

Layer Name: Geothermal Wells

File Name: geothermal_wells

Layer Type: Polygon

Status: Complete

Geographic Extent: Island of Hawaii

Projection: UTM Zone 4 (meters)

Datum: NAD 83 HARN

Please note - if you are using data in the [State's web services](#) or downloading from the [State's geoportal](#), the data is served and exported in WGS84 coordinates, although it is stored internally in UTM coordinates.

Description: This data shows the location of geothermal wells in Hawaii.

History: Coordinates were obtained from the State Department of Land and Natural Resources, Engineering Division by the Hawaii State Energy Office March, 2017. Features were then geocoded by the Onyx Group (consultant to State Energy Office), and a 2,500 meter buffer was applied to generate buffer polygons.

Source: Hawaii Department of Land and Natural Resources, Engineering Division

Attributes: **Polygons:**

Well_Name: Name of the well

Use: Well use (injection, monitored, plugged or production)
