KOLAKALO HASTER PLAE W/O HIT AN PEAK BOUR

#### 07/26/96 14:35:02

#### SIGHAL94/TEAPAC[V1 L1.4] - Summary of Parameter Values

### Intersection Parameters for Int # 0 - FUTALARI BYPASS & MATAWAO AV

| HETROAREA      | XOI | ICBD |  |
|----------------|-----|------|--|
| LOSTTINE       |     | 2.0  |  |
| LEVELOPSERVICE | C   | S    |  |
| NODELOCATION   | 0   | 0    |  |

#### Approach Parameters

|                 | EB   | <b>≾</b> B | WB   | NB   |
|-----------------|------|------------|------|------|
| APPLABELS       | -68- |            | -#8  |      |
| GRADES          | 5.0  | .0         | -6.0 | . 4  |
| PEDLEVELS       | LOW  | LOF        | LOY  | LOT  |
| PARKINGSIDES    | NORE | RONE       | RORE | RORE |
| PARKVOLUKES     | 20   | 29         | 20   | 29   |
| BUSVOLUMES      | 0    | 9          | Ð    | 0    |
| RIGHTTURHOKREDS | 12   | 35         | 247  | 1    |

#### **Hovement Parameters**

# SIGRAL94/TEAPAC[V1 L1.4] - Summary of Parameter Values

## Intersection Parameters for Int # 0 - HALBAKALA HWY & PUKALAWI ST

.

| HETROAREA      | 101 | ICBD |
|----------------|-----|------|
| LOSTTINE       |     | 2.0  |
| LEVELOFSERVICE | С   | S    |
| RODELOCATION   | 0   | θ    |

#### Approach Parameters

|                 | EB    | SB    | WB    | NB    |
|-----------------|-------|-------|-------|-------|
| APPLABELS       | -89   | -#8   | -##   | -88   |
| GRADES          | 8.0   | .0    | -8.6  | 2.0   |
| PEDLEVELS       | KODER | NODER | NODER | KODER |
| PARKINGSIDES    | RORE  | ROHE  | NORE  | NORE  |
| PARKVOLUKES     | 20    | 20    | 28    | 20    |
| BUSVOLUMES      | 0     | 0     | 0     | 0     |
| RIGHTTURNONREDS | 252   | 0     | ŧ     | 141   |

#### Kovement Parameters

| KOVLABELS            | RT         | TH   | LT   | RT   | TH   | LT   | RT   | TE   | LT   | RT   | TH   | LT   |
|----------------------|------------|------|------|------|------|------|------|------|------|------|------|------|
| volumes              | 257        | 693  | Ø    | 0    | 0    | 0    | 0    | 243  | 218  | 171  | 0    | 701  |
| VIDTES               | 12.0       | 12.0 | .0   | .0   | .0   | .0   | .0   | 12.0 | 12.0 | 12.0 | .0   | 12.0 |

Preliminary Engineering Report

for the

Kulamalu Subdivision - Upper Section Rezoning

at

Kula, Maui, Hawaii

Tax Map Key: (2) 2-3-08: portion 5, 38 and 39

# I. INTRODUCTION

The purpose of this report is to summarize the preliminary civil engineering design criteria for the Kulamalu Subdivision - Upper Section Rezoning. It evaluates the existing conditions and defines the grading requirements, storm drainage system and the utility provisions for the proposed project.

# II. PROPOSED PROJECT

# <u>A.</u> <u>Location</u>

٠

The project site is located in Kula, Maui, Hawaii, just south of the town of Pukalani and adjacent to Kula Highway. The Tax Map Key for this site are portions of TMK: 2-3-08:5, 38 and 39. Refer to Exhibit 1.

# B. Project Description

The rezoning of the upper section of the Kulamalu Subdivision will create the following parcels and uses:

Business Halau

19.41 acres 5.03 acres

| Elderly Housing     |       | 4.88 acres  |  |
|---------------------|-------|-------------|--|
| Public/Quasi-Public | 0     | 5.10 acres  |  |
| Park/Public         |       | 14.74 acres |  |
| Single Family       |       | 4.51 acres  |  |
|                     | Total | 53.67 acres |  |

a i Yera

<u>م</u>

. I

The lower portion of the Kulamalu Subdivision is zoned for single and multifamily housing, and will also include the proposed Kamehameha Schools/Bishop Estate campus.

# III. EXISTING CONDITIONS

•

#### A. Adjacent Land Uses

The northern boundary of the project site abuts Kaluapulani/Haakakai Gulch. The southern boundary abuts existing agricultural lots and an unnamed drainageway (tributary of Kaluapulani Gulch). The eastern boundary of the project site abuts Kula Highway. The western boundary abuts the remainder of the Kulamalu Subdivision. Refer to Exhibit 2.

# B. Topography and Soil Conditions

The site was formerly planted in pineapple and is currently used as pasture land, with ground cover of grasses, low shrubs and weeds. The site has a moderate slope from east to west, ranging from 5 to 20 percent. The elevations on the site range from 1860 to 1750 feet mean sea level (msl).

The soil classification of the site is primarily from the Keahua Series. The specific soil types include Keahua cobbly silty clay (KnhC), Keahua silty clay

loam (KnB) and Keahua cobbly silty clay loam (KnaD), as described by the Soil Survey of the Islands of Kauai, Oahu, Molokai, Maui and Lanai. Runoff is slow to medium and the erosion hazard is slight to moderate.

# <u>C.</u> <u>Roadways</u>

There are no improved roads on the project site; remnants of pineapple field roads traverse the site.

Kula Highway, a State-owned, two-lane arterial highway, runs along the eastern boundary of the site.

# <u>D.</u> <u>Drainage</u>

Runoff sheet flows across the project site and enters Kaluapulani/Haakakai Gulch. There are no underground drainage systems on the site.

Offsite runoff flows through Kaluapulani Gulch and its tributary from mauka lands. The Kaluapulani Gulch crossing at Kula Highway consists of 2 - 10 foot diameter corrugated metal pipe culverts. The tributary crossing at Kula Highway consists of 2 - 5 foot diameter corrugated metal pipe culverts. Flow is contained within the gulch walls.

#### E. Wastewater

The site is currently unoccupied and generates no wastewater flow. There is an offsite gravity system within the Pukalani Terrace, Unit II Subdivision, located west of the project site, that conveys wastewater to a privately-owned treatment plant. There are no County wastewater treatment or transmission facilities in the vicinity.

**...** 

•

The treated effluent is currently used for irrigation of the Pukalani Golf Course.

<u>F.</u><u>Water</u>

1. Source

The Makawao-Haiku Water System is supplied by surface water runoff collected on the eastern slopes of Haleakala. The water is collected and conveyed by the Wailoa Ditch and Tunnel System, which is owned, operated and maintained by the East Maui Irrigation Company (EMI), a subsidiary of A & B Hawaii, Inc. The Wailoa Ditch has a capacity of approximately 190 million gallons per day (mgd). The Department of Water Supply (DWS), County of Maui, has an agreement with EMI to draw up to 12 mgd of water to service the area.

2. Treatment

•

The water from Wailoa Ditch is treated at the Kamole Weir Water Treatment Plant, operated by DWS. The plant is capable of treating up to 8 mgd in compliance with the EPA Safe Drinking Water Standards. The plant is located east of the town of Haliimaile, near the intersection of Baldwin Avenue and Haliimaile Road. Refer to Exhibit 3.

3. Storage and Transmission

Treated water is stored in a 300,000 gallon concrete reservoir with a floor elevation of 1114 feet msl, then pumped via high lift pumps to Makawao through a 24-inch force main along Baldwin Avenue and

L....

Olinda Road. Storage is provided by the 0.3 and 2.0 mg Pookela Reservoirs at elevations 1808 ft. and 1830 ft. msl, respectively. The water is then pumped via an 18-inch force main to the 0.5 mg Maluhia Tank at 2051 ft. msl.

There is a 12-inch main running along Olinda Road, Hanamu Road and Haleakala Highway from the Maluhia Tank to the new King Kekaulike High School. There are no water mains within the Kula Highway right-of-way fronting the project site.

There is a 0.85 mg reservoir on the lower portion of the Kulamalu Subdivision, with a floor elevation of 1416 ft. msl. This reservoir is filled with treated water from the Kamole Plant. There is a 12-inch main that runs through the subdivision along the boundary adjacent to Kalialinui Gulch, from the 0.85 mg reservoir to Liholani Street, where it branches off into the Pukalani Terrace Subdivision, Unit II. Refer to Exhibit 4.

# <u>G.</u> <u>Flood Zone</u>

The project site is in Zone "C", an area of minimal flooding, as designated by the Flood Insurance Rate Map (FEMA; community panel number 150003 0260B).

# IV. GRADING AND DRAINAGE PLAN

#### <u>A.</u> <u>Grading</u>

Grading for the proposed improvements will involve excavation and embankment for the construction of building pads, parking areas and

5

**.** .

roadways. Erosion control measures and best management practices will be implemented during the construction period to minimize soil loss and erosion hazards. A detailed grading and erosion control plan will be prepared and submitted to the County of Maui, Department of Public Works for approval. An application for a National Pollutant Discharge Elimination System (NPDES) permit will be submitted to the State Department of Health for review and approval.

#### B. Drainage Plan

Onsite runoff will be collected by underground drainage systems and will be conveyed to Kaluapulani/Haakakai Gulch. Detention facilities will be incorporated within the drainage system to release stormwater into Kaluapulani/Haakakai Gulch at predevelopment rates. Offsite runoff will be allowed to flow through Kaluapulani/Haakakai Gulch unimpeded.

All drainage improvements will be designed in accordance with County Standards. A detailed drainage report will be submitted to the County of Maui, Department of Public Works for review and approval.

C. <u>Hydrology</u>

ł

The onsite drainage system will be sized by using a 50-year recurrence interval based on a one-hour storm. The rate of runoff will be determined by using the Rational Method, as described in the "Rules for the Design of Storm Drainage Facilities in the County of Maui" (11/12/95). See Appendix A for hydrological calculations.

## ATA AUSTIN, TSUTSUMI & ASSOCIATES, INC.

#### V. UTILITIES

•

- <u>A.</u><u>Water</u>
  - 1. Source Improvements

The Kulamalu project, by agreement with DWS, will install a well at Huluhulunui Gulch near Kaupakulua. The well improvements will include the drilling of the well, installation of the well pump, reservoir and associated water lines to connect to the existing system. Refer to Exhibits 6, 7 and 8.

2. Storage Improvements

An offsite storage reservoir of approximately 1,000,000 gallons is proposed on Maui Land & Pineapple Company land at elevation 1975 ft. msl above King Kekaulike High School. This storage is sized for use by Maui Land & Pineapple Company, The Malama Group, King Kekaulike High School and the service area between the 1860 ft. to 1600 ft. elevations (Area 1) of the Kulamalu project. Area 1 of the Kulamalu project includes the Upper Section Rezoning portion of the subdivision. The reservoir size is based on the requirements set forth by the "Water System Standards, Volume I, 1985, Department of Water Supply". The Department of Water Supply has the option of increasing the reservoir size and to participate in the funding for the upsize costs. Refer to Exhibits 4 & 5.

Improvements not within the rezoning area include an onsite storage reservoir of approximately 350,000 gallons, proposed at elevation 1690 ft. msl on the project site to service area 1690 ft. to 1320 ft. (Area 2). This

## ALISTIN, TSUTSUMI & ASSOCIATES, INC.

reservoir is also sized by maximum daily demand plus fire flow. The existing 850,000 gallon reservoir at elevation 1416 ft. msl will service the area below 1320 ft. msl (Area 3). Refer to Exhibit 9.

#### 3. Offsite Water Transmission

The offsite storage reservoir at elevation 1975 ft. msl will be fed via a 12inch inflow main connecting to the existing 12-inch Kekaulike High School main at Haleakala Highway. The outflow main will be a 12-inch main installed along Haleakala Highway to Five Trees, then up along Kula Highway to the project site (see Exhibits 4 & 5).

4. Onsite Water Transmission

The onsite mains along the backbone road within the project between reservoirs will be sized at 12 inch (see Exhibit 9).

#### <u>B.</u><u>Wastewater</u>

•

Wastewater from the project site will gravity flow through the subdivision and enter the existing gravity system within the Pukalani Terrace, Unit II Subdivision, located to the west of the project site. The wastewater will then be conveyed to the privately owned and operated treatment plant.

The private wastewater treatment plant will be able to accommodate the project's flow. Refer to Appendix C for calculations. The treated effluent will continue to be used for irrigation by the Pukalani Golf Course.

ATA AUSTIN, TEUTSUMI & ASSOCIATES, INC.

#### VI. ROAD IMPROVEMENTS

Access to the project site will be from a divided four-lane parkway, with a raised median for landscaping and turning lanes. The right-of-way for the parkway will be 160 feet. The parkway will connect to Kula Highway and create a T-intersection. Appropriate lengths of left turn and deceleration lanes on Kula Highway will be constructed, and conduits for future traffic signals will be installed.

All improvements will be designed in accordance with State and County Standards. A traffic impact analysis report has been prepared for the project.

#### VII. CONCLUSION

The proposed improvements for the project will be designed to produce no adverse effects to existing facilities or to the surrounding environment. All improvements will be designed in accordance with the applicable regulatory agencies.
