By clicking on the “funnel” icon next to the type column heading, we can search for all areas with an ludcode of “A” (for Agricultural Zone):

The screenshot shows the 'State Land Use Districts' interface. At the top, there are tabs for 'Overview', 'Data', and 'API Explorer'. Below the tabs, there are buttons for 'Favorite', 'Download Data', and 'APIs'. The main content area shows 'Showing 1 to 10 of 903' records. A dropdown menu for 'ludcode' is open, with 'A (142)' selected. A red arrow points to the dropdown arrow icon. Below the dropdown is a table with columns: objectid, ludcode, island, acres, createdby, agency, publishdate, featureuid, and created.

objectid	ludcode	island	acres	createdby	agency	publishdate	featureuid	created
1	C		0181885			12/30/1899	{4B910B3B-F1AB-48DE-AF2C-...

3	C	Niihau	19.26853928			12/30/1899	{230DFAF9-1CEE-430F-BE2F-2...	

We’ve now selected 142 of the original 903 records

The screenshot shows the 'State Land Use Districts' interface with the filter 'ludcode: A' applied. It shows 'Showing 1 to 10 of 142' records. The table below shows the filtered results.

objectid	ludcode	island	acres	createdby	agency	publishdate	featureuid	created
2	A	Niihau	46044.5081512			12/30/1899	{ABA640E0-18E9-4705-8680-7...

I can now export the dataset to shapefile, kml, or spreadsheet format. I can download either the full dataset or the filtered dataset.

The screenshot shows the 'Download Data' menu on the left, with options for 'Full Dataset', 'Spreadsheet', 'KML', 'Shapefile', 'Filtered Dataset', 'Spreadsheet', 'KML', and 'Shapefile'. On the right, a file dialog box titled 'Opening State\_Land\_Use\_Districts.zip' is open. It shows the file 'State\_Land\_Use\_Districts.zip' (884 KB) and asks 'What should Firefox do with this file?'. The 'Save File' option is selected.
