FOR IMMEDIATE RELEASE

June 16, 2022

HAWAII'S UNEMPLOYMENT RATE AT 4.2 PERCENT IN MAY

Jobs increased by 21,800 over-the-year

HONOLULU — The Hawaii State Department of Business, Economic Development & Tourism (DBEDT) today announced that the seasonally adjusted unemployment rate for May was 4.2 percent, compared to the revised rate of 4.1 percent in April. Statewide, 647,600 were employed and 28,250 unemployed in May for a total seasonally adjusted labor force of 675,850. Nationally, the seasonally adjusted unemployment rate was 3.6 percent in May for the third consecutive month.

The unemployment rate figures for the State of Hawaii and the U.S. in this release are seasonally adjusted, in accordance with the U.S. Bureau of Labor Statistics (BLS) methodology. The not seasonally adjusted rate for the State was 3.6 percent in May, compared to the revised rate of 3.5 percent in April.

State of Hawaii Seasonally Adjusted Labor Force Data**			
	<u>May</u> <u>2022</u>	<u>Apr</u> <u>2022</u>	<u>May</u> <u>2021*</u>
Labor Force	675,850	673,350	668,450
Employment	647,600	645,700	629,300
Unemployment	28,250	27,950	39,150

* benchmarked data

**totals may not add due to rounding

	MAY 2022	APR 2022	MAY* 2021
<u>Seasonally Adjusted</u>			
STATE	4.2	4.1	5.9
U. S.	3.6	3.6	5.8
<u>Not Seasonally Adjusted</u>			
STATE	3.6	3.5	5.6
HONOLULU	3.4	3.3	5.1

Industry Payroll Employment (Establishment Survey)

In another measure of employment, total nonagricultural jobs decreased by 1,500 over-the-month. Job gains occurred in Other Services (+800); and Leisure & Hospitality (+300). Within Other Services, there was a notable rise in the Personal and Laundry Services subsector. Employment in Professional & Business Services; and Manufacturing remained unchanged. Job losses were experienced in Information (-200); Construction (-300); Trade, Transportation, & Utilities (-500); Financial Activities (-600); and Education & Health Services (-700). Within Trade, Transportation, & Utilities, most of the contraction was in Retail Trade. A decline in Finance & Insurance was primarily responsible for decrease in Financial Activities. In the Education & Health Services grouping, all the job losses took place in Health Care & Social Assistance, largely in Ambulatory Care Services. Government employment went down by 300 jobs. Over- the-year (May 2021 was the 14th month of pandemic effects), nonfarm jobs have gone up by 21,800, or 3.8 percent. However, in comparison with March 2020 (last month prior to pandemic effects), nonfarm jobs were down by 52,200, or -8.0 percent.

Seasonally Adjusted Non-Ag. Jobs (Statewide)			
	May-22	Apr-22	May-21
MINING, LOGGING & CONSTRUCTION	35,700	36,000	37,300
MANUFACTURING	12,500	12,500	11,900
Durable Goods	3,100	3,100	3,300
Non-Durable Goods	9,400	9,400	8,600
TRADE, TRANSPORTATION & UTILITIES	111,100	111,600	108,400
Wholesale Trade	16,100	16,200	16,300
Retail Trade	63,900	64,200	63,000
Transportation, Warehousing, & Utilities	31,100	31,200	29,100
INFORMATION	8,300	8,500	7,200
FINANCIAL ACTIVITIES	25,700	26,300	27,000
Finance & Insurance	14,900	15,300	16,000
Real Estate & Rental & Leasing	10,800	11,000	11,000
PROFESSIONAL & BUSINESS SERVICES	68,900	68,900	68,000
Professional, Scientific, Tech Svcs	25,300	25,000	25,200
Management of Companies & Enterprises	8,700	8,600	8,300
Administrative & Support & Waste Mgmt	34,900	35,300	34,500
EDUCATION & HEALTH SERVICES	84,900	85,600	84,500
Educational Services	13,700	13,500	12,700
Health Care & Social Assistance	71,200	72,100	71,800
LEISURE & HOSPITALITY	110,000	109,700	92,700
Arts, Entertainment & Recreation	10,100	10,600	9,100
Accommodation & Food Services	99,900	99,100	83,600
OTHER SERVICES	26,100	25,300	24,000
GOVERNMENT	119,900	120,200	120,300
Federal Government	35,200	34,700	34,800
State Government	66,200	67,000	66,800
Local Government	18,500	18,500	18,700
TOTAL: STATEWIDE	603,100	604,600	581,300
TOTAL: HONOLULU MSA	435,700	437,500	421,000
TOTAL: KAHULUI-WAILUKU-LAHAINA MSA	72,300	72,400	69,200

Labor Force Components

The concepts and definitions used by the Local Area Unemployment Statistics (LAUS) program are the same as those used in the Current Population Survey for the national labor force data:

- *Civilian labor force.* Included are all persons in the civilian noninstitutional population ages 16 and older classified as either employed or unemployed. (See the definitions below.)
- *Employed persons.* These are all persons who, during the reference week (the week including the 12th day of the month), (a) did any work as paid employees, worked in their own business or profession or on their own farm, or worked 15 hours or more as unpaid workers in an enterprise operated by a member of their family, or (b) were not working but who had jobs from which they were temporarily absent because of vacation, illness, bad weather, childcare problems, maternity or paternity leave, labor-management dispute, job training, or other family or personal reasons, whether or not they were paid for the time off or were seeking other jobs. Each employed person is counted only once, even if he or she holds more than one job.
- *Unemployed persons.* Included are all persons who had no employment during the reference week, were available for work, except for temporary illness, and had made specific efforts to find employment sometime during the 4 week-period ending with the reference week. Persons who were waiting to be recalled to a job from which they had been laid off need not have been looking for work to be classified as unemployed.
- *Unemployment rate.* The unemployed percent of the civilian labor force [i.e., 100 times (unemployed/civilian labor force)].

Seasonal Adjustment

The seasonal fluctuations in the number of employed and unemployed persons reflect hiring and layoff patterns that accompany regular events such as the winter holiday season and the summer vacation season. These variations make it difficult to tell whether month-to-month changes in employment and unemployment are due to normal seasonal patterns or to changing economic conditions. Therefore, the BLS uses a statistical technique called seasonal adjustment to address these issues. This technique uses the history of the labor force data and the job count data to identify the seasonal movements and to calculate the size and direction of these movements. A seasonal adjustment factor is then developed and applied to the estimates to eliminate the effects of regular seasonal fluctuations on the data. Seasonally adjusted statistical series enable more meaningful data comparisons between months or with an annual average.

Current Population (Household) Survey (CPS)

A survey conducted for employment status in the week that includes the 12th day of each month generates the unemployment rate statistics, which is a separate survey from the Establishment Survey that yields the industry job counts. The CPS survey contacts approximately 1,000 households in Hawaii to determine an individual's current employment status. Employed persons consist of: 1) all persons who did any work for pay or profit during the survey reference

week, 2) all persons who did at least 15 hours of unpaid work in a family-owned enterprise operated by someone in their household, and 3) all persons who were temporarily absent from their regular jobs, whether they were paid or not. Persons considered unemployed are ones that do not have a job, have actively looked for work in the prior four weeks and are available for work. Temporarily laid off workers are counted as unemployed, whether they have engaged in a specific job seeking activity. Persons not in the labor force are those who are not classified as employed or unemployed during the survey reference week.

Benchmark Changes to Local Area Unemployment Statistics Data

Statewide and substate data for 2010-2021 have revised inputs and have been re-estimated to reflect revised population controls and model re-estimation.

Change to Monthly Employment Estimates

This release incorporates revised job count figures for the seasonally adjusted series. The revised data reflects historical corrections applied to unadjusted super sector or sector level series dating back from 1990 through 2021. For years, analysts with the State DLIR's Research and Statistics Office have developed monthly employment estimates for Hawaii and its metropolitan areas. These estimates were based on a monthly survey of Hawaii businesses and analysts' knowledge about our local economies. Beginning with the production of preliminary estimates for March 2011, responsibility for the production of State and metropolitan area (MSA) estimates were transitioned from individual state agencies to the U.S Bureau of Labor Statistics (BLS).

For Hawaii, this means the transition of statewide, Honolulu and Kahului-Wailuku-Lahaina MSA estimates for both the seasonally adjusted and not seasonally adjusted areas are produced by BLS. State agencies will continue to provide the BLS with information on local events that may affect the estimates, such as strikes or large layoffs/hiring at businesses not covered by the survey and to disseminate and analyze the Current Employment Statistics (CES) estimates for local data users. BLS feels this change is designed to improve the cost efficiency of the CES program and to reduce the potential bias in state and area estimates. A portion of the cost savings generated by this change is slated to be directed towards raising survey response rates in future years, which will decrease the level of statistical error in the CES estimates. Until then, state analysts feel this change could result in increased month-to-month variability for the industry employment numbers particularly for Hawaii's counties and islands. BLS can be reached at (202) 691-6533 for any questions about these estimates.

The not seasonally adjusted job estimates for Hawaii County, Kauai County, Maui Island, Molokai, and Lanai are produced by the State of Hawaii Department of Business, Economic Development & Tourism.

Seasonally Adjusted Labor Force & Unemployment Estimates for Honolulu & Maui Co.

BLS publishes smoothed seasonally adjusted civilian labor force and unemployment estimates for all metropolitan areas, which includes the City and County of Honolulu and Maui County. BLS releases this data each month in the *Metropolitan Area Employment and Unemployment* news release. The schedule is available at <http://www.bls.gov/news.release/metro.toc.htm>.

Alternative Measures of Labor Underutilization

Alternative Measures of Labor Underutilization for States, Second Quarter of 2021 through First Quarter of 2022 Averages

State	Measure					
	U-1	U-2	U-3	U-4	U-5	U-6
United States	2.3	2.6	4.7	5.0	5.7	8.4
Hawaii	2.8	3.1	4.8	5.1	5.8	9.6

The six alternative labor underutilization state measures based on the Current Population Survey (CPS) and compiled on a 4-quarter moving average basis defined:

- U-1, persons unemployed 15 weeks or longer, as a percent of the civilian labor force;
- U-2, job losers and persons who completed temporary jobs, as a percent of the civilian labor force;
- U-3, total unemployed, as a percent of the civilian labor force (this is the definition used for the official unemployment rate);
- U-4, total unemployed plus discouraged workers, as a percent of the civilian labor force plus discouraged workers;
- U-5, total unemployed, plus discouraged workers, plus all other marginally attached workers*, as a percent of the civilian labor force plus all marginally attached workers; and
- U-6, total unemployed, plus all marginally attached workers, plus total employed part time for economic reasons, as a percent of the civilian labor force plus all marginally attached workers.

* Individuals who want, and are available for work, and who have looked for a job sometime in the prior 12 months (or since the end of their last job if they held one within the past 12 months), but were not counted as unemployed because they had not searched for work in the four weeks preceding the survey, for such reasons as childcare or transportation problems, for example. Discouraged workers are a subset of the marginally attached.

Note that, the state unemployment rates (U-3) that are shown are derived directly from the CPS. As a result, these U-3 measures may differ from the official state unemployment rates for the latest 4-quarter period. The latter are estimates developed from statistical models that incorporate CPS estimates, as well as input data from other sources, such as state unemployment claims data.
