**Agent:** Munekiyo & Hiraga, Inc.  
305 High Street, Suite 104  
Wailuku, Hawaii 96793  
Contact: Colleen Suyama  
Phone No.: (808) 244-2015

**Project Summary:** Ka Lima O Maui, Ltd. proposes to develop a 100 percent affordable housing project to meet the needs of the island's population of disabled and/or economically challenged

individuals on property identified as TMK (2)3-8-046:016 (Parcel 16) in Wailuku, Maui. Parcel 16 is approximately two (2) acres in size. Ingress and egress to the site will be provided through a driveway off of Mahalani Street. The proposed action involves the construction of 16 single-occupancy, one (1) bedroom apartments contained within two (2) separate residential buildings totaling 8,880 square feet (s.f.) (4,440 s.f. for each residential building). The project also includes the renovation of an existing 2,500 s.f. building used by Ka Lima O Maui's Medicaid Waiver Program, as well as the construction of a new building providing office space of approximately 3,600 s.f. and storage and garage space of approximately 3,600 s.f. Additionally, related improvements are proposed including utility, infrastructure, landscaping and parking.

Parcel 16 is located within the limits of the State Land Use "Urban" district. The Wailuku-Kahului Community Plan designates the subject property for "Public/Quasi-Public" use, while the underlying county zoning is "R-3, Residential".

The proposed action involves the use of County lands and funds. The use of County lands and funds are both triggers for Chapter 343, Hawaii Revised Statutes (HRS). As such, a Final Environmental Assessment (EA) has been prepared pursuant to Chapter 343, HRS, and Chapter 200 of Title II, Hawaii Administrative Rules, Environmental Impact Statement Rules. This EA documents the project's technical characteristics and environmental impacts, and advances findings and conclusions relative to the significance of the project.

# **I. PROJECT OVERVIEW**

# I. PROJECT OVERVIEW

## A. PROJECT BACKGROUND, LOCATION AND LAND OWNERSHIP

Ka Lima O Maui, Ltd. (Ka Lima O Maui), Applicant, is a community based vocational rehabilitation program that provides job training and employment opportunities for disabled and economically disadvantaged adults on Maui. Founded in 1955, Ka Lima O Maui is one of the oldest non-profit organizations, and the largest employer of the disabled on the island. Ka Lima O Maui is an independent 501(c)3 non-profit agency and is not a member of a national organization such as the United Way. The organization serves over 200 clients annually within the Maui community, 40 of which are employed by Ka Lima O Maui.

Ka Lima O Maui offers a variety of services to its clients ranging from education to employment, among others. The organization's largest department offers training and employment in grounds and custodial services. Ka Lima O Maui secures jobs for its clients and provides these services through contracts with the County of Maui, as well as other private businesses, such as HC&S, Hawaii Job Corps, The Maui News, and the YMCA. Additionally, Ka Lima O Maui also offers training for clients in acquiring the skills needed for community-based employment. Through funding by way of the State of Hawaii, Department of Vocational Rehabilitation Services, employment is the ultimate objective for this job placement and retention program designed for those with severe disabilities. Work experience programs teach basic skills and expose clients to the real demands and expectations of community-based employment. Long-term support and coaching is then provided to clients throughout their employment. Ka Lima O Maui's Medicaid Waiver Program is the organization's only non-vocational program. The Medicaid Waiver Program is designed to adapt to the individual needs of each client, and focuses on building independent living and social skills through activities such as gardening, yoga, cooking, recreational group outings to beach parks and related recreational sites, as well as cultural excursions.

Ka Lima O Maui (Applicant) proposes to develop a 100 percent affordable housing project to meet the needs of Maui's population of disabled and/or economically challenged individuals on property identified as TMK (2) 3-8-046:016 (Parcel 16) in Wailuku, Maui.

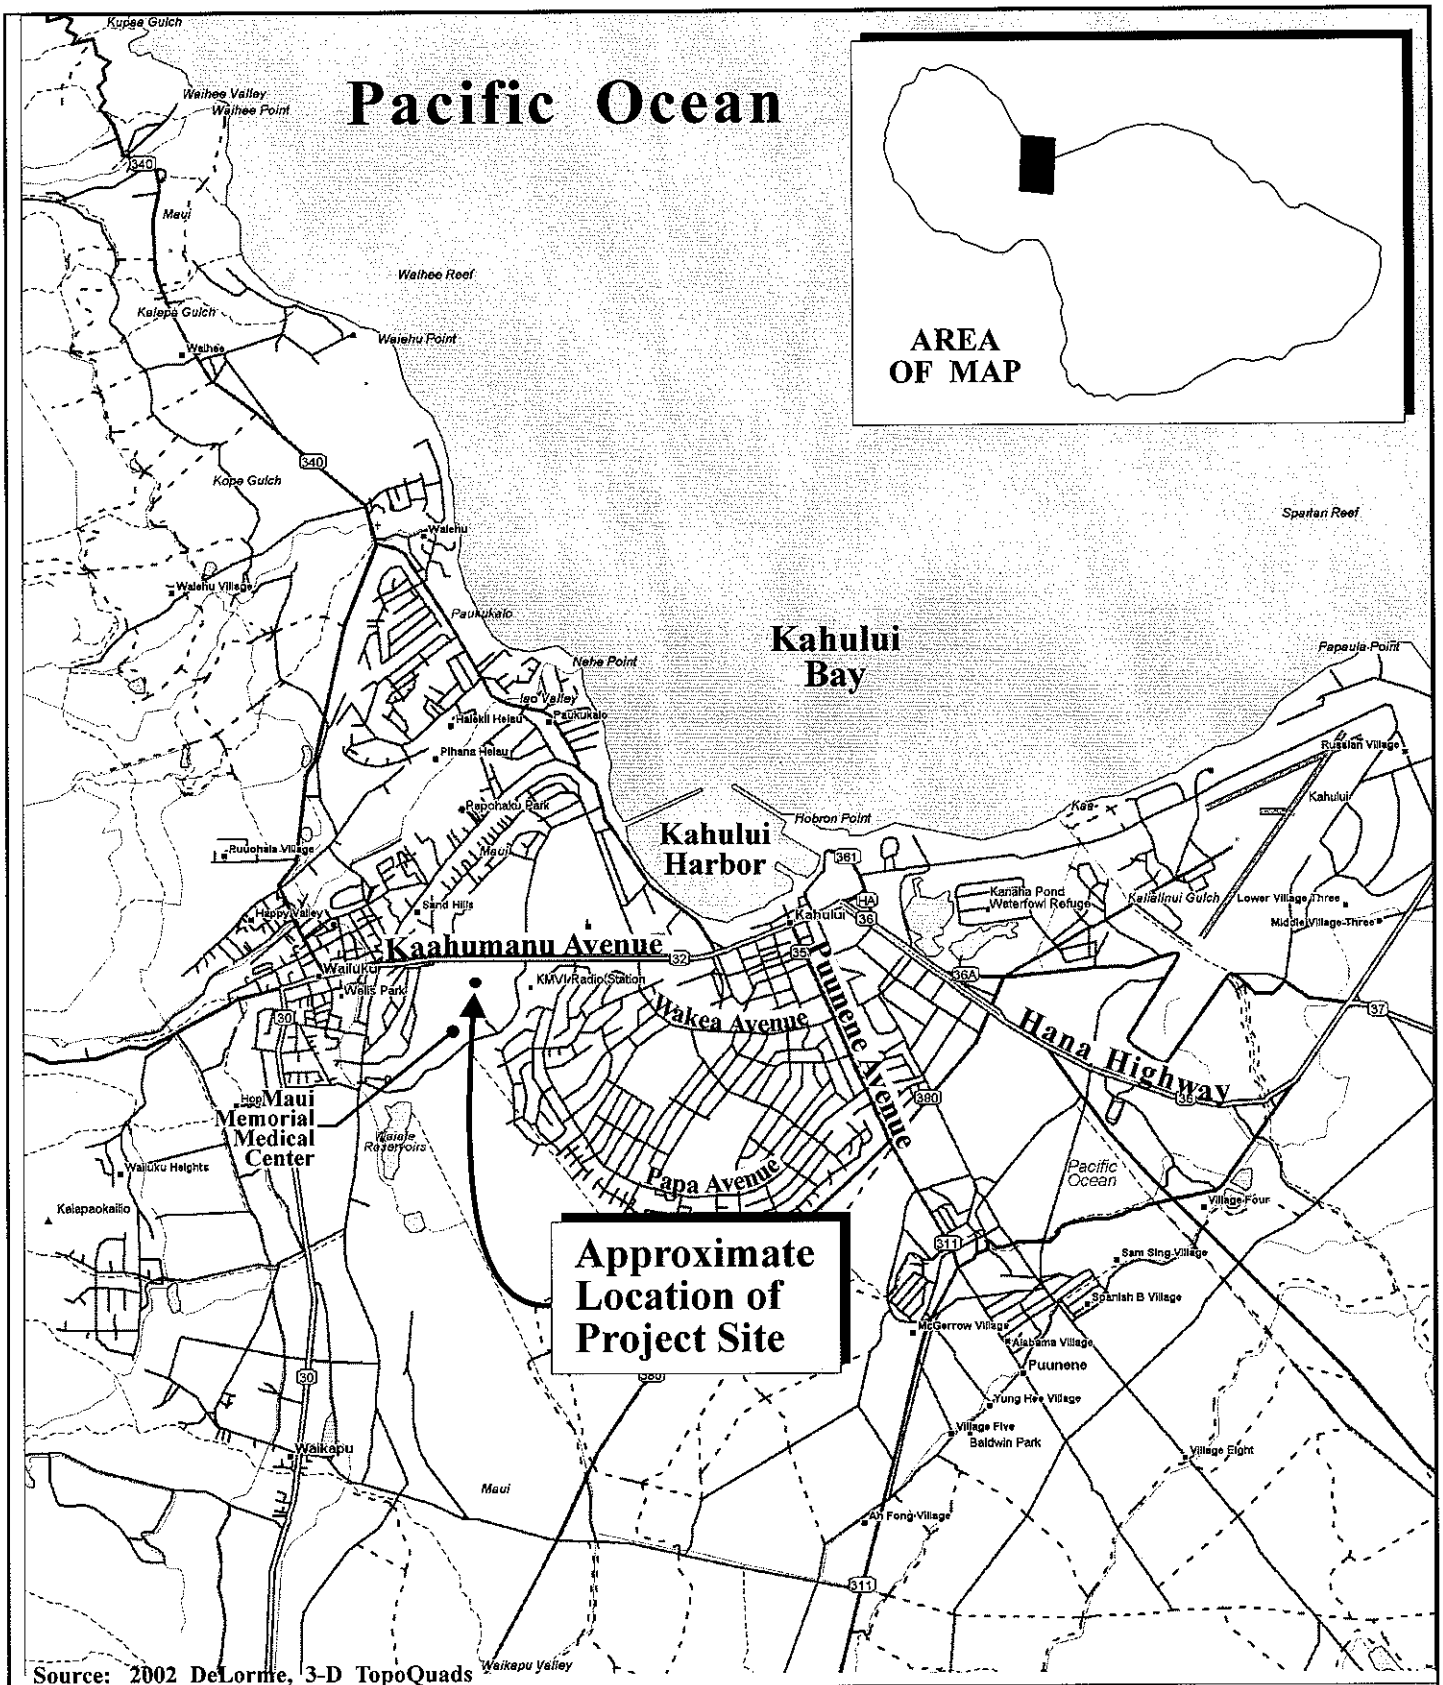

See **Figure 1** and **Figure 2**. Parcel 16 is approximately 2 acres in size and is owned by the County of Maui. Ka Lima O Maui has a 50-year lease with the County of Maui. The subject property is designated “Urban” by the State Land Use Commission, designated “Public/Quasi-Public” by the Wailuku-Kahului Community Plan, and zoned “R-3, Residential” by the County of Maui.

## **B. EXISTING CONDITIONS**

The existing property is developed and is also located in an urbanized area of Wailuku. Ka Lima O Maui currently operates its Medicaid Waiver Program, which focuses on basic living skills, health, and personal assistance, in an existing structure on the subject parcel. Existing improvements on the site include the 2,500 square feet (s.f.) warehouse which houses the Medicaid Waiver Program, storage structure, as well as paved parking and a driveway. Access to the site is provided through a driveway off of Mahalani Street. The remaining portion of the project site is vacant, but was previously graded for the former Ka Lima O Maui nursery operation. Bordering the property, along the western perimeter of the site is the Maui Lani Kaiser Permanente Clinic. To the north of the project site is the County of Maui Police Department, to the east, is Maui Economic Opportunity and the Cameron Center and to the south is Maui Memorial Medical Center. Refer to **Figure 2**.

## **C. PROPOSED ACTION**

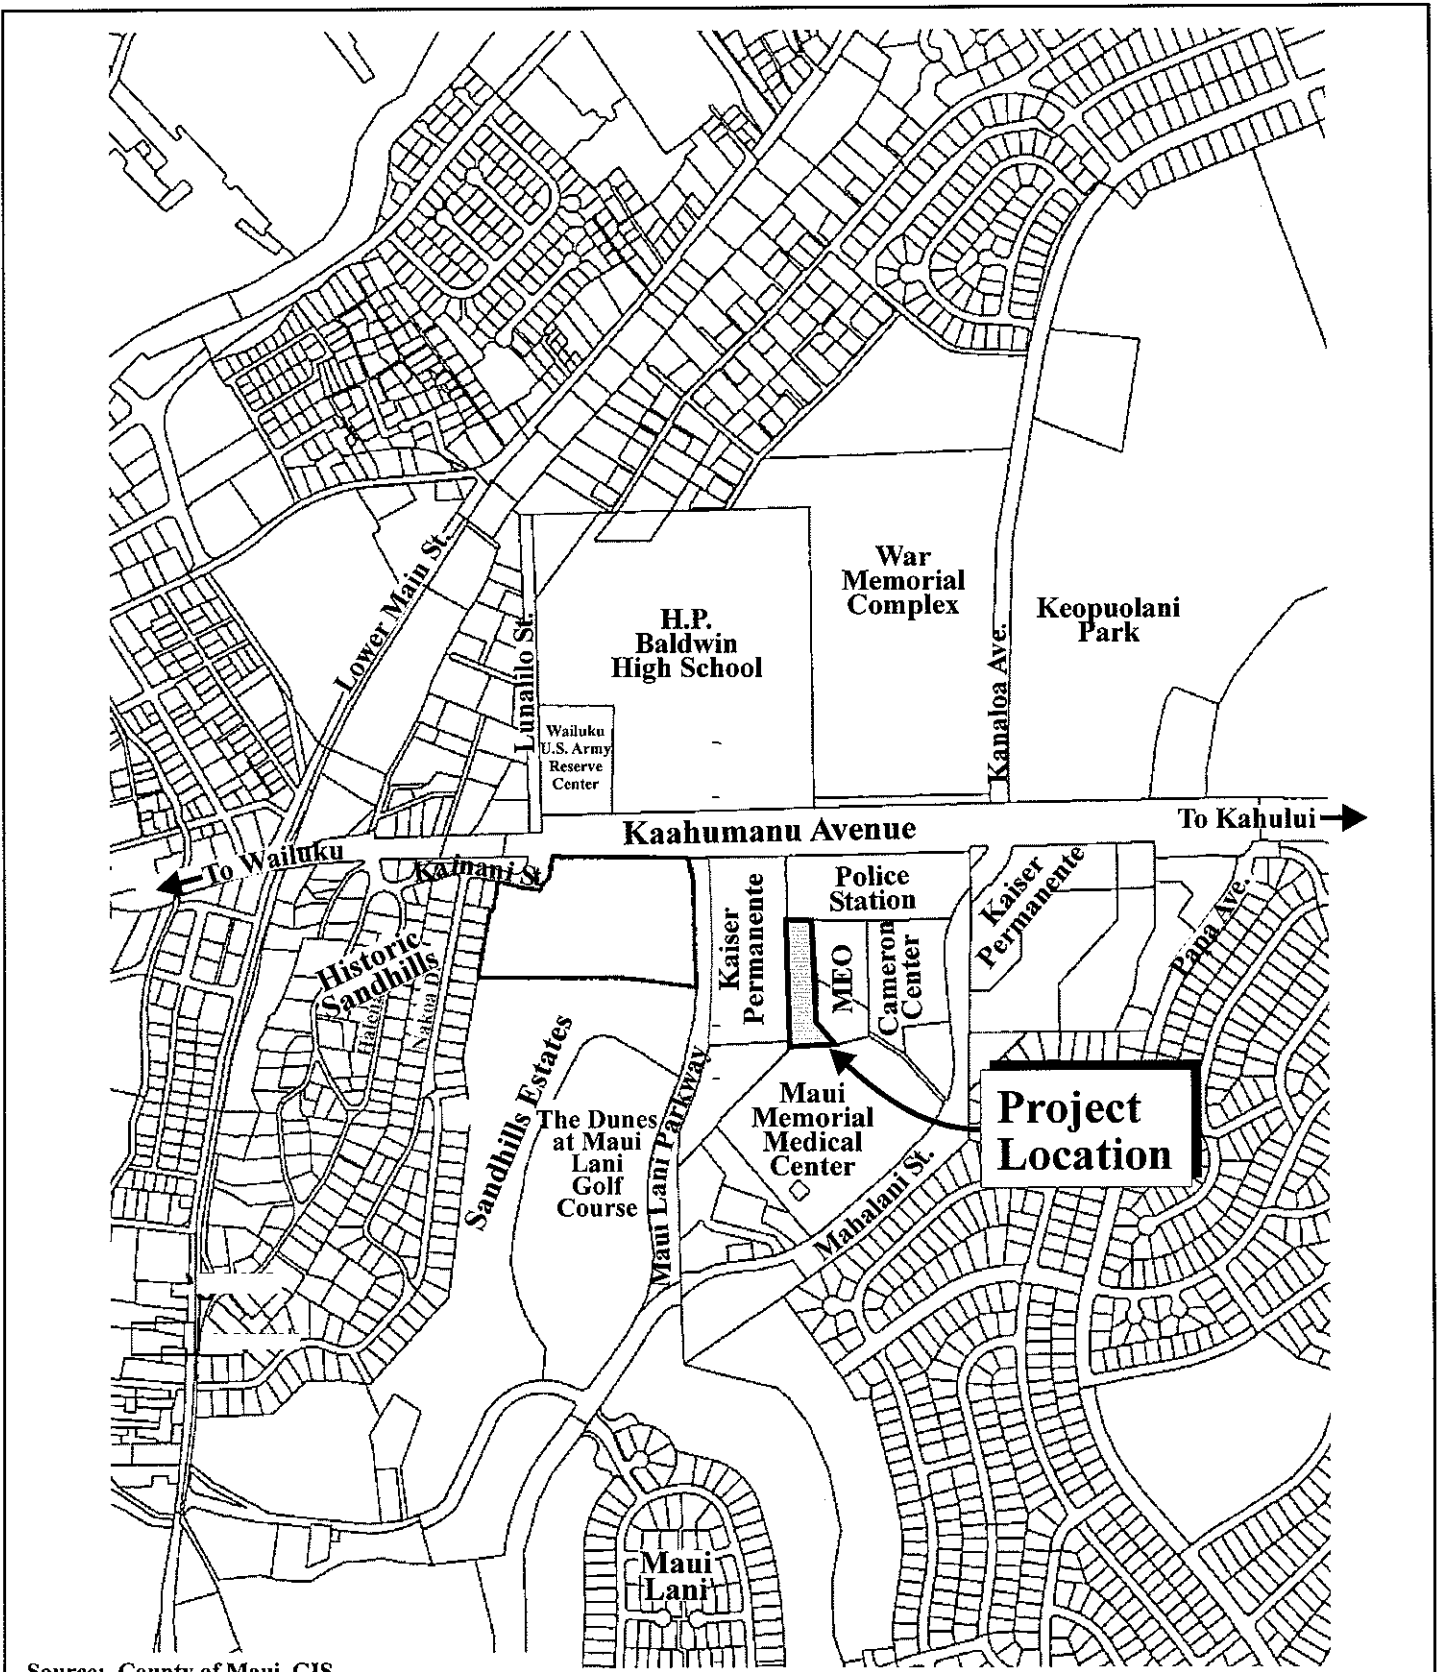

Ka Lima O Maui proposes to develop a 100 percent affordable housing project to meet the needs of the island's population of disabled and/or economically challenged individuals on property identified as TMK (2)3-8-046:016 (Parcel 16) in Wailuku, Maui. Parcel 16 is approximately two (2) acres in size. Ingress and egress to the site will be provided through a driveway off of Mahalani Street. The proposed action involves the construction of 16 single-occupancy, one (1) bedroom apartments contained within two (2) separate residential buildings totaling 8,880 s.f. (4,440 s.f. for each residential building). One apartment will serve as the living quarters of a Ka Lima O Maui staff person to oversee the overall complex and provide assistance to the residents/clients as needed. The project also includes the renovation of an existing 2,500 s.f. building used by Ka Lima O Maui’s Medicaid Waiver Program, as well as the construction of a new two (2) story building providing office space of approximately 3,600 s.f., and storage and garage space of approximately 3,600 s.f. Presently, Ka Lima O Maui’s administrative office is located in the adjacent Cameron new office building. Additionally, related improvements are proposed including utility, infrastructure, landscaping and parking. See **Figure 3**.

## **D. PROJECT NEED**

Although the local economy has slowed significantly over the past several years, demand for affordable housing remains steady. A natural extension of Ka Lima O Maui's mission, "Enhancing Lives through Self-Reliance", the proposed project would provide affordable housing open to Ka Lima O Maui's clients as well as the public. The proposed project would benefit the organization and its clients as the future residents of the facility will have the added safety and security of staff interaction seven (7) days a week. Furthermore, the existing building on the project site which houses Ka Lima O Maui's Medicaid Waiver Program is in need of a renovation to provide a safer and more reliable structure that offers flexibility in use. In addition, the proposed office building is designed to meet the needs of the Applicant's varied agency employment programs. The organization's administration will occupy this proposed building and will provide the convenience to client-residents of being a short distance away from their homes.

## **E. REGULATORY CONTEXT**

### **1. Chapter 343, Hawaii Revised Statutes**

As previously noted, the proposed project will involve the use of County land and funds. As such, an Environmental Assessment (EA) is being prepared pursuant to Chapter 343, Hawaii Revised Statutes (HRS) and Chapter 200 of Title 11, Department of Health Administrative Rules, Environmental Impact Statement Rules. Accordingly, this document addresses the project's technical characteristics, environmental impacts and alternatives, and advances findings and conclusions relative to the significance of the proposed action.

The approving agency for the EA is the Department of Housing and Human Concerns.

### **2. Section 201H-38, Hawaii Revised Statutes**

To facilitate project planning and implementation, Ka Lima O Maui seeks to process the project proposal under a Section 201H-38, HRS application. Applicable land use

entitlements and related development exemptions would be sought through the Section 201H-38, HRS application. Section 201H-38, HRS promotes the delivery of affordable housing by allowing the exemption of endorsed projects from:

*...all statutes, ordinances, charter provisions, and rules of any governmental agency relating to planning, zoning, construction standards for subdivisions, development and improvement of land, and the construction units thereon.*

The proposed project will be a 100 percent affordable housing project. As such, a Section 201H-38, HRS application will be filed with the Maui County Council to seek applicable land use entitlements and related development exemptions from County related code requirements, without compromising public health, safety, or welfare considerations. Proposed exemptions are presented in Section 7 of the 201H-38 application.

**F. PROJECT COSTS AND SCHEDULE**

The estimated construction cost for the proposed improvements is approximately \$4.5 million. Construction of the proposed improvements will commence upon the receipt of all necessary regulatory permits and approvals. Construction duration is estimated to be approximately two (2) years.

**II. DESCRIPTION OF THE  
EXISTING  
ENVIRONMENT,  
POTENTIAL IMPACTS  
AND MITIGATION  
MEASURES**

## **II. DESCRIPTION OF THE EXISTING ENVIRONMENT, POTENTIAL IMPACTS AND MITIGATION MEASURES**

### **A. PHYSICAL SETTING**

#### **1. Surrounding Land Uses**

##### **a. Existing Conditions**

The subject property is located within Wailuku. Wailuku serves as the seat of County and State governments, with several agencies headquartered in the civic center area between Kaohu Street and Main Street. Wailuku also serves as a center for professional services including medical, dental, legal and design professions. Kahului, on the other hand, is home to Kahului Harbor, the island's only deep water port, and the Kahului Airport, the second busiest airport in the State. With its proximity to the harbor and airport, the Kahului region has emerged as the focal point for heavy industrial, light industrial and commercial activities and services such as warehousing, baseyard operations, automotive sales and maintenance, and retailing for equipment and materials for suppliers. Kahului is considered Central Maui's commercial retailing center with the Queen Kaahumanu Center, Maui Mall, Maui Market Place and Kahului Shopping Center located within the region.

Maui Memorial Medical Center is located to the south of the project site. To the north of the site is the headquarters of the Maui Police Department. The proposed project site is also located adjacent to Maui Economic Opportunity (MEO), the Cameron Center, and the Kaiser Permanente Maui Lani Clinic, and covers an area of approximately two (2) acres. The existing 2,500 sq. ft. building, a storage structure, paved parking and driveway currently occupying the project site is being utilized by Ka Lima O Maui for its Medicaid Waiver Program.

**b. Potential Impacts and Proposed Mitigation Measures**

The proposed project is intended to provide affordably priced rental units to address the need of Ka Lima O Maui's clients who are economically disadvantaged. The housing, however, will not be restricted to the Applicant's clients, but will also be open to the public who financially qualify. The project site is located in Wailuku and is adjacent to the Kaiser Permanente Maui Lani Clinic, the County of Maui Police Station, the Cameron Center, MEO, and the Maui Memorial Medical Center. In addition, the project is in close proximity to various business and medical offices and recreational centers such as the War Memorial Complex, Keopuolani Park and the Dunes at Maui Lani golf course. Not far beyond these neighboring properties – to the west, east and south of the project site – is a vast expanse of residential properties including Sandhills, residences in the Maui Lani Project District and Kahului.

The development of residential uses at the project site is consistent with existing residential uses in the area, as well as compatible with surrounding public/quasi-public uses.

**2. Climate**

**a. Existing Conditions**

Like most areas of Hawaii, Maui's climate is relatively uniform year round. Characteristic of Hawaii's climate, the project site experiences mild and uniform temperatures year round, moderate humidity and a relatively consistent northeasterly tradewind. Variation in climate on the island is largely left to local terrain.

The climate of Maui County is defined by average temperatures that range from lows in the 60's to highs in the 80's (based on temperatures recorded at Kahului Airport). September is historically the warmest month, while February is the coolest. Rainfall at Kahului Airport in 2008 average approximately 9.55 inches (Maui County Databook 2009).

**b. Potential Impacts and Mitigation Measures**

The proposed project is not anticipated to adversely affect local climatic conditions in the area.

**3. Topography and Soils**

**a. Existing Conditions**

The site is located on Maui's central isthmus. Underlying the site and surrounding lands is soil belonging to the Pulehu-Ewa-Jaucas association which is characterized as having deep, nearly level to moderate slope, with well drained soils that have moderately fine to coarse texture. See **Figure 4**. The soil type specific to the project site is Puuone Sand (PZUE). See **Figure 5**. PZUE soils predominate in the Kahului region and are typified by a sandy surface layer underlain by cemented sand (Soil Conservation Service, 1972).

The project site is currently developed and lies within an urbanized area of Wailuku.

**b. Potential Impacts and Mitigation Measures**

The project site is currently developed and is also surrounded by developed properties. The existing topographic conditions at the project site will be minimally modified during the grading phase of work to meet design requirements.

The proposed project will not significantly alter existing topography and soil characteristics at or near the project site.

**4. Flood and Tsunami Hazard**

**a. Existing Conditions**

The Flood Insurance Rate Map (FIRM) for this region indicates that the project site is located in Zone X, areas determined to be outside the 0.2 percent annual chance flood plain of minimal flooding. See **Figure 6**. In

addition, the subject property is located beyond the reaches of the tsunami inundation zone.

**b. Potential Impacts and Mitigation Measures**

The project site is not a shoreline property, nor is it situated near streams, wetland areas or other areas which may pose flooding concerns. The subject property is located within Zone X, determined to be outside the 0.2 percent annual chance flood plain and located beyond the reaches of the tsunami inundation zone. Accordingly, adverse conditions associated with flooding does not occur at the property.

**5. Flora, Fauna and Avifauna**

**a. Existing Conditions**

The subject property is a developed property located in an urbanized area of Wailuku. There are no known rare, threatened, or endangered species of plants within the project site.

Fauna and avifauna are also characteristic of urban areas. Fauna typically found in the vicinity include mongoose, rats, dogs and cats. Avifauna include the Common Mynah, Spotted Dove, Barred Dove, Japanese White-Eye Cardinal, Red-Crested Cardinal, and House Sparrow. There are no identified rare, threatened or endangered species of fauna or avifauna found at the project site.

**b. Potential Impacts and Mitigation Measures**

There are no known significant habitats or rare, endangered or threatened species of flora, fauna, and avifauna located within the project site. Furthermore, it is noted that lighting design of the site will specify the shielding of all lights and directional down lighting so that there will be no upward illumination from the poles. This measure is intended to mitigate impacts to sea birds, such as Newell's Shearwater and the endangered Hawaiian petrel who are attracted to lights. It is noted, however, that the project site is located approximately 4,777 ft. (0.9 mi.) from the shoreline.

There are no streams or wetlands located within the project site. Further, the project site will be landscaped to provide a complex which will aesthetically complement the surrounding area. The proposed action is not anticipated to have an adverse impact upon these environmental features.

6. **Archaeological Resources**

a. **Existing Conditions**

An Archaeological Assessment Survey (AAS) of the project site was conducted by Xamanek Researches LLC in May, 2010. See **Appendix "A"**. The survey consisted of an 80 percent surface survey of the subject area and subsurface testing of 16 Backhoe Test trenches (BTs). The area underlying the developed features at the project site, including the Medicaid Waiver Program building, an asphalt parking lot and driveway, and storage sheds, were not examined or tested in the survey.

The survey notes that an area of 18 meters by 17 meters immediately outside the northeast corner of the project site contains a human burial feature, identified as SIHP 50-50-04-4728. This area is intended to be a permanent burial preservation site and is enclosed by a chain link fence. Currently, there are no surface features which visually mark the presence of the burial site. The site was first identified by Archaeological Services Hawaii (ASH) during construction of a past expansion project for the nearby Cameron Center.

b. **Potential Impacts and Mitigation Measures**

No significant archaeological features were identified during the surface and subsurface testing of the project site. Furthermore, no historic properties were identified within the project site during the assessment survey. The survey indicates that this is most likely due to the extensive land modifications that have occurred in the area in recent years. It is also noted that sand dune deposits have been identified throughout the project site.

No adverse impacts to archaeological resources as a result of project implementation are anticipated. In addition, no impacts to the nearby burial site identified as SIHP 50-50-04-4728 are anticipated for the proposed project. Precautionary archaeological monitoring will be conducted during

any ground altering activities on the subject property. Should the discovery of significant cultural materials and/or burials occur during construction, all work in the immediate area of the find will cease and the State Historic Preservation Division (SHPD) will be notified to discuss mitigation measures, in accordance with Chapter 6E, Hawaii Revised Statutes.

7. **Cultural Resources**

a. **Cultural Context**

**Pre-Contact Period**

The project site is located in the *ahupua`a* of Wailuku. The *ahupua`a* of Wailuku is a large land unit that encompasses land near Kahului Bay from Paukukalo to Kapukaulua. The *ahupua`a* includes Iao Valley and the northern half of the Kahului isthmus. This *ahupua`a* is located in, and encompasses approximately half the land area of the Wailuku District. According to the archaeological inventory survey report, Wailuku is noted as being the place where chiefs were buried and wars were fought. The environmental conditions in the lower Iao Valley were ideal for agricultural practices vital to support a large population. Combined with access to Kahului Harbor, these conditions made Wailuku a key location for a political and religious center.

The core area of Wailuku was comprised by Iao Valley and the two related dune formations to the north and south of the stream. This was the central place of religious and political power on Maui, which culminated during the time of High Chief Pi`ilani (c. 1600 AD). During the late pre-contact period, warfare intensified as the chiefs from Maui, Oahu and Hawaii competed for political and military supremacy.

For the duration of King Kahekili (1765 -1790), Wailuku once more became the place of intense warfare. In the mid-1770's, Kalanilahale, the royal residence of Kahekili, was marched upon by a Big Island chief named Kalani`opu`u and his *alapa* (warriors). News of his coming preceded him, and Kahekili hid his warriors in the sand dunes above Halekii *heiau* to surprise the invading troops. A battle followed whereby the army of Kalani`opu`u was pushed to the sea and defeated.

By 1786, Kahekili controlled the islands of Maui, Molokai, Lanai, and Oahu. However, in 1790, Kahekili's control over the islands came to a close with the battle of Kepaniwai when King Kamehameha I defeated the ruler.

### **Early Post-Contact Period**

Significant changes to the landscape of Hawaii ensued after the arrival of missionaries and other foreigners in the late 1700s and early 1800s.

Further, the establishment of the sugar industry in the 19<sup>th</sup> century catalyzed a dramatic transition in Wailuku. The first sugar cane crops grown in the *ahupua`a* were harvested and processed in 1828. Kamehameha III, with the assistance of two Chinese technicians, established a water-powered mill in Wailuku: Hungtai Sugar Works. The Wailuku Sugar Mill was established later in 1862.

Raising cattle also became an established commercial activity on the southern and eastern side of the Iao Valley dunes.

### **Post-1850s Period**

According to the Archaeological Assessment Survey Report, following the Great Mahele of 1848, much of the *ahupua`a* of Wailuku was designated as Crown Land, to be used in support of the royal "state and dignity".

The boost of the sugar industry came in 1876 with the introduction of The Reciprocity Treaty that increased the price of sugar. The construction of ditches in the 1880s by Claus Spreckels tapped into the water resources from the mountains to irrigate fields for sugar cane production. These endeavors contributed to the foundation of the Hawaiian Commercial and Sugar Company in 1882.

The construction of the railroad in the late 1870s and its continuation for approximately two (2) decades facilitated mobility across towns, as well as contributed to the growth of various commercial activities and residential areas.

The introduction of the automobile in the 1950s greatly increased the ease of travel across the island. Residents residing in Wailuku were able to make daily commutes to other areas of the island, especially into nearby Kahului, an expanding town offering two (2) major ports of entry, the Kahului Harbor and Kahului Airport, as well as newly completed shopping centers and other social facilities.

**b. Potential Impacts and Mitigation Measures**

Cultural impact considerations were assessed based on primary source interviews conducted with individuals familiar with the project site and its historical context. In this regard, interviews with Hannah Kamai, Darby Gill and Jamie Woodburn were conducted. These interviews are summarized below.

**(1) Hannah Kamai**

Hannah Kamai is currently retired and lives at home in Paukukalo with her family, a home that she's lived in for 45 years. She was born and raised on Maui, in Waihee, on land that her family owned. Her father was half-Hawaiian, half-Irish and her mother was full Hawaiian. Ms. Kamai currently enjoys traveling and visiting family and friends on the neighbor islands. Ms. Kamai has been involved with Ka Lima O Maui for over 30 years. She began working there in 1965, about ten (10) years after the agency's inception.

Back then, the agency's offices were located in Kahului, at the site of the present-day Hawaiian Canoe Club hale. Ms. Kamai began working as a utility person, but later worked with Ka Lima O Maui clients in the janitorial services. She helped clients to prepare for and find janitorial jobs in various sectors of the community, enabling them to be financially independent and self-reliant.

When Ms. Kamai began working there, Ka Lima O Maui's proposed project site was mostly vacant, but contained a greenhouse that was utilized by their clients for fund-raising purposes. This greenhouse site was converted later into offices for the agency's Medicaid Waiver Program. Ms. Kamai recalls that the Maui Lani area was largely

undeveloped, with most of the landscape covered by kiawe. In the vicinity of the area was the Maui Memorial Medical Center, a Board of Health Building (now the Mental Health Association), a few homes provided for individuals with disabilities, and the Pacific Radio Group offices and radio tower. Ms. Kamai also recalls a landfill that was located on several acres west of the project site that has since been relocated to the Central Maui Landfill.

Because the area was filled with kiawe trees, Ms. Kamai doesn't recall of any sites of cultural importance, or any cultural practices carried out in the Maui Lani area. She explained that the land there was vacant except for kiawe trees, and that no one resided in the area. Since the Maui Lani area is now highly developed, Ms. Kamai acknowledged that she is unaware of any remaining cultural practices that occur in the vicinity of the project site. However, she voiced her concerns over the possibility of historic remains in the sandy areas of Maui Lani, as ancient Hawaiians often chose these places as their burial sites.

Ms. Kamai strongly supports the implementation of the Ka Lima O Maui housing project as it provides housing for the disabled and enables them to live independently. Due to her past involvement with Ka Lima O Maui, assisting the disabled to become more self-reliant, Ms. Kamai looks forward to the project's completion.

(2) **Darby Gill**

Darby Gill is the Executive Director for A Keiki's Dream, a non-profit organization on Maui that provides support services to children in crisis. He also established Funday, a once-a-year celebration on Maui that brings together people with disabilities. In his spare time, Mr. Gill is an avid practitioner of the sport of juggling, a form of running which involves the simultaneous juggling of balls. He can often be seen juggling down Kaahumanu Avenue and around the community.

Mr. Gill is originally from Massachusetts. He decided to move to Hawaii in 1978 after a positive experience running the Honolulu marathon. Soon after moving to Maui, Mr. Gill opened several offices to provide support services for people with disabilities. After establishing Funday, Mr. Gill created A Keiki's Dream, which functioned as a branch-off program. It was during this time that Mr. Gill was hired by Ka Lima O Maui to run their nursery program. He explained that the nursery program specialized in horticulture therapy, a process which utilizes horticultural activities to improve an individual's overall well-being. The nursery program ended in early 2000, due to a lack of funding, and the Medicaid Waver building was built in its place (presently located on the project site). Mr. Gill was involved with Ka Lima O Maui and their nursery program for about twenty-four (24) years, from 1982 to 2006.

Mr. Gill described the vicinity of the project site in the early 1980's as overrun with kiawe. He explained that the project site itself comprised only about one (1) acre of land, with half an acre allocated for the greenhouse structure, and half an acre for growing fields. A different access road was used to enter the project site, about 20 yards south of the present access road. A drainage gulch also ran through the property. At that time the subject area was not yet graded, so most of the terrain was level. Mr. Gill described the subsequent grubbing and grading of the project site occurring as three (3) development phases. Construction of the original greenhouse enacted the first phase of development for the subject property. The second phase of development saw additional grading and grubbing of the subject area and the construction of a new plant nursery. After the nursery program ended in 2000, a third phase of development was enacted that involved demolition of the greenhouse and construction of the Medicaid Waver Program building which presently stands on the project site.

Mr. Gill didn't recall of any cultural practices occurring in the vicinity of the project site. He described the area as vacant except for kiawe and sand. He remembered that there were man-made pathways leading through the kiawe from Baldwin High School. There was

also a dirt road which veered in from Kaahumanu Avenue, east of the project site. Mr. Gill also recalled there were a few homeless people who resided in the area. He remembered an incident which occurred many years ago, in which a criminal on-the-run managed to evade police by running through the kiawe surrounding the project site. Mr. Gill also remembered that a human skull was found on the subject property during one of the phases of development. This event occurred approximately in the year 1980, about 10 years before the establishment of the State Historic Preservation Division (SHPD). As SHPD had not yet been established at this time, authorities from the Bishop Museum were contacted to examine the find. Written documentation regarding Bishop Museum's review was not received by Mr. Gill.

Mr. Gill is supportive of the project, as long as it serves the best interests of Ka Lima O Maui's clients. He believes that the location of the project is beneficial, as it is within the vicinity of numerous social services and public facilities. Mr. Gill explained that many of Ka Lima O Maui's clients currently live in care homes or with families. By providing these clients with affordable housing, it enables them to live independently in quality living environments.

(3) **Jamie Woodburn**

Jamie Woodburn is a long-time resident of Kula and is retired. He currently is involved with consulting work, lobbying, and real estate. Mr. Woodburn is a former Executive Director for Ka Lima O Maui.

Mr. Woodburn came to Hawaii in 1968 after attending the University of Maine. After receiving his master's degree in educational psychology at the University of Hawaii, Manoa, Mr. Woodburn moved to Maui. Shortly thereafter he began working for the Ka Lima O Maui program, first as a part-time worker, and later as a full-time staff member who oversaw their welfare recipient program. He went on to become Executive Director for Ka Lima O Maui in 1984 and oversaw program development, fundraising, and various other projects.

Mr. Woodburn explained that when he began working for Ka Lima O Maui in the 1970's, the vicinity of the project site was overrun with scrub vegetation, kiawe, and sand dunes. He described the area as a "no mans land" which was void of residents or cultural practices. Maui Memorial Hospital was one of the few buildings in the area, and Mr. Woodburn recalled a drainage gulch which led from the hospital into the project site. Prior to the construction of a new greenhouse that was completed in approximately the year 1980, the drainage gulch and the remainder of the project site were graded and grubbed. During the grading and grubbing of the drainage gulch, a human skull was discovered. As the State Historic Preservation Division was not established until 1990, authorities from the Bishop Museum were contacted. Written documentation regarding Bishop Museum review was not provided to Mr. Woodburn. Mr. Woodburn also recalled that there were a few man-made trails in the area which led from Baldwin High School to the hospital.

On the project site itself, Mr. Woodburn recalls that the land was first used by Ka Lima O Maui to grow plumeria trees and coconut stalks for commercial cultivation purposes. In the early 1980's a greenhouse nursery was built on the project site, and clients were educated there on cultivation production. Using plants and flowers grown in the nursery, Ka Lima O Maui was able to generate funding through the sale of its agricultural products. The commercialized nursery program was discontinued sometime around the year 2000. At present, a building which houses Ka Lima O Maui's Medicaid Waiver Program stands in its place.

Mr. Woodburn is aware of the existing burial site which abuts the project driveway on an adjacent parcel. He believes it was discovered upon grading of the area. He has no further problems or concerns with the project. Mr. Woodburn supports the project as it addresses the island's current need to provide affordable housing for disabled and/or economically challenged individuals. He also supports the current location of the project site as it is conveniently located near appropriate support services and medical facilities.

The interviews with Hannah Kamai, Darby Gill and Jamie Woodburn did not reveal any current cultural activities, including gathering, access, or other customary activities occurring on the subject property. The project site has been previously disturbed with the development of the existing building used by Ka Lima O Maui for its Waiver Program. However, since the property is located within an area with previous cultural finds, an Archaeological Assessment Survey (AAS) was prepared. The results of the AAS confirmed that the project site and surrounding areas have been previously disturbed. The proposed project is not anticipated to adversely impact cultural practices, beliefs and features.

Notwithstanding, should there be unanticipated finds of archaeological significance, including human burials, appropriate protocols will be implemented in accordance with procedures established by the State Historic Preservation Division and the Maui/Lanai Islands Burial Council. In addition, the Office of Hawaiian Affairs (OHA) will also be contacted.

**8. Air Quality**

**a. Existing Conditions**

The Wailuku-Kahului region is not exposed to adverse air quality conditions. Point sources, such as the Maui Electric Power Plant and Hawaiian Commercial and Sugar Company's Puunene Mill and non-point sources such as automobile emissions, are not significant to generate high concentrations of pollutants. The relatively high quality of air can also be attributed to the region's constant exposure to winds which quickly disperse concentrations of emissions. This rapid dispersion is evident during burning of sugar cane in fields located southeast of the Kahului residential core.

**b. Potential Impacts and Mitigation Measures**

Localized air quality impacts from construction equipment and vehicles may occur during construction of the proposed project. As such, potential air quality impacts during construction will be mitigated by complying with the provisions of the State Department of Health Administrative Rules, Title 11, Chapter 60, Air Pollution. Measures which may be taken to reduce air quality impacts include water spraying and sprinkling of loose or exposed soil, erecting dust screens, and re-vegetating or paving exposed areas as soon as practicable. Exhaust emissions from construction vehicles are anticipated to have a negligible impact on regional air quality as the emissions would be relatively small and readily dissipated.

No significant long-term air quality impacts are anticipated as a result of the proposed project.

**9. Noise**

**a. Existing Conditions**

Existing background noise levels are primarily attributable to traffic noise along Kaahumanu Avenue. Intermittent noise in the vicinity of the project site may be generated by activity originating from neighboring urbanized properties.

**b. Potential Impacts and Mitigation Measures**

During construction of the proposed project, construction noise will be unavoidable. Operation of construction equipment, such as backhoes, trucks, and generators, will raise ambient noise levels in the vicinity of the project site. Construction noise impacts will be mitigated through compliance with the provisions of the State of Hawaii DOH Administrative Rules, Title 11, Chapter 46, "Community Noise Control." These rules require a noise permit if the noise levels from construction activities are expected to exceed the allowable levels set forth in the Chapter 46 rules. In complying with Chapter 46, the contractor will be responsible for minimizing noise by properly maintaining noise mufflers and by utilizing other noise-attenuating equipment. Construction will be limited to normal daylight hours.

After construction, noise associated with project implementation is not anticipated to be significant.

## 10. Visual Resources

### a. Existing Conditions

Scenic resources to the west of the project site include the Iao Valley and the West Maui Mountains. Looking east, Haleakala is visible. To the north, lies Kahului Harbor and the Pacific Ocean. The project site is located in an urbanized area and is surrounded by developed properties, including Maui Memorial Medical Center, MEO, the Cameron Center, the Maui Police Department, and Kaiser Permanente Maui Lani Clinic.

The project site is not part of a significant view corridor. The property is located at the rear of existing buildings which currently block views from public streets. Furthermore, the property is at a lower elevation than its neighboring properties, to the west and south.

### b. Potential Impacts and Mitigation Measures

The subject property is not part of a scenic corridor and will not affect views from inland vantage points. The maximum building height is anticipated to be approximately 30 feet, which is compatible with adjacent public/quasi-public structures. Further, the subject property is at a lower elevation than Kaahumanu Avenue and separated by the Police Department property. On the west side, the Kaiser Maui Lani Clinic property is significantly higher than the subject property with a retaining wall along the property boundary. Accordingly, the proposed project is not anticipated to have an adverse impact upon the visual character of the surrounding area.

## 11. Outdoor Lighting

### a. Existing Conditions

Existing lighting fixtures in the project vicinity include street lights illuminating Kaahumanu Avenue, Maui Lani Parkway, as well as Mahalani Street. Nearby developed properties, including Kaiser Permanente Maui Lani Clinic and St. Francis Dialysis Center along Maui Lani Parkway, as well as

properties along Mahalani Street, including the County of Maui Police Station, Cameron Center, and Maui Memorial Medical Center, also utilize parking lot and exterior building light fixtures.

**b. Potential Impacts and Mitigation Measures**

Lighting for the proposed parking lot will be designed to balance the need to minimize light spillage and pollution with security and safety requirements. In addition, lighting design will specify the shielding of all lights and directional down lighting so that there will be no upward illumination from the poles. Similar design principles will be used for exterior lighting of the buildings, with the intent of minimizing unnecessary light spillage while allowing for an adequate level of security lighting for residents.

**B. SOCIO-ECONOMIC ENVIRONMENT**

**1. Population**

**a. Existing Conditions**

The population in the County of Maui has exhibited relatively steady growth over the last decade. The resident population of Maui County in 1990 was estimated at 100,504. The year 2000 population was estimated at 128,241, which is a 28 percent increase over 1990 (DBEDT, Hawaii Census 2000). The resident population for the year 2010 is projected to be 151,300 (Maui County Planning Department, June 2006). The estimated 1990 population of the Wailuku-Kahului region was 32,816. The region's population shows an increase to 41,503 in the year 2000 (Maui County Planning Department, June 2006). By the year 2010, population is anticipated to increase to 51,312 (Maui County Planning Department, June 2006).

**b. Potential Impacts and Mitigation Measures**

The proposed project will provide housing for 16 Maui County residents. Given the size and scope of the proposed action, impact on population is expected to be minimal. The proposed project is not considered a direct population generator from a long-term perspective. Instead, the project is anticipated to accommodate demands for affordable housing by existing disabled and/or economically challenged individuals on Maui. Any increase

in population in the Wailuku-Kahului Community Plan region should be within expected growth parameters defined by migration and birth/death rates. Significant adverse impacts to population are not anticipated as a result of the project.

**2. Economy**

**a. Existing Conditions**

The Wailuku-Kahului region encompasses a broad range of commercial, service, and governmental activities. The Kahului Harbor, a deep sea port, and Kahului Airport, both located in the Wailuku-Kahului region, provide vital links to off-island economies and links through which virtually all imports and exports pass. The County government and major private companies are located in the Wailuku-Kahului region. The region supported an estimated 34,500 jobs as of 2002, representing approximately 44 percent of the total jobs on Maui (Maui County Planning Department, June 2006).

In December 2010, the unemployment rate for Maui Island was 7.3 percent. This represents a decrease from the December 2009, 8.6 percent unemployment rate by 1.3 percent (Hawaii Workforce Informer, 2011). In addition, the region is surrounded by significant agricultural acreages primarily in sugar cane cultivation. The vast expanse of agricultural land, managed by Hawaiian Commercial & Sugar (HC&S), is considered a key component of the local economy.

**b. Potential Impacts and Mitigation Measures**

On a short-term basis, the proposed action is anticipated to have a positive effect during the construction phase of development as expenditures for construction and related support services are made through local suppliers and through the employment of local labor.

From a long-term perspective, project residents will require services related to household maintenance, and goods and services which are expected to further support local business owners.

The project will provide much needed affordable housing for Maui's community in need.

Furthermore, a part of the project involves the construction of approximately 3,600 s.f. of office space. The proposed office is designed to meet the needs of Ka Lima O Maui's varied agency employment programs. This office will not only assist those residents of the facility, but will also assist Maui County residents who are economically disadvantaged and in need of support. As previously noted, Ka Lima O Maui provides job training and employment opportunities for eligible clients. This, in turn, will have a direct positive impact upon the agency's clients receiving assistance. The project will also have a positive effect upon those businesses who utilize Ka Lima O Maui's services and employ the organization's clients.

### 3. Housing

#### a. Existing Conditions

The average household size in the Wailuku-Kahului area in the year 2000 was 3.17 compared to an island wide average of 2.90. The average household size in the Wailuku-Kahului area is projected to decrease to an average of 2.98 and 2.91, respectively by the year 2010 and 2015. The percentage of single-occupant households of all owner-occupied households in 2000 was 16.3 percent (Maui County Planning Department, 2006).

In 2000, Maui County's housing supply totaled 56,377 units of which 23 percent, or 13,113 units, were located in the Wailuku-Kahului Community Plan region. This accounts for the largest percentage of housing units on the island. In the year 2000, there was a demand for 13,528 housing units in the Wailuku-Kahului region. As the number of households increases, so will the demand for housing. In the year 2010, the number of households in the Wailuku-Kahului region is estimated to be 17,229. By the year 2020, the number of households will increase to 21,383; housing demand is projected to grow up to 23,774 units (Maui Planning Department, June 2006).

**b. Potential Impacts and Proposed Mitigation Measures**

As noted previously, there is a demand for affordable housing of varying product types to meet the needs of Maui County. The proposed action will address this need through the provision of rental housing intended for individuals earning 50 percent of the median annual income. There is a significant need for rental housing for low income earning Maui residents.

It is noted that some housing units provided by the project may be set aside for Ka Lima O Maui's clients, many of whom are economically disadvantaged. After priority is given to Ka Lima O Maui's clients, the units will be made available to adults with disability and lastly, adults who are economically disadvantaged.

**C. PUBLIC SERVICES**

**1. Recreational Facilities**

**a. Existing Conditions**

The Wailuku-Kahului region encompasses a full range of recreational opportunities, including shoreline and boating activities at the Kahului Harbor and adjoining beach parks, and individual and organized athletic activities offered at numerous County parks. The War Memorial Complex, for example, located along Kaahumanu Avenue, includes a gymnasium, swimming pool, tennis courts, youth baseball fields, football and soccer practice areas, the War Memorial Stadium and baseball stadium. Also found in the Wailuku-Kahului area are the Velma McWayne Santos Community Center, Kahului Community Center, Kanaha Beach Park, and Keopuolani Park. Within the Maui Lani Project District is the Dunes at Maui Lani, a daily fee golf course and driving range open to the public.

**b. Potential Impacts and Mitigation Measures**

The proposed project will provide 16 single-occupancy, one bedroom apartments to Maui residents. The proposed project will not place significant new demands on recreational activities in the project area.

The project will be processed as a Section 201H-38, HRS project. An exemption from Section 18.16.320 of the Maui County Code, relating to Parks and Playgrounds will be requested. This request would exempt the project from the provision of land and/or in-lieu fees for parks and playgrounds.

**2. Police and Fire Protection**

**a. Existing Conditions**

Police protection for the Wailuku region is provided by the County Police Department headquartered at the Wailuku Station, located adjacent to the project site. The region is served by the Department's Central Maui patrol.

Fire prevention, suppression, and protection services for the Wailuku region is provided by the County Department of Fire and Public Safety's Wailuku Station, which is located less than a mile west of the subject site.

**b. Potential Impacts and Mitigation Measures**

The location of the proposed project within the existing Wailuku-Kahului urban core, does not extend service area limits for emergency services. Police and fire protection services are not expected to be adversely impacted by the proposed project. The proposed project will not adversely affect the service capabilities for emergency services.

**3. Solid Waste**

**a. Existing Conditions**

Single-family residential solid waste collection service is provided by the County of Maui on a weekly basis. Residential solid waste collected by County crews are disposed at the County's Central Maui Landfill, located four (4) miles southeast of the Kahului Airport. In addition to County-collected refuse, the Central Maui Landfill accepts commercial waste from private collection companies.

**b. Potential Impacts and Mitigation Measures**

As may be required, a solid waste management plan will be developed in coordination with the Solid Waste Division of the County Department of Environmental Management (DEM) for the disposal of clearing and grubbing material during construction. The plan will incorporate strategies for effective construction waste management to reduce, reuse, and recycle solid waste materials. Such strategies involve the use of efficient design to promote waste reduction, salvaging of material to be used by other businesses or local organizations, and by separating recyclable and non-recyclable materials for proper recycling and disposal. All materials deemed unfit for reuse or recycling will be disposed at an approved construction waste disposal site.

Construction waste disposal/recycling/reuse options that may be considered by the applicant for project implementation include:

- Recycling of cardboard, metal, concrete, plastic, clean wood, glass, gypsum wallboard, carpet and insulation
- Designating specific area(s) on the construction site for segregated or commingled collection of recyclable materials
- Tracking of recycling efforts
- Donating unused materials to charitable organizations
- Salvaging materials and incorporating materials into building design
- Reducing the use of finite raw materials by replacing them with rapidly renewable materials

Upon project completion, solid waste collection for the project will be provided by a private refuse collection company and disposed of at the Central Maui Landfill. The anticipated solid waste generated by the project is not expected to adversely impact the County solid waste capacity of the Central Maui Landfill. In addition, the proposed project proposes to implement a recycling program to reduce the amount of solid waste collected for disposal at the Central Maui Landfill.

4. **Health Care**

a. **Existing Conditions**

Maui Memorial Medical Center, the only major medical facility on the island, services the Wailuku-Kahului region. Acute, general and emergency care services are provided by the approximately 201-bed facility. The Kaiser Permanente Medical Care facility, St. Francis Dialysis Center, located adjacent to the project site, provides additional private health care services in the Central Maui area. In addition, numerous privately operated medical/dental clinics and offices are located in the area to serve the region's residents.

b. **Potential Impacts and Mitigation Measures**

The proposed project is not anticipated to increase the service demands placed upon emergency health care services.

5. **Education**

a. **Existing Conditions**

The Wailuku-Kahului region is served by the State Department of Education's public school system, as well as several privately operated schools accommodating elementary, intermediate and high school students. Department of Education facilities in the Kahului area include Pomaikai, Lihikai and Kahului Schools (Grades K to 5), Maui Waena Intermediate School (Grades 6 to 8), and Maui High School (Grades 9 to 12). Existing facilities in the Wailuku area include Wailuku Elementary School (Grades K to 5), Iao Intermediate School (Grades 6 to 8), and Baldwin High School (Grades 9 to 12). University of Hawaii-Maui College, a branch of the University of Hawaii, serves as the island's principal institution of higher education. Baldwin High School (Grades 9 to 12) is located north of the project site, beyond Kaahumanu Avenue. In addition, there are several private schools in the Wailuku-Kahului area.

b. **Potential Impacts and Mitigation Measures**

The project plans reflect single occupancy dwelling units for adults. With the exception of one (1) unit to house a Ka Lima O Maui staff person, children will not live in the complex. The proposed project is not anticipated to adversely affect enrollments or locations of educational facilities.

D. **INFRASTRUCTURE**

1. **Roadways**

a. **Existing Conditions**

**Roadway Network:** The Wailuku-Kahului region is served by a roadway network which includes arterial, collector and local roads. Existing roadways in the vicinity of the project site include Kaahumanu Avenue to the north, Maui Lani Parkway to the west, and Mahalani Street to the east. See **Appendix “B”**.

Kaahumanu Avenue is the principal linkage between Wailuku and Kahului. Kaahumanu Avenue is a four-lane, divided roadway with a raised median. Exclusive left-turn lanes are provided in the median of Kaahumanu Avenue and right-turn acceleration and deceleration lanes are provided at selected access locations. The posted speed limit for Kaahumanu Avenue in the vicinity of the project site is 45 miles per hour (mph) .

Maui Lani Parkway is a four-lane, divided roadway completed between Kaahumanu Avenue and Waiinu Road. This existing segment is an initial phase of a roadway that will, in the future, extend to Kuihelani Highway providing an alternative route to Kaahumanu Avenue. The existing configuration provides an alternative path to the High Street/Main Street route through Wailuku Town for vehicles traveling between areas located south of Wailuku and areas to the east of Wailuku. Maui Lani Parkway also serves as an alternative access to Mahalani Street. It is anticipated that Maui Lani Parkway will be dedicated to the County of Maui in the future.

Mahalani Street is a four-lane, two (2) way roadway with a posted speed limit of 20 mph that provides access to the project site. It intersects with

Kaahumanu Avenue at a signalized intersection, located roughly north of the project site.

**b. Potential Impacts and Mitigation Measures**

A Traffic Impact Assessment Report (TIAR) was prepared for the proposed project by Philip Rowell and Associates in February 2010. Refer to **Appendix “B”**.

The TIAR analyzes the traffic impacts and related characteristics of the proposed project. Traffic impacts are assessed using the Level of Service (LOS) ratings as determined by the Highway Capacity Manual – HCM 2000 methodology. LOS is a qualitative measurement “A” through “F” in which LOS A represents ideal or free-flowing traffic operating conditions and LOS F represents unacceptable or potentially congested traffic operating conditions. The LOS for the analyzed intersections was then determined for both the AM and PM peak periods.

The following intersections were analyzed as part of the study:

- Kaahumanu Avenue at Mahalani Street and Kanaloa Avenue
- Mahalani Street at Project Driveway

Peak hour traffic analyses were based on traffic counts and projections for a morning peak hour of 7:15 a.m. to 8:15 a.m. and an afternoon peak hour of 4:15 p.m. to 5:15 p.m. for the Kaahumanu Avenue/Mahalani Street intersection and 3:30 p.m. to 4:30 p.m. for the Mahalani Street/Project Drive intersection.

The traffic study examined existing traffic conditions in the area and estimated future background traffic conditions with and without the project. The horizon year of 2012 was used as a reference point from which to analyze future traffic conditions. The 2012 background traffic projections were calculated by expanding existing traffic volumes by the appropriate growth rates and then superimposing traffic generated by related projects.

The LOS analysis of the intersections was performed for background and background plus project conditions. The results of the LOS analysis for 2012 conditions are summarized below:

**Kaahumanu Avenue at Mahalani Street** – Overall, the intersection will operate at LOS D, with and without project generated traffic during the morning and afternoon peak hours.

1. The Kaahumanu Avenue eastbound left, thru, and right movements through the intersection will operate at LOS E, D, and C, respectively, with and without project generated traffic during the morning peak hour. During the afternoon peak hour, the eastbound left, thru, and right movements through the intersection will operate at LOS F, D, and C, respectively, with and without project generated traffic.
2. The Kaahumanu Avenue westbound left, thru, and right movements through the intersection will operate at LOS E, D, and A, respectively, with and without project generated traffic during the morning peak hour. During the afternoon peak hour, the westbound left, thru, and right movements through the intersection will operate at LOS F, D, and A respectively, with and without project generated traffic.
3. The Mahalani Street northbound left, thru, and right movements through the intersection will operate at LOS D, E, and A respectively, with and without project generated traffic during the morning peak hour. During the afternoon peak hour, the northbound left, thru, and right movements through the intersection will operate at LOS E, F, and A respectively, with and without project generated traffic.
4. The Mahalani Street southbound left, thru, and right movements through the intersection will operate at LOS E, E, and A, respectively, with and without project generated traffic during the morning peak hour. In the afternoon peak hour, the southbound left, thru, and right movements through the intersection will operate at LOS F, F, and A, respectively, with and without project generated traffic.

Overall, the change in delay as a result of project generated impact is estimated to be less than one percent.

### **Mahalani Street at Project Driveway**

1. The eastbound left movements from the Project Driveway will operate at LOS C with and without project generated traffic, during both peak periods. The change in delay for the morning peak period is estimated to be 1.5 seconds per vehicle. The change in delay for the afternoon peak period is estimated to be 1.2 seconds per vehicle.
2. The eastbound right movements from the Project Drive will operate at LOS A with and without project generated traffic, during both peak periods.
3. The northbound left and thru movements through Mahalani Street will operate at LOS A with and without project generated traffic, during both peak periods.

### **Traffic Assessment Summary**

The proposed project will generate an estimated 14 trips during the morning peak hour and 22 trips during the afternoon peak hour. The horizon year of 2012 was used as a reference point from which to analyze future traffic conditions. The following provides a summary of the LOS analysis for 2012.

The intersection of Kaahumanu Avenue and Mahalani Street will operate at an overall LOS D during both peak hours, with and without project generated traffic. LOS D is typically considered acceptable for peak hour conditions in urban areas. Since the overall intersection will operate at LOS D and the overall change in delay is one percent or less, no mitigation is recommended.

All movements at the Mahalani Street and Project Driveway intersection will operate at an overall LOS C or better during both peak hours, with and without project generated traffic. Because there is no change in the LOS as a result of project generated traffic, no mitigation is recommended for the project.

It is noted that the applicant is seeking an exemption to Chapter 14.76, MCC, to exempt the affordable component of the project from traffic impact fees. Given the affordable nature of the project, an exemption from regional roadway improvements is also being sought.

2. **Wastewater**

a. **Existing Conditions**

Domestic wastewater generated in the Wailuku-Kahului region is conveyed to the County's Wailuku-Kahului Wastewater Reclamation Facility (WWRF) located one-half mile south of Kahului Harbor. The design capacity of the facility is 7.9 million gallons per day (MGD). As of March 2010, the average daily flow into the WWRF is approximately 4.9 MGD. The facility serves the Kahului, Wailuku, Paia, Kuau and Spreckelsville areas.

Wastewater generated from the existing Medicaid Waiver facility on the subject property is conveyed into an 8-inch sewerline which traverses outside and runs parallel to the property's eastern boundary. This wastewater in turn is transported to the WWRF in Kahului. See **Appendix "C"**.

b. **Potential Impacts and Mitigation Measures**

The proposed project will utilize the existing 8-inch sewerline located along the eastern boundary of the site. The anticipated average daily flow of wastewater from the project is approximately 4,900 gallons per day. This wastewater will continue to be transported to the WWRF in Kahului. According to the County of Maui, Wastewater Reclamation Division, the WWRF has total allocation, including projects already permitted, of 6.95 MGD. The remaining capacity is sufficient to accommodate the additional wastewater generated from the project at this time. As a result, no adverse impacts to regional wastewater facilities are anticipated as a result of project implementation. Refer to **Appendix "C"**.

### 3. Water

#### a. Existing Conditions

Domestic water for the Wailuku-Kahului region is provided by the Department of Water Supply's Central Maui System. The Central Maui System water sources are located on the windward slope of the West Maui Mountains. The major source of water for this system is the Iao Aquifer. Approximately 75 percent of the water to supply the Central Maui System is withdrawn from the Iao Aquifer which is located in the vicinity of the Iao Stream and Waiehu Stream. The remaining 25 percent is withdrawn from Waihee Aquifer to the northwest. The sustainable yield of the Iao Aquifer is 20 MGD. Domestic water and fire protection for the project area are from the 3.0 million gallon Mokuahau tank and wells in Happy Valley.

The project site is serviced by an existing 12-inch waterline on Mahalani Street which provides domestic water and fire protection for the property. The project site currently utilizes a 1-1/2-inch water meter and detention meter, located along Mahalani Street, and an 8-inch fireline with one fire hydrant for fire protection on the property. Refer to **Appendix "C"**.

#### b. Potential Impacts and Mitigation Measures

The proposed project is not anticipated to adversely impact existing water systems.

The proposed project will require approximately 11,358 gallons of water per day to meet domestic demands and will utilize the existing 1-1/2-inch water meter on the property. Additional fire hydrants will be installed on the property, as needed to address fire code requirements of the County of Maui, Fire Department. No adverse impacts to the County water system are anticipated as a result of the proposed project. Refer to **Appendix "C"**.

A Section 201H-38, HRS application will be filed with the Maui County Council requesting an exemption from Chapter 14.12 pertaining to the County's water availability policy.

#### 4. Drainage

##### a. Existing Conditions

At present, an existing Medicaid Waiver building is located on the subject property. The elevation of the project site ranges from approximately 129 feet above mean sea level (amsl) at the southwest corner to 89 feet amsl at the northeast corner. The ground slopes down from the western property line, lies flat along the Medicaid Waiver building area, and slopes down toward the eastern property line, with an average slope of 15.4 percent for the property. The estimated flow for a 50-year, 1-hour storm from the project site is 4.74 cfs, with a generated storage volume of 2,561 cubic feet. Currently, there are no drainage facilities on the site and onsite runoff sheet flows across the property in a west to east direction, eventually draining into adjacent properties. An existing catch basin is located along the offsite access roadway, approximately 190 feet to the west of the project site, and captures some of the runoff from the subject property. Refer to **Appendix "C"**.

##### b. Potential Impacts and Mitigation Measures

No adverse impacts to downstream environments or to natural drainage patterns surrounding the project site are anticipated as a result of project implementation.

Using a 50-year, 1-hour storm, it is estimated that the proposed development will produce approximately 7.80 cfs of runoff, a net increase of 3.06 cfs over the existing conditions. The storage volume of the project site will also increase by 716 cubic feet to a total storage volume of 3,277 cubic feet.

New grated inlet catch basins will be installed within the project site to collect a portion of the surface runoff from the paved parking lot and landscape areas and convey it into onsite subsurface drainage systems. Overflows from the subsurface drainage system will be released on the lower end of the project site and continue to flow down the access roadway, following existing conditions. The remainder of the onsite surface runoff will continue to sheet flow along its existing drainage pattern.

The proposed drainage improvements will be designed to accommodate any changes in surface runoff at the project sites. The improvements will accommodate the increased post development runoff and will be designed, at a minimum, with an additional 20 percent capacity. Drainage design criteria to minimize alterations will be in accordance with the drainage standards for the County of Maui. Refer to **Appendix "C"**.

As may be required, a National Pollutant Discharge Elimination System (NPDES) permit for discharge of stormwater associated with construction activities will be obtained and the requirements of the approved NPDES permit and Best Management Practices (BMPs) plan would be adhered to during construction. At a minimum silt fences, diversion berms and dust screens will be included in the BMP plan. Monitoring of the BMPs during construction will be the responsibility of the selected contractor.

**5. Electrical, Telephone and CATV Systems**

**a. Existing Conditions**

Electrical, telephone and CATV service is provided via overhead lines along Kaahumanu Avenue, to the north and Mahalani Street to the east of the project site. Electrical, telephone and CATV facilities along Maui Lani Parkway have been undergrounded. Services are provided by Maui Electric Company, Ltd., Hawaiian Telecom and Oceanic Time Warner Cable. An existing control panel is located along the northern property line which provides service to the existing facilities.

**b. Potential Impacts and Mitigation Measures**

The project site will be served by the existing underground electrical, telephone and CATV distribution systems servicing the project site. The electric and telephone upgrades will be installed in accordance with utility company rules and regulations.

No adverse impacts to electrical, telephone and CATV systems are anticipated as a result of project implementation.

## **E. CUMULATIVE AND SECONDARY IMPACTS**

Cumulative impacts are defined as the impact on the environment which results from the incremental impact of an action when added to other past, present, and reasonably foreseeable future actions, regardless of what agency or person undertakes such other actions.

The proposed project is not part of a larger action, nor would it occur within the context of such actions. It is noted, however, that the County of Maui's ongoing General Plan update process will involve the formulation of a Maui Island Plan (MIP) which would delineate urban and rural growth boundaries. The subject property is included in the urban growth boundary of the draft MIP. The overall time frame for the General Plan covers a planning horizon up to the year 2030.

In the General Plan context, future regional growth opportunity in surrounding lands in the Wailuku-Kahului region is envisioned.

Secondary impacts are those which have the potential to occur later in time or farther in distance, but are still reasonably foreseeable. They can be viewed as actions of others that are taken because of the presence of the project. Secondary impacts from highway projects, for example, can occur because they can induce development by removing one of the impediments to growth-transportation access. The provision of affordable housing in Central Maui will ensure the adequacy of needed affordable housing over the long term. Specifically, the proposed affordable housing will provide housing for special needs and/or very low income persons which is in limited supply.

The project is not anticipated to have a significant adverse impact on the physical environment. Necessary infrastructure systems and services can be reasonably provided to serve the project. Consequently, the proposed action is not anticipated to result in significant adverse secondary impacts.

**III. RELATIONSHIP TO  
GOVERNMENTAL PLANS,  
POLICIES AND  
CONTROLS**

### **III. RELATIONSHIP TO GOVERNMENTAL PLANS, POLICIES AND CONTROLS**

#### **A. STATE LAND USE DISTRICTS**

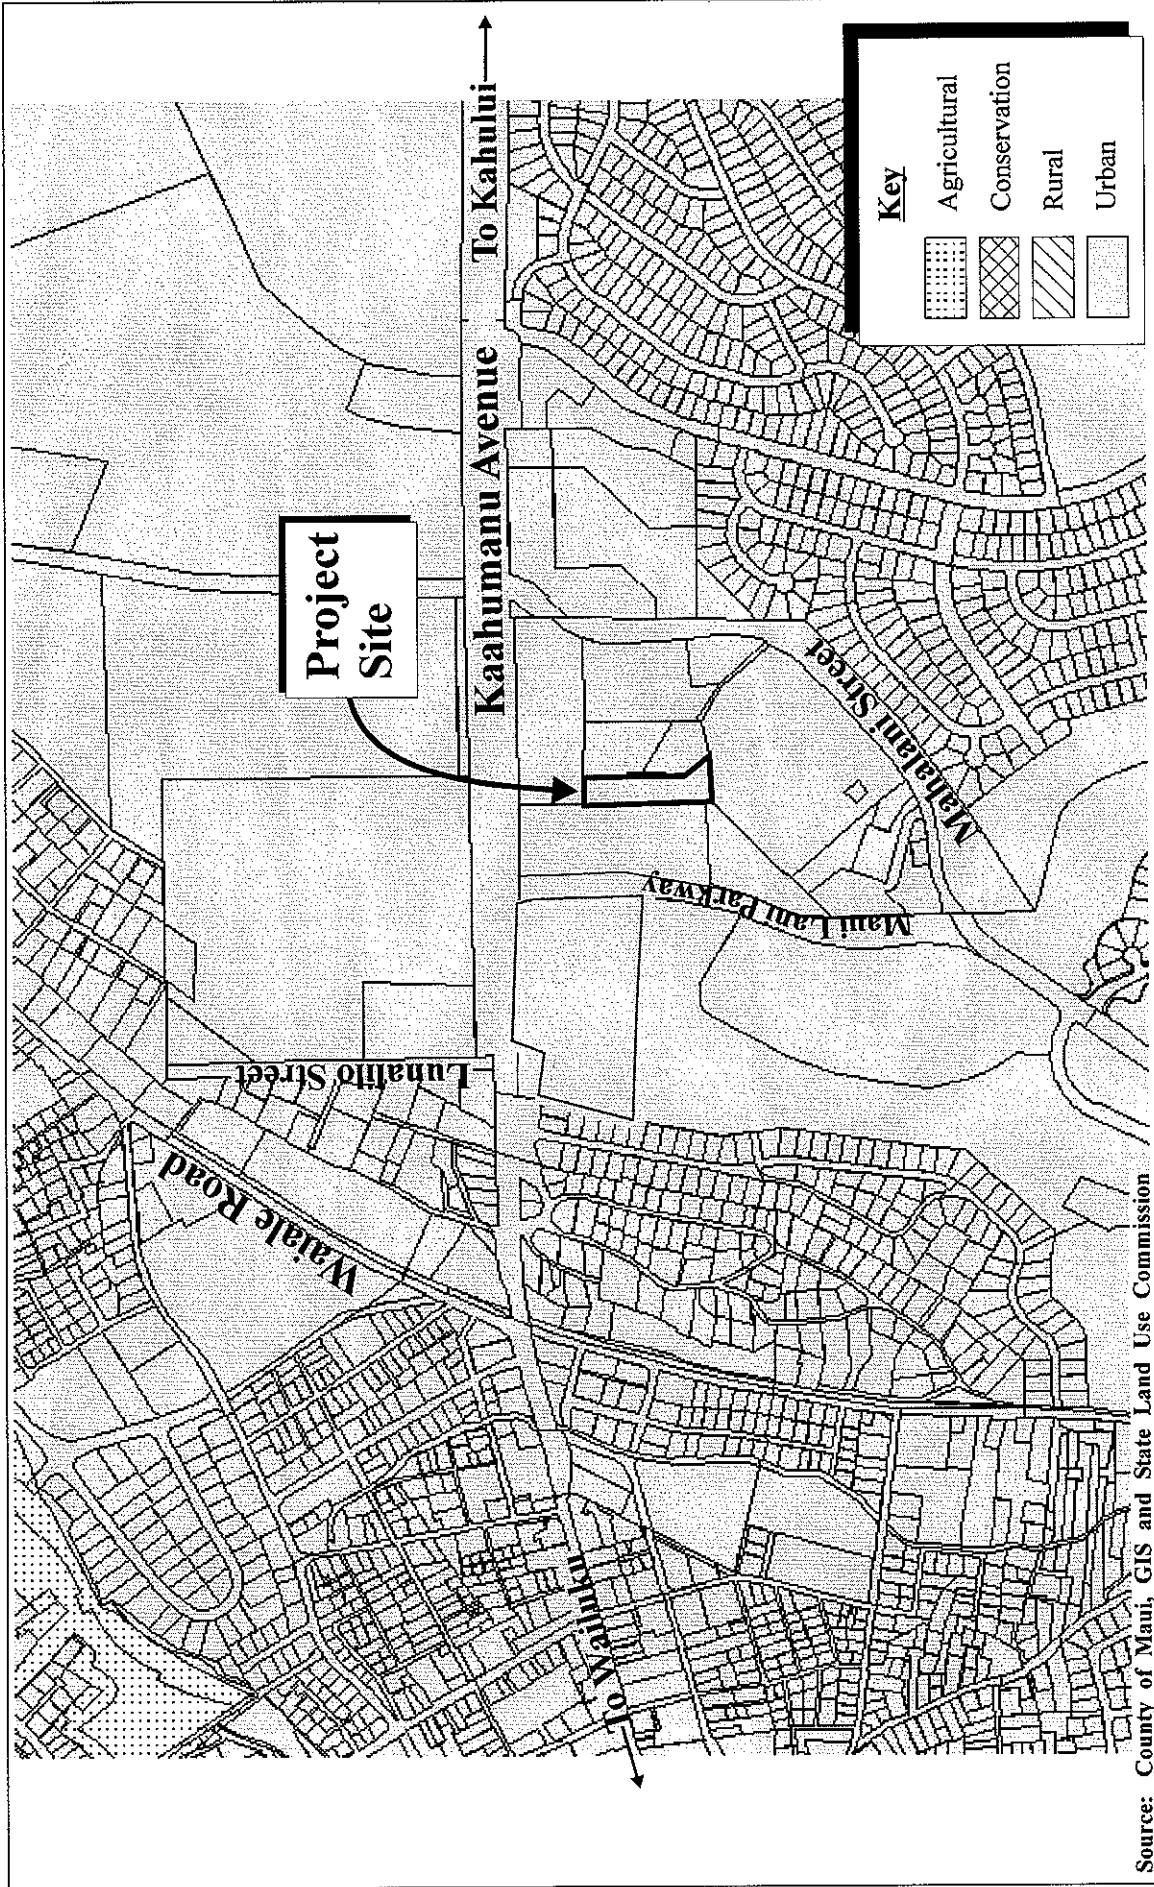

Chapter 205, Hawaii Revised Statutes, relating to the Land Use Commission, establishes the four (4) major land use districts in which all lands in the State are placed. These districts are designated "Urban", "Rural", "Agricultural", and "Conservation". The subject property is located within the "Urban" district. See **Figure 7**. The proposed use of the property is consistent with "Urban" district provisions.

#### **B. MAUI COUNTY GENERAL PLAN**

As indicated by the Maui County Charter, the purpose of the general plan shall be to:

*... indicate desired population and physical development patterns for each island and region within the county; shall address the unique problems and needs of each island and region; shall explain opportunities and the social, economic, and environmental consequences related to potential developments; and shall set forth the desired sequence, patterns and characteristics of future developments. The general plan shall identify objectives to be achieved, and priorities, policies, and implementing actions to be pursued with respect to population density; land use maps, land use regulations, transportation systems, public and community facility locations, water and sewage systems, visitor destinations, urban design, and other matters related to development.*

Chapter 2.80B of the Maui County Code, relating to the General Plan and Community Plans, implements the foregoing Charter provision through enabling legislation which calls for a Countywide Policy Plan and a Maui Island Plan. The Countywide Policy Plan was adopted as Ordinance No. 3732 on March 24, 2010. The Maui Island Plan is currently in the process of review and formulation by the Maui County Council.

Figure 7

Proposed Ka Lima O Maui  
Affordable Housing Project  
State Land Use District Designations

NOT TO SCALE

With regard to the Countywide Policy Plan, Section 2.80B.030 of the Maui County Code states the following.

*The countywide policy plan shall provide broad policies and objectives which portray the desired direction of the County's future. The countywide policy plan shall include:*

1. *A vision for the County;*
2. *A statement of core themes or principles for the County; and*
3. *A list of countywide objectives and policies for population, land use, the environment, the economy, and housing.*

Core principles set forth in the Countywide Policy Plan are listed as follows:

1. Excellence in the stewardship of the natural environment and cultural resources;
2. Compassion for and understanding of others;
3. Respect for diversity;
4. Engagement and empowerment of Maui County residents;
5. Honor for all cultural traditions and histories;
6. Consideration of the contributions of past generations as well as the needs of future generations;
7. Commitment to self-sufficiency;
8. Wisdom and balance in decision making;
9. Thoughtful, island appropriate innovation; and
10. Nurturance of the health and well-being of our families and our communities.

Congruent with these core principles, the Countywide Policy Plan identifies goals objectives, policies and implementing actions for pertinent functional planning categories, which are identified as follows:

1. Natural environment

2. Local cultures and traditions
3. Education
4. Social and healthcare services
5. Housing opportunities for residents
6. Local economy
7. Parks and public facilities
8. Transportation options
9. Physical infrastructure
10. Sustainable land use and growth management
11. Good governance

With respect to the proposed Ka Lima O Maui Affordable Housing Project, the following goals, objectives, policies and implementing actions are illustrative of the project's compliance with the Countywide Policy Plan.

### **Strengthen Social and Healthcare Services**

**Goal:** Health and social services in Maui County will fully and comprehensively serve all segments of the population.

#### **Objective:**

1. In cooperation with the Federal and State governments and nonprofit agencies, broaden access to social and healthcare services and expand options to improve the overall wellness of the people of Maui County.

#### **Policies:**

- a. Work with other levels of government and the nonprofit sector to expand services to address hunger, homelessness, and poverty.

\* \* \*

- f. Encourage equal access to social and healthcare services through both technological and traditional means.

**Objective:**

- 2. Encourage the Federal and State governments and the private sector to improve the quality and delivery of social and healthcare services.

**Policies:**

- a. Strengthen partnerships with government, nonprofit, and private organizations to provide funding and to improve counseling and other assistance to address substance abuse, domestic violence, and other pressing social challenges.

\* \* \*

- e. Support improved social, healthcare, and governmental services for special needs populations.

**Expand Housing Opportunities for Residents**

**Goal:** Quality, island-appropriate housing will be available to all residents.

**Objective:**

- 1. Reduce the affordable housing deficit for residents.

**Policies:**

- a. Ensure that an adequate and permanent supply of affordable housing, both new and existing units, is made available for purchase or rental to our resident and/or workforce population, with special emphasis on providing housing for low- to moderate-income families, and ensure that all affordable housing remains affordable in perpetuity.

\* \* \*

- c. Seek innovative methods to secure land for the development of low- and moderate-income housing.

\* \* \*

- e. Provide for a range of senior-citizen and special needs housing choices on each island that affordably facilitates a continuum of care and services.

\* \* \*

- k. Ensure residents are given priority to obtain affordable housing units developed in their communities, consistent with all applicable regulations.

**Objective:**

- 2. Increase the mix of housing types in towns and neighborhoods to promote sustainable land use planning, expand consumer choice, and protect the County's rural and smalltown character.

**Policy:**

- d. Promote infill housing in urban areas at scales that capitalize on existing infrastructure, lower development costs, and are consistent with existing or desired patterns of development.

**Objective:**

- 3. Increase and maintain the affordable housing inventory.

**Policies:**

- a. Recognize housing at a basic human need, and work to fulfill that need.

\* \* \*

- c. Improve communication, collaboration, and coordination among housing providers and social-service organizations.

\* \* \*

- e. Develop public-private and nonprofit partnerships that facilitate the construction of quality affordable housing.

- f. Streamline the review process for high-quality, affordable housing developments that implement the goals, objectives, and policies of the General Plan.

\* \* \*

- h. Encourage long-term residential use of existing and future housing to meet residential needs.

**Strengthen the Local Economy**

**Goal:** Maui County's economy will be diverse, sustainable, and supportive of community values.

**Objective:**

- 1. Promote an economic climate that will encourage diversification of the County's economic base and a sustainable rate of economic growth.

**Policies:**

- a. Support economic decisions that create long-term benefits.

\* \* \*

- c. Invest in infrastructure, facilities, and programs that foster economic diversification.

\* \* \*

- f. Encourage work environments that are safe, rewarding, and fulfilling to employees.

In summary, the Ka Lima O Maui affordable housing project, is consistent with the themes and principles of the Countywide Policy Plan.

**C. WAILUKU-KAHULUI COMMUNITY PLAN**

The subject parcel is located in the Wailuku-Kahului Community Plan region which is one (1) of nine (9) Community Plan regions established in the County of Maui. Planning for each region is guided by the respective Community Plans, which are designed to implement the

Maui County General Plan. Each Community Plan contains recommendations and standards which guide the sequencing, patterns and characteristics of future development in the region.

The Wailuku-Kahului Community Plan was adopted by the County of Maui through Ordinance No. 3061 which took effect on May 30, 2002.

Land use guidelines are set forth by the Wailuku-Kahului Community Plan Land Use Map. As shown in **Figure 8**, the lands underlying the subject property have been designated as "Public-Quasi Public". The Section 201H-38, HRS request for the project will include an exemption from the requirements of processing an application for a Community Plan Amendment.

The proposed project is in conformance with the following, more general, goals, objectives, and policies of the Wailuku-Kahului Community Plan.

## **HOUSING**

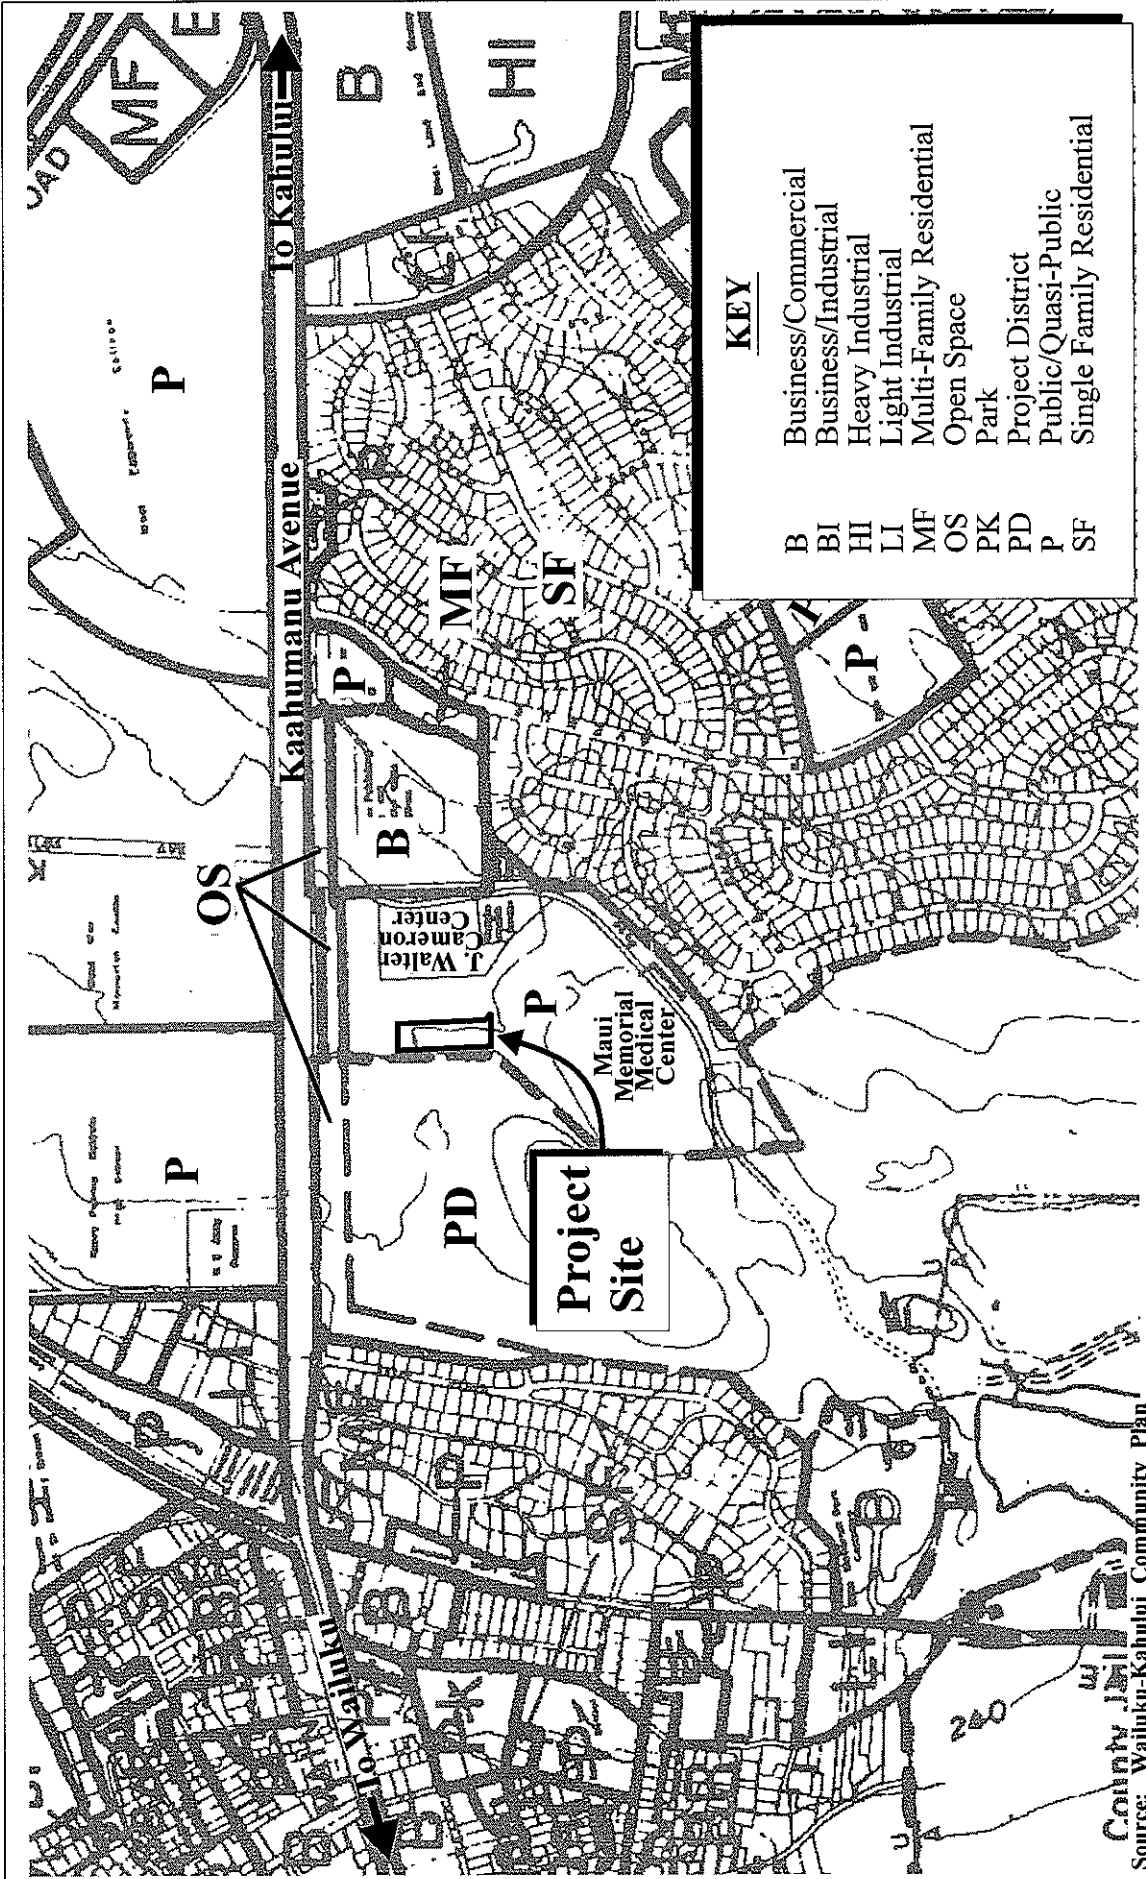

### **Goal:**

A sufficient supply and choice of attractive, sanitary, and affordable housing accommodations for the broad cross section of residents, including the elderly.

### **Objectives and Policies:**

Provide sufficient land areas for new residential growth which relax constraints on the housing market and afford variety in type, price, and location of units. Opportunities for the provision of housing are presently constrained by a lack of expansion areas. This condition should be relieved by a choice of housing in a variety of locations, both rural and urban in character.

The proposed Ka Lima O Maui Affordable Housing Project will provide quality affordable housing for disabled and/or economically disadvantaged residents of Maui in a convenient, centralized location in Wailuku. The project is consistent with the objectives, policies and implementing actions of the Wailuku-Kahului Community Plan.

**Figure 8**  
**Proposed Ka Lima O Maui**  
**Affordable Housing Project**  
**Community Plan Map**

NOT TO SCALE

**D. COUNTY ZONING**

The subject property is designated "R-3, Residential" by Maui County zoning. While the current zoning does not allow for the proposed offices and multi-family residential use, a 201H-38, HRS application will be filed with the Maui County Council. Included in the 201H-38 application is a request to exempt the project from the County's Title 19 standards processes which will enable full project implementation.

**E. COASTAL ZONE MANAGEMENT OBJECTIVES AND POLICIES**

Pursuant to Chapter 205A, Hawaii Revised Statutes, projects are evaluated with respect to Coastal Zone Management (CZM) objectives, policies and guidelines. It is noted that while the subject property is not located within the County of Maui's Special Management Area, the project's relationship to applicable coastal zone management considerations have been reviewed and assessed.

**(1) Recreational Resources**

**Objective:**

Provide coastal recreational opportunities accessible to the public.

**Policies:**

- (A) Improve coordination and funding of coastal recreational planning and management; and
- (B) Provide adequate, accessible, and diverse recreational opportunities in the coastal zone management area by:
  - (i) Protecting coastal resources uniquely suited for recreational activities that cannot be provided in other areas;
  - (ii) Requiring replacement of coastal resources having significant recreational value, including but not limited to surfing sites, fishponds, and sand beaches, when such resources will be unavoidably damaged by development; or requiring reasonable monetary compensation to the state for recreation when replacement is not feasible or desirable;

- (iii) Providing and managing adequate public access, consistent with conservation of natural resources, to and along shorelines with recreational value;
- (iv) Providing an adequate supply of shoreline parks and other recreational facilities suitable for public recreation;
- (v) Ensuring public recreational use of county, state, and federally owned or controlled shoreline lands and waters having recreational value consistent with public safety standards and conservation of natural resources;
- (vi) Adopting water quality standards and regulating point and non-point sources of pollution to protect, and where feasible, restore the recreational value of coastal waters;
- (vii) Developing new shoreline recreational opportunities, where appropriate, such as artificial lagoons, artificial beaches, and artificial reefs for surfing and fishing; and
- (viii) Encouraging reasonable dedication of shoreline areas with recreational value for public use as part of discretionary approvals or permits by the land use commission, board of land and natural resources, county planning commissions; and crediting such dedication against the requirements of Section 46-6, HRS.

**Response:** The proposed project is not located near the shoreline and is not anticipated to adversely impact existing coastal or inland recreational resources. The proposed project will not affect existing public access to the shoreline.

(2) **Historic Resources**

**Objective:**

Protect, preserve and, where desirable, restore those natural and manmade historic and prehistoric resources in the coastal zone management area that are significant in Hawaiian and American history and culture.

**Policies:**

- (A) Identify and analyze significant archeological resources;
- (B) Maximize information retention through preservation of remains and artifacts or salvage operations; and

- (C) Support state goals for protection, restoration, interpretation, and display of historic resources.

**Response:** As stated previously, an archaeological assessment survey report (by Xamanek Researches, LLC.), was produced to identify and issue recommendations regarding historic, cultural and archaeological resources. The report found no significant archaeological features or historic properties within the project site and concluded that no adverse impacts to archaeological resources as a result of project implementation are anticipated. Refer to **Appendix “A”**. Should human remains be inadvertently discovered during land-based, ground-altering activities, work will promptly cease in the immediate area of the find, and the find will be further protected from damage. The State Historic Preservation Division (SHPD), the Office of Hawaiian Affairs (OHA), and the Maui/Lanai Islands Burial Council will be notified immediately and procedures for the treatment of inadvertently discovered human remains will be followed pursuant to Chapter 6E, HRS.

(3) **Scenic and Open Space Resources**

**Objective:**

Protect, preserve and, where desirable, restore or improve the quality of coastal scenic and open space resources.

**Policies:**

- (A) Identify valued scenic resources in the coastal zone management area;
- (B) Ensure that new developments are compatible with their visual environment by designing and locating such developments to minimize the alteration of natural landforms and existing public views to and along the shoreline;
- (C) Preserve, maintain, and, where desirable, improve and restore shoreline open space and scenic resources; and
- (D) Encourage those developments which are not coastal dependent to locate in inland areas.

**Response:** The subject property is located within Maui’s central isthmus and within an urbanized area of Maui. The urban forms established by the proposed project plan will be buffered with landscaping, as well as surrounded by existing structures on

neighboring developed properties. There are no significant view corridors which will be affected by the proposed project.

(4) **Coastal Ecosystems**

**Objective:**

Protect valuable coastal ecosystems, including reefs, from disruption and minimize adverse impacts on all coastal ecosystems.

**Policies:**

- (A) Improve the technical basis for natural resource management;
- (B) Preserve valuable coastal ecosystems, including reefs, of significant biological or economic importance;
- (C) Minimize disruption or degradation of coastal water ecosystems by effective regulation of stream diversions, channelization, and similar land and water uses, recognizing competing water needs; and
- (D) Promote water quantity and quality planning and management practices which reflect the tolerance of fresh water and marine ecosystems and prohibit land and water uses which violate state water quality standards.

**Response:** The proposed project is not anticipated to adversely impact coastal ecosystems. Runoff will be mitigated through onsite drainage improvements. Drainage improvements will be designed in accordance with applicable regulatory standards to ensure that there is no adverse effect on downstream properties.

In addition, Best Management Practices (BMPs) will be implemented during the construction of the project to minimize disruption of coastal water ecosystems. At a minimum silt fences, diversion berms and dust screens will be included in the BMP plan. Monitoring of the BMPs during construction will be the responsibility of the selected contractor. The completion of the proposed project is not expected to adversely impact coastal ecosystems.

(5) **Economic Uses**

**Objective:**

Provide public or private facilities and improvements important to the State's economy in suitable locations.

**Policies:**

- (A) Concentrate coastal dependent development in appropriate areas;
- (B) Ensure that coastal dependent development such as harbors and ports, and coastal related development such as visitor facilities and energy generating facilities, are located, designed, and constructed to minimize adverse social, visual, and environmental impacts in the coastal zone management area; and
- (C) Direct the location and expansion of coastal dependent developments to areas presently designated and used for such developments and permit reasonable long-term growth at such areas, and permit coastal dependent development outside of presently designated areas when:
  - (i) Use of presently designated locations is not feasible;
  - (ii) Adverse environmental effects are minimized; and
  - (iii) The development is important to the State's economy.

**Response:** In addition to the 16 residential units, the proposed action is designed to provide office space for Ka Lima O Maui. Ka Lima O Maui is one of the oldest non-profit businesses and the largest employer of the disabled on the island. It is anticipated that the proposed project will assist in the promotion of economic sustainability within the County of Maui for those individuals who are disabled and/or economically disadvantaged. The proposed project is in keeping with objectives and policies relating to economic uses.

(6) **Coastal Hazards**

**Objective:**

Reduce hazard to life and property from tsunامي, storm waves, stream flooding, erosion, subsidence and pollution.

**Policies:**

- (A) Develop and communicate adequate information about storm wave, tsunami, flood, erosion, subsidence, and point and nonpoint source pollution hazards;
- (B) Control development in areas subject to storm wave, tsunami, flood, erosion, hurricane, wind, subsidence, and point and nonpoint pollution hazards;
- (C) Ensure that developments comply with requirements of the Federal Flood Insurance Program;
- (D) Prevent coastal flooding from inland projects; and
- (E) Develop a coastal point and nonpoint source pollution control program.

**Response:** According to the Flood Insurance Rate Map for the area, the project site is located within Zone X, areas determined outside of the 0.2 percent annual flood plain. No significant adverse drainage impacts to downstream properties are anticipated as a result of project implementation. It is also noted that the proposed project will be designed in accordance with the Drainage Standards of the County of Maui to ensure that the project will not adversely affect downstream and adjoining properties from the effects of flooding and erosion.

(7) **Managing Development**

**Objective:**

Improve the development review process, communication, and public participation in the management of coastal resources and hazards.

**Policies:**

- (A) Use, implement, and enforce existing law effectively to the maximum extent possible in managing present and future coastal zone development;
- (B) Facilitate timely processing of applications for development permits and resolve overlapping of conflicting permit requirements; and
- (C) Communicate the potential short and long-term impacts of proposed significant coastal developments early in their life-cycle and in terms understandable to the public to facilitate public participation in the planning and review process.

**Response:** In compliance with the requirements of Chapter 343, Hawaii Revised Statutes, this Environmental Assessment has been prepared to facilitate public understanding and involvement with the proposed project. All aspects of the development will be conducted in accordance with applicable Federal, State, and County standards. Opportunities for review of the proposed action are also offered through the regulatory review process for the Section 201H-38, HRS application.

(8) **Public Participation**

**Objective:**

Stimulate public awareness, education, and participation in coastal management.

**Policies:**

- (A) Maintain a public advisory body to identify coastal management problems and to provide policy advice and assistance to the coastal zone management program;
- (B) Disseminate information on coastal management issues by means of educational materials, published reports, staff contact, and public workshops for persons and organizations concerned with coastal-related issues, developments, and government activities; and
- (C) Organize workshops, policy dialogues, and site-specific mediations to respond to coastal issues and conflicts.

**Response:** Opportunities for agency and public review of the proposed action are provided through the notification, review and comment processes of the EA requirements of Chapter 343, HRS, as well as through the review process for the Section 201H-38, HRS application for the project. Early consultation letters were mailed to the adjacent property owners. No comments were received from these owners.

(9) **Beach Protection**

**Objective:**

Protect beaches for public use and recreation.

**Policies:**

- (A) Locate new structures inland from the shoreline setback to conserve open space and to minimize loss of improvements due to erosion;
- (B) Prohibit construction of private erosion-protection structures seaward of the shoreline, except when they result in improved aesthetic and engineering solutions to erosion at the sites and do not interfere with existing recreational and waterline activities; and
- (C) Minimize the construction of public erosion-protection structures seaward of the shoreline.

**Response:** The proposed project will not involve construction in the vicinity of shoreline areas. It is noted that during grading activities associated with the proposed project, appropriate BMPs will be utilized to ensure that the downstream coastal environment is not adversely impacted. The proposed project is not anticipated to have an adverse effect on local beach environments.

**(10) Marine Resources**

**Objective:**

Implement the State's ocean resources management plan.

**Policies:**

- (A) Exercise an overall conservation ethic, and practice stewardship in the protection, use, and development of marine and coastal resources;
- (B) Assure that the use and development of marine and coastal resources are ecologically and environmentally sound and economically beneficial;
- (C) Coordinate the management of marine and coastal resources and activities management to improve effectiveness and efficiency;
- (D) Assert and articulate the interests of the State as a partner with federal agencies in the sound management of ocean resources within the United States exclusive economic zone;
- (E) Promote research, study, and understanding of ocean processes, marine life, and other ocean resources in order to acquire and inventory information

necessary to understand how ocean development activities relate to and impact upon ocean and coastal resources; and

- (F) Encourage research and development of new, innovative technologies for exploring, using, or protecting marine and coastal resources.

**Response:** The proposed project is not located adjacent to any beach or shoreline. The proposed project is not anticipated to have adverse effects upon marine and coastal resources in the project vicinity.

In addition to the foregoing objectives and policies, SMA permit review criteria pursuant to Act 224 (2005) provides that:

*No Special Management Area Use Permit or Special Management Area Minor Permit shall be granted for structures that allow artificial light from floodlights, uplights, or spotlights used for decorative or aesthetic purposes when the light:*

- (1) Directly illuminates the shoreline and ocean waters; or*
- (2) Is directed to travel across property boundaries toward the shoreline and ocean waters.*

As previously noted, the proposed project is not located within the Special Management Area. Nevertheless the proposed project's lighting design will specify the shielding of all lights and directional down lighting. Lighting design parameters should mitigate light pollution and prevent lighting from traveling across property boundaries.

**IV. SUMMARY OF  
ADVERSE  
ENVIRONMENTAL  
EFFECTS WHICH  
CANNOT BE AVOIDED**

## **IV. SUMMARY OF ADVERSE ENVIRONMENTAL EFFECTS WHICH CANNOT BE AVOIDED**

The proposed Ka Lima O Maui Affordable Housing Project will result in some construction-related impacts as described in Chapter II, Description of the Existing Conditions, Potential Impacts and Mitigation Measures. Potential effects include noise generated impacts occurring from site preparation and construction activities. In addition, there may be temporary air quality impacts associated with dust generated from construction activities, and exhaust emissions discharged by construction equipment. However, these impacts are anticipated to be temporary and will be mitigated through the use of appropriate BMPs. Implementation of the proposed project is not anticipated to create significant long-term adverse environmental effects.

## **V. ALTERNATIVES TO THE PROPOSED ACTION**

## **V. ALTERNATIVES TO THE PROPOSED ACTION**

### **A. PREFERRED ALTERNATIVE**

The proposed development of a 100 percent affordable housing project involving the construction of 16 single-occupancy, one bedroom apartments, together with the proposed office and storage spaces, and Medicaid Waiver Program was deemed an appropriate use for the property given the surrounding public/quasi-public land uses. This project will provide housing for Maui's population of disabled and/or economically challenged individuals in a location that is available, underused, and in proximity to similar land uses. As the housing is focused towards disabled and/or economically challenged individuals, it will be in the interests of the residents to live in an area with programs and services which cater specifically to their needs. Residents will have ready access to services offered at the neighboring MEO, Cameron Center, Maui Memorial Medical Center, Kaiser Permanente Maui Lani Clinic, as well as recreational centers, such as War Memorial Gym and Keopuolani Park.

Furthermore, the site has been leased by Ka Lima O Maui since 1982, and has been used by the organization to operate its Medicaid Waiver Program since 2002. Ka Lima's current lease with the County of Maui will expire in 2059. Currently, the Applicant's business office is located in the adjacent Cameron Center. Upon project completion, Ka Lima O Maui will relocate its business office to the proposed 3,600 s.f. office on the subject property. The proposed project site offers the convenience to client-residents of living just a short distance away from the organization's administrative function.

### **B. NO ACTION ALTERNATIVE**

The "no action" alternative calls for retaining the project site in its current underutilized condition. If the "no action" alternative were implemented, the project site would continue to be used as a site for Ka Lima O Maui's Medicaid Waiver Program, which is in need of renovation, and a small equipment shed, used for storing landscaping and custodial equipment.

The “no action” alternative would not meet the housing needs of Maui’s population of disabled and/or economically challenged individuals. Furthermore, this alternative would not provide Ka Lima O Maui the opportunity to improve its services to meet the needs of the organization’s varied agency employment programs. Such services are in significant need given the current economic climate of our island and state.

**C. DEFERRED ACTION ALTERNATIVE**

A “deferred action” alternative would have similar consequences as the “no action” alternative in that the proposed project would be delayed and would not be immediately realized. This alternative would not respond to meet the housing needs of Maui’s population of disabled and/or economically challenged individuals. Nor would this alternative meet the needs of Ka Lima O Maui to improve its services.

**D. ALTERNATIVE LOCATIONS**

Vacant land behind the Maui News’ offices (located across the Mahalani Street from the project site) was briefly considered as a possible project site location in the preliminary stages of project development, however, due to the lot’s small size, the project site’s present location was deemed more suitable.

Furthermore, the current project site is under lease to the Applicant from the County of Maui until 2059. There are no other sites readily available to the organization for project development. To ensure timely implementation of the project, Ka Lima O Maui has determined that utilizing the subject property offers the preferred site option in lieu of seeking alternative land acquisition opportunities.

**E. ALTERNATIVE DESIGN CONSIDERATIONS**

In its current form, the project design designates the placement of residential living areas at the rear, with administrative offices near the front entrance of the property. An alternative to this design was considered, involving the placement of administrative offices in the rear of the complex and moving the residential living areas to the front. However, from a functional standpoint, the current spatial layout offers Ka Lima O Maui administration personnel and affiliated workers the opportunity to better monitor the health and overall well-being of the residents, as well as offer increased social interaction between all members of the housing

complex. Such interactions between the residents and workers provide benefits to the disabled and/or economically challenged individuals living there, as they may not receive such specialized attention within other typical housing developments focused towards the general public. Therefore, the proposed design was considered to be the most appropriate alternative given the needs of the project's intended occupants.

**VI. IRREVERSIBLE AND  
IRRETRIEVABLE  
COMMITMENTS OF  
RESOURCES**

## **VI. IRREVERSIBLE AND IRRETRIEVABLE COMMITMENTS OF RESOURCES**

The proposed action will not entail a substantial commitment of public services or resources. Development of the proposed project will involve a commitment of energy, labor, fiscal, and material resources. The use of these resources, when weighed against the expected benefit to be derived from the project, is not considered an adverse commitment.

# **VII. SIGNIFICANCE CRITERIA ASSESSMENT**

## VII. SIGNIFICANCE CRITERIA ASSESSMENT

The "Significance Criteria", Section 12 of the Administrative Rules, Title 11, Chapter 200, "Environmental Impact Statement Rules", were reviewed and analyzed to determine whether the proposed project will have significant impacts to the environment. The following criteria and preliminary analysis are provided.

1. **Involves an irrevocable commitment to loss or destruction of any natural or cultural resource.**

Temporary environmental effects associated with the construction of a new housing development will occur. However, these effects will be limited in scope as there are no known rare, threatened, or endangered species of flora, fauna, avifauna, or important habitats located within the project site. Furthermore, the project construction will be implemented within an area that has already been developed. An archaeological monitoring plan will also be implemented to identify, protect, and preserve historic resources discovered during ground altering activities. Should archaeological features, cultural artifacts, or human burials be located during construction activities, work in the immediate area of the find shall be promptly halted and the find protected from further disturbance. The State Historic Preservation Division (SHPD), the Office of Hawaiian Affairs (OHA), and the Maui/Lanai Islands Burial Council will be immediately contacted to determine the significance of the find and appropriate mitigative measures implemented.

2. **Curtails the range of beneficial uses of the environment.**

The proposed action and the commitment of land resources will not curtail the range of beneficial uses of the environment. The proposed use of the property for affordable housing, office/storage space, and continuation of the Medicaid Waiver Program is compatible with its surrounding developed properties. The proposed project is not anticipated to impact beneficial uses of the environment.

3. **Conflicts with the state's long-term environmental policies or goals and guidelines as expressed in chapter 344, HRS, and any revisions thereof and amendments thereto, court decisions, or executive orders.**

The State's Environmental Policy and Guidelines are set forth in Chapter 344, Hawaii Revised Statutes. The proposed action is consistent with the policies and guidelines of Chapter 344, HRS.

4. **Substantially affects the economic welfare, social welfare, and cultural practices of the community or State.**

The proposed action will have a beneficial effect on the local economy during construction. In the long term, the proposed project will provide 100 percent affordable housing to meet the needs of the island's population of disabled and/or economically challenged individuals, providing positive effects to the social welfare of the Maui community. Furthermore, Ka Lima O Maui's services include job training and employment opportunities which are also beneficial to the community.

5. **Substantially affects public health.**

No adverse impact to public health, safety, or welfare is anticipated as a result of the proposed action. The proposed 201H-38, HRS exemptions will not compromise public health, safety or welfare.

6. **Involves substantial secondary impacts, such as population changes or effects on public facilities.**

The proposed project is anticipated to provide housing for 16 Maui residents, as well as provide office and storage spaces, and upgrades to the Medicaid Waiver Program facility. Given the size and scope of the proposed project, significant adverse impacts to population are not anticipated.

From a land use standpoint, the proposed project is keeping with the objectives, policies, and implementing actions of the Wailuku-Kahului Community Plan. The project does not anticipate any adverse impacts to public facilities as a result of implementation.

Adverse impacts to roadways, water and wastewater capacities and facilities are not anticipated as a result of project implementation.

7. **Involves a substantial degradation of environmental quality.**

During construction of the project, appropriate BMPs will be utilized to ensure that potential adverse environmental effects are mitigated. No substantial degradation of environmental quality is anticipated as a result of project implementation.

8. **Is individually limited but cumulatively has considerable effect upon the environment or involves a commitment for larger actions.**

The proposed action does not represent a commitment to larger actions. In addition, the proposed action is not expected to result in cumulative impacts that would adversely affect the environment.

9. **Substantially affects a rare, threatened, or endangered species, or its habitat.**

The subject property is a developed property located in an urbanized area of Wailuku. There are no known or identified rare, threatened, or endangered species of flora, fauna or avifauna, or their habitats in the vicinity of the project site. Given the scale and location of the proposed project, no rare, threatened or endangered species, habitats or natural environments are anticipated to be adversely affected.

10. **Detrimentially affects air or water quality or ambient noise levels.**

Localized air quality impacts from construction equipment and vehicles may occur during construction of the proposed project. As such, potential air quality impacts during construction will be mitigated through applicable compliance with the provisions of the State Department of Health Administrative Rules, Title 11, Chapter 60, Fugitive Dust. Measures will be taken to minimize air quality impacts such as water spraying of loose or exposed soil, erecting dust screens, and re-vegetating or paving exposed areas as soon as practicable.

Noise impact will occur primarily from construction equipment. Equipment mufflers or other noise attenuating equipment, as well as proper equipment and vehicle maintenance, will be used during construction activities. Construction noise impact will be mitigated through applicable compliance with the provisions of the State of Hawaii, Department of Health Administrative Rules Title 11, Chapter 46, "Community Noise Control". These rules require a noise permit if the noise levels from construction activities are expected to exceed the allowable levels set forth in Chapter 46 rules.

With proposed mitigation measures, the project is not anticipated to have adverse significant impacts on air quality or noise levels.

As the project site is not located along the shoreline, or near a stream or wetland, water quality is not expected to be affected in the short term or long term.

11. **Affects or is likely to suffer damage by being located in an environmentally sensitive area such as a flood plain, tsunami zone, beach, erosion-prone area, geologically hazardous land, estuary, fresh water, or coastal waters.**

The project is not located within and would not affect environmentally sensitive areas. The Flood Insurance Rate Map (FIRM) for this region indicates that the project is located in Zone X, areas determined to be outside of the 0.2 percent annual chance floodplain of minimal flooding. In addition, the subject property is located beyond the reaches of the tsunami inundation zones. The project is not a shoreline property, nor is it situated near streams, wetland areas or other areas which may pose flooding concerns. There are no geologically hazardous lands, estuaries, or coastal waters within or adjacent to the project site.

12. **Substantially affects scenic vistas and viewplanes identified in county or state plans or studies.**

The project site is not identified as a scenic vista or viewplane. It is not anticipated that the proposed project will affect scenic corridors and coastal scenic and open space resources.

13. **Requires substantial energy consumption.**

The proposed project will involve the short-term commitment of fuel for equipment, vehicles, and machinery during construction activities. However, this use is not anticipated to result in a substantial consumption of energy resources. In the long term, the project will create additional demand for electricity. However, this demand is not deemed substantial or excessive within the context of the region's overall energy consumption.

In summary, the site is situated in a convenient and central location in Wailuku. Necessary public facilities and services are in near proximity, or can be reasonably provided to serve the project. The proposed residential development, related office and storage spaces, and upgrades to the Medicaid Waiver Program Facility are not anticipated to have a significant adverse impact on the surrounding

environment. In this context, a Finding of No Significant Impact (FONSI) has been issued for the proposed action.

# **VIII. LIST OF PERMITS AND APPROVALS**

## VIII. LIST OF PERMITS AND APPROVALS

The following permits and approvals will be required prior to the implementation of the proposed project.

### State of Hawaii

1. Department of Health, Noise Permit (as applicable)
2. National Pollutant Discharge Elimination System (NPDES) Permit, as may be required

### County of Maui

1. Section 201H-38 Approval by the Maui County Council
2. Construction Permits

DEC 18 2009

Subject: Technical Assistance for Ka Lima O Maui Affordable Housing Project, TMK (2)3-8-0046:016, Wailuku, Maui, Hawaii

Dear Ms. Mukai:

The U.S. Fish and Wildlife Service has reviewed your November 24, 2009, request for technical assistance regarding the proposed construction and use of an affordable housing development of a two-acre area within TMK (2)3-8-0046:016 in Wailuku, Maui. The project entails the construction of sixteen single-occupancy, one-bedroom apartments within two separate residential buildings totaling 6,000 square feet. The project also involves the construction and use of a 3,600-square-foot storage and garage space and renovation of an existing building.

Based on the information you provided and pertinent information in our files, the threatened Newell's shearwater (*Puffinus auricularis newelli*) and the endangered Hawaiian petrel (*Pterodroma sandwichensis*) (collectively referred to as seabirds) have been observed in the vicinity of the proposed project. Seabirds may traverse the project area at night during the breeding season (February 1 through December 15).

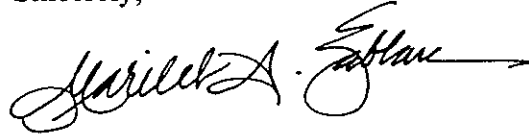

In Hawaii, seabirds are attracted to lights and are known to collide with buildings, light poles, wires, and other tall objects. Under section 7 of the ESA, it is the Federal agency's (or their non-Federal designee) responsibility to make the determination of whether or not the proposed project "may affect" federally listed species or designated critical habitat. A "may affect, not likely to adversely affect" determination is appropriate when effects to federally listed species are expected to be discountable (*i.e.*, unlikely to occur), insignificant (minimal in size), or completely beneficial. This conclusion requires written concurrence from the U.S. Fish and Wildlife Service. If a "may affect" determination is made, then the Federal agency must initiate formal consultation with the Service. Projects that are determined to have "no effect" on federally listed species and/or critical habitat do not require additional coordination or consultation with the U.S. Fish and Wildlife Service.

Ms. Erin Mukai

SUBJECT: Proposed Ka Lima O Maui Affordable Housing Project, TMK (2)3-8-046:016, Wailuku, Maui, Hawaii, 2010-TA-0075

Dear Mr. Mehrhoff:

Thank you for your letter dated December 18, 2009, responding to our request for early consultation comments on the subject project. On behalf of the applicant, Ka Lima O Maui, we wish to provide the following information in response to your comments.

The proposed project is located in a developed property located in an urbanized area of Wailuku. There are no known rare, threatened, or endangered species of fauna or avifauna found at the project site. We note that the lighting design for the project site will specify the shielding of all lights and directional down lighting so that there will be no upward illumination from the poles. Additional project information will be incorporated in the Draft Environmental Assessment (EA), a copy of which be sent to you for review and comment.

Dear Ms. Mukai:

Re: Proposed Ka Lima O Maui Affordable Housing Project, TMK (2)3-8-045:016

Thank you for seeking our comments on the proposed Ka Lima O Maui Affordable Housing Project. The proposed project is consistent with the affordable housing objectives and policies set forth in the Hawaii State Plan. It will provide greater opportunities for persons with disabilities and/or economical challenges.

We look forward to reviewing the draft Environmental Assessment and Chapter 201H application.

Sincerely,

Subject: Early Consultation, Draft Environmental Assessment for the Proposed  
Ka Lima O Maui Affordable Housing Project, TMK (2)3-8-046:016, Wailuku, Maui

The Department of Education (DOE) has reviewed your request for early consultation on the Draft Environmental Assessment (EA) for the Proposed Ka Lima O Maui affordable housing project.

The DOE requests clarification on the nature of the project in the EA. The DOE would like to know whether the occupants of the 16 single-occupancy units would be allowed to have children living with them.

Thank you for the opportunity to comment. If you have any questions, please call Jeremy Kwock of the Facilities Development Branch at (808) 377-8301.

Very truly yours,

SUBJECT: Proposed Ka Lima O Maui Affordable Housing Project, TMK (2)3-8-046:016, Wailuku, Maui, Hawaii

Dear Ms. Matayoshi:

Thank you for your letter dated December 16, 2009, responding to our request for early consultation comments on the subject project. On behalf of the applicant, Ka Lima O Maui, we wish to provide the following information in response to your comments.

The Ka Lima O Maui Affordable Housing Project is being developed specifically to focus on the needs of disabled and/or economically challenged individuals. A more detailed description of the project will be provided in the Draft Environmental Assessment (EA). All units of the housing complex have been designated as single occupancy only. Accordingly, children will not be living in the Ka Lima O Maui Affordable Housing project's residential complex and, therefore, will not create additional need for educational services.

Kathryn Matayoshi  
August 31, 2010

Dear Ms. Mukai:

Subject: PROPOSED KA LIMA O MAUI AFFORDABLE HOUSING  
PROJECT AT TMK (2)3-8-046:016, WAILUKU, MAUI,  
HAWAII

Thank you for the opportunity to review and provide comments on the subject project intended to develop 16 one-bedroom apartments for disabled and/or economically challenged individuals.

The location is most suitable to this type of use with medical, social services, police, recreational, and residential facilities nearby. The proposal makes good use of an otherwise irregular lot. As a sister agency dedicated to providing affordable housing, we commend Ka Lima O Maui for their foresight and initiative in addressing a serious need of their clients.

Should you have any questions, please contact our Planning Office at 620-9519.

SUBJECT: Proposed Ka Lima O Maui Affordable Housing Project, TMK (2)3-8-046:016, Wailuku, Maui, Hawaii

Dear Mr. Park:

Thank you for your letter dated December 3, 2009, responding to our request for early consultation comments on the subject project. On behalf of the applicant, Ka Lima O Maui, we would like to thank you for your positive feedback on the Ka Lima O Maui Affordable Housing Project and look forward to your continued input in the completion of this project. We sincerely appreciate the comments we received from your office.

When completed, a copy of the Draft Environmental Assessment (EA) will be provided to your office for your review and comment. Should you have any questions, please do not hesitate to contact me at (808) 244-2015.

Very truly yours,

Colleen Suyama  
Project Manager

Wailuku, Hawaii 96793

Dear Ms. Mukai:

**Subject: Request for Early Consultation Comments for the  
Preparation of a Draft Environmental Assessment (DEA) for the  
Proposed Ka Lima O Maui Affordable Housing Project  
Wailuku, Island of Maui, Hawaii  
TMK: (2) 3-8-046:016**

The Department of Health (DOH), Clean Water Branch (CWB), received your transmittal letter, dated November 24, 2009, requesting early consultation comments on the subject project for the preparation of a DEA. The DOH-CWB has reviewed the document and offers these comments on your project. Please note that our review is based solely on the information provided in the subject document and its compliance with Hawaii Administrative Rules (HAR), Chapters 11-54 and 11-55. You may be responsible for fulfilling additional requirements related to our program. We recommend that you also read our standard comments on our website at <http://www.hawaii.gov/health/environmental/env-planning/landuse/CWB-standardcomment.pdf>.

1. Any project and its potential impacts to State waters must meet the following criteria:
  - a. Antidegradation policy (HAR, Section 11-54-1.1), which requires that the existing uses and the level of water quality necessary to protect the existing uses of the receiving State water be maintained and protected.
  - b. Designated uses (HAR, Section 11-54-3), as determined by the classification of the receiving State waters.
  - c. Water quality criteria (HAR, Sections 11-54-4 through 11-54-8).

2. You may be required to obtain a National Pollutant Discharge Elimination System (NPDES) permit for discharges of wastewater, including storm water runoff, into State surface waters (HAR, Chapter 11-55). For the following types of discharges into Class A or Class 2 State waters, you may apply for NPDES general permit coverage by submitting a Notice of Intent (NOI) form:

- a. Storm water associated with construction activities, including excavation, grading, clearing, demolition, uprooting of vegetation, equipment staging, and storage areas that result in the disturbance of one (1) acre or more of total land area. The total land area includes a contiguous area where multiple separate and distinct construction activities may be taking place at different times on different schedules under a larger common plan of development or sale. An NPDES permit is required before the start of the construction activities.
- b. Hydrotesting effluent.

You must submit a separate NOI form for each type of discharge at least 30 calendar days prior to the start of the discharge activity, except when applying for coverage for discharges of storm water associated with construction activity. For this type of discharge, the NOI must be submitted 30 calendar days before the start of construction activities. The NOI forms may be picked up at our office or downloaded from our website at <http://www.hawaii.gov/health/environmental/water/cleanwater/forms/genl-index.html>.

3. For types of wastewater not listed in Item 2 above or wastewater discharging into Class 1 or Class AA waters, you must obtain an NPDES individual permit. An application for an NPDES individual permit must be submitted at least 180 calendar days before the commencement of the discharge. The NPDES application forms may be picked up at our office or downloaded from our website at <http://www.hawaii.gov/health/environmental/water/cleanwater/forms/indiv-index.html>.

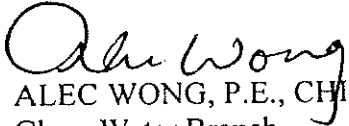

4. Please note that all discharges related to the project construction or operation activities, whether or not NPDES permit coverage and/or Section 401 Water Quality Certification are required, must comply with the State's Water Quality Standards. Noncompliance with water quality requirements contained in HAR, Chapter 11-54, and/or permitting requirements, specified in HAR, Chapter 11-55, may be subject to penalties of \$25,000 per day per violation.

Ms. Erin Mukai

SUBJECT: Proposed Ka Lima O Maui Affordable Housing Project, TMK (2)3-8-046:016, Wailuku, Maui, Hawaii; EMD/CWB 12022PDCL 09

Dear Mr. Wong:

Thank you for your letter dated December 4, 2009, responding to our request for early consultation comments on the subject project. On behalf of the applicant, Ka Lima O Maui, we wish to provide the following information in response to your comments presented in the same order of your letter.

**Response to Comment No. 1:**

The applicant recognizes your concern relating to any impact the project may have on state waters. The applicant wishes to assure you that the project will meet the Department of Health's (DOH) criteria and any impact to state waters due to the construction of the project will be addressed and discussed in the Draft Environmental Assessment (EA), as applicable. Mitigation measures will also be discussed.

**Response to Comment No. 2:**

The applicant recognizes that a National Pollutant Discharge Elimination System (NPDES) permit for discharges of wastewater may be required. As applicable, an application for an NPDES permit will be submitted.

**Response to Comment No. 3:**

If other types of wastewater apply to the project, the applicant acknowledges that a NPDES individual permit must be obtained.

Alec Wong, P.E., Chief  
August 31, 2010  
Page 2

**Response to Comment No. 4:**

For any discharges relating to the project construction or operation activities, the project engineer and contractor will ensure that the applicant complies with the State's Water Quality Standards.

We appreciate the input we received from the department. A copy of the Draft EA will be submitted to your office for review and comment. Should you have any questions, please do not hesitate to contact me at (808) 244-2015.

Very truly yours,

Colleen Suyama  
Project Manager

**Subject: Proposed Ka Lima O Maui Affordable Housing Project, Wailuku,  
Hawaii  
TMK: (2) 3-8-046:016**

Thank you for giving us the opportunity to review and comment on this project. The following comments are offered:

1. The noise created during the construction phase of the project may exceed the maximum allowable levels as set forth in Hawaii Administrative Rules, Chapter 11-46 "Community Noise Control". A noise permit may be required and should be obtained before the commencement of this project.

It is strongly recommended that the Standard Comments found at the Department's website: <http://hawaii.gov/health/environmental/env-planning/landuse/landuse.html> be reviewed, and any comments specifically applicable to this project should be adhered to.

Should you have any questions, please call me at 808 984-8230 or e-mail me at [patricia.kitkowski@doh.hawaii.gov](mailto:patricia.kitkowski@doh.hawaii.gov).

Sincerely,

SUBJECT: Proposed Ka Lima O Maui Affordable Housing Project, TMK (2)3-8-046:016, Wailuku, Maui, Hawaii

Dear Ms. Kitkowski:

Thank you for your letter dated December 11, 2009, responding to our request for early consultation comments on the subject project. On behalf of the applicant, Ka Lima O Maui, we wish to provide the following information in response to your comments.

We note your comment that a noise permit may be required for the project pursuant to Hawaii Administrative Rules (HAR), Chapter 11-46, "Community Noise Control". As applicable, a noise permit will be secured prior to commencement of construction. As recommended, Ka Lima O Maui will review the Standard Comments found at the Department's website for its applicability to the proposed project.

Again, thank you for your comments. Upon completion, a copy of the Draft Environmental Assessment (EA) will be provided to your office for review and comment. Should you have any questions, please do not hesitate to contact me at 244-2015.

**RE: Early consultation for the Ka Lima o Maui Affordable Housing Project, Wailuku, Maui, TK: (2) 3-8-046: 016.**

Aloha e Erin Mukai,

The Office of Hawaiian Affairs (OHA) received your letter requesting comments on the above-mentioned project. Ka Lima o Maui proposes to develop an affordable housing project for disabled and/or economically challenged individuals on the two acres in Wailuku, Maui. The project calls for the construction of 16 single-occupancy, one bedroom apartments contained within two separate residential buildings totaling 6,000 square feet. Ka Lima will prepare a Draft Environmental Assessment for the project, in accordance with Chapter 343, Hawai'i Revised Statutes. OHA has reviewed the project and offers the following comments.

The Draft Environmental Assessment should include a Cultural Impact Assessment (CIA), in accordance with Chapter 343 of the Hawaii Revised Statutes (HRS). The CIA should include information relating to the Native Hawaiian practices and beliefs associated with the general area of the project site, and it is recommended that the community be involved in this assessment. Consideration must also be afforded to any individuals accessing the project area for constitutionally protected traditional and customary purposes, in accordance with the Hawai'i State Constitution, Article XII, Section 7.

OHA requests clarification whether an archaeological inventory survey for the project will be submitted to the State Historic Preservation Division for review and approval. If so, OHA should be allowed the opportunity to comment on the criteria assigned to any cultural or

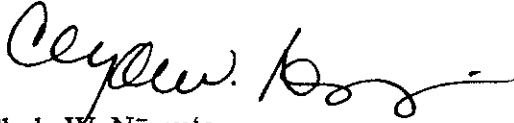

Erin Mukai  
December 21, 2009  
Page 2

archaeological sites identified within the archaeological inventory survey. We request the applicant's assurances that should iwi kūpuna or Native Hawaiian cultural or traditional deposits be found during the construction of the project, work will cease, and the appropriate agencies will be contacted pursuant to applicable law.

In addition, OHA recommends that the applicant use native vegetation in its landscaping plan for subject parcel. Landscaping with native plants furthers the traditional Hawaiian concept of mālama 'āina and creates a more Hawaiian sense of place.

Thank you for the opportunity to comment. If you have further questions, please contact Sterling Wong by phone at (808) 594-0248 or e-mail him at [sterlingw@oha.org](mailto:sterlingw@oha.org).

State of Hawaii  
Office of Hawaiian Affairs  
711 Kapiolani Boulevard, Suite 500  
Honolulu, Hawaii 96813

SUBJECT: Proposed Ka Lima O Maui Affordable Housing Project, TMK (2)3-8-046:016, Wailuku, Maui, Hawaii

Dear Mr. Nāmu`o:

Thank you for your letter dated December 21, 2009, responding to our request for early consultation comments on the subject project. On behalf of the applicant, Ka Lima O Maui, we wish to provide the following information in response to your comments in the same order presented of your letter.

**Response to Comment Regarding Cultural Impact Assessment:**

The Draft Environmental Assessment (EA) for the proposed Ka Lima O Maui Affordable Housing project will include a Cultural Impact Assessment (CIA), in accordance with Chapter 343 of the Hawaii Revised Statutes (HRS). The CIA will address Native Hawaiian practices and beliefs associated with the area of the proposed project site as well as include interviews with individuals familiar with the project area.

**Response to Comment Regarding an Archaeological Inventory Survey:**

An Archaeological Assessment Survey (AAS) for the project was prepared by Xamanek Researches, LLC and was submitted to the State Historic Preservation Division (SHPD) for review and approval. A copy of the AAS will be included in the Draft EA. The applicant also recognizes OHA's concerns regarding the discovery of iwi kupuna or Native Hawaiian cultural or traditional deposits during the construction of the project. In the event that these deposits are found, construction work will immediately cease in the vicinity of the find and appropriate mitigative protocols will be implemented in coordination with SHPD.

Clyde W. Nāmu'o  
August 31, 2010  
Page 2

**Response to Comment Regarding Native Hawaiian Plants:**

Your recommendation to use native Hawaiian plants for landscaping purposes has been provided to the applicant. Use of native plants appropriate to the area will be utilized to the extent practicable.

Upon completion, a copy of the Draft Environmental Assessment (EA) will be provided to your office for review and comment. Should you have any questions, please do not hesitate to call me at (808) 244-2015.

Very truly yours,

Colleen Suyama

Wailuku, Hawaii 96793

Dear Ms. Mukai:

Subject: Ka Lima O Maui Affordable Housing Project  
Early Consultation (EC)

Thank you for requesting the State Department of Transportation's (DOT) review of the subject project.

DOT understands that the subject project proposes to construct 16 single-occupancy, one-bedroom apartments contained within two separate residential buildings totaling 6,000 square feet. The project will also include the renovation of an existing 2,500 square foot building used by Kalima O Maui's Waiver Program, as well as the construction of a new building providing office space of 3,600 square feet and storage and garage space of 3,600 square. Access to the project is from Mahalani Street.

The subject project could potentially impact the State highway, Kaahumanu Avenue, due to its contribution of traffic. Therefore, the Draft Environmental Assessment (DEA) should discuss and evaluate project traffic impacts to Kaahumanu Avenue through the inclusion of a traffic assessment report.

DOT appreciates the opportunity to provide its early comments and requests that four (4) copies of the project DEA with the traffic assessment be provided when the DEA is completed.

If there are any questions, please contact Mr. David Shimokawa of the DOT Statewide Transportation Planning Office at telephone number (808) 587-2356.

Very truly yours,

SUBJECT: Proposed Ka Lima O Maui Affordable Housing Project, TMK (2)3-8-046:016, Wailuku, Maui, Hawaii

Dear Mr. Morioka:

Thank you for your letter dated January 7, 2010, responding to our request for early consultation comments on the subject project. On behalf of the applicant, Ka Lima O Maui, we would like to offer you the following response.

The applicant acknowledges your comment regarding the project's potential impact of traffic on Kaahumanu Avenue. A Traffic Impact Assessment Report (TIAR) has been prepared by the traffic engineer, Phillip Rowell, and will be included in the Draft Environmental Assessment (EA). The TIAR will address the project's effects on the Kaahumanu Avenue-Mahalani Street intersection.

Four (4) copies of the Draft EA will be provided to your office for review and comment during the 30-day public review period.

**SUBJECT: KA LIMA O MAUI AFFORDABLE HOUSING PROJECT  
EARLY CONSULTATION  
TMK (2) 3-8-046:016, WAILUKU**

We reviewed the subject project as a pre-application consultation and have the following comments:

1. Solid Waste Division comments:
  - a. Include options for construction waste disposal/recycling/reuse in the discussion of potential impacts and mitigation measures.
2. Wastewater Reclamation Division (WWRD) comments:
  - a. Although wastewater system capacity is currently available as of 1/25/2010, the developer should be informed that wastewater system capacity cannot be ensured until the issuance of the building permit.
  - b. Wastewater contribution calculations are required before building permit is issued.
  - c. Developer shall pay assessment fees for treatment plant expansion costs in accordance with ordinance setting forth such fees. The property is located in the Wailuku Sewer Service Area.
  - d. Developer is required to fund any necessary off-site improvements to collection system and wastewater pump stations.
  - e. Plans should show the existing single service lateral for the subject property that will service the subject facilities.
  - f. Plans shall show the existing property sewer service manhole near the property line. If a property sewer service manhole does not exist, one shall be installed.

Ms. Erin Mukai  
January 25, 2010  
Page 2

- g. Commercial kitchen facilities within the proposed project shall comply with pre-treatment requirements (including grease interceptors, sample boxes, screens etc.)
- h. Non-contact cooling water and condensate should not drain to the wastewater system.

If you have any questions regarding this memorandum, please contact Gregg Kresge at 270-8230.

Sincerely,

Cheryl K. Okuma, Director

Dear Ms. Okuma:

Thank you for your letter dated January 25, 2010, responding to our request for early consultation comments. On behalf of the applicant, Ka Lima O Maui, we offer the following information in response to your comments in the order presented in your letter.

**Response to Comments from the Solid Waste Division:**

Construction waste disposal/recycling/reuse options will be included in the Draft Environmental Assessment (EA).

**Response to Comments from the Wastewater Reclamation Division (WWRD):**

- a. We note your comment that wastewater system capacity cannot be ensured until the issuance of the building permit.
- b. We acknowledge that wastewater calculations are required before issuance of a building permit.
- c. The applicant acknowledges your comment. Through the 201H-38, Hawaii Revised Statutes (HRS) application process, Ka Lima O Maui intends to seek an exemption from Chapter 14.35, Maui County Code, relating to wastewater assessment fees, subject to approval by the Maui County Council. Ka Lima O Maui is a non-profit organization that is proposing the development of 100 percent affordable housing for its clients and for economically challenged individuals. Ka Lima O Maui will continue coordination with the Department of Environmental Management (DEM) regarding wastewater services for the proposed project.

Cheryl K. Okuma, Director  
August 31, 2010  
Page 2

- d. The applicant acknowledges your comment regarding offsite improvements. System adequacy will be addressed by the project's civil engineer.
- e. Your comments have been forwarded to the applicant and project engineer for action.
- f. Your comments have been forwarded to the applicant and project engineer for action.
- g. The applicant will comply with pre-treatment requirements if commercial kitchen facilities are incorporated in the project's final plans
- h. The applicant acknowledges that non-contact cooling water and condensate should not drain to the wastewater system.

Thank you for your comments. A copy of the Draft EA will be mailed to the DEM upon completion for your consideration and review. Should you have any questions, please do not hesitate to call me at 244-2015.

Very truly yours,

Colleen Suyama  
Project Manager

Dear Ms. Erin Mukai

**Subject: Proposed Ka Lima O Maui Affordable Housing Project at  
TMK (2)3-8-046:016, Wailuku, Maui, Hawaii**

The Department has reviewed your November 24, 2009 letter regarding the above subject project. Based on our review, we have determined that the subject project would be exempt from chapter 2.96, Maui County Code (MCC) on the basis of an affordable housing project with more than the required residential workforce housing units (Section 2.96.030 B. 6. of Chapter 2.96, MCC).

Also, please continue to keep the Department apprised of the status of the subject project and the 201H-038 HRS application process.

Please call Ms. Cara Bohne of our Housing Division at 270-5748 if you have any questions.

Sincerely,

WAYDE T. OSHIRO  
Housing Administrator

SUBJECT: Proposed Ka Lima O Maui Affordable Housing Project, TMK (2)3-8-046:016, Wailuku, Maui, Hawaii

Dear Mr. Oshiro:

Thank you for your letter dated December 10, 2009, responding to our request for early consultation on the subject project. On behalf of the applicant, Ka Lima O Maui, we appreciate your confirmation that the project is exempt from Chapter 2.96, Maui County Code (MCC). As a 201H-38, Hawaii Revised Statutes (HRS) Affordable Housing Project, we will continue to coordinate the project planning with the Department of Housing and Human Concerns (DHHC). As the approving agency; the Draft Environmental Assessment (EA) will be submitted to the DHHC for review and approval.

Should you have any questions, please do not hesitate to contact me at 244-2015.

Very truly yours,

Dear Ms. Mukai:

Based on our review of the proposed Ka Lima O Maui project, the Parks Department does not have any comments or objections at this time.

The applicant will be exempt from park and playground requirements for the subject as the subdivision will be a 100 percent affordable housing project.

Please feel free to contact me or Mr. Patrick Matsui, Chief of Parks Planning and Development, at 270-7931 should you have any questions.

Sincerely,

**DEPARTMENT OF PLANNING**

January 12, 2010

Ms. Erin Mukai  
Munekiyo & Hiraga, Inc.  
305 High Street, Suite 104  
Wailuku, Hawaii 96793

Dear Ms. Mukai:

**SUBJECT: EARLY CONSULTATION COMMENTS REGARDING A DRAFT ENVIRONMENTAL ASSESSMENT TO BE SUBMITTED FOR THE PROPOSED KA LIMA O MAUI AFFORDABLE HOUSING PROJECT, TO BE CONSTRUCTED ALONG MAHALANI STREET, WAILUKU, ISLAND OF MAUI, HAWAII; TMK: (2) 3-8-046:016 (EAC 2009/0046)**

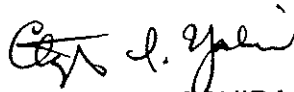

The Department of Planning (Department) is in receipt of your letter, dated November 24, 2009, regarding the above-referenced project. The Department understands that Ka Lima O Maui is proposing to develop a 100 percent (100%) affordable housing project on a 2-acre property for Maui's population of disabled and/or economically challenged individuals. The project consists of constructing two (2), 3,000 square feet (sq. ft.) residential buildings containing eight (8) single-occupancy, one-bedroom apartments in each building. The project also involves the renovation of an existing 2,500 sq. ft. building and construction of a new building that will provide 3,600 sq. ft. of office space, and 3,600 sq. ft. of storage and garage space.

The Department understands that the Applicant seeks to process this proposal under Section 201H-038, Hawaii Revised Statutes. The Department advises the Applicant that if the project is not processed under Section 201H-038, then the project will need either a Change in Zoning (CIZ), or a County Special Use Permit (CUP) in order to operate as the property is currently zoned as R-3 Residential by the County.

Ms. Erin Mukai  
January 12, 2010

SUBJECT: Proposed Ka Lima O Maui Affordable Housing Project, TMK (2)3-8-046:016, Wailuku, Maui, Hawaii

Dear Ms. Aoki:

Thank you for the Planning Department's letter dated January 12, 2010, responding to our request for early consultation comments on the subject project. On behalf of the applicant, Ka Lima O Maui, we wish to provide the following information in response to your letter.

The 201H-38, Hawaii Revised Statutes (HRS), application will seek exemptions from Title 19, Zoning. The applicant acknowledges that should the 201H-38, HRS application not be processed, then appropriate land use entitlements processing will be required.

We appreciate the input we received from the department. A copy of the Draft Environmental Assessment (EA) will be provided to your office for review and comment. Should you have any questions, please do not hesitate to contact me at 244-2015.

Very truly yours,

Colleen Suyama

SUBJECT : RESPONSE TO A REQUEST FOR COMMENTS REGARDING THE  
PROPOSED KA LIMA O MAUI AFFORDABLE HOUSING PROJECT

This communication is submitted as a response to a request for comments by Munekiyo & Hiraga, Inc., Planner, Erin, regarding the following:

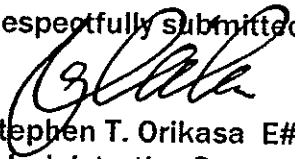

SUBJECT : Proposed Ka Lima O Maui Affordable Housing Project at TMK  
(2) 3-8-046:016, Wailuku, Maui, Hawaii

**RESPONSE:**

Following a review of the submitted documents, concerns from the police perspective would be upon the safety of pedestrian and vehicular movement.

In consideration of the properties current use and location, increases should be minimal and not have a significant impact upon current pedestrian and vehicular movement conditions. The proposed structures are situated upon a property which is of adequate size for on-site/off-street vehicle parking and turn around area. There also appears to be adequate sight distance during ingress and egress from this property.

Respectfully submitted for your review and approval.

Stephen T. Orikasa E#716  
Administrative Sergeant/Wailuku Patrol Division  
12/14/09 @ 0830 Hours

*Concur with Sgt. Orikasa -  
no concerns at this time.  
Recommend approval.

Dear Chief Yabuta:

Thank you for your letter dated December 14, 2009, responding to our request for early consultation comments on the subject project.

Your analysis that the project will have minimal impact on current pedestrian and vehicular movement conditions is consistent with the Traffic Impact Analysis Report (TIAR), prepared for the project. A copy of the TIAR will be included in the Draft Environmental Assessment (EA), which will be forwarded to your office for review and comment.

We appreciate the input from your office. Should you have any questions, please do not hesitate to contact me at 244-2015.

Very truly yours,

Colleen Suyama  
Project Manager

Re: Proposed Ka Lima O Maui Affordable Housing Project  
TMK: 3-8-046:102 and 016

Dear Ms. Mukai:

Thank you for the opportunity to comment in preparation of a Draft Environmental Assessment (EA) and 201H Application for this project.

**Source Availability and Consumption**

The project area is served by the Central Maui System. The main sources of water for this system are the designated Iao aquifer, Waihee aquifer, and the Iao tunnel and Iao-Waikapu Ditch from the designated Na Wai Eha. New source development projects include Maui Lani Wells, Waikapu South well and Waiale Surface Water Treatment Plant. The EA should identify potable and non-potable demand and source, including the source for the private water system serving the existing structure on the subject property. Demand for the proposed development once built out would be about 10,000 gpd based on system standards. The development will be subject to the County's availability policy, codified in Title 14 of the Maui County Code. Chapter 14.12 does currently not exempt affordable housing projects from providing verification of a long term reliable source of water.

**System Infrastructure**

The project site is served by a 12-inch waterline and one fire hydrant at about 70 feet distance to the North. Domestic, irrigation and fire flow calculations will be required in the building permit process. A backflow preventer will be required, unless already present on site.

*"By Water All Things Find Life"*

The Department of Water Supply is an Equal Opportunity provider and employer. To file a complaint of discrimination, write: USDA, Director, Office of Civil Rights, Room 326-W, Whitten Building, 14th and Independence Avenue, SW, Washington DC 20250-9410. Or call (202) 720-5964 (voice and TDD)

Printed on recycled paper

### Conservation

A water conservation checklist for condominiums is attached for reference. We recommend that the following conservation measures be included in the EA and implemented:

Eliminate Single-Pass Cooling: Single-pass, water-cooled systems should be eliminated per Maui County Code Subsection 14.21.20. Although prohibited by code, single-pass water cooling is still manufactured into some models of air conditioners, freezers, and commercial refrigerators.

Maintain Fixtures to Prevent Leaks: A simple, regular program of repair and maintenance can prevent the loss of hundreds or even thousands of gallons a day. The applicant should establish a regular maintenance program.

Use Climate-adapted Plants: Native plants that are adapted to the Plant Zone 4 should be used for all landscaping purposes. Native and climate-adapted plants conserve water and protect the watershed from degradation due to invasive alien species.

Prevent Over-Watering By Automated Systems: Provide rain-sensors on all automated irrigation controllers. Check and reset controllers at least once a month to reflect the monthly changes in evapo-transpiration rates at the site. As an alternative, provide the more automated, soil-moisture sensors on controllers.

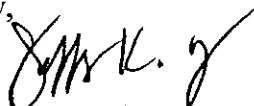

### Pollution Prevention

In order to protect the underlying Iao aquifer, we recommend that the following best management practices be included in the EA and implemented during construction to minimize infiltration and runoff from all construction and vehicle operations:

1. Prevent cement products, oil, fuel and other toxic substances from falling or leaching into the water.
2. Properly and promptly dispose of all loosened and excavated soil and debris material from drainage structure work.
3. Retain ground cover until the last possible date.
4. Stabilize denuded areas by sodding or planting as soon as possible. Replanting should include soil amendments and temporary irrigation. Use high seeding rates to ensure rapid stand establishment.
5. Avoid fertilizers and biocides, or apply only during periods of low rainfall to minimize chemical run-off.
6. Keep run-off on site.

Should you have any questions, please contact our Water Resources and Planning Division at 244-8550.

Sincerely,

  
Jeffrey K. Eng, Director  
emb

## A Checklist of Water Conservation Ideas for Condominiums

### COOLING

#### Cooling Towers

Cooling Towers are used to reject heat from air conditioning systems. In a cooling tower, a circulating stream of warm water contacts an air flow, causing evaporation of a portion of the water. When this water evaporates, the water which remains behind is cooled. The cooled water then circulates through a cooling system, warms and then returns to the tower.

- ☞ Understand Your System: Prepare an inventory of each cooling tower you have, its cooling capacity, and the equipment or processes that it serves
- ☞ If you purchase chemicals for the treatment of the recirculating cooling tower water, have the chemical vendor explain the purpose and action of each chemical.
- ☞ Have your chemical vendor provide a written report of each service call, and be sure that the vendor explains the meaning of each analysis performed, as well as the test results.
- ☞ Tell your chemical vendor that water conservation is a priority, and ask about alternatives that may reduce the amount of water bled-off from the towers.
- ☞ Have vendors bid for your facility's water cooling tower water treatment. Require a predetermined minimum level of water efficiency. Have them provide figures showing projected annual water and chemical consumption and costs.
- ☞ Consider incorporating sulfuric acid to reduce carbonate scale and achieve significantly higher cycles of concentration. If you use sulfuric acid, be sure to observe appropriate safety precautions.
- ☞ Ozone is another alternative that can help remove dissolved minerals and act as a biocide. Again, observe the appropriate safety precautions.
- ☞ If available, use reclaimed water as a source of cooling tower make-up water.
- ☞ Blow-down water is the release of some of the circulating water to remove suspended and dissolved solids left behind as pure water evaporates from the system. Re-use blow down where possible for non-potable uses.

#### Evaporative Coolers

Evaporative coolers lower air temperature by increasing the humidity of incoming air being drawn into a building. The air's ambient or "dry bulb" temperature is lowered when the air absorbs water vapor. After a short period of operation, the recirculating air in the cooler reaches wet bulb temperature, which is theoretically the lowest temperature to which the entering air may be cooled. Some evaporative coolers have recirculation pumps.

All evaporative coolers require either a small amount of bleed-off or regular cleaning to maintain and prevent damage to the coolers pads. The principle opportunity for conservation in evaporative cooling is to reduce the amount of water bled-off, and to reuse that water wherever possible.

- ☞ Be sure your coolers have pumps to recirculate the water. This decreases water consumption and increases cooling efficiency.
- ☞ Check to make sure you are not bleeding off an excessive amount of water. For a typical small cooler, anything more than a few gallons per hour may be excessive.
- ☞ Pipe the bleed-off water from your coolers to help water a landscaped area!

#### Eliminate Once Through Cooling!

Some coolers pass water through the equipment only once, and then discard it. "Single pass" technology is not good for two reasons. First, these single pass coolers use too much water! Secondly, they do not cool as effectively, because the water does not cool to wet bulb temperature. This type of cooling is illegal under Maui County Codes! Make sure your air conditioners, ice makers and other cooling systems are not single pass models!

- ☞ Replace single-pass cooling models with air-cooled or recirculating models
- ☞ Connect to a recirculating cooling water loop. Or retrofit models to be recirculating.
- ☞ If a piece of equipment can not be replaced immediately, remember, it is illegal to dump single pass cooling water into the sewer system. Re-use this water for landscaping or other non-potable uses.

## A Checklist of Water Conservation Ideas for Condominiums

### PLUMBING MEASURES FOR EACH UNIT

- ☞ Replace toilets with Ultra Low Flush Models, or retrofit with low flow flappers. Contact the Maui County Board of Water Supply at 243-7199 or the Wastewater Division at 243-7417 for more information.
- ☞ Retrofit faucets with aerators, or consider alternative faucet types such as self closing or, automatic sensor controlled faucets.
- ☞ Replace showerheads with low flow models. Contact the Maui County Board of Water Supply at 243-7199, or the Public Works Wastewater Division at 243-7417 to find out how you can get these!
- ☞ Check for leaks! Check for leaks! Check for leaks! Do dye tablet or food coloring tests in toilets to check for hidden leaks. Check for dripping faucets indoors and out!

### COMMON LAUNDRY AREAS

- ☞ Efficient washing machines can save up to 20 gallons per load. These also save on energy. If you are replacing laundry facilities don't even consider anything but the new horizontal axis models. These not only save up to 40% of water used, but deliver even more substantial energy savings - up to 65%!
- ☞ Water boilers also require blow-down, or bleed-off, just like air conditioners. Monitor total dissolved solids, and blow down only when necessary!
- ☞ Avoid excessive filter or softener back flush. Back flush only when needed.

### NON-LANDSCAPED AREAS OUTDOORS

- ☞ Never hose your sidewalks and driveways. This is a complete waste of water, and a hose can use 25 gallons in just 5 minutes. Remember: A broom is best.
- ☞ Check for leaks! Note the number of outdoor faucets on the outsides of buildings. Make a list and check every one regularly.
- ☞ Cover Pools and Jacuzzis when not in use. An average sized pool loses about 1,000 gallons per day. A pool cover can cut these losses by 90%.

### EDUCATION

- ☞ Knowledge is power. Educate people about how they can help to save water at your building or facility. You may be surprised at how willing people are to chip in, once they know what to do!

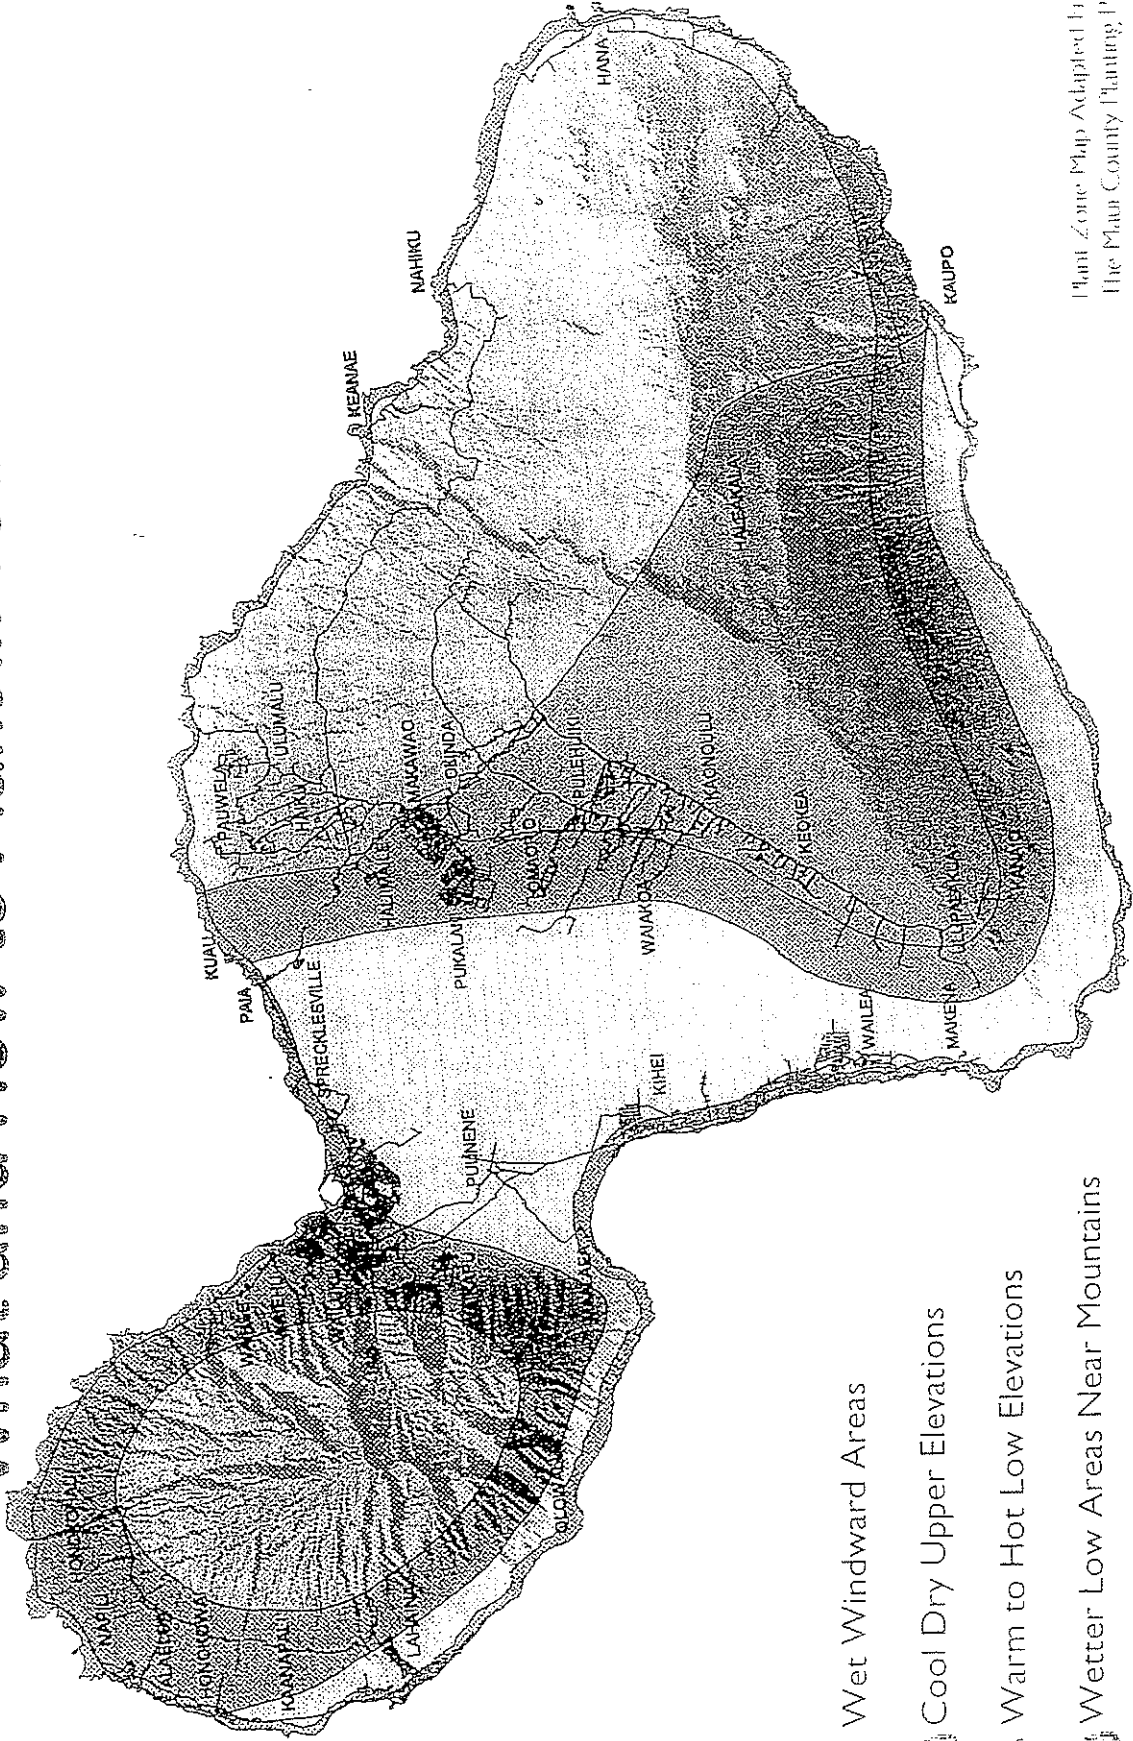

### LANDSCAPES

- ☞ Understand your system: Develop a schematic of all water entry points. Know where your faucets, time clocks, solenoids, booster pumps, sprinklers, bubblers, valves, pipes and etc. are located.
- ☞ Make a checklist of system elements and check each one regularly for leaks! Finding and repairing leaks can lead to big savings, especially in irrigation systems!
- ☞ Use turf only where actually necessary. Avoid turf except in picnic or active play areas.
- ☞ Choose the right plants. Native plants appropriate for your region are best. These save water, because they are adapted to survive on the natural rainfall of the area. Besides saving water, they also help to avoid the spread of invasive alien plant species which can destroy native ecosystems. And they contribute to the true Hawaiian sense of place.
- ☞ Avoid over-watering! Use soil moisture over-rides and rain-shutoffs on all automated systems. Reset controllers at least once per month to account for changing evapotranspiration.
- ☞ Zone your plants. This means that plants with similar water needs should be grouped together. This avoids wasting water, overwatering some plants and under-watering others.
- ☞ Never water during the heat of the day. The best time to water is just around sunrise. Evenings are also acceptable. Once the sun comes up, the evapotranspiration rate soars, and much of your water is wasted.
- ☞ Having your soil tested also helps you to learn what type of watering is needed. Clay soils take from 1/4 to 1/2" of water per hour before water starts running off and being wasted. Sandy soils require somewhat more frequent, shorter watering.
- ☞ Mulch, compost or other organic material will help soils hold moisture, keep the ground from overheating and discourage weeds. Loosening the soil while you add the organic matter will also help keep your lawn healthier.
- ☞ Root feeder or water aerator probes around trees and bushes will help to direct water where it is needed. You can also build a watering basin in the soil around the base of your plants to help the water soak in deeply.

Shoebuttan ardisia	<i>Ardisia elliptica</i>	Myrsinaceae
banana poka	<i>Passiflora mollissima</i>	Passifloraceae

## Selection

As a general rule, it is best to select the largest and healthiest specimens. However, be sure to note that they are not pot-bound. Smaller, younger plants may result in a low rate of plant survival.<sup>1</sup> When selecting native species, consider the site they are to be planted in, and the space that you have to plant. For example: Mountain species such as koa and maile will not grow well in hot coastal areas exposed to strong ocean breezes. Lowland and coastal species such as wiliwili and Kou require abundant sunshine and porous soil. They will not grow well with frequent cloud cover, high rainfall and heavy soil.

Consider too, the size that the species will grow to be. It is not wise to plant trees that will grow too large.<sup>2</sup> Overplanting tends to be a big problem in the landscape due to the underestimation of a species' height, width or spread.

A large, dense canopied tree such as the kukui is a good shade tree for a lawn. However, it's canopy size and density of shade will limit what can be planted in the surrounding area. Shade cast by a koa and ohia lehua is relatively light and will not inhibit growth beneath it.

Keep seasons in mind when you are selecting your plants. Not all plants look good year round, some plants such as ilima will look scraggly after they have flowered and formed seeds. Avoid planting large areas with only one native plant. Mixing plants which naturally grow together will ensure the garden will look good all year round.<sup>3</sup> Looking at natural habitats helps to show how plants grow naturally in the landscape.

When planting an area with a mixed-ecosystem, keep in mind the size and ecological requirements of each plant. Start with the hardiest and most easily grown species, but allow space for fragile ones in subsequent plantings.

## Acquiring natives

Plants in their wild habitat must be protected and maintained. It is best and easiest to get your plants from nurseries (see list), or friend's gardens. Obtain proper permits from landowners and make sure you follow a few common sense rules:

- ▶ collect sparingly from each plant or area.
- ▶ some plants are on the state or Federal Endangered Species list. Make sure you get permits (see app. A,B)

---

<sup>1</sup> K. Nagata, P.6

<sup>2</sup> K. Nagata, P.9

<sup>3</sup> Nagata, P.9

## Soil

Once you have selected your site and the plants you wish to establish there, you must look at the soil conditions on the site. Proper soil is necessary for the successful growth of most native plants, which perform poorly in hard pan, clay or adobe soils. If natives are to be planted in these types of soil, it would be wise to dig planting holes several times the size of the rootball and backfill with 50-75% compost.<sup>4</sup> A large planting hole ensures the development of a strong root system. The plant will have a headstart before the roots penetrate the surrounding poor soil.<sup>5</sup>

It is recommended that native plants not be planted in ground that is more dense than potting soil. If there is no alternative, dig a hole in a mound of soil mixed with volcanic cinder which encourages maximum root development. Fill the hole with water, if the water tends to puddle or drain too slowly, dig a deeper hole until the water does not puddle longer than 1 or 2 minutes.<sup>6</sup> Well-drained soil is one of the most important things when planting natives as you will see in the next section.

## Irrigation

Most natives do very poorly in waterlogged conditions. Do not water if the soil is damp. Water when the soil is dry and the plants are wilting. Once established, a good soaking twice a week should suffice. Deep soaking encourages the development of stronger, and deeper root systems. This is better than frequent and shallow watering which encourage weaker, more shallow root systems.

The following is a watering schedule from Kenneth Nagata's Booklet, *How To Plant A Native Hawaiian Garden*:

### WATER REQUIREMENT

Heavy  
Moderate  
Light

### WATERING FREQUENCY

3x / week  
2x / week  
1x / week

Red clay soils hold more water for a longer period of time than sandy soils do. If your area is very sunny or near a beach, things will dry out faster. Even in the area of one garden, there are parts that will need more or less water. Soils can vary and amount of shade and wind differ. After plants are established (a month or two for most plants, up to a year for some trees), you can back off watering.

---

<sup>4</sup> Nagata, p. 6

<sup>5</sup> Nagata, p. 8

<sup>6</sup> Nagata, p. 8

Automatic sprinkler systems are expensive to install and must be checked and adjusted regularly. Above-ground systems allow you to monitor how much water is being put out, but you lose a lot due to malfunctioning of sprinkler heads and wind. The most efficient way to save water and make sure your plants get enough water, is to hand-water. This way you are getting our precious water to the right places in the right amounts.<sup>7</sup>

## Fertilizer

An all-purpose fertilizer 10-10-10 is adequate for most species. They should be applied at planting time, 3 months later, and 6 months thereafter. Use half the dosage recommended for ornamentals and pay special attention to native ferns which are sensitive to strong fertilizers. Use of organic composts and aged animal manures is suggested instead of chemical fertilizers. In addition, use of cinders for providing trace minerals is strongly recommended.<sup>8</sup>

Natives are plants which were here hundreds of years before the polynesians inhabited the Hawaiian Islands. They were brought here by birds, or survived the harsh ocean conditions to float here. They are well-adapted to Hawaii's varying soil and environmental conditions. This is why they make prime specimens for a xeriscape garden. However, natives will not thrive on their own, especially under harsh conditions. On the other hand, like any other plant, if you over-water and over-fertilize them, they will die. Follow the instructions given to you by the nursery you buy the plant from, or from this booklet. Better yet, buy a book (suggested readings can be found in the bibliography in the back of this pamphlet), read it, and learn more about native plants. I guarantee that you will be pleased with the results.

---

<sup>7</sup> Bornhorst, p. 19-20

<sup>8</sup> Nagata, p. 6

## Propagation

There are many ways to propagate and plant-out native Hawaiian species. One of the most thorough and helpful book is Heidi Bornhorst's book, *Growing Native Hawaiian Plants*. The easiest, and best way to obtain natives for the novice gardener is to get them from a reputable nursery (see appendix c). That way all you will have to do is know how to transplant (if necessary) and plant-out when you are ready. These are the two methods I have listed here.

### Transplanting

1. Use pots that are one size bigger than the potted plant is in
2. Get your potting medium ready

Good potting medium is a ½, ½ mixture of peat moss and perlite. If the plant is from a dry or coastal area, add chunks of cinder or extra perlite. If it is a wet forest species, add more peat moss or compost. Be aware that peat moss is very acidic and certain plants react severely to acidity.

If the plant is to eventually be planted into the ground, make a mix of equal parts peat moss, perlite, and soil from the area in which the plant is to be planted. Slow-release fertilizer can be mixed into the potting medium.

3. Once pots, potting medium, fertilizer and water are ready, you can begin re-potting. Keep the plant stem at the same depth it was in the original pot. Avoid putting the plant in too large a pot, as the plant may not be able to soak up all the water in the soil and the roots may drown and rot.

Mix potting medium and add slow-release fertilizer at this time. Pre-wet the medium to keep dust down and lessen shock to the plant. Put medium in bottom of pot. Measure for the correct depth in the new pot. Make sure there is from ½ to 2 inches from the top of the pot so the plant can get adequate water. Try to stand the plant upright and center the stem in the middle of the pot.

Water the plant thoroughly after transplanting. A vitamin B-1 transplanting solution can help to lessen the transplant shock. Keep the plant in the same type of environment as it was before, sun or shade. If roots were broken, trim off some of the leaves to compensate for the loss.<sup>9</sup>

### Planting out

1. Plant most native Hawaiian plants in a sunny location in soil that is well-drained.
  2. Make the planting hole twice as wide as the root ball or present pot, and just as deep.
- If the soil is clay-like, and drains slowly, mix in some coarse red or bland cinder, coarse perlite or

---

<sup>9</sup> Bornhorst, p.20-21

coarse compost. Place some slow-release fertilizer at the bottom of the hole.

3. Carefully remove the plant from the container and place it in the hole. The top of the soil should be at the same level as the top of the hole, if it is too high or too low, adjust the soil level so that the plant is at the right depth.

4. Water thoroughly after you transplant.

## Mulch

Most natives cannot compete with weeds, and therefore must be weeded around constantly in order to thrive. Mulch is a practical alternative, which discourages and prevents weeds from growing.

Hawaii's hot, humid climate leads to the breaking down of organic mulches. Thick organic mulches such as wood chips and leaves, may also be hiding places for pests.

Stone mulches are attractive, permanent and can help to improve soil quality. Red or black cinder, blue rock chips, smooth river rocks and coral chips are some natural choices.<sup>10</sup> Macadamia nut hulls are also easy to find and can make a nice mulch.<sup>11</sup>

Never pile up mulch right next to the stem or trunk of a plant, keep it a few inches away.

---

<sup>10</sup> Bornhorst, p. 24

<sup>11</sup> Nagata, p. 7

## ZONES

The Maui County Planting Plan has compiled a system of 5 zones of plant growth for Maui County. The descriptions of zones and maps for these zones are as follows:

### Zone 1:

Wet areas on the windward side of the island. More than 40 inches of rain per year. Higher than 3,000 feet.

### Zone 2:

Cool, dry areas in higher elevations (above 1,000 feet). 20 to 40 inches of rain per year.

### Zone 3:

Low, drier areas, warm to hot. Less than 20 inches of rain per year. Sea level to 1,000 feet.

### Zone 4:

Lower elevations which are wetter due to proximity of mountains. 1,000 to 3,000 feet.

### Zone 5:

Salt spray zones in coastal areas on the windward side.

These zones are to be used as a general guide to planting for Maui County. In addition to looking at the maps, read the descriptions of the zones and decide which zone best fits your area. Plants can be listed in more than one zone and can be planted in a variety of conditions. For best results, take notes on the rainfall, wind, sun and salt conditions of your site. Use the zones as a general guide for selection and read about the plants to decide which best fits your needs as far as care and or function.

## PLACES TO SEE NATIVES ON MAUI:

The following places propagate native Hawaiian plants from seeds and/or cuttings. Their purpose is to protect and preserve these native plants. Please contact them before going to view the sites, they can provide valuable information and referral to other sources.

1. Hoolawa Farms 575-5099  
P O Box 731  
Haiku HI 96708
2. The Hawaiian Collection 878-1701  
1127 Manu Street  
Kula HI 96790
3. Kula Botanical Gardens 878-1715  
RR4, Box 228  
Kula HI 96790
4. Maui Botanical Gardens 249-2798  
Kanaloa Avenue, Kahului  
across from stadium
5. Kula Forest Reserve 984-8100  
access road at the end of Waipoli Rd  
Call the Maui District Office
6. Wailea Point, Private Condominium residence 875-9557  
4000 Wailea Alanui, Kihei  
public access points at Four Seasons Resort or  
Polo Beach
7. Kahanu Gardens, National Tropical Botanical Garden 248-8912  
Alau Place, Hana HI 96713
8. Kahului Library Courtyard 873-3097  
20 School Street  
Kahului HI 96732

## PLACES TO BUY NATIVE PLANTS ON MAUI

1. Ho'olawa Farms  
Anna Palomino  
P O Box 731  
Haiku HI 96708  
575-5099  
  
\* The largest and best collection of natives in the state. They will deliver, but worth the drive to go and see! Will propagate upon request
2. Kahanu Gardens  
National Tropical Botanical Garden  
Alau Place, Hana  
248-8912
3. Kihana Nursery  
1708 South Kihei Road  
Kihei HI 96753  
879-1165
4. Kihei Garden and Landscape  
Waiko Road, Wailuku  
P O Box 1058  
Puunene HI 96784  
244-3804
5. Kula Ace Hardware and Nursery  
3600 Lower Kula Road  
Kula HI 96790  
876-0734  
\* many natives in stock  
\* get most of their plants from Ho'olawa Farms  
\* they take special requests
6. Kulamanu Farms - Ann Carter  
Kula HI 96790  
878-1801
7. Maui Nui Botanical Gardens  
Kanaloa Avenue  
(Across from stadium)  
Kahului HI 96732  
249-2798
8. Native Gardenscapes  
Robin McMillan  
1330 Lower Kimo Drive  
Kula HI 96790  
870-1421  
  
\* grows native plants and installs landscapes including irrigation.
9. Native Hawaiian Tree Source  
1630 Piihola Road  
Makawao HI 96768  
572-6180
10. Native Nursery, LLC  
Jonathan Keyser  
250-3341
11. New Moon Enterprises - Pat Bily  
47 Kahoea Place  
Kula HI 96790  
878-2441
12. Waiakoa Tree Farm - Kua Rogoff  
Pukalani HI 96768  
Cell - 264-4166

SUBJECT: Proposed Ka Lima O Maui Affordable Housing Project, TMK (2)3-8-046:016, Wailuku, Maui, Hawaii

Dear Mr. Eng:

Thank you for your letter dated December 16, 2009, responding to our request for early consultation comments on the subject project. On behalf of the applicant, Ka Lima O Maui, we wish to provide the following information in response to your comments presented in the same order of your letter.

**Response to Comment Regarding Source Availability and Consumption:**

Information regarding potable and non-potable water demand for the proposed project will be included in the Draft Environmental Assessment (EA). The Section 201H-38, Hawaii Revised Statutes (HRS), application will seek an exemption from Chapter 14.12 pertaining to the County's water availability policy.

**Response to Comment Regarding System Infrastructure:**

We note your comment that the project site is served by a 12-inch waterline and one fire hydrant located approximately 70 feet to the north. We also confirm that domestic, irrigation and fire flow calculations will be submitted during the building permit process for the project. Your comment regarding the requirement of the backflow preventer has been forwarded to the applicant and their civil engineer.

**Response to Comment Regarding Conservation and Pollution Prevention:**

The suggested water conservation measures will be forwarded to the applicant for the review and possible incorporation into the project plans and landscaping design of the project. Best Management Practices (BMPs) will be utilized for the project.

Thank you for your comments. Once completed, a copy of the Draft EA will be provided to your office for review and comment. Should you have any questions, please do not hesitate to contact me at 244-2015.

Very truly yours,

Colleen Suyama  
Project Manager

Subject: Proposed Ka Lima O Maui Affordable Housing Project  
Mahalani Street  
Wailuku, Maui, Hawaii  
Tax Map Key: (2) 3-8-046:016

Dear Ms. Mukai,

Thank you for allowing us to comment on the proposed subject project.

In reviewing our records and the information received, Maui Electric Company (MECO) may be requiring access and electrical easements for our facilities to serve the subject project site. If the customer plans to add any additional electrical load to our system, we highly encourage the customer to submit an electrical service request so that any new service or service upgrade can be provided on a timely basis.

Should you have any questions or concerns, please call me at 871-2340.

Sincerely,

A handwritten signature in black ink, appearing to read "R. Okazaki". The signature is fluid and cursive, written over a faint horizontal line.

SUBJECT: Proposed Ka Lima O Maui Affordable Housing Project, TMK (2)3-8-046:016, Wailuku, Maui, Hawaii

Dear Mr. Okazaki:

Thank you for your letter dated December 16, 2009, responding to our request for early consultation comments on the subject project. Your comments have been forwarded to the applicant. As the project progresses through the permitting process, the applicant will coordinate with Maui Electric Company their electrical needs.

We appreciate the input from your office. A copy of the Draft Environmental Assessment will be provided for your review and comment. Should you have any questions, please do not hesitate to contact me at 244-2015.

Very truly yours,

Attention: Erin Mukai, Planner

Subject: Proposed Ka Lima O Maui Affordable Housing Project  
TMK: (2) 3-8-046:016 (Parcel 16)

Dear Erin,

Thank you for allowing us to review and comment on the subject project. Your plans have been received and put on file.

Hawaiian Telcom, Inc. has no comment, nor do we require any additional information at this time.

Should you require further assistance, please call me at 242-5107.

Sincerely,

Tom Hutchison  
OSP Engineer

**Re: Draft Environmental Assessment**  
**Ka Lima o Maui Affordable Housing Project**  
**Wailuku, Island of Maui**

Aloha e Deputy Director Ridao,

The Office of Hawaiian Affairs is in receipt of your December 6, 2010 request for comments on a draft environmental assessment (DEA) for the proposed "Ka Lima o Maui Affordable Housing Project" (project) on the Island of Maui. The project will involve construction of two 3,000 square foot buildings with eight (8) single occupancy, one-bedroom apartments each (a total of 16 residential units) on two acres of land. Renovation of an existing 2,500 square foot building and construction of a new building will provide 3,600 square feet of office space and 3,600 square feet of storage space.

The 16 residential units will be developed as 100% affordable and provided to qualified applicants. Ka Lima o Maui (applicant) intends to process the project via a §201H-38, Hawaii Revised Statutes application (201H application) which will request seven exemptions (listed in Attachment 7 of the DEA) from the requirements of the Maui County Code. The 201H application will allow the applicant to have administrative offices and storage space to support its operations in close proximity to their clients an area zoned for residential use. The applicant provides a wide range of services to clients with disabilities and/or who are economically challenged. These services include education, job training, employment support, recreation and cultural outings.

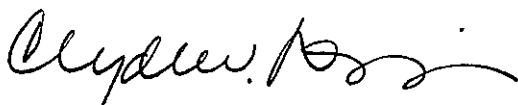

OHA concurs with the "finding of no significant impact" determination within the DEA and we have no objections to the 201H application. OHA applauds the applicant for providing affordable housing opportunities and much needed services to the community.

JoAnn Ridao, Deputy Director  
Department of Housing and Human Concerns  
December 22, 2010  
Page 2 of 2

We are aware that the project is situated within the "Pu'uone Sand Dunes" (sand dunes), which stretch across Central Maui. Numerous iwi kūpuna have been encountered during projects within these sand dunes and the DEA details that a cultural preserve containing burials is situated on an adjacent property. With this in mind, we urge caution during ground disturbance within the project area. Should iwi kūpuna be identified, all work in the area of their discovery must immediately stop and the appropriate agencies notified pursuant to applicable laws.

Thank you for the opportunity to provide comments. Should you have any questions or concerns, please contact Keola Lindsey at 594-0244 or keolal@oha.org.

'O wau iho nō me ka 'oia'i'o,

Clyde W. Nāmu'o

**SUBJECT:** Comments on the Draft Environmental Assessment (EA) and Section 201H-38, Hawaii Revised Statutes Application for the Ka Lima O Maui Affordable Housing Project at TMK (2) 3-8-046:016, Wailuku, Maui, Hawaii

Dear Mr. Nāmu`o:

On behalf of the applicant, Ka Lima O Maui, Ltd., we thank you for your letter of December 22, 2010. We appreciate your concurrence with the "finding of no significance impact" determination and your support of the 201H application.

Through copy of this letter the applicant is aware of your cautionary comments regarding ground disturbance within the project area. In the event iwi kupuna or Native Hawaiian cultural or traditional deposits are found, construction work will immediately cease in the vicinity of the find and appropriate mitigative protocols will be implemented in coordination with the State Historic Preservation Division.

If additional information or clarification is required, please do not hesitate to contact me at (808) 244-2015.

Very truly yours,

Colleen Suyama  
Senior Associate

Dear Ms. Ridao:

**Subject: Comments on Draft Environmental Assessment (EA) and  
201H-38 Affordable Housing Application for the  
Ka Lima O Maui Affordable Housing Project  
Wailuku, Island of Maui, Hawaii**

The Department of Health (DOH), Clean Water Branch (CWB), has reviewed the subject document and has no comments at this time. The DOH-CWB provided early consultation comments for the preparation of the DEA for this project (Letter No. 12022PDCL.09, dated December 4, 2009) to Munekiyo & Hiraga, Inc. Enclosed is a copy of this letter for your use.

As a reminder, all discharges related to the project construction or operation activities, whether or not National Pollutant Discharge Elimination System permit coverage and/or Section 401 Water Quality Certification are required, must comply with the Water Quality Standards. Noncompliance with water quality requirements contained in HAR, Chapter 11-54, and/or permitting requirements, specified in HAR, Chapter 11-55, may be subject to penalties of \$25,000 per day per violation.

If you have any questions, please visit our website at <http://www.hawaii.gov/health/environmental/water/cleanwater/index.html>, or contact the Engineering Section, CWB, at (808) 586-4309.

Sincerely,

for ALEC WONG, P.E., CHIEF  
Clean Water Branch

Dear Mr. Wong:

On behalf of the applicant, Ka Lima O Maui, Ltd., we thank you for your letter of December 22, 2010. In response to your comments, we have the following comments:

1. We acknowledge the proposed development is required to comply with Hawaii Administrative Rules, Chapters 11-54 and 11-55.
2. As may be required, a National Pollutant Discharge Elimination System (NPDES) permit will be submitted to the Department of Health (DOH) and that a NPDES individual permit may be required.

If additional information or clarification is required, please do not hesitate to contact me at (808) 244-2015.

Ms. JoAnn Ridao, Deputy Director  
Department of Housing and Human Concerns  
One Main Plaza  
2200 Main Street, Suite 546  
Wailuku, Hawaii 96793

Dear Ms. Ridao:

Subject: Draft Environmental Assessment and 201H-38 Affordable Housing Application for  
Proposed Ka Lima O Maui Affordable Housing Project, TMK (2) 3-8-046:016  
Wailuku, Maui, Hawai'i

The Department of Education (DOE) has reviewed the draft environmental assessment (EA) for the proposed Ka Lima O Maui affordable housing project.

This project is within the boundaries of the Central Maui School Impact District that was designated by the Board of Education on November 18, 2010.

The EA states that, except for one unit, the project will consist of single-occupancy dwelling units for adults. According to Hawaii Revised Statutes Chapter 302A-1603(b)(1), any form of housing that permanently excludes school-aged children, with the necessary covenants or declarations of restrictions recorded on the property, is exempt from school impact fees.

In order to exempt the adult single-occupancy dwelling units from paying school impact fees, we would need to see appropriate documentation that school-aged children are permanently excluded.

School impact fees are still required on the remaining dwelling unit. Current multi-family impact fees for the Central Maui School Impact District in the Wailuku Cost Area are \$2,153 in construction fees and \$3,220 as a fee-in-lieu of land, for a total of \$5,373 per unit.

Thank you for the opportunity to comment. If you have any questions, please call Jeremy Kwock of the Facilities Development Branch at (808) 377-8301.

Very truly yours,

**SUBJECT: Comments on the Draft Environmental Assessment (EA) and Section 201H-38, Hawaii Revised Statutes Application for the Ka Lima O Maui Affordable Housing Project at TMK (2) 3-8-046:016, Wailuku, Maui, Hawaii**

Dear Ms. Matayoshi:

On behalf of the applicant, Ka Lima O Maui, Ltd., we thank you for your letter of December 27, 2010. In response to your comments, we have the following comments:

1. Prior to issuance of a building permit for the project we will forward appropriate documentation that school-aged children are permanently excluded from the project in order to document the project is exempt from Chapter 302A-1603(b)(1).
2. We acknowledge a school impact fee will be required for the on-site manager's unit.

If additional information or clarification is required, please do not hesitate to contact me at (808) 244-2015.

Dear Ms. Ridao:

**Subject: Draft Environmental Assessment and 201H-38 Affordable Housing Application for the Ka Lima O Maui Affordable Housing Project**  
**TMK: (2) 3-8-046:016, Wailuku, Maui, Hawaii**

Thank you for the opportunity to review this project. We have the following comments to offer:

1. National Pollutant Discharge Elimination System (NPDES) permit coverage maybe required for this project. The Clean Water Branch should be contacted at 808 586-4309.
2. The noise created during the construction phase of the project may exceed the maximum allowable levels as set forth in Hawaii Administrative Rules (HAR), Chapter 11-46, "Community Noise Control." A noise permit may be required and should be obtained before the commencement of work.

It is strongly recommended that the Standard Comments found at the Department's website: <http://hawaii.gov/health/environmental/env-planning/landuse/landuse.html> be reviewed, and any comments specifically applicable to this project should be adhered to.

**SUBJECT: Comments on the Draft Environmental Assessment (EA) and Section 201H-38, Hawaii Revised Statutes Application for the Ka Lima O Maui Affordable Housing Project at TMK (2) 3-8-046:016, Wailuku, Maui, Hawaii**

Dear Ms. Kitkowski:

On behalf of the applicant, Ka Lima O Maui, Ltd., we thank you for your letter of December 28, 2010. In response to your comments, we have the following comments:

1. As applicable, a National Pollutant Discharge Elimination System (NPDES) permit coverage will be obtained for the project prior to initiation of construction.
2. As applicable, in accordance with Hawaii Administrative Rules, Chapter 11-46, "Community Noise Control", a noise permit will be obtained.
3. As recommended, by copy of this letter the applicant has been notified of the standard comments available on the Department's webpage.

If additional information or clarification is required, please do not hesitate to contact me at (808) 244-2015.

Very truly yours,

Colleen Suyama  
Senior Associate

Dear Ms. Ridao:

Subject: Ka Lima O Maui Affordable Housing Project  
Draft Environmental Assessment (DEA) and 201H-38 Affordable Housing Application

The State Department of Transportation (DOT) previously commented on the subject case during the early consultation period in its letter STP 8.0005 dated January 7, 2010 (see Section IX of the DEA).

The DOT Highways Division Planning Branch is still reviewing the subject project. Until this review is completed, DOT's prior comments remain valid.

DOT appreciates the opportunity to provide comments. If there are any other questions, including the need to meet with DOT Highways Division staff, please contact Mr. David Shimokawa of the DOT Statewide Transportation Planning Office at (808) 831-7976.

Very truly yours,

Dear Ms. Shishido,

**SUBJECT: KA LIMA O MAUI AFFORDABLE HOUSING PROJECT  
DRAFT ENVIRONMENTAL ASSESSMENT AND  
201H-38 AFFORDABLE HOUSING APPLICATION  
TMK (2) 3-8-046:016, WAILUKU**

We reviewed the subject project as a pre-application consultation and have the following comments:

1. Solid Waste Division comments:
  - a. Address construction waste disposal/recycling issues.
2. Wastewater Reclamation Division (WWRD) comments:
  - a. Although wastewater system capacity is currently available as of 1/12/2011, the developer should be informed that wastewater system capacity cannot be ensured until the issuance of the building permit.
  - b. Wastewater contribution calculations are required before building permit is issued.
  - c. Developer shall pay assessment fees for treatment plant expansion costs in accordance with ordinance setting forth such fees. The property is located in the Wailuku Sewer Service Area.
  - d. Developer is required to fund any necessary off-site improvements to collection system and wastewater pump stations.

January 10, 2011

- e. Plans should show the existing single service lateral for the subject property that will service the subject facilities.
- f. Plans shall show the existing property sewer service manhole near the property line. If a property sewer service manhole does not exist, one shall be installed.
- g. Commercial kitchen facilities within the proposed project shall comply with pre-treatment requirements (including grease interceptors, sample boxes, screens etc.)
- h. Non-contact cooling water and condensate should not drain to the wastewater system.

If you have any questions regarding this memorandum, please contact Mike Miyamoto at 270-8230.

Sincerely,

KYLE K. GINOZA, Director

MICHELE CHOUTEAU McLEAN  
Deputy Director

JAN 13 2011

COUNTY OF MAUI  
**DEPARTMENT OF PLANNING**

January 13, 2011

Mrs. JoAnn Ridao, Director  
Dept. of Housing & Human Concerns  
One Main Plaza, Suite 546  
2200 Main Street  
Wailuku, Hawaii 96793

Dear Mrs. Ridao:

**SUBJECT: DRAFT ENVIRONMENTAL ASSESSMENT (DEA) COMMENTS REGARDING THE PROPOSED KA LIMA O MAUI AFFORDABLE HOUSING PROJECT, TO BE CONSTRUCTED ALONG MAHALANI STREET, WAILUKU, ISLAND OF MAUI, HAWAII; TMK: (2) 3-8-046:016 (EAC 2010/0019)**

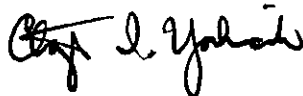

The Department of Planning (Department) is in receipt of your letter, dated December 6, 2010, regarding the above-referenced project. The Department understands that Ka Lima O Maui is proposing to develop a 100 percent (100%) affordable housing project on a 2-acre property for Maui's population of disabled and/or economically challenged individuals. The project consists of constructing two (2) 3,000 square foot (sf) residential buildings containing eight (8) single-occupancy, one-bedroom apartments in each building. The project also involves the renovation of an existing 2,500 sf building and construction of a new building that will provide 3,600 sf of office space, and 3,600 sf of storage and garage space.

The Department understands that the Applicant seeks to process this proposal under Section 201H-038, Hawaii Revised Statutes, and will ask for exemptions to some of the County's Title 19 standards, like offices and multi-family uses not permitted in the R-3 Zoning District. The Department advises the Applicant that if the project is not processed under Section 201H-038, then the project will need either a Change in Zoning (CIZ), or a County Special Use Permit (CUP) in order to operate as proposed as the property is currently zoned R-3 Residential by the County and offices and multi-family uses are not permitted.

Mrs. JoAnn Ridao  
January 13, 2011  
Page 2

Thank you for the opportunity to comment on the proposed project. Should you require further clarification, please contact Staff Planner Joseph Prutch at (808) 270-77512 or by email at [joseph.prutch@mauicounty.gov](mailto:joseph.prutch@mauicounty.gov).

Sincerely,

FROM : DARRELL RAMOS, ADMINISTRATIVE SERGEANT, WAILUKU PATROL DIVISION *12/15/10*  
SUBJECT : RESPONSE TO AN EARLY CONSULTATION REQUEST FOR THE DRAFT ENVIRONMENTAL ASSESMENT FOR THE KA LIMA O MAUI AFFORDABLE HOUSING PROJECT

This communication is submitted as a response to a request for pre-consultation comments by Munekiyo and Hiraga, Inc., Senior Associate Colleen SUYAMA, regarding:

SUBJECT : EARLY CONSULTATION REQUEST FOR DRAFT ENVIRONMENTAL ASSESMENT FOR THE KA LIMA O MAUI AFFORDABLE HOUSEING PROJECT  
LOCATION : WAILUKU MAUI  
TMK : (2) 3-8-046:016

## POLICE PROTECTION :

In review of the information provided, police protection for the project, which will be located within the existing Wailuku-Kahului urban core, does not extend service area limits for emergency services. The proposed project will not adversely affect the service capabilities for emergency services.

## ROADWAYS:

The Wailuku-Kahului region is served by a roadway network which includes arterial, collector and local roads. Existing roadways in the vicinity of the project site include Kaahumanu Avenue to the north, Maui Lani Parkway to the west and Mahalani Street to the east.

Kaahumanu Avenue is the principal linkage between Wailuku and Kahului. Kaahumanu Avenue is a 4 lane, divided highway with a raised median. Exclusive left turn lanes are provided in the median of Kaahumanu Avenue and right-turn acceleration and deceleration lanes are provided at selected access locations. The posted speed limit for Kaahumanu Avenue in the vicinity is 45 MPH.

Maui Lani Parkway is a 4 lane, divided roadway completed between Kaahumanu Avenue and Waiinu Road. This existing segment is an initial phase of a roadway that will, in the future, extend to Kuihelani Highway providing an alternative route to Kaahumanu Avenue. The existing configuration provides an alternative path the High Street/Main Street route through Wailuku Town for vehicle travelling between areas located south of Wailuku and areas to the east of Wailuku. Maui Lani Parkway also serves as an

alternative access to Mahalani Street. It is anticipated that Maui Lani Parkway will be dedicated to the County of Maui in the future.

**REPONSE:**

In review of the submitted documents, concerns from the police perspective are upon the safety of pedestrian and vehicular movement.

The information contained in the provided data has no impact or concerns from the law enforcement perspective. No objections to this request at this time.

*Concern  
12/10/10 0930*

Respectfully submitted,

**SUBJECT:** Comments on the Draft Environmental Assessment (EA) and Section 201H-38, Hawaii Revised Statutes Application for the Ka Lima O Maui Affordable Housing Project at TMK (2) 3-8-046:016, Wailuku, Maui, Hawaii

Dear Chief Yabuta:

On behalf of the applicant, Ka Lima O Maui Ltd. (Ka Lima), we thank you for your letter of December 15, 2010. In response to your comments, please be advised that pedestrian and vehicular movements on the public roadways should not be impacted by the proposed affordable housing project since the residents will be adults serviced by Ka Lima who will most likely take public transportation and whose services are located onsite.

If additional information or clarification is required, please do not hesitate to contact me 244-2015.

Very truly yours,

Colleen Suyama

## ABSTRACT

Xamanek Researches, LLC conducted an Archaeological Assessment for 2 acres of land on Tax Map Key (TMK) 3-8-046:016. The subject area is located in Wailuku *Ahupua`a* and District; on the western portion of the central Maui isthmus. The subject and surrounding area is comprised of a network of Aeolian sand dunes. Portions of the project area have been previously disturbed by grubbing, grading and development.

Archaeological fieldwork occurred on 25 and 27 November 2010, and follow-up work was conducted on 20 January 2010. Fieldwork consisted of both surface and subsurface investigations throughout the subject area. Subsurface testing included sixteen controlled mechanical Backhoe test Trench (BT) excavations. No historic properties were identified during the course of the archaeological fieldwork. Previously disturbed Native Hawaiian remains were previously identified and preserved in perpetuity on the immediately adjacent parcel. Several additional burial features have been identified throughout the surrounding area.

This study was prepared following the Department of Land and Natural Resources, State Historic Preservation Division Hawai'i Administrative Rules (HAR 13-275-276) and is also in compliance with Maui County guidelines, rules, and recommendations. This report presents data gathered from a combination of background research and field survey results.

Archaeological monitoring is warranted for any potential future clearing, grubbing or grading activities. An archaeological monitoring program shall be established; in order to mitigate any potential future inadvertent discoveries that may occur in the subject area.

## INTRODUCTION

Xamanek Researches, LLC conducted an Archaeological Assessment on two acres of land in Wailuku Ahupua`a in the District of Wailuku on the Island of Maui (Figure 1). The subject area is located on Tax Map Key (TMK) 3-8-046:016 (Figure 2). The parcel is located in a developed portion of land bordering Kahului and Wailuku town within an area commonly referred to as *Sand Hills*.

Portions of the subject area have been previously disturbed by mechanical grubbing, grading, and filling activities. The subsurface deposition throughout the project area is comprised of Aeolian dunes, or wind-blown sand that through weathering, forms into concreted lithified sand. Human burials have been identified throughout the sand dunes over time. The burial discoveries have been identified in several forms: sometimes scattered across the surface, in shallow burial pits, or even elaborate pits excavated through meters of the concreted sand. Because the sand dunes actually move over long periods of time, some burials have been discovered c. 6.5 meters (20 feet) below existing surfaces. Although this assessment did not result in the identification of any archaeological features, there is always the possibility of encountering human skeletal remains throughout the general area. The Site 50-50-04-4728 preservation area, located on an adjacent parcel, contains human remains.

This report presents compiled information on the subject parcel in compliance with archaeological assessment guidelines as set forth in the State Department of Land and Natural Resources Historic Preservation Hawai'i Administrative Rules subsection 13-276-5 (a) and (c). During the fieldwork portion of this assessment, both pedestrian survey and subsurface sampling occurred.

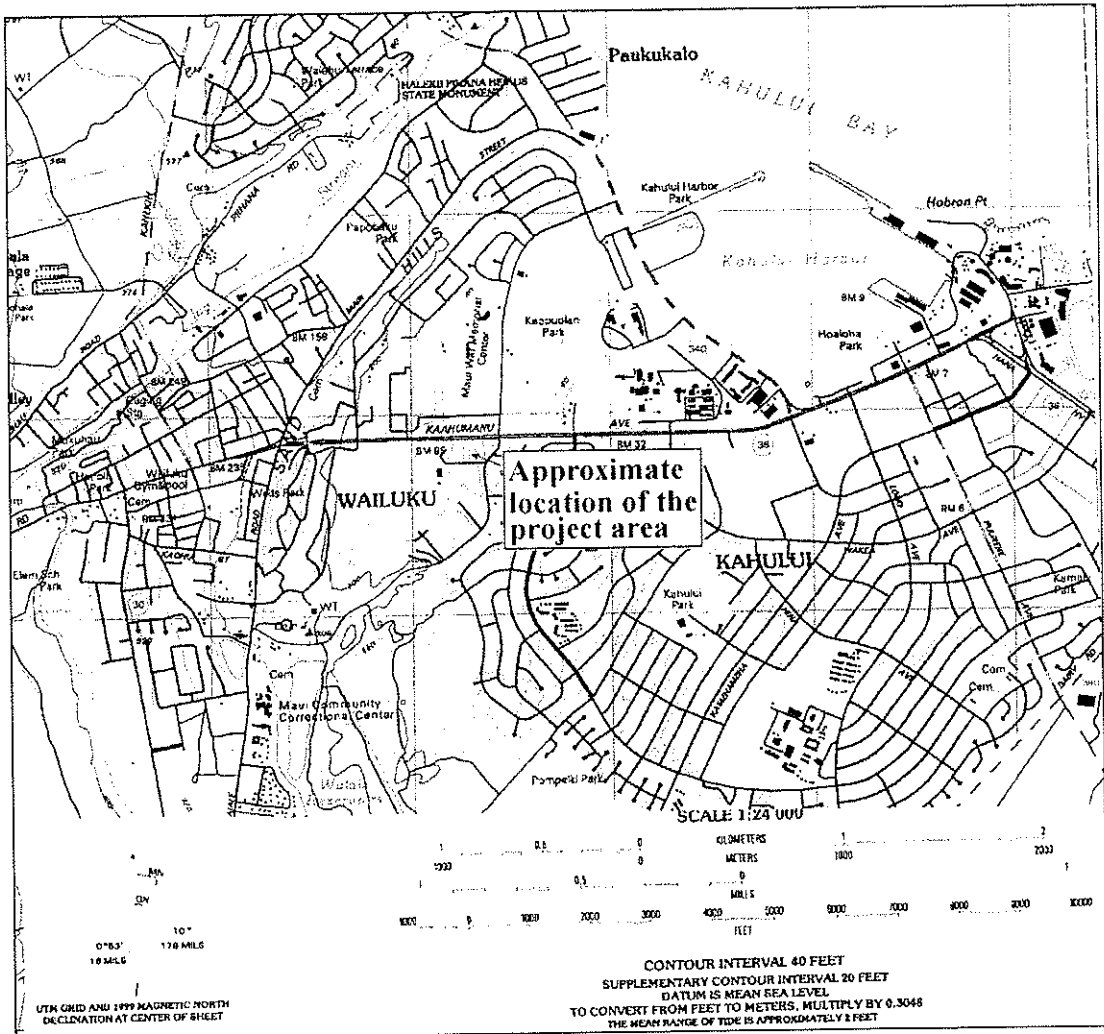

Figure 1: Portion of the U.S Geological Survey topographic map of Wailuku quad showing approximate location of the project area.

## STUDY AREA

### Natural History

The project area lies on the western side of the Kahului Isthmus, below the flank of the West Maui Mountains within an area commonly referred to as *pu'uone* or *sand hills*. The current landowner is Ka Lima O Maui. The area consists of an extensive Aeolian sand dune formation—a large geologic feature that extends at least eight miles from Waiehu through Waikapū. The sandy matrix is underlain by lava flows from Haleakalā and alluvial sediments from the West Maui Mountains (Stearns and Macdonald 1942: 54). Soil classification is Pulehu-Ewa-Jaucas association; further described as “Deep, nearly level to moderately sloping, well-drained and excessively drained soils that have a moderately fine-textured to coarse-textured subsoil or underlying material; on alluvial fans and in basins” (Foote, et.al 1972: 8).

The color of the sand varies from grayish-brown to light brown and golden that generally forms layers of strongly alkaline cemented sand hard pan otherwise known as lithified sand that undulates above and below the surface. Old root molds, or root castings, filled with hard, white alkaline deposits are a common feature in the sand dunes (Ibid., p. 117). *Pu'uone* sands occur on slopes of 7 to 30 degrees, and develop in material derived from coral and seashells (Ibid.).

Annual precipitation in this portion of Maui averages between 20 to 30 inches. The highest monthly rainfall occurs during the winter and spring months. Temperatures range from 60 to 80 degrees Fahrenheit in January to 68 to 90 degrees Fahrenheit in July. Winds are generally trade winds from the northeast, averaging 16 to 18 miles per hour (University of Hawaii, 1983:56).

The project area has been impacted by previous development. Most of the sand dunes in the immediate area have been developed, or partially developed; including the subject area. Previous grubbing, grading, and building has affected the natural environment.

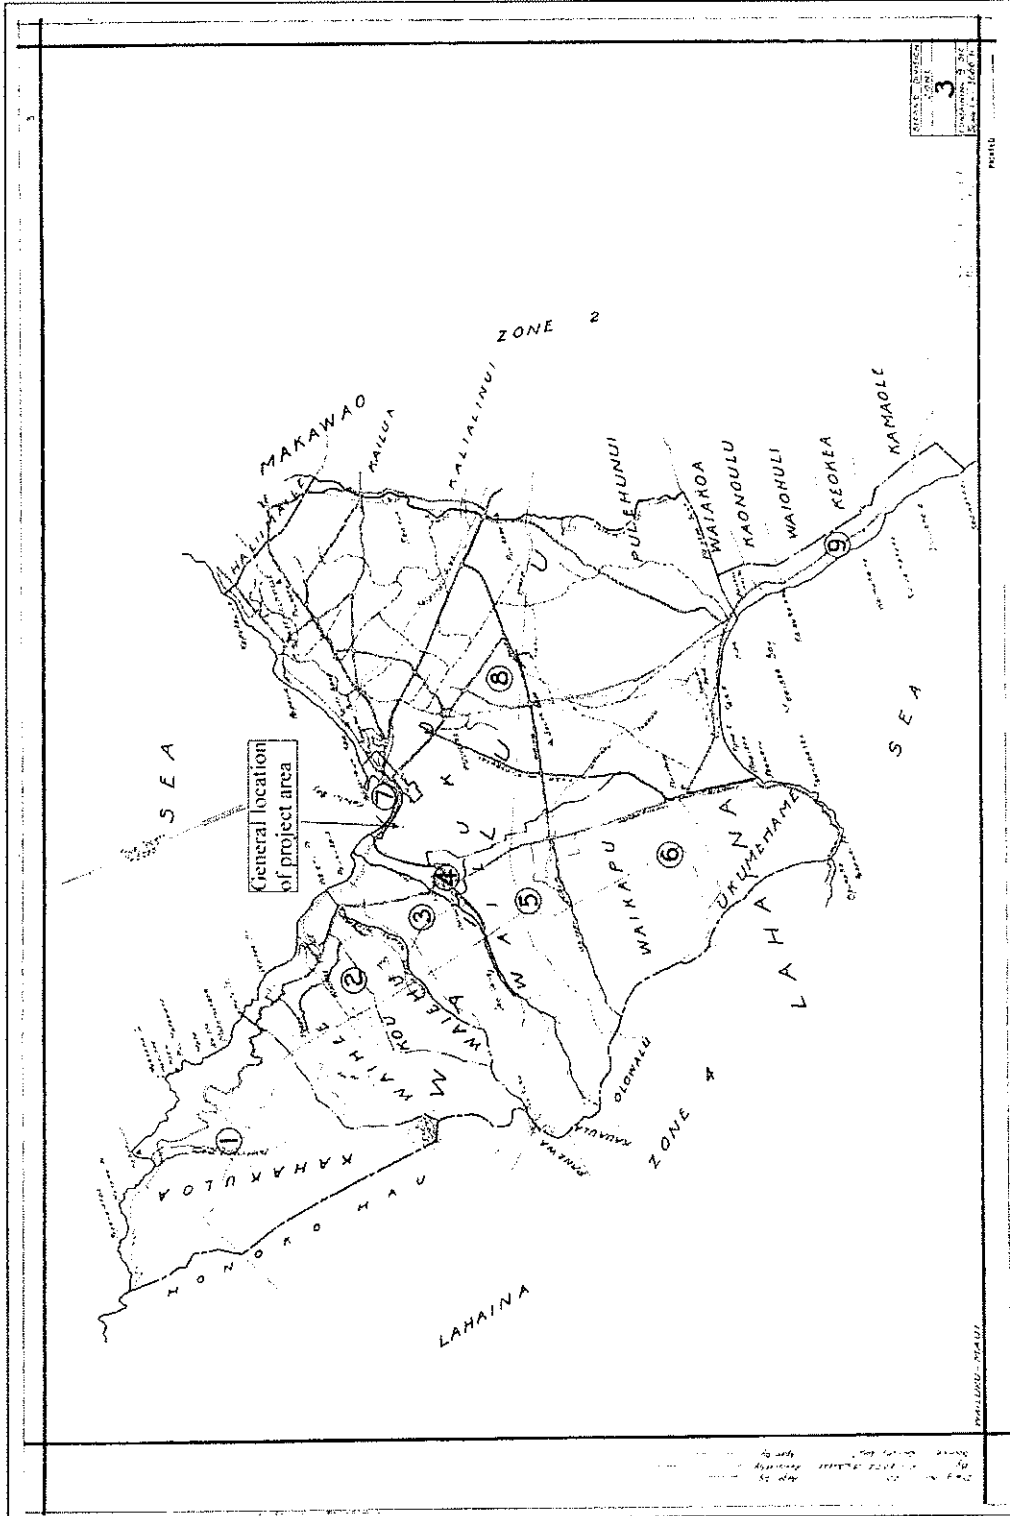

Figure 3: TMK map depicting the present division of the Wailuku District.

## BACKGROUND RESEARCH

### Pre-Contact Period

The *Ahupua'a* of Wailuku is a large land unit stretching around Kahului Bay from Paukūkalo to Kapukaulua. It includes ʻĪao Valley and the northern half of the Kahului Isthmus (Figure 3). ʻĪao Valley is noted as a place where chiefs were buried and wars were fought. Wailuku has been translated as "water of destruction" (Pukui, et. al., 1974: 225).

ʻĪao Valley and the two associated dune formations on the north and south sides of the river constitute the core area of Wailuku. The area is rich with natural and cultural resources. Wailuku was once the religious and political center of Maui culminating during the time of Chief Pi'ilani (approximately 1600 AD). In the late pre-Contact period, warfare increased as the chiefs from Maui, O'ahu and the Big Island struggled for political and military dominance. High Chief Pi'ilani succeeded in unifying the districts, or *moku* of Maui by warfare, but after his death, his sons fought with one another; each hoping to succeed their father as high chief. Eventually Kiha-a-Pi'ilani became victorious, but each following generation of chiefs struggled through warfare in order to secure their positions of political domination (Speakman, 1978: 9-13).

During the reign of the last powerful paramount chief or king of Maui, Kahekili (reigned from 1765 to 1790). Wailuku again became the site of intense warfare. Wailuku was considered to be the capital of Maui, as Kahekili's royal residence, Kalanihale, was located in Wailuku, and surrounded by his retinue.<sup>1</sup> In the mid-1770s, Kalanihale was marched upon by a Big Island chief named Kalani'opu'u and his *alapa* (the name given to his warriors). News of his coming preceded him, and Kahekili hid his warriors in the sand dunes above Haleki'i *heiau* to surprise the invading troops. A fierce battle ensued, and Kalani'opu'u's army was pushed to the sea and slaughtered (Speakman: 16-17).

By 1786, Kahekili controlled Maui, Moloka'i, Lāna'i, and O'ahu. This undisputed political control lasted 4 years. In 1790, Kamehameha the First invaded Kahekili's territory—an action that ended with the infamous battle of Kepaniwai<sup>2</sup> and the defeat of the Maui ruler. The word Kahului can be translated as "the winning", and the Bay takes

<sup>1</sup> The location is said to be located just north of the intersection of High Street and Main Street leading into Iao Valley in Wailuku town.

<sup>2</sup> Kepaniwai means literally "water dam" in reference to Iao Stream, because the stream was choked with human bodies after the slaughter there (Pukui, et. al., 1974, p. 109).

this name because Kamehameha I gathered his warriors there prior to fighting the battle in `Āo Valley (Pukui, et. al., 1974).

## Early Post-Contact Period

The reign of Kamehameha I was intertwined with the increasing presence of foreigners in the Hawaiian Islands. The arrival of Captain Cook offshore at Kahului Bay in 1778 began the steady flow of outside influences that would forever alter the indigenous population and environment. One of the first of these influences came with missionaries, whose charge it was to save the "heathen" souls. The first missionaries arrived in Wailuku in 1832. Reverend Jonathan Green established a girls' seminary known as Central Female Boarding School in 1836, where young Hawaiian women were taught the foreign language, customs and religion.

Another influence to bring change to the Hawaiians was foreign commercialism, which came in the form of mass sugar production. The first sugarcane crops grown in Wailuku *ahupua`a* were harvested and processed around 1828. Kamehameha III, with the help of two Chinese technicians, established a water-powered mill in Wailuku. This was known as Hungtai Sugar Works, and its location was fairly close to the later location of the Wailuku Sugar Mill, which was established in 1862. Hungtai Sugar Works continued to operate until the opening of the new mill.

The population of Wailuku was listed during an 1831-32 missionary census as 2,256; with most of it being in the northern portion, presumably in `Āo Valley (Cordy, 1978: 59).

In Central Maui, on the southern and eastern side of the dunes (Pu`uone Dunes), an early commercial activity took the form of cattle ranching. This sizable area was used for pasturage. By as early as 1845, large herds of cattle were roaming the Kahului Isthmus (cattle had been introduced on the Big Island by Vancouver in 1793). The Maui cattle were under royal *kapu*, so were not to be molested. They were so destructive to the environment that Native Hawaiian landowners protested, but to no avail (Barrere, 1975: 52). In addition to the commercial raising of cattle, there were also other commercial efforts, one being a brief attempt at the production of cotton in the 1830s. This endeavor met with little commercial success however<sup>3</sup>, and further adversely impacted the landscape.

---

<sup>3</sup>The Anglican Church felt that "the Hawaiian people, freed from their service to and dependence on the chiefs should be self-supporting and thought that the encouragement of the manufacture of cloth from the superior cotton which grew luxuriantly in the islands would be a means to that end. They therefore suggested that a manufacturer be sent with sufficient machinery to get the project started. They felt that the people would continue to work with the encouragement and cooperation of the chiefs." (Lemmon et. al., 1973, p. 2.B.3). To this end they sent Miss Lydia Brown in 1835 with "a quantity of domestic spinning apparatus' (presumably spinning wheels and a loom)" (Ibid.), and "charged with the responsibility of teaching the Hawaiian girls the arts of carding, spinning, weaving and knitting locally grown cotton and wool." (Ibid.) As each class grew proficient enough to teach others, a new class was formed (Ibid., 2.B.4).

## Post-1850s Period

After the Māhele (1848), much of the *ahupua`a* of Wailuku was designated as Crown Land, to be used in support of the royal "state and dignity". In 1872, Kamehameha V died, and his sister Princess Ruth Ke`elikolani inherited the land. She was designated as the owner of the *Ka`a* lands of Wailuku, the southern portion of the *ahupua`a*. The *ili* of *Owa* comprised of 743.40 acres, (LCA 420) and was granted to Kuihelani, a steward to Kamehameha I. The much smaller northern section (the *ili* of *Kalua*-LCA 7713, Apana 23--391 acres) was awarded to Princess Ruth's half-sister, Victoria Kamamalu. In 1882, Princess Ruth sold one-half of the Crown Lands of Hawaii to sugar producer, Claus Spreckels, in order to settle her debts with him. Spreckels already held a lease for 16,000 acres of Wailuku *Ahupua`a*, dating from 1878. Worried about what Spreckels might do with half of the Crown Lands, King Kalākaua gave him Land Grant 3343, a 24,000 acre portion of the southeastern section of Wailuku *Ahupua`a*, in return for the surrender of his claim (Adler, 1966: 262-263).

The Reciprocity Treaty of 1876 with the United States gave a boost to the sugar industry by increasing the prices of sugar. The dry eastern part of the *ahupua`a* became attractive as potential sugar land—if only water could be brought to it. In 1880, Spreckels began construction of "Spreckels' Ditch", located *makai* of the Hāmākua Ditch, which had been built earlier by Alexander and Baldwin to water their Maui Agricultural Company's fields in and around Pā`ia. The "Spreckels' Ditch" brought water from Haleakalā farther west onto the arid Kahului isthmus. The ditch was 30 miles long, delivered about 60 million gallons of water a day, and cost \$500,000 to construct.

Spreckels also built another ditch, the Waihe`e ditch in 1882, which tapped the water resources from the West Maui Mountains, thus bringing water to both sides of the Wailuku Commons isthmus area (Adler, 1966: 48-49). These endeavors enabled him, in 1882, to found Hawaiian Commercial and Sugar Company. He continued involvement in that company until 1898, when control was wrested from his hands. The parent company still bears the name of Alexander and Baldwin, the principal participants in the transfer of corporate control. The production of sugar cane continues to be an activity in the isthmus area to this day, although some portions operated by C. Brewer and Company shifted to pineapple production.

The environmental conditions in the lower `Īao Valley, which in pre-Contact times were ideal for agricultural necessary to support a large population, were a wide valley floor, rich alluvial soils, and a constant water supply from `Īao Stream. These combined with the access to Kahului Harbor, rich in marine resources, made this area the prime pre-Contact location on West Maui for a political and religious center. The lower portion of `Īao Valley contained some of the most productive taro land on the island, and the abundance of Land Commission Awards in the lower valley attest to this. There are 66 LCA's, primarily taro patch *kuleana*, and 39 *po`alima* located between the old

Wailuku Mill site and Paukūkalo, on the southern side of `Īao stream. In addition, Kamehameha IV granted 13 awards directly to individual chiefs.<sup>4</sup>

Lower Main Street was built along the route of an old government road, which very likely followed the course of traditional transportation routes from the ocean to the inland portions of `Īao Valley. Many of the LCAs in this area have borders aligned with the road, indicating it was an important transportation corridor at the time the *kuleana* were granted. This corridor follows the natural boundary between the sand dune and the alluvial deposits of the valley. The Kahului Railroad paralleled Lower Main Street, and was one of the earliest known commercial projects that impacted the dune itself (see Figure 4).

The route of the railroad ran from Kahului Harbor to Wailuku Sugar Mill. The remnants of this old railroad bed can still be noted in a few places along Lower Main, and along Kahului Beach Road. The most striking architectural remnants of the railway system located along Kahului Beach Road are the 5 concrete pillars and arches, the most visible *makai* one impressed with the date "1921". In the past, a large wooden frame building rested on these pillars, serving as the housing for the Makaweli Rock Crusher apparatus. It was constructed so the train carrying rock from the quarry could off-load from the track-bed into the crusher. The concrete pilings elevated the crusher adequately above ground so trucks could be driven in and filled with crushed rock. This series of pillars (that was the footings for the Makaweli Rock Crusher Mill) still stands near the intersection of Kanaloa Avenue and Kahului Beach Road (see Photo # 1).

Railroad construction began in the late 1870s and continued for nearly 2 decades, as routes were added and service expanded. The Maui News contains articles dealing with activities in the general vicinity of the project area. One dated February 8, 1902, describes a problem and potential solution resulting from the railroad:

Superintendent R.W. Fuller of the Kahului Railroad Company is preparing to make some important changes in the line of railroad track between Kahului and Wailuku. At present the sharp turn and the railroad crossing at the beach is extremely dangerous on account of the sand dunes that shut out the approaching trains from the view of those approaching the crossing with teams, especially the wind is blowing a gale. The track will be moved some hundreds of feet south of its present location, so that the point where it crosses the road as well as the approaching trains themselves can be seen for quite a distance. On crossing the road, the track will skirt the pasture at greater distance from the public road.

On June 8, 1907, another reference describes plans improving the land for further residential use in the future:

---

<sup>4</sup> This is in contrast to the area south and east of Lower Iao Valley, in which the study parcel lies. Here there were 2 LCAs awarded—one to Victoria Kamamalu (7713), and one to Kuihelani (420). The largest land partition of Central Maui is Grant 3343 to Claus Spreckels.

The Kahului Railroad Company is filling in the lowlands, in and about Kahului and will in time raise the level of the entire town site, when the work is completed and proper drains provided, the town should be free of mosquitos and the place a most desirable locality in which to live.

The railroad continued operations until after World War II. Then slowly, demands began to change, and segments of the system were phased out. An article in **The Maui News** of October 15, 1957 bore the headline "Iron Horses Bow Out as Wailuku Sugar Company Discontinues Use of Railroad". The railroad continued to serve other areas until 1966, when it ceased operation.

## PREVIOUS ARCHAEOLOGICAL WORK

### Previous Archaeological Studies in the general area

#### ʻĪao Valley/Puʻuone Dunes Area

The earliest archaeological work in the Wailuku area was part of the island-wide survey of *heiau* (place of worship) done by Winslow Walker during 1928-1931. He reported a number of *heiau* in the general area of Wailuku. The most well known in the area -*Pihana Heiau* and *Haleki'i Heiau*- lie on the northern side of ʻĪao Stream atop the large dune formation. Efforts in the 1970s led to the preservation and designation of a State Monument, under the supervision of the Division of State Parks (DLNR).

Walker reported that there were a number of other *heiau* in this area of Wailuku, which were said to have been consecrated by Liholiho during his visit to Maui for that purpose in 1801 (Walker, 1931: 146-147). At the time of his survey, none of the following reported *heiau* could be located: Keahuku, Olokua, Olopio, Mālena, Pohakuokahi, Lelemākō, Kāwelowelo, Kaulupala, Palamaihiki, and Oolokalani (Ibid: 148).

Personal communication with Mr. Charles Keau (1992), a well-respected authority on history and prehistory of Maui, provided more information about some of these *heiau*, which Walker could not find. By Mr. Keau's account, there were 3 *heiau* located in the Lower Main Street corridor from Kahului Harbor to the intersection of Lower Main and Mill Streets. One was situated across the street from the Maui Soda Company. Another was located on parcel 083 (TMK: 3-4-039) between the Maui Electric Power Station and the County of Maui Wailuku Government cemetery. A third may have been located near the Home Maid Bakery. During the construction of the parking lot next to the bakery, Mr. Keau reported that Wesley Wong, a well-known local antiquity collector, found 5 adzes of "Tahitian" style. He did not specify when this was, but thought there might still be portions of the *heiau* there as well as some burials. More recent archaeological work has corroborated this prediction.

#### Nisei Veterans Memorial Center

Very significant archaeological findings were identified at the corner of Lower Main Street and Waiehu Beach road—the site of the Nisei Veterans Memorial Center. The Nisei Memorial project has been underway since 1992, and site has proven to be one of the more significant sites studied along the northern Maui coastline.

In February of 1992, Xamanek Researches began an archaeological inventory survey on the approximate 2-acre parcel of land near the intersection of Lower Main and Wai'ehu Beach Road (Fredericksen and Fredericksen, December 1992). The most notable feature surface feature was the former Kahului Railroad bed that ran the length of the property (SIHP -3112). Another historic site (SIHP -3119A) was a refuse disposal area about 20 centimeters below the existing surface. The predominant historic items were bottles and ceramics dating from the late 1800s, about the time the railroad was built and in use. A subsurface excavation that cut through the historic site, exposed a subsurface pre-Contact site designated as Site -3119B. Later, data recovery work at the site caused a revision in the site numbering system. All pre-Contact components of the site are now designated as Site -3120, while the historic components bear the Site -3119 designation.

Site -3120 became extremely interesting when a very early radiocarbon date of AD 233-410 was obtained. However, later data recovery work did not produce material of a comparable date. The deposits from which it came, turned out to have been previously disturbed by excavations done during the construction of the railroad bed, and the original source was not located.

In another area of Site -3120, test excavations produced a number of artifacts, including coral files, bone picks, an unfinished fishhook, and worked bone, along with large quantities of food midden. Data recovery research has shown Site -3120 to be a large habitation site, which contains a cluster of human burials. The latter remain *in situ* and will be preserved as a permanent burial/grave site. Several fire pit features were recovered and a series of 12 radiocarbon dates were obtained. They range from the very early date mentioned above (AD 233-410) to AD 1200-1740, with the majority of the pre-Contact dates falling in a range of AD 1400 to 1700 (Fredericksen, et al., 1998).

Archaeological monitoring followed the completion of data recovery, and a total of 38 additional human burials (SIHP -4668) were located in the southwestern corner of the 2-acre parcel near the crest of the dune. A radiocarbon date from carbon recovered in a large double posthole beneath one of the burials returned a conventional radiocarbon age of 620 +/- 50, and a calibrated date range of AD 1285-1420. The monitoring program is still in process.

Xamanek Researches surveyed the adjacent property to the south (TMK: 3-8-007: 038) in November of 1992. Fourteen backhoe test trenches were excavated, along with 3 manual test units, in the dune areas, and relatively undisturbed portions of the parcel. The *makai* portion of the property had been impacted by the installation of a sewer line, the mid-portion by the construction of the former Kahului Railroad bed (Site -3112) and a rock crusher mill (Site -3145). The only cultural materials recovered were historic items, most likely associated with the railroad construction (Fredericksen and Fredericksen, November 1992).

## Central Maui Area

The central area of Maui, south of Ka'ahumanu Avenue, is noted for many burials in the Pu'uone Sand Dune formation, which stretches across the isthmus. There have been a number of studies documenting these finds (Fredericksen et al., 1997; 1998; Panteleo and Sinoto, 1996; Rotunno-Hazuka, 1994).

However, in the central area to the north of Ka'ahumanu Avenue, very few sites other than scattered burials have been found. The authors have conducted studies at Maui Community College, Maui Central Parkway (Fredericksen and Fredericksen, December 1992; Fredericksen, et. al., 1994), and at the Keiki Zoo Maui (Fredericksen and Fredericksen, September 1995)—all with negative results.

Archaeological Consultants of Hawai'i conducted an archaeological survey for the Maui Arts and Cultural Center, again without significant findings (Kennedy, 1990). Cultural Surveys Hawai'i, Inc conducted an archaeological inventory survey for the 110-acre Maui Central Park area (now Keopuolani Park). A large intact dune was contained in the bulk of the park. There were no indigenous cultural sites located during the Cultural Surveys Hawai'i inventory survey. However, scattered human remains (Site 50-50-04-4211) were previously identified on the surface near the Maui Arts and Cultural Center, during an earlier botanical survey conducted by Xamanek Researches in 1996. Subsequent archaeological work at the inventory level indicated that no additional human remains were present, and Site -4211 was evaluated as "no longer significant" (Heidel, Pyle and Hammatt, January 1997: 97). Other historic sites noted in the Maui Central Park inventory survey include Site -4232, a former World War II military facility, and Site -3112, the Kahului Railroad Berm.<sup>5</sup> Both sites were partially preserved through incorporation into the landscaping of the Park (Ibid: 96).

It was previously thought that the paucity of archaeological findings in this area indicated that the extensive military activity associated with World War II had altered the Central Maui landscape, thereby potentially obliterating most archaeological sites.

Xamanek Researches conducted an archaeological inventory survey along the Maui Lani Parkway, Lot 11-A in 1997. The project is directly west of the current project area. The inventory survey did not find any post-contact cultural deposits however an *in situ* indigenous burial was discovered. The burial feature was assigned SIHP 50-50-04-4401. In addition to this find, several other burials have been located along the Maui Lani Parkway Development. Sites -4368 and -4435 were also located by Xamanek Researches.

In 2001 Xamanek Researches monitored the Mahalani Street improvements project. The project involved widening, upgrading, and replacing existing drain lines, replacing sidewalks, and installing a pedestrian cross walk way and light. A 15-stall parking lot was constructed and was partially monitored during this project. A previously

---

<sup>5</sup> The Kanaloa Avenue construction-monitoring project located a previously unidentified pre-Contact habitation area (Site 5496) along with three *in situ* human burials and the remains of two previously disturbed individuals (Site 5495). Both of these sites lie in the northeastern portion of Keopuolani Park.

unidentified post-Contact wall was recorded and given Site -5113. No other significant findings were located during this project.

### **Maui Lani Development Project Area**

Early surveys by Barrera (1976) of the 1,000 acre Maui Lani Project which within close proximity to the current study parcel, and of the Hale Laulea Subdivision (Barrera, 1983) in Kahului did not identify any sites. Neller (1984) investigated the area known as the "sand borrow site" after sand from there, used at a construction site in Lāhaina, was discovered to contain human remains. His research revealed one complete *in situ* burial, and skeletal fragments of at least 3 other individuals scattered in the vicinity.

In 1987, in response to a call from the Maui Police Department, the present authors visited this same general area ("sand borrow site") to determine the nature of skeletal material reported by local residents. The disturbed, flexed burial of a young female (18 to 25 years of age), and a 4 or 5 year old child nearby, lay partially exposed in a trail used by dirt bikers. At the request of the Police Department, the burials were removed. The presence of a shattered 4<sup>th</sup> thoracic rib and lower scapula blade on the left side, suggested that a frontal, traumatic puncture wound caused the death of the young female. The remains were curated at Maui Community College until they were turned over to the State Historic Preservation Division on Maui for permanent deposition.

In 1990, the Anthropology Department of the Bishop Museum under contract to Maui Lani Partners conducted test excavation on 4 sites which had been identified in a reconnaissance survey done in January 1990 (Rotunno and Cleghorn, February 1990). The sites included 2 parallel alignments, 2 adjacent rock mounds, and a single rock mound. These sites were determined to be of recent origin related to off-road vehicular traffic, and not archaeologically significant. The fourth site (Site 50-50-04-2797) is a human burial site found at the sand borrow pit near the eastern boundary of the Maui Lani Project area. No intact burials were recovered, but the scattered remains of at least 3 individuals were recovered in the surface layer (Rotunno-Hazuka et. al., May 1994a). A subsequent burial search was undertaken. These investigations resulted in the identification of at least 12 individuals from 10 burial features. Six of the features were preserved *in situ* (Rotunno-Hazuka et. al., May 1994b).

Archaeological subsurface sampling of the Maui Lani Development Phases 1 and 1A was conducted by Aki Sinoto Consulting. The objective of the work was to implement a strategy for subsurface sampling to test for the predictability of burials based on topographic features within the unmodified dune areas, and to address the deficiencies in the inventory survey (Pantaleo and Sinoto, January 1996).

A total of 90 backhoe trenches, 2 shovel scrapes and a manual trench were excavated in 58 localities (Ibid: iii). Six previously unrecorded burials were found – 4 associated with the sand borrow site (Site -2797); and one on top of a high dune (Site -4146), of the study area. The authors state: "No predictable pattern of traditional interment of the dead based on preference for topographic features was established during

the current investigation. Rather, the resultant data indicates only one concentration or complex of multiple burials at Site -2797 and isolated individual burials at the top of dunes in the highest locations in the project area" (Ibid.).

### **Wai`ale Road Corridor/Pu`uone Dunes**

A pre-Contact human burial was found while road crews were excavating under the Ka`ahumanu Avenue bridge crossing Wai`ale Road (Site -4126).

Along Wai`ale Road, which forms the western border of the Wailuku Sand Hills (Pu`uone Sand Dunes), monitoring for a drainage project for C. Brewer found human remains which had been disturbed by a former pipe line trench that runs perpendicular to the road (Site -4005). Site -3502 also contains human burial features, an historic coffin burial and another disturbed burial that is thought to be pre-Contact. Site -4067 is the remnant of a habitation site identified during the monitoring for the pipe line that revealed Site -4005. Site -4068 is a habitation site with an associated cluster of human burials (Dunn and Spear, 1995).

During construction for the Maui Homeless Shelter in May of 1992, 3 human burials were inadvertently discovered (Site 50-50-04-2916). These skeletal remains were investigated by Theresa Donham. She found the remains of an adult male in a grading cut, roughly 2 feet below the original surface (Burial 1). No cultural materials were associated, and a burial pit could not be identified. On May 21, a cranium (Burial 2) was exposed during construction of a desilting basin located along the lower slope of the dune at the southeastern corner of the project area (Donham, 1992, p. 3). A test unit measuring 5 by 3 meters was excavated to a depth of 0.50 to 0.75 meters below the surface. All sand material was screened and a total of 280 identifiable elements or skeletal fragments were recovered, along with 235 miscellaneous fragments. Two individuals were represented, an adult female, and a smaller adult individual of undetermined sex.

In 1999, Archaeological Services Hawai'i (ASH) monitored the construction activities for the Cameron Center Expansion. The skeletal remains of two individuals were encountered during this monitoring program. The human remains were placed in a preservation area, designated Site 50-50-04-4728. An area of previously disturbed human remains was also identified. The human remains represent two different individuals, an adult and an infant. The adult remains include a portion of a long bone and rib bone fragments and the infant remains consisted of a portion of a long bone and a portion of cranium. This is based on a discussion with Lisa Rotunno-Hazuka on 9 December 2009, and maps and photos given to us by her. There is no report on this monitoring program, according to Lisa Rotunno-Hazuka, because of a lack of funds. A one page burial treatment plan was written but not submitted to the SHPD for review. Site -4728 was reinterred at the northwest corner of the Cameron Center Expansion project area (**Error! Reference source not found.**), adjacent to the north side of the MEO Child Care Center.

## SETTLEMENT PATTERN AND EXPECTED FINDINGS

### Settlement Pattern

The lower 'Īao Valley portion of Wailuku *Ahupua'a* was a central political and religious area of West Maui, because of its fertile taro lands and close proximity to the sea. Given these conditions, a large population could be supported, and wherever large population clusters are found, the social framework of chiefly importance and religious expression is also present. This is attested to by the existence of the two *heiau* (Haleki'i and Pihana) atop the northern dune system, and others reported by Walker (1931) and Keau (1992, oral communication) within the 'Īao Stream corridor. The middle and upper reaches of 'Īao Valley were covered by *lo'i* and associated *'auwai*, which produced additional food items to support extensive political and religious activities. The Upper 'Īao Valley had been traditionally known as a very significant sacred place in the history of Maui (Donham, MCCRC minutes, June 1, 1995). Coastal sites, such as Site -3120, have been occupied since the 1200s (and possibly much earlier), and no doubt provided the complex with marine resources. There seems to be a pattern in 'Īao Valley, whereby sites closer to the ocean have earlier dates than the ones farther inland, suggesting that settlement occurred first along the sea shore and gradually moved inland as population increased.

An intensification of usage appears to have occurred during the 16th century, and seems to have peaked around the time of Pi'ilani, approximately 1600 AD (Ibid.). All radiocarbon dates, which have been recovered from the sites along this corridor fall into this temporal framework.

The study area lies near the base of the Pu'uone Dune Foundation, and is a part of the island that has been adversely affected by the presence of the military during World War II. A large Marine base existed in the area that is now Keopuolani Park. Before the construction of this base, a sizable plantation community known as—Raw Fish Camp—occupied the area. Prior to that, it was used as pasture land.

### Expected Findings

As a consequence of the considerable amount of land alterations associated with clearing, grubbing, and grading; most surface traces of pre-Contact activity, if it existed, has been most likely destroyed. At the northeast section (*makai*) of the Kanaloa Avenue corridor, remnants of habitation sites with associated human burial features have been

identified, and there is a strong possibility that similar subsurface features are present on the remaining portions of the sand dune formation.

## FIELD METHODS

At the request of Ka Lima O Maui, Xamanek Researches LLC, conducted an archaeological assessment survey on a 2.0 acre parcel of land in Wailuku. The study area is located in Wailuku *Ahupua`a*, Wailuku District, Island of Maui at TMK (2) 3-8-046: 016 (Figures 1 and 3 and Photos 1 and 3). This subject area is located approximately 1,225 m or 1.25 km from the shoreline of the Kahului Bay.

Archaeological fieldwork was conducted by archaeologists Hugh Coflin B.A. and Jonas Madeus, B.A. under the direction of Erik Fredericksen (SHPD Permit #10-07) who was the field director and principal investigator for the project. Fieldwork occurred on the 25<sup>th</sup> and the 27<sup>th</sup> of November 2009. In addition, Jenny Pickett, B.A., carried out follow-up fieldwork on 20 January 2010. A total of three fieldwork days were expended for this survey.

The archaeological investigation consisted of an approximate 80%<sup>6</sup> surface survey of the subject area, and subsurface testing of 16 Backhoe Test trenches (BTs). The pedestrian inspection of the project area was accomplished through systematic sweeps oriented east/west at 5-10 meter intervals. The survey began in the northeast corner of the project area and moved southeast. No surface archaeological sites were encountered during the pedestrian sweeps. The area that was not examined or tested is composed of a large building, three sheds, concrete parking lots, and asphalt driveways. These areas were visually scanned, but formal transects and subsurface sampling did not occur, in order to avoid potential damages and disturbances. Refer to Figure 4 that depicts the area containing buildings, sheds, concrete and asphalt driveways and parking lots.

Again, subsurface testing consisted of the mechanical excavation of 16 BTs. These BTs were closely monitored and the back dirt was periodically checked with shovels and rakes. None of the 16 BTs yielded significant cultural material remains.

Following the excavations, a representative wall from the various subsurface tests was hand scraped with a trowel to aid in recording the soil stratigraphy. The wall profiles were mapped to scale and described using Munsell soil colors and U.S Soil Conservation Service terminology. The completed excavations were then photographed and backfilled.

---

<sup>6</sup> Portions of the project area (c. 20%) are covered by a large building, sheds, parking lots and concrete and asphalt driveways.

**Photo # 2: Overview of the project area, view to the north.**

**Photo # 3: Overview of the project area, view to the south.**

## RESULTS OF FIELDWORK

The current investigation did not encounter any surface archaeological features on the subject area. In addition, no subsurface historic properties were identified in the subject area during our assessment survey. This may be due in part, to extensive land modifications in the recent past. Our subsurface investigation of the project area indicates that sand dune deposits are present throughout the subject parcel.

An area of approximately 18 meters by 17 meters immediately outside the northeast corner of the project area has an enclosed chain link fence around its perimeter for the permanent preservation of the human burial feature assigned SIHP 50-50-04-4728 (Figure 7). Again, this burial feature was identified by Archaeological Services Hawai'i (ASH) during archaeological monitoring for the construction of the Cameron Center Expansion project. The grass inside of the enclosed chain link fence was mowed during the time of our assessment survey. There is no surface monument marking the site (Photo 4 and Photo 5). However, there is a depression in the grass near the southeast corner of the fenced off area that Ms. Lisa Rotunno-Hazuka pointed out as the location of SIHP - 4728 (Figure 6 and Appendix A).

If traditional Hawaiian burials and historic surface feature exist within the subject area, they are were not identified during the subsurface investigations. However, it is possible subsurface features may have been previously impacted by disturbance from commercial agriculture or the construction of the nursery, offices, and storage buildings.<sup>7</sup>

---

<sup>7</sup> The majority of this project area was previously operated as a nursery by Ka Lima O Maui. A warehouse building and some sheds are currently used for offices, classrooms and storage on the subject parcel.

## Subsurface Testing Results

As mentioned above, a total of 16 Backhoe Test trenches (BTs) were systematically laid out and excavated throughout the project area. The trenches measured 5 meters in length by 0.9-1.5 meters in width and 0.55-2.3 meters deep. The mechanical trenches were excavated in order to identify any subsurface cultural deposits and also to examine the subsurface stratigraphy of the subject area (Table 2). These BTs were excavated in the approximate 80% of the two acres planned for the proposed affordable housing. Again, the remaining approximate 20% of the project area was not subject to subsurface testing because it was covered by buildings, sheds, concrete and asphalt driveways, and parking lots (Figure 7 and Photo 6 through Photo 8). See Appendix B for additional photos and profile maps of the backhoe trenches that are not discussed in this section.

				II	20-180 cmbs	10YR 6/4, light yellowish brown, medium-coarse, sand, texture, moderate, coarse, single grain, structure, dry consistency, very hard/very compacted, moist consistency, firm, wet consistency, non-sticky, plasticity, non-plastic; boundary, n/a; topography, n/a; no inclusions, contains no cultural materials	No cultural materials

Table 1 continued

TU #	Length	Width	Wall profile	Layer	Depth	Layer descriptions	Cultural materials
BT-14	.05 m	0.9 m	East face wall	I	0-20 cmbs	7.5YR 4/3, brown, medium, gravelly silty clay, texture: moderate, medium, single grain, structure: dry consistency, loose to semi-compacted; moist consistency, friable; wet consistency, slightly sticky, plasticity, slight plastic, boundary: clear, topography, smooth, inclusions include roots and other organic materials, and 75% angular basalt gravels and/or pebbles; contains no cultural material	No cultural materials
				II	20-150 cmbs	10YR 6/4, light yellowish brown, medium-coarse, sand, texture: moderate, coarse, single grain, structure: dry consistency, very hard/very compacted; moist consistency, firm; wet consistency, non-sticky, plasticity, non-plastic, boundary: clear, topography, smooth, no inclusions, contains no cultural materials	A piece of plywood is at the base of this layer
				III	115-220 cmbs	10YR 5/3, brown, fine-medium, silty sand, texture: weak, fine, single grain, structure: dry consistency, soft; moist consistency, friable, wet consistency, non-sticky, plasticity, non-plastic, boundary: n/a, topography, n/a, no inclusions, contains no cultural materials	A piece of plywood is on top of this layer and 1/2 inch PVC pipe
sBT-15	5.0 m	0.9 m	East face wall	I	0-20 cmbs	10YR 4/2, dark grayish brown, fine-medium, gravelly sandy silt, texture: moderate, fine-medium, single grain, structure: dry consistency, loose to semi-compacted, moist consistency, friable, wet consistency, non-sticky, plasticity, non-plastic, boundary: clear, topography, smooth, inclusions include roots and other organic materials, and 85% angular basalt gravels and/or pebbles, contains no cultural material	No cultural materials
				II	20-100 cmbs	10YR 6/4, light yellowish brown, medium-coarse, sand, texture: moderate, coarse, single grain, structure: dry consistency, very hard/very compacted, moist consistency, firm, wet consistency, non-sticky, plasticity, non-plastic, boundary: clear, topography, smooth, no inclusions, contains no cultural materials	No cultural materials
				III	80-200 cmbs	10YR 5/3, brown, fine-medium, silty sand, texture: weak, fine, single grain, structure: dry consistency, soft; moist consistency, friable, wet consistency, non-sticky, plasticity, non-plastic, boundary: smooth, topography, smooth, no inclusions, contains no cultural materials	No cultural materials
				IV	200-230 cmbs	7.5YR 6/8, reddish yellow, coarse, sand, texture: weak, coarse, single grain, structure: dry consistency, soft, moist consistency, friable; wet consistency, non-sticky, plasticity, non-plastic, boundary: n/a, topography, n/a, no inclusions, contains no cultural materials	No cultural materials
BT-16	5.0 m	1.5 m	West face wall	I	0-20 cmbs	10YR 4/2, dark grayish brown, fine-medium, gravelly sandy silt, texture: moderate, fine-medium, single grain, structure: dry consistency, loose to semi-compacted, moist consistency, friable, wet consistency, non-sticky, plasticity, non-plastic, boundary: clear, topography, smooth, inclusions include roots and other organic materials, and 75% angular basalt gravels and/or pebbles, contains no cultural material	No cultural materials
				II	20-145 mbs	10YR 6/4, light yellowish brown, medium-coarse, sand, texture: moderate, coarse, single grain, structure: dry consistency, very hard/very compacted, moist consistency, firm; wet consistency, non-sticky, plasticity, non-plastic, boundary: clear, topography, smooth; no inclusions, contains no cultural materials	Some refuse in this layer. There is a concentration of new coral and water worn rocks as well.
				III	140-180 cmbs	10YR 5/3, brown, fine-medium, silty sand, texture: weak, fine, single grain, structure: dry consistency, soft; moist consistency, friable, wet consistency, non-sticky, plasticity, non-plastic, boundary: n/a, topography, n/a, no inclusions, contains no cultural materials	No cultural materials

**BT-1 through BT-16** were excavated in the areas of projected improvements for the Ka Lima O Maui nursery. Eight trenches were excavated on the northern half of the property and the other eight were excavated on the southern half. These BTs have similar soil characteristics (Table 2) such as color and consistency etc, so four representative samples out of the 16 BTs will be discussed below. **BT-1, BT-7, BT-10 and BT-14** were selected as the representative samples.

### **BT-1**

BT-1 was excavated on the northern portion of the project area between BT-3 and BT-4 (Figure 7). BT-1 yielded four stratigraphic layers and terminated in Layer IV at the depth of 1.7 meters below surface (Figure 8 and Photo 9). A charcoal intrusion was noted in the previously disturbed portion of Layer III. Much of the area has been previously disturbed evidenced through observations of layer consistency, sand compaction, and bits of modern rubbish deposits noted throughout the test trenches.

Layer I (0-15 cmbs)	7.5YR 4/3, brown; medium, gravelly silty clay, texture; moderate, medium, single grain, structure; dry consistency, loose to semi-compacted; moist consistency, friable; wet consistency, slightly sticky; plasticity, slight plastic; boundary, clear; topography, smooth; inclusions include roots and other organic materials, and 75% angular basalt gravels and/or pebbles; Fill: contains no cultural material
Layer II (15-20 cmbs)	10YR 5/4, yellowish brown; fine, silty sand, texture; moderate, fine, single grain, structure; dry consistency, slightly hard/ compacted ; moist consistency, friable; wet consistency, slightly sticky; plasticity, slightly plastic; boundary, clear; topography, smooth; no inclusions, contains no cultural materials
Layer III (20-90 cmbs)	10YR 6/4, light yellowish brown; medium-coarse, sand, texture; moderate, coarse, single grain, structure; dry consistency, very hard/very compacted; moist consistency, firm; wet consistency, non-sticky; plasticity, non-plastic; boundary, clear; topography, smooth; no inclusions, contains charcoal stained intrusion
Layer IV (90-170 cmbs)	10YR 5/3, brown; fine-medium, silty sand, texture; weak, fine, single grain, structure; dry consistency, soft; moist consistency, friable; wet consistency, non-sticky; plasticity, non-plastic; no inclusions, contains no cultural materials

No significant cultural material remains were noted during the excavation of BT-1. Layer III is a clean and compacted, or partially lithified sand layer. Layer IV consists of a silty loam sand layer with a noticeably darker color.

**Figure 8: Profile map of the west face wall of BT-1.**

**Photo # 9: Overview of the west face wall of BT-1, view to the west.**

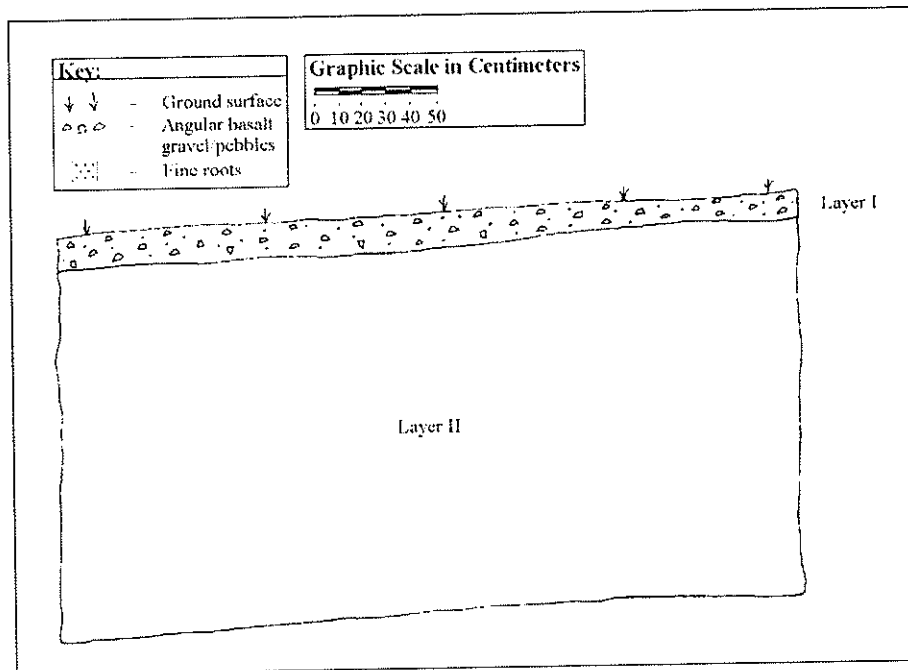

**BT-7**

BT-7 was situated near the west and central portion of the project area (Figure 7) and exposed two stratigraphic layers. BT-7 was terminated at a depth of 1.8 meters below the existing surface due to the absence of cultural materials (Figure 9 and Photo # 10).

Layer I (0-20 cmbs) 7.5YR 4/3, brown; medium, gravelly silty clay, texture; moderate, medium, single grain, structure; dry consistency, loose to semi-compacted; moist consistency, friable; wet consistency, slightly sticky; plasticity, slight plastic; boundary, clear; topography, smooth; inclusions include roots and other organic materials, and 75% angular basalt gravels and/or pebbles; contains no cultural material

Layer II (10-180 cmbs) 10YR 6/4, light yellowish brown; medium-coarse, sand, texture; moderate, coarse, single grain, structure; dry consistency, very hard/very compacted; moist consistency, firm; wet consistency, non-sticky; plasticity, non-plastic; boundary, n/a; topography, n/a; no inclusions but more concreted or compacted sand, contains no cultural materials

No significant cultural material remains were identified during the excavation of BT-7. This trench was terminated 1.8 meters below the existing surface.

**Figure 9: Profile map of east face wall of BT-7.**

**Photo # 10: Overview of the east face wall of BT-7, view to the east.**

#### **BT-10**

BT-10 was placed and excavated near the central and eastern portion of the project area approximately 13.5 meters southeast of the large building in the central area of the property (see Figure 7) and yielded one stratigraphic layer. BT-10 terminated at a depth of 1.8 meters below surface due to lack of cultural materials (see Figure 10 and Photo # 11).

#### **Layer I (0-180 cmbs)**

10YR 6/4, light yellowish brown; medium-coarse, sand, texture; moderate, coarse, single grain, structure; dry consistency, loose to very hard/very compacted; moist consistency, firm; wet consistency, non-sticky; plasticity, non-plastic; boundary, n/a; topography, n/a; no inclusions but more of the concreted or compacted sand, contains no cultural materials

There were no cultural material remains encountered within BT-10.

**Figure 10: Profile map of the west face wall of BT-10.**

**Photo # 11: Overview of the west face wall of BT-10, view to the west.**

## BT-14

BT-14 was situated at the southeast corner of the project area approximately 50 meters south of BT-10 (see Figure 7). Three stratigraphic layers were observed. BT-14 terminated at a depth of 2.2 meters below surface (Figure 11 and Photo # 12).

- |                          |  |
|--------------------------|--|
| Layer I (0-20 cmbs)      | 7.5YR 4/3, brown; medium, gravelly silty clay, texture; moderate, medium, single grain, structure; dry consistency, loose to semi-compacted; moist consistency, friable; wet consistency, slightly sticky; plasticity, slight plastic; boundary, clear; topography, smooth; inclusions include roots and other organic materials, and 75% angular basalt gravels and/or pebbles; contains no cultural material |
| Layer II (20-150 cmbs)   | 10YR 6/4, light yellowish brown; medium-coarse, sand, texture; moderate, coarse, single grain, structure; dry consistency, very hard/very compacted; moist consistency, firm; wet consistency, non-sticky; plasticity, non-plastic; boundary, clear; topography, smooth; no inclusions; contains modern plywood at transition between II & III   |
| Layer III (115-220 cmbs) | 10YR 5/3, brown; fine-medium, silty sand, texture; weak, fine, single grain, structure; dry consistency, soft; moist consistency, friable; wet consistency, non-sticky; plasticity, non-plastic; boundary; contains modern plywood and PVC pipe  |

There were no significant cultural material remains encountered in the deposits of BT-14. However, there was a sheet of ½ inch plywood on top of Layer III at the base of Layer II. There was also a ½ inch irrigation PVC pipe sticking out of Layer III. This finding suggests that Layers II and III in have been previously disturbed. Previously disturbed layers were also observed in the other trenches across the subject parcel. BT-14 terminated at 2.2 meters in depth.

**Figure 11: Profile map of the east face wall of BT-14.**

**Photo # 12: Overview of the east face wall of BT-14, view to the east.**

## **SUMMARY AND CONCLUSIONS**

No significant surface or subsurface cultural remains were identified during this archaeological assessment. A total of sixteen backhoe test trenches were excavated in order to assess the subsurface conditions on the subject parcel. Test results indicate that portions of the project area have been impacted by former grading activities including previous nursery related improvements and the construction of a large warehouse and storage buildings. Approximately 20% of the subject parcel was covered under buildings, sheds, and concrete and asphalt drive ways as well as parking lots at the time of this assessment survey. The remaining surface of the subject area was investigated by the excavation of mechanical subsurface test trenches and covered by a pedestrian survey.

Although no surface or subsurface historic properties were identified during the assessment, sand dune deposits were encountered in all test instances. There is always the possibility of encountering human burial features or possibly isolated finds of previously disturbed human skeletal remains in sand dune matrix. The presence of the Site 4728 preservation area on the adjacent parcel strongly suggests that human remains could be located within the subject parcel.

## **PROJECT MITIGATION AND RECOMMENDATIONS**

Given the results of this archaeological survey, no further work beyond the assessment level is recommended for the project area at this point in time. However, given the location of the project area, and the presence of the previously identified site (Site 50-50-04-4728) on the immediately adjacent property to the east (TMK: 3-8-046: Parcel 027), precautionary archaeological monitoring is recommended for any future earthmoving activities on the subject parcel. This form of mitigation will help ensure that significant material culture remains are identified during future ground disturbance activities on the subject parcel Key (TMK: [2] 3-8-046:016).

## **APPENDIXES**

**Appendix A: Maps, photos and burial treatment plan for Site 50-50-04-4728 from the monitoring program for the Cameron Center Expansion.**

Portion of the plan map for the Cameron Center Expansion project area, showing portion of current project area in yellow and the Site 50-50-04-4728 preservation area.

Portion of the plan map for the Cameron Center Expansion project area, showing the Site 4728 preservation area in blue.

A.S.H.

**BURIAL TREATMENT PLAN**  
**Reinterment proposal**

1. Remains to be reinterred in the NW corner of Lot 2, the Cameron Center Expansion lot.
2. Proposed area is approximately 50ft. South of the Ka Lima Access Road and approximately 40 ft. west of west lot line. See photo, page 1 and Map, page 2  
Lets discuss the buffer zone for this area.
3. Excavate a hole that measures approximately 3 ft. by 5 ft. by 5 ft. deep with a backhoe. Proposed area contains approximately 4-5ft. of fill. Place MECO pullbox inside hole. See pullbox assembly, page 3.
4. Once burial is placed in box and covered with sand, place concrete cover on top and secure. Cover up pull box with more sand.
5. Proposed boundaries for preservation will be demarcated by native shrubs or grasses. Details to be discussed.
6. Burial will be demarcated by a concrete pedestal with granite sign, page 4, may read "Native Hawaiian Cultural Preserve, State Site #50-50-04-479B, Please respect this area" And a logo or picture. Again, details to be discussed.

Re: **Traffic Impact Assessment Report  
Proposed Ka Lima O Maui Housing Project  
95 Mahalani Street  
Wailuku, Maui, Hawaii**

Dear Mike:

Phillip Rowell and Associates have completed the following Traffic Impact Assessment Report (TIAR) for a proposed housing project in Wailuku. The following report is presented in the following format:

- A. Project Location and Description
- B. Purpose and Objective of Study
- C. Methodology
- D. Description of Existing Streets and Intersection Controls
- E. Existing Peak Hour Traffic Volumes
- F. Level-of-Service Concept
- G. Existing Levels-of-Service
- H. Background Traffic Projections
- I. Project Trip Generation
- J. Background Plus Project Traffic Projections
- K. Impact Analysis of Background Plus Project Conditions
- L. Mitigation
- M. Summary and Conclusions

### **A. Project Location and Description**

The proposed project is located at 95 Mahalani Street in Wailuku.

The proposed project is the construction of 16 apartments and 3,600 square feet of office space, and 3,600 square feet of storage and garage space, as well as the renovation on an existing 2,500 square foot office building.

Access and egress will be via the existing driveway serving the J. Walter Cameron Center, which is along the west side of Mahalani Street.

A TMK map indicating the location of the project and a preliminary site plan is provided as Attachment A.

**B. Purpose and Objective of Study**

1. Quantify and describe the traffic related characteristics of the proposed project.
2. Identify potential deficiencies adjacent to the project that will impact traffic operations in the vicinity of the proposed project.

**C. Methodology**

1. *Define the Study Area*

The first step in defining the study area was to estimate the number of peak hour trips that the proposed project will generate. It was estimated that the project will generate 14 trips during the morning peak hour and 16 trips during the afternoon peak hour. This implies that the scope of the traffic assessment could be limited to an "access location and design review" analysis as described by the Institute of Transportation Engineers<sup>1</sup>.

- Kaahumanu Avenue at Mahalani Street and Kanaloa Avenue
- Mahalani Street at Project Drive

2. *Analyze Existing Traffic Conditions*

Existing traffic volumes at the study intersections were estimated from manual traffic counts performed at the intersections on Thursday, January 14, 2010. A level-of-service analysis was performed using the methodology described in the *Highway Capacity Manual*<sup>2</sup> to quantify existing traffic operating conditions.

3. *Estimate Horizon Year Background Traffic Projections*

Background traffic conditions are defined as future traffic conditions without the proposed project. The design horizon year does not necessarily represent the project completion date of the project. It is a date for which future background traffic projections were estimated. For this project, we have used a design, or horizon, year of 2012. Horizon year background traffic conditions were estimated using a background traffic growth factor and adding traffic generated by other known projects in the area that may be completed before 2012.

4. *Estimate Project-Related Traffic Characteristics*

The number peak-hour trips that the proposed project will generate was estimated using standard trip generation procedures outlined in the *Trip Generation Handbook*<sup>3</sup> and data provided in *Trip Generation*<sup>4</sup>. These trips were distributed and assigned based on existing traffic approach and

<sup>4</sup> *Trip Generation*, Institute of Transportation Engineers, Washington, D.C., 2003

departure patterns of traffic currently using the project driveway and the intersection of Kaahumanu Avenue at Mahalani Street.

#### 5. *Analyze Project Related Traffic Impacts*

The project-related traffic was then superimposed on background traffic volumes. The traffic impacts of the project were assessed by analyzing changes of the levels-of-service. The purpose of this analysis was to identify potential operational deficiencies at the project driveway.

#### **D. Description of Existing Streets and Intersection Controls**

A schematic drawing indicating the study intersections, lane configurations and right-of-way controls is provided as Attachment B.

Mahalani Street is a four-lane, two-way roadway with a north-south orientation in the vicinity of the project. The intersection of Mahalani Street at the project drive is an unsignalized T- intersection. Separate left and right turn lanes are provided along the Project Drive approach to Mahalani Street. There is no separate left turn lane for traffic turning left from Mahalani Street into the Project Drive

The intersection of Kaahumanu Avenue at Mahalani Street and Kanaloa Avenue is a signalized intersection. There are separate left turn lanes and deceleration/right turn lanes along each approach. The left turns from Kaahumanu Avenue to Mahalani Street and Kanaloa Avenue are protected. The northbound and southbound approaches have separate phases (split phasing).

#### **E. Existing Peak Hour Traffic Volumes**

Existing peak hour traffic volumes were determined from manual traffic counts performed at the study intersections. The counts are summarized on Attachment C and the traffic count summary worksheets are attached. The counts were performed on Thursday, January 14, 2010.

1. The traffic counts include buses, trucks and other large vehicles. Mopeds and bicycles are not included.
2. The traffic counts include traffic generated by the existing 2,500 square foot office building on the subject property
3. Pedestrian activity was negligible.

#### **F. Level-of-Service Concept**

"Level-of-Service" is a term which denotes any of an infinite number of combinations of traffic operating conditions that may occur on a given lane or roadway when it is subjected to various traffic volumes. Level-of-service (LOS) is a qualitative measure of the effect of a number of factors which include space, speed, travel time, traffic interruptions, freedom to maneuver, safety, driving comfort and convenience.

There are six levels-of-service, A through F, which relate to the driving conditions from best to worst, respectively. The characteristics of traffic operations for each level-of-service are summarized in Table 1. In general, LOS A represents free-flow conditions with no congestion.

LOS F, on the other hand, represents severe congestion with stop-and-go conditions. *Level-of-service D is typically considered acceptable for peak hour conditions in urban areas.*<sup>5</sup>

Corresponding to each level-of-service shown in the table is a volume/capacity ratio. This is the ratio of either existing or projected traffic volumes to the capacity of the intersection. Capacity is defined as the maximum number of vehicles that can be accommodated by the roadway during a specified period of time. The capacity of a particular roadway is dependent upon its physical characteristics such as the number of lanes, the operational characteristics of the roadway (one-way, two-way, turn prohibitions, bus stops, etc.), the type of traffic using the roadway (trucks, buses, etc.) and turning movements.

**Table 1 Level-of-Service Definitions for Signalized Intersections<sup>(1)</sup>**

Level of Service	Interpretation	Volume-to-Capacity Ratio <sup>(2)</sup>	Stopped Delay (Seconds)
A, B	Uncongested operations; all vehicles clear in a single cycle.	0.000-0.700	<20.0
C	Light congestion; occasional backups on critical approaches	0.701-0.800	20.1-35.0
D	Congestion on critical approaches but intersection functional. Vehicles must wait through more than one cycle during short periods. No long standing lines formed.	0.801-0.900	35.1-55.0
E	Severe congestion with some standing lines on critical approaches. Blockage of intersection may occur if signal does not provide protected turning movements.	0.901-1.000	55.1-80.0
F	Total breakdown with stop-and-go operation	>1.001	>80.0

Notes:

- (1) Source: *Highway Capacity Manual, 2000.*
- (2) This is the ratio of the calculated critical volume to Level-of-Service E Capacity.

Like signalized intersections, the operating conditions of intersections controlled by stop signs can be classified by a level-of-service from A to F. However, the method for determining level-of-service for unsignalized intersections is based on the use of gaps in traffic on the major street by vehicles crossing or turning through that stream. Specifically, the capacity of the controlled legs of an intersection is based on two factors: 1) the distribution of gaps in the major street traffic stream, and 2) driver judgement in selecting gaps through which to execute a desired maneuver. The criteria for level-of-service at an unsignalized intersection is therefore based on delay of each turning movement. Table 2 summarizes the definitions for level-of-service and the corresponding delay.

<sup>5</sup> Institute of Transportation Engineers, *Transportation Impact Analyses for Site Development: A Recommended Practice*, 2006, page 60

**Table 2 Level-of-Service Definitions for Unsignalized Intersections<sup>(1)</sup>**

Level-of-Service	Expected Delay to Minor Street Traffic	Delay (Seconds)
A	Little or no delay	<10.0
B	Short traffic delays	10.1 to 15.0
C	Average traffic delays	15.1 to 25.0
D	Long traffic delays	25.1 to 35.0
E	Very long traffic delays	35.1 to 50.0
F	See note (2) below	>50.1

Notes:

(1) Source: *Highway Capacity Manual*, 2000.

(2) When demand volume exceeds the capacity of the lane, extreme delays will be encountered with queuing which may cause severe congestion affecting other traffic movements in the intersection. This condition usually warrants improvement of the intersection.

**G. Existing Levels-of-Service**

The results of the level-of-service analysis of the intersection of Kaahumanu Avenue at Mahalani Street are summarized in Table 3. Based on the level-of-service, the intersection operates at Level-of-Service C during the morning peak hour and Level-of-Service D during the afternoon peak hour.

**Table 3 Existing (2010) Levels-of-Service - Kaahumanu Avenue at Mahalani Street**

Approach and Movement	AM Peak Hour			PM Peak Hour		
	7:15 AM to 8:15 AM			4:15 PM to 5:15 PM		
	V/C	Delay	LOS	V/C	Delay	LOS
Overall Intersection	0.67	34.4	C	0.80	40.3	D
Eastbound Left	0.63	60.7	E	0.75	78.7	E
Eastbound Thru	0.77	39.1	D	0.90	44.1	D
Eastbound Right	0.10	27.3	C	0.03	21.2	C
Westbound Left	0.77	55.6	E	0.80	81.9	F
Westbound Thru	0.88	39.6	D	0.72	36.4	D
Westbound Right	0.17	0.2	A	0.19	0.3	A
Northbound Left	0.15	46.3	D	0.30	60.1	E
Northbound Thru	0.34	49.8	D	0.71	75.3	E
Northbound Right	0.25	0.4	A	0.39	0.7	A
Southbound Left	0.49	49.5	D	0.69	74.4	E
Southbound Left & Thru	0.50	49.4	D	0.71	75.3	E
Southbound Right	0.13	0.2	A	0.06	0.1	A

NOTES:

- Level-of-Service analysis is based on traffic counts performed Thursday, January 14, 2010.
- V/C denotes ratio of volume to capacity. V/C ratio is not calculated for unsignalized intersections.
- Delay is in seconds per vehicle.
- LOS denotes Level-of-Service calculated using the operations method described in *Highway Capacity Manual*. LOS is based on delay.
- See Attachment D for Level-of-Service Calculation Worksheets.

The results of the level-of-service analysis of the intersection of Mahalani Street at the Project Drive is summarized in Table 4. The left turns from the driveway to eastbound Mahalani Street operate at Level-of-Service C. Right turns from the driveway and left turns into the driveway from Mahalani Street operate at Level-of-Service A. This implies that left turns into the Project Drive from Mahalani Street do not have an adverse impact of traffic flow along Mahalani Street.

**Table 4 Existing (2010) Levels-of-Service - Mahakani Street at Project Drive**

Approach and Movement	AM Peak Hour		PM Peak Hour	
	7:15 AM to 7:15 AM		3:30 PM to 4:30 PM	
	Delay	LOS	Delay	LOS
Eastbound Left	18.9	C	18.0	C
Eastbound Right	9.8	A	9.6	A
Northbound Left & Thr	2.8	A	1.1	A

NOTES:

1. Level-of-Service analysis is based on traffic counts performed Thursday, January 14, 2010.
2. Delay is in seconds per vehicle.
3. LOS denotes Level-of-Service calculated using the operations method described in Highway Capacity Manual. LOS is based on delay.
4. See Attachment D for Level-of-Service Calculation Worksheets.

**H. Background Traffic Projections**

2012 background traffic projections are defined as future background traffic conditions without the proposed project. Future traffic growth consists of two components. The first is ambient background growth that is a result of regional growth and cannot be attributed to a specific project. This growth factor also accounts for smaller development projects in the area for which a traffic impact study is not available or are not identified as a related project during the data collection process. The second component is estimated traffic that will be generated by other development projects (related projects) in the vicinity of the proposed project.

*Background Traffic Growth*

The *Maui Long Range Transportation Plan*<sup>6</sup> concluded that traffic in Maui would increase an average of 1.6% per year from 1990 to 2020. This growth rate was used to estimate the background growth between 2010 and 2012, which is the design year for this project. The growth factor was calculated to be 1.0323 using the following formula::

$$F = (1 + i)^n$$

where F = Growth Factor

i = Average annual growth rate, or 0.016

n = Growth period in years

*Related Projects*

The second component in estimating background traffic volumes is traffic generated by other proposed projects in the vicinity. Related projects are defined as those projects that are under construction or have been approved for construction and would significantly impact traffic in the study area. Related projects may be development projects or roadway improvements.

One related project was identified that may be completed before 2012. This project is the expansion of the Maui Family YMCA, which is located along east side of Kanaloa Avenue approximately on-half mile north of Kaahumanu Avenue. The traffic projections were obtained from the project's TIAR<sup>7</sup>.

<sup>6</sup> Kaku Associates, *Maui Long Range Land Transportation Plan*, October 1996

<sup>7</sup> Phillip Rowell and Associates, *TIAR for Maui Family YMCA Expansion*, June 19, 2007

The Kahului Town Center and the Kane Street Mixed Use Project were not included. These project will not be completed until after 2014.

The estimated background traffic projections for 2012 are shown in Attachment E.

**I. Project Trip Generation**

Future traffic volumes generated by a project are typically estimated using the methodology described in the *Trip Generation Handbook*<sup>8</sup> and data provided in *Trip Generation*<sup>9</sup>. This method uses trip generation rates to estimate the number of trips that the project will generate during the peak hours of the project and along the adjacent street.

The proposed project will consist of 16 apartments, 3,600 square feet of office space, and 3,600 square feet of storage and garage space and the renovation of an existing 2,500 square foot office building. Trip generation rates based on the number of apartment units are provided in *Trip Generation* and were used to estimated the number of trips generated by the apartments.

Trips generation rates for single-tenant office buildings were used to estimated the trips generated by the office building. The rates are based on thousand gross square feet of floor area. The trip generation calculations are summarized in Table 5. As shown, the proposed project will generate 7 inbound and 7 outbound trips during the morning peak hour. During the afternoon peak hour, the project will generate 8 inbound and 8 outbound trips.

**Table 5 Trip Generation Calculations for Proposed Project**

Time Period	Direction	Apartment (LU Code 220)			Office Space (LU Code 715)			Total
		Rate or % <sup>(1)</sup>	Units	Trips	Rate or % <sup>(2)</sup>	Units	Trips	
Weekday	Total	6.72	16	108	11.57	3,600	42	150
AM Peak Hour	Total	0.51		8	1.80		6	14
	In	20%		2	89%		5	7
	Out	80%		6	11%		1	7
PM Peak Hour	Total	0.62		10	1.73		6	16
	In	65%		7	15%		1	8
	Out	35%		3	85%		5	8

- (2) Institute of Transportation Engineers, *Trip Generation*, Seventh Edition, 2003, p 1177 - 1179

These trips were distributed and assigned based on existing traffic approach and departure patterns of traffic currently using the project driveway and the intersection of Kaahumanu Avenue at Mahalani Street. The project's trip distribution and the resulting project trip assignments are shown in Attachment F.

<sup>8</sup> Institute of Transportation Engineers, *Trip Generation Handbook*, Washington, D.C., 1998, p. 7-12

<sup>9</sup> Institute of Transportation Engineers, *Trip Generation*, 7<sup>th</sup> Edition, Washington, D.C., 2003

**J. Background Plus Project Projections**

Background plus project traffic projections were estimated by superimposing the peak hourly traffic generated by the proposed project on the background (without project) peak hour traffic projections. This assumes that the peak hourly trips generated by the project coincide with the peak hour of the adjacent street. This represents a worse-case condition as it assumes that the peak hours of all the intersection approaches and the peak hour of the study project coincide. The traffic projection calculations are shown as Tables 6 and 7. The resulting background plus project peak hour traffic projections are shown in Attachment G.

**Table 6 Traffic Projection Calculations - Kaahumanu Avenue at Mahalani Street & Kanaloa Avenue**

**K. Traffic Impact Analysis**

1. The *Highway Capacity Software* (HCS) package was used to perform the level-of-service analysis.
2. The intersection lane configurations are unchanged.
3. As the *Highway Capacity Manual* defines level-of-service by delay, we have used the same definitions.

The results of the level-of-service analysis of the intersection of Kaahumanu Avenue at Mahalani Street are summarized in Table 8. Shown are the peak hour volume-to-capacity ratios, average vehicle delays and levels-of-service of the overall intersection and all lane groups. The intersection will operate at Level-of-Service D during both peak hours, without and with project generated traffic. The volume-to-capacity ratio of the intersection increased 0.01 during the morning peak hour and 0.3 second during the afternoon peak hour. This implies that project generated traffic will have a negligible impact on the level-of-service of the intersection. All volume-to-capacity ratios are 1.00 or less, even though several lane groups will operate at Level-of-Service E or F. Project generated traffic did not change the level-of-service of any lane group.

**Table 8 2012 Levels-of-Service - Kaahumanu Avenue at Mahalani Street**

- NOTES:
1. Peak hour conditions analyzed are "worst-case" conditions, which is the sum of the peak hour of the adjacent street plus the peak hour of the generator.
  2. Delay is in seconds per vehicle.
  3. LOS denotes Level-of-Service calculated using the operations method described in *Highway Capacity Manual*. LOS is based on delay.
  4. See Attachments H & I for Level-of-Service Calculation Worksheets.

The results of the level-of-service of the intersection of Mahalani Street at the Project Drive is summarized in Table 9. Shown are the average vehicle delays and levels-of-service of the controlled lane groups. Delays and levels-of-service are not calculated for uncontrolled lane groups or the overall intersections. Also, volume-to-capacity ratios are not calculated for unsignalized intersections. The level-of-service analysis indicates that left turns from the Project Drive will operate at Level-of-Service C. Right turns from the Project Drive and left turns from Mahalani Drive into the Project Drive will operate at Level-of-Service A, without and with project generated traffic. The northbound left turn and through movement lane group will operate at Level-of-Service A without and with project generated traffic. The average vehicle delay increases 0.1 second during the morning peak hour and 0.2 second during the afternoon peak hour. This implies that project generated traffic will have a minimal impact on traffic operations along Mahalani Street.

**Table 9 2012 Levels-of-Service - Mahalani Street at Project Drive**

Approach and Movement	AM Peak Hour				PM Peak Hour			
	Without Project		With Project		Without Project		With Project	
	Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS
Eastbound Left	20.9	C	22.4	C	20.4	C	21.6	C
Eastbound Right	9.9	A	9.9	A	9.7	A	9.8	A
Northbound Left & Thru	2.7	A	2.8	A	1.0	A	1.2	A

- NOTES:
1. Peak hour conditions analyzed are "worst-case" conditions, which is the sum of the peak hour of the adjacent street plus the peak hour of the generator.
  2. Delay is in seconds per vehicle.
  3. LOS denotes Level-of-Service calculated using the operations method described in *Highway Capacity Manual*. LOS is based on delay.
  4. See Attachment H & I for Level-of-Service Calculation Worksheets.

**L. Mitigation**

We have used the Institute of Transportation Engineers standard that a Level-of-Service D is the minimum acceptable level-of-service and that the criteria is applicable to the overall intersection.<sup>10</sup> It is generally accepted that side street approaches and minor movements, such as left turn lanes may operate at Level-of-Service E or F for short periods if the volume-to-capacity ratio indicates a higher Level-of-Service as this implies that the long delay and therefore the low level-of-service is a result of the traffic signal cycle length rather than a lane deficiency<sup>11</sup>. "Level-of-Service E is sometimes tolerated for minor movements such as left turns when there are no feasible mitigating measures or if it helps maintain the main through movements at acceptable levels-of-service."

Based on this criteria, no mitigation is required at the study intersections as a result of project generated traffic.

**M. Summary and Conclusions**

The conclusions of the traffic impact assessment are:

1. The proposed project is located at 95 Mahalani Street in Wailuku and will consist of 16 apartments, 3,600 square feet of office space and 3,600 square feet of storage and garage space and the renovation of an existing 2,500 square foot office building. Access and egress will be via the existing driveway serving the J. Walter Cameron Center, which is along the west side of Mahalani.
2. It was estimated that the project will generate 14 trips during the morning peak hour and 16 trips during the afternoon peak hour. This implies that the scope of the traffic assessment could be limited to an "access location and design review" analysis as described by the Institute of Transportation Engineers<sup>12</sup>. Therefore, the intersections of Kaahumanu Avenue at Mahalani Street and Kanaloa Avenue and Mahalani Street at Project Drive were analyzed.

Page 11

3. The level-of-service analysis concluded that the intersection Kaahumanu Avenue at Mahalani Street will operate at Level-of-Service D during both peak hours, without and with project generated traffic. The volume-to-capacity ratio of the intersection increased 0.01 during the morning peak hour and 0.3 second during the afternoon peak hour. This implies that project generated traffic will have a negligible impact on the level-of-service of the intersection. All volume-to-capacity ratios are 1.00 or less, even though several lane groups will operate at Level-of-Service E or F. Project generated traffic did not change the level-of-service of any lane group. As the overall intersection will operate at Level-of-Service D and all volume-to-capacity ratios are 1.00 or less, no mitigation is recommended.
4. The level-of-service analysis concluded that left turns from the Project Drive onto Mahalani Street will operate at Level-of-Service C. Right turns from the Project Drive and left turns from Mahalani Drive into the Project Drive will operate at Level-of-Service A, without and with project generated traffic. The northbound left turn and through movement lane group will operate at Level-of-Service A without and with project generated traffic. The average vehicle delay increases 0.1 second during the morning peak hour and 0.2 second during the afternoon peak hour. This implies that project generated traffic will have a minimal impact on traffic operations along Mahalani Street. Since all movements will operate at Level-of-Service C, or better, and there is no change in the level-of-service as a result of project generated traffic, no mitigation is recommended.

Respectfully submitted,

**PRELIMINARY ENGINEERING REPORT  
FOR  
KA LIMA O MAUI AFFORDABLE HOUSING PROJECT  
T.M.K.: (2) 3-8-046: 016**

**1.0 INTRODUCTION**

The purpose of this report is to provide information on the existing infrastructure which will be servicing the proposed project. It will also evaluate the adequacy of the existing infrastructure and anticipated improvements which may be required for the proposed project.

The subject parcel is identified as T.M.K.: (2) 3-8-046: 016, which encompasses an area of approximately 2.00 acres. It is also Lot 3-B-2-B of the Recreational Complex Subdivision. The project site is bordered by the Police Station to the north, the MEO office and to the east, the Maui Memorial Hospital complex to the south, and Kaiser Permanente Maui Lani Clinic to the west. The existing Ka Lima O Maui facility consists of two buildings which are being used for their plant nursery operations.

The proposed project includes the construction of 16 one-bedroom apartments contained in two separate buildings. Each apartment building contains 4,400 square feet. The existing 2,500 square feet building will be renovated for use by Ka Lima O Maui's Medicaid Waiver Program. A new two-story building totaling 7,200 square feet will provide 3,600 square feet of office space and 3,600 square feet of storage and garage space. Related improvements include grading, retaining walls, utility connections, paved parking and landscaping.

**2.0 EXISTING INFRASTRUCTURE**

**2.1 ROADWAYS**

Kaahumanu Avenue is the major roadway linking Kahului and Wailuku. It is owned by the State of Hawaii. It is a four-lane, north-south roadway with a terminus in Wailuku town. At that point Kaahumanu Avenue turns into Main Street which is a two-lane roadway. At its terminus in Kahului, near the Maui Mall, Kaahumanu Avenue turns into Hana Highway.

Mahalani Street is a four-lane, two-way roadway with a north-south orientation in the vicinity of the project site. Mahalani Street turns into a two-lane roadway to the south of the project site. It is a County-owned roadway which connects Kaahumanu Avenue and Maui Lani Parkway. There is an existing driveway from

Mahalani Street which currently provides access to the Ka Lima O Maui facility through the J Walter Cameron Center.

## 2.2 DRAINAGE

The existing Ka Lima O Maui facilities are situated on the project site. The elevation of the project site ranges from approximately 129 feet above mean sea level at the southwest corner of the parcel to 89 feet above mean sea level at the northeast corner. The existing ground slopes down from the western property line, then flattens at the developed area, and slopes down toward the eastern property line. The average slope at the middle of the parcel is approximately 15.4%.

According to the "Soil Survey of Islands of Kauai, Oahu, Maui, Molokai, and Lanai, State of Hawaii (August, 1972)," prepared by the United States Department of Agriculture Soil Conservation Service, the soils within the project site are classified as Puuone sand (PZUE). Puuone sand is characterized as having rapid permeability near the surface, slow runoff, and a moderate to severe wind erosion hazard.

It is estimated that the existing 50-year, 1-hour storm runoff from the project site is 4.74 cfs, with a generated storage volume of 2,561 cubic feet. There are no drainage facilities on the site. Presently, onsite runoff sheet flows across the project site in the west to east direction into the adjacent properties. There is an existing catch basin along the offsite access roadway located approximately 190 feet to the west of the project site. This catch basin does intercept some of the onsite runoff which sheet flows down the access road.

According to Panel Numbers 1500030391E and 1500030392E of the Flood Insurance Rate Map, dated September 25, 2009, prepared by the United States Federal Emergency Management Agency, the project site is situated in Flood Zone X. Flood Zone X represents areas to be outside of the 0.2% annual chance flood.

## 2.3 SEWER

Wastewater generated from the existing Ka Lima O Maui facility is conveyed to an existing 8-inch sewerline which traverses outside and parallel to the eastern boundary of the subject parcel. Wastewater collected from the project will be transported to the Kahului Wastewater Reclamation Facility in Naska.

The Kahului Wastewater Reclamation Facility has a capacity of 7.9 million gallons per day (mgd). As of March 2010, the average daily flow into the Kahului Wastewater Reclamation Facility is approximately 4.9 mgd. However, according to

the Wastewater Reclamation Division, County of Maui, the total allocation, including projects already permitted, is 6.95 mgd.

## 2.4 WATER

Domestic water and fire protection for the project area are serviced from the 3.0 million gallon Mokuhau tank and wells in Happy Valley, which is at elevation of 358 feet. There is an existing 12-inch waterline on Mahalani Street which provides domestic water and fire protection to the project site. Presently, there is a 1-1/2-inch water meter serving the existing Ka Lima O Maui facility. There is also an 8-inch fireline with one fire hydrant currently providing fire protection to the property. The existing water meter and detector meter is located along Mahalani Street.

As part of the building permit process, domestic water and fire flow calculations will be provided to determine the adequacy of the existing water system, in accordance with the rules of the Department of Water Supply.

## 2.5 ELECTRIC AND TELEPHONE

The existing electrical, telephone and cable TV distribution systems on Mahalani Street are located overhead. There are underground facilities from Mahalani Street traversing the offsite access roadway into the project site. An existing control panel is located along the northern property line which provides service to the existing Ka Lima O Maui facilities.

## 3.0 **ANTICIPATED INFRASTRUCTURE IMPROVEMENTS**

### 3.1 ROADWAYS

Access to the project site will continue to be along the paved offsite access roadway from Mahalani Street, which traverses through the J. Walter Cameron Center. The existing driveway will continued to be used for ingress and egress to the project.

The Traffic Impact Analysis Report, prepared by Phillip Rowell & Associates, dated March 29, 2010, concluded the following:

1. The proposed project is located at 95 Mahalani Street in Wailuku and will consist of 16 apartments, 3,600 square feet of office space and 3,600 square feet of storage and garage space and the renovation of an existing 2,500 square foot office building. Access and egress will be via the existing

driveway serving the J. Walter Cameron Center, which is along the west side of Mahalani Street.

2. It was estimated that the project will generate 14 trips during the morning peak hour and 16 trips during the afternoon peak hour. This implies that the scope of the traffic assessment could be limited to an "access location and design review " analysis as described by the Institute of Transportation Engineers. Therefore, the intersections of Kaahumanu Avenue at Mahalani Street and Kanaloa Avenue and Mahalani Street at Project Drive were analyzed.
3. The level-of-service analysis concluded that the intersection Kaahumanu Avenue at Mahalani Street will operate at Level-of-Service D during both peak hours, without and with the project generated traffic. The volume-to-capacity ratio of the intersection increased 0.01 second during the morning peak hour and 0.3 second during the afternoon peak hour. This implies that the project generated traffic will have a negligible impact on the level-of-service of the intersection. All volume-to-capacity ratios are 1.00 or less, even though several lane groups will operate at Level-of-Service E or F. Project generated traffic did not change the level-of-service of any lane group. As the overall intersection will operate at Level-of-Service D and all volume-to-capacity ratios are 1.00 or less, no mitigation is recommended.
4. The level-of-service analysis concluded that left turns from the Project Drive onto Mahalani Street will operate at a Level-of-Service C. Right turns from the Project Drive and left turns from Mahalani Drive into the Project Drive will operate at a Level-of-Service A, without and with project generated traffic. The northbound left turn and through movement lane group will operate a Level-of-Service A without and with project generated traffic. The average vehicle delay increases 0.1 second during the morning peak hour and 0.2 second during the afternoon peak hour. This implies that project generated traffic will have a minimal impact on traffic operations along Mahalani Street. Since all movements will operate at Level-of-Service C, or better, and there is no change in the level-of-service as a result of project generated traffic, no mitigation is recommended.

### 3.2 DRAINAGE

After the development of the proposed project, it is estimated that the 50-year, 1-hour storm runoff will be 7.80 cfs, a net increase of 3.06 cfs over the existing condition. The corresponding storage volume is 3,277 cubic feet, with an increase in storage volume of 716 cubic feet.

Grated inlet catch basins will collect a portion of the surface runoff from the project site within the paved parking lot and landscape areas and conveyed to onsite subsurface drainage systems. The subsurface drainage system will consist of a perforated drainline embedded in crushed rock which will be wrapped with a layer of filter fabric. Surface runoff entering the perforated pipe will be allowed to exfiltrate into the ground. Overflows from the subsurface drainage system will be released on the lower end of the project site and continue to flow down the access roadway as it is presently doing. The remainder of the onsite surface runoff from the project site will continue to sheet flow along its existing drainage pattern.

The drainage design criteria will be to minimize any alterations to the natural pattern of the existing onsite surface runoff and to mitigate the increase in runoff generated by the project for a 50-year, 1-hour storm. This is in accordance with Chapter 4, Rules for the Design of Storm Drainage Facilities in the County of Maui.

### 3.3 SEWER

The sewer system for the project will be connected to the existing 8-inch sewerline located to the east of the site. The anticipated average daily flow from the project is 4,900 gallons per day. The wastewater generated from the project will continue to be transported to the Kahului Wastewater Treatment Facility. According to the Wastewater Reclamation Division, the treatment plant has sufficient capacity to accommodate the additional wastewater generated from the project at this time.

### 3.4 WATER

It is anticipated that proposed development will require 11,358 gallons of water daily to meet the domestic demands. The existing 1-1/2-inch water meter

will be used for the project. Calculations will be prepared and submitted during the building permit process to validate the adequacy of the existing meter.

Additional fire hydrants will be installed as required to meet the requirements of the Fire Department. This determination will be made during the building permit phase.

### 3.5 ELECTRIC AND TELEPHONE

The proposed electrical, telephone and cable TV distribution systems to the subject project will be installed from the existing underground facilities currently servicing the project site. Upgrades to the facilities will be made as necessary during the building permit process. Within the project site, the electric and telephone systems will be installed in accordance with the utility companies rules and regulations.

APPENDIX A  
HYDROLOGIC CALCULATIONS

## Hydrologic Calculations

Purpose: Determine the increase in onsite surface runoff from the undeveloped portion of the project site based on a 50-year, 1-hour storm.

A. Determine the Runoff Coefficient (C):

### ROOF AREAS:

Infiltration (Negligible)	= 0.20
Relief (Hilly)	= 0.06
Vegetal Cover (None)	= 0.07
Development Type (Roof)	= <u>0.55</u>
C=	0.88

### PAVEMENT AREAS:

Infiltration (Negligible)	= 0.20
Relief Rolling)	= 0.03
Vegetal Cover (None)	= 0.07
Development Type (Pavement)	= <u>0.55</u>
C=	0.85

### LANDSCAPE AREAS:

Infiltration (Medium)	= 0.07
Relief (Steep)	= 0.08
Vegetal Cover (Good)	= 0.03
Development Type (Landscape)	= <u>0.15</u>
C=	0.33

### EXISTING CONDITIONS:

Paved Area = 0.30 Acres  
Roof Area = 0.08 Acres  
Landscaped Area = 1.62 acres

WEIGHTED C = 0.43

DEVELOPED CONDITIONS:

Paved Area = 0.85 Acres

Roof Area = 0.39 Acres

Landscaped Area = 0.76 acres

WEIGHTED C = 0.66

- B. Determine the 50-year 1-hour rainfall:

$$i_{50} = 2.5 \text{ inches}$$

Adjust for time of concentration to compute Rainfall Intensity (I):

Existing Condition:

$$T_c = 9 \text{ minutes}$$

$$I = 5.52 \text{ inches/hour}$$

Developed Condition:

$$T_c = 7 \text{ minutes}$$

$$I = 5.91 \text{ inches/hour}$$

- C. Drainage Area (A) = 2.00 Acres

- D. Compute the 50-year storm runoff volume (Q):

$$Q = CIA$$

Existing Conditions:

$$Q = (0.43)(5.52)(2.00)$$

$$= 4.74 \text{ cfs}$$

Developed Conditions:

$$Q = (0.66)(5.91)(2.00)$$

$$= 7.80 \text{ cfs}$$

The increase in runoff due to the development of the proposed development is  $7.80 \text{ cfs} - 4.74 \text{ cfs} = 3.06 \text{ cfs}$ . The existing runoff volume generated from a 50-year, 1-hour storm is 2,561 cubic feet and the developed runoff volume is 3,277 cubic feet, an increase of 716 cubic feet.

# Hydrograph Plot

English

## Hyd. No. 1

### EXISTING CONDITION

Hydrograph type = Rational  
Storm frequency = 50 yrs  
Drainage area = 2.0 ac  
Intensity = 5.52 in  
I-D-F Curve = 2-5.IDF

Peak discharge = 4.74 cfs  
Time interval = 1 min  
Runoff coeff. = 0.43  
Time of conc. (Tc) = 9 min  
Reced. limb factor = 1

Total Volume = 2,561 cuft

# Hydrograph Plot

English

## Hyd. No. 2

### DEVELOPED CONDITION

Hydrograph type = Rational  
Storm frequency = 50 yrs  
Drainage area = 2.0 ac  
Intensity = 5.91 in  
I-D-F Curve = 2-5.IDF

Peak discharge = 7.80 cfs  
Time interval = 1 min  
Runoff coeff. = 0.66  
Time of conc. (Tc) = 7 min  
Reced. limb factor = 1

Total Volume = 3,277 cuft

APPENDIX B  
WATER DEMAND CALCULATIONS

## WATER DEMAND CALCULATIONS

Per 2002 Water System Standards:

Average Daily Demand (ADD) = 140 gallons per 1,000 square feet for  
Commercial/Industrial Mix

= 560 gallons per unit of 5,000 gallons per acre for  
Multi-Family low rise

$ADD = (140)(9,700/1,000) = 1,358 \text{ gpd (Commercial/Industrial)}$

$= (560)(16) = 8,960 \text{ gpd (Multi-Family low rise)}$

$= (5,000) (2.00) = 10,000 \text{ gpd (Multi-Family low rise)}$

**Average Daily Demand = 1,358 gpd + 10,000 gpd = 11,358 gpd**

APPENDIX C  
WASTEWATER CALCULATIONS

## WASTEWATER CALCULATIONS

Per the 2000 Wastewater Flow Standards:

Wastewater Contribution for Office use is 20 gallons/employee/day

Wastewater Contribution for Industrial Shop is 25 gallons/employee/day

Wastewater Contribution for Apartment is 255 gallons per day/unit

Office Employees is 1 per 200 square feet of floor area

Total Office Area = 6,100 square feet, Total Employees = 31 Employees

Office Wastewater Contribution =  $(31)(20) = 620$  gpd

Industrial Employees is 1 per 500 square feet of floor area

Industrial Area = 3,600 square feet, Total Employees = 8 Employees

Industrial Wastewater Contribution =  $(8)(25) = 200$  gpd

There will be 16 apartment units.

Apartment Wastewater Contribution =  $(16)(255) = 4,080$  gpd

**Wastewater Contribution =  $620 + 200 + 4,080 = 4,900$  gpd**
