers between banana leaves, and left for about ten days to mature by "retting" which is the decomposition and removal of softened tissues, leaving the finer fibers. These partially decomposed layered strips were beaten a second time with specially carved four-sided beaters. The patterns carved on the beaters were functional as they produced the necessary characteristics in the kapa for its end use. These carved designs left the equivalent of a watermark on the kapa.
>
> Kapa which was to be extremely soft and pliable, such as that used for the malo or loincloth, was subjected to an additional softening process. This process, which produced a finely ribbed fabric, was done by dampening the cloth, stretching it over a grooved board, and running a wooden grooving tool along the indentations in the board. When the cloth dried, permanent ribs remained. The hand was very similar to our crinkle gauze of today. (pp. 109-110)

Hawaiians were skilled at utilizing plants and materials to dye their clothing and other materials. Different methods would be employed to hō‘awa, extract dye colors from their source material(s). These dyes would be placed in a cup, known as a kā kāpala. Even foreign or exotic plants were utilized for this practice. Hawaiians used different words for the various types of dyeing activities and methods.

- Hili – bark dye, as hili kukui, hili kōlea, hili noni; also kapa dyed with bark or the name for dyeing with the use of bark
- Hōlei –native tree (*Ochorosia compta*) related to the hao (*Rauvolfia*), which yields a yellow dye for kapa
- Kīhe‘ahe‘a pala‘ā – dye made from the pala‘ā (Sphenomeria chinensis syn. chusana) fern; pala‘ā also references a kapa made from the māmaki (*Pipturus spp.*) bark which is then dyed a brownish-red with pala‘ā fern
- Ki‘olena – to dye kapa
- Kūhili – to dye (or stain) by soaking in water containing mashed bark, such as used for nets; also mulberry bark before it is beat into kapa
- Kūpenu – to dye by dipping material
- We‘a – a red dye or to print or dye red

Hawaiians also had a lexicon for the various colors that could be achieved through this traditional practice.

- ‘Ākala – color made from raspberry or thimbleberry juice
- Hili – Dark-brown dye made from bark
- Nao – dark red
- ‘Ōlenalena – yellow
- ‘Ōma‘oma‘o – light green color made from ma‘o leaves
- Pōkohukohu – color made from the noni (*Morinda citrifolia*) root
- Puakai – red

Similarly, lei making was a regular occurrence in traditional Hawaii. Anderson-Fung and Maly (2009) write about the traditional practice:

> In old Hawai‘i, lei could have important ceremonial functions, such as in religious offerings and for chiefly regalia, but lei were also enjoyed as personal adornment by Hawaiians of all levels of society. The ali‘i (chiefs) and the maka‘ainäna (the common people who tended the land) all wore lei. Even the akua (gods, deities, spirits), it was believed, sometimes wore lei when they walked the land in human form. The following observation by the French botanist Gaudichaud, who visited the islands in 1819, paints a picture of Hawai‘i as a place where the lei was an integral part of everyday life:

> "It is indeed rare to encounter one of the natives of this archipelago who does not have an ornamental plant on his head or neck or some other part of his body…[The] women … change [the plants they wear] according to the seasons, [and for them] all the fragrant plants, all flowers, and even the colored fruits, serve as attire, one after another. …The young girls of the people, those of the island of Hawai'i especially, seem to be fond of the [kou, Cordia subcordata], a tree very abundant in all the cultivated areas… The young girls of the mountains, who live near the forests, give their preference to the flowers of the [Erythrina (wiliwili) and a species of Canavalia, called 'awikiwiki], the lively color of which makes magnificent garlands. Such natural attire is much more rich, much more striking, than all the dazzling creations of the elegant European ladies."
>
> This account and others like it suggest that lei worn for personal adornment were fashioned from the favorite plant materials that were readily available and abundant in the lei maker's environment. (p. 4)

Lei making continues as an important practice today, as the making and giving of lei as an expression of aloha to loved ones still regularly occurs throughout the Hawaiian Islands. Practitioners of these crafts actively practice in the Kula and Honua'ula moku, although there is no indicator that the project area is currently used for any of these practices.

6.6 Lā'au Lapa'au

Lā'au lapa'au is the practice of traditional Hawaiian medicine. For centuries, Native Hawaiians relied upon the environment around them to provide them medicine. It is still actively taught and practiced today. Medicinal experts or healers have intimate knowledge about plants and other resources to cure ailments illnesses and sicknesses. Traditional medicine is practiced by native peoples and local communities around the world. Similarly, Native Hawaiians, over many generations, have learned how to properly care for, utilize, and prepare plants to maintain the community's health.

In addition to plant access, it was also important to ensure that these plants were healthy and in good condition. These cultural resources are critical to the ongoing practice of traditional medicine and healing within the Native Hawaiian community. There are still many traditional medicine practitioners in the Hawaiian community and throughout the Hawaiian Islands today.; this practice continues to be taught to the younger generation and is honored and utilized in many Hawaiian households throughout the state.

It was important that medicinal plants existed throughout the Hawaiian Islands so that when people traveled throughout different places on in the islands, they would always

have access to the medicine they needed. In some cases, some plants were extremely rare, and, in those cases, it was particularly important to make sure that these populations were well protected and well cared for. An identification of plants of cultural value for medicinal purposes that grow naturally within the project area is included in **Section 4.2.1 (Flora).** There were also numerous gods associated with health, healing, and medicine: Hiʻiakaikapoliopele, Hiʻiakaikapuaʻenaʻena, Hauwahine, Hina, Hinaʻea, Hinalaulimukala, Kamakanuiʻahuʻilono, Kanaloa, Kū, Kūkeoloʻewa, Lonopūhā, Maʻiola, Mauliola, and ʻŌpeluhuikauhaʻailo.

Maui has an active community of healing practitioners. These practitioners actively practice in the Kula and Honuaʻula moku, although there is no indicator that the project area is currently used for any of these practices. It is possible that abundant native plants like ʻuhaloa may be used medicinally, as this plant is abundant and distributed widely throughout the area.

6.7 Kilo

Kilo "references a Hawaiian observation approach which includes watching or observing [the] environment and resources by listening to the subtleties of place to help guide decisions for management and pono practices" (ʻAuamo, 2016). The practice of kilo is seeing a resurgence in the Hawaiian Islands.

Kilo hōkū are traditional astronomers, or those who study the stars. Hale kilo or hale kilo hōkū are observatories or star observatories, respectfully. Kilo makani are those who traditionally observe the winds. Kilo moana were traditionally oceanographers. Kilo ʻuhane were those who observed and communicated with spirits.

Traditionally the practice of kilo was critical to the management of traditional Hawaiian landscapes. This practice is very closely tied to traditional or customary access as observers would require access to specific vistas, viewsheds, or areas in order to observe environmental phenomenon.

As illustrated in the proceeding section, Native Hawaiians created a wide range of terms for the environment and understanding the ecosystems around them. These terms were often quite specific, and many were tied closely to a specific geographic area. This level of specificity illustrated the close kinship Hawaiians shared to their surrounding environment. The ability to observe and understand all elements of their ecosystem was essential to both the successful care of natural resources and the survival of the Hawaiian people.

The ability to effectively and accurately read weather phenomena was essential to the ability of Hawaiian people who farm, fish, navigate, and conduct any number of practices

in a sustainable and successful manner. The knowledge Hawaiians acquired about their environment around them, including weather phenomena, was the result of multi-generational observations that comprised an extensive body of information passed down through oral traditions. The following Hawaiians names and their descriptions of weather phenomena include words for clouds, rains, and winds that are utilized by kilo to help guide activities and practices:

- Ānuenue – rainbow, a favorable omen.
- Ao akua – godly cloud, figurative representative of a rainbow.
- Ao loa – long cloud or high, distant cloud. Status cloud along the horizon.
- Ao ʻōnohi – cloud with rainbow, ʻōnohi, colors contained within it.
- Ao pehupehu – continually growing cumulus typical of summer. Drifting with the tradewinds, these clouds pick up moisture and darken at their base, finally releasing their rain on the windward mountain cliffs.
- Ao puaʻa – cumulus clouds of various sizes piled together, like a mother pig with piglets clustered around her. The Kona coast is famous for ao puaʻa, a sign of good weather and no impending storms.
- Hoʻomalumalu – sheltering cloud.
- Hoʻoweliweli – threatening cloud.
- Ua loa – extended rainstorm.
- Ua poko – short rain spell.

There are numerous points identified in **Section 3.1**. These points would have been traditionally used by kilo iʻa, skilled ocean observers who would identify marine resources for gathering. These locations for kilo are typically located in nearshore coastal areas from elevations along the shoreline where schools of fish can be observed.

6.8 Ceremonial Practices

Ceremonial practices played an integral role in the lives of Honuaʻula's residents. Numerous heiau and shrines were established throughout the region, serving as places of worship, agricultural ceremonies, and navigational landmarks. One notable heiau, Po-kalani, was located in the uplands of Puʻu Keʻekeʻehia-Puʻu Kaʻeo and was associated with rainmaking rituals (as stated previously in **Section 6.4: Farming**).

The presence of these religious sites underscores the deep connection between the Hawaiian people and their environment. Spiritual observances were woven into daily life, influencing agricultural practices, fishing expeditions, and social structures. The loss of traditional place-based knowledge due to Western contact and missionary influence led to the gradual abandonment of many cultural sites, though efforts to preserve and revitalize these traditions continue today.

The ceremonial practices of traditional Hawaiians are extensive. Throughout the course of Hawai‘i’s history, traditional Hawaiians have integrated religious, spiritual, and ceremonial practices in their daily lifestyle. Traditional or customary practices are then not distinct ceremonial practices but rather a part of their way of life. Therefore, it is challenging to define in discrete terms ceremonial practices associated with traditional Hawaiian customs. For the purpose of this section, the ceremonial practices discussed here focus primarily on customs carried out by general populations of Hawaiians, as opposed to activities or rituals carried out by trained and recognized specialists, kahuna.

Ceremonial practices are incorporated throughout numerous, if not all, of the activities identified in this section. For example, there is a great level of ceremonial practice and ritual associated with the care of the dead, burial remains, and funerary objects. Native Hawaiians as with most Indigenous peoples integrated ceremony into most of their practices especially those that occurred out in the natural landscape or related to their way of life. There was no specific site or materials required for ceremony *per se*.

Nonetheless, shrines were sometimes associated with ceremonial practices. Shrines for the purpose of this assessment are distinct from heiau, which were places of worship. The distinction is the natural context in which these features or sites were created. Heiau required the advice and guidance of a kahuna, who would help ali‘i determine the best location in which to erect a heiau. Conversely, shrines were erected by maka‘āinana as part of their daily or occupational functions.

Makahiki is one example of a practice that has taken place prior to contact and continues post-contact and involves ceremonial elements. One of these elements is the akua loa, described by Malo (1951) as “the image of the Makahiki god, Lono-makua … This work was called ku-i-ke-pa-a” (p. 143). Further described by Malo (1951):

> 22. This Makahiki idol was a stick of wood having a circumference of about ten inches and a length of about two fathoms. In form, it was straight and staff-like, with joints carved at intervals and resembling a horse’s leg; and it had a figure carved at its upper end.
>
> 23. A cross piece was tied to the neck of this figure, and to this cross piece, kea, were bound pieces of the edible pala[20] fern. From each end of this cross piece were hung feather lei that fluttered about, also feather imitations of the ka‘upu bird[21], from which all the flesh and solid parts had been removed.

[20] Native fern (*Marattia douglasii)* used for medicinal purposes as well as in ceremony.
[21] Laysan albatross (*Diomedea immutabilis*), written with diacritical markings as ka‘upu.

> 24. The image was also decorated with a white tapa cloth made from wauke kakahi[22], such as was grown at Kululi[23]. … One end of this tapa was pasted? to the cross piece, from which it hung down in one piece to a length greater than that of the pole. The width of this tapa was the same as the length of the cross piece, about sixteen feet.
>
> 25. The work of fabricating this image, I say, was called kuikepaa. The following night the chiefs and people bore the image in grand procession, and anointed it with cocoanut [sic] oil. Such was the making of the Makahiki god. It was called Lono-makua (father Lono), also the akua loa. This name was given it because it made the circuit of the land. (pp. 144-145)

The akua loa was taken to each ahupua‘a. This custom was important to the care, stewardship, and worship of the gods. These practices were intimately tied to the proper care and sustainable stewardship of all cultural and natural resources. The ethnographic data identifies that Makahiki ceremonies are still conducted along the coastline makai of the project area.

As with many concepts of traditional Hawaiian living and practices, the contemporaneous concept of the kahuna has been largely influenced by Western thought. The roles and responsibilities of the kahuna are well explained by Professor Terry Kanalu Young (1998):

> As recipients of hana lawelawe[24], the Ali‘i Nui were themselves serves of a sort. They were responsible for maintaining a positive spiritual relationship with the Akua through pono conduct. Pono was defined for individuals of that era within the context of a particular task specialty. Kahuna who functioned as experts in specific skill areas like medicinal healing, canoe building, or spiritual advising were consulted by leaders. The experts were looked to as responses for what was considered pono in their respective realms of knowledge. (p. 74)

Kahuna were critical to traditional Hawaiian lifeways as their extensive expertise helped to provide sound and strategic advice to ali‘i and other leaders on proper spiritual, cultural, and ecological management. There are numerous types of kahuna in Hawaiian traditions, including, but not limited to:

---

[22] Meaning outstanding or of high quality, as in reference to the white kapa (tapa) made from these fibers.

[23] Likely a reference to the place in Pelekunu Valley at Kamalō, Moloka‘i, located between the peaks of Kaunuohua and Pēpē‘ōpae.

[24] Hana lawelawe are defined by Young as “service tasks” by which kaukau ali‘i (lower ranked chiefs) served the Ali‘i Nui (high chiefs). These hana lawelawe were critical to the ability of the Ali‘i Nui to effectively govern (Young, 1998).

- kahuna ʻanāʻanā – sorcerer who practices black magic and counter sorcery.
- kahuna aʻo – teaching preacher, minister, sorcerer.
- kahuna hāhā – an expert who diagnoses, as sickness or pain, by feeling the body.
- kahuna haʻiʻōlelo – preacher, especially an itinerant preacher.
- kahuna hoʻohāpai keiki – medical expert who induced pregnancy.
- kahuna hoʻopiʻopiʻo – malevolent sorcerer, as one who inflicts illness by gesture.
- kahuna hoʻoulu ʻai – agricultural expert.
- kahuna hoʻoulu lāhui – priest who increased population by praying for pregnancy.
- kahuna hui – a priest who functioned in ceremonies for the deification of a king.
- kahuna kālai – carving expert, sculptor.
- kahuna kālai waʻa – canoe builder.
- kahuna kiʻi – caretaker of images, who wrapped, oiled, and stored them, and carried them into battle ahead of the chief.
- kahuna kilokilo – priest or expert who observed the skies for omens.
- kahuna lapaʻau – medical doctor, medical practitioner, healer. *Lit.*, curing expert.
- kahuna makani – a priest who induced spirits to possess a patient so that he might then drive the spirits out.
- kahuna nui – high priest and councilor to a high chief; office of councilor.
- kahuna poʻo – high priest.
- kahuna pule – preacher, pastor, minister, parson, priest. clergyman. *Lit.*, prayer expert.
- kahuna pule kaʻahele – preacher.
- kahuna pule wahine – priestess.

Figure 8. Sunset from Mākena (over Kahoʻolawe) (iStock, 2019)

Due to its proximity to neighboring islands, like Kahoʻolawe, South Maui is well positioned for a wide range of ceremonies. There are also stories of kiʻi (image, petroglyph) within the larger region, although mauka of the project area. Handy et al. (1972) recount a story of a Lono Kiʻi (Lono Image) from in a spring in the uplands. It is also said that Huakaʻioka Po (night marchers) were also known to travel through the area (Handy et al. 1972, p. 512).

6.9 Haku Mele, Haku Oli, and Hula

This practice is related to the composition of songs and chants, and is a practice that has existed for many centuries in the Hawaiian culture. Since the Hawaiian culture primarily relied on an oral tradition to pass on knowledge and information, the ability to create songs and chants was essential to pass information from one generation to the next. Hawaiians had hundreds of terms associated with this practice.

Songs and chants are largely influenced by the environment around them. As a pedagogical device it was important, if not imperative, that these songs or chants effectively captured data from the environment around the composer and passed on this information for others to utilize when managing natural resources. In a very real sense, the land and natural resources act as a muse for composers. The category of songs that provide information on or speak to natural resources are called mele ʻāina (songs of the land). As shown in **Section 4.3.2. (Mele)**, there are several traditional chants and songs about the project area and its surrounding landscape.

Much like mele and oli, hula serves as a way of both honoring place and telling the story of place. Many hula, especially those based on mele ʻāina, require intimate understanding of the place where the mele was composed, including the natural elements of that ʻāina. Hula hālau will regularly take huakaʻi, or journeys, to visit and honor the place a particular mele speaks of. The ability to visit the place and learn about it is important to the practice of hula.

Hula, as well as mele or oli, are also offered as gifts to kupuna or akua. This practice also requires access to traditional sites. Associated with hula would have been the practices of lei making and the use of plants to dye clothing.

6.10 Ranching and Paniolo Culture

The Hawaiian paniolo were the first cowboys in the United States. As previously explained in **Section 3.3.2**, Captain George Vancouver first brought cattle to Kamehameha as a gift shortly after Kamehameha unified the Hawaiian Kingdom under his rule in 1793. This was the introduction of ranching to the islands. In order to grow the population so Hawaiians could export cattle and use them throughout the islands, Kamehameha first put a kapu

on the cattle. The cattle grew sharply in numbers, and soon large numbers of cattle were roaming wild throughout Hawaii Islands (Harrington, 2019).

To get the growing population of cattle under control, Kamehameha brought the vaqueros from Mexico, who had the expertise to manage the cattle with horses. Hawaiians could not initially pronounce the term vaqueros, so they would attempt to use the term “españoles” (Spanish speaking males) instead. Unable to pronounce this properly, the term “paniolo” was created.

Horses would be landed on both Hawai‘i Island and Maui Island. They were gifts to John Young, one of Kamehameha I’s close advisors. The introduction of horses had a transformative effect on Hawaiian society. Before the arrival of horses, Hawaiians primarily traveled by foot or by canoe. The use of horses revolutionized transportation and warfare, allowing faster and more efficient movement across the islands.

Lyons’ (1892) publication from the Papers of the Hawaiian Historical Society explains about Spanish influence in Hawai‘i:

> [The Mexican Hispano-Indian] was called by the Hawaiian, specifically, Huanu, Hoke, Hoakina, etc. these names of course meaning Jean, Jose, Joachin, etc. He had with him sometimes full-blooded Indians of Mexican origin, who I say in my boyhood. He was called generically “Paniolo” or “Espangnol,” the word that now-a-days means “cow-boy.” He brought with him the Mexican saddle in all its rich adornment of stamped bull-hide leather, and stirrups broad-winged. He brought the jingling spur with bells of hand-wrought steel. He brought the hair-rope in strands of alternative black and white, and the hand-whirled wheel for twisting it; also the hand-wrought bit, not so crude as it looked to be, and a necessity in bullock-hunting. All this away back in the [eighteen] thirties, long before the birth of the modern cow-boy. Do not I remember him well, this Spaniard, the red bandanna handkerchief tied over his head under the broad flapping hat with rim up-turned in front? Did not the scrape – poncho we always called it, and the name much have come from South American – commend itself to our common sense as a defence (sic) from rain? We adopted it, and the red silk sash in the bargain, and the leggins not buttoned. Last but not least, the lasso or lariat, braided evenly and lovingly from four strands of well-chosen hide, then well-stretched and oiled, coiled in the same left hand, that with the little and third finger held the finely braided bridle rein; (Mexican too this was, and Mexican the causing of the rein to bear on the horse’s neck, instead of to pull on the mouth). (p. 26)

Hawaiians took the lessons and teachings from their Spanish and Mexican instructors and created their own traditions revolving around cattle and horses. Hawaiian paniolo are considered to be some of the best ranchers and cowboys in the world. Hawaiian paniolo

like Ikua Purdy became world-famous for competing in rodeo competitions in the United States, and the skill and craftsmanship of paniolo has been noted throughout history. In places like Makawao, paniolo culture and practices are still actively practiced today.

Figure 9. “Typical Hawaiian Cowboys” (HSA, Paniolo Collection, PP-13-6-015, n.d.)

The paniolo are regarded with great esteem. While they were not intended to remain in the islands, marriages between the paniolo and local population resulted in Hawaiian paniolo. The cowboy lifestyle became a way of life. They were considered particularly masculine, and historic record and songs reflect this (M. Sproat, per. comm. 2021). As horses spread throughout the islands, they were introduced to South Maui as well. The fertile lands and open spaces in the region made it conducive to raising and keeping horses. The availability of horses allowed for easier communication and trade between South Maui and other parts of the island.

Horses played a crucial role in agriculture and ranching on South Maui. They were used for plowing fields, transporting goods, and herding cattle on ranches. The emergence of

paniolo culture in the 19th century further solidified the significance of horses in South Maui's agricultural and ranching practices. Paniolo culture, which blends traditional Hawaiian practices with the horsemanship and cattle-handling techniques brought by Mexican vaqueros, thrived in South Maui. Skilled paniolo were essential for managing the expanding cattle industry on the island.

The Paniolo are a distinct cultural group, or folk society, with origins to numerous ethnic groups including Mexicans, Hawaiians, Portuguese, and others (Mills et al., 2013). Records show that ranching and the Paniolo utilized the project area and geographic extent significantly. (See Paniolo Hall of Fame Oral History Interviews, O'ahu Cattlemen's Association.) In this region, these Paniolo were largely of Native Hawaiian descent, and they integrated not only Hawaiian practices learned from their families, but Hawaiian words and language into their practices as Paniolo.

Figure 10. Paniolo Rounding up Cattle on Haleakala Ranch (n.d.)

The vaqueros also brought the Spanish guitar with them. It is through this introduction that slack key music was also born. It is said that slack key music originated from Mexicans leaving their guitars with local Hawaiians, who would "slack the keys" because they did not know the proper way to tune the guitars, creating a new form of tuning that

originated in the islands. For many decades, “slack key” music grew and was perpetuated within the Paniolo community.

There are also numerous songs written for and by the Paniolo. National Heritage Fellow Clyde “Kindy” Sproat traveled to the Smithsonian Folklife Festival in 1989 to share mele and moʻolelo about the paniolo, slack key music, and falsetto singing. At that festival, when sharing the song “Adios Ke Aloha” by Prince Leleiohoku, the younger brother to King Kalākaua and Queen Liliʻuokalani, Sproat said:

> “Adios Ke Aloha” was written by Prince Leleiōhoku, and he wrote this in honor of the Mexicans that came to teach the cowboys how to rope and ride and all of that. That is my heritage, believe it or not. One of my great-grandfathers was one of those Mexicans that came to teach the Hawaiians how to rope and ride. (Harrington, 2019)

Hawaiʻi Island is known for being the origin of Hawaiʻi’s Paniolo culture, but there are numerous rodeos held on Maui and this way of life is still practiced today.

The project area has been particularly influenced by paniolo culture, as the area was previously managed by Ulupalakua Ranch.

Figure 11. Ulupalakua Ranch (HSA, Reference PNL-68-02055, n.d.)

Figure 12. Ulupalakua Paniolo Working in the Coastal Waters off of South Maui (Ulupalakua Ranch, n.d.)

Figure 13. Tools Used by Paniolo to Create Wire Fences (Honua Consulting, 2022)

Paniolo worked throughout the ahupua‘a, from the mauka lands where the ranch was based, to the ocean. They were responsible for managing the fences that allowed the cattle to graze through the entire lands managed by the ranch. Cattle would be allowed to roam and graze in a particular area, and then they had eaten down the grass and vegetation, the Paniolo would move them to the next pasture.

Building and maintaining fences was an essential part of a cowboy’s job. Paniolo needed to work fast and effectively in order to keep cattle managed and within the ranch’s lands. These extensive ranch walls can be seen throughout the entire upcountry region. Some ranch walls are still present within the project area.

Figure 14. Paniolo Displaying Different Types of Barbed Wire Used for Ranching (Honua Consulting, 2022)

6.10.1 Pāʻū Riders

When Captain Richard J. Cleveland introduced horses to Hawaiʻi in 1803, Hawaiian men and women took to horse riding, starting the equestrian traditions in the islands. The Westerners that were demonstrating how to ride horses were all male, so Hawaiian women joined the men in learning to ride horses astride rather than sidesaddle. Women wore long skirts (pāʻū) to protect their legs or their nice clothes while traveling on horseback. Aliʻi wāhine (female rulers) often wore a pāʻū when they rode horses to dress up for an occasion. The pāʻū used for horse riding is made of nine to twelve yards of fabric that is wrapped so the skirt flows past the stirrups to the ground. The skirt is tied so that the women's legs are covered and protected like pants, while offering the elegance of the long train of skirt that flows from the riders' waist, over the horse, towards the ground. Traditionally, the pāʻū were twisted with kukui nuts and tucked into the waistband to secure the long fabric. Wāhine holo lio pāʻū (female pāʻū riders) also utilized foliage and lei making traditions to adorn themselves and their horses when they rode, making their rides a beautiful sight to behold.

Figure 15. Historic Photo of Pāʻū Riders from Makawao (M. Taylor Collection)

Over time, the tradition of pāʻū riding grew into displays and performances, and wāhine holo lio pāʻū became known as skilled and elegant horse riders. Pāʻū riding faced a

decline after the overthrow of the Hawaiian Kingdom, but it has since been revitalized and there are many wāhine holo lio pāʻū who still wear the traditional pāʻū today. In 1901, the then displaced Queen Liliʻuokalani rode from her home on Beretania Street into Waikīkī, escorted by a troupe of wāhine holo lio pāʻū who wore the traditional riding pāʻū for the journey. In 1906, Lizzie Puahi organized the Paʻu Rider's Club in Waikīkī. Soon after, other people with pāʻū knowledge, like Theresa Wilcox, started additional riding societies, reviving the unique tradition of pāʻū riding in Hawaiʻi. Today, pāʻū riding is alive and well, especially in places like Makawao where riders participate in rodeos and parades, showing off their beautiful traditions and their true elegance.

Figure 16. Pāʻū Riders in the 47th Annual Makawao Paniolo Parade[25] (Malia Bohlin, Malama o Maui, July 2012)

[25] Note how these riders incorporate traditional palaka print clothing, reflective of the paniolo culture.

Figure 17. Pāʻū Rider Turning onto Makawao Avenue During Paniolo Parade (Makawao Rodeo, 2018)

The following articles pulled from the Hawaiian language newspaper archives discuss female horse riders and the general rules or customs surrounding this tradition.

Ka Hoku o ka Pakipika
September 26, 1861 (page 3)

Mau Rula no na wahine holo Lio.	**Some Rules for Female Horse Riders.**
1. A i holo oe maluna o ka lio, mai holo oe me kou pau ole iwaena o ke kaona nei. He mea ino wale ia.	1. When you ride on your horse, do not ride without your skirt through the center of town. This is very unwholesome.
2. Mai kau wale oe i kou pau ma ke alo wale no, a koe kou lemu, me ka ike ia o kou mau oloolo wawae. He mea	2. Do not gird your skirt in the front only and leave your buttocks exposed so that you can see your calves. This is

hilahila loa ia, ke hele oe iwaena o ke akea.

extremely shameful, should you ride in public.

3. E hana mua oe i kou wahi papale a maikai, alaila e kau ae oe maluna o ka lio. E olelo mai auanei kahi poe ia oe, nou ke lai o ke ahiahi.

3. Put on your hat and make sure it looks nice and then climb aboard your horse. Soon some people will say that afternoon peace is yours.

4. Mai holo oe iwaena o ke kaona, me ka luhelelei i kou lauoho; e kahi mua oe i kou lauoho a maikai kau iho kahi papale, lawe mai hoi na wahi papahi lei ilima, alaila e i ia mai auanei oe, maikai wale, e lawe ana.

4. Do not ride through town with messy hair. You should brush your hair first until it looks nice, put on a hat, and bring some adornments of ‘ilima lei. Then you will be the best, truly fine, and ready to go.

5. Mai hoohaahaa i kou pau, aka, e hookiekie iki ae, i elua a ekolu paha iniha maluna o ka puhaka, e huki a pau ka alualu o kou pau, e hoomaloeloe mua oe ia lalo, e liki iho hoi oe a moliolio pono o hope.

5. Do not lower your skirt, rather, keep it high, perhaps two or three inches above the waist. Pull it until there are no wrinkles in your skirt; first you should make the bottom taunt, pulling it until the back is properly tight.

6. I kou holo ana, mai hina oe ihope, aole hoi e hio ma na aoao, aole no hoi e kulou imua, aka, e noho pono, me ka haka pono i kou mau maka imua. Alaila, e ike auanei kahi poe ia oe, a na lakou ia e hoopuka pokole ae i kau wahi mele pokole:

6. When you ride, you should not lean back, do not fall sideways, and do not bow forward, however, sit upright and set your eyes straight ahead. Then some people will just see you and they will quickly utter this short little song:

Holo mai oe, kilakila;
Noho mai oe, hanohano;
Ai ka manu ia luna,
Ka huila o Kapahukea,
E niniu nei i ka lai.

You ride this way with poise;
You sit dignified;
The birds are in the expanse above
The wheel of Kapahukea,
Spinning in the calm.

Oia ka mahalo a ka poe makaikai ke ike aku i ka maikai o kou holo ana mai.

This is a compliment from the spectators when they see how beautifully you ride.

(Aole i pau) W. K.*

Ka Hoku o ka Pakipika

October 3, 1861 (page 3)

No na Wahine Holo Lio.	Concerning Female Horse Riders.
Mai holo oe maluna o ka lio me kou manao ana paha, e holo oe iwaena o ke kulanakauhale nei, me ke kau o ka paka kika i ka waha, a ipupaka maoli paha; he mea ino loa ia, a he mea hilahila loa no hoi iwaena o ka poe maikai. I ka hale no pau ke puhi ana o ka paka, ke kau ka maluna o ka lio hookahi no hana, o ka hana ia oe a mikioi, o ka lawe ae a aulii.	Do not ride upon your horse intending to perhaps ride through town with chewing tobacco in your mouth, or even within an actual tobacco pipe. This is very unwholesome, and extremely shameful among good people. You should finish smoking at the house; should you ride one horse for work, you should work to make it neat, undertaking it until it is exquisite.
I kou holo ana, mai manao oe, o ka hapuku wale mai no i ka lei a kaumaha ka ai, a me ke poo, he hana ia na ka pupule, hookahi no lei o ka wahine maikai.	When you ride do not decide to just hastefully gather lei so that your neck and head become heavy. This is what insane people do. Beautiful women should wear just one lei.
I holo oe iloko o ke kulanakauhale, mai holo mau loa oe iwaena o na alanui a pau, he mea pakua loa ia. I hookahi no holo ana o ke kulanakauhale nei, a puni no, alaila no hoi no i ka hele, o ka holo ana iho la no ia o ka wahine maikai.	When riding within town, do not continually ride through all of the streets; this is a very common practice. Ride through town just once and when you have circled town, then return home. This is how good women ride.
No koʻu ike ana iho, ua mahuahua iki iwaena o keia lahui kahi naauao i loaa mai mai na kumu a kakou, nolaila, ua hookomo iho au i keia mau rula i mea e hiki ai ia kakou ke hoomaopopo i ke ano o ka noho ana, a me na hana ana o ka naauao, a i mea hoi e hiki ai ia kakou ke hilahila i na hana o ka aoao naaupo.	Because I have noticed that some of the teachings received from our teachers have slightly increased among this nation, therefore, I have included these rules in order for us to be able to understand the way enlightened people live and work, and to allow us to shame acts of ignorance.
Naʻu, Elua**	Sincerely, Elua**

Ka Nupepa Kuokoa
April 26, 1901 (page 1)

E ukali ia ana ka Moiwahine Liliuokalani e kekahi mau wahine holo lio mai kona home noho ma ke Alanui Beretania a hiki i Waikiki hookahi pule mai ka la apopo aku. E holo ana lakou me na paʻu holo lio o ka wa kahiko. He luau ke hoomakaukau ia ana no lakou i ko lakou hiki ana ma Waikiki.

Queen Liliʻuokalani will be escorted by some female horse riders from her residence on Beretania Street to Waikīkī a week from tomorrow. They are going to ride in horse riding pāʻū from the days of old. There is a lūʻau being prepared for them upon their arrival in Waikīkī.

6.10.2 Rodeos

The Makawao Paniolo Parade and Rodeo is a long-standing tradition in Makawao that integrates traditional Hawaiian customs and practices with Western traditions. Paniolo have managed the cattle on the land since they were first introduced to Maui.

Rodeos have become a very important tradition within the paniolo culture and community. Paniolo like Archie Kaʻauʻa and Ikua Purdy proved themselves some of the best cowboys in the country when these two young Hawaiians competed in rodeos in the United States:

> One of the most illustrious paniolo in history, Ikua Purdy was born in 1873 at Waimea, Hawaii. He was the great-grandson of John Palmer Parker, founder of the famed Parker Ranch, and Kipikane, granddaughter of King Kamehameha The Great. He learned to ride and rope on the Parker Ranch and competed in roping events on the Big Island, Oʻahu, and Maui. Long before Mainland rodeos, Hawaiian paniolo rode the range and hunted wild cattle on the Big Island. Ten-year-old Purdy learned to rope wild bullocks. He and others practiced the clever method of taming unbroken horses in the ocean—the horses, in several feet of water, soon gave up trying to buck off their riders.
>
> Through the years, many paniolo proved themselves exceptional athletes, horse handlers and cattlemen. Three drew the attention of a wider audience when they competed in the 1908 Frontier Days celebration in Cheyenne, Wyoming, the top contest of the day. Eben “Rawhide Ben” Low, owner and manager of Puʻuwaʻawaʻa Ranch, attended Frontier Days in 1907 and knew his ranch hands could do better than the mainland cowboys. In 1908, he sent three of his top men – Ikua Purdy, Archie Kaʻauʻa (Eben’s half-brother) and Jack Low (Eben’s brother) – to the competition.

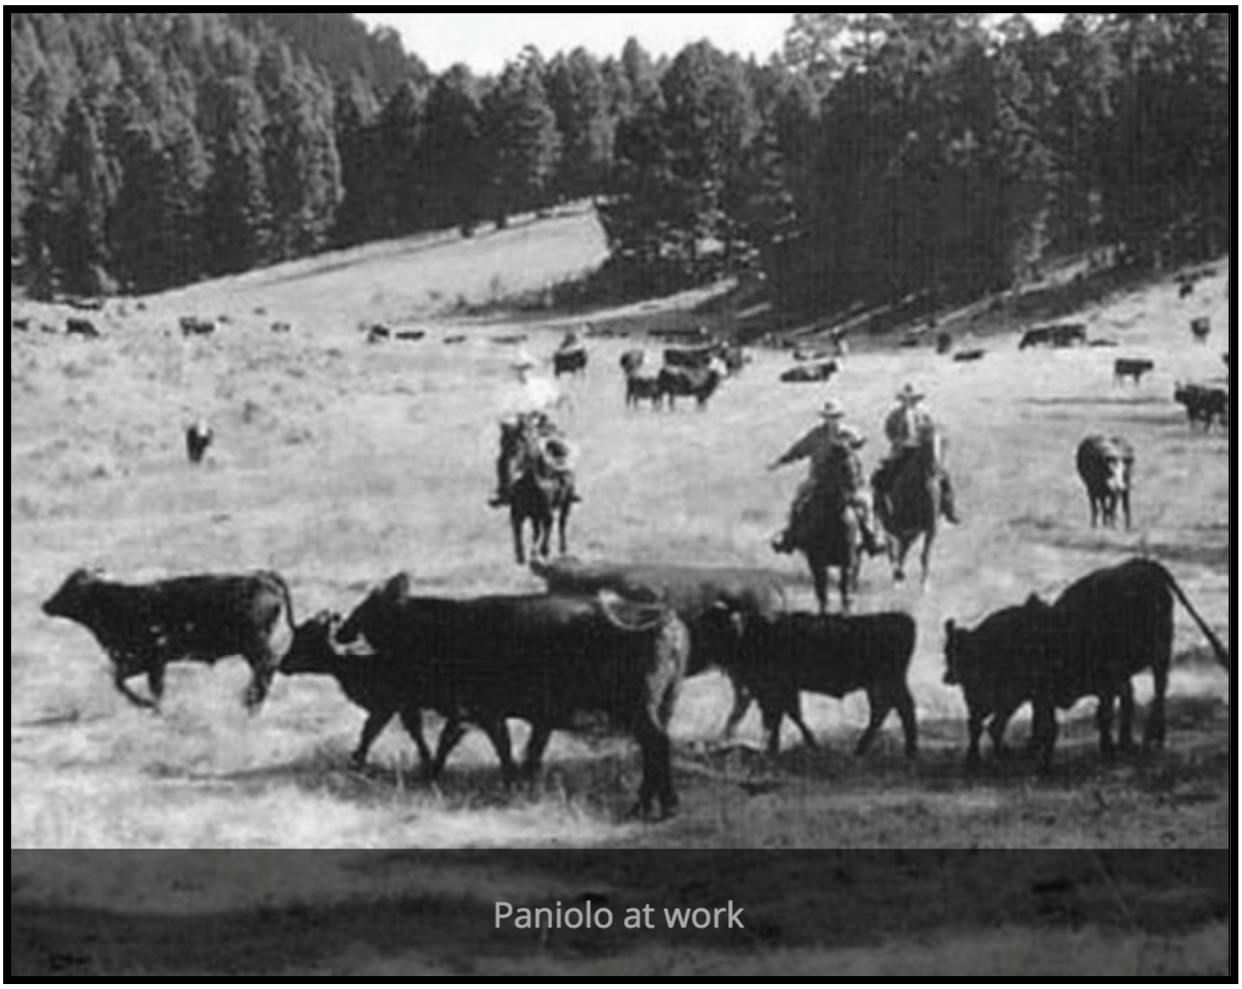

Figure 18. Historic Photo of Hawaiian Paniolo Herding Wild Cattle (Makawao Historical Museum)

By the time he was 20, Ikua Purdy was a master of the rope. In 1903, he and his paniolo friends participated in the first publicized cowboy competition recorded in Honolulu. Five years later, Purdy and other paniolos competed in the 1908 Frontier Days Rodeo in Cheyenne, Wyoming. The paniolo made a colorful entrance in Cheyenne, wearing their vaquero-inspired chaps and hats with flower lei. Headlines in Island and Wyoming newspapers in August of 1908 announced rodeo history. Twelve thousand spectators, a huge number for those days, watched Purdy, Kaʻauʻa, and Low carry off top awards at the world-famous Cheyenne Rodeo. Unlike today's calf-roping, riders lassoed powerful, full-grown steers. The Cheyenne paper reported that the performances of the dashing Hawaiians, in their vaquero-style clothing and flower-covered slouch hats, "took the breath of the American cowboys."

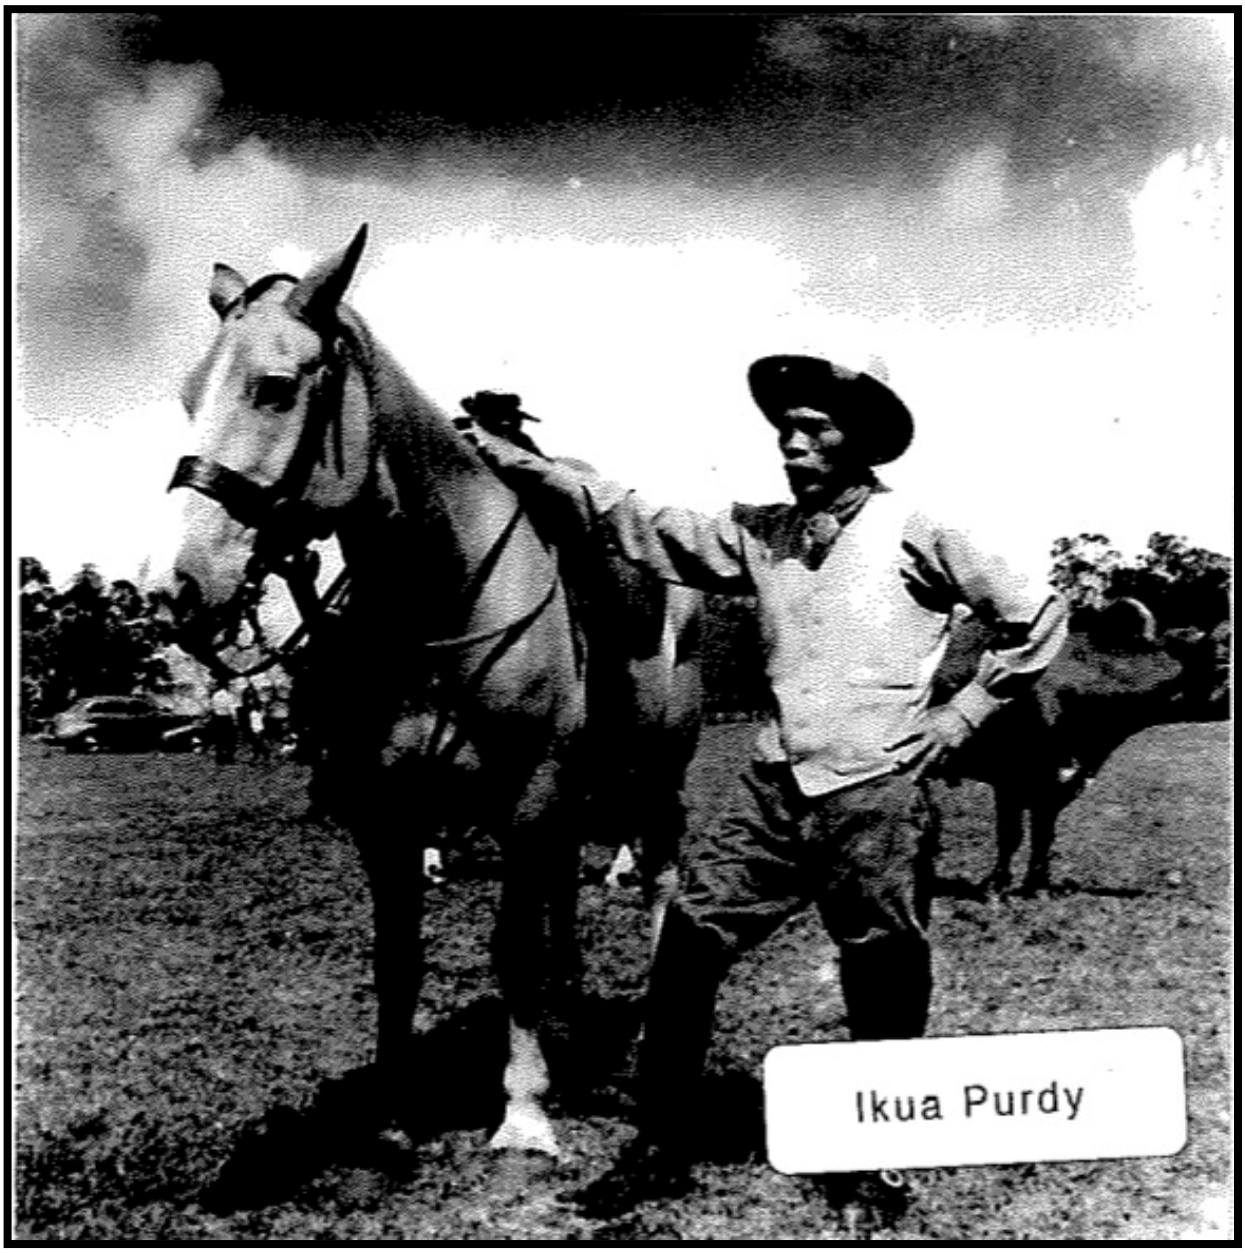

Figure 19. Famed ʻUlupalakua Paniolo Ikua Purdy (ʻUlupalakua Ranch, n.d.)

> They wowed the spectators with their performances too. Under drizzling skies, Purdy won the World's Steer Roping Championship—roping, throwing, and tying the steer in 56 seconds flat. Kaʻauʻa came in second and Low placed sixth. On arriving home, the men were met at dockside by thousands of cheering fans and also honored by parades and other festivities on Maui and Hawaiʻi. The Islands have produced other rodeo greats, including Sebastian Reiny, who could ride backwards while roping a running bull. But the three paniolo who swept the Cheyenne Rodeo remain heroes to this day. Against the best American cowboys, Hawaii's paniolo proved their worth ("Ikua Purdy," 2021).

The paniolo traditions are an essential and significant part of Maui's history and remain an essential part of its culture to this day.

Figure 20. Sale Sproat and Bubu Kamakana in Double Mugging Competition at the 62nd Annual Makawao Rodeo (Matthew Thayer, Maui News, 2017)

The Makawao Rodeo, held in Kula ahupua'a, has been a longstanding tradition in Makawao since 1956 when members of the Maui Roping Club initiated this event. The Maui Roping Club first formed in 1955 by founding members Harold "Oskie" Rice, George Manoa, Sr. and other Maui paniolo. The Rodeo takes place on the Fourth of July weekend when hundreds of entrants compete at the Oskie Rice Arena (on Olinda Road). The "Bull Bash" usually takes place on Friday nights.

Paniolo can enter to compete in a wide range of categories, including "Poowai u." Depending on the location and rodeo, various spelling of this term can be found, some spelling it "Poo Waiu." None of these terms or spellings appear in the Hawaiian language

dictionaries, but a search of alternate spelling “poowaiu” does appear in Hawaiian language articles.

As consistent with the explanations provided by modern rodeo, “poowaiu,” or poʻowaiū, referenced the Hawaiian tradition of capturing wild cattle and then tying them to a tree. Influenced by vaquero styles of ranching, Hawaiian paniolo developed the poʻowaiū method to catch pipi ʻāhiu (wild cattle) that were roaming throughout Hawaiʻi and Maui’s mountain regions. The paniolo lasso the head of a wild cow and then tie it to an ʻāmana (Y-shaped crosspiece or section of a tree) where it could be milked with ease, thus the term poʻowaiū (milk head). These cows were often left tied overnight until they became tired and worn out, at which point they would be led to the corral by a pipi kauō (trained ox). This practice was known as pine in Hawaiian and was a very innovative way of dealing with wild cattle in the mountains. The poʻowaiū competition replicates this activity whereby a paniolo or paniola must catch a steer and then tie it to a post in the middle of the arena.

Figure 21. Paniolo Competing in the “Poowai u” (Poʻowaiū) Competition in the 2018 Makawao Rodeo (Makawao Rodeo, 2018)

In 1939, Inez Ashdown submitted an article to the Hawaiian newspaper, *Ka Hoku o Hawaii*, about the Paniolo history in Hawai'i. Part of the article discusses the very beginnings of cowboy and ranching practices in Hawai'i and explains that the methods of "poowaiu" and "pine" were not used in the early ranching years when wild cattle were first being captured. These methods were apparently developed later on, and are still used today in rodeo events. This is the only Hawaiian language article found within the newspaper archives that discusses the method of "poowaiu." This article also highlights several important Hawaiian paniolo, including Ikua Purdy, and makes an insightful remark about how the paniolo history in Hawai'i is perhaps even more intriguing than the tales of the Wild West. Ashdown (1939, p. 6) also makes claim that the best paniolo of the times resided in Maui:

Na Keiki Paniola.	**The Cowboy Kids.**
Eia nae hoi owai, i keia la, i hiki ke hoomaopopo a paanaau na mele kahiko i poina e hoike ana i na mea e pili ana i na keiki paniolo pipi mua loa i hoea mai ma keia mau kaiaulu?	Nevertheless, who, today, is able to recall or memorize the old songs that have been forgotten that tell the stories about the very first cowboy kids to arrive in these communities?
He poe Mekiko a i ole Paniolo oia wale no ka mea i hoomaopopo ia, no ka mea o ka inoa "paniolo" ua loaa mai ia mai ka inoa "Espanol." O kekahi o na keiki paniolo pipi ka mea nana e hoike mai e pili ana i ka makuakane kupunakane paha he poe Latina lakou.	It was Mexicans or Spaniards, that is all that is remembered, because the term "paniolo" was obtained from the term "Espanol." It was one of the cowboy kids who told us about how the father, or perhaps the grandfather, was of Latin descent.
O Jack Aina, o kekahi o na naita holomua o ka noho, e olelo mai ana "Ai, Kuu makuakane Mekiko. O na paniolo mua loa kai lawe mai i noho lio, kaula, ke kaula waha, kepa, ame na mea apau i loaa ia kakou i keia la."	Jack Aina, one of the riding knights of the saddle, would say, "Yes, My Mexican fathers.[26] It was the first Spaniards who brought saddles, rope, reins, spurs, and all of the things we have today."
Aia ko Aina mau makahiki maluna o ke 60, eia nae hoi oia ke kanaka holo loa ma	Aina is over 60 years old, however, he is the person who has herded cattle

[26] "Ai, Kuu makuakane Mekiko." This line literally translates as, "Eat, My Mexican Fathers" however, the "Ai" could be a misspelt "Ae" which would make the line, "Yes, My Mexican fathers."

ka hooili pipi ana a oia nohoi kekahi o na laeula ma ka hoohei kaula ma ka mokupuni o Maui, a e kuku aku no na poe opiopio iho a nana aku me ka uwauwa ana “Aina! Hu ka makani!” iaia e hemo mai ai mai loko mai o ka pa eke maluna o kona lio kamaaina i ka alakai pipi me kekahi pipi e kekahi poo o kana kaula maluna o 20 kapuai, a komo aku la iloko o ke kai me ka lele ana o ke ehukai iluna.

the longest and he is also one of the experts in throwing rope on the island of Maui. The young folks crowd and look on shouting, “Aina! Hū ka makani!” [27] as he comes out from inside the corral on top of his horse that was trained at herding cattle with a cow [and] one end of his rope over 20 feet high, and he enters the ocean causing the seaspray to burst forth.

E like me ka nui ae o kona anaina o ka oi ia o ka maikai o kana hana ame ka akaaka ana ame ka ae oluolu ana e hoolealea me na lio, o ka oia loa aku nae hoi i na he poe malihini kekahi malaila. A liuliu mahope iho o kona hoomaemae ana a aila ana i kona noho lio ame ke kaula waha, a komo maila nohoi i ka palule nani, ame na lole wawae pale lepo, na kamaa huki ame na kepa-pele a kau iho la nohoi ma kona poo kela papale ooma nui o umi galani, he hoihoi loa oia i ka himeni ana ame ka hula ana no kona haku ame kana mau malihini.

As grandiose as his audience is, his show and the laughter and the eagerness to play with horses is even greater, and is especially great if there are also tourists there. He is ready right after he cleans up, oils his saddle and reins, puts on a dress shirt, his chaps, his boots and jingle bobs, [28] and places a large ten-gallon cowboy hat on his head. He was very fond of singing and dancing hula for his boss and his tourists.

I keia manawa he mea kau lio hou oia a a‘o nohoi na Angus McPhee ma ka Halelio o Keahua o ka Maui Agricultural Company, a o kahi hoi e malamaia ai na lio o ka Hui Hanai Holoholona o Kahoolawe. He loea nohoi oia ma ka hilo kaulaili ana, a ua hoohala oia i ka hapanui o kona manawa ma keia hana ame ka hoonaninani i na noho lio ame na kaula waha, oia hoi e kuni lau ana maluna o na noho lio, no ka mea he

At this time he was a new horse rider taught by Angus McPhee at the Keāhua Stables at Maui Agricultural Company, and at the place where the horses from the Kaho‘olawe Ranch were cared for. He is a master at lassoing and he would spend majority of his time doing this as well as beautifying the saddles and reigns, namely branding the saddle because he was very proud of his pearls and

[27] Hū ka makani, the wind whistles or roars [of things going at great speed.]

[28] Jingle bobs are spurs with bells on them, used to help condition and train horses. Jingle bobs served as a badge of honor because they were only earned by skilled horsemen.

haaheo loa oia o kana mau momi a e nana ana hoi i na aka e like me ke ano mau o na hana a na keiki paniolo pipi.

would look upon their glimmering, just as it is always done by the cowboy kids.

Ua noho hana no oia ma ka Hui hanai holoholona o Ulupalakua i ka wa e noho haku hana ana o Mr. McPhee malaila a e hana pu ana hoi me ka moho kaulana o ke kipukaili , me Ikuwa Purdy, o ke poo hana o ua hui la. Ua makaukau o Ikuwa i na hana o ka aina hanai holoholona mai ka N a hiki i ka W o ka mea hoi e hele malie ana eia nae hoi me he mea la ua maopopo wale iaia kahi e pee mai ana ka pipi ahiu. I ko lakou e puiwa ai e hoomaka ana oia me kona lio punahele e hana e like me ka hele ana a ka uwaki, no ka hoohei ana ame ke kupee ana e like me ka olapa ana a ka uwila.

He was employed at the ʻUlupalakua Ranch at the time when Mr. McPhee was the boss there, and he was working with some famous up and comers at the leather lasso, like Ikuwa Purdy, who was the head worker of the ranch. Ikuwa was an expert at working on the ranch lands from the N [sic] to the W [sic]; he is one who goes about with ease, but always locates wild cattle, as if he just knows where they are hiding. While they are startled, he begins with his favorite horse and works like clockwork, lassoing and tethering like a flash of lightning.

Ua kamaaina nohoi o Aina ia Hapakuka, i make hoi i keia manawa, a kana mau keiki nohoi e lawe lawe nei i kana mau hana kaulana ame kona inoa. A pela nohoi me ia kanaka me Kinau, a i like aku kona ano me kekahi kanaka kaua o ka wa kahiko, a o ka mea hoi nana i hoala mai i ke kanaka kaulio mua loa kaulana, Kamehameha ka Nui, nona hoi na lio ame na pipi, o ka mua loa i Hawaii, a i lawe ia mai Hawaii ma ke ano he mau makana e Vancouver ame Cleveland i na makahiki 1793-4.

Aina also knew Hapakuka, who is dead at this time, and his children as well, who are carrying out his famous deeds and his name. And the same for this person, Kinau, whose disposition was like that of an ancient warrior. And the person who incited the very first famous horse riders, Kamehameha the Great, owned the horses and the cattle, which were the first in Hawaiʻi, and were brought to Hawaiʻi as a gift from Vancouver and Cleveland in the years 1793-4.

Oia mau holoholona i hoea mua ai i Hawaii nei, ua kau ia e ke kapu o umi makahiki e ka Moi Hawaii, a o ua kapu la oia paha ka hoomaka ana o na pipi ahiu e hele ana hoi ma na kuahiwi o Hawaii a

The animals that first arrived here in Hawaiʻi were set under a restrictive period of ten years by the King of Hawaiʻi, and it was perhaps this restriction that started the onset of wild

me Maui a hiki wale i ka manawa a na poe hanai holoholona mahope mai i makemake ai e loaa na pipi maikai ame na lio, i luku aku ai i ua poe pipi ahiu la. O ke ano o ke hoohei ana i keia au aole nohoi alualu ana i na pipi ahiu, a poowaiu i ke kumu laau a pine aku me ka pipi kauo, aole nohoi kela mau kaa pipi no ka huki ana i na kaa ukana.

cattle traveling about in the mountains of Hawai‘i and Maui, up until the time of the ranchers, and after that, people wanted to obtain good cows and horses in order to slaughter the wild cattle. The type of lassoing done at this time did not entail chasing after wild cattle and securing their heads to a tree [po‘owaiū] and then tying them to an ox [pine]; it also did not involve the cattle wagons used to pull carriages.

O Keoki Davies o Hawaii oia nohoi kekahi o na keiki lehia i na hana oia ano, a e hana pu ana hoi me Wile Purdy ame kona mau hoahanai, a o Moku Smythe, Keoki Swift, a he lehulehu o na poe e ae i nee aku paha ma kekahi wahi okoa aku a make paha, aka, o na poe i koe iho a i maopopo ole hoi oiai no nae hoi o ko lakou mau moolelo ua like no a like, a ma kekahi mau ano, ua oi ae, mamua o na moolelo i hoike ia no ka poe koa o ke Komohana kahiko.

Keoki Davies from Hawai‘i was another one the youth skilled at this kind of work, and he worked with Wile Purdy and his cousins and Moku Smythe, Keoki Swift, and there were many others who probably moved to a different place and perhaps died, however, the people who remained here and are unrecognized, although their stories are exactly the same, in some ways, their stories are better than the ones that tell of the heroes of the old West.

Aia no ia paniolo ma Maui i keia manawa he loea ma na hana lima ame ka hana paniolo pipi. O keia Hawaii o Charlie Russell ua kapaia oia o John Lihau Kaaihue a oia nohoi ke poo hana ma na hana pipi ma ka aina hanai holoholona o Honolua. He 41 ona makahiki i keia manawa, a ua hoohuiia oia me kana wahine ma Kaupo i ka makahiki 1919 a ua haaheo nohoi oia i kana wahine maikai ame eiwa mau keiki. He eono mau keiki kane kino puipui ame ekolu kaikamahine ui e kokua ana i ka

These cowboys are located in Maui at this time and they are skilled manual laborers and cowboys. This particular Hawaiian, Charlie Russell, was referred to as John Lihau Kaaihue, and he was the head workman for cattle on the Honolua Ranch. He was 41 years old at this time, and he got together with his wife in Kaupō in the year 1919. He was so proud of his beautiful wife and their nine children. They had six husky boys and three beautiful daughters who helped their

makuakane ma kana mau hana, a i ole i ka makuahine paha ma na hana o ka home a i ole e hoomakaukau ana ame ka ulana lauhala ana...	father with his work, or perhaps their mother with the chores of the house, or else they would help prepare and weave lau hala...

The poʻowaiū and other paniolo practices are extraordinary examples of innovative Hawaiian traditions that have been continued and maintained for over 200 years.

6.11 Modern Hunting

While modern hunting is not a traditional Hawaiian practice, it has certainly become a cultural practice throughout Hawaiʻi. Traditionally, most animals were domesticated, making the need for hunting obsolete. It was not until after foreign contact, when land mammals and ungulates were allowed to roam wild, and hunting weapons, like guns, were introduced to the Hawaiian people, that hunting as we know it today began to gain popularity. The term for hunting in Hawaiian is hahai holoholona, to pursue animals. The need for hunting in Hawaiʻi did not arise until new species of animals arrived in the islands and became wild and widespread. Like the paniolo traditions of Hawaiʻi, hunting is a more modern cultural practice that is influenced by foreign contact, yet Hawaiians have been using introduced technology, including bows and guns, to hunt introduced species such as deer as well as native species, like boar, for generations. In places like South Maui, hunting practices are still very active, and many residents continue to hunt for their food as a part of subsistence living practices. Hunting is considered to be a significant cultural practice within Honuaʻula, including the lands located near the project area. Hunting is also identified in the ethnographic data. There is an extensive deer population in the area. These ungulates are considered invasive, hahai holoholona is important to managing this invasive species.

6.12 Surfing

Traditional surfing in Hawaiʻi has a rich and ancient history that dates back centuries. Surfing, known generally as heʻe nalu, was not just a sport but an integral part of Hawaiian culture and way of life. Surfing in Hawaiʻi can be traced back to ancient Polynesian settlers who arrived in the Hawaiian Islands around 2,000 years ago. These early kānaka settlers brought with them the knowledge and skills of wave riding. Surfing quickly became a significant aspect of Hawaiian society.

John R.K. Clark (2011, p. 19) explains that traditional surfing consisted of six different sports:

- Heʻe nalu – board surfing
- Heʻe one – sand sliding

- He‘e pu‘e wai – river surfing
- Kaha nalu – body surfing
- Pae po‘o – bodyboarding
- Pākākā nalu – outrigger canoe surfing

Traditional surfing held deep spiritual and cultural significance in Hawaiian society. It was not only a recreational activity but also a way to connect with the ocean and the gods. Hawaiian mythology includes stories of powerful deities who were skilled surfers, further emphasizing the cultural importance of surfing. In the early days of Hawaiian surfing, surfboards were typically made from local materials such as koa wood. These wooden surfboards were heavy and often quite large compared to modern surfboards.

Surfing played a role in the social hierarchy of ancient Hawai‘i. Ali‘i often had access to the best surf spots, and the sport was used to reinforce their status. Commoners also surfed, but their boards were usually of lesser quality. With the arrival of European explorers and missionaries in the late 18th century, Hawaiian society underwent significant changes. The influence of Western culture led to a decline in traditional Hawaiian practices, including surfing. Surfing was even discouraged and suppressed by missionaries who viewed it as immoral.

Figure 22. Mākena State Park’s “Big Beach” (Getty Images, n.d.)

The 20th century saw a revival of interest in surfing in Hawai‘i. In the early 1900s, individuals like Duke Kahanamoku, often regarded as the father of modern surfing, helped reintroduce and popularize the sport. Duke’s travels and surf demonstrations in the United States and around the world played a crucial role in spreading surfing beyond Hawai‘i. Today, Hawai‘i is known as one of the world’s premier surfing destinations. It is a global hub for surfers and continues to serve as an important cultural practice.

Traditional Hawaiian surfing techniques and the spirit of he‘e nalu are still respected and honored within the modern surfing community. Hawaiians take pride in their surfing heritage and continue to play a prominent role in the sport’s development and culture. There are numerous important surfing spots in Makena, as well as other beach locations. Based on site visits and discussions with area locals, most local residents, including youth, surf at the area of “Big Beach” at Mākena State Park of Oneloa known as “third entrance.”

Figure 23. "Third entrance," where local residents will often come to surf. (Photo: T. Watson, 2024)

6.13 Fishing, Spearfishing, and Limu Picking

The people of Honua‘ula maintained a profound connection to the sea throughout their history. This ancestral relationship with the ocean shaped not only subsistence practices but also spiritual beliefs, social organization, and cultural identity. Historical accounts, archaeological evidence, oral histories, and ethnographic studies provide a rich tapestry of information about the fishing traditions that have defined this region of Maui for centuries.

6.13.1 Traditional Connection to the Sea in Honua‘ula

According to an 1836 account by Naleipuleho, Honua‘ula was described as an “‘āina wī,” or “land of famines.” Residents lived either along the shore or in the mid-uplands, creating a distinct social geography defined by access to resources. Those living near the shore had the advantage of being “near freshwater and fish but had to travel far to access vegetable foods,” while those in the uplands faced the opposite challenge (Naleipuleho, 1836).

This fundamental relationship between coastal and upland communities created a symbiotic exchange system that was the backbone of Honua‘ula society. Maly & Maly (2003) explain that this pattern was common throughout Hawai‘i:

> The people of the land (kānaka) were noted for their expertise... The kūpuna (elders) of native families from the remote coastlines of Hawai’i have reported that they could determine when schools of certain fish would be coming to their shores by observing the phases of the moon and the condition of specific plants growing in or near the coastal region. (p. 5)

Early observations from European explorers confirm the significance of fishing in the region. In 1786, Jean-François de Galaup became one of the first Europeans to document the maritime activities in what is now the Makena area. He described encountering more than 120 Hawaiians who came out in canoes at dawn to engage in trade, suggesting an active and well-established maritime community:

> More than one hundred and twenty of them, men, women, and children had been out in their canoes since the crack of dawn and immediately offered to begin trading... When he returned aboard, the commander learned that Captain Clonard, his executive officer, had received a chief and had bought a cape and a fine red helmet from him; he had also acquired more than one hundred pigs, some bananas, yams, taro, mats, and various small objects made of feathers and shells. (de Galaup, 1969, pp. 24-25)

This account reveals not only the presence of active fishing communities, but also suggests a well-developed system of exchange centered on marine resources.

6.13.2 The Ahupua‘a System and Fishing Rights

Traditional fishing practices in Makena were embedded within the larger ahupua‘a system of land management. The ahupua‘a of Pāpa‘anui, Kā‘eo, Maluaka, and Mo‘oiki—which comprise the modern Makena area—were designed to give residents access to resources from the mountains to the sea. As Maly & Maly (2003) explain:

> In ancient Hawai’i, all fishing grounds were the property of certain chiefs and kings, and by them, portions were assigned to the people of designated areas of land... While konohiki (landlord-resource managers) and ho‘āina (native tenants) held the first rights to fisheries attached to their lands, traditions, historical accounts, and laws of the kingdom record that ancient custom and practice respected the rights of people to travel to, and fish at more distant fisheries. (p. 9)

This system created a complex set of rights and access protocols that regulated fishing activities. Within this framework, specific fishing grounds were known, named, and carefully managed. Though many of these names have been lost to time, historical records mention fishing grounds in Honua‘ula such as Hiu, Keahua, Kalawa, and Kiele, each likely associated with particular species, fishing techniques, or seasonal patterns.

6.13.3 Traditional Fishing Techniques

Native Hawaiians in Makena employed a diverse array of fishing techniques adapted to the specific marine environments and target species of the region. Maly & Maly (2003) document numerous traditional fishing methods that would have been practiced in areas like Honua‘ula:

> Fishing techniques varied depending on the species being sought, the condition of the sea, the abilities of the fishermen (and women), and the length of time one was fishing. The methods included hand collecting, trapping, spearing, poisoning, using hook and line, using nets and seines, and fishing with decoys. (p. 7)

Daniel Kahā‘ulelio, a native authority on traditional fishing practices born in 1835, provided detailed accounts of fishing techniques in his Hawaiian language newspaper series later compiled as “Ka ‘Oihana Lawai‘a” (Hawaiian Fishing Traditions). Though not specific to Makena, his accounts describe techniques that would have been employed along the Honua‘ula coastline:

> There are many, many ways to fish with nets... Among these is the hukilau, which uses a long net. The lawai‘a (fishermen) would go out; some would take the net out in canoes, and some from the land. Then they would surround the ko‘a (fishing ground) and drive the fish shoreward. (Kahā‘ulelio, 2005, p. 8)

Archaeological evidence and oral histories suggest that the coastline of Makena was particularly well-suited for certain fishing techniques, especially those employing nets in the shallow reefs and bays. The relatively protected waters in areas like Maluaka Beach and near Pu‘u Ōla‘i would have facilitated methods like surround netting (hukilau) and scoop netting.

6.13.4 Fish Preservation and Processing

Given the periodic food shortages that Honua‘ula experienced, preserving fish was essential for survival. Historical accounts indicate that drying fish facilitated easy transport and storage for times when food ran short. Salt production from basins along the shoreline of Oneuli complemented this preservation practice, creating a sustainable food system adapted to the region’s variable conditions.

Maly & Maly (2003) describe the traditional methods of fish preservation that would have been practiced in Makena:

> Among the significant traditional methods of catching and handling fish... were types of pa‘akai (salt making) and drying methods to cure fish for storage and trade. Salt was collected from natural, ocean-fed ponds in certain locations. In some localities, kānaka (people) made their pa‘akai by evaporating sea water from stone salt pans (kaheka). (p. 6)

The importance of these preservation techniques cannot be overstated in understanding the fishing traditions of Makena. In an area prone to drought and famine, the ability to preserve fish represented not just a food storage strategy but a critical adaptation that made permanent settlement possible in this challenging environment.

6.13.5 Fishponds (Loko I‘a)

Historical records document that Honua‘ula once had fishponds, though many have been lost over time. Chief Kauholanuimahu, who rose to power on Maui in the mid-1400s, is credited with “building a fishpond at Keone‘ō‘io” (Kamakau, 1992). Additionally, a small pond was situated along the point called ‘Āpuakēhau near the Keawala‘i Congregational Church, though it was eventually destroyed by surf.

Loko iʻa represented one of the most sophisticated aquaculture systems in the ancient world. Maly & Maly (2003) explain:

> Loko iʻa (fishponds) were another important component of traditional life in Hawaiʻi. They were something like a natural refrigerator from which fish could be harvested as needed. Loko iʻa were built upon or adjacent to naturally occurring features in the kai (ocean) or wai (freshwater), and enhanced to optimize fish production. (p. 7)

While the Makena area did not have as many large fishponds as other parts of Maui, the documented presence of at least two fishponds suggests that this technology was part of the local fishing tradition, likely serving as both a reliable food source during lean periods and as a demonstration of chiefly power and resource management.

Various resources provide valuable information about fishing communities in Honuaʻula and their resource use patterns. Keoneʻōʻio Fish Pond is described in Sterling (1998) as being:

> …attributed to a certain Kauholanūīmahu of Hawaii who came over to reside at Honuaula, Maui, for a few years. It consists of a wall of stones extending 200 feet across the channel, but a tidal wave broke out part of the wall and it has never been rebuilt. Small pools on the lava point beyond Keoneʻoʻio to the west were utilized by the natives to raise large mullet from the small fry caught in the sea pond. (p. 228)

Further information about Kauholanūīmahu indicates he “was the son of Kahoukapu and Laakapu” and “resided a great portion of his time at Honuaula, Maui, where he exercised royal authority, and, among other useful works, built the fishpond at ‘Keoneʻoʻio,’ which still remains” (Sterling, 1998, p. 228). Sterling suggests peaceful relations between Hawaiʻi and Maui during this period, with a Hawaiian royal maintaining residence in Honuaʻula and contributing infrastructure developments like the fishpond. Sterling also notes a possible connection to Maui chiefess Neula, who may have been Kauholanui's wife, potentially explaining “the frequent and protracted residences there by Kauholanui” (1998, p. 228).

6.13.6 Fishing Shrines (Koʻa and Kūʻula)

Archaeological evidence documented by Winslow M. Walker in 1929 identified several fishing shrines (koʻa or kūʻula) in the Makena area. Walker (1931) described the Oneuli koʻa as “a rough [stone] platform 13 by 14 ft and 5 ft high at the front” with “a low wall surround[ing] it on three sides” (p. 103). He also identified another koʻa “located near the

southern end of Maluaka Beach, on a rocky point at a spot he calls Kilauea" (Walker, 1931, p. 103).

These fishing shrines were essential components of the spiritual dimension of fishing in Hawaiian culture. Maly & Maly (2003) explain their significance:

> Ancient Hawaiians placed great importance on managing resources, and fishermen in all ahupua'a maintained and worshiped at shrines—ko'a (fishing shrines) and kū'ula (the stone god forms, named after an honored fisherman-deity). Offerings were placed at the ko'a and kū'ula to ensure that fish would return to the grounds and be given to the fishermen. (p. 6)

According to Hawaiian cultural practices, these ko'a served multiple important functions:

1. **Navigation landmarks**: They helped fishermen identify fishing grounds from the sea;
2. **Observation points**: Some were used to kilo (observe) ocean conditions and sight schools of fish;
3. **Spiritual sites**: Places where fishermen would ask for safety and favorable conditions; and
4. **Religious focal points**: Often featuring upright stones representing Ku'ula-kai, a primary fishing god

The presence of multiple fishing shrines in the Makena area underscores the cultural and spiritual significance of fishing in traditional Hawaiian society. These were not simply utilitarian structures but sacred sites that connected the community to their ancestors, gods, and the marine environment.

Elspeth Sterling's research (1998) documents that Pu'u Ōla'i, the prominent hill at Mākena State Park, featured a ko'a described as a "square heap of black stone" where "fishermen made offerings before putting out to sea" (p. 229). Additionally, oral traditions reference a large underwater cave near Pu'u Ōla'i considered a sacred dwelling place for deified manō, where families who claimed the manō as their 'aumakua would perform various protocols.

The relationship between Hawaiians and sharks as 'aumakua was particularly important in fishing traditions. Maly & Maly (2003) explain:

> Sharks were among the most important 'aumākua, and in general, the native families dwelling in various communities of the islands shared close relationships with their shark 'aumākua. Indeed, the ability of fishermen to engage in their work was often tied to their relationship with such deities and their natural forms. (p. 8)

Pu‘u Ōla‘i itself features prominently in Hawaiian legends related to fishing and marine resources. According to mo‘olelo, the hill was formed when the goddess Pele cut a mo‘o named Pu‘uoinaina in half, with the tail becoming Pu‘u Ōla‘i and the head becoming Molokini islet. This origin story connects the landscape directly to Hawaiian cosmology and underscores the sacred nature of the area’s marine resources.

6.13.7 Seasonal Migration and Fishing Practices

Matsuoka et al. (1996) documented an important seasonal pattern based on kama‘āina Sam Po’s account, noting that “even up through the latter half of the 19th century, the Hawaiians in the district continued to live mauka or makai and plant in accordance with the annual rains” (p. 73). This seasonal movement pattern demonstrates how fishing was integrated into a broader subsistence strategy adapted to Honua‘ula’s challenging environment.

Matsuoka et al., (1996) go on to explain:

> …about once month before the rainy season began, they would carry dirt down from the mountains to the coast in lauhala baskets and fill holes in the lava in preparation for planting... While on the coast, the Hawaiians would subsist on fishing and various vegetable foods that they cultivated in soil placed in the pockets of lava and nurtured by the rain. (p. 73)

This seasonal adaptation reflects the sophisticated ecological knowledge that underpinned fishing practices in Makena. Maly & Maly (2003) elaborate on how Hawaiians throughout the islands synchronized their fishing activities with natural cycles:

> In the practice of fishing (malama i ke kai), understanding natures’ cycles and the relationships between species and their places of habitation were critical to the success of the native fishermen. Some fish were available year around, but many species were seasonal in nature. (p. 5)

The seasonal migration pattern described by Sam Po represents a complex adaptation to Honua‘ula’s unique environment, allowing communities to optimize their use of both terrestrial and marine resources throughout the year.

6.13.8 Settler Colonialism Impacts on Fishing

The arrival of Western ships brought foreign settlers to the island. The subsequent changes to Hawaiian society significantly impacted traditional fishing practices in Makena. Missionary Jonathan S. Green observed in an 1846 letter to *The Polynesian* (See **Section 3.3.3** for full transcript of letter) that the whaling industry was drawing young Hawaiian men away from their communities and into the sea. This exodus of young men

represented a significant disruption to the transmission of traditional fishing knowledge and practices. As expert fishermen left their communities to work on whaling ships, the intergenerational transfer of specialized knowledge about fishing grounds, techniques, and protocols was interrupted.

Foreign accounts also illustrate how introduced animals impacted the landscape that supported traditional fishing practices. Handy et al. (1972) note that "in Honuaula, as in Kaupo and Kahikinui, the forest zone was much lower and rain more abundant before the introduction of cattle," suggesting ecological changes that would have affected the entire subsistence system, including fishing (p. 508).

The deforestation caused by cattle had far-reaching impacts on marine ecosystems. As upland forests receded, soil erosion increased, resulting in greater sediment flows to nearshore waters. This sedimentation would have damaged coral reefs and changed the composition of fish communities. Additionally, the loss of regular rainfall patterns due to deforestation would have affected the seasonal cycles upon which traditional fishing practices depended.

6.13.9 The Impact of the Māhele on Fishing Rights

The Māhele fundamentally transformed traditional fishing rights. Prior to this event, fishing rights were embedded within the ahupua'a system, but the privatization of land disrupted

this system and introduced new legal frameworks for marine resource access.

Maly & Maly (2003) explain this transition:

> By the middle 1800s, as Hawaiian customs and practices were being transformed... those leading the nation began to record laws concerning fishing rights of the people... By the 1839-1840 period, King Kamehameha III had expressed concern about the depletion of marine resources around the populated Hawaiian islands, and the seizing of fishing grounds by foreigners. (p. 10)

In Mākena, the Māhele resulted in land divisions that separated traditional fishing communities from their ancestral fishing grounds. The ahupua'a of Kā'eo was split into two halves, with King Kamehameha III claiming one half along with the ahupua'a of Maluaka, while the konohiki Mahoe claimed the other half. These divisions created new boundaries and access restrictions that undermined traditional fishing practices.

6.13.10 Military Disruption and Modern Transformation

Oral histories document significant disruption to fishing communities during World War II. Annie Leimomi Chang Wilmington, born in Mākena in 1907, recalled the displacement of

coastal families: “When the war started coming, they told everybody from the beach they had to move. [People] were selling their houses… but they [the military] took [bulldozed] all the homes so we didn’t get anything but fifty dollars for it” (de Naie, 2007, p. 219).

This forced relocation fractured fishing communities and severed their direct connection to the sea. Military activities along the coastline, including amphibious training exercises between Maʻalaea and Cape Kīnaʻu, physically altered fishing grounds and damaged marine habitats. The dismantling of Mākena Landing pier removed critical infrastructure that local fishermen had used to access offshore fishing grounds.

The post-war period saw continued decline in traditional fishing communities as economic opportunities shifted away from subsistence activities. Many displaced families never returned to Mākena after the war, resulting in a permanent loss of localized knowledge about fishing grounds, techniques, and seasonal patterns specific to the Mākena coastline.

6.13.11 Tourism Development and Fishing Traditions

The transition to tourism in the latter half of the 20th century represents the most recent phase affecting traditional fishing practices. In 1973, Ulupalakua Ranch sold 16 acres of beachfront property and an additional 1,000 acres to Seibu Holdings, Inc. for the creation of its proposed Mākena Resort, beginning a new era of development that would permanently alter the relationship between local communities and marine resources.

The development of resort properties, golf courses, and luxury residential communities transformed land use patterns and restricted access to traditional fishing areas. Beach parks and public access points provided limited entry to the shoreline, but many traditional fishing spots were effectively privatized or altered by development. The $40 million, 300-room Maui Prince Hotel, completed in 1986, symbolized this transformation from a fishing community to a tourist destination.

Even historic trails used by fishermen were threatened by development. A group called Hui Ala Nui O Makena had to fight legal battles to preserve a portion of the Makena-Keoneoio Road—a segment of Ke Alaloa, an ancient coastal trail used by fishermen for centuries. Though mediation in 1987 preserved a 1,100-foot section as a pedestrian pathway, the larger network of trails that had connected fishing communities was largely lost to development.

6.13.12 Contemporary Fishing Practices

Despite these profound changes, fishing continues to be practiced in Makena, albeit in forms that differ significantly from traditional practices. Recreational fishing, including

shoreline casting, spearfishing, and boat-based trolling, has largely replaced subsistence fishing. Some traditional knowledge persists among families with deep roots in the area, but many traditional fishing grounds, techniques, and protocols have been lost or transformed.

Modern fishing regulations, enforced by the State of Hawai‘i Division of Aquatic Resources, have replaced the kapu system that once governed fishing activities. Size limits, bag limits, seasonal closures, and gear restrictions now dictate when, where, and how people can fish. While these regulations aim to protect marine resources, they represent a fundamentally different management philosophy than the traditional system based on intimate local knowledge and cultural protocols.

The fishing traditions of Makena represent a rich cultural heritage that spans centuries of Hawaiian history. From the ancient ko‘a that marked sacred fishing grounds to the seasonal migrations that synchronized human activities with natural cycles, these traditions reflect a sophisticated understanding of marine ecosystems and sustainable resource use. Though profoundly transformed by historical forces—from the introduction of private property to the rise of tourism—elements of this heritage persist in contemporary practices and cultural memory.

As Makena continues to evolve in the 21st century, the recovery and revitalization of traditional fishing knowledge offers not just a connection to the past but potentially valuable insights for addressing modern environmental challenges. The deep ecological understanding embedded in traditional fishing practices—with its emphasis on seasonality, species-specific approaches, and community-based management—provides a counterpoint to industrial fishing models and offers lessons in sustainability relevant to contemporary conservation efforts.

This historical analysis reveals that fishing was not merely an economic activity, but a complex cultural practice deeply embedded in the spiritual, social, and ecological fabric of Honua‘ula. The fishing traditions of Makena represent an adaptation to challenging environmental conditions, reflecting the innovation, resilience, and deep ecological knowledge of its inhabitants across many centuries—a legacy that continues to shape the identity and future of this special place.

6.14 Paddling

Hawaiian outrigger canoe paddling is deeply rooted in the cultural heritage of the Hawaiian Islands. It is a traditional form of canoeing that has been practiced by the indigenous people of Hawai‘i for centuries. Outrigger canoes are large canoes with a smaller attached float, or outrigger, on one side for stability.

Figure 24. Outrigger Canoe Paddling as a Part of the Outdoor Pursuits Program (Mākena Golf & Beach Club, n.d.)

Canoe paddling holds cultural significance for Hawaiians. In ancient times, outrigger canoes were essential for fishing, transportation, and exploration between the islands. They played a vital role in the lives of the Hawaiian people and were deeply connected to their identity. Paddling plays a vital role in preserving Hawaiian culture and connecting the present generation with their ancestral heritage. It provides a platform for passing down traditional knowledge, values, and skills to younger generations, ensuring the continuation of this rich cultural practice. It is also often seen as a spiritual experience. Hawaiians believe in the concept of mana, a spiritual energy or power that exists in all things. Paddlers connect with the ocean, nature, and their ancestors during their time on the water, fostering a deep sense of respect and reverence.

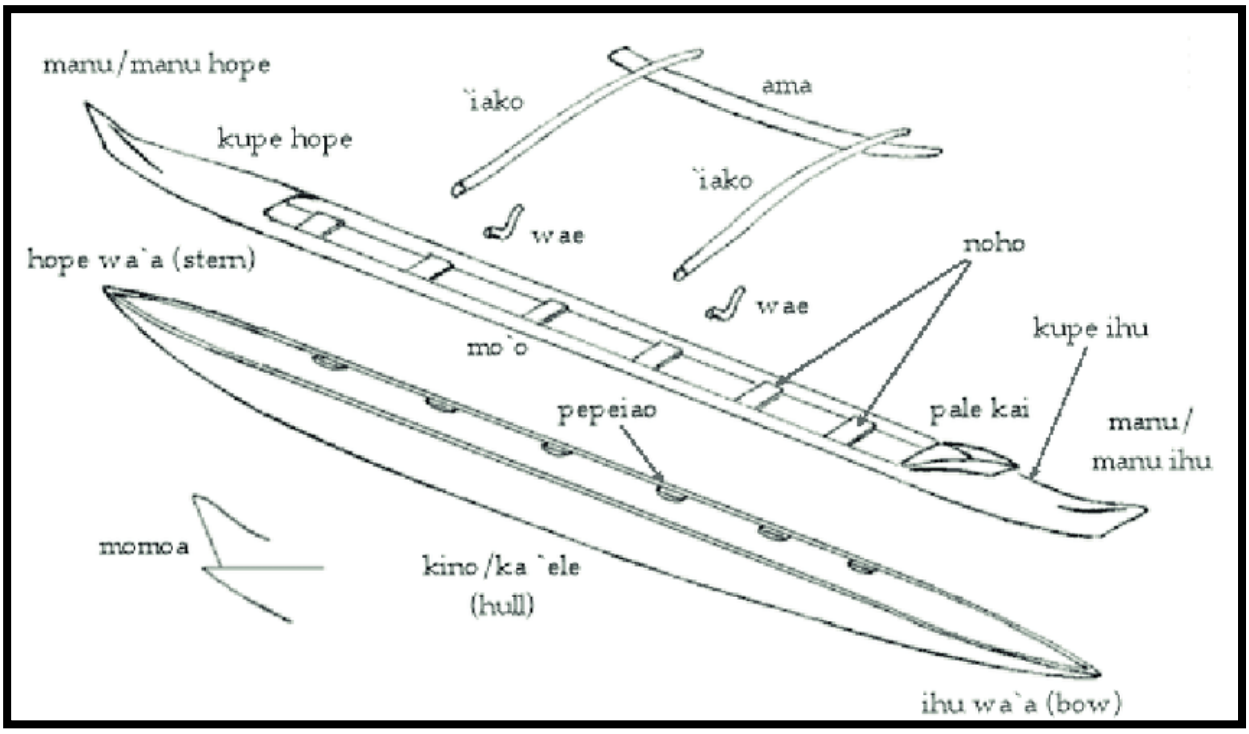

Figure 25. Diagram of Traditional Hawaiian Outrigger Canoe (Babineau, 2004)

Hawaiian names for the parts of an outrigger canoe with English translations:

- Aha – braided or twisted cord used in lashing the canoe
- Ama – float/outrigger
- Hoe – a paddle; to paddle
- Hope waʻa – stern (back end of the canoe)
- ʻIako – spars, boom
- Ihu waʻa – bow (front end of the canoe)
- Kanaka – stern end of ama
- Kapuaʻi – part of ʻiako between hull and ama
- Kino/Kaʻele/Kuamoʻo – hull, keel
- Kua ʻiako – portion of the ʻiako lashed to the hull
- Kupe hope – curved end piece covering the aft part of the hull
- Kupe ihu – curved end piece covering the fore part of the hull
- Lupe – bow end of ama
- Manu hope – stern end piece
- Manu ihu – bow end piece
- Manu kupe –to steer a canoe
- Momoa – under part of the rear covered section of a canoe
- Moʻo – gunwale

- Muku – ends of ʻiako that extend beyond the hull
- Noho – seat
- Pale kai – splash board
- Paʻu – storm covers, spray skirts
- Pepeiao – lugs or blocks inside a canoe hull to which the ʻiako, booms, and perhaps the mast are fastened
- Pikao – hull
- Wae – spreaders
- Waʻa – canoe, also vaʻa, waka

The Mākena Golf & Beach Club has an Outdoor Pursuits Program that provides group outrigger canoe tours with expert guides.

Figure 26. Group Outrigger Canoe Tours at Mākena Golf & Beach Club (n.d.)

There are numerous canoe paddling clubs and organizations throughout Maui that promote the sport, teach traditional techniques, and organize races and events. These clubs are an integral part of the canoe paddling community and provide opportunities for both recreational and competitive paddling. Hawaiian outrigger canoe paddling is not only a sport but also a way of connecting with the land, sea, and culture.

6.15 Kahoolawe

The association between Honua‘ula and Kaho‘olawe is rooted deeply in shared cultural landscapes, interisland practices, and spiritual traditions. Despite Kaho‘olawe’s physical isolation, its proximity to Honua‘ula—across the relatively narrow ‘Alalākeiki Channel—allowed for enduring social, spiritual, and subsistence ties between the communities of Maui and the island.

Oral traditions and chants suggest that Kaho‘olawe was viewed as a child of Holani and, along with Molokini (considered its “lewe,” or navel string), formed a triad of spiritually significant places aligned with Honua‘ula. The two places were not simply geographically adjacent—they were spiritually and culturally entwined. The island’s western cape, Kealaikahiki, literally means “the path to Tahiti” and was a known point for celestial navigation, offering a direct cultural and visual line to Honua‘ula’s coastline and to traditional voyaging routes extending toward the ancestral homeland of Kahiki.

Figure 27. "Kahoolawe Village" (Hawaii State Archives, Ref. GN-5-21102)

Kahoʻolawe is considered part of the Honuaʻula moku and its own ahupuaʻa therein. The people of Honuaʻula historically used Kahoʻolawe as a seasonal fishing and ritual station. With few permanent residents on Kahoʻolawe, it served instead as a place of periodic visitation, where fishing camps were established and ceremonial activities were conducted. The shallow waters and rich fisheries around both islands provided sustenance and economic benefit to residents of the south Maui coast. These activities underscore a reciprocal relationship, wherein the resources of Kahoʻolawe complemented and supported the population and practices of Honuaʻula.

Prior to Western contact, and even into the early 19th century, the people of Honuaʻula and the broader region of Maui used Kahoʻolawe as a satellite resource zone. Archaeological and ethnohistoric records indicate that while Kahoʻolawe may have lacked consistent freshwater and arable land for extensive agriculture, it supported extensive fishing operations. People from Honuaʻula would cross the channel in canoes, often stopping at Molokini to rest before continuing to the island.

Fishponds, koʻa (fishing shrines), and salt pans were among the cultural features documented historically and archaeologically on Kahoʻolawe. These were maintained by people living on Maui—especially from the coastal regions like Honuaʻula—who had lineal, genealogical, and resource claims to the land and sea around Kahoʻolawe. The relationship was not based on permanent settlement but on a rhythm of access governed by knowledge of winds, tides, and lunar calendars.

The island was also used for ritual purification, training of navigators, and religious observance. The barren terrain and isolation of Kahoʻolawe made it a revered wahi pana for kāhuna (priests) who sought solitude for ceremony and prayer. The spiritual importance of Kahoʻolawe resonated throughout Maui, particularly for Honuaʻula residents who maintained family and ceremonial ties to the island.

In the early 19th century, the use of Kahoʻolawe changed dramatically when the Hawaiian monarchy designated it as a place of exile. Convicts—many of whom originated from Maui—were sent to the island, and the last of the fishing families relocated, often to nearby districts such as Honuaʻula. Many of these families are now Makena descendants. This transition deepened the ties between the two places, as families in Honuaʻula remained connected to loved ones exiled to the harsh and often dangerous conditions of Kahoʻolawe.

Later, attempts to graze livestock and establish ranching operations on the island (e.g., by Kahoolawe Ranch and other ventures) had ecological and cultural consequences. Overgrazing and deforestation led to catastrophic erosion, impacting marine ecosystems shared with Honuaʻula. The cultural impact was equally devastating, as continued

degradation severed access to many significant cultural sites and disrupted traditional practices tied to the channel and the surrounding fisheries.

Figure 28. Historic photo of Kahoʻolawe ca. 1899 (Olivares, 1899)

When the island was taken by the U.S. Navy and used as a bombing range starting in 1941, the cultural and physical relationship between Honuaʻula and Kahoʻolawe was further damaged. But resistance to this occupation and destruction was led, in part, by Native Hawaiians from Maui—including those with ancestral ties to Honuaʻula. The resurgence of activism in the 1970s, particularly the efforts of Protect Kahoʻolawe ʻOhana (PKO), reaffirmed the deep genealogical and cultural link between the people of Honuaʻula and the island of Kahoʻolawe.

Today, efforts to heal and restore Kahoʻolawe continue to rely on cultural practitioners and community leaders, many of whom descend from lineages rooted in Honuaʻula. Ceremonies are conducted to reestablish traditional practices, honor ancestral ties, and restore ʻike kūpuna (ancestral knowledge) associated with navigation, fishing, and spiritual engagement. The annual Makahiki ceremonies on Kahoʻolawe, for instance, are facilitated by practitioners from Maui who regard the island not just as a historic site but as a living, sacred space.

In addition, the oceanic space between Honua‘ula and Kaho‘olawe—‘Alalākeiki Channel—remains central to ongoing efforts to revitalize traditional ocean practices, such as wa‘a (canoe) voyaging, kilo (observation), and cultural fishing. The revival of these traditions links contemporary communities with ancient knowledge systems that saw the waters between Maui and Kaho‘olawe as highways of culture rather than barriers.

The cultural association between Honua‘ula and Kaho‘olawe is one of shared genealogy, reciprocal ecology, and interdependent cultural practice. This connection has endured centuries of upheaval—from Western contact and colonial transformation to military occupation and environmental degradation. Yet, the traditions and memories that bind these places remain active, carried by families and practitioners who continue to cross the channel, perform ceremony, and fight for the integrity of their ancestral lands and waters. In the face of ongoing ecological and political challenges, the cultural resources of both Honua‘ula and Kaho‘olawe remain vital to the Native Hawaiian identity and the perpetuation of ‘āina-based knowledge and lifeways.

(This area intentionally left blank.)

7.0 Impact Assessment

While the nature of the proposed activities has the potential to adversely impact cultural resources and practices, the project has intentionally designed the project to avoid most potential adverse impacts to cultural practices. Therefore, the project as currently conceptualized would not significantly and adversely impact cultural resources or traditional or customary practices. Specifically, the project proposed the following actions to avoid or minimize potential adverse effects: 1) the project has completed archaeological surveys and proposed to avoid any impacts to significant historic properties, 2) the project is resulting in a net increase of native species in the region, resulting in a net benefit to that cultural resources and associated practices, and 3) the project is increasing access to culturally significant areas like the area

There are wahi pana within the overall property in which the project area is located, but it is not currently anticipated that any of the resources or practices in the area would be adversely impacted as a result of the project activities.

7.1 Impacts to Flora

The biological survey of Makena reveals a landscape that, while heavily impacted by invasive species and ungulate pressure, still harbors significant native biological and cultural resources worthy of protection. The native plants documented, particularly wiliwili, maiapilo, and other rare endemics, represent important components of Hawai‘i’s biological heritage. Similarly, the Polynesian-introduced canoe plants like kukui, hau, and milo form a living connection to traditional Hawaiian culture and land management practices.

The potential impacts of development on these resources are considerable but could be mitigated through thoughtful conservation planning. The biological survey makes a compelling case that restoration of this area, even as development proceeds, offers a rare opportunity to showcase how ecological rehabilitation can be integrated with land development to create a more sustainable and culturally resonant outcome.

While the biological survey does not explicitly detail the potential impacts of the proposed development, several concerns can be inferred:

1. Habitat Loss – Development will likely result in direct loss of habitat for native plants and animals, including areas where rare species like wiliwili, maiapilo, and puakala are found. This could further reduce already diminished populations.

2. Hydrological Changes – Construction and landscaping could alter water flow patterns, potentially affecting moisture-dependent native species or encouraging erosion that damages native plant communities.
3. Noise and Light Pollution – These forms of pollution can disrupt native wildlife, particularly the endangered ʻōpeʻapeʻa and native birds like the pueo.
4. Potential Loss of Cultural Resources – Native and Polynesian-introduced plants have significant cultural value for traditional practices, medicine, and crafts. Their loss represents not just ecological damage but cultural impoverishment.
5. Fragmentation Effects – Even if some native areas are preserved, development may isolate these into small fragments, reducing their ecological viability and making them more vulnerable to edge effects and invasive species.

Despite these challenges, there are significant opportunities for ecological restoration and preservation of cultural resources. The presence of remnant wiliwili forest and rare endemic species provides a foundation for rebuilding a healthier native ecosystem. Restoration efforts implemented throughout the construction process could create a model of conservation-minded development. The detailed species inventory presents valuable baseline data for conservation planning. By identifying the precise locations of native species, particularly rare endemics, conservation zones can be strategically established to maximize protection of biological and cultural resources. The biological report also notes that improving the diversity of native understory plants would reduce fire risk while simultaneously enhancing habitat value for native wildlife.

All interviewees mentioned the importance of the native vegetation, such as wiliwili. Kalei Luʻuwai recalled that the uplands of Makena used to be “shrub lands” rather than dominated by invasive species like kīawe in his youth, illustrating that the current landscape is relatively recent rather than a long-established ecosystem. CJ Elizares and Leahi Hall recommend that the project engage with cultural practitioners intimately familiar with Makena, as they can ensure protection of native species, advocate for culturally appropriate landscaping, and create protected areas for culturally significant species.

7.2 Impacts to Fauna

The cultural significance of the species observed in the project area is detailed in **Section 4.2.2 (Fauna)** and primarily centers around their importance in Hawaiian mythology.

The biological survey identified endemic and indigenous species in the project area that are of conservation concern: ʻōpeʻpeʻa, koloa maoli, alae keʻokeʻo, and aeʻo. The endemic pueo was surveyed with low occurrence, but this species is found on all the main Hawaiian Islands and is listed as endangered only on Oʻahu.

The ʻōpeʻapeʻa is an endemic, endangered bat found across all the main Hawaiian Islands. This species roosts in native and non-native vegetation from 3-29 feet above ground level and forages along coastlines and forest/pasture boundaries (Russell et al., 2015). To minimize any potential impacts to this endangered species, trees within and near the project are should not be cleared during roosting season from June to September.

Koloa maoli, alae keʻokeʻo, and aeʻo are all birds that are federally and state listed as endangered and found in wetland habitats. The biological report acknowledged that these waterbirds were “sighted but of rare occurrence” during the survey period (Barboza, 2025, p. 11). The project should take care to ensure that these endangered waterbirds are not nesting within the project area’s aquatic habitat and golf course ponds before any work begins.

CJ Elizares explains that ʻiwa birds have been observed using the project area for training their young to ride thermal currents. The golf course water features create valuable habitats for the endangered waterbirds, illustrating that modern development can sometimes create unintended beneficial spaces for culturally significant species. In addition to monitoring the project for the endangered species observed within the project area, CJ recommends designed lighting that minimizes the impacts on native wildlife.

7.3 Impacts to Historic Sites

ASM Affiliates conducted an Archaeological Literature Review and Surface Survey of the project area. The ASM investigation included two pedestrian survey methodologies: 20-meter transect survey of the entire 913-acre Survey Area followed by 5-meter transect survey and detailed feature documentation within portions of the Survey Area being considered for residential development. Based on the results of an initial 20-meter transect survey, three Preservation Areas (covering a total of 76.7 acres of the most intact areas of the archaeological landscape) were identified and withdrawn from development consideration. Within the three agreed-upon Preservation Areas, at least 78 previously documented sites were re-identified, and 29 features were newly identified. Outside the three agreed-upon Preservation Areas, at least 194 previously identified sites (associated with at least 310 archaeological features) were re-identified, and 188 features were newly identified as a result of the survey.

Impacts to historic sites on the remaining parcels, if any, will be covered by Hawaii Revised Statutes (HRS) 6E and Hawaii Administrative Rules (HAR) 13-284 during the entitlement process. Upon discovery of any additional significant archaeological sites or features, should any be found, appropriate action should be taken to avoid, minimize, or mitigate impacts to those resources.

Considering the heightened sensitivity regarding historic properties and iwi kūpuna on Maui and in this region, the project would be well-advised to ensure a thorough archaeological survey is prepared in areas of potential concern and that the survey is approved by SHPD prior to any ground-disturbing activities. Leahi Hall emphasizes that select archaeologists who are approved by the Cultural Focus Groups and culturally knowledgeable individuals from the area should be consulted in the event of iwi discovery.

CJ Elizares explains that Makena's uplands have up to 27 house sites that date back roughly 400 years and include water catchment systems and terraced gardens. He details sites scattered throughout the property among areas that have been disturbed by historical and modern land use. CJ also explains that there are traditional pathways crossing through the project area. He emphasizes that the project should utilize appropriate cultural practitioners and archaeologists to ensure these sites remain further undisturbed.

7.4 Impacts to Intangible Cultural Resources

Intangible cultural resources refer to those resources without physical form. The interviewees did not identify any traditional intangible cultural resources (i.e., hula, mele, or ʻōlelo noʻeau) currently associated with the project area, but many of the interviewees emphasized the importance of community in Makena. Kealahou Alika and Leahi Hall

identify the community itself, which was based on mutual knowledge and trust, as a cultural resource that has been impacted and diminished because of development projects. Leahi states that cultural resources are not just about physical sites or species, but about the relationships between people and place, between generations, and within the ecosystem. Suggested mitigation measures by interviewees to restore a sense of community in Makena include: 1) providing housing that allows residents to observe traditional natural phenomena like sunrise and sunset, enabling them to continue cultural practices of observation (kilo); 2) creating spaces where Native Hawaiian families can return to live in Makena; 3) implementing special tax rates for lineal descendants and kamaʻāina to help address the soaring property taxes that come with development, forcing Hawaiians from their ancestral lands; and 4) creating opportunities for cultural engagement, providing a mechanism for building relationships and cultural understanding among newer residents.

7.5 Impacts to Cultural Practices

The most frequently referenced cultural practices likely to be impacted by the project involve access to the ocean, namely fishing and limu picking. Contemporary scientific understanding highlights new threats to the fishing traditions of Makena. Rising ocean temperatures and acidification threaten the coral reef ecosystems that have sustained fishing communities for generations. A 2017 study by the National Oceanic and Atmospheric Administration found that some reefs in Maui experienced up to 50% coral bleaching during a 2015 warming event, with the south Maui coast (including Makena) among the affected areas.

Interviewees expressed concern about potential runoff from development, invasive species, overfishing, increased tourism, and shoreline erosion presenting additional challenges to marine ecosystems. The introduction of alien algae species like *Acanthophora spicifera* has changed nearshore habitats, while land-based pollution continues to stress reef systems. These challenges represent the newest chapter in the long history of adaptation that has characterized Makena's fishing traditions. Interviewee Kaʻōnohi Lee recalls seeing limu and ʻopihi frequently along the shores, but these species are no longer prevalent due to declining water quality and resource availability.

In response to these challenges, various community initiatives seek to revitalize traditional fishing knowledge and practices. Cultural practitioners, conservation organizations, and educational programs work to document, preserve, and transmit fishing traditions to new generations. These efforts recognize that TEK contains valuable insights for sustainable resource management in the face of modern environmental challenges.

Kaʻōnohi Lee, Eddie Chang, and Kalei Luʻuwai describe the various fishing techniques traditionally practiced in Makena, including hukilau for large gatherings and spearfishing

for sustenance. The beaches were once accessible to only a few families and locals, but the overpopulation and the increase in tourism has made it difficult to physically access traditional fishing sites at beach locations; overfishing and fishing as a sport for "trophies" rather than eating was also identified as Eddie Chang as a significant reason for diminished fishing practices in the area. Mitigation measures recommended by the interviewees to maintain the health of marine resources include: 1) learning from past developmental mistakes that led to vast run-off and sedimentation filling the bay with mud; 2) engaging with developers to encourage improvements in runoff management plans; 3) consulting with "true experts" who understand specific characteristics of Makena and understand the land's natural systems and streams; and 4) hiring locals who know the area and watching the water, ensuring it is potable to minimize environmental impacts.

Other potential mitigation would be establishing access to ocean resources for area descendants and practitioners. Improvement in the management of the beach and marine resources is critical to the preservation of ocean use by practitioners and descendants.

7.6 Cumulative and Indirect Impacts

Adverse cumulative and indirect impacts to cultural resources are often overlooked in CIAs, as they are difficult to assess. Cumulative impacts are cultural impacts that result from the incremental impacts of an activity when added to past, present, and reasonably foreseeable future actions and activities. Indirect impacts are impacts on cultural resources that are not a direct result of the project, but a secondary or tertiary result of the project. This section specifically responds to comments received during the scoping period related to settler colonialism.

Native Hawaiians in the Makena region have increasingly faced restricted access to lands and waters essential for practicing traditional and customary rights, including the gathering of medicinal plants, ceremonial observances, and subsistence fishing and gathering activities. These practices are rooted in a cultural framework that requires not only physical access to specific places but also ecological integrity and generational continuity of knowledge. Over the past century, historic land alienation—particularly following the Māhele and the expansion of ranching, tourism, and private development—has resulted in a widespread loss of access across both private and formerly public lands. As noted in interviews with area descendants such as Kaʻōnohi Lee and Keolahou Alika, this trend has led to a measurable decline in cultural practice, particularly among younger generations, due to the inability to access specific sites or gather required resources.

Multiple interviewees described ongoing efforts to access both shoreline areas and inland resources, noting that development, fencing, and land conversion have obstructed previously open pathways. In some cases, individuals reported being denied access to

areas they once frequented for generations. Others noted that even areas currently considered “publicly accessible”—such as beaches or trails—have become functionally inaccessible due to lack of parking, security enforcement, or over-tourism. The cultural practice of fishing in Mākena Landing, for instance, continues but is reportedly less common due to reduced fish abundance and recreational interference, while traditional kilo practices and ceremonial gatherings have been displaced to less ideal or alternative locations.

The concern articulated in this report is grounded in interviews with individuals who actively attempt to maintain their connection to place and perpetuate cultural practices but have encountered both legal and practical barriers. While some of these barriers stem from privatization and land use changes, it is important to note that under the Hawai‘i Supreme Court’s *Public Access Shoreline Hawai‘i (PASH)* decision and its progeny, Native Hawaiian traditional and customary practices are legally protected even on private lands, provided such practices are exercised in a manner consistent with traditionally recognized customs and do not cause substantial harm. Despite these protections, implementation remains uneven, and community members continue to report challenges accessing traditional sites—highlighting the need for clear legal, administrative, and voluntary access provisions as essential elements of meaningful cultural mitigation.

Quantifying the specific frequency of practice is inherently difficult due to the fluid and seasonal nature of Hawaiian cultural traditions. However, the cumulative narrative across interviews demonstrates a clear pattern of disruption, degradation, and displacement—effects that are not incidental but systemic, and that require equally systemic cultural protections and access guarantees if Native Hawaiian traditions are to meaningfully persist into the future.

Perhaps most concerning cumulative impact is the potential erosion of place-based knowledge—specialized ecological and cultural wisdom intimately tied to specific locations that cannot be preserved when those places are fundamentally altered. These impacts reflect core settler colonial patterns where Indigenous relationships to land are subordinated to Western concepts of property, development, and economic progress. The question becomes whether development can proceed without perpetuating colonial frameworks that prioritize land as commodity over land as cultural foundation, and whether planners can reconceptualize development approaches to center Native Hawaiian relationships with ‘āina rather than treating them as secondary considerations in a primarily economic venture.

Interviewee Keolahou Alika stresses that when it comes to marine resources, it is not about mitigation but restoration because the damage from siltation and pollution has

"already been done"; this perspective shifts the focus from prevention to restoration and accountability, recognizing the cumulative impacts of development in the area over time.

7.7 Ongoing Cultural Activities

The applicant has already implemented an extensive cultural and natural resource program that begins to redress some of the cumulative impacts identified by area descendants and kūpuna. These programs exist independently from this project but may be enhanced as part of the project mitigation.

Based on the challenges in quantifying the specific frequency of practice associated with Hawaiian cultural traditions, it may be appropriate to commission a cultural use plan, or similar such document, to research and document the history of practice in the area and establish access protocols appropriate to the region.

7.8 Mitigation and Best Management Practices

The following mitigation framework is grounded in the extensive cultural, ecological, and community-based knowledge presented in this Cultural Impact Assessment (CIA). Recognizing that Makena is not simply a geographic location but a dynamic cultural landscape, mitigation for the proposed Mākena Mauka Project must prioritize the protection and perpetuation of the deep-rooted practices, relationships, and rights identified in this study.

As affirmed throughout this CIA, traditional and customary practices in Makena remain vital to the identity, resilience, and continuity of Native Hawaiian cultural life. The impact of development on these practices, particularly when linked to cumulative harm and settler colonial histories, calls for a robust, multi-tiered mitigation plan that is not only legally compliant but ethically and culturally informed.

Community interviews, particularly with kūpuna and descendants with multi-generational ties to the region, provided a critical lens for evaluating project impacts. Interviewees expressed deep concern over continued disruption of access to traditional gathering and fishing areas, the degradation of marine resources due to coastal development, and the potential erasure of cultural memory embedded in the land. Several noted the cumulative impacts of historical land dispossession and increasing tourism pressure, which have already strained practices such as subsistence fishing and lāʻau lapaʻau. Some resources and practices, such as lei-making, kilo, and ceremonial observation, depend on visual viewplanes and specific species.

This CIA finds that the project has the potential to cause significant adverse effects on cultural resources and practices, but these impacts are mitigable. The project will continue

to refine mitigation strategies throughout the planning and entitlement processes. Some of these strategies include, but may not be limited to:

- Avoidance of known historic properties through project redesign, in coordination with SHPD;
- Preservation and restoration of native and culturally significant flora, including limu and wiliwili;
- Enhancement of public access to shoreline areas used for cultural fishing and gathering;
- Enhancement of cultural stewardship programming that integrates descendant and practitioner input;
- Enhancement of interpretive signage and traditional ecological education tied to site-specific moʻolelo.

The integrity of cultural practices relies on the continued availability of sites and species, many of which fall within or adjacent to the project boundaries. While HRS Chapter 6E and HAR §13-284 will guide formal consultation and archaeological review, it is recommended that the project's entitlements include enforceable cultural resource protection plans developed in partnership with Native Hawaiian stakeholders.

As articulated in this CIA, the impact of development is not limited to land use changes but extends to knowledge transmission, identity, and the very capacity for future generations to live as Hawaiians in their own homeland. Therefore, developing mitigation strategies as outlined above move beyond basic compliance to reflect an ethic of mālama ʻāina and aloha ʻāina as expressed by the people of Makena. Grounded in the testimony of cultural practitioners such as Kaʻōnohi Lee**,** CJ Elizares**,** Leahi Hall**,** Kalei Luʻuwai**,** and Kealahou Alika, this plan seeks to honor and uphold the living relationships that define Hawaiian culture.

Through proactive, sustained, and culturally grounded mitigation, the Mākena Mauka Project can become a model for regenerative cultural engagement in Hawaiʻi—one that recognizes the irreplaceable value of Hawaiian culture and seeks to cultivate genuine, reciprocal relationships between development and Indigenous stewardship. The measures proposed herein must be implemented in full to satisfy not only legal obligations under *Ka Paʻakai* and HRS Chapter 6E, but moral and cultural ones as well.

8.0 *Ka Paʻakai* Analysis

It has long been the law of the land that the State of Hawaiʻi has an "obligation to protect the reasonable exercise of customary and traditionally exercised rights of Hawaiians to the extent feasible" *Public Access Shoreline Hawaiʻi v. Hawaiʻi County Planning Commission ("PASH")* 79 Hawaiʻi 425, 450 n. 43, 903 P.2d 1246, 1271 n. 43 (1995). In 2000, in the *Ka Paʻakai* decision, the Court established a framework "to help ensure the enforcement of traditional and customary Native Hawaiian rights while reasonably accommodating competition private development interests." 94 Hawaiʻi 31, 35, 7 P.3d 1068, 1972 (2000). This analysis is used here to fulfill the goal of this CIA (**Section 1.4**). It is also used as guidance to state agencies in fulfulling their obligations under *Ka Paʻakai*.

It is also imperative to emphasize that the State may not delegate their obligations under the *Ka Paʻakai* decision to another party, including but not limited to the federal government. While the *Ka Paʻakai* decision was specific to a private developer, the facts of that case would be applicable to the situation at hand because the Court's reasoning for this decision and applicable precedent apply – the issue being that another entity would not have the same public accountability as the State. That is the case herein, the public accountability of the federal government is not equal to that of the State of Hawaiʻi. More specifically, the federal government is not bound to the obligations of the State as set forth under the Hawaiʻi State Constitution, which is the document from which the rights protected under *Ka Paʻakai* emanate.

Based on the guidelines set forth in *Ka Paʻakai*, the Hawaiʻi Supreme Court provided government agencies an analytical framework to ensure the protection and preservation of traditional and customary Native Hawaiian rights while reasonably accommodating competing private development, or other, interests. The Court has stated: "that in order to fulfill its duty to preserve and protect customary and traditional Native Hawaiian rights to the extent feasible, as required by Article XII, Section 7 of the Hawaiʻi Constitution, an administrative agency must, at minimum, make specific findings of fact and conclusions of law as to the following:

1) The identification of valued cultural, historical, or natural resources in the project area, including the extent to which traditional and customary Native Hawaiian rights are exercised in the project area.
2) The extent to which those resources—including traditional and customary Native Hawaiian rights—will be affected or impaired by the proposed action; and
3) The feasible action, if any, to be taken to reasonably protect Native Hawaiian rights if they are found to exist. *Ka Paʻakai*, 94, Hawaii at 47, 7 P.3d at 1084. Cited in *Matter of Contested Case Hearing Re Conservation District Use Application*

(CDUA) HA-3568 for the Thirty Meter Telescope at the Mauna Kea Science Reserve, Kaʻohe Mauka, Hāmākua, Hawaiʻi, 143 Hawaiʻi 379, 431 P.3d 752 (2018) ("*Mauna Kea II*").

To complete a thorough CIA that complies with statutory and case law, it is necessary to fully consider information available from, and provided by, Native Hawaiian cultural practitioners and cultural descendants from the project area. From thorough research, data was extrapolated that provides a comprehensive look at the cultural resources in this ʻāina. Through this research, the factors from *State v Hanapi* are met. These factors are: "to establish that his or her conduct is constitutionally protected as a native Hawaiian right, he or she must show, at minimum, the following three factors. First, he or she must qualify as a "native Hawaiian" within the guidelines set out in PASH . . . [as] "those persons who are 'descendants of native Hawaiians who inhabited the islands prior to 1778,' … regardless of their blood quantum." Second, once a defendant qualifies as a native Hawaiian, he or she must then establish that his or her claimed right is constitutionally protected as a customary or traditional native Hawaiian practice…. Finally, a defendant claiming his or her conduct is constitutionally protected must also prove that the exercise of the right occurred on undeveloped or "less than fully developed property." 89 Hawaiʻi 177, 185-86, 970 P.2d. 485, 493-94 (1998).

The *Ka Paʻakai* analysis is largely a legal analysis, as the applicable tests are legal standards. Therefore, a strong analysis is one conducted by someone with sufficient legal training. Additionally, at the core of a thoughtful *Ka Paʻakai* analysis is a comprehensive understanding of traditional and customary practices. In breaking down the Court's tests, it is important to the different elements that contribute to each test.

The first test – "The identification of valued cultural, historical, or natural resources in the project area, including the extent to which traditional and customary Native Hawaiian rights are exercised in the project area" – consists of two separate elements. First, the simple identification and existence of valued cultural, historical, or natural resources. These resources are tangible in nature. They can include sacred places, culturally valuable plants, or a religious or historic site. This survey sought to exhaustively identify the great multitude of resources that may exist in the project area or adjacent areas.

As to this test, this survey shows there are extensive cultural resources within the project area. Archaeological survey work will be applying *Ka Paʻakai* to historic sites and properties and will be formally assess through the HRS 6E-42 process, which is required for this project.

The second element of this first test is access. Access requires two things to occur. One is the existence of a resource. Whether a plant, an animal, a place, or site, the resource must exist in order a practitioner to access it. The second thing is physical access. This

includes, but it is not limited to, the ability to physically access a plant, animal, site, or location associated with a particular practice. This can also include the traditional and customary route or path taken to access the resource. This can also include cultural protocols that existed in accessing a resource. These are often temporal, in that access protocols can be at a certain time of day or year. Makahiki would be a good example of a traditional custom that has specific cultural protocols associated with access. In the case of Makahiki, the custom takes place at a certain time of year.

Therefore, the first test under *Ka Paʻakai* should include not only a listing of resources, but the identification of ways in which those resources are accessed and utilized in association with a traditional and customary practice.

According to scoping information and ethnographic data, kānaka have accessed the resources in Mākena for many generations.

Therefore, the second test – "The extent to which those resources—including traditional and customary Native Hawaiian rights—will be affected or impaired by the proposed action" – also looks at two separate elements. The first, does the proposed action and its alternatives have an adverse impact on the existence of resources? This would include the alteration, destruction, modification, or harm of sites, including biological resources, sacred places, burial sites, etc. It also includes a loss of species. Any adverse impact or harm to resources is alone an affect or impairment caused by the proposed action.

Under this element, adverse impacts to historic sites or culturally utilized plants would all be identified adverse impacts. Under this same element, any indirect or cumulative effects would create an adverse impact under *Ka Paʻakai* if those actions harmed resources. **Scoping data and ethnographic data indicate some of loss of resources, particularly through increased residential density.**

In addition to this, any action that impacts traditional and customary access to resources, even if there is not direct adverse impact to the resource itself, would result in an affect or impairment resulting from the proposed action. Therefore, the limitations on access that could result from development or use of the project area could create an adverse impact under *Ka Paʻakai.* **Based on ethnographic data collected, access to marine resources has been diminished as a result of multiple development projects in Mākena, leading to increased tourism and overpopulation.**

The third part of the *Ka Paʻakai* framework aims to identify "[t]he feasible action, if any, to be taken to reasonably protect Native Hawaiian rights if they are found to exist." Determining whether or not action has been suitably "feasible" is a matter for the State. These feasible actions could include continued access to the project as needed to conduct cultural practices. The impacts to historic sites will be addressed by SHPD.

Impacts, if any, will be addressed through HRS 6E and HAR 13-284 during the entitlement process, although avoidance of any historic sites is recommended. **The potential adverse effects can be avoided through the implementation of best management practices, which are identified in Section 7.0.**

(This area intentionally left blank.)

9.0 Conclusion

In Hawaiian culture, natural and cultural resources are largely viewed as being one and the same. Without the resources provided by nature, cultural resources could not and would not be procured. From a Hawaiian perspective, all natural and cultural resources are interrelated, and all natural and cultural resources are culturally significant. The kinship between Hawaiians and their land extends back across many generations, and it was the depth and intimacy of this relationship that enabled Hawaiians to thrive sustainability in the islands for hundreds of years prior to the arrival of Europeans. Therefore, Hawaiians are entitled to the pain and anguish they feel at the loss of their lands and resources.

This loss lies at the heart of Hawaiian struggles for traditional or customary access. Therefore, the obligation of the state to ensure that these rights are protected is much more than a legal obligation, as such rights are a necessity of indigenous human life. Recognition and respect for these rights also enables a more mutually respectful and beneficial relationship between the Planned Development and Hawaiians.

Act 50 was passed by the state recognizing:

> … the past failure to require native Hawaiian cultural impact assessments has resulted in the loss and destruction of many important cultural resources and has interfered with the exercise of native Hawaiian culture. The legislature further finds that due consideration of the effects of human activities on native Hawaiian culture and the exercise thereof is necessary to ensure the continued existence, development, and exercise of native Hawaiian culture (Act 50, SLH 2000).

The CIA is a construct of state law and a requirement of HRS Chapter 343. The legislative intent quoted above is critical to the due consideration of the effects the proposed action has and will have on cultural practices, because it specifies the importance of ensuring “the continued existence, development, and exercise” of culture. This recognizes that culture is not static; it is dynamic. It changes over time. Act 50 specifically calls for consideration of the effects a proposed action may have on the continued “development” of native Hawaiian culture. Which means it is insufficient to simply look back to historic practices. Considering effects to the continued development of culture means the state, specifically the governing state or county agency, as the accepting authority of the Chapter 343 Environmental Impact Statement (EIS), of which this CIA is a requirement.

Additionally, the State Environmental Review Program (ERP, formerly OEQC) offers specific guidelines for what elements and issues a CIA should address. The section of this CIA that addresses that element is also provided.

Table 2. ERP Compliance Requirements and Their Corresponding Sections in this Assessment

ERP notes that in addition to the content requirements for the draft EIS, which are set out in HAR §11-200.1 et seq., the assessment concerning cultural impacts should address, but not necessarily be limited to, the following matters:	
A. A discussion of the methods applied and results of consultation with individuals and organizations identified by the preparer as being familiar with cultural practices and features associated with the project area, including any constraints or limitations which might have affected the quality of the information obtained.	A detailed methodology section is provided in **Section 2.0**, *Methodology*.
B. A description of methods adopted by the preparer to identify, locate, and select the persons interviewed, including a discussion of the level of effort undertaken.	A discussion of the effort to gather into from persons familiar with the area or other stakeholders is provided in **Section 2.6**, *Ethnographic Methodology*.
C. Ethnographic and oral history interview procedures, including the circumstances under which the interviews were conducted.	A discussion of procedures, including constraints or limitations, is provided in **Section 2.6**, *Ethnographic Methodology.*
D. Biographical information concerning the individuals and organizations consulted, their expertise, and their historical and genealogical relationship to the project area, as well as information concerning the persons submitting information or interviewed, their particular knowledge and cultural expertise, if any, and their historical and genealogical relationship to the project area.	Biographical information was provided for each interviewee in **Section 5.0**, *Oral Records, Interviews, and Consultations.*
E. A discussion concerning historical and cultural source materials consulted, the institutions and repositories searched and the level of effort undertaken. This discussion	A discussion of the materials consulted is provided in **Section 2.0**, *Methodology*. An extensive cultural and historical overview, which uses both Hawaiian and English

should include, if appropriate, the perspective of the authors, any opposing views, and any other relevant constraints, limitations or biases.	language resources is also provided in **Section 2.0**, *Methodology.*
F. A discussion concerning the cultural resources, practices and beliefs identified, and, for resources and practices, their location within the broad geographical area in which the proposed action is located, as well as their direct or indirect significance or connection to the project site.	In addition to the cultural and historical overview, an extensive discussion concerning cultural resources, practice and beliefs are provided throughout the document by subfield, specifically in **Section 3.0,** *Historic Background* and **Section 4.0**, *Cultural Resources*.
G. A discussion concerning the nature of the cultural practices and beliefs, and the significance of the cultural resources within the project area affected directly or indirectly by the proposed project.	A thorough discussion concerning the nature of traditional or customary practices and the significance of the cultural resources affected directly or indirectly by the proposed alternatives is provided in **Section 7.0**, *Impact Assessment*.
H. An explanation of confidential information that has been withheld from public disclosure in the assessment.	There was no confidential information withheld from public disclosure, except for personal emails, addresses, and phone numbers.
I. A discussion concerning any conflicting information regarding identified cultural resources, practices and beliefs.	There was no conflicting information regarding cultural resources, practices, or beliefs.
J. An analysis of the potential effect of any proposed physical alteration on cultural resources, practices or beliefs; the potential of the proposed action to isolate cultural resources, practices or beliefs from their setting; and the potential of the proposed action to introduce elements which may alter the setting in which cultural practices take place.	A thorough analysis is provided in **Section 7.0,** *Impact Assessment*.
K. A bibliography of references and attached records of interviews which were allowed to be disclosed.	References are included in **Section 10.0**, *References*.

The standard under which an EIS is considered sufficient is also well-established in Hawaii state case law. The court has held:

> …an EIS need not be exhaustive to the point of discussing all possible details bearing on the proposed action but will be upheld as adequate if it has been compiled in good faith and sets forth sufficient information to enable the decision-maker to consider fully the environmental factors involved and to make a reasoned decision after balancing the risks of harm to the environment against the benefits to be derived from the proposed action, as well as to make a reasoned choice between alternatives" *Price v Obayashi Hawaii Corp*, 81 Hawaii 171, 182 (1996), upheld in *Kaleikini v Yoshioka*, 283 P. 3d 60, 74 (2012).

It is the obligation of this CIA to disclose information as required under Act 50 sufficiently and in good faith such that the state may consider all impacts when acting as decision-maker to this proposed action. This assessment is not a policy document, nor does it intend to influence decision-making in any fashion. Rather, it has sought to document the complex, and often elusive, history of past and present cultural practices within the project area and larger region. It is ultimately the responsibility of the state to accept or reject the adequacy of this assessment, and then, if accepted, consider the information disclosed herein when deciding on the proposed action.

In applying *Ka Paʻakai*, cultural, historical, and natural resources have been identified in the project area. Traditional or customary Native Hawaiian rights do not appear to be currently exercised in the project area, but they are practiced in the nearby coastal areas. Implementing the recommendations provided in **Section 7.0** can avoid, minimize, or mitigate any adverse effects on these practices.

Appendix I: Glossary of Hawaiian Terms

The following list of terms were used throughout this report. All definitions were compiled using Pukui and Elbert's *Hawaiian Dictionary* (1986).

ʻAʻā	Rough and stony lava type.
Ahu	Heap, pile, collection, mound, mass; altar, shrine, cairn; a traplike stone enclosure made by fishermen for fish to enter; laid, as the earth oven.
Ahupuaʻa	Land division usually extending from the uplands to the sea, so called because the boundary was marked by a heap (ahu) of stones surmounted by an image of a pig (puaʻa), or because a pig or other tribute was laid on the altar as tax to the chief.
ʻĀina	Land, earth.
ʻĀina Aupuni	Government lands.
ʻĀina Konohiki	Konohiki lands.
ʻĀina Lei Aliʻi	Crown lands.
Akua	1. God, goddess, spirit, ghost. 2. Divine, supernatural, godly.
Ala	Path, road, trail.
Ala hele	Pathway, route, road, way to go, itinerary, trail, highway, means of transportation.
Ala loa	Highway, main way. Ancient island trails.
Alanui Aupuni	Government roads.
Aliʻi	1. Chief, chiefess, ruler, monarch. 2. Royal, regal. 3. To act as chief, reign.
Aliʻi ʻai ahupuaʻa	Chief who controls the ahupuaʻa resources.
Aliʻi ʻai moku	Chief who rules a moku (district).
Aliʻi nui	High chief.
Aliʻi wahine	Female chiefs.
Aloha	Love, affection, compassion, mercy, sympathy, pity, kindness, sentiment, grace, charity
ʻĀpana	Piece, slice, portion, fragment, section, segment, installment, part, land parcel, lot, district, sector, ward, precinct; chop, as of lamb. A kuleana, land division, may consist of several ʻāpana.
ʻAumakua	Family or personal gods, deified ancestors who might assume the shape of sharks, owls, hawks, dogs, plants, etc. A symbiotic relationship existed; mortals did not harm or eat them, and the ʻaumakua warned or reprimanded mortals in dreams, visions, and calls.
ʻAumākua	Plural of ʻaumakua.

ʻAuwai	Irrigation ditch, canal.
Haʻi moʻolelo	Storytelling performance.
Hālau	1. Long house, as for canoes or hula instruction; meeting house. 2. Large, numerous; much.
Hale	House, building, institution, lodge, station, hall.
Hale pili	House thatched with pili grass.
Heiau	Pre-Christian place of worship, shrine. Some heiau were elaborately constructed stone platforms, other simple earth terraces.
Honu	General name for turtle and tortoise.
Honua ola	Living biocultural landscape.
Hoʻokupu	Tribute, tax, ceremonial gift-giving to a chief as a sign of honor and respect; to pay such tribute; church offering.
Hula	A Polynesian dance form accompanied by chant or song.
ʻIke kūpuna	Ancestral knowledge.
ʻIli	Land section, next in importance to ahupuaʻa and usually a subdivision of an ahupuaʻa.
ʻIli kūpono	A nearly independent ʻili land division within an ahupuaʻa, paying tribute to the ruling chief and not to the chief of the ahupuaʻa. Transfer of the ahupuaʻa from one chief to another did not include the ʻili kūpono located within its boundaries.
Iwi	Bone, carcass. The bones of the dead, considered the most cherished possession, were hidden, and hence there are many figurative expressions with iwi meaning life, old age.
Kahuna	Priest, sorcerer, magician, wizard, minister, expert in any profession (whether male or female).
Kalana	Division of land smaller than a moku or district; county
Kalo	Taro (*Colocasia esculenta*), a kind of aroid cultivated since ancient times for food, spreading wildly from the tropics of the Old World. In Hawaiʻi, taro has been the staple from earliest times to the present, and here its culture developed greatly, including more than 300 forms. All parts of the plant are eaten, its starchy root principally as poi, and its leaves as lūʻau.
Kamaʻāina	1. Native-born, one born in a place, host. 2. Native plant. 3. Acquainted, familiar.
Kanaka	Human being, man, person, individual, party, mankind, population.
Kanaka Hawaiʻi	Hawaiians.
Kānāwai	Law, code, rule, statute, act, regulation, ordinance, decree, edict.
Kāne	Male, husband, male sweetheart, man; brother-in-law of a woman.
Kanikau	1. Dirge, lamentation, chant of mourning, lament. 2. To chant, wail, mourn.

Kapu	1. Taboo, prohibition. 2. Special privilege or exemption from ordinary taboo. 3. Sacredness, prohibited, forbidden, sacred, holy, consecrated. 4. No trespassing, keep out.
Kēhau	Dew, mist, dewdrop. Name of a gentle land breeze, as of West Hawai'i.
Ki'i	Image, statue, picture, photograph, drawing, diagram, illustration, likeness, cartoon, idol, doll, petroglyph; features, as of a face; plans, as for a house; carved, as end of an 'auamo pole.
Kilo i'a	A man who observes fish movements from a high place and directs fishermen; to so act.
Kino lau	Many forms taken by a supernatural body, as Pele, who could at will become a flame of fire, a young girl, or an old hag.
Kō	Sugar cane (*Saccharum officinarum*), a large unbranched grass brought to Hawai'i by early Polynesians as a source of sugar and fiber.
Ko'a	1. Fishing grounds, usually identified by lining up with marks on shore. 2. Shrine, often consisting of circular piles of coral or stone, built along the shore or by ponds or streams, used in ceremonies as to make fish multiply; also built on bird islands, and used in ceremonies to make birds multiply.
Kona	Leeward sides of the Hawaiian Islands.
Konohiki	Headman of an ahupua'a land division under the chief; land or fishing rights under control of the konohiki; such rights are sometimes called konohiki rights.
Ko'olau	Windward sides of the Hawaiian Islands.
Kuahu	Altar. Family shrine.
Kula	1. Plain, field, open country, pasture. 2. School, academy; to teach school, go to school; to hold school or class sessions
Kuleana	Right, privilege, concern, responsibility, title, business, property, estate, portion, jurisdiction, authority, liability, interest, claim, ownership, tenure, affair, province.
Kumu	Teacher, tutor, manual, primer, model, pattern.
Kumu hula	Hula teacher.
Kupua	Demigod or culture hero, especially a supernatural being possessing several forms (as Kama-pua'a and Laenihi); one possessing mana; to possess kupua (magic) powers.
Kupuna	Grandparent, ancestor, relative or close friend of the grandparent's generation, grandaunt, granduncle.
Kūpuna	Plural of kupuna.

Limu	A general name for all kinds of plants living under water, both fresh and salt, also algae growing in any damp place in the air, as on the ground, on rocks, and on other plants; also mosses, liverworts, lichens.
Loʻi	Irrigated terrace, especially for taro, but also for rice and paddy.
Loko iʻa	Traditional Hawaiian fishpond.
Lole	Cloth, clothes, costume, dress, gown; to wear clothes.
Māhele ʻĀina	Land Division.
Mahi ʻai	Farmer, planter; to farm, cultivate; agricultural.
Makaʻāinana	Commoner, populace, people in general.
Makai	On the seaside, toward the sea, in the direction of the sea.
Mālama	To take care of, tend, attend, care for, preserve, protect, beware, save, maintain.
Manō	Sharks.
Manō iʻa	Ordinary shark.
Manō kanaka	Shark thought to be born of a human mother and sired by a shark god, or by a deified person whose spirit possesses a shark or turns into a shark.
Mauka	Inland, upland, towards the mountain.
Mele	1. Song, anthem, or chant of any kind. 2. Poem, poetry. 3. To sing, chant.
Mele ʻāina	Songs of the land.
Mōʻī	King, sovereign, monarch, majesty, ruler, queen.
Moku	1. District, island, islet, section, forest, grove, clump, fragment. 2. To be cut, severed, amputated, broken in two.
Mokupuni	Island.
Moʻo	Lizard, reptile of any kind, dragon, serpent.
Moʻolelo	Story, tale, myth, history, tradition, literature, legend, journal, log, yard, fable, essay, chronicle, record, article.
Moʻowahine	Female lizard deity.
Nīʻau-piʻo	Offspring of the marriage of a high-born brother and sister, or half-brother and half-sister.
ʻOhana	Family, relative, kin group; related.
ʻOkana	District or subdistrict, usually comprising several ahupuaʻa.
ʻŌlelo noʻeau	Proverb, wise saying, traditional saying.
Oli	Chant that was not danced to, especially with prolonged phrases chanted in one breath, often with a trill at the end of each phrase; to chant thus.
ʻŌʻō	Digging stick, digging implement, spade.
Pae ʻāina	Group of islands, archipelago.

Pāhoehoe	Smooth, unbroken lava type.
Paniolo	Cowboy (sometimes called paniolo pipi to distinguish from paniolo). 2. hoʻo.pani.olo To be like a cowboy or pretend to be a cowboy.
Pāʻū	Woman's skirt, sarong; skirt worn by women horseback riders
Piʻo	Marriage of full brother and sister of nīʻaupiʻo rank, presumably the highest possible rank. Their offspring had the rank of naha, which is less than piʻo but probably more than nīʻaupiʻo. Later piʻo included marriage with half-sibling.
Pōhaku	Rock, stone, mineral, tablet.
Pono	Goodness, uprightness, morality, moral qualities, correct or proper procedure, excellence, well-being, prosperity, welfare, benefit, behalf, equity, sake, true condition or nature, duty.
Pueo	Hawaiian short-eared owl (*Asio flammeus sandwichensis*), regarded often as a benevolent ʻaumakua.
Pūnāwai	Water spring.
Puʻu	Any kind of a protuberance from a pimple to a hill: hill, peak, cone, hump, mound, bulge, heap, pile
ʻUala	The sweet potato (*Ipomoea batatas*), a perennial, wide-spreading vine, with heart-shaped, angled, or lobed leaves and pinkish-lavender flowers. The tuberous roots are a valuable food, and they vary greatly in many ways, as in color and shape. Though of South American origin, the plant has been a staple food since ancient times in many parts of Polynesia, as well as in some other regions.
ʻUlu	The breadfruit (Artocarpus altilis), a tree perhaps originating in Malaysia and distributed through tropical Asia and Polynesia. It belongs to the fig family, and is grown for its edible fruits, sometimes for ornament. The leaves are large, oblong, more or less lobed; fruits are round or oblong, weighing up to 4.5 kilos, when cooked tasting something like sweet potatoes.
Wahi pana	A sacred and celebrated/legendary place.
Wahine	Woman, lady, wife; sister-in-law, female cousin-in-law of a man.
Wāhine holo lio pāʻū	Female pāʻū riders.
Wai	Water, liquid or liquor of any kind other than sea water.
Waiwai	Goods, property, assets, valuables, value, worth, wealth, importance.
Wao	1. Realm. 2. A general term for inland region usually forested but not precipitous and often uninhabited.

Re: Mākena Golf & Beach Club – Mauka Redevelopment
Wailea-Mākena, Hawaii
HVS Reference: 2023-02-0435

Dear Mr. Wilhelm:

Pursuant to your request, we herewith submit our market study report pertaining to the Mākena Golf & Beach Club – Mauka Redevelopment. We have inspected the real estate and analyzed the market conditions in the Wailea-Mākena, Hawaii, area.

As currently envisioned, the 1,043.71-acre total project (TMK: (2)2-1-005:108, (2)2-1-006:036 and 057, (2)2-1-007:068, 092 and 093, (2)2-1-008:078, 079, 081, and 090, and (2)2-1-031:036(Por.)), of which is 473 acres of residential use will contain 652 residential units as follows:

- 180 rural and single-family residential lots;
- 363 market-rate, multi-family residential units;
- 109 residential workforce housing units (15 single-family and 94 multi-family)

In addition to the residential development, the project will also include roughly 135,000 square feet of operational buildings as follows:

- ~48,000 square feet: restaurant, clubhouse, kitchen, locker rooms, fitness, back-of-house uses
- ~63,000 square feet: golf maintenance, staff center, golf operations, receiving area uses
- ~24,000 square feet: arrival hale, farm operations, restroom uses

While the scope of this market study is limited to the residential component of the Mauka Redevelopment, the planned operational buildings are expected to be complementary to and supportive of future residential development.

1. Executive Summary

Subject of the Market Study

The subject of the study ("Mākena Mauka") comprises roughly 1,043.71 acres of noncontiguous, mostly undeveloped lands located mauka of Mākena Alanui Road within the greater 1,800-acre Mākena Golf & Beach Club. Of the total acreage, 473 acres will be proposed for residential development. The subject is adjacent to the existing 18-hole Mākena North Golf Course and former Mākena South Golf Course. The holding stretches the lower western flank of Haleakala, ranging from nominal to moderately-sloping terrain, affording unobstructed views of Kahoʻolawe, Molokini, Lanaʻi, and the Pacific Ocean.

The 1,800-acre Mākena Golf & Beach Club is a redevelopment of the former Maui Prince Hotel & Resort. The greater development currently features Maluaka Estates (custom oceanfront lots ranging from 0.5 to 0.75 acres), Kula Villas (4-bedroom villas overlooking the Mākena Beach Club), Beach Cottages (4- to 4.5-bedroom, two-story cottages), Beach Club Residences (1- to 3-bedroom condominiums atop the Mākena Beach Clubhouse), and Molokini Residences (4- to 4.5-bedroom, two-story residences). Amenities within the resort community include two clubhouses, an organic farm, sports courts, and the 18-hole Mākena North Golf Course. Kaʻeo, a 47.15-acre mixed-use development within the Mākena Golf & Beach Club, is currently under construction. This low-impact, low-density project includes 32 single-family custom lots, 30 multi-family units (including 4 workforce units), 18 single-family cottages, 14 condominiums, 9 transient vacation rentals, and 27,300 square feet of commercial space.

The Mākena Mauka project site is divided between "Urban" and "Agricultural" within the State Land Use (SLU) District Boundaries, and is classified as primarily "Urban" within the Maui Island Plan Directed Growth Map for South Kihei/Wailea.

The current master plan is shown below, followed by a summary of the land plan development. The Mākena Mauka development is expected to be built out over the next several decades, with an anticipated pre-sale commencement date in 2029.

MĀKENA MAUKA MASTER PLAN

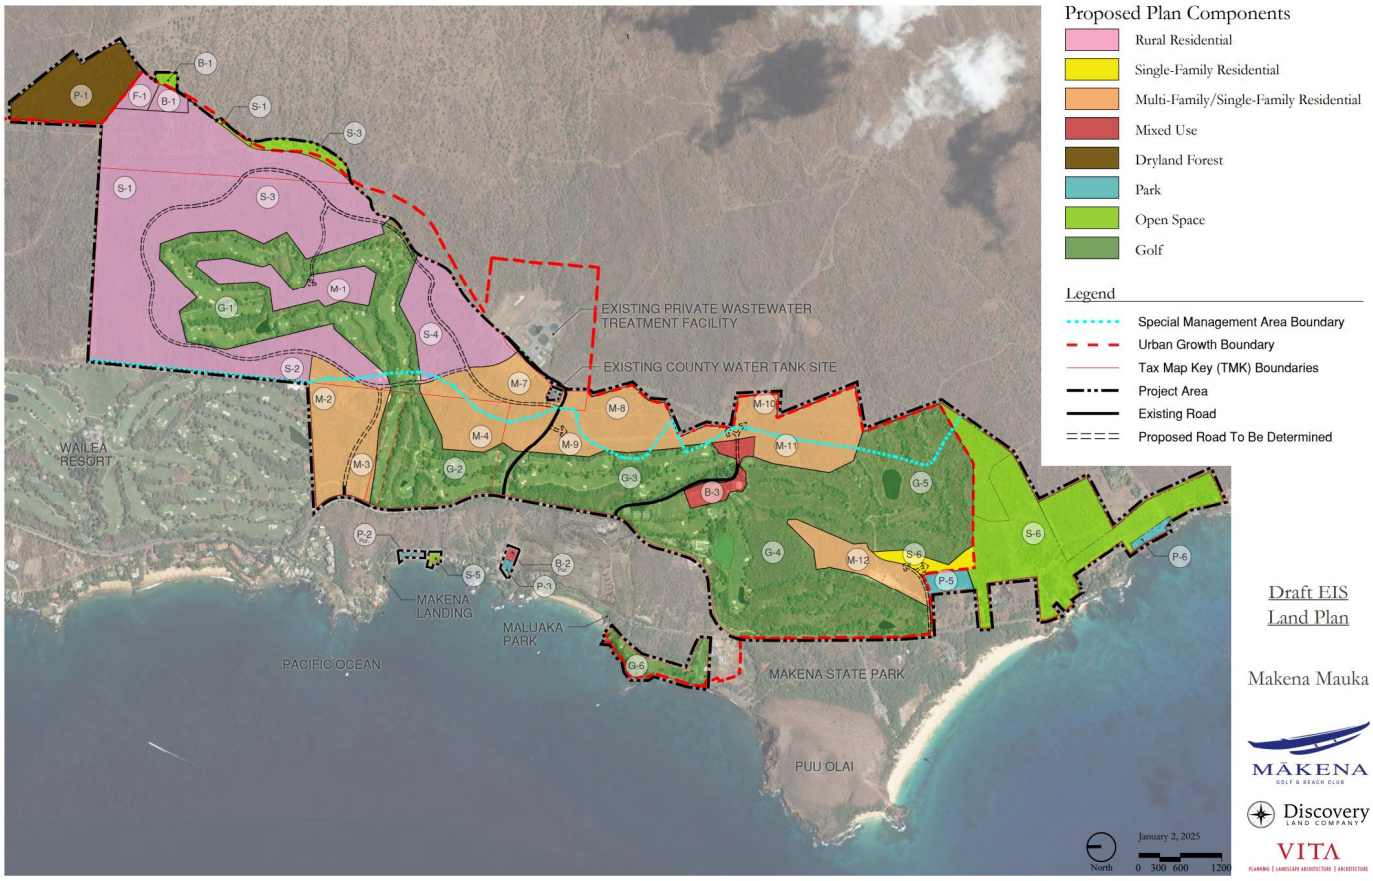

FIGURE 1-1 PROPOSED LAND PLAN DEVELOPMENT SUMMARY – MĀKENA MAUKA

Development "Parcel"	Approximate Area of Residential Use (Acres)	Proposed Residential Use
B-1	3.7	Rural & Single-Family Residential Lots
F-1	3.9	Rural & Single-Family Residential Lots
B-3	9.8	Mixed-Use Multi-Family Residential
M-1	22.1	Rural & Single-Family Residential Lots
M-2*	22.5	Multi-Family/Single-Family Residential
M-3*	19.0	Multi-Family Residential
M-4	18.9	Multi-Family/Single-Family Residential
M-7	27.8	Multi-Family/Single-Family Residential
M-8	12.8	Multi-Family/Single-Family Residential
M-9	22.9	Multi-Family/Single-Family Residential
M-10	24.4	Multi-Family Residential
M-11	14.9	None
M-12	18.3	Multi-Family Residential
S-1	93.6	Rural & Single-Family Residential Lots
S-2	7.3	Rural & Single-Family Residential Lots
S-3	107.0	Rural & Single-Family Residential Lots
S-4	38.1	Rural & Single-Family Residential Lots
S-6 (Portion)	6.0	Rural & Single-Family Residential Lots
Totals	**473.0**	

**Includes 109 residential workforce housing units.*

The Mākena Mauka development will transform a property that is:

- underutilized.
- located in a resort destination area, consistent with the general and community plans.
- in an area serviced by existing infrastructure and utilities.
- within a desirable area of the regional directed urban growth boundary.

Actualization of the proposed plan will create a regional asset providing:

- a wide variety of residential product, from multi-family buildings to vacant, rural residential lots.

- workforce housing units.

- a sustainable and regenerative community complementary with the existing Mākena Golf & Beach Club and in attunement with the surrounding environment.

The project is anticipated to attract significant new capital investment, create jobs in construction and on-going business activity, and further growth of the Maui economy. This will in turn generate enhanced employment and business opportunities for island residents and companies, while further expanding the tax base for the state and county.

From a market overview perspective, the proposed development will have the necessary attributes to be compatible with, and competitive within, the greater Maui real estate sector:

- *It is within an expanding, high-demand area.* Kihei-Mākena is the third-largest residential community on the island of Maui and has historically attracted significant resort development, inclusive of both commercial and residential. Given the warm, sunny climate and pristine beaches in Kihei-Mākena, the demand for residential units in the area is very strong, and as home to the popular Wailea Resort development, it will remain a desirable, competitive market.

- *In concert with market trends.* Master-planned developments have been part of the market in Hawaii for several decades, and they have generally provided higher-quality, more desirable housing and lifestyle opportunities than in standard subdivisions. Mākena Mauka represents a reimagined resort development, characterized as both low-density and low-impact, and includes both onsite workforce housing and workforce housing credits.

- *Maximize the reasonable development potential of a well-located parcel.* Given the superior locational attributes of the subject property, within the context of an expanding Kihei-Mākena development area, and the housing and economic benefits which will flow to Maui from the project, Mākena Mauka will achieve both market and general community objectives.

- *Mākena Mauka is representative of the highest and best use of the property.*

HVS has been engaged to analyze the proposed Mākena Mauka master plan from a real estate market perspective and to identify and quantify probable market and economic impacts associated with its development in light of competitive, regional, prevailing and forecast trends to answer the following basic study questions:

1. Is there sufficient demand to absorb the subject community during a reasonable exposure period given competing developments and projected statewide/regional market trends?

2. Will the community be an appropriate use of the underlying site relative to market needs?

Developer

Discovery Land Company, in partnership with ATC Mākena Holdings, is leading the redevelopment of Mākena Golf & Beach Club. Established in 1994, Discovery Land Company has founded some 25 international and national resorts. These communities include The Summit in Las Vegas, Troubadour in Nashville, Driftwood in Austin, Chileno Bay in Cabo San Lucas, and Kūkiʻo Golf and Beach Club on the Big Island of Hawaii. These enclaves seek to incorporate opportunities for golf and outdoor activities within comfortable family residential settings.

Pertinent Dates

The subject site was inspected by John Berean on April 26, 2023. Our initial market research and analysis was conducted in 2023; our research and analysis were updated for this assignment in January 2025. Katy Black, MAI, participated in the research for this assignment and assisted in the report's preparation.

Scope of Work

The methodology used to develop this study is based on the market research and valuation techniques set forth in the textbooks authored by Hospitality Valuation Services for the American Institute of Real Estate Appraisers and the Appraisal Institute, entitled *The Valuation of Hotels and Motels,*[1] *Hotels, Motels and Restaurants: Valuations and Market Studies,*[2] *The Computerized Income Approach to Hotel/Motel Market Studies and Valuations,*[3] *Hotels and Motels: A Guide to Market Analysis, Investment Analysis, and Valuations,*[4] and *Hotels and Motels – Valuations and Market*

[1] Stephen Rushmore, *The Valuation of Hotels and Motels*. (Chicago: American Institute of Real Estate Appraisers, 1978).
[2] Stephen Rushmore, *Hotels, Motels and Restaurants: Valuations and Market Studies*. (Chicago: American Institute of Real Estate Appraisers, 1983).
[3] Stephen Rushmore, *The Computerized Income Approach to Hotel/Motel Market Studies and Valuations*. (Chicago: American Institute of Real Estate Appraisers, 1990).
[4] Stephen Rushmore, *Hotels and Motels: A Guide to Market Analysis, Investment Analysis, and Valuations* (Chicago: Appraisal Institute, 1992).

Studies,[5] as well as in accordance with the Uniform System of Accounts for the Lodging Industry (USALI).

1. All information was collected and analyzed by the staff of TS Worldwide, LLC. Information such as historical financial statements, site plans, and floor plans, as applicable, were supplied by the client. Other sources of information included Maui County Planning Department, Maui Board of Realtors, Hawaii Information Services, and data from our files.
2. The subject site was evaluated from the viewpoint of its utility for residential development. We reviewed adjacent uses, regional and local accessibility attributes, and visibility characteristics. The subject site was personally inspected by our firm specifically for this assignment.
3. Existing and proposed residential developments that are deemed competitive are researched to provide an indication of current demand.
4. Future demand for the proposed residential development was determined via a review of historical and comparable residential sales, interviews with officials of business and government, and economic and demographic trends.
5. A conclusion in regards to appropriate use, demand, and absorption is made.

2. Market Area Analysis

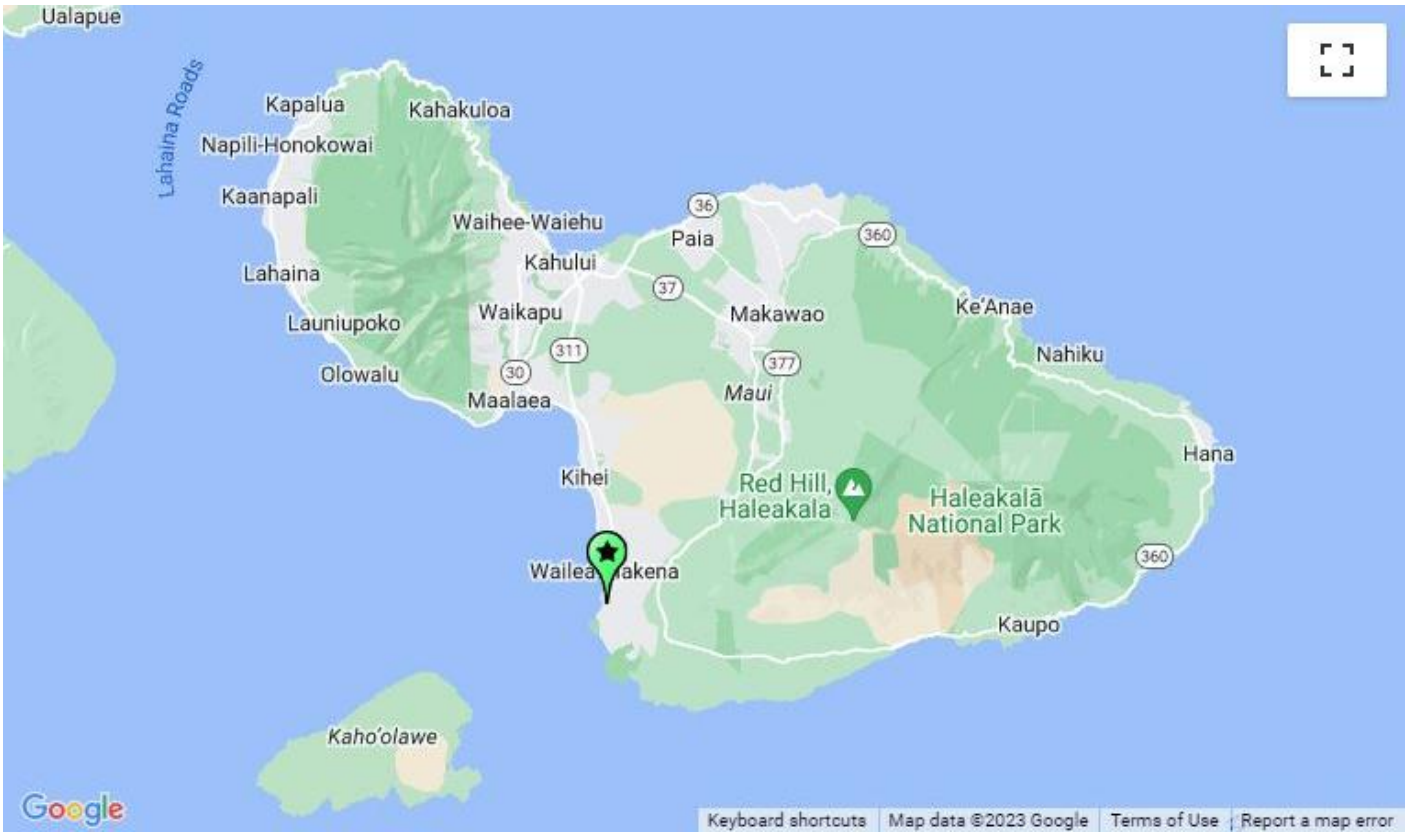
The economic vitality of the market area and neighborhood surrounding the subject property is an important consideration in forecasting demand and income potential. The purpose of the market area analysis is to review available economic and demographic data to determine whether the local market will undergo economic growth, stabilize, or decline.

Market Area Definition

The subject property is located in the census-designated place (CDP) of Wailea-Mākena, the County of Maui, and the State of Hawaii. Maui County includes all three islands of Maui, Lana'i, and Kaho'olawe, and the majority of the island of Moloka'i. The seat of Maui County is Wailuku, which is located on the island of Maui. Maui is the second largest of the Hawaiian Islands and is the third most populated behind Oahu and Hawai'i Island. Maui is often referred to as the "Valley Isle" because of the large isthmus between its northwestern and southeastern volcanoes and the numerous large valleys carved into both mountains. West Maui, with the sprawling beaches and upscale hotels of Ka'anapali and the historic whaling town of Lahaina, is one of Maui's major resort areas. South Maui is home to the island's other main resort district, Wailea. Furthermore, the town of Kihei also offers affordable alternatives to the resort area of Wailea. The tropical north shore of Maui does not offer hotels; however, visitors can choose from a collection of bed-and-breakfast inns, as well as rental homes. Temperatures on Maui range from 70 to 80 degrees Fahrenheit year-round, although the slopes of Haleakala Crater often experience lows near 40 degrees Fahrenheit.

The Hawaiian Islands form a chain that extends more than 1,600 miles across the mid-Pacific Ocean. These islands are either volcanic in nature or small coral atolls; combined, they have an aggregate land area of approximately 6,425 square miles, of which roughly 750 miles are along the coastline.

Together, Hawaii's eight major islands total roughly 4,112,000 acres, with the six primary islands accounting for approximately 98% of this area. In order of descending size, the six primary islands are Hawai'i, Maui, O'ahu, Kaua'i, Moloka'i, and Lana'i. The seventh-largest island, Ni'ihau, is privately owned. Honolulu, the state's capital and largest city, is located on the island of O'ahu, approximately 2,400 miles southwest of San Francisco and the United States mainland.



Due to the volcanic nature of the major islands, much of the state's total land area is unsuitable for development. Mountain ranges, steeply sloping areas, gulches, and barren lava flows constitute a large part of Hawaii's acreage. Of the four major

populated islands—O'ahu, Hawai'i, Maui, and Kaua'i—Hawai'i is the only one with more than half (76.0%) of its land area at less than a 10% slope; however, large tracts of its relatively level areas consist of extensive lava flows.

Compounding the land-use limitations imposed by the islands' physical characteristics is the fact that roughly 50% of all land is state or federal government occupied, while another 20% is collectively held by eight major private owners, each of whom possessed between approximately 29,000 and 363,000 acres in 2018. According to the State of Hawaii Office of Planning, of the roughly four million land acres comprising Hawaii's six major islands, about 48% is designated as conservation land, 47% is designated as agricultural land, and only 5% has been put to urban use. This limited availability of, and resultant desirability for, land creates inherent value in Hawaii real estate.

The subject property's market area can be defined by its Metropolitan Statistical Area (MSA): Kahului-Wailuku-Lahaina, HI MSA. The following exhibit illustrates the market area.

MAP OF MARKET AREA

Economic and Demographic Review

A primary source of economic and demographic statistics used in this analysis is the *Complete Economic and Demographic Data Source* published by Woods & Poole Economics, Inc.—a well-regarded forecasting service based in Washington, D.C. Using a database containing more than 900 variables for each county in the nation, Woods & Poole employs a sophisticated regional model to forecast economic and demographic trends. Historical statistics are based on census data and information published by the Bureau of Economic Analysis. Projections are formulated by Woods & Poole, and all dollar amounts have been adjusted for inflation, thus reflecting real change.

These data are summarized in the following table.

FIGURE 2-2 ECONOMIC AND DEMOGRAPHIC DATA SUMMARY

					Avg. Annual Compounded Chg.		
	2010	2020	2022	2027	2010-20	2010-22	2022-27

* Inflation Adjusted

Source: Woods & Poole Economics, Inc.

The U.S. population grew at an average annual compounded rate of 0.6% from 2010 through 2022. The county's population has grown more slowly than the nation's population; the average annual growth rate of 0.3% between 2010 and 2022 reflects a gradually expanding area. Per-capita personal income increased slowly, at 1.8% on average annually for the county between 2010 and 2022. Local wealth indexes have remained stable in recent years, registering a high 154.9 level for the county in 2022.

Food and beverage sales totaled $889 million in the county in 2022, versus $575 million in 2010. This reflects a 4.2% average annual change. The pace of growth is anticipated to be 1.6% through 2027. The retail sales sector demonstrated an annual increase of 2.2% from 2010 to 2022. An increase of 0.2% average annual change is expected in county retail sales through 2027.

Workforce Characteristics

The characteristics of an area's workforce provide an indication of the type and amount of transient visitation likely to be generated by local businesses. Sectors such as finance, insurance, and real estate (FIRE); wholesale trade; and services produce a considerable number of visitors who are not particularly rate sensitive. The government sector often generates transient room nights, but per-diem reimbursement allowances often limit the accommodations selection to budget and mid-priced lodging facilities. Contributions from manufacturing, construction, transportation, communications, and public utilities (TCPU) employers can also be important, depending on the company type.

The following table sets forth the county workforce distribution by business sector in 2010, 2020, and 2022, as well as a forecast for 2027.

FIGURE 2-3 HISTORICAL AND PROJECTED EMPLOYMENT (000S)

Source: Woods & Poole Economics, Inc.

The preceding data illustrate the long-term employment trends in this market, including the recent impact of the pandemic and the subsequent recovery. Forecasts developed by Woods & Poole Economics, Inc. anticipate that total employment in the county will change by 1.6% on average annually through 2027. The trend is on par with the forecast rate of change for the United States as a whole during the same period.

Unemployment Statistics

The following table presents historical unemployment rates for Maui County, the state of Hawaii, and the nation.

FIGURE 2-4 UNEMPLOYMENT STATISTICS

Year	County	State	U.S.
2014	4.5 %	4.4 %	6.2 %
2015	3.6	3.6	5.3
2016	3.0	3.0	4.9
2017	2.6	2.4	4.4
2018	2.4	2.5	3.9
2019	2.6	2.7	3.7
2020	17.7	11.7	8.1
2021	7.6	6.0	5.4
2022	3.3	3.3	3.6
2023	4.3	2.9	3.6
Month of October			
2023	5.3 %	2.7 %	3.7 %
2024	3.4	2.8	4.1

Source: U.S. Bureau of Labor Statistics

Prior to the pandemic, U.S. unemployment levels were firmly below the 4.6% level recorded in 2006 and 2007, the peak years of the economic cycle prior to the Great Recession. The national unemployment rate for February 2020 was 3.5%. The unemployment rate had remained in the 3.5% to 3.7% range since April 2019, reflecting a trend of stability and strength. However, in April 2020, after the onset of the pandemic, unemployment rose to 14.7%, while employment dropped by 20.7 million. Steady gains in employment have been registered since that time; most recently, the national unemployment rate was 4.1% in December 2024. Rises in employment of 43,000, 212,000, and 256,000 people were registered in October, November, and December, respectively. In November, the most significant gains were reported in the health care, government, and social assistance sectors.

Locally, the unemployment rate was 4.4% in 2023; for this same area in 2024, the most recent month's unemployment rate was registered at 3.6%, versus 7.6% for the same month in 2023. Unemployment levels declined in 2015, and this positive trend continued through 2018, with unemployment remaining relatively stable in 2019; reportedly, local employment was strong in the tourism and construction industries. Furthermore, we note that the region's unemployment rates have historically been well below the national unemployment rates. However, unemployment data from 2020 illustrate a sharp increase given the effects of the COVID-19 pandemic and related global economic crisis, which included massive furloughs/layoffs. Unemployment declined in 2021 and 2022 as tourism and the economy began to rebound. In 2023, unemployment increased related to the impact of the August 2023 wildfires. The most recent comparative period shows improvement as tourism levels have begun to recover.

Major Business and Industry

Providing additional context for understanding the nature of the regional economy, the following table presents a list of the major employers in the local market.

FIGURE 2-5 MAJOR EMPLOYERS

Rank	Firm	Number of Employees
1	State of Hawaii	5,300
2	County of Maui	2,499
3	Grand Wailea, a Waldorf Astoria Resort	1,400
4	Ritz-Carlton Kapalua	1,000

6	Maui Memorial Medical Center	800
7	Four Seasons Resort Maui at Wailea	800
8	Fairmont Kea Lani	700
9	Four Seasons Resort Lana'i at Manele Bay	700
10	Westin Maui Resort & Spa Ka'anapali	700

Source: Maui County, CAFR 2023/24

Tourism is the heart of Hawaii's economy; the state is unique among American tourism destinations because of its physical separation from the U.S. mainland and its relative proximity to Asia. Traditionally, the largest sources of visitation to Hawaii have been the U.S. mainland and Asian countries; nearly 85.0% of visitors come from U.S. feeder markets, while international travelers represent the remaining 15.0%. In 2019, Maui accommodated roughly 3 million visitors with a total visitor expenditure of nearly $5.13 billion. While visitation levels surpassed 2.9 million in 2022, visitor arrivals declined to under 2.5 million in 2023, primarily

attributed to the impact of the August 2023 wildfires. According to the University of Hawai'i Economic Research Organization's ("UHERO") Q3 2024 forecast, Maui's economy remains in the midst of a slow and gradual recovery from its post-wildfire downturn. While reconstruction efforts on Maui are anticipated to take many years, construction activity should spur some economic growth in the near-term. Major projects completed over the last several years include a $340-million car-rental facility at the Kahului Airport, as well as renovations at the Westin, Ritz-Carlton, Fairmont, and Grand Wailea. Development of a 136-room Hampton by Hilton in Kahului is expected to finish in Q1 2025.

Tourism Overview – State of Hawaii

The tourism industry is highly important within this region. The location of Hawaii fosters its status as a truly international resort destination. To monitor the tourism industry, the Hawaii State Department of Business, Economic Development & Tourism ("DBEDT") assumed responsibility in 1999 for collecting and publishing official state tourism-related statistics. The Hawaii Tourism Authority ("HTA") provides comprehensive management of tourism for the state of Hawaii, and is the official source for information on tourism market research, partnership opportunities, industry news and timely updates during emergency situations. Since the vast majority of tourists arrive by way of air travel, visitation data are relatively easy to obtain, as passengers are asked to fill out a questionnaire during their flight. In order to evaluate Hawaii's status as an international tourist destination, we have analyzed historical visitation statistics, as compiled by the DBEDT and HTA.

The following tables show visitation statistics for the state of Hawaii from 2007 through 2024.

FIGURE 2-6 HISTORICAL VISITATION TRENDS FOR THE STATE OF HAWAII (VISITORS BY AIR)

Year	Total Visitors by Air	Percent Change	Domestic Visitors	Percent Change	Domestic % of Total	International Visitors	Percent Change	International % of Total
2007	7,496,820	—	5,582,530	—	74.5 %	1,914,290	—	25.5 %
2008	6,713,436	(10.4) %	4,901,893	(12.2) %	73.0	1,811,543	(5.4) %	27.0
2009	6,420,448	(4.4)	4,672,001	(4.7)	72.8	1,748,447	(3.5)	27.2

Source: Hawaii Tourism Authority

Based on historical tourism statistics, domestic travel to Hawaii fluctuated with economic trends but generally represented between 65.0% to 75.0% of total visitors by air prior to the onset of the pandemic; since 2012, the split between domestic and international visitors has been roughly two-thirds domestic and one-third international.

As mentioned previously, the largest sources of visitation to Hawaii have historically been from the U.S. mainland and Asia, in particular Japan. Major international feeder markets include Japan, Canada, Oceania, and Korea. Over 1.5 million visitors, or nearly 15.0% of total visitors, were from Japan in 2019.

Hawaii was particularly impacted by the COVID-19 pandemic. The state enacted a mandatory quarantine for all travelers arriving to the Hawaiian Islands in March 2020; this quarantine not only applied to out-of-state visitors, but also for local interisland travel. Travel restrictions were eased in October 2020, and visitor arrivals have continued to improve since. A surge in "revenge travel", those making up for time lost during the pandemic, contributed to a strong recovery in domestic travel in 2022, particularly for the outer islands of Maui, Hawai'i, and Kaua'i. Given various travel restrictions and a strong U.S. Dollar, international visitation has remained well-below pre-pandemic levels. The Japanese market, which produced

roughly 300,000 visitor arrivals in 2022, has been slow to return to Hawaii, attributed to a weak Japanese Yen and the country's slow easing of travel restrictions within Japan. As of year-end 2023, international visitation to the islands has begun to recover, but still remains at roughly 50.0% of pre-pandemic levels. Meanwhile, domestic tourism has begun to soften given the relaxation of travel restrictions, the greater availability of international destination, and the strength of the U.S Dollar. The ongoing recovery of tourism and hotel demand will be explored further in-depth in the Supply and Demand Chapter of this report.

Visitors by air historically indicated that "pleasure" was their primary purpose of travel, representing approximately 80.0% of total 2019 visitation. Post-pandemic data indicate that "pleasure" still represents the primary purpose of visitation to the state. With respect to accommodations, hotels are the preferred lodging option by a large margin; historically over half of all visitors to Hawaii planned to stay at a hotel.

Over the past decade, the vacation rental sector in Hawaii largely operated without valid permits, and there were historically few mechanisms for tax collection, although in recent years hotel owners and operators have sought legislation to level the playing field, such as requiring websites including Airbnb and VRBO.com to collect and pay taxes on behalf of short-term rental hosts. The transient occupancy and general excise taxes the short-term rental operators must pay are levied by the state. The necessary permits for short-term rentals are issued by counties, which have varying regulations that were typically poorly enforced.

In recent years, Hawaii's four main counties have made significant progress in crafting laws and rules to better regulate vacation rentals. In April 2019, both the House and Senate of the Hawaii State Legislature approved separate bills addressing the issue. On the island of Oʻahu, Mayor Kirk Caldwell signed a bill establishing a real property tax classification for bed & breakfast properties in December 2019; the law also limits the total number of registered and permitted short-term vacation rentals on Oʻahu starting October 2020. In November 2020, a memoranda of understanding with Airbnb and Expedia Group, parent company of VRBO, was signed with the City & County of Honolulu. Under terms of the agreement, both platforms agree to cooperate with the City in terms of education, information, sharing, and listing; the agreement is expected to help regulate illegal vacation rentals. According to Aloha Hospitality Consulting, vacation rental supply on the island of Oʻahu declined by nearly 50% in 2020, attributed to lack of demand due to the COVID-19 pandemic.

While a similar bill for Kauaʻi County failed to pass in January 2020, the county signed agreements with Expedia and Airbnb in June 2020 to better track and regulate vacation rentals. The agreement requires hosts to submit their tax map key (TMK) numbers to the rental platforms, which is then shared with the county for verification. Violations of the law can incur steep fines of up to $10,000 per day.

On the island of Maui, a new law went into effect on December 22, 2019, significantly increasing the fine for illegal short-term vacation rentals. The fine for a first-time offense is $20,000, followed by fines of $10,000 per day thereafter. In July 2021, the Maui Planning Commission approved a bill reducing the number of short-term rental home permits allowed on Maui from 349 to 178. In November 2022, Maui County Council passed a bill to establish caps on short-term rental uses and creating regulation prohibiting camper-van vacation rentals on public property.

Over the long-term, these new laws and ordinances are expected to help curb the spread of illegal vacation rentals, increase the supply of housing for local residents, and improve hotel occupancies.

The following table illustrates visitation levels by island.

FIGURE 2-8 VISITATION BY ISLAND AND ANNUAL GROWTH %

As shown in the preceding table, O'ahu is the most visited island. International visitors to O'ahu typically schedule day trips to visit the outer islands. This trend is due to the travel habits of international visitors, who tend to travel in large groups, use buses as their main form of transportation, and stay in larger full-service hotels. Moreover, the well-developed infrastructure of O'ahu was planned to handle the needs of these international travelers. In addition, Waikiki as a destination is the most popular among first-time and international visitors.

Maui is the second most visited island after O'ahu. While O'ahu and Waikiki offer an experience of Hawaii in a more urban setting, the island of Maui features lush rainforests, pristine white sand beaches, and luxury resort developments. Maui tends to draw both first- and second-time visitors to the Hawaiian Islands, with primary feeder markets stemming from the West Coast of the United States.

Hawai'i, also known as the Big Island, is the largest island by land mass. The island also features a number of upscale resort developments on its sunny west side; however, the main draw of Hawai'i is the Volcanoes National Park on the east side. Given its sheer size, the Big Islands tends to be frequented by those on their second or third visit to the Hawaiian Islands.

Kaua'i is the smallest and least populated of the four main Hawaiian Islands. As this particular island remains relatively underdeveloped, Kaua'i tends to attract a younger, more active demographic that prefers outdoor adventures such as hiking, kayaking, paddleboarding, snorkeling, and helicopter tours. The island has gained significant popularity in recent years, achieving a 6.3% CAGR in visitation levels between 2012 and 2019. Primary feeder markets for Kaua'i include California, Oregon, Washington, and Arizona.

Visitation Forecast

In 2019, the State of Hawaii achieved a historical peak of over 10.3 million visitors by air. The entrance of Southwest Airlines into the transpacific and interisland market significantly boosted domestic visitation. Prior to the ongoing COVID-19 pandemic, visitation was projected to continue to grow over the next four years, with the largest absolute growth previously expected to stem from the Western United States. In the latest Hawaii DBEDT Quarterly Tourism Forecast, overall visitation is not expected to recover to near peak 2019 levels until 2026/27. The Hawaii DBEDT's most recent four-year visitation forecast, along with historical statistics for 2000 through 2023, are presented in the following table.

FIGURE 2-9 HAWAII DBEDT QUARTERLY TOURISM FORECAST

	Year	Total Visitor Arrivals	Percent Change	
Historical	2000	6,989,293	—	
	2001	6,350,361	(9.1) %	
	2002	6,452,835	1.6

	2027	10,322,744	4.9	99.0

Source: Hawaii DBEDT Tourism Forecast Q3 2024

We note that growth in tourism is expected to slow in 2024 as domestic visitation softens, coupled with the slower-than-anticipated recovery of demand from international sources. Thereafter, stronger growth is expected between 2025 and 2027, concurrent with stronger forecast levels of international visitation.

Airport Traffic

Airport passenger counts are important economic indicators. Trends showing changes in passenger counts also reflect local business activity and the overall economic health of the area.

Kahului Airport (OGG)

Kahului Airport (OGG) is located on the northern edge of the land bridge between Haleakala and the West Maui Mountain Range on the island of Maui. Many commercial carriers provide service, including Alaska Airlines, American Airlines, Hawaiian Airlines, and United Airlines, among others. The airport is undergoing several phases of expansion, authorized by the Hawaii State Legislature. A long-term goal has been set to prepare Kahului Airport for eventual elevation to permanent international airport status with potential regular service routes from Canada and Asian countries. In May 2019, a new car-rental facility opened at the Kahului Airport. The $340-million, four-story facility houses more than a dozen rental-car companies, including offices, customer-service counters, "ready and return" rental-car spaces, and quick-turn-around areas with fuel and carwash facilities. The rental-car facility also includes approximately 3,800 parking stalls dedicated to the rental-car companies, with an additional 700 stalls for Kahului Airport employees; an electric tram provides transportation between the airport terminal and the rental-car counters. A $3-billion master plan for OGG was released seven years ago and includes upgrades and improvements for the airfield and terminal facilities and services. However, the development remains on hold as of 2024.

Kapalua Airport (JHM)

Kapalua Airport is a regional airport located on the northwest side of Maui between Kapalua and Ka'anapali. Most flights to Kapalua Airport originate from commuter airports on neighboring islands by commercial commuter services, unscheduled air taxis, and general aviation. As of year-end 2019, only two commercial carriers provided service: Hawaiian Airlines and Mokulele Airlines. As a former privately-owned airport, any major changes or improvements to Kapalua Airport cannot be made without the consent of the Maui County Council. The airport is limited to a single runway, a couple of terminals, and ancillary support facilities.

Daniel K. Inouye International Airport (HNL)

Located on the island of O'ahu in Honolulu, Daniel K. Inouye International Airport (formerly known as Honolulu International Airport) is the principal aviation gateway to the State of Hawaii. The airport is host to numerous major U.S. and international flagship commercial carriers with direct routes to Australian, American, Asian, and Pacific Rim destinations. It is also the principal hub for Hawaiian Airlines, which offers flights among the various airports of the Hawaiian

Islands and serves the continental U.S. and Asia Pacific regions. The $270-million Mauka Concourse debuted in August 2021; the 230,000-square-foot, two-story facility added eleven narrow-body gates and includes a connecting walkway between Terminal 1 and a new TSA checkpoint. The $377-million Consolidated Rent-A-Car (CONRAC) facility opened in December 2021. The 1.8-million-square-foot five-story structure consolidated all rental car companies serving the airport and includes rental agency areas, office space, car wash equipment, fueling stations, and 2,250 parking stalls. According to the Hawaii Department of Transportation, roughly $1.6 billion has been invested in airport improvements since 2013.

The following table illustrates recent operating statistics for the airport facilities serving the subject property's submarket.

FIGURE 2-10 AIRPORT STATISTICS

	Kahului Airport		Kapalua Airport		Daniel K Inouye International Airport	
Year	Passenger Traffic	Percent Change	Passenger Traffic	Percent Change	Passenger Traffic	Percent Change
2014	6,246,075	—	46,634	—	19,341,893	—
2015	6,678,772	6.9 %	62,228	33.4 %	19,638,982	1.5 %
2016	6,692,710	0.2	75,295	21.0	19,950,125	1.6
2017	6,645,792	(0.7)	81,744	8.6	18,669,243	(6.4)

Sources: Respective Airport Authorities

Following year-over-year improvement in passenger traffic counts, data from 2020 illustrate a substantial decline given the impact of the COVID-19 pandemic and the travel restrictions that were implemented. The number of passengers traveling through all Hawaiian airports declined significantly in March 2020 as a two-week mandatory quarantine was implemented throughout the state of Hawaii. Passenger numbers slowly started to improve in June 2020 as restrictions were eased for interisland travel, and grew further in October 2020 as the Safe Travels program was introduced.

At the Kahului Airport, passenger traffic rebounded in 2021, and visitation exceeded peak 2019 levels in 2022. However, visitation notably declined in 2023 and in the year-to-date 2024 period related to a pullback in domestic tourism, as well as the significant impact of the Lahaina wildfires in August 2023.

Passenger volume at the Daniel K. Inouye International Airport has generally improved between 2021 and the year-to-date 2024 period, with passenger volume measuring roughly 98.0% of 2019 levels as of year-end 2023. However, given a slowdown in domestic tourism and a prolonged recovery of international visitation levels, estimates from airport and government officials suggest that passenger numbers are not expected to fully recovery to pre-pandemic levels until 2027.

Tourist Attractions

The island of Maui is known for its scenic geography and verdant landscapes. In addition to year-round temperatures in the low-80-degree range, beautiful beaches, and typical warm-weather recreational opportunities, Maui is attractive to vacationers because of its natural beauty and sights. Visiting Hana and Mount Haleakala is especially popular among tourists. Although Maui offers modern infrastructure and many appealing tourist attractions, its natural beauty has been maintained. Outdoor recreational activities include helicopter sightseeing, boat and fishing trips, scuba lessons, snorkeling, and luaus. In addition to beach activities, primary Maui attractions including the following:

- Haleakala National Park contains the approximately 10,023-foot summit of Haleakala (an inactive volcano). The summit's crater is 3,000 feet deep and 21 miles in circumference. The park offers 32 miles of hiking trails and horseback riding tours, as well as beautiful flower farms along the slopes of Haleakala. In February 2017, the National Park Service began to implement a reservations system for guests visiting the summit to prevent overcrowding, limiting sunrise visits from 3 AM to 7 AM to a maximum of 150 vehicle reservations.

- The 'Iao Valley State Park is a lush valley in West Maui, located three miles west of Wailuku. This state park is home to one of Maui's most recognizable landmarks, the 1,200-foot-high stone column named the 'Iao Needle. The

'Iao Needle is set amid a landscape of wild orchids and varieties of local tree ferns and overlooks the 'Iao Stream.

- The Maui Ocean Center houses the largest aquarium in the Western Hemisphere, with amazing exhibits of Hawaiian marine life. It also contains the Whale Discovery Center, featuring life-sized models of humpback whales amid living coral reefs. The Underwater Journey features an acrylic tunnel through a roughly 750,000-gallon saltwater tank filled with 2,000 fish, sharks, and other marine creatures.

- The Maui Tropical Plantation is a 60-acre working plantation that offers visitors a tour through an Agricultural Village, including exhibits on such important crops as sugar, pineapple, macadamia nuts, and coffee. A tram ride is available, which travels through a coconut grove and gardens filled with orchids and other native flowers.

- Molokini is a crescent-shaped, partially submerged volcanic crater located between the islands of Maui and Kaho'olawe within Maui County. The small, uninhabited islet spans 23 acres and is a Hawaii State Seabird Sanctuary. Molokini is a popular tourist destination for both scuba diving and snorkeling, featuring lush coral reefs and many endemic fish. Furthermore, the islet's crescent shape protects divers from waves and the Alalakeiki Channel's strong currents.

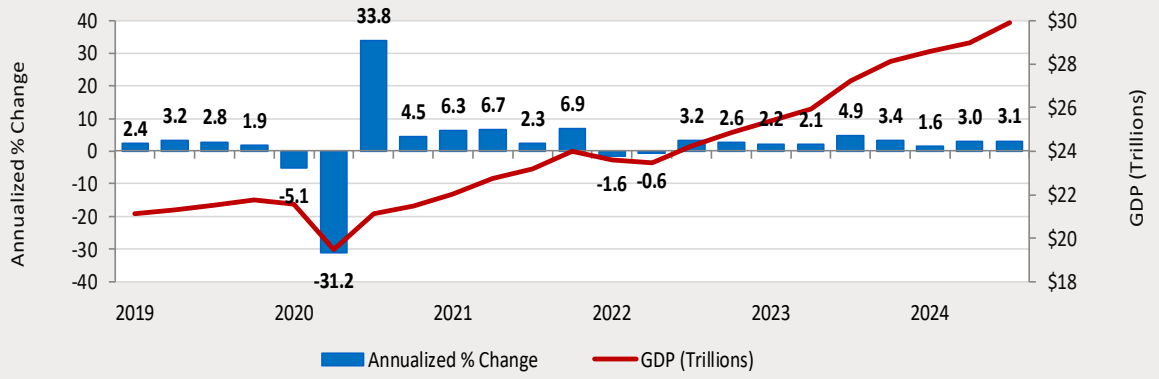
- The Bailey House Museum is located in Wailuku and is operated by the Maui Historical Society. The museum was formerly the residence of a 19th-century missionary family. The museum contains 170 years worth of native Hawaiian artifacts, including furnishings dating back to 1850.

- The Alexander & Baldwin Sugar Museum is located in Pu'unene and offers an illuminating overview of Hawaii's sugar plantation days. Displays feature sugar factory machinery and artifacts dating back to 1878.

- In Ka'anapali Resort's Whaler's Village, the Whale Center of the Pacific offers exhibits on the golden age of whaling, including a life-size model of a whaling ship, exhibits of harpoons and other implements, and the skeleton of a 30-foot humpback whale.

- The islands of Lana'i and Moloka'i are located to the west of the island of Maui and offer exclusive beaches, golf courses, and other popular visitor attractions.

HALEAKALA NATIONAL PARK



Conclusion

This section discussed a wide variety of economic indicators for the pertinent market area. Given the scenic views and beautiful landscapes, Hawaii's economy is largely dependent upon tourism, which declined significantly in 2020 and early 2021 due to the COVID-19 pandemic. While travel has since rebounded and visitation levels reached record highs on Maui in 2022, the market was again significantly impacted in 2023 by the August wildfires in Lahaina. The impacts of the fire are expected to continue to affect the local economy in the short- to mid-term due to depressed tourism levels and increased unemployment. However, as Maui is expected to remain popular with both domestic and international travelers, and in consideration of future reconstruction efforts in Lahaina, the long-term outlook for the market remains cautiously optimistic.

Our analysis of the outlook for this specific market also considers the broader context of the national economy. Gross domestic product (GDP) is a key measure of a country's economic health and trends. Research has also identified a high degree of correlation between GDP and lodging demand. For the eight quarters leading up to 2020, GDP quarterly growth ranged between 0.9% and 3.8%, reflecting moderate economic expansion. The impact of the pandemic was considerable in 2020. As shutdowns halted major components of the U.S. economy from mid-March through May, GDP contracted by an annualized rate of 31.2% in the second quarter of 2020, the largest such decline in U.S. history. While shocking, this GDP decline was offset by a significant rebound in economic activity in the third quarter of 2020, greatly moderating the overall impact for the year. The U.S. economy grew by 33.8% on an

annualized basis in the third quarter, followed by more modest gains in the five quarters that followed through the end of 2021, with GDP having surpassed the pre-pandemic peak by the first quarter of 2021. A pullback during the first half of 2022 was driven by the trade deficit and decreases in government spending and inventory investment, although the decline was offset by gains during the second half of the year.

FIGURE 2-11 UNITED STATES GDP GROWTH RATE

Sources: tradingeconomics.com, Bureau of Economic Analysis

The positive trend continued through 2023, registering a 2.5% increase for the year, with 1.6%, 3.0%, and 3.1% increases recorded in the first through third quarters of 2024, respectively. According to the October 30, 2024, report from the Bureau of Economic Analysis, "The increase in consumer spending reflected increases in both goods and services. Within goods, the leading contributors were other nondurable goods (led by prescription drugs) and motor vehicles and parts. Within services, the leading contributors were health care (led by outpatient services), as well as food services and accommodations. The increase in exports primarily reflected an increase in goods (led by capital goods, excluding automotive). The increase in federal government spending was led by defense spending. The increase in imports primarily reflected an increase in goods (led by capital goods, excluding automotive)." Despite this favorable economic news, transaction activity has been curtailed by high borrowing costs and stricter lending requirements. While the possibility of the economy slowing in the near term remains a concern, the long-term outlook is optimistic.

3. Market Demand Analysis

Based on our analysis of the subject property, its environs, and proposed development, we have reached the following conclusions regarding the probable market standing and economic impacts of the proposed Mākena Mauka project. While our study's projection period, which serves as a basis for the subject projections, extends over two decades to 2047, it is anticipated that all of the components of the proposed development will be fully absorbed in a shorter period.

Location

As mentioned previously, the subject property is located in the census-designated place (CDP) of Wailea-Mākena, the county of Maui, and the state of Hawaii. Within the greater Maui market, the subject is expected to compete with upscale residential developments in the resort areas of Wailea, Kapalua, and Ka'anapali.

Timeline

As our study and forecast period extends over 20 years, our market-based findings and projections are not considered time-sensitive, and should the project timeline be delayed in the near-term, we would not anticipate major changes to our conclusions.

Affordable Housing

Regardless of the point in the economic cycle, there remains a chronic unmet demand for additional affordably-priced housing on Maui. While numerous directed projects have been proposed, along with other mixed-use developments with a workforce housing component, they have been slow to reach fruition; and, those in-development are failing to meet all demand segments in the upwardly-moving market.

Pricing for the subject inventory will comply with the County of Maui "Residential Workforce Housing Policies".

Real Estate Introduction

While the state of Hawaii was significantly impacted by the COVID-19 pandemic and associated economic downturn, the real estate market quickly rebounded as the state's perceived safety associated with a mandatory quarantine drove a market frenzy and record high pricing. Luxury homes throughout the Hawaiian Islands, particularly on Maui, enjoyed the strongest demand. While the frenzied buying patterns appear to have died down and sales have slowed, the median price on Maui continues to increase and remains at or near peak levels.

2023 Wildfires

The recent August 2023 wildfires have also had major impact on real estate in Maui; more than 2,200 structures were destroyed (roughly 85.0% residential), and over 12,000 residents were displaced. In the aftermath, FEMA provided rentals for

survivors who did not have insurance coverage for fire losses, directly leasing homes for more than 1,200 households and providing subsides to 500 others. In October 2024, FEMA raised its rates by 75.0% to entice landlords to rent to locals instead of short-term rentals. With this change in policy, the agency is reportedly paying roughly $3,000 per month for a one-bedroom unit, and more than $5,100 for a three-bedroom, which has further exacerbated the rental market. A report from the University of Hawaii Economic Research Organization ("UHERO"), which conducted surveys in August 2024 found that households who lived, worked, or owned businesses in West Maui and Kula at the time of the 2023 wildfires continue to struggle with housing costs and stability, economic recovery, and access to resources. On average, affected households are reportedly paying over 40.0% more to rent units with the same, or fewer, bedrooms as their original residences.

In the aftermath of the wildfires, the state and other entities have raced to provide temporary and new permanent housing for those affected by the wildfires. The Council for Native Hawaiian Advancement is building 16 modular units in Lahaina and 50 in Kahului. FEMA also is constructing 169 modular homes next to a similar site being built in Lahaina by the state and the Hawaii Community Foundation. In December 2024, the U.S. Congress voted to allocate $1.6 billion in disaster relief through the U.S. Department of Housing and Urban Development (HUD) to support Maui's efforts to rebuild homes, with another $480 allocated for disaster recovery. However, strict federal guidelines govern how the funds must be used, including requirements for comprehensive financial reporting by the County to the federal government.

As mentioned earlier in this report, the impacts of the fire are expected to continue to affect the local economy in the short- to mid-term, with more significant repercussions on the housing market. In October 2024, Maui County released a draft recovery plan that includes short-term projects of one- to two years, mid-term projects of three to five years, and long-term projects of six or more years. However, a concrete timeline for a reconstruction efforts remains unclear.

Real Estate Overview

The "Kihei-Mākena Study Area" (or "South Maui"), which is actually geographically on the south-west coast of the island, is characterized by sandy beaches, resort hotels, upscale condominiums, world-renowned golf courses, and private residential areas. This area, which encompasses Kihei, Wailea, and Mākena, is one of the main tourist destinations on the island of Maui, and has been a focal point for high-end resort commercial and residential development over the last few decades. The residential units at Mākena Mauka are anticipated to cater to the luxury residential market on Maui. The proposed subject site is favorably located in the high-end resort destination of Wailea-Mākena in South Maui, with panoramic views of the Pacific Ocean, Lanai, Molokini, and Kaho'olawe.

Set forth is an overview of relevant trends in the sale of this type of product, as well as an overview of the magnitude and mechanics of the market. This overview also sets the foundation for our forecast of future absorption of the residential component of Mākena Mauka.

The following are several of the more dominant trends shaping Maui's luxury residential market:

- Prior to the onset of the pandemic, the number of luxury residential sales remained generally stable; however, median sales price generally increased year-over-year following a recovery from the 2008 recession.
- The number of luxury sales (greater than $3 million) has generally trended upward year-over-year since 2013.
- The median sales price within the greater Maui residential market has trended upward year-over-year since the recession.

Because the real estate market on the island of Maui is relatively mature and sophisticated, there are comparable data available to provide an understanding of historical development, prices, and sales. Our focus is to profile the competitive developments relative to Mākena Mauka and to project the subject's absorption based on the analysis of sales and prices of comparable projects.

Residential Market Trends and New Supply

The residential market in Maui is robust given consistent upwards movement in pricing and with limited new supply in the past ten years. Luxury product within this market is primarily concentrated in the resort destination areas of Wailea, Mākena, Kapalua, and Ka'anapali. Low vacancy rates and limited supply suggest there is a significant undersupply of housing.

The following tables reflects residential sales trend for the greater Maui market, as provided by the Realtors Association of Maui.

FIGURE 3-1 MAUI RESIDENTIAL SALES – SUMMARY OF ANNUAL SALES

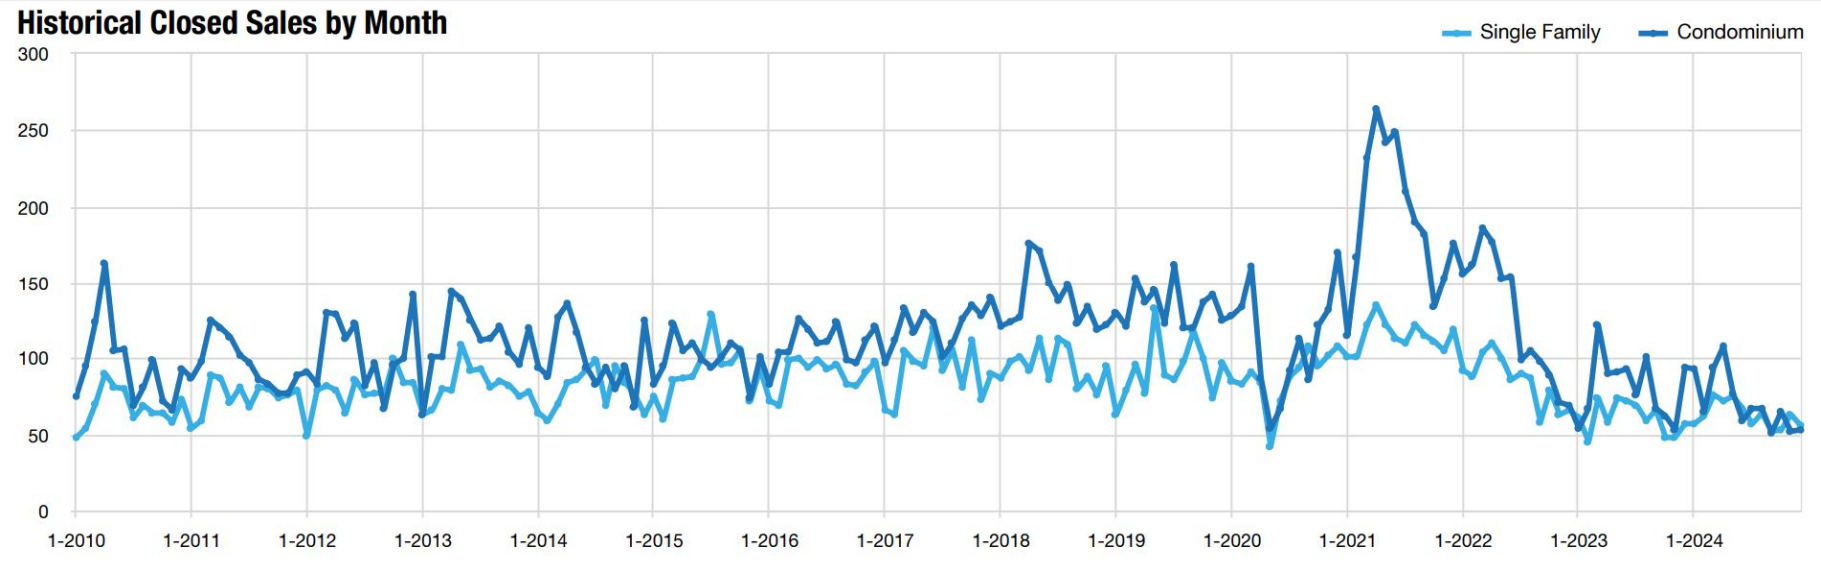


FIGURE 3-2 MAUI RESIDENTIAL SALES – MEDIAN SALES PRICE

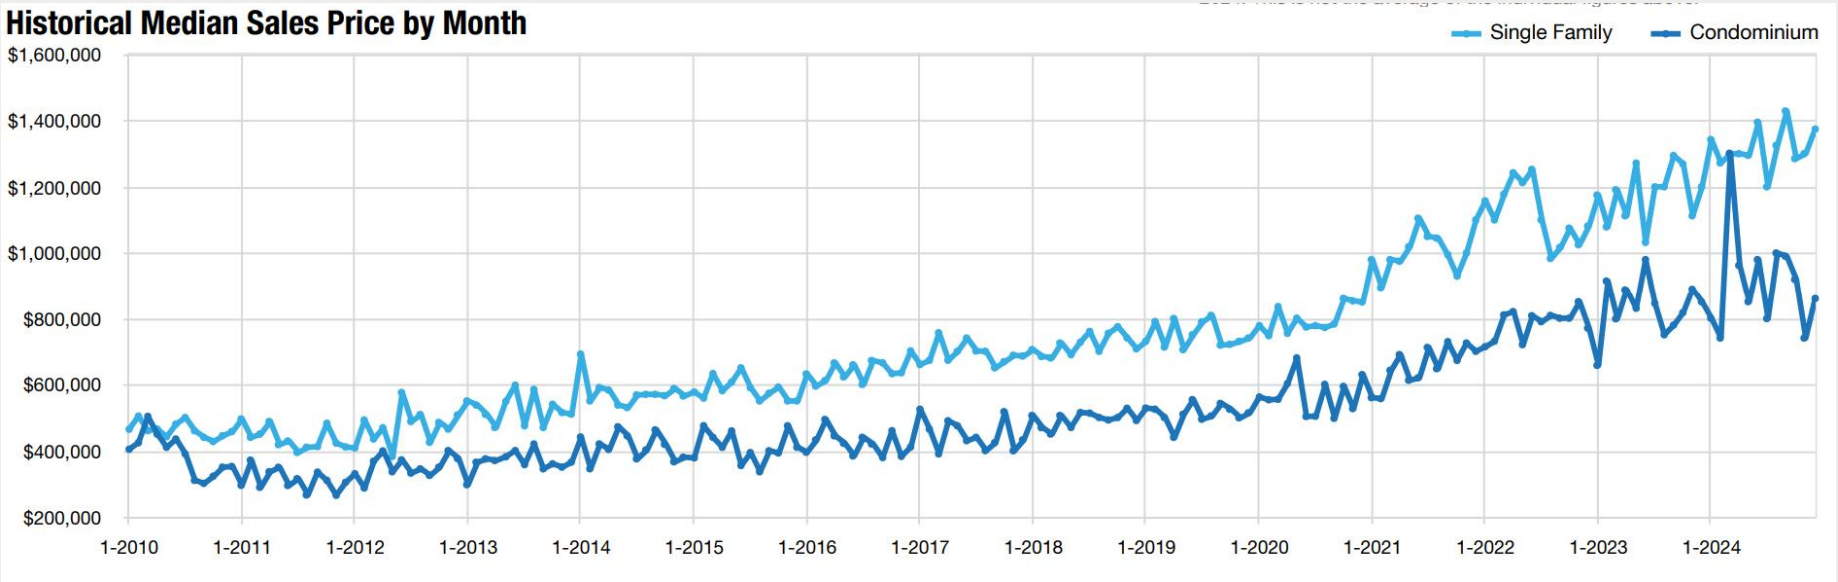

FIGURE 3-3 MAUI RESIDENTIAL SALES – DAYS ON MARKET

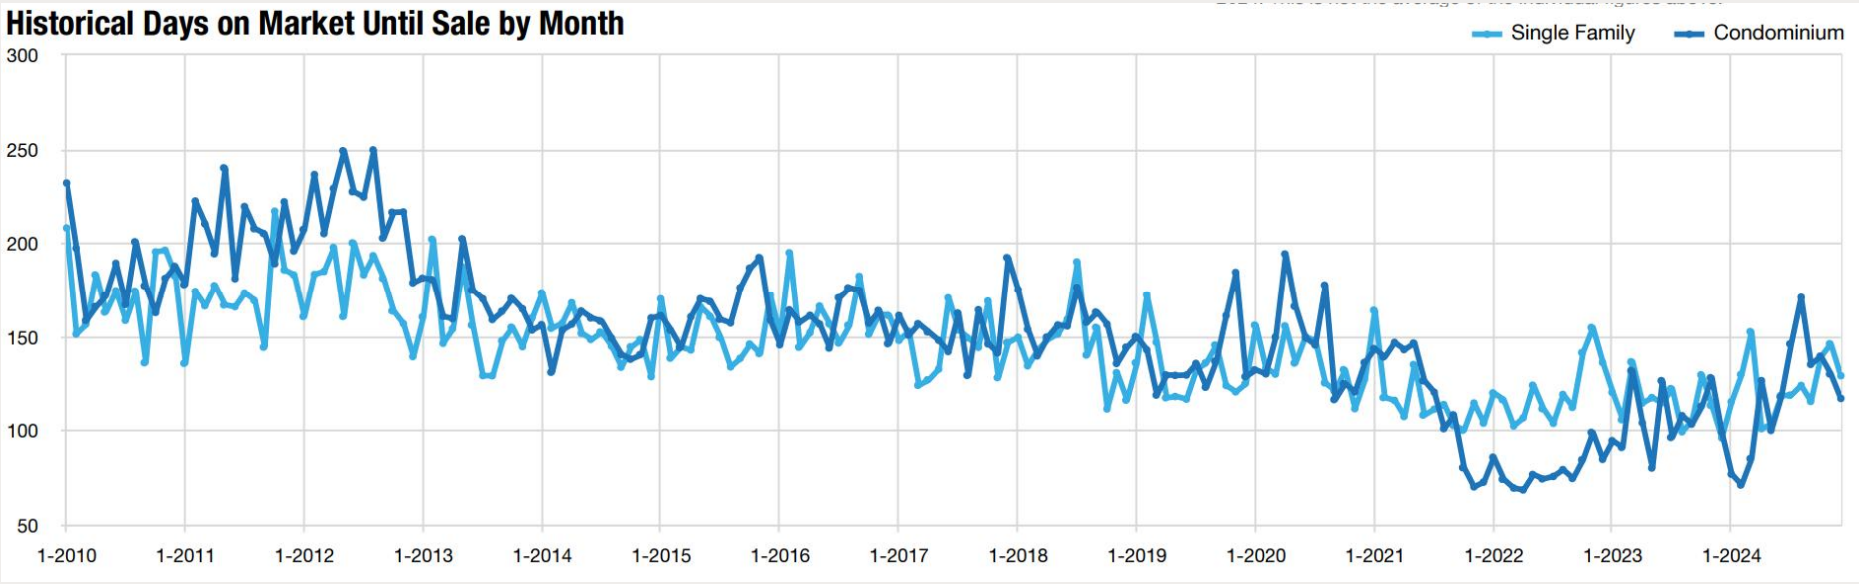

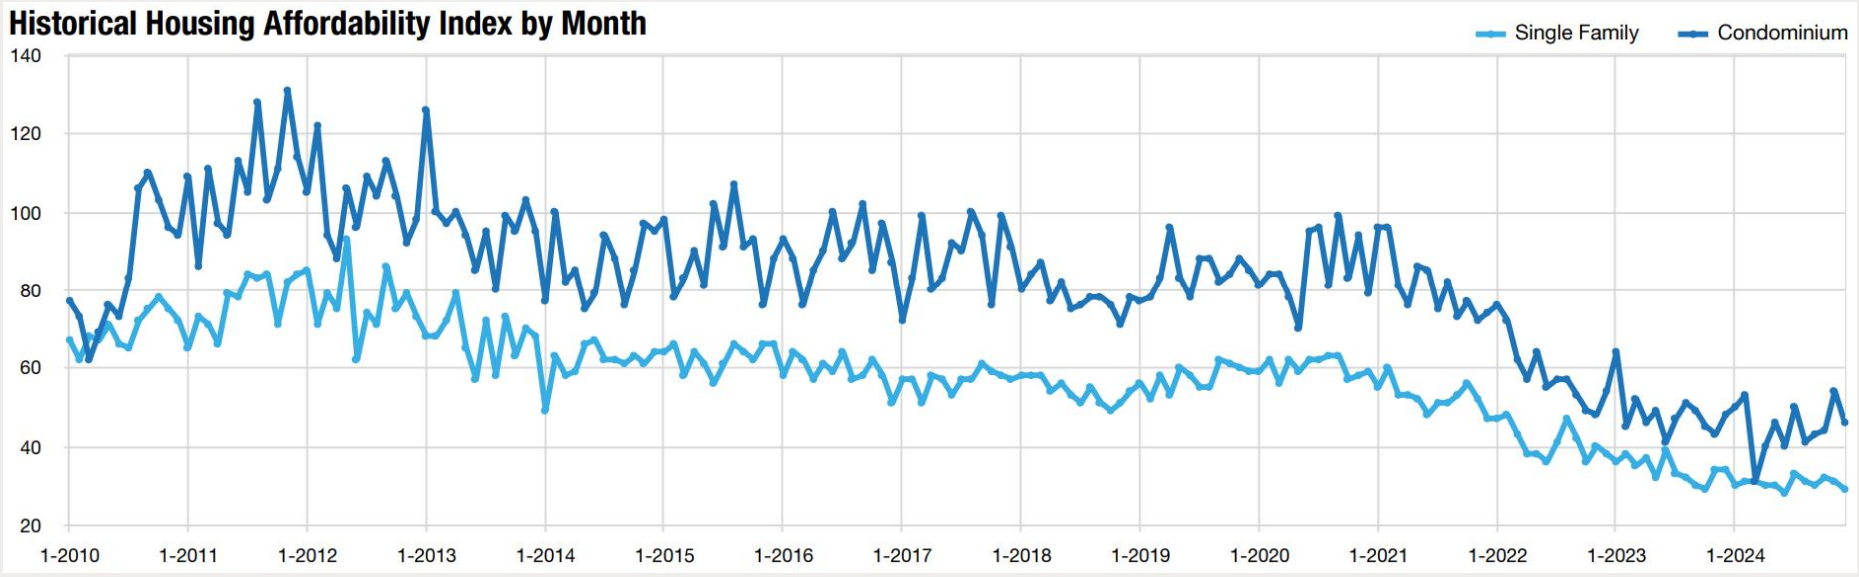

FIGURE 3-4 MAUI RESIDENTIAL SALES – HOUSING AFFORDABILITY INDEX

As illustrated, the number of transactions in the greater Maui market remained relatively stable in the decade prior to the onset of the pandemic. Transaction activity significantly increased in 2021 and early 2022, attributed to an influx of out-of-state buyers in the Maui residential market. In 2023, single-family home transactions were down 28.7% and condominium transactions fell 36.3%. The decline in home transactions is primarily a result of high interest rates, as well as the impact of the August 2023 wildfires. High interest rates lowered the demand for home purchases due to the rising costs of mortgages. It also impacted supply of housing inventory, as current owners with fixed-rate mortgages became reluctant to sell because they would potentially be exposed to much higher interest rates with a new home purchase.

The median sales price has generally trended upward year-over-year since the recession. Improving economic conditions, limited new supply, and high-quality units have contributed to the strong growth in recent years. We note the significant increase in median sales price is attributed to the pandemic.

The average number of days on market (DOM) has generally decreased since its previous high between 2010 and 2012. Limited inventory and increased demand have primarily contributed to this trend. Our conversations with local brokers indicate that the average DOM should remain around two to three months in the near term.

We have narrowed our research to focus primarily on the areas of Kapalua, Ka'anapali, and Wailea-Mākena. These submarkets represent resort destinations that offer a mix of residential inventory types, including improved and vacant single-family lots, as well as multi-family units, similar to the proposed subject property. The following tables reflect annual sales trends for single-family residences and condominiums in the Kapalua, Ka'anapali, and Wailea-Mākena submarkets since 2011.

FIGURE 3-5 KAPALUA, KA‘ANAPALI, WAILEA-MĀKENA – SINGLE FAMILY SALES TRENDS

Single Family Sales - Wailea-Makena, Kapalua, Ka'anapali				
Year	Number of Sales	Average Sales Price	Total Dollar Volume	Market Share (Volume)
2011	76	$3,010,732	$228,815,667	32.3%
2012	56	2,444,079	136,868,397	20.7%
2013	63	2,917,633	183,810,904	24.0%
2014	66	2,593,487	171,170,120	20.7%
2015	59	3,070,212	181,142,499	19.4%
2016	60	2,971,126	178,267,577	17.1%
2017	59	3,259,324	192,300,138	17.1%
2018	78	2,757,199	215,061,502	18.5%
2019	79	3,356,546	265,167,114	21.9%
2020	79	3,658,598	289,029,280	23.3%
2021	148	4,697,398	695,214,883	29.3%
2022	68	5,614,419	381,780,500	21.9%
2023	49	5,713,380	279,955,617	22.0%
2024	52	6,235,400	324,240,811	23.9%
CAGR (2011 - 24)	-2.9%	5.8%	2.7%	
CAGR (2019 - 24)	-8.0%	13.2%	4.1%	

FIGURE 3-6 KAPALUA, KA‘ANAPALI, WAILEA-MĀKENA – CONDOMINIUM SALES TRENDS

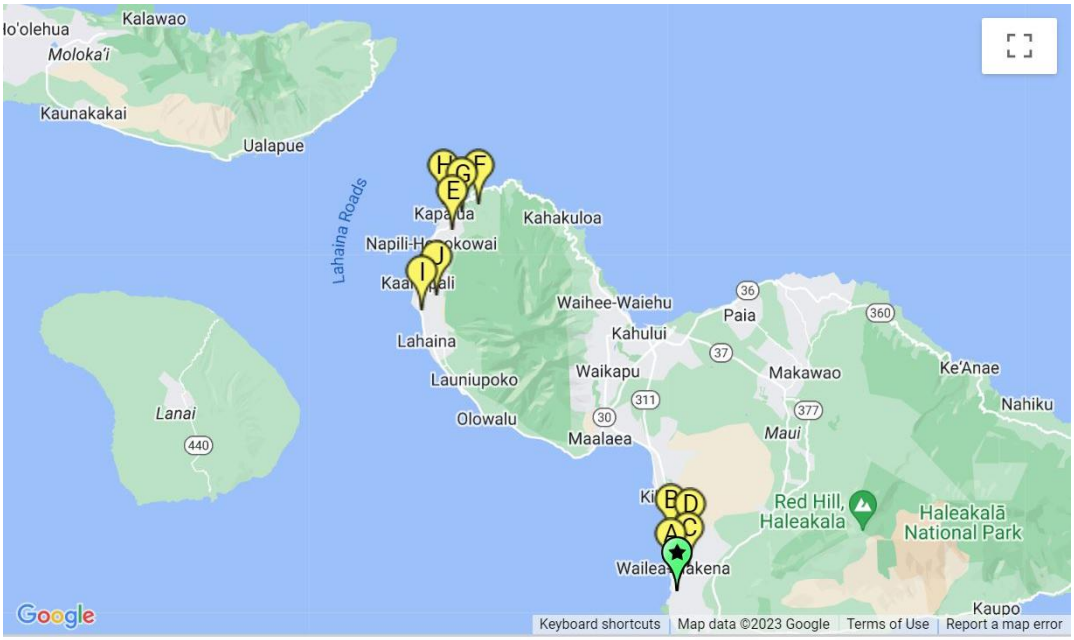
Condominium Sales - Wailea-Makena, Kapalua, Ka'anapali				
Year	Number of Sales	Average Sales Price	Total Dollar Volume	Market Share (Volume)
2011	256	$1,146,333	$293,461,200	52.2%
2012	325	864,140	280,845,509	47.7%
2013	319	1,231,484	392,843,303	51.5%
2014	278	1,385,696	385,223,586	51.0%
2015	255	1,497,490	381,859,940	50.0%
2016	257	1,404,114	360,857,293	44.6%
2017	325	1,497,289	486,618,949	49.2%
2018	434	1,417,254	615,088,394	51.3%
2019	362	1,434,317	519,222,717	46.1%
2020	333	1,586,907	528,439,994	48.6%
2021	699	1,856,008	1,297,349,481	56.8%
2022	342	2,208,031	755,146,434	45.7%
2023	206	2,922,459	602,026,528	49.1%
2024	264	2,758,502	728,244,549	60.2%
CAGR (2011 - 24)	0.2%	7.0%	7.2%	
CAGR (2019 - 24)	-6.1%	14.0%	7.0%	

As illustrated, aside from upwards movement in average sales price and total dollar volume, real estate trends for single-family and condominium sales within these submarkets remained relatively stable between 2012 and 2019. However, all metrics notably increased in 2021 following unprecedented demand amid an influx of out-of-state buyers. Average sales price continued to increase in 2022, although total dollar volume began to normalize. Data in 2023 and 2024 illustrate a continuation of this trend, although we note that average sales price of condominiums declined by roughly 5.0% in 2024.

We have also researched historical land sales within these three submarkets. However, given the limited number of sales, it is difficult to extract meaningful trends from the data.

FIGURE 3-7 KAPALUA, KA'ANAPALI, WAILEA-MĀKENA – LAND SALES TRENDS

Land Sales - Wailea-Makena, Kapalua, Ka'anapali



Year	Number of Sales	Average Sales Price	Total Dollar Volume
2011	28	$915,982	$25,647,500
2012	24	871,225	20,909,400
2013	35	1,088,143	38,085,018
2014	37	1,235,877	45,727,451
2015	28	2,663,705	74,583,750
2016	27	793,579	21,426,625
2017	27	748,620	20,212,750
2018	16	2,390,296	38,244,731
2019	30	2,591,467	77,744,000
2020	29	1,320,589	38,297,075
2021	126	1,149,365	144,820,007
2022	47	1,650,324	77,565,250
2023	24	2,644,180	63,460,308
2024	55	4,106,977	225,883,750
CAGR (2011 - 24)	5.3%	12.2%	18.2%
CAGR (2019 - 24)	12.9%	9.6%	23.8%

Comparable Residential Projects

There are several comparable single-family and multi-family residential products in the greater Maui market that we have used to draw conclusions about the prospects for Mākena Mauka. In an effort to gain a better understanding of the proposed subject development's potential from a supply perspective, we have researched these projects.

Primary active single-family competitors in Wailea-Mākena include improved and vacant lots within One Palauea Bay, Wailea Kai, Wailea Golf Vista, and Wailea Highlands. In Kapalua, competitors include Pineapple Hill, Plantation Estates, Mahana Estates, and Kapalua Place, while competitors in Ka‘anapali include Laniheka and The Pinnacle within the Ka‘anapali Golf Estates.

COMPETITION MAP – IMPROVED & VACANT LOTS

Makena Beach and Golf Resort

A One Palauea Bay

B Wailea Kai

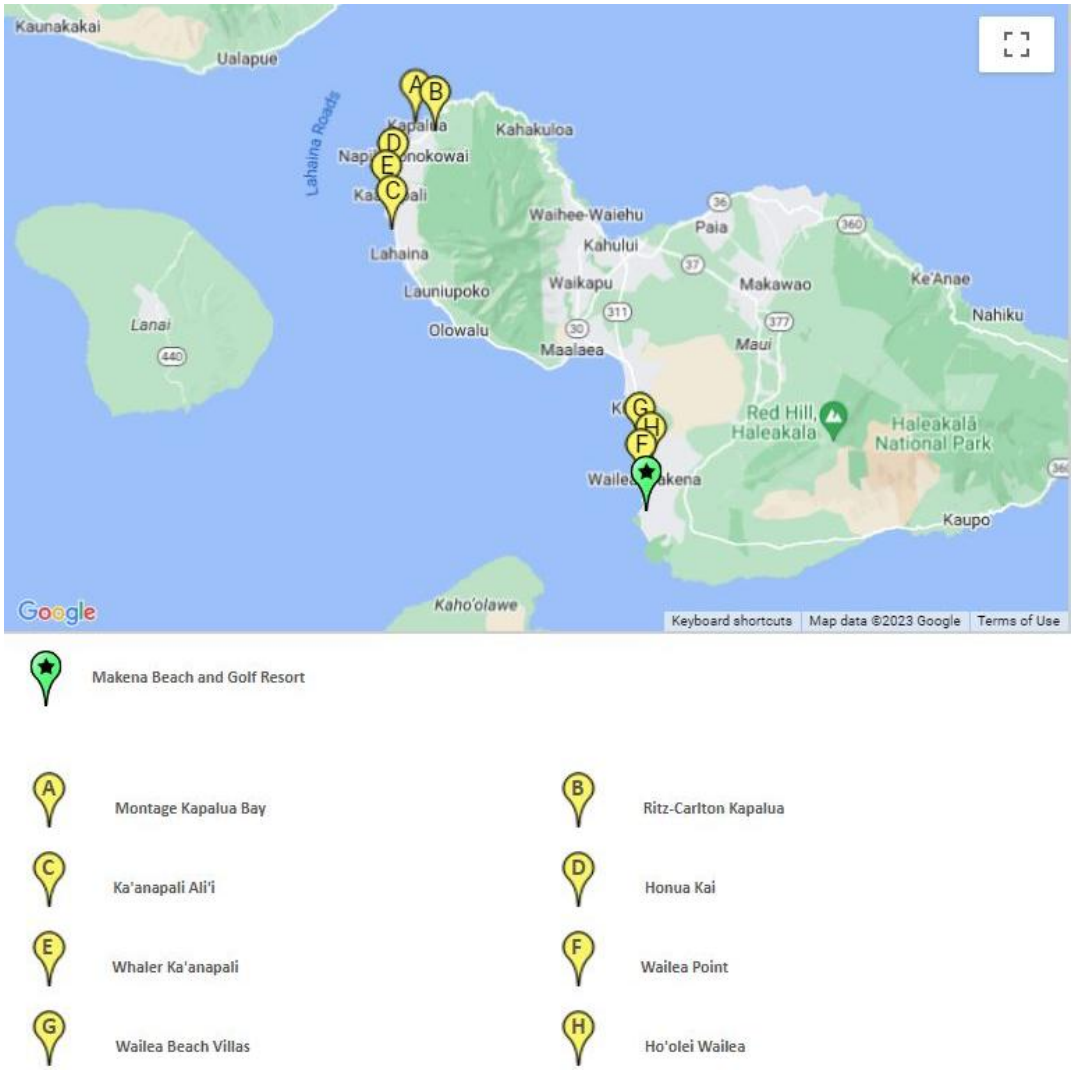
C Wailea Golf Vista

D Wailea Highlands

E Pineapple Hill

F Plantation Estates

G Mahana Estates



H Kapalua Place

I Laniheka

J The Pinnacle

Primary active condominium competitors include the Montage and Ritz-Carlton in Kapalua, as well as Ka‘anapali Ali‘i, Honua Kai, and Whaler in Ka‘anapali. In the Wailea-Mākena area, competitors include Wailea Point, Wailea Beach Villas, Ho‘olei Wailea, as well as Kula Villas, Beach Cottages, Beach Club Residences, and Molokini Residences within the subject-Mākena Golf & Beach Club.

COMPETITION MAP – CONDOMINIUMS

It is important to note that while some of these developments have active listings, most are reselling privately owned units and are not developer-owned inventory.

Competitive developments that are still in the pipeline include Ka‘eo, a 47.15-acre mixed-use development within the Mākena Golf & Beach Club, which will feature 32 single-family custom lots, 30 multi-family units (including 4 workforce units), 18 single-family cottages, 14 condominiums, and 9 transient vacation rentals. Mākena H-2 Residential, a 28-acre lot located makai of Mākena Alanui, is planned to feature 53 single-family residential lots.

Of these comparable developments, the units at the subject Mākena Golf & Beach Club are anticipated to be the most competitive with the multi-family residences at Mākena Mauka given the similar luxury product, location, views, and amenities. The Montage, Ritz-Carlton, and Wailea Point are also considered competitive given their product offering, high-end finishes, and resort-style amenities. The units at Ka‘anapali Ali‘i, Honua Kai, and Whaler in Ka‘anapali are older and command a lower price per square foot. However, these developments have been considered competitive given their resort locations and large unit sizes.

Subject Property Price Positioning

The success of residential sales, both single-family lots and multi-family units, at Mākena Mauka depends on a number of factors, both internal and external to the project. These factors include location, physical character of the project, the type and quality of the amenities, macroeconomic conditions, and the local residential market conditions.

Based on the subject site’s location in the desirable Wailea-Mākena resort area, with panoramic and unobstructed views, as well as the anticipated high-level quality of product associated with the subject development, the proposed residential component is anticipated to achieve pricing equal to or in excess of those typically achieved in the local market for a similar product or unit type. Furthermore, the unparalleled offering of amenities within Mākena Golf & Beach Club is also expected to support and drive the demand for these residential lots and units.

HVS was provided comprehensive pricing data related to existing residential product, as well as guidance on future anticipated pricing for upcoming product, within Mākena Golf & Beach Club. However, per the client‘s request this data has been kept confidential.

Based upon the analysis of the existing comparables, our understanding of the market, the nature of the subject Mākena Mauka, as well as developer’s initial pricing model, HVS is of the opinion that the proposed residential product will garner some of the highest pricing in Maui on a price-per-square-foot basis. Given the growing appetite for luxury residential product, the offering at Mākena Mauka is expected to attract wealthy, out-of-state homebuyers. Due to the location of the project in a resort community, the expected buyer’s demographic profile includes a few local residents, with the majority of buyers being from off-island.

Absorption

We have estimated the absorption of residential sales at Mākena Mauka using comparable properties, historical sales within the greater Mākena Golf & Beach Club, as well as our discussions with the developer, as a basis for our projections. According to the Realtors Association of Maui, as of December 2024, the greater Maui market had 377 active listings, a 63.2% increase from the same period in 2023. This represents 6.2 months of inventory, a substantial increase over 3.7 months of supply in December 2023. Inventory levels lower than four months indicate tight market conditions, typically associated with upward price movement.

Given the limited available supply, as well as in consideration of Mākena Mauka's favorable location, we have assumed that the maximum number of multi-family residences that could be sold each year would total 30 units. In the first projection year, we have assumed zero units would be sold given construction related to infrastructure and site work, as well as in consideration of the ramp up of marketing efforts. Thereafter, future sales are expected to follow a similar trend to historical sales; as such, residential sales are not expected to initially achieve maximum absorption. Based on our review of historical sales within the greater Mākena Golf & Beach Club development, each development "parcel" with 30 or more units is expected to sellout over a ten-year period. We note that the 94 multi-family workforce housing units have not been included in the forecast; however, these units are expected to be readily absorbed; we have assumed these units would be constructed sometime in the initial five-year period. Our forecasted sales pace of the subject Mākena Mauka's residential condominium units is illustrated in the following table.

FIGURE 3-8 ABSORPTION OF SUBJECT MULTI-FAMILY RESIDENCES

Year		Sales & Absorption Timing	Absorbed Residential Units (Pre-Sold/Reserve)
Calendar	Development		
2028	1	Infrastructure Emplacement Commences	0
2029	2	Infrastructure Completed, Vertical Construction & Pre-Sales Begin	15
2030	3	Construction, Absorption & Sales On-Going	30
2031	4	Construction, Absorption & Sales On-Going	30
2032	5	Construction, Absorption & Sales On-Going	30
2033	6	Construction, Absorption & Sales On-Going	30
2034	7	Construction, Absorption & Sales On-Going	30
2035	8	Construction, Absorption & Sales On-Going	30
2036	9	Construction, Absorption & Sales On-Going	30
2037	10	Construction, Absorption & Sales On-Going	30
2038	11	Construction, Absorption & Sales On-Going	30
2039	12	Construction, Absorption & Sales On-Going	30
2040	13	Construction, Absorption & Sales On-Going	30
2041	14	Construction, Absorption & Sales On-Going	18
Total			**363**

***Does not Include 94 multi-family residential workforce housing units*

We have also developed a forecast of absorption for the subject's rural and residential single-family lots. These single-family lots are expected to average 0.5 to 1.6 acres in size. Based on historical trends, we have assumed that the smaller lots will sell at a quicker pace, although absorption will inevitably depend on pricing. Similar to the multi-family residences, we have assumed that zero lots would be sold in the first projection year given construction related to infrastructure and site work, as well as in consideration of the ramp up of marketing efforts. Thereafter, future sales are expected to follow a similar trend to historical sales. Our forecasted sales pace of the subject Mākena Mauka's rural and single-family residential lots is illustrated in the following table. Note that the 15 single-family workforce housing units have not been included in the forecast; however, these units are expected to be readily absorbed; we have assumed these units would be constructed sometime in the initial five-year period.

FIGURE 3-9 ABSORPTION OF SUBJECT RURAL & SINGLE-FAMILY LOTS

Year			Absorbed
Calendar	Development	Sales & Absorption Timing	Residential Lots
2028	1	Infrastructure Emplacement Commences	0
2029	2	Infrastructure Completed & Pre-Sales Begin	5
2030	3	Absorption & Sales On-Going	10
2031	4	Absorption & Sales On-Going	15
2032	5	Absorption & Sales On-Going	15
2033	6	Absorption & Sales On-Going	15
2034	7	Absorption & Sales On-Going	15
2035	8	Absorption & Sales On-Going	15
2036	9	Absorption & Sales On-Going	15
2037	10	Absorption & Sales On-Going	15
2038	11	Absorption & Sales On-Going	15
2039	12	Absorption & Sales On-Going	15
2040	13	Absorption & Sales On-Going	15
2041	14	Absorption & Sales On-Going	15
Total			**180**

***Does not Include 15 single-family residential workforce housing units*

As illustrated, the proposed Mākena Mauka development is expected to achieve full absorption within approximately fifteen years of initial pre-sales offerings, which are anticipated to commence in 2029. Both the multi-family residences, as well as the rural and single-family lots, are projected to be absorbed in a roughly fifteen-year period. The projected absorption period is in line with historical sales trends at the greater Mākena Golf & Beach Club.

4. Statement of Assumptions and Limiting Conditions

1. This report is set forth as a market study of the subject property; this is not an appraisal report.
2. This report is to be used in whole and not in part.
3. No responsibility is assumed for matters of a legal nature, nor do we render any opinion as to title, which is assumed marketable and free of any deed restrictions and easements. The property is evaluated as though free and clear unless otherwise stated.
4. We assume that there are no hidden or unapparent conditions of the sub-soil or structures, such as underground storage tanks, that would render the property more or less valuable. No responsibility is assumed for these conditions or for any engineering that may be required to discover them.
5. We have not considered the presence of potentially hazardous materials such as asbestos, urea-formaldehyde foam insulation, polychlorinated biphenyls (PCBs), any form of toxic waste, pesticides, mold, or lead-based paints. We are not qualified to detect hazardous substances and urge the client to retain an expert in this field if desired.
6. The Americans with Disabilities Act (ADA) became effective on January 26, 1992. We have conducted no specific compliance survey to determine whether the subject property has been designed in accordance with the various detailed requirements of the ADA. It is possible that the design does not conform to the requirements of the act, and this could have an unfavorable effect on operations. Because we have no direct evidence regarding this issue, our estimates do not consider possible non-compliance with the ADA.
7. We have made no survey of the property, and we assume no responsibility in connection with such matters. Sketches, photographs, maps, and other exhibits are included to assist the reader in visualizing the property. It is assumed that the use of the described real estate is within the boundaries of the property described and that there is no encroachment or trespass unless noted.
8. All information, financial operating statements, estimates, and opinions obtained from parties not employed by TS Worldwide, LLC are assumed true and correct. We can assume no liability resulting from misinformation.

9. Unless noted, we assume that there are no encroachments, zoning violations, or building violations encumbering the subject property.

10. The property is assumed to be in full compliance with all applicable federal, state, local, and private codes, laws, consents, licenses, and regulations (including the appropriate liquor license if applicable), and that all licenses, permits, certificates, franchises, and so forth can be freely renewed or transferred to a purchaser.

11. All mortgages, liens, encumbrances, leases, and servitudes have been disregarded unless specified otherwise.

12. None of this material may be reproduced in any form without our written permission, and the report cannot be disseminated to the public through advertising, public relations, news, sales, or other media.

13. We are not required to give testimony or attendance in court because of this analysis without previous arrangements and shall do so only when our standard per-diem fees and travel costs have been paid prior to the appearance.

14. If the reader is making a fiduciary or individual investment decision and has any questions concerning the material presented in this report, it is recommended that the reader contact us.

15. We take no responsibility for any events or circumstances that take place subsequent to the date of our field inspection.

16. The conclusions presented in this report is based upon assumptions, estimates, and evaluations of the market conditions in the local and national economy, which may be subject to sharp rises and declines.

17. It is agreed that our liability to the client is limited to the amount of the fee paid as liquidated damages. Our responsibility is limited to the client; the use of this report by third parties shall be solely at the risk of the client and/or third parties. The use of this report is also subject to the terms and conditions set forth in our engagement letter with the client.

18. This study was prepared by TS Worldwide, LLC. All opinions, recommendations, and conclusions expressed during the course of this assignment are rendered by the staff of TS Worldwide, LLC as employees, rather than as individuals.

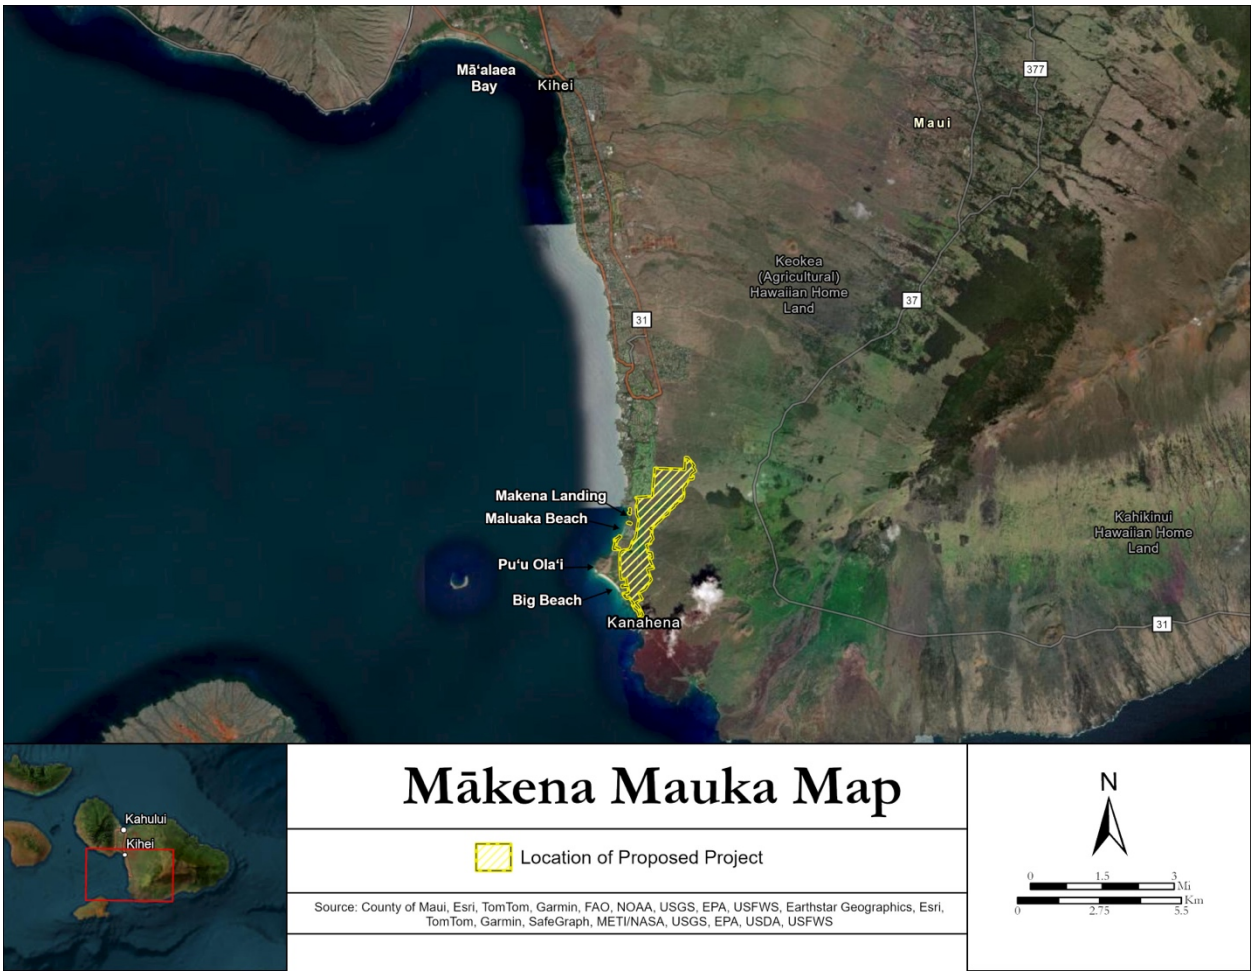
Introduction and Purpose

Introduction

The Draft Social Impact Assessment (SIA) seeks to help determine and analyze potential social effects from the proposed project and consider mitigations for the social, or human, portion of possible environmental impacts from the Mākena Mauka project, within the parameters of Hawai‘i’s environmental review process. Hawai‘i’s process requires an assessment of effects or impacts upon the environment, of which people are a part, meaning that personal and social conditions may be affected, positively and negatively. This Draft SIA documents current and ongoing efforts to learn from and respond to diverse community-based perspectives about the Mākena Mauka project. Through these efforts, the applicant seeks to assess and address reasonably expected social impacts from the proposed project.



Mākena Mauka Project Description

The proposed Mākena Mauka development would be a low-density, master-planned community within the moku of Honua‘ula and the community of Makena. (See Figure 1.) The project area encompasses 1,043.47 acres, with approximately 473 acres of parcels planned for residential development. The project would include a combination of rural and single-family lots and workforce housing on site—a total of 543 market-rate units and 109 affordable housing units. Of the market-rate units, 363 would be multi-family and 180 would be single-family dwellings. Among the affordable housing units, 94 would be multi-family and 15 would be single-family homes. This blend of rural and single-family lots with multi-family residential units would all be built mauka of Makena Alanui Road.

The project would incorporate the existing 18-hole Mākena North Golf Course and the existing, but currently unused and in need of renovation, 18-hole Mākena South Golf Course. The golf amenities would include improvements such as a new clubhouse, receiving area and practice range. Other on-site, private amenities would include programs to support connectivity, a restaurant, fitness center, locker rooms, and walking, biking, and golf cart paths. Ancillary support buildings envisioned include a kitchen, golf maintenance and operations areas, staff center, and other operational buildings, such as administrative offices. The project also would include an arrival hale (house), farm operations and restrooms. Mākena Mauka proposes to include public components such as a community gathering place, hiking trails, additional public beach parking and access, and conservation and open-space areas.

Access to Mākena Mauka would be from Makena Alanui Road and include internal roadways that link individual components of the project. The project plans to further improve the existing internal roadways and connectors to Makena Alanui Road, which is owned and maintained by Maui County, as well as add improvements to internal and connecting infrastructure.

Figure 1. Location of Mākena Mauka project area

Purpose of the SIA

This Draft SIA is attached to, summarized in and informs Mākena Mauka's Draft EIS. It complements the other appended subject-matter reports to the Draft EIS, helping to ensure that the full intent of Hawai'i's "Environmental Impact Statement Rules" (Hawaii Administrative Rules (HAR) §11-200.1) is met. For example, the rules require that social effects are examined in concert with cultural, ecological, economic, historic and aesthetic effects, as part of the environment. The rules include "social conditions" as part of the environment, and they require analysis of impacts on "social welfare," among other things.

The social environment includes people's current and desired lifestyles, values, interpersonal interactions, and involvement and relationships with natural and cultural resources. Assessing how actions in the physical environment may impact the social environment belongs within the environmental review process because Hawai'i's constitution, environmental policy, and rules all require inclusion of the possible impacts, on both the natural and human environment, of a proposed program or project that would use government lands or funds or require state or county approvals (Hawaii Revised Statutes, Chapter 343 "Environmental Impact Statements," 1983).

The environmental review requirements seek to determine how a proposed project can best enable humanity and nature to positively coexist, while retaining what is special about Hawai‘i, including the natural resources, communities’ local identities, and Native Hawaiian rights and uses.

Research about current social concerns connected to Mākena Mauka included the submitted and presented public testimony from the Environmental Impact Statement Preparation Notice (EISPN) scoping period and meetings. The scoping period ran from June 8, 2024 through August 7, 2024, and the meetings were held on July 1 and July 30, 2024, in South Maui. A summary of the testimony topics can be found in Appendix A to this document.

Information gathered from this process spurred a deeper look into testifiers’ concerns and issues from a more directed social perspective. The SIA team reached out to known community members who reside, work, recreate and have historic relationships to the project area to inform the applicant from a potentially more connected perspective. The team created and analyzed an objective and confidential online survey that targeted a more localized audience, centered on the project area. Those who had shown an interest in the project by testifying during the EISPN process also were invited to participate in the survey, providing the applicant with an objective set of data from them as well. The SIA team ensured that the results of the survey were conclusive enough to not need further participation.

Social Impact Assessment Survey

Overarching Social Impact Assessment Survey Questions

1. How do community members perceive Mākena Mauka?
2. How can Mākena Mauka developers best honor the concerns of community members through mitigation measures?

Survey Methods

An anonymous online survey with multiple choice and written response questions was distributed via email to key groups from January 31, 2025 to February 10, 2025. The survey included questions regarding positionality to Mākena Mauka through demographics (n=20 questions), relationships with Mākena Mauka (n=3 questions), and questions regarding perceptions and opinions of Mākena Mauka through written responses (n=5 questions). The entire survey can be found in Appendix B. No additional information about the project was provided other than what can be found in the invitational email and attached survey, because the SIA team wanted to learn from each participant their positionality, baseline perceptions and opinions about the project, and their self-reported relationships to the project area.

Sampling Strategy

Surveys were emailed to individuals who attended and/or testified about the EISPN for Mākena Mauka in writing or orally at the two scoping meetings in July 2024 (Munekiyo Hiraga, 2024); known communities who live, work, and recreate near Mākena Mauka; as well as Native Hawaiian cultural practitioners, community members, and lineal descendants of the project area. Recipients of the email were encouraged and allowed to forward the email to others who they thought may want to participate. A list of the key groups to whom invitational emails for participation in the survey were sent, knowing that there would be significant overlap (i.e., many people could represent several of these groups), are as follows:

- Native Hawaiian community members and lineal descendants of the moku of Honuaʻula – 13 emails
- Neighbors and neighborhoods from around the project area – 28 emails
- High school teachers – 2 emails
- Those who came to the EISPN scoping meetings and/or provided oral or written testimony – 261 emails
    - This group included, but was not limited to, representatives of:
        - Native Hawaiian and environmental advocacy groups,
        - K-12 and college educators,
        - Outdoor enthusiasts, and
        - Government (state and local) workers.
- Native Hawaiian and Environmental advocacy group leaders – 10 emails
- Workers in the area – 130 emails

- Agricultural and ranch workers, and food gatherers in the area – 2 emails
- Businesses and nonprofits in the area – 69 emails
- Volunteer participants in on-site, natural and cultural resource care – 84 emails

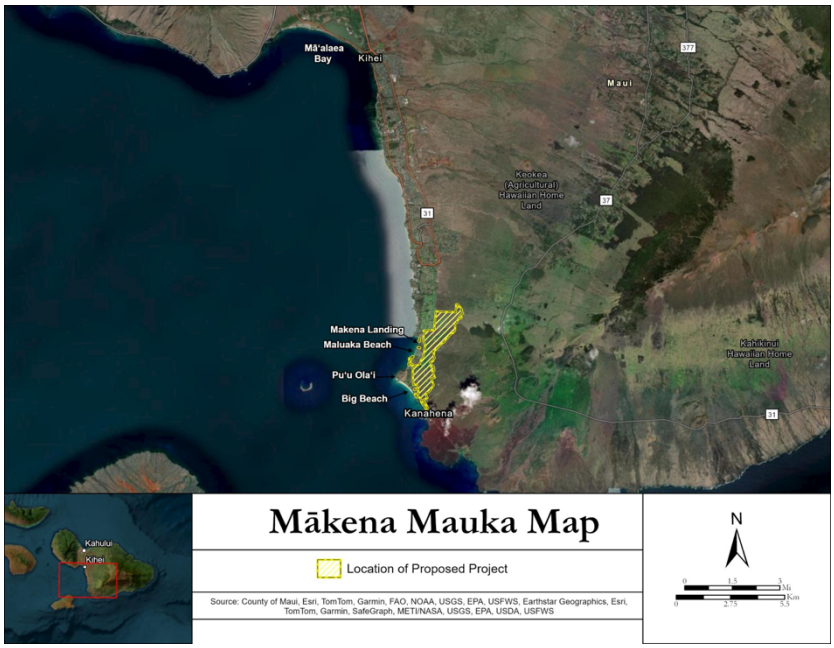
Data Collection

Potential participants (n= 599) were sent an email with an introduction to the intention of the survey and a link to Qualtrics, where the survey was administered online. The introduction email language was as follows:

> Aloha nō,
>
> Your opinions, voice and perspectives are important to make sure that the Mākena Mauka project best understands and respects the needs and concerns of the people of Maui. We invite you to participate in this information-gathering survey that will shape the Social Impact Assessment (SIA) of Mākena Mauka. We estimate that this survey will take between 5 and 15 minutes to complete.
>
> The SIA team's priorities for this survey are to: (1) provide anonymity for participants while collecting needed demographic information; (2) learn about which communities care about the project area and why; and (3) identify the diverse communities that may be impacted by Mākena Mauka and how they describe those impacts.
>
> The SIA report will honor what we learn from this survey. The report's results will be based exclusively on the feedback of those who complete this survey and any related focus groups.
>
> If you have received this email before, please forgive the overlap as we strive to be as inclusive as possible.
>
> ***Anonymity***
>
> This survey is anonymous. This means your contact information will not be connected to the survey in any way. We have set up the software (called Qualtrics) used for this survey to separate your contact information (if you choose to provide it at the end) from your survey responses, keeping your responses confidential. Therefore, no one will ever be able to link your contact information to your specific survey response. You also will have the choice NOT to provide any contact information and still complete the survey.
>
> ***Respectful learning and reporting***
>
> Our team seeks to learn from as many people as possible about perceptions of Mākena Mauka, and how the project can honor and respond to your concerns through meaningful actions.
>
> ***Next steps and how you can participate further***
>
> At the very end of the survey, you will have an opportunity to choose to learn about the preliminary results of this survey and to possibly be contacted with an

offer to participate in a small focus group/listening session. If you choose those options, your survey will be closed and submitted anonymously like everyone's, and then you will be taken to a new page to submit simple contact information. Your contact information will never be able to be linked to the survey that you submitted and will not be used for any other purposes.

Results



We will provide preliminary results to any survey participant who requests them. The complete survey results will be available in a public Social Impact Assessment (SIA), which will be one of the separate reports that is attached to the Mākena Mauka Draft Environmental Impact Assessment. The SIA will focus on expected impacts of the proposed development to the human, or social, environment, and what can be done to limit negative impacts and create or expand positive impacts.

Deadline

Please complete the survey by the end of Sunday, Feb. 9, 2025, if you wish to participate. The survey will close that night at midnight.

Mahalo for considering participating. Please click this link to begin:
https://tinyurl.com/MakenaMaukaSurvey

For your reference: Here is a map of the location of the proposed Mākena Mauka project area (highlighted in yellow), which would be a part of the existing Mākena Golf & Beach Club:

All participants received the first email between January 28 and February 10, 2025, and a reminder email was sent on February 7, 2025. Language for the reminder email was as follows:

> Aloha nō,
>
> If you haven't already, please consider taking a few minutes to participate in the Mākena Mauka survey that will help inform and direct the Social Impact Assessment for the project. The survey will close this Sunday, Feb. 9, 2025, at 11:59pm. (https://tinyurl.com/MakenaMaukaSurvey)
>
> We are committed to hearing from as many people and perspectives as possible and want to ensure that your voice is heard and honored.
>
> Mahalo nui to those who have already participated in this anonymous survey. We look forward to continuing to learn from and with you.
>
> Please see below for the original invitation and its additional information.

The survey was open from January 31, 2025 through February 10, 2025. Although the deadline for responses was February 9, 2025, on the morning of February 10, a request was made from a neighboring employer within a category that had not received many initial invitations: agricultural and ranch workers, and food gatherers in the area. Because the invitation email to their leadership had not been received and forwarded internally until that morning, they requested to reopen the survey for five (5) hours. The SIA team agreed to this request in hopes of reaching an important sector of the project area's community.

Respondents were invited to share their contact information if they wanted to be contacted for further engagement in the SIA; however, this was not a mandatory section in the survey. Should any given respondent select "yes" to be contacted in the future, they were directed to a new Qualtrics survey so that their survey responses were in no way connected with their contact information. This new survey included the following language:

> **Preliminary Results and Focus Group Interest Form**
>
> If you are interested in participating in a future focus group to discuss Mākena Mauka further or to be involved in reviewing the results from this survey, please select "yes" and provide your name, phone number, and/or email.
>
> If you select "yes", your name, phone number, and/or email will be kept on a separate sheet and not connected to this survey.
>
> ○ Yes, I am interested in participating in a future focus group
>
> (1) Name: _____
> (2) Phone number: _____
> (3) Email: _____
>
> ○ No, I am not interested in participating in a future focus group

Analysis

All data was cleaned prior to analysis. Cleaning data means that any of the "test" surveys that the SIA team practiced with prior to sending the survey out to the public were removed (Cleaning Data: The Basics | CBIIT, 2023.). In this cleaning process, the SIA team removed all "test" surveys they had taken prior to January 28, 2025.

The short answer questions were analyzed using a thematic content analysis approach to identify common themes across completed surveys (Vaismoradi & Snelgrove, 2019). Thematic content analysis is a qualitative research method that allows the researcher to systematically identify and interpret recurring patterns, or "themes," within any given dataset (e.g., short answer responses to this SIA survey), to understand overarching opinions, perceptions, experiences, and sentiments from those who completed the survey (Ibid.).

Both deductive and inductive coding were employed. Deductive coding allowed the SIA team to identify themes anticipated in the responses based directly on the question and on previous EIS scoping testimony and scoping meeting transcripts. Inductive coding allowed for identification of themes that emerged from the data (Saldana, 2012). Short answer responses were analyzed by a trained qualitative data analyst using Atlas.ti (Mac Version 8.1.1) to digitalize the process (Paulus, 2014). After coding was complete, the lead analyst revised definitions of all codes, collapsed redundant codes, and generated categories. For example, the codes "not enough parking at the beaches", "too much traffic" and "unsafe evacuation routes" were grouped together in a category named "vehicular-related congestion" (Saldana, 2012). Demographic survey data (e.g., questions about age, household size, length of time living on Maui) was analyzed using basic means and frequencies.

Triangulation of Preliminary Findings

After all data was analyzed, the SIA team created a draft presentation of findings to share back with respondents who had provided their contact information as willing to further engage with the SIA (Birt et al., 2016; Tracy, 2010). In qualitative research methods, this is often called "member checking", which helps ensure the trustworthiness, validity, and credibility of the findings and interpretation (Siegle, 2024). Also, in Hawai‘i, community outreach requires a level of reciprocity, ensuring that people have been heard correctly and reinforcing that this is a sincerely collaborative effort. For member checking, and out of respect to the community that participated in the survey, the draft presentation of findings was emailed on February 14, 2025 to the 55 people who had completed the first survey and had volunteered to continue to participate in the process. The email and its attached presentation invited reactions to preliminary draft findings via another online Qualtrics survey. The language in the email follows:

> Aloha nō,
>
> Mahalo for participating in the information-gathering survey to help inform the Social Impact Assessment (SIA) for Mākena Mauka, and for volunteering to continue to participate in the process.

Results

As promised, attached please find the draft preliminary results from the survey. The complete survey results will be available in the public SIA, which will be one of the reports that is attached to the Mākena Mauka Draft Environmental Impact Statement (EIS). The SIA will focus on what has been learned from the community about expected impacts of the proposed development to the human – or social – environment, and what can be done to limit negative impacts and create or expand positive impacts.

Review

Please review the draft preliminary results (reading time estimated at 10 minutes). An anonymous, short (estimated 5 minutes) feedback questionnaire will follow to understand your opinions on each of our four (4) overall draft result themes. You will also have the opportunity to comment further on each of them in the survey. That opportunity to provide feedback closes at the end of Wednesday, Feb. 19, 2025.

Anonymity

The feedback questionnaire also is anonymous. Again, your contact information will not be connected to your responses in any way, because the software (called Qualtrics) used for the questionnaire has been set up to ensure that responses are separated from this email and your email address, keeping your responses confidential. No one will be able to link your contact information to your questionnaire responses.

Deadline:

Please complete the feedback questionnaire by Wednesday, Feb. 19, 2025, at 11:59pm, if you wish to participate. The survey will close that night at midnight. Mahalo for considering continuing to participate.

Your responses will help to ensure that we have heard you correctly and that our report meets scientific standards.

The link to the questionnaire is embedded in the attached .pdf, as is a QR code that may make it easier for you to link to the questionnaire from your phone. Just in case you want to refer back to this email later, without having to re-open the attachment, here is the link to the questionnaire (https://tinyurl.com/MakenaMauka-MemberCheck), and the QR code is at the end of this email.

The SIA report will honor and report what we learn from the initial survey, your feedback responses and any related focus groups.

Me ka haʻahaʻa,

Mākena Mauka SIA Team

The document that showed the preliminary findings was attached to the email and can be found in Appendix C. The above QR code and link took participants to another anonymous survey. That survey included the following three questions for each of the four preliminary themes.

- Does this theme resonate with you? (Yes, No, I don't know, prefer not to answer)
- Do you see your opinions, perceptions, and thoughts about Mākena Mauka represented in this theme (Yes, No, I don't know, prefer not to answer)
- Please share anything else you have to add about this theme. (short answer)

One reminder email was sent on Tuesday, February 18, 2025, to nudge those who had not yet responded to the preliminary findings share back. The text of that reminder email follows:

> Aloha nō,
>
> Mahalo again for your participation in the Mākena Mauka Social Impact Assessment (SIA) Survey, and for your willingness to help ensure that decision makers are informed by a scientifically backed process.
>
> If you have not yet done so, please consider taking a few minutes to review the attached, preliminary results and to comment (anonymously) on whether or not they resonate with you and what you wrote in the survey. If you already have provided your valuable feedback, Mahalo!
>
> The opportunity to have your confidential review and comments included in our analysis **ends tomorrow night (Wednesday, Feb. 19, 2025) at 11:59pm**.
>
> Please see below for the original email text, and please see the attached for the brief report and the means to evaluate it.
>
> We look forward to hearing from you and to contacting you about the next steps reported in the attachment.
>
> Me ka haʻahaʻa,
>
> Mākena Mauka SIA Team

Qualitative Data Saturation

In qualitative research, non-numerical (i.e., words) data is gathered and analyzed to gain an in-depth understanding of an individual's experiences, attitudes, beliefs, and motivations within a specific context (e.g., living on Maui) (Austin & Sutton, 2014). To understand if any given qualitative project collected "enough" data to understand these concepts, qualitative researchers consider the "saturation" of the dataset (Saunders et al., 2018). Saturation in qualitative research is defined as the criterion for judging when to stop data collection for answering a research question (Hennink & Kaiser, 2022; Saunders et al., 2018). Saturation means that no new topics

are discussed. Another way to determine saturation is when new data are redundant of the data already collected.

Obtaining saturation is important to fully answer a research question from all perspectives of the priority population(s). In a deductive approach, saturation is the extent to which the pre-determined codes or themes are adequately represented in the data. In an inductive approach, saturation suggests the extent to which new codes or themes are identified within the data. The point of saturation varies for each study, and implementation varies widely. Researchers can and do use different strategies to determine saturation, depending in part on the specific analysis and research question(s).

During analysis of the SIA survey results, researchers employed and reached code-meaning saturation, which means that the full understanding of each code was achieved, with no counting required or involved (Hennink & Kaiser, 2022; Saunders et al., 2018). At this point no relevant new codes were anticipated, regardless of how many more surveys were completed by people living on Maui, with any kind of relationship to Mākena Mauka. Therefore, there is and will be no meaningful rationale to extending or expanding the survey.

Findings and Results of Social Impact Assessment Survey

Of the 599 email invitations that were sent, 161 individuals responded to the initial survey, and of the 55 people who volunteered to continue to participate in the process, 14 individuals responded to the preliminary results survey. Literature on online survey response rates vary, though most suggest an average 44.1% response rate is expected (Wu et al., 2022). Methods to ensure higher response rate include incentivizing (e.g., paying people to complete the survey), ensuring mobile capacity (e.g., survey can be completed on a smartphone), and sending reminders or "nudges" to complete (Brown et al., 2024; Smith et al., 2019). While the SIA team employed the last two of those methods (but not incentivizing), the response rate to the SIA survey was 26.9%. Nevertheless, because code-meaning saturation within the qualitative portion of the survey was reached by those who participated, as noted above, the number of responses still met the criteria for closing the survey.

Quantitative Results (i.e., responses from multiple choice questions)

In this section, the details of the responses to the 22 multiple choice questions in the SIA Survey and the preliminary findings feedback are displayed. Throughout this section, data is represented both in tabular form and graphic representation. The duplication is intentional, to cater to different types of readers (e.g., those who prefer numbers vs. visual representation).

The full survey can be found in Appendix B. In sum, the first 13 questions were focused on the demographics of each individual respondent who completed the survey. Examples include age, employment status, gender identity, and racial/ethnic group identification. These multiple-choice questions included a "prefer not to answer" option. The next seven questions focused on the length of time the survey respondent has lived in Hawai‘i, length of time living on Maui, and duration of any given year living on Maui. The next two questions focused on the survey respondent's relationship to Mākena Mauka, giving the opportunity to select "all that apply" on

the first question and to select the most important relationship they felt they had to Mākena Mauka on the second question. The response options for each of these questions were the same, including options such as: "I am a resident of South Maui", "I am a local business owner impacted by Mākena Mauka", and "I am a lineal descendent of the Mākena Mauka area." The survey respondents had 19 possible options to describe their relationships with Mākena Mauka.

Answers to quantitative survey questions were not required, and some respondents did not answer all questions. Additionally, some respondents did not complete the survey. Questions that had a higher "no response" rate occurred later in the survey, so those questions likely were not answered by people who did not finish the survey. The "no response" categories were not included in the counts or the percentages for each question, because those people simply did not participate in those parts of the survey. For the 13 questions that provided the option "prefer not to answer", those numbers are included in the tables but not in the respective questions' percentages. They represent a margin of error, because no one can presume why a participant – even an anonymous one – chose not to provide certain information. For transparency purposes, the SIA team chose to disclose all choices that were made in response to each question.

Age, Ethnicity, and Gender

Survey respondents varied in age, with the most common categories being between ages 35 and 44 (21.7%) and 65 or older (27.0%). No one under 18 years of age completed the survey. Respondents mostly identified as Caucasian (51.5%) and Native Hawaiian (22.0%), with a few respondents identifying as Chinese (8.0%), other (6.5%), Filipino (5.0%), Japanese (4.0%), Korean (2.0%), and Pacific Islander (1.0%). The majority of respondents identified as female (61.2%). Table 1 includes all self-reported demographic data from the SIA survey respondents.

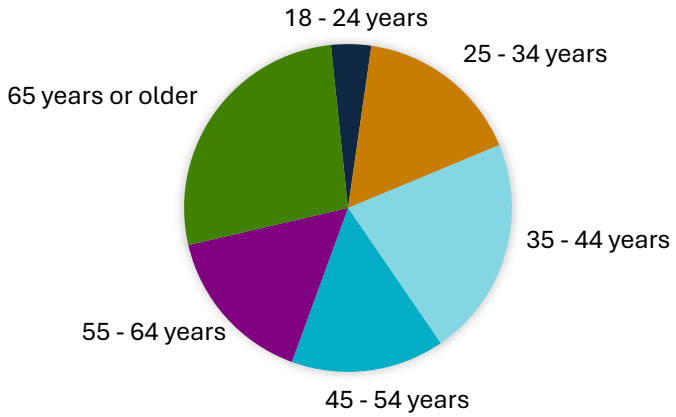
Table 1. Self-reported demographic data of SIA survey respondents

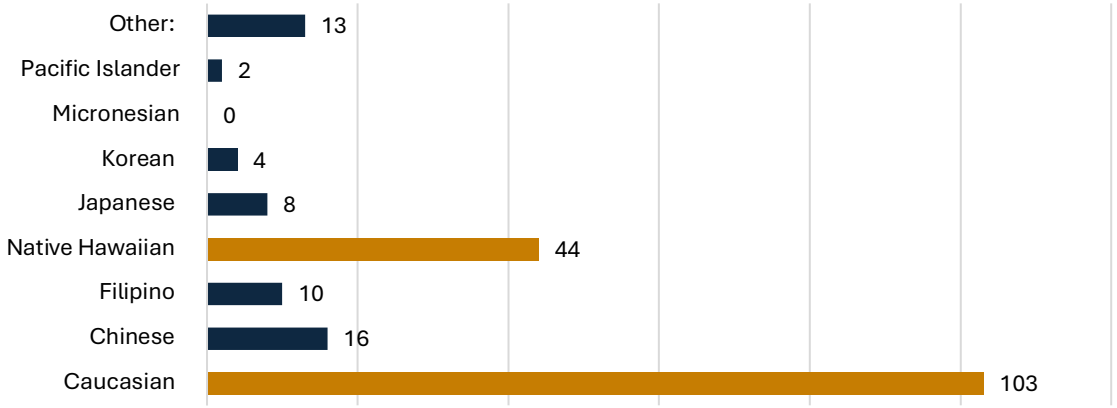
Age	**count**	**%**
Less than 17 years of age	0	0.0%
18 – 24 years	6	3.9%
25 – 34 years	25	16.4%
35 – 44 years	33	21.7%
45 – 54 years	23	15.1%
55 – 64 years	24	15.8%
65 years or older	41	27.0%
Prefer not to answer	2	N/A
Ethnicity	**count**	**%**
Caucasian	103	51.5%
Chinese	16	8.0%
Filipino	10	5.0%
Native Hawaiian	44	22.0%

Japanese	8	4.0%
Korean	4	2.0%
Micronesian	0	0.0%
Pacific Islander	2	1.0%
Other	13	6.5%
Gender	**count**	**%**
Female	85	61.2%
Male	52	37.4%
Non-Binary	1	0.7%
Other	1	0.7%
Prefer not to answer	3	N/A
Income	**count**	**%**
$0 – $49,999	24	20.9%
$50,000 – $99,999	31	27.0%
$100,000 – $159,999	27	23.5%
$160,000 – $199,999	10	8.7%
$200,000 – or more	23	20.0%
Prefer not to answer	27	N/A
Educational Attainment	**count**	**%**
Less than high school degree	1	0.7%
High school degree or equivalent	11	7.8%
Some college but no degree	20	14.2%
Associate degree	9	6.4%
Bachelor’s degree	53	37.6%
Graduate degree	47	33.3%
Prefer not to answer	1	N/A
Employment	**count**	**%**
Disabled, unable to work	1	0.7%
Full-Time Employment	74	55.2%
Part-Time Employment	22	16.4%
Retired	35	26.1%
Unemployed, looking for work	1	0.7%
Unemployed, not looking for work	1	0.7%
Prefer not to answer	8	N/A

Figure 2 provides a visual representation of the self-reported age breakdown of the SIA survey respondents, showing that most of the respondents were aged 65 or older, with a small representation of those aged between 18 and 24 years old.

Figure 2. Self-reported age of SIA survey respondents





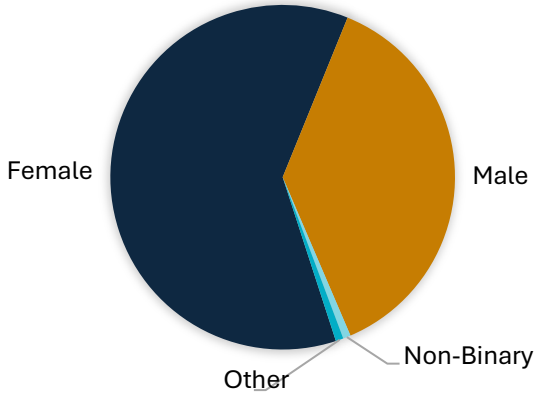


Figure 3 shows the self-reported ethnicity of SIA survey respondents. As highlighted by the gold bars below, the majority of the respondents self-identified as Caucasian (n=103; 51.5%) or Native Hawaiian (n=44; 22.0%).

Figure 3. Self-reported ethnicity of SIA survey respondents

As is common among survey participants, the predominant self-reported gender of the SIA survey respondents was female (n=85; 61.2%), as shown in Figure 4. While 52 respondents (37.4%) self-reported being male, very small percentages selected “non-binary” (0.7%) or “other” (0.7%) as their gender.

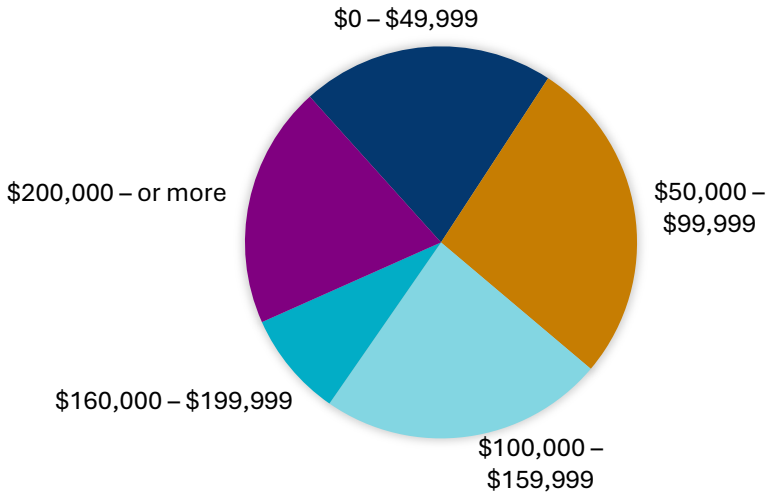

Figure 4. Self-reported gender of SIA survey respondents

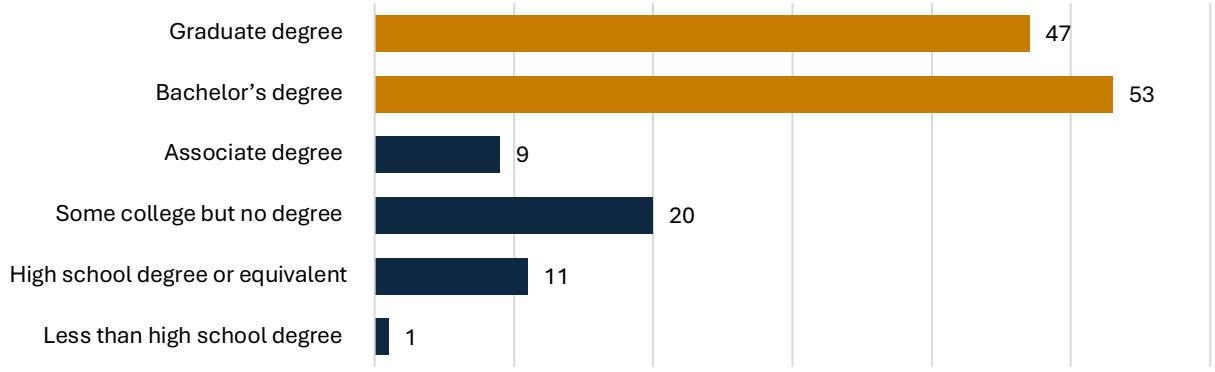
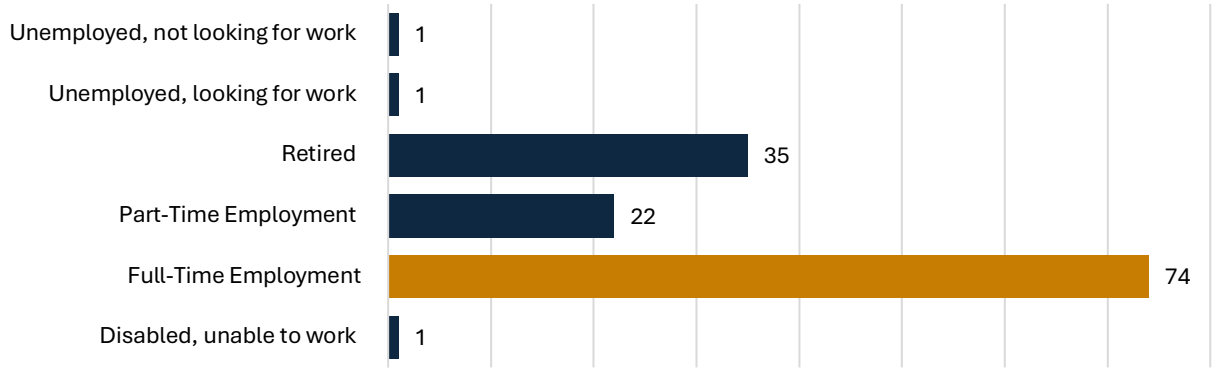
Household Income, Education, and Employment



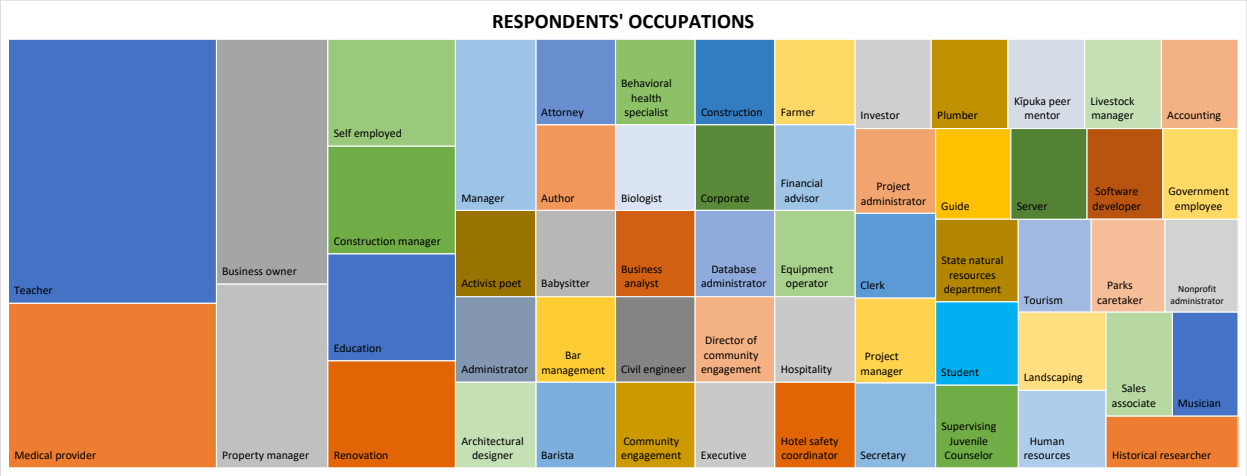
Respondents represent all levels of annual household income categories, with the most common reported income categories being $50,000-$99,000 (n=31; 27.0%) and $100,000-$159,000 (n=27; 23.5%). Figure 5 provides a visual representation of all self-reported household income data from SIA survey respondents.

Figure 5. Self-reported household income of SIA survey respondents



As depicted in Figure 6, respondents had high levels of educational attainment, with most reporting having a bachelor's degree (n=53; 37.6%) or graduate degree (n=47; 33.3%). Only 12 people (8.5%) self-reported no college experience.

Figure 6. Self-reported educational attainment of SIA survey respondents



As seen in Figure 7, most respondents reported being employed, with most having full-time employment (n=74; 55.2%), some being part-time employed (n=22; 16.4%), and some reporting being retired (n=35; 26.1%).

Figure 7. Self-reported employment status of SIA survey respondents

Of those who reported being employed, respondents had a wide variety of occupations, demonstrating the variety of vantage points that contributed to the SIA survey responses. The larger block sizes in Figure 8 indicate more respondents for that occupation. For example, more respondents indicated "teacher" as their occupation than did "secretary", so the "teacher" block is larger than that of "secretary." The teacher block is the largest of the jobs reported, with eight responses and 9.8% of the total. The same data is also represented in tabular format in Table 2, where all the responses, the count of those responses, and their percentages are detailed.

Figure 8. Self-reported occupation of SIA survey respondents

Larger block size indicates more respondents with the same self-reported occupation.

Table 2. Self-reported occupation of SIA survey respondents

Occupation	count	%	Occupation	count	%
Teacher	8	9.8%	Ethnographer	1	1.2%
Medical provider	5	6.1%	Executive	1	1.2%
Business owner	4	4.9%	Farmer	1	1.2%
Property manager	3	3.7%	Financial advisor	1	1.2%
Construction manager	2	2.4%	Flight attendant	1	1.2%
Education	2	2.4%	Gig worker	1	1.2%
Manager	2	2.4%	Government employee	1	1.2%
Renovation	2	2.4%	Guide	1	1.2%
Self employed	2	2.4%	Hawaiian language specialist	1	1.2%
Accounting	1	1.2%	Historical researcher	1	1.2%
Activist poet	1	1.2%	Horticulture	1	1.2%
Administrator	1	1.2%	Hospitality	1	1.2%
Architectural designer	1	1.2%	Hotel safety coordinator	1	1.2%
Attorney	1	1.2%	Human resources	1	1.2%
Author	1	1.2%	Investor	1	1.2%
Babysitter	1	1.2%	Kīpuka peer mentor	1	1.2%

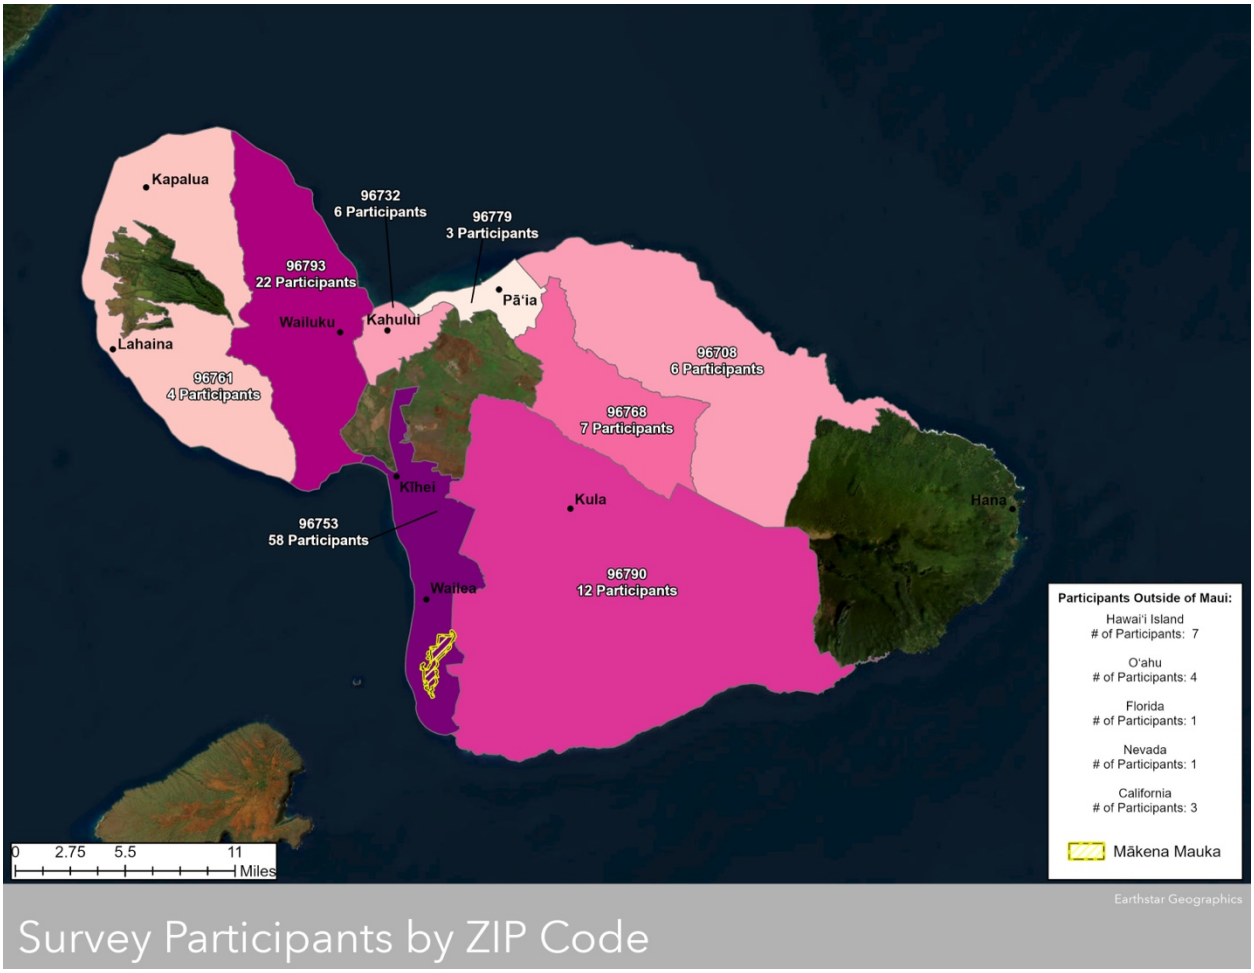
Location, Household Size, and Residency



The most common zip code that respondents reported living in was 96753, Kīhei, Maui (n=58; 43.3%), which is the area that includes the proposed project area; and 96793 (n= 22; 16.4%), which includes Wailuku, the county seat. Table 3 provides details of the zip codes of residence as reported by SIA survey respondents. Figure 9 shows the density of SIA survey respondents by Maui zip code: the darker the color of the zip code area, the more responses were received from that area. This data documents that the SIA survey reached the targeted areas, closest to the project area.

Table 3. Zip codes of residence as reported by SIA survey respondents

zip code	town, state	count	%
96753	Kīhei, Maui	58	43.3%
96793	Wailuku, Maui	22	16.4%
96790	Kula, Maui	12	9.0%

Figure 9. Map of Maui and list of other locations of ZIP codes of residence as reported by SIA survey respondents

On average, the household size of respondents was 2.73 people, with a range of one to eight people in the household, including 0.58 children (range of 0-6) and 0.62 elders (range of 0-2). Table 4 provides details on the self-reported household size, including number of children under the age of 18 years and elders over the age of 65 years.

Table 4. Self-reported household size including number of children (less than 18 years old) and elders (more than 65 years old) of SIA survey respondents

	Household size	Number of children	Number of elders
Mean (average)	2.73	0.58	0.62
Min	1	0	0
Max	8	6	2

Of those who answered the questions, respondents have lived in Hawai‘i for decades, with most respondents reporting more than 21 years of Hawai‘i residency (56.0%) and more than 21 years of living on Maui specifically (50.8%). Of those living on Maui, almost all (95.9%) are living there for most of the year (i.e., between 7 and 12 months a year). Table 5 provides details of the self-reported duration of time living in Hawai‘i. Figures 10 and 11 provide a visual representation of the self-reported duration of residency of SIA survey respondents.

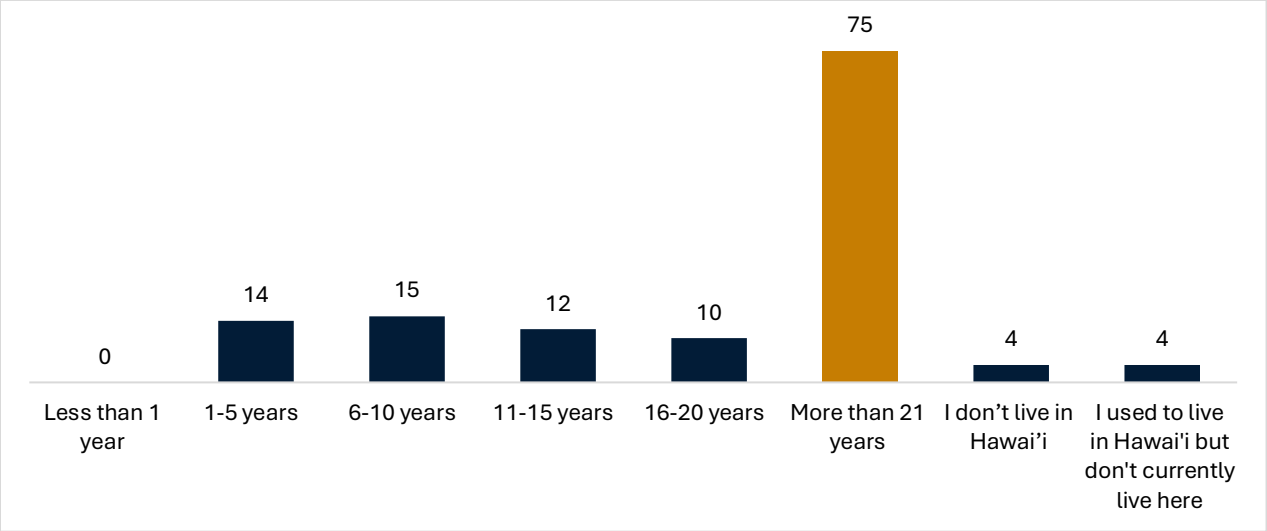
Figure 10. Self-reported years living in Hawai‘i of SIA survey respondents



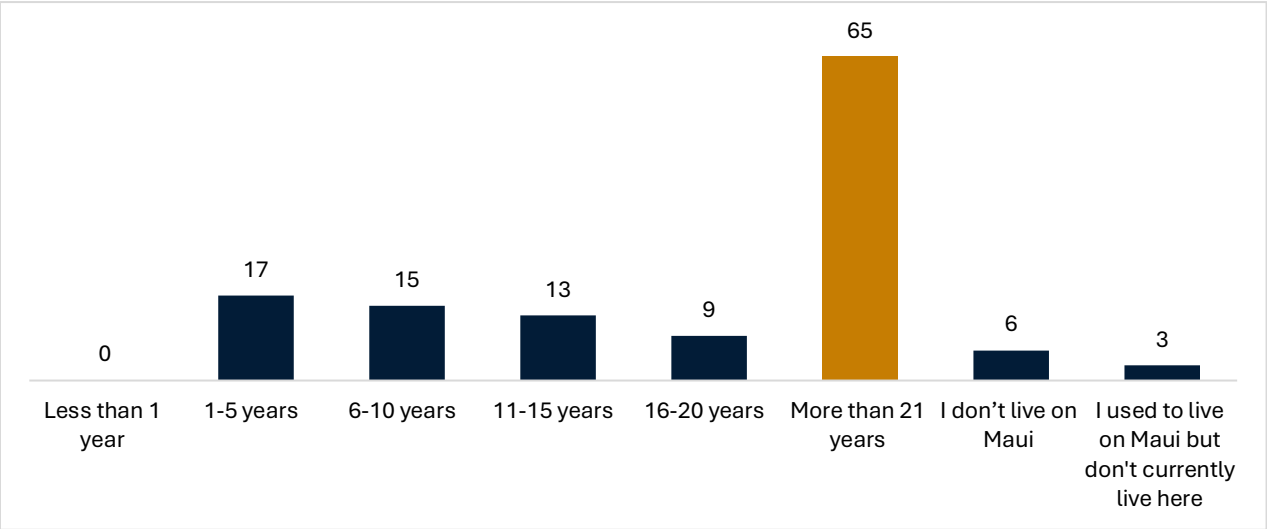


Figure 11. Self-reported years living on Maui of SIA survey respondents

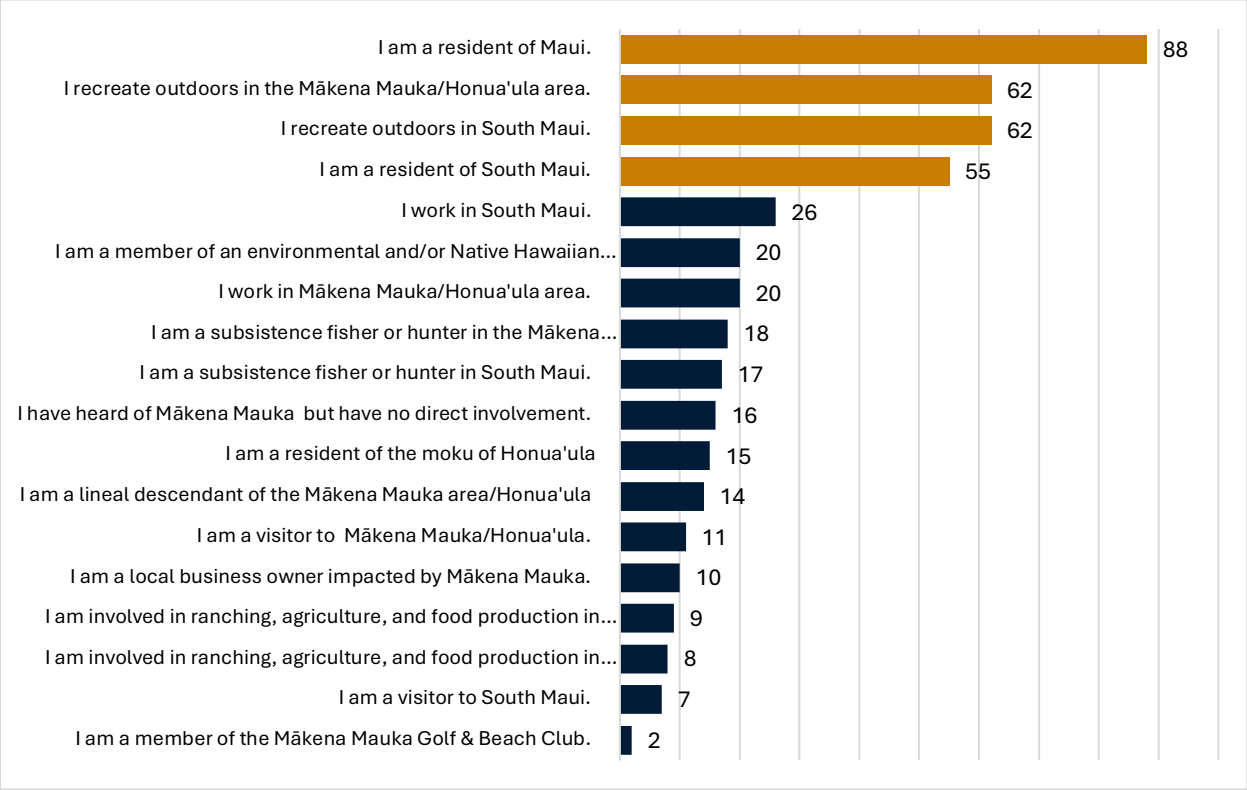

Relationship to Mākena Mauka

Respondents have a variety of relationships to Mākena Mauka, including identifying their relationships to the area broadly as being residents of Maui (68.2%) and residents of South Maui (42.6%). They also identified more narrowly as people who recreate outdoors in the Mākena Mauka area/Honua‘ula (48.1%), and as being lineal descendants of the Mākena Mauka area/Honua‘ula (10.9%). Table 6 provides details on the various self-reported relationships to Mākena Mauka, as identified by survey respondents to the question that allowed them to select all answers that applied. Figure 12 provides a visual representation of the same data in a bar graph, with gold bars highlighting the most common answers, including living on Maui, living and recreating outdoors in South Maui, and recreating outdoors in Mākena Mauka/Honua‘ula.

Table 6. Self-reported relationship to Mākena Mauka of SIA survey respondents (could choose all that apply)

	count	%
I am a member of the Mākena Mauka Golf & Beach Club.	2	1.6%
I am a visitor to South Maui.	7	5.4%
I am involved in ranching, agriculture, and food production in South Maui.	8	6.2%
I am involved in ranching, agriculture, and food production in the Mākena Mauka/Honua'ula	9	7.0%

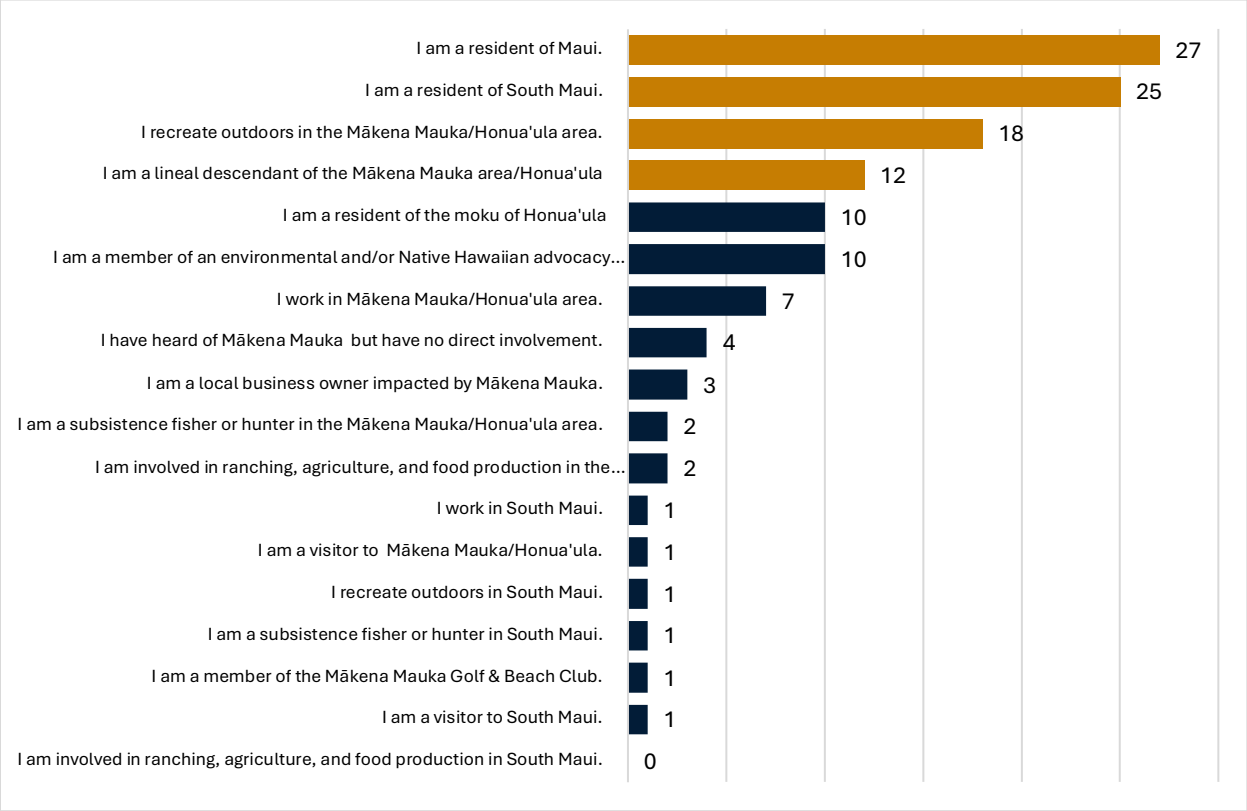
I recreate outdoors in the Mākena Mauka/Honua'ula area.	62	48.1%
I am a resident of Maui.	88	68.2%

Figure 12. Self-reported relationship to Mākena Mauka of SIA survey respondents (could choose all that apply)

Once the SIA survey respondents had to choose which of the possible answers that applied to their relationships to Mākena Mauka was the most important to them, the answers began to depict the closeness of that relationship. For example, Table 7 shows via numbers that three of the highest-ranking answers remained being residents of Maui, in general, and of South Maui in particular.



However, an additional relationship rose in priority among the respondents. Twelve of the 14 respondents who self-reported as lineal descendants of Mākena Mauka area/Honua‘ula selected that relationship with the place as the most important relationship to them. As shown in the bar graph of Figure 13, that relationship rose from being 13th in the rankings of most common relationship with Mākena Mauka to being 4th in the rankings of the most important relationship for respondents with Mākena Mauka. This documents a relevant and actual connection to place among a particular group of respondents.

Table 7. Self-reported relationship of SIA survey respondents to Mākena Mauka (forced to choose the 1 relationship that was most important to respondent)

Relationship to Mākena Mauka	count	%
I am a resident of Maui.	27	21.4%
I am a resident of South Maui.	25	19.8%
I recreate outdoors in the Mākena Mauka/Honua'ula area.	18	14.3%
I am a lineal descendant of the Mākena Mauka area/Honua'ula	12	9.5%
I am a member of an environmental and/or Native Hawaiian advocacy group.	10	7.9%
I am a resident of the moku of Honua'ula	10	7.9%
I work in Mākena Mauka/Honua'ula area.	7	5.6%
I have heard of Mākena Mauka but have no direct involvement.	4	3.2%
I am a local business owner impacted by Mākena Mauka.	3	2.4%
I am involved in ranching, agriculture, and food production in the Mākena Mauka/Honua'ula	2	1.6%
I am a subsistence fisher or hunter in the Mākena Mauka/Honua'ula area.	2	1.6%
I am a visitor to South Maui.	1	0.8%
I am a member of the Mākena Mauka Golf & Beach Club.	1	0.8%
I am a subsistence fisher or hunter in South Maui.	1	0.8%
I recreate outdoors in South Maui.	1	0.8%
I am a visitor to Mākena Mauka/Honua'ula.	1	0.8%
I work in South Maui.	1	0.8%
I am involved in ranching, agriculture, and food production in South Maui.	0	0.0%

Figure 13 also visually represents the priorities of SIA survey respondents that fit within the categories from which the SIA team sought representation, as noted previously in the categories of people to whom invitation emails were sent for participation in the survey. In most cases, the numbers are beyond those in each group that the team was able to email. This means that either the survey reached additional people through email forwarding or that those who were listed in one category may have self-selected the priority of another category. For example, while only two emails were intentionally sent to people known to be involved in ranching, agriculture, or food production, eight noted that affiliation when they could choose all relationships with Mākena Mauka (See Table 6 and Figure 12), but only two stated that was their most important of all of their relationships to the place (See Table 7 and Figure 13). This data will be applied and analyzed later in this report to determine which groups of people should be represented in follow-up focus groups.

Figure 13. Self-reported relationship to Mākena Mauka of SIA survey respondents (forced to choose the 1 relationship that was most important to respondent)

Missing Data

As noted earlier, some tables include survey responses that chose "prefer not to answer", and none include the number of participants that did not respond at all to a particular question. Some multiple-choice questions required a forced response and had an option to choose "Prefer not to answer." Others simply allowed for no answer to be chosen before the participant moved on to the next question. Those non-answers were recorded as "No answer." Percentages for each question exclude surveys without responses. Each row on Table 8 below represents each question in the survey, and the "Missing Data" count in the right-hand column sums the total of non-answers and "prefer not to answer" selections. All of the multiple-choice questions (quantitative data questions) had to be completed to enter the short-answer section, however, which is why Table 9 shows that a consistent 67 people did not complete the last five questions, which were the short-answer questions, because they did not qualify to enter that section.

As is typical within survey completion rates, as any given respondent answered the questions, that person was more likely to stop answering questions further into the survey. This is likely due to "survey fatigue", or the respondent ran out of time and forgot to log back in and complete the survey at another time. The incomplete answers listed in Table 8 do not impact the value of the results or the finding of saturation based on the short-answer results. They do help lead to targeted Focus Groups in the next round of research, as explained in the following "Next Phase of Community Outreach and Engagement" chapter.

Qualitative Findings (i.e., responses from short-answer questions)

Four key themes emerged from the short answer responses to the following three questions:

- How will Mākena Mauka directly impact your community?
- How would you have Mākena Mauka benefit you and your community?
- What one thing do you personally want the decision makers for the draft Environmental Impact Statement and the drafters of the Social Impact Assessment to know?

Below, each of the four key themes are described by the theme name, the categories of codes that support that theme, and exemplifying quotations pulled directly from the short answer responses for each theme. Of note, as is customary with authentic representation of qualitative data, all

short answer responses are provided verbatim (i.e., including errors in spelling or grammar), and clarifying text is provided in [brackets] within a quotation as needed (Eldh et al., 2020).
The themes described below incorporate the following findings: First, respondents strongly feel that Mākena Mauka is not good for the local people, land, or resources of Maui. Second, respondents are very concerned about limited resources on Maui and think Mākena Mauka will only worsen these scarcities. Third, respondents stated that the needs of local people and the land of Maui should be prioritized when it comes to development decisions on Maui. Fourth, respondents noted that there are some opportunities to mitigate the negative impacts of Mākena Mauka, but these mitigations do not outweigh the negative aspects, and they generally did not trust that the mitigations will be honored.

Theme 1: *"Mākena Mauka is not good for the local people, land, or resources of Maui."*

The first theme – "Mākena Mauka is not good for the local people, land, or resources of Maui" – is supported by the following categories:

- Lack of affordable housing
- Displacement of local people
- Overcrowding on beaches and roads
- Too many luxury homes only occupied a short time each year
- Oversaturation of wealthy non-Maui residents

This theme is exemplified by quotations such as:

> *"It [Mākena Mauka] will take water away from important resources. It will take away water from other communities. There is no ACTUAL affordable housing as part of the development. It will impact access to Oneloa. It will cause massive pollution to the area and surrounding waters. It will attract wealthy residents that don't care about the history of the area or the community. They will be many part time residents that don't have an interest in the environment or the history of Hawaii and its people. It will attract people from off island and will further drive out any actual natives that might be left."*

> *"We need to stop prioritizing luxury development for tourists and wealthy transplants and part-time residents. Especially with our limited land, water, and other resources on Maui, we need to focus on creating more and cheaper housing for our locals, especially the kanaka maoli and kama'aina."*

> *"It will change the landscape of our beautiful island, turning the quiet tranquil town of Mākena, into a gentrified tourist trap like nearby Wailea. It will also provide more part time residents with luxury homes, meanwhile, families that are*

born and raised on Maui are being forced to move away due to not having an affordable home to live in."

Theme 2: *"Concerns about limited resources in Maui, and Mākena Mauka will make the problems worse."*

The second theme – "Concerns about limited resources in Maui, and Mākena Mauka will make the problems worse" – is supported by the following categories:

- Limited fresh water
    - Residents already living with water restriction regulations
- Limited affordable housing
- Too much traffic
- Unsafe evacuation routes exacerbated by more people
- Limited access to cultural land and spaces, beaches, oceanfront when more luxury developments are built

This theme is exemplified by quotations such as:

"First -we don't have the drinking water, infrastructure, roads, medical care, police/fire support or ocean access/space on this island for this housing project. It would be filled with non full-time residents who would not malama the land, they over run the beaches, destroy the reef and are disrespectful of the wildlife, steal all the water for landscaping and pools. It would completely change the quality of life for our Maui residents. We would have all the problems of Oahu with no benefits. This is horrible plan."

"We don't need it. We don't want it. We already have more than enough homes that sit empty the majority of the year. What we need are affordable homes for the working class. As a business owner, I have a hard time hiring employees because of the terrible housing crisis we have on Maui. We don't need more expensive homes and wealthy people coming here for part of the year using our resources."

"Mākena Mauka and all of South Maui are already overdeveloped. We are experiencing a serious drought with current water restrictions and cannot afford to allow another huge development to place further strain on the limited water resources. South Maui is also heavily impacted by Kona storms and further development could exacerbate that and cause additional flooding. The annual storms have also been washing out large portions of South Kihei Rd leaving only Piilani Hwy operational. This causes a safety hazard as traffic is backed up on both roads and doesn't allow for safe evacuation outlets. Adding another development would only cause further traffic and safety concerns."

Theme 3: *"The needs of local people and land of Maui should be prioritized and centered first and foremost when it comes to development decisions on Maui."*

The third theme – "The needs of local people and land of Maui should be prioritized and centered first and foremost when it comes to development decisions on Maui" – is supported by the following categories:

- Preserve access to open space, beaches, oceanfront for access by local people
- Affordable housing with priority for local people
- Too many luxury homes that are only inhabited a short time each year
- Resources for building should go to prioritize local communities
    - Lahaina should be rebuilt before additional luxury developments
- The land, flora, fauna, natural resources, and cultural history of Maui need to be protected and prioritized

This theme is exemplified by quotations such as:

> *"Makena is a special and historical area - respect the locals and their needs. Build in a manner than protects & enhances the Āina; not in a manner that protects the developers and those who buy in. Educate people about the culture and needs of those who already reside here. Educate that it's not an entitlement, rather a responsibility to live here."*

> *"They [developers] need to respect and honor the native Hawaiians and the long time residents who have lived in Maui for several generations. Mākena Maui has a moral obligation to preserve the Hawaiian culture and natural resources of Maui. The only way to accomplish these expectations is to prevent development and make it a national park."*

> *"They [developers] need to offer the lineal descendants of Mākena first dibs at the 'affordable housing.'"*

Theme 4: *"There are some opportunities to mitigate the negative impacts of Mākena Mauka, but these mitigations do not outweigh the negative aspects and it is not trusted that the mitigations will be honored."*

The fourth theme – "There are some opportunities to mitigate the negative impacts of Mākena Mauka, but these mitigations do not outweigh the negative aspects and it is not trusted that the mitigations will be honored" – is supported by the following categories:

- Build affordable housing
- Provide resources to rebuild Lahaina, and give back to local community
- Build new, safe roads and evacuation routes

- Preserve Mākena Mauka's native flora and fauna
- Ensure Mākena Mauka remains accessible by locals
- Establish regulations on water use by luxury developments and homeowners
- Listen to local people and prioritize their needs to continue living and thriving on Maui

This theme is exemplified by quotations such as:

> *"Keep as much of the open space and natural views as possible. (…) Provide hiking and camping areas that have been requested long ago for this area. This is what the people of South Maui have always asked for in this area. (…) Don't create more landscape features in rich people's backyard. Respect the native species found in this area though action not just in writing."*

> *"Should the road be expanded to accommodate this new population, I would like to see Makena Mauka focus on genuine housing for locals. Given the devastation of the Lahaina fires, there are numerous families displaced. Thus it does not make sense for the community to encourage such a large influx of newcomers when people who directly contribute to our rich community are forced out."*

> *"[Developers should offer] Perpetual funding for affordable housing for descendants and local workforce (have lived on Maui 10+ years). Perpetual funding for the local community to have meaningful experiences with the Makena environment – where they feel safe, comfortable, and actually able to enjoy Makena without feeling closed in by luxury development, commercial operators, or tourists. Perpetual funding to host community events where Maui-based organizations can have dinner fundraisers and golf tournaments throughout the year - not just in low season for the Makena members."*

Sub-Analyses

Additionally, the SIA team conducted several sub-analyses to ensure the dataset was explored from multiple angles. This included a sub-analysis of only short answer responses from those who self-identified as either Native Hawaiian or a lineal descendent of the Mākena Mauka area/Honua'ula moku, which was 44 of the short answer survey responses. After analyzing only these short answer responses, the SIA team is confident that the general analysis and findings (as delineated above) also fully represents the sentiments, opinions, and perceptions of those who identified as Native Hawaiian or lineal descendants.

Further sub-analysis was conducted on two additional short answer questions. These two questions elicited responses that were illogical to analyze with the responses to the first three short answer questions, because the codes generated from these two questions would not have applied to any of the responses from the first three questions. For example, codes specific to the

question about "what other groups of people should be included for further feedback" would only apply to responses to that specific short answer question, and not to responses to the first three short answer questions. Therefore, one of these sub-analyses was conducted with regard to this short answer question:

- What other groups of people should we connect with to seek further feedback about the proposed Mākena Mauka project?

The SIA team included this question because they wanted to ensure that all relevant perspectives and stakeholders were queried and had the opportunity to participate in the SIA survey. Responses to this question included some specific names of individuals, many of whom are Native Hawaiian and/or lineal descendants. Additionally, some short answer responses suggested that "Native Hawaiian and/or lineal descendants" be included, without naming any one person or family specifically. In response to this feedback, the SIA team conducted the previously mentioned sub-analysis, including responses from only those who self-identified as Native Hawaiian and/or lineal descendants.

Other groups that were recommended to query included recreational and environmental groups, high school and college students, and local community associations and Hawaiian Civic Clubs. Some of the direct responses include:

> *"Make a better and continued effort to engage people who live here and who feel it is their kuleana to protect their history and culture."*

> *"Need to especially connect with Native Hawaiians and local workforce."*

> *"Groups that represent and support the needs of our island's natural beauty and surroundings. Agencies that understand the ingress egress requirements for safety and daily functioning. Especially the agency that is overseeing the current use and the future demand for all water in this area."*

Many of the groups and individuals that were recommended to be queried had been included in the initial email distribution for the SIA survey and were shown to be included by the responses given to the survey. For example, at least 13 emails to known Native Hawaiian and lineal descendants were sent with the first email invitation to complete the survey, and 44 Native Hawaiians and 14 lineal descendants responded. Furthermore, the SIA team plans to use all of the above recommendations to guide future SIA focus group recruitment and invitations, as described in the "Focus Groups" section below, and to inform our mitigation proposals, also described below and which will be further examined and prioritized by the SIA focus groups. The SIA team also conducted a sub-analysis of the responses to the following question:

- Please tell us about another development on Maui that is working really well for you/your community.

The purpose of this question was to provide the SIA team with concrete, existing examples of developments that, at least in part, have some feature that benefits the local community of Maui. Though many short answer responses to this question included "I can't name any" or "there are none," the next most common response to this question included terms such as "affordable housing" and "working class housing," and many specific developments were named. Most of the specific responses are characterized as local developments that offer a wide range of housing options. These developments were intended for the local community and are largely occupied by the owners (e.g., not rental properties, not part-time residents). Developments that include some kind of public aspect (e.g., retail offerings, public parks) were also mentioned. Some direct quotations from the short answer responses to this question include:

> *"Not sure of any recent developments that have really benefitted locals."*

> *"Only well-planned areas that sell to only working residents."*

> *"I appreciate affordable housing developments that are built in appropriate areas of the community plan that was created by the people of south Maui (that won't directly impact or damage fragile cultural areas or ecosystems) that also don't become unnecessary eye sores for all to see."*

Responses to Draft Findings

As delineated in the "Triangulation of Preliminary Findings" section above, all respondents who provided their email address after completing the initial SIA survey were sent a draft of the preliminary findings. Of the 55 individuals to whom these preliminary findings were sent, 14 individuals responded to the preliminary draft findings. Among those, there was 93%-100% agreement with the preliminary themes, as stated by selecting "yes" to questions: "Does this theme resonate with you?" and "Do you see your opinions, perceptions, and thoughts about Mākena Mauka represented in this theme?" Short answer responses to those questions as applied to each of the four themes underscored the same sentiments shared in the SIA survey, with strong opposition to the development of Mākena Mauka:

> *"The results of your survey clearly & overwhelmingly show that your company's intentions to build more gated communities that cater to the wealthy global elite is not wanted or needed here on Maui. It provides absolutely No benefits to our community aside from increasing housing costs & further pushing the investment real estate market higher & higher which intentionally drives Kanaka & generational locals out of their homeland. We definitely don't need to be wasting even more land on another golf course for the rich either. So the question is will your company actually hear & accept our feedback by scrapping this project who's only intent is to make money while driving more Kanaka out as the rich get richer & the middle class go broke? Or will you continue the modern day colonizing ways that other developers have continued generations now in turning*

> *a natural paradise into a ridiculous fake concrete jungle? Will your company heed the voices in our community & pull back or will you continue to steamroll our natural habitat so you can build more fake waterfalls & infinity pools that sit empty the majority of the day?"*

Respondents indicated they were appreciative of being able to see the draft findings, but were unsure of whether these efforts will impact the project:

> *"I appreciate the transparency in showing answers not favorable to MM. I just hope this impacts the trajectory of the project."*

They shared doubts that any mitigations would work for the local people and doubts that mitigations would be taken seriously by the developer:

> *"How do you mitigate water loss and traffic?"*

> *"Due to the lack of trust of developers; mitigations measures will not be applied if it is costly to the developer. Accountability to the local people is not obvious or shown once the community is built."*

Feedback from those who responded to the preliminary findings strongly indicates agreement with the findings and strengthens the validity of the interpretation of the SIA survey as analyzed by the SIA team (Tracy, 2010).

Next Phase of Community Outreach and Engagement

Part of the SIA team's role in the environmental review process for Mākena Mauka is to inform the applicant about social impacts that are presumed, perceived and provided by the general and specific communities that are most likely to be impacted by the development. As noted earlier, that process included reviewing existing recorded data from the EISPN scoping meetings and creating a means to target objective and open-ended questions to a specific set of community members to help determine current community perspectives through the SIA online survey. Historic and current impacts to and changes within the nearby communities and their historic and current demographics provide a context in which the proposal is occurring. This information helps to build a better estimate of the adaptability and needs of the people of the area. It also feeds the content and purpose of deeper conversations that elicit constructive commentary on existing challenges for and impacts to the local communities, along with possible improvements to and mitigations of the proposed development that could help meet existing challenges as well as additional challenges foreseen from the development during and after the development process.

Historic and Existing Conditions

Voyaging Polynesians who settled Hawai‘i approximately 1,000 years ago eventually evolved with this archipelago, developing practices in response to and in care of the distinct island environments and their surrounding seas and skies. Their reciprocal relationships with the place were born of genealogical connections and the respect that one has for one's ancestors and family members. Those familial relationships continue today. Foreign occupation and an illegal overthrow of the constitutional monarchy in Hawai‘i devastated many aspects of Native Hawaiians' traditional lives, including their health, social stature, resource tenure and autonomy (MacKenzie, 2015).

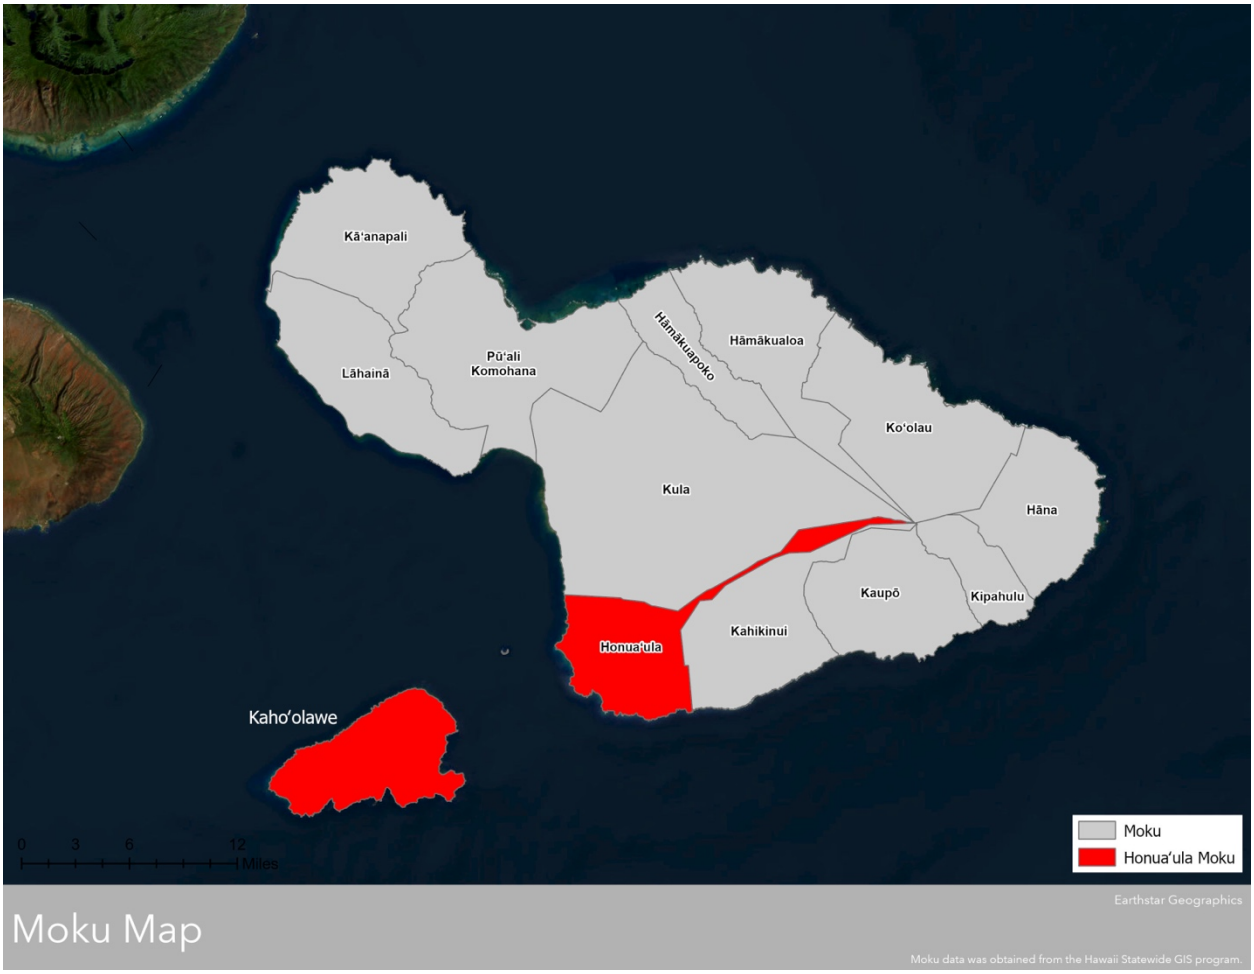
Continued connections to place contributed to the persistence of cultural knowledge and practices, despite historical disruptions. Today, ongoing efforts in cultural revitalization are contributing to the restoration of ecological systems and community well-being that had been impacted by generations of environmental degradation and policy-driven disconnection. A generation of children who were raised in Hawaiian language immersion schools are now adults, raising their own children and publicly speaking a language that once was outlawed by the usurper government. Cultural practices that had to be hidden for generations have been re-blossoming and revitalizing the Hawaiian Islands, of which Native Hawaiian culture is an integral part (McGregor, 2007, p. 4). Community health requires environmental health, and natural resources are cultural resources.

‘Ohana (family) is a defining element of Hawaiian culture, and it requires constant tending (Paglinawan et al., 2020, p. 16). Native Hawaiian familial connections span ancestral ties and future generations, and they include a heritage that connects them to the geological and

evolutionary history of Hawai‘i, as well as to the native, natural resources that continue to populate the islands (McGregor, 2007, p. 13). For example, the Kumulipo, a genealogy chant from King Kalākaua’s and Queen Lili‘uokalani’s family, traces all life origins – including human – back to the coral polyp and follows a parallel evolution of living things on land and sea, showing the interconnectedness of life and ecosystems (The Kumulipo: An Hawaiian Creation Myth, 1997). Another tradition sings of the story of the goddess Pele and her family as they travel the Pacific in various forms. Pele, in one of her geologic forms, volcanically births the islands down the archipelagic chain, and continues to grow the pae ‘āina (archipelago) today. Another birthing story speaks of the first child of Wākea and Ho‘ohokukalani as being Hāloa Naka, who is stillborn, and who when buried grows into the first kalo plant. Their second child, Hāloa, begins the line of Native Hawaiian people.

Such traditions raise the level of connection between one’s place, which feeds and shelters one’s people, and the people, who in turn must care for that place and its resources as siblings and ancestors that must be honored and treated with respect. This level of reciprocal care weaves throughout cultural practices, interpersonal relationships and the Hawaiian language today. Equally, regenerative subsistence practices help to unify the ‘ohana of the insular and extended family, which can include people who are not related by blood or origin, but who live shared values.

Island of Maui



Dominant features of Maui, an island within the Hawaiian archipelago, include a western mountain range named Mauna Kahālāwai and the massive shield volcano, Haleakalā, to the east. Haleakalā ranks as the world’s third largest mountain from seafloor to peak, with its 10,023-foot summit at Pu‘u‘ula‘ula. The project area rests at the base of Haleakalā’s leeward flank.
From another genealogical history, we learn that Maui was the second largest of the island children born to Wākea (Sky Father) and Papahānaumoku (Earth Mother). As Hawaiians settled into their new home islands and inter-archipelagic voyaging ceased, approximately 600 years ago, they innovated land, sea and food management from a learned understanding of the place. For example, Maui was divided into 11 or 12 major districts or moku, including Honua‘ula. The moku were further divided to more manageable and connected sections of land and sea – ahupua‘a – that allowed for the people of that place to connect more deeply and build relationships with their resources. Ahupua‘a tend to include lands similar to a watershed, as well as extending to the ocean fisheries of the near and deep seas that are fed by the runoff from that watershed (Kumu Pono Associates LLC, 2005, p. 9).

Captain Jean-Francois de Galaup, the first westerner to make landfall on Maui (in 1786), began a transformation of the island that once held the capital of the Hawaiian Kingdom. Missionaries, whalers and other western traders made Maui a major port of call, and agriculture expanded to feed this new population and support the galleys of ships. Western diseases came with these new populations, and the once-isolated population of Native Hawaiians began to plummet, at one point to less than 10% of its pre-contact numbers (Blaisdell, 2001).

Moku of Honua‘ula

Honua‘ula moku’s large size encompasses 20 ahupua‘a: Paeahu, Palauea, Keauhou, Kalihi, Waipao, Pāpa‘anui, Kā‘eo, Maluaka, Mo‘oiki, Mohopilo, Mo‘oloa, Mo‘omoku, Onau, Kanahena, Kualapa, Kalihi, Papaka Kai, Kaunuahane, Kaloi, and Kanaio (Kīpaipai Archealology Program, 2025, Honua‘ula: People, History, Culture). Figure 14 shows the range of this moku, from the peak of Haleakalā, to Molokini and Kaho‘olawe, with all of the oceans and currents among these coastlines. This moku includes people of the uplands, coasts, smaller islands and the sea.

Figure 14. Map of Moku of Honua‘ula

According to first-person accounts, Honua‘ula’s environment changed dramatically with the introduction of cattle (Kumu Pono Associates LLC, 2005, pp. 10-11). When much of the uplands were forested, the high mountain of Haleakalā helped to create and capture a morning dew that would blow on cool breezes down the leeward slope that comprises Honua‘ula, keeping the forests and crops moist. That same climatological process created a cloud bridge (Nāulu) that linked Honua‘ula’s Maui lands to Molokini and part of Kaho‘olawe, keeping all of them green with native plants that thrived in limited but consistently moist conditions. Ranching

cleared the lower bands of native dry shrub and forests in broad swaths from the uplands to the coast. This pushed the native forest more mauka (upland), which changed the rain patterns that had enabled previous generations of Hawaiians to successfully farm the arid shoulders of Haleakalā. They had created ground-level aqueducts that channeled the more regular rain toward their crops of sweet potatoes, dryland kalo, bananas, etc. (Ibid.). Along the shoreline, including in Makena, fishing communities traded their sustainably caught fish with the upland communities, supplementing their diets with what crops they could grow along the more arid shore. The fisheries within their ahupuaʻa included waters beyond nearshore reefs, encompassing those around Molokini and Kahoʻolawe (Ibid.).

As westerners found Hawaiʻi's shores and infiltrated the traditional land management systems, land was acquired and used more for immediate economic gain. Honuaʻula was not exempt, with its lands becoming covered with cattle, sugar cane and Irish potatoes. This shift in tenure and management denuded much of the land, planting it in monocultures of invasive species that did not feed the land or Hawaiʻi's people, physically or spiritually. Long-term and dramatic climate and cultural changes ensued, such that Native Hawaiians are no longer the predominant people of this place, and the environment is more drought-prone, fisheries are depleted, and invasive plants and animals have taken over much of the moku. Broken is the hydrologic cycle of the cloud bridge that had formed in the mists and fog of Haleakalā, was intercepted by the native forests, and provided for the rains over Kahoʻolawe, all of which then fed the nearshore ecosystems that rely on steady freshwater influxes.

Maui County government began to grow South Maui's tourism market in the 1970s, from Kīhei through Wailea. Wailea, just northwest of the project area, developed into a golf and resort region, and the Makena area followed suit, with the Maui Prince Hotel and two golf courses. ʻUlupalakua Ranch sold the current project area, which had been mostly used for cattle grazing, to The Seibu Group of Japan in 1973. Within a decade, development of Mākena Resort began. Over several decades, Maui people have experienced waves of influxes of off-island people coming to Maui as visitors and parttime residents within resort areas.

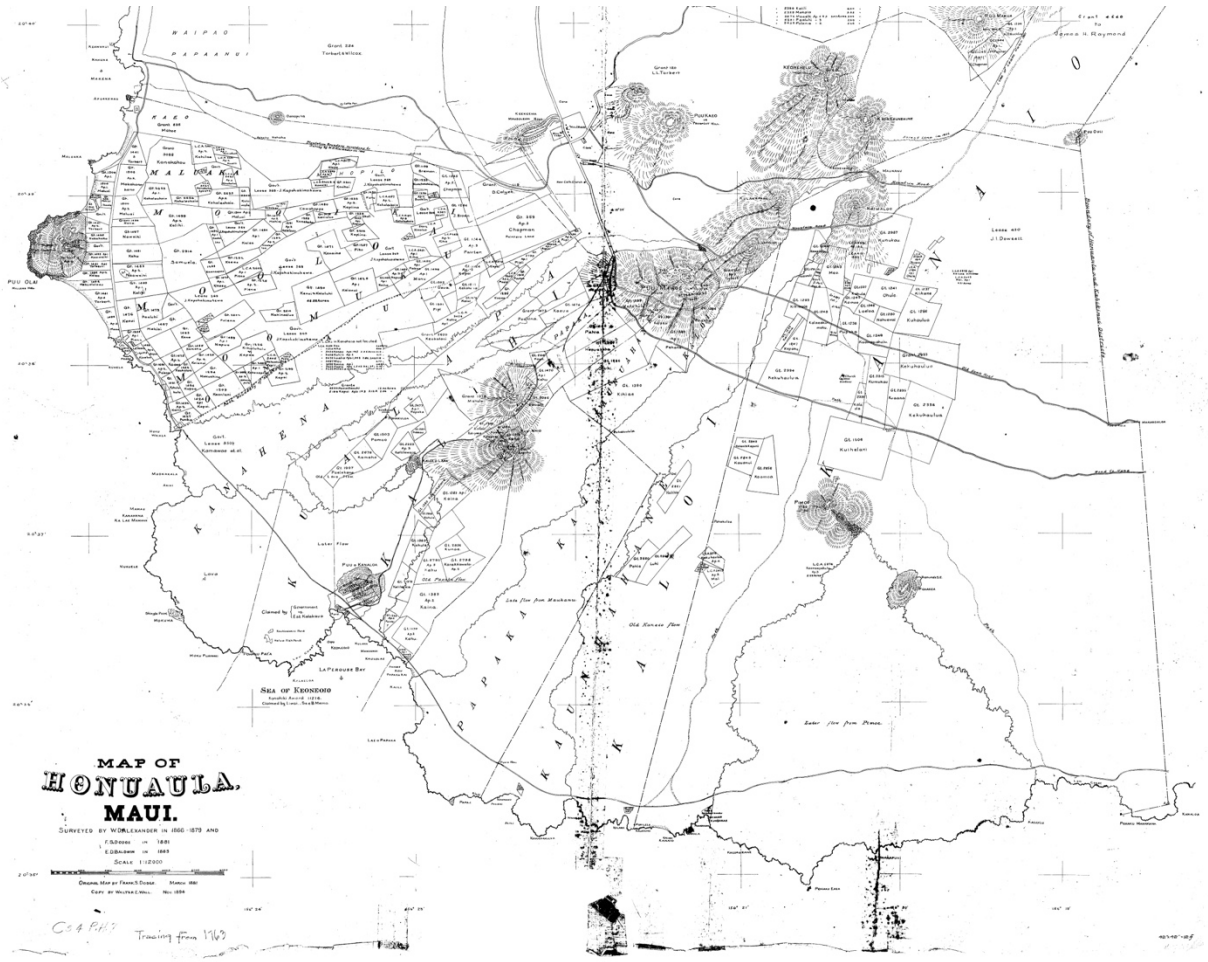
In 2010, Maui County adopted its Countywide Policy Plan through 2030, including an objective for improving land use management and planned growth that would in part require identifying and defining "resort-destination areas" within future island and community plans that would implement the countywide plan (County of Maui, 2010, p. 75). Two years later, in 2012, Maui County adopted the Maui Island Plan: General Plan 2030, with an introduction that described the plan as "a blueprint that provides direction for future growth, the economy, and social and environmental decisions" through 2030 (Maui County, 2012, p. 1-1). According to the Maui Island Plan, Maui Island's vision is: "Ua mau ke ea o ka ʻāina i ka pono. Maui Island will be environmentally, economically, and culturally sustainable with clean, safe, and livable communities and small towns that will protect and perpetuate a pono lifestyle for the future" (Maui County, 2012, p. 1-16). To attain this vision, the Island Plan lists the following values, many of which address social issues and needs and are reflective of public concerns that were heard during the EISPN scoping meetings (See Appendix A) and via the SIA survey:

- Adopt responsible stewardship principles by applying sound natural resource management practices;

- Respect and protect our heritage, traditions, and multi-cultural resources;
- Plan and build communities that include a diversity of housing;
- Retain and enhance the unique identity and sense of place;
- Preserve rural and agricultural lands and encourage sustainable agriculture;
- Secure necessary infrastructure concurrently with future development;
- Support efforts that contribute to a sustainable and diverse economy for Maui;
- Create a political climate that seeks and responds to citizen input;
- Respect and acknowledge the dignity of those who live on Maui;
- Establish a sustainable transportation system that includes multiple modes, including walking, biking, and mass transit, as well as automobile-based modes; and
- Recognize and be sensitive to land ownership issues and work towards resolution.

(Ibid.)

Also, as requested by the Countywide Plan, the Island Plan provided a definition for a "resort destination area." Such an area is: "One of the planned resort destination areas of Kāʻanapali, Kapalua, Mākena, and Wailea, which is intended as a major tourist destination area, consistent with the general and community plans" (Id., p. A-4).



As for the relevant community plan, the Long-Range Division of Maui County's Planning Department currently is amidst the public process of updating the 1998 South Maui Community Plan (SMCP) to be consistent with both the Countywide and Island Plans. The draft documents of the SMCP have been referred to the County Council after public hearings in front of the Planning Commission. As directed by the Countywide plan, a definition for what the SMCP calls the Resort/Hotel designation provides for existing and future visitor-focused development in its designated areas (such as Makena).

The Maui County Council issued Ordinance 3613 for the Makena Resort Area in 2009, and the draft SMCP describes the development of such areas as "typically medium- to high-density with a broad range of uses primarily intended to serve visitors, including transient accommodations, retail and commercial uses, and other visitor amenities. Related and compatible uses include parks and other public/quasi-public uses. Public beach access must be provided as required by law and will not be discouraged" (County of Maui, 2025). Specific, relevant designations in the SMCP for the Mākena Mauka project, which is within the Makena Resort Area, include Parks (no development and inclusive of golf courses), Rural Residential (low density development) and Residential (medium to low density development), all of which are what the applicant is proposing.

Mākena Mauka's project area falls within the district of Makawao, moku of Honuaʻula, and portions of it cross nine of Honuaʻula's 20 ahupuaʻa: Keauhou, Kalihi, Waipao, Pāpaʻnui, Kāʻeo, Maluaka, Moʻoiki, Moʻoloa and Moʻomuku. (See Figure 15.) Immediately surrounding the project area on the ocean side are such public sites as the historic Keawalaʻi Church, Makena Landing, Maluaka Beach and Makena State Park, which includes Oneloa (Big Beach), Oneuli (Black Sand Beach) and Puʻu Ōlaʻi (Little Beach and a dormant volcanic cinder cone point that rises 360 feet above sea level). On the other boundaries of the project area, to the south, east and north, are the remains of low, leeward dryland forest and the pasture lands of large landholder ʻUlupalakua Ranch. From the coast to the upper reaches of the property, the project area rises to

approximately 1,200 feet in elevation. The coastal areas of the Makena region were known for the variety and abundance of their marine resources, including multiple types of limu to be gathered and sea creatures to be fished.

Figure 15. 1894 Map of the Moku of Honua‘ula

(Hawaii Land Survey Registered Maps, 1825 to 1970)

The project area resides within a relatively dry area of the coastline, maintaining a sunny climate for most of the year, with annual temperatures at Makena Golf Course ranging from an average low of 66.3 degrees Fahrenheit to an average high of 83.9 degrees. The highest average temperature taken at the Makena Golf Course site is 87.3 degrees in August, and the average lowest temperature at the same site is 63 degrees in February. Northeasterly trade winds, averaging approximately 10 to 15 miles per hour, prevail from 80% to 85% of the year (Maui Data Book 2020, County of Maui Office of Economic Development).

The annual rainfall average for the project area is 15.70 inches of rain, with the wettest month generally being January (2.48 average inches) and the driest month in this location usually being April (0.75 inches) (Id.). The annual total rainfall measurement from the Mākena Golf Operations, as self-reported, appears to be on a downward trend. The rainfall total reported in

2017 was 20.61", in 2018 it was 20.51", in 2019 the total dropped to 10.81", and in 2020 7.83" of rain were reported from Mākena. In 2021, the annual total rainfall increased a bit, to 10.53", and then in 2022 rainfall appeared to be on a rebound, increasing to 17.45." However, the following years continued to document drier than average conditions, with 11.99" reported in 2023 and 11.68" in 2024, all from Mākena Golf Operations.

Cumulative Impacts in and around Honua'ula

According to current Hawaii Administrative Rules (HAR), when analyzing the environmental impacts of a proposed project, cumulative impacts must be considered as well. The definition of cumulative impacts includes "the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions" (HAR §11-200.1-2). When the proposed action is added to existing and other planned actions, no matter their individual sizes or impacts, the resulting cumulative impacts should be examined for their "collectively significant actions taking place over a period of time." (Ibid.) Table 9 documents the new projects – proposed and underway – surrounding Mākena Mauka. Of the ten projects in this table, seven are already entitled or permitted. Of those, four are under construction or recently completed. Two projects are just at the visionary stage. The potential impacts of those two cannot be adequately assessed, but the possibility of their additional development must be noted.

Table 9. Descriptions of other developments near and around Mākena Mauka

Maluaka Development	
Includes	13 single-family units 6 multi-family condominium units
TMK Nos.	(2) 2-1-006:037
Development Status	Construction began in 2009 and received an extension to be completed by July 31, 2026. As of July 2024, the following was complete: on- and off-site infrastructure, 6-unit multi-family building, and 6 single-family homes. 7 single family units remain to be completed.
Makena H-M Redevelopment Project	
Includes	Conversion of the former 310-room hotel at Mākena Beach and Golf Club Resort into a combination of a hotel, condominium, beach cottage units and a spa hale. A total of 65 units are proposed.
TMK Nos.	(2) 2-1-005:086 (por.)
Development Status	SMA Permit Amendment was approved in 2017. 58 units completed. Construction of remaining 7 units and Beach Club initiated in 2024.
Makena Resort M-5/M-6/S-7/B-2 Project (Kaeo)	
Includes	Mixed-use project on a site of approximately 47 acres: 30 multi-family units 18 single-family cottages 32 single-family custom lots 9 TVR units 14 condos 27,300 square feet of commercial space

TMK Nos.	(2) 2-1-008:080, 098, 099, 100 and 106
Development Status	SMA Use Permit amended in 2021. Infrastructure for first phase of 16 condominium lots completed in 2024.
Wailea 670	
Includes	Master-planned residential community on approximately 670 acres, with single- and multi-family homes, village mixed use, public access preservation and conservation areas (170 acres), and 120 acres of recreational and open space areas. No golf course. At least 288 units of the 1,150 allowed residential units on site will be affordable housing.
TMK Nos.	(2) 2-1-008:056 (por.) and 071
Development Status	Entitled, with an anticipated 20-year build out horizon.
Ledcor Wailea Projects	
Includes	Last of the residential projects within the Wailea Resort and Part A of the Kilohana Subdivision. Includes a mix of single- and multi-family residential neighborhoods. Between 925 and 975 single- and multi-family units. Includes community open space, workforce housing, parks and recreation areas.
TMK Nos.	(2) 2-1-008:114, 127, 128, 130, 132, 133, 135, 136, 143,145, 147, 148 and 154 (CPR unit 2); (2) 2-1-028:002 and 005; (2) 3-9-037:073; and (2) 3-9-038:028 and 049
Development Status	Final EIS accepted.
Grand Wailea Enhancement Project	
Includes	Includes addition of 137 resort guest rooms and other improvements, including resort pool areas and public parking.
TMK Nos.	(2) 2-1-008:109
Development Status	SMA permit application under review (contested).
Proposed H-2 Residential Project	
Includes	Up to 53 condominium lots on approximately 28 acres in Mākena.
TMK Nos.	(2) 2-1-005:085
Development Status	SMA Use Permit approved.
Makena Resort U-1 Project	
Includes	Agricultural residential subdivision to include 36 agricultural lots, ranging from 4 to 95 acres, on a total of 666 acres. Portions of 5 of these lots will be dedicated to an approximately 103-acre dryland forest agricultural conservation area. Additionally, the project includes 7 lots designated for roadway, pedestrian or other restricted uses.
TMK Nos.	(2) 2-1-031:001 to 043
Development Status	Infrastructure construction initiated in 2024.
Wailea Golf Course Properties	
Includes	Wailea Golf LLC proposes a planned, mix-use development among 214 acres, to include a resort hotel and between 856 and 1,070 housing units, with between 198 and 247 being workforce housing.

TMK Nos.	(2) 2-1-008:118, 134, and 140
Development Status	This proposal has been included for possible land use designations within the current draft of the South Maui Community Plan, which has been sent from the Maui Planning Commission to the Maui County Council for review and approval in 2025.
'Ulupalakua Ranch Renewable Energy Projects	
Includes	There has been ongoing consideration for large-scale solar or geothermal renewable energy projects on 200 acres of 'Ulupalakua Ranch land, however, no specific project is proposed at this time.
TMK Nos.	(2) 2-1-008:001 (por.) and (2) 2-1-008:056 (por.)
Development Status	No current project is currently proceeding, but potential remains for future development.

According to EISPN testimonies and SIA survey responses, people have negative expectations about development of their island based on past experiences and changes to Maui. Some of these expectations are based upon seeing several development applications within South Maui, as depicted in Table 9. Community members have expressed fears of a continued loss of sense of place, of what makes Maui special to them. The State Environmental Policy seeks to create or maintain communities with a sense of place and identity that are developed in harmony with the Hawaiian environment (HRS, Chapter 344, §3(2)(C)).

Figure 16 illustrates the number and spatial size of the collective, proposed projects in the area and provides some context for the social outcry against the number of developments in the region. The map shows the patchwork of proposed and progressing development project areas described in Table 9. It does not incorporate the respective densities of the developments in each project area, however. Some of the larger project areas represented in Figure 16 have some of the smallest structural footprints. For example, Makena Resort's U-1 project (light blue and to the northeast) allows for minimal residential construction across its 36 agricultural lots. Also, 'Ulupalakua Ranch's proposed renewable energy project (green and to the northwest) never intended to include homes and now does not include any intended development in the near future. (Note: The swath of green crossing Wailea 670's pink project area represents a previously intended temporary access easement and use that was included in this map because it was part of the original proposal. That access no longer applies.) On the other hand, some of the nearby developments have higher densities than those proposed for Mākena Mauka.

Figure 16. Cumulative impacts

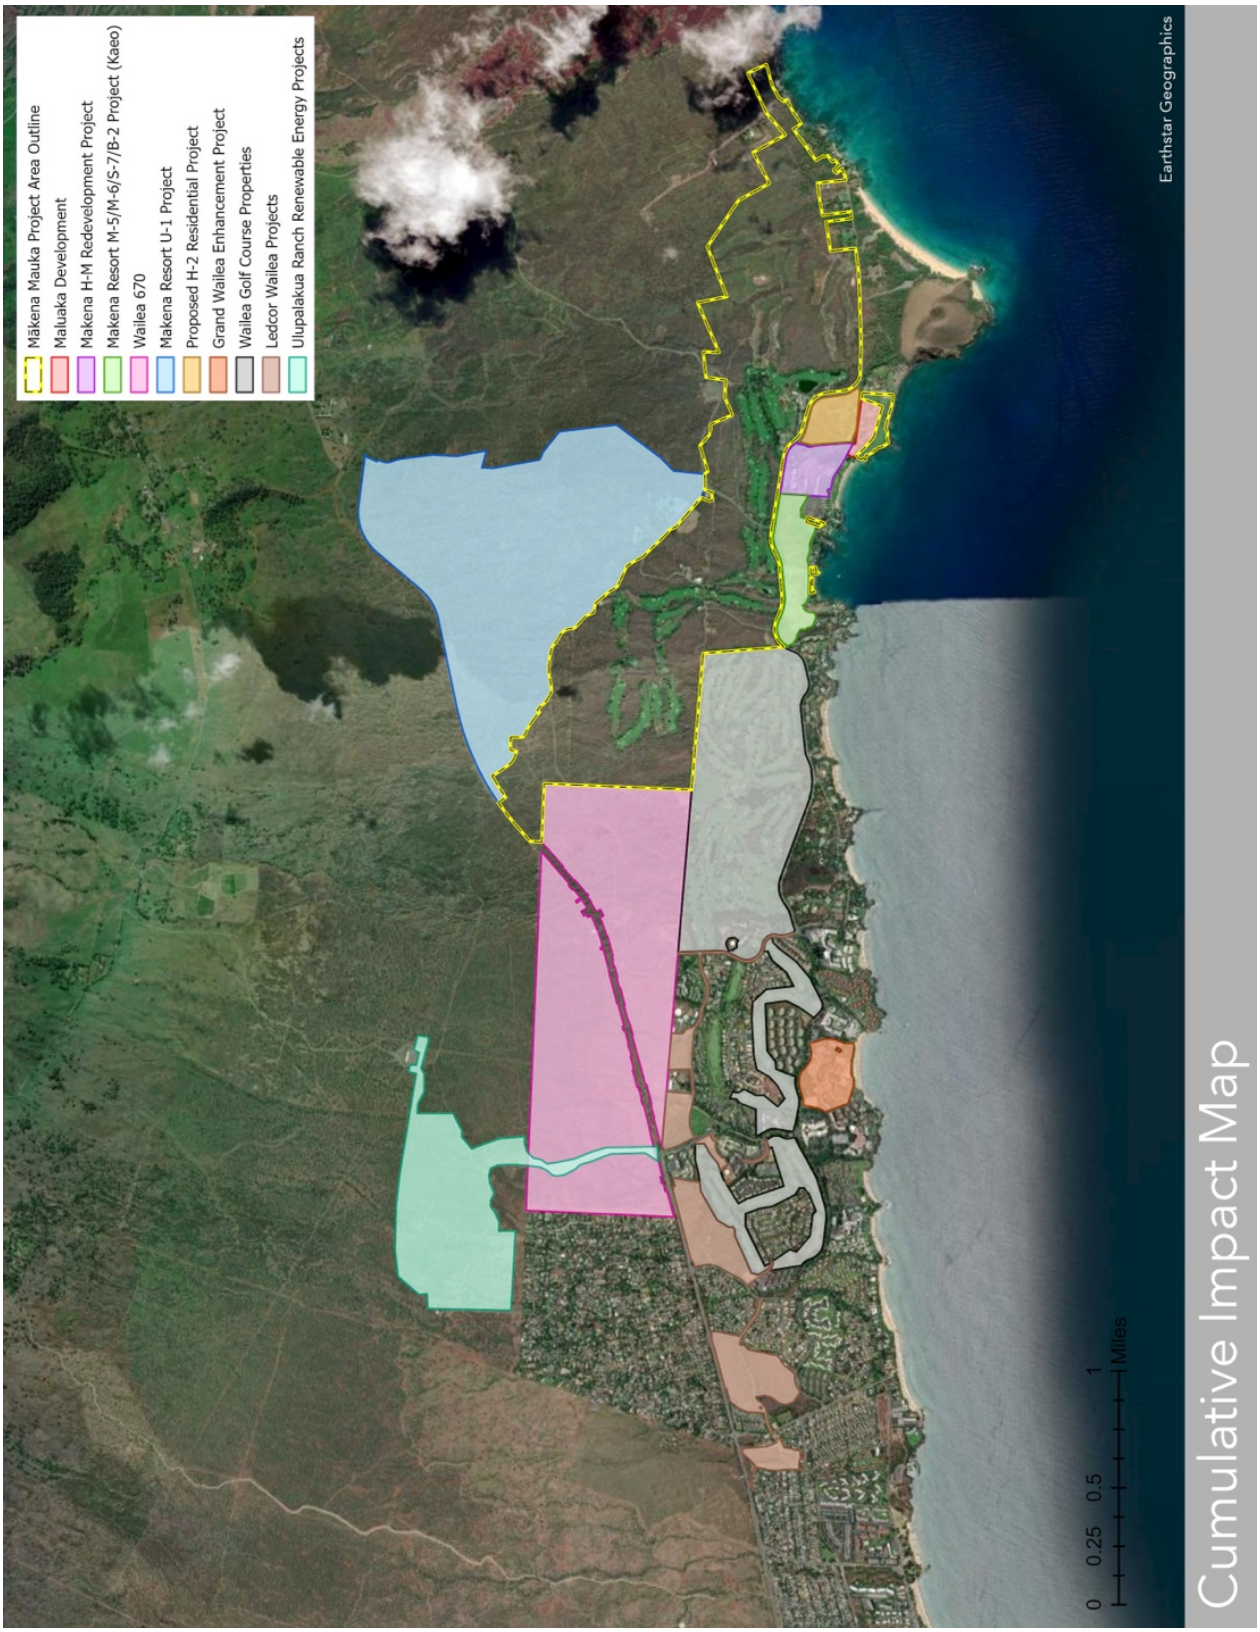


Figure 16 also helps to illustrate the need for cohesive planning for infrastructure to support Maui residents, these developments and their interwoven needs. Common infrastructure concerns noted in the EISPN scoping meetings and in the SIA survey include increased drain on the electrical grid, traffic on already crowded roads and highways, and draw from the Kama‘ole Aquifer in a drought-prone area that requires fresh water for the health of the area’s people (i.e., residential and wastewater uses), land, and marine environments, all of which are sourced from the same aquifer. The development and landscaping of these connected properties also raised concerns about the need for increased storm drainage and control of the collective runoff of valuable soils and damaging pesticides and herbicides. Questions were asked about the planting of non-native, invasive and non-food-generative plants across wide sections of land that could further deplete water resources and food security while adding to a drought-prone area’s fire hazard and mass evacuation needs.

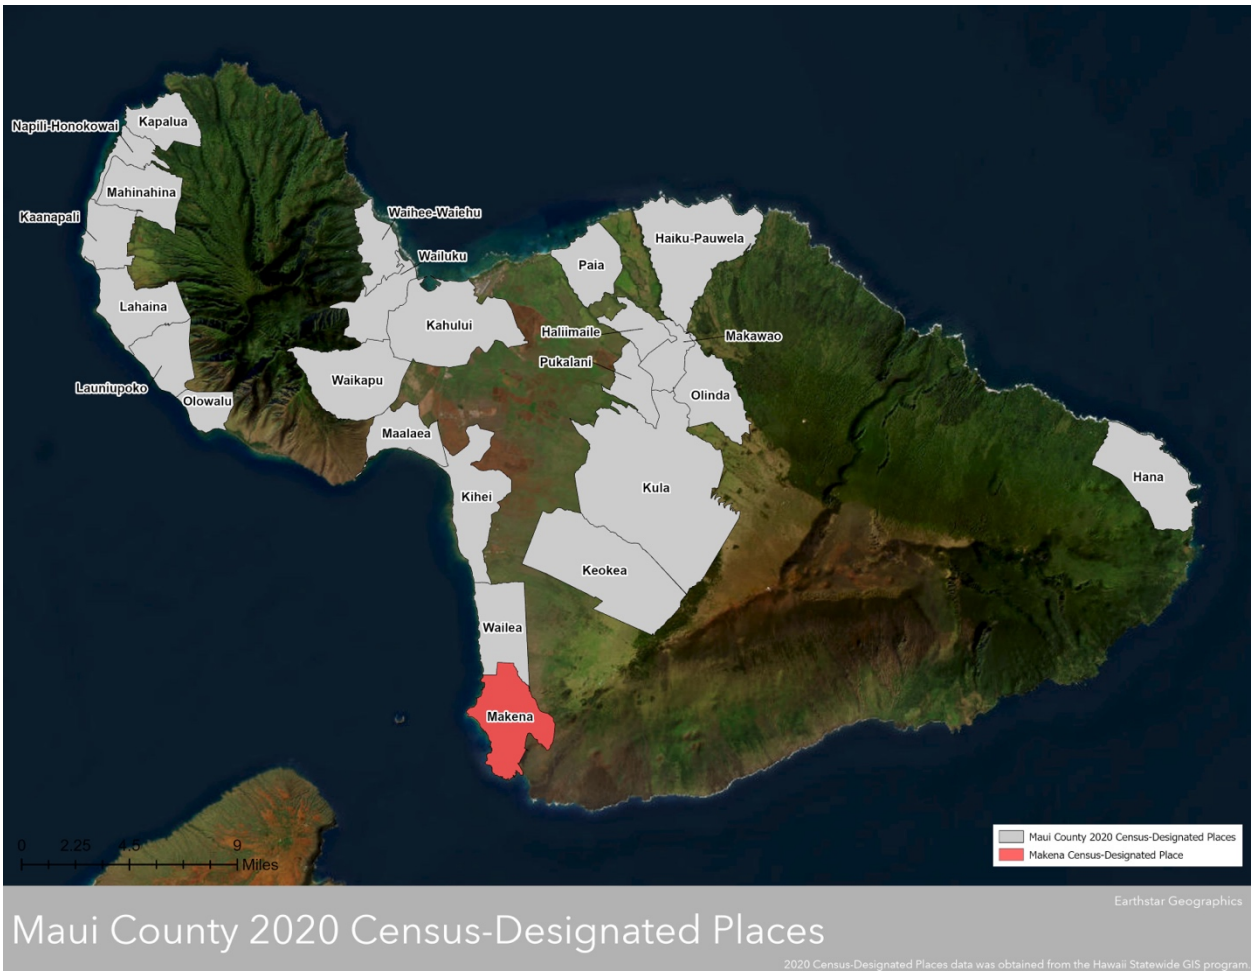
To facilitate cohesive planning that addresses many of the reported public concerns, part of Hawai‘i’s land use entitlement and public review process can involve change in zoning district applications, as it did for most (if not all) of the listed developments in Table 9, as well as for the applicant. In 2008, after review by applicable Maui County agencies, the applicant’s proposed change in zoning for properties, including that of Mākena Mauka, was heard by the Maui Planning Commission through a process of public hearings. The planning commission considered the cumulative and anticipated development in this region and the public’s concerns at that time when it recommended that the Maui County Council approve what became Maui County Ordinance No. 3613 in 2009. The Change in Zoning for Makena Resort Area (Maui Ordinance 3613 (2009)) includes 44 conditions. The applicant’s intended and actual compliance with the conditions inform mitigations to avoidable impacts in the Proposed Mitigation Strategies section.



Demographics

Understanding the social perspective of people who would foreseeably be impacted by the proposed project requires quantitative data on the region’s social fabric. This section provides data on the comparative demographics of Hawai‘i, Maui and the Census-Designated Place of Makena. The data further contextualizes the results of the SIA survey, which then informs next steps toward mitigations in alignment with values and needs of the people of the place.

Current Community Profile

Referenced below are statistical data about Hawai‘i, Maui County, and the Census-Designated region for Makena, all of which were gleaned from the U.S. Bureau of the Census website. Census-designated places (CDPs) were created by the Census Bureau to differentiate among community-based populations. Makena has its own CDP, as shown in Figure 17.

Figure 17. 2020 Census-designated places: Maui

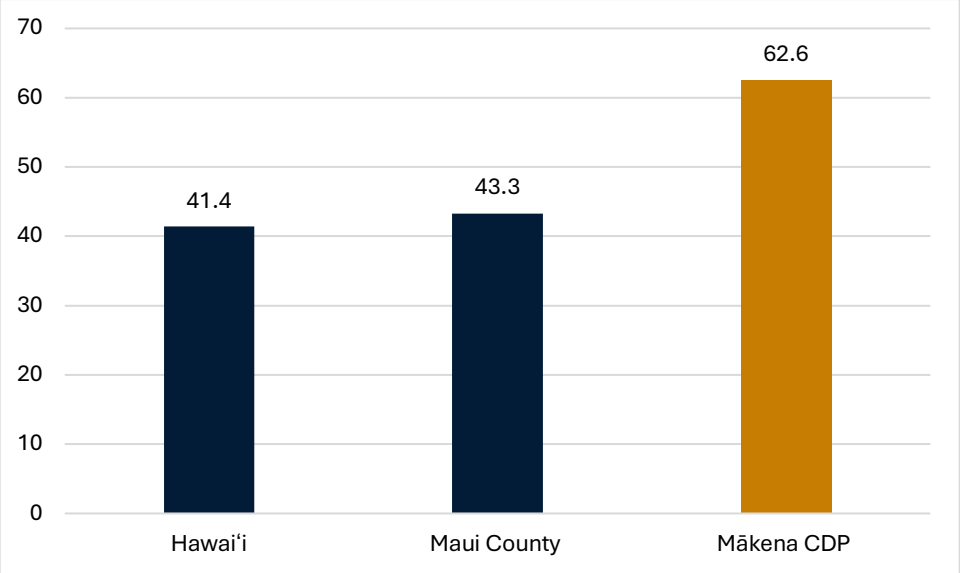
The availability of these narrowing scopes of data allows for a statistical examination of who currently lives in these areas and how that pertains to perceptions of the broader community about the area. Table 10 lists elements of direct comparisons among all of Hawai‘i, Maui County and the Makena CDP. Figures 18 through 22 illustrate each of those comparisons individually. According to these statistics, Maui County does not differ much from Hawai‘i in general, but the Makena CDP has some distinct differences, some of which fit within the perceptions of EISPN testifiers and SIA survey respondents. Many of these differences – provided as empirical data and verifying some community perspectives – were anticipated, given the intentional land-use and zoning decisions made by Maui County decades ago, when Makena was, and continues to be, designated as a resort destination area, as noted earlier.

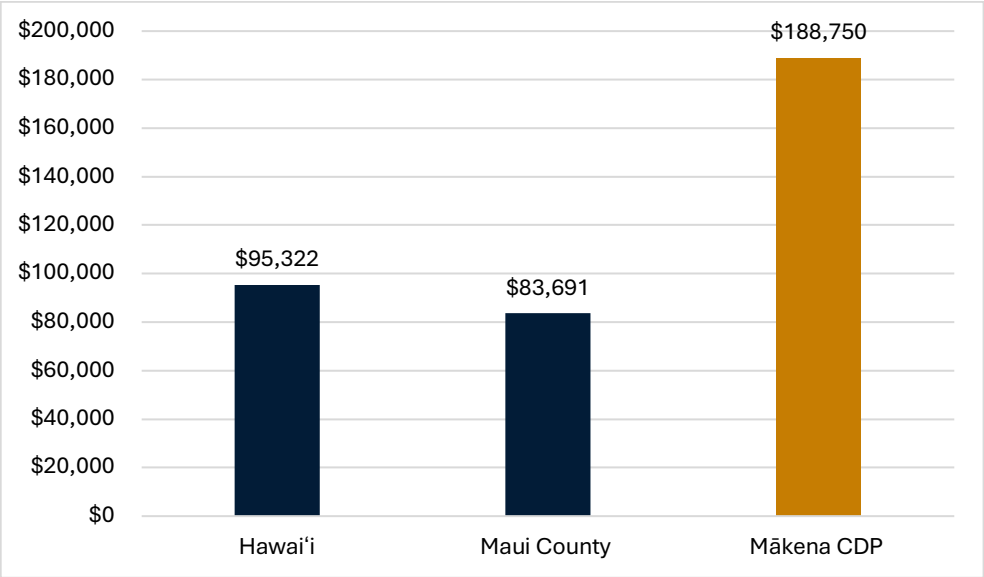
Table 10. Comparable demographics among Hawai‘i, Maui County, and Makena CDP

Demographics	Hawai‘i	Maui County	Makena CDP
Median Age	41.4	43.3	62.6
Median Household Income	$95,322	$83,691	$188,750
Home Ownership Rate	62.4%	63.1%	98.3%
Education Attainment of a Bachelor's degree or Higher	37.0%	31.2%	51.8%
Employment Rate	57.0%	60.6%	35.1%

As also shown in Figure 18, while the median age in Hawai‘i and Maui County is in the early 40s, the median age in the Makena CDP is 62.6 years old.

Figure 18. Median age





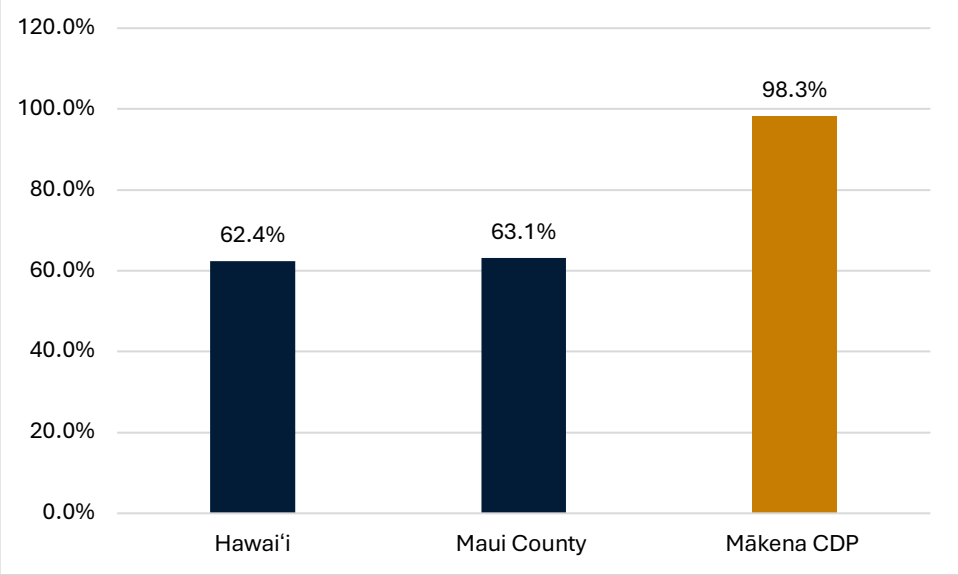


Figure 19 illustrates that the median household income for the Makena CDP is more than twice that of the median household income for Maui County and almost twice the median household income of Hawai‘i overall.

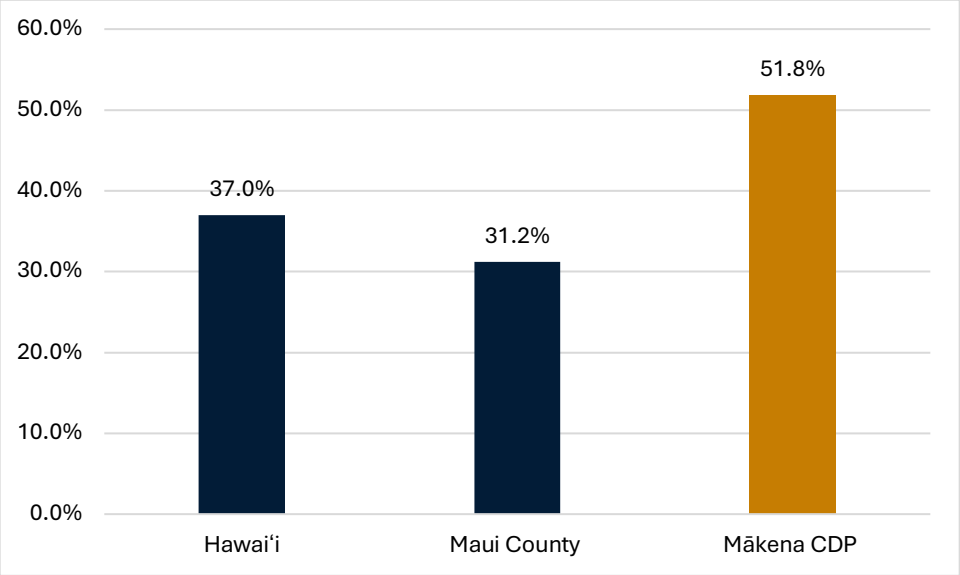
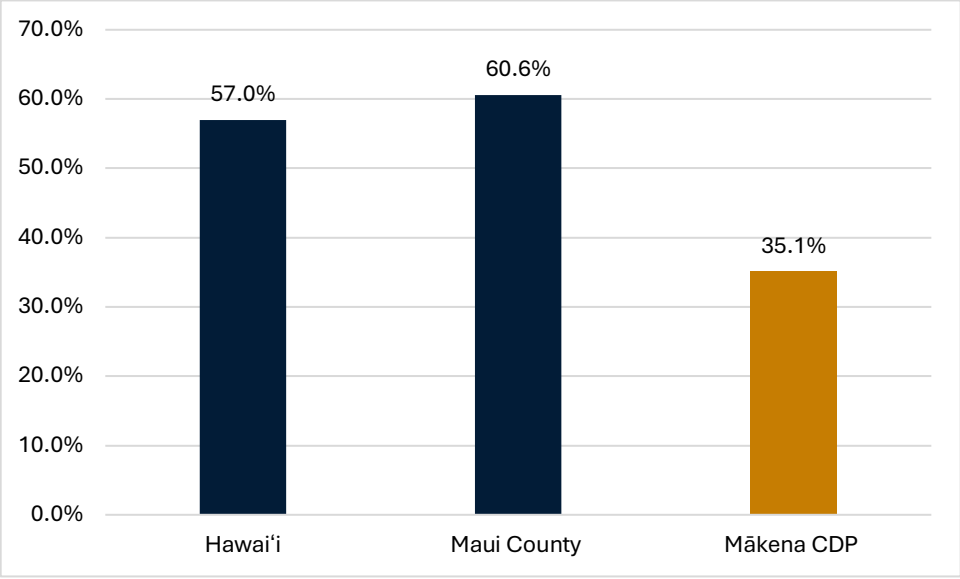
Figure 19. Median household income



Home ownership in the Makena CDP is almost 100%, which Figure 20 illustrates is more than 30% higher than that of Hawai‘i and Maui County.

Figure 20. Home ownership rate



While slightly fewer than a third of Maui County residents, and slightly more than a third of Hawai‘i residents, have received a 4-year college degree or higher, Figure 21 shows that a little more than half of Makena CDP residents have attained that level of education.

Figure 21. Education attainment of a bachelor's degree or higher

In keeping with the median age of people living in the Makena CDP being in the retirement range, fewer people living there are currently employed. Figure 22 shows that the number of people who are employed and living in Makena CDP is at least 20% fewer than that in all of Maui County or in all of Hawai'i.

Figure 22. Employment rate

Analysis of Survey Participants

Next, to contextualize the demographics of the SIA survey respondents, some responses from the survey (e.g., household income, educational attainment) are set side by side with comparable demographic data of Maui County and the Makena CDP. In Table 11, the self-reported demographics of the survey takers – approximately 86% of whom live on Maui, and 94% of whom live in Hawai‘i – varied in a few significant ways from Census data about Maui County in general and the Makena CDP. As above, Maui County and Makena CDP statistical information was gleaned from data collected by the U.S. Bureau of the Census, which last collected baseline data – as it does every 10 years – in 2020.

Table 11. Self-reported demographic data from SIA survey respondents as compared to Maui County and Makena CDP

Categories	Survey %	Maui County %	Makena CDP %
Income			
$0 – $49,999	20.9%	26.3%	22.4%
$50,000 – $99,999	27.0%	31.4%	10.3%
$100,000 – $159,999	23.5%	16.8%	3.4%
$160,000 – $199,999	8.7%	10.7%	20.7%
$200,000 – or more	20.0%	14.8%	43.1%
Education			
Less than high school degree	0.7%	7.3%	2.6%
High school degree or equivalent	7.8%	28.8%	21.1%
Some college but no degree	14.2%	20.7%	9.6%
Associate’s degree	6.4%	12.0%	14.9%
Bachelor’s degree	37.6%	20.2%	25.4%
Graduate degree	33.3%	11.0%	26.3%
Employment			
In the labor force	71.6%	62.9%	35.1%
Ethnicity*			
Hispanic/Latino	0.0%	10.3%	8.6%
Black or African American	0.0%	0.6%	1.0%
Other	6.5%	0.5%	1.5%
Asian	19.0%	26.3%	2.0%
American Indian or Alaska Native	0.0%	0.2%	1.0%
Native Hawaiian or Pacific Islander	23.0%	11.5%	8.2%
Multiple races	25.4%	19.1%	18.9%
Caucasian	51.5%	31.5%	58.7%
	Survey Household Size	**Maui County Household Size**	**Makena CDP Household Size**
Mean (average number of people in household)	2.73	2.84	2.03

* Survey respondents could provide multiple answers to the Ethnicity question. Therefore, the total in this section of the Survey column will not add to 100%

Examined by category, Table 11 shows that in comparison with the demographics of Maui County in general, the SIA survey respondents included an over-representation of those who self-reported as Caucasian and Native Hawaiian, and an under-representation of Hispanic/Latino participants. Compared to residents of Makena CDP, the percentage of Caucasians who participated in the SIA survey aligns more directly. The percentage of Native Hawaiians who participated in the SIA survey remains more than twice that of those who live in Maui County and almost three times that of those who live in the Makena CDP, documenting the level of interest in and care by that population for an area that has cultural and historic significance to them.

Table 11 also depicts that the majority of SIA survey participants include income categories that likely would enable them to qualify for Maui workforce housing (71.4%), but the survey did not ask whether they were homeowners. (See the "Affordable Housing" mitigation topic below.) Meanwhile, the Census data showed that people living in the Makena CDP overwhelmingly own their own homes, and Table 11 shows that 43.1% of them have household incomes above that which would enable them to qualify for workforce housing. Table 11 also documents that the majority of SIA survey respondents are in the workforce (71.6%), more than the number in Maui County (62.9%) and double that of those living in the Makena CDP. This data about the Makena CDP in part documents the resulting demographics of a County-designated resort area. The different data about the SIA survey participants provides an impetus for the applicant to be directly informed by people who work within and serve the project area during the focus groups, because they will be affected by the project, and the anonymous survey data cannot be mined for their specific information.

The data in Table 11 also depicts a possible over-representation of people with college degrees in the SIA survey. The U.S. Census Bureau reported in 2020 that a third of Maui County residents (almost 33.3%) had not completed any college degree, and the SIA survey respondents reported that only 22.7% of them had not completed a college degree. Approximately 77.3% of SIA survey takers and 66.6% of residents of the Makena CDP have a college degree. Those who were not represented in the SIA survey, but who may be impacted by project impacts on future generations are current South Maui high school students and University of Hawai‘i Maui College students, either from South Maui or majoring in subjects relevant to environmental impacts in general, such as natural resources management and planning.

Focus Group Interviews Using a Design Thinking Approach

Informed by the SIA survey and short answer responses and by the various imbalances noted in each of the above comparative, demographic data, the SIA team finds that further qualitative investigation to understand the context of responses by key participants is warranted. Some demographic groups were seemingly under- or over-represented via the demographics of the SIA survey participants, and some groups were overwhelmingly recommended by SIA survey participants to have their voices elevated and prioritized, such as the lineal descendants of the Makena area and Native Hawaiians of Honua‘ula moku.

Therefore, the SIA team intends to conduct targeted focus group interviews using a design thinking approach between the publication of the Draft and Final EISes. Reports on the results

and applications of what is learned will prioritize and refine the operationalization of the recommended mitigations that follow. In research, this is called "mixed methods," because findings from the SIA survey (both quantitative and qualitative short answer) will inform the moderator (i.e., interview) guides for the focus group interviews, therefore sequentially "mixing" methods to best answer the original questions (Meissner et al., 2018; Tariq & Woodman, 2013). To address the lack of trust expressed by survey respondents in either the actual implementation of mitigations or in the positive impacts of those mitigations, the applicant should work to help ensure – as much as possible – positive and lasting outcomes that benefit the communities most impacted by this proposed project. Design thinking-based focus groups will function as collaborative working groups toward such end goals and as targeted participants in the public, environmental review process. See below for the Mitigation topic "Build Trust" for more detail about the focus groups, which will be an interim mitigation.

Social Impacts and Proposed Mitigation Strategies

Descriptions of social impacts and their proposed mitigation strategies follow. They are embedded and highlighted within topics of general concern – or mitigation topics – that arose through analysis of the EISPN scoping comments, the SIA survey results, and community conditions. To determine the following 13 mitigation topics, each of which will be further described and explained below, the SIA team applied our foregoing analysis to identify topics suitable for possible social impact mitigation measures. Please see Appendix A for a table that consolidates the general concerns presented during the EISPN scoping process with the themes, categories and sub-analyses resulting from the SIA survey.

Because social elements can be argued to be woven throughout the environmental review process, the SIA team seeks to ensure and document that the social elements of potential impacts by the proposed project are addressed somewhere in the overall environmental review process. Therefore, where any documented social concerns have been addressed and mitigations have been proposed or the concerns have been shown to have been mitigated, those completed, ongoing or committed actions are reported below. Where some social concerns have been analyzed and addressed through other consultants' reports that also are appended to the Mākena Mauka Draft EIS, that also is noted below and in the table in Appendix A. In many instances, consultants and their resulting reports were sought and contracted by the applicant in response to public comment and requests during the EISPN comment period. For example, one of the concerns brought up in the EISPN scoping meetings was that of possible social impacts from the Mākena Mauka project, which resulted in this SIA being commissioned.

The SIA team anticipates that the upcoming focus group discussions will help identify which proposed mitigations for the Mākena Mauka development are most critical to affected community groups and most likely to effectively address their concerns and needs. (See "Build Trust", below.) By conducting the focus groups after publication of the Draft EIS and before publication of the Final EIS, the applicant creates the interim mitigation of showing care for – and learning more about how to improve – the holistic wellbeing of the place and the people of the place. In its Environmental Policy, the Hawai'i legislature notes that socially, the active review of possible environmental effects helps to enhance and generate environmental awareness and collaboration.

Mitigation Topics (in alphabetical order)

The 13 alphabetized mitigation topics are described below in narrative form. Social impacts are labeled, with specific mitigations proposed for each. For the purposes of this SIA, **social impacts** are effects on elements of the human experience that are anticipated to be caused by the proposed Mākena Mauka project and that are not otherwise accounted for or represented in other specific consultant reports appended to the Draft EIS.

In some cases, a mitigation topic's strategies address concerns noted previously by EISPN testifiers and SIA survey respondents by describing current actions having been or being taken

by the applicant. When appropriate, the SIA team suggests the expansion and enhancement of those actions or the creation of new ones. Actions that can be reported as already initiated or as soon to be initiated are noted. Each mitigation topic ends with a bulleted summary list of that section's social impact mitigations, if relevant.

Affordable Housing

Throughout the EISPN scoping meetings and in the short-answer responses to the SIA survey, the majority of participants decried the current housing crisis in Maui, particularly after the Lahaina and Kula fires of 2023 destroyed more than 2,000 homes and businesses. Several testimonies and responses also requested clarification about how to apply for affordable housing and how it works and is defined.

The baseline for valuing what is "affordable" does not vary with local market rates, so affordable housing in a luxury development area is not more expensive than in any other residential area. On Maui, the equations to determine whether someone qualifies for either rental or for-sale rates depend on federal Department of Housing and Urban Development (HUD) guidelines, Maui's Area Median Income (AMI), and annual interest rates, all of which vary year by year. For example, the 2024 AMI for Maui County is $110,800, a standard that was set based on a two-income family in Maui County that year.

Workforce housing breaks down further into various income brackets. To continue with the 2024 example, and pursuant to Chapter 2.96, for-sale workforce housing units need to be offered in these brackets:

- 30% of the units need to be available to people with 80%-100% AMI ($88,640-$110,800),
- 50% need to be offered to people within 100%-120% AMI ($110,800-$132,960), and
- 20% need to be offered to people within 120%-140% AMI ($132,960-$155,120).

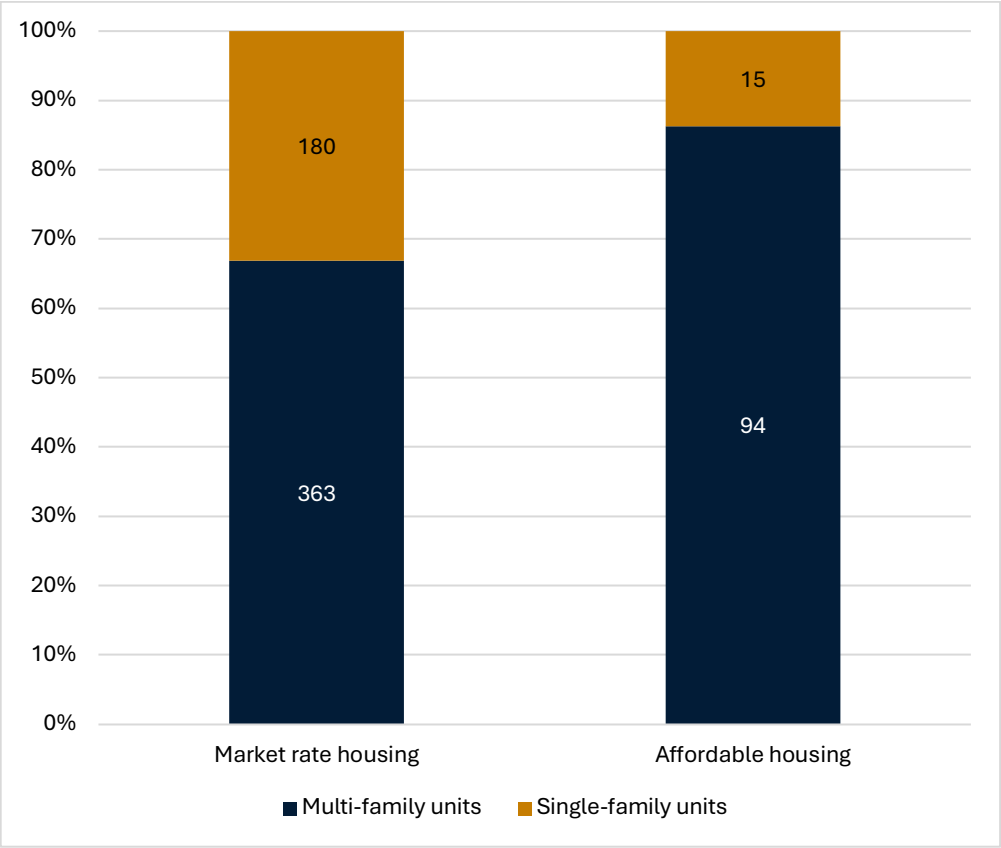
Next, Chapter 2.96 requires that for-sale prices be capped at 28%-30% of the unit buyer's annual income. If the development has government subsidies, then other costs, like taxes and insurance, can be included in this equation.

Maui County maintains a list of people interested in workforce housing. Once workforce housing projects begin, after the respective marketing plan is approved, a lottery is offered for applicants who have met the income and asset requirements, including not having owned residential property for at least three years before selection. Once a pool of qualified applicants is selected from the lottery, the applicants are ranked by the length of time that they have lived in the County. Workforce housing units are then offered based on that ranking.

Comments cited steadily increasing housing prices and property taxes and noted that these price increases may be tied to luxury home sales to people not from Hawai‘i who could afford such prices and did not live here year-round or integrate into the community. They made consistent calls for housing for local people, so that those locals could maintain generational connections to Maui and not have to leave the island or Hawai‘i in general. They requested housing for middle-

and lower-income local families and lineal descendants of an area first. One SIA survey participant wrote:

> *"Fill the 'Missing middle' of housing. We have luxury homes and 'affordable' housing projects, but not much that median-income individuals and couples can purchase."*



Comments received on this topic also noted a desire that affordable housing not emphasize or promote continued class differences. To help address that request, the Makena Change in Zoning (Maui Ordinance 3613, 2009) includes Condition 37, which requires that structures in their districts "be based on or inspired by principles of Hawaiian island architecture in design and construction," with an intent "[t]o exhibit respect for the Hawaiian culture and a Hawaiian sense of place." As such, the SIA team suggests that the applicant comply with that specifically for their affordable housing, thereby also addressing the Maui Island Plan value of retaining and enhancing the unique identity and sense of place of Makena (Maui County, 2012, p. 1-16).

Applicant's positive effects:

As reported below in the "Overcrowding Analysis and Prevention" section, the applicant increased the number of affordable housing units after the EISPN scoping period (from 100 to 109) and eliminated hundreds of market-rate units (from 800 to 543). Figure 23 depicts that of the 652 total dwellings currently planned for Mākena Mauka, the 543 market-rate housing units will include 363 multi-family units (66.9%) and 180 single-family homes (33.1%). The 109 affordable housing units – all of which will be on-site – will be comprised of 94 multi-family units (86.2%) and 15 single-family homes (12.8%).

After the devastating Lahaina and Kula fires, the applicant's Discovery Foundation donated more than $600,000.00 to various charitable organizations providing assistance to displaced residents. Mākena Golf and Beach Club members personally donated more than $10 million to numerous organizations after the fire, including the Hawaii Community Foundation and Maui Food Bank. Mākena members also have spearheaded Housing for Healthcare, LLC, which is an affordable housing project in Maui Lani that is comprised of 16 homes available to physicians, nurses, physician assistants and medical technicians for transitional living options while they search for a permanent Maui home. The applicant also provided meals for emergency workers and hosted an on-site golf event to thank emergency workers for their efforts. As noted in "Institutionalize and Expand Mākena's Aloha Makena Foundation", the applicant continues to host events that support such organizations as the Lahaina Land Trust.

Figure 23. Dwelling types

Social impacts:

- On-site, affordable housing amidst luxury homes in a resort-designated area do not afford local families amidst a current housing crisis with an optimistic vision for a long-term future for themselves or their children on Maui, increasing perceptions of local people not being a priority.

Mitigations to consider:

- Explore on-site perpetual rentals to ensure that affordable housing will be a consistent offering that will not sunset into market-rate housing.
- Design the workforce housing with island values and a Makena sense of place in mind.

Mākena Mauka Draft EIS appended reports for additional analysis & information:

- Design Guidelines
- Economic and Fiscal Impact Analysis Report
- Market Study
- Preliminary Engineering and Drainage Report
- Sustainability Report

- Water Resources Report

Build Trust

Authentic trust is reciprocal and fragile. It requires consistent listening, honesty, humility, and patience. Continuing to build relationships with the community is part of the kuleana – responsibility and privilege – of the applicant. Foreign occupation, the overthrow of the Hawaiian monarchy, and the imposition of western ideologies has had profound, multi-generational impacts on Hawai‘i’s social, environmental, and economic fabrics. One of the social results is an instinctive and pervasive sense of distrust of those who are not from Hawai‘i. This distrust is perpetuated when “outsiders” appear to or actually isolate themselves from or act disrespectfully toward Hawaiian or local communities. “Outsider” is a subjective term and not adopted by everyone. It can mean not Native Hawaiian, not born in Hawai‘i or on Maui, no generational ties to Hawai‘i, has not adopted local cultural norms, etc. Such distrust can be assuaged by employing community-driven approaches with mutually generated solutions to shared issues.

Trust also can be earned through proof of actions and regular, truthful communication. (See also, “Institutionalize and Expand Mākena’s Aloha Makena Foundation.”) Some individuals who participated in the EISPN scoping meetings and who completed the SIA survey challenged both how much the applicant’s consultants would listen to those with whom they consulted, and how much the applicant then would listen to, and follow through with actions, in response to their feedback.

Communication and actions that are not solely timed to public review and entitlement processes apply what has been heard and learned. Equally, consistent and regular check-ins and truthful communication and showings of good-faith collaboration show an honoring of promises made and an ability to evolve with lessons learned. (See “Institutionalize and Expand Mākena’s Aloha Makena Foundation.”)

Applicant’s positive effects:

The applicant not only made changes to their proposed project after listening to the testimony from the EISPN scoping period, but contracted this SIA, agreeing to publish the results of whatever was submitted via the anonymous online survey. The applicant further committed to learning more from their community, by agreeing to target specific groups of stakes- and rightsholders via focus groups.

Part of the impetus of the forthcoming SIA focus groups is to use a design thinking approach to create a constructive opportunity to continue to learn from and hear various community groups and stakes- and rightsholders about their concerns, prioritize those concerns, and collaborate on effective methods of resolution or improvement. After benefiting from the focus groups’ time, insights, and skills, the SIA team will share back what we understood as salient themes and key learnings to the participants, to ensure we heard them correctly and are applying their information appropriately. In qualitative research methods, this is called “member checking.” By seeking to learn more about the relative importance of various community concerns and social impacts, and the reasons behind the prioritized concerns and impacts, the applicant’s

decisions about their actions can become more values-based rather than possibly appearing to be only economically or transactionally based.

Design thinking focus groups are a type of human-centered design that solves real-world problems, while keeping people at the center. While many variations exist, design thinking includes 5 stages:

1. **Empathize**: Understand the subjects' perspectives and needs
2. **Define**: State the specific problem to solve
3. **Ideate**: Brainstorm solutions to problems
4. **Prototype**: Design solutions to the problem
5. **Test**: Assess the solution

These focus groups are approximated to occur in the Fall of 2025, after the publication of the Draft EIS. The focus group interviews will be conducted, recorded, transcribed verbatim, and analyzed using similar thematic analytic methods to those applied to the short answer responses to the SIA survey (Vaismoradi & Snelgrove, 2019). As with those responses, the preliminary findings and themes from the focus group interviews will be member-checked (Tracy, 2010) and analyzed early enough to inform decision making by the applicant about specific elements of ongoing and future mitigations that will be represented in the Final SIA and the Final EIS. The goal of these focus groups will be to collect constructive commentary from respectful conversations that directly address mitigations about concerns shared during the EISPN scoping meetings and in the SIA Survey. The questions for the focus groups will strive to achieve meaningful and purposeful clarifications from targeted community members participating in a discussion-based process. These focus groups will use a design thinking and consensus building approach to allow each group to rank possible mitigation strategies by "most important" and "most impactful." Each focus group will work together to collectively rank these strategies, and the focus of the ensuing conversation will be to discuss their rationale and their specific, actionable strategies for operationalizing the prioritized mitigations.

During these focus group interviews, moderators will task any given focus group to use a democratic consensus building strategy to rank social impact concerns based on the "highest" social impacts. Based on which social impacts are ranked highest by consensus from any given focus group, the associated proposed mitigation strategies for each highly ranked social impact will also be ranked. This will ensure that focus group participants understand what social impacts are being considered and what mitigation strategies are possible – and therefore can focus their efforts on sharing their perspectives within this contextual framework. To engage focus group participants in this task, the moderator will use written cards by which the focus group participants can physically arrange, rearrange, and reach consensus on their highest ranked social impacts and associated mitigations. The focus group interviews will be audio recorded, and to memorialize the final "ranked" social impact and mitigation strategies by any given focus group, the moderator will take a photo of the cards as they lie, in order of ranking. These photos will be analyzed along with the transcribed audio recording of the entire focus group interview.

Proposed composition of focus groups: (each to include 5-10 unique individuals)

- **Lineal Descendants** of the moku of Honua‘ula and/or specifically from the Makena area
- **Native Hawaiians** of the moku of Honua‘ula and/or specifically from the Makena area
- **Cultural practitioners** of the moku of Honua‘ula and/or specifically from the Makena area
- **Long-time, nearby homeowners** from the Makena area
- **Police/fire/safety workers** in the moku of Honua‘ula (e.g., people who give traffic and parking tickets, deal with flooding/fire evacuations and lifeguard/ocean responses)
- **Service workers** within the moku of Honua‘ula (e.g., teachers, state park employees, healthcare workers, grocery store/gas station workers)
- **Tourism workers** within the area (e.g., wait and bar staff, recreational/tourism operators)
- **High school students** from South Maui
- **University of Hawai‘i—Maui college students** from the moku of Honua‘ula, South Maui and/or majoring in relevant subjects, such as natural resources management and planning
- **Subsistence practitioners** of the moku of Honua‘ula and/or specifically from the Makena area (e.g., hunters, fishers, limu gatherers, farmers, ranchers)
- **Environmental/sustainability advocates** from the moku of Honua‘ula and/or specifically from the Makena area
- **Recreational, outdoor enthusiasts** from the moku of Honua‘ula and/or specifically from the Makena area

In seeking members of these focus groups, the SIA team will be seeking people with common interests, background, and expertise. Many of these individuals would fit in several different groups given the possible “overlap” of these groups (e.g., a college student could also be an outdoor enthusiast), but a goal will be to not have any one person participate multiple times. Since the same moderator guide questions will be asked of each group, having one person in multiple groups would over-elevate that person’s opinion. The SIA team would need to determine which group of people someone who would qualify to be in many groups would resonate most with, and which group of people would create the best synergy for productive and respectful discussions together. For example, no one person should be perceived to have any more authority than the others in their group so that a power dynamic does not overtake the willingness and ability of everyone to want and be able to speak and be heard (Naggy Hesse-Biber & Leavy, 2010; Roulston, 2010). The format also will enable the local talk story process to help create a safe cultural context for people to express personal opinions and ideas, with a productive focus, while engendering trust (Rothe, J.P., 2009; Alfonso, D.D., 2007).

The SIA team will employ a multiple methods approach, including a demographic descriptive survey to be completed by participants before each focus group interview begins. To provide consistency and a harmonized dataset for analysis, the moderator questions for each focus group will be the same. Focus groups will include 5-10 people, will be conducted in person, and will be moderated by a trained qualitative methods facilitator. Questions will not be leading, and the moderator will maintain professional integrity and objectivity throughout. The questions will not repeat those from the previous online survey but will be informed by its results (Kitzinger, 1994; Naggy Hesse-Biber & Leavy, 2010).

Each session will take between 75 and 90 minutes, and the timeframes will be respectful of each group's availability. Using a design thinking, consensus building approach, after participant introductions, the facilitator will present a summary of the proposed project and those future SIA mitigations proposed in response to impacts reported via the EISPN scoping meetings and the SIA survey responses (Abookire et al, 2020; Hsieh et al, 2020). Each focus group will prioritize the issues and rank the mitigation strategies in the context of their representative group's needs for successful adaptation to and with the proposed project and the meaningfulness of the proposed mitigation's timing and effects. Happening during the Draft EIS public review, this process will foster creative and constructive brainstorming and consensus building by groups of the public who have specific connections to and knowledge of the project area, as well as would be impacted in specific ways by the project. These robust and informative discussions will provide actionable input that the applicant could directly apply within the Final EIS and SIA, as well as for and with the community.

The sessions will be audio-recorded (no video recording) with the written permission of participants, and transcribed verbatim by a professional transcription company that will delete all names to ensure confidentiality and anonymity. Transcripts will be analyzed by an expert in qualitative analysis, who will not be attending the focus group sessions, reinforcing the anonymity of the participants. That qualitative researcher will employ a thematic content analysis approach to identify common themes and differences among the groups (Vaismoradi & Snelgrove, 2019). Both deductive and inductive coding will be used. Deductive coding will allow the SIA team to identify themes anticipated based on the research for this Draft SIA. Inductive coding will allow for the identification of themes that emerge directly from the fresh data (Saldana, 2012). Demographic survey data from the focus groups will be reported using basic means and frequencies, as was collected and reported in this report.

Social impacts:

- As one of 10 luxury or resort development projects proposed in the same area, Mākena Mauka adds to a cumulative impact of a lack of trust that developers and subsequent homeowners will prioritize learning about or addressing the local community's needs, values and concerns.

Mitigations to consider:

- Enable the conducting, reporting and implementing of results from the aforementioned focus groups, as described and explained above, between the publication of the Draft EIS and the Final EIS, to inform the Final EIS.
- Continue to provide and expand regular reports and communications with the community at large about how commitments made by the applicant are being honored, to document good-faith collaborations, and to share lessons learned through community programming and engagement.

Elevate Local Culture and Community

Rebuilding a multi-generational and multi-cultural community will require the elevation of various cultural identities that are founded on island-based values. The Maui Island Plan value of respecting and protecting Maui's "heritage, traditions, and multi-cultural resources" speaks to this need (Maui County, 2012, p. 1-16). Broken social connections and community networks will require healing that is embedded in mutual respect.

Working together toward mutual long-term goals, with shared values, is a proven method for growing or regrowing shared identity. The SIA team recommends that the applicant prioritize creating spaces and projects for multi-generational and multi-cultural people to work together, learn from each other, and engage with each other and the place and resources. Opportunities for kūpuna to mentor younger generations and for ʻopio to share fresh perspectives and goals with older generations create multi-faceted bonds and learning.

At the most basic level, participants in the EISPN scoping meetings and the SIA survey expressed a feeling of a lack of inclusivity from the applicant and a loss of connection to place and lifestyle. Two sample quotes from the SIA survey that reflect this general sentiment about the proposed development follow:

> *"It will increase the socio and economic disparity, and complexion of my community. It slowly changed over the years, but as of late – it is changing more rapidly. It is no longer a whole community; it is fractured – the elite and the locals."*

> *"Makena Mauka will continue to create Maui as an incredibly wealthy and unaffordable community, especially with an increase in part time residents who do not work within the community and do not contribute in that way."*

While both the Island and Community Plans have continued to identify Makena as a resort community since the 1970s, long-term Maui families and lineal descendants of Makena have memories and histories much longer than that and are loathe to lose familial connections to the physical place and to feeling welcome there.

Community Advisory Group

Two positive, ongoing examples of networking within community has been the applicant's creation and facilitation of two community groups: the Cultural Focus Group (CFG) (to be discussed in "Prioritize Lineal Descendants of Makena and the Moku of Honuaʻula") and the Community Advisory Group (CAG) in 2013.

Applicant's positive effects:

The CAG includes representatives of neighboring landowners and residents, ranging from the head of the Wailea Association to single-family homeowners and residents. The original

membership of long-time Makena residents has expanded over the past 12 years to include newer homeowners. Aiming to be a good and communicative neighbor, the applicant updates this community about their activities and asks the CAG for their input on long-term plans and about their needs and concerns.

The CAG has appeared to be appreciative of the updates and the work done that improves their neighborhood, from the installation of sidewalks, storm drains, native plants, and seabird-safe lighting to cleaning up after storms. When these neighbors need assistance, such as if Keawala‘i Church needs additional parking for an annual event, they appear comfortable asking the applicant for help, and the applicant has a history of being collegial and helpful. This collaborative relationship among neighbors should continue.

Hawaiian Sense of Place

Nonetheless, many participants in the EISPN scoping meetings and the SIA survey spoke or wrote about a lost sense of place in the Wailea and Makena area because of ongoing development and the changed demographics. Maintaining a sense of place is a component of Hawai‘i’s environmental review policy and process that particularly focuses on the social, or human, aspect of the environment, and it is a value from the Maui Island Plan from 2012.

The State Environmental Policy emphasizes the Native Hawaiian concept that every individual may have environmental rights, but they also have an equal and individual responsibility “to protect and enhance Hawaii’s environment and reduce the drain on nonrenewable resources” (HRS Ch. 344, §3-2(D)). To implement a reciprocal community-building opportunity, the applicants can invite the community to participate in a respectful monitoring and restoration of natural and cultural resources and potential subsistence use. This participation could be through structured volunteer programming and potentially through job training or hiring.

Equally, by emphasizing that the region is not just a recreational playground, but that it has a long natural and cultural history that should be honored by those living in and visiting it, the applicant can respectfully integrate their new residents into an existing community and can assist in regrowing that community. New residents and staff should be afforded the opportunity to learn the history of the area and be provided with cultural sensitivity and respect for the indigenous peoples of the place and for other local communities that have a heritage and connection to the place. Community engagement and in-reach and outreach programs will be integral to this process. (See “Institutionalize and Expand Mākena’s Aloha Makena Foundation” and “Support the Mākena ‘Ōiwi Resources & Stewardship Department” for related mitigations.) Rebalancing the resources with community, from mauka to makai, honors the entire ahupua‘a and the moku of Honua‘ula. Furthermore, by building continuity into programming and training, the resources and community continue to flourish.

Ongoing and Proposed Community Gathering Spaces

The EISPN testifiers and SIA survey participants also sought more community spaces in Mākena in general. The provision of such spaces offers direct proof of authentic actions and commitments. (See “Build Trust.”) Some respondents praised spaces on property that are more obviously centered in a Hawaiian sense of place and values, and they expressed a desire that the

applicant openly honor those traditional Hawaiian values and the place's history. Prioritization of Hawaiian values and respect for and implementation of Makena lineal descendants' traditional knowledge could be transparently perceived by the public and ensured into the future.

Applicant's positive effects:

The applicant has committed to providing additional public access (See "Public Access") and community gathering spaces. One opportunity centers on the existing Hale Pili (See "Support the Mākena ʻŌiwi Resources & Stewardship Department.) and plans for a pavilion that will serve as a starting point to connect with Honuaʻula history and protocol before venturing further for community work, volunteering, fundraiser events, cultural education and training, etc. to be led by Mākena's Aloha Makena Foundation and ʻŌiwi Resources & Stewardship Department. (See forthcoming sections focused on these departments.) The applicant is considering additional, compatible facilities in the area of the Hale Pili that can reciprocally meet the needs of Makena area residents and lineal descendants, including the need for mutual relationship building.

Kīpaipai Community Archaeology & Stewardship Program

Applicant's positive effects:

An archaeological training program for multigenerational family and community members, Kīpaipai provides opportunities for participants who engage in the training and want to reconnect with, mālama and perpetuate significant cultural lands in the project area. The program – led by archaeologist Tanya Lee-Greig, who is a lineal descendant of Makena – is founded on a partnership among Lee-Grieg's ʻĀina Archaeology, Mākena's Aloha Makena Foundation, and the Mākena ʻŌiwi Resources & Stewardship team. Kīpaipai originated out of the 2019 Hoʻopai Archaeological Field School Training Program, and it continues to expand the place-based knowledge and experience of multi-generational lineal descendants in the appropriate care for historic and cultural sites, resources, and practices. The significant sociocultural benefits of sharing place-based, Native Hawaiian methods and disciplines within the immediate context of applied knowledge and experience revitalizes connections, skills, respect and the kuleana of giving back to the place itself (Kittinger et al., 2013).

The fragility and cultural significance of sites require different levels of protections and allow for different levels of access. Kīpaipai leadership created huakaʻi (fieldtrips) for lineal descendants to teach them about specific wahi pana (sacred spaces) in the area and how to care for them. These experiences helped give participants more confidence in their intentions and abilities, while reinforcing their connection to these places and sites. Community members can sign up online for information about and potential participation in Laulima Days (workdays) that re-establish traditional knowledge and practices. Some service projects accomplished on these days have included the many steps of building Hale Pili, replanting native species on site, and collecting oral histories of lineal descendants.

Food Sovereignty and Sharing

Makena families fondly remember community and family gatherings, usually centered around food, with ʻUlupalakua Ranch workers and mangagers, the coastal fishing communities, and

events at the Prince Hotel. Reestablishing and then perpetuating food sharing opportunities could help the applicant with integrating their members, workers and residents with the rest of the Makena community: those who still live in the region and those with heritage to it.

Food sovereignty can be addressed in a variety of ways. Food production and sharing bring people together and directly exemplify the reciprocal relationship of people with land and sea, enabling a resource and community transformation. Some methods include but are not limited to: (1) Reestablishing healthy ecosystems that provide subsistence in the form of fish, limu, hunting, farming, and ranching; (2) Farming native, endemic and canoe plants (those brought to Hawai‘i via migrating voyaging canoes) for and by local communities; and (3) Building a commercial kitchen for community use as a community gathering space, which fosters the possibilities of food sovereignty for the area, community wellness and cultural preservation. Improving the region’s ecosystems is addressed in “Preserve Natural Resources” and other mitigation topics below. Once integrated habitats are healed, the gathering of native resources for cultural use and practice and for subsistence becomes sustainable again. The traditional abundance of the area can best be reactivated through ancestral knowledge of integrated resource management.

For example, once healthy soil has been regenerated, farmed native foods can grow underground (kalo, ‘ōlena), along the ground (‘uala), on climbing vines (ipu, uhi), in bushes and low trees (kī, mai‘a, kō), and in forests (niu, ‘ulu, hala). These cultural foods and many others can be managed in traditional plots, fields or lo‘i; planted as windbreaks or landscaping; or integrated in diverse forests, depending on shade needs, irrigation options, appropriate soil accessibility, and goals of food procurement. Each of these types of farming, gardening and silviculture could be applied at Mākena Mauka. Including food forests and farms in plans for Mākena Mauka landscaping and regenerative planting proves intentional long-term investment in the land, people and culture of the place. (See additional farming information in “Support the Mākena ‘Ōiwi Resources & Stewardship Department.”) By caring for and enriching the land through traditional practices, the applicants also feed future generations through farmer training, which teaches them how to respect and grow food and knowledge. Furthermore, through providing an opportunity for community members to care for each other via meals made with ingredients grown, processed and cooked on site at a shared kitchen, the applicant has an opportunity to foster acts of service from within community that uplift and inspire that community.

Social Impacts:

- A potential impact of the applicant’s development could be the continued separation of the multi-generational and multi-cultural blend of Maui’s local community from the resort development area of Makena and Wailea.
- The proposed development could have the potential impact of losing the traditional sense of place and relationship that local people have through generations of experience and history with the Makena area by catering to temporary and parttime residents who use public resources but do not have the opportunity to become part of the larger community.

Mitigations to consider:

- Continue the existing collaborative relationship with the CAG and make best efforts to ensure that it stays mutually beneficial.
- Continue existing efforts to create community spaces and projects for multi-generational and multi-cultural Makena area residents and lineal descendants to work together, learn from each other, and engage with each other, the place, and its resources, including the possibility of a commercial kitchen for appropriate shared use with community members.
- Include, where feasible, regenerative replanting of native ecosystems and the creation of food forests, farms, and spaces that feed communities on and off the property, expanding the out-planting over the life of the project.

Mākena Mauka Draft EIS appended reports for additional analysis & information:

- Agricultural Impact Assessment
- Archaeological Literature Review & Field Inspection
- Cultural Impact Assessment
- Flora & Fauna Report
- Sustainability Report

Elevate Local Needs

Mākena Mauka's proposed development project may not appear on the surface to be intended for locals. However, many local, public needs will be met through development requirements and agreements (e.g., improvements to highways and other infrastructure, required affordable housing, impact fees for additional public parks, schools, police and fire services, etc.), many local jobs will be provided in construction and service industries, and property tax revenue will help to pay for additional public services.

Applicant's positive effects:

The Makena Change in Zoning (Maui Ordinance 3613 (2009)), for example, includes required fees for education (Condition 9: $3,000 per new dwelling unit to the Department of Education for "schools serving the Kihei Makena Community Plan area"), traffic improvements (Condition 11: $5,000 per dwelling unit to the county), and developing and maintaining a South Maui police station (Condition 43: $1,000 per market-priced unit). Among several other examples, Ordinance 3613 also requires the applicant to participate in funding of the widening of Pi'ilani Highway, fund the plan for Makena State Park, and provide additional public parking. (See "Overcrowding Prevention and Further Analysis" and "Public Access.")

However, EISPN testifiers and SIA survey participants did not see these as enough to warrant support for the development, individually or cumulatively. For example, a representative quote from an SIA survey response reads:

> *"From what I have read and understand, Mākena Mauka does not effectively address the needs of the local community. It is another example of directing*

> *limited resources to a small percentage of the population, and to intermittent residents. The project reinforces the lack of understanding shown by developers and feeds the growing divisiveness and distrust felt by the community."*

Therefore, Mākena Mauka has a chance to learn more about and address additional local needs. Upcoming focus groups will target these goals to find additional, meaningful methods of addressing them.

Non-Tourism or Service Industry Jobs

Local people seek opportunities to earn pay that provides economic equity and dignity. They do not want to be relegated to low-wage, tourism-related jobs or to feel like second-class citizens on their home island. Some EISPN testifiers and SIA survey respondents have stated that they do not only want opportunities for entry-level jobs working for and supporting the vacation lifestyles of many visitors and part time residents. A Maui Island Plan value states that planning decisions should "contribute to a sustainable and diverse economy for Maui" (Maui County, 2012, p. 1-16). Mākena Mauka can create employment opportunities, from which locals gain financial stability, feel respected, and build long-term livelihoods on the island.

By creating training opportunities for future generations of locals in natural and cultural resources stewardship, positive growth in both spheres can be integrated. Requests for leadership development and job growth and security for local people are common in Hawai‘i. This development's long-term goals and intentions for investing in the natural and cultural resources of the place provide opportunities for creating training programs and leadership steps within stewardship and management roles on-site. (See "Support the Mākena ‘Ōiwi Resources & Stewardship Department" and "Preservation of Natural Resources.")

Cultural resources will need to be cared for, protected, made available for appropriate use and access, and studied through observation and application of cultural practices. Nāulu Farm (See "Support the Mākena ‘Ōiwi Resources & Stewardship Department.") will need to be maintained, managed and evolved as conditions and needs change. All of these tasks, and many more, invite reciprocity with the place. They also require engagement with community and long-term kuleana and commitment that local people can best provide (Kittinger et al., 2013).

Education and outreach are important components of many of the proposed SIA mitigations, and those work opportunities and leadership roles should be available to local people. By elevating and sharing traditional knowledge in a reciprocal manner, as is being done through Kīpaipai and Mākena's Aloha Makena Foundation, the education and outreach can also be in-reach within the residential and working community of Mākena Mauka. (See "Institutionalize and Expand Mākena's Aloha Makena Foundation.")

Quality of Life for Local People

When they have the time to enjoy outdoor public spaces, EISPN testifiers specifically mentioned the need for open, natural view planes for stress relief. To have the mental and physical space to unwind and soak in the beauty of their home spaces would provide an invaluable affluence. The

people of Makena, Honua‘ula, South Maui and Maui in general remember a time when Makena offered a respite from the inundation of tourists and large houses. The lineal descendants and other cultural practitioners of the place seek the opportunity to practice and apply kilo within healthy, native spaces. Kilo, which applies current natural observations to an internal catalogue of such observations that is hundreds of generations old – inclusive of the information shared by the original, voyaging settlers of Hawai‘i – is an integral component of most Native Hawaiian practices. It requires a healthy environment of native species and sight lines from mauka to makai, makai to mauka, and land or water to sky.

Applicant’s positive effects:

Condition 5 of the Makena Change in Zoning Ordinance requires that the applicant “preserve Makena’s significant views of the Pacific Ocean and broad vista to the Central Maui and Upcounty region” (Maui Ordinance 3613, 2009), but it does not prescribe how or from where one should always be able to access those views, the space and the peace.

The SIA team suggests that these goals be part of natural and resource management planning and implementation, with the remaining public locations for such healing vistas and opportunities for quiet to be documented in the resource baseline studies (See “Preserve Natural Resources.”) Furthermore, any community-based management plan would include local needs in its assessment and balancing approach for management. Under such resource management plans, locals would feel welcome to enjoy Makena’s public access locations – including scenic vistas – and to participate in management service projects and place-based learning opportunities.

Social impacts:

- A possible impact of the proposed project would be continued and extended marginalization of local Maui residents, especially those with Makena and Honua‘ula ties.
- A possible impact from the proposed project could further erode local and Native Hawaiian ways of life, cultural identity, spiritual wellness and community mental health.

Mitigations to consider:

- Enable Mākena Mauka’s employment process to consider viable strategies that allow for new service and non-service industry jobs for local people that include growth and training opportunities whenever possible.
- Strive to design structures and chose colors for structures that fit and blend into the landscape to perpetuate a local appreciation of Makena’s unique natural identity.

Mākena Mauka Draft EIS appended reports for additional analysis & information:

Emergency Evacuation

Currently, only one public road allows for access and exit from Wailea and Makena. Tsunamis, severe storms, floods, fires and compounded traffic accidents may result in the need to completely reroute vehicles, divert and disperse traffic, and support emergency services' response. Several EISPN and SIA survey participants noted concern that additional populations living in Makena would add to the current difficulties addressing emergencies in the area and accelerate the need for an emergency evacuation plan.

Applicant's positive effects:

Mākena Mauka currently is participating in the creation of an inclusive community evacuation plan, which has been spurred by an escalating number of wildfires, particularly the deadly and devastating 2023 Lahaina and Kula fires, and the continuously eroding South Kīhei Road, which flooded again in early 2025. For emergencies that require immediate evacuation by and for the surrounding and visiting community members, Mākena Mauka is planning an emergency access route that provides access mauka from Makena Alanui. This alternate access could also serve area residents, workers and visitors in emergency situations when the diversion of traffic would assist emergency responders, for example. Note that other consultant reports by those who have expertise in this area include the Preliminary Engineering and Drainage Report and the Traffic Report.

To further help ensure that mass-impact emergencies are communicated in a timely fashion, the applicant has complied with their Conditions in Zoning by assisting in the provision of two emergency sirens (Maui Ordinance 3613, 2009, Condition 16). In 2017, the applicant enabled the Hawai‘i Department of Defense's installation of one of the additional sirens at the applicant's wastewater treatment plant. The second siren was installed at Makena State Park.

Additionally, signage about possible emergency situations, what sirens mean and when they are tested, and evacuation routes would be assets to local and visiting people. By having evacuation routes easily found on signs, websites and visitor materials, the applicant would be supplying invaluable safety information.

Social impact:

- Still impacted by the repercussions of the 2023 fires, and in the face of increased storms and storm intensities, the proposed development and its additional structures, vehicles and residents could add to community fears of inadequate ingress for emergency workers and egress for residents and visitors to the area in the case of a weather- or human-caused emergency.

Mitigations to consider:

- Continue to participate in collaborative discussions and formal agreements with other large landowners to provide an inclusive community evacuation plan.
- Help to ensure that the resulting evacuation route and procedures are publicized and provide clear signage for locals and visitors to help limit confusion and panic.

Mākena Mauka Draft EIS appended reports for additional analysis & information:

- Preliminary Engineering and Drainage Report
- Traffic Management Plan
- Traffic Report

Institutionalize and Expand Mākena's Aloha Makena Foundation

Some SIA survey respondents also wanted Mākena's Aloha Makena Foundation to be recognized for its current good work, and they suggested that the department should expand its engagement with, and informing of, the community within the project area (management, staff, residents, and visitors) and the community outside of the project area. As such it could continue to help guide Mākena Golf & Beach Club's management and residents in respectful and inclusive participation and collaboration with Maui, Honua'ula and Makena communities, particularly with Makena's lineal descendant community.

Collaborations with communities require sincerity, thoughtfulness, seeking mutual benefit, proof of investment in the communities' long-term values, and dependable communications and actions. Some methods for weaving sincere cultural respect and sensitivity throughout the project area include providing annual in-reach training and volunteer opportunities for those working and living on the properties. For example, one SIA survey respondent wrote that the applicant should:

> *"[e]ducate people about the culture and needs of those who already reside here. Educate that it's not an entitlement, rather a responsibility to live here."*

Integrating 'olelo Hawai'i, traditional place names and indigenous values in daily use through such practical elements as signage, presentations, meeting formalities and regular communications can help instill sincere recognition and respect for the people and history of the place.

Applicant's positive efffects:

Mākena's Aloha Makena Foundation, partnered with Mākena's 'Ōiwi Resources & Stewardship team when appropriate, assists in the design and implementation of such efforts, in direct collaboration with the lineal descendants, as represented in the Cultural Focus Group. (See "Prioritize Lineal Descendants of Makena and the Moku of Honua'ula.") Aloha Makena strives to develop intentional reciprocation – a circular giving of aloha and healing – with the natural resources of the project area, with Makena in general, and the many communities of Makena.

Support for the two Mākena departments wove throughout the SIA survey, within responses written by Hawaiians and non-Hawaiians. Some participants questioned the sustainability of the departments and the authenticity of the applicant's integration of the Hawaiian values that the departments exemplify:

> *"...programming that supports authentic connection with the natural and cultural resources – and further how to support those resources regenerating, it gets relegated to 2 small departments while onsite leadership and the larger departments do not dedicate adequate priority in resources and time for attunement to Makena and Honua'ula culture and environmental kinship."*

Ensuring that the public actively sees an integration of Hawaiian values and appreciation of the heritage and culture of Makena and Honua'ula could improve the general public's perception of the applicant's overall sincerity as a long-term community member and supporter.

Place-based Orientations

The applicant could create – in collaboration with Makena lineal descendants – and ensure implementation of orientations prior to people being on-boarded as new staff, residents, visitors, contractors, or volunteers. Such orientations would include awareness of and respect for cultural, natural, and historic resources in the area, including cultural protocol, safety instructions and relevant rules. For long-term staff and residents, regular refreshers and updates on cultural and natural resource protocols and awareness would retain prioritization of these values and make such discussion more commonplace and comfortable for both the presenters and the people learning. Making such materials and updates accessible on the internet and social media allows for different styles of learning and the ability to self-discover and educate when specifically interested.

Communications and Programming

Applicant's positive effects:

In-reach and outreach should continue to include teaching and requiring appropriate cultural protocols for access to, and providing service and maintenance projects for, culturally significant areas and sites. Protective limitations could be set and explained for particular locations. In some cases, certain places may be closed to the public to allow for group access by people with specific skills and connections to those places. As the community helps to improve the habitats and ecosystems of the area, they learn about those resources' connectivity with each other and with humans. Intentionally building community members' understanding and appreciation for these resources through service actions makes the activities and the place more meaningful to participants, no matter where they are from originally (Kittinger et al., 2013).

Programming should continue to include school accesses and cultural learning opportunities that incorporate service and stewardship labor at the correct level of understanding, skill level and respect for the activity or process. Respect for place-based traditions, values and wisdom

enriches the quality of natural and cultural resource perpetuation by adding to more recent, western scientific expertise and by building the capacity and shared commitment of relevant communities. ʻĀina-based education and stewardship opportunities founded on traditional knowledge help to reclaim lineal descendants' holistic identity, revitalize the place-based Hawaiian culture, regenerate community, and renew kuleana, while taking advantage of Mākena's inspiring outdoor classrooms.

Equally, regular updates on progress in regenerative resource work, cultural programming and appropriate opportunities for involvement should continue to be offered to members of the applicant's community and the local community. The applicant will need to maintain these elements of community building, maintenance and understanding, inclusive of the Hawaiian worldview of the familial connections of people to place and the historic and natural elements of that place. The reciprocal relationships of interwoven communities build a holistic sense of well-being and belonging that provides support and stability in times of crisis and of shared joy. The SIA team further suggests that the applicant continue to develop and support Aloha Makena programs that engender community good will and exemplify Native Hawaiian cultural values, publicizing them internally to the applicant's staff and residents and to surrounding communities. The following examples of existing Mākena programs should be continued and could be expanded.

Aloha Mākena Endowed Scholarship at the University of Hawaiʻi

Applicant's positive effects:

Aloha Mākena, the 501(c)(3) nonprofit for Mākena Golf & Beach Club with a vision of a continuum of aloha and reciprocity, helps provide for on-site community events, multi-generational training programs, and scholarships. Since 2018, the Aloha Mākena Endowed Scholarship Fund has provided a perpetual investment in the Makena community. Scholarships for students seeking an undergraduate certificate or degree on any University of Hawaiʻi (UH) campus are available annually. Preference is given to applicants who have genealogical ties to Makena or are Mākena Golf & Beach Club employees or their immediate family members. As of this writing, eight scholarships have been granted, and grantees have been able to use the funds for classes, books and other costs directly connected to attendance at UH.

Community Events

Applicant's positive effects:

Mākena's Aloha Makena Foundation regularly organizes and hosts fundraiser events for community collaborators that provide essential services to Maui, while sharing the values of aloha, working together, and treating each other as family. To benefit these organizations and shared goals, Mākena hosts fundraiser events, annual golf tournaments and other programs. Select examples include:

- I Ola Kanaloa – In December 2024, Mākena hosted a farm dinner at Nāulu Farm to fundraise for two Kanaloa Kahoʻolawe preservation and perpetuation organizations: Protect Kahoʻolawe ʻOhana and the Kahaoʻolawe Island Reserve Commission. The event was located at the farm that was named for the cloud bridge that used to form

regularly from Ulupalakua to Kahoʻolawe and that overlooks the ʻAlalākeiki Channel that connects Makena's shoreline to Kahoʻolawe.

- Ulu Mai he Wai – This farm dinner held in November 2024, also at Nāulu Farm, supported watershed awareness and management by providing a fundraiser for three collaborative organizations that seek to expand and improve native ecosystems, watersheds, and clean freshwater on Maui. The three organizations – Uhiwai o Haleakalā, Kula Community Watershed, and Mauna Kahālāwai Watershed Partnership – were the sole financial beneficiaries of the evening. All attendees were treated to the beautiful views from Puʻu ʻŌlai to Kahoʻolawe, the setting of Nāulu Farm, and the opportunity to network with like-minded people seeking to return rain, clean water and environmental health and well-being to Maui.
- ʻOhana o Honuaʻula – For the past two years, Mākena has hosted a community dinner to celebrate the up-country families of ʻUlupalakua Ranch and the shoreline families of Makena. Similar parties used to occur regularly at Makena Landing and had been missed by these families of shared ahupuaʻa and history. By hosting these reunions, Mākena continues the important generational links of people to place and to each other in an effort to rebuild mutual support in environmental and cultural endeavors.
- Annual Pickleball Tournament – Raises funds for the Boys and Girls Club of Maui.
- Annual Golf Tournaments – Include, but are not limited to, the following:
    - The Maui Interscholastic League (MIL) Golf Tournament
    - Nā Hale o Maui Annual Golf Tournament (in support of the named organization, which seeks to provide perpetual affordable housing for Maui)
    - A golf tournament in support of the Hawaiʻi Land Trust, which works to protect the ʻāina of Hawaiʻi in perpetuity and to teach future generations the multiple skills needed to continue that work
    - A charity golf tournament for three organizations that protect Maui's forests and native birds: Uhiwai o Haleakalā, Maui Forest Bird Recovery Project, and Maui Nui Seabird Recovery Project
    - An annual golf tournament in support of Keawalaʻi Church's Outreach Fund, which in turn supports Maui community members in need
    - The annual V Foundation tournament, which is a fundraising event for that organization's fight against cancer

Donations to the Community

Applicant's positive effects:

Providing financial support for a decade, the applicant (Mākena Golf & Beach Club) has donated more than $600,000 to Maui organizations, investing in their community. Some of these organizations address such basic community needs as health, food security and affordable housing. Other grantee organizations support environmental health through resource conservation and stewardship, protecting native natural resources, and educating the youth and broader community.

These nonprofits target issues and locations in Makena, Honuaʻula, South Maui and Maui Nui. The nonprofit beneficiaries include but are not limited to the Protect Kahoʻolawe ʻOhana, Maui Health, Imua Family Services, Hale Makua Health Services, Grow Some Good, Hui O Waʻa

Kaulua, Maui Arts & Cultural Center, Maui Food Bank, Maui Behavioral Health Resources, Leeward Haleakalā Watershed Restoration Partnership, Holani Hana, Book Trust, Ala Kukui, Hawai'i Nature Center, Ka Hale A Ke Ola, Maui Rapid Response, Maui Nui Seabird Recovery Project, Maui Forest Bird Recovery Project, Uhiwai O Haleakalā, Nā Hale O Maui, and Keawala'i Church.

Mākena Golf & Beach Club members have personally contributed nearly $20 million to Maui Health in recent years, enabling access to critical life-saving equipment, creating new service centers, and supporting programs that recruit, house, and care for healthcare professionals serving the Maui community.

Holo 'Ai

Applicant's positive effects:

As of May 2025, Mākena had contributed more than 25,000 pounds of food to the Maui-based community food-sharing program Holo 'Ai. Maui Nui Venison began the program during the COVID-19 pandemic as a proactive response to food instability in Maui. The program expanded again in response to the Maui wildfires of August 2023, and food distribution coolers and sites are mapped and calendared reliably. By sharing the lean protein of invasive deer, Maui Nui, its food preparation, distribution partners, and supporters, like Mākena Golf & Beach Club, have helped to build community resilience while striving to rebalance the island's ecosystem. As of April 2025, Holo 'Ai had donated more than 194,000 pounds of venison to Maui families.

Social impacts:

- A possible impact of the proposed development would be a continuation of a historical lack of meaningful community involvement by development projects that have often excluded or ignored local voices, especially Native Hawaiian lineal descendants from culturally significant areas like Makena.
- A possible impact by the applicant could be what have become expected superficial gestures toward cultural inclusion from other developers, which can feel disrespectful or performative if not backed by genuine commitment.

Mitigations to consider:

- Integrate Hawaiian language, traditional place names and indigenous values as much as possible through Mākena Golf & Beach Club signage, presentations, meeting formalities and regular communications, with input from Makena lineal descendants.
- Continue to support the capacity and efficacy of Mākena's Aloha Makena Foundation.
- Create and ensure the implementation of educational orientations that include cultural sensitivity and respect prior to people being on-boarded as new staff, residents, visitors, contractors or volunteers, offering regular refreshers and updates for long-term employees and residents about cultural and natural resources, Hawaiian history, and cultural protocols and awareness.
- Provide regular updates on progress in regenerative resource work and cultural programming via community in-reach and outreach, including the internet and social media.

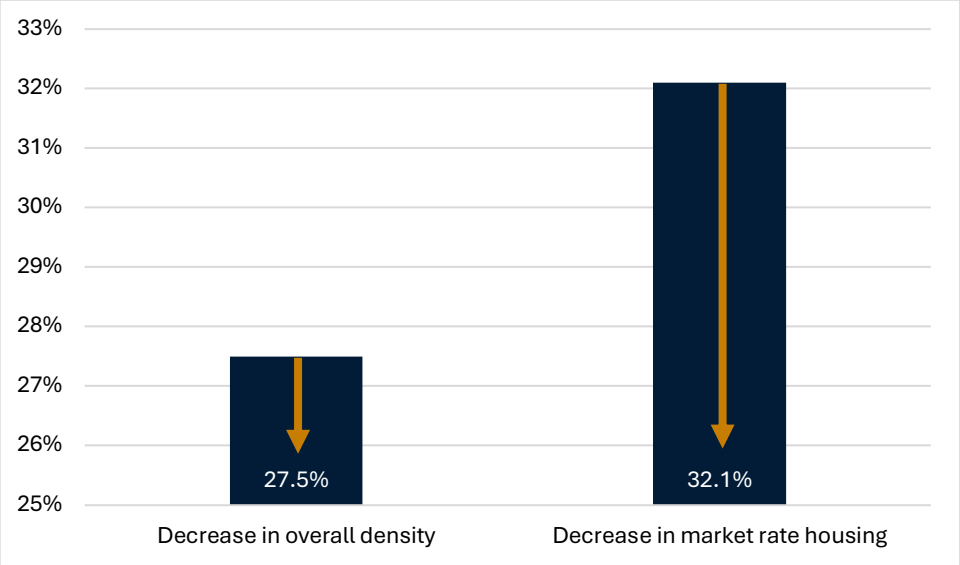
Overcrowding Prevention and Further Analysis

General concerns expressed during the EISPN scoping meetings and via the SIA survey responses included people not wanting this area to be overcrowded or overdeveloped, and they did not want it to lose its identity. This concept wove through a variety of sub-topics, which are batched below to address issues raised by the public from a social perspective and to provide information about the applicant's current commitments and actions in relation to each.



Reduction in Development Density

Directly assisting in the mitigation of cumulative development density impacts in the Honua'ula moku are Conditions 1 through 4 of the applicant's Conditions in Zoning (Maui Ordinance 3613, 2009). These conditions specify maximum density levels within each district zoned area. The densities proposed in the current project are less than or equal to the densities established in these conditions.

Applicant's positive effects:

In response to consistently hearing from the public in the EISPN scoping meetings that they did not want the Makena area to be overdeveloped, the applicant reduced the number of units they are proposing to develop. In a 27.5% reduction of density, they dropped the proposed number of units listed in the EISPN from 900 to 652. They also are proposing to add to the originally proposed 100 on-site workforce housing units, now offering 109. This represents an increase from 15% to 17% out of the total number of units. Therefore, they propose to develop 543 market-rate units instead of the originally proposed 800. This results in a 32.1% decrease in market-rate units. Figure 24 visually depicts this decrease in impacts, via the drop in density overall and specifically in the number of market-rate units.

Figure 24. Housing density decrease

Below, Figure 25 further illustrates the specific changes in on-site housing units being offered by the applicant for the development of Mākena Mauka.

Figure 25. Dwelling unit changes

Traffic

EISPN testifiers and SIA survey respondents pointed to chronic traffic issues that the Maui community foresees being exacerbated by additional developments in the area.

Applicant's positive effects:

Some of the mitigations to which the applicant has already committed are found in its Change in Zoning ordinance. They include the payment of a traffic impact fee of $5,000 per dwelling unit to the county for general traffic improvements (Id., Condition 11), as well as paying a pro-rata share – with other large developments in the area – to upgrade Pi'ilani Highway to four lanes of traffic from Kilohana Drive to Wailea Ike Drive (Id., Condition 12). As part of a required Transportation Management Plan to reduce construction-generated traffic, the applicant must provide for park-and-ride programs, shuttles for workers, and alternate work schedules (Id., Conditions 14 and 15).

Parking

Adequate parking for beach area shuttles and for direct access for specific public access locations and groups of people will limit vehicle congestion in a fragile and significant area.

Applicant's positive effects:

The applicant has already added public parking along the redeveloped Hono'iki Road and has committed to adding another 65 public parking spaces within the Mākena Mauka project area. These spaces will help to eliminate dangerous parking along Makena Alanui Road and within neighborhoods, reduce the volume of vehicles seeking parking, and therefore reduce evacuation needs during an emergency. (See "Public Access" and "Emergency Evacuation.")

Beaches

Participants in the EISPN scoping meetings and the SIA survey expressed consistent concern about overcrowding at beaches in the Makena area that already made them feel unwelcome and uncomfortable, and that they feared would be exacerbated by more development near those beaches. Two sample quotes from the SIA survey responses read:

> *"[O]ur beaches are overrun with people, there's not enough space for everyone, I can't fish without people getting in my way..."*

> *"Makena Landing is already over-run by tourists and commercial operations – pushing locals out."*

Because of these perceptions and concerns, the applicant contracted a study to empirically show who is using South Maui beaches throughout the course of the day, and of those people, how many originate from housing that is similar to what Mākena Mauka is proposing to develop. Based on that data, the same consultant then estimated the projected impact of an additional 543

residential, market-rate units that would likely only be occupied part of the year, and 109 workforce housing units that likely would be lived in year-round. The study was provided to the SIA team at our request to analyze the results in the context of concerns heard from the public. (See Appendix D: Visitor Trends at Mākena and Wailea Beaches Using Azira Data, 2025, Memorandum by Fehr & Peers.)

The study includes human movement data collected from location-based applications and services on smartphones and other mobile devices between January 2019 and June 2024. (Note: The analysts ran the study with and without the year 2020, which could portray data anomalies because of COVID-19 travel and movement restrictions, but no statistical difference was noted, whether data from 2020 was included or not.) Fehr & Peers was able to sort the data to note where the smart devices spent the night and when they were at one of 18 South Maui beaches for at least 15 minutes, which would register as one beach visit. The 18 beaches begin in the north at Kama‘ole Beach Park I and end in the south at Makena State Park. (See Appendix D, Figure 1, p. 3 for a map of the beaches studied, and the source points of people staying at Mākena Golf & Beach Club’s residential units, other Makena part-time or full-time residential units, Wailea part-time or full-time occupied residential units, Wailea short-term vacation resort or hotel areas, and Wailea hotels/resorts.)

Existing Mākena Golf & Beach Club residents and guests represented just 0.19% of all visitors to these beaches. The most popular beach for this population is Maluaka – closest to these existing residences – and there, Mākena Golf & Beach Club residents represented 3.92% of the visitors. More than 48% of Maluaka Beach’s visitors were Maui residents (not including Mākena Golf & Beach Club), and 48% were non-Maui residents (Appendix D, Table 1, p. 4).

The next most frequented beaches by Mākena Golf & Beach Club residents and visitors were Oneuli Beach, of which they were 1.11% of the beach visitors; Makena Landing, where they represented 0.42% of the visitors; and Makena State Park Beach, where they made up 0.15% of the visitors (Ibid.). This lack of beach participation may be because those residents and visitors instead are availing themselves of the private, on-property amenities (golf, gyms, spas, tennis and pickleball courts, restaurants, etc.). The same would likely be true for Mākena Mauka residents, given their access to the same and improved on-site amenities. Fehr & Peers sought to examine that theory using their data.

To evaluate the potential additional impact that Mākena Mauka’s proposed 652 new homes may have on these same beaches, Fehr & Peers used the number of average Makena part-time/full-time residential beach visit samples in 2023 (the last complete year of data), data from similar residential types from Wailea, and analyzed traffic volumes in the Makena and Wailea area. Fehr & Peers calculated that the new residences at Mākena Mauka would add a total of approximately 32 beach visits per day to the area, with 15 from the mostly part-time market-rate unit residents and 17 from full-time, local workforce housing residents (Appendix D, Table 3, p. 11). Fehr & Peers forecasts that the impact of both types of Mākena Mauka’s additional housing units – market-rate and workforce – would have a “negligible impact on visitation at the 18 study beaches” (Appendix D, pp. 40-41).

Another issue noted at the EISPN public scoping meetings and in the SIA survey was a discomfort among locals at visiting beaches in the Makena and Wailea area because they did not feel welcome. According to the data, the beaches in the study that attracted the most Maui residents from outside of Makena and Wailea were Oneuli (61.46%), Makena Landing (52.82%), North Po'olenalena (48.06%), Makena State Park (46.97%) and Palauea (52.74%) beaches. (See Appendix D, Table 1, p. 4.) From Palauea Beach south to Makena Beach, most beach visitors were Maui residents from outside of Makena and Wailea, with the exception of Ka'awa Beach, where most beach visits are evenly split between Maui residents in general and part-time residents and guests from the Makena area (not including Mākena Golf & Beach Club). In contrast, when all the part-time and full-time residents and guests in the Makena area are combined, they encompass a total of 2.17% of all visitors to the 18 South Maui beaches studied. (Ibid.) Thus, the testifiers' and survey respondents' perceptions and concerns do not appear to be accurate for beaches in the Makena area.

The intensity of concern about, and the perception of, overcrowding at beaches in Makena in general and by nonlocals in particular could warrant a sustainable use study and plan for specific beaches in the relevant area for which the applicant has maintenance responsibilities: Makena Landing, North Maluaka and South Maluaka (Maui Ordinance 3613, 2009, Condition 36). Sustainable use studies collect baseline information to examine whether there are ongoing conflicting uses, whether existing infrastructure meets current needs, if public safety resources are adequate, and how localized natural and cultural resources are protected. They are objective studies that enable specific plans to for balanced management of people and resources. Such a study would apply what has been learned from the Fehr & Peers study about the estimated number of people on nearby beaches, and the origins of those people. That information would help determine the sufficiency of the current infrastructure, such as parking and public lighting, informational signage, trash bins and their emptying, bathrooms and showers and their maintenance, picnic tables and grills, lifeguards and lifesaving devices, security, and opportunities of access for people of various abilities. The study also would analyze current and conflicting uses, creating a social assessment of types of users and their respective needs for space to rest, kilo, recreate, and subsistence gather and fish.

Social impact:

- Additional, cumulative development of the Makena and Wailea area increases the likelihood of conflicting uses of public infrastructure and of non-renewable resources among local people and new residents and visitors.

Mitigations to consider:

- Conduct sustainable use studies for the beach areas of Makena Landing, North Maluaka and South Maluaka, and share the analysis and results publicly.

Mākena Mauka Draft EIS appended reports for additional analysis & information:

- Design Guidelines
- Market Study

- Noise Assessment Report
- Preliminary Engineering and Drainage Report
- Traffic Report

- Visitor Trends at Mākena and Wailea Beaches Using Azira Data (Appendix D to this Draft SIA)

Preserve Natural Resources

Testifiers and survey participants spoke and wrote about the need to revitalize and preserve native natural resources within the project area and other, surrounding properties in Makena, rebuilding the safety net of native species biodiversity. Protecting and enhancing that biodiversity requires an investment in knowledge and in committed, long-term action. People can be an important part of the biodiversity that enables resiliency in and with nature. Because native natural resources are cultural resources, the SIA team recommends that this work incorporate the traditional knowledge and stewardship practices of local lineal descendants and other kūpuna. Community outreach about the revitalization of the native ecosystems must include recognition of their cultural significance.

The survival of Native Hawaiians' ancestors while exploring and populating the largest ocean on the planet depended on the accuracy of their perception and on their ability to remember and teach over thousands of years. Newer scientific baselines are much more recent and are often sourced from observations distanced or isolated from nature, rather than as part of it. Responsible resource managers striving to adapt to escalating changes on the planet are learning to recognize and appreciate place-based traditional knowledge, which is born of being embedded within and as part of nature (Robbins, 2018). Indigenous peoples' records of ecosystems and habitats that have changed regularly over their culture's evolution enable them to recognize when to adapt with their environment. Native Hawaiians' success with resiliency over generations gives them confidence to recognize what is in front of them, and to evolve with the resources to which they have a genealogical relationship. They must survive together.

More broadly, cultural ecosystem work in the Makena area also could include community-based management to ensure that a balance of broader community concerns and needs are met. Including community members who care about the place and its resources with the management process helps to ensure the longevity of any resource management plan, examples of which follow. Such preservation goals meet another Maui Island Plan value of adopting "responsible stewardship principles by applying sound natural resource management practices (Maui County, 2012, p. 1-16)."

Dryland Forests

Applicant's positive effects:

As noted in the Mākena ʻŌiwi Resources & Stewardship section, the Mākena Golf & Beach Club team has begun to focus on the ecosystem of the lower Honuaʻula dryland forest.

Restoring this once biologically diverse ecosystem would help to recharge aquifers, renew the renowned water cycles from Haleakalā to Kahoʻolawe, set the ecological foundation for habitat connectivity, and enable the return of native species on the land and in the sea. This example of reciprocity – caring for the land that cares for the people – remains a kuleana for the people of the place and an opportunity for others to learn and assist in that work, thereby also rebuilding community and restoring balance with the natural environment. Investing the time, care and resources in such a restoration project would regenerate ecosystem function, reconnect people to place, and build an overall better quality of life for people living and working in and around Mākena Mauka.

The leeward dryland forests of Haleakalā's lower slopes were expansive, and regenerating them provides an opportunity for comprehensive work, with enough land, resources and time (generational) provided to that work. As noted below in "Public Access: Additional Park and Conservation Lands", lands will be set aside in perpetual conservation areas, and the applicant has committed to restoration of the dryland forest lands. Meanwhile, much of the undeveloped portions of the project area can incorporate the lowland dry forest ecosystem. The effects of that system's regeneration will spread through various other species, habitats, and ecosystems, rebuilding the resilience of biodiversity (Natural Area Reserve Systems, 2012, p. 10).

The regenerative work will require invasive species removal of non-native plants and ungulates, rebuilding healthy soils, attracting and holding moisture, and reseeding and nurturing native plants that will attract other native species such as pollinating insects and birds. Another important component of this work is the reconnection to traditional knowledge gleaned by observation and experience. Any archeological and cultural sites within the ecosystem provide additional reserves of information that can help locate appropriate planting areas and seasons, for example. To that end, when possible, the applicant should restore and reuse ancient loʻi, mala and ʻauwai. Investing in this future-focused work will require seed banks, nurseries, access to ongoing experiential and classroom learning, on-the-job training programs and volunteer service opportunities. (See "Elevate Local Needs.") Restoration projects can help build local capacity and a skilled workforce, strengthen relationships among community organizations and individuals, spur local businesses, build a shared responsibility for the environment, and lead to enduring social and environmental improvements (Kittinger et al., 2013).

Natural Resources Baseline Studies and Monitoring

Ahupuaʻa-wide native regeneration would need to include the integration of lineal descendants' traditional knowledge and experience, other scientific expertise, natural and cultural resources, traditional practices, and community from mauka to makai. For example, historic sites have been trampled and damaged by ungulates and humans over the years. By removing invasive species, both natural and cultural resources can be restored and maintained. By involving lineal descendants of the place, the opportunity to relearn and teach about these sites will help inform proper management, inspire more interrelated resource management collaborations, and preserve ancestral knowledge. Equally, native plant species will need to be reincorporated as the various environments-of-place dictate. As an example, native coastal plants will need to be part of landscaping and regeneration on properties along the coastline. This also will include project area lands in support of any community-based management areas along the coastline. Furthermore, soil erosion control helps the forest regenerative process by keeping healthy soil in

place to nurture native plants, channeling waterflow to ensure irrigation gets to the right plants or filters to the aquifer and ensuring that too much sediment does not flow into the sea and onto reefs. (See "Water Resources.")

Baseline studies of natural resources within and near the project area could be done so that regular qualitative studies and sampling can be conducted as part of stewardship of the integrated ecosystems. Annual or seasonal resource surveys and sampling will build a useful record and tool for current and future stewards of the mauka and makai resources. They will alert stewards about any positive and negative changes in the respective environment that can enable them to respond accordingly. Monitoring and documentation can be supported by community volunteers and can be used as staffed education and outreach opportunities, perhaps inspiring other large landholders and community members. Benefits of community involvement in this process include enhanced community capacity for environmental stewardship, greater awareness of the status of the surrounding environment and the local ability to improve it, increased understanding of the history and heritage of the area, and a heightened collective sense of kuleana to work together to improve and maintain the resources. (See "Elevate Local Culture and Community.")

Resource studies could include, but not be limited to, that of natural freshwater systems, marine and coastal areas, dryland forests, water conservation and use, and cultural access and perpetuation. These studies would provide for living documents that help to train and inform resource stewards, and to provide for education and outreach opportunities for and with community members. Once all of the baseline studies of natural resources and applicable public services have been analyzed and prioritized, action plans could be created and implemented. Leading with lineal descendants of Makena, traditional knowledge and local needs in this process would be integral for success.

Applicant's positive effects:

Some of this work has already begun through the applicant's compliance with Condition 19 of the County's Conditions in Zoning for the applicant (Maui Ordinance 3613, 2009). This condition already requires a specific resource sampling and monitoring program for coastal waters, with which the applicant maintains compliance. Quarterly sampling and reporting document the status of nearshore waters that are impacted by ground and surface water flow from upcountry, including from the project area. The reports help build a record for internal resource managers as well as for the Hawai‘i Departments of Health and of Land and Natural Resources, with which the applicant must file the reports.

Furthermore, Condition 38 (Id.) requires a baseline study of flora and fauna for each Shoreline Management Area (SMA) permit application, to list "all endemic, indigenous, and endangered species and their distribution" within the project area and shorelines along its makai boundary. Such a baseline study was produced of the applicant's coastal lands and provided to the County in 2010, and the applicant has prepared a new study for this EIS.

The Mākena Mauka project applicant already intends to set aside 30.368 acres as Dryland Forest, apply to change the zoning to Open Space, and include that land in a conservation easement. This area is included in Figure 26 and represents the location of the dryland forest management area described above.

The applicant also intends to place at least 100 acres – identified by archaeologists and flora and fauna consultants – for archaeology and native species (wiliwili) protection in a conservation easement. That area is labeled on Figure 26 as the Wiliwili Conservation Easement. It abuts the Mākena Mauka project area and is part of the Makena Resort U-1 project that is listed in Table 9: Cumulative Impacts.

Social impacts:

- Potential impacts of developing on and near the significant natural and cultural resources of Makena could be generational in the lost opportunities to practice and expand traditional ecological management skills.

Mitigations to consider:

- Evaluate the potential for a plan to regenerate and restore a leeward dryland forest ecosystem within Mākena Mauka, including traditional cultural knowledge and methods in the process.
- Establish and implement a strategy for conducting baseline and recuring surveys of natural resources within and near the project area in collaboration with local community members, including Makena lineal descendants.
- Continue conserving substantive lands for the perpetual preservation of natural and cultural resources similar to the conservation areas already identified.

Prioritize Lineal Descendants of Makena and the Moku of Honua‘ula

Prioritizing Native Hawaiian culture and knowledge requires learning about it and applying it, respectfully and with permission. Traditional cultural knowledge is not static; it is acquired through immersive observation, experience, and practice over time. It includes a symbiotic relationship with the environment, multi-generational members of a community, and spiritual connections (Kanehe, 2015, p. 1022). Not only is recognizing traditional and cultural access and practice part of the Hawai‘i Constitution, it also is a respectful start to seeking leadership for management of Hawai‘i’s resources.

The project area includes several significant historic, burial, and spiritual sites, which affirm that the area once supported large numbers of Native Hawaiians through successful ahupua‘a management and shared, respectful, and reciprocal actions. Those families whose long line of ancestors inhabited and cared for this place continue to advocate for its protection and care today. They know that every resource is connected and that every natural resource is a cultural resource to which they have familial kuleana.

A common refrain among respondents to the SIA Survey was to prioritize lineal descendants of the Makena area and the Honua‘ula moku. Testifiers at the EISPN scoping meetings stated that lineal descendants no longer feel welcome in the area and advocated that genealogical connections to the land should be more valued than monetary connections to the land. In both forums, requests for access to generational lands were heard, as well as the importance of sustaining a stewardship connection to the place that can only help with resources management. Descendants of people who evolved with this specific place have intrinsic stewardship knowledge, earned through the generational experiences of myriad environmental and human changes. On a more spiritual level, their traditional cultural and religious practices elevate connection to the place and knowledge and respect for the place and for them.

Applicant’s positive effects:

The Mākena Mauka team currently facilitates and engages with a Cultural Focus Group (CFG) that includes lineal descendants of the area. Founded in 2013, the CFG ensures that family representatives bring generational knowledge that can be used to collaborate with on-the-ground land stewards and leadership. By integrating and honoring the interconnected knowledge of each of the nine ahupua‘a – extending into the sea – that are included in the project area, property managers and eventual homeowners can only benefit. This group, their knowledge and advice, should not be seen merely as a group to schedule, consult and keep apprised, but should be respected and elevated as leaders in resource management. The CFG should be valued partners in honoring the place that their ancestors learned how to care for in a manner that enabled them and the resources to thrive.

The SIA team recommends co-creating and executing a formal, adaptive agreement with the CFG to document and prove a continuous intention to work together for shared goals. (See “Build Trust.”) The applicant’s leadership and staff will change over time, as will leadership and membership of the CFG. Taking the time to work through a long-term agreement enables future creativity and provides the benefits of alerting both parties to issues that need to be addressed to build trust in the current and long-term relationship. The collaboration required to work through those issues builds a foundation for avoiding and mediating future disagreements (The Nature Conservancy, Hawai‘i Marine Program, 2017). Creating, implementing, and appropriately adapting such an agreement and relationship emphasizes the importance of the relationship and “of clarity, inclusiveness and true collaboration” (Id., at 13).

Respect for the people and resources of the place should be ubiquitous throughout the property and should be the foundation upon which future homeowners build and live their lives while on the property. Collaboration with the CFG and their families can best ensure that their values lead the discussions and birth the methods for regenerating and then maintaining native resources,

honoring the history of people and place, and respecting that their culture is alive, continuing to evolve and remaining invaluable to the future of Maui. Because people are integral components to ecosystems in Hawai‘i, everyone who lives and works in this space should be privileged with – and given the opportunity to honor – the history, values and restorative practices of lineal descendants of the area.

Both the environment and Makena families desire the return of the ancestral quiet of Makena. Both deserve to feel respected and welcome, and both require space and time for regular rest and restoration, together. With that peace comes a reverence for the natural and cultural spaces, and the ability to care for them and each other. Multi-generational spaces that encourage the transfer of information and practices, storytelling, and speaking in ‘olelo Hawai‘i become Hawaiian spaces again that are protected and nurtured (PBR Hawaii & Associates, 2018). Once the people, native plants, freshwater springs, limu and other marine resources have been welcomed home, then the place can once again feed the lineal descendants, spiritually and physically.

Social impacts:

- Additional development in the Makena area could further limit the local community’s access to respectful and accurate opportunities to learn about Native Hawaiian history, living practices, placenames, etc. from the lineal descendants of the place.
- The proposed development could, even unintentionally, limit access to the lineal descendants of Makena, for whom the place is a generational, cultural home.

Mitigations to consider:

- Actively examine the opportunity to co-create and execute a formal, adaptive agreement with the CFG to document and prove a continuous intention to work together for shared goals.
- Develop a plan to designate perpetual access to and use of cultural areas and resources for Makena lineal descendants.
- Create spaces where descendants of the area and people with a genealogical relationship to the place are comfortable living, practicing and learning their culture.

Mākena Mauka Draft EIS appended reports for additional analysis & information:

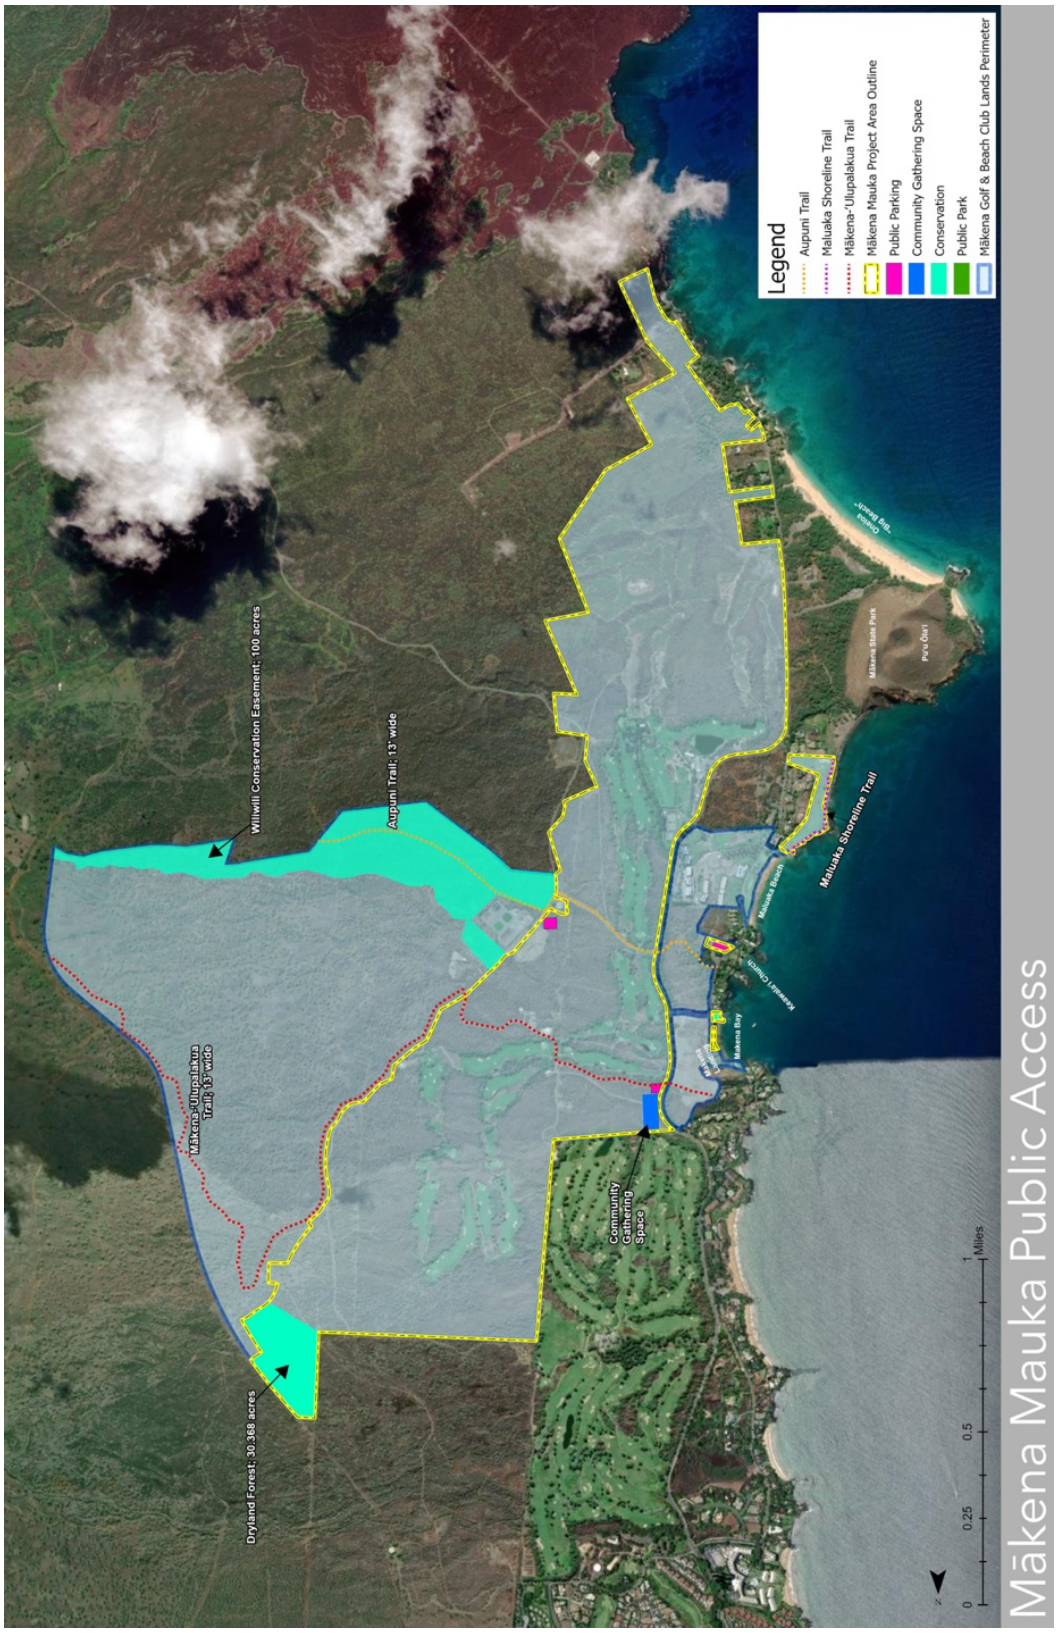
Public Access

Requests for facilitating public access onto and near the project area consistently wove through EISPN scoping testimonies and SIA survey responses. Participants variously requested access and sometimes gathering rights for subsistence, cultural practice and recreation. Next steps and on-going work by the applicant should continue to encourage local community members and

residents to return comfortably to the area. Such encouragement should be informed by community outreach about, and controls that protect, the area's natural and cultural resources. (See "Preserve Natural Resources" and "Overcrowding Prevention and Further Analysis.")

Public Trails



Public testifiers in the EIS scoping process and participants in the SIA survey requested ensured access for cultural purposes and for the public to the natural beauty and resources of Makena, mauka and makai.

Applicant's positive effects:

Each of the following public trails have been committed to by the applicant and can be found in Figure 26:

- The County requested that the applicant provide and maintain a perpetual, public shoreline trail "between the shoreline boundary and the mauka boundary" of their property (Maui Ordinance 3613, 2009, Condition 33). In 2015, the applicant cleared and restored approximately 1,600 lineal feet (equal to approximately 490 meters or a third of a mile) of the Maluaka Shoreline Trail, which runs between Maluaka Beach Park and Oneuli Beach. The applicant has committed to relocating the shoreline trail inland, where possible, in the face of sea level rise, which has not yet impacted the trail.
- The applicant has committed that Mākena-ʻUlupalakua Trail will be 13-feet wide, including a total of five feet of buffers, and will be placed into a reputable land trust for future management.
- The applicant has further committed that the shorter Aupuni Trail also will be 13-feet wide, inclusive of a total of five feet of landscape buffer.
- To help address such EISPN scoping and SIA survey issues as consulting with lineal descendants, the SIA team urges the applicant to ensure that any signage related to these trails incorporates the traditional names of the place and shares information that the lineal descendants of the place help to provide and to check for accuracy.
- To further help address the public calls for preserving natural resources, the SIA team urges the applicant to work toward removing invasive plant species along the trails and buffering the trails with native plants to help prevent human foot traffic from causing further spread of invasives.

Figure 26. Public access map

Public Beaches

Applicant's positive effects:

In 2013, four years after the approval of the applicant's Conditions in Zoning, the applicant had funded the required plan for development of Makena State Park and had submitted the plan to Hawai'i's DLNR and Maui's Department of Parks and Recreation (Maui Ordinance 3613, 2009, Condition 34). The plan included analysis of possible recreational uses, public parking and facilities, and landscaping strategies.

More expansively, Condition 36 (Id.) requires the applicant – "for the life of the project" – to maintain all of the following beach park areas: Makena Landing, North Maluaka and South Maluaka. These are the beaches referenced for carrying capacity studies in "Overcrowding Prevention and Future Analysis" and in "Preserve Natural Resources". Also, as noted in the "Additional Park and Conservation Lands" subsection below and on Figure 26, the applicant not only is maintaining these areas, but also adding to public access, parking and lands around all of these beaches.

Alternative Access Methods (Bicycle and Pedestrian)

As noted in the Maui Island Plan, one of the island's values is to "[e]stablish a sustainable transportation system that includes multiple modes, including walking, biking, and mass transit, as well as automobile-based modes" (Maui County, 2012, p. 1-16). To meet the need for non-vehicular traffic and safety for people accessing the area using alternate means, the applicant should expand the sidewalk on the mauka (mountain side) from the northernmost section of Makena Alanui Road that abuts their project area to Makena State Park and expand the bike lane from Makena State Park to where it currently ends at the tennis courts. Such actions would also assist in meeting the requirements of Condition 10 of the applicant's Condition in Zoning (Id.), which calls for pedestrian and bicycle paths within the project area and "fronting" it.

Public Parking

To ensure that all public trails, beaches, and parks connected to or within the project area are truly publicly accessible, the SIA team encourages the applicant to provide adequate, permeable parking stalls for access, as well as places to lock bicycles and safe access for bicycle riders and pedestrians. Incorporating permeable surfaces in parking areas would enable the filtering of rain and groundwater runoff over areas that commonly collect vehicle and tire dirt and seepage. It also allows for the flat area to be used safely for other purposes.

Applicant's positive effects:

Those parking stalls committed to by the applicant are noted on Figure 26. For example, the applicant committed to provide approximately 40 public parking stalls, with space for up to 25 additional cars, mauka of Makena Alanui Road to provide parking for both the Mākena-'Ulupalakua Trail and nearby beaches. Parking accommodations will be made at the base of the Aupuni Trail, next to the wastewater treatment plant. Condition 31 (Id.) also requires the construction of a total of 60 parking spaces at Maluaka Beach, with at least 10 at the north end of

the beach. The applicant has so far completed the 10 parking stalls along Makena Road, along with an additional 19 parking stalls along Honoiki Street.

Shuttles

Shuttles between beaches would be an asset as well for a specified, limited number of visitors (a possible result of the above-mentioned sustainable use studies) and improved public safety and emergency ingress and egress (fewer cars parked along the side of the Makena Alanui Road and near people's homes). This system could be part of what is researched in a sustainable use study. (See "Preserve Natural Resources")

Encouraging shuttle access within the Makena area can minimize the number of vehicles on the road, which would also minimize potential safety issues and conflicts between pedestrians and bicyclists. Given the issues provided by testifiers and survey respondents, the shuttle program should include providing access to local people via the shuttle and specific parking spaces. It also would minimize negative parking impacts on local people outside of designated parking areas (i.e., preventing dangerous on-street parking that hampers emergency entry and departure of the area for emergency vehicles and during an evacuation). (See "Emergency Evacuation.")

Applicant's positive effects:

The applicant committed to researching, developing, and providing a shuttle system to and from new parking lots mauka of Makena Alanui Road and the nearby beach parks, including Makena State Park.

Additional Park Lands

According to Condition 35 (Maui Ordnance 3613, 2009), the applicant also must coordinate with DLNR and DPR specifically to "renovate and beautify Makena Landing".

Applicant's positive effects:

In 2013, the applicant received a Shoreline Setback Determination for Makena Landing and a Special Management Area Minor permit. The 2013 plan has continued to evolve based on ongoing input from Mākena's CAG and the CFG. Consultation also continues with Maui County about the full work plan, accessibility, and other improvements.

The applicant has made some landscaping improvements to date, including replacing invasive kiawe trees with seven native trees, and has added parking. Regular maintenance of the landscaping and irrigation, cleaning of the public restrooms, and other building maintenance continues by the applicant, which also seeks to create and provide updated signage that educates locals and visitors about the area's culture and history.

In compliance with another Condition in Zoning, the applicant added 0.66 acres of land to expand a beach park at the south end of Maluaka Beach. (Id., Condition 32.) The combined total of the park area now meets the condition's requirement for a total of at least 1.5 acres being available for public use and beach access, and the donation was formalized and recorded in 2018

with a "Declaration of Restrictive Covenants for Park Purposes". This beach park area is documented on Figure 26.

Furthermore, the applicant has donated additional lands for public and conservation use between Makena Landing and Maluaka Beach. The applicant has identified a 0.455-acre parcel south of Makena Landing that will be annexed into a Makena Landing Park agreement with Maui County. This parcel expands public park and beach access and is marked as park lands in Figure 26. Close to that parcel, the applicant has set aside approximately 0.42 acres, also fronting Makena Bay, as a future conservation area, as it is represented in Figure 26. Additional conservation lands were described in the "Preserve Natural Resources" section, above, and are shown on Figure 26 as the 100-acre Wiliwili and Dryland Forest Conservation Areas.

Social Impacts:

- Additional development of private land abutting public resources such as beaches, the ocean and coastal trails in the Makena area further impacts the welcome that local people feel, the integrity of their sense of place, and the quality and safety of their experiences within and among these natural resources.

Mitigations to consider:

- Ensure that any signage related to public trails and beaches that the applicant maintains incorporates the traditional names and information about the place, about which Makena lineal descendants are consulted.
- Continue to remove invasive plants along and within public trails, beaches, parks and conservation areas, buffering such locations as much as possible with native plants.
- Continue to seek and provide ways to make local people feel welcome and safe in the Makena area, including through expanding and encouraging alternative means of public access and parking (i.e., pedestrian, bicycle and shuttle).

Support the Mākena ʻŌiwi Resources & Stewardship Department

Participants in the SIA survey's short answer sections wrote of their support for how Mākena's ʻŌiwi Resources & Stewardship team members have brought Native Hawaiian perspectives and knowledge to the applicant's natural and cultural resource management. Some respondents also called for lineal descendants and others with cultural knowledge about the Makena and Honuaʻula areas to be considered for positions of leadership at, and continued to be hired by, the Mākena Golf & Beach Club. These actions would show the applicant's sincere recognition of the importance of traditional stewardship of the project area's expansive natural and cultural resources, perpetuation of cultural practices on site, and intergenerational training of that

knowledge, experience and practice. One representative example of a broad request to authenticate this recognition comes from the SIA survey and reads:

> *"You must solve for a regenerative Honua'ula ecosystem, you must make sure anyone who comes across any aspect of your development sees deep love and commitment to the Makena culture and environment, and make very meaningful gives towards sustained support of the ecosystem and the local people being able to maintain their relationship with the natural and cultural resources of the place."*

Staffing

Applicant's positive effects:

Currently, the Mākena 'Ōiwi Resources & Stewardship team, which provides for intergenerational learning in cultural practices, including resource management, is staffed by people who have genealogical ties to Honua'ula and Makena. That foundation and their respective and interwoven families nurture a singular sense of purpose and kuleana to care for each other and the place. They have an expanding opportunity to learn from their familial homeland and to re-tap into the source of ancestral knowledge in Honua'ula and Makena. Sustainable resource management requires a reliable and adequate pipeline of future leaders with ties to the place (PBR Hawaii & Assoc., 2018).

Traditional and constant awareness and categorizing of kilo – applying observations of natural phenomenon to cultural practices – by descendants of the place adds to generations of experiential knowledge. While the climate, environment, ecosystems, habitat and human demographics have changed over the same hundreds of years, the land and nature provide evidence of past indigenous success in this space and how the people evolved with this place. Being part of that evolving continuum of knowledge and able to inform and support each other while skills are relearned or improved upon is invaluable. This working environment and community also enables a greater likelihood of employee retention, skilled workers' health and overall satisfaction, and the development of next-generation leadership (Kittinger et al., 2013).

As such, the Mākena 'Ōiwi Resources & Stewardship team has been implementing and should continue to implement the restoration of interconnected native ecosystems and their diverse habitats. (See "Preserve Natural Resources: Dryland Forest.") They work extensively with Mākena's Aloha Makena Foundation, Mākena's Cultural Focus Group (CFG) and Community Advocacy Group (CAG), the lineal descendants of Makena and Honua'ula, and with other local communities. Their programs include, but are not limited to, maintaining Nāulu Farm and Hale Pili, collaborating with the Aloha Makena Foundation and Kīpaipai Community Archaeology & Stewardship Program, providing cultural accesses and practices, offering volunteer training and educational place-based service opportunities to school and community groups (through the Hana Kaulike program, which invites groups to apply to participate in intentional and informed physical labor), and managing cultural and natural resources in the project area.

Nāulu Farm

Applicant's positive effects:

A focal point of the Mākena ʻŌiwi Resources & Stewardship team is the continued development and maintenance of Nāulu Farm. The team repurposed part of an abandoned golf course – that had devolved into cinder and kiawe – into a multi-crop food farm that is also the beautiful backdrop to many Aloha Makena events. The layout of Nāulu Farm, named for the winds and cloud bridge that connect Haleakalā to the sacred island of Kahoʻolawe, reflects Nāulu on the land by following the sun's path through each day and season. Waiʻaka pond, which is an enclosed system of fish, insects and plants, also is a reflection of clouds on the land. The farm supports native and food species, with a goal of feeding Mākena Golf & Beach Club membership with greens, herbs, and fruits from trees, bushes, vines and root systems. During the COVID-19 pandemic, the Mākena ʻŌiwi Resources & Stewardship team brought farm boxes to the community, exemplifying the deep traditional value of caring for one's community.

Including seedlings of native species from family homes, ceremonial and healing plants, flowers and fruits for cultural use and feeding community, and a design that requires reverence for applied kilo: this farm is the team's piko (center/source/homebase). The goal is to have it become both sustainable and sustaining. With about a half of an acre being farmed on a 1½-acre footprint, the potential for expansion should be studied. With enough trained and in-training staff, feeding the Makena community a healthful native diet would become systemic, and it could easily expand to other landowners, creating opportunities for the trading of resources and knowledge.

The planned restoration of the dryland forest (See "Preserve Natural Resources") will also require a nursery and seed storage for native Makena plants to replace the eventually removed invasive species. A native plant nursery could also supply the applicant and homeowners with native landscaping plants and maintain the resources for Hale Pili.

Hale Pili

Applicant's positive effects:

The Mākena ʻŌiwi Resources & Stewardship team learned from and assisted Hōlani Hāna and Hālau Hale Kuhikuhi – led by Master Hale Builder Francis Sinenci – in building a traditional hale, or house, at the entry to Makena. The practitioners invested in the team members' ability to mālama (care for) and maintain the hale into the future by teaching them protocol, history, methods and skills. Named Hale Pili to express the intention of those caring for and working under the protection of the hale to grow pili (connected) to the place and each other, the hale's presence also exemplifies a pili to the history of these lands that continues to expand into the future.

That history returns to life a fondly remembered hālau waʻa (learning center of canoes) that had been the home of a revered fishing uncle in Makena who brought together other Makena fishing families to learn traditional practices, how to kilo their moku's multiple environments, and how to properly mālama the encompassed natural and cultural resources and each other. Fishing families knew the importance of the canoes that carry fishers, their tools, and their fish safely to and from the sea, connecting them to subsistence and to Molokini and Kahoʻolawe.

During a dedication ceremony in 2025 that honored the land and heritage upon which the hale was built, the builders and the purpose of this hale, the Mākena ʻŌiwi Resources & Stewardship team officially received the kuleana to maintain and manage Hale Pili. The team has committed to ensuring that any use of the space will maintain the integrity of its cultural significance and purposes. Hale Pili is intended to be a culturally attuned space where community members who are committed to the reciprocal care for the resources and people of Makena can find peace, fellowship and opportunities to learn, mālama, and steward those resources, using traditional knowledge. For example, those employees, volunteers, and expert practitioners who seek to gather, share, and apply traditional knowledge toward regenerating dryland forests, removing invasive species, caring for culturally significant sites, managing the integrated ecosystems of land and sea, feeding the community, and providing appropriate cultural outreach could gather here. Hale Pili already hosted, through its construction, community days of learning and service toward building the hale and reverence for it.

Social impacts:

- In further developing a large amount of private land, the applicant potentially impacts the opportunities of lineal descendants of Makena and Honuaʻula in particular – and Native Hawaiians of Maui in general – from the experiential learning opportunities of natural resources management and traditional farming.
- The proposed development could create the potential impact of limiting job opportunities for lineal descendants of Makena and other Native Hawaiians to resort maintenance, service and administration jobs, further excluding the options for immersive jobs in traditional resources management and subsistence, and in that of conducting and teaching cultural practices in a pono way that honors the ancestral sources of that knowledge.

Mitigations to Consider:

- Explore methods through which the employment, internship and scholarship processes can help to educate and authentically embed and exemplify traditional values and cultural knowledge in Mākena Golf & Beach Club.
- Encourage on-site intergenerational learning and practicing of cultural knowledge, particularly for natural and cultural resource management and sustainable agriculture.
- Continue and expand the provision of programs that include appropriate cultural accesses and practice as well as volunteer service training and opportunities for project staff and residents in the project area, including but not limited to support for Nāulu Farm and Hale Pili.

Mākena Mauka Draft EIS appended reports for additional analysis & information:

- Agricultural Impact Assessment
- Archaeological Literature Review & Field Inspection
- Cultural Impact Assessment
- Flora & Fauna Report
- Sustainability Report

Water Resources

Many participants in both the EIS scoping process and the SIA survey noted that a lack of freshwater in South Maui remains a concern. Many residents face limits on their own use and have witnessed the fierce impacts of wildfires on drought-impacted lands. They want evidence that future developments like Mākena Mauka will not increase that deficit.

While the moku of Honua‘ula has long held a dry landscape, with water only visible as dew or low-lying clouds when the native dryland forest was in place, or during winter rains when ephemeral streams flow, those natural water cycles have been disrupted by a recent history of ranching, mono-culture agriculture and non-native landscaping in the area. This has resulted in fire-prone landscapes, flood-prone low-lying areas, and marine life in danger of being smothered by pollution and sediment from uncontrolled runoff during severe storms.

The project area retains several large and small gulches that allow for ephemeral streams to flow to the sea when enough rain accumulates. Maintaining those natural waterways and ensuring that they are planted in native species will help to slow down soil loss and prevent washing sediment onto downslope nearshore reefs, drowning coral ecosystems in runoff made up of unbalanced nutrients and detritus. Replanting and landscaping upland and coastal properties with location-appropriate native plants will help the area retain water, recharge aquifers and perpetuate reef health. (See “Preserve Natural Resources.”)

Every ecosystem’s health requires clean freshwater, including the sea. Humans, as part of all of those ecosystems, also require clean, fresh water. Proper management of ‘āina will direct, filter and protect the ground and surface water that runs to the sea. Learning about the natural water processes of the place is an integral element in regenerating natural ecosystems and in using and re-attaining traditional knowledge. Native Hawaiian expertise must be integrated with other scientific methods for managing the environment as it has evolved, and as it continues to evolve in the face of climate change. As such, the SIA team recommends that the applicant invest in the creation and implementation of a master drainage plan: mauka to makai. The plan should include a baseline documentation of existing resources and documentation of steps that would need to be taken toward the goal of a successful return to healthy, interconnected ecosystems. (See “Preserve Natural Resources.”) Management of these resources further assists in the creation of reciprocal jobs for the place and people of the place. (See “Elevate Local Needs.”)

Nearby large landowner Haleakalā Ranch created a conservation easement over 5,320 acres of its property in 1983 for the purposes of reclaiming the native habitat and natural systems of Waikamoi. After fencing the area, removing ungulates and other invasive plant and animal species, reinstating native species, monitoring, and maintaining the area, it has been estimated that the value of groundwater recharge alone due to watershed conservation work in Waikamoi, on the eastern flank of Haleakalā, was $36,200,000.00 in 2018 (The Economic Research Organization at the University of Hawai‘i, 2018, p.1). That conservation also prevented approximately 1,540 tons of sediment from reaching the ocean as of 2017 (Id., p. 14). While the preserve includes a native rainforest versus a dryland forest, it exemplifies the short- and long-term value of restorative conservation work on the freshwater supply. Researchers found that approximately half of the recollected freshwater in Waikamoi recharged aquifers and the other half flowed downslope as surface water, all of which is needed in Honua‘ula (Id., p. 7).

As the applicant plans its development, the SIA team recommends that it pursue documentable ways to build water conservation into their infrastructure, landscaping and overall design. For example, as part of adaptation to climate change, drainage plans should incorporate more than the minimum size and quantity of retention basins currently required by most rules and regulations. Additionally, Condition 27 of the applicant's conditions in zoning (Maui Ordinance 3613, 2009) requires the provision of a water conservation plan, including dual water lines for the use of non-potable water for landscaping and other irrigation needs. Part of the "Build Trust" mitigation topic would include reporting out to the community any water conservation commitments and implementations as they occur.

Applicant's positive effects:

The applicant already is creating R-1 water (recycled to the highest level) and distributing what they have for irrigation purposes. The supply level will remain low until there are enough people living in the area to increase the wastewater inputs, at which point the applicant commits to continue using all of the R-1 water first.

Social impact:

- As Maui residents face increased drought conditions and water-use restrictions, the applicant could use its large development project to provide positive social impacts by exemplifying the implementation of recycled and catchment water use, and of traditional knowledge for potential ground water recharge, surface water management, and native plantings.

Mitigations to consider:

- Invest in the creation and implementation of a master drainage plan – mauka to makai – that incorporates traditional knowledge of Makena and Honua'ula.
- Pursue documentable ways to build water conservation into the infrastructure, landscaping and overall design, which can be shared with the broader community as a shared learning opportunity.
- Encourage project-wide and personal yard landscaping with native, drought -resistant plants that can be irrigated with catchment or reclaimed water that is safe enough to then be further filtered by the ground and enter the aquifer.

Wildfire Preparation

Due to the recent wildfire disasters on Maui, persistent drought conditions that enable fire-prone vegetation, increasingly high temperatures, more common gusty winds, and human-caused fires, the SIA team recommends that the applicant proactively create and enact a fire assessment and prevention plan to manage and lower fire risk for its residential development and surrounding lands and properties. To do so, based on existing protocols, the applicant could continue to update its fire mitigation practices in collaboration with the Maui County Fire Department, Maui Emergency Management Agency, Hawai‘i Wildfire Management Organization, and neighboring landowners, among others.

The largest source of fuel for such fires is the non-native, often invasive vegetation that has overtaken native forests like Honua‘ula’s once native dryland forests. Much of that region has been repopulated with invasive dry scrub forest, including dry grasses, koa haole and kiawe, all of which is often far from water, electricity that could help pump water, and access roads. One of the most proactive and long-term wildfire prevention tactics includes removing invasive species fuel loads and reseeding and restoring as much of the area in native plants as possible. Future homeowners and residents should be educated and made aware of fire hazards and of their community responsibility to take precautions and report hazardous conditions to enhance community safety.

Fire mitigation techniques include consistently maintained, graveled 50-foot-wide fire breaks along internal fence lines; around native seed storage, plant nurseries and pili grass fields; and around the perimeter of the property to help protect from and prevent fire spread inside and outside the project area. Collaboration and coordination with neighboring landowners can enable more efficient firebreaks and more consistent surveys to identify and address mutual fire hazards like dry grasses. For example, integrating grazing operations with sheep or cattle from ‘Ulupalakua Ranch could help control non-native vegetation along fence lines and in large tracts of land nearby, such as those in the Mākena Ranch Estates that are under development. Deer fencing and native plantings help reduce invasive, fire-prone grasses. Vegetation should be cleared during wet seasons, and all plant growth should be removed within firebreaks and along fence lines to help allow for access and prevent fire spread.

Applicant’s positive effects:

In 2017, the applicant enabled the Hawai‘i Department of Defense’s installation of a public emergency siren at the applicant’s wastewater treatment plant. The applicant also installed an emergency siren at Makena State Park.

The applicant will continue to follow Hawai‘i’s Fire Code standards, installing an appropriate number of fire hydrants for its communities and enabling their private water system with backup generators to ensure firefighting water access by allowing their system to be connected to the county’s main for emergencies. Creating a fire response protocol for the extensive dryland forests and farm areas should occur while planning infrastructure, irrigation, and roadways. Prior to the completion of the development, a water truck on site to help mitigate dust particulates should also be available to drench fire breaks during high-risk periods.

Social impacts:

- In a drought-prone area, with temperatures and winds increasing, any development adds fuel to wildfire possibilities and to public anxiety during continued social impacts from the 2023 wildfires.

Mitigations to consider:

- Consult with relevant local, county and state agencies, as well as neighboring landowners, to collaborate on such elements as firebreaks and controlling and removing non-native, fire-prone vegetation, and to encourage fire prevention strategies and safety.

Appendix A.

Mitigation Topics Origin and Table

EIS Preparation Notice Scoping Testimony

The Mākena Mauka project team first published its Environmental Impact Statement Preparation Notice (EISPN) on June 8, 2024, scheduling one public scoping meeting. Responding to public requests, it then republished the notice on June 23, 2024, adding a second public scoping meeting opportunity and extending the comment period by the allowed additional 30 days to August 7, 2024. The two public scoping meetings for the EISPN were held on July 1, 2024 (at Malcolm Center in Kīhei) and July 30, 2024 (at Lokelani Intermediate School cafeteria in Kīhei), both locations in South Maui, which is the same region as that of the Mākena Mauka project.

The Social Impact Assessment (SIA) team reviewed annotated transcripts from these meetings, extracting key issues and recommendations shared by those who participated. Salient issues focused on concerns about limited resources (e.g., housing, water), congestion and overcrowding (e.g., traffic, wastewater), and physical impacts on local people (e.g., displacement, loss of access to beaches). Discussions focused not only on the impacts on local people – but also on native flora and fauna, the land, and other environmental concerns.

Provision of affordable housing, improvement of roadways and evacuation routes, and preserving public access were all noted as social mitigation recommendations. Focusing on environmentally sustainable landscaping and taking into consideration potential run-off pollution and the preservation and planting of local plants were all discussed as ways to decrease negative impacts on the environment. Regardless of recommendations to lessen the negative impacts of Mākena Mauka, the overarching requests from the participants who engaged in either or both public scoping meetings were overwhelmingly not to build Mākena Mauka at all.

Below is a list of concerns generated by grouping statements together on like-topics. Any such categorization is subjective by nature, so we have alphabetized the following list to ensure no intimation of ranking. To triangulate these categories and topics, the same words were used when analyzing the SIA short answer questions through the coding analytic process.

- Access to Public and Private Areas
- Air Quality
- Climate Change
- Community Consultation
- Consultation with Lineal Descendants
- Consultants
- Cultural Impacts
- Cumulative Impacts
- Displacement
- Drainage
- Dryland Forest Impacts
- Economic Impacts
- EIS Preparation Notice
- Evacuation Plan
- Existing Environmental Conditions
- Fire Risk

- Flora and Fauna
- General Environmental Impact
- Giving Back
- Gulches, Streams, and Wetlands
- Historic and Archaeological Impacts
- Housing Affordability/Value of Homes
- Lack of Need or Want for Project
- Legitimacy of Land Ownership
- Level of Detail in EIS Preparation Notice
- Limited Resources
- Marine Environment
- Mental Health Impacts
- Native Hawaiian Access Rights
- Natural Landforms
- Not Honoring Promises
- Open Space
- Other Utilities and Infrastructure
- Overdevelopment, Overtourism
- Readability of Maps in EIS Preparation Notice
- Scenic Views
- Social Impacts
- Soil Impacts
- Timing
- Traffic and Roadways
- Use of Land/Homes (e.g., for locals vs. for those off-island)
- Wastewater Treatment
- Water Availability
- Wind Impacts

Public Concerns, Mitigation Topics and Proposed Mitigation Strategies

The 13 mitigation topics that are described in the Social Impacts and Proposed Mitigation Strategies section of the Draft SIA are labeled below with horizontal, gray headings. Under each of these headings are listed the relevant:

- "Concerns from EISPN Scoping," as listed above;
- "Themes, Categories and Sub-analyses Results from SIA Survey," as listed and described in the "Findings and Results of Social Impact Assessment Survey" section of this report; and
- When applicable, titles of the other appended Mākena Mauka Draft EIS Consultant Reports that are related to and will inform these topics.

The remaining concerns elicited from the EISPN scoping meetings that were listed above and are not included in Table 1 because they are addressed in or by the Draft EIS itself, including:

- EIS Preparation Notice
- Existing environmental conditions
- General environmental impact
- Legitimacy of ownership
- Readability of maps in EIS Preparation Notice

Appendix Table A1. Public concerns and mitigation topics

Affordable Housing	
Concerns from EISPN Scoping	- Economic Impacts - Housing affordability/value of homes - Mental Health Impacts - Other utilities and infrastructure
Themes, Categories and Sub-Analyses Results from SIA Survey	- Affordable housing with priority for local people - Build affordable housing - Lack of affordable housing - Limited affordable housing - Listen to local people and prioritize their needs to continue living and thriving on Maui - Too many luxury homes that are only inhabited a short period of time each year
Related Mākena Mauka Draft EIS Consultant Reports	- Design Guidelines - Economic and Fiscal Impact Analysis Report - Market study - Preliminary Engineering and Drainage Report - Sustainability Report - Water Resources Report
Build Trust	
Concerns from EISPN Scoping	- Giving back to local communities - Not honoring promises, breaking promises
Themes, Categories and Sub-Analyses Results from SIA Survey	- There are some opportunities to mitigate the negative impacts of Mākena Mauka, but these mitigations do not outweigh the negative aspects, and it is not trusted that the mitigations will be honored
Elevate Local Culture and Community	
Concerns from EISPN Scoping	- Community consultation - Consultation with lineal descendants
Themes, Categories and Sub-Analyses Results from SIA Survey	- Displacement of local people - Oversaturation of wealthy non-Maui residents - Not good for the local people, land, or resources of Maui
Related Mākena Mauka Draft EIS Consultant Reports	- Agricultural Impact Assessment - Archaeological Literature Review & Field Inspection - Cultural Impact Assessment - Flora & Fauna Report - Sustainability Report

Elevate Local Needs	
Concerns from EISPN Scoping	- Community consultation - Consultation with lineal descendants - Displacement - Economic Impact - Giving back - Lack of need or want for project - Mental health impacts - Scenic views - Timing (e.g., with Lahaina fires and Kīhei flooding) - Use of land/homes (e.g., for locals vs. for those off-island)
Themes, Categories and Sub-Analyses Results from SIA Survey	- Lahaina should be rebuilt before additional luxury developments - Listen to local people and prioritize their needs to continue living and thriving on Maui - The needs of local people and land of Maui should be prioritized and centered first and foremost when it comes to development decisions on Maui - Provide resources to rebuild Lahaina, and give back to local community - Resources for building should go to prioritize local communities
Related Mākena Mauka Draft EIS Consultant Reports	- Agricultural Impact Assessment - Economic and Fiscal Impact Analysis Report - Flora & Fauna Report - Market Study - Sustainability Report - Traffic Impact Analysis Report - View Analysis - Water Quality and Marine Biology Assessment Report
Emergency Evacuation	
Concerns from EISPN Scoping	- Climate change - Evacuation plan
Themes, Categories and Sub-Analyses Results from SIA Survey	- Build new, safe roads and evacuation routes - Unsafe evacuation routes exacerbated by more people
Related Mākena Mauka Draft EIS Consultant Reports	- Preliminary Engineering and Drainage Report - Traffic Impact Analysis Report - Transportation Management Plan
Institutionalize and Expand Mākena's Aloha Makena Foundation	
Concerns from EISPN Scoping	- Community Consultation - Cultural impacts - Giving back - Historic and archaeological impacts - Native Hawaiian access rights
Themes, Categories and Sub-Analyses Results from SIA Survey	- Consult with lineal descendants and Native Hawaiians of the place - Limited access to cultural land and spaces, beaches, and oceanfront when more luxury developments are built - The needs of local people and land of Maui should be prioritized and centered first and foremost when it comes to development decisions on Maui - Preserve Mākena Mauka's native flora and fauna

Related Mākena Mauka Draft EIS Consultant Reports	- Archaeological Literature Review & Field Inspection - Cultural Impact Assessment - Sustainability Report
Overcrowding Analysis and Prevention	
Concerns from EISPN Scoping	- Cumulative Impacts - Displacement - Over-development/ over-tourism - Scenic views - Traffic and roadways
Themes, Categories and Sub-Analyses Results from SIA Survey	- Overcrowding on beaches and roads
Related Mākena Mauka Draft EIS Consultant Reports	- Design Guidelines - Market Study - Noise Assessment Report - Preliminary Engineering and Drainage Report - Transportation Management Plan - View Analysis - Visitor Trends at Mākena and Wailea Beaches Using Azira Data (Appendix D to this Social Impact Assessment) - Water Quality and Marine Biology Assessment Report
Preserve Natural Resources	
Concerns from EISPN Scoping	- Air Quality - Climate change - Drainage - Dryland forest impacts - Flora and fauna - Gulches, streams and wetlands - Limited resources - Marine environment - Natural landforms - Open space - Scenic views - Soil impacts
Themes, Categories and Sub-Analyses Results from SIA Survey	- Preserve Mākena Mauka's native flora and fauna
Related Mākena Mauka Draft EIS Consultant Reports	- Air Quality Assessment Report - Archaeological Literature Review & Field Inspection - Design Guidelines - Flora and Fauna Survey - Groundwater Resources Impact Assessment Report - Preliminary Engineering and Drainage Report - Sustainability Report - View Analysis - Water Quality and Marine Biology Assessment Report

Prioritize Lineal Descendants of Makena and the Moku of Honua‘ula	
Concerns from EISPN Scoping	- Community consultation - Consultation with community and lineal descendants - Cultural impacts - Historic and archaeological impacts - Native Hawaiian access rights - Scenic views
Themes, Categories and Sub-Analyses Results from SIA Survey	- Consult with lineal descendants of the place - The land, flora, fauna, natural resources, and cultural history of Maui need to be protected and prioritized - Limited access to cultural land and spaces, beaches, and oceanfront when more luxury developments are built
Related Mākena Mauka Draft EIS Consultant Reports	- Archaeological Literature Review & Field Inspection - Cultural Impact Assessment - Sustainability Report - View Analysis
Public Access	
Concerns from EISPN Scoping	- Access to public and private areas - Open space preservation and access
Themes, Categories and Sub-Analyses Results from SIA Survey	- Ensure Mākena Mauka remains accessible by locals - Limited access to cultural land and spaces, beaches, and oceanfront when more luxury developments are built - Preserve access to open space, beaches, oceanfront for access by local people
Related Mākena Mauka Draft EIS Consultant Reports	- Archaeological Literature Review & Field Inspection - Flora and Fauna Survey - Transportation Management Plan
Support the Mākena ‘Ōiwi Resources & Stewardship Department	
Concerns from EISPN Scoping	- Cultural impacts - Historic and archaeological impacts - Native Hawaiian access rights
Themes, Categories and Sub-Analyses Results from SIA Survey	- Consult with lineal descendants of the place - The land, flora, fauna, natural resources, and cultural history of Maui need to be protected and prioritized - Limited access to cultural land and spaces, beaches, and oceanfront when more luxury developments are built - The needs of local people and land of Maui should be prioritized and centered first and foremost when it comes to development decisions on Maui - Preserve Mākena Mauka’s native flora and fauna
Related Mākena Mauka Draft EIS Consultant Reports	- Archaeological Literature Review & Field Inspection - Cultural Impact Assessment - Flora & Fauna Report - Sustainability Report
Water Resources	
Concerns from EISPN Scoping	- Climate change - Other utilities and infrastructure - Wastewater treatment - Water availability

Themes, Categories and Sub-Analyses Results from SIA Survey	- Concerns about limited resources in Maui, and Mākena Mauka will make the problems worse - Establish regulations on water use by luxury developments and homeowners - Limited fresh water: residents already living with water restriction regulations
Related Mākena Mauka Draft EIS Consultant Reports	- Design Guidelines - Groundwater Resources Impact Assessment Report - Preliminary Engineering and Drainage Report - Sustainability Report - Water Quality & Marine Biological Report
Wildfire Preparation	
Concerns from EISPN Scoping	- Climate change - Fire risk
Related Mākena Mauka Draft EIS Consultant Reports	- Design Guidelines - Flora and Fauna Survey

Appendix B.

Mākena Mauka Social Impact Assessment Survey

Mahalo for helping us to learn what is important to you!

This section is about you.

1. What is your age in years?

- ○ Less than 17 years of age
- ○ 18 - 24 years
- ○ 25 - 34 years
- ○ 35 - 44 years
- ○ 45 - 54 years
- ○ 55 - 64 years
- ○ 65 years or older
- ○ Prefer not to answer

2. Which racial/ethnic group(s) do you belong to? (Select ALL that apply)

- ☐ Caucasian
- ☐ Chinese
- ☐ Filipino
- ☐ Native Hawaiian
- ☐ Japanese
- ☐ Korean
- ☐ Micronesian (please specify) _____
- ☐ Pacific Islander (please specify) _____
- ☐ Other: _____
- ☐ Prefer not to answer

3. Of the racial/ethnic group(s) you belong to, which do you most closely identify with? (Select ONLY ONE)

- ○ Caucasian
- ○ Chinese
- ○ Filipino
- ○ Native Hawaiian
- ○ Japanese
- ○ Korean
- ○ Micronesian (please specify) _____
- ○ Pacific Islander (please specify) _____
- ○ Other: _____
- ○ Prefer not to answer

4. With what gender do you identify?

- ○ Female
- ○ Male
- ○ Non-Binary
- ○ Other: _____
- ○ Prefer not to answer

5. What is your combined yearly household income?

- ○ $0 – $49,999
- ○ $50,000 – $99,999
- ○ $100,000 – $159,999
- ○ $160,000 – $199,999
- ○ $200,000 – or more
- ○ Prefer not to answer

6. What is the highest level of school you have completed or the highest degree you have received?

- ○ Less than high school degree
- ○ High school degree or equivalent (e.g., GED)
- ○ Some college but no degree
- ○ Associate degree
- ○ Bachelor's degree
- ○ Graduate degree
- ○ Prefer not to answer

7. Which of the options below best describes your employment status?

- ○ Disabled, unable to work
- ○ Full-Time Employment (including self-employment)
- ○ Part-Time Employment (including self-employment)
- ○ Retired
- ○ Unemployed, looking for work
- ○ Unemployed, not looking for work
- ○ Prefer not to answer

8. If you currently have an occupation, what is it?

_____

9. Please describe your marital status.

- ○ Married
- ○ Widowed
- ○ Divorced
- ○ Separated
- ○ Never married
- ○ Prefer not to answer

10. How many people live in your home, including yourself?

_____

11. How many children, aged 17 or younger, including yourself, live in your home?

_____

12. How many Elders, aged 65 or older, including yourself, live in your household?

_____

13. What is your zip code of residency?

_____

14. How long have you lived in Hawai‘i, up to today?

- ○ Less than 1 year
- ○ 1-5 years
- ○ 6-10 years
- ○ 11-15 years
- ○ 16-20 years
- ○ More than 21 years
- ○ I don’t live in Hawai‘i
- ○ I used to live in Hawai'i but don't currently live here

15. If you used to live in Hawai'i but don't currently live here, how long ago did you live in Hawai‘i?

_____

16. If you used to live in Hawai‘i but don't currently live here, how long did you live in Hawai‘i before you moved away?

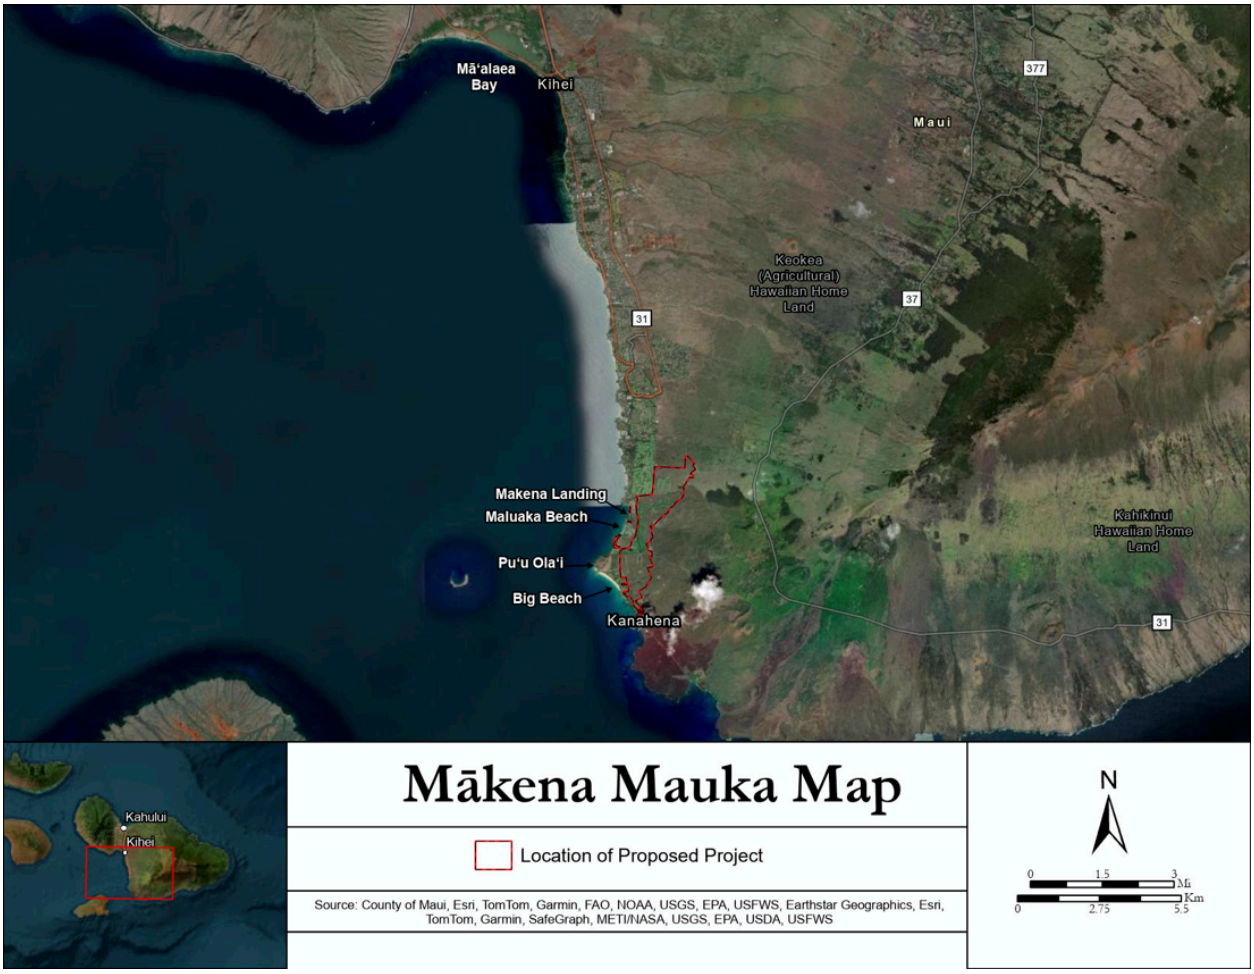
_____

17. How long have you lived on Maui, up to today?

- ○ Less than 1 year
- ○ 1-5 years
- ○ 6-10 years
- ○ 11-15 years
- ○ 16-20 years
- ○ More than 21 years
- ○ I don’t live on Maui
- ○ I used to live on Maui but don't currently live here

18. How much of the year do or did you live on Maui?

- ○ 1 month or less
- ○ 2-6 months
- ○ 7-12 months



19. If you used to live on Maui but don't currently live here, how long ago did you live on Maui?

_____

20. If you used to live on Maui but don't currently live here, how long did you live on Maui before you moved away?

_____

This section is about your experience with Mākena Mauka.

21. What is your relationship to Mākena Mauka? (Check ALL that apply)

- ☐ I am a resident of Maui.
- ☐ I am a resident of South Maui.
- ☐ I am a resident of the moku of Honua'ula (i.e., the region of Mākena Mauka)
- ☐ I am a lineal descendant of the Mākena Mauka area/Honua'ula
- ☐ I am a visitor to Mākena Mauka/Honua'ula.
- ☐ I am a visitor to South Maui.
- ☐ I work in Mākena Mauka/Honua'ula area.
- ☐ I work in South Maui.
- ☐ I am involved in ranching, agriculture, and food production in the Mākena Mauka/Honua'ula
- ☐ I am involved in ranching, agriculture, and food production in South Maui.
- ☐ I am a subsistence fisher or hunter in the Mākena Mauka/Honua'ula area.
- ☐ I am a subsistence fisher or hunter in South Maui.
- ☐ I recreate outdoors in the Mākena Mauka/Honua'ula area.
- ☐ I recreate outdoors in South Maui.
- ☐ I am a member of an environmental and/or Native Hawaiian advocacy group.
- ☐ I am a member of the Mākena Mauka Golf & Beach Club.
- ☐ I am a local business owner impacted by Mākena Mauka.
- ☐ I have heard of Mākena Mauka but have no direct involvement.
- ☐ I am not familiar with Mākena Mauka.

22. If you had to select just ONE most important to you, what is your relationship to Mākena Mauka?

- ○ I am a resident of Maui.
- ○ I am a resident of South Maui.
- ○ I am a resident of the moku of Honua'ula (i.e., the region of Mākena Mauka)
- ○ I am a lineal descendant of the Mākena Mauka area/Honua'ula
- ○ I am a visitor to Mākena Mauka/Honua'ula.
- ○ I am a visitor to South Maui.
- ○ I work in Mākena Mauka/Honua'ula area.
- ○ I work in South Maui.
- ○ I am involved in ranching, agriculture, and food production in the Mākena Mauka/Honua'ula
- ○ I am involved in ranching, agriculture, and food production in South Maui.
- ○ I am a subsistence fisher or hunter in the Mākena Mauka/Honua'ula area.
- ○ I am a subsistence fisher or hunter in South Maui.
- ○ I recreate outdoors in the Mākena Mauka/Honua'ula area.
- ○ I recreate outdoors in South Maui.
- ○ I am a member of an environmental and/or Native Hawaiian advocacy group.
- ○ I am a member of the Mākena Mauka Golf & Beach Club.
- ○ I am a local business owner impacted by Mākena Mauka.
- ○ I have heard of Mākena Mauka but have no direct involvement.
- ○ I am not familiar with Mākena Mauka.

23. How will Mākena Mauka directly impact your community?

24. How would you have Mākena Mauka benefit you and your community?

25. Please tell us about another development on Maui that is working really well for you/your community.

26. What one thing do you personally want the decision makers for the draft Environmental Impact Statement and the drafters of the Social Impact Assessment to know?

27. What other groups of people should we connect with to seek further feedback about the proposed Mākena Mauka project?

Focus Group Interest Form

If you are interested in participating in a future focus group to discuss Mākena Mauka further or to be involved in reviewing the results from this survey please, select “yes” and provide your name, phone number, and/or email.

If you select "yes", your name, phone number, and/or email will not be kept on a separate sheet and not connected to this survey.

- ○ Yes, I am interested in participating in a future focus group

  (1) Name: _____
  (2) Phone number: _____
  (3) Email: _____

- ○ No, I am not interested in participating in a future focus group

Appendix C.

Preliminary Findings Shared with Survey Respondents

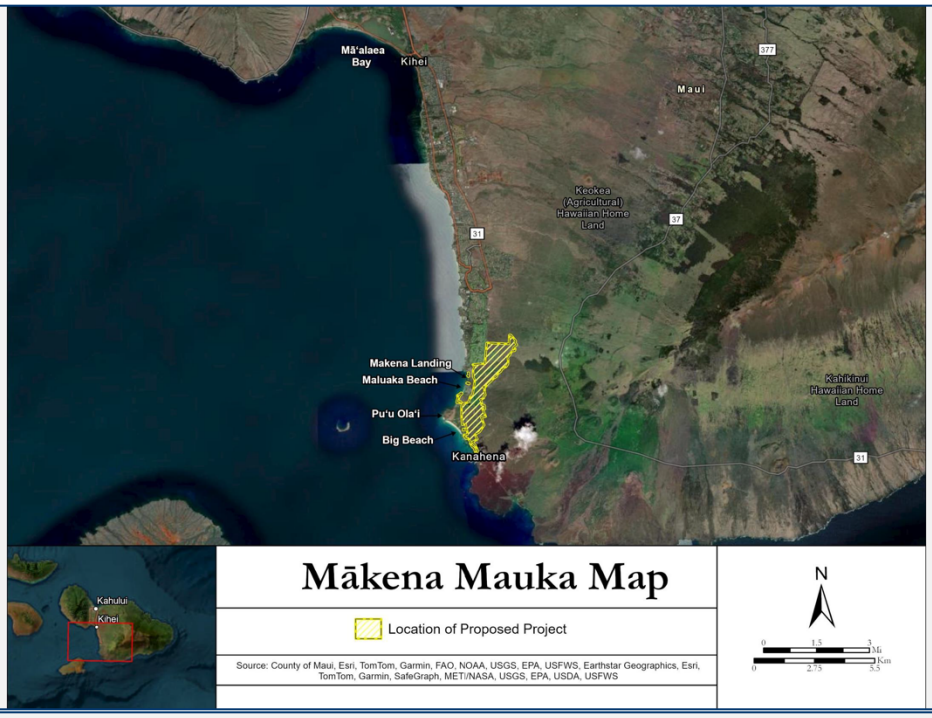
PRELIMINARY FINDINGS FROM SOCIAL IMPACT ASSESSMENT SURVEY FOR MĀKENA MAUKA

For Review by Volunteer Survey Participants

Deadline for Feedback: Wednesday, February 19, 2025 11:59 pm

TABLE OF CONTENTS

- Purpose and goal
- Overview of survey
- Summary of how survey was analyzed
- Draft preliminary themes
  - Theme
  - Supporting categories
  - Example quotations from short answer survey responses
- Next steps



PURPOSE OF THIS SLIDE PRESENTATION

- Share the preliminary findings from the Social Impact Assessment Survey
- Gain additional anonymous feedback from volunteer survey participants regarding the draft findings from the survey
- If you have additional feedback regarding the preliminary findings presented in this slide show, please go to this URL: https://tinyurl.com/MakenaMauka-MemberCheck

  or scan this QR code to provide your feedback
- All feedback, which is anonymous, needs to be submitted by Wednesday, February 19, 2025 at 11:59 pm

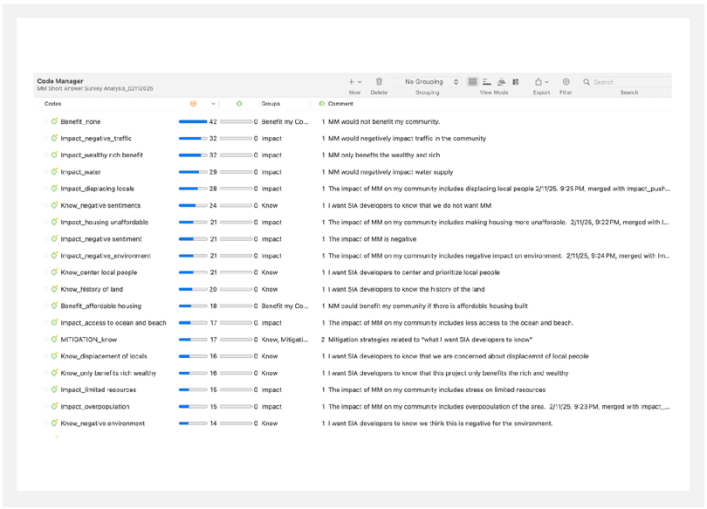
GOAL OF SOCIAL IMPACT ASSESSMENT

- Understand the opinions, voices, and perspectives of the people of Maui regarding Mākena Mauka
- Provide an anonymous space for giving feedback
- Learn which communities are impacted by Mākena Mauka and why
- Identify how different communities can be impacted by Mākena Mauka
- Provide recommendations to mitigate the impacts of Mākena Mauka on local people of Maui

ABOUT THE SURVEY

- The survey was sent via email to diverse communities in Maui between January 28, 2025 and February 10, 2025
- The survey was anonymous and collected using a program called Qualtrics
- The survey had 22 multiple choice questions about demographics (for example, household size, how long one has lived on Maui)
- The survey had 5 short answer questions

SURVEYS COMPLETED



- 161 surveys completed
  - 96 were 100% complete
  - 36 were ≥70% complete
  - 29 were < 70% complete
- Data saturation was met for all of the short answer questions
  - This means that towards the end of analysis of the short answer questions, no new codes, categories, or themes were generated
  - Another way of saying this is: the research team is confident that we understand what volunteer participants think and that the volunteer participants largely shared very similar thoughts, opinions, perceptions about Mākena Mauka

SHORT ANSWER QUESTIONS FROM THE SURVEY

- How will Mākena Mauka directly impact your community?
- How would you have Mākena Mauka benefit you and your community?
- Please tell us about another development on Maui that is working really well for you/your community.
- What one thing do you personally want the decision makers for the draft Environmental Impact Statement and the drafters of the Social Impact Assessment to know?
- What other groups of people should we connect with to seek further feedback about the proposed Mākena Mauka project?

HOW WERE THE SHORT ANSWER RESPONSES ANALYZED

- All of the short answer responses for each question were analyzed by labeling, or giving codes to, every response line by line
- This is an example of some of the codes
- Codes were each defined in the "comment" section
- There were 68 codes in all

HOW THE SHORT ANSWER RESPONSES WERE ANALYZED

- After all of the responses were coded line-by-line, like-codes were grouped together to create categories
- Categories then were grouped together into overall themes that they support

PRELIMINARY FINDINGS – THEME #1

- Mākena Mauka is not good for local people, land, or resources of Maui.

- Supporting categories
  - Lack of affordable housing
  - Displacement of local people
  - Overcrowding on beaches, roads
  - Too many luxury homes only occupied a short time each year
  - Oversaturation of wealthy non-Maui residents

EXAMPLE SURVEY RESPONSES SUPPORTING THEME #1

- *"It* [Mākena Mauka] *will take water away from important resources. It will take away water from other communities. There is no ACTUAL affordable housing as part of the development. It will impact access to Oneloa. It will cause massive pollution to the area and surrounding waters. It will attract wealthy residents that don't care about the history of the area or the community. They will be many part time residents that don't have an interest in the environment or the history of Hawaii and its people. It will attract people from off island and will further drive out any actual natives that might be left."*

- *"We need to stop prioritizing luxury development for tourists and wealthy transplants and part-time residents. Especially with our limited land, water, and other resources on Maui, we need to focus on creating more and cheaper housing for our locals, especially the kanaka maoli and kama'aina."*

PRELIMINARY FINDINGS – THEME #2

- Survey respondents are very concerned about limited resources in Maui, and Mākena Mauka will make the problems worse.

- Supporting categories
  - Limited fresh water
    - Residents already living with water restriction regulations
  - Limited affordable housing
  - Too much traffic
  - Unsafe evacuation routes made worse with more people
  - Limited access to cultural land and spaces, beaches, oceanfront when more luxury developments are built

EXAMPLE SURVEY RESPONSES SUPPORTING THEME #2

- *"First -we don't have the drinking water, infrastructure, roads, medical care, police/fire support or ocean access/space on this island for this housing project. It would be filled with non full time residents who would not malama the land, they over run the beaches, destroy the reef and are disrespectful of the wildlife, steal all the water for landscaping and pools. It would completely change the quality of life for our Maui residents. We would have all the problems of Oahu with no benefits. This is horrible plan."*

- *"We don't need it. We don't want it. We already have more than enough homes that sit empty the majority of the year. What we need are affordable homes for the working class. As a business owner, I have a hard time hiring employees because of the terrible housing crisis we have on Maui. We don't need more expensive homes and wealthy people coming here for part of the year using our resources."*

PRELIMINARY FINDINGS – THEME #3

- The needs of local people and the land of Maui should be prioritized and centered first and foremost when it comes to development decisions on Maui.

- Supporting categories
  - Preserve access to open space, beaches, ocean front for access by local people
  - Affordable housing with priority for local people
  - Too many luxury homes that are only inhabited a short time each year
  - Resources for building should go to prioritize local communities
    - Lahaina should be rebuilt before additional luxury developments
  - The land, flora, fauna, natural resources, and cultural history of Maui need to be protected and prioritized

EXAMPLE SURVEY RESPONSES SUPPORTING THEME #3

- *"Makena is a special and historical area - respect the locals and their needs. Build in a manner than protects & enhances the Āina; not in a manner that protects the developers and those who buy in. Educate people about the culture and needs of those who already reside here. Educate that it's not an entitlement, rather a responsibility to live here."*

- *"They* [developers] *need to respect and honor the native Hawaiians and the long time residents who have lived in Maui for several generations. Mākena Maui has a moral obligation to preserve the Hawaiian culture and natural resources of Maui. The only way to accomplish these expectations is to prevent development and make it a national park."*

PRELIMINARY FINDINGS – THEME #4

- There are some opportunities to mitigate the negative impacts of Mākena Mauka, but these mitigations do not outweigh the negative aspects and it is not trusted that the mitigations will be honored.

- Supporting categories
  - Build affordable housing
  - Provide resources to rebuild Lahaina and give back to local community
  - Build new, safe roads and evacuation routes
  - Preserve Mākena Mauka's native flora and fauna
  - Ensure Mākena Mauka remains accessible by locals
  - Establish regulations on water use by luxury developments and homeowners
  - Listen to local people and prioritize their needs to continue living and thriving on Maui

EXAMPLE SURVEY RESPONSES SUPPORTING THEME #4

- *"Keep as much of the open space and natural views as possible. (…) Provide hiking and camping areas that have been requested long ago for this area. This is what the people of South Maui have always asked for in this area. (…) Don't create more landscape features in rich people's backyard. Respect the native species found in this area though action not just in writing."*

- *"Should the road be expanded to accommodate this new population, I would like to see Makena Mauka focus on genuine housing for locals. Given the devastation of the Lahaina fires, there are numerous families displaced. Thus it does not make sense for the community to encourage such a large influx of newcomers when people who directly contribute to our rich community are forced out."*

NEXT STEPS

- Please provide your anonymous feedback (see next slide) on the four (4) themes
- Survey and feedback results will be provided to the Mākena Mauka project team
- Draft Social Impact Assessment (SIA) will include the full results and proposed mitigations for public review, as part of the Mākena Mauka Draft Environmental Impact Statement (EIS)
- Focus Groups will be conducted following the Draft EIS
- Results from the Focus Groups will be provided to the Mākena Mauka project team
- Final SIA will include the full report from the Focus Groups, assessment results and proposed mitigations
- Final SIA will be part of the Final EIS
- Community collaboration will continue

PLEASE PROVIDE YOUR FEEDBACK

- If you have additional feedback regarding the preliminary findings presented in this slide show, please go to this URL: https://tinyurl.com/MakenaMauka-MemberCheck

  or scan this QR code to provide your feedback
- All feedback needs to be submitted by Wednesday, February 19, 2025 11:59 pm

Appendix D.

Visitor Trends at Mākena and Wailea Beaches Using Azira Data, Memorandum by Fehr & Peers

FEHR PEERS

Memorandum

Date: June 19, 2025

To: AREG AC Makena Propco, LLC

From: Sohrab Rashid, Amir Sadeghi, William Chen, and Mike Wallace

Subject: Visitor Trends at Makena and Wailea Beaches Using Azira Data

---

This memorandum documents our findings regarding visiting trends at Makena and Wailea beaches using Azira human movement data. The primary purpose of this study is to estimate the future users of the Makena and Wailea beaches utilizing existing data and extrapolating based on housing type. This existing data is used to estimate potential future beach usage by residents of the new units in comparison to visitors originating from hotels/resorts, residents of Maui, as well as visitors from outside Maui.

The analysis focuses on eighteen (18) study beaches within the Wailea-Makena area of Maui, including Kama'ole Beach Park I, Kama'ole Beach Park II, Kama'ole Beach Park III, Keawakapu Beach (North), Keawakapu Beach (South), Mōkapu Beach, Ulua Beach, Wailea Beach, Polo Beach, Palauea Beach, North Po'olenalena Beach, South Po'olenalena Beach, Ka'awa Beach, Makena Landing Beach, Maluaka Beach, One'uli Beach, Pu'u'Ola'i (Little) Beach, and Makena State Park (Big Beach).

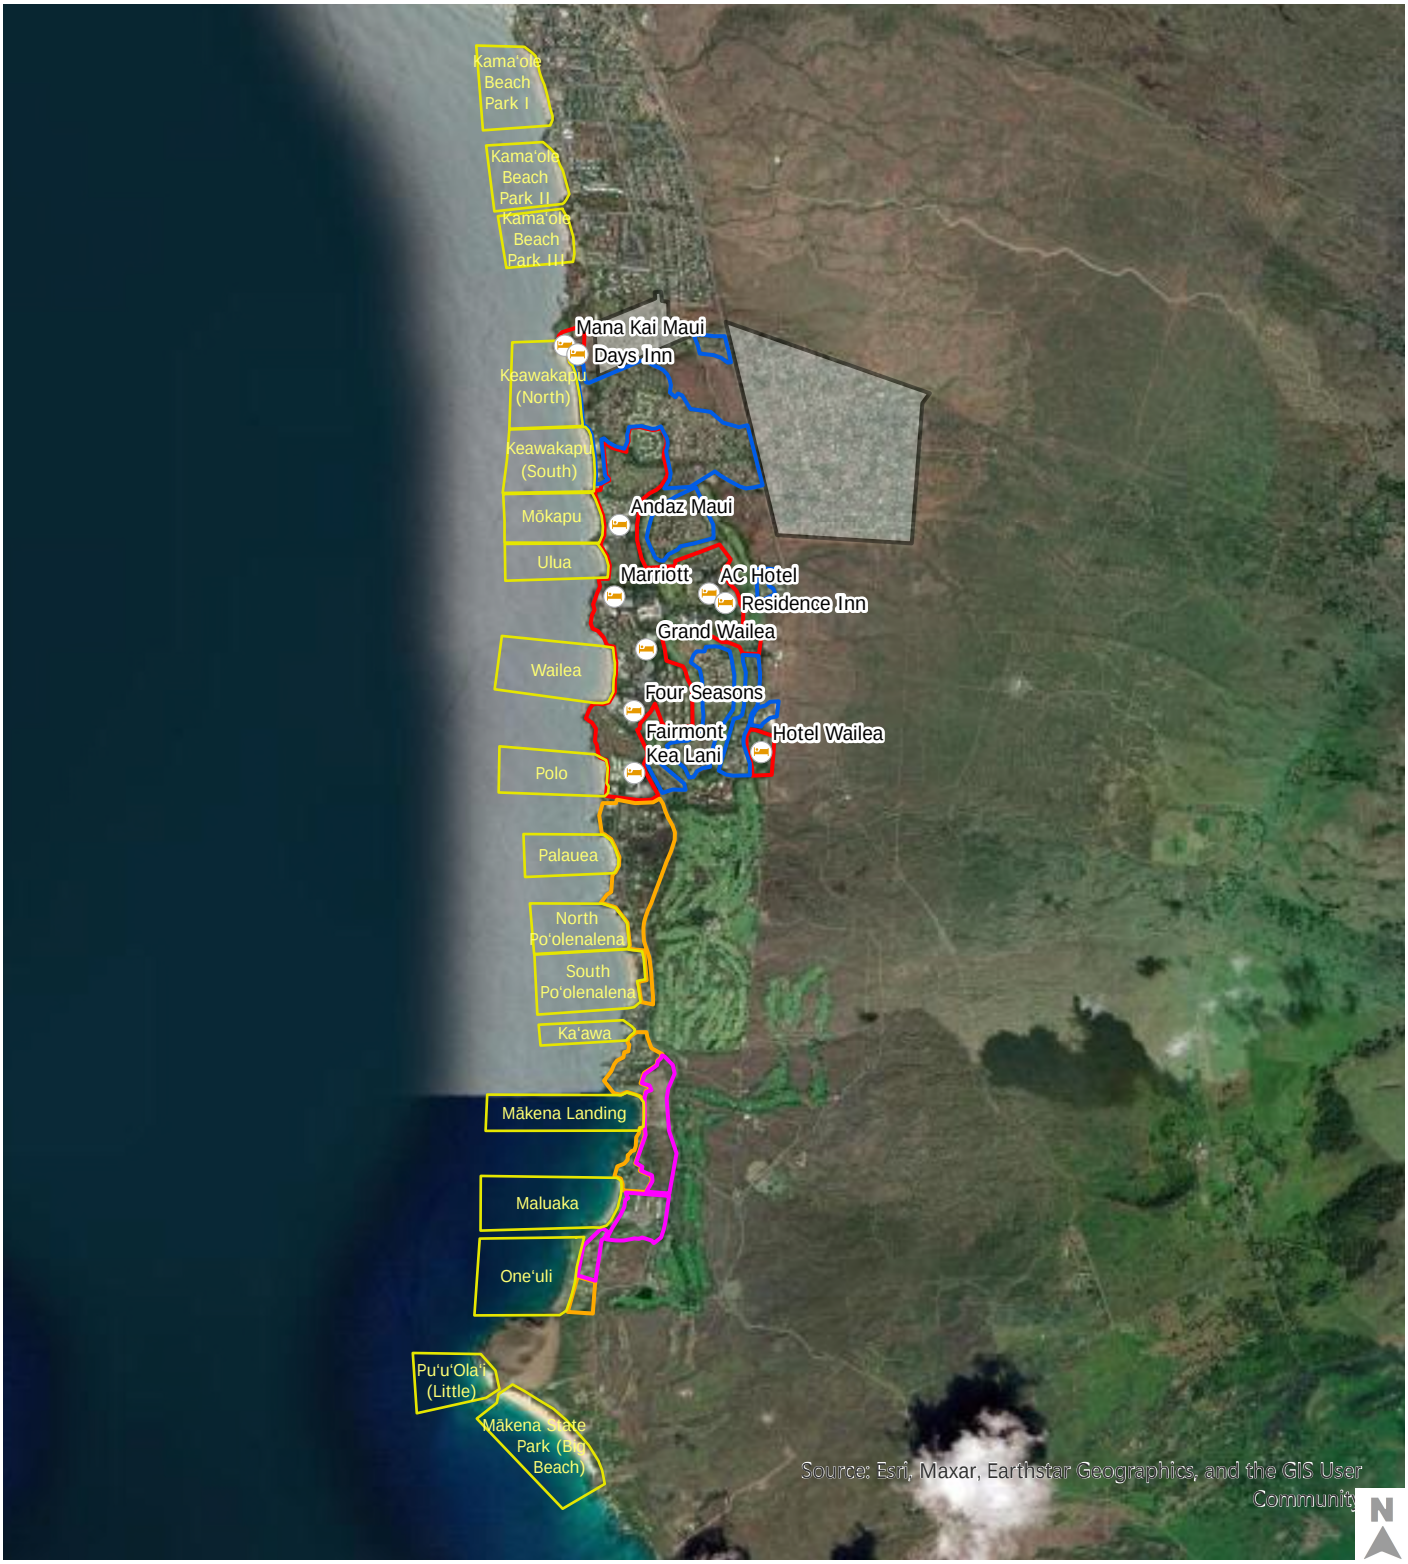
Figure 1 illustrates the locations of the study beach boundaries (in yellow), Makena Golf & Beach Club part-time (PT) or full-time (FT) occupied residential units (within the magenta boundaries), Other Makena part-time (PT) or full-time (FT) occupied residential units (within the orange boundaries), Wailea part-time (PT) or full-time (FT) occupied residential units (within the blue boundaries), and Wailea hotel/resort areas (in red).

Azira Data

The Azira dataset used for this analysis provides human movement data, primarily derived from smartphones and other mobile devices such as tablets. Location-based information is collected from these devices that anonymously documents the trip trajectories of all sampled trips during our study period, from January 2019 to June 2024. The dataset offers three report types: the Pathing X report, the Common Evening/Daytime Location report, and the Demographics report. Each is described below.

- The Pathing X report provides detailed information about the travel patterns of individual devices before and after they are observed at a study location. This report includes the device's location observations, along with the timing of those observations relative to the visit. It is used to understand travel behavior and analyze traffic patterns. Using this report, we determine where visitors stay the night (i.e., their "nighttime location") while in the South Maui area, which could be a second home, vacation rental, or hotel/resort property within the Makena and Wailea study area.
- The Common Evening/Daytime Location report identifies where a device typically stays during the evening and early morning hours throughout the year. This information identifies their permanent "home location" (e.g., on Maui, other Hawaiian islands, on the Mainland or elsewhere)
- The Azira Demographics report provides socio-economic data of the visitors' census tract of permanent home locations, including age, economic (Median Household Income and Median Home Value), education, income, and race. This report does not factor into our final analysis.

Azira data was available within the study area from January 2019 through June 2024. Because of the global COVID-19 pandemic dramatically changed travel patterns and behavior for residents and tourists alike, the analysis was conducted under two distinct scenarios:



- Full Dataset Analysis: This section includes an analysis of the entire dataset.
- Non-COVID Period Analysis: This section focuses on data excluding the COVID period (Year 2020), providing additional insights into the non-COVID period.

The data and findings for each scenario are presented separately below:

1. Entire Dataset Analysis (Including COVID-19 Period):

Distribution of Beach Visits

For this analysis, the nighttime location of unique devices during the evening (8 PM – 5 AM) was identified for the entire study period based on a daily average. A device was considered to have made a beach visit if it was observed on the beach for at least 15 minutes. **Table 1** contains the percentage of detected visits of visitors whose devices' nighttime locations are located in each residential or hotel/resort area. In addition to the percentage of visitors whose nighttime locations are in the Makena Golf & Beach Club PT/FT residential units (within the magenta boundaries on **Figure 1**), the other columns in **Table 1** contain the percentages of people staying in other Makena PT/FT residential units (orange boundaries), Wailea PT/FT residential units (blue boundaries), Wailea hotel/resort areas (red boundaries), and from other locations categorized by Maui residents and non-Maui residents. Non-Maui residents includes guests staying at other hotels/resorts on Maui and any day visitors to the island from other Hawaiian islands and outside Hawai'i.

- Mākena Golf & Beach Club Part-Time (PT) or Full-Time (FT) Occupied Residential Units
- Other Mākena Part-Time (PT) or Full-Time (FT) Occupied Residential Units
- Wailea Part-Time (PT) or Full-Time (FT) Occupied Residential Units
- Wailea Short-Term Vacation Resort & Hotel Areas
- Wailea Hotels/Resorts
- Beaches
- Wailea Other Nearby Residential Units

Figure 1

Study Area

Table 1: Percentage of Visit Samples to Study Beaches by Residential Zone (January 2019 to June 2024 Including Covid-19 Period Data)

Study Beaches	Nighttime Location of Beach Visitors (Daily Average)						
	Makena Golf & Beach Club PT/FT Residential	Other Makena PT/FT Residential	Wailea PT/FT Residential	Wailea Hotel/ Resort	All Other Locations (Maui-Residents)	All Other Locations (Non-Maui Residents)	Total
1. Kamaʻole Beach Park I	0.02%	0.06%	0.20%	1.42%	40.58%	57.72%	100%
2. Kamaʻole Beach Park II	0.03%	0.04%	0.24%	1.74%	32.29%	65.66%	100%
3. Kamaʻole Beach Park III	0.06%	0.01%	0.68%	2.53%	38.45%	58.28%	100%
4. Keawakapu Beach (North)	0.02%	0.10%	3.51%	28.14%	37.04%	31.19%	100%
5. Keawakapu Beach (South)	0.01%	0.06%	4.85%	36.34%	35.23%	23.51%	100%
6. Mōkapu Beach	0.00%	0.17%	4.08%	42.89%	29.00%	23.86%	100%
7. Ulua Beach	0.00%	0.04%	2.83%	43.72%	28.02%	25.39%	100%
8. Wailea Beach	0.07%	0.14%	1.70%	47.95%	22.07%	28.07%	100%
9. Polo Beach	0.01%	0.24%	1.56%	45.63%	28.30%	24.26%	100%
10. Palauea Beach	0.00%	4.51%	0.93%	11.73%	52.74%	30.09%	100%
11. North Poʻolenalena Beach	0.04%	12.67%	0.61%	4.68%	48.06%	33.94%	100%
12. South Poʻolenalena Beach	0.06%	13.57%	0.25%	4.77%	43.02%	38.33%	100%
13. Kaʻawa Beach	0.06%	35.63%	0.28%	5.03%	35.45%	23.55%	100%
14. Makena Landing Beach	0.42%	7.38%	0.51%	5.70%	52.82%	33.17%	100%
15. Maluaka Beach	3.92%	4.03%	1.33%	7.93%	42.72%	40.07%	100%
16. Oneʻuli Beach	1.11%	0.40%	1.17%	4.55%	61.46%	31.31%	100%
17. PuʻuʻOlaʻi (Little) Beach	0.00%	0.48%	0.78%	14.90%	40.35%	43.49%	100%
18. Makena State Park Beach (Big Beach)	0.15%	0.04%	1.06%	10.32%	46.97%	41.46%	100%
Total[2]	***0.19%***	***1.98%***	***1.49%***	***20.49%***	***31.57%***	***44.28%***	***100%***

1. The data in this table weighs each day equally.
2. Totals by beach are based on combined data and are not the sum of each row.

To help illustrate the limited proportion of beach visits originating from the PT/FT residential units, we have graphed the data from **Table 1**. **Figure 2** illustrates the proportion of visitors at each beach location based on their nighttime location origin, and **Figure 3** shows each residential area and the proportional distribution to each beach. In addition, individual beach visitation trends by nighttime location are presented in **Appendix A**.

The key finding from the number of visitor samples listed in **Table 1** and illustrated on **Figure 2** is that the proportion of beach visitors from existing Makena Golf & Beach Club PT/FT residences is nominal compared to other visitor origins. Makena Golf & Beach Club PT/FT residents/guests have the highest sample size visitation at the Maluaka Beach, Makena Landing Beach, and Wailea Beach, as shown in **Table 2**.

The beach with the highest proportion of Makena Golf & Beach Club PT/FT residents and/or guests is Maluaka Beach, and those residents/guests represent just under five (5) percent of the total visitors. Of the remaining visitors to this beach, roughly 95 percent come from (in descending order): other Maui residents, hotel/resort guests from elsewhere on the island, Wailea hotels/resorts, other Makena PT/FT residents/guests, and Wailea PT/FT residential areas.

At all beaches studied, Makena PT/FT residents/guests make up just 2.17 percent of visitors—equivalent to fewer than three (3) out of every 100 beach visitors. Of these, Makena Golf & Beach Club PT/FT residents/guests account for only 0.19 percent, meaning typically less than one (1) visitor per 500, while other Makena PT/FT residents/guests make up approximately 1.98 percent, or about two (2) visitors per 100.

This finding is expected in that the primary reason Makena Golf & Beach Club owners tend not to visit the beaches is that the club offers a private amenity program, including pools, spas, fitness facilities, food and beverage (F&B), and golf. With all the onsite amenities available, their beach visits are mainly limited to Maluaka Beach.

From **Figure 3**, the Azira data samples show that the beaches with the highest proportion of Wailea hotel/resort guests are those immediately adjacent to the resort properties including Mōkapu, Wailea, Ulua and Polo Beaches. The beaches with the highest proportion of Maui residents from outside Makena and Wailea include One'uli, Makena, and Palauea Beaches. Lastly, beaches with the highest proportion of non-Maui residents staying elsewhere on the island include Kama'ole Beach Park I, II and III.

Table 2 presents the number of Azira sampled beach visits for each of the study beaches by residential zone.

Figure 2: Beach Visitation by Nighttime Location (by Beach) – (January 2019 to June 2024 Including Covid-19 Period Data)

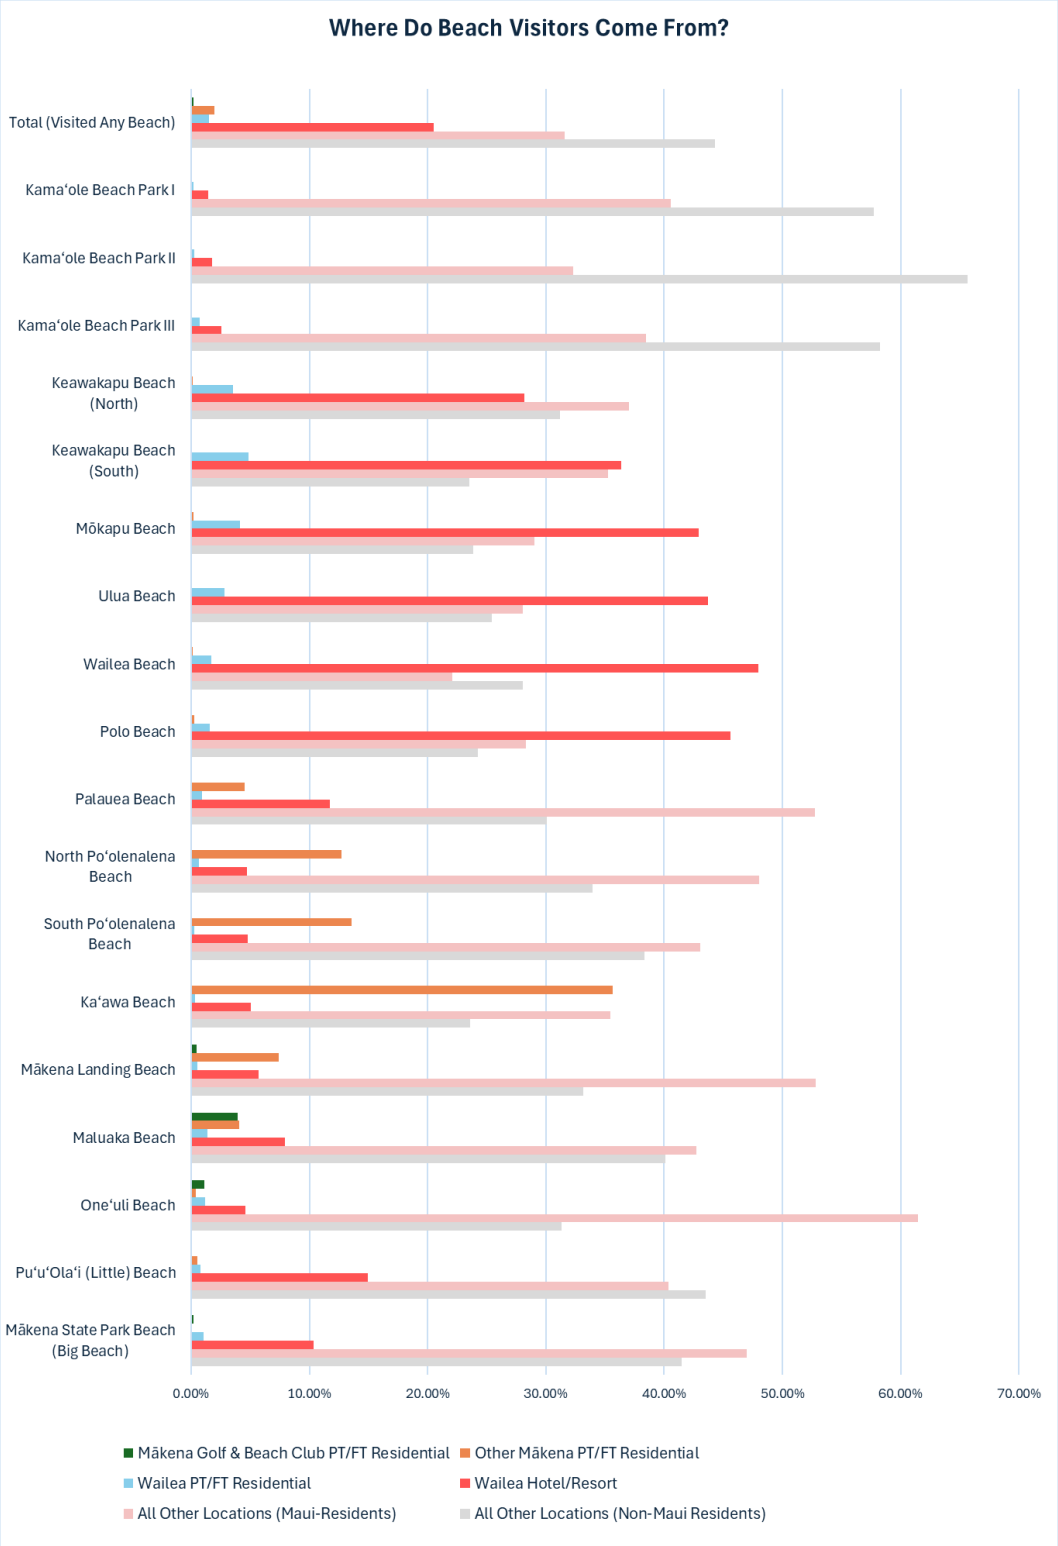


Figure 3: Beach Visitation by Nighttime Location (by Residential Zone) – (January 2019 to June 2024 Including Covid-19 Period Data)

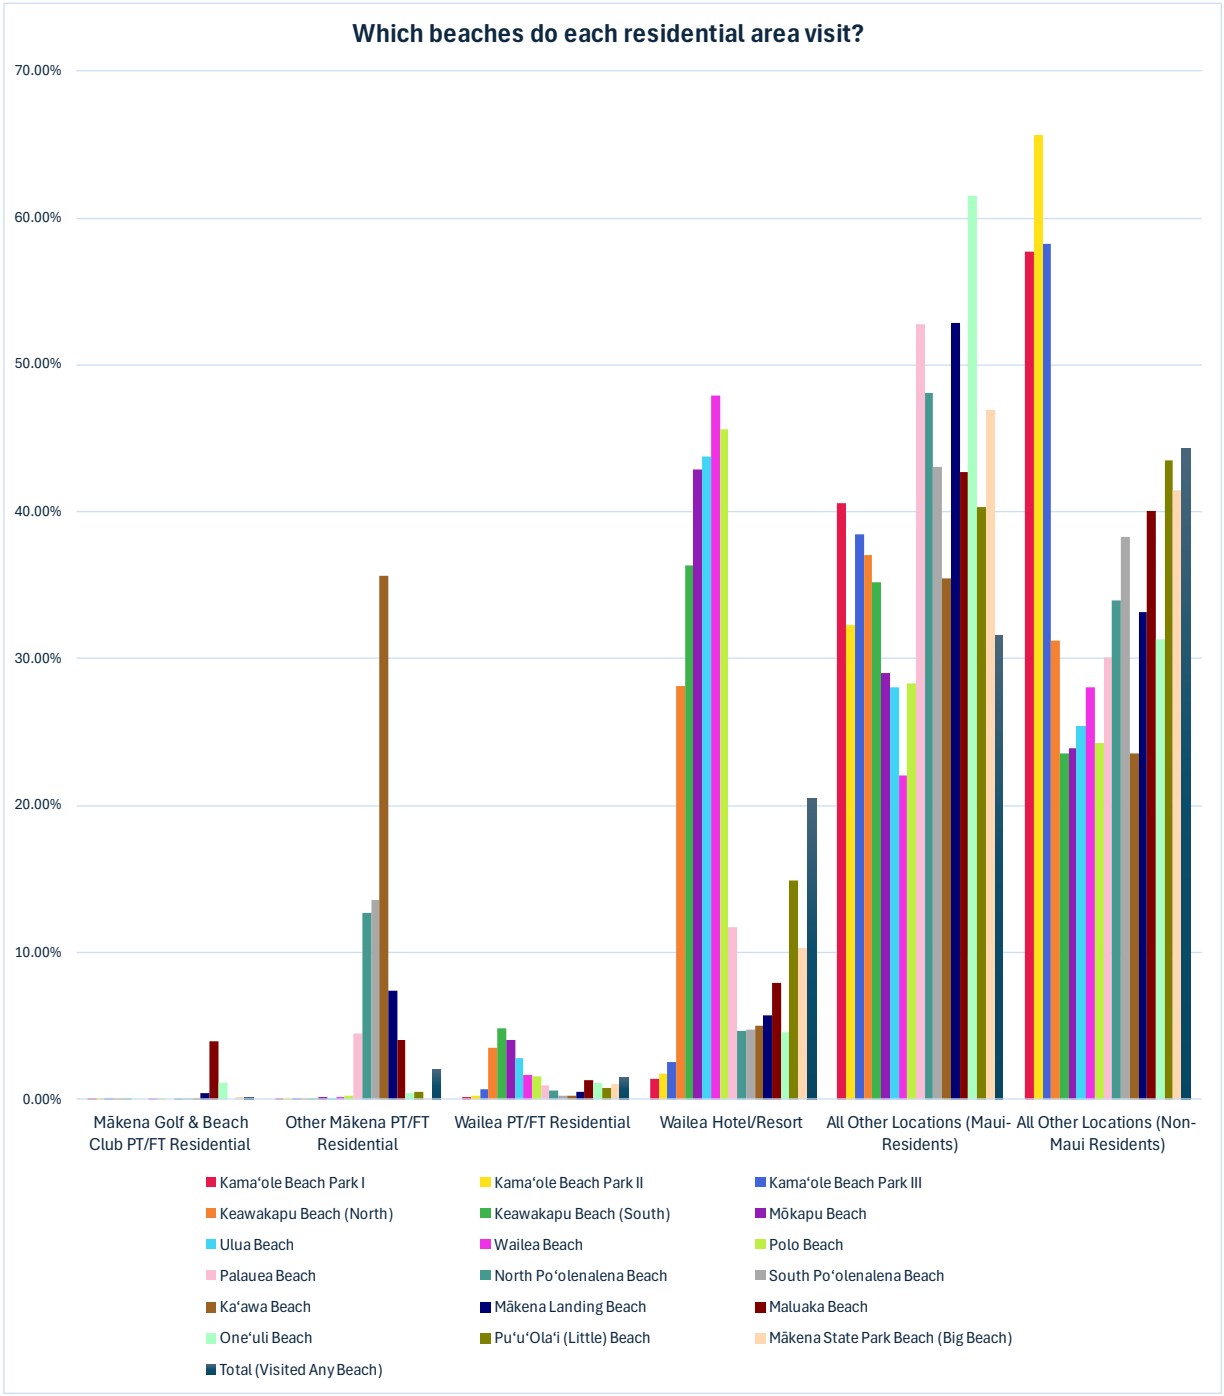

Table 2: Number of Visit Samples to Each Beach by Zone (January 2019 – June 2024 Including Covid-19 Period Data)

Study Beaches	Nighttime Location of Beach Visitors (All Azira Visits, Jan 2019-Jun 2024)						
	Makena Golf & Beach Club PT/FT Residential	Other Makena PT/FT Residential	Wailea PT/FT Residential	Wailea Hotel/ Resort	All Other Locations (Maui-Residents)	All Other Locations (Non-Maui Residents)	Total Beach Samples
1. Kama'ole Beach Park I	3	9	26	248	6,910	9,537	16,733
2. Kama'ole Beach Park II	4	6	21	166	2,615	5,466	8,278

1. This table shows all daily visits, over the entire period (Jan 2019-June 2024). This is intended to provide an order of magnitude of visitation for each beach. Since some days will have more visits than others, dividing the values in this table will not yield the same percentages as Table 1.
2. Adding the numbers up in each column will not give the total at the bottom since people can visit multiple beaches.

Estimate of Increased Number of Beach Visits

The Fehr & Peers team was asked to evaluate the incremental impact that 652 new residential units proposed within the Makena Golf & Beach area could have on beach visitation. Of these, 543 are generally expected to be occupied on a part-time basis, while the remaining 109 residences will be affordable units and generally occupied on a full-time basis. Because Azira data only represents a sample of mobile devices, it cannot be used independently to calculate or estimate the absolute number of persons visiting the beach or traveling in the area. Some individuals with devices may not have location services turned on, some people may not have a device, or may not have taken that device to the beach. That said, it is possible to correlate the number of samples to the existing number of PT/FT residential units and available traffic data to generally estimate the potential number of beach visitors from the proposed 543 Market units and 109 Workforce Housing units. This process is described below.

543 Market Units

It should be noted that the exact number of existing PT/FT residential units in the Makena area is not known due to the prevalence of short-term vacation rentals in the area that are offered in and amongst some of the condominium projects of the area. Accordingly, data from similar residential types from Wailea were used as a proxy for the Makena area. Currently, there are approximately 1,200 PT/FT units in the Wailea area between Kilohana Drive and Kaukahi Street. According to **Table 2**, there are roughly 1,644 Azira visits across all study beaches, indicating an average of approximately 1.37 visits per unit. Using this ratio and applying it to the Makena area, the addition of 543 new units in Makena Golf & Beach Club is projected to generate approximately 744 new Azira visits. Given that the dataset spans from 2019 to the end of June 2024 and includes 2,007 days, the new Azira visits per day would be approximately 744/2,007 = 0.37. However, the number of visits need to be correlated to the number of persons, and traffic data was used as a means of estimating this number.

According to the Traffic Volumes Highway Performance Monitoring System (HPMS) 2023 report published by the Hawai'i Department of Transportation (HDOT), the Annual Average Daily Traffic (AADT) in the Wailea-Makena area is 17,000 on Route 31 (Pi'ilani Highway) between MP 5.92 and 7.149, and 10,100 on Route 3135 (Wailea-Alanui Drive) between MP 0 and 1.339, totaling 27,100. The Office of Energy and Renewable Energy reports that the average number of people per household vehicle is 1.5. While not all passengers in these vehicles are associated with a beach visit, the volume can serve as a relational proxy and likely results in a conservative estimate of new beachgoers. Based on Azira data, the Makena PT/FT residential visit samples in 2023 was 999, leading to an estimated 27,100 * 1.5 / 999 ≈ 41 people per Azira visit.

Multiplying the new Azira visits per day (0.37) by the estimated number of people per Azira visit (41), we estimate an additional 15 beach visits per day. To distribute the estimated increase in beach visits across specific areas, we applied the same ratio derived from each beach's sample size of

visitor nighttime locations to the total nighttime location sample size of beach visitors. This was done for the Makena Golf & Beach Club Market Units (543 units) using the Makena Golf & Beach Club sample sizes (magenta boundary). Please note that this calculation assumes all road traffic is generated by PT/FT residents, providing a conservative estimate for each beach. In addition, we identified the peak visitation hours for PT/FT residents as 10 AM to 2 PM. Nearly 40% of visits were conducted during that period. Using this percentage, we can also estimate the projected increase in beach visitors during peak period (10 AM to 2 PM).

109 Workforce Housing Units

The same methodology described for the Makena Market Units was applied to estimate the beach visitation impact of the 109 additional workforce housing units. For this calculation, it was assumed that the workforce housing units would have characteristics similar to the "Wailea Other Nearby Residential Units" (depicted in gray shading on **Figure 1**). Currently, there are approximately 890 units in this category, generating roughly 3,063 Azira visits across all study beaches, or an average of 3.44 visits per unit.

Applying this ratio, the 109 new units are projected to generate approximately 375 new Azira visits. Over the dataset period (2019 to June 2024, or 2,007 days), this equates to about 0.19 new Azira visits per day.

To estimate the number of people associated with these visits, the same traffic volume (27,100 vehicles) and occupancy rate (1.5 persons per vehicle) were used. However, the relevant Azira sample size for this group in 2023 was 615, leading to an estimated 27,100 * 1.5 / 615 ≈ 66 people per Azira visit.

Multiplying the daily new Azira visits (0.19) by the estimated number of people per Azira visit (66) results in an estimated increase of approximately 12 additional beach visits per day. To distribute the estimated increase in beach visits across specific areas, we applied the same ratio derived from each beach's sample size of visitor nighttime locations to the total nighttime location sample size of beach visitors. This calculation was performed for the Makena Golf & Beach Club Workforce Housing Units (109 units) using the "All Other Locations (Maui Residents)" sample sizes.

Please note that this calculation assumes all road traffic is generated by nearby residential residents, providing a conservative estimate for each beach. As with the previous analysis, the peak visitation hours were identified as 3 PM to 7 PM, during which approximately 40% of visits occur. This percentage was used to estimate the projected increase in beach visitors during the peak period.

The results in **Table 3** show that the estimated increase in peak period beach visitors from the proposed 543 new Makena Golf & Beach Club Market units would be highest at Maluaka Beach with four (4) new peak period visitors, and a total of six (6) new visitors at all beaches. Furthermore, the highest estimated increase from the proposed 109 workforce housing units is two (2) additional daily visitors and one (1) peak period visitor at a single beach.

Table 3: Projected Increase in Beach Visitation with 543 New Makena Golf & Beach Club Market Units and 109 Workforce Housing Units - (Based on January 2019 – June 2024 Data Including Covid-19 Period)

Beach	543 Market Units		109 Workforce Housing Units	
	Estimated Daily Increase in Beachgoers[1]	Estimated Peak Period Increase in Beachgoers[1]	Estimated Daily Increase in Beachgoers[1]	Estimated Peak Period Increase in Beachgoers[1]
1. Kama'ole Beach Park I	0	0	2	1
2. Kama'ole Beach Park II	0	0	1	0
3. Kama'ole Beach Park III	1	0	1	1
4. Keawakapu Beach (North)	0	0	2	1
5. Keawakapu Beach (South)	0	0	1	0
6. Mōkapu Beach	0	0	1	0
7. Ulua Beach	0	0	1	0
8. Wailea Beach	1	1	1	1
9. Polo Beach	0	0	1	0
10. Palauea Beach	0	0	1	0
11. North Po'olenalena Beach	0	0	0	0
12. South Po'olenalena Beach	0	0	1	1
13. Ka'awa Beach	0	0	0	0
14. Makena Landing Beach	1	1	1	1
15. Maluaka Beach	10	4	1	0
16. One'uli Beach	1	0	0	0
17. Pu'u'Ola'i (Little) Beach	0	0	0	0
18. Makena State Park Beach (Big Beach)	1	0	2	1
Total[2]	***15***	***6***	***17***	***7***

1. The numbers in the table have been rounded to the nearest whole number.
2. Summing up the values in the total column results in slightly higher values compared to earlier calculations in the report, as individual visitors may have made multiple visits to a beach. The initial methodology accounted for each unique device only once to more accurately represent distinct visitation patterns.

Additional Detailed Information from Azira Data Evaluation

Figures 4 through 6 illustrate the average number of beach visit samples by residents and guests of the Makena Golf & Beach Club PT/FT housing in the magenta bounded zones, presented by week, month, and year, respectively.

Figure 4: Weekly Average Number of Beach Visit Samples by Makena Golf & Beach Club PT/FT Residents

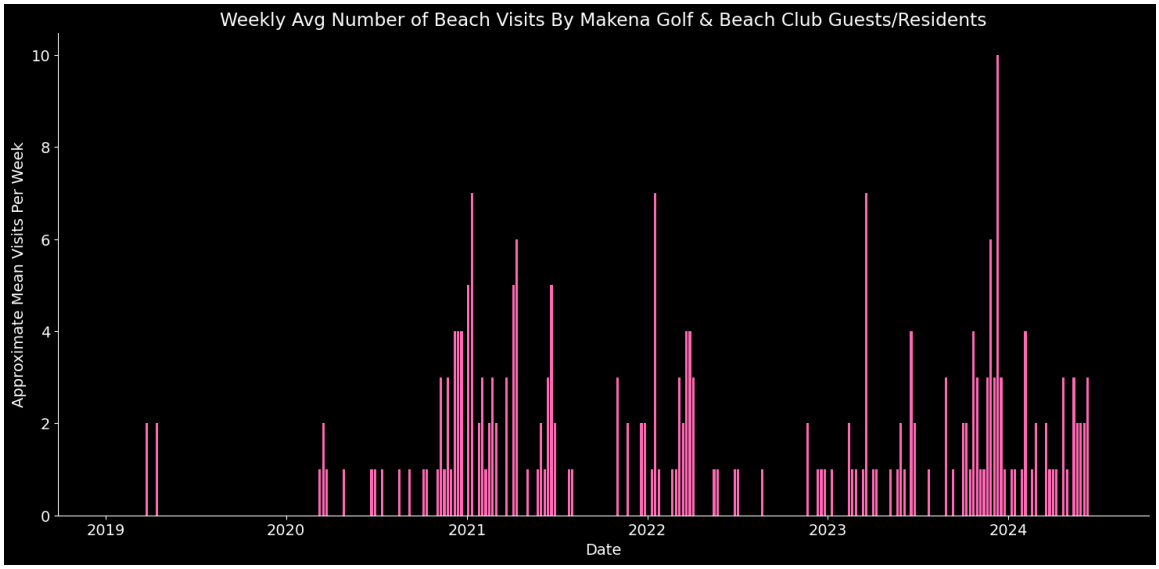

Figure 5: Monthly Average Number of Beach Visit Samples by Makena Golf & Beach Club PT/FT Residents

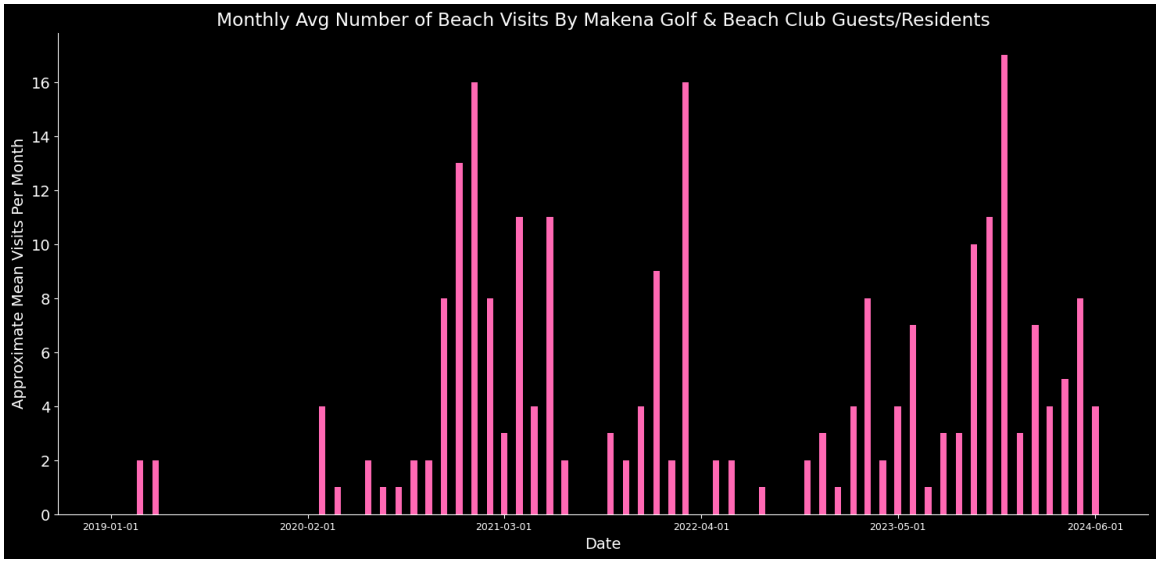

Figure 6: Yearly Average Number of Beach Visit Samples by Makena Golf & Beach Club PT/FT Residents

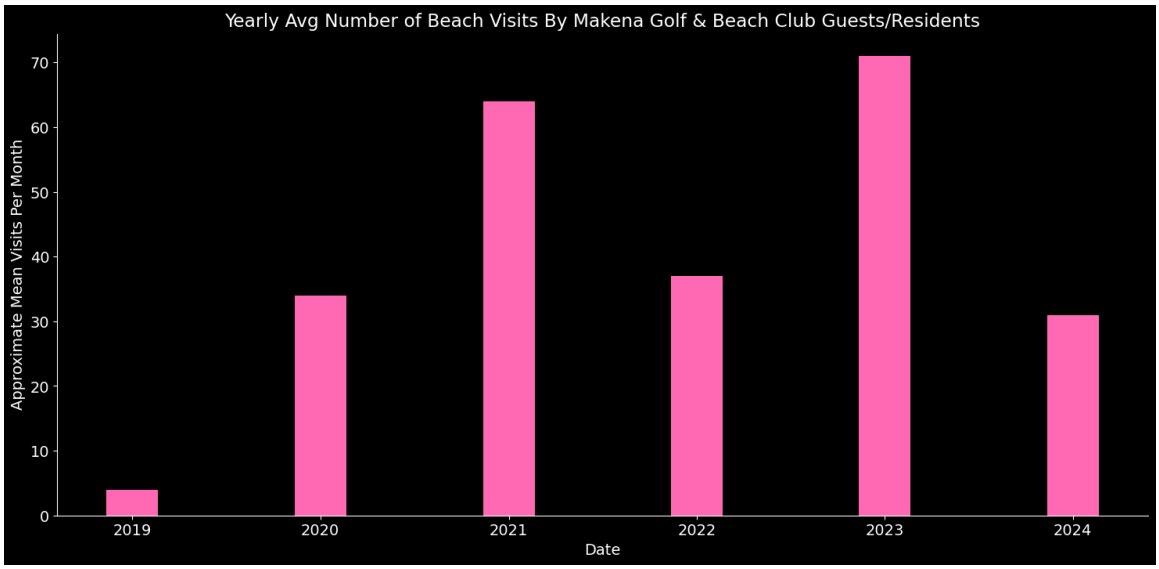

Figure 7 presents the temporal distribution of visit samples at each beach and the proportion from Makena Golf & Beach Club PT/FT residents, Other Makena PT/FT residents, Wailea PT/FT residents, Wailea hotel/resort guests, and other visitors from outside the immediate study area, categorized as Maui residents and Non-Maui residents.

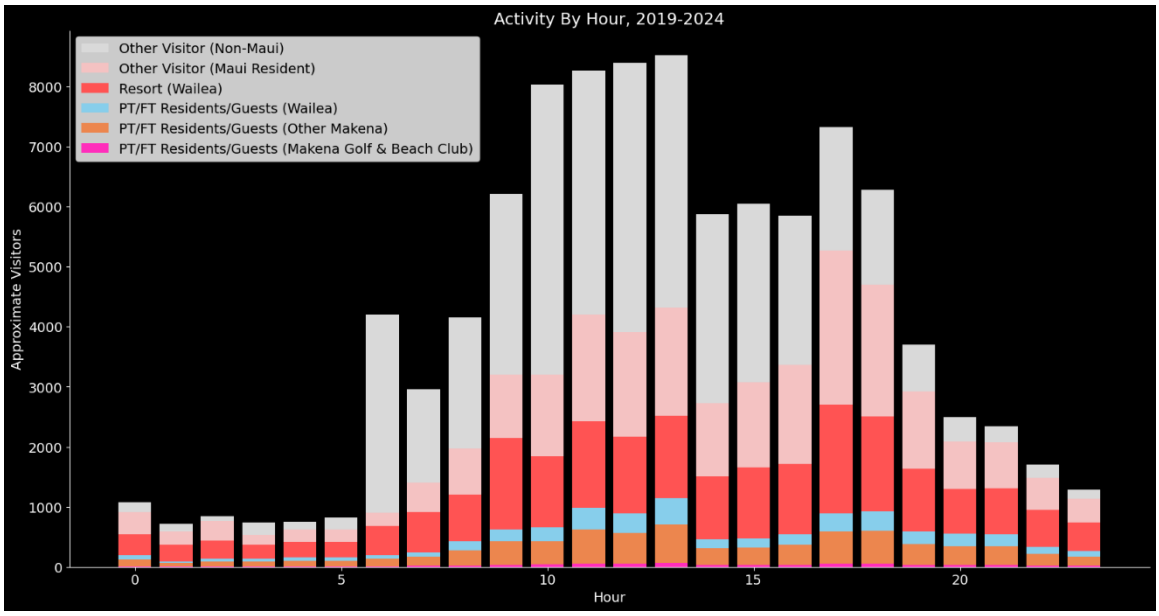
Figure 7: Temporal Distribution of Visit Samples for Each Zone



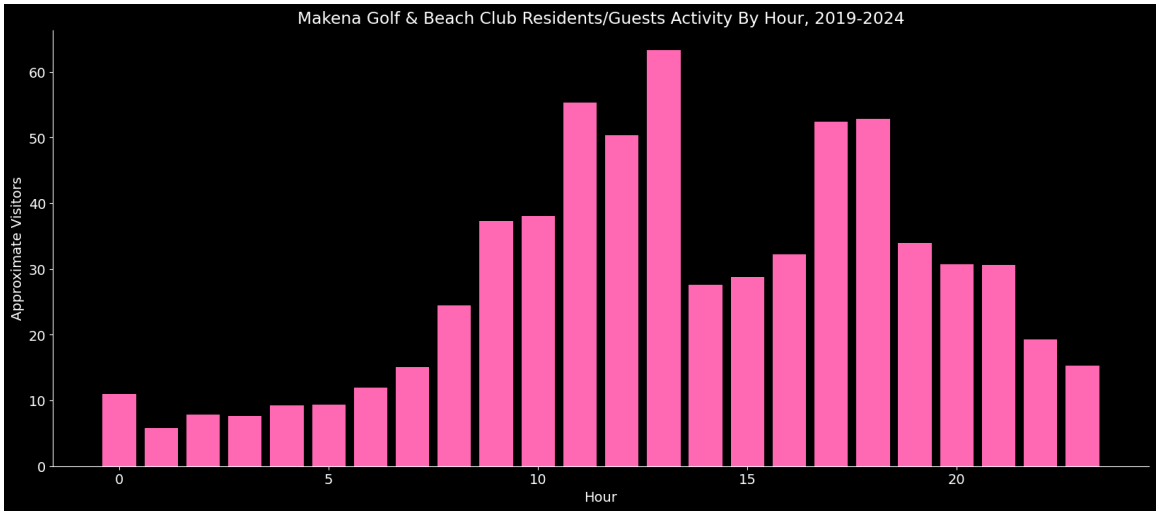


Figure 8 provides the same information as **Figure 7** for Makena Golf & Beach Club PT/FT residents and guests (i.e., in the magenta zones) but expands the vertical scale to better illustrate the hourly variation of visit samples from this group only over the 2019 to 2024 study period.

Figure 8: Temporal Distribution of Visits by Makena Golf & Beach Club PT/FT Residents/Guests Only

Figures 9.a through 9.c present heatmaps of beach visitors based on their home locations, where they spend the majority of the year. For **Figure 9.a**, for example, Maui residents that were sampled at one of the 18 study beaches primarily live in the Kihei and other South Maui areas, with others living generally in the Kahului and Wailuku communities. In **Figure 9.c**, the greatest proportion of beach visitors come from the west coast of the Mainland with additional concentrations in Phoenix, Dallas-Ft. Worth, Chicago, New York City, and Rocky Mountain cities.

Figure 9.a: Beach Visitor Maui Home Locations

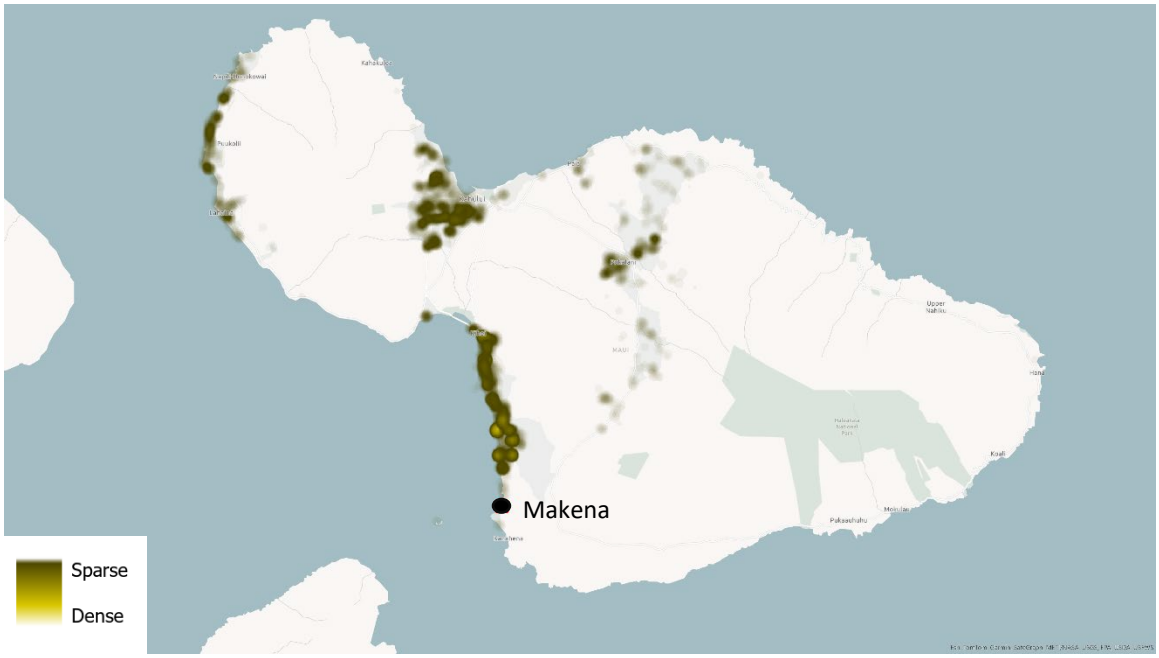

Figure 9.b: Beach Visitor State of Hawai'i Home Locations

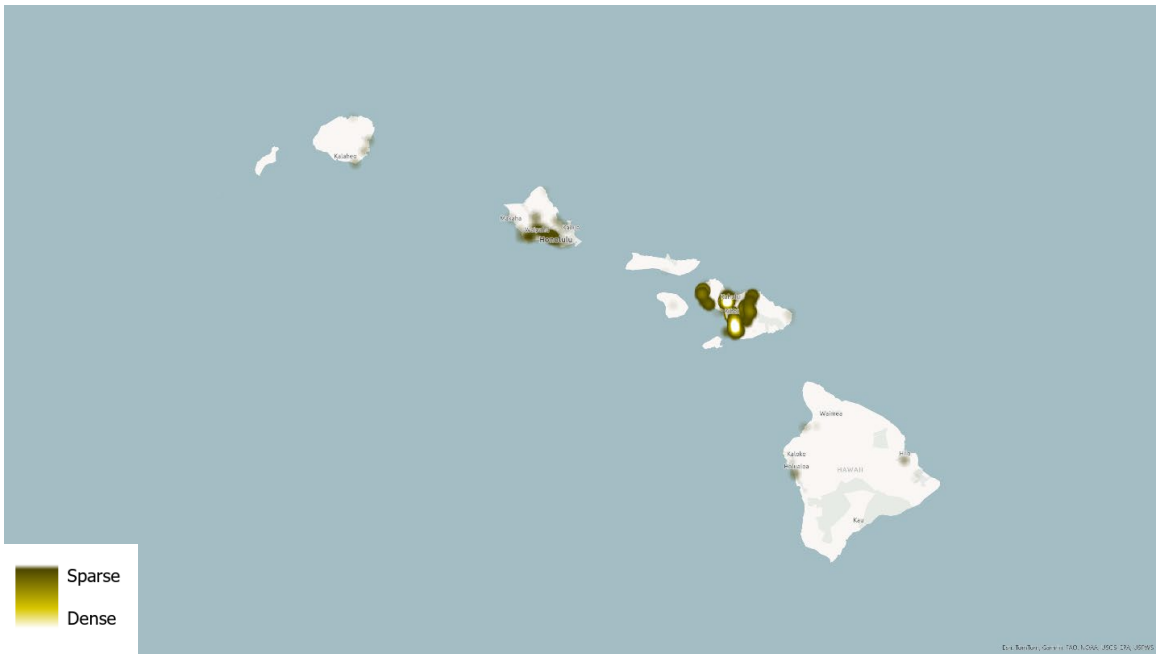

Figure 9.c: Beach Visitor U.S. Home Locations

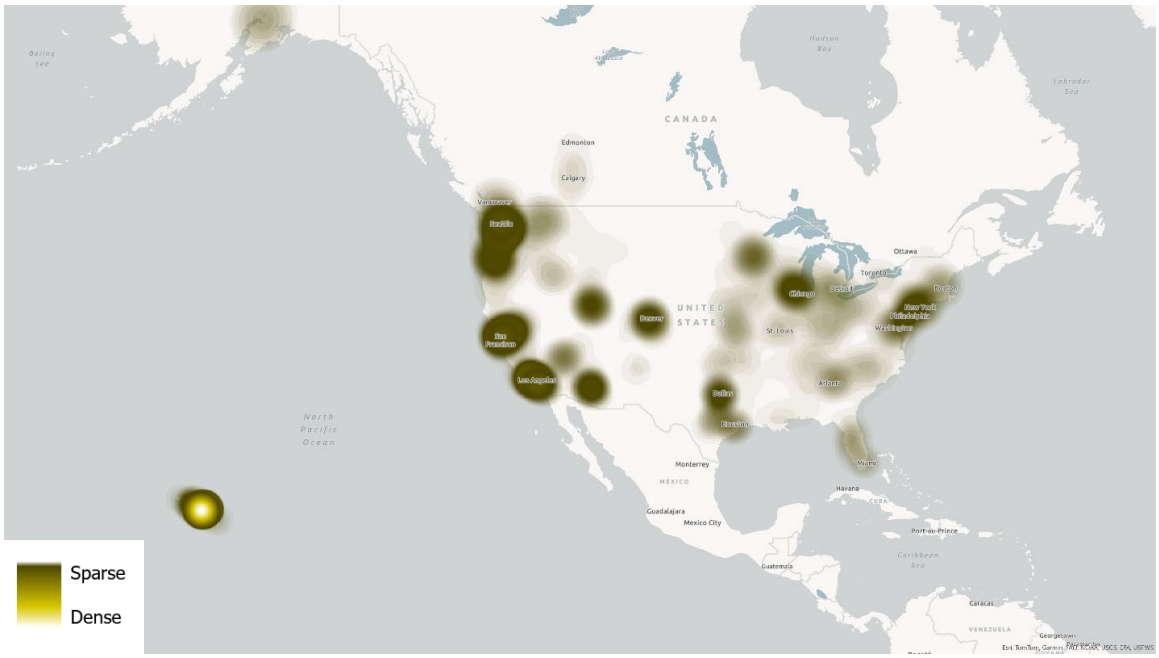

Figure 10 illustrates the variation in total visitation at all study beaches throughout the nearly 5-year period and compares visitation during peak months to the average months. From the data, total visitation is nearly 13% higher during the peak months (December – April) compared to the overall average. Among all months, September has the lowest average visitation (2,217), while December has the highest (3,925), resulting in a difference of 1,708 visits. The largest spikes in the data are anomalies and could be caused by a highly attended event(s), holidays, or other issues. The largest spikes in the data are anomalies and could be caused by a highly attended event(s), holidays, or other issues.

Figure 10: Estimated Daily Total Beach Visitation (Peak Months vs. Average)

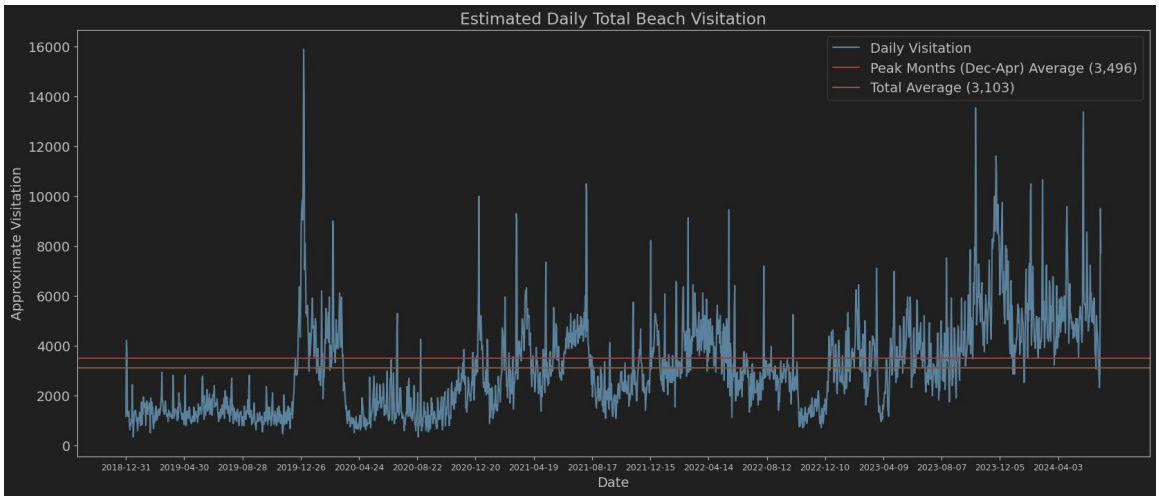

Figure 11 presents the same data as **Figure 10** but provides a detailed breakdown of beach visitation by Makena PT/FT residents, Wailea PT/FT residents, Wailea resort guests, and other visitors from outside the immediate study area, categorized as Maui residents and Non-Maui residents. As shown in the graph, Maui residents and visitors from outside the Makena area are the dominant beach visitor groups.

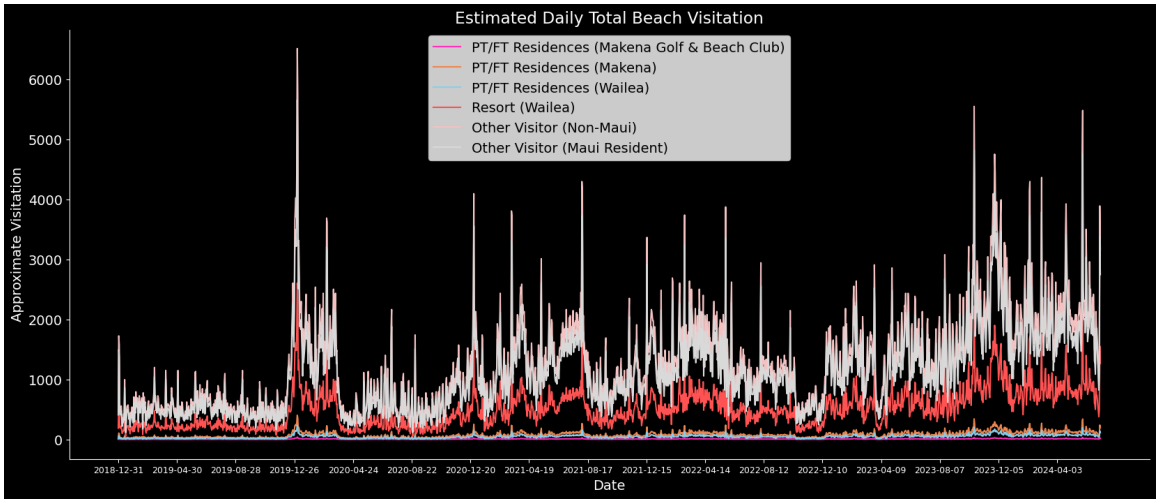
Figure 11: Estimated Daily Total Beach Visitation by Resident Area



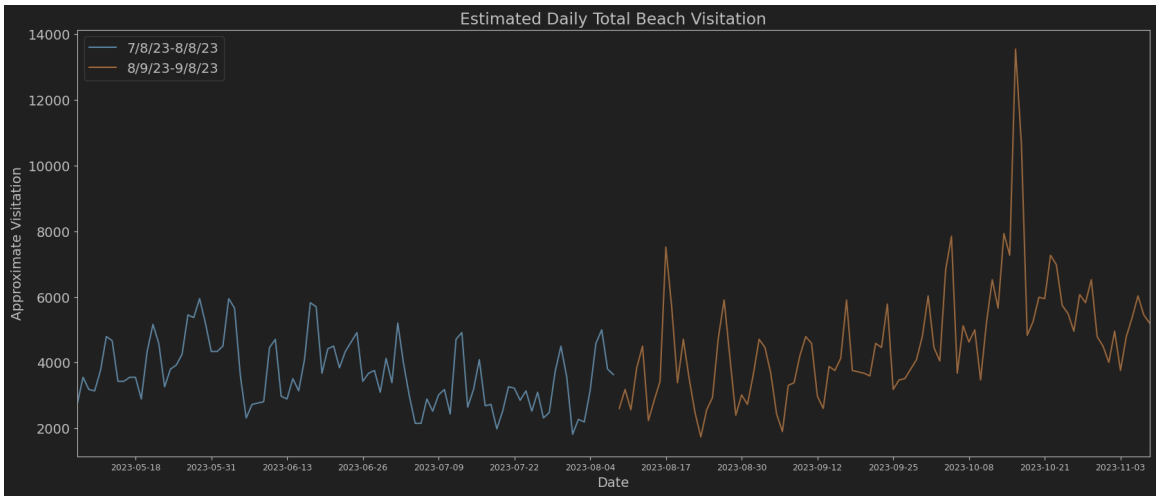


Figure 12 presents an analysis of daily beach visitation in the period surrounding the Maui wildfires. The data contrasts visitation for the month preceding the wildfires (July 8, 2023, to August 8, 2023) with the month following the event (August 9, 2023, to September 8, 2023). For broader context, the average daily visitation over the three months prior to the wildfires was 3,689, compared to 4,642 in the three months following the event.

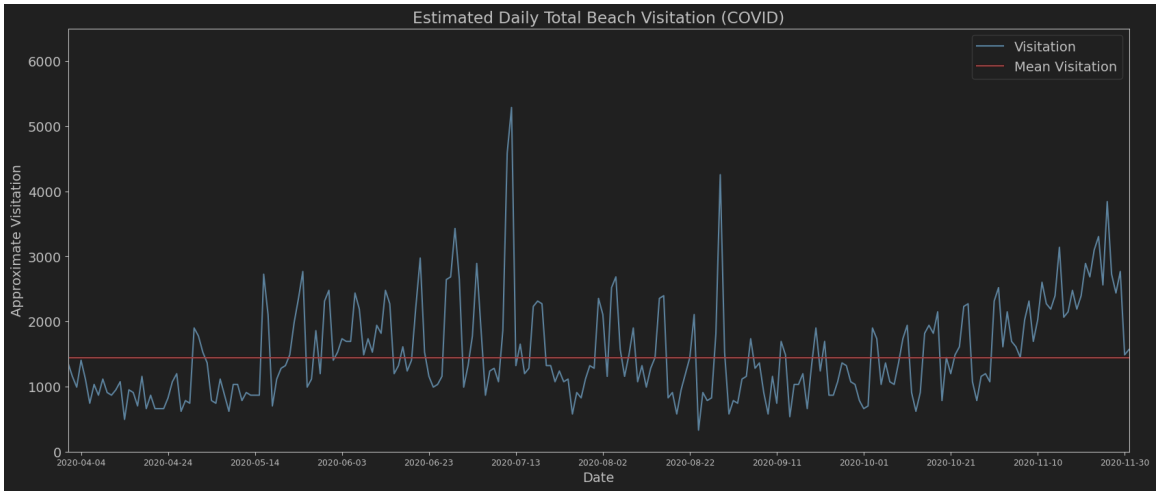
Figure 12: Estimated Daily Total Beach Visitation (Before and After Maui Wildfires)

Figures 13.a and 13.b compare beach visitation during the COVID period (Year 2020) with post-COVID visitation (Year 2022). As illustrated in the figures, daily visitation post-COVID is nearly twice that of the COVID period.

Figure 13.a: Estimated Daily Total Beach Visitation During COVID (Year 2020)



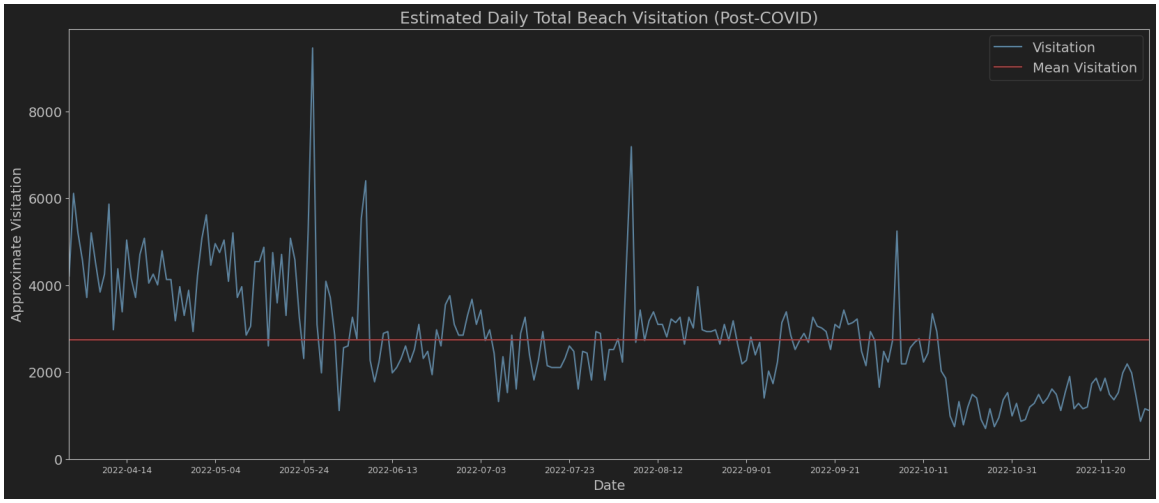


Figure 13.b: Estimated Daily Total Beach Visitation Post-Covid (Year 2022)

Figures 14.a and 14.b compare the daily total beach visitation for the first seven months of 2019 and the first seven months of 2023. This comparison eliminates the effect of the August 2023 Maui wildfire. Note that the 2019 visitation numbers are based on 7,626 unique devices (for the whole year), while the 2023 data are based on 21,423 devices. As Azira is likely collecting data from more and more phones over time, we believe the 2019 numbers may be less representative of actual beach visitation during that year. Please note that the increasing number of devices captured over the years does not necessarily translate to a proportional increase in the number of actual visits.

Figure 14.a: Estimated Daily Total Beach Visitation – January to July 2019

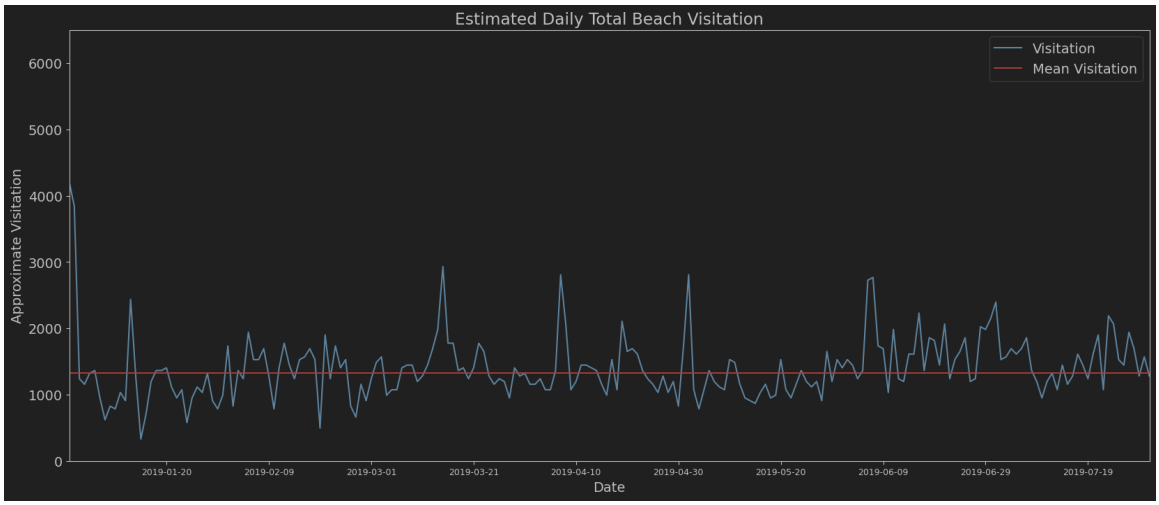

Figure 14.b: Estimated Daily Total Beach Visitation – January to July 2023

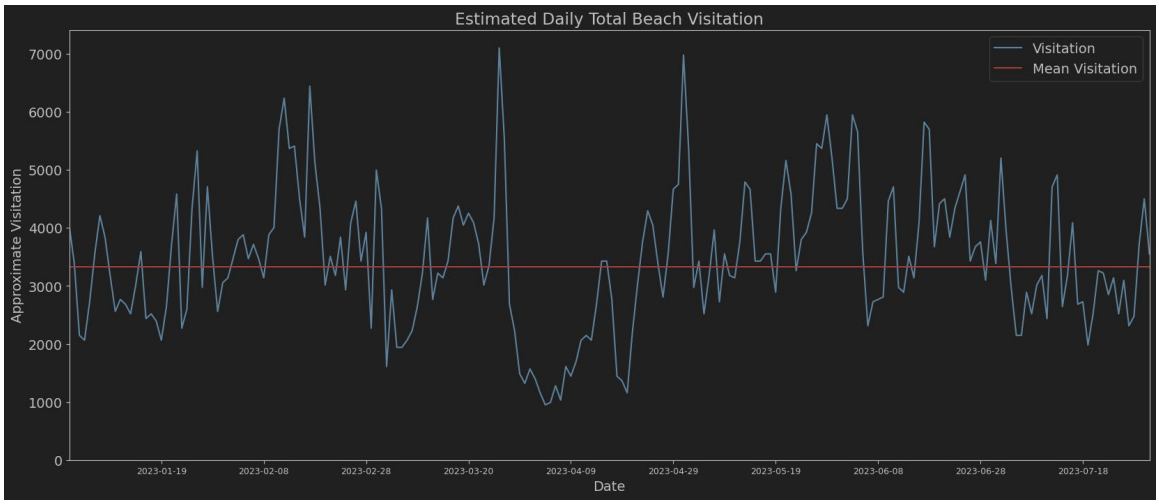

Figure 15 highlights the geographic location of all beach visitors two hours before and after their visit to a study beach(es). While most locations are in the Kihei and Wailea area, visitors travel to various locations in the Kahului-Wailuku communities, as well as to the west side, but to a lesser degree.

Figure 15: Beach Visitor Locations Two Hours Before and After Beach Visit (All Visitors)

Table 4 presents the aggregated percentages of beachgoers who visited various places two hours before and after their beach visit. These percentages are derived by dividing the total visits to each category between January 1, 2019, and June 30, 2024, by the total number of beach visitor samples during the same period, which was 277,328. Azira data provided specific locations or establishments, and these were aggregated into various land use categories for use in an economic analysis if needed.

Table 4: Beach Visitor Land Use Stops Two Hours Before and After Beach Visit (All Visitors)

Place Category	Percentage
Retail	16.10%
Gas Station/Auto Repair	9.00%
Fast Food	6.25%
Grocery	6.50%
Restaurant	6.06%

Other	4.60%

2. Non-COVID Period Analysis (Year 2020 Excluded)

Distribution of Beach Visits

For this analysis, the nighttime location of unique devices during the evening (8 PM – 5 AM) was identified for the entire study period based on a daily average. A device was considered to have made a beach visit if it was observed on the beach for at least 15 minutes. **Table 6** contains the percentage of detected visits of visitors whose devices' nighttime locations are located in each residential or hotel/resort area. In addition to the percentage of visitors whose nighttime locations are in the Makena Golf & Beach Club PT/FT residential units (within the magenta boundaries on **Figure 1**), the other columns in **Table 6** contain the percentages of people staying in other Makena PT/FT residential units (orange boundaries), Wailea PT/FT residential units (blue boundaries), Wailea hotel/resort areas (red boundaries), and from other locations categorized by Maui residents and non-Maui residents. Non-Maui residents includes guests staying at other hotels/resorts on Maui and any day visitors to the island from other Hawaiian islands and outside Hawai'i.

To help illustrate the limited proportion of beach visits originating from the PT/FT residential units, we have graphed the data from **Table 6**. **Figure 17** illustrates the proportion of visitors at each beach location based on their nighttime location origin, and **Figure 18** shows each residential area and the proportional distribution to each beach.

In addition, individual beach visitation trends by nighttime location are presented in **Appendix A**.

The key finding from the number of visitor samples listed in **Table 6** and illustrated on **Figure 17** is that the proportion of beach visitors from existing Makena Golf & Beach Club PT/FT residences is nominal compared to other visitor origins. Makena Golf & Beach Club PT/FT residents/guests have the highest sample size visitation at the Maluaka Beach, Makena Landing Beach, and Wailea Beach, as shown in **Table 7**.

The beach with the highest proportion of Makena Golf & Beach Club PT/FT residents and/or guests is Maluaka Beach, and those residents/guests represent just under five (5) percent of the total visitors. Of the remaining visitors to this beach, roughly 95 percent come from (in descending order): hotel/resort guests from elsewhere on the island, other Maui residents, Wailea hotels/resorts, other Makena PT/FT residents/guests, and Wailea PT/FT residential areas.

At all beaches studied, Makena PT/FT residents/guests make up just 2.08 percent of visitors—equivalent to fewer than three (3) out of every 100 beach visitors. Of these, Makena Golf & Beach Club PT/FT residents/guests account for only 0.19 percent, meaning typically less than one (1) visitor per 500, while other Makena PT/FT residents/guests make up approximately 1.89 percent, or about two (2) visitors per 100. This finding is expected in that the primary reason Makena Golf & Beach Club owners tend not to visit the beaches is that the club offers a private amenity program, including pools, spas, fitness facilities, food and beverage (F&B), and golf. With all the onsite amenities available, their beach visits are mainly limited to Maluaka Beach.

From **Figure 18**, the Azira data samples show that the beaches with the highest proportion of Wailea hotel/resort guests are those immediately adjacent to the resort properties including Mōkapu, Wailea, Ulua and Polo Beaches. The beaches with the highest proportion of Maui residents from outside Makena and Wailea include One'uli, Makena, and Palauea Beaches. Lastly, beaches with the highest proportion of non-Maui residents staying elsewhere on the island include Kama'ole Beach Park I, II and III.

Table 6: Percentage of Visit Samples to Each Beach by Residential Zone (January 2019 – June 2024 Excluding Covid-19 Period Data)

Study Beaches	Nighttime Location of Beach Visitors (Daily Average)						
	Makena Golf & Beach Club PT/FT Residential	Other Makena PT/FT Residential	Wailea PT/FT Residential	Wailea Hotel/ Resort	All Other Locations (Maui-Residents)	All Other Locations (Non-Maui Residents)	Total

1. This table shows all daily visits, over the entire period (Jan 2019-June 2024, excluding the year 2020). This is intended to provide an order of magnitude of visitation for each beach. Since some days will have more visits than others, dividing the values in this table will not yield the same percentages as Table 7.
2. Adding the numbers up in each column will not give the total at the bottom since people can visit multiple beaches.

Estimate of Increased Number of Beach Visits

The Fehr & Peers team was asked to evaluate the incremental impact that 652 new residential units proposed within the Makena Golf & Beach area could have on beach visitation. Of these, 543 are generally expected to be occupied on a part-time basis, while the remaining 109 residences will be affordable units and generally occupied on a full-time basis. Because Azira data only represents a sample of mobile devices, it cannot be used independently to calculate or estimate the absolute number of persons visiting the beach or traveling in the area. Some individuals with devices may not have location services turned on, some people may not have a device, or may not have taken that device to the beach. That said, it is possible to correlate the number of samples to the existing number of PT/FT residential units and available traffic data to generally estimate the potential number of beach visitors from the proposed 543 Market units and 109 Workforce Housing units. This process is described below.

543 Market Units

It should be noted that the exact number of existing PT/FT residential units in the Makena area is not known due to the prevalence of short-term vacation rentals in the area that are offered in and amongst some of the condominium projects of the area. Accordingly, data from similar residential types from Wailea were used as a proxy for the Makena area. Currently, there are approximately 1,200 PT/FT units in the Wailea area between Kilohana Drive and Kaukahi Street. According to **Table 7**, there are roughly 1,336 Azira visits across all study beaches, indicating an average of approximately 1.11 visits per unit. Using this ratio and applying it to the Makena area, the addition of 543 new units in Makena Golf & Beach Club is projected to generate approximately 605 new Azira visits. Given that the dataset spans from 2019 to the end of June 2024, excluding the year 2020, and includes 1,642 days, the new Azira visits per day would be approximately 605/1,642 = 0.37. However, the number of visits need to be correlated to the number of persons, and traffic data was used as a means of estimating this number.

According to the Traffic Volumes Highway Performance Monitoring System (HPMS) 2023 report published by the Hawai'i Department of Transportation (HDOT), the Annual Average Daily Traffic (AADT) in the Wailea-Makena area is 17,000 on Route 31 (Pi'ilani Highway) between MP 5.92 and 7.149, and 10,100 on Route 3135 (Wailea-Alanui Drive) between MP 0 and 1.339, totaling 27,100. The Office of Energy and Renewable Energy reports that the average number of people per household vehicle is 1.5. While not all passengers in these vehicles are associated with a beach visit, the volume can serve as a relational proxy and likely results in a conservative estimate of new beachgoers. Based on Azira data, the Makena PT/FT residential visit samples in 2023 was 999, leading to an estimated 27,100 * 1.5 / 999 ≈ 41 people per Azira visit.

Multiplying the new Azira visits per day (0.37) by the estimated number of people per Azira visit, we estimate an additional 15 beach visits per day. To distribute the estimated increase in beach visits across specific areas, we applied the same ratio derived from each beach's sample size of

visitor nighttime locations to the total nighttime location sample size of beach visitors. This was done for the Makena Golf & Beach Club Market Units (543 units) using the Makena Golf & Beach Club sample sizes (magenta boundary). Please note that this calculation assumes all road traffic is generated by PT/FT residents, providing a conservative estimate for each beach. In addition, we identified the peak visitation hours for PT/FT residents as 10 AM to 2 PM. Nearly 40% of visits were conducted during that period. Using this percentage, we can also estimate the projected increase in beach visitors during peak period (10 AM to 2 PM).

109 Workforce Housing Units

The same methodology described for the Makena Market Units was applied to estimate the beach visitation impact of the 109 additional workforce housing units. For this calculation, it was assumed that the workforce housing units would have characteristics similar to the "Wailea Other Nearby Residential Units" (depicted in gray shading on **Figure 1**). Currently, there are approximately 890 units in this category, generating roughly 2,413 Azira visits across all study beaches, or an average of 2.71 visits per unit.

Applying this ratio, the 109 new units are projected to generate approximately 296 new Azira visits. Over the dataset period (2019 to June 2024, excluding the year 2020, or 1,642 days), this equates to about 0.18 new Azira visits per day.

To estimate the number of people associated with these visits, the same traffic volume (27,100 vehicles) and occupancy rate (1.5 persons per vehicle) were used. However, the relevant Azira sample size for this group in 2023 was 615, leading to an estimated 27,100 * 1.5 / 615 ≈ 66 people per Azira visit.

Multiplying the daily new Azira visits (0.18) by the estimated number of people per Azira visit (66) results in an estimated increase of approximately 12 additional beach visits per day. To distribute the estimated increase in beach visits across specific areas, we applied the same ratio derived from each beach's sample size of visitor nighttime locations to the total nighttime location sample size of beach visitors. This calculation was performed for the Makena Golf & Beach Club Workforce Housing Units (109 units) using the "All Other Locations (Maui Residents)" sample sizes.

Please note that this calculation assumes all road traffic is generated by nearby residential residents, providing a conservative estimate for each beach. As with the previous analysis, the peak visitation hours were identified as 3 PM to 7 PM, during which approximately 40% of visits occur. This percentage was used to estimate the projected increase in beach visitors during the peak period.

The results in **Table 8** show that the estimated increase in peak period beach visitors from the proposed 543 new Makena Golf & Beach Club Market units would be highest at Maluaka Beach with four (4) new peak period visitors, and a total of six (6) new visitors at all beaches. Furthermore, the highest estimated increase at a single beach from the proposed 109 workforce housing units is two (2) additional daily visitors and one (1) peak period visitor.

Table 8: Projected Increase in Beach Visitation with 543 New Makena Golf & Beach Club Market Units and 109 Workforce Housing Units - (Based on January 2019 – June 2024 Data Excluding Covid-19 Period)

Beach	543 Market Units		109 Workforce Housing Units

18. Makena State Park Beach (Big Beach)	1	0	2	1
Total[2]	***15***	***6***	***17***	***6***

1. The numbers in the table have been rounded to the nearest whole number.
2. Summing up the values in the total column results in slightly higher values compared to earlier calculations in the report, as individual visitors may have made multiple visits to a beach. The earlier methodology accounted for each unique device only once to more accurately represent distinct visitation patterns.

Additional Detailed Information from Azira Data Evaluation

Figures 19 through 21 illustrate the average number of beach visit samples by residents and guests of the Makena Golf & Beach Club PT/FT housing in the magenta bounded zones, presented by week, month, and year, respectively.

Figure 19: Weekly Average Number of Beach Visit Samples by Makena Golf & Beach Club PT/FT Residents

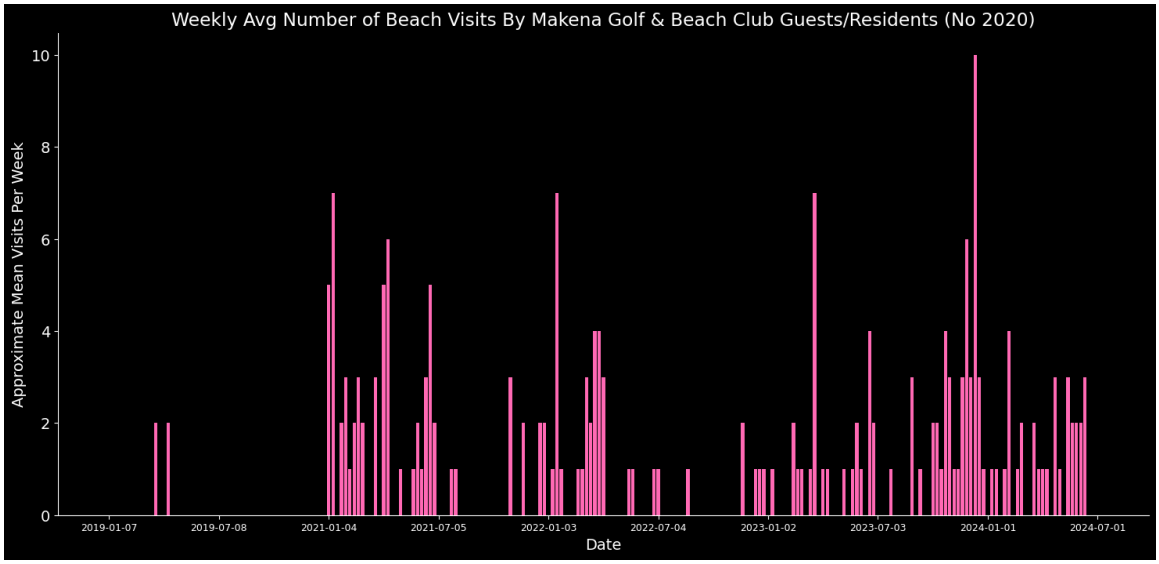

Figure 20: Monthly Average Number of Beach Visit Samples by Makena Golf & Beach Club PT/FT Residents

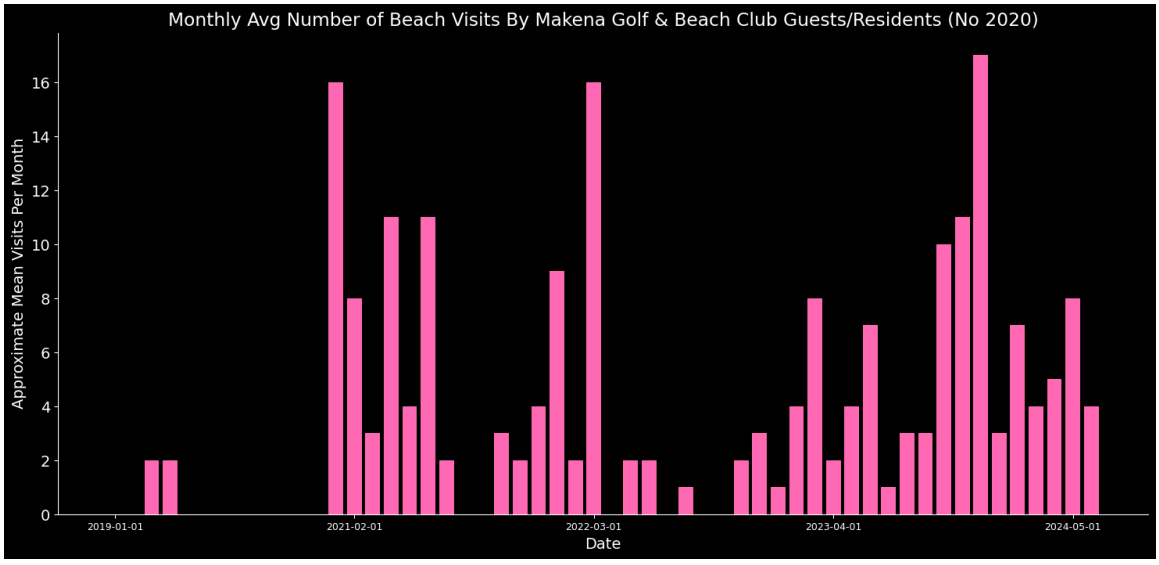

Figure 21: Yearly Average Number of Beach Visit Samples by Makena Golf & Beach Club PT/FT Residents

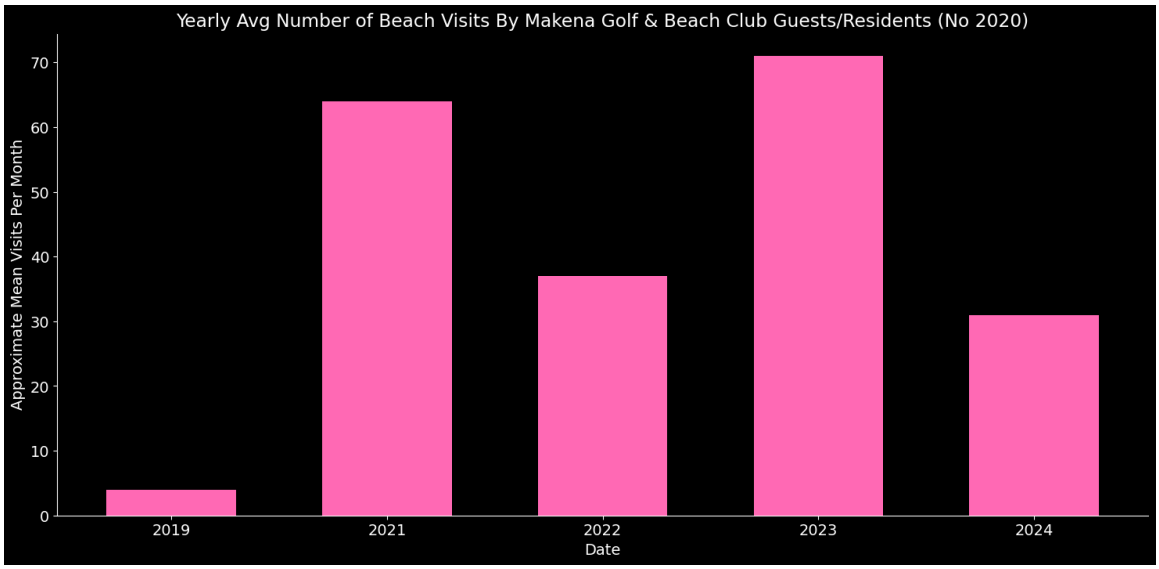

Figure 22 presents the temporal distribution of visit samples at each beach and the proportion from Makena Golf & Beach Club PT/FT residents, Other Makena PT/FT residents, Wailea PT/FT residents, Wailea hotel/resort guests, and other visitors from outside the immediate study area, categorized as Maui residents and Non-Maui residents.

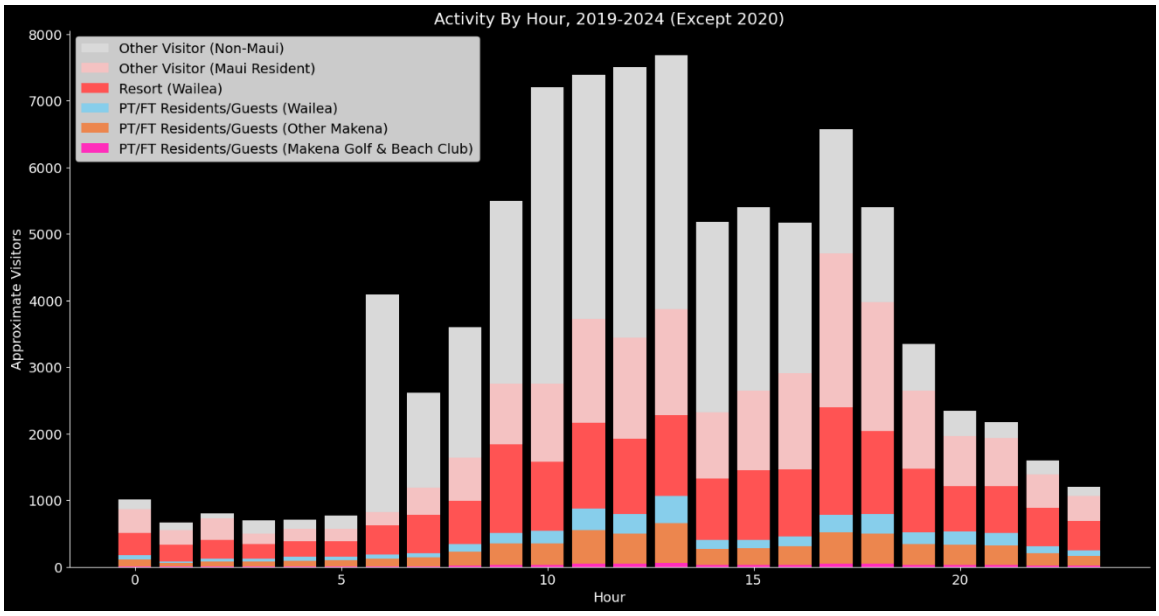
Figure 22: Temporal Distribution of Visit Samples for Each Zone



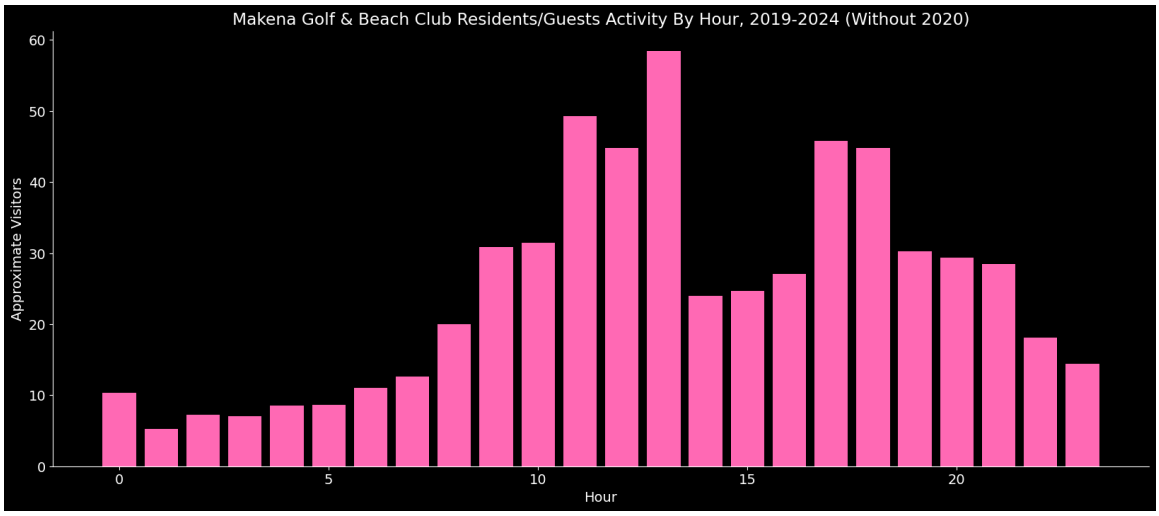


Figure 23 provides the same information as **Figure 22** for Makena Golf & Beach Club PT/FT residents and guests (i.e., in the magenta zones) but expands the vertical scale to better illustrate the hourly variation of visit samples from this group only over the 2019 to 2024 study period (without 2020).

Figure 23: Temporal Distribution of Visits by Makena Golf & Beach Club PT/FT Residents/Guests Only

Figures 24.a through 24.c present heatmaps of beach visitors based on their home locations, where they spend the majority of the year. For **Figure 24.a**, for example, Maui residents that were sampled at one of the 18 study beaches primarily live in the Kihei and other South Maui areas, with others living primarily in the Kahului and Wailuku communities. In **Figure 24.c**, the majority of beach visitors originate from the West Coast of the mainland, as well as from the Northeast, upper Midewest, and Texas.

Figure 24.a: Beach Visitor Maui Home Locations

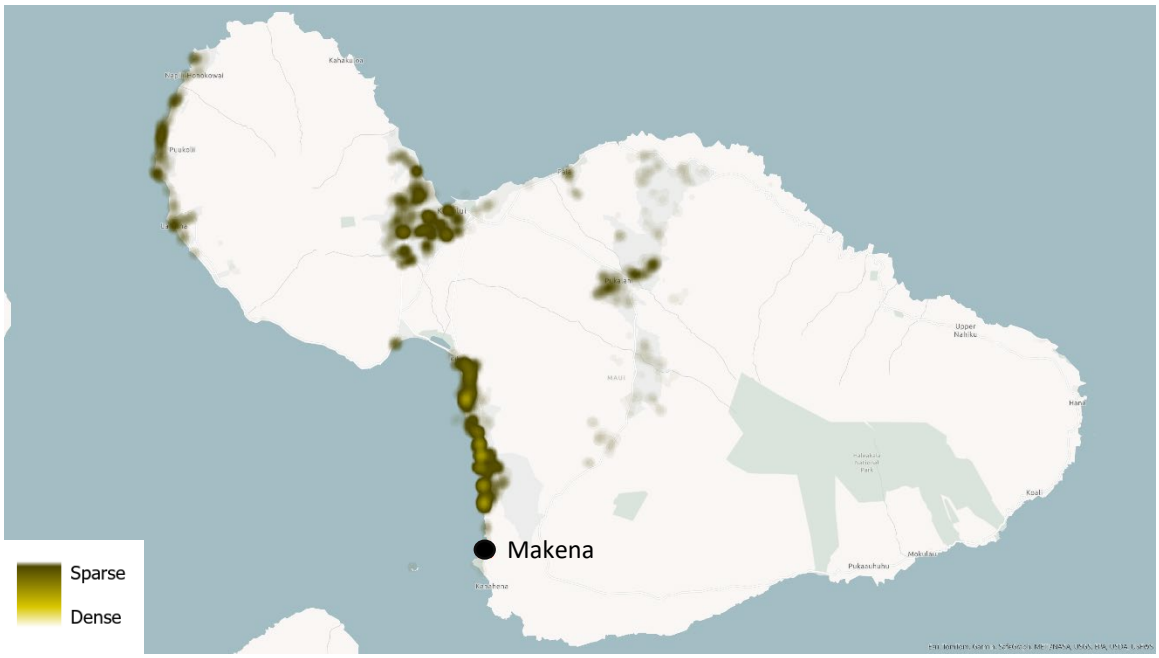

Figure 24.b: Beach Visitor State of Hawai'i Home Locations

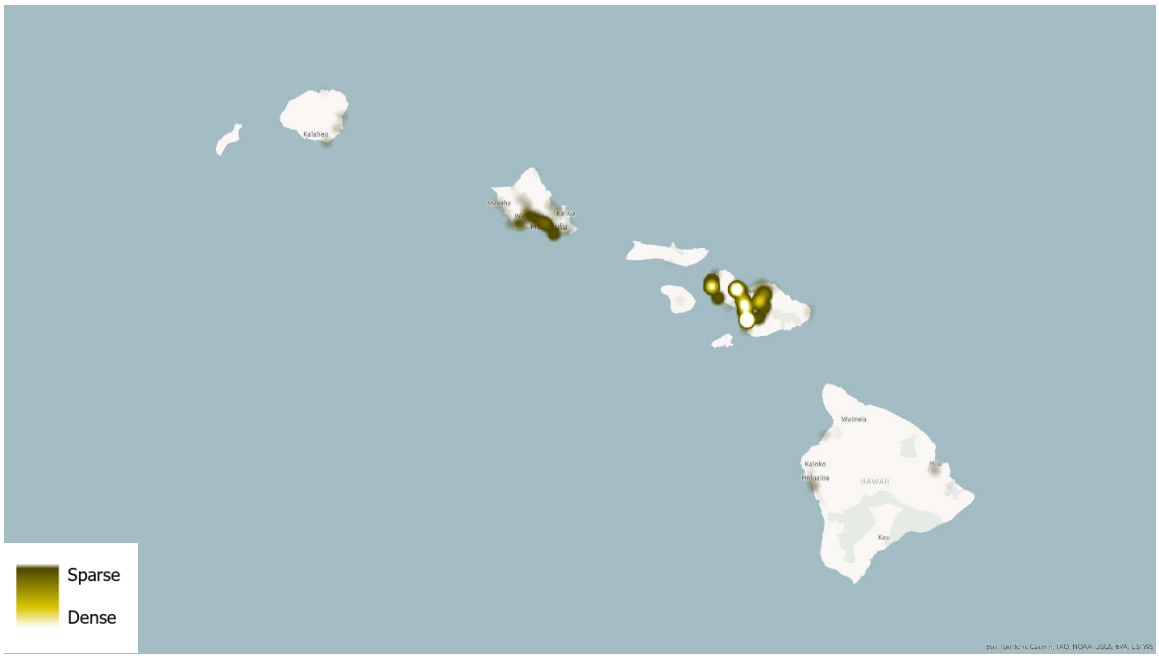

Figure 24.c: Beach Visitor U.S. Home Locations

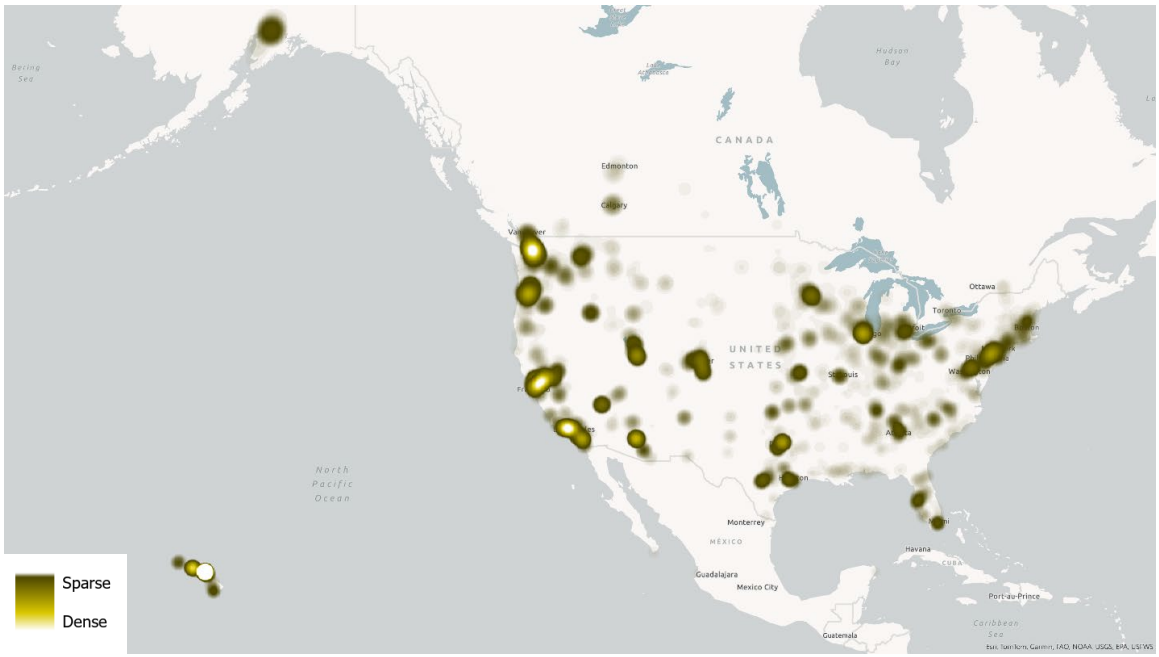

Figure 25 illustrates the variation in total visitation at all study beaches throughout the nearly 5-year period (without 2020) and compares visitation during peak months to the average months. From the data, total visitation is nearly 7% higher during the peak months (December – April) compared to the overall average. Among all months, September has the lowest average visitation (2,490), while December has the highest (4,105), resulting in a difference of 1,615 visits. The largest spikes in the data are anomalies and could be caused by a highly attended event(s), holidays, or other issues.

Figure 25: Estimated Daily Total Beach Visitation (Peak Months vs. Average)

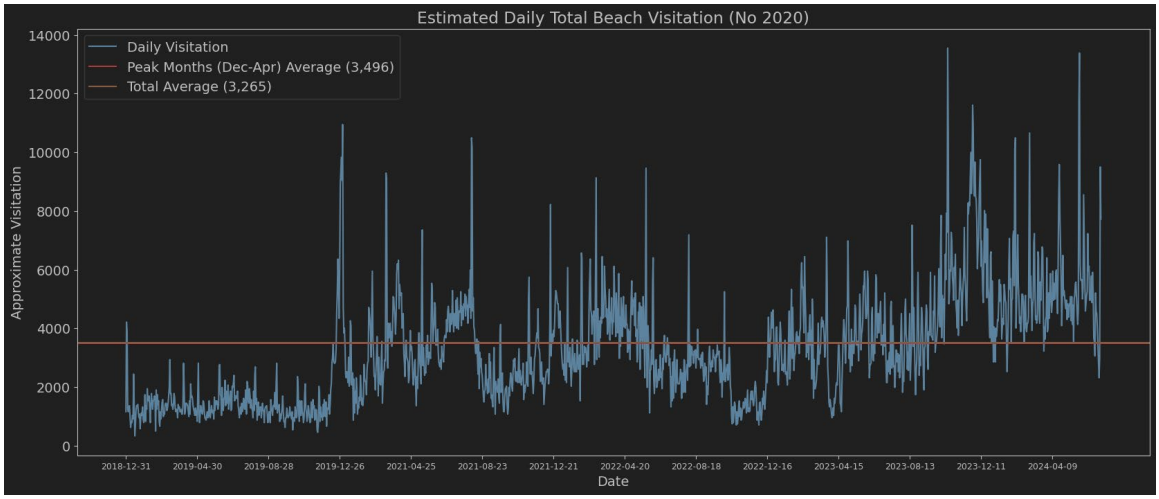

Figure 26 presents the same data as **Figure 25** but provides a detailed breakdown of beach visitation by Makena PT/FT residents, Wailea PT/FT residents, Wailea resort guests, and other visitors from outside the immediate study area, categorized as Maui residents and Non-Maui residents. As shown in the graph, Maui residents and visitors from outside the Makena area are the dominant beach visitor groups.

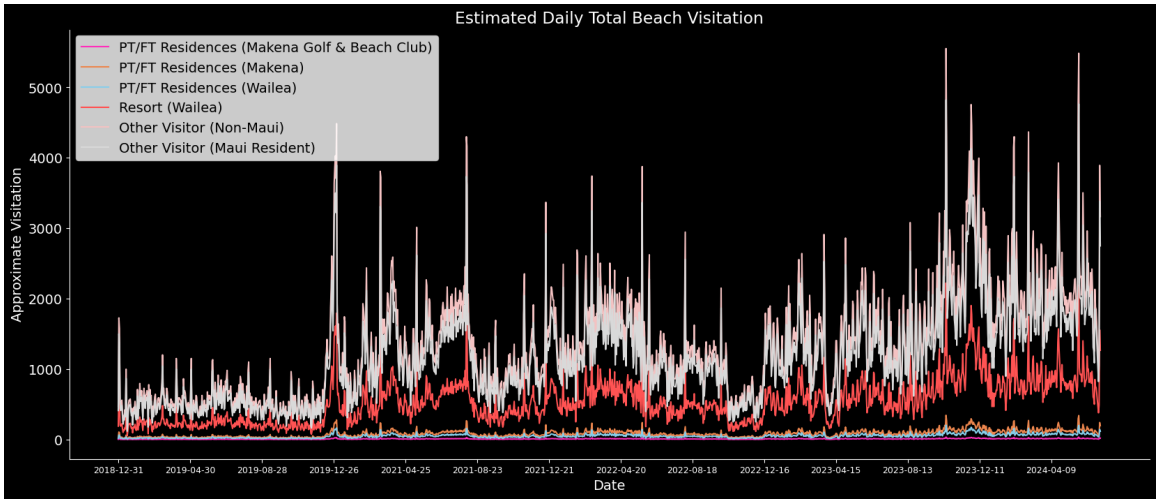
Figure 26: Estimated Daily Total Beach Visitation by Resident Area



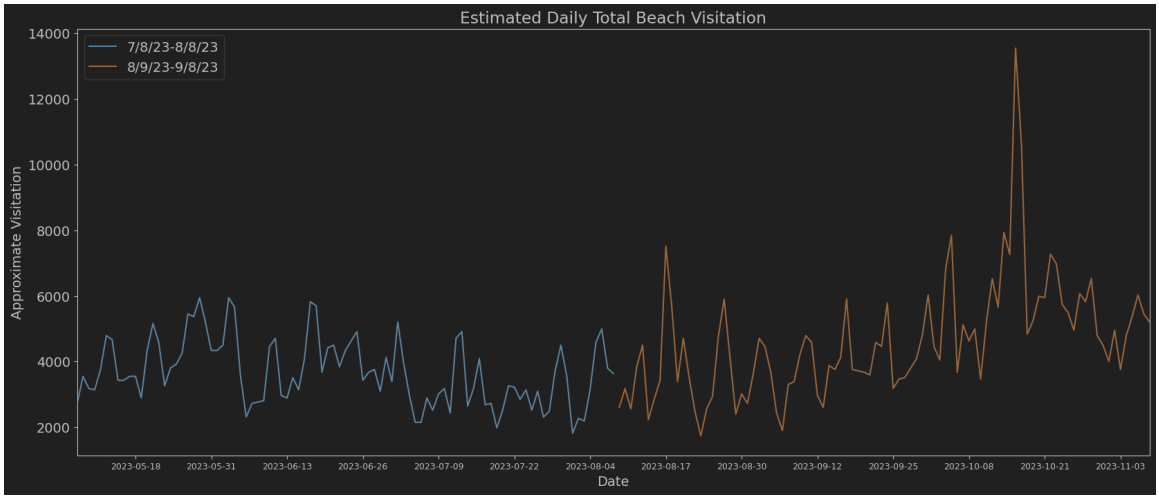


Figure 27 presents an analysis of daily beach visitation in the period surrounding the Maui wildfires. The data contrasts visitation for the month preceding the wildfires (July 8, 2023, to August 8, 2023) with the month following the event (August 9, 2023, to September 8, 2023). For broader context, the average daily visitation over the three months prior to the wildfires was 3,689, compared to 4,642 in the three months following the event, likely resulting from the travel restrictions to communities on the west side of Maui.

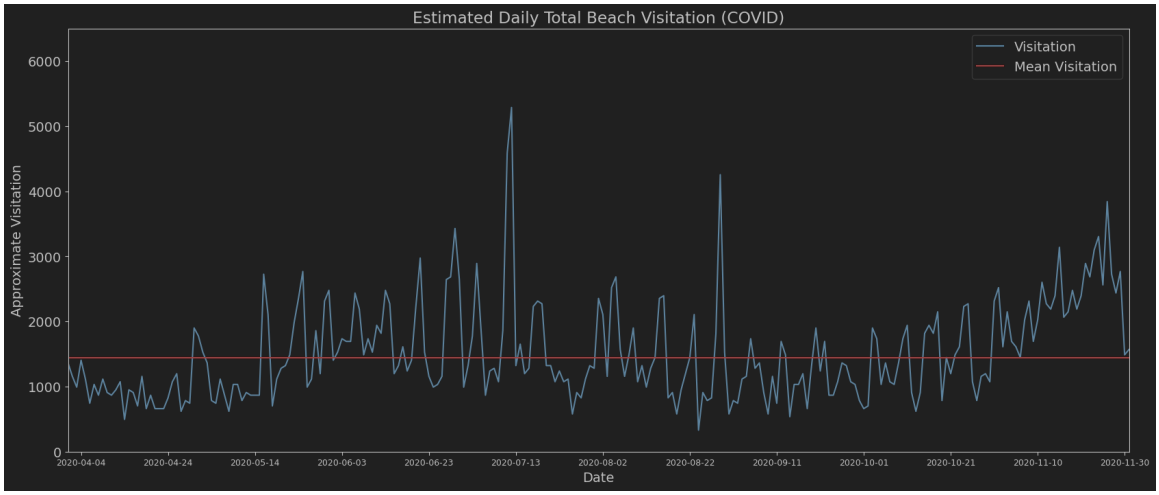
Figure 27: Estimated Daily Total Beach Visitation (Before and After Maui Wildfires)

Figures 28.a and 28.b compare beach visitation during the COVID period (Year 2020) with post-COVID visitation (Year 2022). As illustrated in the figures, daily visitation post-COVID is nearly twice that of the COVID period.

Figure 28.a: Estimated Daily Total Beach Visitation During COVID (Year 2020)



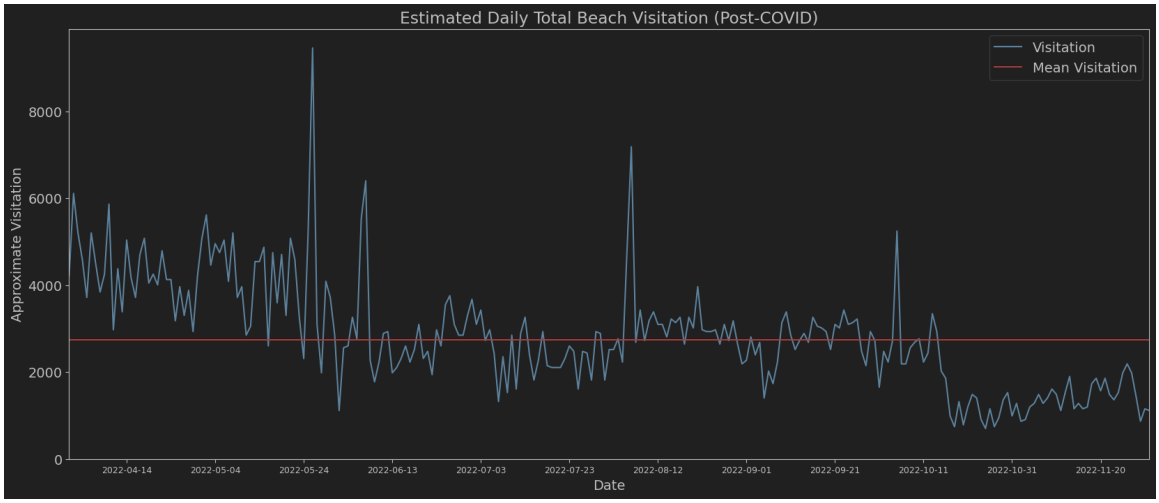


Figure 28.b: Estimated Daily Total Beach Visitation Post-Covid (Year 2022)

Figures 29.a and 29.b compare the daily total beach visitation for the first seven months of 2019 and the first seven months of 2023. This comparison eliminates the effect of the August 2023 Maui wildfire. Note that the 2019 visitation numbers are based on 7,626 unique devices (for the whole year), while the 2023 data are based on 21,423 devices. As Azira is collecting data from more and more phones over time, we believe the 2019 numbers are much less representative of actual beach visitation during that year. Please note that the increasing number of devices captured over the years does not necessarily translate to a proportional increase in the number of actual visits.

Figure 29.a: Estimated Daily Total Beach Visitation – January to July 2019

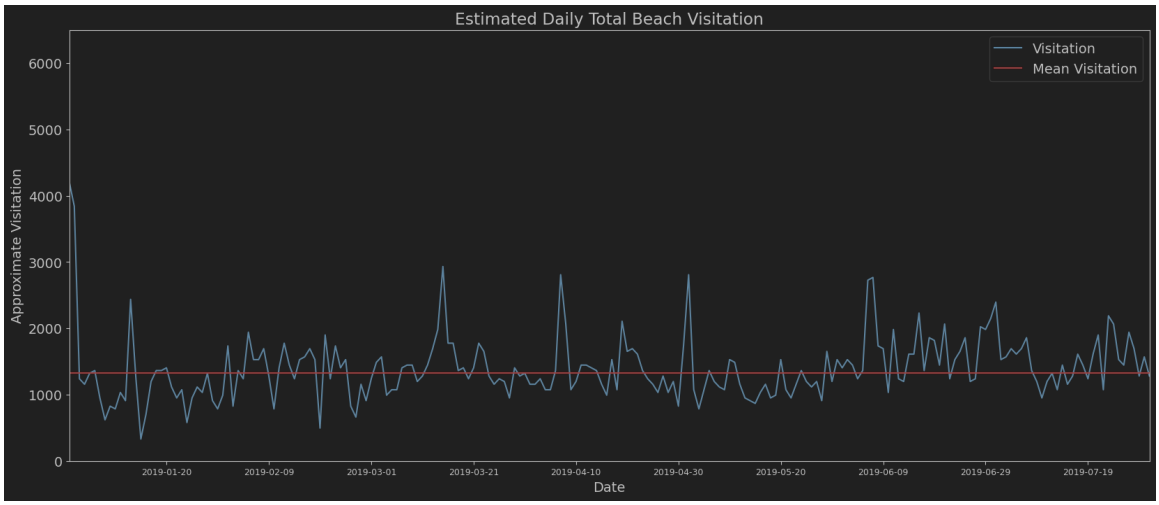

Figure 29.b: Estimated Daily Total Beach Visitation – January to July 2023

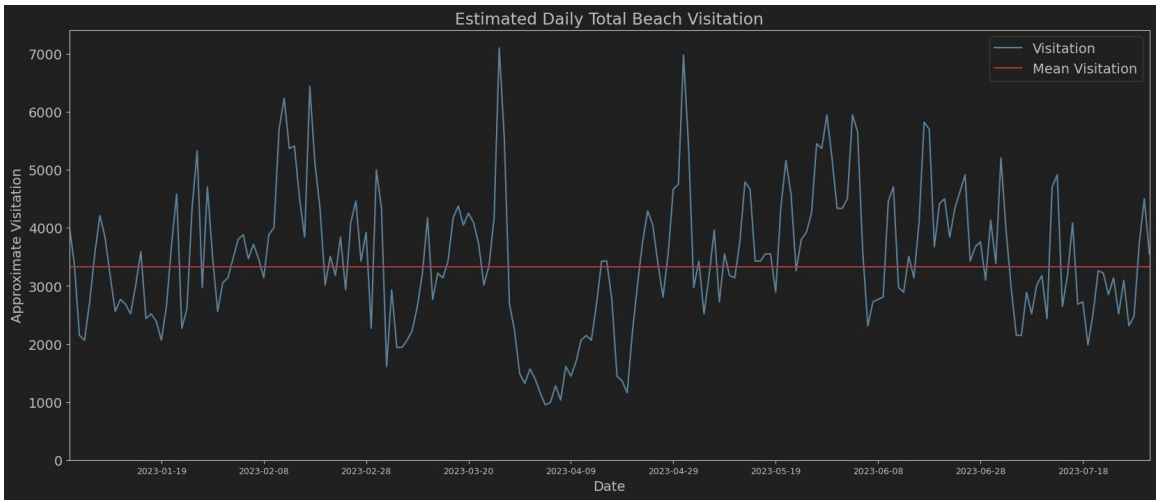

Figure 30 highlights the geographic location of all beach visitors two hours before and after their visit to a study beach(es). While most locations are in the South Maui area, visitors also traveled to various locations in the Kahului-Wailuku communities, and to the west side, albeit to a much lesser degree.

Figure 30: Beach Visitor Locations Two Hours Before and After Beach Visit (All Visitors)

Table 9 presents the aggregated percentages of beachgoers who visited various places two hours before and after their beach visit. These percentages are derived by dividing the total visits to each category between January 1, 2019, and June 30, 2024, excluding the year 2020, by the total number of beach visitor samples during the same period. Azira data provided specific locations or establishments, and these were aggregated into various land use categories for use in an economic analysis if needed.

Table 9: Beach Visitor Land Use Stops Two Hours Before and After Beach Visit (All Visitors)

Place Category	Percentage
Retail	15.14%
Gas Station/Auto Repair	8.89%
Fast Food	5.61%
Grocery	6.32%
Restaurant	5.96%
Parks	3.98%
Convenience	1.46%
Attraction	0.47%
Other	3.39%

Figure 31 and **Table 10** provide the same information as **Figure 30** and **Table 9**, but specifically for Makena Golf & Beach Club FT/PT residents and guests (magenta zones only).

Figure 31: Beach Visitor Locations Two Hours Before and After Beach Visit (Makena Golf & Beach Club PT/FT Residents)

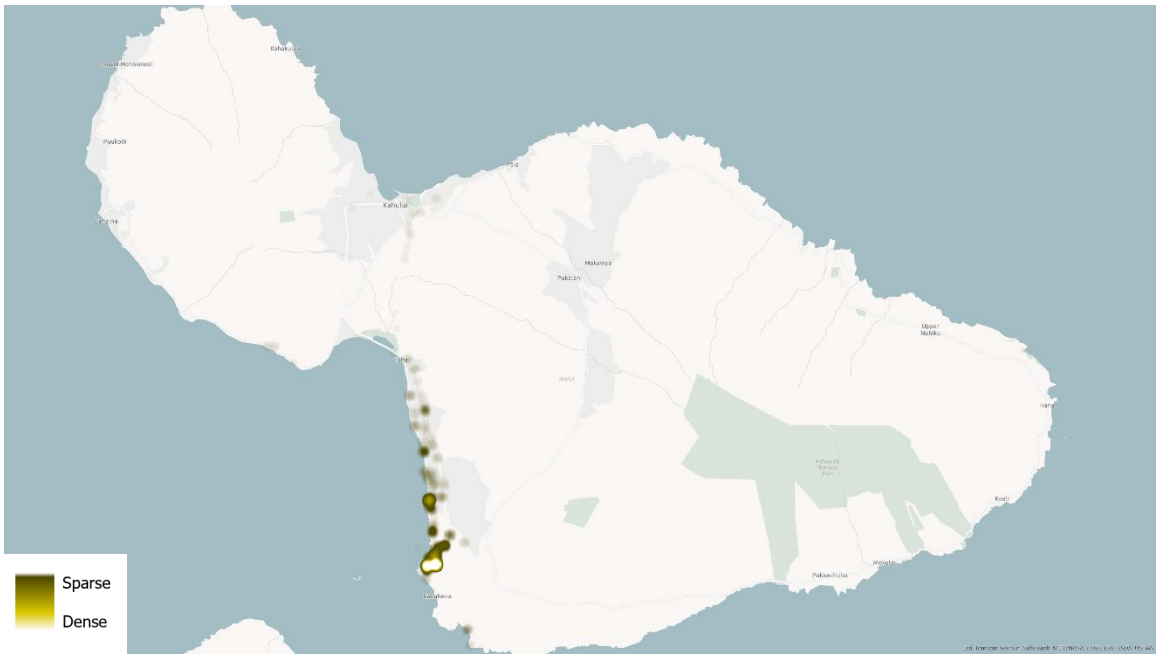

Table 10: Beach Visitor Land Use Stops Two Hours Before and After Beach Visit (Makena Golf & Beach Club PT/FT Residents)

Place Category	Percentage
Retail	15.94%
Gas Station/Auto Repair	11.59%
Fast Food	1.45%
Grocery	4.35%
Restaurant	2.90%
Parks	2.90%
Convenience	1.45%
Attraction	1.45%
Other	5.80%

Summary and Conclusion

According to the analysis of both scenarios, with and without COVID-19, the Makena Golf & Beach Club PT/FT residents (magenta areas) contribute the smallest percentage of beachgoers, significantly less than hotel/resort guests and visitors from other locations. When the dataset excludes the Covid-19 period, the resulting distribution of beach visitors is very similar to the results of the entire study period (January 2019 to June 2024). In the following summary the percentages

from the "with Covid-19" dataset are shown in parentheses following the non-Covid-19 dataset values. 0.19% (0.19%) of all study beach visitors originate in Makena Golf & Beach Club part-time/full-time residential units. Moreover, 1.89% (1.98%) of all study beach visitors originate in other Makena part-time/full-time residential units. In comparison, 23.02% (21.98%) of all visitors to the study area beaches originate from Wailea, with 1.28% (1.49%) from part-time/full-time residential units, 21.74% (20.49%) from resort areas. Visitors from non-Wailea and non-Makena areas make up 74.90% (75.85%) of the total, with 27.31% (31.57%) from Maui residents and 47.59% (44.28%) from non-Maui residents.

In both scenarios (with and without Year 2020 data from the pandemic), the anticipated impact of adding 543 new Makena Golf & Beach Club Market Units is shown, with the additional impact of 109 workforce housing units provided in parentheses, for the estimated daily and peak increases in beach visitation, respectively:

- Kama'ole Beach Park I: 0 (2) daily trips and 0 (1) peak hour trips.
- Kama'ole Beach Park I: 0 (1) daily trips and 0 (0) peak hour trips.
- Kama'ole Beach Park I: 1 (1) daily trips and 0 (1) peak hour trips.
- Keawakapu Beach (North): 0 (2) daily trips and 0 (1) peak hour trips.
- Keawakapu Beach (South): 0 (1) daily trips and 0 (0) peak hour trips.
- Mōkapu Beach: 0 (1) daily trips and 0 (0) peak hour trips.
- Ulua Beach: 0 (1) daily trips and 0 (0) peak hour trips.
- Wailea Beach: 1 (1) daily trips and 1 (1) peak hour trips.
- Polo Beach: 0 (1) daily trips and 0 (0) peak hour trips.
- Palauea Beach: 0 (1) daily trips and 0 (0) peak hour trips.
- North Po'olenalena Beach: 0 (0) daily trips and 0 (0) peak hour trips.
- South Po'olenalena Beach: 0 (1) daily trips and 0 (1) peak hour trips.
- Ka'awa Beach: 0 (0) daily trips and 0 (0) peak hour trips.
- Makena Landing Beach: 1 (1) daily trips and 1 (1) peak hour trips.
- Maluaka Beach: 10 (1) daily trips and 4 (0) peak hour trips.
- One'uli Beach: 1 (0) daily trips and 0 (0) peak hour trips.
- Pu'u 'Ola'i (Little) Beach: 0 (0) daily trips and 0 (0) peak hour trips.
- Makena State Park (Big Beach) Beach: 1 (2) daily trips and 0 (1) peak hour trips.

Regardless of the data source, the addition of the proposed 543 PT/FT dwelling units is forecast to have a negligible impact on visitation at the 18 study beaches. As mentioned earlier, the primary reason Makena Golf & Beach Club owners tend not to visit the beaches is that the club offers a private amenity program, including pools, spas, fitness facilities, F&B, and golf. With all the onsite amenities available, their beach visits are mainly limited to Maluaka Beach, but all beach visits from the new units will tend to be infrequent and dispersed across multiple beaches. Lastly, the addition of the proposed 109 Workforce Housing Units is also forecasted to have a similar negligible impact

on visits at the 18 study beaches, with a total of 17 additional daily trips and seven (7) peak-hour trips at all locations.

Executive Summary

This Economic and Fiscal Impact Study has been prepared for the proposed Mākena Mauka project, a low-density master planned residential community within the Makena area of South Maui, to assess (1) the short-term construction-related impacts of the project, and, (2) the long-term operational impacts of the project at full build-out. The project will involve development of market rate housing together with workforce housing with a mixture of rural and single-family lots and multi-family residential units, within an area that has largely been planned for such uses for decades. The project will incorporate the existing 18-hole Makena North Golf Course and the 18-hole Makena South Golf Course (to be renovated as part of the project), together with a community gathering place, hiking trails, programs to support connectivity, walking, bicycling, golf cart paths, beach parking for the public, areas reserved for conservation/open space, and areas reserved for public beach access. The project will result in positive economic and fiscal impacts to the State of Hawai'i and the County of Maui both during construction and at full-build out (during operations), as summarized below.

CONSTRUCTION PERIOD

The construction of the project is anticipated to cost approximately $4.0 billion over 30 years. Project construction would directly result in the creation of approximately 330 full-time equivalent (FTE)[1] jobs per year, with associated total earnings of $30.3 million annually. **The total impacts of construction, including direct, indirect, and induced impacts, would be approximately 840 FTE jobs per year with associated earnings of $62.2 million.** Project construction and initial sales of market rate housing units will generate general excise tax (GET), personal income tax, corporate income tax, and conveyance tax revenues. Given that the State and the County would not bear any costs associated with the construction activity, **the State and County would both experience a positive fiscal impact during the construction period of $12.3 million and $1.0 million annually from construction activity related tax revenues, respectively.**

FULL BUILD-OUT (OPERATIONS)

The proposed project is anticipated to include both full-time and part-time residents. While all of the workforce housing units are assumed to be occupied by full-time residents, 90 percent of the market-rate units are anticipated to be occupied by part-time residents (assumed to be present on the island approximately 20 percent of the time). The operation of the proposed Mākena Mauka project would create new employment. The proposed project is anticipated to generate total onsite net new sales of $59.3 million per year, including revenues from club operations as well as rent revenues for the workforce housing units at the Mākena Mauka property (excluding

[1] Full-time equivalent (FTE) is a unit to measure employed persons who work different hours per week comparable. FTE is typically based on a 40-hour work week. For example, a full-time employee counts as 1.0 FTE, while a part-time employee who works 20 hours a week counts as 0.5 FTE.

real estate sales). In addition to the existing jobs at the property, **the operation of new components of Mākena Mauka, including housing, the clubhouse, and the renovated South Golf Course, will create approximately 112 additional FTE jobs directly with associated earnings of $5.6 million annually** through club operation and additional golf course operation over the existing golf course operation. In addition, new residents of Mākena Mauka will also spend money offsite (outside of the property) within the local economy, which will create positive economic impacts on Maui. For example, if all households of the market units spend $250.00[2] a day while on Maui, the total offsite economic impacts on Maui would be approximately $38,000.00 a day[3] (or approximately $14 million annually).

From a fiscal perspective, an increase in the cost of government services is applied for the property based on a per-capita cost factor for both the State and County and number of residents accommodated at the property. Meanwhile, both the State and County will realize new tax revenues from the proposed project, **resulting in a net positive fiscal impact of $12.0 million for the State and $48.3 million for the County on an annual basis.**

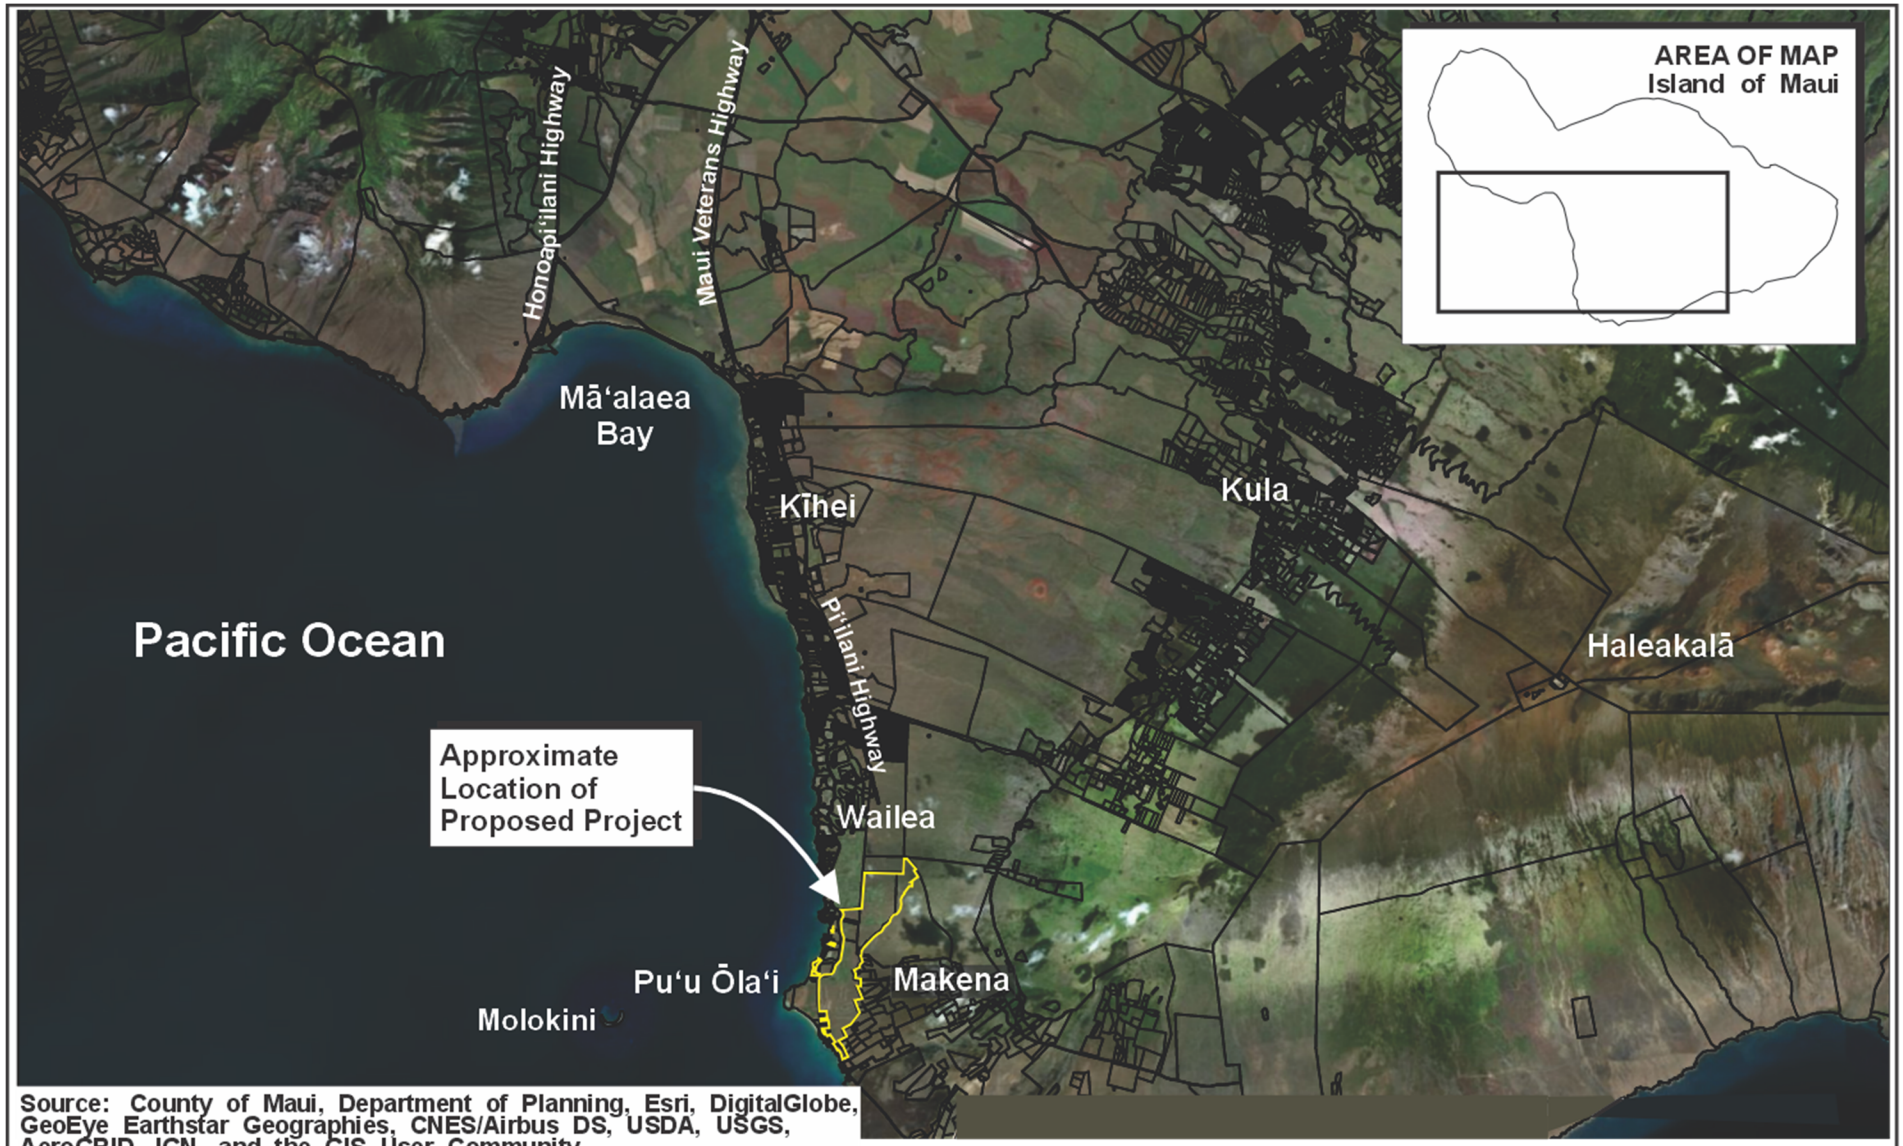
[2] Estimate of daily household spending provided by AREG AC Makena Propco LLC (dba Mākena Golf & Beach Club Owners).

[3] The market units actively used in any given day is approximately 152 units (full-time market units [54 units] + 20 percent of part-time market units [489 units x 20 percent = 97.8 units] = 151.8 units). If each market unit household spends $250.00 /day, it would result in $38,000.00 total spending per day.

INTRODUCTION

I. INTRODUCTION

This Economic and Fiscal Impact Study (Study) has been prepared for the proposed Mākena Mauka Project (hereafter referred to as the "proposed project"), a residential and golf club development in Makena, Maui, Hawai'i. The study presents an analysis of the short-term, development-related impacts to the local economy, as well as long-term impacts of the project at full build-out. Likewise, fiscal impacts to the State of Hawai'i (State) and County of Maui (County) are analyzed for both periods.



A. PROJECT OVERVIEW

AREG AC Makena Propco LLC doing business as Mākena Golf & Beach Club Owners proposes the development of Mākena Mauka, a low-density master planned residential community within the Makena area of South Maui (this area is sometimes referred to as Makena Resort). Mākena Mauka will offer market rate housing together with workforce housing with a mixture of rural and single-family lots and multi-family residential units within an area that has largely been planned for such uses for decades, all located mauka of Makena Alanui Road. See **Figure 1**, **Figure 2**, and **Figure 3**. The proposed development program is summarized in **Table 1**. It is noted that the preliminary conceptual plan anticipates approximately 543 market rate housing units and 109 workforce housing units. No short time vacation rental will be allowed within the project.

Table 1. Development Program

	Total	Unit
Residential		
Market Rate		
Single-Family Residential	180	units
Multi-Family Residential	363	units
Subtotal	**543**	**units**
Workforce Housing		
Single-Family For Rent	15	units
Multi-Family For Rent	94	units
Subtotal	**109**	**units**
Total Residential	**652**	**units**
Ancillary/Commercial		
Restaurant, Clubhouse, Kitchen, Locker Rooms, Fitness, Back of House	48,000	sq.ft.
Golf Maintenance, Staff Center, Golf Operations, Receiving Area	63,000	sq.ft.
Arrival Hale, Farm Operations, Restrooms	24,000	sq.ft.
Total Commercial	**135,000**	**sq.ft.**
Golf Courses		
Existing North Golf Course	197	acres
Existing Makena South Golf Course	225	acres
Total Golf Courses	**422**	**acres**

Mākena Mauka

Conceptual Land Use Plan

Prepared for: AREG AC Makena Propco LLC

MUNEKIYO HIRAGA

ATCMakena/Makena MP EIS 2100/Applications/Figures/ConcLandUse.FE

The project will incorporate the existing 18-hole Makena North Golf Course and the 18-hole Makena South Golf Course (to be renovated as part of the project), together with a community gathering place, hiking trails, programs to support connectivity, walking, bicycling, golf cart paths, beach parking for the public, areas reserved for conservation/open space, and areas reserved for public beach access. The current vision for the Mākena Mauka land plan includes 652 housing units, including 109 onsite residential workforce housing units, and approximately 135,000 square feet (sq. ft.) of operational support buildings, which include golf maintenance, staff offices, restaurants, back of house, golf operations and other uses; within the approximately 1,043.71-acre total project area which includes approximately 473 acres of parcels proposed for residential development. The project will provide workforce housing in perpetuity. According to Section 2.96.040, Maui County Code (MCC), if workforce housing units remain available only to income-qualified groups in perpetuity, developers are required to provide at least 20 percent of the total number of market units. As such, the proposed 109 onsite workforce housing units (20 percent of the total market units) will satisfy the residential workforce housing requirements. It is noted that Section 2.96.020, MCC defines "Residential workforce housing unit" as *a unit or lot to be sold or rented to residents within one of the following income groups as established by the department:*

1. *"Very low income", which are those households whose gross annual family income is fifty percent or less of the area median income as established by HUD, or as adjusted by the department, for Hana, Lanai, and Molokai.*

2. *"Low income", which are those households whose gross annual family income is more than fifty percent, but not more than eighty percent of the area median income as established by HUD, or as adjusted by the department, for Hana, Lanai, and Molokai.*

3. *"Below-moderate income", which are those households whose gross annual family income is more than eighty percent, but not more than one hundred percent of the area median income as established by HUD, or as adjusted by the department, for Hana, Lanai, and Molokai.*

4. *"Moderate income", which are those households whose gross annual family income is more than one hundred percent, but not more than one hundred twenty percent of the area median income as established by HUD, or as adjusted by the department, for Hana, Lanai, and Molokai.*

5. *"Above-moderate income", which are those households whose gross annual family income is more than one hundred twenty*

percent, but not more than one hundred forty percent of the area median income as established by HUD, or as adjusted by the department, for Hana, Lanai, and Molokai.

Preliminarily, approximately one third of the proposed workforce housing units will be available for households earning 80 percent of the Area Median Income (AMI) or less, another one third of the units will be available for households earning between 81 to 100 percent of the AMI, and the remaining one third of the units will be available for households earning between 101 to 120 percent of the AMI.

B. METHODOLOGY

An overview of the methodology used for the economic and fiscal impact analyses is provided below. Assumptions utilized in this analysis are presented in the note sections of the tables included in this report, as applicable. All figures are reported in 2025 dollars.

1. Economic Impact Assessment

The development and operational economic impacts of the proposed Mākena Mauka Project were analyzed using the *Hawai'i State Input-Output Study: 2017 Benchmark Report*, which was prepared by the State Department of Business, Economic Development, and Tourism (DBEDT) in 2022. The Input-Output (I-O) analysis provides information on the relationships between industries, final users, and factors of production within an economy to determine the role and relative importance of each sector. Specifically, the I-O analysis provides multipliers for direct, indirect, and induced effects for output, earnings, and employment resulting from an exogenous change in an industry's final demand. In this case, the changes in the economy that are analyzed are construction spending for development and resident spending resulting from the project at full build-out. The multipliers measure the economic activity resulting from an industry or household spending an additional dollar.

The State Input-Output Study reports direct, indirect, and induced output (dollars), employment, and labor income. Direct, indirect, and induced effects are described below:

- **Direct effects** – Direct effects refer to immediate effects associated with a change in the economy. For example, direct effects could be the dollar value of a construction budget or the number of jobs associated with that construction budget.
- **Indirect effects** – Indirect effects relate to inter-industry spending or the secondary impacts of a change. These impacts occur when industries buy goods and services from other local industries. In the construction sector,

for example, indirect effects would include contractor expenditures on construction materials such as wood or steel.

- **Induced effects** – Induced effects capture household spending impacts generated when people who benefit from direct or indirect impacts spend their income on local goods and services. For example, a construction industry employee may spend his or her income on groceries or eating out at a restaurant.

For the purposes of this analysis, indirect and induced effects will be reported together and collectively be referred to as "indirect impacts".

2. Fiscal Impact Assessment

Fiscal impacts were analyzed for the State of Hawai'i and County of Maui both during the construction period and at full build-out of the project. This analysis identifies the key revenues, namely taxes, that the State and County would collect from the proposed project. For each major source, a dollar estimate of revenues is provided based on project characteristics and assumed occupancy patterns and market conditions. It is noted that this study is not intended to provide a comprehensive analysis of all revenue sources that would be impacted but rather focuses on the largest revenue sources, in terms of dollars collected.

The analysis of fiscal impacts to the State and County are based on fiscal year 2025 budget and tax rates. The analysis assumes that the structure of tax revenues and government expenditures presented in the 2025 budgets remains the same. If taxation or spending policies are substantially changed in the future, the projected fiscal impacts of the proposed project would differ.

The cost of providing government services is largely linked to the number of persons served. Generally, as the "service population" increases, there is a need to increase spending for services such as police and fire protection and other government functions. A common practice in fiscal impact analysis for jurisdictions in the continental United States is to define a service population as 100 percent of residents residing within a jurisdiction plus 50 percent of employees. This reflects the fact that while residential population is generally considered to constitute a larger share of demand for services, local employment contributes to a jurisdiction's daytime population, resulting in an increase in demand for government services. This methodology for defining service population is appropriate for non-island economies. However, on Maui and in the State of Hawai'i more broadly, the residents and employees on the island and in the State are generally one and the same. For the most part, employees do not reside outside of the State or County that they work in. Hawai'i is also unique due to the large influx of visitors to the State each day that adds to the "de facto" population. According to the State of Hawai'i Data Book 2023 (Department of Business,

Economic Development & Tourism, 2023), “de facto” population includes all persons physically present in an area regardless of military status or usual place of residence. On the other hand, the resident population is defined as the number of persons whose usual place of residence is in an area. Because the majority of the market-rate rate housing units is anticipated to be occupied by part-time residents whose usual places of residence are outside of Hawai‘i, the part-time residents of the proposed Mākena Mauka would be only captured by “de facto” population. For these reasons, the service population utilized for this fiscal impact analysis is based on “de facto” population of the County and State, or the population of people physically present, including residents and tourists. The population of the project site will include residents of the new residential units proposed.

It is noted that this report utilizes the 2022 de facto population to establish a baseline per capita cost of government services. Population parameters have been impacted following the August 2023 Maui wildfires. While the 2025 de facto population would typically be estimated by applying the historic average annual growth rate for both the State and County to correspond with the fiscal year 2025 budget, because the August 2023 Maui wildfires have impacted both resident and visitor population levels on the island of Maui, the 2022 de facto population data was utilized as status quo, without applying an annual growth rate.

ECONOMIC IMPACT ASSESSMENT

II

II. ECONOMIC IMPACT ASSESSMENT

A. ECONOMIC IMPACTS OF CONSTRUCTION ACTIVITIES

The proposed project will generate positive short-term economic impacts associated with construction jobs and spending. The construction period is estimated to be 30 years. The development cost of the proposed project, excluding land and financing costs, is anticipated to total approximately $4.0 billion over 30 years. This includes $3.8 billion for residential components, $162.0 million for ancillary/commercial components, and an additional $36.0 million for golf related improvements. The total construction cost translates into average construction expenditures of approximately $132.6 million per year. However, in practice, construction expenditures will vary from year to year. See **Table 2**.

Table 2. Project Construction Costs

	Total	Unit	Construction Cost per Unit/Sq. Ft.	Total Construction Cost
Residential				
Market Rate				
Single-Family Residential	180	units	$8,500,000	$1,530,000,000
Multi-Family Residential	363	units	$6,000,000	$2,178,000,000
Subtotal	**543**	**units**		**$3,708,000,000**
Workforce Housing				
Single-Family Residential (Rental)	15	units	$700,000	$10,500,000
Multi-Family (Rental)	94	units	$650,000	$61,100,000
Subtotal	**109**	units		**$71,600,000**
Total Residential	**652**	units		**$3,779,600,000**
Ancillary/Commercial				
Restaurant, Clubhouse, Kitchen, Locker Rooms, Fitness, Back of House	48,000	sq.ft.	$1,200	$57,600,000
Golf Maintenance, Staff Center, Golf Operations, Receiving Area	63,000	sq.ft.	$1,200	$75,600,000
Arrival Hale, Farm Operations, Restrooms	24,000	sq.ft.	$1,200	$28,800,000
Total Commercial	**135,000**	**sq.ft.**		**$162,000,000**
Golf Courses				
Existing North Golf Course	197	acres	-	$0
Existing South Golf Course to be improved	225	acres	-	$36,000,000
Total Golf Courses	**422**	**acres**	**-**	**$36,000,000**
TOTAL CONSTRUCTION COST				**$3,977,600,000**
ANNUAL AVERAGE				**$132,586,700**

Source: Mākena Golf & Beach Club Owners, 2025.
Prepared by: Munekiyo Hiraga, 2025.

The economic impacts associated with the development of the project are summarized in **Table 3**. Construction activities related to the project are anticipated to directly generate approximately 9,870 full-time equivalent (FTE) jobs in the construction industry. The construction is anticipated to span approximately 30 years. Therefore, the construction of the proposed Mākena Mauka project would generate approximately 330 FTE jobs per year in the construction industry. While recognizing that construction employment will fluctuate over the different phases of development, for the purpose of this study's analysis, it is assumed that the construction jobs would be distributed evenly across the 30-year development period.

Annual direct labor earnings (income) associated with development-related direct employment would total approximately $908.0 million, or $30.3 million annually, over the 30-year construction period. Refer to **Table 3**.

It is noted that according to the University of Hawai'i Economic Research Organization's (UHERO) Forecast for the State of Hawai'i (2025 Second Quarter), while the construction market remains strong as of the second quarter of 2025, it is projected that construction employment would begin to gradually recede by 2027. Given that construction of the proposed project will begin in 2028 or later and will be spread over the 30-year period, the project is not anticipated to present a significant adverse impact on the availability of construction labor for the wildfire rebuilding efforts.

Table 3. Construction-Period Economic Impacts

Item	Multiplier	Amount	Unit
Assumed Construction Period		30	years
Construction Expenditure and Related Sales			
Construction Cost, Total		$3,977,600,000	
Hawaii	70%	$2,784,320,000	
Imports	30%	$1,193,280,000	
Construction Cost, Annual Average		$132,586,700	per year
Indirect Sales	1.14 of Hawaii expenditure	$3,174,124,800	
Indirect Sales, Annual Average		$105,804,200	per year
Total Sales		7,151,724,800	jobs
Total Sales, Annual Average		238,390,800	jobs per year
Employment (onsite & offsite)			
Construction jobs	2.48 x sales/$1 mil	9,870	jobs
Annual Average		330	jobs per year
Indirect Jobs Generated by Construction	1.54 per direct job	15,200	jobs
Annual Average		510	jobs per year
Total Employment		25,070	jobs
Annual Average		840	jobs per year
Earnings			
Construction Earnings (a)	$ 92,000 per job	$ 908,040,000	
Annual Average		$ 30,268,000	per year
Earnings for Indirect Jobs	$ 63,000 per job	$ 957,600,000	
Annual Average		$ 31,920,000	per year
Total Earnings		$ 1,865,640,000	
Annual Average		$ 62,188,000	per year

Note:
(a) Average annual salary of construction related industry types.
(b) Average annual salary of all industry types (including government).
Sources:
State Department of Business, Economic Development and Tourism's 2017 State Input-Output Study for Hawai'i, 2022;
State of Hawai'i, Department of Labor and Industorial Relations, 2023 Employment and Payrolls in Hawai'i, October 2024.
Prepared by: Munekiyo Hiraga, 2025.

In addition to direct impacts, the development of the proposed project will generate indirect impacts associated with the purchase of goods and services by construction companies and their employees. Those employees and their families will, in turn, purchase goods and services from other companies, resulting in induced economic impacts. The indirect sales during the construction period is estimated at $105.8 million per year. This indirect spending will generate additional jobs in the economy. Total indirect employment over the development period would average approximately 510 FTE jobs per year with associated earnings of $31.9 million per year. Refer to **Table 3**.

B. ECONOMIC IMPACTS AT FULL BUILD-OUT

The analysis presented herein assesses the economic impacts of the project at full-build out and evaluates the net impact of the new development. It is noted that during the 30-

year construction period, completed residential units will be sold/occupied as they become available. As such, operational economic impacts at any given time during the construction period would be roughly proportional to the level of completion.

The proposed project is anticipated to include both full-time and part-time residents. While all of the workforce housing units are assumed to be occupied by full-time residents, 90 percent of the market-rate units are anticipated to be occupied by part-time residents (assumed to be on the island approximately 20 percent of the time).

1. Employment

As shown in **Table 4** below, the Makena North Golf Course operations currently employ 141 FTE. The number of jobs in FTE is equal to the number of full-time employees plus half the number of part-time employees. At build-out, the proposed project would generate new employment for the renovated Makena South Golf Course, other club operations, and residential and common area maintenance. The total employment anticipated at full build-out is 253 FTE jobs, including the existing 141 FTE jobs at the Makena North Golf Course. As a result, the project would result in a net increase of 112 direct FTE jobs.

Table 4. Onsite Employment at Operations

	Full-Time Equivalent (FTE)		
	Existing	**Proposed**	**Total at Build Out**
Golf Courses Operations	61	39	100
Other Club Operation	58	30	88
Residential Maintenance	0	21	21
Common Areas Maintenance	22	22	44
Total	**141**	**112**	**253**
Net Increase (Decrease) in Employment			**112**

Source: Mākena Golf & Beach Club Owners, 2025.
Prepared by: Munekiyo Hiraga, 2025.

2. Club Operation Revenues

Table 5 below provides a description of estimated gross revenues generated by the Mākena Mauka project operations:

Table 5. Annual Club Operation Revenues

Annual Revenue	Existing	Proposed	Total at Build Out
Golf Course Operations & Retail	$1,500,000	$2,250,000	$3,750,000
F&B and Events	$2,100,000	$3,900,000	$6,000,000
Residential Services	$0	$3,000,000	$3,000,000
Outdoor/Beach Services, Spa, and Fitness	$150,000	$2,700,000	$2,850,000
Misclleneous	$100,000	$44,400,000	$44,500,000
Total	**$3,850,000**	**$56,250,000**	**$60,100,000**
Net Increase (Decrease) in Revenues			**$56,250,000**

Source: Mākena Golf & Beach Club Owners, 2025.
Prepared by: Munekiyo Hiraga, 2025.

As described earlier, the proposed project would include two (2) golf courses. The existing Makena North Golf Course is currently in operation and the Makena South Golf Course was closed in 2008. As part of the project, the renovated Makena South Golf Course will generate new revenues. In addition, commercial operations at the clubhouse, as well as food and beverage and other miscellaneous activities, will generate additional revenues. The total net increase in revenues from the proposed club operations is estimated to be approximately $56.3 million per year.

3. Workforce Housing Rent Revenues

The Mākena Mauka Project will include 109 residential workforce housing units. Preliminarily, approximately one third of the units will be available for households earning 80 percent of the AMI or less, another one third of the units will be available for households earning between 81 to 100 percent of the AMI, and the remaining one third of the units will be available for households earning between 101 to 120 percent of the AMI. Based on the County of Maui, Department of Housing Affordable Rent Guidelines 2024, the total rent revenues from the workforce housing units are estimated to be $3.0 million per year. See **Table 6**.

Table 6. Annual Workforce Housing Rent Revenues

Unit Type	AMI 80%			AMI 100%			AMI 120%			Total Units	Total Annual Rent Revenues	
	Unit No.	Monthly Rent/unit (a)	Annual Rent Revenues	Unit No.	Monthly Rent/unit (a)	Annual Rent Revenues	Unit No.	Monthly Rent/unit (a)	Annual Rent Revenues			
Single-Family												
3-bedroom	5	$2,305	$138,300	5	$2,881	$172,860	5	$ 3,457	$207,420	15 units	$ 518,580	per year
Single-Family Subtotal	5	-	$138,300	5	-	$172,860	5	-	$207,420	**15 units**	**$ 518,580**	**per year**

1-bedroom	12	$1,662	$239,328	12	$2,078	$299,232	12	$ 2,493	$358,992	36 units	$ 897,552	per year
Studio	6	$1,551	$111,672	6	$1,939	$139,608	6	$ 2,327	$167,544	18 units	$ 418,824	per year
Multi-Family Subtotal	32	-	$ 686,160	32	-	$857,664	30	-	$ 957,384	**94 units**	**$ 2,501,208**	**per year**
										Net Increase (Decrease) in Revenues	**$ 3,020,000**	**per year**

(a) The rent revenues were calcurated based on the County of Maui, Department of Housing Affordable Rent Guideline 2024.
Source: County of Maui, Department of Housing
Prepared by: Munekiyo Hiraga, 2025.

4. Total Onsite Net Economic Impacts at Full Build-Out

The total net economic impacts of the proposed Mākena Mauka project are presented in **Table 7**. Impacts are presented for on-property activities, those involving spending and employment generated at the Mākena Mauka community, and do not include real estate sales.

Table 7. Net Operational Economic Impacts

Item	Multiplier or Source	Amount	Unit
Net New Sales			
Club Revenues	Table 5	$56,250,000	per year
Rent Revenues	Table 6	$3,020,000	per year
Subtotal, On-Property		$59,270,000	per year
Net New Employment	Table 4	112	jobs per year
Net New Earnings (a)	$ 49,800 per job	$5,577,600	per year

Notes:
(a) Earning calculated using 2025 projected average w age for the Amusements and Recreation industry on Maui.
Sources:
State Department of Business, Economic Development and Tourism's 2017 State Input-Output Study for Haw ai'i, 2022; State of Haw ai'i, Department of Labor and Industorial Relations, 2023 Employment and Payrolls in Haw ai'i, October 2024.
Prepared by: Munekiyo Hiraga, 2025.

The proposed Mākena Mauka Project is anticipated to generate new annual revenues of approximately $59.3 million and will employ 112 new FTE jobs in addition to the existing employment at the Makena North Golf Courses. Based on average estimated salaries and wages of $49,800.00 per year, total direct earnings associated with the new jobs would be approximately $5.6 million annually.

5. Offsite Economic Impacts

While not quantified in this analysis, new residents of the project are anticipated to spend money on goods and services within the County of Maui (outside of Mākena Mauka site). Due to the luxury nature of the market rate residential units within the Mākena Mauka community, future residents and owners are anticipated to be high-income households contributing to the local economy through offsite spending.

For example, if all households of the market units spend $250.00[4] a day while on Maui, the total offsite economic impacts on Maui would be approximately $38,000.00 a day[5] (approximately $14 million annually). Examples of offsite spending on Maui include, but are not limited to, food and beverage, car rental, owned vehicle registration and maintenance, gasoline, groceries, clothing, ride services, and leisure activities such as golf and charter fishing.

In addition, as noted previously, it is assumed that 90 percent of the market rate units will be occupied by part-time residents who will be on the island approximately 20 percent of the time. Because those homes will be occupied for a limited time of the year, various services to upkeep the homes will be required throughout the year. Those services would include, but not limited to, pool cleaning, window washing, interior cleaning, and landscapers. These economic impacts are not captured in this analysis and would be additive to the direct onsite impacts noted above.

[4] Estimate of daily household spending provided by AREG AC Makena Propco LLC (dba Mākena Golf & Beach Club Owners).

[5] The market units actively used in any given day is approximately 152 units (full-time market units [54 units] + 20 percent of part-time market units [489 units x 20 percent = 97.8 units] = 151.8 units). If each market unit household spends $250.00/day, it would result in $38,000.00 total spending per day.

FISCAL IMPACT ASSESSMENT

III

III. FISCAL IMPACT ASSESSMENT

This chapter presents an analysis of the fiscal impacts to the State and County general funds. One-time development related impacts, as well as ongoing annual fiscal impacts at project build-out are presented. As will be presented below, estimated annual fiscal impacts during the construction period for the State are $12.3 million/year and for the County are $1.0 million/year. Estimated annual fiscal impacts at full build-out for the State are $12.0 million/year and for the County are $48.3 million. These impacts are further described in the sections below.

A. FISCAL IMPACTS OF CONSTRUCTION ACTIVITIES

1. State of Hawai‘i

a. Revenues

The construction and sale of units at the proposed project would generate tax revenue for the State of Hawai‘i. The applicable taxes are the General Excise Tax (GET), personal income tax, corporate income tax, and conveyance tax.

GET, personal income tax, and corporate income tax revenues are estimated in **Table 8** and are based on the economic impacts associated with project construction presented in the preceding chapter.

Table 8. State Tax Revenues from Development Activities

General Excise Tax (GET)		
General Excise Tax Rate		
Final Sales	4.0%	
Indirect Sales	0.5%	
	Expenditures and Sales	**Tax Revenue**
Construction Expenditures (Taxed at 4.0%)	$3,977,600,000	$159,104,000
Consumption (60% of Payroll) (Taxed at 4.0%)	$544,824,000	$21,793,000
Indirect Sales	$3,174,124,800	
Hawaii (70%) - Taxed at 4.0%	$2,221,887,360	
Less Consumption	-$544,824,000	
Subtotal	$1,677,063,360	$67,082,500
Imports (30%) - Taxed at 0.5%	$952,237,440	$4,761,200

Profit from Construction (c)	$198,880,000	$8,750,700
TOTAL CORPORATE INCOME TAX REVENUE		**$8,750,700**
ANNUAL AVERAGE		**$291,700**
Conveyance Tax		
	Full-Time Residents	**Part-Time Residents**
Percent of Units	10%	90%
Homeowners Exemption	Yes	No
Conveyance Tax Rate per $100	$ 0.90	$ 1.10
Total Taxable Assessed Value	$ 441,000,000	$ 3,993,000,000
Conveyance Tax	**$3,969,000**	**$43,923,000**
TOTAL CONVEYANCE TAX REVENUE (FULL-TIME + PART-TIME)		**$47,892,000**
ANNUAL AVERAGE		**$1,596,400**

Notes:
(a) Personal income tax rate based on $75,000 annual income for head of household.
(b) Actual rate may be higher depending on corportate income.
(c) 5% of the total cost of construction is assumed for profits for construction companies.
Sources:
State of Hawai'i, Department of Taxation, 2021; State Department of Business, Economic Development and Tourism's 2017 State Input-Output Study for Hawai'i, 2022.
Prepared by: Munekiyo Hiraga, 2025.

i. General Excise Tax

The State collects GET based on two (2) rates, 4.0 percent for final sales and 0.5 percent for indirect sales, such as wholesale construction materials. The total GET revenue, including the direct construction costs and indirect sales, would be approximately $185.7 million in total. These revenues would be distributed over the 30-year development period and average approximately $6.2 million annually. Refer to **Table 8**.

ii. Personal Income Tax

The State would collect personal income taxes on the labor income resulting from the direct, indirect, and induced jobs generated by the proposed project. As discussed in the economic impact analysis, labor income would total approximately $62.2 million per year over the 30-year development period. Assuming a personal income tax rate of 6.8 percent, it is estimated that the State would realize approximately $126.9 million in total or $4.2 million per year in personal income tax revenue. Refer to **Table 8**.

iii. Corporate Income Tax

The State would also see the benefit of corporate income tax collected from the construction contractors based on their profits from the construction phase. The profits generated from the construction work would be taxed at the rate of 4.4 percent. Based on the conservative assumption that the construction companies involved will achieve a profit of five (5) percent of their gross income, the State would receive approximately $8.8 million in total or $0.3 million annually in corporate income taxes. Refer to **Table 8**.

iv. Conveyance Tax on Sale of Real Property

Conveyance tax is assessed by the State on the sale of real property. The tax rate is based on the sale amount and, for residential developments, whether the property is the buyer's primary residence. The conveyance tax rate for primary residents and part-time residents depends on the value of the unit. For the purpose of this analysis, full-time residents at the development are assumed to qualify for the homeowner exemption, which results in a lower conveyance tax rate, 0.90 percent, while part-time residents

are assumed to pay the higher conveyance tax rate, 1.10 percent.[6] Refer to **Table 8**.

Based on the foregoing assumptions and projected sale prices, the initial sale of the Mākena Mauka residential units would generate an estimated $47.9 million in total or $1.6 million per year in conveyance taxes for the State.

In summary, State general fund tax revenues that would be generated by the project's development activities would, therefore, total approximately $369.2 million or $12.3 million annually. This includes GET ($185.7 million), personal income tax ($126.9 million), corporate income tax ($8.8 million), and conveyance tax ($47.9 million). Refer to **Table 8**.

Although not included in the foregoing analysis of the State's general fund, it is noted that the State Department of Education (DOE) would collect one-time revenues (during development of residential units) for school impact fees. The project developer will coordinate with DOE to determine applicable DOE school impact fee requirements for the project. These fees would be paid directly to the DOE for the development or expansion of public school facilities within the Central Maui School District. While the proposed project will pay appropriate school impact fees, as applicable, it is noted that the project is not anticipated to significantly affect local schools as a resort residential community with a large proportion of part-time residents.

b. Expenditures

The State is not expected to bear any expenditures associated with the construction of the proposed Mākena Mauka project.

c. Net Impacts

The one-time construction tax revenues from the project for the State would be approximately $369.2 million in total or $12.3 million annually, which would be generated by a combination of GET, personal income tax, corporate income tax, and conveyance tax revenue streams. The State is not expected to incur any expenses related to construction. As such, the

[6] Conveyance tax rates vary based on the valuation of the real property sold as well as whether or not the purchaser is eligible for a county's homeowners exemption on property tax. The conveyance tax rates used for this analysis were based on the anticipated sale price of the units as well as anticipated status of purchasers' homeowners exemption.

net fiscal impact of the development activities is also approximately $369.2 million in total or $12.3 million annually. See **Table 9**.

Table 9. Net State Fiscal Impacts, Construction Period

Expenditures	**$0**
Revenues	
GET	$185,658,200
Personal Income Tax	$126,863,500
Coporate Income Tax	$8,750,700
Conveyance Tax	$47,892,000
Total Revenues	**$369,164,400**
Annual Average	**$12,305,500**
Net Fiscal Impact	**$369,164,400**
Net Fiscal Impact per year	**$12,305,500**
Prepared by: Munekiyo Hiraga, 2025.	

2. County of Maui

a. Revenues

The County of Maui would also realize one-time construction-related revenues from the proposed development, primarily in the form of GET surcharge. As of January 1, 2024, the County of Maui started implementation of 0.5 percent surcharge on GET which goes to the County General Fund. The GET surcharge revenue from the construction activities is estimated to be approximately $31.0 million in total or $1.0 million annually. See **Table 10**. In addition, although it is not quantified as part of this analysis, building permit fees flow to the County's general fund while other impact fees represent revenues for specific County funds.

Table 10. Maui County GET Surcharge

General Excise Tax (GET)		
County General Excise Tax Rate (a)	0.50%	
	Expenditures and Sales	**Tax Revenue**
Construction Expenditures	$3,977,600,000	$19,888,000
Consumption (60% of payroll)	$544,824,000	$2,724,100
Indirect Sales	$3,174,124,800	
Hawaii (70%) (b)	$2,221,887,400	
Less consumption	-$544,824,000	
Subtotal	$1,677,063,400	$8,385,300
TOTAL GET SURCHARGE REVENUE		**$30,997,400**
ANNUAL AVERAGE		**$1,033,200**

Note:
(a) GET surcharge only applies to final sales taxed at 4.0 percent.
(b) Hawai'i indirect sales is assumed to be final sales that is taxed at 4.0 percent.
Sources:
State of Hawai'i, Department of Taxation, 2021;
State Department of Business, Economic Development and Tourism's 2017 State Input-Output Study for Hawai'i, 2022.
Prepared by: Munekiyo Hiraga, 2025.

AREG AC Makena Propco LLC (dba Mākena Golf & Beach Club Owners), the project developer, will also be required to dedicate land for park development or pay the Park Assessment Fee pursuant to Section 18.16.320, Maui County Code (MCC). The developer is exploring various options for complying with its applicable park dedication requirement. If the developer chooses to pay the park assessment fee, these fees would be paid directly to the County for the purposes of providing park-related improvements.

It is also noted that the proposed project will comply with the County's workforce housing provisions as set out in the Residential Workforce Housing Policy Ordinance codified in MCC, Section 2.96. The Ordinance allows affordable housing requirements to be satisfied through the provision of onsite or offsite affordable housing units or through the payment of an in-lieu fee. Although compliance with the residential workforce housing policy does not represent a direct fiscal benefit to the County's general fund, it nevertheless benefits the County and qualifying residents. The project will provide workforce housing in perpetuity. According to Section 2.96.040, MCC, if workforce housing units remain available only to income-qualified groups in perpetuity, developers are required to provide at least 20 percent of the total number of market units. As such, the proposed 109 onsite workforce housing units (20 percent of

the total market units) will satisfy the residential workforce housing requirements. As noted previously, preliminarily, approximately one third of the proposed workforce housing units will be available for households earning 80 percent of the AMI or less, another one third of the units will be available for households earning between 81 to 100 percent of the AMI, and the remaining one third of the units will be available for households earning between 101 to 120 percent of the AMI.

Lastly, AREG AC Makena Propco LLC (dba Mākena Golf & Beach Club Owners), the project developer, has made or will make a variety of contributions to the County infrastructure pursuant to conditions attached to the Change of Zoning approval for the project area, approved by the County Council via Ordinance No. 3613. Notable contributions include construction of public beach parking, Pi'ilani Highway widening, bikeways, trails, and walking paths, private sewer system for the area, $5,000.00/unit contribution to traffic impact (if traffic impact fees are not implemented), land for a civil defense siren, nearshore water quality monitoring for the area, donation of beach park lands, maintenance of two (2) public beach parks and three (3) public restroom facilities (including the water usage and sewer fees for these public restrooms), $1,000.00/unit contribution for a new police station, and public evacuation route to the wastewater treatment plant. In addition, the developer provides for the landscaping, irrigation, water, and landscape maintenance for over 1.5 miles of roadways, including along Mākena Alanui, Honoiki Street, and Mākena-Keone'ō'io Road.

b. Expenditures

Similar to the State, the County of Maui is not expected to bear any expenditures associated with the construction of the proposed project. The developer will be responsible for the cost of developing and constructing internal roadways and all other infrastructure improvements necessary for the project.

c. Net Impacts

As previously discussed, County expenditures associated with project development are not expected. Therefore, the short-term fiscal impact to the County of Maui resulting from the construction of the proposed project would be positive.

The development of the proposed project would generate approximately $31.0 million in total or $1.0 million annually of GET surcharge at the rate of 0.5 percent. In addition, while not quantified, one-time building permit

fees will also generated for the County general fund. In addition to general fund revenues, the project would provide park land dedication or alternatively in park assessment fees. The net fiscal impact for the County associated with the development period would be approximately $31.0 million in total or $1.0 million annually. See **Table 11**.

Table 11. Net County Fiscal Impacts, Construction Period

Expenditures	**$0**
Revenues	
GET Surcharge	$30,997,400
Total Revenues	**$30,997,400**
Net Fiscal Impact	**$30,997,400**
Net Fiscal Impact, Annual Average	**$1,033,200**
Prepared by: Munekiyo Hiraga, 2025.	

B. FISCAL IMPACTS AT FULL BUILD-OUT

Fiscal impacts at full build-out is provided below. It is noted that during the 30-year construction period, completed residential units will be sold/occupied as they become available. As such, operational fiscal impacts at any given time during the construction period would be roughly proportional to the level of completion.

1. State of Hawai‘i

a. Revenue

The State of Hawai‘i would receive revenues from several sources as a result of the proposed project at full build-out. These include GET on club revenues, personal income taxes of new employees, and corporate income taxes from the club revenues and rent revenues from the workforce housing units. Beyond these taxes, the State would also receive conveyance taxes from units that are resold over time.

Table 12 below estimates the amount of GET, recurring conveyance tax revenue, personal income tax from employees, and corporate income tax generated by the proposed project.

Table 12. State Tax Revenues

GENERAL EXCISE TAX REVENUE	
General Excise Tax Rate	
Final Sales	4%
New On-property Revenues, Annual Average (a)	$59,270,000
New General Excise Tax Revenue	**$2,370,800**
RECURRING CONVEYANCE TAX REVENUE	
Percentage of Units Re-sold Each Year (b)	20%
Total Conveyance Tax Revenue at Initial Sale (c)	$47,892,000
Annual Recurring Conveyance Tax Revenue (d)	**$9,578,400**
PERSONAL INCOME TAX	
Personal Income Tax Rate (e)	6.8%
Net New Employees	112
Net New Annual Earnings (a)	$5,577,600
New Annual Personal Income Tax Revenue	**$379,300**
CORPORATE INCOME TAX	
Corporate Income Tax Rate (f)	4.4%
Profits	10.0%
Net income from Club Revenues (g)	$56,250,000
Net income from Workforce Housing Rent (g)	$3,020,000
New Annual Corporate Income Tax Revenue	**$260,800**
TOTAL	**$12,589,300**

Notes:

(a) Refer to **Table 7**.

(b) Assumes units are re-sold every 5 years based on developer's past experience with similar product type.

(c) Refer to **Table 8** for calculation of conveyance tax at initial sale.

(d) Based on estimated home values at time of initial sale. Actual conveyance tax revenue would be higher depending on year sold and home price appreciation over time.

(e) Personal income tax rate based on $75,000 annual income for head of household.

(f) Actual rate may be higher depending on corportate income.

(g) Net income is estimated to be 10% of gross income.

Prepared by: Munekiyo Hiraga, 2025.

i. General Excise Tax

The change in GET revenues for the State would be based on the change in new club and amenities revenues, as well as rent revenues from the workforce housing units. The total change in the GET revenue to the State is estimated at approximately $2.4 million per year. Refer to **Table 12**.

ii. Recurring Conveyance Tax on the Sale of Real Property

The State will also collect conveyance tax revenue from the project as units are re-sold over time. This analysis assumes that 20 percent market-rate residential units are re-sold each year based on the developer's experience that units are resold, on average, every five (5) years. The actual conveyance tax revenue realized annually would vary by year and housing market trends as home values fluctuate over time. To provide a simple proxy for annual recurring conveyance tax revenue, this analysis assumes that the revenue represents 20 percent of the total project conveyance tax revenue at initial sale. As presented in **Table 8**, the initial sale of all units at the project is expected to generate approximately $47.9 million in conveyance taxes. Assuming that 20 percent of units are re-sold each year, the recurring conveyance tax revenue for the State is estimated at approximately $9.6 million annually. Refer to **Table 12**. It should be noted that actual conveyance tax revenue would likely be higher depending on the year sold and the long-term appreciation in the price of the units over time.

iii. Personal Income Tax

The proposed project is anticipated to employ approximately 112 additional employees over the existing employment at the Makena North and South Golf Courses. Based on a personal income tax rate of 6.8 percent, these new earners would generate approximately $0.38 million in annual personal income tax revenue for the State. As previously mentioned, the majority of market rate residents are expected to be part-time residents. These part-time residents will likely not earn taxable income in the State. While not quantified in this analysis, full-time project residents (including market and workforce housing units) are anticipated to generate some level of new personal income tax revenue for the State.

iv. Corporate Income Tax

The project will also generate State revenue from corporate income taxes levied on the profits of Mākena Golf & Beach Club Owners from residential workforce housing rent and income from club amenities. Assuming a corporate income tax rate of 4.4 percent, the project is anticipated to generate annual revenues of approximately $0.26 million to the State. It is noted that profit is estimated as 10 percent of gross income. Similar to the personal income tax, full-time project residents (including market and workforce housing units) are anticipated to contribute to some level of new corporate income tax as new workforce within the State.

Together, the project would generate approximately $12.6 million per year in revenue annually for the State general fund. It is noted that this is a conservative estimate as it does not factor in home value appreciation for conveyance tax revenue estimation purposes nor does it include personal income taxes within Hawai‘i that may be generated by project residents.

b. Expenditures

As explained earlier in Chapter I, the analysis of government expenditures is conducted on a cost per capita basis, where the de facto population, or the number of people physically present, including residents and visitors, is used in calculations. **Table 13** presents the proposed de facto population at the project site. An estimated 741 residents are estimated to be on the project site per day, based on the assumption regarding full-time and part-time residential occupancy patterns. It is assumed that residents of the workforce housing units would be 100 percent full-time residents on Maui while 90 percent of the market rate units will be part-time residents. Based on the foregoing, the net change in de facto population is anticipated to be approximately 741 more persons.

Table 13. Mākena Mauka De Facto Population

Residents	Proposed Unit
Residents per Unit (a)	2.84
Market Units	
Full-Time Residential Units	54
Full-Time Residents per day	153
Part-Time Residential Units	489
Percent of Time on Maui	20%
Part-Time Residents per day	278
Subtotal (Market Units Residents per day)	431
Workforce Housing Units (All Full-Time)	
Full-time Residential Units	109
Full-Time Residents per day	310
Total Residents per day	**741**
TOTAL	
Total De Facto Population	**741**

Note: (a) Average household size in Makena CDP from 2020 Census.
Source: Mākena Golf & Beach Club Owners, 2025; U.S. Census Bureau, 2020
Prepared by: Munekiyo Hiraga, 2025.

The State of Hawai'i can, therefore, expect an increase in expenditures specifically associated with the project due to the higher de facto population.

Table 14 provides a breakdown of the State's $9.7 billion general fund budget for fiscal year 2025 by department. General fund expenditures are allocated on a per de facto population basis for departments that would be impacted by the project.

Table 14. State of Hawai'i General Fund Expenditures

Human Resources Development	$25,919,882	No	$0	$0
Human Services	$1,382,205,488	No	$0	$0
Labor and Industrial Relations	$24,162,737	No	$0	$0
Land and Natural Resources	$93,748,636	Yes	$59	$43,448
Law Enforcement	$40,468,961	Yes	$25	$18,755
Lieutenant Governor	$1,824,848	No	$0	$0
Public Safety	$296,840,434	Yes	$186	$137,572
Taxation	$37,692,076	Yes	$24	$17,469
Transportation	$0	Yes	$0	$0
University of Hawaii	$673,082,129	No	$0	$0
TOTAL	**$9,656,913,916**		**$745**	**$551,600**

Notes:
(a) Due to the Maui wildfires in August 2023, De Facto Population has decreased since then. As such, the 2022 De Facto population was utilized as status quo and historical annual average increase was not applied to the 2022 De Facto Population because the population parameters have been impacted by the August 2023 wildfires.
Source: Hawai'i Data Book 2023; State of Hawai'i Department of Budget and Finance, 2022.
Prepared by: Munekiyo Hiraga, 2025.

As indicated in **Table 14** above, this analysis assumes that the State administrative functions would not be impacted by the project. Administrative functions include departments such as Accounting and General Services, the Attorney General, Budget and Finance, the Governor and Lieutenant Governor, and Taxation. Due to the primarily resort-oriented nature of the proposed project, the property is also assumed to

not directly impact State education expenditures, including charter schools and the University of Hawai‘i.

Based on the foregoing assumptions, the total cost per person (de facto population) of State functions that would be impacted by the proposed project is approximately $745.00. Based on these assumptions and the projected increase in de facto population at the project site, the total change in annual operating costs for the State would be an increase of approximately $0.55 million per year. Refer to **Table 14**.

c. <u>Net Impacts</u>

Increased State revenues associated with the proposed project are estimated to be approximately $12.6 million on an annual basis. This includes GET revenue ($2.4 million), recurring conveyance tax revenue ($9.6 million), personal income tax ($0.38 million), and corporate income tax ($0.26 million). This, however, is considered to be a conservative estimate as it does not include personal income tax that may be paid by project residents and is based on conveyance tax revenues that do not factor in home price appreciation. Annual general fund expenditures required to serve the project are estimated to increase by approximately $0.55 million per year, due to the increase in the de facto population at the project site.

Based on the foregoing, the project would generate a net fiscal surplus for the State of approximately $12.0 million each year. See **Table 15** below.

Table 15. State Fiscal Impact

Annual Revenues

Prepared by: Munekiyo Hiraga, 2025.		

1. County of Maui

a. Revenues

i. Property Tax

The County of Maui will realize increased property tax revenues from the proposed project.

ii. Residential Property Tax

Real property tax rates in the County are based on a classification system of a property's highest and best use. For condominium developments, each unit within the development is classified based upon its actual use. The proposed units within the Mākena Mauka project may fall within one (1) of two (2) classes, depending on the occupancy of the unit. The two (2) classifications, as outlined in Section 3.48.305 of the MCC, are described below:

- **Owner-occupied (homes of full-time residents)** – units owned and occupied as a principal home and for which a homeowner exemption claim was filed and granted.
- **Non-owner-occupied (homes of part-time residents)** – units that do not have rental, commercial, or industrial use, and are not a primary residence.

As previously mentioned, the proposed project's market units are anticipated to serve both full-time residents and part-time residents. Full-time residents are expected to occupy approximately 10 percent of the total market units, while part-time residents are anticipated to occupy the remaining 90 percent of the market units. This analysis conservatively assumes that full-time residents at the project will consider their unit to be their principal home and will claim a homeowner exemption. Part-time residents are assumed to occupy their Makena unit for less than six (6) consecutive months per year and their units are, therefore, categorized as "non-owner-occupied". It is assumed that rental workforce housing units will be exempt from the property tax pursuant to Section 3.48.496 of MCC.

Table 16 presents the real property tax rates and the anticipated annual property tax revenue generated by the residential component of the proposed project. The proposed residential units are anticipated to generate approximately $47.7 million in total annual property tax revenues for the County of Maui.

As shown in **Table 16**, the majority of the project's residential property tax revenue is estimated to come from the market rate units that will be used by part-time residents and classified as "non-owner-occupied" for the property tax purposes. The "non-owner-occupied" property tax rate is among the highest property tax rates in the County and represents nearly a quarter of the County's total property tax revenue (County of Maui, Real Property Assessment Division, 2025). The proposed project will represent a considerable increase in property tax revenue for non-owner occupied units/homes Countywide.

It is noted that 100 percent of the property tax revenue will be allocated to the County general fund. As further shown in a later section and on Table 19 (County General Fund Expenditure), the net increase of the property tax revenues from the proposed project will be used for a variety of purposes, including Fire and Public Safety, Housing, Parks and Recreation, Public Works, and Transportation.

Table 16. Residential Property Tax

ASSUMPTIONS	
Market Units	
Percentage of full-time residents	10%
Percentage of part-time residents	90%
Workforce Housing	
Percentage of full-time residents	100%

ANNUAL PROPERTY TAX REVENUE AT FULL BUILD-OUT

Unit Type	Tax Rate (a)		Number of Units	Assessed Value			Total Property Tax Revenue/year
	Classification	Max Rate per $1,000		Average Assessed Value per Unit (b)	Less Homeowner Exemption	Net Taxable Assessed Value	
Market Full-time Residences	Owner-occupied	$3.25	54	$8-$8.5M	$200,000	$ 430,200,000	$ 1,184,850
Market Part-time Residences	Non-owner-occupied	$14.00	489	$8-$8.5M	$ -	$ 3,993,000,000	$ 46,547,430
Workforce Housing (Rental)	Exempt per §3.48.496 MCC	-	109	-	$ -	$ -	$ -
TOTAL			**652**			**$ 4,423,200,000**	**$ 47,732,300**

Notes:
(a) As published in the County of Maui Fiscal Year 2025 Budget Ordinances. Tier depends on Assessed Value.
(b) Assessed value based on projected sales price by unit type for market rate sale unit. Per Chapter 3.48.450, Maui County Code, real property owned and occupied only as a principal home qualifies for an exemption of $200,000.
Sources: County of Maui Budget Office, 2023; Mākena Golf & Beach Club Owners, 2025.
Prepared by: Munekiyo Hiraga, 2025.

i. Non-Residential Property Tax

The non-residential property tax revenues are calculated based on the total building value and land values for the golf courses, common/open spaces, commercial area, and open space. The construction cost for the amenities and commercial spaces are used as a proxy for building value. The land values for non-residential area is conservatively estimated to remain the same

after the development of the project. As shown in **Table 17** below, the non-residential components would generate approximately $1.5 million in annual property tax revenue for the County. Together with the residential property taxes, the proposed project is expected to generate approximately $49.2 million in property taxes annually. The existing property taxes paid for the site for 2024 was $469,500.00. As such, the net increase in property tax revenue resulting from build-out of the project would be approximately $48.7 million on an annual basis. Refer to **Table 17** below.

Table 17. Net Property Tax

PROPERTY TAX REVENUE AT FULL BUILD-OUT			
Residential Assessed Value	Refer to **Table 17.**		
Non-Residential Assessed Value	**Commercial**	**Golf Courses**	**Other Areas**

Total Annual Property Tax Revenue	$49,180,600		
EXISTING PROPERTY TAX REVENUE			
Existing Property Tax Revenue (2024) (g)	$469,500		
NET NEW PROPERTY TAX REVENUE			
Net New Property Tax Revenue	**$48,711,100**		

Notes:

(a) Construction value used as proxy for building value. Refer to **Table 2**.

(b) Non-residential land values are assumed to remain the same after project completion.

(c) Refer to **Table 16**.

(d) Commercial tax rate: $6.05 per $1000 of assessed value.

(e) Per tax records, golf courses taxed according to conservation rate: $6.43 per $1000 of assessed value.

(f) Other areas mainly consists of open spaces, and therefore agricultural rate of $5.74 per $1,000 of assessed value w as utilized.

(g) Existing (2024) assessed values per real property tax records.

Source: County of Maui Budget Office, 2024; County of Maui, Real Property Tax Records, 2024.

Prepared by: Munekiyo Hiraga, 2025.

ii. General Excise Tax Surcharge

As noted previously, as of January 1, 2024, the County of Maui initiated to impose a GET surcharge at the rate of 0.5 percent for final sales. The GET surcharge is not imposed on indirect sales. The total GET surcharge revenue associated with net increase in

spending within Maui County by the project's residents as well as the new club amenities and workforce housing rent revenues, the GET surcharge revenues to the County is estimated at approximately $0.3 million. Beyond property tax revenues and GET surcharge, the County would collect a nominal amount in other taxes and fees from new residents to Maui. This may include various license and permit fees and other charges paid by project households. These revenues, however, would be minimal compared to real property tax and GET surcharge revenues generated by the project and, as such, have not been included in this analysis. See **Table 18**.

Table 18. Maui County GET Surcharge

GENERAL EXCISE TAX REVENUE	
General Excise Tax Rate	0.5%
New On-property Revenues, Annual Average (a)	$59,270,000
New General Excise Tax Revenue	**$296,400**
Notes: (a) Refer to **Table 7**. Prepared by: Munekiyo Hiraga, 2025.	

b. Expenditures

Similar to the State, the County of Maui can expect higher operating expenditures associated with the project due to the increase (from existing conditions) in de facto population at the property. As previously mentioned, due to the new homes that would be build on the project site, the de facto population at the project site is expected to be approximately 741 people.

Table 19 below summarizes the impacts to the County's general fund associated with the proposed project. As shown, the County's fiscal year 2025 budget includes an estimated $781.3 million of general fund expenditures for various County activities and services. The cost of County functions is allocated on a per person (de facto population) basis based on the 2022 de facto population for Maui County. It should be noted, however, that (similar to the State) not all County functions will be impacted by the proposed project. For example, legislative costs (i.e., the County Council) and capital expenditures are not expected to change as a result of the project. General Government expenditures, which cover administrative functions such as the Mayor's Office, Management, Personnel, and Finance, among other departments, are also not anticipated to change as a result of the proposed project.

Table 19. County General Fund Expenditure

ASSUMPTIONS				
Maui County De Facto Population, 2022 (a)	212,378			
Proposed Project Population	741			
GENERAL FUND EXPENDITURE IMPACTS				
	FY 2025 Budget	**Impacted by Project**	**Existing Cost per Person**	**Proposed Project Cost**
Agriculture	$ 8,231,016	No	$0	$0

Transportation	$ 11,505,136	Yes	$54	$40,124
TOTAL	**$781,277,822**		**$999**	**$740,200**

Notes:
(a) Due to the Maui wildfires in August 2023, De Facto Population has decreased since then. As such, the 2022 De Facto population was utilized as status quo and historical annual average increase was not applied to the 2022 De Facto Population because the population parameters have been impacted by the August 2023 wildfires.
(b) The budget for Countywide includes insurance, debt service payments, interdepartmental transfers and unreimbursed employee benefits.
Sources: State Databook 2023; County of Maui Budget Office, 2024.
Prepared by: Munekiyo Hiraga, 2025.

As shown in **Table 20**, the total general fund cost per de facto population (of County functions that would be impacted by the proposed project) is approximately $1,000. Based on these assumptions, the total change in annual operating costs for the County's general fund would be an increase of approximately $0.74 million.

b. Net Impacts

County revenues associated with the proposed project are estimated to be approximately $49.0 million annually in property tax and GET surcharge revenues. General fund expenditures required to serve the project are estimated to increase by $0.74 million. As such, the proposed project is expected to generate a positive net benefit of approximately $48.3 million annually for the County of Maui. See **Table 20**.

REVENUES		
Net New Property Tax Revenues	$48,711,100	Refer to **Table 17**.
New GET Surcharge Revenue	$296,400	Refer to **Table 18**.
Total Revenues	**$49,007,500**	
EXPENDITURES		
Net Increase (Decrease) in Expenditures	**$740,200**	Refer to **Table 19**.
NET FISCAL IMPACT		
Net Fiscal Impact per year	**$48,267,300**	per year
Prepared by: Munekiyo Hiraga, 2025.		

CONCLUSION IV

IV. CONCLUSION

The development of the proposed project would generate positive economic and fiscal impacts to the State of Hawai'i and County of Maui during both the construction period and at full build-out during ongoing operations. See **Table 21**.

CONSTRUCTION PERIOD

From a development standpoint, the project is anticipated to cost $4.0 billion to construct over the 30-year development period. This would result in approximately 330 direct full-time equivalent (FTE)[7] jobs per year for the 30-year development period, with associated total earnings of approximately $30.3 million per year. **The total impacts of construction, including direct, indirect, and induced impacts, would be 840 jobs in annual person years with associated earnings of approximately $62.2 million.** In addition, initial sales of the market rate housing units will generate general excise tax (GET), personal income tax, corporate income tax, and conveyance tax revenues. The State and County would benefit from additional tax revenue but would not bear any additional costs as a result of project construction. As such, **the State and County would experience a positive fiscal impact over the construction period in the amount of $12.3 million for the State and $1.0 million for the County, annually.**

FULL BUILD-OUT (OPERATIONS)

The proposed project is anticipated to include both full-time and part-time residents. While all of the workforce housing units are assumed to be full-time residents, 90 percent of the market-rate units are anticipated to be occupied by part-time residents (assumed to be present on the island approximately 20 percent of the time). **Upon completion, the proposed project is anticipated to generate total net new sales revenue of $59.3 million per year.** This is comprised of net new revenues from club operations at the Mākena Mauka property, as well as net new rent revenues from the workforce housing units. **The operations of Mākena Mauka will result in approximately 112 additional FTE jobs with associated earnings of approximately $5.6 million per year** through club operation and additional golf course operation over the existing golf course operation. In addition, new residents of Mākena Mauka will also spend money offsite (outside of the property) within the local economy, which will create positive economic impacts on Maui. For example, if all households of the market units spend $250.00[8] a day while on Maui, the

[7] Full-time equivalent (FTE) is a unit to measure employed persons who work different hours per week comparable. FTE is typically based on a 40-hour work week. For example, a full-time employee counts as 1.0 FTE, while a part-time employee who works 20 hours a week counts as 0.5 FTE.

[8] Estimate of daily household spending provided by AREG AC Makena Propco LLC (dba Mākena Golf & Beach Club Owners).

total offsite economic impacts on Maui would be over $38,000.00 a day[9] (or approximately $14 million annually).

From a fiscal perspective, the de facto population at the project site will increase, resulting in an increase in the cost of government services for the property for both the State and County. Meanwhile, **both the State and County will realize new tax revenues from the proposed project, resulting in a net positive fiscal impact of approximately $12.0 million for the State and $48.3 million for the County on an annual basis.**

Table 21. Summary of Economic and Fiscal Impact Analysis

	Construction		Operation
	Total	**Annual**	**Annual**
Economic Impacts			
Direct Impacts			
Output (Sales)	$ 3,977,600,000	$132,586,700	$59,270,000
Employment	9,870	330	112
Earnings	$ 908,040,000	$30,268,000	$5,577,600
Indirect Impacts			
Output (Sales)	$ 3,174,124,800	$105,804,200	n.e.
Employment	15,200	510	n.e.
Earnings	$ 957,600,000	$31,920,000	n.e.
Fiscal Impacts			
State of Hawaii	$ 369,164,400	$12,305,500	$12,037,700
County of Maui	$ 30,997,400	$1,033,200	$48,267,300
Prepared by: Munekiyo Hiraga, 2025.			

[9] The market units actively used in any given day is approximately 152 units (full-time market units [54 units] + 20 percent of part-time market units [489 units x 20 percent = 97.8 units] = 151.8 units). If each market unit household spends $250.00 /day, it would result in $38,000.00 total spending per day.

I. PROJECT DESCRIPTION

Mākena Mauka ("the project") is a low-density master-planned residential community that will offer market rate housing together with residential workforce housing, with a mixture of rural and single-family lots and multi-family residential units, within an area that has largely been planned for such uses for decades. The project will incorporate the existing 18-hole Mākena North Golf Course and the 18-hole Mākena South Golf Course (to be renovated as part of the land plan), together with a community gathering place, hiking trails, programs to support connectivity, walking, bicycling, and golf cart paths, beach parking for the public, areas reserved for conservation/open space, and areas reserved for public beach access. The Applicant's current vision for the Mākena Mauka land plan includes 652 housing units, including 109 onsite residential workforce housing units, 180 single-family market-value units, 363 multi-family market-value units, and approximately 135,000 square feet (SF cba) of operational support buildings, which include golf maintenance, staff offices, restaurants, back of house, golf operations and other uses; within the approximately 1,043-acre total project area which includes approximately 473 acres of parcels proposed for residential development. The workforce housing is expected to be completed within the first 10 years of construction, with the remaining single-family market-value homes and multi-family market-value homes being constructed equally over three 10-year periods (10, 20, and 30 years into the future). The project will incorporate the existing 18-hole Mākena North Golf Course and the existing (to-be-renovated) 18-hole Mākena South Golf Course, with improvements to the golf facilities. The project will include a community gathering place, hiking trails, programs to support connectivity, walking, bicycling, golf cart paths, beach parking areas for the public, areas reserved for conservation/open space, and areas reserved for public beach access. Access to the project area will be provided from Makena Alanui Drive, with an internal roadway network connecting to the individual communities within the project. Improvements to existing roadways and intersections within the project area are anticipated, were identified for mitigation, as part of the proposed project. Future internal bicycle and pedestrian facilities are still being designed with the goal to connect to the existing bike lanes and sidewalk on the makai side of Makena Alanui Drive.

Mākena Mauka currently is participating in the creation of an inclusive community evacuation plan, which has been spurred by an escalating number of wildfires, particularly the deadly and devastating 2023 Lahaina and Kula fires, and the continuously eroding South Kīhei Road, which flooded again in early 2025. For emergencies that require immediate evacuation by and for the surrounding and visiting community members, Mākena Mauka is planning an emergency access route that provides access mauka from Makena Alanui Drive. This alternate access could also serve area residents, workers and visitors in emergency situations when the diversion of traffic would assist emergency responders, for example.

To further help ensure that mass-impact emergencies are communicated in a timely fashion, the applicant has complied with their Conditions in Zoning by assisting in the provision of two emergency sirens (Maui Ordinance 3613, 2009, Condition 16). In 2017, the applicant enabled the Hawai‘i Department of Defense's installation of one of the additional sirens at the applicant's wastewater treatment plant. The second siren was installed at Makena State Park.

A Traffic Impact Analysis Report (TIAR) was prepared in support of the proposed project's environmental permitting. The project is expected to begin construction in 2028 and be completed by 2058. This TIAR will evaluate existing conditions and assess impacts to roadways and study intersections

(see Figure 2) in the surrounding areas as a result of the proposed development for scenarios 10, 20, and 30-years into the future after phased construction. Future years (2038, 2048, and 2058) will be evaluated with and without the project to assess traffic congestion and potential impacts.

In a June 3, 2022 memo to the State of Hawai‘i Department of Transportation (HDOT), it was noted that the project's owner and HDOT were in agreement that the project's pro rata share to satisfy the land use conditions will be based upon a TIAR prepared by the project and reviewed by HDOT. The memo was signed by the project owner on June 3, 2022 and by HDOT on June 7, 2022.

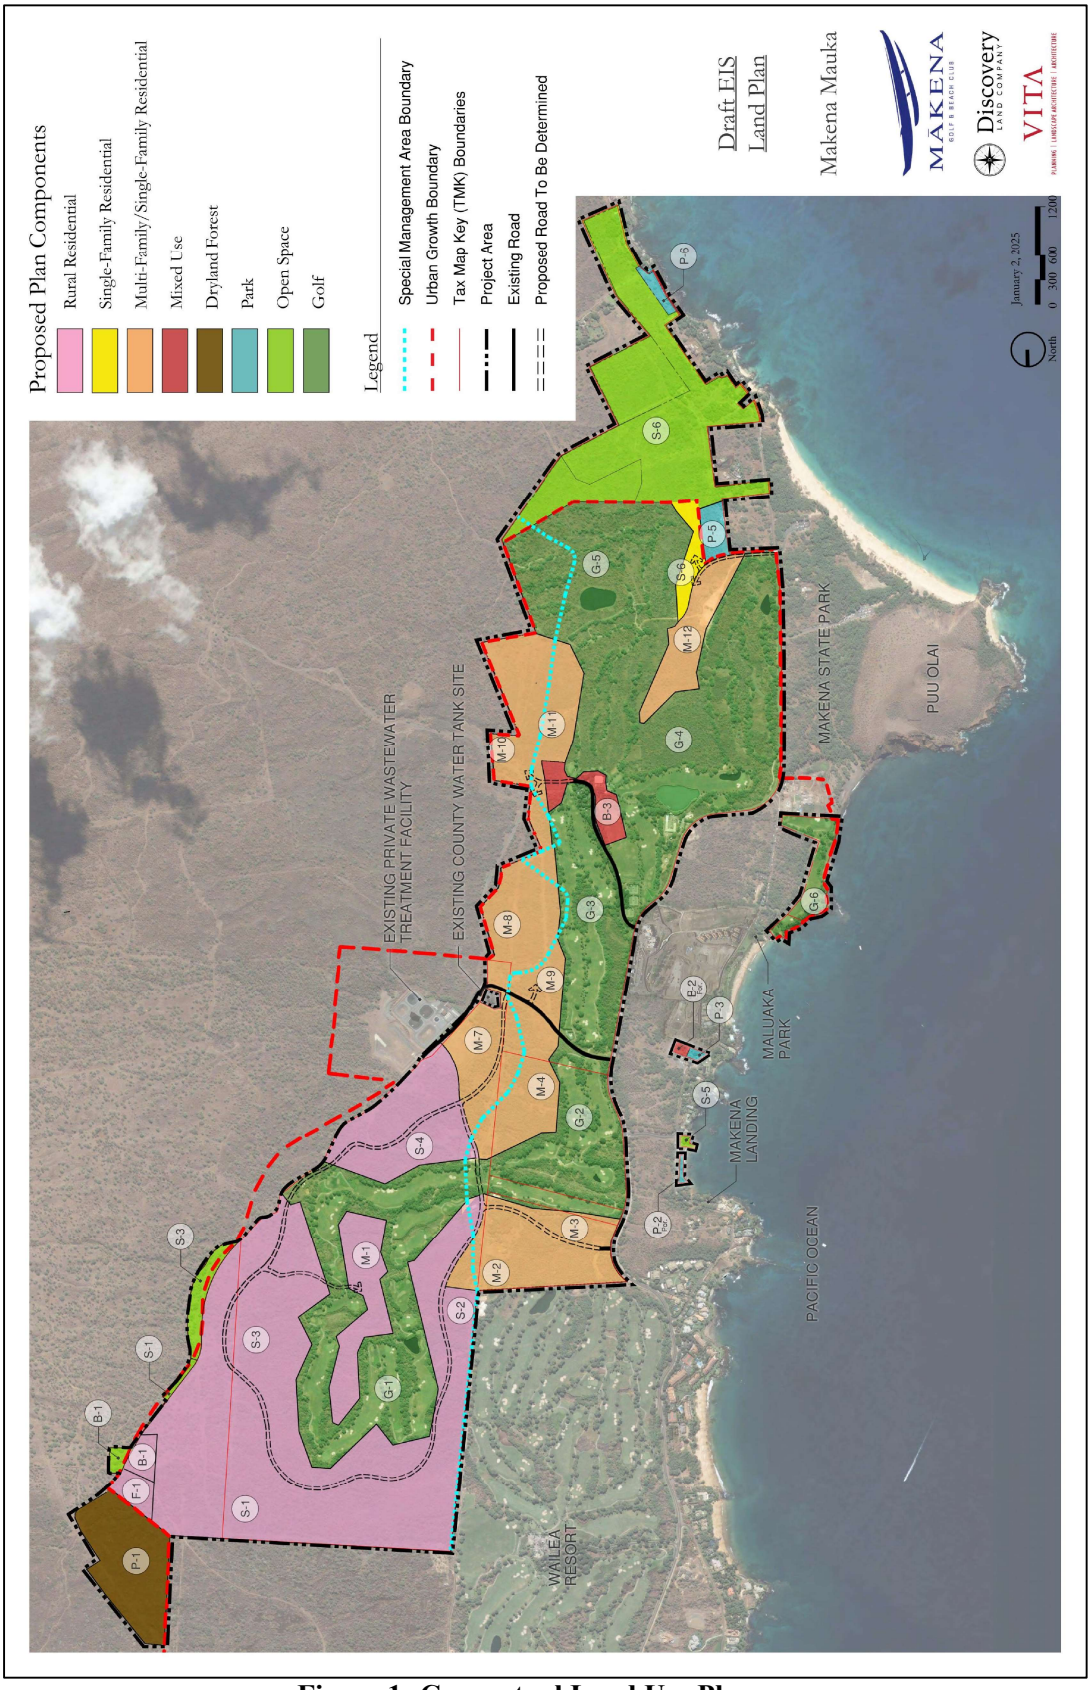

Figure 1: Conceptual Land Use Plan

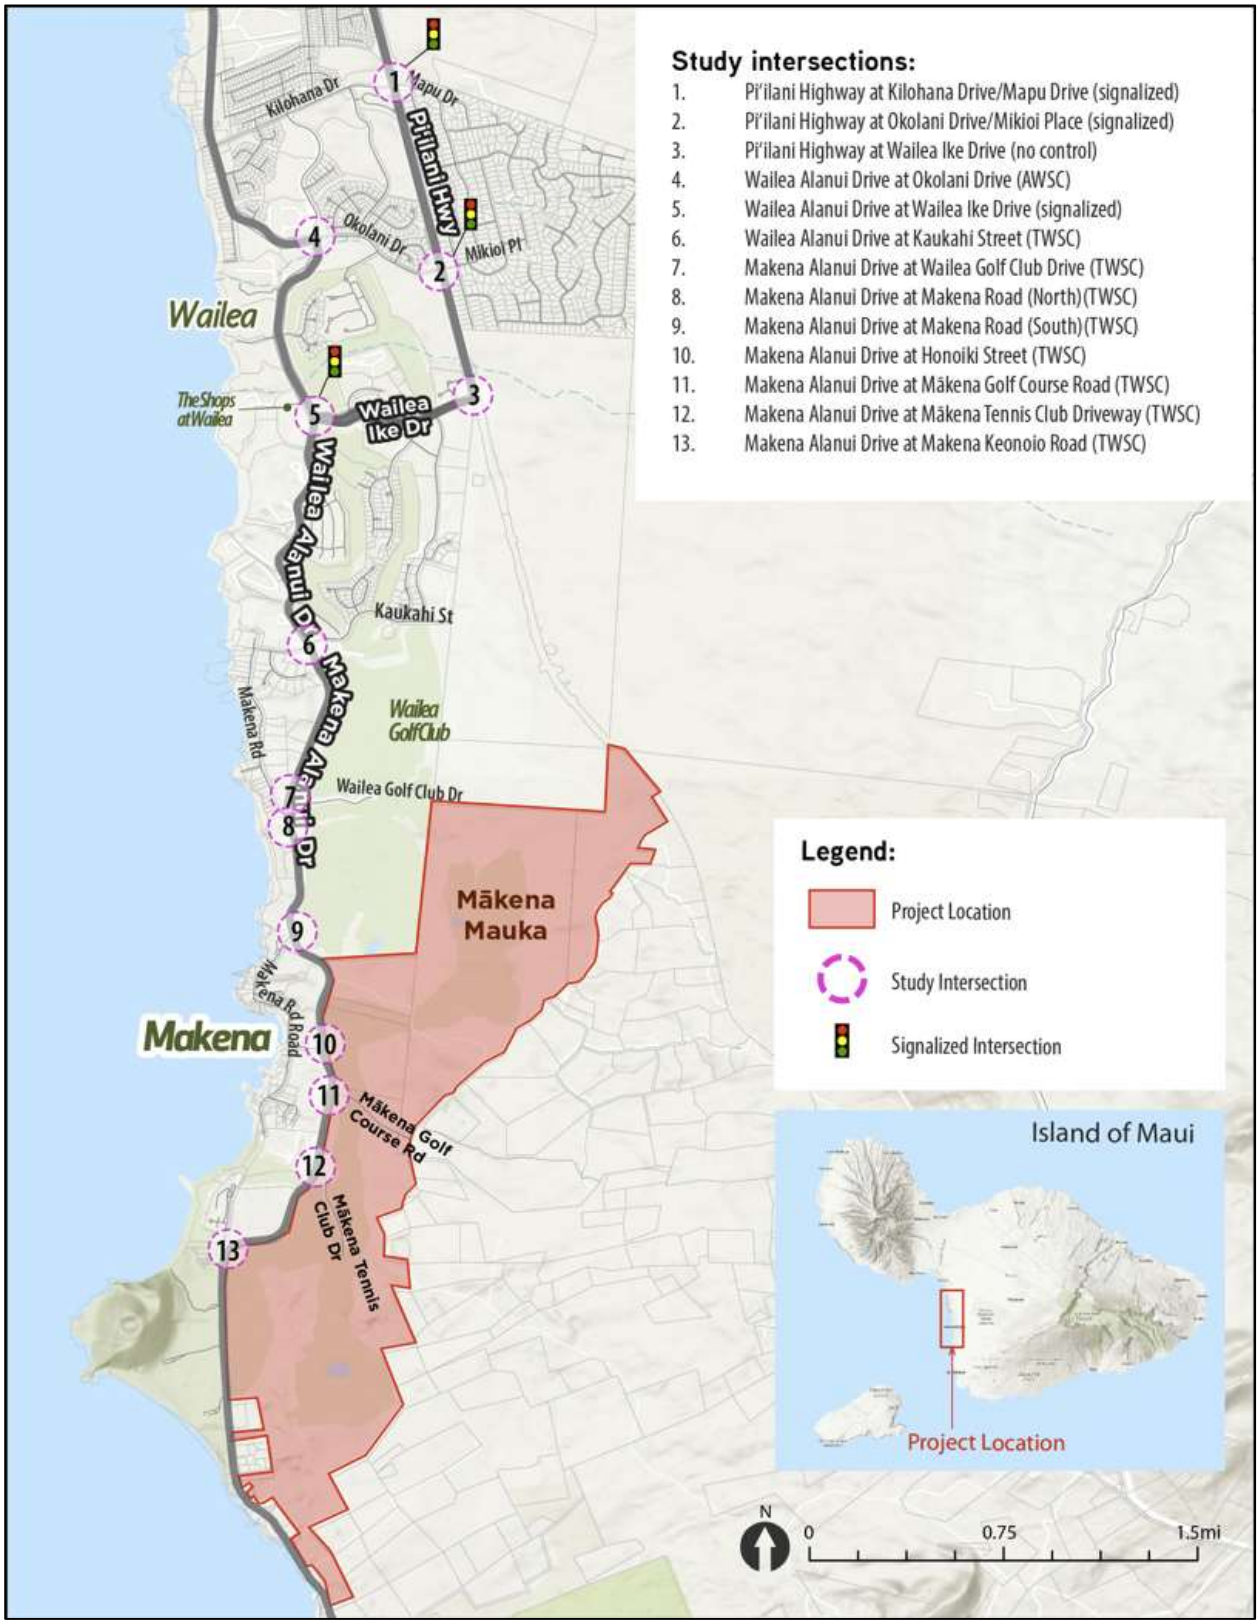

Figure 2: Project Study Area

II. EXISTING CONDITIONS

Pi‘ilani Highway and North/South Kihei Road provide access from Kihei, Wailea, and Makena to West and Central Maui. Existing and historic traffic counts show that most of the existing traffic to and from the study area uses Pi‘ilani Highway as the main roadway for regional traffic.

A. Roadway Configurations

1. Pi‘ilani Highway

Pi‘ilani Highway (State Route 31) is a north-south oriented, two to four-lane, undivided state-owned roadway extending 7.3 miles from Mokulele Highway (State Route 311) and North Kihei Road, in the north, to Wailea Ike Drive in the south. Pi‘ilani Highway transitions into a two-lane roadway between Kilohana Drive and Wailea Ike Drive. The posted speed limit for the majority of Pi‘ilani Highway ranges from 35 miles per hour (MPH) to 45 MPH. Near the southern terminus at Wailea Ike Drive, the southbound speed limit is reduced to 20 MPH. Shoulder widths of six feet to ten feet exist on both sides of Pi‘ilani Highway. These shoulders are sometimes use by cyclists as bike shoulders. At some signalized intersections with dedicated right turn lanes, the bike shoulder transitions into a marked bike lane between the through lane and dedicated right turn lane.

2. Kilohana Drive

Kilohana Drive is an undivided, two-lane, privately-owned (by Alexander & Baldwin, Inc.) roadway that extends from South Kihei Road in the west to Pi‘ilani Highway in the east. Continuous sidewalks exist on both sides of the roadway. Intersections along Kilohana Drive are stop-controlled with turn lanes. Pi‘ilani Highway transitions from a four-lane roadway to a two-lane roadway south of Kilohana Drive. The posted speed limit of Kilohana Drive is 25 MPH.

3. Wailea Ike Drive

Wailea Ike Drive is an east-west oriented, two- to four-lane, County of Maui (COM)-owned, divided roadway extending from Wailea Alanui Drive in the west, to Pi‘ilani Highway in the east. Median widths vary from six feet near Pi‘ilani Highway to 100 feet near Wailea Alanui Drive. Wailea Ike Drive intersects Wailea Alanui Drive as a signalized intersection and intersects Pi‘ilani Highway as a two-lane, uncontrolled intersection where Wailea Ike Drive transitions into Pi‘ilani Highway at an approximately 90-degree turn. Sidewalks exist on both sides of Wailea Ike Drive. The posted speed limit of Wailea Ike Drive is 30 MPH.

4. Wailea Alanui Drive

Wailea Alanui Drive is a north-south oriented two- to four-lane, divided, COM-owned roadway extending from Kilohana Drive in the north, to Kaukahi Street in the south. In the project area, Wailea Alanui Drive is a four-lane divided roadway from Okolani Drive to Kaukahi Street. A continuous sidewalk exists only on the west side of Wailea Alanui Drive. The posted speed limit of Wailea Alanui Drive is 30 MPH.

5. Makena Alanui Drive

Makena Alanui Drive is a north-south oriented, two-lane, undivided, COM-owned roadway extending from Kaukahi Street in the north, to Makena Keonoio Road, where it transitions into Makena Road. Intersections along Makena Alanui Drive are stop-controlled. Makena Alanui Drive provides access through Makena Town. Sidewalks exist on portions of the west side of Makena Alanui Drive. Sidewalks are missing on segments just south of Makena Road (north), just south of Makena Road (south), and south of the Makena Tennis Club Driveway. There are no sidewalks on the east side of Makena Alanui

Drive. A signed and striped bike lane exists on both sides of Māk Makena ena Alanui Drive from Kaukahi Street to the Mākena Tennis Club Driveway. The posted speed limit of Makena Alanui Drive is 20-30 MPH.

6. Kaukahi Street

Kaukahi Street is an east-west oriented, two-lane, privately-owned roadway starting at Makena Road on the makai side (ocean side, in this region would be west side) and extending approximately 0.75 miles on the mauka side. Kaukahi Street intersects Makena Alanui Drive at a two-way stop-controlled intersection. Kaukahi Street separates Wailea Alanui Drive to the north and Makena Alanui Drive to the south. Sidewalks existing on the north side of Kaukahi Street and on the south side of Kaukahi Street west of Wailea Alanui Drive. The posted speed limit is 20 MPH makai of Makena Alanui Drive, and 30 MPH mauka of Makena Alanui Drive.

B. Study Intersections

Existing lane configurations and traffic controls at the study intersections are shown in Figure 3. Pedestrian facilities and bike facilities are shown in Figure 4. The study intersections are included in writeups below.

1. Pi‘ilani Highway at Kilohana Drive/Mapu Drive

Pi‘ilani Highway at Kilohana Drive/Mapu Drive is a signalized intersection. Kilohana Drive approaches Pi‘ilani Highway from the west and Mapu Drive approaches Pi‘ilani Highway from the east. Pi‘ilani Highway narrows from a four-lane roadway north of Kilohana Drive to a two-lane roadway south of Kilohana Drive. A dedicated left turn lane exists for both Pi‘ilani Highway approaches. The southbound approach has a dedicated right turn lane. The minor approaching roads have a protected left turn and a shared through-right turn lane. Marked crosswalks exist across the west, east, and south legs of the intersection. The posted speed limit on Pi‘ilani Highway at this intersection is 35 MPH. The posted speed limit on Kilohana Drive is 25 MPH and on Mapu Drive is 20 MPH.

2. Pi‘ilani Highway at Okolani Drive/Mikioi Place

A traffic signal was recently installed at the Pi‘ilani Highway and Okolani Drive/Mikioi intersection on June 26, 2023. Dedicated left turn lanes exist for the northbound, southbound, and eastbound approaches. Channelized right turn lanes exist for all approaches. A marked crosswalk exists only on the west leg of the intersection. The posted speed limit on Pi‘ilani Highway at this intersection is 35 MPH. The posted speed limit on Okolani Drive is 30 MPH and on Mikioi Place is 20 MPH.

3. Pi‘ilani Highway at Wailea Ike Drive

Pi‘ilani Highway at Wailea Ike Drive is a two-way, two-lane, uncontrolled intersection. The Pi‘ilani Highway approaches the intersection from the north and Wailea Ike Drive approaches the intersection from the west. There is no stop control, as the two movements do not conflict with each other, transitioning from one road to the other at an approximately 90-degree turn. There are no marked crosswalks at the intersection. The posted speed limit on the Pi‘ilani Highway southbound approach is 20 MPH. The posted speed limit on Wailea Ike Drive is 30 MPH. This intersection will become the main access for the future Honua‘ula development.

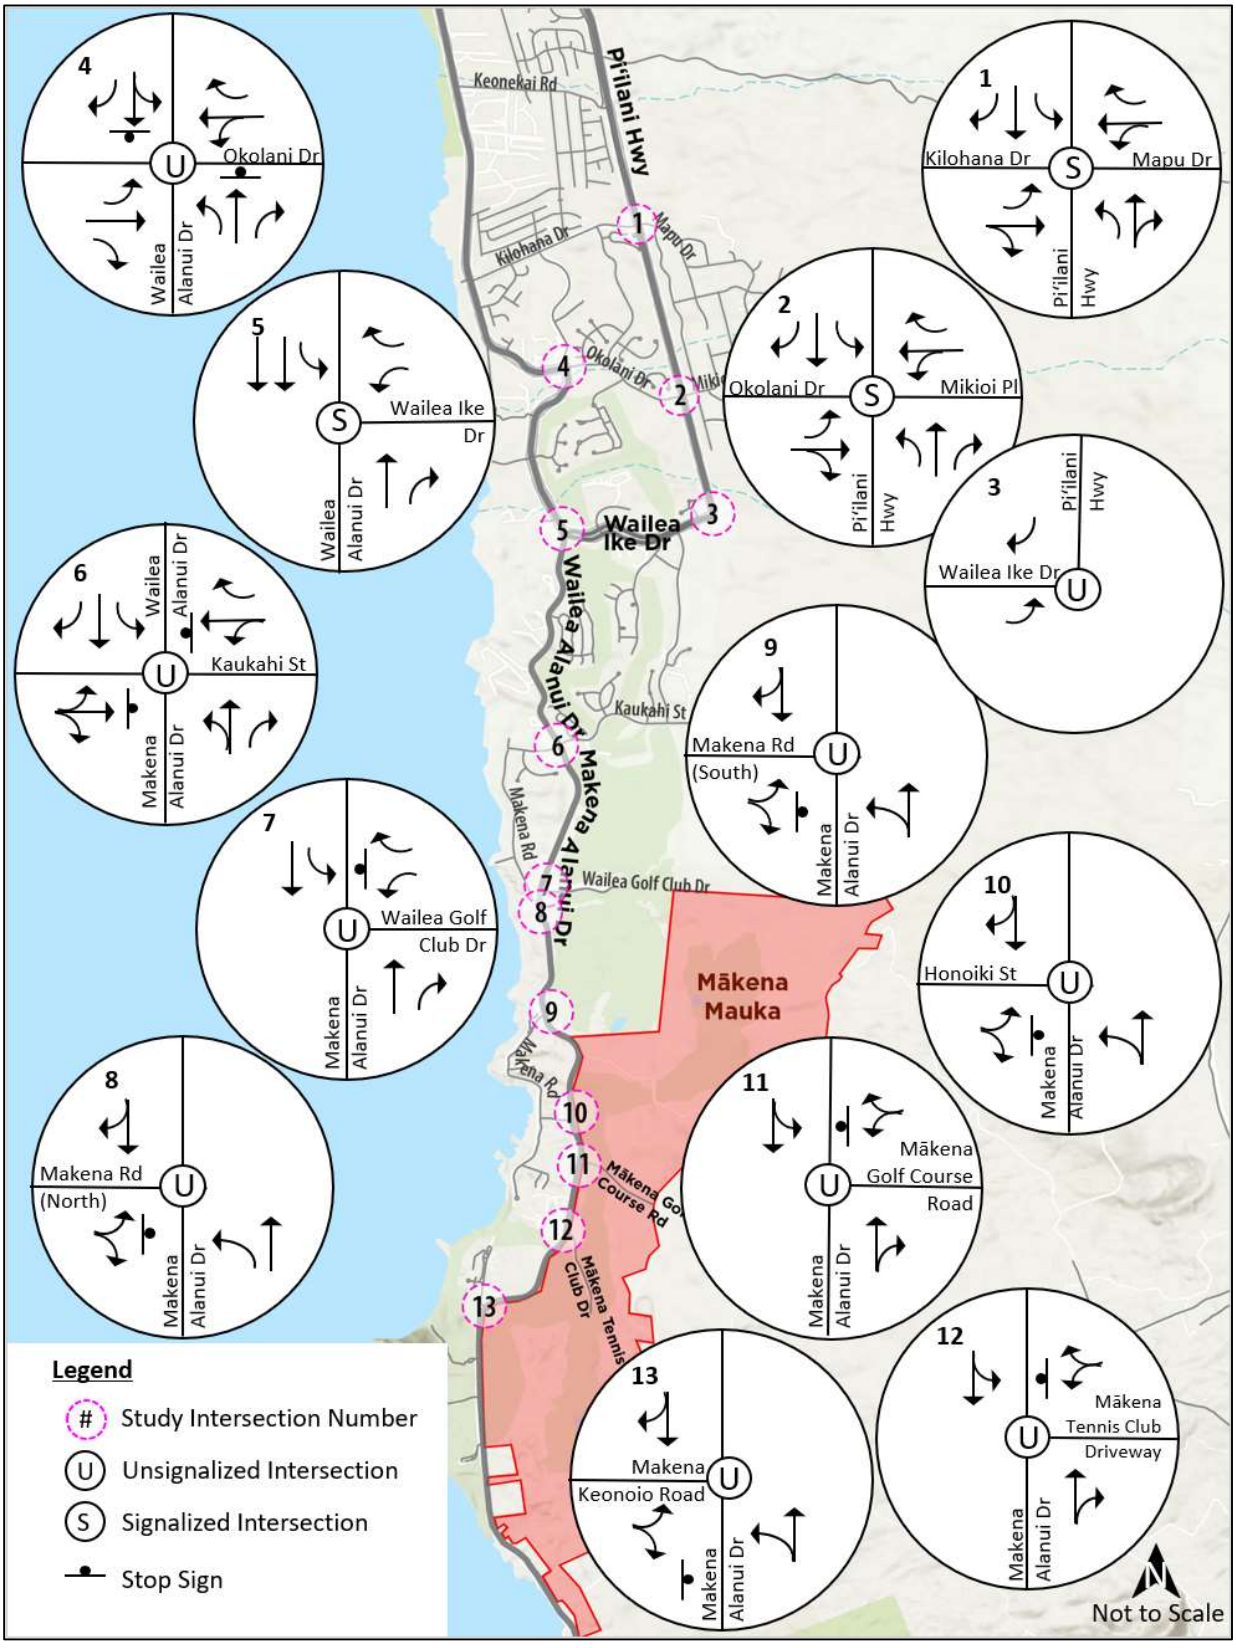

Figure 3: Existing Lane Configuration

Figure 4: Existing Pedestrian and Bicycle Facilities

4. Wailea Alanui Drive at Okolani Drive

Wailea Alanui Drive at Okolani Drive is an all-way stop-controlled (AWSC) intersection. The northbound and eastbound approaches have an exclusive left turn lane, through lane, and right turn lane. The southbound and westbound approaches have shared left-through lanes and an exclusive right turn lane. There are marked crosswalks across the north, south, and west legs. All right turn lanes are channelized except for the southbound right turn lane from Wailea Alanui Drive onto Okolani Drive. Medians exist on each approach at this intersection. The posted speed limit on both roadways is 30 MPH.

5. Wailea Alanui Drive at Wailea Ike Drive

Wailea Alanui Drive at Wailea Ike Drive is a signalized intersection. This is the only signalized intersection in the project area not located along Pi‘ilani Highway. The Wailea Ike Drive southbound left turn is protected. Exclusive turn lanes and medians exist for each approach. Marked crosswalks exist across each leg of the intersection. The posted speed limit on both roadways is 30 MPH.

6. Wailea Alanui Drive/Makena Alanui Drive at Kaukahi Street

Wailea Alanui Drive and Makena Alanui Drive at Kaukahi Street is a two-way stop-controlled (TWSC) intersection with stop control on the Kaukahi Street approaches. Wailea Alanui Drive intersects Kaukahi Street from the north. South of Kaukahi Street, Wailea Alanui Drive transitions into Makena Alanui Drive. Wailea Alanui Drive transitions from a four-lane roadway north of Kaukahi Street to a two-lane roadway south of Kaukahi Street. A striped and signed bike lane exists on Makena Alanui Drive in both directions south of this intersection. A marked crosswalk exists across the north leg of the intersection. Sidewalks exist on the west side of Wailea Alanui Drive and Makena Alanui Drive, and on the north side of Kaukahi Street. The posted speed limit on Wailea Alanui Drive and Makena Alanui Drive is 30 MPH. The posted speed limit on Kaukahi Street is 20 MPH.

7. Makena Alanui Drive at Wailea Golf Club Drive

Makena Alanui Drive at Wailea Golf Club Drive is a T-intersection with stop control on the Wailea Golf Club Drive approach. Wailea Golf Club Drive approaches from the east. The Wailea Golf Club Drive is gated and closed after business hours. Exclusive left turn and right turn lanes exist for each movement. Bike lanes exist on Makena Alanui Drive. There are no marked crosswalks at this intersection. The west side of Makena Alanui Drive has a sidewalk. The posted speed limit on Makena Alanui Drive is 30 MPH. There is no posted speed limit on Wailea Golf Club Drive.

8. Makena Alanui Drive at Mākena Road (North)

Makena Alanui Drive at Makena Road (North) is a T-intersection with stop control on the Makena Road approach. Makena Road (North) provides access to residential housing and beaches on the west side of Makena Alanui Drive. Bike lanes exist on Makena Alanui Drive. There are no marked crosswalks at this intersection. A sidewalk exists on the west side of Makena Alanui Drive. The posted speed limit on Makena Alanui Drive is 30 MPH. There is no posted speed limit on Makena Road (North).

9. Makena Alanui Drive at Mākena Road (South)

Makena Alanui Drive at Makena Road (South) is a T-intersection with stop control on the Makena Road approach. Makena Road (South) provides access to residential housing and beaches on the west side of Makena Alanui Drive. Bike lanes exist on Makena Alanui Drive. There are no marked crosswalks at this intersection. The west side of Makena Alanui Drive has a sidewalk. The posted speed limit on Makena Alanui Drive is 30 MPH. There is no posted speed limit on Makena Road (South).

10. Makena Alanui Drive at Honoiki Street

Makena Alanui Drive at Honoiki Street is T-intersection with stop control on the Honoiki Street approach. Honoiki Street approaches this intersection from the west. Honoiki Street provides access to Makena Road which runs parallel to Makena Alanui Drive. Honoiki Street will be the main access for the future Mākena Mauka development. Bike lanes exist on Makena Alanui Drive. A marked crosswalk exists on the west leg of this intersection. The west side of Makena Alanui Drive has a sidewalk. The posted speed limit on Makena Alanui Drive is 30 MPH. There is no posted speed limit on Honoiki Street.

11. Makena Alanui Drive at Mākena Golf Course Driveway

Makena Alanui Drive at the Mākena Golf Course Driveway is a gated TWSC intersection. A sidewalk exists on the west side of Makena Alanui Drive. There are no marked crosswalks at this intersection. Bike lanes exist on Makena Alanui Drive. The posted speed limit on Makena Alanui Drive is 30 MPH. There is no posted speed limit on the future Mākena Golf Course Driveway.

12. Mākena Alanui Drive at Mākena Tennis Club Driveway

Māk Makena ena Alanui Drive at the Mākena Tennis Club Driveway is a TWSC intersection with stop control for the minor approaches. A sidewalk exists on the west side of Makena Alanui Drive. There are no marked crosswalks at this intersection. Bike lanes exist on Makena Alanui Drive. The posted speed limit on Makena Alanui Drive is 30 MPH. There is no posted speed limit on the Mākena Tennis Club Driveway.

13. Makena Alanui Drive at Makena Keonoio Road

Makena Alanui Drive at Makena Keonoio Road is a TWSC intersection with stop controlled for the minor approach. There are no marked crosswalks or sidewalks at this intersection. Bike lanes do not exist at this intersection. Makena Keonoio Road leads to Maluaka Beach. The posted speed limit on Makena Alanui Drive is 30 MPH. There is no posted speed limit on Makena Keonoio Road.

C. Bus Stops and Bus Routes

Maui Bus provides one bus route from Kahului to Wailea. Route 10 (Kihei Islander) provides access from Queen Kaʻahumanu Center in Kahului to Wailea Ike Drive in Wailea. A Route 10 bus leaves Queen Kaʻahumanu Center every hour from 5:30 AM to 7:30 PM. Route 10 takes two hours to complete a roundtrip beginning and ending at Queen Kaʻahumanu Center. There are two stops in the study area: westbound at Wailea Alanui Drive and Okolani Drive and eastbound at Wailea Alanui Drive and Wailea Ike Drive. A bench exists at both bus stops. Existing Maui Bus data can be found in Appendix A.

D. Volumes

1. Vehicular Volume

a) Roadway Traffic Volumes

Historical average annual daily traffic (AADT) exists at a station along Piʻilani Highway between Lipoa Street and East Welakahao Road (see Figure 5). This station captures and represents the traffic pattern between Kihei and Wailea/Makena. The AADT is based on Hawaiʻi DOT traffic counts included in *Historical Traffic Station Maps.*

Figure 5: HDOT Station Location Map – Lipoa Street to East Welakahao Road

The HDOT historical 24-hour traffic volume distribution shows a variation in travel patterns throughout the day with prominent morning and a longer afternoon commuter peak period. The historical AADT from years 2016-2024 are shown in Table 1. The monthly average daily traffic (ADT) from years 2016-2024 are shown in Figure 6. At the time of this TIAR, 2024 data was available up to April 2024. The general yearly pattern shows the highest monthly volumes to be in January, with the lowest monthly volumes in September. The impact of the Covid-19 pandemic can be seen in the year 2020 and 2021 data. After that, traffic volumes returned to slightly less than pre-pandemic levels until the August 2023 Lahaina wildfires, which resulted in a significant drop in traffic volume. Traffic volumes returned to pre-fire levels after about three months.

Table 1: Historical Roadway Traffic Volumes

Pi'ilani Highway between Lipoa Street and East Welakahao Road	
Year	AADT
2016	35,476
2017	-
2018	36,381
2019	35,582
2020	22,787
2021	31,472
2022	32,921
2023	32,464
2024	33,535*

*AADT from January 2024 to April 2024

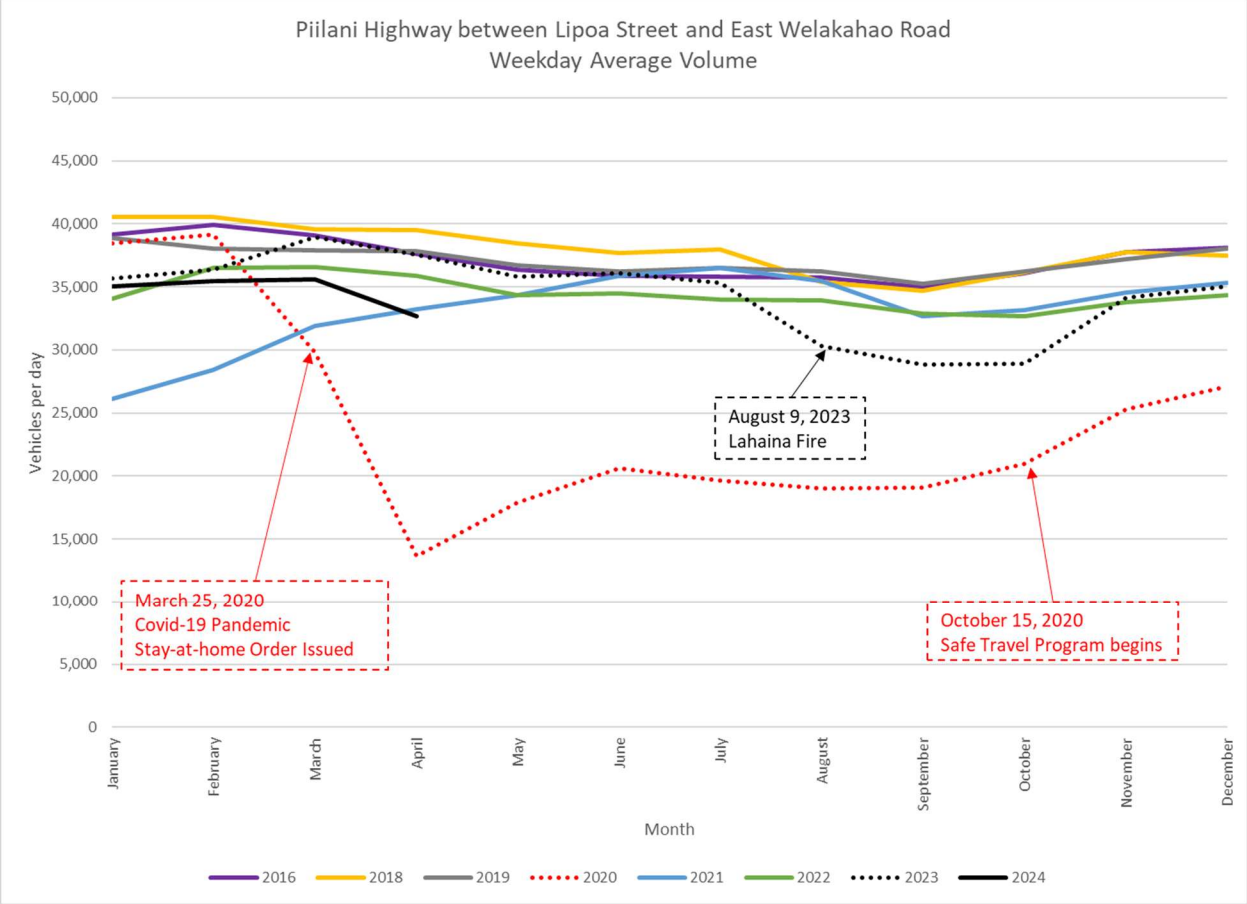

Figure 6: Historic Monthly ADT on Pi'ilani Highway – Lipoa Street to East Welakahao Road

The HDOT historical 24-hour traffic volume distribution along Wailea Alanui Drive between Malukai Lane and Hale Ali'i Place (see Figure 7) shows a travel pattern increasing throughout the day until the afternoon peak hour in the northbound direction, and a distinct AM peak with descending traffic volumes in the southbound direction. This general traffic pattern was reflected in the intersection peak hour volumes.

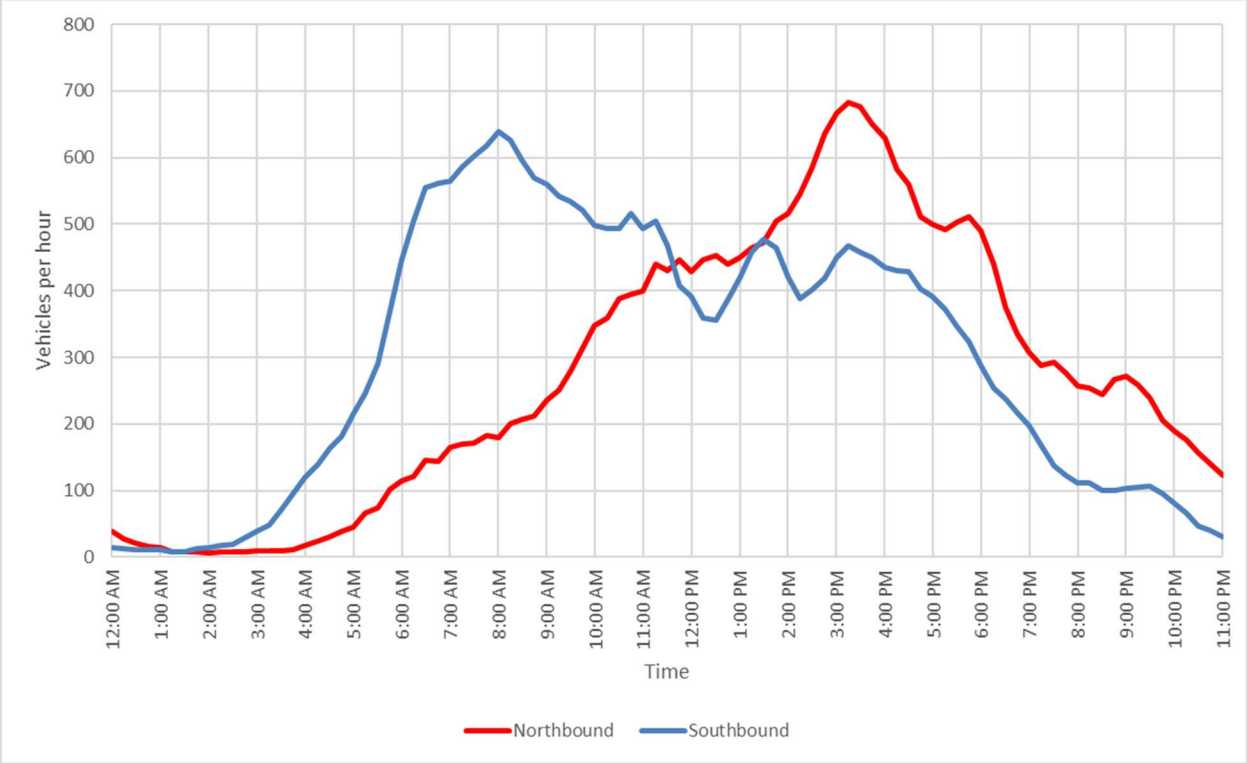

Figure 7: Historic 24-Hour Volumes on Pi'ilani Highway – Lipoa Street to East Welakahao Road

b) Existing Intersection Peak Hour Volumes

Manual intersection turning movement traffic counts were taken at the study intersections during the commuter peak periods on Tuesday, May 9, 2024. Counts included a tabulation of passenger vehicles, heavy trucks, pedestrians, and bicycles. The Existing (2024) peak hour volumes are shown in Figure 8. Detailed peak period counts are included in Appendix A. The peak hour was determined to be 7:30 – 8:30 AM and 3:30 – 4:30 PM.

2. Pedestrian and Bicycle Volumes

Pedestrian and bicycle volumes were low at the Pi'ilani Highway intersections. Overall, the pedestrian and bicycle volumes were higher in the AM than the PM. Pedestrian volumes were highest in the Wailea Resort area. Bicycle volumes were moderate and consistent on Makena Alanui Drive and Wailea Alanui Drive, even where exclusive bike lanes did not exist. Table 2 and Table 3 shows the Existing (2024) pedestrian and bicycle count, respectively.

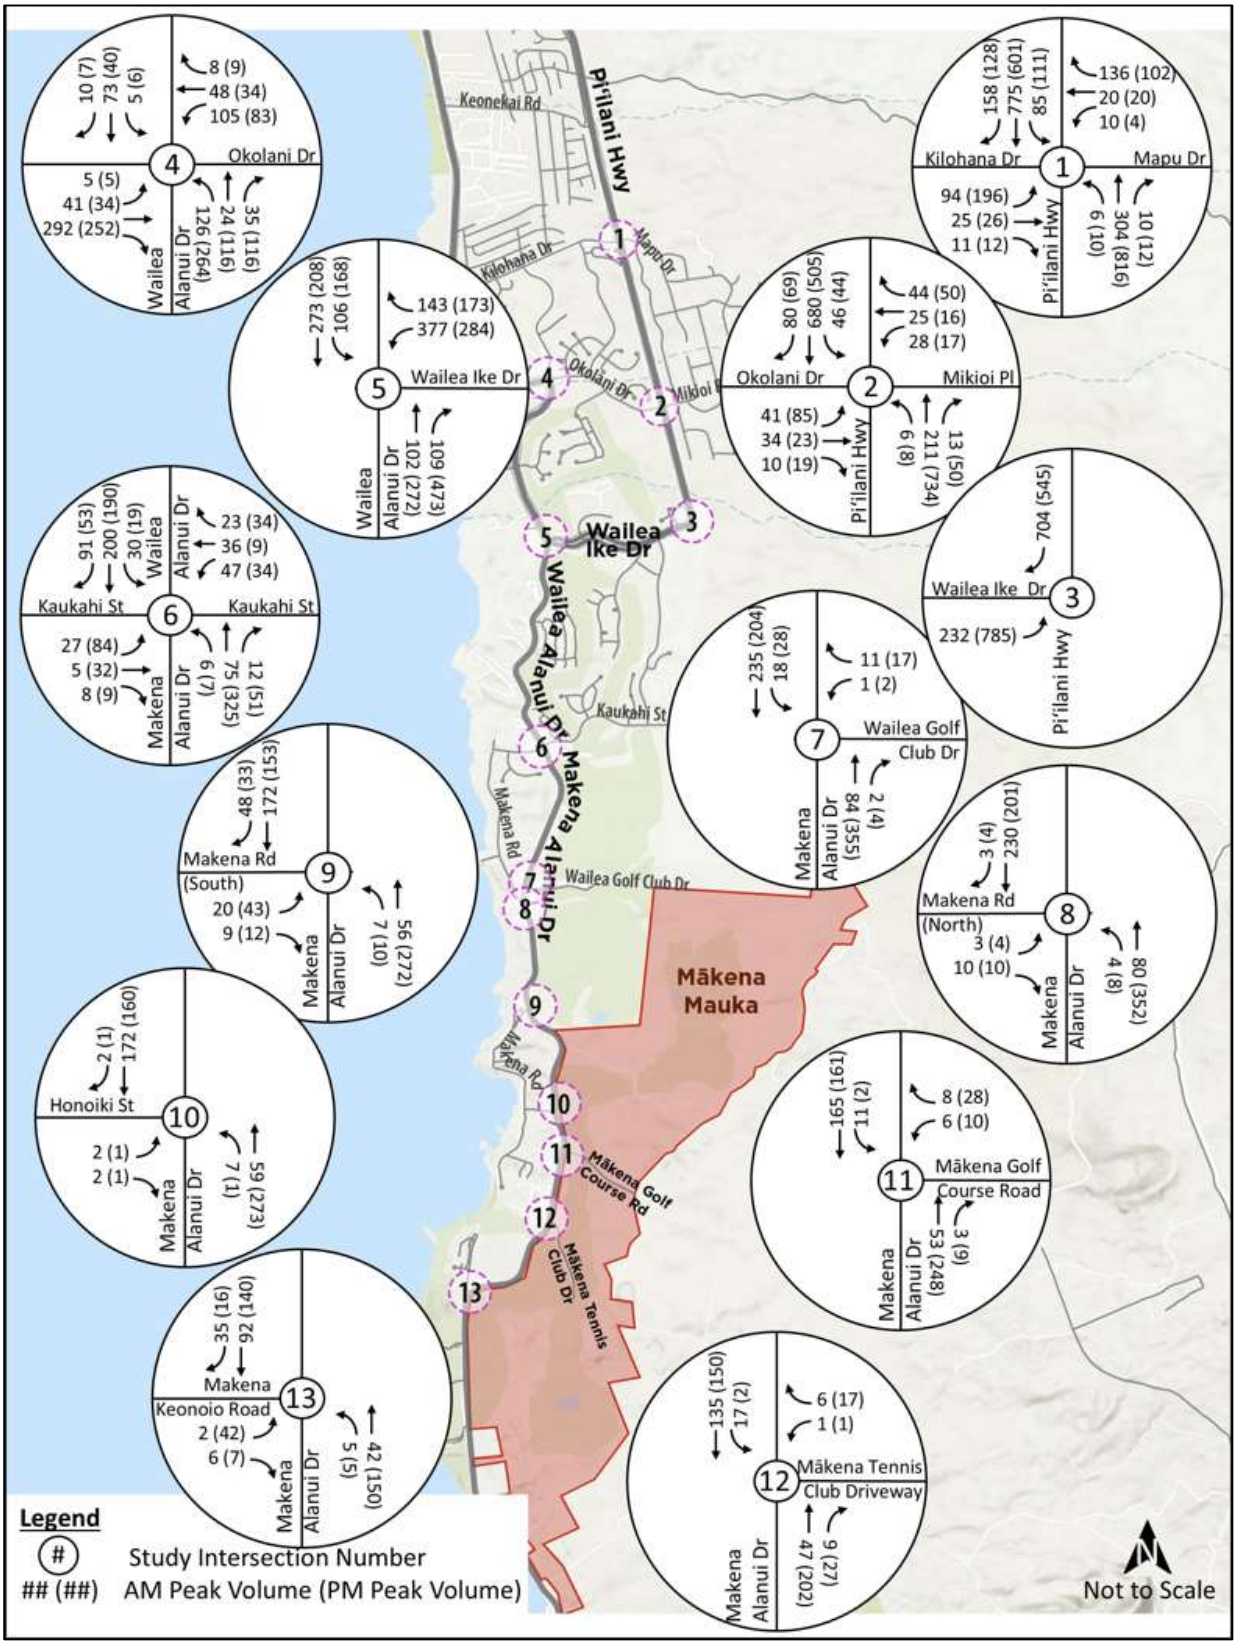

Figure 8: Existing (2024) Peak Hour Volumes

Table 2: Existing (2024) Pedestrian Volumes

	Intersection	AM Peak Hour (7:30 - 8:30 AM)					PM Peak Hour (3:30 - 4:30 PM)				
		North Leg	East Leg	South Leg	West Leg	Total	North Leg	East Leg	South Leg	West Leg	Total

E. Field Observations

1. Peak Hour Queue

The southbound direction has the highest directional volume in the AM peak hour. South of Kilohana Drive, vehicles travelling through Pi'ilani Highway onto Wailea Ike Drive are free-flow and do not experience delay during the AM peak.

The northbound direction has the highest directional volume in the PM peak hour. It was observed that vehicles traveling along Pi'ilani Highway in the northbound direction start queuing at the Kilohana Drive signalized intersection and queuing continues south to Wailea Ike Drive during the PM peak hour. North of this intersection, Pi'ilani Highway is a four-lane highway and the traffic dissipates quickly. The queue is likely a product of the signal at Kilohana Drive and Pi'ilani Highway only having one northbound approach lane.

2. Vehicle Speed

The posted speed limit on Makena Alanui Drive near the Mākena Tennis Club Driveway is 30 MPH. However, during field observations, vehicles south of the tennis courts were observed to drive above the posted speed limit. This section of Makena Alanui Drive has travel lanes of about 12 feet. There are no shoulders, curbs, bike lanes, or sidewalks.

F. Traffic Operation Analysis Methodology

1. Level of Service

Level of service (LOS) is an operational analysis rating system used in traffic engineering to measure the effectiveness of roadway operating conditions. There are six LOS ranging from A to F. LOS A is defined as being the least interrupted flow conditions with little or no delays, whereas LOS F is defined as conditions where extreme delays exist. Intersection LOS and delay were determined for the AM and PM peak hours using *Synchro 11* traffic analysis software and analyzed using *HCM* 6th Edition (*HCM 6th*) (TRB, 2016) methodologies. The LOS analysis for signalized intersections is based on average total vehicle delay based on the methodologies of the *HCM 6th*, as shown in Table 4.

Table 4: LOS Criteria for Signalized Intersections

Average Control Delay (s/veh)	LOS by v/c Ratio	
	<=1.0	>1.0
≤ 10.0	A	F
>10 and ≤15	B	F
>15 and ≤25	C	F
>25 and ≤35	D	F
>35 and ≤50	E	F
>50	F	F

Source: *HCM 6th* (TRB, 2016)

As stated in the *HCM 6th*, LOS for an all-way stop-controlled (AWSC) and a two-way stop-controlled (TWSC) intersection is determined by the measured control delay (see Table 5). Delay at an AWSC intersection is defined for the intersection as a whole and for each movement. Delay at a TWSC intersection is defined by each minor movement and not for the major movements or intersection as a whole. This is because vehicles traveling along the major, free-flow road, of a TWSC intersection, proceed through with minimal delay. Those vehicles approaching the intersection along the minor movement (side-street) are controlled by a stop sign and thus experience delay attributable to the volume of vehicles passing along the free-flow road and the gaps available.

Another measure of intersection delay is the volume to capacity (v/c) ratio. This is the ratio of the volume of traffic utilizing the intersection compared to the maximum volume of vehicles that can be accommodated by the intersection during a specific period. A v/c ratio under 0.85 means the intersection is operating under capacity and excessive delays are not experienced. An intersection is operating near its capacity when v/c ratios range from 0.85 to 0.95. Unstable flows are expected when the v/c ratio is between 0.95 and 1.0. A traffic movement can have a poor LOS but low v/c, which suggests that the traffic volumes along that movement are low but must wait a long time to make the movement. This is common for low volume protected turn movements or side streets that must wait through a long cycle length for their phase to come up.

Table 5: LOS Criteria for Unsignalized Intersections

Average Control Delay (s/veh)	LOS by v/c Ratio	
	<=1.0	>1.0
≤ 10.0	A	F
>10 and ≤20	B	F
>20 and ≤35	C	F
>35 and ≤55	D	F
>55 and ≤80	E	F
>80	F	F

Source: *HCM 6th* (TRB, 2016)

2. LOS Standards

LOS standards were obtained from the HDOT *Best Practices for Traffic Impact Analysis Reports* (HDOT, 2010). This report establishes four thresholds that are defined to have significant impacts:

- If the operations of an intersection, turning movement, or roadway segment changes from LOS D or better to LOS E or F.
- If the roadway element is already operating at LOS E or F, and the delay for that location increases by 5 percent or more with the project.
- If the intersection, turning movement or roadway segment LOS decreases by two or more levels, but not below LOS D, a critical assessment of the location should be conducted.
- For other elements of the system (other than intersections), if the service measure used to determine LOS (e.g., density or speed) degrades by five percent or more.

All intersections along the State-owned Piʻilani Highway that exceed the overall LOS D or worse threshold will be analyzed with potential mitigation to improve the overall intersection to LOS D or better.

LOS standards were obtained from the *County of Maui Street Design Manual* (COM, 2018) and applies for City owned roadways. It that states that the standard for intersections in town centers and less densely populated areas for the peak hour of traffic is LOS "E" and LOS "D," respectively. All intersections besides ones that intersect with Piʻilani Highway (State owned) will use the LOS "D" standard for town centers.

G. Existing (2024) Intersection LOS

Existing (2024) intersection and travel movement LOS and average delay (in seconds per vehicle) were determined for the AM and PM peak hours at the study intersections and are shown in Tables 6 and 7. The southbound right turn and eastbound left turn at Piʻilani Highway at Wailea Ike Drive are free movements that will not result in any notable delay. Intersections and individual movements that operate at LOS E or worse are highlighted in yellow. Existing (2024) Synchro worksheets can be found in Appendix B.

1. Pi‘ilani Highway at Kilohana Drive/Mapu Drive

This intersection operates at LOS B and LOS C during the AM and PM peak hours, respectively. During the PM peak hour, the Pi‘ilani Highway left turns and the Kilohana Drive and Mapu Drive approaches operate at LOS E or worse. At this intersection, the main line traffic operations are prioritized over the turn lanes and minor street approaches. North of this intersection, Pi‘ilani Highway widens to four lanes.

2. Pi‘ilani Highway at Okolani Drive/Mikioi Place

This intersection operates at LOS B during the AM and PM peak hours. All movements at this intersection operate at an acceptable LOS.

3. Pi‘ilani Highway at Wailea Ike Drive

All movements at this intersection are free-flow and do not experience measurable delay.

4. Wailea Alanui Drive at Okolani Drive

This intersection operates at LOS B during the AM and PM peak hours. All movements at this intersection operate at an acceptable LOS.

5. Wailea Alanui Drive at Wailea Ike Drive

The overall intersection operates at LOS C during the AM and PM peak hours. The southbound left turns operate at LOS F during PM peak hour, with 83.7 seconds of delay and a v/c of 0.97. The southbound left turn volume in the PM peak hour is 168 vph and this movement was observed to clear the intersection every cycle. All other movements operate at LOS D or better.

6. Wailea Alanui Drive/Makena Alanui Drive at Kaukahi Street

All movements operate at LOS C or better for both peak hours.

7. Makena Alanui Drive at Wailea Golf Course Drive
All movements operate at LOS B or better for both peak hours.

8. Makena Alanui Drive at Makena Road (North)
All movements operate at LOS B or better for both peak hours.

9. Makena Alanui Drive at Makena Road (South)
All movements operate at LOS B or better for both peak hours.

10. Makena Alanui Drive at Honoiki Street
All movements operate at LOS B or better for both peak hours.

11. Makena Alanui Drive at Mākena Golf Course Driveway
All movements operate at LOS B or better for both peak hours.

12. Makena Alanui Drive at Mākena Tennis Club Driveway
All movements operate at LOS B or better for both peak hours.

13. Makena Alanui Makena at Mākena Keonoio Road
All movements operate at LOS B or better for both peak hours.

H. Mitigation for Existing (2024) Conditions

The Piʻilani Highway at Kilohana Drive/Mapu Drive intersection does not have any viable short-term improvements that can improve the existing delay in the PM. The analysis suggests green time can be redistributed from the Piʻilani Highway through phases to provide more green time for the other phases, however, that will result in increased delay along Piʻilani Highway and it is recommended that the main line be prioritized at this intersection. The intersection operates at an acceptable LOS and thus short-term changes are not recommended for this intersection.

The Wailea Alanui Drive at Wailea Ike Drive southbound left turn in the PM peak hour operates at LOS F. The signal timing can be adjusted to ensure that the southbound left turn lane clears the queue every cycle. The southbound left turn volume is 168 vph and the queue cleared the intersection every cycle during field observations. Short term changes are not recommended for this intersection.

III. Future Without Project Conditions

The Future conditions were evaluated for the 10, 20 and 30-year milestone years, corresponding to years 2038, 2048, and 2058 after construction begins in 2028. Background growth and future traffic volume projections were included in the analysis for the milestone years. Future intersection LOS were evaluated without the development to reflect future without project conditions.

A. Future Surrounding Area Development

Future surrounding area developments were identified and cross checked with the COM Project Viewer Status website and the State of Hawai'i *Environmental Review Program* (ERP) website on December 12, 2024. Future surrounding area developments were then narrowed down to those developments that were assumed likely to be constructed and occupied by 2038, 2048 and 2058. The future surrounding area developments are shown in Figure 9.

1. Maluaka Development

The Maluaka Development consists of 13 single-family homes and six (6) multi-family homes. The project was initiated in 2009 and was expected to be completed by 2022. The project has completed construction of the infrastructure, multi-family buildings, and six (6) of the 13 single-family homes. As such, the completed homes were captured in the May 9, 2024 data collection. The remaining seven (7) single-family homes yet to be completed will add incidental traffic volume to the project, and is assumed to be captured in the future background growth rate.

2. Mākena Resort H-M

The Mākena Resort H-M will be located at the previous site of the Mākena Beach and Golf Resort which closed on July 1, 2016. The original plan included a 76-room hotel, 50 apartment units, and 12 multi-family and 14 single-family residential units. The Special Management Area (SMA) Permit was approved in 2014 and an amendment to that SMA Permit was approved in 2017. The latest plan includes 55 multi-family and ten (10) single-family residential units, a beach club (restaurant, fitness, spa, etc.), and related improvements. Construction for this project has begun. A traffic report detailing the project generated trips was not able to be located and therefore project related trips were calculated using the *ITE Trip Generation Manual, 11th Edition* (ITE, 2021) and included in the Future (2038) Without Project volumes.

3. Mākena Resort M-5/M-6/S-7/B-2

The Mākena Resort M-5/M-6/S-7/B-2 development originally consisted of 46 resort single-family residential units, 88 resort multi-family residential units, ten (10) transient vacation rental units, 14 residential condominium units and approximately 27,300 square feet of retail space. This development is located near Mākena H-1, H-2 and H-M in the Makena Resort area. The SMA Permit was approved in 2017 and amended in 2021. The amended project will include 30 multi-family units, 18 single-family cottages, 32-single family custom lots, nine (9) transient vacation rental units, 14 residential condominiums, and 27,300 square feet of retail space. An updated traffic report detailing this reduction was not able to be located and therefore project related trips were calculated using the *ITE Trip Generation Manual*. Construction schedule for this project was not available. However, the project was included in the Future (2038) Without Project traffic volumes.

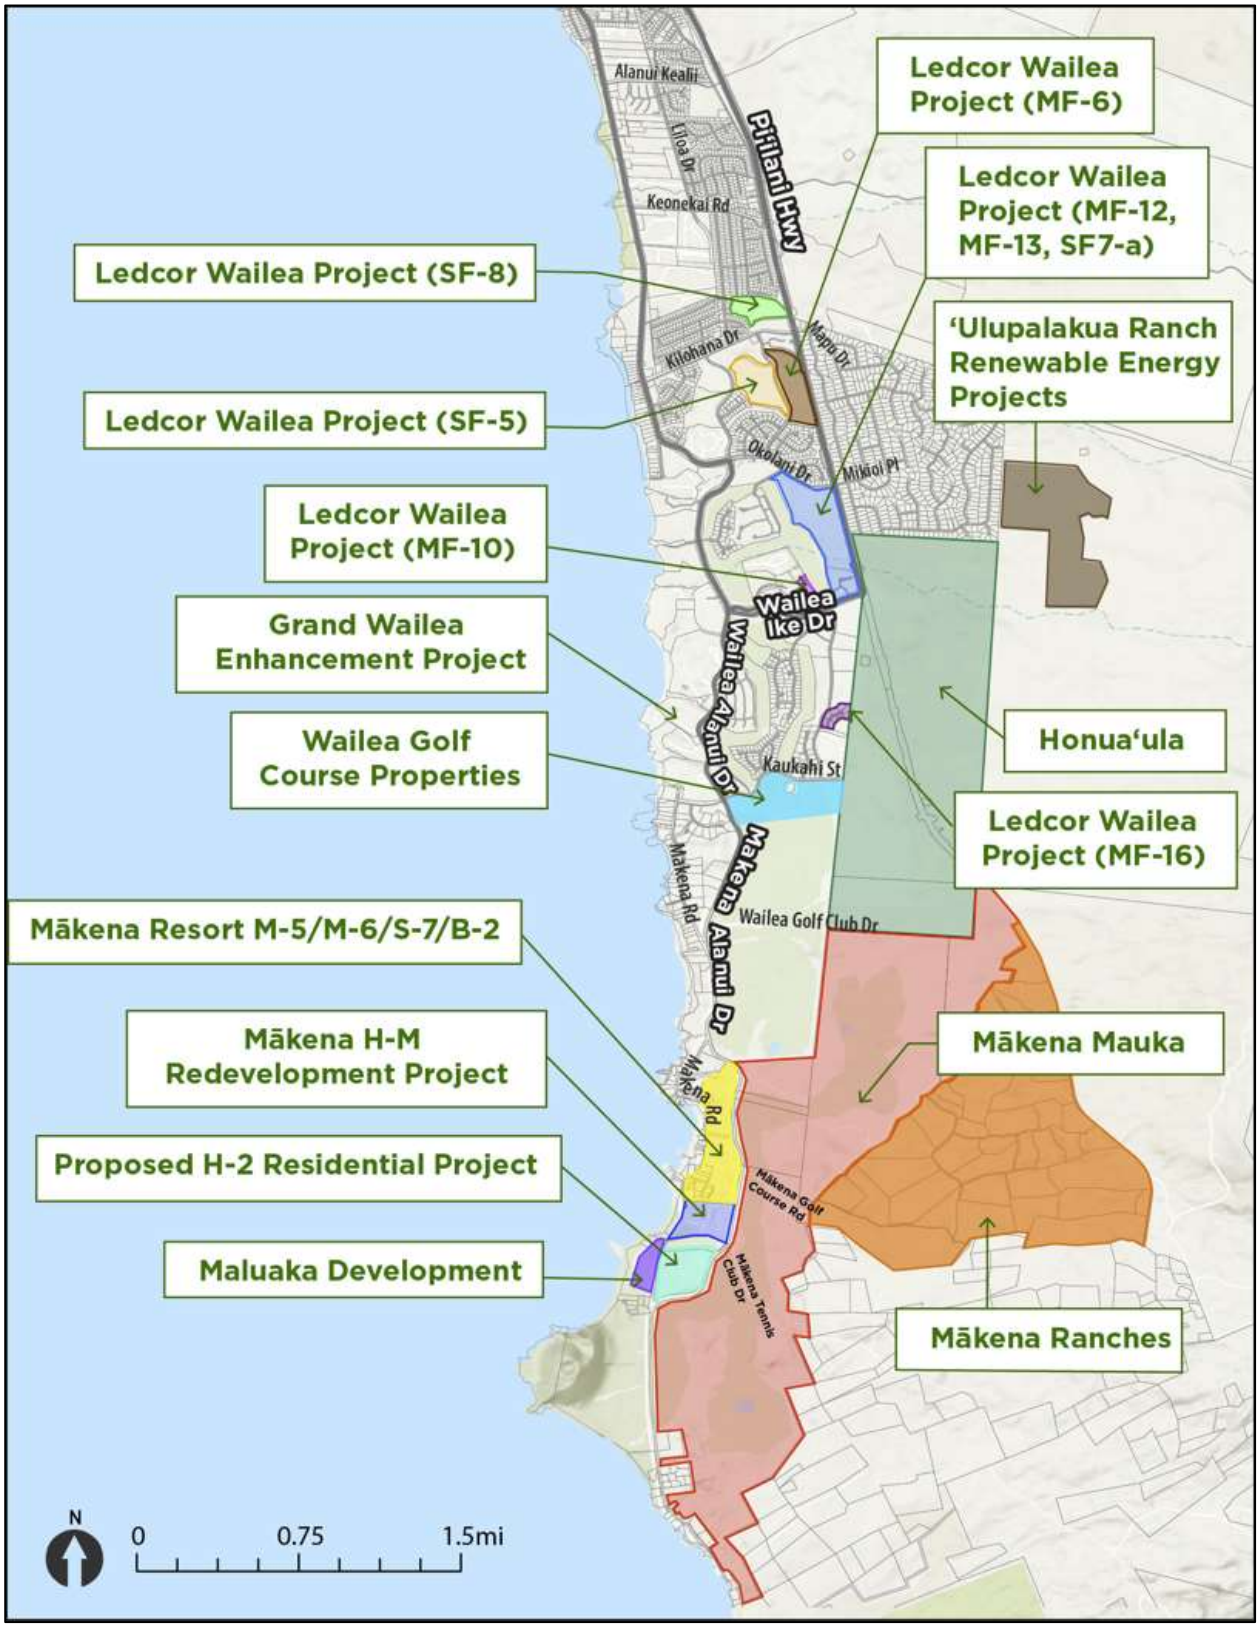

Figure 9: Future Surrounding Area Development

4. Ledcor Wailea Projects

The Ledcor Wailea Projects include 925 to 975 single-family and multi-family homes with open space amenities and various pedestrian paths. The 2025 *Ledcor Wailea Projects Final EIS* (PBR Hawai‘i, 2025) is pending acceptance. The 2033 project generated trips from the *2025 Ledcor Wailea Projects Final EIS* were included with the Future (2038) background volumes. The 2042 project generated trips from the *2025 Ledcor Wailea Projects Final EIS* were added to the Future (2048) volumes.

The traffic analysis from the *2025 Ledcor Wailea Projects Final EIS* projected the northbound left turn at Wailea Alanui Drive and Okolani Drive to operate at LOS E, but below capacity in 2033. In 2042, the northbound left turn was projected to operate at LOS F and over capacity. In 2042, it was recommended that a single lane roundabout, or stop control modification be considered, with future monitoring to determine if a signal, roundabout, or stop control modifications are warranted.

5. Grand Wailea Enhancement Project

The Grand Wailea Enhancement Project will add 137 hotel rooms to the Wailea Resort. It was noted that the SMA permit is currently under review. A traffic report detailing the project generated trips was not able to be identified at the time of this TIAR, and therefore project related trips were derived using the *ITE Trip Generation Manual*. The project is assumed to be completed by 2038 and resulting trips were included in the Future (2038) Without Project volumes.

6. Honua‘ula (Wailea 670)

Honua‘ula is proposing to include 1,150 residential units, with at least 288 affordable housing units, commercial and office space, and a small golf amenity. This project is in the permitting and entitlement stage and anticipating a 20-year buildout. The 2021-2026 project generated trips from the *2017 Honua‘ula TIAR* (SSFM, 2017) were assumed to be completed by 2038 and were included with the Future (2038) background volumes. The 2036 project generated trips from the *2017 Honua‘ula TIAR* were assumed to be completed by 2048 added to the Future (2048) volumes. As part of this project, several roadway and intersection improvements are proposed for construction and assumed to be completed by 2038, including:

- Widening of Pi‘ilani Highway between Kilohana Drive and Wailea Ike Drive;
- Intersection improvements at Pi‘ilani Highway at Wailea Ike Drive including signalization, construction of the north and east legs of the intersection, and a second right turn lane from Wailea Ike Drive to northbound Pi‘ilani Highway;
- Intersection improvements at Wailea Alanui Drive and Wailea Ike Drive, including two northbound right turn lanes and two southbound left turn lanes; and
- Signalization of Kaukahi Street when warranted.

As one of the 30 conditions mentioned in *Exhibit “B”*, Honua‘ula development is responsible for these improvements. *Exhibit “B”* can be found in Appendix C. Mākena Mauka is committed to assist in the costs of design and construction of the Pi‘ilani Highway Widening Project.

7. Proposed H-2 Residential Project

The Proposed H-2 Residential Project is expected to include up to 53 “single-family condominium lots.” The SMA permit application has been approved. The project is expected to be completed by 2038. Year 2028 traffic volumes from the *2022 Proposed H-2 Residential Project Final EA* were included in the Future (2038) volumes.

8. Mākena Ranches

The Mākena Ranches will include 36 agricultural lots, ranging in size from approximately four (4) acres to 95 acres, totaling approximately 666 acres. Portions of five (5) of these lots will be dedicated to dryland forest agricultural conservation area totaling approximately 103 acres. Agricultural farm plan area and conservation area, taken together will comprise approximately 89 percent of the area of the 36 lots. Additionally, the project includes seven (7) lots designated for roadway, pedestrian, or other uses (restricted uses), totaling approximately 116 acres. Construction for this project is ongoing. Residents are expected to begin moving in by 2028 with full occupancy spread out over 15 years. This project was not included in the COM project status viewer and therefore was not individually added to future year analysis and assumed to be captured in the background growth rate.

9. Wailea Golf Course Properties

Wailea Golf LLC proposes a planned, mixed-use development among 214 acres on TMK (2) 2-1-008:118, 134, and 140, to include a resort hotel with up to 1,070 housing units. The project will include up to 247 affordable housing units, 247 single-family market-value homes, and 576 multi-family market-value homes. 90% of the market value homes are assumed to be recreational homes, or second homes, which is in line with the percentages used for the Wailea Resort and Mākena Mauka developments. A traffic report detailing the project generated trips was not able to be identified at the time of this TIAR, and therefore project related trips were derived using the *ITE Trip Generation Manual*. The proposal for this project has been sent to the Maui Planning Commision for review and approval. For the purposes of our analysis, it was assumed that one-third of the project generated trips will be included in each of the future years of 2038, 2048, and 2058. The trip distribution assumed that about one-third of the project generated trips would be generated from each of the three TMK parcels. Project related trips were then distributed through the study intersections using the Existing (2024) traffic patterns.

10. ʻUlupalakua Ranch Renewable Energy Projects

The Paeahu Solar Project was previously proposed for development on 200 acres of ʻUlupalakua Ranch Land however the project is no longer proceeding. Since then, the Hawaiʻi State Energy Office announced plans for conducting a geothermal survey and there is potential for a future renewable energy project at ʻUlupalakua Ranch. The Paeahu Solar Project projected 2-4 daily staff to maintain operations. A renewable energy project is not expected to significantly increase traffic volume. Any project related trips from a renewable energy project at ʻUlupalakua Ranch is expected to be captured in the background growth rate.

B. Future Traffic Volumes

Future traffic volumes were projected by applying an ambient background growth in addition to trip volumes related to specific developments. Ambient background growth is associated with regional growth not attributed to a specific project. This growth also considers traffic associated with minor, or small, projects for which no traffic data, or traffic studies, are available. The second component is estimated traffic that will be generated by other major development projects in the vicinity of the proposed project. Included in the assessment of future background conditions are roadway improvements that are part of the related projects.

1. Background Growth

a) Historic HDOT Data

Historical 24-hour traffic data was collected from the HDOT. Changes in traffic volumes along roadways in the surrounding area over the past five years have been mixed, as shown in Table 1. Historic HDOT traffic patterns do not show any traffic growth in the area from 2016-2024, even when removing the Covid-19 pandemic years (2019 and 2020) and the Lahaina Fire (2023) volumes from the calculation.

b) Maui Long Range Transportation Plan

The *Federal-Aid Highways 2035 Transportation Plan for the District of Maui* (HDOT, 2014) daily vehicle trip projections for South Kihei in 2020 and 2025 would result in an annual growth rate of 1.52%.

c) Surrounding Area Projects

Various traffic reports in the area were reviewed for consistency in future forecasting and assumptions. The growth rates used in those reports ranged from 0% to 3.6%, referring to historic HDOT data trends, nearby master plans, and the Maui Travel Demand Forecasting Model.

d) Annual Growth Rate

A 1.52% compound annual growth rate over 34 years, from 2024 to 2058, would result in a 67% increase in traffic volume. However, the historic HDOT traffic volumes over the past nine years, from 2016-2024, do not reflect changes. With recent traffic volumes resulting in no growth but future models still projecting increases in the area, a 1.0% annual growth rate is assumed to be appropriate for this project's future analysis that extends through 2058. This 1.0% compound annual growth rate was applied to all major regional movements at all study intersections.

2. Future Without Project Volumes

The future without project volumes were calculated by applying the 1% background growth to the existing volumes and adding the trips generated from future surrounding area developments. Future Without Project volumes for the Years 2038, 2048 and 2058 are shown in Figures 10-12, respectively.

3. Future Without Project Lane Configurations

With the inclusion of the Honua'ula development, it was assumed that the Pi'ilani Highway and Wailea Ike Drive intersection would be reconstructed. The lane configuration in the *2017 Honua'ula TIAR* was used for analysis. Changes to this intersection will also include the widening of Pi'ilani Highway from two lanes to four lanes. Pi'ilani Highway at Kilohana Drive/Mapu Drive and at Okolani Drive/Mikioi Place were analyzed with four travel lanes, using lane configurations outlined in the *2017 Honua'ula TIAR.* The *2017 Honua'ula TIAR* also included improvements at Wailea Alanui Drive and Wailea Ike Drive and at Wailea Alanui Drive and Makena Alanui Drive at Kaukahi Street when needed. The Wailea Alanui Drive and Wailea Ike Drive and at Wailea Alanui Drive/Makena Alanui Drive at Kaukahi Street intersections will be analyzed using existing lane configuration.

4. Future Without Project Signal Timing and Phasing

All signalized study intersections were observed to have varying cycle lengths, suggesting uncoordinated and fully actuated signal timing. As a part of future analysis, signal timing was optimized at all signalized intersections.

The Pi'ilani Highway at Wailea Ike Drive is expected to have protected northbound and southbound left turns. The westbound and eastbound approaches will operate with split phasing. The westbound right turn

was analyzed with “permitted+overlap” traffic signal phasing, overlapping with the protected southbound left turn phase, to provide more green time for the westbound right turn movement.

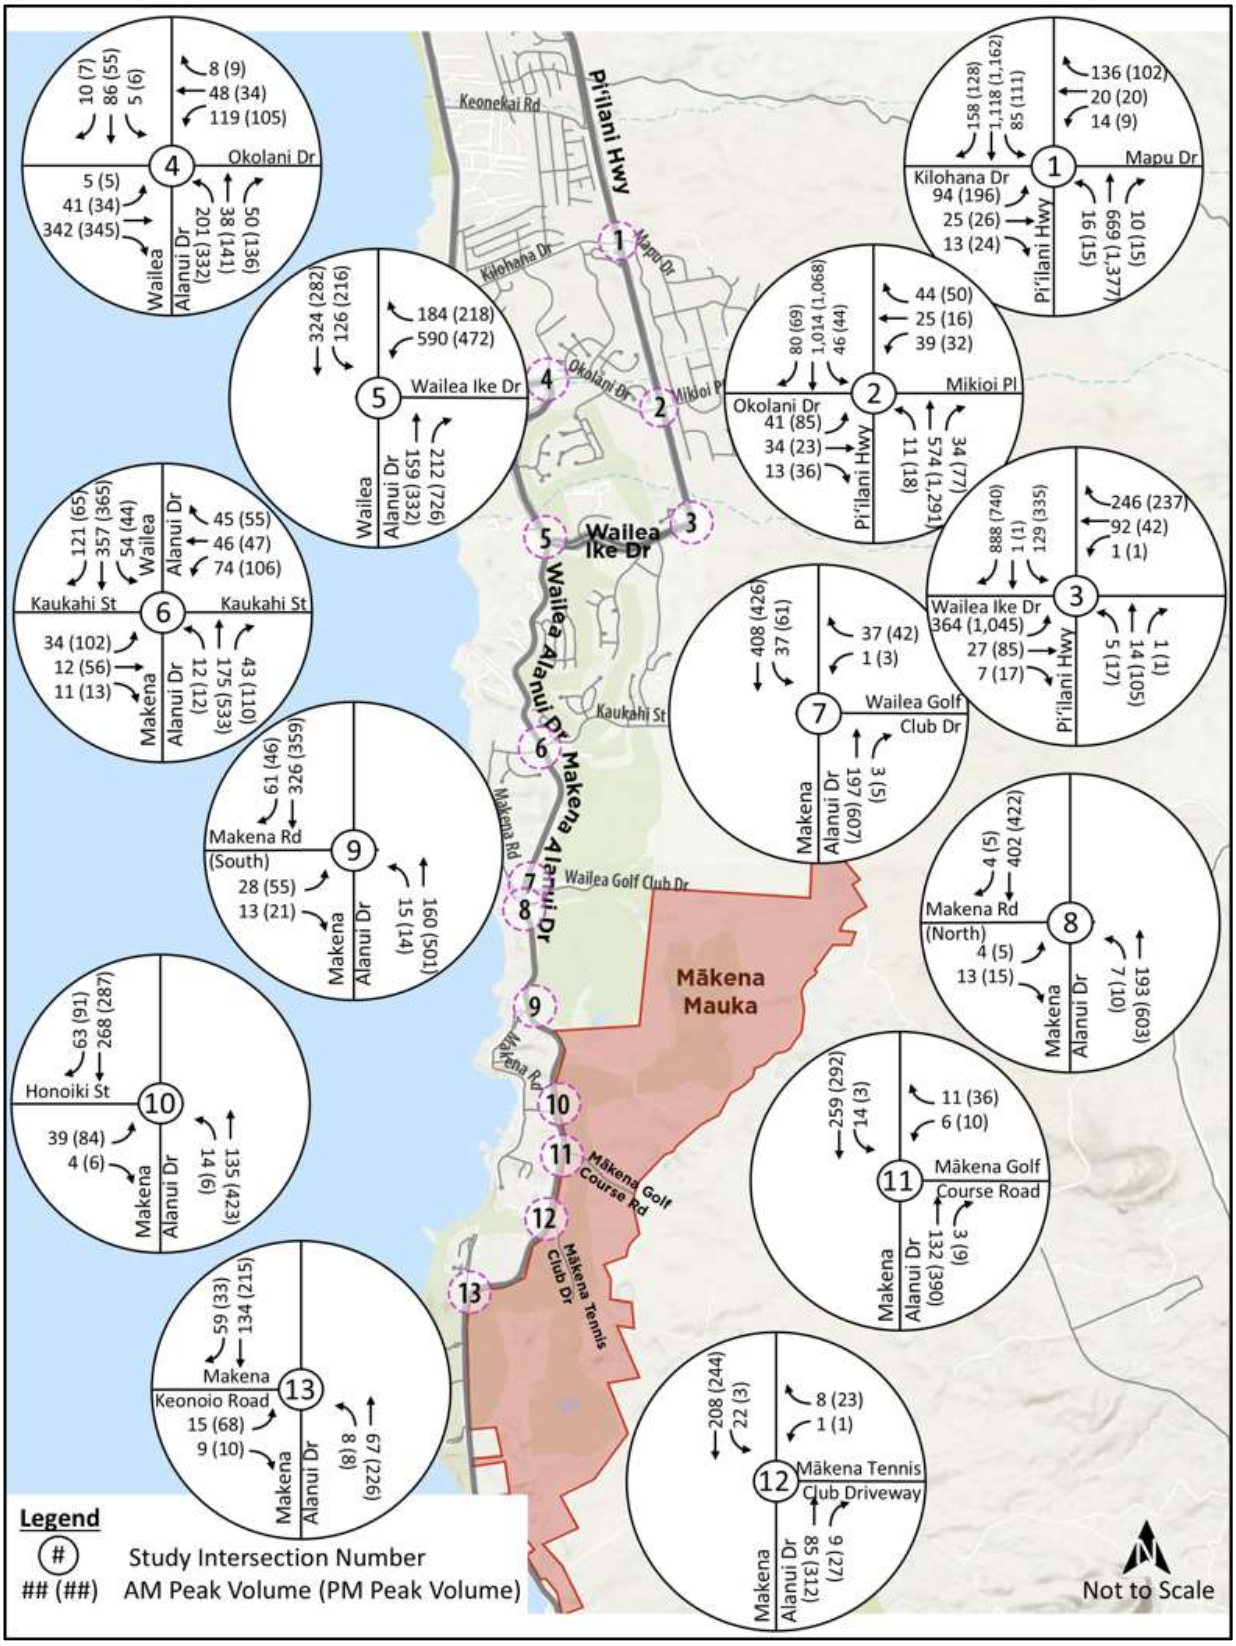

Figure 10: Future (2038) Without Project Peak Hour Volumes

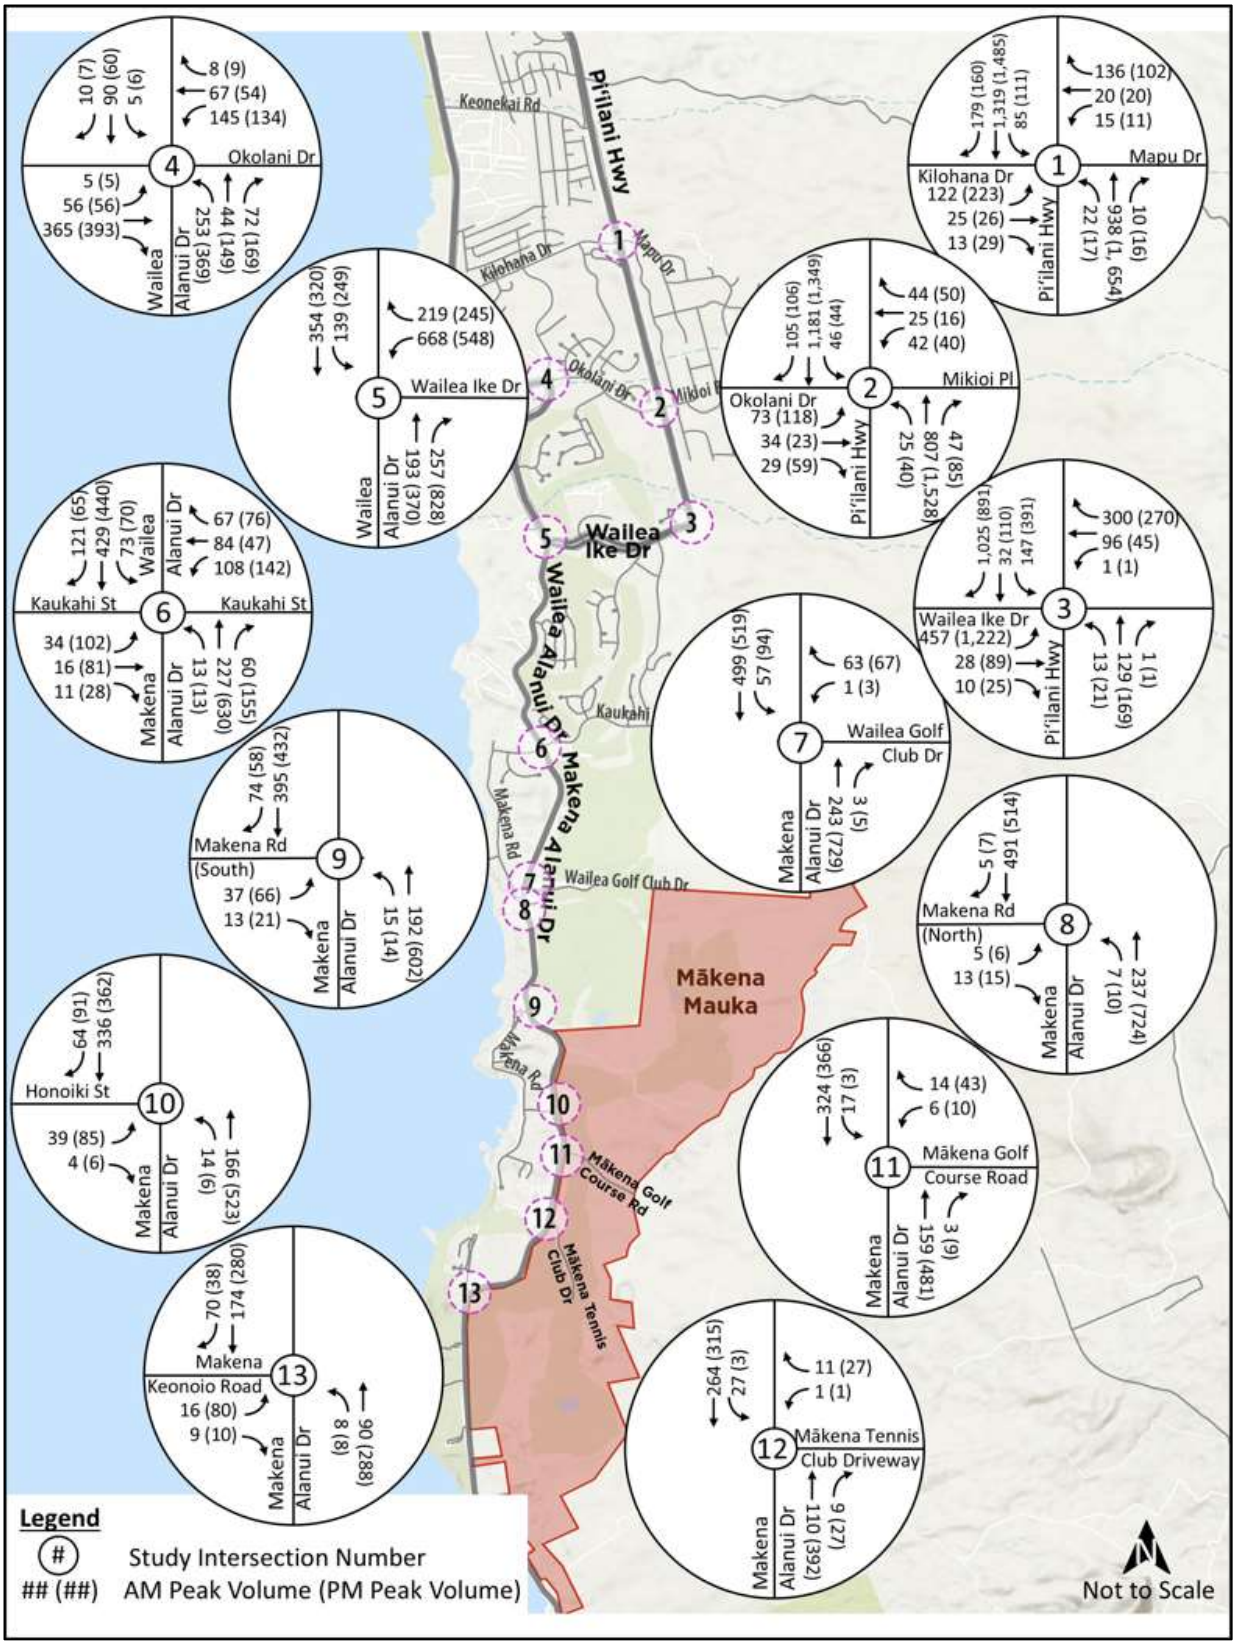

Figure 11: Future (2048) Without Project Peak Hour Volumes

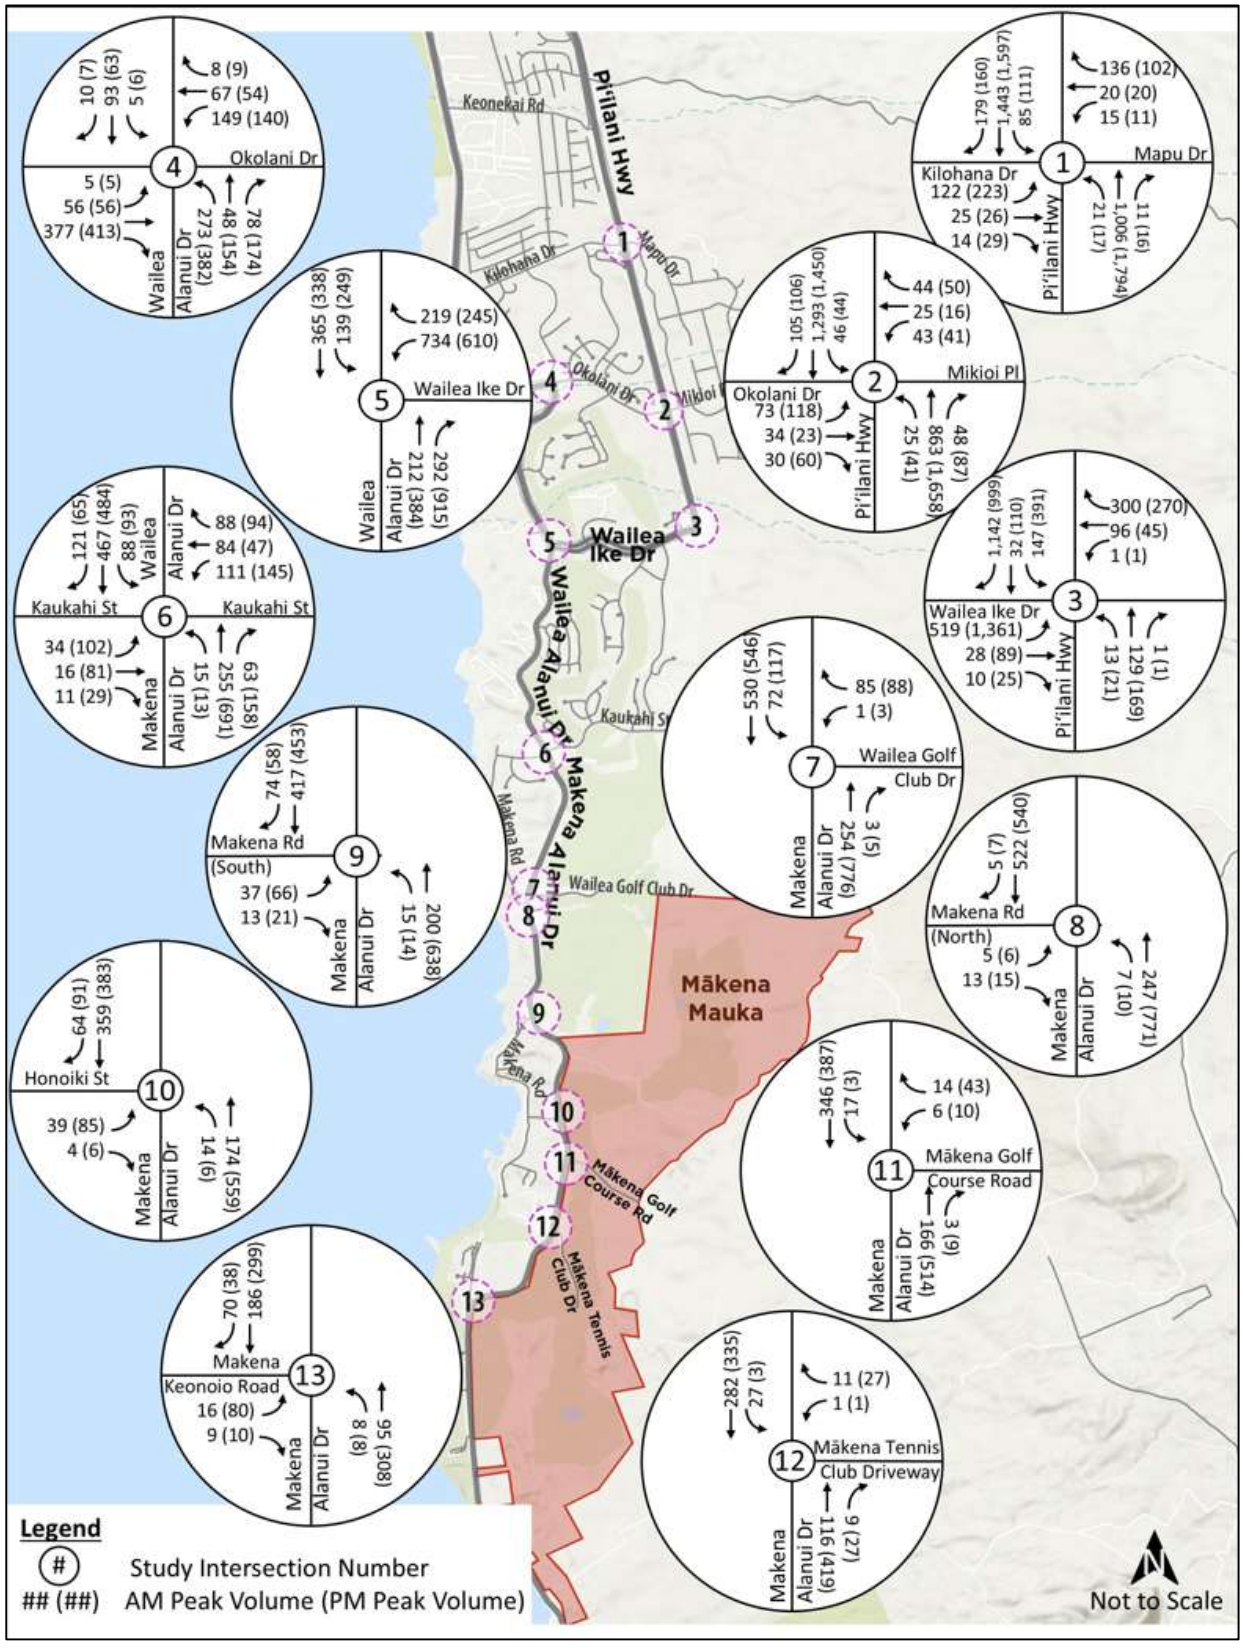

Figure 12: Future (2058) Without Project Peak Hour Volumes

C. Future (2038) Without Project LOS

Future (2038) Without Project intersection LOS, v/c ratio and delay were determined for the AM and PM peak hours (see Table 8 and 9). Intersections and individual movements that operate at LOS E or worse are highlighted in yellow. Future (2038) Without Project Synchro worksheets can be found in Appendix D.

1. Pi‘ilani Highway at Kilohana Drive/Mapu Drive

Pi‘ilani Highway at Kilohana Drive/Mapu Drive is projected to operate at LOS A and LOS B during the AM and PM peak hours, respectively. All movements operate at LOS D or better. No improvements are needed or recommended at this intersection.

2. Pi‘ilani Highway at Okolani Drive/Mikioi Place

This intersection operates at LOS A during the AM and PM peak hours. All movements operate at LOS C or better. No improvements are needed or recommended at this intersection.

3. Pi'ilani Highway at Wailea Ike Drive

This intersection operates at LOS B and LOS C during the AM and PM peak hours, respectively. All movements operate at LOS D or better. No improvements are needed or recommended at this intersection.

4. Wailea Alanui Drive at Okolani Drive

This intersection operates at LOS C and LOS D during the AM and PM peak hours, respectively. The northbound left turn operates at LOS E (v/c of 0.83). The delay is only limited to the PM peak hour with a v/c under 0.85. This intersection will not pass an 8-hour or 4-hour traffic signal warrant. The v/c is not a critical level (above 0.85) that will require mitigation. No improvements are needed or recommended at this intersection.

5. Wailea Alanui Drive at Wailea Ike Drive

This intersection will operate at LOS D during the AM and PM peak hours. The southbound left turns and westbound left turns are projected to operate at LOS E, with a v/c over 0.85 during the AM and PM peak hours.

Signal timing adjustments were not able to improve the southbound left turn during the PM peak hour. The *2017 Honua'ula TIAR* recommended adding a second westbound left turn lane and a second northbound right turn lane. Therefore, Wailea Alanui Drive at Wailea Ike Drive was analyzed with the additional westbound left turn lane and northbound right turn lane (see Table 10). The cycle length was increased to allow for the longer pedestrian crossings due to the additional travel lanes.

This change did not change the southbound left turn geometry however, it does provide the two heavy movements at this intersection with additional capacity, which in turn allows for the signal timing to be adjusted. The intersection operates at LOS C during the Future (2038) Without Project AM and PM peak hours, and all movements will operate at LOS D or better. It is recommended that the second westbound left turn and the second northbound right turn be added in Future (2038) Without Project.

Table 10: Future (2038) Without Project Mitigation at Wailea Alanui Dr & Wailea Ike Dr

Existing Lane Configuration	AM Peak			PM Peak

6. Wailea Alanui Drive/Makena Alanui Drive at Kaukahi Street

The Kaukahi Street approaches will operate at LOS F during the PM peak hour. The v/c for both approaches are greater than 1.00. Drivers are expected to have difficulty making turns from Kaukahi Street during the PM peak hour. Improvements to the intersection will be analyzed.

The *2017 Honua'ula TIAR* recommended the intersection be signalized in 2026. This intersection will not pass the 8-Hour or 4-Hour Vehicle (traffic signal) Warrant but will pass the Peak Hour Vehicle Warrant. However, it should be noted that the satisfaction of a warrant does not necessarily justify installing a traffic signal. The traffic signal warrant analysis can be found in Appendix E.

Wailea Alanui Drive/Makena Alanui Drive at Kaukahi Street was analyzed in Synchro 11 as a signalized intersection with permitted phases for all movements (see Table 11). The intersection operates at LOS A during the Future (2038) Without Project AM and PM peak hours, and all movements will operate at LOS B or better.

Table 11: Future (2038) Without Project Mitigation at Wailea Alanui Dr & Kaukahi St

Kaukahi WB Left-Through	A	7.9	0.22	B	10.2	0.31

7. Makena Alanui Drive at Wailea Golf Course Drive

All movements operate at LOS D or better for both peak hours.

8. Makena Alanui Drive at Makena Road (North)

All movements operate at LOS C or better for both peak hours.

9. Makena Alanui Drive at Makena Road (South)

All movements operate at LOS C or better for both peak hours.

10. Makena Alanui Drive at Honoiki Street

All movements operate at LOS C or better for both peak hours.

11. Makena Alanui Drive at Future Mākena Golf Course Driveway

All movements operate at LOS B or better for both peak hours.

12. Makena Alanui Drive at Mākena Tennis Club Driveway

All movements operate at LOS B or better for both peak hours.

13. Makena Alanui Drive at Makena Keonoio Road

All movements operate at LOS C or better for both peak hours.

D. Future (2038) Without Project Recommendation

It is recommended that a second westbound left turn and a second northbound right turn be added at Wailea Alanui Drive and Wailea Ike Drive in Future (2038) Without Project. The cycle length and pedestrian phases should be modified to account for the longer pedestrian crossing distances and times. This intersection will be analyzed in the future condition with these improvements.

It is recommended that the Wailea Alanui Drive/Makena Alanui Drive and Kaukahi Street intersection be signalized when traffic volumes meet traffic signal warrant thresholds and when traffic analysis determines a signal is needed as recommended in the *Honua'ula TIAR*. This intersection will be analyzed in the remaining future conditions as a signalized intersection.

E. Future (2048) Without Project LOS

In addition to the Future (2038) Without Project mitigation improvements, the traffic signals at all signalized intersections were optimized. Future (2048) Without Project intersection LOS, delay, and v/c were determined for the AM and PM peak hours (see Table 12 and 13). Intersections and individual movements that operate at LOS E or worse are highlighted in yellow. Future (2048) Without Project Synchro worksheets can be found in Appendix D.

1. Pi‘ilani Highway at Kilohana Drive/Mapu Drive

Pi‘ilani Highway at Kilohana Drive/Mapu Drive is projected to operate at LOS B during the AM and PM peak hours. The southbound left turn is projected to operate at LOS F (v/c of 0.88) during the PM peak hour. The southbound left turn volume is 111 vph, or about two (2) vehicles per minute. This movement is expected to clear the intersection every cycle. No improvements are needed or recommended at this intersection.

2. Pi‘ilani Highway at Okolani Drive/Mikioi Place

This intersection operates at LOS B during the AM and PM peak hours. All movements operate at LOS C or better. No improvements are needed or recommended at this intersection.

3. Pi'ilani Highway at Wailea Ike Drive

This intersection operates at LOS B and LOS C during the AM and PM peak hours, respectively. All movements operate at LOS D or better. No improvements are needed or recommended at this intersection.

4. Wailea Alanui Drive at Okolani Drive

This intersection will operate at LOS C and LOS E during the AM and PM peak hours. The northbound left turn and eastbound right turn lane will operate at LOS F (v/c of 1.02 and 1.00, respectively) during the PM peak hour. The delay is due to the high traffic volume (369 vph for the northbound left, 393 vph for the eastbound right) and the AWSC.

The traffic volume at this intersection is too low to pass a traffic signal vehicle warrant. This intersection was analyzed as a TWSC and as a single lane roundabout (see Table 14).

Single Lane Roundabout	**AM Peak**			**PM Peak**		
	LOS	Delay	v/c	LOS	Delay	v/c
4 - Wailea Alanui Dr & Okolani Dr	**A**	**6.9**	-	**B**	**10.1**	-
Wailea Alanui NB Approach	A	5.8	0.32	B	11.3	0.65
Wailea Alanui SB Approach	A	5.9	0.14	A	6.6	0.13
Okolani EB Approach	A	8.5	0.45	A	9.3	0.50
Okolani WB Approach	A	6.2	0.25	A	9.1	0.33

As a TWSC, the delay would worsen with multiple movements operating at LOS E or worse. As a single lane roundabout, all movements at this intersection are projected to operate at LOS B or better.

The *2025 Ledcor Wailea Projects Final EIS* identifies the northbound left turn and eastbound right turns as movements that operate at LOS E or worse. The *2025 Ledcor Wailea Projects Final EIS* recommends a traffic signal or a roundabout as potential mitigation for this intersection in 2042.

5. Wailea Alanui Drive at Wailea Ike Drive

This intersection operates at LOS C during the AM and PM peak hours. All movements operate at LOS D or better. No improvements are needed or recommended at this intersection.

6. Wailea Alanui Drive/Makena Alanui Drive at Kaukahi Street

This intersection operates at LOS A during the AM and PM peak hours. All movements operate at LOS B or better. No improvements are needed or recommended at this intersection.

7. Makena Alanui Drive at Wailea Golf Course Drive

The westbound left turn operates at LOS E (v/c of 0.03) during the PM peak hour. The westbound left turn volume is 3 vph. The volume on the minor street approach is too low to satisfy an AWSC or traffic signal vehicle warrant. The v/c is not a critical level (above 0.85) that will require mitigation. It is recommended this intersection remain a TWSC intersection.

8. Makena Alanui Drive at Makena Road (North)

All movements operate at LOS C or better for both peak hours.

9. Makena Alanui Drive at Makena Road (South)

The Makena Road (South) eastbound approach will operate at LOS E (v/c of 0.49) during the PM peak hour. The eastbound approach volume is 87 vph during the PM peak hour.

An AWSC warrant, Warrant D: 8-Hour Volume (vehicles, pedestrians, and bicycles), was analyzed. Two conditions must be satisfied to pass this warrant:

- The total number of vehicles, pedestrians and bicycles on the major approach street is at least 300 units per hour for any 8 hours in a day and
- The total number of vehicles, pedestrians and bicycles on the minor street approach is at least 200 units per hour for the same 8 hours.

The volume on the minor street approach is too low to satisfy an AWSC or traffic signal vehicle warrant. The v/c is not a critical level (above 0.85) that will require mitigation. It is recommended this intersection remain a TWSC intersection.

10. Makena Alanui Drive at Honoiki Street

All movements operate at LOS D or better for both peak hours.

11. Makena Alanui Drive at Future Mākena Golf Course Driveway

All movements operate at LOS C or better for both peak hours.

12. Makena Alanui Drive at Mākena Tennis Club Driveway

All movements operate at LOS B or better for both peak hours.

13. Makena Alanui Drive at Makena Keonoio Road

All movements operate at LOS C or better for both peak hours.

F. Future (2048) Without Project Recommendation

It is recommended that a single lane roundabout be considered at Wailea Alanui Drive and Okolani Drive in Future (2048) Without Project. Future Without Project conditions will analyze this intersection as a single lane roundabout.

G. Future (2058) Without Project LOS

Future (2058) Without Project intersection LOS, v/c ratio and delay were determined for the AM and PM peak hours (see Table 15 and 16). The results for the Future (2058) Without Project conditions were similar to Future (2048) Without Project conditions, with worsening conditions. Intersections and individual movements that operate at LOS E or worse are highlighted in yellow. Future (2058) Without Project Synchro worksheets can be found in Appendix D.

1. Pi‘ilani Highway at Kilohana Drive/Mapu Drive

Pi‘ilani Highway at Kilohana Drive/Mapu Drive is projected to operate at LOS B during the AM and PM peak hours. The southbound left turn is projected to operate at LOS F (v/c of 0.88) during the PM peak hour. The southbound left turn volume is 111 vph, or approximately two (2) vehicles per minute. This movement is expected to clear the intersection every cycle. No improvements are needed or recommended at this intersection.

2. Pi‘ilani Highway at Okolani Drive/Mikioi Place

This intersection operates at LOS B during the AM and PM peak hours. All movements operate at LOS C or better. No improvements are needed or recommended at this intersection.

3. Pi‘ilani Highway at Wailea Ike Drive

This intersection operates at LOS B and LOS D during the AM and PM peak hours, respectively. The northbound left and southbound left is projected to operate at LOS E (v/c of 0.55 and 0.87, respectively). The northbound left turn and southbound left turn volume is 21 vph and 391 vph, respectively, during the

PM peak hour. The northbound queue is expected to clear the intersection every cycle. This intersection is being analyzed with split phasing. Typically, intersections with split phasing have less effective green time for each approach phase. The signal timing can be adjusted to allow for the southbound dual left turn to clear the intersection very cycle. No improvements are needed or recommended at this intersection.

4. Wailea Alanui Drive at Okolani Drive

This intersection operates at LOS A and LOS B during the AM and PM peak hours, respectively. All movements operate at LOS B or better. No improvements are needed or recommended at this intersection.

5. Wailea Alanui Drive at Wailea Ike Drive

This intersection operates at LOS C during the AM and PM peak hours. All movements operate at LOS D or better. No improvements are needed or recommended at this intersection.

6. Wailea Alanui Drive/Makena Alanui Drive at Kaukahi Street

This intersection operates at LOS A during the AM and PM peak hours. All movements operate at LOS B or better. No improvements are needed or recommended at this intersection.

7. Makena Alanui Drive at Wailea Golf Course Drive

The Wailea Golf Course Drive westbound left turn will operate at LOS F (v/c of 0.04) during the PM peak hour. The westbound left turn volume is 3 vph during the PM peak hour. The volume on the minor street approach is too low to satisfy an AWSC or traffic signal vehicle warrant. The v/c is not a critical level (above 0.85) that will require mitigation. It is recommended this intersection remain a TWSC intersection.

8. Makena Alanui Drive at Makena Road (North)

All movements operate at LOS C or better for both peak hours.

9. Makena Alanui Drive at Makena Road (South)

The Mākena Road (South) eastbound approach will operate at LOS E (v/c of 0.53) during the PM peak hour. The eastbound approach volume is 87 vph during the PM peak hour. The volume on the minor street approach is too low to satisfy an AWSC or traffic signal vehicle warrant. The v/c is not a critical level (above 0.85) that will require mitigation. It is recommended this intersection remain a TWSC intersection.

10. Makena Alanui Drive at Honoiki Street

The Honoiki Street eastbound approach will operate at LOS E (v/c of 0.49) during the PM peak hour. The eastbound approach volume is 91 vph during the PM peak hour. The volume on the minor street approach is too low to satisfy an AWSC or traffic signal vehicle warrant. The v/c is not a critical level (above 0.85) that will require mitigation. It is recommended this intersection remain a TWSC intersection.

11. Makena Alanui Drive at Mākena Golf Course Driveway

All movements operate at LOS C or better for both peak hours.

12. Makena Alanui Drive at Mākena Tennis Club Driveway

All movements operate at LOS B or better for both peak hours.

13. Makena Alanui Drive at Makena Keonoio Road

All movements operate at LOS C or better for both peak hours.

H. Future (2058) Without Project Recommendation

Traffic signal timings should be monitored and updated as needed. No other improvements are recommended for the Future (2058) Without Project Condition.

I. Existing (2024) and Future Without Project Comparison

A comparison between the Existing (2024), and Future (2038), (2048), and (2058) conditions during the AM and PM peak hours are shown in Tables 17 and 18, respectively. The LOS and delay in the comparison tables reflect the recommended Future Without Project mitigation. The overall delay at most intersections will increase but will still operate at an acceptable LOS.

IV. Future With Project Conditions

A. Project Phasing

The Mākena Mauka project is proposing to be developed in phases, with full build out and occupancy by 2058. The Future conditions were evaluated for the 10-, 20- and 30-year milestone years after the anticipated start of construction in 2028, aligning with years 2038, 2048 and 2058. The expected LOS were evaluated with the development.

Construction is expected to begin in 2028 with a steady buildout through 2058. The following was the intended project density as of April 2025:

- All 109 workforce housing units are assumed to be completed by 2038.
- Construction of the 543 market value housing units are to be built gradually over 30 years.
    - Market value housing units are assumed to be constructed in equal amounts (60 of 180 single-family units, 121 of 363 multi-family units) by 2038, 2048, and 2058, respectively.
- Mākena Mauka will consist of 180 single-family homes, 90% (162) of these homes are anticipated by the developer to be "second" homes which owners would use a couple months a year.
    - 162 units are analyzed as "Recreational Homes".
- Mākena Mauka will consist of 363 multi-family homes, 90% (327) of these homes are anticipated by the developer to be "second" homes which owners would use a couple months a year.
    - 327 units are analyzed as "Recreational Homes".
- Project generated volumes in 2038 are assumed to use the "North Access Road", which is currently between Makena Road (South) and Honoiki Street, and the Mākena Golf Course Driveway which is currently located just south of Honoiki Street.
- Project generated volumes in 2048 are assumed to use the Mākena Tennis Club Driveway (currently located just south of Honoiki Street), "North Access Road", and Mākena Golf Course Driveway.
- Project generated volumes in 2058 are assumed to use the "South Access Road", which will be a new roadway intersecting Makena Alanui Drive across the existing Mākena Beach Parking Lot, and the three northern access roads.
- All operational support buildings are assumed to be completed in the first phase.

B. Future Roadway Assumptions

The widening of Piʻilani Highway from Kilohana Street to Wailea Ike Drive, the signalization of Piʻilani Highway at Wailea Ike Drive, and the signalization of Wailea Alanui Drive/Makena Alanui Drive at Kaukahi Street part of the Honuaula (Wailea 670) project are assumed to be in place when Mākena Mauka begins construction. These improvements were including in the Future Without Project model and will be part of the Future With Project traffic model.

The *2025 Ledcor Wailea Resort Final EIS* identified the Wailea Ike Drive at Okolani Street northbound left turn to operate at LOS E in 2033 and LOS F in 2042. The intersection will not pass the 4-hour traffic signal warrant. A single lane roundabout or other control modifications could be considered. The COM Street Design Manual (COM, 2018) states: "New traffic signals or four-way stop-controlled intersections are discouraged. Roundabouts are the preferred treatment for intersections that cannot be adequately controlled by one-way or two-way stop control." This intersection will be analyzed as a single lane

roundabout in all Future With Project conditions. This improvement is assumed to be constructed by others.

C. Future With Project Generated Volumes

Trips resulting from the project were calculated and added to the road network using the four-step trip generation methodology: trip generation, trip distribution, modal choice, route assignment.

1. Trip Generation

The proposed mixed-use development is planned to include commercial and office space, workforce housing units, market rate multi-family units, recreational homes, and market rate single-family units. Trips for the proposed development were calculated using *ITE Trip Generation Manual* and the associated trip generation rates are shown in Table 19. The workforce housing, market-value single-family homes and multi-family homes will use the Affordable Housing (ITE Code 223), Single-Family Detached (ITE Code 210) and Multi-Family Low-Rise (ITE Code 220), respectively.

The project estimates that 10% of the single-family and multi-family homes will be full-time residents, while the remaining 90% will consist of part-time residents. The 90%-10% ratio split between full-time residents and part-time residents is the same ratio used in the *2017 Mākena Resort Final EA* and the *2024 Ledcor South Maui Final EIS*. The "Recreational Homes" description provided from the *ITE Trip Generation Manual* states: "A recreational home is either (1) a second home used by its owner periodically for recreation or (2) rented on a seasonal basis. Some sites in the database are located within a resort that contains local services and complete recreational facilities." This description matches the intended use of the seconds homes in Mākena Mauka. Project generated trips for the part-time residential homes will use rates from the "Recreational Home" (ITE Code 260) land use.

In addition to the residential offerings, the development is proposing approximately 135,000 SF of operational support buildings, which include:

- Restaurant, Clubhouse, Kitchen, Locker Rooms, Fitness, Back of House (48,000 SF),
- Golf Maintenance, Staff Center, Golf Operations, Receiving Area (63,000 SF), and
- Arrival Hale, Farm Operations, Restrooms (24,000 SF).

Of these operational support buildings, the buildings totaling 48,000 SF are expected to generate additional trips while the buildings totaling 63,000 SF and 24,000 SF were assumed to be ancillary and are not expected to generate new vehicle trips from outside the development. The "Health/Fitness Club" (ITE Code 492) description provided from the *ITE Trip Generation Manual* states: "A health/fitness club is a privately-owned facility that primarily focuses on individual fitness or training. It typically provides exercise classes, fitness equipment, a weight room, spa, lockers rooms, and a small restaurant or snack bar." This description matches the intended use of the buildings totaling 48,000 SF and therefore project generated trips for these will use rates from the "Health/Fitness Club" (ITE Code 492) land use. The operational buildings were assumed to be completed by 2038.

Table 19: Project Related Land Use

ITE Code	Variable	AM Peak Hour of Adjacent Street			PM Peak Hour of Adjacent Street		
		Equation	% In	% Out	Equation	% In	% Out
Single-Family Detached (210)	Dwelling Units	Ln(T) = 0.91 Ln(X) + 0.12	25	75	Ln(T) = 0.94 Ln(X) + 0.27	63	37
Multi-Family Low-Rise (220)	Dwelling Units	T = 0.31(X) + 22.85	24	76	T = 0.43(X) + 20.55	63	37
Affordable Housing (223)	Dwelling Units	Ln(T) = 0.81 Ln(X) + 0.22	29	71	Ln(T) = 0.72 Ln(X) + 0.64	59	41
Recreational Homes (260)	Dwelling Units	Ln(T) = 1.00 Ln(X) - 1.53	55	45	Ln(T) = 0.93 Ln(X) - 0.76	46	54
Health/Fitness Club (492)	1,000 SF GFA	T = 1.31(X)	51	49	Ln(T) = 0.67 Ln(X) + 2.44	57	43

Resulting project related trips for each phase and total are shown in Table 20.

Table 20: Project Related Generated Trips

Year	Land Use	Units	AM Peak Hour of Adjacent Street (7 - 9 AM)			PM Peak Hour of Adjacent Street (4 - 6 PM)		
			In	Out	Total	In	Out	Total
2038	Single-Family (10% of SF)	6 Units	1	5	6	4	3	7
	Recreational Homes (90% of SF)	54 Units	6	6	12	9	10	19

	Recreational Homes (90% of MF)	109 Units	13	11	24	17	20	37
	Affordable Housing (Multi-Family)	109 Units	16	40	56	33	23	56
	Health/Fitness Club	48,000 SF	32	31	63	87	67	154
2038 Total Project Generated Trips			74	114	188	166	133	299
2048	Single-Family (10% of SF)	6 Units	1	5	6	4	3	7
	Recreational Homes (90% of SF)	54 Units	6	6	12	9	10	19
	Multi-Family (10% of MF)	12 Units	6	21	27	16	10	26
	Recreational Homes (90% of MF)	109 Units	13	11	24	17	20	37
2048 Total Project Generated Trips			26	43	69	46	43	89
2058	Single-Family (10% of SF)	6 Units	1	5	6	4	3	7
	Recreational Homes (90% of SF)	54 Units	6	6	12	9	10	19
	Multi-Family (10% of MF)	12 Units	6	21	27	16	10	26
	Recreational Homes (90% of MF)	109 Units	13	11	24	17	20	37
2058 Total Project Generated Trips			26	43	69	46	43	89
Mākena Mauka Project Generated Trips Full Buildout			126	200	326	258	219	477

Trip reduction associated with pass-by or diverted trips was not included in this analysis so as to assume the worst-case scenario from an external vehicle trip generation standpoint. A supplemental Transportation Management Plan (TMP) is being prepared to determine appropriate transportation demand management (TDM) strategies to help reduce vehicle traffic through alternate forms of transportation.

2. Trip Distribution

The project-related trips were distributed at Wailea Ika Drive and Wailea Alanui Drive using existing traffic patterns. At all other study intersections, project related trips were not distributed, and instead added to the main line volume. The trip distribution is in line with other traffic reports in the area.

3. Modal Choice

Without additional connectivity and access, the resulting number of users likely to travel to Mākena Mauka by foot, bike, or transit is relatively small and thus no factor was applied to the resulting volumes. Therefore, all external project generated trips are assumed to be vehicle trips.

4. Trip Assignment

Total project related vehicular trips for years 2038, 2048 and 2058 are shown in Figures 13-14, 15-16, and 17-18, respectively.

5. Future With Project Volumes

External project related vehicular volumes were added to the Future Without Project traffic volumes which resulted in the Future (2038), (2048) and (2058) With Project traffic volumes shown in Figures 19-20, 21-22, and 23-24, respectively.

D. Future (2038) With Project LOS

Future (2038) With Project intersection LOS, v/c ratio and delay were determined for the AM and PM peak hours (see Table 21 and 22). Intersections and individual movements that operate at LOS E or worse are highlighted in yellow. Future (2038) With Project Synchro worksheets can be found in Appendix F.

1. Pi‘ilani Highway at Kilohana Drive/Mapu Drive

Pi‘ilani Highway at Kilohana Drive/Mapu Drive is projected to operate at LOS A and LOS B during the AM and PM peak hours, respectively. All movements operate at LOS D or better. No improvements are needed or recommended at this intersection.

2. Pi‘ilani Highway at Okolani Drive/Mikioi Place

This intersection operates at LOS A during the AM and PM peak hours. All movements operate at LOS C or better. No improvements are needed or recommended at this intersection.

3. Pi'ilani Highway at Wailea Ike Drive

This intersection operates at LOS B and LOS C during the AM and PM peak hours, respectively. All movements operate at LOS D or better. No improvements are needed or recommended at this intersection.

4. Wailea Alanui Drive at Okolani Drive

The intersection and all movements will operate at LOS A during both peak hours. No improvements are needed or recommended at this intersection.

5. Wailea Alanui Drive at Wailea Ike Drive

This intersection will operate at LOS C during the AM and PM peak hours. All movements operate at LOS D or better. No improvements are needed or recommended at this intersection.

6. Wailea Alanui Drive/Makena Alanui Drive at Kaukahi Street

This intersection will operate at LOS A during the AM and PM peak hours. All movements operate at LOS B or better. No improvements are needed or recommended at this intersection.

7. Makena Alanui Drive at Wailea Golf Course Drive

The westbound left turn operates at LOS E (v/c of 0.04) during the PM peak hour. The westbound left turn volume is 3 vph. The volume on the minor street approach is too low to satisfy an AWSC or traffic signal vehicle warrant. The v/c is not a critical level (above 0.85) that will require mitigation. It is recommended this intersection remain a TWSC intersection.

8. Makena Alanui Drive at Makena Road (North)

All movements operate at LOS C or better for both peak hours.

9. Makena Alanui Drive at Makena Road (South)

The Mākena Road (South) eastbound approach will operate at LOS E (v/c of 0.52) during the PM peak hour. The eastbound approach volume is 88 vph during the PM peak hour. This intersection will not pass an 8-Hour or 4-Hour traffic signal warrant and will not pass an AWSC warrant. The v/c is not a critical level (above 0.85) that will require mitigation. No improvements are needed or recommended at this intersection.

9.5 Makena Alanui Drive at Future North Access

All movements operate at LOS B or better for both peak hours.

10. Makena Alanui Drive at Honoiki Street

All movements operate at LOS C or better for both peak hours.

11. Makena Alanui Drive at Mākena Golf Course Driveway

All movements operate at LOS B or better for both peak hours.

12. Makena Alanui Drive at Mākena Tennis Club Driveway

All movements operate at LOS B or better for both peak hours.

13. Makena Alanui Drive at Makena Keonoio Road

All movements operate at LOS B or better for both peak hours.

E. Future (2038) With Project Recommendation

Traffic signal operations should be monitored and updated as needed. A comparison of the intersection overall delay between the Future (2038) Without and With Project conditions are shown in Table 23. Most of the intersections experience slightly higher delay, except at Wailea Alanui Drive and Okolani Drive, which was analyzed as a single lane roundabout in the Future (2038) With Project condition. The overall delay at most intersections will increase but will still operate at an acceptable LOS.

Table 23: Future (2038) Without and With Project Comparison

Future With Project LOS and delay shown with recommended mitigation

It should be noted that the traffic volumes and intersection control at intersections #10-#13 are the same for the without project and with project condition, and therefore will have the same delay.

F. Future (2048) With Project LOS

Future (2048) With Project intersection LOS, v/c ratio and delay were determined for the AM and PM peak hours (see Table 24 and 25). Intersections and individual movements that operate at LOS E or worse are highlighted in yellow. Future (2048) With Project Synchro worksheets can be found in Appendix F.

1. Pi‘ilani Highway at Kilohana Drive/Mapu Drive

Pi‘ilani Highway at Kilohana Drive/Mapu Drive is projected to operate at LOS B and LOS C during the AM and PM peak hours, respectively. The southbound left turn is projected to operate at LOS F (v/c of 0.88) during the PM peak hour. The southbound left turn volume is 111 vph, or approximately two (2) vehicles per minute. The long delay is due to the southbound left turns having a relatively short split in comparison to the overall cycle length. The southbound left turn movement experiences long wait times between cycles but is expected to clear the intersection every cycle, similar to the existing condition. No improvements are needed or recommended at this intersection.

2. Pi‘ilani Highway at Okolani Drive/Mikioi Place

This intersection operates at LOS B during the AM and PM peak hours. All movements operate at LOS C or better. No improvements are needed or recommended at this intersection.

3. Pi'ilani Highway at Wailea Ike Drive

This intersection operates at LOS B and LOS D during the AM and PM peak hours, respectively. The southbound left is projected to operate at LOS E (v/c of 0.92). The southbound left turn volume 391 vphduring the PM peak hour. This intersection is being analyzed with split phasing. Typically, intersections with split phasing have less effective green time for each approach phase. The signal timing can be adjusted to allow for the southbound dual left turn to clear the intersection very cycle. No improvements are needed or recommended at this intersection.

4. Wailea Alanui Drive at Okolani Drive

This intersection operates at LOS A and LOS B during the AM and PM peak hours, respectively. All movements operate at LOS B or better. No improvements are needed or recommended at this intersection.

5. Wailea Alanui Drive at Wailea Ike Drive

This intersection will operate at LOS C and LOS D during the AM and PM peak hours, respectively. The southbound left turn is projected to operate at LOS E (v/c of 0.90) during the PM peak hour. The southbound left turn volume is 249 vph during the PM peak hour. The northbound through movement operates at LOS C, which suggests that some green time can be allocated from the northbound through to the southbound left turn. Signal timing should be adjusted as needed. All other movements operate at LOS D or better. No improvements are needed or recommended at this intersection.

6. Wailea Alanui Drive/Makena Alanui Drive at Kaukahi Street

This intersection will operate at LOS A during the AM and PM peak hours. All movements operate at LOS B or better. No improvements are needed or recommended at this intersection.

7. Makena Alanui Drive at Wailea Golf Course Drive

The Wailea Golf Course Drive westbound left turn will operate at LOS F (v/c of 0.10) during the PM peak hour. The westbound left turn volume is 5 vph during the PM peak hour. The volume on the minor street approach is too low to satisfy an AWSC or traffic signal vehicle warrant. All other movements operate at LOS C or better. The v/c is not a critical level (above 0.85) that will require mitigation. It is recommended this intersection remain a TWSC intersection.

8. Makena Alanui Drive at Makena Road (North)

All movements operate at LOS D or better for both peak hours.

9. Makena Alanui Drive at Makena Road (South)

The Makena Road (South) eastbound approach will operate at LOS F (v/c of 0.96) during the PM peak hour. The eastbound approach volume is 103 vph during the PM peak hour.

The Future (2048) With Project traffic volumes will not support a minor approach volume that can satisfy any traffic signal vehicle warrant or AWSC warrant. Two alternatives were analyzed including a dedicated left turn lane from Makena Alanui Drive with a refuge lane for eastbound vehicles turning onto Makena Alanui Drive, and as a single lane roundabout (or traffic circle) (see Table 26). All movements will operate at LOS D or better for both alternatives. Dedicated turn lanes are a cheaper alternative that can be installed quicker than a single lane roundabout and therefore, it is recommended that turn lanes be provided at Makena Road (South).

Table 26: Future (2048) With Project Mitigation at Makena Alanui Dr & Makena Rd (South)

Turn Lanes to/from Makena Alanui Drive	AM Peak			PM Peak		
	LOS	Delay	v/c	LOS	Delay	v/c
9 - Makena Alanui Dr & Makena Rd (South)	**-**	**1.1**	**-**	**-**	**2.0**	**-**

Makena Rd (South) EB Approach	A	5.2	0.07	A	8.2	0.20

9.5 Makena Alanui Drive at Future North Access

All movements operate at LOS C or better for both peak hours.

10. Makena Alanui Drive at Honoiki Street

The Honoiki Street eastbound approach will operate at LOS E (v/c of 0.52) during the PM peak hour. The eastbound approach volume is 91 vph during the PM peak hour. The volume on the minor street approach is too low to satisfy any traffic signal vehicle warrant or AWSC warrant. The v/c is not a critical level (above 0.85) that will require mitigation. No improvements are needed or recommended at this intersection.

11. Makena Alanui Drive at Mākena Golf Course Driveway

All movements operate at LOS C or better for both peak hours.

12. Makena Alanui Drive at Mākena Tennis Club Driveway

All movements operate at LOS B or better for both peak hours.

13. Makena Alanui Drive at Makena Keonoio Road

All movements operate at LOS C or better for both peak hours.

G. Future (2048) With Project Recommendation

It is recommended that a dedicated left turn lane from Makena Alanui Drive to Makena Road (south) and a refuge lane for the Makena Road (South) eastbound left turn onto Makena Alanui Drive be installed when needed. This configuration will be reflected in all Future (2058) With Project conditions. Traffic signal operations should be monitored and updated as needed.

A comparison of the intersection overall delay between the Future (2048) Without and With Project conditions are shown in Table 27. The overall delay at most intersections will increase but will still operate at an acceptable LOS.

Table 27: Future (2048) Without and With Project Comparison

Future With Project LOS and delay shown with recommended mitigation

It should be noted that the traffic volumes and intersection control at intersection #13 is the same for the without project and with project condition, and therefore will have the same delay.

H. Future (2058) With Project LOS

Future (2058) With Project intersection LOS, v/c ratio and delay were determined for the AM and PM peak hours (see Table 28 and 29). Intersections and individual movements that operate at LOS E or worse are highlighted in yellow. Future (2058) With Project Synchro worksheets can be found in Appendix F.

1. Pi‘ilani Highway at Kilohana Drive/Mapu Drive

Pi‘ilani Highway at Kilohana Drive/Mapu Drive is projected to operate at LOS B and LOS C during the AM and PM peak hours, respectively. The southbound left turn is projected to operate at LOS F (v/c of 0.88) during the PM peak hour. The southbound left turn volume is 111 vph, or approximately two (2) vehicles per minute. This movement is expected to clear the intersection every cycle. No improvements are needed or recommended at this intersection.

2. Pi‘ilani Highway at Okolani Drive/Mikioi Place

This intersection operates at LOS B during the AM and PM peak hours. All movements operate at LOS C or better. No improvements are needed or recommended at this intersection.

3. Pi‘ilani Highway at Wailea Ike Drive

Pi‘ilani Highway at Wailea Ike Drive is projected to operate at LOS B and LOS D during the AM and PM peak hours, respectively. The northbound left and southbound left is projected to operate at LOS E (v/c of 0.56 and 0.88, respectively) during the PM peak hour. The northbound and southbound left turn has a volume of 21 vph and 391, respectively. The northbound queue is expected to clear every cycle. The southbound dual left turn should be monitored, and the traffic signal timing should be adjusted as needed.

4. Wailea Alanui Drive at Okolani Drive

This intersection operates at LOS A and LOS B during the AM and PM peak hours, respectively. All movements operate at LOS B or better. No improvements are needed or recommended at this intersection.

5. Wailea Alanui Drive at Wailea Ike Drive

This intersection will operate at LOS C and LOS D during the AM and PM peak hours. The southbound left turn is projected to operate at LOS E (v/c of 0.90) during the PM peak hour. The southbound left turn volume is 249 vph during the PM peak hour. The northbound through movement operates at LOS C, which suggests that some green time can be allocated from the northbound through to the southbound left turn. Signal timing should be adjusted as needed. All other movements operate at LOS D or better. No improvements are needed or recommended at this intersection.

6. Wailea Alanui Drive/Makena Alanui Drive at Kaukahi Street

This intersection will operate at LOS A and LOS B during the AM and PM peak hours, respectively. All movements operate at LOS B or better. No improvements are needed or recommended at this intersection.

7. Makena Alanui Drive at Wailea Golf Course Drive

The Wailea Golf Course Drive westbound left turn will operate at LOS F (v/c of 0.15) during the PM peak hour. The westbound left turn volume is 5 vph during the PM peak hour. The volume on the minor street approach is too low to satisfy any traffic signal vehicle warrant. The v/c is not a critical level (above 0.85) that will require mitigation. It is recommended this intersection remain a TWSC intersection.

8. Makena Alanui Drive at Makena Road (North)

All movements operate at LOS D or better for both peak hours.

9. Makena Alanui Drive at Makena Road (South)

All movements operate at LOS D or better for both peak hours.

9.5 Makena Alanui Drive at Future North Access

All movements operate at LOS C or better for both peak hours.

10. Makena Alanui Drive at Honoiki Street

The Honoiki Street eastbound approach will operate at LOS F (v/c of 0.64) during the PM peak hour. The eastbound approach volume is 91 vph during the PM peak hour.

The Future (2058) With Project traffic volumes will not support a minor approach volume that can satisfy any traffic signal vehicle warrant or AWSC warrant. Two alternatives were analyzed including a dedicated left turn lane from Makena Alanui Drive with a refuge lane for eastbound vehicles turning onto Makena Alanui Drive, and as a single lane roundabout (see Table 30). All movements will operate at LOS D or better for both alternatives. Dedicated turn lanes are a cheaper alternative that can be installed quicker than a single lane roundabout and therefore it is recommended that turn lanes be provided at Honoiki Street.

Table 30: Future (2058) With Project Mitigation at Makena Alanui Dr & Honoiki St

Turn Lanes to/from Makena Alanui Drive	AM Peak			PM Peak		
	LOS	Delay	v/c	LOS	Delay	v/c

Honoiki EB Approach	A	5.0	0.06	A	6.2	0.14

11. Makena Alanui Drive at Mākena Golf Course Driveway

All movements operate at LOS C or better for both peak hours.

12. Makena Alanui Drive at Mākena Tennis Club Driveway

All movements operate at LOS B or better for both peak hours.

13. Makena Alanui Drive at Makena Keonoio Road

All movements operate at LOS C or better for both peak hours.

14. Makena Alanui Drive at Future South Access

All movements operate at LOS B or better for both peak hours.

I. Future (2058) With Project Recommendation

It is recommended that a dedicated left turn lane from Makena Alanui Drive to Honoiki Street and a refuge lane for the Honoiki Street eastbound left turn onto Makena Alanui Drive be installed when needed. Traffic signal operations should be monitored and updated as needed.

A comparison of the intersection overall delay between the Future (2058) Without and With Project conditions are shown in Table 31. The overall delay at most intersections will increase but will still operate at an acceptable LOS.

Table 31: Future (2058) Without and With Project Comparison

Future With Project LOS and delay shown with recommended mitigation

V. SUMMARY

Mākena Mauka is a proposed low-density master planned residential community within the Makena area of South Maui with full occupancy expected by 2058. The applicant's current vision for the Mākena Mauka land plan includes 652 housing units, including 109 onsite residential workforce housing units, 180 single-family market-value units, 363 multi-family market-value units, and approximately 135,000 SF of operational support buildings, which include golf maintenance, staff offices, restaurants, back of house, golf operations and other uses; within the approximately 1,043-acre total project area which includes approximately 473 acres of parcels proposed for residential development. The workforce housing is expected to be completed within the first 10 years of construction, with the remaining single-family homes and multi-family homes being constructed in equal amounts over three 10-year periods (10, 20, and 30 years into the future), aligning with years 2038, 2048, and 2058. Future internal bicycle and pedestrian facilities are still being designed with the goal to connect to the existing bike lanes and sidewalk on the makai side of Makena Alanui Drive. Access to the project area will be provided from Makena Alanui Road with an internal roadway network connecting to the individual communities within the project. Plans for a secondary access are also being planned but have not yet been finalized. This TIAR evaluated existing conditions and assessed impacts in the surrounding areas as a result of the proposed development for scenarios 10, 20, and 30-years into the future after construction (2038, 2048, and 2058). Future year conditions were evaluated with and without the project.

The following improvements are anticipated to be completed by others to improve traffic operations at the study intersections prior to the construction of Mākena Mauka, and were therefore included in the Future Without Project conditions:

- Widen Pi‘ilani Highway
    - Widen Pi‘ilani Highway from two lanes to four lanes from Kilohana Drive to Wailea Ike Drive, including improvements to Kilohana Drive and Wailea Ike Drive. This is part of *Exhibit "B"* in the Honua‘ula master plan. As one of the conditions mentioned in *Exhibit "B"*, the Honua‘ula development is responsible for the widening of Pi‘ilani Highway and improvements to Kilohana Drive and Wailea Ike Drive. This is expected to be completed by HDOT with the surrounding developments contributing through fair share agreements.
        - Mākena Mauka is responsible for a financial contribution to this project pursuant to the 2008 CIZ conditions of approval.
- Wailea Alanui Drive at Wailea Ike Drive (Study Intersection #3)
    - Add a second northbound right turn lane and a second westbound left turn lane at Wailea Alanui Drive and Wailea Ike Drive. As one of the conditions mentioned in *Exhibit "B"*, the Honua‘ula development is responsible for this improvement. This improvement is expected to be completed with the start of the Honua‘ula construction.
- Wailea Alanui Drive/Makena Alanui Drive at Kaukahi Street (Study Intersection #6)
    - Signalize Wailea Alanui Drive/Makena Alanui Drive at Kaukahi Street. As one of the conditions mentioned in *Exhibit "B"*, the Honua‘ula development is responsible for the signalization of Wailea Alanui Drive at Kaukahi Street when warranted. This improvement is expected to be completed with the start of the Honua‘ula construction.
- Wailea Alanui Drive at Okolani Drive (Study Intersection #4)

  - This intersection has been identified in the *2025 Ledcor Wailea Resort Final EIS* as an intersection that should consider a single lane roundabout or other stop control modifications. The intersection should be monitored to determine if a traffic signal, roundabout, or stop modifications are warranted.
- Adjust the signal timing and phases at various intersections as needed.

The following Future With Project intersection improvements are recommended to be considered with this project to improve traffic conditions in advance of the future year they were analyzed for:

- Makena Alanui Drive at Makena Road (South) (Study Intersection #9)
  - A refuge lane for the eastbound left turn from Makena Road (South) onto Makena Alanui Drive is recommended in Future (2048) With Project.
- Makena Alanui Drive at Honoiki Street (Study Intersection #10)
  - A refuge lane for the eastbound left turn from Honoiki Street onto Makena Alanui Drive is recommended in Future (2058) With Project.
- Adjust the signal timing and phases at various intersections as needed.

Missing sidewalk segments on Makena Alanui Drive just south of Makena Road (south) are recommended to be installed and connect to the existing sidewalk facilities.

A summary of the improvements at the study intersections are shown in Figure 25.

ALL ROUTES ARE **$2** PER BOARDING | All times in **BOLD** are **PM**

BUS RULES

For your safety and the safety of others:

- Please be at the bus stop at least five (5) minutes prior to the departure time. Wait on the proper side of the road for the bus to arrive at the bus stop sign. Wait for the bus to make a complete stop before approaching the bus.
- Please enter the bus with exact fare or have your pass visible.
- Infants under 2 years old, traveling free must ride on the lap of an accompanying adult.
- Please allow senior citizens the use of front seating.
- Please be alert at all times for sudden or quick stops.
- When standing, please move to the rear of the bus and always hold on to the standee handbars or seatbars.
- Please do not change your seats after the bus starts moving and please fasten your seatbelts.
- Shirt and footwear are required.
- Pets must be in an enclosed carrier or cage. Service animals are allowed on the bus.
- Anyone who believes that he or she has been discriminated against on the basis of race, color or national origin, while using the Maui Bus or its paratransit services may file a Title VI complaint with the County of Maui Department of Transportation.

BAGGAGE RULES

All baggage and personal items must be stored under a passenger's seat or on the passenger's lap, and will not protrude to another seat or interfere with other passengers. Baggage that will not be admitted on board shall include any oversized, dangerous or offensive article that may cause harm or discomfort to any passenger. All items must be free of sand and debris. No baggage may be stored in the aisle or on another seat.

- One (1) Medium-sized suitcase, dufflebag, backpack, carry-on bag, metal-framed child carriers, small metal caddy on wheels, collapsible baby stroller, band instrument, skateboard, soft body board without skegs, beach chair, pet carrier or cage, small cooler, or container with no sharp edges holding a maximum of three (3) golf clubs or detachable fishing poles is allowed.
- Grocery and reusable bags that a passenger can carry in their arms are allowed. Bags filled with bottle and can recyclables are not allowed.

BICYCLE RULES

- All buses are equipped with a bicycle rack that can hold a maximum of two (2) bicycles. Both tires must sit flat to the base of the rack.
- Only two-wheeled, non-motorized bicycles are permitted. No gas or electric powered bicycles are allowed.
- Bicycles with an oversized basket or other type of carrier that obstructs the view of the driver is not permitted.

PROHIBITED

- Surfboards and skimboards.
- Eating, drinking, smoking, e-cigarettes or loud music.
- Flammable, explosive or toxic material.
- Weapons and dangerous instruments.
- Littering on the bus.
- Obstructing or interfering with the bus driver.

FARES

Please deposit the exact fare or present your bus pass to the driver when boarding the bus. Daily and monthly bus passes are also available.

BUS SCHEDULE

EFFECTIVE JULY 2019

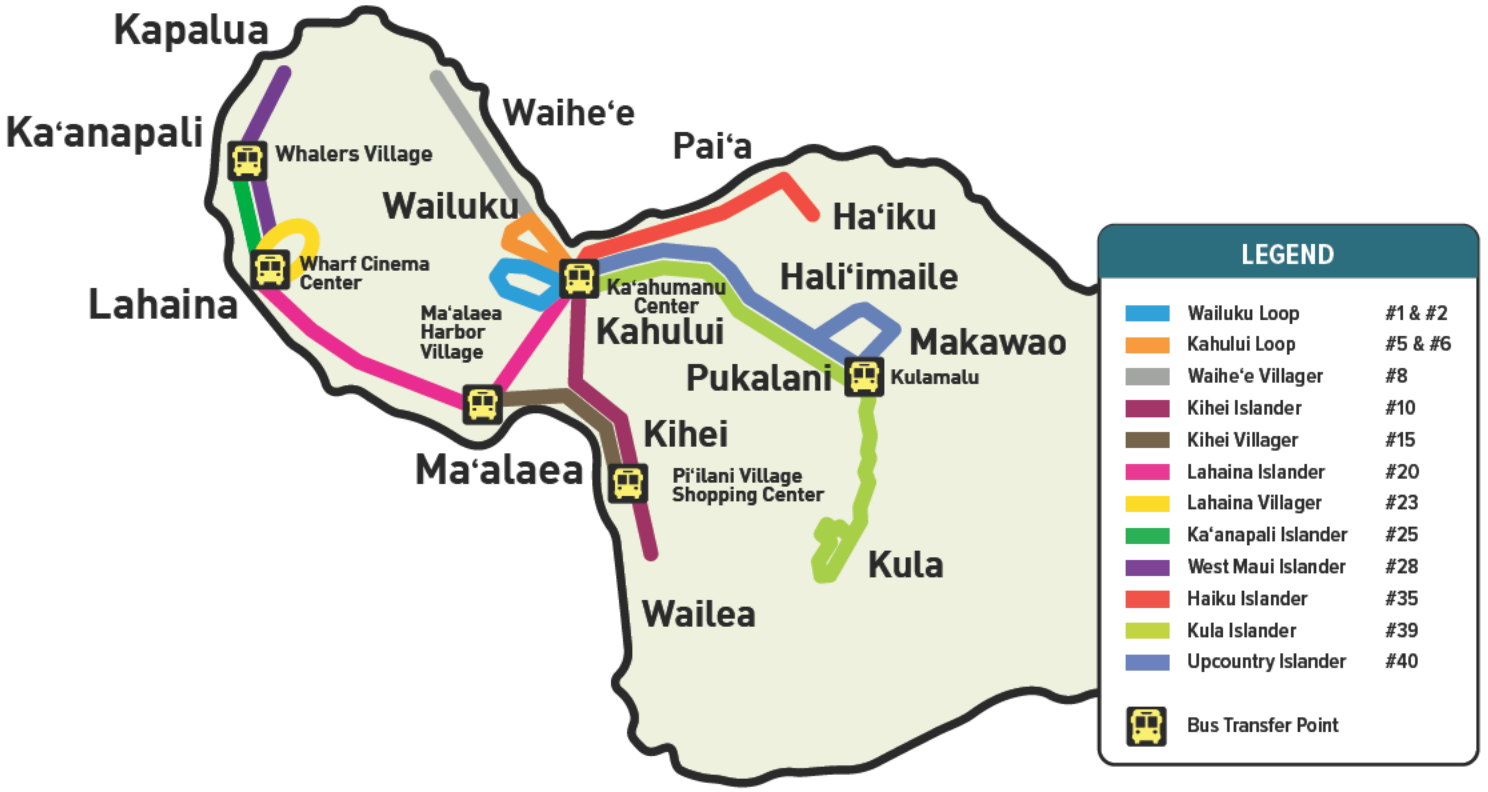
All vehicles are ADA accessible and are equipped with two bicycle racks

maui bus

County of Maui
Department of Transportation
Operated by
Roberts Hawaii

GENERAL INFORMATION

The Maui Bus public transit service consists of 14 bus routes, all operated by Roberts Hawaii. These routes are funded by the County of Maui and provide service in and between various Central, South, West, Haiku, Kula, and U pcountry Maui communities. All of the routes are operated seven days a week, including holidays.



No transfer tickets are given on any of the routes.

FARES

All routes cost $2.00 per boarding. Infants under 2 years old, riding on the lap of an accompanying adult travel free. Daily and monthly passes are also available.

DUE TO SPACE LIMITATIONS, NOT ALL STOPS ARE LISTED ON THE SCHEDULE.

Please refer to the county of Maui website at mauicounty.gov/bus to view route maps.

Appendix C
Honua‘ula Exhibit “B”

HONUAULA 30
CONDITIONS

EXHIBIT "2"

Conditions of Zoning

1. That Honua`ula Partners, LLC, its successors and permitted assigns, shall, at their own cost and expense, develop, maintain, and operate, or cause to be developed, maintained, and operated, a private water source, storage facilities, and transmission lines for the Wailea 670 project in accordance with Department of Water Supply standards and all applicable community plans. Honua`ula Partners, LLC, its successors and permitted assigns, shall comply with all reporting requirements of the State Commission on Water Resource Management.

   In addition, Honua`ula Partners, LLC, its successors and permitted assigns, shall comply with applicable water ordinances that pertain to the supply and transmission of water from the island of Maui when such ordinances are enacted.

   At the time the project water system is completed, Honua`ula Partners, LLC, its successors and permitted assigns, shall offer to the County the right to purchase the project water system at the cost of development of such system.

   The water rates for the residential workforce housing units shall be no higher than the general water consumer rates set by the County in its annual budget, for as long as the units are subject to Chapter 2.96, Maui County Code.

2. That Honua`ula Partners, LLC, its successors and permitted assigns, shall implement the following traffic improvements:

   a. Upgrade Piilani Highway, from Kilohana Drive to Wailea Ike Drive, to four lanes of traffic. The improvements shall be completed prior to the commencement of any construction on the site, with the exception of grading.

   b. Extend Piilani Highway for two lanes of traffic from Wailea Ike Drive to Kaukahi Street. The improvement shall be constructed at or prior to the completion of 50 percent of the project. Said improvement shall be maintained by Honua`ula Partners, LLC, its successors and permitted assigns.

   c. Signalize the Piilani Highway/Okolani Drive/Mikioi Place intersection and provide an exclusive left-turn lane on Okolani Drive prior to occupancy of the first unit in Kihei-Makena Project District 9.

   d. Modify the Piilani Highway/Wailea Ike Drive intersection into a signalized intersection and provide a free right-turn lane from Piilani Highway to Wailea Ike Drive and a second right-turn lane from

Wailea Ike Drive to northbound Piilani Highway prior to occupancy of the first unit in Kihei-Makena Project District 9.

e. Modify the Wailea Alanui/Wailea Ike Drive intersection to add a signalized double right-turn movement from northbound to eastbound turning traffic and provide two left-turn lanes for southbound traffic from Wailea Ike Drive prior to occupancy of the first unit in Kihei-Makena Project District 9.

f. Modify the Piilani Highway/Kilohana Drive/Mapu Place intersection to provide an exclusive left-turn lane, and the southbound Piilani Highway approach to provide an exclusive right-turn lane into Mapu Place prior to occupancy of the first unit in Kihei-Makena Project District 9.

g. Signalize the Wailea Ike Drive/Kalai Waa Street intersection in coordination with Wailea Resort and Makena Resort when warranted.

h. Signalize the Wailea Alanui/Kaukahi Drive/Kaukahi Street intersection in coordination with Wailea Resort and Makena Resort when warranted.

3. That, as represented, Honua`ula Partners, LLC, its successors and permitted assigns, shall make a contribution to the County for traffic improvements in an amount equal to $5,000 per unit. The contribution shall be paid to the County prior to issuance of a building permit. Upon adoption of a traffic impact fee ordinance, Honua`ula Partners, LLC, its successors and permitted assigns, shall comply with the ordinance in lieu of this voluntary contribution. Should a traffic impact fee ordinance be adopted prior to the collection of this contribution, the applicable amount shall be the greater of the two. Such contributions or fees shall not be a substitute for any other traffic infrastructure requirements related to the Change in Zoning.

4. That Honua`ula Partners, LLC, its successors and permitted assigns, shall be responsible for all required infrastructural improvements for the project, including water source and system improvements for potable and nonpotable use and fire protection, drainage improvements, traffic-related improvements, wastewater system improvements and utility upgrades, as determined by the appropriate governmental agencies and public utility companies. Except as otherwise provided by more specific conditions of zoning, said improvements shall be constructed and implemented concurrently with the development of each phase of Kihei-Makena Project District 9, and shall be completed prior to issuance of any certificate of occupancy or final subdivision approval, unless improvements are bonded by Honua`ula Partners, LLC, its successors and permitted assigns. Honua`ula Partners, LLC shall execute appropriate agreements with governmental agencies regarding participation in improvements of infrastructure and public facilities as determined by the agencies.

5. That Honua`ula Partners, LLC, its successors and permitted assigns, shall provide workforce housing in accordance with Chapter 2.96, Maui County Code (the "Residential Workforce Housing Policy"); provided that, 250 of the required workforce housing units shall be located at the Kaonoulu Light Industrial Subdivision and completed prior to any market-rate unit, that 125 of those workforce housing units shall be ownership units, and that 125 of those units shall be rental units. In addition, construction of those workforce housing units shall be commenced within two years, provided all necessary permits can be obtained within that timeframe. Honua`ula Partners, LLC, its successors and permitted assigns, shall provide a minimum two-acre park at the Kaonoulu Light Industrial Subdivision, which shall be credited toward the requirements of Section 18.16.320, Maui County Code, for that subdivision.

6. That a Drainage Master Plan and Phasing Plan of improvements shall be submitted for review and approval during Project District Phase II processing. Said plan shall include the recommended drainage improvements as represented in the Preliminary Drainage Report. The County may require periodic updates of the Drainage Master Plan and Phasing Plan.

7. That Honua`ula Partners, LLC, its successors and permitted assigns, shall prepare an animal management plan that shall be submitted during Project District Phase II processing and approved by the Department of Land and Natural Resources prior to submittal of Project District Phase III processing. Said plan shall include procedures for the management of animal intrusions including, but not limited to, construction of boundary or perimeter fencing, wildlife control permits, and rodent and feral cat control. Honua`ula Partners, LLC, its successors and permitted assigns, shall implement the approved animal management plan. The Department of Land and Natural Resources may require periodic updates of the plan.

8. That Honua`ula Partners, LLC, its successors and permitted assigns, shall inform owners within Kihei-Makena Project District 9 that the area is subject to the intrusion of mammals such as axis deer, pigs, and rodents, and the impacts and management plan associated with such intrusions.

9. That Honua`ula Partners, LLC, its successors and permitted assigns, shall prepare an assessment of the owl (Pueo or Hawaiian Short-eared Owl) and the Hawaiian Hoary Bat in coordination with the Department of Land and Natural Resources, and, if appropriate, mitigative measures shall be incorporated into Kihei-Makena Project District 9. Said assessment shall be prepared prior to submittal of Project District Phase II processing.

10. That, in lieu of the dedication of a Little League Field and related amenities as originally specified in Ordinance No. 2171 (1992), Exhibit "B", Condition No. 8, and based on current land and construction cost estimates for the Little League Field, not less than $5,000,000 shall be paid to the County upon Project District

Phase II approval for the development of the South Maui Community Park. Said amount shall not be credited against future park assessments.

11. That Honua`ula Partners, LLC is proposing to develop 6 acres of private parks and 84 acres of open space within the development. Said private parks shall be open to the public and privately maintained. Furthermore, said private parks and open space shall not be used to satisfy the park assessment requirements under Section 18.16.320, Maui County Code, or for future credits under said subdivision ordinance. The Director of Parks and Recreation and Honua`ula Partners, LLC agree that the park assessment shall be satisfied with an in-lieu cash contribution for the entire project. The amounts and timing of payment of said in-lieu fees shall be subject to the provisions of Section 18.16.320, Maui County Code.

12. That, as represented by Honua`ula Partners, LLC, the golf course shall be subject to the following conditions:

    a. Honua`ula Partners, LLC, its successors and permitted assigns, shall permit one nonprofit organization per quarter of the calendar year, other than Maui Junior Golf Association ("Maui Junior Golf"), the use of the golf course and the clubhouse for a fund-raising activity upon terms mutually agreed upon with said nonprofit organization.

    b. Honua`ula Partners, LLC, its successors and permitted assigns, shall: (1) develop an organized instructional program for junior golfers at its facility from September to January each year; (2) permit Maui Junior Golf the use of the golf course in accordance with Honua`ula Partners, LLC's instructional program; and (3) sponsor one Maui Junior Golf fund-raising tournament per year. The terms of the Junior Golf Program by Honua`ula Partners, LLC shall be as follows:

        The instructional program will be developed to teach youngsters ages 12 to 18 years of age the fundamentals of golf and how to play the game, while also providing quality instruction/training three days a week from September 1 through January 31, with some blackout dates. This program will support the overall efforts of Maui Junior Golf.

        Private lessons will also be available at a discounted rate of 50 percent of the regular rate based on two lessons per junior golfer for a maximum of 50 lessons per month from February through August on a space-available basis.

        For the annual fund-raising event for the Maui Junior Golf, the rate per player shall be 50 percent of the regular rate with the number of golfers limited to no more than 144 players per event.

c. Honua`ula Partners, LLC, its successors and permitted assigns, shall permit the Maui Interscholastic League ("MIL") and the Hawaii High School Athletic Association ("HHSAA") to each use the golf course once per year for an official MIL golf tournament or an official HHSAA golf tournament if requested by the MIL or the HHSAA, or for regular season play-offs if requested by the MIL.

d. Honua`ula Partners, LLC, its successors and permitted assigns, shall permit Maui residents to play at the golf course on Tuesday of each week. The charge for Maui residents for green fees, including golf cart rental fees, shall not exceed 40 percent of the average market rate for green fees and golf cart rental fees in South Maui, and shall exclude all membership fees.

13. That Honua`ula Partners, LLC, its successors and permitted assigns, shall prepare a Cultural Resources Preservation Plan ("CRPP"), in consultation with: Na Kupuna O Maui; lineal descendents of the area; other Native Hawaiian groups; the Maui County Cultural Resources Commission; the Maui/Lanai Island Burial Council; the Office of Hawaiian Affairs; the State Historic Preservation Division, Department of Land and Natural Resources; the Maui County Council; Na Ala Hele; and all other interested parties. Prior to initiating this consultation process, Honua`ula Partners, LLC, its successors and permitted assigns, shall publish a single public notice in a Maui newspaper and a State-wide newspaper that are published weekly. The CRPP shall consider access to specific sites to be preserved, the manner and method of preservation of sites, the appropriate protocol for visitation to cultural sites, and recognition of public access in accordance with the Constitution of the State of Hawaii, the Hawaii Revised Statutes, and other laws, in Kihei-Makena Project District 9.

Upon completion of the CRPP, Honua`ula Partners, LLC, its successors and permitted assigns, shall submit the plan to the State Historic Preservation Division, Department of Land and Natural Resources, and the Office of Hawaiian Affairs for review and recommendations prior to Project District Phase II approval. Upon receipt of the above agencies' comments and recommendations, the CRPP shall be forwarded to the Maui County Cultural Resources Commission for its review and adoption prior to Project District Phase II approval.

14. That a nonpotable water supply system shall be utilized for all irrigation purposes.

15. That, during construction, all dust control shall utilize nonpotable water or effluent, which may be obtained from the Kihei Wastewater Reclamation Facility when available.

16. That Honua`ula Partners, LLC, its successors and permitted assigns, shall provide a Sewage Disposal Analysis that has been reviewed and commented on by the State Department of Health, the State Department of Land and Natural Resources,

the County Department of Environmental Management, and the County Department of Water Supply prior to Project District Phase II approval. The Sewage Disposal Analysis, along with reviews and comments, shall be submitted to the Maui County Council for review and the project shall be subject to additional conditions or amendments by the Maui County Council if warranted by the Sewage Disposal Analysis.

17. That Honua`ula Partners, LLC, its successors and permitted assigns, shall construct, maintain, and/or participate in the operation of a private wastewater treatment facility and system that accommodate the needs of the entire Kihei-Makena Project District 9. All reclaimed water from the private wastewater treatment facility shall be utilized for irrigation, dust control, or other nonpotable purposes, and none of the reclaimed water shall be placed into injection wells.

    The sewer rates for the residential workforce housing units shall be no higher than the residential sewer rates set by the County in its annual budget, for as long as the units are subject to Chapter 2.96, Maui County Code.

18. That Honua`ula Partners, LLC, its successors and permitted assigns, shall address in their Project District Phase II application the following:

    a. Condition 1 of the Department of Health's "Twelve Conditions Applicable To All New Golf Course Development" ("12 Conditions") relating to an approved sampling plan, establishment of the baseline groundwater/vadose zone water quality, and if appropriate, nearshore water quality, has been met to the satisfaction of the Director of Health;

    b. Conditions 2 and 3 of the Department of Health's "12 Conditions" relating to groundwater monitoring have been satisfied by the Director of Health;

    c. Condition 4 relating to the preliminary proposal of the individual treatment system meets the requirements of the Department of Health, and final design shall be approved at the time of Project District Phase III;

    d. Condition 5 of the Department of Health's "12 Conditions" relating to use of effluent has been satisfied;

    e. Condition 6 of the Department of Health's "12 Conditions" relating to golf carts and storage of petroleum has been addressed and incorporated in the design and layout of the buildings;

    f. Conditions 7, 8, and 11 of the Department of Health's "12 Conditions" relating to fertilizers, biocides, and pesticides and the Integrated Golf Course Management Plan have been reviewed, and comments from the Department of Agriculture and the Department of Health have been incorporated in the design and layout of the golf courses;

g. Condition 9 of the Department of Health's "12 Conditions" relating to noise from maintenance facilities has been addressed through the location and design of the maintenance activities and facilities;

h. Condition 10 of the Department of Health's "12 Conditions" and the County Department of Environmental Management's concerns and recommendations relating to solid waste disposal management activities and facilities are identified and designed;

i. Condition 12 of the Department of Health's "12 Conditions" relating to soil runoff during construction and concerns of the State Department of Transportation; the County Department of Public Works; the State Department of Health; and the Natural Resources Conservation Service of the United States Department of Agriculture relating to drainage are addressed and incorporated in the design and layout of the plans, and a preliminary erosion control and drainage report is included in the application;

j. Confirmation from Maui Electric Company, Ltd. ("MECO") that the proposal to relocate and/or landscape MECO facilities is incorporated in the application and site plan; and

k. Roadway improvements to the satisfaction of the State Department of Transportation and the County Department of Public Works and proposed agreements are incorporated in the application and site plan and finalized as part of Project District Phase II approval.

19. That Honua`ula Partners, LLC, its successors and permitted assigns, shall execute appropriate agreements with the State of Hawaii and County of Maui agencies regarding participation in improvements of infrastructure and public facilities where such improvements are reasonably related to Honua`ula Partners, LLC 's project.

20. That marine monitoring programs shall be conducted which include monitoring and assessment of coastal water resources (groundwater and surface water) that receive surface water or groundwater discharges from the hydrologic unit where the project is located. Monitoring programs shall include both water quality and ecological monitoring.

Water Quality Monitoring shall provide water quality data adequate to assess compliance with applicable State water quality standards at Hawaii Administrative Rules Chapter 11-54. Assessment procedures shall be in accordance with the current Hawaii Department of Health ("HIDOH") methodology for Clean Water Act Section 305(b) water quality assessment, including use of approved analytical methods and quality control/quality

assurance measures. The water quality data shall be submitted annually to HIDOH for use in the State's Integrated Report of Assessed Waters prepared under Clean Water Act Sections 303(d) and 305(b). If this report lists the receiving waters as impaired and requiring a Total Maximum Daily Load ("TMDL") study, then the monitoring program shall be amended to evaluate land-based pollutants, including: (1) monitoring of surface water and groundwater quality for the pollutants identified as the source of the impairment; and (2) providing estimates of total mass discharge of those pollutants on a daily and annual basis from all sources, including infiltration, injection, and runoff. The results of the land-based pollution water quality monitoring and loading estimate shall be submitted to the HIDOH Environmental Planning Office, TMDL Program.

The ecological monitoring shall include ecological assessment in accordance with the Coral Reef Assessment and Monitoring Program protocols used by the Department of Land and Natural Resources. The initial assessment shall use the full protocol. Subsequent annual assessments can use the Rapid Assessment Techniques. Results shall be reported annually to the Aquatic Resources Division, Department of Land and Natural Resources.

21. That all exterior lighting shall be shielded from adjacent residential properties and near shore waters. Lighting requirements in force at the time of building permit application shall be applied.

22. That Honua`ula Partners, LLC, its successors and permitted assigns, shall pay the Department of Education $3,000 per dwelling unit upon issuance of each building permit to be used, to the extent possible, for schools serving the Kihei-Makena Community Plan area; provided that, should the State pass legislation imposing school impact fees that apply to Kihei-Makena Project District 9, Honua`ula Partners, LLC, its successors and permitted assigns, shall from that point forward comply with the State requirements, or contribute $3,000 per dwelling unit, whichever is greater.

23. That Honua`ula Partners, LLC, its successors and permitted assigns, shall fund and construct adequate civil defense measures as determined by the State and County of Maui civil defense agencies.

24. That Honua`ula Partners, LLC, its successors and permitted assigns, shall provide to the County two acres of land with direct access to the Piilani Highway extension for the development of fire control facilities within the village mixed-use sub-district at the time 50 percent of the total unit/lot count has received either a certificate of occupancy or final subdivision approval. The acreage provided shall have roadway and full utility services provided to the parcel.

That Honua`ula Partners, LLC, its successors and permitted assigns, shall contribute $550,000 to the County for the development of a police station in South Maui, to be paid at the time a contract is entered into for the construction of that police station.

25. That no transient vacation rentals or time shares shall be allowed within Kihei-Makena Project District 9; and further, no special use permit or conditional permit for such accommodations shall be accepted by the Department of Planning.

26. That Honua`ula Partners, LLC, its successors and permitted assigns, shall provide a preservation/mitigation plan pursuant to Chapter 6E, Hawaii Revised Statutes, that has been approved by the State Historic Preservation Division, Department of Land and Natural Resources, and the Office of Hawaiian Affairs prior to Project District Phase II approval.

27. That Honua`ula Partners, LLC, its successors and permitted assigns, shall provide the report "Remnant Wiliwili Forest Habitat at Wailea 670, Maui, Hawaii by Lee Altenberg, Ph.D.", along with a preservation/mitigation plan, to the State Department of Land and Natural Resources, the United States Fish and Wildlife Service, and the United States Corps of Engineers for review and recommendations prior to Project District Phase II approval. The Maui Planning Commission shall consider adoption of the plan prior to Project District Phase II approval.

Such plan shall include a minimum preservation standard as follows: That Honua`ula Partners, LLC, its successors and permitted assigns, shall establish in perpetuity a Conservation Easement (the "Easement"), entitled "Native Plant Preservation Area", for the conservation of native Hawaiian plants and significant cultural sites in Kihei-Makena Project District 9 as shown on the attached map. The Easement shall comprise the portion of the property south of latitude 20°40'15.00"N, excluding any portions that the State Department of Land and Natural Resources, the United States Fish and Wildlife Service, and the United States Corps of Engineers find do not merit preservation, but shall not be less than 18 acres and shall not exceed 130 acres.

The scope of the Easement shall be set forth in an agreement between Honua`ula Partners, LLC and the County that shall include:

a. A commitment from Honua`ula Partners, LLC, its successors and permitted assigns, to protect and preserve the Easement for the protection of native Hawaiian plants and significant cultural sites worthy of preservation, restoration, and interpretation for public education and enrichment consistent with a Conservation Plan for the Easement developed by Honua`ula Partners, LLC and approved by the State Department of Land and Natural Resources, the United States Geological

Survey, and the United States Fish and Wildlife Service; and with a Cultural Resource Preservation Plan, which includes the management and maintenance of the Easement, developed by Honua`ula Partners, LLC and approved by the State Department of Land and Natural Resources (collectively, the "Conservation/Preservation Plans").

b. That Honua`ula Partners, LLC, its successors and permitted assigns, shall agree to confine use of the Easement to activities consistent with the purpose and intent of the Easement.

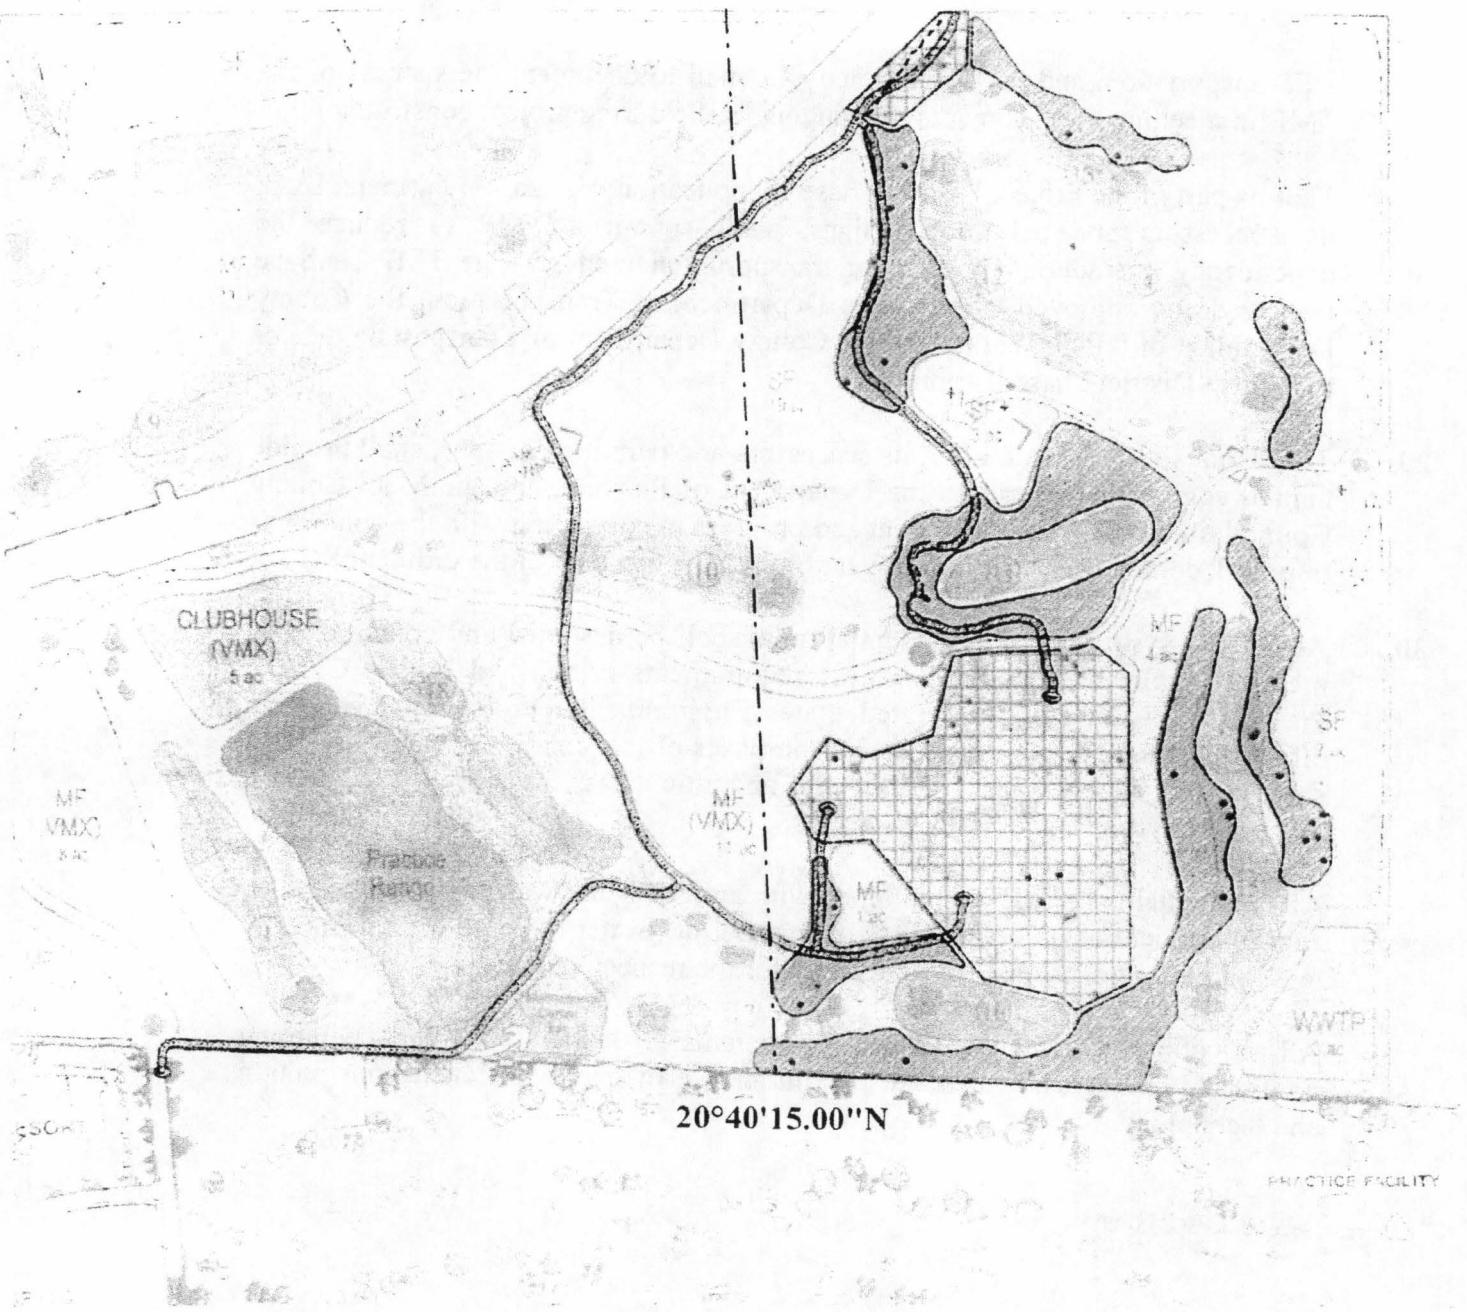
c. That Honua`ula Partners, LLC, its successors and permitted assigns, shall be prohibited from development in the Easement other than erecting fences, enhancing trails, and constructing structures for the maintenance needed for the area, in accordance with the Conservation/Preservation Plans.

d. That title to the Easement shall be held by Honua`ula Partners, LLC, its successors and permitted assigns, or conveyed to a land trust that holds other conservation easements. Access to the Easement shall be permitted pursuant to an established schedule specified in the Conservation/Preservation Plans to organizations on Maui dedicated to the preservation of native plants, to help restore and perpetuate native species and to engage in needed research activities. These organizations may enter the Easement at reasonable times for cultural and educational purposes only.

e. Honua`ula Partners, LLC, its successors and permitted assigns, shall be allowed to receive all tax benefits allowable under tax laws applicable to the Easement at the time that said Easement is established in Kihei-Makena Project District 9, which will be evidenced by the recordation of the Easement in the Bureau of Conveyances, State of Hawaii.

28. That, prior to the commencement of any construction activity, Honua`ula Partners, LLC, its successors and permitted assigns, shall develop and submit a Transportation Management Plan ("TMP"), to be reviewed and approved by the State Department of Transportation, the County Department of Public Works, and the County Department of Transportation. The purpose of the TMP shall be to reduce traffic generated by construction activity related to the Kaonoulu Light Industrial Subdivision and Kihei-Makena Project District 9, including traffic generated by the improvements to Piilani Highway between Kilohana Drive and Wailea Ike Drive. The TMP shall provide for programs such as park and ride, shuttles, and/or restrictions on worker access to ongoing construction activity during peak hour traffic. Upon approval, project contractors shall implement the TMP during construction activities. Honua`ula Partners, LLC, its successors and permitted assigns, shall submit an annual report to the State Department of Transportation, the County Department of Public Works, the County Department

of Transportation, and the Maui County Council to document the success of the TMP in meeting its benchmarks of reducing traffic during project construction.



That as part of the Project District Phase II application, Honua`ula Partners, LLC, its successors and permitted assigns, shall submit a TMP to reduce the dependency on individual vehicular transportation modes. The TMP shall be reviewed and approved by the State Department of Transportation, the County Department of Public Works, and the County Department of Transportation prior to Project District Phase II approval.

29. That Honua`ula Partners, LLC, its successors and permitted assigns, shall provide annual compliance reports to the Department of Planning and the Maui County Council on the status of the project and progress in complying with the conditions imposed, commencing within one year of the effective date of the ordinance.

30. All energy systems for all residential units shall be designed and constructed to meet all applicable ENERGY STAR requirements established by the Climate Protection Division of the United States Environmental Protection Agency in effect at the time of construction. For purposes of this condition, energy systems shall include all hot water systems, roof and attic areas, outside walls, windows, air cooling systems, and heating systems.

All residential units shall be equipped with a primary hot water system at least as energy efficient as a conventional solar panel hot water system, sized to meet at least 80 percent of the hot water demand for the respective units.

All air cooling systems and all heating systems for laundry facilities, swimming pools, and spa areas shall make maximum use of energy-efficient construction and technology.

Legend

Existing Native Plants (Field Surveyed)

- Canavalia Pubescens ('awikiwiki)
- Erythrina Sandwicensis (wiliwili)
- Lipochaeta Rockii (nehe)

Archaeological Sites (To Be Preserved)

BOTANICAL HABITAT PRESERVES	Approx. Area (Acres)
Native Plant Preservation Area	+/- 18 ac
Native Plant Management / Enhancement Area	+/- 23 ac
Interpretive Trail (min. 4-foot wide cinder trail with interpretive signs)	+/- 2 ac
TOTAL :	+/- 43 ac

NOTE: All areas need to be field located and surveyed to establish appropriate boundaries that relate to the existing topographic and geological features with native plants located. Field adjustments for golf course, roadways and infrastructure will be necessary.

DIGEST

ORDINANCE NO._____
BILL NO. 22 (2008)

A BILL FOR AN ORDINANCE TO REPEAL ORDINANCE NO. 2171 (1992) AND TO ESTABLISH KIHEI-MAKENA PROJECT DISTRICT 9 (WAILEA 670) ZONING (CONDITIONAL ZONING), FOR APPROXIMATELY 670 ACRES SITUATED AT PAEAHU, PALAUEA, KEAUHOU, MAUI, HAWAII

This bill proposes to repeal Ordinance No. 2171 and to established Kihei Project District 9 (Wailea 670) zoning (conditional zoning) for property situated at Paeahu, Palauea, Keauhou, Maui, Hawaii, identified for real property tax purposes by Tax Map key Nos. (2) 2-1-008:056 and (2) 2-1-008:071, comprised of approximately 670 acres.

I, ROY T. HIRAGA, County Clerk of the County of Maui, State of Hawaii, DO HEREBY CERTIFY that the foregoing BILL NO. 22 (2008) was passed on First Reading at the February 8, 2008 meeting of the Council of the County of Maui, State of Hawaii, by the following vote:

AYES: Councilmembers Gladys C. Baisa, William J. Medeiros, Michael J. Molina, Joseph Pontanilla, Michael P. Victorino, and Vice-Chair Dennis A. Mateo.

NOES: Councilmembers Michelle Anderson, Jo Anne Johnson, and Chair G. Riki Hokama.

DATED at Wailuku, Maui, Hawaii, this 29th day of February, 2008.

ROY T. HIRAGA, COUNTY CLERK
COUNTY OF MAUI, STATE OF HAWAII

Copies of the foregoing Bill, in full, are on file in the Office of the County Clerk, County of Maui, for use and examination by the public.

Figure 3: Project Access Roads 7

I. Introduction

Mākena Mauka is a low-density master-planned residential community that will offer market rate housing together with residential workforce housing, with a mixture of rural and single-family lots and multi-family residential units, within an area that has largely been planned for such uses for decades. The project will incorporate the existing 18-hole Mākena North Golf Course and the 18-hole Mākena South Golf Course (to be renovated as part of the land plan), together with a community gathering place, hiking trails, programs to support connectivity, walking, bicycling, and golf cart paths, beach parking for the public, areas reserved for conservation/open space, and areas reserved for public beach access. The Applicant's current vision for the Mākena Mauka land plan includes 652 housing units, including 109 onsite residential workforce housing units, and approximately 135,000 sf of operational support buildings, which include golf maintenance, staff offices, restaurants, back of house, golf operations and other uses; within the approximately 1,041.47-acre total project area which includes approximately 473 acres of parcels proposed for residential development. Future internal bicycle and pedestrian facilities are still being designed with the goal to connect to the existing bike lanes and sidewalk on the makai side of Makena Alanui Drive.

The project conceptual land use plan is provided in Figure 1. The project location map is provided in Figure 2. The project is expected to begin construction in 2028 and be completed by 2058. The project proposes the phased construction of a total of 652 residential units, inclusive of 109 onsite workforce housing units, 180 single-family market-value units, and 363 multi-family market-value by the year 2058.

The workforce housing will be completed in partnership with a third-party Affordable Developer. The workforce housing project will be completed pursuant to Chapter 2.96 of the Maui County Code or Ordinances. The 109 workforce housing units will be included in Phase I of the Future (2038) With Project analysis, which results in the highest number of trips in Phase I and will therefore reflect the more conservative analysis. The impact of the 109 workforce housing units will ultimately be the same at full buildout in 2058, regardless of the exact timeframe and buildout schedule. The remaining single-family market-value homes and multi-family market-value homes will be constructed equally over three 10-year periods (10, 20, and 30 years into the future). A total of 135,000 square feet of operational support buildings will also be developed in phases over 30 years.

As part of the special management area (SMA) permit application, a Construction Management Plan (CMP) has been prepared to satisfy the conditions within Ordinance No. 3613, which states, "The developer shall develop and submit a Transportation Management Plan ("TMP"), to be reviewed and approved by the State of Hawai'i Department of Transportation (HDOT), the Maui County Department of Public Works (Maui DPW), and the Maui County Department of Transportation (Maui DOT). The purpose of the TMP shall be to reduce traffic generated by construction activity related to the Mākena Resort Area. The TMP shall provide for programs such as park and ride, shuttles, and/or restrictions on worker access to ongoing construction activity during peak hour traffic. Upon approval, project contractors shall implement the TMP during construction activities. The developer shall submit an annual report to the HDOT, Maui DPW, Maui DOT, and the Maui County Council to document the success of the TMP in meeting its benchmarks of reducing traffic during project construction. The TMP shall be reviewed and approved by HDOT, Maui DPW, and Maui DOT prior to issuance of each SMA permit within the Mākena Resort Area."

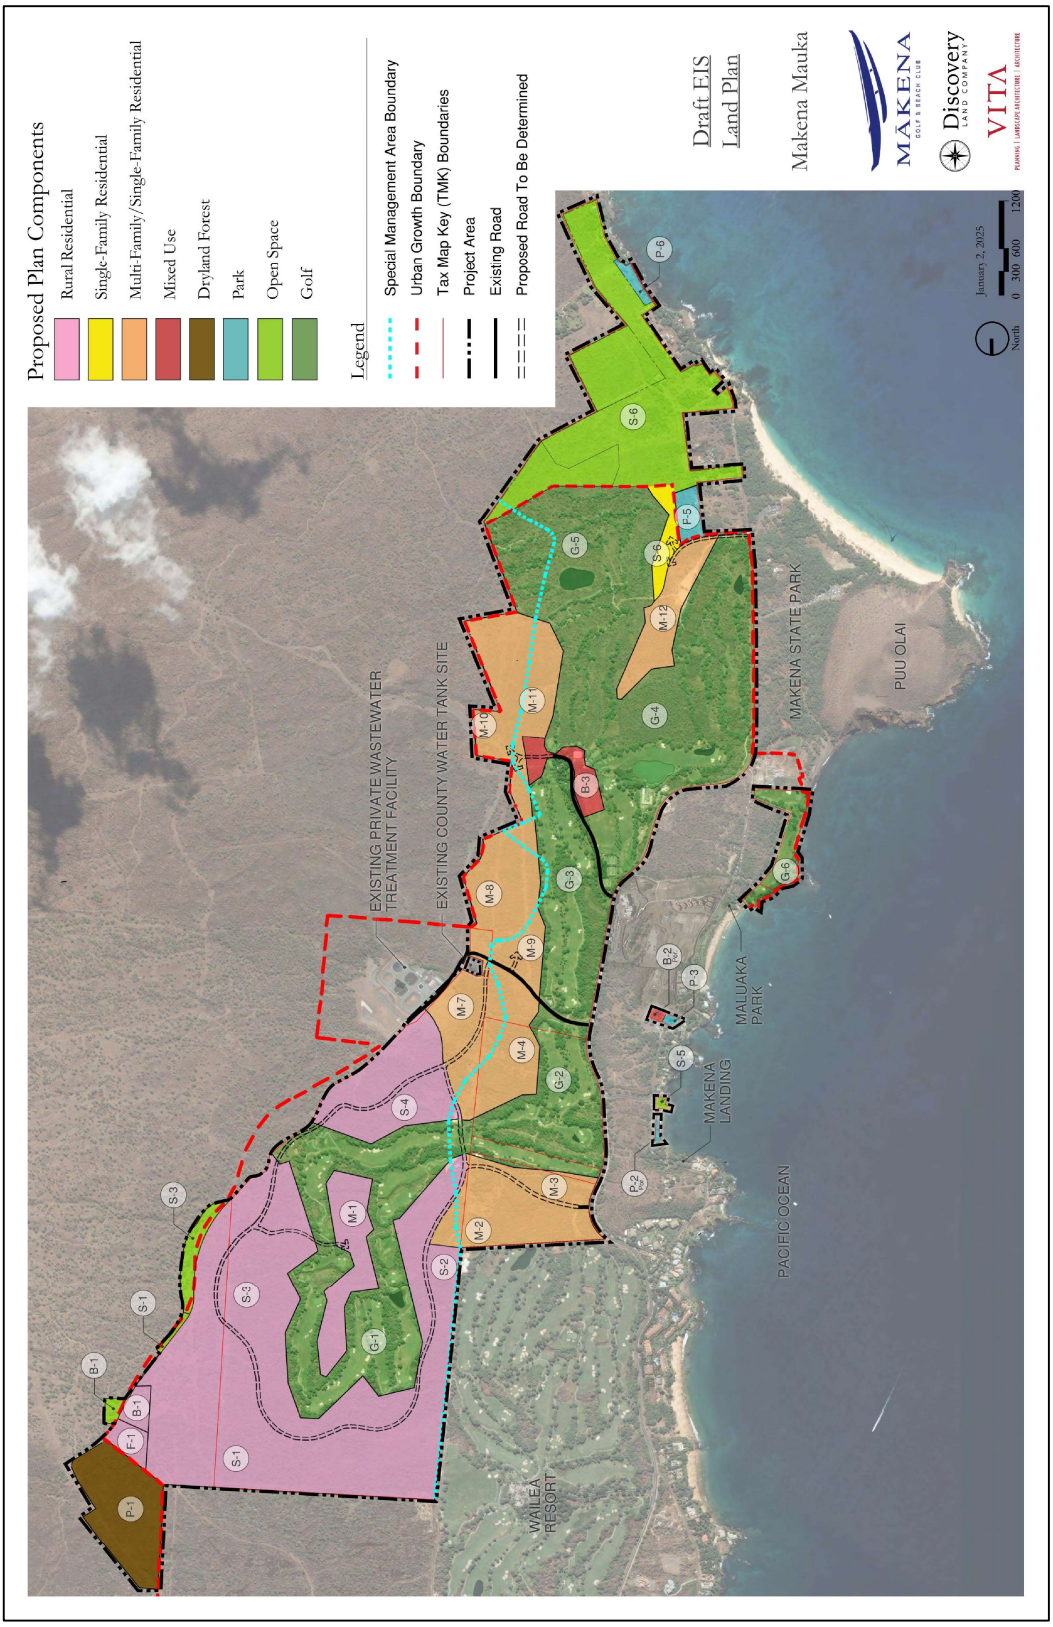

Figure 1: Conceptual Land Use Plan

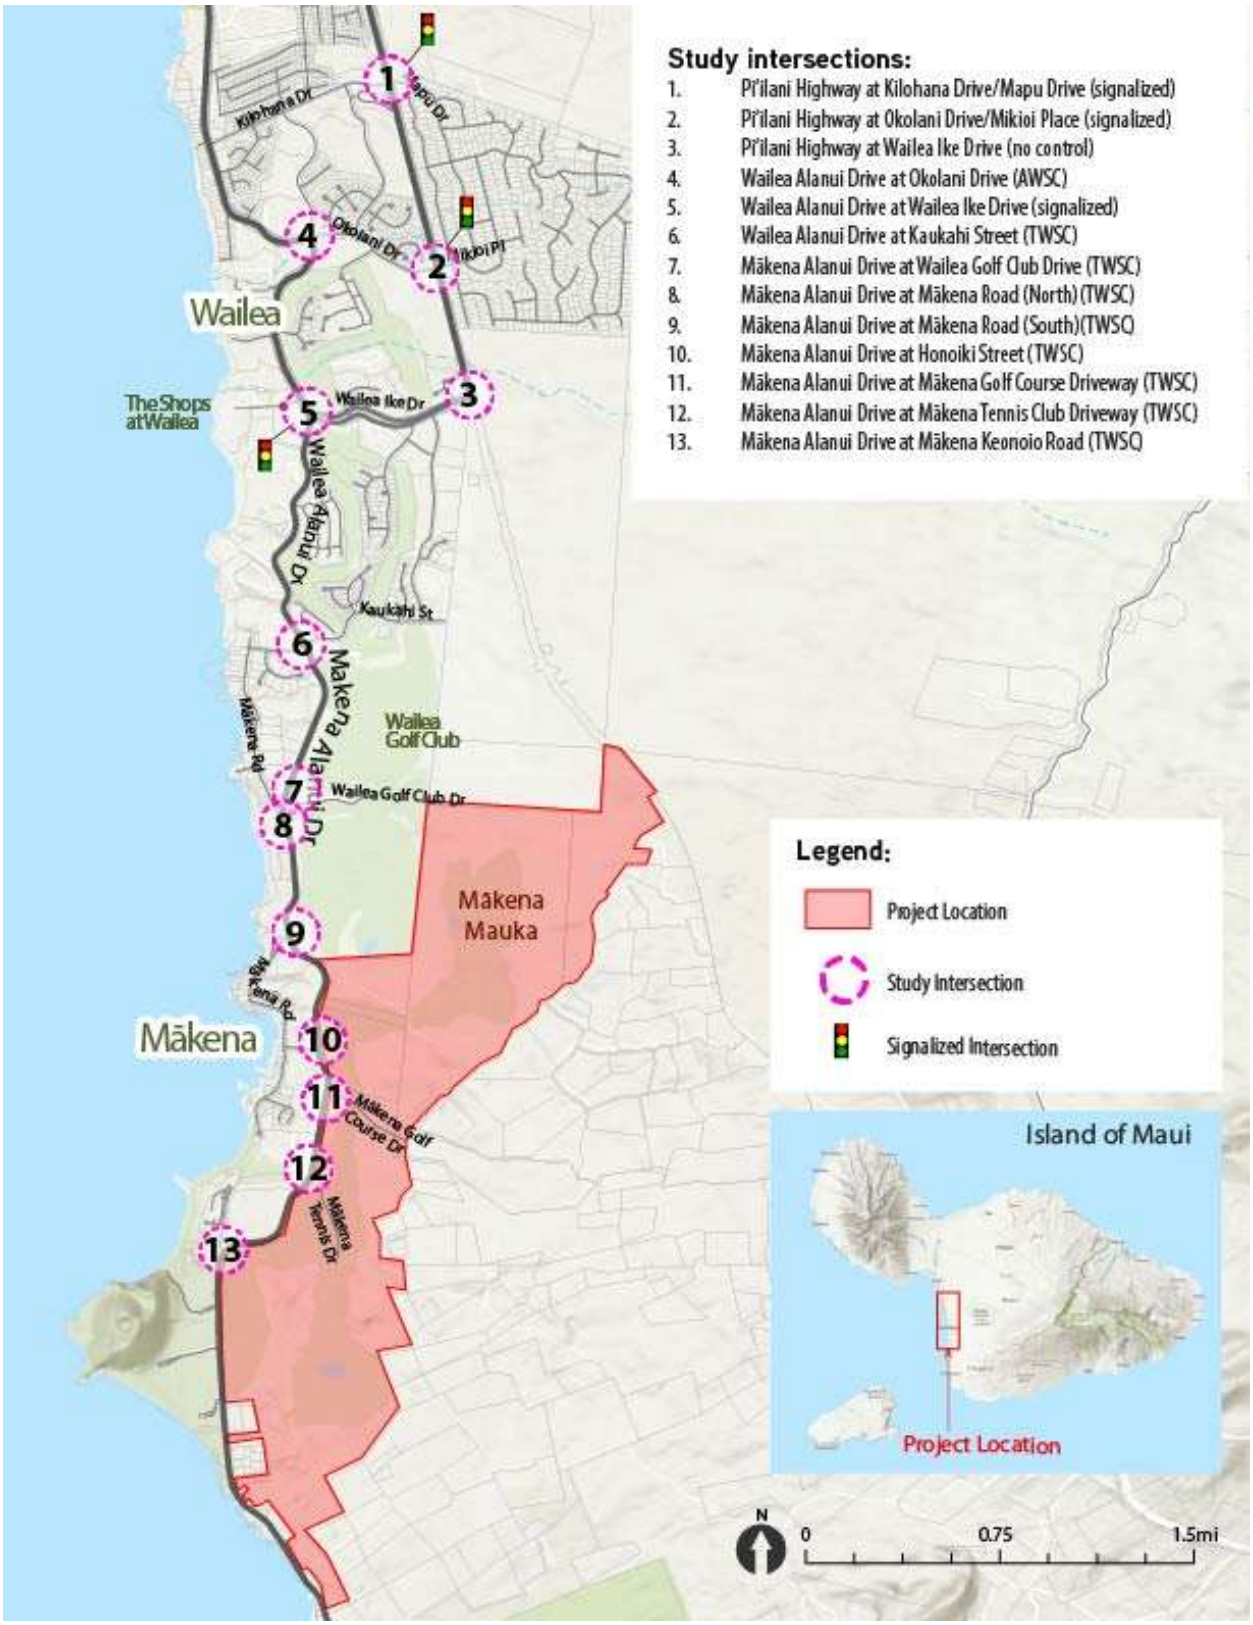

Figure 2: Project Location Map

II. Project Timeline

The project is currently proceeding through the environmental review application. A timeline and schedule for construction of the project is still being determined. The latest estimates for the project include:

- Site Plan Permit Application: September 2028
- Building Permit Application: March 2029
- Site Construction Completed: Year 2053
- Certificate of Occupancy: Year 2058

III. Existing Roadway Conditions

The project site is in Makena, Maui. The main routes to and from the project site include Piʻilani Highway, Wailea Ike Drive, Wailea Alanui Drive, and Makena Alanui Drive.

A. Piʻilani Highway

Piʻilani Highway (State Route 31) is a north-south oriented, two to four-lane, undivided state-owned roadway extending 7.3 miles from Mokulele Highway (State Route 311) and North Kihei Road, in the north, to Wailea Ike Drive in the south. Piʻilani Highway transitions into a two-lane roadway between Kilohana Drive and Wailea Ike Drive. The posted speed limit for the majority of Piʻilani Highway ranges from 35 miles per hour (MPH) to 45 MPH. Near the southern terminus at Wailea Ike Drive, the southbound speed limit is reduced to 20 MPH. Shoulder widths of six feet to ten feet exist on both sides of Piʻilani Highway. These shoulders are able to be used by cyclists as bike shoulders. At some signalized intersections with dedicated right turn lanes, the bike shoulder transitions into a marked bike lane located between the through lane and dedicated right turn lane.

B. Wailea Ike Drive

Wailea Ike Drive is an east-west oriented, two- to four-lane, County of Maui (COM)-owned, divided roadway extending from Wailea Alanui Drive in the west, to Piʻilani Highway in the east. Median widths vary from six feet near Piʻilani Highway to 100 feet near Wailea Alanui Drive. Wailea Ike Drive intersects Wailea Alanui Drive as a signalized intersection and intersects Piʻilani Highway as a two-lane, uncontrolled intersection where Wailea Ike Drive transitions into Piʻilani Highway at an approximately 90-degree turn. Sidewalks exist on both sides of Wailea Ike Drive. The posted speed limit on Wailea Ike Drive is 30 MPH.

C. Wailea Alanui Drive

Wailea Alanui Drive is a north-south oriented two- to four-lane, divided, COM-owned roadway extending from Kilohana Drive in the north, to Kaukahi Street in the south. In the project area, Wailea Alanui Drive is a four-lane divided roadway from Okolani Drive to Kaukahi Street. A continuous sidewalk exists only on the west side of Wailea Alanui Drive. The posted speed limit on Wailea Alanui Drive is 30 MPH.

D. Makena Alanui Drive

Makena Alanui Drive is a north-south oriented, two-lane, undivided, COM-owned roadway extending from Kaukahi Street in the north, to Makena Keonoio Road, where it transitions into Makena Road. Intersections along Makena Alanui Drive are stop-controlled. Makena Alanui Drive provides access through Makena Town. Sidewalks exist on portions of the west side of Makena Alanui Drive. Sidewalks are missing on segments just south of Makena Road (north), just south of Makena Road (south), and south of the Mākena Tennis Club Roadway. There are no sidewalks on the east side of Makena Alanui Drive. A signed and striped bike lane exists on both sides of Makena Alanui Drive from Kaukahi Street to the Mākena Tennis Club Driveway. The posted speed limit on Makena Alanui Drive is 20-30 MPH.

IV. Construction Management Plan

Construction of the development is anticipated to start in Quarter 4 of 2028 and is expected to be completed over three ten-year phases corresponding to years 2038, 2048, and 2058. Construction is anticipated to be limited to daytime working hours. Should night construction be needed, the contractor shall procure the appropriate noise permits before starting the work.

A. Vehicle Peak Hour

The Mākena Mauka traffic impact analysis report (TIAR) identified the existing AM and PM peak hours as occurring between 7:30 – 8:30 AM and 3:30 – 4:30 PM, respectively.

B. Haul Route

In accordance with the provisions of Ordinance No. 3613 from 2008, construction access is intended to be provided from Pi‘ilani Highway (via the future extension through the Wailea 670 project) to the construction sites within the Project area. The ordinance further states that construction traffic shall be prohibited along Kilohana Drive, Wailea Ike Drive, Wailea Alanui Drive, and Makena Alanui Drive to the extent practicable.

However, the availability of the Pi'ilani Highway extension, which at one time was intended to connect to the Project area, is not currently available due to the development delays of the Wailea 670 project, and therefore is not practicable. The Applicant does not own the rights-of-way for a construction access road from Pi'ilani Highway to the Project area. It is expected that the practicability of construction access roads from Pi’ilani Highway to construction sites within the Project area will be explored through negotiations with the neighboring landowners as part of the environmental review process. As this time, there are not feasible routes of access through the neighboring properties that would allow direct access.

Therefore, since the intended haul route from Ordinance 3616 is not practicable, the Applicant is in compliance with this Ordinance provision. The haul route is assumed to be along southbound on Pi‘ilani Highway, westbound on Wailea Ike Drive, southbound on Wailea Alanui Drive, and southbound onto Makena Alanui Drive. These transition into one of the four access roads (see Figure 3) into the project:

- The “North Access Road”, an existing gated roadway between Makena Road (South) and Honoiki Street,
- The Mākena Golf Course Road, currently located just south of Honoiki Street,
- The Mākena Tennis Club Driveway, currently located just south of Mākena Golf Course Road,
- and the “South Access Road”, which will be a new roadway intersecting Makena Alanui Drive across the existing Makena Beach Parking Lot.

C. Vehicle Access

Construction vehicle access to the project construction site will be provided from Makena Alanui Drive. Access to the project area will be provided from Makena Alanui Drive to one of the four access roads (see Figure 3), with an internal roadway network connecting to the individual communities within the project.

Construction workers will not be allowed to park on public roads. Construction workers are expected to park on-site.

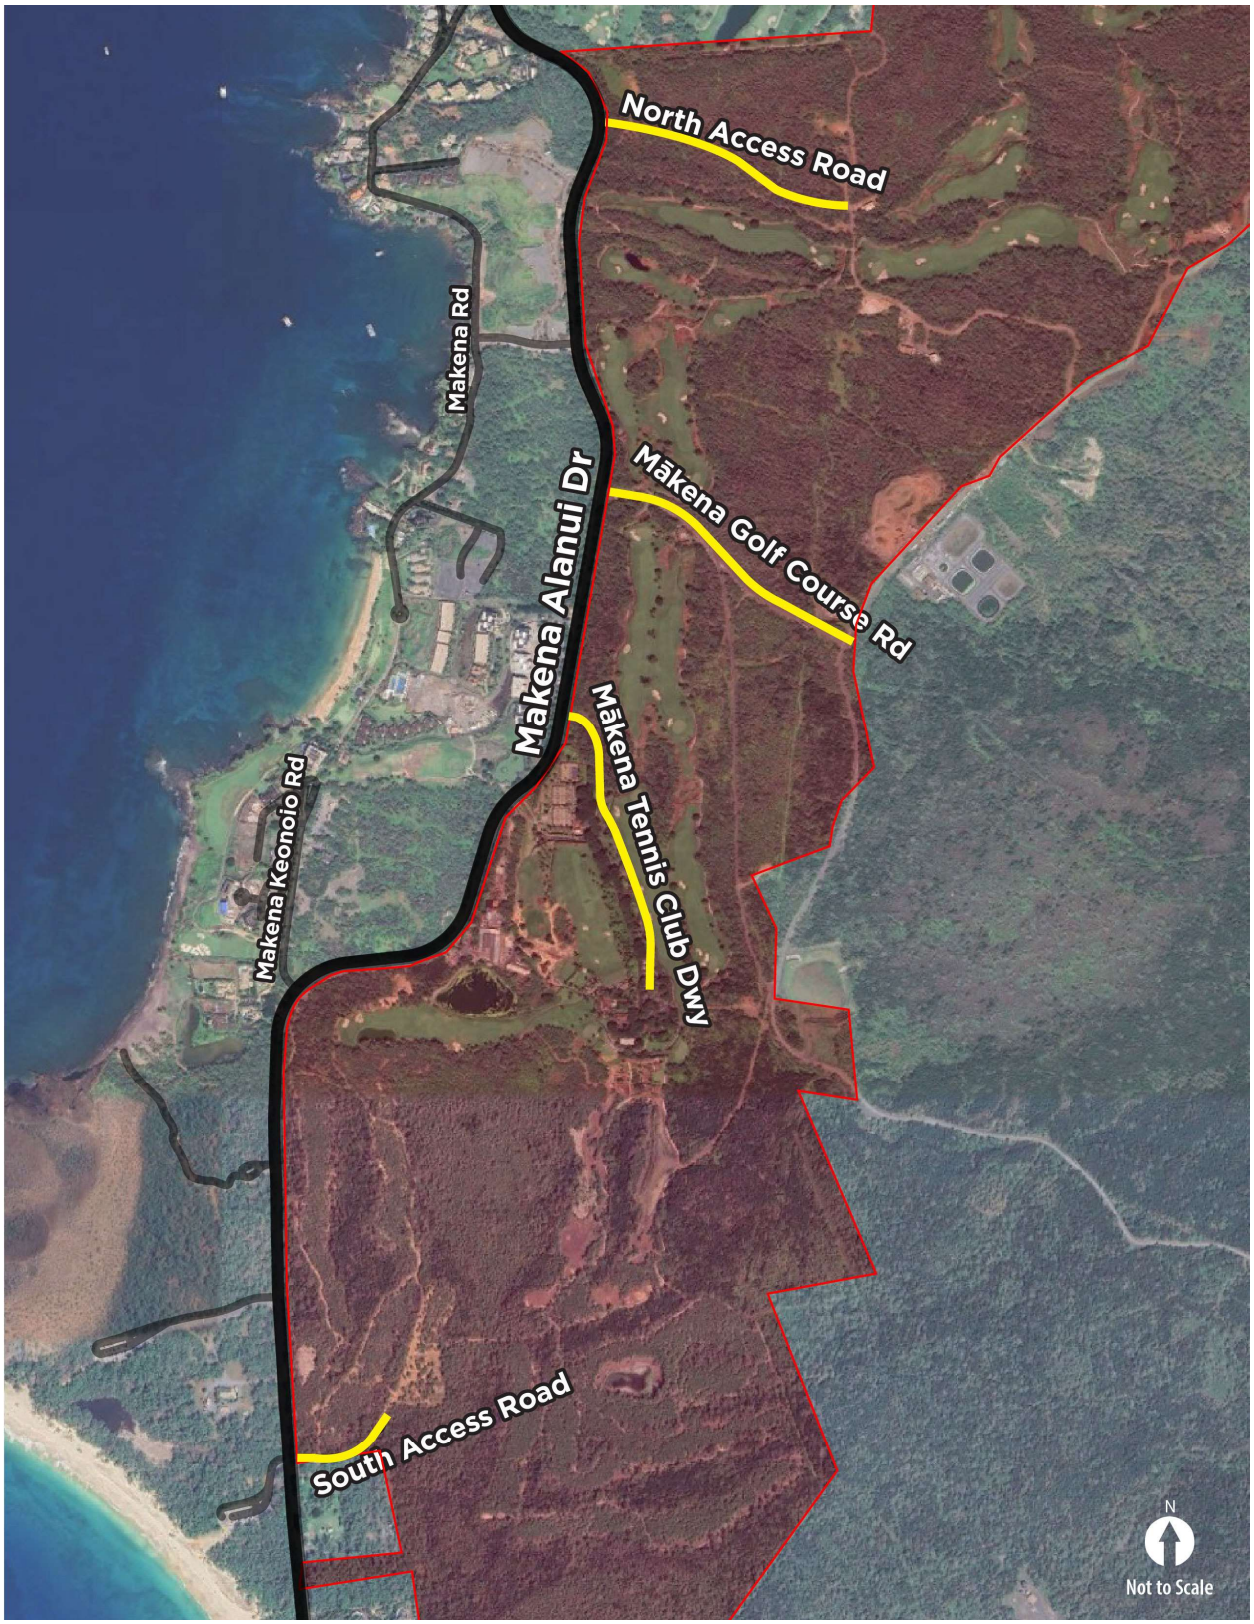

Figure 3: Project Access Roads

D. Heavy Vehicle Access

Heavy construction vehicles will need access to the site for deliveries to support various construction activities. These heavy vehicles will access the site during daylight non-peak periods from 8:30 AM to 3:30 PM. Construction-related deliveries are expected to change over the course of construction phasing. All loading and unloading of construction related materials will take place on-site. There is no existing on-street parking in the area. The parking for construction workers will also be provided on-site. To reduce traffic impacts, construction materials, fuel, supplies, and equipment will be delivered during off-peak hours. Heavy vehicles will be staged towards the mauka ends of M2 and M3 parcels (see Figure 1), which can be accessed through the "North Access Road".

Information regarding type of construction vehicles and number of construction vehicles are not known at this time. It is recommended that construction vehicles arrive and depart the project site outside of the commuter peak hours.

E. Noise

Heavy construction equipment and construction activities would be the primary source of noise during construction. Equipment mufflers or other noise attenuating equipment, as well as proper equipment maintenance, will be used during construction activities in order to mitigate potential impacts to ambient noise conditions in the vicinity.

All construction work will follow the State of Hawai‘i Department of Health (HDOH) noise regulations. Certain demolition and construction equipment (such as pile drivers, hydraulic hammers, jackhammers, etc.) will only be used from 9:00 AM to 5:30 PM, Monday through Friday. Contractors will be required to avoid sensitive areas and comply with the maximum allowable noise levels for stationary equipment established by Hawai‘i Administrative Rules (HAR), Chapter 11-46, "Community Noise Control". Should a community noise permit be required, a permit will be obtained prior to the commencement of construction.

F. Traffic Control Plan

Construction of the project is expected to happen entirely on-site, and it is not anticipated to impact any public right-of-way. A work zone is where construction work is taking place within the roadway. The work zone can be marked with signing, striping, cones, message boards, barriers, construction vehicles, and other devices. Road closures may be required during construction, such as pedestrian improvements pursuant to Ordinance 3613. Where needed, alternative routes or detour routes will be provided if vehicle, pedestrian, or bicycle facilities are impacted.

Off-site roadwork may include improvements at several study intersections identified in the *Mākena Mauka Draft Traffic Impact Analysis Report* (TIAR). If off-site roadwork is required, traffic control plans (TCPs) should be compliant with the *Manual on Uniform Traffic Control Devices* (*MUTCD) (FHWA, 2023)*, the latest *HDOT Section 645 – Work Zone Traffic Control* details, and *COM Street Design Manual* (COM, 2018) standards.

1. Traffic Control Strategies

Various traffic control strategies will be used to accommodate drivers within the work zone in a safe manner. Some of the traffic control strategies include:

- Single Lane Closure – Single lane closures will reduce roadway capacity but will allow for vehicles to generally travel on the same route.
- Construction hours – Limit construction hours to off-peak periods.
- Reduced Speed Limit – Reducing speed limits can help protect drivers and construction workers.
- Reduced Travel Lane Widths – Reduced travel lane width can help slow down driving speeds.
- Detour Route – Detour routes can be used if/when movements at vehicle movements, pedestrian facilities, and bike facilities are prohibited.

2. Traffic Control Devices

Various traffic control strategies will be used to accommodate drivers within the work zone in a safe manner. Some of the traffic control strategies include:

- Warning signs – *MUTCD* compliant temporary work zone signs will be installed prior to all work in accordance with the latest state standards. Spacing of the warning signs will be spaced based on the work zone speed limit. A flashing arrow board and message boards can be used to alert drivers of lane changes.
- Cones – Cones will be used to separate the work zone from travel lanes. Taper lengths, buffer lengths, cone spacing, and minimum lane width will follow the latest state standards based on the work zone speed limit.
- Police Officers – Police officers can be stationed at the near side and far side of the work zones.

3. Project Coordination

Any offsite roadwork should be coordinated with other projects in the area. For roadwork on Piʻilani Highway, Occupancy and Use of State Highway ROW permits must be filled out and completed on a weekly basis. For roadwork on COM-owned roadways, roadway permits from the Development Services Administration must be filled out two weeks prior to the start of work.

G. Transportation Demand Management

Transportation Demand Management (TDM) Strategies aim to reduce the construction related traffic.

1. Work Hours

It is recommended that construction workers have work hours that begin and end outside of the identified AM and PM peak hours.

2. Park and Ride and Shuttle Service

A centralized, off-site park-and-ride facility with shuttle service could be used to reduce vehicle traffic to the project where construction workers drive to a designated park-and-ride facility located outside of the project site. Workers can then be shuttled to the project site. There are two park-and-ride facilities outside of Kihei:

- Kahului Park-and-Ride
    - Located at the northwest corner of Kuihelani Highway (State Route 380) and Puʻunēnē Avenue, this park-and-ride can be used as a designated spot for workers living in Central Maui. This facility has 45 marked parking spaces, including four Americans with Disabilities Act (ADA) compliant parking spaces, bicycle and motorcycle parking.

- Ma‘alaea Park-and-Ride
    - Located just east of Honoapi‘ilani Highway on North Kihei Road, this park-and-ride can be used as a designated spot for workers living in West Maui. This facility has approximately 30 marked parking spaces, including two ADA compliant parking spaces.

3. Ridesharing and Carpooling

Ridesharing and carpooling should be used to help reduce vehicle traffic. A designated ridesharing and carpooling parking lot could be provided on-site.

4. Public Information and Outreach

The contractor and developer will provide information regarding the construction in a timely, accurate, and consistent manner to all the stakeholders, the general public, neighborhood residents and businesses, and the appropriate emergency entities upon request. The following materials will be used for Public Information and Outreach:

- Project Signage with contact information to field questions or concerns,
- Courtesy updates will be provided to local businesses and residents via email or posted notices, and
- A project website or hotline with updates on the construction schedule and any possible affected vehicle, pedestrian, or bike facilities.

H. Pre-Construction and Post-Construction Street Condition

A representative from the HDOT and Maui DPW should be invited to inspect the state-owned and COM-owned roadways with a contractor representative after construction. The contractor will be responsible for repairing construction-related wear and tear on the pavement by filling potholes, repaving or replacing damaged asphalt pavement, and replacing broken concrete on sidewalks in accordance with State and COM standard specifications.

V. CMP Management Monitoring During Construction

The contractor will monitor the effectiveness of the CMP strategies during work hours and will be responsible for issues or complaints. The contractor will coordinate with the Engineer and HDOT if adjustments are needed to the TMP. Modifications to shorten the work zone or work hours will be allowed. Modifications to lengthen the work zone or work hours will need to be coordinated with the Engineer and HDOT. The contractor shall coordinate with other ongoing and future projects in the project area. Any closures that extend beyond the hours proposed in the CMP or result in the closures of more than one travel lane will require a separate technical memorandum.

I. Introduction

Mākena Mauka is a low-density master-planned residential community that will offer market rate housing together with residential workforce housing, with a mixture of rural and single-family lots and multi-family residential units, within an area that has largely been planned for such uses for decades. The project will incorporate the existing 18-hole Mākena North Golf Course and the 18-hole Mākena South Golf Course (to be renovated as part of the land plan), together with a community gathering place, hiking trails, programs to support connectivity, walking, bicycling, and golf cart paths, beach parking for the public, areas reserved for conservation/open space, and areas reserved for public beach access.

The Applicant's current vision for the Mākena Mauka land plan includes 652 housing units, including 109 onsite residential workforce housing units, and approximately 135,000 sf of operational support buildings, which include golf maintenance, staff offices, restaurants, back of house, golf operations and other uses; within the approximately 1,041.47-acre total project area which includes approximately 473 acres of parcels proposed for residential development. The workforce housing is expected to be completed within the first 10 years of construction, with the remaining single-family homes and multi-family homes being constructed in equal amounts over three 10-year periods (10, 20, and 30 years into the future), aligning with years 2038, 2048, and 2058. Future internal bicycle and pedestrian facilities are still being designed with the goal to connect to the existing bike lanes and sidewalk on the west side of Makena Alanui Drive.

The project location map is provided in Figure 1. The project is expected to begin construction in 2028 and be completed by 2058. The project proposes the phased construction of a total of 652 residential units, inclusive of 109 onsite workforce housing units, 180 single-family market-value units, and 363 multi-family market-value units by the year 2058. The latest Land Plan included in the Draft Environmental Impact Statement (EIS) is shown in Figure 2. It is estimated that 90% of the market value homes will be used as second homes. These owners of second homes are expected to be at their residences two to three months of the year and not rent out their homes outside of that period.

The workforce housing will be completed in partnership with a third-party Affordable Developer. The workforce housing project will be completed pursuant to Chapter 2.96 of the Maui County Code or Ordinances. The 109 workforce housing units will be included in Phase I of the Future (2038) With Project analysis, which results in the highest number of trips in Phase I and will therefore reflect the more conservative analysis. The impact of the 109 workforce housing units will ultimately be the same at full buildout in 2058, regardless of the exact timeframe and buildout schedule. The remaining single-family market-value homes and multi-family market-value homes will be constructed equally over three 10-year periods (10, 20, and 30 years into the future). A recreational multi-use building, an operational multi-use building, and various other smaller buildings will be included in Phase 1.

As part of the special management area (SMA) permit application, a Transportation Management Plan (TMP) has been prepared to satisfy the conditions within Ordinance No. 3613, which states, "As part of the first SMA application, the developer shall submit a TMP to reduce the dependency on individual vehicular transportation modes. The TMP shall be reviewed and approved by the State Department of Transportation (HDOT), the County Department of Public Works (Maui DPW), and the County Department of Transportation (Maui DOT) to address post-construction traffic issues." The TMP is included in support of the Mākena Mauka Environmental Impact Statement (EIS).

This TMP documents the existing conditions and identifies future transportation requirements for the property. This TMP identifies Transportation Demand Management (TDM) strategies that promote a reduction in passenger vehicle trips in order to reduce the impact on surrounding streets.

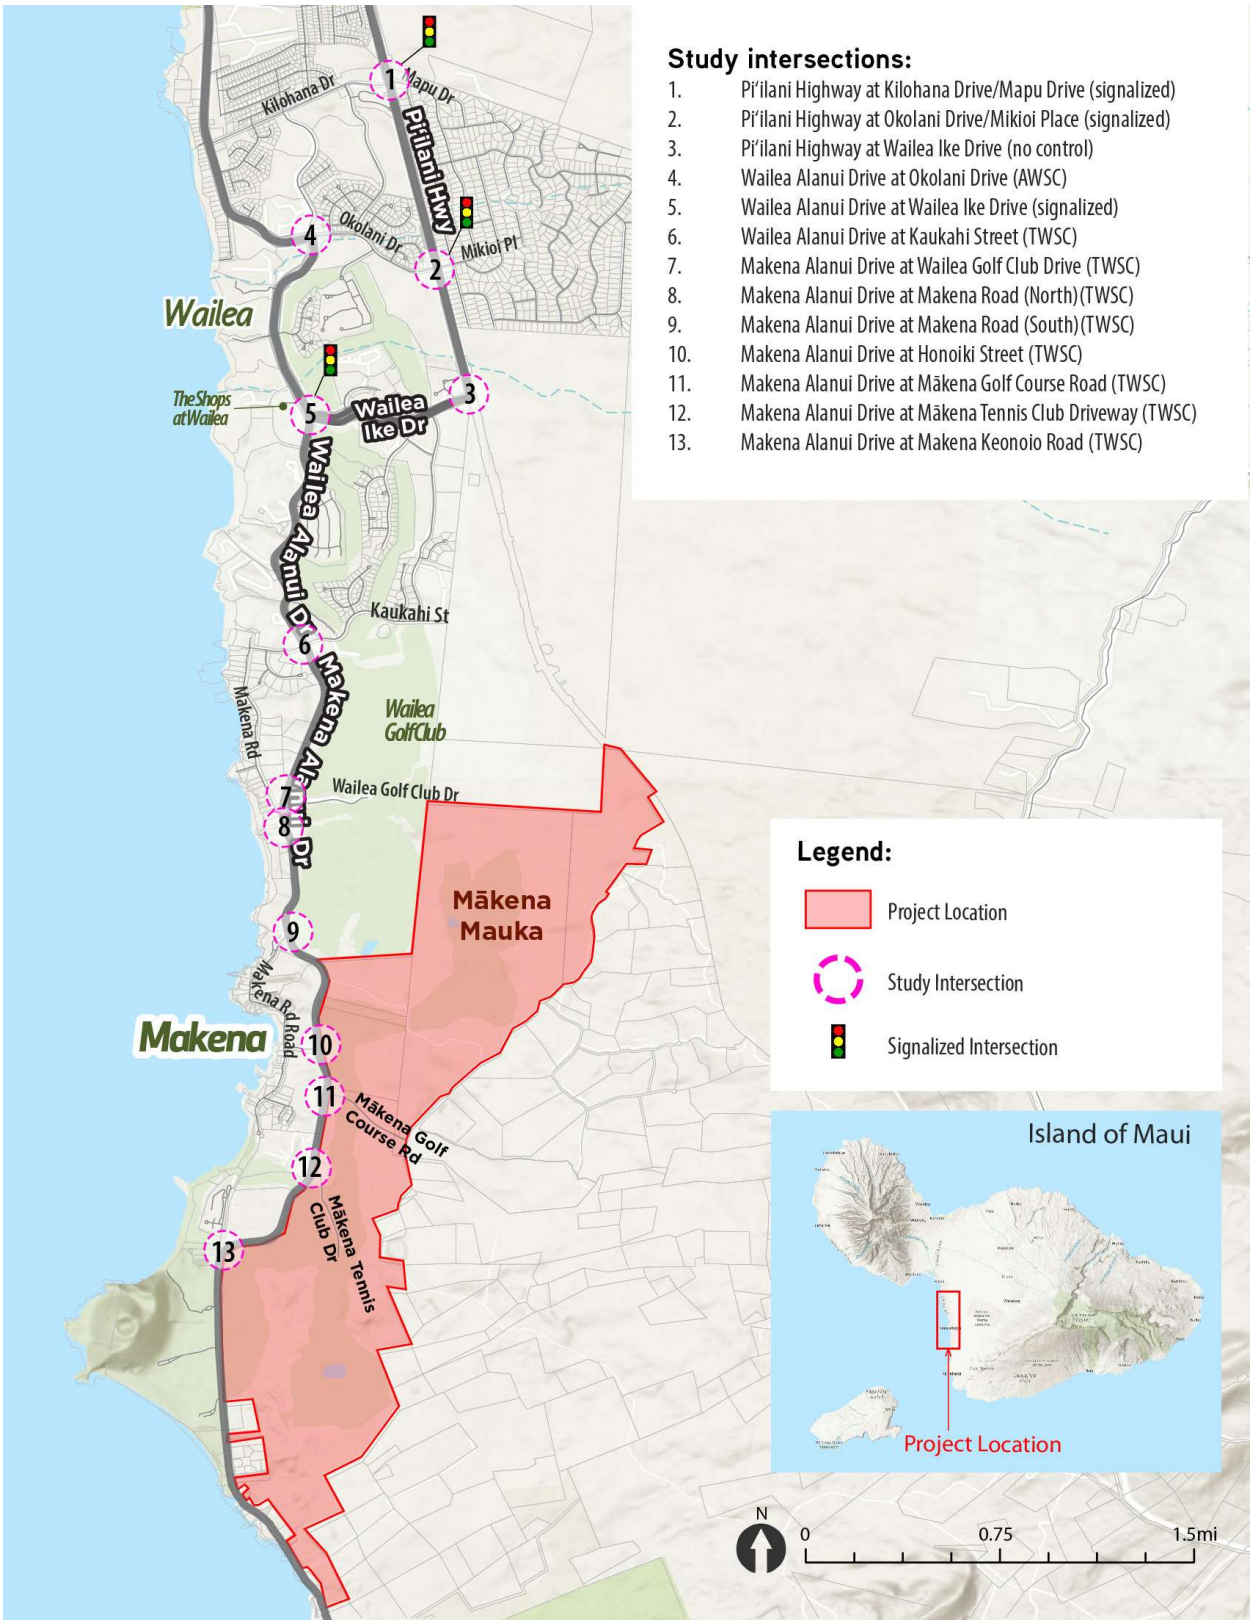

Figure 1: Project Location Map

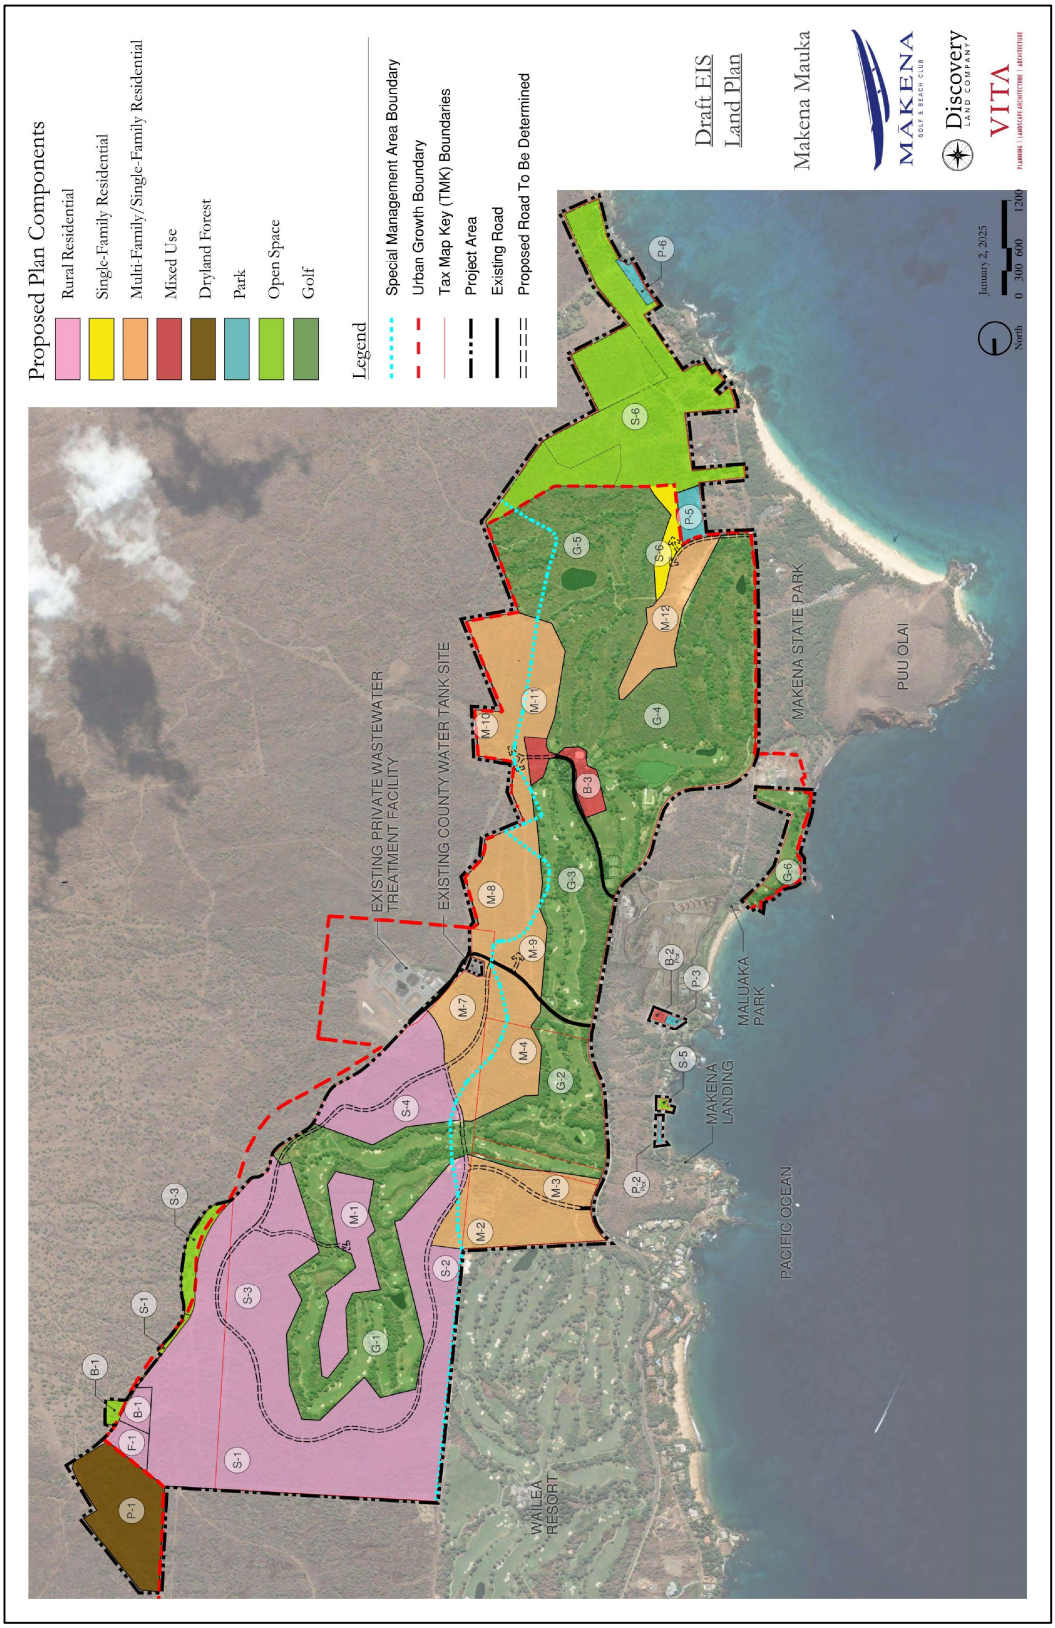

Figure 2: Project Land Plan

II. Existing Conditions

A. Existing Roadways

The major roadways in the project area include Piʻilani Highway, Wailea Ike Drive, Wailea Alanui Drive, and Makena Alanui Drive.

1. Piʻilani Highway

Piʻilani Highway (State Route 31) is a north-south oriented, two- to four-lane, undivided state-owned roadway extending 7.3 miles from Mokulele Highway (State Route 311) and North Kihei Road, in the north, to Wailea Ike Drive in the south. Piʻilani Highway transitions into a two-lane roadway between Kilohana Drive and Wailea Ike Drive. The posted speed limit for the majority of Piʻilani Highway ranges from 40 miles per hour (MPH) to 45 MPH. Near the southern terminus at Wailea Ike Drive, the southbound speed limit is reduced to 20 MPH. Shoulder widths of six to ten feet exist on both sides of Piʻilani Highway. These shoulders are able to be used by cyclists as bike shoulders. At some signalized intersections with dedicated right turn lanes, the bike shoulder transitions into a marked bike lane located between the through lane and dedicated right turn lane.

2. Wailea Ike Drive

Wailea Ike Drive is an east-west oriented, two- to four-lane, County of Maui (COM)-owned, divided roadway extending from Wailea Alanui Drive in the west, to Piʻilani Highway in the east. Median widths vary from six feet near Piʻilani Highway to 100 feet near Wailea Alanui Drive. Wailea Ike Drive intersects Wailea Alanui Drive as a signalized intersection and intersects Piʻilani Highway as a two-lane, uncontrolled intersection where Wailea Ike Drive transitions into Piʻilani Highway at an approximately 90-degree turn. Sidewalks exist on both sides of Wailea Ike Drive. The posted speed limit on Wailea Ike Drive is 30 MPH.

3. Wailea Alanui Drive

Wailea Alanui Drive is a north-south oriented two- to four-lane, divided, COM-owned roadway extending from Kilohana Drive in the north, to Kaukahi Street in the south. In the project area, Wailea Alanui Drive is a four-lane divided roadway from Okolani Drive to Kaukahi Street. A continuous sidewalk exists only on the west side of Wailea Alanui Drive. The posted speed limit on Wailea Alanui Drive is 30 MPH.

4. Makena Alanui Drive

Makena Alanui Drive is a north-south oriented, two-lane, undivided, COM-owned roadway extending from Kaukahi Street in the north, to Makena Keonoio Road, where it transitions into Makena Road. Intersections along Makena Alanui Drive are stop-controlled. Makena Alanui Drive provides access through Makena Town. Sidewalks exist on portions of the west side of Makena Alanui Drive. Sidewalks are missing on segments just south of Makena Road (north), just south of Makena Road (south), and south of the Mākena Golf Course Tennis Club Roadway. There are no sidewalks on the east side of Makena Alanui Drive. A signed and striped bike lane exists on both sides of Makena Alanui Drive from Kaukahi Street to the Mākena Golf Course Tennis Court Driveway. The posted speed limit on Makena Alanui Drive is 30 MPH.

B. Vehicle Peak Hour

Manual intersection turning movement traffic counts were taken at the study intersections during the commuter peak periods on Tuesday, May 9, 2024. From these, the existing peak hour was determined to be 7:30 – 8:30 AM and 3:30 – 4:30 PM.

C. Existing Pedestrian Facilities

Sidewalks exist on both sides of Wailea Ike Drive and on the west side of Wailea Alanui Drive. Sidewalks also exist on west side of Makena Alanui Drive from Kaukahi Street to the Mākena Tennis Courts Driveway, except for an approximate 650-foot segment just south of Mākena Road (South).

The existing pedestrian facilities are shown in Figure 3.

D. Existing Bike Facilities

Marked and signed bike lanes exist on Makena Alanui Drive from Kaukahi Street in the north to the Mākena Tennis Courts Driveway in the south. The existing bike facilities are shown in Figure 3.

E. Existing Transit Facilities

Maui Bus provides one bus route from Kahului to Wailea. Route 10 (Kihei Islander) provides access from Kahului Transit Center to Wailea Ike Drive in Wailea. The Kahului Transit Center was completed on November 20, 2024. Prior to the completion of the Kahului Transit Center, Route 10 stopped at Queen Ka‘ahumanu Shopping Center. A Route 10 bus leaves the Kahului Transit Center every hour from 5:30 AM to 7:30 PM. Route 10 takes two hours to complete a roundtrip beginning and ending at the Kahului Transit Center. There are two stops in the study area: westbound at Wailea Alanui Drive and Okolani Drive and eastbound at Wailea Alanui Drive and Wailea Ike Drive. A bench exists at both bus stops. The existing bus stops are shown in Figure 3.

Figure 3: Existing Pedestrian and Bicycle Facilities

III. Complete Streets

In 2012, the COM adopted Resolution 12-34, establishing a Complete Streets Policy for the County of Maui. Resolution 12-34 requires that, "all roadway projects, including, design, planning, reconstruction, rehabilitation, maintenance, or operations in the County of Maui be balanced and equitable in accommodating and encouraging travel by bicyclists, public transportation vehicles and their passengers, and pedestrians of all ages and abilities in accordance with Complete Streets principles"

The COM Street Design Manual is setup to implement Resolution 12-34 and to encourage the development of transportation facilities or projects that provide safe transportation for all modes and all users within the context of the surrounding community.

There are a few potential and known projects being planned and developed in the vicinity of Mākena Golf & Beach Club. Some of these projects have access off Makena Alanui Drive as it feeds the traffic to Wailea Alanui Drive and eventually to the Pi'ilani Highway. For this reason, Makena Alanui Drive can be categorized as Minor Collector Street, it also provides local access and area circulation.

The December 2018 COM Street Design Manual can be referenced for the COM streets in the public Right-of-Way (ROW). The COM Street Design Manual sets desired widths for different characteristics by Street Type and Surrounding Land Use. The typical cross section for a Minor Collector is shown in Figure 4 and includes the following elements:

- Vehicle Lane: 10-foot wide lanes
- Sidewalk: 6-foot wide sidewalk on both sides of the street
- Bike Lanes: 5-foot wide bike lanes on both sides of the street (Optional)
- Parking Lanes: 8-foot wide on both sides of the street. (Optional)

Figure 3-6: Minor Collector - Typical Cross Section (56-foot ROW)

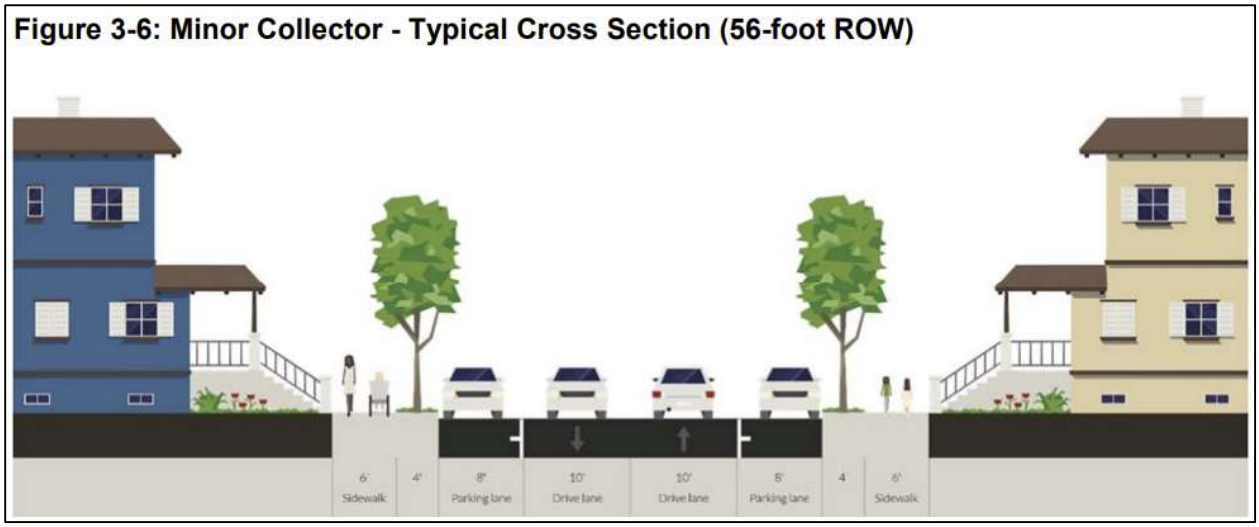

Figure 4: COM Street Design Manual – Minor Collector Typical Section

A. Vehicle Travel Lane

Per the COM Street Design Manual, ten-foot travel lanes are required for minor collectors. Twelve- to fourteen-foot travel lanes exist on Wailea Ike Drive, Wailea Alanui Drive, and Makena Alanui Drive. This meets the minimum ten-foot requirement.

B. Pedestrian Facilities

Per the COM Street Design Manual, six-foot wide sidewalks are required on both sides of the minor collector. A six-foot paved sidewalk existing on the west side of Makena Alanui Drive from Kaukahi Street to the Mākena Tennis Courts Driveway, except for an approximate 650-foot segment from Makena Road (South) approaching the Mākena Golf Course Driveway. There is no sidewalk on the east side of Makena Alanui Drive.

C. Bicycle Facilities

Per the COM Street Design Manual, five-foot wide bike lanes are optional. Six-foot wide bike lanes exist on both sides of Makena Alanui Road from Kaukahi Street to the Mākena Tennis Courts Driveway. There are no marked or signed bike facilities on Wailea Ike Drive or Wailea Alanui Drive.

D. Parking Facilities

Per the COM Street Design Manual, eight-foot wide marked parking lanes are optional. Marked on-street parking does not exist in the project area. There are no plans to include on-street parking.

IV. Future Conditions and Transportation Management Plan

Construction of the development is anticipated to start in Quarter 4 of 2028 and is expected to be completed and occupied in three 10-year phases by 2038, 2048, and 2058. Phase 1 will include all of the workforce housing units, a third of the market-value homes, a recreational multi-use building, an operational multi-use building, and various other smaller buildings. Phases 2 and 3 will include equal volumes of the remaining market value homes in each phase.

A. Future External Multimodal Facilities

Access to the project area will be provided from Makena Alanui Dive, with an internal roadway network connecting to the individual communities within the project. There are four planned vehicle access points to the project (see Figure 2) including:

- The “North Access Road”, an existing gated roadway between Makena Road (South) and Honoiki Street,
- The Mākena Golf Course Road, currently located just south of Honoiki Street,
- The Mākena Tennis Court Road, currently located just south of Mākena Golf Course Road,
- and the “South Access Road”, which will be a new roadway intersecting Makena Alanui Drive across the existing Mākena Beach Parking Lot.

The *Draft Mākena Mauka Traffic Impact Analysis Report* (TIAR) included recommendations to install refuge lanes for the Makena Road (South) and Honoiki Street approaches on Mākena Alanui Drive.

Ordinance 3613 states, “The developer shall provide pedestrian and bicycle access ways within the roadways throughout and fronting the Mākena Resort Area. A schematic plan for pedestrian and bicycle access ways throughout and fronting the Mākena Resort Area shall be submitted to the Department of Planning for consideration by the Maui Planning Commission in conjunction with SMA permit applications.” Mākena Mauka will commit to Ordinance 3613 and install the required improvements. Mākena Mauka is committed to a public beach shuttle connecting the on-site public parking to Maluaka Beach Park. Due to the inclusive amenity programs found within the confines of the Mākena Golf & Beach Club, residents have historically utilized golf carts to navigate their way around the project area. The

following strategies are proposed to provide connectivity and encourage the use of multi-modal transportation that may be incorporated by the project.

- Pedestrian connectivity
    - Construct a six-foot sidewalk on the west side of Makena Alanui Drive at Makena Road (South) the North Access Road to connect the existing sidewalks.
    - Construct a six-foot sidewalk on the east side of Makena Alanui Drive.
    - Construct a six-foot sidewalk on the east side of Wailea Alanui Drive.
- Bicycle connectivity
    - A five-foot bike lane on Wailea Alanui Drive connecting the existing bike lane on Makena Alanui Drive to Wailea Ike Drive.
- Transit
    - Coordinate with Maui Bus Service to seek their interest to expand Route #10 to extend into Makena.
    - Provide bus shelters and benches at existing and new bus stops in the Makena area
    - Commence operations of a public beach shuttle from the Mākena Mauka public parking areas to the nearby beaches.

The project construction is estimated to begin in 2028 with full operation in 2058. There is no specific timeline for implementation at this time. The corresponding improvements will be incrementally done over the project construction.

B. Future Internal Multimodal Facilities for Residents

Roberts Hawai‘i offers shuttles from Kahului Airport to 155 destinations, including hotels in Makena. Mākena Mauka can coordinate with Roberts Hawai‘i to get service from Kahului Airport to the project site. Homeowners will be encouraged to use walking, bicycle, and golf cart paths that are being planned on-site. A beach shuttle will be provided from two (2) internal parking areas to public beach parks in the Makena area. These alternatives will reduce vehicle trips.

Mākena Mauka is planning to reduce the use of private vehicles by providing a pedestrian-friendly layout, complete street designs for internal roadways, integrating a bike network, and creating pedestrian trails to connect to various destinations. A concierge program will offer on-demand shuttle and off-site travel coordination from public parking areas to nearby beaches.

C. Future Internal Multimodal Facilities for Employees and Staff

Employees and staff of Mākena Mauka will generate traffic. This section describes Transportation Demand Management (TDM) Strategies aimed to reduce the project related traffic impacts by employees and staff.

1. Park and Ride

A centralized, off-site park-and-ride facility with shuttle service could be used to reduce vehicle traffic to the project where construction workers drive to a designated park-and-ride facility located outside of the project site. Workers can then be shuttled to the project site. There are two park-and-ride facilities outside of Kihei:

- Kahului Park-and-Ride
    - Located at the northwest corner of Kuihelani Highway (State Route 380) and Pu‘unēnē Avenue, this park-and-ride can be used as a designated spot for workers living in Central

Maui. This facility has 45 marked parking spaces, including four Americans with Disabilities Act (ADA) compliant parking spaces, bicycle and motorcycle parking.

- Ma‘alaea Park-and-Ride
    - Located just east of Honoapi‘ilani Highway on North Kihei Road, this park-and-ride can be used as a designated spot for workers living in West Maui. This facility has approximately 30 marked parking spaces, including two ADA compliant parking spaces.

2. Work Hours

Employers can be encouraged to have flexible work hours that allow for employees to start and end their work shifts during non-peak hours. Staggering work hours allow for employees to start at different times, reducing the number of employees that travel to and from work during the same time periods.

3. Ridesharing and Carpooling

Ridesharing and carpooling should be used to help reduce vehicle traffic. A designated ridesharing and carpooling parking lot can be provided on-site. Ridesharing and carpooling can be incentivized by designating parking stalls or providing cheaper parking rates.

4. Shuttle Service

Shuttle service can be provided from Mākena Mauka to nearby bus stops, nearby destinations, or employee parking lots. Designated shuttle loading and unloading zones should be clearly identified on-site.

V. TMP Management Monitoring During Construction

The owner will monitor the effectiveness of the TMP and TDM strategies during work hours and will be responsible for issues or complaints. The owner will coordinate with the Engineer and HDOT if adjustments are needed to the TMP.

APPENDIX Y

ANALYSIS OF HAWAIʻI STATE PLAN

APPENDIX Y.

Analysis of Project Applicability to Hawai‘i State Plan

Chapter 226, Hawai‘i Revised Statues (HRS), also known as the Hawai‘i State Plan, is a long-range comprehensive plan which serves as a guide for the future long-term development of the State by identifying goals, objectives, policies, and priorities, as well as implementation mechanisms. The Plan consists of three (3) parts. Part I includes the Overall Theme, Goals, Objectives, and Policies; Part II includes Planning, Coordination, and Implementation; and Part III establishes Priority Guidelines. Inasmuch as Part II of the State Plan covers its administrative structure and implementation process, discussion of the Proposed Action's applicability to Part II is not appropriate. Below is an analysis of the project's applicability to Part I and Part III of the Hawai‘i State Plan.

The methodology for the analysis involves examining the project's applicability to the Hawai‘i State Plan's goals, objectives, and policies. "Applicability" refers to a project's need, purpose, and effects, and how these advance or promote a particular set of goals, objectives, and priority guidelines. In assessing the relationship between a proposed action and the Hawai‘i State Plan, an action may be categorized in one of the following groups:

1. **Directly applicable**: the action and its potential effects directly advance or promote the objective, policy, or priority guideline.

   Example: A county project to develop a new water source and related transmission facilities would be directly applicable to the objectives and policies for Facility Systems-Water (HRS 226-16) which states: *(5) Support water supply services to areas experiencing critical water problems.*

2. **Indirectly applicable**: the action and its potential effects indirectly support or advance the objective, policy, or priority guideline.

   Example: The county water source project cited above supports other related objectives and policies for the economy (HRS 226-6, General), which, by example, states: *(9) Strive to achieve a level of construction activity responsive to, and consistent with, state growth objectives.* In this case, the principle purpose of the project was not to create new construction activities, but nonetheless, supports this policy by creating temporary construction activity during the implementation of the project. In this instance, the proposed action may be deemed to be indirectly applicable to the objective and policy of the Hawai‘i State Plan.

3. **Not applicable**: the action and its potential effects have no direct or indirect relationship to the objectives and policies of the Hawai‘i State Plan.

Example: That same county water source improvement project referenced above, may not have direct or indirect linkage to objectives and policies for the economy-Federal Expenditures (HRS 226-9) which states: *(1) Encourage the sustained flow of federal expenditures in Hawaii that generates long-term government civilian employment*. From the standpoint of the agency proposing the water system improvement, and assuming no Federal Funding for the project, there is an unlikely intent that the proposed water source project would be connected to or reliant upon the foregoing policy. Hence, from the standpoint of judiciously applied policy analysis, the proposed action would be considered not applicable to the policy.

In general, a proposed action's applicability to the objectives, policies, and priority guidelines of the Hawai'i State Plan is judged on the basis of the action's direct or indirect relationship to the respective objectives, policies, and priority directions. It is recognized that the categorization of "applicability" is subject to interpretation and should be appropriately considered in the context of local and regional conditions.

Hawai'i State Plan, Chapter 226, HRS Part I. Overall Themes, Goals, Objectives and Policies **Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable**	**DA**	**IA**	**NA**
HRS 226-1: Findings and Purpose			
HRS 226-2: Definitions			
HRS 226-3: Overall Theme			
HRS 226-4: State Goals. In order to guarantee, for the present and future generations, those elements of choice and mobility that insure that individuals and groups may approach their desired levels of self-reliance and self-determination, it shall be the goal of the State to achieve: (1) A strong, viable economy, characterized by stability, diversity, and growth, that enables the fulfillment of the needs and expectations of Hawaii's present and future generations. (2) A desired physical environment, characterized by beauty, cleanliness, quiet, stable natural systems, and uniqueness, that enhances the mental and physical well-being of the people. (3) Physical, social, and economic well-being, for individuals and families in Hawaii, that nourishes a sense of community responsibility, of caring, and of participation in community life.			
Analysis: **The Proposed Action supports the above-noted goal of the Hawai'i State Plan. The Proposed Action will create jobs and encourage spending, both in the short term for construction contractors and supplies, and in the long term with residents and employees. The Proposed Action seeks to support the population by providing resort-style residential accommodations. Through this development, the local economy will benefit from tourism, job creation, and additional spending.** **Furthermore, the Proposed Action has been designed with careful consideration given to community input obtained during the planning process, to complement and enhance existing development within the Makena Resort. Particular attention has been given to the placement of buildings during the design process to arrive at a plan that is believed to be both sensitive and place-appropriate to the surrounding community. A View Analysis, providing "before" and "after" perspectives of the proposed new community from public vantage points, has been prepared to demonstrate the low profile of the project and the maintenance of existing views and open space resources.** **As such, with mitigation measures outlined in the Environmental Impact Statement (EIS) document, including those set forth by land use entitlement conditions, there will be no**			

Hawai'i State Plan, Chapter 226, HRS Part I. Overall Themes, Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
significant adverse impacts on the physical, social, and economic well-being of the community with implementation of the Proposed Action.			
Chapter 226-5 Objective and Policies for Population			
Objective: It shall be the objective in planning for the State's population to guide population growth to be consistent with the achievement of physical, economic and social objectives contained in this chapter.	✓		
Policies:			
(1) Manage population growth statewide in a manner that provides increased opportunities for Hawaii's people to pursue their physical, social, and economic aspirations while recognizing the unique needs of each county.		✓	
(2) Encourage an increase in economic activities and employment opportunities on the neighbor islands consistent with community needs and desires.		✓	
(3) Promote increased opportunities for Hawaii's people to pursue their socio-economic aspirations throughout the islands.		✓	
(4) Encourage research activities and public awareness programs to foster an understanding of Hawaii's limited capacity to accommodate population needs and to address concerns resulting from an increase in Hawaii's population.			✓
(5) Encourage federal actions and coordination among major governmental agencies to promote a more balanced distribution of immigrants among the states, provided that such actions do not prevent the reunion of immediate family members.			✓
(6) Pursue an increase in federal assistance for states with a greater proportion of foreign immigrants relative to their state's population.			✓
(7) Plan the development and availability of land and water resources in a coordinated manner so as to provide for the desired levels of growth in each geographic area.	✓		
Analysis: **The Proposed Action supports the objective and above-noted policies relating to population. The majority of residents of the proposed new master planned residential community are anticipated to be part-time residents on Maui. As such, there will not be a substantial increase in population with implementation of the Proposed Action. In addition, the project will be implemented in an area designated for growth by the Maui Island Plan (MIP) and will be developed concurrently with the infrastructure systems required to service the project. Technical reports for land and water resources have been conducted as part of the environmental review for the Proposed Action and have informed project plans and formulation of appropriate mitigation measures, in conjunction with community consultation.**			
Chapter 226-6 Objectives and policies for the economy – – in general			
Objectives: Planning for the State's economy in general shall be directed toward achievement of the following objectives:			
(1) Increased and diversified employment opportunities to achieve full employment, increased income and job choice, and improved living standards for Hawaii's people, while at the same time stimulating the development and expansion of economic activities capitalizing on defense, dual-use, and science and technology assets, particularly on the neighbor islands where employment opportunities may be limited.		✓	
(2) A steadily growing and diversified economic base that is not overly dependent on a few industries, and includes the development and expansion of industries		✓	

Hawai'i State Plan, Chapter 226, HRS Part I. Overall Themes, Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
on the neighbor islands.			
Policies:			
(1) Promote and encourage entrepreneurship within Hawaii by residents and nonresidents of the State.			✓
(2) Expand Hawaii's national and international marketing, communication, and organizational ties, to increase the State's capacity to adjust to and capitalize upon economic changes and opportunities occurring outside the State.			✓
(3) Promote Hawaii as an attractive market for environmentally and socially sound investment activities that benefit Hawaii's people.			✓
(4) Transform and maintain Hawaii as a place that welcomes and facilitates innovative activity that may lead to commercial opportunities.			✓
(5) Promote innovative activity that may pose initial risks, but ultimately contribute to the economy of Hawaii.			✓
(6) Seek broader outlets for new or expanded Hawaii business investments.			✓
(7) Expand existing markets and penetrate new markets for Hawaii's products and services.			✓
(8) Assure that the basic economic needs of Hawaii's people are maintained in the event of disruptions in overseas transportation.			✓
(9) Strive to achieve a level of construction activity responsive to, and consistent with, state growth objectives.		✓	
(10) Encourage the formation of cooperatives and other favorable marketing arrangements at the local or regional level to assist Hawaii's small scale producers, manufacturers, and distributors.			✓
(11) Encourage labor-intensive activities that are economically satisfying and which offer opportunities for upward mobility.		✓	
(12) Encourage innovative activities that may not be labor-intensive, but may otherwise contribute to the economy of Hawaii.			✓
(13) Foster greater cooperation and coordination between the government and private sectors in developing Hawaii's employment and economic growth opportunities.			✓
(14) Stimulate the development and expansion of economic activities which will benefit areas with substantial or expected employment problems.			✓
(15) Maintain acceptable working conditions and standards for Hawaii's workers.		✓	
(16) Provide equal employment opportunities for all segments of Hawaii's population through affirmative action and nondiscrimination measures.			✓
(17) Stimulate the development and expansion of economic activities capitalizing on defense, dual-use, and science and technology assets, particularly on the neighbor islands where employment opportunities may be limited.			✓
(18) Encourage businesses that have favorable financial multiplier effects within Hawaii's economy, particularly with respect to emerging industries in science and technology.			✓
(19) Promote and protect intangible resources in Hawaii, such as scenic beauty and the aloha spirit, which are vital to a healthy economy.		✓	

Hawai'i State Plan, Chapter 226, HRS Part I. Overall Themes, Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
(20) Increase effective communication between the educational community and the private sector to develop relevant curricula and training programs to meet future employment needs in general, and requirements of new or innovative potential growth industries in particular.			✓
(21) Foster a business climate in Hawaii--including attitudes, tax and regulatory policies, and financial and technical assistance programs-- that is conducive to the expansion of existing enterprises and the creation and attraction of new business and industry.			✓
Analysis: **The Proposed Action supports the objectives and above-noted policies relating to the economy in general. The construction of the proposed master planned residential community will result in short-term economic activity in terms of construction jobs and construction-related spending. The project's location in Makena will afford its residents the opportunity to live in an area known for its natural and scenic beauty. The project will include the development of 109 onsite workforce housing units, providing the opportunity for local families to live and work in the Makena community.**			
Chapter 226-7 Objectives and policies for the economy – – agriculture.			
Objectives: Planning for the State's economy with regard to agriculture shall be directed towards achievement of the following objectives:			
(1) Viability of Hawaii's sugar and pineapple industries.			✓
(2) Growth and development of diversified agriculture throughout the State.	✓		
(3) An agriculture industry that continues to constitute a dynamic and essential component of Hawaii's strategic, economic, and social well-being.			✓
Policies:			
(1) Establish a clear direction for Hawaii's agriculture through stakeholder commitment and advocacy.			✓
(2) Encourage agriculture by making the best use of natural resources.			✓
(3) Provide the governor and the legislature with information and options needed for prudent decision-making for the development of agriculture.			✓
(4) Establish strong relationships between the agricultural and visitor industries for mutual marketing benefits.			✓
(5) Foster increased public awareness and understanding of the contributions and benefits of agriculture as a major sector of Hawaii's economy.			✓
(6) Seek the enactment and retention of federal and state legislation that benefits Hawaii's agricultural industries.			✓
(7) Strengthen diversified agriculture by developing an effective promotion, marketing, and distribution system between Hawaii's food producers and consumers in the State, nation, and world.			✓
(8) Support research and development activities that strengthen economic productivity in agriculture, stimulate greater efficiency, and enhance the development of new products and agricultural by-products.			✓
(9) Enhance agricultural growth by providing public incentives and encouraging private initiatives.			✓

Hawai'i State Plan, Chapter 226, HRS Part I. Overall Themes, Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
(10) Assure the availability of agriculturally suitable lands with adequate water to accommodate present and future needs.			✓
(11) Increase the attractiveness and opportunities for an agricultural education and livelihood.			✓
(12) In addition to the State's priority on food, expand Hawaii's agricultural base by promoting growth and development of flowers, tropical fruits and plants, livestock, feed grains, forestry, food crops, aquaculture, and other potential enterprises.			✓
(13) Promote economically competitive activities that increase Hawaii's agricultural self-sufficiency, including the increased purchase and use of Hawaii-grown food and food products by residents, businesses, and governmental bodies as defined under section 103D-104.			✓
(14) Promote and assist in the establishment of sound financial programs for diversified agriculture.			✓
(15) Institute and support programs and activities to assist the entry of displaced agricultural workers into alternative agricultural or other employment.			✓
(16) Facilitate the transition of agricultural lands in economically nonfeasible agricultural production to economically viable agricultural uses.			✓
(17) Perpetuate, promote, and increase use of traditional Hawaiian farming systems, such as the use of loko i'a, māla, and irrigated lo'i, and growth of traditional Hawaiian crops, such as kalo, 'uala, and 'ulu.	✓		
(18) Increase and develop small-scale farms.	✓		
***An*alysis: The Proposed Action supports the above-noted objective and policies relating to agriculture. The proposed land plan incorporates the Nāulu Farm, a non-commercial 2-acre farm operated by the Applicant's 'Ōiwi Resources Stewardship Department. Operations include an animal farm, a greenhouse dedicated to cultivating native species, a vegetable and fruit garden, an aquaponics system, and educational programs. The greenhouse propagates native species for replanting areas in the project site. The farm's operations are subsidized by a portion of the homeowners' association fees.**			
Chapter 226-8 Objective and policies for the economy – – visitor industry.			
Objective: Planning for the State's economy with regard to the visitor industry shall be directed towards the achievement of the objective of a visitor industry that constitutes a major component of steady growth for Hawaii's economy.			✓
Policies:			
(1) Support and assist in the promotion of Hawaii's visitor attractions and facilities.			✓
(2) Ensure that visitor industry activities are in keeping with the social, economic, and physical needs and aspirations of Hawaii's people.			✓
(3) Improve the quality of existing visitor destination areas by utilizing Hawaii's strengths in science and technology.			✓
(4) Encourage cooperation and coordination between the government and private sectors in developing and maintaining well-designed, adequately serviced visitor industry and related developments which are sensitive to neighboring communities and activities.			✓

Hawai'i State Plan, Chapter 226, HRS Part I. Overall Themes, Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
(5) Develop the industry in a manner that will continue to provide new job opportunities and steady employment for Hawaii's people.			✓
(6) Provide opportunities for Hawaii's people to obtain job training and education that will allow for upward mobility within the visitor industry.			✓
(7) Foster a recognition of the contribution of the visitor industry to Hawaii's economy and the need to perpetuate the aloha spirit.			✓
(8) Foster an understanding by visitors of the aloha spirit and of the unique and sensitive character of Hawaii's cultures and values.			✓
Analysis: **The Proposed Action is not applicable to the objective and policies related to the visitor industry.**			
Chapter 226-9 Objective and policies for the economy – – federal expenditures.			
Objective: Planning for the State's economy with regard to federal expenditures shall be directed towards achievement of the objective of a stable federal investment base as an integral component of Hawaii's economy.			✓
Policies:			
(1) Encourage the sustained flow of federal expenditures in Hawaii that generates long-term government civilian employment;			✓
(2) Promote Hawaii's supportive role in national defense, in a manner consistent with Hawaii's social, environmental, and cultural goals by building upon dual-use and defense applications to develop thriving ocean engineering, aerospace research and development, and related dual-use technology sectors in Hawaii's economy;			✓
(3) Promote the development of federally supported activities in Hawaii that respect statewide economic concerns, are sensitive to community needs, and minimize adverse impacts on Hawaii's environment;			✓
(4) Increase opportunities for entry and advancement of Hawaii's people into federal government service;			✓
(5) Promote federal use of local commodities, services, and facilities available in Hawaii;			✓
(6) Strengthen federal-state-county communication and coordination in all federal activities that affect Hawaii; and			✓
(7) Pursue the return of federally controlled lands in Hawaii that are not required for either the defense of the nation or for other purposes of national importance, and promote the mutually beneficial exchanges of land between federal agencies, the State, and the counties.			✓
Analysis: **The Proposed Action is not directly or indirectly applicable to the above objective and policies related to federal expenditures.**			
Chapter 226-10 Objective and policies for the economy – – potential growth and innovative activities.			
Objective: Planning for the State's economy with regard to potential growth and innovative activities shall be directed towards achievement of the objective of development and expansion of potential growth and innovative activities that serve to increase and diversify Hawaii's economic base.			✓
Policies:			

Hawai'i State Plan, Chapter 226, HRS Part I. Overall Themes, Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
(1) Facilitate investment and employment growth in economic activities that have the potential to expand and diversify Hawaii's economy, including but not limited to diversified agriculture, aquaculture, renewable energy development, creative media, health care, and science and technology-based sectors;			✓
(2) Facilitate investment in innovative activity that may pose risks or be less labor-intensive than other traditional business activity, but if successful, will generate revenue in Hawaii through the export of services or products or substitution of imported services or products;			✓
(3) Encourage entrepreneurship in innovative activity by academic researchers and instructors who may not have the background, skill, or initial inclination to commercially exploit their discoveries or achievements;			✓
(4) Recognize that innovative activity is not exclusively dependent upon individuals with advanced formal education, but that many self-taught, motivated individuals are able, willing, sufficiently knowledgeable, and equipped with the attitude necessary to undertake innovative activity;			✓
(5) Increase the opportunities for investors in innovative activity and talent engaged in innovative activity to personally meet and interact at cultural, art, entertainment, culinary, athletic, or visitor-oriented events without a business focus;			✓
(6) Expand Hawaii's capacity to attract and service international programs and activities that generate employment for Hawaii's people;			✓
(7) Enhance and promote Hawaii's role as a center for international relations, trade, finance, services, technology, education, culture, and the arts;			✓
(8) Accelerate research and development of new energy-related industries based on wind, solar, ocean, underground resources, and solid waste;			✓
(9) Promote Hawaii's geographic, environmental, social, and technological advantages to attract new or innovative economic activities into the State;			✓
(10) Provide public incentives and encourage private initiative to attract new or innovative industries that best support Hawaii's social, economic, physical, and environmental objectives;			✓
(11) Increase research and the development of ocean-related economic activities such as mining, food production, and scientific research;			✓
(12) Develop, promote, and support research and educational and training programs that will enhance Hawaii's ability to attract and develop economic activities of benefit to Hawaii;			✓
(13) Foster a broader public recognition and understanding of the potential benefits of new or innovative growth-oriented industry in Hawaii;			✓
(14) Encourage the development and implementation of joint federal and state initiatives to attract federal programs and projects that will support Hawaii's social, economic, physical, and environmental objectives;			✓
(15) Increase research and development of businesses and services in the telecommunications and information industries;			✓
(16) Foster the research and development of nonfossil fuel and energy efficient modes of transportation; and			✓
(17) Recognize and promote health care and health care information technology			✓

Hawai'i State Plan, Chapter 226, HRS Part I. Overall Themes, Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
as growth industries.			
Analysis: **The Proposed Action is not directly or indirectly applicable to the above objective and policies related to potential growth and innovative activities.**			
Chapter 226-10.5 Objectives and policies for the economy – – information industry.			
Objective: Planning for the State's economy with regard to telecommunications and information technology shall be directed toward recognizing that broadband and wireless communication capability and infrastructure are foundations for an innovative economy and positioning Hawaii as a leader in broadband and wireless communications and applications in the Pacific Region.			✓
Policies:			
(1) Promote efforts to attain the highest speeds of electronic and wireless communication within Hawaii and between Hawaii and the world, and make high speed communication available to all residents and businesses in Hawaii;			✓
(2) Encourage the continued development and expansion of the telecommunications infrastructure serving Hawaii to accommodate future growth and innovation in Hawaii's economy;			✓
(3) Facilitate the development of new or innovative business and service ventures in the information industry which will provide employment opportunities for the people of Hawaii;			✓
(4) Encourage mainland- and foreign-based companies of all sizes, whether information technology-focused or not, to allow their principals, employees, or contractors to live in and work from Hawaii, using technology to communicate with their headquarters, offices, or customers located out-of-state;			✓
(5) Encourage greater cooperation between the public and private sectors in developing and maintaining a well-designed information industry;			✓
(6) Ensure that the development of new businesses and services in the industry are in keeping with the social, economic, and physical needs and aspirations of Hawaii's people;			✓
(7) Provide opportunities for Hawaii's people to obtain job training and education that will allow for upward mobility within the information industry;			✓
(8) Foster a recognition of the contribution of the information industry to Hawaii's economy; and			✓
(9) Assist in the promotion of Hawaii as a broker, creator, and processor of information in the Pacific.			✓
Analysis: **The Proposed Action is not directly or indirectly applicable to the above objective and policies related to telecommunications and information technology.**			
Chapter 226-11 Objectives and policies for the physical environment – – land based, shoreline, and marine resources.			
Objectives: Planning for the State's physical environment with regard to land-based, shoreline, and marine resources shall be directed towards achievement of the following objectives:			
(1) Prudent use of Hawaii's land-based, shoreline, and marine resources.	✓		
(2) Effective protection of Hawaii's unique and fragile environmental resources.	✓		
Policies:			

Hawai'i State Plan, Chapter 226, HRS Part I. Overall Themes, Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
(1) Exercise an overall conservation ethic in the use of Hawaii's natural resources.	✓		
(2) Ensure compatibility between land-based and water-based activities and natural resources and ecological systems.		✓	
(3) Take into account the physical attributes of areas when planning and designing activities and facilities.	✓		
(4) Manage natural resources and environs to encourage their beneficial and multiple use without generating costly or irreparable environmental damage.		✓	
(5) Consider multiple uses in watershed areas, provided such uses do not detrimentally affect water quality and recharge functions.		✓	
(6) Encourage the protection of rare or endangered plant and animal species and habitats native to Hawaii.	✓		
(7) Provide public incentives that encourage private actions to protect significant natural resources from degradation or unnecessary depletion.			✓
(8) Pursue compatible relationships among activities, facilities, and natural resources.	✓		
(9) Promote increased accessibility and prudent use of inland and shoreline areas for public recreational, educational, and scientific purposes.	✓		
Analysis: **The Proposed Action supports the above-noted objective and policies relating to land-based, shoreline, and marine resources. The Proposed Action has been designed to respect existing topography to the extent practicable in order to minimize cut and fill activity and potential grading-related impacts on the land. In addition, a comprehensive program of Best Management Practices (BMPs) and Low-Impact Development (LID) techniques will be used to minimize construction-related impacts and stormwater runoff. Furthermore, portions of the overall land plan are proposed to be left in their current undeveloped state with the aim of preserving native dryland forest habitats so as to not disrupt natural processes and environs. In addition, open space areas within the project area will be preserved and portions of these areas will be made accessible through hiking trails. Lastly, pursuant to conditions attached to the land use entitlement approvals for the Proposed Action, the Applicant will continue to maintain the Makena Landing and Maluaka beach parks, and construct additional beach parking stalls in the area.**			
Chapter 226-12 Objective and policies for the physical environment – – scenic, natural beauty, and historic resources.			
Objective: Planning for the State's physical environment shall be directed towards achievement of the objective of enhancement of Hawaii's scenic assets, natural beauty, and multi-cultural/historical resources.	✓		
Policies:			
(1) Promote the preservation and restoration of significant natural and historic resources.	✓		
(2) Provide incentives to maintain and enhance historic, cultural, and scenic amenities.			✓
(3) Promote the preservation of views and vistas to enhance the visual and aesthetic enjoyment of mountains, ocean, scenic landscapes, and other natural features.	✓		
(4) Protect those special areas, structures, and elements that are an integral and functional part of Hawaii's ethnic and cultural heritage.	✓		

Hawai'i State Plan, Chapter 226, HRS Part I. Overall Themes, Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
(5) Encourage the design of developments and activities that complement the natural beauty of the islands.	✓		
Analysis: **The Proposed Action supports the objective and above-noted policies relating to scenic, natural, and historic resources. An Archaeological Literature Review and Surface Survey (ALRSS) was carried out as part of the environmental review process to identify and properly document any significant historic or cultural sites within the project area. Through this process, a program of avoidance, preservation, and monitoring was recommended and will be adhered to in order to ensure that the identified historic resources will not be negatively impacted by the Proposed Action. In addition, a Cultural Impact Assessment (CIA) was carried out to ensure that any potential impacts on cultural practices or resources within or in vicinity of the project site are appropriately mitigated.** **In addition, the Proposed Action has been designed with careful consideration given to community input obtained during the planning process, to complement and enhance existing development within the Makena Resort. Particular attention has been given to the placement of buildings during the design process to arrive at a plan that is believed to be both sensitive and place appropriate to the surrounding community. A View Analysis, providing "before" and "after" perspectives of the proposed new community from public vantage points, has been prepared to demonstrate the low profile of the project and the preservation of scenic and open space resources. A dryland forest ecosystem within the project area will also be preserved as part of the Proposed Action.**			
Chapter 226-13 Objectives and policies for the physical environment – – land, air, and water quality.			
Objectives: Planning for the State's physical environment with regard to land, air, and water quality shall be directed towards achievement of the following objectives.			
(1) Maintenance and pursuit of improved quality in Hawaii's land, air, and water resources.	✓		
(2) Greater public awareness and appreciation of Hawaii's environmental resources.	✓		
Policies:			
(1) Foster educational activities that promote a better understanding of Hawaii's limited environmental resources.		✓	
(2) Promote the proper management of Hawaii's land and water resources.		✓	
(3) Promote effective measures to achieve desired quality in Hawaii's surface, ground, and coastal waters.		✓	
(4) Encourage actions to maintain or improve aural and air quality levels to enhance the health and well-being of Hawaii's people.	✓		
(5) Reduce the threat to life and property from erosion, flooding, tsunamis, hurricanes, earthquakes, volcanic eruptions, and other natural or man-induced hazards and disasters.		✓	
(6) Encourage design and construction practices that enhance the physical qualities of Hawaii's communities.		✓	
(7) Encourage urban developments in close proximity to existing services and facilities.	✓		
(8) Foster recognition of the importance and value of the land, air, and water resources to Hawaii's people, their cultures and visitors.	✓		

Hawai'i State Plan, Chapter 226, HRS Part I. Overall Themes, Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
Analysis: The Proposed Action supports the above-noted objective and policies relating to land, air, and water quality. The project will be implemented in an area designated for growth by the MIP and developed consistent with infrastructure systems to service the project. In addition, the project's location, mostly mauka of Makena Alanui Road, places the proposed development components outside of the tsunami evacuation zone, flood hazard zones, and the projected 3.2-foot sea-level rise hazard area. Although a portion of the land plan located along the shoreline does lie within these areas, no vertical development is planned to occur within this area. Furthermore, as part of the environmental review process, studies relative to air quality, noise, and nearshore marine water quality were carried out. Based on the impact assessment of the project on these resources in Chapter II of the EIS, with the implementation of the proposed mitigation measures, as applicable, the Proposed Action is not expected to result in significant adverse environmental impacts.			
Chapter 226-14 Objective and policies for facility systems – – in general.			
Objective: Planning for the State's facility systems in general shall be directed towards achievement of the objective of water, transportation, waste disposal, and energy and telecommunication systems that support statewide social, economic, and physical objectives.	✓		
Policies:			
(1) Accommodate the needs of Hawaii's people through coordination of facility systems and capital improvement priorities in consonance with state and county plans.			✓
(2) Encourage flexibility in the design and development of facility systems to promote prudent use of resources and accommodate changing public demands and priorities.			✓
(3) Ensure that required facility systems can be supported within resource capacities and at reasonable cost to the user.	✓		
(4) Pursue alternative methods of financing programs and projects and cost-saving techniques in the planning, construction, and maintenance of facility systems.			✓
Analysis: **The Proposed Action is directly applicable to the above-noted objective and policy related to facility systems in general. The Preliminary Engineering Report (PER) was prepared to ensure that the Proposed Action would not burden facility systems.**			
Chapter 226-15 Objectives and policies for facility systems – – solid and liquid waste.			
Objectives: Planning for the State's facility systems with regard to solid and liquid wastes shall be directed towards the achievement of the following objectives:			
(1) Maintenance of basic public health and sanitation standards relating to treatment and disposal of solid and liquid wastes.		✓	
(2) Provision of adequate sewerage facilities for physical and economic activities that alleviate problems in housing, employment, mobility, and other areas.		✓	
Policies:			
(1) Encourage the adequate development of sewerage facilities that complement planned growth.		✓	
(2) Promote re-use and recycling to reduce solid and liquid wastes and employ a conservation ethic.		✓	
(3) Promote research to develop more efficient and economical treatment and			✓

Hawai'i State Plan, Chapter 226, HRS Part I. Overall Themes, Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
disposal of solid and liquid wastes.			
Analysis: **The Proposed Action supports the objectives and above-noted policies relating to solid and liquid waste. The Proposed Action will be serviced by the existing, privately-owned and maintained Makena Wastewater Treatment Facility, which has adequate wastewater capacity to serve the projected demand generated by the project. In addition, solid waste generated by the project's uses will be collected by a private refuse service provider and disposed at the Central Maui Landfill. In addition, recycle bins/facilities will be located throughout the proposed new community to divert solid waste from landfill disposal.**			
Chapter 226-16 Objective and policies for facility systems – – water.			
Objective: Planning for the State's facility systems with regard to water shall be directed towards achievement of the objective of the provision of water to adequately accommodate domestic, agricultural, commercial, industrial, recreational, and other needs within resource capacities.	✓		
Policies:			
(1) Coordinate development of land use activities with existing and potential water supply.	✓		
(2) Support research and development of alternative methods to meet future water requirements well in advance of anticipated needs.			✓
(3) Reclaim and encourage the productive use of runoff water and wastewater discharges.	✓		
(4) Assist in improving the quality, efficiency, service, and storage capabilities of water systems for domestic and agricultural use.			✓
(5) Support water supply services to areas experiencing critical water problems.			✓
(6) Promote water conservation programs and practices in government, private industry, and the general public to help ensure adequate water to meet long-term needs.		✓	
Analysis: **The Proposed Action supports the objective and above-noted policies relating to water. As discussed in Chapter II of the EIS, new private groundwater wells will be developed to provide the necessary drinking water for the proposed market units. Use of these wells will limit use of the County's Central Maui water system to the workforce housing units. Water conservation measures will be implemented throughout the new community in line with the guiding sustainability principles for the project.**			
Chapter 226-17 Objectives and policies for facility systems – – transportation.			
Objectives: Planning for the State's facility systems with regard to transportation shall be directed towards the achievement of the following objectives:			
(1) An integrated multi-modal transportation system that services statewide needs and promotes the efficient, economical, safe, and convenient movement of people and goods.	✓		
(2) A statewide transportation system that is consistent with and will accommodate planned growth objectives throughout the State.		✓	
Policies:			
(1) Design, program, and develop a multi-modal system in conformance with desired growth and physical development as stated in this chapter;	✓		

Hawai'i State Plan, Chapter 226, HRS Part I. Overall Themes, Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
(2) Coordinate state, county, federal, and private transportation activities and programs toward the achievement of statewide objectives;			✓
(3) Encourage a reasonable distribution of financial responsibilities for transportation among participating governmental and private parties;		✓	
(4) Provide for improved accessibility to shipping, docking, and storage facilities;			✓
(5) Promote a reasonable level and variety of mass transportation services that adequately meet statewide and community needs;			✓
(6) Encourage transportation systems that serve to accommodate present and future development needs of communities;	✓		
(7) Encourage a variety of carriers to offer increased opportunities and advantages to interisland movement of people and goods;			✓
(8) Increase the capacities of airport and harbor systems and support facilities to effectively accommodate transshipment and storage needs;			✓
(9) Encourage the development of transportation systems and programs which would assist statewide economic growth and diversification;			✓
(10) Encourage the design and development of transportation systems sensitive to the needs of affected communities and the quality of Hawaii's natural environment;		✓	
(11) Encourage safe and convenient use of low-cost, energy-efficient, non-polluting means of transportation;	✓		
(12) Coordinate intergovernmental land use and transportation planning activities to ensure the timely delivery of supporting transportation infrastructure in order to accommodate planned growth objectives; and			✓
(13) Encourage diversification of transportation modes and infrastructure to promote alternate fuels and energy efficiency.		✓	
Analysis: **The Proposed Action supports the above-noted objective and policies relating to transportation. As part of the project, an integrated network of golf cart paths will be developed within the new community for the residents' use in an effort to reduce localized vehicular traffic in the Makena area. In addition, new walking and bicycle pathways will integrate the new community with existing pathways in Makena Resort to encourage safe, non-polluting means of local transportation. Also, the Applicant will be contributing its fair share towards regional roadway improvements in accordance with conditions of previously approved entitlements for the project area.**			
Chapter 226-18 Objectives and policies for facility systems – – energy.			
Objectives: Planning for the State's facility systems with regard to energy shall be directed toward the achievement of the following objectives, giving due consideration to all:			
(1) Dependable, efficient, and economical statewide energy systems capable of supporting the needs of the people;		✓	
(2) Increased energy security and self-sufficiency through the reduction and ultimate elimination of Hawaii's dependence on imported fuels for electrical generation and ground transportation.		✓	
(3) Greater diversification of energy generation in the face of threats to Hawaii's energy supplies and systems;		✓	

Hawai'i State Plan, Chapter 226, HRS Part I. Overall Themes, Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
(4) Reduction, avoidance, or sequestration of greenhouse gas emissions from energy supply and use; and			✓
(5) Utility models that make the social and financial interests of Hawaii's utility customers a priority.			✓
Policies:			
(b) To achieve the energy objectives, it shall be the policy of this State to ensure the short- and long-term provision of adequate, reasonably priced, and dependable energy services to accommodate demand.			✓
(1) Support research and development as well as promote the use of renewable energy sources;		✓	
(2) Ensure that the combination of energy supplies and energy-saving systems is sufficient to support the demands of growth;			✓
(3) Base decisions of least-cost supply-side and demand-side energy resource options on a comparison of their total costs and benefits when a least-cost is determined by a reasonably comprehensive, quantitative, and qualitative accounting of their long-term, direct and indirect economic, environmental, social, cultural, and public health costs and benefits;			✓
(4) Promote all cost-effective conservation of power and fuel supplies through measures, including:		✓	
(A) Development of cost-effective demand-side management programs;			✓
(B) Education;			✓
(C) Adoption of energy-efficient practices and technologies; and		✓	
(D) Increasing energy efficiency and decreasing energy use in public infrastructure		✓	
(5) Ensure, to the extent that new supply-side resources are needed, that the development or expansion of energy systems uses the least-cost energy supply option and maximizes efficient technologies; and			✓
(6) Support research, development, demonstration, and use of energy efficiency, load management, and other demand-side management programs, practices, and technologies;		✓	
(7) Promote alternate fuels and transportation energy efficiency;		✓	
(8) Support actions that reduce, avoid, or sequester greenhouse gases in utility, transportation, and industrial sector applications;			✓
(9) Support actions that reduce, avoid, or sequester Hawaii's greenhouse gas emissions through agriculture and forestry initiatives;			✓
(10) Provide priority handling and processing for all state and county permits required for renewable energy projects;			✓
(11) Ensure that liquefied natural gas is used only as a cost-effective transitional, limited-term replacement of petroleum for electricity generation and does not impede the development and use of other cost-effective renewable energy sources; and			✓

Hawai'i State Plan, Chapter 226, HRS Part I. Overall Themes, Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
(12) Promote the development of indigenous geothermal energy resources that are located on public trust land as an affordable and reliable source of firm power for Hawaii.			✓
Analysis: **The Proposed Action supports the above-noted objectives and policies relating to energy. A Sustainability Report has been prepared to ensure that the Proposed Action is designed and implemented in accordance with overall guiding sustainability principles. Through the implementation of combined sustainability strategies, the project will seek to reduce its overall environmental impact. For example, the new Mākena Mauka community will require Leadership in Energy and Design (LEED) certification for all buildings 500 square feet and larger.**			
Chapter 226-18.5 Objectives and policies for facility systems – – telecommunications.			
Objective: Planning for the State's telecommunications facility systems shall be directed towards the achievement of dependable, efficient, and economical statewide telecommunications systems capable of supporting the needs of the people.		✓	
Policies:			
(b) To achieve the telecommunications objective, it shall be the policy of this State to ensure the provision of adequate, reasonably priced, and dependable telecommunications services to accommodate demand.			✓
(1) Facilitate research and development of telecommunications systems and resources;			✓
(2) Encourage public and private sector efforts to develop means for adequate, ongoing telecommunications planning;		✓	
(3) Promote efficient management and use of existing telecommunications systems and services; and		✓	
(4) Facilitate the development of education and training of telecommunications personnel.			✓
Analysis: **The Proposed Action supports the objective and above-noted policies relating to telecommunications. The Applicant's design team will coordinate closely with relevant utility providers to connect the new community to existing telecommunication infrastructure. The cost of connection and any necessary upgrades to existing systems will be paid by the Applicant.**			
Chapter 226-19 Objectives and policies for socio-cultural advancement – – housing.			
Objectives: Planning for the State's socio-cultural advancement with regard to housing shall be directed toward the achievement of the following objectives:			
(1) Greater opportunities for Hawaii's people to secure reasonably priced, safe, sanitary, and livable homes, located in suitable environments that satisfactorily accommodate the needs and desires of families and individuals, through collaboration and cooperation between government and nonprofit and for-profit developers to ensure that more affordable housing is made available to very low-, low- and moderate-income segments of Hawaii's population.	✓		
(2) The orderly development of residential areas sensitive to community needs and other land uses.	✓		
(3) The development and provision of affordable rental housing by the State to meet the housing needs of Hawaii's people.	✓		

Hawai'i State Plan, Chapter 226, HRS Part I. Overall Themes, Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
Policies:			
(1) Effectively accommodate the housing needs of Hawaii's people.	✓		
(2) Stimulate and promote feasible approaches that increase housing choices for low-income, moderate-income, and gap-group households.	✓		
(3) Increase homeownership and rental opportunities and choices in terms of quality, location, cost, densities, style, and size of housing.	✓		
(4) Promote appropriate improvement, rehabilitation, and maintenance of existing housing units and residential areas.			✓
(5) Promote design and location of housing developments taking into account the physical setting, accessibility to public facilities and services, and other concerns of existing communities and surrounding areas.	✓		
(6) Facilitate the use of available vacant, developable, and underutilized urban lands for housing.	✓		
(7) Foster a variety of lifestyles traditional to Hawaii through the design and maintenance of neighborhoods that reflect the culture and values of the community.			✓
(8) Promote research and development of methods to reduce the cost of housing construction in Hawaii.			✓
Analysis: The Proposed Action supports the objectives and above-noted policies relating to housing. The project aims to develop a new master planned residential community in an area designated as appropriate for this type of development by the Maui Island Plan, and amid similar communities. In addition, as part of the project, residential workforce housing units will be developed in an effort to provide opportunities for local families to reside in the Makena region in proximity to resort employment opportunities. The Proposed Action, in part, facilitates the use of available vacant, developable, and underutilized urban lands for housing.			
Chapter 226-20 Objectives and policies for socio-cultural advancement – – health.			
Objectives: Planning for the State's socio-cultural advancement with regard to health shall be directed towards achievement of the following objectives:			
(1) Fulfillment of basic individual health needs of the general public.			✓
(2) Maintenance of sanitary and environmentally healthful conditions in Hawaii's communities.	✓		
(3) Elimination of health disparities by identifying and addressing social determinants of health.			✓
Policies:			
(1) Provide adequate and accessible services and facilities for prevention and treatment of physical and mental health problems, including substance abuse.			✓
(2) Encourage improved cooperation among public and private sectors in the provision of health care to accommodate the total health needs of individuals throughout the State.			✓
(3) Encourage public and private efforts to develop and promote statewide and local strategies to reduce health care and related insurance costs.			✓

Hawai'i State Plan, Chapter 226, HRS Part I. Overall Themes, Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
(4) Foster an awareness of the need for personal health maintenance and preventive health care through education and other measures.			✓
(5) Provide programs, services, and activities that ensure environmentally healthful and sanitary conditions.			✓
(6) Improve the State's capabilities in preventing contamination by pesticides and other potentially hazardous substances through increased coordination, education, monitoring, and enforcement.			✓
(7) Prioritize programs, services, interventions, and activities that address identified social determinants of health to improve native Hawaiian health and well-being consistent with the United States Congress' declaration of policy as codified in title 42 United States Code section 11702, and to reduce health disparities of disproportionately affected demographics, including native Hawaiians, other Pacific Islanders, and Filipinos. The prioritization of affected demographic groups other than native Hawaiians may be reviewed every ten years and revised based on the best available epidemiological and public health data.			✓
Analysis: **The Proposed Action is directly applicable to the objective related to sanitary and environmentally healthful conditions in Hawai'i's communities. During the construction phase of the Proposed Action, the developer will be required to mitigate potential impacts that could be harmful to health, such as fugitive dust and noise. During the Proposed Action's operational phase, the homeowners' association will be required to maintain community infrastructure.**			
Chapter 226-21 Objectives and policies for Socio-cultural advancement – – education.			
Objective: Planning for the State's socio-cultural advancement with regard to education shall be directed towards achievement of the objective of the provision of a variety of educational opportunities to enable individuals to fulfill their needs, responsibilities, and aspirations.		✓	
Policies:			
(1) Support educational programs and activities that enhance personal development, physical fitness, recreation, and cultural pursuits of all groups.			✓
(2) Ensure the provision of adequate and accessible educational services and facilities that are designed to meet individual and community needs.		✓	
(3) Provide appropriate educational opportunities for groups with special needs.			✓
(4) Promote educational programs which enhance understanding of Hawaii's cultural heritage.		✓	
(5) Provide higher educational opportunities that enable Hawaii's people to adapt to changing employment demands.			✓
(6) Assist individuals, especially those experiencing critical employment problems or barriers, or undergoing employment transitions, by providing appropriate employment training programs and other related educational opportunities.			✓
(7) Promote programs and activities that facilitate the acquisition of basic skills, such as reading, writing, computing, listening, speaking, and reasoning.			✓
(8) Emphasize quality educational programs in Hawaii's institutions to promote academic excellence.			✓
(9) Support research programs and activities that enhance the education programs of the State.			✓

Hawai'i State Plan, Chapter 226, HRS Part I. Overall Themes, Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
Analysis: **The Proposed Action supports the objective and above-noted policies relating to education. The Proposed Action is indirectly applicable to the objective and policies for the socio-cultural advancement of education. For each residential unit built, a school impact fee will be levied, which will go towards the development of educational facilities and programs. The Applicant will coordinate with the State Department of Education to determine the educational impact fee for the project in consideration of previously approved entitlement conditions. In addition, the proposed development includes the construction of a community gathering place, which will support opportunities to share knowledge about Hawai'i's cultural heritage.**			
Chapter 226-22 Objective and policies for socio-cultural advancement – – social services.			
Objective: Planning for the State's socio-cultural advancement with regard to social services shall be directed towards the achievement of the objective of improved public and private social services and activities that enable individuals, families, and groups to become more self-reliant and confident to improve their well-being.			✓
Policies:			
(1) Assist individuals, especially those in need of attaining a minimally adequate standard of living and those confronted by social and economic hardship conditions, through social services and activities within the State's fiscal capacities.			✓
(2) Promote coordination and integrative approaches among public and private agencies and programs to jointly address social problems that will enable individuals, families, and groups to deal effectively with social problems and to enhance their participation in society.			✓
(3) Facilitate the adjustment of new residents, especially recently arrived immigrants, into Hawaii's communities.			✓
(4) Promote alternatives to institutional care in the provision of long-term care for elder and disabled populations.			✓
(5) Support public and private efforts to prevent domestic abuse and child molestation, and assist victims of abuse and neglect.			✓
(6) Promote programs which assist people in need of family planning services to enable them to meet their needs.			✓
Analysis: **The Proposed Action is not directly or indirectly applicable to the above objective and policies related to social services.**			
Chapter 226-23 Objective and policies for socio-cultural advancement – – leisure.			
Objective: Planning for the State's socio-cultural advancement with regard to leisure shall be directed towards the achievement of the objective of the adequate provision of resources to accommodate diverse cultural, artistic, and recreational needs for present and future generations.	✓		
Policies:			
(1) Foster and preserve Hawaii's multi-cultural heritage through supportive cultural, artistic, recreational, and humanities-oriented programs and activities.	✓		
(2) Provide a wide range of activities and facilities to fulfill the cultural, artistic, and recreational needs of all diverse and special groups effectively and efficiently.	✓		
(3) Enhance the enjoyment of recreational experiences through safety and security measures, educational opportunities, and improved facility design and	✓		

Hawai'i State Plan, Chapter 226, HRS Part I. Overall Themes, Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
maintenance.			
(4) Promote the recreational and educational potential of natural resources having scenic, open space, cultural, historical, geological, or biological values while ensuring that their inherent values are preserved.	✓		
(5) Ensure opportunities for everyone to use and enjoy Hawaii's recreational resources.	✓		
(6) Assure the availability of sufficient resources to provide for future cultural, artistic, and recreational needs.		✓	
(7) Provide adequate and accessible physical fitness programs to promote the physical and mental well-being of Hawaii's people.			✓
(8) Increase opportunities for appreciation and participation in the creative arts, including the literary, theatrical, visual, musical, folk, and traditional art forms.		✓	
(9) Encourage the development of creative expression in the artistic disciplines to enable all segments of Hawaii's population to participate in the creative arts.			✓
(10) Assure adequate access to significant natural and cultural resources in public ownership.			✓
Analysis: **The Proposed Action supports the objective and above-noted policies relating to leisure. The Proposed Action involves development of a new master-planned community that will provide for the preservation of open space resources as well as the ongoing maintenance/expansion of park facilities, creation of walking trails, installation of additional beach parking stalls, and construction of new recreational facilities for residents, including a new golf course clubhouse, new driving range, and improvements to the South Golf Course, which is currently closed. The Applicant also intends to create a community gathering space to facilitate social cultural learning and advancement within Makena, which will be based on input received from ongoing outreach with community stakeholders.**			
Chapter 226-24 Objective and policies for socio-cultural advancement – – individual rights and personal well-being.			
<u>Objective</u>: Planning for the State's socio-cultural advancement with regard to individual rights and personal well-being shall be directed towards achievement of the objective of increased opportunities and protection of individual rights to enable individuals to fulfill their socio-economic needs and aspirations.			✓
<u>Policies</u>:			
(1) Provide effective services and activities that protect individuals from criminal acts and unfair practices and that alleviate the consequences of criminal acts in order to foster a safe and secure environment.			✓
(2) Uphold and protect the national and state constitutional rights of every individual.			✓
(3) Assure access to, and availability of, legal assistance, consumer protection, and other public services which strive to attain social justice.			✓
(4) Ensure equal opportunities for individual participation in society.			✓
Analysis: **The Proposed Action is not directly or indirectly applicable to the above objective and policies related to individual rights and personal well-being.**			
Chapter 226-25 Objective and policies for socio-cultural advancement – – culture.			

Hawai'i State Plan, Chapter 226, HRS Part I. Overall Themes, Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
Objective: Planning for the State's socio-cultural advancement with regard to culture shall be directed toward the achievement of the objective of enhancement of cultural identities, traditions, values, customs, and arts of Hawaii's people.	✓		
Policies:			
(1) Foster increased knowledge and understanding of Hawaii's ethnic and cultural heritages and the history of Hawaii.		✓	
(2) Support activities and conditions that promote cultural values, customs, and arts that enrich the lifestyles of Hawaii's people and which are sensitive and responsive to family and community needs.	✓		
(3) Encourage increased awareness of the effects of proposed public and private actions on the integrity and quality of cultural and community lifestyles in Hawaii.		✓	
(4) Encourage the essence of the aloha spirit in people's daily activities to promote harmonious relationships among Hawaii's people and visitors.		✓	
Analysis: **The Proposed Action supports the objective and above-noted policy relating to culture. An ALRSS and CIA were carried out for the EIS document to ensure that potential impacts to existing historic resources and cultural practices are appropriately mitigated. These studies will foster increased knowledge and understanding of Hawai'i's ethnic and cultural heritages and the history of the Makena area. The proposed community will incorporate facilities and programs to promote awareness among residents of cultural values, customs, and arts that enrich the lifestyle of Hawai'i's people.**			
Chapter 226-26 Objectives and policies for socio-cultural advancement – – public safety.			
Objectives: Planning for the State's socio-cultural advancement with regard to public safety shall be directed towards the achievement of the following objectives:			
(1) Assurance of public safety and adequate protection of life and property for all people.			✓
(2) Optimum organizational readiness and capability in all phases of emergency management to maintain the strength, resources, and social and economic well-being of the community in the event of civil disruptions, wars, natural disasters, and other major disturbances.			✓
(3) Promotion of a sense of community responsibility for the welfare and safety of Hawaii's people.			✓
Policies (Public Safety):			
(1) Ensure that public safety programs are effective and responsive to community needs.			✓
(2) Encourage increased community awareness and participation in public safety programs.			✓
Policies (Public Safety-Criminal Justice):			
(1) Support criminal justice programs aimed at preventing and curtailing criminal activities.			✓
(2) Develop a coordinated, systematic approach to criminal justice administration among all criminal justice agencies.			✓
(3) Provide a range of correctional resources which may include facilities and alternatives to traditional incarceration in order to address the varied security needs of the community and successfully reintegrate offenders into the			✓

Hawai'i State Plan, Chapter 226, HRS Part I. Overall Themes, Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
community.			
Policies (Public Safety – Emergency Management):			
(1) Ensure that responsible organizations are in a proper state of readiness to respond to major war-related, natural, or technological disasters and civil disturbances at all times.			✓
(2) Enhance the coordination between emergency management programs throughout the State.			✓
Analysis: **The Proposed Action is not directly or indirectly applicable to the above objectives and policies related to public safety.**			
Chapter 226-27 Objectives and policies for socio-cultural advancement – – government.			
Objectives: Planning the State's socio-cultural advancement with regard to government shall be directed towards the achievement of the following objectives:			
(1) Efficient, effective, and responsive government services at all levels in the State.			✓
(2) Fiscal integrity, responsibility, and efficiency in the state government and county governments.			✓
Policies:			
(1) Provide for necessary public goods and services not assumed by the private sector.			✓
(2) Pursue an openness and responsiveness in government that permits the flow of public information, interaction, and response.			✓
(3) Minimize the size of government to that necessary to be effective.			✓
(4) Stimulate the responsibility in citizens to productively participate in government for a better Hawaii.			✓
(5) Assure that government attitudes, actions, and services are sensitive to community needs and concerns.			✓
(6) Provide for a balanced fiscal budget.			✓
(7) Improve the fiscal budgeting and management system of the State.			✓
(8) Promote the consolidation of state and county governmental functions to increase the effective and efficient delivery of government programs and services and to eliminate duplicative services wherever feasible.			✓
Analysis: **The Proposed Action is not directly or indirectly applicable to the above objectives and policies related to an efficient government.**			

Hawai'i State Plan, Chapter 226, HRS Part III. Priority Guidelines Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	N/A
Chapter 226-101: Purpose. The purpose of this part is to establish overall priority guidelines to address areas of statewide concern.			
Chapter 226-102: Overall direction. The State shall strive to improve the quality of life for Hawaii's present and future population through the pursuit of desirable courses of action in seven major areas of statewide concern which merit priority attention: economic development, population growth and land resource management, affordable housing, crime and criminal justice, quality education, principles of sustainability, and climate change adaptation.			
Chapter 226-103: Economic priority guidelines.			
(a) Priority guidelines to stimulate economic growth and encourage business expansion and development to provide needed jobs for Hawaii's people and achieve a stable and diversified economy:	✓		
(1) Seek a variety of means to increase the availability of investment capital for new and expanding enterprises.	✓		
(A) Encourage investments which:			
(i) Reflect long term commitments to the State;	✓		
(ii) Rely on economic linkages within the local economy;		✓	
(iii) Diversify the economy;			✓
(iv) Reinvest in the local economy;		✓	
(v) Are sensitive to community needs and priorities; and		✓	
(vi) Demonstrate a commitment to provide management opportunities to Hawaii residents; and		✓	
(B) Encourage investments in innovative activities that have a nexus to the State, such as:			✓
(i) Present or former residents acting as entrepreneurs or principals;			✓
(ii) Academic support from an institution of higher education in Hawaii;			✓
(iii) Investment interest from Hawaii residents;			✓
(iv) Resources unique to Hawaii that are required for innovative activity; and			✓
(v) Complementary or supportive industries or government programs or projects.			✓
(2) Encourage the expansion of technological research to assist industry development and support the development and commercialization of technological advancements.			✓
(3) Improve the quality, accessibility, and range of services provided by government to business, including data and reference services and assistance in complying with governmental regulations.			✓
(4) Seek to ensure that state business tax and labor laws and administrative policies are equitable, rational, and predictable.			✓
(5) Streamline the processes for building and development permit and review, and telecommunication infrastructure installation approval and eliminate or consolidate other burdensome or duplicative governmental requirements imposed on business, where scientific evidence indicates that public health, safety and welfare would not be adversely affected.			✓
(6) Encourage the formation of cooperatives and other favorable marketing or distribution arrangements at the regional or local level to assist Hawaii's small-scale producers, manufacturers, and distributors.			✓

Hawai'i State Plan, Chapter 226, HRS Part III. Priority Guidelines Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	N/A
(7) Continue to seek legislation to protect Hawaii from transportation interruptions between Hawaii and the continental United States.			✓
(8) Provide public incentives and encourage private initiative to develop and attract industries which promise long-term growth potentials and which have the following characteristics:			
(A) An industry that can take advantage of Hawaii's unique location and available physical and human resources.		✓	
(B) A clean industry that would have minimal adverse effects on Hawaii's environment.			✓
(C) An industry that is willing to hire and train Hawaii's people to meet the industry's labor needs at all levels of employment.		✓	
(D) An industry that would provide reasonable income and steady employment.		✓	
(9) Support and encourage, through educational and technical assistance programs and other means, expanded opportunities for employee ownership and participation in Hawaii business.			✓
(10) Enhance the quality of Hawaii's labor force and develop and maintain career opportunities for Hawaii's people through the following actions:			
(A) Expand vocational training in diversified agriculture, aquaculture, information industry, and other areas where growth is desired and feasible.			✓
(B) Encourage more effective career counseling and guidance in high schools and post-secondary institutions to inform students of present and future career opportunities.			✓
(C) Allocate educational resources to career areas where high employment is expected and where growth of new industries is desired.			✓
(D) Promote career opportunities in all industries for Hawaii's people by encouraging firms doing business in the State to hire residents.			✓
(E) Promote greater public and private sector cooperation in determining industrial training needs and in developing relevant curricula and on-the-job training opportunities.			✓
(F) Provide retraining programs and other support services to assist entry of displaced workers into alternative employment.			✓
(b) Priority guidelines to promote the economic health and quality of the visitor industry:		✓	
(1) Promote visitor satisfaction by fostering an environment which enhances the Aloha Spirit and minimizes inconveniences to Hawaii's residents and visitors.		✓	
(2) Encourage the development and maintenance of well-designed, adequately serviced hotels and resort destination areas which are sensitive to neighboring communities and activities and which provide for adequate shoreline setbacks and beach access.			✓
(3) Support appropriate capital improvements to enhance the quality of existing resort destination areas and provide incentives to encourage investment in upgrading, repair, and maintenance of visitor facilities.			✓
(4) Encourage visitor industry practices and activities which respect, preserve, and enhance Hawaii's significant natural, scenic, historic, and cultural resources.			✓
(5) Develop and maintain career opportunities in the visitor industry for Hawaii's people, with emphasis on managerial positions.			✓
(6) Support and coordinate tourism promotion abroad to enhance Hawaii's share of existing and potential visitor markets.			✓
(7) Maintain and encourage a more favorable resort investment climate consistent with the objectives of this chapter.			✓

Hawai'i State Plan, Chapter 226, HRS Part III. Priority Guidelines Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	N/A
(8) Support law enforcement activities that provide a safer environment for both visitors and residents alike.			✓
(9) Coordinate visitor industry activities and promotions to business visitors through the state network of advanced data communication techniques.			✓
(c) Priority guidelines to promote the continued viability of the sugar and pineapple industries:			✓
(1) Provide adequate agricultural lands to support the economic viability of the sugar and pineapple industries.			✓
(2) Continue efforts to maintain federal support to provide stable sugar prices high enough to allow profitable operations in Hawaii.			✓
(3) Support research and development, as appropriate, to improve the quality and production of sugar and pineapple crops.			✓
(d) Priority guidelines to promote the growth and development of diversified agriculture and aquaculture:		✓	
(1) Identify, conserve, and protect agricultural and aquacultural lands of importance and initiate affirmative and comprehensive programs to promote economically productive agricultural and aquacultural uses of such lands.			✓
(2) Assist in providing adequate, reasonably priced water for agricultural activities.			✓
(3) Encourage public and private investment to increase water supply and to improve transmission, storage, and irrigation facilities in support of diversified agriculture and aquaculture.			✓
(4) Assist in the formation and operation of production and marketing associations and cooperatives to reduce production and marketing costs.			✓
(5) Encourage and assist with the development of a waterborne and airborne freight and cargo system capable of meeting the needs of Hawaii's agricultural community.			✓
(6) Seek favorable freight rates for Hawaii's agricultural products from interisland and overseas transportation operators.			✓
(7) Encourage the development and expansion of agricultural and aquacultural activities which offer long-term economic growth potential and employment opportunities.			✓
(8) Continue the development of agricultural parks and other programs to assist small independent farmers in securing agricultural lands and loans.			✓
(9) Require agricultural uses in agricultural subdivisions and closely monitor the uses in these subdivisions.			✓
(10) Support the continuation of land currently in use for diversified agriculture.		✓	
(11) Encourage residents and visitors to support Hawaii's farmers by purchasing locally grown food and food products.			✓
(e) Priority guidelines for water use and development:	✓		
(1) Maintain and improve water conservation programs to reduce the overall water consumption rate.		✓	
(2) Encourage the improvement of irrigation technology and promote the use of nonpotable water for agricultural and landscaping purposes.	✓		
(3) Increase the support for research and development of economically feasible alternative water sources.			✓
(4) Explore alternative funding sources and approaches to support future water development programs and water system improvements.			✓
(f) Priority guidelines for energy use and development:		✓	
(1) Encourage the development, demonstration, and commercialization of		✓	

Hawai'i State Plan, Chapter 226, HRS Part III. Priority Guidelines Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	N/A
renewable energy sources.			
(2) Initiate, maintain, and improve energy conservation programs aimed at reducing energy waste and increasing public awareness of the need to conserve energy.			✓
(3) Provide incentives to encourage the use of energy conserving technology in residential, industrial, and other buildings.			✓
(4) Encourage the development and use of energy conserving and cost-efficient transportation systems.		✓	
(g) Priority guidelines to promote the development of the information industry:			✓
(1) Establish an information network, with an emphasis on broadband and wireless infrastructure and capability that will serve as the foundation of and catalyst for overall economic growth and diversification in Hawaii.			✓
(2) Encourage the development of services such as financial data processing, a products and services exchange, foreign language translations, telemarketing, teleconferencing, a twenty-four-hour international stock exchange, international banking, and a Pacific Rim management center.			✓
(3) Encourage the development of small businesses in the information field such as software development; the development of new information systems, peripherals, and applications; data conversion and data entry services; and home or cottage services such as computer programming, secretarial, and accounting services.			✓
(4) Encourage the development or expansion of educational and training opportunities for residents in the information and telecommunications fields.			✓
(5) Encourage research activities, including legal research in the information and telecommunications fields.			✓
(6) Support promotional activities to market Hawaii's information industry services.			✓
(7) Encourage the location or co-location of telecommunication or wireless information relay facilities in the community, including public areas, where scientific evidence indicates that the public health, safety, and welfare would not be adversely affected.			✓
Analysis: **The Proposed Action supports the above-noted priority guidelines relating to the economy. The Proposed Action seeks to stimulate economic growth and health by developing a resort-oriented master-planned community in a location designated as appropriate for such growth by the MIP. Through this Proposed Action, the local economy will benefit from job creation and resident spending. The development of additional beach parking as part of the Proposed Action promotes visitor satisfaction and helps to minimize inconveniences to the Native Hawaiian community. In addition, the project's location mauka of Makena Alanui Road supports protection of the shoreline and beach access. The proposed land plan incorporates the Nāulu Farm, which is operated by the Applicant's 'Ōiwi Resources Stewardship Department, supporting the continuation of land being used for diversified agriculture. The project area will be served by the privately-owned and maintained Makena Wastewater Reclamation Facility and will utilize reclaimed wastewater for irrigation of common area landscaping and fire flow purposes.**			
Chapter 226-104: Population growth and land resources priority guidelines.			
(a) Priority guidelines to effect desired statewide growth and distribution:	✓		
(1) Encourage planning and resource management to insure that population growth rates throughout the State are consistent with available and planned resource capacities and reflect the needs and desires of Hawaii's people.	✓		
(2) Manage a growth rate for Hawaii's economy that will parallel future employment needs for Hawaii's people.			✓

Hawai'i State Plan, Chapter 226, HRS Part III. Priority Guidelines Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	N/A
(3) Ensure that adequate support services and facilities are provided to accommodate the desired distribution of future growth throughout the State.	✓		
(4) Encourage major state and federal investments and services to promote economic development and private investment to the neighbor islands, as appropriate.			✓
(5) Explore the possibility of making available urban land, low-interest loans, and housing subsidies to encourage the provision of housing to support selective economic and population growth on the neighbor islands.			✓
(6) Seek federal funds and other funding sources outside the State for research, program development, and training to provide future employment opportunities on the neighbor islands.			✓
(7) Support the development of high technology parks on the neighbor islands.			✓
(b) Priority guidelines for regional growth distribution and land resource utilization:	✓		
(1) Encourage urban growth primarily to existing urban areas where adequate public facilities are already available or can be provided with reasonable public expenditures, and away from areas where other important benefits are present, such as protection of important agricultural land or preservation of lifestyles.	✓		
(2) Make available marginal or nonessential agricultural lands for appropriate urban uses while maintaining agricultural lands of importance in the agricultural district.	✓		
(3) Restrict development when drafting of water would result in exceeding the sustainable yield or in significantly diminishing the recharge capacity of any groundwater area.			✓
(4) Encourage restriction of new urban development in areas where water is insufficient from any source for both agricultural and domestic use.			✓
(5) In order to preserve green belts, give priority to state capital-improvement funds which encourage location of urban development within existing urban areas except where compelling public interest dictates development of a noncontiguous new urban core.			✓
(6) Seek participation from the private sector for the cost of building infrastructure and utilities, and maintaining open spaces.	✓		
(7) Pursue rehabilitation of appropriate urban areas.			✓
(8) Support the redevelopment of Kakaako into a viable residential, industrial, and commercial community.			✓
(9) Direct future urban development away from critical environmental areas or impose mitigating measures so that negative impacts on the environment would be minimized.			✓
(10) Identify critical environmental areas in Hawaii to include but not be limited to the following: watershed and recharge areas; wildlife habitats (on land and in the ocean); areas with endangered species of plants and wildlife; natural streams and water bodies; scenic and recreational shoreline resources; open space and natural areas; historic and cultural sites; areas particularly sensitive to reduction in water and air quality; and scenic resources.		✓	
(11) Identify all areas where priority should be given to preserving rural character and lifestyle.			✓
(12) Utilize Hawaii's limited land resources wisely, providing adequate land to accommodate projected population and economic growth needs while ensuring the protection of the environment and the availability of the shoreline, conservation lands, and other limited resources for future	✓		

Hawai'i State Plan, Chapter 226, HRS Part III. Priority Guidelines Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	N/A
generations.			
(13) Protect and enhance Hawaii's shoreline, open spaces, and scenic resources.		✓	
Analysis: **The Proposed Action supports the above-noted priority guidelines relating to population growth and land resources. The Proposed Action seeks to support the population by providing a resort-oriented master-planned community in a location designated as appropriate for such growth by the MIP. The majority of residents of the proposed new community are anticipated to be part-time residents on Maui. As such, there will not be a substantial increase in population with implementation of the Proposed Action. In addition, the project will fund and construct all necessary infrastructure systems needed to service the project.**			
Chapter 226-105: Crime and criminal justice.			
Priority guidelines in the area of crime and criminal justice:			✓
(1) Support law enforcement activities and other criminal justice efforts that are directed to provide a safer environment.			✓
(2) Target state and local resources on efforts to reduce the incidence of violent crime and on programs relating to the apprehension and prosecution of repeat offenders.			✓
(3) Support community and neighborhood program initiatives that enable residents to assist law enforcement agencies in preventing criminal activities.			✓
(4) Reduce overcrowding or substandard conditions in correctional facilities through a comprehensive approach among all criminal justice agencies which may include sentencing law revisions and use of alternative sanctions other than incarceration for persons who pose no danger to their community.			✓
(5) Provide a range of appropriate sanctions for juvenile offenders, including community-based programs and other alternative sanctions.			✓
(6) Increase public and private efforts to assist witnesses and victims of crimes and to minimize the costs of victimization.			✓
Analysis: **The Proposed Action is not directly or indirectly applicable to the above priority guidelines related to crime and criminal justice.**			
Chapter 226-106: Affordable housing.			
Priority guidelines for the provision of affordable housing:	✓		
(1) Seek to use marginal or nonessential agricultural land and public land to meet housing needs of low- and moderate-income and gap-group households.			✓
(2) Encourage the use of alternative construction and development methods as a means of reducing production costs.			✓
(3) Improve information and analysis relative to land availability and suitability for housing.			✓
(4) Create incentives for development which would increase home ownership and rental opportunities for Hawaii's low- and moderate-income households, gap-group households, and residents with special needs.			✓
(5) Encourage continued support for government or private housing programs that provide low interest mortgages to Hawaii's people for the purchase of initial owner-occupied housing.			✓
(6) Encourage public and private sector cooperation in the development of rental housing alternatives.	✓		
(7) Encourage improved coordination between various agencies and levels of government to deal with housing policies and regulations.			✓
(8) Give higher priority to the provision of quality housing that is affordable for Hawaii's residents and less priority to development of housing intended			✓

Hawai'i State Plan, Chapter 226, HRS Part III. Priority Guidelines Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	N/A
primarily for individuals outside of Hawaii.			
Analysis: **The Proposed Action supports the above-noted priority guidelines relating to affordable housing. As part of the project, onsite workforce housing units will be developed in an effort to provide opportunities for local families to reside in the Makena region in proximity to resort employment opportunities.**			
Chapter 226-107: Quality education.			
Priority guidelines to promote quality education:		✓	
(1) Pursue effective programs which reflect the varied district, school, and student needs to strengthen basic skills achievement;			✓
(2) Continue emphasis on general education "core" requirements to provide common background to students and essential support to other university programs;			✓
(3) Initiate efforts to improve the quality of education by improving the capabilities of the education work force;			✓
(4) Promote increased opportunities for greater autonomy and flexibility of educational institutions in their decision making responsibilities;			✓
(5) Increase and improve the use of information technology in education by the availability of telecommunications equipment for:			
(A) The electronic exchange of information;			✓
(B) Statewide electronic mail; and			✓
(C) Access to the Internet.			✓
(6) Encourage programs that increase the public's awareness and understanding of the impact of information technologies on our lives;			✓
(7) Pursue the establishment of Hawaii's public and private universities and colleges as research and training centers of the Pacific;			✓
(8) Develop resources and programs for early childhood education;		✓	
(9) Explore alternatives for funding and delivery of educational services to improve the overall quality of education; and		✓	
(10) Strengthen and expand educational programs and services for students with special needs.		✓	
Analysis: **The Proposed Action supports the above-noted priority guidelines relating to education. A school impact fee will be levied against each residential unit, which is anticipated to go towards development of school and education facilities. As such, the Proposed Action is indirectly applicable to the development of school resources and facilities to promote quality education. The Applicant will coordinate with the State Department of Education to determine the educational impact fee for the project in consonance with previously approved entitlement conditions.**			
CHAPTER 226-108: Sustainability			
Priority guidelines and principles to promote sustainability shall include:	✓		
(1) Encouraging balanced economic, social, community, and environmental priorities;	✓		
(2) Encouraging planning that respects and promotes living within the natural resources and limits of the State;	✓		
(3) Promoting a diversified and dynamic economy;			✓
(4) Encouraging respect for the host culture;		✓	
(5) Promoting decisions based on meeting the needs of the present without compromising the needs of future generations;			✓
(6) Considering the principles of the ahupua'a system; and			✓

Hawai'i State Plan, Chapter 226, HRS Part III. Priority Guidelines Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	N/A
(7) Emphasizing that everyone, including individuals, families, communities, businesses, and government, has the responsibility for achieving a sustainable Hawaii.			✓
Analysis: The Proposed Action supports the above-noted priority guidelines relating to sustainability. The Proposed Action has been designed in a way that balances economic, social, community, and environmental priorities. As previously discussed, the Proposed Action will create jobs and encourage spending, both in the short term for construction contractors and supplies, and in the long term with resort employees. The development of workforce housing units will provide an opportunity for families to reside in the Makena region in proximity to resort employment opportunities. The project has been designed such that environmental impacts will be appropriately mitigated. In addition, a Sustainability Report has been prepared to ensure that the Proposed Action is designed and implemented in accordance with overall guiding sustainability principles. Through the implementation of combined sustainability strategies, the project will seek to reduce its overall environmental impact. For example, the new Mākena Mauka community will require LEED certification for all buildings 500 square feet and larger. The Proposed Action has been designed with the preservation of Makena's natural resources, such as water, in mind, and these resources will not be excessively burdened by the project.			
CHAPTER 226-109: Climate change adaptation			
Priority guidelines and principles to promote climate change adaptation shall include:	✓		
(1) Ensure that Hawaii's people are educated, informed, and aware of the impacts climate change may have on their communities;			✓
(2) Encourage community stewardship groups and local stakeholders to participate in planning and implementation of climate change policies;			✓
(3) Invest in continued monitoring and research of Hawaii's climate and the impacts of climate change on the State;			✓
(4) Consider native Hawaiian traditional knowledge and practices in planning for the impacts of climate change;		✓	
(5) Encourage the preservation and restoration of natural landscape features, such as coral reefs, beaches and dunes, forests, streams, floodplains, and wetlands, that have the inherent capacity to avoid, minimize, or mitigate the impacts of climate change;	✓		
(6) Explore adaptation strategies that moderate harm or exploit beneficial opportunities in response to actual or expected climate change impacts to the natural and built environments;		✓	
(7) Promote sector resilience in areas such as water, roads, airports, and public health, by encouraging the identification of climate change threats, assessment of potential consequences, and evaluation of adaptation options;		✓	
(8) Foster cross-jurisdictional collaboration between county, state, and federal agencies and partnerships between government and private entities and other nongovernmental entities, including nonprofit entities;			✓
(9) Use management and implementation approaches that encourage the continual collection, evaluation, and integration of new information and strategies into new and existing practices, policies, and plans; and			✓
(10) Encourage planning and management of the natural and built environments that effectively integrate climate change policy.	✓		
Analysis: **The Proposed Action supports the above-noted priority guidelines relating to climate change adaptation. As part of the environmental review process, technical studies related to assessing climate change resiliency have been completed, including a Sustainability Report and an Air Quality and Climate Change Study. A Water Quality Assessment has also been conducted to determine the impact, if any, the proposed development would have on the nearshore environment. Appropriate mitigation measures will be implemented, including a comprehensive**			

Hawai'i State Plan, Chapter 226, HRS Part III. Priority Guidelines Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	N/A
program of BMPs and LID measures to minimize potential impacts related to runoff. In addition, the Proposed Action has been evaluated in the context of anticipated long-term sea-level rise to ensure the Proposed Action will not be significantly adversely affected by long-term climate change projections.			

APPENDIX Z

ANALYSIS OF COUNTYWIDE POLICY PLAN

APPENDIX Z.

Analysis of Project Applicability to Countywide Policy Plan

The Countywide Policy Plan was adopted in March 2010 and is a comprehensive policy document for the islands of Maui County to the year 2030. The plan replaces the *General Plan of the County of Maui 1990 Update* and provides the policy framework for the development of the forthcoming Maui Island Plan as well as for updating the nine (9) detailed Community Plans.

The Countywide Policy Plan provides broad goals, objectives, policies, and implementing actions that portray the desired direction of the County's future. Goals are intended to describe a desirable condition of the County by the year 2030 and are intentionally general. Objectives tend to be more specific and may be regarded as milestones to achieve the larger goals. Policies are not intended as regulations, but instead provide a general guideline for County decision makers, departments, and collaborating organizations toward the attainment of goals and objectives. Implementing actions are specific tasks, procedures, programs, or techniques that carry out policy.

Discussion of how the Proposed Action conforms to the relevant goals, objectives, policies, and implementing actions of the Countywide Policy Plan is provided below. The methodology for assessing a project's relationship to the Countywide Policy Plan involves examining the project's applicability to the Plan's goals, objectives, and policies. "Applicability" refers to a project's need, purpose, and effects, and how they advance or promote a particular set of goals, objectives and policies. In assessing the relationship between a proposed action and the Countywide Policy Plan, an action may be categorized in one of the following groups:

1. **Directly applicable:** the action and its potential effects directly advance, promote, or affect the relevant goal, objective, or policy.

   Example: A County project to develop a new water source and related transmission facilities would be directly applicable to improving physical infrastructure. The relevant objective states: *"Improve water systems to assure access to sustainable, clean, reliable, and affordable sources of water*" (Objective I.1). A policy within this objective category states: *"Ensure that adequate supplies of water are available prior to approval of subdivision or construction documents"* (Policy I.1.a).

   In this instance, the proposed action is considered to be directly applicable to the cited objective and policy.

2. **Indirectly applicable:** the action and its potential effects indirectly support, advance, or affect the objective, policy, or priority guideline.

   Example: The county water source project cited above supports the objective to: *"Improve land use management and implement a directed-growth strategy"* (Objective J.1). A related policy encompassed by this objective, states: *"Direct new development in and*

around communities with existing infrastructure and service capacity, and protect natural, scenic, shoreline, and cultural resources" (Policy J.1.h). In this case, the principle purpose of the project is not to create source specifically intended to improve land use management. Nonetheless, the proposed action indirectly supports the Countywide Policy Plan's directives relating to appropriate locations for new development.

3. **Not applicable:** the action and its potential effects have no direct or indirect relationship to the objectives and policies of the Countywide Policy Plan.

Example: The county water source improvement project referenced above may not have direct or indirect linkage to Objective D.1, which states: *"In cooperation with the Federal and State governments and nonprofit agencies, broaden access to social and healthcare services and expand options to improve the overall wellness of the people of Maui County"*. Hence, from a policy analysis and linkage standpoint, the proposed action would be considered not applicable to this set of objectives and policies.

It is recognized that policy analysis is subject to interpretation and is best considered in the context of the proposed action's local and regional conditions.

COUNTYWIDE POLICY PLAN (Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable)	DA	IA	NA
A. PROTECT THE NATURAL ENVIRONMENT			
Goal: Maui County's natural environment and distinctive open spaces will be preserved, managed, and cared for in perpetuity.	✓		
Objective:			
(1) Improve the opportunity to experience the natural beauty and native biodiversity of the islands for present and future generations.	✓		
Policies:			
(a) Perpetuate native Hawaiian biodiversity by preventing the introduction of invasive species, containing or eliminating existing noxious pests, and protecting critical habitat areas.		✓	
(b) Preserve and reestablish indigenous and endemic species' habitats and their connectivity.		✓	
(c) Restore and protect forests, wetlands, watersheds, and stream flows, and guard against wildfires, flooding, and erosion.	✓		
(d) Protect baseline stream flows for perennial streams, and support policies that ensure adequate stream flow to support Native Hawaiian aquatic species, traditional kalo cultivation, and self-sustaining ahupua'a.		✓	
(e) Protect undeveloped beaches, dunes, and coastal ecosystems, and restore natural shoreline processes.		✓	
(f) Protect the natural state and integrity of unique terrain, valued natural environments, and geological features.		✓	
(g) Preserve and provide ongoing care for important scenic vistas, view planes, landscapes, and open-space resources.		✓	
(h) Expand coordination with the State and nonprofit agencies and their volunteers to reduce invasive species, replant indigenous species, and identify critical habitat.		✓	

COUNTYWIDE POLICY PLAN (Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable)	DA	IA	NA
Implementing Actions:			
(a) Develop island-wide networks of greenways, watercourses, and habitat corridors.			✓
Analysis: **The Proposed Action supports the goal, objective, and above-noted policies relating to preservation of Maui's natural environment and distinctive open spaces. The Proposed Action has been designed with careful consideration given to community input obtained during the planning process to complement and enhance existing development within the Mākena Resort. Particular attention has been given during the design process to the placement of buildings to arrive at a plan that is both sensitive and place-appropriate to the surrounding community. A View Analysis, providing "before" and "after" perspectives of the proposed new community from public vantage points, has been prepared to demonstrate the low profile of the project. The Proposed Action also involves protecting an existing dryland forest, preserving the habitat of indigenous and endemic species, and maintaining open space resources in the project area.**			
Objective:			
(2) Improve the quality of environmentally sensitive, locally valued natural resources and native ecology of each island.	✓		
Policies:			
(a) Protect and restore nearshore reef environments and water quality.		✓	
(b) Protect marine resources and valued wildlife.		✓	
(c) Improve the connection between urban environments and the natural landscape, and incorporate natural features of the land into urban design.	✓		
(d) Utilize land-conservation tools to ensure the permanence of valued open spaces.	✓		
(e) Mitigate the negative effects of upland uses on coastal wetlands, marine life, and coral reefs.	✓		
(f) Strengthen coastal-zone management, re-naturalization of shorelines, where possible, and filtration or treatment of urban and agricultural runoff.		✓	
(g) Regulate the use and maintenance of stormwater-treatment systems that incorporate the use of native vegetation and mimic natural systems.	✓		
(h) Advocate for stronger regulation of fishing, boating, cruise ship, and ecotourism activities.			✓
(i) Restore watersheds and aquifer-recharge areas to healthy and productive status, and increase public knowledge about the importance of watershed stewardship, water conservation, and groundwater protection.			✓
Implementing Actions:			
(a) Develop regulations to minimize runoff of pollutants into nearshore waters and reduce nonpoint and point source pollution.			✓
Analysis: **The Proposed Action supports the objective and above-noted policies relating to the improvement of environmentally sensitive, locally valued natural resources and native ecology. As part of the environmental review process, a Water Quality Assessment and Marine Biological Survey have been conducted to assess potential impacts from the project on the nearshore environment. A comprehensive program of Best Management Practices (BMPs) and a drainage plan inclusive of Low Impact Development (LID) techniques will be used to minimize the potential for construction and post-construction-related drainage impacts. The Proposed Action also sets out to preserve an area of dryland forest within the project area, which supports the native ecology of the area.**			
Objective:			
(3) Improve the stewardship of the natural environment.	✓		
Policies:			
(a) Preserve and protect natural resources with significant scenic, economic,		✓	

COUNTYWIDE POLICY PLAN (Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable)	DA	IA	NA
cultural, environmental, or recreational value.			
(b) Improve communication, coordination, and collaboration among government agencies, nonprofit organizations, communities, individuals, and land owners that work for the protection of the natural environment.			✓
(c) Evaluate development to assess potential short-term and long-term impacts on land, air, aquatic, and marine environments.		✓	
(d) Improve efforts to mitigate and plan for the impact of natural disasters, human influenced emergencies, and global warming.		✓	
(e) Regulate access to sensitive ecological sites and landscapes.	✓		
(f) Reduce air, noise, light, land, and water pollution, and reduce Maui County's contribution to global climate change.		✓	
(g) Plan and prepare for and educate visitors and residents about the possible effects of global warming.			✓
(h) Provide public access to beaches and shorelines for recreational and cultural purposes where appropriate.	✓		
(i) Educate the construction and landscape industries and property owners about the use of best management practices to prevent erosion and nonpoint source pollution.		✓	
(j) Support the acquisition of resources with scenic, environmental, and recreational value, and encumber their use.			✓
(k) Improve enforcement activities relating to the natural environment.			✓
(l) For each shoreline community, identify and prioritize beach-conservation objectives, and develop action plans for their implementation.			✓
Implementing Actions:			✓
(a) Document, record, and monitor existing conditions, populations, and locations of flora and fauna communities.		✓	
(b) Implement Federal and State policies that require a reduction of greenhouse-gas emissions.			✓
(c) Establish a baseline inventory of available natural resources and their respective carrying capacities.			✓
***Analysis*: The Proposed Action supports the objective and above-noted policies relating to stewardship of the natural environment. The Proposed Action recognizes the importance of environmental stewardship and will incorporate measures to mitigate impacts to and protect resources with significant scenic, economic, cultural, environmental, and recreational value. Such measures include undertaking technical analyses such as a View Analysis, an Economic and Fiscal Impact Study, archaeological investigations and supporting documentation, terrestrial and marine biological surveys, an Air Quality and Climate Change Study, a Water Resources Report, and a Cultural Impact Assessment (CIA), as well as employing a comprehensive program of BMPs to prevent impacts from construction, including temporary erosion control, stormwater management, and dust control. In addition, the Proposed Action will contribute a pro rata share for regional roadway improvements to improve regional access to Makena and develop additional beach parking in appropriate locations in the local community. The project will improve connectivity with hiking trails and walking, bicycle, and golf cart paths. The archaeological sites will have restricted access pursuant to the Proposed Action's preservation plans.**			
Objective:			
(4) Educate residents and visitors about responsible stewardship practices and the interconnectedness of the natural environment and people.		✓	
Policies:			
(a) Expand education about native flora, fauna, and ecosystems.		✓	

COUNTYWIDE POLICY PLAN (Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable)	DA	IA	NA
(b) Align priorities to recognize that the health of the natural environment and the health of people are inextricably linked.			✓
(c) Promote programs and incentives that decrease greenhouse-gas emissions and improve environmental stewardship.		✓	
Analysis: **The Proposed Action supports the objective and above-noted policies relating to education about responsible stewardship practices and the interconnectedness of the natural environment and people. As part of the environmental impact analysis for the Proposed Action, a Flora and Fauna Survey of the project area was carried out to identify existing flora and fauna communities. The Proposed Action will preserve an existing dryland forest in the project area. In addition, the Proposed Action will incorporate walking, bicycle, and golf cart pathways to connect with existing pathways and encourage alternative forms of transportation in the local community, thereby helping to reduce greenhouse gas emissions.**			
B. PRESERVE LOCAL CULTURES AND TRADITIONS			
Goal: Maui County will foster a spirit of pono and protect, perpetuate, and reinvigorate its resident's multi-cultural values and traditions to ensure that current and future generations will enjoy the benefits of their rich island heritage.	✓		
Objective:			
(1) Perpetuate the Hawaiian culture as a vital force in the lives of residents.	✓		
Policies:			
(a) Protect and preserve access to mountain, ocean, and island resources for traditional Hawaiian cultural practices.	✓		
(b) Prohibit inappropriate development of cultural lands and sites that are important for traditional Hawaiian cultural practices, and establish mandates for the special protection of these lands in perpetuity.	✓		
(c) Promote the use of ahupua'a and moku management practices.		✓	
(d) Encourage the use of traditional Hawaiian architecture and craftsmanship.	✓		
(e) Promote the use of the Hawaiian language.			✓
(f) Recognize and preserve the unique natural and cultural characteristics of each ahupua'a or district.		✓	
(g) Encourage schools to promote broader incorporation of Hawaiian and other local cultures' history and values lessons into curriculum.			✓
(h) Ensure the protection of Native Hawaiian rights.		✓	
(i) Promote, encourage, and require the correct use of traditional place names, particularly in government documents, signage, and the tourism industry.		✓	
Implementing Actions:			
(a) Establish alternative land use and overlay zoning designations that recognize and preserve the unique natural and cultural characteristics of each ahupua'a or district.			✓
(b) Develop requirements for all County applicants to perpetuate and use proper traditional place names in all applications submitted.			✓
Analysis: **The Proposed Action supports the goal, objective, and above-noted policies relating to multi-cultural values and traditions. As part of this environmental review process, a CIA was carried out to ensure the protection of Native Hawaiian rights and identify cultural customs and practices in the project area. The CIA and archaeological investigations will serve to protect significant cultural lands, resources, and sites, and access to these lands and sites in accordance with State Historic Preservation Division (SHPD) requirements. In addition, the Proposed Action will involve the development of a community gathering place for local residents and visitors to**			

COUNTYWIDE POLICY PLAN (Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable)	DA	IA	NA
come together to talk story, conduct environmental education activities, and share local knowledge.			
Objective:			
(2) Emphasize respect for our island lifestyle and our unique local cultures, family, and natural environment.	✓		
Policies:			
(a) Acknowledge the Hawaiian culture as the host culture, and foster respect and humility among residents and visitors toward the Hawaiian people and their practices.	✓		
(b) Perpetuate a respect for diversity, and recognize the historic blending of cultures and ethnicities.	✓		
(c) Encourage the perpetuation of each culture's unique cuisine, attire, dance, music, and folklore, and other unique island traditions and recreational activities.		✓	
(d) Recognize the interconnectedness between the natural environment and the cultural heritage of the islands.		✓	
(e) Protect and prioritize funding for recreational activities that support local cultural practices, such as surfing, fishing, and outrigger-canoe paddling.			✓
Analysis: **The Proposed Action supports the objective and above-noted policies relating to island lifestyle and unique local cultures, family, and natural environment. Regular meetings between the Applicant and local stakeholders have been and will continue to be carried out in recognition of the island lifestyle, unique local cultures, and the natural environment. Also, a community gathering place will be developed in Mākena Mauka for social and cultural interaction. An existing dryland forest within the project area will be preserved and connectivity will be improved with hiking, walking, and bicycle paths.**			
Objective:			
(3) Preserve for present and future generations the opportunity to know and experience the arts, culture, and history of Maui County.	✓		
Policies:			
(a) Foster teaching opportunities for cultural practitioners to share their knowledge and skills.		✓	
(b) Support the development of cultural centers.	✓		
(c) Broaden opportunities for public art and the display of local artwork.		✓	
(d) Foster the Aloha Spirit by celebrating the Hawaiian host culture and other Maui County cultures through support of cultural-education programs, festivals, celebrations, and ceremonies.		✓	
(e) Support the perpetuation of Hawaiian arts and culture.		✓	
(f) Support programs and activities that record the oral and pictorial history of residents.		✓	
(g) Support the development of repositories for culture, history, genealogy, oral history, film, and interactive learning.	✓		
Implementing Actions:			
(a) Establish incentives for the display of public art.			✓
(b) Establish centers and programs of excellence for the perpetuation of Hawaiian arts and culture.	✓		
Analysis: **The Proposed Action supports the objective and above-noted policies relating to Maui's arts, culture, and history. The Proposed Action will incorporate a community gathering place that will be a facility for social and cultural interaction. The community gathering place**			

COUNTYWIDE POLICY PLAN (Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable)	DA	IA	NA
would foster teaching opportunities for cultural practitioners to share their knowledge and skills and broaden opportunities to foster the Aloha Spirit.			
Objective:			
(4) Preserve and restore significant historic architecture, structures, cultural sites, cultural districts, and cultural landscapes.	✓		
Policies:			
(a) Support the development of island-wide historic, archaeological, and cultural resources inventories.		✓	
(b) Promote the rehabilitation and adaptive reuse of historic sites, buildings, and structures to perpetuate a traditional sense of place.		✓	
(c) Identify a sustainable rate of use and set forth specific policies to protect cultural resources.			✓
(d) Protect and preserve lands that are culturally or historically significant.	✓		
(e) Support programs that protect, record, restore, maintain, provide education about, and interpret cultural districts, landscapes, sites, and artifacts in both natural and museum settings.		✓	
(f) Perpetuate the authentic character and historic integrity of rural communities and small towns.		✓	
(g) Seek solutions that honor the traditions and practices of the host culture while recognizing the needs of the community.		✓	
(h) Support the development of an Archaeological District Ordinance.			✓
(i) Protect summits, slopes, and ridgelines from inappropriate development.			✓
(j) Support the registering of important historic sites on the State and Federal historic registers.		✓	
(k) Provide opportunities for public involvement with restoration and enhancement of all types of cultural resources.		✓	
(l) Foster partnerships to identify and preserve or revitalize historic and cultural sites.		✓	
Implementing Actions:			
(a) Identify, develop, map, and maintain an inventory of locally significant natural. cultural, and historical resources for protection.		✓	
(b) Prepare, continually update, and implement a cultural-management plan for cultural sites, districts, and landscapes, where appropriate.			✓
(c) Enact an Archaeological District Ordinance.			✓
(d) Nominate important historic sites to the State and Federal historic registers.			✓
Analysis: **The Proposed Action supports the objective and above-noted policies relating to the preservation and restoration of significant historic resources. An Archaeological Literature Review and Surface Survey (ALRSS) was carried out as part of the environmental review process to identify and properly document any significant historic or cultural sites within the project area. Through the HRS, 6E review process, which involves consultation with the SHPD, a program likely combining avoidance, preservation, and monitoring will be implemented in order to ensure that these sites will not be negatively impacted by the Proposed Action. In addition, a CIA was carried out to identify the presence of, and potential impacts to, any cultural practices occurring in the vicinity of the project area. The CIA authors concluded that the Proposed Action would not significantly or adversely impact cultural resources or traditional or customary practices.**			
C. IMPROVE EDUCATION			
Goal: Residents will have access to lifelong formal and informal educational options enabling them to realize their ambitions.		✓	

COUNTYWIDE POLICY PLAN (Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable)	DA	IA	NA
Objective:			
(1) Encourage the State to attract and retain school administrators and educators of the highest quality.		✓	
Policies:			
(a) Encourage the State to provide teachers with nationally competitive pay and benefit packages.		✓	
(b) Encourage the State to ensure teachers will have the teaching tools and support staff needed to provide students with an excellent education.		✓	
(c) Explore Maui County district- and school-based decision making in public education.			✓
Analysis: **The Proposed Action supports the goal, objective, and above-noted policies relating to educational options. As the majority of market residential units within the new community are expected to be owned and occupied by part-time residents, the project is not expected to place substantial demands on the State Department of Education (DOE) and its school facilities/programs. Children of families living within the 109 onsite workforce housing units would, however, be served by DOE schools. For each residential unit developed within the project, a school impact fee will be paid to the DOE. The Applicant will coordinate with the DOE to determine its fair share for a school impact fee contribution, which would be used by the DOE to improve educational facilities and programs.**			
Objective:			
(2) Provide nurturing learning environments that build skills for the 21st century.		✓	
Policies:			
(a) Expand professional-development opportunities in disciplines that support the economic-development goals of Maui County.			✓
(b) Plan for demographic, social, and technological changes in a timely manner.			✓
(c) Encourage collaborative partnerships to improve conditions of learning environments.			✓
(d) Promote development of neighborhood schools and educational centers.		✓	
(e) Integrate schools, community parks, and playgrounds, and expand each community's use of these facilities.		✓	
(f) Support coordination between land use and school-facility planning agencies.			✓
(g) Encourage the upgrade and ongoing maintenance of public-school facilities.		✓	
(h) Encourage the State Department of Education to seek reliable, innovative, and alternative methods to support a level of per-pupil funding that places Hawai'i among the top tier of states nationally for its financial support of public schools.			✓
(i) Encourage the State to promote healthier, more productive learning environments, including by providing healthy meals, more physical activity, natural lighting, and passive cooling.			✓
(j) Encourage the State to support the development of benchmarks to measure the success of Hawai'i's public-education system and clarify lines of accountability.			✓
(k) Design school and park facilities in proximity to residential areas.			✓
(l) Support technology- and natural-environment-based learning.			✓
(m) Encourage the State to support lower student-teacher ratios in public schools.			✓

COUNTYWIDE POLICY PLAN (Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable)	DA	IA	NA
(n) Encourage alternative learning and educational opportunities.			✓
Implementing Actions:			
(a) Develop safe walking and bicycling programs for school children.			✓
Analysis: **The Proposed Action supports the objective and above-noted policies relating to providing nurturing learning environments. As the majority of market residential units within the new community are expected to be owned and occupied by part-time residents, the project is not expected to place substantial demands on the DOE and its facilities/programs. Children of families living within the 109 onsite workforce housing units would, however, be served by DOE schools. For each residential unit developed within the project, a school impact fee will be paid to the DOE. The Applicant will coordinate with the DOE to determine its fair share for a school impact fee contribution, which would be utilized by the DOE to improve educational facilities and programs.**			
Objective:			
(3) Provide all residents with educational opportunities that can help them better understand themselves and their surroundings and allow them to realize their ambitions.			✓
Policies:			
(a) Encourage the State to improve Maui Community College as a comprehensive community college that will serve each community.			✓
(b) Broaden the use of technology and telecommunications to improve educational opportunities throughout the County.			✓
(c) Attract graduate-level research programs and institutions.			✓
(d) Promote the teaching of traditional practices, including aquaculture; subsistence agriculture; Pacific Island, Asian, and other forms of alternative health practices; and indigenous Hawaiian architecture.			✓
(e) Integrate cultural and environmental values in education, including self-sufficiency and sustainability.			✓
(f) Foster a partnership and ongoing dialogue between business organizations, formal educational institutions, and vocational training centers to tailor learning and mentoring programs to County needs.			✓
(g) Ensure teaching of the arts to all ages.			✓
(h) Expand and develop vocational learning opportunities by establishing trade schools.			✓
(i) Encourage the State to integrate financial and economic literacy in elementary, secondary, and higher-education levels.			✓
Implementing Actions:			
(a) Encourage the State to establish a four-year university, and support the development of other higher-education institutions to enable residents to obtain bachelor degrees and postgraduate degrees in Maui County.			✓
Analysis: **The Proposed Action is not directly or indirectly applicable to the above objective and policies related to college-level educational opportunities.**			
Objective:			
(4) Maximize community-based educational opportunities.			✓
Policies:			
(a) Encourage the State and others to expand pre-school, after-school, and homebased (parent-child) learning.			✓
(b) Support public-private partnerships to develop youth-internship, -apprenticeship, and -mentoring programs.			✓
(c) Support the development of a wide range of informal educational and cultural programs for all residents.			✓

COUNTYWIDE POLICY PLAN (Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable)	DA	IA	NA
(d) Improve partnerships that utilize the skills and talents at Hawai'i's colleges and universities to benefit the County.			✓
(e) Support career-development and job-recruitment programs and centers.			✓
(f) Attract learning institutions and specialty schools to diversify and enhance educational opportunities.			✓
(g) Expand education of important life skills for the general public.			✓
(h) Support community facilities such as museums, libraries, nature centers, and open spaces that provide interactive-learning opportunities for all ages.			✓
Analysis: **The Proposed Action is not directly or indirectly applicable to the above objective and policies related to maximizing community-based educational opportunities.**			
D. STRENGTHEN SOCIAL AND HEALTHCARE SERVICES			
Goal: Health and social services in Maui County will fully and comprehensively serve all segments of the population.			✓
Objective:			
(1) In cooperation with the Federal and State governments and nonprofit agencies, broaden access to social and healthcare services and expand options to improve the overall wellness of the people of Maui County.			✓
Policies:			
(a) Work with other levels of government and the nonprofit sector to expand services to address hunger, homelessness, and poverty.			✓
(b) Support the improvement of opportunities for disadvantaged youth, encourage the tradition of hanai relatives, and support expanded opportunities for foster care.			✓
(c) Support expanded long-term-care options, both in institutions and at home, for patients requiring ongoing assistance and medical attention.			✓
(d) Encourage the expansion and improvement of local hospitals, facilitate the establishment of new healthcare facilities, and facilitate prompt and high-quality emergency- and urgent-care services for all.			✓
(e) Support broadened access to affordable health insurance and health care, and recognize the unique economic challenges posed to families when healthcare services are provided off-island.			✓
(f) Encourage equal access to social and healthcare services through both technological and traditional means.			✓
Analysis: **The Proposed Action is not directly or indirectly applicable to the above objective and policies related to full-service health and social services in Maui County.**			
Objective:			
(2) Encourage the Federal and State governments and the private sector to improve the quality and delivery of social and healthcare services.			✓
Policies:			
(a) Strengthen partnerships with government, nonprofit, and private organizations to provide funding and to improve counseling and other assistance to address substance abuse, domestic violence, and other pressing social challenges.			✓
(b) Encourage the State to improve the quality of medical personnel, facilities, services, and equipment.			✓
(c) Encourage investment to improve the recruitment of medical professionals and the quality of medical facilities and equipment throughout Maui County.			✓
(d) Promote the development of continuum-of-care facilities that provide assisted living, hospice, home-care, and skilled-nursing options allowing the individual to be cared for in a manner congruent with his or her needs and desires.			✓
(e) Support improved social, healthcare, and governmental services for special needs populations.			✓

COUNTYWIDE POLICY PLAN (Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable)	DA	IA	NA
(f) Plan for the needs of an aging population and the resulting impacts on social services, housing, and healthcare delivery.			✓
(g) Improve coordination among the police, the courts, and the public in the administration of social and healthcare services.			✓
(h) Support programs that address needs of veterans.			✓
(i) Support programs that address the needs of immigrants.			✓
Implementing Actions:			
(a) Invest in programs designed to improve the general welfare and quality of life of Native Hawaiians.			✓
(b) Assist and facilitate the State Department of Public Safety and others in efforts to strengthen programs and facilities that will improve the mental and social health of incarcerated people and assist in prison inmates' successful transition back into Maui County communities.			✓
(c) Develop and maintain a comprehensive index that will measure the health and wellness needs of families.			✓
(d) Provide heliports countywide for emergency health and safety purposes.			✓
Analysis: **The Proposed Action is not directly or indirectly applicable to the above objective and policies related to improving the quality and delivery of social and healthcare services.**			
Objective:			
(3) Strengthen public-awareness programs related to healthy lifestyles and social and medical services.			✓
Policies:			
(a) Expand public awareness about personal safety and crime prevention.			✓
(b) Encourage residents to pursue education and training for careers in the healthcare, social services, and community-development fields.			✓
(c) Expand public awareness and promote programs to achieve healthy eating habits and drug-free lifestyles.			✓
Analysis: **The Proposed Action is not directly or indirectly applicable to the above objective and policies related to public awareness of health and social service programs.**			
E. EXPAND HOUSING OPPORTUNITIES FOR RESIDENTS			
Goal: Quality, island-appropriate housing will be available to all residents.	✓		
Objective:			
(1) Reduce the affordable housing deficit for residents.	✓		
Policies:			
(a) Ensure that an adequate and permanent supply of affordable housing, both new and existing units, is made available for purchase or rental to our resident and/or workforce population, with special emphasis on providing housing for low- to moderate-income families, and ensure that all affordable housing remains affordable in perpetuity.	✓		
(b) Seek innovative ways to lower housing costs without compromising the quality of our island lifestyle.			✓
(c) Seek innovative methods to secure land for the development of low- and moderate- income housing.	✓		
(d) Provide the homeless population with emergency and transitional shelter and other supportive programs.			✓
(e) Provide for a range of senior-citizen and special needs housing choices on each island that affordably facilitates a continuum of care and services.			✓
(f) Support the Department of Hawaiian Home Lands' development of			✓

COUNTYWIDE POLICY PLAN (Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable)	DA	IA	NA
homestead lands.			
(g) Manage property-tax burdens to protect affordable resident homeownership.			✓
(h) Explore taxation mechanisms to increase and maintain access to affordable housing.			✓
(i) Improve awareness regarding available affordable homeowner's insurance.			✓
(j) Redevelop commercial areas with a mixture of affordable residential and business uses, where appropriate.			✓
(k) Ensure residents are given priority to obtain affordable housing units developed in their communities, consistent with all applicable regulations.	✓		
(l) Establish pricing for affordable housing that is more reflective of Maui County's workforce than the United States Housing and Urban Development's median-income estimates for Maui County.			✓
(m) Develop neighborhoods with a mixture of accessible and integrated community facilities and services.			✓
(n) Provide alternative regulatory frameworks to facilitate the use of Kuleana lands by the descendants of Native Hawaiians who received those lands pursuant to the Kuleana Act of 1850.			✓
(o) Work with lending institutions to expand housing options and safeguard the financial security of homeowners.			✓
(p) Promote the use of the community land trust model and other land-lease and land- financing options.			✓
(q) Support the opportunity to age in place by providing accessible and appropriately designed residential units.			✓
Analysis: **The Proposed Action supports the goal, objective, and above-noted policies relating to housing. The Proposed Action involves the development of a master planned resort residential community in an area suited for this type of development, and amid similar communities. In addition, as part of the project, residential workforce housing units will be developed in an effort to provide affordable housing opportunities for local families, including resort employees and their families, to reside in proximity to resort employment opportunities.**			
Objective:			
(2) Increase the mix of housing types in towns and neighborhoods to promote sustainable land use planning, expand consumer choice, and protect the County's rural and small town character.	✓		
Policies:			
(a) Seek innovative ways to develop 'ohana cottages and accessory-dwelling units as affordable housing.			✓
(b) Design neighborhoods to foster interaction among neighbors.			✓
(c) Encourage a mix of social, economic, and age groups within neighborhoods.		✓	
(d) Promote infill housing in urban areas at scales that capitalize on existing infrastructure, lower development costs, and are consistent with existing or desired patterns of development.			✓
(e) Encourage the building industry to use environmentally sustainable materials, technologies, and site planning.	✓		
(f) Develop workforce housing in proximity to job centers and transit facilities.	✓		
(g) Provide incentives to developers and owners who incorporate green building practices and energy-efficient technologies into their housing developments.			✓
Implementing Actions:			
(a) Revise laws to support neighborhood designs that incorporate a mix of housing types that are appropriate for island living.			✓

COUNTYWIDE POLICY PLAN (Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable)	DA	IA	NA
Analysis: **The Proposed Action supports the objective and above-noted policies related to providing a mix of housing types. The Proposed Action involves the development of a master-planned residential community in an area suited for this type of development, amid similar communities and employment centers, and in an area designated for growth. The Proposed Action will also involve the development of workforce housing units on site, which will locate affordable housing in close proximity to jobs. In addition, the Proposed Action is located in close proximity to existing infrastructure, which is consistent with the Kihei-Makena Community Plan, forthcoming South Maui Community Plan, and the Maui Island Plan.**			
Objective:			
(3) Increase and maintain the affordable housing inventory.	✓		
Policies:			
(a) Recognize housing as a basic human need, and work to fulfill that need.	✓		
(b) Prioritize available infrastructure capacity for affordable housing.	✓		
(c) Improve communication, collaboration, and coordination among housing providers and social-service organizations.			✓
(d) Study future projected housing needs, monitor economic cycles, and prepare for future conditions on each island.			✓
(e) Develop public-private and nonprofit partnerships that facilitate the construction of quality affordable housing.	✓		
(f) Streamline the review process for high-quality, affordable housing developments that implement the goals, objectives, and policies of the General Plan.			✓
(g) Minimize the intrusion of housing on prime, productive, and potentially productive agricultural lands and regionally valuable agricultural lands.	✓		
(h) Encourage long-term residential use of existing and future housing to meet residential needs.			✓
Implementing Actions:			
(a) Develop policies to even out the peaks and valleys in Maui County's construction-demand cycles.			✓
Analysis: **The Proposed Action supports the objective and above-noted policies relating to maintaining the affordable housing inventory. The Proposed Action involves the development of a master-planned resort residential community in an area suited for this type of development, amid similar communities. In addition, as part of the project, onsite workforce housing units will be developed in an effort to provide affordable housing opportunities for local families, including resort employees and their families, to reside in the Makena region in proximity to resort employment opportunities. While the majority of the Proposed Action will rely on a private water system, the workforce housing units will connect to the County of Maui, Department of Water Supply's Central Maui Service System, which is in alignment with the policy to prioritize existing infrastructure capacity for affordable housing.**			
Objective:			
(4) Expand access to education related to housing options, homeownership, financing, and residential construction.			✓
Policies:			
(a) Broaden access to information about County, State, and Federal programs that provide financial assistance to renters and home buyers.			✓
(b) Expand access to information about opportunities for homeownership and self-help housing.			✓
(c) Educate residents about making housing choices that support their individual needs, the needs of their communities, and the health of the islands' natural systems.			✓

COUNTYWIDE POLICY PLAN (Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable)	DA	IA	NA
(d) Improve home buyers' education on all aspects of homeownership.			✓
Analysis: **The Proposed Action is not directly or indirectly applicable to the above objective and policies related to education on housing options, homeownership, financing, and residential construction.**			
F. STRENGTHEN THE LOCAL ECONOMY			
Goal: Maui County's economy will be diverse, sustainable, and supportive of community values.	✓		
Objective:			
(1) Promote an economic climate that will encourage diversification of the County's economic base and a sustainable rate of economic growth.	✓		
Policies:			
(a) Support economic decisions that create long-term benefits.	✓		
(b) Promote lifelong education, career development, and technical training for existing and emerging industries.			✓
(c) Invest in infrastructure, facilities, and programs that foster economic diversification.	✓		
(d) Support and promote locally produced products and locally owned operations and businesses that benefit local communities and meet local demand.		✓	
(e) Support programs that assist industries to retain and attract more local labor and facilitate the creation of jobs that offer a living wage.			✓
(f) Encourage work environments that are safe, rewarding, and fulfilling to employees.	✓		
(g) Support home-based businesses that are appropriate for and in character with the community.			✓
(h) Encourage businesses that promote the health and well-being of the residents, produce value-added products, and support community values.			✓
(i) Foster an understanding of the role of all industries in our economy.			✓
(j) Support efforts to improve conditions that foster economic vitality in our historic small towns.			✓
(k) Support and encourage traditional host-culture businesses and indigenous agricultural practices.			✓
(l) Support public and private entities that assist entrepreneurs in establishing locally operated businesses.			✓
Implementing Actions:			
(a) Develop regulations and programs that support opportunities for local merchants, farmers, and small businesses to sell their goods and services directly to the public.			✓
(b) Monitor the carrying capacity of the islands' social, ecological, and infrastructure systems with respect to the economy.			✓
Analysis: **The Proposed Action supports the goal, objective, and above-noted policies related to the diversity and sustainability of Maui's economy. As noted in the Economic and Fiscal Impact Analysis report prepared for the subject project, the construction and operation of the new community will generate substantial employment opportunities as well as increased revenue to both State and County governments.**			
Objective:			
(2) Diversify and expand sustainable forms of agriculture and aquaculture.			✓
Policies:			
(a) Support programs that position Maui County's agricultural products as premium export products.			✓

COUNTYWIDE POLICY PLAN (Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable)	DA	IA	NA
(b) Prioritize the use of agricultural land to feed the local population, and promote the use of agricultural lands for sustainable and diversified agricultural activities.			✓
(c) Capitalize on Hawai'i's economic opportunities in the ecologically sensitive aquaculture industries.			✓
(d) Assist farmers to help make Maui County more self-sufficient in food production.			✓
(e) Support ordinances, programs, and policies that keep agricultural land and water available and affordable to farmers.			✓
(f) Support a tax structure that is conducive to the growth of the agricultural economy.			✓
(g) Enhance County efforts to monitor and regulate important agricultural issues.			✓
(h) Support education, research, and facilities that strengthen the agricultural industry.			✓
(i) Maintain the genetic integrity of existing food crops.			✓
(j) Encourage healthy and organic farm practices that contribute to land health and regeneration.			✓
(k) Support cooperatives and other types of nontraditional communal farming and efforts.			✓
(l) Encourage methods of monitoring and controlling genetically modified crops to prevent adverse effects.			✓
(m) Work with the State to ease the permitting process for the revitalization of traditional fish ponds.			✓
Implementing Actions:			
(a) Redirect efforts in the Office of Economic Development to further facilitate the development of the agricultural section and to monitor agricultural legislation and issues.			✓
(b) Publicly identify, with signage and other means, the field locations of all genetically modified crops.			✓
(c) Create agricultural parks in areas distant from genetically modified crops.			✓
Analysis: **The Proposed Action is not directly or indirectly applicable to the above objective and policies related to agricultural economic opportunities.**			
Objective:			
(3) Support a visitor industry that respects the resident culture and the environment.		✓	
Policies:			
(a) Promote traditional Hawaiian practices in visitor-related facilities and activities.		✓	
(b) Encourage and educate the visitor industry to be sensitive to island lifestyles and cultural values.		✓	
(c) Encourage a spirit of welcome for residents at visitor facilities, such as by offering kama'aina incentives and discount programs.			✓
(d) Support the renovation and enhancement of existing visitor facilities.			✓
(e) Support policies, programs, and a tax structure that redirect the benefits of the visitor industry back into the local community.			✓
(f) Encourage resident ownership of visitor-related businesses and facilities.			✓
(g) Develop partnerships to provide educational and training facilities to residents employed in the visitor industry.			✓

COUNTYWIDE POLICY PLAN (Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable)	DA	IA	NA
(h) Foster an understanding of local cultures, customs, and etiquette, and emphasize the importance of the Aloha Spirit as a common good for all.		✓	
(i) Support the diversification, development, evolution, and integration of the visitor industry in a way that is compatible with the traditional, social, economic, spiritual, and environmental values of island residents		✓	
(j) Improve collaboration between the visitor industry and the other sectors of Maui County's economy.			✓
(k) Perpetuate an authentic image of the Hawaiian culture and history and an appropriate recognition of the host culture.		✓	
(l) Support the programs and initiatives outlined in the Maui County Tourism Strategic Plan 2006-2015.			✓
(m) Promote water conservation, beach conservation, and open-space conservation in areas providing services for visitors.		✓	
(n) Recognize the important contributions that the visitor industry makes to the County's economy, and support a healthy and vibrant visitor industry.		✓	
***Analysis*: The Proposed Action supports the objective and above-noted policies relating to the visitor industry. As a master-planned residential community, the Proposed Action seeks to support the visitor industry and population by providing resort-style residential accommodations and related recreational facilities/programs. Through this Proposed Action, the local economy will benefit from tourism, job creation, tax revenues, and visitor spending.**			
Objective:			
(4) Expand economic sectors that increase living-wage job choices and are compatible with community values.		✓	
Policies:			
(a) Support emerging industries, including the following: • Health and wellness industry; • Sports and recreation industry; • Film and entertainment industry; • Arts and culture industry; • Renewable-energy industry; • Research and development industry; • High-technology and knowledge-based industries; • Education and training industry; • Ecotourism industry; and • Agritourism industry.		✓	
***Analysis:* The Proposed Action supports the objective and above-noted policies relating to the expansion of economic sectors. The Proposed Action involves the development of a master-planned residential community. It indirectly supports emerging economic sectors by creating a demand for goods and services and providing affordable housing opportunities for workers employed in these economic sectors.**			
G. IMPROVE PARKS AND PUBLIC FACILITIES			
Goal: A full range of island-appropriate public facilities and recreational opportunities will be provided to improve the quality of life for residents and visitors.	✓		
Objective:			
(1) Expand access to recreational opportunities and community facilities to meet the present and future needs of residents of all ages and physical abilities.	✓		
Policies:			
(a) Protect, enhance, and expand access to public shoreline and mountain resources.	✓		
(b) Expand and enhance the network of parks, multi-use paths, and bikeways.	✓		
(c) Assist communities in developing recreational facilities that promote physical fitness.	✓		

COUNTYWIDE POLICY PLAN (Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable)	DA	IA	NA
(d) Expand venue options for recreation and performances that enrich the lifestyles of Maui County's people.	✓		
(e) Expand affordable recreational and after-school programs for youth.			✓
(f) Encourage and invest in recreational, social, and leisure activities that bring people together and build community pride.	✓		
(g) Promote the development and enhancement of community centers, civic spaces, and gathering places throughout our communities.	✓		
(h) Expand affordable access to recreational opportunities that support the local lifestyle.	✓		
Implementing Actions:			
(a) Identify and reserve lands for cemeteries, and preserve existing cemeteries on all islands, appropriately accommodating varying cultural and, faith-based traditions.			✓
Analysis: **The Proposed Action supports the goal, objective, and above-noted policies relating to island-appropriate public facilities and recreational opportunities. The Proposed Action involves the ongoing maintenance of the Mākena Landing and Maluaka beach parks in Makena, and the integration of bicycle and pedestrian pathways, hiking trails, and golf cart pathways that will connect with existing pathways in the community. The Proposed Action will also include the development of a community gathering place for local residents to foster social and cultural interaction. Beach access parking improvements will be carried out for greater public access to shoreline resources in Makena and better overall access between the mountain and the ocean.**			
Objective:			
(2) Improve the quality and adequacy of community facilities.	✓		
Policies:			
(a) Provide an adequate supply of dedicated shelters and facilities for disaster relief.			✓
(b) Provide and maintain community facilities that are appropriately designed to reflect the traditions and customs of local cultures.	✓		
(c) Ensure that parks and public facilities are safe and adequately equipped for the needs of all ages and physical abilities to the extent reasonable.	✓		
(d) Maintain, enhance, expand, and provide new active and passive recreational facilities in ways that preserve the natural beauty of their locations.	✓		
(e) Redesign or retrofit public facilities to adapt to major shifts in environmental or urban conditions to the extent reasonable.			✓
Analysis: **The Proposed Action supports the objective and above-noted policies relating to improving the quality and adequacy of community facilities. The Proposed Action provides for the ongoing maintenance of the Makena Landing and Maluaka beach parks, which are both owned by the Applicant and made available as County beach park facilities. Further, the project includes development of a community gathering place to foster social and cultural interaction among the Makena residential community. The master plan also provides for a network of trails, open space, and a preserved dryland forest for passive recreational opportunities.**			
Objective:			
(3) Enhance the funding, management, and planning of public facilities and park lands.	✓		
Policies:			
(a) Identify and encourage the establishment of regulated and environmentally sound campgrounds.			✓
(b) Manage park use and control access to natural resources in order to rest sensitive places and utilize the resources in a sustainable manner.			✓
(c) Provide public-recreational facilities that are clean and well-maintained.	✓		

COUNTYWIDE POLICY PLAN (Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable)	DA	IA	NA
(d) Develop partnerships to ensure proper stewardship of the islands' trails, public lands, and access systems.	✓		
(e) Ensure that there is an adequate supply of public restrooms in convenient locations.	✓		
Implementing Actions:			
(a) Encourage the State to allow for overnight fishing along the shoreline in accordance with management plans and regulations.			✓
(b) Develop and regularly update functional plans, including those relating to public facilities, parks, and campgrounds.			✓
(c) Develop and adopt local level-of service standards for public facilities and parks.			✓
(d) Identify, acquire, and develop lands for parks, civic spaces, and public uses.		✓	
Analysis: **The Proposed Action supports the objective and above-noted policies relating to the management and planning of park facilities. The Proposed Action provides for the ongoing maintenance of the Makena Landing and Maluaka beach parks, which are both owned by the Applicant and made available as County beach park facilities. The master plan includes provision of land for the expansion of Makena Landing beach park as well as additional beach access parking within the Makena community.**			
H. DIVERSIFY TRANSPORTATION OPTIONS			
Goal: Maui County will have an efficient, economical, and environmentally sensitive means of moving people and goods.	✓		
Objective:			
(1) Provide an effective, affordable, and convenient ground-transportation system that is environmentally sustainable.		✓	
Policies:			
(a) Execute planning strategies to reduce traffic congestion.		✓	
(b) Plan for the efficient relocation of roadways for the public benefit.			✓
(c) Support the use of alternative roadway designs, such as traffic-calming techniques and modern roundabouts.			✓
(d) Increase route and mode options in the ground-transportation network.			✓
(e) Ensure that roadway systems are safe, efficient, and maintained in good condition.		✓	
(f) Preserve roadway corridors that have historic, scenic, or unique physical attributes that enhance the character and scenic resources of communities.		✓	
(g) Design new roads and roadway improvements to retain and enhance the existing character and scenic resources of the communities through which they pass.			✓
(h) Promote a variety of affordable and convenient transportation services that meet countywide and community needs and expand ridership of transit systems.			✓
(i) Collaborate with transit agencies, government agencies, employers, and operators to provide planning strategies that reduce peak-hour traffic.			✓
(j) Develop and expand an attractive, island-appropriate, and efficient public transportation system.			✓
(k) Provide and encourage the development of specialized transportation options for the young, the elderly, and persons with disabilities.			✓
(l) Evaluate all alternatives to preserve quality of life before widening roads.			✓
(m) Encourage businesses in the promotion of alternative transportation options for resident and visitor use.			✓

COUNTYWIDE POLICY PLAN (Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable)	DA	IA	NA
(n) Support the development of carbon-emission standards and an incentive program aimed at achieving County carbon-emission goals.			✓
Implementing Actions:			
(a) Create incentives and implement strategies to reduce visitor dependence on rental cars.			✓
(b) Establish efficient public-transit routes between employment centers and primary workforce residential areas.			✓
(c) Create attractive, island-appropriate, conveniently located park-and-ride and ride- share facilities.			✓
Analysis: **The Proposed Action supports the goal, objective, and above-noted policies relating to movement of people and goods. An interior roadway network will be engineered and installed as part of implementing the new community. In addition, pedestrian/bicycle pathways and golf cart paths will be developed for the residents' use in an effort to reduce vehicular traffic for localized trips. The Applicant will also be contributing its fair share for regional roadway improvements pursuant to its existing entitlement approvals.**			
Objective:			
(2) Reduce the reliance on the automobile and fossil fuels by encouraging walking, bicycling, and other energy-efficient and safe alternative modes of transportation.	✓		
Policies:			
(a) Make walking and bicycling transportation safe and easy between and within communities.	✓		
(b) Require development to be designed with the pedestrian in mind.	✓		
(c) Design new and retrofit existing rights-of-way with adequate sidewalks, bicycle lanes, or separated multi-use transit corridors.			✓
(d) Support the development of a countywide network of bikeways, equestrian trails, and pedestrian paths.		✓	
(e) Support the reestablishment of traditional trails between communities, to the ocean, and through the mountains for public use.			✓
(f) Encourage educational programs to increase safety for pedestrians and bicyclists.			✓
Implementing Actions:			
(a) Design, build, and modify existing bikeways to improve safety and separation from automobiles.			✓
(b) Increase enforcement to reduce abuse of bicycle and pedestrian lanes by motorized vehicles.			✓
(c) Identify non-motorized transportation options as a priority for new sources of funding.			✓
Analysis: **The Proposed Action supports the objectives and above-noted policies relating to reducing reliance on the automobile and encouraging walking and bicycling. As part of the project, pedestrian, bicycle, and golf cart paths will be developed for the residents' use in an effort to reduce use of vehicles for localized trips.**			
Objective:			
(3) Improve opportunities for affordable, efficient, safe, and reliable air transportation.			✓
Policies:			
(a) Discourage private helicopter and fixed-wing landing sites to mitigate environmental and social impacts.			✓
(b) Encourage the use of quieter aircraft and noise-abatement procedures for arrivals and departures.			✓

COUNTYWIDE POLICY PLAN (Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable)	DA	IA	NA
(c) Encourage the modernization and maintenance of air-transportation facilities for general-aviation activities.			✓
(d) Encourage a viable and competitive atmosphere for air carriers to expand service and ensure sufficient intra-County flights and affordable fares for consumers.			✓
(e) Continue to support secondary airports, and encourage the State to provide them with adequate funding.			✓
(f) During Community Plan updates, explore the use of the smaller airports.			✓
(g) Encourage the State to provide efficient, adequate, and affordable parking and transit connections within and around airports.			✓
Analysis: **The Proposed Action is not directly or indirectly applicable to the above objective and policies related to the improvement of air transportation.**			
Objective:			
(4) Improve opportunities for affordable, efficient, safe, and reliable ocean transportation.			✓
Policies:			
(a) Support programs and regulations that reduce the disposal of maritime waste and prevent spills into the ocean.			✓
(b) Encourage the upgrading of harbors to resist damage from natural hazards and disasters.			✓
(c) Encourage the State to study the use of existing harbors and set priorities for future use.			✓
(d) Explore all options to protect the traditional recreational uses of harbors, and mitigate harbor-upgrade impacts to recreational uses where feasible.			✓
(e) Encourage the upgrading of harbors and the separation of cargo and bulk materials from passenger and recreational uses.			✓
(f) Encourage the State to provide for improved capacity at shipping, docking, and storage facilities.			✓
(g) Encourage the State to provide adequate parking facilities and transit connections within and around harbor areas.			✓
(h) Encourage the redevelopment and revitalization of harbors while preserving historic and cultural assets in harbor districts.			✓
(i) Encourage the State to provide adequate facilities for small-boat operations, including small-boat launch ramps, according to community needs.			✓
(j) Support the maintenance and cleanliness of harbor facilities.			✓
(k) Support the redevelopment of harbors as pedestrian-oriented gathering places.			✓
Analysis: **The Proposed Action is not directly or indirectly applicable to the above objective and policies related to the improvement of ocean transportation.**			
Objective:			
(5) Improve and expand the planning and management of transportation systems.	✓		
Policies:			
(a) Encourage progressive community design and development that will reduce transportation trips.	✓		
(b) Require new developments to contribute their pro rata share of local and regional infrastructure costs.		✓	
(c) Establish appropriate user fees for private enterprises that utilize public transportation facilities for recreational purposes.			✓
(d) Support the revision of roadway-design criteria and standards so that roads are compatible with surrounding neighborhoods and the character of rural			✓

COUNTYWIDE POLICY PLAN (Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable)	DA	IA	NA
areas.			
(e) Plan for multi-modal transportation and utility corridors on each island.			✓
(f) Support designing all transportation facilities, including airport, harbor, and mass- transit stations, to reflect Hawaiian architecture.			✓
(g) Utilize transportation-demand management as an integral part of transportation planning.	✓		
(h) Accommodate the planting of street trees and other appropriate landscaping in all public rights-of-way.	✓		
Analysis: **The Proposed Action supports the objective and above-noted policies relating to the improvement and expansion of the planning and management of transportation systems. Traffic Management Plans have been prepared for both the construction and operational phases of the project. These plans set forth a program of transportation demand management measures to reduce the number of vehicle trips and lessen pressure on area roadways. In addition, as part of the project, pedestrian, bicycle, and golf cart paths will be installed for the residents' use in an effort to reduce use of vehicles for localized trips.**			
I. IMPROVE PHYSICAL INFRASTRUCTURE			
Goal: Maui County's physical infrastructure will be maintained in optimum condition and will provide for and effectively serve the needs of the County through clean and sustainable technologies.	✓		
Objective:			
(1) Improve water systems to assure access to sustainable, clean, reliable, and affordable sources of water.	✓		
Policies:			
(a) Ensure that adequate supplies of water are available prior to approval of subdivision or construction documents.	✓		
(b) Develop and fund improved water-delivery systems.	✓		
(c) Ensure a reliable and affordable supply of water for productive agricultural uses.			✓
(d) Promote the reclamation of gray water, and enable the use of reclaimed, gray, and brackish water for activities that do not require potable water.	✓		
(e) Retain and expand public control and ownership of water resources and delivery systems.			✓
(f) Improve the management of water systems so that surface-water and groundwater resources are not degraded by overuse or pollution.	✓		
(g) Explore and promote alternative water-source-development methods.	✓		
(h) Seek reliable long-term sources of water to serve developments that achieve consistency with the appropriate Community Plans.	✓		
Implementing Actions:			
(a) Develop a process to review all applications for desalination.			✓
Analysis: **The Proposed Action supports the goal, objective and above-noted policies relating to the improvement of water system infrastructure. As discussed in Chapter II and according to the Water Resources Report, new water sources in the form of groundwater wells will be developed to serve the Proposed Action – with the exception of the residential workforce housing, which will be connected to the County of Maui, Department of Water Supply Central Maui Service system. The new community will also use reclaimed water for irrigation of landscaping in order to offset overall potable (drinking water) use for the project.**			
Objective:			
(2) Improve waste-disposal practices and systems to be efficient, safe, and as environmentally sound as possible.		✓	

COUNTYWIDE POLICY PLAN (Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable)	DA	IA	NA
Policies:			
(a) Provide sustainable waste-disposal systems and comprehensive, convenient recycling programs to reduce the flow of waste into landfills.		✓	
(b) Support innovative and alternative practices in recycling solid waste and wastewater and disposing of hazardous waste.			✓
(c) Encourage vendors and owners of automobile, appliance, and white goods to participate in the safe disposal and recycling of such goods, and ensure greater accountability for large waste producers.			✓
(d) Develop strategies to promote public awareness to reduce pollution and litter, and encourage residents to reduce, reuse, recycle, and compost waste materials.		✓	
(e) Pursue improvements and upgrades to existing wastewater and solid-waste systems consistent with current and future plans and the County's Capital Improvement Program.		✓	
Implementing Actions:			
(a) Establish recycling, trash-separation, and materials recovery programs and facilities to reduce the flow of waste into landfills.		✓	
(b) Study the feasibility of developing environmentally safe waste-to-energy facilities.			✓
(c) Utilize taxes and fees as means to encourage conservation and recycling.			✓
(d) Implement and regularly update the Integrated Solid Waste Management Plan.			✓
(e) Phase out the use of injection wells.			✓
Analysis: **The Proposed Action supports the objective and above-noted policies relating to improving liquid and solid waste collection practices. The Proposed Action will be serviced by the existing private Makena Wastewater Reclamation Facility (WWRF), which has adequate capacity to serve the projected wastewater demand to be generated by the project. Non-potable reclaimed water from the Makena WWRF will be used for irrigation of landscaping in the new community to offset the project's use of potable (drinking) water use. Solid waste generated by the project will be collected by private refuse services and disposed of at the Central Maui Landfill. Throughout the residential neighborhoods, recycling receptacles/facilities will be provided to divert solid waste away from landfill disposal.**			
Objective:			
(3) Direct growth in a way that makes efficient use of existing infrastructure and to areas where there is available infrastructure capacity.	✓		
Policies:			
(a) Capitalize on existing infrastructure capacity as a priority over infrastructure expansion.	✓		
(b) Planning for new towns should only be considered if a region's growth is too large to be directed into infill and adjacent growth areas.			✓
(c) Utilize appropriate infrastructure technologies in the appropriate locations.		✓	
(d) Promote land use patterns that can be provided with infrastructure and public facilities in a cost-effective manner.		✓	
(e) Support catchment systems and on-site wastewater treatment in rural areas and aggregated water and wastewater systems in urban areas if they are appropriately located.		✓	
Implementing Actions:			
(a) Develop a streamlining system for urban infill projects.			✓

COUNTYWIDE POLICY PLAN (Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable)	DA	IA	NA
(b) Identify appropriate areas for urban expansion of existing towns where infrastructure and public facilities can be provided in a cost-effective manner.	✓		
Analysis: **The Proposed Action supports the objective and above-noted policies relating to directing growth to make efficient use of existing infrastructure and capacity. The Proposed Action is a low-density master-planned residential community in an area designated as suitable for this type of development by the Maui Island Plan. It is located adjacent to existing similar land uses with the privately-owned and maintained Makena WWRF available to service the project. All infrastructure needed to support the project will be installed and paid for by the Applicant.**			
Objective:			
(4) Improve the planning and management of infrastructure systems.	✓		
Policies:			
(a) Provide a reliable and sufficient level of funding to enhance and maintain infrastructure systems.			✓
(b) Require new developments to contribute their pro rata share of local and regional infrastructure costs.	✓		
(c) Improve coordination among infrastructure providers and planning agencies to minimize construction impacts.			✓
(d) Maintain inventories of infrastructure capacity, and project future infrastructure needs.			✓
(e) Require social-justice and -equity issues to be considered during the infrastructure-planning process.			✓
(f) Discourage the development of critical infrastructure systems within hazard zones and the tsunami-inundation zone to the extent practical.			✓
(g) Ensure that infrastructure is built concurrent with or prior to development.	✓		
(h) Ensure that basic infrastructure needs can be met during a disaster.			✓
(i) Locate public facilities and emergency services in appropriate locations that support the health, safety, and welfare of each community and that minimize delivery inefficiencies.			✓
(j) Promote the undergrounding of utility and other distribution lines for health safety, and aesthetic reasons.	✓		
Implementing Actions:			
(a) Develop and regularly update functional plans for infrastructure systems.			✓
(b) Develop, adopt, and regularly update local or community-sensitive level-of service standards for infrastructure systems.			✓
Analysis: **The Proposed Action supports the objective and above-noted policies relating to improving the planning and management of infrastructure systems. The Proposed Action involves the development of a low-density master-planned residential community in an area designated for future growth by the Maui Island Plan, adjacent to similar existing uses. All infrastructure will be developed concurrent with the project. The Applicant will provide its fair share contribution for regional roadway improvements in accordance with its existing land use approvals. In addition, utility infrastructure for the Proposed Action will be placed primarily underground.**			
J. PROMOTE SUSTAINABLE LAND USE AND GROWTH MANAGEMENT			
Goal: Community character, lifestyles, economies, and natural assets will be preserved by managing growth and using land in a sustainable manner.	✓		
Objective:			
(1) Improve land use management and implement a directed-growth strategy.	✓		
Policies:			

COUNTYWIDE POLICY PLAN (Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable)	DA	IA	NA
(a) Establish, map, and enforce urban- and rural-growth limits.			✓
(b) Direct urban and rural growth to designated areas.	✓		
(c) Limit the number of visitor-accommodation units and facilities in Community Plan Areas.			✓
(d) Maintain a sustainable balance between the resident, part-time resident, and visitor populations.	✓		
(e) Encourage redevelopment and infill in existing communities on lands intended for urban use to protect productive farm land and open-space resources.			✓
(f) Discourage new entitlements for residential, resort, or commercial development along the shoreline.			✓
(g) Restrict development in areas that are prone to natural hazards, disasters, or sea-level rise.	✓		
(h) Direct new development in and around communities with existing infrastructure and service capacity, and protect natural, scenic, shoreline, and cultural resources.	✓		
(i) Establish and maintain permanent open space between communities to protect each community's identity.	✓		
(j) Support the dedication of land for public uses.	✓		
(k) Preserve the public's rights of access to and continuous lateral access along all shorelines.	✓		
(l) Enable existing and future communities to be self-sufficient through sustainable land use planning and management practices.			✓
(m) Protect summits, slopes, and ridgelines from inappropriate development.			✓
Implementing Actions:			
(a) Regularly update urban- and rural-growth boundaries and their maps.			✓
(b) Establish transfer and purchase of development rights programs.			✓
(c) Develop and adopt a green infrastructure plan.			✓
(d) Develop studies to help determine a sustainable social, environmental, and economic carrying capacity for each island.			✓
(e) Identify and define resort-destination areas.	✓		
Analysis: **The Proposed Action supports the goal, objective, and above-noted policies relating to the management of growth. The project will be implemented in an area designated for growth and concurrent with infrastructure systems to service the project. In addition, the project's location, mostly mauka of Makena Alanui Road, places it primarily outside of the tsunami evacuation zone, flood hazard zones, and the projected 3.2-foot sea-level rise hazard area. Although a portion of the land plan located along the shoreline lies within these areas, no vertical structures are planned to be developed within this area. Furthermore, as part of the environmental review process, studies relative to air quality, noise, and nearshore marine water quality were carried out to assess potential impacts on these resources and establish appropriate mitigation measures. The Proposed Action is located within the Urban Growth Boundary (UGB) for Makena as set forth in the Maui Island Plan.**			
Objective:			
(2) Improve planning for and management of agricultural lands and rural areas.			✓
Policies:			
(a) Protect prime, productive, and potentially productive agricultural lands to maintain the islands' agricultural and rural identities and economies.			✓

COUNTYWIDE POLICY PLAN (Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable)	DA	IA	NA
(b) Provide opportunities and incentives for self-sufficient and subsistence homesteads and farms.			✓
(c) Discourage developing or subdividing agriculturally designated lands when non- agricultural activities would be primary uses.			✓
(d) Conduct agricultural-development planning to facilitate robust and sustainable agricultural activities.			✓
Implementing Actions:			
(a) Inventory and protect prime, productive, and potentially productive agricultural lands from competing non-agricultural land uses.			✓
Analysis: **The Proposed Action is not directly or indirectly applicable to the above objective and policies related to the planning and management of agricultural lands.**			
Objective:			
(3) Design all developments to be in harmony with the environment and to protect each community's sense of place.	✓		
Policies:			
(a) Support and provide incentives for green building practices.	✓		
(b) Encourage the incorporation of green building practices and technologies into all government facilities to the extent practicable.			✓
(c) Protect and enhance the unique architectural and landscape characteristics of each Community Plan Area, small town, and neighborhood.	✓		
(d) Ensure that adequate recreational areas, open spaces, and public-gathering places are provided and maintained in all urban centers and neighborhoods.	✓		
(e) Ensure business districts are distinctive, attractive, and pedestrian-friendly destinations.			✓
(f) Use trees and other forms of landscaping along rights-of-way and within parking lots to provide shade, beauty, urban-heat reduction, and separation of pedestrians from automobile traffic in accordance with community desires.	✓		
(g) Where appropriate, integrate public-transit, equestrian, pedestrian, and bicycle facilities, and public rights-of-way as design elements in new and existing communities.	✓		
(h) Ensure better connectivity and linkages between land uses.	✓		
(i) Adequately buffer and mitigate noise and air pollution in mixed-use areas to maintain residential quality of life.			✓
(j) Protect rural communities and traditional small towns by regulating the footprint, locations, site planning, and design of structures.	✓		
(k) Support small-town revitalization and preservation.			✓
(l) Facilitate safe pedestrian access, and create linkages between destinations and within parking areas.	✓		
Implementing Actions:			
(a) Establish design guidelines and standards to enhance urban and rural environments.	✓		
(b) Provide funding for civic-center and civic-space developments.			✓
(c) Establish and enhance urban forests in neighborhoods and business districts.	✓		
Analysis: The Proposed Action supports the objective and above-noted policies relating to designing in harmony with the environment and protecting each community's sense of place. The Proposed Action aims to develop a low-density master-planned residential community in an area suited for this type of development, amid similar communities. The Proposed Action will include a community gathering place to promote social and cultural interaction among the residents. The Proposed Action will involve a system of pedestrian, bicycle, and golf cart pathways to facilitate			

COUNTYWIDE POLICY PLAN (Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable)	DA	IA	NA
alternative forms of transportation. This system will connect to the existing network of pathways throughout Makena. The Proposed Action will also preserve a dryland forest unique to the natural habitat found in the area.			
Objective:			
(4) Improve and increase efficiency in land use planning and management.	✓		
Policies:			
(a) Assess the cumulative impact of developments on natural ecosystems, natural resources, wildlife habitat, and surrounding uses.		✓	
(b) Ensure that new development projects requiring discretionary permits demonstrate a community need, show consistency with the General Plan, and provide an analysis of impacts.		✓	
(c) Encourage public and private partnerships to preserve lands of importance, develop housing, and meet the needs of residents.	✓		
(d) Promote creative subdivision designs that implement best practices in land development, sustainable management of natural and physical resources, increased pedestrian and bicycle functionality and safety, and the principles of livable communities.	✓		
(e) Coordinate with Federal, State, and County officials in order to ensure that land use decisions are consistent with County plans and the vision local populations have for their communities.	✓		
(f) Enable greater public participation in the review of subdivisions.		✓	
(g) Improve land use decision making through the use of land- and geographic information systems.			✓
Implementing Actions:			
(a) Institute a time limit and sunsetting stipulations on development entitlements and their implementation.			✓
Analysis: **The Proposed Action supports the objective and above-noted policies relating to improving land use planning. As part of the environmental review process, studies on flora and fauna, air quality, noise, and nearshore marine water quality were carried out to assess the potential impacts of the project and establish mitigation measures, as appropriate. In addition, the project was evaluated in relation to its conformance with land use plans, policies, and controls as described in Chapter III of the EIS document.**			
K. STRIVE FOR GOOD GOVERNANCE			
Goal: Government services will be transparent, effective, efficient, and responsive to the needs of residents.		✓	
Objective:			
(1) Strengthen governmental planning, coordination, consensus building, and decision making.			✓
Policies:			
(a) Plan and prepare for the effects of social, demographic, economic, and environmental shifts.			✓
(b) Plan for and address the possible implications of Hawaiian sovereignty.			✓
(c) Encourage collaboration among government agencies to reduce duplication of efforts and promote information availability and exchange.			✓
(d) Expand opportunities for the County to be involved in and affect State and Federal decision making.			✓
(e) Plan and prepare for large-scale emergencies and contingencies.			✓
(f) Improve public awareness about preparing for natural hazards, disasters, and evacuation plans.			✓

COUNTYWIDE POLICY PLAN (Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable)	DA	IA	NA
(g) Improve coordination among Federal, State, and County agencies.			✓
Implementing Actions:			
(a) Develop policies, regulations, and programs to protect and enhance the unique character and needs of the County's various communities.			✓
(b) Evaluate and if necessary, recommend modifications to the County Charter that could result in a possible change to the form of governance for Maui County.			✓
(c) Study and evaluate the feasibility and implications of voting in Maui County Council elections.			✓
(d) Study and evaluate the feasibility of authorizing town governments in Maui County.			✓
Analysis: **The Proposed Action is not directly or indirectly applicable to the above objective and policies related to the improvement of governmental planning and decision-making processes.**			
Objective:			
(2) Promote civic engagement.		✓	
Policies:			
(a) Foster consensus building through in-depth, innovative, and accessible public participatory processes.		✓	
(b) Promote and ensure public participation and equal access to government among all citizens.			✓
(c) Encourage a broad cross-section of residents to volunteer on boards and commissions.			✓
(d) Encourage the State to improve its community-involvement processes.			✓
(e) Support community-based decision making.		✓	
(f) Expand advisory functions at the community level.			✓
(g) Expand opportunities for all members of the public to participate in public meetings and forums.			✓
(h) Facilitate the community's ability to obtain relevant documentation.		✓	
(i) Increase voter registration and turnout.			✓
Implementing Actions:			
(a) Implement two-way communication using audio-visual technology that allows residents to participate in the County's planning processes.			✓
(b) Ensure and expand the use of online notification of County business and public meetings, and ensure the posting of all County board and commission meeting minutes.			✓
(c) Explore funding mechanisms to improve participation by volunteers on boards and commissions.			✓
(d) Develop a project-review process that mandates early and ongoing consultation in and with communities affected by planning and land use activities.			✓
Analysis: The Proposed Action supports the objective and above-noted policies related to promoting civic engagement. Although the Proposed Action is a private sector initiative, the Applicant has met with stakeholders and community members in an effort to promote dialogue and input on the Proposed Action. A guiding principle of the Applicant is to be a "Good Neighbor" and contribute to and support a healthy community and place.			
Objective:			

COUNTYWIDE POLICY PLAN (Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable)	DA	IA	NA
(3) Improve the efficiency, reliability, and transparency of County government's internal processes and decision making.			✓
Policies:			
(a) Use advanced technology to improve efficiency.			✓
(b) Simplify and clarify the permitting process to provide uniformity, reliability, efficiency, and transparency.			✓
(c) Improve communication with Lanaʻi and Molokaʻi through the expanded use of information technologies, expanded staffing, and the creation and expansion of government-service centers.			✓
(d) Ensure that laws, policies, and regulations are internally consistent and effectuate the intent of the General Plan.			✓
Implementing Actions:			
(a) Update the County Code to be consistent with the General Plan.			✓
(b) Identify and update County regulations and procedures to increase the productivity and efficiency of County government.			✓
(c) Develop local level-of-service standards for infrastructure, public facilities, and services.			✓
(d) Implement plans through programs, regulations, and capital improvements in a timely manner.			✓
(e) Expand government online services.			✓
Analysis: **The Proposed Action is not directly or indirectly applicable to the above objective and policies related to the improvement of the County government's efficiency and transparency.**			
Objective:			
(4) Adequately fund in order to effectively administer, implement, and enforce the General Plan.			✓
Policies:			
(a) Adequately fund, staff, and support the timely update and implementation of planning policy, programs, functional plans, and enforcement activities.			✓
(b) Ensure that the County's General Plan process provides for efficient planning at the County, island, town, and neighborhood level.			✓
(c) Encourage ongoing professional development, education, and training of County employees.			✓
(d) Encourage competitive compensation packages for County employees to attract and retain County personnel.			✓
(e) Enable the County government to be more responsive in implementing our General Plan and Community Plans.			✓
(f) Review discretionary permits for compliance with the Countywide Policy Plan.			✓
(g) Strengthen the enforcement of County, State, and Federal land use laws.			✓
Implementing Actions:			
(a) Establish penalties to ensure compliance with County, State, and Federal land use laws.			✓
Analysis: **The Proposed Action is not directly or indirectly applicable to the above objective and policies related to the County adequately funding the administration, implementation, and enforcement of the General Plan.**			
Objective:			
(5) Strive for County government to be a role model for implementing cultural and environmental policies and practices.			✓
Policies:			

COUNTYWIDE POLICY PLAN (Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable)	DA	IA	NA
(a) Educate residents on the benefits of sustainable practices.			✓
(b) Encourage the retention and hiring of qualified professionals who can improve cultural and environmental practices.			✓
(c) Incorporate environmentally sound and culturally appropriate practices in government operations and services.			✓
(d) Encourage all vendors with County contracts to incorporate environmentally sound and culturally appropriate practices.			✓
Analysis: **The Proposed Action is not directly or indirectly applicable to the above objective and policies related to supporting the County government in being a role model for implementing cultural and environmental policies and practices.**			
L. MITIGATE CLIMATE CHANGE AND WORK TOWARD RESILIENCE			
Goal: Minimize the causes and negative effects of climate change.	✓		
Objective:			
(1) Lower carbon emissions levels to mitigate climate change impacts and limit the rate of global warming.	✓		
Policies:			
(a) Increase reforestation efforts by encouraging residents and visitors to plant non-invasive gardens and trees.	✓		
(b) Improve communication, coordination, and collaboration among those that work to mitigate climate change impacts.			✓
(c) Promote the teaching and use of regenerative agriculture.	✓		
(d) Invest in infrastructure that is not dependent on fossil fuels and utilizes renewable energy.	✓		
(e) Improve efforts to mitigate and plan for the impact of natural disasters and global warming.		✓	
(f) Encourage the building industry to use environmentally sustainable materials, technology, and site planning.	✓		
(g) Reduce air, noise, light, land, and water pollution, and reduce Maui County's contribution to global climate change.		✓	
(h) Plan and prepare for and educate visitors and residents about the possible effects of global warming.		✓	
(i) Promote programs and incentives that decrease greenhouse-gas emissions and improve environmental stewardship.			✓
(j) Support the development of carbon-emission standards and an incentive program aimed at achieving County carbon-emission goals.			✓
Implementing Actions:			
(a) Implement Federal and State policies that require a reduction of greenhouse-gas emissions.			✓
(b) Establish a Countywide Climate Action Plan			✓
(c) Develop programs that assist residents and businesses with obtaining access to renewable energy sources.			✓
(d) Revise laws to support neighborhood designs that incorporate the use of renewable energy sources that are appropriate for island living.			✓
(e) Incorporate planting of native and indigenous trees as a major component of Urban Design to both cool neighborhoods and reduce carbon dioxide.	✓		
(f) Coordinate with State, County, and private landowners in the development of forestry and prioritizing of native and indigenous trees to reduce carbon dioxide.			✓
(g) Strongly support efforts to restore and improve Maui County's watersheds for			✓

COUNTYWIDE POLICY PLAN (Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable)	DA	IA	NA
the purpose of improving the water supply, controlling carbon dioxide levels, decreasing soil runoff, and reducing coastal flooding.			
Analysis: **The Proposed Action supports the goal, objective, and above-noted policies relating to climate change mitigation. A Sustainability Report has been prepared for the Proposed Action, which sets forth both guiding sustainability principles as well as a program of sustainability measures intended to reduce the environmental footprint of the new community. This program includes Leadership in Energy and Environmental Design (LEED) certification for buildings 500 square feet or larger, the installation of rooftop photovoltaic (PV) panels, and the use of energy-efficient technologies. The Proposed Action will provide pedestrian/bicycle lanes to reduce greenhouse gas emissions and reliance on the automobile. Recycle containers/facilities will also be placed throughout the project area to reduce the amount of solid waste going to the landfill.**			
Objective:			
(2) Reduce the impacts of sea-level rise by acknowledging climate change, adapting, mitigating, and planning accordingly.	✓		
Policies:			
(a) Evaluate development to assess potential short-term and long-term sea-level rise impacts on nearshore environments.		✓	
(b) Improve efforts to mitigate and plan for the impact of sea-level rise.		✓	
(c) Protect undeveloped beaches, dunes, and ecosystems, and restore natural shoreline processes.		✓	
(d) Develop an inventory of private wastewater systems (septic systems, cesspools) that may be affected by sea-level rise.			✓
(e) Strengthen coastal-zone management, re-naturalization of shorelines, where possible, and filtration or treatment of urban and agricultural runoff.		✓	
(f) Educate the construction and landscape industries and property owners about the use of best management practices to prevent erosion and nonpoint source pollution.			✓
(g) Discourage beach hardening processes such as building sea walls and revetments that block movement of the shoreline and can accelerate erosion.			✓
(h) Discourage new entitlements for residential, resort, or commercial development along the shoreline.			✓
(i) Restrict development in areas that are prone to sea-level rise.		✓	
(j) Move or rebuild public facilities away from nearshore environments to account for sea-level rise to the extent reasonable.			✓
(k) Move or rebuild roads that are in sea-level rise inundation zones to the extent reasonable.			✓
(l) Ensure that public or affordable housing projects include siting and design standards that promote equity and resilience for vulnerable populations.	✓		
(m) Identify, research, and evaluate innovative and sustainable financing to support mitigation and adaptation to sea level rise.			✓
Implementing Actions:			
(a) Develop programs to help transition shoreline property owners out of their nearshore locations and develop a long-term plan to stay out of the way of natural beach migration.			✓
(b) Identify buildings, roads, and other infrastructure that are in sea-level rise inundation zones and assist in adaptive efforts, including nature-based solutions, elevation, or moving them away from such zones.			✓
(c) Identify disaster redevelopment alternatives that support resilience-focused adaptation to sea level rise in the event of a catastrophic coastal event.			✓

COUNTYWIDE POLICY PLAN (Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable)	DA	IA	NA
Analysis: **The Proposed Action is consistent with the objective and above-noted policies relating to reducing the impacts of sea-level rise and adapting, mitigating, and planning accordingly. A sea-level rise assessment was carried out on the project to ensure that improvements will not be adversely impacted by projected sea-level rise. No vertical structures are proposed within the 3.2 ft. sea-level rise exposure area. Even in a more drastic scenario, including up to 10 feet of sea-level rise, the proposed development, including the workforce housing units, lies well outside of lands that would be affected by sea-level rise.**			
Objective:			
(3) Significantly increase the use of renewable and green technologies to. promote energy efficiency and energy self-sufficiency.	✓		
Policies:			
(a) Promote the use of locally renewable energy sources, and reward energy efficiency.	✓		
(b) Consider tax incentives and credits for the development of sustainable- and renewable-energy sources.			✓
(c) Expand education about energy conservation and self-sufficiency.			✓
(d) Encourage small-scale energy generation that utilizes wind, sun, water, biowaste, and other renewable sources of energy.	✓		
(e) Expand renewable-energy production.		✓	
(f) Develop public-private partnerships to ensure the use of renewable energy and increase energy efficiency.			✓
(g) Require the incorporation of locally appropriate energy-saving and green building design concepts in all new developments by providing energy-efficient urban design guidelines and amendments to the Building Code.			✓
(h) Encourage the use of sustainable energy to power vehicles.			✓
(i) Promote the retrofitting of existing buildings and new development to incorporate energy-saving design concepts anddevices.	✓		
(j) Encourage green footprint practices.	✓		
(k) Reduce Maui County's dependence on fossil fuels and energy imports.		✓	
(l) Support green building practices such as the construction of buildings that aim to minimize carbon dioxide production, produce renewable energy, and recycle water.	✓		
(m) Promote and support environmentally friendly practices in all energy sectors.			✓
Implementing Actions:			
(a) Adopt an energy-efficiency policy for Maui County government as a model for other jurisdictions.			✓
(b) Adopt a Green Building Code and support green building practices.			✓
Analysis**: The Proposed Action supports the objective and above-noted policies relating to renewable and green technologies. A Sustainability Report has been prepared for the Proposed Action, which sets forth both guiding sustainability principles as well as a program of sustainability measures intended to reduce the environmental footprint of the new community. This program includes LEED certification of buildings 500 square feet or larger as well as the use of energy-efficient technologies.**			

APPENDIX

AA

ANALYSIS OF MAUI ISLAND PLAN

APPENDIX AA.

Analysis of Project Applicability to Maui Island Plan

The Maui Island Plan (MIP) is applicable to the island of Maui only, providing more specific policy-based strategies for population, land use, transportation, public and community facilities, water and wastewater systems, visitor destinations, urban design, and other matters related to future growth.

As provided by Chapter 2.80B, the MIP shall include the following components:

1. *An island-wide land use strategy, including a managed and directed growth plan*
2. *A water element assessing supply, demand and quality parameters*
3. *A nearshore ecosystem element assessing nearshore waters and requirements for preservation and restoration*
4. *An implementation program which addresses the County's 20-year capital improvement requirements, financial program for implementation, and action implementation schedule*
5. *Milestone indicators designed to measure implementation progress of the MIP*

It is noted that Ordinance No. 4004 does not address the component relating to the implementation program. Chapter 2.80B of the Maui County Code, relating to the General Plan, was amended via Ordinance No. 3979, October 5, 2012, to provide that the implementation program component be adopted no later than one (1) year following the effective date of Ordinance No. 4004. In December 2013 and March 2014, the Council approved time extensions for approval and adoption of the implementation chapter of the MIP. The implementation program component of the MIP was adopted as Ordinance No. 4126 on May 29, 2014.

The MIP addresses a number of planning categories with detailed policy analysis and recommendations which are framed in terms of goals, objectives, policies, and implementing actions. These planning categories address the following areas:

1. *Population*
2. *Heritage Resources*
3. *Natural Hazards*
4. *Economic Development*
5. *Housing*
6. *Infrastructure and Public Facilities*
7. *Land Use*

The Proposed Action has been reviewed with respect to pertinent goals, objectives, policies, and implementing actions of the MIP. The analysis is presented in the table below.

The methodology used for assessing a project's relationship to the MIP involves examining the project's applicability to the Plan's goals, objectives, and policies. "Applicability" refers to a project's need, purpose, and effects, and how they advance or promote a particular set of goals, objectives, and priority guidelines. In assessing the relationship between a proposed action and the MIP, an action may be categorized in one of the following groups:

1. **Directly applicable:** the action and its potential effects directly advance or promote the objective, policy, or priority guideline.

   Example: Using a county project to develop a new water source and related transmission facilities as an example, a project of this nature would be directly applicable to the MIP's Objective 6.3.2, which states: *"Increase the efficiency and capacity of the water systems in striving to meet the needs and balance the island's water needs".* As well, this action would directly advance the MIP's Policy 6.3.2.f, which states: *Acquire and develop additional sources of potable water.* The need, purpose, and effects of the proposed new water source project is directly applicable to the foregoing objective and policy.

2. **Indirectly applicable:** the action's potential effects indirectly support or advance the objective, policy, or priority guideline.

   Example: The county water source project cited above supports the MIP's Objective 7.3.2 which states: *"Facilitate more self-sufficient and sustainable communities".* Additionally, this kind of action is indirectly applicable to the related MIP Policy 7.3.2.f, which states: *"Facilitate the development of housing by focusing projects in locations where land and infrastructure costs facilitate the development of affordably-priced housing".* In this case, the principle purpose of the project was not to specifically facilitate the development of affordably-priced housing. However, the project's contribution to adequate infrastructure systems is supportive of the policy. In this instance, the proposed action may be deemed to be indirectly applicable to the objective and policy of the MIP.

3. **Not applicable:** The action and its potential effects have no direct or indirect relationship to the objectives and policies of the Maui Island Plan.

   Example: That same county water source improvement project referenced above may not have direct or indirect linkage to the MIP's Objective 4.2.1, which states: *"Increase the economic contribution of the visitor industry to the island's environmental well-being for the island's residents' quality of life"*. In this case, there is no reasonably deduced direct or indirect relationship between the proposed action and Objective 4.2.1. Hence, the proposed action would be considered not applicable to the objective.

In general, a proposed action's applicability to the MIP is assessed on the basis of the action's direct or indirect relationship to the respective objectives, policies, and implementing actions. It is recognized that the categorization of "applicability" is subject to interpretation and should be appropriately considered in the context of local and regional conditions.

Maui Island Plan Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
CHAPTER 1 – POPULATION			
Goal:			
1.1 Maui's people, values, and lifestyles thrive through strong, healthy, and vibrant island communities.	✓		
Objective:			
1.1.1 Greater retention and return of island residents by providing viable work, education, and lifestyle options.	✓		
Policies:			
1.1.1.a Expand programs that enable the community to meet the education, employment, housing, and social goals of youth and young adults.		✓	
1.1.1.b Expand housing, transportation, employment, and social opportunities to ensure residents are able to comfortably age within their communities.	✓		
1.1.1.c Measure and track resident satisfaction through surveys and community indicators.			✓
1.1.1.d Support funding for transportation, housing, health care, recreation, and social service programs that help those with special needs (including the elderly and disabled).			✓
Analysis: The Proposed Action supports the goal, objective, and above-noted policy relating to strong, healthy, and vibrant communities. The Proposed Action involves the development of a master-planned residential community in an area suited for this type of development, amid similar communities and employment centers, and in an area designated for growth by the Maui Island Plan (MIP). The Proposed Action will also involve the development of onsite workforce housing units, which will locate affordable housing in close proximity to jobs. According to the Economic and Fiscal Impact Analysis report prepared for the Proposed Action, the construction and operation of the new Mākena Mauka community will generate substantial employment opportunities as well as increased tax revenues to both State and County governments.			
CHAPTER 2 – HERITAGE RESOURCES			
CULTURAL, HISTORICAL, AND ARCHAEOLOGICAL RESOURCES ISSUES			
Goal:			
2.1 Our community respects and protects archaeological and cultural resources while perpetuating diverse cultural identities and traditions.	✓		
Objective:			
2.1.1 An island culture and lifestyle that is healthy and vibrant as measured by the ability of residents to live on Maui, access and enjoy the natural environment, and practice Hawaiian customs and traditions in accordance with Article XII, Section 7, Hawai'i State Constitution, and Section 7-1, Hawai`i Revised Statutes (HRS).	✓		
Policies:			
2.1.1.a Perpetuate the spirit of aloha and celebrate the host Hawaiian culture and other		✓	

Maui Island Plan Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
ethnic cultures.			
2.1.1.b Perpetuate a respect for diversity and recognize the broad blending of cultures and ethnicities as vital to the quality of life on Maui.	✓		
2.1.1.c Ensure traditional public access routes, including native Hawaiian trails, are maintained for public use.	✓		
2.1.1.d Support the education of visitors and new residents about the customs and etiquette of the Hawaiian culture, as well as other cultures.		✓	
Objective:			
2.2 A more effective and efficient planning and review process that incorporates the best available cultural resources inventory, protection techniques, and preservation strategies.	✓		
Policies:			
2.1.2.a Ensure that the island has a comprehensive and up-to-date inventory of historic and archaeological resources, and their cultural significance.	✓		
2.1.2.b Require the update of existing planning and regulatory mechanisms to protect the natural, cultural, scenic, and historic resources within designated Heritage Areas (see Cultural Resources Overlay/Scenic Corridor Protection Technical Reference Map).			✓
2.1.2.c Ensure that cultural, historic, and archaeological resources are protected for the benefit of present and future generations.	✓		
Objective:			
2.3 Enhance the island's historic, archaeological, and cultural resources.	✓		
Policies:			
2.1.3.a Identify and pursue a listing of the properties and sites on the State and National Register of Historic Places.			✓
2.1.3.b Support the use of easements, dedications, and other mechanisms to acquire, maintain, and protect lands with cultural, archaeological, and historic significance.		✓	
2.1.3.c Support regulations to require developers, when appropriate, to prepare an Archaeological Inventory Survey, Cultural Impact Assessment, and Ethnographic Inventories that are reviewed and commented upon by the Office of Hawaiian Affairs, Native Hawaiian advisory bodies, the State Historic Preservation Division (SHPD), and the Office of Environmental Quality Control, and systematically comply with the steps listed in SHPD's administrative rules, including consultation and monitoring during construction phases of projects.	✓		
2.1.3.d Promote the rehabilitation and adaptive reuse of historic sites, buildings, and structures.		✓	
2.1.3.e Encourage property owners to register historic and archaeological sites on the State and National Register.			✓
2.1.3.f Support opportunities for public involvement with the intent to facilitate the protection and restoration of historic and archeological sites, including consultation with stakeholders.	✓		
2.1.3.g Encourage the resolution of land title questions relating to Land Commission Awards and Royal patents.			✓

Maui Island Plan Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
2.1.3.h Ensure compliance with historic preservation laws, and discourage demolition of properties that are determined to be eligible for listing on the National or State Register of Historic Places.	✓		
Analysis: **The Proposed Action supports the goal, objectives, and above-noted policies relating to cultural, historic, and archaeological resources. An Archaeological Literature Review and Surface Survey (ALRSS) was carried out in preparation of the Draft Environmental Impact Assessment (EIS) to identify and properly document any significant historic or cultural sites within the project area. Through this process, a program of avoidance, preservation, and monitoring was recommended and will be adhered to, based on State Historic Preservation Division (SHPD) review requirements, in order to ensure that these sites will not be adversely impacted by the Proposed Action. Consultation with key stakeholders will be conducted during the SHPD historic preservation review process. In addition, a Cultural Impact Assessment (CIA) was carried out to assess the presence of cultural practices within the project area and establish appropriate mitigation measures. The Proposed Action will also involve the development of a community gathering place to foster respect for diversity and recognize the broad blending of cultures and ethnicities as vital to the quality of life on Maui.**			
SHORELINE, REEFS, AND NEARSHORE WATERS			
Goal:			
2.2 An intact, ecologically functional system of reef, shoreline, and nearshore waters that are protected in perpetuity.	✓		
Objective:			
2.2.1 A more comprehensive and community-based ICZM program.	✓		
Policies:			
2.2.1.a Encourage a management system that protects and temporarily rests the reef ecosystems from overuse.			✓
2.2.1.b Support the establishment of additional MMAs and reef replenishment areas.			✓
2.2.1.c Work with appropriate agencies and community members to protect any special managed conservation areas from overuse and ensure that surrounding land uses do not contribute to the degradation of the natural resources, such as ʻAhihi-Kinaʻu Natural Area Reserve, Honolua-Mokulēʻia Bay Marine Life Conservation District, and Makena State Park.	✓		
2.2.1.d Incorporate the following into the MIP, where consistent with the MIP:			
(1) Beach Management Plan for Maui;			✓
(2) Coastal Nonpoint Pollution Control Program Management Plan;			✓
(3) Implementation Plan for Polluted Runoff Control; and			✓
(4) Ocean Resource Management Plan.			✓
2.2.1.e Support greater coordination among governmental agencies involved with the protection of the island's marine resources.			✓
Objective:			
2.2.2 Improved reef health, coastal water quality, and marine life.	✓		
Policies:			

Maui Island Plan Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
2.2.2.a Create additional mechanisms where needed to contain and control runoff and pollution.	✓		
2.2.2.b Allow extraction of high quality, Class A, low silt sands only when they will be used to protect or restore Maui's shorelines and beaches.			✓
2.2.2.c Carefully manage beach nourishment activities to protect the coastal and marine ecosystem.			✓
2.2.2.d Require, where appropriate, a buffer between landscaped areas and the shoreline, gulches, and streams to reduce the runoff of fertilizers, pesticides, herbicides, and other pollutants into coastal waters.	✓		
2.2.2.e Strictly regulate shoreline armoring in accordance with adopted Shoreline Rules, with an intent to protect the coastal and marine ecosystem.			✓
2.2.2.f Support greater protection of Keālia Pond National Wildlife Refuge through the following:			
(1) Enhancement of marine ecosystems;			✓
(2) Beach and sand dune restoration; and			✓
(3) Expansion of habitat for Maui's threatened or endangered sea turtles, birds, and other species.			✓
2.2.2.g Support the development of regulations to prevent the excessive depletion of fish stocks due to non-sustainable practices and gear such as SCUBA spear-fishing and lay nets, within the context of nearshore ecosystems.			✓
2.2.2.h Encourage the State to conduct a regular census of fish populations and monitor coral health.			✓
2.2.2.i Encourage the State to significantly increase the number of park rangers, enforcement officers, and marine biologists to protect coastal resources.			✓
2.2.2.j Encourage the State to prohibit the collection and exportation of fish, coral, algae, and other marine species for the ornamental and aquarium trade.			✓
Objective:			
2.2.3 Water quality that meets or exceeds State Clean Water Act standards.	✓		
Policies:			
2.2.3.a Reduce the amount of impervious surface and devise site plan standards that aim to minimize storm runoff and NPS pollution.	✓		
2.2.3.b Support the revision of existing regulations to require an Erosion and Sedimentation Control Plan (ESCP) for development activities that may pose a threat to water quality.			✓
2.2.3.c Require an on-site monitoring program, where applicable, when grading may pose a threat to water quality or when recommended in the ESCP.			✓
2.2.3.d Avoid development actions that impair Maui's reef systems and remove identified stressors.			✓
2.2.3.e Phase out cesspools and restrict the use of septic systems in ecologically sensitive coastal areas by converting to environmentally-friendly alternative sewage treatment systems, and connecting to central sewerage systems when and where feasible.			✓
2.2.3.f Prohibit the development of new wastewater injection wells, except when unavoidable for public health and safety purposes.			✓

Maui Island Plan Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
2.2.3.g Ensure that the County upholds its affirmative duty under the Clean Water Act by monitoring and reducing point and NPS pollution to help safeguard coastal waters.			✓
Objective:			
2.2.4 Acquire additional shoreline lands and shoreline access rights.			✓
Policies:			
2.2.4.a Promote the use of conservation easements, land trusts, transfer and purchase of development rights, and mitigation banking.			✓
2.2.4.b Require the dedication of public beach and rocky shoreline access ways to and along the shoreline where it serves a practical public interest as a condition of development or subdivision approval; future subdivisions and developments shall be consistent with and effectuate, to the extent practicable, the *Shoreline Access Inventory Update - Final Report* (March 2005), and its updates.			✓
2.2.4.c Incorporate the *Shoreline Access Inventory Update - Final Report* (March 2005), and its regular updates, into this plan.			✓
2.2.4.d Identify access points while further acquiring key shoreline parcels and easement rights to enhance and protect beach access and shoreline recreation.			✓
Analysis: **The Proposed Action supports the goal and above-noted objective and policies relating to shoreline, reef, and nearshore waters. As part of the environmental review process, a Water Quality Assessment and Marine Biological Survey have been conducted to assess potential impacts from the project on the nearshore environment. A comprehensive program of Best Management Practices (BMPs) and a drainage plan inclusive of Low Impact Development (LID) techniques will be utilized to minimize the potential for construction and post-construction-related drainage impacts.**			
WATERSHEDS, STREAMS, AND WETLANDS ISSUES			
Goal:			
2.3 Healthy watersheds, streams, and riparian environments.	✓		
Objective:			
2.3.1 Greater protection and enhancement of watersheds, streams, and riparian environments.		✓	
Policies:			
2.3.1.a All present and future watershed management plans shall incorporate concepts of ahupua‘a management based on the interconnectedness of upland and coastal ecosystems/species.		✓	
2.3.1.b Continue to support and be an active member of watershed partnerships.			✓
2.3.1.c Support the establishment of regional water trusts, composed of public and private members, to manage water resources.			✓
2.3.1.d Support regulations to require developments to utilize ahupua‘a management practices.			✓
2.3.1.e Work with private and non-profit entities to educate the public about the connection between upland activities within the watershed and the impacts on nearshore ecosystems and coral reefs.			✓

Maui Island Plan Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
2.3.1.f Provide adequate funding and staff to develop and implement watershed protection plans and policies, including acquisition and management of watershed resources and land.			✓
2.3.1.g Encourage the State to mandate instream assessment to provide adequate water for native species.			✓
2.3.1.h Maui will protect all watersheds and streams in a manner that guarantees a healthy, sustainable riparian environment.		✓	
Objective:			
2.3.2 Decreased NPS and point source pollution.	✓		
Policies:			
2.3.2.a Enforce water pollution related standards and codes.			✓
2.3.2.b Support the use of LID Techniques such as those described in the State of Hawai'i LID Practitioner's Guide (June 2006), as amended.	✓		
2.3.2.c Encourage farmers and ranchers to use agricultural BMPs to address NPS pollution.			✓
Objective:			
2.3.3 Preserve existing wetlands and improve and restore degraded wetlands.			✓
Policies:			
2.3.3.a Prohibit the destruction and degradation of existing upland, mid-elevation, and coastal wetlands.			✓
2.3.3.b Support and fund wetland protection and improvement, and restoration of degraded wetlands.			✓
2.3.3.c Where applicable, require developers to provide a wetland protection buffer and/or other protective measures around and between development and wetland resources.			✓
Objective:			
2.3.4 Greater preservation of native flora and fauna biodiversity to protect native species.	✓		
Policies:			
2.3.4.a Work with appropriate agencies to eliminate feral ungulate populations and invasive species.	✓		
2.3.4.b Encourage the State to provide adequate funding to preserve biodiversity, protect native species, and contain or eliminate invasive species.			✓
2.3.4.c Support the work of conservation groups and organizations that protect, reestablish, manage, and nurture sensitive ecological areas and threatened indigenous ecosystems.			✓
Objective:			
2.3.5 Limited development in critical watershed areas.			✓
Policies:			
2.3.5.a Discourage development and subdivision of land within critical watersheds and in areas susceptible to high erosion and sediment loss.			✓

Maui Island Plan Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
2.3.5.b Designate critical watershed areas as conservation lands.			✓
2.3.5.c Strongly encourage new subdivisions and developments that are proximate to environmentally sensitive watershed resources to prepare and implement CSD plans.			✓
Objective:			
2.3.6 Enhance the vitality and functioning of streams, while balancing the multiple needs of the community.	✓		
Policies			
2.3.6.a Protect and enhance natural streambeds and discourage stream alteration.	✓		
2.3.6.b Work with appropriate agencies to establish minimum stream flow levels and ensure adequate stream flow to sustain riparian ecosystems, traditional kalo cultivation, and self-sustaining ahupua'a.			✓
2.3.6.c Respect and participate in the resolution of native Hawaiian residual land and water rights issues (kuleana lands, ceded lands, and historic agricultural and gathering rights).			✓
2.3.6.d Ensure that stream flows implement laws and policies found in the State Constitution and Water Code.			✓
2.3.6.e Work with appropriate agencies and stakeholders to establish minimum stream flow levels, promote actions to support riparian habitat and the use of available lo'i, and maintain adequate flows for the production of healthy kalo crops.			✓
Analysis: **The Proposed Action supports the goal and above-noted objectives and policies relating to watersheds, streams, and wetland issues. The master plan for the Proposed Action has been formulated to prioritize the retention of the existing alignment of streams and gulches that run through the project area. As such, alteration of these features will be minimized to the extent practicable and be limited to that needed to accommodate necessary infrastructure improvements such as roadway and culvert crossings. Also, a comprehensive program of BMPs and a drainage plan inclusive of LID techniques will be used to minimize the potential for construction and post-construction-related drainage impacts. A Flora and Fauna Survey was completed as part of the environmental review process to determine the presence of indigenous species and habitat within the project area, and to advance mitigation measures aimed at protecting and avoiding impacts to these species and habitats. The Proposed Action also involves the maintenance and protection of a dryland forest within the project area.**			
WILDLIFE AND NATURAL AREAS			
Goal:			
2.4 Maui's natural areas and indigenous flora and fauna will be protected.	✓		
Objective:			
2.4.1 A comprehensive management strategy that includes further identification, protection, and restoration of indigenous wildlife habitats.		✓	
Policies:			
2.4.1.a Identify and inventory the following:			
(1) Natural, recreational, and open space resources;	✓		
(2) Flora and fauna with medium, high, and very high concentrations of threatened or endangered species; and	✓		

Maui Island Plan Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable		DA	IA	NA
	(3) Location and extent of invasive species.			✓
2.4.1.b	Require flora and fauna assessment and protection plans for development in areas with concentrations of indigenous flora and fauna; development shall comply with the assessment and protection plan and shall use the avoidance, minimization, and mitigation approach respectively, with an emphasis on avoidance.	✓		
2.4.1.c	Support the implementation of Hawai`i's Comprehensive Wildlife Conservation Strategy (October 2005).			✓
Objective:				
2.4.2	A decrease in invasive species through programs and partnerships that eradicate undesirable species and protect native habitat.			✓
Policies:				
2.4.2.a	Prevent the introduction of invasive species at all of Maui's airports and harbors.			✓
2.4.2.b	Encourage the State to increase funding in support of invasive species interception, control, and eradication.			✓
2.4.2.c	Encourage the State to develop programs that allow students to participate in invasive species eradication projects.			✓
Objective:				
2.4.3	Greater protection of sensitive lands, indigenous habitat, and native flora and fauna.	✓		
Policies:				
2.4.3.a	Secure an interconnected network of sensitive lands, greenways, watercourses, and habitats.			✓
2.4.3.b	Protect Maui's sensitive lands (see Sensitive Lands on Protected Areas Diagrams).			✓
2.4.3.c	Promote innovative environmental-planning methods and site-planning standards that preserve and re-establish indigenous flora and fauna habitat, to preserve and restore connected habitat corridors and open space.			✓
2.4.3.d	Utilize protection tools such as conservation easements, land trusts, land banks, Purchase of Developments Rights (PDRs), Transfer of Development Rights (TDRs), and other stewardship tools to acquire natural areas			✓
2.4.3.e	Encourage discussions with communities to designate heritage areas that protect recreational and cultural lifestyles and resources.			✓
2.4.3.f	Support the expansion of Haleakalā National Park, and the creation of new national parks, where appropriate and supported by local communities.			✓
2.4.3.g	Encourage reforestation efforts that increase native species' habitat.	✓		
2.4.3.h	Utilize the Natural Area Partnership Program (NAPP) and other programs to protect natural lands.			✓
2.4.3.i	Support increased dedicated funding for the acquisition, protection, restoration, or preservation of important natural areas or open space through the following: grants from the Land and Water Conservation Fund; dedicated funding from real property taxes or other appropriate revenues; bond issues; real estate transfer tax; revenues from the Transient Accommodations Tax; development			✓

Maui Island Plan Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
mitigation fees; and other appropriate funding sources.			
Analysis: **The Proposed Action supports the goal and above-noted objectives and policies relating to wildlife and natural areas. As noted above, a Flora and Fauna Survey was carried out as part of the environmental review process to document any endangered or threatened species within the project area. The study provided recommended mitigation strategies aimed at minimizing potential impacts to flora and fauna resources in the area. In addition, the Proposed Action involves the preservation of a dryland forest within the project area as well as the maintenance of open space resources.**			
SCENIC RESOURCES			
Goal:			
2.5 Maui will continue to be a beautiful island steeped in coastal, mountain, open space, and historically significant views that are preserved to enrich the residents' quality of life, attract visitors, provide a connection to the past, and promote a sense of place.	✓		
Objective:			
2.5.1 A greater level of protection for scenic resources.	✓		
Policies:			
2.5.1.a Protect views to include, but not be limited to, Haleakalā, ʻĪao Valley, the Mauna Kahalawai (West Maui Mountains), Puʻu Ōʻlaʻi, Kahoʻolawe, Molokini, Molokaʻi, and Lānaʻi, Mauna Kea, Mauna Loa, sea stacks, the Pacific Ocean, and significant water features, ridgelines, and landforms.	✓		
2.5.1.b Identify, preserve, and provide ongoing management of important scenic vistas and open space resources, including mauka-to-makai and makai-to-mauka view planes.	✓		
2.5.1.c Protect "night sky" resources by encouraging the implementation of ambient light ordinances and encouraging conversion of all sources that create excessive light pollution, affecting our ability to view the stars.	✓		
2.5.1.d Protect ridgelines from development where practicable to facilitate the protection of public views.			✓
2.5.1.e Protect scenic resources along Maui's scenic roadway corridors.	✓		
Objective:			
2.5.2. Reduce impacts of development projects and public-utility improvements on scenic resources.	✓		
Policies:			
2.5.2.a Enforce the policies and guidelines of the SMA regarding the protection of views.			✓
2.5.2.b Require any new subdivision of land, development, or redevelopment adjacent to a "high" or "exceptional" scenic corridor to submit an impact assessment of the project's scenic impacts; this assessment shall use the avoidance, minimization, and mitigation steps respectively, with an emphasis on avoidance.			✓
2.5.2.c Require appropriate building setbacks and limits on wall heights to protect views along scenic corridors.			✓

Maui Island Plan Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
2.5.2.d Encourage the State of Hawai`i Board of Land and Natural Resources to deny any development within the State Conservation District that interferes with a scenic landscape or disrupts important open space resources.			✓
2.5.2.e Require Urban Design and Review Board (UDRB) review and approval of utility poles, facilities, and other visible infrastructure improvements along scenic corridors.			✓
2.5.2.f Ensure little or no effect on scenic resources from utility improvements, primarily power poles.			✓
2.5.2.g Protect scenic vistas from intrusion by power poles.	✓		
Objective:			
2.5.3 Greater protection of and access to scenic vistas, access points, and scenic lookout points.			✓
Policy:			
2.5.3.a Protect, enhance, and acquire access to Maui's scenic vistas and resources.		✓	
Analysis: **The Proposed Action supports the goal and above-noted objectives and policies relating to scenic resources. The Proposed Action has been designed with careful consideration given to community input obtained during the planning process, to complement and enhance existing development within the Makena Resort. Particular attention would be given to the placement of buildings during the design process to arrive at a plan that is believed to be both sensitive and place-appropriate to the surrounding community. A View Analysis, providing "before" and "after" perspectives of the proposed new community from public vantage points has been prepared to demonstrate the low profile and low density of the project. All electrical infrastructure for the project will be placed underground to reduce the visual impact of utility infrastructure improvements on scenic resources.**			
CHAPTER 3 – NATURAL HAZARDS			
Goal:			
3.1 Maui will be disaster resilient.		✓	
Objective:			
3.1.1 Increased inter-agency coordination.		✓	
Policy:			
3.1.1.a Reinforce the island's preparedness capacity by:			
(1) Applying the latest data-gathering techniques/technology;			✓
(2) Pursuing funding opportunities;			✓
(3) Improving monitoring and advance warning systems;		✓	
(4) Fostering public awareness; and			✓
(5) Working with external agencies to coordinate disaster mitigation and response.		✓	
Objective:			
3.1.2 Greater protection of life and property.		✓	

Maui Island Plan Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
Policies:			
3.1.2.a Identify critical infrastructure, lifelines, roads, and populations that are vulnerable to coastal hazards, and encourage strategic retreat and relocation to safer areas.			✓
3.1.2.b Consider the location of dams, reservoirs, holding ponds, and other water-containing entities that are upstream of inhabited areas to anticipate, avoid, and mitigate inundation risks, and discourage new development in areas where possible inundation hazards may exist.			✓
3.1.2.c Strengthen current development standards to minimize destruction of land and property.			✓
3.1.2.d Encourage the use of construction techniques that reduce the potential for damage from natural hazards.		✓	
3.1.2.e Increase the County's resilience to drought.			✓
3.1.2.f Increase food and energy security through local production and storage.			✓
Objective:			
3.1.3 A more coordinated emergency response system that includes clearly defined and mapped evacuation routes.		✓	
Policy:			
3.1.3.a Identify and expand shelter facilities and evacuation routes away from areas susceptible to natural hazards.		✓	
Objective:			
3.1.4 A more educated and involved public that is aware of and prepared for natural hazards.			✓
Policies:			
3.1.4.a Promote public education and involvement related to natural hazards awareness and preparedness.			✓
3.1.4.b Coordinate a multi-agency effort to establish and promote a comprehensive public education program that will focus on practical approaches to preparedness, damage prevention, and hazard mitigation.			✓
Analysis: **The Proposed Action supports the goal and above-noted objective and policies relating to natural hazards. The project will be implemented in an area designated for growth by the MIP and concurrent with infrastructure systems to service the project. In addition, the project's location, mostly mauka of Makena Alanui Road, places it primarily outside of the tsunami evacuation zone, flood hazard zones, and the projected 3.2-foot sea-level rise hazard area. Although a portion of the land plan located along the shoreline does lie within these areas, no vertical structures are planned to be developed within this area. The proposed development will incorporate design features to increase resilience to natural hazards and with consideration to evacuation routes.**			
CHAPTER 4 – ECONOMIC DEVELOPMENT			
ECONOMIC DIVERSIFICATION			
Goal:			
4.1 Maui will have a balanced economy composed of a variety of industries that offer employment opportunities and well-paying jobs and a business	✓		

Maui Island Plan Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
environment that is sensitive to resident needs and the island's unique natural and cultural resources.			
Objective:			
4.1.1 A more diversified economy.	✓		
Policies:			
4.1.1.a Encourage an economy that is driven by innovation, research and development, and human resource development, including but not limited to, increasing technology- and knowledge-based sectors to be a major component in Maui County's economic base.			✓
4.1.1.b Support the creation of new jobs and industries that provide a living wage.	✓		
4.1.1.c Facilitate and expedite permits and approvals.			✓
4.1.1.d Develop linkages and partnerships among international research and development activities and Maui businesses.			✓
Objective:			
4.1.2 Increase activities that support principles of sustainability.	✓		
Policies:			
4.1.2.a Support industries that are sustainable, and culturally and environmentally sensitive.	✓		
4.1.2.b Encourage and support local businesses.		✓	
4.1.2.c Substitute imports with locally-produced services and products where practicable.			✓
4.1.2.d Support the development of economic development clusters in targeted industry sectors.			✓
4.1.2.e Encourage all businesses to save energy, water, and other resources.			✓
Objective:			
4.1.3 Improve the island's business climate.	✓		
Policies:			
4.1.3.a Upgrade, maintain the quality of, and improve access to telecommunications infrastructure.	✓		
4.1.3.b Ensure an adequate supply of affordable workforce housing.	✓		
4.1.3.c Develop neighborhoods and communities that are attractive to the workforce of a diversified economy.	✓		
4.1.3.d Encourage, nurture, and reward entrepreneurship and innovation.			✓
4.1.3.e Encourage employers to establish incentive programs. Support flexibility in workforce policies compatible with business and quality of life goals.			✓
4.1.3.f Assist community development organizations with revitalization and development of neighborhoods and communities that are attractive to the workforce of a diversified economy.			✓

Maui Island Plan Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
Analysis: **The Proposed Action supports the goal and above-noted objectives and policies relating to economic diversification. According to the Economic and Fiscal Impact Analysis report prepared for the subject project, the construction and operation of the new community will generate substantial employment opportunities as well as increased revenues to both the State and County governments. The Proposed Action will create jobs and encourage spending, both in the short term for construction contractors and supplies, and in the long term with employees. The Proposed Action seeks to support the visitor industry and population by providing resort-style residential accommodations in an existing resort area and within an Urban Growth Boundary (UGB) as set forth by the MIP. Through the Proposed Action, the local economy will benefit from job creation and increased resident spending. In addition, as part of the project, residential workforce housing units will be developed in an effort to provide opportunities for local families to reside in the Makena region in proximity to resort employment opportunities.**			
TOURISM			
Goal:			
4.2 A healthy visitor industry that provides economic well-being with stable and diverse employment opportunities.		✓	
Objective:			
4.2.1 Increase the economic contribution of the visitor industry to the island's environmental well-being for the island's residents' quality of life.		✓	
Policies:			
4.2.1.a Engage the visitor industry in the growth of emerging sectors where practicable.			✓
4.2.1.b Support the implementation of the Maui County TSP, when consistent with the MIP.			✓
4.2.1.c Focus economic growth in the visitor industry through enhanced visitor experiences and an emphasis on attracting higher-spending.			✓
4.2.1.d Provide a rich visitor experience, while protecting the island's natural beauty, culture, lifestyles, and aloha spirit.		✓	
4.2.1.e Diversify the tourism industry by supporting appropriate niche activities such as ecotourism, cultural tourism, voluntourism, ag-tourism, health and wellness tourism, educational tourism, medical tourism, and other viable tourism-related businesses in appropriate locations.			✓
4.2.1.f Recognize the important economic contributions that the visitor industry makes and support a healthy and vibrant visitor industry.			✓
4.2.1.g Support the increased availability of kamaʻāina discount programs.			✓
Objective:			
4.2.2 Comprehensively manage future visitor-unit expansion.		✓	
Policies:			
4.2.2.a Mitigate the impact of tourism on the host culture, natural environment, and resident lifestyles.		✓	
4.2.2.b Allow, where permitted by the community plan, the development of business hotels and small, sensitively-designed inns.			✓
4.2.2.c Manage impacts from transient vacation rentals, hotels, bed and breakfast units, timeshares, and resort condominiums on residential communities, public			✓

Maui Island Plan Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
infrastructure, and community facilities.			
4.2.2.d Discourage supplanting of existing island housing to visitor accommodations that may have a negative impact on long-term rental housing, price of housing, and price of land.			✓
4.2.2.e Allow the designation of retreat/mini-conference centers in appropriate locations through the community plan process.			✓
4.2.2.f Community plans should consider establishing standards such as limits on building size, room count, and the number of inns, if any, that will be allowed in small towns.			✓
Objective:			
4.2.3 Maximize residents' benefits from the visitor industry.			✓
Policies:			
4.2.3.a Promote a desirable island population by striving to not exceed an island-wide visitor population of roughly 33 percent of the resident population.			✓
4.2.3.b Use the required General Plan Annual Status Report to monitor trends related to residents and visitors.			✓
Analysis: **The Proposed Action is indirectly applicable to the goal, objectives, and policies related to tourism. Pursuant to conditions attached to the land use entitlement approvals for the Proposed Action, the Applicant will continue to maintain the Makena Landing and Maluaka beach parks, and construct additional beach parking stalls in the area. This will help to mitigate the impact of tourism on the host culture and positively impact the visitor experience.**			
AGRICULTURE			
Goal:			
4.3 Maui will have a diversified agricultural industry contributing to greater economic, food, and energy security and prosperity.	✓		
Objective:			
4.3.1 Strive for at least 85 percent of locally-consumed fruits and vegetables and 30 percent of all other locally-consumed foods to be grown in-State.	✓		
Policies:			
4.3.1.a Strive to substitute food/agricultural product imports with a reliable supply of locally produced food and agricultural products.		✓	
4.3.1.b Facilitate and support the direct marketing/sale of the island's agricultural products to local consumers, through farmers markets and similar venues.			✓
4.3.1.c Encourage growing a diverse variety of crops and livestock to ensure the stewardship of our land while safeguarding consumer safety.	✓		
4.3.1.d Work with the State to regulate and monitor genetically-modified-organism (GMO) crops to ensure the safety of all crops and label all GMO products.			✓
Objective:			
4.3.2 Maintain or increase agriculture's share of the total island economy.			✓
Policies:			
4.3.2.a Encourage the export of the island's agricultural products to offshore markets.			✓

Maui Island Plan Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
4.3.2.b Support infrastructure investments at harbors, such as ferry service, airports, and other facilities for the rapid and cost-effective export of island-grown products.			✓
4.3.2.c Encourage the continued viability of sugar cane production, or other agricultural crops, in central Maui and all of Maui Island.			✓
4.3.2.d Work with the State to reduce excise taxes for commercial agricultural products produced within the State.			✓
4.3.2.e Coordinate with appropriate State and Federal Departments and agencies, private shipping companies, and farmers associations to assist in the rapid and cost-effective export of Maui's agricultural products to off-island markets.			✓
Objective:			
4.3.3 Expand diversified agriculture production at an average annual rate of 4 percent.			✓
Policies:			
4.3.3.a Promote the development of locally-grown and ecologically-sound biofuels, aquaculture, and forest products.			✓
4.3.3.b Support the development of farming associations/cooperatives.			✓
4.3.3.c Work with educational institutions and appropriate agencies to provide education and training for farm owners and entrepreneurs.			✓
Analysis: **The Proposed Action is applicable to the above-noted goal, objective, and policies related to agriculture. The proposed land plan incorporates the Nāulu Farm, a non-commercial 2-acre farm operated by the Applicant's ʻŌiwi Resources Stewardship Department. Operations include an animal farm, a greenhouse dedicated to cultivating native species, a vegetable and fruit garden, and an aquaponics system. The greenhouse propagates native species for replanting areas in the project site. The farm's operations are subsidized by a portion of the homeowners' association fees.**			
EMERGING SECTORS			
Goal:			
4.4 A diverse array of emerging economic sectors.			✓
Objective:			
4.4.1 Support increased investment and expanded activity in emerging industries.			✓
Policies:			
4.4.1.a Support the development of and access to state-of-the-art voice, video, and data telecommunications systems and high-speed Internet.			✓
4.4.1.b Attract and assist industries to compete in high technology activities such as those related to renewable energy, green technologies, diversified agriculture, ocean sciences, health sciences, space technologies, and other knowledge-based industries.			✓
4.4.1.c Support new industries that are environmentally and culturally sensitive such as health and wellness, sports and outdoor activities, cultural activities, the arts, film-making, entertainment, and digital media.			✓
4.4.1.d Support a sustainable, culturally sensitive, astronomy industry.			✓

Maui Island Plan Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
4.4.1.e Support the continued development of the Maui Research and Technology Park in Kihei, as a center for research and development, education, and diversified economic development, as provided by the Maui County Code.			✓
4.4.1.f Work with appropriate organizations to support the development of high technology clusters around renewable energy, diversified agriculture, ocean sciences, health sciences, and other knowledge-based industries.			✓
Objective:			
4.4.2 Increase the development of renewable energy technologies that are supported by the local community.			✓
Policies:			
4.4.2.a Support the expansion of the renewable energy sector and the use of solar, wind, wave, and biofuel technologies.			✓
4.4.2.b Provide incentives to encourage renewable energy development, the use of green energy technologies, and energy conservation.			✓
4.4.2.c Ensure an adequate supply of land and facilitate permitting to meet the needs for renewable energy technologies such as solar, wind, wave, biofuel, and other technologies, provided that environmental, view plane, and cultural impacts are addressed.			✓
4.4.2.d Support the Maui County Energy Alliance Plan where consistent with the MIP.			✓
Analysis: **The Proposed Action is not directly or indirectly applicable to the above goal, objectives, and policies related to emerging economic sectors.**			
SMALL BUSINESS DEVELOPMENT			
Goal:			
4.5 Small businesses will play a key role in Maui's economy.		✓	
Objective:			
4.5.1 Increase the number of and revenue generated by small businesses and decrease the percentage of small business failures.		✓	
Policies:			
4.5.1.a Provide incentives and support for small businesses and entrepreneurs that incorporate sustainable technologies and practices into their operations, utilize local materials, or produce and sell locally-made goods or services.			✓
4.5.1.b Assist traditional "mom and pop" business establishments.		✓	
4.5.1.c Reduce barriers to small business development.			✓
4.5.1.d Require, where feasible, the government procurement of goods and services from locally-owned, small businesses.			✓
4.5.1.e Support community markets and venues that sell locally-made produce, goods, and services.			✓
Analysis: **The Proposed Action supports the goal, objective, and above-noted policy relating to emerging sectors. According to the Economic and Fiscal Impact Analysis report prepared for the project, the construction and operation of the new community will generate substantial economic benefits including employment opportunities, visitor spending and increase tax revenues to both State and County governments. The Proposed Action will create jobs and encourage spending,**			

Maui Island Plan Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
both in the short term for construction contractors and supplies, and in the long term with employees. Many of the companies and related services involved in transactions related to this project will involve small local operations and businesses.			
HEALTH CARE SECTOR			
Goal:			
4.6 Maui will have a health care industry and options that broaden career opportunities that are reliable, efficient, and provide social well-being.			✓
Objective:			
4.6.1 Expand the economic benefits of the health care sector.			✓
Policies:			
4.6.1.a Encourage expanded services at MMMC and at other medical facilities.			✓
4.6.1.b Support expansion of federally qualified health centers with the direct involvement of the residents of the communities served.			✓
4.6.1.c Support the use of multimedia as a means to provide healthcare information.			✓
4.6.1.d Encourage digitalization of all diagnostic equipment at all facilities on Maui to enable sharing of data and more efficient use of limited provider workforce, consistent with data protection and patient privacy.			✓
4.6.1.e Support the expansion of telemedicine.			✓
4.6.1.f Encourage expansion and improved access to emergency care in all communities.			✓
Objective:			
4.6.2 Be more efficient in the delivery of health care services and in minimizing health care costs.			✓
Policies:			
4.6.2.a Support expansion of health care providers and facilities to improve access to quality care throughout the island.			✓
4.6.2.b Encourage the expansion of veteran health care services.			✓
4.6.2.c Allow home-based out-patient medical care that does not interfere with surrounding neighborhoods.			✓
Objective:			
4.6.3. Expand Maui's alternative health care services, including spiritual practices.			✓
Policies:			
4.6.3.a Support efforts to promote alternative medicine.			✓
4.6.3.b Allow small-scale home-alternative medicine businesses such as massage, chiropractic care, traditional Hawaiian healing, and acupuncture that do not interfere with surrounding neighborhoods.			✓
Analysis: **The Proposed Action is not directly or indirectly applicable to the above goal, objectives, and policies related to the health care sector.**			
EDUCATION AND WORKFORCE DEVELOPMENT			

Maui Island Plan Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
Goal:			
4.7 Maui will have effective education and workforce development programs and initiatives that are aligned with economic development goals.		✓	
Objective:			
4.7.1 Improve preschool and K-12 education to allow our youth to develop the skills needed to successfully navigate the 21st century.		✓	
Objective:			
4.7.1.a Encourage the State to implement programs such as:			
(1) Universally available preschool for children between the ages of one and five;			✓
(2) Mandatory kindergarten;			✓
(3) Mandatory K-5th grade classroom size limits of 1 teacher to 20 students;			✓
(4) Mandatory nutrition programs; and			✓
(5) Mandatory Native Hawaiian programs at all grade levels.			✓
4.7.1.b Encourage the DOE to extend the school day by at least an hour.			✓
4.7.1.c Encourage the State to increase funding for public education so that Hawai‘i is among the top 10 states nationally as measured by investment per pupil.		✓	
4.7.1.d Encourage the State to ensure teacher certifications relate to effective delivery and improved student performances, and develop an industry experience/equivalency certification to assure our DOE students have access to career technical education and training.			✓
4.7.1.e Encourage the UHMC to provide dormitory space for high school students.			✓
4.7.1.f Encourage the development and implementation of curriculum on native Hawaiian history, culture, and practices, in consultation with native Hawaiian groups and associations.			✓
Objective:			
4.7.2 Encourage an increase in the number of certificate recipients and associate, bachelors, and graduate degrees conferred.			✓
Policies:			
4.7.2.a Encourage the State to increase the number of articulation agreements between the UHMC and four-year universities, particularly the University of Hawai‘i at Manoa.			✓
4.7.2.b Encourage the State to expand accredited 2-year, 4-year, and graduate programs through the UHMC.			✓
4.7.2.c Encourage the education and training of our residents to meet the needs of a diversified economy.			✓
4.7.2.d Support education and training programs such as student internships, vocational training, and career development opportunities to ensure a highly skilled workforce			✓

Maui Island Plan Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
4.7.2.e Work with educational institutions to improve and expand access to education and training through multiple modes, including distance learning.			✓
Objective:			
4.7.3 Strive to ensure that more of Maui's jobs are developed in STEM-related sectors by 2030.			✓
Policies:			
4.7.3.a Support the development of STEM-related certificates and degrees at the two- and four year levels.			✓
4.7.3.b Support the education initiatives of the Maui Agricultural Development Plan.			✓
4.7.3.c Expand and seek funding for internships, mentoring, job shadowing, etc. to foster interest in health and green workforce careers.			✓
4.7.3.d Work with MEDB, UHMC, and other similar organizations to expand internship/education programs to support STEM careers.			✓
4.7.3.e Continue to partner with the MEDB and other similar organizations to recruit, assist, and retain emerging industries, research and development activities, and educational/workforce opportunities.			✓
Analysis: **The Proposed Action supports the goal and above-noted objective and policies relating to educational and workforce development. As the majority of market residential units within the new community are expected to be owned and occupied by part-time residents, the project is not expected to place substantial demands on the State Department of Education (DOE) and its school facilities/programs. Children of families living within the onsite residential workforce units would, however, be served by DOE schools. For each residential unit developed within the project, a school impact fee will be paid to the DOE. The Applicant will coordinate with DOE to determine its fair share for a school impact fee contribution, which would be utilized by DOE to improve educational facilities and programs.**			
CHAPTER 5 – HOUSING			
Goal:			
5.1 Maui will have safe, decent, appropriate, and affordable housing for all residents developed in a way that contributes to strong neighborhoods and a thriving island community.	✓		
Objective:			
5.1.1 More livable communities that provide for a mix of housing types, land uses, income levels, and age.	✓		
Policies:			
5.1.1.a Promote livable communities (compact/walkable/bikeable, access to transit) that provide for a mix of housing types and land uses, including parks, open space, and recreational areas.	✓		
5.1.1.b Promote planning approaches that provide a mix of multifamily and single-family housing units to expand housing choices.	✓		
5.1.1.c Discourage gated communities.			✓
5.1.1.d Provide incentives for the rehabilitation or adaptive reuse of historic structures to facilitate more housing choices.			✓
5.1.1.e Use planning and regulatory approaches to provide higher housing densities.			✓

Maui Island Plan Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
Objective:			
5.1.2 Better monitoring, evaluation, and refinement of affordable housing policy in conjunction with the economic cycle.		✓	
Policies:			
5.1.2.a Improve data on resident and nonresident housing.			✓
5.1.2.b Utilize the following approaches to promote resident housing and to minimize offshore market impacts:			
(1) Ensure that the future housing stock is composed of a mix of housing types (multifamily, small lots, ohana units, co-housing, cottage houses, etc.);	✓		
(2) Encourage new housing in proximity to jobs and services, in places that are conducive/affordable to island residents; and	✓		
(3) Explore taxation alternatives and building fee structures.			✓
Objective:			
5.1.3 Provide affordable housing, rental or in fee, to the broad spectrum of our island community.	✓		
Policies:			
5.1.3.a Consider regulations that can help keep affordable housing available at affordable rents.			✓
5.1.3.b Seek to have ownership of affordable for-sale and rental housing vested in a non-profit community land trust, or other qualified housing provider, committed to keeping such housing affordable in perpetuity.	✓		
5.1.3.c Facilitate the use of public lands in urban areas that are suitable for affordable housing.			✓
5.1.3.d Develop or support partnerships and initiatives that provide housing-related education/outreach.			✓
5.1.3.e Support the continuing efforts of the County and its community partners to:			
(1) Disseminate information on different housing/financial assistance programs (loans, grants, etc.) including information on housing rehabilitation/restoration/adaptive reuse;			✓
(2) Provide housing-related counseling including budget, credit, and financial planning assistance; and			✓
(3) Create and maintain a comprehensive/master list of available affordable housing to help residents secure a unit that satisfies their need.			✓
Objective:			
5.1.4 Provide infrastructure in a more timely manner to support the development of affordable housing.		✓	
Policies:			
5.1.4.a Prioritize the development of infrastructure that supports the development of affordable housing.		✓	
5.1.4.b Utilize appropriate financing approaches and assistance tools to encourage the development of infrastructure and public facilities.			✓

Maui Island Plan Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
5.1.4.c Tailor infrastructure requirements to correspond with appropriate level-of-service standards to help control housing costs and to maintain safety.			✓
Objective:			
5.1.5 A wider range of affordable housing options and programs for those with special needs.			✓
Policies:			
5.1.5.a Ensure that residents with special needs have access to appropriate housing.			✓
5.1.5.b Encourage housing to be built or rehabilitated to allow the elderly and those with special needs to live in their homes.			✓
5.1.5.c Ensure and facilitate programs to assist those with special needs from becoming homeless.			✓
5.1.5.d Promote programs that stimulate the production of sustainable homeless shelters and alternative housing technologies.			✓
5.1.5.e Support programs that offer home modification counseling on low-interest retrofit loans and grants to those with special needs.			✓
Objective:			
5.1.6 Reduce the cost to developers of providing housing that is affordable to families with household incomes 160 percent and below of annual median income.	✓		
Policies:			
5.1.6.a Support fast-track processing procedures for the following housing-related entitlements: affordable housing projects/units; indigenous Hawaiian housing/units; and special-needs housing units (seniors, disabled, homeless, etc.).			✓
5.1.6.b Require the construction of affordable for-sale and rental housing units as part of the construction of new housing developments.	✓		
5.1.6.c Offer extra incentives in boom periods and withdraw incentives during slack periods.			✓
Objective:			
5.1.7 Increased preservation and promotion of indigenous Hawaiian housing and architecture.			✓
Policies:			
5.1.7.a Preserve, promote, and give priority to Hawaiian housing/architecture forms to preserve Hawaiian culture.			✓
5.1.7.b Provide for indigenous architecture as an allowable structure for native Hawaiian uses to include hula and lāʻau lapaʻau.			✓
Analysis: **The Proposed Action supports the goal and above-noted objectives and policies relating to housing. The proposed master-planned project will be developed in an area of Makena designated for growth by the MIP and concurrent with infrastructure systems to service the project. As part of the project, 109 onsite residential workforce housing units will be developed in an effort to provide opportunities for local families to reside in the Makena region in proximity to employment opportunities. Other than existing gates installed at Makena, there will be no new gates installed within the new community.**			

Maui Island Plan Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
CHAPTER 6 – INFRASTRUCTURE AND PUBLIC FACILITES			
SOLID WASTE			
Goal:			
6.1 Maui will have implemented the ISWMP thereby diverting waste from its landfills, extending their capacities.		✓	
Objective:			
6.1.1 Meet our future solid waste needs with a more comprehensive planning and management strategy.			✓
Policies:			
6.1.1.a Update and publicize the ISWMP every ten years.			✓
6.1.1.b Strengthen inter-agency coordination including Planning and Environmental Management departments.			✓
6.1.1.c Divert waste from the landfills and educate the public about the recommendations of the ISWMP.		✓	
6.1.1.d Minimize future active, unlined landfill cells to the extent feasible.			✓
Objective:			
6.1.2 Divert at least 60 percent of solid waste from the island's landfills.		✓	
Policies:			
6.1.2.a Require residents and commercial enterprises that generate waste to pay a fair proportion of disposal costs.		✓	
6.1.2.b Encourage environmentally safe waste-to-energy solutions.			✓
6.1.2.c Facilitate the reduction of solid waste generated by packaging, food service products, construction waste, etc.			✓
6.1.2.d Educate residents and visitors about the impacts of and methods to reduce, reuse, and recycle.		✓	
6.1.2.e Discourage the disposal of landfill leachate by diversion to wastewater treatment plants, where practicable.			✓
Analysis: **The Proposed Action supports the goal and above-noted objective and policies relating to solid waste. Solid waste generated by the proposed residential units will be collected by a private refuse service company and disposed at the Central Maui Landfill. In addition, there will be recycling facilities throughout the residential development with associated educational signage to encourage recycling and to minimize the amount of solid waste going to the landfill.**			
WASTEWATER			
Goal:			
6.2 Maui will have wastewater systems that comply with or exceed State and Federal regulations; meet levels-of-service needs; provide adequate capacity to accommodate projected demand; ensure efficient, effective, and environmentally sensitive operation; and maximize wastewater reuse where feasible.	✓		

Maui Island Plan Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
Objective:			
6.2.1 A wastewater planning program capable of efficiently providing timely and adequate capacity to service projected demand where economically feasible and practicable.		✓	
Policies:			
6.2.1.a Encourage the use of renewable energy in support of wastewater treatment facilities.			✓
6.2.1.b Focus the expansion of wastewater systems to accommodate planned growth consistent with the MIP Directed Growth Strategy.			✓
6.2.1.c Establish new wastewater treatment plant(s) outside the tsunami zone.		✓	
Objective:			
6.2.2 Adequate levels of wastewater service with minimal environmental impacts.		✓	
Policies:			
6.2.2.a Meet or exceed all State and Federal standards regulating wastewater disposal or reuse.		✓	
6.2.2.b Encourage tertiary treatment for all municipal wastewater that is disposed through deep injection wells. Phase out all municipal and private injection wells in coordination with water reuse programs, where feasible, by 2020.			✓
6.2.2.c Improve and upgrade the County's existing wastewater collection, treatment, and reuse facilities consistent with current and future plans and the County's CIP.			✓
6.2.2.d Maintain an ongoing sewer inspection program for public and private multi-user systems to identify potential problems and forecast each system's residual life.			✓
6.2.2.e Require all new developments to fund system improvements in proportion to the development impact and in accordance with the County's wastewater functional plan.			✓
6.2.2.f Require appropriate funding mechanisms, such as a sinking fund, to adequately maintain or replace aging water-system components.			✓
6.2.2.g Strongly encourage the phase out of cesspools.			✓
Objective:			
6.2.3 Increase the reuse of wastewater.	✓		
Policies:			
6.2.3.a Strengthen coordination between the Department of Water Supply (DWS) and the WWRD to promote reuse/recycling of wastewater.			✓
6.2.3.b Expand the reuse of wastewater from the Central Maui, Kīhei, Lahaina, and other wastewater systems.	✓		
Analysis: **The Proposed Action supports the goal and above-noted objectives and policies relating to wastewater. The Proposed Action will be serviced by the existing privately-owned and maintained Makena Wastewater Reclamation Facility (WWRF), which has adequate capacity to serve the projected demand to be generated by the project. The new community will utilize**			

Maui Island Plan Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable		DA	IA	NA
reclaimed water from the Makena WWRF for irrigation of landscaping in order to offset overall potable (drinking) water use for the project. All wastewater infrastructure required for the project will be installed and paid for by the Applicant.				
WATER				
Goal:				
6.3	Maui will have an environmentally sustainable, reliable, safe, and efficient water system.	✓		
Objective:				
6.3.1	More comprehensive approach to water resources planning to effectively protect, recharge, and manage water resources including watersheds, groundwater, streams, and aquifers.			✓
Policies:				
6.3.1.a	Ensure that DWS actions reflect its public trust responsibilities toward water.			✓
6.3.1.b	Ensure the WUDP implements the State Water Code and MIP's goals, objectives, and policies.			✓
6.3.1.c	Regularly update the WUDP, to maintain compliance with the General Plan.			✓
6.3.1.d	Ensure that the County's CIP for water-source development is consistent with the WUDP and the MIP.			✓
6.3.1.e	Where desirable, retain and expand public ownership and management of watersheds and fresh-water systems.			✓
6.3.1.f	Encourage and improve data exchange and coordination among Federal, State, County, and private land use planning and water resource management agencies.			✓
Objective:				
6.3.2	Increase the efficiency and capacity of the water systems in striving to meet the needs and balance the island's water needs.	✓		
Policies:				
6.3.2.a	Ensure the efficiency of all water system elements including well and stream intakes, water catchment, transmission lines, reservoirs, and all other system infrastructure.		✓	
6.3.2.b	Encourage increased education about and use of private catchment systems where practicable for nonpotable uses.			✓
6.3.2.c	Maximize the efficient use of reclaimed wastewater to serve nonpotable needs.		✓	
6.3.2.d	Work with appropriate State and County agencies to achieve a balance in resolving the needs of water users in keeping with the water allocation priorities of the MIP.			✓
6.3.2.e	Ensure water conservation through education, incentives, and regulations.			✓
6.3.2.f	Acquire and develop additional sources of potable water.	✓		
Objective:				

Maui Island Plan Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
6.3 Improve water quality and the monitoring of public and private water systems.	✓		
Policy:			
6.3.3.a Protect and maintain water delivery systems.	✓		
Analysis: **The Proposed Action supports the goal and above-noted objectives and policies relating to water. As discussed in Chapter II of the EIS document and according to the Preliminary Engineering Report, new water sources in the form of groundwater wells will be developed to serve the entirety of the Proposed Action, with the exception of its workforce housing component, which will be connected to the Central Maui water system. The new community will also use reclaimed water for irrigation of landscaping in order to offset overall potable (drinking) water use for the project. All water infrastructure required for the project will be installed and paid for by the Applicant.**			
TRANSPORTATION			
Goal:			
6.4 An interconnected, efficient, and well-maintained, multimodal transportation system.	✓		
Objective:			
6.4.1 Provide for a more integrated island-wide transportation and land use planning program that reduces congestion and promotes more efficient (transit-friendly) land use patterns.	✓		
Policies:			
6.4.1.a Plan for an integrated multi-modal transportation system comprised of public transit, bicycle, pedestrian, automobile, and other transportation modes.	✓		
6.4.1.b Refocus transportation investment from the construction of additional roadways only for the automobile to the expansion of a multimodal transportation system.		✓	
6.4.1.c Encourage the use of “complete streets” design methods.	✓		
6.4.1.d Encourage employers to implement TDM strategies.	✓		
Objective:			
6.4.2 Safe, interconnected transit, roadway, bicycle, equestrian, and pedestrian network.	✓		
Policies:			
6.4.2.a Ensure transit-, roadway-, and pedestrian-facilities design and level-of-service standards respect the unique character of our communities.	✓		
6.4.2.b Prioritize transportation improvements list to cost-effectively meet existing and future needs consistent with the MIP.			✓
6.4.2.c Require new development, where appropriate, to integrate sidewalks, pathways, bikeways, and transit infrastructure into new commercial and residential projects while enhancing community character.	✓		
6.4.2.d Identify and improve hazardous and substandard sections of roadways, drainage infrastructure, and bridges, provided that the historical integrity of the roads and bridges are protected.			✓

Maui Island Plan Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
6.4.2.e Consider identification, acquisition where appropriate, and utilization of abandoned right of-ways for bikeways, pedestrian pathways, and open-space networks.			✓
6.4.2.f Support the implementation of the *Central Maui Pedestrian & Bicycle Master Plan* (March 2012), when consistent with the MIP.			✓
Objective:			
6.4.3 An island-wide, multimodal transportation system that respects and enhances the natural environment, scenic views, and each community's character.		✓	
Policies:			
6.4.3.a Ensure that the roadway and transit alignments respect the natural environment and scenic views.		✓	
6.4.3.b Ensure that roadways and transit systems in rural areas and small towns enhance community character.		✓	
6.4.3.c Design all transit systems to respect visual corridors and Maui's character.			✓
Analysis: **The Proposed Action supports the goal, objectives, and above-noted policies relating to transportation. A place-appropriate interior roadway network inspired by smart-growth and complete streets design will be engineered and installed as part of the new community. In addition, pedestrian, bicycle, and golf cart paths will be developed for the residents' use in an effort to reduce vehicular traffic for localized trips. The network of pathways will be integrated with existing pathways throughout Makena Resort. The Applicant will also be contributing its fair share for regional roadway improvements pursuant to conditions of its existing entitlement approvals.**			
TRANSIT			
Goal:			
6.5 An island-wide transit system that addresses the needs of residents and visitors and contributes to healthy and livable communities.			✓
Objective:			
6.5.1 An integrated transit system that better serves all mobility needs of Maui's residents and visitors.			✓
Policies:			
6.5.1.a Maximize access to public transit in town centers, commercial districts, and employment centers.			✓
6.5.1.b Expand regional and inter-regional transit services, where appropriate, in heavily traveled corridors and within communities			✓
6.5.1.c Increase the frequency of current service, add additional bus routes as demand requires, and transition to nonpolluting transit vehicles, as funding permits.			✓
6.5.1.d Provide adequate transit infrastructure (e.g., bus pullouts, waiting benches and shelters, signs) along existing and future transit right-of-ways.			✓
6.5.1.e Require new development where appropriate, to provide right-of-ways (ROWs) to accommodate transit circulation and support facilities.			✓
6.5.1.f Identify, protect, and preserve, or acquire corridors for future inter-community transit use, including but not limited to, rail and also multimodal use corridors.			✓
6.5.1.g Establish transit corridors by planning for and securing right-of-way when			✓

Maui Island Plan Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable		DA	IA	NA
	appropriate for alternative modes of transportation (such as rail and water ferry service).			
6.5.1.h	Pursue improvements and upgrades to the existing transit system consistent with updated MDOT planning studies/transit plans (within the framework of comprehensive island-wide multimodal transportation plans).			✓
6.5.1.i	Increase inter-agency coordination between the Department of Planning, State Department of Transportation, County Department of Public Works, and other applicable agencies.			✓
Objective:				
6.5.2	Plan for a more diversified and stable funding base to support transportation goals.			✓
Policies:				
6.5.2.a	Support alternative methods and sources of funding transportation improvements (including impact fees, higher taxes, fare adjustments, dedicated sources of funding, and assessments).			✓
6.5.2.b	Collaborate with public-private entities or nonprofit organizations to reduce public transit operational expenses.			✓
6.5.2.c	Coordinate with appropriate Federal, State, and County agencies to fund transportation projects in areas where growth is anticipated.			✓
Analysis: **The Proposed Action is not directly or indirectly applicable to the above goal, objectives, and policies related to transit.**				
PARKS				
Goal:				
6.6	Maui will have a diverse range of active and passive recreational parks, wilderness areas, and other natural-resource areas linked, where feasible, by a network of greenways, bikeways, pathways, and roads that are accessible to all.	✓		
Objective:				
6.6.1	More effective, long-range planning of parks and recreation programs able to meet community needs.		✓	
Policies:				
6.6.1.a	Support, consistent with the MIP, the implementation of open-space and recreational plans, such as the *Pali to Puamana Parkway* Master Plan and the *Upcountry Greenways Master Plan*.			✓
6.6.1.b	Utilize the ahupua‘a approach by integrating mauka-to-makai natural landscapes into an island-wide parks and recreation functional plan.			✓
6.6.1.c	Provide a balanced mix of passive and active parks, including neighborhood, community, and regional parks, in each community plan area.	✓		
6.6.1.d	Support the expansion of Haleakala National Park, where supported by affected communities.			✓
6.6.1.e	Support lo‘i and dryland taro restoration in County, State, and Federal parks.			✓
6.6.1.f	Encourage private landowners to dedicate land to Federal, State, or County governments, or nonprofit land trusts, for parks and open-space protection		✓	

Maui Island Plan Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable		DA	IA	NA
	consistent with the MIP.			
6.6.1.g	Strengthen inter-agency coordination including State and County departments, such as resolving joint use of facilities and properties.			✓
6.6.1.h	Work with the State to prepare and implement a master management plan for ʻĀhihi-Kīnaʻu and La Perouse-Keoneʻōʻio Bay to Kanaloa Point region.			✓
Objective:				
6.6.2	Achieve parks and recreation opportunities to meet the diverse needs of our community.	✓		
Policies:				
6.6.2.a	Establish appropriate level-of-service standards at the neighborhood, community, and regional levels.			✓
6.6.2.b	Identify and acquire parks and recreational facilities that address existing park inadequacies and complement and enhance neighborhoods, communities, and natural land features.		✓	
6.6.2.c	Design park facilities to preserve and enhance natural site characteristics, maximize views, protect environmental and cultural sites, and minimize water demands.		✓	
6.6.2.d	Acquire lands along the shoreline, between coastal roadways and the ocean.			✓
6.6.2.e	Encourage the development of regional parks, district parks, and greenways in a manner that helps to contain sprawl, provide separation between distinct communities, or offer open space within urban communities.			✓
6.6.2.f	Require large master-planned communities that incorporate a mixture of park facilities pursuant to parks standards and functional plans.	✓		
6.6.2.g	Support appropriate areas for cultural parks (e.g., Kepaniwai) in each community plan area.			✓
6.6.2.h	Incorporate community input to determine the appropriate location, design, and long-term stewardship of parks and recreation facilities.		✓	
6.6.2.i	Manage commercial activities at public parks to minimize impacts to residents.			✓
6.6.2.j	Support public-private partnerships to implement the acquisition and development of parks when consistent with the General Plan.		✓	
6.6.2.k	Support a coordinated program to improve, operate, and maintain joint-use facilities and grounds.			✓
Objective:				
6.6.3	An expanded network of greenways, trails, pathways, and bikeways.	✓		
Policies:				
6.6.3.a	Link existing and future park sites, natural areas, the shoreline, and residential areas with a network of bikeways, pedestrian paths, trails, and greenways.	✓		
6.6.3.b	Support the implementation of plans and programs that facilitate pedestrian mobility and access to active and passive recreation areas and sites.	✓		
6.6.3.c	Collaborate with the State and private land owners to ensure perpetual access and proper stewardship of traditional trails and access systems.	✓		

Maui Island Plan Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
6.6.3.d Facilitate the development of well-managed noncommercial campgrounds throughout the island.			✓
6.6.3.e Consider requiring commercial bike rental businesses to provide funding that supports a mauka-to-makai Haleakalā bikeway improvement program.			✓
6.6.3.f Ensure ADA compliance and seek opportunities to make all parks and recreational facilities accessible to people with disabilities.			✓
Analysis: **The Proposed Action supports the goal, objectives, and above-noted policies relating to parks. The Proposed Action involves the ongoing maintenance of Makena Landing and Maluaka beach parks in Makena, and the integration of bicycle and pedestrian pathways, hiking trails, and golf cart pathways that will connect with existing pathways in Makena. The Proposed Action will also include the development of a community gathering place to foster social and cultural interaction. In addition, beach access parking improvements will be installed for greater public access to shoreline resources in Makena, and better overall connectivity between the mountain and the ocean.**			
PUBLIC FACILITIES			
Goal:			
6.7 Maui will have adequate public facilities that meet the diverse needs of residents.		✓	
Objective:			
6.7.1 More effective planning for public facilities to meet community needs.		✓	
Policies:			
6.7.1.a Ensure the development and update of island-wide public facilities functional plans that incorporate prioritized facilities, programs, and a financial component.			✓
6.7.1.b Establish appropriate level-of-service standards for public facilities provided by the County.			✓
6.7.1.c Pursue improvements and upgrades of County public facilities consistent with the public facilities functional plan.			✓
6.7.1.d Recognize Wailuku Town as Maui's Civic Center and support the revitalization of the Civic Center District by consolidating government office spaces, enhancing landscape beautification, and providing adequate public parking.			✓
6.7.1.e Support, with community input, the relocation of the Maui Community Correctional Center from Wailuku to an appropriate location in Pu'unēnē.			✓
6.7.1.f Adequately plan and fund public safety facilities (fire, police, ambulance, civil defense) to meet community needs.		✓	
6.7.1.g Increase joint facilities utilization and program coordination between State and County agencies such as baseyards, communication centers, recreational facilities, etc., where feasible.			✓
6.7.1.h Focus future expenditures for additional government office space, parking, and related facilities in Wailuku's Civic Center District.			✓
6.7.1.i Encourage continuous and safe walkways for children within one mile of each school.			✓

Maui Island Plan Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
6.7.1.j Encourage public-private partnerships to identify and resolve public facility plan shortcomings when consistent with the General Plan.			✓
6.7.1.k Incorporate community/area residents' input to determine the appropriate location and design of public facilities.			✓
Analysis: **The Proposed Action is applicable to the above goal, objective, and policy related to public facilities. The Proposed Action will contribute toward police and fire protection services through real property tax revenues generated by the project.**			
SCHOOLS AND LIBRARIES			
Goal:			
6.8 Maui will have school and library facilities that meet residents' needs and goals.		✓	
Objective:			
6.8.1 Assist in providing appropriate school and library facilities in a timely manner and in strategic locations.		✓	
Policies:			
6.8.1.a Work in partnership with all educational institutions to meet current and future needs including appropriate location, timing, and design of future facilities.			✓
6.8.1.b Allow for the expansion and intensification of uses at the UHMC including satellite campuses operating in remote areas.			✓
6.8.1.c Encourage the DOE to build and maintain smaller, community-oriented schools.			✓
6.8.1.d Encourage better cooperation by the State and County for use of State and County facilities.			✓
6.8.1.e Encourage the State to upgrade, modernize, and expand school facilities, including those in remote communities.		✓	
6.8.1.f Work with the State to develop a master plan for the expansion of UHMC in accordance with the MIP.			✓
6.8.1.g Support partnerships (public/private/nonprofit) to build and staff new schools and improve existing facilities.			✓
6.8.1.h Work with the BOE HSPLS to provide centralized library services (including telecommunications) to all areas of Maui.			✓
6.8.1.i Work with the State to expedite planning and construction of Kīhei High School, including the integration of the high school with the Maui Research and Technology Park.			✓
6.8.1.j Work with the State to identify intermediate school sites in Central Maui and other areas where needed.			✓
Objective:			
6.8.2 Provide a more expansive network of safe and convenient pedestrian-friendly streets, trails, pathways, and bikeways between neighborhoods and schools where appropriate.			✓
Policies:			
6.8.2.a Encourage the State to build new school facilities in appropriate locations that minimize time and distance for students to travel to and from school.			✓

Maui Island Plan Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
6.8.2.b Encourage the State to implement the Safe Routes to School initiative with funding commitments to help the County plan and fund projects that ensure safe access routes to school.			✓
Analysis: **The Proposed Action supports the goal and above-noted objective and policy relating to schools and libraries. As the majority of market residential units within the new community are expected to be owned and occupied by part-time residents, the project is not expected to place a substantial demand on the DOE and its school facilities/programs. Children of families living within the 109 onsite workforce units would, however, be served by DOE schools. For each residential unit developed within the project, a school impact fee will be paid to the DOE. The Applicant will coordinate with DOE to determine its fair share for a school impact fee contribution, which would be utilized by DOE to improve educational facilities and programs.**			
HEALTH CARE			
Goal:			
6.9 All of Maui residents will have the best possible health care to include healthy living, disease prevention, as well as acute and long-term care.			✓
Objective:			
6.9.1 Greater autonomy to the Maui region in their efforts to improve medical care on the island.			✓
Policies:			
6.9.1.a Encourage the State to give greater autonomy to the Maui region in their efforts to improve medical care on the island.			✓
6.9.1.b Support innovative financial solutions, such as capital partnerships, joint ventures, and consolidations for MMMC and other health institutions.			✓
6.9.1.c Support MMMC as a major core medical center that provides a greater range of services.			✓
6.9.1.d Support the immediate development of a critical access hospital in West Maui.			✓
6.9.1.e Support the expansion of regional critical-access facilities, where allowed by Federal regulations.			✓
6.9.1.f Improve medical service to remote and outlying regions.			✓
6.9.1.g Support transportation services for dialysis patients and community dialysis programs.			✓
6.9.1.h Work with the State to determine the feasibility of appropriate medical facilities in South Maui and Hāna, including the possible reestablishment of a small community hospital in Hāna, the establishment of a hospital in South Maui, and assist the State in securing funding to meet Maui's health care needs.			✓
Objective:			
6.9.2 An expansion of long-term care facilities and long-term care alternatives to meet the needs of our aging population.			✓
Policies:			
6.9.2.a Support efforts to increase Maui's long-term care bed capacity to cover current and future needs, close to large population centers.			✓

Maui Island Plan Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
6.9.2.b Recognize that facilities for low-income elders who need long-term care are a needed form of affordable and subsidized housing.			✓
6.9.2.c Evaluate the needs of the long-term disabled and provide planning support for their care, if there is a need for long-term care facilities.			✓
6.9.2.d Consider long-term care facilities as a major potential employment base and encourage the recruitment and training of potential employees.			✓
Objective:			
6.9.3 More support to home-care and community-based programs so they become alternatives to traditional nursing homes.			✓
Policies:			
6.9.3.a Support the establishment of a program to assist the elderly and people with disabilities to remain in their homes or in a home-like setting.			✓
6.9.3.b Support the establishment of senior and adult-day-care centers and senior housing.			✓
6.9.3.c Continue to support existing senior centers (e.g. Kaunoa), and establish new senior centers that will provide day-care sites and programs for the disabled and elderly.			✓
6.9.3.d Support funding alternatives for community-based services that assist home-care efforts.			✓
6.9.3.e Encourage the State to adopt the recommendations contained within the Legislative Reference Bureau's report entitled "Gimme a Break: Respite Care Services in Other States," (December 2007) where appropriate, feasible, and consistent with the MIP.			✓
Objective:			
6.9.4 Improved preventative medicine and primary health care.			✓
Policies:			
6.9.4.a Develop and utilize health-status benchmarks to measure prevention and primary health care service delivery.			✓
6.9.4.b Support programs that provide family planning assistance.			✓
Analysis: **The Proposed Action is not directly or indirectly applicable to the above goal, objectives, and policies related to health care.**			
ENERGY			
Goal:			
6.10 Maui will meet its energy needs through local sources of clean, renewable energy, and through conservation.	✓		
Objective:			
6.10.1 Reduce fossil fuel consumption. Using the 2005 electricity consumption as a baseline, reduce by 15 percent in 2015; 20 percent by 2020; and 30 percent by 2030.		✓	
Policies:			

Maui Island Plan Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
6.10.1.a Support energy efficient systems, processes, and methods in public and private operations, buildings, and facilities.		✓	
6.10.1.b Support the Maui Solar Rooftop initiative.		✓	
6.10.1.c Support Hawai`i Energy and other Public Utility Commission (PUC) approved energy efficiency programs.		✓	
Objective:			
6.10.2 Increase the minimum percentage of electricity obtained from clean, renewable energy sources. By 2015, more than 15 percent of Maui's electricity will be produced from locally-produced, clean, renewable energy sources, 25 percent by 2020, and 40 percent by 2030.		✓	
Policies:			
6.10.2.a Evaluate available renewable energy resource sites and applicable technologies.			✓
6.10.2.b Encourage the installation of renewable energy systems, where appropriate.	✓		
6.10.2.c Support the establishment of new renewable energy facilities at appropriate locations provided that environmental, view plane, and cultural impacts are addressed.			✓
6.10.2.d Encourage all new County facilities completed after January 1, 2015, to produce at least 15 percent of their projected electricity needs with onsite renewable energy.			✓
Objective:			
6.10.3 Increased use of clean, renewable energy.			✓
Policies:			
6.10.3.a Support efforts in the PUC to upgrade Maui's power grid to integrate renewable energy from multiple sources and wheeling of electricity.		✓	
6.10.3.b Encourage the PUC to work with the County to implement and expedite community supported renewable energy projects.			✓
6.10.3.c Encourage efforts to produce more renewable energy using distributed generation.	✓		
6.10.3.d Encourage import substitution by MECO and the broader community to become more self-sufficient in energy production.		✓	
6.10.3.e Educate the public on the economic and environmental benefits from the increased use of renewable energy.			✓
6.10.3.f Encourage support from the Federal government, State, and the private sector for Maui's renewable energy objectives.		✓	
6.10.3.g Encourage incentives to support the development and use of renewable energy.			✓
Objective:			
6.10.4 More efficient distribution of power throughout the island while preserving island beauty.		✓	

Maui Island Plan Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
Analysis: **The Proposed Action supports the goal and above-noted objective and policies relating to renewable and green technologies. A Sustainability Report has been prepared for the Proposed Action, which sets forth both guiding sustainability principles and a program of sustainability measures intended to reduce the environmental footprint of the new community. This program includes Leadership in Energy and Design (LEED) certification of buildings 500 square feet or larger, the installation of rooftop photovoltaic (PV) panels, and the use of energy efficiency/conservation technologies.**			
HARBORS AND AIRPORT			
Goal:			
6.11 Maui will have harbors and airports that will efficiently, dependably, and safely facilitate the movement of passengers and cargo.			✓
Objective:			
6.11.1 Upgraded harbor facilities to handle larger volumes of freight and passengers and additional small boat harbors.			✓
Policies:			
6.11.1.a Support the expansion and upgrade of Kahului Harbor through the following, provided that any expansion is respectful of cultural practices and existing recreational uses and supports improved water quality:			
(1) Accommodate increasing volumes of cargo;			✓
(2) Provide deeper pier depths and greater fuel-receiving and storing capacities; and			✓
(3) Ensure safe and efficient work areas, including separating passenger operations from fuel and cargo operations.			✓
6.11.1.b Work with public and private entities to provide adequate pier slips, utilities, repair facilities, and waste-disposal capabilities.			✓
6.11.1.c Encourage the State to safely separate passenger (cruise and ferry) operations from hazardous bulk fuels and heavy cargo transporting operations, while not decreasing harbor's capacity to safely support various recreational uses.			✓
6.11.1.d Encourage the State to develop cargo inspecting sites and facilities for efficient cargo and container processing and transportation and to prevent alien species entry.			✓
6.11.1.e Support a State and County task force to study the feasibility of a second commercial harbor on Maui.			✓
Objective:			
6.11.2 Establish more economically thriving and environmentally sensitive small boat harbors accommodating resident and business activity, including fishing, recreation, and tour boats.			✓
Policy:			
6.11.2.a Provide for needed shore-side facilities and capabilities to support small boat harbor users (e.g. repair facilities, parking, cold storage, and mass-transit connections).			✓
Objective:			

Maui Island Plan Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
6.11.3 Upgraded airport facilities and navigation aids to serve the needs of passengers, freight movements, and general aviation.			✓
Policies:			
6.11.3.a Protect the island's airports from encroaching urbanization that may negatively impact the airport operations.			✓
6.11.3.b Support State efforts to improve Kahului Airport operations to better serve passenger and cargo needs.			✓
6.11.3.c Support State efforts to identify sites and plan to relocate and accommodate small and rotary wing aircraft.			✓
6.11.3.d Encourage the State to improve airport safety including lighting, fuel transmission, fuel safety, etc.			✓
6.11.3.e Consider expansion of rental car facilities in West and South Maui.			✓
6.11.3.f Consider expansion of mass transit (bus, fixed-rail, shuttle, and taxis, bicycle, and pedestrian facilities) to and from Kahului Airport and not limited to passenger movements (allowing for luggage and cargo).			✓
6.11.3.g Encourage the State to maintain airport capacity and to encourage more responsive air services to Hāna and Kapalua.			✓
Analysis: **The Proposed Action is not directly or indirectly applicable to the above goal, objectives, and policies related to harbors and airports.**			
CHAPTER 7 – LAND USE			
AGRICULTURAL LANDS			
Goal:			
7.1 Maui will have a prosperous agricultural industry and will protect agricultural lands.		✓	
Objective:			
7.1.1 Significantly reduce the loss of productive agricultural lands.		✓	
Policies:			
7.1.1.a Allow, where appropriate, the clustering of development on agricultural lands when approved as a CSD plan or similar approval mechanism.			✓
7.1.1.b Require, where appropriate, the review and approval of CSD plans prior to the subdivision of agricultural land.			✓
7.1.1.c Discourage developing or subdividing productive agricultural lands for residential uses in which the residence would be the primary use and any agricultural activities would be secondary uses.			✓
7.1.1.d Consider requirements for public notification and review of the subdivision of agricultural land into four or more lots.			✓
7.1.1.e Focus urban growth, to the extent practicable, away from productive and important agricultural lands.			✓

Maui Island Plan Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
7.1.1.f Strongly discourage the conversion of productive and important agricultural lands (such as sugar, pineapple, and other produce lands) to rural or urban use, unless justified during the General Plan update, or when other overriding factors are present.		✓	
7.1.1.g Further develop the requirements for agricultural assessments found under Section 19.510, MCC.			✓
7.1.1.h Provide incentives for landowners to preserve and protect agricultural lands from development through the use of TDR/PDR, tax credits, easement programs, or similar means.			✓
7.1.1.i Promote the use of U.S.D.A. Farm and Ranch Lands Protection Program grants to fund the acquisition of conservation easements on eligible agricultural lands.			✓
7.1.1.j Require all major developments adjacent to agricultural lands to provide an appropriate and site-specific agricultural protection buffer as part of a required site plan.		✓	
7.1.1.k Support and promote the viability of Maui's agricultural businesses through property tax incentives and other programs and subsidies.			✓
7.1.1.l Encourage future community plan efforts to identify lands within the County Agricultural zoning district that are primarily being used for large-lot residential or rural use and consider such lands for reclassification to an appropriate County Rural zone.			✓
Objective:			
7.1.2 Reduction of the island's dependence on off-island agricultural products and expansion of export capacity.			✓
Policies:			
7.1.2.a Coordinate with the agricultural community, associations/community groups, agricultural landowners, and the State to designate IALs.			✓
7.1.2.b Support an incentive package for productive Agricultural Lands which aims to ensure agricultural viability for small- and commercial-scale agricultural producers.			✓
7.1.2.c Actively look to acquire land and provide infrastructure to expand the agricultural park and establish new agricultural parks.			✓
7.1.2.d Support the designation of a research and development area within agricultural parks to help farmers stay attuned to new technology and research.			✓
7.1.2.e Support local cooperative extension services to facilitate timely technology transfer opportunities.			✓
7.1.2.f Support plans and programs to develop additional sources of water for irrigation purposes.			✓
7.1.2.g Consider appropriate subdivision requirements (gravel roads, above-ground utilities, etc.) in those subdivisions creating Agricultural Parks where lots are limited to agricultural production with no dwellings.			✓
7.1.2.h Support the recommendations, policies, and actions contained within the Maui Agricultural Development Plan, July 2009, when consistent with the MIP.			✓

Maui Island Plan Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
7.1.2.i Allow water and tax discounts for legitimate farming operations on rural and agricultural land.			✓
7.1.2.j Give priority in delivery and use of agricultural water and agricultural land within County agricultural parks to cultivation of food crops for local consumption.			✓
7.1.2.k Support programs that control pests and diseases that affect agriculture.			✓
7.1.2.l Support the development of training and apprenticeship programs to encourage an adequate supply of agricultural workers.			✓
Objective:			
7.1.3 Support and facilitate connectivity between communities.		✓	
Policies:			
7.1.3.a Evaluate the impact of gated communities on interconnectivity.			✓
7.1.3.b Discourage land use and urban design that impedes interconnectivity between adjacent communities.		✓	
Analysis: **The Proposed Action supports the goal and above-noted objective and policies relating to agriculture. The Proposed Action involves a request to re-designate a portion of the master plan area (around the top of the existing North Golf Course) from the Agriculture to Rural district to allow for land use consistency with Community Plan designations. These lands fall within the Urban Growth Boundary (UGB) for Makena as set forth by the MIP and, as such, have been designated as an appropriate area for future growth in the community. The project will be designed to provide place-appropriate connectivity between communities while also providing adequate buffers from neighboring agricultural lands. In addition, the proposed land plan incorporates the Nāulu Farm, a non-commercial 2-acre farm operated by the Applicant's ʻŌiwi Resources Stewardship Department. Operations include an animal farm, a greenhouse dedicated to cultivating native species, a vegetable and fruit garden, and an aquaponics system. The greenhouse propagates native species for replanting areas in the project site. The farm's operations are subsidized by a portion of the homeowners' association fees.**			
RURAL AREAS			
Goal:			
7.2 Maui will have a rural landscape and lifestyle where natural systems, cultural resources and farm lands are protected and development enhances and compliments the viability and character of rural communities.	✓		
Objective:			
7.2.1 Reduce the proliferation and impact of residential development outside of urban, small town, and rural growth boundaries.	✓		
Policies:			
7.2.1.a Focus development to areas inside urban, small town, and rural growth boundaries to preserve natural, cultural, and agricultural resources.	✓		
7.2.1.b Encourage cluster development with a mandatory buffer requirement/clear edge at the interface of country towns, agricultural uses, and surrounding rural landscapes.			✓
7.2.1.c Encourage or require, where appropriate, CSDs and the use of green spaces/natural separations to protect the character of rural landscapes.			✓

Maui Island Plan Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
7.2.1.d Encourage basic goods/services in business country towns.			✓
7.2.1.e Allow for mixed uses, including residential uses, within Business Country Town Districts.			✓
7.2.1.f Encourage the use of alternative stormwater management techniques that minimize land disturbance and preserve natural drainage features.	✓		
7.2.1.g Encourage green belts, open space buffers, and riparian zones to minimize conflicts between agriculture and residential uses.		✓	
7.2.1.h Evaluate the impact of gated communities on inter-connectivity.			✓
Objective:			
7.2.2 More appropriate service/infrastructure standards to enhance and protect the island's rural character and natural systems.	✓		
Policies:			
7.2.2.a Minimize impermeable surfaces within rural areas.		✓	
7.2.2.b Protect and support the character, economic viability, and historic integrity of Maui's small towns.			✓
7.2.2.c Use infrastructure, public service, and design standards that are appropriate to rural areas.	✓		
7.2.2.d Discourage land use and urban design that impede interconnectivity between adjacent communities.		✓	
Analysis: **The Proposed Action supports the goal and above-noted objectives and policies relating to rural areas. The Proposed Action will involve the development of a low-density master-planned residential community in Makena Resort, in an area suited for this type of development, amid similar communities. The proposed residential development will focus development to areas within the UGB as designated by the MIP.**			
URBAN AREAS			
Goal:			
7.3 Maui will have livable human-scale urban communities, an efficient and sustainable land use pattern, and sufficient housing and services for Maui residents.	✓		
Objective:			
7.3.1 Facilitate and support a more compact, efficient, human-scale urban development pattern.	✓		
Policies:			
7. 3.1.a Ensure higher-density compact urban communities, infill, and redevelopment of underutilized urban lots within Urban Growth Boundaries.	✓		
7.3.1.b Maintain a distinct separation between communities, such as but not limited to, Wailuku and Waikapū; Wailuku and Waiheʻe; Pukalani and Makawao; Pukalani and Kula; Makawao and Hāliʻimaile; Lahaina and Kāʻanapali; Kīhei and Māʻalaea; and Māʻalaea and Waikapū, to protect the character and identity of Maui's communities.	✓		

Maui Island Plan Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
7.3.1.c Strengthen evaluation requirements for new urban expansion, new towns, and major urban infill projects within urban growth areas. Tailor submittal requirements to reflect the impact or scale of different projects.			✓
7.3.1.d Ensure future amendments to urban growth boundaries achieve the following: (1) provide a beneficial extension of the existing community; (2) are in areas where it is cost-effective to provide and operate infrastructure/public service facilities; and (3) do not promote automobile-oriented land use patterns.			✓
7.3.1.e Evaluate the impact of gated communities on inter-connectivity.			✓
7.3.1.f Encourage the development and implementation of neighborhood design standards that are environmentally friendly, such as LEED for Neighborhood Development (LEED – ND) standards.		✓	
7.3.1.g Discourage future pyramid zoning within the industrial zoning districts, while allowing accessory commercial uses and grandfathering existing uses.			✓
7.3.1.h Promote agriculture by encouraging community gardening, community-supported agricultural programs, and farmers markets within and adjacent to urban areas.	✓		
7.3.1.i Discourage land use and urban design that impedes inter-connectivity between adjacent communities.			✓
Objective:			
7.3.2 Facilitate more self-sufficient and sustainable communities.	✓		
Policies:			
7.3.2.a When developing new communities, provide sufficient lands for commercial, appropriate industrial, educational, spiritual, and non-profit uses to serve the daily needs of community residents.			✓
7.3.2.b Site community facilities such as schools, parks, libraries, and community centers within walking and biking distance of residences.			✓
7.3.2.c Facilitate self-sufficient communities and shorten commutes by:			
(1) Directing residential development to job-rich areas;	✓		
(2) Allowing for appropriate commercial development and community services to shorten commutes; and			✓
(3) Allowing home occupations or home-based businesses that are compatible with surrounding neighborhoods and lifestyles.			✓
7.3.2.d Ensure, where appropriate, that affordable employee housing and multi-modal transportation opportunities are located near major employment centers.	✓		
7.3.2.e Discourage the establishment of bedroom communities where long commutes are required to employment centers.			✓
7.3.2.f Facilitate the development of housing by focusing projects in locations where land and infrastructure costs facilitate the development of affordably-priced housing.	✓		
7.3.2.g Provide incentives to facilitate the development of multifamily housing.			✓

Maui Island Plan Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
7.3.2.h Encourage the placement of rental housing projects in the same areas as for-sale housing to facilitate mixed-income communities.	✓		
7.3.2.i Develop communities that provide sufficient parks, schools, libraries, and other essential public facilities and services to serve resident needs.			✓
7.3.2.j Promote agriculture by encouraging community gardening, edible landscaping, community-supported agricultural programs, and farmers markets within and adjacent to urban areas.	✓		
Objective:			
7.3.3 Strengthen the island's sense of place.	✓		
Policies:			
7.3.3.a Protect and enhance the unique architectural and landscape characteristics of each community.	✓		
7.3.3.b Encourage Hawaiian architecture and tropical building designs.		✓	
7.3.3.c Support the continued revitalization of historic country towns, Wailuku Town, and Kahului's commercial core and harbor-front without displacing traditional, cultural, recreational and customary uses.			✓
7.3.3.d Strongly encourage the preservation of buildings, structures, and sites of historic significance.		✓	
7.3.3.e Require community input through Design Workshops for major new urban expansion, new towns, and major urban infill projects.		✓	
7.3.3.f Require design enhancement, landscaping, and integration of park and rides, bicycle parking areas, and mass-transit infrastructure to mitigate the effect of parking lots and structured parking on the urban landscape.			✓
7.3.3.g Ensure that safe and attractive public spaces (e.g., plazas, parks, town/village squares) are provided throughout the island's urban areas.			✓
Objective:			
7.3.4 Strengthen planning and management for the visitor industry to protect resident quality of life and enhance the visitor experience.	✓		
Policies:			
7.3.4.a Discourage the conversion of hotel units to timeshares and fractional ownership.			✓
7.3.4.b Monitor and manage the amount of, and impacts from, timeshares and fractional ownership.			✓
7.3.4.c Manage short-term rentals and bed-and-breakfast homes through a permitting and regulatory process in accordance with adopted ordinances and community plan policies.			✓
7.3.4.d Limit large-scale resort development to the four existing resort destination areas of Wailea, Makena, Kapalua and Kāʻanapali. "Large Scale Resort" is defined as complexes that include multiple accommodation facilities, activity businesses, retail complexes, and other amenities.	✓		
Objective:			
7.3.5 Ensure that Maui's planning and development review process becomes more transparent, efficient, and innovative.			✓

Maui Island Plan Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable	DA	IA	NA
Policies:			
7.3.5.a Encourage greater community involvement in land use planning and decision making.	✓		
7.3.5.b Establish a predictable and timely development review process that facilitates the approval of projects that meet planning and regulatory requirements.			✓
7.3.5.c Increase inter-agency coordination between the Department of Planning and all State and County agencies responsible for infrastructure and public facilities provision, particularly as it relates to the mitigation of long-term cumulative impacts resulting from development projects.			✓
7.3.5.d Provide greater certainty and transparency in the development review process.			✓
7.3.5.e Expand and maintain land use and geographic information system databases for improved decisions, and make data and products available to the public.			✓
Analysis: **The Proposed Action supports the goal and above-noted objectives and policies relating to urban areas. The Proposed Action involves the development of a low-density master-planned residential community in a destination resort area suited for this type of development, amid similar communities, employment centers, in an area designated for growth, and concurrent with infrastructure systems to service the project. The Proposed Action also involves the development of affordable housing in proximity to job opportunities. The project also strives to encourage community involvement in land use planning and decision making in Makena Resort. The Applicant has and continues to meet with community stakeholders and has conducted community meetings in preparation for and during the environmental review process. In addition, the proposed land plan incorporates the Nāulu Farm, a non-commercial 2-acre farm operated by the Applicant's 'Ōiwi Resources Stewardship Department. The farm's operations are subsidized by a portion of the homeowners' association fees.**			
CHAPTER 8 – DIRECTED GROWTH PLAN			
URBAN AND SMALL TOWN GROWTH AREA			
Goal:			
8.1 Maui will have well-serviced, complete, and vibrant urban communities and traditional small towns through sound planning and clearly defined development expectations.	✓		
Policies:			
8.1.a The County, with public input, will be responsible for designating new growth areas where infrastructure and public facilities will be provided, consistent with the policies of the MIP and in accordance with State and County infrastructure plans.			✓
8.1.b Amendments to a UGB or STB shall be reviewed as a MIP amendment. A UGB or STB shall only be expanded if the island-wide inventory (maintained by the Department of Planning) of existing land uses (residential, commercial, industrial) indicates that additional urban density land is necessary to provide for the needs of the projected population growth within ten years of that inventory; or, during the decennial update of the MIP.			✓
8.1.c Community plans shall provide for urban density land use designations only within UGBs and Small Towns. The County may only support and approve State Urban Land Use Designations for areas within UGBs, STBs, and Rural Villages.		✓	

Maui Island Plan Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable		DA	IA	NA
8.1.d	The unique character and function of existing small towns shall be protected to retain and preserve their sense of place.			✓
8.1.e	New development shall be consistent with the UGBs, STBs, and all other applicable policies of the MIP. New urban-density development shall not be allowed outside of a UGB or STB.	✓		
8.1.f	The County, as a condition of development approval, shall require developers of privately owned infrastructure systems to provide financial insurance (bonding, etc.) for the operation and maintenance of these systems.			✓
8.1.g	The County shall implement a zoning program to comprehensively redistrict and rezone lands within UGBs according to updated community plan policies and map designations.			✓
8.1.h	The County will seek to focus capital improvements (schools, libraries, roads, and other infrastructure and public facilities) within the UGBs and STBs in accordance with the MIP.			✓
8.1.i	The County will promote (through incentives, financial participation, expedited project review, infrastructure/public facilities support, etc.) appropriate urban infill, redevelopment and the efficient use of buildable land within UGBs to avoid the need to expand the UGBs.	✓		
8.1.j	The MIP's UGBs and STBs shall not be construed or implemented to prohibit the construction of a single-family dwelling on any existing parcel where otherwise permitted by law.			✓
Analysis: **The Proposed Action is directly applicable to the goal and above-noted policies for urban and small-town growth areas. The proposed development is located on lands within the UGB as set forth by the MIP. The Proposed Action involves development of a low-density master-planned residential community in an area suited for this type of development, amid similar communities, where infrastructure will be available concurrently with development. As such, the Proposed Action is consistent with the MIP and will be implemented in accordance with State and County infrastructure requirements.**				
RURAL GROWTH AREA				
Goal:				
8.2	Maui will maintain opportunities for agriculture and rural communities through sound planning and clearly defined development expectations.			✓
Policies:				
8.2.a	Amendments to a RGB shall be reviewed as an MIP amendment. A RGB shall only be expanded if an island-wide inventory of existing land uses (residential, commercial, industrial) indicates that additional lands are necessary to provide for the needs of the projected population growth within ten years of that inventory; or, during the decennial update of the MIP.			✓
8.2.b	New development shall be consistent with RGB and all other applicable policies and requirements of the MIP. Public, quasi-public, civic, and limited commercial or industrial uses may be allowed in the RGB when the proposed uses demonstrate a public need and are consistent with the Community Plan and zoning.			✓
8.2.c	Environmental protection and compatibility will be a top priority in rural growth areas.			✓

Maui Island Plan Goals, Objectives and Policies Key: DA = Directly Applicable, IA = Indirectly Applicable, NA = Not Applicable		DA	IA	NA
8.2.d	All development within rural growth areas should avoid encroachment upon prime agricultural land.			✓
8.2.e	Rural growth areas include Rural Residential Areas and Rural Villages. Rural residential areas may be designated when they are located in association with or on the border of urban growth areas or Small Towns; and/or when they provide for complete, self-sufficient rural communities with a range of uses to be developed at densities that do not require urban infrastructure.			✓
8.2.f	Community plans shall provide for rural density land use designations only within RGBs; provided that limited community plan urban designations may be allowed within Rural Villages. New rural growth areas shall not be located where urban expansion may ultimately become necessary or desirable. New rural-density development shall not be allowed outside of a RGB.			✓
8.2.g	New rural growth areas intended to be complete, self-sufficient rural communities must be located a significant distance from existing urban areas, distinctly separated by agricultural or open lands.			✓
8.2.h	Urban-scale infrastructure and public facilities shall not be provided in rural areas except as described in the defined Level-of-Service (LOS) standards. There should be no expectations of urban services in rural areas.			✓
8.2.i	Urban development standards shall not be required within RGBs except in fulfillment of Federal law.			✓
8.2.j	The unique character and function of existing small towns and rural communities shall be protected to retain and preserve their sense of place.			✓
8.2.k	Preserve rural landscapes in which natural systems, cultural resources, and agricultural lands are protected and development compliments rural character and contributes to the viability of communities and small towns.			✓
8.2.l	The MIP's RGBs shall not be construed or implemented to prohibit the construction of a single family dwelling on any existing parcel where otherwise permitted by law.			✓
8.2.m	The County shall implement a zoning program to comprehensively redistrict and rezone lands within RGBs, and to implement community plan policies and map designations.			✓
8.2.n	At the time of zoning from agricultural to rural, Council will consider prohibiting restrictions on agricultural activity.			✓
Analysis: **The Proposed Action is not directly or indirectly applicable to the above goal and policies related to the MIP Rural Growth Area as the project does not involve lands within the Rural Growth Boundary of the MIP.**				
PROTECTED AREA POLICY				
8.3.a	The Protected Areas in Diagrams E-1, NW-1, N-1, NE-1, S-1, SE-1, and WC-1 should be concurrently reviewed with Table 8-2 and with any proposed land uses that may result in an adverse impact on a Protected Area. The County Council and the Administration should be notified if a Protected Area may be compromised by a development proposal.			✓
Analysis: **The Proposed Action does not involve development on any lands designated in the Protected Areas Diagrams. As such, the Proposed Action is consistent with the Protected Area Policy.**

PUBLIC SCOPING MEETING

EIS PUBLIC SCOPING MEETING AGENDA

1. INTRODUCTION
2. PURPOSE OF TONIGHT'S MEETING
3. PROPOSED ACTION OVERVIEW
4. ENVIRONMENTAL IMPACT STATEMENT (EIS) PROCESS
5. EISPN PUBLIC COMMENTS
   - Opportunity to provide comments that will be included in the Draft EIS
     - Oral comments provided this evening will be audio recorded and published along with the DEIS per Hawai‘i Administrative Rules (HAR) Chapter 11-200.1
     - Oral comments will be summarized and included in the Draft EIS
     - Written comments will be collected and included in the Draft EIS

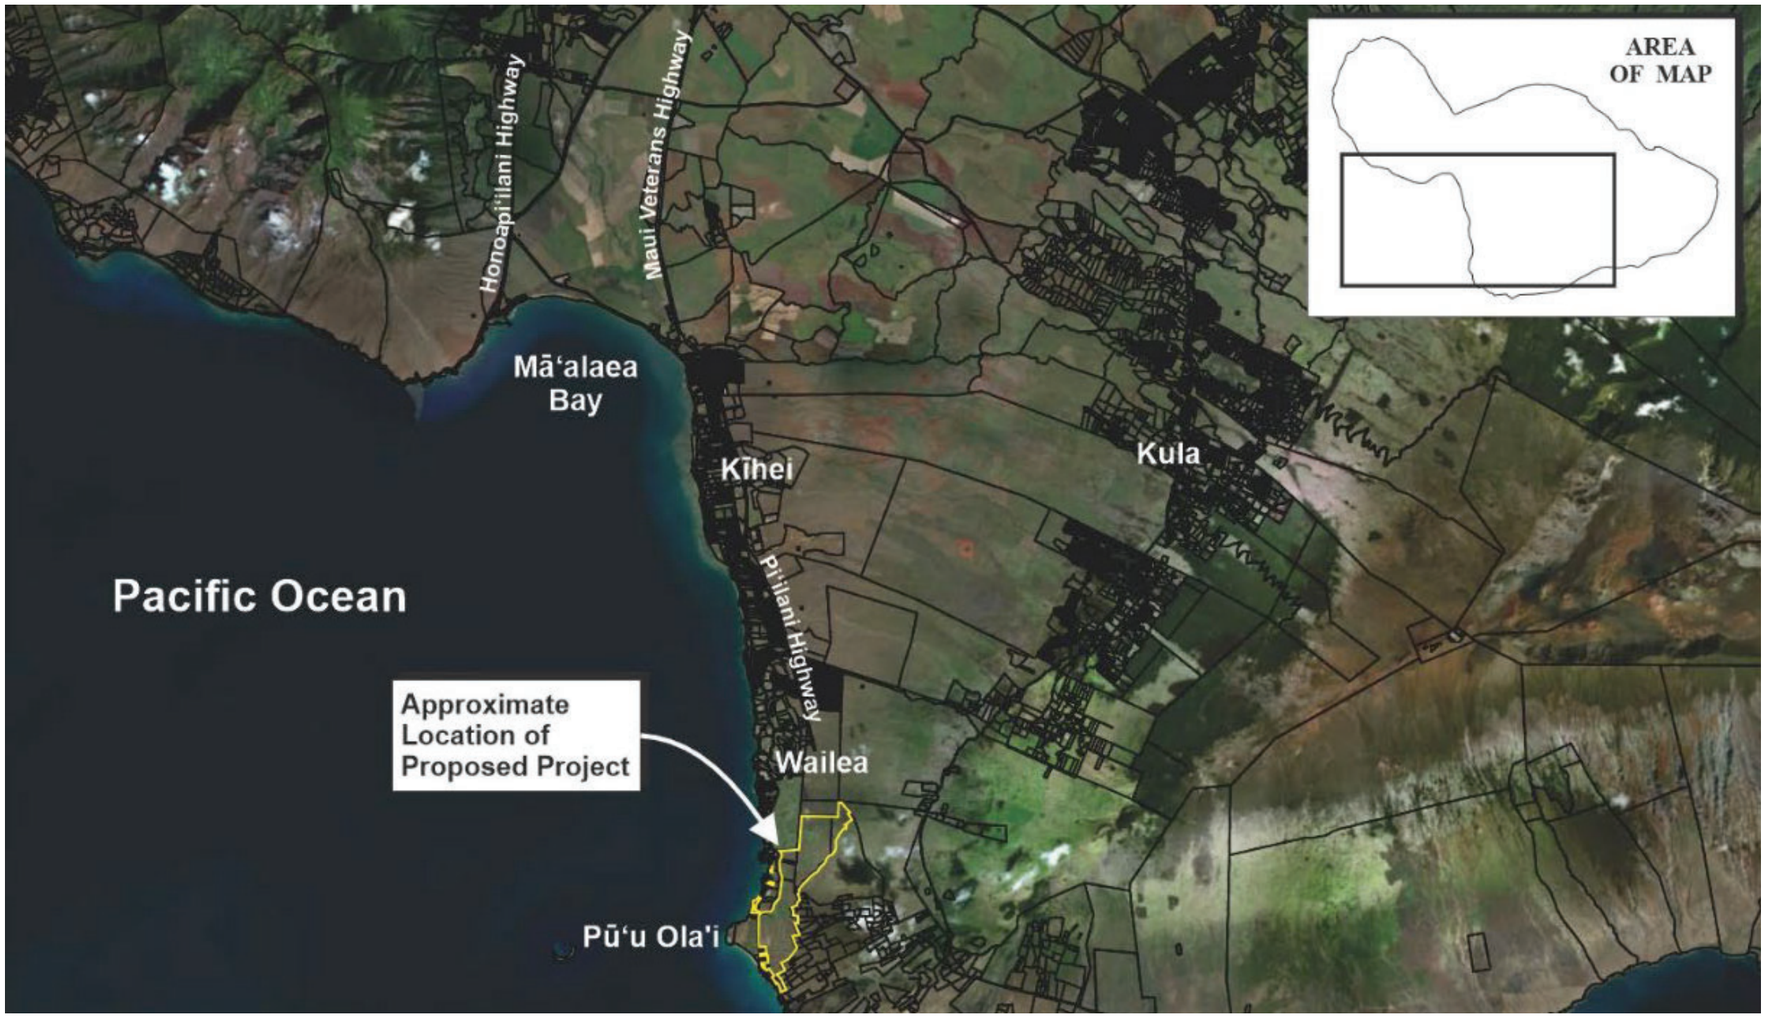
INTRODUCTION

- **APPLICANT**
  - AREG AC Makena Propco, LLC
    doing business as Mākena Golf & Beach Club Owners

- **TMK Nos.**
  - (2) 2-1-005:108; (2) 2-1-006:036 and 057; (2) 2-1-007:068, 092 and 093; (2) 2-1-008:078, 079, 081 and 090; (2) 2-1-031:036 por.

PURPOSE OF TONIGHT'S MEETING

EIS PUBLIC SCOPING MEETING PURPOSE



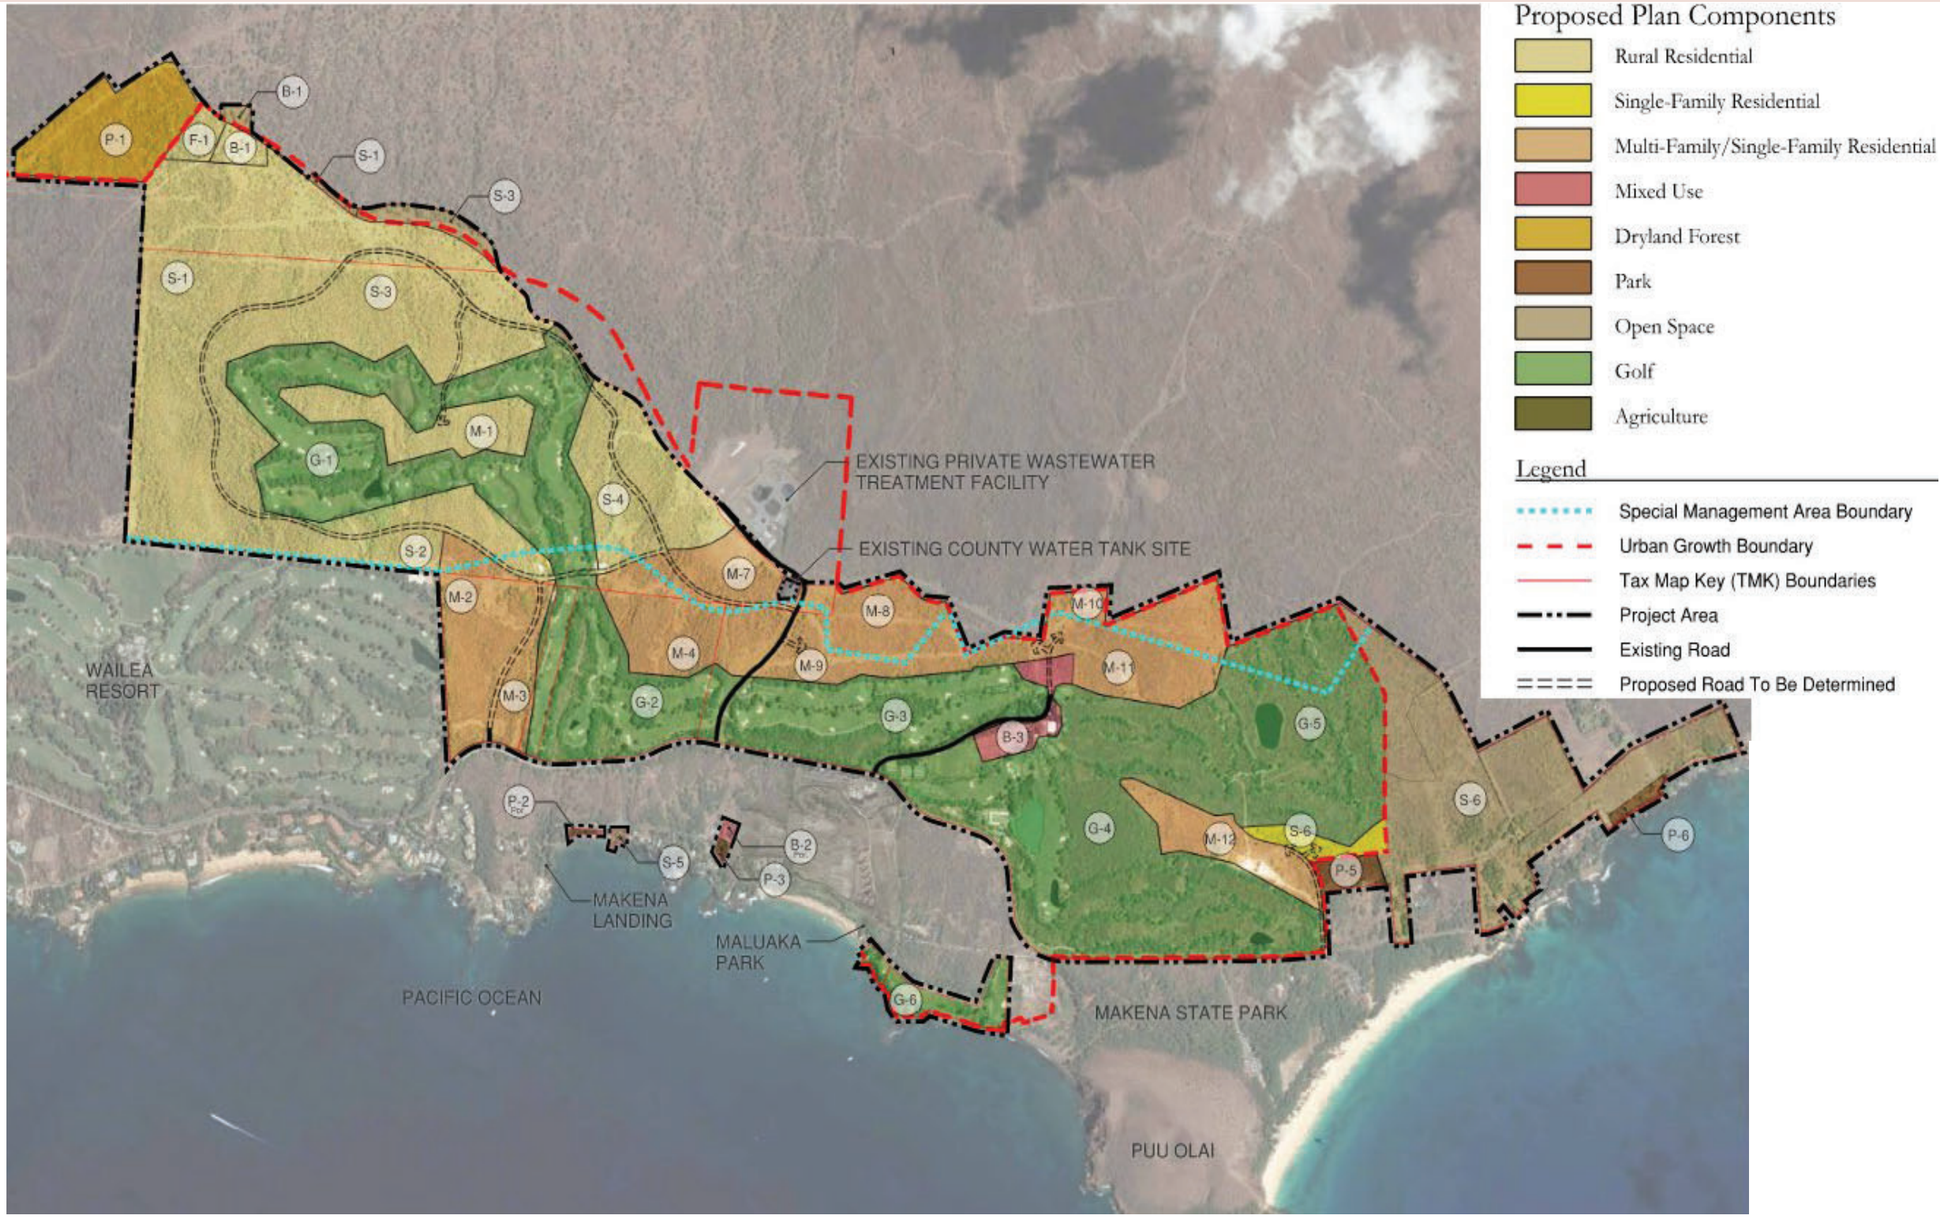
- Receive comments on issues to be studied within the Draft EIS
- This is not a question-and-answer session
- This is an opportunity to provide input and comments to shape the Draft EIS
- We are here to listen to your comments

PROPOSED ACTION OVERVIEW

PROPOSED ACTION

LOCATION

- Within the Makena region of South Maui
- Within the moku of Honuaʻula
- Within the ahupuaʻa of Keauhou, Kalihi, Waipao, Pāpaʻanui, Kāʻeo, Maluaka, Moʻoiki, Moʻoloa and Moʻomuku



BACKGROUND

- 1970 – Kihei Civic Development Plan identified Makena as a secondary resort-residential community
- 1979 – SMA granted to construct the Maui Prince Hotel
- 1985 – Kihei-Makena Community Plan identified Makena as a planned resort destination area, including golf courses, single-family, multi-family, hotel, public/quasi-public and commercial uses
- 1998 – Kihei-Makena Community Plan maintained the residential, hotel and other uses and recognized Makena as a planned resort destination
- 2009 – Maui County Council approves rezoning for 603 acres under Ordinance 3613 for apartment, community business, resort commercial, hotel, park golf course and residential uses

PROPOSED ACTION

OVERVIEW

SUMMARY

- Low-density master planned residential community will offer market rate housing together with residential workforce housing with a mixture of rural and single-family homes and multifamily residential units.
- An estimated 850-900 total residential units, inclusive of 94-100 onsite workforce housing units are proposed to be constructed across 18 parcels in alignment with the Maui Island Plan
- Mākena Mauka will include a community gathering place, public hiking trails, an emphasis on multi-modal transportation, public beach parking, conservation open space, areas reserved for public shoreline access, and programs to support cultural education
- Construction is anticipated to be completed over a 25-30 year period, dependent upon market conditions
- Workforce housing, park dedication and the related infrastructure improvements/contributions will be provided

EIS PROCESS

PROPOSED ACTION

- This EISPN has been prepared in accordance with Hawai‘i Revised Statutes (HRS) Chapter 343 and HAR Chapter 11-200.1. Pursuant to HAR Section 11-200.1-7(c), the Maui Planning Commission shall have final authority to accept the EIS due to the first discretionary permit/approval being an SMA Use Permit from the Maui Planning Commission.
- Purpose of an EIS: serves as an informational document to ensure that environmental concerns are given appropriate consideration in decision-making along with economic and technical considerations

PROCESS FLOWCHART

EIS Preparation Notice (EISPN)

June 8 & 23, 2024

60-day Public Comment Period

Draft EIS (DEIS)

- Includes all EISPN public comments

45-day Public Comment Period

Final EIS (FEIS)

- Includes all DEIS public comments

- Accepting authority is the Maui Planning Commission

EIS PREPARATION NOTICE (EISPN)

- The EISPN is available at the State of Hawai‘i Environmental Review Program website:

  https://files.hawaii.gov/dbedt/erp/Doc_Library/2024-06-08-MA-EISPN-Makena-Mauka.pdf

- The EISPN is available on the Mākena Mauka EIS and permitting website:

  www.makenapermitting.com

- The 60-day public comment period will be open through August 7th, 2024

- The second Public Scoping Meeting will be held at 6pm on Tuesday, July 30th, 2024 at the Lokelani Intermediate School cafeteria

TECHNICAL STUDIES

- Air Quality Assessment Report
- Archaeological reports and documentation
- Cultural Impact Assessment
- Design Guidelines
- Economic & Fiscal Impact Analysis Report
- Flora & Fauna Survey
- Groundwater Resources Impact Assessment Report
- Market Study
- Noise Assessment Report
- Preliminary Engineering & Drainage Report
- Sustainability Report
- Traffic Impact Analysis Report
- Transportation Management Plan
- View Analysis
- Water Quality & Marine Biology Assessment Report

EISPN PUBLIC COMMENTS

OPTIONS TO SUBMIT

1. ORAL COMMENTS
   - Please share your comments with us tonight or at the July 30th scoping meeting. All oral comments will be audio recorded and a written summary will be included within the Draft EIS

2. WRITTEN COMMENTS BY MAIL
   - Send your written comments to:

     Munekiyo & Hiraga, attn: Mākena Mauka
     305 High St., Suite 104
     Wailuku, HI 96793

3. WRITTEN COMMENTS ONLINE → www.makenapermitting.com

4. WRITTEN COMMENTS BY EMAIL → eis@makenagbc.com

ORAL COMMENTS TONIGHT

- Testifiers will be given the opportunity to testify in order

- The goal is for everyone wishing to give oral testimony an equal opportunity to speak tonight should they wish to do so

- Comments will be audio recorded, summarized, and responded to in the DEIS

PUBLIC SCOPING MEETING

EIS PUBLIC SCOPING MEETING AGENDA

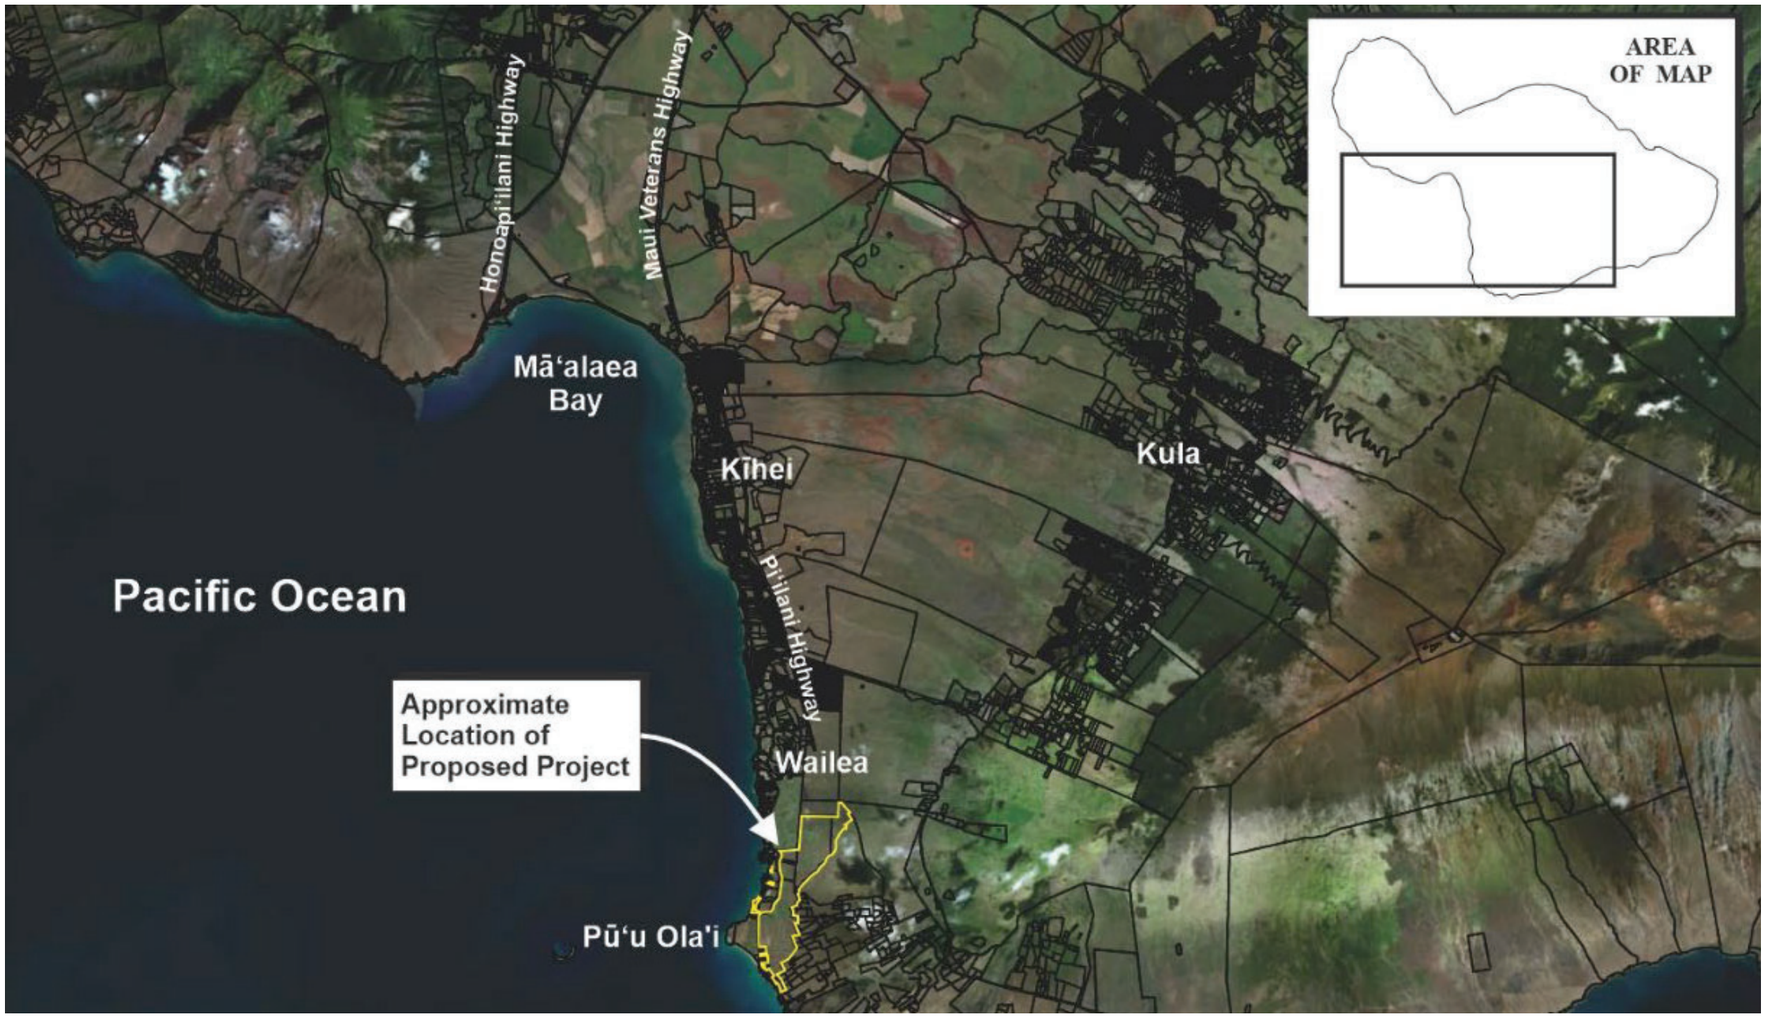
1. INTRODUCTION
2. PURPOSE OF TONIGHT'S MEETING
3. PROPOSED ACTION OVERVIEW
4. ENVIRONMENTAL IMPACT STATEMENT (EIS) PROCESS
5. EISPN PUBLIC COMMENTS

INTRODUCTION

- **APPLICANT**
  - AREG AC Makena Propco, LLC
    doing business as Mākena Golf & Beach Club
- **TMK Nos.**
  - (2) 2-1-005:108; (2) 2-1-006:036 and 057; (2) 2-1-007:068, 092 and 093; (2) 2-1-008:078, 079, 081 and 090; (2) 2-1-031:036 por.

PURPOSE OF TONIGHT'S MEETING

EIS PUBLIC SCOPING MEETING PURPOSE



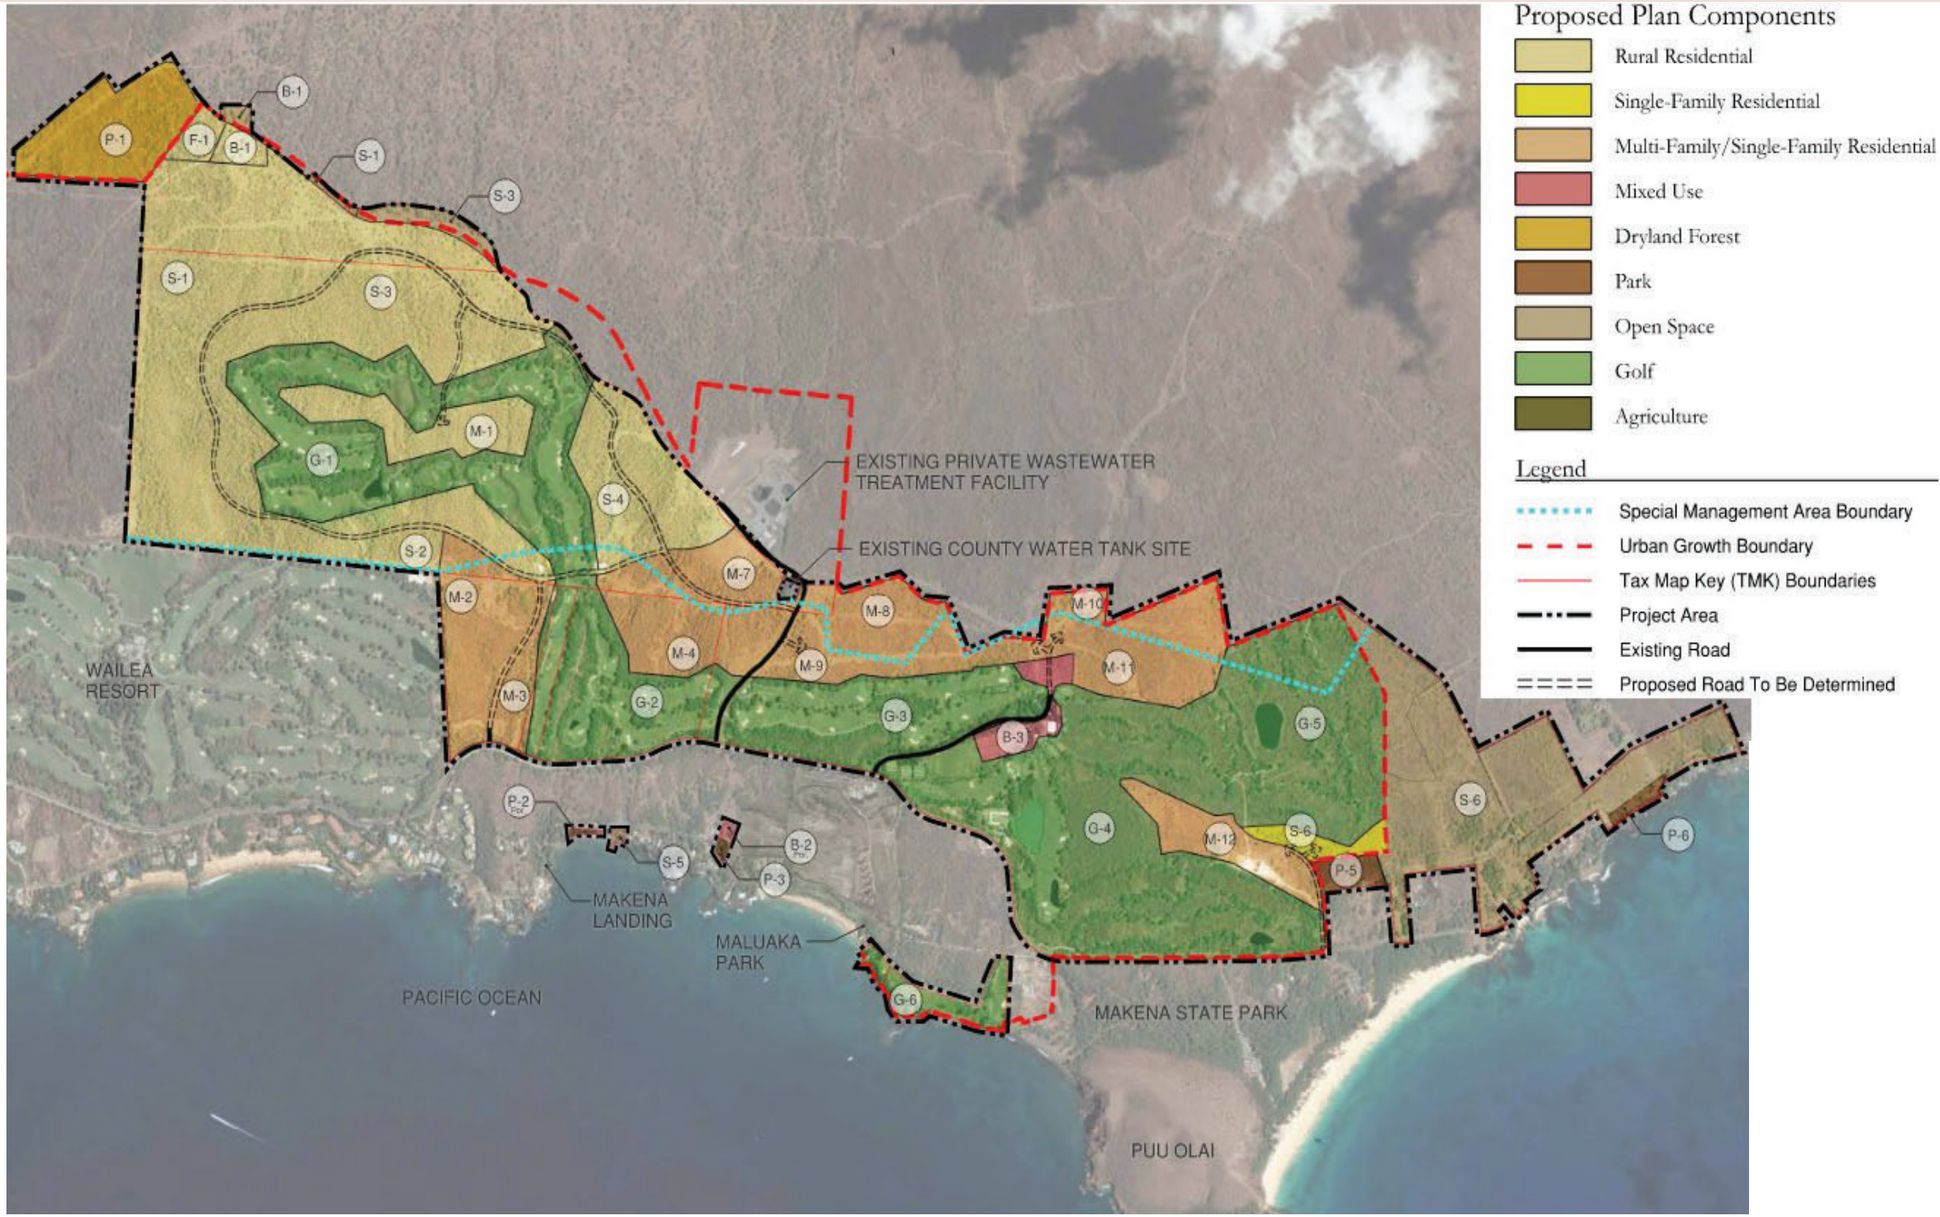
- Receive comments on issues to be studied within the Draft EIS
- We are here to listen to your comments
- This is not a question-and-answer session
- This is an opportunity to provide input and comments to shape the Draft EIS

PROPOSED ACTION OVERVIEW

PROPOSED ACTION

LOCATION

- Within the Makena region of South Maui
- Within the moku of Honuaʻula
- Within the ahupuaʻa of Keauhou, Kalihi, Waipao, Pāpaʻanui, Kāʻeo, Maluaka, Moʻoiki, Moʻoloa and Moʻomuku



BACKGROUND

- 1970 – Kihei Civic Development Plan identified Makena as a secondary resort-residential community
- 1979 – SMA granted to construct the Maui Prince Hotel
- 1985 – Kihei-Makena Community Plan identified Makena as a planned resort destination area, including golf courses, single-family, multi-family, hotel, public/quasi-public and commercial uses
- 1998 – Kihei-Makena Community Plan maintained the residential, hotel and other uses and recognized Makena as a planned resort destination
- 2009 – Maui County Council approves rezoning for 603 acres under Ordinance 3613 for apartment, community business, resort commercial, hotel, park golf course and residential uses

PROPOSED ACTION

OVERVIEW

SUMMARY

- Low-density master planned residential community will offer market rate housing together with residential workforce housing with a mixture of rural and single-family homes and multifamily residential units.
- An estimated 850-900 total residential units, inclusive of 94-100 onsite workforce housing units are proposed to be constructed across 1,043 acres in alignment with the Maui Island Plan
- Mākena Mauka will include a community gathering place, public hiking trails, an emphasis on multi-modal transportation, public beach parking, conservation open space, areas reserved for public shoreline access, and programs to support cultural education
- Construction is anticipated to be completed over a 25-30 year period, dependent upon market conditions
- Workforce housing, park dedication and the related infrastructure improvements/contributions will be provided

EIS PROCESS

PROPOSED ACTION

- This EISPN has been prepared in accordance with Hawai‘i Revised Statutes (HRS) Chapter 343 and HAR Chapter 11-200.1. Pursuant to HAR Section 11-200.1-7(c), the Maui Planning Commission shall have final authority to accept the EIS due to the first discretionary permit/approval being an SMA Use Permit from the Maui Planning Commission.
- The purpose of an EIS is to serve as an informational document to ensure that environmental concerns are given appropriate consideration in decision-making along with economic and technical considerations

PROCESS FLOWCHART

SUBJECT: Environmental Impact Statement Preparation Notice for the Proposed Mākena Mauka Project at TMKs (2)2-1-005:108, (2)2-1-006:036 and 057, (2)2-1-007:068, 092 and 093, (2)2-1-008:078, 079, 081, and 090, and (2)2-1-031:036 (Por.), Wailea-Mākena, Maui, Hawai'i; (EIS2024-00001)

Dear «Salutation» «Last_Name»:

On behalf of AREG AC Makena Propco LLC (doing business as Mākena Golf & Beach Club Owners), we are providing for review and comment the Environmental Impact Statement Preparation Notice (EISPN) for the Proposed Mākena Mauka Project prepared pursuant to Hawai'i Revised Statutes (HRS), Chapter 343, and Hawai'i Administrative Rules (HAR), Title 11, Chapter 200.1.

The County of Maui Department of Planning has determined that an Environmental Impact Statement (EIS) is required for the above-referenced project. The determination was made in accordance with HRS Section 343-5(e), and HAR Section 11-200.1-14(d)(2) which state that an approving agency may authorize an Applicant to prepare an EIS rather than an Environmental Assessment if, through its judgement and experience, it determines that an EIS is likely to be required.

The EISPN will be published in the June 8, 2024 edition of the Environmental Review Program's (ERP) Environmental Notice bulletin and can also be accessed through the ERP site via the links and QR code below:

Scan QR code for the EISPN or go to links provided below:
