HAWAII OCTOBER UNEMPLOYMENT RATE REMAINS AT 2.9 PERCENT

Jobs increased by 9,400 year-over-year

FOR IMMEDIATE RELEASE

November 18, 2024

HONOLULU — The Hawaii State Department of Business, Economic Development and Tourism (DBEDT) today announced that the seasonally adjusted unemployment rate for October was 2.9 percent, the same for the fifth consecutive month. In October, 651,850 persons were employed and 19,300 were unemployed, for a total seasonally adjusted labor force of 671,150 statewide. Nationally, the seasonally adjusted unemployment rate was 4.1 percent in October, the same as in September.

The unemployment rate figures for the state of Hawaii and the U.S. in this release are seasonally adjusted in accordance with U.S. Bureau of Labor Statistics (BLS) methodology. The not-seasonally adjusted rate for the state was 2.9 percent in October, compared to 3.2 percent in September.

State of Hawaii Seasonally Adjusted Labor Force Data**						
	Oct 2024	Sep 2024	Oct 2023*			
Labor Force	671,150	670,400	675,650			
Employment	651,850	651,100	655,100			
Unemployment	19,300	19,300	20,550

Industry Payroll Employment (Establishment Survey)

In a separate measure of employment, total nonagricultural jobs decreased by 200 month-over-month, from September 2024 to October 2024. Job gains were experienced in Construction (+900); and Manufacturing (+100). Employment in Trade, Transportation & Utilities; Information; and Financial Activities remained unchanged. Job losses occurred in Other Services (-200); Professional & Business Services (-400); Leisure & Hospitality (-500); and Private Education & Health Services (-1,300). Within Private Education & Health Services, job contraction was spread out over the four major subsectors of Health Services, namely Ambulatory Services, Hospitals, Nursing & Residential Care Facilities, and Social Assistance. Government employment went up by 1,200 jobs, mostly due to strong seasonal growth of workers in the University of Hawaii system. Year-over-year (October 2023 was the 43rd month of pandemic effects), nonfarm jobs have gone up by 9,400, or 1.5 percent. However, in comparison with March 2020 (the last month prior to pandemic effects), nonfarm jobs were down by 16,900, or -2.6 percent.

Seasonally Adjusted Non-Ag. Jobs (Statewide)					
	Oct-24	Sep-24	Oct-23		
MINING, LOGGING & CONSTRUCTION	43,200	42,300	37,500		
MANUFACTURING	13,000	12,900	12,600		
Durable Goods	3,500	3,500	3,300		
Non-Durable Goods	9,500	9,400	9,300		
TRADE, TRANSPORTATION & UTILITIES	114,800	114,800	115,800		
Wholesale Trade	17,200	17,300	17,500		
Retail Trade	64,500	64,400	64,500		
Transportation, Warehousing & Utilities	33,100	33,100	33,800

TOTAL: KAHULUI-WAILUKU-LAHAINA MSA	72,000	71,900	69,600		

Technical Notes:

Labor Force Components

The concepts and definitions used by the Local Area Unemployment Statistics (LAUS) program are the same as those used in the Current Population Survey for the national labor force data:

- Civilian labor force. Included are all persons in the civilian noninstitutional population ages 16 and older classified as either employed or unemployed. (See the definitions below.)
- Employed persons. These are all persons who, during the reference week (the week including the twelfth day of the month), (a) did any work as paid employees, worked in their own business or profession or on their own farm, or worked 15 hours or more as unpaid workers in an enterprise operated by a member of their family, or (b) were not working but who had jobs from which they were temporarily absent because of vacation, illness, bad weather, childcare problems, maternity or paternity leave, labor-management dispute, job training, or other family or personal reasons, whether or not they were paid for the time off or were seeking other jobs. Each employed person is counted only once, even if he or she holds more than one job.
- Unemployed persons. Included are all persons who had no employment during the
 reference week, were available for work, except for temporary illness and had
 made specific efforts to find employment sometime during the four-week period
 ending with the reference week. Persons who were waiting to be recalled to a job
 from which they had been laid off need not have been looking for work to be
 classified as unemployed.

• *Unemployment rate*. The unemployed percent of the civilian labor force [i.e., 100 times (unemployed/civilian labor force)].

Seasonal Adjustment

The seasonal fluctuations in the number of employed and unemployed persons reflect hiring and layoff patterns that accompany regular events such as the winter holiday season and the summer vacation season. These variations make it difficult to tell whether month-to-month changes in employment and unemployment are due to normal seasonal patterns or to changing economic conditions. Therefore, the BLS uses a statistical technique called seasonal adjustment to address these issues. This technique uses the history of the labor force data and the job count data to identify the seasonal movements and to calculate the size and direction of these movements. A seasonal adjustment factor is then developed and applied to the estimates to eliminate the effects of regular seasonal fluctuations on the data. Seasonally adjusted statistical series enable more meaningful data comparisons between months or with an annual average.

Current Population (Household) Survey (CPS)

A survey conducted for employment status in the week that includes the twelfth day of each month generates the unemployment rate statistics, which is a separate survey from the Establishment Survey that yields the industry job counts. The CPS survey contacts approximately 1,000 households in Hawaii to determine an individual's current employment status. Employed persons consist of 1) all persons who did any work for pay or profit during the survey reference week, 2) all persons who did at least 15 hours of unpaid work in a family-owned enterprise operated by someone in their household and 3) all persons who were temporarily absent from their regular jobs, whether they were paid or not. Persons considered unemployed are those that do not have a job, have actively looked for work in the prior four weeks and are available for work. Temporarily laid-off workers are counted as unemployed, whether they have engaged in a specific job-seeking activity. Persons not in the labor force are those who are not classified as employed or unemployed during the survey reference week.

Benchmark Changes to Local Area Unemployment Statistics Data

Statewide and sub-state data for 2019 to 2023 have revised inputs and data for 2010 to 2023 have been re-estimated to reflect revised population controls and model reestimation.

Change to Monthly Employment Estimates

This release incorporates revised job count figures for the seasonally adjusted series. The revised data reflects historical corrections applied to unadjusted super sector or sector-level series dating back from 2019 through 2023. For years, analysts with the state of

Hawaii Department of Labor and Industrial Relations Research and Statistics Office have developed monthly employment estimates for Hawaii and its metropolitan areas. These estimates were based on a monthly survey of Hawaii businesses and analysts' knowledge about our local economies. Beginning with the production of preliminary estimates for March 2011, responsibility for the production of state and metropolitan area (MSA) estimates were transitioned from individual state agencies to the U.S Bureau of Labor Statistics (BLS).

For Hawaii, this means the transition of statewide, Honolulu and Kahului-Wailuku-Lahaina MSA estimates for both the seasonally adjusted and not-seasonally adjusted areas are produced by BLS. State agencies will continue to provide the BLS with information on local events that may affect the estimates, such as strikes or large layoffs/hiring at businesses not covered by the survey and to disseminate and analyze the Current Employment Statistics (CES) estimates for local data users. BLS feels this change is designed to improve the cost efficiency of the CES program and to reduce the potential bias in state and area estimates. A portion of the cost savings generated by this change is slated to be directed toward raising survey response rates in future years, which will decrease the level of statistical error in the CES estimates. Until then, state analysts feel this change could result in increased month-to-month variability for the industry employment numbers particularly for Hawaii's counties and islands. BLS can be reached at 202-691-6555 for any questions about these estimates.

The not-seasonally adjusted job estimates for Hawaii County, Kauai County, Maui, Molokai and Lanai are produced by the state of Hawaii Department of Business, Economic Development and Tourism.

Labor Force Estimates for Small Areas

Labor Force estimates for the islands within Maui County (Maui, Molokai and Lanai) are produced by the state of Hawaii Department of Business, Economic Development and Tourism.

Seasonally Adjusted Labor Force and Unemployment Estimates for Honolulu and Maui County

BLS publishes smoothed seasonally adjusted civilian labor force and unemployment estimates for all metropolitan areas, which includes the City and County of Honolulu and Maui County.

BLS releases this data each month in the *Metropolitan Area Employment and Unemployment* news release. The schedule is available at http://www.bls.gov/news.release/metro.toc.htm.

Alternative Measures of Labor Underutilization

Alternative Measures of Labor Underutilization for States, fourth quarter of 2023 through third quarter of 2024 averages (percent)

Area	Measure					
	U-1	U-2	U-3	U-4	U-5	U-6
United States	1.4	1.9	3.9	4.2	4.8	7.4
Hawaii	1.2	1.2	3.0	3.1	3.9	6.4

The six alternative labor underutilization state measures based on the Current Population Survey (CPS) and compiled on a four-quarter moving-average basis defined as:

- U-1, persons unemployed 15 weeks or longer, as a percent of the civilian labor force;
- U-2, job losers and persons who completed temporary jobs, as a percent of the civilian labor force:
- U-3, total unemployed, as a percent of the civilian labor force (this is the definition used for the official unemployment rate);
- U-4, total unemployed plus discouraged workers, as a percent of the civilian labor force plus discouraged workers;
- U-5, total unemployed, plus discouraged workers, plus all other marginally attached workers*, as a percent of the civilian labor force plus all marginally attached workers; and U-6, total unemployed, plus all marginally attached workers, plus total employed part-time for economic reasons, as a percent of the civilian labor force plus all marginally attached workers.

*Individuals who want and are available for work, and who have looked for a job sometime in the prior 12 months (or since the end of their last job if they had one within the past 12 months) but were not counted as unemployed because they had not searched for work in the four weeks preceding the survey, for such reasons as childcare or transportation problems, for example. Discouraged workers are a subset of the marginally attached.

Please note that the state unemployment rates (U-3) that are shown are derived directly from the CPS. As a result, these U-3 measures may differ from the official state unemployment rates for the latest four-quarter period. The latter are estimates developed from statistical models that incorporate CPS estimates, as well as input data from other sources, such as state unemployment claims data.
