As always Conventional Radiocarbon Ages and sigmas are rounded to the nearest 10 years per the conventions of the 1977 International Radiocarbon Conference. When counting statistics produce sigmas lower than +/- 30 years, a conservative +/- 30 BP is cited for the result. The reported d13C was measured separately in an IRMS (isotope ratio mass spectrometer). It is NOT the AMS d13C which would include fractionation effects from natural, chemistry and AMS induced sources.

When interpreting the result, please consider any communications you may have had with us regarding the sample. As always, your inquiries are most welcome. If you have any questions or would like further details of the analysis, please do not hesitate to contact us.

Thank you for prepaying the analysis. As always, if you have any questions or would like to discuss the results, don't hesitate to contact us.

Sincerely,

Ronald E. Hatfield Director

ISO/IEC 17025:2005-Accredited Testing Laboratory

REPORT OF RADIOCARBON DATING ANALYSES

Gina Farley — Report Date: November 06, 2019

Cultural Surveys Hawaii — Material Received: October 25, 2019

Laboratory Number	Sample Code Number	Conventional Radiocarbon Age (BP) or Percent Modern Carbon (pMC) & Stable Isotopes Calendar Calibrated Results: 95.4 % Probability High Probability Density Range Method (HPD)	
Beta - 541406	**Sample 1**	**200 +/- 30 BP**	IRMS δ13C: -24.3 o/oo
(53.5%)	**1728 - 1810 cal AD**	**(222 - 140 cal BP)**	
(26.0%)	**1646 - 1690 cal AD**	**(304 - 260 cal BP)**	
(15.9%)	**1925 - Post AD 1950**	**(25 - Post BP 0)**	

Submitter Material: Plant Tissue
Pretreatment: (charred material) acid/alkali/acid
Analyzed Material: Charred material
Analysis Service: AMS-Standard delivery
Percent Modern Carbon: 97.54 +/- 0.36 pMC
Fraction Modern Carbon: 0.9754 +/- 0.0036
D14C: -24.59 +/- 3.64 o/oo
Δ14C: -32.70 +/- 3.64 o/oo (1950:2019)
Measured Radiocarbon Age: (without d13C correction): 190 +/- 30 BP
Calibration: BetaCal3.21: HPD method: INTCAL13

Results are ISO/IEC-17025:2005 accredited. No sub-contracting or student labor was used in the analyses. All work was done at Beta in 4 in-house NEC accelerator mass spectrometers and 4 Thermo IRMSs. The "Conventional Radiocarbon Age" was calculated using the Libby half-life (5568 years), is corrected for total isotopic fraction and was used for calendar calibration where applicable. The Age is rounded to the nearest 10 years and is reported as radiocarbon years before present (BP), "present" = AD 1950. Results greater than the modern reference are reported as percent modern carbon (pMC). The modern reference standard was 95% the 14C signature of NIST SRM-4990C (oxalic acid). Quoted errors are 1 sigma counting statistics. Calculated sigmas less than 30 BP on the Conventional Radiocarbon Age are conservatively rounded up to 30. d13C values are on the material itself (not the AMS d13C). d13C and d15N values are relative to VPDB-1. References for calendar calibrations are cited at the bottom of calibration graph pages.

Downtown Neighborhood Board No. 13 Meeting Record

DOWNTOWN NEIGHBORHOOD BOARD NO. 13

c/o NEIGHBORHOOD COMMISSION • 530 SOUTH KING STREET ROOM 406 • HONOLULU, HAWAII, 96813
PHONE (808) 768-3710 • FAX (808) 768-3711 • INTERNET: http://www1.honolulu.gov

DRAFT REGULAR MEETING MINUTES
THURSDAY, AUGUST 6, 2015
PAUAHI COMMUNITY CENTER

CALL TO ORDER: Chair Alvin Au called the meeting to order at 7:01 p.m., **with a quorum of eight (8) members present.** Note: This nine (9) member Board requires five (5) members to establish a quorum and to take official Board action.

Board Members Present: Alvin Au, Anthony Chang, Jasmine Mancos, Dolores Mollring, Chu Lan Shubert-Kwock, Tom Smyth, Robert Tom, and Stanford Yuen.

Board Members Absent: None.

Guests: Captain James Hull (Honolulu Fire Department); Lieutenant Stephen Silva and Sergeant Jeffrey Nagai (Honolulu Police Department); Diana Ronquillo and Clare Ann Ronquillo (Neighborhood Citizen's Patrol); Pat Lee (Honolulu Rail Transit Project); Lee Stack (Chinatown Improvement District); Nicole Reid (Arts District Merchants Association); John Chang (Mayor Kirk Caldwell's Representative); Liz Char and Sandy Pfund (City and County of Honolulu); Councilmember Carol Fukunaga; Sonny Le (Representative Karl Rhoads Office); Senator Suzanne Chun Oakland; Sam Lanai (Scarlet Honolulu LLC); Wesley Fong and Howard Lum (Chinatown Community Center Association); Gwen Abella (Winston Hale); James McCarthy, Jonathan Saupe, Sandra Pohl, Stanley Yon, Kelly Griffith, Ronald Higa, John Donaldson-Selby, Jenny Grondin, David Segarra, Bradley Rhea, Rhonda Jones, Julia Cornell, Serena Hashimoto, and Ray Rudie; Ericson Cristobal (Videographer); Neil Baarde (Neighborhood Commission Office).

INTRODUCTION OF BOARD MEMBERS: Board members introduced themselves at this time.

FILLING OF ONE (1) AT-LARGE VACANCY

- James McCarthy – McCarthy noted that he has lived in the Downtown area for eight (8) years but has been a part of the community for 15 years. McCarthy noted that he was the pioneer for the Chinatown lofts and is a faculty member of SEEK Middle School. McCarthy noticed all the changes going on within the neighborhood and would like to be a member of the Board.
- Jonathan Saupe – Saupe noted that he has been a resident living in the heart of Chinatown for five (5) years. He was the former Executive Producer at Hawaii News Now, but is now an owner of a retail boutique, Barrio Vintage. Barrio Vintage was started four (4) years ago as a small pop-up concept and has grown to one (1) of the State's most popular destinations for vintage clothing and treasure hunters. Saupe sees the main issues facing the Downtown/Chinatown area as homelessness, affordable housing, community space development, and noted it is in need of a push for more tourism dollars to find their way to the historic streets of Chinatown.
- Sandra Pohl – Pohl noted that she has lived and grew up in the Chinatown area and commented that it is the best place. Pohl noted that she also owns a store and has been around for at least 15 years. Pohl noted she is a committed volunteer and a community advocate and commented that she is working to make the Downtown/Chinatown area a better place. Pohl noted that she has helped organize many different clean ups and events including the Walk on the Wild Side event. Pohl commented that she sees the things occurring in the area every day and noted that she wants to make a difference.
- Stanley Yon – Yon noted that he lives at Honolulu Park Place and is currently working at St. Andrew's Priory and is responsible for the grounds and the maintenance. Yon noted that he lives and works right in the center of the Downtown/Chinatown community. Yon is also on the Board of Directors of a 175 low income senior housing and noted that he is active in multiple locations as well as the Downtown/Chinatown area. Before coming to Hawaii, Yon noted he was a part of Los Angeles Economic Development and has worked in the Foreign Trade Zone. Yon commented that he also served on the Planning Advisory Committee as well as attending most of the Downtown Board Meetings and listens, observes, and noted that he has learned many things about the community. Yon commented that he would like to engage in the community as well as adding his skills and personality to the Board because he shares the same vision for the Downtown/Chinatown area.

Hearing no other nominations, Chair Au called for the vote.

- **James McCarthy received no votes, 0-8-0.** (**NAY**: Au, Chang, Mancos, Mollring, Shubert-Kwock, Smyth, Tom, and Yuen.)
- **Jonathan Saupe did not receive enough votes to fill the vacancy, 4-4-0.** (**AYE**: Au, Chang, Mancos, and Smyth.) (**NAY**: Mollring, Shubert-Kwock, Tom, and Yuen.)
- **Sandra Pohl did not receive enough votes to fill the vacancy, 1-7-0.** (**AYE**: Smyth) (**NAY**: Au, Chang, Mancos, Mollring, Shubert-Kwock, Tom, and Yuen.)
- **Stanley Yon did not receive enough votes to fill the vacancy, 3-5-0.** (**AYE**: Mollring, Shubert-Kwock, and Yuen.) (**NAY**: Au, Chang, Mancos, Smyth, and Tom.)

Comments – Smyth noted that the Board has seen the way the votes are spread and noted that some members can change their minds.

Chair Au called for the vote.

- **James McCarthy received no votes, 0-8-0.** (**NAY**: Au, Chang, Mancos, Mollring, Shubert-Kwock, Smyth, Tom, and Yuen.)
- **Jonathan Saupe did not receive enough votes to fill the vacancy, 4-4-0.** (**AYE**: Au, Chang, Mancos, and Tom.) (**NAY**: Mollring, Shubert-Kwock, Smyth, and Yuen.)
- **Sandra Pohl did not receive enough votes to fill the vacancy, 1-7-0.** (**AYE**: Smyth) (**NAY**: Au, Chang, Mancos, Mollring, Shubert-Kwock, Tom, and Yuen.)
- **Stanley Yon did not receive enough votes to fill the vacancy, 3-5-0.** (**AYE**: Mollring, Shubert-Kwock, and Yuen.) (**NAY**: Au, Chang, Mancos, Smyth, and Tom.)

Comments – Chair Au thanked the candidates and noted that he was very impressed and asked the candidates to return to the September 2015 Board meeting, if they are still interested in filling the vacancy.

Chair Au deferred the filling of the vacancy to the September 2015 meeting.

PUBLIC SAFETY REPORTS

Honolulu Fire Departments (HFD) – Captain James Hull reported the following:

- July 2015 Fire Statistics – There were 6 structure, 0 wildland, 0 vehicle and 4 rubbish fires; 130 medical emergencies, 1 search and rescue, and 34 miscellaneous calls for service. There were no major or unusual incidents.
- Fire Safety Tip – Hawaii is in hurricane season from June 2015 to November 2015. The HFD encourages every family to take the necessary steps to prepare for a hurricane; every family should have an evacuation plan, survival kit, and to know how to remain informed about hurricane disasters. More information about hurricane preparedness can be found at the Department of Emergency Management's (DEM) website at www.honolulu.gov/dem.

Questions, comments, and concerns that followed:

1. Fire Alarm – Mollring apologized to her neighbors and the community because of the fire alarm that was blaring around 1:00 a.m. to 2:00 a.m. Mollring commented that she looked outside her window and saw HFD not moving, so Mollring knew it was not anything serious. Mollring noted that the new system that was installed should only ring in the event of a real fire. Captain Hull responded that in his experience fire alarms are the most frequent calls that HFD responds to and noted that when HFD goes to inspect, the people stay in their rooms even though there is a possibility of a real fire. Captain Hull reminded the community that if an alarm goes off, the residents should go outside and stay outside to help HFD do their job. Tom noted that the same thing occurred around the same time at Capitol Place.
2. Fire Lane – John Donaldson-Selby asked if Fort Street Mall is a usable fire lane. Captain Hull responded that HFD can use Fort Street because of the stand pipes if needed because the high rises on Fort Street Mall.

Honolulu Police Department (HPD) – Lieutenant Stephen Silva and reported the following:

- July 2015 Crime Statistics – There were 8 motor vehicle thefts, 4 burglaries, 74 thefts, 18 unauthorized entries into a motor vehicle (UEMV), 36 assaults, 6 sex assaults, 2 graffiti and 3 drug offenses, for a total of 2,399 calls for service.

- Safety Tips: Hurricane Preparedness was emphasized and the importance of having a "To-go" kit and "Stay" kit. Lt. Lee explained what each kit should contain. Also, in an emergency, listen for updated information and seek the nearest shelter.

Questions, comments and concerns followed:

1. Crime Trends – Shubert-Kwock noted that she was surprised in the thefts and assault numbers and asked if Lieutenant Silva can give any information. Lieutenant Silva responded that the crime that has increased could be because it is summer time.
2. Cameras – Shubert-Kwock raised a concern and asked about the status of cameras. Lieutenant Silva responded that there are three (3) nonfunctional cameras and the rest are all functional. Shubert-Kwock noted that HPD needs to request the refund for the camera work and asked if it would be possible. Lieutenant Silva responded that he was not aware of the situation but will make some inquiries.
3. Arrests – Mancos asked if the reported drug incidents count as arrests made. Lieutenant Silva responded that he is guessing three (3) arrests were made but it could be possible that no arrests were made. Mancos asked if HPD should encourage to community, that if someone sees something, they should say something. Lieutenant Silva responded that HPD always encourages the community to call and report. Serena Hashimoto raised a concern about the number of drug arrests because her shop calls HPD about drugs at least 20 times a day and noted that everyone knows Chinatown's reputation which is upsetting to the Neighborhood Board. Lieutenant Silva responded that the statistics given are the patrol statistics and noted that the NARC/VICE unit has their own statistics as well. Donaldson-Selby noted that the Board should request the NARC/VICE unit to the meetings for statistics. Lieutenant Silva noted that he will forward the request.

Neighborhood Citizen's Patrol – Mollring reported that her group was a part of the National Citizen's Patrol Walk. Over 50 people came to walk down Pauahi Street then to Aala Park where a potluck was held. Calare Ann Ronquillo noted that the River/Pauahi group also participated in the walk and noted that their block captain thanked HPD for their work and for always patrolling near River Street and Pauahi Street. Ronquillo noted that their group members are dwindling, but noted that HPDs efforts are making the area cleaner and safer.

COMMUNITY CONCERNS:

Hawaii Pacific University (HPU) – No representative present; no report provided. Smyth commented that the large fence that used to enclose Aloha Tower has been taken down but many small fences have been put up. Smyth noted that the public can no longer walk through the campus area or the center lane.

Safe Haven – No representative was present. No report was provided.

Honolulu Rail Transit Project – Pat Lee reported the following:

- Transit Savings Report – Every month, the American Public Transportation Association (APTA) releases a Transit Savings Report which shows how much a person can save on a monthly and yearly basis by taking public transit. In Honolulu, individuals who ride public transportation instead of driving can save more than $12,000 per year. APTA determines the cost of the average monthly transit pass and compares it with the costs of driving, including gas, maintenance, tires, insurance, registration and parking fees.
- Rail Systems – Rail is about transportation and land use, but also about social equity. There are many people who are too young or too old to drive, unable to drive or cannot afford to own and operate a car. These residents depend heavily on public transportation to get to their jobs, school, run errands and carry on with their lives. Rail would improve public transportation by increasing efficiency and reducing travel times compared to a bus-only trip, due to its frequent service and reliability. Bus routes would be redesigned to feed into the rail system from other areas to service more riders. Rail will also enable Transit Oriented Development near stations and along its route. TOD brings new retail and commercial opportunities, but also new opportunities for affordable housing in proximity to good public transportation. This would help those in the income groups who need housing and depend on public transportation.
- Construction Highlights – These are the latest construction highlights: 267 foundation shafts have been placed, 187 columns erected, 3,090 segments casted, and 139 spans. The West Oahu Farrington Highway Guideway portion (from East Kapolei to Pearl Highlands) is now 66% completed. The Kamehameha Highway portion (from Pearl Highlands to Aloha Stadium) is 39% completed, and the Rail Operations Center in Waipahu is 74% completed. Over three (3) miles of guideway are completed and the rail guideway is now proceeding into the Waipahu area. For traffic updates, meeting notices and more information, please visit the website www.honolulutransit.org, call the project hotline at 566-2299 or email a question at info@honolulutransit.org.

Chinatown Business & Community Association (CBCA) – Chu Lan Shubert-Kwock reported the following:

- Mid Pauahi Crosswalk – The mid Pauahi crosswalk is finally getting built. This crosswalk was initiated by CBCA back in 2009-2010 and are thankfaul it will be completed by mid-August 2015.
- Chinatown Meetings – CBCA attended two (2) important Chinatown meetings regarding the senior housing on River Street, working on the needs of the community. These include the Chinatown Community Center which will be 10,000 square feet and will be multipurpose community center. CBCA asked that the immigrants be honored with trees and flowers brought to the islands to remind them of their ancestral homes.
- Dr. Sun Yat Sen's 150th Anniversary – The Dr. Sun Yat Sen's 150 anniversary will be honored with a new garden at Foster Gardens. $150,000 has been approved by the City Council. CBCA thanks all those who worked hard for this to happen.
- Bills 44 and 46 – The Bills passed 3rd reading and will expand sit/lie hours in Union Square and the Chinatown Mall by Aala Park.
- Kalihi Business Association Meeting – Shubert-Kwock and Director Judi Rod attended the Kalihi Business Association Meeting to learn more about their concerns. CBCA learned that business owners have suffered due to illegal camping and filth. Some of the homeless are not willing to move into shelters for various reasons. CBCA asks that shelters which received money from tax dollars do more, leaving them on the sidewalks is not helping the community.
- Bill 49 – Bill 49 allows the sale and consumption of liquor on Fort Street Mall and other Chinatown Malls is a bad bill introduced by Councilmember Fukunaga with little input from tenants and residents around the mall.
- Economic Revitalization – CBCA is very unhappy that the City is pushing more liquor on the public streets and malls under the misguided belief that it is "economic revitalization" for Downtown and Chinatown. 589 Chinatown merchants and residents petitioned the Mayor, HLC, DTS, and Councilmember Carol Fukunaga that they do not think liquor and noise help the area. Promoters leave after close up time, but leaving drunks for the community to deal with.
- Homeless – CBCA is hopeful that Governor Ige convened a high powered committee on Homelessness and CBCA hopes it will help the City to produce more permanent housing for the homeless and also provide help to the mentally ill.
- Chinatown Heroes Banquet – CBCA will be hosting the 6th Chinatown Heroes Banquet on Saturday, October 17, 2015 at the Golden Palace. CBCA will be honoring Councilmember Fukunaga, for the Chinatown bathrooms; David Chang, Little Village Noodle House and Epic; KHON2 news for extensive coverage of Chinatown issues; Hawaii 5-0 for bringing business/highlighting Chinatown; Ernie Loo, the long time unsung hero of Chinatown. Tickets are $35/person and sponsor tables are $1,000 each for a group of 10.
- Chinese Moon Festival/Concert – On Saturday, September 12, 2015 at 2:00 p.m. at the Mission Memorial Building, 550 South King Street, there will be a Chinese Moon Festival/Concert. Admission is free.
- Next Meeting – The next CBCA Chinatown Dim Sum meeting is scheduled for Tuesday, August 11, 2015, Empress Restaurant from 8:30-10:00 a.m.

Chinatown Improvement District (CID): Lee Stack reported that the Sustaining Chinatown: The next one (1) - hour series to learn how to maintain and protect historic structures is scheduled for Tuesday, August 25, 2015 at the Lyons Associates, 45 N. King Street. Presentations are free, but reservations are recommended. For more information visit www.cidchinatownhawaii.org.

Arts District Merchants Association (ADMA): Nicole Reid highlighted the following:

- First Friday – ADMA is hosting a public health crawl, which will go through different businesses. All businesses have agreed and will give discounts to all those who wish to be a part of the event. The money made will go to a non-profit.

Public:

- Representative Brower – Gwen Abella raised a concern about Representative Tom Brower and noted that what he did to the shopping carts was wrong. Abella noted that she is not glad he got beat but it was criminal act what he did and commented that it did not help anyone.
- Queens Hospital – Ray Rudie raised a concern about the Canal Street off ramp and asked if the City can increase parking on the street. Rudie noted that it has yet to be done and asked for an update because Lisbon Street is too narrow for parking and a two (2) way street and suggested that it be turned into a one (1) way street with parking since the streets adjacent are both two (2) way streets.

ELECTED OFFICIALS:

Mayor Kirk Caldwell's Representative – John Chang reported the following:

- Mango Jam Honolulu – The "Mango Jam Honolulu" showcases the mango and how it brings the many cultures in Hawaii together. On stage there will be community groups and entertainers. There will also be an open market. The event is sponsored by the Hawaii Maoli and the Mayor's Office of Culture and the Arts (MOCA), at the Fasi Civic Center, from 4:30 p.m. to 9:30 p.m. on Friday, August 7, 2015, and 10:00 a.m. to 9:30 p.m. on Saturday, August 8, 2015.
- Title VI Program Report Public Hearing – As a recipient of Federal Transit Administration (FTA) funds, DTS-PTD is required to comply with FTA requirements that prohibit discrimination on the basis of race, color, national origin, gender, or disability in all programs, activities, and services. DTS-PTD must submit a Title VI Program report to FTA every three years. DTS-PTD is in the process of finalizing the report and welcomes any public participation/input. All public input regarding the report will be included in the final version to be submitted to the Transportation Commission and City Council for approval. Upon approval, the report will be submitted to FTA in December 2015. For more information call 768-8374, email thebusstop@honolulu.gov, or visit http://www.thebus.org/AboutTheBus/DraftTitleVIProgram.asp.
- Bill 48 – In regards to Bill 48, sitting does not apply to bus stops. If an individual is lying at the bus stop, Bill 48 applies. Officers checked the area at various times of the day and did not observe anyone lying at the bus stops. If anyone sees any individual lying down, please call 911.

Questions, comments and concerns followed: Action Summit in Chinatown – Shubert-Kwock noted that the Action Summit in Chinatown was a success and asked if a report can be compiled and given to the Board. Mollring noted that her son in law called the Federal Justice Department (FJD) who said that the FJD is saying that the Sit and Lie Bill is unconstitutional.

Councilmember Carol Fukunaga – Councilmember Fukunaga distributed her report and highlighted the following:

- Hiroshima Commemoration – Today, there was a commemoration for the 70th anniversary of the bombing of Hiroshima.
- Clean Ups – The next Clean Up will be Saturday, August 15, 2015. The area's that will be cleaned will be Sun Yat Sen Park and College Walk. Participants asked if they can paint the bridge red to better deter graffiti. Councilmember Fukunaga noted that hopefully it will work with the Administration.
- Bills 44 and 46 – Bills 44 and 46 were adopted by Council and has passed 3rd reading. Councilmember Fukunaga noted that the bills will probably get the support needed by Mayor Caldwell. Bill 44 will extend the hours for other businesses that stay open later. It was noted that the Mayor may not support this bill.

Questions, comments and concerns followed: Bill 49 – Shubert-Kwock noted that she attended the Bill 49 hearing and noted that the Director allowed to have a bathroom at the mall and noted that liquor licenses cannot be issued. Councilmember Fukunaga responded that the Department of Parks and Recreation (DPR) and Liquor Commission allows consumption of liquor in controlled areas and are trying to be more flexible for Fort Street Mall. Donaldson-Selby asked if the public can get the minutes from that hearing. Chair Au noted that a member of the Board also sits on the Board of Directors too, and commented that they can give him the information. Stack raised a concern and noted that it is great to have a dialogue but there needs to be at least two (2) people to have a dialogue. Howard Lum thanked Councilmember Fukunaga for Bill 46 and noted that she has done a great job for Chinatown.

Charter Commission – No representative was present; no report was provided.

Governor David Ige's Representative – No representative present; no report provided.

Senator Suzanne Chun Oakland – Senator Chun Oakland was present earlier in the meeting. A report was available.

Representative Scott Saiki – No representative present; A report provided.

Representative Karl Rhoads – Chair Au read the following report:

- Update – The City replaced the "parking" sign that points to the Chinatown Municipal Parking lot on Beretania Street.
- Drug Dealing Activity – Received a complaint regarding suspecting drug dealing activity across the street from 1315 River Street. The issue was forwarded to HPD.

- Hotel Street – Received a complaint regarding bicyclist riding down Hotel Street on the wrong side of the road and ignoring traffic lights. This happens most often at the intersection of Hotel Street and Smith Street. The issue has been forwarded to HPD.

NEW BUSINESS:

Discussion on Transfer of Business from The Empire Inc. to Scarlet Honolulu, LCC – Shubert-Kwock noted that she did not write a letter to the Liquor Commission but Wayne Luke has been notified. Shubert-Kwock commented that the Board does not know what is going on but it is a concern of the community and the new owner should at least come to the Board for dialogue. The Liquor Commission does ask for the Neighborhood Boards opinion and commented that the Board lost their opportunity. Sam Lanai commented that he is the owner of Scarlet Honolulu, LCC and noted that he has also opened a LGBT night club, which has been very successful in the three (3) weeks it has been open. The Scarlet Honolulu is small but the other half will be a Tiki lounge and restaurant, like a new upscale happy hour. Chair Au noted that it was nice to meet Lanai and hear what he had to say and offered a spot on the agenda to Lanai once his business is established to give an update. Mollring noted that all the reports received have been awesome and welcomed Lanai to the neighborhood.

Discussion on Murphy's Bar and Grill Street Closure – Chair Au announced that the 19th annual Pigskin Pigout fundraiser for the UH Football program will be on Thursday, August 27, 2015. Shubert-Kwock noted that the event will help cancer patients and commented that the community needs to be notified for courtesy. Chair Au noted that the Liquor Commission was informed and told Murphy's Bar and Grill that they need to come to the Neighborhood Board to present and notify the community. Chair Au commented that Murphy's Bar and Grill are usually good events that are controlled.

Community Update and Discussion for the Affordable Senior Rental Housing on River Street – Sandy Pfund reported that there were some concerns about the design and the possible impact it will have on the neighbors. Pfund noted she has been working with the architects to make sure that the plans are refined and commented that it takes time to evaluate all of the designs and will take longer than originally anticipated. Pfund noted that the architects will reduce the number of exceptions and will come back to the Board in September 2015 with another update for the Board and the community. Pfund commented that the Kuhio Park Terrace Community Center tour is occurring and noted that Senator Chun Oakland is the holder of the master list of those who are interested, the community can call or email Senator Chun Oakland for an appointment tour.

Questions, comments, and concerns that followed: Community Center – Shubert-Kwock noted that the community center is one (1) of the best things to happen to Chinatown and noted she hopes the community center can be functional in the long run and asked for feedback on the project. Pfund responded that they will for an advisory committee because they are trying to make a flexible committee that is interested in the design as well.

Discussion – Wesley Fong noted that he has met with the City agencies and Michaels Co. and noted that the Chinatown Community Center Association (CCCA) would like to echo the comments and recommendations of the Historic Hawaii Foundation on preserving the historic and cultural character of Chinatown especially the location of the proposed Chinatown Community Center and affordable senior housing project on River Street. To preserve the character of the neighborhood surrounding the site, the density of the proposed housing project needs to be at a height that will not destroy the historic and cultural character of the mauka area of Chinatown bordered by Vineyard Boulevard. As mentioned, there are temples, a shrine, low rise Chinatown Cultural Plaza, low rise Chinese Schools, low rise apartment complexes all located along or in proximity of the River. Across Vineyard Boulevard is the Kwan Yin Temple and Foster Garden. This site above Beretania Street is surrounded by a unique blend of cultural and historic sites making up the unique character of the area and this character must be preserved. Lum thanked the City, Pfund, Councilmember Fukunaga, and the Neighborhood Board for being sensitive to the community's concerns and the temple.

Questions, comments, and concerns that followed:

1. Addiction – Smyth raised a concern about the occupants who do not have an alcohol or drug dependency and asked how those who are dependent will be taken care of. Fond responded that he will leave it up to the City because he cannot dictate people. Shubert-Kwock raised a concern about the recommendations of representatives because CBCA is not on the list. Shubert-Kwock noted that she is disappointed for not being recognized. Fong responded that he has a letter from CBCA and noted that some members are on the Board of Directors. Fong commented that it is not for CCCA to determine and noted that they only makes suggestions.
2. Compromise – Reid raised a concern and asked what would happen if the City does not comply with the rules. Fong responded that it is a matter of compromise and it is not an all or nothing kind of deal. If there is

no compromise, CCCA will not encourage or sponsor the project. Pfund noted that there was a meeting held where those comments were made and commented that the City does notice the opinions but cannot put the comments in the documents until completed, but the City is always open to suggestions to improve the fair housing situation for all.

APPROVAL OF JULY 2, 2015 MEETING MINUTES – This item was deferred until the September 2015 meeting.

BOARD BUSINESS AND REPORTS:

Chair's Report=

- Chair Au reported that he invited the Department of Emergency Management (DEM) to come to the September 2015 meeting to inform the community about the Downtown/Chinatown danger zones as well as the safe zones.
- Shubert-Kwock asked if the Board can have an update from Hawaii Theater and from DPR to talk about the concrete box at Sun Yat Sen Park and to also talk about the park rules and the malls. DPR needs to educate the Board. Sam Moku also needs to come and give an update on Aloha Tower. Mollring noted that she took the tour of Aloha Tower and noted that there is a large room where the Neighborhood Board can have meetings and asked the other Board members to think about it. Shubert-Kwock noted that the room is a 350 square foot room with a nice view and an AC unit.
- Tom raised a concern about the Mayor's Homeless Task Force and noted that the City is trying to move the homeless out of Kakaako. The concern is that the homeless might settle in the Downtown/Chinatown area. Chair Au responded that there is a shelter behind the transit building on Dillingham Boulevard. The family is willing to sell their house for the homeless.
- Shubert-Kwock noted that in regards of the Chinatown Action Summit, the Board should invite Harrison Rue and raised another concern about the lack of signage for the new hygiene center because it would be helpful to let the public know that the bathroom hours are from 7:00 a.m. – 7:00 p.m. and asked if the Chair can make the request.

Other Liquor License Applications or Street Closure Events – No report.

Future Agenda Item Requests – No report.

Neighborhood Commission Updates – No report.

Treasurer's Report – Treasurer Mollring reported a $300.27 remaining balance. The report was filed.

City and County Affairs – No report.

Shubert-Kwock departed the meeting at 8:48 p.m.; Seven (7) members present.

Oahu Metropolitan Planning Organization (OahuMPO) – Smyth reported the committee is working on changing the by-laws to reflect the changes in the federal laws.

ANNOUNCEMENTS:

- Next Meeting – The next Downtown Neighborhood Board No. 13 meeting is scheduled for Thursday, September 3, 2015, Pauahi Community Center at 7:00 p.m.
- Neighborhood Citizen's Patrol (NCP) – The NCP meets each Tuesday on the Diamondhead side of Kukui Plaza at 8:00 p.m. Please consider joining the patrol and supporting its efforts as they express their service and pride in our Downtown/Chinatown community.
- Broadcasts – Videotape of Board meetings are scheduled to be shown on the third Thursday, and on the second and fourth Saturday on `Olelo Channel 49.

ADJOURNMENT: The meeting adjourned at 8:50 p.m.

DRAFT REGULAR MEETING MINUTES
THURSDAY, NOVEMBER 5, 2015
PAUAHI COMMUNITY CENTER

CALL TO ORDER – Chair Alvin Au called the meeting to order at 7:03 p.m., **with a quorum of seven (7) members present.** Note: This nine (9) member Board requires five (5) members to establish a quorum and to take official Board action.

Board Members Present – Alvin Au, Anthony Chang, Jasmine Mancos, Dolores Mollring, Jonathan Saupe, Chu Lan Shubert-Kwock (arrived at 7:35 p.m.), Tom Smyth, Robert Tom, and Stanford Yuen (arrived at 7:43 p.m.).

Board Members Absent – None.

Guests – Fire Fighter 1 Gerald Higgins and Captain Ken Kahahawai (Honolulu Fire Department); Major Calvin Tong, Lieutenant Stephen Silva, Sergeant Stuart Yano, and Sergeant Michael O'Neill (Honolulu Police Department); Laurel Johnston (Governor David Ige's Office); Noelle Wright (Mayor Kirk Caldwell's Representative); Representative Karl Rhoads; Andrew Tang (Department of Planning and Permitting); Pat Lee (Honolulu Rail Transit Project); Allen Stack Jr. (Chinatown Improvement District); Nicole Reid (Arts District Merchants Association); Clare Ann Ronquillo (River/Pauahi Citizens Patrol); Gwen Abella (Winston Hale); Todd Iocovelli and James Donnelly (Make-A-Wish); Greg Payton (Safe Haven); Nathanial Howard and Anya McClent (Hawaii Pacific University); Cameron McElroy (Real Office Centers); Monika Mordasin and Karen Seddon (Michael's Development Company); Rochelle Nagata-Wu (WRNS Studios); Michelle Bartell (American Savings Bank); Paul Mallory (Michaels Corporations); Lori Lum, Howard Lum, Kehaulani Lum, Roland Louie, and Wesley Fong (Chinatown Community Center Association); Vina Quick, and Ronald Higa; Ericson Cristobal (Videographer); Neil Baarde (Neighborhood Commission Office).

INTRODUCTION OF BOARD MEMBERS – Board members introduced themselves at this time.

PUBLIC SAFETY REPORTS

Honolulu Fire Departments (HFD) – Fire Fighter 1 Gerald Higgins reported the following:

- October 2015 Statistics – There were 5 structure, 17 vehicle, 1 nuisance, 1 cooking, and 21 activated alarms. There were 183 medical emergencies, 5 motor vehicle collision with pedestrians, 7 motor vehicle collisions, 1 mountain rescue, 1 ocean rescue, 1 hazardous material incident, with 7 unusual incidents.
- Fire Safety Tip – This holiday season, consider a fire-resistant, artificial Christmas tree. If a natural tree is purchased, select one (1) that is as fresh as possible. Cut off at least 1/2 '' at the bottom end of the trunk prior to placing the tree in a stand to allow the tree to absorb water. Keep the tree hydrated and away from heat sources. Use noncombustible materials for decorations. Choose only Underwriter's Laboratory approved electrical decorations and follow the manufacturer's instructions for installation. Do not overload the extension cords.

Honolulu Police Department (HPD) – Lieutenant Stephen Silva reported the following:

- October 2015 Crime Statistics – There were 9 motor vehicle thefts, 10 burglaries, 89 thefts, 52 unauthorized entries into a motor vehicle (UEMV), 29 assaults, 1 sex assault, 1 graffiti and 6 drug offenses, for a total of 2,605 calls for service.
- UEMV Prevention Tips
    - Lock the Doors – Simply locking the car doors will deter those who might just be waiting around for an easy target. Suspects have been known to check car door handles to see if the car is unlocked.
    - Keep Car Neat – Keep shopping bags and other items out of sight. A car that appears empty is not appealing to thieves.
    - Stash Before Parking – Stash and conceal all items before paring the car. Suspects have been known to conduct surveillance while looking for an opportunity to steal again. During the holiday season, do not leave bags in the car for thieves to steal.
    - Park Visibly – Always park under a lighted area or where it is visible to the public. Never behind a

wall or bushes where visibility is blocked and offers good concealment to the suspects who want to break in.
- o Layer Defenses – Increase the safety of the car with a vehicle alarm or steering wheel anti-theft wheel lock. These measures deter theft.
- o Lastly – Ensure the vehicle registration and insurance cards are hidden inside the vehicle. Thieves are known to steal the vehicle's paperwork, read the owners address on the registration, and burglarize the home.

Questions, comments and concerns followed: Thanks – Howard Lum thanked HPD and the City for sweeping and patrolling along Kukui Street and Vineyard Boulevard. Lum noted that he has noticed much change since the sweep and commented that the neighborhood feels safer.

Narco/Vice Commander – Major Calvin Tong introduced himself and was available to take questions.

1. Trends – Smyth raised a concern about the crimes that are not on the report and noted that the Board has been asking if the trend is going up or down. Major Tong responded that he has not noticed any real trends and asked the public to keep their eyes open and make the report so Narco/Vice can patrol or take action. Major Tong noted that the hotline number to report anonymously is 723-3933.
2. Drug Activity – Tom asked if most of the drug activity occurs in the daytime or the nighttime. Major Tong responded that the activity is never certain because all of the reported activities are always different. Tom noted that he heard of HPD foot patrolling the area but has never seen them and asked for more foot patrol. Lieutenant Silva responded that there are foot patrolling officers including in the evening. They might not be visible but they are around.
3. Suspicious Coffee Shop – Miki Lee raised a concern about a coffee shop on Nuuanu Avenue and Smith Street and noted that it does not feel safe for women to walk by. Major Tong responded that the coffee shop could be on HPDs radar and asked for extra details on the side. Patrick Wilson noted that the coffee shop being mentioned, definitely has suspicious activity going on for years. Wilson also raised a concern about being offered drugs across the street and "The Arcade" on Hotel Street and asked why the locations are not being investigated. Major Tong responded that he understands the community's frustration but HPDs resources are the issue. HPD is doing their best but can always do better and asked if Wilson reported to HPD after being offered drugs. Wilson noted that he lives in the heart of Waikiki and has noticed all the activity slowly disappear and noted that it should not take that much resource for the Downtown/Chinatown area. Major Tong responded that HPD will not stop doing their best.

Neighborhood Citizen's Patrol – Mollring reported that her group been walking every Tuesday night and announced that on Saturday, November 14, 2015 a sign waiving event will be at Kekaulike Mall from 8:00 a.m. A potluck will follow after the event. Clare Ann Ronquillo reported that the River/Pauahi Street block captain would like to thank HPD for their assistance with the homeless and the rowdy teenagers that have been out past their curfew.

COMMUNITY CONCERNS

Hawaii Pacific University (HPU) – No representative present; no report provided.

Safe Haven – Greg Payton reported the following:

- Moving – Safe Haven will be moving from Beretania Street to Pauahi Hale in February 2016.
- Statistics – One (1) person was discharged to their family on the mainland and one (1) person moved in. The activity center is awesome and is doing well.
- Landlord Summit – The Landlord Summit will be on Tuesday, November 17, 2015. Governor Ige and Mayor Caldwell will be in attendance to help find all the landlords in Hawaii in order to help the homeless. Payton is looking for a willing landlord to rent to a program who helps the homeless. Payton noted that they will be trying to get a loading zone area in front of Pauahi Hale.

Honolulu Rail Transit Project – Hearing no objections, Chair Au tabled the report until Pat Lee arrives.

Chinatown Business & Community Association (CBCA) – Hearing no objections, Chair Au tabled the report until Shubert-Kwock arrives.

Chinatown Improvement District (CID) – Allan Stack reported that CID is a part of the planning process for the beautification project with the City for Smith Street Park. Stack noted that they are completing the final draft of the plan that will include planters and hedges.

Arts District Merchants Association (ADMA) – Nicole Reid highlighted the following:

- Clean Up – The clean up scheduled for November 2015 has been put on hold. ADMA will inform the public when a date has been set.
- Downtown Shop Around – The Downtown shop around will be on Friday, November 27, 2015 and is a Black Friday event with certain shops in the Downtown/Chinatown area. The event is also partnering with Uber, for less traffic congestion.
- Street Parking Stalls – There has been an uptick in the rental of public street parking stalls. Many streets had private stalls before and Reid encouraged the Board to invite DTS to explain why certain stalls are permitted.

Public Concerns

- Rubbish on the Streets – Resident Miki Lee distributed some photos of rubbish on the streets of Downtown and Chinatown and noted that as a result of the rubbish and the homeless the area smells of urine and feces, and is unattractive to residents and visitors.
- Empty Spaces in Buildings – Gwen Abella raised a concern about the buildings in the Chinatown area being empty and asked why the space cannot be used to house the homeless.
- HPU Student Body President – The HPU Student Body President Nathaniel Thomas Howard thanked the Board for having him and noted that he will try to be in attendance from now on. Chair Au commented that Sam Moku is the HPU representative but has missed the last few meetings and asked if Howard can talk to the President or Moku to get at least some news to give to the community.
- Kapolei Christmas Parade – Ronald Higa announced that the Kapolei Christmas Parade will be on Saturday, December 12, 2015 at 6:00 p.m. There will be fireworks and the Kapolei High School Band will be playing.

ELECTED OFFICIALS

Shubert-Kwock arrived at 7:35 p.m.; Eight (8) members present.

Mayor Kirk Caldwell's Representative – Noelle Wright reported the following:

- Clarification on DTS Permitting – DTS works closely with the Honolulu Film Office on filming permit requests and strives to balance the needs of production with the needs of the community. The requests for permits typically come from the Honolulu Film Office. Permits are granted for available meters with an emphasis on parking production vehicles in front of closed businesses or adjacent to park areas whenever possible. Depending on the shot, parking may be restricted to provide a clear area for the shot or where the camera needs to be placed for the shot.
- Rubbish on Kukui Street and Vineyard Boulevard – DPR noted that the area described is not under the jurisdiction of DPR. ENV noted that they are looking into the concern and will provide a response at the December 2015 meeting.
- Grass Overgrowth – DFM noted that the area was previously maintained by DPR, but recently DFM took over the grass cutting maintenance for this area. The grass is scheduled to be cut on Friday, November 6, 2015.
- Community Assistance with City Clean Up Projects – DPR noted that the community should contact Clinton Jamile at 768-3034 to plan community clean up projects and learn about the DPR's "Adopt-A-Park" Program. DFM noted that there are a number of ways to assist the City on community cleanup projects. Community members can participate in DFM's storm water quality adopt a block and adopt a stream projects that address various locations throughout Oahu throughout the year. Information can be obtained through the Environmental Concern Line at 768-3300 or through the City's website.
- Jaywalking Citations – From January to August 2015, HPD issued 3,575 citations for jaywalking.
- Chinatown Action Summit – Andrew Tang, a TOD Planner, announced that the City is planning a follow up meeting to the Chinatown Action Summit on Tuesday, December 1, 2015 at 6:00 p.m. at the Aloha Tower HPU Room 3. Tang noted that they have taken the feedback from the last meeting and noted that they have worked the additions into the plan.

Yuen arrived at 7:43 p.m.; Nine (9) members present.

Questions, comments and concerns followed:

1. Aloha Tower Tour – Smyth noted that most of Aloha Tower is still closed to the public. Smyth noted that he is trying to get his condo association to take the tour of the new layout.
2. Graffiti – Tom noted that he has been noticing many walls with graffiti drawn on it and asked what the requirements were for the community to paint over the graffiti. Wright will follow up.
3. Robberies – Shubert-Kwock noted that there has been a recent wave of teenagers terrorizing and robbing people and small convenient stores. Shubert-Kwock also raised a concern about the amount of fights and drug activity on North King Street and Maunakea Street.
4. Sidewalks – Mollring noted that the City sidewalks are in bad condition because some of the sidewalks are cracked or uneven. Chair Au noted that DFM is in charge of the sidewalks and asked for the hotline number. Wright will follow up with the number.
5. Vineyard Boulevard – Resident, Annie Peterson, raised a concern about an alley way and asked if the City can sweep the alley because it is hard and uneasy for the residents of the nearby building. Chair Au noted that there is a hotline that contacts HPD or DFM to make a report.
6. Honolulu 311 App – Reid commended the City on their Honolulu 311 App because it has really helped and noted that the City even fixed the broken sprinklers. Wright noted that the pothole hotline number is 768-7777.
7. Funds – Mollring raised a concern about the Mayor releasing the funds for non profits. Specifically Weed and Seed Funding. Wright will follow up.
8. Foot Patrol – Tom raised a concern about the number of foot patrol officers in the Downtown/Chinatown area and noted that he does not see any and asked for more officers on the streets.

Councilmember Carol Fukunaga – No representative was present; A report was provided.

Governor David Ige's Representative – Laurel Johnston reported the following:

- Absence – Johnston announced that the reason for the Governor's representative's absence is because Governor Ige was concerned about other islands not getting the same amount of information to the other islands. Johnston noted that Governor Ige will work through the Community Colleges to give any information needed.
- Budget – Budget hearings will start soon and noted that Governor Ige has been working on many different projects.
- Turtle Bay – Land Conservation history has been made as Turtle Bay Resort and a collaboration of entities led by the State of Hawaii completed an agreement to preserve in perpetuity nearly 630 acres of open space along Oahu's North Shore. Governor Ige signed into law Senate Bill 284 on Friday, June 12, 2015, following the initiative of the Legislature. The details of the agreement were approved by the State Board of Land and Natural Resources (DLNR) on Friday, September 25, 2015.

Questions, comments, and concerns that followed:

1. Thanks – Chair Au thanked Johnston for attending and noted that the community is really involved and will be asking for help.
2. Homeless – Shubert-Kwock welcomed Johnston to the meeting and asked for State reports on the homeless and asked how the State can move the homeless and how to get more shelters. Johnston will follow up. Yuen commented that he appreciates Governor Ige for making homeless an emergency issue.

Senator Suzanne Chun Oakland – No representative was present. A report was not available.

Representative Scott Saiki – No representative was present; A report was provided.

Representative Karl Rhoads – Representative Rhoads reported the following:

- Chaplain Lane – A Board member asked if Chaplain Lane is a private lane. According to DFM, division of road maintenance, Chaplain Lane is City owned.
- Central Middle School – Governor Ige released $310,000 in Capital Improvement Project funds for the design and construction to repave the parking lots (Kukui, Administrative, Queen Emma) at Central Middle School. The estimated completion date for the project is November 2016.
- McKinley High School – Governor Ige released $10,000,000 in Capital Improvement Project funds for the construction and works of art to renovate Building W at McKinley High School. The estimated completion date for the project is June 2018.
- 2016 Legislative Session – The 2016 Legislative Session is coming up in January 2016. If anyone has any ideas for bills, please contact Representative Rhoads.

Questions, comments, and concerns that followed:

1. Steward Ship Bill – Shubert-Kwock raised a concern and asked if the Steward Ship Bill will be re-written or amended. Representative Rhoads responded that Act 221 has worked in a few cases but many petitioners did not follow through and noted that they are waiting to see the 2015 results and commented that he will stay on top of the issue.
2. Bills – Howard asked when and where Representative Rhoads will meet with Governor Ige and how the community can draft a bill. Representative Rhoads responded that there will be a Community Meeting on Thursday, November 19, 2015 at the Honolulu Community College, the meeting will begin at 6:30 p.m. To draft a bill, the first thing would be to be a part of the legislation and noted that if anyone is interested in drafting a bill, to contact his office at 586-6180.

Hearing no objections, Chair Au took the agenda out of order to Honolulu Rail Transit Project – Pat Lee.

Honolulu Rail Transit Project – Pat Lee reported the following:

- Business Outreach Programs – The Holidays are coming, and it's an important time for shoppers as well as businesses. HART is undertaking several initiatives to support and assist local businesses along the rail alignment during construction. HART has in place a Business Outreach Program designed to keep businesses informed and updated on construction activities, and to provide business-oriented outreach to assist those who are affected by the work. HART's Business Outreach Program includes insuring proper access, signage and collateral for businesses. The alliance program, which includes over 400 businesses in the construction corridor, provides tailored construction briefings, free business development workshops and regular contact with HART to jointly develop additional programs to assist businesses during construction. HART plans to expand the outreach program to the Airport and City Center sections of the project as construction activity progresses into urban Honolulu.
- Shop and Dine On The Line – The HART Business Outreach Program includes:
    - HART's Business Alliance Program with meetings and weekly construction alerts
    - Business sign program with directional access and "Open for Business" signs
    - Detailed information for customers about area construction activity and access
    - Additional business resources in partnership with the Mayor's Office of Economic Development, U.S. Small Business Administration, the Hawaii Small Business Development Center, and the Mink Center for Business and Leadership
    - Electronic online offer program for additional customer outreach, social media and marketing workshops
- Shop and Dine Online Application – One (1) of these programs is Shop and Dine on the Line which partners with nearly 100 businesses in the Aiea, Pearl City and Waipahu area. The program is designed to assist businesses along the rail alignment during construction. Mention the Shop and Dine on the Line program, or print out the online brochure, to receive discounts on dining, shopping and services. With the Holidays approaching, we urge the public to patronize these stores and restaurants and use the discounts and other promotions these businesses are offering which help our local businesses during construction. Please visit: www.shopanddineontheline.com for more details to help our local businesses during construction. You can also visit the website using your phone or mobile device, and show the Shop and Dine logo on your phone.
- General Information – For general project information, traffic updates, meeting notices and more information, please visit the website www.honolulutransit.org, call the project hotline at 566-2299 or email a question at info@honolulutransit.org.

Chinatown Business and Community Association (CBCA) – Shubert-Kwock reported the following:

- Chinatown Heroes Banquet – CBCA Celebrated its 6th Annual Chinatown Heroes Banquet attended by 200 people. The following were honored:
    1. Council Member Carol Fukunaga
    2. Sifu Ernie Loo
    3. DTS Director Mike Formby
    4. Little Village Noodle House owner, David Chang
    5. Hawaii 5-0 Eye Productions
    6. KHON2 News
- Homeless – Homelessness in Chinatown is again a pressing problem as more are migrating back. CBCA will continue to work with IHS and Safe Haven and begin a collaborative work with Safe Haven to find rental housing for the Housing First program. CBCA is pleased that Mayor Caldwell and the City Council as well as Governor Ige are working hard pushing for housing for our homeless and ramping up placements and services.

- Crime Statistics – Crime Stats - we are plagued by drug dealings and fights in various parts of Chinatown. Bank of Hawaii has reported some grave problems by North King Street and Maunakea Street.
- Youth Gangs – Youth Gangs again are plaguing our merchants, they range in ages from 10 to 15 in groups of eight (8) to 10. They carry backpacks, steal and run off while others block the view of the shop owners.
- Duc's Bistro – Bottom part of Maunakea street liquor store across from Duc's Bistro has a bigger gathering of people hanging out the liquor store where they are dealing drugs and drinking alcohol.
- Graffiti – We are pleased to report that the Ket On building no the one across Duc's Bistro is now graffiti free.
- Next CBCA Meeting – CBCA is working with other community groups on the Senior affordable housing on River. The next CBCA Dim Sum meeting is Tuesday, November 10, 2015 at 8:30 a.m. to 10:00 a.m. at Empress Restaurant in the Chinese Cultural Plaza, second floor. All welcome to join us to make Chinatown a better place for all.

NEW BUSINESS

3rd Annual Make-A-Wish Jingle Bell Rock Run – James Donnelly and Todd Locovelli announced that the 3rd annual Jingle Bell Rock Run will go from Iolani Palace to Ward Avenue, through Beretania Street and then down King Street. The 5K will be on Sunday, December 20, 2015. The keiki run will begin at 5:30 p.m. and the Adult 5K will begin at 6:00 p.m. There will be limited/rolling road closures. Locovelli noted that King Street and Beretania Street will only have a few lanes closed but will be reopened once the last runner passes.

American Savings Bank (ASB) – Michelle Bartell presented the plans for a new corporate campus on Aala Street and Beretania Street. Bartell noted that ASB prides their work on their work culture and teamwork. ASB has received many awards being voted that it is the best place to work at five (5) different locations. The new corporate campus would be the start of something new. The corporate campus will have parking, offices, and a branch on the bottom level. There is currently no rendering of the interior, but Bartell noted that it is a great way to collaborate not only within the five (5) different teams within ASB but with also the community. Bartell noted that she will send more information regarding the groundbreaking and the opening to the Board. Bartell also noted that ASB has been working with Farrington High School students to help with grants and other forms of aid.

Questions, comments, and concerns that followed:

1. Building Cost – Chair Au noted that the Neighborhood Board boundaries stop at the stream and thanked Bartell for her report and asked what the cost of the building will be. Bartell responded that it was $12 million for the land and ASB is still working on the total project costs. Bartell noted that the current ASB headquarters is still at Fort Street Mall.
2. Community – Smyth asked if ASB will close its current headquarters on Fort Street. Bartell responded that the building will remain but the teammates will all be transferred to the new building. Shubert-Kwock asked if there will be community rooms to help the community. Bartell responded that ASB does offer its seeds of service programs.
3. Security – Saupe noted that he is excited about the project but raised a concern about the security because across the street is a rough area. Bartell responded that ASB has their own security and will be sure to secure all areas inside and outside of the building.
4. Employees – Tom raised a concern about the number of employees and asked if all the employees would leave around the same time. Bartell responded that there will be around 600 employees and noted that they will have separate schedules where employees could be leaving all hours of the day. Bartell noted that there will be paid parking for the public and there will be designated spots for the employees.
5. Retail – Yuen asked if ASB has envisioned any retail stores or restaurants being in the building. Bartell responded No, only ASB will be in the building but the employees will be buying food from all over the community. A resident raised a concern and asked if ASB will be closing any branches. Bartell responded that they sold the Kalihi Service Center and will potentially be moving the site to the Kamehameha Shopping Center.

Community Update on the Proposed City Affordable Senior Rental Housing – Sandy Pfund, Rochelle Nagata-Wu, Monika Mordasin, and Karen Seddon updated the community on the proposed City affordable senior rental housing issue and noted that they have concluded their negotiations with Michaels Development Co. and are waiting to hear back from Full Council to see if their proposal will go into the Committee hearing. If all goes well and Council passes the proposal, the contract will be awarded to Michaels Development Co. The lease will be for 65 years and it was noted that the City as well as the contractors, have gone over the communities issues that were raised at the community meeting and have made adjustments and is working on their due diligence. Nagata-Wu noted that the main issues were height, mass, energy, and cultural references. The height was reduced from 260 feet to 230 feet.

The mass was reduced by 1000 square feet, for more space between the building and temple. The height of the separating wall was shortened to 40 feet. The City and the architects have done many things to address the community's issues for the temple and the rest of the community. The City is trying to give the community the best building they can to improve the well-being of the community. Mordasin noted that they have reduced all of the units from 650 square feet to 570 square feet. The community center was not sacrificed and noted that the community will be able to use the community center for programs such as the Community Advisory Committee and other community programs. For more information call 691-9446 or email Riverstreetcommunitycenter@gmail.com. Wesley Fong noted that this is a seven (7) year endeavor and commented that they have prepared a position letter and asked the Board to support the project. Fong noted that the position paper has already supported and adopted.

Questions, comments, and concerns that followed:

1. Recommendations – Mancos asked what was in the packet that was distributed by Lum. Lum responded that included in the packet are letters that have already been supported by the Board. Mancos raised a concern about the list and noted that there is no way to accurately monitor someone with mental health issues. Fong responded that the list is only for recommendations. Shubert-Kwock noted that the list could be breaking Federal Laws or a law that deals with Civil Rights. Yuen commented that the devil is in the detail and noted that the guidelines set are good and hopes that the advisory committee works well.
2. Parking Situation – Shubert-Kwock raised a concern about the room's colors and asked if the color can change to something other than white. Shubert-Kwock asked how many dedicated parking stalls and how many public stalls there will be. Mordasin responded that the issue was brought up so the change was made to the draft changing the parking lot to a 10,000 square feet lot. Chair Au noted that he was flattered by the presentation because he was expecting the project to turn out like Kuhio Park Terrace (KPT). Chair Au noted that more details are needed for the proposal and commented that it is a great first step.

Shubert-Kwock moved and Mollring seconded that the Downtown Neighborhood Board No. 13 support items 1-7 from the Chinatown Community Center Association Position Paper that was dated July 14, 2015.

Discussion – Saupe noted that the seven (7) items listed are too broad to support. Tom noted that he admires CCCA and asked if anything had been adverse. Mordasin responded that each unit will have a kitchen, bathroom, and all must go through the advisory group. Fong noted that in general everyone is on the same general page. Pfund commented that some of the comments were legal issues. Chair Au called for the vote. Yuen noted that he must recuse himself because it is a conflict of interest.

Shubert-Kwock moved and Mollring seconded that the Downtown Neighborhood Board No. 13 support items 1-7 from the Chinatown Community Center Association Position Paper that was dated July 14, 2015. The motion was ADOPTED, 5-3-0. (**AYE**: Au, Mollring, Shubert-Kwock, Smyth, and Tom.)(**NAY**: Chang, Mancos, and Saupe.)

Yuen moved and Shubert-Kwock seconded that the Downtown Neighborhood Board No. 13 endorse the conceptual design that was put forth by Michaels Development Company and The City and County of Honolulu. The motion was UNANIMOUSLY ADOPTED, 9-0-0. (**AYE**: Au, Chang, Mancos, Mollring, Saupe, Shubert-Kwock, Smyth, Tom, and Yuen.)

City Sewer Rehabilitation Project – Paul Mallory distributed the draft map and plan and reported that sewer construction is progressing and the pipe installation was held up by permits because of different noise variances. The construction manager should have notified the nearby public and neighbors. The construction will begin on Monday, November 16, 2015 work will be from Monday to Thursday, 6:00 p.m. to 6:00 a.m. Mallory noted that he will be working in the area for the next three (3) months and asked to be a part of the December agenda.

Questions, comments, and concerns that followed: Manhole Covers – Mollring raised a concern about the team working near Kukui Plaza and noted that after the construction the workers did not properly replace the manhole cover correctly. Mallory noted that his card was attached to his map, and to call if there are any questions or concerns pertaining to the project.

Honolulu Christmas Lights Parade – Chair Au noted that the parade will be on Saturday, December 5, 2015 and will start at 6:00 p.m. on King Street and will move from River Street to Kawaiahao Street where the parade will end at Honolulu Hale.

APPROVAL OF OCTOBER 1, 2015 MEETING MINUTES – Shubert-Kwock moved and Mancos seconded that the Downtown Neighborhood Board No. 13 approves the October 1, 2015 meeting minutes. The motion was UNANIMOUSLY ADOPTED, 9-0-0. (**AYE**: Au, Chang, Mancos, Mollring, Shubert-Kwock, Saupe, Smyth, Tom, and Yuen.)

BOARD BUSINESS AND REPORTS

Chair's Report – No report.

Other Liquor License Applications or Street Closure Events – No report.

Future Agenda Item Requests – Chair Au noted that DTS and HBL would like to come and discuss the new bike path. Chair Au asked if the Board would like an after event report from the Hallowbaloo event. Shubert-Kwock responded that she would like to hear the after event report because the event was an experiment with new techniques.

Neighborhood Commission Updates – No report.

Treasurer's Report – Treasurer Mollring reported a remaining balance of $245.53. The report was filed.

City and County Affairs – No report.

Oahu Metropolitan Planning Organization (OahuMPO) – No report.

ANNOUNCEMENTS:

Next Meeting – The next Downtown Neighborhood Board No. 13 meeting is scheduled for Thursday, November 5, 2015, Pauahi Community Center at 7:00 p.m.

Neighborhood Citizen's Patrol (NCP) – The NCP meets each Tuesday on the Diamondhead side of Kukui Plaza at 8:00 p.m. Please consider joining the patrol and supporting its efforts as they express their service and pride in our Downtown/Chinatown community.

Broadcasts – Videotape of Board meetings are scheduled to be shown on the third Thursday, and on the second and fourth Saturday on `Olelo Channel 49.

ADJOURNMENT: The meeting adjourned at 9:40 p.m.

Submitted by: Neil Baarde, Neighborhood Assistant

DOWNTOWN NEIGHBORHOOD BOARD NO. 13

c/o NEIGHBORHOOD COMMISSION • 530 SOUTH KING STREET ROOM 406 • HONOLULU, HAWAII, 96813
PHONE (808) 768-3710 • FAX (808) 768-3711 • INTERNET: http://www1.honolulu.gov

DRAFT REGULAR MEETING MINUTES
THURSDAY, FEBRUARY 4, 2016
PAUAHI COMMUNITY CENTER

CALL TO ORDER – Chair Alvin Au called the meeting to order at 7:02 p.m., **with a quorum of seven (7) members present.** Note: This nine (9) member Board requires five (5) members to establish a quorum and to take official Board action.

Board Members Present – Alvin Au, Anthony Chang (departed at 9:38 p.m.), Jasmine Mancos (arrived at 7:14 p.m., departed at 8:53 p.m.), Dolores Mollring, Jonathan Saupe (arrived at 7:14 p.m.), Chu Lan Shubert-Kwock, Tom Smyth, Robert Tom, and Stanford Yuen.

Board Members Absent – None.

Guests – Firefighter Recruit Travis Takahashi, Firefighter Aubrey Burris, Firefighter Chris Takayama, and Firefighter III Mark Bates (Honolulu Fire Department); Captain Ben Mahi, Major Roy Sugimoto, Lieutenant Stephen Silva, Sergeant Mark Suaglar, Corporal Steven Matsuda, and Officer Alan Ibrao (Honolulu Police Department); Greg Payton (Safe Haven); Pat Lee (Honolulu Rail Transit Project); Sam Moku, Kristylee Rabaino, Taylor Silva, Daniel Valencia, and Nathanael Howard (Hawaii Pacific University); Allen Stack Jr. (Chinatown Improvement District); Nicole Reid (Arts District Merchants Association); Howard Lum and Kehaulani Lum (Chinatown Community Center Association); Elizabeth O'Brien (Hawaii Theater); Director George Atta (Mayor Kirk Caldwell's representative); Councilmember Carol Fukunaga; Laurel Johnston (Governor David Ige's representative); Senator Suzanne Chun Oakland; April Bautista (Representative Karl Rhoads representative); Liz Char, Sandy Pfund, Irene Banao, Milton Kikuchi, and Ty Fukumitsu (City and County of Honolulu); Donna Blanchard (Kumu Kahua Theatre); Lawrence Friedman, Rebecca Friedman, Ronald Higa, Mike Peacock, Kalawai'a Goo, Ena Aulan, Willis Moore, Gwen Abella, Willard Brown, Matt Bleder, Tyler Dos-Santos, Brooke Wilson, Sean Newcamp, and Jocelyn Belden. Eric Cristobal (Videographer); Executive Secretary Shawn Hamamoto, Uyen Vong, and Neil Baarde (Neighborhood Commission Office).

INTRODUCTION OF BOARD MEMBERS – Chair Au and the Board members introduced themselves and wished the community a "Happy Chinese New Year!" at this time.

PUBLIC SAFETY REPORTS

Honolulu Fire Departments (HFD) – Firefighter I Aubrey Burris reported the following:

- January 2016 Statistics – There were 1 structure, 1 wildland, 1 nuisance, 3 cooking fires, with 5 activated alarms. There were 163 medical emergencies, 4 motor vehicle collision with pedestrians, 3 motor vehicle collisions, and 1 hazardous materials incident.
- Hiking Safety Tip – HFD often responds to hikers who are lost or injured. The Department of Land and Natural Resources (DLNR), Division of Forestry and Wildlife, list the following safety tips:
    - Inform others about the plan to hike and to notify others with the name and location of the trail and the expected time to return from the hike. This information will give rescuers accurate information on where to start the search.
    - Plan the hike to include sufficient daylight.
    - Take a fully charged cell phone when going on a hike as HFD relies on phone contact when trying to locate a lost hiker or obtain any information regarding an injured hiker. If capable, HFD will use the phone's global positioning system (GPS) to obtain a general location.
    - When hiking, stay on the trail. Most accidents happen when hikers leave the established trail and disregard warning signs. Staying on the trail greatly reduces the chances of having a serious fall or getting lost. For more information, visit www.dlnr.hawaii.gov/recreation.

Honolulu Police Department (HPD) – Lieutenant (Lt.) Stephen Silva reported the following:

- January 2016 Crime Statistics – There were 4 motor vehicle thefts, 8 burglaries, 89 thefts, 22 unauthorized entries into a motor vehicle (UEMV), 17 assaults, 4 sex assaults, 2 graffiti and 4 drug offenses, for a total of 2,577 calls for service.

- Pedestrian Safety Tips – Be safe and be seen. Wear bright/light colored clothing and reflective materials. Be smart and alert. Avoid dangerous behaviors. Always walk on the sidewalk. If there is no sidewalk, walk facing traffic. Do not assume vehicles will stop. Make eye contact with drivers. Do not rely solely on pedestrian signals. Look left, right, and left again before crossing a street. Obey traffic signals. Do not wear headphones or talk on a cell phone while crossing.

Mancos and Saupe arrived at 7:14 p.m.; Nine (9) members present.

Questions, comments and concerns followed:

1. Statistics – Tom noted that there was a dramatic decrease in the statistics and asked what the cause was. Lt. Silva responded that it is the typical pattern because the holiday season brings crime. Tom asked if there were any changes in foot patrol officers. Lt. Silva introduced Major Roy Sugimoto and it was noted that there has been an increase in foot patrols and commented that after the new recruits graduate they will be 4th watch. Major Sugimoto noted that there will be full coverage depending on the community with the most needs.
2. Chinatown Substation – Shubert-Kwock noted she has three (3) concerns and asked: 1) update on the cameras in the Downtown/Chinatown area, 2) the language access at the HPD substation, suggested having a Chinese interpreter or Chinese interpretation signs, and 3) asked if videos of drug activity can work in arresting a suspect. Major Sugimoto responded that videos are taken case by case, but if the videos are usable, it could be used. Sometimes it is hard to use videos but if needed, HPD can clear the picture with the help of the Crime Analysis Unit. Major Sugimoto introduced Captain Ben Mahi and noted that only 911 can assign an interpreter and commented that there are 26 cameras total, four (4) are out. Captain Mahi commented that there are at least three (3) officers at the substation on each shift and noted that one (1) of the Chinese speaking officers had addressed a sidewalk issue and noted that he will return to the substation with the concerns. Shubert-Kwock thanked HPD and noted she will spread the word.
3. Refrigerator – Mollring noted that cashiers have come up to her and noted that people at Sun Yat Sen Park have put a refrigerator there and have been seeing people pull electrical wires to operate the refrigerator. Captain Mahi asked if it was in the pavilion area. Mollring responded that it is next to an encampment. Captain Mahi will follow up.
4. Homeless Camps – Tom raised a concern about homeless people camping near his building and asked what he can do. Captain Mahi responded that being homeless is not a crime but if there is suspicious activity occurring call HPD. Also call HPD if the camp seems to be getting bigger and HPD will enforce the law with DPR and they will go through the process after the assessment is done. Tom also noted that on Kukui Street there is a methadone clinic across from St. Andrew's Priory and asked if HPD is aware that the clinic is near schools. Captain Mahi noted that HPD is aware of the clinic but commented that the concerns need to go through the City or the State. Saupe raised a concern about restaurants complaining about homeless people in front of the restaurant and near the police substation and asked if anything is being done. Saupe also asked about the homeless camping at the parks and noted that DPR said the park extends to the sidewalks. Captain Mahi responded that all efforts are being done to reduce fear and the perception of crime in the area and noted that HPD needs the community's help by reporting any suspicious activity. Captain Mahi noted that he has sat down with Corp. Counsel, DFM, DPR, and commented that they have done studies and noted that if they see homeless during the sweeps, they will try to get them into an outreach program.
5. Smith/Beretania Park – Chair Au noted that he remembers the opening of Smith/Beretania Park and commented that the Neighborhood Board asked DPR to close the park from 10:00 p.m. to 5:00 a.m., DFM accommodated the Board but ownership switched to DFM. Chair Au asked Captain Mahi to ask DFM and DPR to please enforce the rules again. Captain Mahi responded that he has been working with DPR and noted that they have been using all types of methods but at Smith/Beretania Park the park is closed from 7:00 p.m. to 7:00 a.m., the signage is still getting fixed and Captain Mahi noted that HPD is doing as much as they can to reduce the fear in the area. Yuen noted that HPD is good at moving the homeless but when they move, they move to sidewalks and Yuen commented that he does not know how to address the issue because they are still breaking the law. Yuen commented that he has a photo of two (2) homeless camps in the area hiding behind a car. Captain Mahi responded that HPD officers have to make tough decisions and noted that the main question is the dirt part of the park because many homeless have been known to move to the dirt parts of the park.

Hearing no objections, Chair Au took the agenda out of order to Discussion on Crime and Safety Concerns.

Discussion on Small Business and Neighborhood Crime and Safety Concerns – Chair Au noted that he has asked HPD to stay to answer the communities concerns and commented that as a group the entire community can solve all the problems.

- Funding – Mike Peacock noted that he is planning to open an office on King Street and Maunakea Street and commented that he had been homeless for five (5) years and during his recovery he was working with the Hawaii Information Consortium (HIC). Peacock commented that opportunity comes through funding and noted that the question is how come the homeless is the big issue that no one took the responsibility to get a correct count of the homeless to get funding for the issue. Peacock commented that the City needs to put the homeless where they feel safe. Mancos thanked Peacock for his comments and noted the Neighborhood Board is an advisory council and is trying to help. Chair Au commented that homelessness is a big systematic issue and everybody needs to work together.
- Environment – Don Murphy noted that he has been in the Downtown/Chinatown area for 29 years and commented that the environment is getting just as bad as before. No one wants to visit the area and agreed with Chair Au and commented that the Community needs to work together for a solution, because the real challenge is needing to move forward.
- Bike Lanes – Ron Higa raised a concern about a wheelchair using the bike lane on King Street when there was nobody on the sidewalk and asked if that is legal or not. Captain Mahi responded that Higa should have reported the incident and noted that HPD will address the issue because vehicles do not belong in the bike lane. Captain Mahi noted that HPD will come when called.
- Kumu Kahua Theatre – Donna Blanchard, Managing Director of Kumu Kahua Theatre reported that they are on the corner of Bethel Street and Merchant Street and noted that they exist to encourage local play writers to tell the stories of people here in Hawaii. Blanchard noted that they are a part of a new group with other merchants and commented that they are excited to be a part of the community and their ohana.
- Power Washing – Gwen Abella raised a concern about the City needing to power wash the bus stop across Winston Hale because it is filthy and would like it power washed.
- Sit/Lie Law Enforcement – Matt Bleder raised a concern about the homeless at Smith/Beretania Park and asked how HPD enforces the Sit/Lie laws. Captain Mahi responded that there are generally always stragglers when the park closes and commented that there are many suspicious activities and noted that the best way to help HPD is to make a report. Captain Mahi noted that HPD has been working with many City agencies and noted that if there are homeless on sidewalks it is illegal. Gifford Chang commented that he has worked closely with HPD at the Night in Chinatown Event and noted that he has no complaints regarding HPD.
- Filing A Police Report – Chair Au noted that the community has their own perceptions on how to properly file a police report and commented that people are afraid because of the number of steps that need to be taken and asked what the steps are to file a police report. Captain Mahi will follow up. Chair Au noted that everyone should be compassionate to each other.
- Systematic Approach – Kalawai'a Goo noted that she has seen many issues and noted that she was inspired by Mother Theresa's Peace Rally Speech and commented that she is disturbed by the Sit/Lie Laws because it targets a certain group of people. The purpose for the laws was to approach the issue from a supported view for better sustainable results.
- Safe Haven – Chair Au noted that Safe Haven has a hygiene center and commented that it has been accosted by those trying to help. Safe Haven needs the community's help and asked the Citizen's Patrols or HPD to check in from time to time.
- Smith/Beretania Park Clean Up – Lee Stack announced that the Chinatown Improvement District (CID) will be hosting a park clean up at Smith/Beretania Park on Saturday, February 20, 2016 and noted that CID has been working on a project for the park. Bob asked what time the clean up is and if anything is needed. Stack responded 8:30 a.m. and CID provides snacks and noted that those willing to help can bring their own gloves, paint rollers, and brushes.
- Thanks – Major Sugimoto thanked the Neighborhood Board for inviting them to the meeting to hear the good and the bad concerns. Major Sugimoto noted that he is excited to be moving forward and commented that he has noticed the merchants group is growing which is fantastic because the community and HPD are one (1) big organization. Major Sugimoto noted that HPD will stand with the group to help move forward and find a solution. Peacock thanked HPD and noted that he understands the Neighborhood Board is an advisory board, but if the people push the homeless, the homeless will push back and commented that the solution is a systematic approach. Mancos noted that she appreciates everyone's comments and explained that the Board Members are all volunteers that represent the community.
- Homeless – Nicole Reid noted that the homeless issue has been discussed a lot of times because the homeless population is growing and noted that a group of researchers and merchants have been meeting with City and State Officials and all are enthusiastic about moving forward. The group has been looking for a new meeting site and noted that a consistent way of communication is needed. Reid noted that there is always room for improvement and appreciates HPDs help.

Hearing no objections, Chair Au brought the order of the agenda back to Neighborhood Citizen's Patrol.

Neighborhood Citizen's Patrol (NCP) – Mollring reported that her group has been active but the neighborhood has been quiet. If anyone is interested in joining the NCP, the NCP meets on the Diamond Head side of Kukui Plaza at 8:00 p.m. every Tuesday night.

COMMUNITY CONCERNS

Hawaii Pacific University (HPU) – No representative was present.; No report was provided.

Safe Haven – Greg Payton reported the following:

- Residents – Safe Haven discharged 11 residents, admitted one (1), and returned one (1) homeless individual to Portland. It was noted that 60 people were helped get off the streets last year and noted that this year Safe Haven is trying to help 75 people.
- Grants and Aids – Safe Haven currently has two (2) grants and aids. One (1) with the Institute for Human Services (IHS) and Councilmember Carol Fukunaga. With the help of the grants and aids, Safe Haven was able to hire two (2) new staff members and helped place five (5) residents.
- Hygiene Center – The hygiene center with public toilets are open and it was noted that the center serves over 60 people a day and there has been no vandalism or graffiti damages. Payton noted that 20 out of the 60 people who use the hygiene center are people who are working but live in their cars.
- Housing and Urban Development (HUD) Funding – HUD funding is needed for renovations, Payton is hoping to speed up the process and hopes the project can be completed by October 2016. Payton noted that Safe Haven is responsible for counting the homeless in the Chinatown area and commented that Safe Haven has many volunteers that help serve over 200 people a year.
- Calling to Action – Payton announced that if anyone is willing to house the homeless in the Kaimuki, Kalihi, or Aiea areas, please call 529-4554 for information. Payton noted that Mental Health Kokua will take care of any damages occurred by the homeless residents.

Questions, comments, and concerns that followed: Renovations – Mollring thanked Payton and his volunteers for helping with the parade. Shubert-Kwock noted that the community needs more people like Payton and suggested that during the renovations to place the toilets in the front, the sink in the middle, and the showers in the back of the hygiene center. Payton responded that they will be going through major renovations which will require Safe Haven to raise money.

Honolulu Authority on Rapid Trasit (HART) – Pat Lee reported the following:

- Honolulu Rail System – The first set of train vehicles are expected to arrive in Honolulu soon. Ansaldo Honolulu (now Hitachi Rail USA) was awarded the $1.4 billion Core Systems Contract for the Honolulu Rail Transit Project to design, build, operate and maintain the train vehicles in addition to the operations and control center. Honolulu's rail system will be the first fully automated driverless urban rail transit system in the United States. The train cars are manufactured at the Hitachi Rail factory in Reggio Calabria, Italy and shipped to Pittsburg, California, for final assembly, then on to HART's Rail Operations Center in Waipahu.
- Rail Cars – HART's trains will consist of four (4) cars. Each four (4) car train can carry about 800 people. The car shell structure is 100% aluminum. There are two (2) types of car shells, one (1) type for the ends of the train and the other for the middle cars. The middle car shells have an opening at both ends to permit passengers to move between the four (4) car trains. There are three (3) doorways on each side of both types of rail cars. Each rail car is 59–1/2 feet long, 14 feet high and 10 feet wide. The car shell structure consists of a combination of over 40 different aluminum extrusion profiles. The aluminum extrusions are welded together. The weight of the aluminum car shell without doors, interior linings, seats or other equipment is approximately 14,000 pounds. HART's four (4) car trains will include Closed-circuit security cameras, Air conditioning, Free WiFi, Seating for 188 riders, and Space for surfboards, coolers, luggage, strollers, bicycles and wheelchairs.
- Construction Highlights – The latest construction highlights are more than 400 foundation shafts have been placed, more than 300 columns erected, more than 4,000 segments casted, and about six (6) miles of guideway completed to date.
- General Information – For general project information, traffic updates, meeting notices and more information, please visit the website www.honolulutransit.org, call the project hotline at 566-2299 or email a question at info@honolulutransit.org.

Hearing no objections, Chair Au brought the agenda out or order to Hawaii Pacific University.

Hawaii Pacific University (HPU) – Sam Moku reported the following:

- New President – The new President of HPU is the former Dean at Villanova University, John Rotunda. Moku noted that everyone at HPU is excited to have him and commented that he is currently trying to settle into his new position and looking for a residence. Moku noted that Rotunda will visit the Neighborhood Board when he can.
- Western Association of Schools and Colleges (WASC) Accreditation – HPU has been going through the process of achieving accreditation through WASC. Moku noted that HPU should receive their score soon.
- New Year's Eve Event Report – There were roughly 7,000 youngsters at the event and noted that the event was a trial run to see if similar events can be scheduled. Moku noted that all aspects of the event passed the test and commented that the Harbor Division had positive feedback. Moku noted that everyone enjoyed the fireworks and Moku introduced some of the students who were in attendance because they are interested in civic engagement.

Questions, comments, and concerns that followed:

1. Meetings at Aloha Tower – Mollring asked the community if anyone objects to having the meetings at Aloha Tower. Moku noted that parking should be the only concern and commented that he will double check the boat days with the Harbor Division. Smyth noted that he lives across the street and is very happy. Smyth commented that Aloha Tower offers great facilities.
2. Ground Floor Updates – Saupe asked for an update on the retail shops on the ground floor of Aloha Tower. Moku responded that currently there is a Barnes & Noble Bookstore, Nashville's Bar, and Moku noted that HPU is slowly bringing in other retail shops. Moku noted that 90% of the dorms have been filled and there are still 12 retail spaces open. Shubert-Kwock commented that she is thankful for Moku offering the meeting room to the Neighborhood Board and noted that she is pleased with the building and asked Moku to double check the schedule.

Hearing no objections, Chair Au took the agenda out of order to Discussion of holding the Neighborhood Board Meetings at Aloha Tower.

Shubert-Kwock moved and Tom seconded that the Downtown Neighborhood Board hold their monthly meetings at Aloha Tower.

Discussion – Yuen noted that parking is an issue and the Board should wait to vote until Moku answers all the Boards questions. Chang agreed with Yuen and suggested tabling the issue until the Board has more information. Shubert-Kwock withdrew her motion.

Chair Au resumed the order of the agenda.

Chinatown Business and Community Association (CBCA) – Shubert-Kwock reported the following:

- Monthly Meetings – CBCA held it's monthly Chinatown Dim Sum Breakfast Meeting at Empress Restaurant. The topic of discussion was focused on crimes affecting businesses and residents. There are two (2) new events 1) St. Patrick's Day Festival with street closures, and 2) a new bar license for 2 Hotel Street.
- Noise Issues – A Bill that was introduced by Representative Rhoads has been supported by CBCA, Chinatown Gateway Tenants Association, Lynne Matusow, Lee Stack, and others.
- Honolulu Liquor Commission – CBCA would like the Honolulu Liquor Commission to remove the music license of repeated offenders and levy stiffer fines, limit continuation of hearings by the repeated offenders, and to add soundproofing to establishments wanting music and restrict low amp music with protection for the public.
- Chinatown Events – Last month, CBCA participated in the huge Chinatown Parade and supported the Night in Chinatown block party. The block party was the largest and best run block party in Chinatown. The event brought people of all ages together to celebrate Chinese New Year and the booths included City and non-profit groups to promote their missions. Shubert-Kwock noted that extending the block party to River Street was a smart and appropriate idea. CBCA will continue to address the crimes and drug issues in the Chinatown area. Recent police meetings with stockholders may provide added police support.
- Hale Waiolu – The community is disappointed that the City is not leading the Hale Waiolu project, allowing delays caused by politics and politicians, and to allow them to bully the community and granting special favors for only a few.

- Chinatown Open House – This Friday, February 5, 2016 will be Chinatown's Open House where lions will bless all the shops and society halls between 6:00 p.m. to 9:00 p.m. King Street, River Street to Nuuanu Avenue will be shut down. Shubert-Kwock suggested the community get there early to park in the Chinatown garages for only $3 from 5:30 p.m. until midnight.
- Next Meeting – The next CBCA Dim Sum Meeting is at Empress Restaurant on Tuesday, February 9, 2016 from 8:30 a.m. to 10:00 a.m.

Questions, comments, and concerns that followed: Noise Complaints – Saupe asked what noise complaints Shubert-Kwock was regarding. Shubert-Kwock responded that on Hotel Street there are repeat offenders that the Honolulu Liquor Commission is having issues with. The fines are not enough and the Liquor Commission should pull their permits or try to sound proof the area. Saupe noted that he does not see much support on the issue and commented that the Night in Chinatown Event was a really noisy event. Shubert-Kwock responded that she appreciates his opinions but noted the issue is that repeat offenders do not listen to the law.

Chinatown Improvement District (CID) – Lee Stack reported the following:

- Smith/Beretania Park Clean-Up – CID will be hosting a park clean up at Smith/Beretania Park on Saturday, February 20, 2016 at 8:30 a.m.
- Chinatown Directory – The complete Chinatown Directory is available at cidchinatownhawaii.org.
- Roaming Patrol Program – CID will continue to have signups for the roaming patrol program.

Arts District Merchants Association (ADMA) – Nicole Reid reported the following:

- Arts Culture Merchants Etcetera (ACME) – As ADMA is going under a few changes, they have decided to rename themselves to ACME. Reid noted that all are welcome to attend and commented that their focus is more business friendly.
- Chinatownnow.com – Chinatownnow.com has a list of merchants, restaurants, and event calendars.
- Coordinated Merchant Patrols – A patrol has started where the group walks through the business areas and it was noted that they are similar to the Waikiki Ambassadors.
- Noise Levels – The community needs an understanding of what measurement tools are being used because in the report it said "felt" the noise. Reid commented that the bar owners need metrics.

Chinatown Community Center Association (CCCA) – Howard Lum deferred his report at this time.

Michel's Pipe Services City Sewer Rehabilitation Project – Paul Mallory reported that 90% of Phase 1 has been completed. There are seven (7) lines left on River Street near North Beretania Street and Hotel Street. The part of the project that is Nimitz Highway will be finished by the end of March 2016. The Chinatown Phase 2 project should be completed by the end of April 2016. Phase 2 is 50% completed. Mallory noted that all the yellow areas on the map are incomplete.

Questions, comments, and concerns that followed:

1. Day Work – Chair Au noted that he assumes Michel's Pipe Services are only doing way work. Mallory responded that they did have a night variance at one (1) point but the residents from the Honolulu Tower had complaints and when they tried to renew the permit they could not work at night. Mallory noted that they are still in the process of renewing their permit. Chair Au asked what the areas are that still have work to be done. Mallory responded North Beretania Street, River Street, North Pauahi Street, Nimitz Highway, Maunakea Street, Merchant Street, Fort Street Mall, and North Hotel Street near Smith Street are all that is left to be done for Chinatown Phase 1. Chair Au asked about Phase 2. Mallory responded that they need the variance for Phase 2 and noted that he will need Board comments because with the project in place without Board comments is unfair. Mallory noted that contractually it is illegal and commented that he did not mean to disrespect anyone and noted that they were trying their best to blanket the area by foot. Mallory commented that he was guided to work at night to mitigate the issue.
2. Parking Concerns – Shubert-Kwock noted that she watched some of the workers and commented that they took up three (3) lanes. Shubert-Kwock noted that the vehicles parked on River Street and commented that it is causing concerns and asked Mallory to confine their space. Mallory responded that is why they need the variance to work at night and noted that they will try harder.

Mancos departed the meeting at 8:53 p.m.; Eight (8) members present.

Public Concerns

- New Mandarin Academy – Shubert-Kwock announced that there is a new Mandarin Academy that will teach Mandarin to all ages.
- Veterans Treatment Corporation – Mike Peacock announced that there will be a march to connect the Veterans with first circuit court to try and reduce the negative impact on the homeless. Peacock noted that he is trying to find a solution to be a positive part of the community.

ELECTED OFFICIALS

Mayor Kirk Caldwell's Representative – Director George Atta of the Department of Planning and Permitting (DPP) reported the following:

- Bus Pad Repairs – The Department of Design and Construction (DDC) has indicated that King Street between Bethel Street and Alapai Street is programmed for contract resurfacing under Rehabilitation of Streets, Unit 67 that will address the bus pad at King Street and Nuuanu Avenue. The bid advertisement is scheduled for October 2016. DFM will check to see if interim repairs are needed and will consult with DDC as appropriate.
- Indentation on the Corner of Hotel Street and Maunakea Street – DDC has indicated that Maunakea Street from Nimitz Highway to Vineyard Boulevard has been identified for contract resurfacing under Rehabilitation of Localized Streets, Phase 12D. Hotel Street from River Street to Richards Street has been identified for concrete resurfacing under Rehabilitation of Streets, Unit 65. Both projects will be subject to utility clearances and availability of funds so no construction date has been set at this time. DFM will check to see if interim repairs are needed.
- Hole on Corner of Beretania Street and Nuuanu Avenue – DDC has indicated that Beretania Street will be resurfaced under Rehabilitation of Beretania Street, Unit 64-R project. The project is targeted to restart construction in February 2016. Potholes will be patched by DFM until construction project resumes.

Questions, comments and concerns followed:

1. Construction – Chair Au asked if the construction on Maunakea Street will be occurring throughout the day or night. Director Atta will follow up.
2. Power Washing Schedule – Shubert-Kwock noted that the sidewalks have a strong smell of urine and asked the City to power wash the areas once a month and noted it is important to increase the power washing in the area. Director Atta responded that he has received the message and noted that Director Sasamura noted it has been a funding issue, but Director Atta will follow up.

Councilmember Carol Fukunaga – Councilmember Carol Fukunaga reported the following:

- Tackling Crime in Chinatown – Retailers and businesses in the Nuuanu/Bethel Street area have called for additional police presence in Chinatown to combat assaults and drug related incidents near Hawaii Theatre and along Nuuanu Avenue and Bethel Street, as well as break ins and vandalism near many small businesses.
- Public Health and Safety Updates – DFM reported on the cracks in the Nuuanu Stream wall. An Emergency Procurement Request was approved by the DDC on October 6, 2015, and transmitted to the Department of Budget and Fiscal Services (BFS) on October 12, 2015. A notice to proceed was issued on December 10, 2015 and the design phase for the repairs will be underway pending approval from the Army Corps of Engineers and the Department of Health (DOH).

Governor David Ige's Representative – Laurel Johnston reported that the Governor's Newsletter is in the back and noted that in the newsletter are excerpts from his State of the State Address. Johnston commented that the Department of Education (DOE) and Governor Ige have been working on cooling at least 1,000 classrooms.

Questions, comments, and concerns that followed: Funding – Shubert-Kwock noted that she likes the Governor's initiatives and commented that she is only disappointed because he did not ask for funds for early education. Shubert Kwock asked if Governor Ige can bring the Super Ferry back. Johnston responded that there are two (2) pieces, 1) a preschool open doors program through private contracts and commented that she hopes the Legislation can take a better look at the situation, and 2) more funding is needed for the early education programs. Johnston commented that there has not been any proposal for the Super Ferry and noted that the issue will take a while but will follow up with more information.

Senator Suzanne Chun Oakland – No representative was present.; a report was provided.

Representative Scott Saiki – No representative was present.; a report was provided.

Representative Karl Rhoads – April Bautista reported the following:

- Motorcycle Noise – Received a complaint regarding the noise from motorcycles along Hotel Street and Nuuanu Avenue. The law requires all motorcycles to be equipped with a muffler to prevent excessive noise. It is illegal to modify an exhaust system that will amplify or increase the noise. For these reasons, it is encouraged the community calls HPD if one sees he motorcycles license plate at the next time a disruption occurs.
- Hole Fronting Downbeat Diner – Received a complaint that there is a deep hole in front of Downbeat Diner where a tree should be planted. Representative Rhoads has contacted the City about the issue. Division of Urban Forestry (DUF) stated vandalism of the trees do occur. The empty tree well was recently replanted and is still intact.
- Smith/Beretania Park – Received a complaint regarding the homeless people occupying Smith/Beretania Park, specifically the area of grass between the park fence and sidewalk on Pauahi Street. Representative Rhoads has contacted HPD about the issue.
- Power Washing Schedule – Received an inquiry about the power washing schedule for Chinatown and power washing of bus stops. Representative Rhoads has contacted DFM regarding the schedule and DFM stated that it is on a rotational schedule with only one (1) crew between Saturdays and Wednesdays. Also, power washing of bus stops is not part of their job duty but will do so if particularly dirty. Representative Rhoads wrote a letter to the Mayor to increase the frequency of sidewalk power washing and to consider power washing bus stops again.
- Early Morning Wal-Mart Noise – Received a complaint regarding early morning noise from Wal-Mart delivery and rubbish trucks at the Downtown location. Representative Rhoads wrote a letter to the store manager of the Downtown location regarding the issue.
- Bills of Interest
    - House Bill 2249 – Relating to noise. The Bill establishes enhanced penalties for multiple noise violations or more during a single calendar year. The Committee on Consumer Protection and Commerce deferred the measure until Monday, February 8, 2016 at 2:00 p.m. in Conference Room 325.
    - House Bill 2248 – Relating to condominium governing instruments. The current law states that two thirds (2/3) of the voting interest is needed to pass an amendment. This Bill changes the voting requirements to allow the amendment of bylaws of a condominium association to 6% of owners who return a ballot, indicating a vote of either “yes” or “no”. When counting the ballots and 67% of the people voting “yes” at the end, then the proposed amendment is adopted at the end of the year. Note that this bill does not change the one (1) year period. The committee on Consumer Protection and Commerce deferred the measure until Monday, February 8, 2016 at 2:00 p.m. in Conference Room 325.
    - House Bill 1542 – Relating to Harbors. The Bill authorizes the director of transportation to adopt rules that regulate and limit noise at harbors, ports, roadsteads, docks, wharves, piers, quays, bulkheads, and landings of the State. Currently, no one has authority to regulate harbor noise.

NEW BUSINESS

Parking Rules and Street Usage Permit Presentation – Ty Fukumitsu presented the following:

- Contact Information – It was noted that Fukumitsu’s office is on the 2nd floor of the Frank Fasi Municipal Building and they are open Monday through Friday from 8:00 a.m. to 4:00 p.m. their telephone number is 768-8387 and noted that the Frequently Asked Questions (FAQ) regarding the permitting process can be found online.
- Permit Application Process – A permit is needed when performing work or when closing streets or sidewalks. Fukumitsu showed the permit application and the requirements for the application process.
- Typical Permits – The typical permits that are given are usually street usage, temporary loading zones, staging, lane or sidewalk closures, and road closures. The City looks for safety concerns, location, and the working hours and dates of the application of the permit.
- Review Process – The review process is a tiered process that looks into the parking situations, lanes/sidewalk/or road closures before the permit can be accepted.
- Fees – Fees are given when the application takes up parking meters. The metered space that is taken will cost $12 times the number of meters taken. Fukumitsu noted that only cash and checks are accepted and noted that checks are preferred. Fukumitsu noted that anyone wishing for a permit should apply early, because the average permitting process takes 10 – 20 minutes and the applicant should bring a drawing of the area and a copy of their traffic control plan.

Questions, comments, and concerns that followed:

1. Nuuanu Avenue – Saupe raised a concern about Nuuanu Avenue on the weekends because there are cars parked on both sides of the street and noted that it is detrimental to the businesses because the stalls are always taken and asked if the City could span out the number of permits given and commented that the movie trucks are not utilizing the better parking areas. Fukumitsu responded they are trying to limit the stalls that are being taken, but there are street closures that ban parking. Fukumitsu noted that there needs to be at least one (1) lane open for traffic flow and commented that some situations are tough. Saupe noted that eight (8) permits were given during the Christmas/Holiday Season and commented that people were always asking and looking for parking stalls. Saupe noted that he understands if someone is filming in the area and the street needs to be clear, but the stalls usually open up after 4:00 p.m.
2. Internal Audit – A resident noted that she had called HPD on Hawaii Theatre for taking two (2) spaces when their permit only allowed for them to take the stalls at the end of the day, but Hawaii Theatre did give half back. The resident noted that her point is that DPP is over permitting, and asked for an internal audit.
3. Fort Street – Mollring noted that someone is not using their permits on Fort Street and commented that the stalls are important but are vacant because they are not using the permits correctly. Fukumitsu responded that sometimes on Fort Street the permits are not legal and suggested calling the office the next time someone notices the signs because parking in the Chinatown require notices of at least 24 hours.

Chang departed the meeting at 9:38 p.m.; Seven (7) members present.

4. Loading Zones – Reid asked and Fukumitsu responded that they try not to give loading zone permits but by statute the City can only charge for the meters that are being used. Reid asked what information is required for signs. Fukumitsu responded that the sign needs to be readable, the dates, times, and the plan of the event. The permits are good for 30 days and needs to be renewed after if still continuing. Fukumitsu noted that there are no set rules for permitted loading zones and metered stalls but everything goes under review.

Community Update on the Proposed City Affordable Senior Rental Housing – Yuen noted that the discussion is the same as six (6) months ago and noted that he is concerned about the projects progress. Sandy Pfund noted that the process needed is for Council to pass a Resolution of the agreement to Michael's Project agreement. The rights were given but the EIS or EA is the issue. Funding is another issue because the developers need to apply for loans or funding. Pfund commented that City Council is still discussing the options and suggested holding meetings with the neighbors, but "neighbors" are being debated to whether it is only abutting neighbors. The agreement needs to move forward because the funding is due Tuesday, June 14, 2016. Many documents are still needed, the developer will not spend money until City Council is finished debating. Yuen asked for deadlines and asked for reports when they reach milestones because the Board has been uninformed and been receiving second hand information and asked to be sent the important deadlines and milestones to the Board. Pfund responded that the deadline is in June 2016, and many steps are involved and many more steps have been achieved and noted that there is no time to waste. The next step is with City Council but there are lingering complaints and concerns. Yuen noted that one (1) person overseeing the project is a concern because there has yet to be input from the community and asked if the Board can be a part of the meeting. Pfund responded yes. Councilmember Fukunaga noted that same issues were presented at the first hearing and noted that she had no control over the Resolution introduction but the concern is talking to the administration. What will be done is something that everyone can be a part of and suggested transparency findings at all meeting dates of the progress made and if there are complaints they can be addressed to the administration. Yuen asked to please keep Mayor Caldwell informed and asked if Executive Secretary of NCO Shawn Hamamoto to be in favor of the project and the neighbors meeting.

Due to time constraints the rest of the agenda was deferred to March 2016 meeting.

ANNOUNCEMENTS

Next Meeting – The next Downtown Neighborhood Board No. 13 meeting is scheduled for Thursday, March 3, 2016, at the Pauahi Community Center at 7:00 p.m.

ADJOURNMENT – The meeting adjourned at 10:00 p.m.

Submitted by: Neil Baarde, Neighborhood Assistant II

Final Review by: Chair Alvin Au

DOWNTOWN NEIGHBORHOOD BOARD NO. 13

c/o NEIGHBORHOOD COMMISSION • 530 SOUTH KING STREET ROOM 406 • HONOLULU, HAWAII, 96813
PHONE (808) 768-3710 • FAX (808) 768-3711 • INTERNET: http://www1.honolulu.gov

DRAFT REGULAR MEETING MINUTES
THURSDAY, March 3, 2016
PAUAHI COMMUNITY CENTER

CALL TO ORDER – Chair Alvin Au called the meeting to order at 7:03 p.m., **with a quorum of eight (8) members present.** Note: This nine (9) member Board requires five (5) members to establish a quorum and to take official Board action.

Board Members Present – Alvin Au, Anthony Chang, Jasmine Mancos, Dolores Mollring, Jonathan Saupe, Thomas Smyth, Robert Tom, and Stanford Yuen.

Board Members Absent – Chu Lan Shubert-Kwock.

Guests – Laurel Johnston (Governor Ige's representative); George Atta (Mayor Caldwell's representative); Councilmember Carol Fukinaga; Lieutenant Baron Lee and Sergeant Lyle Fleck (Honolulu Police Department); Firefighter Captain Corey Silva and Firefighter I Jonathan Waltz (Honolulu Fire Department); Pat Lee (Honolulu Authority for Rapid Transit); Sam Moku (Hawaii Pacific University); April Bautista (Representative Karl Rhoads representative); Paul Mallory (Michels Corporation); Allen Stack Jr. (Chinatown Improvement District); Bill Hanrahan (Mental Health Kokua), Rick Taniguchi (Honolulu Marathon); Don Murphy and Joe Felix (St Patrick's Day Block Party); Wanda Akers, Chuck Bussler, Robynne Maii, Sandy Ma, Gwen Abella, Ronald Higa, Julian Ng, Fred White, Gavin Masaki, Iris Oda; and Sharon Baillie (Neighborhood Commission Office).

INTRODUCTION OF BOARD MEMBERS – Chair Au and the Board members introduced themselves at this time.

PUBLIC SAFETY REPORTS

Honolulu Fire Departments (HFD) – Firefighter I Jonathan Waltz reported the following:

- February 2016 Statistics – There was 1 structure, 0 wildland/brush, 2 nuisance, and 1 cooking fire, with 7 activated alarms. There were 161 medical emergencies, 2 motor vehicle collisions with pedestrians, 1 motor vehicle crash/collision, 0 mountain rescues, 2 ocean rescues, and 3 hazardous materials incidents.
- Fire Safety Tip – Escape Planning:
    - Plan ahead and be prepared- Make a home escape plan.
    - Know at least two (2) ways out of every room.
    - Have an outside meeting place.
    - Practice your home fire drill twice a year during the day and night with everyone in your home and use two (2) ways out.
    - Teach children how to escape on their own in case you cannot assist them.
    - Close doors behind you as you leave.
    - If the alarm sounds- Get out and stay out. Never go back inside for people or pets.
    - If you have to escape through smoke, get low and crawl under the smoke.
    - Call the fire department from outside of your home.

Honolulu Police Department (HPD) – Lieutenant Baron Lee reported the following:

- January 2016 Crime Statistics – There were 12 motor vehicle thefts, 6 burglaries, 79 thefts, 16 unauthorized entries into a motor vehicle (UEMV), 26 assaults, 2 sex assaults, 2 graffiti and 6 drug offenses. A total of 2,577 calls were placed for service.
- Safety Tips – Automated Teller Machines
    - Whenever possible utilize Automated Teller Machines inside of businesses.
    - Avoid using street ATMs when it is dark.
    - Be aware of suspicious persons or vehicles in the area, trust your gut feelings.
    - Have your card out of your wallet or purse before approaching an ATM.
    - Do not write your personal identification number (PIN) on your card and do not keep it in wallet.
    - When entering your PIN, keep the numbers away from view of others
    - Do not withdraw huge amounts of cash, secure money as soon as it comes out of machine, and take your receipt

- If someone demands your money, do not fight, just give up the money to the suspect and get away.
- Report all incidents to the police as soon as possible.

- Community Policing – If anyone is interested in starting a neighborhood business security watch or a community citizen's patrol please contact Sergeant Deric Valoroso at 529-3695.

Questions, comments and concerns that followed:

1. Status – Au asked what the status was from the meeting last week on policing around the area and Lee answered that there is a lot more added foot patrol in the area, and effort to keep the homeless in compliance with the sit-lie protocol.
2. Assaults – Tom mentions that the statistics from last month are going down, except for assaults and wants to know what classifies an assault. Lee states that assault is when someone knowingly and intentionally injures another person, such as hitting that person.
3. Foot Patrols – Saupe understands that these extra foot patrols are temporary and would like to know if there is an end date. Lee states that it is hard to say, that these extra foot patrols will continue in the Downtown business district/Chinatown area and the only reason why they may get pulled away is if there is something else going on in the district where they are needed, such as in the Keeaumoku area.
4. Smith Street Park – A resident wants to know if the homeless are following the park closure rules, since he notices their belongs are still in the park. Lee says usually the homeless will take their belonging with them when they leave, however sometimes they will stash them in the bushes.
5. Stealing – Resident Akers says that she needs help going to the store and other places, and that the same man always steals from her. She does not believe she has any rights and she is afraid to say anything since he might attacks her. Lee advises that if this happens to please call 911 and to provide as many details as possible, such as what the person looks like, what they are wearing, if they know their name. They both go to the back in order to get more information on helping Akers situation.

Neighborhood Citizen's Patrol (NCP) – Mollring states that the group has been walking regularly, and it has been quiet lately. The NCP group is doing sign waving this Saturday, March 5, 2016 at Kekaulike Mall on King Street and everyone invited to join. Sign waving will start at 8:30 a.m. and there will be a pot luck afterwards provided by Weed and Seed.

COMMUNITY CONCERNS

Hawaii Pacific University (HPU) – No report was provided.

Safe Haven – Program Director Bill Hanrahan reported the following:

- What it is – Safe Haven is a 25 bed residence for the severely mentally ill homeless, and they also serve 40 people through a day program, for as many as 65 clients.
- Last month – Safe Haven was able to place one (1) person from their residence into permanent housing, along with two (2) people from their day program. One (1) resident had their parole revoked and was sent back to prison. They also facilitated one (1) persons return back to their family on the mainland.
- Hygiene center – There are public restrooms and showers at Pauahi Hale that serve around 60 people a day. The men's showers were down for a time last month, therefore they were only able to serve around 40 people a day during this time.

Honolulu Authority on Rapid Transit (HART) – Pat Lee reported the following:

- Completion –The Honolulu Rail Transit Project is moving forward with about seven miles of guideway construction completed.
- East Kapolei and Waipahu – Foundation and column work has been completed from Kualakai Parkway to Farrington Highway near Waipahu High School. Crews are continuing with guideway structure, track installation and raised median work.
- Kiewit – HART's contractor, Kiewit, has started installing new curbs and gutters along Farrington Highway for its roadway restoration work and this should be completed by end of summer.
- Operation center – The Rail Operations Center is almost completed and should be finished in April. The first four rail cars are arriving this month. Work on the stations in Waipahu and East Kapolei is starting.
- Pearl City/Aiea – Utility relocations, drilled shafts and foundation and column work are underway along Kamehameha Highway. The second "balanced cantilever" which will cross over H-1 is underway near the Waiau Power Plant and Sears Distribution Center. The H2R2 ramp preconstruction work is underway. The KHG station group construction contract (Pearl Highlands, Pearl Ridge and Aloha Stadium) is pending. Guideway work on the KHG segment should be completed by end of next year.

- Airport – Utility relocations are continuing on the Airport section. The guideway and stations contract is out for bid.
- Kalihi –Crews are preparing for the temporary relocation of utilities on Dillingham to widen the roadway on the makai side of the boulevard in preparation for guideway work down the center of the boulevard.
- Contact – For general project information, traffic updates, meeting notices and more information, please visit the website www.honolulutransit.org, call the project hotline at 566-2299 or email a question at info@honolulutransit.org.

Chinatown Business and Community Association (CBCA) – Mollring reported the following:

- Chinese New Year – Monday, February 8, 2016 was the year of the Monkey. On Friday, January 29, 2016 there was a Chinatown block party, with a Chinatown Parade where over 85 groups participated.
- Continued Celebrations – For the following two (2) weekends there was lots of celebrating taking place at the Chinese Cultural Plaza.
- Meetings – On Tuesday, February 9, 2016 the monthly CBCA meeting was held. Next month's meeting will be at Empress Restaurant and is scheduled for Wednesday, March 09, 2016 from 8:30 a.m. to 10:00 a.m. and is open to all who would like to attend.

Chinatown Improvement District (CID) – Allen Stack Jr. reported the following:

- Park clean-up – There was a park clean-up at Smith Street Park which was very successful. The park is maintained more now, making the clean-up easier. There was one (1) needle found on top of a building. The people that came out for the clean-up helped paint, clean up graffiti, rack, and pick up trash. Please come to a park clean-up if you ever have time.

Arts Culture Merchants Etcetera (ACME) – Jonathan Saupe reported the following:

- Reorganization – ACME is still in the midst of reorganizing the group formally known as ADMA.
- Meet and greet – There will be a mixer held on Friday, April 15, 2016 at 5:30 p.m. at the Rock Center on Hotel Street and Nuuanu Street. If you would like to attend or need more information please email jsaupe82@gmail.com
- Advertisement – There should be new flyers, maps, and brochures coming out into the community very soon highlighting the new and old merchants in the community.

Chinatown Community Center Association (CCCA) – No representative was present; no report was provided.

City Sewer Rehabilitation Project, Michels Pipe Services – Paul Mallory reported the following:

- Phase 1 – Chinatown area one (1) project is 100% installed. Three (3) lines need to be television inspected. This will take place during the day on Hotel Street between Fort Street and Smith Street and take one (1) to two (2) hours.
- Phase 2 – Chinatown area two (2) phase is mainly on North Beretania Street to the H1 freeway between Queen Street and River Street. This phase is scheduled to be complete by Sunday, March 27, 2016.
- Setbacks – There have been a few minor setbacks with night work and utilities. Some of the ownership of the utilities were in question so, they had to wait to figure out who was going to fix what. Bars were calling to ask if they could move around their work time because it was at night during their peak business.

Questions, comments, and concerns that followed: Thanks – Au thanks Mallory for being such great partners in working on this project. Mallory thanks him and says that the company tries not to let complaints escalate, and that they like to mitigate any situations before it gets worse.

Public Concerns

- Nashville Waikiki – Resident Ma states that she and her family have recently moved to the downtown area into Harbour Court across from Aloha Tower. Every Thursday, Nashville Waikiki, which is in Aloha Towers has a motorcycle promotion, where different motorcycle clubs come and they will ride their motorcycles revving the engines loudly down the road sometimes until 1:00 a.m. in the morning. This noise keeps people up and would like something to be done about it. She has contacted the police, liquor commission, and the offices at aloha towers. It was suggested she come to the neighborhood board to present her situation. Ma supports local businesses but wishes that this event would not be so late and loud. Ma will get in touch with Moku from HPU to exchange information on this situation.
- Fete – Married couple, Chuck Bussler and Robin Maii introduced themselves to the board and let everyone know that they will be opening a restaurant on Nuuanu Street and Hotel Street called Fete slated to open

either Friday March 18, 2016 or Saturday, March 19, 2016. They will be applying for a liquor license, however it is strictly for the food menu, there will be no loud music or entertainment to go along with that.

ELECTED OFFICIALS

Mayor Kirk Caldwell's Representative – Director George Atta of the Department of Planning and Permitting (DPP) reported the following:

- Halewai'Olu – The administration held meetings on Monday, February 29, 2016, Tuesday, March 1, 2016, and Wednesday, March 2, 2016 with representatives from different community organizations. Representative Karl Rhoads and Representative Suzanne Chun Oakland sent representatives to the meetings, as well as Councilmember Carol Fukunaga attended. There was great discussion about different idea that could be done/changed with project.
- Meetings – There will be two (2) public meetings at the Mayor's Conference room if anyone would like to hear more about the project and put their ideas in. The first one will be Tuesday, March 8, 2016 at 4:30 p.m. and the second one will be Monday, March 10, 2016 at 4:30 p.m.
- Title VI – The 2016 Title VI program report public hearing will be held on Friday, April 8, 2016 at 9:30 a.m. at the Mission Memorial meeting room. The Department of Transportation Services Public Transit Division (DTS-PTD) receives federal grant money every year for public transit services, and therefore is required to give a report every three (3) years on how they are improving their transit services to all citizens on Oahu.

Questions, comments and concerns followed:

1. Senior housing – Yuen would like to know if anyone from the City will be at the meeting to present and give updates on the Senior Rental Housing project. He believes that there should be a timeline on what is happening to show progress, because if there is nothing then no progress has been made. Au suggests that a representative from the board be present as the Senior Housing project meetings. Atta will take concerns back to the Mayor and Managing Director.
2. Traffic signals – Mollring said at Hotel and Maunakea and at Hotel and Smith that the buttons on the traffic signals have been removed, the round circular thing that holds the button is no longer there so people cannot press the buttons to cross the street.
3. Sufficient – Yuen expressed his satisfaction with the Feng Shui report prepared by Michaels Development Company, which had flyers and updates for the board members. He states that back in November 2015 the board had voted to support this project.

Councilmember Carol Fukunaga – Councilmember Carol Fukunaga reported the following:

- Downtown TOD plan – Resolution 15-252 which includes the Final Downtown Transit-Oriented Development (TOD) plan will be heard by the Council's Zoning and Planning Committee at the end of March 2016.
- Aggressiveness – There is a need to have a much more aggressive plan in updating the water, sewer, and road infrastructure. We should take advantage of the transit development to build more permanent supportive housing as well as affordable housing on city and state lands which are in the TOD areas.
- Iwilei – The area between ORNL and the Senior Development project is a potential area where there can be urban rest stops and permanent supportive housing. The goal would be to have these types of facilities in areas where people would be able to thrive and take advantage of the transit systems.

Questions, comments and concerns followed:

1. Hilo Hattie – Tom asked if there was consideration in using Hilo Hattie as a potential place for these services, in which Fukunaga replied that land was owned by the Weinberg Trust and that they were not interested at that time in using that area as a city or state program site. They need to use their revenue producing areas in order to help sustain all the good work and programs they have elsewhere.
2. Sidewalks – A resident mentioned that he was walking in Iwailei by Kmart next to the Salvation Army and said that there were tents set up all along the sidewalk, Fukunaga states that the Department of Facilities and Maintenance (DFM) had previously come through and cleaned up the area. She will report the latest finding.
3. Methadone clinic – Tom asked if there was any variance in the methadone clinic next to his building at Capital Place, being so close to schools. Fukunaga is unaware but will work close with Representative Rhoades and Representative Aseki to find a safe place for such services to be provided.

Governor David Ige's Representative – Laurel Johnston reported the following:

- Taxes – The state is behind about one (1) week right now in processing tax forms, trying to mitigate any tax fraud. Please do taxes sooner than later so process time is not delayed.

- Homelessness – The Governor is aware of the homeless problem and will probably issue another Emergency Proclamation, this is the only way to streamline processes and get through procurement with moving money around.

Senator Suzanne Chun Oakland – No representative was present; a report was provided.

Representative Karl Rhoads – April Bautista reported the following:

- Leaking pipe – Rhodes noticed there was a leaking pipe at Smith-Beretania Park and forwarded the issue to the City. The latest update is that a work order has been places to repair the leaking pipe.
- Signage – Rhodes requested that there be signs placed throughout Chinatown directing people to the public restrooms at Pauahi Hale.
- Parking meter – There is a broken parking ticket machine at Propark Inc. parking lot at the corner of Beretania Street and Nuuanu Avenue. The machine has run out of paper, and customers were unable to get ahold of office to report this issue. Rhoads office has forwarded the complaints they have received about this to the company.
- Art of the Capital – Art of the Capital will be on Friday, April 1, 2016 from 5:00 p.m. to 7:00 p.m. and Representative Karl Rhoads office will be providing light refreshments.
- Bills of interest – HB 1516 would clarify that the internet against children fee which is used to investigate child pornography is to be assessed against every defendant who is convicted of a misdemeanor or felony regardless of the nature of the offense. HB 2121 would appropriate moneys from the general fund for civil legal services for low- and moderate-income persons to be purchased by the judiciary.

NEW BUSINESS

Community Update on the Proposed City Affordable Senior Rental Housing – No report was provided.

Questions, comments and concerns followed: Sufficient – Yuen finds the building rendering attractive that was provided to Au in an email and he moves for the board to support the plan.

Yuen moved and Saupe seconded that the Downtown Neighborhood Board No. 13 support the Michaels Development Fung Shui rendering concept. The motion was adopted by UNANIMOUS CONSENT, 8-0-0. (**AYE**: Au, Mancos, Mollring, Saupe, Smyth, Tom, Chang, and Yuen; **NAY**: none; **Abstain**: none.)

Board of Water Supply Honolulu Water System Improvements in the Downtown Neighborhood Board Area – Iris Oda reported the following:

- Main replacements – Main upsize replacements of 24 inches would be from River Street all the way down to Kalakaua Avenue along Ala Moana Boulevard.
- Other mains – There are a few 16 inch and 20 inch main upgrades planned for along Cooke Street, Pensacola Street, and Piikoi Street.
- Downtown – The downtown neighborhood boundaries are between River Street and Cooke Street. They are looking to upgrade to a 24 inch main which would connect from King Street and run through Nuuanu Stream. If there are difficulties, the alternative alignments could be down River Street that connects to another main that crosses Nuuanu Stream. As well as if this does not work another alternative would be along Nuuanu Avenue. Aloha Tower Drive would be the next alternative, then along Nimitz Highway would be an alternative as well for the main replacement routes.
- Potential start – Potentially the project would start in the year 2020 to replace the aging water mains. The draftee is outside of the six (6) year CIP, the design and construction would come later.

Questions, comments and concerns followed:

1. Night work – Au stated that night construction could potentially disrupt the over 10,000 resident's livelihood, as well as the businesses during the day and would like to see a number provided so that these people can call about their concerns. Oda stated that with every project they do, they inform the residents and provided a number to call. Resident now can call the Board of Water Supply (BWS) and someone would pick up day or night.
2. Shutdown – Saupe wants to know how much of a traffic shutdown effort would take place, Oda says there are no plans right now, but they will have traffic plans in the future and usually when there are projects like this there is one lane traffic, allowing ingress and egress to places.
3. Rail – Tom mentions that the rail is coming in 2020 as well and this would be a perfect storm with the two different projects going on Oda says that they try to facilitate and coordinate with different projects that are going on.

4. Necessary – Yuen notes that replacing aging pipelines is a necessary evil and that he appreciates being informed, and would like the BWS to come back and give updates. Oda states that she would be happy to come back to give updates as plans progress on the project and gets further along.

St. Patrick's Day Block Party – Don Murphy (Owner of Murphy's) and Joe Felix (General Manager, O'Toole's Irish Pub) reported the following:

- Celebration – There will be a St. Patrick's Day Block Party, Thursday, March 17, 2016, starting at 11:00 a.m. outside/near Murphy's Bar and Grill.
- Street closures – King Street to Nimitz Highway will be closed, as well as Marin Lane, and Merchant Street between Nuuanu Avenue and Bethel Street. Closures will start around 5:30 p.m. lasting until 10:00 p.m.
- Music and food – Live music will stop playing at 10:00 p.m. The parking lot at Murphy's will have a lot of different food to eat, there will also be a Keiki tent from noon to 6:00 p.m. with crafts for the children.

Questions, comments and concerns followed: Conscientious – Yuen thanks Murphy's and O'Toole's for making a great effort to mitigate any foreseeable issues when they put on these events. Yuen has been to some of these block parties and there is always a great time to be had.

Yuen moved and Mancos seconded that the Downtown Neighborhood Board No. 13 support the St. Patrick Day Block Party. The motion was adopted by UNANIMOUS CONSENT, 8-0-0. (**AYE**: Au, Mancos, Mollring, Saupe, Smyth, Tom, Chang, and Yuen; **NAY**: none; **Abstain**: none.)

Annual 2016 Honolulu Marathon Half Marathon (Hapalua) – Rick Tanaguchi reported the following:

- Half marathon – On Sunday, April 10, 2016
- Participants – There are 6,300 people signed up for the event thus far, and of that 5,000 are local participants.
- Street closures – Nimitz Highway will be closed from 4:30 a.m. to 7:30 a.m., a special traffic lane will be made from Smith Street to Aloha Tower to accommodate Aloha Tower requirements as well as HPU housing requirements allowing ingress during those times. Marin Towers has access throughout the event on King Street, and during the event they are only able to exit through Maunakea Street. Some residents at Harbour Court and Harbour Square will be locked in from 5:30 a.m. to 7:15 a.m.

Questions, comments and concerns followed:

1. Notifications – Au wants to know if the resident manager of Harbour Court knows about these closures and if he is communicating this to the residents, in which Tanaguchi states that the resident manager knows and has sent notices to the residents in the past about these closures.
2. Fireworks – Saupe asks if this year there will be a firework start, and Tanaguchi says there will be no firework start, that is only for the Honolulu Marathon which takes place the second Sunday in December.

Discussion to Schedule the Downtown Neighborhood Board meeting at the Hawaii Pacific Aloha Tower – Sam Moku reported the following:

- Right space – People from the board should come down to Aloha Towers to check out the spaces to see if it is the right place to be in. There will be a one (1) year test run with no fees, and would be on the first Thursday of each month.
- Space – The space where the board meetings would take place would be in multi-purpose room #2, which is right next to two (2) 24/7 security office located in the tower itself. The restroom is right next door as well for easy access.
- Parking – Parking would not be free. There would be a $5 dollar fee after 4:0 p.m., however they can set aside some spots for Olelo and some stalls for handicap as well.
- Boat days – There is a boat day on Thursday, October 6, 2016, where all of the parking is closed off and homeland security takes over, therefore parking may be an issue for that meeting day.

Questions, comments and concerns followed: Subcommittee – Au wants to form a subcommittee to check out the space at Aloha Tower. Mancos, Saupe, and Smyth volunteer to go check out the space. Au would like to be at the new meeting space by June, so long as the Neighborhood Commission Office approves the facilities contract once the neighborhood board approves the move.

Mancos moved and Mollring seconded that the Downtown Neighborhood Board No. 13 support the forming of a subcommittee to check out the Aloha Towers meeting space. The motion was adopted by UNANIMOUS

CONSENT, 8-0-0. (**AYE**: Au, Mancos, Mollring, Saupe, Smyth, Tom, Chang, and Yuen; **NAY**: none; **Abstain**: none.)

Discussion to amend the name of the Downtown Neighborhood Board as the Downtown Chinatown Neighborhood Board

- Signatures – Au notes receiving rules and regulations from the Neighborhood Commission Office in order to change the board's name. One (1) stipulation needed, is a petition with 100 signature on it. Mancos states we should table the discussion until the next month's meeting when board member Shubert-Kwock is back, since she is the one who really spearheaded the effort.

APPROVAL OF January 7, 2016 and February 4, 2016 REGULAR MEETING MINUTES – **The Board approved the January 7, 2016 and February 4, 2016 meeting minutes by UNANIMOUS CONSENT as amended, 8-0-0.** (**AYE**: Au, Mancos, Mollring, Saupe, Smyth, Tom, Chang, and Yuen; **NAY**: none; **Abstain**: none.)

February, Page 2: "Mollring noted that cashiers have come up to her and noted that people at Sun Yat Sen Park have put a refrigerator there and have been seeing people pull electrical wires to operate the refrigerator." **Should read**, "Mollring noted that cashier has come up to her and noted that people at the park by the YMCA and across from Royal School have put a refrigerator there and saw people pull electrical wires to operate the refrigerator."

February, Page 4: "Safe Haven currently has two (2) grants and aids. One (1) with the Institute for Human Services (IHS) and Councilmember Carol Fukunaga. With the help of the grants and aids…" **Should read**, "Safe Haven currently has two (2) grants-in-aids. One (1) is with the Institute for Human Services (IHS) through funding from Councilmember Carol Fukunaga. With the help of the grants-in-aid…"

February, Page 9: "Yuen asked to please keep Mayor Caldwell informed and asked if Executive Secretary of NCO Shawn Hamamoto to be in favor of the project and the neighbors meeting." **Should read**, "Yuen asked to please keep Mayor Caldwell informed and asked if Executive Secretary of NCO Shawn Hamamoto could take this message back to mayor and managing director."

February, Page 9: Should read, "… Councilmember Fukunaga asked to respond to NB Member Yuen's comments as they pertained to City Council action. She noted that she had no control over the introduction of the resolution (authorizing the Mayor or his designee to enter into a development agreement between the City and Halewai'olu Senior Development LLC), as specified in Department Communication 758 (City Council Docushare listing); however, she was aware that the City Council Chair wanted community concerns addressed by the developer.

BOARD BUISNESS AND REPORTS

Chair's Report – Au stated he received an email from the Downbeat Diner and Lounge owner about making a presentation at April's meeting on an even titled, "Sailor Jerry Festival" on Saturday, June 11, 2016. HART will have a presentation at April's meeting about the segment work that will be going on in the neighborhood.

Neighborhood Commission Updates –Tom shares that there are discussions pertaining to City's neighborhood boards. There may be some major structure changes to neighborhood boards, who votes, who is on the board, and how big the boards are. These are ongoing between City Council and Administration, nothing has been confirmed, but there may be some major changes in the neighborhood board structure within the next six (6) months.

Treasurer's Report – Treasurer Mollring reported a remaining balance of $154.95. The report was filed.

ANNOUNCEMENTS

Next Meeting – The next Downtown Neighborhood Board No. 13 meeting is scheduled for Thursday, April 7, 2016, at the Pauahi Community Center at 7:00 p.m.

ADJOURNMENT – The meeting adjourned at 8:55 p.m.

DOWNTOWN-CHINATOWN NEIGHBORHOOD BOARD NO. 13

NEIGHBORHOOD COMMISSION • 925 DILLINGHAM BOULEVARD, SUITE 160 • HONOLULU, HAWAII, 96817
PHONE (808) 768-3710 • FAX (808) 768-3711 • INTERNET http:///www.honolulu.gov/nco

REGULAR MEETING MINUTES
THURSDAY, JUNE 1, 2017
ONE ALOHA TOWER, MULTI PURPOSE ROOM 2

CALL TO ORDER – Chair Alvin Au called the meeting to order at 7:03 p.m**., with nine (9) members present, establishing quorum**. Note: This nine (9) member Board requires five (5) members to establish a quorum and to take official Board action.

Board Members Present – Alvin Au, Anthony Chang, Dolores Mollring, Bob Tom, Stanford Yuen, Kevin Lye, Lori McCarney, Chu Lan Shubert-Kwock, and John Donaldson-Selby.

Guests – Captain Kenneth Kahahawai (Honolulu Fire Department); Sergeant Harold Chi (Honolulu Police Department); Laurel Johnston (Governor Ige's Representative); Councilmember Carol Fukunaga; Megan Muramatsu (Mayor Caldwell's Representative); Pat Lee (Honolulu Authority for Rapid Transportation); Glen Young (Senator Karl Rhoads' Representative); Representative Daniel Holt; Honglong Li (Department of Transportation Services); Director Sandy Pfund (Department of Land Management); Executive Director Marti Townsend (Sierra Club); Lee Stack (Chinatown Improvement District); Karen Seddon and Stuart Kritzen (Michaels Development Corporation); Amy Lum and Michelle Bartell (American Savings Bank); Bill Hanrahan (Mental Health Kokua); John Shead, Randy Chu, Peter Lloyd, Kathleen Lee, Raul Torres De Si, Rick Keene, Ronald Higa, Anthony Marlin, David Amodo (videographer); and Sultan White (Neighborhood Commission Office).

INTRODUCTION OF BOARD MEMBERS – Chair Au and the Board members introduced themselves. Chair Au reminded the individuals present to speak into the microphone when wishing to speak.

PUBLIC SAFETY REPORTS
Honolulu Fire Department (HFD) – Captain Kenneth Kahahawai reported the following:

- May 2017 Fire Statistics – There were 6 nuisance fires, 1 cooking fire, and 1 activated alarm (no fire). There were 172 medical emergencies, 2 motor vehicle collisions with pedestrians, 1 hazardous materials incident, and 3 motor vehicle crashes/collisions.
- Fire Safety Tip – Smoke Alarms: Working smoke alarms save lives by decreasing the risk of dying in a home fire in half. Smoke alarms should be installed and maintained in every home. Test smoke alarms at least once a month using the test button. If the smoke alarm has a nine-volt battery, change it annually. The entire smoke alarm should be replaced every ten years. The HFD will conduct its Smoke Alarms for Everyone or SAFE program on Tuesday, June 6, 2017. If you are interested in in receiving a free SAFE smoke alarm installation, please call 723-7168 for more information.

Honolulu Police Department (HPD) – Sergeant Harold Chi reported the following:

- May 2017 Crime Statistics – There were 3 motor vehicle thefts, 15 burglaries, 68 thefts, 17 unauthorized entries into a motor vehicle (UEMV's), 15 assaults, 5 sexual assaults, 5 graffiti incidents and 6 drug offenses. A total of 2,367 calls were placed for service.
- Safety Tip – Hurricane Season: Hurricane Season has started and will last through November. Families should prepare a Go Kit (if forced to leave the home to a shelter) and a Stay Kit (essentials for staying at home). Have plenty of water, medicine and flashlights. Have a rain catcher if possible. Listen to the radio for State safety broadcasts and have extra batteries.

Questions, comments and concerns that followed:

1. Comment on Statistics: Shubert-Kwock thanked HPD for their high number of drug arrests in April 2017, but mentioned that there seemed to be a lot of thefts and burglaries still. Sergeant Chi said that there are many hidden places in Chinatown that makes it easy for burglars to hide. The best thing to do is have good neighbors and secure your home as best as possible.
2. Arrests or Calls: Lye asked if the sheet represented arrests or calls. Sargeant Chi said that the arrests statistics are usually higher.
3. Purse Snatch: Mollring thanked HPD for the Kamali'i park cleaning. She said that she witnessed a purse snatching. Sergeant Chi said to be careful at night, and walk in lit areas. Make sure not to leave your purse

unattended, in a shopping cart for example. Be aware. If a purse snatching does occur, be sure to get a good description and report it to the police.

4. Homelessness: Tom asked if the expansion of the sit-lie ban would drive more homeless people back into Chinatown. Sergeant Chi said that his officers address homelessness daily. He said that homeless people drift to where HPD takes no action.

Neighborhood Citizen's Patrol (NCP) – Dolores Mollring reported that they have not seen any prostitution or drug dealing during their walks.

Public Concerns

- 2017 Best of Honolulu Festival: Raul Torres reported that on Saturday, August 5, 2017 from 10:00 a.m. to 5:00 p.m. at the Honolulu Hale Civic Grounds, American Savings Bank will present the 2017 Best of Honolulu Festival. It is a free, family-friendly event featuring 'ono food, keiki zone, entertainment and a marketplace. There will also be a fun run for the adults and kids. They estimate 500 to 1,000 people will attend. Find free parking at the Frank Faci Municipal Building parking garage.
- Chinatown Improvements: Honglong Li reported that the Department of Transportation Services (DTS) plans to make the district more pedestrian/bike friendly. They will install 14 wayfinding signs. The signs will direct pedestrians to popular attractions in Chinatown. They will begin the additions on Wednesday, June 7, 2017 and end mid-July 2017. Construction hours are 8:30 a.m. to 3:30 p.m. Monday to Friday. They will never close more than one (1) traffic lane. If you have further questions call 768-5472.
- River of Life: Yuen commented that the River of Life is outgrowing their current space and need a new location. He suggested the City help River of Life move with grants or a land exchange. He commented that moving River of Life would also move homeless people out of Chinatown.
- American Savings Bank: Yuen suggested that the City invest in the restaurants and small businesses in Chinatown to prepare for the opening of American Savings Bank, which will be the neighborhood's biggest business entity. American Savings Bank will bring in 600 new employees and potential customers to Chinatown.
- Chinatown Functions: Peter Pao, the owner of a new sandwich shop in Chinatown, raised concerns about not being notified when functions open. He said that promoters should notify shop owners before hosting block parties in Chinatown.

NEW BUSINESS

Information Update on Halewai'olu Senior Residence Development – Karen Seddon reported that they are completing due diligence. They need to complete HRS Chapter 6E and the National Historic Preservation Act in order to move forward. She mentioned that the cost of construction has gone up, so they are working on securing funding. There will be 150 units. 120 will be single bed units. 30 will be double bed units. There are planning to have 19 floors with 10 units per floor. Right now they are working on the concept, efficiency and costs. The first funding round will be in the first quarter of 2018 with construction beginning late 2019.

Questions, comments, and concerns followed:

1. National Prehistoric Preservation Act: Shubert-Kwock asked what the National Historic Preservation Act entails. Seddon responded that it is a federal architectural survey process. They must fill out paperwork and hold public meetings.
2. Community Center: Shubert-Kwock mentioned that the public does not want to lose the community center. Seddon answered that they are still going strong, and that they may add more affordable units to secure more funding.
3. Fence: Lye asked and Seddon pointed out where the fence was on the diagram.
4. Sense of Place: Lye asked if the architecture of the building would blend into Chinatown's aesthetic. Seddon answered that it would, and that the concept drawing is not completely finished.
5. Approval: Yuen reminded the Board and the public that two (2) years ago the Board endorsed the conceptual plan.

Director Sandy Pfund reported that the Department of Land Management is supporting and strongly encouraging Michaels Development Corporation to complete Halewai'olu. There are delays, but they are working through them. They will share details with the community as updates occur. An Environmental Assessment (EA) will be conducted, which will be open to community input. The EA will be shared with the Board.
Questions, comments, and concerns followed: Zoning: Shubert-Kwock asked if the height limit could change for the building. Director Pfund said that they were trying to get as many units as possible. They have not yet reached the

height limit, but until due diligence is completed they are not sure how much taller they can make the building.

Noise Variance Application for American Savings Bank Construction – Director of Communications & Community Advancement Michelle Bartell reported that they have a noise variance on 300 North Beretania Street on Friday, June 9, 2017 from 6:00 p.m. to 9:00 a.m. They are pouring 600 cubic yards of concrete. They must do it at night since there are a lot of trucks. Even though they have a long block of time for the noise variance, they only expect the pour to last six (6) to eight (8) hours. They sent letters to immediate residents.

Questions, comments, and concerns followed:

1. Fair Notice: Chair Au said that it is important to give fair notice to all of the residents in the affected area. Director Bartell gave notice to residents in the immediate impact area, but acknowledged they could have expanded the radius of who they contacted.
2. Time: Shubert-Kwock asked if the pour would last 15 hours. Director Bartell answered that even though they have 15 hours allotted, they will only use six (6) to eight (8) hours.
3. Finish Earlier: Shubert-Kwock asked if they can finish the pour by 10:00 p.m. by starting earlier. Director Bartell said that if they moved it up earlier it would affect rush-hour traffic. They will be done between 1:00 a.m. and 3:00 a.m. It will not affect businesses, but unfortunately will affect residents.
4. One Night: Yuen asked and Director Bartell answered that the pour would only last one (1) night. Yuen stressed it is important to be transparent and open with the community.
5. Mauna Kea Street: Chair Au asked and Director Bartell answered that the trucks will not park on Mauna Kea Street.

Resolution to Protect Oahu Groundwater Resources from Red Hill Bulk Fuel Storage Tanks – Executive Director of Sierra Club Marti Townsend reported on water security at Red Hill. The Board of Water Supply (BWS) has informed Sierra Club that in the event of a catastrophic fuel release at Red Hill, the neighborhoods that get water from the Halawa Shaft and Moanalua Wells would be affected (metropolitan Honolulu area spanning Moanalua to Hawaii Kai, which has approximately 40,000 residents and visitors). Passing the following resolution would demonstrate solidarity and support for protecting our precious groundwater and drinking water resources from potential fuel contamination at Red Hill:

Resolution to Protect Oahu's Groundwater Resources from the Red Hill Bulk Fuel Storage Tanks

WHEREAS, clean, unpolluted drinking water is a basic human right and held in trust and to be protected for the benefit of the people pursuant to Article XI, Sections 1 and 7 of the Hawai'i State Constitution; and

WHEREAS, the Red Hill Facility contains twenty tanks, each able to hold 12.5 million gallons of fuel that are located 100 feet above a sole source aquifer designated by the U.S. Environmental Protection Agency in 1987 as a major source of drinking water for O'ahu residents and visitors; and

WHEREAS, on January 13, 2014, the U.S. Navy reported a 27,000 gallon leak of jet fuel from its Red Hill Bulk Fuel Storage Facility; and

WHEREAS, since its construction in the 1940s, the U.S. Navy's Red Hill Bulk Fuel Storage Facility has leaked more than thirty times, releasing at least 155,000 gallons of fuel into the environment; and

WHEREAS, water samples from the groundwater near the tanks show traces of petroleum contaminants that are hazardous to human health; and

WHEREAS, the U.S. Navy, the Defense Logistics Agency, the U.S. Environmental Protection Agency, and Hawai'i State Department of Health agreed to an Administrative Order on Consent that is expected to take at least twenty-two years to complete; and

WHEREAS, the Administrative Order on Consent does not guarantee that the tanks will not leak in the future or that future leaks can be cleaned up; and

WHEREAS, the Downtown-Chinatown Neighborhood Board No. 13 would be directly affected if the sole source aquifer beneath the Red Hill Facility were contaminated with fuel; now, therefore
BE IT RESOLVED, that the Downtown-Chinatown Neighborhood Board No. 13 is very concerned about where these tanks are located in relation to a sole source aquifer on O'ahu; and

BE IT FURTHER RESOLVED, that the Downtown-Chinatown Neighborhood Board No. 13 supports precautionary measures to be taken to ensure there is no additional leaks or contamination of our groundwater resources now and into the future; and

BE IT FURTHER RESOLVED, that the Downtown-Chinatown Neighborhood Board No. 13 deems the twenty-two year timeline of the Administrative Order on Consent to be too long to ensure the safety of our groundwater and drinking water resources; and

BE IT FURTHER RESOLVED, that the Downtown-Chinatown Neighborhood Board No. 13 urges the Navy, the Defense Logistics Agency, the Department of Health, and the Environmental Protection Agency to take urgent action to protect O'ahu's groundwater resources and find a solution to upgrade, retrofit, or decommission the Red Hill Bulk Fuel Storage Facility; and be it

ORDERED, that copies of this resolution be transmitted to the Governor, the Director of the Department of Health, the members of the Honolulu City Council, the members of the Hawai'i State Legislature, and the Hawai'i Congressional delegation.

Questions, comments, and concerns followed:

1. Other Boards: Chair Au asked which Boards have passed the resolution so far. Executive Director Townsend said that the Manoa Board has passed the resolution. The Downtown-Chinatown Board is the second to hear the resolution.
2. Lawsuit: Chair Au asked if Sierra Club is filing a lawsuit. Executive Director Townsend said that they have only initiated the lawsuit process. They have asked the Department of Health (DOH) to rewrite regulations for water tanks.
3. Public Pressure: Shubert-Kwock asked if the resolution would only add pressure. Executive Director Townsend answered that it would add public pressure, which worked beneficially for other cities who dealt with similar problems.
4. Timeline: Shubert-Kwock asked the timeline on their plan. Executive Director Townsend answered that they would get all the Neighborhood Board resolutions by the end of summer 2017 and continue community outreach to 100,000 people.
5. Construction: Tom mentioned that there are trace elements in the water already, so if construction started immediately how long would it take for the tanks to be fixed. Executive Director Townsend said that was a question for the Navy. He said that the Navy could do more to be faster and more protective, but that would cost more money. By the end of 2017 they will know when it will be completely finished.
6. Priority List: McCarney asked if anyone was resisting or if they are trying to push the issue up the priority list. Executive Director Townsend replied that they are trying to move it up the priority list.
7. Decommissioned: Lye asked if it was likely that the tanks would be decommissioned. Executive Director Townsend said that would only happen if the tanks are not repaired.
8. Congressional Delegation: Yuen asked if they have contacted the Congressional delegation. Executive Director Townsend said he has, and that they have all been supportive.
9. Congressional Delegation: Chair Au and Yuen suggested that when Sierra Club meets with the Navy to have members of the Congressional delegation present.

Shubert-Kwock moved and McCarney seconded that the Downtown-Chinatown Neighborhood Board No. 13 support the Resolution to Protect Oahu's Groundwater Resources from the Red Hill Bulk Fuel Storage Tanks as drafted. Discussion followed:

1. Common Sense: Shubert-Kwock said that it was common sense to protect the water supply.
2. Cost: Lye asked the cost of the repairs. Executive Director Townsend said they do not yet know the costs, but they are ramping up to that step. Studies show that it will be expensive, but protecting water is worth it.
3. Money Source: Lye asked the source of the money for the repairs. Executive Director Townsend said it would be the Navy.

The motion was APPROVED by UNANIMOUS CONSENT, 9-0-0; (**AYE**: Au, Chang, Mollring, Lye, Tom, Donaldson-Selby, McCarney, Shubert-Kwock and Yuen; **NAY**: None; **ABSTAIN**: None).

Bikeshare Hawaii – CEO Lori McCarney passed out information on Biki. She reassured the community that there would be no advertising at the stations. The stations in each neighborhood would have a different sense of identity. Chinatown has been assigned the color red. The program opens on Thursday, June 28, 2017. Installation

begins on Thursday, June 8, 2017. Each station will finish being constructed within two (2) hours.

Change of Park Closure Hours for Kamalii Mini Park – Chair Au announced that even though the Board approved the change on park closure hours for Kamalii Mini Park from 10:00 p.m. to 5:00 a.m. to 7:00 p.m. to 7:00 a.m. during the May 2017 meeting, since it was not on the agenda there needs to be an opportunity for opposition to speak.

Questions, comments, and concerns followed:

1. Constituents: Councilmember Carol Fukunaga said that the request came from constituents who were concerned about illegal activity in the park.
2. Fence: Shubert-Kwock mentioned that changing the hours will not keep people out of the park. There should be a fence. Councilmember Fukunaga said that changing the hours would bring the issue to attention. She circulated a handout with alternative uses for the park, such as moped and bike parking.
3. Parks Board: Megan Muramatsu said that the request is already on its way to the Department of Parks and Recreation Board.

Shubert-Kwock and Lye seconded that the Downtown-Chinatown Neighborhood Board No. 13 support the change of park closure hours for Kamalii Mini Park from 10:00 p.m. to 5:00 a.m. to 7:00 p.m. to 7:00 a.m. The motion was APPROVED by UNANIMOUS CONSENT, 9-0-0 (**AYE**: Au, Chang, Mollring, Lye, Tom, Donaldson-Selby, McCarney, Shubert-Kwock and Yuen; **NAY**: None; **ABSTAIN**: None).

Cinco De Mayo Festival After Action Review – The Board engaged in the following discussion:

- Issues: Shubert-Kwock said that the block party was not well organized. She said that there should be tougher regulation on the Block Parties in Chinatown. She was disappointed with the Cinco De Mayo party and stated more trash cans and portable toilets were needed. She said that ambulances were called four (4) times for drunk people. The party was too loud. There needs to be a change in policy by the Department of Transportation Services (DTS). One visit to a Neighborhood Board meeting is not sufficient notice.
- DTS response: Chair Au said he spoke to Ty Fukumitsu of DTS on Friday, May 5, 2017. Chair Au said that Fukumitsu said DTS did not receive any verbal complaints from HPD or users. Chair Au said that Fukumitsu said the party was okay, and that the street closures were smaller than what was requested. Chair Au said that Fukumitsu said street closures can be given without Board approval.
- Complaint: Shubert-Kwock said that she sent a video and an email complaint to HPD and DTS.
- Complaint: Donaldson-Selby also sent a complaint about security being too aggressive.
- Beer Garden: A resident suggested that beer gardens would be a better option to contain the drinking to one area. The resident also suggested that the party could be in an indoor space on private property.
- Board Power: A resident said that the Board does have the power to make change, even though it is an advisory board. Shubert-Kwock responded that it was difficult because DTS has the power to do whatever they want, so the policy itself must change.
- Standards: McCarney suggested a guideline and standards for promoters who want to hold block parties in Chinatown be created.
- Post-Event Report: Councilmember Fukunaga said that the area legislature has requested post-event reports from the promoter. They should be obtained quickly. The community can file complaints to the liquor commission.
- Letter: Shubert-Kwock suggested the Board write a letter and Chair Au asked for her to write it.

Gordon Biersch Brewery Restaurant Liquor License – Chair Au announced that there is a temporary extension of liquor license premise permit for Gordon Biersch Brewery Restaurant on Friday, June 2, 2017 from 6:00 p.m. to 10:00 p.m. for a special event.

101st Annual King Kamehameha Celebration – Chair Au announced that there was a traffic advisory for the parade on Saturday, June 10, 2017 from 9:00 a.m. to 11:00 a.m.

COMMUNITY CONCERNS

Hawaii Pacific University (HPU) – No representative was present. No report was given.

Safe Haven – No representative was present. No report was given.

Honolulu Rail Transit (HART) – HART Representative Pat Lee announced that HART would like to notify area

residents and businesses that it will be conducting Subsurface Utility Engineering (SUE) work along Nimitz Highway near Iwilei Road, and continuing east to Halekauwila Street. Work will continue on Halekauwila Street to Ward Avenue. The work will then move to a portion of Queen Street between Cummins Street and Waimanu Street. Work will take place weekdays beginning on Monday, June 12, 2017 and is planned to run through Monday, July 17, 2017. Work is scheduled to take place 8:30 a.m. to 3:30 p.m., although some weekend and night work may be required. There may be some light noise from construction, and HART apologizes for any inconvenience. If you have any questions or comments, please call 808-566-2299 or visit www.honolulutransit.org.

Questions, comments, and concerns followed:

1. X-Ray: Tom asked what they are investigating. Lee responded that they are using a ground penetrating radar to take x-ray pictures under the soil to locate utilities.
2. Red Cross: Chang asked what would happen to the Red Cross building. Lee responded that they would be doing construction within 11 feet of the building. Red Cross wants HART to purchase the entire building so that they could move elsewhere. They are still in discussions.

Chinatown Business & Community Association – Shubert-Kwock reported that in May 2017 the community experienced some issues with violent assaults by criminal elements preying on lone individuals at bus stops or parks. Stores were robbed when owners left to go bathrooms, cash from registers was taken, and goods were stolen. One liquor retailer was struck over the head with a steel pipe when only $20.00 was in the cash register. The retailer was an older lady in her 70s. The robbers were three (3) males. Another elderly lady was waiting for the bus outside Walmart in Downtown. She was kicked in the head by a large male, then taken in critical condition to Queens Medical Hospital. Across from Pacific Club three (3) young men attacked a male with a machete. He suffered slash wounds to his face and neck. It is advised to be careful when waiting for a bus or a ride. We must be aware and alert. Do not travel in the dark alone and do not be careless about leaving the shop unwatched. Continue to call 911 when illegal activity is witnessed. Our HPD Commander has deployed more resources recently. There were more HPD patrols and more drug arrests in April 2017. There were 18 drug arrests which is the highest in six (6) years on a per month data count. Chinatown and Waikiki need HPD resources and presence more than elsewhere. The community needs Community Police back as HPD will be doubly effective with cooperation and trust from the community.

Chinatown Improvement District (CID) – Lee Stack reported the following:

- Seminars: CID will have their second series of Historic Preservation Seminars, cosponsored by Historic Hawaii Foundation. They will be held at the Hawaii National Bank Building on the 5th Floor from 12:00 p.m. to 1:00 p.m. on the second Wednesday of each month. They are free and open to the public.
- Taste of Chinatown: The festival will be held on Saturday, August 26, 2017. It will be at the Smith Beretania Park. They may close part of Smith Street to add more booths, vendors and crafts. If they decide to do a street closure, they will come to the Board for a presentation.

Questions, comments, and concerns followed: Tables and Tents: Shubert-Kwock suggested that tables and tents be provided since it was hot last year. Stack responded that grant funding was cut, so it would be difficult to provide tables and tents for everyone.

Arts, Culture, Merchants, Etc. (ACME) – No representative was present. No report was given.

ELECTED OFFICIALS

Mayor Kirk Caldwell's Representative – Megan Muramatsu from the City Managing Director's Office provided updates on questions from the last meeting.

- Noise Complaint: Corporal Steven Matsuda of the District 1 (Central Honolulu) Community Policing Team met with Joshua Mandelstam, manager of the Ong King Arts Center, located at 184 North King Street. Mr. Mandelstam is aware of the noise complaint and wants to be a responsible and good neighbor. It appears that the loud noise is from an open rear door from the establishment to a patio area where the partying continues. The patio has an internal stairwell that leads to an area that is adjacent to the Chinatown Manor building. Mr. Mandelstam said he will limit or not allow his patrons to socialize in the patio area during the late evening hours, or possibly keep the door closed. He also will try to end the live music earlier in the evening. In addition, according to Lee Stack of the Chinatown Improvement District, Ong King's lease will not be renewed when it expires in June 2017.
- Cyclist Signs: The Department of Transportation Services (DTS) has confirmed that according to the State of Hawaii Traffic Laws Section 291C-148, "Unless otherwise prohibited, a bicycle may be driven at a speed

of ten miles per hour or less on a sidewalk or sidewalk area; provided that the driver of the bicycle shall yield the right of way to any pedestrian and that bicycle riding shall be prohibited on sidewalks in business districts." A "business district" is defined as "The territory contiguous to and including a highway when within any six hundred feet along such highway there are buildings in use for businesses or industrial purposes, including but not limited to hotels, banks, or office buildings, and public buildings which occupy at least three hundred feet of frontage on one side or three hundred feet collectively on both sides of the highway." Therefore, bicyclists adhering to this section should not be riding a bicycle on the sidewalk in the Downtown/Chinatown area. This is an enforcement concern and the Honolulu Police Department (HPD) is aware of this ordinance relating to bicycling on sidewalks and can site violators without the presence of signs. As such, by copy of this response, we will be informing the HPD of this concern for their action. The DTS also recommends that the HPD be notified whenever violations are observed. As such, "No Bicycling on Sidewalk" signs do not appear to be necessary at this time.

- 1270 Queen Emma Street: The Department of Community Services is confirming that 1270 Queen Emma Street is not a City project and the City is not involved with the project.
- Potholes: Fort Street between Kukui Street and Beretania Street is identified as in need of resurfacing and is part of the Department of Design and Construction's (DDC) Rehabilitation of Localized Streets, Phase 12D construction project. Potholes were patched on Saturday, May 13, 2017. The Phase 12D project is still in the design phase and projected date for repaving has not been scheduled yet.
- Cost Impact: The establishment of an Office of Climate Change, Sustainability and Resiliency (CCSR) was mandated by City and County of Honolulu voters in November 2016 when 54.5% of Oahu residents voted in the affirmative to create the Office. There is no current cost to the City and County in the current FY-2018 budget for the CCSR. This is due to the fact that the current Executive Director of the CCSR also serves as the City's Chief Resilience Officer, a position that is supported entirely by a 2017-2018 grant from 100 Resilient Cities (100 RC), a project of the Rockefeller Foundation. The grant also provides approximately $1 million in other in-kind and technical support at no cost to taxpayers of the City and County of Honolulu, as well as free services from "platform partners" such as Microsoft and others that could bring millions of dollars in additional assistance to the city over the next three (3) years. While the 100 RC grant provides support for the Office's resilience work, the city is committed to honoring the mandate of Oahu voters to ensure long-term sustainability for our communities and prepare for the impacts of climate change—which will have profound (negative) infrastructure and fiscal implications to the city. The Mayor has requested $269,000 in the FY-2018 budget for the CCSR to pursue programs that reduce the city's energy costs, increase water efficiency, prepare the city for climate change-related sea level rise, and other sustainability initiatives. These programs are expected to conserve taxpayer dollars over both the short and long-term. Beyond the two (2)-year grant agreement with 100 RC, grant funds will no longer be available to support the Chief Resilience Officer position, but free services from platform partners will remain available and provide significant financial support to city projects and programs.
- Sun Yat Sen Park Light: Street light was repaired on Wednesday, April 26, 2017 as requested.
- Power Cleaning: DFM power washed River Street on an emergency feces/urine call on Thursday, May 4, 2017 and returned to power wash the Nuuanu Street to River Street area about Wednesday, May 10, 2017. DFM is tentatively scheduled to power wash the Nuuanu Street to River Street area on or about June 6 pending available resources. Unfortunately it is difficult to provide schedules due to emergency situations that arise such as power washing of bus stops or areas where defecation/urination have occurred.

Questions, comments, and concerns followed:

1. Pothole: Mollring said that a pothole was not filled on Fort Street between South Kukui Street and Beretania Street. She said it is by the second parking meter where the Hawaii Pacific University vans park, so it might have been hidden at the time.
2. Street Cleaning: Schubert-Kwock would like a regular street cleaning schedule for the neglected streets in Chinatown. She said that there used to be two (2) street cleaning machines, but there is one (1) now. She wants two (2) again.
3. Ong King: A resident thanked the City for helping with the noise issue at Ong King.

Councilmember Carol Fukunaga –Councilmember Fukunaga reported the following:

- Kamalii Park: Community stakeholders are pursuing new uses for Kamalii Mini Park to curb illegal activities. Some uses include a Bikeshare Hawaii station and moped parking.
- Sun Yat Sen Park: The appropriation for park improvements has been increased to $561,000, based on updated Department of Design and Construction (DDC) estimates for installation of a smaller electrical facility and removal of the existing bench seating area.
- Parking Fees: Bill 12 will double the parking fees in Downtown, Chinatown and Waikiki.

- Reception: There will be a reception to honor the Board members at the Plaza Waikiki on Tuesday, June 13, 2017 at 3:00 p.m.

Questions, comments, and concerns followed:
1. Parking Fees: Shubert-Kwock asked not to increase the parking fees. Councilmember Fukunaga responded that these areas were selected because they have not been increased for a while. Yuen asked the rationale for picking Chinatown for increasing the parking fees. Councilmember Fukunaga answered that Downtown, Chinatown and Waikiki were all identified as having the specific hours for having the fees imposed.
2. Bill 44: Shubert-Kwock said the Bill 44 should be modified to include a special amendment to exclude Chinatown. Councilmember Fukunaga said that Bill 44 was deferred due to many disagreements, so there is time to work on it.
3. Kamalii Park: Lye mentioned that increasing moped parking at Kamalii Park could disturb the residents due to increase in noise. Councilmember Fukunaga said that moped activity usually stops in the afternoon, and that she hopes Bikeshare Hawaii becomes a much more robust part of the community.

Governor David Ige's Representative – Laurel Johnston, Deputy Director of the Department of Budget and Finance highlighted some points on the monthly newsletter:
- Priorities: Deputy Director Johnston said that Governor Ige is pleased to have passed some of his top priorities in the 2017 legislative session, which are written in the newsletter.
- Japan-Hawaii Economic Summit: This is the first time Kailua-Kona has hosted a summit. Hawaii's relationship with Japan continues to thrive because it is rooted in historical, cultural and business connections. The State wants to find new ways to build on that solid foundation with increased tourism, trade, student exchanges and clean energy projects for mutual benefit.
- Special Session: The Director of Finance is working with the Legislative leadership to get a special session to vote on the Rail.

Questions, comments and concerns that followed:
1. Immigration Ban: Shubert-Kwock is proud of Hawaii for suing on the immigration ban.
2. Education: Shubert-Kwock raised concerns about the new selection of the Education Chief coming from out-of-state. She said they would not be familiar with how education in Hawaii works.
3. Airport: Lye asked when Uber and Lyft would be allowed at the airport. Deputy Director Johnston said that she will check and believes it is an issue for the Public Utilities Commission (PUC). Shubert-Kwock said to upgrade the airport.

Representative Daniel Holt – Representative Holt distributed a newsletter and reported that in the past session he worked diligently to secure the funds necessary for a wide array of projects that will benefit the most individuals, including monies dedicated to the arts, homelessness, Kupuna, schools, transportation needs and highway safety. He introduced legislation to increase police presence in Chinatown, but it did not go through. He gave his praise to Bikeshare Hawaii. He agrees that Chinatown could use an upgrade before American Savings Bank arrives.

Questions, comments and concerns that followed:
1. Graffiti: Shubert-Kwock raised concerns about graffiti in the area. Representative Holt said that they are working hard to provide funding for cover ups. Mollring suggested that if the graffiti is not removed within 48 hours than the building owner be fined, which is done in other cities. Representative Holt said there are positives and negatives to that proposal. There should be discussion to figure out how to address the graffiti problem.
2. Bidding: A resident asked if there was an update on the bidding to manage most of the Downtown properties. The Mayor's Office will bring an answer for that.

Senator Karl Rhoads' Representative – Glen Young said that Senator Rhoads' office is open for any ideas for new legislature.

APPROVAL OF MAY 4, 2017 REGULAR MEETING MINUTES – **McCarney motioned and Mollring seconded to approve the May 4, 2017 regular meeting minutes as written.**

BOARD BUISNESS AND REPORTS

Chair's Report – Chair Au thanked Stanford Yuen and Anthony Chang for being dutiful Downtown-Chinatown

Neighborhood Board Members. The community and the neighborhood are appreciative. He also recognized Tom Smyth for his service. He announced that the Installation Ceremony would be on Saturday, June 24, 2017 from 8:30 a.m. to 1:00 p.m. He reminded that new Members need to respond by Tuesday, June 13, 2017. He reminded that if any Member does not attend the event then they must take the online Sunshine Law Certification.

Neighborhood Commission Updates – No report was given.

Office of Information Practices Report – No report was given.

Treasurer's Report – Treasurer Mollring reported a remaining balance of $74.26 for April 2017. The report was filed.

City and County Affairs – No report was given.

Oahu Metropolitan Planning Organization (OMPO) – Mollring volunteered to be on the Water Committee. Chair Au will contact Mollring via email to appoint Mollring as the representative for the Water Committee.

ANNOUNCEMENTS

Next Meeting – The next Downtown-Chinatown Neighborhood Board No 13 meeting is scheduled for Thursday, July 6, 2017 at the Hawaii Pacific University, One Aloha Tower Drive, Multi-Purpose Room 2 at 7:00 p.m.

ADJOURNMENT – The meeting adjourned at 9:39 p.m.

Submitted by: Sultan White, Neighborhood Assistant I
Reviewed by: Dylan Whitsell, Neighborhood Assistant I

REGULAR MEETING MINUTES
THURSDAY 4 APRIL 2019
ONE ALOHA TOWER, MULTI PURPOSE ROOM 2

CALL TO ORDER – Chair Shubert-Kwock called the meeting to order at 6:00 p.m. **Quorum was established with eight members present**. Note: This nine-member Board requires five members to establish a quorum and to take official Board action.

Board Members Present – Ernest Caravalho, James Logue, Kevin Lye, Kevin McDonald, Dolores Mollring, Willis Moore, Chu Lan Shubert-Kwock, Laura Struges (appointed).

Board Members Absent – Bob Tom

Guests – Lieutenant Taniguchi (Honolulu Police Department); Captain Russell Youth (Honolulu Fire Department); Raelynn Nakabayashi (Mayor Kirk Caldwell's representative); Marc Alexander (Office of Housing); Councilmember Fukunaga; Glen Young (Senator Karl Rhoads' office); Damien Elefante (Governor David Ige's representative); Pat Lee (Honolulu Authority for Rapid Transportation); Greg Payton (Safe Haven); Lee Stack (Chinatown Improvement District); Fran Butera (Chinatown Watch); Nancy Ortiz (Cinco De Mayo); Susan Wolf, Diane Kraus, Verne Nichols, James Tennant, Kainoa Adolpho, Ronald Higa, Questor Lau, Keith Kurahashi, Rik Papa, Eric Wong, and Bob Armstrong (community members); Harry Cho and Casey Ishitani (Neighborhood Commission Office).

PUBLIC SAFETY REPORTS

Honolulu Fire Department (HFD) – HFD departed due to an emergency. A report was provided to the Board that stated the following:

- March 2019 Statistics: There were 5 nuisance fires, 5 activated alarms with no fire, 141 medical emergencies, 3 motor vehicle collisions with a pedestrian, 5 motor vehicle crash/collisions, and 1 ocean rescue.
- Safety Tip: Fire sprinklers respond quickly and effectively to a fire, often extinguishing the fire prior to the fire department's arrival. Fire sprinklers can save lives and property from fire. The National Fire Association reported fire sprinklers reduced fire deaths by 83% and property loss in homes by 69%.

Honolulu Police Department (HPD) – Lieutenant Taniguchi reported the following:

- March 2019 Statistics: There were 7 motor vehicle thefts, 6 burglaries, 50 thefts, 30 unauthorized entries into motor vehicles (UEMV), 29 assaults, 3 sex assaults, 1 graffiti incident, 3 drug offenses, and 2,545 total calls for service.
- Safety Tip: Due to the recent increase in UEMVs, HPD would like to remind the public to lock your doors, do not leave valuables in your vehicle, keep your vehicle clean, stash before you park, park in a visible area, use car alarms, and report suspicious activity.

Questions, comments, and concerns followed:

1. Arrests: Moore asked what type of action has been taken on those arrested as listed in the monthly statistics. Lieutenant Taniguchi stated that there is an ongoing cycle where people who get arrested end up back on the street.
2. Patrol: Lye requested an increase in patrol at Kamalii Mini Park. Shubert-Kwock thanked Major Nishibun for his efforts to increasing patrol and working with the community policing teams.
3. Reserve Officers: Logue asked if HPD can increase the number of reserve officers to help with patrolling of Chinatown.
4. Legislation: McDonald asked if more legislation would help HPD reduce homelessness.
5. Enforcement: A community member raised concerns that the sit/lie law is not being enforced.

Neighborhood Citizen Patrol (NCP) – Mollring reported that the NCP has been patrolling every Tuesday night. Eric Wong of the Kekaulike Mall Citizens Patrol stated that their group has been walking every Thursday.

ELECTED OFFICIALS

Mayor Kirk Caldwell's representative – Raelynn Nakabayashi reported the following:

- Follow-Up on Concerns:
  - Dr. Sun Yet-sen Park Memorial Park: Department of Design and Construction (DDC) stated that there is no public comment period scheduled for the renovation project.
  - Sidewalk Ramps: Department of Facility (DFM) stated that they are allowed to patch damaged Americans with Disabilities Act (ADA) ramps, but modifications to improve the ADA ramps utilized by wheelchairs to meet current standards would need to be assessed and implemented by DDC, due to the complex nature of ADA ramp construction. Questions regarding maintenance patching of ADA ramps can be directed to the Division of Road Maintenance at 768-3600.

Questions, comments, and concerns followed:

1. Crosswalk: Shubert-Kwock raised concerns that the crosswalks on North Beretania Street and Maunakea Street are rough and faded. Suggested using scramble crosswalks due to multiple intersections.
2. Public Phone: Caravalho raised concerns regarding a public phone that has been vandalized and trashed.
3. Repaving: Moore asked what are City's plans are to repave the rest of King Street, rather than only in front of City Hall.
4. Events: McDonald asked if the Liquor Commission has the authority to cancel an event due to liquor violations even though permits have been approved by other City departments.
5. Dr. Sun Yat-sen Park Memorial Park: A community member raised concerns with funds being used for renovations to a park, when there is currently a homeless crisis. The community was not receptive to this project by DDC.
6. Homeless: Community members and business owners raised concerns that homeless are urinating and defecating on the sidewalks. They requested that the City clean/wash the sidewalks.
7. Sidewalks: A community member stated that the sidewalk on Bishop Street/Adam Lane in front of Pauline Bookstore is very slippery when wet.

Senator Karl Rhoads – Senator Rhoads reported the following:

- Capital Improvement Funds: $100,000 in Capital Improvement funds were released for improvements to the Chinese Chamber of Commerce Foundation's Downtown Honolulu building to provide access to seniors and individuals with disabilities. This request for funds was one of Senator Rhoads' top priorities and is extremely pleased to see that funds are now being released.
- Capital Improvement Funds: $1,567,570 in Capital Improvement funds were released to fund seawater air-conditioning energy transfer facilities for designated state buildings Downtown. Construction on the long-awaited Honolulu Seawater Air Conditioning Project in Kakaako is projected to break ground in 2020. Construction itself is set to take another 20 to 22 months. When completed, this district cooling system will reduce Hawaii's dependency on oil by about 178,000 barrels annually, will minimize greenhouse gas emissions, will decrease potable water usage by more than 260 million gallons per year, and will cut down on sewage discharge by up to 84 million gallons per year.
- Strode Montesssori Preschool: Senator Rhoads received a response from HPD on his communication to them concerning the criminal activity taking place on the sidewalks fronting the Strode Montessori Preschool at 925 Bethel Street. Chief Susan Ballard stated that while police officers did not witness any criminal activity when they patrolled the area, HPD officers will make it a point to conduct more frequent checks in that vicinity.

Questions, comments, and concerns followed – Legislative Update: Logue requested a legislative update next month regarding Senator Rhoads' current Bills.

House Representative Daniel Holt – Representative Holt reported the following:

- Bills: House Bill (HB) 159 relating to crime, increases penalties for anyone who knowingly keeps or maintains any structure or place for the purpose of suing controlled substances or which is used for keeping or selling them in violation of controlled substance laws, also increases criminal penalties for those who knowingly profit from, advance, or participate in gambling.
- A'ala Dog Park: A'ala Dog Park recently opened. This was made possible through a public-private partnership between the State, City, community groups, and a non-profit.

- Capital Improvement Funds: $100,000 in Capital Improvement funds were released for improvements to the Chinese Chamber of Commerce Foundation's Downtown Honolulu building to provide access to seniors and individuals with disabilities.
- Recent Events: Representative Holt recently attended the Walk on the Wild Side event in Chinatown hosted by the Kidney Foundation.

Questions, comments, and concerns followed:
1. Chinatown Parade: Shubert-Kwock requested to continue funding for the Chinatown Parade.
2. Gaming Rooms: Logue asked about the enforcement of illegal game rooms.
3. Tobacco Tax: Lye asked for an update regarding the increase on tobacco taxes.

Councilmember Carol Fukunaga – Councilmember Fukunaga reported the following:
- City Budget: Mahalo to the Neighborhood Board No. 13 members and Downtown-Chinatown business leaders for supporting the first round of CD1 amendments to Bill 10, the City's fiscal year 2020 Executive Operating Budget. Bill 10, CD1 was adopted by the Council's Budget Committee during an all-day committee meeting on Wednesday, April 3, 2019 and will be scheduled for a Council review on Wednesday, April 17, 2109. The CD1 amendments included a $200,000 appropriation for private security services to Department of Land Management, which manages the City's affordable housing and city properties in the Downtown-Chinatown area.
- Fire Safety Legislation: Bill 96, relating to fire safety, was the subject of two (2) PITS committee meetings in March. HFD continues to oppose any time extensions proposed in the Bill 96, CD1 drafts, and additional amendments are pending.

Questions, comments, and concerns followed:
1. Security: Caravalho raised concerns that the security will not have authority to enforce laws or make arrests. Lye asked how many security positions there will be and to whom the contract will be awarded to. Councilmember Fukunaga stated that there are no details on that yet and this is a starting point. A community member suggested having security for privately owned buildings as well.
2. Homeless: Logue asked if declaring a homeless emergency has done by other cities before.
3. Events: McDonald asked if the Liquor Commission has the authority to cancel an event due to liquor violations even though permits have been approved by other City departments.

Governor David Ige's Representative – Damien Elefante reported the following:
- Homeless: A response was received from the State Homeless Coordinator stating that $30 million was appropriated by the legislature homeless service centers and shelters across Hawaii.

Community Concerns – Homeless: A community member raised concerns with homeless sleeping and urinating in front of her business. She stated that his has been driving customers away and negatively impacting her business.

NEW BUSINESS

Filling of Vacancy – There is one (1) at-large vacancy. Shubert-Kwock asked all volunteers to introduce themselves.

Caravalho nominated Laura Sturges. Hearing no other nominations, Sturges was voted on the Downtown/Chinatown Neighborhood Board No. 13 by majority vote. (**Aye**: Caravalho, Lye, Logue, Mollring, Shubert-Kwock).

Sturges was appointed to the Board. Eight (8) members present.

Office of Housing – Director Marc Alexander gave a brief presentation and provided handouts regarding the 2019 homeless point-in-time count results and the City and County of Honolulu's Housing First. Director Alexander was available to answer questions and was cut short due to time constraints.

Questions, comments, and concerns followed:
1. Housing First: Logue asked about Housing First units and the voucher system. Alexander stated that data on the number of Housing First clients are not given out due to privacy and that there are no dedicated units for housing first. Vouchers are provided after an evaluation through the Coordinated Entry System.

2. Housing: Caravalho raised concerns that providing housing for drug abusers takes away from those who are economically houseless. He suggested sending drug abusers and the mentally ill to assessment programs prior to providing housing.

Halewai'olu River Street Senior Affordable Rental Project – Questor Lau gave a brief presentation on the project. There will be 156 affordable senior rentals units with the majority targeted at 60% area median income (AMI) or below. There will be 130 one (1) bedroom units and 26 two (2) bedroom units on 17 floors.

Questions, comments, and concerns followed – Senior Citizens: McDonald stated that seniors should be aware that Chinatown can get loud because it is a college/business/residential community.

Domestic Violence Action Center – Nanci Kriedman reported that the Domestic Violence Action Center is the only agency of its kind in Hawaii, offering unduplicated specialized services to survivors of relationship and family violence. Information was provided on the agency's services.

Department of Environmental Services (ENV) – Michael O'Keefe gave a presentation on the City's new bulky item pilot program to reduce the amount of illegal dumping. The City currently provides bulky item pick-up once a month all over Oahu. The new system will require those who want a pick up to schedule an appointment

Questions, comments, and concerns followed:

1. Outreach: McDonald asked what they of outreach will be done to notify the public. O'Keefe stated that ENV will be presenting to the Neighborhood Boards, individual mailers will be sent to 80,000 residents in the Honolulu Collection District, a press release will be sent, and a new conference as well.
2. Illegal Dumping: A community member raised concerns with illegal dumping of trash at bulky item pick-up sites. O'Keefe suggested calling HPD if you notice anyone illegally dumping their trash. A community member raised concerns that people rummage through trash that is illegally dumped on the side of the road.

Cinco de Mayo – Nancy Ortiz reported that the event will take place on Sunday, May 5, 2019 from 2: 00 p.m. to 10:00 p.m. A floor plan/map of the event was provided to the Board and public. The event will be held on Nuuanu Street between Pauahi Street and King Street. Buses will be diverted from Hotel Street. Special duty HPD officers will be hired to secure the entire footprint. The security and staff are all experienced with these types of events and will have a zero tolerance policy in effect. A security/medical headquarters tent will be established for any emergency needs. Guests over 21 and over will have a distinct color wristband and alcohol will only be served to guests with the wristband on. All volunteer staff serving alcohol will have taken the bartender/manager class with the Liquor Commission and have at least two (2) years' experience with these type of events. There is an emergency evacuation plan in place and will be handed out to the security supervisors.

Questions, comments, and concerns followed – Alcohol: A community member asked if alcohol would be served from 2:00 p.m. to 10:00 p.m. concurrently with the keiki activities and if the drink with be just beer and wine or mixed drinks as well. Ortiz responded yes and there will be mixed drinks.

McDonald moved and Caravalho seconded to support the Cinco de Mayo event. The motion was adopted by majority vote, 7-0-1. (**Aye**: Caravalho, Lye, Logue, McDonald, Mollring, Moore, Sturges; **Nay**: None; **Abstain**: Shubert-Kwock).

Kekaulike Mall – Shubert-Kwock gave an update on Kekaulike Mall.

Handicapped Sidewalks in Chinatown – This item was not discussed.

City Council Bill 10 CD1:
The Downtown-Chinatown Neighborhood Board No. 13 supports City Council Bill 10 CD1 introduced by Councilmember Carol Fukunaga to ask the City to release $200,000 for private security for sidewalk safety in Downtown and Chinatown due to escalating violence on the sidewalks and street.

Logue moved and Caravalho seconded the Board support the resolution with the amendments made by Lye. The motion was adopted by unanimous consent, 8-0-0. (**Aye**: Caravalho, Lye, Logue, McDonald, Mollring, Moore, Shubert-Kwock, Sturges; **Nay**: None; **Abstain**: None).

Chinatown Liquor Stores:
The Downtown-Chinatown Neighborhood Board No. 13 requests that the City remove liquor stores overserving patrons in Chinatown, which causes violence and unrest on our streets and endangering citizens' lives.

The Neighborhood Assistant departed at 9:00 p.m.

Hearing no objections, the motion to amend was adopted by unanimous consent, 8-0-0. (Aye: Caravalho, Lye, Logue, McDonald, Mollring, Moore, Shubert-Kwock, Sturges**; Nay**: None**; Abstain**: None**).**
The duly amended main motion was adopted by majority vote 6-1-1. (Aye: Caravalho, Lye, Logue, Mollring, Shubert-Kwock, Sturges**; Nay**: McDonald**; Abstain**: Moore**).**

COMMUNITY REPORTS

Safe Haven – Greg Payton reported that there was one Safe Haven discharges/intakes, one return to the mainland, two Mental Health Kokua Oahu Case Management Housing placement, and 4 permanent housing placements. The grand total for 2019 is 42 placements through March 2019.

Honolulu Authority for Rapid Transportation (HART) – Pat Lee reported that the rail system will be a fully automated, driverless system, utilizing a fleet of 20 four (4) car trains. Each train car is 64 feet long, 14 feet high and 10 feet wide. There are three (3) doorways on each side of a rail car, for a total of 12 doors for each four car train. A 6th four-car train has just been delivered to the Rail Operations Center, which means a quarter of the 80-rail car fleet is already here on island. The system will have 17 trains in operation during peak times and eight (8) trains during non-peak hours. Trains will operate between 4:00 a.m. and 12:00 a.m., and arrive at stations every five minutes during peak, and about 11 minutes during off peak times. The trains will be air conditioned and equipped with WIFI, audio and visual announcement boards, closed circuit TV security cameras and call boxes, and space for strollers, bicycles, luggage and even surfboards. The four car trains have a maximum capacity of 800 passengers, which is equivalent to about 10 city buses. The trains will be fully Americans with Disabilities Act (ADA) compliant, with 188 seats, priority seating for seniors and disabled as well as designated areas for wheelchairs. The Automatic Train Control System testing between the Rail Operations Center and the stations in Waipahu is ongoing in preparation for the interim opening of rail service from Halawa station at Aloha Stadium to the Kualaka'i station at east Kapolei by the end of next year, which will be a limited passenger service. The public will be hearing more details in the coming months. Revenue passenger service for the full 20-mile, 21 station rail system is planned for the end of 2025. Once completed, rail will become an integral part of Honolulu's public transit system connecting seamlessly with the bus and Handivan, using a smart card system called the Holo Card, where riders can transfer easily between the different transportation modes. The public may view the train cars at the upcoming Train Community Day on Saturday 22 June 2019, 10:00 a.m. to 2:00 p.m. at the Rail Operations Center next to Leeward Community College. The event is open to the public. Starting next week, Wednesday 10 April 2019, NAN, who's HART's contractor doing the utility work, will be relocating a waterline which requires closing both left and right turn exits out of Aloha Tower at the Bishop Street/Nimitz intersection across from Bishop Street. The duration of the work is approximately two to three weeks and work will be during the day time from 8:30 a.m. to 3:00 p.m., Monday through Friday. This will not affect makai bound traffic into Aloha Tower from Bishop Street. To exit the Aloha Tower complex, you can use the driveway on the Kalihi side and turn right or left on Nimitz at the traffic signal. For more information on the rail project, please visit the HART website at www.honolulutransit.org, call the project hotline at 566-2299, or email a question to info@honolulutransit.org.

Chinatown Business and Community Association (CBCA) – Shubert-Kwock reported that the CBCA has worked almost a whole month on Kekaulike Mall, Oahu Market and Chun Market to ensure sidewalk safety, is working with HPD and others in the community to move homeless camps throughout Chinatown, is educating merchants on sanitation and trash, met with stake holders on the homeless and drug crisis in Chinatown and trying our new ways to reduce crime. The next meeting is Golden Palace at 10:00 a.m. on Tuesday 9 April 2019. Deputy Director of Environmental Services will be talking about city's plans. A green demarcation was drawn so merchants do no cross the line with merchandise into public space. Also a request for the city to re-do dangerous sidewalks and re-paint crosswalks.

Chinatown Improvement District (CID) – Lee Stack reported that the community security patrol project has been rolled over into a new term due to popular request. The general consensus is that the project is having a positive impact in the area and people are pleased with the outcome. The report for the graffiti coating study has been completed and, after a few final edits, will be published on the CID website (www.cidchinatown.org) and by email. After some trial and error, two (2) coatings were identified that work well with citrus based graffiti removal products

allowing for safer and easier removal of graffiti in public areas with less caustic products. The results and products recommended in the study have already proved useful as a solution to a graffiti issue on the wall surrounding Kawaihao Church. CID is also currently working on a beautification project along River Street. The CID decided to adopt the River Street sidewalk under Department of Facilities Maintenance's Malama o ka Aina program. Working with a panel of cultural and community advisors as well as others we plan to place some planters in the area planted with native plants and also to devise a call for artists to submit artwork arranged around various historical and cultural themes pertaining to Nuuanu stream and the Chinatown area. CID plans to have the planters and the sidewalks painted. CID is very excited about this project which has the capacity to transform a much underutilized area of Chinatown with no costly redevelopment or installations. This project has received the support of Department of Facility Maintenance and, recently, the Mayor's Commission on Culture and the Arts.

Chinatown Watch – Fran Butera reported the following:

- Acknowledgments: Sincerest thanks to Councilmember Carol Fukunaga for her Proposed Amendment to the City's budget, which provides for the City to fund private security around City-owned buildings. This is a welcome, badly-needed emergency measure. Several City-owned properties in Chinatown are serious trouble spots, including the entire Hale Pauahi block and the Pauahi Recreation Center. Board Chair Chu Ian Shubert Kwock spearheaded the push to rein in illegal peddling on Kekaulike Mall. She worked with City DFM and Department of Parks and Recreation personnel to paint demarcation lines on the pavement to clearly outline the space for legally selling goods. She was out in her wheelchair at 5:30 a.m. each day of the project. She continues to visit the mall almost daily, on her own time, to monitor this and other issues. Chinatown Watch members report that the Green Line is an improvement and works as intended. Mental Health Kokua (Greg Payton) hired a security guard last week to monitor activity in front of the Safe Haven/Hygiene Center building. This is a welcome change and long overdue. Mahalo, Greg. We look forward to a sharp reduction in aberrant behavior around your facility.
- Continuing Problems Call For Security Presence: River of Life Mission, the City Hygiene Center and the seemingly unregulated liquor stores continue to draw homeless / mentally ill / substance abusers and criminals to our neighborhood where they roam freely around Chinatown among residents, shopkeepers, visitors and workers. From this toxic mix come the countless daily assaults on our community's health and safety: public drinking, drug use, drug sales, fights, psychotic outbursts, f-bomb barrages, shouting matches, urination and defecation in public spaces and on private property, sitting, lying, camping, littering on public sidewalks and in city parks, vandalism, theft, and purse snatchings and assaults by gangs on kupuna and other vulnerable people. These things go on throughout the day, putting the highest number of people at risk. As currently funded and staffed, HPD cannot control this volatile situation. Daily disruptions by homeless, mentally ill, and substance abusers steal HPD's time, resources, and attention away from its core mission of fighting crime and protecting the public. City-funded security will put more eyes and uniforms out in the public spaces. The guards are a middle layer between the merchants/residents/pedestrians and the HPD. They will help reinforce the message that "you have to obey the law here." For public safety, it is crucial that the guards patrol outdoors in the public spaces (sidewalk, streets, etc.) Around the city-owned buildings, not just inside or within the footprint of the buildings. Based on on-going citizen reports and our own daily reality, we believe that security patrols are needed immediately for all public property in the entire Downtown-Chinatown district. However, Councilmember Fukunaga's proposed amendment is a 1st step to change the course of this unfolding public safety nightmare.
- To the City Administration: The community would like that City to begin immediately to fund private security patrols for Chinatown, with special emphasis on the known crime zones surrounding the homeless services and liquor stores. Provide all additional funding needed to support HPD in protecting Chinatown's citizens. Close the Pauahi Street hygiene center and relocate Safe Haven out of Chinatown. Fast-track your negotiations with River of Life Mission so they may move their feeding operation to Iwilei this year. Close the liquor stores that sell alcohol and drugs to the homeless and mentally ill substance abusers who congregate in disproportionately high numbers in Chinatown.
- To Chinatown Residents, Merchants, Shoppers, Property Owners, and Visitors: Call 911 to report violations. Don't think you're inconveniencing the police by calling. They want you to call 911. Doing so gets the violations into their database and helps HPD help you. Talk to your neighbors about the problems. Encourage them to call 911, too. Post incidents anonymously to ChinatownWatch.com. Please encourage your neighbors to post, too. It's an unofficial but visible way to build our community's case for more support. Please note that posting to ChinatownWatch.com is not a substitute for calling 911. To order Chinatown Watch window signs for your business, go to ChinatownWatch.com, click the About link, then send a message via the Contact link. Please allow a few days for a response as the site is run by volunteers. Get some neighbors together to meet with the HPD's Community Policing Team (CPT). Call the CPT office at

(808) 732-3927. A strong community partnership with HPD is good for everyone. Merchants and property owners, please join the Chinatown Improvement District's neighborhood security patrol. Call Lee Stack at (808) 589-9927, email chinatownimprovementdistrict@gmail.com, or visit the website: cidchinatownhawaii.org. Support legislation to fund private security patrols for Downtown-Chinatown's public spaces. Contact Councilmember Fukunaga's office for details. Email cafukunaga@honolulu.gov or call 768-5006.

APPROVAL OF THURSDAY 7 MARCH 2019 REGULAR MEETING MINUTES – **Moore moved and Logue seconded to approve the Thursday 7 March 2019 regular meeting minutes. The motion was adopted by unanimous consent, 8-0-0** (**Aye**: Caravalho, Lye, Logue, McDonald, Mollring, Moore, Shubert-Kwock, Sturges; **Nay**: None; **Abstain**: None).

ANNOUNCEMENTS

- Next Meeting – The next meeting of the Downtown–Chinatown Neighborhood Board № 13 is scheduled for Thursday 2 May 2019 at Hawaii Pacific University, One Aloha Tower Drive, Multi-Purpose Room 2 at 6:00 p.m.
- Neighborhood Citizen Patrol – The Neighborhood Citizen Patrol meets each Tuesday on the Diamond Head side of Kukui Plaza at 8:00 p.m. Please join the patrol and support its efforts to express service and pride in our Downtown–Chinatown community.
- ʻŌlelo – Rebroadcasts of Downtown–Chinatown Neighborhood Board № 13 meetings are scheduled on ʻŌlelo channel 49 for every third Thursday at 9:00 p.m., as well as 6:00 a.m. on the second and fourth Saturdays of each month. An archive of past meetings may be found on http://olelo.org/olelonet/ and searching on <Downtown Chinatown>.

ADJOURNMENT – Chair Shubert-Kwock adjourned the meeting at 9:13 p.m.

DOWNTOWN–CHINATOWN NEIGHBORHOOD BOARD № 13

NEIGHBORHOOD COMMISSION • 925 DILLINGHAM BOULEVARD, SUITE 160 • HONOLULU, HAWAII 96817
PHONE (808) 768-3710 • FAX (808) 768-3711 • INTERNET http:///www.honolulu.gov/nco

REGULAR MEETING MINUTES
THURSDAY 3 OCTOBER 2019
ONE ALOHA TOWER, MULTI PURPOSE ROOM 2

CALL TO ORDER – Secretary Kamoshida called the meeting to order at 6:00 p.m. **Quorum was established with eight members present**. Note: This nine-member Board requires five members to establish a quorum and to take official Board action.

Board Members Present – Robert Armstrong, Roxie-Anne Kamoshida, James Logue, Kevin Lye, Sandy Ma, Kevin McDonald (arrived 6:03 p.m.), Dolores Mollring, Willis Moore, and Chu Lan Shubert-Kwock

Board Members Absent – None

Guests – Major Ryan Nishibun, Captain Glenn Hayashi, and Lieutenant Brian Taniguchi (Honolulu Police Department); Captain Russell Youth (Honolulu Fire Department); Alexander Zannes (Mayor Kirk Caldwell's representative); Damien Elefante (Governor David Ige's representative); Councilmember Carol Fukunaga and Kimberly Ribellia (Councilmember Carol Fukunaga's office); Senator Karl Rhoads; Damien Elefante (Governor David Ige's representative); Randy Chu (Department of Land Management); Lee Stack and Kainoa Adolpho (Chinatown Improvement District); Nicole Reid (Arts, Culture, Merchants, Etc.); Ronald Higa, Steve Lohse, Keith Kurahashi, Theresa Schubert, Mike Galmiche (community members); Harry Cho (Neighborhood Commission Office). **Name not included if not known or if illegible on the sign-in sheet.**

PUBLIC SAFETY REPORTS

Honolulu Police Department (HPD) – Lieutenant Taniguchi reported the following:

- September 2019 Statistics: There were 7 motor vehicle thefts, 9 burglaries, 54 thefts, 23 unauthorized entries into motor vehicles (UEMV), 15 assaults, 1 sex assault, 5 drug offenses, 1 graffiti incident, and 2,435 total calls for service.
- Safety Tip: Safety tips were given on Halloween safety.

McDonald arrived at 6:03 p.m. and assumed the Chair. Nine members present.

Questions, comments, and concerns followed:

1. Fourth Watch: Shubert-Kwock commended HPD's Fourth Watch for patrolling the area.
2. Bicycles: Ma raised concerns with bicyclists riding on the sidewalk.
3. Illegal Parking: Shubert-Kwock raised concerns with vehicles illegally parking and blocking sidewalks.
4. Citing: McDonald raised concerns that HPD cannot issue citations if the violation is not witnessed.

Honolulu Fire Department (HFD) – Captain Youth reported the following:

- September 2019 Statistics: There was 1 structure fire, 4 nuisance fires, 1 cooking fire, 11 activated alarms (no fire), 135 medical emergencies, 1 motor vehicle collision with a pedestrian, and 5 motor vehicle crash/collisions.
- Safety Tip: Safety tips were given on Halloween Safety.

Questions, comments, and concerns followed:

1. Fire Trucks: Shubert-Kwock raised concerns that fire trucks may have difficulties turning at Maunakea and Pauahi Streets.
2. Fire Hydrants: Mollring raised concerns with placing the steel poles in front of fire hydrants.

Neighborhood Citizens Patrol (NCP) – Mollring reported that the NCP had not been walking due to the rain.

Logue moved and Shubert-Kwock seconded to add election of Vice Chair to the agenda. The motion was adopted, 8-0-0 (**Aye**: Armstrong, Kamoshida, Logue, Ma, McDonald, Mollring, Moore, Shubert-Kwock; **Nay**: None; **Abstain**: None).

ELECTION OF VICE CHAIR

Shubert-Kwock nominated Logue and McDonald nominated Lye. Logue was elected Vice Chair, 7-1-0 (**Logue**: Armstrong, Kamoshida, Logue, Ma, Mollring, Moore, Shubert-Kwock; **Lye**: McDonald; **Abstain**: None).

ELECTED OFFICIALS

Governor David Ige's Representative – Damien Elefante reported the following:

- Capitol Connections: This month's *Capitol Connections* highlight Governor Ige's vision for sustainability in Hawaii, affordable housing, and local agriculture.
- Hawaii Annual Code Challenge: Kick-off for the event will take place on Saturday 19 October 2019.
- Aloha Stadium: The public is invited to participate in the comment period of the Aloha Stadium project until Thursday 7 November 2019.

Questions, comments, and concerns followed:

1. Ohana Zones: Logue raised concerns regarding Ohana Zones and their funding. McDonald also raised concerns with homelessness and asked for an update regarding Governor Ige's plans to end homelessness.

Mayor Kirk Caldwell's representative – Alexander Zannes reported the following:

- Follow-Up on Concerns:
    - Street Lights on Chaplain Lane: Department of Facility Maintenance (DFM) stated that the burnt out lights were replaced on Wednesday 11 September 2019.
    - Sidewalks: DFM stated that inspection of the traffic island/median at Pali Highway and South Beretania Street was unable to detect any residual fecal matter. Please call (808) 768-4381 to report such concerns with specific location details so timely investigations can be conducted.
    - Bus Stop Seating: Department of Transportation Services (DTS) stated that they have previously explained to NB 13 the health and safety reasons that prompted the removal of the bus stop benches at Smith and Hotel Streets. DTS may be willing to replace the benches at this location if NB 13 agrees to adopt and maintain the bus stops at which the replacement benches will be installed. Interested Neighborhood Board members may contact Coreen Blanco of DTS at (808) 768-8375 for more information on DTS' Bus Stop Volunteer Program.
    - TheBus Safety: DTS appreciates and shares the Neighborhood Board's interest in promoting safety on TheBus. DTS is working with Oahu Transit Services, Inc., the City bus operations contractor, to develop a rider awareness safety campaign for implementation later this year. Currently, TheBus promotes safety onboard all vehicles through a bus placard that encourages riders to be aware, take action, and report any suspicious activity by calling 911 or notifying the driver. The placard is translated into 18 different languages, and supports Transit Watch, the nationwide safety and security awareness campaign. Additionally, all buses are equipped with interior announcement systems that announce safety messages while a vehicle is in service. Announcements include safety tips, such as: stand clear of doors, keep aisles and seats clear, hold on when standing, hold on when the bus is departing, use caution when exiting, crosswalk safety, and pickpocket warnings.
    - Chinatown Trash: Department of Environmental Services (ENV) stated that they are looking at self-locking carts for businesses in Chinatown. They are not suggesting earlier nighttime collection as there are many businesses open 24–hours and some closing after midnight, which is why they go with a 4 a.m. route.
    - River Street Homeless: HPD stated that District 1 (Central Honolulu) patrol and Fourth Watch officers have been addressing homeless issues along River Street, as well as accompanying the Department of Facility Maintenance (DFM) in conducting their Stored Property Ordinance (SPO)/Sidewalk Nuisance Ordinance (SNO). The District 1 Crime Reduction Unit (CRU) and patrol have been patrolling and surveying the area for illegal activity. Residents in the area, the public, and shop owners are encouraged to call 911 when they see suspicious activities.
    - River of Life Relocation: Office of Housing stated that negotiations between the City and River of Life are progressing well and further details will be provided upon completion. Updates may be available by the next neighborhood board meeting.
    - Sidewalk Repairs: DFM requested to please provide the locations of the sidewalk that is needing repairs. DFM will make temporary repairs and schedule the permanent repairs by contract.
    - Magnum P.I.: Office of Economic Development stated that there are no dates mentioned, but if it involves Dillingham, it may be the shoot that occurred on 14 July 2019. Public notice was provided

in several different ways: notification letters were sent to affected area businesses, signage was posted including variable message boards, *no parking* signage, and a widely disseminated Traffic Advisory sent to the media by the city communication team that was broadcasted on television news outlets. Information would usually be brought to the neighborhood board, but in this instance the show was on hiatus until mid-June and the sequence was developed after that. NB 13 was on recess in July, so there was no option to come to the board.

- o Bulb-outs: DTS stated that the painted planters will be put back after the bulb-out reconstruction; anticipated completion 2020.

Questions, comments, and concerns followed:

1. Magnum P.I.: Shubert-Kwock requested for prior notice of any street closures that will occur in the Downtown–Chinatown area.
2. Trash Pick-Up: Shubert-Kwock raised concerns that trash pick-up is difficult in Chinatown due to the bulb-outs and barricades.
3. Loading Zone: Ma asked why DTS does not recommend a freight-loading zone.
4. Attendance at Neighborhood Board Meetings: Shubert-Kwock asked if a representative from DTS and Honolulu Liquor Commission can attend the Downtown–Chinatown Neighborhood Board meetings every other month to provide updates.
5. Public Bathrooms: Ma stated that she is aware that there are bathrooms at the Safe Haven Hygiene Center, and asked if there are plans to have public restrooms available for visitors and tourists.
6. Homeless: McDonald requested for monthly updates on any solutions to address homelessness in Chinatown.

Senator Karl Rhoads – Senator Rhoads reported the following:

- 26th Annual Children's Day: Hawaii's 26th Annual Children and Youth Day will take place on Sunday 6 October 2019 from 10:00 a.m. to 3:00 p.m. at the State Capitol grounds and surrounding areas. Children and Youth Day honors and celebrates our children and youth in Hawaii. There will be over 300 interactive, educational, fun activities for infants, toddlers, children, youth, and the entire family. Free parking will be available at neighboring State parking lots, Central Middle School, and Central Pacific Bank at the corner of King and Alakea Streets. For more information, please call Kama'aina Kids at (808) 262-3651 or visit www.HawaiiCYD.org.

Questions, comments, and concerns followed:

1. Homelessness: Shubert-Kwock asked for an update regarding the Institute of Human Services (HIS) petitioning the first 10 cases.
2. Senate Bill (SB) 1124: Armstrong commended Senator Rhoads for SB 1124, which requires a licensed psychiatrist or advanced practice registered nurse with prescriptive authority and psychiatric specialization to determine, prior to a person's discharge from a psychiatric facility, whether an assisted community treatment plan is indicated and to make certain arrangements if so indicated and amends the criteria for assisted community treatment.

Councilmember Carol Fukunaga – Kimberly Ribellia reported the following:

- Kamali'i Mini Park Changes: As a follow-up to Councilmember Fukunaga's September 2019 report on complaints about Kamali'i Mini Park, a copy of Resolution 19-250 was provided, requesting adoption of alternative uses for Kamali'i Mini Park and removal of this site from the city parks inventory. A hearing for this resolution is being requested for the Tuesday 22 October 2019 Parks, Community Services and Intergovernmental Agreements (PCSI) Committee meeting. Councilmember Fukunaga welcomes a resolution of support from Downtown–Chinatown NB 13. As reported previously, the Councilmember believes that a change in the designation of uses of the Kamali'i Mini Park would improve public safety and security in the downtown/Pali Highway gateway to Honolulu considerably, and it would save city taxpayers in reduced enforcement or clean-up expenditures. The Councilmember and her staff met with Chief Ballard and her team on Ordinance 18-14 (Bill 52, 2018 sidewalk and public space restrictions island-wide) to address HPD concerns over enforceability, and will be seeking further assistance from Senator Rhoads and Representative Holt as they harmonize state/county legislation involving public sanitation, vagrancy and related criminal activity.
- Nighttime Noise Complaints on Nimitz Highway: On 18 September 2019, HART's public affairs team and its contractors conducted a community forum at the request of Councilmember Fukunaga, to discuss the noise complaints raised about the nighttime pre-transit construction utility and grading work along Nimitz Highway. During September and October 2019, pre-construction utility and grading work resulted in several

noise complaints from Mann Tower and Harbor Court residents. Councilmember Fukunaga was able to work with the NAN Inc. project managers to address some of the Mann Tower complaints. However, with respect to complaints from other properties along Nimitz Highway, the Councilmember is working with the State Department of Health's Noise and Radiation Branch to determine whether alternative daytime work may be a better alternative. HART's noise variance permits authorizing nighttime and weekend work were issued early in the process for a 3-year time frame. As the utility and grading construction work enters urban Honolulu, where multiple high-rise structures are located along the Nimitz Highway/Ala Moana Boulevard corridor, it may be more practical to allow for daytime construction along portions of Nimitz Highway to be shifted to daytime hours to address neighbors' concerns.

- Nighttime Noise Variance Permit Meeting: In addition to nighttime utility and grading pre-transit construction work entering the urban Honolulu area, the City's Department of Design and Construction scheduled a nighttime noise variance permit meeting for its Downtown–Chinatown repaving projects on Thursday 3 October 2019 at 6:30 p.m. in the Central Middle School cafeteria. Councilmember Fukunaga received a notice of this community meeting on Thursday 26 September and immediately notified AECOM of the schedule conflict with tonight's neighborhood board meeting. DDC reported it was unable to reschedule the meeting, and area legislators Holt, Rhoads and Councilmember Fukunaga requested the following corrective actions: Providing two additional weeks for public feedback and comment on the proposed noise variance permit beyond the Thursday 3 October 2019 community meeting date, and providing a list of the addresses to whom the notice of the community variance permit meeting were sent. The Councilmember received complaints that residents of Honolulu Tower, one of the larger condo properties in downtown Honolulu, had not been notified of this meeting. Information about the noise permit request will be shared with constituents for other properties that may not have received notice about tonight's community meeting.

Questions, comments, and concerns followed:

1. Noise Variance Meeting: Ma asked that DDC present to the Neighborhood Board regarding the nighttime noise variance and requested a more legible map of the rehabilitation of streets.
2. Bulb-outs: Shubert-Kwock raised concerns that no community meeting was held by DTS for the permanent bulb-outs.
3. Trash: Shubert-Kwock requested late-night pick-ups and lockable refuse bins.
4. Homeless: McDonald raised concerns with homeless in the area.

Resident and Community Concerns:

- Public Bathrooms: A community member stated that although bathrooms in Chinatown would be good, it would invite more illegal activity from the homeless. A community member suggested private bathrooms for visitors and tourists.

NEW BUSINESS

Halewaiolu Senior Residence – Keith Kurahashi reported that the land owner is the City and County of Honolulu. The height limit for the project is 350 feet and the tower height will be 173 feet. It will be a BMX-4, business mixed use zoning. There will be 155 affordable senior dwelling units.

Questions, comments, and concerns followed:

1. Community Center: Shubert-Kwock asked about the community center and its use. Kurahashi stated that it will be around 4,000 square feet and its use will be determined by the association.
2. Ground Breaking: Armstrong asked when the ground breaking will take place. Kurahashi stated that it will take place in 2020.
3. Parking: Armstrong asked how many parking stalls there will be and Ma asked if there is visitor parking. Kurahashi stated that there will be 51 parking stalls and all stalls will be first come first serve.

Hallowbaloo Music and Arts Festival – Mark Tarone was present.

Shubert-Kwock moved and Logue seconded to defer discussion of this agenda item due to the lack of clarity of street closures on the agenda. The motion was adopted by majority vote, 5-3-0 (**Aye**: Armstrong, Kamoshida, Logue, Mollring, Shubert-Kwock; **Nay**: Ma, McDonald, Moore; **Abstain**: None).

Resolution 2019-006 Urging the City DTS to Prohibit DJ Booths During Non-Construction Street Closures in Chinatown:

Logue moved and Shubert-Kwock seconded to adopt the resolution. After discussion, the motion was not adopted, 0-8-0 (**Aye**: None; **Nay**: Armstrong, Kamoshida, Logue, Ma, McDonald, Mollring, Moore, Shubert-Kwock; **Abstain**: None).

Resolution 2019-007 Urging the City Administration and City Council and the State of Hawaii the Enforce HRS 281-78 to Control Public Liquor Consumption:

Logue moved and Shubert-Kwock seconded to adopt the resolution. After discussion, the motion failed, 4-4-0 (Aye: Kamoshida, Logue, Mollring, Shubert-Kwock; **Nay**: Armstrong, Ma, McDonald, Moore; **Abstain**: None).

Resolution 2019-009 Requesting Rescission of the Yellow Bag Mandate:

Logue moved and Shubert-Kwock seconded to adopt the resolution. After discussion, the motion failed, 2-6-0 (Aye: Logue, McDonald; **Nay**: Armstrong, Kamoshida, Ma, Moore, Mollring, Shubert-Kwock; **Abstain**: None).

COMMUNITY REPORTS

Safe Haven – Greg Payton reported the following from September 2019: 5 Safe Haven discharges/intakes, 2 activity center placements, 2 MHK – Oahu Case Management Housings, and 9 permanent housing placements. The grand total for 2019 is 74 placements through September.

Honolulu Authority for Rapid Transportation (HART) – Pat Lee was not present but provided a traffic update and report to the board. HART's weekly traffic notice for work in the area, which is described by intersections on Nimitz Highway and various streets in Downtown and Chinatown, is available and updated weekly at: http://hartdocs.honolulu.gov/docushare/dsweb/View/Collection-1470. For more information on the rail project, the public may visit the HART website at www.honolulutransit.org, call the project hotline at (808) 566-2299, or email a question to info@honolulutransit.org.

Chinatown Business and Community Association (CBCA) – The CBCA met on Tuesday 10 September 2019 at Golden Palace for the monthly dim sum meeting. Agenda items consisted of ongoing issues in Chinatown including illegal trash, sidewalk encroachment by merchants and homeless, burglaries and assaults, Kekaulike Mall, repairs of trip hazards, and liquor issues from open drinking and smoking along sidewalks and Kekaulike Mall. HPD has been cooperative resulting in the arrest and citation of illegal vendors. Mayor Caldwell had a press conference on using yellow bags to reduce illegal trash and breaking into trash by folks looking for valuables to recycle. Harry continues to be a problem, especially when he is high on either alcohol or drugs. He creates trash by turning over trash receptacles and dragging trash to various locations. Department of Opala has increased enforcement of illegal trash dumping, up to $2,500 fine. City continues to work on possible locked bins and night trash pickups for merchants and residents which might resolve these problems. CBCA's next Meeting is Tuesday 8 October 2019 at Golden Palace, 10:00 a.m. All are welcome. CBCA's 10th annual banquet to celebrate Chinatown Heroes is on Saturday 19 October 2019 at Golden Palace, with a ten-course dinner for $34 per person.

Chinatown Improvement District (CID) – Lee Stack reported that with grant funds received in July, CID rolled out a new patrol schedule for the community patrol project. The patrols now cover seven days per week and a have a new daytime walk-around patrol for certain streets in response to concerns and suggestions from small businesses in the area. We are working on setting up a meeting so that we can coordinate community patrol efforts with the City funded guard services on City properties. We have spoken with HPD about a new initiative where an HPD officer will sometimes accompany the daytime patrol guard. Approximately 200 to 300 people attended the Mid-Autumn Lantern Festival on 13 September 2019. At the event, there were moon cakes, lantern viewing, a raffle, and free lantern making activities (very popular with the children and some adults). Students had made a number of lanterns which were displayed and then given away at the end of the evening. We have posted photos from the event on our Facebook page. We have a suggestion regarding Sit-Lie Legislation in Chinatown. Given the concerns raised at various Neighborhood Board meetings about health and safety issues in the Chinatown District, NB members might be interested in talking with our Councilmember Fukunaga or the Administration about extending the hours of the sit–lie law to when nighttime businesses in the area close—around 2:00 a.m. In Waikiki, sit–lie legislation is in effect 24/7 while in Chinatown the sit–lie law is not enforceable between 11:00 p.m. and 5:00 a.m. Yet, there are businesses in Chinatown which close around 2:00 a.m. and whose businesses are blocked and impacted. Perhaps the legislation could be extended to 24/7 in the Chinatown District, similar to the commercial district of Waikiki—or to at least match the hours of nighttime businesses which close at 2:00 a.m. Lastly, we suggest that the heading for this portion of the agenda be changed back to Community Reports from the new title

"Community Concerns" because we participate in this portion of the agenda primarily to report on our projects and activities in the area.

APPROVAL OF MINUTES

The June 2019 meeting minutes, as presented by the Chair for review by the Board and not those originally circulated by the Neighborhood Assistant, were adopted, 6-0-2 (**Aye**: Kamoshida, Logue, McDonald, Mollring, Moore, Shubert-Kwock; **Nay**: None; **Abstain**: Armstrong, Ma).

Armstrong moved and Moore seconded to approve the August 2019 meeting minutes. Kamoshida moved and Logue seconded to amend the minutes on page 2 of 8, as printed, from "Shubert-Kwock then verbally announced her resignation from NB 13, made some inappropriate remarks out of turn and without being recognized by the chair towards several board members, and left the meeting at 6:45 p.m." to "Shubert-Kwock then verbally announced her resignation from NB 13 and immediately left the meeting at 6:45 p.m." The motion to amend the minutes was adopted, 7-1-0 (**Aye**: Armstrong, Kamoshida, Logue, Ma, Mollring, Moore, Shubert-Kwock; **Nay**: McDonald; **Abstain**: None). **The motion to adopt the amended minutes was adopted, 7-1-0** (**Aye**: Armstrong, Kamoshida, Logue, Ma, Mollring, Moore, Shubert-Kwock; **Nay**: McDonald; **Abstain**: None).

Logue moved and Mollring seconded to adopt the September 2019 minutes as amended to replace the extant CBCA report and to add a report from Chinatown Watch. The motion passed, 7-0-1 (**Aye**: Armstrong, Kamoshida, Logue, McDonald, Mollring, Moore, Shubert-Kwock; **Nay**: None; **Abstain**: Ma).

BOARD BUSINESS

Lye spoke through the interactive conference technology to the Board and noted that he had been in attendance of the entirety of the meeting from a remote location, duly noticed to the public as per the 2017 *Oahu's Neighborhood Board System Member Guidebook*, and had attempted to participate in the meeting as specified on page 38 of the *Guidebook* and §2-14-115(a) of the *Neighborhood Plan*, which collectively specify that presence at a Board meeting has been conferred since 1 July 2012 through remote participation using interactive conference technology, and hence voting on actions before the Board by Members participating thusly is permissible. Lye further noted that he was disenfranchised by not being permitted to be heard or vote on matters before the Board during the meeting.

ANNOUNCEMENTS

- Next Meeting – The next meeting of Downtown–Chinatown Neighborhood Board № 13 is scheduled for Thursday 7 November 2019 at Hawaii Pacific University, One Aloha Tower Drive, Multi-Purpose Room 2 at 6:00 p.m.
- Neighborhood Citizen Patrol – The Neighborhood Citizen Patrol meets each Tuesday on the Diamond Head side of Kukui Plaza at 8:00 p.m. Please join the patrol and support its efforts to express service and pride in our Downtown–Chinatown community.
- ʻŌlelo – Rebroadcasts of Downtown–Chinatown Neighborhood Board № 13 meetings are scheduled on ʻŌlelo channel 49 for every third Thursday at 9:00 p.m., as well as 6:00 a.m. on the second and fourth Saturdays of each month. An archive of past meetings may be found on http://olelo.org/olelonet/; select and expand <Community/Informational> from the list of On Demand categories on this page and then manually scroll to find listings for playback of <Downtown Board> meetings.

ADJOURNMENT – McDonald adjourned the meeting at 8:30 p.m.

Initial draft by Harry Cho, Neighborhood Assistant
Edited by NB 13 Secretary Roxie-Anne Kamoshida and Kevin Lye

Appendix P

Memorandum of Agreement
Cultural Surveys Hawai‘i, Inc.
April 2020

MEMORANDUM OF AGREEMENT
BETWEEN
THE CITY AND COUNTY OF HONOLULU
AND
THE HALEWAIʻOLU SENIOR DEVELOPMENT, LLC
AND
THE HAWAIʻI STATE HISTORIC PRESERVATION OFFICER
REGARDING THE
DEMOLITION AND REDEVELOPMENT OF
THE JOHN R. GILLILAND SR. BUILDING AND SURROUNDING PARKING LOT

THIS AGREEMENT ("Agreement") is made this_____ day of _____, 2020 by and among the City and County of Honolulu ("CCH") in its capacity as the Responsible Entity as defined below, the Hawaiʻi State Historic Preservation Office ("SHPO") through the office of the Hawaiʻi State Historic Preservation Division, a division of the Department of Land and Natural Resources of the State of Hawaiʻi ("SHPD") and Halewaiʻolu Senior Development, LLC, ("Developer" or "HSD") (collectively "Signatory Parties") for the purposes herein set forth.

RECITALS

WHEREAS, pursuant to 24 CFR §58, the U.S. Department of Housing and Urban Development ("HUD"), designated CCH as the Responsible Entity, as defined in 24 CFR §58.2(a)(7), for environmental reviews of projects previously assisted with certain HUD funding, and the Mayor of the City and County of Honolulu ("Mayor") as the certifying officer of the Responsible Entity. Pursuant to 24 CFR §§ 58.4 and 58.5, CCH, as the Responsible Entity, must assume responsibilities for environmental review, decision-making and action that would apply to HUD under the National Environmental Policy Act of 1969, as amended (42 U.S.C. §4321 et. seq.) ("NEPA"), Section 106 of the National Historic Preservation Act, as amended (54 U.S.C. §306108, formerly 16 U.S.C. §470f) ("Section 106"), and Section 106 implementing regulations at 36 CFR §800. Accordingly, pursuant to 24 CFR §§ 58.5 and 58.13, as the Responsible Entity's Certifying Officer, the Mayor is the "responsible Federal official" as that term is used in Section 102 of NEPA, and the "Agency Official" as that term is used in Section 106 and 36 CFR §800. The Mayor, as the Certifying Officer of the Responsible Entity and Section 106 Agency Official, hereby delegates authority to CCH to implement and monitor this Agreement; and

WHEREAS, together with its own funds, CCH used funds from HUD's Community Development Block Grant ("CDBG") to acquire the real property and improvements located at 1331 River Street in Honolulu, Hawaii, more particularly described as Tax Map Key ("TMK") number (1) 1-7-006:012 (the "Property"). The Property is therefore currently subject to CDBG restrictions; and

WHEREAS, the 0.6181-acre Property contains a building (the "Building") which was built in 1958 and has been determined eligible for listing in the State and National Registers of Historic Places, at the local level

under Criterion C, as a unique example of mid-twentieth century modern architecture. The historic name of the Building is the John R. Gilliland Sr. Building. The Building has become dilapidated and is currently functionally obsolete. The Building is currently unoccupied and together with the surrounding neighborhood, has become a gathering place for the homeless population; and

WHEREAS, a hazardous materials assessment survey ("Hazmat Survey")for the Building was conducted by Ford & Associates in April 2019 evidenced the presence of hazardous materials including, but not limited to, asbestos-containing materials. Nine of the asbestos-containing materials were found in amounts above regulatory safe levels; and

WHEREAS, HUD originally designated the Property as a blighted area; and

WHEREAS, HUD originally provided federal CDBG funds for the acquisition of the commercial property which met the national objective of removal of blight, however, the City proposes to change the designation of use pursuant to the provisions of 24 Code of Federal Regulations ("CFR") section 570.505. The change in the national objective is to affordable housing. All 100% of the units created will meet the CDBG national objective at 24 CFR 570.208(a)(3) Housing Activities.

WHEREAS, CCH has determined it best to provide low-income housing to Honolulu's senior population by entering into a public-private partnership; and

WHEREAS, through a Request for Proposals (RFP) process, CCH selected HSD to plan, design, construct, operate and manage redevelopment of the Property pursuant to the terms and conditions of that certain Development Agreement ("DA") dated May 17, 2016, as amended from time to time, made by and between CCH and HSD; and

WHEREAS, HSD was selected as the best qualified development proposal for the redevelopment of the Property and upon satisfaction of conditions precedent established in the revised DA, subsequent to 201H approval, the CCH will recommend to the City Council that HSD be approved for a long-term lease, and thus CCH has invited HSD to sign this Agreement as an Invited Signatory; and

WHEREAS, CCH, subject to the terms and certain conditions precedent in the revised DA, subsequent to 201H approval and City Council approval of a long-term lease, will approve HSD to demolish the existing Building located on the property with the intent to redevelop the Property into an affordable housing rental project for seniors aged 62 and over, at 80% Area Median Income (AMI) and below with the vast majority of units available to seniors with incomes at 60% AMI and below. The demolition and redevelopment together shall be referred to herein as the "Project;" and

WHEREAS, HSD both hosted and attended numerous community meetings with Concurring Parties which culminated in several design changes to the Project including, but not limited to, establishing setbacks of the Project from Lum Sai Ho Tong ranging from approximately 13 feet to 23 feet;

WHEREAS, due to the initial acquisition of the Property and Building with a portion of HUD CDBG funds, the Project is an undertaking subject to review under Section 106 and its implementing regulations, 36 CFR §800; and

WHEREAS, CCH has defined the undertaking's area of potential effect ("APE") as the area within the general boundaries of the H-1 Freeway to the northeast, Maunakea Street and Nuuanu Avenue to the southeast, North Beretania Street to the southwest and Aala Street to the northwest in Honolulu, Hawaii (includes the project site and portions of TMK Nos. (1) 1-7-005:019; (1) 1-7-005:021; (1) 1-7-006:003; (1) 1-7-006:008; (1) 1-7-006:010; (1) 1-7-006:012; (1) 1-7-006:013; (1) 1-7-007:001; (1) 1-7-007:002; (1) 1-7-007:021; (1) 1-7-008:001; (1) 1-7-008:002; (1) 1-7-023:033; (1) 1-7-023:034; (1) 1-7-023:036; (1) 1-7-026:004; (1) 1-7-026:010; (1) 1-7-026:011; (1) 1-7-026:012; (1) 1-7-026:013; (1) 1-7-026:015; (1) 1-7-026:016; and (1) 1-7-026:017 (see Exhibit A); and

WHEREAS, CCH has defined the undertaking's archaeological study area, a component of the APE as the 0.6181-acre project footprint, located at 1331 River Street (TMK (1) 1-7-006:012) (see Exhibit B); and

WHEREAS, CCH's historic property identification effort identified the following historic properties within the project's APE that may be affected by the undertaking: (1) *For Architectural Historic Properties***:** Please reference Exhibit C, Historic Architectural Resources Identified within the Halewai'olu Area of Potential Effect, (2) *For Archaeological Historic Properties*: Please reference Exhibit D, Historic Archaeological Resources Identified within the Halewai'olu Area of Potential Effect; and

WHEREAS, Mayor, as the certifying official of the Responsible Entity and Agency Official under Section 106, has determined that the undertaking will have an adverse effect on the following historic properties, which have been determined eligible for listing in the National Register of Historic Places: Lum Sai Ho Tong and the John R. Gilliland Building (Please Reference Exhibit C) and State Inventory of Historic Places (SIHP) 50-80-14-8840 (Please Reference Exhibit D). While the undertaking may have a potential adverse effect on Lum Sai Ho Tong, the potential adverse effects will be mitigated by providing the setbacks as stated above and implementing the mitigation measures as stipulated in this Agreement; and

WHEREAS, CCH consulted with SHPO under 36 CFR §800; and

WHEREAS, SHPO has reviewed and concurred with the evaluations and recommendations in the following referenced materials *Reconnaissance Level Survey for the John R. Gilliland Building* and *Archaeological Inventory Survey for the Halewai'olu Senior Residences Project, Honolulu Ahupua'a, Honolulu (Kona) District, O'ahu Island, Hawai'i TMK (1) 1-7-006:012* (Draft January 2019); and

WHEREAS, human skeletal remains were identified on the Property and in compliance with Hawai'i State burial law (HRS §6E-43 and HAR §13-300), CCH, together with HSD, further consulted with SHPO (including the SHPD History and Culture Branch), the O'ahu Island Burial Council ("OIBC"), and OIBC-recognized Native Hawaiian cultural descendants, including without limitation the Mana Caceres 'Ohana, the Keala Norman 'Ohana, the Marin Ohana represented by Donna and Daron Makaiwi, and the Ali'i Pauahi Hawaiian Civic Club; and

WHEREAS, in June 2019, CCH prepared and delivered over 100 letters of invitation ("Invitation") and accompanying background materials describing the proposed undertaking to organizations and individuals with a potential interest in the proposed undertaking and its potential to affect historic properties including all Native Hawaiian Organizations identified on the *Native Hawaiian Organization Notification List* published by the U.S. Department of the Interior, and maintained by the Office of Native Hawaiian Relations, to identify any Native Hawaiian Organizations and/or Native Hawaiian descendants who may have ancestral

lineal or cultural ties, knowledge, or religious attachment or concerns regarding the proposed undertaking (See Exhibit E). Multiple parties responded to the Invitation and, of these, the Historic Hawai'i Foundation (a Hawaii nonprofit corporation), Hawaiian Memorial Life Plan Ltd, dba Borthwick Mortuary, Chinatown Community Center Association, Lum Sai Ho Tong, the Ali'i Pauahi Hawaiian Civic Club, Mr. Mana Caceres and his family, and Mr. & Mrs. Donna and Daron Makaiwi, expressed a desire to participate in consultation as concurring parties ("Concurring Parties"); and

WHEREAS, CCH and HSD have consulted with the Concurring Parties regarding the effects of the undertaking on historic properties and have invited them to sign this Agreement as concurring parties**;** and

WHEREAS, in accordance with 36 CFR § 800.6(a)(1), CCH has notified the Advisory Council on Historic Preservation ("ACHP") of the adverse effect determination with specified documentation, and ACHP has chosen not to participate in the consultation pursuant to 36 CFR §800.6(a)(1)(iii) (see Exhibit F); and

NOW, THEREFORE, CCH, SHPO, and HSD agree that the undertaking shall be implemented in accordance with the following stipulations in order to take into account the effect of the undertaking on historic properties.

STIPULATIONS

CCH, with the assistance of HSD, shall ensure that the following measures are carried out:

I. ADVISORY COMMITTEE COORDINATION

A. Within six (6) months of the execution of the Agreement, an advisory committee ("Advisory Committee") will be established. The purpose of the Advisory Committee is to assist HSR management with the development of the Story Map (see Section III.B. of this Agreement) and any other information needed for scope, content and final product. The Advisory Committee shall also assist HSR management with guidance, review and comment on the use of the Social Activities Center (SAC). HSR management will work with the Advisory Committee in good faith to include recommendations of the Advisory Committee for the use of the SAC so long as any recommendation does not fall within the purview of management.

B. The Advisory Committee will also assist with other provisions as stated in this Agreement.

C. HSD shall recruit representatives to the Advisory Committee from the following organizations:
- Downtown Chinatown Neighborhood Board Number 13;
- United Chinese Society;
- Chinese Chamber of Commerce; and
  Chinatown Community Center Association.

HSD shall also invite other representatives from the community to join the Advisory Community (including, but not limited to, representatives from the following organizations):
- Lum Sai Ho Tong:
- Ali`i Pauahi Hawaiian Civic Club
- Hawaiian Social or Civic Clubs;

- Japanese Social or Civic Clubs;
- Chinese Social or Civic Clubs;
- Filipino Social or Civic Clubs;
- Vietnamese Social or Civic Clubs;
- Adjacent Property Owners; and
- Halewai'olu Senior Residences Resident(s) (after Project is occupied).

The Advisory Committee will also include representatives from:

- Property Manager (Michaels Management);
- Resident Services Director (Better Tomorrows);
- HSD; and
- CCH.

D. The Advisory Committee shall establish Bylaws or Rules of Procedure to govern its operations. Additional representatives may be added from time to time by HSD or by a majority vote of the existing members. Except for HSD, Property Manager and the Resident Services Director (Better Tomorrows), representatives may be removed from the Advisory Committee for cause by majority vote of the existing members.

E. The Committee shall meet at least quarterly during the duration of the Agreement, but may forego a quarterly meeting if no meeting is necessary and by a majority vote. At the completion of the Agreement, the Advisory Committee may disband or decide to continue to meet as needed.

II. MITIGATION OF ARCHAEOLOGICAL HISTORIC PROPERTIES INCLUDING PREVIOUSLY IDENTIFED BURIAL SITES

A. Prior to Project-related ground disturbance that could affect archaeological historic properties including burial sites, HSD shall develop and implement, pursuant to Hawai'i State Rules of Practice and Procedure Relating to Burial Sites and Human Remains (HRS §6E-43 and HAR §13-300), a burial treatment plan ("BTP") for the previously identified Native Hawaiian burial site identified during the Project's archaeological inventory survey. HSD shall comply with the BTP and all applicable Federal, State and Local laws.

B. Prior to Project-related ground disturbance that could affect archaeological historic properties including burial sites, HSD shall develop and implement an archaeological monitoring program pursuant to HAR §13-279. The archaeological monitoring plan ("AMP"), prepared pursuant to HAR §13-279-4, shall include the description of a targeted data collection component to be developed in consultation with the SHPD. This targeted data collection component of the AMP shall be carried out during the interval between current building demolition and the start of project construction. The AMP shall be submitted to the SHPD for review and approval prior to implementation. All ground-disturbing work shall proceed in accordance with the approved AMP. This AMP shall be approved by the SHPD prior to the start of project construction and shall be implemented as project construction continues.

III. EDUCATIONAL AND INTERPRETIVE PROGRAMS

A. Consultation Protocol for Developing Materials

1. Within six (6) months of the formation of the Advisory Committee, HSD shall provide to the Advisory Committee a draft work plan that outlines the scopes of work, timelines and assigned personnel for the Web-Based Geographic Information System Story Map. Any comments received by HSD from Advisory Committee within thirty (30) days of receipt shall be considered by HSD in developing a scope of work.
2. HSD shall provide a response to all written comments received during the comment period, explaining how the comment was included in the scope of work, or, if not included, the rationale for the exclusion.
3. HSD shall prepare a close-out memo for each of the stipulations to document mitigation actions taken with a timeline and outcomes achieved by the action. HSD shall distribute the close-out memo to the Signatories and Concurring Parties.

B. Web-Based Geographic Information System (GIS) Story Map

1. Within six (6) months of finalizing the work plan, HSD shall develop a web-based GIS story map that provides interactive, interpretive, and educational content based on this Project's Reconnaissance Level Survey, Archaeological Inventory Survey, and Cultural Impact Assessment. Story maps are a relatively recent technological innovation that can fill the role of more traditional public interpretation measures, such as physical interpretive signage and self-guided tours with informational placards. Story maps are an application/platform for accessing information and incorporating geographic location data based on GPS and GIS through mobile devices such as smart phones, laptop computers, and tablets.
2. The story map's focus and working title shall be "River Walk through Honolulu's Chinatown—Historical and Cultural Sites Along Nu'uanu Stream."
3. In consultation with the Advisory Committee, Historic Hawai'i Foundation (HHF) and the SHPD, ten locations shall be selected for inclusion in the story map. From inland/*mauka* to seaward/*makai* places along the Nu'uanu Stream Corridor from which the ten story map locations shall be selected may include, but not be limited to, the following:
   a) Foster Botanical Garden
   b) Kuan Yin Temple
   c) Lum Sai Ho Tong Temple
   d) Izumo Taishakyo Temple
   e) The Halewai'olu Senior Residences project area
   f) The Gilliland Building
   g) "The Vineyard" and its ties to the Marin Family
   h) Dr. Sun Yat Sen Memorial Statue
   i) Chinatown Cultural Plaza
   j) Re-channelization of Nu'uanu Stream
   k) A'ala Park
   l) Kuwili and Kawa Fishponds
4. Preparation of the story map shall include the following steps:
   a) Initial consultation meeting with Advisory Committee, HHF, and the SHPD. This meeting will discuss and decide upon the ten locations along Nu'uanu Stream that

will be the subject of the story map. This meeting will offer the Advisory Committee the opportunity to specify the content of the story map.

b) Field inspection of the Nu'uanu Stream story map area to assess current conditions and collect any needed GPS location data and current photos.

c) Preparation of the draft story map text and images with links to other information sources – to include the following:
   i. Historical, archaeological, and cultural background in images and text.
   ii. Links to other Chinatown public interpretation and research, such as HART's HRTP documentation and resources, as well as the CCH's own resources.

d) Second consultation meeting with the Advisory Committee, HHF and the SHPD. Prior to this meeting the draft story map application will be provided to the Advisory Committee for their review and comment at the second consultation meeting.

e) Preparation of the final story map based on comments from the second consultation meeting.

f) HSD shall ensure that the story map is maintained and available for public use over the internet for at least five years following its completion.

IV. CONSTRUCTION PROTECTION PLAN

A. Pursuant to best management practices approved by CCH, HSD, in cooperation with its general contractor, will implement standard monitoring of effects, of the Project's construction, if any, on adjacent historic properties in the vicinity (e.g. Lum Sai Ho Tong and Borthwick Mortuary), in addition to procuring all necessary noise permits. Potential effects which shall be monitored include, but are not limited to, traffic, noise, vibration, dust and other effects associated with construction. Should an effect occur outside of the normal course of construction, HSD will make this information available through a written memo as required by Section VI.A. of this Agreement.

B. HSD shall ensure that any inadvertent damage resulting from the Project to adjacent historic structures shall be repaired in accordance with The Secretary of the Interior's Standards for the Treatment of Historic Properties, 36 CFR §68. HSD shall submit a scope of work or treatment plan to address inadvertent damage to the SHPD for concurrence before initiating repairs.

V. POSTREVIEW DISCOVERIES

B. Should additional human remains or burial sites be identified during project construction, CCH shall ensure that HSD treat them following Hawai'i State burial law governing inadvertent discoveries of human skeletal remains (HRS §6E-43.6, HAR §13-300-40).

C. If additional archaeological historic properties are discovered that may be historically significant or unanticipated effects on historic properties are found, CCH shall ensure that HSD implement a plan to address such discoveries following consultation and the procedures outlined in HAR §13-275-12 and HAR §13-280.

VI. MONITORING AND REPORTING

A. Each year following the execution of this Agreement, until it expires or is terminated, HSD shall provide the Signatory Parties and Concurring Parties a summary written memo detailing work undertaken with respect to the Project or problems encountered including any adverse effect to Eligible Properties.
B. Signatory Parties and Concurring Parties may request a meeting to discuss the summary written memo to facilitate review, comment on the annual report, to resolve questions, or to resolve adverse conditions.

VII. DURATION

A. If the terms of this Agreement have been fully implemented by five (5) years from the date of the execution of this Agreement, this Agreement will terminate and be considered null and void. In the event the terms of this Agreement have not been fully implemented by five (5) years from the date of the execution of this Agreement, CCH shall notify the Signatory Parties and Concurring Parties, and, in its sole discretion, if it chooses to continue with the undertaking, shall re-initiate review of the undertaking in accordance with 36 CFR § 800.

VIII. DISPUTE RESOLUTION

A. Should any Signatory Party to this Agreement object at any time to any actions proposed or the manner in which the terms of this Agreement are implemented, CCH shall consult with such party to resolve the objection. If CCH determines that such objection cannot be resolved, CCH will:

1. Forward all documentation relevant to the dispute, including CCH's proposed resolution, to ACHP. ACHP shall provide CCH with its advice on the resolution of the objection within thirty (30) days of receiving adequate documentation. Prior to reaching a final decision on the dispute, CCH shall prepare a written response that takes into account any timely advice or comments regarding the dispute from ACHP, HSD, and Signatory Parties, and provide them with a copy of this written response. CCH will proceed according to its final decision.

2. If ACHP does not provide its advice regarding the dispute within the thirty (30) day time period, CCH may proceed according to its final decision. Signatories and Concurring Parties will be notified in writing.

B. Any terms of this Agreement that are not subject to dispute shall remain unchanged and in full force and effect.

XII. AMENDMENTS

A. This Agreement may be amended when such an amendment is agreed to in writing by each of the Signatory Parties with consultation by the Concurring Parties. Such amendment shall be

effective the date such amendment is executed by the Signatory Parties and delivered electronically to the ACHP.

XIII. TERMINATION

A. If any of the Signatory Parties to this Agreement, determines that its terms will not or cannot be carried out, that party shall immediately consult with the other Signatory Parties to attempt to develop an amendment per Stipulation XII, above. If within thirty (30) days an amendment cannot be reached, any Signatory may terminate the Agreement upon written notification to the other Signatories.

B. Once the Agreement is terminated, and prior to work continuing on the undertaking, CCH must either execute an agreement pursuant to 36 CFR § 800.6 or request, take into account, and respond to comments of ACHP under 36 CFR § 800.7; provided, however, nothing herein shall be construed to require the CCH to halt construction and related activities proceeding in accordance with this Agreement initiated prior to the termination of this Agreement. CCH shall notify the Signatories of action it will pursue. Concurring Parties will be notified in writing. Any new agreement pursuant to 36 CFR § 800.6 or action based under 36 CFR § 800.7 shall apply solely to activities initiated after the termination of this Agreement.

C. Execution of this Agreement by CCH and implementation of its terms evidence CCH has taken into account the effects of the undertaking on historic properties.

XIV. MISCELLANEOUS

A. Formal notices and communication between the Signatory Parties shall be sufficiently given if, and shall not be deemed given unless, dispatched by certified mail, postage prepaid, return receipt required, or sent by express delivery or overnight courier service, to the office of the Signatories shown as follows, or such other address as the Signatory may designate in writing from time to time:

NOTES

This document assumes that the term "Signatory" has been defined in the agreement to include both signatories and invited signatories.

The agency must submit a copy of the executed MOA, along with the documentation specified in Section 800.11(f), to ACHP prior to approving the undertaking in order to meet the requirements of Section 106. 36 CFR § 800.6(b)(1)(iv)

Advisory Council on Historic Preservation
Notice of Election Not to Participate in Consultation

&šŐŽƋĞ ϭ

Preserving America's Heritage

November 7, 2019

Ms. Rebecca C. Borja
U.S. Department of Housing and Urban Development
1132 Bishop Street, Suite 1400
Honolulu, HI 96813

Ref: *Proposed Halewaiolu Senior Residence Project at 1331 River Street*
Honolulu, Hawaii
ACHPConnect Log Number: 14616

Dear Ms. Borja:

The Advisory Council on Historic Preservation (ACHP) has received your notification and supporting documentation regarding the adverse effects of the referenced undertaking on a property or properties listed or eligible for listing in the National Register of Historic Places. Based upon the information provided, we have concluded that Appendix A, *Criteria for Council Involvement in Reviewing Individual Section 106 Cases*, of our regulations, "Protection of Historic Properties" (36 CFR Part 800), does not apply to this undertaking. Accordingly, we do not believe that our participation in the consultation to resolve adverse effects is needed. However, if we receive a request for participation from the State Historic Preservation Officer (SHPO), Tribal Historic Preservation Officer (THPO), affected Indian tribe, a consulting party, or other party, we may reconsider this decision. Additionally, should circumstances change, and it is determined that our participation is needed to conclude the consultation process, please notify us.

Pursuant to 36 CFR §800.6(b)(1)(iv), you will need to file the final Memorandum of Agreement (MOA), developed in consultation with the Hawaii State Historic Preservation Officer (SHPO), and any other consulting parties, and related documentation with the ACHP at the conclusion of the consultation process. The filing of the MOA, and supporting documentation with the ACHP is required in order to complete the requirements of Section 106 of the National Historic Preservation Act.

Thank you for providing us with the notification of adverse effect. If you have any questions or require further assistance, please contact Ms. Sarah Stokely at (202) 517-0224 or via email at sstokely@achp.gov.

Sincerely,

LaShavio Johnson

Management Summary

Reference	Archaeological Inventory Survey Report for the Halewai‘olu Senior Residences Project, Honolulu Ahupua‘a, Honolulu (Kona) District, O‘ahu, TMK: [1] 1-7-006:012 (Farley et al. 2019)
Date	December 2019
Project Number(s)	Cultural Surveys Hawai‘i, Inc. (CSH) Job Code: HONOLULU 87
Investigation Permit Number	CSH completed the archaeological inventory survey (AIS) fieldwork under archaeological fieldwork permit number 19-07, issued by the Hawai‘i State Historic Preservation Division (SHPD) per Hawai‘i Administrative Rules (HAR) §13-13-282.
Agencies	SHPD; Federal Housing and Urban Development (HUD); City and County of Honolulu Office of Strategic Development, Department of Land Management (DLM), and Department of Planning and Permitting (DPP)
Land Jurisdiction	City and County of Honolulu
Project Proponent	City and County of Honolulu Office of Strategic Development
Project Funding	Federal; HUD Community Development Block Grants (CDBG)
Project Location	The Halewai‘olu Senior Residences project is at 1331–1347 River Street, between Vineyard Boulevard and North Kukui Street. The AIS study area is depicted on a portion of the 1998 Honolulu U.S. Geological Survey (USGS) 7.5-minute topographic quadrangle.
Project Description	The John R. Gilliland Sr. Building and its surrounding parking lot are planned for demolition, to be replaced by proposed affordable senior housing. The proposed project will redevelop land acquired by the City and County of Honolulu in 1992 with funds received from HUD-CDBG. The 17-story housing facility will consist of 155 units (plus one resident manager unit), a community room with warming kitchen, restrooms and storage, a computer room, social services activity rooms, a social services office, property management offices, mail and package boxes, and an elevator lobby on the ground level. A courtyard, retail space and parking access, trash compactor room, and loading area will also be on the ground level. Ground disturbance associated with project construction will include demolition and removal of the existing building, borings related to foundation pile installation, and excavations for structural footings, utility installation, roadway and parking area installation, and landscaping.
Project Area, Area of Potential Effect (APE), and AIS Study Area	The area of potential effect (APE) is bounded by Beretania Street on the southwest, ‘A‘ala Street on the northwest, the H-1 freeway on the northeast, and portions of Maunakea Street and Nu‘uanu Avenue on the southeast side (forming an “L” shape). The project area is identical to

	the APE, in accordance with HAR §13-275-2. The AIS study area within the APE/project area is restricted to the proposed project's footprint at 1331–1347 River Street.
Project Acreage	The APE/project area is approximately 45 acres (18.2 hectares). The AIS study area is approximately 0.6 acre (0.24 hectare).
Historic Preservation Regulatory Context	As a City and County of Honolulu project on City and County lands, the project is subject to historic preservation review under Hawai‘i Revised Statutes (HRS) §6E-8 and HAR §13-275. Additionally, the proposed project is a federal undertaking as defined by Section 106 of the National Historic Preservation Act (NHPA) of 1966, as amended (2006), due to the use of HUD-CDBG funding for acquisition and/or improvement of the project. Project construction is to be funded with federal equity through the Low Income Housing Tax Credit program and Hawai‘i State funds. With the use of federal funding for initial land purchase, the project is subject to HUD's environmental/historic preservation review regulations (24 CFR [Code of Federal Regulations] Part 58), which includes compliance with the National Environmental Policy Act (NEPA) and Section 106 of the NHPA. Following 24 CFR Part 58, the City is the responsible entity to carry out this federal environmental and historic preservation review in compliance with HUD. The City and County of Honolulu DLM initiated project-related HRS §6E-8 consultation with the SHPD at a meeting with the Architecture and Archaeology branches on 12 April 2017. The City DLM subsequently initiated project-related Section 106 consultation with the SHPD in a letter dated 10 June 2019, which was received by the SHPD on 14 June 2019 (Log No.: 2019.01347). Fung Associates, Inc., completed a *Reconnaissance Level Architectural Inventory Survey Form for the John R. Gilliland Sr. Building* (Hibbard and Chiu 2016; see Appendix A), which assessed the building as eligible for listing on the National Register of Historic Places (National Register) under Criterion C. The SHPD concurred with this assessment in a letter dated 27 February 2017 (Log No.: 2017.02503; Doc. No.: 1702JLP04). Because the project includes demolition of this determined National Register-eligible historic property, a project effect determination of "adverse effect" is likely, leading to a Memorandum of Agreement (MOA) under Section 106. The purpose of the MOA is to codify the mitigation measures for National Register-eligible historic properties that will be adversely affected by the project. CSH prepared a cultural impact assessment (CIA) (Spencer and Hammatt 2019) to support the project's NEPA environmental assessment. This AIS investigation was designed to fulfill both federal and Hawai‘i State historic preservation review requirements for the identification of

	archaeological historic properties. In consultation with the SHPD, this AIS investigation fulfills the requirements of HAR §13-276 and the *Secretary of the Interior's Standards for Archaeology and Historic Preservation*. It was conducted to identify, document, and evaluate archaeological historic properties' eligibility for listing on the National Register and to assess archaeological historic property significance under Hawai‘i State significance criteria pursuant to HAR §13-275-6. Archaeological historic property eligibility for listing on the Hawai‘i Register of Historic Places (Hawai‘i Register) was evaluated following the criteria outlined in HAR §13-198-8. This report is intended to support any project-related historic preservation consultation with consulting parties such as State and County agencies, interested Native Hawaiian Organizations (NHOs), and community groups. The identification and treatment of human skeletal remains discovered during this AIS investigation complied with Hawai‘i State burial law (HRS §6E-43 and HAR §13-300).
Architectural Historic Properties	In 2016, Fung Associates, Inc., prepared a reconnaissance level survey (RLS) of architectural historic properties within the project area (Hibbard and Chiu 2016; see Appendix A). The survey assessed the age, integrity, and significance of the AIS study area's only building, the John R. Gilliland Sr. Building. It also identified potential adverse effects and mitigation alternatives relating to the building's demolition. Staff who conducted the survey meet the Secretary of the Interior's Professional Qualifications Standards as architectural historians, per 36 CFR Part 61. The RLS was accepted by the SHPD Architecture Branch in a letter dated 27 February 2017 (Log No.: 2017.02503; Doc. No.: 1702JLP04). The RLS includes a brief historical context pertaining to the John R. Gilliland Sr. Building. The building was constructed in 1958 and was designed by architect Kenneth Sato. It retains much of its historic character in terms of design, materials, workmanship, and construction methods. The RLS assessed the John R. Gilliland Sr. Building as eligible for listing on the State and National Registers under Criterion C as a very good example of a small retail/office building constructed in Hawai‘i in a modern style in the 1950s. Additionally, Fung Associates, Inc., completed a pedestrian survey in 2019 of all architectural properties within the APE built prior to 1972, in accordance with HAR §13-275 and 36 CFR Part 800.4. This study meets both state and federal requirements for the identification of historic properties. Twenty potentially historic resources comprising buildings, sculptures, or objects were identified and evaluated for eligibility based on the project's anticipated completion date of 2022. On behalf of the project proponents, Fung and Associates has submitted these results to

	the SHPD/State Historic Preservation Officer (SHPO) in support of the project’s historic preservation review compliance.
Consultation	Consultation regarding the Halewai‘olu Senior Residences Project has been ongoing since the project’s inception. Consultation efforts among the project proponents, the SHPD, consulting parties, and the River Street community are summarized below. On 12 April 2017, Liz Char of Halewai‘olu Senior Development, LLC, Alison Chiu and Tonia Moy of Fung Associates, Inc., and Matt McDermott of CSH met with Dr. Susan Lebo (archaeology branch chief), Kimi Matsushima and Stephanie Hacker (O‘ahu archaeologists), and Tanya Gumpac-Maguire (architectural historian) of the SHPD. This meeting initiated HRS §6E-8 consultation with the SHPD. Ms. Char introduced the project and provided a background of the property ownership, agency of record, proposed development, and known consulting parties. Because the demolition of the John R. Gilliland Sr. Building would likely result in an adverse effect, the SHPD staff recommended drafting an MOA in parallel with the project consultation and development and suggested additional parties for consultation. Mr. McDermott noted there was no data about subsurface archaeology in the project area, but that archaeological testing would likely yield findings. The SHPD staff recommended consultation with the O‘ahu Island Burial Council (OIBC) and proposed to meet at a later date to discuss a testing strategy for an AIS. On 8 May 2019, Matt McDermott of CSH gave a presentation at the OIBC monthly meeting to introduce the project, the AIS, and the consultation process. Mr. McDermott discussed the need for federal historic preservation review of the project triggered by federal funding and discussed previous land use within the archaeological study area as indicated by background research. Finally, he presented the proposed subsurface testing strategy for the AIS and explained that as a part of the consultation process, letters would be sent to the OIBC, Chinatown community groups, Nu‘uanu Stream groups, architecture groups, and NHOs. On 10 June 2019, invitations to the 25 June public meeting (see below) were sent via email or U.S. mail to the SHPD and consulting parties; this letter formally initiated NHPA Section 106 consultation with the SHPD. On 25 June 2019, a public informational meeting was held at the Blaisdell Center. Sandra Pfund (City and County DLM [Department of Land Management]) introduced the project and described the purpose of the meeting. Sharon Har (Halewai‘olu Senior Development) provided a project overview. Alison Chiu and Bethany Zedalis (Fung Associates) provided an architectural background. On 9 July 2019, a Section 106 consultation meeting was attended by Alison Chiu and Bethany Zedalis of Fung Associates; Tanya Gumpac-

	Maguire of the SHPD Architecture Branch; Sharon Har and Questor Lau of Halewai‘olu Senior Development, LLC; Keith Kurahashi of R.M. Towill; Sandra Pfund from the City and County of Honolulu DLM; and Matt McDermott of CSH. Sharon Har provided an overview of the project and comments from consulting parties. Mr. McDermott provided an update of the ongoing AIS, including the burial find of 8 July 2019 (State Inventory of Historic Places [SIHP] # 50-80-14-8840 Component 2, Feature 6). Ms. Chiu and Ms. Zedalis proposed the APE for the project to consist of an archaeological APE and an additional architectural APE. Ms. Gumpac-Maguire concurred with the two APEs. On 22 July 2019, Ena Sroat and Matt McDermott of CSH met with Susan Lebo of the SHPD (Archaeology Branch) to discuss the results of the AIS testing up to that point and additional testing based on the identification of an in situ burial (SIHP # -8840 Component 2, Feature 6) in Test Excavation 2 (T-2). Based on this discussion, it was agreed that the AIS testing strategy would be increased by three test excavations—two in the vicinity of T-2 and one in the vicinity of Test Excavation 9 (T-9), where a potential agricultural berm had been identified. On 14 August 2019, Matt McDermott of CSH presented the results of the AIS investigation at the OIBC meeting. Mr. McDermott discussed the burial find of 8 July 2019 (SIHP # -8840 Component 2, Feature 6), and how excavation of two additional trenches—one on either side of the initial trench—failed to identify any additional human remains. He explained that the forthcoming burial treatment plan (BTP) will be part of the MOA and that the Native American Grave Protection and Repatriation Act (NAGPRA) does not apply, as the project does not involve tribal or federal land. He stated that Board Member Mana Caceres had been involved in the early stages of consultation regarding the burial find, and that Mr. Caceres would be applying as a cultural descendant for the remains. On 19 September 2019, a second public informational meeting was held at the Blaisdell Center. Sandra Pfund of the City and County of Honolulu DLM explained that the purpose of the meeting was to update the community regarding the AIS and CIA studies and how they relate to the project’s historic preservation review process. Sharon Har (Halewai‘olu Senior Development) provided a project overview. Bethany Zedalis (Fung Associates) provided an architectural background. Matt McDermott of CSH presented the preliminary results of the project’s AIS and proposed mitigation commitments, including burial treatment for the burial find of 8 July 2019 (SIHP # -8840 Component 2, Feature 6). There were no questions from the audience members.

	On 6, 8, and 9 October 2019, a notice regarding the identification of human remains on 8 July 2019 (SIHP # -8840 Component 2, Feature 6) was published in the *Honolulu Star-Advertiser*. At the 9 October 2019 OIBC meeting, Brandy Caceres and ‘Ohana (family) were recognized as cultural descendants of the *‘iwi kupuna* (ancestral human remains) identified on 8 July 2019 (SIHP # -8840 Component 2, Feature 6). On 19 November 2019, a Section 106 Consultation meeting regarding the project’s MOA was attended by Susan Lebo (archaeology branch) and Tanya Gumpac-McGuire (architecture branch [via phone]) of the SHPD; Randy Chiu of the City and County DLM; Howard and Kehaulani Lum of Lum Sai Ho Ton; Liana Benn of the Chinatown Community Center Association; cultural descendants Mana and Kalehua Caceres; Daron Makaiwi of the Marin ‘Ohana; Sharon Har, Questor Lau, and Benjamin Edger of Halewai‘olu Senior Development, LLC; Matt McDermott of CSH; Tonia Moy and Alison Chiu of Fung Associates; Jay Morford of Hawaiian Memorial Life Plan; Mel Kalahiki of Borthwick Mortuary; Kiersten Faulkner of the Historic Hawai‘i Foundation; and Sylvia Young of HawaiiUSA Federal Credit Union. Ms. Har explained that the purpose of the meeting was to discuss mitigation. Mr. McDermott explained the MOA is being developed to alleviate the adverse effect of the project’s construction on the John R. Gilliland Sr. Building and the archaeological historic property identified during the AIS. SHPD staff proposed that mitigation should focus on things to benefit the community. Ms. Faulkner suggested this could be achieved through a display, a video, an oral history, a traveling exhibit, or by putting funds into an adjacent building. She further emphasized that the MOA needs to be enforceable, with a timeline and specific stipulations as to who does what and to what standard. Discussion also included the proposed activity center within the senior residence, and that it will not just be for residents but also for the community at large. On 21 November 2019, Matt McDermott and Ena Sroat of CSH met with Susan Lebo, Samantha Cragen, and Andrew McCallister of the SHPD Archaeology Branch. Discussion topics included the outstanding SIHP number for the historic property identified during the AIS and possible mitigation measures.
Fieldwork Effort	The AIS fieldwork was conducted between 1 and 30 July 2019, under the general supervision of Matt McDermott, M.A. (Principal Investigator), and Ena Sroat, B.A. (Project Director). CSH archaeologists included Sara Blahut, M.A. (osteologist), Alison Welser, M.A. (osteologist), Gina Farley, M.A., Lisa Manirath, M.A., Brittany Enanoria, B.A., Jessica Burden, B.A., Tanyja Roberson, B.A., Jonathan Alperstein, B.A., Ryan Harismendy, B.A., and Phoenix Pu‘u, B.A. This work required approximately 38 person-days to complete.

	Fieldwork consisted of a pedestrian inspection and the excavation and documentation of 15 test excavations.
Archaeological Historic Properties Identified and Historic Property Significance	One archaeological historic property was newly identified during the Halewai‘olu Senior Residences AIS: SIHP # 50-80-14-8840, subsurface cultural deposits. SIHP # -8840 comprises three components, designated as Components 1–3. SIHP # -8840 Component 1 consists of multiple, buried agricultural deposits associated with use of the Nu‘uanu Stream floodplain. SIHP # -8840 Component 2 consists of possibly pre- to post-Contact habitation layers, including associated pit features and a human burial site, which developed within the uppermost natural alluvium deposits alongside Nu‘uanu Stream. SIHP # -8840 Component 3 consists of historical infrastructure remnants associated with the residential and commercial development of Honolulu. SIHP # -8840 is assessed as significant under Hawai‘i State historic property significance Criterion d (has yielded information important for research on prehistory or history) and Criterion e (has an important value to the native Hawaiian people or another ethnic group of the state), pursuant to HAR §13-275-6. Additionally, it is recommended eligible for inclusion on the Hawai‘i and National Registers under Criterion D. This assessment is based on the historic property’s association with the extensive traditional Hawaiian agricultural system and habitation along Nu‘uanu Stream and the urban development of Honolulu. This historic property has provided and can potentially provide additional information on traditional Hawaiian agricultural practices and chronology; on the residential and commercial growth and ethnic distribution of Honolulu Town from the nineteenth through mid-twentieth centuries; and on late pre- to post-Contact burial practices.
Project Effect	Based on the AIS investigation, the project effect determination per HAR §13-275-7 is “effect, with proposed mitigation commitments.” In addition, under Section 106 of the NHPA, the proposed project will have an “adverse effect” on the identified archaeological historic property.
Mitigation Commitments	Based on the AIS results, the agreed upon mitigation commitments consist of a BTP addressing the previously identified burial site (SIHP # -8840 Component 2, Feature 6) and data recovery in the form of archaeological monitoring for SIHP # -8840 Components 1–3. Mitigation measures will be detailed in the MOA that is currently being prepared pursuant to 36 CFR Part 800.6.

Section 3 Background Research **17**

3.1 Traditional Background 17
3.1.1 Place Names and Legends 17
3.1.2 *Ali‘i* and Battles 22
3.1 Historical Background 23
3.1.1 Early Post-Contact Period 23
3.1.2 Mid-1800s 26
3.1.3 Late 1800s 29
3.1.4 1900s to Present 35
3.2 Previous Archaeological Research 53
3.2.1 Erkelens et al. 1994; Goodwin 1997; Goodwin and Allen 2005 53
3.2.2 Kennedy et al. 1994; Riley et al. 1995 53
3.2.3 McGerty et al. 1995 59
3.2.4 Heidel and Hammatt 1997 59
3.2.5 Elmore and Kennedy 2001 59
3.2.6 Mann and Hammatt 2002 60
3.2.7 West et al. 2002 60
3.2.8 Pietrusewsky 2003; McIntosh et al. 2006; Kailihiwa and Cleghorn 2007; Cleghorn et al. 2012 60
3.2.9 Hammatt 2005 61
3.2.10 McIntosh and Cleghorn 2005 61
3.2.11 Groza and Hammatt 2008 61
3.2.12 Hunkin et al. 2012 61
3.2.13 Mintmier et al. 2014 62
3.2.14 Enanoria and Hammatt 2015 62
3.2.15 Belluomini et al. 2016 62

3.2.16 Yucha et al. 2016 62
3.3 Background Summary and Predictive Model 62

Section 4 Results of Fieldwork 65

4.1 Historic Properties Identified 65
4.2 Stratigraphic Overview 65
4.3 Subsurface Testing Results 68
4.3.1 Test Excavation 1 (T-1) 68
4.3.2 Test Excavation 2 (T-2) 79
4.3.3 Test Excavation 2B (T-2B) 92
4.3.4 Test Excavation 2C (T-2C) 100
4.3.5 Test Excavation 3 (T-3) 104
4.3.6 Test Excavation 4 (T-4) 108
4.3.7 Test Excavation 5 (T-5) 115
4.3.8 Test Excavation 6 (T-6) 121
4.3.9 Test Excavation 7 (T-7) 127
4.3.10 Test Excavation 8 (T-8) 131
4.3.11 Test Excavation 9 (T-9) 135
4.3.12 Test Excavation 9B (T-9B) 143
4.3.13 Test Excavation 10 (T-10) 149
4.3.14 Test Excavation 11 (T-11) 157
Test Excavation 12 (T-12) 164

Section 5 Results of Laboratory Analysis 169

5.1 Bulk Sample Analysis 169
5.1.1 Previous Archaeological Investigations of Taro *Lo‘i* Deposits 169
5.1.2 Results of Wet Screening for the Current AIS 171
5.2 Artifact Analysis 183
5.2.3 Miscellaneous Artifacts 219
5.2.4 Summary 223
5.3 Faunal Analysis 225
5.3.1 Faunal Osseous Remains 225
5.3.2 Invertebrate Faunal Remains 227
5.4 Floral Analysis 227
5.4.1 Pollen Analysis 227
5.4.2 Wood Taxa Identification 229
5.4.3 Radiocarbon Dating Analysis 231

Section 6 Historic Property Description 233

6.1 SIHP # 50-80-14-8840 Component 1 233
6.1.1 Uppermost Agricultural Deposit 237
6.1.2 Deeper Agricultural Deposits 237
6.1.3 Pollen Analysis 240
6.2 SIHP # 50-80-14-8840 Component 2 241
6.2.1 Stratum IIa 241
6.2.2 Stratum IIb 245
6.2.3 Laboratory Analyses 245
6.3 SIHP # 50-80-14-8840 Component 3 246

6.3.1 SIHP # -8840 Component 3, Feature 1, Oil-rolled Crushed Coral Surface with Associated Base Course 247
6.3.2 SIHP # -8840 Component 3, Feature 2, Hollow Tile Wall with Concrete Base 247
6.3.3 SIHP # -8840 Component 3, Feature 3, Concrete Footing 254
6.3.4 SIHP # -8840 Component 3, Feature 4, Etched Concrete Surface 254
6.3.5 SIHP # -8840 Component 3, Feature 5, Mortared Brick Structure with Concrete Foundation 254
6.3.6 SIHP # -8840 Component 3, Feature 6, Burnt Trash Fill 255
6.4 SIHP # -8840 Significance Assessment 255
Section 7 Consultation 257
Section 8 Summary and Interpretation 265
Section 9 Significance Assessment 267
Section 10 Project Effect and Mitigation Commitments 270
10.1 Project Effect 270
10.2 Mitigation Commitments 270
Section 11 References Cited 271
Appendix A Gilliland Building RLS 287
Appendix B LCA Documentation 301
Appendix C Pollen Analysis 305
Appendix D Wood Taxa Identification 311
Appendix E Radiocarbon Dating Analysis 315

List of Figures

Figure 1. Aerial photograph showing the AIS study area within the APE (note APE is identical to the project area) (Google Earth 2013) 2
Figure 2. Portion of the 1998 Honolulu USGS 7.5-minute topographic quadrangle, showing the AIS study area....3
Figure 3. Tax Map Key (TMK) [1] 1-7-006, showing the AIS study area (Hawai‘i TMK Service 2014) 4

Section 1 Introduction

1.1 Project Background

At the request of Halewai‘olu Senior Development, LLC, Cultural Surveys Hawai‘i, Inc. (CSH), has prepared this archaeological inventory survey (AIS) report for the Halewai‘olu Senior Residences Project, Honolulu Ahupua‘a, Honolulu (Kona) District, O‘ahu, TMK: [1] 1-7-006:012. The Halewai‘olu Senior Residences project is at 1331–1347 River Street, between Vineyard Boulevard and North Kukui Street. The area of potential effect (APE) is bounded by Beretania Street on the southwest, ‘A‘ala Street on the northwest, the H-1 freeway on the northeast, and portions of Maunakea Street and Nu‘uanu Avenue on the southeast (forming an “L” shape). In accordance with Hawai‘i Administrative Rules (HAR) §13-13-275-2, the project area is identical to the APE, which comprises approximately 45 acres (18.2 hectares). The AIS study area within the APE/project area is restricted to the proposed project’s footprint at 1331–1347 River Street and comprises approximately 0.6 acre (0.24 hectare). The APE/project area is depicted on a 2013 aerial photograph (Figure 1). The AIS study area is depicted on a portion of the 1998 Honolulu U.S. Geological Survey (USGS) 7.5-minute topographic quadrangle (Figure 2), a tax map plat (Figure 3), and a 2013 aerial photograph (Figure 4).

The John R. Gilliland Sr. Building (the only building within the AIS study area) and its surrounding parking lot (see Figure 4) are planned for demolition, to be replaced by proposed affordable senior housing. The proposed project will redevelop land acquired by the City and County of Honolulu in 1992 with funds received from Federal Housing and Urban Development (HUD) Community Development Block Grants (CDBG). The 17-story housing facility will consist of 155 units (plus one resident manager unit), a community room with warming kitchen, restrooms and storage, a computer room, social services activity rooms, a social services office, property management offices, mail and package boxes, and an elevator lobby on the ground level. A courtyard, retail space and parking access, trash compactor room, and loading area will also be on the ground level. Ground disturbance associated with project construction will include demolition and removal of the existing building, borings related to foundation pile installation, and excavations for structural footings, utility installation, roadway and parking area installation, and landscaping.

1.2 Historic Preservation Regulatory Context and Document Purpose

As a City and County of Honolulu project on City and County lands, the project is subject to historic preservation review under Hawai‘i Revised Statutes (HRS) §6E-8 and HAR §13-275. Additionally, the proposed project is a federal undertaking as defined by Section 106 of the National Historic Preservation Act (NHPA) of 1966, as amended (2006), due to the use of HUD-CDBG funding for acquisition and/or improvement of the project. Project construction is to be funded with federal equity through the Low Income Housing Tax Credit program and Hawai‘i State funds. With the use of federal funding for initial land purchase, the project is subject to HUD’s environmental/historic preservation review regulations (24 CFR [Code of Federal Regulations] Part 58), which includes compliance with the National Environmental Policy Act (NEPA) and Section 106 of the NHPA. Following 24 CFR Part 58, the City is the responsible

Figure 1. Aerial photograph showing the AIS study area within the APE (note APE is identical to the project area) (Google Earth 2013)

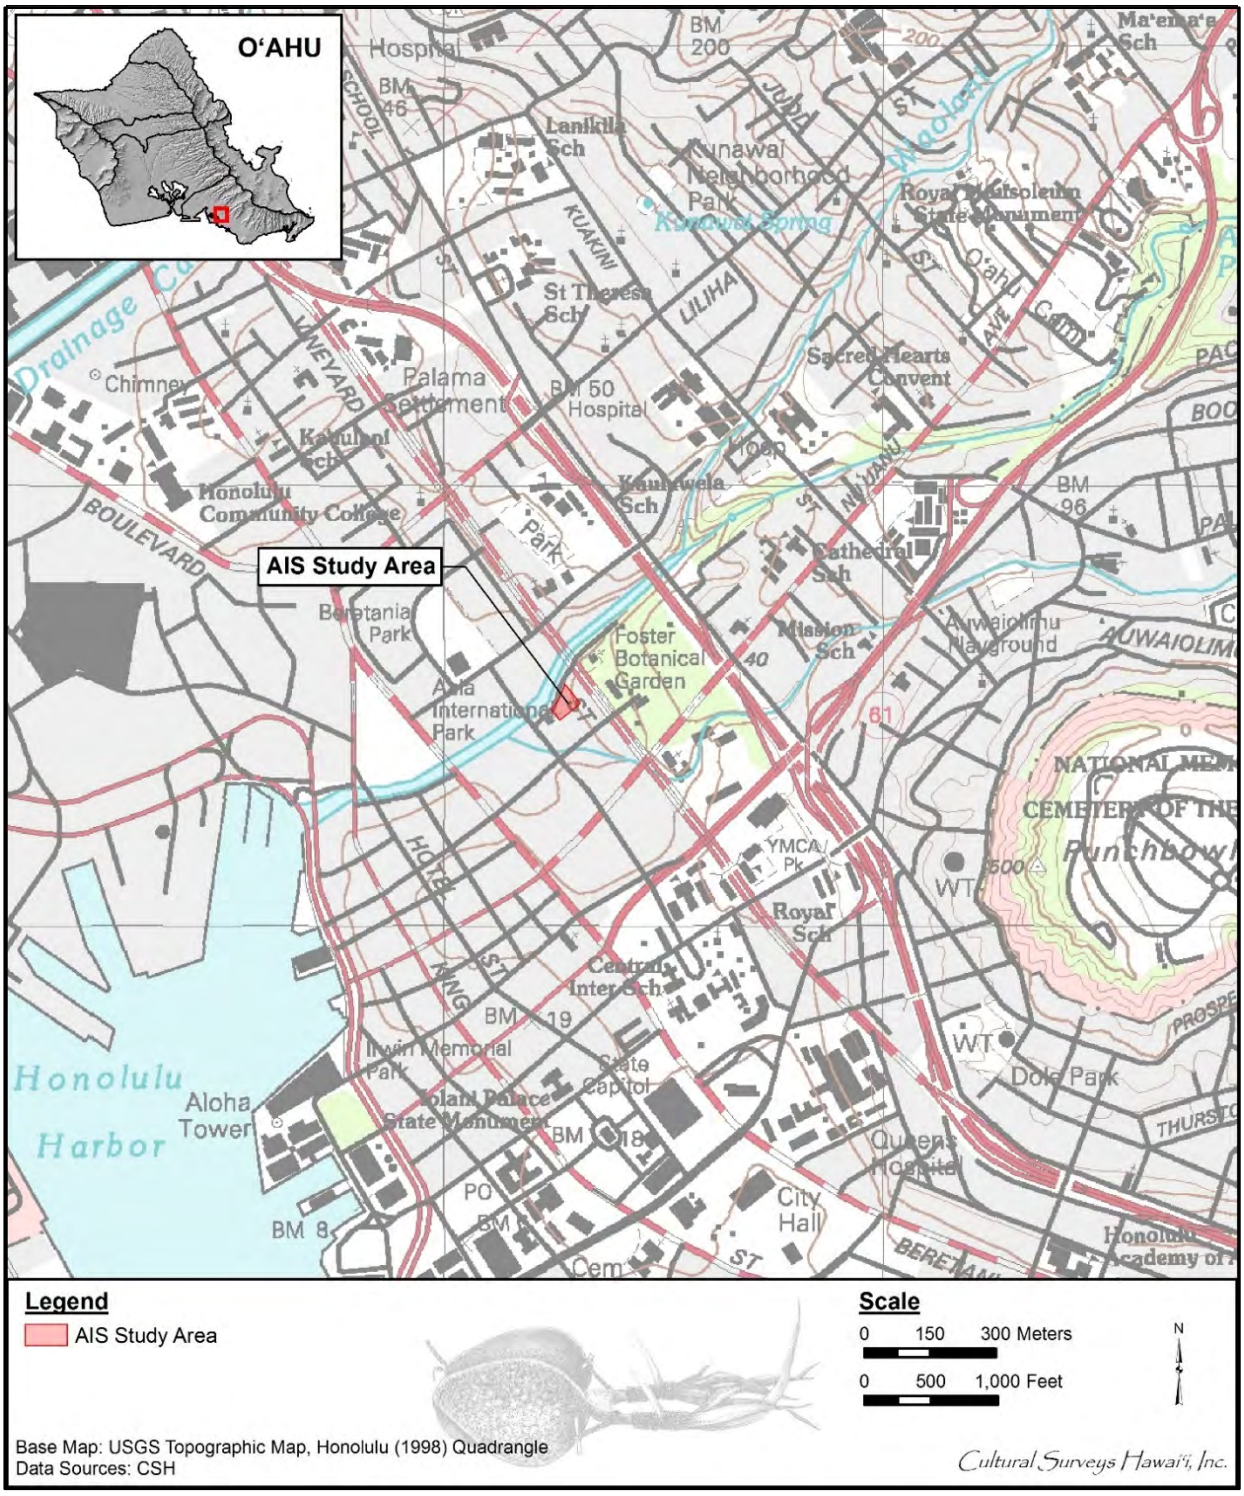

Figure 2. Portion of the 1998 Honolulu USGS 7.5-minute topographic quadrangle, showing the AIS study area

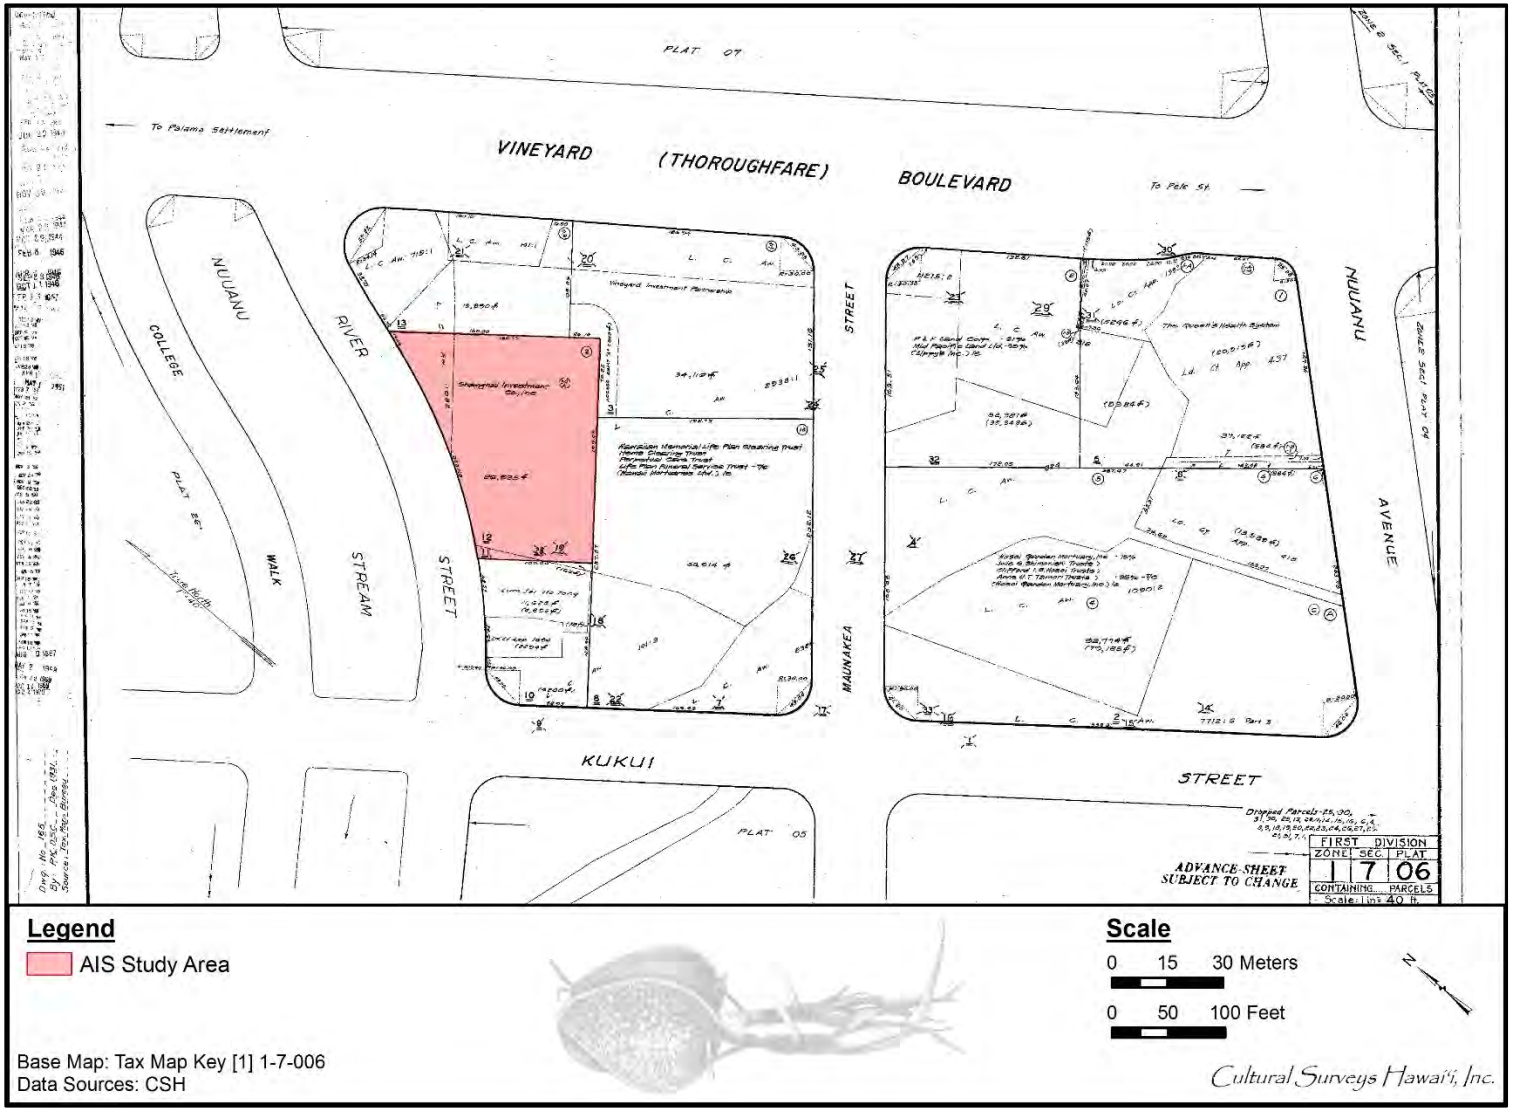

Figure 3. Tax Map Key (TMK) [1] 1-7-006, showing the AIS study area (Hawai‘i TMK Service 2014)

Figure 4. Aerial photograph of the AIS study area (Google Earth 2013)

entity to carry out this federal environmental and historic preservation review in compliance with HUD.

The City and County of Honolulu Department of Land Management (DLM) initiated project-related HRS §6E-8 consultation with the Hawai‘i State Historic Preservation Division (SHPD) at a meeting with the Architecture and Archaeology branches on 12 April 2017. The City DLM subsequently initiated project-related Section 106 consultation with the SHPD in a letter dated 10 June 2019, which was received by the SHPD on 14 June 2019 (Log No.: 2019.01347).

Fung Associates, Inc., completed a *Reconnaissance Level Architectural Inventory Survey Form for the John R. Gilliland Sr. Building* (Hibbard and Chiu 2016; see Appendix A), which assessed the building as eligible for listing on the National Register of Historic Places (National Register) under Criterion C (embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction). The SHPD concurred with this assessment in a letter dated 27 February 2017 (Log No.: 2017.02503; Doc. No.: 1702JLP04). As a result, a Memorandum of Agreement (MOA) is required for the project under Section 106. The purpose of the MOA is to codify the mitigation measures for National Register-eligible historic properties that will be adversely affected by the project.

CSH prepared a cultural impact assessment (CIA) (Spencer and Hammatt 2019) to support the project's NEPA environmental assessment.

This AIS investigation was designed to fulfill both federal and Hawai‘i State historic preservation review requirements for the identification of archaeological historic properties. In consultation with the SHPD, this AIS investigation fulfills the requirements of HAR §13-276 and the *Secretary of the Interior's Standards for Archaeology and Historic Preservation*. It was conducted to identify, document, and evaluate archaeological historic properties' eligibility for listing on the National Register and to assess archaeological historic property significance under Hawai‘i State significance criteria pursuant to HAR §13-275-6. Archaeological historic property eligibility for listing on the Hawai‘i Register of Historic Places (Hawai‘i Register) was evaluated following the criteria outlined in HAR §13-198-8. This report is intended to support any project-related historic preservation consultation with consulting parties, such as State and County agencies, interested Native Hawaiian Organizations (NHOs), and community groups.

The identification and treatment of human skeletal remains discovered during this AIS investigation complied with Hawai‘i State burial law (HRS §6E-43 and HAR §13-300).

1.3 Architectural Historic Properties

In 2016, Fung Associates, Inc., prepared a reconnaissance level survey (RLS) of architectural historic properties within the project area (Hibbard and Chiu 2016; see Appendix A). The survey assessed the age, integrity, and significance of the AIS study area's only building, the John R. Gilliland Sr. Building. It also identified potential adverse effects and mitigation alternatives related to the building's demolition. Staff who conducted the survey meet the Secretary of the Interior's Professional Qualifications Standards as architectural historians, per 36 CFR Part 61. The RLS was accepted by the SHPD Architecture Branch in a letter dated 27 February 2017 (Log No.: 2017.02503; Doc. No.: 1702JLP04).

The RLS included a brief historical context pertaining to the John R. Gilliland Sr. Building. The building was constructed in 1958 and was designed by architect Kenneth Sato. It retains much of its historic character in terms of design, materials, workmanship, and construction methods. The RLS assessed the John R. Gilliland Sr. Building as eligible for listing on the State and National Registers under Criterion C as a very good example of a small retail/office building constructed in Hawai‘i in a modern style in the 1950s.

Additionally, Fung Associates, Inc., completed a pedestrian survey in 2019 of all architectural properties within the APE built prior to 1972, in accordance with HAR §13-275 and 36 CFR Part 800.4. This study meets both state and federal requirements for the identification of historic properties. Twenty potentially historic resources comprising buildings, sculptures, or objects were identified and evaluated for eligibility based on the project's anticipated completion date of 2022. On behalf of the project proponents, Fung and Associates has submitted these results to the SHPD/State Historic Preservation Officer (SHPO) in support of the project's historic preservation review compliance.

1.4 Environmental Setting

1.4.1 Natural Environment

The Halewai‘olu Senior Residences project is on the southern leeward coastal plain of Honolulu, approximately 0.7 km (0.4 mile) inland from Honolulu Harbor. It is relatively flat and is 2.7 m (8.9 ft) above sea level. Rainfall in the AIS study area averages 833.5 mm (32.8 inches) annually (Giambelluca et al. 2013), and the average temperature is 23.7° C (74.6° F) (Giambelluca et al. 2014). There is no vegetation within the AIS study area, which is paved with asphalt and concrete.

The AIS study area is on the margins of Nu‘uanu Stream, within the stream's floodplain as it enters Honolulu Harbor. According to the U.S. Department of Agriculture (USDA) Soil Survey Geographic (SSURGO) database (2001) and soil survey data gathered by Foote et al. (1972), the project area's soils consist of Ewa silty clay loam, moderately shallow, 0 to 2% slopes (EmA) (Figure 5). The Ewa Series is described as follows:

> This series consists of well-drained soils in basins and on alluvial fans on the islands of Maui and Oahu. These soils developed in alluvium derived from basic igneous rock. […]
>
> These soils are used for sugarcane, truck crops, and pasture. The natural vegetation consists of fingergrass, kiawe, koa haole, klu, and uhaloa. [Foote et al. 1972:29]

1.4.2 Built Environment

The Halewai‘olu Senior Residences project is within central Honolulu, surrounded by modern urban development including commercial buildings, paved streets, sidewalks, utility infrastructure, and landscaped margins. The AIS study area consists of a two-story commercial building, the John R. Gilliland Sr. Building, and surrounding asphalt-paved parking lot (see Figure 4). The channelized Nu‘uanu Stream is northwest of the project area, across River Street.

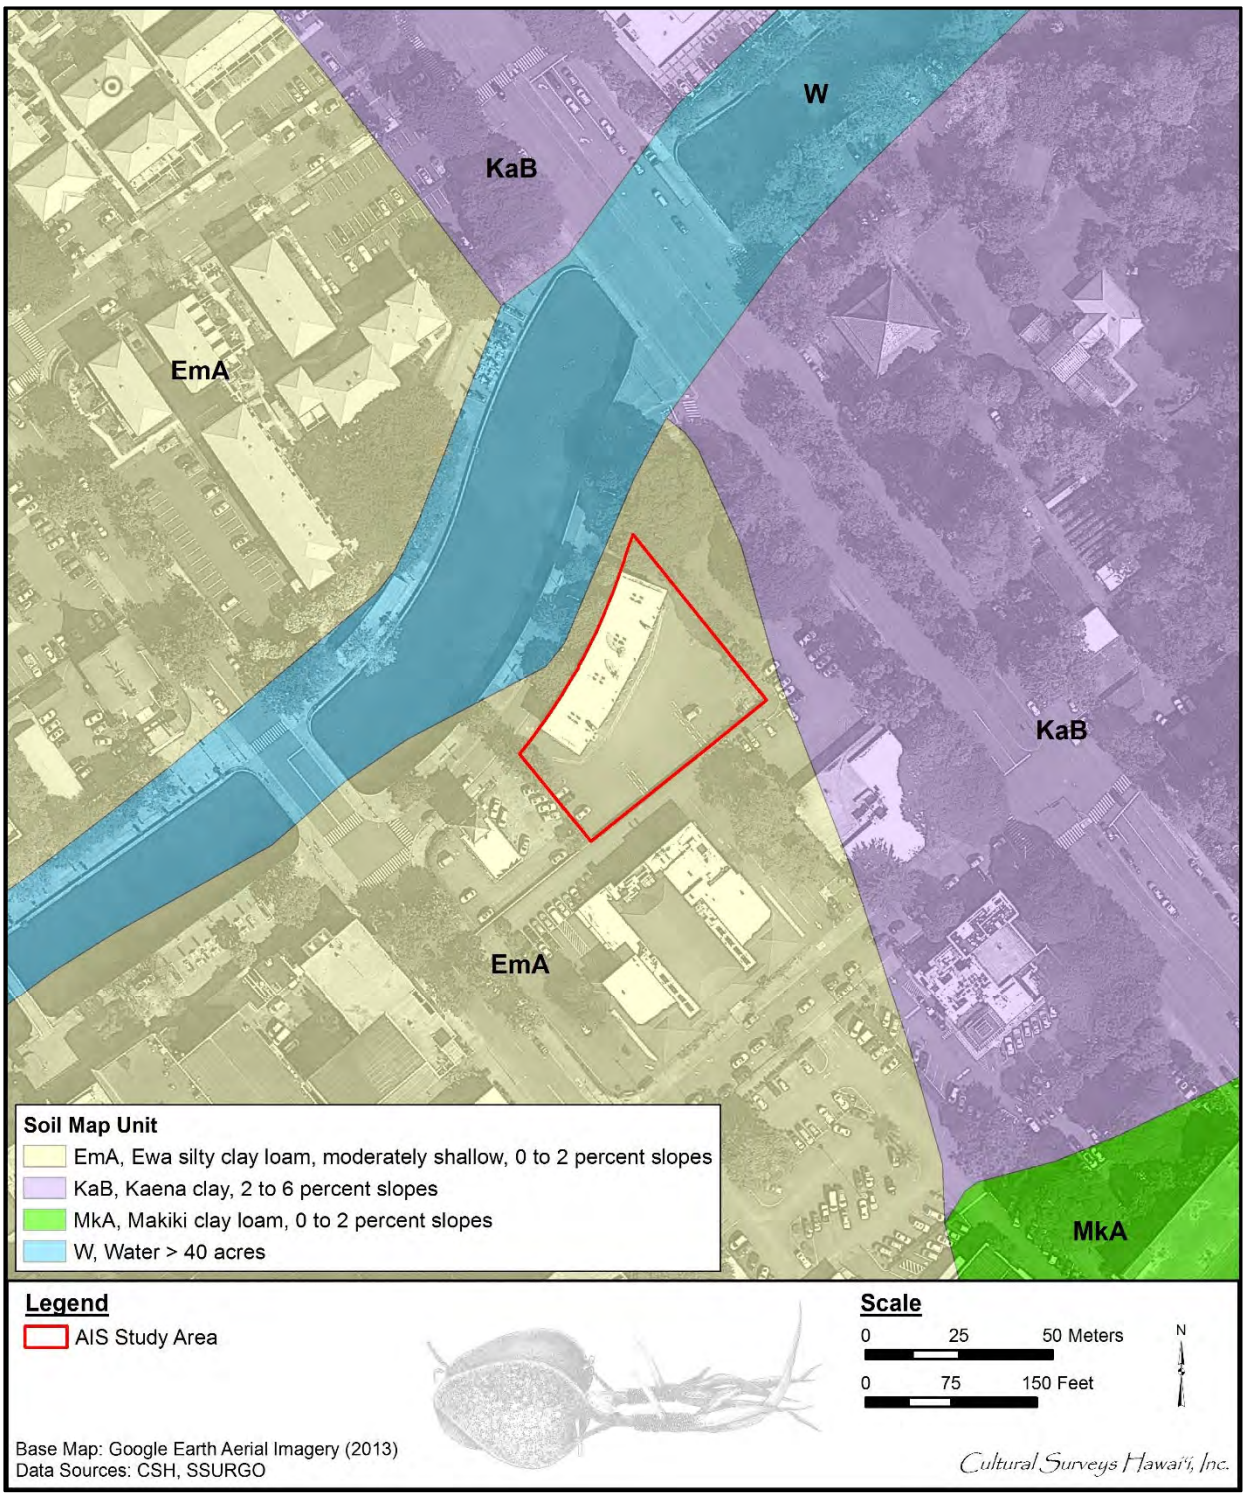

Figure 5. Overlay of *Soil Survey of the State of Hawaii* (Foote et al. 1972), indicating soil types within and surrounding the AIS study area (USDA SSURGO 2001)

Section 2 AIS Methods

2.1 Field Methods

CSH completed the fieldwork component of this AIS under archaeological fieldwork permit number 19-07, issued by the SHPD pursuant to HAR §13-282. Fieldwork was conducted between 1 and 30 July 2019 under the general supervision of Matt McDermott, M.A. (Principal Investigator), and Ena Sroat, B.A. (Project Director). CSH archaeologists included Sara Blahut, M.A. (osteologist), Alison Welser, M.A. (osteologist), Gina Farley, M.A., Lisa Manirath, M.A., Brittany Enanoria, B.A., Jessica Burden, B.A., Tanyja Roberson, B.A., Jonathan Alperstein, B.A., Ryan Harismendy, B.A., and Phoenix Pu‘u, B.A. This work required approximately 38 person-days to complete.

As the Halewai‘olu Senior Residences AIS study area consists of a two-story commercial building (the John R. Gilliland Sr. Building) and associated asphalt parking lot, no surface archaeological historic properties were anticipated. Although fieldwork included a 100% pedestrian survey of the AIS study area, investigations focused on a program of test excavations to identify subsurface archaeological historic properties.

2.1.1 Subsurface Testing

The proposed subsurface testing strategy consisted of 12 test excavations (T-1 through T-12) distributed throughout the AIS study area, each measuring 0.6 by 6.1 m (2 by 20 feet [ft]) (Figure 6). The distribution was based on general coverage of the AIS study area; the planned locations of deep project-related ground disturbance such as elevator shafts (Figure 7); the accessibility of interior building space; and a review of cultural and historical background research, including historical maps and aerial photographs (see Section 3: Background Research). Based on the results of utility toning, several of the exterior test excavations were adjusted slightly (Figure 8). Based on spatial limitations and the results of utility toning, the dimensions of the two planned interior test excavations were adjusted to 0.9 by 3 m (3 by 10 ft) (T-10) and 0.6 by 3 m (2 by 10 ft) (T-11).

Following completion of AIS test excavations T-1 through T-12, CSH consulted with the SHPD regarding the testing results and the sufficiency of the testing strategy. Based on the documentation of a human burial site (State Inventory of Historic Places [SIHP] # 50-80-14-8840 Component 2, Feature 6) within T-2, CSH proposed two additional test excavations (T-2B and T-2C) on either side of T-2 to investigate the presence of a potential burial cluster and to delineate the burial site boundaries. The SHPD agreed with this strategy and additionally requested a third test excavation in the vicinity of T-9 in order to investigate further a potential agricultural berm feature (T-9B) (see Figure 8).

Initial excavation methods consisted of saw-cutting the asphalt parking lot surface (exterior excavations) or concrete building foundation (interior excavations). Excavation then proceeded via backhoe scrapes to approximately 1.5 m (5 ft) below surface (i.e., the maximum depth to safely enter the excavation without a shoring device). The excavation sidewalls were then cleaned, inspected, and documented, and soil samples were collected if appropriate. Excavation then continued to just below the water table and/or a culturally sterile, buried streambed (Stratum III). In general, this final excavation to the water table and/or streambed proceeded in two phases. The

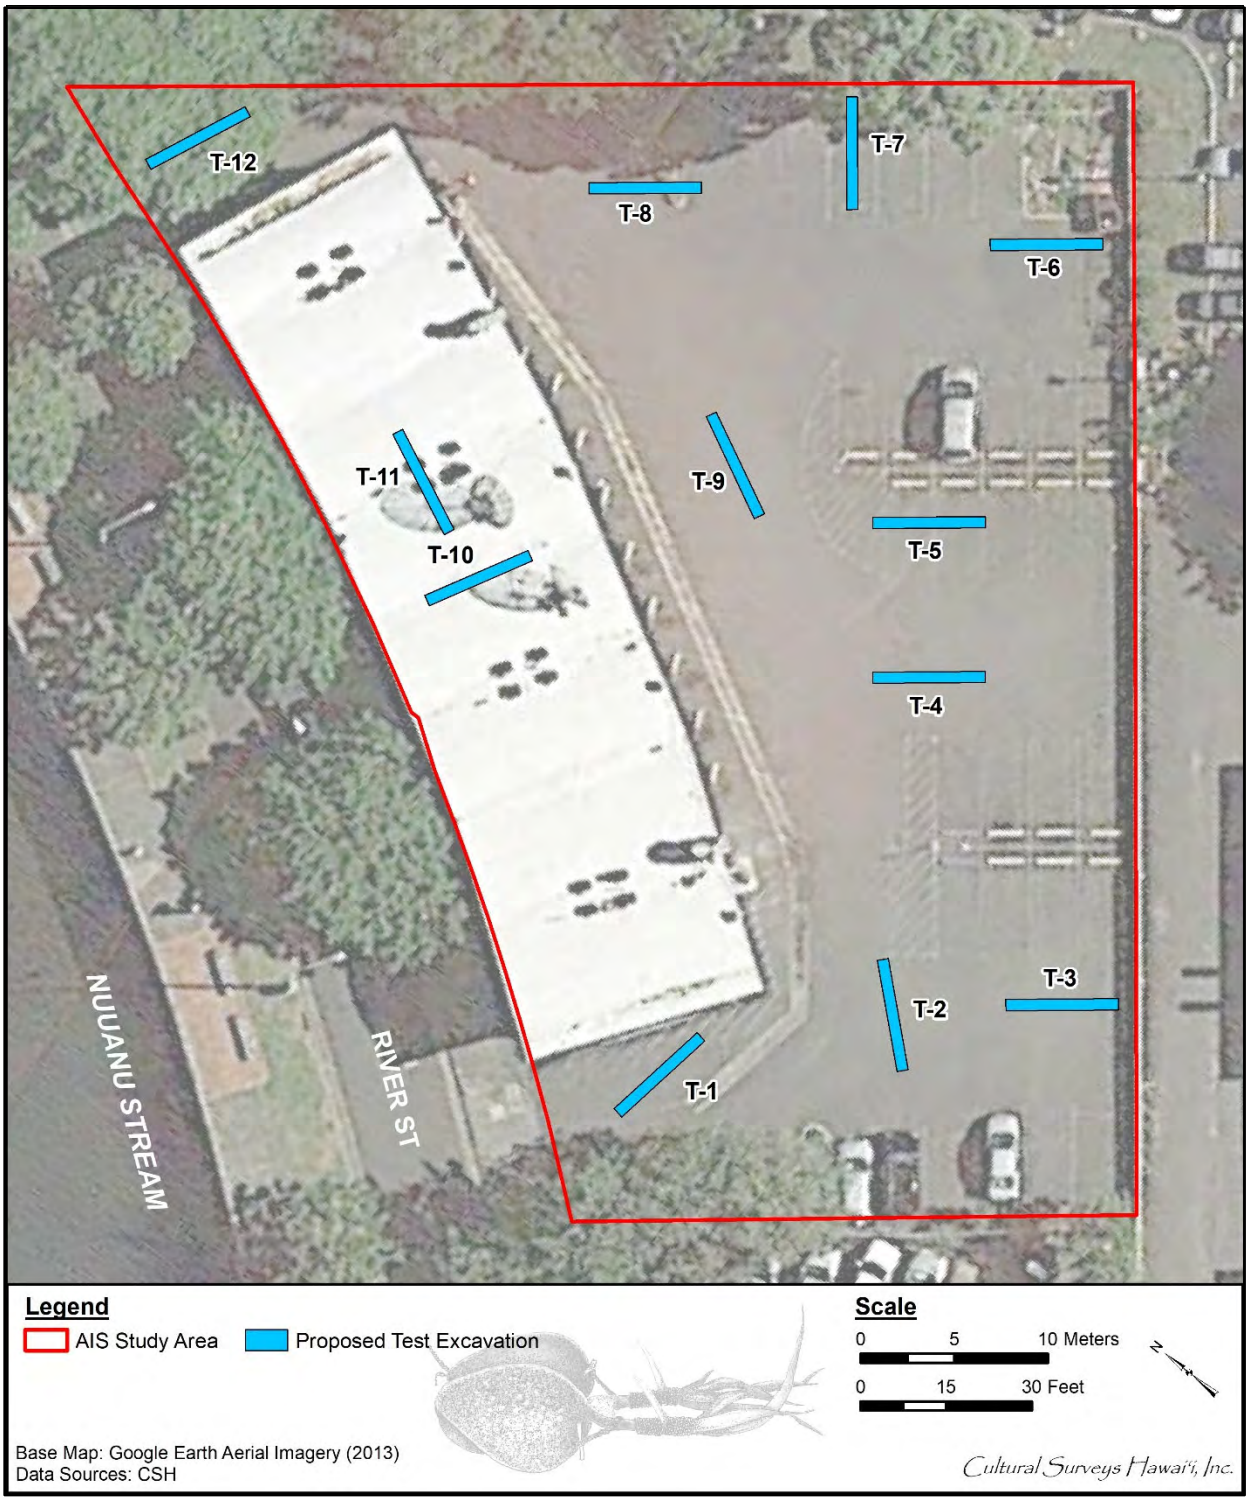

Figure 6. Aerial photograph showing 12 proposed AIS test excavations within the AIS study area (Google Earth 2013)

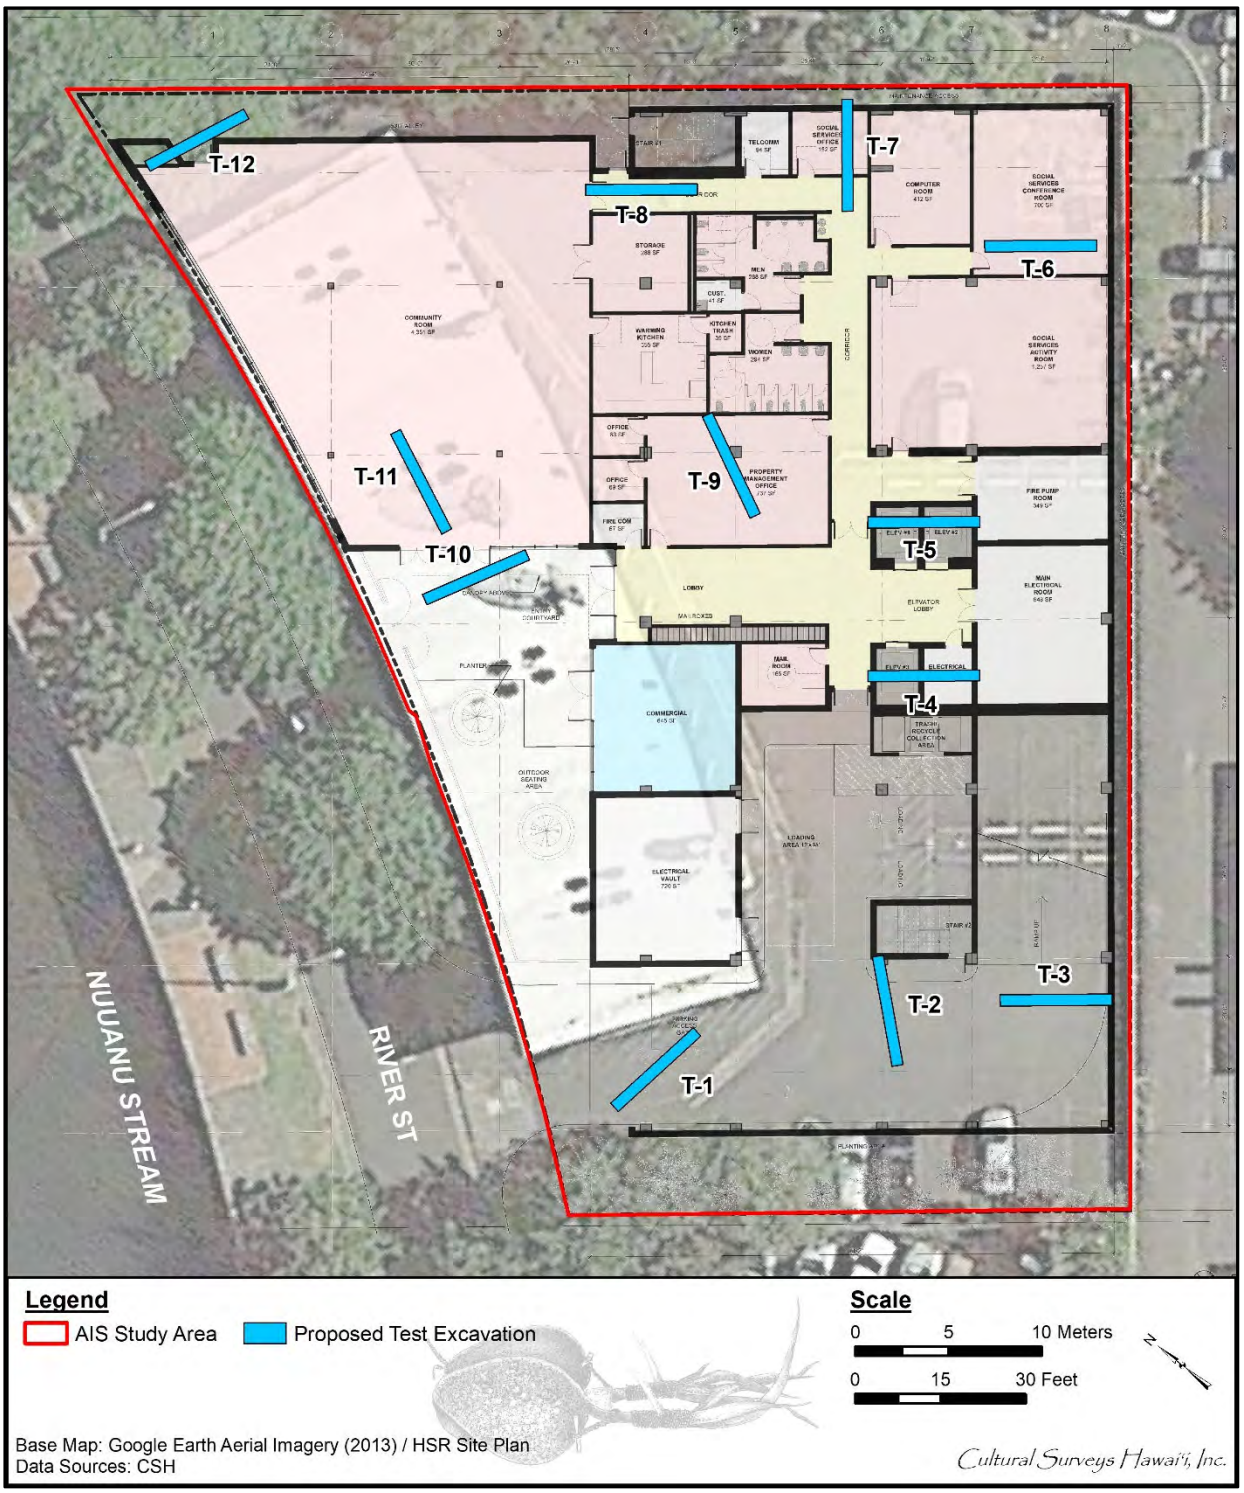

Figure 7. Aerial photograph of the AIS study area, with overlay of the project design; note T-4 and T-5 target planned deep elevator pit ground disturbance (Google Earth 2013)

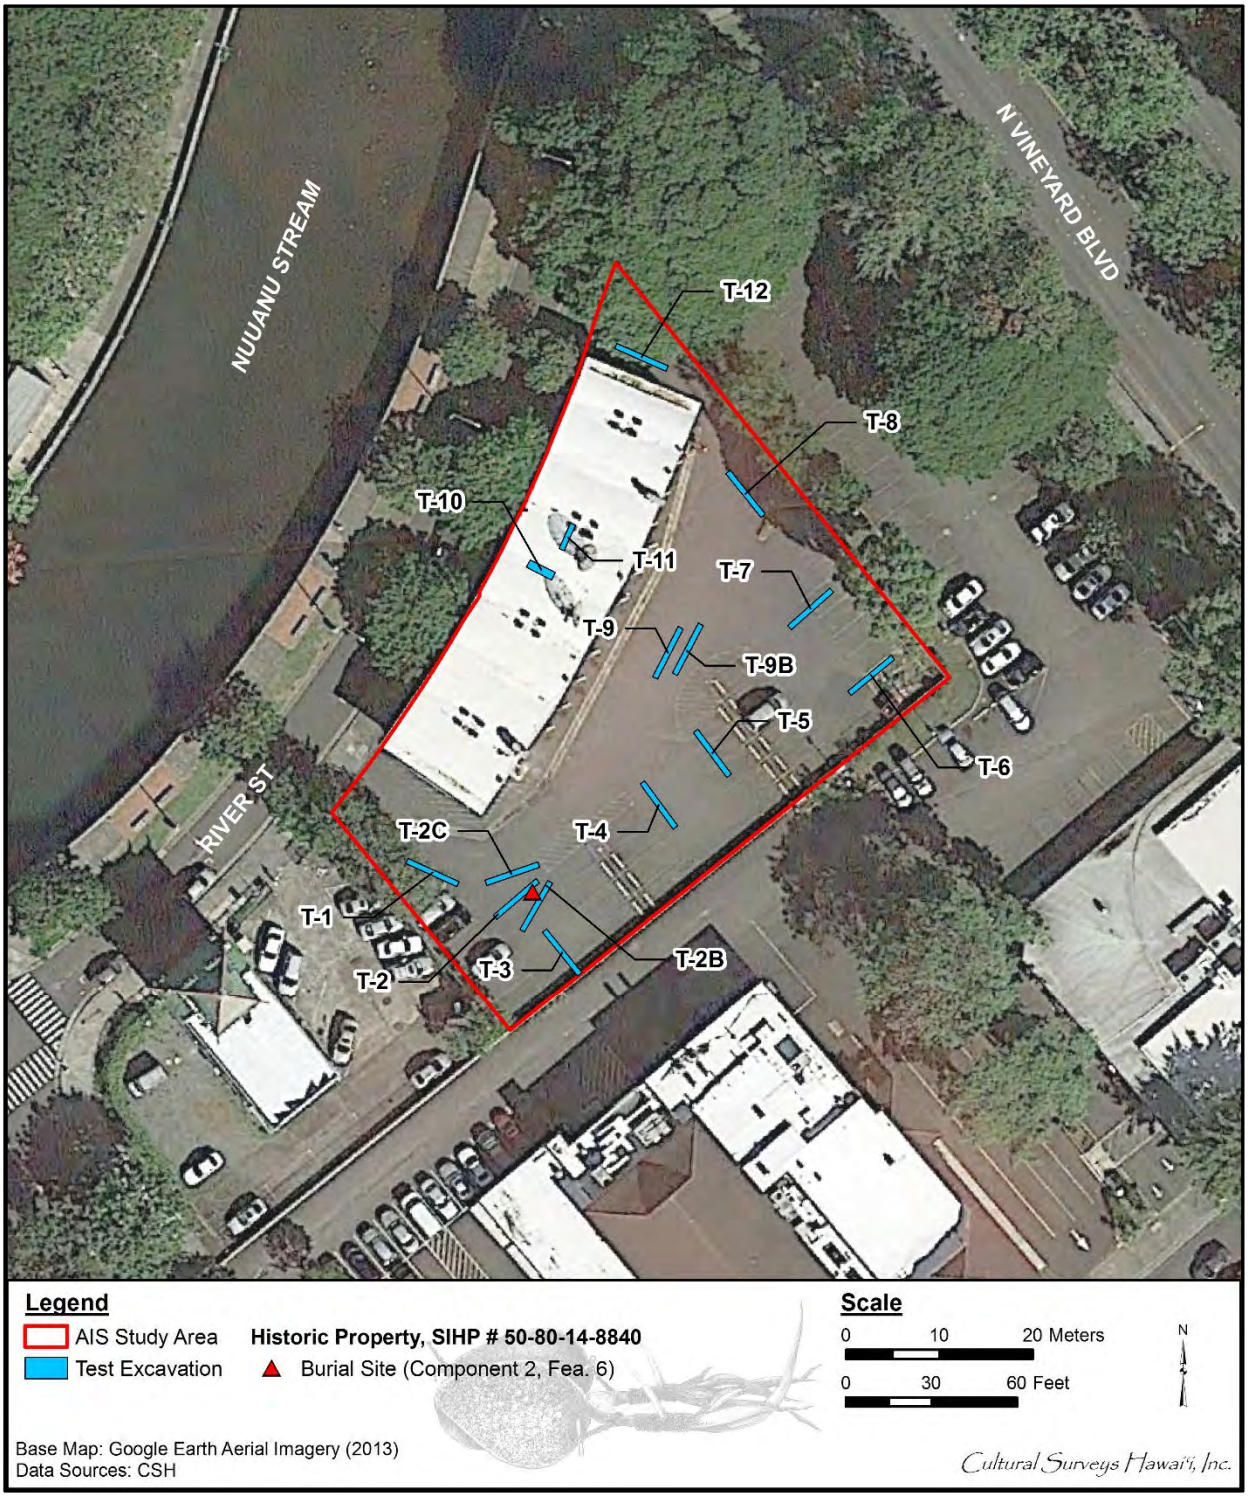

Figure 8. Aerial photograph of the AIS study area, showing the 15 completed AIS test excavations and the SIHP # -8840 Component 2, Feature 6, human burial (Google Earth 2013)

first phase consisted of completion of one half of the trench (e.g., the *makai* half), with the uncompleted portion (e.g., the *mauka* half) serving as a pedestal from which to safely inspect, document, and sample the deepest stratigraphy. The second phase consisted of excavation of the remaining portion of the trench, with close inspection of the extracted sediments to correlate with the previously collected data. Exceptions to this methodology included T-8, which was excavated to the water table in one phase, with shoring installed prior to inspection of the deepest stratigraphy; this was done to compare the efficacy of different methodologies. In a few instances, a portion of the test excavation could not be excavated to the water table and/or streambed due to safety concerns or subsurface obstacles. Safety issues included petroleum contamination within shallow fill deposits (T-4 and T-5) and unstable sidewalls due to demolition rubble (T-3). Subsurface obstacles included a large boulder within T-6 and a utility pipe within T-10. In addition, the immediate area of the human burial site identified within T-2 was not excavated in order to ensure the integrity and safety of the burial.

A stratigraphic profile of each test excavation was drawn and photographed. The observed soils/sediments were described using standard USDA soil description observations/terminology. Descriptions included Munsell color, texture, consistence, structure, plasticity, cementation, origin, descriptions of any inclusions, such as cultural material and/or roots, lower boundary distinctiveness and topography, and other general observations. Where stratigraphic anomalies or potential cultural deposits were exposed, these were carefully represented on test excavation profile maps. Photographs were also taken of the general AIS study area and in-progress work, recording on-the-job procedures, personnel, work conditions, and the area’s natural and built environment. A photographic scale and north arrow were included in each photograph.

Cultural material observed within modern and historical fill deposits such a demolition layers was generally recorded (e.g., photographed, described) but not collected. Cultural material associated with potential historic properties such as historical trash pits was photographed and grab samples were collected, with care given to including representative artifact types as well as those with the most diagnostic characteristics.

Representative soil/sediment samples were collected from the natural strata underlying modern and historical fill deposits, including potential cultural deposits (i.e., habitation layers, agricultural deposits), for further characterization within the CSH laboratory and for outsourced sample analysis as described in Section 2.2 below. Samples were collected as bulk or column samples, and all samples were collected as single stratum samples without crossing stratigraphic boundaries. Care was taken during the collection of column samples to clean/sterilize the extraction implement so as not to cross-contaminate samples.

The locations of the exterior test excavations were recorded using a Trimble GPS Pathfinder ProXH mapping-grade GPS unit with a TSCI Datalogger using real-time differential correction. This unit provides sub-meter horizontal accuracy in the field. GPS field data was then post-processed. GPS location information was converted into GIS shape files using Trimble’s Pathfinder Office software, version 5.6, and graphically displayed using ESRI’s ArcGIS, version 10.2.1. The approximate locations of the two interior test excavations were extrapolated based on triangulation of architectural components of the John R. Gilliland Sr. Building.

2.2 **Laboratory Methods**

Materials collected during AIS fieldwork were identified and catalogued at CSH's laboratory facilities on O‘ahu. Analysis of collected materials was undertaken using standard archaeological laboratory techniques. Materials were washed, screened, sorted, measured, weighed, described, and/or photographed.

2.2.1 Bulk and Column Sample Analysis

Sediment samples collected from a vertical series of natural alluvium deposits (Stratum II), including interpreted agricultural deposits (SIHP # -8840 Component 1), were examined within the CSH laboratory to aid in characterizing these deposits. Samples were collected as bulk or column samples. All samples were labeled with provenience information, and the volume of each sample was recorded so that comparisons could be made among samples. In the lab, bulk and column samples were first visually inspected. Many of the samples were additionally photo-documented, generating a visual record of the potential agricultural deposits. Select column samples were submitted for palynological analysis (see Section 2.2.4.1 below).

Wet screening of samples was performed on selected representative samples (n=7) to document material content. Scaled, close-up photographs of the selected samples were taken prior to wet screening for comparison with post-wet screening results. The samples, ranging from 0.5 to 2 liters, were placed in large (approximately 7-liter) 4-mm sealable (Ziploc-type) plastic bags. The bags were filled with tap water and allowed to soak for an hour with periodic agitation and massaging to break up sediment peds/masses in preparation for wet screening. Soaked and agitated samples were poured onto large, 1/16-inch mesh screens and sprayed with a water hose to work the finer-grained sediment through the mesh. Commonly, gravel-sized peds/masses of soil adhering to itself resulted; the largest of these peds/masses were broken apart by hand as wet screening continued. Smaller peds/masses were not broken down by hand. Sediment that did not pass through the 1/16-inch mesh was spread out on the screen and air-dried. Dried samples were inspected (without magnification) for artifacts, plant remains, charcoal, and limonite root casts and nodules. Post-wet screening, scaled, close-up photographs were taken for comparison. Results of this analysis are presented in Section 5.1: Bulk Sample Analysis.

2.2.2 Artifact Analysis

In general, artifact analysis focused on establishing, to the greatest extent possible, material type, function, cultural affiliation, and age of manufacture. As applicable, artifacts were washed, sorted, measured, weighed, described, photographed, and catalogued. Diagnostic (dateable or identifiable) attributes of artifacts were researched.

No traditional Hawaiian artifactual material was collected. Historical artifacts were analyzed using standard reference materials, as well as resources available on the internet; these included Elliott and Gould (1988), Munsey (1970), Bureau of Land Management/Society for Historical Archaeology (BLM/SHA) (2019), and Florida Museum of Natural History (2018), among others. Analyzed materials were tabulated and are presented in Section 5.2: Artifact Analysis.

2.2.3 Faunal Analysis

Faunal analysis focused on species identification and evidence of food consumption. Collected non-human vertebrate skeletal material was identified to the lowest possible taxa and analyzed

using an in-house comparative collection and reference texts (Adams and Crabtree 2008; France 2009). Identified faunal remains are discussed in Section 5.3: Faunal Analysis.

2.2.4 Floral Analysis

2.2.4.1 Palynological Analysis

Palynology is the branch of science concerned with the study of pollen, spores, phytoliths, and other palynomorphs. Palynomorphs are often preserved in soil/sediment samples and, following physical and chemical extraction, can be identified with a microscope. This information leads to the types of plants that made up the local environment, or the local watershed, at the time the sediment was deposited. A large amount of palynological research has been conducted on O‘ahu to examine human impacts on native vegetation.

Ten samples from two test excavations (T-7 and T-9) were submitted to BGP Consulting, LLC, in Flagstaff, Arizona for pollen analysis. The samples targeted a vertical series of natural alluvium deposits, including interpreted agricultural deposits (SIHP # -8840 Component 1). The results of the palynological analysis are presented in Appendix C and are discussed in Section 5.4.1: Pollen Analysis.

2.2.4.2 Wood Taxa Identification

Charcoal samples from two fire-related features (SIHP # -8840 Component 2, Features 2 and 4) were analyzed for species identification. Samples were sent to the Wood Identification Laboratory at International Archaeological Research Institute, Inc. (IARII), for taxa identification. The samples were viewed under magnification of a dissecting microscope and compared with anatomical characteristics of known woods in the Pacific Islands Wood Collection at the Department of Botany, University of Hawai‘i at Mānoa, as well as in published descriptions. Taxa identification of wood samples provides useful information for interpreting the environmental and cultural history of the area and helps to determine a general time frame of land use. Analysis by IARII also identifies short-lived plant species and/or plant parts that may be used for radiocarbon dating. Following analysis, samples were returned to the CSH laboratory. The results are presented in Appendix D and are discussed in Section 5.4.2: Wood Taxa Identification.

2.2.4.3 Radiocarbon Dating Analysis

Charcoal from SIHP # -8840 Component 2, Feature 4, fire-related feature, was submitted to Beta Analytic, Inc., of Miami, Florida, for radiocarbon dating analysis. Parenchyma charcoal was selected because it is not likely to have much inbuilt age, as soft storage tissues are not long-lived; hence, it provides a tighter timeframe for possible radiocarbon dates. The sample was analyzed using the accelerator mass spectrometry (AMS) method. The conventional radiocarbon age determined by Beta Analytic, Inc., was then calibrated to calendar ages using the IntCal 13 calibration program. The results are presented in Appendix E and are discussed in Section 5.4.3: Radiocarbon Dating Analysis.

2.2.5 Disposition of Materials

The Hawai‘i State rules governing AIS investigations (HAR §13-276) state the following regarding AIS collections from private lands:

> Arrangements shall be made with private landowners on the disposition of collections from their lands. If private landowners request archiving of material, then the archive shall be determined in consultation with the SHPD. [HAR §13-276-6]

All materials collected during the current AIS, including samples and artifacts, are the property of the landowner. Upon conclusion of the AIS investigation, all collected materials were temporarily stored at the CSH office in Waimānalo, O‘ahu. Disposition of the collection will be determined in consultation with the landowner. All data generated during the course of the AIS is stored at the CSH offices.

2.3 Research Methods

Background research included a review of previous archaeological studies on file at the SHPD; review of documents at Hamilton Library of the University of Hawai‘i, the Hawai‘i State Archives, the Mission Houses Museum Library, the Hawai‘i Public Library, and the Bishop Museum Archives; study of historical photographs at the Hawai‘i State Archives and the Bishop Museum Archives; and study of historical maps at the Survey Office of the Department of Land and Natural Resources. Historical maps and photographs from the CSH library were also consulted. In addition, Māhele records were examined from the Waihona ‘Aina database (Waihona ‘Aina 2019). This research provided the environmental, cultural, historical, and archaeological background discussed in the following section.

Section 3 Background Research

3.1 Traditional Background

The area that today comprises the portion of downtown Honolulu surrounding the mouth of Nu‘uanu Stream was known to Hawaiians as “Kou.” This area was a center of population and activity similar to Waikīkī, its preeminent neighbor to the southeast. Kou possessed shoreward fishponds and irrigated fields fed by streams descending from Nu‘uanu and Pauoa valleys (McAllister 1933:80). The land surrounding Nu‘uanu Stream was densely populated, with a concentration of *lo‘i* (irrigated taro patches) and *‘auwai* (irrigation ditches) that brought water to the agricultural fields (Figure 9 and Figure 10). There were several large fishponds, including Kawa and Kūwili, *makai* (seaward) of the current project, where Hawaiians raised fish. Additionally, nearby Honolulu Harbor was brimming with marine resources such as fish, crabs, shells, and seaweed. In addition, Kou/Honolulu had a long tradition as a royal center, where the *ali‘i* (chiefly class) would meet and entertain. Pukui (1983) recounts the poetical saying, *“Hui aka nā maka i Kou”* (“the faces will meet at Kou”), in reference to such gatherings (Pukui 1983:1128).

3.1.1 Place Names and Legends

Pukui et al. (1974:49–50) translate Honolulu as “protected bay,” referring to the protection of Honolulu Harbor. According to Westervelt (1915), Honolulu is a name made by the union of the two words “*Hono*” and “*lulu*”:

> Some say it means ‘Sheltered Hollow.’ The old Hawaiians say that ‘Hono’ means ‘abundance’ and ‘lulu’ means ‘calm,’ or ‘peace,’ or ‘abundance of peace.’ The navigator who gave the definition ‘Fair Haven’ was out of the way, inasmuch as the name does not belong to a harbor, but to a district having ‘abundant calm,’ or ‘a pleasant slope of restful land.’
>
> ‘Honolulu’ was probably a name given to a very rich district of farm land near what is now known as the junction of Liliha and School Streets, because its chief was Honolulu, one of the high chiefs of the time of Kakuhihewa, according to the legends. [Westervelt 1915:14]

Older names for the harbor are Kou and Māmala. Kākuhihewa was a *mō‘ī* (king, sovereign) of O‘ahu prior to the time of Kamehameha I. Kākuhihewa divided the island amongst his favorite chiefs and officers, who gave their names to the places they received; hence, the place now known as Honolulu was, until the time of Kamehameha I, called Kou after a chief who was an *ilāmuku* (marshal) under Kākuhihewa (Westervelt 1915:14). According to Westervelt (1915:14), “Ke-kai-o-Mamala was the name of the surf which came in the outer entrance of the harbor of Kou. It was named after Mamala, a chiefess who loved to play konane (Hawaiian checkers), drink awa [*kawa*; *Piper methysticum*], and ride the surf.”

The *ahupua‘a* (traditional land division) of Kou/Honolulu was subdivided into several smaller land divisions known as *‘ili*. The area between Maunakea Street and Nu‘uanu Stream, *makai* of King Street was known as Kapu‘ukolo. The area between Maunakea Street and Nu‘uanu Stream, *mauka* (inland, toward the mountains) of King Street to Beretania Street was called Kīkīhale. Pukui

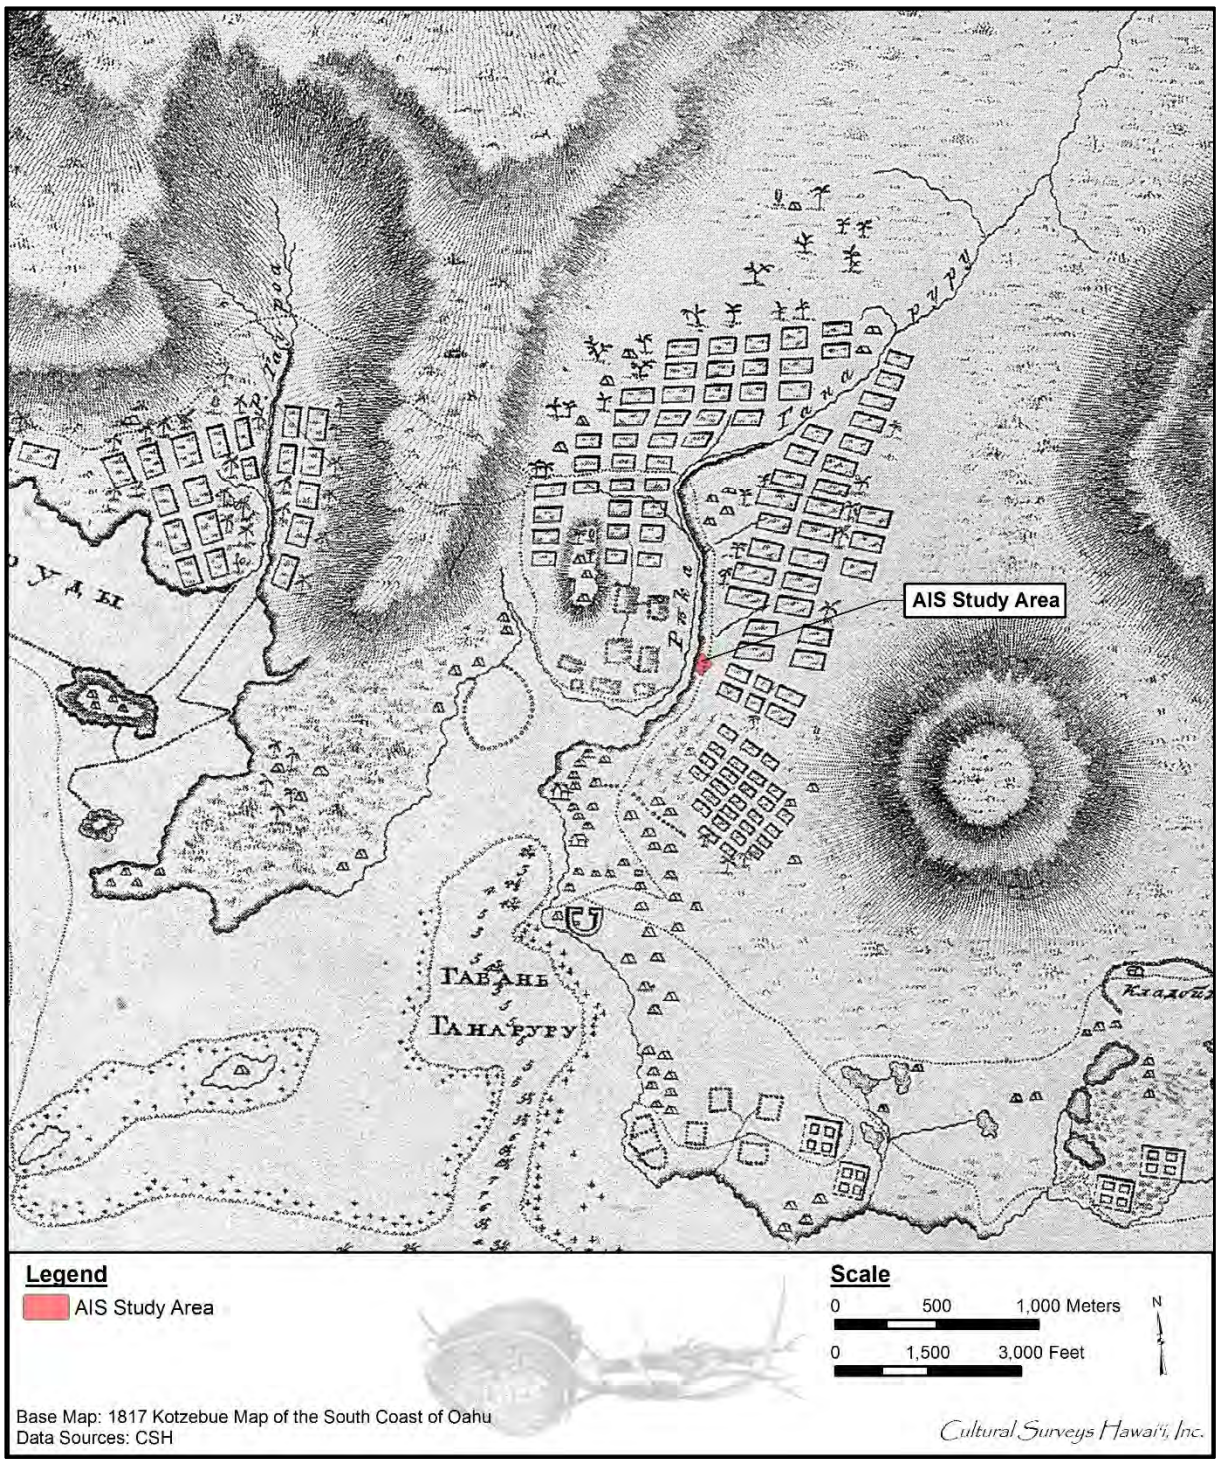

Figure 9. Portion of the 1817 map of the south coast of O‘ahu by Otto von Kotzebue, lieutenant of the Russian naval vessel, the *Rurick*, showing a concentration of taro fields (rectangles) around the banks of Nu‘uanu Stream and grass huts along the coast and the inland trails

Figure 10. Portion of the 1855 LaPasse map of the South Coast of Oahu, showing the AIS study area within a concentration of taro fields (rectangles) around the banks of Nu‘uanu Stream

et al. (1974:110) state that Kīkīhale was named for the daughter of the chief, Kou, for whom the area was named. The current project is within the *‘ili* of Kalāwahine (Figure 11), which Pukui et al. (1974) indicate as being named for a deity who guarded water sources. The literal translation is “the day [of] women” (Pukui et al. 1974:76). Some of these place names are mentioned in the legend of ‘Ai‘ai, described below (Thrum 1998:230–254).

Kū‘ula, the god presiding over the fish of the sea, had a son named ‘Ai‘ai. ‘Ai‘ai was the first to teach the Hawaiians how to make various fishing lines and nets and was the first to set up a *ko‘a kū‘ula*, a rock shrine, on which the fishermen would place their first catch as an offering to Kū‘ula. He was also the first to set up *ko‘a i‘a*, fishing stations, where certain fish were known to gather (Thrum 1998:231). Leaving his birthplace in Maui, ‘Ai‘ai traveled around the islands establishing *ko‘a kū‘ula* and *ko‘a i‘a*. He landed first at Ka‘ena Point, then traveled around the island of O‘ahu, stopping in Kaka‘ako (an *‘ili* now covered by One Waterfront Plaza) to visit his friend, Apua. Here, he met the famed O‘ahu chief, Kou, a skilled fisherman who caught the large *aku* (bonito; *Katsuwonus pelamis*) in the bay of Māmala (Honolulu Harbor). ‘Ai‘ai soon met a young woman named Puiwa. They married and had a son named Puniaiki.

One day, the family went to a dam on Nu‘uanu Stream to catch *‘o‘opu* (gobies) and *‘ōpae* (shrimp). When Puiwa left the newborn, Puniaiki, on the bank of the stream, the baby started to cry. ‘Ai‘ai told his wife to tend to the child, but she answered him back saucily. ‘Ai‘ai called on his ancestors, and a storm came up, flooding the dam and sweeping the child into the stream. Leaving his wife, ‘Ai‘ai went downstream to the *‘ili* of Kaumakapili. Here, he saw the chiefess Kīkīhale gather a large *‘o‘opu* from the stream. Kīkīhale’s guardian advised her to put it in a calabash with water and keep it as a pet. ‘Ai‘ai realized that the *‘o‘opu* was Puniaiki, his transformed child who had been swept downstream to Kīkīhale (referring to both the person and the *‘ili* named Kīkīhale). The next day, the chiefess’ guardian saw that the *‘o‘opu* had turned back into a child, and Kīkīhale instructed her to raise the child until it was an adult, so that she could take the young man for a husband. This came to pass, but the chiefess was not satisfied with her husband Puniaiki, since he did not bring fish home as the other men in the islands. Puniaiki was annoyed with her complaints and took the pearl fishhook, Kahuai, given to him by his father, ‘Ai‘ai, and went out with the men of Kou to fish for the *aku*. When Puniaiki held the pearl fishhook in his hand, “the akus, unprecedented in number, fairly leaped into the canoes. They became so filled with the fish, without labor, that they sank in the water as they reached Kapuukolo, and the men jumped overboard to float them to the beach” (Thrum 1998:247–248). This suggests Kapu‘ukolo was not only an *‘ili* name but also a canoe landing, a place to come ashore after *aku* fishing.

Kou is also mentioned in the legend of Hi‘iaka, beloved sister of the Hawaiian volcano goddess, Pele. Hi‘iaka and her companions had been traveling around O‘ahu on the land trails but decided to travel from Pu‘uloa (Pearl Harbor in ‘Ewa) to Waikīkī by canoe. At Pu‘uloa, Hi‘iaka met a party who was planning on traveling to the house of the chiefess Pele‘ula in Waikīkī. Hi‘iaka recited a chant, telling the people that although they were going by land, and she was going by sea, they would meet again in Kou:

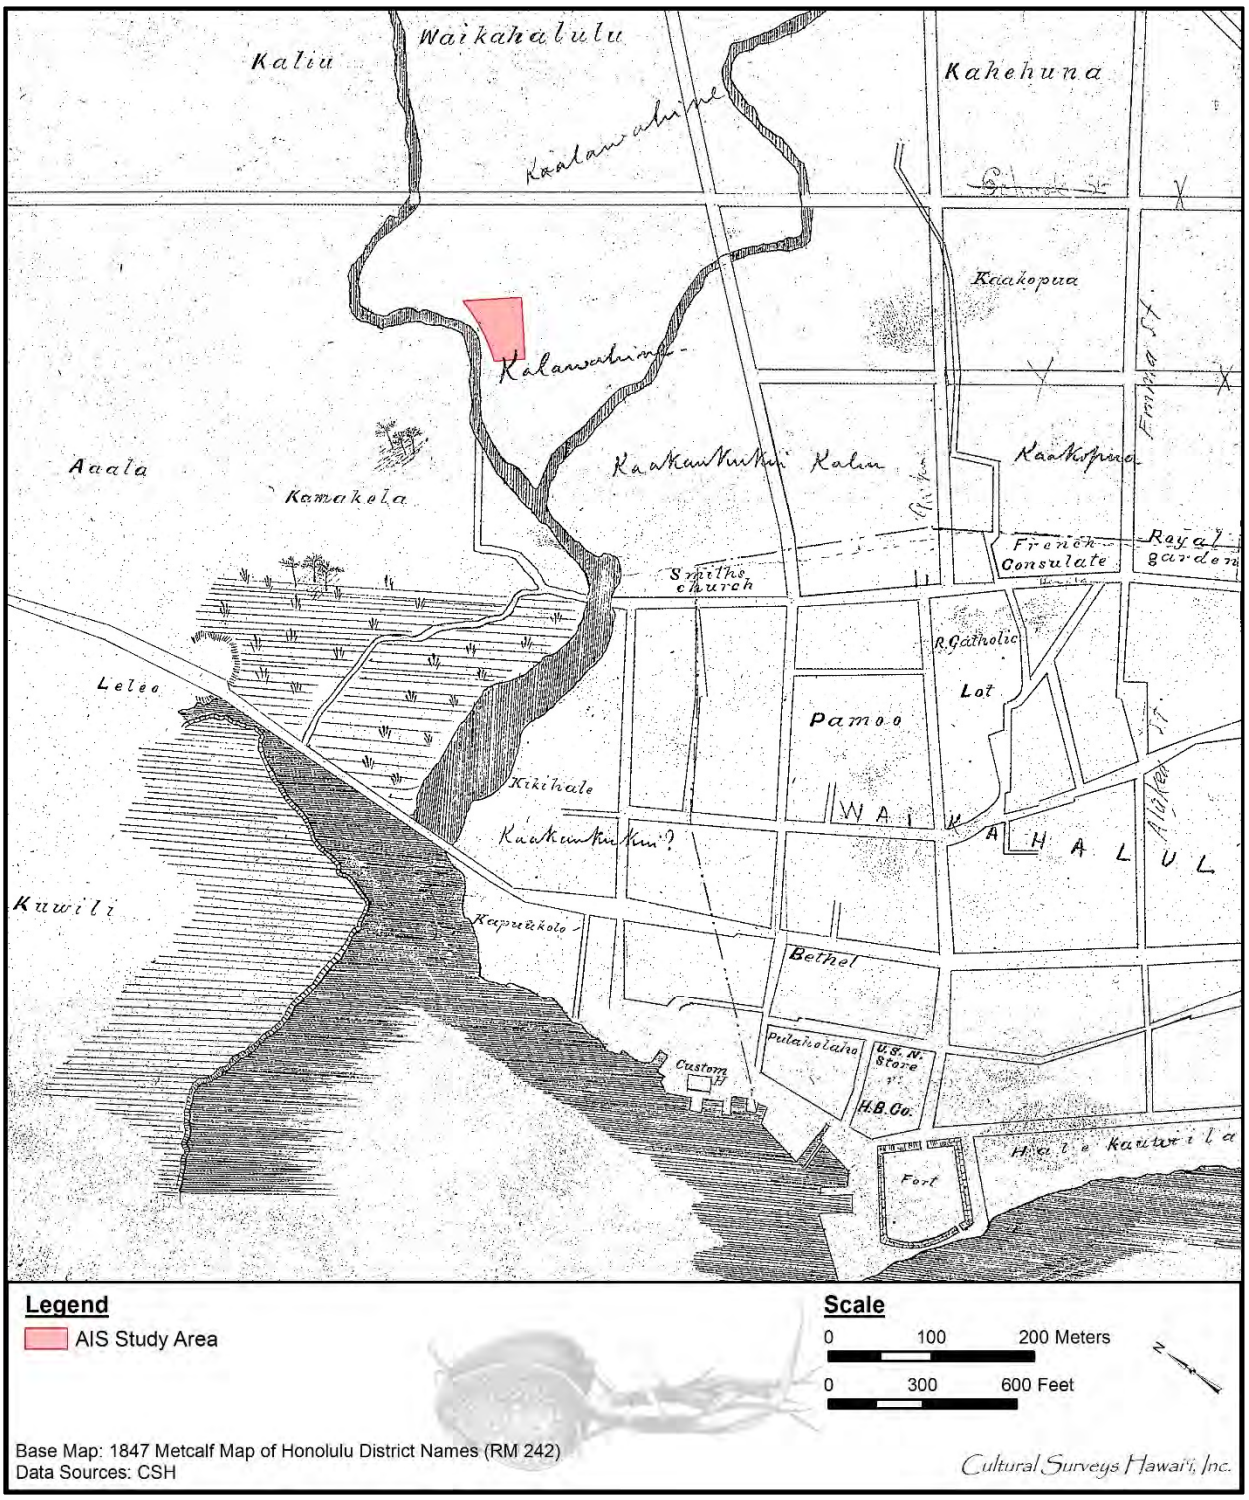

Figure 11. Portion of the 1847 Metcalf map of Honolulu District names (RM 242), showing the AIS study area within the *‘ili* of Kalāwahine

Kou is the coral flat	*‘O Kou ka papa*
Ka‘ākaukukui is the pool	*‘O Ka‘ākaukukui ka loko*
Some ‘alamihi [a black crab], indeed	*‘O ka ‘alamihi a‘e nō*
Wait all day until night	*‘O ka lā a pō iho*
Friends shall meet in Kou.	*Hui aku i Kou nā maka*.

[Ho‘oulumāhiehie 2008a:277; Ho‘oulumāhiehie 2008b:297]

3.1.2 *Ali‘i* and Battles

Nu‘uanu Valley, *mauka* of the current project, was the site of several battles during the pre-Contact period, usually between leeward Kona chiefs and windward Ko‘olau chiefs who moved along the Pali trail and pass to conduct raids into each other’s territories:

> Between Kahapa‘akai clear to the mouth of the valley were situated many celebrated *heiaus* (*luakini waihau*) where people went to worship. [These had been] erected in ancient days as war *heiaus* or *heiaus* for purifying the land; for Nu‘uanu had been a magnificent battleground in those old times. Here Pele-io-holani fought against Alapa‘i-nui, ruling chief of Hawaii, and so fought chiefs before and after his day. [Kamakau 1991:291]

Through a series of such battles, Kū‘ali‘i unified the island of O‘ahu around AD 1720-1740. In the Legend of Kalelealuaka, Kū‘ali‘i fought to overcome the district chief, Kākuihiwewa. An account from Thrum (1907:102) reported, “In a few days again came a report that Kualii had an army at a place called Kahapaakai, in Nuuanu. Maliuhaaino [the war chief of Kākuihiwewa] immediately marshaled his forces and started for the scene of battle the same evening.”

The hero Kalelealuaka had the ability to fly from one point to another in the blink of an eye. He became a warrior for the O‘ahu chief, Kākuhihewa, during a series of battles with the O‘ahu chief Kūali‘i. “Kalelealuaka flew to the battlefield, slaying many of the warriors, including the captain of Kūali‘i’s forces. Kūali‘i sued for peace and agreed to live as a subject under the dominion of Kākuihiwewa” (Thrum 1907:102).

However, in a second story of the battles in Nu‘uanu, it is Kūali‘i who is the victor:

> In the valley of Waolani, a side valley from the great Nuuanu, stood one of the sacred Heiaus called Kawaluna, which only the highest chief of the island was entitled to consecrate at the annual sacrifice. As Moi of Oahu the undoubted right to perform the ceremony was with *Kualii*, and he resolved to assert his prerogative and try conclusions with the Kona chiefs, who were preparing to resist what they considered an assumption of authority by the Koolaupoko chief. Crossing the mountain by the Nuuanu and Kalihi passes, *Kualii* assembled his men on the ridge of Keanakamano, overlooking the Waolani valley, descended to the Heiau, performed the customary ceremony on such occasions, and at the conclusion fought and routed the Kona forces that had ascended the valley to resist and prevent him. The Kona chiefs submitted themselves, and *Kualii* returned to Kailua. [Fornander 1996:280]

In 1783, the Maui chief Kahekili invaded O‘ahu, landing at Waikīkī. The chief of O‘ahu, Kahahana, resided at Kawānanakoa in upland Nu‘uanu at the time (Kamakau 1992:135). In

Fornander’s (1996) legendary account, Kahekili marched through several places in the vicinity of the current project:

> In the beginning of 1783—some say it was in the month of January—Kahekili, dividing his forces in three columns, marched from Waikiki by Puowaina, Pauoa, and Kapena [in Nu‘uanu], and gave battle to Kahahana near the small stream of Kaheiki. Kahahana’s army was thoroughly routed, and he and his wife Kekua-poi-ula fled to the mountains. [Fornander 1996:224–225]

Kahekili’s forces first moved toward Nu‘uanu Valley and reached Kulaokahu‘a, the arid coastal plain between Honolulu and Waikīkī. The great warrior Pe‘ape‘a, a follower of Kahekili who lived in Mānoa, heard of the Maui’s chief’s movements and ran toward the battle:

> *A lohe o Peapea, haalele iho la ia i ka wahine a holo mai la ma uka mai o Ualakaa, a Makiki, Pauoa, Kaheiki, e pili la me Maemae. Ilaila loaa iaia ka maka mua o na kanaka o Kahekili. A o ko Kahahana aoao hoi, i Waolani ka poe, i Maemae ka maka mua e iho mai ana.*
>
> When Peapea heard this he left his wife and ran above Ualakaa [Roundtop], Makiki, Pauoa, and Kaheiki, which is adjacent to Maemae. There he met the van of the army of Kahekili. As to the forces of Kahahana, the main army was at Waolani, while the front was descending from Maemae. [Fornander 1919:458–459]

At Ma‘ema‘e, which Fornander (1919) places around Wyllie Street (approximately 2 km *mauka* of the current project), Pe‘ape‘a came between the two forces and began to single handedly destroy Kahahana’s army:

> *Pela no kona hele luku ana a hiki i Luakaha, a Nuuanu. Hee o Kahahana ame kona mau alii a holo aku la, o ka nui ua pau i ka make ia Peapea. A puni ae la o Oahu nei ia Kahekili, lawe ae la o Peapea ia Kekuapoi, wahine a Kahahana i wahine nana, mamuli o kona koa ame ka ikaika, a noho iho la.*
>
> Thus he went slaughtering until reaching Luakaha [most *mauka ‘ili*] in Nuuanu. Kahahana and his chiefs were defeated and fled, the majority having been all slain by Peapea. Oahu being conquered by Kahekili, Peapea took Kekuapoi, Kahahana’s wife, as his own, on account of his courage and strength, and [they] lived together. [Fornander 1919:460–461]

3.1 Historical Background

3.1.1 Early Post-Contact Period

In the early post-Contact period, Kou was not a major destination for foreigners visiting the island. A discouraging factor for early trade on O‘ahu was political instability. The ruling chief Peleiōhōlani died around 1779, and his heir, Kumuhana, was almost immediately deposed in a *coup d’etat*. A period of political unrest followed. This included the successful invasion by Kahekili of Maui in 1783; the bloody crushing of the O‘ahu rebellion in 1786; the invasion by the Kaua‘i ruler, Ka‘eokūlani, in 1791; the passing of the rule to Kalanikūpule after Kahekili’s death in 1794; and finally, Kalanikūpule’s defeat by Kamehameha I at the Battle of Nu‘uanu in 1795 (Cordy 2002:42–44).

These events contributed to political and economic instability, which in turn delayed the development of Honolulu as a major port. Other events that diminished O‘ahu’s reputation as a port of call include the *Daedalus* killings in 1792; the mysterious death of Captain Kendrick in 1794; the seizure of the *Jackal* and *Prince Lee Boo* ships, which led to the deaths of Captains Brown and Gordon in 1795; and the wreck of the *Arthur* under Captain Henry Barber in 1796 (Beechert 1991:12–14). The earliest accounts of the south shore of O‘ahu recount the fear of attack; the difficulty of getting water and food, particularly yams (Portlock 1789); and, in one instance, the efforts of natives to seize a whaleboat (Dixon 1789:161).

3.1.1.1 Battle of Nu‘uanu

The Battle of Nu‘uanu, the most significant post-Contact battle, took place when Kamehameha, Hawai‘i Island chief, landed at Waikīkī to fight the forces of O‘ahu. This was Kamehameha’s final battle in his conquest of the island of O‘ahu, which took place in the valley *mauka* of the current project:

> Kamehameha landed his fleet and disembarked his army on Oahu, extending from Waialae to Waikiki. Consuming but a few days in arranging and organizing, he marched up the Nuuanu valley, where Kalanikupule had posted his forces, from Puiwa upwards, occupying Kaumuohena, Kapaeli, Kaukahoku, Kawananakoa, Luakaha, Kahapaakai, Kamoniakapueo, and Nuuanu. At Puiwa the hostile forces met, and for a while the victory was hotly contested; but the superiority of Kamehameha’s artillery, the number of his guns, and the better practice of his soldiers, soon turned the day in his favour, and the defeat of the Oahu forces became an accelerated rout and a promiscuous slaughter. Of those who were not killed, some escaped up the sides of the mountains that enclose the valley on either side, while a large number were driven over the pali of Nuuanu, a precipice of several hundred feet in height, and perished miserably. [Fornander 1996:347–348]

Thomas Thrum (1897) provides additional details regarding how the battle raged at Nu‘uanu:

> […] the position of the Oahu army was on the steep side of the hill, about three miles in the rear of the town of Honolulu. A stone wall protected them in front, and the steepness of the ground availed them against an assault. Believing themselves secure, they defied their enemies with insulting gestures and bravados. A field piece, which Young had brought to bear upon them, knocking the stones about their heads, disordered their ranks and they broke and fled. Its most fatal result was the death of Kaiana, who was killed by this ball. His loss spread consternation among his troops and rendered the victory comparatively easy. The forces of Kamehameha charged; in the onslaught many of the Oahuans were slain, and the rest pursued with great slaughter until they were driven to the end of the valley, which terminates in a precipice of six hundred feet, nearly perpendicular height, forming a bold and narrow gorge between the two forest-clad mountains. A few made their escape; some were driven headlong over its brink, and tumbled, mangled and lifeless corpses, on the rocks and trees beneath; others fought with desperation and met a warrior’s death […] [Thrum 1897:111]

3.1.1.2 Honolulu Harbor

Another factor for the delay in the development of Kou as a major port was the relatively late discovery of Honolulu Harbor, attributed to Captain William Brown in early 1793. Furthermore, Honolulu's prominence had to wait until Kamehameha I established peace and encouraged trade. Kamehameha defeated Kalanikūpule at the battle of Nu‘uanu in 1795 and in 1809, moved his court, government, and residence from Waikīkī to Honolulu. Hence, it was not until the first decade of the nineteenth century that newly arrived foreigners considered Honolulu a place of commercial importance. According to Kuykendall (1938:27), Honolulu was situated in a "rich and productive island and its protected harbor, the only accessible one in the entire group, [which] caused foreign ships to go there in preference to other places." However, into the 1820s, Honolulu remained more notable for its native culture than for Western urbanization. A visitor to Honolulu in 1819 wrote the following:

> The port of Onorourou [Honolulu], generally frequented today by all the European vessels that come to the islands, is without doubt the most favorable location with respect to shelter, commerce, and resources for the supply of ships. The town of Onorourou is located on a large, flat plain. It is on the shores of a bay of the same name. The houses, similar to the most part to those of Owhyhi [Hawai‘i] and of Mowi [Maui], are however interspersed with a certain number of houses built of stone that belong for the most part to Europeans or to Anglo-Americans. [de Freycinet 1978:42]

The 1830s marked a shift in the character of Honolulu as perceived by its inhabitants. By this time, Western commercial and missionary interests had supplanted the Native Hawaiian traditions that had once shaped the environment, and Western and urban ideals propelled Honolulu's growth. Such ideals found expression in events like the formal naming of streets, which commenced in September 1836. At that time, the *Sandwich Island Gazette* began soliciting suggestions for street names from its readers. Among those accepted were King Street, Beretania Street, and Garden Lane (Thrum 1884).

3.1.1.3 Francisco de Paula Marín

The history of the Gillilands in Hawai‘i (after whom the John R. Gilliland Sr. Building in the current AIS study area is named) begins first with Francisco de Paula Marín. Marín was a horticultural experimenter who acquired his knowledge as a youth working in the Andalusian vineyards of Spain. In 1793 or 1794, he traveled to Hawai‘i, where he was befriended by Kamehameha I. Marín served as Kamehameha's interpreter and assumed many government duties. Kamehameha, in turn, gave land to Marín for his agricultural experiments, and Marín introduced numerous plant species to the Islands (Gast and Conrad 1973). Marín had at least three wives of Hawaiian blood and many children. He was known for his flourishing gardens and vineyards, as well as for his reluctance to share those crops with friends and acquaintances; hence, the Hawaiian corruption of his name "Manini" has become a slang word for miserly (Encyclopaedia Britannica 2019).

Most of the current AIS study area is within land formerly owned by Marín, known as "The Vineyard" (see Figure 12 and discussion below of LCA 2938). Around 1813 or 1814, Marín travelled to California to obtain grape cuttings and other plants, which he brought back to O‘ahu. The site of the first planting of the grape cuttings was likely at his land on the harbor front (the

foot of present-day Fort Street); however, the following year (1815), he began a larger planting at his “new vineyard,” described as follows:

> The site of this planting was in the area known as Kalawahine, which had been allotted to Jonathan Winship [pioneer of the sandalwood trade, which Marín had encouraged to Kamehameha to enter] by the king. It was located at the confluence of Nuuanu and Pauoa streams, close to what is now Kukui and River streets […]. Marin had asked Kalanimoku [high chief, similar to a prime minister] for land in which to plant his vines, and Kalanimoku arranged with Winship for the use of part of the Kalawahine holding. [Gast and Conrad 1973:50]

From that time onward, wine-making was almost a year-round activity for Marín. Years later, when a new street adjacent to its *mauka* boundary was constructed, it was called Vineyard Street.

Jacques Arago visited the vineyard in 1819 and described it as follows:

> Yesterday, I made a very interesting excursion, and visited the vineyard of Marin […]. It is situated on the slope of a beautiful hill. The foot of which is watered by a small river bordered by palma christi [castorbean; *Ricinus communis*], banana and superb cocoa-nut trees. I gathered some of the grapes from the vine and found them excellent. [Hee 1955 in Gast and Conrad 1973:52]

Ten years later (1829), C.S. Stewart visited the vineyard and described it as follows:

> We had scarcely passed a hundred rods from the village before we found something new to admire in the yard of Mr. Marini. After crossing a small stream which bounds it on one side, our path led us the whole length of another. It is well planted and cultivated, and yields grapes sufficient to make considerable quantities of wine. Along the fences in some parts are bushes of the damask rose in full bloom, which appeared to fine advantage, in contrast with the pale yellow blossom of the cotton tree, with which they are interspersed. The vineyard is also skirted with pineapples, in different stages of maturity […] [Stewart n.d. in Gast and Conrad 1973:52]

3.1.2 Mid-1800s

3.1.2.1 The Māhele

The Organic Acts of 1845 and 1846 initiated the process of the Māhele, the division of Hawaiian lands, which introduced private property into Hawaiian society. In 1848, the crown and the *ali‘i* received their land titles. *Kuleana* (commoner) awards for individual parcels within the *ahupua‘a* were subsequently granted in 1850. These awards were presented to tenants, Native Hawaiians, naturalized foreigners, non-Hawaiians born in the Islands, or long-term resident foreigners who could prove occupancy on the parcels prior to 1845 (Chinen 1958).

Land Commission Award (LCA) documentation provides information on land use within the AIS study area. Historical maps show the majority of the AIS study area as within LCA 2938 to Huanu, for the heirs of Lahilahi (Gilliland ‘Ohana [Family]) (Figure 12 and Figure 13). Huanu is the “grandson of Marin” (see above discussion of Francisco de Paula Marín), and this claim is for “farm land in the vineyard” (Waihona ‘Aina 2019). According to LCA documentation, “P. Manini [another name for Marín] formerly held this land from Kamehameha I, having received it from

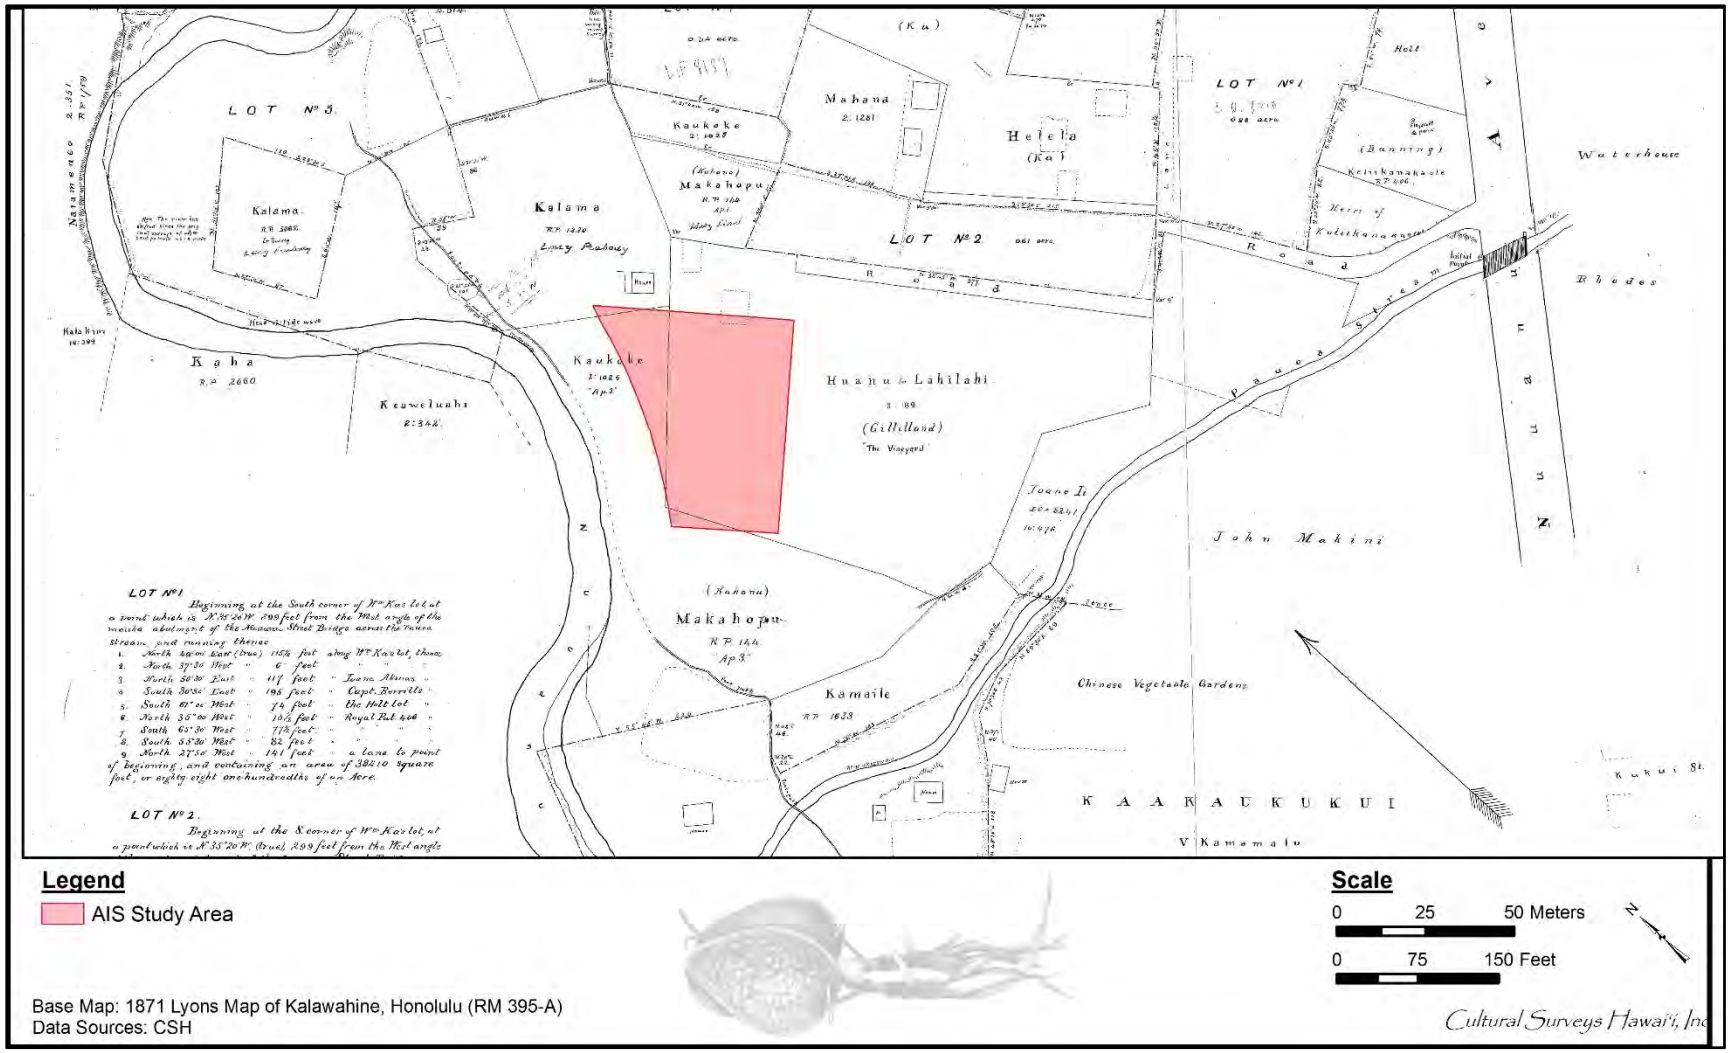

Figure 12. 1871 Lyons map of Kalawahine, Honolulu (RM 395-A), showing LCAs in the vicinity of the AIS study area

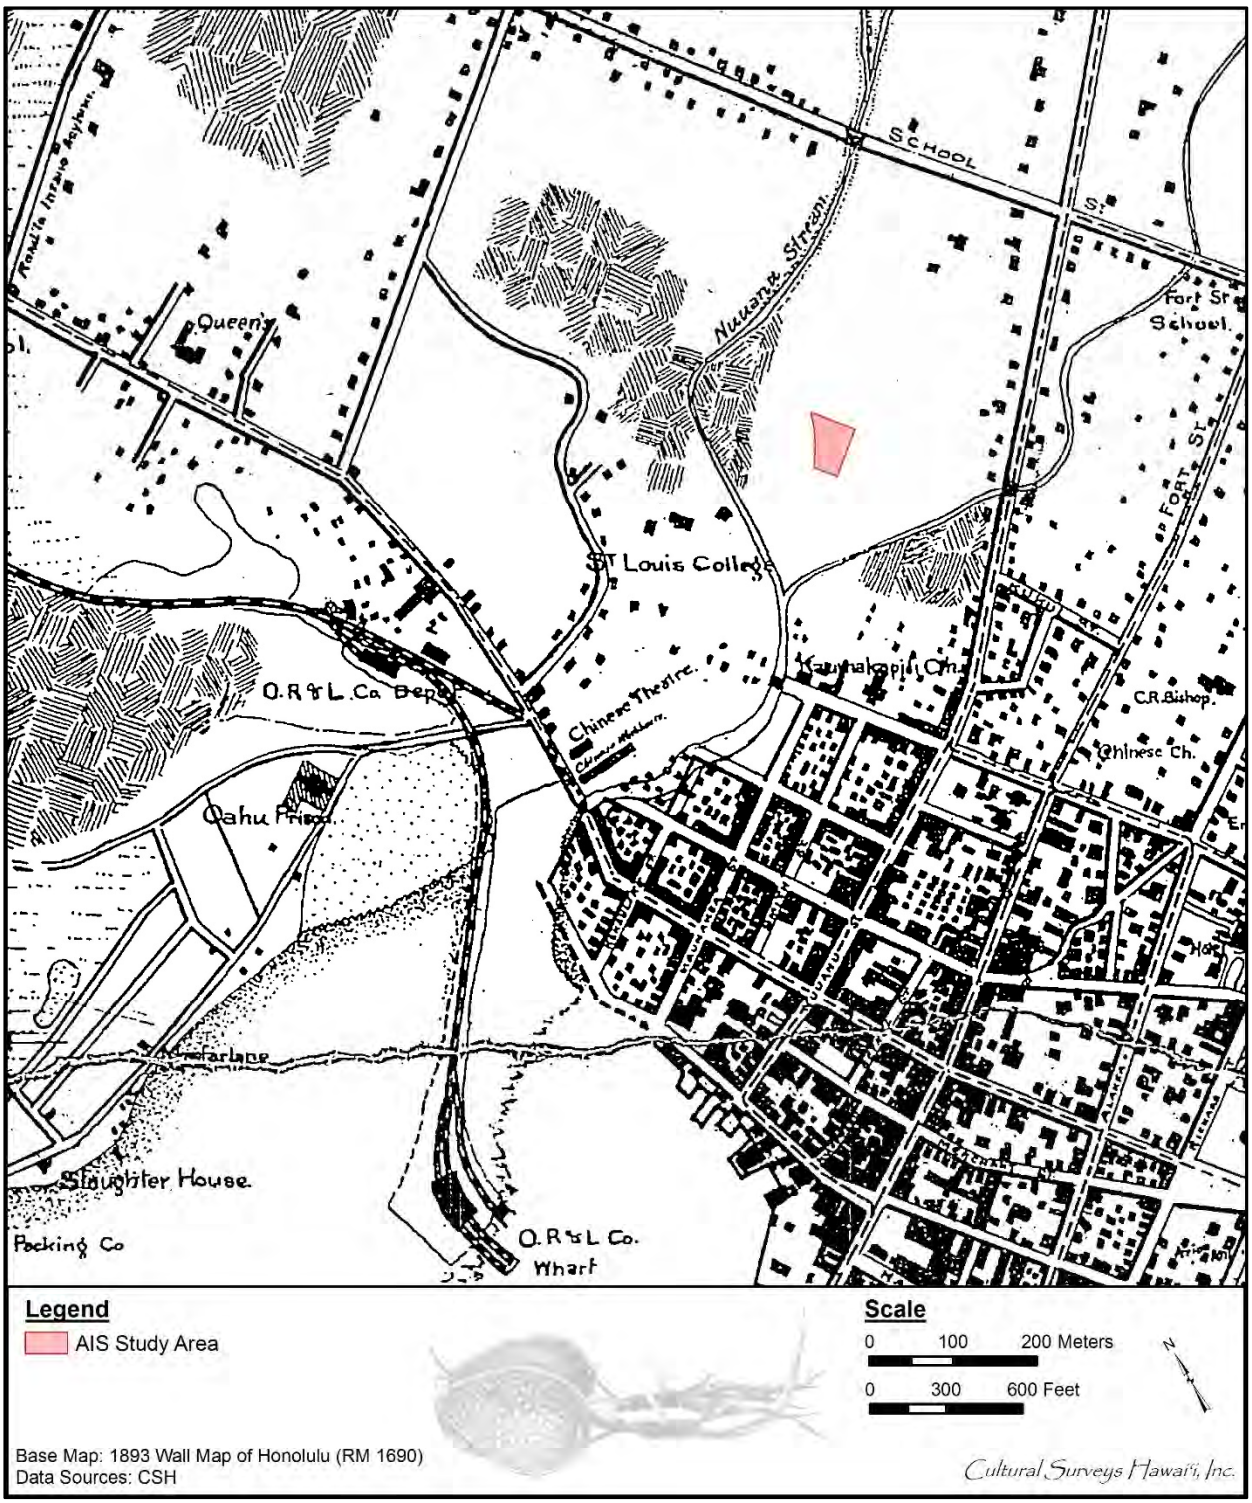

Figure 13. 1893 Dodge and Wall map of Kamanuwai Block and a Part of Kamakakela (RM 1651), showing LCAs in the vicinity of the AIS study area

him. On death of Manini, it came to his daughter, Lahilahi, and on her death to her children […]. The lot is fenced round and has been cultivated and never disputed" (Waihona ‘Aina 2019). The parcel comprises 2.311 acres.

Most of the ‘Ewa (northwest) portion of the AIS study area is within LCA 11082:3 to Kaukoke. The parcel is 330.8 *anana* (Hawaiian unit of measurement equivalent to the distance between the fingertips of the outstretched arms, approximately 2 yards [Mattimoe and Nagao 1967]). In addition, small sections in the west corner of the AIS study area appear to overlap with LCA 141:2 and 3 to Makahopu (also called Makahoku). According to LCA documentation, Makahopu "made the fence and a house and planted food […]. There are some lahala [*Pandanus tectorius*] trees planted on the land by Kaahumanu's orders" (Waihona ‘Aina 2019). ‘Āpana (lot) 2 is 105.9 *anana*, while ‘Āpana 3 is 1,133.7 *anana*. Additionally, the far north corner of the AIS study area may be within LCA 715:1 to Kalama. This claim for four taro patches and a house site comprises 1.03 acres. LCA documentation is included in Appendix B.

Landscape features (solid and dashed lines) depicted within the AIS study area on the 1871 Lyons map and the 1893 Dodge and Wall map (see Figure 12 and Figure 13) may represent the boundaries between LCAs and/or agricultural or house plots within LCAs. A structure is also indicated as partially within the northeast portion of the AIS study area.

3.1.2.2 Mentions of Kalāwahine in Hawaiian Language Newspapers

Two notices published in *Ka Hae Hawaii* in 1861 describe the prohibition of people and animals, including horses, cows, mules, and donkeys, from trespassing upon the fields of Kalāwahine (*Ka Hae Hawaii* 10 and 31 July 1861). The second notice additionally describes a prohibition on the collection of firewood at the mountain in Kalāwahine, without permission from the *konohiki* (land supervisor) P. Naone. These prohibitions were placed by "L. Haalelea," presumably referring to Liwai (Levi) Ha‘alelea, the son of Ha‘alou, governor of Moloka‘i under Kalaimoku. Ha‘alelea was a Hulumanu (court favorite) of Kamehameha III and was elevated to chief upon his marriage to Kekauonohi, daughter of Kamehameha I, around 1848 (Barrere 1994).

A 31 October 1861 notice in *Ka Hoku o Ka Pakipika* announces the auction of the estate of Po, which included five *lo‘i* at Kalāwahine.

In addition, two birth and death announcements for residents of Kalāwahine appeared in *Ka Nupepa Kuokoa*. Nawahinelua was born on 22 April 1862 (*Ka Nupepa Kuokoa* 10 May 1862), while Kaili passed away on 25 June 1865 (*Ka Nupepa Kuokoa* 6 July 1865).

3.1.3 Late 1800s

3.1.3.1 Increased Urbanization

The first efforts to deepen Honolulu Harbor were made in the 1840s. The idea of using the dredged material composed of sand and crushed coral to fill in low-lying lands was quickly adopted. From 1857 to 1870, the "Esplanade" between Fort and Alakea streets was created on 22 acres of former reef and tideland. By 1874, Sand (Quarantine) Island, site of the first immigration station, had been created over "reclaimed" land on reefs.

In 1846, Honolulu was made the capitol of the Hawaiian Kingdom and was well on its way to becoming the commercial and political hub of the Islands. Charles Wilkes, commander of the U.S.

Exploring Expedition, visited Hawai‘i in 1841 and related that Honolulu was “very conspicuous from the sea and has more the appearance of a civilized land, with its churches and spires, than any other island in Polynesia” (Wilkes 1856:373). Honolulu was in a period of rapid change during the latter half of the nineteenth century, and Reverend Sereno Bishop (1916) offered a unique perspective on the changes in the layout of Honolulu and the buildings that lined the streets:

> When I returned to Honolulu in 1853, after an absence of thirteen years, I was struck by the many changes […]. The major portion of the residents of Honolulu still lived in thatched houses [in 1840]. In fact the town was almost entirely composed of this kind of dwellings […]. When I went away there were only Punchbowl Road, Beretania Street, King Street and Merchant Street. This was the condition of the city in 1840. [Bishop 1916:58]

Beginning at the start of the whaling era (ca. 1820) and extending into the 1840s and 1850s, when seamen came ashore for “rest and relaxation,” the downtown area from Nu‘uanu Street west to Nu‘uanu Stream was a district of “dilapidated native huts and tenements, tiny bar-rooms, coffeeshops, and run-down boarding houses, all turning to the harbor for their opportunities and income” (Daws 2006:239). However, there was some movement of wealthy Caucasian residents into the lower section of Nu‘uanu in the mid- to late nineteenth century. Malcolm Brown (1918) noted the following:

> Towards the latter part of the 1800’s, Nuuanu became the fashionable residential district, and there were many beautiful homes lining Nuuanu Ave. and the cross streets in the valley […]. The houses were big because there were many children in most families, and the house lots were large because they needed pasture space for their horses. [Brown 1918:28]

By the late 1800s, historical maps show increasingly dense land use and urbanization in the vicinity of the current project, particularly *makai* of the subject parcel (Figure 14 through Figure 17). St. Louis College, approximately 100 m west of the current project, was established in 1883 by Right Reverend Hermann, D.D. (Doctor Divinitatis), Bishop of Olba. Hermann recruited teachers from the United States and intended for the school to be a first-class preparatory, classical, and commercial school. The school initially comprised a single two-story brick building; however, due to the influx of students, additional accommodations were later constructed (Alexander 1896). The gradual expansion of the campus can be seen in Figure 15 through Figure 17.

3.1.3.2 Realignment of Nu‘uanu Stream

Another change in the late nineteenth century was the realignment of Nu‘uanu Stream. In the late nineteenth century, spurred by the deaths during the recent cholera epidemic, the government began to plan and institute public improvements to the roads, bridges, sewer systems, and streams in the western Honolulu area. Thomas Thrum (1896), editor of the *Hawaiian Almanac and Annual*, reported on these improvements in his annual retrospect of the preceding year:

> The new spirit of public improvements […] has been pushed with vigor. The relaying of larger water mains through a number of streets and completion of the new pumping plant, auxiliary to the reservoir system, was effected in time to do valuable service during the cholera period by shutting off the reservoir supply with its possible contamination, and flushing the mains with artesian water […]. The

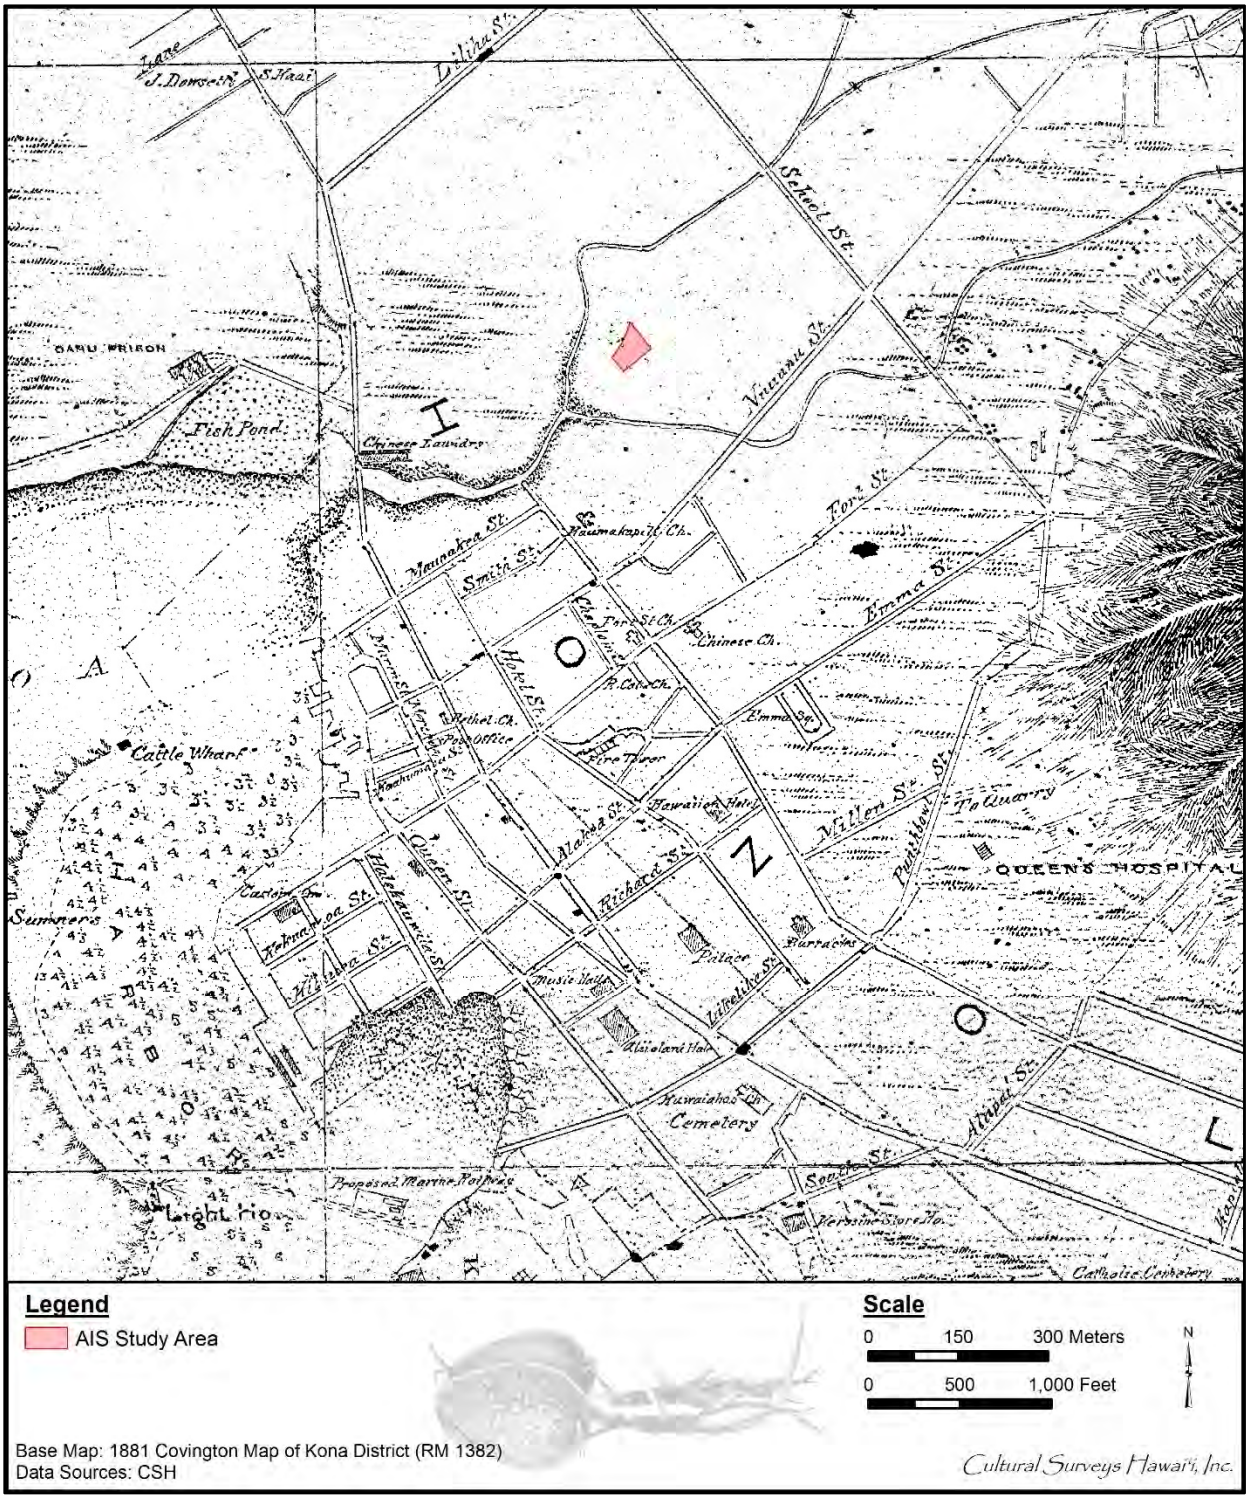

Figure 14. Portion of the 1881 Covington map of Kona District (RM 1382), showing urban development *makai* of the AIS study area

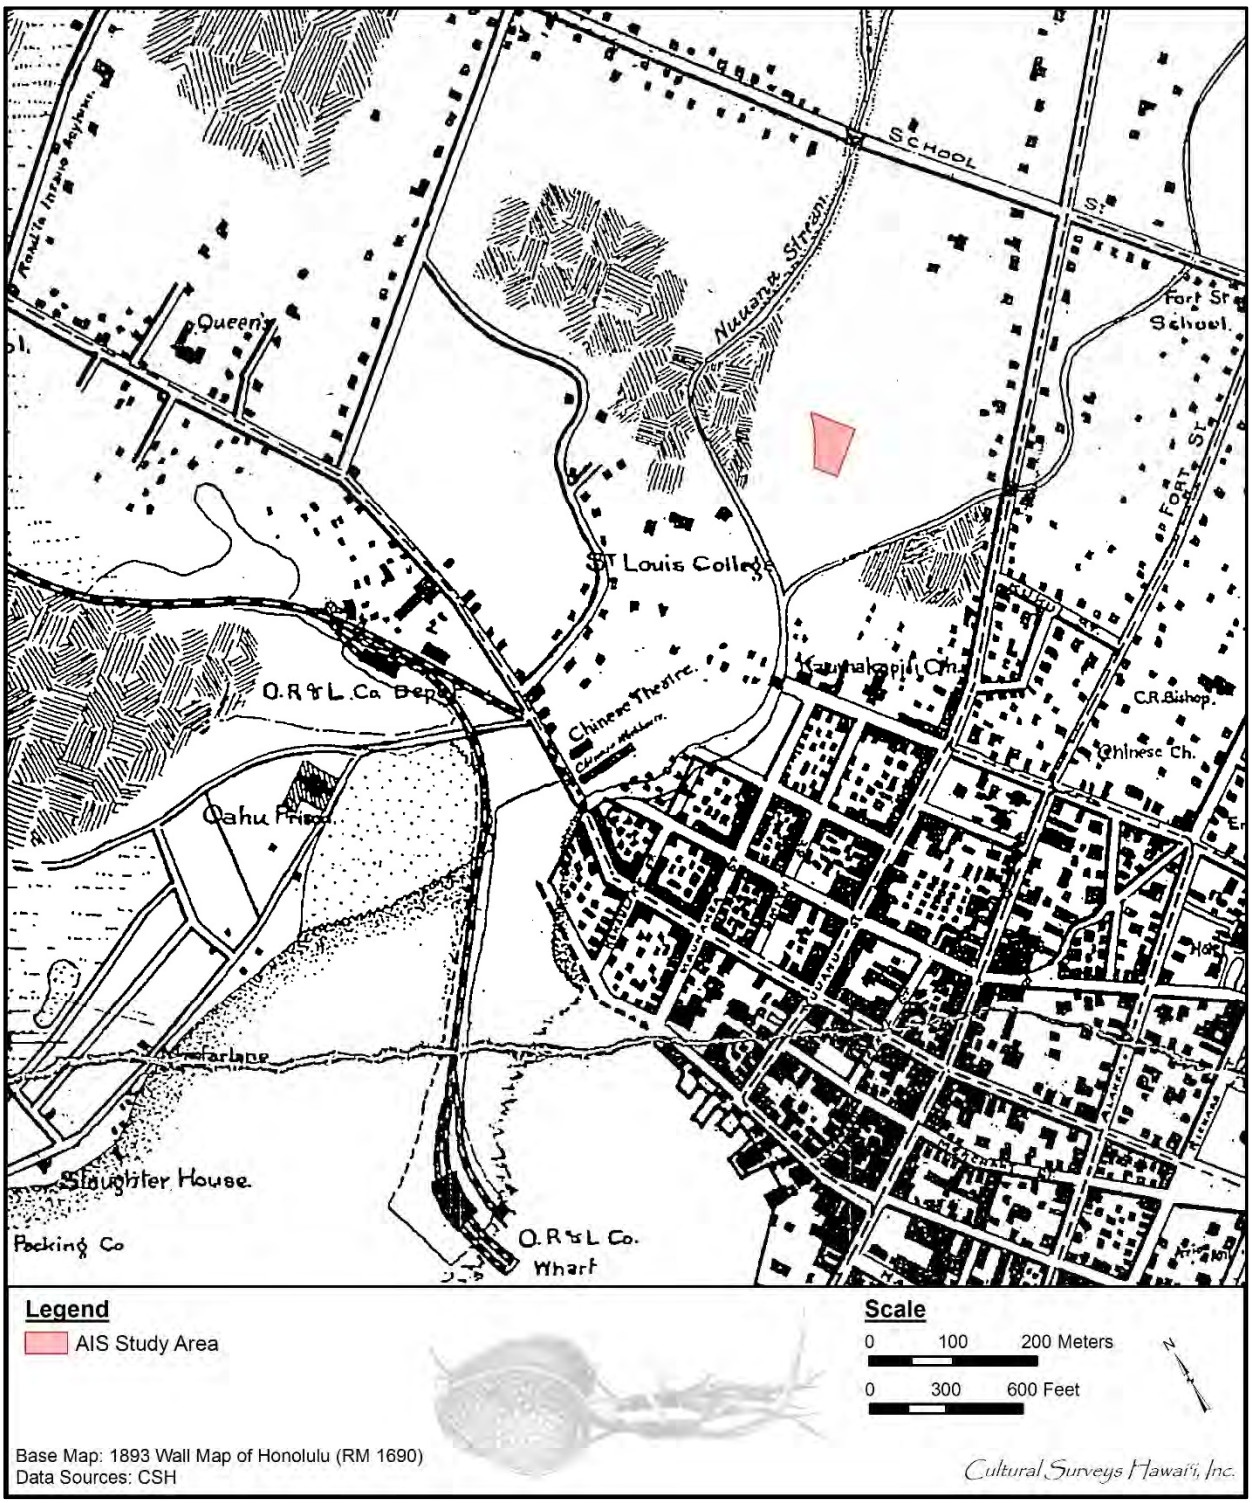

Figure 16. Portion of the 1893 Wall map of Honolulu (RM 1690), showing urban development *makai* of the AIS study area

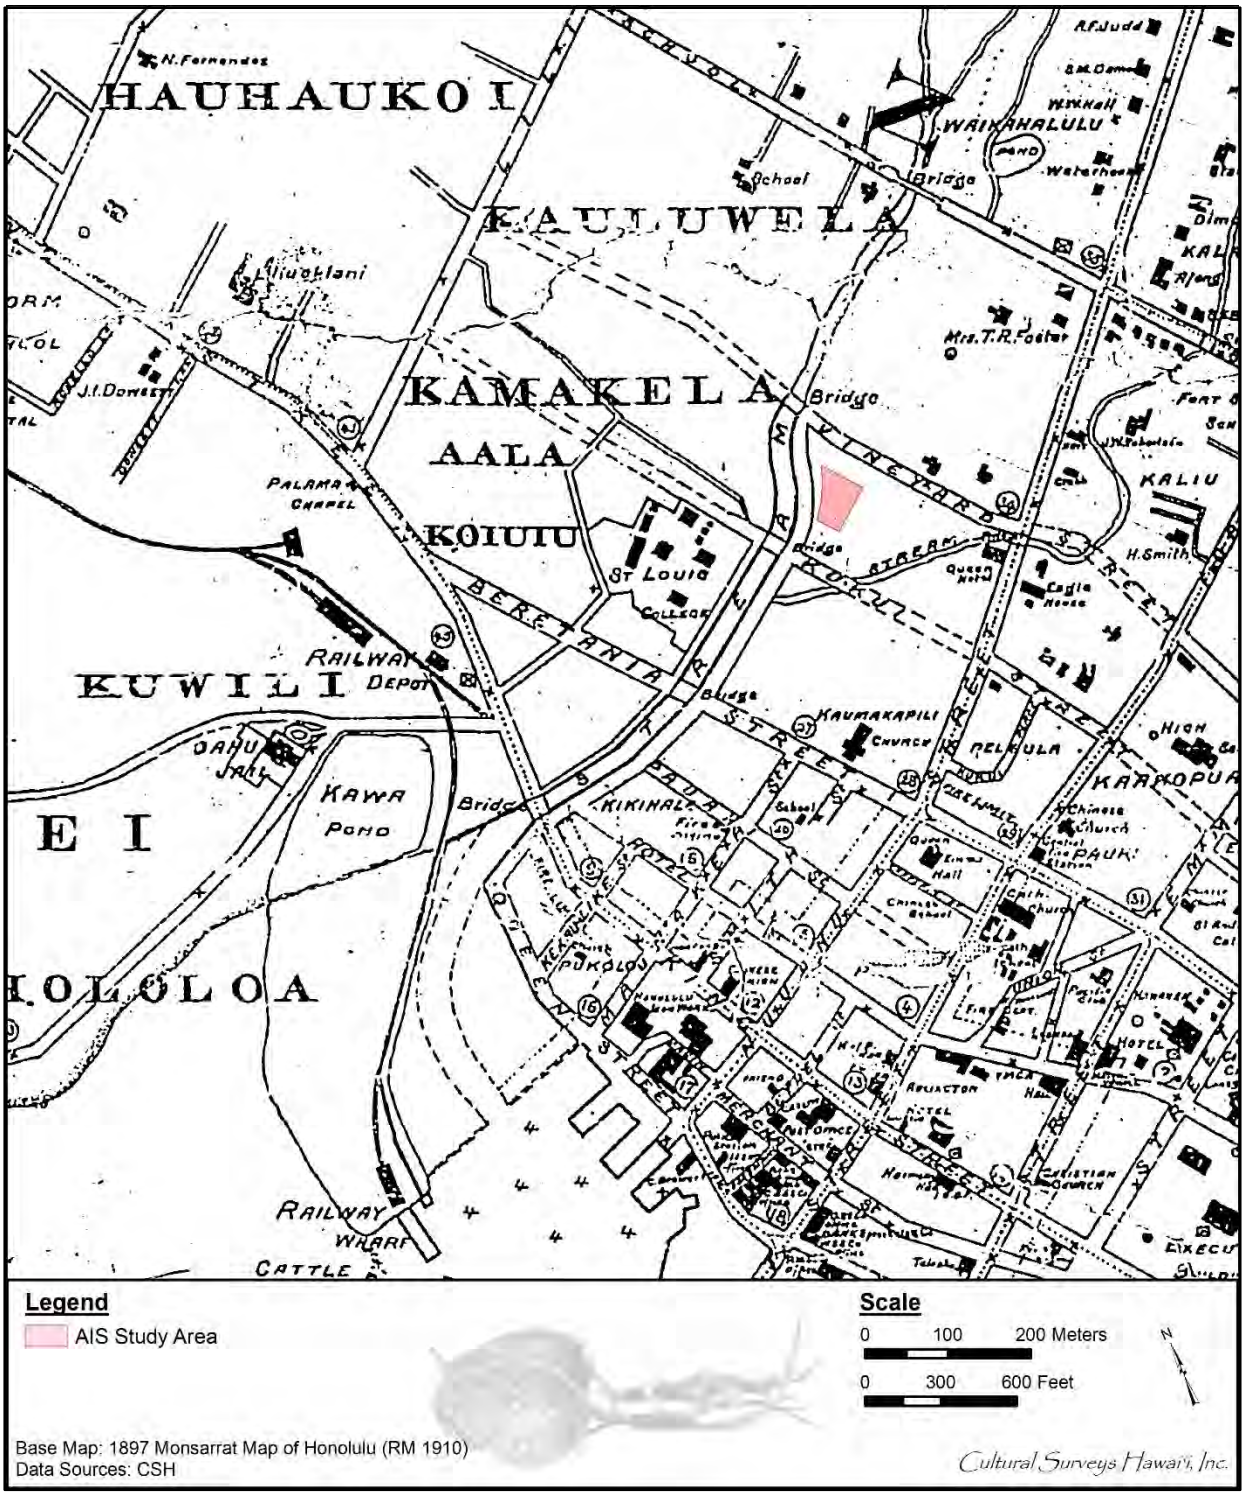

Figure 17. Portion of the 1897 Monsarrat map of Honolulu (RM 1910), showing urban development surrounding the AIS study area

> enlargement of the inner harbor by dredging, with contemplated increased wharfage facilities along the extension of Queen street toward the King street bridge has already been entered upon. The dredging serves the further beneficial purpose of filling in the low land partly occupied, till recently, by the old wash houses, on the northern side of Nuuanu stream which is to be assigned to park [Aala Park] purposes for the benefit of the residents in that part of the city and the improvement of its sanitary condition. This, with the change of the wash houses to Iwilei, and the hurried occupancy of the new market, and destruction of the old one, were imperative health measures adopted during the cholera visitation. [Thrum 1896:144]

Beginning in 1896, Nu‘uanu Stream was dredged, and the water course was changed. The stream was diverted from approximately 100 m west of the current AIS study area to nearly adjacent to it (see Figure 11 through Figure 17). A stone wall was built on both sides of the stream, and dredged material was used to create River Street, adjacent to the current AIS study area (Hurst 1992). Due to the infilling and stabilization of the Nu‘uanu stream banks, more substantial wood structures could be built, replacing the adobe cottages and dilapidated shacks of the early years.

3.1.4 1900s to Present

Honolulu in the late nineteenth century consisted of many unpaved streets and several small lanes (that no longer exist) between major roads. Bishop Street, the main road now between Fort and Alakea streets, did not exist. However, by 1919, Honolulu had wide paved streets with blocks of contiguous brick and stone stores along all major downtown roads. The first section of Bishop Street, between Fort and King streets, was built in 1900. This street quickly became the financial sector of the city, and many of the “Big Five” companies (Castle & Cooke, Alexander & Baldwin, C. Brewer & Company, American Factors [now Amfac], and Theo H. Davies & Company) built their headquarters and their banks on this street (Ames 1996:27). By 1918, the section from the harbor to King Street had been completed and paved (Ames 1996:119). In 1919, the *mauka* extension of Bishop Street from Hotel to Beretania streets began. The city condemned all the property in the way of this new thoroughfare and, in 1927, razed all of the buildings (Ames 1996:120).

3.1.4.1 Chinatown

In 1852, there were only about 71 Chinese living around Honolulu, most of whom had come to the Islands as merchants and continued to carry out this trade. That year, sugar planters began to import large numbers of Chinese “coolies” to work on their sugar plantations. Once their contracts were fulfilled, some of the workers moved to Honolulu to open their own businesses in the area that came to be known as Chinatown. The unsanitary and over-populated area alarmed the white business class, who noted that “[m]ost Chinese businesses were housed in decaying buildings on the depressed lower blocks of Nu‘uanu and Maunakea Street, and in Chinatown the womanless coolies congregated to gamble, smoke opium or simply pass the time” (Daws 2006:300). By the 1870s, a sizeable population of Chinese immigrants had settled in Honolulu, concentrated in the blocks between Nu‘uanu and Maunakea streets (see Figure 16). An 1878 census recorded 1,299 Chinese in Honolulu; the total city population numbered 14,114.

In 1899, the first case of bubonic plague was identified in Hawai‘i, in a Chinese bookkeeper named You Chong. After an examination by Dr. G.H. Herbert, who noted a high temperature and

swelling in the groin, the patient died the next night. After an autopsy, the diagnosis of bubonic plague was determined. Since the disease had broken out in the immigrants' area of Honolulu, all Chinese and Japanese were barred from leaving Honolulu for other ports. Two other cases were reported the same day, and the Board of Health laid down a strict quarantine for Chinatown (area bound by Nu‘uanu, Kukui, River, and Queen streets; just *makai* of the current project). Approximately 7,000 people, primarily Chinese and Japanese immigrants, lived and worked in this area (Iwamoto 1967:122–124). A third ethnic group who inhabited this area were Hawaiians, numbering approximately 1,000, on land their families had occupied for generations (Mohr 2005:63).

From 12 December 1899 to 31 March 1900, 71 cases of bubonic plague were reported; 61 people died, 41 of whom lived within the established Chinatown quarantine area. The Board of Health concluded they could not contain the plague and decided the best remedy was to set "sanitary fires" to infected wooden buildings. Forty-one controlled fires were set between 31 December 1899 and 13 August 1900 as follows:

> Therefore, on December 30, after careful deliberation, the Board of Health chose fire as the 'surest, most thorough, and most expeditious' method. Fire would destroy the plague germs, kill rats, cleanse the soil and open it up to the purifying influence of sun and air, and would prevent any occupancy of the premises until a safe period of time had elapsed. [Iwamoto 1967:124]

Infected patients were moved to a quarantine camp at Kaka‘ako. Some people, not necessarily patients, whose houses were burned were housed at the barracks of the Kaka‘ako Rifle Range. Their belongings were stored in the cellars of Kaumakapili Church, approximately 200 m south of the current project (see Figure 14 through Figure 17).

On 20 January 1900, a fire set between Kaumakapili Church and Nu‘uanu Avenue quickly got out of control. Rising winds swept burning embers to the roof of the church; the fire then jumped to several other blocks and then to the wharfs:

> By 1:30 p.m. the fire began making its way from Beretania Street along Achi Lane toward Kukui Street. People feared that the *mauka* section of the city would be destroyed. Chinatown refugees rushed back to save belongings, but were driven back by fire and smoke; they formed a seething mob near the bridge and Kukui Street […]. The Chinese consul and vice consul also circulated among the people and tried to pacify them, since at this time the Chinese believed that the Board of Heath had purposely burned their homes. [Iwamoto 1967:130–131]

No one was killed in the fire, but Chinatown was destroyed. Many people were homeless and bereft of all belongings, which were lost when Kaumakapili Church burned to the ground. No additional patients were identified with the disease in April 1900, and the Hawaiian Islands were declared free of the plague (Iwamoto 1967:125, 129).

The Chinatown Historic District (SIHP # -9986) is approximately 200 m *makai* (southwest) of the current project. The buildings are typically two or three stories, with older buildings made of brick, wood, or cut stone, and newer buildings made of concrete or steel. Despite the relatively small population of Chinese currently living in Chinatown, this area still serves as the principle

center for the business and social life of the Chinese community of the island (Historic Hawai‘i Foundation 2015-2016).

3.1.4.2 Foster Botanical Garden

Foster Botanical Garden comprises 21.02 acres of land adjoining Nu‘uanu Stream in downtown Honolulu. The garden can be divided into two sections. The southern section, called Foster Garden, is 13.55 acres. The northern section, called Lili‘uokalani Garden, is 7.475 acres. Although there are no major architectural features within the garden, the historic landscaping, which includes a large number of historic trees, makes this area significant to the history of Hawai‘i (Follmer 1988).

In 1855, William Hillebrand, a German physician and botanist, settled on approximately 6 acres of purchased and leased land west of Nu‘uanu Avenue and east of Nu‘uanu Stream. Hillebrand propagated trees and cultivated a botanical garden there until he returned to Germany some 20 years later. In 1880, ship owner Thomas Foster and his part-Hawaiian wife, Mary, purchased the property. Mary Foster expanded the existing garden by increasing the acreage of the property and planting additional trees. In 1919, she leased 2 acres to the Hawaiian Sugar Planters' Association for an experiment station (Follmer 1988).

In 1884, Princess (later Queen) Lili‘uokalani purchased the land that came to be known as Lili‘uokalani Garden from the estate of Queen Kalama, wife of Kamehameha III. During most of her adult life, Lili‘uokalani kept a small house on the property, just above the falls. In 1912, five years before her death, the newly established Lili‘uokalani Trust transferred the Queen's land to the Civic Federation of Honolulu as a park and recreation ground. The Civic Federation then acquired additional lots in the area and, in 1916, transferred 2.75 acres of land to the City of Honolulu. The City subsequently added another 4.75 acres to the garden (Follmer 1988).

In 1930, Mary Foster bequested her home and garden, comprising 5 acres, to the City of Honolulu; an additional 8.5 acres was subsequently added. Foster Botanical Garden (SIHP # -1389) is the core of a botanical garden system that collectively contains the most diverse tropical plant collection in the United States (Follmer 1988). It is approximately 50 m *mauka* (northeast) of the current project, just across Vineyard Boulevard (Figure 28 through Figure 31).

3.1.4.3 Development within the Current AIS Study Area

A review of twentieth century historical maps and aerial photographs (Figure 18 through Figure 31) indicates urban development within the AIS study area by 1906. At that time, a tenement was at the center of the AIS study area, while several dwellings and stores were along the northwestern boundary; a kitchen facility was in between the tenement and the stores (see Figure 18 and Figure 20). The stores included a Plumbing and Tin Shop, a restaurant, and a Mattress Factory (see Figure 20 and Figure 23). By 1950, additional dwellings were within the eastern and southeastern portions of the AIS study area, and a parking area for automobiles was at the south corner (see Figure 27). The stores along the northwestern boundary, although in the same location, were described as having concrete floors by that time; hence, these buildings may have been remodeled or rebuilt between 1927 and 1950.

The John R. Gilliland Sr. Building was constructed within the AIS study area in 1958; it is visible on 1968 and 1982 aerial photographs (see Figure 29 and Figure 31). Fung Associates (Hibbard and Chiu 2016) assessed this two-story commercial building as eligible for listing on the National Register under Criterion C. They assert that the building is architecturally significant as

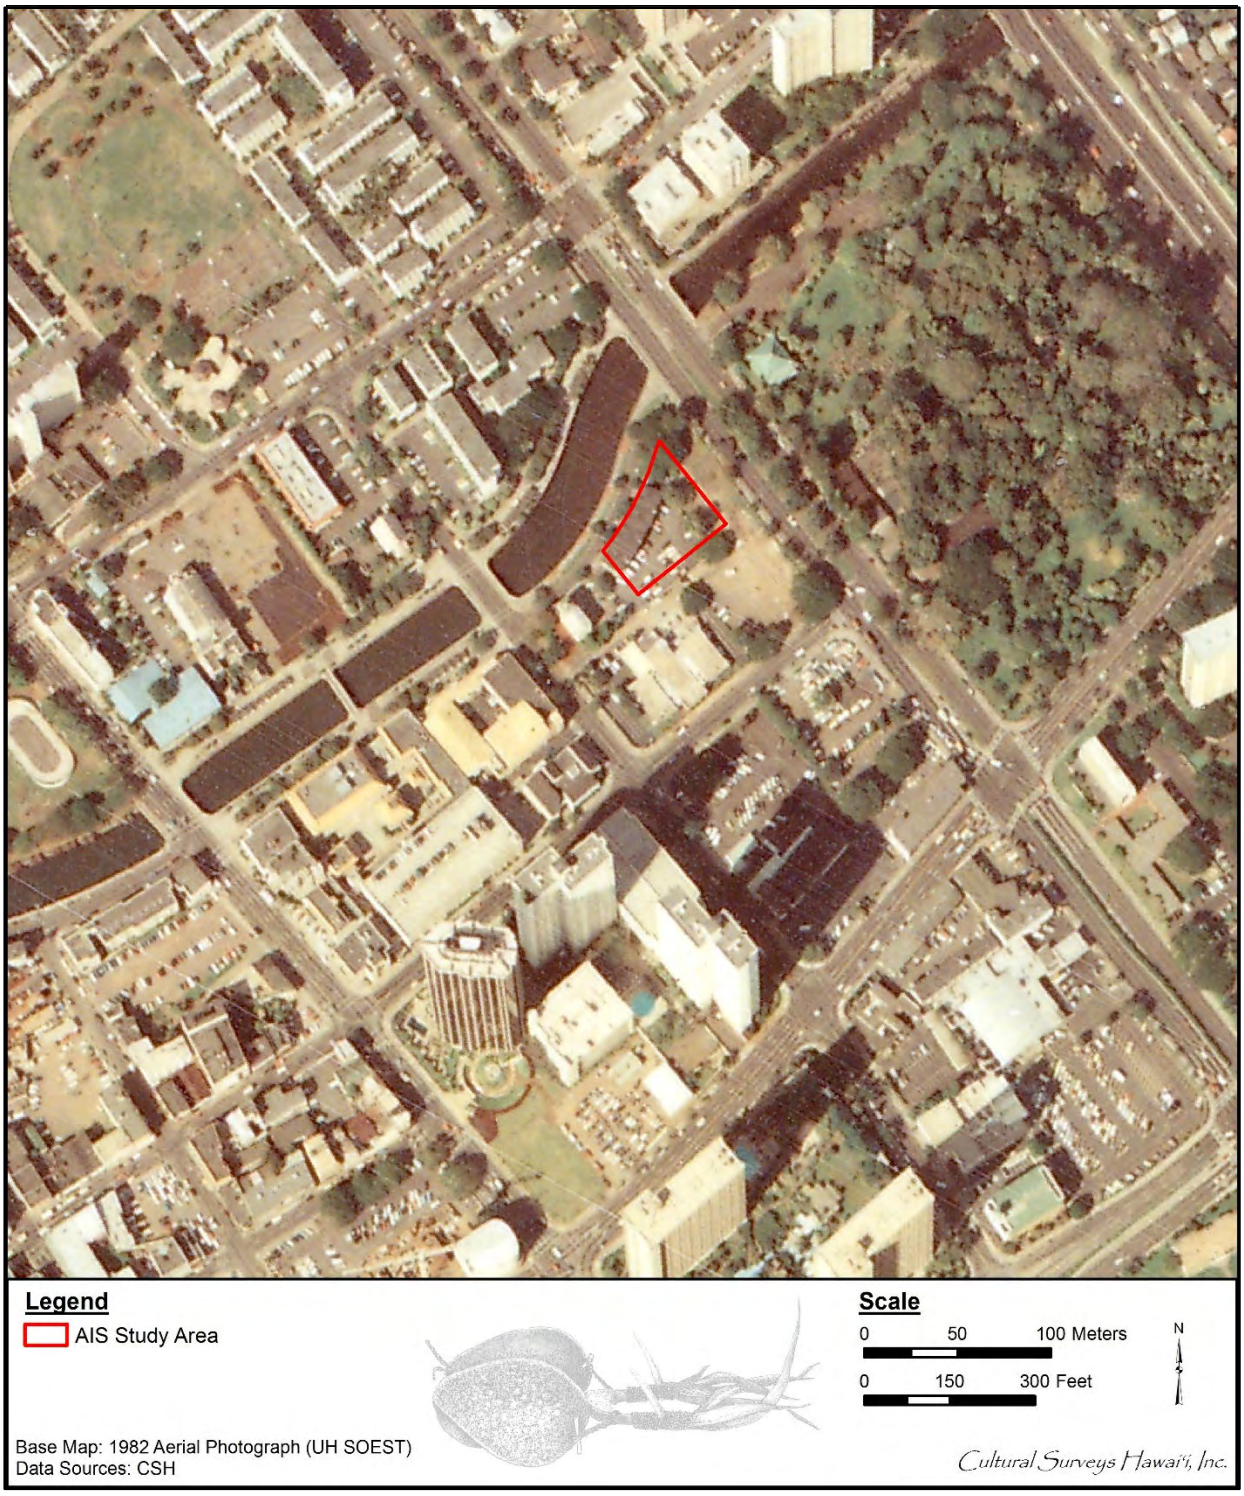

Figure 31. 1982 aerial photograph (UH SOEST), showing the AIS study area

Figure 32. The John R. Gilliland Sr. Building within the AIS study area (from Hibbard and Chiu 2016)

a very good example of a small retail/office building constructed in Hawai‘i in a modern style in the 1950s, and that it is typical of its period in design, materials, workmanship, and construction methods.

The John R. Gilliland Sr. Building is also a good example of the architectural work of Kenneth Sato. Sato was born in Kahuku on O‘ahu and received a civil engineering degree from the University of Hawai‘i. He owned the Kewalo Steel Company and designed a number of churches, apartments, and low-rise commercial buildings. He also worked on a number of public schools and bridges for the Territory of Hawaii. Other works by Sato include the Miyamoto buildings at 1331 Nu‘uanu Avenue and the Door of Faith Church on Young Street in Honolulu (Hibbard and Chiu 2016).

As of the 2016 study by Fung Associates, only two spaces on the ground floor of the building were occupied: Uptown Café and Hanagasa Inn, with both restaurants serving local/Asian food. Chikara Mochi formerly occupied the space south of Hanagasa Inn. Hibbard and Chiu (2016) also noted three Royal Ponciana trees (*Delonix regia*) lining the sidewalk fronting the building (i.e., the River Street southeast sidewalk) (see Figure 32), and the asphalt-paved parking lot occupying the rear portion of the property. According to Hibbard and Chiu (2016), the rear parking lot was improved and enclosed in 1966 by a concrete masonry unit (CMU) retaining wall.

3.2 **Previous Archaeological Research**

No previous archaeological studies have been conducted within or adjacent to the current AIS study area. Below is a discussion of previous studies in the vicinity, which are depicted on Figure 33 and summarized in Table 1. Historic properties previously identified in the vicinity are depicted on Figure 34.

3.2.1 Erkelens et al. 1994; Goodwin 1997; Goodwin and Allen 2005

In 1994, IARII conducted an AIS for the Kekaulike Revitalization project, Diamond Head Block in the Chinatown Historic District (SIHP # 50-80-14-9986) (Goodwin 1997). The survey identified more than 100 features, designated as SIHP # -4875. At least one of the features was assessed as pre-Contact, while others were determined to be from the first approximately 70 years following Western Contact. Other residential and commercial features dated to the first 50 years of Chinese immigration, along with several from the twentieth century.

The survey also identified human skeletal remains, which were part of a secondary burial containing the incomplete remains of three individuals (Erkelens et al. 1994). Represented in these remains were a male aged 24-30, a female aged 15-18, and a female aged 3-4. These individuals were likely moved from their original context during construction of a post-1900 water line; hence, the original internment may have occurred during the nineteenth century. Erkelens et al. (1994) hypothesize that the individuals may have been victims of the 1860 Chinatown fire.

IARII subsequently conducted data recovery from 2 August to 30 September and 7 October 1994 (Goodwin and Allen 2005). Staff archaeologists recovered artifacts and charcoal that indicated the area was in use as early as the thirteenth century, with heavy occupation occurring from the early to mid-nineteenth century. Four compounds and a blacksmith’s shop, dating partly to the early nineteenth century, were excavated. The 8,552 collected artifacts were associated with a variety of ethnic groups (Hawaiian, Euro-American, and Asian). They included porcelains, earthenware, stoneware, lithics, fishhooks, pendants, a *poi* (taro corm paste) pounder, metal, coins, beads, bottles, glass shards, bone, and shell. Identified features included post molds, living floors, firepits, refuse pits, and fence lines. The large amount of faunal bone recovered included species present in the pre-Contact period (pig, dog, turtle, chicken, shark, fish, and Pacific rat), as well as post-Contact introductions (cow, horse, goat, sheep, domestic cat, and the Norway/roof rat).

Human fetal remains were found in a refuse deposit (Feature 338) during data recovery. Osteological analysis determined the fetus was carried into the second or beginning of the third trimester of pregnancy before a premature birth or miscarriage; there was no evidence of deliberate burial (Erkelens et al. 1994). Artifacts within Feature 338 suggest it dates to 1850-1880.

3.2.2 Kennedy et al. 1994; Riley et al. 1995

Kennedy et al. (1994) conducted an AIS for the Kekaulike Revitalization project, ‘Ewa Block, bounded by King, River, Hotel, and Kekaulike streets (Kennedy et al. 1994). Investigations consisted of nine backhoe trenches and three hand-excavated test units. Two historic properties were identified: SIHP # -4587, a small pond, and SIHP # -4588, a multi-component historic property consisting of 53 features of various functions spanning the pre- to post-Contact periods. The features included 20 post holes, three pits of indeterminate function, three fire pits, three cut stone walls, seven crushed coral foundations, a burn layer (possibly from the 1900 or 1902

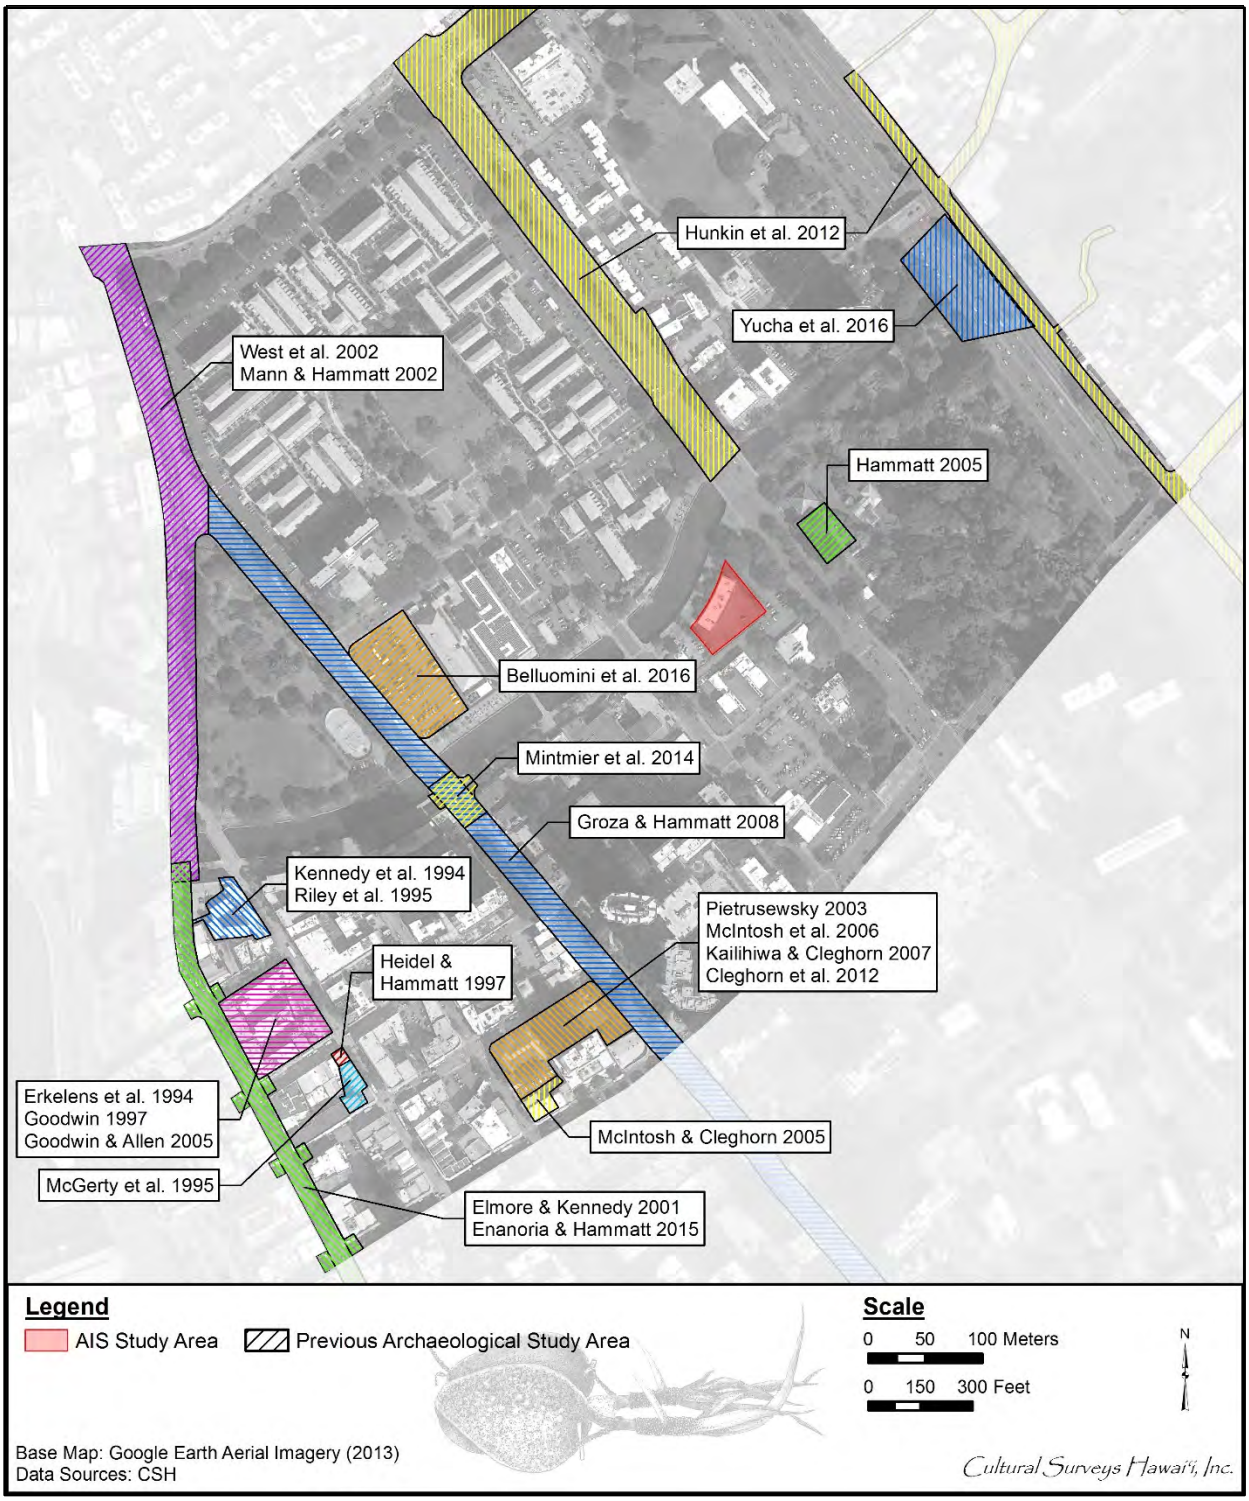

Figure 33. Previous archaeological studies in the vicinity of the AIS study area (Google Earth 2013)

Table 1. Previous archaeological studies in the vicinity of the AIS study area

Reference	Type of Study	Location	Results (SIHP # 50-80-14-****)
Erkelens et al. 1994	Burial report	Kekaulike revitalization, Diamond Head (DH) block	Documented four sets of human skeletal remains associated with SIHP # -4875
Kennedy et al. 1994	Archaeological inventory survey	Kekaulike revitalization, ‘Ewa block	Identified SIHP # -4587, a small fishpond, and SIHP # -4588, a multi-component historic property consisting of 53 features dating from pre-Contact period to twentieth century, including three human burials
McGerty et al. 1995	Archaeological assessment (no finds AIS)	Chinatown Community Service Center	Background research of project area and immediate surroundings indicated pre-Contact agriculture and habitation and urban development associated with Chinatown; AIS recommended
Riley et al. 1995	Data recovery	Kekaulike revitalization, ‘Ewa block	Documented 55 features spanning early pre-Contact period through twentieth century; C14 dating of SIHP # -4587, fishpond, yielded an early tenth century date; dating of SIHP # -4588, coral reef stone platform, yielded an eleventh century date
Goodwin 1997	Archaeological inventory survey	Kekaulike revitalization, DH block	Identified SIHP # -4875, consisting of over 100 features and six culturally enriched strata; majority of features interpreted as Native Hawaiian from early post-Contact period but also included historical and modern features and structural remnants; documented a single burial
Heidel and Hammatt 1997	Archaeological testing	1,700-sq-ft lot in Chinatown	No historic properties identified in four test excavations
Elmore and Kennedy 2001	Archaeological monitoring	King St, between River St and Bethel St	Identified one in situ, flexed human burial (SIHP # -5781) between Maunakea St and Smith St

Reference	Type of Study	Location	Results (SIHP # 50-80-14-****)
Mann and Hammatt 2002	Archaeological monitoring	King St rehabilitation	Identified one incomplete, previously disturbed, human burial (SIHP # -6317) near intersection of King St and Punchbowl St and a pit feature containing non-human skeletal remains at corner of King St and Richards St (no SIHP # assigned)
West et al. 2002	Archaeological monitoring	King St, between Liliha St and River St	Identified Honolulu Rapid Transit & Land Company (HRT&L) trolley (SIHP # -5942) and associated artifacts
Pietrusewsky 2003 (in Kailihiwa and Cleghorn 2007)	Osteological analysis	Smith-Beretania parking lot	Identified remains of two children, five young adults, and 16 adults of Asian, Caucasian, and/or Polynesian descent (SIHP # -6772)
Goodwin and Allen 2005	Data recovery	Kekaulike revitalization, DH block	Excavated four house compounds and a blacksmith’s shop (SIHP # -4875); C14 dating indicated area in use as early as thirteenth century; four human burials documented
Hammatt 2005	Burial report	Foster Botanical Gardens (180 N Vineyard Blvd)	Human bone fragments recovered from backdirt and reinterred on botanical garden grounds (SIHP # -1389)
McIntosh and Cleghorn 2005	Archaeological inventory survey	Pearl St. One Bldg	Identified SIHP # -6691, a four-component historic property composed of two disturbed sets of human remains, two historical trash pits, charred remains of Chinatown structure destroyed in 1900 Chinatown fire, and remnant of historic building that partially collapsed in 2001
McIntosh et al. 2006	Archaeological inventory survey	Smith-Beretania parking lot	Documented SIHP # -6772, which includes trash pits, a cooking feature, building structural foundations, traditional and historic artifacts, and abundant midden deposits
Kailihiwa and Cleghorn 2007	Archaeological monitoring	Smith-Beretania parking lot	Documented SIHP # -6772, including 23 sets of human remains
Groza and Hammatt 2008	Archaeological monitoring	Beretania St between King St and Alapa‘i St	No historic properties identified, likely due to prior disturbance

Reference	Type of Study	Location	Results (SIHP # 50-80-14-****)
Cleghorn et al. 2012	Data recovery	Smith-Beretania parking lot	Documented SIHP # -6772, consisting of pits, privies, and other features with traditional Hawaiian artifacts and two human burials
Hunkin et al. 2012	Archaeological monitoring	Kalihi/Nu‘uanu sewer project	Identified an isolated human bone fragment in fill (no SIHP # assigned)
Mintmier et al. 2014	Archaeological monitoring	Intersection of Beretania St and River St	No historic properties identified
Enanoria and Hammatt 2015	Archaeological monitoring	King St between Bethel St and River St	No historic properties identified
Belluomini et al. 2016	Archaeological inventory survey	American Savings Bank Campus (300 N Beretania St)	Identified SIHP # -7933, human remains and associated features; SIHP # -7934, LCA boundary wall remnants; and SIHP # -7935, building foundation remnants
Yucha et al. 2016	Archaeological monitoring	H-1 from Middle St to Ward Ave	No historic properties identified

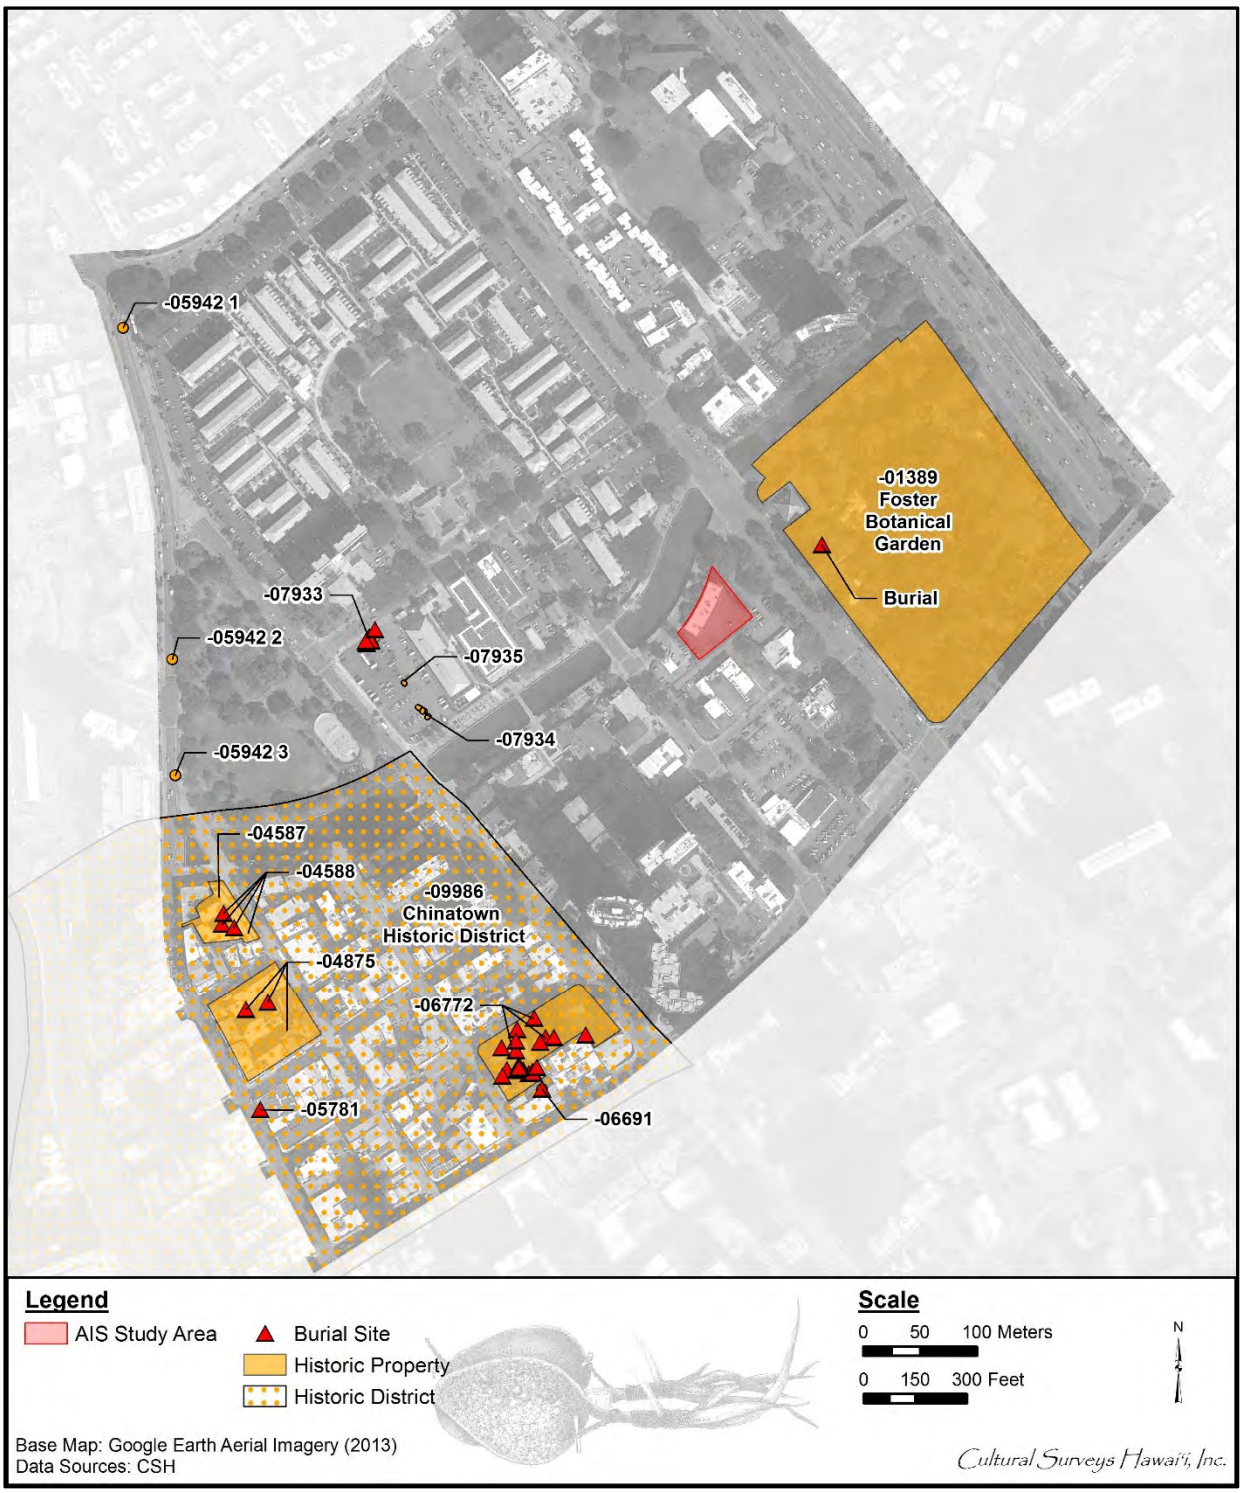

Figure 34. Aerial photograph with overlay of historic properties, historic districts, and human burials in the vicinity of the AIS study area

Chinatown fires), historic trash pits, and three human burials (two likely historical and one likely traditional Hawaiian) (Kennedy et al. 1994).

Subsequently, Riley et al. (1995) conducted data recovery for SIHP #s -4587 and -4588. Sixty-four test units were excavated, and 55 features documented; these inlcuded three additional human burials. Radiocarbon dating of charcoal from SIHP # -4587 yielded a much earlier date than expected, within the tenth century. As the dated charcoal was obtained from behind the pond wall, the radiocarbon date was believed to represent the construction or renovation of the pond. Investigations indicated use of the pond continued up to the 1860s, when it was in-filled.

Analysis of the documented features of SIHP # -4588 indicated an extensive timeline of occupation of the study area. Features ranged from the tenth and eleventh centuries (as evidenced by the pond and a coral reef stone platform with the remnants of a possible human burial), to the seventeenth and eighteenth centuries (as evidenced by a hard-packed living surface with associated traditional Hawaiian artifacts), through the nineteenth century (as evidenced by a latrine pit, a Kaua‘i *poi* pounder, and traditional style fishhooks made from copper), and up to the twentieth century.

Osteological analysis of the three human burials identified during data recovery and the three burials documented during the AIS identified five of the six individuals as being of Chinese descent. The other individual was in a “pre-Western contact” context and was assessed as likely Native Hawaiian.

3.2.3 McGerty et al. 1995

In 1995, McGerty et al. (1995) conducted background research for the Chinatown Community Service Center project. Research included a review of previous archaeological studies in the vicinity, *mo‘olelo* (stories) of the area, archival documents, and historical maps. The study indicated that pre-Contact land use comprised agriculture and habitation. During the historical period, which saw the growth of urban Honolulu Town, the area (known as Kikihale) transformed into a portion of Chinatown and contained a shifting complex of small businesses.

3.2.4 Heidel and Hammatt 1997

In 1997, CSH conducted archeological testing at a 1,700-sq-ft parcel (TMK: [1] 1-7-003:014) in Chinatown (Heidel and Hammatt 1997). Four test trenches yielded no cultural features or materials, with the exception of a historical basement filled with modern debris and sediment. The report does not present a possible association or date of occupation for the basement, and no SIHP number was assigned (Heidel and Hammatt 1997).

3.2.5 Elmore and Kennedy 2001

Elmore and Kennedy (2001) conducted archaeological monitoring for miscellaneous sidewalk improvements on King Street, between River Street and Bethel Street. One in situ human burial, designated as SHIP # -5781, was identified between Maunakea Street and Smith Street, beneath the *mauka* lane of King Street. Based on the burial’s flexed position and lack of post-Contact artifacts, the burial was assessed as likely Native Hawaiian. Artifacts recovered from the backdirt pile included glass and ceramic fragments, a shark tooth, possible drilled shell fragments, a possible shark tooth tool, and one fishhook; however, none could be definitively associated with the burial.

3.2.6 Mann and Hammatt 2002

In 2002, CSH conducted archaeological monitoring for the King Street Rehabilitation project on sections of King Street, between Dillingham Boulevard and South Street (Mann and Hammatt 2002). One human burial, designated as SIHP # -6371, was identified near the intersection of South King Street and Punchbowl Street, *makai* of Honolulu Hale. The skeletal remains were incomplete and poorly preserved due to previous disturbance by construction activities; the SHPD took custody of the remains. In addition, a pit feature containing a substantial quantity of non-human skeletal remains was documented at the corner of South King Street and Richards Street; no SIHP number was assigned.

3.2.7 West et al. 2002

In 2002, Garcia and Associates (GANDA) conducted archaeological monitoring for the installation of water mains along King Street, between Liliha Street and River Street (West et al. 2002). One previously recorded historic property, structural remnants of the Honolulu Rapid Transit & Land Company Trolley (SIHP # -5942), was documented in multiple locations. Documented remnants include railroad ties, metal hardware, and bricks. Small sections of the trolley track (not in situ) were exposed atop fill material, which overlay coral bedrock. Identified cultural material included glass bottles and jars, handmade leather shoes, ceramics, faunal bone (pig, cow, and chicken), shell, wood, charcoal, Belgian Block cobblestones, and metal hardware.

3.2.8 Pietrusewsky 2003; McIntosh et al. 2006; Kailihiwa and Cleghorn 2007; Cleghorn et al. 2012

In 2001, Pacific Legacy conducted an AIS for Block 10, Smith-Beretania Parking Lot, in Chinatown (McIntosh et al. 2006). Six backhoe excavations yielded abundant post-Contact structural materials and artifacts with 68 associated subsurface features, designated as SIHP # -6772. The features included trash pits, cooking features, and building structural foundations with associated European, American, and Asian artifacts; traditional Hawaiian artifacts; and abundant midden deposits. Most of the structural remnants dated between 1850 and 1900 and were likely associated with the buildings destroyed in the 1900 Chinatown fire. Post-Contact artifacts consisted of glass, metal, ceramic, and bone, indicating a wide variety of functions. Fewer Native Hawaiian artifacts were recovered; these included *poi* pounder fragments, an *‘ulu maika* (game stone), cowrie shell lures, a complete stone adze, and a complete conch shell trumpet.

Subsequently in 2001, Pacific Legacy conducted data recovery for Block 10, Smith-Beretania Parking Lot, to mitigate the impacts to SIHP # -6772 (Cleghorn et al. 2012). Data recovery excavations identified numerous pits, privies, and miscellaneous features with traditional Hawaiian and post-Contact artifacts. Two human burials, one adult and one child, were also documented.

In 2002, Pacific Legacy conducted archaeological monitoring for Block 10, Smith-Beretania Parking Lot (Kailihiwa and Cleghorn 2007). Additional features, deposits, and human remains associated with SIHP # -6772 were identified; these consisted of six non-burial features and 22 human burials. In addition, 20 “find spots” (locations where collected artifacts were not associated with a cultural layer or deposit) were documented. The human remains were primarily identified near the south wall of the Smith-Beretania apartment structure.

Dr. Michael Pietrusewsky (2003) analyzed the human remains and determined they could represent individuals of Asian, Caucasian, and/or Polynesian descent. His analysis revealed the remains included two children, five young adults, and 16 adults; hence, he suggests a portion of the study area may have served as a family cemetery. All burials were inventoried, excavated, mapped, and reburied on the property.

3.2.9 Hammatt 2005

In 2004, CSH received a call from Terry Hildebrand of the City and County of Honolulu Department of Design and Construction, reporting a discovery of human remains during trenching activities at Foster Botanical Gardens (SIHP # -1389) (Hammatt 2005). Dr. Sara Collins of the SHPD noted that the remains, which included a maxilla fragment and portion of a long bone, were found in a previously disturbed context. CSH archaeologists screened the backdirt in which the maxilla fragment was found and recovered additional remains, including a long bone, clavicle, fragments of a mandible, loose teeth, and rib fragments. The remains were reinterred on the grounds of the botanical garden near the western side of the Kuan Yin Temple.

3.2.10 McIntosh and Cleghorn 2005

In 2005, Pacific Legacy conducted an AIS at the corner of Nu‘uanu Avenue and Pauahi Street (McIntosh and Cleghorn 2005). A multi-component historic property, SIHP # -6691, was identified. SIHP # -6691 comprises the incomplete remains of two disturbed human burials within two historical trash pits; the charred remains of a structure destroyed in the 1900 Chinatown fire; and structural remnants of a historical building that partially collapsed in 2001. McIntosh and Cleghorn (2005) concluded the burials had been previously disturbed and incorporated into later trash pits, likely during the early 1900s.

3.2.11 Groza and Hammatt 2008

In 2008, CSH conducted archaeological monitoring for the Rehabilitation of Streets project on an approximately 1,800-m (5,900-ft) segment of Beretania Street, between North King Street and Alapa‘i Street (Groza and Hammatt 2008). No historic properties were identified, and extensive fill deposits were encountered. In the eastern portion of the study area, the natural sediment consisted of volcanic cinder from the Sugar Loaf/Tantalus series. In the western portion, the natural sediment was silty clay loam with clay inclusions, likely alluvial deposits from nearby Nu‘uanu Stream.

3.2.12 Hunkin et al. 2012

In 2011, CSH conducted archaeological monitoring for the Kalihi/Nu‘uanu Sewer Rehabilitation project, which extended from Middle Street in Kalihi west toward Pi‘ikoi Street near the eastern boundary of Punchbowl Crater (Hunkin et al. 2012). No historic properties were identified. The study area’s subsurface deposits appeared to have been disturbed by past land use, including extensive earthmoving activity and importation of fill sediments. However, a single isolated human bone fragment was discovered in fill material. The custody of this skeletal fragment was transferred to the SHPD on 4 August 2008, and treatment of the fragment was carried out under the SHPD’s authority. No SIHP number was assigned.

3.2.13 Mintmier et al. 2014

Pacific Consulting Services, Inc. (PCSI), conducted archaeological monitoring for traffic infrastructure improvements at the intersection of Beretania and River streets, partially within the Chinatown Historical District, SIHP # -9986. No contributing features/components of SIHP # -9986, nor any new historic properties, were documented. Eighteen glass and ceramic artifacts were collected and dated to the late nineteenth to mid-twentieth century.

3.2.14 Enanoria and Hammatt 2015

In 2013, CSH conducted archaeological monitoring for rehabilitation and replacement of water, gas, sewer, and drain lines along King Street and at each of the cross-street intersections between River and Bethel streets (Enanoria and Hammatt 2015). In general, the documented stratigraphy consisted of a series of fill sediments associated with the construction of the existing asphalt surface and the construction of subsurface utilities, overlying disturbed natural alluvium, natural volcanic cinder, and the coral shelf. No historic properties were identified.

3.2.15 Belluomini et al. 2016

In 2016, CSH conducted an AIS for the American Savings Bank Campus at 300 North Beretania Street. Subsurface testing identified three historic properties: SIHP #s -7933, -7934, and -7935. SIHP # -7933, identified in the northwest portion of the study area, consists of seven human burials (Burials 1–7) and six associated features (Features 8–13). SIHP # -7934, identified in the southeast portion of the study area, consists of structural remnants interpreted as LCA boundary walls and designated as Features 1–3. SIHP # -7935 consists of the structural remnants of a building foundation, identified in the central portion of the study area.

3.2.16 Yucha et al. 2016

Between 2013 and 2014, CSH conducted archaeological monitoring for the H-1 Resurfacing project from Middle Street to Ward Avenue. As archaeological monitoring was conducted only for excavations conducted deeper than the overlying asphalt/concrete surfaces, monitoring was limited to the area of the Nu‘uanu Stream Bridge widening and lighting replacement activities, identified as Project Area 3. The archaeologists documented a series of highly disturbed fill deposits that averaged more than 100 cm in depth. No historic properties were identified.

3.3 Background Summary and Predictive Model

The current project is within the portion of downtown Honolulu surrounding the mouth of Nu‘uanu Stream, known to Hawaiians as “Kou.” This area was a center of population and activity similar to Waikīkī. Kou had a long tradition as a royal center, where the *ali‘i* would meet and entertain. Kou also possessed shoreward fishponds and irrigated fields, and nearby Honolulu Harbor was brimming with marine resources. The land surrounding Nu‘uanu Stream was particularly densely populated, with a concentration of *lo‘i* and *‘auwai*. Historical maps show the AIS study area as within that dense cluster of *lo‘i*.

In the early post-Contact period, Kou was not a major destination for foreigners visiting the island. However, in 1809, Kamehameha moved his court, government, and residence from Waikīkī to Honolulu, and newly arrived foreigners began to consider Honolulu a place of commercial importance. By the 1830s, Western commercial and missionary interests had supplanted the Native Hawaiian traditions that had once shaped the environment, and Western and urban ideals propelled

Honolulu’s growth. The Organic Acts of 1845 and 1846 initiated the process of the Māhele, the division of Hawaiian lands, which introduced private property into Hawaiian society. Historical maps indicate most of the ‘Ewa (northwest) portion of the AIS study area was within LCA 11082:3 to Kaukoke, while small sections in the western corner appear to overlap with LCA 141:2 and 3 to Makahopu. LCA documentation indicates these parcels included a house, a fence, and agricultural plots. In addition, the far north corner of the AIS study area may have been within LCA 715:1 to Kalama, who claimed four taro patches and a house site. Landscape features (solid and dashed lines) depicted on late nineteenth century maps as within the AIS study area may represent the boundaries between the LCAs and/or agricultural or house plots within the LCAs. A building or structure is also indicated as partially within the northeast portion of the AIS study area.

However, the majority of the AIS study area was within LCA 2938 to Huanu, for the heirs of Lahilahi (Gilliland ‘Ohana). Huanu was the grandson of Francisco de Paula Marín, and the claim was for “farm land in the vineyard” (Waihona ‘Aina 2019). The history of the Gillilands in Hawai‘i (after whom the John R. Gilliland Sr. Building in the current AIS study area is named) begins first with Francisco de Paula Marín, a Spanish horticultural experimenter. In 1793 or 1794, Marín traveled to Hawai‘i, where he was befriended by Kamehameha I. He served as Kamehameha’s interpreter and assumed many government duties. Kamehameha, in turn, gave land to Marín for his agricultural experiments, and Marín introduced numerous plant species to the Islands. Marín’s land within the current AIS study area was known as “The Vineyard,” which he planted with grape cuttings sourced from California in 1815. Visitors to the vineyard also reported seeing damask rose (*Rosa damascena*) bushes, cotton (*Gossypium* sp.) trees, and pineapples (*Ananas comosus*) growing on the parcel.

By the late 1800s, historical maps show increasingly dense land use and urbanization in the vicinity of the current project, particularly *makai* of the parcel in an area that came to be known as Chinatown. By the 1870s, a sizeable population of Chinese immigrants had settled in Honolulu, concentrated in the blocks between Nu‘uanu and Maunakea streets. Today, this area still serves as the principle center for the business and social life of the Chinese community of the island.

Another change in the late nineteenth century was the realignment of Nu‘uanu Stream. Beginning in 1896, Nu‘uanu Stream was dredged, and the water course was changed, with the stream diverted from approximately 100 m west of the current project to nearly adjacent to it. A stone wall was built on both sides of the stream, and dredged material was used to create River Street, adjacent to the current AIS study area.

A review of twentieth century historical maps and aerial photographs indicates development within the AIS study area by 1906. At that time, a tenement was at the center of the AIS study area, while several dwellings and stores were along the northwestern boundary; a kitchen facility was in between the tenement and the stores, which included a Plumbing and Tin Shop, a restaurant, and a Mattress Factory. By 1950, additional dwellings were present in the eastern and southeastern portions of the AIS study area, and a parking area for automobiles was in the south corner. The stores along the northwestern boundary were by that time described as having concrete floors.

The John R. Gilliland Sr. Building was constructed within the AIS study area in 1958. In 2016, Fung Associates assessed this two-story commercial building as eligible for listing on the National Register under Criterion C, as a very good example of a small retail/office building constructed in

Hawai‘i in a modern style in the 1950s. It is also a good example of the architectural work of Kenneth Sato, who designed several notable buildings in the Islands. According to the study, the rear parking lot was improved and enclosed by a CMU retaining wall in 1966.

Mauka (northeast) of the AIS study area, across Vineyard Boulevard (named for Marín's vineyard), is Foster Botanical Garden (SIHP # -1389), which is the closest previously identified historic property to the current AIS study area (approximately 50 m away). In 2004, human remains were encountered during trenching activities in the southern portion of the garden (Hammatt 2005). The remains were found in a previously disturbed context and were reinterred on the grounds; no SIHP number was assigned. No previous archaeological studies have been conducted within or adjacent to the current AIS study area. However, previous studies in the vicinity have documented pre- and post-Contact habitation layers with associated features, including human burials; infrastructure remnants with associated artifacts; historical trash pits; buried fishpond sediment; LCA boundary wall remnants; and disturbed/displaced human remains.

Based on this background research, it was anticipated that the current AIS could identify buried agricultural deposits and features associated with taro and/or grape cultivation; pre- and/or post-Contact habitation layer(s) with associated features, potentially including human remains; landscape features or structural remnants associated with LCA boundaries; and twentieth century structural remnants with associated artifacts and/or historical trash pits.

Section 4 Results of Fieldwork

The fieldwork component of the Halewai‘olu Senior Residences AIS was conducted between 1 and 30 July 2019 under the general supervision of Matt McDermott, M.A. (Principle Investigator), and Ena Sroat, B.A. (Project Director). The subsurface testing program consisted of 15 test excavations (T-1 through T-12, including T-2B, T-2C, and T-9B), comprising 13 exterior excavations and two interior excavations (Figure 35). The maximum depth of the excavations ranged from 160 to 252 cm below surface (cmbs). The water table was encountered in ten of the 15 test excavations, between 193 and 247 cmbs.

4.1 Historic Properties Identified

One archaeological historic property was newly identified during the Halewai‘olu Senior Residences AIS: SIHP # 50-80-14-8840, subsurface cultural deposits (see Figure 35). SIHP # -8840 consists of three components, designated as Components 1–3. SIHP # -8840 Component 1 consists of agricultural deposits, including possible agricultural berms. SIHP # -8840 Component 2 consists of two habitation layers with associated pit features and a human burial site. SIHP # -8840 Component 3 consists of historical infrastructure remnants associated with the residential and commercial growth of Honolulu.

4.2 Stratigraphic Overview

Stratigraphy within the AIS study area was designated using a Roman numeration system (e.g., Stratum I, II, III), with substrata designated using an alphabetic system (e.g., Stratum Ia, Ib, Ic). Although the alphabetic substrata designations within the Roman numeral designations may vary between test excavations, the Roman numeral stratigraphic designations correlate across the study area, so that stratigraphic patterns can be clearly documented and discussed (Table 2 and Table 3).

All current land surfaces and fill deposits, as well as SIHP # -8840 Component 3 infrastructure remnants, are designated as Stratum I; these are associated with the modern development of the area. All SIHP # -8840 Component 3 infrastructure remnants are given feature numbers; former surfaces and fill deposits are also given stratum designations. The underlying vertical series of natural alluvial deposits is designated as Stratum II; this includes interpreted habitation layers (SIHP # -8840 Component 2) and agricultural deposits (SIHP # -8840 Component 1). Like Stratum I, Stratum II was documented in all 15 test excavations. The Stratum II deposits likely represent overflow or flooding episodes of nearby Nu‘uanu Stream. The two uppermost alluvial deposits, Strata IIa and IIb, contain evidence of cultural use in some areas; within those

Table 2. Stratigraphic designations

Stratum	Sediment Description
I	Modern developed land, fills, and infrastructure remnants (SIHP # -8840 Component 3)
II	Naturally deposited alluvium, including habitation layers (SIHP # -8840 Component 2) and agricultural deposits (SIHP # -8840 Component 1)
III	Streambed

T-12	North corner	Ia–Id	IIa	IIc	IIb, IIIa–IIIb

excavations, they are designated as part of SIHP # -8840 Component 2, habitation layers. The underlying strata (Strata IIc–IIg) represent at least three periods of agricultural use, likely associated with wetland taro agriculture along the banks of Nu‘uanu Stream. In test excavations where these layers contain evidence of agriculture (e.g., oxidized [red] mottling), they are designated as part of SIHP # -8840 Component 1.

The most recent agricultural deposit (Stratum IIc in T-2, T-2B, T-3 through T-8, T-10, and T-12; Stratum IId in T-9 and T-9B) was identified almost ubiquitously across the AIS study area, within 12 of the 15 test excavations. It contains a dense latticework of oxidized (red) mottling, believed to be the result of chemical interactions between taro roots and the surrounding soil, and in some areas, cinder gravel. The layer generally presents as dark brown silty clay loam. Deeper (i.e., older) agricultural deposits were identified within a discrete zone in the central/*mauka* portion of the AIS study area (within T-4, T-5, and T-7 through T-9B). These strata contain a similar latticework of oxidized (red) mottling, although generally less dense than the overlying stratum.

The basal stratum, Stratum III, is interpreted as a streambed and may represent a former braid delta of Nu‘uanu Stream, pre-dating the deposition of the Stratum II alluvium. Stratum III was documented in nine test excavations (T-1, T-2, T-2B, T-2C, T-9, T-9B, and T-10 through T-12) in the northwestern portion of the AIS study area, closest to Nu‘uanu Stream. Stratum III typically presents as very dark grayish brown sandy clay, sandy clay loam, or silty clay loam. This stratum is distinct from the overlying alluvial series for its inclusion of abundant waterworn basalt gravel and cobbles.

4.3 Subsurface Testing Results

4.3.1 Test Excavation 1 (T-1)

Test Excavation 1 (T-1) is an exterior excavation near the southwestern boundary of the AIS study area. It is oriented northwest-southeast and is 6 m long by 0.85 m wide, with a maximum depth of 230 cmbs. The water table was encountered at 200 cmbs.

The observed stratigraphy includes the asphalt parking lot surface (Stratum Ia) and associated extremely gravelly (basalt) loamy sand base course (Stratum Ib), very gravelly sand (crushed coral) base course (Stratum Ic), a second layer of extremely gravelly (basalt) loamy sand base course (Stratum Id), and cobbly (basalt) silty clay fill (Stratum Ie), overlying an oil-rolled crushed coral surface with associated very gravelly (basalt) sandy loam base course (Strata If and Ig; SIHP # -8840 Component 3, Feature 1), atop silty clay (Stratum IIa; SIHP # -8840 Component 2), three layers of silty clay loam (Strata IIb–IId), and very gravelly (basalt) silty clay loam (Stratum III) (Figure 36 through Figure 39 and Table 4).

The oil-rolled, crushed coral surface and associated base course (Strata If and Ig) are designated as SIHP # -8840 Component 3, Feature 1. Strata If and Ig were documented within all four trench walls, although they were absent from the northeast corner of the excavation (see Figure 36 through Figure 40). Each layer is approximately 10 cm thick, and the base course (Stratum Ig) contains pig (*Sus scrofa*) bone, brick, glass, and ceramic fragments. The pig bone and a grab sample of artifacts were collected. Diagnostic artifacts are of primarily Asian origin and date from the mid-nineteenth to twentieth century. One machine-made bottle fragment (Accession [Acc.] # 132) dates to post-1908, indicating the layer was deposited after that time.

Figure 38. T-1 southwest wall, view to south

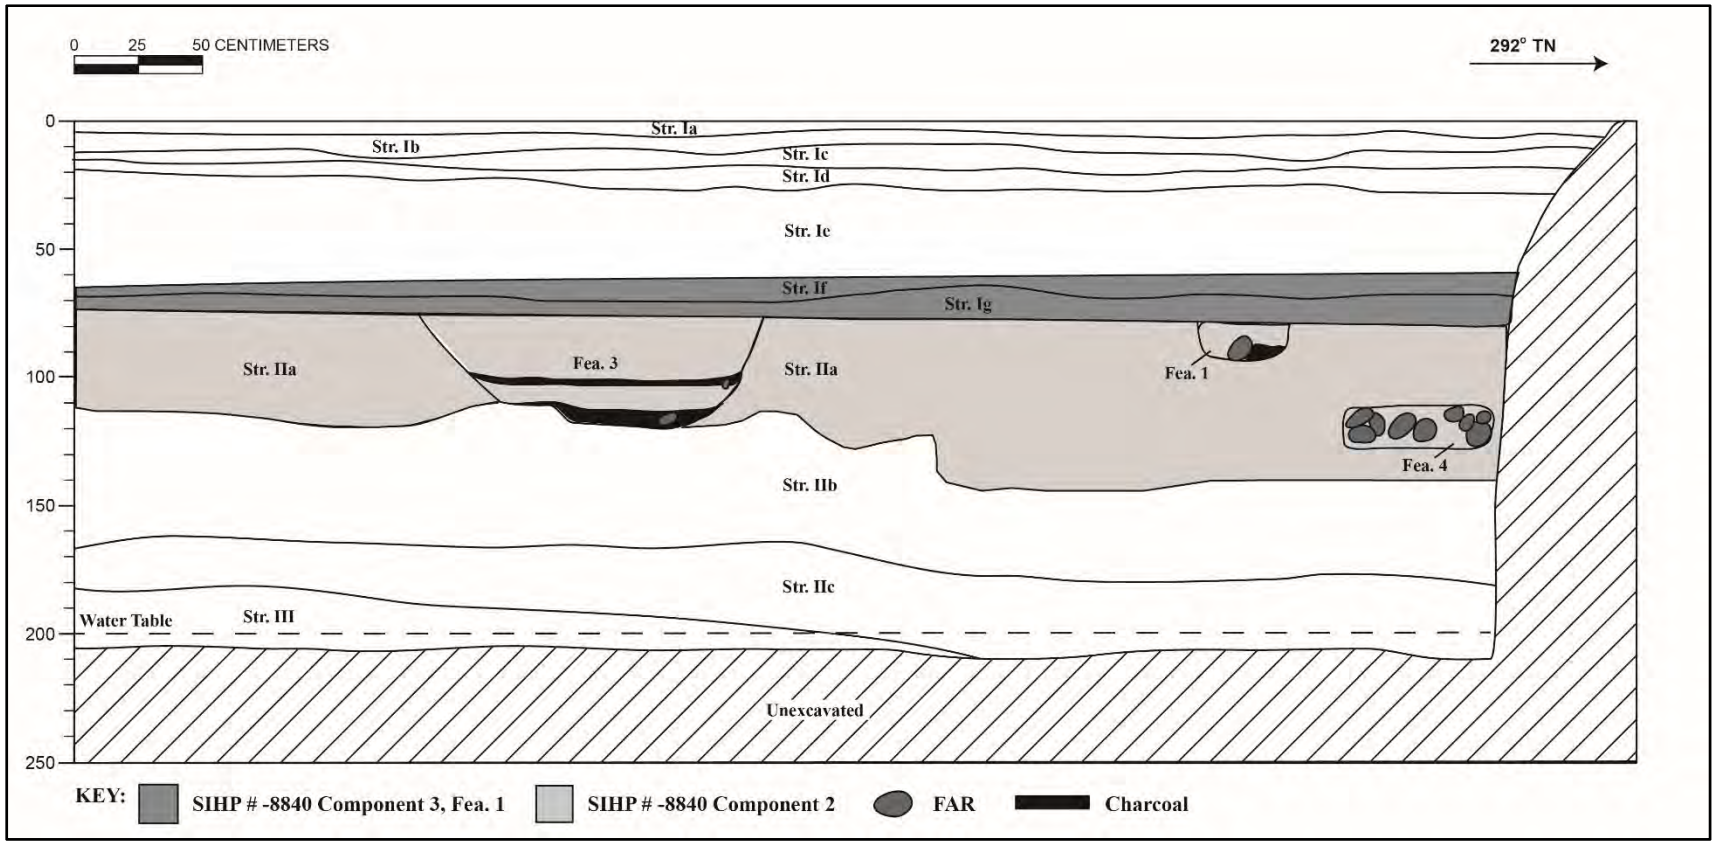

Figure 39. Profile of T-1 southwest wall

Table 4. T-1 stratigraphic description

Stratum	Depth (cmbs)	Description
Ia	0–7	Asphalt; parking lot surface
Ib	5–16	Base course; 10YR 3/1, very dark gray; extremely gravelly loamy sand; weak, very fine, granular structure; moist, friable consistence; no cementation; non-plastic; terrigenous origin; abrupt, smooth lower boundary; no roots observed; basalt gravel base course
Ic	11–20	Base course; 10YR 6/3, pale brown; very gravelly sand; structureless (single-grain); moist, loose consistence; no cementation; non-plastic; marine origin; abrupt, smooth lower boundary; no roots observed; crushed coral base course
Id	16–30	Base course; 5YR 3/3, dark reddish brown; extremely gravelly loamy sand; weak, very fine, granular structure; moist, friable consistence; no cementation; non-plastic; terrigenous origin; abrupt, smooth lower boundary; no roots observed; basalt gravel base course
Ie	20–71	Fill; 10YR 4/4, dark yellowish brown; cobbly silty clay; moderate, medium, blocky structure; moist, firm consistence; no cementation; plastic; terrigenous origin; abrupt, smooth lower boundary; no roots observed; fill derived from alluvium, containing basalt cobbles
If	54–71	SIHP # -8840 Component 3, Feature 1; 10YR 8/2, very pale brown; very gravelly sand; structureless (single-grain); moist, loose consistence; no cementation; non-plastic; marine origin; abrupt, discontinuous lower boundary; no roots observed; oil-rolled crushed coral surface
Ig	60–81	SIHP # -8840 Component 3, Feature 1; 10YR 3/4, dark yellowish brown; very gravelly sandy loam; weak, very fine, granular structure; moist, friable consistence; no cementation; slightly plastic; mixed origin; abrupt, discontinuous lower boundary; no roots observed; basalt gravel base course with pig (*S. scrofa*) bone and brick, glass, and ceramic fragments
IIa	70–155	SIHP # -8840 Component 2; 10YR 2/2, very dark brown; silty clay; strong, medium, blocky structure; moist, firm consistence; no cementation; plastic; terrigenous origin; clear, irregular lower boundary; few, fine roots; habitation layer with charcoal flecking and four associated pit features (Features 1–4)
	77–93	SIHP # -8840 Component 2, Feature 1; 10YR 3/2, very dark grayish brown; cobbly silty clay; fire-related feature containing fire-affected rock (FAR) and charcoal
	71–115	SIHP # -8840 Component 2, Feature 2; 10YR 3/2, very dark grayish brown; silty clay; fire-related feature containing charcoal

Stratum	Depth (cmbs)	Description
	76–120	SIHP # -8840 Component 2, Feature 3; 10YR 3/2, very dark grayish brown; cobbly silty clay; fire-related feature containing FAR and charcoal
	111–127	SIHP # -8840 Component 2, Feature 4; 10YR 2/2, very dark brown; cobbly silty clay loam; fire-related feature containing FAR and charcoal
IIb	109–181	Natural; 10YR 3/4, dark yellowish brown; silty clay loam; moderate, fine, granular structure; moist, friable consistence; no cementation; very plastic; terrigenous origin; clear, smooth lower boundary; few, fine roots; naturally deposited alluvium
IIc	130–205	Natural; 10YR 3/2, very dark grayish brown; silty clay loam; moderate, medium, granular structure; moist, firm consistence; no cementation; plastic; terrigenous origin; clear, discontinuous lower boundary; no roots observed; naturally deposited alluvium
IId	135–205	Natural; 10YR 3/3, dark brown; silty clay loam; moderate, fine, granular structure; moist, firm consistence; no cementation; plastic; terrigenous origin; clear, discontinuous lower boundary; no roots observed; naturally deposited alluvium
III	140–230 (BOE)	Natural; 10YR 3/2, very dark grayish brown; very gravelly silty clay loam; moderate, fine, granular structure; moist, firm consistence; no cementation; plastic; terrigenous origin; lower boundary not observed; few, fine roots; streambed with waterworn basalt gravel and cobbles

Figure 40. SIHP # -8840 Component 3, Feature 1, oil-rolled crushed coral surface and associated base course (Strata If and Ig), in T-1 southwest wall, view to southwest

Stratum II (a–d) is naturally deposited alluvium, while the underlying Stratum III is interpreted as a streambed, based on the presence of waterworn basalt gravel and cobbles. Because Stratum IIa contains charcoal flecking and four associated pit features, it is designated as part of SIHP # -8840 Component 2, habitation layers. The four features, interpreted as fire-related features, are designated as SIHP # -8840 Component 2, Features 1–4 (Figure 41 through Figure 44). Features 1–3 originate at the upper boundary of the stratum, while Feature 4 is within the lower/middle portion of the stratum. While the upper boundaries of Features 1–3 may have been truncated by the deposition of the overlying fill deposit, based on their matrices, they appear to originate within Stratum IIa; their position at the upper boundary of the layer indicates they are more recent than (i.e., they post-date) Feature 4. The features are described below.

Feature 1 is a basin-shaped pit feature identified in the southwest wall of T-1, at the upper boundary of Stratum IIa/SIHP # -8840 Component 2 (see Figure 39 and Figure 41). It was documented between 77 and 93 cmbs and measures 35 cm across. A thin, heat-altered band of reddened sediment, a fire-affected basalt cobble, and a 6-cm thick layer of charcoal were observed at the base of the pit, which is interpreted as a fire-related feature. A charcoal sample was collected.

Feature 2 is a basin-shaped pit feature identified in the northeast wall of T-1, at the upper boundary of Stratum IIa/SIHP # -8840 Component 2 (see Figure 36, Figure 37, and Figure 42). It was documented between 71 and 115 cmbs and measures 1 m across. A thin, heat-altered band of reddened sediment and a 4-cm thick layer of charcoal were observed at the base of the pit, which is interpreted as a fire-related feature. Several small, non-diagnostic bottle glass fragments (not collected) and fire-affected basalt cobbles were also observed within the pit. A charcoal sample was collected.

Feature 3 is a basin-shaped pit feature identified in the southwest wall of T-1, at the upper boundary of Stratum IIa/SIHP # -8840 Component 2 (see Figure 39 and Figure 43). It was documented between 76 and 120 cmbs and measures 1.5 m across. Multiple heat-altered bands of reddened sediment and layers of charcoal ranging from 5–10 cm thick were observed within the pit, which is interpreted as a fire-related feature. A charcoal sample was collected.

Feature 4 is a pit feature identified in both sidewalls of T-1, within Stratum IIa/SIHP # -8840 Component 2 (see Figure 37 and Figure 44). It was documented between 111 and 127 cmbs and measures 55 cm across; the exposed portion is 85 cm long, spanning the width of the trench. This

Figure 41. SIHP # -8840 Component 2, Feature 1, fire-related feature, in T-1 southwest wall, view to west

Figure 42. SIHP # -8840 Component 2, Feature 2, fire-related feature, in T-1 northeast wall, view to northeast

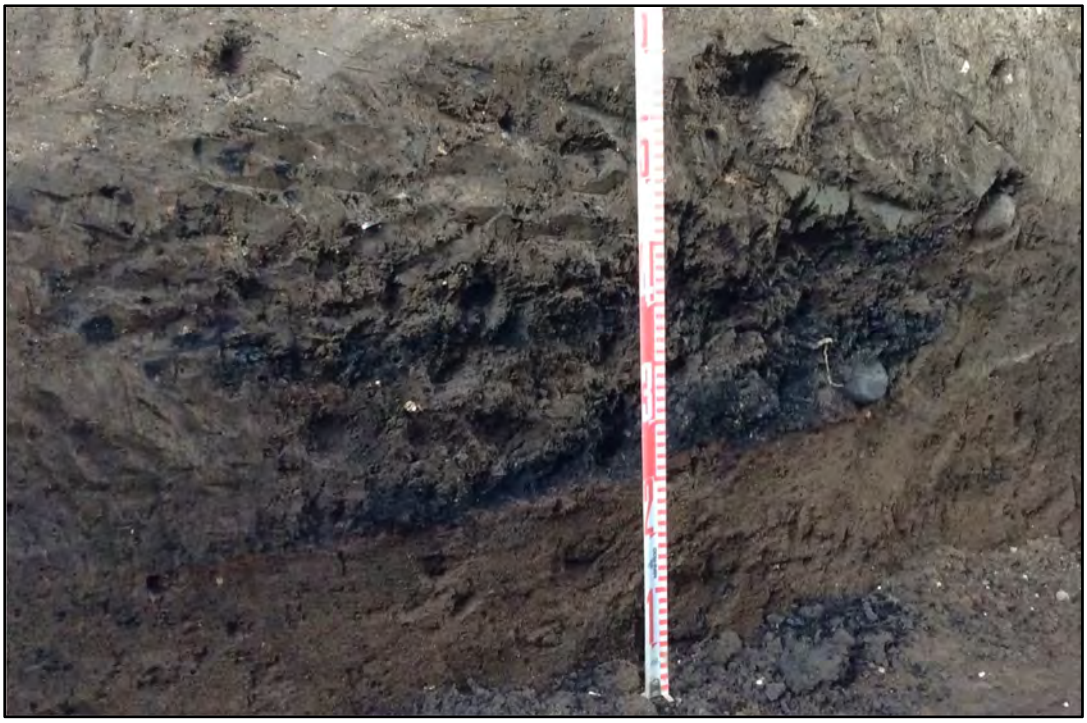

Figure 43. SIHP # -8840 Component 2, Feature 3, fire-related feature, in T-1 southwest wall, view to west

Figure 44. SIHP # -8840 Component 2, Feature 4, fire-related feature, in T-1 southwest wall, view to west

pit is lined with fire-affected basalt cobbles, and charcoal flecking was observed in the matrix surrounding the cobbles; a charcoal sample was collected. This feature is interpreted as a fire-related feature.

Charcoal samples from SIHP # -8840 Component 2, Feature 2 (Sample 1) and Feature 4 (Sample 2), were submitted to the Wood Identification Laboratory at IARII for taxa identification (see Section 5.4.2 for full results). Most of Sample 1 is *kiawe* (*Prosopis pallida*); the rest is indeterminate hardwood. As *kiawe* was likely introduced to Hawai‘i in 1828 (Wagner et al. 1990 in Huebert 2019), the feature was therefore used after that date. In contrast, Sample 2 contains wood from native and endemic species including *‘ōhi‘a lehua* (*Metrosideros polymorpha*), *koa* (*Acacia* cf. *koa*), *kōpiko* (*Psychotria* sp.), and possibly *hau* (*Hibiscus* sp.); no post-Contact introductions were identified within the sample.

The wood identification results are in agreement with the stratigraphic contexts of Features 2 and 4. Although both features were identified within Stratum IIa, Feature 2 originates at the upper boundary of the layer, while Feature 4 is within the middle portion; hence, Feature 2 post-dates Feature 4. The identification of charcoal from a historically introduced species (*kiawe*; *P. pallida*) within Feature 2 securely dates that feature to the post-Contact period, while the apparent lack of historical introductions within the underlying Feature 4 suggests it dates to the pre- or early post-Contact period.

A subsample derived from Sample 2 (Feature 4) was submitted to Beta Analytic, Inc., for radiocarbon dating analysis. The portion of Sample 2 identified as parenchyma charcoal was submitted because it is not likely to have much inbuilt age, as soft storage tissues are not long-lived. The radiocarbon analysis yielded two-sigma calibrated date ranges of AD 1728-1810 (53.5% probability), 1646-1690 (26.0%), and 1925-post 1950 (15.9%). While diagnostic artifacts recovered from overlying fill deposits suggest Stratum IIa functioned as a surface into the 1930s (see Section 5.2.4), the most recent date (1925-post 1950) can likely be discarded. The identification of pit features within different vertical portions of the quite thick stratum suggests the layer was not deposited all at once, but rather over a (potentially extended) period of time. As Feature 4 was identified within the lower portion of Stratum IIa, it would therefore date to the early part of that time period. Furthermore, the cobble-lined fire pit is consistent with traditional Hawaiian fire-related features. Hence, the radiocarbon analysis, like the wood taxa analysis (discussed above), supports a pre- or early post-Contact date for Feature 4.

4.3.2 Test Excavation 2 (T-2)

Test Excavation 2 (T-2) is an exterior excavation near the south corner of the AIS study area. It is oriented northeast-southwest and is 6.1 m long by 0.76 m wide, with a maximum depth of 220 cmbs. The water table was encountered at 214 cmbs.

The observed stratigraphy includes the asphalt parking lot surface (Stratum Ia), associated extremely gravelly (basalt) loamy sand base course (Stratum Ib), very gravelly loamy sand (mixed crushed coral) base course (Stratum Ic), very cobbly (basalt) sandy clay loam fill (Stratum Id; demolition fill), and a hollow tile wall with concrete base (SIHP # -8840 Component 3, Feature 2), overlying silty clay loam (Stratum IIa; SIHP # -8840 Component 2), sandy loam (Stratum IIb; SIHP # -8840 Component 2), another layer of silty clay loam (Stratum IIc; SIHP # -8840 Component 1), and terrigenous sand (Stratum IId), atop very cobbly (basalt) sandy clay (Stratum III) (Figure 45 through Figure 50 and Table 5).

Stratum Id is a demolition fill layer containing basalt gravel and cobbles, glass and ceramic fragments, and pig (*S. scrofa*) bone; the pig bone and three complete glass bottles were collected. One machine-made beer bottle (Acc. # 44) dates to post-1921, indicating deposition of the layer after 1921. A hollow tile wall with a concrete base, designated as SIHP # -8840 Component 3, Feature 2, was also identified within Stratum Id (see Figure 49 through Figure 52). The wall remnant was documented at the *makai* (southwest) end of T-2, extending roughly east-west from the southwest endwall into the southeast sidewall. It was documented between 37 and 70 cmbs. The exposed portion is 3.1 m long with a maximum width of 20 cm. The hollow tile portion comprises a single course and is approximately 20 cm thick. The underlying concrete base is 15 cm thick. No associated builder’s pit was observed; rather, it appeared the wall was founded on Stratum IIa prior to the deposition of the Stratum Id fill. Other portions of this structural remnant were documented in nearby T-2b (see Section 4.3.3) and possibly also in T-4 (see Section 4.3.6).

A review of historical maps suggests SIHP # -8840 Component 3, Feature 2, may have served as a boundary marker between dwellings in the southeastern portion of the AIS study area and tenements in the central portion of the AIS study area, indicated with a solid line on the 1906 Dakin map (see Figure 18 and Figure 163) and the 1914, 1927, and 1950 Sanborn maps (see Figure 20, Figure 23, Figure 27, and Figure 164 through Figure 166). Although Feature 2 lines up quite well with the boundary as depicted on the 1950 Sanborn map, it appears to be several meters to the east on the earlier maps. It is possible the boundary shifted over time, or that the margin of error is greater for older maps; alternatively, Feature 2, which was likely constructed after 1910 (see T-2B discussion in Section 4.3.3 below), may not be associated with this boundary.

Stratum II (a–d) is naturally deposited alluvium, although the upper portion of Stratum IIa has been disturbed or reworked. Stratum IIa contains charcoal flecking, red brick fragments, and two pit features (Features 5 and 6), one of which contains human skeletal remains (Feature 6); hence, it is designated as part of SIHP # -8840 Component 2, habitation layers. While the upper boundary of Feature 5 may have been truncated, based on its matrix, it appears to originate within Stratum IIa; its position at the upper boundary of the layer indicates it is more recent than (i.e., post-dates) Feature 6, which extends from the lower boundary of the stratum. In addition, a concentration of metal, basalt, and charcoal was noted within Stratum IIa/SIHP # -8840 Component 2 in the northwest wall but was not designated as a feature (Figure 53). Features 5 and 6 are described below.

Stratum	Depth (cmbs)	Description
Ia	0–7	Asphalt; parking lot surface
Ib	7–20	Base course; 10YR 3/1, very dark gray; extremely gravelly loamy sand; weak, very fine, granular structure; moist, friable consistence; no cementation; non-plastic; terrigenous origin; abrupt, smooth lower boundary; no roots observed; basalt gravel base course
Ic	14–27	Base course; 10YR 6/4, light yellowish brown; very gravelly loamy sand; weak, very fine, granular structure; moist, friable consistence; no cementation; non-plastic; mixed origin; abrupt, smooth lower boundary; no roots observed; mixed crushed coral base course
Id	19–70	Fill; 10YR 2/2, very dark brown; very cobbly sandy clay loam; moderate, fine, granular structure; moist, friable consistence; no cementation; non-plastic; terrigenous origin; abrupt, smooth lower boundary; no roots observed; demolition fill containing basalt cobbles, glass and ceramic fragments, and pig bone
SIHP # -8840 Comp. 3, Fea. 2	37–70	SIHP # -8840 Component 3, Feature 2; hollow tile wall with concrete base; possibly a boundary wall
IIa	55–127	SIHP # -8840 Component 2; 10YR 3/2, very dark grayish brown; silty clay loam; moderate, fine, blocky structure; moist, firm consistence; no cementation; slightly plastic; terrigenous origin; clear, smooth lower boundary; no roots observed; habitation layer with charcoal flecking and pit features (Features 5 and 6)
	60–103	SIHP # -8840 Component 2, Feature 5; 10YR 3/2, very dark grayish brown; gravelly silty clay loam; pit feature containing red brick, glass, metal, charcoal, FAR, and coral gravel
	120–127	SIHP # -8840 Component 2, Feature 6; 10YR 3/2, very dark grayish brown; silty clay loam; small pit feature containing human skeletal remains
IIb	115–160	SIHP # -8840 Component 2; 10YR 3/4, dark yellowish brown; sandy loam; weak, fine, granular structure; moist, friable consistence; no cementation; non-plastic; mixed origin; clear, smooth lower boundary; no roots observed; habitation layer containing sparse basalt and coral gravel, and small marine shell fragments, and a stacked basalt feature (Feature 7)
	124–160	SIHP # -8840 Component 2, Feature 7; stacked basalt cobbles of an unknown function

Stratum	Depth (cmbs)	Description
IIc	140–164	SIHP # -8840 Component 1; 7.5YR 3/2, dark brown; silty clay loam; weak, medium, granular structure; moist, friable consistence; no cementation; slightly plastic; terrigenous origin; clear, smooth lower boundary; agricultural layer containing cinder and oxidized (red) mottling
IId	160–182	Natural; 7.5YR 3/4, dark brown; sand; structureless (single-grain); moist, loose consistence; no cementation; non-plastic; terrigenous origin; clear, smooth lower boundary; no roots observed; naturally deposited sand
III	175–220 (BOE)	Natural; 7.5YR 2.5/2, very dark brown; very cobbly sandy clay; weak, fine, granular structure; moist, friable consistence; no cementation; non-plastic; lower boundary not observed; no roots observed; streambed with waterworn basalt cobbles and gravel

Figure 51. Plan view of SIHP # -8840 Component 3, Feature 2, hollow tile wall remnant with concrete base, in T-2

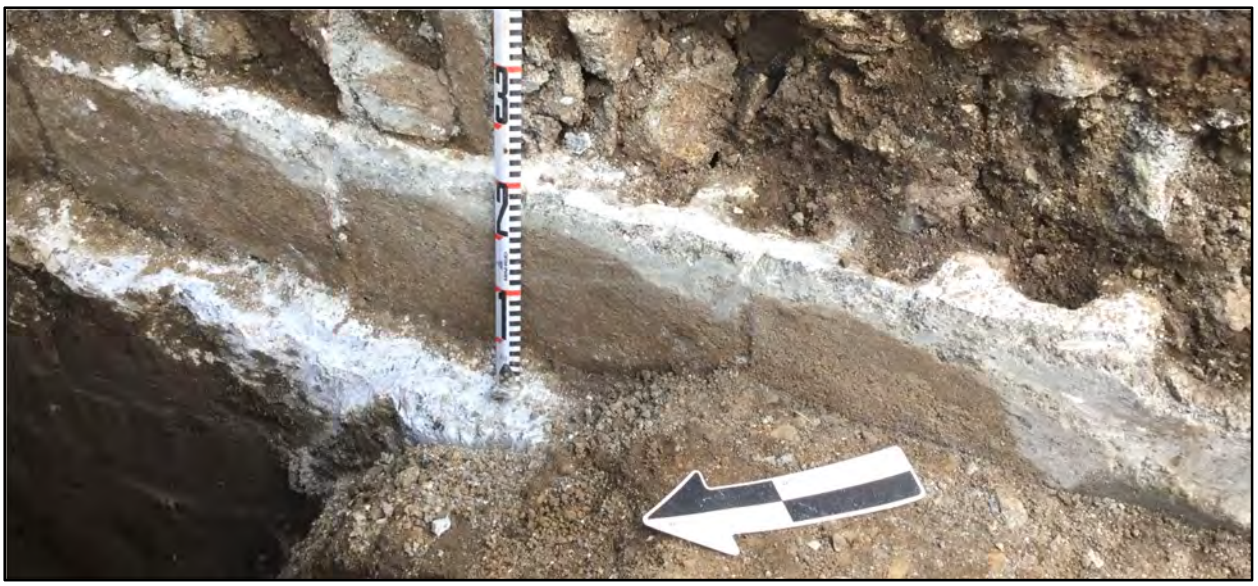

Figure 52. SIHP # -8840 Component 3, Feature 2, hollow tile wall remnant with concrete base, in T-2 southeast wall, view to east

Figure 53. Concentration of metal, basalt, and charcoal within Stratum IIa/SIHP # -8840 Component 2 in T-2 northwest wall

Feature 5 is a basin-shaped pit feature identified at/near the upper boundary of Stratum IIa/SIHP # -8840 Component 2 within both sidewalls of T-2 (see Figure 47, Figure 48, and Figure 54). It was documented between 60 and 103 cmbs and measures 85 cm across. The exposed portion is 76 cm wide, spanning the width of the trench. The feature contains red brick, glass, metal, charcoal, FAR, and coral gravel (not collected). Its function is indeterminate.

Feature 6 is a small pit feature containing human skeletal remains (see Figure 45, Figure 46, Figure 55, and Figure 56). It was documented between 120 and 127 cmbs within the southwest wall of T-2, near the southeast end of the excavation. It originates at the base of Stratum IIa/SIHP # -8840 Component 2 and terminates in the underlying Stratum IIb/SIHP # -8840 Component 2. The pit measures 26 cm across and contains the remains of a single fetal individual (at or near birth). Observed skeletal elements comprise the lower limbs; the upper body likely remains in situ within the southwest sidewall (see Figure 56). The remains are in good condition, and the individual is approximately 85% complete.

The human remains were identified during cleaning of the sidewall, when the trench was excavated to approximately 150 cmbs; this portion of the trench was benched and was not excavated further (see Figure 46). The archaeologists troweled through the loose sediment within the trench and recovered several displaced fragments; these were wrapped in muslin. Troweling through portions of the backdirt pile did not yield any additional remains.

A sheet of muslin was nailed over the exposed portion of the burial (see Figure 45 and Figure 55). A small pit measuring 10 cm high by 12 cm across was dug into the sidewall approximately 15 cm northeast of Feature 6, and the muslin-wrapped, displaced remains were placed into the pit. A second sheet of muslin was then nailed over the pit (Figure 57). Afterwards, a plywood board measuring 2.5 by 2.5 ft was placed over the wall, covering both Feature 6 and the pit with the displaced remains. Following documentation of the excavation, the trench was backfilled to a depth of 90 cmbs. Four plywood boards, each approximately 1 by 2.5 ft, were placed on the excavation floor above the burial find location. The remainder of the trench was then backfilled.

The underlying Stratum IIb contains sparse basalt and coral gravel and small marine shell fragments, as well as a stacked basalt feature. Hence, Stratum IIb is also designated as part of SIHP # -8840 Component 2. The feature, designated as Feature 7, is described below.

Feature 7 comprises three stacked basalt cobbles identified within Stratum IIb/SIHP # -8840 Component 2 in the northwest wall of T-2 (see Figure 47, Figure 48, and Figure 54). It was documented between 124 and 160 cmbs and measures 25 cm across. Its function is indeterminate.

Beneath the SIHP # -8840 Component 2 (Strata IIa and IIb) habitation layers is Stratum IIc, interpreted as an agricultural deposit. Stratum IIc contains cinder gravel and oxidized (red) mottling and is designated as part of SIHP # -8840 Component 1. The underlying Stratum III contains abundant waterworn basalt cobbles and gravel and is interpreted as a streambed.

4.3.3 Test Excavation 2B (T-2B)

Test Excavation 2B (T-2B) is an exterior excavation, just east of T-2, excavated to investigate the presence of a potential burial cluster and to delineate the burial site boundaries for SIHP # -8840 Component 2, Feature 6 (see Section 4.3.2 above); however, no human remains were identified in T-2B. T-2B is oriented northeast-southwest and measures 6.1 m long by 0.73 m wide, with a maximum depth of 225 cmbs. The water table was encountered at 222 cmbs.

The observed stratigraphy includes three layers of asphalt comprising the parking lot surface (Strata Ia–Ic) and associated very gravelly sand (crushed coral) base course (Stratum Id), gravelly (basalt) silty clay loam fill (Stratum Ie), very gravelly (basalt) sandy clay loam fill (Stratum If; demolition fill), and a hollow tile wall with concrete base (SIHP # -8840 Component 3, Feature 2), overlying two layers of silty clay loam (Strata IIa and IIb; SIHP # -8840 Component 2), gravelly (cinder) loam (Stratum IIc; SIHP # -8840 Component 1), and extremely gravelly (basalt) sand (Stratum III) (Figure 58 through Figure 60 and Table 6). A saw-cut cow (*Bos taurus*) bone recovered from the spoils pile was collected; its exact provenience is unknown.

The Stratum Ib and Ic asphalt layers were highly degraded/crumbly. The Stratum Ie fill contains historical trash, including a small lens of burnt trash; a grab sample of metal, glass, and ceramics as well as a bone artifact were collected. The bone artifact (Acc. # 26), likely part of a folding personal hygiene tool, dates to post-1926, indicating deposition of Stratum Ie after that time. Stratum If is a demolition fill containing basalt gravel and metal and glass debris.

At the lateral interface of Strata Ie and If, resting atop Stratum IIa, is a hollow tile wall with a concrete base (see Figure 58 through Figure 61 and Figure 62). This structural remnant, designated as SIHP # -8840 Component 3, Feature 2, was documented between 22 and 73 cmbs, extending roughly east-west from near the east corner of the trench into the northwest sidewall. The exposed portion is approximately 2.5 m long with a maximum width of 35 cm. No associated builder's pit was observed; rather, it appeared the wall was founded on Stratum IIa prior to the deposition of the Strata Ie and If fills. As the wall overlies and therefore post-dates SIHP # -8840 Component 2, Feature 8 (historical trash pit, discussed below), it was constructed no earlier than 1910. Other portions of this structural remnant were documented in nearby T-2 (see Section 4.3.2) and possibly also in T-4 (see Section 4.3.6).

The underlying Stratum II (a–c) is natural alluvium. Because Strata IIa and IIb contain pit features, they are designated as part of SIHP # -8840 Component 2, habitation layers. The features, designated as Features 8–10, are described below.

Feature 8 is a large pit feature identified at the *mauka* (northeast) end of T-2B in the southeast sidewall (see Figure 58, Figure 59, and Figure 62). It was documented between 70 and 145 cmbs at the upper boundary of Stratum IIa/SIHP # -8840 Component 2. Glass, metal, ceramic, and bone artifacts were collected from this feature, which is interpreted as a historical trash pit; a grab sample was collected. Diagnostic artifacts are Euro-American and Asian in origin. A machine-made glass marble (Acc. # 37), a bottle glass fragment (Acc. # 41), and a Dutch gin bottle date to post-1910, 1910-1919, and ca. 1910, respectively, indicating use of the feature after that date. Feature 8 overlies and therefore post-dates Feature 9, discussed below. Feature 8 underlies and therefore pre-dates SIHP # -8841 Component 3, Feature 2 (hollow tile wall), discussed above.

Table 6. T-2B stratigraphic description

Stratum	Depth (cmbs)	Description
Ia	0–5	Asphalt; parking lot surface
Ib	5–10	Second layer of asphalt
Ic	10–19	Third layer of asphalt
Id	12–22	Base course; 10YR 8/2, very pale brown; very gravelly sand; structureless (single-grain); moist, loose consistence; no cementation; non-plastic; marine origin; abrupt, smooth lower boundary; no roots observed; crushed coral base course
Ie	21–70	Fill; 10YR 3/2, very dark grayish brown; gravelly silty clay loam; weak, fine, granular structure; moist, friable consistence; no cementation; slightly plastic; terrigenous origin; clear, discontinuous lower boundary; no roots observed; fill derived from alluvium, containing basalt gravel
SIHP # -8840 Comp. 3, Fea. 2	22–73	SIHP # -8840 Component 3, Feature 2; hollow tile wall with concrete base; possibly a boundary wall
If	16–79	Fill; 10YR 5/6, yellowish brown; very gravelly sandy clay loam; moderate, medium, blocky structure; moist, friable consistence; no cementation; slightly plastic; mixed origin; clear, discontinuous lower boundary; no roots observed; demolition fill containing basalt gravel and metal and glass debris
IIa	70–191	SIHP # -8840 Component 2; 10YR 3/1, very dark gray; silty clay loam; moderate, fine, blocky structure; moist, friable consistence; no cementation; slightly plastic; terrigenous origin; clear, irregular lower boundary; no roots observed; habitation layer containing pit features (Features 8 and 9)
	70–145	SIHP # -8840 Component 2, Feature 8; 10YR 3/1, very dark gray; silty clay loam; historical trash pit containing glass, metal, ceramic, and bone artifacts
	115–191	SIHP # -8840 Component 2, Feature 9; 10YR 3/1, very dark gray; silty clay loam; pit feature of indeterminate function
IIb	112–176	SIHP # -8840 Component 2; 10YR 3/6, dark yellowish brown; silty clay loam; weak, fine, granular structure; moist, friable consistence; no cementation; slightly plastic; terrigenous origin; clear, discontinuous lower boundary; no roots observed; habitation layer containing a pit feature (Feature 10)
	117–171	SIHP # -8840 Component 2, Feature 10; 10YR 3/6, dark yellowish brown; silty clay loam; pit feature of indeterminate function

Stratum	Depth (cmbs)	Description
IIc	175–216	SIHP # -8840 Component 1; 10YR 2/2, very dark brown; gravelly loam; weak, very fine, granular structure; moist, friable consistence; no cementation; non-plastic; terrigenous origin; clear, wavy lower boundary; no roots observed; agricultural deposit containing cinder gravel, oxidized (red) mottling, reddish-orange concretions and nodules, and several tubular root casts
III	197–225 (BOE)	Natural; GLEY 10Y 2.5/1, greenish black; extremely gravelly sand; structureless (single-grain); moist, loose consistence; no cementation; non-plastic; terrigenous origin; lower boundary not observed; no roots observed; streambed with waterworn basalt gravel and cobbles

Figure 61. Plan view of SIHP # -8840 Component 3, Feature 2, hollow tile wall with concrete base, in T-2B

Figure 62. Northeast end of T-2B southeast wall, showing SIHP # -8840 Component 3, Feature 2 (hollow tile wall remnant) overlying SIHP # -8840 Component 2 Features 8 and 9, pit features, view to east

Feature 9 is a large pit feature identified at the *mauka* (northeast) end of T-2B in the southeast sidewall (see Figure 58, Figure 59, and Figure 62). It was documented between 115 and 191 cmbs, extending from the lower boundary of Stratum IIa/SIHP # -8840 Component 2, intrusive through Stratum IIb, and terminating in Stratum IIc. It underlies Feature 8 (described above), which it therefore pre-dates. The exposed portion of the feature is approximately 2 m long. No cultural materials were identified wihtin the feature; its function is indeterminate.

Feature 10 is an oblong pit feature identified in the southeast wall of T-2B (see Figure 58, Figure 59, and Figure 63). It was documented at the upper boundary of Stratum IIb/SIHP # -8840 Component 2, between 117 and 171 cmbs and measures 25 cm across. No cultural materials were identified within the feature; its function is indeterminate.

Stratum IIc contains basalt gravel and oxidized (red) mottling and is interpreted as an agricultural deposit; hence, it is designated as part of SIHP # -8840 Component 1. A bulk sample of Stratum IIc was collected from the excavator bucket. Wet screening of the sample yielded reddish-orange concretions and nodules and several tubular root casts; based on previous archaeological studies (see Section 5.1.1), these are interpreted as evidence of agricultural use. The underlying Stratum III contains abundant waterworn basalt gravel and cobbles and is interpreted as a streambed.

Figure 63. SIHP # -8840 Component 2 Feature 10, pit feature, in T-2B southeast wall, view to south

4.3.4 Test Excavation 2C (T-2C)

Test Excavation 2C (T-2C) is an exterior excavation, just north of T-2, excavated to investigate the presence of a potential burial cluster and to delineate the burial site boundaries of SIHP # -8840 Component 2, Feature 6 (see Section 4.3.2 above); however, no human remains were identified in T-2C. T-2C is oriented northeast-southwest and measures 6.1 m long by 0.76 m wide, with a maximum depth of 225 cmbs. The water table was not encountered.

The observed stratigraphy includes three layers of asphalt (Strata Ia–Ic) and associated very gravelly sand (crushed coral) base course (Stratum Id), very gravelly (basalt) sandy clay loam base course (Stratum Ie), and gravelly silty clay loam fill (Stratum If; demolition fill), overlying two layers of silty clay loam (Strata IIa/SIHP # -8840 Component 2 and IIb) and very gravelly (basalt) sandy clay (Stratum III) (Figure 64, Figure 65, and Table 7).

The Strata Ib and Ic asphalt layers were highly degraded/crumbly. Stratum If is a demolition fill containing medium mammal bone (inconsistent with human) and ceramic, metal, and glass artifacts. The mammal bone and a grab sample of artifacts were collected. Diagnostic artifacts are Hawaiian, Euro-American, and Japanese in origin. One machine-made bottle (Acc. # 161) dates to 1935, indicating the fill was deposited after that date.

Stratum II (a and b) is naturally deposited alluvium, while the underlying Stratum III contains abundant waterworn basalt gravel and cobbles and is interpreted as a streambed. Because Stratum IIa contains charcoal flecking and a pit feature, it is designated as part of SIHP # -8840 Component 2, habitation layers. The feature, designated as Feature 11, is described below.

Feature 11 is a small pit feature identified in the southeast sidewall of T-2C (see Figure 65 and Figure 66). It was documented between 137 and 152 cmbs, extending from the lower boundary of Stratum IIa/SIHP # -8840 Component 2 and terminating in Stratum IIb. It measures 30 cm across. No cultural materials were observed within the feature; its function is indeterminate.

Figure 64. T-2C southeast wall, view to south

Figure 66. SIHP # -8840 Component 2, Feature 11, pit feature of indeterminate function, in T-2C southeast sidewall, view to southeast

Table 7. T-2C stratigraphic description

Stratum	Depth (cmbs)	Description
Ia	0–8	Asphalt; parking lot surface
Ib	6–16	Second layer of asphalt
Ic	12–26	Third layer of asphalt
Id	25–29	Base course; 10YR 7/3, very pale brown; very gravelly sand; structureless (single-grain); moist, loose consistence; no cementation; non-plastic; marine origin; abrupt, smooth lower boundary; no roots observed; crushed coral base course
Ie	29–37	Base course; 10YR 3/1, very dark gray; very gravelly sandy clay loam; moderate, medium, granular structure; moist, firm consistence; no cementation; slightly plastic; terrigenous origin; abrupt, discontinuous lower boundary; no roots observed; basalt gravel base course
If	27–64	Fill; 10YR 3/2, very dark grayish brown; gravelly silty clay loam; moderate, medium, granular structure; moist, friable consistence; no cementation; slightly plastic; terrigenous origin; clear, wavy lower boundary; no roots observed; demolition fill, containing basalt gravel and cobbles, medium mammal bone, and glass, metal, and ceramic artifacts
IIa	55–152	SIHP # -8840 Component 2; 10YR 2/2, very dark brown; silty clay loam; moderate, medium, granular structure; moist, firm consistence; no cementation; plastic; terrigenous origin; clear, irregular lower boundary; no roots observed; habitation layer containing charcoal flecking and a pit feature (Feature 11)
	137–152	SIHP # -8840 Component 2, Feature 11; 10YR 2/2, very dark brown; silty clay loam; pit feature of indeterminate function
IIb	100–161	Natural; 10YR 3/3, dark brown; silty clay loam; weak, fine, granular structure; moist, friable consistence; plastic; terrigenous origin; clear, smooth lower boundary; no roots observed; naturally deposited alluvium
III	161–174 (BOE)	Natural; 10YR 3/2, very dark grayish brown; very gravelly sandy clay; weak, fine, granular structure; moist, friable consistence; no cementation; non-plastic; lower boundary not observed; no roots observed; streambed containing abundant waterworn basalt gravel and cobbles

4.3.5 Test Excavation 3 (T-3)

Test Excavation 3 (T-3) is an exterior excavation near the south corner of the AIS study area. It is oriented northwest-southeast and is 6.15 m long by 0.8 m wide, with a maximum depth of 160 cmbs. The water table was not encountered.

The observed stratigraphy includes the asphalt parking lot surface (Stratum Ia) and associated extremely gravelly (basalt) sandy clay loam base course (Stratum Ib), very gravelly sand (crushed coral) base course (Stratum Ic), very gravelly (basalt) sandy clay loam fill (Stratum Id), and gravelly (basalt) sandy clay loam fill (Stratum Ie; demolition fill), overlying gravelly (basalt) silty clay loam (Stratum IIa; SIHP # -8840 Component 2) and two layers of silty clay loam (Strata IIb and IIc/SIHP # -8840 Component 1) (Figure 67 through Figure 69, and Table 8).

Stratum Ie is a demolition fill containing concrete and metal debris. Large pieces of concrete at either end of the excavation within Stratum Ie threatened to destabilize the sidewalls if removed; hence, only the central portion of the trench was excavated fully (see Figure 69).

The underlying Stratum II (a–c) is naturally deposited alluvium. The upper portion of Stratum IIa has been disturbed or reworked and contains charcoal flecking and red brick fragments (not collected); hence, it is designated as part of SIHP # -8840 Component 2, habitation layers. Stratum IIc contains oxidized (red) mottling and is interpreted as an agricultural deposit; it is designated as part of SIHP # -8840 Component 1.

Figure 67. Southeast end of T-3 southwest wall, showing concrete debris within Stratum Ie, demolition fill, which prevented full excavation, view to south

Figure 68. T-3 southwest wall, central portion, view to southwest

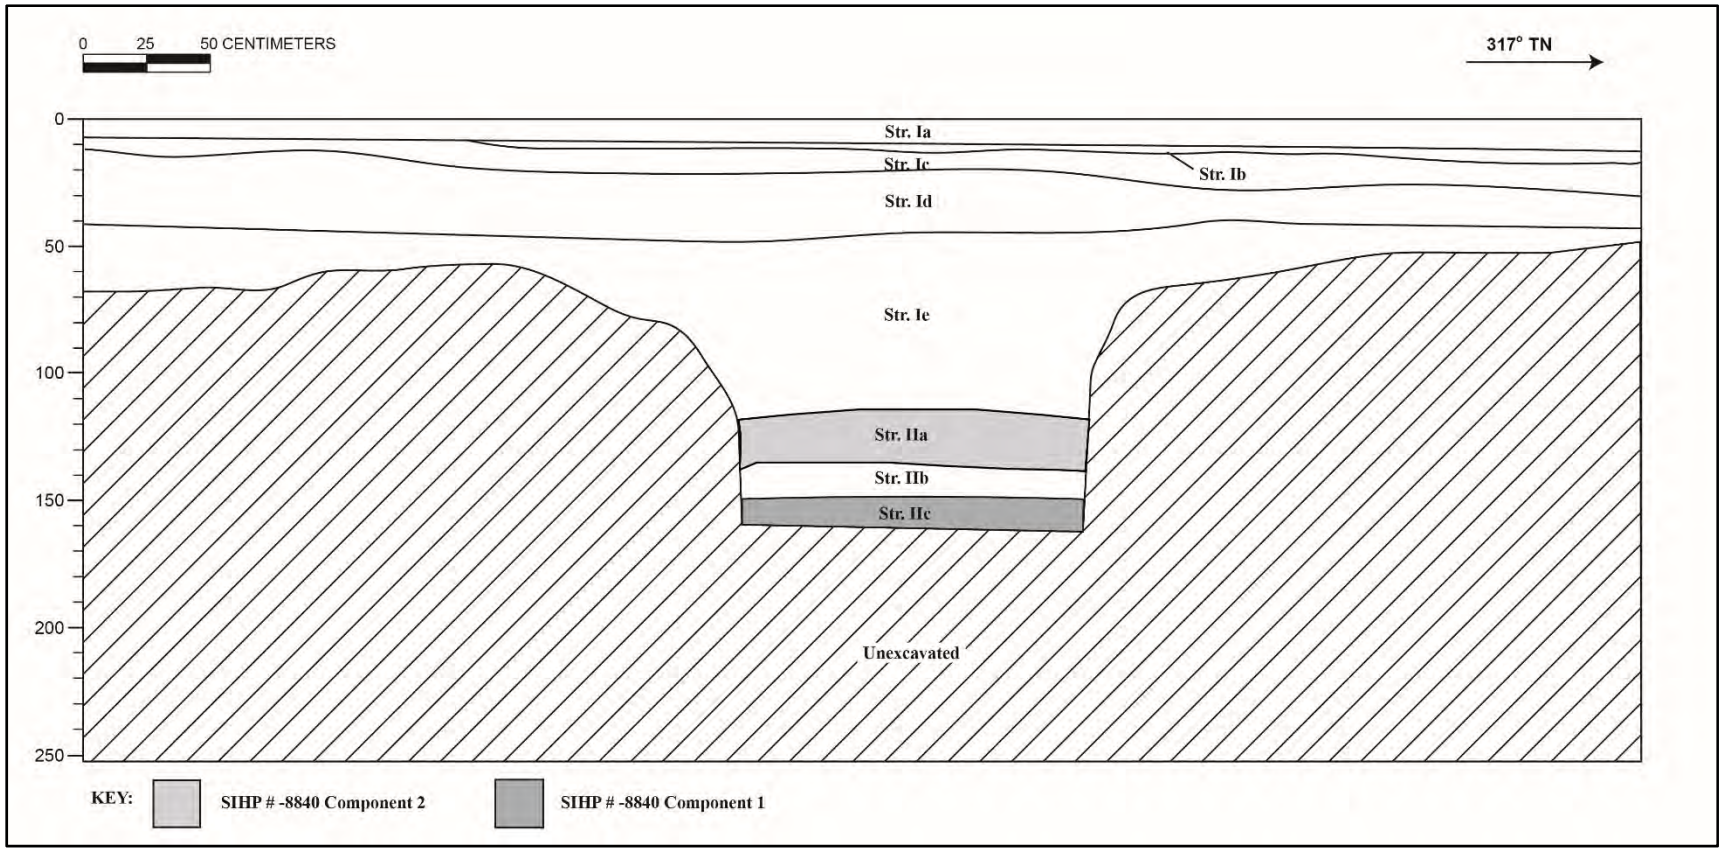

Figure 69. Profile of T-3 southwest wall

Table 8. T-3 stratigraphic description

Stratum	Depth (cmbs)	Description
Ia	0–7	Asphalt; parking lot surface
Ib	7–12	Base course; 10YR 4/2, dark grayish brown; extremely gravelly sandy clay loam; moderate, fine, granular structure; moist, friable consistence; no cementation; slightly plastic; terrigenous origin; abrupt, discontinuous lower boundary; no roots observed; basalt gravel base course
Ic	7–35	Base course; 10YR 7/3, very pale brown; very gravelly sand; structureless (single-grain); moist, loose consistence; no cementation; non-plastic; marine origin; abrupt, smooth lower boundary; no roots observed; crushed coral base course
Id	12–45	Fill; 2.5YR 3/2, dusky red; very gravelly sandy clay loam; terrigenous origin; moderate, medium, granular structure; moist, firm consistence; no cementation; slightly plastic; terrigenous origin; abrupt, smooth lower boundary; no roots observed; contains basalt gravel
Ie	35–110	Fill; 10YR 3/3, dark brown; gravelly sandy clay loam; moderate, medium, granular structure; moist, firm consistence; no cementation; slightly plastic; terrigenous origin; clear, smooth lower boundary; no roots observed; demolition fill containing basalt gravel and metal and concrete debris
IIa	110–133	SIHP # -8840 Component 2; 10YR 3/2, very dark grayish brown; gravelly silty clay loam; moderate, fine, granular structure; moist, friable consistence; no cementation; plastic; terrigenous origin; clear, smooth lower boundary; few, fine roots; habitation layer with basalt gravel, charcoal, and red brick in its upper portion
IIb	136–148	Natural; 10YR 3/3, dark brown; silty clay loam; weak, very fine, granular structure; moist, friable consistence; no cementation; plastic; terrigenous origin; clear, smooth lower boundary; few, fine roots; naturally deposited alluvium
IIc	146–160 (BOE)	SIHP # -8840 Component 1; 10YR 3/2, very dark grayish brown; silty clay loam; weak, fine, granular structure; moist, friable consistence; no cementation; plastic; terrigenous origin; lower boundary not observed; no roots observed; agricultural deposit with oxidized (red) mottling

4.3.6 Test Excavation 4 (T-4)

Test Excavation 4 (T-4) is an exterior excavation in the southeastern portion of the AIS study area. It is oriented northwest-southeast and is 6.1 m long by 0.8 m wide, with a maximum depth of 229 cmbs. The water table was encountered at 223 cmbs.

The observed stratigraphy includes the asphalt parking lot surface (Stratum Ia), associated extremely gravelly sand (crushed coral) base course (Stratum Ib), very gravelly (basalt) sandy clay loam fill (Stratum Ic; demolition fill), and a concrete footing (SIHP # -8840 Component 3, Feature 3), overlying gravelly (basalt) silty clay loam (Stratum IIa; SIHP # -8840 Component 2), three layers of silty clay loam (Strata IIb, IIc/SIHP # -8840 Component 1, and IId), and a second layer of gravelly (basalt) silty clay loam (Stratum IIe; SIHP # -8840 Component 1) (Figure 70 through Figure 75 and Table 9). A saw-cut cow (*Bos taurus*) bone and a small mammal bone fragment were collected from the spoils pile; their exact provenience is unknown.

Stratum Ic is a demolition fill containing concrete, brick, hollow tile, and metal debris, as well as a concrete footing (see Figure 72 through Figure 75). A strong odor of petroleum indicated Stratum Ic was contaminated in the ‘Ewa (northwest) portion of the trench; hence, that portion was not fully excavated (see Figure 73). The concrete footing is designated as SIHP # -8840 Component 3, Feature 3. The exposed portion is 85 cm long by 45 cm wide and 15 cm thick, documented between 43 and 58 cmbs within the trench floor and both sidewalls. It may represent the concrete base of the hollow tile wall (SIHP # -8840 Component 3, Feature 2) identified in T-2 and T-2B (see Sections 4.3.2 and 4.3.3 above), as it is of approximately the same thickness, width, and orientation (roughly east-west). Furthermore, the presence of hollow tile debris in the surrounding Stratum Ic fill material supports this hypothesis, suggesting the upper hollow tile portion was once present but has been demolished. Like Feature 2, Feature 3 appeared to be founded upon Stratum IIa and to pre-date the deposition of the surrounding fill layer.

Stratum II (a–e) is natural alluvium. The upper portion of Stratum IIa has been disturbed or reworked and contains charcoal flecking and red brick fragments; hence, it is designated as part of SIHP # -8840 Component 2, habitation layers. Strata IIc and IIe contain oxidized (red) mottling and are interpreted as agricultural deposits; they are designated as part of SIHP # -8840 Component 1 (Figure 76). A bulk sample of Stratum IIe was collected from the spoils pile.

Table 9. T-4 stratigraphic description

Stratum	Depth (cmbs)	Description
Ia	0–6	Asphalt; parking lot surface
Ib	6–20	Base course; 10YR 6/3, pale brown; extremely gravelly sand; structureless (single-grain); moist, loose consistence; no cementation; non-plastic; marine origin; abrupt, smooth lower boundary; no roots observed; crushed coral base course
Ic	14–74	Fill; 2.5YR 3/2, dusky red; very gravelly sandy clay loam; terrigenous origin; moderate, medium, granular structure; moist, firm consistence; no cementation; slightly plastic; terrigenous origin; clear, smooth lower boundary; no roots observed; demolition fill containing basalt gravel and concrete, hollow tile, brick, and metal debris
SIHP # -8840 Comp. 3, Feature 3	43–58	SIHP # -8840 Component 3, Feature 3; concrete footing; possibly the base of a former hollow tile wall
IIa	71–115	SIHP # -8840 Component 2; 10YR 3/2, very dark grayish brown; gravelly silty clay loam; weak, medium, granular structure; moist, friable consistence; no cementation; slightly plastic; terrigenous origin; clear, smooth lower boundary; no roots observed; naturally deposited alluvium with basalt gravel, charcoal flecking, and red brick fragments in its upper portion
IIb	105–148	Natural; 10YR 4/3, brown; silty clay loam; weak, fine, granular structure; moist, friable consistence; no cementation; slightly plastic; terrigenous origin; clear, smooth lower boundary; no roots observed; naturally deposited alluvium
IIc	145–165	SIHP # -8840 Component 1; 10YR 3/3, dark brown; silty clay loam; moderate, medium granular structure; moist, firm consistence; no cementation; plastic; terrigenous origin; clear, smooth lower boundary; no roots observed; agricultural deposit with oxidized (red) mottling
IId	158–200	Natural; 10YR 4/3, brown; silty clay loam; weak, fine, granular structure; moist, friable consistence; no cementation; plastic; terrigenous origin; clear, smooth lower boundary; few, fine roots; naturally deposited alluvium
IIe	196–229 (BOE)	SIHP # -8840 Component 1; 10YR 3/2, very dark grayish brown; gravelly silty clay loam; moderate, fine, granular structure; moist, firm consistence; no cementation; plastic; terrigenous origin; lower boundary not observed; no roots observed; agricultural deposit with abundant oxidized (red) mottling

Figure 76. Stratum IIe/SIHP # -8840 Component 1 sediment, showing abundant oxidized (red) mottling

4.3.7 Test Excavation 5 (T-5)

Test Excavation 5 (T-5) is an exterior excavation in the southeastern portion of the AIS study area. It is oriented northwest-southeast and is 6.1 m long by 0.75 m wide, with a maximum depth of 224 cmbs. The water table was encountered at 220 cmbs.

The observed stratigraphy includes the asphalt parking lot surface (Stratum Ia) and associated extremely gravelly sand (crushed coral) base course (Stratum Ib), very gravelly (basalt) sandy clay loam fill (Stratum Ic), and very gravelly (basalt) silty clay loam fill (Stratum Id), overlying gravelly (basalt) silty clay loam (Stratum IIa; SIHP # -8840 Component 2) and five layers of silty clay loam (Strata IIb, IIc/SIHP # -8840 Component 1, IId, IIe, and IIf/SIHP # -8840 Component 1) (Figure 77 through Figure 79 and Table 10). Due to petroleum contamination within Stratum Id, minimal cleaning of the sidewalls was conducted, and a 1-m profile drawing was documented at the center of the trench to minimize the archaeologists' exposure to the contaminated sediment.

A corroded metal spike or nail and a small, non-diagnostic ceramic fragment were identified in Stratum Id; these were photographed but not collected (Figure 80). The underlying Stratum II (a–f) is natural alluvium. The upper portion of Stratum IIa has been disturbed or reworked and contains an abandoned utility pipe as well as glass, metal, and ceramic fragments; hence, Stratum IIa is designated as part of SIHP # -8840 Component 2, habitation layers. Artifacts associated with Stratum IIa were photographed but not collected (Figure 81). Strata IIc and IIf contain oxidized (red) mottling and are interpreted as agricultural deposits; they are designated as part of SIHP # -8840 Component 1. A bulk sample of Stratum IIf was collected from the spoils pile.

Figure 77. T-5 northeast wall, view to north (no photo available at full depth)

Figure 78. Close-up of the profiled (central) portion of T-5 northeast wall, view to north, at 160 cmbs (no photo available at full depth)

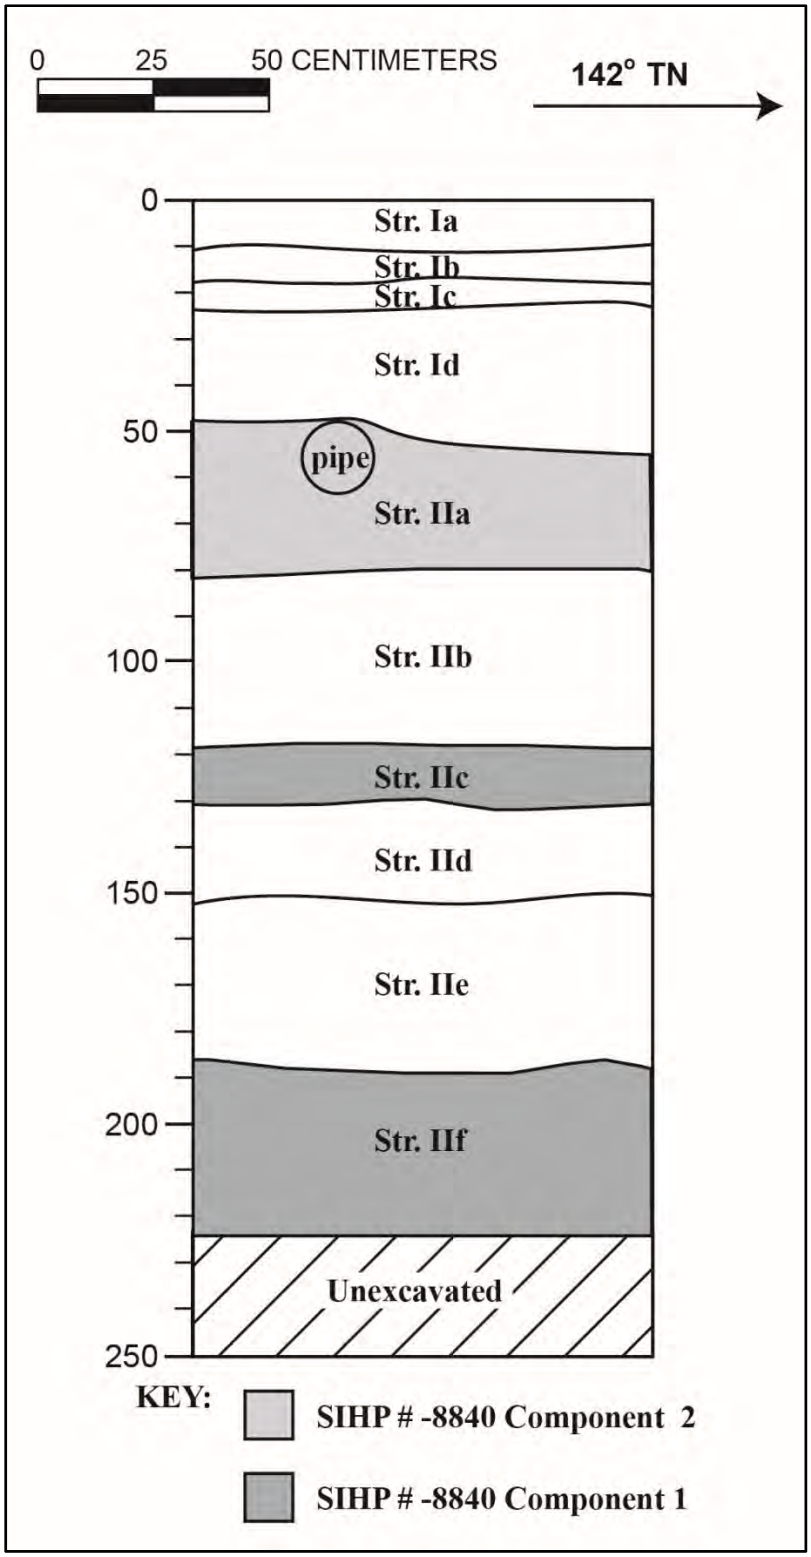

Figure 79. Profile of the central portion of T-5 northeast wall

Table 10. T-5 stratigraphic description

Stratum	Depth (cmbs)	Description
Ia	0–10	Asphalt; parking lot surface
Ib	10–18	Base course; 10YR 6/3, pale brown; extremely gravelly sand; structureless (single-grain); moist, loose consistence; no cementation; non-plastic; marine origin; abrupt, smooth lower boundary; no roots observed; crushed coral base course
Ic	17–24	Fill; 2.5YR 3/2, dusky red; very gravelly sandy clay loam; terrigenous origin; moderate, medium, granular structure; moist, firm consistence; no cementation; slightly plastic; terrigenous origin; abrupt, smooth lower boundary; no roots observed contains basalt gravel
Id	23–55	Fill; 10YR 3/2, very dark grayish brown; very gravelly silty clay loam; moderate, fine, granular structure; moist, friable consistence; no cementation; slightly plastic; terrigenous origin; abrupt, smooth lower boundary; no roots observed; contaminated with petroleum, mottled with 10YR 2/1, black, containing a corroded metal spike or nail and a small, non-diagnostic ceramic fragment
IIa	48–80	SIHP # -8840 Component 2; 10YR 3/2, very dark grayish brown; gravelly silty clay loam; weak, medium, granular structure; moist, friable consistence; no cementation; slightly plastic; terrigenous origin; clear, smooth lower boundary; no roots observed; naturally deposited alluvium with basalt gravel, an abandoned utility pipe, and glass, metal, and ceramic fragments in its upper portion
IIb	80–118	Natural; 10YR 3/3, dark brown; silty clay loam; moderate, medium granular structure; moist, firm consistence; no cementation; plastic; terrigenous origin; clear, smooth lower boundary; no roots observed; naturally deposited alluvium
IIc	118–130	SIHP # -8840 Component 1; 10YR 3/3, dark brown; silty clay loam; moderate, medium granular structure; moist, firm consistence; no cementation; plastic; terrigenous origin; clear, smooth lower boundary; no roots observed; agricultural deposit with oxidized (red) mottling
IId	130–150	Natural; 10YR 4/3, brown; silty clay loam; weak, fine, granular structure; moist, friable consistence; no cementation; plastic; terrigenous origin; clear, smooth lower boundary; no roots observed; naturally deposited alluvium
IIe	150–187	Natural; 10YR 3/2, very dark grayish brown; silty clay loam; moderate, medium, granular structure; moist, firm consistence; no cementation; plastic; terrigenous origin; clear, smooth lower boundary; no roots observed; naturally deposited alluvium

Stratum	Depth (cmbs)	Description
IIf	187–224 (BOE)	SIHP # -8840 Component 1; 10YR 3/3, dark brown; silty clay loam; moderate, medium granular structure; moist, firm consistence; no cementation; plastic; terrigenous origin; lower boundary not observed; no roots observed; agricultural deposit with oxidized (red) mottling

Figure 80. A metal spike or nail (too corroded to analyze) and a non-diagnostic ceramic fragment from T-5 Stratum Id, fill (not collected)

Figure 81. Post-Contact artifacts and utility pipe fragments identified in the upper portion of T-5 Stratum IIa/SIHP # -8840 Component 2 (not collected; no diagnostic elements could be discerned from the photograph)

4.3.8 Test Excavation 6 (T-6)

Test Excavation 6 (T-6) is an exterior excavation in the east corner of the AIS study area. It is oriented northeast-southwest and is 6 m long by 0.7 m wide, with a maximum depth of 213 cmbs. The water table was encountered at 210 cmbs.

The observed stratigraphy includes the asphalt parking lot surface (Stratum Ia) and associated extremely gravelly sand (crushed coral) base course (Stratum Ib), gravelly (basalt) sandy clay loam fill (Stratum Ic; demolition fill), and two layers of silty clay loam fill (Strata Id and Ie), overlying three layers of silty clay loam (Strata IIa, IIb, and IIc/SIHP # -8840 Component 1) and clay loam (Stratum IId) (Figure 82 through Figure 84 and Table 11).

Stratum Ic is a demolition fill layer containing basalt gravel, fish (Osteichthyes) bone, brick, hollow tiles, and concrete (Figure 85); two brick fragments were collected. Both are Euro-American in origin, and one (Acc. # 158) post-dates 1916, indicating the layer was deposited after that date. A large piece of concrete within Stratum Ic near the *mauka* (northeast) end of the trench prevented full excavation in that area (see Figure 84 and Figure 86).

Strata Id and Ie are fills derived from alluvium. Stratum Ie contains red brick, a coral construction block, glass, ceramic, metal, *Sphyraenidae* sp. (barracuda) dentary, slate, and concrete, as well as a carbon graphite rod for a dry-cell battery; a grab sample was collected. Diagnostic artifacts are mainly Japanese and Euro-American in origin. The carbon graphite rod (Acc. # 77) post-dates 1912, indicating the layer was deposited after that date.

The underlying Stratum II (a–d) is naturally deposited alluvium. Stratum IIa contains sparse charcoal flecking but no other potentially cultural materials; hence, it is not designated as part of SIHP # -8840 Component 2, habitation layers. Stratum IIc contains oxidized (red) mottling and is interpreted as an agricultural deposit; it is designated as part of SIHP # -8840 Component 1. Bulk samples were collected from Strata IIa–IId from the northwest wall (see Figure 84).

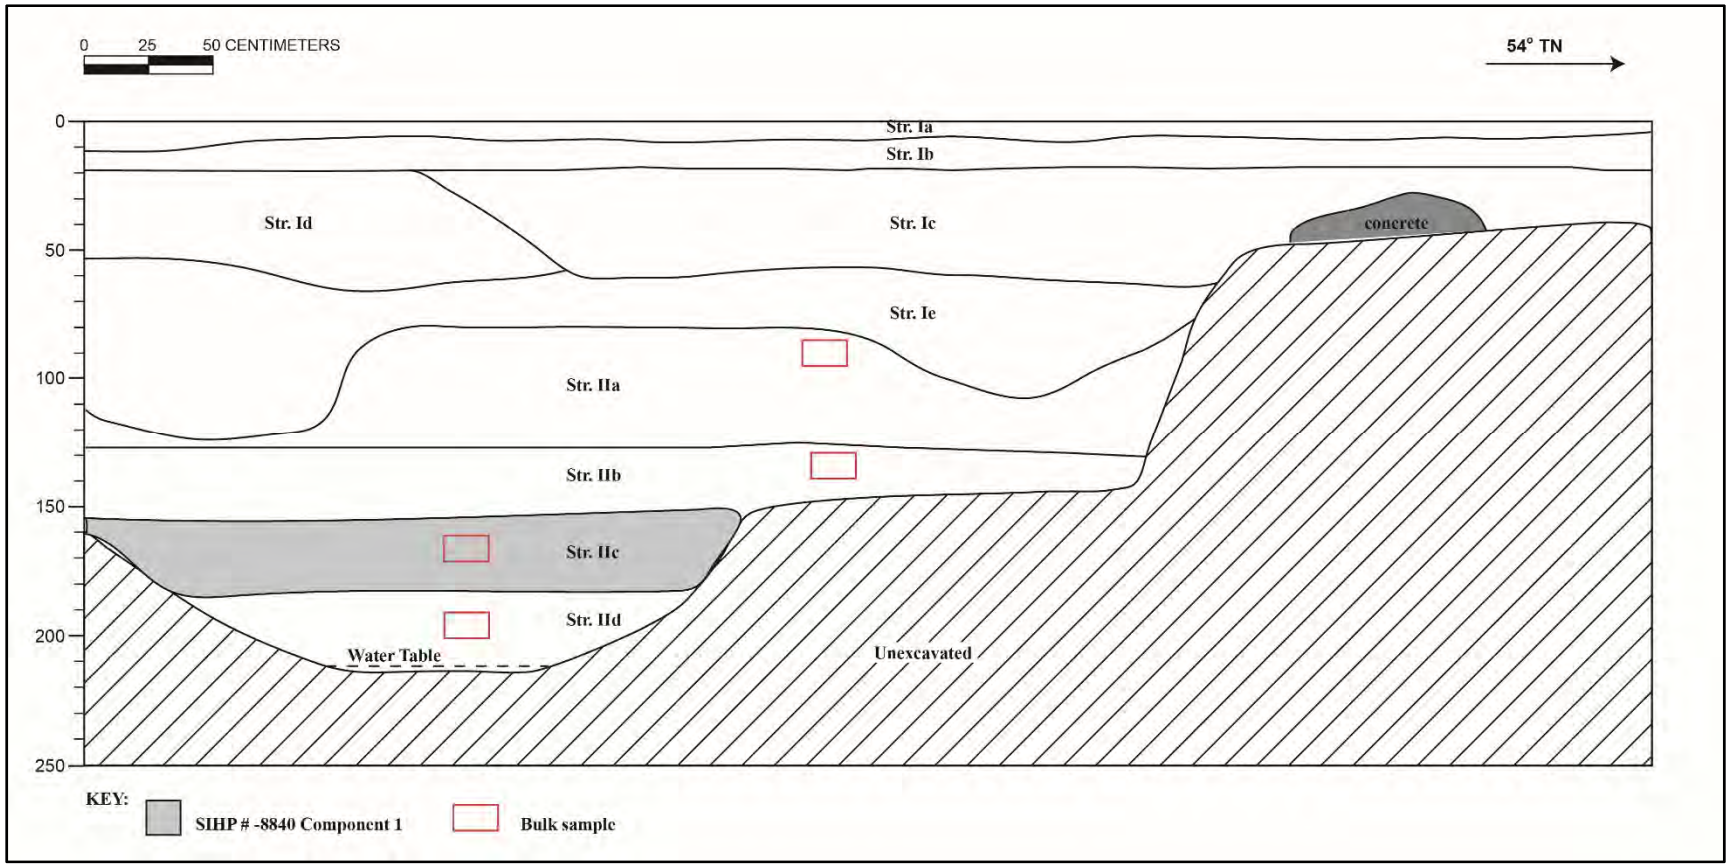

Figure 84. Profile of T-6 northwest wall

Table 11. T-6 stratigraphic description

Stratum	Depth (cmbs)	Description
Ia	0–10	Asphalt; parking lot surface
Ib	7–19	Base course; 10YR 6/3, pale brown; extremely gravelly sand; structureless (single-grain); moist, loose consistence; no cementation; non-plastic; marine origin; abrupt, smooth lower boundary; no roots observed; crushed coral base course
Ic	17–60	Fill; 10YR 4/2, dark grayish brown; gravelly sandy clay loam; weak, fine, granular structure; moist, friable consistence; no cementation; slightly plastic; mixed origin; abrupt, discontinuous lower boundary; no roots observed; demolition fill containing basalt gravel, fish bone, brick, hollow tiles, and concrete
Id	17–65	Fill; 10YR 4/3, brown; silty clay loam; moderate, fine, blocky structure; moist, firm consistence; no cementation; plastic; terrigenous origin; abrupt, discontinuous lower boundary; no roots observed; fill derived from alluvium
Ie	51–125	Fill; 10YR 3/2, very dark grayish brown; silty clay loam; moderate, fine, blocky structure; moist, firm consistence; no cementation; plastic; terrigenous origin; abrupt, irregular lower boundary; no roots observed; contains yellow and red brick, glass, ceramic, metal, marine shell, *Sphyraenidae* sp. (barracuda) dentary, and concrete
IIa	79–130	Natural; 10YR 3/2, very dark grayish brown; silty clay loam; weak, medium, granular structure; moist, friable consistence; no cementation; slightly plastic; terrigenous origin; clear, smooth lower boundary; no roots observed; naturally deposited alluvium with charcoal flecking
IIb	125–155	Natural; 10YR 3/3, dark brown; silty clay loam; moderate, medium granular structure; moist, firm consistence; no cementation; plastic; terrigenous origin; clear, smooth lower boundary; no roots observed; naturally deposited alluvium
IIc	150–182	SIHP # -8840 Component 1; 10YR 3/3, dark brown; silty clay loam; moderate, medium granular structure; moist, firm consistence; no cementation; plastic; terrigenous origin; clear, smooth lower boundary; agricultural deposit with oxidized (red) mottling
IId	180–213 (BOE)	Natural; 10YR 4/2, dark grayish brown; clay loam; moderate, fine, blocky structure; moist, firm consistence; no cementation; very plastic; terrigenous origin; lower boundary not observed; few, fine roots; naturally deposited alluvium

Figure 86. North corner of T-6, showing large piece of concrete within Stratum Ic, demolition fill, which prevented further excavation in that area

4.3.9 Test Excavation 7 (T-7)

Test Excavation 7 (T-7) is an exterior excavation in the northeastern portion of the AIS study area. It is oriented northeast-southwest and is 6 m long by 0.7 m wide, with a maximum depth of 218 cmbs. The water table was encountered at 204 cmbs.

The observed stratigraphy includes the asphalt parking lot surface (Stratum Ia), associated extremely gravelly sand (crushed coral) base course (Stratum Ib), and very gravelly (basalt) silty clay loam fill (Stratum Ic), overlying gravelly (coral and basalt) silty clay loam (Stratum IIa), silty clay loam (Stratum IIb), gravelly (cinder) silty clay loam (Stratum IIc; SIHP # -8840 Component 1), and three additional layers of silty clay loam (Strata IId/SIHP # -8840 Component 1, IIe, and IIf) (Figure 87, Figure 88, and Table 12).

Stratum Ic is fill derived from alluvium, containing coral and basalt gravel and a utility pipe. Stratum II (a–f) is natural alluvium. Strata IIc and IId contain charcoal flecking and oxidized (red) mottling and are interpreted as agricultural deposits; they are designated as part of SIHP # -8840 Component 1. A column sample collected from Stratum II (a–f) was submitted to BGP Consulting (Phillips 2019) for pollen analysis (see Figure 88 and Section 5.4.1).

The Strata IIa, IIb, and IIf samples contain no pollen and therefore could not be assessed. Asteraceae and Cheno-Ams dominate the Stratum IIe sample, suggesting a shrubland environment. Grass pollen gradually increases over time (i.e., increases up the sample column), becoming dominant in Stratum IIc. A single large grass grain identified in Stratum IIc may represent rice (*laiki*; *Oryza sativa*) or sugarcane (*kō*; *Saccharum* sp.) cultivation in the vicinity or the collection of *pili* (*Heteropogon contortus*) grass. In addition, a high proportion of fern spores in Stratum IIc might reflect increased input from upslope and/or overbank flooding.

Taken at face value, the pollen data from T-7 suggests a change over time from shrubland to grassland; sedge family pollen, representing wetlands (including *loʻi*), is present but found in relatively low percentages. However, as the percentages of degraded grains within the samples are very high, and the total pollen concentrations are very low, Phillips (2019) cautions that the data is likely not an accurate reflection of the original pollen assemblage. Hence, the lack of evidence for past agriculture is very likely a product of taphonomy (i.e., the very poor pollen preservation).

Figure 87. T-7 southeast wall, view to south

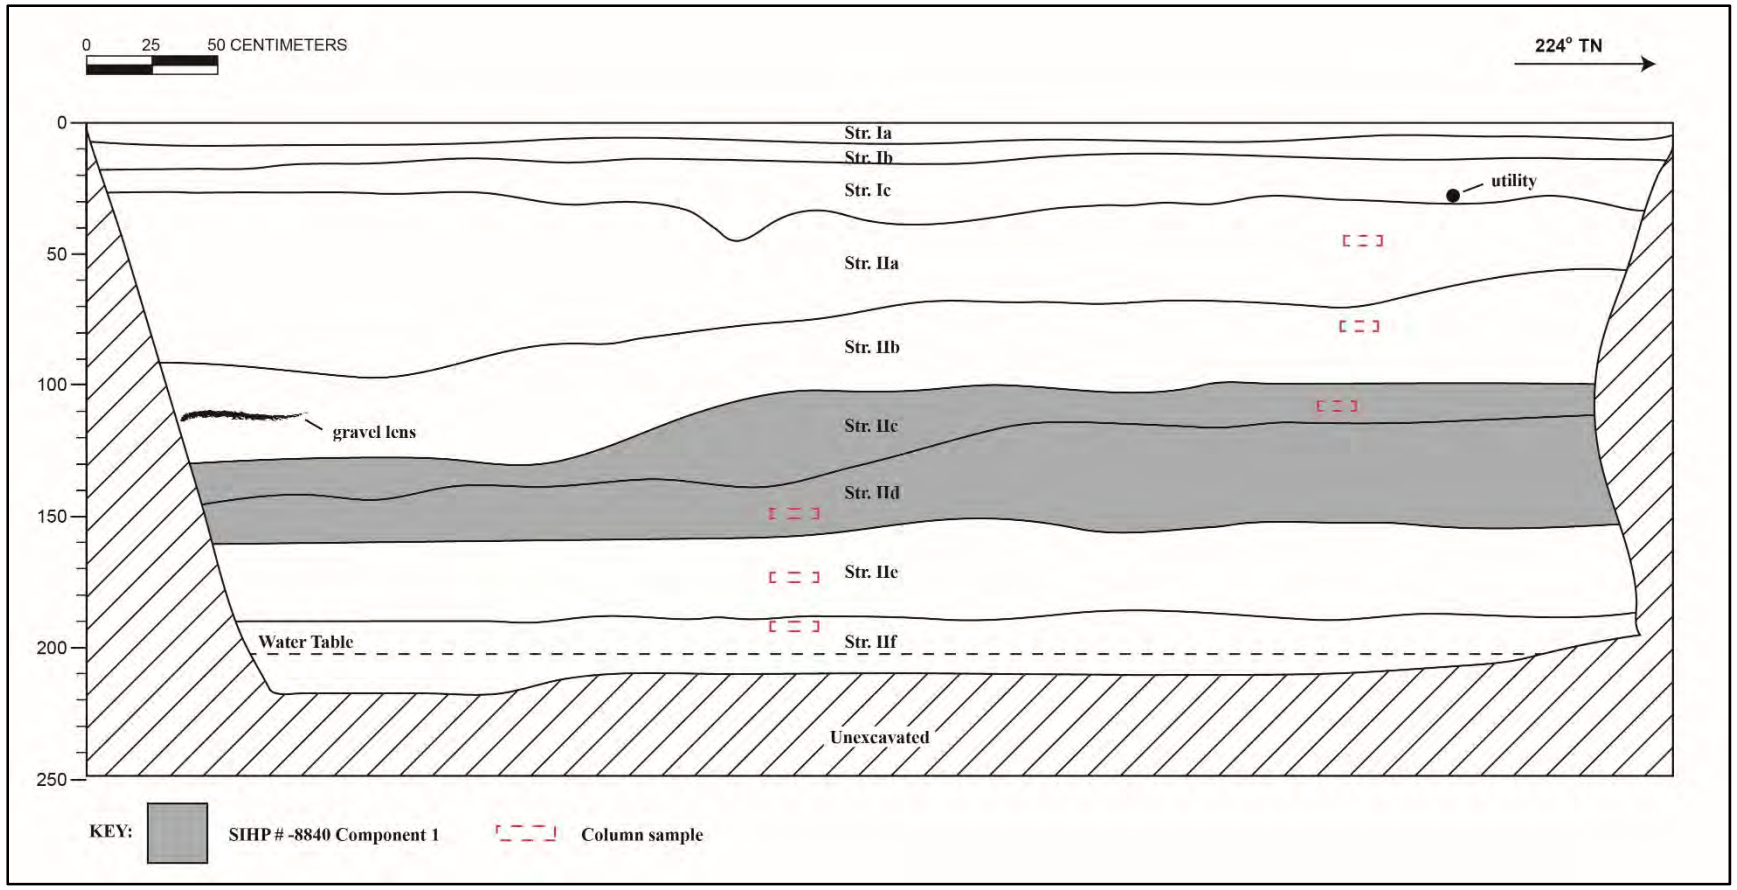

Figure 88. Profile of T-7 southeast wall

Table 12. T-7 stratigraphic description

Stratum	Depth (cmbs)	Description
Ia	0–7	Asphalt; parking lot surface
Ib	5–17	Base course; 10YR 6/3, pale brown; extremely gravelly sand; structureless (single-grain); moist, loose consistence; no cementation; non-plastic; marine origin; abrupt, smooth lower boundary; no roots observed; crushed coral base course
Ic	15–45	Fill; 10YR 4/3, brown; very gravelly silty clay loam; moderate, medium, granular structure; moist, friable consistence; no cementation; slightly plastic; terrigenous origin; clear, smooth lower boundary; few, fine to medium roots; derived from alluvium and contains coral and basalt gravel and a utility pipe
IIa	28–100	Natural; 10YR 3/2, very dark grayish brown; gravelly silty clay loam; moderate, fine, granular structure; moist, firm consistence; no cementation; plastic; terrigenous origin; clear, smooth lower boundary; common, fine roots; naturally deposited alluvium with sparse charcoal flecking
IIb	56–130	Natural; 10YR 3/4, dark yellowish brown; silty clay loam; moderate, fine, granular structure; moist, firm consistence; no cementation; plastic; terrigenous origin; clear, smooth lower boundary; common, fine roots; naturally deposited alluvium
IIc	99–148	SIHP # -8840 Component 1; 5YR 3/2, dark reddish brown; gravelly silty clay loam; moderate, medium, granular structure; moist, friable consistence; no cementation; slightly plastic; terrigenous origin; clear, smooth lower boundary; agricultural layer with cinder gravel, charcoal flecking, and oxidized (red) mottling
IId	112–160	SIHP # -8840 Component 1; 10YR 3/4, dark yellowish brown; silty clay loam; moderate, fine, granular structure; moist, firm consistence; no cementation; plastic; terrigenous origin; clear, smooth lower boundary; agricultural layer with charcoal flecking and oxidized (red) mottling
IIe	151–188	Natural; 10YR 3/2, very dark grayish brown; silty clay loam; moderate, medium, granular structure; moist, firm consistence; no cementation; plastic; terrigenous origin; clear, smooth lower boundary; few, fine roots; naturally deposited alluvium
IIf	188–218 (BOE)	Natural; 10YR 3/2, very dark grayish brown; silty clay loam; moderate, fine, granular structure; moist, firm consistence; no cementation; plastic; terrigenous origin; lower boundary not observed; no roots observed; naturally deposited alluvium

4.3.10 Test Excavation 8 (T-8)

Test Excavation 8 (T-8) is an exterior excavation in the northeastern portion of the AIS study area. It is oriented northwest-southeast and is 6.1 m long by 0.72 m wide, with a maximum depth of 225 cmbs. The water table was encountered at 198 cmbs.

The observed stratigraphy includes the asphalt parking lot surface (Stratum Ia), associated extremely gravelly (basalt) loamy sand base course (Stratum Ib), and extremely gravelly sand (crushed coral) base course (Stratum Ic), overlying gravelly (cinder, basalt) silty clay loam (Stratum IIa; SIHP # -8840 Component 2), four layers of silty clay loam (Strata IIb, IIc/SIHP # -8840 Component 1, IId/SIHP # -8840 Component 1, and IIe), sandy clay loam (Stratum IIf) and sandy clay (Stratum IIg; SIHP # -8840 Component 1) (Figure 89, Figure 90, and Table 13).

Stratum II (a–g) is natural alluvium (Figure 91). The upper portion of Stratum IIa is disturbed or reworked and contains charcoal, red brick fragments, and fish bone; hence, it is designated as part of SIHP # -8840 Component 2, habitation layers. Strata IIc, IId, and IIg contain charcoal flecking and oxidized (red) mottling and are interpreted as agricultural deposits; they are designated as part of SIHP # -8840 Component 1. Stratum IIg was documented below the water table via excavation of a pot hole (see Figure 90).

Figure 89. T-8 southwest wall, view to west

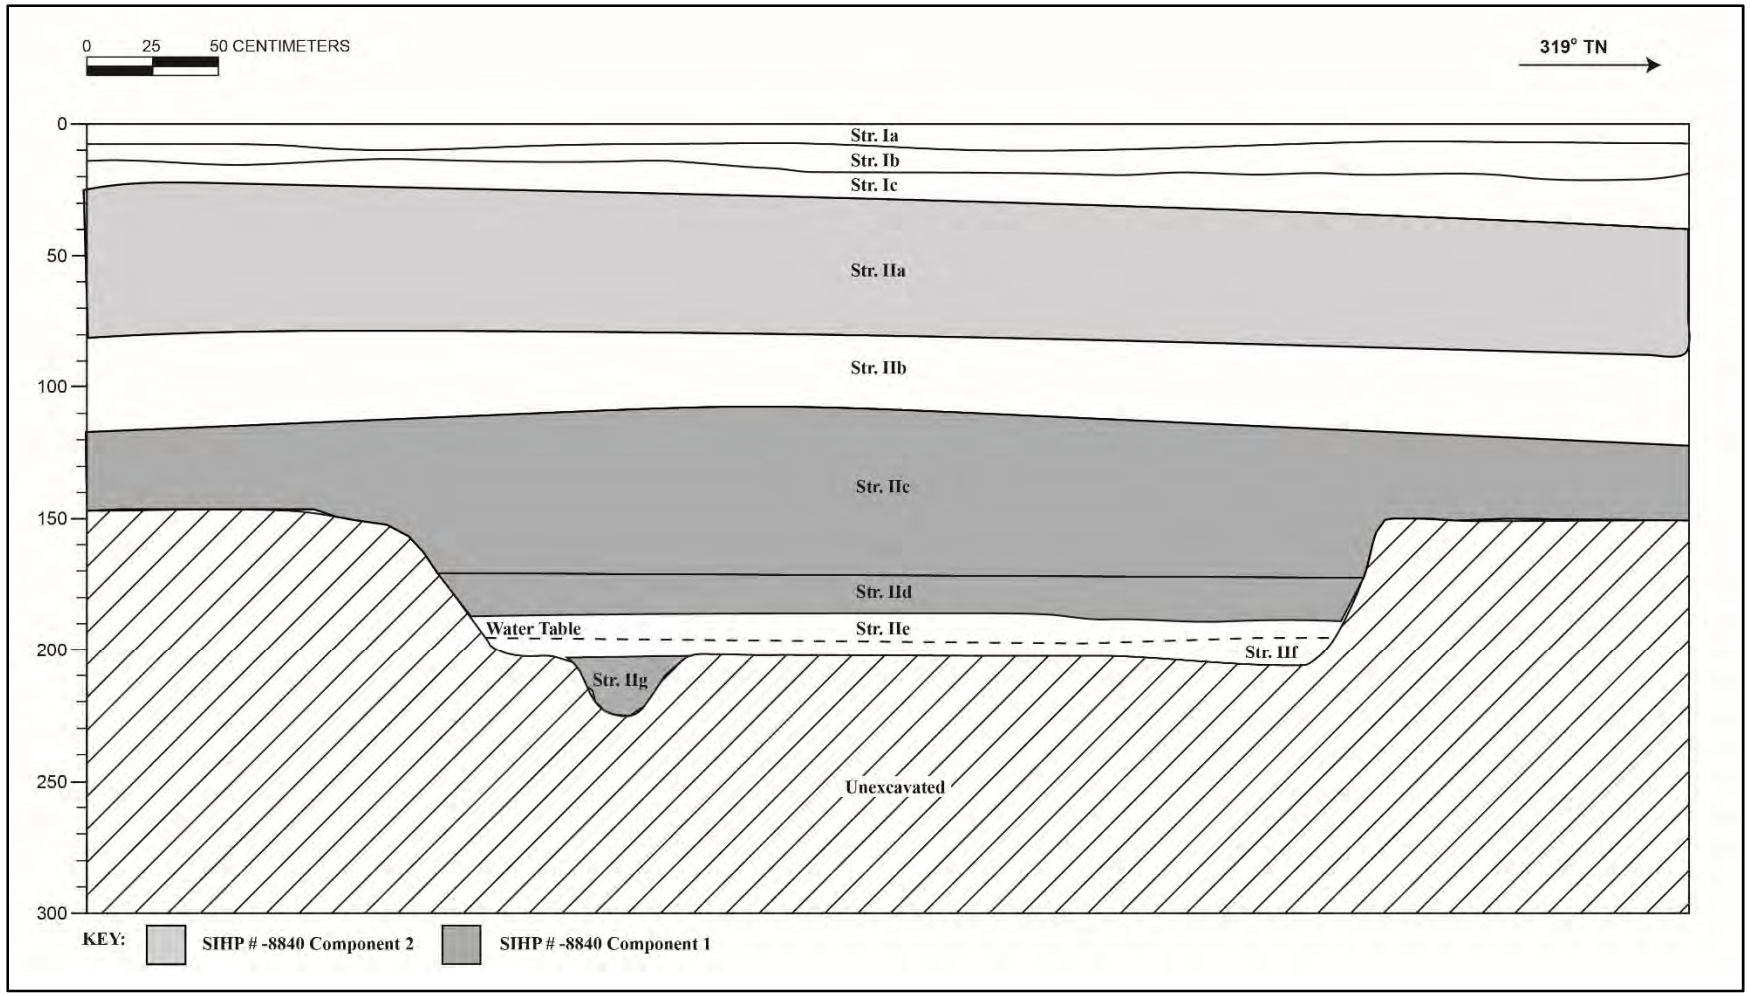

Figure 90. Profile of T-8 southwest wall

Table 13. T-8 stratigraphic description

Stratum	Depth (cmbs)	Description
Ia	0–6	Asphalt; parking lot surface
Ib	6–20	Base course; 10YR 5/1, gray; extremely gravelly loamy sand; moderate, fine, granular structure; moist, firm consistence; no cementation; non-plastic; abrupt, smooth lower boundary; no roots observed; basalt gravel base course
Ic	12–40	Base course; 10YR 6/3, pale brown; extremely gravelly sand; structureless (single-grain); moist, loose consistence; no cementation; non-plastic; marine origin; abrupt, smooth lower boundary; no roots observed; crushed coral base course
IIa	22–85	SIHP # -8840 Component 2; 10YR 3/2, very dark grayish brown; gravelly silty clay loam; weak, medium, granular structure; moist, friable consistence; no cementation; slightly plastic; terrigenous origin; clear, smooth lower boundary; few, fine roots; habitation layer containing cinder and basalt gravel in its lower portion and red brick, charcoal, and fish bone in its upper portion
IIb	76–120	Natural; 10YR 3/3, dark brown; silty clay loam; weak, fine, granular structure; moist, friable consistence; no cementation; plastic; terrigenous origin; clear, smooth lower boundary; few, fine roots; naturally deposited alluvium
IIc	107–170	SIHP # -8840 Component 1; 10YR 3/2, very dark grayish brown; silty clay loam; weak, fine, granular structure; moist, friable consistence; no cementation; plastic; terrigenous origin; clear, smooth lower boundary; no roots observed; agricultural deposit with charcoal flecking and oxidized (red) mottling
IId	168–185	SIHP # -8840 Component 1; 10YR 3/2, very dark grayish brown; silty clay loam; weak, fine, granular structure; moist, friable consistence; no cementation; plastic; terrigenous origin; clear, smooth lower boundary; agricultural deposit with charcoal flecking and oxidized (red) mottling
IIe	185–193	Natural; 10YR 4/2, dark grayish brown; silty clay loam; weak, fine, granular structure; moist, friable consistence; no cementation; plastic; terrigenous origin; clear, smooth lower boundary; few, fine roots; naturally deposited alluvium
IIf	193–205	Natural; 10YR 4/4, dark yellowish brown; sandy clay loam; weak, fine, granular structure; wet, slightly sticky consistence; no cementation; slightly plastic; terrigenous origin; clear, smooth lower boundary; few, fine roots; naturally deposited alluvium

Stratum	Depth (cmbs)	Description
IIg	205–225 (BOE)	SIHP # -8840 Component 1; 10YR 3/2, very dark grayish brown; sandy clay; weak, fine, granular structure; wet, slightly sticky consistence; no cementation; plastic; terrigenous origin; lower boundary not observed; few, fine roots; agricultural deposit with charcoal flecking and oxidized (red) mottling

Figure 91. Close-up of Strata IIa (SIHP # -8840 Component 2), IIb, and IIc (SIHP # -8840 Component 1), within T-8 southwest wall, view to south

4.3.11 Test Excavation 9 (T-9)

Test Excavation 9 (T-9) is an exterior excavation in the central portion of the AIS study area. It is oriented northeast-southwest and is 6 m long by 0.8 m wide, with a maximum depth of 196 cmbs. The water table was encountered at 193 cmbs.

The observed stratigraphy includes the asphalt parking lot surface (Stratum Ia), associated extremely gravelly (basalt) silt loam base course (Stratum Ib), and very gravelly loamy sand (crushed coral) base course (Stratum Ic), overlying five deposits of silty clay loam (Strata IIa/SIHP # -8840 Component 2, IIb, and IIc–IIe/SIHP # -8840 Component 1), gravelly (basalt) silty clay (Stratum IIf; SIHP # -8840 Component 1), and very gravelly (basalt) sandy loam (Stratum III) (Figure 92 through Figure 95 and Table 14).

Stratum II (a–e) is natural alluvium. Stratum IIa contains three pit features, interpreted as historical trash pits, and is designated as part of SIHP # -8840 Component 2, habitation layers. Although the upper boundary of Feature 14 is truncated, and the upper boundaries of Features 12 and 13 may also be truncated, based on their matrices, they appear to originate in Stratum IIa. Features 12–14 and are described below.

Feature 12 is a historical trash pit identified in both sidewalls of T-9, originating at the upper boundary of Stratum IIa/SIHP # -8840 Component 2, intruding through Strata IIb–III, and continuing beyond the base of excavation (see Figure 92 through Figure 96). It was documented between 45 and 196 cmbs and ranges between 65 and 100 cm across (*mauka-makai*). The exposed portion of the feature is 80 cm wide, spanning the width of the trench. Feature 12 contains abundant bottle glass and ceramics, as well as marine shell midden (*Periglypta reticulata*), bird (Aves) and saw-cut mammal (inconsistent with human) bone, charcoal, and fire-affected basalt cobbles. The faunal bone and a grab sample of glass, ceramics, and shell midden were collected. Diagnostic artifacts are mainly of European and Euro-American origin and date from the late nineteenth to possibly early twentieth century. One item, a Dutch glass gin bottle (Acc. # 55), dates between 1890 and 1910, indicating use of the feature post-1890. Similarly, the completeness, lack of damage, and consistent size of the collected shells indicate the midden is likely historical (i.e., post-Contact).

Feature 13 is a historical trash pit identified at the upper boundary of Stratum IIa/SIHP # -8840 Component 2 in the northwest sidewall of T-9 (see Figure 93, Figure 95, and Figure 97). It was documented between 45 and 67 cmbs and measures 1.7 m across. It truncates and therefore post-dates the underlying Feature 14 (see description below). Feature 13 contains metal, glass, ceramic, bird (Aves) and cow (*Bos taurus*) bone, and charcoal. The faunal bone was collected.

Feature 14 is a historical trash pit identified in the northwest sidewall of T-9, originating at the upper boundary of Stratum IIa/SIHP # -8840 Component 2, intruding through Strata IIb–IId, and terminating in Stratum IIe (see Figure 93, Figure 95, and Figure 97). It was documented between 44 and 137 cmbs and measures 1.8 m across. It is truncated by the overlying Feature 13 (see description above), which it therefore pre-dates. Feature 14 contains metal, ceramic, glass, goat (*Capra hircus*) bone, charcoal, and fire-affected basalt cobbles. The faunal bone and a grab sample of metal, glass, and ceramics were collected. Diagnostic artifacts are Euro-American in origin, dating from the late nineteenth to possibly the early twentieth century. One glass bottle fragment (Acc. # 159) dates between 1880 and 1920, indicating use of the feature post-1880.

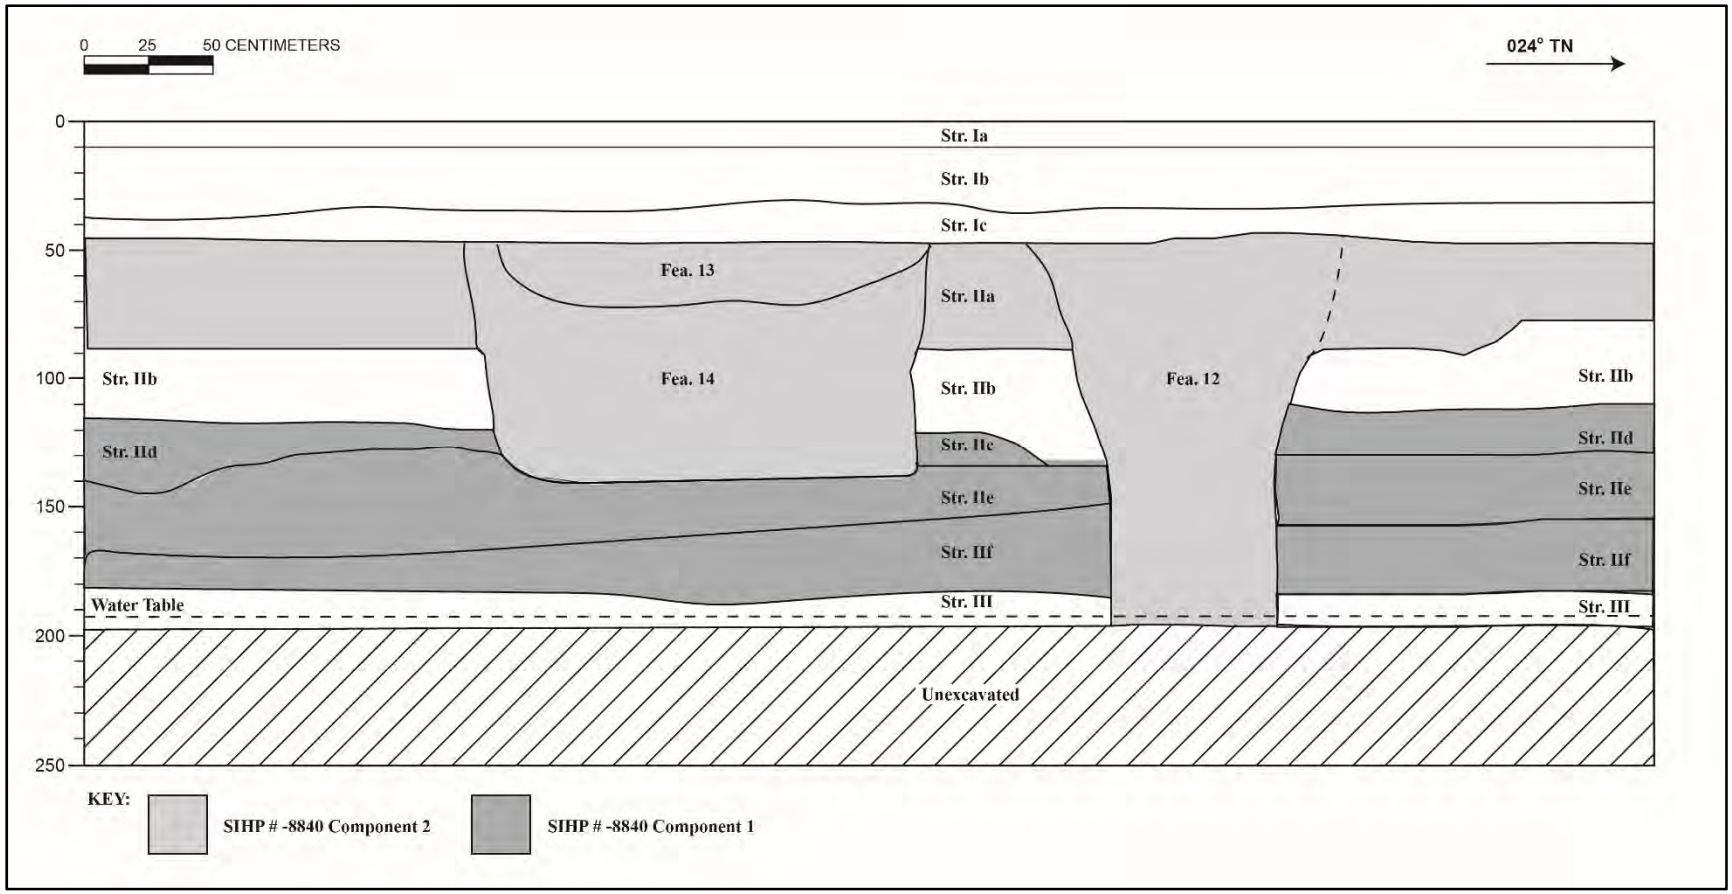

Figure 95. Profile of T-9 northwest wall

Table 14. T-9 stratigraphic description

Stratum	Depth (cmbs)	Description
Ia	0–10	Asphalt; parking lot surface
Ib	10–30	Base course; 10YR 2/1, black; extremely gravelly silt loam; structureless (single-grain); moist, loose consistence; no cementation; non-plastic; terrigenous origin; abrupt, smooth lower boundary; no roots observed; basalt gravel base course
Ic	30–40	Base course; 10YR 7/3, very pale brown; very gravelly loamy sand; weak, fine, granular structure; moist, friable consistence; no cementation; non-plastic; marine origin; abrupt, smooth lower boundary; no roots observed; crushed coral base course
IIa	45–90	SIHP # -8840 Component 2; 10YR 3/2, very dark grayish brown; silty clay loam; moderate, fine, blocky structure; moist, firm consistence; no cementation; plastic; terrigenous origin; clear, discontinuous lower boundary; no roots observed; habitation layer with pit features (Features 12–14)
	45–196 (BOE)	SIHP # -8840 Component 2, Feature 12; 10YR 3/2, very dark grayish brown; silty clay loam; historical trash pit containing bottle glass, ceramic, shell midden, bird and saw-cut mammal bone, charcoal, and FAR
	45–67	SIHP # -8840 Component 2, Feature 13; 2.5Y 3/3, dark olive brown; silty clay loam; historical trash pit containing metal, ceramic, bird and cow bone, and charcoal
	44–137	SIHP # -8840 Component 2, Feature 14; 10YR 3/3, dark brown; silty clay loam; historical trash pit containing metal, ceramic, goat bone, charcoal, and FAR
IIb	72–122	Natural; 10YR 3/3, dark brown; silty clay loam; moderate, fine, blocky structure; moist, firm consistence; no cementation; plastic; terrigenous origin; clear, discontinuous lower boundary; no roots observed; naturally deposited alluvium
IIc	100–138	SIHP # -8840 Component 1; 10YR 3/3, dark brown; silty clay loam; moderate, fine, blocky structure; moist, firm consistence; no cementation; plastic; terrigenous origin; clear, discontinuous lower boundary; no roots observed; possible agricultural berm
IId	115–145	SIHP # -8840 Component 1; 10YR 3/3, dark brown; silty clay loam; moderate, fine, blocky structure; moist, firm consistence; no cementation; plastic; terrigenous origin; clear, discontinuous lower boundary; no roots observed; agricultural deposit with abundant oxidized (red) mottling

Stratum	Depth (cmbs)	Description
IIe	115–160	SIHP # -8840 Component 1; 10YR 4/3, brown; silty clay loam; moderate, fine, blocky structure; moist, firm consistence; no cementation; very plastic; terrigenous origin; clear, discontinuous lower boundary; no roots observed; agricultural deposit with abundant oxidized (red) mottling
IIf	125–185	SIHP # -8840 Component 1; 10YR 3/2, very dark grayish brown; gravelly silty clay; strong, fine, blocky structure; moist, extremely firm consistence; no cementation; very plastic; terrigenous origin; clear, discontinuous lower boundary; no roots observed; agricultural deposit with abundant oxidized (red) mottling and basalt gravel
III	181–196 (BOE)	Natural; 10YR 3/2, very dark grayish brown; very gravelly sandy loam; weak, fine, granular structure; west, slightly sticky consistence; no cementation; non-plastic; terrigenous origin; lower boundary not observed; no roots observed; streambed with waterworn basalt gravel and cobbles

Figure 96. SIHP # -8840 Component 2, Feature 12, historical trash pit, in T-9 southeast wall, view to south

Figure 97 SIHP # -8840 Component 2, Features 13 (above) and 14 (below), historical trash pits, in T-9 northwest wall, view to northwest

Strata IIc–IIf are interpreted as agricultural deposits and are designated as part of SIHP # -8840 Component 1. Strata IId–IIf contain abundant oxidized (red) mottling. Stratum IIc does not contain mottling but, based on morphology, is interpreted as a possible berm. Stratum IIc measures approximately 2 m across and 25 cm tall in the southeast sidewall. In the northwest sidewall, it measures only 50 cm across, as it appears to be truncated by SIHP # -8840 Component 2, Feature 14. (Note: it is very difficult to distinguish the T-9 berm in photographs; see Figure 102 for a photograph of a berm in nearby T-9B). The underlying Stratum III contains waterworn basalt gravel and cobbles and is interpreted as a streambed (Figure 98).

Column and bulk samples were collected from Strata IIb and IId–IIf from the southeast wall (see Figure 94; note the Stratum IIf bulk sample was collected from the trench floor and is therefore not depicted on the profile drawing). The column sample was submitted to BGP Consulting (Phillips 2019) for pollen analysis (see Section 5.4.1 for full results). The Stratum IIe sample contained no pollen and therefore could not be assessed.

The T-9 assemblage is more diverse than the T-7 assemblage, with a greater number of types identified in all productive samples. No distinct temporal trends are apparent; rather, the assemblage is characterized by less common types, particularly the spurge and madder families. Normally, this data would be interpreted as reflecting local stands of shrubs and herbs. However, as the percentages of degraded grains within the samples are very high, and the total pollen concentrations are very low, Phillips (2019) cautions that the data is likely not an accurate reflection of the original pollen assemblage. The fact that sedge pollen, indicative of a wetland environment such as a *lo‘i*, is unexpectedly scarce is likely also a product of the very poor pollen preservation within the samples.

Wet screening of the bulk samples yielded reddish nodules within Strata IId and IIe, as well as reddish-orange concretions and nodules and several tubular root casts within Stratum IIf; based on previous archaeological studies (see Section 5.1.1), these are interpreted as evidence of agricultural use.

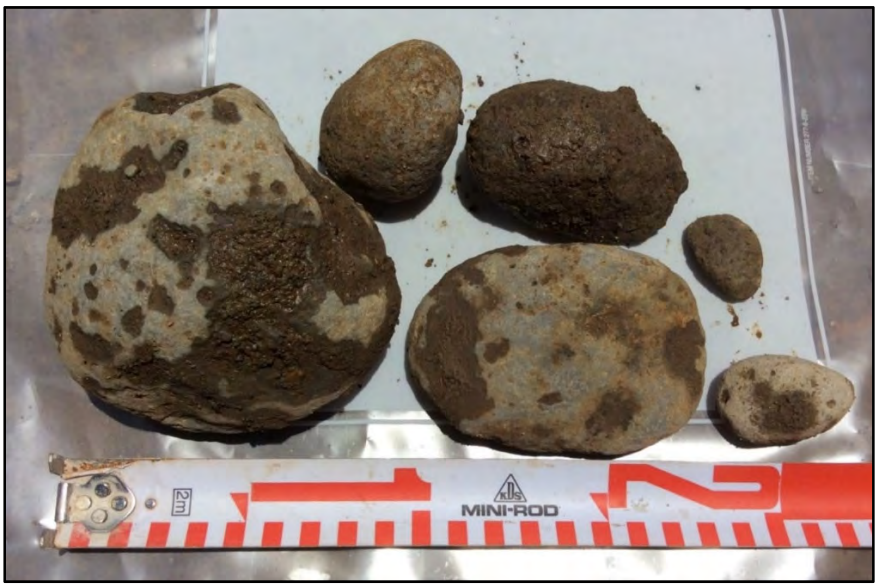

Figure 98. Waterworn basalt cobbles from Stratum III, streambed

4.3.12 Test Excavation 9B (T-9B)

Test Excavation 9B (T-9B) is an exterior excavation, just east of T-9, excavated to investigate a potential agricultural berm feature identified in T-9 (see Section 4.3.11 above). It is oriented northeast-southwest and is 6.1 m long by 0.73 m wide, with a maximum depth of 212 cmbs. The water table was not encountered.

The observed stratigraphy includes the asphalt parking lot surface (Stratum Ia), associated extremely gravelly (basalt) silt loam base course (Stratum Ib), and very gravelly loamy sand (crushed coral) base course (Stratum Ic), overlying gravelly (basalt) loam (Stratum IIa; SIHP # -8840 Component 2), loam (Stratum IIb), three layers of silty clay loam (Strata IIc–IIe; SIHP # -8840 Component 1), and very gravelly (basalt) sandy loam (Stratum III) (Figure 99, Figure 100, and Table 15). A large pocket of modern disturbance truncates Stratum II (a–e) at the *makai* (southwest) end of the excavation (see Figure 100).

Stratum II (a–e) is natural alluvium. Because Stratum IIa contains a pit feature, it is designated as part of SIHP # -8840 Component 2, habitation layers. The pit feature, designated as Feature 15, is described below.

Feature 15 is an oblong pit feature identified in the southeast wall of T-9B. It originates in Stratum IIa/SIHP # -8840 Component 2, intrudes through Strata IIb and IIc, and terminates in Stratum IIe (see Figure 100 and Figure 101). It was documented between 65 and 150 cmbs and measures 35–45 cm across. No cultural materials were identified within the feature; its function is indeterminate.

Strata IIc through IIe are interpreted as agricultural deposits and are designated as part of SIHP # -8840 Component 1. Strata IId and IIe contain abundant oxidized (red) mottling. Stratum IIc, which does not contain mottling, represents possible agricultural berms identified at both ends of the excavation. The berm at the *mauka* (northeast) end measures approximately 1.7 m across by 35 cm tall (Figure 102). The berm at the *makai* (southwest) end measures approximately 1.5 m across by 30 cm tall, although it is bisected by SIHP # -8840 Component 2, Feature 15. As these berms do not align with the potential berm identified in T-9, this area may represent the convergence of multiple agricultural plots.

Bulk samples were collected from Strata IIc–IIe, and a column sample was collected from Strata IIc and IIe from the southeast wall (see Figure 100). The underlying Stratum III contains abundant waterworn basalt gravel and cobbles and is interpreted as a streambed.

Table 15. T-9B stratigraphic description

Stratum	Depth (cmbs)	Description
Ia	0–10	Asphalt; parking lot surface
Ib	9–24	Base course; 10YR 2/1, black; extremely gravelly silt loam; structureless (single-grain); moist, loose consistence; no cementation; non-plastic; marine origin; abrupt, smooth lower boundary; no roots observed; basalt gravel base course
Ic	23–31	Base course; 10YR 7/3, very pale brown; very gravelly loamy sand; weak, fine, granular structure; moist, friable consistence; no cementation; non-plastic; marine origin; abrupt, smooth lower boundary; no roots observed; crushed coral base course
IIa	30–149	SIHP # -8840 Component 2; 10YR 3/3, dark brown; gravelly loam; moderate, fine, granular structure; moist, friable consistence; no cementation; slightly plastic; terrigenous origin; clear, irregular lower boundary; no roots observed; habitation layer containing basalt gravel and a pit feature (Feature 15)
	65–150	SIHP # -8840 Component 2, Feature 15; 10YR 3/3, dark brown; cobbly loam; pit feature of indeterminate function containing several waterworn basalt cobbles
IIb	60–118	Natural; 10YR 3/4, dark yellowish brown; loam; weak, fine, granular structure; moist, friable consistence; no cementation; non-plastic; terrigenous origin; clear, discontinuous lower boundary; no roots observed; naturally deposited alluvium
IIc	79–123	SIHP # -8840 Component 1; 10YR 3/4, dark yellowish brown; silty clay loam; moderate, fine, granular structure; moist, friable consistence; no cementation; slightly plastic; terrigenous origin; clear, discontinuous lower boundary; no roots observed; possible agricultural berm
IId	106–134	SIHP # -8840 Component 1; 10YR 3/4, dark yellowish brown; silty clay loam; moderate, fine, blocky structure; moist, firm consistence; no cementation; plastic; terrigenous origin; clear, discontinuous lower boundary; no roots observed; agricultural deposit with oxidized (red) mottling
IIe	115–188	SIHP # -8840 Component 1; 10YR 3/4, dark yellowish brown; silty clay loam; moderate, fine, granular structure; moist, friable consistence; no cementation; slightly plastic; terrigenous origin; clear, smooth lower boundary; no roots observed; agricultural layer with oxidized (red) mottling
III	188–212 (BOE)	Natural; 10YR 3/2, very dark grayish brown; very gravelly sandy loam; weak, fine, granular structure; west, slightly sticky consistence; no cementation; non-plastic; terrigenous origin; lower boundary not observed; no roots observed; streambed with waterworn basalt gravel and cobbles

4.3.13 Test Excavation 10 (T-10)

Test Excavation 10 (T-10) is an interior excavation inside the central portion of the John R. Gilliland Sr. Building. It is oriented northwest-southeast and is 3.05 m long by 0.89 m wide, with a maximum depth of 180 cmbs. The water table was not encountered.

The observed stratigraphy includes the concrete floor (Stratum Ia), gravelly (basalt) sandy clay loam fill (Stratum Ib), an etched concrete surface (Stratum Ic; SIHP # -8840 Component 3, Feature 4), very gravelly sand (crushed coral) fill (Stratum Id), gravelly (basalt) clay loam construction fill (Stratum Ie), and a mortared brick structural remnant with a concrete foundation (SIHP # -8840 Component 3, Feature 5), overlying three layers of gravelly (basalt or cinder) silty clay loam (Strata IIa/SIHP # -8840 Component 2, IIb, and IIc/SIHP # -8840 Component 1) and cobbly (basalt) silty clay loam (Stratum III) (Figure 103 through Figure 105 and Table 16). Small mammal and saw-cut cow (*Bos taurus*) bone was collected from the spoils pile; the exact provenience is unknown.

Stratum Ib contains concrete debris. The underlying etched concrete surface (Stratum Ic) is designated as SIHP # -8840 Component 3, Feature 4 (see Figure 103 through Figure 106). It is 10–15 cm thick, documented between 28 and 43 cmbs, and extended across the entire excavation prior to be being removed. It overlies crushed coral fill (Stratum Id) and construction fill (Stratum Ie), which contain utility pipes that prevented full excavation in the southeast portion of the trench (see Figure 105). A review of historical maps suggests SIHP # -8840 Component 3, Feature 4, is associated with a former unspecified store fronting River Street, indicated on the 1950 Sanborn map as having a “CONC FL” (concrete floor) (see Figure 27 and Figure 166).

A second infrastructure remnant, designated as SIHP # -8840 Component 3, Feature 5, was identified below the Stratum Id crushed coral fill in the southern corner of the excavation, between 60 and 110 cmbs. It is composed of mortared brick atop a concrete foundation (see Figure 104, Figure 105, and Figure 107). Each brick is 13 cm long by 10 cm wide and 6 cm tall; no maker’s mark was observed. The concrete base is approximately 10 cm thick. A maximum of seven courses was observed within the exposed portion of the feature (adjacent to the southwest sidewall, not depicted in the stratigraphic profile), which comprises two walls at right angles, representing the northern corner of a former building/structure. The exposed portion of the feature is 50 cm long (northeast-southwest) by 45 cm wide (northwest-southeast) and 50 cm tall. It was not possible to extend the excavation in order to expose the feature further, due to the presence of an active subsurface electrical line.

SIHP # -8840 Component 3, Feature 5, appeared to be founded on Stratum IIb, natural alluvium, as no builder’s pit was identified within the surrounding Stratum IIa (SIHP # -8840 Component 2, habitation layer), suggesting Feature 5 pre-dates Stratum IIa. However, according to Lebo (1997:106–107), the first brick structure was built in Honolulu in 1847. As radiocarbon dating (see Section 5.4.3) indicates use of Stratum IIa by 1810, Feature 5 therefore post-dates at least the older portions of Stratum IIa (the Stratum IIa sediment likely accumulated over a relatively long period of time, with multiple episodes of deposition). A review of historical maps dating from 1906 to 1950 (see Figure 163 through Figure 166) depict no brick structure or building in this location, suggesting Feature 5 pre-dates 1906. In addition, glass, metal, and ceramic fragments collected from the spoils pile likely originate from the Stratum Ie fill, which overlies and therefore

Figure 103. T-10 northeast wall, view to east

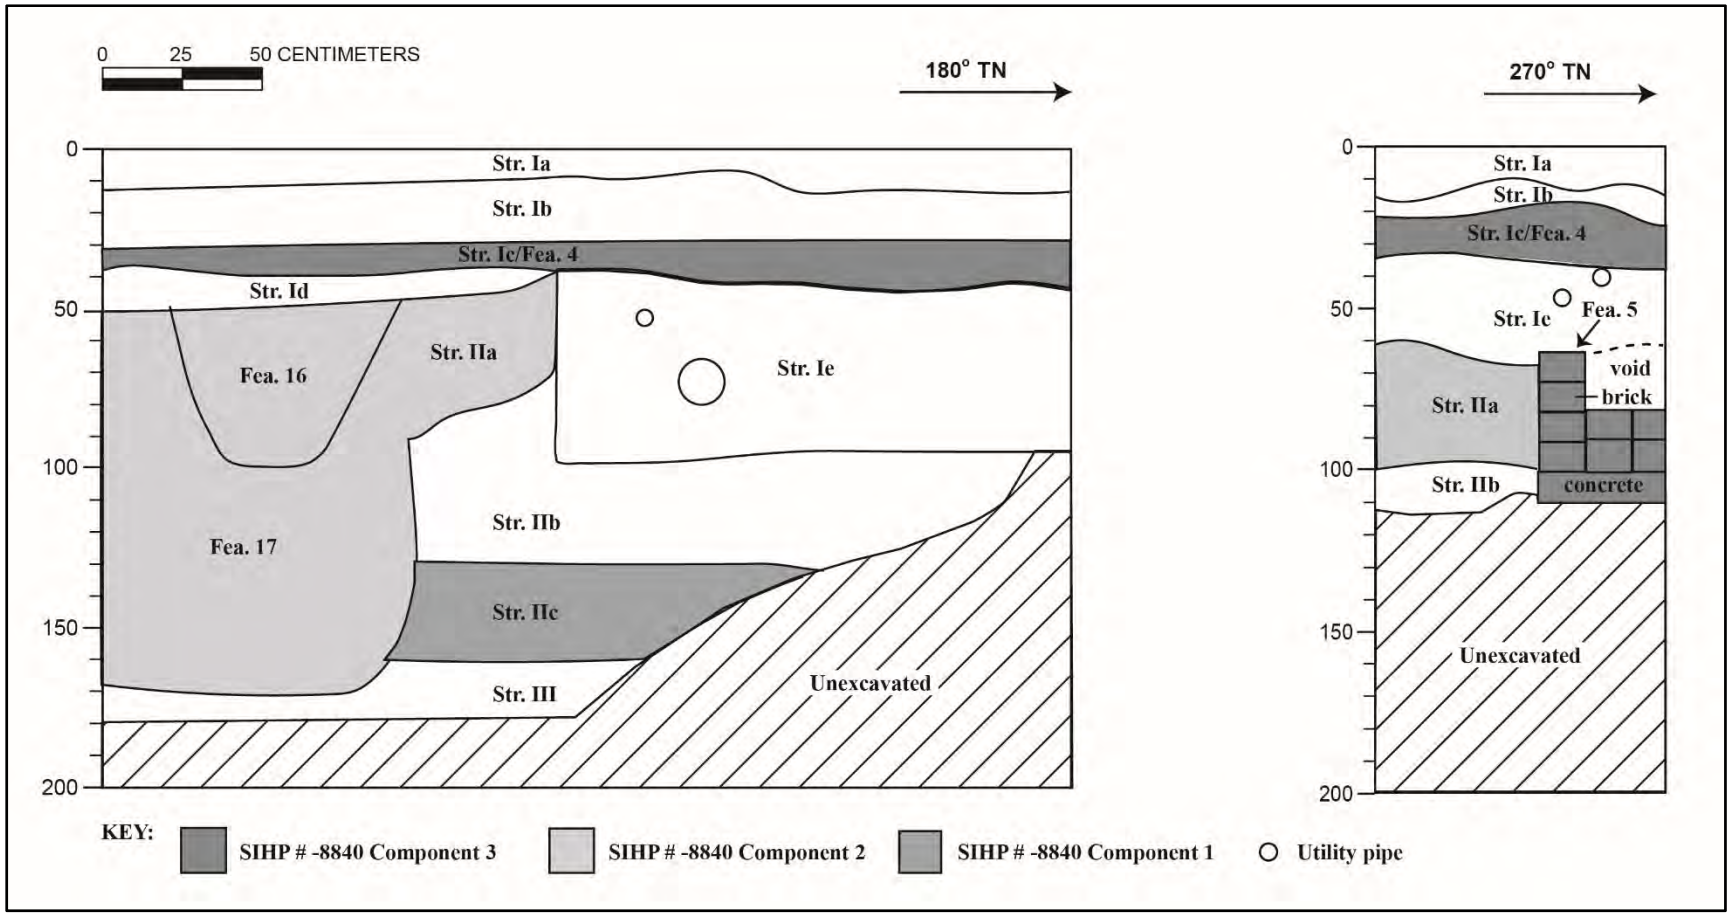

Figure 105. Profile of T-10 northeast (left) and southeast (right) walls

Table 16. T-10 stratigraphic description

Stratum	Depth (cmbs)	Description
Ia	0–14	Concrete; John R. Gilliland Sr. Building floor
Ib	11–29	Fill; 10YR 4/4, dark yellowish brown; gravelly sandy clay loam; weak, fine, granular structure; moist, friable consistence; no cementation; slightly plastic; terrigenous origin; abrupt, smooth lower boundary; no roots observed; contains basalt gravel and concrete debris
Ic	28–43	SIHP # -8840 Component 3, Feature 4; etched concrete surface, likely associated with a former unspecified store on River Street
Id	37–49	Fill; 10YR 7/4, very pale brown; very gravelly sand; structureless (single-grain); moist, loose consistence; marine origin; abrupt, discontinuous lower boundary; no roots observed; crushed coral fill containing two utility pipes
Ie	37–100	Construction fill; 10YR 3/2, very dark grayish brown; gravelly clay loam; moderate, medium, blocky structure; moist, friable consistence; no cementation; plastic; terrigenous origin; clear, discontinuous lower boundary; no roots observed; utility pit composed of fill derived from alluvium and containing two utility pipes
IIa	45–170	SIHP # -8840 Component 2; 10YR 3/4, dark yellowish brown; gravelly silty clay loam; weak, fine, granular structure; moist, friable consistence; no cementation; plastic; terrigenous origin; clear, discontinuous lower boundary; no roots observed; habitation layer containing basalt gravel and pit features
	46–99	SIHP # -8840 Component 2, Feature 16; 10YR 3/4, dark yellowish brown; gravelly silty clay loam; pit feature of indeterminate function
	90–170	SIHP # -8840 Component 2, Feature 17; 10YR 3/4, dark yellowish brown; gravelly silty clay loam; pit feature of indeterminate function containing sparse bottle glass and FAR
SIHP # -8840 Comp. 3, Feature 5	60–110	SIHP # -8840 Component 3, Feature 5; mortared brick structural remnant with concrete foundation
IIb	74–127	Natural; 10YR 2/2, very dark brown; gravelly silty clay loam; weak, fine, granular structure; moist, friable consistence; no cementation; plastic; terrigenous origin; clear, discontinuous lower boundary; no roots observed; naturally deposited alluvium with root voids

Stratum	Depth (cmbs)	Description
IIc	143–160	SIHP # -8840 Component 1; 10YR 3/2, very dark grayish brown; gravelly silty clay loam; weak, fine, granular structure; moist, friable consistence; no cementation; plastic; terrigenous origin; clear, discontinuous lower boundary; no roots observed; agricultural deposit containing cinder gravel and oxidized (red) mottling
III	160–180 (BOE)	Natural; 10YR 3/1, very dark gray; cobbly silty clay loam; weak, fine, granular structure; moist, friable consistence; no cementation; plastic; terrigenous origin; clear, discontinuous lower boundary; no roots observed; streambed containing waterworn basalt gravel and cobbles

Figure 106. Plan view of SIHP # -8840 Component 3, Feature 4, etched concrete surface

Figure 107. SIHP # -8840 Component 3, Feature 5, mortared brick structural remnant with concrete foundation, in T-10 southern corner, view to south

post-dates Feature 5. These include items of U.S., Euro-American, and Asian (primarily Chinese) origin, dating from the mid-nineteenth to early twentieth century. One glass medicine bottle (Acc. # 110) dates to 1924-1940, indicating Stratum Ie was deposited after 1924. This is consistent with a late nineteenth or early twentieth century date for construction of Feature 5.

Stratum II (a–d) is natural alluvium. Because Stratum IIa contains two pit features, it is designated as part of SIHP # -8840 Component 2, habitation layers. Although the upper boundary of Feature 16 may be truncated, based on its matrix, it appears to originate in Stratum IIa. Its position at the upper boundary of the layer indicates it is more recent than (i.e., post-dates) the underlying Feature 17. Features 16 and 17 are described below.

Feature 16 is a basin-shaped pit feature identified at the upper boundary of Stratum IIa/SIHP # -8840 Component 2 in the northeast wall of T-10 (see Figure 105 and Figure 108). It was documented between 46 and 99 cmbs and measures approximately 65 cm across. It overlies and

therefore post-dates Feature 17 (described below). No cultural materials were observed within the feature; its function is indeterminate.

Feature 17 is a large pit feature identified in the northeast wall of T-10, below Feature 16 (described above), which it therefore pre-dates (see Figure 105 and Figure 108). It extends from the lower boundary of Stratum IIa/SIHP # -8840 Component 2, intrudes through Strata IIb and IIc, and terminates in Stratum III. It was documented between 60 and 110 cmbs and measures 95 cm across. Several pieces of bottle glass and FAR were identified at the base of the feature. The bottle glass was collected; two diagnostic fragments (Acc. #s 74 and 76) date to 1800-1910, indicating use of the feature post-1800. The function of this feature is indeterminate.

Stratum IIc contains oxidized (red) mottling and is interpreted as an agricultural layer; it is designated as part of SIHP # -8840 Component 1. The underlying Stratum III contains waterworn basalt gravel and cobbles and is interpreted as a streambed.

Figure 108. Northwest end of T-10 northeast wall, showing remnant of SIHP # -8840 Component 3, Feature 4, etched concrete surface, above SIHP # -8840 Component 2, Features 16 and 17, pit features, view to north

4.3.14 Test Excavation 11 (T-11)

Test Excavation 11 (T-11) is an interior excavation, northeast of T-10 (discussed in Section 4.3.13 above). It is oriented northeast-southwest and is 2.96 m long by 0.71 m wide, with a maximum depth of 195 cmbs. The water table was not encountered.

The observed stratigraphy includes the concrete floor of the John R. Gilliland Sr. Building (Stratum Ia) and associated extremely gravelly (basalt) sand base course (Stratum Ib), an etched concrete surface (Stratum Ic; SIHP # -8840 Component 3, Feature 4), very gravelly (basalt) sandy loam construction fill (Stratum Id), very gravelly sand (crushed coral) fill (Stratum Ie), gravelly silty clay loam burnt trash fill (Stratum If; SIHP # -8840 Component 3, Feature 6), gravelly sandy loam fill (Stratum Ig), and very gravelly clay loam fill (Stratum Ih), overlying two layers of silty clay loam (Strata IIa/SIHP # -8840 Component 2 and IIb) and a layer of cobbly (basalt) silty clay loam (Stratum III) (Figure 109, Figure 110, and Table 17).

Beneath the current concrete floor and associated basalt gravel base course (Strata Ia and Ib) is an etched concrete surface (Stratum Ic), documented between 18 and 41 cmbs (see Figure 109 through Figure 111). Designated as SIHP # -8840 Component 3, Feature 4, it is 15–20 cm thick and extended across the entire excavation prior to being removed. The same concrete surface was documented in nearby T-10. As in T-10, it overlies construction fill (Stratum Id) and crushed coral fill (Stratum Ie). A review of historical maps suggests Feature 4 is associated with a former unspecified store fronting River Street, indicated on the 1950 Sanborn map as having a “CONC FL” (concrete floor) (see Figure 27 and Figure 166).

Below Stratum Ie is a thin burnt trash layer (Stratum If), approximately 5–10 cm thick, documented between 45 and 56 cmbs (see Figure 109, Figure 110, and Figure 112). Designated as SIHP # -8840 Component 3, Feature 6, it contains bottle glass, charcoal, and ceramics; a grab sample of glass and ceramics was collected. A saw-cut small mammal bone recovered from the backdirt pile may also be associated with the layer; however, its provenience is uncertain. Feature 6 underlies and therefore pre-dates the Feature 4 etched concrete surface (discussed above), which was likely in place by 1950. As the underlying Stratum IIa/SIHP # -8840 Component 2 habitation layer likely functioned as a surface until at least 1935 (see Section 5.2.4 discussion), Feature 6 was likely deposited sometime between 1935 and 1950. This timeline is supported by the associated artifacts. Although none of the collected artifacts were sufficiently diagnostic to be dated to a particular year or even decade, the date ranges for the items fall between the 1840s and 1930s (see Section 5.2 Artifact Analysis).

The underlying Strata Ig and Ih contain sparse red brick fragments. No maker’s mark was observed, and the fragments were not collected.

Stratum II (a and b) is naturally deposited alluvium. Stratum IIa contains charcoal flecking and pit features and is therefore designated as part of SIHP # -8840 Component 2. The two pit features, designated as Features 18 and 19, are described below.

Feature 18 is a basin-shaped pit feature identified in the western corner of T-11 (see Figure 109, Figure 110, and Figure 112). It was documented between 61 and 105 cmbs within the northwest sidewall and southwest endwall, originating in Stratum IIa/SIHP # -8840 Component 2, intruding through Stratum IIb, and terminating in Stratum III. The feature is 70 cm long

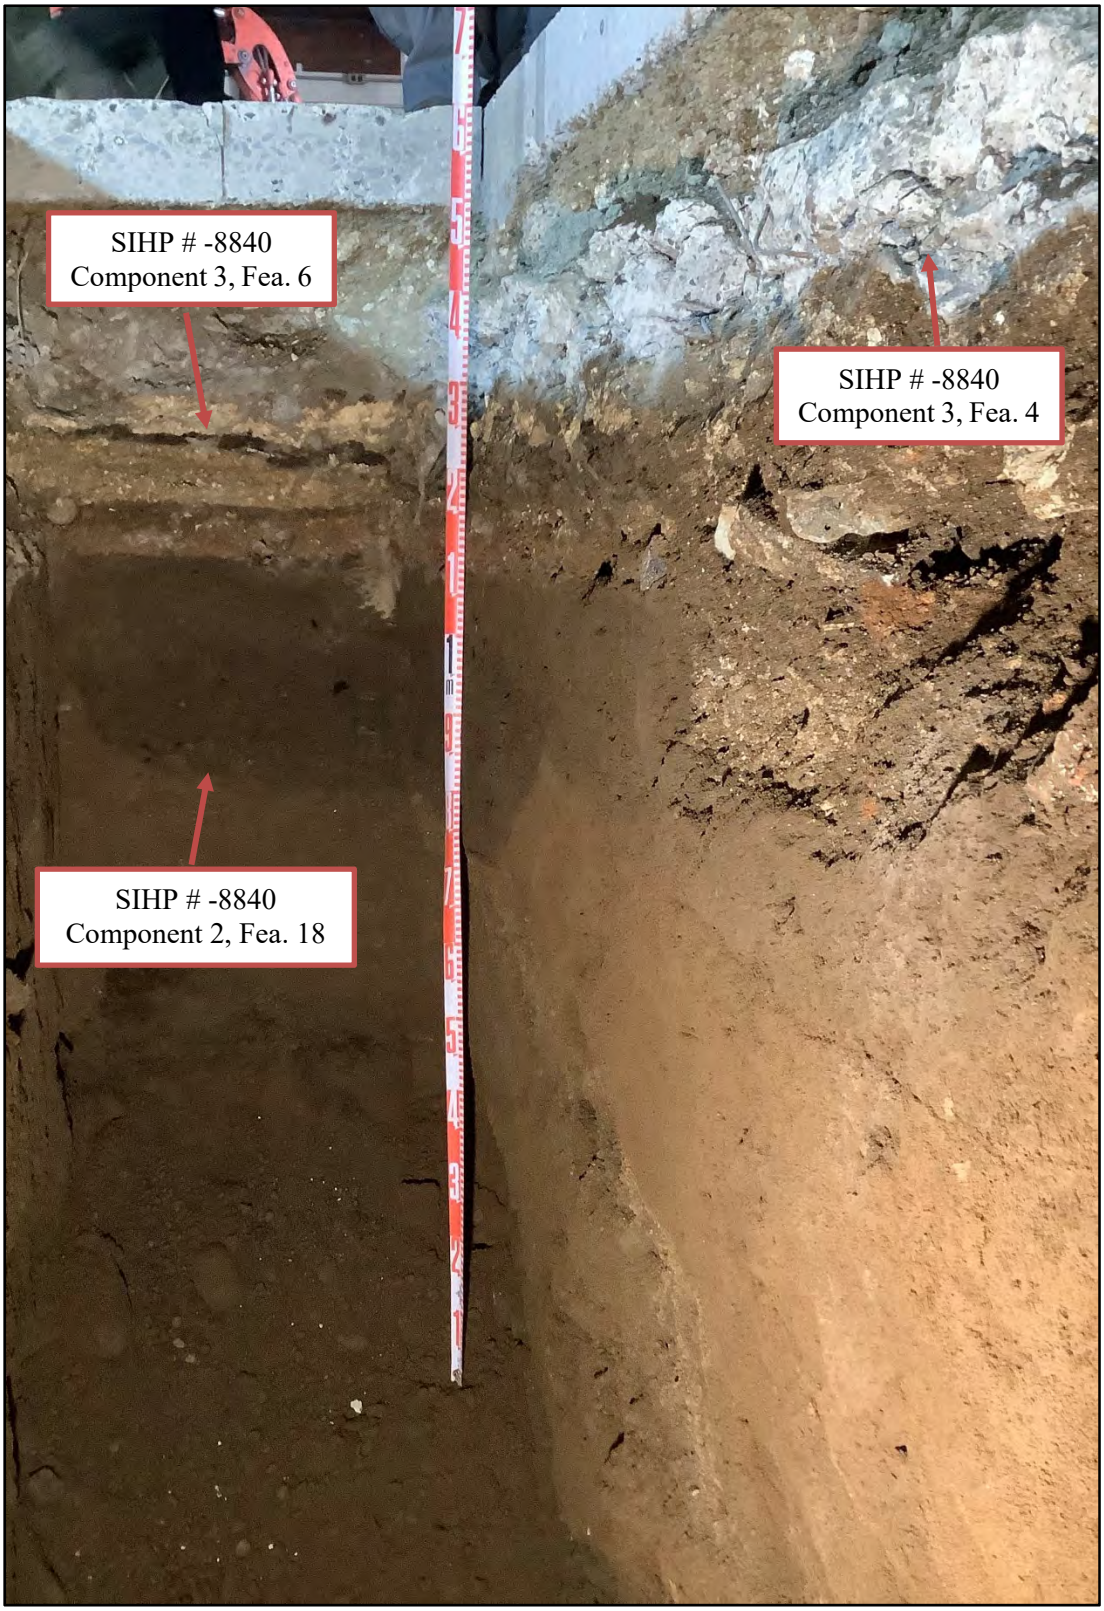

Figure 109. T-11 southwest (left) and northwest (right) walls, view to south

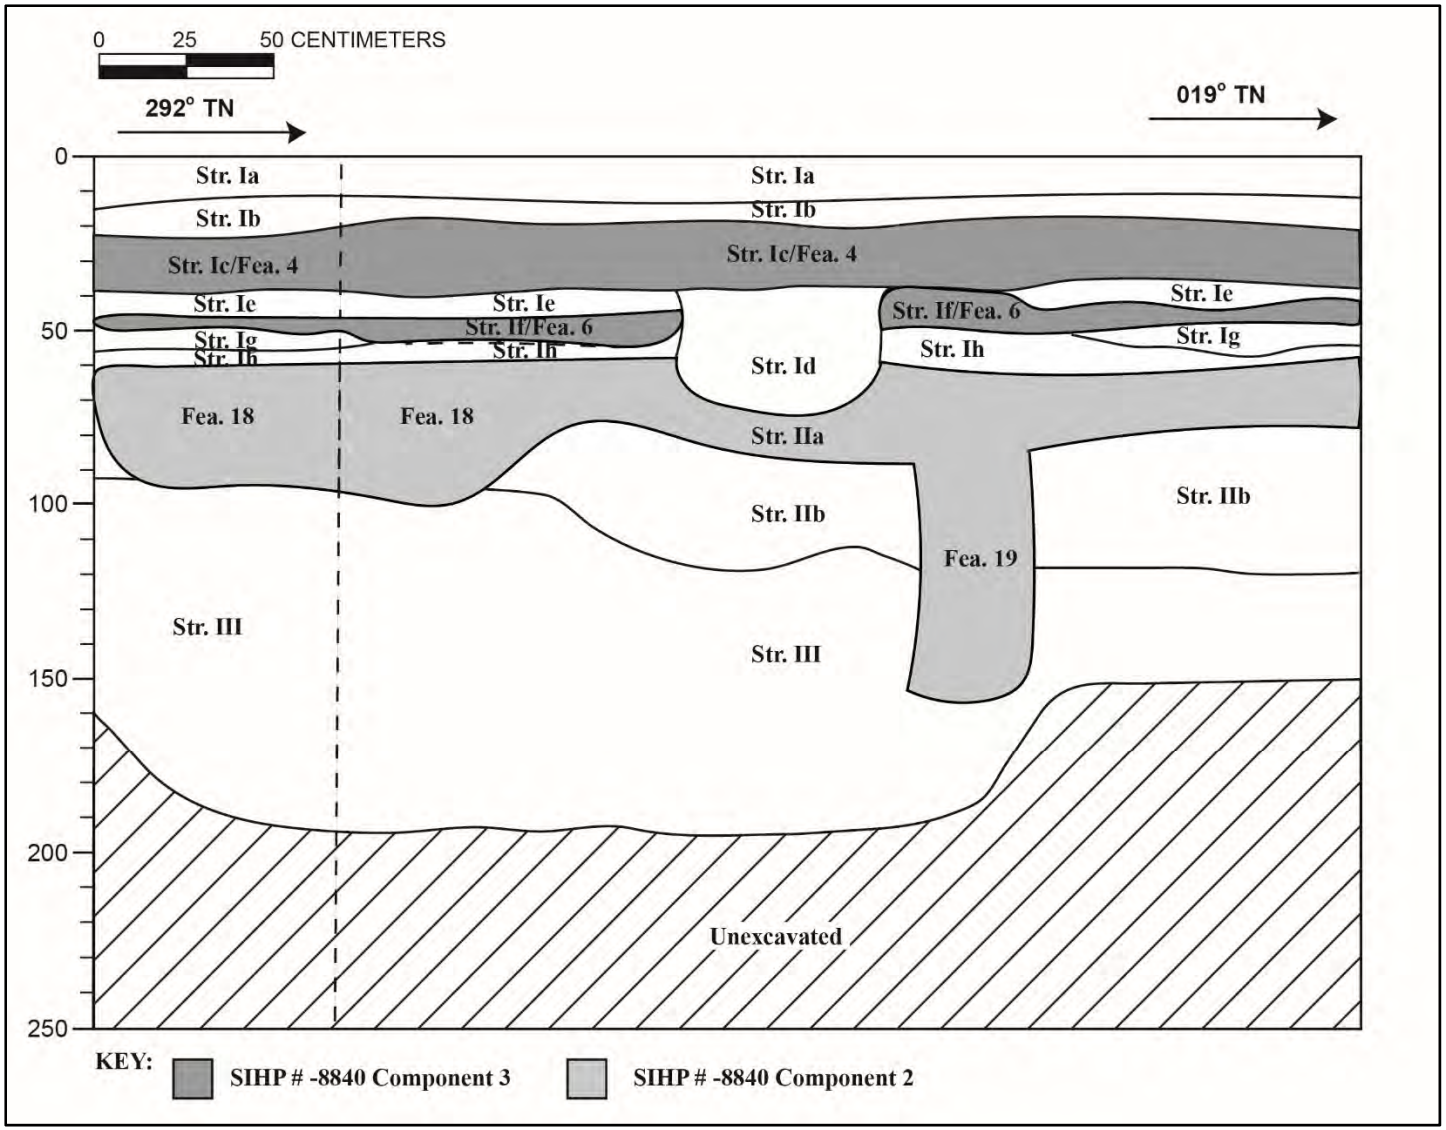

Figure 110. Profile of T-11 southwest (left) and northwest (right) walls

Table 17. T-11 stratigraphic description

Stratum	Depth (cmbs)	Description
Ia	0–13	Concrete; John R. Gilliland Sr. Building floor
Ib	13–19	Base course; 10YR 6/2, light brownish gray; extremely gravelly sand; structureless (single-grain); moist, loose consistence; no cementation; non-plastic; terrigenous origin; abrupt, discontinuous lower boundary; no roots observed; basalt gravel base course
Ic	18–41	SIHP # -8840 Component 3, Feature 4; etched concrete surface, likely associated with a former unspecified store on River Street
Id	38–74	Fill; 10YR 2/2, very dark brown; very gravelly sandy loam; weak, fine, granular structure; moist, friable consistence; no cementation; non-plastic; mixed origin; abrupt, discontinuous lower boundary; no roots observed; contains basalt gravel
Ie	35–46	Fill; 10YR 7/4, very pale brown; very gravelly sand; structureless (single-grain); moist, loose consistence; marine origin; abrupt, discontinuous lower boundary; no roots observed; crushed coral fill
If	45–56	SIHP # -8840 Component 3, Feature 6; 10YR 2/2, very dark brown; gravelly silty clay loam; moderate, fine, granular structure; moist, friable consistence; no cementation; slightly plastic; terrigenous origin; clear, discontinuous lower boundary; no roots observed; burnt trash fill containing charcoal, bottle glass, and ceramics
Ig	47–58	Fill; 10YR 6/2, light brownish gray; gravelly sandy loam; weak, fine, granular structure; moist, friable consistence; no cementation; non-plastic; mixed origin; abrupt, discontinuous lower boundary; no roots observed; contains basalt gravel, a utility pipe, and red brick fragments
Ih	50-62	Fill; 5YR 4/4, reddish brown; very gravelly clay loam; moderate, medium, granular structure; moist, friable consistence; no cementation; plastic; terrigenous origin; abrupt, discontinuous lower boundary; no roots observed; contains basalt gravel and red brick fragments
IIa	54–156	SIHP # -8840 Component 2; 10YR 2/2, very dark brown; silty clay loam; weak, fine, blocky structure; moist, friable consistence; no cementation; slightly plastic; terrigenous origin; clear, irregular lower boundary; no roots observed; habitation layer containing charcoal flecking and pit features (Features 18 and 19)
	61–105	SIHP # -8840 Component 2, Feature 18; 10YR 2/2, very dark brown; sandy clay loam; pit feature of indeterminate function, containing charcoal flecking
	85–156	SIHP # -8840 Component 2, Feature 19; 10YR 2/2, very dark brown; sandy clay loam; pit feature interpreted as a post hole

Stratum	Depth (cmbs)	Description
IIb	74–118	Natural; 10YR 3/4, dark yellowish brown; silty clay loam; weak, fine, blocky structure; moist, friable consistence; no cementation; slightly plastic; terrigenous origin; clear, discontinuous lower boundary; no roots observed; naturally deposited alluvium
III	95–195 (BOE)	Natural; 10YR 4/4, dark yellowish brown; cobbly silty clay loam; very moist, friable consistence; no cementation; non-plastic; weak, medium, granular structure; lower boundary not observed; no roots observed; streambed containing waterworn basalt gravel and cobbles

Figure 111. SIHP # -8840 Component 3, Feature 4, etched concrete surface

Figure 112. Close-up of the western corner of T-11, upper portion, showing SIHP # -8840 Component 3, Feature 4 (etched concrete surface [after removal]) and Feature 6 (burnt trash layer), and Component 2, Feature 18 (pit feature of indeterminate function), view to southwest

(northwest-southeast) by 60 cm wide (northeast-southwest) and contains sparse charcoal; its function is indeterminate.

Feature 19 is a long, rectangular pit feature identified in the northwest wall of T-11 (see Figure 109, Figure 110, and Figure 113). It was documented between 85 and 156 cmbs, extending from the lower boundary of Stratum IIa/SIHP # -8840 Component 2, intruding through Stratum IIb, and terminating in Stratum III. Based on morphology, this feature is interpreted as a posthole. The darker, organic-stained portion at the center of the feature represents the location of the former post, while the surrounding pit matrix is lighter in color (see Figure 113). A small amount of charcoal was observed near the base of the feature.

The underlying Stratum III contains waterworn basalt gravel and cobbles (see Figure 114) and is interpreted as a streambed.

Figure 113. SIHP # -8840 Component 2, Feature 19, posthole, in T-11 northwest wall, view to north

Figure 114. Waterworn basalt gravel and cobbles from T-11 Stratum III, streambed

Test Excavation 12 (T-12)

Test Excavation 12 (T-12) is an exterior excavation in the northern corner of the AIS study area. It is oriented northwest-southeast and is 6.15 m long by 0.74 m wide, with a maximum depth of 252 cmbs. The water table was encountered at 247 cmbs.

The observed stratigraphy consists of the asphalt parking lot surface (Stratum Ia) and associated extremely gravelly sand (crushed coral) base course, gravelly (basalt) sandy clay fill (Stratum Ic), and cobbly (basalt) silty clay loam fill (Stratum Id), overlying silty clay (Stratum IIa; SIHP # -8840 Component 2), gravelly (basalt) silty clay loam (Stratum IIb), and silty clay loam (Stratum IIc; SIHP # -8840 Component 2), atop very gravelly (basalt) sandy clay (Stratum IIIa) and cobbly (basalt) sandy clay (Stratum IIIb) (Figure 115, Figure 116, and Table 18).

Stratum Id is a demolition fill layer containing cut basalt blocks, concrete, asphalt, bottle glass, ceramics, and brick; two glass bottles and a ceramic spoon fragment were collected. The bottles (Acc. #s 125 and 126) date to post-1921 and 1923-1956, respectively, indicating deposition of the layer post-1923. A pyramidal dressed basalt pillar with a square base was removed from Stratum Id within the southwest sidewall, near the southeast end of the trench. The pillar was photographed (Figure 117) but not collected, and the resulting void in the sidewall was documented in the profile drawing (see Figure 116). In addition, a large piece of concrete was removed from the southwest sidewall at the opposite end of the trench, from the Stratum Id/IIa interface; the resulting void was documented in the profile drawing (see Figure 116). Another large piece of concrete, approximately 5 cm thick, could not be removed from the southeast end of the trench without destabilizing the sidewalls; hence, this portion of the excavation was benched (see Figure 116).

Stratum II (a–c) is natural alluvium, although the upper portion of Stratum IIa has been disturbed or reworked and contains charcoal flecking and faunal material; hence, Stratum IIa is designated as part of SIHP # -8840 Component 2, habitation layers. The faunal material, identified as fish (Osteichthyes) bone, saw-cut cow (*Bos taurus*) bone, and possible baleen whale (*Mysteceti*), was collected.

Stratum IIc exhibited quite a bit of variation within this trench. In some places, the clay content was higher, and the sediment appeared mottled with oxidized (red) mottling; in other places, the silt content was higher, and the sediment appeared less mottled. Based on the presence of oxidized (red) mottling, Stratum IIc is interpreted as an agricultural deposit and is designated as part of SIHP # -8840 Component 1. Bulk samples were collected from Stratum IIc within the trench floor and from the spoils pile (an intact block, removed from a localized deposit indicated on the profile drawing with a dashed line). Wet screening of the sample from the trench floor yielded reddish nodules. Wet screening of the sample from the localized deposit revealed a pronounced tubule structure still intact, with reddish coloration on the interior of the broken open tubules. Based on previous archaeological studies (see Section 5.1.1), these are interpreted as evidence of agricultural use.

The underlying Stratum III (a and b) contains waterworn basalt gravel and cobbles and is interpreted as a streambed. A bulk sample of Stratum IIIa was collected from the excavator bucket.

Figure 115. T-12 southwest wall, view to west

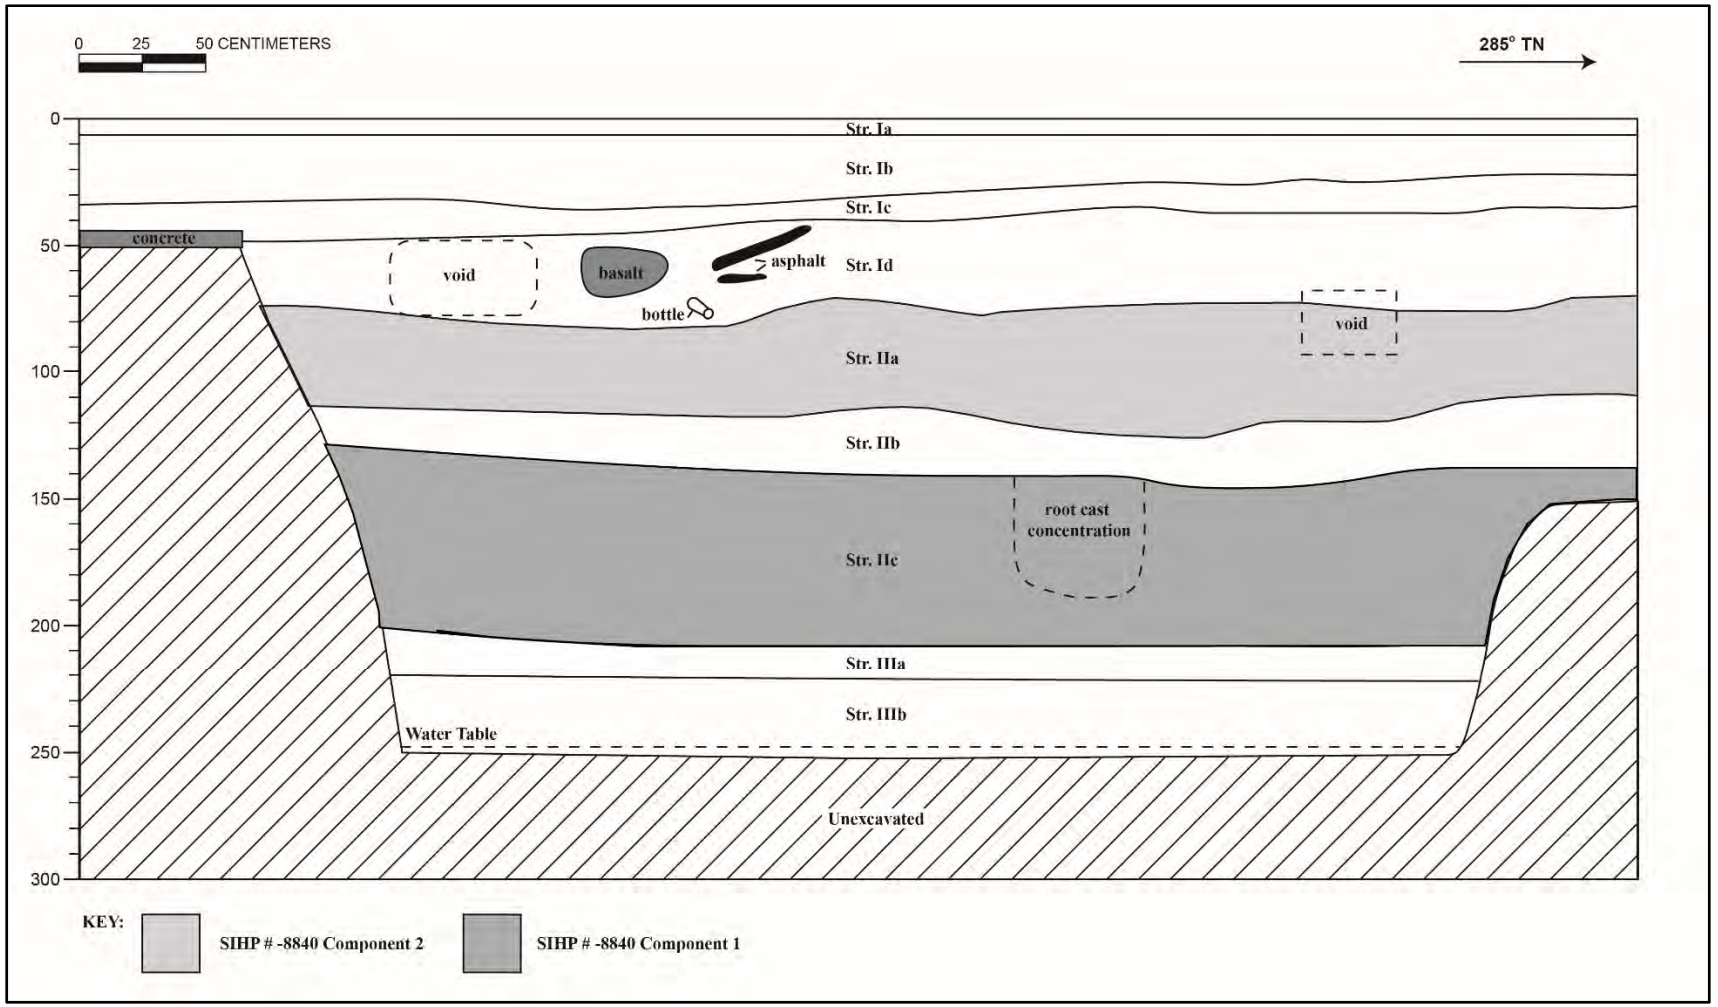

Figure 116. Profile of T-12 southwest wall

Table 18. T-12 stratigraphic description

Stratum	Depth (cmbs)	Description
Ia	0–7	Asphalt; parking lot surface
Ib	5–35	Base course; 10YR 7/3, very pale brown; extremely gravelly sand; structureless (single-grain); moist, loose consistence; marine origin; abrupt, smooth lower boundary; no roots observed; crushed coral base course
Ic	21–46	Fill; 5YR 3/3, dark reddish brown; gravelly sandy clay; moderate, medium, blocky structure; moist, firm consistence; no cementation; plastic; mixed origin; clear, smooth lower boundary; no roots observed; contains basalt gravel
Id	34–82	10YR 3/3, dark brown; cobbly silty clay loam; weak, medium, granular structure; moist, friable consistence; no cementation; slightly plastic; clear, smooth lower boundary; no roots observed; demolition fill containing basalt cobbles, concrete, asphalt, bottle glass, ceramic, and brick
IIa	70–125	SIHP # -8840 Component 2; 10YR 2/2, very dark brown; silty clay; weak, medium, blocky structure; moist, friable consistence; no cementation; plastic; terrigenous origin; clear, smooth lower boundary; no roots observed; naturally deposited alluvium with charcoal flecking, fish and saw-cut cow bone, and possible baleen whale
IIb	108–140	Natural; 10YR 3/4, dark yellowish brown; gravelly silty clay loam; weak, fine, granular structure; moist, friable consistence; no cementation; plastic; terrigenous origin; clear, smooth lower boundary; few, fine roots; naturally deposited alluvium with basalt gravel
IIc	127–207	SIHP # -8840 Component 1; 10YR 3/3, dark brown; silty clay loam; weak, fine, granular structure; moist, friable consistence; no cementation; plastic; terrigenous origin; clear, smooth lower boundary; few, medium roots; naturally deposited alluvium with oxidized (red) mottling
IIIa	200–222	Natural; 10YR 3/2, very dark grayish brown; very gravelly sandy clay; weak, fine, granular structure; moist, friable consistence; no cementation; plastic; terrigenous origin; clear, smooth lower boundary; no roots observed; streambed with waterworn basalt gravel
IIIb	218–252 (BOE)	Natural; 10YR 3/1, very dark gray; cobbly sandy clay; weak, fine, granular structure; wet, slightly sticky consistence; no cementation; plastic; lower boundary not observed; no roots observed; streambed with waterworn basalt gravel and cobbles

Figure 117. Cut, pyramid-shaped basalt stone removed from T-12 Stratum Id, demolition fill (not collected)

Section 5 Results of Laboratory Analysis

5.1 Bulk Sample Analysis

A total of 17 bulk samples were collected from seven test excavations during the current AIS (Table 19). Samples were collected from the Stratum II alluvium series, primarily from strata interpreted as possible agricultural deposits (i.e., SIHP # -8840 Component 1), which are likely associated with *lo‘i kalo*. Seven were wet screened to further characterize the targeted deposits. These include one sample from T-2B (Stratum IIc, interpreted agricultural deposit), near the southern corner of the AIS study area; two samples from T-12 (Stratum IIc [one general sample and one from a localized deposit], interpreted agricultural deposit), near the northern corner of the study area; and a series of four samples from T-9 (Stratum IIb, natural alluvium, and Strata IId–IIf, interpreted agricultural deposits), in the central portion of the study area.

5.1.1 Previous Archaeological Investigations of Taro *Lo‘i* Deposits

Previous archaeological investigations of former taro *lo‘i* have characterized the associated agricultural deposits as gleyed and predominantly clay, with ferruginous mottling, limonite root casts, and abundant dispersed charcoal. Maury Morgenstein's (1978) study of abandoned taro *lo‘i* within Kaiwainui Marsh, Kailua, O‘ahu documented two subsurface agricultural deposits associated with a terrace wall, both of which contained abundant diffused charcoal particles and limonite root casts:

> The presence of charcoal and ferruginous impregnated root tubes associated with the terrace wall strongly supports an agricultural hypothesis for soils layers III and IV. The root tubes are wider than the present grass vegetation root tubes and were formed by a heavier rooted plant such as Taro. [Morgenstein 1978:37]

The presence of ferruginous mottling, limonite casts, and dispersed charcoal within former *lo‘i* was also noted by Jane Allen and colleagues (1987) during extensive investigations of the Luluku field system within Kāne‘ohe, O‘ahu:

> In ponded soils, aeration along roots also oxidizes small areas in the subsoil, resulting in bright mottling within a dark, gleyed soil matrix; precipates of iron and manganese as limonite casts and manganese nodules, respectively, often occur. […] Charcoal in pondfields is typically churned and dispersed throughout the soil through subsequent cultivation and ponding activities. [Allen et al. 1987:36]

A. Rose Schilt (1980) made similar observations of *lo‘i* deposits in Hanalei Valley, Kaua‘i, and provided the following summary of her findings in relation to earlier *lo‘i* studies:

> Previous archaeological projects in Mākaha Valley, O‘ahu, and Hālawa Valley, Molokai have documented the appearance of pondfield soils in which irrigated taro has been cultivated (Morgenstein and Burnett 1972; Riley 1975). These soils are characterized by hydrated iron-oxide (limonite) tubes which appear as prominent reddish mottles. These ferruginous tubes are known to develop around the roots of taro plants, although the mechanism of concentration is not well understood. […] These tubes or mottles were quite prominent in the soil core we took in a recently cultivated lo‘i in Hanalei Valley. [Schilt 1980:29]

Table 19. Bulk samples collected during the AIS

Test Excavation	Stratum (location)	SIHP # -8840 Component 1	Depth (cmbs)	Size (L)	Screened? (Y/N)	Observations
T-2B	Str. IIc (excavator bucket)	Agricultural deposit	~175–216	2.0	Y	Distinctive oxidized nodules and root casts
T-4	Str. IIe (spoils)	Agricultural deposit	~205 cmbs	1.0	N	–
T-5	Str. IIf (spoils)	Agricultural deposit	~186–205	2.0	N	–
T-6	Str. IIa (NW wall)	–	80–90	0.25	N	–
	Str. IIb (NW wall)	–	125–135	0.5	N	–
	Str. IIc (NW wall)	Agricultural deposit	150–185	0.25	N	–
	Str. IId (NW wall)	–	180–212	0.5	N	–
T-9	Str. IIb (SE wall)	–	107–120	0.5	Y	No oxidized nodules or root casts
	Str. IId (SE wall)	Agricultural deposit	127–137	1.0	Y	Limited oxidized nodules
	Str. IIe (SE wall)	Agricultural deposit	145–155	1.0	Y	Limited oxidized nodules
	Str. IIf (trench floor)	Agricultural deposit	~160–180	1.0	Y	Distinctive oxidized nodules and root casts
T-9B	Str. IIc (SE wall)	Agricultural deposit	85–102	2.0	N	–
	Str. IId (SE wall)	Agricultural berm	117–113	2.0	N	–
	Str. IIe (SE wall)	Agricultural deposit	137–150	2.0	N	–
T-12	Str. IIc (trench floor)	Agricultural deposit	182–197	1.0	Y	Limited oxidized nodules
	Str. IIc (localized), (spoils; intact block)	Agricultural deposit	–	1.5	Y	Pronounced tubule structure
	Str. IIIa (streambed) (excavator bucket)	–	~200–220	0.5	N	–

More recently, Sroat et al. (2016) analyzed suspected buried taro *lo‘i* deposits from Waikele, O‘ahu, as part of archaeological data recovery carried out in the footprint of the Waipahu Transit Station for the Honolulu Authority for Rapid Transit’s Honolulu Rail Transit Project. As with the investigations cited above, these analyses documented varying amounts of dispersed charcoal particles, oxidized reddish (ferruginous) mottling, and tubular root casts and concretions consistent with the limonite casts and nodules described above, thought to be associated with buried taro *lo‘i* deposits (Figure 118 through Figure 120).

5.1.2 Results of Wet Screening for the Current AIS

Background research indicated the possibility for remnants of former agricultural activity within the current AIS study area, potentially including buried pre-Contact or post-Contact taro *lo‘i* deposits and/or deposits associated with Don Marín’s Vineyard. However, based on the results of radiocarbon dating of a feature associated with the Stratum IIa habitation layer (see Section 5.4.3), the interpreted agricultural deposits (Strata IIc–IIg) likely pre-date Marín’s Vineyard. During the AIS fieldwork, these interpreted agricultural deposits were observed to have sparse charcoal flecking and readily discernable reddish mottles, similar to those described in the earlier investigations (discussed above). These mottles are indicative of the type of oxidation that appears to result from chemical interactions between taro roots and the surrounding soil. Additionally, potential structural remains, interpreted as remnant pond-field berms consistent with taro *lo‘i*, were documented in T-9 and T-9B.

Photographs of each sample before and after wet screening are presented in Figure 121 through Figure 136. The results of the wet screening generally support a modest correlation between the field observation of reddish oxidized mottling and the presence of limonite nodules and root casts within the samples. For instance, the bulk sample from T-9 Stratum IIb (see Figure 124 and Figure 125) did not contain oxidized nodules or root casts, which is consistent with the lack of mottling observed during fieldwork and the interpretation of the layer as natural alluvium (i.e., not agricultural). Similarly, the T-2B Stratum IIc (see Figure 121 through Figure 123) and T-9 Stratum IIf (see Figure 130 through Figure 132) bulk samples yielded distinctive oxidized nodules and root casts, which is consistent with the strong reddish oxidized mottles observed in the field. In contrast, bulk samples from T-9 Strata IId (see Figure 126 and Figure 127) and IIe (see Figure 128 and Figure 129) and T-12 Stratum IIc (general sample; see Figure 133 and Figure 134), which were observed in the field to have reddish oxidized mottles, yielded only limited evidence of reddish limonite nodules and no evidence of root casts. These results indicate significant variability in the formation of these nodules and root casts, possibly related to minor differences in soil chemistry and/or the duration of use of the deposit for agriculture.

A second bulk sample from T-12 Stratum IIc (intact block) was markedly different from the other samples. In the southwest sidewall of T-12, within Stratum IIc (see Figure 116), a localized (approximately 70-cm by 70-cm area in the profile) and pronounced concentration of dense, clayey sediment with what appeared to be abundant root casts was observed. The bulk sample from this localized deposit was collected as a single, large, intact block (Figure 135). This bulk sample was distinctive during the wet screening process, as it did not break down with water soaking and agitation, nor during spraying with the water hose. The pronounced adherence of the matrix remained even after days of soaking and agitation, approaching cementation that was only eventually broken down into fragments by hand. Figure 136 shows some of the remnant after wet screening, with the pronounced tubule structure still intact and some reddish coloration on the

interior of the broken open tubules. This localized area of T-12 Stratum IIc appears to be distinct from the other bulk samples and likely represents different formation processes, potentially interactions with the soil and/or a different plant species.

No charcoal flecks, artifacts, or plant remains were observed in any of the samples. The lack of observable charcoal flecks in the wet screened samples may be a result of the wet screening method or the relatively modest size of the samples (0.5 to 2 liters).

Figure 118. Portion of a bulk sample collected from suspected taro *lo‘i* deposits from the Waipahu Transit Station, showing ferruginous (red) mottling, dispersed charcoal particles, and remnant root casts (from Sroat et al. 2016:73)

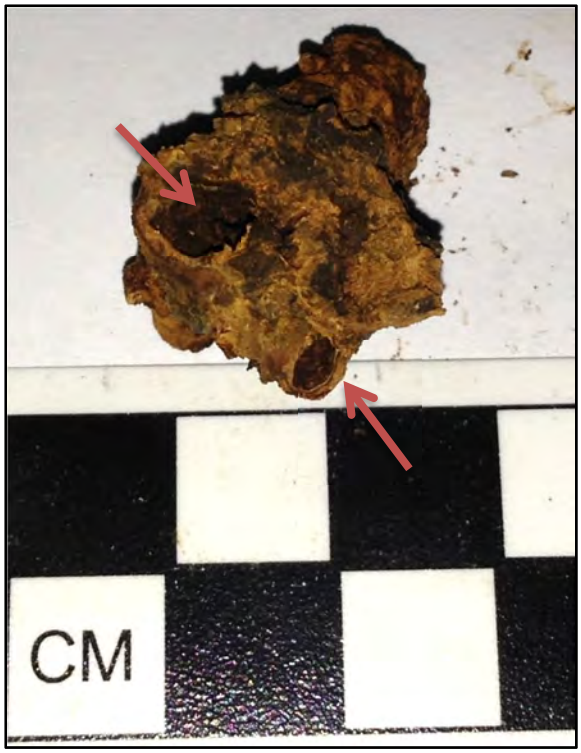

Figure 119. Dried portion of a bulk sample from suspected taro *lo‘i* deposits from the Waipahu Transit Station, showing ferruginous (red) mottling and an intact root cast (orange arrows) (from Sroat et al. 2016:77)

Figure 120. Root nodules (left) and root casts (right), identified through wet screening of bulk samples from suspected taro *lo‘i* deposits from the Waipahu Transit Station (from Sroat et al. 2016:81)

Figure 121. T-2B Stratum IIc bulk sample before wet screening; the red oxidized mottling observed in the field was less apparent in the collected bulk sample, likely as a result of drying and potentially abrasion or polishing of the large sediment masses/peds during transport within the plastic sample bag

Figure 122. T-2B Stratum IIc bulk sample after wet screening; note distinct reddish-orange concretions and nodules and several tubular root casts on right side of photo (see Figure 123 below for close-up)

Figure 123. Close-up of limonite root casts and nodules (and one natural, water-rounded basalt pebble) in the T-2B Stratum IIc bulk sample, believed to be the result of oxidation at the interface between surrounding soil and former taro roots; orange arrows indicate remnant tubules believed to have formed around taro roots and rootlets

Figure 124. T-9 Stratum IIb bulk sample before wet screening; no red oxidized mottling

Figure 125. T-9 Stratum IIb bulk sample after wet screening; no evidence of tubular root casts or nodules were observed

Figure 126. T-9 Stratum IId bulk sample before wet screening; note easily discernable reddish mottling

Figure 127. T-9 Stratum IId bulk sample after wet screening; note the reddish nodules

Figure 128. T-9 Stratum IIe bulk sample before wet screening; some reddish mottling discernable

Figure 129. T-9 Stratum IIe bulk sample after wet screening; note the small, faint, reddish nodules and the smaller volume compared to other samples of similar size

Figure 130. T-9 Stratum IIf bulk sample before wet screening; some reddish mottling discernable

Figure 131. T-9 Stratum IIf bulk sample after wet screening; note the reddish-orange concretions and nodules, several tubular root casts (right side of photo; close-up in Figure 132 below), and one limestone pebble (top right corner)

Figure 132. Close-up of limonite root casts and nodules T-9 Stratum IIf bulk sample, believed to be the result of oxidation at the interface between surrounding soils and former taro roots; orange arrows indicate remnant tubules believed to have formed around taro roots and rootlets; the reddish coloration of the interior of the root tubules can be seen in portions of tubules that have been broken open

Figure 133. T-12 Stratum IIc general bulk sample before wet screening; the red oxidized mottling observed in the field was less apparent in the collected bulk sample, likely as a result of drying and potentially abrasion or polishing of the large sediment masses/peds during transport within the plastic sample bag

Figure 134. T-12 Stratum IIc general bulk sample after wet screening; note the small reddish nodules

Figure 135. T-12 Stratum IIc bulk sample (localized deposit) after wet screening

Figure 136. A portion of the T-12 Stratum IIc bulk sample (localized deposit) after wet screening

5.2 Artifact Analysis

Artifacts collected during the AIS were curated and analyzed by CSH personnel as described in Section 2.2.2 above. One hundred sixty-one historic artifacts were collected during the AIS; no traditional Hawaiian artifacts were identified or collected. The collected artifacts do not represent 100% collection from the study area; rather, grab samples were collected with an emphasis on representative artifact types, complete artifacts, and those with diagnostic traits. The collected artifacts are presented in Table 20 and discussed below.

The current assemblage includes 74 glass bottles or bottle fragments, one glass jar, four pressed glass artifacts, three window glass fragments, one glass marble, one unidentified milk glass object, three unidentified glass fragments, one glass insulator, 36 ceramic hollowwares, four ceramic flatwares, three ceramic tablewares, one ceramic spoon, one ceramic doorknob, two stoneware storage vessels, two stoneware bottles, one unidentified stoneware vessel fragment, four common pottery vessels, one bone grooming tool, one bone toothbrush, four nails, two metal utility pipes, four unidentified metal fragments, one carbon battery rod, one slate fragment, one brick, one coral block, one concrete brick, and one concrete masonry unit.

Artifacts were assessed for type, material, origin, and date. Artifacts were identified to country of origin where possible. Some artifacts lacked the diagnostic characteristics necessary to identify the country of origin and were identified only as Euro-American, indicating origin from a country in either North America or Europe (most likely the United States or England). Origin was only identified more specifically than country when the artifact could be identified as having been made in Hawai‘i or for a Hawaiian company.

Artifacts were assessed to determine date of manufacture first and foremost. Where applicable, manufacture date ranges were modified by available information regarding dates of import of certain materials and immigration of ethnic groups to Hawai‘i. Notable dates frequently used in this capacity are 1850, the date of increased import of goods to support the influx of missionaries; 1852, the date of the first immigration of Chinese workers; and 1868, the date of the first immigration of Japanese workers. Some date ranges are quite wide, due to a lack of diagnostic characteristics needed to narrow the range. Additionally, it is not expected that artifacts were always consumed and discarded immediately; many types of artifacts would have had long periods of use between manufacture and deposition. The below discussion includes *terminus ante quem* (latest possible date) and *terminus post quem* (earliest possible date) limits for dates of deposition of artifacts, features, and stratigraphic layers based on a combination of artifact manufacture/ import dates and available land use information.

5.2.1 Glass Artifacts

The glass artifacts include 74 glass bottles or bottle fragments, one glass jar, three pressed glass tumblers, one unidentified pressed glass fragment, three window glass fragments, one glass insulator, one glass marble, one unidentified milk glass fragment, and three unidentified glass fragments. The country of origin for 18 of the bottles could be determined; these items are from the mainland United States (n=7), Hawai‘i (n=3), the Netherlands (n=2), Scotland (n=2), Japan (n=2), and China (n=2).

Table 20. Artifacts collected during the Halewai‘olu Senior Residences AIS

Provenience	Material	Type	Acc. #	Description	Origin	Age
T-1, Str. Ig SIHP # -8840 Component 3 Base course	Ceramic	Bottle	127	Stoneware cylindrical mineral water/gin bottle, base to body fragment, ferruginous salt glaze, unglazed interior; helical marks in interior and cut-off scars on base indicate a wheel-thrown bottle	Germany	1850-1879
	Glass	Jar	128	Cobalt blue glass jar or bottle, lip fragment, continuous external thread finish without ground rim, unidentified method of manufacture	–	Post-1900
	Ceramic	Hollowware	129	Porcelain “*tz‘u*” rice bowl, body to rim fragment (1) and base to body fragment (1), cobalt underglaze, hand-painted Double Happiness motif on exterior	China	1850-1870
			130	Porcelain hollowware, body to rim fragment, deep green glaze on exterior	Asia	Post-1852
			131	Porcelain hollowware, *kozara* dish (shallow dish for side dishes), base to rim fragment, underglaze blue floral katagami stencil decoration	Japan	1870s-1912
	Glass	Bottle	132	Colorless glass beverage bottle, base to heel fragment, cylindrical shape, slight recessed base, machine-made; embossing: “[REGI] (STERED)” on heel, partial propriety mark on base	–	Post-1908
	Ceramic	Other	133	Porcelain door knob fragment	–	Post-1850
T-2, Str. Id Demolition fill	Glass	Bottle	42	Blue aqua glass bottle, complete, cylindrical shape, slight kick-up base, mold-blown, two-piece cup-bottom mold, tooled oil finish, dimples in finish for “Swingtop” lightning-type closure (not present)	–	1897-1920
			43	Blue aqua glass bottle, complete, cylindrical shape, slight kick-up base, machine-made, club sauce or similar finish; embossing: “8” on base	–	Post-1908

Provenience	Material	Type	Acc. #	Description	Origin	Age
T-2, Str. Id Demolition fill	Glass	Bottle	44	Amber glass beer bottle, complete, cylindrical shape, flat base, machine-made, crown finish	Japan	Post-1921
T-2B, Str. Ie, Fill	Metal	Unknown	1	Rusted ferrous metal ring, unknown function	–	–
	Glass	Bottle	2	Colorless glass bottle, heel to body fragment (1), body fragments (3), and shoulder fragments (2), side seam visible on one fragment, cylindrical shape, unidentified method of manufacture	–	Post-1870
			3	Colorless glass bottle, shoulder to finish fragment, cylindrical shape, machine-made, crown finish	–	Post-1908
			4	Colorless glass bottle, base to body fragment, cylindrical body, flat base, one side mold seam and horizontal seam on heel visible, unidentified method of manufacture	–	Post-1870
			5	Colorless glass bottle, body fragment, cylindrical body, side seam evident, unidentified method manufacture	–	Post-1870
			6	Aqua glass bottle, body fragment, cylindrical shape, no seam evident, unidentified method of manufacture	–	–
			7	Blue-aqua glass bottle, base to body fragment, cylindrical shape, machine-made (press-and-blow), valve mark on base	–	Early 1910s
			8	Aqua glass beer bottle, base to body fragment, cylindrical shape, flat base, mold-blown, two-piece post-bottom mold; embossing: “[HONOLULU] B.& M.Co., LTD./ [HONO]LULU, T.H.” vertically on body, “I.P.G.CO/3004” on base (double stamped with same info); mark for Illinois-Pacific Glass Co.; would have had tooled crown finish; bottle for Honolulu Brewing & Malting Co., Ltd.	Hawai‘i	1911-1917

Provenience	Material	Type	Acc. #	Description	Origin	Age
T-2B, Str. Ie, Fill	Glass	Bottle	9	Aqua glass bottle, heel to body fragment, cylindrical shape, horizontal seam on heel, unidentified method of manufacture	–	–
			10	Gray tinted colorless glass bottle, body fragment, square body, no seams evident, unidentified method of manufacture	–	1915-1925
			11	Amber glass bottle, body fragment, cylindrical body, mold-blown, turn mold	–	1870-1920
	Ceramic	Hollowware	12	Porcelain rice bowl, base to body fragment (1), body fragment (1), and body to rim fragment (1), hand-painted blue and pink underglaze striped decoration on exterior, unglazed footring, hand-painted blue ring on base	Japan	Post-1868
			13	Porcelain "*tz'u*" rice bowl, base to body fragment (1) and body to rim fragment (1), cobalt underglaze hand-painted Double Happiness motif on exterior, unglazed footring	China	1850-1870
	Glass	Bottle	14	Amber glass bottle, body fragment, cylindrical shape, unidentified method of manufacture	–	–
			15	Olive-amber glass bottle, body fragment, cylindrical body, unidentified method of manufacture	–	–
			16	Amber glass bottle, body fragment, cylindrical shape, unidentified method of manufacture	–	–
	Ceramic	Hollowware	17	Porcelain straight-sided cup, body fragment (1), underglaze blue landscape transfer-print decoration on exterior	Japan	Post-1888

Provenience	Material	Type	Acc. #	Description	Origin	Age
T-2B, Str. Ie, Fill	Ceramic	Hollowware	18	Porcelain hollowware, base to body fragment, underglaze blue floral transfer-print decoration on interior	Japan	Post-1888
			19	Porcelain hollowware, body to rim fragment, underglaze winter green on exterior	Asia	Post-1852
			20	Porcelain hollowware, body to rim fragment, remnant of overglaze decoration (possible floral pattern) on exterior and interior	China	Post-1852
			21	Porcelain hollowware, body fragment, wintergreen with green, white, and brown floral hand-painted decoration underglaze on exterior, unglazed interior	Japan	Post-1868
		Common pottery	22	Porcelain planter, body fragment (1) and shoulder to rim fragment (1), cobalt underglaze on exterior, on flat rim, and top part of interior, applique white and green floral design on exterior	China	Post-1852
		Hollowware	23	Whiteware hollowware, body to rim fragment, underglaze polychrome green and black hand-painted decoration	–	Post-1850
		Tableware	24	Ironstone tableware, body to rim fragment, wavy rim, undecorated	Euro-America	1850-20th century
		Hollowware	25	Porcelain flatware, body fragment, undecorated	–	Post-1850

Provenience	Material	Type	Acc. #	Description	Origin	Age
T-2B, Str. Ie, Fill	Bone	Toiletries	26	Polished bone object, long thin straight-sided fragment with parallel sides and rounded end, decorative incised lines along edges of object, 11 alternating decorative square holes at rounded end, metal pin and washer through hole at rounded end; incised text: “MADE IN JAPAN” on one side; likely part of a folding personal hygiene tool	Japan	Post-1926
T-2B, Str. IIa SIHP # -8840 Component 2, Fea. 8, Historical trash pit	Glass	Bottle	27	Amber glass bottle, base to heel fragments (2), cylindrical shape, kick-up base, mold-blown, unidentified mold type	–	1800-1920
			28	Amber glass bottle, body fragment, unidentified method of manufacture	–	–
		Bottle	29	Amber glass bottle, body fragment, cylindrical shape, unidentified method of manufacture	–	–
		Window	30	Aqua flat glass fragment, one straight intact edge indicates likely part of square or rectangular pane, smooth surface	–	1838–1889
		Unknown	31	Aqua flat glass fragment, unknown function; possibly window glass but outside the thickness range of most dating methods for historic window glass	–	–
			32	Colorless glass fragment, slightly curved	–	Post-1870
		Bottle	33	Aqua glass bottle, neck to lip fragment, machine-made, small mouth external thread finish	–	Post-1908
	Ceramic	Tableware	34	Whiteware tableware fragment, undecorated	Euro-America	Post-1850
		Hollowware	35	Ironstone hollowware fragment, handle fragment, remnant of copper or gold luster	Euro-America	1850s-ca. 1900

Provenience	Material	Type	Acc. #	Description	Origin	Age
T-2B, Str. IIa SIHP # -8840 Component 2, Fea. 8, Historical trash pit	Metal	Nail	36	Wire nail, rusted, complete, round shank, pointed tip, round head	–	Post-1894
	Glass	Marble	37	Glass machine-made marble, “opaque” type, light brown	–	Post-1910
	Metal	Nail	38	Wire nail, complete, white corrosion and ferrous rust, likely nickel-plated, round head, round shaft, pointed nail end	–	Post-1894
	Metal	Nail	39	Wire nail, complete, white corrosion, round head, round shaft, pointed nail end, bent profile from being pulled	–	Post-1894
	Glass	Pressed	40	Colorless pressed glass fragment, embossed ridges on edges of fragment and convex circle on center, function unknown	–	–
		Bottle	41	Colorless glass fragment, base to body fragment, cylindrical shape, flat base, machine-made, Owens machine mark on base; embossing: “986” horizontally on heel, “B/10” on base; marks for Charles Boldt Glass Co.	U.S.	1910-1919
			45	Olive glass beverage bottle, cylindrical shape, flat base, mold-blown, turn-mold, tooled mineral finish	–	1880–1920
			46	Aqua glass bottle, base to heel fragment, cylindrical shape, slight recessed base, machine-made, suction scar on base; embossing: “15 IG” on heel, possibly mark for Imperial Glass Co.	–	Post-1908

Provenience	Material	Type	Acc. #	Description	Origin	Age
T-2B, Str. IIa SIHP # -8840 Component 2, Fea. 8, Historical trash pit	Glass	Bottle	47	Colorless glass Dutch case gin bottle, body to lip fragment, square paneled body, tooled oil finish, applied blob seal' embossing: palm tree image surrounded by text "PALMBOOM C MEYER & Co / SCHIEDAM PALMBOOM" in seal	Netherlands	ca. 1910
	Bone	Toiletries	48	Bone toothbrush, handle fragment	–	Pre-1884
	Ceramic	Hollowware	49	Porcelain hollowware sauce dish, complete except for chips in rim, flower relief mold on interior	Japan	Post-1852
T-2C, Str. If Demolition fill	Glass	Bottle	121	Blue-green beverage bottle, neck to lip fragment, machine-made, variation of crown finish	–	Post-1908
	Ceramic	Hollowware	134	Porcelain hollowware, *kozara* dish (shallow dish for side dishes), base to rim fragment, underglaze blue transfer-print on interior	Japan	Post-1888
	Glass	Bottle	135	Aqua glass bottle, complete, cylindrical shape, flat base, mold-blown, two-piece post bottom mold, tooled crown finish; embossing: "0/81/3" on base	–	1870-1890
		Pressed	136	Colorless pressed glass tumbler, base to body fragment (1) and body fragment (1), cylindrical fluted body	–	Post-1870
	Ceramic	Unknown	139	Stoneware knob fragment, possibly lid knob, for unknown vessel, dark brown metallic glaze, possibly salt or alkaline glaze	Euro-America	–
	Glass	Bottle	161	Colorless glass bottle, complete except for thin chip from base to shoulder, cylindrical shape, flat base, vertical embossed ribs on heel and shoulder, machine-made, crown finish; embossing: "Pacific//Pacific (script)" at upward angled diagonal on shoulder, "NET CONTENTS 6 1/2 FLU[ID OZ]" on body just below shoulder, "P/ 21 (Owens-Illinois mark) 5"	Hawai‘i	1935

Provenience	Material	Type	Acc. #	Description	Origin	Age
T-6, Str. Ic Demolition fill	Other	Brick	157	Concrete dark gray block, faced on all sides but not ground to a smooth finish	Euro-America	Post-1871
			158	Concrete hollow block, half fragment, faced on all sides, light gray; length unknown, width unknown	Euro-America	Post-1916
T-6, Str. Ie, Fill	Carbon	Other	77	Carbon graphite rod for a dry-cell battery	–	Post-1912
	Stone	Slate	78	Slate fragment, one straight edge indicating it was part of a square or rectangular panel, uniform thickness, smooth sides, painted black on both sides; possibly an early chalkboard, but slate pencils do not mark it, hence, it is not a slate board	–	–
	Glass	Bottle	79	Amber glass bottle, base to body fragment, cylindrical shape, unidentified method of manufacture	–	–
	Metal	Other	80	Ferrous metal handle, semi-circular shape	–	–
		Nail	81	Rusted wire nail	–	Post-1894
	Ceramic	Hollowware	82	Porcelain hollowware, body fragment, transparent glaze, underglaze blue *fukizumi* decoration on interior	Japan	1870s–ca. 1920
			83	Porcelain hollowware, base to body fragment, relief molded scallop decoration on exterior, scalloped base/footring	Euro-America	Post-1850
			84	Japanese ceramic rice bowl lid (futa), complete with base to rim fragment (1) and body to rim fragment (1), underglaze criss-crossing line design on exterior of hand-painted blue and light green lines and transfer-printed dark green lines	Japan	Post-1888

Provenience	Material	Type	Acc. #	Description	Origin	Age
T-6, Str. Ie, Fill	Ceramic	Hollowware	85	Porcelain bowl, base to rim fragment high unglazed footring with one blue circle around interior and two around exterior; underglaze hand-painted blue design on exterior, slightly everted rim has blue hand-painted motif of plum blossoms on exterior side of rim	Japan	Post-1868
	Glass	Bottle	86	Amber glass liquor bottle, base to lip, cylindrical shape, slight kick-up base, mold-blown, two-piece cup-bottom mold, tooled brandy finish; embossing: “W.C. PEACOCK & CO/ (company monogram logo)/ HONOLULU, H.I./ WINE & LIQUOR MERCHANTS” vertically on body	Hawai‘i	Early 1900s
	Coral	Other	137	Coral construction block, light yellow red (orange); complete, rectangular; eroded on one side but originally faced on all sides; no trace of mortar on any side	–	–
	Other	Brick	138	Dark red brick fragment, portion of one face remaining only, no measurements possible; some mortar on one side	–	–
T-9, Str. IIa SIHP # -8840 Component 2, Fea. 12, Historical trash pit	Glass	Bottle	50	Dark amber olive (black) glass bottle, base to shoulder fragment, cylindrical shape, kick-up base, mold-blown, turn mold	–	1870-1920
			51	Dark olive (black) glass bottle, base to lip fragment, cylindrical shape, kick-up base, mold-blown, two-piece cup-bottom mold, applied mineral or brandy finish	–	1850-1885
			52	Dark olive (black) glass whiskey bottle, base to body fragment, cylindrical shape, kick-up base, Ricketts’ style plate on base, three-piece dip-mold; embossing: “R. COOPER (arch) & CO/PORTOBELLO (inverted arch)” on base	Scotland	1866-1885

5.2.1.1 Bottles

The terminology used to describe bottle traits and dating information is based on information from the U.S. Department of the Interior, Bureau of Land Management (BLM) Society of Historic Archaeology (SHA) “Historic Glass Bottle Identification and Information Website” (BLM/SHA 2018), unless otherwise noted. Bottle research focused on function and date of manufacture, using reference texts and online resources to identify maker’s marks and company histories.

5.2.1.2 Bottle Manufacturing Methods

The evolution of bottle manufacturing breaks down into three stages. Since antiquity, bottles have been free-blown with a blow pipe. Free-blown bottles are usually asymmetrical, crudely made, and have a pontil mark where a rod was used to hold the bottle during the last steps of manufacture. The lip of the bottle was finished by hand. In the United States, these types of bottles usually pre-date ca. 1865 (BLM/SHA 2018). The current assemblage contains no free-blown bottles.

Around ca. 1800, glass workers began to blow bottles in molds. The current assemblage includes 37 mold-blown bottles (Acc. #s 8, 11, 27, 42, 45, 47, 50–52, 55–57, 59–63, 65, 66, 70–74, 76, 86, 93–95, 98, 99, 107, 111, 116, 119, 135, and 159). One of the first types of molds was the one-piece dip mold, which dates from 1800 to 1870. Bottles made with this type of mold do not have seams or embossing. Beginning in 1830, the one-piece dip mold was gradually replaced by the three-piece dip mold, which dates from 1830 to 1870. A bottom mold was used to form the body of the bottle, and a hinged top mold was used to form the shoulder, neck, and finish of the bottle. This resulted in a seam wrapping horizontally around the shoulder, and two vertical side seams extending from the shoulder seam up the neck. There are no vertical side seams on the lower body. The current assemblage contains six dip-molded bottles (Acc. #s 52, 60, 65, 73, 74, and 116).

The most common type of mold is the two-piece mold, which dates from 1850 to 1920. There are four variations of the two-piece mold: hinge, key, post-bottom, and cup-bottom. The two-piece post-bottom mold was used between 1850 and 1890. This type of mold leaves two vertical side seams extending up the heel, body, and neck of the bottle from a circle seam on the center of the base. The two-piece cup-bottom mold dates to post-1850, with peak use from 1880 through the 1910s. This mold leaves a horizontal seam around the heel of the bottle, and two side seams extending from the heel seam up the bottle body and neck. In the current assemblage, three bottles were made with a two-piece post-bottom mold (Acc. #s 8, 93, and 135), and four bottles were made with a two-piece cup-bottom mold (Acc. #s 42, 51, 86, and 107). The variation of one two-piece mold bottle (Acc. # 57) could not be determined.

Turn-mold bottles date from 1870 to 1920. They were made by turning the bottles inside the mold, which left the body of the bottles seamless and shiny. Unlike free-blown bottles, turn-mold bottles are symmetrical and evenly proportioned. They can be identified by faint concentric rings around the heel and body of the bottle. Most do not have marking or embossing. Turn-molded bottles are often used for wine or liquor. There are seven turn-mold bottles in the current assemblage (Acc. #s 11, 45, 50, 59, 62, and 119). In addition, 19 bottles in the current assemblage were identified as mold-blown, but the type of mold could not be determined (Acc. #s 27, 47, 55, 56, 61, 63, 66, 70–72, 76, 89, 90, 94, 95, 98, 99, 111, and 117).

Semi-automatic machines were introduced in the 1890s and were mostly used to make wide-mouth bottles/jars. The glass had to be manually fed into the machines by glass workers. In 1903, Michael Owens invented a machine that took the place of the skilled glass workers. The machine could blow wide-mouth bottles as early as 1905 and narrow-necked bottles (e.g., beverage bottles) as early as 1908. The Automatic Bottle Machine (ABM) blew a bottle from base to lip, usually with a two-piece cup-bottom mold. The two side seams extend to and over the lip of the bottle or to a horizontal seam at the bottom of the bottle finish. The base of a bottle made in the early Owens ABM machines often had a round scar with feathered edges. There are few ways aside from the presence of the Owens suction scar on the base to distinguish a bottle made by a semi- versus fully-automatic machine; hence, both types of bottles are described in this report as "machine-made" (BLM/SHA 2019). There are 16 machine-made bottles in the current assemblage (Acc. #s 3, 7, 33, 41, 43, 44, 46, 106, 108–110, 121, 125, 126, 132, and 161).

Additionally, the manufacturing techniques for 22 bottles in the current assemblage are unknown (Acc. #s 2, 4–6, 9, 10, 14–16, 28, 29, 58, 67, 68, 72, 75, 79, 89, 90, 92, 117, and 120). These bottle fragments do not have the diagnostic physical features (e.g., pontil marks, mold seams, suctions scars, valve marks) necessary to determine the method of manufacture.

5.2.1.3 Bottle Finishing Methods

Methods for adding the bottle finish are also useful in artifact dating. In conjunction with the method of bottle manufacturing (discussed above), bottle finishing methods were used to narrow the date range of the collected artifacts. During the mold-blown era, from 1800 to ca. 1920, the lip of the bottle continued to be done by hand. Early mouth-blown bottles were removed from the blowpipe by cracking off, bursting off, or shearing the neck. The post-manipulation of the bottle to create the lip was known as "finishing." One method, known as an "applied finish," was used from 1840 to 1885. In this method, glass was applied to the bottle neck, and the finish was shaped with a specialized lipping tool. Diagnostic features of an applied finish include side mold seams that end abruptly on the neck at the bottom of the finish; excess glass slopping over the upper neck below the finish; and a horizontal ridge inside the neck of the bottle that can be felt by inserting a finger into the bottle bore (BLM/SHA 2019). Eight bottles in the current assemblage have an applied finish (Acc. #s 51, 55, 59, 63, 70, 71, 99, and 111).

The standard tooled finish was used as early as the 1860s on smaller bottles, but it did not become the dominant finishing method until 1890. The date range for a tooled finish is generally 1870 to 1920. The upper part of the bottle was refired, and some of the glass from the neck was formed into the finish with a lipping tool. Diagnostic features of a tooled finish include side mold seams that fade out on the neck of the bottle below the finish; concentric horizontal tooling marks present on the finish and upper neck; an absence of glass flopping over the upper neck; and an absence of the interior ride in the bore (BLM/SHA 2019). Seven bottles in the current assemblage have a tooled finish (Acc. #s 42, 45, 47, 86, 95, 98, and 135).

5.2.1.4 Bottle Embossing

Several other bottle characteristics can also provide dating information. These include maker's marks, proprietary embossing, bottle type, closure type, and color. A combination of characteristics is often used to assess the most likely date range for manufacture.

Accession # 8 is an aqua glass beer bottle made by the Illinois-Pacific Glass Company for the Honolulu Brewing and Malting Company. The Illinois-Pacific Glass Company was founded in 1902 as a consolidation of the Abramason-Heunisch Company, the U.S. Bottlers' Supply Company, and the Illinois Glass Company's Pacific Coast Division (Lockhart et al. 2016:417; Moody 1926:2111). The three main manufacturer's marks used were IPGCo, IPGCo with the letters formed in a diamond shape, and IPGCo surrounded by a diamond; all three can be dated generally to 1910-1925 (Lockhart et al. 2016:443). Accession # 8 features the first listed maker's mark (IPGCO) and can be more narrowly dated by its proprietary embossing to 1911-1917 (Elliot and Gould:189).

The Owens-Illinois Glass Company was created through the merger of the Owens Glass Company and the Illinois Glass Company in 1929. The company was formally incorporated as the Owens-Illinois Glass Company, Ltd., in 1931 (Lockhart and Hoenig 2018:297; Paquett 1994). It was one of the largest glass bottle manufacturers in the world, with plants across the U.S. Since the company's incorporation, three maker's marks have been used. The first maker's mark combined the logos of both companies. It comprised a diamond around an "O" containing an "I," called the Diamond-OI logo. It was used from 1929 to 1954. Number codes were also introduced in 1929. The number on the left of the logo represents the production plant, while the number on the right represents the year of manufacture. The plant and date codes on Acc. # 161 indicate this bottle was manufactured in San Francisco, California, in 1935 (Lockhart and Hoenig 2018:303).

Accession #s 52 and 73 (Figure 137) are olive glass whiskey bottles with base embossing by Richard Cooper & Company. This company was one of several glass manufacturers that emerged in Portobello, Scotland, in the late nineteenth century. Richard Cooper began manufacturing glass in 1856 alongside William Bailey, until Bailey's death in 1859. At that time, Cooper took on his brother-in-law, Thomas Wood, as a partner (Lockhart et al. 2014:493). The two split after a disagreement in 1866, dividing the company and becoming competitors. This continued until 1928, when Cooper's plant was purchased by Distillers Company, Ltd, which had previously purchased Wood's plant (Lockhart et al. 2014:494). A few different variations of Cooper's proprietary information were used as a mark throughout the years the plant operated. The variation that appears on Acc. #s 52 and 73 was used from ca. 1866-1885 (Lockhart et al. 2014:496).

Accession # 57 is an aqua glass Spalding's glue bottle. Little is known about Henry C. Spalding & Company, the company responsible for manufacturing Spalding's Celebrated Prepared Glue, but advertisements can be found in newspapers dating to the 1860s (Henry C. Spalding & Co. 1860). The current bottle is an early two-piece mold bottle, with a blowpipe pontil scar and a "tooled" rolled finish. This type of finish, though technically created using an implement on the existing glass of the bottle lip, was phased out in the 1870s and predates the implements later used to create what is typically referred to as a tooled finish (BLM/SHA_Bottle Finishes & Closures 2019). A manufacture date of pre-1870s is further supported by the discontinuation of the use of a blowpipe as a pontil ca. 1870 (BLM/ SHA_Bottle Bases 2019).

Accession # 86 (Figure 138) is an amber glass liquor bottle manufactured for W.C. Peacock & Company Ltd., of Honolulu. Walter Chamberlain Peacock was born in England in 1858 and relocated to Hawaii in 1881. He started a liquor business with George Freeth. By 1890, Freeth had left the Islands, and W.C. Peacock & Company, Ltd., was established. After Peacock's death in

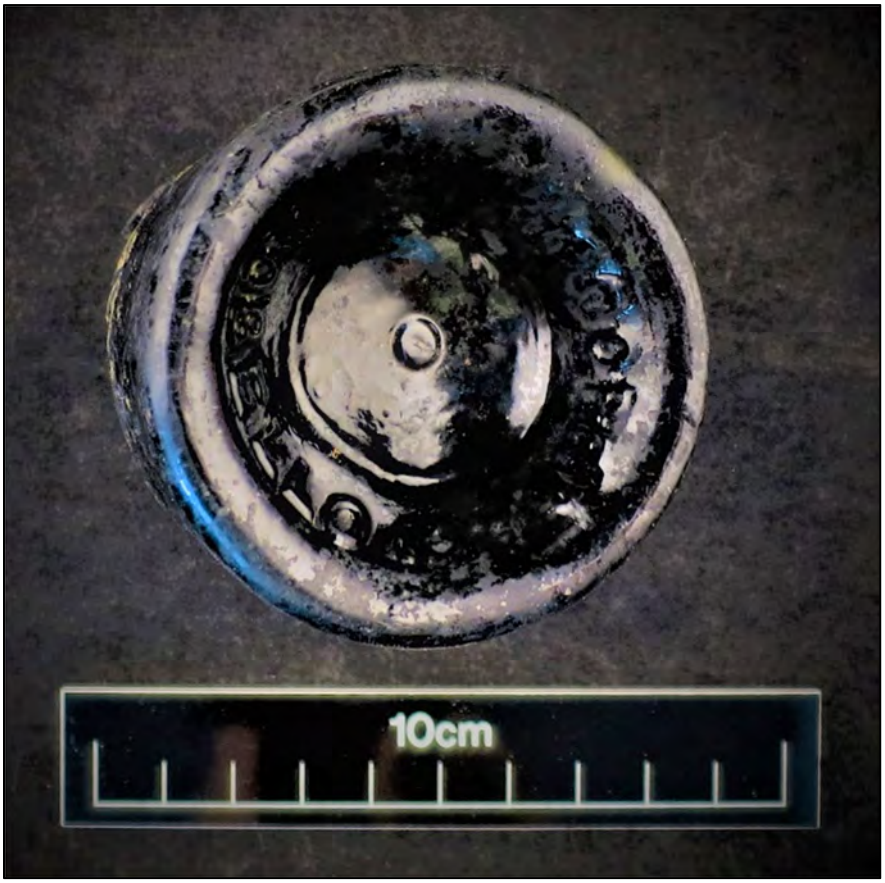

Figure 137. Acc. # 73, olive (black) glass whiskey bottle manufactured by Richard Cooper & Company

Figure 138. Acc. # 86, amber glass liquor bottle manufactured for W.C. Peacock & Company, Ltd.

1909, operation of the company passed to his nephew, before Prohibition forced the company's termination in 1915 (Sullivan 2013). The embossing on Acc. # 86 is consistent with bottles manufactured in the early 1900s (Elliot and Gould 1998:177).

Accession # 110 (Figure 139) is a colorless glass medicine bottle that held Davis brand vegetable painkiller. Created by Perry Davis to treat his own ailments and later marketed to the public, Davis' vegetable painkiller was a popular medicine sold from 1843 through the early 1940s (Davis and Son 2014; Tamburello 2008). The machine-made bottle was manufactured by the Diamond Glass Company of Pennsylvania, which was founded in 1886 when ten partners purchased and renamed the Penn Glass Works facilities. The company successfully operated and expanded to serve eastern Pennsylvania and the surrounding states through several decades, eventually merging with another firm to become Diamond-Bathurst in 1983. In 1987, it became a subsidiary of Anchor Hocking, which closed the plant for good in 1990 (Lockhart et al. 2015:88). A horizontally elongated diamond mark is embossed on the base of Acc. # 110; this logo was used by the Diamond Glass Company from 1924 to 1940 (Lockhart et al. 2015:88).

Three bottles in the current assemblage (Acc. #s 7, 106, and 108) were manufactured with a press-and-blow machine. Accession # 108 is a colorless glass milk bottle with a cap-seat finish. Based on the horizontal seam tapering out below the finish, it was made by a press-and-blow machine, which could be semi-automatic (late 1890s to mid-1910s) or fully automatic (post-1910s). Accession # 106 is a colorless glass bottle also made with a press-and-blow machine, as evidenced by the valve mark on the base. The mark is made as a machine's push-rod valve ejects the partially expanded parison from the blank mold and shifts it to the blow mold. Valve marks are round, about half an inch in diameter, and incised into the surface of the glass. As the same diagnostic features are shared by bottles made from semi-automatic and fully automatic machines, Acc. # 108 dates from the late 1890s to the mid-twentieth century (BLM/SHA 2019). Accession # 7 is a blue-aqua glass bottle with a valve mark on the base. Narrow-mouthed bottles with valve marks are uncommon, but some soda and beer bottles were manufactured on press-and-blow machines in the early 1900s (BLM/SHA 2019).

Accession # 109 (Figure 140) is a colorless glass Heinz pickle bottle. H.J. Heinz founded the company in 1869 and sold it to his brother, John, and cousin, Frederick, in 1875. They named the company F&J Heinz, which became H.J. Heinz when they sold the company back to H.J in 1888 (BLM/SHA 2019). The number embossed on the bases of Heinz bottles can help to identify bottle use and manufacture date. The "132" on the base of Acc. # 109 indicates the bottle was manufactured to hold pickles between 1918 and 1933 (BLM/SHA 2019).

Accession # 107 is an aqua glass Carter's ink bottle. Carter's Ink Company was founded in Boston in 1858 and eventually became the world's largest ink manufacturer (Faulkner and Faulkner 2003:41; Old Main Artifacts 2015). It produced ink and related products until 1976, when it was purchased by the Dennison Company (Old Main Artifacts 2015). The base embossing on Acc. # 107 indicates it was manufactured in the United States in 1897.

Accession # 55 is an olive glass Cosmopoliet Gin bottle. The gin was made by Dutch distillery Melchers, founded by Petrus Melchers in Scheidam, Netherlands, in 1837. The company made a number of branded gins, which it exported first to the United States and later to South America, Africa, and Australia. The company was operated by several generations of the Melcher family

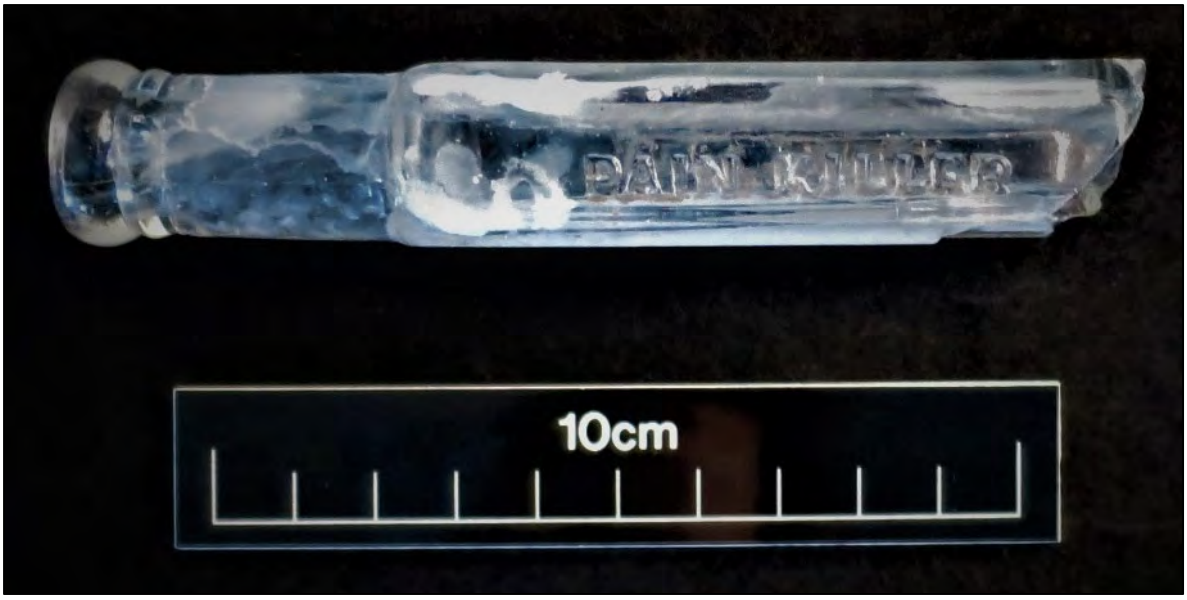

Figure 139. Acc. # 110, machine-made colorless glass medicine bottle manufactured for Davis brand vegetable painkiller

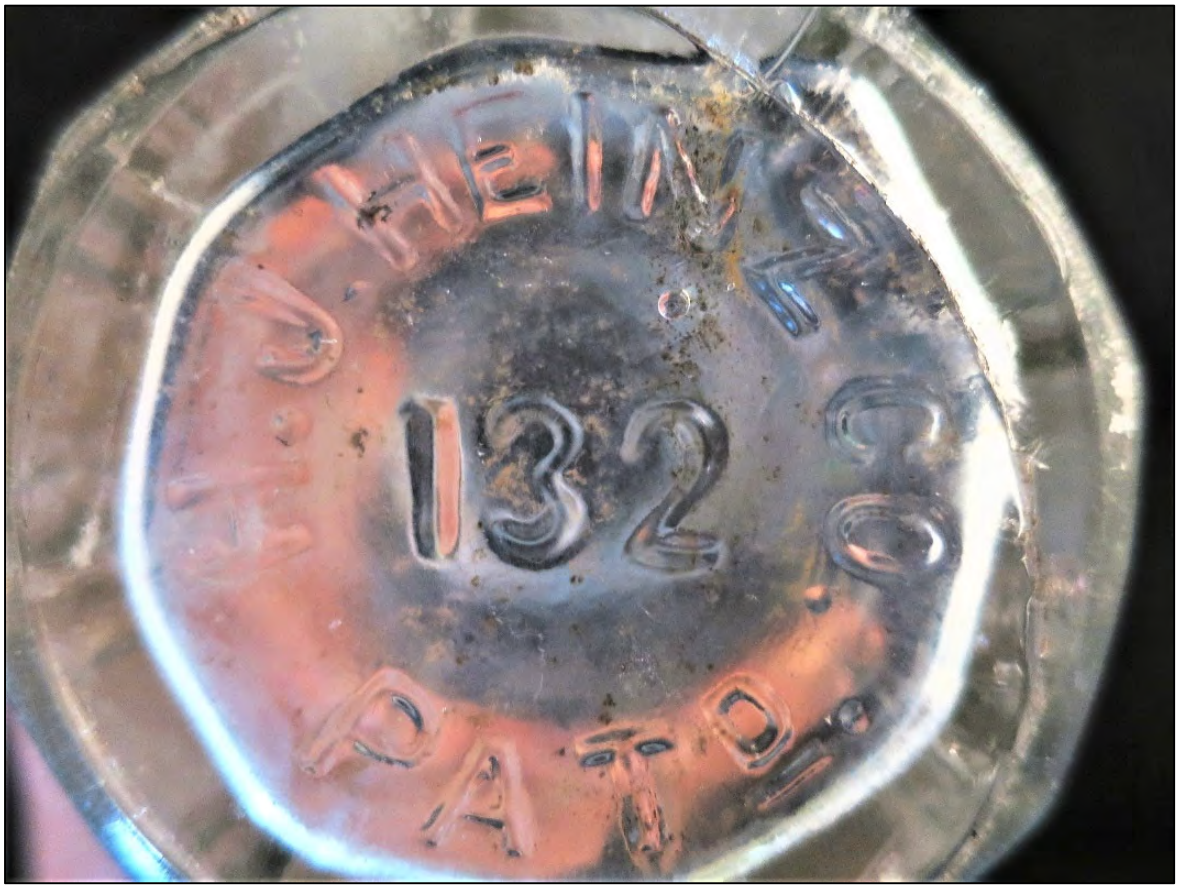

Figure 140. Acc. # 109, colorless glass Heinz pickle bottle base embossing

through both world wars, eventually being sold to the Vonk family in 1970. The company continues to produce a variety of products under the Melcher name to this day (Melchers Group 2019). Accession # 55 is a Cosmopoliet brand case gin bottle embossed with the brand's distinctive "Standing Man" figure. The bottle is incomplete, but available examples of the complete bottle show it would have had an applied mineral finish (Munsey 2009:31). Dutch case gin bottles were made with this type of finish from 1890 to 1910 (BLM/SHA 2019). Accession # 47 (Figure 141) is also a Dutch case gin bottle, colorless, with a mineral finish and a blob seal on the shoulder. This bottle was made by C. Meyer & Company, a gin distiller in Schiedam, Netherlands, about which little information could be found. This bottle, which held Palmboom gin, is common in Hawai‘i and dates to ca. 1910 (Johnston 2015:145).

Accession # 126 is a machine-made colorless glass condiment bottle manufactured by the F.E. Reed Glass Company. The company was founded in the late 1800s, when the Reed family bought into, and eventually took over, Rochester Glass Works in New York. The company produced glass for sale in the eastern United States until closing due to bankruptcy in 1956 (Lockhart et al. 2015:1). The company used the mark featured on Acc. # 126, an R in a triangle, from 1923 to 1956 (BLM/SHA 2019).

Accession # 41 is a colorless glass bottle made by the Charles Boldt Glass Company, which was founded in 1900 when the Muncie Glass Company reorganized. Boldt procured a license to manufacture liquor bottles and flasks using an Owens ABM in 1910 but sold the majority of his company stock to the Owens Bottle Company in 1919 as a result of increasing Prohibition. Owens took control of and diversified production. He acquired the rest of the company stock in 1926, closing the operation's Cincinnati plant (Schulz et al. 2014). The company used the mark that appears on Acc. # 41 from 1910 to 1919 (BLM/SHA 2019).

Accession # 42 (Figure 142) is a blue aqua glass bottle manufactured to be compatible with a "Swingtop" closure. The "Swingtop" closure is a variation of a common closure type, the lightning style closure, which features a rubber stopper held in place by a wire around the neck of the bottle. The "Swingtop" differs from a standard lightning closure in that it utilizes two dimples in the finish to hold the wire and stopper in place rather than wire around the neck of the bottle. The earliest known use of this variation is by Grolsch®, a Dutch alcohol manufacturer, in 1897 (BLM/SHA 2019).

Accession #s 44 and 125 are machine-made amber glass beer bottles with "JAPAN" embossed on the base. The McKinley Tariff Act ratified by the United States in 1891 required imports to be marked with their country of origin. Japan used "Nippon" until the term was declared inadequate by the United States in 1921, and all future imports were required to be labeled with "Japan" (Ross 2012:24).

Accession # 116 is a Chinese medicinal vial, which was made using a special process. First, a hollow glass tube was blown. Then, the tube was dipped in molten glass, and the outer body was shaped into a rectangle with four sides and a base on a hard surface. The free end of the tube was then broken from the blowpipe, creating a "burst off" finish, which was left rough on purpose, so that the rough edges would "grab" the cork seal and keep it in place. These vials contained liquid or oil-based medicine and are often associated with Chinese overseas sites in the American west dating from 1850 to 1930 (BLM/SHA 2019; Montana Historical Society 2010:7).

Figure 141. Acc. # 47, colorless glass Dutch Palmboom case gin bottle with applied blob seal

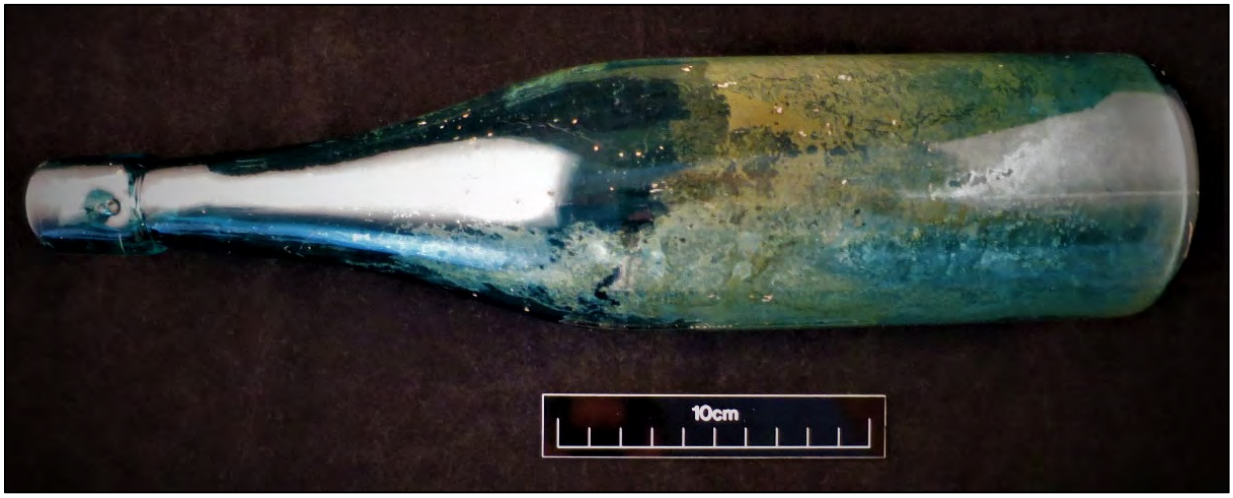

Figure 142. Acc. # 42, aqua glass beverage bottle with “Swingtop” closure

Accession # 94 is a colorless glass bottle fragment with a slight sun-colored amethyst tint. Colorless glass is usually created through the use of a decolorizing agent such as manganese dioxide. Upon exposure to ultraviolet (UV) light, manganese dioxide causes the glass to take on a tint ranging in color from light pink to moderately dark amethyst, commonly referred to as "sun-colored amethyst." Manganese dioxide was commonly used to decolor glass bottles, primarily mold-blown bottles, between 1890 and 1920 (BLM/SHA 2019). Accession # 10 is a colorless glass bottle fragment with a slight gray tint. Gray-tinted colorless glass bottles usually date from 1915 to 1925 (BLM/SHA 2019).

5.2.1.5 Miscellaneous Glass Artifacts

Accession #s 53 (Figure 143), 54, and 136 are colorless pressed glass tumblers. To make pressed glass, molten glass is poured into a mold and "pressed" with a plunger. Pressed glass tableware was produced beginning in 1825. Early pressed glass was ornate to hide manufacturing flaws (Welker and Welker 1985). By 1865, pressed glass technology had advanced, and it became more functional and affordable. True colorless pressed glass dates to post-1870 (BLM/SHA 2019).

There are three window glass fragments in the current assemblage (Acc. #s 30, 91, and 118). Flat window glass can be diagnostic depending on—among other traits—surface texture, uniformity, and thickness. Hand-blown window glass dates to pre-1920, and machine-made window glass dates to post-1905. Cylinder window glass was made when a tube of blown glass was flattened to create a large, smooth, even sheet. Its predecessors, broad and crown glass, produced glass with less even surfaces and variable thicknesses (Weiland 2009:29). Cylinder glass was the most popular type of window glass in the early nineteenth century, and an increasing demand for larger (and therefore thicker) windows resulted in a steady increase in glass thickness. Glass thickness increased from 0.75 mm in the early 1800s to 3.3 mm in the early 1900s, when machine-produced glass replaced cylinder glass (Weiland 2009:29). Accession #s 30 and 91 are both aqua window glass fragments, 2.2 mm and 2.0 mm thick, respectively. Taking into account all of the methods tested by Weiland, Acc. # 30 was likely manufactured between 1838 and 1889, while Acc. # 91 was most likely manufactured between 1840 and 1881 (Weiland 2009:31). Accession # 118 is also a flat glass fragment; however, its thickness of 7 mm is well outside the range for pre-machine-made window glass. Accession # 31 is 3.1 mm thick, which is outside the dating range of most of the methods tested by Weiland. Only one method includes glass of this thickness, indicating a date of post-1845 (Weiland 2009:31).

Accession # 64 is a blue-aqua glass insulator. Glass insulators came into use during the mid-1840s to early 1850s, when they were used on telephone and electrical power lines. They were attached to the wooden utility lines using metal pins, and their peak popularity was between 1875 and 1930. Some of the styles manufactured include toll style, telegraph style, rural and long-distance telephone styles, beehive, hoopskirt, and pony. Accession # 64 is a threaded pin-style insulator, which was invented in 1865 (Berge 1980:155–156).

Accession # 37 (Figure 144) is an opaque brown-swirled glass machine-made marble. Marbles are some of the first toys in history, with use during Roman times and the Middle Ages, and can be made of ceramic, stone, or glass. They were mass produced in Europe, particularly Germany, during the eighteenth and nineteenth centuries (Carskadden and Gartley 1990). Germany was the world leader in marble production throughout the nineteenth century into the 1920s. Marbles were

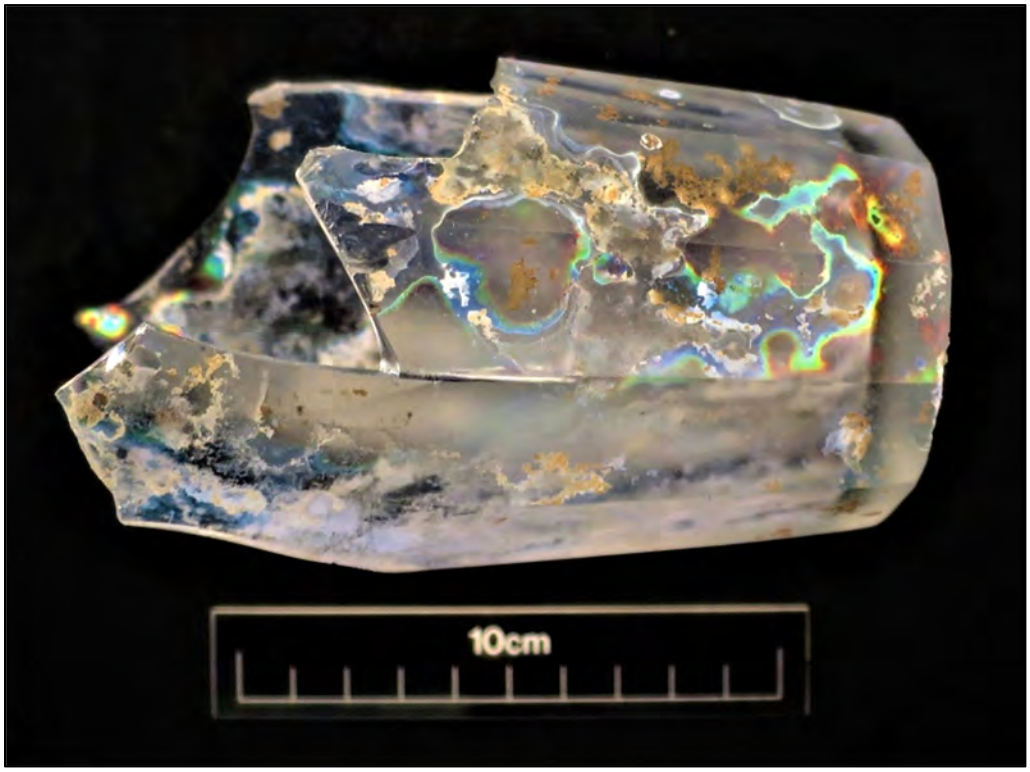

Figure 143. Acc. # 53, colorless pressed glass tumbler

Figure 144. Acc. # 37, machine-made brown glass marble

produced in the United States but not in large quantity until the invention of the automatic marble-making machine in 1901 (Randall 1971). Machine-made marbles most likely date to post-1910, when glass marbles became more common in the United States (Carskadden and Gartley 1990).

Accession # 96 is a fragment of a circular, hollow milk glass object of indeterminate function. Milk glass was first introduced in Venice during the 1500s. Milk glass tableware was popular from ca. 1870s to the mid-twentieth century. It waned in popularity during the Great Depression but experienced a resurgence after World War II. Like pressed glass, milk glass was an economical substitute for more expensive China (BLM/SHA 2019).

5.2.2 Ceramic Artifact Analysis

Ceramic vessels were analyzed for paste, shape, color, decoration, and origin. Paste includes "earthenware," "stoneware," and "porcelain." Shapes are designated as "flatware" (e.g., plates, shallow saucers) or "hollowware" (e.g., bowls, cups). When a fragment was too small to determine general shape, the artifact is listed as "tableware" (Huddleson 2013). The terminology and dates for manufacturing and decoration techniques used in this section are from the Maryland Archaeological Conservation Lab (2002) internet site "Diagnostic Artifacts of Maryland," unless otherwise noted.

Fifty-four ceramic artifacts were collected during the AIS. These include 52 vessel fragments, a spoon, and a doorknob. The 52 vessel fragments include flatware (n=4), hollowware (n=36), tableware (n=3), common pottery vessels (n=4), storage containers (n=2), bottles (n=2), and one unidentified item. Twenty-five of the artifacts originate from Euro-America, two from England, two from Germany, ten from Japan, eight from China, and three from Asia (China or Japan).

5.2.2.1 Euro-American Ceramics

The ceramics discussed in this section were manufactured in the United States or England or were identified only as Euro-American. They fall into three main categories: earthenwares, stonewares, and porcelains.

Whiteware is a type of earthenware made of a semi-porous to porous, compact material fired at 1100–1200º C (Florida Museum of Natural History 2018). Whiteware production began in 1820, with the height of production from 1850-1910 (Lebo 1997). Hand-painted whiteware dates between 1830 and 1870 (Maples 1998:110). One whiteware fragment (Acc. # 149; Figure 145) is decorated with a painted thick-line polychrome floral design, which was most popular on whiteware from 1840 to 1870.

Accession # 100 (see Figure 145) is a whiteware fragment with a transfer-print decoration. This type of decoration was made using tissue paper to transfer designs from inked, engraved plates onto the surfaces of ceramic vessels. Transfer-printing began in Staffordshire in 1783 and was popular in the United States until the mid-nineteenth century, when undecorated or minimally decorated ceramic wares came into style. There was a resurgence in use ca. 1870, and transfer-printed wares remained on the market until they were replaced by decals in the early 1900s. Accession # 100 has a scenic vignette print, which dates from 1850 to 1889 (Maryland Archaeological Conservation Lab 2019).

Figure 145. 1) Acc. # 149, whiteware hollowware fragment with hand-painted floral decoration; 2) Acc. # 100, whiteware plate marly to rim fragment with blue scenic vignette transfer; 3) Acc. # 150, dipped London-shaped whiteware bowl fragments with blue annular banding

Dipped wares are refined earthenwares decorated with clays that had different colors when fired or were dyed with mineral oxides suspended in a liquid solution called slip. Slip could be used as a dip for the entire surface of the vessel or solution to pour, band, drip, or trail decoration. Dipped earthenwares could also be decorated by removing the slip in cut patterns and exposing the ceramic body underneath. Dipped earthenwares were the most affordable hollowware decoration available from ca. 1780s through the nineteenth century. Dating is based on decorative technique and vessel shape. Accession # 150 (see Figure 145) is a London-shaped bowl with blue annular banding. Banded wares date from the 1770s to the early twentieth century, with blue bands being most common after 1840 (Miller 1991:6).

One artifact in the current assemblage, Acc. # 141 (Figure 146), is a Victorian majolica style whiteware planter. Victorian majolica is a ware characterized by intricate relief molding and brightly colored glazes, usually on earthenware (Maryland Archaeological Conservation Lab 2019). It was first produced in Great Britain in 1851 to mimic Italian Renaissance tin-glazed pottery. It then spread through Europe and the Americas, with production beginning in North America by the 1870s (Bergesen 1990:9, 87, 103; Dawes 1990:140). Victorian majolica's popularity in the United States began as a result of its appearance at the 1876 Centennial Exposition in Philadelphia. Its popularity peaked in the 1880s but waned by the turn of the twentieth century, with production discontinued in the United States by World War I (Dawes 1990:151; Maryland Archaeological Conservation Lab 2019). As Victorian majolica is relatively fragile compared to

Figure 146. Acc. # 141, whiteware Victorian majolica planter fragments

other types of wares, special use items such as butter dishes, dessert plates, and cheese plates were more common than everyday tableware (Bergesen 1990:22). Accession # 141 is decorated with a turquoise underglaze on the exterior and a lavender underglaze on the interior. The exterior body has a relief molded repeating a Celtic style pattern along the rim and heel and multicolored embossed lilies on the exterior body. There is no maker's mark on this artifact; however, while colors are not considered diagnostic, it should be noted that this color scheme was favored by popular British potter George Jones.

Accession #s 103 and 144 are yellowware hollowware fragments. Yellowware is a type of earthenware made from yellow clays in England and North America. The paste is coarser than refined earthenwares such as whitewares and porcelains, and yellowwares are fired at higher temperatures. Yellowware production began in the United Kingdom in the late eighteenth century. By 1800, North American potteries were producing yellowware in Ohio, New Jersey, Pennsylvania, and Maryland. Yellowware continued to be produced until the 1930s, but popularity declined around the turn of the century. Five common decorating techniques include slipped decoration, mocha, Rockingham glazes, oxide washes/flint enamels, and relief molding (Maryland Archaeological Conservation Lab 2019). Accession # 144 is a yellowware nappy, a plain deep bowl with flared sides (Liebowitz 1985). Nappies are a common yellowware vessel type, with most produced between 1840 and 1900 (Lebo 1997:83)

Another type of Euro-American ceramic in the current assemblage is ironstone (Acc. #s 24, 35, 143, 145–147, and 151–155; Figure 147). This is a semi-vitreous refined earthenware fired at higher temperatures than whiteware, with an intermediate hardness between whiteware and porcelain (Florida Museum of Natural History 2018). It was produced in England's Staffordshire district and in the United States. White ironstone was most popular from 1840 to 1870 but was sold into the twentieth century. Many patterns and shapes were produced and replicated by

Figure 147. 1) Acc. # 154, paneled ironstone hollowware vessel, base to body fragment; 2) Acc. # 146, ironstone ewer or pitcher fragments with J.W. Pankhurst maker's mark on base; 3) Acc. # 147, ironstone saucer fragment with Henry Alcock & Company maker's mark on base; 4) Acc. # 35, ironstone hollowware handle fragment with remnants of copper or gold luster decoration

different potters, and the rise and fall in popularity of the styles is useful for dating. Before 1860, wares with detailed molding and sharp angles were popular. Examples include foliage, paneled/scalloped, harvest, classical, and ribbed motifs. Post-1860, detailed molding was replaced by wares with simple lines (Maryland Archaeological Conservation Lab 2019; Wetherbee 1985:102). Around the turn of the century, household use declined and white ironstone began to be used commercially in hotels, train depots, and restaurants. Accession #s 145, 151, and 154 are all paneled wares, indicating a manufacture date of pre-1860.

Several ironstone artifacts in the collection have maker's marks. Accession # 146, a pitcher or ewer with relief-molded foliage, was made by J.W. Pankhurst, a British potter who operated in Hanley, Stoke-on-Trent, from 1850 to 1883 (Birks 2016). Accession # 147 is an undecorated saucer made by Henry Alcock & Company, a potter operating in Cobridge, Stoke-on-Trent, between 1861 and 1910 (Birks 2016). Accession # 35 is a hollowware handle fragment with remnants of copper or gold luster, a decoration used on ironwares from the 1850s to ca. 1900 (Wetherbee 1996:150–151). Accession #s 24, 143, 152, 153, 155, and 160 are all incomplete and lack diagnostic characteristics to further narrow the date of manufacture.

Accession # 142 is a common earthenware garden flowerpot. Flowerpots were hand thrown until William Lond made a pottery molding machine in 1861 (Scanland and Redmond 2013:30). Accession # 142 appears to be machine-made, indicating it was made after 1861.

Stoneware is fired at higher temperatures and is more vitrified and durable than earthenwares (Florida Museum of Natural History 2018). Stonewares are often decorated with a salt glaze, which is produced when salt is introduced into the kiln during firing. The salt reacts with the silicates in the clay leaving a shiny, pitted surface; this texture is also called “orange peel.” Color varies between pale beige, dark gray, and red. Accession # 156 is a stoneware vessel fragment, likely from a flowerpot. Accession # 162 is a knob fragment from an unidentified vessel with a shiny brown glaze, possibly a salt-glaze.

Accession #s 127 (Figure 148) and 148 are German “Westerwald” stoneware bottles. These bottles were made in a variety of shapes that evolved over time, but most are tall and cylindrical with a short neck and shoulder handle. They were salt-glazed for decoration. The bottles were typically used to export mineral water from the lower Westerwald region of Germany (Leavitt 2013:324); however, some were sent to Holland, filled with Dutch gin, and exported. The sturdiness of the bottles made them ideal for shipping water and gin overseas. Production range is from the early to mid-nineteenth century until World War I. Until the end of the nineteenth century, the bottles were thrown on a wheel, creating a distinctive pattern of helical ridges on the interior of the jug. In 1879, an extruding press used in the manufacture of sewer pipes was adapted for use in bottle-making, soon replacing wheel manufacture and resulting in fine, near-vertical marks on the interior of the bottles (Leavitt 2013:329). Accession #s 127 and 148 both have helical ridges on the interior, indicating they were produced before 1897.

One Euro-American porcelain fragment was collected (Acc. # 83). Porcelains are very hard, compact, vitreous, and fired at temperatures of 1300–1450º C (Florida Museum of Natural History 2018). The manufacture of Euro-American porcelain began as early as the mid-1700s, but the popularity of porcelain did not take hold until the mid- to late nineteenth century. Most Euro-American porcelain was decorated, with common techniques including overglaze painting and printing, relief molding, gilding, and decal print. Accession # 83 is a relief molded hollowware fragment, while Acc. # 133 is a doorknob. Until the mid-1800s, porcelain doorknobs were imported from France and England. In 1841, porcelain doorknobs with simple cast iron shanks were patented in the United States. They gained popularity and became more widespread by the 1860s (Hall 2009).

5.2.2.2 Asian Ceramics

Twenty-one Asian ceramic artifacts were collected during the AIS. They include 17 hollowware porcelain vessels, one porcelain spoon, one common pottery planter, and two stoneware storage jars. Eight were identified as Chinese, and ten were identified as Japanese. Another three could only be identified as Asian.

5.2.2.2.1 Chinese Ceramics

Of the Chinese ceramics collected during the AIS, three can be categorized as “*tz‘u*” wares or “Kitchen Qing” wares (Acc. #s 13, 104, and 129; Figure 149). These wares were made and exported to America between 1644 and 1911 (Lister and Lister 1989). They are typically found in nineteenth and early twentieth century archaeological contexts for overseas Chinese communities in the western United States and Hawai‘i (Costello and Maniery 1988; Lebo 1997). The immigration of Chinese to work on Hawaiian sugar plantations took place between 1852 and 1892, but several Chinese entrepreneurs had established themselves in the Islands earlier (Nordyke and

Figure 148. Acc. # 127, German stoneware bottle, base to body fragment

Figure 149. Acc. # 129, porcelain *tz‘u* rice bowl with Double Happiness decoration

Lee 1898). In fact, there were three Chinese stores in Honolulu by the 1830s dealing in “dry goods,” with at least one selling “crockery.” In this context, “crockery” probably refers to inexpensive export Chinese porcelain (Char 1974:20). Chinese exports were not only bought by Chinese immigrants but were also purchased by Hawaiians, Caucasians, and other residents. In a study on three early Chinese stores in Hawai‘i, Char (1974:31) stated that “[m]issionary and merchant families of the white population took to China goods, as did the New Englanders at home in America.”

Chinese ceramics were made with a variety of motifs including “Double Happiness,” “Bamboo,” “Four Seasons,” and “Winter Green” (Lebo 1997). The “Double Happiness” motif consists of a blue hand-painted design with two stylized “Happiness” symbols. This can be accompanied by a “Swirl” or “Sweet Pea” motif.

“Winter Green” is a decoration consisting of a light blue to bluish green glaze, usually on the interior and exterior of the vessel. It has been noted in collections containing both Chinese and Japanese ceramics. Some sources say it was a Chinese invention adopted by the Japanese in the seventh century (Lister and Lister 1989; Ross 2012), while others say it was of Japanese origin and adopted by the Chinese (Sando and Felton 2013; Stenger 1986; Wegars 1988). Certain techniques can be linked to Japanese Winter Green; these include polychrome hand-painted overglaze and the Japanese technique of *kasuri-mon* (incising the exterior of the vessel before glazing) (Ross 2012). Accession # 104 is a Chinese porcelain rice bowl with wintergreen glaze.

Lister and Lister (1989) note the Double Happiness motif is usually found in California Chinese community sites dating before 1880, while the Bamboo (Three Circles and Dragonfly) motif is found in the early part of the 1860-1900 period. The Four Seasons and Winter Green dishes are usually found in the later part of the 1860-1900 period. However, Lister and Lister (1989:53) caution that Chinese ceramic styles are “notably long-lived” and that some styles, especially the Four Seasons and Winter Green types, may have been exported to America into the mid-twentieth century. Sando and Felton (1993), using the inventory of a nineteenth century Chinese store in Northern California, researched the various prices of ceramics with different patterns. Both Double Happiness and the Bamboo pattern were considered low-priced wares, in contrast with the more high-priced ceramics, such as Four Seasons and Winter Green. Of the inexpensive patterns, Double Happiness wares are found in contexts that pre-date 1870; they are superseded by the Bamboo pattern after that date. Accession #s 13 and 129 are decorated with the Double Happiness motif (see Figure 149).

Accession # 124 is an undecorated porcelain spoon fragment. Spoons were an important Chinese eating utensil (Frierman 1983:176). The Chinese table setting would have consisted of a teacup, spoon, chopsticks, bowl, and saucer to eat soups, stews, noodles, meats, and broth (Anderson 1988; Knee 2012:69; Lister and Lister 1989). Accession # 124 dates to post-1852 (date of the first immigration of Chinese workers). Accession # 20, a porcelain hollowware fragment with an overglaze decoration, also dates to post-1852, as it lacks the necessary characteristics for further dating.

Accession #s 101 and 102 are Chinese brown-glazed stoneware (CBGS) vessel fragments. CBGS is one of the most common types of ceramics found in archaeological contexts with Chinese artifacts. They were utilitarian in function, primarily used for the shipment and storage of food (Yang and Hellmann 2013). Most vessels were produced in Canton, a province in southern China,

and were made using a combination of slab and coil technology. Because the vessels were made by hundreds of potters, there are variations in form; however, standard shapes include wide-mouth, spouted, barrel, and straight-sided jars, liquor bottles, stew pots, and pans (Yang and Hellmann 2013). CBGS vessels have buff-colored paste, an exterior glaze ranging from brown to black, and a thin, light brown interior glaze, although the glaze rarely covers the entire vessel; usually, the heel, base, and footring are unglazed (Choy 2014). CBGS can be difficult to date because similar vessel forms have been manufactured for hundreds of years (Munsey 1970:136; Yang and Hellman 1996:59).

5.2.2.2.2 Japanese Ceramics

Three decoration methods are used on Japanese ceramics: hand-painting, stencil-printing, and transfer-printing. Stencil-printing is when a paper stencil is placed over the vessel, and color decoration is applied. The two stenciling methods are called *fukizumi* and *katagami*. *Fukizumi*, or negative, stenciling is when the stencil is placed on the vessel to block pigment, and color is sprayed around the edges, creating an outline. *Katagami*, or positive, stenciling is when the color is applied to the vessel through holes in the stencil. Stenciling was used during the seventeenth century, abandoned in the eighteenth century, and reinvented in the early 1870s in Hizen province. From there, it spread to Tobe and Mino provinces between 1878 and 1882 and was later adopted in other porcelain centers across Japan (Ross 2012:7). The first Japanese transfer-printed wares were produced by potters in Tajimi in 1888 and were soon copied by other major ceramic centers. By ca. 1920, transfer-printed wares replaced stenciled wares (Ross 2012:8).

Accession #s 12, 21, and 85 (Figure 150) are hand-painted porcelain bowls dating to post-1868 (date of the first immigration of Japanese workers). Accession # 49 is a small porcelain sauce dish, with a relief-molded flower on the interior, also dating to post-1868. Accession # 82 (see Figure 150) is a porcelain hollowware fragment with an underglaze blue *fukizumi* decoration on the interior dating from the 1870s to 1920. Accession # 131 (see Figure 150) is a flatware *kozara* dish with an underglaze blue *katagami* decoration on the interior. The combination of the dish style and the stencil decoration provides a manufacture date range of 1870s to 1912 (Ross 2012:10). Accession # 84 is a rice bowl lid (*futa*) with a mix of transfer-printed and hand-painted lines dating to post-1888 (date of the first Japanese transfer-printed wares). Accession #s 17, 18 (see Figure 150), and 134 are hollowware fragments with a blue transfer-print decoration, also dating to post-1888.

5.2.3 Miscellaneous Artifacts

Accession # 48 (Figure 151) is a bone toothbrush handle fragment. Bone was the most common material for toothbrush handles up to the end of the nineteenth century. Celluloid brushes began to be made as early as 1869 and, along with other synthetic materials, almost completely replaced bone as the handle/head material by the 1940s. Two attributes that provide definitive date ranges are the number of holes/number of rows and the presence of a hole on the handle end. Before ca. 1890, brushes tended to have four or five rows of holes, with about 21 holes per row. From 1890 to 1910, brushes had three or four rows, with an average of 17 holes per row. After 1910, a brush had three or four rows, with an average of ten holes per row (Mattick 1993:182). Toothbrush makers drilled a hole at the end of the handle, starting in 1884, to encourage people to hang up their brushes to dry thoroughly and prevent the growth of bacteria (Mattick 1993:165). Based on these criteria, Acc. # 48 dates to pre-1884.

Figure 150. 1) Acc. # 85, porcelain rice bowl with hand-painted decoration; 2) Acc. # 82, porcelain hollowware body fragment with *fukizumi* decoration; 3) Acc. # 131, porcelain *kozara* dish base to rim fragment with *katagami* decoration; 4) Acc. # 18, porcelain hollowware base to body fragment with transfer-print decoration

Figure 151. Acc. # 48, polished bone toothbrush handle

Accession #s 36, 38 (Figure 152), 39, and 81 are wire nails. Wire nails are the most recently produced type of nail, manufactured in the United States from ca. 1850 to the present. They have round heads and round shafts, with consistently shaped shanks, and exhibit little change over time. Thus, distinguishing early wire nails from modern wire nails is very difficult (IMACS 1992). Wire nails were first imported to Hawai‘i by E.O. Hall and Son in 1894 (Hurst and Allen 1992 in Lebo 1997:112).

Accession # 26 is a polished bone artifact fragment that was likely part of a folding personal hygiene tool. It is incised with the words “MADE IN JAPAN,” which indicates the object was imported to the United States post-1921 (Ross 2012:24).

Accession # 87 is a 15-cm diameter ferrous metal utility pipe fragment. The first iron pipes for government utility use arrived in Hawai‘i in 1850 (Taylor 1922:374).

Accession # 78 is a slate fragment, with one straight edge indicating it was part of a square or rectangular panel. It is painted black on both sides. As slate pencils do not mark it, this is not a slate board. However, it could be an early chalkboard.

Accession # 77 is a carbon battery electrode. The first modern batteries were invented in 1800 by Alessandro Volta (Spude 2002), who produced “wet cell” batteries containing liquid electrolyte and metal electrodes. Based on principles pioneered by Volta, William Cruichshank was the first to mass produce batteries for purchase starting in 1802. In 1836, the first rechargeable battery was invented by John D. Daniell. It produced a more stable current with a system using lead acid. In 1886, the first “dry cell” battery was invented using ammonium chloride mixed with plaster (Spude 2002). This type of battery, often called a zinc-carbon battery, is the modern standard for batteries. Accession # 77 is a carbon electrode from a zinc-carbon “dry cell” battery, manufactured post-1912 (Goodman 1998:36).

Accession # 138 (Figure 153) is a dark red brick fragment with attached mortar. The first brick building in Hawai‘i was the King’s palace built in Lahaina, Maui in 1802. By 1820, “California” or “Victoria” bricks were being imported to Hawai‘i (Greer 1968:16). Local brick-making began on O‘ahu in 1839, and the first structure was built in Honolulu in 1847 (Lebo 1997:106–107). However, bricks were only manufactured for a brief time in Hawai‘i. In the 1860s, bricks started being imported from Japan (Lebo 1999). Accession # 138 is too small to provide datable information.

Accession # 137 (Figure 154) is a coral block, faced on all sides, with no mortar. It appears too small to be part of the outer wall of a structure but may be a paving brick. It measures 12.3 cm long by 11.4 cm wide and 6.6 cm thick. The block was not able to be dated.

Accession # 157 is a dark gray concrete block, faced on all sides, but not ground to a smooth finish. It is 18.6 cm long by 8.3 cm wide, and 5.6 cm thick. Solid concrete blocks were first used for construction in Hawai‘i in 1871 (Schmitt 1995:77). Accession # 158 is a concrete masonry unit (CMU) fragment. The first machine to manufacture the hollow concrete blocks was invented in 1900 (Madehow.com).

Figure 154. Acc. # 137, coral block fragment

5.2.4 Summary

CSH personnel collected 161 artifacts during the AIS. Most are composed of glass (n=89) and ceramics (n=53). Artifacts were collected from fill deposits, including demolition fills and a burnt trash fill (SIHP # -8840 Component 3, Feature 6), and the Stratum IIa/SIHP # -8840 Component 2 habitation layer, mainly from historical trash pit features. In general, the artifact assemblage dates from the mid-nineteenth to mid-twentieth century and consists of domestic items associated with the residential and commercial development of the study area.

The glass artifacts consist primarily of beverage bottles, with more than twice as many mold-blown bottles (1800-1920) as machine-made bottles (post-1908). Many of the mold-blown bottles are early mold types and have applied finishes (1800-1885), although a small number of later two-piece molds with tooled finishes are also present. Most of the bottles for which country of origin could be identified were manufactured in the United States, while the rest are from Scotland, the Netherlands, Japan, and China. Three were identified as having been manufactured for use by Hawaiian companies. Likely manufacture dates of bottles in the current assemblage span the full length of a century from ca. 1850-1950.

The ceramic artifacts are mostly hollowware vessels originating from Euro-American countries, primarily England. Ironstone is the most common ware type, with most dating to the latter half of the nineteenth century. Porcelain artifacts from Japan and China that could be dated from decoration type date primarily to the latter half of the nineteenth century as well. The ceramics from Euro-America date to the late nineteenth to early twentieth century.

The dating of diagnostic artifacts can be used to assess the earliest and latest possible dates for the deposition of fills and structural remnants and the use of cultural layers and features. Artifacts

were collected and analyzed from four pit features associated with the Stratum IIa/SIHP # -8840 Component 2 habitation layer. Three of these features (Features 8, 12, and 14) were documented at the upper boundary of the layer and are interpreted as historical trash pits. The fourth (Feature 17) extended from the lower portion of the layer; its function is indeterminate. As features were documented within different vertical portions of the quite thick layer, Stratum IIa was likely deposited in multiple episodes over a potentially extended period of time. If this were the case, features in the upper portion of the layer would therefore post-date those in the lower portion of the layer. Furthermore, radiocarbon dating (see Section 5.4.3 below) suggests the lower portion of Stratum IIa was in place by 1810. The artifact assemblage supports this timeline, as two diagnostic glass fragments (Acc. #s 74 and 76) collected from Feature 17, at the lower boundary of Stratum IIa, date to 1800-1910, indicating use of the feature during that time period. In contrast, diagnostic artifacts collected from Features 8, 12, and 14, at the upper boundary of the stratum, indicate use of these features post-1910 (Acc. #s 37, 41, and 47), post-1890 (Acc. # 55), and post-1880 (Acc. # 159), respectively.

Furthermore, analysis of artifacts collected from fill deposits overlying the Stratum IIa/SIHP # -8840 Component 2 habitation layer can provide an indication of how long Stratum IIa was exposed and functioned as a surface prior to being in-filled. The results of this analysis indicate Stratum IIa functioned as a surface into the twentieth century, as recently as the mid-1930s. This is based on diagnostic artifacts associated with T-2 Stratum Id (Acc. # 44), T-2B Stratum Ie (Acc. # 26), T-2C Stratum If (Acc. # 161), T-6 Stratum Ie (Acc. # 77), T-10 Stratum Ie (Acc. # 110), and T-12 Stratum Id (Acc. # 126), which date to post-1921, post-1926, 1935, post-1912, 1924-1940, and 1923-1956, respectively.

Artifact analysis also assists in establishing dates of likely deposition for SIHP # -8840 Component 3 infrastructure remnants. For instance, a glass beverage bottle (Acc. # 132) collected from T-1 Stratum Ig, base course associated with SIHP # -8840 Component 3, Feature 1 (oil-rolled crushed coral surface), dates to post-1908, indicating Feature 1 was deposited after that date. Furthermore, the dating of SIHP # -8840 Component 2, Feature 8 (historical trash pit, discussed above), provides a *terminus post quem* of 1910 for SIHP # -8840 Component 3, Feature 2 (hollow tile wall), which directly overlies it.

In addition, artifacts were collected from SIHP # -8840 Component 3, Feature 6, burnt trash fill (T-10 Stratum If). Although none of the collected artifacts were sufficiently diagnostic to be dated to a particular year or even decade, the date ranges for the items fall between the 1840s and 1930s. However, the date range for the deposition of Feature 6 can be narrowed further, since it overlies and therefore post-dates the Stratum IIa/SIHP # -8840 Component 2 habitation layer. Analysis of artifacts from features associated with Stratum IIa and from overlying fill deposits suggests Stratum IIa functioned as a surface until at least 1935 (see discussion above); hence, the Feature 6 burnt trash fill was likely deposited after that date. In addition, a review of historical maps suggests the overlying SIHP # -8840 Component 3, Feature 4 (etched concrete surface), was in place by 1950, indicating Feature 6 pre-dates that time. The Feature 6 artifact assemblage, with its potential range of 1840s to 1930s, is consistent with deposition of the layer sometime between 1935 and 1950.

5.3 Faunal Analysis

5.3.1 Faunal Osseous Remains

CSH personnel collected faunal osseous remains from ten of the 15 test excavations during the current AIS. The identified remains, as shown in Table 21, include pig (*S. scrofa*), cow (*B. taurus*), fish (Osteichthyes), bird (Aves), goat (*C. hircus*), and possibly baleen whale (Mysticeti). These include a Polynesian-introduced species (i.e., pig), historically introduced species (i.e., cow and goat), and possible native/endemic species (fish, birds, and possibly whale). Most of these remains are considered to be food refuse, with many exhibiting evidence of post-Contact butchering methods as indicated by striated cut marks from a saw; these butchered remains are primarily cow and pig. One sample of pig remains also exhibits potential evidence of heat alteration, further supporting its interpreted function as food refuse.

The collected material for which the provenience was known came from fill deposits (Stratum I), usually demolition fill layers, and from Stratum IIa/SIHP # -8840 Component 2, the upper of two habitation layers. Most of the material associated with Stratum IIa/SIHP # -8840 Component 2 was collected from three pit features in T-9 (Features 12–14), interpreted as historical trash pits. These features originate at the upper boundary of the stratum and are therefore interpreted as being more recent than features identified within lower portions of the stratum, which appears to have accumulated over a relatively long period of time and may have functioned as a surface from the pre- or very early post-Contact period into at least the 1920s (see Section 6.2.1 discussion). The identification of faunal osseous material from historically introduced species (goat, cow) and with evidence of post-Contact butchering methods within the features supports this interpretation.

Only in T-12 were faunal osseous remains collected from the general layer of Stratum IIa (i.e., not collected from a feature). Notably, these remains include material tentatively identified as possible baleen whale by Dr. Kenneth Longenecker of the Hawai‘i Institute of Marine Biology, who examined photographs of the material. Whales are divided into two suborders: baleen whales (Mysteceti) and toothed whales (Odontoceti). In place of teeth, baleen whales have baleen, bristly plates composed of keratin, which the whale uses to “filter, sift, sieve or trap” its prey from seawater inside its mouth (Whale and Dolphin Conservation, n.d.). The humpback whale is by far the most common baleen species found in Hawaiian waters, although there have been rare sightings of other species (State of Hawai‘i Division of Aquatic Resources 2019).

Whalers, primarily American vessels, began arriving in Hawai‘i in the early nineteenth century. For Hawaiian ports, especially Lahaina and Honolulu (0.7 km southwest of the current project), the whaling fleet was the crux of the economy at that time, and whale oil was used for heating, lamps, and in industrial machinery (HawaiiHistory.org 2019). Because dried baleen is strong, light, flexible, and hard-wearing, it was useful as construction material. Baleen was used in a variety of commercial enterprises, including the manufacture of fashion items, particularly corsets, collars, and frames for hooped skirts. In addition, it was also used in chimney sweep brushes, umbrella ribs, riding crops, buggy whips, hat brims, and upholstery stuffing (Smithsonian, n.d.; University of Aberdeen Department of Zoology 2002). The discovery of petroleum in 1859 in Pennsylvania signaled the end of the whaling industry (HawaiiHistory.org 2019).

Table 21. Faunal osseous remains collected during the AIS

Provenience	Taxon	Weight (g)	Description
T-1, Str. Ig/SIHP # -8840 Component 3, Fea. 1 Base course	*S. scrofa* (pig)	12.3	Mandible portion with M1, M2
T-2, Str. Id Demolition fill	*S. scrofa* (pig)	27.0	Proximal rib portion, various fragments; possible heat alteration
T-2B, Spoils	*B. taurus* (cow)	177.9	Long bone section, saw-cut
T-2C, Str. If Demolition fill	Medium mammal, inconsistent with human	7.9	Small fragments
T-4, Spoils	Small mammal	4.3	Long bone portion
	B. taurus (cow)	12.7	Rib section, saw-cut
T-6, Str. Ic Demolition fill	Osteichthyes (fish)	0.8	Unknown portion
T-6, Str. Ie, Fill	*Sphyraenidae* sp. (barracuda)	3.8	Dentary
T-9, Str. IIa/SIHP # -8840	Aves (bird)	4.7	Femur, ulna
Component 2, Fea. 12 Historical trash pit	Mammal, inconsistent with human	6.2	Fragments, saw-cut
T-9, Str. IIa/SIHP # -8840 Component 2, Fea. 12 Historical trash pit	Aves (bird)	8.4	Phalanx, carpometacarpus, and distal tibiotarsus, various portions and fragments
	B. taurus (cow)	22.0	Vertebral portion
T-9, Str. IIa/SIHP # -8840 Component 2, Fea. 12, Historic trash pit	*C. hircus* (goat)	5.4	Femur fragment
T-10, Spoils	*B. taurus* (cow)	42.4	Scapula section, saw-cut; other fragment
	Small mammal	1.6	Misc. fragments
T-11, Spoils	Small mammal	1.5	Long bone portion, saw-cut
T-12, Str. IIa/SIHP # -8840 Component 2	Possible Mysticeti (whale)	67.6	Possible baleen
Habitation layer	Osteichthyes (fish)	9.7	Vertebral fragments
	B. taurus (cow)	2.8	Cortical fragment, saw cut

5.3.2 Invertebrate Faunal Remains

Invertebrate faunal remains were collected from a single test excavation (T-9) and are summarized in Table 22. The shells, identified as *Periglypta reticulata*, were collected from SIHP # -8840 Component 2, Feature 12, interpreted as a historical trash pit. This bivalve species is consistent with midden (i.e., food refuse). Based on the completeness of the shells, the consistency of their sizes, and their lack of damage, this is likely historical (i.e., post-Contact) midden. This interpretation is supported by the Feature 12 artifact assemblage, which indicates the feature post-dates 1890.

5.4 Floral Analysis

5.4.1 Pollen Analysis

Ten samples from two test excavations (T-7 and T-9) were submitted to BGP Consulting, LLC, for pollen analysis. The samples target a vertical series of natural alluvium deposits (Stratum II), including interpreted agricultural deposits (SIHP # -8840 Component 1). The samples are summarized in Table 23, and the report by BGP Consulting, LLC (Phillips 2019), is presented in Appendix C. The results of the analysis are discussed below.

It should be noted that no samples were sufficient for standard counts, and pollen is completely absent from four samples. In samples containing pollen, the percentages of degraded grains range from relatively high (19.3%) to very high (39.5%), indicating poor preservation. Hence, the data is likely not an accurate reflection of the original pollen assemblage.

5.4.1.1 Test Excavation 7

Six samples from T-7 were submitted for palynological analysis. The samples were collected from Strata IIa–IIf, naturally deposited alluvium. Strata IIc and IId contain charcoal flecking and oxidized (red) mottling and are interpreted as agricultural deposits (SIHP # -8840 Component 1). The Strata IIa, IIb, and IIf samples contained no pollen and are therefore not discussed further.

Asteraceae and Cheno-Ams dominate the Stratum IIe sample, suggesting a shrubland environment. Grass pollen gradually increases over time (i.e., increases up the column sample), becoming dominant in Stratum IIc. A single large grass grain identified in Stratum IIc may represent rice (*laiki*; *Oryza sativa*) or sugarcane (*kō*; *Saccharum* sp.) cultivation in the vicinity or the collection of *pili* (*Heteropogon contortus*) grass. In addition, a high proportion of fern spores in Stratum IIc might reflect increased input from upslope and/or overbank flooding.

5.4.1.2 Test Excavation 9

Four samples from T-9 were submitted for palynological analysis. The samples were collected from Strata IIb and IId–IIf (naturally deposited alluvium). Strata IId–IIf contain abundant oxidized (red) mottling and are interpreted as agricultural deposits (SIHP # -8840 Component 1). The Stratum IIe sample contained no pollen and is therefore not discussed further.

The T-9 assemblage is more diverse than the T-7 assemblage (discussed above), with a greater number of types identified in all productive samples. No distinct temporal trends are apparent; rather, the assemblage is characterized by less common types, particularly the spurge and madder families. Normally, this data would be interpreted as reflecting local stands of shrubs and herbs.

Table 22. Invertebrate faunal remains collected during the AIS

Provenience	Taxon	Comment
T-9, Str. IIa SIHP # -8840 Component 2, Fea. 12 Historic trash pit	*P. reticulata*	MNI of 25 valves; completeness of shells, consistency of size, and lack of damage indicate this is likely historic (i.e., post-Contact) midden

Table 23. Samples submitted for palynological analysis

Test Excavation	Sample #	Stratum	Depth (cmbs)	SIHP #	Description
7	1	IIa	44–47	–	Natural alluvium
	2	IIb	76–79		
	3	IIc	107–110	SIHP # -8840	Agricultural deposit
	4	IId	148–151	Component 1	
	5	IIe	172–175	–	Natural alluvium
	6	IIf	190–193		
9	7	IIb	111–114		
	8	IId	128–131	SIHP # -8840	Agricultural deposit
	9	IIe	150–154	Component 1	
	10	IIf	170–173		

Large grass grains in Strata IIb and IId provide additional evidence for rice (*laiki*; *O. sativa*) or sugarcane (*kō*; *Saccharum* sp.) cultivation in the vicinity or the collection of *pili* (*H. contortus*) grass, as suggested by the single grain identified in the T-7 Stratum IIc sample (see above). In addition, a single pollen grain from historically introduced *kiawe* (*Prosopis pallida*) was identified in Stratum IIb, and two grains from historically introduced pine (*Pinus* sp.) were identified in Stratum IId.

5.4.1.3 Summary and Interpretation

The most common pollen types identified in the current samples are low-spine Asteraceae (*Ambrosia* type) and Cheno-Am (*‘āweoweo*), spurge family, and grass family. Sedge family pollen, representing wetlands, is present but found in relatively low percentages. Polynesian introductions include coconut (*niu*; *Cocos nucifera*), paper mulberry (*wauke*; *Broussonetia papyrifera*), and possibly ti (kī; *Cordyline fruticosa*). Large grass pollen grains may represent rice (*laiki*; *O. sativa*) or sugarcane (*kō*; *Saccharum* sp.) cultivation in the vicinity or the collection of *pili* (*H. contortus*) grass.

Historically introduced mesquite (*kiawe*; *P. pallida*) and pine (*Pinus* sp.), identified in T-9 Strata IIb and IId, respectively, likely indicate disturbance throughout the sample column. Radiocarbon dating of a fire-related feature associated with Stratum IIa (in T-1, see Section 5.4.3) suggests use of that layer as a living surface by 1810. As *kiawe* was not introduced to the island until 1828, the single grain identified in Stratum IIb is likely intrusive from above. The two *Pinus*

pollen grains identified in Stratum IId are even more incongruous, as pine trees were not introduced to the island until the twentieth century.

Although there is strong evidence suggesting the current study area was once in taro cultivation, no *Colocasia* pollen was identified in the samples. According to Phillips (2019), despite the widespread practice of wetland taro cultivation across O‘ahu, *Colocasia* pollen is rare, even in suspected and known agricultural settings, such as the current study area. Typically propagated from a corm/root cutting or from a shoot, taro rarely blooms or sets seeds naturally (Onwueme 1999 in Phillips 2019). Like other members of the Araceae family, taro produces relatively small quantities of pollen when in bloom; in fact, some varieties have never been known to flower. Furthermore, taro is harvested at a time when the edible corm has its highest nutritional value and is most viable for propagation, which occurs before flowering, further reducing the likelihood of pollen deposition.

The likelihood of finding *Colocasia* pollen was further decreased by the very poor pollen preservation within the samples. Only six of the ten samples contain pollen; within those six, the percentages of degraded grains are very high, while the total pollen concentrations are very low. Taken at face value, the data from T-7 suggests a change over time from shrubland to grassland. In nearby T-9, no such change is evidenced, and the assemblage is more diverse. However, given the proximity of the two excavations, these apparent differences are more likely a product of poor pollen preservation rather than an accurate reflection of past vegetation. Sedge pollen, indicative of a wetland environment such as a *lo‘i*, is unexpectedly scarce—likely also a product of taphonomic factors.

5.4.2 Wood Taxa Identification

Two charcoal samples were submitted to the Wood Identification Laboratory at IARII for taxa identification. Both samples were collected from fire-related features in T-1 Stratum IIa/SIHP # -8840 Component 2, designated as Features 2 and 4. The samples are summarized in Table 24, and the report from IARII (Huebert 2019) is included in Appendix D. The results of the analysis are presented in Table 25 and discussed below.

Most of the examined material was small (< 1 cm), and all fragments except one were wood charcoal; the other was parenchyma charcoal. Most of Sample 1 (SIHP # -8840 Component 2, Feature 2) is *kiawe* (*P. pallida*); the rest is indeterminate hardwood. *Kiawe* is a tree native to Peru, Colombia, and Ecuador, which was likely introduced to Hawai‘i by Father Bachelot in 1828 (Huebert 2019:3).

Sample 2 (SIHP # -8840 Component 2, Feature 4) contains wood from native species including *‘ōhi‘a lehua* (*Metrosideros polymorpha*), *koa* (*Acacia* cf. *koa*), *kōpiko* (*Psychotria* sp.), and possibly *hau* (*Hibiscus* sp.). There are seven native shrub and tree species of *Hibiscus*, including several endemic varieties, as well as at least three naturalized historical (i.e., post-Contact) introductions (Wagner et al. 2005 in Huebert 2019:3). Most species feature showy flowers. *Hibiscus tiliaceus*, or *hau*, occurs commonly in moist areas on most of the main Hawaiian Islands. In addition to ornamental plantings, the bark of *hau* was sometimes used to make *lei*, while the soft wood was used for canoe outriggers, fishnet floats, and in the native fireplow (Abbott 1992 in Huebert 2019:3).

Table 24. Samples from T-1 Stratum IIa/SIHP # -8840 Component 2 submitted for wood identification analysis

Sample #	Depth (cmbs)	Fea. #	Description
1	111	2	Fire-related feature at the upper boundary of the habitation layer
2	128–131	4	Fire-related feature in the lower-middle portion of the habitation layer

Table 25. Results of wood identification analysis

Sample #	WIDL #	Taxon	Plant Part	Count	Weight (g)	Comment
1	1916-1	*P. pallida* (*kiawe*)	Wood charcoal	18	0.4	–
	1916-2	Indeterminate hardwood	Wood charcoal	1	0.01	–
2	1916-3	*M. polymorpha* (*‘ōhi‘a lehua*)	Wood charcoal	2	0.06	–
	1916-4	Indeterminate	Parenchyma charcoal	1	0.01	Thin; superficially resembles nutshell but is not endocarp
	1916-5	*Psychotria* sp. (*kōpiko*)	Wood charcoal	1	0.01	–
	1916-6	*Hibiscus* sp. (*hau* and others)	Wood charcoal	1	0.04	–
	1916-7	*Acacia* cf. *koa* (*koa* and others)	Wood charcoal	5	0.08	–
	1916-8	Indeterminate hardwood	Wood charcoal	4	0.06	–

‘Ōhi‘a lehua (*M. polymorpha*) is an endemic species used for making spears, mallets, idols, posts and rafters for houses, and enclosures around temples (Buck 1957, Malo 1951, and Neal 1965 in Huebert 2019:3). *Kōpiko* (*Psychotria* sp.) comprises 11 endemic species, of which five are known to grow on O‘ahu. The species range from small to up to 20 m tall (Wagner et al. 1990 in Huebert 2019:3). *Kōpiko* was used as firewood and to make *kapa* (barkcloth) logs (Malo 1951 in Huebert 2019:4).

None of these are short-lived materials preferred for radiocarbon dating. However, Huebert (2019:2) indicates the parenchyma is not likely to have much inbuilt age, since soft storage tissues are not long-lived; hence, it is the best option available for radiocarbon dating (see Section 5.4.3 below for results). As some *Psychotria* species are small trees, and *Hibiscus* species are fast growing, Huebert (2019:2) suggests one of these as the next best option.

As mentioned above, Sample 1, collected from SIHP # -8840 Component 2, Feature 2, consists mainly of a post-Contact introduction, *kiawe* (*P. pallida*). As it is believed *kiawe* was introduced to the Islands in 1828, its presence indicates the feature was used after that time. In contrast,

Sample 2, collected from SIHP # -8840 Component 2, Feature 4, consists mainly of native or endemic species, with no positive identification of post-Contact introductions; these results are in agreement with the stratigraphic positions of the features. Although both were identified within T-1 Stratum IIa, Feature 2 originates at the upper boundary of the stratum, while Feature 4 is within the lower-middle portion; hence, Feature 2 post-dates Feature 4. As Feature 2 dates securely to the post-Contact period, Feature 4 may therefore date to the pre- or early post-Contact period—a hypothesis supported by the radiocarbon dating results (see Section 5.4.3 below).

5.4.3 Radiocarbon Dating Analysis

One sample was submitted to Beta Analytic, Inc., for radiocarbon dating analysis. This sample comprises parenchyma charcoal recovered from a charcoal sample (Sample 2; see Section 5.4.2 above) analyzed at IARII's Wood Identification Laboratory. The parenchyma charcoal was selected for radiocarbon analysis because it is not likely to have much inbuilt age, as soft storage tissues are not long-lived. The results of the radiocarbon analysis are presented in Table 26 and discussed below. The report from Beta Analytic is included in Appendix E.

The sample was recovered from SIHP # -8840 Component 2, Feature 4, a fire-related feature identified within the lower-middle portion of T-1 Stratum IIa, interpreted as a habitation layer (SIHP # -8840 Component 2). The radiocarbon analysis yielded two-sigma calibrated date ranges of AD 1728-1810 (53.5% probability), 1646-1690 (26.0%), and 1925-post 1950 (15.9%); however, the most recent date range can likely be discarded. While diagnostic artifacts recovered from overlying fill deposits (see Section 5.2.4) suggest Stratum IIa functioned as a surface into the 1930s, the identification of pit features within different vertical portions of the quite thick stratum indicates the layer was not deposited all at once, but rather over a (potentially extended) period of time. As Feature 4 was identified within the lower portion of IIa, it would therefore date to the earlier part of that time period. Furthermore, the cobble-lined fire pit is consistent with traditional Hawaiian fire-related features. Hence, the radiocarbon analysis, like the wood taxa analysis (discussed above), supports a pre- or early post-Contact date for Feature 4 and suggests use of the Stratum IIa habitation layer by 1810.

Table 26. Results of radiocarbon analysis

Lab #	Beta Lab #	Material Dated	SIHP/Fea. #	Stratum (matrix)	Depth (cmbs)	Activity Rep. by Date	Conventional Age (BP)	C12/13 Ratio	Calibrated Dates (AD; 2-sigma) (% probability)

Section 6 Historic Property Description

One archaeological historic property was newly identified during the Halewai‘olu Senior Residences AIS: SIHP # 50-80-14-8840, subsurface cultural deposits. SIHP # -8840 was identified in all 15 test excavations and comprises 0.52 acre (including interpolated boundaries), encompassing nearly the entire AIS study area. It has three components, which are summarized in Table 27 and depicted on Figure 155 through Figure 157. SIHP # -8840 Components 1–3 span the pre-Contact period through the mid-twentieth century and are discussed in detail in Sections 6.1–6.3 below. The significance assessment of SIHP # -8840 is presented in Section 6.4 below.

Table 27. Summary of SIHP # 50-80-14-8840 components

Component #	Formal Type	Function
1	Agricultural deposits	Agriculture
2	Habitation layers	Habitation; human interment
3	Subsurface infrastructure remnants	Residential; commercial

6.1 SIHP # 50-80-14-8840 Component 1

FORMAL TYPE:	Agricultural deposits
FUNCTION:	Agriculture
AGE:	Pre-Contact
NUMBER OF FEATURES:	0
TEST EXCAVATIONS:	T-2, T-2B, T-3 through T-10, and T-12
DIMENSIONS	0.43 acre
TAX MAP KEY:	[1] 1-7-006:012
LAND JURISDICTION:	City and County of Honolulu
PREVIOUS DOCUMENTATION:	N/A

SIHP # 50-80-14-8840 Component 1 consists of multiple buried agricultural deposits, identified throughout the majority of the AIS study area, within 13 of the 15 test excavations (absent only in T-1 and T-11) (see Figure 35 and Figure 155 through Figure 157). These agricultural deposits are within a vertical series of primarily silty clay loam alluvial deposits, which appear to represent Nu‘uanu Stream overflow or flooding episodes. The agricultural deposits were identified beneath the upper two alluvial deposits (Strata IIa and IIb), which functioned as possibly pre- to post-Contact habitation layers and are designated as SIHP # -8840 Component 2 (see Section 6.2 below). As radiocarbon dating suggests use of Stratum IIa by 1810, with Stratum IIb therefore even earlier, the Component 1 agricultural deposits (Strata IIc–IIg) likely date to the pre-Contact period, with at least three chronological periods of agricultural use indicated (Table 28). Given the location of the AIS study area within the floodplain of Nu‘uanu Stream, these agricultural deposits likely represent *lo‘i kalo*.

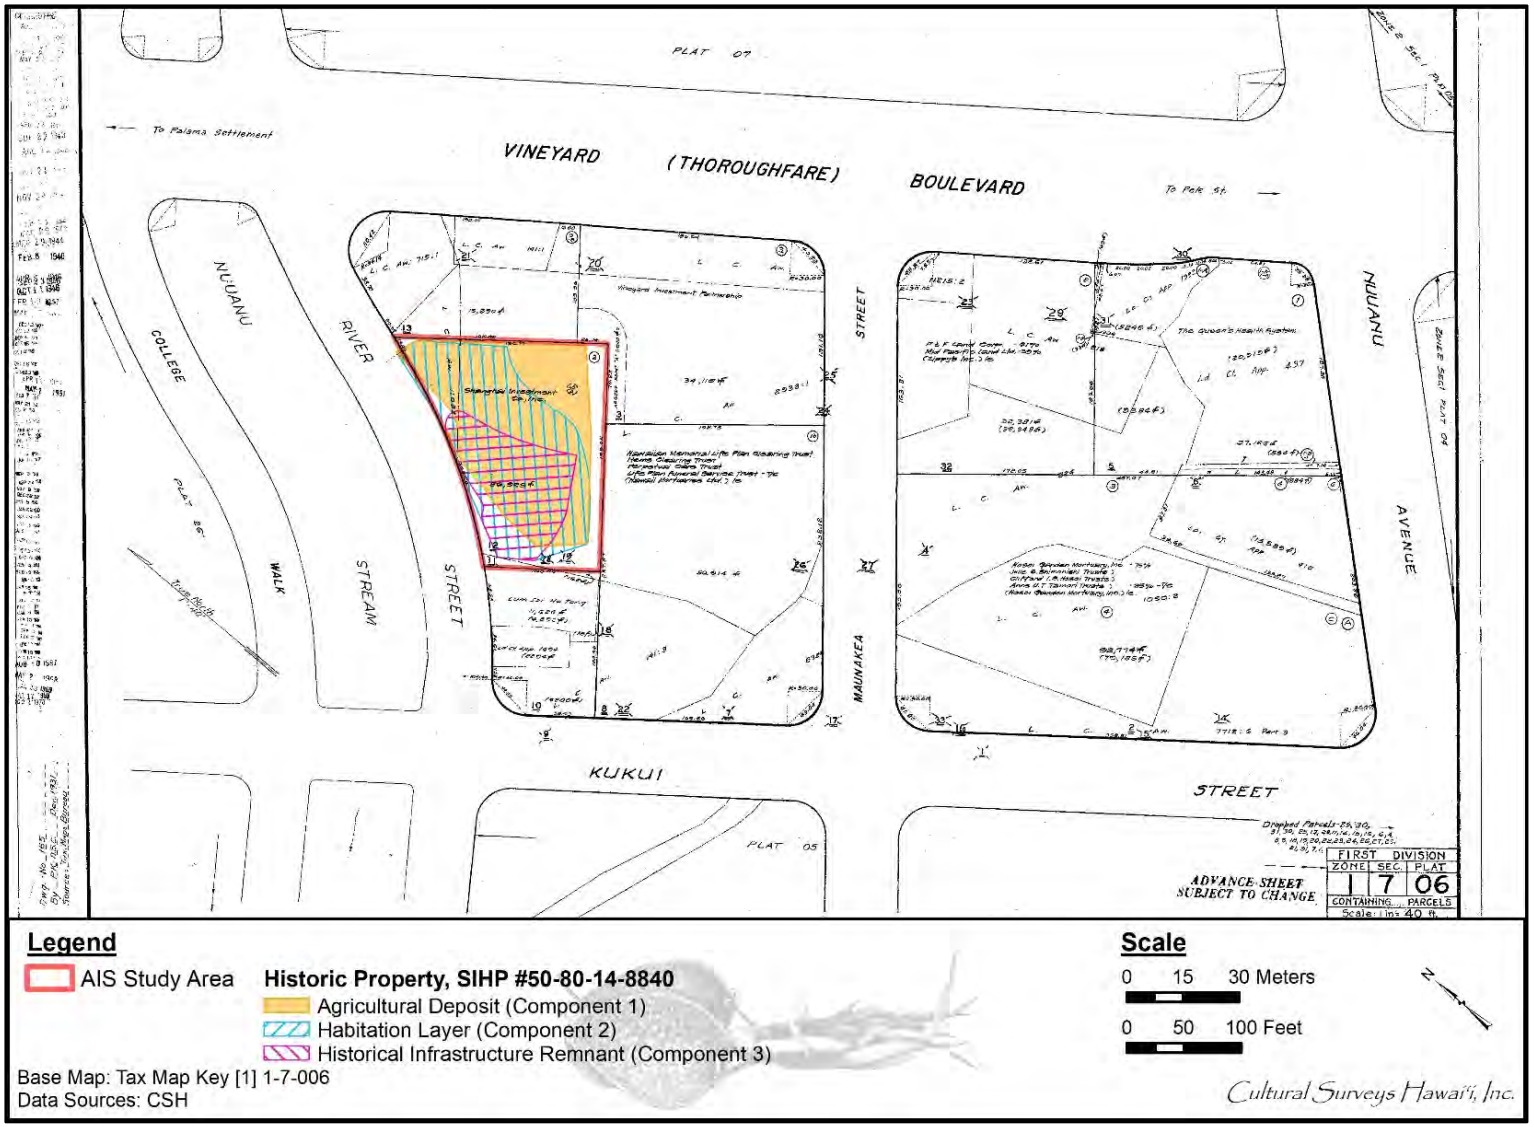

Figure 156. TMK: [1] 1-7-006, showing the distribution of SIHP # -8840 Components 1–3 within the Halewai‘olu Senior Residences AIS study area (Hawai‘i TMK Service 2014)

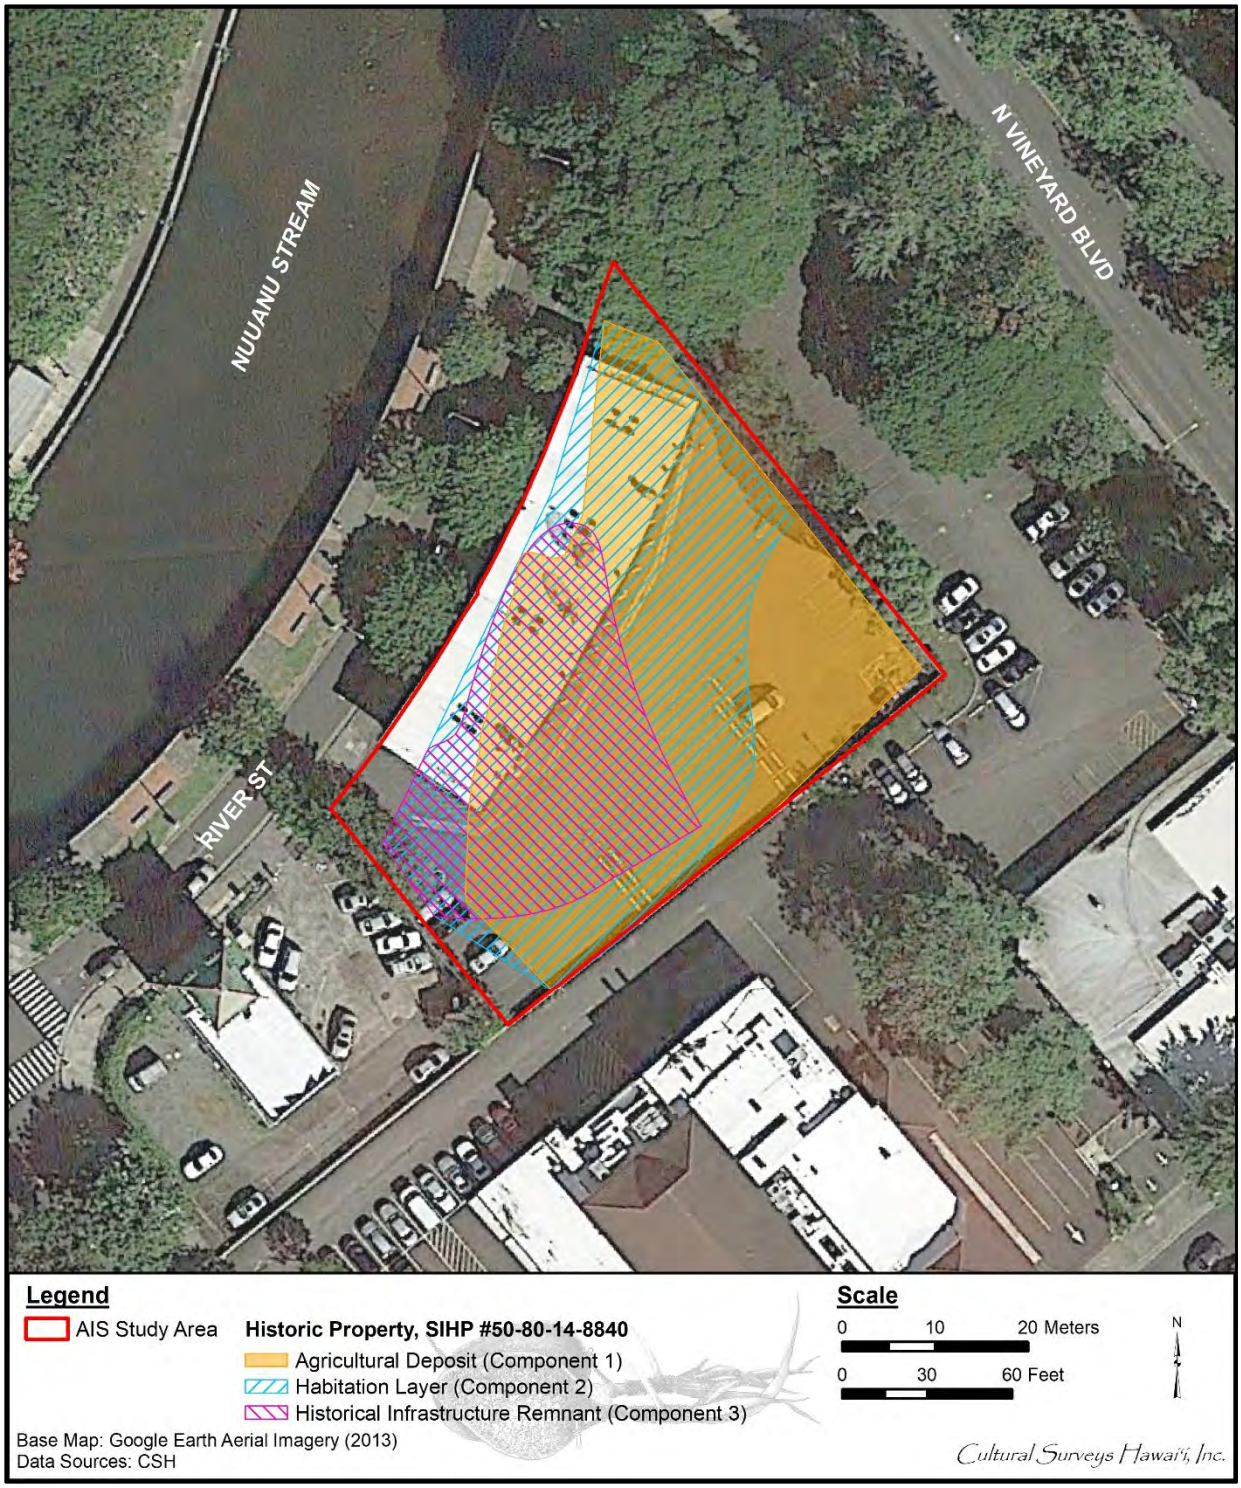

Figure 157. Aerial photograph (Google Earth 2013), showing the distribution of SIHP # -8840 Components 1–3 within the Halewai‘olu Senior Residences AIS study area

Table 28. SIHP # -8840 Component 1 agricultural deposits identified during the AIS

Formal Type	Stratum	Test Excavation
Agricultural deposit	IIc	T-2, T-2B, T-3 through T-8, T-10, and T-12
	IId	T-7, T-8, T-9, T-9B
	IIe	T-4, T-9
	IIf	T-5, T-9
	IIg	T-8
Agricultural berm	IIc	T-9, T-9B

6.1.1 Uppermost Agricultural Deposit

The most recent agricultural deposit (Stratum IIc in T-2, T-2B, T-3 through T-8, and T-10; Stratum IId in T-9 and T-9B) was identified almost ubiquitously across the AIS study area, in 13 of the 15 test excavations. It typically presents as dark brown silty clay loam and contains cinder gravel in some areas (Figure 158 and Figure 159). The deposit is characterized by a dense latticework of oxidized (red) mottling, which is believed to be the result of chemical interactions between taro roots and the surrounding soil. In addition, limonite nodules and/or root casts were identified within bulk samples collected from the uppermost agricultural deposits in T-2B, T-9, and T-12; based on previous archaeological studies (see Section 5.1.1), these are also interpreted as evidence of agricultural use.

This interpretation is further supported in T-9 and T-9B by the presence of small berms (Stratum IIc) adjacent to the uppermost agricultural deposit (Stratum IId) (see Figure 94 and Figure 100). In T-9, the Stratum IIc berm measures approximately 2 m across and 25 cm tall in the southeast sidewall. In the northwest sidewall, it is only 50 cm across, as it appears to be truncated by SIHP # -8840 Component 2, Feature 14 (pit feature). In T-9B, the berm at the *mauka* (northeast) end measures approximately 1.7 m across by 35 cm tall (see Figure 102), while the berm at the *makai* (southwest) end measures approximately 1.5 m across by 30 cm tall, although it is bisected by SIHP # -8840 Component 2, Feature 15 (pit feature). As these berms do not align with the berm identified in T-9, this area may represent the convergence of multiple agricultural plots.

6.1.2 Deeper Agricultural Deposits

Deeper (i.e., older) agricultural deposits were identified within a discrete zone in the central/*mauka* (northeast) portion of the AIS study area (within T-4, T-5, T-7 through T-9B). Directly beneath the youngest agricultural deposit within T-7 through T-9B is a silty clay loam deposit (T-7 and T-8 Stratum IId; T-9 and T-9B Stratum IIe) interpreted as an agricultural layer. This deposit contains a similar latticework of oxidized (red) mottling, although generally less dense than the overlying stratum (Figure 160). The layer is described as brown, dark yellowish brown, or very dark grayish brown and lacks the cinder content of the overlying deposit.

The deepest agricultural deposits were documented within T-4, T-5, T-8, and T-9, just above or at the level of the water table. These deposits (Strata IIe–IIg) range from silty clay loam to sandy clay loam and contain a dense latticework of oxidized (red) mottling similar to the uppermost agricultural deposit (Figure 161).

Figure 158. Close-up of Stratum IIc (youngest SIHP # -8840 Component 1 agricultural deposit) within T-7 northeast wall, showing a dense latticework of oxidized (red) mottling

Figure 159. T-9 Stratum IId, SIHP # -8840 Component 1 agricultural deposit, characterized by oxidized (red) mottling

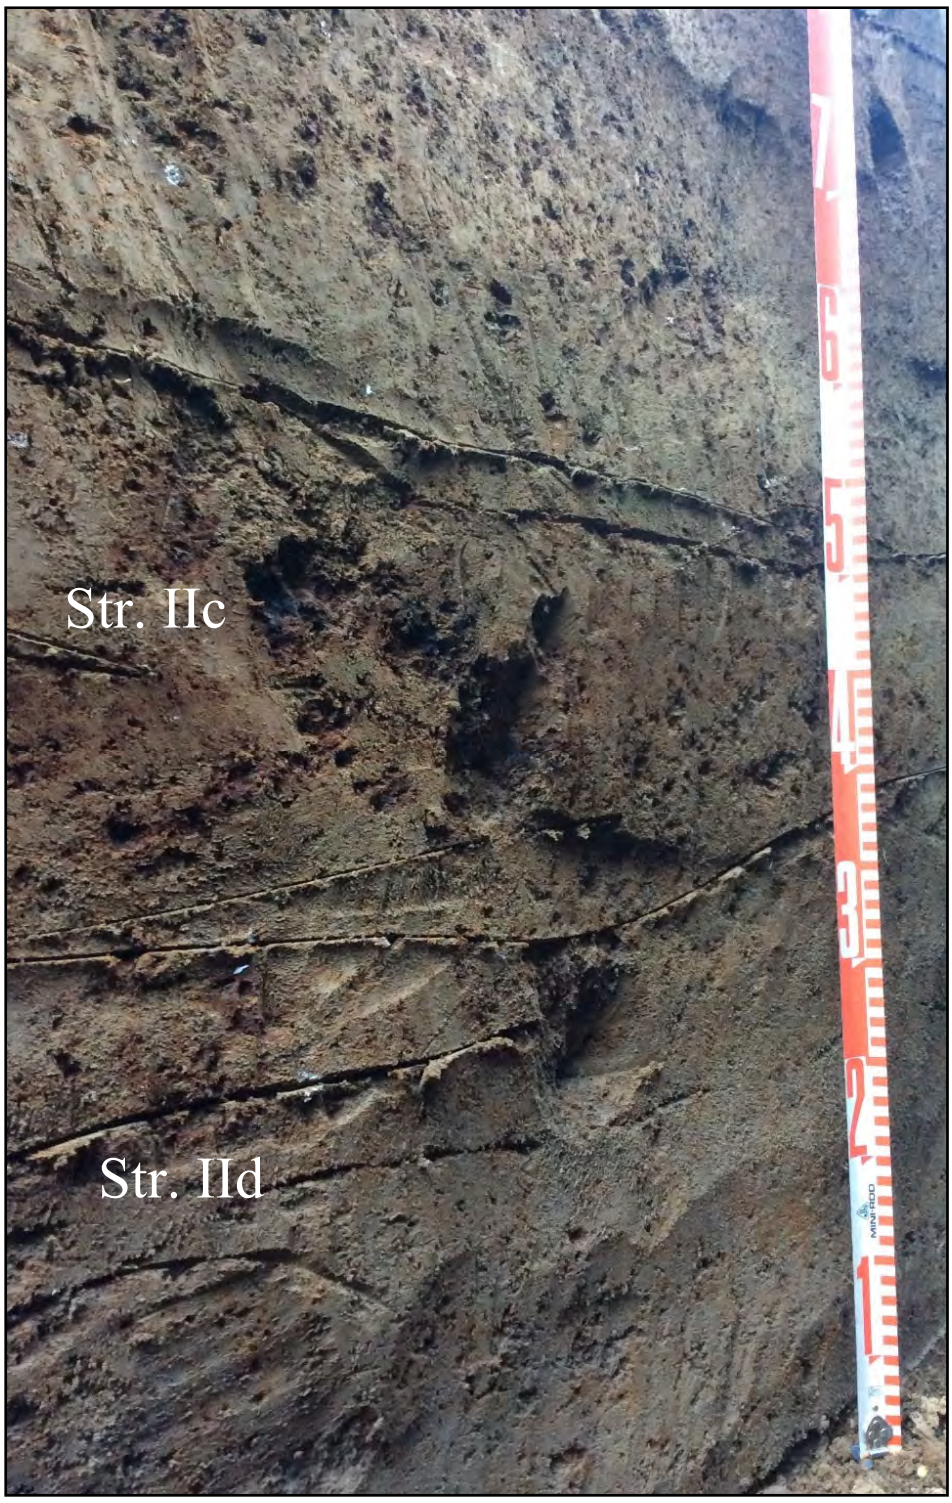

Figure 160. T-7 northeast wall, showing SIHP # -8840 Component 1 agricultural deposits (Strata IIc and IId) characterized by oxidized (red) mottling; the darker areas and voids of Stratum IIc contain cinder gravel

Figure 161. T-9 Stratum IIe, SIHP # -8840 Component 1 agricultural deposit, characterized by oxidized (red) mottling

6.1.3 Pollen Analysis

Abundant bulk samples were collected from the Stratum II alluvium series, including the interpreted SIHP # -8840 Component 1 agricultural deposits. In addition, several column samples were collected; two of these column series (from T-7 and T-9) were submitted for palynological analysis (see Section 5.4.1 for full results).

The most common pollen types identified in the samples are low-spine Asteraceae (*Ambrosia* type) and Cheno-Am (*‘āweoweo*), spurge family, and grass family. Sedge family pollen, representing wetlands (including *lo‘i*), is present but found in relatively low percentages. Polynesian introductions include coconut (*niu*; *Cocos nucifera*), paper mulberry (*wauke*; *Broussonetia papyrifera*), and possibly ti (*kī*; *Cordyline fruticosa*). Large grass pollen grains may represent rice (*laiki*; *O. sativa*) or sugarcane (*kō*; *Saccharum* sp.) cultivation in the vicinity or the collection of *pili* (*H. contortus*) grass.

Historically introduced mesquite (*kiawe*; *P. pallida*) and pine (*Pinus* sp.), identified in T-9 Strata IIb and IId, respectively, likely indicate disturbance throughout the sample column. Radiocarbon dating of a fire-related feature associated with Stratum IIa (in T-1, see Section 5.4.3) indicates use of that layer as a living surface by 1810. As *kiawe* was not introduced to the island until 1828, the single grain identified in Stratum IIb is likely intrusive from above. The two *Pinus* pollen grains identified in Stratum IId are even more incongruous, as pine trees were not introduced to the island until the twentieth century; hence, they are also likely intrusive from above.

Although there is strong evidence suggesting the current study area was once in taro cultivation, no *Colocasia* pollen was identified in the samples. According to Phillips (2019), despite the widespread practice of wetland taro cultivation across O‘ahu, *Colocasia* pollen is rare, even in suspected and known agricultural settings such as the current study area. Typically propagated from a corm/root cutting or from a shoot, taro rarely blooms or sets seeds naturally (Onwueme 1999 in Phillips 2019). Like other members of the Araceae family, taro produces relatively small quantities of pollen when in bloom; in fact, some varieties have never been known to flower. Furthermore, taro is harvested at a time when the edible corm has its highest nutritional value and is most viable for propagation, which occurs before flowering, further reducing the likelihood of pollen deposition.

The likelihood of finding *Colocasia* pollen was further decreased by the very poor pollen preservation within the samples. Only six of the ten samples contain pollen; within those six, the percentages of degraded grains are very high, while the total pollen concentrations are very low. Hence, the data is likely not an accurate reflection of the original pollen assemblage.

6.2 **SIHP # 50-80-14-8840 Component 2**

FORMAL TYPE:	Habitation layers
FUNCTION:	Habitation; human interment
AGE:	Possibly pre- to post-Contact
NUMBER OF FEATURES:	19
TEST EXCAVATIONS:	T-1 through T-5 and T-8 through T-12
DIMENSIONS	0.43 acre
TAX MAP KEY:	[1] 1-7-006:012
LAND JURISDICTION:	City and County of Honolulu
PREVIOUS DOCUMENTATION:	N/A

SIHP # -8840 Component 2 consists of buried habitation layers, which developed within the uppermost natural alluvium deposits alongside Nu‘uanu Stream. Component 2 was documented throughout the majority of the AIS study area (absent only in the eastern corner of the AIS study area; see Figure 155 through Figure 157). Only two test excavations (T-6 and T-7) are not included within the boundaries of SIHP # -8840 Component 2 due to negligible cultural content (i.e., only sparse amounts of charcoal flecking). SIHP # -8840 Component 2 is primarily composed of the uppermost (i.e., youngest) natural alluvial deposit, designated as Stratum IIa. Within two adjacent test excavations (T-2 and T-2B) in the southern portion of the AIS study area, the underlying Stratum IIb alluvial deposit also evidences cultural activity and is therefore designated as part of SIHP # -8840 Component 2. A total of 19 features (17 associated with Stratum IIa and two associated with Stratum IIb) were documented. SIHP # -8840 Component 2 layers and features are summarized in Table 29 and discussed in detail below.

6.2.1 Stratum IIa

Stratum IIa typically presents as a very dark grayish brown silty clay loam deposit, between 25 and 70 cm thick. Cultural use of Stratum IIa is indicated by strong charcoal flecking, historical

Table 29. Summary of SIHP # -8840 Component 2 layers and features identified during the AIS

Stratum	Formal Type	Function	Test Excavation/Fea. #
IIa	Habitation layer	Habitation; human burial	T-1 through T-5, T-8 through T-12
	Pit feature (n=17)	Indeterminate (n=7)	T-2 (Fea. 5), T-2B (Fea. 9), T-2C (Fea. 11), T-9B (Fea. 15), T-10 (Feas. 16, 17), T-11 (Fea. 18)
		Historical trash pit (n=4)	T-2B (Fea. 8), T-9 (Feas. 12–14)
		Fire-related feature (n=4)	T-1 (Feas. 1–4)
		Post hole (n=1)	T-11 (Fea. 19)
		Human burial (n=1)	T-2 (Fea. 6)
IIb	Habitation layer	Habitation	T-2, T-2B
	Stacked basalt cobbles (n=1)	Indeterminate	T-2 (Fea. 7)
	Pit feature (n=1)	Indeterminate	T-2B (Fea. 10)

artifacts within the upper 4–15 cm, and/or the presence of pit features. Within five test excavations (T-3 through T-5, T-8, and T-12), the upper portion of the layer contains charcoal, red brick fragments, bottle glass, ceramic, metal, coral, and/or faunal bone. Associated features were documented within eight test excavations (T-1, T-2, T-2B, T-2C, T-9, T-9B, T-10, and T-11). As features were documented originating in different vertical portions of the stratum, it is likely the Stratum IIa sediment was not deposited all at once but rather through multiple episodes over a period of time, with features in the lower portion of the stratum pre-dating those in the upper portion; this hypothesis is supported by the results of various laboratory analyses (discussed in Section 6.2.3 below).

The Stratum IIa features consist of four fire-related features (Features 1–4), one posthole (Feature 19), four historical trash pits (Features 8, 12–14), a human burial (Feature 6), and seven pits of indeterminate function (Features 5, 9, 11, and 15–18) (see Table 29). The 17 features associated with Stratum IIa are described in detail below. Profiles, plan maps, and photographs are presented in Section 4.3 Subsurface Testing Results and are referenced in the descriptions below.

Feature 1 is a basin-shaped pit feature identified in the southwest wall of T-1, at the upper boundary of Stratum IIa/SIHP # -8840 Component 2 (see Figure 39 and Figure 41). It was documented between 77 and 93 cmbs and measures 35 cm across. A thin, heat-altered band of reddened sediment, a fire-affected basalt cobble, and a 6-cm thick layer of charcoal were observed at the base of the pit, which is interpreted as a fire-related feature. A charcoal sample was collected.

Feature 2 is a basin-shaped pit feature identified in the northeast wall of T-1, at the upper boundary of Stratum IIa/SIHP # -8840 Component 2 (see Figure 36, Figure 37, and Figure 42). It was documented between 71 and 115 cmbs and measures 1 m across. A thin, heat-altered band of reddened sediment and a 4-cm thick layer of charcoal were observed at the base of the pit, which is interpreted as a fire-related feature. Several small, non-diagnostic bottle glass fragments (not collected) and fire-affected basalt cobbles were also observed within the pit. A charcoal sample was collected.

Feature 3 is a basin-shaped pit feature identified in the southwest wall of T-1, at the upper boundary of Stratum IIa/SIHP # -8840 Component 2 (see Figure 39 and Figure 43). It was documented between 76 and 120 cmbs and measures 1.5 m across. Multiple heat-altered bands of reddened sediment and layers of charcoal ranging from 510 cm thick were observed within the pit, which is interpreted as a fire-related feature. A charcoal sample was collected.

Feature 4 is a pit feature identified in both sidewalls of T-1, within Stratum IIa/SIHP # -8840 Component 2 (see Figure 37 and Figure 44). It was documented between 111 and 127 cmbs and measures 55 cm across; the exposed portion is 85 cm long, spanning the width of the trench. The pit is lined with fire-affected basalt cobbles, and charcoal flecking was observed in the matrix surrounding the cobbles. This is interpreted as a fire-related feature.

Feature 5 is a basin-shaped pit feature identified at the upper boundary of Stratum IIa/SIHP # -8840 Component 2 within both sidewalls of T-2 (see Figure 47, Figure 48, and Figure 54). It was documented between 60 and 103 cmbs and measures 85 cm across. The exposed portion is 76 cm wide, with the feature spanning the width of the trench. The feature contains red brick, glass, metal, charcoal, FAR, and coral gravel. Its function is indeterminate.

Feature 6 is a small pit feature containing human skeletal remains (see Figure 45, Figure 46, Figure 55 through Figure 57). It was documented between 120 and 127 cmbs within the southwest wall of T-2, near the southeast end of the excavation. It originates at the base of Stratum IIa/SIHP # -8840 Component 2 and terminates in the underlying Stratum IIb/ SIHP # -8840 Component 2. The pit measures 26 cm across and contains the remains of a single fetal individual (at or near birth). Observed skeletal elements comprise the lower limbs; the upper body likely remains in situ within the southwest sidewall (see Figure 56). The remains are in good condition, and the individual is approximately 85% complete.

The majority of the remains were observed in situ (i.e., within the burial pit) and were left in place. Several additional small fragments which had been displaced by cleaning of the sidewall were recovered and reinterred 15 cm northeast of the Feature 6 pit feature, within a small, hand-carved niche. A burial treatment plan (BTP) addressing this human burial site is forthcoming.

Feature 8 is a large pit feature identified at the *mauka* (northeast) end of T-2B in the southeast sidewall (see Figure 58, Figure 59, and Figure 62). It was documented between 70 and 145 cmbs at the upper boundary of Stratum IIa/SIHP # -8840 Component 2. Glass, metal, ceramic, and bone artifacts were collected from this feature, which is interpreted as a historical trash pit. A machine-made glass marble (Acc. # 37) dates to post-1910, indicating use of the feature after that date. Feature 8 truncates and therefore post-dates Feature 9, discussed below.

Feature 9 is a large pit feature identified at the *mauka* (northeast) end of T-2B in the southeast sidewall (see Figure 58, Figure 59, and Figure 62). It was documented between 115 and 191 cmbs, originating in Stratum IIa/SIHP # -8840 Component 2, intrusive through Stratum IIb, and terminating in Stratum IIc. It is truncated by Feature 8 (described above), which it therefore pre-dates. The exposed portion of the feature is approximately 2 m long. No cultural materials were identified within the feature; its function is indeterminate.

Feature 11 is a small pit feature identified in the southeast sidewall of T-2C (see Figure 65 and Figure 66). It was documented between 137 and 152 cmbs, originating in Stratum IIa/SIHP # -8840 Component 2 and terminating in Stratum IIb. It measures 30 cm across. No cultural materials were observed within the feature; its function is indeterminate.

Feature 12 is a large pit feature identified in both sidewalls of T-9, originating at the upper boundary of Stratum IIa/SIHP # -8840 Component 2, intruding through Strata IIb–III and continuing beyond the base of excavation (see Figure 92 through Figure 96). It was documented between 45 and 196 cmbs and measures 65–100 cm across (*mauka-makai*). The exposed portion of the feature is 80 cm wide, spanning the width of the trench. Feature 12 contains abundant bottle glass and ceramics, as well as marine shell midden, faunal bone, charcoal, and FAR. It is interpreted as a historical trash pit. The faunal bone and a grab sample of glass, ceramics, and shell midden were collected. Diagnostic artifacts are mainly of European and Euro-American origin and date from the late nineteenth to possibly early twentieth century. One item, a Dutch glass gin bottle (Acc. #55), dates between 1890 and 1910, placing use of the feature firmly post-1890. The completeness, lack of damage, and consistent size of the collected shells similarly indicate this is historical (i.e., post-Contact) midden.

Feature 13 is a shallow pit feature identified at the upper boundary of Stratum IIa/SIHP # -8840 Component 2 in the northwest sidewall of T-9 (see Figure 93, Figure 95, and Figure 97). It was documented between 45 and 67 cmbs and measures 1.7 m across. It truncates and therefore post-dates the underlying Feature 14 (see description below). Feature 13 contains metal, glass, ceramic, bird (Aves) and cow (*B. taurus*) bone, and charcoal. The faunal bone was collected.

Feature 14 is a large pit feature identified in the northwest sidewall of T-9, originating at the upper boundary of Stratum IIa/SIHP # -8840 Component 2, intruding through Strata IIa–IIc, and terminating in Stratum IId/SIHP # -8840 Component 1 (see Figure 93, Figure 95, and Figure 97). It was documented between 44 and 137 cmbs and measures 1.8 m across. The feature contains metal, ceramic, faunal bone, charcoal, and FAR. It is interpreted as a historical trash pit. The faunal bone and a grab sample of metal, glass, and ceramics were collected. Diagnostic artifacts are Euro-American dating from the late nineteenth to possibly the early twentieth century. One glass bottle fragment (Acc. # 159) dates between 1880 and 1920, indicating use of the feature post-1880.

Feature 15 is an oblong pit feature identified in the southeast wall of T-9B. It extends from the lower boundary of Stratum IIa/SIHP # -8840 Component 2, intrudes through Strata IIb and IIc, and terminates in Stratum IIe (see Figure 100 and Figure 101). It was documented between 65 and 150 cmbs and measures 35–45 cm across. No cultural materials were identified within the feature; its function is indeterminate.

Feature 16 is a basin-shaped pit feature identified at the upper boundary of Stratum IIa/SIHP # -8840 Component 2 in the northeast wall of T-10 (see Figure 105 and Figure 108). It was documented between 46 and 99 cmbs, overlying and therefore post-dating Feature 17 (see description below). It measures 65 cm across. No cultural materials were observed within the feature; its function is indeterminate.

Feature 17 is a large pit feature identified in the northeast wall of T-10, below Feature 16 (described above), which it therefore pre-dates (see Figure 105 and Figure 108). It extends from the lower boundary of Stratum IIa/SIHP # -8840 Component 2, intrudes through Strata IIb and IIc, and terminates in Stratum III. It was documented between 60 and 110 cmbs and measures 95 cm across. Several pieces of bottle glass and FAR were identified at the base of the feature. The bottle glass was collected; two diagnostic fragments date to 1800-1910, indicating use of the feature post-1800. The function of this feature is indeterminate.

Feature 18 is a basin-shaped pit feature identified at the upper boundary of Stratum IIa/SIHP # -8840 Component 2 in the west corner of T-11 (see Figure 109, Figure 110, and Figure 112). It was documented between 61 and 105 cmbs within the northwest sidewall and southwest endwall. The exposed portion of the feature is 70 cm long (northwest-southeast) by 60 cm wide (northeast-southwest). The feature contains charcoal. Its function is indeterminate.

Feature 19 is a long, rectangular pit feature identified in the northwest wall of T-11 (see Figure 109, Figure 110, and Figure 113). It was documented between 85 and 156 cmbs, originating in Stratum IIa/SIHP # -8840 Component 2, intrusive through Stratum IIb, and terminating in Stratum III. Based on morphology, this feature is interpreted as a posthole. The darker, organic-stained portion at the center of the feature represents the location of the former post, while the surrounding pit matrix is lighter in color (see Figure 113). A small amount of charcoal was observed near the base of the feature.

6.2.2 Stratum IIb

Stratum IIb consists of a fairly homogenous, dark brown to dark yellowish brown fine silty clay loam. Based on its homogeneity and fine silts, it appears to represent a low energy deposit. Stratum IIb was documented within all AIS test excavations; however, it is only designated as part of SIHP # -8840 Component 2 where it contains evidence of human activity, within T-2 and the adjacent T-2B. Within T-2, Stratum IIb contains three stacked waterworn basalt cobbles of indeterminate function (Feature 7). Within T-2B, it contains an angled pit, also of indeterminate function (Feature 10). These two features are described in detail below. Profiles, plan maps, and photographs are presented in Section 4.3: Subsurface Testing Results and are referenced in the descriptions below.

Feature 7 comprises three stacked basalt cobbles identified within Stratum IIb/SIHP # -8840 Component 2 in the northwest wall of T-2 (see Figure 47, Figure 48, and Figure 54). It was documented between 124 and 160 cmbs and measures 25 cm across. Its function is indeterminate.

Feature 10 is an oblong pit feature identified in the southeast wall of T-2B (see Figure 58, Figure 59, and Figure 63). It was documented at the upper boundary of Stratum IIb/SIHP # -8840 Component 2 between 117 and 171 cmbs and measures 25 cm across. Its function is indeterminate.

6.2.3 Laboratory Analyses

Two charcoal samples, collected from SIHP # -8840 Component 2, Features 2 and 4, were submitted to the Wood Identification Laboratory at IARII for taxa identification (see Section 5.4.2 for full results). Features 2 and 4 are both fire-related features identified in T-1 Stratum IIa. Feature 2 was documented at the upper boundary of the stratum, while Feature 4 was documented in the lower-middle portion of the stratum; hence, Feature 2 post-dates Feature 4.

Most of Sample 1 (Feature 2) was identified as *kiawe* (*P. pallida*), while the rest is indeterminate hardwood. As *kiawe* was likely introduced to Hawai‘i in 1828, Feature 2 therefore post-dates that time and dates securely to the post-Contact period. In contrast, Sample 2 (Feature 4) contains wood from native species including *‘ōhi‘a lehua* (*M. polymorpha*), *koa* (*Acacia* cf. *koa*), *kōpiko* (*Psychotria* sp.), and possibly *hau* (*Hibiscus* sp.); no post-Contact introductions were identified. These results suggest Feature 4 may date to the pre- or early post-Contact period; hence, a subsample recovered from Sample 2 (Feature 4) was submitted to Beta Analytic, Inc., for radiocarbon dating analysis.

The radiocarbon analysis yielded two-sigma calibrated date ranges of AD 1728-1810 (53.5% probability), 1646-1690 (26.0%), and 1925-post 1950 (15.9%). However, the most recent date range (1925-post 1950) can likely be discarded. Although diagnostic artifacts recovered from overlying fill deposits suggest Stratum IIa functioned as a surface into the 1930s (see Section 5.2.4), the identification of pit features within different vertical portions of the quite thick stratum indicates the layer was not deposited all at once but rather over a (potentially extended) period of time. As Feature 4 was identified within the lower portion of Stratum IIa, it would therefore date to the early part of that time period. Hence, the radiocarbon analysis, like the wood taxa analysis (discussed above), supports a pre- or early post-Contact date for the lower portion of Stratum IIa.

The artifact assemblage further supports the timeline suggested by radiocarbon dating and wood taxa identification. Artifacts were collected and analyzed from four pit features associated with the Stratum IIa/SIHP # -8840 Component 2 habitation layer. Two diagnostic glass fragments (Acc. #s 74 and 76) collected from Feature 17, documented at the lower boundary of Stratum IIa, date to 1800-1910, indicating use of the feature during that time period and consistent with an early post-Contact date for that portion of the layer. In contrast, diagnostic artifacts collected from Features 8, 12, and 14, documented at the upper boundary of the stratum, indicate use of these features post-1910 (Acc. #s 37, 41, and 47), post-1890 (Acc. # 55), and post-1880 (Acc. # 159), respectively, reflecting more recent use of that portion of the layer. Although shell midden (*P. reticulata*) was retrieved from Feature 12, it was assessed as likely historical (i.e., post-Contact), rather than traditional Hawaiian, and therefore not in conflict with the interpretation of the feature as a post-1890 historical trash pit.

Stratum IIb underlies and therefore pre-dates Stratum IIa. Based on the radiocarbon dating of the lower portion of Stratum IIa to the pre- or early post-Contact period and the lack of historical materials identified within Stratum IIb and its associated features, Stratum IIb likely dates to the pre- or very early post-Contact period. It is worth noting that this timeline places Stratum IIa during the time of Marín’s Vineyard, which was planted in 1815; however, no evidence of grape cultivation was identified within Stratum IIa. It is possible this portion of Marín’s land was not in active cultivation.

6.3 SIHP # 50-80-14-8840 Component 3

FORMAL TYPE:	Infrastructure remnants
FUNCTION:	Habitation; commercial
AGE:	Post-Contact
NUMBER OF FEATURES:	6
TEST EXCAVATIONS:	T-1, T-2, T-2B, T-4, T-10, and T-11
DIMENSIONS	0.2 acre
TAX MAP KEY:	[1] 1-7-006:012
LAND JURISDICTION:	City and County of Honolulu
PREVIOUS DOCUMENTATION:	N/A

SIHP # -8840 Component 3 consists of historical infrastructure remnants, documented within roughly the *makai* (southwest) half of the AIS study area (see Figure 35 and Figure 162 through

Figure 166). These remnants consist of an oil-rolled crushed coral surface with associated base course (Feature 1; T-1), a hollow tile wall with concrete base (Feature 2; T-2 and T-2B), a concrete footing (Feature 3; T-4), an etched concrete surface (Feature 4; T-10 and T-11), a mortared brick structure (Feature 5; T-10), and a burnt trash fill (Feature 6; T-11). These are summarized in Table 30 and are described in detail in the following subsections. Profiles, plan maps, and photographs are presented in Section 4.3: Subsurface Testing Results and are referenced in the descriptions below.

It should be noted that various demolition layers identified throughout the AIS study area are not included in SIHP # -8840 Component 3. These layers contain concrete, brick, metal, and hollow tile debris, as well as ceramics and bottle glass. They likely represent the remains of previous structures within the AIS study area; however, due to lack of integrity and association, they are not included within SIHP # -8840. Demolition layers were documented within eight test excavations (T-2, T-2B, T-2C, T-3, T-4, T-6, T-10, and T-12).

6.3.1 SIHP # -8840 Component 3, Feature 1, Oil-rolled Crushed Coral Surface with Associated Base Course

An oil-rolled crushed coral surface and associated basalt gravel base course (Strata If and Ig) were identified within T-1, near the southwestern boundary of the AIS study area. They are designated as SIHP # -8840 Component 3, Feature 1. Feature 1 was documented within all four trench walls, although it was absent from the northeastern corner of the excavation (see Figure 36 through Figure 40). Strata If and Ig are each approximately 10 cm thick, and Stratum Ig contains brick, glass, and ceramic fragments, as well as pig (*S. scrofa*) bone. The pig bone and a grab sample of artifacts were collected. Diagnostic artifacts are of primarily Asian origin and date from the mid-nineteenth to twentieth century. One machine-made bottle fragment (Acc. # 132) dates to post-1908, indicating the layer was deposited after that time.

According to an RLS of the project area by Fung Associates (Hibbard and Chiu 2016; see Appendix A), the parking lot was improved in 1966, and aerial photographs (see Figure 25 and Figure 29) indicate the AIS study area was asphalt-paved sometime between 1941 and 1968. Hence, SIHP # -8840 Component 3, Feature 1, likely functioned as a surface for some period of time between 1908 and 1966.

6.3.2 SIHP # -8840 Component 3, Feature 2, Hollow Tile Wall with Concrete Base

A hollow tile wall with concrete base was identified within two adjacent test excavations, T-2 and T-2B, near the southern corner of the AIS study area. It is designated as SIHP # -8840 Component 3, Feature 2. A review of historical maps suggests this wall may have served as a boundary marker between dwellings in the southeastern portion of the AIS study area and tenements in the central portion of the study area. This boundary is indicated with a solid line on the 1906 Dakin map (see Figure 163) and the 1914, 1927, and 1950 Sanborn maps (see Figure 164 through Figure 166). A line in approximately the same location appears on the 1893 Dodge and Wall map (see Figure 162), suggesting the boundary (if not the wall) dates back to at least the nineteenth century, when it appears to have been associated with agricultural and/or house lots of LCA 2938 (see Section 3.1.2.1 discussion). However, it should be noted that although the portion of Feature 2 within T-2 lines up quite well with the boundary on the 1950 Sanborn map (see Figure 166), the portion within T-2B does not line up as well. On the earlier maps, both remnants appear

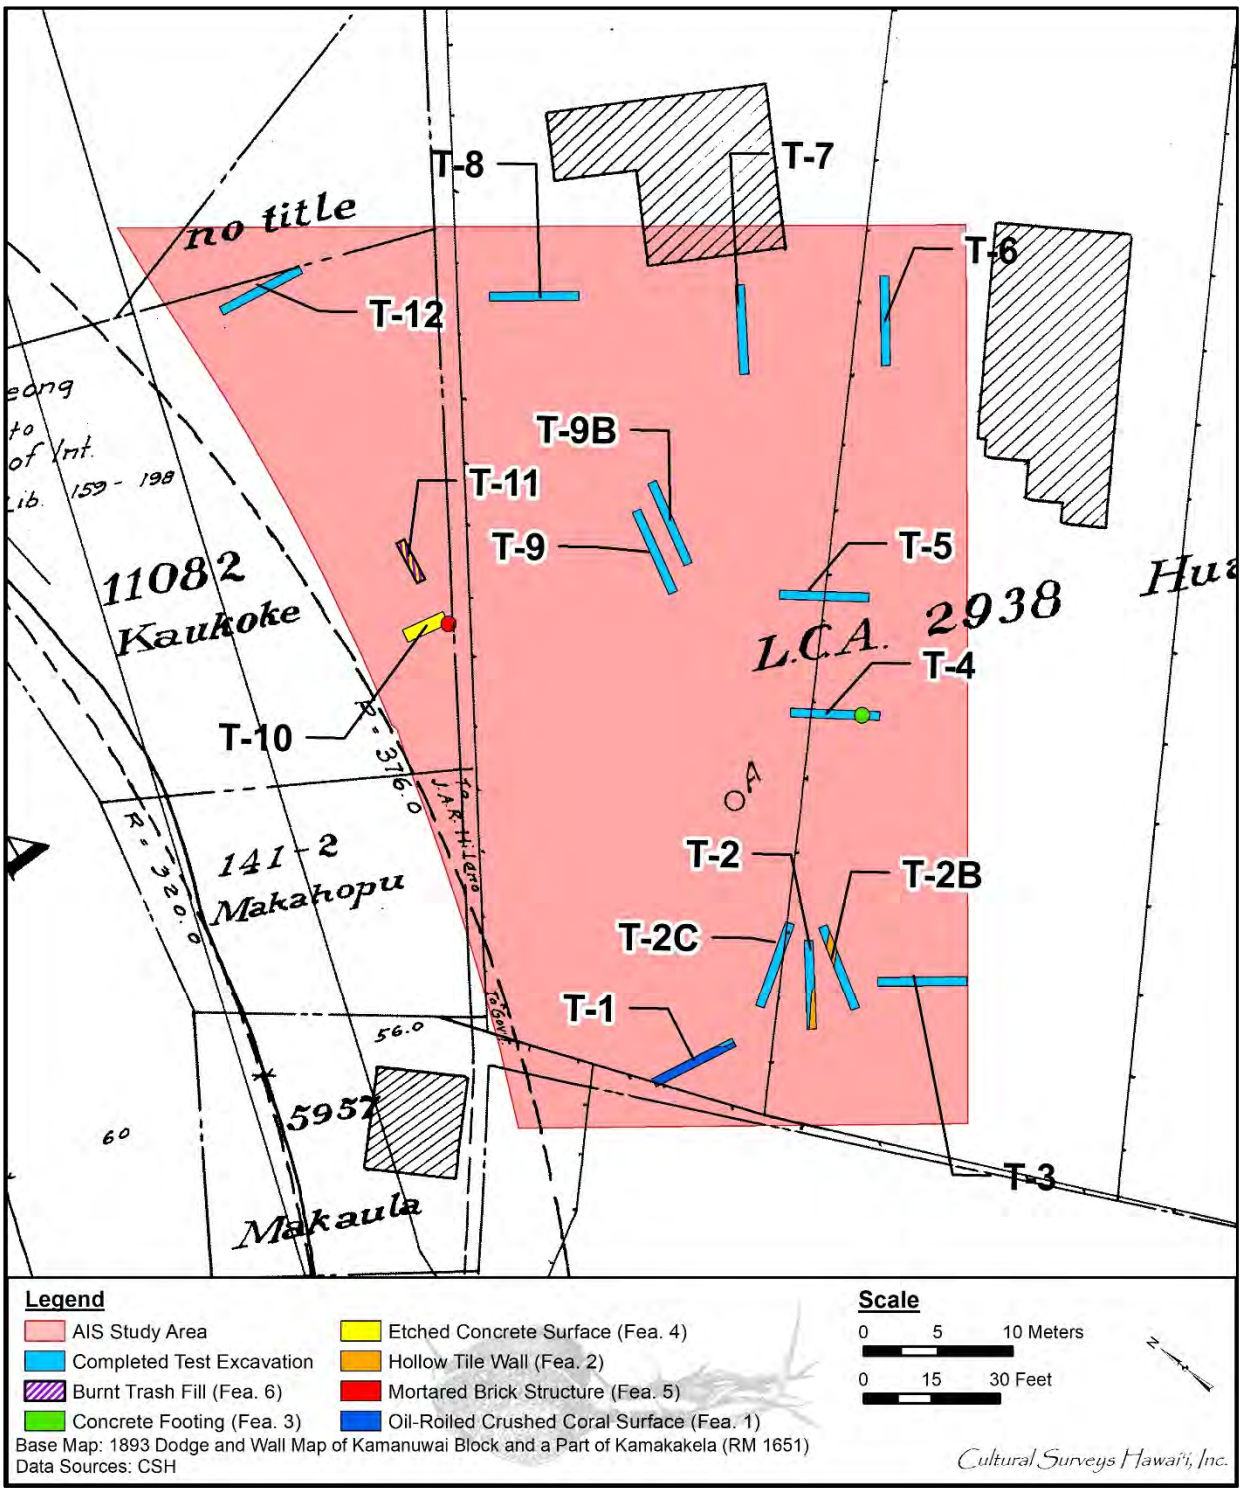

Figure 162. 1893 Dodge and Wall map of Kamanuwai Block and a part of Kamakakela (RM 1651), with overlay of completed test excavations and SIHP # -8840 Component 3, Features 1–6

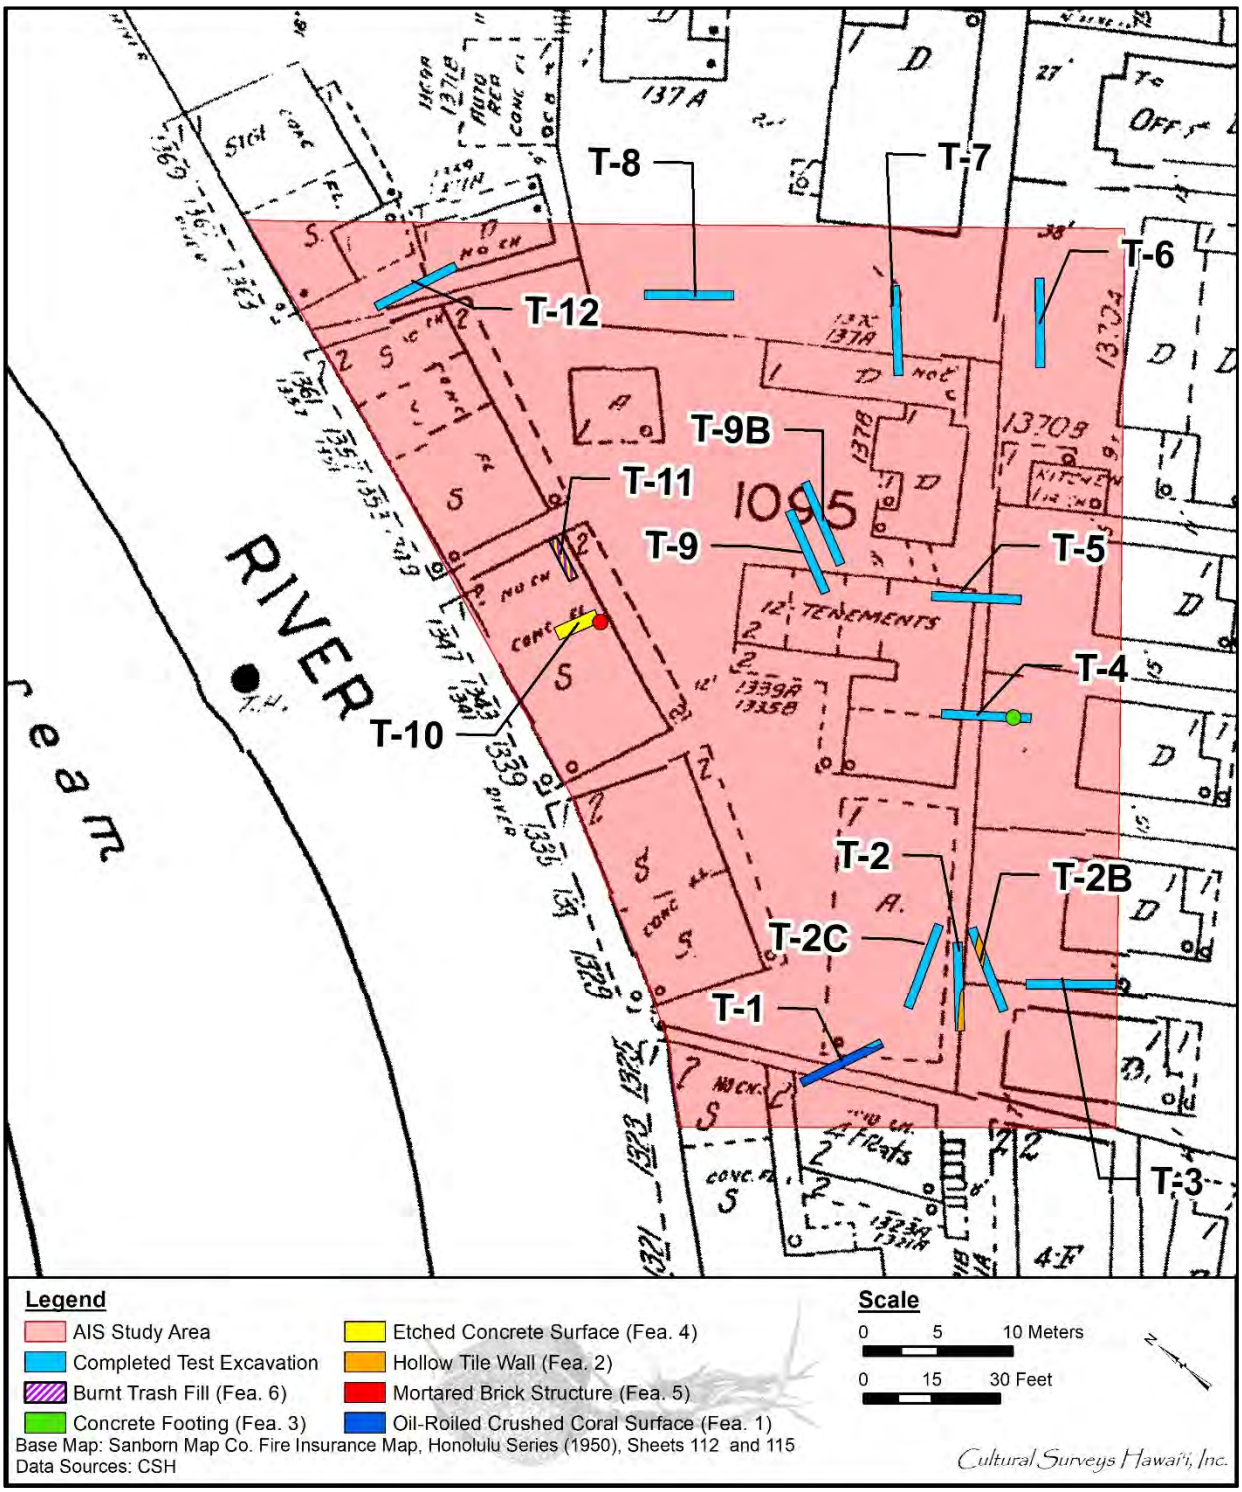

Figure 166. 1950 Sanborn Map Company fire insurance map, Honolulu series, Sheets 112 and 115, with overlay of completed test excavations and SIHP # -8840 Component 3, Features 1–6

Table 30. SIHP # -8840 Component 3 features identified during the AIS

Fea. #	Formal Type	Test Excavation	Comment
1	Oil-rolled crushed coral surface and associated base course	T-1	Functioned as a surface for some period of time between 1908 and 1966
2	Hollow tile wall with a concrete base	T-2, T-2B	Possible boundary wall between dwellings and tenements (see Figure 166*)
3	Concrete footing	T-4	Possibly concrete portion of the above hollow tile boundary wall
4	Etched concrete surface	T-10, T-11	Unspecified store fronting River St, present by 1950 (see Figure 166*)
5	Mortared brick structure with a concrete foundation	T-10	Likely constructed between 1847 and 1906
6	Burnt trash fill	T-11	Likely deposited between 1935 and 1950

*Sanborn Map Company fire insurance map, Honolulu series (1950), Sheets 110, 112, and 115

to be several meters southeast of the indicated boundary, although the margin of error for these maps is unknown. Hence, the association between Feature 2 and this former boundary cannot be stated definitively.

SIHP # -8840 Component 3, Feature 2, as identified in T-2 and T-2B, is described in detail below.

6.3.2.1 SIHP # -8840 Component 3, Feature 2 within T-2

SIHP # -8840 Component 3, Feature 2, was documented at the *makai* (southwest) end of T-2, extending roughly east-west from the southwest endwall into the southeast sidewall (see Figure 49 through Figure 52). It was documented between 37 and 70 cmbs. The exposed portion is 3.1 m long with a maximum width of 20 cm. The hollow tile portion comprises a single course and is approximately 20 cm thick. The underlying concrete base is 15 cm thick. No associated builder’s pit was observed; rather, it appeared the wall was founded on Stratum IIa (SIHP # -8840 Component 2, habitation layer; see Section 6.2 above) prior to the deposition of the Stratum Id fill.

6.3.2.2 SIHP # -8840 Component 3, Feature 2 within T-2B

Within T-2B, Feature 2 was documented between 22 and 73 cmbs, extending roughly east-west from near the east corner of the trench into the northwest sidewall (see Figure 58 through Figure 61, and Figure 62). The exposed portion is approximately 2.5 m long, with a maximum width of 35 cm. The hollow tile portion is discontinuous, comprising 1–2 courses where it was observed, with a maximum thickness of 35 cm. The underlying concrete base is approximately 18 cm thick. No associated builder’s pit was observed; rather, it appeared the wall was founded on Stratum IIa (SIHP # -8840 Component 2 habitation layer [see Section 6.2]) prior to the deposition of the Strata Ie and If fills.

Within T-2B, Feature 2 directly overlay a pit feature interpreted as a historical trash pit (SIHP # -8840 Component 2, Feature 8). Artifact analysis indicates use of the underlying pit feature no earlier than 1910; hence, Feature 2 was constructed no earlier than 1910.

6.3.3 SIHP # -8840 Component 3, Feature 3, Concrete Footing

A concrete infrastructure remnant identified as a footing was documented near the southeast end of T-4, within the trench floor and extending into both sidewalls. Designated as SIHP # -8840 Component 3, Feature 3, it appeared to be founded upon Stratum IIa (SIHP # -8840 Component 2 habitation layer [see Section 6.2]) and was documented between 43 and 58 cmbs. The exposed portion is 85 cm long by 45 cm wide and 15 cm thick.

This remnant may represent the concrete base of the hollow tile wall identified in T-2 and T-2B (SIHP # -8840 Component 3, Feature 2; see Section 6.3.2 above); it is of approximately the same thickness, width, and orientation (roughly east-west), as well as being at approximately the same depth and stratigraphic position (founded upon Stratum IIa). Furthermore, the presence of hollow tile debris in the surrounding Stratum Ic fill material suggests the upper hollow tile portion was once present but had been demolished. However, as T-4 is approximately 15 m *mauka* (northeast) of T-2 and T-2B, and since the hollow tile portion was not observed in T-4, the association cannot be stated definitively.

6.3.4 SIHP # -8840 Component 3, Feature 4, Etched Concrete Surface

An etched concrete surface was identified within the two interior excavations, T-10 and T-11, and designated as SIHP # -8840 Component 3, Feature 4. A review of historical maps suggests Feature 4 is associated with a former unspecified store fronting River Street, indicated on the 1950 Sanborn map (see Figure 166) as having a “CONC FL” (concrete floor). SIHP # -8840 Component 3, Feature 5, as documented in T-10 and T-11, is described in detail below.

6.3.4.1 T-10

Within T-10, Feature 4 was documented between 28 and 43 cmbs, beneath the concrete floor of the John R. Gilliland Sr. Building and underlying fill deposit (Strata Ia and Ib) (see Figure 103 through Figure 106 and Figure 108). Feature 4 is 10–15 cm thick and extended across the entire excavation (3.05 m long [northwest-southeast] by 0.89 m wide [northeast-southwest]) prior to being removed. It overlies crushed coral fill (Stratum Id) and construction fill (Stratum Ie).

6.3.4.2 T-11

Within T-11, Feature 4, was documented between 18 and 41 cmbs, beneath the current concrete floor of the John R. Gilliland Sr. Building and associated base course layer (Strata Ia and Ib) (see Figure 109 through Figure 111). It is 15–20 cm thick and extended across the entire excavation (2.96 m long [northeast-southwest] by 0.71 m wide [northwest-southeast]) prior to being removed. As in T-10, it overlies construction fill (Stratum Id) and crushed coral fill (Stratum Ie).

6.3.5 SIHP # -8840 Component 3, Feature 5, Mortared Brick Structure with Concrete Foundation

The remnant of a mortared brick structure with a concrete foundation was identified at the southern corner of T-10, between 60 and 110 cmbs (see Figure 104, Figure 105, and Figure 107). It is designated as SIHP # -8840 Component 3, Feature 5. Each brick is 13 cm long by 10 cm wide

and 6 cm tall; no maker’s mark was observed. The concrete base is approximately 10 cm thick. A maximum of seven courses were observed within the exposed portion of the feature (within the southwest sidewall, not depicted in the profile drawing), which comprises two walls at right angles, representing the northern corner of the former building/structure. The exposed portion of the feature is 50 cm long (northeast-southwest) by 45 cm wide (northwest-southeast) and 50 cm tall. It was not possible to extend the excavation in order to expose the feature further due to the presence of an active subsurface electrical line.

SIHP # -8840 Component 3, Feature 5, appeared to be founded on Stratum IIb, natural alluvium, as no builder’s pit was identified within the surrounding Stratum IIa (SIHP # -8840 Component 2, habitation layer), suggesting Feature 5 pre-dates Stratum IIa. However, according to Lebo (1997:106–107), the first brick structure was built in Honolulu in 1847. As radiocarbon dating (see Section 5.4.3) indicates use of Stratum IIa by 1810, it appears Feature 5 post-dates at least the lower (i.e., earlier) portion of Stratum IIa. A review of historical maps dating from 1906 to 1950 (see Figure 163 through Figure 166) revealed no former brick structure or building in this location, suggesting Feature 5 dates to the period between 1847 and 1906. Furthermore, diagnostic artifacts indicate deposition of the overlying Stratum Ie sometime after 1924, which is consistent with a late nineteenth or early twentieth century date for the construction of Feature 5.

6.3.6 SIHP # -8840 Component 3, Feature 6, Burnt Trash Fill

A thin burnt trash layer (Stratum If), approximately 5–10 cm thick, was documented in T-11, between 45 and 56 cmbs (see Figure 109, Figure 110, and Figure 112). Designated as SIHP # -8840 Component 3, Feature 6, it is composed of very dark brown silty clay loam and contains bottle glass, charcoal, and ceramics; a grab sample of glass and ceramics was collected. A saw-cut faunal bone recovered from the backdirt pile may also be associated with the trash layer; however, its provenience is uncertain.

SIHP # -8840 Component 3, Feature 6, underlies and therefore pre-dates the SIHP # -8840 Component 3, Feature 4 etched concrete surface (see Section 6.3.5 above), which was likely in place by 1950. Based on artifact analysis, the underlying Stratum IIa/SIHP # -8840 Component 2 habitation layer was exposed as a surface until at least 1935. Hence, Feature 6 was likely deposited sometime between 1935 and 1950. Although none of the artifacts recovered from Feature 6 were sufficiently diagnostic to be dated to a particular year or even decade, the date ranges for the items, which fall between the 1840s and 1930s, is consistent with deposition between 1935 and 1950.

6.4 SIHP # -8840 Significance Assessment

SIHP # -8840 is assessed as significant under Hawai‘i State historic property significance Criterion d (has yielded information important for research on prehistory or history) and Criterion e (has an important value to the native Hawaiian people or another ethnic group of the state), pursuant to HAR § 13-275-6. Additionally, it is recommended eligible for inclusion on the Hawai‘i and National Registers under Criterion D. This assessment is based on the historic property’s association with the extensive traditional Hawaiian agricultural system and habitation along Nu‘uanu Stream and the urban development of Honolulu. SIHP # -8840 has provided, and can potentially provide additional information on traditional Hawaiian agricultural practices and chronology; on the residential and commercial growth and ethnic distribution of Honolulu Town

from the nineteenth through mid-twentieth centuries; and on late pre-Contact to post-Contact burial practices. SIHP # -8840 retains integrity of location, materials, and design.

Section 7 Consultation

Consultation regarding the Halewai‘olu Senior Residences project has been ongoing since the project’s inception. This section summarizes consultation efforts among the project proponents, the SHPD, consulting parties, and the River Street community.

On 12 April 2017, Liz Char of Halewai‘olu Senior Development, LLC; Alison Chiu and Tonia Moy of Fung Associates, Inc.; and Matt McDermott of CSH met with Dr. Susan Lebo (Archaeology Branch chief), Kimi Matsushima and Stephanie Hacker (O‘ahu archaeologists), and Tanya Gumpac-Maguire (architectural historian) of the SHPD. This meeting initiated HRS §6E-8 consultation with the SHPD. Ms. Char introduced the project and provided a background of the property ownership, agency of record, proposed development, and known consulting parties. At that time, consulting parties consisted of the Chinatown Community Center Association, the Historic Hawai‘i Foundation, and Lum Sai Ho Tong. Because the demolition of the John R. Gilliland Sr. Building would likely result in an adverse effect, the SHPD staff recommended drafting an MOA in parallel with the project consultation and development and suggested additional parties for consultation. Mr. McDermott noted there was no data about subsurface archaeology within the project area, but that archaeological testing would likely yield findings. The SHPD staff recommended consultation with the O‘ahu Island Burial Council (OIBC) and proposed to meet at a later date to discuss a testing strategy for an AIS.

On 8 May 2019, Matt McDermott of CSH gave a presentation at the OIBC meeting to introduce the project, the AIS, and the consultation process. Mr. McDermott discussed the need for federal historic preservation review of the project triggered by federal funding and discussed previous land use within the AIS study area as indicated by background research. Finally, he presented the proposed subsurface testing strategy for the AIS and explained that as a part of the consultation process, letters would be sent to the OIBC, Chinatown community groups, Nu‘uanu Stream groups, architecture groups, and NHOs. Mr. McDermott asked for suggestions for additional parties to be consulted, and Board Member Aulii Mitchell suggested Kehaulani Lum. Board Member Kali Fermantez inquired as to how the effects of the proposed project on the John R. Gilliland Sr. Building would be mitigated, and Mr. McDermott emphasized the need to balance the impacts of building demolition with the good of the community. Board Chair Hina Wong-Kalu stated she looked forward to future consultation meetings and mentioned that she would come forward as a cultural descendant if she were not the Board Chair, as she is a descendant of both Hawaiian and Chinese in that area. Aulii Mitchell then offered that he is a descendant of the Tong Yees. Finally, Hina Wong-Kalu expressed concern regarding the crematorium at the Hosoi Garden Mortuary (one block Diamond Head [southeast] of the current project) and suggested including the Mortuary in the consultation process.

On 10 June 2019, invitations to the 25 June public meeting (see discussion below) were sent via email or U.S. mail to the SHPD and consulting parties; this letter formally initiated Section 106 consultation with the SHPD. Letters were sent to the following individuals/organizations:

On 25 June 2019, a public informational meeting was held at the Blaisdell Center. Sandra Pfund (City and County of Honolulu DLM) introduced the project and described the purpose of the meeting. Sharon Har (Halewai‘olu Senior Development) provided a project overview. Alison Chiu and Bethany Zedalis (Fung Associates) provided an architectural background. Matt McDermott of CSH summarized the historical and archaeological background. This was followed by questions from the audience. In attendance were Liana Benn, Wesley Fong, and Roland Louie of the Chinatown Community Center Association; Jay Morford and Ennilee Anulao of Hawaiian Memorial Life Plan; Kiersten Faulkner of the Historic Hawai‘i Foundation; Honorary Mayor of Chinatown Joseph Young; Pamela Liu of the Honolulu Police Department; members of the Caceres ‘Ohana (cultural descendants); Joette Yago and Janet Meinke-Lau of the City and County of Honolulu Department of Planning and Permitting; Karl Rhoads of the Hawai‘i State Senate (District 13); Councilmember Carol Fukunaga and Kim Ribellia from her office; Cheryl Tanaka and Randall Goto of the City and County of Honolulu Department of Budget and Fiscal Services; Christy MacPherson of Faith Action; City and County of Honolulu Managing Director Roy Amemiya; Kehaulani and Howard Lum of Lum Sai Ho Tong; and Donna and Daron Makaiwi of the Marin ‘Ohana. Questions included inquiries about possible project effects on the Mun Lun School; whether the planned multi-purpose room will be used as a community center; whether the project footprint could change as a result of the AIS findings; whether the Native American Grave Protection and Repatriation Act (NAGPRA) applies to the project; and the possible effects of mortuary smoke on the new building and its residents.

On 9 July 2019, a Section 106 consultation meeting was attended by Alison Chiu and Bethany Zedalis of Fung Associates; Tanya Gumpac-Maguire of the SHPD (Architecture Branch); Sharon Har and Questor Lau of Halewai‘olu Senior Development, LLC; Keith Kurahashi of R.M. Towill; Sandra Pfund from the City and County of Honolulu DLM; and Matt McDermott of CSH. Sharon Har provided an overview of the project and comments from consulting parties, including a request to incorporate historical documentation of the presence of *ali‘i* in the area and the Battle of Nu‘uanu, how smoke from the crematorium might affect the project, questions surrounding possible NAGPRA triggers, the name of the multi-purpose room, the impacts of construction and mitigation concerns, and whether the results of the AIS could alter the footprint of the senior residences. Mr. McDermott provided an update of the ongoing AIS, including the burial find of 8 July 2019 (SIHP # -8840 Component 2, Feature 6). Ms. Chiu and Ms. Zedalis proposed the area

of potential effect (APE) for the project to consist of an archaeological APE and an additional architectural APE. Ms. Gumpac-Maguire concurred with the two APEs.

On 22 July 2019, Ena Sroat and Matt McDermott of CSH met with Susan Lebo of the SHPD (Archaeology Branch) to discuss the results of the AIS testing up to that point and additional testing based on the identification of an in situ burial (SIHP # -8840 Component 2, Feature 6) in T-2. Based on this discussion, it was agreed that the AIS testing strategy would be increased by three test excavations—two in the vicinity of T-2 and one in the vicinity of T-9, where a potential agricultural berm had been identified.

On 14 August 2019, Matt McDermott of CSH presented the results of the current AIS investigation at the OIBC meeting. Mr. McDermott discussed the burial find of 8 July 2019 (SIHP # -8840 Component 2, Feature 6) and how excavation of two additional trenches—one on either side of the initial trench—failed to identify any additional remains. He explained that the forthcoming burial treatment plan (BTP) will be part of the MOA and that NAGPRA does not apply as the project does not involve tribal or federal land; this is confirmed by Kamana‘o Mills (large landowner). Board Member Aulii Mitchell inquired as to whether testing would be conducted to determine the burial date, and Mr. McDermott explained that the remains were found in a sediment layer that is not pre-Contact; hence, the burial is likely historic. He stated that Board Member Mana Caceres had been involved in the early stages of consultation regarding the burial find, and that Mr. Caceres would be applying as a cultural descendant of the remains.

On 19 September 2019, a second public informational meeting was held at the Blaisdell Center. Sandra Pfund of the City and County of Honolulu DLM explained the purpose of the meeting was to provide the community with an update regarding the AIS and CIA studies and how they relate to the project’s historic preservation review process. Sharon Har (Halewai‘olu Senior Development) provided a project overview. Bethany Zedalis (Fung Associates) provided an architectural background. Matt McDermott of CSH presented the preliminary results of the project’s AIS and proposed mitigation commitments, including burial treatment. There were no questions from the audience members, who included Sharon Pang of Care Companions & Consulting; cultural descendants Mana Caceres, Logan Keola, and Gerry Lam; Jay Morford of Hawaiian Memorial Life Plan; Cheryl Tanaka and Randall Goto of the City and County of Honolulu Department of Budget and Fiscal Services; Howard Lum of Lum Sai Ho Tong; Anni Peterson of Better Tomorrows; Allen Stack and Wesley Fong of the Chinatown Community Center Association; Karl Rhoads of the Hawai‘i State Senate (District 13); and Kiersten Faulkner of the Historic Hawai‘i Foundation. Also in attendance were Tonia Moy of Fung Associates; Ben Edger and Questor Lau of Halewai‘olu Senior Development, LLC; and Chantel Spencer and Kamuela Ka‘apana of CSH.

On 6, 8, and 9 October 2019, the following notice was published in the *Honolulu Star-Advertiser*:

> NOTICE TO INTERESTED PARTIES IS HEREBY GIVEN that human skeletal remains were identified by Cultural Surveys Hawai’i, Inc. during the course of an archaeological inventory survey related to the Halewai’olu Senior Residences, Honolulu Ahupua’a, Honolulu (Kona) District, O’ahu, TMK: [1] 1-7-060:120 [sic].
>
> Following the procedures of Hawai’i Revised Statutes (HRS) Section 6E-43, and Hawai’i Administrative Rules (HAR) Chapter 13-300, these remains are considered

previously identified. Based on the context of the finds, they are over 50 years old and most likely Native Hawaiian.

Background research indicates that this burial was located in the ‘ili of Kalawahine, within the boundaries of a Land Commission Award (LCA) to Huanu for Lahilani, daughter of Francisco Manini (Francisco Marin). On an 1871 Lyons map this particular award is identified as LCA 3:189; on an 1893 Dodge and Wall map it is identified as LCA 2938. Nearby LCAs include an award to Kaukoke (identified variously as LCA 2:1025 ‘Apana 3 and LCA 11082), an award to Makahopu (LCA 141-2), and an award to Keikenui no Makahopu (LCA 141-3).

The project proponent is the City and County of Honolulu—contact the Department of Land Management, ATTN: Director, 558 S. King Street, Honolulu, Hawai’i 96813 [Tel: (808) 768-4277].

The project proponent has proposed preservation in place for these remains; however, the decision to preserve in place or relocate these previously identified human remains shall be made by the O’ahu Island Burial Council in consultation with the State Historic Preservation Division (SHPD) and any recognized lineal and/or cultural descendants, per the requirements of HAR Section 13-300-33. Appropriate treatment shall occur in accordance with HAR Section 13-300-38.

All persons having any knowledge of the identity or history of these human remains are requested to immediately contact Ms. Regina Hilo, SHPD Burial Site Specialist, at 601 Kamokila Boulevard, Room 555, Kapolei, Hawai’i 96707 [Tel: (808) 692-8015, Fax: (808) 692-8020, Email: Regina.Hilo@hawaii.gov].

All interested parties shall respond within thirty (30) days of this notice and file descendancy claim forms and/or provide information to the SHPD adequately demonstrating lineal descent from these designated burials or cultural descent from ancestors buried in the same ahupua’a or district.

At the 9 October 2019 OIBC meeting, Brandy Caceres and ‘Ohana were recognized as cultural descendants of the *‘iwi kupuna* (human remains) identified on 8 July 2019 (SIHP # -8840 Component 2, Feature 6).

On 19 November 2019, a Section 106 Consultation meeting regarding the project’s MOA was attended by Susan Lebo (Archaeology Branch) and Tanya Gumpac-McGuire (Architecture Branch [via phone]) of the SHPD; Randy Chiu of the City and County DLM; Howard and Kehaulani Lum of Lum Sai Ho Ton; Liana Benn of the Chinatown Community Center Association; cultural descendants Mana and Kalehua Caceres; Daron Makaiwi of the Marin ‘Ohana; Sharon Har, Questor Lau, and Benjamin Edger of Halewai‘olu Senior Development, LLC; Matt McDermott of CSH; Tonia Moy and Alison Chiu of Fung Associates; Jay Morford of Hawaiian Memorial Life Plan; Mel Kalahiki of Borthwick Mortuary; Kiersten Faulkner of the Historic Hawai‘i Foundation; and Sylvia Young of the HawaiiUSA Federal Credit Union. Ms. Har explained that the purpose of the meeting was to discuss mitigation. Mr. McDermott explained that the MOA is being developed to alleviate the adverse effect of the project’s construction on the John R. Gilliland Sr. Building and the archaeological historic property identified during the AIS. SHPD staff proposed that mitigation should focus on benefitting the community. Ms. Faulkner suggested this could be

achieved through a display, a video, an oral history, a traveling exhibit, or by putting funds into an adjacent building. She further emphasized that the MOA needs to be enforceable, with a timeline and specific stipulations as to who does what and to what standard. Discussion also included the proposed activity center within the senior residence, and that it will not just be for residents but also for the community at large.

On 21 November 2019, Matt McDermott and Ena Sroat of CSH met with Susan Lebo, Samantha Cragen, and Andrew McCallister of SHPD's Archaeology Branch. Discussion topics included the outstanding SIHP numbers for the historic property identified during the AIS and possible mitigation measures.

Section 8 Summary and Interpretation

At the request of Halewai‘olu Senior Development, LLC, CSH has prepared this AIS report for the Halewai‘olu Senior Residences project, Honolulu Ahupua‘a, Honolulu (Kona) District, O‘ahu, TMK: [1] 1-7-006:012. The Halewai‘olu Senior Residences project is at 1331–1347 River Street, between Vineyard Boulevard and North Kukui Street. The John R. Gilliland Sr. Building and its surrounding parking lot are planned for demolition, to be replaced by proposed affordable senior housing.

The current project is within the portion of downtown Honolulu surrounding the mouth of Nu‘uanu Stream, known to Hawaiians as “Kou.” Kou had a long tradition as a royal center, where the *ali‘i* would meet and entertain. It also possessed shoreward fishponds and irrigated fields, and nearby Honolulu Harbor was brimming with marine resources. The land surrounding Nu‘uanu Stream was particularly densely populated, with a concentration of *lo‘i* and *‘auwai*. Historical maps show the AIS study area as within that dense cluster of *lo‘i*.

By the 1830s, Western commercial and missionary interests had supplanted the Native Hawaiian traditions that once shaped the environment, and Western and urban ideals propelled Honolulu’s growth. The Organic Acts of 1845 and 1846 initiated the process of the Māhele, the division of Hawaiian lands, which introduced private property into Hawaiian society. Historical maps indicate the majority of the AIS study area was within LCA 2938 to Huanu, for the heirs of Lahilahi (Gilliland ‘Ohana). Huanu was the grandson of Francisco de Paula Marín, whose land within the current study area was known as “The Vineyard.” Marín had planted his vineyard with grape cuttings sourced from California in 1815.

A review of twentieth century historical maps and aerial photographs indicates modern development within the study area by 1906. At that time, a tenement was at the center of the study area, while several dwellings and stores were along the northwestern boundary. By 1950, additional dwellings were present in the eastern and southeastern portions of the study area, and a parking area for automobiles was in the southern corner. The John R. Gilliland Sr. Building was constructed within the study area in 1958. In 2016, Fung Associates assessed this two-story commercial building as eligible inclusion on the National Register under Criterion C, as a very good example of a small retail/office building constructed in Hawai‘i in a modern style in the 1950s.

Based on background research, it was anticipated that the current AIS could identify buried agricultural deposits and features associated with taro and/or grape cultivation; pre- and/or post-Contact habitation layer(s) with associated features, potentially including human remains; landscape features or structural remnants associated with LCA boundaries; and nineteenth and twentieth century structural remnants with associated artifacts and/or historical trash pits. As the AIS study area consists of a two-story commercial building (the John R. Gilliland Sr. Building) and associated asphalt parking lot, no surface archaeological historic properties were anticipated.

Fifteen test excavations (T-1 through T-12, including T-2B, T-2C, and T-9B) were completed. In general, the observed stratigraphy consists of the modern land surface, fill deposits, and infrastructure remnants (Stratum I); a vertical series of natural alluvium (Stratum II); and a buried streambed, likely associated with a former braid of Nu‘uanu Stream (Stratum III). In addition, one

archaeological historic property was identified: SIHP # -8840, subsurface cultural deposits, documented in all 15 test excavations.

SIHP # -8840 is a newly identified historic property with three components spanning the pre-Contact period through the mid-twentieth century. Component 1 consists of agricultural deposits, likely representing pre-Contact taro farming along the banks of Nu‘uanu Stream; these comprise the deeper alluvial deposits (Strata IIc–IIg) and reflect at least three periods of agriculture. Associated berm structures (Stratum IId) were identified in two adjacent test excavations (T-9 and T-9B), indicating that area may represent the intersection of two or more agricultural plots.

Component 2 consists of habitation layers with associated pit features, including a human burial site (Feature 6). This component comprises the upper alluvial deposits (Strata IIa and IIb), which likely functioned as living surfaces from the late pre-Contact period at least into the 1930s. The uppermost alluvial deposit, Stratum IIa, is a thick layer with pit features documented throughout its vertical extent. This layer likely accumulated over an extended period of time and, based on radiocarbon dating, functioned as a surface by 1810. Hence, Stratum IIa was likely contemporaneous with Marín’s Vineyard, although no evidence for grape cultivation was identified within the layer. It is possible this portion of the Vineyard was not actively cultivated.

Component 3 consists of historical infrastructure remnants, including an oil-rolled crushed coral surface, a hollow tile wall remnant, a concrete footing, an etched concrete surface, a mortared brick structural remnant, and burnt trash fill. Based on stratigraphic context and analysis of associated artifacts, all of these remnants date to the twentieth century, except possibly for the brick structural remnant (Feature 5), which may date to the nineteenth century (post-1847, the date of the first brick structure in Honolulu).

SIHP # -8840 is assessed as significant under Hawai‘i State historic property significance Criterion d (has yielded information important for research on prehistory or history) and Criterion e (has an important value to the native Hawaiian people or another ethnic group of the state), pursuant to HAR §13-275-6. Additionally, it is recommended eligible for inclusion on the Hawai‘i and National Registers under Criterion D. This assessment is based on the historic property’s association with the extensive traditional Hawaiian agricultural system and habitation along Nu‘uanu Stream and the urban development of Honolulu. SIHP # -8840 has provided, and can potentially provide additional information on traditional Hawaiian agricultural practices and chronology; on the residential and commercial growth and ethnic distribution of Honolulu Town from the nineteenth through mid-twentieth centuries; and on late pre-Contact to post-Contact burial practices. SIHP # -8840 retains integrity of location, materials, and design.

Section 9 Significance Assessment

Once a historic property is identified, then an assessment of significance shall occur pursuant to HAR §13-275-6. To be significant, a historic property shall possess integrity of location, design, setting, materials, workmanship, feeling, and/or association and meet one or more of the following significance criteria:

a. be associated with events that have made an important contribution to the broad patterns of our history;
b. be associated with the lives of persons significant in our past;
c. embody the distinctive characteristics of a type, period, or method of construction; represent the work of a master, or possess high artistic value;
d. have yielded, or is likely to yield, information important for research on prehistory or history; or
e. have an important value to the native Hawaiian people or to another ethnic group of the state due to associations with cultural practices once carried out, or still carried out, at the property or due to associations being important to the group's history and cultural identity.

Table 31 presents the significance assessment and mitigation commitments for the historic property identified during the Halewai‘olu Senior Residences AIS, SIHP # -8840 (subsurface cultural deposits). This significance assessment is included in this AISR for the review and concurrence of the SHPD. In addition, historic property integrity, which is the ability of a property to convey its significance, was assessed based on the guidance provided in National Register Bulletin #15, "How to Apply the National Register Criteria for Evaluation" (NPS 1997) and "Assessing Site Significance: A Guide for Archaeologists and Historians" (Hardesty and Little 2000). The seven aspects of integrity and their descriptions are as follows:

- *Location* is the place where the historic property was constructed or the place where the historic event occurred
- *Design* is the combination of elements that create the form, plan, space, structure, and style of the property
- *Setting* is the physical environment of a historic property
- *Materials* are the physical elements that were combined or deposited during a particular period of time and in a particular pattern or configuration to form a historic property
- *Workmanship* is the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory
- *Feeling* is a property's expression of the aesthetic or historic sense of a particular period of time
- *Association* is the direct link between an important historic event or person and a historic property (NPS 1997; Hardesty and Little 2000)

Table 31. Archaeological historic property integrity, significance, and mitigation commitments

SIHP # 50-80-14-	AIS Test Excavations	Formal Type/Name	Function	Age	Integrity							Hawai‘i State Significance Criteria	National Register Eligibility Criteria	Mitigation Commitments
					Location	Design	Setting	Materials	Workmanship	Feeling	Association	HAR §13-275-6	36 CFR 60.4	
8840	T-1 through T-12	Subsurface cultural deposits	Agriculture, habitation, human interment, commercial and residential infrastructure	Pre-Contact to mid-twentieth century	Y	Y	N	Y	N	N	N	d and e	D	Archaeological monitoring; burial treatment (BTP forthcoming)

SIHP # -8840, subsurface cultural deposits, has three components, designated as Components 1–3. Component 1 comprises agricultural deposits. Component 2 comprises habitation layers with associated pit features, including a human burial. Component 3 comprises historical infrastructure remnants. SIHP # -8840 is assessed as significant under Hawai‘i State historic property significance Criterion d (has yielded information important for research on prehistory or history) and Criterion e (has an important value to the native Hawaiian people or another ethnic group of the state), pursuant to Hawai‘i Administrative Rules (HAR) §13-275-6. Additionally, it is recommended eligible for inclusion on the Hawai‘i and National Registers under Criterion D. This assessment is based on the historic property’s association with the extensive traditional Hawaiian agricultural system and habitation along Nu‘uanu Stream and the urban development of Honolulu. SIHP # -8840 has provided, and can potentially provide additional information on traditional Hawaiian agricultural practices and chronology; on the residential and commercial growth and ethnic distribution of Honolulu Town from the nineteenth through mid-twentieth centuries; and on late pre-Contact to post-Contact burial practices. SIHP # -8840 retains integrity of location, materials, and design.

Section 10 Project Effect and Mitigation Commitments

The following project effect and mitigation commitment discussions are intended to facilitate project planning and to support the proposed project's required historic preservation consultation. It is also intended to provide specific mitigation commitments for the Halewai‘olu Senior Residences project.

10.1 Project Effect

Under Hawai‘i State historic preservation review legislation, one of two project effect determinations must be established: 1) "No historic properties affected," the project will have no effect on significant historic properties; or 2) "Effect, with proposed mitigation commitments," the project will affect one or more significant historic properties, and the effects will potentially be harmful. However, the agreed upon mitigation commitments involving one or more forms of mitigation will reasonably and acceptably mitigate any harmful effects (HAR §13-275-7).

One significant archaeological historic property (SIHP # -8840) was documented during the Halewai‘olu Senior Residences AIS, and the proposed project has the potential to affect this historic property. Based on the AIS investigation, the project effect determination per HAR §13-275-7 is "effect, with agreed upon mitigation commitments." In addition, under Section 106 of the NHPA, the proposed project will have an "adverse effect" on the identified archaeological historic property, SIHP # -8840. The mitigation commitments outlined below will reduce the project's potential adverse effect on SIHP # -8840, subsurface cultural deposits.

10.2 Mitigation Commitments

Under Hawai‘i State historic preservation review legislation, if a project will have an "effect" (impact) on significant historic properties, then a mitigation commitment proposing the form of mitigation to be undertaken for each significant historic property shall be submitted for SHPD review and acceptance. Mitigation may occur in the following five forms: A) Preservation, B) Architectural Recordation, C) Archaeological Data Recovery (which includes archaeological monitoring), D) Historical Data Recovery, and E) Ethnographic Documentation (HAR §13-275-8).

This AIS indicates the Halewai‘olu Senior Residences AIS study area contains one archaeological historic property: SIHP # -8840, subsurface cultural deposits. SIHP # -8840 was identified in all 15 test excavations. Under Section 106 of the NHPA, the proposed project will have an "adverse effect" on this archaeological historic property. In addition, due to the inherent limitations of any sampling strategy, it is possible additional historic properties may be identified during construction activities.

Based on the AIS results, the agreed upon mitigation commitments consist of a burial treatment plan (BTP) addressing the previously identified human burial site (SIHP # -8840 Component 2, Feature 6) and data recovery in the form of archaeological monitoring for SIHP # -8840 Components 1–3 (see Table 31). Mitigation measures will be detailed in the MOA currently being prepared pursuant to 36 CFR Part 800.6.

I. GENERAL INFORMATION

Common / Present Name:	John R. Gilliland Building
Historic Name:	Same
Property Owner:	City and County of Honolulu
Address:	1331 River Street / Units 1331, 1341, 1343, 1347, 201 through 216
City/ Town/ Location:	Honolulu
County:	Honolulu
TMK [(X)-X-X-XXX:XXX)]:	(1)-7-0-060: 120: 000 through 020
Subdivision/Neighborhood:	Chinatown
Latitude:	157°51'35"W
Longitude:	21°18'56"N
Parcel Number:	
Historic District:	N/A
Original Use:	Commercial
Current Use:	Commercial
Architect/ Builder (if known):	Kenneth Sato
Date of Construction (if known):	1958

II. Photograph of Resource

Prepared By: Don Hibbard and Alison Chiu **Consulting Firm:** Fung Associates, Inc.

III. CONDITION ASSESSMENT

Category (select all that apply):

- ☐Building(s)
  - ☐Residential ☒**Commercial** ☐Educational ☐Public/Civic ☐Religious
- ☐Structure(s)
- ☐Object(s)
- ☐Site(s)/Landscape(s)
- ☐Archaeology or potential for archaeology (Please provide a description of the potential for archaeology within VI. Description of Resource Features below.)

Condition:

- ☐Excellent
- ☐Good
- ☒**Fair**

Eligibility (select all that apply):

- ☐National Register of Historic Places
- ☐State Register of Historic Places
  - ☐Not Eligible
  - ☒**Eligible**
  - ☐Listed
  - ☐Contributing to Historic District:
    Name of District: Click here to enter text.
  - ☐Unknown

Criteria of Significance (select all that apply)

- ☐A: Associated with Events
- ☐B: Associated with Significant Person(s)
- ☒**C: Distinctive characteristics of a type, period or method of construction; work of a master; possess high artistic values (Architecture, Engineering, Design)**
- ☐D: Have yielded or may be likely to yield information important to history or prehistory.

VI. Narrative Description

Include within the description of resource features any changes to the resource that have been made over time.

A. Describe exterior features:

This two-story modern style building is distinguished by a canopy between the first and second stories that runs the length of the façade and has a folded plate roof with a drip edge. The façade is further enriched by the roof, which is a series of front-facing, segmental-arched, barrel vaults with overhanging eaves on both the front and rear elevations of the structure. The reinforced concrete building is eight bays wide, with all the bays being of similar width except the northeast-most bay, which is narrower. The barrel vaults define the bays with one covering each bay. On the second story each bay features a picture window, flanked on either side by a pair of jalousie windows. A window air-conditioning unit is set in the lower half of one jalousie window in each bay. At ground level, each bay contained a store front, but the three southeast bays have been modified to address the consolidation of the interior spaces to develop a larger restaurant area. The original store fronts have a hinged door to the north with an adjoining display window to the south. The windows have been modified over time. The kick plate below the windows is simply the flat wall, which is composed of concrete masonry units (CMU) blocks. The narrower, north bay has a set of three jalousie windows on the second story and on the first a tri-fold door, opening the store space to the sidewalk. The three south bays each have six panels. The six north-most panels are solid, while in the middle bay each panel contains a fixed, plate glass window in its upper portion. The south-most bay has a north of center, recessed doorway with a fixed plate glass window to the entry's south. A box neon sign is suspended from the canopy above the entry and reads, "Uptown Café." A second box neon sign is similarly suspended from the canopy in the third bay from the north and this one reads, "Hanagasa Inn."

The rear, southeast side of the building on the ground level has a single door entry in each bay at its south side. The second story is handled the same as the façade's second story. A 3'-6" concrete sidewalk runs the length of the rear elevation and is defined by a 3" curb on its parking lot edge. The parking lot is elevated above the sidewalk and is flush with the top of the curb. Air conditioning/ventilation duct work, conduits, and electrical equipment protrude from the face of the rear elevation.

At either end of the building a double stair, each stair having eighteen steps, leads up to the second floor. The steps are concrete, and a flat roof extends 3'-9" from the sides of the end barrel vaults to protect the stairs from the elements. The space under the stairways has been enclosed with T-111 in recent years, to provide storage areas. The storage spaces are accessed by a centered, hinged, T-111 door. The stairways retain their wrought iron railings with their stylized post and rail pattern. A hinged, metal, security screen door is at the head of the stair.

B. Describe distinguishing interior features:

The screen doors at the head of the stairs provide access to a double-loaded, central hallway. The hall is approximately 4'-0" wide and curves to follow the line of the street. The ceiling in the hallway follows the vaulting of the roof and is approximately 20'-6" high at its apex. The concrete floor has been covered by modern tiles. There are eight doors on each side of the hall, which lead into office spaces. Nine of the doors are original and feature four horizontal-paned windows. At the bottom of some of the doors is a gravity flap letter plate. None of the original doors retain their original knobs. Each office has a picture window flanked on either side by a pair of jalousie windows, except the narrower, northern-most offices which only have a set of three jalousie windows. In a corner of each office is a half bath, which is entered via a single panel door. None of these doors have their original knobs. The offices have 9'-4" high dropped ceilings and originally had connecting doors in the plastered partition walls to allow access to the other office spaces. A number of these openings have been sealed up, but some original single panel doors still remain, again minus their original knobs.

On the ground floor only two spaces are occupied: the Uptown Café and Hanagasa Inn. The former occupies the three southern-most bays of the building. It has an L-shaped dining area with a bar niche at the north end of the dining room. It was remodeled around 2000. The Hanagasa Inn occupies the second and third bays from the north. It was remodeled in the 1990s. Chikara Mochi occupied the space south of Hanagasa Inn. It still retains obscure, wire fire glass jalousie windows in its front and rear walls, a material which is rarely found today.

C. Describe the landscape and setting (include adjacent sites/resources):

This commercial building sits on a flat, 26,925 square foot lot, and fronts on River Street with vacant lots to either side. Three Royal Poincianna trees (*Delonix regia*) line the sidewalk in front of the building. A blacktop-paved parking lot occupies the rear of the property behind the building. The rear parking lot was improved and enclosed in 1966 by a CMU retaining wall.

VII. Statement of Significance

The Gilliland Building was constructed in 1958, following designs prepared by Kenneth Sato. It is architecturally significant as a very good example of a small retail/office building constructed in Hawaii in a modern style in the 1950s. It is typical of its period in its design, materials, workmanship, and construction methods. It is also important as a very good example of the architectural work of Kenneth Sato.

The façade of the building is distinguished by its folded plate canopy and segmental arched barrel vaulted roof. Folded plate technology originated in Germany in 1925 when it was utilized to cover a coal bunker. The idea spread to Russia and its earliest known use in the United States was in a 44'-0" x 77'-0" San Francisco warehouse in 1935. Other warehouses in California utilized this new type of roof, but as late as 1949, it was still not well known in the United States. An assembly of flat plates, or slabs, inclined in different directions and joined along their longitudinal edges, the folded plate structural system is capable of carrying loads without the need for additional supporting beams along mutual edges. Typically made of cast *in situ* or precast reinforced concrete, these roofs require less material, are cheaper to construct, are simpler to manufacture than other shells and are economical over long spans that need to be free of internal columns. Following World War II the distinctive, eye catching appeal of the form slipped nicely into the mid-century modern architectural vocabulary, celebrating the new age, the wonders of technology and its accompanying affluence. The only other use of a folded plate canopy utilized on a commercial building in Honolulu's downtown area is at 1165 Bethel Street.

The segmental ached, barrel-vaulted, concrete roof also enunciated the advances in concrete technology as applied to the building trade. The designer of the building, Kenneth Sato, also utilized this form at the Waimalu Shopping Center in both the roof and first-story canopy.

As such the building stands as an excellent example of the dramatic and eye-catching mid-century modern movement in Hawaii. The building's folded plate canopy, combined with its concrete barrel vaulted roof, make it a distinctive architectural statement, celebrating the plastic qualities of concrete and the variety of forms it could assume. There are no other comparable buildings in the city.

Kenneth Sato (1908-2006) was born in Kahuku, on Oahu, graduated from McKinley High School, and received a degree in civil engineering from the University of Hawaii in 1930. He owned the Kewalo Steel Company, and designed a number of churches, apartments, and low rise commercial buildings, and worked on a number of public schools and bridges for the Territory of Hawaii. Other works include the Waiola Congregational Church in Lahaina, the Miyamoto Buildings at 1331 Nuuanu Avenue, and the Door of Faith Church on Young Street in Honolulu.

VIII. Survey Analysis

Please provide your observations about the survey; including constraints and opportunities for future research and/or survey in connection to this site.

The survey was straight-forward and encountered no problems. Two of the ground floor commercial spaces were boarded up and could not be accessed. It would be of value to learn more about the designer of the building, Kenneth Sato, and at some point an inventory should be compiled on folded plate roofs in Honolulu.

Appendix C Pollen Analysis

Pollen Analysis

Bruce G. Phillips
BGP Consulting LLC

In advance of development at the Halewai‘olu Senior Residences, Honolulu *ahupua‘a*, Honolulu District, Island of O‘ahu, Cultural Surveys Hawai‘i (CSH) identified multiple buried agricultural deposits, designated CSH 1. Also identified were habitation layers, designated CSH 2. Trench 7 was excavated in the area consisting primarily of agricultural deposits (CSH 1); six sediment samples were collected from Trench 7. Trench 9 was excavated an area where both habitation and agricultural layers were found (CSH 2); four sediment samples were collected. Subsequently, the ten sediment samples were submitted to BGP Consulting for pollen analysis, with the goal of identifying past cultural activities in the area and characterizing vegetation communities at the time of deposition.

The project area is situated on former floodplain of and immediately adjacent to Nu‘uanu Stream. Elevation is approximately 10 feet above mean sea level. Annual rainfall averages 24 to 31 inches (Giambelluca et al. 1986). Soils in the project area are mapped as Ewa silty clay loam, deep, well drained soils that formed in alluvium on alluvial fans and river terraces (Soil Survey Staff 2019). *Mauka* of the project area are soils classified as Kaena clay, deep, poorly drained soils that formed in alluvium and colluvium, primarily found on alluvial fans. Prior to urban development and channelization of Nu‘uanu Stream in the early 20th century, the area served for many centuries as irrigated *lo‘i kalo* (taro wetland fields).

Before Polynesian agriculture transformed coastal lowlands, natural vegetation along the coastline would have primarily been characterized as Coastal Dry communities, having elevations less than 50 feet and rainfall less 47 inches per year (Gagne and Cuddihy 1990). Local edaphic conditions determine the makeup of various herblands, grasslands, shrublands, forests, and mixed communities. In turn, these communities can be further differentiated based on dominant species, such as *‘aki ‘aki* Grassland dominated by *Sporobolus virginicus*. Many areas once covered with extensive grasslands are now dominated by alien species, such as *kiawe* (*Prosopis pallida*) forests.

Coastal Wet communities occur on all of the main islands. Native examples, however, were much disturbed by the early Hawaiians, as nutrient-rich floodplains, marshes, and lowland riparian areas were turned into fishponds and irrigated farmlands (*lo‘i*) for the cultivation of *kalo* (taro; *Colocasia esculenta*). Much of these same farmlands were subsequently turned into rice fields. Common natural constituents would have included members of the sedge family (Cyperaceae) and grass family (Poaceae).

Methods

Sediment samples were sent to the Palynology Laboratory, Texas A&M University, College Station, for pollen extractions (fern-type spores are herein included under “pollen”). Sample bag contents were thoroughly mixed and 10-gram subsamples were taken. Approximately 19,666

grains of *Lycopodium* were added to estimate pollen concentration. Samples were then treated with 10 percent hydrochloric acid to reduce carbonates, followed by a swirl-and-decant step (Mehringer 1967):136–137) to reduce the heavier matrix fraction (greater than 180 µm). Silicates were reduced by a hydrofluoric acid treatment of approximately 20 hours. Heavy liquid flotation in zinc bromide (with a specific gravity of 1.9) was followed by acetolysis to further reduce organics. The remaining residues were washed with water and alcohol, stained with saffranin, and suspended in glycerol.

At BGP Consulting facilities, extracts were mounted and examined at a viewing power of 400X on an Olympus BHTU compound microscope. Typically, standard counts of 100- to 200-pollen grains are conducted. In the current project, however, total pollen concentrations were insufficient for standard counts. In this case, entire slides were scanned and all grains were counted. Identifications were aided by BGP Consulting reference material and by keys (Selling 1946, 1947; Moore et al. 1991). Each fossil pollen grain was identified to the generic level when possible. If a grain could not be differentiated from similar genera, it was identified to the family level. Pollen grains that were broken, corroded, or degraded beyond recognition were assigned to the "degraded" category. Percentages of types were calculated for each sample. Pollen concentrations were calculated with the following formula:

$$\text{Concentration (grains/gram)} = \frac{\text{pollen grains counted}}{\text{tracers counted}} \times \frac{\text{tracer concentration}}{\text{sample weight}}$$

Results

No samples were sufficient for standard counts and pollen was entirely absent from four samples. Twenty-five types of pollen and spores are identified (Table 1). The assemblage is diverse, primarily reflecting relatively dry shrub-covered terrain; forested land upslope is indicated by fern spores. In samples containing pollen, the percentages of degraded grains range from relatively high (19.3) to very high (39.5), indicating poor preservation within the sample set (Tables 2 and 3). Therefore, the data likely are not an accurate reflection of the original pollen assemblage. That is, they probably do not convey a realistic scenario of the former floral landscape.

The most common types are low-spine Asteraceae (*Ambrosia* type), Cheno-Am (*aweoweo*), spurge family, and grass family, all in variable percentages. Sedge family pollen, representing wetlands, is present, but found in relatively low percentages. Polynesian introductions include *niu* (coconut), *wauke* (paper mulberry), and possibly *ti*. Historic introductions are pine and *kiawe* (mesquite). Large grass pollen grains could represent *laiki* (rice) and/or *ko* (sugarcane) farming in the area, or the collection of *pili* grass (*Heteropogon contortus*). In practice, *laiki*, *ko*, and *pili* grass pollen grains have common traits under light microscopy and cannot be distinguished (Moore et al. 1990); SEM is required.

Considerations

Despite the widespread practice of *lo'i kalo* cultivation across O'ahu, *Colocasia* pollen is rare in suspected and even known agricultural settings, such as the current project area. Typically propagated from a corm/root cutting or from a shoot, *kalo* rarely blooms or sets seed naturally (Onwueme 1999). Like other members of the Araceae (arum family), *kalo* produces relatively small quantities of pollen when in bloom. Some varieties have never been known to flower. *Kalo* is harvested at a time when the edible corm has its highest nutritional content and is most viable for propagation. This occurs before flowering, further reducing the possibility of pollen deposition.

Degraded pollen assemblages are not uncommon in archaeological contexts (Hall 1981, 1985; Holloway 1981). Unfortunately, there currently are no standards and guideline by which analysts record and report degraded pollen grains (Bryant and Hall 1993), often making comparisons difficult. Many factors cause pollen deterioration, and the process is not well understood. Mechanical factors can cause grains to be crushed or torn apart, whereas chemical agents can affect their structural integrity. Chief among chemical agents is the cycle of wetting and drying (Holloway 1989). It is possible that pollen in sediments at or near the water table have suffered deterioration due to fluctuations in groundwater level, caused by climatic (e.g., rainfall) and/or oceanic (e.g., sea levels) factors, or possibly even tides. Also affecting the number and distribution of pollen types is the amount of sporopollenin in grains of different plants. Sporopollenin is a highly resistant organic compound that allows pollen to be preserved in sediments and other settings. Because Cheno-Ams and Asteraceae have large amounts of the compound and hence preserve well, they are often over-represented in the pollen record. Soil chemistry can also cause pollen to degrade. For example, ancient soils in the American Southwest are highly basic, causing deterioration. This likely is not the case in young A and C horizons along the O'ahu coast. Mechanical processes include degradation during fluvial transport and repeated trampling in high-traffic areas. Although technically not a process of degradation, mechanical sorting can affect the amount of pollen in sediment samples. That is, during fluvial transport, pollen acts like clastic particles, moving and settling according to water velocity; the largest grains are deposited in coarse silt and fine sand, while smaller grains settle in fine silt and clay. As most samples come from clay layers, mechanical sorting likely is not responsible for the differences in pollen concentrations. Although Stratum IIc is somewhat gravelly and potentially affected by sorting, the layer in Trench 7 has the highest pollen concentration in the assemblage (296 grains per gram), albeit extremely low. Although soil pH may not have caused pollen deterioration, some other chemical factor might be to blame, such as reduction/oxidation reactions. A likely cause is repeated cycles of wetting and drying near the water table, though this may not be the only cause.

Discussion

Within Trench 7, no data is available for Strata IIa and IIb, the habitation layers (CSH 2). Representing CSH 1, Stratum IIc contains a single large grass grain, potentially reflecting nearby *laiki* or *ko* farming. The grain might also be intrusive. In the lower portion of the sample column (Stratum IIe), Asteraceae and Cheno-Ams dominate, suggesting a shrubland environment. Grass pollen gradually increases over time, becoming dominant in Stratum IIc. If taken at face value,

the data suggest a shift from shrubland to grassland. A high portion of fern spores in Stratum IIc might reflect increased input from upslope, and more overbank flooding.

The Trench 9 assemblage is more diverse than Trench 7, having greater numbers of types in every productive sample. No distinct temporal trends are apparent. Rather, the assemblage is characterized by a relative abundance of less common types, particularly the spurge and madder families. A spike of *Helianthus*-type pollen in Stratum IId also is unusual. Under normal circumstances, these data would be interpreted as reflecting local stands of herbs and shrubs. Preservation, however, must be taken into account. Higher percentages of large grass grains in Strata IIb and IIc than in Trench 7 are stronger evidence for *laiki* or *ko* farming. *Kiawe* pollen in Stratum IIb and pine pollen in Stratum IId indicate disturbance throughout the sample column.

Although preservation must be considered, there are some distinct differences between the Trench 7 and Trench 9 assemblages. As mentioned above, the Trench 9 assemblage is more diverse, suggesting a richer flora. Trench 7 is dominated by grass and shrub pollen versus the abundance of rather unusual types in Trench 9, further suggesting contrasting vegetation. Given the proximity of the trenches, these differences are more likely the result of taphonomic factors than actual variation on the former landscape.

In recent investigations of suspected *lo‘i kalo* fields in Waikiki (e.g., Phillips 2019), the common element of pollen assemblages was high proportions of sedge family pollen, often in excess of 60 percent. While *kalo* pollen was extremely rare or absent, the abundance of sedge pollen reflected the wetland environment in which the staple was cultivated. In some cases, relatively high percentages of large grass grains indicated samples were from *laiki* fields. In the current project, sedge pollen is found low percentages or absent, suggesting sample columns in neither trench represented wetland environments.

Regarding pollen preservation, although degradation such as that found in the current assemblage is uncommon, it is not unprecedented. As part of the Transit Corridor Project (Phillips 2016), a highly degraded assemblage was obtained from a site in Waikele *ahupua‘a*: only five of ten samples contained pollen. The norm, however, are pollen-rich assemblages with concentrations in excess of 5,000 grains per gram in nearly every sample (e.g., Phillips 2018).

In summary, six of ten samples contain pollen. Within the six, the percentages of degraded grains are very high and total pollen concentrations extremely low, both indicating very poor preservation. The pollen data should be viewed in this light. Polynesian introductions include *niu, wauke,* and possibly *ti*, all found in scarce quantities. Large grass pollen grains might reflect *laiki* and/or *ko* farming in historic times. If taken at face value, pollen data from the Trench 7 sequence suggest a change over time from shrublands to grasslands. No such landscape change transformation is seen in Trench 9. Rather, a diverse assemblage and a relative abundance of otherwise unusual types reflects a rich local flora. Given the proximity of the trenches, the differences likely are due to poor pollen preservation rather than actual conditions of former vegetation. Sedge pollen is scarce and no distinct indication of a former *lo‘i* is present.

RE: Analysis of charcoal samples from Halewaiolu Senior Housing Project, Honolulu, HONOLULU 87 [WIDL1916]

Greetings Ena,

The report for analysis of your charcoal samples from the Halewaiolu Senior Housing Project, Honolulu (HONOLULU 87) is attached. Don't hesitate to contact me if you would like to discuss the results. Digital microscope photographs of some of your specimens have been archived at IARII. Should you wish to view the images or use them in a report, please let me know.

Best regards,

Jennifer Huebert
(808) 946-2548, Ext. 107
jhuebert@iarii.org

* * * * * * * * *

METHODS

The freshly fractured transverse, tangential, and radial facets of selected charcoal fragments were examined with an epi-illuminated microscope at magnifications of 50–500X. Taxonomic identifications were made by comparing observed anatomical characteristics with those of woods in the IARII reference collection. Vouchers associated with this collection have been verified and archived at the Department of Botany, University of Hawai‘i at Mānoa. Other published references, including books, journal articles, technical documents, and wood atlases, were also consulted. Material that was not examined was returned to its original packaging and marked as residual.

HAWAI'I: 2081 Young Street, Honolulu, Hawai'i 96826-2231 - Tel: (808) 946-2548 - Fax: (808) 943-0716 - E-mail: HonoluluOffice@iarii.org
GUAM: P.O. Box 22621, GMF, Guam 96921 - Tel/Fax: (671) 646-7552 - E-mail: GuamOffice@iarii.org

RESULTS

WIDL No.	Taxon	Plant Part & State of Preservation	Count	Weight (g)	Comment
Sample 1, Fe.2, Test Unit 1, 111 cmbs, IIIa					
1916-1	*Prosopis pallida* (*kiawe*)	Wood charcoal	18	0.4	
1916-2	Indeterminate hardwood	Wood charcoal	1	0.01	
Sample 2, Fe.4, Test Unit 1, 128-131 cmbs, IIIa					
1916-3	*Metrosideros polymorpha* (*‘ōhi‘a lehua*)	Wood charcoal	2	0.06	
1916-4	Indeterminate	Parenchyma charcoal	1	0.01	Thin; superficially resembles nutshell but is not endocarp
1916-5	*Psychotria* sp. (*kōpiko*)	Wood charcoal	1	0.01	
1916-6	*Hibiscus* sp. (*hau* and others)	Wood charcoal	1	0.04	
1916-7	*Acacia* cf. *koa* (*koa* and others)	Wood charcoal	5	0.08	
1916-8	Indeterminate hardwood	Wood charcoal	4	0.06	

The two submitted samples were moist and were dried before analysis. Many fragments became quite brittle and/or crumbly; this can occur naturally when charcoal is subject to wetting and drying while in the ground, or when it is dried too quickly after recovery from a moist matrix. Most of the examined material was small, well under 1 cm, and all fragments but one were wood charcoal.

Most of Sample 1 is *kiawe*. The unidentified residual fragments are all extremely small; they all appear to more *kiawe* charcoal. Sample 2 contained a variety of wood from native taxa, including *‘ōhi‘a lehua*, *koa*, possibly *hau*, *kopiko*, and a fragment of some type of thin parenchymous (storage) tissue.

None are the short-lived materials preferred for radiocarbon dating. The parenchyma (1916-4) is not likely to have much inbuilt age, however, as soft storage tissues such as these are not long-lived. Some *Psychotria* (1916-5) are smaller trees (but see below), and *Hibiscus* are fast-growing, so either might be the next best choice to date. *Koa* and *‘ōhi‘a lehua* trees can be very long-lived. Several papers regarding the selection of charcoal for radiocarbon dating can be provided upon request (Allen and Huebert 2014, Athens and Rieth 2013). Consider choosing one fragment of material for radiocarbon dating, when possibly, to eliminate the chance of dating more than one event (Ashmore 1999; also see Higham and Petchey 2000:Table 4).

A brief systematic review is given below; for more information on Hawaiian plants, suggested references are the Manual of the Flowering Plants of Hawai‘i (Wagner et al. 1999; also available online at http://botany.si.edu/pacificislandbiodiversity/hawaiianflora/query2.cfm) and the Bishop Museum’s Hawaiian Ethnobotany Online Database (http://data.bishopmuseum.org/ethnobotanydb).

TAXA REVIEW

LEGUMINOSAE / FABACEAE (Pea family)

Acacia koa A. Gray (*Koa*)

One of the largest endemic trees in Hawai‘i, *koa* may attain 35 m in height at higher elevations (Wagner et al. 1990:641-642) and not branch until 12 m or more above the ground (Rock 1913:175). This straight trunk was especially useful for canoes as well as paddles, and surfboards (Malo 1951:126, 223). *Koa* trees which are also found at lower elevations in the dry regions, have a distribution range of 60 to 2,060 m on all of the main Hawaiian Islands except Ni‘ihau and Kaho‘olawe (Wagner et al. 1990:641).

Prosopis pallida (Humb. & Bonpl. ex Willd.) Kunth (*Kiawe*, mesquite)

This tree, native to Peru, Colombia and Ecuador, is believed to have been introduced into Hawai‘i by Father Bachelot who grew a tree from a single seed in 1828. Today the 8-20 m tall trees may dominate low elevation, dry, and disturbed sites and can be found in vegetation from behind the beaches up into degraded dry forests, ranging in elevation from sea level to 610 m on all of the main Hawaiian Islands (Wagner et al. 1990:693).

MALVACEAE (Mallow family)

Hibiscus sp. (*Hau, hau hele, koki‘o,* and others)

In the Hawaiian Islands, there are 7 native shrub and tree species of *Hibiscus*, several of which include endemic varieties, and at least 3 naturalized historic introductions (Wagner et al. 2005-onwards). *H. tiliaceus*, or *hau*, occurs commonly in moist areas from sea level to over 1,000 m in elevation on most of the main islands (Wagner et al. 1990:888). Most species feature showy flowers. In addition to ornamental plantings, the bark of *hau* was sometimes used to make *lei*, there are herbal remedies made from different parts of the various species, and the soft wood was used for many purposes including canoe outriggers, fishnet floats, and in the native fireplow by rubbing a harder wood against it (Abbott 1992).

MYRTACEAE (Myrtle family)

Metrosideros polymorpha Gaud. (*‘Ōhi‘a lehua*)

This endemic species ranges in habit from prostrate shrubs to tall trees and in distribution from sea level to 2200 m elevation in many ecological situations on all of the main Hawaiian Islands (Wagner et al. 1990:967). The hard wood was once used for making spears and mallets, idols, posts and rafters for houses, and enclosures around temples (Buck 1957:87; Malo 1951:20; Neal 1965:638).

RUBIACEAE (Coffee family)

Psychotria sp. (*Kōpiko*)

The 11 endemic species of *Psychotria* in the Hawaiian Islands are found in mesic to wet forests. Five species are known on O‘ahu; these species range from small trees to trees up to 20 m tall (Wagner et

al. 1990:1160-1170). *Kōpiko* was previously used as firewood, and also to make kapa logs (Malo 1951:21).

RE: Radiocarbon Dating Results

Dear Ms. Farley,

Enclosed is the radiocarbon dating result for one sample recently sent to us. As usual, specifics of the analysis are listed on the report with the result and calibration data is provided where applicable. The Conventional Radiocarbon Age has been corrected for total fractionation effects and where applicable, calibration was performed using 2013 calibration databases (cited on the graph pages).

The web directory containing the table of results and PDF download also contains pictures, a cvs spreadsheet download option and a quality assurance report containing expected vs. measured values for 3-5 working standards analyzed simultaneously with your samples.

The reported result is accredited to ISO/IEC 17025:2005 Testing Accreditation PJLA #59423 standards and all pretreatments and chemistry were performed here in our laboratories and counted in our own accelerators here in Miami. Since Beta is not a teaching laboratory, only graduates trained to strict protocols of the ISO/IEC 17025:2005 Testing Accreditation PJLA #59423 program participated in the analysis.

As always Conventional Radiocarbon Ages and sigmas are rounded to the nearest 10 years per the conventions of the 1977 International Radiocarbon Conference. When counting statistics produce sigmas lower than +/- 30 years, a conservative +/- 30 BP is cited for the result. The reported d13C was measured separately in an IRMS (isotope ratio mass spectrometer). It is NOT the AMS d13C which would include fractionation effects from natural, chemistry and AMS induced sources.

When interpreting the result, please consider any communications you may have had with us regarding the sample. As always, your inquiries are most welcome. If you have any questions or would like further details of the analysis, please do not hesitate to contact us.

Thank you for prepaying the analysis. As always, if you have any questions or would like to discuss the results, don't hesitate to contact us.

Sincerely,

Ronald E. Hatfield Director

REPORT OF RADIOCARBON DATING ANALYSES

Gina Farley — Report Date: November 06, 2019

Cultural Surveys Hawaii — Material Received: October 25, 2019

Laboratory Number	Sample Code Number	Conventional Radiocarbon Age (BP) or Percent Modern Carbon (pMC) & Stable Isotopes Calendar Calibrated Results: 95.4 % Probability High Probability Density Range Method (HPD)	
Beta - 541406	**Sample 1**	**200 +/- 30 BP**	IRMS δ13C: -24.3 o/oo
(53.5%)	**1728 - 1810 cal AD**	**(222 - 140 cal BP)**	
(26.0%)	**1646 - 1690 cal AD**	**(304 - 260 cal BP)**	
(15.9%)	**1925 - Post AD 1950**	**(25 - Post BP 0)**	

Submitter Material: Plant Tissue
Pretreatment: (charred material) acid/alkali/acid
Analyzed Material: Charred material
Analysis Service: AMS-Standard delivery
Percent Modern Carbon: 97.54 +/- 0.36 pMC
Fraction Modern Carbon: 0.9754 +/- 0.0036
D14C: -24.59 +/- 3.64 o/oo
Δ14C: -32.70 +/- 3.64 o/oo (1950:2019)
Measured Radiocarbon Age: (without d13C correction): 190 +/- 30 BP
Calibration: BetaCal3.21: HPD method: INTCAL13

Results are ISO/IEC-17025:2005 accredited. No sub-contracting or student labor was used in the analyses. All work was done at Beta in 4 in-house NEC accelerator mass spectrometers and 4 Thermo IRMSs. The "Conventional Radiocarbon Age" was calculated using the Libby half-life (5568 years), is corrected for total isotopic fraction and was used for calendar calibration where applicable. The Age is rounded to the nearest 10 years and is reported as radiocarbon years before present (BP), "present" = AD 1950. Results greater than the modern reference are reported as percent modern carbon (pMC). The modern reference standard was 95% the 14C signature of NIST SRM-4990C (oxalic acid). Quoted errors are 1 sigma counting statistics. Calculated sigmas less than 30 BP on the Conventional Radiocarbon Age are conservatively rounded up to 30. d13C values are on the material itself (not the AMS d13C). d13C and d15N values are relative to VPDB-1. References for calendar calibrations are cited at the bottom of calibration graph pages.

Downtown Neighborhood Board No. 13 Meeting Record

DOWNTOWN NEIGHBORHOOD BOARD NO. 13

c/o NEIGHBORHOOD COMMISSION • 530 SOUTH KING STREET ROOM 406 • HONOLULU, HAWAII, 96813
PHONE (808) 768-3710 • FAX (808) 768-3711 • INTERNET: http://www1.honolulu.gov

DRAFT REGULAR MEETING MINUTES
THURSDAY, AUGUST 6, 2015
PAUAHI COMMUNITY CENTER

CALL TO ORDER: Chair Alvin Au called the meeting to order at 7:01 p.m., **with a quorum of eight (8) members present.** Note: This nine (9) member Board requires five (5) members to establish a quorum and to take official Board action.

Board Members Present: Alvin Au, Anthony Chang, Jasmine Mancos, Dolores Mollring, Chu Lan Shubert-Kwock, Tom Smyth, Robert Tom, and Stanford Yuen.

Board Members Absent: None.

Guests: Captain James Hull (Honolulu Fire Department); Lieutenant Stephen Silva and Sergeant Jeffrey Nagai (Honolulu Police Department); Diana Ronquillo and Clare Ann Ronquillo (Neighborhood Citizen's Patrol); Pat Lee (Honolulu Rail Transit Project); Lee Stack (Chinatown Improvement District); Nicole Reid (Arts District Merchants Association); John Chang (Mayor Kirk Caldwell's Representative); Liz Char and Sandy Pfund (City and County of Honolulu); Councilmember Carol Fukunaga; Sonny Le (Representative Karl Rhoads Office); Senator Suzanne Chun Oakland; Sam Lanai (Scarlet Honolulu LLC); Wesley Fong and Howard Lum (Chinatown Community Center Association); Gwen Abella (Winston Hale); James McCarthy, Jonathan Saupe, Sandra Pohl, Stanley Yon, Kelly Griffith, Ronald Higa, John Donaldson-Selby, Jenny Grondin, David Segarra, Bradley Rhea, Rhonda Jones, Julia Cornell, Serena Hashimoto, and Ray Rudie; Ericson Cristobal (Videographer); Neil Baarde (Neighborhood Commission Office).

INTRODUCTION OF BOARD MEMBERS: Board members introduced themselves at this time.

FILLING OF ONE (1) AT-LARGE VACANCY

- James McCarthy – McCarthy noted that he has lived in the Downtown area for eight (8) years but has been a part of the community for 15 years. McCarthy noted that he was the pioneer for the Chinatown lofts and is a faculty member of SEEK Middle School. McCarthy noticed all the changes going on within the neighborhood and would like to be a member of the Board.
- Jonathan Saupe – Saupe noted that he has been a resident living in the heart of Chinatown for five (5) years. He was the former Executive Producer at Hawaii News Now, but is now an owner of a retail boutique, Barrio Vintage. Barrio Vintage was started four (4) years ago as a small pop-up concept and has grown to one (1) of the State's most popular destinations for vintage clothing and treasure hunters. Saupe sees the main issues facing the Downtown/Chinatown area as homelessness, affordable housing, community space development, and noted it is in need of a push for more tourism dollars to find their way to the historic streets of Chinatown.
- Sandra Pohl – Pohl noted that she has lived and grew up in the Chinatown area and commented that it is the best place. Pohl noted that she also owns a store and has been around for at least 15 years. Pohl noted she is a committed volunteer and a community advocate and commented that she is working to make the Downtown/Chinatown area a better place. Pohl noted that she has helped organize many different clean ups and events including the Walk on the Wild Side event. Pohl commented that she sees the things occurring in the area every day and noted that she wants to make a difference.
- Stanley Yon – Yon noted that he lives at Honolulu Park Place and is currently working at St. Andrew's Priory and is responsible for the grounds and the maintenance. Yon noted that he lives and works right in the center of the Downtown/Chinatown community. Yon is also on the Board of Directors of a 175 low income senior housing and noted that he is active in multiple locations as well as the Downtown/Chinatown area. Before coming to Hawaii, Yon noted he was a part of Los Angeles Economic Development and has worked in the Foreign Trade Zone. Yon commented that he also served on the Planning Advisory Committee as well as attending most of the Downtown Board Meetings and listens, observes, and noted that he has learned many things about the community. Yon commented that he would like to engage in the community as well as adding his skills and personality to the Board because he shares the same vision for the Downtown/Chinatown area.

Hearing no other nominations, Chair Au called for the vote.

- **James McCarthy received no votes, 0-8-0.** (**NAY**: Au, Chang, Mancos, Mollring, Shubert-Kwock, Smyth, Tom, and Yuen.)
- **Jonathan Saupe did not receive enough votes to fill the vacancy, 4-4-0.** (**AYE**: Au, Chang, Mancos, and Smyth.) (**NAY**: Mollring, Shubert-Kwock, Tom, and Yuen.)
- **Sandra Pohl did not receive enough votes to fill the vacancy, 1-7-0.** (**AYE**: Smyth) (**NAY**: Au, Chang, Mancos, Mollring, Shubert-Kwock, Tom, and Yuen.)
- **Stanley Yon did not receive enough votes to fill the vacancy, 3-5-0.** (**AYE**: Mollring, Shubert-Kwock, and Yuen.) (**NAY**: Au, Chang, Mancos, Smyth, and Tom.)

Comments – Smyth noted that the Board has seen the way the votes are spread and noted that some members can change their minds.

Chair Au called for the vote.

- **James McCarthy received no votes, 0-8-0.** (**NAY**: Au, Chang, Mancos, Mollring, Shubert-Kwock, Smyth, Tom, and Yuen.)
- **Jonathan Saupe did not receive enough votes to fill the vacancy, 4-4-0.** (**AYE**: Au, Chang, Mancos, and Tom.) (**NAY**: Mollring, Shubert-Kwock, Smyth, and Yuen.)
- **Sandra Pohl did not receive enough votes to fill the vacancy, 1-7-0.** (**AYE**: Smyth) (**NAY**: Au, Chang, Mancos, Mollring, Shubert-Kwock, Tom, and Yuen.)
- **Stanley Yon did not receive enough votes to fill the vacancy, 3-5-0.** (**AYE**: Mollring, Shubert-Kwock, and Yuen.) (**NAY**: Au, Chang, Mancos, Smyth, and Tom.)

Comments – Chair Au thanked the candidates and noted that he was very impressed and asked the candidates to return to the September 2015 Board meeting, if they are still interested in filling the vacancy.

Chair Au deferred the filling of the vacancy to the September 2015 meeting.

PUBLIC SAFETY REPORTS

Honolulu Fire Departments (HFD) – Captain James Hull reported the following:

- July 2015 Fire Statistics – There were 6 structure, 0 wildland, 0 vehicle and 4 rubbish fires; 130 medical emergencies, 1 search and rescue, and 34 miscellaneous calls for service. There were no major or unusual incidents.
- Fire Safety Tip – Hawaii is in hurricane season from June 2015 to November 2015. The HFD encourages every family to take the necessary steps to prepare for a hurricane; every family should have an evacuation plan, survival kit, and to know how to remain informed about hurricane disasters. More information about hurricane preparedness can be found at the Department of Emergency Management's (DEM) website at www.honolulu.gov/dem.

Questions, comments, and concerns that followed:

1. Fire Alarm – Mollring apologized to her neighbors and the community because of the fire alarm that was blaring around 1:00 a.m. to 2:00 a.m. Mollring commented that she looked outside her window and saw HFD not moving, so Mollring knew it was not anything serious. Mollring noted that the new system that was installed should only ring in the event of a real fire. Captain Hull responded that in his experience fire alarms are the most frequent calls that HFD responds to and noted that when HFD goes to inspect, the people stay in their rooms even though there is a possibility of a real fire. Captain Hull reminded the community that if an alarm goes off, the residents should go outside and stay outside to help HFD do their job. Tom noted that the same thing occurred around the same time at Capitol Place.
2. Fire Lane – John Donaldson-Selby asked if Fort Street Mall is a usable fire lane. Captain Hull responded that HFD can use Fort Street because of the stand pipes if needed because the high rises on Fort Street Mall.

Honolulu Police Department (HPD) – Lieutenant Stephen Silva and reported the following:

- July 2015 Crime Statistics – There were 8 motor vehicle thefts, 4 burglaries, 74 thefts, 18 unauthorized entries into a motor vehicle (UEMV), 36 assaults, 6 sex assaults, 2 graffiti and 3 drug offenses, for a total of 2,399 calls for service.

- Safety Tips: Hurricane Preparedness was emphasized and the importance of having a "To-go" kit and "Stay" kit. Lt. Lee explained what each kit should contain. Also, in an emergency, listen for updated information and seek the nearest shelter.

Questions, comments and concerns followed:

1. Crime Trends – Shubert-Kwock noted that she was surprised in the thefts and assault numbers and asked if Lieutenant Silva can give any information. Lieutenant Silva responded that the crime that has increased could be because it is summer time.
2. Cameras – Shubert-Kwock raised a concern and asked about the status of cameras. Lieutenant Silva responded that there are three (3) nonfunctional cameras and the rest are all functional. Shubert-Kwock noted that HPD needs to request the refund for the camera work and asked if it would be possible. Lieutenant Silva responded that he was not aware of the situation but will make some inquiries.
3. Arrests – Mancos asked if the reported drug incidents count as arrests made. Lieutenant Silva responded that he is guessing three (3) arrests were made but it could be possible that no arrests were made. Mancos asked if HPD should encourage to community, that if someone sees something, they should say something. Lieutenant Silva responded that HPD always encourages the community to call and report. Serena Hashimoto raised a concern about the number of drug arrests because her shop calls HPD about drugs at least 20 times a day and noted that everyone knows Chinatown's reputation which is upsetting to the Neighborhood Board. Lieutenant Silva responded that the statistics given are the patrol statistics and noted that the NARC/VICE unit has their own statistics as well. Donaldson-Selby noted that the Board should request the NARC/VICE unit to the meetings for statistics. Lieutenant Silva noted that he will forward the request.

Neighborhood Citizen's Patrol – Mollring reported that her group was a part of the National Citizen's Patrol Walk. Over 50 people came to walk down Pauahi Street then to Aala Park where a potluck was held. Calare Ann Ronquillo noted that the River/Pauahi group also participated in the walk and noted that their block captain thanked HPD for their work and for always patrolling near River Street and Pauahi Street. Ronquillo noted that their group members are dwindling, but noted that HPDs efforts are making the area cleaner and safer.

COMMUNITY CONCERNS:

Hawaii Pacific University (HPU) – No representative present; no report provided. Smyth commented that the large fence that used to enclose Aloha Tower has been taken down but many small fences have been put up. Smyth noted that the public can no longer walk through the campus area or the center lane.

Safe Haven – No representative was present. No report was provided.

Honolulu Rail Transit Project – Pat Lee reported the following:

- Transit Savings Report – Every month, the American Public Transportation Association (APTA) releases a Transit Savings Report which shows how much a person can save on a monthly and yearly basis by taking public transit. In Honolulu, individuals who ride public transportation instead of driving can save more than $12,000 per year. APTA determines the cost of the average monthly transit pass and compares it with the costs of driving, including gas, maintenance, tires, insurance, registration and parking fees.
- Rail Systems – Rail is about transportation and land use, but also about social equity. There are many people who are too young or too old to drive, unable to drive or cannot afford to own and operate a car. These residents depend heavily on public transportation to get to their jobs, school, run errands and carry on with their lives. Rail would improve public transportation by increasing efficiency and reducing travel times compared to a bus-only trip, due to its frequent service and reliability. Bus routes would be redesigned to feed into the rail system from other areas to service more riders. Rail will also enable Transit Oriented Development near stations and along its route. TOD brings new retail and commercial opportunities, but also new opportunities for affordable housing in proximity to good public transportation. This would help those in the income groups who need housing and depend on public transportation.
- Construction Highlights – These are the latest construction highlights: 267 foundation shafts have been placed, 187 columns erected, 3,090 segments casted, and 139 spans. The West Oahu Farrington Highway Guideway portion (from East Kapolei to Pearl Highlands) is now 66% completed. The Kamehameha Highway portion (from Pearl Highlands to Aloha Stadium) is 39% completed, and the Rail Operations Center in Waipahu is 74% completed. Over three (3) miles of guideway are completed and the rail guideway is now proceeding into the Waipahu area. For traffic updates, meeting notices and more information, please visit the website www.honolulutransit.org, call the project hotline at 566-2299 or email a question at info@honolulutransit.org.

Chinatown Business & Community Association (CBCA) – Chu Lan Shubert-Kwock reported the following:

- Mid Pauahi Crosswalk – The mid Pauahi crosswalk is finally getting built. This crosswalk was initiated by CBCA back in 2009-2010 and are thankfaul it will be completed by mid-August 2015.
- Chinatown Meetings – CBCA attended two (2) important Chinatown meetings regarding the senior housing on River Street, working on the needs of the community. These include the Chinatown Community Center which will be 10,000 square feet and will be multipurpose community center. CBCA asked that the immigrants be honored with trees and flowers brought to the islands to remind them of their ancestral homes.
- Dr. Sun Yat Sen's 150th Anniversary – The Dr. Sun Yat Sen's 150 anniversary will be honored with a new garden at Foster Gardens. $150,000 has been approved by the City Council. CBCA thanks all those who worked hard for this to happen.
- Bills 44 and 46 – The Bills passed 3rd reading and will expand sit/lie hours in Union Square and the Chinatown Mall by Aala Park.
- Kalihi Business Association Meeting – Shubert-Kwock and Director Judi Rod attended the Kalihi Business Association Meeting to learn more about their concerns. CBCA learned that business owners have suffered due to illegal camping and filth. Some of the homeless are not willing to move into shelters for various reasons. CBCA asks that shelters which received money from tax dollars do more, leaving them on the sidewalks is not helping the community.
- Bill 49 – Bill 49 allows the sale and consumption of liquor on Fort Street Mall and other Chinatown Malls is a bad bill introduced by Councilmember Fukunaga with little input from tenants and residents around the mall.
- Economic Revitalization – CBCA is very unhappy that the City is pushing more liquor on the public streets and malls under the misguided belief that it is "economic revitalization" for Downtown and Chinatown. 589 Chinatown merchants and residents petitioned the Mayor, HLC, DTS, and Councilmember Carol Fukunaga that they do not think liquor and noise help the area. Promoters leave after close up time, but leaving drunks for the community to deal with.
- Homeless – CBCA is hopeful that Governor Ige convened a high powered committee on Homelessness and CBCA hopes it will help the City to produce more permanent housing for the homeless and also provide help to the mentally ill.
- Chinatown Heroes Banquet – CBCA will be hosting the 6th Chinatown Heroes Banquet on Saturday, October 17, 2015 at the Golden Palace. CBCA will be honoring Councilmember Fukunaga, for the Chinatown bathrooms; David Chang, Little Village Noodle House and Epic; KHON2 news for extensive coverage of Chinatown issues; Hawaii 5-0 for bringing business/highlighting Chinatown; Ernie Loo, the long time unsung hero of Chinatown. Tickets are $35/person and sponsor tables are $1,000 each for a group of 10.
- Chinese Moon Festival/Concert – On Saturday, September 12, 2015 at 2:00 p.m. at the Mission Memorial Building, 550 South King Street, there will be a Chinese Moon Festival/Concert. Admission is free.
- Next Meeting – The next CBCA Chinatown Dim Sum meeting is scheduled for Tuesday, August 11, 2015, Empress Restaurant from 8:30-10:00 a.m.

Chinatown Improvement District (CID): Lee Stack reported that the Sustaining Chinatown: The next one (1) - hour series to learn how to maintain and protect historic structures is scheduled for Tuesday, August 25, 2015 at the Lyons Associates, 45 N. King Street. Presentations are free, but reservations are recommended. For more information visit www.cidchinatownhawaii.org.

Arts District Merchants Association (ADMA): Nicole Reid highlighted the following:

- First Friday – ADMA is hosting a public health crawl, which will go through different businesses. All businesses have agreed and will give discounts to all those who wish to be a part of the event. The money made will go to a non-profit.

Public:

- Representative Brower – Gwen Abella raised a concern about Representative Tom Brower and noted that what he did to the shopping carts was wrong. Abella noted that she is not glad he got beat but it was criminal act what he did and commented that it did not help anyone.
- Queens Hospital – Ray Rudie raised a concern about the Canal Street off ramp and asked if the City can increase parking on the street. Rudie noted that it has yet to be done and asked for an update because Lisbon Street is too narrow for parking and a two (2) way street and suggested that it be turned into a one (1) way street with parking since the streets adjacent are both two (2) way streets.

ELECTED OFFICIALS:

Mayor Kirk Caldwell's Representative – John Chang reported the following:

- Mango Jam Honolulu – The "Mango Jam Honolulu" showcases the mango and how it brings the many cultures in Hawaii together. On stage there will be community groups and entertainers. There will also be an open market. The event is sponsored by the Hawaii Maoli and the Mayor's Office of Culture and the Arts (MOCA), at the Fasi Civic Center, from 4:30 p.m. to 9:30 p.m. on Friday, August 7, 2015, and 10:00 a.m. to 9:30 p.m. on Saturday, August 8, 2015.
- Title VI Program Report Public Hearing – As a recipient of Federal Transit Administration (FTA) funds, DTS-PTD is required to comply with FTA requirements that prohibit discrimination on the basis of race, color, national origin, gender, or disability in all programs, activities, and services. DTS-PTD must submit a Title VI Program report to FTA every three years. DTS-PTD is in the process of finalizing the report and welcomes any public participation/input. All public input regarding the report will be included in the final version to be submitted to the Transportation Commission and City Council for approval. Upon approval, the report will be submitted to FTA in December 2015. For more information call 768-8374, email thebusstop@honolulu.gov, or visit http://www.thebus.org/AboutTheBus/DraftTitleVIProgram.asp.
- Bill 48 – In regards to Bill 48, sitting does not apply to bus stops. If an individual is lying at the bus stop, Bill 48 applies. Officers checked the area at various times of the day and did not observe anyone lying at the bus stops. If anyone sees any individual lying down, please call 911.

Questions, comments and concerns followed: Action Summit in Chinatown – Shubert-Kwock noted that the Action Summit in Chinatown was a success and asked if a report can be compiled and given to the Board. Mollring noted that her son in law called the Federal Justice Department (FJD) who said that the FJD is saying that the Sit and Lie Bill is unconstitutional.

Councilmember Carol Fukunaga – Councilmember Fukunaga distributed her report and highlighted the following:

- Hiroshima Commemoration – Today, there was a commemoration for the 70th anniversary of the bombing of Hiroshima.
- Clean Ups – The next Clean Up will be Saturday, August 15, 2015. The area's that will be cleaned will be Sun Yat Sen Park and College Walk. Participants asked if they can paint the bridge red to better deter graffiti. Councilmember Fukunaga noted that hopefully it will work with the Administration.
- Bills 44 and 46 – Bills 44 and 46 were adopted by Council and has passed 3rd reading. Councilmember Fukunaga noted that the bills will probably get the support needed by Mayor Caldwell. Bill 44 will extend the hours for other businesses that stay open later. It was noted that the Mayor may not support this bill.

Questions, comments and concerns followed: Bill 49 – Shubert-Kwock noted that she attended the Bill 49 hearing and noted that the Director allowed to have a bathroom at the mall and noted that liquor licenses cannot be issued. Councilmember Fukunaga responded that the Department of Parks and Recreation (DPR) and Liquor Commission allows consumption of liquor in controlled areas and are trying to be more flexible for Fort Street Mall. Donaldson-Selby asked if the public can get the minutes from that hearing. Chair Au noted that a member of the Board also sits on the Board of Directors too, and commented that they can give him the information. Stack raised a concern and noted that it is great to have a dialogue but there needs to be at least two (2) people to have a dialogue. Howard Lum thanked Councilmember Fukunaga for Bill 46 and noted that she has done a great job for Chinatown.

Charter Commission – No representative was present; no report was provided.

Governor David Ige's Representative – No representative present; no report provided.

Senator Suzanne Chun Oakland – Senator Chun Oakland was present earlier in the meeting. A report was available.

Representative Scott Saiki – No representative present; A report provided.

Representative Karl Rhoads – Chair Au read the following report:

- Update – The City replaced the "parking" sign that points to the Chinatown Municipal Parking lot on Beretania Street.
- Drug Dealing Activity – Received a complaint regarding suspecting drug dealing activity across the street from 1315 River Street. The issue was forwarded to HPD.

- Hotel Street – Received a complaint regarding bicyclist riding down Hotel Street on the wrong side of the road and ignoring traffic lights. This happens most often at the intersection of Hotel Street and Smith Street. The issue has been forwarded to HPD.

NEW BUSINESS:

Discussion on Transfer of Business from The Empire Inc. to Scarlet Honolulu, LCC – Shubert-Kwock noted that she did not write a letter to the Liquor Commission but Wayne Luke has been notified. Shubert-Kwock commented that the Board does not know what is going on but it is a concern of the community and the new owner should at least come to the Board for dialogue. The Liquor Commission does ask for the Neighborhood Boards opinion and commented that the Board lost their opportunity. Sam Lanai commented that he is the owner of Scarlet Honolulu, LCC and noted that he has also opened a LGBT night club, which has been very successful in the three (3) weeks it has been open. The Scarlet Honolulu is small but the other half will be a Tiki lounge and restaurant, like a new upscale happy hour. Chair Au noted that it was nice to meet Lanai and hear what he had to say and offered a spot on the agenda to Lanai once his business is established to give an update. Mollring noted that all the reports received have been awesome and welcomed Lanai to the neighborhood.

Discussion on Murphy's Bar and Grill Street Closure – Chair Au announced that the 19th annual Pigskin Pigout fundraiser for the UH Football program will be on Thursday, August 27, 2015. Shubert-Kwock noted that the event will help cancer patients and commented that the community needs to be notified for courtesy. Chair Au noted that the Liquor Commission was informed and told Murphy's Bar and Grill that they need to come to the Neighborhood Board to present and notify the community. Chair Au commented that Murphy's Bar and Grill are usually good events that are controlled.

Community Update and Discussion for the Affordable Senior Rental Housing on River Street – Sandy Pfund reported that there were some concerns about the design and the possible impact it will have on the neighbors. Pfund noted she has been working with the architects to make sure that the plans are refined and commented that it takes time to evaluate all of the designs and will take longer than originally anticipated. Pfund noted that the architects will reduce the number of exceptions and will come back to the Board in September 2015 with another update for the Board and the community. Pfund commented that the Kuhio Park Terrace Community Center tour is occurring and noted that Senator Chun Oakland is the holder of the master list of those who are interested, the community can call or email Senator Chun Oakland for an appointment tour.

Questions, comments, and concerns that followed: Community Center – Shubert-Kwock noted that the community center is one (1) of the best things to happen to Chinatown and noted she hopes the community center can be functional in the long run and asked for feedback on the project. Pfund responded that they will for an advisory committee because they are trying to make a flexible committee that is interested in the design as well.

Discussion – Wesley Fong noted that he has met with the City agencies and Michaels Co. and noted that the Chinatown Community Center Association (CCCA) would like to echo the comments and recommendations of the Historic Hawaii Foundation on preserving the historic and cultural character of Chinatown especially the location of the proposed Chinatown Community Center and affordable senior housing project on River Street. To preserve the character of the neighborhood surrounding the site, the density of the proposed housing project needs to be at a height that will not destroy the historic and cultural character of the mauka area of Chinatown bordered by Vineyard Boulevard. As mentioned, there are temples, a shrine, low rise Chinatown Cultural Plaza, low rise Chinese Schools, low rise apartment complexes all located along or in proximity of the River. Across Vineyard Boulevard is the Kwan Yin Temple and Foster Garden. This site above Beretania Street is surrounded by a unique blend of cultural and historic sites making up the unique character of the area and this character must be preserved. Lum thanked the City, Pfund, Councilmember Fukunaga, and the Neighborhood Board for being sensitive to the community's concerns and the temple.

Questions, comments, and concerns that followed:

1. Addiction – Smyth raised a concern about the occupants who do not have an alcohol or drug dependency and asked how those who are dependent will be taken care of. Fond responded that he will leave it up to the City because he cannot dictate people. Shubert-Kwock raised a concern about the recommendations of representatives because CBCA is not on the list. Shubert-Kwock noted that she is disappointed for not being recognized. Fong responded that he has a letter from CBCA and noted that some members are on the Board of Directors. Fong commented that it is not for CCCA to determine and noted that they only makes suggestions.
2. Compromise – Reid raised a concern and asked what would happen if the City does not comply with the rules. Fong responded that it is a matter of compromise and it is not an all or nothing kind of deal. If there is

no compromise, CCCA will not encourage or sponsor the project. Pfund noted that there was a meeting held where those comments were made and commented that the City does notice the opinions but cannot put the comments in the documents until completed, but the City is always open to suggestions to improve the fair housing situation for all.

APPROVAL OF JULY 2, 2015 MEETING MINUTES – This item was deferred until the September 2015 meeting.

BOARD BUSINESS AND REPORTS:

Chair's Report=

- Chair Au reported that he invited the Department of Emergency Management (DEM) to come to the September 2015 meeting to inform the community about the Downtown/Chinatown danger zones as well as the safe zones.
- Shubert-Kwock asked if the Board can have an update from Hawaii Theater and from DPR to talk about the concrete box at Sun Yat Sen Park and to also talk about the park rules and the malls. DPR needs to educate the Board. Sam Moku also needs to come and give an update on Aloha Tower. Mollring noted that she took the tour of Aloha Tower and noted that there is a large room where the Neighborhood Board can have meetings and asked the other Board members to think about it. Shubert-Kwock noted that the room is a 350 square foot room with a nice view and an AC unit.
- Tom raised a concern about the Mayor's Homeless Task Force and noted that the City is trying to move the homeless out of Kakaako. The concern is that the homeless might settle in the Downtown/Chinatown area. Chair Au responded that there is a shelter behind the transit building on Dillingham Boulevard. The family is willing to sell their house for the homeless.
- Shubert-Kwock noted that in regards of the Chinatown Action Summit, the Board should invite Harrison Rue and raised another concern about the lack of signage for the new hygiene center because it would be helpful to let the public know that the bathroom hours are from 7:00 a.m. – 7:00 p.m. and asked if the Chair can make the request.

Other Liquor License Applications or Street Closure Events – No report.

Future Agenda Item Requests – No report.

Neighborhood Commission Updates – No report.

Treasurer's Report – Treasurer Mollring reported a $300.27 remaining balance. The report was filed.

City and County Affairs – No report.

Shubert-Kwock departed the meeting at 8:48 p.m.; Seven (7) members present.

Oahu Metropolitan Planning Organization (OahuMPO) – Smyth reported the committee is working on changing the by-laws to reflect the changes in the federal laws.

ANNOUNCEMENTS:

- Next Meeting – The next Downtown Neighborhood Board No. 13 meeting is scheduled for Thursday, September 3, 2015, Pauahi Community Center at 7:00 p.m.
- Neighborhood Citizen's Patrol (NCP) – The NCP meets each Tuesday on the Diamondhead side of Kukui Plaza at 8:00 p.m. Please consider joining the patrol and supporting its efforts as they express their service and pride in our Downtown/Chinatown community.
- Broadcasts – Videotape of Board meetings are scheduled to be shown on the third Thursday, and on the second and fourth Saturday on `Olelo Channel 49.

ADJOURNMENT: The meeting adjourned at 8:50 p.m.

DRAFT REGULAR MEETING MINUTES
THURSDAY, NOVEMBER 5, 2015
PAUAHI COMMUNITY CENTER

CALL TO ORDER – Chair Alvin Au called the meeting to order at 7:03 p.m., **with a quorum of seven (7) members present.** Note: This nine (9) member Board requires five (5) members to establish a quorum and to take official Board action.

Board Members Present – Alvin Au, Anthony Chang, Jasmine Mancos, Dolores Mollring, Jonathan Saupe, Chu Lan Shubert-Kwock (arrived at 7:35 p.m.), Tom Smyth, Robert Tom, and Stanford Yuen (arrived at 7:43 p.m.).

Board Members Absent – None.

Guests – Fire Fighter 1 Gerald Higgins and Captain Ken Kahahawai (Honolulu Fire Department); Major Calvin Tong, Lieutenant Stephen Silva, Sergeant Stuart Yano, and Sergeant Michael O'Neill (Honolulu Police Department); Laurel Johnston (Governor David Ige's Office); Noelle Wright (Mayor Kirk Caldwell's Representative); Representative Karl Rhoads; Andrew Tang (Department of Planning and Permitting); Pat Lee (Honolulu Rail Transit Project); Allen Stack Jr. (Chinatown Improvement District); Nicole Reid (Arts District Merchants Association); Clare Ann Ronquillo (River/Pauahi Citizens Patrol); Gwen Abella (Winston Hale); Todd Iocovelli and James Donnelly (Make-A-Wish); Greg Payton (Safe Haven); Nathanial Howard and Anya McClent (Hawaii Pacific University); Cameron McElroy (Real Office Centers); Monika Mordasin and Karen Seddon (Michael's Development Company); Rochelle Nagata-Wu (WRNS Studios); Michelle Bartell (American Savings Bank); Paul Mallory (Michaels Corporations); Lori Lum, Howard Lum, Kehaulani Lum, Roland Louie, and Wesley Fong (Chinatown Community Center Association); Vina Quick, and Ronald Higa; Ericson Cristobal (Videographer); Neil Baarde (Neighborhood Commission Office).

INTRODUCTION OF BOARD MEMBERS – Board members introduced themselves at this time.

PUBLIC SAFETY REPORTS

Honolulu Fire Departments (HFD) – Fire Fighter 1 Gerald Higgins reported the following:

- October 2015 Statistics – There were 5 structure, 17 vehicle, 1 nuisance, 1 cooking, and 21 activated alarms. There were 183 medical emergencies, 5 motor vehicle collision with pedestrians, 7 motor vehicle collisions, 1 mountain rescue, 1 ocean rescue, 1 hazardous material incident, with 7 unusual incidents.
- Fire Safety Tip – This holiday season, consider a fire-resistant, artificial Christmas tree. If a natural tree is purchased, select one (1) that is as fresh as possible. Cut off at least 1/2 '' at the bottom end of the trunk prior to placing the tree in a stand to allow the tree to absorb water. Keep the tree hydrated and away from heat sources. Use noncombustible materials for decorations. Choose only Underwriter's Laboratory approved electrical decorations and follow the manufacturer's instructions for installation. Do not overload the extension cords.

Honolulu Police Department (HPD) – Lieutenant Stephen Silva reported the following:

- October 2015 Crime Statistics – There were 9 motor vehicle thefts, 10 burglaries, 89 thefts, 52 unauthorized entries into a motor vehicle (UEMV), 29 assaults, 1 sex assault, 1 graffiti and 6 drug offenses, for a total of 2,605 calls for service.
- UEMV Prevention Tips
    - Lock the Doors – Simply locking the car doors will deter those who might just be waiting around for an easy target. Suspects have been known to check car door handles to see if the car is unlocked.
    - Keep Car Neat – Keep shopping bags and other items out of sight. A car that appears empty is not appealing to thieves.
    - Stash Before Parking – Stash and conceal all items before paring the car. Suspects have been known to conduct surveillance while looking for an opportunity to steal again. During the holiday season, do not leave bags in the car for thieves to steal.
    - Park Visibly – Always park under a lighted area or where it is visible to the public. Never behind a

wall or bushes where visibility is blocked and offers good concealment to the suspects who want to break in.
- o Layer Defenses – Increase the safety of the car with a vehicle alarm or steering wheel anti-theft wheel lock. These measures deter theft.
- o Lastly – Ensure the vehicle registration and insurance cards are hidden inside the vehicle. Thieves are known to steal the vehicle's paperwork, read the owners address on the registration, and burglarize the home.

Questions, comments and concerns followed: Thanks – Howard Lum thanked HPD and the City for sweeping and patrolling along Kukui Street and Vineyard Boulevard. Lum noted that he has noticed much change since the sweep and commented that the neighborhood feels safer.

Narco/Vice Commander – Major Calvin Tong introduced himself and was available to take questions.

1. Trends – Smyth raised a concern about the crimes that are not on the report and noted that the Board has been asking if the trend is going up or down. Major Tong responded that he has not noticed any real trends and asked the public to keep their eyes open and make the report so Narco/Vice can patrol or take action. Major Tong noted that the hotline number to report anonymously is 723-3933.
2. Drug Activity – Tom asked if most of the drug activity occurs in the daytime or the nighttime. Major Tong responded that the activity is never certain because all of the reported activities are always different. Tom noted that he heard of HPD foot patrolling the area but has never seen them and asked for more foot patrol. Lieutenant Silva responded that there are foot patrolling officers including in the evening. They might not be visible but they are around.
3. Suspicious Coffee Shop – Miki Lee raised a concern about a coffee shop on Nuuanu Avenue and Smith Street and noted that it does not feel safe for women to walk by. Major Tong responded that the coffee shop could be on HPDs radar and asked for extra details on the side. Patrick Wilson noted that the coffee shop being mentioned, definitely has suspicious activity going on for years. Wilson also raised a concern about being offered drugs across the street and "The Arcade" on Hotel Street and asked why the locations are not being investigated. Major Tong responded that he understands the community's frustration but HPDs resources are the issue. HPD is doing their best but can always do better and asked if Wilson reported to HPD after being offered drugs. Wilson noted that he lives in the heart of Waikiki and has noticed all the activity slowly disappear and noted that it should not take that much resource for the Downtown/Chinatown area. Major Tong responded that HPD will not stop doing their best.

Neighborhood Citizen's Patrol – Mollring reported that her group been walking every Tuesday night and announced that on Saturday, November 14, 2015 a sign waiving event will be at Kekaulike Mall from 8:00 a.m. A potluck will follow after the event. Clare Ann Ronquillo reported that the River/Pauahi Street block captain would like to thank HPD for their assistance with the homeless and the rowdy teenagers that have been out past their curfew.

COMMUNITY CONCERNS

Hawaii Pacific University (HPU) – No representative present; no report provided.

Safe Haven – Greg Payton reported the following:

- Moving – Safe Haven will be moving from Beretania Street to Pauahi Hale in February 2016.
- Statistics – One (1) person was discharged to their family on the mainland and one (1) person moved in. The activity center is awesome and is doing well.
- Landlord Summit – The Landlord Summit will be on Tuesday, November 17, 2015. Governor Ige and Mayor Caldwell will be in attendance to help find all the landlords in Hawaii in order to help the homeless. Payton is looking for a willing landlord to rent to a program who helps the homeless. Payton noted that they will be trying to get a loading zone area in front of Pauahi Hale.

Honolulu Rail Transit Project – Hearing no objections, Chair Au tabled the report until Pat Lee arrives.

Chinatown Business & Community Association (CBCA) – Hearing no objections, Chair Au tabled the report until Shubert-Kwock arrives.

Chinatown Improvement District (CID) – Allan Stack reported that CID is a part of the planning process for the beautification project with the City for Smith Street Park. Stack noted that they are completing the final draft of the plan that will include planters and hedges.

Arts District Merchants Association (ADMA) – Nicole Reid highlighted the following:

- Clean Up – The clean up scheduled for November 2015 has been put on hold. ADMA will inform the public when a date has been set.
- Downtown Shop Around – The Downtown shop around will be on Friday, November 27, 2015 and is a Black Friday event with certain shops in the Downtown/Chinatown area. The event is also partnering with Uber, for less traffic congestion.
- Street Parking Stalls – There has been an uptick in the rental of public street parking stalls. Many streets had private stalls before and Reid encouraged the Board to invite DTS to explain why certain stalls are permitted.

Public Concerns

- Rubbish on the Streets – Resident Miki Lee distributed some photos of rubbish on the streets of Downtown and Chinatown and noted that as a result of the rubbish and the homeless the area smells of urine and feces, and is unattractive to residents and visitors.
- Empty Spaces in Buildings – Gwen Abella raised a concern about the buildings in the Chinatown area being empty and asked why the space cannot be used to house the homeless.
- HPU Student Body President – The HPU Student Body President Nathaniel Thomas Howard thanked the Board for having him and noted that he will try to be in attendance from now on. Chair Au commented that Sam Moku is the HPU representative but has missed the last few meetings and asked if Howard can talk to the President or Moku to get at least some news to give to the community.
- Kapolei Christmas Parade – Ronald Higa announced that the Kapolei Christmas Parade will be on Saturday, December 12, 2015 at 6:00 p.m. There will be fireworks and the Kapolei High School Band will be playing.

ELECTED OFFICIALS

Shubert-Kwock arrived at 7:35 p.m.; Eight (8) members present.

Mayor Kirk Caldwell's Representative – Noelle Wright reported the following:

- Clarification on DTS Permitting – DTS works closely with the Honolulu Film Office on filming permit requests and strives to balance the needs of production with the needs of the community. The requests for permits typically come from the Honolulu Film Office. Permits are granted for available meters with an emphasis on parking production vehicles in front of closed businesses or adjacent to park areas whenever possible. Depending on the shot, parking may be restricted to provide a clear area for the shot or where the camera needs to be placed for the shot.
- Rubbish on Kukui Street and Vineyard Boulevard – DPR noted that the area described is not under the jurisdiction of DPR. ENV noted that they are looking into the concern and will provide a response at the December 2015 meeting.
- Grass Overgrowth – DFM noted that the area was previously maintained by DPR, but recently DFM took over the grass cutting maintenance for this area. The grass is scheduled to be cut on Friday, November 6, 2015.
- Community Assistance with City Clean Up Projects – DPR noted that the community should contact Clinton Jamile at 768-3034 to plan community clean up projects and learn about the DPR's "Adopt-A-Park" Program. DFM noted that there are a number of ways to assist the City on community cleanup projects. Community members can participate in DFM's storm water quality adopt a block and adopt a stream projects that address various locations throughout Oahu throughout the year. Information can be obtained through the Environmental Concern Line at 768-3300 or through the City's website.
- Jaywalking Citations – From January to August 2015, HPD issued 3,575 citations for jaywalking.
- Chinatown Action Summit – Andrew Tang, a TOD Planner, announced that the City is planning a follow up meeting to the Chinatown Action Summit on Tuesday, December 1, 2015 at 6:00 p.m. at the Aloha Tower HPU Room 3. Tang noted that they have taken the feedback from the last meeting and noted that they have worked the additions into the plan.

Yuen arrived at 7:43 p.m.; Nine (9) members present.

Questions, comments and concerns followed:

1. Aloha Tower Tour – Smyth noted that most of Aloha Tower is still closed to the public. Smyth noted that he is trying to get his condo association to take the tour of the new layout.
2. Graffiti – Tom noted that he has been noticing many walls with graffiti drawn on it and asked what the requirements were for the community to paint over the graffiti. Wright will follow up.
3. Robberies – Shubert-Kwock noted that there has been a recent wave of teenagers terrorizing and robbing people and small convenient stores. Shubert-Kwock also raised a concern about the amount of fights and drug activity on North King Street and Maunakea Street.
4. Sidewalks – Mollring noted that the City sidewalks are in bad condition because some of the sidewalks are cracked or uneven. Chair Au noted that DFM is in charge of the sidewalks and asked for the hotline number. Wright will follow up with the number.
5. Vineyard Boulevard – Resident, Annie Peterson, raised a concern about an alley way and asked if the City can sweep the alley because it is hard and uneasy for the residents of the nearby building. Chair Au noted that there is a hotline that contacts HPD or DFM to make a report.
6. Honolulu 311 App – Reid commended the City on their Honolulu 311 App because it has really helped and noted that the City even fixed the broken sprinklers. Wright noted that the pothole hotline number is 768-7777.
7. Funds – Mollring raised a concern about the Mayor releasing the funds for non profits. Specifically Weed and Seed Funding. Wright will follow up.
8. Foot Patrol – Tom raised a concern about the number of foot patrol officers in the Downtown/Chinatown area and noted that he does not see any and asked for more officers on the streets.

Councilmember Carol Fukunaga – No representative was present; A report was provided.

Governor David Ige's Representative – Laurel Johnston reported the following:

- Absence – Johnston announced that the reason for the Governor's representative's absence is because Governor Ige was concerned about other islands not getting the same amount of information to the other islands. Johnston noted that Governor Ige will work through the Community Colleges to give any information needed.
- Budget – Budget hearings will start soon and noted that Governor Ige has been working on many different projects.
- Turtle Bay – Land Conservation history has been made as Turtle Bay Resort and a collaboration of entities led by the State of Hawaii completed an agreement to preserve in perpetuity nearly 630 acres of open space along Oahu's North Shore. Governor Ige signed into law Senate Bill 284 on Friday, June 12, 2015, following the initiative of the Legislature. The details of the agreement were approved by the State Board of Land and Natural Resources (DLNR) on Friday, September 25, 2015.

Questions, comments, and concerns that followed:

1. Thanks – Chair Au thanked Johnston for attending and noted that the community is really involved and will be asking for help.
2. Homeless – Shubert-Kwock welcomed Johnston to the meeting and asked for State reports on the homeless and asked how the State can move the homeless and how to get more shelters. Johnston will follow up. Yuen commented that he appreciates Governor Ige for making homeless an emergency issue.

Senator Suzanne Chun Oakland – No representative was present. A report was not available.

Representative Scott Saiki – No representative was present; A report was provided.

Representative Karl Rhoads – Representative Rhoads reported the following:

- Chaplain Lane – A Board member asked if Chaplain Lane is a private lane. According to DFM, division of road maintenance, Chaplain Lane is City owned.
- Central Middle School – Governor Ige released $310,000 in Capital Improvement Project funds for the design and construction to repave the parking lots (Kukui, Administrative, Queen Emma) at Central Middle School. The estimated completion date for the project is November 2016.
- McKinley High School – Governor Ige released $10,000,000 in Capital Improvement Project funds for the construction and works of art to renovate Building W at McKinley High School. The estimated completion date for the project is June 2018.
- 2016 Legislative Session – The 2016 Legislative Session is coming up in January 2016. If anyone has any ideas for bills, please contact Representative Rhoads.

Questions, comments, and concerns that followed:

1. Steward Ship Bill – Shubert-Kwock raised a concern and asked if the Steward Ship Bill will be re-written or amended. Representative Rhoads responded that Act 221 has worked in a few cases but many petitioners did not follow through and noted that they are waiting to see the 2015 results and commented that he will stay on top of the issue.
2. Bills – Howard asked when and where Representative Rhoads will meet with Governor Ige and how the community can draft a bill. Representative Rhoads responded that there will be a Community Meeting on Thursday, November 19, 2015 at the Honolulu Community College, the meeting will begin at 6:30 p.m. To draft a bill, the first thing would be to be a part of the legislation and noted that if anyone is interested in drafting a bill, to contact his office at 586-6180.

Hearing no objections, Chair Au took the agenda out of order to Honolulu Rail Transit Project – Pat Lee.

Honolulu Rail Transit Project – Pat Lee reported the following:

- Business Outreach Programs – The Holidays are coming, and it's an important time for shoppers as well as businesses. HART is undertaking several initiatives to support and assist local businesses along the rail alignment during construction. HART has in place a Business Outreach Program designed to keep businesses informed and updated on construction activities, and to provide business-oriented outreach to assist those who are affected by the work. HART's Business Outreach Program includes insuring proper access, signage and collateral for businesses. The alliance program, which includes over 400 businesses in the construction corridor, provides tailored construction briefings, free business development workshops and regular contact with HART to jointly develop additional programs to assist businesses during construction. HART plans to expand the outreach program to the Airport and City Center sections of the project as construction activity progresses into urban Honolulu.
- Shop and Dine On The Line – The HART Business Outreach Program includes:
    - HART's Business Alliance Program with meetings and weekly construction alerts
    - Business sign program with directional access and "Open for Business" signs
    - Detailed information for customers about area construction activity and access
    - Additional business resources in partnership with the Mayor's Office of Economic Development, U.S. Small Business Administration, the Hawaii Small Business Development Center, and the Mink Center for Business and Leadership
    - Electronic online offer program for additional customer outreach, social media and marketing workshops
- Shop and Dine Online Application – One (1) of these programs is Shop and Dine on the Line which partners with nearly 100 businesses in the Aiea, Pearl City and Waipahu area. The program is designed to assist businesses along the rail alignment during construction. Mention the Shop and Dine on the Line program, or print out the online brochure, to receive discounts on dining, shopping and services. With the Holidays approaching, we urge the public to patronize these stores and restaurants and use the discounts and other promotions these businesses are offering which help our local businesses during construction. Please visit: www.shopanddineontheline.com for more details to help our local businesses during construction. You can also visit the website using your phone or mobile device, and show the Shop and Dine logo on your phone.
- General Information – For general project information, traffic updates, meeting notices and more information, please visit the website www.honolulutransit.org, call the project hotline at 566-2299 or email a question at info@honolulutransit.org.

Chinatown Business and Community Association (CBCA) – Shubert-Kwock reported the following:

- Chinatown Heroes Banquet – CBCA Celebrated its 6th Annual Chinatown Heroes Banquet attended by 200 people. The following were honored:
    1. Council Member Carol Fukunaga
    2. Sifu Ernie Loo
    3. DTS Director Mike Formby
    4. Little Village Noodle House owner, David Chang
    5. Hawaii 5-0 Eye Productions
    6. KHON2 News
- Homeless – Homelessness in Chinatown is again a pressing problem as more are migrating back. CBCA will continue to work with IHS and Safe Haven and begin a collaborative work with Safe Haven to find rental housing for the Housing First program. CBCA is pleased that Mayor Caldwell and the City Council as well as Governor Ige are working hard pushing for housing for our homeless and ramping up placements and services.

- Crime Statistics – Crime Stats - we are plagued by drug dealings and fights in various parts of Chinatown. Bank of Hawaii has reported some grave problems by North King Street and Maunakea Street.
- Youth Gangs – Youth Gangs again are plaguing our merchants, they range in ages from 10 to 15 in groups of eight (8) to 10. They carry backpacks, steal and run off while others block the view of the shop owners.
- Duc's Bistro – Bottom part of Maunakea street liquor store across from Duc's Bistro has a bigger gathering of people hanging out the liquor store where they are dealing drugs and drinking alcohol.
- Graffiti – We are pleased to report that the Ket On building no the one across Duc's Bistro is now graffiti free.
- Next CBCA Meeting – CBCA is working with other community groups on the Senior affordable housing on River. The next CBCA Dim Sum meeting is Tuesday, November 10, 2015 at 8:30 a.m. to 10:00 a.m. at Empress Restaurant in the Chinese Cultural Plaza, second floor. All welcome to join us to make Chinatown a better place for all.

NEW BUSINESS

3rd Annual Make-A-Wish Jingle Bell Rock Run – James Donnelly and Todd Locovelli announced that the 3rd annual Jingle Bell Rock Run will go from Iolani Palace to Ward Avenue, through Beretania Street and then down King Street. The 5K will be on Sunday, December 20, 2015. The keiki run will begin at 5:30 p.m. and the Adult 5K will begin at 6:00 p.m. There will be limited/rolling road closures. Locovelli noted that King Street and Beretania Street will only have a few lanes closed but will be reopened once the last runner passes.

American Savings Bank (ASB) – Michelle Bartell presented the plans for a new corporate campus on Aala Street and Beretania Street. Bartell noted that ASB prides their work on their work culture and teamwork. ASB has received many awards being voted that it is the best place to work at five (5) different locations. The new corporate campus would be the start of something new. The corporate campus will have parking, offices, and a branch on the bottom level. There is currently no rendering of the interior, but Bartell noted that it is a great way to collaborate not only within the five (5) different teams within ASB but with also the community. Bartell noted that she will send more information regarding the groundbreaking and the opening to the Board. Bartell also noted that ASB has been working with Farrington High School students to help with grants and other forms of aid.

Questions, comments, and concerns that followed:

1. Building Cost – Chair Au noted that the Neighborhood Board boundaries stop at the stream and thanked Bartell for her report and asked what the cost of the building will be. Bartell responded that it was $12 million for the land and ASB is still working on the total project costs. Bartell noted that the current ASB headquarters is still at Fort Street Mall.
2. Community – Smyth asked if ASB will close its current headquarters on Fort Street. Bartell responded that the building will remain but the teammates will all be transferred to the new building. Shubert-Kwock asked if there will be community rooms to help the community. Bartell responded that ASB does offer its seeds of service programs.
3. Security – Saupe noted that he is excited about the project but raised a concern about the security because across the street is a rough area. Bartell responded that ASB has their own security and will be sure to secure all areas inside and outside of the building.
4. Employees – Tom raised a concern about the number of employees and asked if all the employees would leave around the same time. Bartell responded that there will be around 600 employees and noted that they will have separate schedules where employees could be leaving all hours of the day. Bartell noted that there will be paid parking for the public and there will be designated spots for the employees.
5. Retail – Yuen asked if ASB has envisioned any retail stores or restaurants being in the building. Bartell responded No, only ASB will be in the building but the employees will be buying food from all over the community. A resident raised a concern and asked if ASB will be closing any branches. Bartell responded that they sold the Kalihi Service Center and will potentially be moving the site to the Kamehameha Shopping Center.

Community Update on the Proposed City Affordable Senior Rental Housing – Sandy Pfund, Rochelle Nagata-Wu, Monika Mordasin, and Karen Seddon updated the community on the proposed City affordable senior rental housing issue and noted that they have concluded their negotiations with Michaels Development Co. and are waiting to hear back from Full Council to see if their proposal will go into the Committee hearing. If all goes well and Council passes the proposal, the contract will be awarded to Michaels Development Co. The lease will be for 65 years and it was noted that the City as well as the contractors, have gone over the communities issues that were raised at the community meeting and have made adjustments and is working on their due diligence. Nagata-Wu noted that the main issues were height, mass, energy, and cultural references. The height was reduced from 260 feet to 230 feet.

The mass was reduced by 1000 square feet, for more space between the building and temple. The height of the separating wall was shortened to 40 feet. The City and the architects have done many things to address the community's issues for the temple and the rest of the community. The City is trying to give the community the best building they can to improve the well-being of the community. Mordasin noted that they have reduced all of the units from 650 square feet to 570 square feet. The community center was not sacrificed and noted that the community will be able to use the community center for programs such as the Community Advisory Committee and other community programs. For more information call 691-9446 or email Riverstreetcommunitycenter@gmail.com. Wesley Fong noted that this is a seven (7) year endeavor and commented that they have prepared a position letter and asked the Board to support the project. Fong noted that the position paper has already supported and adopted.

Questions, comments, and concerns that followed:

1. Recommendations – Mancos asked what was in the packet that was distributed by Lum. Lum responded that included in the packet are letters that have already been supported by the Board. Mancos raised a concern about the list and noted that there is no way to accurately monitor someone with mental health issues. Fong responded that the list is only for recommendations. Shubert-Kwock noted that the list could be breaking Federal Laws or a law that deals with Civil Rights. Yuen commented that the devil is in the detail and noted that the guidelines set are good and hopes that the advisory committee works well.
2. Parking Situation – Shubert-Kwock raised a concern about the room's colors and asked if the color can change to something other than white. Shubert-Kwock asked how many dedicated parking stalls and how many public stalls there will be. Mordasin responded that the issue was brought up so the change was made to the draft changing the parking lot to a 10,000 square feet lot. Chair Au noted that he was flattered by the presentation because he was expecting the project to turn out like Kuhio Park Terrace (KPT). Chair Au noted that more details are needed for the proposal and commented that it is a great first step.

Shubert-Kwock moved and Mollring seconded that the Downtown Neighborhood Board No. 13 support items 1-7 from the Chinatown Community Center Association Position Paper that was dated July 14, 2015.

Discussion – Saupe noted that the seven (7) items listed are too broad to support. Tom noted that he admires CCCA and asked if anything had been adverse. Mordasin responded that each unit will have a kitchen, bathroom, and all must go through the advisory group. Fong noted that in general everyone is on the same general page. Pfund commented that some of the comments were legal issues. Chair Au called for the vote. Yuen noted that he must recuse himself because it is a conflict of interest.

Shubert-Kwock moved and Mollring seconded that the Downtown Neighborhood Board No. 13 support items 1-7 from the Chinatown Community Center Association Position Paper that was dated July 14, 2015. The motion was ADOPTED, 5-3-0. (**AYE**: Au, Mollring, Shubert-Kwock, Smyth, and Tom.)(**NAY**: Chang, Mancos, and Saupe.)

Yuen moved and Shubert-Kwock seconded that the Downtown Neighborhood Board No. 13 endorse the conceptual design that was put forth by Michaels Development Company and The City and County of Honolulu. The motion was UNANIMOUSLY ADOPTED, 9-0-0. (**AYE**: Au, Chang, Mancos, Mollring, Saupe, Shubert-Kwock, Smyth, Tom, and Yuen.)

City Sewer Rehabilitation Project – Paul Mallory distributed the draft map and plan and reported that sewer construction is progressing and the pipe installation was held up by permits because of different noise variances. The construction manager should have notified the nearby public and neighbors. The construction will begin on Monday, November 16, 2015 work will be from Monday to Thursday, 6:00 p.m. to 6:00 a.m. Mallory noted that he will be working in the area for the next three (3) months and asked to be a part of the December agenda.

Questions, comments, and concerns that followed: Manhole Covers – Mollring raised a concern about the team working near Kukui Plaza and noted that after the construction the workers did not properly replace the manhole cover correctly. Mallory noted that his card was attached to his map, and to call if there are any questions or concerns pertaining to the project.

Honolulu Christmas Lights Parade – Chair Au noted that the parade will be on Saturday, December 5, 2015 and will start at 6:00 p.m. on King Street and will move from River Street to Kawaiahao Street where the parade will end at Honolulu Hale.

APPROVAL OF OCTOBER 1, 2015 MEETING MINUTES – Shubert-Kwock moved and Mancos seconded that the Downtown Neighborhood Board No. 13 approves the October 1, 2015 meeting minutes. The motion was UNANIMOUSLY ADOPTED, 9-0-0. (**AYE**: Au, Chang, Mancos, Mollring, Shubert-Kwock, Saupe, Smyth, Tom, and Yuen.)

BOARD BUSINESS AND REPORTS

Chair's Report – No report.

Other Liquor License Applications or Street Closure Events – No report.

Future Agenda Item Requests – Chair Au noted that DTS and HBL would like to come and discuss the new bike path. Chair Au asked if the Board would like an after event report from the Hallowbaloo event. Shubert-Kwock responded that she would like to hear the after event report because the event was an experiment with new techniques.

Neighborhood Commission Updates – No report.

Treasurer's Report – Treasurer Mollring reported a remaining balance of $245.53. The report was filed.

City and County Affairs – No report.

Oahu Metropolitan Planning Organization (OahuMPO) – No report.

ANNOUNCEMENTS:

Next Meeting – The next Downtown Neighborhood Board No. 13 meeting is scheduled for Thursday, November 5, 2015, Pauahi Community Center at 7:00 p.m.

Neighborhood Citizen's Patrol (NCP) – The NCP meets each Tuesday on the Diamondhead side of Kukui Plaza at 8:00 p.m. Please consider joining the patrol and supporting its efforts as they express their service and pride in our Downtown/Chinatown community.

Broadcasts – Videotape of Board meetings are scheduled to be shown on the third Thursday, and on the second and fourth Saturday on `Olelo Channel 49.

ADJOURNMENT: The meeting adjourned at 9:40 p.m.

Submitted by: Neil Baarde, Neighborhood Assistant

DRAFT REGULAR MEETING MINUTES
THURSDAY, FEBRUARY 4, 2016
PAUAHI COMMUNITY CENTER

CALL TO ORDER – Chair Alvin Au called the meeting to order at 7:02 p.m., **with a quorum of seven (7) members present.** Note: This nine (9) member Board requires five (5) members to establish a quorum and to take official Board action.

Board Members Present – Alvin Au, Anthony Chang (departed at 9:38 p.m.), Jasmine Mancos (arrived at 7:14 p.m., departed at 8:53 p.m.), Dolores Mollring, Jonathan Saupe (arrived at 7:14 p.m.), Chu Lan Shubert-Kwock, Tom Smyth, Robert Tom, and Stanford Yuen.

Board Members Absent – None.

Guests – Firefighter Recruit Travis Takahashi, Firefighter Aubrey Burris, Firefighter Chris Takayama, and Firefighter III Mark Bates (Honolulu Fire Department); Captain Ben Mahi, Major Roy Sugimoto, Lieutenant Stephen Silva, Sergeant Mark Suaglar, Corporal Steven Matsuda, and Officer Alan Ibrao (Honolulu Police Department); Greg Payton (Safe Haven); Pat Lee (Honolulu Rail Transit Project); Sam Moku, Kristylee Rabaino, Taylor Silva, Daniel Valencia, and Nathanael Howard (Hawaii Pacific University); Allen Stack Jr. (Chinatown Improvement District); Nicole Reid (Arts District Merchants Association); Howard Lum and Kehaulani Lum (Chinatown Community Center Association); Elizabeth O'Brien (Hawaii Theater); Director George Atta (Mayor Kirk Caldwell's representative); Councilmember Carol Fukunaga; Laurel Johnston (Governor David Ige's representative); Senator Suzanne Chun Oakland; April Bautista (Representative Karl Rhoads representative); Liz Char, Sandy Pfund, Irene Banao, Milton Kikuchi, and Ty Fukumitsu (City and County of Honolulu); Donna Blanchard (Kumu Kahua Theatre); Lawrence Friedman, Rebecca Friedman, Ronald Higa, Mike Peacock, Kalawai'a Goo, Ena Aulan, Willis Moore, Gwen Abella, Willard Brown, Matt Bleder, Tyler Dos-Santos, Brooke Wilson, Sean Newcamp, and Jocelyn Belden. Eric Cristobal (Videographer); Executive Secretary Shawn Hamamoto, Uyen Vong, and Neil Baarde (Neighborhood Commission Office).

INTRODUCTION OF BOARD MEMBERS – Chair Au and the Board members introduced themselves and wished the community a "Happy Chinese New Year!" at this time.

PUBLIC SAFETY REPORTS

Honolulu Fire Departments (HFD) – Firefighter I Aubrey Burris reported the following:

- January 2016 Statistics – There were 1 structure, 1 wildland, 1 nuisance, 3 cooking fires, with 5 activated alarms. There were 163 medical emergencies, 4 motor vehicle collision with pedestrians, 3 motor vehicle collisions, and 1 hazardous materials incident.
- Hiking Safety Tip – HFD often responds to hikers who are lost or injured. The Department of Land and Natural Resources (DLNR), Division of Forestry and Wildlife, list the following safety tips:
    - Inform others about the plan to hike and to notify others with the name and location of the trail and the expected time to return from the hike. This information will give rescuers accurate information on where to start the search.
    - Plan the hike to include sufficient daylight.
    - Take a fully charged cell phone when going on a hike as HFD relies on phone contact when trying to locate a lost hiker or obtain any information regarding an injured hiker. If capable, HFD will use the phone's global positioning system (GPS) to obtain a general location.
    - When hiking, stay on the trail. Most accidents happen when hikers leave the established trail and disregard warning signs. Staying on the trail greatly reduces the chances of having a serious fall or getting lost. For more information, visit www.dlnr.hawaii.gov/recreation.

Honolulu Police Department (HPD) – Lieutenant (Lt.) Stephen Silva reported the following:

- January 2016 Crime Statistics – There were 4 motor vehicle thefts, 8 burglaries, 89 thefts, 22 unauthorized entries into a motor vehicle (UEMV), 17 assaults, 4 sex assaults, 2 graffiti and 4 drug offenses, for a total of 2,577 calls for service.

- Pedestrian Safety Tips – Be safe and be seen. Wear bright/light colored clothing and reflective materials. Be smart and alert. Avoid dangerous behaviors. Always walk on the sidewalk. If there is no sidewalk, walk facing traffic. Do not assume vehicles will stop. Make eye contact with drivers. Do not rely solely on pedestrian signals. Look left, right, and left again before crossing a street. Obey traffic signals. Do not wear headphones or talk on a cell phone while crossing.

Mancos and Saupe arrived at 7:14 p.m.; Nine (9) members present.

Questions, comments and concerns followed:

1. Statistics – Tom noted that there was a dramatic decrease in the statistics and asked what the cause was. Lt. Silva responded that it is the typical pattern because the holiday season brings crime. Tom asked if there were any changes in foot patrol officers. Lt. Silva introduced Major Roy Sugimoto and it was noted that there has been an increase in foot patrols and commented that after the new recruits graduate they will be 4th watch. Major Sugimoto noted that there will be full coverage depending on the community with the most needs.
2. Chinatown Substation – Shubert-Kwock noted she has three (3) concerns and asked: 1) update on the cameras in the Downtown/Chinatown area, 2) the language access at the HPD substation, suggested having a Chinese interpreter or Chinese interpretation signs, and 3) asked if videos of drug activity can work in arresting a suspect. Major Sugimoto responded that videos are taken case by case, but if the videos are usable, it could be used. Sometimes it is hard to use videos but if needed, HPD can clear the picture with the help of the Crime Analysis Unit. Major Sugimoto introduced Captain Ben Mahi and noted that only 911 can assign an interpreter and commented that there are 26 cameras total, four (4) are out. Captain Mahi commented that there are at least three (3) officers at the substation on each shift and noted that one (1) of the Chinese speaking officers had addressed a sidewalk issue and noted that he will return to the substation with the concerns. Shubert-Kwock thanked HPD and noted she will spread the word.
3. Refrigerator – Mollring noted that cashiers have come up to her and noted that people at Sun Yat Sen Park have put a refrigerator there and have been seeing people pull electrical wires to operate the refrigerator. Captain Mahi asked if it was in the pavilion area. Mollring responded that it is next to an encampment. Captain Mahi will follow up.
4. Homeless Camps – Tom raised a concern about homeless people camping near his building and asked what he can do. Captain Mahi responded that being homeless is not a crime but if there is suspicious activity occurring call HPD. Also call HPD if the camp seems to be getting bigger and HPD will enforce the law with DPR and they will go through the process after the assessment is done. Tom also noted that on Kukui Street there is a methadone clinic across from St. Andrew's Priory and asked if HPD is aware that the clinic is near schools. Captain Mahi noted that HPD is aware of the clinic but commented that the concerns need to go through the City or the State. Saupe raised a concern about restaurants complaining about homeless people in front of the restaurant and near the police substation and asked if anything is being done. Saupe also asked about the homeless camping at the parks and noted that DPR said the park extends to the sidewalks. Captain Mahi responded that all efforts are being done to reduce fear and the perception of crime in the area and noted that HPD needs the community's help by reporting any suspicious activity. Captain Mahi noted that he has sat down with Corp. Counsel, DFM, DPR, and commented that they have done studies and noted that if they see homeless during the sweeps, they will try to get them into an outreach program.
5. Smith/Beretania Park – Chair Au noted that he remembers the opening of Smith/Beretania Park and commented that the Neighborhood Board asked DPR to close the park from 10:00 p.m. to 5:00 a.m., DFM accommodated the Board but ownership switched to DFM. Chair Au asked Captain Mahi to ask DFM and DPR to please enforce the rules again. Captain Mahi responded that he has been working with DPR and noted that they have been using all types of methods but at Smith/Beretania Park the park is closed from 7:00 p.m. to 7:00 a.m., the signage is still getting fixed and Captain Mahi noted that HPD is doing as much as they can to reduce the fear in the area. Yuen noted that HPD is good at moving the homeless but when they move, they move to sidewalks and Yuen commented that he does not know how to address the issue because they are still breaking the law. Yuen commented that he has a photo of two (2) homeless camps in the area hiding behind a car. Captain Mahi responded that HPD officers have to make tough decisions and noted that the main question is the dirt part of the park because many homeless have been known to move to the dirt parts of the park.

Hearing no objections, Chair Au took the agenda out of order to Discussion on Crime and Safety Concerns.

Discussion on Small Business and Neighborhood Crime and Safety Concerns – Chair Au noted that he has asked HPD to stay to answer the communities concerns and commented that as a group the entire community can solve all the problems.

- Funding – Mike Peacock noted that he is planning to open an office on King Street and Maunakea Street and commented that he had been homeless for five (5) years and during his recovery he was working with the Hawaii Information Consortium (HIC). Peacock commented that opportunity comes through funding and noted that the question is how come the homeless is the big issue that no one took the responsibility to get a correct count of the homeless to get funding for the issue. Peacock commented that the City needs to put the homeless where they feel safe. Mancos thanked Peacock for his comments and noted the Neighborhood Board is an advisory council and is trying to help. Chair Au commented that homelessness is a big systematic issue and everybody needs to work together.
- Environment – Don Murphy noted that he has been in the Downtown/Chinatown area for 29 years and commented that the environment is getting just as bad as before. No one wants to visit the area and agreed with Chair Au and commented that the Community needs to work together for a solution, because the real challenge is needing to move forward.
- Bike Lanes – Ron Higa raised a concern about a wheelchair using the bike lane on King Street when there was nobody on the sidewalk and asked if that is legal or not. Captain Mahi responded that Higa should have reported the incident and noted that HPD will address the issue because vehicles do not belong in the bike lane. Captain Mahi noted that HPD will come when called.
- Kumu Kahua Theatre – Donna Blanchard, Managing Director of Kumu Kahua Theatre reported that they are on the corner of Bethel Street and Merchant Street and noted that they exist to encourage local play writers to tell the stories of people here in Hawaii. Blanchard noted that they are a part of a new group with other merchants and commented that they are excited to be a part of the community and their ohana.
- Power Washing – Gwen Abella raised a concern about the City needing to power wash the bus stop across Winston Hale because it is filthy and would like it power washed.
- Sit/Lie Law Enforcement – Matt Bleder raised a concern about the homeless at Smith/Beretania Park and asked how HPD enforces the Sit/Lie laws. Captain Mahi responded that there are generally always stragglers when the park closes and commented that there are many suspicious activities and noted that the best way to help HPD is to make a report. Captain Mahi noted that HPD has been working with many City agencies and noted that if there are homeless on sidewalks it is illegal. Gifford Chang commented that he has worked closely with HPD at the Night in Chinatown Event and noted that he has no complaints regarding HPD.
- Filing A Police Report – Chair Au noted that the community has their own perceptions on how to properly file a police report and commented that people are afraid because of the number of steps that need to be taken and asked what the steps are to file a police report. Captain Mahi will follow up. Chair Au noted that everyone should be compassionate to each other.
- Systematic Approach – Kalawai'a Goo noted that she has seen many issues and noted that she was inspired by Mother Theresa's Peace Rally Speech and commented that she is disturbed by the Sit/Lie Laws because it targets a certain group of people. The purpose for the laws was to approach the issue from a supported view for better sustainable results.
- Safe Haven – Chair Au noted that Safe Haven has a hygiene center and commented that it has been accosted by those trying to help. Safe Haven needs the community's help and asked the Citizen's Patrols or HPD to check in from time to time.
- Smith/Beretania Park Clean Up – Lee Stack announced that the Chinatown Improvement District (CID) will be hosting a park clean up at Smith/Beretania Park on Saturday, February 20, 2016 and noted that CID has been working on a project for the park. Bob asked what time the clean up is and if anything is needed. Stack responded 8:30 a.m. and CID provides snacks and noted that those willing to help can bring their own gloves, paint rollers, and brushes.
- Thanks – Major Sugimoto thanked the Neighborhood Board for inviting them to the meeting to hear the good and the bad concerns. Major Sugimoto noted that he is excited to be moving forward and commented that he has noticed the merchants group is growing which is fantastic because the community and HPD are one (1) big organization. Major Sugimoto noted that HPD will stand with the group to help move forward and find a solution. Peacock thanked HPD and noted that he understands the Neighborhood Board is an advisory board, but if the people push the homeless, the homeless will push back and commented that the solution is a systematic approach. Mancos noted that she appreciates everyone's comments and explained that the Board Members are all volunteers that represent the community.
- Homeless – Nicole Reid noted that the homeless issue has been discussed a lot of times because the homeless population is growing and noted that a group of researchers and merchants have been meeting with City and State Officials and all are enthusiastic about moving forward. The group has been looking for a new meeting site and noted that a consistent way of communication is needed. Reid noted that there is always room for improvement and appreciates HPDs help.

Hearing no objections, Chair Au brought the order of the agenda back to Neighborhood Citizen's Patrol.

Neighborhood Citizen's Patrol (NCP) – Mollring reported that her group has been active but the neighborhood has been quiet. If anyone is interested in joining the NCP, the NCP meets on the Diamond Head side of Kukui Plaza at 8:00 p.m. every Tuesday night.

COMMUNITY CONCERNS

Hawaii Pacific University (HPU) – No representative was present.; No report was provided.

Safe Haven – Greg Payton reported the following:

- Residents – Safe Haven discharged 11 residents, admitted one (1), and returned one (1) homeless individual to Portland. It was noted that 60 people were helped get off the streets last year and noted that this year Safe Haven is trying to help 75 people.
- Grants and Aids – Safe Haven currently has two (2) grants and aids. One (1) with the Institute for Human Services (IHS) and Councilmember Carol Fukunaga. With the help of the grants and aids, Safe Haven was able to hire two (2) new staff members and helped place five (5) residents.
- Hygiene Center – The hygiene center with public toilets are open and it was noted that the center serves over 60 people a day and there has been no vandalism or graffiti damages. Payton noted that 20 out of the 60 people who use the hygiene center are people who are working but live in their cars.
- Housing and Urban Development (HUD) Funding – HUD funding is needed for renovations, Payton is hoping to speed up the process and hopes the project can be completed by October 2016. Payton noted that Safe Haven is responsible for counting the homeless in the Chinatown area and commented that Safe Haven has many volunteers that help serve over 200 people a year.
- Calling to Action – Payton announced that if anyone is willing to house the homeless in the Kaimuki, Kalihi, or Aiea areas, please call 529-4554 for information. Payton noted that Mental Health Kokua will take care of any damages occurred by the homeless residents.

Questions, comments, and concerns that followed: Renovations – Mollring thanked Payton and his volunteers for helping with the parade. Shubert-Kwock noted that the community needs more people like Payton and suggested that during the renovations to place the toilets in the front, the sink in the middle, and the showers in the back of the hygiene center. Payton responded that they will be going through major renovations which will require Safe Haven to raise money.

Honolulu Authority on Rapid Trasit (HART) – Pat Lee reported the following:

- Honolulu Rail System – The first set of train vehicles are expected to arrive in Honolulu soon. Ansaldo Honolulu (now Hitachi Rail USA) was awarded the $1.4 billion Core Systems Contract for the Honolulu Rail Transit Project to design, build, operate and maintain the train vehicles in addition to the operations and control center. Honolulu's rail system will be the first fully automated driverless urban rail transit system in the United States. The train cars are manufactured at the Hitachi Rail factory in Reggio Calabria, Italy and shipped to Pittsburg, California, for final assembly, then on to HART's Rail Operations Center in Waipahu.
- Rail Cars – HART's trains will consist of four (4) cars. Each four (4) car train can carry about 800 people. The car shell structure is 100% aluminum. There are two (2) types of car shells, one (1) type for the ends of the train and the other for the middle cars. The middle car shells have an opening at both ends to permit passengers to move between the four (4) car trains. There are three (3) doorways on each side of both types of rail cars. Each rail car is 59–1/2 feet long, 14 feet high and 10 feet wide. The car shell structure consists of a combination of over 40 different aluminum extrusion profiles. The aluminum extrusions are welded together. The weight of the aluminum car shell without doors, interior linings, seats or other equipment is approximately 14,000 pounds. HART's four (4) car trains will include Closed-circuit security cameras, Air conditioning, Free WiFi, Seating for 188 riders, and Space for surfboards, coolers, luggage, strollers, bicycles and wheelchairs.
- Construction Highlights – The latest construction highlights are more than 400 foundation shafts have been placed, more than 300 columns erected, more than 4,000 segments casted, and about six (6) miles of guideway completed to date.
- General Information – For general project information, traffic updates, meeting notices and more information, please visit the website www.honolulutransit.org, call the project hotline at 566-2299 or email a question at info@honolulutransit.org.

Hearing no objections, Chair Au brought the agenda out or order to Hawaii Pacific University.

Hawaii Pacific University (HPU) – Sam Moku reported the following:

- New President – The new President of HPU is the former Dean at Villanova University, John Rotunda. Moku noted that everyone at HPU is excited to have him and commented that he is currently trying to settle into his new position and looking for a residence. Moku noted that Rotunda will visit the Neighborhood Board when he can.
- Western Association of Schools and Colleges (WASC) Accreditation – HPU has been going through the process of achieving accreditation through WASC. Moku noted that HPU should receive their score soon.
- New Year's Eve Event Report – There were roughly 7,000 youngsters at the event and noted that the event was a trial run to see if similar events can be scheduled. Moku noted that all aspects of the event passed the test and commented that the Harbor Division had positive feedback. Moku noted that everyone enjoyed the fireworks and Moku introduced some of the students who were in attendance because they are interested in civic engagement.

Questions, comments, and concerns that followed:

1. Meetings at Aloha Tower – Mollring asked the community if anyone objects to having the meetings at Aloha Tower. Moku noted that parking should be the only concern and commented that he will double check the boat days with the Harbor Division. Smyth noted that he lives across the street and is very happy. Smyth commented that Aloha Tower offers great facilities.
2. Ground Floor Updates – Saupe asked for an update on the retail shops on the ground floor of Aloha Tower. Moku responded that currently there is a Barnes & Noble Bookstore, Nashville's Bar, and Moku noted that HPU is slowly bringing in other retail shops. Moku noted that 90% of the dorms have been filled and there are still 12 retail spaces open. Shubert-Kwock commented that she is thankful for Moku offering the meeting room to the Neighborhood Board and noted that she is pleased with the building and asked Moku to double check the schedule.

Hearing no objections, Chair Au took the agenda out of order to Discussion of holding the Neighborhood Board Meetings at Aloha Tower.

Shubert-Kwock moved and Tom seconded that the Downtown Neighborhood Board hold their monthly meetings at Aloha Tower.

Discussion – Yuen noted that parking is an issue and the Board should wait to vote until Moku answers all the Boards questions. Chang agreed with Yuen and suggested tabling the issue until the Board has more information. Shubert-Kwock withdrew her motion.

Chair Au resumed the order of the agenda.

Chinatown Business and Community Association (CBCA) – Shubert-Kwock reported the following:

- Monthly Meetings – CBCA held it's monthly Chinatown Dim Sum Breakfast Meeting at Empress Restaurant. The topic of discussion was focused on crimes affecting businesses and residents. There are two (2) new events 1) St. Patrick's Day Festival with street closures, and 2) a new bar license for 2 Hotel Street.
- Noise Issues – A Bill that was introduced by Representative Rhoads has been supported by CBCA, Chinatown Gateway Tenants Association, Lynne Matusow, Lee Stack, and others.
- Honolulu Liquor Commission – CBCA would like the Honolulu Liquor Commission to remove the music license of repeated offenders and levy stiffer fines, limit continuation of hearings by the repeated offenders, and to add soundproofing to establishments wanting music and restrict low amp music with protection for the public.
- Chinatown Events – Last month, CBCA participated in the huge Chinatown Parade and supported the Night in Chinatown block party. The block party was the largest and best run block party in Chinatown. The event brought people of all ages together to celebrate Chinese New Year and the booths included City and non-profit groups to promote their missions. Shubert-Kwock noted that extending the block party to River Street was a smart and appropriate idea. CBCA will continue to address the crimes and drug issues in the Chinatown area. Recent police meetings with stockholders may provide added police support.
- Hale Waiolu – The community is disappointed that the City is not leading the Hale Waiolu project, allowing delays caused by politics and politicians, and to allow them to bully the community and granting special favors for only a few.

- Chinatown Open House – This Friday, February 5, 2016 will be Chinatown's Open House where lions will bless all the shops and society halls between 6:00 p.m. to 9:00 p.m. King Street, River Street to Nuuanu Avenue will be shut down. Shubert-Kwock suggested the community get there early to park in the Chinatown garages for only $3 from 5:30 p.m. until midnight.
- Next Meeting – The next CBCA Dim Sum Meeting is at Empress Restaurant on Tuesday, February 9, 2016 from 8:30 a.m. to 10:00 a.m.

Questions, comments, and concerns that followed: Noise Complaints – Saupe asked what noise complaints Shubert-Kwock was regarding. Shubert-Kwock responded that on Hotel Street there are repeat offenders that the Honolulu Liquor Commission is having issues with. The fines are not enough and the Liquor Commission should pull their permits or try to sound proof the area. Saupe noted that he does not see much support on the issue and commented that the Night in Chinatown Event was a really noisy event. Shubert-Kwock responded that she appreciates his opinions but noted the issue is that repeat offenders do not listen to the law.

Chinatown Improvement District (CID) – Lee Stack reported the following:

- Smith/Beretania Park Clean-Up – CID will be hosting a park clean up at Smith/Beretania Park on Saturday, February 20, 2016 at 8:30 a.m.
- Chinatown Directory – The complete Chinatown Directory is available at cidchinatownhawaii.org.
- Roaming Patrol Program – CID will continue to have signups for the roaming patrol program.

Arts District Merchants Association (ADMA) – Nicole Reid reported the following:

- Arts Culture Merchants Etcetera (ACME) – As ADMA is going under a few changes, they have decided to rename themselves to ACME. Reid noted that all are welcome to attend and commented that their focus is more business friendly.
- Chinatownnow.com – Chinatownnow.com has a list of merchants, restaurants, and event calendars.
- Coordinated Merchant Patrols – A patrol has started where the group walks through the business areas and it was noted that they are similar to the Waikiki Ambassadors.
- Noise Levels – The community needs an understanding of what measurement tools are being used because in the report it said "felt" the noise. Reid commented that the bar owners need metrics.

Chinatown Community Center Association (CCCA) – Howard Lum deferred his report at this time.

Michel's Pipe Services City Sewer Rehabilitation Project – Paul Mallory reported that 90% of Phase 1 has been completed. There are seven (7) lines left on River Street near North Beretania Street and Hotel Street. The part of the project that is Nimitz Highway will be finished by the end of March 2016. The Chinatown Phase 2 project should be completed by the end of April 2016. Phase 2 is 50% completed. Mallory noted that all the yellow areas on the map are incomplete.

Questions, comments, and concerns that followed:

1. Day Work – Chair Au noted that he assumes Michel's Pipe Services are only doing way work. Mallory responded that they did have a night variance at one (1) point but the residents from the Honolulu Tower had complaints and when they tried to renew the permit they could not work at night. Mallory noted that they are still in the process of renewing their permit. Chair Au asked what the areas are that still have work to be done. Mallory responded North Beretania Street, River Street, North Pauahi Street, Nimitz Highway, Maunakea Street, Merchant Street, Fort Street Mall, and North Hotel Street near Smith Street are all that is left to be done for Chinatown Phase 1. Chair Au asked about Phase 2. Mallory responded that they need the variance for Phase 2 and noted that he will need Board comments because with the project in place without Board comments is unfair. Mallory noted that contractually it is illegal and commented that he did not mean to disrespect anyone and noted that they were trying their best to blanket the area by foot. Mallory commented that he was guided to work at night to mitigate the issue.
2. Parking Concerns – Shubert-Kwock noted that she watched some of the workers and commented that they took up three (3) lanes. Shubert-Kwock noted that the vehicles parked on River Street and commented that it is causing concerns and asked Mallory to confine their space. Mallory responded that is why they need the variance to work at night and noted that they will try harder.

Mancos departed the meeting at 8:53 p.m.; Eight (8) members present.

Public Concerns

- New Mandarin Academy – Shubert-Kwock announced that there is a new Mandarin Academy that will teach Mandarin to all ages.
- Veterans Treatment Corporation – Mike Peacock announced that there will be a march to connect the Veterans with first circuit court to try and reduce the negative impact on the homeless. Peacock noted that he is trying to find a solution to be a positive part of the community.

ELECTED OFFICIALS

Mayor Kirk Caldwell's Representative – Director George Atta of the Department of Planning and Permitting (DPP) reported the following:

- Bus Pad Repairs – The Department of Design and Construction (DDC) has indicated that King Street between Bethel Street and Alapai Street is programmed for contract resurfacing under Rehabilitation of Streets, Unit 67 that will address the bus pad at King Street and Nuuanu Avenue. The bid advertisement is scheduled for October 2016. DFM will check to see if interim repairs are needed and will consult with DDC as appropriate.
- Indentation on the Corner of Hotel Street and Maunakea Street – DDC has indicated that Maunakea Street from Nimitz Highway to Vineyard Boulevard has been identified for contract resurfacing under Rehabilitation of Localized Streets, Phase 12D. Hotel Street from River Street to Richards Street has been identified for concrete resurfacing under Rehabilitation of Streets, Unit 65. Both projects will be subject to utility clearances and availability of funds so no construction date has been set at this time. DFM will check to see if interim repairs are needed.
- Hole on Corner of Beretania Street and Nuuanu Avenue – DDC has indicated that Beretania Street will be resurfaced under Rehabilitation of Beretania Street, Unit 64-R project. The project is targeted to restart construction in February 2016. Potholes will be patched by DFM until construction project resumes.

Questions, comments and concerns followed:

1. Construction – Chair Au asked if the construction on Maunakea Street will be occurring throughout the day or night. Director Atta will follow up.
2. Power Washing Schedule – Shubert-Kwock noted that the sidewalks have a strong smell of urine and asked the City to power wash the areas once a month and noted it is important to increase the power washing in the area. Director Atta responded that he has received the message and noted that Director Sasamura noted it has been a funding issue, but Director Atta will follow up.

Councilmember Carol Fukunaga – Councilmember Carol Fukunaga reported the following:

- Tackling Crime in Chinatown – Retailers and businesses in the Nuuanu/Bethel Street area have called for additional police presence in Chinatown to combat assaults and drug related incidents near Hawaii Theatre and along Nuuanu Avenue and Bethel Street, as well as break ins and vandalism near many small businesses.
- Public Health and Safety Updates – DFM reported on the cracks in the Nuuanu Stream wall. An Emergency Procurement Request was approved by the DDC on October 6, 2015, and transmitted to the Department of Budget and Fiscal Services (BFS) on October 12, 2015. A notice to proceed was issued on December 10, 2015 and the design phase for the repairs will be underway pending approval from the Army Corps of Engineers and the Department of Health (DOH).

Governor David Ige's Representative – Laurel Johnston reported that the Governor's Newsletter is in the back and noted that in the newsletter are excerpts from his State of the State Address. Johnston commented that the Department of Education (DOE) and Governor Ige have been working on cooling at least 1,000 classrooms.

Questions, comments, and concerns that followed: Funding – Shubert-Kwock noted that she likes the Governor's initiatives and commented that she is only disappointed because he did not ask for funds for early education. Shubert Kwock asked if Governor Ige can bring the Super Ferry back. Johnston responded that there are two (2) pieces, 1) a preschool open doors program through private contracts and commented that she hopes the Legislation can take a better look at the situation, and 2) more funding is needed for the early education programs. Johnston commented that there has not been any proposal for the Super Ferry and noted that the issue will take a while but will follow up with more information.

Senator Suzanne Chun Oakland – No representative was present.; a report was provided.

Representative Scott Saiki – No representative was present.; a report was provided.

Representative Karl Rhoads – April Bautista reported the following:

- Motorcycle Noise – Received a complaint regarding the noise from motorcycles along Hotel Street and Nuuanu Avenue. The law requires all motorcycles to be equipped with a muffler to prevent excessive noise. It is illegal to modify an exhaust system that will amplify or increase the noise. For these reasons, it is encouraged the community calls HPD if one sees he motorcycles license plate at the next time a disruption occurs.
- Hole Fronting Downbeat Diner – Received a complaint that there is a deep hole in front of Downbeat Diner where a tree should be planted. Representative Rhoads has contacted the City about the issue. Division of Urban Forestry (DUF) stated vandalism of the trees do occur. The empty tree well was recently replanted and is still intact.
- Smith/Beretania Park – Received a complaint regarding the homeless people occupying Smith/Beretania Park, specifically the area of grass between the park fence and sidewalk on Pauahi Street. Representative Rhoads has contacted HPD about the issue.
- Power Washing Schedule – Received an inquiry about the power washing schedule for Chinatown and power washing of bus stops. Representative Rhoads has contacted DFM regarding the schedule and DFM stated that it is on a rotational schedule with only one (1) crew between Saturdays and Wednesdays. Also, power washing of bus stops is not part of their job duty but will do so if particularly dirty. Representative Rhoads wrote a letter to the Mayor to increase the frequency of sidewalk power washing and to consider power washing bus stops again.
- Early Morning Wal-Mart Noise – Received a complaint regarding early morning noise from Wal-Mart delivery and rubbish trucks at the Downtown location. Representative Rhoads wrote a letter to the store manager of the Downtown location regarding the issue.
- Bills of Interest
    - House Bill 2249 – Relating to noise. The Bill establishes enhanced penalties for multiple noise violations or more during a single calendar year. The Committee on Consumer Protection and Commerce deferred the measure until Monday, February 8, 2016 at 2:00 p.m. in Conference Room 325.
    - House Bill 2248 – Relating to condominium governing instruments. The current law states that two thirds (2/3) of the voting interest is needed to pass an amendment. This Bill changes the voting requirements to allow the amendment of bylaws of a condominium association to 6% of owners who return a ballot, indicating a vote of either “yes” or “no”. When counting the ballots and 67% of the people voting “yes” at the end, then the proposed amendment is adopted at the end of the year. Note that this bill does not change the one (1) year period. The committee on Consumer Protection and Commerce deferred the measure until Monday, February 8, 2016 at 2:00 p.m. in Conference Room 325.
    - House Bill 1542 – Relating to Harbors. The Bill authorizes the director of transportation to adopt rules that regulate and limit noise at harbors, ports, roadsteads, docks, wharves, piers, quays, bulkheads, and landings of the State. Currently, no one has authority to regulate harbor noise.

NEW BUSINESS

Parking Rules and Street Usage Permit Presentation – Ty Fukumitsu presented the following:

- Contact Information – It was noted that Fukumitsu’s office is on the 2nd floor of the Frank Fasi Municipal Building and they are open Monday through Friday from 8:00 a.m. to 4:00 p.m. their telephone number is 768-8387 and noted that the Frequently Asked Questions (FAQ) regarding the permitting process can be found online.
- Permit Application Process – A permit is needed when performing work or when closing streets or sidewalks. Fukumitsu showed the permit application and the requirements for the application process.
- Typical Permits – The typical permits that are given are usually street usage, temporary loading zones, staging, lane or sidewalk closures, and road closures. The City looks for safety concerns, location, and the working hours and dates of the application of the permit.
- Review Process – The review process is a tiered process that looks into the parking situations, lanes/sidewalk/or road closures before the permit can be accepted.
- Fees – Fees are given when the application takes up parking meters. The metered space that is taken will cost $12 times the number of meters taken. Fukumitsu noted that only cash and checks are accepted and noted that checks are preferred. Fukumitsu noted that anyone wishing for a permit should apply early, because the average permitting process takes 10 – 20 minutes and the applicant should bring a drawing of the area and a copy of their traffic control plan.

Questions, comments, and concerns that followed:

1. Nuuanu Avenue – Saupe raised a concern about Nuuanu Avenue on the weekends because there are cars parked on both sides of the street and noted that it is detrimental to the businesses because the stalls are always taken and asked if the City could span out the number of permits given and commented that the movie trucks are not utilizing the better parking areas. Fukumitsu responded they are trying to limit the stalls that are being taken, but there are street closures that ban parking. Fukumitsu noted that there needs to be at least one (1) lane open for traffic flow and commented that some situations are tough. Saupe noted that eight (8) permits were given during the Christmas/Holiday Season and commented that people were always asking and looking for parking stalls. Saupe noted that he understands if someone is filming in the area and the street needs to be clear, but the stalls usually open up after 4:00 p.m.
2. Internal Audit – A resident noted that she had called HPD on Hawaii Theatre for taking two (2) spaces when their permit only allowed for them to take the stalls at the end of the day, but Hawaii Theatre did give half back. The resident noted that her point is that DPP is over permitting, and asked for an internal audit.
3. Fort Street – Mollring noted that someone is not using their permits on Fort Street and commented that the stalls are important but are vacant because they are not using the permits correctly. Fukumitsu responded that sometimes on Fort Street the permits are not legal and suggested calling the office the next time someone notices the signs because parking in the Chinatown require notices of at least 24 hours.

Chang departed the meeting at 9:38 p.m.; Seven (7) members present.

4. Loading Zones – Reid asked and Fukumitsu responded that they try not to give loading zone permits but by statute the City can only charge for the meters that are being used. Reid asked what information is required for signs. Fukumitsu responded that the sign needs to be readable, the dates, times, and the plan of the event. The permits are good for 30 days and needs to be renewed after if still continuing. Fukumitsu noted that there are no set rules for permitted loading zones and metered stalls but everything goes under review.

Community Update on the Proposed City Affordable Senior Rental Housing – Yuen noted that the discussion is the same as six (6) months ago and noted that he is concerned about the projects progress. Sandy Pfund noted that the process needed is for Council to pass a Resolution of the agreement to Michael's Project agreement. The rights were given but the EIS or EA is the issue. Funding is another issue because the developers need to apply for loans or funding. Pfund commented that City Council is still discussing the options and suggested holding meetings with the neighbors, but "neighbors" are being debated to whether it is only abutting neighbors. The agreement needs to move forward because the funding is due Tuesday, June 14, 2016. Many documents are still needed, the developer will not spend money until City Council is finished debating. Yuen asked for deadlines and asked for reports when they reach milestones because the Board has been uninformed and been receiving second hand information and asked to be sent the important deadlines and milestones to the Board. Pfund responded that the deadline is in June 2016, and many steps are involved and many more steps have been achieved and noted that there is no time to waste. The next step is with City Council but there are lingering complaints and concerns. Yuen noted that one (1) person overseeing the project is a concern because there has yet to be input from the community and asked if the Board can be a part of the meeting. Pfund responded yes. Councilmember Fukunaga noted that same issues were presented at the first hearing and noted that she had no control over the Resolution introduction but the concern is talking to the administration. What will be done is something that everyone can be a part of and suggested transparency findings at all meeting dates of the progress made and if there are complaints they can be addressed to the administration. Yuen asked to please keep Mayor Caldwell informed and asked if Executive Secretary of NCO Shawn Hamamoto to be in favor of the project and the neighbors meeting.

Due to time constraints the rest of the agenda was deferred to March 2016 meeting.

ANNOUNCEMENTS

Next Meeting – The next Downtown Neighborhood Board No. 13 meeting is scheduled for Thursday, March 3, 2016, at the Pauahi Community Center at 7:00 p.m.

ADJOURNMENT – The meeting adjourned at 10:00 p.m.

Submitted by: Neil Baarde, Neighborhood Assistant II

DOWNTOWN NEIGHBORHOOD BOARD NO. 13

c/o NEIGHBORHOOD COMMISSION • 530 SOUTH KING STREET ROOM 406 • HONOLULU, HAWAII, 96813
PHONE (808) 768-3710 • FAX (808) 768-3711 • INTERNET: http://www1.honolulu.gov

DRAFT REGULAR MEETING MINUTES
THURSDAY, March 3, 2016
PAUAHI COMMUNITY CENTER

CALL TO ORDER – Chair Alvin Au called the meeting to order at 7:03 p.m., **with a quorum of eight (8) members present.** Note: This nine (9) member Board requires five (5) members to establish a quorum and to take official Board action.

Board Members Present – Alvin Au, Anthony Chang, Jasmine Mancos, Dolores Mollring, Jonathan Saupe, Thomas Smyth, Robert Tom, and Stanford Yuen.

Board Members Absent – Chu Lan Shubert-Kwock.

Guests – Laurel Johnston (Governor Ige's representative); George Atta (Mayor Caldwell's representative); Councilmember Carol Fukinaga; Lieutenant Baron Lee and Sergeant Lyle Fleck (Honolulu Police Department); Firefighter Captain Corey Silva and Firefighter I Jonathan Waltz (Honolulu Fire Department); Pat Lee (Honolulu Authority for Rapid Transit); Sam Moku (Hawaii Pacific University); April Bautista (Representative Karl Rhoads representative); Paul Mallory (Michels Corporation); Allen Stack Jr. (Chinatown Improvement District); Bill Hanrahan (Mental Health Kokua), Rick Taniguchi (Honolulu Marathon); Don Murphy and Joe Felix (St Patrick's Day Block Party); Wanda Akers, Chuck Bussler, Robynne Maii, Sandy Ma, Gwen Abella, Ronald Higa, Julian Ng, Fred White, Gavin Masaki, Iris Oda; and Sharon Baillie (Neighborhood Commission Office).

INTRODUCTION OF BOARD MEMBERS – Chair Au and the Board members introduced themselves at this time.

PUBLIC SAFETY REPORTS

Honolulu Fire Departments (HFD) – Firefighter I Jonathan Waltz reported the following:

- February 2016 Statistics – There was 1 structure, 0 wildland/brush, 2 nuisance, and 1 cooking fire, with 7 activated alarms. There were 161 medical emergencies, 2 motor vehicle collisions with pedestrians, 1 motor vehicle crash/collision, 0 mountain rescues, 2 ocean rescues, and 3 hazardous materials incidents.
- Fire Safety Tip – Escape Planning:
    - Plan ahead and be prepared- Make a home escape plan.
    - Know at least two (2) ways out of every room.
    - Have an outside meeting place.
    - Practice your home fire drill twice a year during the day and night with everyone in your home and use two (2) ways out.
    - Teach children how to escape on their own in case you cannot assist them.
    - Close doors behind you as you leave.
    - If the alarm sounds- Get out and stay out. Never go back inside for people or pets.
    - If you have to escape through smoke, get low and crawl under the smoke.
    - Call the fire department from outside of your home.

Honolulu Police Department (HPD) – Lieutenant Baron Lee reported the following:

- January 2016 Crime Statistics – There were 12 motor vehicle thefts, 6 burglaries, 79 thefts, 16 unauthorized entries into a motor vehicle (UEMV), 26 assaults, 2 sex assaults, 2 graffiti and 6 drug offenses. A total of 2,577 calls were placed for service.
- Safety Tips – Automated Teller Machines
    - Whenever possible utilize Automated Teller Machines inside of businesses.
    - Avoid using street ATMs when it is dark.
    - Be aware of suspicious persons or vehicles in the area, trust your gut feelings.
    - Have your card out of your wallet or purse before approaching an ATM.
    - Do not write your personal identification number (PIN) on your card and do not keep it in wallet.
    - When entering your PIN, keep the numbers away from view of others
    - Do not withdraw huge amounts of cash, secure money as soon as it comes out of machine, and take your receipt

- If someone demands your money, do not fight, just give up the money to the suspect and get away.
- Report all incidents to the police as soon as possible.

- Community Policing – If anyone is interested in starting a neighborhood business security watch or a community citizen's patrol please contact Sergeant Deric Valoroso at 529-3695.

Questions, comments and concerns that followed:

1. Status – Au asked what the status was from the meeting last week on policing around the area and Lee answered that there is a lot more added foot patrol in the area, and effort to keep the homeless in compliance with the sit-lie protocol.
2. Assaults – Tom mentions that the statistics from last month are going down, except for assaults and wants to know what classifies an assault. Lee states that assault is when someone knowingly and intentionally injures another person, such as hitting that person.
3. Foot Patrols – Saupe understands that these extra foot patrols are temporary and would like to know if there is an end date. Lee states that it is hard to say, that these extra foot patrols will continue in the Downtown business district/Chinatown area and the only reason why they may get pulled away is if there is something else going on in the district where they are needed, such as in the Keeaumoku area.
4. Smith Street Park – A resident wants to know if the homeless are following the park closure rules, since he notices their belongs are still in the park. Lee says usually the homeless will take their belonging with them when they leave, however sometimes they will stash them in the bushes.
5. Stealing – Resident Akers says that she needs help going to the store and other places, and that the same man always steals from her. She does not believe she has any rights and she is afraid to say anything since he might attacks her. Lee advises that if this happens to please call 911 and to provide as many details as possible, such as what the person looks like, what they are wearing, if they know their name. They both go to the back in order to get more information on helping Akers situation.

Neighborhood Citizen's Patrol (NCP) – Mollring states that the group has been walking regularly, and it has been quiet lately. The NCP group is doing sign waving this Saturday, March 5, 2016 at Kekaulike Mall on King Street and everyone invited to join. Sign waving will start at 8:30 a.m. and there will be a pot luck afterwards provided by Weed and Seed.

COMMUNITY CONCERNS

Hawaii Pacific University (HPU) – No report was provided.

Safe Haven – Program Director Bill Hanrahan reported the following:

- What it is – Safe Haven is a 25 bed residence for the severely mentally ill homeless, and they also serve 40 people through a day program, for as many as 65 clients.
- Last month – Safe Haven was able to place one (1) person from their residence into permanent housing, along with two (2) people from their day program. One (1) resident had their parole revoked and was sent back to prison. They also facilitated one (1) persons return back to their family on the mainland.
- Hygiene center – There are public restrooms and showers at Pauahi Hale that serve around 60 people a day. The men's showers were down for a time last month, therefore they were only able to serve around 40 people a day during this time.

Honolulu Authority on Rapid Transit (HART) – Pat Lee reported the following:

- Completion –The Honolulu Rail Transit Project is moving forward with about seven miles of guideway construction completed.
- East Kapolei and Waipahu – Foundation and column work has been completed from Kualakai Parkway to Farrington Highway near Waipahu High School. Crews are continuing with guideway structure, track installation and raised median work.
- Kiewit – HART's contractor, Kiewit, has started installing new curbs and gutters along Farrington Highway for its roadway restoration work and this should be completed by end of summer.
- Operation center – The Rail Operations Center is almost completed and should be finished in April. The first four rail cars are arriving this month. Work on the stations in Waipahu and East Kapolei is starting.
- Pearl City/Aiea – Utility relocations, drilled shafts and foundation and column work are underway along Kamehameha Highway. The second "balanced cantilever" which will cross over H-1 is underway near the Waiau Power Plant and Sears Distribution Center. The H2R2 ramp preconstruction work is underway. The KHG station group construction contract (Pearl Highlands, Pearl Ridge and Aloha Stadium) is pending. Guideway work on the KHG segment should be completed by end of next year.

- Airport – Utility relocations are continuing on the Airport section. The guideway and stations contract is out for bid.
- Kalihi –Crews are preparing for the temporary relocation of utilities on Dillingham to widen the roadway on the makai side of the boulevard in preparation for guideway work down the center of the boulevard.
- Contact – For general project information, traffic updates, meeting notices and more information, please visit the website www.honolulutransit.org, call the project hotline at 566-2299 or email a question at info@honolulutransit.org.

Chinatown Business and Community Association (CBCA) – Mollring reported the following:

- Chinese New Year – Monday, February 8, 2016 was the year of the Monkey. On Friday, January 29, 2016 there was a Chinatown block party, with a Chinatown Parade where over 85 groups participated.
- Continued Celebrations – For the following two (2) weekends there was lots of celebrating taking place at the Chinese Cultural Plaza.
- Meetings – On Tuesday, February 9, 2016 the monthly CBCA meeting was held. Next month's meeting will be at Empress Restaurant and is scheduled for Wednesday, March 09, 2016 from 8:30 a.m. to 10:00 a.m. and is open to all who would like to attend.

Chinatown Improvement District (CID) – Allen Stack Jr. reported the following:

- Park clean-up – There was a park clean-up at Smith Street Park which was very successful. The park is maintained more now, making the clean-up easier. There was one (1) needle found on top of a building. The people that came out for the clean-up helped paint, clean up graffiti, rack, and pick up trash. Please come to a park clean-up if you ever have time.

Arts Culture Merchants Etcetera (ACME) – Jonathan Saupe reported the following:

- Reorganization – ACME is still in the midst of reorganizing the group formally known as ADMA.
- Meet and greet – There will be a mixer held on Friday, April 15, 2016 at 5:30 p.m. at the Rock Center on Hotel Street and Nuuanu Street. If you would like to attend or need more information please email jsaupe82@gmail.com
- Advertisement – There should be new flyers, maps, and brochures coming out into the community very soon highlighting the new and old merchants in the community.

Chinatown Community Center Association (CCCA) – No representative was present; no report was provided.

City Sewer Rehabilitation Project, Michels Pipe Services – Paul Mallory reported the following:

- Phase 1 – Chinatown area one (1) project is 100% installed. Three (3) lines need to be television inspected. This will take place during the day on Hotel Street between Fort Street and Smith Street and take one (1) to two (2) hours.
- Phase 2 – Chinatown area two (2) phase is mainly on North Beretania Street to the H1 freeway between Queen Street and River Street. This phase is scheduled to be complete by Sunday, March 27, 2016.
- Setbacks – There have been a few minor setbacks with night work and utilities. Some of the ownership of the utilities were in question so, they had to wait to figure out who was going to fix what. Bars were calling to ask if they could move around their work time because it was at night during their peak business.

Questions, comments, and concerns that followed: Thanks – Au thanks Mallory for being such great partners in working on this project. Mallory thanks him and says that the company tries not to let complaints escalate, and that they like to mitigate any situations before it gets worse.

Public Concerns

- Nashville Waikiki – Resident Ma states that she and her family have recently moved to the downtown area into Harbour Court across from Aloha Tower. Every Thursday, Nashville Waikiki, which is in Aloha Towers has a motorcycle promotion, where different motorcycle clubs come and they will ride their motorcycles revving the engines loudly down the road sometimes until 1:00 a.m. in the morning. This noise keeps people up and would like something to be done about it. She has contacted the police, liquor commission, and the offices at aloha towers. It was suggested she come to the neighborhood board to present her situation. Ma supports local businesses but wishes that this event would not be so late and loud. Ma will get in touch with Moku from HPU to exchange information on this situation.
- Fete – Married couple, Chuck Bussler and Robin Maii introduced themselves to the board and let everyone know that they will be opening a restaurant on Nuuanu Street and Hotel Street called Fete slated to open

either Friday March 18, 2016 or Saturday, March 19, 2016. They will be applying for a liquor license, however it is strictly for the food menu, there will be no loud music or entertainment to go along with that.

ELECTED OFFICIALS

Mayor Kirk Caldwell's Representative – Director George Atta of the Department of Planning and Permitting (DPP) reported the following:

- Halewai'Olu – The administration held meetings on Monday, February 29, 2016, Tuesday, March 1, 2016, and Wednesday, March 2, 2016 with representatives from different community organizations. Representative Karl Rhoads and Representative Suzanne Chun Oakland sent representatives to the meetings, as well as Councilmember Carol Fukunaga attended. There was great discussion about different idea that could be done/changed with project.
- Meetings – There will be two (2) public meetings at the Mayor's Conference room if anyone would like to hear more about the project and put their ideas in. The first one will be Tuesday, March 8, 2016 at 4:30 p.m. and the second one will be Monday, March 10, 2016 at 4:30 p.m.
- Title VI – The 2016 Title VI program report public hearing will be held on Friday, April 8, 2016 at 9:30 a.m. at the Mission Memorial meeting room. The Department of Transportation Services Public Transit Division (DTS-PTD) receives federal grant money every year for public transit services, and therefore is required to give a report every three (3) years on how they are improving their transit services to all citizens on Oahu.

Questions, comments and concerns followed:

1. Senior housing – Yuen would like to know if anyone from the City will be at the meeting to present and give updates on the Senior Rental Housing project. He believes that there should be a timeline on what is happening to show progress, because if there is nothing then no progress has been made. Au suggests that a representative from the board be present as the Senior Housing project meetings. Atta will take concerns back to the Mayor and Managing Director.
2. Traffic signals – Mollring said at Hotel and Maunakea and at Hotel and Smith that the buttons on the traffic signals have been removed, the round circular thing that holds the button is no longer there so people cannot press the buttons to cross the street.
3. Sufficient – Yuen expressed his satisfaction with the Feng Shui report prepared by Michaels Development Company, which had flyers and updates for the board members. He states that back in November 2015 the board had voted to support this project.

Councilmember Carol Fukunaga – Councilmember Carol Fukunaga reported the following:

- Downtown TOD plan – Resolution 15-252 which includes the Final Downtown Transit-Oriented Development (TOD) plan will be heard by the Council's Zoning and Planning Committee at the end of March 2016.
- Aggressiveness – There is a need to have a much more aggressive plan in updating the water, sewer, and road infrastructure. We should take advantage of the transit development to build more permanent supportive housing as well as affordable housing on city and state lands which are in the TOD areas.
- Iwilei – The area between ORNL and the Senior Development project is a potential area where there can be urban rest stops and permanent supportive housing. The goal would be to have these types of facilities in areas where people would be able to thrive and take advantage of the transit systems.

Questions, comments and concerns followed:

1. Hilo Hattie – Tom asked if there was consideration in using Hilo Hattie as a potential place for these services, in which Fukunaga replied that land was owned by the Weinberg Trust and that they were not interested at that time in using that area as a city or state program site. They need to use their revenue producing areas in order to help sustain all the good work and programs they have elsewhere.
2. Sidewalks – A resident mentioned that he was walking in Iwailei by Kmart next to the Salvation Army and said that there were tents set up all along the sidewalk, Fukunaga states that the Department of Facilities and Maintenance (DFM) had previously come through and cleaned up the area. She will report the latest finding.
3. Methadone clinic – Tom asked if there was any variance in the methadone clinic next to his building at Capital Place, being so close to schools. Fukunaga is unaware but will work close with Representative Rhoades and Representative Aseki to find a safe place for such services to be provided.

Governor David Ige's Representative – Laurel Johnston reported the following:

- Taxes – The state is behind about one (1) week right now in processing tax forms, trying to mitigate any tax fraud. Please do taxes sooner than later so process time is not delayed.

- Homelessness – The Governor is aware of the homeless problem and will probably issue another Emergency Proclamation, this is the only way to streamline processes and get through procurement with moving money around.

Senator Suzanne Chun Oakland – No representative was present; a report was provided.

Representative Karl Rhoads – April Bautista reported the following:

- Leaking pipe – Rhodes noticed there was a leaking pipe at Smith-Beretania Park and forwarded the issue to the City. The latest update is that a work order has been places to repair the leaking pipe.
- Signage – Rhodes requested that there be signs placed throughout Chinatown directing people to the public restrooms at Pauahi Hale.
- Parking meter – There is a broken parking ticket machine at Propark Inc. parking lot at the corner of Beretania Street and Nuuanu Avenue. The machine has run out of paper, and customers were unable to get ahold of office to report this issue. Rhoads office has forwarded the complaints they have received about this to the company.
- Art of the Capital – Art of the Capital will be on Friday, April 1, 2016 from 5:00 p.m. to 7:00 p.m. and Representative Karl Rhoads office will be providing light refreshments.
- Bills of interest – HB 1516 would clarify that the internet against children fee which is used to investigate child pornography is to be assessed against every defendant who is convicted of a misdemeanor or felony regardless of the nature of the offense. HB 2121 would appropriate moneys from the general fund for civil legal services for low- and moderate-income persons to be purchased by the judiciary.

NEW BUSINESS

Community Update on the Proposed City Affordable Senior Rental Housing – No report was provided.

Questions, comments and concerns followed: Sufficient – Yuen finds the building rendering attractive that was provided to Au in an email and he moves for the board to support the plan.

Yuen moved and Saupe seconded that the Downtown Neighborhood Board No. 13 support the Michaels Development Fung Shui rendering concept. The motion was adopted by UNANIMOUS CONSENT, 8-0-0. (**AYE**: Au, Mancos, Mollring, Saupe, Smyth, Tom, Chang, and Yuen; **NAY**: none; **Abstain**: none.)

Board of Water Supply Honolulu Water System Improvements in the Downtown Neighborhood Board Area – Iris Oda reported the following:

- Main replacements – Main upsize replacements of 24 inches would be from River Street all the way down to Kalakaua Avenue along Ala Moana Boulevard.
- Other mains – There are a few 16 inch and 20 inch main upgrades planned for along Cooke Street, Pensacola Street, and Piikoi Street.
- Downtown – The downtown neighborhood boundaries are between River Street and Cooke Street. They are looking to upgrade to a 24 inch main which would connect from King Street and run through Nuuanu Stream. If there are difficulties, the alternative alignments could be down River Street that connects to another main that crosses Nuuanu Stream. As well as if this does not work another alternative would be along Nuuanu Avenue. Aloha Tower Drive would be the next alternative, then along Nimitz Highway would be an alternative as well for the main replacement routes.
- Potential start – Potentially the project would start in the year 2020 to replace the aging water mains. The draftee is outside of the six (6) year CIP, the design and construction would come later.

Questions, comments and concerns followed:

1. Night work – Au stated that night construction could potentially disrupt the over 10,000 resident's livelihood, as well as the businesses during the day and would like to see a number provided so that these people can call about their concerns. Oda stated that with every project they do, they inform the residents and provided a number to call. Resident now can call the Board of Water Supply (BWS) and someone would pick up day or night.
2. Shutdown – Saupe wants to know how much of a traffic shutdown effort would take place, Oda says there are no plans right now, but they will have traffic plans in the future and usually when there are projects like this there is one lane traffic, allowing ingress and egress to places.
3. Rail – Tom mentions that the rail is coming in 2020 as well and this would be a perfect storm with the two different projects going on Oda says that they try to facilitate and coordinate with different projects that are going on.

4. Necessary – Yuen notes that replacing aging pipelines is a necessary evil and that he appreciates being informed, and would like the BWS to come back and give updates. Oda states that she would be happy to come back to give updates as plans progress on the project and gets further along.

St. Patrick's Day Block Party – Don Murphy (Owner of Murphy's) and Joe Felix (General Manager, O'Toole's Irish Pub) reported the following:

- Celebration – There will be a St. Patrick's Day Block Party, Thursday, March 17, 2016, starting at 11:00 a.m. outside/near Murphy's Bar and Grill.
- Street closures – King Street to Nimitz Highway will be closed, as well as Marin Lane, and Merchant Street between Nuuanu Avenue and Bethel Street. Closures will start around 5:30 p.m. lasting until 10:00 p.m.
- Music and food – Live music will stop playing at 10:00 p.m. The parking lot at Murphy's will have a lot of different food to eat, there will also be a Keiki tent from noon to 6:00 p.m. with crafts for the children.

Questions, comments and concerns followed: Conscientious – Yuen thanks Murphy's and O'Toole's for making a great effort to mitigate any foreseeable issues when they put on these events. Yuen has been to some of these block parties and there is always a great time to be had.

Yuen moved and Mancos seconded that the Downtown Neighborhood Board No. 13 support the St. Patrick Day Block Party. The motion was adopted by UNANIMOUS CONSENT, 8-0-0. (**AYE**: Au, Mancos, Mollring, Saupe, Smyth, Tom, Chang, and Yuen; **NAY**: none; **Abstain**: none.)

Annual 2016 Honolulu Marathon Half Marathon (Hapalua) – Rick Tanaguchi reported the following:

- Half marathon – On Sunday, April 10, 2016
- Participants – There are 6,300 people signed up for the event thus far, and of that 5,000 are local participants.
- Street closures – Nimitz Highway will be closed from 4:30 a.m. to 7:30 a.m., a special traffic lane will be made from Smith Street to Aloha Tower to accommodate Aloha Tower requirements as well as HPU housing requirements allowing ingress during those times. Marin Towers has access throughout the event on King Street, and during the event they are only able to exit through Maunakea Street. Some residents at Harbour Court and Harbour Square will be locked in from 5:30 a.m. to 7:15 a.m.

Questions, comments and concerns followed:

1. Notifications – Au wants to know if the resident manager of Harbour Court knows about these closures and if he is communicating this to the residents, in which Tanaguchi states that the resident manager knows and has sent notices to the residents in the past about these closures.
2. Fireworks – Saupe asks if this year there will be a firework start, and Tanaguchi says there will be no firework start, that is only for the Honolulu Marathon which takes place the second Sunday in December.

Discussion to Schedule the Downtown Neighborhood Board meeting at the Hawaii Pacific Aloha Tower – Sam Moku reported the following:

- Right space – People from the board should come down to Aloha Towers to check out the spaces to see if it is the right place to be in. There will be a one (1) year test run with no fees, and would be on the first Thursday of each month.
- Space – The space where the board meetings would take place would be in multi-purpose room #2, which is right next to two (2) 24/7 security office located in the tower itself. The restroom is right next door as well for easy access.
- Parking – Parking would not be free. There would be a $5 dollar fee after 4:0 p.m., however they can set aside some spots for Olelo and some stalls for handicap as well.
- Boat days – There is a boat day on Thursday, October 6, 2016, where all of the parking is closed off and homeland security takes over, therefore parking may be an issue for that meeting day.

Questions, comments and concerns followed: Subcommittee – Au wants to form a subcommittee to check out the space at Aloha Tower. Mancos, Saupe, and Smyth volunteer to go check out the space. Au would like to be at the new meeting space by June, so long as the Neighborhood Commission Office approves the facilities contract once the neighborhood board approves the move.

Mancos moved and Mollring seconded that the Downtown Neighborhood Board No. 13 support the forming of a subcommittee to check out the Aloha Towers meeting space. The motion was adopted by UNANIMOUS

CONSENT, 8-0-0. (**AYE**: Au, Mancos, Mollring, Saupe, Smyth, Tom, Chang, and Yuen; **NAY**: none; **Abstain**: none.)

Discussion to amend the name of the Downtown Neighborhood Board as the Downtown Chinatown Neighborhood Board

- Signatures – Au notes receiving rules and regulations from the Neighborhood Commission Office in order to change the board's name. One (1) stipulation needed, is a petition with 100 signature on it. Mancos states we should table the discussion until the next month's meeting when board member Shubert-Kwock is back, since she is the one who really spearheaded the effort.

APPROVAL OF January 7, 2016 and February 4, 2016 REGULAR MEETING MINUTES – **The Board approved the January 7, 2016 and February 4, 2016 meeting minutes by UNANIMOUS CONSENT as amended, 8-0-0.** (**AYE**: Au, Mancos, Mollring, Saupe, Smyth, Tom, Chang, and Yuen; **NAY**: none; **Abstain**: none.)

February, Page 2: "Mollring noted that cashiers have come up to her and noted that people at Sun Yat Sen Park have put a refrigerator there and have been seeing people pull electrical wires to operate the refrigerator." **Should read**, "Mollring noted that cashier has come up to her and noted that people at the park by the YMCA and across from Royal School have put a refrigerator there and saw people pull electrical wires to operate the refrigerator."

February, Page 4: "Safe Haven currently has two (2) grants and aids. One (1) with the Institute for Human Services (IHS) and Councilmember Carol Fukunaga. With the help of the grants and aids…" **Should read**, "Safe Haven currently has two (2) grants-in-aids. One (1) is with the Institute for Human Services (IHS) through funding from Councilmember Carol Fukunaga. With the help of the grants-in-aid…"

February, Page 9: "Yuen asked to please keep Mayor Caldwell informed and asked if Executive Secretary of NCO Shawn Hamamoto to be in favor of the project and the neighbors meeting." **Should read**, "Yuen asked to please keep Mayor Caldwell informed and asked if Executive Secretary of NCO Shawn Hamamoto could take this message back to mayor and managing director."

February, Page 9: Should read, "… Councilmember Fukunaga asked to respond to NB Member Yuen's comments as they pertained to City Council action. She noted that she had no control over the introduction of the resolution (authorizing the Mayor or his designee to enter into a development agreement between the City and Halewai'olu Senior Development LLC), as specified in Department Communication 758 (City Council Docushare listing); however, she was aware that the City Council Chair wanted community concerns addressed by the developer.

BOARD BUISNESS AND REPORTS

Chair's Report – Au stated he received an email from the Downbeat Diner and Lounge owner about making a presentation at April's meeting on an even titled, "Sailor Jerry Festival" on Saturday, June 11, 2016. HART will have a presentation at April's meeting about the segment work that will be going on in the neighborhood.

Neighborhood Commission Updates –Tom shares that there are discussions pertaining to City's neighborhood boards. There may be some major structure changes to neighborhood boards, who votes, who is on the board, and how big the boards are. These are ongoing between City Council and Administration, nothing has been confirmed, but there may be some major changes in the neighborhood board structure within the next six (6) months.

Treasurer's Report – Treasurer Mollring reported a remaining balance of $154.95. The report was filed.

ANNOUNCEMENTS

Next Meeting – The next Downtown Neighborhood Board No. 13 meeting is scheduled for Thursday, April 7, 2016, at the Pauahi Community Center at 7:00 p.m.

ADJOURNMENT – The meeting adjourned at 8:55 p.m.

DOWNTOWN-CHINATOWN NEIGHBORHOOD BOARD NO. 13

NEIGHBORHOOD COMMISSION • 925 DILLINGHAM BOULEVARD, SUITE 160 • HONOLULU, HAWAII, 96817
PHONE (808) 768-3710 • FAX (808) 768-3711 • INTERNET http:///www.honolulu.gov/nco

REGULAR MEETING MINUTES
THURSDAY, JUNE 1, 2017
ONE ALOHA TOWER, MULTI PURPOSE ROOM 2

CALL TO ORDER – Chair Alvin Au called the meeting to order at 7:03 p.m**., with nine (9) members present, establishing quorum**. Note: This nine (9) member Board requires five (5) members to establish a quorum and to take official Board action.

Board Members Present – Alvin Au, Anthony Chang, Dolores Mollring, Bob Tom, Stanford Yuen, Kevin Lye, Lori McCarney, Chu Lan Shubert-Kwock, and John Donaldson-Selby.

Guests – Captain Kenneth Kahahawai (Honolulu Fire Department); Sergeant Harold Chi (Honolulu Police Department); Laurel Johnston (Governor Ige's Representative); Councilmember Carol Fukunaga; Megan Muramatsu (Mayor Caldwell's Representative); Pat Lee (Honolulu Authority for Rapid Transportation); Glen Young (Senator Karl Rhoads' Representative); Representative Daniel Holt; Honglong Li (Department of Transportation Services); Director Sandy Pfund (Department of Land Management); Executive Director Marti Townsend (Sierra Club); Lee Stack (Chinatown Improvement District); Karen Seddon and Stuart Kritzen (Michaels Development Corporation); Amy Lum and Michelle Bartell (American Savings Bank); Bill Hanrahan (Mental Health Kokua); John Shead, Randy Chu, Peter Lloyd, Kathleen Lee, Raul Torres De Si, Rick Keene, Ronald Higa, Anthony Marlin, David Amodo (videographer); and Sultan White (Neighborhood Commission Office).

INTRODUCTION OF BOARD MEMBERS – Chair Au and the Board members introduced themselves. Chair Au reminded the individuals present to speak into the microphone when wishing to speak.

PUBLIC SAFETY REPORTS
Honolulu Fire Department (HFD) – Captain Kenneth Kahahawai reported the following:

- May 2017 Fire Statistics – There were 6 nuisance fires, 1 cooking fire, and 1 activated alarm (no fire). There were 172 medical emergencies, 2 motor vehicle collisions with pedestrians, 1 hazardous materials incident, and 3 motor vehicle crashes/collisions.
- Fire Safety Tip – Smoke Alarms: Working smoke alarms save lives by decreasing the risk of dying in a home fire in half. Smoke alarms should be installed and maintained in every home. Test smoke alarms at least once a month using the test button. If the smoke alarm has a nine-volt battery, change it annually. The entire smoke alarm should be replaced every ten years. The HFD will conduct its Smoke Alarms for Everyone or SAFE program on Tuesday, June 6, 2017. If you are interested in in receiving a free SAFE smoke alarm installation, please call 723-7168 for more information.

Honolulu Police Department (HPD) – Sergeant Harold Chi reported the following:

- May 2017 Crime Statistics – There were 3 motor vehicle thefts, 15 burglaries, 68 thefts, 17 unauthorized entries into a motor vehicle (UEMV's), 15 assaults, 5 sexual assaults, 5 graffiti incidents and 6 drug offenses. A total of 2,367 calls were placed for service.
- Safety Tip – Hurricane Season: Hurricane Season has started and will last through November. Families should prepare a Go Kit (if forced to leave the home to a shelter) and a Stay Kit (essentials for staying at home). Have plenty of water, medicine and flashlights. Have a rain catcher if possible. Listen to the radio for State safety broadcasts and have extra batteries.

Questions, comments and concerns that followed:

1. Comment on Statistics: Shubert-Kwock thanked HPD for their high number of drug arrests in April 2017, but mentioned that there seemed to be a lot of thefts and burglaries still. Sergeant Chi said that there are many hidden places in Chinatown that makes it easy for burglars to hide. The best thing to do is have good neighbors and secure your home as best as possible.
2. Arrests or Calls: Lye asked if the sheet represented arrests or calls. Sargeant Chi said that the arrests statistics are usually higher.
3. Purse Snatch: Mollring thanked HPD for the Kamali'i park cleaning. She said that she witnessed a purse snatching. Sergeant Chi said to be careful at night, and walk in lit areas. Make sure not to leave your purse

unattended, in a shopping cart for example. Be aware. If a purse snatching does occur, be sure to get a good description and report it to the police.

4. Homelessness: Tom asked if the expansion of the sit-lie ban would drive more homeless people back into Chinatown. Sergeant Chi said that his officers address homelessness daily. He said that homeless people drift to where HPD takes no action.

Neighborhood Citizen's Patrol (NCP) – Dolores Mollring reported that they have not seen any prostitution or drug dealing during their walks.

Public Concerns

- 2017 Best of Honolulu Festival: Raul Torres reported that on Saturday, August 5, 2017 from 10:00 a.m. to 5:00 p.m. at the Honolulu Hale Civic Grounds, American Savings Bank will present the 2017 Best of Honolulu Festival. It is a free, family-friendly event featuring 'ono food, keiki zone, entertainment and a marketplace. There will also be a fun run for the adults and kids. They estimate 500 to 1,000 people will attend. Find free parking at the Frank Faci Municipal Building parking garage.
- Chinatown Improvements: Honglong Li reported that the Department of Transportation Services (DTS) plans to make the district more pedestrian/bike friendly. They will install 14 wayfinding signs. The signs will direct pedestrians to popular attractions in Chinatown. They will begin the additions on Wednesday, June 7, 2017 and end mid-July 2017. Construction hours are 8:30 a.m. to 3:30 p.m. Monday to Friday. They will never close more than one (1) traffic lane. If you have further questions call 768-5472.
- River of Life: Yuen commented that the River of Life is outgrowing their current space and need a new location. He suggested the City help River of Life move with grants or a land exchange. He commented that moving River of Life would also move homeless people out of Chinatown.
- American Savings Bank: Yuen suggested that the City invest in the restaurants and small businesses in Chinatown to prepare for the opening of American Savings Bank, which will be the neighborhood's biggest business entity. American Savings Bank will bring in 600 new employees and potential customers to Chinatown.
- Chinatown Functions: Peter Pao, the owner of a new sandwich shop in Chinatown, raised concerns about not being notified when functions open. He said that promoters should notify shop owners before hosting block parties in Chinatown.

NEW BUSINESS

Information Update on Halewai'olu Senior Residence Development – Karen Seddon reported that they are completing due diligence. They need to complete HRS Chapter 6E and the National Historic Preservation Act in order to move forward. She mentioned that the cost of construction has gone up, so they are working on securing funding. There will be 150 units. 120 will be single bed units. 30 will be double bed units. There are planning to have 19 floors with 10 units per floor. Right now they are working on the concept, efficiency and costs. The first funding round will be in the first quarter of 2018 with construction beginning late 2019.

Questions, comments, and concerns followed:

1. National Prehistoric Preservation Act: Shubert-Kwock asked what the National Historic Preservation Act entails. Seddon responded that it is a federal architectural survey process. They must fill out paperwork and hold public meetings.
2. Community Center: Shubert-Kwock mentioned that the public does not want to lose the community center. Seddon answered that they are still going strong, and that they may add more affordable units to secure more funding.
3. Fence: Lye asked and Seddon pointed out where the fence was on the diagram.
4. Sense of Place: Lye asked if the architecture of the building would blend into Chinatown's aesthetic. Seddon answered that it would, and that the concept drawing is not completely finished.
5. Approval: Yuen reminded the Board and the public that two (2) years ago the Board endorsed the conceptual plan.

Director Sandy Pfund reported that the Department of Land Management is supporting and strongly encouraging Michaels Development Corporation to complete Halewai'olu. There are delays, but they are working through them. They will share details with the community as updates occur. An Environmental Assessment (EA) will be conducted, which will be open to community input. The EA will be shared with the Board.
Questions, comments, and concerns followed: Zoning: Shubert-Kwock asked if the height limit could change for the building. Director Pfund said that they were trying to get as many units as possible. They have not yet reached the

height limit, but until due diligence is completed they are not sure how much taller they can make the building.

Noise Variance Application for American Savings Bank Construction – Director of Communications & Community Advancement Michelle Bartell reported that they have a noise variance on 300 North Beretania Street on Friday, June 9, 2017 from 6:00 p.m. to 9:00 a.m. They are pouring 600 cubic yards of concrete. They must do it at night since there are a lot of trucks. Even though they have a long block of time for the noise variance, they only expect the pour to last six (6) to eight (8) hours. They sent letters to immediate residents.

Questions, comments, and concerns followed:

1. Fair Notice: Chair Au said that it is important to give fair notice to all of the residents in the affected area. Director Bartell gave notice to residents in the immediate impact area, but acknowledged they could have expanded the radius of who they contacted.
2. Time: Shubert-Kwock asked if the pour would last 15 hours. Director Bartell answered that even though they have 15 hours allotted, they will only use six (6) to eight (8) hours.
3. Finish Earlier: Shubert-Kwock asked if they can finish the pour by 10:00 p.m. by starting earlier. Director Bartell said that if they moved it up earlier it would affect rush-hour traffic. They will be done between 1:00 a.m. and 3:00 a.m. It will not affect businesses, but unfortunately will affect residents.
4. One Night: Yuen asked and Director Bartell answered that the pour would only last one (1) night. Yuen stressed it is important to be transparent and open with the community.
5. Mauna Kea Street: Chair Au asked and Director Bartell answered that the trucks will not park on Mauna Kea Street.

Resolution to Protect Oahu Groundwater Resources from Red Hill Bulk Fuel Storage Tanks – Executive Director of Sierra Club Marti Townsend reported on water security at Red Hill. The Board of Water Supply (BWS) has informed Sierra Club that in the event of a catastrophic fuel release at Red Hill, the neighborhoods that get water from the Halawa Shaft and Moanalua Wells would be affected (metropolitan Honolulu area spanning Moanalua to Hawaii Kai, which has approximately 40,000 residents and visitors). Passing the following resolution would demonstrate solidarity and support for protecting our precious groundwater and drinking water resources from potential fuel contamination at Red Hill:

Resolution to Protect Oahu's Groundwater Resources from the Red Hill Bulk Fuel Storage Tanks

WHEREAS, clean, unpolluted drinking water is a basic human right and held in trust and to be protected for the benefit of the people pursuant to Article XI, Sections 1 and 7 of the Hawai'i State Constitution; and

WHEREAS, the Red Hill Facility contains twenty tanks, each able to hold 12.5 million gallons of fuel that are located 100 feet above a sole source aquifer designated by the U.S. Environmental Protection Agency in 1987 as a major source of drinking water for O'ahu residents and visitors; and

WHEREAS, on January 13, 2014, the U.S. Navy reported a 27,000 gallon leak of jet fuel from its Red Hill Bulk Fuel Storage Facility; and

WHEREAS, since its construction in the 1940s, the U.S. Navy's Red Hill Bulk Fuel Storage Facility has leaked more than thirty times, releasing at least 155,000 gallons of fuel into the environment; and

WHEREAS, water samples from the groundwater near the tanks show traces of petroleum contaminants that are hazardous to human health; and

WHEREAS, the U.S. Navy, the Defense Logistics Agency, the U.S. Environmental Protection Agency, and Hawai'i State Department of Health agreed to an Administrative Order on Consent that is expected to take at least twenty-two years to complete; and

WHEREAS, the Administrative Order on Consent does not guarantee that the tanks will not leak in the future or that future leaks can be cleaned up; and

WHEREAS, the Downtown-Chinatown Neighborhood Board No. 13 would be directly affected if the sole source aquifer beneath the Red Hill Facility were contaminated with fuel; now, therefore
BE IT RESOLVED, that the Downtown-Chinatown Neighborhood Board No. 13 is very concerned about where these tanks are located in relation to a sole source aquifer on O'ahu; and

BE IT FURTHER RESOLVED, that the Downtown-Chinatown Neighborhood Board No. 13 supports precautionary measures to be taken to ensure there is no additional leaks or contamination of our groundwater resources now and into the future; and

BE IT FURTHER RESOLVED, that the Downtown-Chinatown Neighborhood Board No. 13 deems the twenty-two year timeline of the Administrative Order on Consent to be too long to ensure the safety of our groundwater and drinking water resources; and

BE IT FURTHER RESOLVED, that the Downtown-Chinatown Neighborhood Board No. 13 urges the Navy, the Defense Logistics Agency, the Department of Health, and the Environmental Protection Agency to take urgent action to protect O'ahu's groundwater resources and find a solution to upgrade, retrofit, or decommission the Red Hill Bulk Fuel Storage Facility; and be it

ORDERED, that copies of this resolution be transmitted to the Governor, the Director of the Department of Health, the members of the Honolulu City Council, the members of the Hawai'i State Legislature, and the Hawai'i Congressional delegation.

Questions, comments, and concerns followed:

1. Other Boards: Chair Au asked which Boards have passed the resolution so far. Executive Director Townsend said that the Manoa Board has passed the resolution. The Downtown-Chinatown Board is the second to hear the resolution.
2. Lawsuit: Chair Au asked if Sierra Club is filing a lawsuit. Executive Director Townsend said that they have only initiated the lawsuit process. They have asked the Department of Health (DOH) to rewrite regulations for water tanks.
3. Public Pressure: Shubert-Kwock asked if the resolution would only add pressure. Executive Director Townsend answered that it would add public pressure, which worked beneficially for other cities who dealt with similar problems.
4. Timeline: Shubert-Kwock asked the timeline on their plan. Executive Director Townsend answered that they would get all the Neighborhood Board resolutions by the end of summer 2017 and continue community outreach to 100,000 people.
5. Construction: Tom mentioned that there are trace elements in the water already, so if construction started immediately how long would it take for the tanks to be fixed. Executive Director Townsend said that was a question for the Navy. He said that the Navy could do more to be faster and more protective, but that would cost more money. By the end of 2017 they will know when it will be completely finished.
6. Priority List: McCarney asked if anyone was resisting or if they are trying to push the issue up the priority list. Executive Director Townsend replied that they are trying to move it up the priority list.
7. Decommissioned: Lye asked if it was likely that the tanks would be decommissioned. Executive Director Townsend said that would only happen if the tanks are not repaired.
8. Congressional Delegation: Yuen asked if they have contacted the Congressional delegation. Executive Director Townsend said he has, and that they have all been supportive.
9. Congressional Delegation: Chair Au and Yuen suggested that when Sierra Club meets with the Navy to have members of the Congressional delegation present.

Shubert-Kwock moved and McCarney seconded that the Downtown-Chinatown Neighborhood Board No. 13 support the Resolution to Protect Oahu's Groundwater Resources from the Red Hill Bulk Fuel Storage Tanks as drafted. Discussion followed:

1. Common Sense: Shubert-Kwock said that it was common sense to protect the water supply.
2. Cost: Lye asked the cost of the repairs. Executive Director Townsend said they do not yet know the costs, but they are ramping up to that step. Studies show that it will be expensive, but protecting water is worth it.
3. Money Source: Lye asked the source of the money for the repairs. Executive Director Townsend said it would be the Navy.

The motion was APPROVED by UNANIMOUS CONSENT, 9-0-0; (**AYE**: Au, Chang, Mollring, Lye, Tom, Donaldson-Selby, McCarney, Shubert-Kwock and Yuen; **NAY**: None; **ABSTAIN**: None).

Bikeshare Hawaii – CEO Lori McCarney passed out information on Biki. She reassured the community that there would be no advertising at the stations. The stations in each neighborhood would have a different sense of identity. Chinatown has been assigned the color red. The program opens on Thursday, June 28, 2017. Installation

begins on Thursday, June 8, 2017. Each station will finish being constructed within two (2) hours.

Change of Park Closure Hours for Kamalii Mini Park – Chair Au announced that even though the Board approved the change on park closure hours for Kamalii Mini Park from 10:00 p.m. to 5:00 a.m. to 7:00 p.m. to 7:00 a.m. during the May 2017 meeting, since it was not on the agenda there needs to be an opportunity for opposition to speak.

Questions, comments, and concerns followed:

1. Constituents: Councilmember Carol Fukunaga said that the request came from constituents who were concerned about illegal activity in the park.
2. Fence: Shubert-Kwock mentioned that changing the hours will not keep people out of the park. There should be a fence. Councilmember Fukunaga said that changing the hours would bring the issue to attention. She circulated a handout with alternative uses for the park, such as moped and bike parking.
3. Parks Board: Megan Muramatsu said that the request is already on its way to the Department of Parks and Recreation Board.

Shubert-Kwock and Lye seconded that the Downtown-Chinatown Neighborhood Board No. 13 support the change of park closure hours for Kamalii Mini Park from 10:00 p.m. to 5:00 a.m. to 7:00 p.m. to 7:00 a.m. The motion was APPROVED by UNANIMOUS CONSENT, 9-0-0 (**AYE**: Au, Chang, Mollring, Lye, Tom, Donaldson-Selby, McCarney, Shubert-Kwock and Yuen; **NAY**: None; **ABSTAIN**: None).

Cinco De Mayo Festival After Action Review – The Board engaged in the following discussion:

- Issues: Shubert-Kwock said that the block party was not well organized. She said that there should be tougher regulation on the Block Parties in Chinatown. She was disappointed with the Cinco De Mayo party and stated more trash cans and portable toilets were needed. She said that ambulances were called four (4) times for drunk people. The party was too loud. There needs to be a change in policy by the Department of Transportation Services (DTS). One visit to a Neighborhood Board meeting is not sufficient notice.
- DTS response: Chair Au said he spoke to Ty Fukumitsu of DTS on Friday, May 5, 2017. Chair Au said that Fukumitsu said DTS did not receive any verbal complaints from HPD or users. Chair Au said that Fukumitsu said the party was okay, and that the street closures were smaller than what was requested. Chair Au said that Fukumitsu said street closures can be given without Board approval.
- Complaint: Shubert-Kwock said that she sent a video and an email complaint to HPD and DTS.
- Complaint: Donaldson-Selby also sent a complaint about security being too aggressive.
- Beer Garden: A resident suggested that beer gardens would be a better option to contain the drinking to one area. The resident also suggested that the party could be in an indoor space on private property.
- Board Power: A resident said that the Board does have the power to make change, even though it is an advisory board. Shubert-Kwock responded that it was difficult because DTS has the power to do whatever they want, so the policy itself must change.
- Standards: McCarney suggested a guideline and standards for promoters who want to hold block parties in Chinatown be created.
- Post-Event Report: Councilmember Fukunaga said that the area legislature has requested post-event reports from the promoter. They should be obtained quickly. The community can file complaints to the liquor commission.
- Letter: Shubert-Kwock suggested the Board write a letter and Chair Au asked for her to write it.

Gordon Biersch Brewery Restaurant Liquor License – Chair Au announced that there is a temporary extension of liquor license premise permit for Gordon Biersch Brewery Restaurant on Friday, June 2, 2017 from 6:00 p.m. to 10:00 p.m. for a special event.

101st Annual King Kamehameha Celebration – Chair Au announced that there was a traffic advisory for the parade on Saturday, June 10, 2017 from 9:00 a.m. to 11:00 a.m.

COMMUNITY CONCERNS

Hawaii Pacific University (HPU) – No representative was present. No report was given.

Safe Haven – No representative was present. No report was given.

Honolulu Rail Transit (HART) – HART Representative Pat Lee announced that HART would like to notify area

residents and businesses that it will be conducting Subsurface Utility Engineering (SUE) work along Nimitz Highway near Iwilei Road, and continuing east to Halekauwila Street. Work will continue on Halekauwila Street to Ward Avenue. The work will then move to a portion of Queen Street between Cummins Street and Waimanu Street. Work will take place weekdays beginning on Monday, June 12, 2017 and is planned to run through Monday, July 17, 2017. Work is scheduled to take place 8:30 a.m. to 3:30 p.m., although some weekend and night work may be required. There may be some light noise from construction, and HART apologizes for any inconvenience. If you have any questions or comments, please call 808-566-2299 or visit www.honolulutransit.org.

Questions, comments, and concerns followed:

1. X-Ray: Tom asked what they are investigating. Lee responded that they are using a ground penetrating radar to take x-ray pictures under the soil to locate utilities.
2. Red Cross: Chang asked what would happen to the Red Cross building. Lee responded that they would be doing construction within 11 feet of the building. Red Cross wants HART to purchase the entire building so that they could move elsewhere. They are still in discussions.

Chinatown Business & Community Association – Shubert-Kwock reported that in May 2017 the community experienced some issues with violent assaults by criminal elements preying on lone individuals at bus stops or parks. Stores were robbed when owners left to go bathrooms, cash from registers was taken, and goods were stolen. One liquor retailer was struck over the head with a steel pipe when only $20.00 was in the cash register. The retailer was an older lady in her 70s. The robbers were three (3) males. Another elderly lady was waiting for the bus outside Walmart in Downtown. She was kicked in the head by a large male, then taken in critical condition to Queens Medical Hospital. Across from Pacific Club three (3) young men attacked a male with a machete. He suffered slash wounds to his face and neck. It is advised to be careful when waiting for a bus or a ride. We must be aware and alert. Do not travel in the dark alone and do not be careless about leaving the shop unwatched. Continue to call 911 when illegal activity is witnessed. Our HPD Commander has deployed more resources recently. There were more HPD patrols and more drug arrests in April 2017. There were 18 drug arrests which is the highest in six (6) years on a per month data count. Chinatown and Waikiki need HPD resources and presence more than elsewhere. The community needs Community Police back as HPD will be doubly effective with cooperation and trust from the community.

Chinatown Improvement District (CID) – Lee Stack reported the following:

- Seminars: CID will have their second series of Historic Preservation Seminars, cosponsored by Historic Hawaii Foundation. They will be held at the Hawaii National Bank Building on the 5th Floor from 12:00 p.m. to 1:00 p.m. on the second Wednesday of each month. They are free and open to the public.
- Taste of Chinatown: The festival will be held on Saturday, August 26, 2017. It will be at the Smith Beretania Park. They may close part of Smith Street to add more booths, vendors and crafts. If they decide to do a street closure, they will come to the Board for a presentation.

Questions, comments, and concerns followed: Tables and Tents: Shubert-Kwock suggested that tables and tents be provided since it was hot last year. Stack responded that grant funding was cut, so it would be difficult to provide tables and tents for everyone.

Arts, Culture, Merchants, Etc. (ACME) – No representative was present. No report was given.

ELECTED OFFICIALS

Mayor Kirk Caldwell's Representative – Megan Muramatsu from the City Managing Director's Office provided updates on questions from the last meeting.

- Noise Complaint: Corporal Steven Matsuda of the District 1 (Central Honolulu) Community Policing Team met with Joshua Mandelstam, manager of the Ong King Arts Center, located at 184 North King Street. Mr. Mandelstam is aware of the noise complaint and wants to be a responsible and good neighbor. It appears that the loud noise is from an open rear door from the establishment to a patio area where the partying continues. The patio has an internal stairwell that leads to an area that is adjacent to the Chinatown Manor building. Mr. Mandelstam said he will limit or not allow his patrons to socialize in the patio area during the late evening hours, or possibly keep the door closed. He also will try to end the live music earlier in the evening. In addition, according to Lee Stack of the Chinatown Improvement District, Ong King's lease will not be renewed when it expires in June 2017.
- Cyclist Signs: The Department of Transportation Services (DTS) has confirmed that according to the State of Hawaii Traffic Laws Section 291C-148, "Unless otherwise prohibited, a bicycle may be driven at a speed

of ten miles per hour or less on a sidewalk or sidewalk area; provided that the driver of the bicycle shall yield the right of way to any pedestrian and that bicycle riding shall be prohibited on sidewalks in business districts." A "business district" is defined as "The territory contiguous to and including a highway when within any six hundred feet along such highway there are buildings in use for businesses or industrial purposes, including but not limited to hotels, banks, or office buildings, and public buildings which occupy at least three hundred feet of frontage on one side or three hundred feet collectively on both sides of the highway." Therefore, bicyclists adhering to this section should not be riding a bicycle on the sidewalk in the Downtown/Chinatown area. This is an enforcement concern and the Honolulu Police Department (HPD) is aware of this ordinance relating to bicycling on sidewalks and can site violators without the presence of signs. As such, by copy of this response, we will be informing the HPD of this concern for their action. The DTS also recommends that the HPD be notified whenever violations are observed. As such, "No Bicycling on Sidewalk" signs do not appear to be necessary at this time.

- 1270 Queen Emma Street: The Department of Community Services is confirming that 1270 Queen Emma Street is not a City project and the City is not involved with the project.
- Potholes: Fort Street between Kukui Street and Beretania Street is identified as in need of resurfacing and is part of the Department of Design and Construction's (DDC) Rehabilitation of Localized Streets, Phase 12D construction project. Potholes were patched on Saturday, May 13, 2017. The Phase 12D project is still in the design phase and projected date for repaving has not been scheduled yet.
- Cost Impact: The establishment of an Office of Climate Change, Sustainability and Resiliency (CCSR) was mandated by City and County of Honolulu voters in November 2016 when 54.5% of Oahu residents voted in the affirmative to create the Office. There is no current cost to the City and County in the current FY-2018 budget for the CCSR. This is due to the fact that the current Executive Director of the CCSR also serves as the City's Chief Resilience Officer, a position that is supported entirely by a 2017-2018 grant from 100 Resilient Cities (100 RC), a project of the Rockefeller Foundation. The grant also provides approximately $1 million in other in-kind and technical support at no cost to taxpayers of the City and County of Honolulu, as well as free services from "platform partners" such as Microsoft and others that could bring millions of dollars in additional assistance to the city over the next three (3) years. While the 100 RC grant provides support for the Office's resilience work, the city is committed to honoring the mandate of Oahu voters to ensure long-term sustainability for our communities and prepare for the impacts of climate change—which will have profound (negative) infrastructure and fiscal implications to the city. The Mayor has requested $269,000 in the FY-2018 budget for the CCSR to pursue programs that reduce the city's energy costs, increase water efficiency, prepare the city for climate change-related sea level rise, and other sustainability initiatives. These programs are expected to conserve taxpayer dollars over both the short and long-term. Beyond the two (2)-year grant agreement with 100 RC, grant funds will no longer be available to support the Chief Resilience Officer position, but free services from platform partners will remain available and provide significant financial support to city projects and programs.
- Sun Yat Sen Park Light: Street light was repaired on Wednesday, April 26, 2017 as requested.
- Power Cleaning: DFM power washed River Street on an emergency feces/urine call on Thursday, May 4, 2017 and returned to power wash the Nuuanu Street to River Street area about Wednesday, May 10, 2017. DFM is tentatively scheduled to power wash the Nuuanu Street to River Street area on or about June 6 pending available resources. Unfortunately it is difficult to provide schedules due to emergency situations that arise such as power washing of bus stops or areas where defecation/urination have occurred.

Questions, comments, and concerns followed:

1. Pothole: Mollring said that a pothole was not filled on Fort Street between South Kukui Street and Beretania Street. She said it is by the second parking meter where the Hawaii Pacific University vans park, so it might have been hidden at the time.
2. Street Cleaning: Schubert-Kwock would like a regular street cleaning schedule for the neglected streets in Chinatown. She said that there used to be two (2) street cleaning machines, but there is one (1) now. She wants two (2) again.
3. Ong King: A resident thanked the City for helping with the noise issue at Ong King.

Councilmember Carol Fukunaga –Councilmember Fukunaga reported the following:

- Kamalii Park: Community stakeholders are pursuing new uses for Kamalii Mini Park to curb illegal activities. Some uses include a Bikeshare Hawaii station and moped parking.
- Sun Yat Sen Park: The appropriation for park improvements has been increased to $561,000, based on updated Department of Design and Construction (DDC) estimates for installation of a smaller electrical facility and removal of the existing bench seating area.
- Parking Fees: Bill 12 will double the parking fees in Downtown, Chinatown and Waikiki.

- Reception: There will be a reception to honor the Board members at the Plaza Waikiki on Tuesday, June 13, 2017 at 3:00 p.m.

Questions, comments, and concerns followed:
1. Parking Fees: Shubert-Kwock asked not to increase the parking fees. Councilmember Fukunaga responded that these areas were selected because they have not been increased for a while. Yuen asked the rationale for picking Chinatown for increasing the parking fees. Councilmember Fukunaga answered that Downtown, Chinatown and Waikiki were all identified as having the specific hours for having the fees imposed.
2. Bill 44: Shubert-Kwock said the Bill 44 should be modified to include a special amendment to exclude Chinatown. Councilmember Fukunaga said that Bill 44 was deferred due to many disagreements, so there is time to work on it.
3. Kamalii Park: Lye mentioned that increasing moped parking at Kamalii Park could disturb the residents due to increase in noise. Councilmember Fukunaga said that moped activity usually stops in the afternoon, and that she hopes Bikeshare Hawaii becomes a much more robust part of the community.

Governor David Ige's Representative – Laurel Johnston, Deputy Director of the Department of Budget and Finance highlighted some points on the monthly newsletter:
- Priorities: Deputy Director Johnston said that Governor Ige is pleased to have passed some of his top priorities in the 2017 legislative session, which are written in the newsletter.
- Japan-Hawaii Economic Summit: This is the first time Kailua-Kona has hosted a summit. Hawaii's relationship with Japan continues to thrive because it is rooted in historical, cultural and business connections. The State wants to find new ways to build on that solid foundation with increased tourism, trade, student exchanges and clean energy projects for mutual benefit.
- Special Session: The Director of Finance is working with the Legislative leadership to get a special session to vote on the Rail.

Questions, comments and concerns that followed:
1. Immigration Ban: Shubert-Kwock is proud of Hawaii for suing on the immigration ban.
2. Education: Shubert-Kwock raised concerns about the new selection of the Education Chief coming from out-of-state. She said they would not be familiar with how education in Hawaii works.
3. Airport: Lye asked when Uber and Lyft would be allowed at the airport. Deputy Director Johnston said that she will check and believes it is an issue for the Public Utilities Commission (PUC). Shubert-Kwock said to upgrade the airport.

Representative Daniel Holt – Representative Holt distributed a newsletter and reported that in the past session he worked diligently to secure the funds necessary for a wide array of projects that will benefit the most individuals, including monies dedicated to the arts, homelessness, Kupuna, schools, transportation needs and highway safety. He introduced legislation to increase police presence in Chinatown, but it did not go through. He gave his praise to Bikeshare Hawaii. He agrees that Chinatown could use an upgrade before American Savings Bank arrives.

Questions, comments and concerns that followed:
1. Graffiti: Shubert-Kwock raised concerns about graffiti in the area. Representative Holt said that they are working hard to provide funding for cover ups. Mollring suggested that if the graffiti is not removed within 48 hours than the building owner be fined, which is done in other cities. Representative Holt said there are positives and negatives to that proposal. There should be discussion to figure out how to address the graffiti problem.
2. Bidding: A resident asked if there was an update on the bidding to manage most of the Downtown properties. The Mayor's Office will bring an answer for that.

Senator Karl Rhoads' Representative – Glen Young said that Senator Rhoads' office is open for any ideas for new legislature.

APPROVAL OF MAY 4, 2017 REGULAR MEETING MINUTES – **McCarney motioned and Mollring seconded to approve the May 4, 2017 regular meeting minutes as written.**

BOARD BUISNESS AND REPORTS

Chair's Report – Chair Au thanked Stanford Yuen and Anthony Chang for being dutiful Downtown-Chinatown

Neighborhood Board Members. The community and the neighborhood are appreciative. He also recognized Tom Smyth for his service. He announced that the Installation Ceremony would be on Saturday, June 24, 2017 from 8:30 a.m. to 1:00 p.m. He reminded that new Members need to respond by Tuesday, June 13, 2017. He reminded that if any Member does not attend the event then they must take the online Sunshine Law Certification.

Neighborhood Commission Updates – No report was given.

Office of Information Practices Report – No report was given.

Treasurer's Report – Treasurer Mollring reported a remaining balance of $74.26 for April 2017. The report was filed.

City and County Affairs – No report was given.

Oahu Metropolitan Planning Organization (OMPO) – Mollring volunteered to be on the Water Committee. Chair Au will contact Mollring via email to appoint Mollring as the representative for the Water Committee.

ANNOUNCEMENTS

Next Meeting – The next Downtown-Chinatown Neighborhood Board No 13 meeting is scheduled for Thursday, July 6, 2017 at the Hawaii Pacific University, One Aloha Tower Drive, Multi-Purpose Room 2 at 7:00 p.m.

ADJOURNMENT – The meeting adjourned at 9:39 p.m.

Submitted by: Sultan White, Neighborhood Assistant I
Reviewed by: Dylan Whitsell, Neighborhood Assistant I

REGULAR MEETING MINUTES
THURSDAY 4 APRIL 2019
ONE ALOHA TOWER, MULTI PURPOSE ROOM 2

CALL TO ORDER – Chair Shubert-Kwock called the meeting to order at 6:00 p.m. **Quorum was established with eight members present**. Note: This nine-member Board requires five members to establish a quorum and to take official Board action.

Board Members Present – Ernest Caravalho, James Logue, Kevin Lye, Kevin McDonald, Dolores Mollring, Willis Moore, Chu Lan Shubert-Kwock, Laura Struges (appointed).

Board Members Absent – Bob Tom

Guests – Lieutenant Taniguchi (Honolulu Police Department); Captain Russell Youth (Honolulu Fire Department); Raelynn Nakabayashi (Mayor Kirk Caldwell's representative); Marc Alexander (Office of Housing); Councilmember Fukunaga; Glen Young (Senator Karl Rhoads' office); Damien Elefante (Governor David Ige's representative); Pat Lee (Honolulu Authority for Rapid Transportation); Greg Payton (Safe Haven); Lee Stack (Chinatown Improvement District); Fran Butera (Chinatown Watch); Nancy Ortiz (Cinco De Mayo); Susan Wolf, Diane Kraus, Verne Nichols, James Tennant, Kainoa Adolpho, Ronald Higa, Questor Lau, Keith Kurahashi, Rik Papa, Eric Wong, and Bob Armstrong (community members); Harry Cho and Casey Ishitani (Neighborhood Commission Office).

PUBLIC SAFETY REPORTS

Honolulu Fire Department (HFD) – HFD departed due to an emergency. A report was provided to the Board that stated the following:

- March 2019 Statistics: There were 5 nuisance fires, 5 activated alarms with no fire, 141 medical emergencies, 3 motor vehicle collisions with a pedestrian, 5 motor vehicle crash/collisions, and 1 ocean rescue.
- Safety Tip: Fire sprinklers respond quickly and effectively to a fire, often extinguishing the fire prior to the fire department's arrival. Fire sprinklers can save lives and property from fire. The National Fire Association reported fire sprinklers reduced fire deaths by 83% and property loss in homes by 69%.

Honolulu Police Department (HPD) – Lieutenant Taniguchi reported the following:

- March 2019 Statistics: There were 7 motor vehicle thefts, 6 burglaries, 50 thefts, 30 unauthorized entries into motor vehicles (UEMV), 29 assaults, 3 sex assaults, 1 graffiti incident, 3 drug offenses, and 2,545 total calls for service.
- Safety Tip: Due to the recent increase in UEMVs, HPD would like to remind the public to lock your doors, do not leave valuables in your vehicle, keep your vehicle clean, stash before you park, park in a visible area, use car alarms, and report suspicious activity.

Questions, comments, and concerns followed:

1. Arrests: Moore asked what type of action has been taken on those arrested as listed in the monthly statistics. Lieutenant Taniguchi stated that there is an ongoing cycle where people who get arrested end up back on the street.
2. Patrol: Lye requested an increase in patrol at Kamalii Mini Park. Shubert-Kwock thanked Major Nishibun for his efforts to increasing patrol and working with the community policing teams.
3. Reserve Officers: Logue asked if HPD can increase the number of reserve officers to help with patrolling of Chinatown.
4. Legislation: McDonald asked if more legislation would help HPD reduce homelessness.
5. Enforcement: A community member raised concerns that the sit/lie law is not being enforced.

Neighborhood Citizen Patrol (NCP) – Mollring reported that the NCP has been patrolling every Tuesday night. Eric Wong of the Kekaulike Mall Citizens Patrol stated that their group has been walking every Thursday.

ELECTED OFFICIALS

Mayor Kirk Caldwell's representative – Raelynn Nakabayashi reported the following:

- Follow-Up on Concerns:
  - Dr. Sun Yet-sen Park Memorial Park: Department of Design and Construction (DDC) stated that there is no public comment period scheduled for the renovation project.
  - Sidewalk Ramps: Department of Facility (DFM) stated that they are allowed to patch damaged Americans with Disabilities Act (ADA) ramps, but modifications to improve the ADA ramps utilized by wheelchairs to meet current standards would need to be assessed and implemented by DDC, due to the complex nature of ADA ramp construction. Questions regarding maintenance patching of ADA ramps can be directed to the Division of Road Maintenance at 768-3600.

Questions, comments, and concerns followed:

1. Crosswalk: Shubert-Kwock raised concerns that the crosswalks on North Beretania Street and Maunakea Street are rough and faded. Suggested using scramble crosswalks due to multiple intersections.
2. Public Phone: Caravalho raised concerns regarding a public phone that has been vandalized and trashed.
3. Repaving: Moore asked what are City's plans are to repave the rest of King Street, rather than only in front of City Hall.
4. Events: McDonald asked if the Liquor Commission has the authority to cancel an event due to liquor violations even though permits have been approved by other City departments.
5. Dr. Sun Yat-sen Park Memorial Park: A community member raised concerns with funds being used for renovations to a park, when there is currently a homeless crisis. The community was not receptive to this project by DDC.
6. Homeless: Community members and business owners raised concerns that homeless are urinating and defecating on the sidewalks. They requested that the City clean/wash the sidewalks.
7. Sidewalks: A community member stated that the sidewalk on Bishop Street/Adam Lane in front of Pauline Bookstore is very slippery when wet.

Senator Karl Rhoads – Senator Rhoads reported the following:

- Capital Improvement Funds: $100,000 in Capital Improvement funds were released for improvements to the Chinese Chamber of Commerce Foundation's Downtown Honolulu building to provide access to seniors and individuals with disabilities. This request for funds was one of Senator Rhoads' top priorities and is extremely pleased to see that funds are now being released.
- Capital Improvement Funds: $1,567,570 in Capital Improvement funds were released to fund seawater air-conditioning energy transfer facilities for designated state buildings Downtown. Construction on the long-awaited Honolulu Seawater Air Conditioning Project in Kakaako is projected to break ground in 2020. Construction itself is set to take another 20 to 22 months. When completed, this district cooling system will reduce Hawaii's dependency on oil by about 178,000 barrels annually, will minimize greenhouse gas emissions, will decrease potable water usage by more than 260 million gallons per year, and will cut down on sewage discharge by up to 84 million gallons per year.
- Strode Montesssori Preschool: Senator Rhoads received a response from HPD on his communication to them concerning the criminal activity taking place on the sidewalks fronting the Strode Montessori Preschool at 925 Bethel Street. Chief Susan Ballard stated that while police officers did not witness any criminal activity when they patrolled the area, HPD officers will make it a point to conduct more frequent checks in that vicinity.

Questions, comments, and concerns followed – Legislative Update: Logue requested a legislative update next month regarding Senator Rhoads' current Bills.

House Representative Daniel Holt – Representative Holt reported the following:

- Bills: House Bill (HB) 159 relating to crime, increases penalties for anyone who knowingly keeps or maintains any structure or place for the purpose of suing controlled substances or which is used for keeping or selling them in violation of controlled substance laws, also increases criminal penalties for those who knowingly profit from, advance, or participate in gambling.
- A'ala Dog Park: A'ala Dog Park recently opened. This was made possible through a public-private partnership between the State, City, community groups, and a non-profit.

- Capital Improvement Funds: $100,000 in Capital Improvement funds were released for improvements to the Chinese Chamber of Commerce Foundation's Downtown Honolulu building to provide access to seniors and individuals with disabilities.
- Recent Events: Representative Holt recently attended the Walk on the Wild Side event in Chinatown hosted by the Kidney Foundation.

Questions, comments, and concerns followed:
1. Chinatown Parade: Shubert-Kwock requested to continue funding for the Chinatown Parade.
2. Gaming Rooms: Logue asked about the enforcement of illegal game rooms.
3. Tobacco Tax: Lye asked for an update regarding the increase on tobacco taxes.

Councilmember Carol Fukunaga – Councilmember Fukunaga reported the following:
- City Budget: Mahalo to the Neighborhood Board No. 13 members and Downtown-Chinatown business leaders for supporting the first round of CD1 amendments to Bill 10, the City's fiscal year 2020 Executive Operating Budget. Bill 10, CD1 was adopted by the Council's Budget Committee during an all-day committee meeting on Wednesday, April 3, 2019 and will be scheduled for a Council review on Wednesday, April 17, 2109. The CD1 amendments included a $200,000 appropriation for private security services to Department of Land Management, which manages the City's affordable housing and city properties in the Downtown-Chinatown area.
- Fire Safety Legislation: Bill 96, relating to fire safety, was the subject of two (2) PITS committee meetings in March. HFD continues to oppose any time extensions proposed in the Bill 96, CD1 drafts, and additional amendments are pending.

Questions, comments, and concerns followed:
1. Security: Caravalho raised concerns that the security will not have authority to enforce laws or make arrests. Lye asked how many security positions there will be and to whom the contract will be awarded to. Councilmember Fukunaga stated that there are no details on that yet and this is a starting point. A community member suggested having security for privately owned buildings as well.
2. Homeless: Logue asked if declaring a homeless emergency has done by other cities before.
3. Events: McDonald asked if the Liquor Commission has the authority to cancel an event due to liquor violations even though permits have been approved by other City departments.

Governor David Ige's Representative – Damien Elefante reported the following:
- Homeless: A response was received from the State Homeless Coordinator stating that $30 million was appropriated by the legislature homeless service centers and shelters across Hawaii.

Community Concerns – Homeless: A community member raised concerns with homeless sleeping and urinating in front of her business. She stated that his has been driving customers away and negatively impacting her business.

NEW BUSINESS

Filling of Vacancy – There is one (1) at-large vacancy. Shubert-Kwock asked all volunteers to introduce themselves.

Caravalho nominated Laura Sturges. Hearing no other nominations, Sturges was voted on the Downtown/Chinatown Neighborhood Board No. 13 by majority vote. (**Aye**: Caravalho, Lye, Logue, Mollring, Shubert-Kwock).

Sturges was appointed to the Board. Eight (8) members present.

Office of Housing – Director Marc Alexander gave a brief presentation and provided handouts regarding the 2019 homeless point-in-time count results and the City and County of Honolulu's Housing First. Director Alexander was available to answer questions and was cut short due to time constraints.

Questions, comments, and concerns followed:
1. Housing First: Logue asked about Housing First units and the voucher system. Alexander stated that data on the number of Housing First clients are not given out due to privacy and that there are no dedicated units for housing first. Vouchers are provided after an evaluation through the Coordinated Entry System.

2. Housing: Caravalho raised concerns that providing housing for drug abusers takes away from those who are economically houseless. He suggested sending drug abusers and the mentally ill to assessment programs prior to providing housing.

Halewai'olu River Street Senior Affordable Rental Project – Questor Lau gave a brief presentation on the project. There will be 156 affordable senior rentals units with the majority targeted at 60% area median income (AMI) or below. There will be 130 one (1) bedroom units and 26 two (2) bedroom units on 17 floors.

Questions, comments, and concerns followed – Senior Citizens: McDonald stated that seniors should be aware that Chinatown can get loud because it is a college/business/residential community.

Domestic Violence Action Center – Nanci Kriedman reported that the Domestic Violence Action Center is the only agency of its kind in Hawaii, offering unduplicated specialized services to survivors of relationship and family violence. Information was provided on the agency's services.

Department of Environmental Services (ENV) – Michael O'Keefe gave a presentation on the City's new bulky item pilot program to reduce the amount of illegal dumping. The City currently provides bulky item pick-up once a month all over Oahu. The new system will require those who want a pick up to schedule an appointment

Questions, comments, and concerns followed:

1. Outreach: McDonald asked what they of outreach will be done to notify the public. O'Keefe stated that ENV will be presenting to the Neighborhood Boards, individual mailers will be sent to 80,000 residents in the Honolulu Collection District, a press release will be sent, and a new conference as well.
2. Illegal Dumping: A community member raised concerns with illegal dumping of trash at bulky item pick-up sites. O'Keefe suggested calling HPD if you notice anyone illegally dumping their trash. A community member raised concerns that people rummage through trash that is illegally dumped on the side of the road.

Cinco de Mayo – Nancy Ortiz reported that the event will take place on Sunday, May 5, 2019 from 2: 00 p.m. to 10:00 p.m. A floor plan/map of the event was provided to the Board and public. The event will be held on Nuuanu Street between Pauahi Street and King Street. Buses will be diverted from Hotel Street. Special duty HPD officers will be hired to secure the entire footprint. The security and staff are all experienced with these types of events and will have a zero tolerance policy in effect. A security/medical headquarters tent will be established for any emergency needs. Guests over 21 and over will have a distinct color wristband and alcohol will only be served to guests with the wristband on. All volunteer staff serving alcohol will have taken the bartender/manager class with the Liquor Commission and have at least two (2) years' experience with these type of events. There is an emergency evacuation plan in place and will be handed out to the security supervisors.

Questions, comments, and concerns followed – Alcohol: A community member asked if alcohol would be served from 2:00 p.m. to 10:00 p.m. concurrently with the keiki activities and if the drink with be just beer and wine or mixed drinks as well. Ortiz responded yes and there will be mixed drinks.

McDonald moved and Caravalho seconded to support the Cinco de Mayo event. The motion was adopted by majority vote, 7-0-1. (**Aye**: Caravalho, Lye, Logue, McDonald, Mollring, Moore, Sturges; **Nay**: None; **Abstain**: Shubert-Kwock).

Kekaulike Mall – Shubert-Kwock gave an update on Kekaulike Mall.

Handicapped Sidewalks in Chinatown – This item was not discussed.

City Council Bill 10 CD1:
The Downtown-Chinatown Neighborhood Board No. 13 supports City Council Bill 10 CD1 introduced by Councilmember Carol Fukunaga to ask the City to release $200,000 for private security for sidewalk safety in Downtown and Chinatown due to escalating violence on the sidewalks and street.

Logue moved and Caravalho seconded the Board support the resolution with the amendments made by Lye. The motion was adopted by unanimous consent, 8-0-0. (**Aye**: Caravalho, Lye, Logue, McDonald, Mollring, Moore, Shubert-Kwock, Sturges; **Nay**: None; **Abstain**: None).

Chinatown Liquor Stores:
The Downtown-Chinatown Neighborhood Board No. 13 requests that the City remove liquor stores overserving patrons in Chinatown, which causes violence and unrest on our streets and endangering citizens' lives.

The Neighborhood Assistant departed at 9:00 p.m.

Hearing no objections, the motion to amend was adopted by unanimous consent, 8-0-0. (Aye: Caravalho, Lye, Logue, McDonald, Mollring, Moore, Shubert-Kwock, Sturges**; Nay**: None**; Abstain**: None**).**
The duly amended main motion was adopted by majority vote 6-1-1. (Aye: Caravalho, Lye, Logue, Mollring, Shubert-Kwock, Sturges**; Nay**: McDonald**; Abstain**: Moore**).**

COMMUNITY REPORTS

Safe Haven – Greg Payton reported that there was one Safe Haven discharges/intakes, one return to the mainland, two Mental Health Kokua Oahu Case Management Housing placement, and 4 permanent housing placements. The grand total for 2019 is 42 placements through March 2019.

Honolulu Authority for Rapid Transportation (HART) – Pat Lee reported that the rail system will be a fully automated, driverless system, utilizing a fleet of 20 four (4) car trains. Each train car is 64 feet long, 14 feet high and 10 feet wide. There are three (3) doorways on each side of a rail car, for a total of 12 doors for each four car train. A 6th four-car train has just been delivered to the Rail Operations Center, which means a quarter of the 80-rail car fleet is already here on island. The system will have 17 trains in operation during peak times and eight (8) trains during non-peak hours. Trains will operate between 4:00 a.m. and 12:00 a.m., and arrive at stations every five minutes during peak, and about 11 minutes during off peak times. The trains will be air conditioned and equipped with WIFI, audio and visual announcement boards, closed circuit TV security cameras and call boxes, and space for strollers, bicycles, luggage and even surfboards. The four car trains have a maximum capacity of 800 passengers, which is equivalent to about 10 city buses. The trains will be fully Americans with Disabilities Act (ADA) compliant, with 188 seats, priority seating for seniors and disabled as well as designated areas for wheelchairs. The Automatic Train Control System testing between the Rail Operations Center and the stations in Waipahu is ongoing in preparation for the interim opening of rail service from Halawa station at Aloha Stadium to the Kualaka'i station at east Kapolei by the end of next year, which will be a limited passenger service. The public will be hearing more details in the coming months. Revenue passenger service for the full 20-mile, 21 station rail system is planned for the end of 2025. Once completed, rail will become an integral part of Honolulu's public transit system connecting seamlessly with the bus and Handivan, using a smart card system called the Holo Card, where riders can transfer easily between the different transportation modes. The public may view the train cars at the upcoming Train Community Day on Saturday 22 June 2019, 10:00 a.m. to 2:00 p.m. at the Rail Operations Center next to Leeward Community College. The event is open to the public. Starting next week, Wednesday 10 April 2019, NAN, who's HART's contractor doing the utility work, will be relocating a waterline which requires closing both left and right turn exits out of Aloha Tower at the Bishop Street/Nimitz intersection across from Bishop Street. The duration of the work is approximately two to three weeks and work will be during the day time from 8:30 a.m. to 3:00 p.m., Monday through Friday. This will not affect makai bound traffic into Aloha Tower from Bishop Street. To exit the Aloha Tower complex, you can use the driveway on the Kalihi side and turn right or left on Nimitz at the traffic signal. For more information on the rail project, please visit the HART website at www.honolulutransit.org, call the project hotline at 566-2299, or email a question to info@honolulutransit.org.

Chinatown Business and Community Association (CBCA) – Shubert-Kwock reported that the CBCA has worked almost a whole month on Kekaulike Mall, Oahu Market and Chun Market to ensure sidewalk safety, is working with HPD and others in the community to move homeless camps throughout Chinatown, is educating merchants on sanitation and trash, met with stake holders on the homeless and drug crisis in Chinatown and trying our new ways to reduce crime. The next meeting is Golden Palace at 10:00 a.m. on Tuesday 9 April 2019. Deputy Director of Environmental Services will be talking about city's plans. A green demarcation was drawn so merchants do no cross the line with merchandise into public space. Also a request for the city to re-do dangerous sidewalks and re-paint crosswalks.

Chinatown Improvement District (CID) – Lee Stack reported that the community security patrol project has been rolled over into a new term due to popular request. The general consensus is that the project is having a positive impact in the area and people are pleased with the outcome. The report for the graffiti coating study has been completed and, after a few final edits, will be published on the CID website (www.cidchinatown.org) and by email. After some trial and error, two (2) coatings were identified that work well with citrus based graffiti removal products

allowing for safer and easier removal of graffiti in public areas with less caustic products. The results and products recommended in the study have already proved useful as a solution to a graffiti issue on the wall surrounding Kawaihao Church. CID is also currently working on a beautification project along River Street. The CID decided to adopt the River Street sidewalk under Department of Facilities Maintenance's Malama o ka Aina program. Working with a panel of cultural and community advisors as well as others we plan to place some planters in the area planted with native plants and also to devise a call for artists to submit artwork arranged around various historical and cultural themes pertaining to Nuuanu stream and the Chinatown area. CID plans to have the planters and the sidewalks painted. CID is very excited about this project which has the capacity to transform a much underutilized area of Chinatown with no costly redevelopment or installations. This project has received the support of Department of Facility Maintenance and, recently, the Mayor's Commission on Culture and the Arts.

Chinatown Watch – Fran Butera reported the following:

- Acknowledgments: Sincerest thanks to Councilmember Carol Fukunaga for her Proposed Amendment to the City's budget, which provides for the City to fund private security around City-owned buildings. This is a welcome, badly-needed emergency measure. Several City-owned properties in Chinatown are serious trouble spots, including the entire Hale Pauahi block and the Pauahi Recreation Center. Board Chair Chu Ian Shubert Kwock spearheaded the push to rein in illegal peddling on Kekaulike Mall. She worked with City DFM and Department of Parks and Recreation personnel to paint demarcation lines on the pavement to clearly outline the space for legally selling goods. She was out in her wheelchair at 5:30 a.m. each day of the project. She continues to visit the mall almost daily, on her own time, to monitor this and other issues. Chinatown Watch members report that the Green Line is an improvement and works as intended. Mental Health Kokua (Greg Payton) hired a security guard last week to monitor activity in front of the Safe Haven/Hygiene Center building. This is a welcome change and long overdue. Mahalo, Greg. We look forward to a sharp reduction in aberrant behavior around your facility.
- Continuing Problems Call For Security Presence: River of Life Mission, the City Hygiene Center and the seemingly unregulated liquor stores continue to draw homeless / mentally ill / substance abusers and criminals to our neighborhood where they roam freely around Chinatown among residents, shopkeepers, visitors and workers. From this toxic mix come the countless daily assaults on our community's health and safety: public drinking, drug use, drug sales, fights, psychotic outbursts, f-bomb barrages, shouting matches, urination and defecation in public spaces and on private property, sitting, lying, camping, littering on public sidewalks and in city parks, vandalism, theft, and purse snatchings and assaults by gangs on kupuna and other vulnerable people. These things go on throughout the day, putting the highest number of people at risk. As currently funded and staffed, HPD cannot control this volatile situation. Daily disruptions by homeless, mentally ill, and substance abusers steal HPD's time, resources, and attention away from its core mission of fighting crime and protecting the public. City-funded security will put more eyes and uniforms out in the public spaces. The guards are a middle layer between the merchants/residents/pedestrians and the HPD. They will help reinforce the message that "you have to obey the law here." For public safety, it is crucial that the guards patrol outdoors in the public spaces (sidewalk, streets, etc.) Around the city-owned buildings, not just inside or within the footprint of the buildings. Based on on-going citizen reports and our own daily reality, we believe that security patrols are needed immediately for all public property in the entire Downtown-Chinatown district. However, Councilmember Fukunaga's proposed amendment is a 1st step to change the course of this unfolding public safety nightmare.
- To the City Administration: The community would like that City to begin immediately to fund private security patrols for Chinatown, with special emphasis on the known crime zones surrounding the homeless services and liquor stores. Provide all additional funding needed to support HPD in protecting Chinatown's citizens. Close the Pauahi Street hygiene center and relocate Safe Haven out of Chinatown. Fast-track your negotiations with River of Life Mission so they may move their feeding operation to Iwilei this year. Close the liquor stores that sell alcohol and drugs to the homeless and mentally ill substance abusers who congregate in disproportionately high numbers in Chinatown.
- To Chinatown Residents, Merchants, Shoppers, Property Owners, and Visitors: Call 911 to report violations. Don't think you're inconveniencing the police by calling. They want you to call 911. Doing so gets the violations into their database and helps HPD help you. Talk to your neighbors about the problems. Encourage them to call 911, too. Post incidents anonymously to ChinatownWatch.com. Please encourage your neighbors to post, too. It's an unofficial but visible way to build our community's case for more support. Please note that posting to ChinatownWatch.com is not a substitute for calling 911. To order Chinatown Watch window signs for your business, go to ChinatownWatch.com, click the About link, then send a message via the Contact link. Please allow a few days for a response as the site is run by volunteers. Get some neighbors together to meet with the HPD's Community Policing Team (CPT). Call the CPT office at

(808) 732-3927. A strong community partnership with HPD is good for everyone. Merchants and property owners, please join the Chinatown Improvement District's neighborhood security patrol. Call Lee Stack at (808) 589-9927, email chinatownimprovementdistrict@gmail.com, or visit the website: cidchinatownhawaii.org. Support legislation to fund private security patrols for Downtown-Chinatown's public spaces. Contact Councilmember Fukunaga's office for details. Email cafukunaga@honolulu.gov or call 768-5006.

APPROVAL OF THURSDAY 7 MARCH 2019 REGULAR MEETING MINUTES – **Moore moved and Logue seconded to approve the Thursday 7 March 2019 regular meeting minutes. The motion was adopted by unanimous consent, 8-0-0** (**Aye**: Caravalho, Lye, Logue, McDonald, Mollring, Moore, Shubert-Kwock, Sturges; **Nay**: None; **Abstain**: None).

ANNOUNCEMENTS

- Next Meeting – The next meeting of the Downtown–Chinatown Neighborhood Board № 13 is scheduled for Thursday 2 May 2019 at Hawaii Pacific University, One Aloha Tower Drive, Multi-Purpose Room 2 at 6:00 p.m.
- Neighborhood Citizen Patrol – The Neighborhood Citizen Patrol meets each Tuesday on the Diamond Head side of Kukui Plaza at 8:00 p.m. Please join the patrol and support its efforts to express service and pride in our Downtown–Chinatown community.
- ʻŌlelo – Rebroadcasts of Downtown–Chinatown Neighborhood Board № 13 meetings are scheduled on ʻŌlelo channel 49 for every third Thursday at 9:00 p.m., as well as 6:00 a.m. on the second and fourth Saturdays of each month. An archive of past meetings may be found on http://olelo.org/olelonet/ and searching on <Downtown Chinatown>.

ADJOURNMENT – Chair Shubert-Kwock adjourned the meeting at 9:13 p.m.

Submitted by: Harry Cho, Public Relations Assistant
Reviewed by: Chris Naylon, Neighborhood Assistant

DOWNTOWN–CHINATOWN NEIGHBORHOOD BOARD № 13

NEIGHBORHOOD COMMISSION • 925 DILLINGHAM BOULEVARD, SUITE 160 • HONOLULU, HAWAII 96817

REGULAR MEETING MINUTES
THURSDAY 3 OCTOBER 2019
ONE ALOHA TOWER, MULTI PURPOSE ROOM 2

CALL TO ORDER – Secretary Kamoshida called the meeting to order at 6:00 p.m. **Quorum was established with eight members present**. Note: This nine-member Board requires five members to establish a quorum and to take official Board action.

Board Members Present – Robert Armstrong, Roxie-Anne Kamoshida, James Logue, Kevin Lye, Sandy Ma, Kevin McDonald (arrived 6:03 p.m.), Dolores Mollring, Willis Moore, and Chu Lan Shubert-Kwock

Board Members Absent – None

Guests – Major Ryan Nishibun, Captain Glenn Hayashi, and Lieutenant Brian Taniguchi (Honolulu Police Department); Captain Russell Youth (Honolulu Fire Department); Alexander Zannes (Mayor Kirk Caldwell's representative); Damien Elefante (Governor David Ige's representative); Councilmember Carol Fukunaga and Kimberly Ribellia (Councilmember Carol Fukunaga's office); Senator Karl Rhoads; Damien Elefante (Governor David Ige's representative); Randy Chu (Department of Land Management); Lee Stack and Kainoa Adolpho (Chinatown Improvement District); Nicole Reid (Arts, Culture, Merchants, Etc.); Ronald Higa, Steve Lohse, Keith Kurahashi, Theresa Schubert, Mike Galmiche (community members); Harry Cho (Neighborhood Commission Office). **Name not included if not known or if illegible on the sign-in sheet.**

PUBLIC SAFETY REPORTS

Honolulu Police Department (HPD) – Lieutenant Taniguchi reported the following:

- September 2019 Statistics: There were 7 motor vehicle thefts, 9 burglaries, 54 thefts, 23 unauthorized entries into motor vehicles (UEMV), 15 assaults, 1 sex assault, 5 drug offenses, 1 graffiti incident, and 2,435 total calls for service.
- Safety Tip: Safety tips were given on Halloween safety.

McDonald arrived at 6:03 p.m. and assumed the Chair. Nine members present.

Questions, comments, and concerns followed:

1. Fourth Watch: Shubert-Kwock commended HPD's Fourth Watch for patrolling the area.
2. Bicycles: Ma raised concerns with bicyclists riding on the sidewalk.
3. Illegal Parking: Shubert-Kwock raised concerns with vehicles illegally parking and blocking sidewalks.
4. Citing: McDonald raised concerns that HPD cannot issue citations if the violation is not witnessed.

Honolulu Fire Department (HFD) – Captain Youth reported the following:

- September 2019 Statistics: There was 1 structure fire, 4 nuisance fires, 1 cooking fire, 11 activated alarms (no fire), 135 medical emergencies, 1 motor vehicle collision with a pedestrian, and 5 motor vehicle crash/collisions.
- Safety Tip: Safety tips were given on Halloween Safety.

Questions, comments, and concerns followed:

1. Fire Trucks: Shubert-Kwock raised concerns that fire trucks may have difficulties turning at Maunakea and Pauahi Streets.
2. Fire Hydrants: Mollring raised concerns with placing the steel poles in front of fire hydrants.

Neighborhood Citizens Patrol (NCP) – Mollring reported that the NCP had not been walking due to the rain.

Logue moved and Shubert-Kwock seconded to add election of Vice Chair to the agenda. The motion was adopted, 8-0-0 (**Aye**: Armstrong, Kamoshida, Logue, Ma, McDonald, Mollring, Moore, Shubert-Kwock; **Nay**: None; **Abstain**: None).

ELECTION OF VICE CHAIR

Shubert-Kwock nominated Logue and McDonald nominated Lye. Logue was elected Vice Chair, 7-1-0 (**Logue**: Armstrong, Kamoshida, Logue, Ma, Mollring, Moore, Shubert-Kwock; **Lye**: McDonald; **Abstain**: None).

ELECTED OFFICIALS

Governor David Ige's Representative – Damien Elefante reported the following:

- Capitol Connections: This month's *Capitol Connections* highlight Governor Ige's vision for sustainability in Hawaii, affordable housing, and local agriculture.
- Hawaii Annual Code Challenge: Kick-off for the event will take place on Saturday 19 October 2019.
- Aloha Stadium: The public is invited to participate in the comment period of the Aloha Stadium project until Thursday 7 November 2019.

Questions, comments, and concerns followed:

1. Ohana Zones: Logue raised concerns regarding Ohana Zones and their funding. McDonald also raised concerns with homelessness and asked for an update regarding Governor Ige's plans to end homelessness.

Mayor Kirk Caldwell's representative – Alexander Zannes reported the following:

- Follow-Up on Concerns:
    - Street Lights on Chaplain Lane: Department of Facility Maintenance (DFM) stated that the burnt out lights were replaced on Wednesday 11 September 2019.
    - Sidewalks: DFM stated that inspection of the traffic island/median at Pali Highway and South Beretania Street was unable to detect any residual fecal matter. Please call (808) 768-4381 to report such concerns with specific location details so timely investigations can be conducted.
    - Bus Stop Seating: Department of Transportation Services (DTS) stated that they have previously explained to NB 13 the health and safety reasons that prompted the removal of the bus stop benches at Smith and Hotel Streets. DTS may be willing to replace the benches at this location if NB 13 agrees to adopt and maintain the bus stops at which the replacement benches will be installed. Interested Neighborhood Board members may contact Coreen Blanco of DTS at (808) 768-8375 for more information on DTS' Bus Stop Volunteer Program.
    - TheBus Safety: DTS appreciates and shares the Neighborhood Board's interest in promoting safety on TheBus. DTS is working with Oahu Transit Services, Inc., the City bus operations contractor, to develop a rider awareness safety campaign for implementation later this year. Currently, TheBus promotes safety onboard all vehicles through a bus placard that encourages riders to be aware, take action, and report any suspicious activity by calling 911 or notifying the driver. The placard is translated into 18 different languages, and supports Transit Watch, the nationwide safety and security awareness campaign. Additionally, all buses are equipped with interior announcement systems that announce safety messages while a vehicle is in service. Announcements include safety tips, such as: stand clear of doors, keep aisles and seats clear, hold on when standing, hold on when the bus is departing, use caution when exiting, crosswalk safety, and pickpocket warnings.
    - Chinatown Trash: Department of Environmental Services (ENV) stated that they are looking at self-locking carts for businesses in Chinatown. They are not suggesting earlier nighttime collection as there are many businesses open 24–hours and some closing after midnight, which is why they go with a 4 a.m. route.
    - River Street Homeless: HPD stated that District 1 (Central Honolulu) patrol and Fourth Watch officers have been addressing homeless issues along River Street, as well as accompanying the Department of Facility Maintenance (DFM) in conducting their Stored Property Ordinance (SPO)/Sidewalk Nuisance Ordinance (SNO). The District 1 Crime Reduction Unit (CRU) and patrol have been patrolling and surveying the area for illegal activity. Residents in the area, the public, and shop owners are encouraged to call 911 when they see suspicious activities.
    - River of Life Relocation: Office of Housing stated that negotiations between the City and River of Life are progressing well and further details will be provided upon completion. Updates may be available by the next neighborhood board meeting.
    - Sidewalk Repairs: DFM requested to please provide the locations of the sidewalk that is needing repairs. DFM will make temporary repairs and schedule the permanent repairs by contract.
    - Magnum P.I.: Office of Economic Development stated that there are no dates mentioned, but if it involves Dillingham, it may be the shoot that occurred on 14 July 2019. Public notice was provided

in several different ways: notification letters were sent to affected area businesses, signage was posted including variable message boards, *no parking* signage, and a widely disseminated Traffic Advisory sent to the media by the city communication team that was broadcasted on television news outlets. Information would usually be brought to the neighborhood board, but in this instance the show was on hiatus until mid-June and the sequence was developed after that. NB 13 was on recess in July, so there was no option to come to the board.

- o Bulb-outs: DTS stated that the painted planters will be put back after the bulb-out reconstruction; anticipated completion 2020.

Questions, comments, and concerns followed:

1. Magnum P.I.: Shubert-Kwock requested for prior notice of any street closures that will occur in the Downtown–Chinatown area.
2. Trash Pick-Up: Shubert-Kwock raised concerns that trash pick-up is difficult in Chinatown due to the bulb-outs and barricades.
3. Loading Zone: Ma asked why DTS does not recommend a freight-loading zone.
4. Attendance at Neighborhood Board Meetings: Shubert-Kwock asked if a representative from DTS and Honolulu Liquor Commission can attend the Downtown–Chinatown Neighborhood Board meetings every other month to provide updates.
5. Public Bathrooms: Ma stated that she is aware that there are bathrooms at the Safe Haven Hygiene Center, and asked if there are plans to have public restrooms available for visitors and tourists.
6. Homeless: McDonald requested for monthly updates on any solutions to address homelessness in Chinatown.

Senator Karl Rhoads – Senator Rhoads reported the following:

- 26th Annual Children's Day: Hawaii's 26th Annual Children and Youth Day will take place on Sunday 6 October 2019 from 10:00 a.m. to 3:00 p.m. at the State Capitol grounds and surrounding areas. Children and Youth Day honors and celebrates our children and youth in Hawaii. There will be over 300 interactive, educational, fun activities for infants, toddlers, children, youth, and the entire family. Free parking will be available at neighboring State parking lots, Central Middle School, and Central Pacific Bank at the corner of King and Alakea Streets. For more information, please call Kama'aina Kids at (808) 262-3651 or visit www.HawaiiCYD.org.

Questions, comments, and concerns followed:

1. Homelessness: Shubert-Kwock asked for an update regarding the Institute of Human Services (HIS) petitioning the first 10 cases.
2. Senate Bill (SB) 1124: Armstrong commended Senator Rhoads for SB 1124, which requires a licensed psychiatrist or advanced practice registered nurse with prescriptive authority and psychiatric specialization to determine, prior to a person's discharge from a psychiatric facility, whether an assisted community treatment plan is indicated and to make certain arrangements if so indicated and amends the criteria for assisted community treatment.

Councilmember Carol Fukunaga – Kimberly Ribellia reported the following:

- Kamali'i Mini Park Changes: As a follow-up to Councilmember Fukunaga's September 2019 report on complaints about Kamali'i Mini Park, a copy of Resolution 19-250 was provided, requesting adoption of alternative uses for Kamali'i Mini Park and removal of this site from the city parks inventory. A hearing for this resolution is being requested for the Tuesday 22 October 2019 Parks, Community Services and Intergovernmental Agreements (PCSI) Committee meeting. Councilmember Fukunaga welcomes a resolution of support from Downtown–Chinatown NB 13. As reported previously, the Councilmember believes that a change in the designation of uses of the Kamali'i Mini Park would improve public safety and security in the downtown/Pali Highway gateway to Honolulu considerably, and it would save city taxpayers in reduced enforcement or clean-up expenditures. The Councilmember and her staff met with Chief Ballard and her team on Ordinance 18-14 (Bill 52, 2018 sidewalk and public space restrictions island-wide) to address HPD concerns over enforceability, and will be seeking further assistance from Senator Rhoads and Representative Holt as they harmonize state/county legislation involving public sanitation, vagrancy and related criminal activity.
- Nighttime Noise Complaints on Nimitz Highway: On 18 September 2019, HART's public affairs team and its contractors conducted a community forum at the request of Councilmember Fukunaga, to discuss the noise complaints raised about the nighttime pre-transit construction utility and grading work along Nimitz Highway. During September and October 2019, pre-construction utility and grading work resulted in several

noise complaints from Mann Tower and Harbor Court residents. Councilmember Fukunaga was able to work with the NAN Inc. project managers to address some of the Mann Tower complaints. However, with respect to complaints from other properties along Nimitz Highway, the Councilmember is working with the State Department of Health's Noise and Radiation Branch to determine whether alternative daytime work may be a better alternative. HART's noise variance permits authorizing nighttime and weekend work were issued early in the process for a 3-year time frame. As the utility and grading construction work enters urban Honolulu, where multiple high-rise structures are located along the Nimitz Highway/Ala Moana Boulevard corridor, it may be more practical to allow for daytime construction along portions of Nimitz Highway to be shifted to daytime hours to address neighbors' concerns.

- Nighttime Noise Variance Permit Meeting: In addition to nighttime utility and grading pre-transit construction work entering the urban Honolulu area, the City's Department of Design and Construction scheduled a nighttime noise variance permit meeting for its Downtown–Chinatown repaving projects on Thursday 3 October 2019 at 6:30 p.m. in the Central Middle School cafeteria. Councilmember Fukunaga received a notice of this community meeting on Thursday 26 September and immediately notified AECOM of the schedule conflict with tonight's neighborhood board meeting. DDC reported it was unable to reschedule the meeting, and area legislators Holt, Rhoads and Councilmember Fukunaga requested the following corrective actions: Providing two additional weeks for public feedback and comment on the proposed noise variance permit beyond the Thursday 3 October 2019 community meeting date, and providing a list of the addresses to whom the notice of the community variance permit meeting were sent. The Councilmember received complaints that residents of Honolulu Tower, one of the larger condo properties in downtown Honolulu, had not been notified of this meeting. Information about the noise permit request will be shared with constituents for other properties that may not have received notice about tonight's community meeting.

Questions, comments, and concerns followed:

1. Noise Variance Meeting: Ma asked that DDC present to the Neighborhood Board regarding the nighttime noise variance and requested a more legible map of the rehabilitation of streets.
2. Bulb-outs: Shubert-Kwock raised concerns that no community meeting was held by DTS for the permanent bulb-outs.
3. Trash: Shubert-Kwock requested late-night pick-ups and lockable refuse bins.
4. Homeless: McDonald raised concerns with homeless in the area.

Resident and Community Concerns:

- Public Bathrooms: A community member stated that although bathrooms in Chinatown would be good, it would invite more illegal activity from the homeless. A community member suggested private bathrooms for visitors and tourists.

NEW BUSINESS

Halewaiolu Senior Residence – Keith Kurahashi reported that the land owner is the City and County of Honolulu. The height limit for the project is 350 feet and the tower height will be 173 feet. It will be a BMX-4, business mixed use zoning. There will be 155 affordable senior dwelling units.

Questions, comments, and concerns followed:

1. Community Center: Shubert-Kwock asked about the community center and its use. Kurahashi stated that it will be around 4,000 square feet and its use will be determined by the association.
2. Ground Breaking: Armstrong asked when the ground breaking will take place. Kurahashi stated that it will take place in 2020.
3. Parking: Armstrong asked how many parking stalls there will be and Ma asked if there is visitor parking. Kurahashi stated that there will be 51 parking stalls and all stalls will be first come first serve.

Hallowbaloo Music and Arts Festival – Mark Tarone was present.

Shubert-Kwock moved and Logue seconded to defer discussion of this agenda item due to the lack of clarity of street closures on the agenda. The motion was adopted by majority vote, 5-3-0 (**Aye**: Armstrong, Kamoshida, Logue, Mollring, Shubert-Kwock; **Nay**: Ma, McDonald, Moore; **Abstain**: None).

Resolution 2019-006 Urging the City DTS to Prohibit DJ Booths During Non-Construction Street Closures in Chinatown:

Logue moved and Shubert-Kwock seconded to adopt the resolution. After discussion, the motion was not adopted, 0-8-0 (**Aye**: None; **Nay**: Armstrong, Kamoshida, Logue, Ma, McDonald, Mollring, Moore, Shubert-Kwock; **Abstain**: None).

Resolution 2019-007 Urging the City Administration and City Council and the State of Hawaii the Enforce HRS 281-78 to Control Public Liquor Consumption:

Logue moved and Shubert-Kwock seconded to adopt the resolution. After discussion, the motion failed, 4-4-0 (Aye: Kamoshida, Logue, Mollring, Shubert-Kwock; **Nay**: Armstrong, Ma, McDonald, Moore; **Abstain**: None).

Resolution 2019-009 Requesting Rescission of the Yellow Bag Mandate:

Logue moved and Shubert-Kwock seconded to adopt the resolution. After discussion, the motion failed, 2-6-0 (Aye: Logue, McDonald; **Nay**: Armstrong, Kamoshida, Ma, Moore, Mollring, Shubert-Kwock; **Abstain**: None).

COMMUNITY REPORTS

Safe Haven – Greg Payton reported the following from September 2019: 5 Safe Haven discharges/intakes, 2 activity center placements, 2 MHK – Oahu Case Management Housings, and 9 permanent housing placements. The grand total for 2019 is 74 placements through September.

Honolulu Authority for Rapid Transportation (HART) – Pat Lee was not present but provided a traffic update and report to the board. HART's weekly traffic notice for work in the area, which is described by intersections on Nimitz Highway and various streets in Downtown and Chinatown, is available and updated weekly at: http://hartdocs.honolulu.gov/docushare/dsweb/View/Collection-1470. For more information on the rail project, the public may visit the HART website at www.honolulutransit.org, call the project hotline at (808) 566-2299, or email a question to info@honolulutransit.org.

Chinatown Business and Community Association (CBCA) – The CBCA met on Tuesday 10 September 2019 at Golden Palace for the monthly dim sum meeting. Agenda items consisted of ongoing issues in Chinatown including illegal trash, sidewalk encroachment by merchants and homeless, burglaries and assaults, Kekaulike Mall, repairs of trip hazards, and liquor issues from open drinking and smoking along sidewalks and Kekaulike Mall. HPD has been cooperative resulting in the arrest and citation of illegal vendors. Mayor Caldwell had a press conference on using yellow bags to reduce illegal trash and breaking into trash by folks looking for valuables to recycle. Harry continues to be a problem, especially when he is high on either alcohol or drugs. He creates trash by turning over trash receptacles and dragging trash to various locations. Department of Opala has increased enforcement of illegal trash dumping, up to $2,500 fine. City continues to work on possible locked bins and night trash pickups for merchants and residents which might resolve these problems. CBCA's next Meeting is Tuesday 8 October 2019 at Golden Palace, 10:00 a.m. All are welcome. CBCA's 10th annual banquet to celebrate Chinatown Heroes is on Saturday 19 October 2019 at Golden Palace, with a ten-course dinner for $34 per person.

Chinatown Improvement District (CID) – Lee Stack reported that with grant funds received in July, CID rolled out a new patrol schedule for the community patrol project. The patrols now cover seven days per week and a have a new daytime walk-around patrol for certain streets in response to concerns and suggestions from small businesses in the area. We are working on setting up a meeting so that we can coordinate community patrol efforts with the City funded guard services on City properties. We have spoken with HPD about a new initiative where an HPD officer will sometimes accompany the daytime patrol guard. Approximately 200 to 300 people attended the Mid-Autumn Lantern Festival on 13 September 2019. At the event, there were moon cakes, lantern viewing, a raffle, and free lantern making activities (very popular with the children and some adults). Students had made a number of lanterns which were displayed and then given away at the end of the evening. We have posted photos from the event on our Facebook page. We have a suggestion regarding Sit-Lie Legislation in Chinatown. Given the concerns raised at various Neighborhood Board meetings about health and safety issues in the Chinatown District, NB members might be interested in talking with our Councilmember Fukunaga or the Administration about extending the hours of the sit–lie law to when nighttime businesses in the area close—around 2:00 a.m. In Waikiki, sit–lie legislation is in effect 24/7 while in Chinatown the sit–lie law is not enforceable between 11:00 p.m. and 5:00 a.m. Yet, there are businesses in Chinatown which close around 2:00 a.m. and whose businesses are blocked and impacted. Perhaps the legislation could be extended to 24/7 in the Chinatown District, similar to the commercial district of Waikiki—or to at least match the hours of nighttime businesses which close at 2:00 a.m. Lastly, we suggest that the heading for this portion of the agenda be changed back to Community Reports from the new title

"Community Concerns" because we participate in this portion of the agenda primarily to report on our projects and activities in the area.

APPROVAL OF MINUTES

The June 2019 meeting minutes, as presented by the Chair for review by the Board and not those originally circulated by the Neighborhood Assistant, were adopted, 6-0-2 (**Aye**: Kamoshida, Logue, McDonald, Mollring, Moore, Shubert-Kwock; **Nay**: None; **Abstain**: Armstrong, Ma).

Armstrong moved and Moore seconded to approve the August 2019 meeting minutes. Kamoshida moved and Logue seconded to amend the minutes on page 2 of 8, as printed, from "Shubert-Kwock then verbally announced her resignation from NB 13, made some inappropriate remarks out of turn and without being recognized by the chair towards several board members, and left the meeting at 6:45 p.m." to "Shubert-Kwock then verbally announced her resignation from NB 13 and immediately left the meeting at 6:45 p.m." The motion to amend the minutes was adopted, 7-1-0 (**Aye**: Armstrong, Kamoshida, Logue, Ma, Mollring, Moore, Shubert-Kwock; **Nay**: McDonald; **Abstain**: None). **The motion to adopt the amended minutes was adopted, 7-1-0** (**Aye**: Armstrong, Kamoshida, Logue, Ma, Mollring, Moore, Shubert-Kwock; **Nay**: McDonald; **Abstain**: None).

Logue moved and Mollring seconded to adopt the September 2019 minutes as amended to replace the extant CBCA report and to add a report from Chinatown Watch. The motion passed, 7-0-1 (**Aye**: Armstrong, Kamoshida, Logue, McDonald, Mollring, Moore, Shubert-Kwock; **Nay**: None; **Abstain**: Ma).

BOARD BUSINESS

Lye spoke through the interactive conference technology to the Board and noted that he had been in attendance of the entirety of the meeting from a remote location, duly noticed to the public as per the 2017 *Oahu's Neighborhood Board System Member Guidebook*, and had attempted to participate in the meeting as specified on page 38 of the *Guidebook* and §2-14-115(a) of the *Neighborhood Plan*, which collectively specify that presence at a Board meeting has been conferred since 1 July 2012 through remote participation using interactive conference technology, and hence voting on actions before the Board by Members participating thusly is permissible. Lye further noted that he was disenfranchised by not being permitted to be heard or vote on matters before the Board during the meeting.

ANNOUNCEMENTS

- Next Meeting – The next meeting of Downtown–Chinatown Neighborhood Board № 13 is scheduled for Thursday 7 November 2019 at Hawaii Pacific University, One Aloha Tower Drive, Multi-Purpose Room 2 at 6:00 p.m.
- Neighborhood Citizen Patrol – The Neighborhood Citizen Patrol meets each Tuesday on the Diamond Head side of Kukui Plaza at 8:00 p.m. Please join the patrol and support its efforts to express service and pride in our Downtown–Chinatown community.
- ʻŌlelo – Rebroadcasts of Downtown–Chinatown Neighborhood Board № 13 meetings are scheduled on ʻŌlelo channel 49 for every third Thursday at 9:00 p.m., as well as 6:00 a.m. on the second and fourth Saturdays of each month. An archive of past meetings may be found on http://olelo.org/olelonet/; select and expand <Community/Informational> from the list of On Demand categories on this page and then manually scroll to find listings for playback of <Downtown Board> meetings.

ADJOURNMENT – McDonald adjourned the meeting at 8:30 p.m.

Initial draft by Harry Cho, Neighborhood Assistant
Edited by NB 13 Secretary Roxie-Anne Kamoshida and Kevin Lye

Appendix P

Memorandum of Agreement
Cultural Surveys Hawai‘i, Inc.
April 2020

MEMORANDUM OF AGREEMENT
BETWEEN
THE CITY AND COUNTY OF HONOLULU
AND
THE HALEWAIʻOLU SENIOR DEVELOPMENT, LLC
AND
THE HAWAIʻI STATE HISTORIC PRESERVATION OFFICER
REGARDING THE
DEMOLITION AND REDEVELOPMENT OF
THE JOHN R. GILLILAND SR. BUILDING AND SURROUNDING PARKING LOT

THIS AGREEMENT ("Agreement") is made this_____ day of _____, 2020 by and among the City and County of Honolulu ("CCH") in its capacity as the Responsible Entity as defined below, the Hawaiʻi State Historic Preservation Office ("SHPO") through the office of the Hawaiʻi State Historic Preservation Division, a division of the Department of Land and Natural Resources of the State of Hawaiʻi ("SHPD") and Halewaiʻolu Senior Development, LLC, ("Developer" or "HSD") (collectively "Signatory Parties") for the purposes herein set forth.

RECITALS

WHEREAS, pursuant to 24 CFR §58, the U.S. Department of Housing and Urban Development ("HUD"), designated CCH as the Responsible Entity, as defined in 24 CFR §58.2(a)(7), for environmental reviews of projects previously assisted with certain HUD funding, and the Mayor of the City and County of Honolulu ("Mayor") as the certifying officer of the Responsible Entity. Pursuant to 24 CFR §§ 58.4 and 58.5, CCH, as the Responsible Entity, must assume responsibilities for environmental review, decision-making and action that would apply to HUD under the National Environmental Policy Act of 1969, as amended (42 U.S.C. §4321 et. seq.) ("NEPA"), Section 106 of the National Historic Preservation Act, as amended (54 U.S.C. §306108, formerly 16 U.S.C. §470f) ("Section 106"), and Section 106 implementing regulations at 36 CFR §800. Accordingly, pursuant to 24 CFR §§ 58.5 and 58.13, as the Responsible Entity's Certifying Officer, the Mayor is the "responsible Federal official" as that term is used in Section 102 of NEPA, and the "Agency Official" as that term is used in Section 106 and 36 CFR §800. The Mayor, as the Certifying Officer of the Responsible Entity and Section 106 Agency Official, hereby delegates authority to CCH to implement and monitor this Agreement; and

WHEREAS, together with its own funds, CCH used funds from HUD's Community Development Block Grant ("CDBG") to acquire the real property and improvements located at 1331 River Street in Honolulu, Hawaii, more particularly described as Tax Map Key ("TMK") number (1) 1-7-006:012 (the "Property"). The Property is therefore currently subject to CDBG restrictions; and

WHEREAS, the 0.6181-acre Property contains a building (the "Building") which was built in 1958 and has been determined eligible for listing in the State and National Registers of Historic Places, at the local level

under Criterion C, as a unique example of mid-twentieth century modern architecture. The historic name of the Building is the John R. Gilliland Sr. Building. The Building has become dilapidated and is currently functionally obsolete. The Building is currently unoccupied and together with the surrounding neighborhood, has become a gathering place for the homeless population; and

WHEREAS, a hazardous materials assessment survey ("Hazmat Survey")for the Building was conducted by Ford & Associates in April 2019 evidenced the presence of hazardous materials including, but not limited to, asbestos-containing materials. Nine of the asbestos-containing materials were found in amounts above regulatory safe levels; and

WHEREAS, HUD originally designated the Property as a blighted area; and

WHEREAS, HUD originally provided federal CDBG funds for the acquisition of the commercial property which met the national objective of removal of blight, however, the City proposes to change the designation of use pursuant to the provisions of 24 Code of Federal Regulations ("CFR") section 570.505. The change in the national objective is to affordable housing. All 100% of the units created will meet the CDBG national objective at 24 CFR 570.208(a)(3) Housing Activities.

WHEREAS, CCH has determined it best to provide low-income housing to Honolulu's senior population by entering into a public-private partnership; and

WHEREAS, through a Request for Proposals (RFP) process, CCH selected HSD to plan, design, construct, operate and manage redevelopment of the Property pursuant to the terms and conditions of that certain Development Agreement ("DA") dated May 17, 2016, as amended from time to time, made by and between CCH and HSD; and

WHEREAS, HSD was selected as the best qualified development proposal for the redevelopment of the Property and upon satisfaction of conditions precedent established in the revised DA, subsequent to 201H approval, the CCH will recommend to the City Council that HSD be approved for a long-term lease, and thus CCH has invited HSD to sign this Agreement as an Invited Signatory; and

WHEREAS, CCH, subject to the terms and certain conditions precedent in the revised DA, subsequent to 201H approval and City Council approval of a long-term lease, will approve HSD to demolish the existing Building located on the property with the intent to redevelop the Property into an affordable housing rental project for seniors aged 62 and over, at 80% Area Median Income (AMI) and below with the vast majority of units available to seniors with incomes at 60% AMI and below. The demolition and redevelopment together shall be referred to herein as the "Project;" and

WHEREAS, HSD both hosted and attended numerous community meetings with Concurring Parties which culminated in several design changes to the Project including, but not limited to, establishing setbacks of the Project from Lum Sai Ho Tong ranging from approximately 13 feet to 23 feet;

WHEREAS, due to the initial acquisition of the Property and Building with a portion of HUD CDBG funds, the Project is an undertaking subject to review under Section 106 and its implementing regulations, 36 CFR §800; and

WHEREAS, CCH has defined the undertaking's area of potential effect ("APE") as the area within the general boundaries of the H-1 Freeway to the northeast, Maunakea Street and Nuuanu Avenue to the southeast, North Beretania Street to the southwest and Aala Street to the northwest in Honolulu, Hawaii (includes the project site and portions of TMK Nos. (1) 1-7-005:019; (1) 1-7-005:021; (1) 1-7-006:003; (1) 1-7-006:008; (1) 1-7-006:010; (1) 1-7-006:012; (1) 1-7-006:013; (1) 1-7-007:001; (1) 1-7-007:002; (1) 1-7-007:021; (1) 1-7-008:001; (1) 1-7-008:002; (1) 1-7-023:033; (1) 1-7-023:034; (1) 1-7-023:036; (1) 1-7-026:004; (1) 1-7-026:010; (1) 1-7-026:011; (1) 1-7-026:012; (1) 1-7-026:013; (1) 1-7-026:015; (1) 1-7-026:016; and (1) 1-7-026:017 (see Exhibit A); and

WHEREAS, CCH has defined the undertaking's archaeological study area, a component of the APE as the 0.6181-acre project footprint, located at 1331 River Street (TMK (1) 1-7-006:012) (see Exhibit B); and

WHEREAS, CCH's historic property identification effort identified the following historic properties within the project's APE that may be affected by the undertaking: (1) *For Architectural Historic Properties***:** Please reference Exhibit C, Historic Architectural Resources Identified within the Halewai'olu Area of Potential Effect, (2) *For Archaeological Historic Properties*: Please reference Exhibit D, Historic Archaeological Resources Identified within the Halewai'olu Area of Potential Effect; and

WHEREAS, Mayor, as the certifying official of the Responsible Entity and Agency Official under Section 106, has determined that the undertaking will have an adverse effect on the following historic properties, which have been determined eligible for listing in the National Register of Historic Places: Lum Sai Ho Tong and the John R. Gilliland Building (Please Reference Exhibit C) and State Inventory of Historic Places (SIHP) 50-80-14-8840 (Please Reference Exhibit D). While the undertaking may have a potential adverse effect on Lum Sai Ho Tong, the potential adverse effects will be mitigated by providing the setbacks as stated above and implementing the mitigation measures as stipulated in this Agreement; and

WHEREAS, CCH consulted with SHPO under 36 CFR §800; and

WHEREAS, SHPO has reviewed and concurred with the evaluations and recommendations in the following referenced materials *Reconnaissance Level Survey for the John R. Gilliland Building* and *Archaeological Inventory Survey for the Halewai'olu Senior Residences Project, Honolulu Ahupua'a, Honolulu (Kona) District, O'ahu Island, Hawai'i TMK (1) 1-7-006:012* (Draft January 2019); and

WHEREAS, human skeletal remains were identified on the Property and in compliance with Hawai'i State burial law (HRS §6E-43 and HAR §13-300), CCH, together with HSD, further consulted with SHPO (including the SHPD History and Culture Branch), the O'ahu Island Burial Council ("OIBC"), and OIBC-recognized Native Hawaiian cultural descendants, including without limitation the Mana Caceres 'Ohana, the Keala Norman 'Ohana, the Marin Ohana represented by Donna and Daron Makaiwi, and the Ali'i Pauahi Hawaiian Civic Club; and

WHEREAS, in June 2019, CCH prepared and delivered over 100 letters of invitation ("Invitation") and accompanying background materials describing the proposed undertaking to organizations and individuals with a potential interest in the proposed undertaking and its potential to affect historic properties including all Native Hawaiian Organizations identified on the *Native Hawaiian Organization Notification List* published by the U.S. Department of the Interior, and maintained by the Office of Native Hawaiian Relations, to identify any Native Hawaiian Organizations and/or Native Hawaiian descendants who may have ancestral

lineal or cultural ties, knowledge, or religious attachment or concerns regarding the proposed undertaking (See Exhibit E). Multiple parties responded to the Invitation and, of these, the Historic Hawai'i Foundation (a Hawaii nonprofit corporation), Hawaiian Memorial Life Plan Ltd, dba Borthwick Mortuary, Chinatown Community Center Association, Lum Sai Ho Tong, the Ali'i Pauahi Hawaiian Civic Club, Mr. Mana Caceres and his family, and Mr. & Mrs. Donna and Daron Makaiwi, expressed a desire to participate in consultation as concurring parties ("Concurring Parties"); and

WHEREAS, CCH and HSD have consulted with the Concurring Parties regarding the effects of the undertaking on historic properties and have invited them to sign this Agreement as concurring parties**;** and

WHEREAS, in accordance with 36 CFR § 800.6(a)(1), CCH has notified the Advisory Council on Historic Preservation ("ACHP") of the adverse effect determination with specified documentation, and ACHP has chosen not to participate in the consultation pursuant to 36 CFR §800.6(a)(1)(iii) (see Exhibit F); and

NOW, THEREFORE, CCH, SHPO, and HSD agree that the undertaking shall be implemented in accordance with the following stipulations in order to take into account the effect of the undertaking on historic properties.

STIPULATIONS

CCH, with the assistance of HSD, shall ensure that the following measures are carried out:

I. ADVISORY COMMITTEE COORDINATION

A. Within six (6) months of the execution of the Agreement, an advisory committee ("Advisory Committee") will be established. The purpose of the Advisory Committee is to assist HSR management with the development of the Story Map (see Section III.B. of this Agreement) and any other information needed for scope, content and final product. The Advisory Committee shall also assist HSR management with guidance, review and comment on the use of the Social Activities Center (SAC). HSR management will work with the Advisory Committee in good faith to include recommendations of the Advisory Committee for the use of the SAC so long as any recommendation does not fall within the purview of management.

B. The Advisory Committee will also assist with other provisions as stated in this Agreement.

C. HSD shall recruit representatives to the Advisory Committee from the following organizations:
- Downtown Chinatown Neighborhood Board Number 13;
- United Chinese Society;
- Chinese Chamber of Commerce; and
  Chinatown Community Center Association.

HSD shall also invite other representatives from the community to join the Advisory Community (including, but not limited to, representatives from the following organizations):
- Lum Sai Ho Tong:
- Ali`i Pauahi Hawaiian Civic Club
- Hawaiian Social or Civic Clubs;

- Japanese Social or Civic Clubs;
- Chinese Social or Civic Clubs;
- Filipino Social or Civic Clubs;
- Vietnamese Social or Civic Clubs;
- Adjacent Property Owners; and
- Halewai'olu Senior Residences Resident(s) (after Project is occupied).

The Advisory Committee will also include representatives from:

- Property Manager (Michaels Management);
- Resident Services Director (Better Tomorrows);
- HSD; and
- CCH.

D. The Advisory Committee shall establish Bylaws or Rules of Procedure to govern its operations. Additional representatives may be added from time to time by HSD or by a majority vote of the existing members. Except for HSD, Property Manager and the Resident Services Director (Better Tomorrows), representatives may be removed from the Advisory Committee for cause by majority vote of the existing members.

E. The Committee shall meet at least quarterly during the duration of the Agreement, but may forego a quarterly meeting if no meeting is necessary and by a majority vote. At the completion of the Agreement, the Advisory Committee may disband or decide to continue to meet as needed.

II. MITIGATION OF ARCHAEOLOGICAL HISTORIC PROPERTIES INCLUDING PREVIOUSLY IDENTIFED BURIAL SITES

A. Prior to Project-related ground disturbance that could affect archaeological historic properties including burial sites, HSD shall develop and implement, pursuant to Hawai'i State Rules of Practice and Procedure Relating to Burial Sites and Human Remains (HRS §6E-43 and HAR §13-300), a burial treatment plan ("BTP") for the previously identified Native Hawaiian burial site identified during the Project's archaeological inventory survey. HSD shall comply with the BTP and all applicable Federal, State and Local laws.

B. Prior to Project-related ground disturbance that could affect archaeological historic properties including burial sites, HSD shall develop and implement an archaeological monitoring program pursuant to HAR §13-279. The archaeological monitoring plan ("AMP"), prepared pursuant to HAR §13-279-4, shall include the description of a targeted data collection component to be developed in consultation with the SHPD. This targeted data collection component of the AMP shall be carried out during the interval between current building demolition and the start of project construction. The AMP shall be submitted to the SHPD for review and approval prior to implementation. All ground-disturbing work shall proceed in accordance with the approved AMP. This AMP shall be approved by the SHPD prior to the start of project construction and shall be implemented as project construction continues.

III. EDUCATIONAL AND INTERPRETIVE PROGRAMS

A. Consultation Protocol for Developing Materials

1. Within six (6) months of the formation of the Advisory Committee, HSD shall provide to the Advisory Committee a draft work plan that outlines the scopes of work, timelines and assigned personnel for the Web-Based Geographic Information System Story Map. Any comments received by HSD from Advisory Committee within thirty (30) days of receipt shall be considered by HSD in developing a scope of work.
2. HSD shall provide a response to all written comments received during the comment period, explaining how the comment was included in the scope of work, or, if not included, the rationale for the exclusion.
3. HSD shall prepare a close-out memo for each of the stipulations to document mitigation actions taken with a timeline and outcomes achieved by the action. HSD shall distribute the close-out memo to the Signatories and Concurring Parties.

B. Web-Based Geographic Information System (GIS) Story Map

1. Within six (6) months of finalizing the work plan, HSD shall develop a web-based GIS story map that provides interactive, interpretive, and educational content based on this Project's Reconnaissance Level Survey, Archaeological Inventory Survey, and Cultural Impact Assessment. Story maps are a relatively recent technological innovation that can fill the role of more traditional public interpretation measures, such as physical interpretive signage and self-guided tours with informational placards. Story maps are an application/platform for accessing information and incorporating geographic location data based on GPS and GIS through mobile devices such as smart phones, laptop computers, and tablets.
2. The story map's focus and working title shall be "River Walk through Honolulu's Chinatown—Historical and Cultural Sites Along Nu'uanu Stream."
3. In consultation with the Advisory Committee, Historic Hawai'i Foundation (HHF) and the SHPD, ten locations shall be selected for inclusion in the story map. From inland/*mauka* to seaward/*makai* places along the Nu'uanu Stream Corridor from which the ten story map locations shall be selected may include, but not be limited to, the following:
   a) Foster Botanical Garden
   b) Kuan Yin Temple
   c) Lum Sai Ho Tong Temple
   d) Izumo Taishakyo Temple
   e) The Halewai'olu Senior Residences project area
   f) The Gilliland Building
   g) "The Vineyard" and its ties to the Marin Family
   h) Dr. Sun Yat Sen Memorial Statue
   i) Chinatown Cultural Plaza
   j) Re-channelization of Nu'uanu Stream
   k) A'ala Park
   l) Kuwili and Kawa Fishponds
4. Preparation of the story map shall include the following steps:
   a) Initial consultation meeting with Advisory Committee, HHF, and the SHPD. This meeting will discuss and decide upon the ten locations along Nu'uanu Stream that

will be the subject of the story map. This meeting will offer the Advisory Committee the opportunity to specify the content of the story map.

b) Field inspection of the Nu'uanu Stream story map area to assess current conditions and collect any needed GPS location data and current photos.

c) Preparation of the draft story map text and images with links to other information sources – to include the following:
   i. Historical, archaeological, and cultural background in images and text.
   ii. Links to other Chinatown public interpretation and research, such as HART's HRTP documentation and resources, as well as the CCH's own resources.

d) Second consultation meeting with the Advisory Committee, HHF and the SHPD. Prior to this meeting the draft story map application will be provided to the Advisory Committee for their review and comment at the second consultation meeting.

e) Preparation of the final story map based on comments from the second consultation meeting.

f) HSD shall ensure that the story map is maintained and available for public use over the internet for at least five years following its completion.

IV. CONSTRUCTION PROTECTION PLAN

A. Pursuant to best management practices approved by CCH, HSD, in cooperation with its general contractor, will implement standard monitoring of effects, of the Project's construction, if any, on adjacent historic properties in the vicinity (e.g. Lum Sai Ho Tong and Borthwick Mortuary), in addition to procuring all necessary noise permits. Potential effects which shall be monitored include, but are not limited to, traffic, noise, vibration, dust and other effects associated with construction. Should an effect occur outside of the normal course of construction, HSD will make this information available through a written memo as required by Section VI.A. of this Agreement.

B. HSD shall ensure that any inadvertent damage resulting from the Project to adjacent historic structures shall be repaired in accordance with The Secretary of the Interior's Standards for the Treatment of Historic Properties, 36 CFR §68. HSD shall submit a scope of work or treatment plan to address inadvertent damage to the SHPD for concurrence before initiating repairs.

V. POSTREVIEW DISCOVERIES

B. Should additional human remains or burial sites be identified during project construction, CCH shall ensure that HSD treat them following Hawai'i State burial law governing inadvertent discoveries of human skeletal remains (HRS §6E-43.6, HAR §13-300-40).

C. If additional archaeological historic properties are discovered that may be historically significant or unanticipated effects on historic properties are found, CCH shall ensure that HSD implement a plan to address such discoveries following consultation and the procedures outlined in HAR §13-275-12 and HAR §13-280.

VI. MONITORING AND REPORTING

A. Each year following the execution of this Agreement, until it expires or is terminated, HSD shall provide the Signatory Parties and Concurring Parties a summary written memo detailing work undertaken with respect to the Project or problems encountered including any adverse effect to Eligible Properties.
B. Signatory Parties and Concurring Parties may request a meeting to discuss the summary written memo to facilitate review, comment on the annual report, to resolve questions, or to resolve adverse conditions.

VII. DURATION

A. If the terms of this Agreement have been fully implemented by five (5) years from the date of the execution of this Agreement, this Agreement will terminate and be considered null and void. In the event the terms of this Agreement have not been fully implemented by five (5) years from the date of the execution of this Agreement, CCH shall notify the Signatory Parties and Concurring Parties, and, in its sole discretion, if it chooses to continue with the undertaking, shall re-initiate review of the undertaking in accordance with 36 CFR § 800.

VIII. DISPUTE RESOLUTION

A. Should any Signatory Party to this Agreement object at any time to any actions proposed or the manner in which the terms of this Agreement are implemented, CCH shall consult with such party to resolve the objection. If CCH determines that such objection cannot be resolved, CCH will:

1. Forward all documentation relevant to the dispute, including CCH's proposed resolution, to ACHP. ACHP shall provide CCH with its advice on the resolution of the objection within thirty (30) days of receiving adequate documentation. Prior to reaching a final decision on the dispute, CCH shall prepare a written response that takes into account any timely advice or comments regarding the dispute from ACHP, HSD, and Signatory Parties, and provide them with a copy of this written response. CCH will proceed according to its final decision.

2. If ACHP does not provide its advice regarding the dispute within the thirty (30) day time period, CCH may proceed according to its final decision. Signatories and Concurring Parties will be notified in writing.

B. Any terms of this Agreement that are not subject to dispute shall remain unchanged and in full force and effect.

XII. AMENDMENTS

A. This Agreement may be amended when such an amendment is agreed to in writing by each of the Signatory Parties with consultation by the Concurring Parties. Such amendment shall be

effective the date such amendment is executed by the Signatory Parties and delivered electronically to the ACHP.

XIII. TERMINATION

A. If any of the Signatory Parties to this Agreement, determines that its terms will not or cannot be carried out, that party shall immediately consult with the other Signatory Parties to attempt to develop an amendment per Stipulation XII, above. If within thirty (30) days an amendment cannot be reached, any Signatory may terminate the Agreement upon written notification to the other Signatories.

B. Once the Agreement is terminated, and prior to work continuing on the undertaking, CCH must either execute an agreement pursuant to 36 CFR § 800.6 or request, take into account, and respond to comments of ACHP under 36 CFR § 800.7; provided, however, nothing herein shall be construed to require the CCH to halt construction and related activities proceeding in accordance with this Agreement initiated prior to the termination of this Agreement. CCH shall notify the Signatories of action it will pursue. Concurring Parties will be notified in writing. Any new agreement pursuant to 36 CFR § 800.6 or action based under 36 CFR § 800.7 shall apply solely to activities initiated after the termination of this Agreement.

C. Execution of this Agreement by CCH and implementation of its terms evidence CCH has taken into account the effects of the undertaking on historic properties.

XIV. MISCELLANEOUS

A. Formal notices and communication between the Signatory Parties shall be sufficiently given if, and shall not be deemed given unless, dispatched by certified mail, postage prepaid, return receipt required, or sent by express delivery or overnight courier service, to the office of the Signatories shown as follows, or such other address as the Signatory may designate in writing from time to time:

Advisory Council on Historic Preservation
Notice of Election Not to Participate in Consultation

&šŐŽƋĞ ϭ

Preserving America's Heritage

November 7, 2019

Ms. Rebecca C. Borja
U.S. Department of Housing and Urban Development
1132 Bishop Street, Suite 1400
Honolulu, HI 96813

Ref: *Proposed Halewaiolu Senior Residence Project at 1331 River Street*
Honolulu, Hawaii
ACHPConnect Log Number: 14616

Dear Ms. Borja:

The Advisory Council on Historic Preservation (ACHP) has received your notification and supporting documentation regarding the adverse effects of the referenced undertaking on a property or properties listed or eligible for listing in the National Register of Historic Places. Based upon the information provided, we have concluded that Appendix A, *Criteria for Council Involvement in Reviewing Individual Section 106 Cases*, of our regulations, "Protection of Historic Properties" (36 CFR Part 800), does not apply to this undertaking. Accordingly, we do not believe that our participation in the consultation to resolve adverse effects is needed. However, if we receive a request for participation from the State Historic Preservation Officer (SHPO), Tribal Historic Preservation Officer (THPO), affected Indian tribe, a consulting party, or other party, we may reconsider this decision. Additionally, should circumstances change, and it is determined that our participation is needed to conclude the consultation process, please notify us.

Pursuant to 36 CFR §800.6(b)(1)(iv), you will need to file the final Memorandum of Agreement (MOA), developed in consultation with the Hawaii State Historic Preservation Officer (SHPO), and any other consulting parties, and related documentation with the ACHP at the conclusion of the consultation process. The filing of the MOA, and supporting documentation with the ACHP is required in order to complete the requirements of Section 106 of the National Historic Preservation Act.

Thank you for providing us with the notification of adverse effect. If you have any questions or require further assistance, please contact Ms. Sarah Stokely at (202) 517-0224 or via email at sstokely@achp.gov.

Sincerely,

LaShavio Johnson

Management Summary

Reference	Cultural Impact Assessment for the Halewai‘olu Senior Residence Project, Honolulu Ahupua‘a, Honolulu (Kona) District, O‘ahu, TMK: [1] 1-7-006:012 (Spencer and Hammatt 2019)
Date	October 2019
Project Number(s)	Cultural Surveys Hawai‘i, Inc. (CSH) Job Code: HONOLULU 88
Agencies	Office of Environmental Quality Control (OEQC)
Land Jurisdiction	The City and County of Honolulu
Project Location	The project area is located at 1331–1347 River Street and encompasses the entirety of the existing building and its surrounding parking lot.
Project Description	The proposed project involves the construction of an affordable housing facility for seniors aged 62 and over at 80% Area Median Income (AMI) and below, with the vast majority of units (139 units) available to seniors with incomes at 60% AMI and below. To facilitate construction, the existing building and its surrounding parking lot is planned for demolition; it will be replaced by the proposed housing facility. The housing facility will consist of 155 units (plus one resident manager unit), a community room with warming kitchen, restrooms and storage, computer room, social services activity rooms, social services office, property management offices, with mail and package boxes and elevator lobby on the ground level. A courtyard, retail space and parking access, along with trash compactor room and loading area are also on the ground level. Vehicle and bicycle parking are on the next two levels with a recreation area, laundry room and equipment rooms on the fourth level. Residential units are on the fifth through seventeenth levels.
Project Acreage	Approximately 27,000 square feet (sq ft) (0.6 acres)
Document Purpose	A Cultural Impact Assessment (CIA) is not required for this Project. Governor David Ige signed and adopted Hawaii Administrative Rules, Chapter 11-200.1 on July 30, 2019, which took effect on August 9, 2019. The Project complies with eligibility criteria listed in preparation of an Environmental Assessment and Cultural Impact Assessment. However, at the request of Halewaiolu Senior Development, LLC on behalf of the City and County of Honolulu, CSH conducted a CIA for this Project. While it is no longer a requirement for this Project, this CIA was prepared following standard practice associated with Hawai‘i Revised Statutes (HRS) §343, which requires consideration of the proposed project’s potential effect on cultural beliefs, practices, and resources. Through document research and cultural consultation efforts, this report provides information compiled to date pertinent to the assessment of the proposed project’s potential impacts to cultural beliefs, practices, and

	resources (pursuant to the Office of Environmental Quality Control's *Guidelines for Assessing Cultural Impacts*) which may include traditional cultural properties (TCPs). These TCPs may be significant historic properties under State of Hawai‘i significance Criterion e, pursuant to Hawai‘i Administrative Rules (HAR) §13-275-6 and §13-284-6. Significance Criterion e refers to historic properties that "have an important value to the native Hawaiian people or to another ethnic group of the state due to associations with cultural practices once carried out, or still carried out, at the property or due to associations with traditional beliefs, events or oral accounts—these associations being important to the group's history and cultural identity" (HAR §13-275-6 and §13-284-6). The document will likely also support the project's historic preservation review under HRS §6E and HAR §13-275 and §13-284. The document is intended to support the project's environmental review and may also serve to support the project's historic preservation review under HRS §6E-8 and HAR §13-284.
Results of Background Research	Background research for this study yieded the following results in approximate chronological order: 1. Pukui et al. (1974:49–50) literally translates Honolulu as "protected bay," which refers to the protection of Honolulu Harbor. Older names for the harbor are Kou and Māmala. 2. Traditionally known as Kou, Honolulu had a long tradition as a royal center where the *ali‘i* (chiefs) would meet and entertain. Kou stretched from "Nu‘uanu to Alakea Streets and from Hotel Street to the sea" (McAllister 1933:80). 3. The *ahupua‘a* (land division extending from the mountain to the sea) of Kou was subdivided into several smaller land divisions, known as *‘ili* (land section within an *ahupua‘a*). The area between Maunakea Street and Nu‘uanu Stream and *makai* (toward the sea) of King Street was known as Kapu‘ukolo. The area between Maunakea and Nu‘uanu Stream *mauka* (toward the mountains) of King Street to Beretania Street was called Kīkīhale. 4. Near the current alignment of Richards and Queens streets was Hono-kau-pu—a noted field for *‘ulu maika,* an ancient Hawaiian game similar to bowling (Westervelt 1915:16). Kou was the popular *‘ulu maika* field amongst chiefs. The track at Hono-kau-pu was approximately 12 ft wide and extended from the current location of Merchant and Fort streets, traveling ‘Ewa (westward) to the intersection of Merchant Street and Nu‘uanu Avenue. It is said that Kamehameha I used this *maika* (stone used in *‘ulu maika*) track (Westervelt 1915:16). 5. Pākākā was the name of a coastal point, a canoe landing, and wharf built off the point in 1827, and the name of a

	heiau (pre-Christian place of worship) built on that same. The name literally means “to skim, as stones over the water” (Pukui et al. 1974:175). Thrum (1906) generated several lists and surveys of *heiau* and noted that Peter Corney, a visitor to the island in 1819, saw several *heiau* along the Honolulu shore. 6. Following the Māhele in 1845, an 1871 map shows the original property owners of the land which sits under the current existing building. This included individuals named Kaukoke and Makahopu, and Lahilahi Marin, daughter of Francisco Paulo de Marin, confidant of Kamehameha I. 7. In 1846, Honolulu was made the capitol of the Hawaiian Kingdom and was well on its way to becoming the commercial and political hub of the Islands. 8. In 1899, the first case of bubonic plague was identified in Hawai‘i, in a Chinese bookkeeper named You Chong. After an examination by Dr. G.H. Herbert, who noted a high temperature and swelling in the groin, the patient died the next night. After an autopsy, the diagnosis of bubonic plague was determined. 9. From 12 December 1899 to 31 March 1900, 71 cases of bubonic plague were reported, with 61 deaths, 41 of whom lived within the established Chinatown quarantine area. The Board of Health concluded they could not contain the plague and decided the best remedy was to set “sanitary fires” to infected wooden buildings. A total of 41 controlled fires were set between 31 December 1899 and 13 August 1900.
Results of Community Consultation	CSH attempted to contact Native Hawaiian organizations (NHOs), agencies, and community members. Below is a list of individuals who showed interest in sharing their *mana‘o* (thought, opinions) and *‘ike* (knowledge) about the project area and Honolulu Ahupua‘a. 1. Gerald Lam, *Kama‘āina*, Attorney at Law 2. Howard Lum and Kehaulani Lum of Lum Sai Ho Tong 3. Wesley Fong, Chinatown Community Association
Impacts and Recommendations	Based on information gathered from the cultural and historical background and the community consultation, potential impacts were identified and the following preliminary recommendations were made. 1. Project construction workers and all other personnel involved in the construction and related activities of the project should be informed of the possibility of inadvertent cultural finds, including human remains. In the event that any potential historic properties are identified during construction activities, all activities will

	cease in that area and the SHPD will be notified pursuant to HAR §13-280-3. In the event that *iwi kūpuna* (ancestral remains) are identified, all earth moving activities in the area will stop, the area will be cordoned off, and the SHPD, coroner, and Police Department will be notified pursuant to HAR §13-300-40. In addition, in the event of an inadvertent discovery of human remains, the completion of a burial treatment plan, in compliance with HAR §13-300 and HRS §6E-43, is recommended. 2. In the event that *iwi kūpuna* and/or cultural finds are encountered during construction, project proponents should consult with cultural and lineal descendants of the area to develop a reinterment plan and cultural preservation plan for proper cultural protocol, curation, and long-term maintenance.

Section 1 Introduction

1.1 Project Background

At the request of Halewai‘olu Senior Development, LLC (HSD) on behalf of the City and County of Honolulu (City), Cultural Surveys Hawai‘i, Inc. (CSH) is conducting a cultural impact assessment (CIA) for the Halewai‘olu Senior Residence Project, Honolulu Ahupua‘a, Honolulu (Kona) District, O‘ahu, Tax Map Key (TMK): [1] 1-7-006:012. The project area, located at 1331 River Street, consists of approximately 27,000 square feet (sq ft) (0.62 acres) encompassing the entirety of the existing building and its surrounding parking lot. The project area is depicted on a portion of the 1998 Honolulu U.S. Geological Survey (USGS) 7.5-minute topographic quadrangle (Figure 1), a tax map plat (Figure 2), and a 2013 aerial photograph (Figure 3).

The proposed project involves the construction of an affordable housing facility for seniors aged 62 and over at 80% Area Median Income (AMI) and below, with the vast majority of units (139 units) available to seniors with incomes at 60% AMI and below. To facilitate construction, the existing building and its surrounding parking lot is planned for demolition; it will be replaced by the proposed housing facility. The housing facility will consist of 155 units (plus one resident manager unit), a community room with warming kitchen, restrooms and storage, computer room, social services activity rooms, social services office, property management offices, with mail and package boxes and elevator lobby on the ground level. A courtyard, retail space and parking access, along with trash compactor room and loading area are also on the ground level. Vehicle and bicycle parking are on the next two levels with a recreation area, laundry room and equipment rooms on the fourth level. Residential units are on the fifth through seventeenth levels. Please refer to Figure 4 for a site development plan.

The City purchased the project area in 1992 utilizing funding from U.S. Department of Housing and Urban Development (HUD) Community Development Block Grants (CDBG). Project construction is funded with equity through the Low Income Housing Tax Credit program and Hawai‘i State funds. With the use of HUD CDGB funding for initial land purchase, the project is subject to HUD’s CDBG environmental/historic preservation review regulations (24 CFR Part 58), which includes compliance with the National Environmental Policy Act (NEPA) and Section 106 of the National Historic Preservation Act (NHPA). Following 24 CFR Part 58, the City is the responsible entity to carry out this federal environmental and historic preservation review compliance. As a City project on City-owned land, the City is also responsible for the project’s State of Hawai‘i environmental (Hawai‘i Revised Statutes [HRS] §343) and historic preservation (HRS §6E) review. A Cultural Impact Assessment (CIA) is not required for this Project. Governor David Ige signed and adopted Hawaii Administrative Rules, Chapter 11-200.1 on July 30,2019, which took effect on August 9, 2019. The Project complies with eligibility criteria listed in Chapter 11-200.1-15, which authorizes the exemption from the preparation of an Environmental Assessment and Cultural Impact Assessment. However, at the request of Halewaiolu Senior Development, LLC on behalf of the City, CSH conducted a CIA for this Project. The CIA consultation effort and outreach will generally dovetail with the project’s federal and state environmental and historic preservation review consultation.

At the time of Western Contact at the end of the eighteenth century, the project area would have been on the outskirts of the settlement of Kou, the traditional Native Hawaiian community that

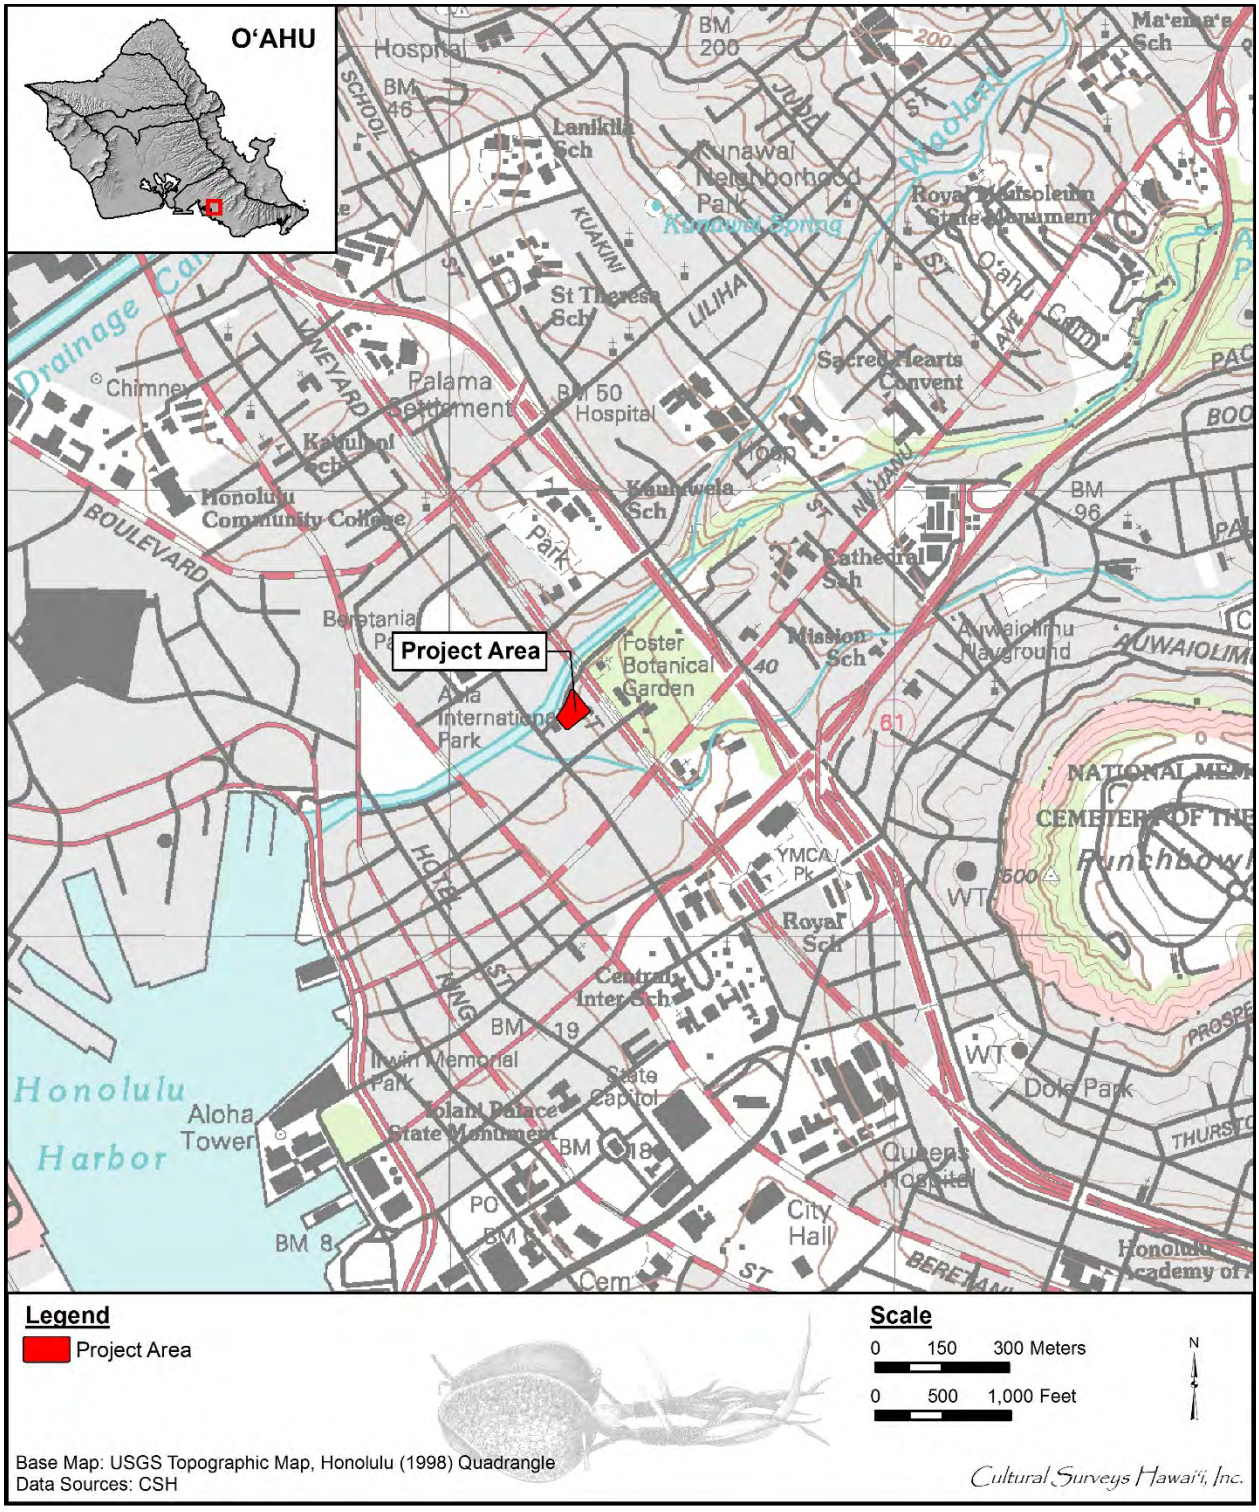

Figure 1. Portion of the 1998 Honolulu USGS 7.5-minute topographic quadrangles showing the location of the project area

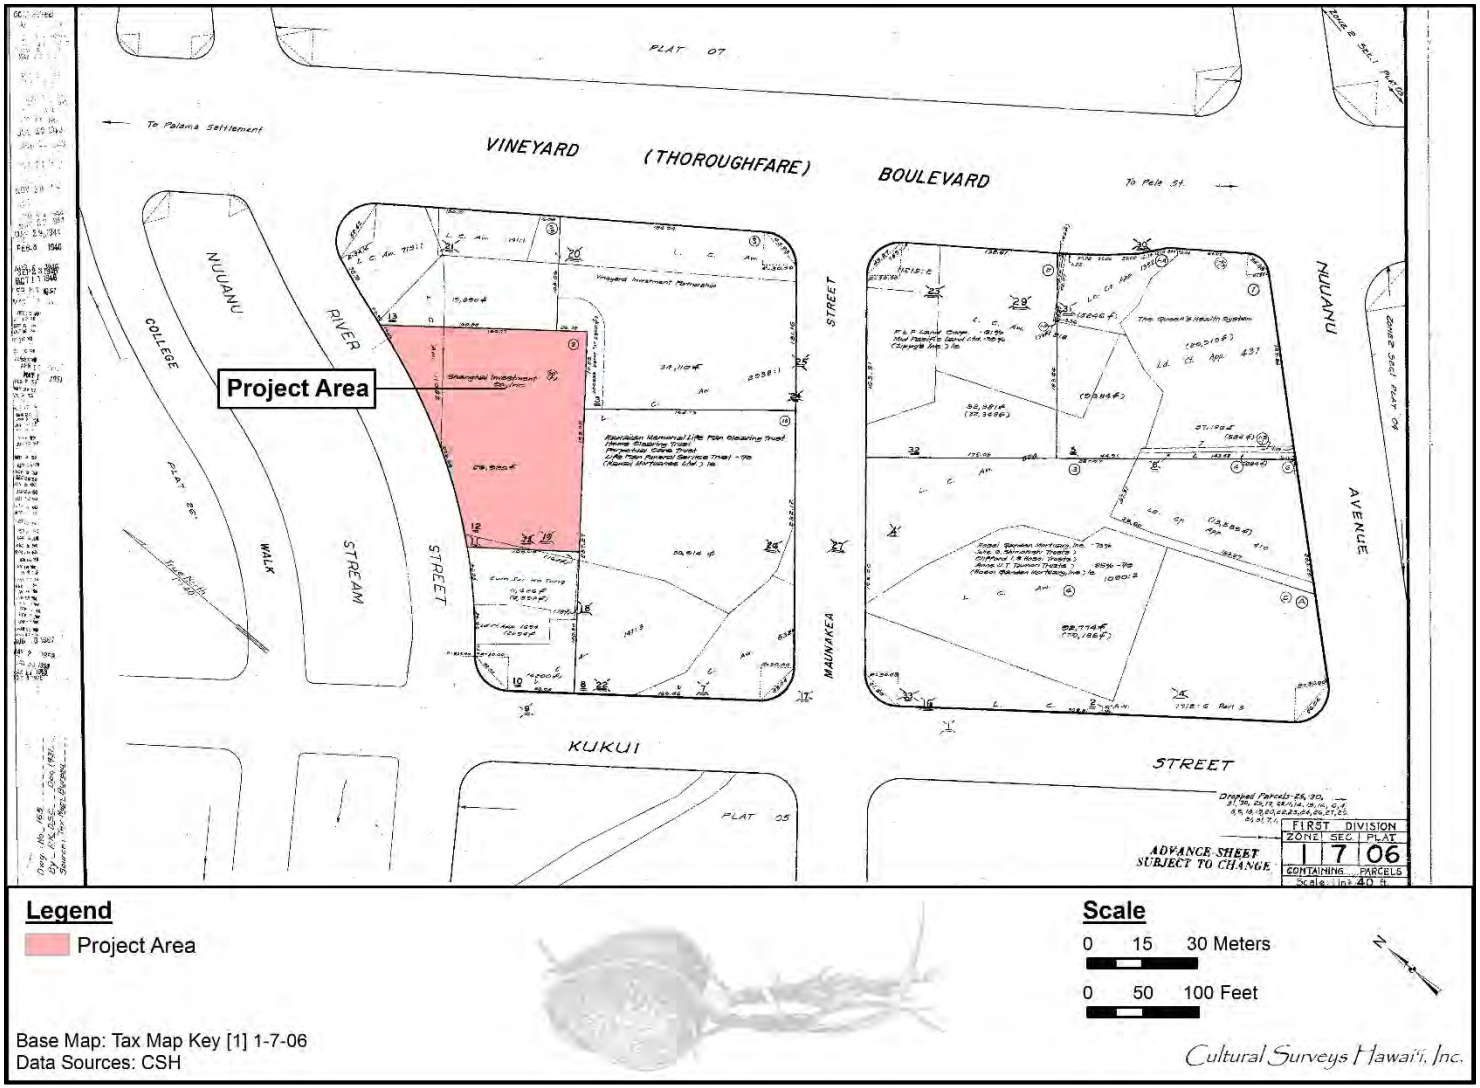

Figure 2. Tax Map Key (TMK) [1] 1-7-06 showing the project area (Hawai‘i TMK Service 2014)

Figure 3. Aerial photograph showing the location of the project area (Google Earth 2013)

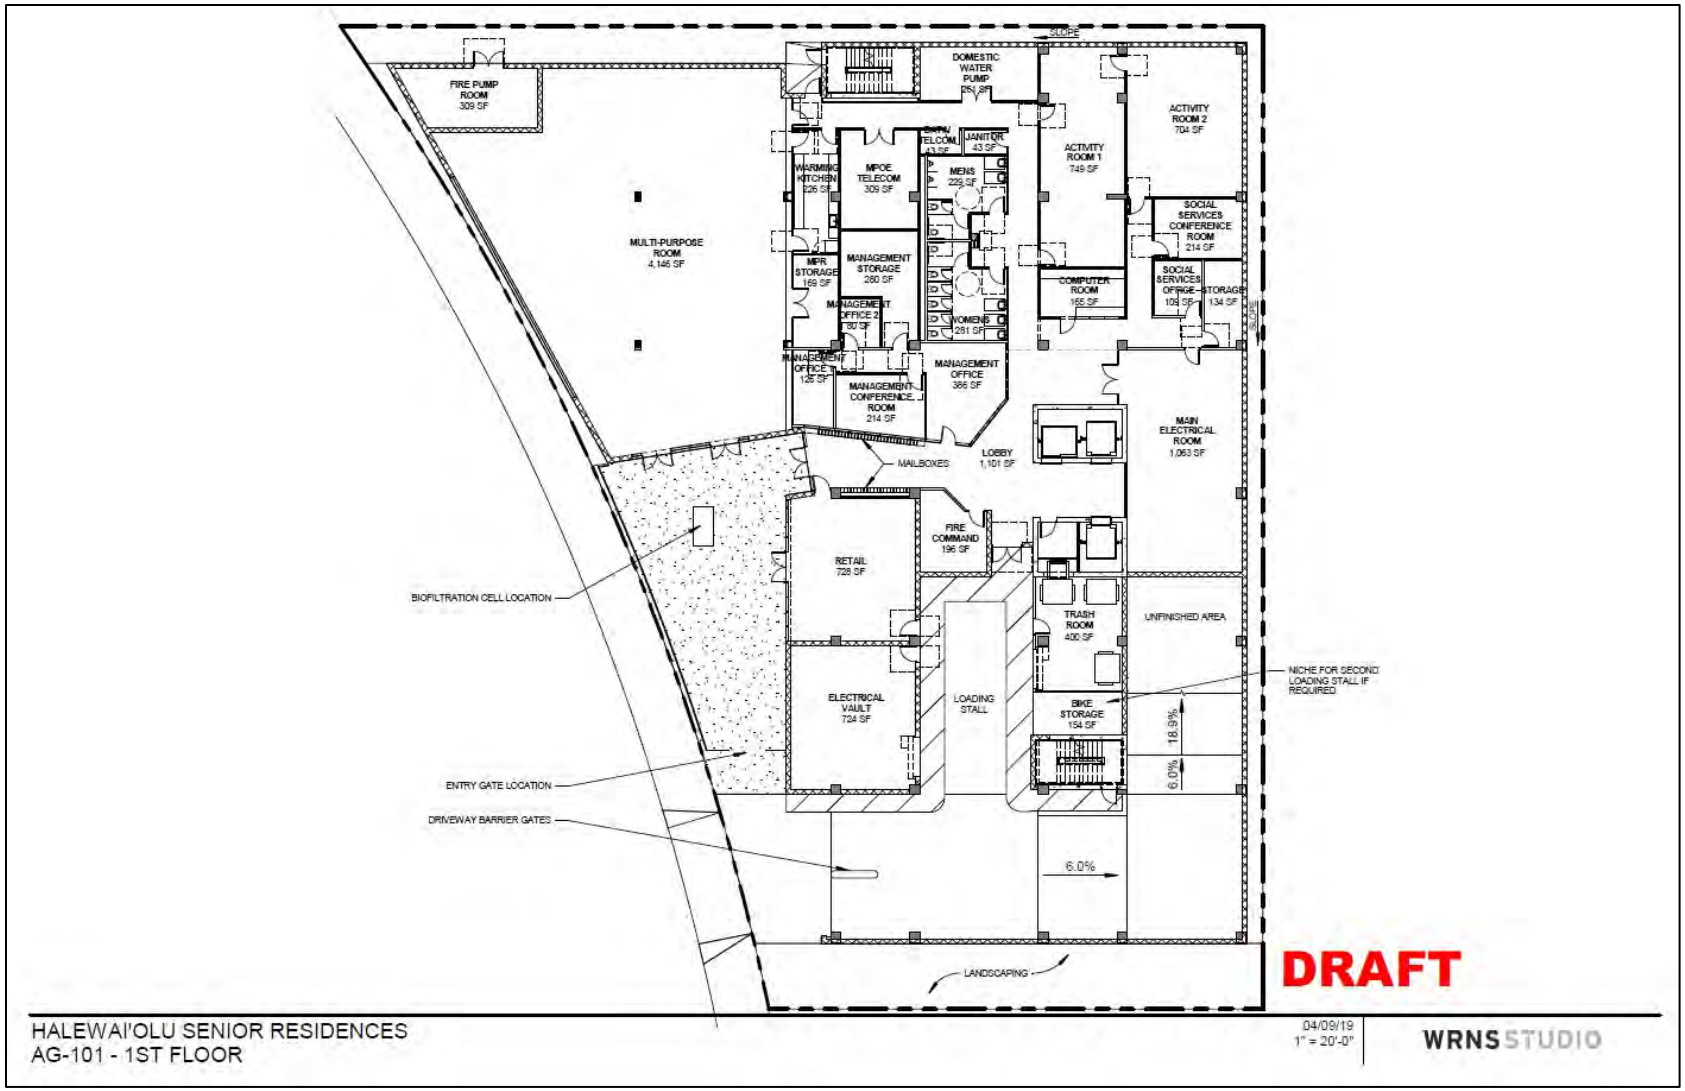

Figure 4. Site development plan (courtesy of client)

developed into Honolulu. Native Hawaiians and increasingly non-Native Hawaiians continued to inhabit and use the project area and its vicinity in the nineteenth and twentieth centuries as Honolulu developed and expanded. The project area is generally considered part of Honolulu's Chinatown, although it is outside the designated Chinatown National Historic District boundary. In studies to support the Honolulu Authority for Rapid Transit's Honolulu Rapid Transportation Project, Chinatown was identified as a potential traditional cultural property eligible for listing on the National Register of Historic Places. Nu‘uanu Stream and the Lum Sai Ho Tong building are immediately adjacent to the project area.

1.2 **Document Purpose**

A Cultural Impact Assessment is not required for this Project. Governor David Ige signed and adopted Hawaii Administrative Rules, Chapter 11-200.1 on July 30, 2019, which took effect on August 9, 2019. The Project complies with eligibility criteria listed in Chapter 11-200.1-15. Which authorizes the exemption from the preparation of an Environmental Assessment and Cultural Impact Assessment. However, at the request of Halewaiolu Senior Development, LLC on behalf of the City and County of Honolulu, CSH conducted a CIA for this Project. While it is no longer a requirement for this Project, this CIA was prepared following standard practices associated with Hawai‘i Revised Statutes (HRS) §343, which requires consideration of the proposed project's potential effect on cultural beliefs, practices, and resources. Through document research and cultural consultation efforts, this report provides information compiled to date pertinent to the assessment of the proposed project's potential impacts to cultural beliefs, practices, and resources (pursuant to the Office of Environmental Quality Control's *Guidelines for Assessing Cultural Impacts*) which may include traditional cultural properties (TCPs). These TCPs may be significant historic properties under State of Hawai‘i significance Criterion e, pursuant to Hawai‘i Administrative Rules (HAR) §13-275-6 and §13-284-6. Significance Criterion e refers to historic properties that "have an important value to the native Hawaiian people or to another ethnic group of the state due to associations with cultural practices once carried out, or still carried out, at the property or due to associations with traditional beliefs, events or oral accounts—these associations being important to the group's history and cultural identity" (HAR §13-275-6 and §13-284-6). The document will likely also support the project's historic preservation review under HRS §6E and HAR §13-275 and §13-284. The document is intended to support the project's environmental review and may also serve to support the project's historic preservation review under HRS §6E-8 and HAR §13-284.

1.3 **Scope of Work**

1. Examination of cultural and historical resources, including Land Commission documents, historic maps, and previous research reports, with the specific purpose of identifying traditional Hawaiian activities including gathering of plant, animal, and other resources or agricultural pursuits as may be indicated in the historic record.
2. Review of previous archaeological work at and near the subject parcel that may be relevant to reconstructions of traditional land use activities; and to the identification and description of cultural resources, practices, and beliefs associated with the parcel.
3. Consultation and interviews with knowledgeable parties regarding cultural and natural resources and practices at or near the parcel; present and past uses of the parcel; and/or other practices, uses, or traditions associated with the parcel and environs.

4. Preparation of a report that summarizes the results of these research activities and provides recommendations based on findings.

1.4 Environmental Setting

1.4.1 Natural Environment

The Honolulu leeward coastal plain is stratified with late-Pleistocene coral reef substrate overlaid with calcareous marine beach sand, terrigenous sediments, and/or stream-fed alluvial deposits (Armstrong 1983:36). Terrigenous sediments are formed and deposited on land, or are materials derived from land mixed with purely marine material. The modern Hawaiian shoreline configuration, including that of Honolulu Harbor, is primarily the result of three factors: the rising sea level following the end of the Pleistocene (Macdonald et al. 1983; Stearns 1978); the 1.5-2.0 m (4.9-6.6 ft) highstand of the sea during the mid- to late Holocene; and prehistoric and historic human landscape modification. The elevation of the project area is approximately 1.5 m (5.0 ft) above mean sea level (AMSL).

1.4.2 *Ka Lepo* (Soils)

According to the U.S. Department of Agriculture (USDA) Soil Survey Geographic (SSURGO) database (2001) and soil survey data gathered by Foote et al. (1972), the project area's soils consist primarily of Ewa silty clay loam, moderately shallow, 0 to 2% slopes (EmA) (Figure 5). Soil of the Ewa series is described below:

> This series consists of well-drained soils in basins and on alluvial fans on the islands of Maui and Oahu. These soils developed in alluvium derived from basic igneous rock. They are nearly level to moderately sloping. Elevations range from near sea level to 150 feet. The annual rainfall amounts to 10 to 30 inches. Most of it occurs between November and April […]
>
> These soils are used for sugarcane, truck crops, and pasture. The natural vegetation consists of fingergrass, kiawe, koa haole, klu, and uhaloa. [Foote et al. 1972:29]

1.4.3 *Ka Makani* (Wind)

Each small geographic area in Hawai‘i had a Hawaiian name for its own wind, rain, and seas. The area of Honolulu was no exception to this naming practice. A wind specific to Honolulu is one also named after a rain of Honolulu, Kūkalahale. *The Wind Gourd of La‘amaomao* tells the story of Pāka‘a and his son Kuāpāka‘a who are descendants of the wind goddess La‘amaomao. With their possession of her special wind gourd, they could control and call forth the winds of Hawai‘i. Pāka‘a's chant traces the winds of and surrounding the Honolulu Ahupua‘a. Pāka‘a's chant is listed below:

He Kuehu lepo ko Kahua,	Kuehu-lepo is of Kahua,
He Kukalahale ko Honolulu,	Kukalahale is of Honolulu,
He Ao-a-oa ko Mamala,	‘Ao‘aoa is of Māmala,
He Olauniu ko Kapalama,	‘Ōlauniu is of Kapālama,
He Haupeepee ko Kalihi	Haupe‘epe‘e is of Kalihi

[Nakuina 1902:56–57; 1992:50]

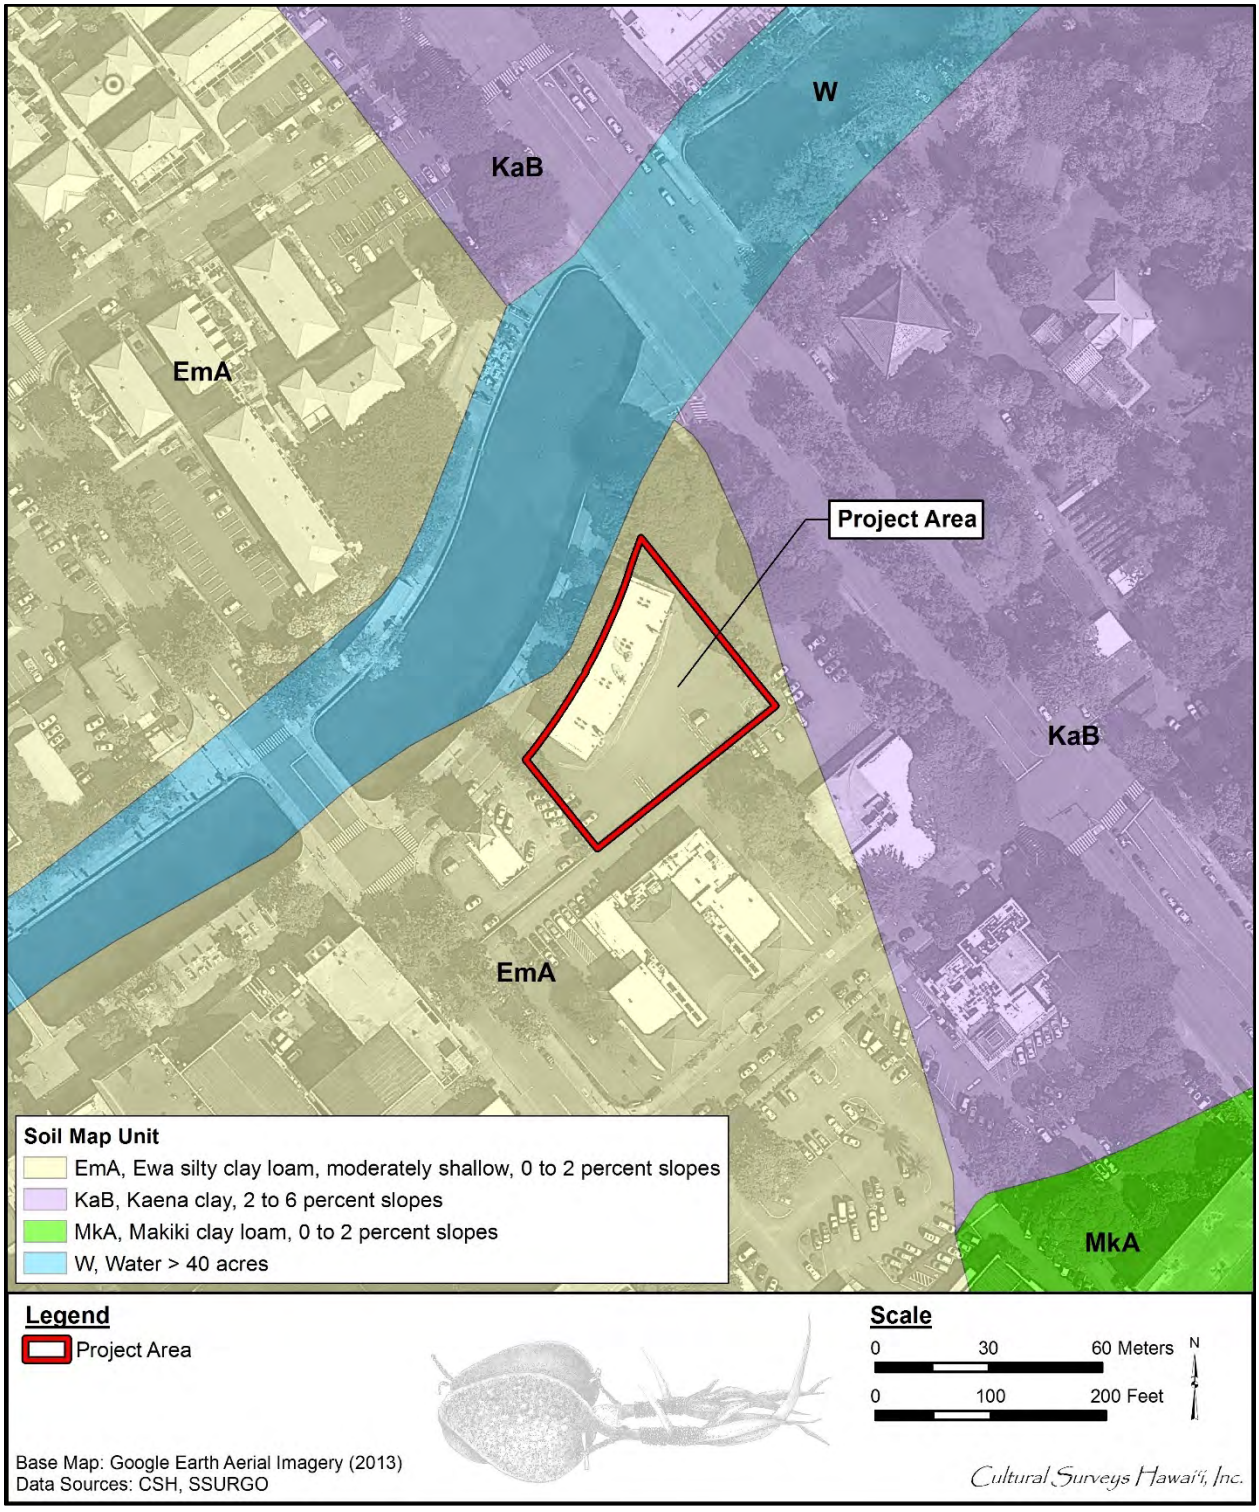

Figure 5. Overlay of *Soil Survey of the State of Hawaii* (Foote et al. 1972) on a 2013 Google Earth aerial photograph, indicating soil types within and surrounding the project area (USDA SSURGO 2001)

1.4.4 *Ka Ua* (Rain)

Precipitation is a major component of the water cycle accountable for depositing fresh water on local flora. Pre-Contact *kānaka ʻōiwi* (Native Hawaiians) recognized two distinct annual seasons. The first, known as *kau* (period of time, especially summer), lasts typically from May to October and is a season marked by a high-sun period corresponding to warmer temperatures and steady trade winds. The second season, *hoʻoilo* (winter, rainy season), continues through the end of the year from November to April and is a much cooler period when trade winds are less frequent, and widespread storms and rainfall become more prevalent (Giambelluca et al. 1986:17). Typically, the maximum rainfall occurs in January and the minimum in June (Giambelluca et al. 1986:17).

It was a customary and necessary tradition to grant a name for each type of rain. Rains were named to show their action toward plants or the supposed effects on people or their possessions (Pukui and Elbert 1986:361). The ability to identify rain names showed a great deal of knowledge a person has of their homeland. As explained by Collette Akana:

> Rains are a source of pride for one's homeland. To know one's home is to know its stories and legends, its famous aliʻi, its landmarks, and its rains. […] Rain names were an important component in the traditional, largely place-based, information imparted to Hawaiian youngsters. Knowledge of local weather patterns ensured survival and proliferation, and knowledge of one's homeland was held in high esteem. [Charlot cited in Akana and Gonzalez 2015:xvii]

Types of rain referencing the *moku* of Honolulu include Kuiʻilima and Kūkalahale.

1.4.4.1 Ka Ua Kuiʻilima

The Kuiʻilima rain (same as the Kuilima rain) is one closely associated with the Honolulu Ahupuaʻa. Kuiʻilima means "to string ʻilima flowers" and Kuilima means "to lock arms" (Pukui and Elbert 1986:174). This rain was mentioned in a *mele inoa* or name chant for Albert Ka Haku o Hawaiʻi composed by his uncle, Kamehameha V, Lot Kapuāiwa:

Kuʻu hoa i ka ua Kuilima

Ua Kūkalahale o Honolulu

Translation:

My companion in the Kuilima rain

The Kūkalahale rain of Honolulu

[Akana and Gonzalez 2015:126]

Mentioned in another *mele inoa,* the Kuilima rain is described below:

Aloha Nuʻuanu i ke kāmakahala lā

Ke kuia maila e ka ua noe ē

Ka ua Kuilima o Nuʻuanu lā

Ke hehi [maila] i ka maka o ka ʻāhihi ē

Translation:

Beloved Nu‘uanu with its kāmakahala plants

Strung together by the misty rain

The Kuilima rain of Nu‘uanu

Treading on the face of the ‘āhihi flowers

[Akana and Gonzalez 2015:127]

1.4.4.2 Ka Ua Kūkalahale

The Kūkalahale rain is another rain associated with Honolulu and the larger Kona district of O‘ahu. *Kū kala hale* means “standing under the eaves of the house” or “striking the house gables” while *Kūkala hale* means “announcing to the homes” (Akana and Gonzalez 2015:127). This rain was mentioned in a *mele kanikau* (lamentation) for Joseph Nāwahīokalani‘ōpu‘u:

Nākolo, nakulu, pa‘apa‘a‘ina kaupoku o Kākuhihewa ē

Hewa ka i‘a a ‘Umiamaka i ka lili a ka ua Kūkalahale

Translation:

The roofs of Kākuhihewa are roaring, rumbling, and crackling

The fish of ‘Umiamaka was wronged by the jealousy of the Kūkalahale rain

[Akana and Gonzalez 2015:127]

The Kūkalahale rain is also referred to in the legend of Hi‘iakaikapoliopele:

A i ia wā i uhau a‘e ai ‘o Hi‘iaka i kēia kau, ‘oiai nō ka ua Kūkalahale o Honolulu nei e ho‘okawewe ana i ka lau lā‘au a me nā hākala ho‘i o nā hale pili o ia mau lā aloha o ka nohona o ko kākou mau kūpuna.

Translation:

Then Hi‘iaka offered up this chant, while the Kūkalahale rain of Honolulu pattered upon the leaves of the trees and the thatched roofs of those beloved days of our ancestors. [Akana and Gonzalez 2015:127]

Another section of the same legend notes the Kūkalahale rain:

I ia wā i ha‘alei aku ai ‘o Kauakahiapaoa i kāna kilu.... ‘He mau wahi hua mele paoa loa kā ho‘i ka‘u i oli a‘e nei. E‘eha ana ho‘i au i ke kaikamahine o ka ua Kūkalahale.’

I kēlā wā, lālau ihola ‘o Pele‘ula i kāna ipu, a oli a‘ela noō ho‘i.

. . . . . .

Eia au ē, ka ua Kūkalahale

A pā!

Translation:

At that point, Kauakahiapaoa tossed his kilu . . . ‘Those were certainly unlucky

lines I just chanted. I shall be wounded by the girl of the Kūkalahale rains.’

Whereupon Pele‘ula reached for her gourd maker and chanted.

. . . . . .

Here am I, the Kūkalahale rain

Let it strike!

[Akana and Gonzalez 2015:127]

1.4.5 *Nā Au ‘Oko‘a* (Different Currents)

Published by Fornander, the following *oli* (chant) was composed by Kapa‘ahulani honoring chief Kūali‘i. Kūali‘i sat as paramount chief of the Hawaiian Islands from 1720–1740 (Cordy 2002:19). This *oli,* some 600 lines in length, mentions the different currents and their characteristics in the Honolulu area.

He kai he‘enalu ko Kahaloa,

He kai hului ko Kalia,

He kai hele kohana ko Mamala,

He kai au ko Kapueone,

He kai kaha-nalu ko Makaiwa,

He kai ka anae ko Keehi,

He kai elemihi ko Leleiwi,

He kai awalau ko Puuloa

[Fornander 1880:379]

Translation:

The sea for surf-riding is at Kahaloa, [in Waikīkī]

The sea for casting the net is at Kalia, [in Waikīkī]

The sea for going naked is at Mamala, [mouth of Honolulu Harbor]

The sea for swimming is at Kapuuone, [in Kapālama/Kalihi]

The sea for surf riding sideways is at Makaiwa, [in Kapālama, Kalihi]

The sea for kicking up mullet is at Keehi, [in Moanalua]

The sea for small crabs is at Leleiwi, [in Moanalua]

The sea of many harbors is at Puuloa, [in ‘Ewa]

[Fornander 1880:378]

1.4.6 Built Environment

The project area is located within central Honolulu, surrounded by modern urban development including commercial buildings, paved streets, sidewalks, utility infrastructure, and landscaped margins. The project area is covered by commercial warehouses and parking lots.

Section 2 Methods

2.1 Archival Research

Research centers on Hawaiian activities including *ka‘ao* (legends), *wahi pana* (storied places), *‘ōlelo no‘eau* (proverbs), *oli*, *mele* (songs), traditional *mo‘olelo* (stories), traditional subsistence and gathering methods, ritual and ceremonial practices, and more. Background research focuses on land transformation, development, and population changes beginning with the early post-Contact era to the present day.

Cultural documents, primary and secondary cultural and historical sources, historic maps, and photographs were reviewed for information pertaining to the study area. Research was primarily conducted at the CSH library. CSH cultural researchers also gather information at other archives and libraries including the Hawai‘i State Archives, the Bishop Museum Archives, the University of Hawai‘i at Mānoa’s Hamilton Library, Ulukau, The Hawaiian Electronic Library (Ulukau.org 2014), the State Historic Preservation Division (SHPD) Library, the State of Hawai‘i Land Survey Division, the Hawaiian Historical Society, and the Hawaiian Mission Houses Historic Site and Archives. Information on Land Commission Awards (LCAs) were accessed via Waihona ‘Aina Corporation’s Māhele database (Waihona ‘Aina 2000), the Office of Hawaiian Affairs (OHA) Papakilo Database (Office of Hawaiian Affairs 2015), and the Ava Konohiki Ancestral Visions of ‘Āina website (Ava Konohiki 2015).

2.2 Community Consultation

2.2.1 Scoping for Participants

The cultural department commences our consultation efforts by utilizing our previous community contact list to facilitate the interview process. We then review an in-house database of *kūpuna* (elders), *kama‘āina* (native born), cultural practitioners, lineal and cultural descendants, Native Hawaiian Organizations (NHOs; includes Hawaiian Civic Clubs and those listed on the Department of Interior’s NHO list), and community groups. CSH also contacts agencies such as the SHPD, OHA, and the appropriate Island Burial Council where the proposed project is located for their response on the project and to identify lineal and cultural descendants, individuals and/or NHO with cultural expertise and/or knowledge of the study area. CSH is also open to referrals and new contacts.

2.2.2 “Talk Story” Sessions

Prior to the interview, CSH cultural researchers explain the role of a CIA, how the consent process works, the project purpose, the intent of the study, and how their *‘ike* (knowledge) and *mana‘o* (opinion, understanding) will be used in the report. The interviewee is given an Authorization and Release Form to read and sign.

“Talk Story” sessions range from the formal (e.g., sit down and *kūkā* [consultation, discussion] in the participant’s place of choice over set interview questions) to the informal (e.g., hiking to cultural sites near the study area and asking questions based on findings during the field outing). In some cases, interviews are recorded and transcribed later.

CSH also conducts group interviews, which range in size. Group interviews usually begin with set, formal questions. As the group interview progresses, questions are based on interviewees' answers. Group interviews are always transcribed and notes are taken. Recorded interviews assist the cultural researcher in 1) conveying accurate information for interview summaries, 2) reducing misinterpretation, and 3) adding missing details to *mo‘olelo*.

CSH seeks *kōkua* (assistance) and guidance in identifying past and current traditional cultural practices of the study area. Those aspects include general history of the *ahupua‘a* (traditional land division); past and present land use of the study area; knowledge of cultural sites (for example, *wahi pana*, archaeological sites, and burials); knowledge of traditional gathering practices (past and present) within the study area; cultural associations (*ka‘ao* and *mo‘olelo*); referrals; and any other cultural concerns the community might have related to Hawaiian cultural practices within or in the vicinity of the study area.

2.2.3 Interview Completion

After an interview, CSH cultural researchers transcribe and create an interview summary based on information provided by the interviewee. Cultural researchers give a copy of the transcription and interview summary to the interviewee for review and ask that they make any necessary edits. Once the interviewee has made those edits, CSH incorporates their *‘ike* and *mana‘o* into the report. When the draft report is submitted to the client, cultural researchers then prepare a finalized packet of the participant's transcription, interview summary, and any photos taken during the interview. We also include a thank you card and honoraria.

It is important that CSH cultural researchers cultivate and maintain community relationships. The CIA report may be completed, but CSH researchers continuously keep in touch with the community and interviewees throughout the year—such as checking in to say hello via email or by phone, volunteering with past interviewees on community service projects, and sending holiday cards to them and their *‘ohana* (family). CSH researchers feel this is an important component to building relationships and being part of an *‘ohana* and community.

"*I ulu no ka lālā i ke kumu*—the branches grow because of the trunk," is an *‘ōlelo no‘eau* (#1261) shared by Mary Kawena Pukui with the simple explanation: "Without our ancestors we would not be here" (Pukui 1983:137). As cultural researchers, we often lose our *kūpuna* but we do not lose their wisdom and words. We routinely check obituaries and gather information from other community contacts if we have lost our *kūpuna*. CSH makes it a point to reach out to the *‘ohana* of our *kūpuna* who have passed on and pay our respects including sending all past transcriptions, interview summaries, and photos for families to have on file for genealogical and historical reference.

Section 3 *Ka‘ao* and *Mo‘olelo*

Hawaiian storytellers of old were greatly honored; they were a major source of entertainment and their stories contained teachings while interweaving elements of Hawaiian lifestyles, genealogy, history, relationships, arts, and the natural environment (Pukui and Green 1995:IX). According to Pukui and Green (1995), storytelling is better heard rather than read for much becomes lost in the transfer from the spoken to the written word and *ka‘ao* are often full of *kaona* or double meanings.

Ka‘ao are defined by Pukui and Elbert (1986:108) as a "legend, tale […], romance, [and/or], fiction." *Ka‘ao* may be thought of as oral literature or legends, often fictional or mythic in origin, and have been "consciously composed to tickle the fancy rather than to inform the mind as to supposed events" (Beckwith 1970:1). Conversely, Pukui and Elbert (1986:254) define *mo‘olelo* as a "story, tale, myth, history, [and/or] tradition." The *mo‘olelo* are generally traditional stories about the gods, historic figures or stories which cover historic events and locate the events with known places. *Mo‘olelo* are often intimately connected to a tangible place or space.

In differentiating *ka‘ao* and *mo‘olelo* it may be useful to think of *ka‘ao* as expressly delving into the *wao akua* (realm of the gods), discussing the exploits of *akua* (gods) in a primordial time. *Mo‘olelo* on the other hand, reference a host of characters from *ali‘i* (royalty), to *akua* and *kupua* (supernatural beings), to finally *maka‘āinana* (commoners), and discuss their varied and complex interactions within the *wao kānaka* (realm of man). Beckwith elaborates, "In reality, the distinction between *ka‘ao* as fiction and *mo‘olelo* as fact cannot be pressed too closely. It is rather in the intention than in the fact" (Beckwith 1970:1). Thus a so-called *mo‘olelo*, which may be enlivened by fantastic adventures of *kupua*, "nevertheless corresponds with the Hawaiian view of the relation between nature and man" (Beckwith 1970:1).

Both *ka‘ao* and *mo‘olelo* provide important insight into a specific geographical area, adding to a rich fabric of traditional knowledge. The preservation and passing on of these stories through oration remains a highly valued tradition. Additionally, oral traditions associated with the study area communicate the intrinsic value and meaning of a place, specifically its meaning to both *kama‘āina* as well as others who also value that place.

The following section presents traditional accounts of ancient Hawaiians living in the vicinity of the project area. Many relate an age of mythical characters whose epic adventures inadvertently lead to the Hawaiian race of *ali‘i* and *maka‘āinana*. The *ka‘ao* in and around the project area shared below are some of the oldest Hawaiian stories that have survived; they still speak to the characteristics and environment of the area and its people.

3.1.1 The Story of Haumea and Kū-hoʻoneʻe-nuʻu

Westervelt shares his account of the Polynesian deity Haumea and a young girl named Mulei‘ula who has traveled to Tahiti with her father and soon after goes into labor. The deity Haumea, on her own supernatural journey, passes by and offers aid for a successful delivery during labor in exchange for the girl's beautiful tree named Kūhoʻoneʻenuʻu. In this version, the young princess, in her stubbornness, retracts the exchange and almost loses her life and that of her child due to her fondness for her favorite tree. The voyage of this tree continues in a second *mo‘olelo*, as this is the wooden source used to carve the god of Pākākā Heiau.

> The story of the god of this temple is a story of voyages and vicissitudes. Olopana had sailed away from Waipio, Hawaii, for the island of distant seas. Somewhere in all the great number of islands which were grouped under the general name ‘Kahiki’ Olopana found a home. Here his daughter Mu-lei-ula (Mu-with-the-red-garland) was experiencing great trouble being near to childbirth. For some reason, Haumea, one of the Polynesian ancestors, had stopped for a time to visit the people of that land. When the friends were afraid that Mu-lei-ula would die, Haumea came to help, saying: ‘In our land the mother lives. The mother and child both live.’ The people said, ‘If you give us aid, how can we render payment or give you a reward?’
>
> Haumea said: ‘There is a beautiful tree with two strange but glorious flowers, which I like very much. It is “the tree of changing leaves” with two flowers, one kind singing sharply, and the other singing from time to time. For this tree I will save the life of the chief’s daughter and her child.’
>
> Gladly, the sick girl and her friends promised to give this beautiful tree to Haumea. It was a tree dearly loved by the princess.
>
> Haumea commenced the prayers and incantations which accompanied her treatment of the sick, and the chiefess rapidly grew stronger. This had come so quickly and easily that she repented the gift of the tree with the beautiful flowers, and cried out, ‘I will not give the tree.’
>
> Immediately she began to lose strength, and called to Haumea that she would give the tree if she could be forgiving and healed. However, as strength came to her once more she again felt sorry for her tree and refused to let it go. Again the incantations were broken off and the divine aid withdrawn.
>
> Olopana in agony cried to his daughter: ‘Give up the tree. Of what use will it be with its flowers if you die?’ Haumea, with the most powerful incantations, gave her the final strength, and mother and child both lived and became well and strong.
>
> Haumea took the tree and travelled over the far seas to distant Hawaii. On that larger island she found no place to plant the tree. She crossed over to the island Maui, and came to the ‘four rivers.’ There she found the awa of the gods and prepared it for drinking, but needed fresh water to mix with it.
>
> She laid her tree on the ground at Puu-kume by the Wai-hee stream and went down after water. When she returned the tree had rooted. While she looked it began to stand up and send forth branches. She built a stone wall around it, to protect it from the winds. When it blossomed Haumea returned to her divine home in Nuumealani, the land of mists and shadows where the gods dwelt. [Westervelt 1915:21–25]

3.1.2 The God of Pākākā Heiau and the Story of Kū-ho‘one‘e-nu‘u

The following *mo‘olelo* describes the same great tree known by the name of Kalauokekāhuli. This tree was given to the deity Haumea in exchange for her services as a midwife. The tree goes with Haumea on a mythical journey eventually becoming carved into a god form of Kūho‘one‘enu‘u used for worship at the Pākākā Heiau in Honolulu. The following is an excerpt from Kamakau’s account of this epic story:

> PĀKĀKĀ was an ancient *heiau*, a *waihau po‘o kanaka*. It was built by Ka-maunu-i-Halakaipo; the god for whom it was built was Kū-ho‘one‘e-nu‘u. Kū-ho‘one‘e-nu‘u was a god from Kahiki-kū; this is his story.
>
> When Haumea was traveling in Kahiki-kū and Kahiki-moe, Mulei‘ula, the daughter of ‘Olopana, ruler of those lands, was having difficulty in childbirth. Sounds of lamentation filled the air, and preparations were being made to cut open her stomach. The mother would die, but the child would live. Haumea said, ‘In our land the mother lives. The mother and the child would both live.’ ‘Olopana said to her, ‘Then deliver my daughter so that my daughter and my grandchild may live. What payment do you want for the delivery?’ Haumea answered, ‘This tree with beautiful flowers.’
>
> The name of the tree was Ka-lau-o-ke-kāhuli, and its flowers were Kanikawī and Kanikawā. This precious tree with exceedingly beautiful flowers belonged to the daughter of ‘Olopana of Kahiki-kū, the ‘‘*iwa kilau moku*’ of Kahiki, whose perfection among the chiefs was without compare in the world. Not wanting to die, she consented to the giving of the tree. [Kamakau 1991:6–8]

The story of the tree continues:

> One branch of this tree was made into a rack on which wooden bowls or netted calabashes were slung (that was Ka-haka-iki). Another branch became a shelf on which bundles were placed (that was Keolo‘ewa). Another branch landed of the seashore at Oneawa, in Kailua, O‘ahu. The fish followed it, and this became a place where schools of fish would come in. When this branch (that is, Mākālei) was taken inland of Kailua, the fish of Kawainui Pond followed it inland. The trunk of the tree was used as a dung heap and as a place for throwing wastes. This was Kū-ho‘one‘e-nu‘u.
>
> Wai-la‘ahia the husband and Halelua the wife were people without gods. The god Kū-ho‘one‘e-nu‘u came at night in a dream to have them go and get it [the tree trunk] for a god themselves. For three nights and three days they were urged to go and carve a god [from the tree] for themselves. On the third day of urging. Wai-la‘ahia prepared the things that had been ordered—a pig, coconuts, red fish, garments, and *kohekohe* grass. Then he went and laid down his offering and freed the *kapu.* Then he took the tree trunk inland to Polipoli at Nāpoko there in Waiehu. Wai-la‘ahia erected a *waihau* [a *heiau* for Kū-ho‘one‘e-nu‘u], dedicated it, and freed it.
>
> This god became famous as a god of *mana* [divine power] and a god who seized kingdoms (*he akua kā‘ili aupuni*). The chiefs as far as O‘ahu heard of him. Wai-la‘ahia was a *kahu* of Ka-maunu-i-Halakaipo, chief of O‘ahu. He brought the god to O‘ahu, and Ka-maunu-i-Halakaipo built Pākākā as a heiau for it.
>
> Kū-ho‘one‘e-nu‘u was a god of the chiefs of O‘ahu from remote times to the times of Kūali‘i, Ka-pi‘i-oho-o-ka-lani, Pele-i‘ō-hōlani, Kūmahana, and Kahahana. It is said that this was the most ancient god from Hawai‘i to Kaua‘i. [Kamakau 1991:6–8]

3.1.3 Hi‘iaka Travels to Kou

Kou, the ancient name of Honolulu, was known as a place where chiefs gathered to play and where the people gathered to watch them. Pukui (1983:120) relates the poetical saying *“Hui aku nā maka i Kou”* (“the faces will meet at Kou”) in reference to such gatherings. It is briefly mentioned in the legend of Hi‘iaka, beloved sister of the goddess, Pele. Hi‘iaka and her companions have been traveling around O‘ahu on the land trails and decide to travel from Pu‘uloa (Pearl Harbor) to Waikīkī by canoe. At Pu‘uloa, Hi‘iaka met a party who were planning to travel to the house of the chiefess Pele‘ula in Waikīkī. Hi‘iaka recited a chant, telling the people that although they were going by land and she was going by sea, they would meet again in Kou:

‘O Kou ka papa	Kou is the coral flat
‘O Ka‘ākaukukui ka loko	Ka‘ākaukukui is the pool
‘O ka ‘alamihi a‘e nō	Some ‘alamihi [a black crab], indeed
‘O ka lā a pō iho	Wait all day until night
Hui aku i Kou nā maka	Friends shall meet in Kou

[Ho‘oulumāhiehie 2008a:297; 2008b:277]

3.1.4 ‘Ai‘ai and Puniaiki in Kou

The *ahupua‘a* of Kou was subdivided into several smaller land divisions, known as *‘ili*. The area between Maunakea Street and Nu‘uanu Stream and *makai* of King Street was known as Kapu‘ukolo. The area between Maunakea and Nu‘uanu Stream *mauka* of King Street to Beretania Street was called Kīkīhale. In Pukui et al.’s (1974:110) *Place Names of Hawaii*, no meanings are given for these names, but they do state that Kīkīhale was named for the daughter of the chief, Kou, for whom the district was named. Many of these names are mentioned in the legend of ‘Ai‘ai (Thrum 1998:230–254).

Kū‘ula, the god presiding over the fish of the sea had a son named ‘Ai‘ai. He was the first to teach the Hawaiians how to make various fishing lines and nets, the first to set up a *ko‘a kū‘ula*, a rock shrine, on which the fishermen would place their first catch as an offering to Kū‘ula, and the first to set up *ko‘a i‘a*, fishing stations, where certain fish were known to gather (Thrum 1998:231). Leaving his birthplace in Maui, ‘Ai‘ai traveled around the islands, establishing *ko‘a kū‘ula* and *ko‘a i‘a*.

He landed first at Keana Point, then traveled around the island of O‘ahu, stopping in Kaka‘ako (an *‘ili* now covered by One Waterfront Plaza) to visit his friend, Apua. Here he met the famed O‘ahu chief, Kou, a skilled fisherman who caught the large *aku* (bonito; *Katsuwonus pelamis*) in the bay of Māmala (ancient name for the mouth of Honolulu Harbor). ‘Ai‘ai soon met a young woman named Puiwa. They married and had a son named Puniaiki. One day the family went to a dam on the Nu‘uanu Stream to catch *‘o‘opu* (gobies) and *‘ōpae* (shrimp). When Puiwa left the newborn, Puniaiki, on the bank of the river, the baby started to cry. ‘Ai‘ai told his wife to tend to the child but she answered him back saucily, so ‘Ai‘ai called on his ancestors and a storm came up, flooding the dam and sweeping the child into the stream. Leaving his wife, he went downstream to the *‘ili* of Kaumakapili. Here he saw the chiefess Kīkīhale gather a large *‘o‘opu* from the stream.

Kīkīhale’s guardian advised her to put it in a calabash with water and keep it as a pet. ‘Ai‘ai realized that the *‘o‘opu* was Puniaiki, his transformed child who had been swept downstream to Kīkīhale (the person and also the *‘ili* named Kīkīhale). The next day the chiefess’ guardian saw that the *‘o‘opu* had turned back into a child and Kīkīhale instructed her to raise the child until it was an adult, so that she could take the young man for a husband. This came to pass, but the chiefess was not satisfied with her husband Puniaiki since he did not bring fish home as the other men in the islands. Puniaiki was annoyed with her complaints, and took the pearl fishhook, Kahuai, given to him by his father ‘Ai‘ai, and went out with the men of Kou to fish for the *aku*. The story goes that when Puniaiki held the pearl fishhook in his hand:

> . . . the akus, unprecedented in number, fairly leaped into the canoes. They became so filled with the fish, without labor, that they sank in the water as they reached Kapuukolo, and the men jumped overboard to float them to the beach. [Thrum 1998:247–248]

This suggests that not only was Kapu‘ukolo an *‘ili* name, but also a canoe landing, a place to come ashore after *aku* fishing.

3.2 *Wahi Pana* (Storied Places)

Wahi pana are legendary or storied places of an area. These legendary or storied places may include a variety of natural or human-made structures. Oftentimes dating to the pre-Contact period, most *wahi pana* are in some way connected to a particular *mo‘olelo*, however, a *wahi pana* may exist without a connection to any particular story. Davianna McGregor outlines the types of natural and human-made structures that may constitute *wahi pana*:

> Natural places have mana, and are sacred because of the presence of the gods, the akua, and the ancestral guardian spirits, the ‘aumakua. Human-made structures for the Hawaiian religion and family religious practices are also sacred. These structures and places include temples, and shrines, or heiau, for war, peace, agriculture, fishing, healing, and the like; pu‘uhonua, places of refuge and sanctuaries for healing and rebirth; agricultural sites and sites of food production such as the lo‘i pond fields and terraces slopes, ‘auwai irrigation ditches, and the fishponds; and special function sites such as trails, salt pans, holua slides, quarries, petroglyphs, gaming sites, and canoe landings. [McGregor 1996:22]

As McGregor makes clear, *wahi pana* can refer to natural geographic locations such as streams, peaks, rock formations, ridges, offshore islands and reefs, or they can refer to Hawaiian land divisions such as *ahupua‘a* or *‘ili*, and man-made structures such as fishponds. It is common for places and lanscape features to have multiple names, some of which may only be known to certain *‘ohana* or even certain individuals within an *‘ohana*, and many have been lost, forgotten, or kept secret through time. Place names also convey *kaona* and *huna* (secret) information that may even have political or subversive undertones. Before the introduction of writing to the Hawaiian Islands, cultural information was exclusively preserved and perpetuated orally. Hawaiians gave names to literally everything in their environment, including points of interest that may have gone unnoticed by persons of other cultural backgrounds. Hawaiians have named taro patches, rocks and trees that represented deities and ancestors, sites of houses and *heiau*, canoe landings, fishing stations in the

sea, resting places in the forests, and the tiniest spots where miraculous or interesting events are believed to have taken place (Pukui et al. 1974:x).

Pukui et al. (1974:49–50) literally translates Honolulu as “protected bay,” which refers to the protection of Honolulu Harbor. Older names for the harbor are Kou and Māmala. According to Westervelt, Honolulu is a name made by the union of the two words “*Hono*” and “*lulu*.” Westervelt explains as follows:

> Some say it means ‘Sheltered Hollow.’ The old Hawaiians say that ‘Hono’ means ‘abundance’ and ‘lulu’ means ‘calm,’ or ‘peace,’ or ‘abundance of peace.’ The navigator who gave the definition ‘Fair Haven’ was out of the way, inasmuch as the name does not belong to a harbor, but to a district having ‘abundant calm,’ or ‘a pleasant slope of restful land.’ ‘Honolulu’ was probably a name given to a very rich district of farm land near what is now known as the junction of Liliha and School Streets, because its chief was Honolulu, one of the high chiefs of the time of Kakuhihewa, according to the legends. [Westervelt 1915:14]

Traditionally known as Kou, Honolulu had a long tradition as a royal center where the *ali‘i* would meet and entertain. Kou stretched from “Nu‘uanu to Alakea Streets and from Hotel Street to the sea” (McAllister 1933:80). Westervelt adds that Honolulu was most likely a name of a very rich farm land near the junction of Liliha and School streets. A high chief of this area was known as Honolulu. According to legends, he ruled this area during the time of Kākuhihewa.

Kākuhihewa was the *mō‘ī* (king, sovereign) of O‘ahu prior to Kamehameha’s rule. Kākuhihewa divided the island of O‘ahu amongst his favorite chiefs and officers and offered their names to the places that they received, hence the traditional name Kou. The area was named after a chief who was an *ilāmuku* (marshall) under Kākuhihewa.

3.2.1 Honokaupu

Near the current alignment of Richards and Queens streets was Hono-kau-pu—a noted field for *‘ulu maika,* an ancient Hawaiian game similar to bowling (Westervelt 1915:16). Kou was the popular *‘ulu maika* field amongst chiefs. The track at Hono-kau-pu was approximately 12 ft wide and extended from the current location of Merchant and Fort streets, traveling ‘Ewa to the intersection of Merchant Street and Nu‘uanu Avenue. It is said that Kamehameha I used this *maika* track (Westervelt 1915:16). At the foot of the present Richards Street was once the site of lumber yards. In ancient times, this area was called Ula-kua and idols were made here. Near Ula-kua was Ke-kau-kukui, a place where people gathered to play *kōnane*, an ancient game that resembled checkers. Ke-kau-kukui was also where Kekūanāo‘a, father of Kamehameha V (Lot Kapuāiwa), built his home (Westervelt 1915:17).

3.2.2 Pākākā and the Honolulu Fort

Pākākā was the name of a coastal point, a canoe landing, and wharf built off the point in 1827, and the name of a *heiau* built on that same point. The name literally means “to skim, as stones over the water” (Pukui et al. 1974:175). Thrum (1906) generated several lists and surveys of *heiau* and noted that Peter Corney, a visitor to the island in 1819, saw several *heiau* along the Honolulu shore:

> There are several morais [*heiau*], or churches in the village, and at new moon the priests, chiefs and hikanees (aikane) [friends] enter them with offerings of hogs,

> plantains, and cocoanuts, which they set before the wooden images. The place is fenced in, and have [*sic*] pieces of white flags flying on the fences. [Corney 1896:101]

Westervelt (1915:21) identifies Pākākā Heiau as once being the main royal temple in Honolulu and the headquarters for priests, with the nearby wharf a possible part of the complex. The walls of the *heiau* were decorated with sacrificial heads of men. Westervelt relates that Pākākā was built before the time of Kākuhihewa, and was later owned by Kīna‘u, the mother of Kamehameha V.

In 1816, a fort named Kekuanohu was constructed in this area, roughly *mauka* of Pākākā Heiau; the adjacent street was called Fort Street. Liholiho, Kamehameha II, built a palace complex in this area in 1821, possibly on the former Pākākā Heiau platform. Christiaan Klieger (1997:15–16) has suggested the Pākākā Palace complex may have lasted until around 1826, when a new royal compound was built for Kamehameha III within the town of Honolulu, near the modern junction of Alakea and Beretania streets.

Kekuanohu Fort was demolished in 1857 and the stones from the wall were used to create a seawall (Pukui et al. 1974:30), which was then filled to create a new land, called the Esplanade or ‘Āinahau, from the *hau* tree (beach hibiscus; *Hibiscus tiliaceus*) land (Pukui et al. 1974:7).

3.3 *‘Ōlelo No‘eau* (Proverbs)

Hawaiian knowledge was shared by way of oral histories. Indeed, one’s *leo* (voice) is oftentimes presented as *ho‘okupu* (“to cause growth,” a gift given to convey appreciation, to strengthen bonds); the high valuation of the spoken word underscores the importance of the oral tradition (in this case, Hawaiian sayings or expressions), and its ability to impart traditional Hawaiian “aesthetic, historic, and educational values” (Pukui 1983:vii). Thus, in many ways these expressions may be understood as inspiring growth within the reader or between speaker and listener:

> They reveal with each new reading ever deeper layers of meaning, giving understanding not only of Hawai‘i and its people but of all humanity. Since the sayings carry the immediacy of the spoken word, considered to be the highest form of cultural expression in old Hawai‘i, they bring us closer to the everyday thoughts and lives of the Hawaiians who created them. Taken together, the sayings offer a basis for an understanding of the essence and origins of traditional Hawaiian values. The sayings may be categorized, in Western terms, as proverbs, aphorisms, didactic adages, jokes, riddles, epithets, lines from chants, etc., and they present a variety of literary techniques such as metaphor, analogy, allegory, personification, irony, pun, and repetition. It is worth noting, however, that the sayings were spoken, and that their meanings and purposes should not be assessed by the Western concepts of literary types and techniques. [Pukui 1983:vii]

Simply, *‘ōlelo no‘eau* may be understood as proverbs. The Webster dictionary notes it as “a phrase which is often repeated; especially, a sentence which briefly and forcibly expresses some practical truth, or the result of experience and observation.” It is a pithy or short form of folk wisdom. Pukui equates proverbs to a treasury of Hawaiian expressions (Pukui 1995:xii). Oftentimes within these Hawaiian expressions or proverbs are references to places. This section draws from the collection of author and historian Mary Kawena Pukui and her knowledge of Hawaiian proverbs describing *‘āina* (land), chiefs, plants, and places. The following proverbs are

from Mary Kawena Pukui's *‘Ōlelo No‘eau* (Pukui 1983) and describe the broader region of Honolulu.

3.3.1 *‘Ōlelo No‘eau* #407

The following *‘ōlelo no‘eau* paints a picture of Honolulu as an area of recreation where games were held.

> *Hāhā pō‘ele ka pāpa‘i o Kou.*
>
> The crabs of Kou are groped for in the dark.
>
> Applied to one who goes groping in the dark. The chiefs held *kōnane* and other games at the shore of Kou (now central Honolulu), and people came from everywhere to watch. Very often they remained until it was too dark to see and had to grope for their companions. [Pukui 1983:51]

3.3.2 *‘Ōlelo No‘eau* #1016

The following *‘ōlelo no‘eau* describes the early landscape of Honolulu.

> *Ho‘ā ke ahi, kō‘ala ke ola. O na hale wale no ka i Honolulu; o ka ‘ai a me ka i‘a i Nu‘uanu.*
>
> Light the fire for there is life-giving substance. Only the houses stand in Honolulu; the vegetable food and meat are in Nu‘uanu.
>
> An expression of affection for Nu‘uanu. In olden days, much of the taro lands were found in Nu‘uanu, which supplied Honolulu with poi, taro greens, ‘o‘opu, and freshwater shrimp. So it is said that only houses stand in Honolulu. Food comes from Nu‘uanu. [Pukui 1983:109]

3.3.3 *‘Ōlelo No‘eau* #1128

The following *‘ōlelo no‘eau* speaks of Kou and its popularity in leisure and recreation.

> *Hui aku na maka i Kou.*
>
> The faces will meet in Kou.
>
> We will all meet there. Kou (now central Honolulu) was the place where chiefs played games, and people came from everywhere to watch. [Pukui 1983:120]

3.3.4 *‘Ōlelo No‘eau* #1423

The following *‘ōlelo no‘eau* speaks of the usual weather of Honolulu.

> *Ka lā ikiiki o Honolulu.*
>
> The intensely warm days of Honolulu.
>
> People from the country often claim that Honolulu is excessively warm. [Pukui 1983:154]

3.3.5 *‘Ōlelo No‘eau* #1575

The following *‘ōlelo no‘eau* mentions the Kūkalahale rain previously mentioned in Section 1.4.4.2.

Ka ua Kukalahale o Honolulu.

The Kukalahale rain of Honolulu.

The rain that announces itself to the homes by the pattering it makes on the roofs as it falls. Often mentioned in songs. [Pukui 1983:170]

3.4 *Mele* (Songs)

3.4.1 “He Aloha Nō ‘o Honolulu”

The following *mele* retraces the sea routes of the famed ship *Maunaloa*. These routes included Honolulu to Maui and onward to the west coast of Hawai‘i. This *mele* also describes the feel of the landscape with a different rain and wind for each place.

He aloha nō ‘o Honolulu i ka ua Kūkalahale
Ka nuku a‘o Māmala ‘ae a‘e nei ma hope
Kau mai ana ma mua ka malu ‘ula a‘o Lele
Kukui ‘a‘ā mau, pio ‘ole i ke Kaua‘ula
‘Au aku i ke kai loa oni mai ana ‘o ‘Upolu
Ho‘okomo iā Mahukona i ka makani ‘Āpa‘apa‘a
E wiki ‘oe ‘apa nei eia a‘e ‘o Kawaihae
Ho‘ohaehae Nāulu, i ka makani ku‘ehu ‘ale
‘O ka hao a ka Mūmuku poho pono nā pe‘a heke
‘O ka heke nō nā Kona i ke kai mā‘oki‘oki
Ki‘ina ke koi‘i koi i ka piko o Hualālai
A la‘i wale ke kaunu ‘a‘ole pahuna hala
Hale ‘ole nō kāua i ke kole maka onaona
E haupā ‘oe a kena i ka piko ‘oe a lihaliha
Hāli‘ali‘a mai ana kou aloha kākia iwi
Ho‘okomo iā Honu‘apo i ke kai kauha‘a
Ha‘alele ka Maunaloa i ka pohu la‘i a‘o Kona
Ho‘okomo iā Ho‘okena i ka pewa a‘o ka manini
Ha‘ina mai ka puana ‘o ka heke nō nā Kona
No Kona ke kai malino kaulana i ka lehulehu

Translation:

Dearly loved is Honolulu in the Kūkalahale rain
The entrance of Māmala Bay fares on behind

Up ahead is the breadfruit shade of Lele
The ever-blazing torch unextinguished by the Kaua‘ula wind
Faring out to the deep sea of ‘Upolu Point appears
Entering Mahukona in the ‘Āpa‘apa‘a wind
Make haste, slowpoke, for hers is Kawaihae
Where the Nāulu showes stir up wave gustling winds
The buffering of the Mūmuku wind fills out the topsails
The Kona districts are foremost with their sea-patterned hues
The rush sweeps to the summit of Hualālai
And love is contended, no thrust is missed
We make no error with the tender-eyed kole fish
You eat heartily, right to the rich oily belly
I‘m reminded of your love holding me fast
Coming in to Honu‘apo in the restless sea
The *Maunaloa* departs the quiet tranquility of Kona
Porting into Ho‘okena in her bay like a manini tail
The story is told that the Kona districts are the finest
For Kona are the clam seas, famous among all people.
[Wilcox 2003:50–51]

Section 4 Background Research

4.1 Pre-Contact to 1800s

By approximately AD 1310, *ali‘i* Māweke partitioned O‘ahu into three districts: the Kona region; the ‘Ewa, Wai‘anae, and Waialua region; and the windward Ko‘olau region. Then, in approximately AD 1490, the *‘aha ali‘i* (council of chiefs) chose Mā‘ilikūkahi, an *ali‘i kapu* (sacred chief) who was born at the sacred site of Kūkaniloko in the uplands of Waialua to be the new *ali‘i nui* (paramount chief) of O‘ahu. After his paramountship was installed, Mā‘ilikūkahi instituted an explicit land division and administrative structure. O‘ahu was further divided into six *moku*—Kona, ‘Ewa, Wai‘anae, Waialua, Ko‘olauloa, and Ko‘olaupoko—that were divided again into 86 *ahupua‘a* and smaller territorial units, such as *‘ili* or land section (Kirch 2010:84–90). Upon his ascent to *ali‘i nui*, Mā‘ilikūkahi shifted his residence from Waialua to Waikīkī, which may have initiated the pattern of royal residence at Waikīkī (McAllister 1933:74).

Kamehameha defeated Kalanikūpule at the battle of Nu‘uanu in 1795, and in 1809, moved his court, government, and residence from Waikīkī to Honolulu. Kamehameha was known to have taken a special interest in farming and would work in the fields alongside the commoners to demonstrate the importance of agriculture (Figure 6). Crops such as yams were developed under Kamehameha and were often sold to the captains of foreign ships in need of provisions at Honolulu Harbor (‘Ī‘ī 1959:69).

Honolulu was somewhat slow to catch on as a major destination for foreigners visiting the archipelago. The only stop of Cook’s ships on O‘ahu was at Waimea Bay (1779), not viable as a significant port owing to the famous winter swell that breaks there. A discouraging factor for early trade at O‘ahu was political instability. The ruling chief Peleiōhōlani died around 1780, and his heir, Kumuhana was almost immediately deposed in a coup d’etat. A period of political unrest followed including the successful invasion of Maui by Kahekili in 1783, the bloody crushing of the O‘ahu rebellion in 1786, the invasion by the Kaua‘i ruler Ka‘eokūlani in 1791, the passing of the rule following Kahekili’s death in 1794 to Kalanikūpule, and finally, his defeat by Kamehameha I in 1795 (Beechert 1991:12–14).

E.S. Craighill Handy and Elizabeth G. Handy give a description of Honolulu:

> What is now Honolulu was originally that flatland area between the lower ends of Nu‘uanu and Pauoa Valleys and the harbor. Westervelt (1915, p. 1) wrote that ‘Honolulu’ was probably a name given to a very rich district of farm land near what is now […] the junction of Liliha and School Streets, because its chief was Honolulu, one of the high chiefs at the time of Kakuhihewa […] It is probable that the chief referred to by Westervelt took his name from the harbor and adjoining land. The original name of the land where the town grew when the harbor became a haven for foreign ships was Kou (Pukui and Elbert, 1957, p. 154). The number of heiau in this area indicates that it was a place of first importance before the era of foreign contact. [Handy and Handy 1972:479]

Rev. Hiram Bingham arrived in Honolulu in 1820. He described Honolulu as a still predominantly native Hawaiian environment—still a “village”—on the brink of western transformations:

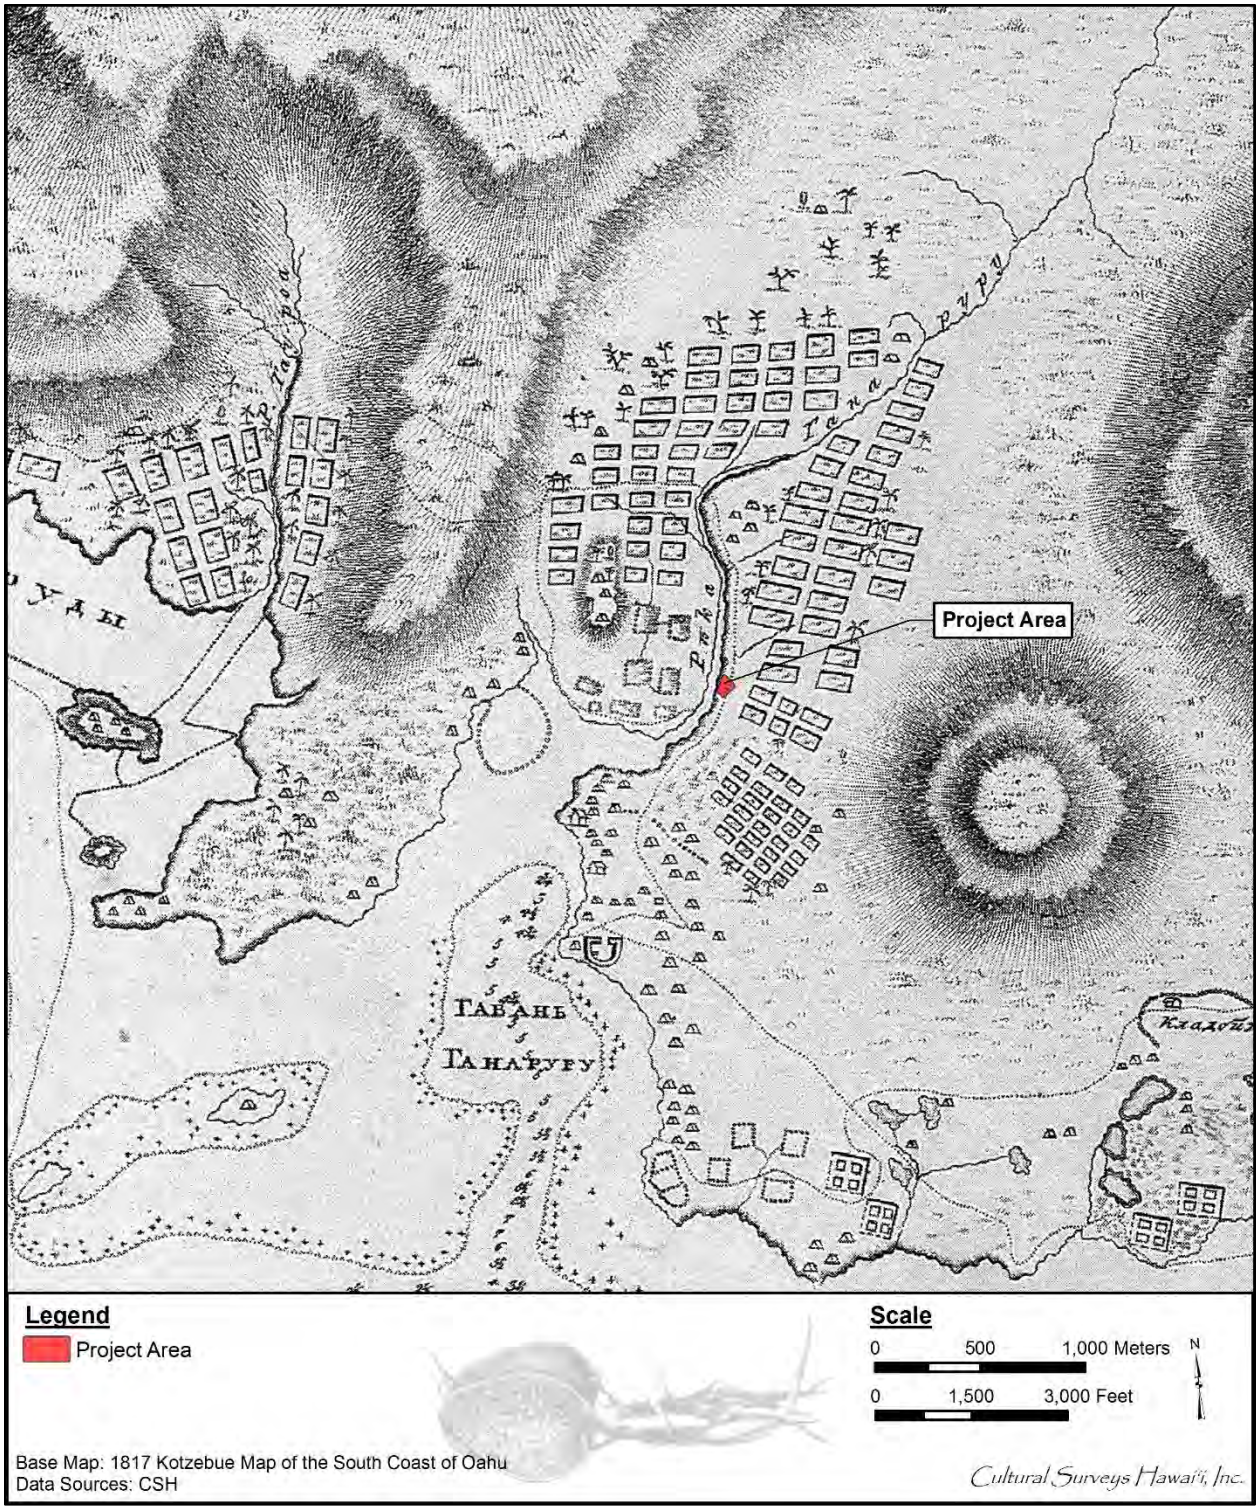

Figure 6. 1817 Kotzebue map showing the project area just along Nu‘uanu Stream. The rectangle shapes along the stream represent *lo‘i kalo*.

> We can anchor in the roadstead abreast of Honolulu village, on the south side of the island, about 17 miles from the eastern extremity […] Passing through the irregular village of some thousands of inhabitants, whose grass thatched habitations were mostly small and mean, while some were more spacious, we walked about a mile northwardly to the opening of the valley of Pauoa, then turning southeasterly, ascending to the top of Punchbowl Hill, an extinguished crater, whose base bounds the northeast part of the village or town […] Below us, on the south and west, spread the plain of Honolulu, having its fishponds and salt making pools along the seashore, the village and fort between us and the harbor, and the valley stretching a few miles north into the interior, which presented its scattered habitations and numerous beds of *kalo* (*arum esculentum*) in its various stages of growth, with its large green leaves, beautifully embossed on the silvery water, in which it flourishes. [Bingham 1847:92–93]

Waikīkī was the favored area for chiefly residences in the pre-Contact period. Honolulu's prominence had to wait until the peace established by Kamehameha I led to open reliable trade at Honolulu Harbor. Francisco de Paula Marin, a Spaniard who arrived in the Hawai‘i in 1793 or 1794 and had become a confidante of Kamehameha and recorded in his journal, "In the end of 1809 and beginning of 1810 I was employed building a stone house for the King" (Gast and Conrad 1973:200). This was the first stone structure in Honolulu, a town that, according to Marin, was "[by 1810] a village of several hundred native dwellings centered around the grass houses of Kamehameha on Pākākā Point near the foot of what is now Fort Street. Of the 60 white residents on O‘ahu, nearly all lived in the village, and many were in the service of the king" (Gast and Conrad 1973:29).

4.2 **Mid-Nineteenth Century**

4.2.1 The Māhele and the Kuleana Act

In 1845, the Board of Commissioners to Quiet Land Titles, also called the Land Commission, was established "for the investigation and final ascertainment or rejection of all claims of private individuals, whether natives or foreigners, to any landed property" (Chinen 1958:8). This led to the Māhele, the division of lands among the king of Hawai‘i, the *ali‘i*, and the common people, which introduced the concept of private property into Hawaiian society. In 1848, Kamehameha III divided the land into four divisions: Crown Lands reserved for himself and the royal house; Government Lands set aside to generate revenue for the government; Konohiki Lands claimed by *ali‘i* and their *konohiki* (supervisors); and *kuleana* (native land rights), habitation and agricultural plots claimed by the common people (Chinen 1958:8–15).

Upon confirmation of a land claim, the *ali‘i* were required to pay a commutation fee to the government. This commutation (meaning a substitution of one form of payment or charge for another) could be satisfied with a cash payment or the return of land of equal value. This payment was usually one-third of the value of the unimproved land at the date of the award (Chinen 1958:9–12). The *ali‘i* usually retained some of the land they were awarded and then returned some of the land to pay the commutation fee. The returned land usually became Government Land. In 1851, Government Lands became available for purchase "in lots of from one to fifty acres in fee simple, to residents only, at a minimum price of fifty cents per acre" (U.S. Department of the Interior 1882:23). These costs did not include the survey fee, which was to be paid by the interested buyer.

Under the Kuleana Act of 1850, the *maka‘āinana* were required to file their claims with the Land Commission within a specified time period in order to apply for fee-simple title to their lands. The claim could only be filed after the claimant arranged and paid for a survey, and two witnesses testified that they knew the claimant and the boundaries of the land, knew that the claimant had lived on the land since 1839, and knew that no one had challenged the claim. Then, the *maka‘āinana* could present their claims to the Land Commission to receive their Land Commission Award (LCA) (Kame‘eleihiwa 1992).

Not everyone who was eligible to apply for *kuleana* lands did so and not all of the claims were awarded. Some claimants failed to follow through and come before the Land Commission, some did not produce two witnesses, and some did not get their land surveyed. In addition, some *maka‘āinana* may have been reluctant to claim *‘āina* that had been traditionally controlled by their *ali‘i*, some may have not been familiar with the concept of private land ownership, and some may have not known about the Māhele, the process of making claims (which required a survey), or the strict deadline for making claims. Further, the Land Commission was comprised largely of foreign missionaries, so the small number of claimants and awards may reflect only those *maka‘āinana* who were in good standing with the church. Significantly, the surveying of land was not standardized (Kame‘eleihiwa 1992:296–297).

An 1847 Metcalf map shows the project area near Nu‘uanu Stream in the *‘ili* of Kalawahine, situated below Waikahalulu (Figure 7). Other *‘ili* present on this map are Kamakela, Leleo, Kikihale, Kaakaukukui, Ka‘akopua, and Pāmo‘o. Māhele records show that Pehu submitted testimony to the Land Commissioner to claim ownership of property in the area of Ka‘akaukukui. His testimony also mentions a chinaman who lived there:

> [...] there was peace for the chief while Pehu was the property owner. He had enclosed the lot. The servants' area had several patches but the road had cut through them remaining a small portion. I have not seen cane growing there but the land which was planted with sugar cane is separated from the sugar mill area. I had seen Pehu settle a Chinaman there but I did not see Kekuanaoa drive that Chinaman away. Kinau was left these lands at the time Poki had gone on a trip and Pehu lived under Kinau where he continuously lived until his death. After Kinau had died, Pehu lived under Kekuanaoa. He had bequested all of his work with Kekuanaoa to Mahuka. I believe this place is for Pehu, Pahuwai, Aa, Kamae, Napulima and there are several people there now who have lived under Pehu. Three houses are standing there.
>
> Pahuwai, sworn, I had been a servant of Pehu and had lived there at the time of Kaahumanu and by Pehu's request. I was there when the sugar mill had started to operate. I have not known who had put Pehu there nor have I known whether this place is in the sugar mill lot. I do not know the chief who owns that place. I have seen the Chinaman living there but I did not hear Kekuanaoa say to evict him. Previously I have not known anyone had objected, I do know now someone has objected.
>
> Kauaua, sworn, I am a native of this place and I am very familiar with this place. Kaakaukukui is the land of the chiefs and I had seen Pehu build the enclosure for

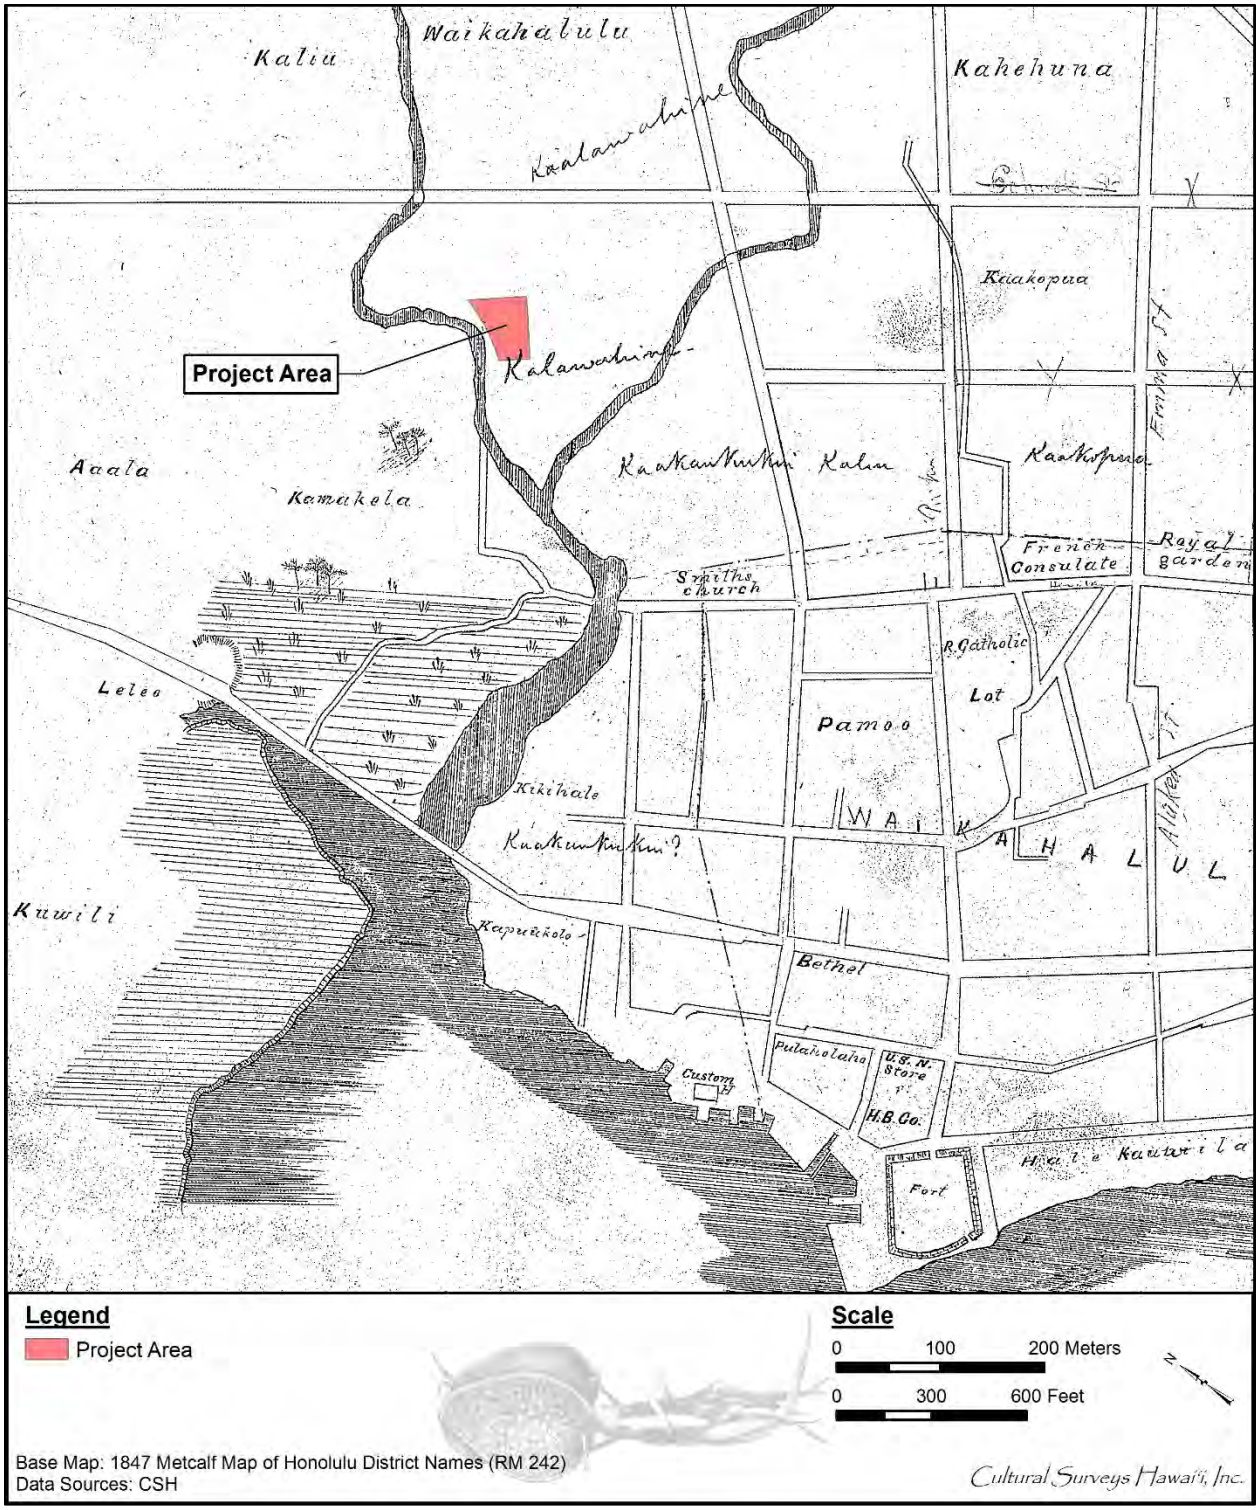

Figure 7. 1847 Metcalf map showing location of project area alongside Nu‘uanu Stream

> this place, also a house was built.
>
> Kalawaia, the father of Pehu and the husband of Pahuwai, was placed there. Later the Chinaman under Pehu built his house. The sugar mill was a separate place and because I had wanted to plant taro, I built a patch. The road has cut through it leaving only a half portion. Pehu had built a wooden fence for this place during the time of Kaahumanu, but it fell apart and a mud enclosure was built in its place at the time Kinau was yet alive.
>
> Poki then selected Pehu as konohiki for all the lands in Honolulu here when he had seen that this place had been included in Kaakaukukui while the ahupuaa is still his under the chiefs. I had not heard the objections to the Chinaman nor have I heard he had been evicted.
>
> The land officers will make a decision. [Waihona ‘Aina 2000]

An 1871 Lyons map (Figure 8) shows the current project area and those who owned property where the current building stands today: Kaukoke, Huanu o Lahilahi (Gilliland ‘Ohana), and Makahopu.

Witness testimony submitted for Makahopu claims is as follows:

> The representative for Keikenui said, Those taro patches and that place called Waimakaakamanu are all for Makahopu, of which the konohiki had entangled as his from long ago, until the time Keliiahonui had stirred Makahopu to have himself separated from the land. Makahopu then had complained to Hooliliamanu, the tax assessor, and a hearing was held before him where the decision was in favor of Makahopu, in that all of these lands were ruled for him. Makahopu lived there until his death and this same right was bequested to his heir without any objection.
>
> Kaukoke, sworn, I have seen this place over which there is a dispute. It is true that the patch which is mentioned is not for the konohiki, but the pandanus trees which are standing there are for him. The reason I think this way is because Kaahumanu I had brought the seeds and planted them there and they were for her at the time they were grown and had matured. When she died, they had become Kinau's property and now they are for Kekauonohi and the heirs of Makahopu.
>
> Makahopu had lived there a long time under Kaahumanu I and the patch, Kawaliula, and the pasture are for the konohiki, also the produce from these two places have been for Kaahumanu, then for Kinau and now they are for Kekauonohi. The lumber belonging to the foreigner is being stored there with the konohiki by rental. This is not with Makahopu.
>
> It has been agreed by the land commissioners and surveyor to have the land surveyed and divided, separating each claimant one from the other in these disputed places, then a certified document may be issued.
>
> It would be well only when the konohiki and Makahopu have agreed together. [Waihona ‘Aina 2000]

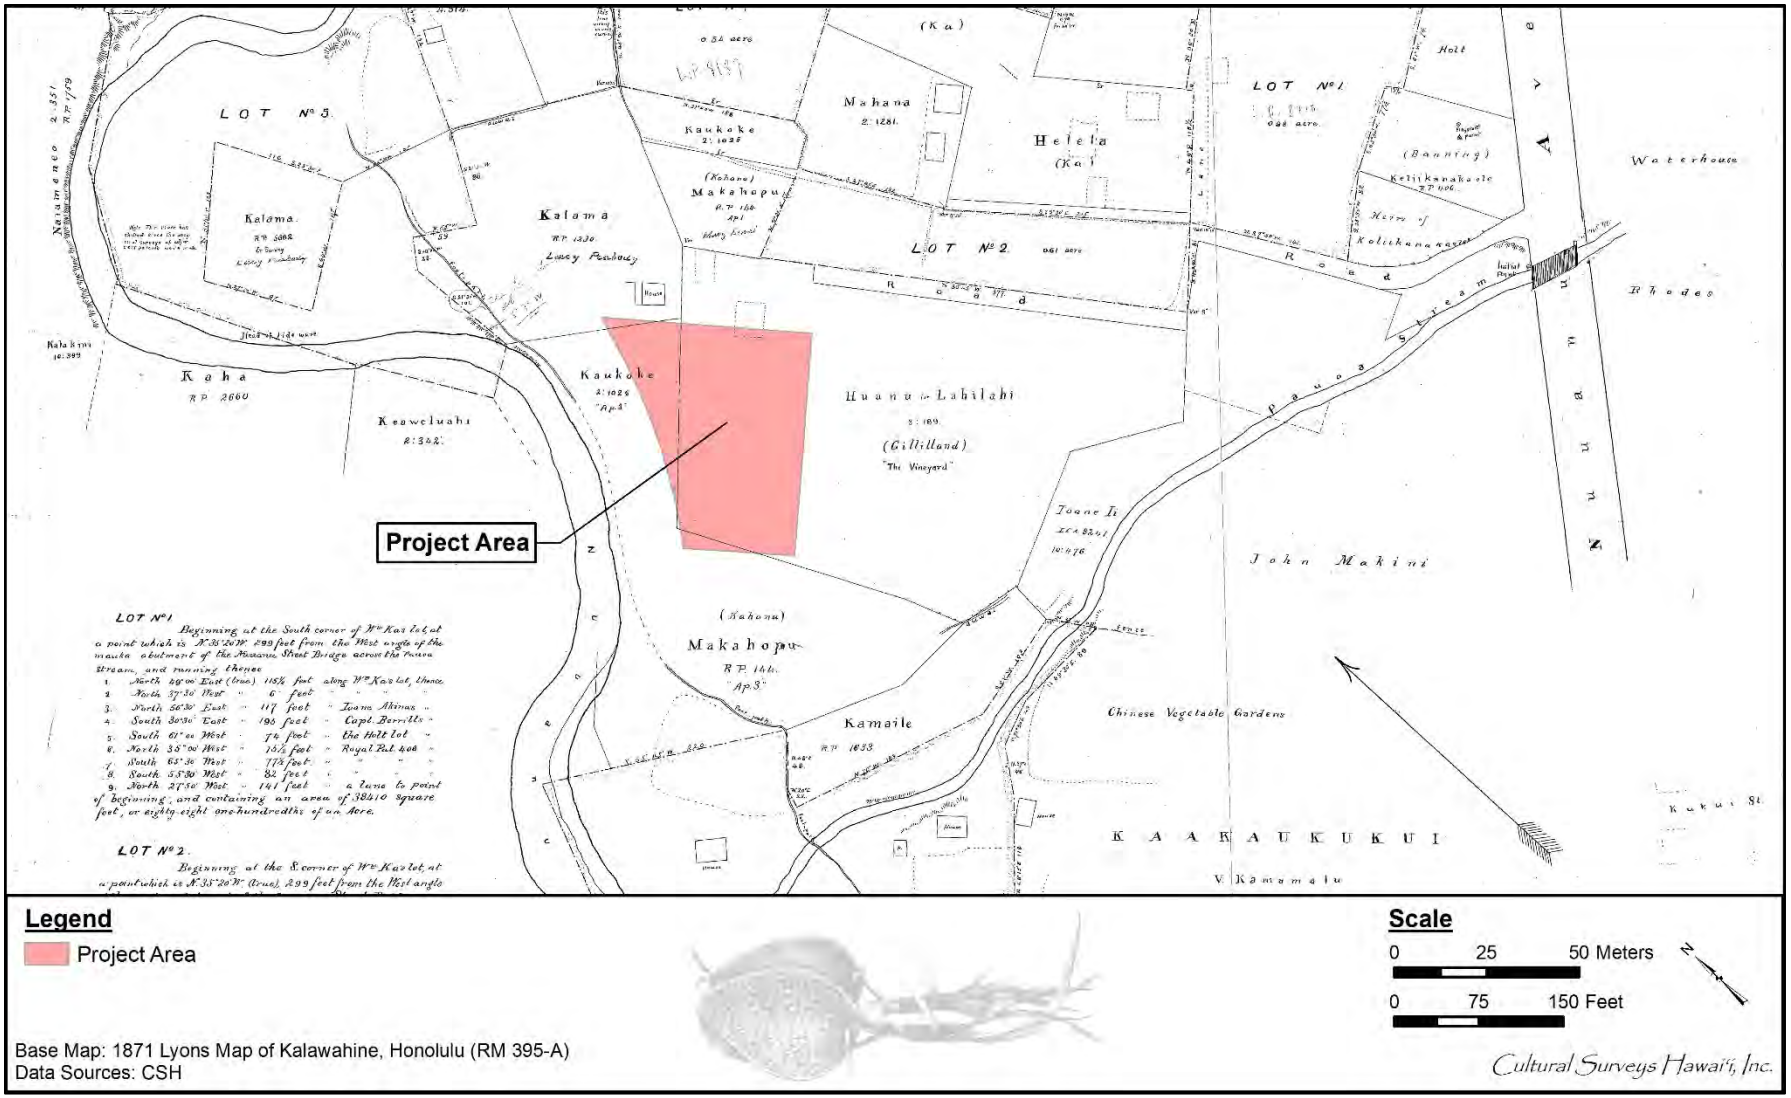

Figure 8. 1871 Lyons map with outline of project area; the original property owners surrounding the project area were Kaukoke, Huanu o Lahilahi (Gilliland ‘Ohana), and Makahopu

A claim submitted by Kaukoke lists the boundaries of his property:

> To the Honorable Land Commissioners of the Hawaiian Islands, Greet-ings: I hereby state my claim for lo‘i land, however, it is a half of a lo‘i, at Kalawahine, Honolulu. It is bounded on the north by the vineyard; on the east by the lo‘i of Kawelo; on the south by the lo‘i of Makahopu; on the west by the half of Makahopu. I got if from Makahopu and have been there twelve years. [Waihona ‘Aina 2000]

4.2.2 Francisco Paulo de Marin and the Gillilands

The demolition of the existing building (the John R. Gilliland building) will provide the area for the proposed project. The history of the Gillilands in Hawai‘i begins first with Francisco Paulo de Marin who was a confidant of Kamehameha I. He had atleast three wives of Hawaiian blood and many children.

The following Māhele document lists the heirs of Marin (also called Manini) and the heirs of Lahilahi, one of Francisco’s daughters, in their testimony for property in Honolulu. Their property was named Huanu o Lahilahi:

> P. Manini formerly held this land from Kamehameha I, having received it from him. On death of Manini it came to his daughter, Lahilahi and on her death to her children, Francis, John, & Rosalia. Francis is dead. The lot is fenced round & has been cultivated & never disputed. I have lived on this lot ever since time of Kamehameha I.
>
> Kaoani, sworn, I saw the survey made by Mr. Turner & it is according to the wall of the lot. I have lived there since Kamehameha I and there is no dispute to the Title. [Waihona ‘Aina 2000]

Witnesses to their claim also provided testimony:

> S. Reynolds, sworn, I have known these four land sections here well. They are for their grandparent, Manini. I had first seen sections 1,2,3 in 1811, one house lot and the land sections. I was living mauka of this place in 1823, and since that time Manini's interest had never been objected for the rest of life.
>
> When Manini died he had bequested these places to Lahilahi, his daughter and when she died her children, Palakiko, Rosalia, and Huanu inherited this land. Kaapuiki is the guardian, no objections. Palakiko is deceased and I am the administrator. Palakiko had bequested his one-third interest in these land sections to Juanu, he now has two-thirds interest. No objections. [Waihona ‘Aina 2000]

4.3 Late Nineteenth Century

In 1846, Honolulu was made the capitol of the Hawaiian Kingdom and was well on its way to becoming the commercial and political hub of the Islands. Charles Wilkes, commander of the U.S. Exploring Expedition, visited Hawai‘i in 1841 and related that Honolulu was “very conspicuous from the sea and has more the appearance of a civilized land, with its churches and spires, than any other island in Polynesia” (Wilkes 1856:373).

Honolulu was in a period of rapid change. Reverend Sereno Bishop offers a unique perspective on the changes in the layout of Honolulu and the structures that lined the streets:

> When I returned to Honolulu in 1853, after an absence of thirteen years, I was struck by the many changes. […] [In 1840] The major portion of the residents of Honolulu still lived in thatched houses. In fact the town was almost entirely composed of this kind of dwellings […] When I went away there were only Punchbowl Road, Beretania Street, King Street and Merchant Street. This was the condition of the city in 1840. [Bishop 1916:58]

Beginning at the start of the whaling era (1820) and extending into the 1840s and 1850s when seamen came ashore for "rest and relaxation," the downtown area from Nu‘uanu Street west to Nu‘uanu Stream was a district of "dilapidated native huts and tenements, tiny bar-rooms, coffeeshops, and run-down boarding houses, all turning to the harbor for their opportunities and income" (Daws 2006:239) (Figure 9, Figure 10, Figure 11).

There was some movement of wealthy Caucasian residents into the lower section of Nu‘uanu in the mid- to late part of the nineteenth century. Malcolm Brown noted,

> Towards the latter part of the 1800's, Nuuanu became the fashionable residential district, and there were many beautiful homes lining Nuuanu Ave. and the cross streets in the valley. […] The houses were big because there were many children in most families, and the house lots were large because they needed pasture space for their horses. [Brown 1918:28]

4.4 Twentieth Century to Present

4.4.1 Repatriation of Bones in Chinatown

Land records associated with Mataio Kekuanaoa's LCA 170 at Kapukolo (also known as Kapu‘ukolo) indicate traditional Hawaiian land use on the property. However, the immediate area was also part of a rich Chinese cultural landscape. This particular parcel is within the area today known as Chinatown and is bound between North King Street (*mauka*) and North Nimitz Highway (*makai*). For nearly a century, the common practice was for Chinese patriots to disinter their fellow countrymen's bones and prepare them for shipment back to their homeland of China. In a general sense, it is logical to assume that many of these bones most likely passed through Honolulu's Chinatown, but the details are not well-known. Maly and Maly (2013) provide the following account:

> Preparing Bones for Shipment to China from Honolulu's Chinatown (1896)
>
> *Hawaiian Gazette*
>
> February 14, 1896 (page 4)
>
> A Strange Occupation.
>
> A House in Nuuanu Stream Where This Is Done—
>
> A Gruesome Trade Carried On.

Figure 9. 1855 LaPasse map with outline of project area surrounded by fields of *lo‘i kalo*

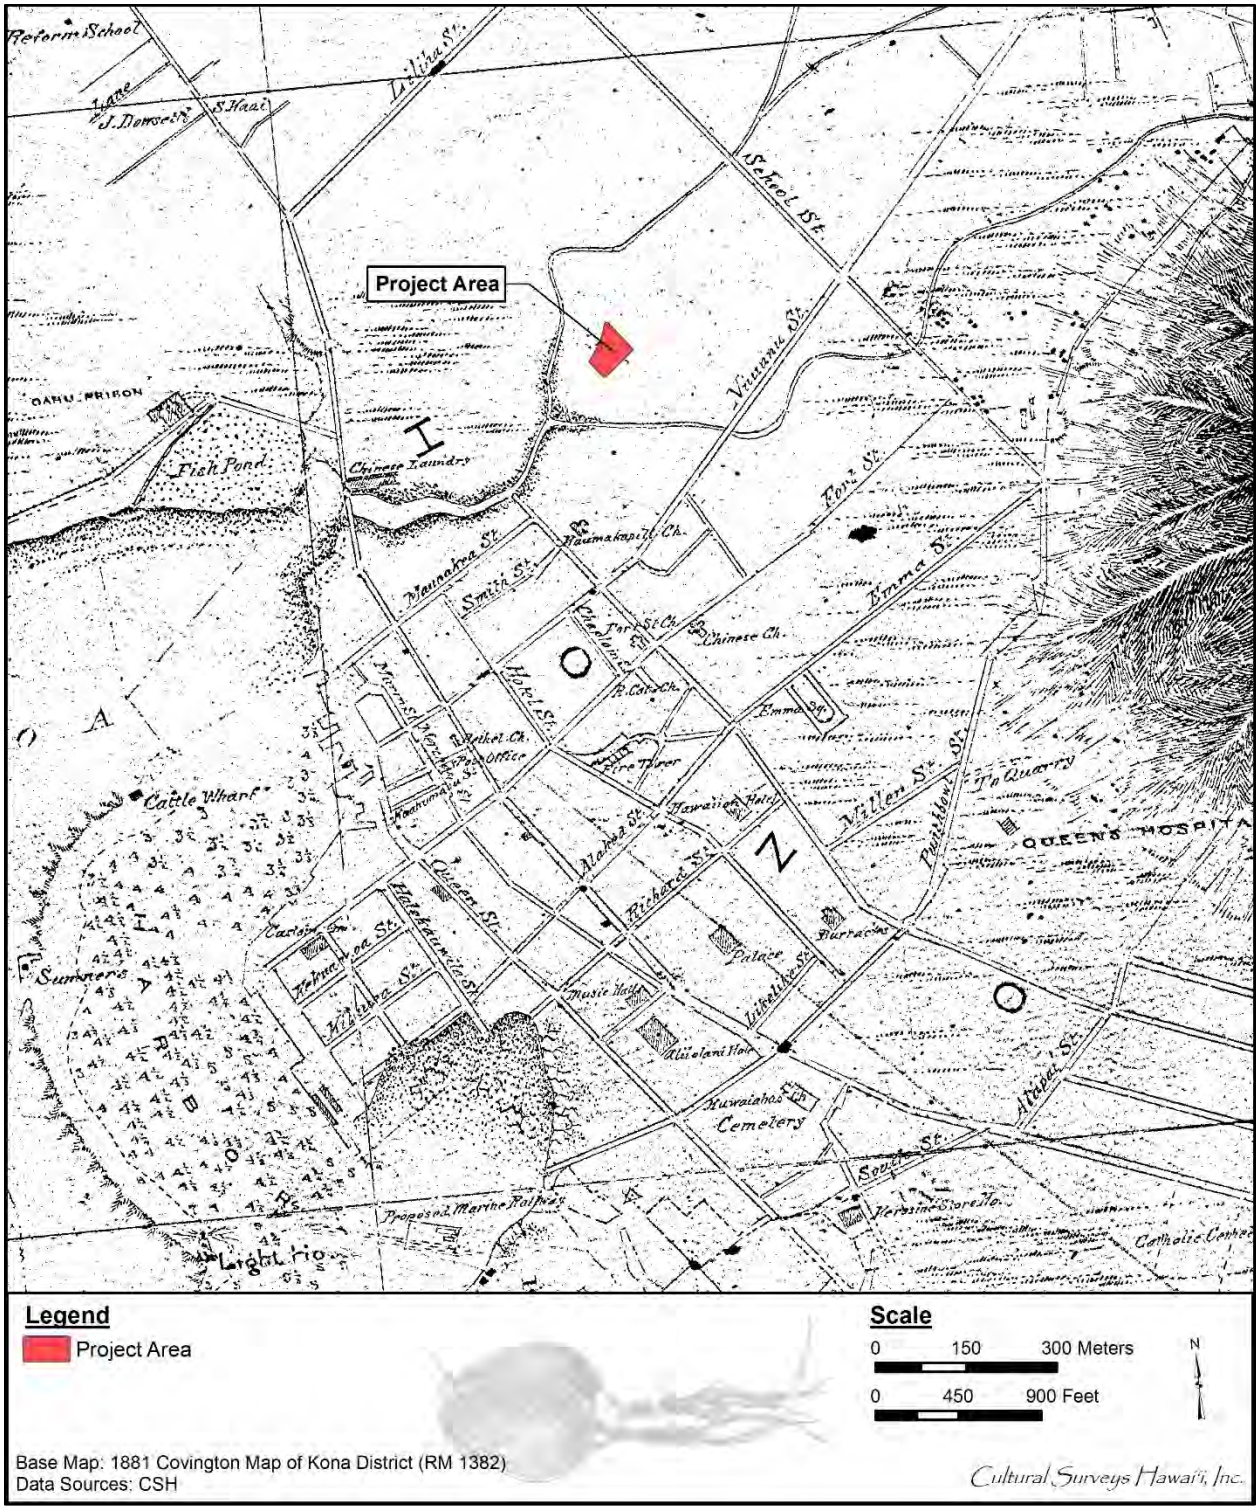

Figure 10. 1881 Covington map with outline of project area; notice side streets are now visible in Honolulu

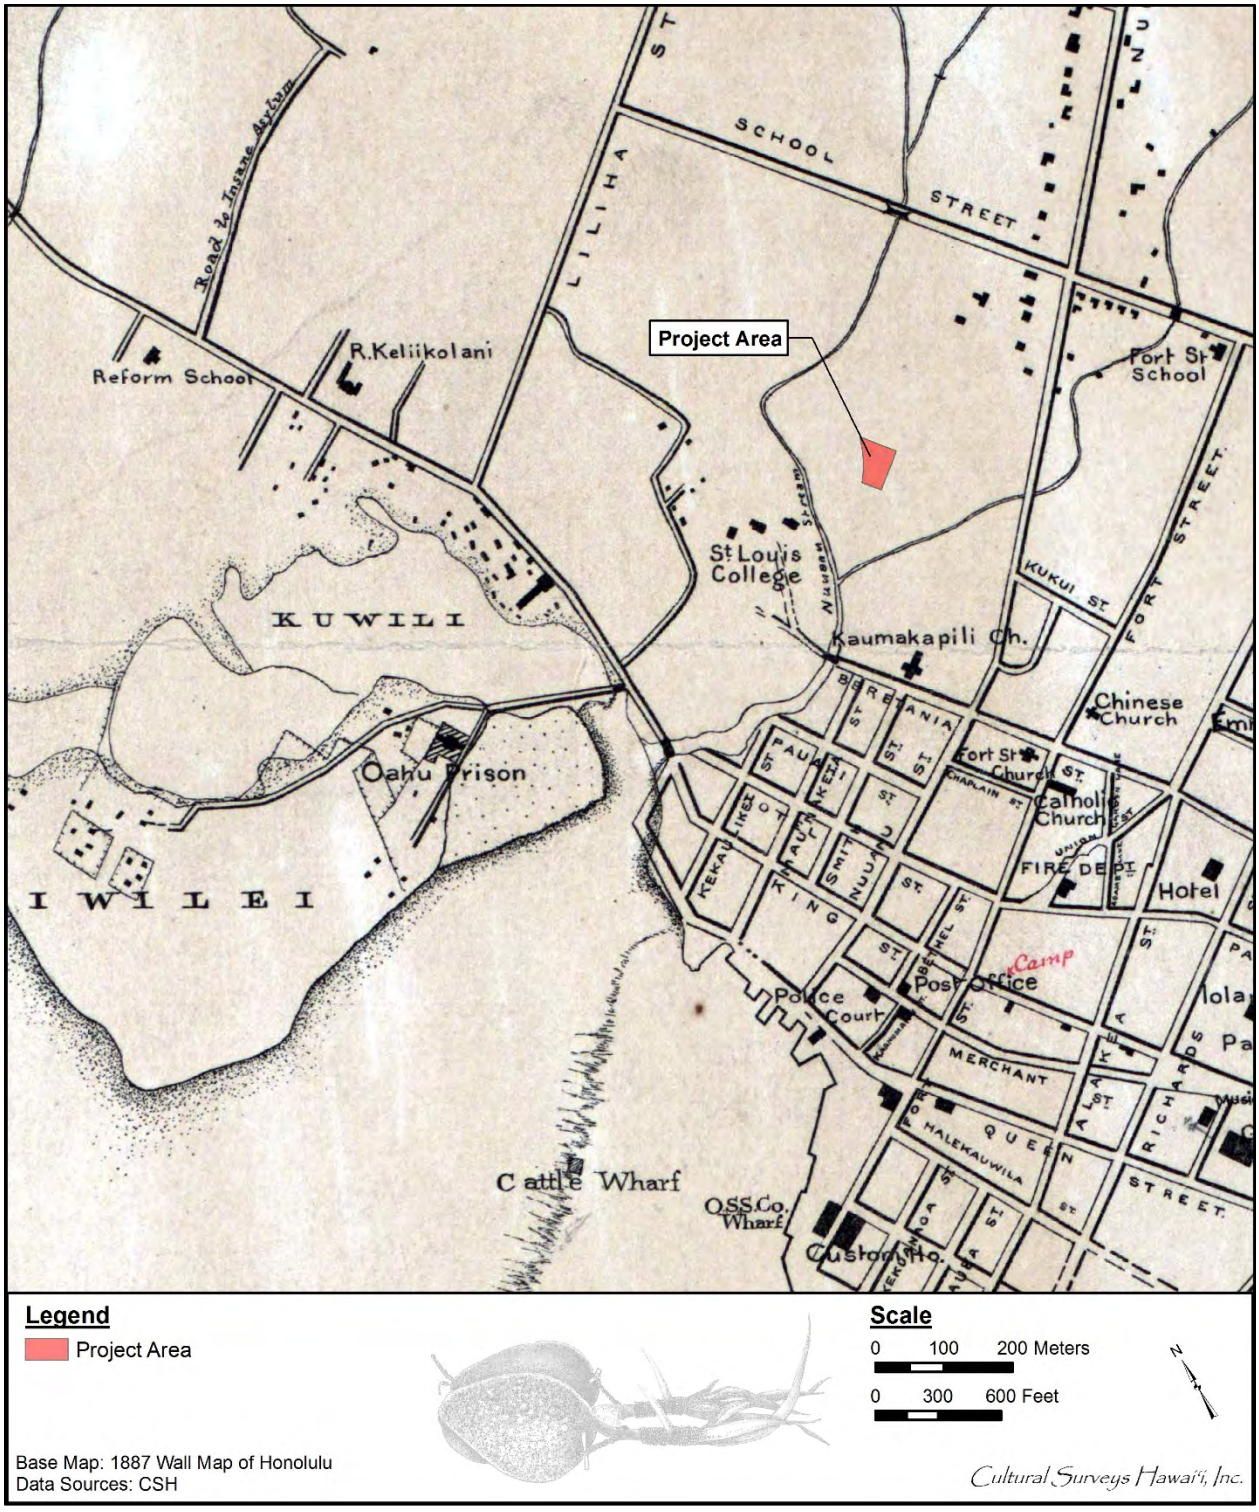

Figure 11. 1887 Wall map with outline of project area and showing a more developed Honolulu

> Situated just at the foot of Hotel street and a little back of the buildings fronting on the land now being built up by the dredger mud, silt and sand, is a very rough 8 x 12 structure of most unpromising appearance. It stands on four posts about four feet from the ground and looks for all the world like a top-heavy pigeon coop. To look at its exterior would mean nothing to the observer, but to know of its inside workings would make everything about it interesting at once.
>
> It is known as the Chinese club house. Whenever a Chinaman has a bag of human bones to prepare for transportation to China it is inside the very narrow limits of this structure that the work of scraping away dried-up skin fragments and other unnecessary matter is done.
>
> A peep in at the window close on to the hour of midnight in the dark of the moon is perhaps the best mode of receiving a lasting impression on seeing a couple of Chinamen seated on the floor, each with a pile of bones in front of him and working by the dim rays of a peanut oil lamp. A broken sickle in the hands of one serves to cut away the unnecessary dried skin and ligaments, while a cocoanut grater in the hands of the other, does good work toward removing what the sickle has failed to do. A couple of black oil cloth valises constitute the receptacles for the bones which are done up, some in cloth and others in brown paper. Such portions as the skulls are always wrapped in cloth while the legs and arms suffer the indignity of brown paper. A pile of scrapings here and there furnish the only decorations that the room affords. Cracks in the walls serve, on a windy night, to make peculiar noises, which seem a fitting accompaniment for the work of the industrious ones inside.
>
> Ever since the Chinese first came into the country has this custom been observed, and as long as they remain here will the same thing go on. No matter if the law says they shall not dig up the dead from places of burial, they will continue to do it some way or other. If the present club house is removed they will have recourse to another place.
>
> The former position of the club house was where the dredger pipes are now emptying their mud. It will be remembered that Nuuanu stream was in a very decidedly marshy condition at that point before the introduction of improvements.
>
> Then, as now, Chinamen made nightly visits to the place and scraped the bones of their relatives preparatory to transportation, but instead of carrying all waste material as they have to do now, they simply dumped this into the stream to be carried out to sea or to settle among the bulrushes. [Maly and Maly 2013:155–156]

The exact location of the place where the processing of human bones is described as an 8 by 12 structure is unknown. The “Chinese club house” is said to be “where the dredger pipes are now emptying their mud” presumably in or at the edge of Nu‘uanu Stream. In previous maps a structure labeled Joss House (a Chinese temple or shrine) was a block east of Nu‘uanu Stream. This building may have been the “Chinese club house” referred to in the 1896 *Hawaiian Gazette* article of “A Strange Occupation.” This would have been south of the current project area (Figure 12).

Figure 12. 1906 Dakin fire map showing out line of project area

4.4.2 1900s

4.4.2.1 The 1900 Chinatown Fire

In 1852, there were only about 71 Chinese living around Honolulu, most of whom had come to the Islands as merchants and continued to carry out this trade. In 1852, sugar planters began to import large numbers of Chinese "coolies" to work on their sugar plantations. Once their contracts were filled, some of the workers moved to Honolulu to open their own businesses in the area that soon came to be known as Chinatown. The unsanitary and over-populated area alarmed the white business class who noted, "Most Chinese businesses were housed in decaying buildings on the depressed lower blocks of Nu‘uanu and Maunakea Street, and in Chinatown the womanless coolies congregated to gamble, smoke opium or simply pass the time" (Daws 2006:300). By the 1870s, a sizeable population of Chinese immigrants had settled in Honolulu, especially concentrated in the blocks between Nu‘uanu and Maunakea streets. An 1878 census recorded 1,299 Chinese in Honolulu; the total city population numbered 14,114.

In 1899, the first case of bubonic plague was identified in Hawai‘i, in a Chinese bookkeeper named You Chong. After an examination by Dr. G.H. Herbert, who noted a high temperature and swelling in the groin, the patient died the next night. After an autopsy, the diagnosis of bubonic plague was determined.

Since the disease had broken out in the immigrants' area of Honolulu, all Chinese and Japanese were barred from leaving Honolulu for other ports. Two other cases were reported on the same day and the Board of Health laid down a strict quarantine for Chinatown, that area of Honolulu bound by Nu‘uanu, Kukui, River, and Queen streets. Within this area about 7,000 people, primarily Chinese and Japanese immigrants, lived and worked (Iwamoto 1967:122–124). A third ethnic group who inhabited the area were Hawaiians; about 1,000 lived in areas their families had occupied for generations (Mohr 2005:63).

From 12 December 1899 to 31 March 1900, 71 cases of bubonic plague were reported, with 61 deaths, 41 of whom lived within the established Chinatown quarantine area. The Board of Health concluded they could not contain the plague and decided the best remedy was to set "sanitary fires" to infected wooden buildings. A total of 41 controlled fires were set between 31 December 1899 and 13 August 1900:

> Therefore, on December 30, after careful deliberation, the Board of Health chose fire as the 'surest, most thorough, and most expeditious' method. Fire would destroy the plague germs, kill rats, cleanse the soil and open it up to the purifying influence of sun and air, and would prevent any occupancy of the premises until a safe period of time had elapsed. [Iwamoto 1967:124]

Infected patients were moved to a quarantine camp at Kaka‘ako. Some people, not necessarily patients, whose houses were burned were housed at the barracks of the Kaka‘ako Rifle Range. Their belongings were stored in the cellars of Kaumakapili Church.

On 20 January 1900, a fire was set between Kaumakapili Church and Nu‘uanu Avenue, which quickly got out of control. Rising winds swept burning embers to the roof of the church; the fire then jumped to several other blocks and then to the wharfs:

> By 1:30 p.m. the fire began making its way from Beretania Street along Achi Lane toward Kukui Street. People feared that the *mauka* section of the city would be destroyed. Chinatown refugees rushed back to save belongings, but were driven back by fire and smoke; they formed a seething mob near the bridge and Kukui Street. […] The Chinese consul and vice consul also circulated among the people and tried to pacify them, since at this time the Chinese believed that the Board of Heath had purposely burned their homes. [Iwamoto 1967:130–131]

No one was killed in the fire, but Chinatown was destroyed. Many people were homeless and bereft of all belongings, which were lost when Kaumakapili Church burned to the ground. No additional patients were identified with the disease in April 1900, and the Hawaiian Islands were declared free of the plague (Iwamoto 1967:125, 129). Figure 13 through Figure 16 show the succession of development before, during, and after the plague.

4.4.3 Contemporary Land Use

Honolulu in the late nineteenth century consisted of many streets still unpaved and several small lanes (that no longer exist) between major roads. Bishop Street, the main road now between Fort and Alakea streets, did not exist. Union Street exists now only as a pedestrian walkway between buildings.

By 1919, however, Honolulu had wide paved streets with blocks of contiguous brick and stone stores along all major downtown roads. The first section of Bishop Street, between Fort and King streets, was built in 1900. This street quickly became the financial sector of the city, and many of the "Big Five" companies built their headquarters and their banks on this street (Ames 1996:27). By 1918, the section from the harbor to King Street had been completed and paved (Ames 1996:119). In 1919, the *mauka* extension of Bishop Street from Hotel to Beretania Street began. The city condemned all the property in the way of this new thoroughfare and in 1927, razed all of the structures, including several of the residences near the project area (Ames 1996:120).

The first efforts to deepen Honolulu Harbor were made in the 1840s. The idea of using the dredged material composed of sand and crushed coral to fill in low-lying lands was quickly adopted. From 1857 to 1870, the "Esplanade" between Fort Street and Alakea Street was created on 22 acres of former reef and tideland. By 1874, Sand (Quarantine) Island, site of the first immigration station, had been created over "reclaimed" land on reefs.

Section 5 Previous Archaeological Research

No previous archaeological studies have been conducted within or adjacent to the current project area. Below is a discussion of previous studies in the vicinity, which are depicted on Figure 17 and summarized in Table 1. Historic properties in the vicinity are depicted on Figure 18.

5.1.1 Erkelens et al. 1994; Goodwin 1997; Goodwin and Allen 2005

In 1994, International Archaeological Research Institute, Inc. (IARII) conducted an archaeological inventory survey (AIS) for the Kekaulike Revitalization project, Diamond Head Block (Goodwin 1997). The survey identified more than 100 features, designated as State Inventory of Historic Places (SIHP) # 50-80-14-4875. At least one of the features was assessed as pre-Contact, while others were determined to be from the first ca. 70 years following Western Contact. Other residential and commercial features dated to the first 50 years of Chinese immigration, along with several from the twentieth century.

The survey also identified human skeletal remains, which were part of a secondary burial containing the incomplete remains of three individuals (Erkelens et al. 1994). Represented in these remains were a male aged 24030, a female aged 15018, and a female aged 304. These individuals were likely moved from their original context during construction of a post-1900 water line; hence, the date of original internment may have occurred during the nineteenth century. Erkelens et al. (1994) hypothesize that the individuals may have been victims of the 1860 Chinatown fire.

IARII subsequently conducted data recovery from 2 August to 30 September and 7 October 1994 (Goodwin and Allen 2005). Staff archaeologists recovered artifacts and charcoal that indicated the area was in use as early as the thirteenth century, with heavy occupation occurring from the early to mid-nineteenth century. Four compounds and a blacksmith’s shop, dating partly to the early nineteenth century, were excavated. A total of 8,552 artifacts were collected, associated with a variety of ethnic origins (traditional Hawaiian, Euro-American, and Asian). Collected materials included porcelains, earthenware, stoneware, lithics, fishhooks, pendants, a *poi* pounder, metal, coins, beads, bottles, glass shards, bone, shell, and charcoal. Identified features included post molds, living floors, firepits for heating and cooking, refuse pits, and fence lines. Large amounts of faunal bone were also recovered, including from species present in the pre-Contact period (pig, dog, turtle, chicken, shark, fish, and Pacific rat), as well as post-Contact introductions (cow, horse, goat, sheep, domestic cat, and the Norway/roof rat).

In addition, fetal remains were found in a refuse deposit (Feature 338) during data recovery. Osteological analysis determined the fetus was carried into the second or beginning of the third trimester of pregnancy before a premature birth or miscarriage; there was no evidence of deliberate burial (Erkelens et al. 1994). Artifacts within Feature 338 suggest it dates to 1850-1880.

5.1.2 Kennedy et al. 1994; Riley et al. 1995

Kennedy et al. (1994) conducted an AIS for the Kekaulike Revitalization project, ‘Ewa Block, bounded by King, River, Hotel, and Kekaulike streets (Kennedy et al. 1994). Investigations consisted of nine backhoe trenches and three hand-excavated test units. Two historic properties were identified: SIHP # 50-80-14-4587, a small pond, and SIHP # 50-80-14-4588, a multi-

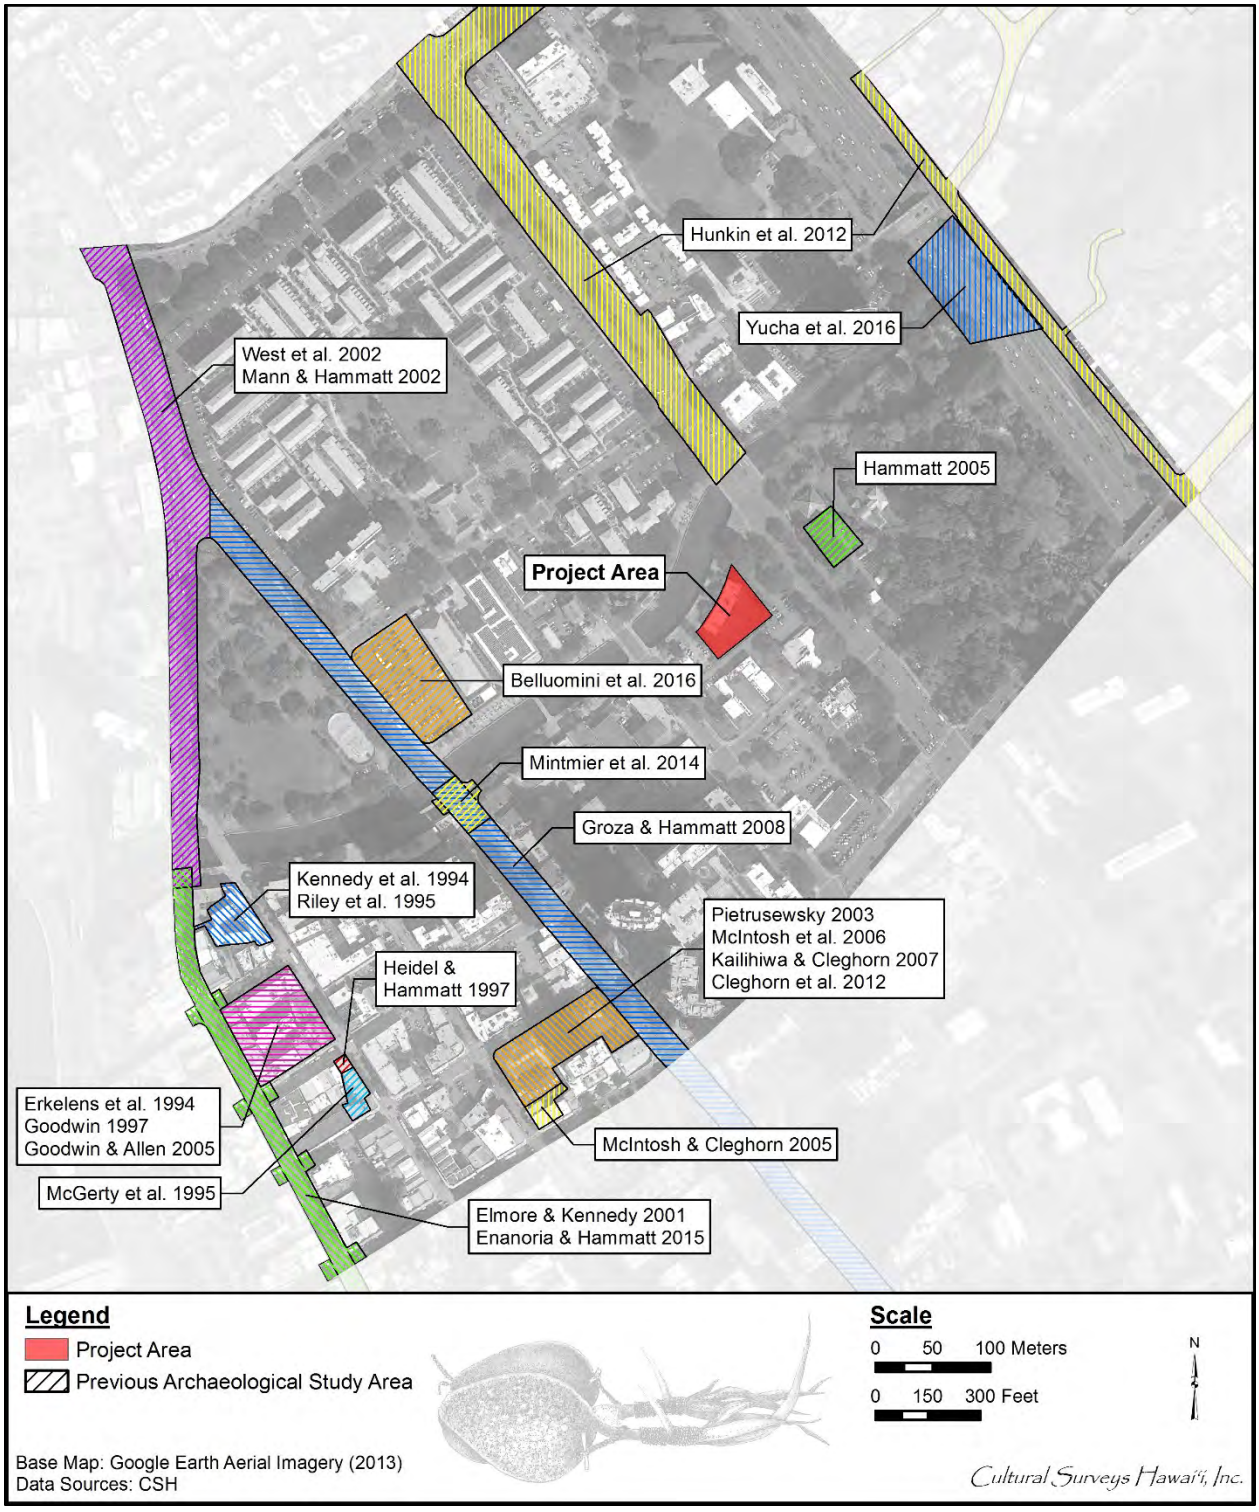

Figure 17. Previous archaeological studies within the vicinity of the Halewai‘olu Senior Residence project area (Google Earth 2013)

Table 1. Previous archaeological studies in the vicinity of the project area

Reference	Type of Study	Location	Results (SIHP # 50-80-14-****)
Erkelens et al. 1994	Burial report	Kekaulike revitalization project, Diamond Head block	Documented four sets of human skeletal remains associated with SIHP # -4875
Kennedy et al. 1994	Archaeological inventory survey	Kekaulike revitalization project, ‘Ewa block	Identified SIHP # -4587, a small fishpond, and SIHP # -4588, a multi-component historic property consisting of 53 features dating from pre-Contact period to twentieth century, including three human burials
McGerty et al. 1995	Archaeological assessment (no fnds AIS)	Chinatown Community Service Center, on two parcels within Chinatown district	Concluded project area had potential to contain significant pre- and post-Contact cultural deposits; AIS recommended
Riley et al. 1995	Data recovery	Kekaulike revitalization project, ‘Ewa block	Documented 55 features spanning early pre-Contact period through twentieth century; C14 dating of SIHP # -4587, fishpond, yielded an early tenth century date; dating of SIHP # -4588, coral reef stone platform yielded an eleventh century date
Goodwin 1997	Archaeological inventory survey	Kekaulike revitalization project, Diamond Head block	Identified SIHP # -4875, consisting of over 100 features and six culturally enriched strata; majority of features interpreted as Native Hawaiian from early post-Contact period, but also included historic and modern features and structural remnants; documented a single burial
Heidel and Hammatt 1997	Archaeological testing	1,700-sq-ft lot in Chinatown	No historic properties identified in four test excavations
Elmore and Kennedy 2001	Archaeological monitoring	King St, between River St and Bethel St	Identified one in situ, flexed human burial (SIHP # -5781) between Maunakea St and Smith St

Reference	Type of Study	Location	Results (SIHP # 50-80-14-****)
Mann and Hammatt 2002	Archaeological monitoring	King St rehabilitation	Identified one incomplete, previously disturbed, human burial (SIHP # -6317) near intersection of King St and Punchbowl St and a pit feature containing non-human skeletal remains at corner of King St and Richards St (no SIHP # assigned)
West et al. 2002	Archaeological monitoring	Installation of water mains along King St, between Liliha and River St	Identified Honolulu Rapid Transit & Land Company (HRT&L) trolley (SIHP # -5942) and associated artifacts
Pietrusewsky 2003 (in Kailihiwa and Celghorn 2007)	Osteological analysis	Smith-Beretania parking lot	Identified two children, five young adults, and 16 adults of Asian, Caucasian, and/or Polynesian descent (SIHP # 50-80-12-6672)
Goodwin and Allen 2005	Data recovery	Kekaulike revitalization project, Diamond Head block	Excavated four house compounds and a blacksmith’s shop (SIHP # -4875); C14 dating indicated area was in use as early as thirteenth century; four human burials documented
Hammatt 2005	Burial report	Foster Botanical Gardens (180 North Vineyard Blvd)	Human bone fragments recovered from backpile and reinterred on botanical garden grounds (No SIHP # assigned)
McIntosh and Cleghorn 2005	Archaeological inventory survey	Pearl St One Bldg	Identified SIHP # -6691, a four-component site composed of two disturbed sets of human remains, two historic trash pits, charred remains of a Chinatown structure destroyed in 1900 Chinatown fire, and remnant of a historic building that partially collapsed in 2001
McIntosh et al. 2006	Archaeological inventory survey	Smith-Beretainia parking lot	Identified SIHP #50-80-12-6672, which includes trash pits, a cooking feature, building structural foundations, traditional and historic artifacts, and abundant midden deposits
Kailihiwa and Cleghorn 2007	Archaeological monitoring	Smith-Beretania parking lot	Identified SIHP # -6672, including 23 sets of human remains

Reference	Type of Study	Location	Results (SIHP # 50-80-14-****)
Groza and Hammatt 2008	Archaeological monitoring	Beretania St between King St and Alapa‘i St	No historic properties identified, likely due to previous disturbance
Cleghorn et al. 2012	Data recovery	Smith-Beretania parking lot	Documented SIHP # -6772, consisting of numerous pits, privies, and miscellaneous features with traditional Hawaiian artifacts and two human burials
Hunkin et al. 2012	Archaeological monitoring	Kalihi/Nu‘uanu sewer project	Identified isolated human bone fragment in fill material (no SIHP # assigned)
Mintmier et al. 2014	Archaeological monitoring	Intersection of Beretania St and River St	No historic properties identified
Enanoria and Hammmatt 2015	Archaeological monitoring	King St Reconstruction between Bethel and River St	No historic properties identified
Belluomini et al. 2016	Archaeological inventory survey	American Savings Bank Campus (300 N Beretania St)	Identified SIHP # -7933, human remains and associated features; SIHP # -7934, LCA boundary wall remnants; and SIHP # -7935, building foundation remnants
Yucha et al. 2016	Archaeological monitoring	H-1 from Middle St to Ward Ave	No historic properties identified

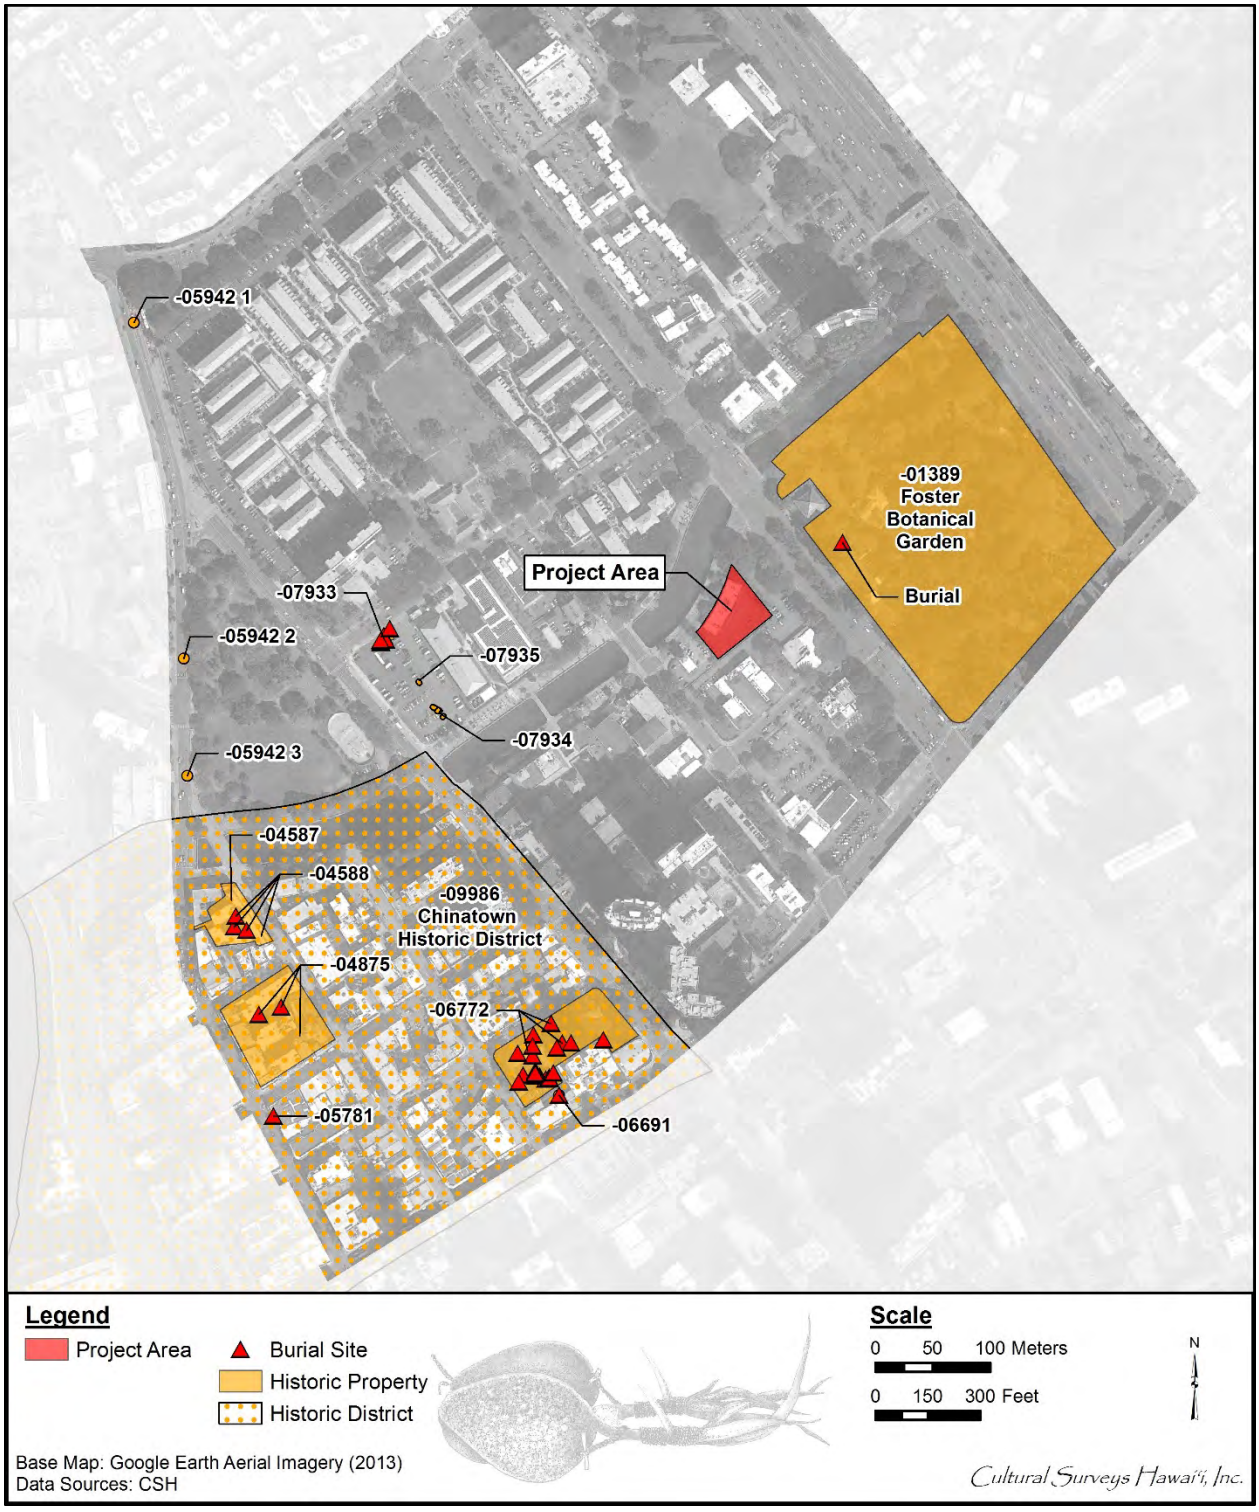

Figure 18. Aerial photograph showing the locations of documented historic properties and burials within the vicinity of the Halewai‘olu Senior Residence project area

component historic property consisting of 53 features of various functions spanning the pre- to post-Contact periods. The features included 20 postholes, three pits of indeterminate function, three fire pits, three cut stone walls, seven crushed coral foundations, a burn layer (possibly from the 1900 or 1902 Chinatown fires), historic trash pits, and three human burials (two likely historic and one likely traditional Hawaiian) (Kennedy et al. 1994).

Subsequently, Riley et al. (1995) conducted data recovery for SIHP #s 50-80-14-4587 and -4588 (Riley et al. 1995). Sixty-four test units were excavated, and 55 features were documented, including three additional human burials. Radiocarbon dating of charcoal from SIHP # -4587 yielded a much earlier date than expected, within the tenth century. As the dated charcoal was obtained from behind the pond wall, the radiocarbon date was believed to represent the construction or renovation of the pond. Investigations indicated use of the pond continued up to the 1860s, when it was in-filled.

Analysis of the documented features of SIHP # -4588 indicated an extensive timeline of occupation of the study area. Features ranged from the tenth and eleventh centuries (as evidenced by the pond and a coral reef stone platform with the remnants of a possible human burial), to the seventeenth and eighteenth centuries (as evidenced by a hard-packed living surface with associated traditional Hawaiian artifacts), through the nineteenth century (as evidenced by a latrine pit, a Kaua‘i *poi* pounder, and traditional style fishhooks made from copper), and up to the twentieth century.

Osteological analysis of the three human burials identified during data recovery and the three burials documented during the AIS identified five of the six individuals as being of Chinese descent. The other individual was in a “pre-Western contact” context and was determined to be Native Hawaiian.

5.1.3 McGerty et al. 1995

In 1995, Scientific Consultant Services, Inc. (SCS) conducted an archaeological assessment (no finds AIS) for the Chinatown Community Service Center project, on two parcels of land in the Chinatown district (TMKs: [1] 1-7-003:014 and 015), on the *mauka* side of the block bordered by Hotel, Maunakea, King, and Smith streets (McGerty et al. 1995). After conducting thorough research into previous archaeological work in the area, myths and legends, archival documents, and previous land use, SCS concluded the project area had the potential to contain significant pre- and post-Contact cultural deposits and recommended that the project area be subject to an AIS.

5.1.4 Heidl and Hammatt 1997

In 1997, CSH conducted archeological testing at a 1,700-sq-ft parcel (TMK: [1] 1-7-003:014) in Chinatown (Heidel and Hammatt 1997). Four test trenches yielded no cultural deposits or materials, with the exception of a historic basement filled with modern debris and sediment. The report does not present a possible association or date of occupation for the basement, and no SIHP number was assigned (Heidel and Hammatt 1997).

5.1.5 Elmore and Kennedy 2001

Elmore and Kennedy (2001) conducted archaeological monitoring for miscellaneous sidewalk improvements on King Street between River Street and Bethel Street. One in situ human burial, designated as SHIP # 50-80-14-5781, was identified between Maunakea Street and Smith Street,

beneath the *mauka* lane of King Street. Based on the burial's flexed position and lack of post-Contact artifacts, the burial was determined to be Native Hawaiian. Artifacts recovered from the backdirt pile included ceramic fragments, glass, a shark tooth, possible drilled shell fragments, a possible shark tooth tool, and one fishhook; however, none could be positively associated with the burial.

5.1.6 Mann and Hammatt 2002

In 2002, CSH conducted archaeological monitoring for the King Street Rehabilitation project on sections of King Street between Dillingham Boulevard and South Street (Mann and Hammatt 2002). One human burial, designated as SIHP # 50-80-14-6371, was identified near the intersection of South King Street and Punchbowl Street, *makai* of Honolulu Hale. The skeletal remains were incomplete and poorly preserved due to previous disturbance by construction activities; the SHPD took custody of the remains. In addition, a pit feature containing a substantial quantity of non-human skeletal remains was documented at the corner of South King Street and Richards Street; however, no SIHP number was assigned.

5.1.7 West et al. 2002

In 2002, Garcia and Associates (GANDA) conducted archaeological monitoring for the installation of water mains along King Street between Liliha Street and River Street (West et al. 2002). One previously recorded historic property, structural remnants of the Honolulu Rapid Transit & Land Company Trolley (SIHP # 50-80-14-5942), was documented in multiple locations. Documented remnants include railroad ties, metal hardware, and bricks. Small sections of the trolley track (not in situ) were exposed atop fill material, which overlay coral bedrock. Identified artifacts included glass bottles and jars, handmade leather shoes, ceramics, faunal bone (pig, cow and chicken), shell, wood, charcoal, Belgian Block cobblestones, and metal hardware.

5.1.8 Pietrusewsky 2003; McIntosh et al. 2006; Kailihiwa and Celghorn 2007; Cleghorn et al. 2012

In 2001, Pacific Legacy conducted an AIS for Block 10: Smith-Beretania Parking Lot in Chinatown (McIntosh et al. 2006). Six backhoe excavations yielded abundant post-Contact structural materials and artifacts with 68 associated subsurface features, designated as SIHP # 50-80-14-6672. The features included trash pits, cooking features, and building structural foundations with associated European, American, and Asian artifacts; traditional Hawaiian artifacts; and abundant midden deposits. Most of the structural remnants dated between 1850 and 1900 and were likely associated with the buildings destroyed in the 1900 Chinatown fire. Post-Contact artifacts consisted of glass, metal, ceramic, and bone, indicating a wide variety of functions. Fewer Native Hawaiian artifacts were recovered; these included *poi* pounder fragments, an *‘ulu maika*, cowrie shell lures, a complete stone adze, and a complete conch shell trumpet.

Subsequently in 2001, Pacific Legacy conducted data recovery for Block 10: Smith-Beretania Parking Lot to mitigate the impacts to SIHP # -6672 (Cleghorn et al. 2012). Data recovery excavations identified numerous pits, privies, and miscellaneous features with traditional Hawaiian and post-Contact artifacts. Two human burials, one adult and one child, were also documented.

In 2002, Pacific Legacy conducted archaeological monitoring for Block 10: Smith-Beretania Parking Lot (Kailihiwa and Cleghorn 2007). Additional features, deposits, and human remains

associated with SIHP # -6672 were identified; these consisted of six non-burial features and 22 human burials. In addition, 20 “find spots” (locations where artifacts were collected but not associated with a cultural layer or deposit) were documented. The human remains were primarily identified near the south wall of the Smith-Beretania apartment structure.

Dr. Michael Pietrusewsky analyzed the human remains in 2003 and determined they could represent individuals of Asian, Caucasian, and/or Polynesian descent. The analysis revealed the remains included two children, five young adults, and 16 adults, and Dr. Pietrusewsky (2003) suggests a portion of the study area may have served as a family cemetery. All burials were inventoried, excavated, mapped, and reburied on the property.

5.1.9 Hammatt 2005

In 2004, CSH received a call from Terry Hildebrand of the City and County of Honolulu Department of Design and Construction reporting a discovery of human remains during trenching activities at Foster Botanical Gardens (SIHP # 50-80-14-1389) (Hammatt 2005). Dr. Sara Collins of the SHPD noted that the remains, which included a maxilla fragment and portion of a long bone, were found in a previously disturbed context. CSH archaeologists screened the backdirt in which the maxilla fragment was found and recovered additional remains, including a long bone, clavicle, fragments of a mandible, loose teeth, and rib fragments. The remains were reinterred on the grounds of the botanical garden near the western side of the Kuan Yin Temple.

5.1.10 McIntosh and Cleghorn 2005

In 2005, Pacific Legacy conducted an AIS at the corner of Nu‘uanu Avenue and Pauahi Street (McIntosh and Cleghorn 2005). A multi-component historic property was identified: SIHP # 50-80-14-6691, composed of the incomplete remains of two disturbed human burials within two historic trash pits; the charred remains of a structure destroyed in the 1900 Chinatown fire; and structural remnants of a historic building that partially collapsed in 2001. The burials had been previously disturbed and incorporated into later trash pits, likely during the early 1900s.

5.1.11 Groza and Hammatt 2008

In 2008, CSH conducted archaeological monitoring for the Rehabilitation of Streets project on an approximately 1,800-m (5,900-ft) segment of Beretania Street between North King Street and Alapa‘i Street (Groza and Hammatt 2008). No historic properties were identified, and extensive fill deposits were encountered. In the eastern portion of the study area, the natural sediment consisted of volcanic cinder from the Sugar Loaf/Tantalus series. In the western portion, the natural sediment was silty clay loam with clay inclusions, likely due to the close proximity of Nu‘uanu Stream.

5.1.12 Hunkin et al. 2012

In 2011, CSH conducted archaeological monitoring for the Kalihi/Nu‘uanu Sewer Rehabilitation project, which extended from Middle Street in Kalihi west toward Pi‘ikoi Street near the eastern boundary of Punchbowl Crater (Hunkin et al. 2012). No historic properties were identified. The study area’s subsurface deposits appeared to have been disturbed by past land use, including extensive earthmoving activity and importation of fill sediments. However, a single isolated human bone fragment was discovered in fill material. The custody of this skeletal fragment

was transferred to the SHPD on 4 August 2008, and treatment of the fragment was carried out under the SHPD's authority. No SIHP number was assigned.

5.1.13 Mintmier et al. 2014

Pacific Consulting Services, Inc. (PCSI) conducted archaeological monitoring for traffic infrastructure improvements at the intersection of Beretania and River streets, partially within the Chinatown Historical District, SIHP # 50-80-14-9986. However, no contributing features/components of SIHP # -9986 nor any new historic properties were documented during monitoring. Eighteen glass and ceramic artifacts were collected and dated to the late nineteenth to mid-twentieth century.

5.1.14 Enanoria and Hammatt 2015

In 2013, CSH conducted archaeological monitoring for rehabilitation and replacement of water, gas, sewer, and drain lines along King Street and at each of the cross-street intersections between River and Bethel streets (Enanoria and Hammatt 2015). In general, the documented stratigraphy consisted of a series of fill sediments associated with the construction of the existing asphalt surface and the construction of subsurface utilities, overlying disturbed natural alluvium, natural volcanic cinder, and the coral shelf. No historic properties were identified.

5.1.15 Belluomini et al. 2016

In 2016, CSH conducted an AIS for the American Savings Bank Campus at 300 North Beretania Street. Subsurface testing identified three historic properties: SIHP #s 50-80-14-7933, -7934, and -7935. SIHP # -7933 consists of seven human burials, designated as Burials 1–7, and six associated features, designated as Features 8–13. SIHP # -7933 was identified in the northwest portion of the study area, within LCA 731. SIHP # -7934 consists of structural remnants interpreted as LCA boundary walls and designated as Features 1–3. SIHP # -7934 was identified in the southeast portion of the study area. SIHP # -7935 consists of the structural remnants of a building foundation, identified in the central portion of the study area.

5.1.16 Yucha et al. 2016

Between 2013 and 2014, CSH conducted archaeological monitoring for the H-1 Resurfacing project from Middle Street to Ward Avenue. As archaeological monitoring was conducted only for excavations conducted deeper than the overlying asphalt/concrete surfaces, monitoring was limited to the area of the Nu‘uanu Stream Bridge widening and lighting replacement activities, identified as Project Area 3. The archaeologists documented a series of highly disturbed fill deposits that averaged more than 100 cm in depth. No historic properties were identified

Section 6 Community Consultation

6.1 Introduction

Throughout the course of this assessment, an effort was made to contact and consult with NHOs, agencies, and community members including descendants of the area, in order to identify individuals with cultural expertise and/or knowledge of the *ahupua‘a* where the project area is located. CSH initiated its outreach effort in July 2019 through letters, emails, telephone calls, and in person contact.

6.2 Community Contact Letter

Letters (Figure 19 and Figure 20) along with a map and aerial photograph of the project were mailed with the following text:

> At the request of Halewai‘olu Senior Development, LLC (HSD) on behalf of the City and County of Honolulu (City), Cultural Surveys Hawai‘i, Inc. (CSH) is conducting a cultural impact assessment (CIA) for the Halewai‘olu Senior Residence Project, Honolulu Ahupua‘a, Honolulu (Kona) District, O‘ahu Island, Tax Map Key (TMK): [1] 1-7-006:012. The project area, located at 1331 River Street, consists of approximately 27,000 square feet (0.62 acres) encompassing the entirety of the existing building and its surrounding parking lot. The project area is depicted on a portion of the 1998 Honolulu U.S. Geological Survey (USGS) 7.5-minute topographic quadrangle and a 2013 aerial photograph.
>
> The proposed project involves the construction of an affordable housing facility for seniors aged 62 and over at 80% Area Median Income (AMI) and below, with the vast majority of units (139 units) available to seniors with incomes at 60% AMI and below. To facilitate construction, the John R. Gilliland Building and its surrounding parking lot is planned for demolition where it will be replaced by the proposed housing facility. The housing facility will consist of 155 units (plus 1 resident manager units), a community room with warming kitchen, restrooms and storage, computer room, social services activity rooms, social services office, property management offices, mail and package boxes and elevator lobby on the ground level. A courtyard, retail space and parking access, along with trash compactor room and loading area are also on the ground level. Vehicle and bicycle parking are on the next two levels with a recreation area, laundry room and equipment rooms on the fourth level. Residential units are on the fifth through seventeenth levels. Please refer to [attachment] for a site development plan.
>
> The City purchased the project area in 1992 utilizing funding from U.S. Department of Housing and Urban Development (HUD) Community Development Block Grants (CDBG). Project construction is funded with equity through the Low Income Housing Tax Credit program and Hawai‘i State funds. With the use of HUD CDGB funding for initial land purchase, the project is subject to HUD’s CDBG environmental/historic preservation review regulations (24 CFR Part 58), which includes compliance with the National Environmental Policy Act (NEPA) and

Section 106 of the National Historic Preservation Act (NHPA). Following 24 CFR Part 58, the City is the responsible entity to carry out this federal environmental and historic preservation review compliance. As a City project on City-owned land, the City is also responsible for the project's State of Hawai‘i environmental (Hawai‘i Revised Statutes [HRS] §343) and historic preservation (HRS §6E) review. While this CIA is specifically carried out to comply with Hawai‘i State environmental review under HRS §343, the CIA consultation effort and outreach will generally dovetail with the project's federal and state environmental and historic preservation review consultation.

At the time of Western Contact at the end of the eighteenth century, the project area would have been on the outskirts of the settlement of Kou, the traditional Native Hawaiian community that developed into Honolulu. Native Hawaiians and increasingly non-Native Hawaiians continued to inhabit and use the project area and its vicinity in the nineteenth and twentieth centuries as Honolulu developed and expanded. The project area is generally considered part of Honolulu's Chinatown, although it is outside the designated Chinatown National Historic District boundary. In studies to support the Honolulu Authority for Rapid Transit's Honolulu Rapid Transportation Project, Chinatown was identified as a potential traditional cultural property eligible for listing on the National Register of Historic Places. Nu‘uanu Stream and the Lum Sai Ho Tong building are immediately adjacent to the project area.

As outlined in the implementation guidelines for HRS §343, the purpose of this CIA is to gather information about the project area and its surroundings through research and interviews with individuals knowledgeable about this area in order to assess potential impacts to the cultural resources, cultural practices, and beliefs identified as a result of the planned project. We are seeking your *kōkua* and guidance regarding the following aspects of our study:

- **General history as well as present and past land use of the project area**
- **Knowledge of cultural sites that may be impacted by future development of the project area—for example, historic and archaeological sites, as well as burials**
- **Knowledge of traditional gathering practices in the project area, both past and ongoing**
- **Cultural associations of the project area, such as *mo‘olelo* and traditional uses**
- **Any cultural significance of the project area in relation to the Chinatown community**
- **Referrals of *kūpuna* or elders and *kama‘āina* who might be willing to share their cultural knowledge of the project area and the surrounding *ahupua‘a* lands**
- **Any other cultural concerns related to Hawaiian, or the Chinatown community's, cultural practices within or in the vicinity of the project area**

July 2019

Aloha,

At the request of Halewai‘olu Senior Development, LLC (HSD) on behalf of the City and County of Honolulu (City), Cultural Surveys Hawai‘i, Inc. (CSH) is conducting a cultural impact assessment (CIA) for the Halewai‘olu Senior Residence Project, Honolulu Ahupua‘a, Honolulu (Kona) District, O‘ahu Island, Tax Map Key (TMK): [1] 1-7-006:012. The project area, located at 1331 River Street, consists of approximately 27,000 square feet (0.62 acres) encompassing the entirety of the John R. Gilliland Building and its surrounding parking lot. The project area is depicted on a portion of the 1998 Honolulu U.S. Geological Survey (USGS) 7.5-minute topographic quadrangle (Figure 1) and a 2013 aerial photograph (Figure 2).

The proposed project involves the construction of an affordable housing facility for seniors aged 62 and over at 80% Area Median Income (AMI) and below, with the vast majority of units (139 units) available to seniors with incomes at 60% AMI and below. To facilitate construction, the John R. Gilliland Building and its surrounding parking lot is planned for demolition where it will be replaced by the proposed housing facility. The housing facility will consist of 155 units (plus 1 resident manager units), a community room with warming kitchen, restrooms and storage, computer room, social services activity rooms, social services office, property management offices, mail and package boxes and elevator lobby on the ground level. A courtyard, retail space and parking access, along with trash compactor room and loading area are also on the ground level. Vehicle and bicycle parking are on the next two levels with a recreation area, laundry room and equipment rooms on the fourth level. Residential units are on the fifth through seventeenth levels. Please refer to Figure 3 for a site development plan.

The City purchased the project area in 1972 utilizing funding from U.S. Department of Housing and Urban Development (HUD) Community Development Block Grants (CDBG). Project construction is funded with equity through the Low Income Housing Tax Credit program and Hawai‘i State funds. With the use of HUD CDGB funding for initial land purchase, the project is subject to HUD's CDBG environmental/historic preservation review regulations (24 CFR Part 58), which includes compliance with the National Environmental Policy Act (NEPA) and Section 106 of the National Historic Preservation Act (NHPA). Following 24 CFR Part 58, the City is the responsible entity to carry out this federal environmental and historic preservation review compliance. As a City project on City-owned land, the City is also responsible for the project's State of Hawai‘i environmental (Hawai‘i Revised Statutes [HRS] §343) and historic preservation (HRS §6E) review. While this CIA is specifically carried out to comply with Hawai‘i State environmental review under HRS §343, the CIA consultation effort and outreach will generally dovetail with the project's federal and state environmental and historic preservation review consultation.

At the time of Western Contact at the end of the eighteenth century, the project area would have been on the outskirts of the settlement of Kou, the traditional Native Hawaiian community that

Figure 19. Community consultation letter, page one

developed into Honolulu. Native Hawaiians and increasingly non-Native Hawaiians continued to inhabit and use the project area and its vicinity in the nineteenth and twentieth centuries as Honolulu developed and expanded. The project area is generally considered part of Honolulu's Chinatown, although it is outside the designated Chinatown National Historic District boundary. In studies to support the Honolulu Authority for Rapid Transit's Honolulu Rapid Transportation Project, Chinatown was identified as a potential traditional cultural property eligible for listing on the National Register of Historic Places. Nu‘uanu Stream and the Lum Sai Ho Tong building are immediately adjacent to the project area.

As outlined in the implementation guidelines for HRS §343, the purpose of this CIA is to gather information about the project area and its surroundings through research and interviews with individuals knowledgeable about this area in order to assess potential impacts to the cultural resources, cultural practices, and beliefs identified as a result of the planned project. We are seeking your *kōkua* and guidance regarding the following aspects of our study:

- **General history as well as present and past land use of the project area**
- **Knowledge of cultural sites that may be impacted by future development of the project area—for example, historic and archaeological sites, as well as burials**
- **Knowledge of traditional gathering practices in the project area, both past and ongoing**
- **Cultural associations of the project area, such as *mo‘olelo* and traditional uses**
- **Any cultural significance of the project area in relation to the Chinatown community**
- **Referrals of *kūpuna* or elders and *kama‘āina* who might be willing to share their cultural knowledge of the project area and the surrounding *ahupua‘a* lands**
- **Any other cultural concerns related to Hawaiian, or the Chinatown community's, cultural practices within or in the vicinity of the project area**

In advance, we appreciate your assistance in our research effort. If you are interested in participating in this study, please contact Chantellee Spencer at cspencer@culturalsurveys.com. We are also available by phone at (808) 965-6478.

Me ka ha‘aha‘a,

Chantellee K. Spencer
Cultural Researcher

6.3 **Community Contact Table**

Below in Table 2 are names, affiliations, dates of contact, and comments from NHOs, individuals, organizations, and agencies contacted for this project. Results are presented below in alphabetical order.

Table 2. Community contact table

Name	Affiliation	Comments
Anulao, Ennilaee	Borthwick Mortuary	Letter and figures sent via email 12 July 2019
Au, Alvin	Chair, Downtown NB 13	Letter and figures sent via email 12 July 2019
Au Hoy, Cathy	Aala Dog Park Association	Letter and figures sent via email 12 July 2019
Au, Gordon	Member of Chinatown Community Center Association	Mr. Au was cc'd in an email from Mr. Wesley Fong on 15 July 2019. Mr. Fong sent the following message: *Chantelle: The Chinatown Community Center Association would like to continue participating in this topic affecting Halewaiolu.* CSH replied with the following message on 16 July 2019: *Aloha Mr. Fong and members of the Chinatown Community Center Association, mahalo for reaching out to me.* *I am thinking of a way to meet with you all but not sure how to go about syncing our schedules so I am open to suggestions.* *The most efficient way I can think of is to have a group meeting with 4-6 people. This would be more manageable in terms of recording everyone's comments and testimony.* *If more than six people would like to participate, we could consider holding meetings at two different times or on two different days.* *If I can get a headcount of who will be participating maybe then we can determine if this will take one or two days and maybe then we can set a date.* *I am open to suggestions and I appreciate you reaching out to me.*
Baldauf, Natalie	*Kama'āina*	Letter and figures sent via USPS 12 July 2019

Name	Affiliation	Comments
		Small meeting is OK. There should be at least three from CCCA and I think 3 from LSHT since the members may overlap. When and where? Please give us several dates to chose. CSH replied same day: *I will be flying in from Hilo to conduct this meeting and working on a location for us to meet. I will be in touch with you regarding the dates.* Mr. Fong replied: *Thanks* CSH reached out to Mr. Fong on 5 August 2019 proposing other options to meet: *Aloha Mr. Fong, In exploring all options to get feedback from you and other community members, will submitting individual testimony suffice? Or do you all prefer a meeting in person?* *Looking forward to hearing from you.* Mr. Fong replied same day: *In person. So we can know what is everyone else's concerns. Tx, WES.* CSH sent Mr. Fong a follow up email on 18 September 2019: *I hope this email finds you all well and in good spirits. I tried reaching out to you all last week Monday regarding the next Section 106 meeting. I have not received a reply and the meeting is scheduled to take place tomorrow night, 5:30pm in the Maui Room of the Blaisdell Center. Immediately following the Section 106 meeting, there will be time available for you all to meet with me to speak or submit testimony for the consultation portion of the CIA. Please respond to this email if you will be attending either the Section 106 meeting or if you will be available to meet after.* Mr. Fong responded the same day: *I will attend representing Chinatown Community Center Association.* Following the Section 106 meeting on 19 September 2019 Mr. Fong contacted the Board of Directors of the Chinatown Community Center Association and forwarded an open-ended questionnaire provided by CSH. Two members of the Board filled out the questionnaires and were forwarded an authorization form asking permission for CSH to use their answers

Although LSHT is part of CCCA, I think we may want to have a separate meeting to address our concerns. Please le me know when would be best for you. Thank you very much.* CSH replied 23 July 2019: *Aloha Mr. Lum, Mahalo for reaching out to me, sorry for the delayed response. I'm still working on dates but will coordinate separately for the two groups*

Name	Affiliation	Comments
		(LSHT and CCCA). Would it be possible to meet with you folks during the week or only on the weekend?" Mr. Lum replied same day: "*Aloha Chantelle, Thank you very much* CSH reached out to Mr. Lum on 5 August 2019 with other options to meet: *Aloha Mr. Lum,* *In exploring all options to get feedback from you and other members of Lum Sai Ho Tong, will submitting individual testimony suffice? Or do you prefer a meeting in person?* *Looking forward to hearing from you.* Following a Section 106 meeting on 19 September 2019 which was attended by. Howard Lum, CSH was in contact with both Howard and Kehaulani Lum who submitted testimony on behalf of Lum Sai Ho Tong.
Lum, Kehaulani	Ali‘i Pauahi Hawaiian Civic Club/Lum Sai Ho Tong	Letter and figures sent via email 12 July 2019 Ms. Lum was cc’d in an email from Mr. Wesley Fong on 15 July 2019. Mr. Fong sent the following message: *Chantelle: The Chinatown Community Center Association would like to continue participating in this topic affecting Halewaiolu.* CSH replied with the following message on 16 July 2019: *Aloha Mr. Fong and members of the Chinatown Community Center Association, mahalo for reaching out to me.* *I am thinking of a way to meet with you all but not sure how to go about syncing our schedules so I am open to suggestions.* *The most efficient way I can think of is to have a group meeting with 4-6 people. This would be more manageable in terms of recording everyone’s comments and testimony.* *If more than six people would like to participate, we could consider holding meetings at two different times or on two different days.* *If I can get a headcount of who will be participating maybe then we can determine if this will take one or two days and maybe then we can set a date.*

Name	Affiliation	Comments
		I am open to suggestions and I appreciate you reaching out to me. Ms. Lum was cc'd in an email from Mr. Howard Lum on 17 July 2019. Mr. Lum sent the following message: *Aloha Chantelle, Kehau and I are with Lum Sai Ho Tong and we would like to meet with you. Although LSHT is part of CCCA, I think we may want to have a separate meeting to address our concerns. Please let me know when would be best for you. Thank you very much.* Ms. Lum was cc'd in an email from Mr. Bruce Keaulani on 23 July 2019. His message read: *Aloha Chantellee, Kehaulani Lum and I are interested in participating in the study provided by CSH for the purpose of this CIA. As Cultural practitioners we hope to work with you to ensure historical knowledge of the Chinatown area is secured in generations to come. Please feel free to call or write with further questions. Mahalo nui* Following a Section 106 meeting on 19 September 2019 which was attended by. Howard Lum, CSH was in contact with both Howard and Kehaulani Lum who submitted testimony on behalf of Lum Sai Ho Tong. In addition, she also visited the CSH office with Mr. Bruce Keaulani to drop off documents to be included in the CIA.

Section 7 Previous Oral History Research

The following section draws from previous oral history research conducted by the University of Hawai‘i’s Center for Oral History (UHCOH) to highlight the voices of several people who have or have had deep knowledge of the culture and history of the project areas. Indigenous cultures have used oral history to preserve a record of their past in the absence of written records.

In 1976, the Center for Oral History (COH) was established by the Hawai‘i State Legislature with the intent to preserve the memories of Hawai‘i’s people through oral interviews for the purpose of disseminating transcripts to researchers, students, and the general community. To date, 12 communities have been recorded by the COH, two of which are in the project area, Kaka‘ako and Waikīkī. Below are summaries and excerpts from this vast collection of oral histories. Please note that diacritical marks for Hawaiian words are presented as they appeared in the actual UHCOH study, unless otherwise summarized.

7.1 Honolulu

The oral history from the *ahupua‘a* of Honolulu has not been recorded to date. Historical documentation, scholarly endeavors, and oral histories from the peripheral localities of Kaka‘ako have been included as they reference the place Ka‘ākaukukui, an *‘ili* just west of the project area.

7.2 Remembering Kaka‘ako

In 1978, the UHCOH produced a two-volume report called Remembering Kaka‘ako, which covered the vibrant residents of the area during the early to mid-nineteenth century (UHCOH 1978). The Kaka‘ako area was home to a diverse ethnic mix of Hawaiians, Chinese, Japanese, Filipinos, Portuguese, and others. Bachelors lived in rented rooms while families lived in small homes clustered together with others of the same ethnic background. Although each ethnic group lived in their own clusters, diverse residents congregated at church, school, and during community activities and events. Their *mo‘olelo* color the cultural and historical background with nuanced recollections and add depth to the information provided by *kūpuna* and *kama‘āina* interviewed for this CIA. Summaries and excerpts from this collection of oral histories are presented below.

7.2.1 Eleanor Nahiapo Wilson Heavy

Mrs. Eleanor Nahiapo Wilson Heavy, a Hawaiian-English-Chinese woman, was born in Kaka‘ako in 1912 and lived there until 1938 (UHCOH 1978:340–405). Her home was on Pohukaina and South streets and she attended Muriel Kindergarten in Kaka‘ako. She used to help her mother collect herbs such as *pōpolo* (black nightshade; *Solanum nigrum*) for cold and congested chest, and the *‘uhaloa* (American weed; *Waltheria indica var. americana*) root for colds. The people in Kaka‘ako at this time still went to the medicinal *kahuna*; the hospital was a place where you would go when no hope remained.

Her mother traveled to the Squattersville area (Ka‘ākaukukui) to gather *limu* (seaweed), *wana* or *‘ina* (sea urchins), squid, and *‘ōpae* (shrimp) for the family’s meals. Mrs. Heavy also remembered that they used Hawaiian salt to embalm bodies. They would stuff the *‘ōkole* (buttocks) with salt, working it in with *ti* leaves. They also put salt in cuts under the armpit, and within the mouth, nose and ears. The body then could be viewed by relatives at the undertakers for several

days. The body was later put into a coffin for burial at the Catholic Cemetery or at the Kawaiaha‘o Church cemetery, both on King Street.

7.2.2 Mary Ka‘uhane Naito

Mary Ka‘uhane Naito, Hawaiian-Caucasian, was born in Kaka‘ako in 1920 (UHCOH 1978:877–912). Her father worked at the Hawaiian Electric powerhouse. Their family lived for a time in Squattersville, and they were one of the families evicted when the houses were torn down. Although she remembered that Kaka‘ako was mainly a district of poor people, she still talked of her birthplace with pride:

> I going tell I’m proud because I come from Kakaako because we had good people. We get along with one another. You know? And if there’s a Palama team going, and Kakaako team go, we still stick together. You know. Regardless of what, we still stick. And we all born and raise in Kakaako. . . That’s why I’m not ashamed to say that I came from Kakaako because all the people in Kakaako was good. [UHCOH 1978:911]

Section 8 *Kama‘āina* Interviews

The authors and researchers of this report extend our deep appreciation to everyone who took time to speak and share their *mana‘o* and *‘ike* with CSH whether in interviews or brief consultations. We request that if these interviews are used in future documents, the words of contributors are reproduced accurately and in no way altered, and that if large excerpts from interviews are used, report preparers obtain the express written consent of the interviewee/s. *Consultation efforts are still ongoing for this project.*

8.1 Gerald Lam

Mr. Gerald Lam attended a public meeting in compliance with the National Historic Preservation Act (NHPA) Section 106 and HRS Chapter 6E Consultation for the proposed project. Following the meeting, CSH sent Mr. Lam a set of open-ended interview questions to assist with a personal statement on his knowledge of Honolulu, its history, and his personal connection to places nearest the project area. To maintain the integrity of Mr. Lam's personal statement and to honor the names of *kūpuna* mentioned, the questions and Mr. Lam's answers are presented below in its entirety as it was submitted to CSH. The questions with no responses were purposely left unanswered.

1. Name

Gerald
Nalikolauokalanikea`alohilanikīkaupe`aokalanikapuhupineakaleikoakeopuhiwa-a-Pākī Yun Chin Lam

2. Where were you born?

Honolulu, Hawai`i

3. Where did you grow up?

I grew up and was culturally trained personally by my family practitioners, at the time each publicly acclaimed, specifically in Papakōlea, Pauoa, Makiki, Honolulu Chinatown, Nu`uanu, Kaka`ako, Ala Moana, Waikīkī, Kaimuki, Hanalei and Hā`ena on Kauai Island, Honokahua on Maui Island. As a child, my home mailing addresses included Tantalus Drive, Victoria Street, Kukui Street, Alohea Lane, Prince Edward Street, Hanalei P.O., and Honokahua homestead.

4. When were you born?

August 11, 1951

5. Parents. Mother. Father.

Father: Clarence Wing Hoon Lam (10-12-1917 – 09-14-2018)

Mother: Ella Pākī Fong Lam (11-29-1921 – 10-07-2017)

6. Occupation/Affiliation

Attorney at Law

7. Area of residence

1979 – present: Ko`olaupoko Moku, O`ahu Island

8. How long have you lived or been associated with the area?

1951 – 1979: See question 3, supra.

1979 – present: See question 7, supra.

9. Personal and/or family connection to ahupua`a

Nā Ahupua`a o Nu`uanu a me Pauoa, Pu`umawaena i Auwaiolimu Kewalo, Kalawahine:

Native

Pākī cultural kuleana birthright acknowledged by Kamehameha V Kapuāiwa in 1871 to my G-grandmother Princess Kapuhupineakaleikoakeopuhiwa Pākī

Part II: Historical information

11. Is there anything you would like to say about the general history of the area, or past and present land use?

Generally, the settlement homesteads of the native citizenry extended makai beginning from about where King Street runs today to the coastline. However, agriculture continued mauka into the upper valleys. Marshlands (such as Waikīkī and Ala Moana) and areas mauka of the concentration of the general citizenry were especially residences of kāhuna. A mauka example of kāhuna residence is seen along Nu`uanu river at today's `A`ala and Beretania streets where Palile kahuna representative of Ka`opulupulu and Lanikaula persuasions were buried in and adjacent to the royal patent land named "Palile." "Palile" is not to be confused with "palili" (taro shoot) or "palila" (native bird). "Palile" is exclusively a royal kapu name without other meaning. These kahuna burials are where lies the shark cave dedicated to Kamohoali`i specifically, whose cavern tubes extend mauka to Pu`u Mawaena (Puowaina) at Auwaiolimu and Kalawahine. Queen Lili`uokalani placed her Royal Garden there among the sacred springs, which feed 'ama'ama (fish of the ali`i) and other fish spawn makai. Palile kāhuna presided over this life of the land (`Āina i hane). Lo'i were fed above ground and fish spawn fed underground. Thus, resident kāhuna burials in perpendicular pairs had further comprised over time a broadly patterned Makali`i constellation. The traditional significance of this is universal throughout the Hawaiian archipelago. Notably explained, whereby the chain of islands extending from Kuaihelani in the West to the Big Island of Hawai`i to the East were received in divine birthright by the Kūki`i genealogical clan via its fasting high priests, who had voyaged from the West into the rising sun through Mokupuni o Ke`alohilanipe`aokalani (Kauai Island) to finally arrive at Lapawai on O'ahu Island. Their iwi kūpuna were then followed by three clan migrations from the East into Hawai`i, following the rising sun which sets in Hawai`i.

The arriving Ke`alohilani high priests of Kūki`i clan were Nanaulu descendants (aka Paumakua, Ohua, Maweke, Kākuhihewa, Pi`ilani, and Pākī). Ulu descendants arrived later circa 12th century C.E. (aka Pa`ao, Pilikaeaea, Hewahewa). Nanaulu kāhuna arrived at Lapawai on O`ahu Island, set the food bearing Makali`i Tree in Kawainui, and traveled over the Ko`olau at Konahuanui which was then split forming Lanihuli to the West and Nu`uanu Valley between. The living waters of IO then spread Ko'olaupoko from Kailua and Kona from Nu`uanu. Konahuanui and Lanihuli feed the sacred springs of Ko'olaupoko to the north and Kalawahine and Auwaiolimu to the south. Priestly supervision of sacred springs and life of the

land resides at Ke`alohilani (Mount Olomana) and extends over the Ko`olau to Pu`u Mawaena (Punchbowl Mountain). Annual fish runs and spawning circling O`ahu's coastline extend from these sacred springs of IO that extend north and south from Konahuanui and Lanihuli. As the gateway residence of the first arriving high priests of birthright, Ko`olaupoko is the kino lau of the archipelago, which its `uhane is Ke`alohilani (Mount Olomana), piko is circa Ulupau Head (in Mokapu), and `unihipili is Mokoli`i (in Ke`alohiwai at Kualoa). Notably, King Kahekili II resided in Kani`ohe (Kāne`ohe) and presided from Waikīkī. Major battles consistently finalized throughout Nu`uanu having originated from other ahupua`a. War iwi abound throughout Nu`uanu. Also, see Western accounts of King Kahekili's conquering of O`ahu circa 1782 and King Kamehameha's subsequent conquering in 1795. Kapu kaua pau rituals took place in Nu`uanu, Pauoa, Auwaiolimu, Kalawahine, Waikīkī, and Kailua ahupua`a.

Notably, my G-grandmother Kapahupineakaleikoakeōpūhiwa-a-Pākī acquiesced her kuleana birthright lands to be set aside as a reservation for native Hawaiian homesteads today known as Papakōlea Homestead. It was G-grandmother that confirmed the name "Pākī" upon Queen Lili`uokalani. Accordingly, G-grandmother is buried at the very center front of the Queen's Garden Uluhaimālama located on Auwaiolimu Street. During childhood, from Tantalus Drive a mile above Puowaina Drive, I would walk daily down to Chinatown for training and back home again through the homestead. When older, my walk extended to Victoria Street and Ala Moana Park and back.

12. Do you have any memories of what existed in that area or cultural events that were practiced?

Beginning in 1954, I began training in Tao-Gar (aka "Lin-Gar") in the Lum Sai Ho Tong's Tin Hau Temple located at Kukui and River Streets, under renowned kung-fu spiritualist Lum Dai Yung. At the time, the area was not considered Chinatown proper. The Tong served Chinese residences abutting Chinatown proper, i.e. `A`ala, Kukui, Vineyard, and Nu`uanu. I helped minister to elders residing in `A`ala Street cottages, and in On Tong Society and Buck Toy Society buildings at 544 and 578 N. Vineyard Blvd, respectively. These were Chinese immigrant laborer families living outside of Chinatown, far from the supplies of gambling and opium found south of Pauahi Street.

In Territorial Hawai`i at the time were renowned kung-fu masters Lum Dai Yung and Wong Cook Fat who had migrated to Honolulu in the early 1900s desiring political asylum from China in the aftermath of the "Boxer Rebellion," which had been waged against foreign occupation by the Ching Dynasty's use of the underground Hung Mun kung-fu fighters. Thousands of these fighters gained earlier fame during the Opium Wars of 1839 and 1856 against Westerners and the Sino-Japanese War of 1894. The "Hung Mun" are individuals of a rebel underground existing since circa 1680 that had spread throughout China dedicated to the overthrow of the Ching Dynasty (Manchurian rule). The invincible kung-fu fighters that popular history identifies as "Shaolin monk warriors" gave birth to the

Hung Mun Brotherhood. The famed Shaolin Monastery burned to the ground by the Ching royal armies was the temple located in Fujian Province. Five surviving Shaolin Buddhist monks escaped south into Guangdong (Canton). Most all of today's kung-fu originate from them as animal styles. However, Fujian Province was more renown for China's prolific Lum Clan ("Lam, Lin, Lim, Lem") and its Taoist saint, Lin Moniang (born 960 CE) aka Tin Hau Sung Mu ("Ku Po" or Great Aunt). Possessing divine qualities of prophecy, revelation, and healing, Ku Po was revered throughout the empire. There in Fujian Province on Mei Chou Island, she ascended to the top of the Tao mountain (Shan Tao) and into Heaven. She evolved as the patron saint of seafarers often guiding voyagers to destinations and safety. The power of China was its navy, funded and established by powerful merchants. Fujian was the province of the Lum clan and China's primary base of seafaring abroad. Circa 1000 CE, Chinese voyaging fleets arrived into O`ahu (re Maweke clan) and later circa 1500 into the Big Island (re Umiokalani clan). Notably, the migration of the Samoan priest Pa`ao with Tahitian war chief Pilikaeaea to Big Island occurred about 1200 CE. While Shao Lin Fist (aka Sil Lum Pai) had long converted into Buddhism, Lin Moniang Fist (aka Tao or Lin-Gar) remained native Taoist. Notably, the elements of Nature comprise the tao-gar, which contains no animal forms. Fujian Province's indomitable "Shaolin Temple laymen warriors" in history were actually the nearby Taoist Lin-Gar warriors from the Tin Hau Sung Mu quarters. On O`ahu since 1000 CE and Big island since 1500 CE, this tao-gar is known as "ke ao i ka pō." Through the 1950s and 1960s, I learned tao-gar in Honolulu Chinatown, and its related to ke ao i ka pō in Makiki.

In 1889, China's Lum clan immigrants from Chung Shan in Guangdong (Canton) Province established the Lum Sai Ho Tong in Hawaii. Its Lum, Lam, Lin, Lim, and Lem membership met in rented quarters located on Smith Street between Pauahi and Hotel Streets to pay respects to their clan's patron saint, Tin Hau Sung Mu ("Ku Po"). In 1899, Mr. Say Yip Lam donated land at 1315 River Street for a new clubhouse. Later, masters Lum Dai Yung and Wong Cook Fat migrated to Honolulu. By 1900 in China, a cultural renaissance of Chinese pride reached crescendo via kung-fu fighters such as Wong Fei Hung against Western and Japanese professional fighters, which led to the organization of the Jing Mu Physical Culture Association in Shanghai in 1903. In 1930, a Jing Mu kung-fu gym was developed in Honolulu Chinatown that today is known as The Chinese Physical Culture Association. Originally, Master Lum taught and managed the Jing Mu gym teaching Buddhist kung-fu Fat-Gar. He left to organize the Gee Yung Society in 1937. In 1953, the Lum Sai Ho Tong erected a new building standing today as the Lum Sai Ho Tong Tin Hau Taoist Temple. I began training there in 1953 in the tao-gar art of fighting ghosts, or spirits. Teaching elsewhere in Chinatown at the time, was the father of my aunt Thelma Wong, the renowned mystic Wong Cook Fat known as "Old Man Wong of Kalihi." My aunt Thelma Wong was the wife of my mother's brother, Clarence Fong.

Over 3,000 years ago, the surviving son of China's Prime Minister-Lieutenant General, Bi Gan, received Emperor Wu's honorary designation of "Lin" aka

"Lum." Bi Gan was the 30th odd generation descendant of China's first emperor Huang Ti (the Yellow Emperor). Therefore, the first "Lum" was a Huang, or Wong. In Honolulu, after the death of master Lum Dai Yung in the late 1950s, I was directed to my aunt's father, master Wong Cook Fat. Every day after elementary school at Kamehameha Prep School on Kapālama Heights, I walked to master Wong's place near North School and Kalihi Streets to train in Lin-Gar. At 4:30 pm we would ride to the Eddie Lam Service Station on Smith Street at Nimitz where Hung-Gar was taught during evenings. My father would fetch me around 5:00 pm after picking up my mother who worked on Bethel Street at Nimitz. Eddie Lam was one of the primary financiers and donors constructing the Lum Sai Ho Tong building in 1953. I often ate across Smith Street at Tasty Broiler with the "uncles" upon their return from beating on troublesome U.S. Navy sailors in Hotel Street bars. Often, the uncles would chase away outside individuals spying on our kung-fu practices.

Concurrently, there were incorporated Hung Mun Brotherhood organizations, i.e. the Chee Kung Tong Societies on O`ahu, Maui, and Big Island. While seeking the overthrow of the Ching Emperor, the revolutionary Dr. Sun Yat Sen needed a military of his own. He was educated in political science when attending school on O`ahu, which became central to his global financing effort. He was advised to become a Hung Mun and join the Chee Kung Tong network through Honolulu. During his revolution, Dr. Sun had support and quarters just off Maunakea Street on King Street and in Ha‘iku on Maui. The powerful Hung Mun warlords became the backbone of his military force that defeated the Ching royal army. The overthrow of "the last emperor of China" occurred in 1912, and China became a democratic Republic. The Hung Mun continued to be supported by Lum clan participation in the 1960s through 1980s. My father Clarence Wing Hoon Lam and uncle Sun Hung Wong ("mayor of Chinatown" under the mayoral administrations of Frank Fasi and Jeremy Harris) established China's classical Shaolin Wushu in Honolulu Chinatown with a healing center at Chee Wo Tong Herb Store on Maunakea Street and a kung-fu gym featuring the Flying White Crane, Hop Gar, Tibetan Lama, and Choi-Li-Fat styles on Nu`uanu Street at School Street. Clarence and Sun Hung were principles behind the partnership of the Chee Kung Tong Society, Mun Lun School, Kuomintang Society, and Lung Doo Society that constructed Honolulu's Chinatown Cultural Plaza in in 1972. In 1974, we moved the Chee Kung Tong Temple and its Hung Mun altars from Nu`uanu and School Streets to the 3rd floor of the Chinatown Cultural Plaza at 100 North Beretania Street. The Republic of China (ROC aka Free China) eventually bought the Cultural Plaza. For decades, the Lum Sai Ho Tong Society has continued conducting ceremonies, service feasts, and parades for giving thanks and blessing the Chinatown environs and ancestors, related societies such as Chee Kung Tong, Lung Doo, On Tong, Buck Toy, and Chung Wah Chung Kung Hui, and specially, Native Hawaiian burials (known and unknown) throughout Chinatown and Nu`uanu.

13. How about personal and/or family history in the area?

Also see answers to Questions 11 and 12, above.

In 2016, sacred burials of my Palile clan kahuna were discovered on the Palile Royal Patent land as conveyed by the 1845 Land Commission. Palile is my family's genealogical name given to our O`ahu kahuna that on Moloka`i are known as Lanikaula kahuna. Palile is also the kapu name given to my royal Hawaiian 2G-grandfather, High Chief Palile Naliko Lanihuli Lanikaula Keōpūhiwa a Pākī, who was commonly called Keōpūhiwa. Those burials are clearly marked kahuna burials due to their configuration in the shape of the Makali'i constellation, and their placement directly above a shark cave of Kamohoali'i. Kamohoali'i is the Shark God and my genealogical personal aumakua dictated to me in 1958 by Aunty Luka Kinolau, Aunty Lillian Kahoali'i, and Aunty Alice Namakelua. I had been then forbidden to ever again eat shark meat, including shark fin soup at Chinese banquets. It would be a strict desecration to build anything near or above the Palile kahuna burials there at A'ala and Beretania Streets. My request to have the burials moved mauka to the opposite end of the shark cave at the Queen Lili`uokalani Royal Gardens, Uluhaimālama, on Auwaiolimu Street at the foot of Punchbowl where my G-grandmother is buried had been ignored. Consequently, the O`ahu Burial Council allowed the construction of the American Savings Bank Office Building over the graves reasoning it should be okay because no bones would be touched. This is incompetent of course because in Hawaiian culture, "`Āina" means the land, the ocean, and the sky. With respect to kahuna burials, it is a desecration to cutoff the `Āina. It is just as repugnant as constructing an office building over the graves in Punchbowl National Cemetery reasoning to not touch any bones. Prior to the commencement of construction, I orally warned the developer's consultants that they will certainly run into more kahuna burials to the East. Months later, more burials were discovered. That site now containing the American Savings Bank Office Building at A'ala, Beretania, and River Streets has since been cast under my genealogical kapu lele by my cultural authority, which authority is further certified pursuant to Hawai`i State Act 153 of 2005. In the Native Hawaiian traditional culture, the disturbed ``unihipili of Palile kahuna are now free to roam about the premises while lacking their manamana until I or another Palile authority intervenes.

Just one block mauka of the American Savings Bank Office Building along the shark lava tube over which River Street Mall runs sits my Chinese family headquarters, the Lum Sai Ho Tong Tin Hau Temple at Kukui Street. That organization is the legacy of my deceased father Clarence W.H. Lam and where I had trained as a child. Across Kukui Street is the Sun Yat Sen Gymnasium where I regularly taught kung-fu and lā`au lapa`au before moving adjacent to the courtyard of the Chinatpwn Cultural Plaza, which is opposite of the recently constructed American Savings Bank Office Building that sits on top of my Hawaiian family's kahuna burials..

14. Past land use? Past agricultural, fisheries or other uses of the area?

See above.

Part III: Cultural and historic sites

15. Are there any cultural, archeological, historic, and/or burial sites in or around the proposed project area (e.g., heiau, hale, kū‘ula, ilina)?

There are Palile kahuna burials of the royal Pākī genealogy located under the newly constructed American Savings Bank Office Building bordered by ‘A`ala Street, Beretania Street and River Street Mall. That location at about ‘A`ala and Beretania Streets is the underground sacred Kamohoali‘i shark cave of sacred spring waters whose lava tubes run mauka through Auwaiolimu into Kekapuwai past Roosevelt High School. ‘Ama’ama fish spawned in this and similar underground caves nearby, past Pearl River and into ‘Ewa District. The annual ‘ama’ama runs circling O‘ahu Island commenced in these sacred underground aquifers. These mineralized aquifers comprising one of Earth’s leylines are molecularly charged having thereby supernatural energy. It had been these healing waters known by kahuna to ably provide the sustainability of surplus fish supply for all of O‘ahu’s moku and ahupua`a. This environmental capacity and natural blessing have since been critically damaged by military construction and the later construction of the gargantuan First Hawaiian Bank Building. The incoming Rail construction from Kapolei past Middle Street will likely be the final nail of the irrevocably permanent crucifixion of the healing waters, coastal fish, and traditional structure of O‘ahu’s ancient underground aquifer.

Part IV: Gathering/hunting/fishing/etc. practices

16. Are you, or is anyone you know, involved in any cultural practices in the project area – for example plant gathering, fishing, hunting, surfing, etc.?

The Lum Sai Ho Tong Society and its Tin Hau Temple have for many decades customarily held annual ceremonies to honor the native Hawaiian host people and culture of the area and ancient burials. There has been no other organization known to me to have been so maintaining the life of the land. I continue to teach the tao-gar and lin-gar arts as well as the Shaolin kung-fu at and near the Lum Sai Ho Tong Temple and the Chinatown Cultural Plaza.

Furthermore, since the construction of the recent American Savings Bank Office Building, I am personally responsible to maintain the Native Hawaii traditional kapu lele thereupon that land site as my native lineage’s appointed priestly authority. My activities concerning that property are perpetual and follow specific traditional months and moon phases.

17. If you are, how did you learn the activity/ies and how long have you engaged in _____?

In the 1950s, I was trained by Master Lum Dai Yung at the corner park that is now Safeway supermarket at Bishop/Fort and Kukui Streets, and at the newly rebuilt Lum Sai Ho Tong Tin Hau Temple at River and Kukui Streets. I continued in 1971 as a Hung Mun enforcer at the Buddhist Temple on Nu`uanu Avenue across from the Chun Hoon Supermarket at School Street; and, later moved the altars and training to the Chinatown Cultural Plaza bordered by Kukui, Maunakea, Beretania, and River Streets. I continue my Chinese cultural practices there.

Furthermore, I had been also been trained by the renowned Territorial Hawai`i kahuna Aunty Luka Kinolau, the Pākī royal genealogist Aunty Lillian Kahoali'i, and renowned culturalist Aunty Alice Namakelua acting under my grandmother, Princess Alina Elizabeth Pākī (aka Grandma Alina Fong) throughout the 1950s and 1960s. I received my Pākī birthright in 1958 inclusive of the Lanikaula priestly authority. I was later formally trained in the practices of the Pai kahuna lapa`au by Papa Henry Auwae from February 2, 1995 through December 31, 2000. I was given ‘uniki as Maoli Kahuna Lā`au Lapa`au by Papa Henry Auwae in November 2000 before public witnesses at Lapakahi State Park that included elected State representatives, Office of Hawaiian Affairs staff, Federal agents, Queen's Hospital executives, Queen Emma Foundation representatives, and State Parks staff. I am individually recognized as a Native Hawaiian master practitioner under State Act 153 of 2005 and Hawai`i Revised Statutes 453-2(c). In 2006, my aunt Elizabeth Fong Lim, who was the eldest daughter and one of 16 children born of my grandmother, conveyed the custody of the royal Pākī genealogical scrolls and records to me at the Bishop Museum. Consequently, I exercise my traditional Native Hawaiian cultural obligations in the immediate area with respect to the American Savings Bank Office Building disgracefully constructed over my genealogical burials.

18. Can you tell me about any cultural practices from the past?

19. Knowledge of past or present cultural protocols observed

The seventh month of the lunar calendar is the Ghost Month According to Taoist belief, on the last day of the sixth lunar month, the gates of Hell opens up and the ghosts and restless spirits (to include those of deceased ancestors) are free to roam the human world. It is said that these ghosts are looking for food and entertainment and if not appeased, will resort to mischief. Therefore on the 15th day of the seventh lunar month a Hungry Ghost Festival is held by my family's organization, the Lum Sai Ho Tong Society located at Kukui and River Streets. It is commonly celebrated by leaving out food for the hungry ghosts and the burning of joss paper (faux money) and other offerings for their use in the afterlife. Unlike Ching Ming which one would pay respects to ones ancestors, the Hungry Ghost Festival is for all those who are deceased. At the end of the month it is traditional to light a paper lotus and float it down a river or in the ocean so the spirits can find its way back to the underworld. Our Lum Sai Ho Tong Tin Hau Temple annually celebrates the Hungry Ghost Festival with a Taoist priest that performs the rituals to placate the restless ghosts, feeding them and sending them money (Siu Yee). Similar ghost festivals are held throughout Asia. The Japanese call its celebration the Bon Festival, or Obon. The Lum Sai Ho Tong Society in Honolulu Chinatown prepares Hawaiian food in honor of the many Hawaiians who had for centuries lived on the land where Lum Sai Ho Tong building sits and throughout Chinatown, Nu`uanu, Palama, and Downtown. Individual food plates are placed along the sidewalks of Kukui and River Streets accompanied by incense sticks burning on the sides. Siu Yee is then burned within the temple grounds. After the ceremony the plates of food are given to the homeless.

Part V: Legends, stories and place, and sense of place

20. Is there anything you would like to say about legends, or stories about the project area?

21. Are there any names, traditions, or practices associated with the area and features of the landscape? Origin stories…?

Concerning the area beginning about mauka of King Street and up to School Street as the priestly kuleana of Palile kahuna for the life of the land and resident citizens.

Palile is a name of royal kapu kuleana significant in history, at least up to the early 1800s. “Palila” was name for makers of royal capes and kahili, and “Palile” was carelessly recorded as “Palila” from time to time. “Palili” was a household name and “Palile” was as well carelessly recorded as “Palili” at times. Western alphabet is problematical.

Please take particular notice that LCA 731 at ‘A`ala and Beretania Streets occurs during the evolution of an emigrant Land Commission in Hawaii when foreign missionary were seeking influence over the King and his lands. Therefore, this LCA is especially significant. Migrant Reverend William Richards had influenced and drafted the 1839 Declaration of Human Rights for the King’s signature and decree. Co-ruler Kina’u was naïve to the fact that this was merely the first step to remove the lands from Na Akua ownership into man’s ownership. Naïvely influenced to believe that these “inalienable divine rights” of man constituted the Kingdom’s same government under God’s law, newly baptized Christian Kina’u convinced Kauikeaouli to adopt this Western declaration by royal decree as if securing his power and governance under God. However, the social and legal realities were really the opposite.

Competent constitutional scholars understand that a declaration of inalienable human rights, exemplified in U.S. history, is the foundation upon which makes way for a constitutional government under man’s law. Under the Gods (“God”), there are no land titles or military. God owns the land and personally protects His people from His enemies. Nevertheless, man is born with divinely innate inalienable rights, i.e. life, liberty, and the pursuit of happiness.

Declaring those “inalienable rights” allows man to leave God’s dominion and strike out on his own. The U.S. Declaration of Independence advised Great Britain of having violated man’s inalienable rights. The resulting U.S. Constitution founded a new nation under laws of man distinguished from laws of God. Accordingly, the U.S. Constitution separated God’s administration, or Church, from government rule. Governance under God’s law is by scripture whereby God controls land (honua and wai), ocean (kai), and skies (lani), altogether comprising the ‘aina. The administrators are merely priestly agents of the God, the Ruler.

In comparison, governance under man’s law is by constitution whereby man creates land titles exercising control over the ‘āina, which control is subject to man’s constitutional authority, not God’s authority. God’s laws are reduced to mere admonitions. Administrators in the U.S., for example, are not agents of God, but

instead, of the people. They are elected officials, bureaucrats, and judges. While a the Hawaiian Kingdom's naïve struggle away from Gods' rule toward men's rule had clearly been responsible for the tragic separation of native Hawaiians from aboriginal sustainability, this foreign transition simultaneously elevated modernization entirely above sacred native traditions, kapu, and practices – even with impunity. Historically, as Western construction modernized Hawaii, iwi kŭpuna were disregarded. Commonly now, creative legal and economic proposals remove or relocate iwi and kapu in favor of further construction. Whereas Gods' laws are immutable and never change, men's laws are relative and can always change. While construction is incidental, in comparison, a spiritual hewa can never be undone. Even after ho'oponopono healing scars the `āina.

Consequently, from Kamehameha III (Kauikeaouli) came Rev. William Richard's 1839 Declaration of Human Rights promptly followed by a Constitution in 1841 based upon the proposition that individual land grants were necessary to assure divine fairness and conduct commerce. The Land Commission of 1845 formed to divide lands and convey titles. Palile LCA 731 upon testimony of Palile in 1847 is compelling to my family interests. At about that time, King Kauikeaouli's portion was conveyed to him. It would not be until the August 6, 1850 Kuleana Act when Commoners would generally be granted titles. LCA 731 is based upon testimony in 1847 of royal class significance. Palile is a name naturally associated with the rare royal name Pinea, aka Paina. "Pinea" has no translation otherwise than as strictly a royal name.

The site burial map distinctly shows the configuration of kahuna burials which is not odd considering the location at a Kamohoali'i shark cave. Palile is a significant name of my direct lineage that includes both the Maweke kahuna clans of Lanikaula (Maui Precinct) and Ka'opulupulu (O'ahu). In 1778, Ka'opulupulu advised O'ahu's King Kahahana that Captain Cook was not a god, but instead, a foreigner from Moku iā Ke'oke'o iā Uliuli iā Melemele destined to take over dominion of Hawaii's lands. This was also the identical advisory by Lanikaula-a-Pākī on Maui to Prince Kalaniulumoku and King Kahekili-Kalaninui‘ahumanu. Shortly thereafter, O‘ahu King Kahahana terminated a kahuna clan by ordering the deaths of Ka'opulupulu and his only son, Kahulupue. Palile in Lanikaula continued in the child Kalanikauiokikilo-Kalaniwaiakua-Kekumanomanookekapu, the incarnate name of the kapu of Maui Precinct, who was the kapu ali'i wahine who with her pi'o son Prince Kalaniulumoku bore Ali'i Pākī (Kalanihelemaiiluna Pākī).

Meanwhile on the Big Island, King Liloa's consort was chiefess Pinea of my same O'ahu lineal kapu kuleana handed down to my 3G-grandmother of the same namesake, i.e. Kapahu-Pinea-Kaleikoa Pākī, the chiefess sister of Ali'i Pākī who, in turn, is my 5G-grandfather. My great-grandmother is the only child of Kapahu-Pinea-Kaleikoa Pākī with her grandnephew Palile-Lanihuli-Naliko-Keōpūhiwa Pākī, the grandson of Ali'i Pākī. Accordingly, my great-grandmother is named for both her Pākī mother and Pākī father, i.e. Kapahupinea-Kaleikoa-Keopuhiwa Pākī. Through Palile comes my family kapa ‘ia authority given through my mother Ella and aunt Elizabeth by my grandmother, Alina Kapahupineakaleikoakeopuhiwa-a-

Pākī Say, as the hiapo of her mother, commonly called “Kapahu”. This kapu kuleana is that exclusive lineal authority held by the only child born between King Kamehamehanui ‘Ailu’au of Maui and his sister Kalola-Pupuka-Kalaninuiokamoku, namely, Kalanikauiokikilo-Kalaniwaiakua-Kekumanomanookekapu who is my direct 6G-grandmother. I was sequestered and trained in tradition and skills beginning in 1955, given mo‘okū‘auhau authorities in 1959, and deposited with kapa ‘ia kuleana and royal records in 2006. This kapu includes responsibility for iwi of the Maweke lineage as well as its unclaimed subjects, i.e. the location under the American Savings Bank Office Building at ‘A`ala and Beretania Streets.

Shortly before his death, Lot Kapuāiwa (Kamehameha V) recognized the kuleana in this royal Pākī female child born in early 1871 over lands on O‘ahu for Hawaiian settlements extending from Kapālama to Nu‘uanu to Pauoa to Makiki. There were no konohiki in wealth existing at that time. Hawaiians were poor, without the historical natural wealth to hanahanai residents. Accordingly, my great-grandmother with the industry of my Chinese merchant great-grandfather governed konohiki and became renowned in old Papakōlea for caring over native families. Our families extended through Pauoa and Nu’uanu. As the hiapo, my grandmother, also through the industry of my grandfather, continued this kuleana and became widely celebrated for her caring over moku residents throughout her life, and as well, being their ho’ohānau (midwife). In 2006, my aunt Elizabeth as the eldest daughter, passed the mo‘okū‘auhau to me at her 90th birthday at the Bishop Museum. I decided not to deposit our ancient charts and written records at the museum and instead kept them private. Among a large family of over 200 surviving, I individually conduct the Palile Pākī discretions and lineage responsibilities.

22. Trails ancient or contemporary in the area? Who used/uses them?

23. Mauka-makai relationships?

Part VI: What else?

24. Do you have any, or do you know of any concerns the community might have related to Hawaiian or other cultural practices within or in the vicinity of the project area?

My kūpuna had strictly warned against recognizing cultural authority and kuleana in any claimant showing only indirect relevant lineage, i.e. claimed birthright through his/her mother does not remain matriarchal back to the origin of the kuleana. Furthermore, the claimant’s father must be the blood brother, father, uncle, nephew, grandnephew, grandfather or granduncle of the claimant’s mother who must possess the claimed kuleana, or, the husband via Hawaii’s rarest ancient ali’i nui wahine privilege. Further, the claimant must show the specific training received, and identify the chain of custody and chain of authority as unbroken since ancient origin to the claimant’s ordination. My kūpuna were especially negative over vague name-dropping and liberally assigning false qualifications to grandparents, deceased relatives, or “teachers.”

25. Do you have any recommendations regarding site management or protection, and development in the proposed project area?

26. Did CSH miss anything? Is there anything else you would like to add?

27. Is there anyone else we should talk to about this cultural study?

28. If so, may I say that you referred CSH to him/her?

8.2 Howard Lum and Kehaulani Lum of Lum Sai Ho Tong

As with Mr. Lam, to maintain the integrity and to respect the information submitted to CSH, the questionnaire given to the representatives of Lum Sai Ho Tong is presented below as it was submitted to CSH. In addition to the questionnaire, Kehaulani Lum submitted documents to CSH that she wished to include in the CIA. These documents are presented in Appendix B.

Part I: Contact information

Name: Lum Sai Ho Tong (Howard Lum, President)

Where were you born? Kalāwahine (Chinatown)

Where did you grow up? Kalāwahine/Kamanuwai (Chinatown)

When were you born? 1889

Parents. Mother. Father. Founders: Lum Duck Sun, Lum Duck Yew, Lum Gee Wah, Lam Lup Sai (Lam Toi), Lum Gee Hoon. River Street Land Donors: Lam Say Yip, Lam Lau See

Occupation/Affiliation: Lum Sai Ho Tong (Lum Family Society and Tin Hau Temple)

Area of residence: 1315 River Street, Honolulu, Hawai`i 96817

How long have you lived or been associated with the area? 130 years

Personal and/or family connection to *ahupua'a:* Same

Referrals: www.lumsaihotonghawaii.com; Lum Sai Ho Tong 130th Anniversary Booklet; Tin Hau Temple Schedule of Celebrations

Part II: Historical information

Is there anything you would like to say about the general history of the area, or past and present land use?

Lum Sai Ho Tong, which neighbors the subject property, was established in 1889, before the "Great Chinatown Fire" of 1900. This is a sacred land. Until the overthrow of Queen Lili`uokalani, the area extended into and was fed by the flowing Nu`uanu and Pauoa Streams. It carries the ancient name of "Kalāwahine," and has figured prominently, from the time of Papa and Wakea, down through O`ahu's Heroic, Settlement and Dynastic Periods, over 70 generations later, as `āina Momona, rich, abundant, precious and sweet lands. Kalo, hala, kou, tamarind and many species of trees, plants and animals, once flourished, in its embrace. Giant monkeypods, kou, sacred poinciena and various introduced flowering plants,

continue to dig their roots deep into the soil. Here is the high water shoreline, where ocean tides bring sea creatures and salt water (kai) to mix with the fresh mountain water (wai), as it descends from the heights of Nu`uanu Valley. Here, too, is the place where native and introduced winged animals, including Honolulu's beloved Manu o Kū and the `auku`u, rest, live, hunt and soar in the prevailing winds, reflecting a treasured `ili name of "Kawaimakaokamanu." Native and introduced trees once forested the land, with some still providing shade and delicious bounty to residents, neighbors and friends. The fragrant scent of past and present sandalwood incense lingers in the breeze, and the sound of bells, drums, sacred music, chants and prayers from the area's spiritual practitioners are daily gifts. Fishing and gathering of spiritual resources continue to be practiced in the area. Many individuals who sense nature's energy gather here.

Do you have any memories of what existed in that area or cultural events that were practiced?

In ancient times, native practices attached to farming, fishing and sacred living prevailed. Mo`ōlelo of a visit by Hi`iakaikapoliopele and Lohiau, and a game of kilu which was played with a resident named, Pele`ula, is well documented. Makahiki and chiefly events were held. Plants and trees were cultivated for the ali`i's spiritual and secular needs. The great leader, Kamehameha, after winning the Battle of Nu`uanu, settled his cherished friends and family members here. His beloved wife, Ka`ahumanu, reserved harvests from trees planted on the land, and chosen Konohiki gathered traditional foods, ocean, river and land resources here. Lum Sai Ho Tong, established in 1889, 130 years ago, honors and preserves the practices of familial connections. Our ancestral home stands, in unbroken practice, as a cultural and spiritual center and sanctuary for our members and the general public. We nurture, preserve and protect ancestral worship practices, dating back to our great Ancestor, Pi Kan, in the time of the Shang Dynasty in China (1766-1100s BC), Tin Hau Sung Mu (960-1126 AD), our patron ancestor, who is revered as the "Goddess of the Seas," and all ancestors, alive and deceased. Our 130th Anniversary program booklet and temple calendar, which are attached, identify the numerous cultural events and rituals that continue to be held on our site (neighboring the Halewai`olu Residences site) daily, weekly and monthly. Of note are: 1) Chinese New Year celebrations, which span over a 2 to 3 week period and include day and night-long traditional ceremonies and festivities; 2) Our patron Saint Tin Hau's birthday celebrations, which span over a 1 week period, with celebrations, a banquet and, sometimes, a community-wide parade; 3) Ching Ming, a Spring event, when LSHT members journey to Mānoa Chinese Cemetery and clean the graves of our ancestors and perform the sacred ceremony of paisan, offering them food, drink and prayers; 4) Siu Yee, or Hungry Ghost Festival, when LSHT holds 2 ceremonies, one in Tin Hau Temple and the other on the land, to honor and and invite all of the deceased and wandering spirits, as well as our ancestors, to partake of food and drink. On this day, plates of traditional native Hawaiian food are laid around the property, along with candles and incense, while our priest chants and burns a cage full of paper money offerings and firecrackers,

inviting and honoring the area's deceased native Hawaiian ancestors, to eat with us; and 5) Numerous feast days, in honor of significant deities. The moon calendar regulates the practices of Lum Sai Ho Tong.

How about personal and/or family history in the area?

Many members of Lum Sai Ho Tong, who, by Constitution, carry the surname Lum, Lim, Lam or Lin, in their genealogy, have close and deep generational family ties to the area. Historical archives document the area as a place where businessmen, farmers and fishermen would seek important sanctuary and support here. Their descendants continue to worship, fellowship, and gather spiritual, physical and other important supplies here. Lum Sai Ho Tong is also a repository for the genealogy of the Lum Family, which dates back to Huang Di, China's first Emperor. In addition, some of our members descend from native inhabitants of the area.

Past land use? Past agricultural, fisheries or other uses of the area?

In addition to the above answers, the land serves as a place for making traditional offerings. As Tin Hau carries, among other titles, that of the "Goddess of the Sea," 1000s of practitioners make pilgrimages here, 365 days a year, on the auspicious shore of the Nu`uanu, where seawater reaches its highest point on land. Prayers for abundance of the fisheries, safety in the ocean, and overall well being are offered with ho`okupu or offerings of the bounty of the land and sea. In past times, sacred ceremonies were held in the river proper. Our temple faces and spiritually touches the water, the sky, the mountains and the land, connecting us to the area's natural essence, historically and presently, as a treasured cultural and spiritual place. It is common to find fishermen, farmers, and diverse practitioners making offerings and requesting guidance, assistance and good fortune here. The crew of a famous sailing vessel, the Princess Tai Ping, attributes their survival from a disaster at sea, to the protection of Tin Hau and their pilgrimage to Tin Hau Temple in 2009. (See story in attached booklet.)

Part III: Cultural and historic sites

Are there any cultural, archeological, historic, and/or burial sites in or around the proposed project area (e.g., *heiau, hale, kū‘ula, ilina*)?

We are aware that several burial sites have been found around the area, in the Stream, and throughout Chinatown. The area has a history of human habitation, battles, and spiritual and physical sites, including hale, lo`i, heiau, imu and `ulu maika fields. In addition, the legend of Kahuoi, a pearl fish hook of great value, and Kamanuwai, the bird which cared for it, is believed to have been grounded in this area. Kamanuwai is also the name of an ancient chiefly lo`i., said to have been reserved for Kamehameha's sacred wife, Ke`opūolani The water which flows through the area descends from the sacred hills of Nu`uanu and Pauoa, and is said to have been the home of the sacred mo`o wahine, Kalāwahine.

Part IV: Gathering/hunting/fishing/etc. practices

Are you, or is anyone you know, involved in any cultural practices in the project area – for example plant gathering, fishing, hunting, surfing, etc.?

LSHT is devoted to the continuation of spiritual practices which honor the ocean, stream, sky and land practices, through our temple activities. We also tend a sacred fruit tree planted on our land by our ancestors and used for ritual offerings. From time to time, we have witnessed people fishing in Nu`uanu Stream.

If you are, how did you learn the activity/ies and how long have you engaged in spiritual practices of Tin Hau, the Goddess of the Sea. This is a traditional practice handed down through the generations, from over 1,000 years of practice. Our ancestors brought this to Hawai`i in the 1800s, and we have continuously practiced it, without break.

Can you tell me about any cultural practices from the past?

Besides ceremonies conducted to honor Tin Hau, the Goddess of the Sea, and other important deities, blessed ceremonial food (jai, roast pork, sweet buns, rice, etc.) is prepared and served to congregants. Forest trees were harvested and prepared for culinary and ornamental use. Sacred trees were planted to ensure protection. The building was constructed, in alignment with the stream and ocean tides, as well as the winds of the area. Prayers, incense and flowers continue to be offered every day. Caring for ancient stones and statues from Taoist temples which have been closed and/or from observants who bring them to us for safe keeping.

Knowledge of past or present cultural protocols observed:

Same as 18, plus, numerous ritual days. (See calendar of events.) Street parade, led by Native Hawaiian chanter. Floating lanterns on Nu`uanu Stream. Martial arts teaching. Families gather in fellowship, ritual and honor of the ancestors. Ceremonial objects and materials are created and made available here.

Part V: Legends, stories and place, and sense of place

Is there anything you would like to say about legends, or stories about the project area?

This area has long served as a sacred sanctuary. Our great stories call forth our patron Saint, Tin Hau, who, as a young woman, miraculously saved the lives of people who were in danger on the Sea, through her dreams. She continues to protect fishermen and ocean voyagers, today, as well as those who inhabit the land. We seek guidance from her on all matters, through oracle readings and prayers, everyday. Our Great Ancestor, Pi Kan, is the father of the first Lum man. He was born 3,111 years ago and is a direct descendent of Huang Di, the Yellow Emperor. Confucius called him the “most ethical man of his generation,” because he defended the well being of the people, against a cruel emperor, even though it cost him his life. We honor his spiritual presence, and the manifestation of Tin Hau, and all of the ancestors, in this area. In addition, some members speak of witnessing ancestral spirits in the area and in ceremonies. Members have witnessed and experienced many miracles taking place (lives saved, families reunited, employment, happiness,

etc.). Our practice of honoring our ancestors and all beings, nurtures the essence of this land, which is grounded in the spirit of the ancient people who followed the phases the moon and honored their kupuna,`aumakua, akua and celestial deities, in chant, ho`okupu, and rituals which are similar, in nature, to our practices.

Are there any names, traditions, or practices associated with the area and features of the landscape? Origin stories…?

See above.

Trails ancient or contemporary in the area? Who used/uses them?

During the battle of Nu`uanu, Kamehameha's warriors forced Kalanikupule's warriors to retreat to `Ewa, from an area that is only two blocks away, near Pali Highway and Vineyard/Kukui. They may have passed on the trails leading to the stream and their canoes. Nu`uanu Stream is an ancient passageway for warriors, gatherers, and inhabitants of Nu`uanu. We have also used for lantern ceremonies, in the past. There is always talk of restoring it, for recreational uses. We have been involved in the building of a crosswalk at Vineyard and River Street, which restores mauka-makai pedestrian access to River Street and the corridor leading to Honolulu Harbor. Traditionally, residents along the stream would have depended on the Stream for their physical and spiritual well being. The trails leading to it have been cut, with the building of the walls.

***Mauka-makai* relationships?**

Before the building of the freeway, the area populated by Chinese residents extended above Foster Gardens and into Liliha. From our land, we currently enjoy view planes from River Street to the peaks of Nu`uanu Valley.

Part VI: What else?

Do you have any, or do you know of any concerns the community might have related to Hawaiian or other cultural practices within or in the vicinity of the project area?

Yes. Concerns have been expressed about the finding of `iwi kupuna and their appropriate care. We are also aware of Lum family members whose lineage flows from priestly lines related to the area. Our concerns regarding the health and well being of the residents of the area, as well as the condition of air flow in the area have been noted by the City Council.

Do you have any recommendations regarding site management or protection, and development in the proposed project area?

Yes. Given the historic nature of our building and practice, we recommend pre-construction consultation, with the developer (ie engineering) and remediation, to ensure that the project does not adversely impact our health, structure and practice.

Did CSH miss anything? Is there anything else you would like to add?

Nuisances: Safety and security issues of existing and proposed project, as well as impact on access and parking.

Is there anyone else we should talk to about this cultural study?

If so, may I say that you referred CSH to him/her?

8.3 **Wesley Fong**

Mr. Fong did not submit a written testimony to CSH. In his effort to provide a statement on behalf of the Chinatown Community Center Association (CCCA), he forwarded an open-ended questionnaire provided by CSH to the Board of Directors and other Officers of the CCCA. CSH received replies from two members but did not receive authorization to use their responses in this CIA. To honor their privacy and CSH procedures, their responses will not be included without their authorization. However, a commentary submitted by Wesley Fong to the Honolulu Advertiser is presented in Appendix C.

Section 9 Traditional Cultural Practices

Timothy R. Pauketat succinctly describes the importance of traditions, especially in regards tothe active manifestation of one's culture or aspects thereof. According to Pauketat,

> People have always had traditions, practiced traditions, resisted traditions, or created traditions […] Power, plurality, and human agency are all a part of how traditions come about. Traditions do not simply exist without people and their struggles involved every step of the way. [Pauketat 2001:1]

It is understood that traditional practices are developed within the group, in this case, within the Hawaiian culture. These traditions are meant to mark or represent aspects of Hawaiian culture that have been practiced since ancient times. As with most human constructs, traditions are evolving and prone to change, resulting from multiple influences including modernization as well as other cultures. It is well known that within Hawai‘i, a "broader 'local' multicultural perspective exists" (Kawelu 2015:3). While this "local" multicultural mix is deservedly celebrated, it must be noted that it often comes into contact with "traditional Hawaiian culture." This contact among cultures and traditions has undoubtedly resulted in numerous cultural entanglements. These cultural entanglements have prompted questions regarding the legitimacy of newly evolved traditional practices. The influences of "local" culture are well noted throughout this section and understood to represent survival or "the active sense of presence, the continuance of native stories, not a mere reaction, or a survivable name. Native survivance stories are renunciations of dominance, tragedy and victimry" (Vizenor 1999:vii). Acknowledgement of these "local" influences helps to inform nuanced understandings of entanglement and of a "living [Hawaiian] contemporary culture" (Kawelu 2015:3). This section strives to articulate traditional Hawaiian cultural practices practiced within the *ahupua‘a* in ancient times, and the aspects of these traditional practices that continue to be practiced today; however, this section also challenges "tropes of authenticity" (Cipolla 2013) and acknowledges the multicultural influences and entanglements that may "change" or "create" a tradition.

This section integrates information from Sections 3–5 in examining cultural resources and practices identified within or in proximity of the project area in the broader context of the encompassing Honolulu landscape.

9.1 Habitation and Settlement

Kamehameha defeated Kalanikūpule at the battle of Nu‘uanu in 1795, and in 1809, moved his court, government, and residence from Waikīkī to Honolulu. Kamehameha was known to have taken a special interest in farming and would work in the fields alongside the commoners to demonstrate the importance of agriculture. Crops such as yams were developed under Kamehameha and were often sold to the captains of foreign ships in need of provisions at Honolulu Harbor (‘Ī‘ī 1959:69).

In historic maps, the project area is near Nu‘uanu Stream in the *‘ili* of Kalawahine, situated below Waikahalulu. Other *‘ili* present on older maps are Kamakela, Leleo, Kikihale, Kaakaukukui, Ka‘akopua, and Pāmo‘o. Māhele records show that Pehu submitted testimony to the Land Commissioner to claim ownership of property in the area of Ka‘akaukukui.

The history of the Gillilands in Hawai‘i begins first with Francisco Paulo de Marin who was a confidant of Kamehameha I. He had atleast three wives of Hawaiian blood and many children.

The following Māhele document lists the heirs of Marin (also called Manini) and the heirs of Lahilahi, one of Francisco’s daughters, in their testimony for property in Honolulu. Their property was named Huanu o Lahilahi:

> P. Manini formerly held this land from Kamehameha I, having received it from him. On death of Manini it came to his daughter, Lahilahi and on her death to her children, Francis, John, & Rosalia. Francis is dead. The lot is fenced round & has been cultivated & never disputed. I have lived on this lot ever since time of Kamehameha I.
>
> Kaoani, sworn, I saw the survey made by Mr. Turner & it is according to the wall of the lot. I have lived there since Kamehameha I and there is no dispute to the Title. [Waihona ‘Aina 2000]

Interviewee Gerald Lam shared his personal knowledge of the history of Honolulu:

> Generally, the settlement homesteads of the native citizenry extended makai beginning from about where King Street runs today to the coastline. However, agriculture continued mauka into the upper valleys. Marshlands (such as Waikīkī and Ala Moana) and areas mauka of the concentration of the general citizenry were especially residences of kāhuna. A mauka example of kāhuna residence is seen along Nu`uanu river at today’s `A`ala and Beretania streets where Palile kahuna representative of Ka`opulupulu and Lanikaula persuasions were buried in and adjacent to the royal patent land named “Palile.” “Palile” is not to be confused with “palili” (taro shoot) or “palila” (native bird). “Palile” is exclusively a royal kapu name without other meaning. These kahuna burials are where lies the shark cave dedicated to Kamohoali`i specifically, whose cavern tubes extend mauka to Pu`u Mawaena (Puowaina) at Auwaiolimu and Kalawahine. Queen Lili`uokalani placed her Royal Garden there among the sacred springs, which feed ‘ama’ama (fish of the ali`i) and other fish spawn makai. Palile kāhuna presided over this life of the land (`Āina i hane).
>
> Notably, my G-grandmother Kapahupineakaleikoakeōpūhiwa-a-Pākī acquiesced her kuleana birthright lands to be set aside as a reservation for native Hawaiian homesteads today known as Papakōlea Homestead. It was G-grandmother that confirmed the name “Pākī” upon Queen Lili`uokalani. Accordingly, G-grandmother is buried at the very center front of the Queen’s Garden Uluhaimālama located on Auwaiolimu Street. During childhood, from Tantalus Drive a mile above Puowaina Drive, I would walk daily down to Chinatown for training and back home again through the homestead. When older, my walk extended to Victoria Street and Ala Moana Park and back.

9.2 ***Wahi Pana***

Near the current alignment of Richards and Queens streets was Hono-kau-pu—a noted field for *‘ulu maika,* an ancient Hawaiian game similar to bowling (Westervelt 1915:16). Kou was the

popular *‘ulu maika* field amongst chiefs. The track at Hono-kau-pu was approximately 12 ft wide and extended from the current location of Merchant and Fort streets, traveling ‘Ewa to the intersection of Merchant Street and Nu‘uanu Avenue. It is said that Kamehameha I used this *maika* track (Westervelt 1915:16).

Pākākā was the name of a coastal point, a canoe landing, and wharf built off the point in 1827, and the name of a *heiau* built on that same point. The name literally means “to skim, as stones over the water” (Pukui et al. 1974:175). In 1816, a fort named Kekuanohu was constructed in this area, roughly *mauka* of Pākākā Heiau; the adjacent street was called Fort Street. Liholiho, Kamehameha II, built a palace complex in this area in 1821, possibly on the former Pākākā Heiau platform.

Interviewee Gerald Lam explains notable *wahi pana* and their significance as was taught to him by his *kūpuna:*

> As the gateway residence of the first arriving high priests of birthright, Ko`olaupoko is the kino lau of the archipelago, which its `uhane is Ke`alohilani (Mount Olomana), piko is circa Ulupau Head (in Mokapu), and `unihipili is Mokoli`i (in Ke`alohiwai at Kualoa). Notably, King Kahekili II resided in Kani`ohe (Kāne`ohe) and presided from Waikīkī. Major battles consistently finalized throughout Nu`uanu having originated from other ahupua`a. War iwi abound throughout Nu`uanu. Also, see Western accounts of King Kahekili’s conquering of O`ahu circa 1782 and King Kamehameha’s subsequent conquering in 1795. Kapu kaua pau rituals took place in Nu`uanu, Pauoa, Auwaiolimu, Kalawahine, Waikīkī, and Kailua ahupua`a.

Representatives of Lum Sai Ho Tong provided CSH with the following information relating to their knowledge of the general history of the area:

> Lum Sai Ho Tong, which neighbors the subject property, was established in 1889, before the “Great Chinatown Fire” of 1900. This is a sacred land. Until the overthrow of Queen Lili`uokalani, the area extended into and was fed by the flowing Nu`uanu and Pauoa Streams. It carries the ancient name of “Kalāwahine,” and has figured prominently, from the time of Papa and Wakea, down through O`ahu’s Heroic, Settlement and Dynastic Periods, over 70 generations later, as `āina Momona, rich, abundant, precious and sweet lands. Kalo, hala, kou, tamarind and many species of trees, plants and animals, once flourished, in its embrace. Giant monkeypods, kou, sacred poinciena and various introduced flowering plants, continue to dig their roots deep into the soil. Here is the high water shoreline, where ocean tides bring sea creatures and salt water (kai) to mix with the fresh mountain water (wai), as it descends from the heights of Nu`uanu Valley. Here, too, is the place where native and introduced winged animals, including Honolulu’s beloved Manu o Kū and the `auku`u, rest, live, hunt and soar in the prevailing winds, reflecting a treasured `ili name of “Kawaimakaokamanu.” Native and introduced trees once forested the land, with some still providing shade and delicious bounty to residents, neighbors and friends. The fragrant scent of past and present sandalwood incense lingers in the breeze, and the sound of bells, drums, sacred music, chants and prayers from the area’s spiritual practitioners are daily gifts.

> Fishing and gathering of spiritual resources continue to be practiced in the area. Many individuals who sense nature's energy gather here.

9.3 **Religious Practice and Burials**

Land records associated with Mataio Kekuanaoa's LCA 170 at Kapukolo (also known as Kapu‘ukolo) indicate traditional Hawaiian land use on the property. However, the immediate area was also part of a rich Chinese cultural landscape. This particular parcel is within the area today known as Chinatown and is bound between North King Street (*mauka*) and North Nimitz Highway (*makai*). For nearly a century, the common practice was for Chinese patriots to disinter their fellow countrymen's bones and prepare them for shipment back to their homeland of China. In a general sense, it is logical to assume that many of these bones most likely passed through Honolulu's Chinatown, but the details are not well-known.

Previous oral history research conducted by the University of Hawai‘i's Center for Oral History (UHCOH) highlights Mrs. Eleanor Nahiapo Wilson Heavy. Mrs. Heavy remembered that they used Hawaiian salt to embalm bodies. They would stuff the *‘ōkole* (buttocks) with salt, working it in with *ti* leaves. They also put salt in cuts under the armpit, and within the mouth, nose and ears. The body then could be viewed by relatives at the undertakers for several days. The body was later put into a coffin for burial at the Catholic Cemetery or at the Kawaiaha‘o Church cemetery, both on King Street.

Interviewee Gerald Lam explains special times observed by those of the Taoist belief and how a festival is held by Lum Sai Ho Tong in celebration:

> The seventh month of the lunar calendar is the Ghost Month According to Taoist belief, on the last day of the sixth lunar month, the gates of Hell opens up and the ghosts and restless spirits (to include those of deceased ancestors) are free to roam the human world. It is said that these ghosts are looking for food and entertainment and if not appeased, will resort to mischief. Therefore on the 15th day of the seventh lunar month a Hungry Ghost Festival is held by my family's organization, the Lum Sai Ho Tong Society located at Kukui and River Streets. It is commonly celebrated by leaving out food for the hungry ghosts and the burning of joss paper (faux money) and other offerings for their use in the afterlife.

In addition, Mr. Lam mentions *kahuna* burials:

> In 2016, sacred burials of my Palile clan kahuna were discovered on the Palile Royal Patent land as conveyed by the 1845 Land Commission. Palile is my family's genealogical name given to our O`ahu kahuna that on Moloka`i are known as Lanikaula kahuna. Palile is also the kapu name given to my royal Hawaiian 2G-grandfather, High Chief Palile Naliko Lanihuli Lanikaula Keōpūhiwa a Pākī, who was commonly called Keōpūhiwa. Those burials are clearly marked kahuna burials due to their configuration in the shape of the Makali'i constellation, and their placement directly above a shark cave of Kamohoali'i. Kamohoali'i is the Shark God and my genealogical personal aumakua dictated to me in 1958 by Aunty Luka Kinolau, Aunty Lillian Kahoali'i, and Aunty Alice Namakelua. I had been then forbidden to ever again eat shark meat, including shark fin soup at Chinese banquets.

> There are Palile kahuna burials of the royal Pākī genealogy located under the newly constructed American Savings Bank Office Building bordered by ‘A`ala Street, Beretania Street and River Street Mall. That location at about ‘A`ala and Beretania Streets is the underground sacred Kamohoali‘i shark cave of sacred spring waters whose lava tubes run mauka through Auwaiolimu into Kekapuwai past Roosevelt High School. ‘Ama’ama fish spawned in this and similar underground caves nearby, past Pearl River and into ‘Ewa District.

Lum Sai Ho Tong shared their religious customs observed and celebrated on their grounds:

> Our ancestral home stands, in unbroken practice, as a cultural and spiritual center and sanctuary for our members and the general public. We nurture, preserve and protect ancestral worship practices, dating back to our great Ancestor, Pi Kan, in the time of the Shang Dynasty in China (1766-1100s BC), Tin Hau Sung Mu (960-1126 AD), our patron ancestor, who is revered as the “Goddess of the Seas,” and all ancestors, alive and deceased. Our 130th Anniversary program booklet and temple calendar, which are attached, identify the numerous cultural events and rituals that continue to be held on our site (neighboring the Halewai`olu Residences site) daily, weekly and monthly. Of note are: 1) Chinese New Year celebrations, which span over a 2 to 3 week period and include day and night-long traditional ceremonies and festivities; 2) Our patron Saint Tin Hau’s birthday celebrations, which span over a 1 week period, with celebrations, a banquet and, sometimes, a community-wide parade; 3) Ching Ming, a Spring event, when LSHT members journey to Mānoa Chinese Cemetery and clean the graves of our ancestors and perform the sacred ceremony of paisan, offering them food, drink and prayers; 4) Siu Yee, or Hungry Ghost Festival, when LSHT holds 2 ceremonies, one in Tin Hau Temple and the other on the land, to honor and and invite all of the deceased and wandering spirits, as well as our ancestors, to partake of food and drink. On this day, plates of traditional native Hawaiian food are laid around the property, along with candles and incense, while our priest chants and burns a cage full of paper money offerings and firecrackers, inviting and honoring the area’s deceased native Hawaiian ancestors, to eat with us; and 5) Numerous feast days, in honor of significant deities. The moon calendar regulates the practices of Lum Sai Ho Tong.

9.4 **Recreation**

Interviewee Gerald Lam began training in Tao-Gar in the Lum Sai Ho Tong‘s Tin Hau Temple under renowned kung-fu spiritualist Lum Dai Yung. His recollection of kung-fu in Territorial Hawai‘i is presented below:

> In Territorial Hawai`i at the time were renowned kung-fu masters Lum Dai Yung and Wong Cook Fat who had migrated to Honolulu in the early 1900s desiring political asylum from China in the aftermath of the “Boxer Rebellion,” which had been waged against foreign occupation by the Ching Dynasty’s use of the underground Hung Mun kung-fu fighters.
>
> In 1889, China’s Lum clan immigrants from Chung Shan in Guangdong (Canton) Province established the Lum Sai Ho Tong in Hawaii. Its Lum, Lam, Lin, Lim, and

> Lem membership met in rented quarters located on Smith Street between Pauahi and Hotel Streets to pay respects to their clan's patron saint, Tin Hau Sung Mu ("Ku Po"). In 1899, Mr. Say Yip Lam donated land at 1315 River Street for a new clubhouse. Later, masters Lum Dai Yung and Wong Cook Fat migrated to Honolulu. By 1900 in China, a cultural renaissance of Chinese pride reached crescendo via kung-fu fighters such as Wong Fei Hung against Western and Japanese professional fighters, which led to the organization of the Jing Mu Physical Culture Association in Shanghai in 1903. In 1930, a Jing Mu kung-fu gym was developed in Honolulu Chinatown that today is known as The Chinese Physical Culture Association. Originally, Master Lum taught and managed the Jing Mu gym teaching Buddhist kung-fu Fat-Gar. He left to organize the Gee Yung Society in 1937. In 1953, the Lum Sai Ho Tong erected a new building standing today as the Lum Sai Ho Tong Tin Hau Taoist Temple. I began training there in 1953 in the tao-gar art of fighting ghosts, or spirits. Teaching elsewhere in Chinatown at the time, was the father of my aunt Thelma Wong, the renowned mystic Wong Cook Fat known as "Old Man Wong of Kalihi." My aunt Thelma Wong was the wife of my mother's brother, Clarence Fong.

9.5 **Gathering of Plant and Food Resources**

UHCOH recorded Mrs. Eleanor Nahiapo Wilson Heavy and her recollection of her mother traveling to the Squattersville area (Ka‘ākaukukui) to gather *limu*, *wana* or *‘ina*, squid, and *‘ōpae* for the family's meals.

Representatives of Lum Sai Ho Tong provided the following statement regarding plants for cultivation and harvest.

> Plants and trees were cultivated for the ali`i's spiritual and secular needs. The great leader, Kamehameha, after winning the Battle of Nu`uanu, settled his cherished friends and family members here. His beloved wife, Ka`ahumanu, reserved harvests from trees planted on the land, and chosen Konohiki gathered traditional foods, ocean, river and land resources here.

Interviewee Gerald Lam shared his knowledge of spawning cycles:

> Queen Lili`uokalani placed her Royal Garden there among the sacred springs, which feed ‘ama'ama (fish of the ali`i) and other fish spawn makai. Palile kāhuna presided over this life of the land (`Āina i hane). Lo'i were fed above ground and fish spawn fed underground.
>
> […] at about ‘A`ala and Beretania Streets is the underground sacred Kamohoali‘i shark cave of sacred spring waters whose lava tubes run mauka through Auwaiolimu into Kekapuwai past Roosevelt High School. ‘Ama'ama fish spawned in this and similar underground caves nearby, past Pearl River and into ‘Ewa District. The annual ‘ama'ama runs circling O‘ahu Island commenced in these sacred underground aquifers. These mineralized aquifers comprising one of Earth's leylines are molecularly charged having thereby supernatural energy. It had been these healing waters known by kahuna to ably provide the sustainability of surplus fish supply for all of O‘ahu's moku and ahupua`a.

Section 10 Summary and Recommendations

CSH undertook this CIA at the request of Halewai‘olu Senior Development LLC. The research broadly covered the Honolulu Ahupua‘a.

10.1 Results of Background Research

Background research for this project yielded the following information (presented in approximate chronological order):

1. Pukui et al. (1974:49–50) literally translates Honolulu as “protected bay,” which refers to the protection of Honolulu Harbor. Older names for the harbor are Kou and Māmala.
2. Traditionally known as Kou, Honolulu had a long tradition as a royal center where the *ali‘i* would meet and entertain. Kou stretched from “Nu‘uanu to Alakea Streets and from Hotel Street to the sea” (McAllister 1933:80).
3. The *ahupua‘a* of Kou was subdivided into several smaller land divisions, known as *‘ili.* The area between Maunakea Street and Nu‘uanu Stream and *makai* of King Street was known as Kapu‘ukolo. The area between Maunakea and Nu‘uanu Stream *mauka* of King Street to Beretania Street was called Kīkīhale.
4. Near the current alignment of Richards and Queens streets was Hono-kau-pu—a noted field for *‘ulu maika,* an ancient Hawaiian game similar to bowling (Westervelt 1915:16). Kou was the popular *‘ulu maika* field amongst chiefs. The track at Hono-kau-pu was approximately 12 ft wide and extended from the current location of Merchant and Fort streets, traveling ‘Ewa to the intersection of Merchant Street and Nu‘uanu Avenue. It is said that Kamehameha I used this *maika* track (Westervelt 1915:16).
5. Pākākā was the name of a coastal point, a canoe landing, and wharf built off the point in 1827, and the name of a *heiau* built on that same. The name literally means “to skim, as stones over the water” (Pukui et al. 1974:175). Thrum (1906) generated several lists and surveys of *heiau* and noted that Peter Corney, a visitor to the island in 1819, saw several *heiau* along the Honolulu shore.
6. Following the Māhele in 1845, an 1871 map shows the original property owners of the land which sits under the current building. This included individuals named Kaukoke and Makahopu, and Lahilahi Marin, daughter of Francisco Paulo de Marin, confidant of Kamehameha I.
7. In 1846, Honolulu was made the capitol of the Hawaiian Kingdom and was well on its way to becoming the commercial and political hub of the Islands.
8. In 1899, the first case of bubonic plague was identified in Hawai‘i, in a Chinese bookkeeper named You Chong. After an examination by Dr. G.H. Herbert, who noted a high temperature and swelling in the groin, the patient died the next night. After an autopsy, the diagnosis of bubonic plague was determined.
9. From 12 December 1899 to 31 March 1900, 71 cases of bubonic plague were reported, with 61 deaths, 41 of whom lived within the established Chinatown quarantine area. The Board of Health concluded they could not contain the plague and decided the best remedy was to set “sanitary fires” to infected wooden buildings. A total of 41 controlled fires were set between 31 December 1899 and 13 August 1900.

10.2 **Impacts and Recommendations**

Based on information gathered from the cultural and historical background and the community consultation, CSH identified potential impacts and makes the following recommendations based on approved community consultations.

1. Project construction workers and all other personnel involved in the construction and related activities of the project should be informed of the possibility of inadvertent cultural finds, including human remains. In the event that any potential historic properties are identified during construction activities, all activities will cease and the SHPD will be notified pursuant to HAR §13-280-3. In the event that *iwi kūpuna* are identified, all earth moving activities in the area will stop, the area will be cordoned off, and the SHPD and Police Department will be notified pursuant to HAR §13-300- 40. In addition, in the event of an inadvertent discovery of human remains, the completion of a burial treatment plan, in compliance with HAR §13-300 and HRS §6E-43, is recommended.
2. In the event that *iwi kūpuna* and/or cultural finds are encountered during construction, project proponents should consult with cultural and lineal descendants of the area to develop a reinterment plan and cultural preservation plan for proper cultural protocol, curation, and long-term maintenance.

Hallet H. Hammatt, President
Cultural Surveys Hawai'i, Inc.
ATTN: Chantellee K. Spencer
399 Hualani Street, Suite 124
Hilo, Hawaii 96720

Dear Ms. Spencer:

SUBJECT: Project Inquiry for the Halewai'olu Senior Residence Project
Tax Map Key 1-7-006: 012

Thank you for your letter received on July 15, 2019, regarding your request for general information on the subject area. The Department of Planning and Permitting (DPP) offers the following comments:

1. The guiding planning documents for the project area are the County General Plan (GP) and the Primary Urban Center Development Plan (PUC DP). Both the GP and the PUC DP are currently being updated. For more information on these projects, please visit the DPP website: www.honoluludpp.org, and the PUC DP website: www.pucdp.com.

2. The project site is not within a Special District, however, it is in close proximity to both the Punchbowl Special District (leading mauka from N. Vineyard Street) and the Chinatown Special District (leading makai from N. Beretania Street). Information on these Special Districts is below:

   a. Section 21-9.60 (a) of the Land Use Ordinance (LUO) regarding the Chinatown Special District states: "Chinatown is the oldest section of downtown Honolulu. In addition to its historic role in the growth of the city, and its architectural significance as reflected in its placement on the National Register of Historic Places, it reflects a dynamic ethnic population and business community". A reproduction of the LUO can be found here: http://www.honoluludpp.org/ApplicationsForms/ZoningandLandUsePermits.aspx

Ms. Chantellee K. Spencer
August 9, 2019
Page 2

b. Section 21-9.50 (a) of the Land Use Ordinance (LUO) regarding the Punchbowl Special District states: "The significance of the National Memorial Cemetery of the Pacific as a national monument and as one of Hawaii's important landmarks has long been recognized. Over the years, however, land development and land use changes in the area have posed a serious threat to the views of its slopes and diminished the serenity of the natural appearance and sanctity of the national cemetery and its environs." A reproduction of the LUO can be found here: http://www.honoluludpp.org/ApplicationsForms/ZoningandLandUsePermits.aspx

3. The subject site falls within the defined area of the Downtown Neighborhood TOD Plan (adopted in 2017). This plan involved market research and extensive public outreach to help identify needs and envision the potential character of the area within a half-mile of the Downtown cluster of planned rail stations: Iwilei Station, Chinatown Station, and Downtown Station. http://www.honolulu.gov/rep/site/dpptod/downtown_docs/Downtown_TOD_Plan_adopted_9-17.pdf

4. In 2016 the City produced a Chinatown Action Plan meant to present a set of strategies and actions informed by the community to improve the historic neighborhood (this strategic report is not only limited to the Special District). The Chinatown Action Plan can be viewed here: https://www.honolulu.gov/rep/site/dpptod/chinatown_docs/ChinatownActionPlan-Final_3-16.pdf

Should you have any questions regarding these comments, please contact Noelle Cole, of our staff, at 768-8055.

Very truly yours,

Kathy K. Sokugawa
Acting Director

Lum Sai Ho Tong Building

INTRODUCTION

2019 marks the 130th Anniversary of Lum Sai Ho Tong. Our first building was completed in 1899, and it also happens to be about 60-plus years ago that our present building was finished. And, so, like in 1989, our 100th Anniversary, we feel that it is very important to update and document the Lum Sai Ho Tong history for the future generations, today. We are able to do this, because of our benevolent and broadminded benefactors, elders and friends who came before us.

However times may have changed, we, at Lum Sai Ho Tong, are thankful, and we strive to fulfill the wishes and the missions outlined for us, by our elders, in our Constitution. So, for the Lum`s, we hope that with this updated book, you will remember who we are, where we come from, and to continue to do your best to honor the positive legacy of our great ancestor Pi Kan and our patron saint Tin Hau Sung Mu, and in doing so, also honor your parents and ancestors and prosper.

To our friends, we wish all you here, tonight, great happiness, health and prosperity. And, to the Lum's, our wish is that you will remember your legacy and pass this on to your descendants, so that in thirty years from now, they may again update this book with greater good than we, and our forefathers, have given.

In Recognition of

130th Anniversary of Lum Sai Ho Tong

WHEREAS, in 1889, a group of immigrants who had made Hawai'i their home established a society clubhouse for men with the surname Lum (including Lin, Lam or Lim); and

WHEREAS, Lum Sai Ho Tong was named after the ancestral homelands of the Lum families which lay west of the Yellow River in China; and

WHEREAS, Lum families trace their roots back to Bi Gan, a noble advisor during the Shang Dynasty (1766-1121 BC) in China and Lum Gu Po, a selfless young woman from the Song Dynasty (960-1126 AD) who was deified as Tin Hau Sung Mu; and

WHEREAS, through the substantial support and commitment of its founders, the society was chartered in 1918 in Honolulu under the Territory of Hawai'i; and

WHEREAS, the mission of the organization is to encourage fellowship, benevolence and assistance among the members and families in Hawai'i; and

WHEREAS, the clubhouse building features a Tin Hau shrine, living quarters, shops, and a meeting room where members could meet, receive and send letters home, worship and ask for assistance; and

WHEREAS, in 1931, Lum Sai Ho Tong became the first Chinese society in Hawai'i to grant membership to women; and

WHEREAS, each year members of Lum Sai Ho Tong celebrate the birthday of Gu Po, Ching Ming Festival, spring and summer activities and more;

THEREFORE I, DAVID Y. IGE, Governor, and **I, JOSHUA B. GREEN, Lieutenant Governor** of the **State of Hawai'i,** do hereby congratulate Lum Sai Ho Tong on its 130th anniversary and recognize its longstanding commitment to their members and the community, preservation of culture, and promotion of respect, tolerance and understanding.

Done at the State Capitol, in Executive Chambers, Honolulu, State of Hawai'i, this fifteenth day of April 2019.

JOSHUA B. GREEN
Lieutenant Governor, State of Hawai'i

DAVID Y. IGE
Governor, State of Hawai'i

4

MESSAGE FROM MAYOR KIRK CALDWELL

Aloha! It gives me great pleasure to extend my hearty congratulations and warm aloha to the members of Lum Sai Ho Tong Society of Hawai'i on this auspicious occasion. Over the years, Lum Sai Ho Tong has been an integral part of the development of the island of O'ahu. Originally founded to provide shelter, medical care and other assistance, as well as a place for members to meet who had immigrated to Hawai'i from China in 1889, the society began from humble headquarters on Smith Street.

In 1899, Lum Say Yip donated a parcel of land at 1315 River Street and the Lums erected their first building in 1900. In 1953, a second building replaced the original building. Today, the Lums continue to meet there for their business, cultural and social gatherings.

Over the years, Lum Sai Ho Tong has always been a leader in the Chinatown community, setting many precedents, such as having the first woman president and starting and participating in many cultural events. It has also been an ardent leader and advocate for a cleaner and safer River Street in the mauka area, which also happens to be the cultural center of Chinatown with its many historical temples, shrines, schools and monuments.

Additionally, on the second floor of the building, the Society sponsors and manages the Tin Hau Temple for the Chinatown community, as well as its members. In fact, Tin Hau Temple is open to the public 365 days a year. The principal deity there is Tin Hau Sung Mu, or Gu Po, who also happens to be the Patron Saint of the Lum Family.

On behalf of the people of the city and county of Honolulu, I extend my congratulations and best wishes to the members of Lum Sai Ho Tong for a memorable 130th anniversary celebration and many more prosperous years.

Kirk Caldwell

CONGRATULATIONS AND BEST WISHES
IN HONOR OF LUM SAI HO TONG'S 130TH ANNIVERSARY
AND TIN HAU SUNG MU'S 1,059TH BIRTHDAY

~~~~~~

A SPECIAL MESSAGE

FROM THE DESCENDANTS OF LSHT FOUNDING MEMBER

LAM TOI (LUM LOP SAI)

~~~~~~

Two years ago, I began to research my Lam family history. (I am 72 yrs old and live in Minnesota.) I followed up on a lead buried in the family papers that said my grandfather, Lam Toi (Lum Lop Sai) helped found a benevolent society in 1889 and was president for 16 years.

It was a long shot, but out of curiosity I Googled: Lum Sai Ho Tong. To my astonishment, a website appeared with photos, directions, and a phone number! Howard Lum, your president and most enthusiastic ambassador took my call. He not only filled me in on all things Lum, but also graciously invited me and my Hawaii cousins to visit when I came to Honolulu.

It was a thrill and highlight of our trip to meet with Howard and staff in January 2018 and to visit in the building and temple on River St. that is such a historic treasure in Honolulu's Chinatown.

My grandfather, Lam Toi, would be so proud to know that the organization that he helped found in 1889, would be valued enough by succeeding generations that it would still be alive over 100 years later. Keeping our family's heritage and traditions alive is not easy to do in this modern age, but it is even more important than ever. I am so grateful to all of you at LSHT that work so hard and contribute so much time and effort to do this.

My family's heartfelt congratulations to you on your 130th anniversary. It is indeed a cause for celebration.

And on behalf of all of Lam Toi's descendants, a sincere THANK YOU!

Pat Katsura-Lam Rollins

Lum Sai Ho Tong
1315 River St,
Honolulu, HI 96817

Dear President Lum,

On behalf of the Lim Family Benevolent Society in San Francisco, CA, I would like to congratulate you on the 130th Anniversary of Lum Sai Ho Tong of Honolulu. That is a testimony of how Lum Sai Ho Tong has greatly contributed to the betterment of the community with your unselfish services and respect for tradition.

We are honored to be able to attend your 130th Anniversary Celebration with our delegates and to recognize the many achievements of Lum Sai Ho Tong of Honolulu.

We wish you all the success for many more years to come, and we hope to continue keep our family association links strong and impactful.

Sincerely,

Thomas Lam
President
Lim Family Benevolent Society

LUM SAI HO TONG PRESIDENT'S MESSAGE
APRIL 28, 2019

Aloha, Good evening and welcome to all.

I would like to thank all of our friends, members and families for joining us at our 130th Lum Sai Ho Tong Spring Banquet and Birthday Celebration in honor of Tin Hau Sung Mu. I hope that all of you have a great time tonight!

Now, this is my 7th term that I have had the honor of serving as president of Lum Sai Ho Tong. And, I especially would like to thank the officers, directors and members of LSHT for the amazing support and hard work they have rendered on behalf of LSHT and the community. To the very best team, the biggest MAHALO!!

On this auspicious occasion, I would once again like to share an observation. Today, I reflect on my 19 years, since I have become an active member in our society and the community. And, I am so thankful that I have had the opportunity to serve LSHT, our members and the community, as our esteemed ancestors, Pi Kan, Tin Hau Sung Mu and many others have done before me. Pi Kan and Tin Hau Sung Mu are the greatest examples of "goodness," and how we should strive to live. So today, I would like to reiterate what I said in 2014, and my picture of the "Circle of Life":

- Always honor your parents – Because of them, we are here today...
- Always honor your family – Because your family is your foundation...
- Always be thankful – Because gratitude is the source of all that is goodness...
- Always give back to your community – Because with your community, you can reaffirm your humanity...

So, tonight, I would like to encourage everyone here to reflect on the "Circle of Life" and do your best to work to fulfill your own " Circle of Life". Strive to be positive, thankful, and happy.... In closing, I would like to wish you all health, happiness and good fortune!

Yours very truly,

Howard C. O. Lum, President

TIN HAU SUNG MU

(KU PO or MATSU)

Tin Hau, also referred to as Tin Hau Sung Mu (or, affectionately referred to by the Lum's as "Ku Po" or "Great Grand Aunt"), was born during the Sung Dynasty (960 - 1126 A.D.), on the 23rd day of the third month of the lunar calendar. The exact year is unknown. She was born a Lum maiden, the sixth daughter of Lum Yuen, an official of Poo Tin County, Fukien Province. Tin Hau was noted for her unselfishness and for her remarkable intelligence. She was hailed as a young lady who was always willing to help others in need.

Legend tells us that, once, during a severe storm, she dived, without hesitation, into deep waters at sea to rescue her father from drowning and tried valiantly to locate the body of her older brother. Her devotion to family and her bravery were known and admired throughout the village.

Tin Hau, however, died at a young age, in her early twenties. Legend goes on to say that even after her death, on numerous occasions, Tin Hau appeared to seafarers during heavy storms, guiding them to safety and saving many from drowning; Hence, she was, and still is, revered, as the "Goddess of the Seas."

The successive courts of the Sung Dynasty and all dynasties in China noticed Tin Hau's deeds. She was conferred the title of "Lady Ling Wai," in the Sung Dynasty, and was called the "Princess of Supernatural Favour," by Emperor Gaozong in 1155 AD. In the Yuan Dynasty, she became, "Tin Fee," and the "Protector of the Empire and the Brilliantly Outstanding Heavenly Princess." In the Ming Dynasty, she was honored as "Gee Sai Sung Fee," with the title, "Protector of the Nation," and she was bestowed the official title "Holy Mother of Heaven Above," by the Yongle Emperor, in 1417. In the Qing Dynasty, her title was raised to the most deified one of "Tin Hau," "Heavenly Queen" or "Heavenly Empress". In 1839, her last Imperial title was given, as, "Holy Mother of Heaven," by the Daoguang Emperor. In all, Tin Hau was given twenty-two official or imperial titles.

Today, at Lum Sai Ho Tong, Tin Hau's full-bodied golden statue occupies a central position, high upon the altar, in a great, golden-sculptured and well-decorated chamber, flanked on her two sides by the statues of "River-Watching God" and "Ocean-Guarding God." Three large incense burners are placed in front of the statues. On the altar table, a set of candlesticks and incense burners are all made of pewter. The table, itself, is finely inlaid with carvings depicting human activities.

Every year, thousands of members of LSHT in Honolulu and the community continue to respect and honor this patron deity at Tin Hau Temple. On the 23rd day of the third month of the lunar calendar, an annual memorial celebration is observed as Tin Hau Dahn (or Ku Po Dahn). On this occasion, individuals worship at the temple, bringing incense and joss candles, as well as silver and gold symbolic paper money, which are burned as offerings to Tin Hau. Some also bring offerings of food, fruits and preserved sweets. LSHT has, throughout the years, celebrated the occasion with a gala spring

dinner banquet, attended by many members, friends and special guests of the Society and the Temple.

During LSHT's Spring banquet in 1981. Mr. and Mrs. Wing Kit Lum donated a beautiful scroll, bearing the portrait of the Goddess "Tin Hau Sung Mu" (Ku Po or Great Grand Aunt). LSHT is very appreciative of their generous donation. The portrait of Ku Po is displayed on the stage every year during the spring banquet.

Today, it is claimed that there are more than 5,000 Tin Hau or Matsu Temples and more than 100,000,000 devotees, throughout China, Taiwan, Malaysia, Indonesia, Hong Kong, Singapore, Vietnam, Thailand, Philippines, Okinawa, South East Asia and the world.

THE MIRACLE OF THE PRINCESS TAI PING

TIN HAU SUNG MU (Ku Po or Matsu)

April 26, 2009

An incident off the coast of Taiwan, of great significance to Hawai`i's Tin Hau Temple, happened in the early morning hours of April 26, 2009. It truly rates as a miracle and is described, herein, relating to the experience of the survivors of the Princess Tai Ping disaster.

The aftermath of a trans Pacific Ocean goodwill tour round trip – Taiwan – Westcoast USA – Taiwan

Photo Courtesy of the Crew of the Princess Tai Ping

Background: The *Princess Tai Ping* was a replica of a 15th Century Ming Dynasty 53-foot wooden sailing warship. Planning for this replica started in early 2000 and construction was completed in 2006. After completion of construction, the vessel embarked on a 5,100-mile goodwill journey across the vast Pacific Ocean, to the West Coast of the United States, and stopping at several coastal cities. On its homeward voyage of another 5,100 miles, from the West Coast to Taiwan, the *Princess Tai Ping* stopped in Honolulu for nearly two months, in early 2009. Prior to their departure from Honolulu, on February 16, 2009, the crew was instructed by Skipper Nelson Liu and Assistant Angela Chao to visit Tin Hau Temple in Honolulu, to pay respect and to ask for blessings and a safe voyage. On January 1, 2009, the crew visited Tin Hau Temple and was invited back, before their final leg back to Taiwan. Three days before their departure date, the crew called and said that they could not come, because their car had broken down. LSHT members picked them up and hosted them. Six Hawai`i residents signed on as crew. Prior to departure from Honolulu, on February 16th, 2009, the crew was instructed by Skipper Nelson Liu and Assistant Angela Chao, to visit the Tin Hau Temple in Honolulu, to pay their respects to the Goddess Tin Hau Sung Mu and to ask for her blessings and a safe voyage to Taiwan. The "Heavenly Queen Mother" is widely known throughout the East Coast of China and among Southeast Asian nations as the "Savior of the Seafaring People."

A Tempest at Sea: On the final leg of its 5,100 mile westward journey across the Pacific Ocean, about thirty miles south of its homeport in Taiwan, in a raging tempest, the *Princess Tai Ping* sailed slowly, to delay entry into port until daylight. A Liberian flagged tanker was also in the vicinity, northeastward bound. Its course appeared to have it pass about two miles away. For unknown reasons, the tanker changed its course sharply and headed directly for the *Princess Tai Ping*. Skipper Nelson Liu, of the *Princess Tai Ping*, immediately called the tanker and notified them they were on a collision course, which the tanker acknowledged. It was too late, however, and the tanker collided into the *Princess Tai Ping*, shearing it in half and continued to sail off. The disaster occurred in the gloom and darkness of early morning on April 26th, 2009, 2:30 am - Taiwan time (8:30 am April 25th Hawaii Time).

Most of the crew of the *Princess Tai Ping* was gathered on the stern section of the vessel at the time. There was no way distress signals could be sent by the crew, clinging on to wreckage and debris from the vessel. However, thanks to a miracle, their beacon, acquired earlier during the voyage, floated up from the wreckage and was retrieved by a crewmember, in pitch darkness. Upon activation, the emergency beacon distress signals were transmitted across the Pacific, intercepted by the US Coast Guard in Hawai`i and West Coast, then, relayed back to the Coast Guard station in Taiwan.

Another Miracle: Unexpectedly, at dawn, floating among the debris from the severed vessel was *a bright golden yellow cape*. It was eagerly retrieved by the crew and used to attract the Taiwan Coast Guard rescue team that had arrived on the scene at first light of dawn to search for survivors. The cape was part of the garment used to adorn the statuette of the Goddess Tin Hau Sung Mu, housed in a shrine located at the stern section of the vessel.

Photo by Keith Lim

After nearly six hours at sea, still clinging to the wreckage, all of the crewmembers of the *Princess Tai Ping* were rescued and transferred by helicopter to area hospitals for observation. A senior crewmember, Professor Thomas William Cook, was detained for several weeks, for his injuries. The remaining ten crewmembers sustained only minor injuries and were released after treatment. Heeding the advice of Skipper Nelson Liu and Assistant Angela Chao, the five Hawai`i residents, including several other of their USA friends, returned to Honolulu on a pilgrimage to the Tin Hau Temple, on May 19th, 2009, to give thanks to the Goddess Tin Hau Sung Mu (Ku Po) (Matsu) for their safety and miraculous rescue. Honor, praise and tribute are given to Tin Hau Sung Mu and the brave crew of the *Princess Tai Ping*.

Mahalo to the crew of the Princess Tai Ping for sharing of a frightening, but, thrilling, experience:

Skipper Nelson Liu, Taiwan
Assistant Angela Chao, Taiwan
Tang Yu-Quan, China

Larz Stewart, Honolulu, Hawai`i USA
Jason Arnold, Honolulu, Hawai`i USA
Jack Durham, Honolulu, Hawai`i USA
John Hunter, Honolulu, Hawai`i USA
Liz Zeiger, Honolulu, Hawai`i USA
Kinjo, Okinawa, Japan
Mori, Okinawa, Japan

16

THE ORIGINATOR OF THE LUM CLAN
PI KAN

The original ancestor of the Lum clan was Minister Pi Kan, who was born 3,111 years ago. A direct descendent of Huang Di, the Yellow Emperor, Pi Kan served in the court of King Tzou, his nephew, during the declining years of the Shang (Yin) Dynasty (1766-1122 B.C.). Pi Kan was one of the King's three closest and trusted advisors administering the affairs of the country.

King Tzou was described as a cruel and tyrannical ruler. He issued harsh punishments and committed shocking atrocities among his subjects. Instead of minding national affairs for the good of the people and country, King Tzou, it was said, indulged in degrading vices and was influenced by those who sought to please him for their own gains. There was great concern about unrest and rumors of rebellion to overthrow the Yin Empire, especially among King Tzou's closest advisors, Prince of Wei, Senior Tutor Jizi and Junior Tutor Pi Kan. They used every occasion to inform King Tzou and pressed for reform. Eventually, Prince of Wei and Senior Tutor Jizi, fearing for their lives, feigned illness and left the court.

Pi Kan was an honest statesman, known for his courage and forthrightness. He continued to see King Tzou, to persuade him to mend his ways, in order to save the empire. King Tzou was untouched by Pi Kan's devotion and loyalty to court and nation. Pi Kan pleaded and admonished King Tzou, the drunken despot, for three days. Finally, the King replied, "I have heard that while an ordinary man's heart has five apertures, a sage's heart has seven. Pi Kan must be a sage. Let us see whether his heart has seven apertures or five." And, he ordered Pi Kan killed on the spot, to have his heart examined.

King Tzou, still not satisfied, ordered the execution of all who were related to Pi Kan. At the advice of an elderly servant, Pi Kan's wife, Yu Chi Shih, who was expecting a child at the time, fled to a stone house in the forest, near a spring of water. There, a son was born. This son, later named Lin Chien, ("Lin" meaning "forest" and "Chien" meaning "a spring of water") was to become the ancestor of subsequent generations of Lum descendants.

Following the execution of Pi Kan, the empire of King Tzou was overthrown by Prince Ji-Fa, thus, ending the Shang (Yin)

17

Dynasty and beginning the Chou Dynasty. The new sovereign, Prince Ji-Fa, assumed the title of "Wu Wang," translated as "Martial Emperor Wu." Soon thereafter the new sovereign, Wu Wang, proceeded to take action towards winning the confidence and respect of the people of the empire and of Yin, in particular. He also sought and released political and military prisoners of the deposed Tzou and restored the honors, which they enjoyed in the Yin court.

In order to exemplify loyalty and bravery, Wu Wang ordered Pi Kan's tomb reconstructed and erected a bronze plaque on which was engraved an elegy:

"With a forest of trees on the left, a spring of water on the right. And facing hills in the front, served by a road at the back. The Spirit of Ages, therefore would be eternally preserved."

Furthermore, Wu Wang conferred upon Pi Kan's heir a high title in his court. The name "Chien," as well as the surname of "Lin" (Lum), was conferred upon him out of respect to his birthplace in the forest. The Chinese Lum character, 林, consisting of two trees means "forest." Such royal grant of a name was of the highest honor. Thus, the Lum clan began with the only son who was heir to Pi Kan.

This is a brief history of the Lum Family which dates back about 3,110 years with the martyr, Pi Kan, as the original ancestor whose birthday falls on the sixth day of the fifth month of the old Chinese Lunar calendar. On this day, the various Lum family groups throughout the world celebrate his birthday under the auspices of their family organization.

All such family organizations throughout the world are called, Lum Sai Ho Tong. "Sai Ho," meaning "West River," was the name of Pi Kan Kung's birthplace and where he lived, until the despotic King Tzou executed him. It is located on the west side of the Yellow River in Shensi Province in Northwest China. Thus, the Lum's, to this day, consider and honor the loyal and faithful Pi Kan as their original ancestor, and his son, Lin Chien, as their forefather.

The Lum Clan spread far and wide around the world, and thousands have distinguished themselves prominently in academia, military, government, and business. Some of the most famous Lum's were: Lum Fang (551 BC-479 BC), outstanding student of Confucius. Also, Lum Li, who migrated south to Jiangsu Province (265-316 AD), where he had six sons, nicknamed the "Six Dragons," for their extraordinary strength. One of them, Lum Luk, was commissioned by Emperor Yuen to expel the insurgents of the five border tribes from the south. This took three years and became known as the Fon Chia Disturbance. During this campaign, Luk crossed the Yangtze River to Jin An, present day Fujian Province. He became governor and during the Tang Dynasty, the Lum Family was the largest in Fujian Province. Luk's descendent, Lum Pee, had nine sons who all became governors of nine different provinces, and thus became known as the family of nine Governors.

At the end of the Sung Dynasty, Tin Hau, Grand Lady Matsu, was born to the 22nd generation of Luk. She was born on Poo Tin Island, Poo Tin County, Fujian, around 960 AD. She is considered to be the patron saint of the Lum family.

Then, during the Qing Dynasty, came Lum Chek Shu, the righteous Governor of Quantung and Quangxi, who banned and destroyed the opium brought in by the British and exposed the evil of the drug.

After the Qing Dynasty was overthrown, another patriot of the Lum family, Lum Sim, was elected president of the Republic of China in 1932, and served for three consecutive terms. At the turn of the 20th century, the

Lum Family migrated in large numbers to many countries and continued to grow and prosper. Throughout the world, wherever there are groups of Lum's there are organized associations called Lum Sai Ho Tong, to enable members to appreciate their roots, help one another, and to preserve their noble traditions and culture. Today, most of these associations also contribute and support their communities via charities and community services.

Pi Kan is regarded as "The most faithful minister in history," because of his loyalty to the Shang Dynasty, even at the cost of his own life. Although Pi Kan is primarily known for his great loyalty, equally important is his reputation for great honor and compassion for all people. Thus, he is also known throughout China as the patron saint of businessmen and "The God of Civil Wealth and Culture."

PI KAN'S TEMPLE COMPLEX

After King Wu of the Chou Dynasty ascended the throne, he repaired Pi Kan's tomb and restored, posthumously, all of Pi Kan's titles. Recognition of Pi Kan was then expanded by the Xiawen Emperor, Tuo Bahong, of the Wei Dynasty, who personally paid a visit in 386 AD. By imperial decree, he ordered that a temple be built before the tomb. It is the Pi Kan Temple of Weihu today.

After the second thousand years, the Ming Emperor, Xiazong, paid a formal visit to the Pi Kan Temple in 1494 AD. He then repaired and established the scale and shape of the temple as seen today. Thereafter, it was called, "The First Temple Under Heaven."

In 1993, after 500 years, the first Weihu Pi Kan Commemoration was held to celebrate Pi Kan's birthday. In 2006, in preparation for the 3100th birthday celebration for Pi Kan, the Weihu municipal government, together with the Weihu Pi Kan Commemoration Committee, sponsored a project to expand and enlarge the complex and to call it the "Honan Weihu Pi Kan Tourism Zone." In May 2008, on Pi Kan's 3100th birthday, hundreds of thousands of visitors visited the temple to pay their respects.

Throughout the temple complex, one can find many rare and historical relics, such as, the 64 Stone Steles, which includes the only known Stele carved with a sword by Confucius, himself, and Steles written by the Xiaowen emperor and Emperor Qianlong.

HISTORICAL BACKGROUND THE FIRST CHINESE IN HAWAI'I — 230 YEARS AGO

The first Chinese visitors to set foot in Hawai'i arrived two hundred thirty years ago, in 1789, according to available information. They were probably carpenters, craftsmen and seamen traveling on their own accord or working as crewmen on American and European trading ships engaged in the sandalwood trade, between the Kingdom of Hawai'i and China.

The Chinese arriving in Hawai'i during the period 1830-1840 were merchants, businessmen, technicians and skilled craftsmen. Contrary to western stereotype, they were not laborers. The first major wave

of 200 contract laborers arrived in Hawai`i in 1852, to work on the sugar plantations. From that time until the turn of the century, about 46,000 Chinese arrived in Hawai`i. The vast majority of these people came from various villages and districts in the Kwangtung Province.

EARLY LUM IMMIGRANT

Exactly when the first person with the surname Lum arrived in Hawai`i is not known. However, prior to the period of the arrival of the first group of Chinese contract laborers in 1852, a young man by the name of Lum Ching, from Nam Kai Village, Kung Sheong Doo District, Chung Shan County, Kwangtung Province, came to Hawai`i to practice "Kum yee hok," a trade based on his knowledge and skill of an astronomy/geology-based study. He would be seen carrying two round "magic" instruments on the outskirts of Honolulu, studying the environment of various locales. These instruments were the "low poon," an astronomy-based compass, and the light-reflecting mirror. Lum Ching correlated heavenly bodies, especially stars, to geographic features on earth, such as mountains and rivers. This study of sky and earth was applied to specific sites, to forecast favorable or unfavorable characteristics of the sites concerned.

Later studies revealed that Lum Ching died and was buried in Hawai`i. This was confirmed with the finding of a tombstone at the Mānoa Chinese Cemetery, owned by Lin Yee Chung Society, in Honolulu. During the decades that followed, the resting place of Lum Ching Kung deteriorated from exposure to the weather and neglect. In May 1948, President Lum Yee Nung wrote to President Ching Chow and the Directors of Lin Yee Chung, requesting that a new tomb be provided for Lum Ching Kung and that the original tombstone be relocated to a new burial site, in order to preserve this segment of history of the Lum`s. The Lin Yee Chung Association granted Lum Sai Ho Tong's request. Thereafter, each year during Ching-Ming (Pure Brightness Festival), LSHT members visit the tomb of Lum Ching Kung, to pay their respects to this pioneer ancestor.

THE 130-YEAR HISTORY OF
LUM SAI HO TONG
1889 – 2019

FOUNDING OF (LUM) SAI HO TONG — 1889

Many years passed since the arrival of Chinese to Hawai`i, before a group of men decided it would be of mutual interest and benefit to organize an association of individuals bearing the Lum surname. In 1889, they established themselves as Sai Ho Tong.

The Society's purpose was to provide for the basic needs of its Lum members. In those days, the society was an abode for across-the-Pali travellers. Residents of the Windward area coming to Honolulu spent 10 to 12 hours riding by horse and buggy or spent hours walking across the mountain. Here, they could gather at a central place, away from their everyday work environment on the plantations, to meet with other friends; a place to receive and send letters home; a place where other clan folks could help one another to read and write letters to families and relatives still in China; and, a place where assistance could be obtained in times of illness or financial need.

In addition to providing for the worldly needs of its members, the clubhouse further provided for their religious needs as well. Ancestral worship among many families played (and still plays) a prominent role in the life of the Chinese. At the clubhouse, there was a place for worshipping Tin Hau.

Lum Sai Ho Tong was first located on Smith Street, between Hotel and Pauahi Streets. During the initial ten years, members rented a clubhouse near the Sun Yin Wo restaurant. Travelers from the country districts found food, shelter and a hearty welcome at the Lum headquarters. The aged of the Lum family found help there, and members who had no permanent homes also made it their headquarters, even having their mail sent there. The society provided medical aid and gave free advice in business matters, such as land transactions. Younger members even gave steamship tickets to older members who could no longer work and who wished to return to China. Eventually, they were even helped to find refuge in the Palolo Home.

Records indicate that among the original founders, Lum Duck Sun, Lum Duck Yew, Lum Gee Hoon, Lam Toi, and Lum Gee Wah provided substantial financial support annually towards maintenance and operation of the Society.

By the late 1890's, ten years after the founding of the Lum clan, the Society was still without its own building. The desire for a clubhouse that the Society could call its own and for a permanent base of operation kindled Lam Say Yip (prominent farmer and rice merchant and father of renown businessman Eddie Lam) to generously donate a parcel of land to the Society, in 1899. As President and one of the early benefactors of Sai Ho Tong, he came from the village of Buck Toy, Leong Doo, Chung Shan County, Kwangtung Province. This site of 2,486 square feet, located on River Street near the corner of Kukui Street, continues to be the location of the Society's headquarters, 130 years later.

Further, Lam Say Yip and his wife, Lam Lau See, each contributed money to kick off a fund drive for the new building ($500 and $200, respectively; totaling over $20,000, in today's value). The deed to the property was put into a trusteeship consisting of Lam Toi, Lum Wo Sing and Lum Kam Chen, with the understanding that they would deed it back to the society, after it

had been incorporated. Incorporation took place in 1918.

The task of planning and fundraising for construction of the new building was delegated to Lum Kum Chin, Lum Kum Fat, Lum Lup Mow, Lum Wo Sang, Lum Won and Lum Yip Kee. Eventually a two- story wooden building was built.

Along with the generous financial contributions that were needed to erect the building, members made many other significant donations. These included: A wooden arch with "Tin Hau Kung" carved on it, which was erected to face the river; Statues of the God of Door, the God of Wealth and the God of Territory; A complete set of valuable weapons; High mounted "Silence" and "Deference" notice plaques; A large bell and drum set; A large incense burner for the Heavenly God; A pair of large porcelain vases made in the Han Dynasty; One jade chop; One cedar incense burner; One bronze gong; A pair of cymbals; A pair of small gongs; and, many chairs and embroidered cushions.

Construction was completed by the end of 1899, however, the official opening of the building was delayed until June of 1900, due to a major epidemic. Authorities contended that the bubonic plague was so severe that they burned and destroyed over 38 acres of buildings in Chinatown, to stop its spread. Over 4,000 Chinatown residents were quarantined in Kalihi or displaced to Liliha, causing tremendous fear and anxiety in the community. When the ashes settled, Sai Ho Tong's new building was outside the quarantine area and, fortunately, was saved from destruction.

The new building was subsequently named Lum Sai Ho Tong (Hall of Lum Society) and Tin Hau Kung (The Temple of Tin Hau). Auspiciously, it faces west toward a river (Nu`uanu).

HISTORICAL EVENTS 1919 – 1953

In February 1919, President Lum Yum and other members of the Board of Directors convened to approve the construction of the second two-story building and the renovation of the original one. The upper story of the front building housed Tin Hau Temple and a conference hall, and the ground floor had two rooms, for rental. The upper story of the back building consisted of a large room, for living quarters; and, the ground floor housed a bedroom, a room for the elderly, and a sick room.

From 1919 to 1931, Lum Sai Ho Tong was under the leadership of Presidents Lum Yum, Lam Toi, Lum Hop, Lum Man Sook, Lum Kung and Dr. Kalfred Dip Lum.

In 1931, LSHT Directors historically voted to expand its membership. To do so, full membership status was offered to female members (Lum sisters and sisters-in law) of the Lum clan. Thus, men and women would pay equal membership fees, enjoy the same rights and privileges, and share the same responsibilities. Thereupon, Mrs. Lee Lum Mew Wing, Mrs. Lum Hop and Mrs. Lum Mow Chin were selected to handle registration of new members. The Lum Society may have been the pioneer among the Chinese societies to grant full membership to women. Indeed, even the Pacific Club was a male-only organization, at this time.

During the same year, LSHT published its regulations and bylaws in English and Chinese, for the first time. Lum Wing Kwai was the President; Lum Chun Chee, the Secretary; and Lum Jock Chin, Lum Chock Fu, Lum Gun, Lum Wo, Lum Cheong and Lum Kee Chung, the Directors.

In 1932, further changes and renovations were made to the LSHT building. The large living quarters on the upper story of the back building were converted into an open conference hall. An altar was erected to worship the Lum clan's grand ancestor, Bi Gan Kung. Thereafter, annual celebrations to observe Bi Gan's birthday were held on the sixth day of the fifth month of the lunar calendar.

In January 1935, the Lum Society membership commenced planning an elaborate celebration of Tin Hau's birthday. On this occasion, Tan Sing Dramatic Club was invited to perform. The celebration committee included Mrs. Lum Lee Kwai Sin, Mrs. Lum Lai, Mrs. Lum Kwock, Mrs. Lum Mow Chin and Aunty Ting Pai.

A year later (1936) on the 23rd day of the third month of the lunar calendar, members of LSHT celebrated Tin Hau's birthday. LSHT used this occasion to honor its elderly members. As part of this celebration, LSHT families also attended a Cantonese opera performed at the A`ala Theater. This opera played before a capacity audience of young and old, men and women.

The year 1949 was the 60th Anniversary of LSHT. Under the Presidency of Lum Yee Nung, the Society held its anniversary and Tin Hau's birthday celebrations at the Wo Fat Restaurant on April 24. Many guests were invited to this event.

In 1951, the Hawai`i Chinese community observed the 100th Anniversary of Chinese workers arriving in Hawaii. The United Chinese Society organized many events in the Chinese community to celebrate this historical event. One such activity was a beautiful parade of floats. The Lum Society was proudly represented in this parade by sponsoring five lovely floats. Lum Quon Chock loaned the vehicles. Also in 1951, LSHT expanded its activities to members by teaching Kung Fu and other Chinese martial arts.

The Society in 1952 embarked on a major initiative — to raise funds for and to construct a new society hall and temple. In July 1952, LSHT extended its focus to include youth and youth activities. A youth department was added to include membership enrollment and registration of young people.

A NEW CHALLENGE — A NEW BUILDING

Keeping up with the Neighborhood Redevelopment plans in 1952, the officers and directors undertook two major challenges — first, the construction of a new building and second, fundraising to cover the construction cost.

The low bid, by Calvin Ching, was $49,750. When Lum Yee Nung consulted professional builders, they estimated minimal costs at $47,000 ($445,000 in 2019 dollars). Treasurer Lum Kam Chee assisted by President Lum Wah Hin, Vice President Lum Quon Chock, Lum Chung Chee, Lum See Tuck, Lum Wo, Lum Wah Chan and many others handled the fundraising effort. The total amount collected was $24,000. Added to the existing treasury, the building fund amounted to $35,000. The total cost of the building was projected at $45,000. Lum Quon Chock, Lum Wah Hin and Eddie Lam generously offered to defray any cost overrun, should this amount prove to be insufficient.

The preparation of plans and specifications and construction of the new building were under the capable management of Lum Quon Chock. He generously waived his fees for preparation of the plans and specifications. The members, who wanted to see the building started, applauded him.

Lum Wah Hin, Lum Quon Chock & Alfred K. C. Lum

Eddie Lam chaired the construction committee. Lum Wah Hin and Lum Quon Chock were appointed overseers of building construction; Lum Soong Him was the fiscal officer, and Lum Soong Bow and Lum Wah Fat were auditors. (It is interesting to note that there was no written contract for the construction.)

The design for the ground floor included two spacious rooms for shops in the front and five rooms for living quarters in the back. On the second story, the front would house Tin Hau and in the back, a large kitchen, two toilets and washrooms. The third story would include a conference room and a storeroom. The roof of the building would be in the traditional Chinese architecture.

Prior to construction of the new building, the old building would be torn down and the name of the titleholders to the land corrected to Lum Sai Ho Tong, with proper registration and public announcement. LSHT was thus assured that the land would not be sold and Tin Hau Kung would not be abolished.

TRANSFER OF TIN HAU STATUE

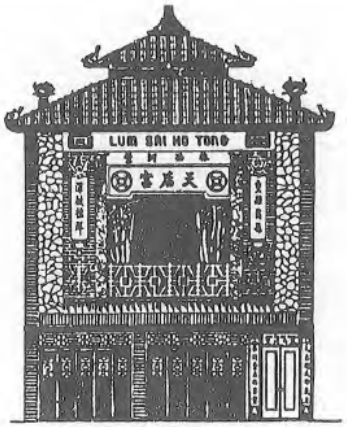
President Lum Wah Hin arranged for the transfer of Tin Hau to Kuan Yin Temple on the 28th day of the 5th month of the lunar calendar (1952). On that day, between 5:00 a.m. and 7:00 Tin Hau's golden statue was transferred to Kuan Yin Temple where it was temporarily enshrined during construction of the new LSHT building. Members of LSHT paid their respects to Tin Hau and a banquet was held that afternoon.

GROUND-BREAKING AND CONSTRUCTION OF NEW BUILDING BEGINS

Once Tin Hau was relocated, plans for groundbreaking ceremonies began in 1952. Taoist priest Lee Han blessed the grounds in accordance with Taoist rites.

In August 1953, demolition of the two old buildings and construction of the new building began. After the work on the foundation for the new building started, poor ground conditions were discovered and needed to be corrected. Two options were considered: Steel piles or a cement surface. If steel piles were driven, the additional cost would further strain the shortage in the project's budget.

The second option was to remove the existing ground fill of mud and refill the site with rocks and concrete mixture and top with concrete. This method provided sufficiently strong to support the building and was approved by the Building Department of the City and County of Honolulu.



After the decision was made to stabilize the foundation with rockfill and concrete pad, construction of the building began. To reduce expenses, members took on various works themselves. Lum Wah Hin, Lum Quon Chock and Eddie Lam handled procurement of materials and contracting labor forces. Past Presidents Dr. Fred Lam, Lum Chung Chee, Lum Kee Chung, Lum Hong Chee, Lum Wo, Lum Yee Nung and Lum Wah Chan were project overseers.

Work progressed well and the new building was completed on schedule in November 1953.

RITES FOR THE RETURN OF TIN HAU'S STATUE

Upon completion of LSHT's new building, the statue of Tin Hau was re-enshrined in the new temple. Solemn rites were performed to welcome back the sacred statue, on the 15th day of the 11th month of the lunar calendar at 4:00 a.m. All members of LSHT gathered first in the new building, then, at 5:00 a.m., they proceeded to Kuan Yin Temple, to escort the statue of Tin Hau back to her new temple. In the procession, the statue was carried high on the shoulders of the bearers. Upon arrival at the new temple, rites were performed to express gratitude to the "God of Heaven." At the gate of the new temple, solemn respects were paid to the "God of Doors." The central doors were then opened and rites of lighting up the eyes of the statue were performed. The statue of Tin Hau was then returned to its central position on the altar.

One month later, starting on the 15th day of the 12th month of the lunar calendar, Taoist rites were held for three days and three nights. Priest Lee Han presided over the rites, assisted by four priests. Six musicians provided music for the occasion. Many paper images of gods were burned as offerings. Also "heaven" and "earth" rosters of over 6,000 devout followers were included and recited in the ceremony. The rites lasted through the night of the 17th day. Much credit for the success of this event was due to the Lum sisters and sisters-in-law, for their valuable services during this three-day event. Further, it was determined that the 25th day of the 12th month of the Lunar calendar was a suitable day to enshrine two other statues. Therefore, the golden statues of the Dragon Queen and the Terra Queen were placed beside Tin Hau on the altar. Each of the three queens has as her attendants a pair of boy and girl statues, known as Golden Boy and Jade Maiden. (In Chinese mythology, a "dragon" symbolizes supreme power controlling all water sources — oceans, seas, lakes, and rivers.) Mr. and Mrs. Lum See Duck, owners of the Sun Jun Hing antique shop, and other devout followers, donated the Dragon Queen and Terra Queen statues.

Lum Sai Ho Tong Building

DEDICATION OF THE NEW BUILDING

In June 1956, a meeting was called to discuss the details of the rites and ceremonies to celebrate the opening of the new building to the public. November 18, 1956, was the auspicious day of the dedication. It marked a milestone in the history of Lum Sai Ho Tong, which was established in 1889; 67 years previously, in a humble rented upstairs room on Smith Street.

A ribbon-cutting ceremony was held at noon, followed by a cocktail party from 2:00 to 4:00 p.m. A list of donors, with their photos and amount of individual donations, was posted on the bulletin board. To climax this historic event, a banquet was held on Sunday, December 2, 1956, at 5:00 p.m., at the Chinese American Club.

The following Committees were appointed for this event:

Chairman	Eddie T. Lam
Co-Chairman	Dr. Fred K. Lam
Finance	Lum Wah Hin
Chinese Secretary	Lum Yee Nung
English Secretary	Dr. Alfred C. S. Lum
Banquet	Arthur Wo Lum
Social Activities	Lum Quon Chock
Host	Calvin K. C. Lum
Chinese Public Relations	Lum Wah Chan
English Public Relations	Richard T. F. Lum
Program	Rose L. Lum
Cashiers	Lum Hung Lun
	Lum Wah Hin
	Lum Wah Chan
Decoration	Lum Kam On
Publications	Lum Hon Chee
	Eddie Lam
Invitations	Eddie Lam
	Dr. Fred Lam
	Lum Yee Nung
General Affairs	Lum Hung Lun (Kalihi)

STATUE OF KUAN YIN MOVED TO TIN HAU TEMPLE

In 1958, the Kuan Yin Temple was to be demolished and replaced with a new building. On June 7, the original statue of Kuan Yin, and other statutes, were temporarily enshrined at Tin Hau Temple. Taoist rites were performed throughout the day and night.

ACQUIRING THE ADJACENT PARCEL OF LAND

In early 1961, the Honolulu Redevelopment Agency (HRA) of the City and County of Honolulu wrote to LSHT offering to sell the adjacent parcels of land. The letter also stated that if the parcels were bought by someone else, LSHT could be required to relinquish its present land holding in order that the buyer would be able to carry out his development plans.

A meeting was held on February 18, 1961, to discuss this matter. The land offered contained an area of 9,282 square feet, which, at $5.80 per square foot, would cost $54,000 ($457,000 in 2019 dollars). The requirement was that 50% of the area be reserved for parking. Further discussion was held at a general membership meeting on March 12, at which time a decision was made to acquire the adjacent parcels of land.

At that time, LSHT had $20,000; short by $34,000. This necessitated borrowing the additional funds needed. However, the monthly payments to the bank would be more than LSHT's income. Finally, the Directors decided that a portion of the funds, in the amount of $10,000, would be borrowed from members. LSHT President Richard M.C. Lum was in charge of arranging the loan. After much effort, Richard M.C. Lum and Secretary Lum Kam Ping went to the Honolulu Redevelopment Agency to sign the contract. A deposit of $2,700, 5% of the total purchase price, was made on October 20, 1961. The HRA also agreed to permit LSHT to construct buildings on the property for commercial use. The following year, 1962, HRA agreed to level the ground so that the Society could use it for parking.

At the time of the acquisition of the adjoining parcels of land, Mrs. Yee Lum Sui Heong loaned the Society the sum of $5,000, and Mrs. Sin Heong, the sum of $1,000, each waiving interest for the first year in order to assist LSHT in purchasing the parcels of land. LSHT honored its agreement with the two lenders and repaid the loans, including accrued interest. Today, this location at 1315 River Street continues to be headquarters for Lum Sai Ho Tong and Tin Hau Temple.

THE 70TH ANNIVERSARY - 1959

LSHT observed its 70th Anniversary with ceremonial rites on September 6, 1959, under the presidency of Alfred Kam Chee Lum. He donated a whole pig for the occasion. A cocktail party was held at 2:00 p.m. Many leaders and members of the Chinese community were invited. A banquet climaxed the event on September 20, 1959.

THE 75TH ANNIVERSARY - 1964

On February 27, 1964, LSHT had its own statue of Kuan Yin enshrined in Tin Hau Temple. At 8:00 a.m. enshrinement rites were held and Taoist priests were invited to light up the eyes of the statue. Respects to stars and constellations were made.

Also, in February, at a regular and general meeting, President Lum Kam Ping suggested that LSHT reactivate the youth group. Clarence Wing Hoon Lam was elected director and Charles Tung Cho Lum and Lum Yu Hing as assistants to handle all youth activities.

On November 8, 1964, LSHT celebrated its 75th anniversary under the presidency of Lum Kam Ping. A cocktail and dinner party was held. Leaders and members of all Chinese organizations and societies were invited. Alfred Kam Chee Lum was the chairman.

During the same year, rainwater flooded the first floor store spaces. Lum Wah Hin and other loyal members helped clean and repair the building. Also, the statues of the gods in the Tin Hau Temple needed replacement. This was accomplished through generous donations from members and friends. In November 1965. Taoist rites were performed for the placing of the new statues.

Lum Wah Hin brought back from Hong Kong one horizontal and two vertical embroidered brocade hangings for the Temple and the ritual robe for Taoist rites

AMENDING LUM SAI HO TONG'S CHARTER OF INCORPORATION - 1964

On October 11, 1964, a general membership meeting was called to discuss amending the Charter of Incorporation of LSHT.

LSHT was first chartered in 1918, under the statute of the Territory of Hawai`i. Several provisions of the Charter required revision and/or amendment. As the Charter then provided, the assets of LSHT should not exceed the value of $50,000. With LSHT's acquisition of the adjoining parcels of land, the combined value of the land and improvements exceeded the limitation. The membership unanimously approved amendment of the Charter of Incorporation to delete the $50,000 limitation and to increase the limitation to $500,000. The amendment was filed with the Department of Regulatory Agencies, State of Hawai`i. Attorney Richard M.C. Lum provided legal services, at no cost to the Society.

In 1966, LSHT was notified that it would not qualify as a tax-exempt corporation because, as the Charter read, upon dissolution of the corporation, all of its assets would be distributed to its members. This matter was referred to President Richard M.C. Lum for corrective action. The Charter was amended prior to December 31, 1966, to provide that, upon dissolution, the assets of the dissolved corporation would be distributed to another nonprofit corporation and/or entity.

In early 1967, all nonprofit corporations, including LSHT, had their respective Charters of Incorporation reviewed and/or amended, in order to qualify for and obtain tax-exempt status, under the existing Hawaii Statutes and Internal Revenue Service rules and regulations. Richard M.C. Lum reviewed this matter, and he reported that LSHT's Charter of Incorporation was in order and in compliance with all the existing statutes and rules and regulations.

STATUE OF HAU WONG MOVED TO TIN HAU TEMPLE - 1967

On April 30, 1967, a special general membership meeting was held to consider the request of Mr. Lai Kam Lee, of the Hau Wong Temple on School Street, to accommodate the statue of Hau Wong at the Tin Hau Temple, during construction of their new temple. This request was approved at the general meeting. Lum Wah Hin and Lum Wo were elected chairmen of the committee to welcome the statue of Hau Wong to Tin Hau Temple. The day of enshrinement of Hau Wong was June 9, 1967, the 2nd day of the 5th month of the lunar calendar.

THE 80TH ANNIVERSARY - 1969

LSHT celebrated its 80th Anniversary on April 19, 1969, under the presidency of William Hon Kwong Lum. A banquet was held at the Yong Sing Restaurant. Leaders of the Chinese societies were invited, and many Lum members attended and enjoyed the festivities.

THE 90TH ANNIVERSARY - 1979

LSHT celebrated its 90th Anniversary in October 1979, with a large banquet at the Empress Restaurant. Richard Wah Chew Lum was the president. The Society received many gift scrolls and silk hangings for this occasion. Judge Richard M.C. Lum was the master of ceremonies. The Wo Lok Music Club provided the Chinese music and Lung Kong Martial Arts performed the lion dance. Consul General of the Republic of China, Admiral Hoh-Tu Liu, was one of the honored guest speakers at the banquet.

SUPPORTING THE WORLD LIN'S ASSOCIATION and CHEW TIN KUNG, A SISTER TEMPLE – 1980

Lum Sai Ho Tong established an alliance with The World Lin's Association and the Honolulu Tin Hau Temple formed a sister-temple relationship with Pei Kang Chew Tin Kung during the 1980's.

In the fall of 1980, a letter was received from the Lin Association in Taipei, Taiwan inviting the Hawaii LSHT to participate in the planning and establishing of The World Lin's Association with its general headquarters in Taipei. A formal opening conference was scheduled for October 1, 1981 in Taipei. Group life member dues were U.S. $1,300, and individual life member dues were U.S. $100.

At its September 1981 meeting the Directors of LSHT voted to join The World Lin's Association, as a group life member. In addition, Kenneth Kwan Yee Lum, Lam Siu Wing, Lum Wing Kit and Laura Chew Ying Sun joined as individual life members, each paying dues of U.S. $100. Five members were chosen to represent the Hawai`i LSHT at the first World Lin's Association conference on October 1, 1981. They were: Kenneth Kwan Yee Lum, Richard Wah Chew Lum, Lum Wing Kit, Philip Wah Chan Lum and Lam Siu Wing.

While attending the World Lin's conference, Kenneth K. Y. Lum presented, on behalf of Hawai`i LSHT, a portrait of the "Heavenly Goddess" Tin Hau, to the Taipei Lin Association for its Temple For The Lins' Ancestor Juridical Foundation. He also visited and presented a portrait of the "Heavenly Goddess" Tin Hau to the Chew Tin Kung temple at Pei-Kang (North Harbor), Taiwan. This marked the establishment of a sister-temple relationship between the Pei-Kang Chew Tin Kung and the Honolulu Tin Hau Temple.

The following year, June 14, 1982, a delegation of nine representatives of the Pei-Kang Chew Tin Kung, under the leadership of Wong Yin Kwei, accompanied a full-bodied statue of Tin Hau to Honolulu. Greeting the visitors at the Honolulu International Airport and to accept the Matsu statue, with reverence and appreciation, were President Lam Shing Tak, Lum Wing Kit and his wife, Rose Sui King Lum, Kenneth Kwan Yee Lum, Lum Quan Cho, Laura Chew Ying Sun, Lam Siu Wing, and other members of LSHT.

The alliance of Chew Tin Kung and Tin Hau Temple was reconfirmed at a formal service at the Tin Hau Temple in Honolulu on the morning of June 15, 1982. Director General of the Coordination Council for North American Affairs, Mr. Paul C. K. Tso, and Advisor to the Commission of Overseas Chinese Affairs, C. L. Cheng, witnessed the reconfirmation. The two temples pledged mutual cooperation. Chew Tin Kung presented to Tin Hau Temple a gold-plated throne for the enshrinement of the "Heavenly Goddess," Tin Hau or Matsu, the same goddess known by different names in different parts of China. In return, Tin Hau Temple gave Chew Tin Kung a large koa wood bowl, engraved with the Chinese characters, which read, "Sung Yuen Chong Hui," meaning "God given chance which leads to togetherness will forever shine.

THE 95TH ANNIVERSARY - 1984

On April 23, 1984, LSHT celebrated its 95th Anniversary, jointly with Tin Hau's birthday. A banquet was held and all proper ceremonies and rites were observed. Kenneth Kwan Yee Lum was president.

The Temple was cared for by able attendants, including, Lam Siu Wing, who came to Honolulu, Hawai`i, from Hong Kong, where he had served as the secretary of the Nanyang Chamber of Commerce for more than thirty years. He was also the economic reporter of the Oversea Chinese Daily News paper. As a temple attendant of Chinese divination, he helped believers with his good works, selflessness, kind heart and patience.

This year also ushered in happy events for the Lum Society. Two outstanding Lum members were elevated to higher positions. Herman Lum, the Society's legal counsel, was appointed Chief Justice of the State of Hawai`i. He came to pay homage to Tin Hau. A banquet was held in his honor. Also, legal counsel Richard M.C. Lum was appointed a Judge in the Courts of the State of Hawai`i. Congratulatory messages were sent to both of them.

LUM SAI HO TONG CENTENNIAL YEAR 1989

To start the Centennial Year off auspiciously, the Lum Society members showed gratitude for their legacy, being housed in its clubhouse the Tin Hau Temple, by offering prayers at the Temple. They, further, asked for blessings and guidance during this Centennial Year on New Year's Day.

Highlights of this auspicious year, 1989, included the following events, which were chaired by James L. H. Lum and Betsy Y. Lum under the leadership of President William H. K. Lum:

INSTALLATION OF OFFICERS

On New Year's Day, following the bai sun (religious) services, installation of the new officers took place in the Society Hall. Dignitaries from the community and officers from the Chinese community, as well as families and friends, were invited to attend the installation. A luncheon reception followed. President William Hon Kwong Lum and Vice President James Loui Him Lum led the Society during this Centennial Year.

SPRING BANQUET

The annual Spring Banquet was held on May 7, 1989 at Yong Sing Restaurant, at which time the Society honored Ku Po, its Great Grand Aunt. The senior Lum members, 70 years and older, were invited, as special guests of the Society.

SPECIAL CENTENNIAL PROJECTS

Song. The Society was most proud of the talents of its members. A special "Lum Sai Ho Tong Centennial Song" was written and arranged by Rose Lau Lum for this occasion. Members of the Society, accompanied by guests from Chew Tin Temple, Pei Kang, Taiwan, sang this song as an opening number at the centennial banquet celebration.

Medallion. The Centennial Committee wanted something special to present to all of the past and present presidents, including the women's division, under whose leadership and guidance the Society has grown and prospered to its present status. A special gold medallion was designed. The medallion was the size of an American half dollar, inscribed with the words "Lum Sai Ho Tong Hawaii," in Chinese and in English, and the year "1889-1989," to commemorate its Centennial Year. On the reverse side, the presidents' names were engraved in Chinese. Eunice Yen Fen Chun chaired this committee.

Centennial Souvenir Plate. In researching material for the Centennial celebration, the Committee was delighted to discover the Lum Society logo. They incorporated this logo into a souvenir plate to be used as centerpieces and as gifts to our special guests at the Centennial banquet. A 7-1/4 inch plate with a white background was chosen with the logo and inscriptions designed in red. Encircling the logo on the plate, the words "Lum Sai Ho Tong" were placed on the top and the year "1889 - Hawaii - 1989" at the bottom. These souvenir plates were then placed on teakwood stands. A limited edition of these plates was made. President William H. K. Lum and Co-Chairs James L. H. Lum and Betsy Y. Lum generously donated all of these centennial souvenir plates.

In addition, all guests were given a small Chinese candy dish on which a peach bun was placed. On the reverse side of all these candy dishes, the Society's centennial theme, "Lum Sai Ho Tong, 1889 Hawaii 1989" was hand-lettered in gold by Hung Luke Lum.

Centennial Booklet. A major project to record the history of the Lum Sai Ho Tong, in English and Chinese, was suggested, as the only historical booklet of the Lum Society was written solely in Chinese for the Society's 75th anniversary in 1964. A Steering Committee for the project was named — Charles T. C. Lum, Lin Wei Tung, Harold C. K. Lum, James L. H. Lum, Eunice Y. F. Chun and Betsy Y. Lum. A Centennial Book Staff was then formed. The committees and many friends spent countless hours and days in researching, translating, writing and putting together this historical booklet, for which the Society was most grateful.

Fong Suk Ceremony
Laura C. Y. Sun & Rev. Duane Pang

RITE OF SALVATION SERVICE OR FONG SUK
Taoist Rites of Cosmic Renewal and Thanksgiving (Chiao)
"Chow Yen Ching Chia"

On October 12 and 13, LSHT highlighted its centennial celebration with an impressive and colorful "Fong Suk" ceremony by Taoist Priest, Reverend Duane Pang, at Tin Hau Temple.

These formal ritual services were conducted on behalf of the members and community, to give thanks to Tin Hau. It included: "Hoy Tan," inviting the heavenly host of heavenly worthies and saints to attend the celebration; "Ng Kung" offering incense and flowers as a thanksgiving sacrifice; "Go Say" going to Kwan Yin Temple, Wah Kong Temple and Yuk Wong Tan Temple to invite their patron deities to attend; "Jook Sing" invoking the pole star in prayer to forgive our sins and misdoings and asking for blessings; and "Sam Koon Ging," chanting of the "Three Officials of Heaven, Earth and Water Canon."

In the afternoon of October 13, a "Chew Yau" ritual, also referred to as "Fong Suk," was conducted for over two hours. This rite of salvation service was conducted on behalf of the souls of our late Society members, family members, and for those who had no one to care for their wellbeing — the lonely spirits. Prayers were said, on their behalf, to help alleviate their sufferings and help them "crossover" to heaven. Food offerings, joss money and clothing were sacrificed on their behalf.

Displayed were symbolic figures of the Demon King, "Jin Min Dai See," one of the many transformations of Kuan Yin, who controls all souls in the Underworld and "Lam Bong Jeung Quon," who carries the Society's list of contributors to Heaven to be blessed.

Lum Hung Lun, Chairman of the event, President William H.K. Lum and Kenneth K.Y. Lum were the celebrants. Lam Siu Wing and the delegate members of the Taiwan Chew Tin Temple — Hsiang Wu, Tsai Shen-Chu, Hsoeh Chin-Tien and Tsai Po Choung, assisted them. Also participating were Laura C. Y. Sun, Betsy Y. Lum, Eunice Y. F. Chun, Alan S. F. Lum, Violet Au, Ngit Chow Wong, Barbara Chang, Larry Ing, Bow Lum On, Lum Sin Won and many members and friends of the Lum Society and Tin Hau Temple.

A delicious dinner followed the services and was prepared and served by members on both days. Those responsible for the various sumptuous meals on October 12 were Laura C. Y. Sun and Sam Moi Lum Ng; on October 13, Dorothy Chang Lum, Annie Tom Lum, Robert Kong and James L.H. Lum, assisted by many Lum Society members who worked days preparing the food for this auspicious occasion. Thanks were given to Rev. Duane Pang for his assistance.

CENTENNIAL BANQUET
OCTOBER 15, 1989

The climax of the Centennial Year was a lavish Chinese dinner on October 15, 1989, at the Yong Sing Restaurant on Alakea Street. Sounds of exploding firecrackers and Chinese music by the Wo Lok Orchestra filled the air, as the program opened with remarks by Master of Ceremonies Judge Richard M.C. Lum. President William H.K. Lum and Vice President James L.H. Lum, assisted by Daryl Hung Hook Lum (son of Mr. and Mrs. William H.K. Lum) and Christopher Finseth (son of Mrs. Frances Leilani Lam and grandson of the late Mr. Eddie Lam, past president of Lum Sai Ho Tong), lighted the longevity candles, before an ornate altar decorated with symbols of long life and good fortune. Chinese couplets, written by Lam Siu Wing, and portraits of Ku Po and Pi Kan Kung were displayed on the walls.

Society President William H.K. Lum welcomed the guests and delivered the Centennial message. This was followed by the Lum Society members singing the "Lum Sai Ho Tong Centennial Song," arranged and directed by Rose Lau Lum.

Guest speakers on the program were Paul J. K. Tso, Director General, Coordination Council for North American Affairs; Ted Wong, Trustee of the United Chinese Society; Shen Chu Tsai, Director, Puck Kong Chew Tin Kung Temple, Taiwan; and Samuel Bow Yen Lim, President of the Lim Family Benevolent Association, San Francisco, California. Ronald Mun represented Mayor Frank F. Fasi, in presenting a proclamation from the City & County of Honolulu. A delegation of visiting Lum's was introduced.

From California, Samuel Bow Yen Lim, President, Lim Family Benevolent Association of San Francisco and Mr. Lum Jun Wah, President of Lum Gar Kung, Oakland. From Taiwan, Hsiang Wu, Tsai PO Choung, Tsai Shen Chu, and Hsueh Chin Tien, Directors of Chew Tin Temple. (In 1981, the Buck Kong Chew Tin Temple established a sister relationship with the Lum Society's Tin Hau Temple.) The visiting delegation from California and Taiwan presented gifts to the Lum Society, and, in turn, gifts were reciprocated to them.

Past presidents of Lum Sai Ho Tong and its Women's Division were introduced and presented with the gold Centennial medallion by President William H.K. Lum, Women's Division President Annie Tom Lum and Medallion Chair Eunice Y.F. Chun. Also recognized with a gift were several non-member volunteers of the Society who have, over the years, given unselfishly of their time and talents to the Lum Society. They were Violet Au, Eloise Wong, Robert Kong and Quan Ping Yuen.

Chinese operatic entertainment was provided by Rose Lau Lum and the Wo Lok musicians. The specially designed LSHT logo centerpieces on each table were given to a lucky member or guest. Banquet Chairman Kenneth K. Y. Lum joined President William H.K. Lum, Vice President James L.H. Lum and Co-Chair Centennial Committee Betsy Y. Lum in offering the traditional toast.

Vice President James L.H. Lum brought the centennial celebration to a close with his acknowledgment to the many members and friends who had helped to make this a memorable and enjoyable centennial celebration.

HISTORICAL EVENTS 1997 – 2019

1997-1998 Lita Lum is elected the first female president of Lum Sai Ho Tong.

1999-2000 Betsy Kam Sai Yuen is installed as the second female president of Lum Sai Ho Tong. Both she and Lita Lum served with distinction.

1999 (May) 110th Anniversary and Tin Hau Sung Mu's birthday are celebrated with a grand parade through Chinatown, culminating in an elaborate dinner at Yong Sing Restaurant. President Betsy Lum and Jeffery Lam chair these successful events. Community members applaud Lum Sai Ho Tong for bringing everyone together in such a historic way.

2000 At the 8th World Lin Convention, with the support of LSHT's Board behind her, Betsy Lum accepts the invitation to host the 9th World Lin's Association Convention, in Honolulu Hawai`i, in November 2002. This would be the first such event held in Hawai`i.

2002 (Nov.) The 9th World Lin Convention is held in Honolulu, hosted by President Keith Lim and members of Hawai`i Lum Sai Ho Tong. Members of the world Lum Family from Hawai`i, Taiwan, Japan, Okinawa, Singapore, Thailand, Philippines, other Asian countries, the continental USA and Canada convened at the Sheraton Waikiki Hotel. The Lim family of Kohala, the 2002 Na Hōkū Hanohano Award Winner, headlined the festivities.

2004 (October) Delegates and members from Hawai`i participated in the 10th World Lin Convention in Taiwan.

2006 (October) Delegates and members participated in the 11th World Lin Convention in Singapore, attended by more than 3000 international members.

2008 City and County of Honolulu proposes a Housing First project next to Lum Sai Ho Tong and Tin Hau Temple.

2008 (October) Delegates and members attend the 12th World Lin Convention in Manila with over 1500 international members.

Monthly Meetings

39

2009 (March) The Downtown and Chinatown Community, as well as Lum Sai Ho Tong, unanimously oppose a Housing First Project in Chinatown. Lum Sai Ho Tong and the Chinatown Community form the "Concerned Citizens on River Street Housing," led by President Wesley Fong and LSHT President Howard Lum.

2009 (April) Lum Sai Ho Tong's 120th Anniversary Banquet is held at Golden Palace Restaurant. An amazing birthday gift from Ku Po to Lum Sai Ho Tong: "The survival and rescue of the entire crew of the Princess Tai Ping"!

2010 (July) Honolulu City Council decides to not approve funding for the proposed Housing First project, after overwhelming community opposition, led by Lum Sai Ho Tong and over 60 Chinatown organizations.

2013 (January) City and other community leaders suggest that Lum Sai Ho Tong and Chinatown community leaders work together with the City, to design a satisfactory project on River Street, adjacent to Lum Sai Ho Tong.

Thereafter, Founding member Lum Sai Ho Tong and many community leaders form the "Chinatown Community Center Association," led by president Wesley Fong. CCCA works with the City to conceive a project for the site, next to Lum Sai Ho Tong, that is satisfactory to all involved.

Lum Sai Ho Tong, together with Kwan Yin Temple and others in the community, meets with the State and, after decades of requests, again propose a much-needed crosswalk on Vineyard Boulevard. The crosswalk will unify the River Street historic area, improve pedestrian flow along the Nu`uanu Stream and create harmony and prosperity for the Chinatown community. Representative Karl Rhoads lends pivotal support.

2016 (May) After three years of negotiations, and heartfelt testimony from the members of Lum Sai Ho Tong, the Honolulu City Council unanimously approves the Halewai`olu Residences and Community Center Project, Resolution 16-70, with modifications requested by Lum Sai Ho Tong and the community. Mahalo nui loa to all involved in this historic endeavor.

2016 The State of Hawai`i approves and budgets monies to build the Vineyard Boulevard crosswalk. Rep. Karl Rhoads continues to recognize the importance of the crosswalk and fully backs the project.

In keeping with our legacy of benevolence, in September, LSHT hosts a sold-out community-wide luncheon, entitled, "College is Possible," to share financial aid opportunities for students and their families. Several families and students attend and receive valuable information.

Lum Sai Ho Tong continues needed repair and maintenance of its historic building.

2017 The membership of LSHT amends its Constitution, to strengthen proper management and sustainability of the organization. In particular, the management of the Board would now include up to three Vice Presidents. In addition, to expand membership in the society, a temporary amendment allows the child of any person with the surname Lam, Lim, Lin or Lum, including a maiden name, would be allowed to become a member. Qualified applicants will be accepted until November 4, 2019.

2018 After significant delays and costs increases, the State, again, approves and begins construction of the important Vineyard Boulevard crosswalk. Expected opening in early Summer 2019. A very big Mahalo to Senator Karl Rhoads and many other legislators, Councilwoman Carol Fukunaga and Governor Ige for their support.

Lum Sai Ho Tong continues needed repair and maintenance of its historic building.

2019 In February, the developer of Halewai`olu Residences gains State of Hawai`i approval for full funding of the $80,000,000 project, bringing the community-initiated project to a historic moment. Lum Sai Ho Tong and CCCA continue to monitor the status of the project.

April CCCA requests adoption of the strip of land fronting Lum Sai Ho Tong and the adjacent City property, along the Nu`uanu Stream, to help beautify this vibrant historic community.

LSHT celebrates the 1,059th birthday of Tin Hau Sung Mu and the 130th Anniversary of the society, with four days of jubilant celebrations, spearheaded by President Howard Lum and funded by numerous members, donors and community friends.

April 27 Tin Hau Dahn is held, led by Rev. Duane Pang, who has overseen ceremonies at the temple for over 35 years. The ritual, which commemorates the birthday of the Empress of Heaven, is well attended by members of LSHT and the community. The altar, which is covered in red and festooned with food, flowers, tea, liquor, delicacies, and colorful paper money, is overflowing with offerings to Tin Hau. Many thanks to Mona and Kenneth Lam, the Tin Hau Auxiliary members, and our caretakers, Huang Hao Run and Li Lin Gui for organizing this year's special Dahn.

Following the Dahn, Tin Hau and numerous escorts emerge from the Temple and lead a festive parade around the Nu`uanu River. With gratitude and aloha, Tin Hau visits and is warmly welcomed by Kwan Yin Temple, Izumo Taisha Temple, and the Kwan Yin Statue at the Chinatown Cultural Plaza, before returning to her temple home. She is followed by hundreds of well wishers, including LSHT members, society representatives from all over Hawai`i and the country, Miss Chinatown, and Chinese lion and temple groups, including: Chinese Physical Culture, Lung Kong, Kuo Min Tang, Gee Yung, Chinese Lion Dance, Sing Yung, Kutt Hing Wah Gong Temple. Mahalo nui loa to Howard Lum, Keith Lim, Rev. Pang, Gifford Chang, Donna Chang, Leonard Kam, and all of the devoted sifu who have brought their lions and students to honor Tin Hau.

The parade culminates with a delicious lunch of blessed food, courtesy of Ku Po, our great grand aunt and overseen by Mona and Kenneth Lam, Mae Dang, Ah Yuk, Mor Fung Leung, Verna Takashima, and LSHT and Tin Hau Auxiliary members.

April 28 A sumptuous sold-out Anniversary Banquet is held at Jade Dynasty, Ala Moana Center, for over 320 guests from Hawai`i and beyond. Mahalo nui loa to Chairs Mona Lam and Keith Lim, William and Betsy Lum, Kenneth Lam, President Howard Lum, Emcee Victor Lim, Rev. Duane Pang, and all of the members and friends of Lum Sai Ho Tong, for creating this beautiful celebration, in furtherance of our founders' vision.

Lum Sai Ho Tong will be creating a foundation, to preserve our building and to further our founding members' mission of benevolence to our members and the community.

We, the grateful descendants of Pi Kan and Tin Hau, and members of Lum Sai Ho Tong Hawai`i invite and welcome all with the surname Lum, Lam, Lim, and Lin (林), and their families to become members and to participate in our numerous activities and our precious legacy.

LEGACY LEADERS

Sustaining the legacy of our founders is an act of devotion, generosity, steadfastness and humility. Lum Sai Ho Tong is grateful to every member and patron who shares of themselves, and their abundance, to further our mission. Through all of you, our culture is preserved and LSHT and Tin Hau Temple remain strong and relevant, as a peaceful sanctuary for thousands of Hawai‘i’s residents and immigrants.

Stories of gratitude, honor, sacrifice and family love abound in our society, and, in this 130th Anniversary year, we are honored to profile five special Lum Sai Ho Tong members, nominated by our members, as legacy leaders whose good and noble works inspire us all:

JUDGE RICHARD MEE CHO LUM 林薇初

WILLIAM H. K. & BETSY LUM 林阮金水 & 林阮金水

EDDIE FLORES, JR. 林志雄

HOWARD C. O. LUM 林子安

JUDGE RICHARD MEE CHO LUM 林薇初

Richard Mee Cho Lum was born on November 19, 1925 to business merchant Yan Chew Lum and Violet Yuen Choy Hee, as the eldest children of six. Having been born to a business merchant, who operated a flourishing Chinese merchandise store, known as Tuck Cheong Laup on Maunakea Street, on the site presently occupied by Cindy Lei Shoppe and Wing Loy Market.

After graduating from Cathedral School on Nu`uanu Avenue, he was accepted by Saint Louis High School in Kaimuki. After December 7 1941, his classes were disrupted, for the entire campus and buildings were used as a hospital. Students went to McKinley School, to resume classes, from which he graduated in June 1943. He was hired to work at Liberty Bank, corner of Maunakea and King Streets; a job he had held until his graduation after college. He continued to work after graduation, receiving a salary of $75.00 per month.

He saw that some of his classmates received employment at Pearl Harbor Naval Shipyard or Hickam Air Field, however, since there was an employment freeze, Richard could not change employment. The only exemption was to quit work to attend school at University of Hawai‘i. Richard had a taste of college studies, during the summer of 1943. He asked Liberty Bank to release him to attend college. However, if you were a student, you would be subjected to the draft; unless, you were not a student, but employed in some defense type of work.

Richard decided to enter University of Hawai‘i, in Summer of 1943, as a full-time day student, and during the course of time, he applied for employment at the Pearl Harbor Naval Shipyard and was accepted to work on the graveyard shift, paying 76 cents a machinist helper, in Shop 3, allowing time for him to attend full time at University of Hawai‘i. Richard selected a minimum course credits to be classified as a student. In the meantime, Richard investigated that if he applied and attended the apprentice program as a machinist, the chances of exemption for the draft would be enhanced. So, he entered the Naval Shipyard Apprentice Program, and the first stage, he was paid 51 cents per hour, taking a pay cut from 76 cents per hour, as a machinist helper and civilian employee. As an apprentice, he was inducted into the US Naval Reserve, with a reserved status, until September 26, 1945, when all the apprentices were notified as to the change of status, and each was directed to register at the Selective Service office, near their residence, an office on Pensacola Street in Honolulu. During the interim, Richard pursued his education, by taking courses listed under the College of Arts and Sciences.

On November 26, 1945, Richard received the usual greetings to report, on December 13, 1945, to the United States Army and was transported to Schofield Barracks, Hawai‘i. After basic training, the entire group was mustered out to stand in formation. Every other soldier in formation was directed to step forward and assigned to board the army vehicle for their next assignment, New Caledonia in the South Pacific.

The others not singled out were assigned to other posts on O'ahu. Richard was assigned to the 13th Ordinance Depot, to be stationed on Red Hill and work out of a Hawaiian Ordnance Depot, until his discharge, for the convenience of the government, on February 25, 1947, with a rank of Tec. 4.

While stationed at Red Hill Barrack, Richard lived the life of a "Pineapple Soldier"; able to go home every night, without staying in the barrack at Red Hill. K-P and guard duty assignments were assumed by others, in the unit, whose home towns were not in Honolulu.

From induction to assignment to his unit at Red Hill Barrack and until his discharge, Richard continued his education by attending night classes and taking a minimum of four to six credits.

After his discharge in February 1947, Richard enrolled as a full-time student taking 21 credits a semester, including two summer sessions, to qualify for graduation in June 1949, with a Bachelor of Arts Degree in Business.

Prior to graduation from college in June 1949, Richard continued his chores in the family "Yee On Market," getting up about 3-4 a.m. and, with his Dad, Yan Chew Lum, drove to C.Q. Yee Hop slaughter house, on Middle Street, to pick up the company's quota of three carcasses of pigs, and transporting same to Market Place off A'ala Street, across from the O'ahu Railway Station, during the early morning. Richard prepared each carcass of pig into sections, to be sold to peddlers whose vans came to the market to pick up each required sections of the pigs to be sold to their regular neighborhood customers. After 8:00 a.m., Richard called it a day and drove the pickup truck and parked it near Crawford Hall, for classes until 12:30 p.m., when Richard called it a day and went home.

After graduation from University of Hawai'i, employment was hard to come by. Richard was ineligible to apply and/or receive state unemployment compensation. Reading the handout to Veteran's Administration, Richard tried to cash in the VA unemployment benefit known as 52/20. The VA would pay the veterans the sum of $20.00 for 52-weeks, in the nature of unemployment.

Richard tried his luck by approaching the VA office on Bethel Street (the present Island Insurance Building), in June 1949, and met the VA counselor. (His name escaped Richard's memory.) He informed the counselor of the 52/20. The counselor reviewed Richard's service record and said, "I can get you something better. Make use of your GI bill, VA will send you to school, pay all your tuition and books and also pay you $75.00 stipend, provided you don't get married. According to our records, VA can send you to school, short of three years. Go and get a Master in Business or some graduate studies, using your GI Bill, or go to law school, but your father must provide for you for three or four months. Why don't you talk with your father and get me the name(s) of the school you want to go."

Richard returned to the VA counselor, with the list of law schools, and informed him that a law school aptitude test is required, and the deadline has passed. The VA counselor informed Richard that he would do his best, write letters of application to the list of law schools furnished, and arrange the law school aptitude test to be taken on a single day at Punahou School. All of the law schools to which he had written were not encouraging. Most of them suggested to try for the 1950-1951 school year, except two law schools, namely, University of Missouri, School of Law and Hastings College of the Law, in San Francisco, California.

Arrangements were made by the VA counselor for Richard to attend school in August 1949.

Richard undertook to take the real estate broker's examination and was issued a real estate broker's license, No. 1498, in 1953; which license is still in effect today.

He was admitted to practice law –

Supreme Court, Territory of Hawai'i, June 21, 1954
United States District Court for the District of Hawai'i, July 20, 1954
United States Court of Appeals for the Ninth Circuit, April 9, 1962
Supreme Court of the United States, October 14, 1958

After being admitted to the Hawai'i Bar, Richard was appointed by Judge Carrick Busk to co-counsel with Attorney Jon Uehara, in his first criminal jury trial in a first-degree murder case involving a criminal trial, titled State of Hawai'i vs. Josa, for hijacking Y. Higa, a payroll clerk. After the trial, Richard was appointed by Attorney General Edward N. Sylva to be Deputy Attorney General in 1958. The Deputy General's salary was $300 per month. Richard was assigned to the legal department, Territorial Highway Department, handling land condemnation involving parcels of land taken to construct the H-1, Pali Highway, and Vineyard thoroughfare.

Observing the Associates making far more in salary per month, Richard applied to Supreme Court of Hawai'i, Per Diem Judge, District Court of First Circuit, State of Hawai'i, for a term of six years, on January 2, 1975, and for a second term of six years, on January 2, 1981. He was then appointed Judge District Court of First Circuit, State of Hawai'i for a term of six years, on October 31, 1984, and reappointed for a term of another six years, on October 31, 1990. He retired on October 31, 1994.

Richard married Susan Young and raised three boys and two girls, of which all are successful in their respective professions. All five are graduates of Mun Lun Chinese School, as well.

He has been a member and former President for the following: Lum Sai Ho Tong, Buck Toy Club, Leong Doo Society, United Chinese Labor Association (known as Chung Wah Gung Kung Hui), Chung Shan Association of Hawaii, and Mo Hock Ke Lock Bo (Mun Lun School).

Richard's father, Yan Chew Lum, and grandfather, Gum Fat Lum, were also members and past presidents for Lum Sai Ho Tong.

He has been a member or held positions with several Kiwanis Clubs, for over 50 years, including Kiwanis Club of Waikiki, President of Kiwanis Club of Ala Moana, President of Kiwanis Club of Hawaii Loa, Lieutenant Governor Division 22, California-Hawaii-Nevada District, in 1998.

WILLIAM H. K. & BETSY LUM 林阮金水 & 林阮金水

"The reason why heaven and earth are able to endure and continue thus long is because they do not live of, or for, themselves."

~ Lao Tzu, Tao Te Ching, 600 B.C.

William Hon Kwong Lum and Betsy Kam Sai Yuen Lum epitomize the essence of philosopher Lao Tzu's quote. With over a century of service to Lum Sai Ho Tong between them, Bill and Betsy Lum are selflessly carrying on the legacy of the ancestors, with integrity, steadfastness, benevolence, honesty, knowledge, and humor.

Together they are the heart and soul of Lum Sai Ho Tong and Tin Hau Temple, serving not for favor or advancement, but for the love of Chinese culture, and through a sense of duty, "filial piety." When asked what's motivated them to serve on the board of Lum Sai Ho Tong since before Hawai'i became the 50th State, they are truly at a loss for words to describe what others clearly see as their decades of dedicated, loyal service. Bill and Betsy can't think of life in any other way than to continue what has been handed down by Bill's father, Anthony Hung Lun Lum, an entrepreneur, World War I veteran, and long-time Lum Sai Ho Tong board member.

Anthony was born into a large traditional Chinese family that placed great responsibility on him as an older son. Though not the eldest, Anthony left school in the 4th grade to help his parents, Bung Yun Lum and Lo Yong Ching Lum, care for ten younger siblings, when his two elder brothers were sent back to China (i.e. Sai Gong Li village, Zhongshan County, Guangdong Province). By sending the two eldest sons back to the family village, Bung Yun fulfilled twice over, a vow made to his father, that he would send his eldest son back to the ancestral village, as a condition of being allowed to journey to Hawai'i in 1881.

While not rich in gold, the Lums through Bun Yun's leadership were a respected, hardworking, and trustworthy family known for their successful management and production efforts at the Kalihi Poi Factory and rice farming operations in the Kahana/Punalu'u area of windward O'ahu.

Bill's grandmother, Lo Yong, was esteemed in the community as a seer, a translator, and a moon harp musician, serving all who came to her door. A shrine to the ancestors graced the family home in Kalihi, and the practice of honoring them with sweet-smelling incense, red candles, food and warm tea, was carried on daily.

During the annual Ching Ming season, when Chinese families gather to honor ancestors and tidy gravesites, it was Anthony who organized the Lum family, ensuring that proper preparations were made for ancestors, at the family gravesites in Mānoa. Bill's younger sister, Sai Mee (Gladys) was responsible for preparing/cooking many of the offering dishes presented for the Ching Ming ceremonies, while other family members assisted by gathering baisan supplies, and folding paper money. When it was time to pay respects, Anthony kept a watchful eye on all to ensure that customary bows were deep and proper, foreheads to the ground, and palms pressed down in reverence.

Being active members of Lum Sai Ho Tong was a natural extension of the family's life. It was where Bill's sense of duty to his ancestors, duty to country, and appreciation for Chinese culture was nurtured. The close familial ties, however, would be tested when Bill was drafted to serve in the United States Army, immediately upon graduation from high school.

In 1944, following graduation from Farrington High School, military service for Bill meant active-duty stationed in the Far East. It was the time of the US-China Military Alliance when more than 250,000 Americans served in the China/India/Burma Theater. Bill found himself in China, the homeland of his grandparents, thus, helping to protect his relatives and the people of China. In essence, he was giving back to both nations with his deepest gratitude and respect. Bill served with distinction while stationed in China.

By 1946, when the Chinese were beginning to say, "Go Home G.I.," he requested transfer to the Zone of Interior and was re-assigned to duty in New York State at Fort Wright, on Long Island. While stationed at Fort Wright, the Base Commander and his wife thought that Bill would be an ideal candidate to enter West Point Military Academy.

Bill showed "spark and interest," they said. However, his humility won out, believing he was not sufficiently qualified to spend three years at West Point. He thanked the Commander and his wife, was honorably discharged attaining the rank of Army Staff Sergeant, and like his father and grandfather before him, turned his eye to a career in business.

Upon discharge from the Army, Bill realized it was too late to return home to enroll at the University of Hawaii. So with GI bill in hand, and the guarantee of higher education, he left New York, boarded a train to Chicago, and found his way to Bradley University-- Peoria, Illinois, where he enrolled and in three years earned both a BS in Business Administration and MA in Economics. In 1952, Bill returned to Hawai'i and resumed his involvement at Lum Sai Ho Tong, as well as looking out for the secular and spiritual needs of his family.

While Bill had been serving his country in China and pursuing higher education in the Midwest, Betsy Kam Sai Yuen, was herself excelling academically some 2,000 miles west. A 1943 graduate of Sacred Hearts Academy, Betsy furthered her education by attending Armstrong College, Berkeley, California, earning a degree in Secretarial Administration and a BA in Business.

The daughter of Jack Tim Yuen and Kam Nee Fong Yuen, Betsy's family roots are very similar to Bill's, tracing back to Zhongshan County, Guangdong China. Her paternal grandfather Chee Won Yuen was raised in Jo Bu Tou village, while her paternal grandmother, Look Shee Yuen, hailed from Gak Tin village.

Upon completion of her college studies, Betsy returned to Hawai'i and secured employment first in private industry, then with the City and County of Honolulu, and the Hawaii Territorial government. She was eventually recruited for a Federal position at Central Intelligence Agency, Honolulu field office. With her solid work experience, personable nature, and intelligence, Betsy became the first local woman hired to work out of The Agency's Honolulu field office.

Through the 1960's Betsy turned her full attention and energies to raising and caring for her growing family. She was a devoted, fun-loving mom who together with Bill raised three active boys and their daughter. Once her youngest son began primary school, Betsy returned to the workforce, seeking and finding employment with City and County of Honolulu, where she served capably as administrative secretary to several department directors. In 1986, with nearly two decades of service to

the City and County of Honolulu, she retired and turned her attention to activities at Lum Sai Ho Tong, as well as other local community organizations.

As their names foretold, it was not long before William Hon Kwong (Brightness) and Betsy Kam Sai (Golden Water) would find each other. The couple wed in 1957 and their family grew with children-- Wilbert Hung Tim, Daryl Hung Hook, Carol Kwai Sun (Lau), and Randall Hung Luke. The siblings, now grown with families of their own, reminisced about the Lum Sai Ho Tong events of their youth--fondly remembering annual summer picnics, spring banquets, Christmas and New Year's celebrations. Today, they continue to support and contribute to Lum Sai Ho Tong with their own children.

Bill's education and professional experience proved beneficial both for his family and for Lum Sai Ho Tong. He served for over thirty years in Hawaii's banking community—initially with Hawaiian Trust as a Trust Officer, mortgage-banking responsibilities followed at the Blackfield Corporation and Bank of Hawaii where he served as Assistant Vice President. In the latter years of his career, Bill served with the U.S. Department of Housing and Urban Development, (HUD) in the Multi-Family and Single Family Housing division until his retirement in 1988.

Besides helping to provide financing for sorely needed housing projects throughout the State of Hawai'i, Guam, and Saipan, Bill championed the sustainability of Lum Sai Ho Tong's own real estate asset. To this day, he carefully audits and ensures the organization's fiscal stability.

Over the years, Bill and Betsy have given significant hours of their time and monetary resources to the upkeep, maintenance and operation of LSHT and Tin Hau Temple. And they have each led Lum Sai Ho Tong as President in different years.

Bill served as Lum Sai Ho Tong President twice; first in 1969, then again in 1988, while Betsy served as President in 1999 and 2000. Though she may have wondered and asked herself, "What am I getting myself into" when through marriage, she became part of the LSHT family, Betsy like her husband provided excellent leadership to Lum Sai Ho Tong while serving as the Society's president.

In May of 1999, the 110th Anniversary of Lum Sai Ho Tong, Betsy organized and coordinated a cultural parade that included many of Honolulu's local Chinese groups and organizations. With Ku Po, the Patron Saint, also known as Matsu, leading the way, participants paraded festively through Honolulu's Chinatown.

Then in 2000 during her second tenure as LSHT President, while attending a World Lin Convention in Okinawa, Betsy accepted the invitation to host the 2002, 9th World Lin Convention in Honolulu, Hawai'i. After many months of careful planning, organizing, in November of 2002, an international contingent of convention participants (similarly surnamed Lin, Lum, Lam) from Taiwan, China, Japan, Southeast Asia, and North America gathered in Honolulu, Hawai'i for several days of convention programs and activities. On the convention's final evening, a traditional Chinese banquet brought together World Lin conventioneers with local Lum family and friends, community leaders, and representatives of Chinese cultural organizations. A sumptuous dinner at the Waikiki Sheraton was enjoyed by all, with over 750 invited guests present for the finale of a successful Hawaii, 9th World Lin Convention.

Interestingly, Bill and Betsy Lum are the only husband and wife couple in LSHT history to both grace Lum Sai Ho Tong's "Wall of Presidents." Each have their photographs

included amongst the portraits of past Lum Sai Ho Tong presidents. They have also cultivated numerous members, directors and leaders of the organization, including two Presidents from their own family, brother Edward Hon Hoong Lum and niece Kehaulani Lum, and several more individuals from within the organization.

Through LSHT, their efforts have positively impacted the larger Chinatown community. Together they have been steadfast advocates and supporters of affordable Senior Housing. Each has testified on numerous occasions before the Honolulu City Council and the Neighborhood Board. In particular, they have championed housing for seniors on the City property adjacent to Lum Sai Ho Tong, and after years-long efforts, that affordable Senior housing facility is on the path to becoming a reality.

They are ambassadors of aloha and leaders, within Honolulu's larger Chinatown community. Whether at Lum Sai Ho Tong, or out and about the community representing the Society, Bill and Betsy welcome visitors and guests who stop by the temple.

On auspicious ceremonial-celebration days, they can be found at LSHT handing out red-paper lisee envelopes, adorning the performing Chinese lions, and ensuring that all guests/visitors have enough to eat at lunches served following the special celebrations. Both are active members of the See Dai Doo Society, and they provide support and advice to the Chung Shan Association of Hawai'i.

Their dedication, service, and commitment over the years to Lum Sai Ho Tong members and the larger community, continue an unbroken family chain of reverence that dates back over 2,500 years. Together they are exemplars, along with their descendants, living the Chinese/Confucian virtues of *Xiao (filial piety)*, *Ren (Benevolence)*, *Yi (Honesty)*, *Zhi (Knowledge)*, *Xin (Faithfulness)*, and *Li (Correct behavior)*.

Though in their 90's, both believe they still have much more to contribute and accomplish. Out of a deep sense of duty, respect and gratitude to those who came before them, Bill and Betsy continue their work at Lum Sai Ho Tong, keeping a watchful eye on the future, hopeful that their legacy of service endures as both reminder and example to those who will follow.

EDDIE FLORES, JR. 林志雄

Eddie was born in Hong Kong. His family immigrated to Hawai'i in 1963, when he was 16 years old. Although he had a learning disability and was brought up in a poor social and economic environment, Eddie was able to graduate, with a bachelor's degree, from the University of Hawai'i and a master's degree from the University of Oklahoma. He proudly served six years in the United States Army Reserves Military Intelligence Unit. Eddie started his real estate business, two years after he graduated from University of Hawai'i in 1974. He built his company into the top business brokerage firm in Hawai'i, within a few years.

In 1976, he bought the L & L Drive-Inn restaurant and gave it as a gift to his mother who was working as a waitress at Lynn's Deli. In 1990, Eddie took over L & L and expanded the restaurant chain from three restaurants into 200 locations in 12 states and 6 countries with his partner Johnson Kam. L & L is the first business from Hawai'i to dominate as a restaurant brand in the U.S. Mainland. L & L is also the first from Hawai'i to franchise successfully and open in multiple countries.

Perhaps the most impressive aspect of the way Eddie runs his business is his generosity and unselfishness. Eddie has provided loans, credit and lease guaranty for his employees in the L & L restaurant chain so they can share the same American dream.

Throughout Eddie's career, he has never forgotten his roots and hardship as an immigrant. He volunteered beyond his business or professional responsibilities to serve his community. Eddie was one of the key person to build the largest Filipino Community Center in the United States and the Chinatown Community Center. Eddie had won many professional and volunteer awards that epitomized his success. Some of his major recognition are University of Hawai'i Distinguished Alumni, Hawaii Small Business Entrepreneur of the Year, United Chinese Society Citizen of the Year, National Restaurant Association Diversity Award, and Presidential Award for Overseas Filipinos.

Additionally, Eddie taught real estate, investment, management, business appraisal, and travel courses throughout the State of Hawaii. As an instructor, he received the highest honor by the Hawaii Association of Realtors, as the "Highest Rated Instructor" and "Educator of the Year." As an author, Eddie wrote four books – "Listing and Selling Business Opportunities", "How to List and Sell Business Opportunities", "266 Million Winning Lottery Recipes", and "108 Tips on Travel, Culture and Business in China". He also published articles locally and internationally on various subjects such as real estate, business appraisal, investment and business opportunities.

Eddie has served on many boards and commissions which include the Honolulu Board of Water Supply (former Chairman), Honolulu Police Commission, Chaminade University, East-West Center, Filipino Community Center (Emeritus Chairman), Chinese Chamber of Commerce of Hawaii (Emeritus Board of Director), among others.

Eddie Flores, Jr. and his connection to Lum Sai Ho Tong

Eddie's great grandfather, Mr. Hoy Hin Lum, arrived in Hawai'i as a laborer around 1870. When he made enough money, he started a bakery and later sent for his wife in China. Mr. Lum came from the village of Da' Che (Big Car) in Zhongshan, China. Most of the residents from the Village of Da' Che (中山大车村) have the last name 'Lum.' Eddie visited the Village of Da' Che many times and personally donated many scholarships for the residents to attend the University of Hawai'i.

Eddie's grandfather, Mr. Quon Lock Lum, was born in Maui. Mr. Lum had six children with his first wife, Mrs. Yim Lin Kam. During the depression, Mr. Lum lost his job. He took his family back to China and was supported by various relatives in Zhongshan and Hong Kong. When Japan attacked Pearl Harbor, Mr. Lum returned to Honolulu with his two sons, Kam Lau and Charlie. His oldest daughter Rose returned a few months later. Mr. Lum's other two daughters, Margaret Kwai Lin Lum (Eddie's mother) and Betty, and son George remained in China with relatives. Mrs. Yim Lin Kam passed away at an early age of 36 in China. Thereafter, Mr. Lum remarried in 1948 to Mrs. Sin Won Lau and had another child, Yan Tim Lum, who was born in China. Eddie's grandfather was a member of Lum Sai Ho Tong for many years.

Eddie's mother, Margaret, married his father, Eduardo Flores, in Macau. His father moved the family to Hong Kong after the war. In 1960, Eddie's grandfather, Mr. Lum, visited his family in Hong Kong. He wanted them to have a better life so he paid for their passage on President Cleveland ship in 1963 to Honolulu. However, life became very difficult for Eddie's family, since both of his parents had no skill and had very little education. At that time, they shared an old house on the second floor with two other families and a Chinese Club at 1520 Liliha Street located across from the Liliha Library.

Eddie's other grandmother, Mrs. Sin Won Lau, arrived in Honolulu with her son, Yan Tim Lum, in 1965. She started to work at Lum Sai Ho Tong in 1966, to care for the temple. She was paid a small monthly salary of $80.00. Eddie's grandfather, Mr. Quon Lock Lum, accompanied her to clean and to cook at the temple. Although Grandma Lau dedicated her entire life to the temple, little recognition was given to her. She retired in 1995, after almost 30 years of service.

Eddie's youngest sister, Vicki, studied at Mun Lun Chinese School. She would often stop by Lum Sai Ho Tong after school to visit her grandparents. Of all the siblings, Vicki has the best recollection of Lum Sai Ho Tong. Grandma Lau was a devout Taoist priestess who was often tapped to pray for ancestors who have passed on. Her services were always in great demand, as people from all over the island came to see her. Vicki still remembers the red stick candles burning and her kneeling in front of the name placards of those who had died to pray for them. Some days, Vicki would be very busy folding Chinese money to burn, so that the people Grandma Lau prayed for would have money in the afterlife. Weekends were exciting for the Flores' siblings at the temple, as live musicians would come to clang on their cymbals and play on what looked like a Chinese banjo. Not to mention there was more food for Eddie and his siblings to eat.

Time spent with their grandparents, at Lum Sai Ho Tong, was one of the most memorable and happiest moments they have ever had together as a family.

HOWARD C. O. LUM 林子安

Howard Lum's ties to Lum Sai Ho Tong, Tin Hau Temple, Pi Kan Temple and Tin Hau's Island:

I was born in Honolulu in 1950. Like many other Chinese children of that period, my family was business people. My father, Bung Sun, came from Buck Toy Village in Zhong Shan. My mother, Violet Hatsuyo Yanaru, was born in Honolulu.

Because my parents were always busy at work, it was my aunt (Tong Shee) and uncle (Moon Gett) who raised me and many other children in our extended family, including my brother and my sister. Because my aunt and uncle had no boys, I happily overstayed at their home until I was 11 ½ years old. It was a very happy time of my life. However, during my stay, when I was 4 years old, I got very sick and nearly died. My cousins later told me that if not for Tin Hau Temple and the priestess there, I would not have survived the year. I had developed whooping cough, with no cure at the time. I could not stop coughing and could not eat anything. My aunt told me that for 6 months she carried me on her back from doctor to doctor and tried all kinds of medicine, but it was only when I went to Tin Hau Temple and drank the tea, that the priestess prepared, that I was then able to eat.

Finally, after 6 months, another member of Lum Sai Ho Tong told my aunt that in the new building next door, a doctor had a medicine that may help. She took me there, and after one spoon of medicine, my coughing subsided. As a child, whenever I had problems, my aunt would take me to Lum Sai Ho Tong. Even though I was never told formally, I probably was what we would call a godchild (kai jai) of Tin Hau. After my father and older family members passed on, I, and our family members no longer participated in any of the Lum Sai Ho Tong functions.

Over the years, I have had many experiences myself, and I have seen or heard of many other amazing events having taken place at Tin Hau Temple. I surmise that many others may have had similar experiences over the years.

One day, in 1999, I decided to see what was happening at Lum Sai Ho Tong, and, so, I stopped in. An old timer greeted me, and I said to him, "Wow, you are still operating!" He said, "Yes, young man, and we could use your help." I replied, "Okay", and, so, that is how I returned and started helping there. The old timer was Clarence Lam, who worked with my father (Bung Sun) and others to move the Pu Sats to Kwan Yin Temple in 1953, for the new building. My father and uncle also were big supporters and contributors, back then, to the new Lum Sai Ho Tong building, as well as a school that was built in Buck Toy Village. I guess things always happen for a reason!

After getting re-involved and re-indoctrinated with Lum Sai Ho Tong, in 1999, I also went to several World Lin/Lum World Conventions, and I learned more and more about the World Lum family. I went to Taiwan, Singapore, Philippines, China, Okinawa and other places with them. Being in business, I went all over China and Asia, and, then, I started to do business in Xiamen, in Fukien Province. Knowing that Tin Hau Sung Mu was from Mei Zhou Island, in Po Tin County, Fukien Province, I visited her island. It was very beautiful, with over six temples scattered around the island. They had Tin Hau maidens and helpers all over the island who were extremely kind, and they would guide and help you around. I went there two times, and my son Daren went there once.

During my travels in Asia, I have visited Tin Hau/Matsu Temples all over Taiwan, Singapore, Philippines, Thailand, Vietnam, and in China (Shanghai, Shandong, Xiamen, Guangzhou, as well as on the mainland).

On my second visit to Xiamen and Mei Zhou Island, out of the blue, my Chinese business associate said he had just opened a new factory in Honan, and he insisted that I visit it with him. So, we flew there from Xiamen. Knowing that Great Ancestor Pi Kan was from Honan, I asked him to take me to Pi Kan's Temple, which he did. Pi Kan's Temple is adjacent to the Shao Lin Temple in Hei Bei City. Pi Kan's Temple complex, which is over 3,000 years old, was quite a sight. With over 20 acres, and with several buildings and monuments, it was magnificent. It housed many treasures, including the only known stone stele (monument), carved with a sword by Confucius, honoring Pi Kan as "the most noble of bureaucrats in China." There are also several other famous steles honoring Pi Kan from emperors from the Song, Ming and Ching Dynasties.

On my visit, I paid 12 yuan admission, and I went in like a tourist. When I told them I was a Lum, they immediately treated me differently. Several volunteers came out and dressed me up in a cheong sam and set up a sun toi, with fresh food and flowers, for me to bai san! When I left, they gave me a packet, with the ashes from the burned incense, which I still have today.

ME KE ALOHA PUMEHANA

The Board and members of Lum Sai Ho Tong fondly express our deep gratitude and Aloha to our beloved kupuna who have gone to be with our ancestors. Mahalo nui loa for your many years of devoted leadership and service to our LSHT family.

Me ke aloha Pumehana.

Judge Richard Mee Cho Lum, Past President

Housing project wrong for Chinatown

By Wesley F. Fong

Honolulu's Chinatown has a unique history and character. Extending from Nimitz Highway to Vineyard Boulevard and from Nu'uanu Avenue to River Street, it is a vibrant neighborhood of shops, temples, schools and affordable housing complexes.

However, unlike the Chinatown of yesterday, today you can find not only Chinese but Vietnamese, Cambodians, Laotians, Filipinos, Japanese, Koreans working side by side in the many shops and marketplaces. Vietnamese pho may have just supplanted the Chinese won ton mein in popularity.

There is even a distinctive art district that harmoniously coexists with the heart of Chinatown and is now a part of the fabric of Chinatown, though you may not find a Chinatown produce shopper visiting an art gallery to admire the work of an emerging artist or an art patron going to a Chinatown market to buy a bunch of choi sum.

Despite all of the changes to its fabric, Chinatown's character has not dramatically changed. A visit to Chinatown is still an adventure in sightseeing, shopping and eating. Where else can you find a cure for your cold at an herb shop, stop at a dim sum restaurant and order chicken feet for lunch, watch a friendly game of mah jong or if lucky join in a Chinese card game and then purchase the ingredients for the evening's meal?

An integral part of Chinatown is its river walk. Just a block away from the bustle of the busy produce markets is the River Street walk that extends from Nimitz Highway to Vineyard Boulevard. If one walks up the River Street mall to the Kwan Yin Temple in the early morning, one can feel a sense of peace and tranquility.

Unfortunately, the city has proposed to develop a residence for the homeless on River Street near Vineyard Boulevard. This so-called "Housing First" concept includes housing for those who are mentally incapacitated and/or have drug and alcohol abuse problems. Although counseling services will be available, they are strictly voluntary and not a condition of occupancy. These residents are free to roam the Chinatown neighborhood with little accountability.

The city should be commended for its efforts to help the homeless, but the proposed location for the "Housing First" project is inappropriate. Within just a block of the proposed site, there are three schools. One school has more than 290 students and about 80 percent of them live in the neighborhood. Many students walk within a half block of the proposed site.

There are also three temples within a half block and three affordable housing complexes and about 70 businesses within a block of the proposed site. In addition

to the Chinatown community, the Downtown Neighborhood Board 13 and the Art District Art Merchants Association are opposed to the proposed location. Even the city's own prosecuting attorney's office is opposed because the location conflicts with the "Weed and Seed" program for the area.

A viable alternative to the "Housing First" project at the proposed location is an affordable senior housing complex with a senior multipurpose center. There is a great need for senior housing and a place for our seniors in the neighborhood to exercise, practice old skills, learn new ones and just socialize.

Such an alternative would be compatible with Chinatown's existing character and in keeping with the intent and purpose of the City Council's Resolution 09-364 CD1 adopted unanimously by the council on Jan. 27. The resolution requested the city administration to prepare a special area plan for Chinatown including the subject location to conform to the Chinatown Special District, emphasizing consideration of a low-rise, senior or other affordable housing project on River Street and with Chinatown community participation.

To date, the administration has not complied with the City Council's request.

We understand that there is a problem with the homeless not only in Chinatown but in nearly every neighborhood of Honolulu. But simply building a residence for the homeless at one location, especially without community input, will not solve the problem.

Since the homeless issue is of islandwide concern, won't it be more prudent for the city, state and all affected parties to sit down and together discuss a mutually acceptable master plan to address the homeless issue in all of Honolulu?

It is also important to ensure that the homeless actually agree to live in the homeless residence and follow its rules. This suggested forum is practical and should save a duplication of public and private effort and resources, but again this may just be political naīvet talking.

There is still a great need to protect and preserve the unique character of our Chinatown and its River Street walk and to preserve its rich heritage, culture and family life. San Antonio has its River Walk, so why can't Honolulu have its River Walk in Chinatown?

Wesley F. Fong is an attorney and community volunteer. He wrote this commentary for The Advertiser in his role as president of Concerned Citizens on River Street Housing.

VEC	Vapor Encroachment Condition
VES	Vapor Encroachment Screen

Executive Summary

Michaels Development Company ("Client") retained Bureau Veritas North America, Inc. (Bureau Veritas) to conduct a Phase I Environmental Site Assessment ("ESA" or "assessment") of Halewaiolu Residences property located at 1331-1347 River Street (Tax Map Key Number [TMK]: [1] 1-7-006: Parcel 012) in Honolulu, Oahu, Hawaii (the "subject property"). The objective of the assessment was to provide an independent, professional opinion regarding the presence or absence of recognized environmental conditions, as defined by ASTM International (ASTM), associated with the subject property.

This assessment was performed in accordance with Bureau Veritas' Proposal Number 1709.15.166, dated June 8, 2015 and ASTM Practice E1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process. The United States Environmental Protection Agency (USEPA) has determined that the ASTM E1527-13 standard is consistent with the requirements for conducting All Appropriate Inquiry (AAI) and may be used to comply with the AAI regulations (40 Code of Federal Regulations [CFR] Part 312). The methods and terms are defined in the ASTM standard and AAI regulations. Details of the work performed, sources of information, and findings are presented in the report. Limitations of the assessment are described in Sections 1.2 and 1.3.

The subject property is comprised of a rectangular parcel with approximately 26,925 square feet of land area located in the densely developed Chinatown district of Honolulu, Oahu, Hawaii. The City and County of Honolulu Public Access database lists the subject property as TMK: (1) 1-7-006: Parcel 012, which is currently zoned "BMX-4 Central Business Mixed Use." The State Land Use designation is "Urban District." The City and County of Honolulu Real Property Assessment Division lists the Property Class of the subject property as "Commercial."

A description of the current uses and improvements at the subject property is presented in the following table:

Parcel/Street Address (including known historic address[es])	1331-1347 River Street (TMK: [1] 1-7-006: Parcel 012), Honolulu, Oahu, Hawaii Specific addresses: 1331 River Street 1333 River Street 1335 River Street 1337 River Street 1339 River Street 1341 River Street 1343 River Street 1345 River Street 1347 River Street
Owner:	City and County of Honolulu
Number and Size of Buildings:	The subject property is improved with a two-story multi-tenant commercial building, approximately 10,234 square feet in size and the associated asphalt-paved parking lot.
Construction Date(s):	1959
Tenants:	Hanagusa Inn, Mikis Florist, Uptown Café, and Lloyd M. Nakasone CPA (Certified Public Accountant)
Current Usage:	Commercial tenants, including restaurants, a florist, and offices

The historical research presented in this assessment has established the obvious uses of the subject property since 1914. In addition, information on historic uses of adjoining properties was also obtained. A chronological summary of the historic use of the subject and adjoining/nearby properties is presented below.

The earliest available fire insurance map, dated 1914, showed the subject property as multiple lots developed with stores and dwellings. River Street was depicted adjacent to the northwest of the subject property, beyond which was Nuuanu Stream. North Vineyard Boulevard was depicted to the northeast of the subject property. The general area was depicted as a residential neighborhood. The 1950 fire insurance map depicted an auto repair on the northeast adjoining property. The 1955 fire insurance map also shows an oil and grease storage on the northeast adjoining property. The 1963 fire insurance map depicted the subject property developed with the current building, labeled with seven "Stores." According to Department of Planning and Permitting records, the building was constructed in 1959.

Readily available records at the City and County of Honolulu Real Property Tax Assessment Office were reviewed to assess past ownership and uses of the subject property. The subject property is listed as TMK: (1) 1-7-006: Parcel 012. In 1935, the subject property was owned by James F. Gilliland, Gonatanco N. Gilliland, and Annie R. Franco. It was deeded to James F. Gilliland Estate and Annie Franco in 1962; to Agnes M Gilliland Trust and Saint Louis Chaminade Education Center in 1986, St. Louis Education Foundation in 1987; and to Shanghai Investment Company, Inc. in 1989. In 1992, the parcel was deeded to the City and County of Honolulu, the current owner.

This assessment has revealed no evidence of recognized environmental conditions, as defined by ASTM, in connection with the subject property, except for the following:

- **Former Auto Repair Facility on the Northeast Adjoining Property –** The 1950 and 1955 fire insurance maps depicted an "Auto Repair" on the northeast adjoining property. The 1955 fire insurance map also depicted an "Oil and Grease Storage" on the northeast adjoining property.

  This is considered a recognized environmental condition because there is a potential for past releases of petroleum hydrocarbons and other chemicals from the northeast adjoining property to migrate to the subject property. Bureau Veritas recommends conducting a subsurface investigation along the northeastern boundary of the subject property, including soil and groundwater sampling with laboratory analyses.

However, this assessment has revealed the following environmental conditions, which are not considered recognized environmental conditions, as defined by ASTM, in connection with the subject property:

- **Suspect Asbestos-Containing Materials (ACM)** – The building on the subject property was constructed in 1959 and may contain asbestos-containing materials (ACM). Suspect ACM were observed in the subject building, including vinyl floor tiles with associated mastic, drop and hard wall plaster. The building may also include suspect ACM that were hidden from view, such as caulking or sealant between building components and roofing materials.

  This finding is not considered a recognized environmental condition because asbestos is not an ASTM issue. However, prior to any activities (i.e., repair, renovation, demolition) which may disturb suspect ACM, these and similar materials should be sampled and analyzed for possible asbestos content. If these materials are found to contain asbestos, the building owner or leased space tenant may be required to comply with applicable United States Environmental Protection Agency (EPA), Occupational Safety and Health Administration (OSHA), National Emission Standards for Hazardous Air Pollutants (NESHAPS), and state and local regulations.

- **Suspect Lead-Based paint (LBP) –** The subject property is improved with a multi-tenant building constructed in 1959. Therefore, LBP could be an issue at the subject property. The way to determine if LBP is an issue is through sampling and laboratory analysis to determine the presence or absence of LBP.

  This finding is not considered a recognized environmental condition because LBP on buildings is not considered an ASTM issue. Sampling and analysis should be conducted prior to renovation or demolition activities that may disturb painted surfaces. If the paints are found to contain lead, the building owner or leased space tenant may be required to comply with applicable USEPA, NESHAPS, OSHA, and state and local regulations.

1.0 INTRODUCTION

Michaels Development Company ("Client") retained Bureau Veritas North America, Inc. (Bureau Veritas) to conduct a Phase I Environmental Site Assessment ("ESA" or "assessment") of Halewaiolu Residences located at 1331-1347 River Street (Tax Map Key Number [TMK]: [1] 1-7-006: Parcel 012) in Honolulu, Oahu, Hawaii (the "subject property"). The objective of the assessment was to provide an independent, professional opinion regarding the presence or absence of recognized environmental conditions, as defined by ASTM International (ASTM), associated with the subject property.

1.1 PURPOSE

The purpose of the assessment is to follow ASTM Practice E1527-13, which defines good commercial and customary practice in the United States of America for conducting an environmental site assessment of a parcel of commercial real estate with respect to the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) and petroleum products. As such, this standard is intended to permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitation on CERCLA liability (the landowner liability protections or LLPs); that is, the standard that constitutes all appropriate inquiries into the previous ownership and uses of the property consistent with good commercial and customary practice as defined at 42 United States Code 9601(35) (B). The term recognized environmental conditions is defined as the presence or likely presence of any hazardous substances or petroleum products in, on, or at the property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.

1.2 METHODOLOGY

This assessment was performed under the conditions of, and in accordance with Bureau Veritas' Proposal Number 1709.15.166, dated June 8, 2015 and ASTM International Practice E1527-13, Standard Practice for Environmental Site Assessments: Phase I ESA Process. The United States Environmental Protection Agency (USEPA) has determined that the ASTM E1527-13 standard is consistent with the requirements for conducting All Appropriate Inquiry (AAI) and may be used to comply with the AAI regulations (40 Code of Federal Regulations [CFR] Part 312). The methods and terms are as defined in the ASTM standard and AAI regulations. Details of the work performed, sources of information, and findings are presented in the report. Limitations of the assessment are described in Sections 1.2 and 1.3.

The assessment generally included the following components:

- Review information provided by the client. This includes that information required by the Standard with respect to "User Responsibilities" as well as other information provided (e.g., Environmental Liens, Activity and Use Limitations [AULs], Specialized Knowledge).

- Review selected information on general geology and topography of the subject property, local groundwater conditions, and proximity to ecologically sensitive receptors, such as streams, that might be impacted by recognized environmental conditions. A determination of the sources of water, power, and sewer service at the subject property.

- Investigate historical use of the subject property through reasonably ascertainable ASTM Standard Historical Sources for evidence of prior land use that could have led to recognized environmental conditions. These Standard Historical Sources may include: aerial photography, United States Geological Survey (USGS) topographic maps, fire insurance maps, property tax files, building department records and zoning/land use records.

- Review of environmental records available from the client, property owner or site contact for evidence of recognized environmental conditions and AULs. This includes documents such as regulatory agency reports, permits, registrations, previous assessments, etc.

- Review a commercial database summary of ASTM Standard Federal, State, and Tribal regulatory agency records pertinent to the subject property and offsite facilities located within ASTM specified search distances from the subject property.

- Conduct interviews with the subject property owner (or their designated Key Site Manager) and occupants regarding current and previous uses of the subject property, particularly with respect to activities involving hazardous substances and petroleum products. Past owners, operators and occupants may also be interviewed to the extent they may be identified and their information is not likely to be duplicative.

- Conduct an onsite reconnaissance of the subject property for visual evidence of recognized environmental conditions, including, but not limited to: existing or potential soil and water contamination, as evidenced by soil or pavement staining or discoloration, unnaturally stressed vegetation, or indications of waste dumping or burial; pits, ponds, or lagoons; containers of hazardous substances or petroleum products; electrical and hydraulic equipment that may contain polychlorinated biphenyls (PCBs), such as electrical transformers and hydraulic hoists; underground and aboveground storage tanks (USTs and ASTs, respectively); etc.

- Perform a subject property line visual reconnaissance of adjacent properties for evidence of potential offsite environmental conditions that may affect the subject property.

- Evaluate information gathered during the assessment to reach conclusions concerning recognized environmental conditions and prepare this report.

This assessment also included the following non-ASTM items:

- Asbestos-Containing Materials (ACM)
- Lead-Based Paint (LBP)
- Radon
- Wetlands

This assessment did not include sampling or analysis of suspect ACM, paints, soil, groundwater or other materials.

Bureau Veritas representative Ms. Nicole Okino, Staff Geologist, under the supervision of Mr. Tim Swartz, Senior Project Manager and Environmental Professional as defined in §312.10 of 40 Code of Federal Regulations (CFR) 312 (see Section 10.0), conducted the site walkthrough portion of the assessment on June 25, 2015, accompanied by Mr. Richard Char, Vice President and Senior Property Manager of Hawaiian Properties, Ltd. and representative of the subject property owner.

Copies of selected relevant documents and supporting information are included in the applicable appendices. See the Table of Contents for a list of Appendices. Resumes for assessors and Environmental Professionals involved in this assessment are included in the Appendices. Photographs taken at the time of the walkthrough are included behind the Photographs Tab.

1.3 EXCEPTIONS & LIMITING CONDITIONS OF ASSESSMENT

Information for the assessment was obtained from the sources listed in the Appendices. This information, to the extent it was relied on to form our opinion, is assumed to be correct and complete. Bureau Veritas is not responsible for the quality or content of information from these sources.

1.3.1 Unavailable Documentation

All requested documentation regarding the subject property was made available for review.

1.3.2 Lack of Access/Reconnaissance Limitations

Bureau Veritas did not encounter significant access or reconnaissance limitations at the subject property.

1.3.3 Data Gaps

The ASTM E1527-13 requires that the report identify the following: 1) obvious uses of the subject property since 1940 or first development, whichever is earlier; and 2) significant "data gaps" which affect the ability of the Environmental Professional to identify recognized environmental conditions. The report is also to include information on the sources consulted to address the data gaps.

Historical subject property ownership and/or use information was obtained for the time period 1914 to present. Based on this information, Bureau Veritas has established the history of *obvious* uses of the subject property since 1940 or first development, whichever is *earlier*. No significant data gaps (or other data gaps warranting discussion) were encountered during this Phase I ESA.

1.4 RELIANCE

The information and opinions rendered in this report are exclusively for use by Michaels Development Company. Bureau Veritas will not distribute or publish this report without consent except as required by law or court order. The information and opinions expressed in this report are given in response to a limited assignment and should be considered and implemented only in light of that assignment. The services provided by Bureau Veritas in completing this project were consistent with normal standards of the profession. No other warranty, expressed or implied, is made.

2.0 USER PROVIDED INFORMATION

ASTM E1527-13 defines "*User*" as the party seeking to use Practice E1527 to complete an environmental site assessment of the subject property. Bureau Veritas understands that Palolo Apartments LLC and Bank of Hawaii are the *User* as defined by ASTM E1527-13. ASTM E1527-13 specifies that certain tasks associated with identifying potential recognized environmental conditions at the subject property should be performed by the *User* and provided to the Environmental Professional (i.e., *User Responsibilities*). Accordingly, Bureau Veritas provided the *User* a questionnaire, requesting specific information (see Appendices).

The User Questionnaire included requests for information on the following: environmental liens and AULs that are filed or recorded against the property; "specialized knowledge" of the *User*; relationship of the purchase price to the fair market value of the property if it were not contaminated; commonly known or reasonable ascertainable information; the degree of obviousness of the presence of likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation; the

presence of *Proceedings Involving the Property* (e.g., litigation, regulatory agency rulings, violations); the reason for performing the Phase I ESA, and other information/documents (e.g., site plan, ALTA survey).

Based on Bureau Veritas' review of the *User* provided information, no readily apparent evidence of potential recognized environmental conditions at the subject property was noted.

3.0 SUBJECT PROPERTY DESCRIPTION

3.1 LOCATION

The subject property is comprised of a rectangular parcel with approximately 26,925 square feet of land area located in the densely developed Chinatown district of Honolulu, Oahu, Hawaii. The City and County of Honolulu Public Access database lists the subject property as TMK: (1) 1-7-006: Parcel 012, which is currently zoned "BMX-4 Central Business Mixed Use." The State Land Use designation is "Urban District." The City and County of Honolulu Real Property Assessment Division lists the Property Class of the subject property as "Commercial."

3.2 CURRENT USE OF SUBJECT PROPERTY

A description of the current uses and improvements at the subject parcel is presented in the table on the below.

Parcel/Street Address (including known historic address[es])	1331-1347 River Street (TMK: [1] 1-7-006: Parcel 012), Honolulu, Oahu, Hawaii Specific addresses: 1331 River Street 1333 River Street 1335 River Street 1337 River Street 1339 River Street 1341 River Street 1343 River Street 1345 River Street 1347 River Street
Owner:	City and County of Honolulu
Number and Size of Buildings:	The subject property is improved with a two-story multi-tenant commercial building, approximately 10,234 square feet in size and the associated asphalt-paved parking lot.
Construction Date(s):	1959
Tenants:	Hanagusa Inn, Mikis Florist, Uptown Café, and Lloyd M. Nakasone CPA (Certified Public Accountant)
Current Usage:	Commercial tenants, including restaurants, a florist, and offices

3.3 CURRENT USES OF ADJOINING/NEARBY PROPERTIES

The area surrounding the subject property consists primarily of commercial buildings. Adjoining and nearby properties were observed (from the subject property or from public access areas) for evidence of potential recognized environmental conditions and their potential to pose an environmental concern to the subject property (Figure 1, Figures Tab). The uses and features of adjoining properties are described below (by relative compass direction and across adjoining roadways):

Northwest		
Company/Facility Name	**Address**	**Type/Relevant Observations (if any)**
River Street, beyond which is Nuuanu Stream	Not applicable	Stream

North		
Company/Facility Name	**Address**	**Type/Relevant Observations (if any)**
River Street, beyond which is Nuuanu Stream	Not applicable	Stream

Northeast		
Company/Facility Name	**Address**	**Type/Relevant Observations (if any)**
Borthwick Mortuary	1330 Maunakea Street	Mortuary and associated parking lot

East		
Company/Facility Name	**Address**	**Type/Relevant Observations (if any)**
Memorial Chapel Borthwick Mortuary	1330 Maunakea Street	Mortuary and associated parking lot

Southeast		
Company/Facility Name	**Address**	**Type/Relevant Observations (if any)**
Borthwick Mortuary	1330 Maunakea Street	Mortuary and associated parking lot

South		
Company/Facility Name	**Address**	**Type/Relevant Observations (if any)**
Borthwick Mortuary	1330 Maunakea Street	Mortuary and associated parking lot

Southwest		
Company/Facility Name	**Address**	**Type/Relevant Observations (if any)**
Lum Sai Ho Tang building	1315 River Street	Commercial building

West		
Company/Facility Name	**Address**	**Type/Relevant Observations (if any)**
River Street, beyond which is Nuuanu Stream	Not applicable	Stream

Information regarding historical or other documented uses of nearby properties that may pose an environmental concern to the subject property is discussed in Sections 4.0 and 6.0, respectively.

3.4 PHYSICAL SETTING

The physical setting of the subject property was assessed through a review of the following: USGS Topographic Maps, visual observations at the subject property and nearby properties, and selected additional documentation (e.g., soil survey, geotechnical reports, previous Phase II assessment, interviews with local personnel). General information on the topography, surface water, soils, bedrock and groundwater in the vicinity of the subject property is as follows:

Soil Type	The southwestern portion of the subject property is Ewa silty clay loam, moderately shallow, 0 to 2 percent slopes and the northeastern portion of the subject property is Kaena clay, 2 to 6 percent slopes (USDA, 1972)
Nearby Surface Water/Drainage Features	Nuuanu Stream adjacent to the northwest beyond River Street
Estimated Depth Shallow Groundwater:	Approximately 3 to 8 feet
Estimated Shallow Groundwater Flow Direction	Southwest, toward the Pacific Ocean at Honolulu Harbor (USGS, Honolulu, 2013)

Bureau Veritas reviewed the *Aquifer Identification and Classification for Oahu: Groundwater Protection Strategy for Hawaii, Report No. 179*, published by the Water Resources Research Center at the University of Hawaii, for information on groundwater conditions below the subject property. The report describes the regional groundwater in the vicinity of and beneath the subject property as part of the Kalihi aquifer system within the Honolulu aquifer sector.

The upper aquifer is described as an unconfined, basal aquifer of the sedimentary type, occurring in non-volcanic lithology. This aquifer is listed with moderate salinity (1,000 to 5,000 milligrams of chloride per liter of water (mg/L Cl^-) that is not of ecological importance and is not used as a drinking water supply. It is identified as replaceable, with a high vulnerability to contamination.

The lower aquifer is described as a confined, basal aquifer of the flank type, occurring in horizontally extensive lavas. This aquifer is listed as a currently used, irreplaceable, fresh (less than 250 mg/L Cl^-) drinking water source with a low vulnerability to contamination.

The subject property is located above the HDOH defined Underground Injection Control (UIC) line. Areas above the UIC line denote potential underground drinking water aquifers. Areas below the UIC line generally denote aquifers that are unsuitable for drinking water purposes. Consequently, the groundwater below the subject property is considered a potential drinking water source.

The subsurface conditions under the subject property are interpreted from available data and may vary. Estimated groundwater flow direction is based on topography and nearby water features unless otherwise noted. Topography is not always a reliable basis for predicting groundwater flow direction. The local groundwater gradient under the subject property may be influenced naturally by tidal influences, zones of higher or lower permeability, or artificially by nearby pumping or recharge, and may deviate from the regional trend.

4.0 HISTORICAL REVIEW

The following Sections detail Bureau Veritas' review of available historical and related information. This includes a review of ASTM Standard Historical Sources, Agency/Department records/personnel interviews and other documents. The historical summary also incorporates information obtained from interviews and other components of the assessment process.

4.1 SUMMARY OF HISTORICAL REVIEW

The historical research presented in this assessment has established the obvious uses of the subject property since 1914. In addition, information on historic uses of adjoining properties was also obtained. A chronological summary of the historic use of the subject and adjoining/nearby properties is presented below.

The earliest available fire insurance map, dated 1914, showed the subject property as multiple lots developed with stores and dwellings. River Street was depicted adjacent to the northwest of the subject property, beyond which was Nuuanu Stream. North Vineyard Boulevard was depicted to the northeast of the subject property. The general area was depicted as a residential neighborhood. The 1950 fire insurance map depicted an auto repair on the northeast adjoining property. The 1955 fire insurance map also shows an oil and grease storage on the northeast adjoining property. The 1963 fire insurance map depicted the subject property developed with the current building, labeled with seven "Stores." According to Department of Planning and Permitting records, the building was constructed in 1959.

Readily available records at the City and County of Honolulu Real Property Tax Assessment Office were reviewed to assess past ownership and uses of the subject property. The subject property is listed as TMK: (1) 1-7-006: Parcel 012. In 1935, the subject property was owned by James F. Gilliland, Gonatanco N Gilliland, and Annie R. Franco. It was deeded to James F Gilliland Estate and Annie Franco in 1962; to Agnes M Gilliland Trust and Saint Louis Chaminade Education Center in 1986, St. Louis Education Foundation in 1987; and to Shanghai Investment Company, Inc. in 1989. In 1992, the parcel was deeded to the City and County of Honolulu, the current owner.

4.2 AERIAL PHOTOGRAPHS

Aerial photographs, including the subject and adjoining properties, were obtained from Environmental Data Resources, Inc. (EDR), and Google Earth™. Photographs taken in the years 1952, 1968, 1976, 1978, 1985, 1992, 2000, 2004, 2006, 2008, 2009, 2011, 2013, and 2014 were reviewed. Aerial photographs from EDR are included in Appendix D. Key findings noted during this review are as follows:

- The 1952 aerial photograph showed the subject property with trees and improved with four buildings. River Street was shown adjacent to the northwest, beyond which was Nuuanu Stream. North Vineyard Boulevard appeared to the northeast. The general area appeared as an urban neighborhood.

- The 1968 aerial photograph showed the subject property developed with the current structure. The east, south, and southwest adjoining properties also appeared redeveloped with structures. No significant changes were noted in the 1976, 1978, and 1985 aerial photographs.

- No significant changes were noted in the 1992 aerial photograph, except that the east adjoining property structure was no longer shown. No significant changes were noted in the remaining aerial photographs from 2000 through 2014.

4.3 USGS TOPOGRAPHIC MAPS

Available historic topographic maps for the subject property and vicinity were obtained from EDR and included the years 1928, 1953, 1954, 1959, 1969, 1970, 1983, 1998, and 2013. Topographic maps from EDR are included in Appendix E. Key findings noted during this review are as follows:

- The earliest available topographic map, from 1928, depicted the subject property developed with a small structure and a portion of a larger structure that extended to the southwest. The current roadways were depicted in the area, and most of the adjoining areas were developed with building.

- The 1953 topographic map showed the subject parcel shaded pink to denote unspecified development. No significant changes were observed on the remaining topographic maps, dated from 1954 to 2013.

4.4 FIRE INSURANCE MAPS

Fire insurance maps typically depict either the locations of manufacturing and industrial facilities within the city limits or potential hazards existing within individual building structures. In many cases, evidence of environmental concern, such as locations of USTs, can be found by reviewing fire insurance maps.

Fire insurance maps for the subject property and vicinity were obtained from EDR of fire insurance maps for the years 1914, 1927, 1950, 1955, 1963, 1974, 1975, 1976, 1978, 1985, 1991, and 1993. The maps provided by EDR are included in Appendix E. Key findings noted during this review are as follows:

- The earliest available fire insurance map, dated 1914, showed the subject property as multiple lots developed with stores and dwellings. River Street was depicted adjacent to the northwest of the subject property, beyond which was Nuuanu Stream. North Vineyard Boulevard was depicted to the northeast of the subject property. The general area was depicted as a residential neighborhood. No significant changes were noted on the 1927 fire insurance map.

- The 1950 fire insurance mas depicted the subject property similar to the 1927 fire insurance map. The northeast adjoining parcel was shown with an “Auto Repair” facility.

- The 1955 fire insurance map depicted the subject property similar to the 1950 fire insurance map. The northeast adjoining property was shown with an “Oil and Grease Storage”, in addition to the auto repair facility.

- The 1963 fire insurance map depicted the subject property developed with the current building, labeled with seven “Stores.” The southwest adjoining property was depicted redeveloped with a store and the south adjoining property was redeveloped with Borthwick Mortuary. No significant changes were noted on the 1974 fire insurance map.

- No significant changes were observed in the remaining fire insurance maps from 1975 through 1993.

4.5 RECORDED LAND TITLE RECORDS

Information provided to Bureau Veritas by the *User* with respect to environmental liens or AULs was discussed in Section 2.0. ASTM E1527-13 recommends that the User retain a title company or title professional to provide recorded land title records.

As part of this assessment, Bureau Veritas was provided a title report reflecting recorded land title records and lien records that are filed under federal, state, tribal, or local law from Title Guaranty of Hawaii, Inc., and dated April 28, 2015. Bureau Veritas' review of the land title records did not reveal environmental liens or AULs associated with the subject property.

Readily available records at the City and County of Honolulu Real Property Tax Assessment Office were reviewed to assess past ownership and uses of the subject property. The subject property is listed as TMK: (1) 1-7-006: Parcel 012. In 1935, the subject property was owned by James F. Gilliland, Gonatanco N Gilliland, and Annie R. Franco. It was deeded to James F Gilliland Estate and Annie Franco in 1962; to Agnes M Gilliland Trust and Saint Louis Chaminade Education Center in 1986; St. Louis Education Foundation in 1987; Shanghai Investment Company, Inc. in 1989. In 1992 the parcel was deeded to the City and County of Honolulu, the current owner. A summary of past ownership for the subject property is presented in the table below:

Parcel	Year	Property Transaction
TMK: (1) 1-7-006: Parcel 012	1935	The earliest records indicate the parcel was owned by James F. Gilliland, Gonatanco N. Gilliland, and Annie R. Franco.
	1962	Parcel deeded to James F. Gilliland Estate and Annie Franco.
	1983	Parcel leased to RJ Associates.
	1986	Parcel deeded to Agnes M. Gilliland Trust and Saint Louis Chaminade Education Center.
	1987	Parcel deeded to St. Louis Education Foundation.
	1989	Parcel deeded to Shanghai Investment Company, Inc.
	1992	Parcel deeded to City and County of Honolulu, the current owner.
	2006	Parcel leased to New Hanagasa Inn Corp.

No readily apparent evidence of recognized environmental conditions at the subject property was noted during our review of tax assessment records.

4.6 CITY DIRECTORY

A city directory provides names of former businesses and occupants of the subject property, which may indicate potential environmental concerns associated with the business. A city directory report was provided by EDR, and is included in Appendix G. A summary of the listings for the subject property is shown below. No facilities of environmental concern were listed for the adjoining and nearby properties.

Year	Listing
1995	1333 River Street: Riverside Inn 1335 River Street: Beauty Salon Toyo, Chinen Masa Graphic Design, Envisions Plus, Inc., Rowland Higa, Eric Hill, Hironaka and Associates Inc., Owen Kobayashi Graphic Design, and Property International 1341 River Street: Chikaramochi Store 1343 River Street: Collage Walk Diner 1347 River Street: Mikis Florist

Year	Listing
1999	1333 River Street: Riverside Inn 1335 River Street: Beauty Salon Toyo, Eric Hill, First Model Management Incorporated, Gordon Loriann Landscape Architect, Hironaka and Associates Incorporated, Loriann Gordon, Mock J Realty, and Property International 1341 River Street: Chikaramochi Store 1343 River Street: Collage Walk Diner 1347 River Street: Mikis Florist
2003	1333 River Street: Helene Toya and Uptown Cafe 1335 River Street: Beauty Salon Toyo, Envisions Plus, Inc., Eric Hill, Gordon Loriann Landscape Architect, Hironaka and Associates Inc., Honolulu Realty, Honolulu Realty Management, M&M Electric Inc., Mock J Realty, Ray Kar Computers, and Saturnino Tamayo 1343 River Street: Collage Walk Inn 1347 River Street: Mikis Florist
2008	1335 River Street: Beauty Salon Toyo, Envisions Plus, Inc., Honolulu Realty, Jun Shiatsu Seitai, Lloyd M Nakasone CPA, Lloyd Nakasone, and M&M Electric Inc. 1343 River Street: Hanagasa Inn Inc. 1347 River Street: Mikis Florist
2013	1333 River Street: Uptown Cafe 1335 River Street: Honolulu Realyt, Jun Shiatsu Seitai, and Nakasone Lloyd M CPA 1343 River Street: New Hanagasa Inn Corp. 1347 River Street: Mikis Florist

No readily apparent evidence of recognized environmental conditions at the subject property and adjoining properties were noted in the city directory report.

4.7 AGENCY CONTACTS

4.7.1 Building, Planning, and/or Zoning Departments

According to the City and County of Honolulu DPP database, the subject property is currently zoned "BMX-4 Central Business Mixed Use," and the State Land Use designation is "Urban District." The City and County of Honolulu Real Property Assessment Division lists the Property Class of the subject property as "Commercial." The DPP database also indicates that the two-story retail building on the subject property was constructed in 1959.

Bureau Veritas also reviewed building permits maintained by the DPP to obtain historical information for the subject property. Five permits, dated from 1973 to 2004, were listed for the subject property, which included permits for alterations, electrical work, and plumbing.

No readily apparent evidence of recognized environmental conditions at the subject parcel/property was noted in the building permit records reviewed.

4.7.2 Fire Department

The Honolulu Fire Department was contacted on June 16, 2015 to obtain information regarding any fires, complaints, permits, or violations involving hazardous material use, USTs, or ASTs on record for the subject and/or adjoining properties.

The Honolulu Fire Department has one dumpster fire incident report, number 2005-38721. The incident report was reviewed at the Honolulu Fire Department on July 6, 2015. The report stated that a dumpster fire occurred on Sunday, November 27, 2005 at approximately 5:04 PM. No evidence of environmental concern was noted in the incident report.

4.7.3 Department of Health (Solid and Hazardous Waste Branch)

The State of Hawaii Department of Health (HDOH), Solid and Hazardous Waste Branch UST and leaking underground storage tank (LUST) databases (2015) were reviewed to obtain information regarding any USTs or LUSTs at the subject property or adjoining properties.

The subject property and immediately surrounding properties were not listed in the UST and LUST databases reviewed.

4.7.4 Department of Health (Hazard Evaluation & Emergency Response Office)

The HDOH Hazard Evaluation and Emergency Response (HEER) Office Release Notification database (2014) was reviewed to obtain information regarding any spills or other environmental incidents that may have occurred at the subject property or adjacent properties.

The subject property and adjoining properties were not listed in the HEER databases reviewed.

4.8 PREVIOUS ENVIRONMENTAL REPORTS OR OTHER DOCUMENTS

No previous environmental reports or other historical documents regarding the subject parcel/property were provided to Bureau Veritas for review during this assessment.

5.0 INTERVIEWS

Bureau Veritas interviewed selected individuals associated with the subject property. The purpose of the interviews was to obtain additional information related to: 1) the current and past operations at the subject and/or adjoining properties that may result in recognized environmental conditions; and 2) the presence of Proceedings Involving the Property (e.g., litigation, regulatory agency rulings, violations).

Bureau Veritas interviewed Mr. Richard Char, Vice President and Senior Project Manager with Hawaiian Properties, Ltd. and representative of the subject property owner, during the site walkthrough on June 25, 2015. Mr. Char has been associated with the subject property for approximately ten years, and appeared to be forthcoming with the information for which he had knowledge.

Mr. Char was unaware of any USTs, hydraulic equipment, chemical spills, or hazardous materials releases on the subject property. Furthermore, he was unaware of any undocumented or unpermitted wells on the subject property. He was aware of a sump-pump located on the southern portion of the subject property used to collect storm water and pump it into the City and County of Honolulu storm drain system. The subject property is hooked up to the city gas line for cooking purposes at the two cafes in the subject building.

Trash is collected in a dumpster on the northeastern corner of the subject property and disposed offsite on a regular basis.

Mr. Char was asked whether any asbestos or lead paint testing had been conducted at the subject property. He was only aware that the spray-applied acoustical ("popcorn") ceiling plaster on the second floor of the subject building was removed. However, he was not able to provide a copy of the test results or asbestos abatement documents.

Mr. Char was asked the following and responded to the best of his knowledge:

Any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property.	Yes _____	No **X**
Any pending, threatened or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property.	Yes _____	No **X**
Any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.	Yes _____	No **X**

6.0 STANDARD ENVIRONMENTAL RECORD SOURCES: FEDERAL, STATE, AND TRIBAL

Available government database information prepared by EDR was reviewed to evaluate both the subject property and any listed sites within ASTM-recommended search distances, which could potentially impact the subject property. Federal, state, and local databases reviewed are included in Appendix H.

The regulatory database report also included an Unmappable Sites Section. Unmappable sites are sites that cannot be plotted with confidence, but can be located by zip code or city name. In general, a site cannot be geocoded due to inaccurate or missing information in the environmental database record provided by its applicable agency. Unmappable sites that were identified by Bureau Veritas are included, as applicable, within the following paragraphs.

Subject Property

The subject property was not identified in the EDR database report.

Nearby Properties

A total of 116 listings were identified within the specified search distances from the subject parcel, including: one Corrective Action Report (CORRACTS), six Resource Conservation and Recovery Act, Conditionally Exempt Small Quantity Generator (RCRA-CESQG) site; 66 State Hazardous Waste Sites (SHWS); 23 Leaking Underground Storage Tank (LUST) sites; one Underground Storage Tank (UST) sites; four Institutional Control (INST CONTROL) sites; two Engineering Control (ENG CONTROLS) sites; one Voluntary Response Program Sites (VCP); three RCRA Non-Generator (NonGen) sites, one Department of Defense site (DOD); one Formerly Used Defense sites (FUDS); two EDR Proprietary Manufactured Gas Plants (EDR MGP); four EDR Exclusive Historic Dry Cleaners (EDR US Hist Cleaners); and one EDR Exclusive Historic Gas Station (EDR US Hist Auto Stat) sites.

Nearby sites with the potential to impact the subject property were evaluated in detail and are listed as follows:

Facility/Address	Database	Orientation from Subject Property (approximate)	Environmental Concern
Kukui Tower 35 North Kukui Street	RCRA-CESQG	Approximately 600 feet south	No; one RCRA-CESQG listed with "No Violations Found."
Nuuanu Medical Center 1374 Nuuanu Avenue	RCRA-CESQG	Approximately 600 feet southeast	No; one RCRA-CESQG listed with "No Violations Found."
Young Laundry and Dry Cleaning 1365 Nuuanu Avenue	EDR US Hist Cleaners	Approximately 600 feet southeast	No; last listed in 2012 as Young Laundry and Dry Cleaners. This site is too distant and cross-gradient to affect the subject property.

The other listed sites are not expected to present an environmental concern to the subject property because they require no further action, or based upon Bureau Veritas' review, are too distant and/or topographically down-gradient or cross-gradient relative to the subject property to reasonably affect it.

7.0 TIER 1 VAPOR ENCROACHMENT SCREEN (VES)

Bureau Veritas conducted a Tier 1 VES during the Phase I ESA. The VES was conducted in accordance with ASTM E2600-10, Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions (VES standard). A VES is often conducted in conjunction with a Phase I assessment as much of the information utilized is common to both processes. The methods and terms are as defined in the ASTM VES standard.

The goal of a VES is to identify a vapor encroachment condition (VEC) at a subject property. A VEC is defined as the presence of likely presence of chemicals of concern (COC) vapors in the subsurface of a subject property caused by the release of vapors from contaminated soil or groundwater either on or near the subject property.

In accordance with the VES standard, Bureau Veritas requested that the *User* provide information on the subject property, with respect to the following: "specialized knowledge" of the *User*; and commonly known or reasonable ascertainable information.

Based on Bureau Veritas' review of the *User* provided information, no readily apparent evidence of potential vapor encroachment conditions at the subject property was noted.

7.1 TIER 1 SCREENING INFORMATION

A Tier 1 VES includes obtaining and reviewing information on the subject property and adjoining properties. This includes information on the following: user provided information; physical setting information; existing/planned use of the subject property; types of structures/existing or planned on the subject property; surrounding area description; selected Federal, State, Local and Tribal environmental records sources; historical records related to the past use of the subject property and adjoining properties within the area of concern (AOC), 1/10 to 1/3 mile; the likely COC; and the presence of significant natural or man-made conduits that can serve as preferential pathways, such as utility corridors, sewers, storm

drains, etc. (Note: These “preferential pathways” may provide for a more direct route for vapors to encroach upon the subject property).

As stated previously, most of this information was obtained as part of the standard Phase I assessment process and has already been discussed in the applicable sections of this report. Additional information was also obtained with respect to the following: planned additional structures; and significant natural or man-made “preferential pathways” of potential vapor migration. This information is summarized below:

- Currently, there are plans to demolish the current building and construct a new apartment building.

- The subject property includes utilities, each of which includes underground conduits. Below-grade utilities include water, sanitary sewer, electricity, and gas (for cooking).

7.2 TIER 1 SCREENING EVALUATION

An evaluation includes two tests: 1) a search distance test to evaluate the proximity of the target property to known or suspected “contaminated properties”, and 2) a COC test to determine the likely presence of COCs at the subject or properties within the AOC. In evaluating the data, the distance and proximity to potentially contaminated off-site properties must be evaluated, including whether they are up-, cross-, or down-gradient relative to the subject property. A brief summary of relevant information considered for the Tier 1 screening follows:

Use of Property:	Retail stores
Soil Characteristics	Ewa silty clay loam and Kaena clay (USDA, 1972)
Depth to groundwater:	3 to 5 feet (USGS, Honolulu, 2013)
Preferential Pathways:	Underground utilities

The VES process has been completed in accordance with the ASTM E2600-10. Based on the information gathered during this assessment, no potential sources of COC, as defined in the ASTM E2600-10, were identified, except for the former “Auto Repair” and Oil and Grease Storage” structures identified on the northeast adjoining property on the 1950 and 1955 fire insurance maps (see Section 4.4.) This finding is considered a VEC and a recognized environmental condition in relation to the subject property.

8.0 SITE RECONNAISSANCE

8.1 GENERAL OBSERVATIONS

At the time of the site walkthrough on June 25, 2015, the subject property was observed as a two-story commercial building and associated asphalt-paved parking lot along River Street. The parking lot was observed in good condition with *de minimis* staining from incidental leakage of parked vehicles.

The subject building was observed on the western portion of the subject property. The southernmost tenant was Uptown Café, and their ovens/stoves are hooked up to the city gas line for cooking purposes. A food grease trap was observed under the sink in the kitchen. However, Uptown Café cleans out the food grease trap and the food grease in 55-gallon drums located outside the rear door to Uptown Cafe.

The restaurant area of Uptown Café was observed with drop ceilings and vinyl flooring, which are suspect ACM. Uptown Café had one women's and one men's bathroom in the northern portion of the restaurant area.

There was a vacant space north of Uptown Café. The vacant space was observed with black mold or soot on the walls and ceiling. It included concrete floors and electrical outlets hanging from the ceiling. Hanagasa Inn was not open at the time of the site walkthrough; however, Hanagasa Inn is similar to Uptown Café.

Mikis Florist occupies the northernmost space on the ground floor of the subject building. Mikis Florist was observed with a lawn equipment repair area in the rear of the store. A small amount of staining (de minimis) was observed on the floor. Shelves held associated tools for fixing equipment. A small used oil container was observed outside the rear door to Mikis Florist in a cardboard box.

Bureau Veritas was able to access all of the second floor units except one, the Lloyd Nakasone, CPA office. The second floor units were observed with carpet or vinyl flooring. Each unit had its own bathroom. Most of the units were observed with peeling paint, which is suspect LBP.

Covers for a sump-pump were observed on the central portion of the subject property for the collection of storm water. A trash dumpster was observed on the northeastern corner of the subject property. A pad-mounted electrical transformer, owned and maintained by Hawaiian Electric, was observed on the southern corner of the subject property. "No PCBs" stickers were not observed on the transformer vault.

No evidence of significant releases was observed, and no evidence of subsurface structures of environmental concern (e.g., USTs, hydraulic lifts) was observed on the subject property.

8.2 HAZARDOUS SUBSTANCES AND PETROLEUM PRODUCTS (OTHER THAN UST/AST)

The subject property was assessed for signs of use, storage, or disposal of hazardous substances and/or petroleum products. Property uses where these types of materials are typically found include: vehicle service bays, vehicle repair operations, auto body shops and related activities (e.g., solvents, cleaners, degreasers, lubricants, paints, antifreeze); dry cleaners, rug cleaners, steam laundries, Laundromats with self-serve dry clean machines (e.g., chlorinated solvents, Naphtha, mineral spirits); manufacturing operations, plating facilities and other industrial/commercial operations. For purposes of this assessment, this does not include use/storage of small quantities of typical janitorial and maintenance materials (if any), unless considered relevant.

Bureau Veritas observed one container of used oil in a cardboard box located at the rear of Mikis Florist. Mr. Miki stated that he takes the container (after it is full) to his friend who owns as automobile mechanic shop for disposal.

8.3 STORAGE TANKS

8.3.1 Underground Storage Tanks

The subject property was assessed for evidence of USTs. The assessment consisted of noting evidence (e.g., fill ports, vent piping, dispensing equipment, pavement variations) indicating that USTs are currently or were previously located on the subject property.

No visual evidence was observed, and no other information was obtained, to indicate the current and/or potential past presence of USTs at the subject property.

8.3.2 Aboveground Storage Tanks

The subject property was assessed for evidence of ASTs. The assessment included noting evidence (e.g., concrete foundations or saddles, pedestals or steel support structures) indicating that ASTs were previously located on the subject property.

No visual evidence was observed, and no other information was obtained, to indicate the current and/or potential past presence of ASTs at the subject property.

8.3.3 In-Ground Hydraulic Equipment

The subject property was assessed for evidence of in-ground hydraulic equipment (e.g., hydraulic elevators or lifts that have hydraulic fluid-containing reservoirs or jacks below ground surface) or other types of hydraulic equipment. Hydraulic fluid in equipment installed in 1978 or before may contain PCBs.

No visual evidence was observed, and no other information was obtained, to indicate the current and/or potential past presence of in-ground hydraulic equipment at the subject property.

8.4 WASTES

The subject property was assessed for evidence suggesting the generation or disposal of “wastes” onsite (e.g., drums, dumpsters, debris piles). Observations suggesting the presence of wastes onsite (if any) are presented below. This includes observations/information suggesting 1) the placement of significant quantities of “fill” materials (from an unknown or potentially contaminated source) or 2) the “disposal” of wastes/debris/trash onsite.

No visual evidence was observed, and no other information was obtained, to indicate the current and/or potential past presence of onsite waste disposal at the subject property. Food grease barrels for Uptown Café and Hanagasa Inn were observed at the rear of the subject building. Each restaurant is responsible for disposal of the grease container. Household-type wastes are placed in a trash dumpster on the northeastern portion of the subject property and are collected for off-site disposal on a regular basis.

8.5 POLYCHLORINATED BIPHENYLS

The subject property was assessed for the presence of liquid-cooled electrical units (e.g., transformers) and major sources of hydraulic fluid (e.g., elevators, lifts). Such units are notable because they may be potential PCB sources.

A pad-mounted transformer vault was observed on the southern corner of the subject property. A “No PCBs” sticker was not observed on the transformer. However, through communications with Hawaiian Electric, Bureau Veritas learned that transformer number 82836 is a Non-PCB unit. The letter from Hawaiian Electric is included as Appendix I.

8.6 WASTE WATER AND STORM WATER DISCHARGE

The subject property was assessed for evidence of waste or process water discharges (if any) and storm water discharges. For purposes of this assessment, this generally includes discharges other than domestic waste water from sinks and toilets. In addition, properly functioning septic systems used strictly for residential and most commercial operations generally do not represent a cause for concern.

Exceptions can include those instances where hazardous substances/petroleum products may be discharged through the system (e.g., spent solvents at an auto repair facility).

Wastewater is not currently generated at the subject property.

The storm water runoff from the subject property flows via sheet flow to the northwest, into River Street and the associated storm drains. Storm water also flows into the sump-pump on the central portion of the subject property, where it is pumped to the City and County of Honolulu storm drain system.

The assessment consisted of noting evidence of the following: hatches, manholes, patches on the floor slabs, clean out access points; oil/water separators, clarifiers, sumps and trench drains; septic systems; pools of liquid (i.e., likely to contain hazardous substances or petroleum products); pits, ponds, or lagoons (i.e., associated with waste disposal or treatment); industrial or other process discharge sources; etc.

No visual evidence was observed, and no other information was obtained, to indicate the current and/or potential past presence of the above noted features or discharges sources.

8.7 WELLS

The subject property was assessed for evidence of wells (e.g., dry, irrigation, injection, abandoned, monitor, supply).

No visual evidence was observed, and no other information was obtained, to indicate the current and/or potential past presence of wells at the subject property. According to the State of Hawaii, Department of Land and Natural Resources (DLNR), Division of Water Resource Management *Ground Water Index and Summary* database (2006), there are no records of active, inactive, or destroyed wells on the subject property. The nearest well (Well No.3-1951-001), is located approximately 500 feet northeast of the subject property. This well was drilled in 1883 to a depth of 767 feet. The well is owned by the City and County Parks and Recreation and is listed as abandoned and sealed.

9.0 NON-ASTM ISSUES

9.1 ASBESTOS-CONTAINING MATERIALS

The apartment building on the subject property was constructed in 1959 and may contain asbestos-containing materials (ACM). Suspect ACM were observed in the subject building, including vinyl floor tiles with associated mastic, drop-in ceiling panels, and hard wall plaster. The building may also include suspect ACM that were hidden from view, such as caulking or sealant between building components and roofing materials.

Mr. Char stated that some of the popcorn ceiling on the second floor of the subject building was removed before he was associated with the property. However, he was not able to provide a copy of the test results or asbestos abatement documents.

Physical sampling and analysis of suspect ACM was not conducted during the assessment. Prior to any activities (i.e., repair, renovation, demolition) which may disturb suspect ACM, these and similar materials should be sampled and analyzed for possible asbestos content. If these materials are found to contain asbestos, the building owner or leased space tenant may be required to comply with applicable United States Environmental Protection Agency (EPA), Occupational Safety and Health Administration (OSHA), National Emission Standards for Hazardous Air Pollutants (NESHAPS), and state and local regulations.

9.2 RADON

Radon is a naturally occurring radioactive gas formed by the decay of uranium in bedrock and soil. The potential adverse health effects associated with radon gas depend on various factors, such as the concentration of the gas and duration of exposure. The concentration of radon gas in a building depends on subsurface soil conditions, the integrity of the building's foundation, and the building's ventilation system.

Due to the relatively young geological age (less than five million years) of the southernmost islands of the Hawaiian archipelago, radon gas does not occur at elevated levels. Therefore, no further investigation of radon is recommended for the subject property.

9.3 LEAD-BASED PAINT

Lead-based paint (LBP) was commonly used for corrosion protection in the 1960s, and in prime, intermediate, and finish coats well into the 1970s. Regulations specifically addressing LBP include Housing and Urban Development (HUD) (1995) guidelines and the Consumer Product Safety Act (1977). These regulations define LBP as containing 0.5 percent (%) lead by weight (5,000 ppm), and 0.009% lead by weight (90 parts per million), respectively, for housing and consumer products. There is no industrial definition. There are specific testing methods for sampling and analyzing lead in paint.

Because the building on the subject property was built before 1978, LBP may be an issue at this site. The way to determine if LBP is an issue is through sampling and laboratory analysis to determine the presence or absence of LBP. Sampling and analysis should be conducted prior to renovation or demolition activities that may disturb painted surfaces. If the paints are found to contain lead, the building owner or leased space tenant may be required to comply with applicable USEPA, NESHAPS, OSHA, and state and local regulations.

9.4 WETLANDS

The subject property was inspected for the presence of sensitive ecological areas by noting environmental indicators (e.g., wetlands, vegetation, floodplains) located on or immediately adjoining the subject property.

No sensitive ecological areas were observed on the subject property. The USGS 7.5-Minute Topographic Quadrangle Map, Honolulu (2013), which includes the subject property and adjoining properties, and the National Wetlands Inventory Map do not depict wetlands or other sensitive ecological areas on the subject property. The nearest designated wetlands area is the Nuunau Stream, located adjacent to the northwest of the subject property, beyond River Street. Nuuanu Stream is described as Estuarine and Marine Deepwater.

The Federal Emergency Management Agency Flood Insurance Rate Map (FEMA/FIRM) was reviewed to determine if the subject property is located in a flood hazard area. According to the FEMA/FIRM index map (FEMA/FIRM Panel No. 15003C0366G, dated January 19, 2011), the subject property and adjoining properties are located in Zone X. to denote areas determined to be outside the 0.2% annual chance floodplain.

10.0 FINDINGS AND OPINIONS

Bureau Veritas has performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527-13 for Halewaiolu Residences located at 1331-1347 River Street (Tax Map Key Number [TMK]: [1] 1-7-006: Parcel 012) in Honolulu, Oahu, Hawaii (the "subject property"). Any exceptions to, or deletions from, this practice are described in Sections 1.2 and 1.3 of this report.

This assessment has revealed no evidence of recognized environmental conditions, as defined by ASTM, in connection with the subject property, except for the following:

- **Former Auto Repair Facility on the Northeast Adjoining Property-** The 1950 and 1955 fire insurance maps depicted an "Auto Repair" on the northeast adjoining property. The 1955 fire insurance map also depicted an "Oil and Grease Storage" on the northeast adjoining property.

  This is considered a recognized environmental condition because there is a potential for past releases of petroleum hydrocarbons and other chemicals from the northeast adjoining property to migrate to the subject property. Bureau Veritas recommends conducting a subsurface investigation along the northeastern boundary of the subject property, including soil and groundwater sampling with laboratory analyses.

However, this assessment has revealed the following environmental conditions, which are not considered recognized environmental conditions, as defined by ASTM, in connection with the subject property:

- **Suspect ACM** –The building on the subject property was constructed in 1959 and may contain ACM. Suspect ACM were observed in the subject building, including vinyl floor tiles with associated mastic, drop and hard wall plaster. The building may also include suspect ACM that were hidden from view, such as caulking or sealant between building components and roofing materials.

  This finding is not considered a recognized environmental condition because asbestos is not an ASTM issue. However, prior to any activities (i.e., repair, renovation, demolition) which may disturb suspect ACM, these and similar materials should be sampled and analyzed for possible asbestos content. If these materials are found to contain asbestos, the building owner or leased space tenant may be required to comply with applicable United States Environmental Protection Agency (EPA), Occupational Safety and Health Administration (OSHA), National Emission Standards for Hazardous Air Pollutants (NESHAPS), and state and local regulations.

- **Suspect LBP-** The subject property is improved with a multi-tenant building constructed in 1959. Therefore, LBP could be an issue at the subject property. The way to determine if LBP is an issue is through sampling and laboratory analysis to determine the presence or absence of LBP.

  This finding is not considered a recognized environmental condition because LBP on buildings is not considered an ASTM issue. Sampling and analysis should be conducted prior to renovation or demolition activities that may disturb painted surfaces. If the paints are found to contain lead, the building owner or leased space tenant may be required to comply with applicable USEPA, NESHAPS, OSHA, and state and local regulations.

11.0 SIGNATURES

Certification of both Environmental Professionals signing below:

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

APPENDIX A

RESUMES

Tim J. Swartz

Senior Project Manager

Associate of Science Degree (AS) in Occupational and Environmental Safety Management
Honolulu Community College, Honolulu, Hawaii

Undergraduate Studies in Psychology and Biology
University of Kansas, Lawrence, Kansas

Environmental Professional as defined in Section 312.10 of 40 CFR 312

Asbestos Hazard Emergency Response Act (AHERA) Building Inspector

AHERA Management Planner

State of Hawaii Department of Health (DOH) - Certified Asbestos Project Monitor

National Institute of Occupational Safety and Health (NIOSH) 582 Phase Contrast Microscopy/Asbestos Identification/AAR Participant

SCITEC Radiation Safety Training

OSHA 40-Hour Hazardous Waste, Health, and Safety Accreditation/Annual Update

Lead-Based Paint Inspector

Lead-Based Paint Abatement Worker Awareness Training Course

Tim Swartz has over 27 years of experience in the environmental and industrial hygiene fields. His background includes numerous Phase I environmental site assessments (ESAs) and management of large-scale Phase I ESA projects; soil and groundwater sampling; asbestos and lead paint assessments and management of large-scale asbestos and lead paint projects; air monitoring and project oversight for asbestos and lead paint abatement projects; and various air quality surveys.

Mr. Swartz has extensive project management experience and is familiar with standards and requirements of the American Society for Testing and Materials (ASTM) International standards for Phase I environmental site assessments (ESAs), and Asbestos Hazard Emergency Response Act (AHERA) standards for asbestos projects. He is also familiar with Environmental Protection Agency (EPA) regulations for asbestos building surveys and air monitoring projects; EPA and Department of Housing and Urban Development (HUD) guidelines for lead-based paint surveys and abatement; and Occupational Safety and Health Administration (OSHA) regulations for projects involving worker health and safety.

John P. Rau, P.G.

Senior Geologist/Manager, Environmental Services

B.A., Geology, 1989
La Salle University, Philadelphia, Pennsylvania

Registered Professional Geologist, Tennessee, Number 4188

Hazardous Waste Operations and Emergency (HAZWOPER) Response Training (40-Hour), 1992

HAZWOPER Refresher Training (8-Hour), Annual

Environmental Compliance Officer Course, US Army, 2000 with Annual Refreshers through 2004

Defense Hazardous Materials/Waste Handling Course, US Army Logistical Management College, 2001

AHERA Asbestos Management Planner, 2000

AHERA Asbestos Building Inspector, 2000

Combined Arms Service and Staff Course, US Army, 2000

Chemical Officer Advanced Course, US Army Chemical School, 1999

Chemical Officer Basic Course, US Army Chemical School, 1989

Live Toxic Agent Training, US Army Chemical Decontamination Training Facility (CDTF), 1999 and 1989

Mr. Rau is the Manager of the Environmental Service (ES) Division of Bureau Veritas' Honolulu Office. He has more than 22 years of experience conducting release response actions, underground storage tanks (USTs) closures, site characterization, remedial investigations, remedial alternative analysis, and remedial action design, construction, and implementation. He has conducted numerous investigations for public and private clients, including financial institutions, law firms, real estate developers, commercial and manufacturing organizations, and government agencies. His experience includes participation in numerous response actions completed under the Hawaii State Contingency Plan and UST regulations. Mr. Rau has conducted and supervised field activities for hundreds of environmental investigations involving the collection of soil and groundwater samples, supervision of drilling and the installation of monitoring wells, execution of soil vapor surveys, and the characterization, treatment, and disposal of impacted soil and groundwater.

Mr. Rau has worked closely with the personnel at the State of Hawaii Department of Health (HDOH). He is able to interact with the HDOH personnel to allow environmental issues to be managed and resolved effectively. Through numerous years of interaction, he is often able to anticipate HDOH's expectations and he has a complete understanding of their concerns and requirements.

Mr. Rau served twenty-four years with the US Army, the US Army Reserve, and the Hawaii Army National Guard. He has served in both the enlisted and officer ranks. He was stationed in Hawaii, the Republic of Korea, the Republic of Iraq, and many locations throughout the Continental US. As part of the US Army Chemical Corps, Mr. Rau has extensive experience with chemical, biological, radiological and nuclear (CBRN) issues and training. While part of the Hawaii Army National Guard's Environmental Management Office, Mr. Rau conducted environmental compliance audits of facilities and provided training and assistance to units to ensure adherence to Federal, State, and US Army regulations.

During mid-2004 through early 2006, Mr. Rau was mobilized for service in Iraq with the 2-299th Infantry Battalion of the Hawaii Army National Guard. His duties as the Battalion Civil Affairs Officer required him to work closely with the civilian populace within southwestern Baghdad, including members of the Iraqi Government. He led unit efforts to provide reconstruction support and supply humanitarian assistance to the Iraqi people within the unit's area of operation. During his deployment, Mr. Rau managed over 1.5-million dollars' worth of reconstruction projects, which were completed in the city of Baghdad, using Iraqi contractors and labor.

APPENDIX C

USER QUESTIONNAIRE

ASTM PRACTICE E 1527-13 USER/CLIENT QUESTIONNAIRE
To be returned to Bureau Veritas with the authorized proposal

GENERAL INFORMATION

User/Client Name(s):	Michaels Development Company
Property Name and Address (Include known current and former address[es] and parcel no.):	Halewai`olu Senior Residences 1331; 1333; 1335; 1337; 1339; 1341; 1343; 1345; and 1347 River Street Honolulu, Hawaii 96817 Tax Key (1) 1-7-006-012
Property Acreage:	0.618
Current Property Type (Designate property type and list current tenants [business name and type of operation]):	Residential: __ Commercial: ✓ Industrial: __ Other: __ Miki's Florist: Flower Shop Hanagusa Inn: Restaurant Uptown Cafe: Restaurant Lloyd M Nakasone CPA: Accountant
Type of Property Transaction with respect to User (Designate one):	Purchase: __ Lease: ✓ 65 Year Ground Lease with City & County of Honolulu Other (provide further information): __
Reason Phase I is Required (Check all that apply):	*Landowner Liability Protections* (e.g. Innocent Landowner Defense): __ Evaluation of Business Risk: __ Other (list): Required for 201H Exemption Application and Consolidated Financial Application (Note: If no reason is given it is assumed that this assessment is being performed to satisfy one of the requirements for *Landowner Liability Protections* to *CERCLA* liability.
Site Owner/ Contact(s) (Name and phone number):	City & County of Honolulu Chris Sadayasu, Asset Management Administrator (808) 768-4292

Please provide the above information as well as a site plan (ALTA Survey, if available) which clearly designates the boundaries of the subject property for purposes of this Phase I ESA. A list of other Helpful documents is included with the proposal.

ASTM PRACTICE E 1527-13 USER/CLIENT QUESTIONNAIRE (Continued)

Providing the following information (if available) to the *environmental professional* (Bureau Veritas) is one of the requirements to qualify for one of the *Landowner Liability Protections (LLPs)* offered under CERCLA. Missing or incomplete information could result in a determination that "*all appropriate inquiry*" is not complete. If further information is desired regarding these issues, Bureau Veritas recommends you consult with an Environmental Attorney.

REQUIRED INFORMATION

The citation at the end of each item (e.g., 40 CFR 312.XX) is the section of EPA's November 1, 2005 AAI Final Rule which discusses that item. The ASTM Standard requires that reasonably ascertainable recorded land title records that are filed under federal, tribal, state and local law should be reviewed to determine the presence of Environmental Liens and Activity and Use Limitations (AULs) that are currently recorded against the property. This should also include a review of Environmental Liens and AULs that are imposed by judicial authorities and recorded/filed in judicial records. The Standard recommends that the User retain a title company or title professional to undertake a review of recorded land title records. Furthermore, the User is to provide any actual knowledge on Environmental Liens and AULs, as well as other selected information regarding *recognized environmental conditions,* to the *environmental professional.*

1. **Environmental cleanup liens that are filed or recorded against the site (40 CFR 312.25).**
Given the above requirement, are you aware of any environmental cleanup liens against the *property* that are filed or recorded under federal, tribal, state or local law? (Check One)

No: X

Yes (If "Yes" provide further information): __

(Note: If you desire that Bureau Veritas retain a title company/title professional on your behalf to review reasonably ascertainable recorded land title records for the presence of environmental cleanup liens and AULs currently recorded against the property please designate such on the Proposal Acceptance Agreement)

2. **Activity and land use limitations (AULs) that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26).**
Given the above requirement, are you aware of any AULs, such as *engineering controls*, land use restrictions or *institutional controls* that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law? (Check One)

No: __

Yes (If "Yes" provide further information): ✓ See Preliminary Report Dated May 6, 2015.

ASTM PRACTICE E 1527-13 USER/CLIENT QUESTIONNAIRE (Continued)

3. Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).

As the *user* of this *ESA* do you have any specialized knowledge or experience related to the *property* or nearby properties? For example, are you involved in the same line of business as the current or former *occupants* of the *property* or an adjoining *property* so that you would have specialized knowledge of the chemicals and processes used by this type of business? (Check One)

No: X

Yes (If "Yes" provide further information): __

4. Relationship of the purchase price to the fair market value of the *property* if it were not contaminated (40 CFR 312.29).

Does the purchase price being paid for this *property* reasonably reflect the fair market value of the *property*? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the *property*?

Yes: __

No (If "No" provide further information): __

Not Applicable (e.g., transaction is a lease): X

5. Commonly known or *reasonably ascertainable* information about the *property* (40 CFR 312.30).

Are you aware of commonly known or *reasonably ascertainable* information about the *property* that would help the *environmental professional* to identify conditions indicative of releases or threatened releases?

No: X

Yes (If "Yes" provide further information): __

For example, as *user*,

(a.) Do you know the past uses of the *property*?

No: X

Yes (If "Yes" provide further information): __

ASTM PRACTICE E 1527-13 USER/CLIENT QUESTIONNAIRE (Continued)

(b.) Do you know of specific chemicals that are present or once were present at the *property*?
No: X
Yes (If "Yes" provide further information): __

(c.) Do you know of spills or other chemical releases that have taken place at the *property*?
No: X
Yes (If "Yes" provide further information): __

(d.) Do you know of any environmental cleanups that have taken place at the *property*?
No: X
Yes (If "Yes" provide further information): __

6. The degree of obviousness of the presence or likely presence of contamination at the *property*, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).
As the *user* of this *ESA*, based on your knowledge and experience related to the *property* are there any *obvious* indicators that point to the presence or likely presence of contamination at the *property*?
No: X
Yes (If "Yes" provide further information): __

7. Proceedings involving the *property* (ASTM E 1527-05 § 10.9).
Are you aware of any of the following:
(a.) Any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property?
No: X
Yes (If "Yes" provide further information): __

ASTM PRACTICE E 1527-13 USER/CLIENT QUESTIONNAIRE (Continued)

(a.) Any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property?

No: X

Yes (If "Yes" provide further information): __

(b.) Any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?

No: X

Yes (If "Yes" provide further information): __

SIGNATURE

It is understood that the information presented in this form is an integral part of the Phase I ESA process and that Bureau Veritas will evaluate and rely on this information in the development of the final Phase I ESA report.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.

EDR Inquiry # 4328367.3

Contact: Nicole Okino

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Bureau Veritas North America, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Site Name: 1331-1347 River Street
Address: 1331-1347 River Street
City, State, Zip: Honolulu, HI 96817

1985	1955
1978	1950
1976	1927
1975	1914

Sanborn® Library search results
Certification # DBCE-46CA-9455

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ✓ Library of Congress
- ✓ University Publications of America
- ✓ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Bureau Veritas North America, Inc. (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

Disclaimer - Copyright and Trademark notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT. Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

Copyright 2015 by Environmental Data Resources, Inc. All rights reserved. Reproduction in any media or format, in whole or in part, of any report or map of Environmental Data Resources, Inc., or its affiliates, is prohibited without prior written permission.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

Year	Target Street	Cross Street	Source

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL ---------- National Priority List
Proposed NPL ---------- Proposed National Priority List Sites
NPL LIENS ---------- Federal Superfund Liens

Federal Delisted NPL site list

Delisted NPL ---------- National Priority List Deletions

Federal CERCLIS list

CERCLIS ---------- Comprehensive Environmental Response, Compensation, and Liability Information System
FEDERAL FACILITY ---------- Federal Facility Site Information listing

Federal RCRA generators list

RCRA-LQG ---------- RCRA - Large Quantity Generators

Federal institutional controls / engineering controls registries

US ENG CONTROLS ---------- Engineering Controls Sites List
US INST CONTROL ---------- Sites with Institutional Controls
LUCIS ---------- Land Use Control Information System

Federal ERNS list

ERNS ---------- Emergency Response Notification System

State and tribal landfill and/or solid waste disposal site lists

HI SWF/LF ---------- Permitted Landfills in the State of Hawaii

State and tribal leaking storage tank lists

INDIAN LUST ---------- Leaking Underground Storage Tanks on Indian Land

State and tribal registered storage tank lists

INDIAN UST ---------- Underground Storage Tanks on Indian Land

FEMA UST ---- Underground Storage Tank Listing

State and tribal voluntary cleanup sites

INDIAN VCP ---- Voluntary Cleanup Priority Listing

State and tribal Brownfields sites

HI BROWNFIELDS ---- Brownfields Sites

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS ---- A Listing of Brownfields Sites

Local Lists of Landfill / Solid Waste Disposal Sites

ODI ---- Open Dump Inventory
DEBRIS REGION 9 ---- Torres Martinez Reservation Illegal Dump Site Locations
INDIAN ODI ---- Report on the Status of Open Dumps on Indian Lands

Local Lists of Hazardous waste / Contaminated Sites

US CDL ---- Clandestine Drug Labs
HI CDL ---- Clandestine Drug Lab Listing
US HIST CDL ---- National Clandestine Laboratory Register

Local Land Records

LIENS 2 ---- CERCLA Lien Information

Records of Emergency Release Reports

HMIRS ---- Hazardous Materials Information Reporting System
HI SPILLS 90 ---- SPILLS 90 data from FirstSearch

Other Ascertainable Records

DOT OPS ---- Incident and Accident Data
CONSENT ---- Superfund (CERCLA) Consent Decrees
ROD ---- Records Of Decision
UMTRA ---- Uranium Mill Tailings Sites
US MINES ---- Mines Master Index File
TRIS ---- Toxic Chemical Release Inventory System
TSCA ---- Toxic Substances Control Act
SSTS ---- Section 7 Tracking Systems
ICIS ---- Integrated Compliance Information System
PADS ---- PCB Activity Database System
MLTS ---- Material Licensing Tracking System
RADINFO ---- Radiation Information Database
RAATS ---- RCRA Administrative Action Tracking System
RMP ---- Risk Management Plans
HI UIC ---- Underground Injection Wells Listing

HI DRYCLEANERS ---------- Permitted Drycleaner Facility Listing
INDIAN RESERV ---------- Indian Reservations
SCRD DRYCLEANERS ---------- State Coalition for Remediation of Drycleaners Listing
LEAD SMELTERS ---------- Lead Smelter Sites
US AIRS ---------- Aerometric Information Retrieval System Facility Subsystem
EPA WATCH LIST ---------- EPA WATCH LIST
US FIN ASSUR ---------- Financial Assurance Information
COAL ASH EPA ---------- Coal Combustion Residues Surface Impoundments List
PCB TRANSFORMER ---------- PCB Transformer Registration Database
COAL ASH DOE ---------- Steam-Electric Plant Operation Data
PRP ---------- Potentially Responsible Parties

EDR RECOVERED GOVERNMENT ARCHIVES

Exclusive Recovered Govt. Archives

HI RGA LF ---------- Recovered Government Archive Solid Waste Facilities List
HI RGA LUST ---------- Recovered Government Archive Leaking Underground Storage Tank
HI RGA HWS ---------- Recovered Government Archive State Hazardous Waste Facilities List

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/10/2015 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Federal RCRA generators list

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/10/2015 has revealed that there are 6 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

HI SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Health.

A review of the HI SHWS list, as provided by EDR, and dated 12/02/2014 has revealed that there are 66 HI SHWS sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

HI LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the Department of Health's Active Leaking Underground Storage Tank Log Listing.

A review of the HI LUST list, as provided by EDR, and dated 03/02/2015 has revealed that there are 23

EXECUTIVE SUMMARY

HI LUST sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

HI UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Health's Listing of Underground Storage Tanks.

A review of the HI UST list, as provided by EDR, and dated 03/02/2015 has revealed that there is 1 HI UST site within approximately 0.25 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/10/2015 has revealed that there are 3 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 2 EDR MGP sites within approximately 1 mile of the target property.

HAWAIIAN GAS PRODUCT	516-520 KUWILI ST	WNW 1/2 - 1 (0.527 mi.)	52	70

Lower Elevation	Address	Direction / Distance	Map ID	Page
BHP GASCO	432 PACIFIC STREET	W 1/2 - 1 (0.797 mi.)	O78	139

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there is 1 EDR US Hist Auto Stat site within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
Not reported	1255 NUUANU AVE	S 1/8 - 1/4 (0.201 mi.)	D11	17

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there are 4 EDR US Hist Cleaners sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

US EPA Air Quality System (AQS) contains ambient air pollution data collected by EPA, State, Local, and Tribal air pollution control agencies from thousands of monitoring stations.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Corrective Action Summary:

Event date:	01/01/1990
Event:	CA029ST
Event date:	04/30/1990
Event:	CA029EP
Event date:	04/30/1990
Event:	CA049PA
Event date:	04/30/1990
Event:	CA Prioritization, Facility or area was assigned a low corrective action priority.
Event date:	03/16/1992
Event:	CA Prioritization, Facility or area was assigned a low corrective action priority.
Event date:	03/16/1992
Event:	Stabilization Measures Evaluation,This facility is not amenable to stabilization activity at the present time for reasons other than 1- it appears to be technically infeasible or inappropriate (NF) or 2- there is a lack of technical information (IN). Reasons for this conclusion may be the status of closure at the facility, the degree of risk, timing considerations, the status of corrective action work at the facility, or other administrative considerations.
Event date:	04/01/2010
Event:	Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.
Event date:	12/11/2012
Event:	CA550RC
Event date:	12/11/2012
Event:	Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of significant changes at the facility.

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE
Area of violation: Not reported
Date achieved compliance: Not reported
Evaluation lead agency: State

FINDS:

Registry ID: 110005722316

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

POLYNESIAN HOSPITALITY (Continued) **1000906758**

program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Description: Soil Vapor Extraction and Treatment System1.This permit encompasses the following equipment and associated appurtenances for the soil vapor extraction and treatment system:a.ThermTech Thermal/Catalytic Oxidizer, model no. VAC 50, serial no. 11051100;b.G.L. Environmental Services Thermal/Catalytic Oxidizer, model no. GLE22435-13-65-11, serial no. 120-1150-30-8-97;c.Soil Vapor Extraction (SVE) System with Vacuum Blower;d.Vapor Extraction Wells; ande.In Situ Chemical Oxidation (ISCO).

FINDS:

Registry ID: 110009359826

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CRITERIA AND HAZARDOUS AIR POLLUTANT INVENTORY

Registry ID: 110000495848

Environmental Interest/Information System
GASOLINE AND DIESEL PRODUCERS

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the

UNOCAL 76 HONOLULU LRNG CTR (Continued) **1000167494**

National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

STATE MASTER

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

AIR MAJOR

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA’s programs. The vision for ICIS is to replace EPA’s independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include;

Environmental Interest/Information System

QUEEN EMMALANI TOWER (Continued) **1000688441**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/16/2014

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Data Release Frequency: Quarterly

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/25/2013
Date Data Arrived at EDR: 11/11/2013

Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

EPA WATCH LIST: EPA WATCH LIST
EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)
The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

Most Recent Revision:	Not reported

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

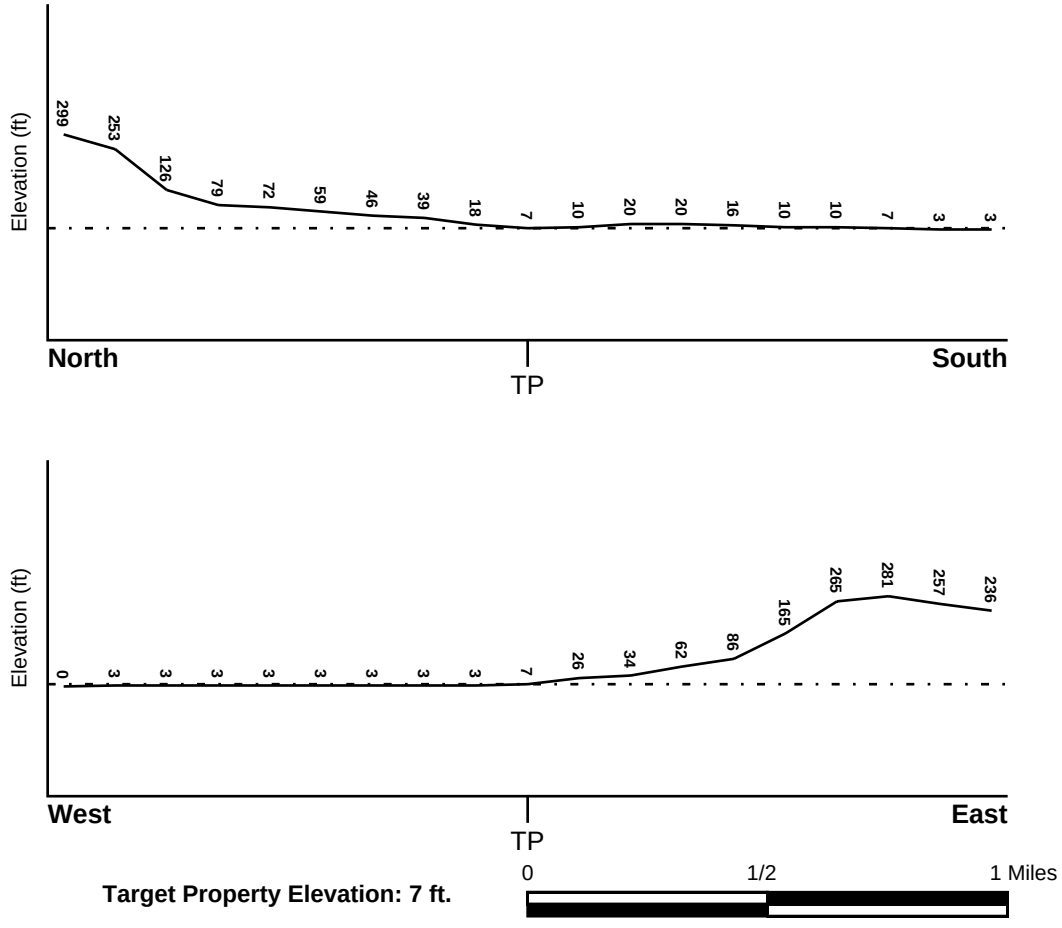
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 7 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
HONOLULU, HI	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 15003C - FEMA DFIRM Flood data

Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
HONOLULU	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Ewa

Soil Surface Texture: silty clay loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	7 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	ML-K (proposed)	Max: 14 Min: 4.23	Max: 7.3 Min: 6.6
2	7 inches	29 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	ML-K (proposed)	Max: 14 Min: 4.23	Max: 7.3 Min: 6.6
3	29 inches	38 inches	bedrock	Not reported	Not reported	Max: 42 Min: 1	Max: Min:

Soil Map ID: 2

Soil Component Name: Water > 40 acres

Soil Surface Texture: silty clay loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 3

Soil Component Name: Kaena

Soil Surface Texture: clay

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Poorly drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 107 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	9 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 4.23 Min: 0.42	Max: 7.3 Min: 6.6

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
2	9 inches	37 inches	stony clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 1.41 Min: 0.01	Max: 7.3 Min: 6.6
3	37 inches	53 inches	stony clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 1.41 Min: 0.01	Max: 7.3 Min: 6.6

Soil Map ID: 4

Soil Component Name: Makiki

Soil Surface Texture: clay loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Well Index Database
Source: Commission on Water Resource Management
Telephone: 808-587-0214
CWRM maintains a Well Index Database to track specific information pertaining to the construction and installation of production wells in Hawaii

OTHER STATE DATABASE INFORMATION

RADON

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

EXECUTIVE SUMMARY

Halewaiolu Senior Development, LLC retained Ford & Associates, Inc. (FAI) to perform a Phase II Environmental Site Assessment (ESA) for the Halewaiolu Residences Redevelopment Project, located at 1331-1347 River Street (Tax Map Key Number [TMK]: [1] 1-7-006: Parcel 012), in Honolulu, Oahu, Hawaii (herein referred to as the "site"). A Site Location Map showing the location of the site is included as Figure 1, located behind the *Figures* tab.

The site is the current location of a two-story, multi-tenant commercial building intended for redevelopment. In July 2015, Bureau Veritas North America, Inc. (BVNA) conducted a Phase I ESA of the site to assess for the presence of recognized environmental conditions (RECs) related to historical use (BVNA, 2015). Based on this investigation, BVNA identified the former presence of automobile repair structures and an oil and grease storage area on the northeast adjacent property.

Therefore, the purpose of this investigation was to perform subsurface soil and groundwater sampling and analysis at the site to assess for the potential migration of chemicals of potential concern (COPC) from these historical features on the neighboring property.

FAI mobilized to the site on April 1, 2019 to perform soil and groundwater sampling activities. During this time, FAI supervised Geotek Hawaii, Inc. (Geotek), a drilling subcontractor, during the drilling of three borings at the site (identified as B-1 through B-3). Drilling and subsurface soil sampling were performed using the direct push drilling method. Soil samples were collected using the multi-increment sampling approach recommended by the State of Hawaii Department of Health (HDOH, 2017b). In each boring, one soil sample was collected from the capillary fringe. Following completion of each boring, Geotek installed a temporary groundwater well consisting of 1-inch diameter Schedule 40 PVC well casing, with 0.010 inch screen size. Groundwater purging and sampling was performed following installation, using a low-flow sampling technique (HDOH, 2017b).

In total, three soil samples (identified as *B-1*, *B-2*, and *B-3*) and three groundwater samples (identified as *MW-1* through *MW-3*) were collected from the site and analyzed for the following:

- Total Petroleum Hydrocarbons (TPH) as Gasoline Range Organics (GRO), Diesel Range Organics (DRO) and Residual Range Organics (RRO) using Environmental Protection Agency (EPA) Methods 8015M.
- Total Lead and Cadmium using EPA Methods 6020B/3050B/3005A.
- Polychlorinated Biphenyls (PCBs) using EPA Methods 8082A/3550C/3510C.
- Volatile Organic Compounds (VOCs) using EPA Methods 8260C/5030B.
- Polynuclear Aromatic Hydrocarbons (PAHs) using EPA Method 8270D/3550C/3010C.

Based upon the laboratory analytical results, no COPC were detected above the laboratory reporting limits, or the HDOH Tier 1 Unrestricted (residential) and Commercial/Industrial (C/I) Environmental

Action Levels (Unrestricted and C/I EALs, respectively) in either the soil samples or groundwater samples. Therefore, it does not appear that the site has been impacted by historical features on the neighboring property, and no further investigation appears necessary at this time.

1.0 INTRODUCTION AND PURPOSE

Halewaiolu Senior Development, LLC retained Ford & Associates, Inc. (FAI) to perform a Phase II Environmental Site Assessment (ESA) for the Halewaiolu Residences Redevelopment Project, located at 1331-1347 River Street (Tax Map Key Number [TMK]: [1] 1-7-006: Parcel 012), in Honolulu, Oahu, Hawaii (herein referred to as the "site"). A Site Location Map showing the location of the site is included as Figure 1, located behind the *Figures* tab.

The site is the current location of a two-story, multi-tenant commercial building intended for redevelopment. In July 2015, Bureau Veritas North America, Inc. (BVNA) conducted a Phase I ESA of the site to assess for the presence of recognized environmental conditions (RECs) related to historical use (BVNA, 2015). Based on this investigation, BVNA identified the former presence of automobile repair structures and an oil and grease storage area on the northeast adjacent property.

Therefore, the purpose of this investigation was to perform subsurface soil and groundwater sampling and analysis at the site to assess for the potential migration of chemicals of potential concern (COPC) from these historical features on the neighboring property.

2.0 BACKGROUND

2.1 SITE DESCRIPTION

The site is located at 1331-1347 River Street, in a commercial setting of Honolulu. The City and County of Honolulu Planning and Permitting (DPP) database lists the site as TMK: (1) 1-7-006: Parcel 012. It is an approximately 16,925 square-foot land parcel currently improved with a two-story multi-tenant commercial building and associated asphalt-paved parking areas. The building measures approximately 10,234 square feet in area, and was formerly occupied by restaurants, a florist, and offices. At the time of this investigation, the majority of the building was unoccupied. The approximate layout of the site is depicted on Figure 2, located behind the *Figures* tab.

2.2 PHYSICAL SETTING

2.2.1 Soils/Geology

According to the United States Geologic Survey (USGS), Honolulu, Hawaii, 7.5-minute topographic quadrangle map (USGS, 2013), the site lies at an elevation of approximately 5 to 8 feet above mean sea level. The topography of the site and surrounding region is generally level, with a slight slope east.

According to the Soil Survey of the Islands of Kauai, Oahu, Maui, Molokai, and Lanai (Foote, D.E. et al., 1972), the type of soil underlying the site is classified as Ewa silty clay loam, moderately shallow, 0 to 2 percent slopes. The Ewa series consists of well-drained soils in basins and on alluvial fans. They are nearly level to moderately sloping. On the silty clay loam, runoff is very slow, and the erosion hazard is no more than slight.

Based upon the borings completed as part of this investigation, there is a thin layer of asphalt pavement and base course, beneath which is approximately six inches to 1.5 feet of fill. At approximately one to two feet below ground surface (bgs), the soil becomes native, dark brown, sandy clay. At approximately seven to eight feet bgs, the soil becomes wet, brown clayey gravel with sand.

2.2.2 Surface Water

The nearest surface water body is Nuuanu Stream, which is located approximately 50 feet (15 meters) northwest of the site, just beyond River Street.

2.2.3 Groundwater

The Aquifer Identification and Classification for Oahu: Groundwater Protection Strategy for Hawaii (Mink, J.F. and L.S. Lau, 1990), published by the Water Resources Research Center at the University of Hawaii, was reviewed for information on groundwater conditions below the site. The report describes the aquifers below the site as part of the Nuuanu aquifer system of the Honolulu sector, on the Island of Oahu.

The upper aquifer is an unconfined basal aquifer of the sedimentary type, occurring in non- volcanic lithology. Its status is described as a replaceable water supply with moderate salinity (1,000 - 5,000

milligrams per liter [mg/L] Chloride). It is currently used, but is not considered ecologically important or a drinking water supply. This aquifer is highly vulnerability to contamination.

The lower aquifer is a confined basal aquifer of the flank type, occurring in horizontally extensive lavas. Its status is described as an irreplaceable, fresh (<250 mg/L Chloride) drinking water supply. It is currently used, and has low vulnerability to contamination.

The site is located above the State of Hawaii Department of Health (HDOH) Safe Drinking Water Branch defined Underground Injection Control (UIC) line. Areas above the UIC line denote potential underground drinking water sources. Areas below the UIC line generally denote groundwater that is unsuitable for drinking water purposes. Consequently, the groundwater underlying the site is considered a potential drinking water source. However, as noted above, based on review of the Aquifer Identification and Classification for Oahu: Groundwater Protection Strategy for Hawaii, the upper aquifer at the site is not considered a drinking water source.

Based upon the investigation described herein, groundwater was encountered at depths of 7 to 8 feet bgs.

2.3 HISTORIC/FUTURE LAND USE

Based upon review of a previous Phase I ESA at the site (BVNA, 2015), as early as 1914 the site was divided into several lots that were developed with stores and residences. In 1959, the site was redeveloped with the current structure, which has since been used as commercial tenant spaces for a variety of businesses.

Halewaiolu Senior Development, LLC intends to demolish the current structure and develop the site with a 17-story apartment building and associated parking structure (referred to as the Halewaiolu Residences).

3.0 SUMMARY OF INVESTIGATION HISTORY

In July 2015, BVNA conducted a Phase I ESA of the site to assess for the presence of RECs associated with historical use (BVNA, 2015). As part of this investigation, BVNA reviewed available Sanborn fire insurance maps for the general area of the site. Fire insurance maps typically depict either the locations of manufacturing and industrial facilities within the city limits or potential hazards existing within individual building structures. In many cases, evidence of environmental concern, such as locations of underground storage tanks (UST), can be found by reviewing fire insurance maps. Fire insurance maps were available for the years 1914, 1927, 1950, 1955, 1963, 1974, 1975, 1976, 1978, 1985, 1991, and 1993.

Based on review of the fire insurance maps from 1950 and 1955, the northeast adjoining property was occupied by a structure labeled "Auto Repair." Furthermore, on the 1955 fire insurance map, there was an additional structure on the northeast adjoining property labeled "Oil and Grease Storage." These structures are not depicted on the remaining fire insurance maps. The locations of the former auto repair and oil/grease storage facilities are depicted on Figure 3, located behind the *Figures* tab.

This finding was considered a REC because of the potential for past releases of petroleum hydrocarbons other chemicals from these structures to migrate and impact the site. Therefore, BVNA recommended conducting a subsurface investigation at the site to assess for the presence of COPC.

Note that in reviewing the fire insurance maps from the BVNA report, FAI identified a fuel station structure labeled "Gas & Oils" located further northeast of the site, at the corner of River Street and Vineyard Boulevard. It was identified on the 1927, 1950, and 1955 maps. The location of this structure is also depicted on Figure 3, located behind the *Figures* tab.

4.0 APPLICABLE ACTION LEVELS

The applicable action levels for this project were established using the HDOH guidance document entitled "Evaluation of Environmental Hazards at Sites with Contaminated Soil and Groundwater" (HDOH, 2017a), which is published by the Hazard Evaluation and Emergency Response (HEER) of the HDOH.

The site lies above the HDOH designated UIC line; therefore, the underlying groundwater would be considered a potential drinking water source. However, based on review of the Aquifer Identification and Classification for Oahu: Groundwater Protection Strategy for Hawaii, the upper aquifer at the site is not considered a drinking water source. Additionally, the nearest surface water body is Nuuanu Stream, which is located approximately 50 feet (15 meters) away from the site. Therefore, the analytical results were compared the HDOH Tier 1 Unrestricted (residential) and Commercial/Industrial (C/I) Environmental Action Levels (Unrestricted and C/I EALs, respectively) where groundwater is not a current or potential source of drinking water, and the nearest surface water body is within 150 meters of the site (HDOH, 2017a).

5.0 SCOPE OF WORK

5.1 BORING LOCATION SELECTION

FAI established three boring locations at the site to facilitate the collection of soil and groundwater samples. The three borings (identified as B-1 through B-3) were positioned at spacing intervals of 30 feet along the north side of the site closest to the former location of the auto repair and oil/grease storage structures noted in Section 3.0. The approximate locations of the borings are depicted on Figure 4, located behind the *Figures* tab.

5.2 UTILITY CLEARANCE

In preparation for drilling, FAI submitted a Hawaii One Call locate request, which provides public utility companies with a notification of the intent to drill, and the proposed location of borings. The utility companies then mark any public utilities in proximity of the borings. No utilities were identified as a result of the Hawaii One Call locate request.

FAI also retained Geotek Hawaii, Inc. (Geotek) to perform a geophysical survey at the site on April 1, 2019 to further assess for the potential presence of subsurface utilities. The survey consisted of radio detection and ground penetrating radar (GPR). Once FAI selected the location of the borings, Geotek scanned the area using GPR. No subsurface utilities were identified in the survey.

5.3 SUBSURFACE SOIL SAMPLING ACTIVITIES

FAI conducted drilling and soil sampling activities on April 1, 2019, as well. During this time, FAI supervised Geotek during the drilling of the three borings at the site. Drilling and subsurface soil sampling were performed using the direct push drilling method. Geotek drilled the borings using a track-mounted rig equipped with a 5-foot long open-barrel sampler, with an inside diameter of 1.5 inches. The sampler was fitted with a disposable acetate liner. Once the soil was retrieved from the subsurface, the acetate liner was cut open to expose the soil and facilitate the collection of the samples. No drilling difficulties were encountered.

Soil samples were collected using the multi-increment sampling approach recommended by the HDOH (HDOH, 2017b). In each boring, one soil sample was collected from the capillary fringe. The depth of samples varied depending on depth to groundwater. To collect each soil sample for volatile analysis, 30, 5-gram soil subsamples, evenly spaced over the sampling interval, were collected from each boring using a disposable, adjustable T-handle fitted with a core sample collector. The 5-gram soil subsamples were ejected from the sample collector into a glass jar containing 150 milliliters (mL) of methanol preservative. Following collection of soil for volatile analysis, the remainder of the sample interval was collected in a new, 1-gallon-sized Zip-lock™ bag for non-volatile analytical testing, referred to as the bulk sample. The samples were placed into a cooler containing wet ice. Both the volatile and non-volatile samples were logged on a chain-of custody form that accompanied the samples to the laboratory.

During the sample collection process, a hand-held RAE Systems MiniRAE 2000 organic vapor analyzer photoionization detector (PID) was used to monitor for volatile organic vapors in the soil headspace. The

PID was calibrated using 100 parts per million by volume (ppmv) isobutylene span gas and ambient air prior to use. Soil dedicated for headspace analysis was placed into a self-sealing plastic bag. The bag was filled until approximately one third full and the soil was crushed. The sample was allowed to volatilize for approximately 15 minutes at ambient temperature, prior to being analyzed. After the designated time, the tip of the PID was inserted into the plastic bag, and a measurement was taken. Organic vapor readings were detected in the soil samples subjected to field screening by the PID, as listed in the table below. No significant evidence of petroleum hydrocarbon contamination (i.e., odor, staining, etc.) was noted in the three borings drilled at the site, though some minimal PID readings were noted in the soil sample collected from B-1.

A summary of the soil sample collection information is presented in the following table:

Table 5-1: Summary of Soil Sample Collection Information

Sample ID	Boring ID	Date/Time	Sample Interval	PID Reading (ppm)
B-1	B-1	4-1-19 / 0926 hrs	5.5 to 7.5 feet	0.9
B-2	B-2	4-1-19 / 0951 hrs	6.5 to 8.0 feet	0.0
B-3	B-3	4-1-19 / 1037 hrs	6.5 to 8.5 feet	0.0

5.4 GROUNDWATER SAMPLING ACTIVITIES

Following completion of drilling, Geotek installed temporary groundwater wells in the three borings (identified as MW-1 through MW-3). The groundwater monitoring wells consisted of 1-inch diameter Schedule 40 polyvinyl chloride (PVC) well casing, with 0.010-inch screen size. Approximately 10 feet of screen and 5 feet of riser were inserted into the borings. Details of the well diagrams are included on the boring logs in Appendix A.

FAI performed groundwater purging and sampling using a low-flow sampling technique (HDOH, 2017b). FAI used a down-hole bladder pump with new polyethylene tubing to purge each well and collect the groundwater sample. The depth to water was measured and recorded before well purging. To purge the well and collect the groundwater sample, the bladder pump was positioned near the middle area of the screened interval. The flow rate was limited to approximately one liter per minute, or less, during purging and sampling, to minimize drawdown.

FAI purged the wells until the water quality parameters (temperature, pH, conductivity, and dissolved oxygen) reached equilibrium (i.e., plus or minus 10 percent of the previous reading), or at least three casing volumes were removed. Water quality was measured with a YSI Professional Plus water quality instrument and a Hach turbidity meter. FAI did not encounter any issues with purging the groundwater wells. Relevant information regarding the purging and sampling activities was recorded on the groundwater sampling field data sheet presented in Appendix B. Purge water was stored in a 55-gallon drum onsite.

Groundwater for VOC-related analyses was collected using the bladder pump and transferred to pre-cleaned laboratory-supplied, 40-mL vials. The vials were filled and sealed, so that there was no headspace present. Groundwater for non-volatile analysis was collected using the bladder pump and

transferred into 500 mL amber jars and 250 mL polypropylene containers with no preservative and solid polypropylene caps. The sample containers were filled nearly to the top and then the cap was screwed on tightly. Upon collection, the groundwater samples were immediately labeled and placed on ice to chill the samples and keep the samples at a temperature of 4 degrees ºC or below. The samples were logged on a chain-of-custody form that accompanied the samples and delivered to the laboratory.

A summary of the groundwater sample collection information is presented in the following table:

Table 5-2: Summary of Groundwater Sample Collection Information

Sample ID	Well ID	Boring ID	Date/Time	Depth to Groundwater	Petroleum Odor Noted?
MW-1	MW-1	B-1	4-1-19 / 1053 hrs	7.2 feet	No
MW-2	MW-2	B-2	4-1-19 / 1159 hrs	7.5 feet	No
MW-3	MW-3	B-3	4-1-19 / 1303 hrs	7.85 feet	No

After sampling the groundwater, the PVC well casing was removed from the boring. The boring was subsequently backfilled with the soil cuttings, bentonite chips, and capped with asphalt cold patch.

5.5 DECONTAMINATION PROCEDURES

The majority of the equipment used for soil and groundwater sampling was dedicated and disposable to prevent cross contamination between samples. In the field, new disposable gloves were donned prior to the collection of each sample. After the sample was collected, the disposable gloves were removed and discarded. New polyethylene tubing and bladders were used to collect each groundwater sample, and discarded after use. Decontamination of field tools (i.e., trowels, water level meter etc.) was conducted prior to, and after, sample collection as follows:

- Removed large clumps of soil or matter attached to sampling equipment;
- Washed with Alconox™;
- Double rinsed with distilled water; and
- Air dried.

5.6 CHAIN-OF-CUSTODY PROCEDURES

A chain-of-custody was used for the tracking of the soil and groundwater samples from the field to the laboratory until the time they are analyzed. FAI retained one copy of the chain-of-custody form, while the original remained with the sample and the laboratory performing the analysis. The samples were hand-delivered to Advanced Analytical Laboratory (AAL), located in Honolulu, Hawaii, under standard chain-of-custody procedures.

The chain-of-custody form includes:

- Name, address and telephone number of sender;
- Project number and name;

- Sample identification number and number of containers;
- Date sampled and sample matrix;
- Requested analytes by Environmental Protection Agency (EPA) method;
- Turnaround time information;
- Any special instructions or explanation of preservatives;
- Sign off on chain-of-custody (samplers' name/ initials); and
- Authorized signature (samplers' or other signature shipping the samples).

6.0 LABORATORY ANALYTICAL RESULTS

The soil and groundwater samples collected as part of this investigation were submitted to AAL under Chain-of-Custody procedures. A copy of the analytical reports and Chain-of-Custody documents for the samples are presented in Appendix C. The laboratory analytical results for the soil and groundwater samples are summarized in Tables 1 and 2, respectively, located behind the *Tables* tab.

The soil and groundwater samples collected from the site were analyzed for the following COPC:

- Total Petroleum Hydrocarbons (TPH) as Gasoline Range Organics (GRO), Diesel Range Organics (DRO) and Residual Range Organics (RRO) using EPA Methods 8015M.
- Total Lead and Cadmium using EPA Methods 6020B/3050B/3005A.
- Polychlorinated Biphenyls (PCBs) using EPA Methods 8082A/3550C/3510C.
- Volatile Organic Compounds (VOCs) using EPA Methods 8260C/5030B.
- Polynuclear Aromatic Hydrocarbons (PAHs) using EPA Method 8270D/3550C/3010C.

Details of the analytical results are described in the following sections.

6.1 SOIL SAMPLE ANALYTICAL RESULTS

A total of three multi-increment soil samples (identified as *B-1, B-2,* and *B-3*) were collected from the borings drilled at the site. Key findings from the analytical results are as follows:

- TPH-GRO, TPH-DRO, TPH-RRO, Cadmium, PCBs, VOCs, and PAHs were not detected above the laboratory reporting limits.
- Lead was detected in samples *B-1*, *B-2*, and *B-3* at concentrations ranging from 3.3 to 7.6 milligrams per kilogram (mg/kg), which are below the Unrestricted EAL of 200 mg/kg.

6.2 GROUNDWATER ANALYTICAL RESULTS

A total of three groundwater samples (identified as *MW-1*, *MW-2,* and *MW-3*) were collected from the site. Key findings from the analytical results are as follows:

- TPH-GRO, TPH-DRO, TPH-RRO, Lead, Cadmium, PCBs, VOCs, and PAHs were not detected above the laboratory reporting limits.

6.3 SUB-SAMPLING FOR LABORATORY ANALYSIS

The collection of each bulk soil sample for analysis resulted in approximately one to two pounds of soil, which is then processed for non-volatile testing using the multi-increment sub-sampling procedure, as

recommended by the HDOH. For this procedure, the bulk sample is spread out and air dried, after which it is processed through a No. 10 (2-millimeter) sieve. The sample is then spread out in a thin, even layer. Using a small spatula, the lab then collects approximately 30 equal volume sub-samples of the fine fraction of soil from systematic random locations of the dried sample. The analyses are then performed on this representative sub-sample.

6.4 LABORATORY QUALITY CONTROL

The soil and groundwater samples were submitted to AAL for laboratory analyses. Analytical data was generated following EPA methods (SW-846 protocols), and laboratory standard operating procedures (SOP) and quality assurance/quality control (QA/QC) guidelines for sample analysis. Common laboratory QC checks include the use of Method Blank, Matrix Spike and Matrix Spike Duplicate, and Laboratory Control and Laboratory Control Duplicate samples. The complete laboratory analytical reports and chain-of-custody forms are presented in Appendix C. QA/QC notes are attached to the laboratory reports.

7.0 GENERATED WASTE DISPOSAL

As part of this investigation, the following waste was generated:

- Nitrile gloves, acetate liners, and polyethylene tubing. These items were considered non-hazardous waste, and placed in a general refuse dumpster for disposal.

- One 55-gallon drum of groundwater well purge water and field decontamination water (a mixture of distilled water and Alconox). The drum of purge water was temporarily stored onsite until receipt of the analytical results. As noted in Section 6.2, COPC were not detected above the laboratory reporting limits in the groundwater. Additionally, the groundwater did not contain any free product or exhibit a sheen. Therefore, per the HDOH Technical Guidance Manual (HDOH, 2017b), the groundwater can be disposed on the asphalt-paved ground surface and allowed to evaporate, so long as it is not allowed to run off into a surface water body or storm drain.

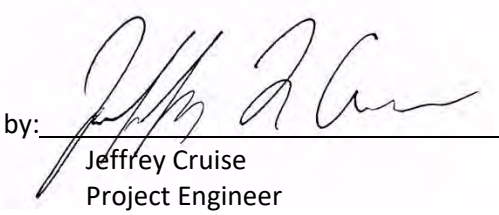
- Soil cuttings generated from the drilling process. As noted in Section 5.3 and 5.4 of the report, no significant evidence of petroleum hydrocarbon contamination (i.e., odor, staining, etc.) was noted during the drilling process, and the borings were backfilled with the soil cuttings. Additionally, per Section 6.1, COPC were not detected above the laboratory reporting limits or EALs in the soil. Therefore, per the HDOH Technical Guidance Manual (HDOH, 2017b), for soil that meets the Unrestricted EAL there are no use restrictions on reuse.

8.0 SUMMARY AND CONCLUSIONS

Based on review of the fire insurance maps from 1950 and 1955, the northeast adjoining property was occupied by a structure labeled "Auto Repair." Furthermore, on the 1955 fire insurance map, there was an additional structure on the northeast adjoining property labeled "Oil and Grease Storage." Therefore, the purpose of this investigation was to perform subsurface soil and groundwater sampling and analysis at the site to assess for the potential migration of COPC from these historical features on the neighboring property.

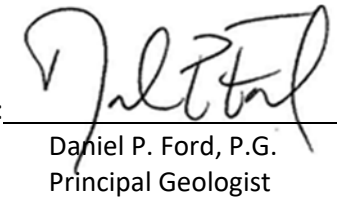
FAI mobilized to the site on April 1, 2019 to perform soil and groundwater sampling activities. During this time, FAI supervised Geotek, a drilling subcontractor, during the drilling of three borings at the site (identified as B-1 through B-3). Drilling and subsurface soil sampling were performed using the direct push drilling method. Soil samples were collected using the multi-increment sampling approach recommended by the HDOH (HDOH, 2017b). In each boring, one soil sample was collected from the capillary fringe. Following completion of each boring, Geotek installed a temporary groundwater well consisting of 1-inch diameter Schedule 40 PVC well casing, with 0.010 inch screen size. Groundwater purging and sampling was performed following installation, using a low-flow sampling technique (HDOH, 2017b).

In total, three soil samples (identified as *B-1*, *B-2*, and *B-3*) and three groundwater samples (identified as *MW-1* through *MW-3*) were collected from the site and analyzed for the following:



- TPH-GRO, DRO, and RRO using EPA Methods 8015M.
- Total Lead and Cadmium using EPA Methods 6020B/3050B/3005A.
- PCBs using EPA Methods 8082A/3550C/3510C.
- VOCs using EPA Methods 8260C/5030B.
- PAHs using EPA Method 8270D/3550C/3010C.

Based upon the laboratory analytical results, no COPC were detected above the laboratory reporting limits, or the Unrestricted and C/I EALs in either the soil samples or groundwater samples. Therefore, it does not appear that the site has been impacted by historical features on the neighboring property, and no further investigation appears necessary at this time.



9.0 LIMITATIONS

This report is for the exclusive use of Halewaiolu Senior Development, LLC and no other party shall have any right to rely on any service provided by FAI without prior written consent. The information and opinions expressed in this report are given in response to a limited assignment and should be considered and implemented only in light of that assignment.

The services provided by FAI in completing this project were consistent with normal standards of the profession. No other warranty, expressed or implied, is made. FAI will not distribute or publish this report without consent except as required by law or court order.

Site Name:	Halewaiolu Residences Redevelopment Project 1331-1347 River Street, Honolulu, Oahu, Hawaii	**Date:**	April 1, 2019

Ford & Associates, Inc. (FAI) used a bladder pump to purge the wells and collect the groundwater sample (MW-1 collection shown above).	PHOTO **5**

Following groundwater sampling, the polyvinyl chloride (PVC) well casing was removed from the subsurface, and the boring was backfilled with soil cuttings and asphalt-cold patch.	PHOTO **6**

APPENDIX C
LABORATORY ANALYTICAL REPORT AND CHAIN-OF-CUSTODY FORM

ADVANCED ANALYTICAL LABORATORY INC

April 9, 2019

Ford & Associates, Inc
173 Kuuala Rd.
Kailua, HI
96732

Dear Jeff Cruise,

Please find enclosed the analytical report for:

Project Name:	1313 River Street
AAL Project #:	U205
Date Received:	04/01/2019
MIS Prep:	Yes (3 samples)

The results, applicable reporting limits, QA/QC data, invoice, and copy of COC are included. If Multi-incremental preparation was needed for this project, it was completed by Advanced Analytical Laboratory, Honolulu, HI.

Advanced Analytical Laboratory appreciates the opportunity to provide analytical services for this project. If you have any questions regarding this project, please don't hesitate to contact AAL.

Thank you for your business and continuing support.

Sincerely,

Uwe Baumgartner, Ph.D
Owner

Elisa M. Young

Surrogate Recoveries					
Decachlorobiphenyl			128%	128%	
Tetrachloro-m-xylene			94%	97%	

Acceptable Recovery Limits:

Surrogates	*50-150%*
LCS/ MS/MSD	*50-150%*
Acceptable RPD limit:	*30%*

This report is issued solely for the use of the person or company to whom it is addressed.
Any use, copying or disclosure other than by the intended recipient is unauthorized.

Data Qualifiers and Comments:

Results reported on dry-weight basis for soil samples.

MRL- Method Reporting Limit
nd- Indicates the analyte is not detected at the listing reporting limit.
C- Coelution with other compounds.
M- % Recovery of surrogate, MS/MSD is out of the acceptable limit due to matrix effect.
B- Indicates the analyte is detected in the method blank associated with the sample.
J- The analyte is detected at below the reporting limit.
E- The result reported exceeds the calibration range, and is an estimate.
D- Sample required dilution due to matrix. Method Reporting Limits were elevated due to dilutions.
H- Sample was received or analyzed past holding time
Q- Sample was received with head space, improper preserved or above recommended temperature.
I- Due to insufficient sample, LCS/LCS DUP were analyzed in place of MS/MSD.
R- The recovery of this analyte in QC sample failed high, but the analyte was not detected in all related samples. No action was taken.
R-1- The RPD value for the MS/MSD was outside of QC acceptance limits however both recoveries were acceptable. All related samples were "nd". No action was taken.
R-2- The recovery of the surogate in sample failed high, but all related analytes were not detected in the sample. No action was taken.
