Subject: [EXTERNAL] Testimony in Support of SCAP Approval for the Kapa'a Bridge Project Aloha Commissioners,
Date: Thursday, January 15, 2026 12:38:08 PM

Aloha Commissioners,

I am submitting testimony in support of Areté Collective and their development plans as it relates to the Stream Channel Alteration Permit for the Kapa'a Bridge project.

As an employee, I have found Areté Collective to be proactive, responsive, and a good faith partner in supporting sustainable development. From taking care of the golf courses and surrounding areas, to proactively hiring the Hawaii Marine Animal Rescue, to regularly monitoring by AECOS, and providing onsite wildlife education for staff and contractors, Areté has demonstrated a commitment to protecting the environment and natural and cultural resources in the larger development area.

Furthermore, Areté has validated its pledge to engage meaningfully with the community. They have listened to concerns and adjusted the project, including increasing setbacks, reducing the project footprint, and increasing the amount of native plants throughout the entire project.

For these reasons, I respectfully request that the Commission approve the Stream Channel Alteration Permit.

Mahalo,

Donald P. Murray

FROM THE DESK OF

Ka'ōiwi Kurosu

January 15, 2026

Members of the Commission

Subject: Testimony in Support of SCAP Approval for the Kapa'a Bridge Project

Dear Members of the Commission,

My name is Ka'ōiwi McKenzie-Kurosu and as a cultural and lineal descendant of this area with a Kuleana parcel still existing along the projects coastline, I am humbly writing in support of Areté Collective for the approval of their Stream Channel Alteration Permit for the Kapa'a Bridge project.

Areté Collective has continued to demonstrate its commitment to responsible development while validating its pledge to engage meaningfully with the community. They have heard our concerns and made adjustments to include increasing setbacks, reducing the projects footprint, and increasing the number of native plants and trees throughout the entire project. They are improving access to the shoreline, removing invasive ironwood trees that have proved to cause significant erosion, and planted native grasses, shrubs and trees throughout the golf course as well as along the coast. They have also demonstrated a commitment to protecting the environment of natural and cultural resources across much of the development area as well as continuing to honor my Ohana's kuleana parcel with so much aloha.

Based on the documentation provided and the studies completed, the application meets all three required components of the Ka Pa'akai framework. There are no traditional Native Hawaiian practices occurring within the area identified, and I have witnessed the conditions of this man-made drainage to have a grassy-sandy floor with no flowing water and no signs of O'pae or O'opu living in this area.

For these reasons, and most importantly because the project is identical in scope and design to the application that the Commission unanimously approved in 2022, I whole heartedly support approval of Areté Collective's Stream Channel permit application for the Kapa'a Bridge project.

Sincerely yours,

Ka'ōiwi McKenzie-Kurosu

Kuleana owner

Subject: Agenda B1, Support of SCAP Approval for the Kapa'a Bridge Project

Dear Members of the Commission,

As a former member of Turtle Bay's Cultural Advisory Committee, I respectfully submit testimony in support of Areté's Collective and their resubmittal of their Stream Channel Alteration Permit to build a bridge over the East Main Drain.

The Cultural Advisory Committee was formed in 2021 by then-owner Blackstone and included both Hawaiian and non-Hawaiian members representing a cross-section of the community. We met regularly for three years until the hotel changed ownership and the committee concluded in 2024.

Because there has been some misunderstanding about the CAC's involvement, I would like to note that Becky and Joey Buchan of Areté Collective invited me for a tour of the area to share their vision and plans. And even after the committee dissolved, Areté continued meeting individually with members to seek cultural guidance.

I also acknowledge that the vision of Turtle Bay has been shaped by decades of studies, reviews, and community consultation including outreach to more than 300 individuals and agencies, a 2024 open house with 250+ attendees, Neighborhood Board presentations, and numerous one-on-one conversations.

Areté Collective has demonstrated its commitment to responsible development and has validated its pledge to engage meaningfully with the community. They are increasing setbacks, reducing the project footprint, improving access to the shoreline, removing invasive ironwood trees, and planting native plants along the coastline and throughout the golf course.

For these reasons and more which are underscored by the knowledge that the East Main Drain is an engineered waterway to support drainage with no traditional or customary practices within the culvert area, I urge the Commission to support this permit application, which is the same project approved by the Commission in 2022.

Mahalo nui,

Mahina Chillingworth

ADDENDUM TO OFFICIAL TESTIMONY OF KŪPA'A KUILIMA

January 17, 2026

Before the Commission on Water Resource Management (CWRM)

RE: SCAP.6438.3 – Wasatch Areté TB Holdings

Proposed Stream Channel Alteration Permit for a Concrete Culvert Across 'Ō'io Stream, Kahuku

Aloha Chair Kanaka'ole and Honorable Commissioners,

This addendum is submitted to supplement Kūpa'a Kuilima's official testimony dated November 29, 2025. It provides additional information relevant to the Commission's consideration of SCAP.6438.3, including newly documented native wildlife impacts and clarification of unresolved regulatory and safety concerns directly enabled by the proposed culvert.

This addendum incorporates and relies upon a written correspondence dated January 13, 2026, from Linda Elliott, President and Center Director of the Hawai'i Wildlife Center, addressed to the U.S. Fish and Wildlife Service and the Hawai'i Department of Land and Natural Resources, Division of Forestry and Wildlife. This correspondence is attached in its entirety as Exhibit A and is incorporated herein by reference.

I. Absence of an Incidental Take License (ITL) and Habitat Conservation Plan (HCP)

There is currently no approved Incidental Take License (ITL) and no Habitat Conservation Plan (HCP) in place for the Turtle Bay property or the broader development that this proposed culvert is intended to serve.

The 'Ō'io Stream area and surrounding landscape provide habitat for multiple protected native species, including seabirds and the endangered Hawaiian gallinule ('alae 'ula), as well as the Hawaiian coot ('alae ke'oke'o), Hawaiian stilt (ae'o), and Hawaiian duck (koloa maoli), all of which utilize freshwater, wetland, and stream-associated habitats in the area. Stream channel alteration, roadway construction, increased lighting, expanded vehicle access, and higher traffic volumes substantially increase the likelihood of incidental take. Without an ITL and HCP, there is no legally enforceable framework identifying anticipated take, avoidance and minimization measures, mitigation commitments, monitoring requirements, or adaptive management obligations.

Approval of a stream channel alteration that facilitates development-related access and infrastructure, in the absence of these required protections, would expose native species to increased risk while leaving the State without enforceable safeguards or accountability mechanisms.

II. Culvert as Enabling Infrastructure for Increased Traffic and Speed

The proposed culvert is not a standalone project. Its function is to support roadway connectivity and future development. Approval of the culvert will directly enable:

- Increased vehicle traffic volume associated with new roads and expanded access;
- Higher vehicle speeds resulting from roadway design and alignment;
- Increased likelihood of wildlife-vehicle collisions, particularly for ground-dwelling and wetland-dependent species.

These impacts are not speculative. Traffic volume and speed increases are foreseeable consequences of roadway expansion and must be evaluated as part of the cumulative impacts of the project. No such analysis has been provided to the Commission. Traffic impacts in this context are directly tied to public safety, wildlife

protection, and resource stewardship and therefore fall squarely within the Commission's public trust considerations.

III. Documented Native Bird Injury and Mortality at Turtle Bay (Exhibit A)

As documented in the Hawai'i Wildlife Center correspondence attached as Exhibit A, native bird injury and mortality at Turtle Bay is not hypothetical, it is ongoing.

The correspondence details, among other things:

- Years of seabird fallout data (2013–2025) demonstrating significant impacts in the Turtle Bay–Kahuku region, with acknowledgment that available records likely underrepresent actual take due to unreported or mishandled incidents;
- Multiple public reports of shearwaters colliding with illuminated resort structures, including glass doors and pool facilities, resulting in injury and death;
- Confirmed instances of deceased shearwaters found on resort beaches and property, reported to state and federal agencies;
- A documented incident involving an endangered Hawaiian gallinule struck by a golf ball, left without timely intervention and later found dead;
- Repeated delays, non-responses, and incomplete coordination between the resort, developers, and wildlife professionals despite years of outreach;
- The continued absence of a finalized, transparent, and coordinated wildlife response protocol with enforceable agreements and clear procedures for handling injured or deceased native species.

These documented incidents underscore the real and ongoing risks to protected species at the project site. Expansion of infrastructure, lighting, traffic, and increased human activity, without an ITL, HCP, or enforceable wildlife response plan, will predictably increase these impacts.

IV. Relevance to the Commission's Public Trust Obligations

The Commission cannot responsibly evaluate the proposed Stream Channel Alteration Permit without considering the cumulative impacts enabled by the culvert. The absence of an ITL and HCP, the documented record of native wildlife injury and mortality, and the foreseeable increase in traffic volume and vehicle speeds collectively represent significant unresolved issues.

Approving SCAP.6438.3 under these conditions would undermine the Commission's duty to protect Hawai'i's water resources, native species, and public safety for present and future generations.

V. Request

In addition to the requests listed in our November 29th 2025 testimony, Kūpa'a Kuilima respectfully requests that the Commission deny, or, at least, continue to defer action on SCAP.6438.3 until:

- An Incidental Take License and Habitat Conservation Plan are completed, approved, and publicly reviewed;
- Traffic volume, speed, and safety impacts enabled by the culvert and associated roadway are fully disclosed and analyzed;
- Wildlife response protocols are finalized, enforceable, and coordinated with appropriate state and federal agencies;
- The cumulative impacts of the culvert as enabling infrastructure are properly evaluated.

Mahalo nui for your careful consideration of this supplemental information and for your continued commitment to upholding the public trust.

?

Linda Elliott <[REDACTED]@hawaiiwildlifecenter.org>

Tue, Jan 13, 4:46 PM (2 days ago)

Per your request here is some info on the incidents and communications we have had that I can track down for the last year regarding the Turtle Bay property and native wildlife incidents and concerns.

Jan 30, 2025 we provided [REDACTED] data on downed seabirds at Turtle Bay included all birds from Hale'iwa to Kualoa Ranch 2013-2025. It shows significant seabird fallout in that area. We also noted that we have gotten reports that they have released birds on their own or there have been ones that have been reported but then "disappeared" or "flew away" (possibly released by someone), which no longer needed a pick up. So the birds we have in our records don't show the full picture. Also, it's very possible that Feather and Fur has received birds from that location that died and didn't make it to us/into our records.

On July 22, 2025 a guest at the Ritz Carlton Turtle Bay contacted us reporting "In the span of less than 30 minutes starting at approximately 9pm we saw about 15 of the albatross (caller called them albatross but we're thinking they were shearwaters) crash into the lighted pool or the Sunset Bar hut that was brightly lit. The ones that crashed into the glass doors of the bar hit very hard. The staff seemed to say it was a common occurrence and just moved them to the bushes. Some appeared to be quite injured." "I'd say we saw likely 20 injured (shearwaters) in a very short time period. They tend to get placed by the workers in the bushes to the left of the sandbar hut (as you face the ocean)." We gave the reporter the wildlife agencies contacts and we forwarded the information our selves to [REDACTED], [REDACTED] and [REDACTED] as well.

On September 7, 2025 a public person by the name of [REDACTED] sent pictures of 4 dead shearwaters by Turtle Bay on the beach with a GPS point. That was shared with DOFAW— [REDACTED] and [REDACTED]. And also with [REDACTED].

On Oct. 13, 2025 We were included in an email from [REDACTED] to [REDACTED] of Turtle Bay Resort/Host Hotels. The introduction per [REDACTED] was so "we can coordinate better for any birds that may fallout this year at Turtle Bay Resort during the fall out period" "[REDACTED] it would be great if you can connect with [REDACTED] to work out how TBR can ensure proper care and assessment is provided by HWC if birds are found on property.". I followed up with a reply to the email on October 14th, 2025 and let her know we are looking forward to setting up an efficient process to get downed, sick/injured or orphaned native birds from the Turtle Bay Resort to rehabilitative care at Hawai'i Wildlife Center, both for fallout and for any native birds throughout the year and I asked for a phone meeting. No Response received from [REDACTED]

On October. 28, 2025 I sent another email request to [REDACTED] and [REDACTED] and [REDACTED] replied: "[REDACTED] just finished up her response protocol so hopefully, you folks can work together to make sure birds are getting the best care without delays." No response from [REDACTED]

On Oct. 31, 2025 [REDACTED] replied. "Thanks again for reaching out. We are very close to finalizing our fallout plan which [REDACTED] has reviewed and provided feedback. I have cc'd our Director of Security from

The Ritz Carlton Turtle Bay, [REDACTED] who will be the contact if there are any downed birds on the property in the future. He now has your contact for any questions he might have." We have yet to receive that fallout plan as of 1/13/26.

On Nov. 19, 2025 we received a call from a golfer/public person, [REDACTED] reporting a gallinule that was hit by a golf ball and was alive and struggling, was told to capture and report it to the golf staff and it needed to be transported to Feather and Fur ASAP. After no response and a long delay our team followed up and were told the gallinule had been left and was later found dead.

On Dec. 3, 2025 I mentioned in an email to [REDACTED] we have not yet heard anything from Turtle Bay. On Dec. 4 2025, [REDACTED] said she was reaching out to Turtle Bay and Arete. And asked for our data from fallout in that area when we can get to it.

On Dec. 16 2025 [REDACTED] sent a list of golf course maintenance staff and their emails but no contact phone #s or what the SOP is for injured, orphaned, downed or dead native birds and how we are going to coordinate with them.

On Jan. 2, 2026 I replied to [REDACTED] list of golf maintenance guys with a request for how HWC fits in to their response plan and in what capacity are we are included. I also sent a sample service agreement similar to what other resorts or utilities have done. I have not heard back from [REDACTED] or anyone else.

Jan. 6, 2026, We received pictures of signage on the Fazio, Turtle Bay Golf course and also that our info was shared in a presentation to a community conservation group she was attending from [REDACTED] We had not been contacted by the Resort on the use of our info or how this works with any SOP they may have.

Today, Jan 13, 2026, ██████████ called around 12:30PM said the staff found a dead gallinule this morning on the Palmer Course, hole #6. I called and left messages for ██████████ and then called ██████████ and ██████████ to see if anyone knows the SOP that Turtle Bay Resort supposedly developed on dead endangered species on their property. We also gave ██████████ info on how to collect the carcass and store it until ██████████ could arrange to have it picked up and taken to ██████████ ██████████ returned my call late afternoon and we reviewed the information we had and what is the possible next steps. It seems the carcass was left outside for hours before they contacted us and at that time ██████████ asked for it to be collected, not the best policy if there is to be a necropsy.

A lot of time was spent on these responses to native wildlife that would have been more efficiently handled and better for the birds if there is an actual response plan with agreements in place with all relevant parties.

Hope this is helpful in moving wildlife response forward for the native wildlife and in partnership with the resort and developers.

Aloha,
Linda

OFFICIAL TESTIMONY OF KŪPA'A KUILIMA

November 29th, 2025

Before the Commission on Water Resource Management (CWRM)

RE: SCAP.6438.3 - Wasatch Areté TB Holdings

Proposed Stream Channel Alteration Permit for a New Concrete Culvert Across 'Ō'io Stream, Kahuku

Aloha Chair Chang and Honorable Commissioners,

Kūpa'a Kuilima submits this testimony in strong opposition to approving Stream Channel Alteration Permit SCAP.6438.3. The Commission's decision to defer the permit at the November meeting was both appropriate and necessary, and we mahalo you for recognizing many of the same concerns that our community has been raising. This project simply cannot be evaluated responsibly without a complete Ka Pa'akai Framework Analysis, updated environmental and hydrologic data, and a transparent explanation of the broader development this culvert is intended to support.

Below, we highlight the major deficiencies that must be addressed before the Commission can lawfully or ethically consider approval.

I. Ka Pa'akai Framework Analysis Has Not Been Completed

The Ka Pa'akai Framework Analysis for this project has not yet been completed. The existing Cultural Impact Assessment (2012) and SEIS (2013) were improperly accepted by the Department of Planning and Permitting in 2022 as fulfilling Ka Pa'akai. The current DPP Director has chosen not to revisit or overturn that determination, leaving the department open to legal challenge. Regardless of the DPP's position, this Commission has its own legal obligation to determine whether the documents provided by the applicant meet the threshold of fulfilling Ka Pa'akai Framework Analysis.

To date, the applicant has not been able to identify which document, or combination of documents, fulfills Ka Pa'akai. If they are referring to the CIA (2012) and SEIS (2013), then these two documents clearly do not meet the three-part framework. These documents fail to adequately answer the three core questions required under Ka Pa'akai:

- 1) What traditional and customary Native Hawaiian rights and practices exist in the vicinity of the proposed action?
- 2) What impacts would the proposed action have on those practices? And,
- 3) How does the applicant intend to mitigate those impacts?

At the November 2025 meeting, Areté representatives seemed to imply that the Turtle Bay Cultural Advisory Committee was consulted as a part of Ka Pa'akai for this project. But that committee did not exist until 2021 and was disbanded in 2025. If the CIA is supposed to be the document demonstrating Ka Pa'akai compliance, that committee did not exist during the supposed consultation process.

Additionally, proper consultation under the Ka Pa'akai Framework requires far more than the applicant has shown. It includes signed disclosures of consent from consultees, transcripts of interviews, opportunities for practitioners to review and correct those transcripts, and ultimately, the publication of a complete report. None

of this has been provided to the Commission. The applicant has not produced evidence demonstrating that they completed these steps.

Substantively, the existing CIA (2012) and SEIS (2013) also do not satisfy Ka Pa'akai, firstly because it does not answer the three-part framework for analysis mentioned above. And additionally, much of the consultation in the CIA (2012) relied on paid employees of the then-developer, which undermines the validity of the process.

As people of this place, we know who the cultural practitioners are who should be consulted. There are today native practitioners who engage in hula, limu picking, shoreline and subsistence fishing, including casting, throw net, lay net, and diving, lei making, gathering coastal resources such as pa'akai, collecting lā'au lapa'au, and recreate, 'au'au kai in these places. These practices will be directly affected by alterations to 'Ō'io Stream. If Areté had completed a Ka Pa'akai Framework Analysis, then their project team should be able to show evidence of the completed analysis. At the very least they should be able to clearly explain how each of these practices may be impacted and what measures they intend to take to mitigate those impacts. Based on the responses given by the Areté team at the November 2025 CWRM meeting, it appears they are unable to provide this information and that is because an adequate Ka Pa'akai Framework Analysis has not been completed.

II. Outdated Flood and Sea Level Rise Modeling

In a meeting with the Honolulu Department of Planning and Permitting, the flood risk modeling presented by the applicant in the SEIS (2013) was reviewed by subject-matter experts from the University of Hawai'i and found to be inadequate. As highlighted in the report prepared by Dr. Haunani Kāne and Sara Kahanamoku-Meyer, the analysis failed to incorporate potential **groundwater flooding**, one of the most critical and well-documented drivers of backshore inundation. Instead, the applicant relied on a minimal scenario that does not represent present or projected flood risk. This incomplete assessment leaves significant gaps in understanding how flooding may impact 'Ō'io Stream, surrounding ecosystems, and nearby communities. This analysis is publicly viewable here:

https://drive.google.com/file/d/1h_zV_a6_bxf0zUN6BA9liwq4-CM3ZrUc/view?usp=sharing

Climate change has already intensified flooding events across Hawai'i. Without comprehensive and current flood risk modeling—including groundwater emergence, passive flooding, and sea level rise dynamics—any culvert, stream crossing, or channel alteration risks increasing flooding, erosion, and damage to both ecosystems and community infrastructure.

Compounding these deficiencies, the flood and sea level rise analysis submitted by the applicant does **not incorporate the most recent State of Hawai'i-endorsed modeling updates**, including the **2025 passive flooding model release** and the updated guidance provided through the State's 2022 Hawai'i Sea Level Rise Vulnerability and Adaptation Report. These updated models—now required for State and County planning—include refined passive flooding layers, backshore inundation projections, and the Sea Level Rise Exposure Area (SLR-XA), all of which are directly relevant to the project area.

State guidance is explicit: planners and applicants must evaluate a minimum of **4 feet of sea level rise**, and up to **6 feet for low-tolerance-for-risk infrastructure**, such as culverts. NOAA's updated 4–8 foot passive flooding scenarios, PacIOPS layers, and revised SLR-XA projections were released in support of these requirements.

However, the applicant's analysis relies instead on **older “low” and “intermediate-low” scenarios** that UH researchers have already deemed obsolete. By failing to incorporate the newly released 2025 data, the applicant's modeling does not reflect current exposure conditions, projected flooding pathways, or the State's

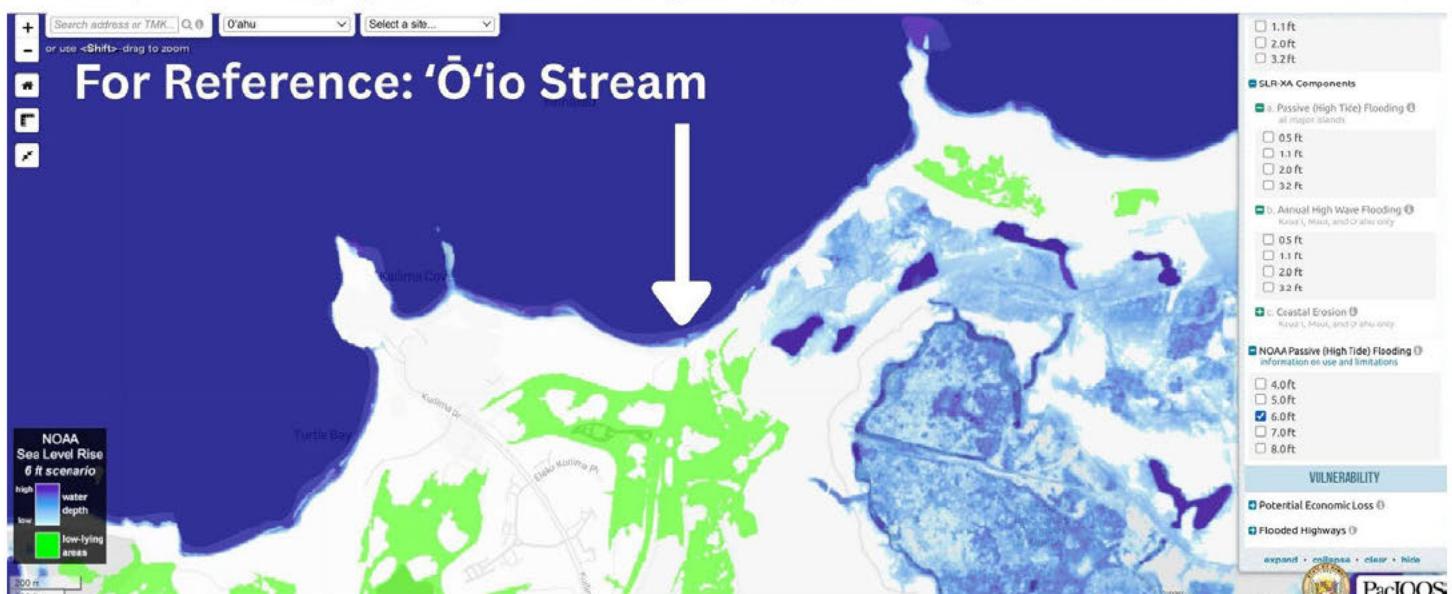

required planning thresholds. As a result, the analysis cannot be considered aligned with best available science and cannot support responsible decision-making.

Given the accelerating pace of sea level rise and recent statewide updates to coastal hazard modeling, approving a culvert based on outdated or incomplete data would expose both the Commission and the public to unnecessary and preventable risk.

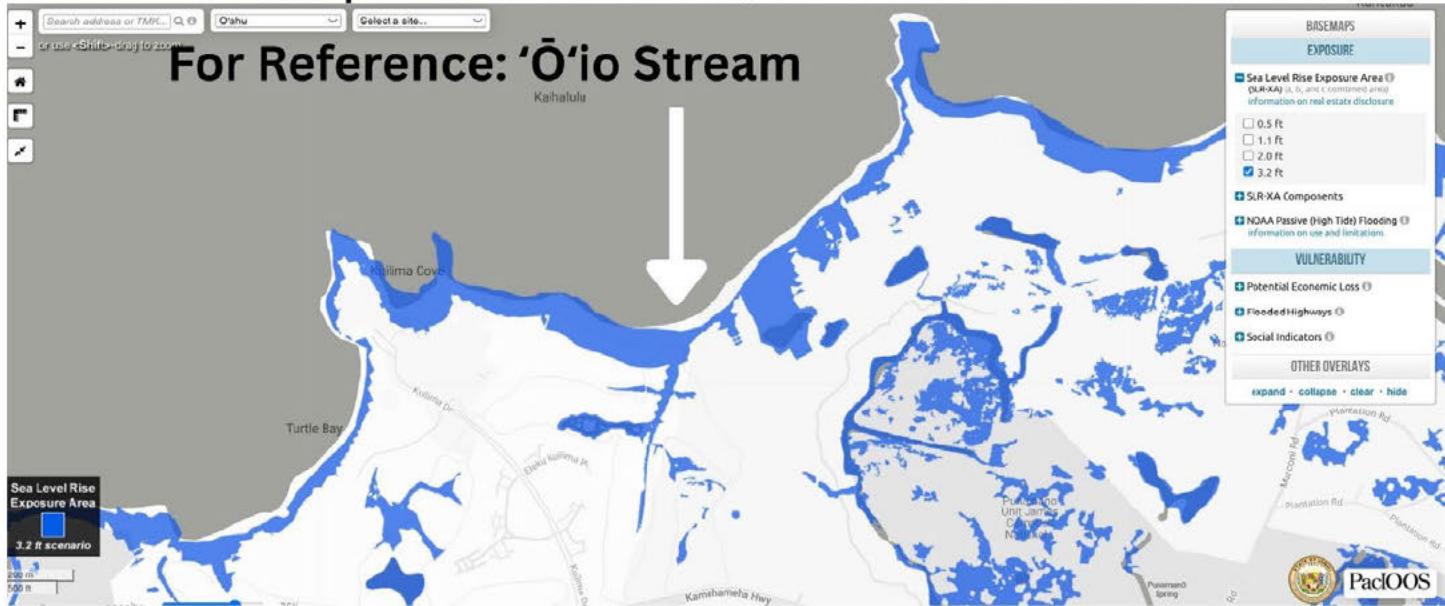

Passive High Tide Flooding at 6 Feet

NOAA passive flooding layers from 4–8 ft – showing what high-tide flooding could look like in future conditions

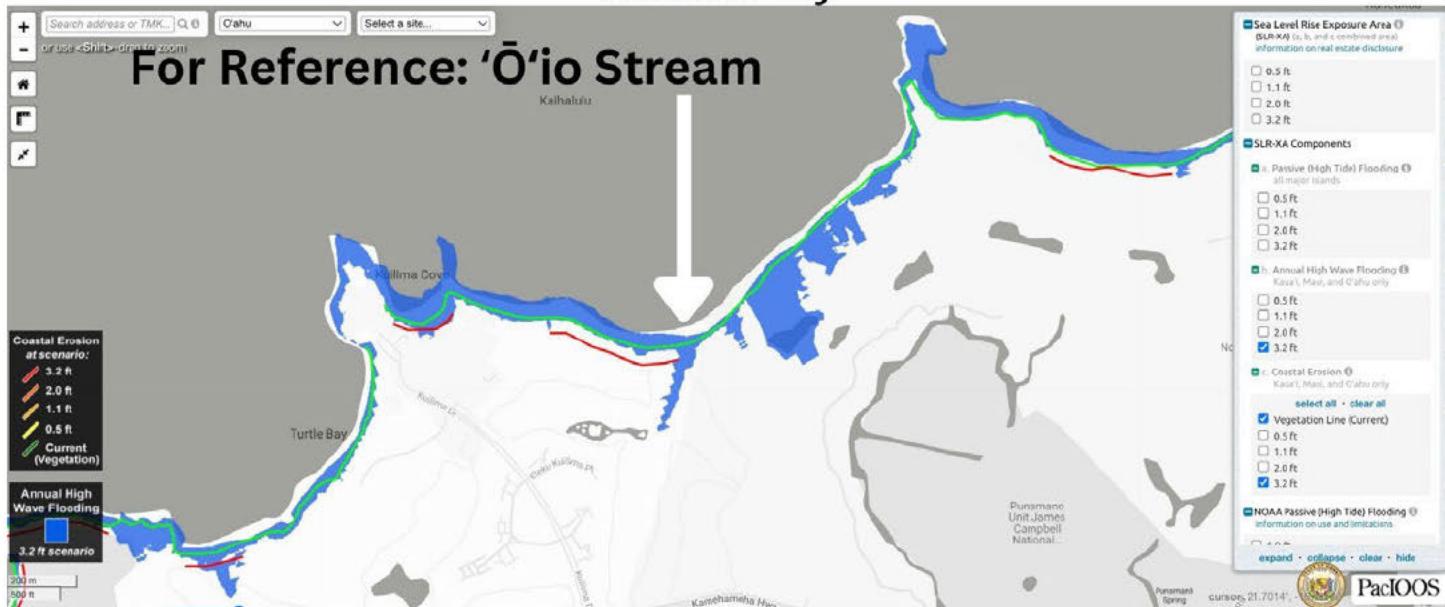

Sea Level Rise Exposure Area at 3.2 Feet (under the 4 feet minimum scenario)

Annual High Wave Flooding at 3.2 Feet (under the 4 feet minimum scenario) at Kaihalulu Bay.

III. No Explanation of the Larger Development Plan

Throughout the November 2025 meeting, Commissioners repeatedly asked the applicant to explain what broader project the culvert is intended to serve. The applicant was unable to provide an adequate answer. A culvert is not a standalone structure; it is part of a larger development plan involving roadways, buildup, and alterations to hydrology and shoreline processes. CWRM cannot properly evaluate a single component of a

larger project when the larger project has not been adequately disclosed, which would be considered segmentation.

IV. Public Trust Responsibilities and Agency Precedent

Approving a permit based on decade-old documents and outdated science would set a dangerous precedent. Such action would undermine the Public Trust Doctrine, weaken protections for Native Hawaiian rights under Article XII, Section 7, and erode public confidence in CWRM's ability to steward Hawai'i's water resources responsibly. The Commission's duty is to present and future generations. An incomplete and outdated record cannot satisfy that duty. Legally, the Commission should demand that the applicant provide updated supplemental technical studies and environmental disclosure documents in order to make an informed decision and fulfill the intent of the law.

VI. Request

For these reasons, Kūpa'a Kuilima respectfully urges the Commission to require a complete and updated Ka Pa'akai Framework Analysis, including independent cultural consultation, identification of traditional and customary practices, analysis of impacts, and proposed mitigation supported by documentation and interview transcripts. We also request that the Commission require updated hydrologic, flood, and sea level rise modeling that incorporates groundwater inundation, the SLR-XA, NOAA's 4-8 ft scenarios, and cumulative watershed impacts, consistent with the State's 2022 and 2025 guidance. Finally, we ask that the Commission continue to defer this permit until all the above required information is provided and reviewed.

Conclusion

‘Ō’io Stream is a living cultural and ecological resource. The decisions made here will shape the health of the stream, the shoreline, and the surrounding community for generations. The applicant has not met the legal, scientific, or cultural thresholds necessary for approval. We urge the Commission to maintain its stance and defer action until the required analyses and studies are properly completed. Mahalo nui for your time, diligence, and commitment to the protection of Hawai’i’s water resources and cultural heritage.

TESTIMONY OF JESSICA DOS SANTOS

Before the Commission on Water Resource Management (CWRM)

RE: SCAP.6438.3 – Wasatch Areté TB Holdings

Proposed Stream Channel Alteration Permit for a Concrete Culvert Across ‘Ō‘io Stream, Kahuku

Aloha Chair Kanaka‘ole and Honorable Commissioners,

My name is Jessica dos Santos. I submit this testimony as a private citizen, long-time Kahuku community member, and former President of the Kahuku Community Association. I am also a former member of the Turtle Bay Cultural Advisory Committee (CAC), on which I served from its inception in 2021 until my resignation in January 2025. I offer this testimony to provide factual clarification regarding the applicant’s claims of consultation and to urge the Commission to deny, or continue deferring, Stream Channel Alteration Permit SCAP.6438.3 due to serious legal, cultural, and scientific deficiencies.

I was asked to serve on the Cultural Advisory Committee because of my leadership role within the Kahuku community and with the understanding that I had a responsibility to report back to the community on matters that could affect them. Throughout my time on the committee, I repeatedly asked direct questions about whether development beyond the existing hotel operations was being planned and whether permits were being pursued. These questions were asked specifically because of the potential impacts to our community and our ‘āina. Those details were not shared.

In 2022, when determinations that would later enable the Areté development were requested and approved, that information was not disclosed to the Cultural Advisory Committee. There was one meeting in which Tom Donovan of Turtle Bay referenced a possible interest by the prior landowners in developing areas referred to as H1, H2, and RR3. However, we were told at that time that no decisions had been made and that development might not proceed because of economic uncertainty. At no point was the committee informed that development would definitively move forward, nor were we consulted on any specific plans, impacts, or mitigation measures related to such development nor any related stream alterations.

The bulk of the committee’s work focused on providing feedback related to existing resort operations, such as an interpretive cultural gallery, a paniolo-themed lū‘au, and guided cultural tours. Even within that limited scope, recommendations from committee members were often not meaningfully incorporated if at all, leaving several of us questioning the purpose and sincerity of the process.

On May 28th, 2024, the Cultural Advisory Committee received an email late at night, just hours before a May 29th, 2024 public press release announced the sale of the land to two new owners. In a subsequent meeting with one of those new owners, Areté, we were informed that development would proceed. Shortly thereafter, the Cultural Advisory Committee was dissolved. Based on my direct experience, I can state clearly and confidently that the committee was never consulted on the Areté development of condos (RR3), nor any hotel development (H1 and H2), nor any stream alteration plans, nor were we informed in a timely or transparent manner that such development was definitively moving forward.

For these reasons, any assertion by the applicant that the Cultural Advisory Committee was consulted as part of stakeholder outreach or as a component of a Ka Pa‘akai Framework

Analysis is inaccurate and misleading. Characterizing the CAC as having been consulted on this development is a false representation of what actually occurred.

This lack of genuine consultation is directly reflected in the broader deficiencies before the Commission today. The Ka Pa'akai Framework Analysis for this project has not been adequately completed. The applicant has not identified any document that satisfies the three required components of Ka Pa'akai: identification of traditional and customary Native Hawaiian practices in the area, analysis of how those practices will be impacted, and specific mitigation measures to address those impacts. The Cultural Impact Assessment from 2012 and the Supplemental Environmental Impact Statement from 2013 do not meet this standard. Moreover, the CAC did not exist at the time those documents were prepared, further underscoring that they cannot credibly be used to demonstrate compliance with Ka Pa'akai.

As someone from this place, I know, and the applicant should know, that 'Ō'io Stream, and its surrounding/connected shorelines, are either actively used, or has the potential to be used, by Native Hawaiian practitioners today for fishing, limu gathering, pa'akai collection, lā'au lapa'au, other subsistence practices, and shoreline recreation. Altering the stream with a concrete culvert will directly affect these practices. Yet this applicant has provided no evidence of proper consultation with practitioners, no documentation of interviews or consent beyond the insufficient 2013 SEIS Cultural Impact Statement for the overall development plans, and no clear explanation of how impacts will be mitigated.

In addition to these cultural failures, the technical analyses supporting this permit are outdated and inadequate. Flood and sea level rise modeling relied upon by the applicant is more than a decade old and has been reviewed by University of Hawai'i experts who found it deficient, particularly for failing to account for groundwater flooding. The analysis does not incorporate the State of Hawai'i's most recent guidance, including the 2022 Hawai'i Sea Level Rise Vulnerability and Adaptation Report and the updated 2025 passive flooding models. These models require evaluation of at least four feet of sea level rise, and more for infrastructure such as culverts. Proceeding with a permit based on obsolete scenarios does not reflect best available science and places both the community and the Commission at risk.

The Commission has a constitutional and public trust duty to protect Hawai'i's water resources and Native Hawaiian rights for present and future generations. Approving a permit based on incomplete cultural analysis, outdated science, and misleading claims of consultation would set a dangerous precedent and undermine public confidence in the Commission's role as a steward of these resources.

For all of these reasons, I respectfully urge the Commission to deny or continue deferring action on SCAP.6438.3 and to require the applicant to complete a lawful and transparent Ka Pa'akai Framework Analysis, conduct genuine cultural consultation, provide updated hydrologic and sea level rise modeling consistent with current State guidance.

Mahalo nui for your careful consideration and for upholding your responsibility to protect 'Ō'io Stream, our community, and the public trust.

Respectfully submitted,

Jessica dos Santos

Community Testimony RE: SCAP 6438.3

Karen Phillips	 <p>I come to this area regularly., I care about protecting streams, ecosystems, and cultural practices.</p>	<p>I oppose the Stream Channel Alteration Permit (SCAP.6438.3) requested by Wasatch Arete TB Holdings., I urge the Commission to defer decision-making until compliance with Article XII, Section 7 - Ka Pa'akai Framework Analysis is fulfilled, as the existing SEIS and CIA are inadequate, outdated and the consultation in the CIA consists of many paid employees of the developer., I believe the existing flood hazard analysis and flooding scenarios modeled are incomplete, as UH Mānoa experts have stated that the low and intermediate low scenarios used for sea level rise projections are obsolete. These flood-risk studies only include outdated sea level rise/storm surge and do not contemplate groundwater flooding, which is a critical component and should be required before any culvert or stream alteration is approved., I am concerned about the cumulative impacts of stream modifications on ecosystems and the well-being of the community., The applicant's modeling does not use the State of Hawai'i's required standards—including the 2022 Sea Level Rise Vulnerability & Adaptation Report, the 2025 passive flooding model update, or the SLR-XA—which must be included for safe and prudent decision-making., I stand with Kūpa'a Kuilima, and I support Kūpa'a Kuilima's call for the Commission to defer approval of this permit until a complete Ka Pa'akai Framework Analysis and flood-risk assessment are conducted. Protecting 'Ōio Stream is critical to maintaining the health of our ecosystems, cultural practices, and community resilience in Kahuku., I am concerned that approving this permit based on outdated, decade-old documents, without rigorous re-examination of current conditions, would set a dangerous precedent, undermine the Public Trust Doctrine, and weaken protections for Native Hawaiian rights under Article XII, Section 7., I urge CWRM to continue deferring this permit until all required cultural, environmental, and hydrologic analyses are completed.</p>	<p>The cultural integrity is important to both the indigenous people of Hawaii and for tourism. If the island culture is overruled by corporate greed without thought to the native interests of the people, then the beauty and attraction of Hawaii will forever be lost.</p>	<p>I authorize Kūpa'a Kuilima to include my name and testimony in the official submission to the Commission on Water Resource Management.</p>

My son grew up walking this shoreline and walking along side this stream. We got to see it before construction began and while they have taken over. We have seen archeologist close to Queen's Bath or Keiki Pool before construction happened and this really lit my son up. He is almost 7 and was maybe 4 at the time. He was really into dinosaurs at the time so of course we spoke to them. They told us that they found native Hawaiian artifacts and knew they would find more but that they were not allowed enough time to do their work to prove their case that building could not commence on this site. We have walked by countless native Hawaiians fishing, relaxing, having 1 year old bday parties, doing hula, praying and more beautiful native Hawaiian practices on this shoreline, as they should have this right. I have seen grandfathers teaching their grandchildren how to fish here on both sides close to this stream. Thanks for hearing my	I authorize Kūpa'a Kuilima to include my name and testimony in the official submission to the Commission on Water Resource Management.

				words. The ground they have cleared my son named, "Peaceful forest" - what do we teach our kids is important by our actions and our choices?

This is one of the few remaining intact coastlines in the island of O'ahu. I regularly visit this shoreline in my personal time to gather plant cuttings for lei making, gather fish and other marine resources, and conduct ceremony. The proposed stream alterations stand to adversely affect the ecosystem which I and many others depend on to conduct traditional, customary, and subsistence practices. There are many other 'ohana from the Kahuku area and across O'ahu which regularly fish on this coastline and would be impacted by stream alterations. The current developer has failed to adequately consider and describe impacts to these practices in any existing documents, including those prepared by prior landowners. A Ka Pa'akai Framework analysis must be completed prior to any further action toward these proposed stream modifications.</p>	
--	--	---	---	--

				<p>I strongly urge the CWRM to uphold its mandate to protect Native Hawaiian rights, stream resources, and the public trust by rejecting this permit application and holding any future resubmissions to the highest levels of scrutiny.</p> <p>Ke aloha aina no, Kawelakai Kahahawai Farrant</p>	
Melvin Hovakimian	[REDACTED]	I live in a nearby community., I work in or near Kahuku., I care about protecting streams, ecosystems, and cultural practices. Kūpa'a Kuilima We respectfully call on decision-makers to halt the proposed development of luxury hotels at Kawela Bay and Turtle Bay, protect our coastal environment, and prioritize the needs of the local community over large-scale commercial interests. The North Shore is served by a two-lane highway that already experiences frequent congestion and traffic standstills. Large-scale hotel construction would require heavy machinery, oversized vehicles, and long-term increases in traffic that our roads are not designed to support. This would create safety risks, delay emergency access, and significantly disrupt daily life for residents. Kūpa'a Kuilima – Stand Firm for the Land, the Ocean, and the People.	I authorize Kūpa'a Kuilima to include my name and testimony in the official submission to the Commission on Water Resource Management.
Joy Silver	[REDACTED]	I live in a nearby community., I work in or near Kahuku., I come to this area regularly., I care about protecting streams, ecosystems, and cultural	I oppose the Stream Channel Alteration Permit (SCAP.6438.3) requested by Wasatch Arete TB Holdings., I urge the Commission to defer decision-making until compliance with Article XII, Section 7 - Ka Pa'akai Framework Analysis is fulfilled, as the existing SEIS and CIA are inadequate, outdated and the consultation in the CIA consists of many paid employees of the developer., I believe the existing flood hazard analysis and flooding scenarios modeled are incomplete, as UH Mānoa experts have stated that the low and intermediate low scenarios used for sea level rise projections are obsolete. These flood-risk studies only include outdated sea level rise/storm surge and do not contemplate groundwater flooding,	Water is life. We need to look to Native Hawaiian as well as other indigenous cultures and understand the importance of protecting water. We are stewards of this land. Please understand that what we do today affects all future generations and species.	I authorize Kūpa'a Kuilima to include my name and testimony in the official submission to the Commission on Water

		practices.	which is a critical component and should be required before any culvert or stream alteration is approved., I am concerned about the cumulative impacts of stream modifications on ecosystems and the well-being of the community., The applicant's modeling does not use the State of Hawai'i's required standards—including the 2022 Sea Level Rise Vulnerability & Adaptation Report, the 2025 passive flooding model update, or the SLR-XA—which must be included for safe and prudent decision-making., I stand with Kūpa'a Kuilima, and I support Kūpa'a Kuilima's call for the Commission to defer approval of this permit until a complete Ka Pa'akai Framework Analysis and flood-risk assessment are conducted. Place names in Hawai'i tell a story of the significance of that place, and 'ōio Stream is an example of that. The naming of 'ōio Stream shows us that this place is capable of holding an abundance of bonefish ('ōio), who typically live in shallow sandflats and reef areas. Constructing a permanent concrete structure would undoubtedly change the environment in which the 'ōio inhabit, thus potentially resulting in the loss of 'ōio in the area. A loss in fish in the area would adversely impact the health of our reefs nearby. The environmental and cultural costs that come with the culvert far outweigh the reason to construct one, and I strongly support Kūpa'a Kuilima's call for the Commission on Water Resource Management to defer approval of this permit until a complete Ka Pa'akai Framework Analysis and flood-risk assessment are conducted. Mahalo nō.</p>	<p>I authorize Kūpa'a Kuilima to include my name and testimony in the official submission to the Commission on Water Resource Management.</p>

Protecting 'Ō'io Stream is critical to maintaining the health of our ecosystems, cultural practices, and community resilience in Kahuku., I am concerned that approving this permit based on outdated, decade-old documents, without rigorous re-examination of current conditions, would set a dangerous precedent, undermine the Public Trust Doctrine, and weaken protections for Native Hawaiian rights under Article XII, Section 7., I urge CWRM to continue deferring this permit until all required cultural, environmental, and hydrologic analyses are completed.</p>	<p>Protecting 'Ō'io Stream matters because it is not just a drainage feature—it is a living, culturally significant waterway that supports native ecosystems, reflects traditional Hawaiian stewardship practices, and helps manage flooding in a changing climate. 'Ō'io Stream connects mauka to makai, carrying fresh water, nutrients, and life to coastal areas. Altering it with permanent concrete infrastructure risks long-term harm: increased flooding upstream and downstream, loss of habitat, disruption of cultural practices, and irreversible impacts driven by outdated data that does not reflect today's rainfall patterns, sea level rise, or groundwater conditions. Once a stream is channelized, the damage cannot easily be undone. Protecting 'Ō'io Stream means honoring cultural responsibility, following sound science, and choosing resilient, forward-looking solutions that safeguard both the land and the community for future generations.</p> <p>I authorize Kūpa'a Kuilima to include my name and testimony in the official submission to the Commission on Water Resource Management.</p>	

Damien Nāko'a Farrant	 <p>I live in a nearby community., I am a Native Hawaiian cultural practitioner., I work in or near Kahuku., I come to this area regularly., I care about protecting streams, ecosystems, and cultural practices.</p>	<p>I oppose the Stream Channel Alteration Permit (SCAP.6438.3) requested by Wasatch Arete TB Holdings., I am a Native Hawaiian and/or cultural practitioner and the documents provided do not fully list the extent of the native rights and traditional and customary practices that take place in the vicinity of the project as required by Article XII, Section 7 - Ka Pa'akai Framework Analysis., I am a Native Hawaiian and/or cultural practitioner and the documents provided do not fully describe the potential impacts to the native rights and traditional and customary practices that take place in the vicinity of the project as required by Article XII, Section 7 - Ka Pa'akai Framework Analysis., I am a Native Hawaiian and/or cultural practitioner and the documents provided do not include mitigation measures for the potential impacts to the native rights and traditional and customary practices that take place in the vicinity of the project as required by Article XII, Section 7 - Ka Pa'akai Framework Analysis., I believe the existing flood hazard analysis and flooding scenarios modeled are incomplete, as UH Mānoa experts have stated that the low and intermediate low scenarios used for sea level rise projections are obsolete. I also hold a Ph.D. in environmental science and management. I have witnessed considerable development by Turtle Bay for decades, the vast majority of which has diminished natural and cultural resources. This new effort to construct a concrete culvert in 'Ō'io stream threatens existing water flow from mauka to makai and has high potential to increase risk of flooding and create complications with rising sea levels. The negative impacts of concrete culverts on hydrological cycles are evident across Hawai'i and in many other parts of the world. By further disrupting stream flow and hydrological cycles in 'Ō'io stream, this proposed project threatens the mixing of terrestrial fresh water and nutrients with the coastal environment that produces an abundance of limu and other marine life that are key parts of cultural traditions. In addition to the threats that this project poses to the natural ecological cycles and cultural practices, the effort</p>	<p>I authorize Kūpa'a Kuilima to include my name and testimony in the official submission to the Commission on Water Resource Management.</p>
-----------------------	--	---	---	---

				<p>to rush this and related permits for development initiatives reflect a lack of respect for existing policies and procedures including but not limited to the rules set forth with the Ka Pa'akai Framework Analysis. These procedures and frameworks are designed to ensure that developers and agencies are accountable to communities and Native Hawaiian traditional and customary practices. Rushing through these procedures with outdated information for the convenience of implementing this and other projects is a disservice to the intention of those frameworks and the communities that they are designed to serve.</p> <p>I would like to see this permit denied as it poses threats to ecosystems and cultural practices now and in the future. Any further consideration of this project needs to at least be deferred until flood hazard analyses have been updated and community members have been consulted more extensively to ensure that any modifications do not impact Native Hawaiian traditional and customary rights now and in the future.</p>	
Karen	[REDACTED]	I live in Kahuku.,	I oppose the Stream Channel Alteration Permit (SCAP.6438.3)	This project offers no	I authorize

Turner	[REDACTED]	I care about protecting streams, ecosystems, and cultural practices.	<p>requested by Wasatch Arete TB Holdings., I urge the Commission to defer decision-making until compliance with Article XII, Section 7 - Ka Pa'akai Framework Analysis is fulfilled, as the existing SEIS and CIA are inadequate, outdated and the consultation in the CIA consists of many paid employees of the developer., I believe the existing flood hazard analysis and flooding scenarios modeled are incomplete, as UH Mānoa experts have stated that the low and intermediate low scenarios used for sea level rise projections are obsolete. These flood-risk studies only include outdated sea level rise/storm surge and do not contemplate groundwater flooding, which is a critical component and should be required before any culvert or stream alteration is approved., I am concerned about the cumulative impacts of stream modifications on ecosystems and the well-being of the community., The applicant's modeling does not use the State of Hawai'i's required standards—including the 2022 Sea Level Rise Vulnerability & Adaptation Report, the 2025 passive flooding model update, or the SLR-XA—which must be included for safe and prudent decision-making., I stand with Kūpa'a Kuilima, and I support Kūpa'a Kuilima's call for the Commission to defer approval of this permit until a complete Ka Pa'akai Framework Analysis and flood-risk assessment are conducted. Protecting 'Ōio Stream is critical to maintaining the health of our ecosystems, cultural practices, and community resilience in Kahuku., I am concerned that approving this permit based on outdated, decade-old documents, without rigorous re-examination of current conditions, would set a dangerous precedent, undermine the Public Trust Doctrine, and weaken protections for Native Hawaiian rights under Article XII, Section 7., I urge CWRM to continue deferring this permit until all required cultural, environmental, and hydrologic analyses are completed.</p>	<p>benefit to the community of Kahuku. The coastline for the development is an important area for native species and should be preserved, a high end condo development is a shameful addition to the North Shore.</p>	Kūpa'a Kuilima to include my name and testimony in the official submission to the Commission on Water Resource Management.
Davina Sanders	[REDACTED]	I live in Kahuku., Myself and/or my 'ohana are from Kahuku., Myself and/or my 'ohana have been in Kahuku for generations., I live in a nearby community., I am a Native Hawaiian cultural practitioner., I	<p>I oppose the Stream Channel Alteration Permit (SCAP.6438.3) requested by Wasatch Arete TB Holdings., I urge the Commission to defer decision-making until compliance with Article XII, Section 7 - Ka Pa'akai Framework Analysis is fulfilled, as the existing SEIS and CIA are inadequate, outdated and the consultation in the CIA consists of many paid employees of the developer., I am a Native Hawaiian and/or cultural practitioner and the documents provided do not fully list the extent of the native rights and traditional and customary practices that take place in the vicinity of the project as required by Article XII, Section 7 - Ka Pa'akai Framework Analysis., I am a Native Hawaiian and/or cultural practitioner and the documents provided do not fully describe the potential impacts to the native rights and traditional and customary practices that take place in the vicinity of the project as required by Article XII, Section</p>	<p>O Kahawai Oio he tupuna oia. Dear Commissioners,

Aloha mai kākou,

My name is David H. Stant Jr, and I am a resident of the Ko‘olauloa/North Shore community. I am submitting testimony in strong support of approval of the Stream Channel Alteration Permit (SCAP) for the Kapa‘a Bridge project.

I want to respectfully ask the Board to stay focused on what is actually before you today. This permit is only for the Kapa‘a Bridge and associated work within the channel. It is not a permit for the entire Turtle Bay development, and it should not be treated as such.

Much of the opposition testimony I’ve heard is not about the bridge or the stream channel at all. Instead, it appears to be an attempt to stop the entire project by delaying this permit and calling for another SEIS. That request goes far beyond the scope of this application and, in my view, is not justified.

This project has already gone through more than a decade of study, review, and public process, including a Cultural Impact Assessment and a Final SEIS that was accepted and approved. Requiring the applicant to redo the entire FSEIS again—when this permit involves the same bridge project previously approved by the Commission in 2022—does not serve the community or the process.

I have attended community meetings, outreach sessions, and Neighborhood Board presentations over the years, and I have seen sincere efforts by Areté Collective and Turtle Bay to listen to community concerns, engage with kūpuna, fishermen, cultural practitioners, and residents, and make informed decisions. These efforts matter.

It is also important to remember that the East Main Drain is an engineered drainage system, not a natural stream with traditional or customary practices occurring within the culvert area. The permit request reflects that reality.

This bridge project will support long-term shoreline management, improve infrastructure, and help create hundreds of jobs that will directly benefit our local community. Holding up this permit for reasons unrelated to its actual scope only hurts working families and delays needed improvements.

I respectfully urge the Commission to evaluate this application based on the facts, the studies already completed, and the specific permit being requested—not on broader objections to the overall development.

Mahalo nui loa for the opportunity to provide testimony and for your continued service to our community.

Me ke aloha,

David H. Stant Jr

Subject: [EXTERNAL] Agenda B1 – Support of SCAP Approval for the Kapa'a Bridge Project
Date: Monday, January 19, 2026 7:42:43 AM

Dear Commissioners,

Aloha mai kākou,

My name is Laurie Ann L. Stant, and I live in the Ko‘olauloa / North Shore area. I am writing in support of approval of the Stream Channel Alteration Permit (SCAP) for the Kapa‘a Bridge project.

I respectfully ask the Commission to consider this application based on the specific permit before you. This SCAP request applies only to the Kapa‘a Bridge and work within the existing channel. It is not an approval for the full Turtle Bay development, and it should not be evaluated as if it were.

Some opposition testimony has raised concerns about flooding, groundwater impacts, and potential harm to the ‘Ō‘io Stream habitat. I appreciate those concerns, but I believe they have already been carefully studied and addressed through the existing environmental review process. The project is supported by extensive hydrology, flood hazard, and environmental analyses that were completed as part of the Final SEIS and related technical studies.

It is also important to note that the East Main Drain is an engineered drainage system designed to manage stormwater flows. It is not a natural stream supporting traditional or customary practices within the culvert area. For that reason, the suggestion that this permit would cause irreversible harm to a natural stream environment does not accurately reflect the conditions on the ground.

Calls to delay this permit until another SEIS is conducted go well beyond the scope of the SCAP application. The bridge project itself was previously reviewed and approved by this Commission in 2022, and there has been no new information presented that would justify reopening the entire Final SEIS process.

As a community member, I also recognize the responsibility we have to care for the land and ocean. In this case, I believe that responsibility has been met through years of study, consultation, and engagement with cultural practitioners, environmental groups, fishermen, kūpuna, and residents. Continuing to delay this permit does not provide additional environmental protection, but it does delay infrastructure improvements and job opportunities that our community needs.

This project will support shoreline management, public safety, and long-term resilience while creating hundreds of local jobs. Evaluating this permit on its actual merits, rather than broader opposition to unrelated aspects of the development, is both fair and appropriate.

For these reasons, I respectfully urge the Commission to approve the Stream Channel Alteration Permit for the Kapa‘a Bridge project.

Mahalo nui loa for your time and consideration.

Me ke aloha,

Laurie Ann L. Stant

From: Kaui Benson [REDACTED]
Sent: Monday, January 19, 2026 8:29 AM
To: DLNR.CW.DLNRCWRM <dlnr.cwrm@hawaii.gov>
Subject: [EXTERNAL] Kapa'a Bridge

Dear Commissioners,

Aloha mai kākou,

My name is Kaui Benson, and I am a resident of the Ko'olauloa / North Shore community. I respectfully submit this testimony in support of approving the Stream Channel Alteration Permit (SCAP) for the Kapa'a Bridge project.

I ask the Commission to evaluate this application within its proper and legally defined scope. The permit before you is limited to work associated with the Kapa'a Bridge and improvements within the existing channel. It is not an application for the broader Turtle Bay development, nor does it reopen land use or zoning approvals that were addressed through prior processes.

Opposition testimony has raised concerns regarding flood hazards, groundwater impacts, and potential adverse effects on stream habitat. These concerns are important; however, they are not new and have already been evaluated through extensive environmental review. The project is supported by more than a decade of study, including hydrologic and flood hazard analyses conducted as part of the Final Supplemental Environmental Impact Statement (FSEIS), which was accepted and relied upon by regulatory agencies.

No substantive new information has been presented that would justify reopening or repeating the FSEIS process. Requiring a new SEIS for a project element that was previously reviewed and approved would exceed the scope of this permit and undermine the integrity of the environmental review framework.

It is also critical to accurately characterize the project area. The East Main Drain is an engineered drainage facility designed to convey stormwater and manage flood flows. It is not a natural stream supporting traditional or customary practices within the culvert area affected by this permit. Assertions that approval of this SCAP would cause irreversible harm to a natural stream environment are inconsistent with the documented

conditions of the site and prior agency findings.

The Kapa'a Bridge project itself was approved by this Commission in 2022. The current permit request is consistent with that approval and necessary to allow the project to proceed as designed. Further delay based on issues unrelated to the specific scope of the SCAP would set an unreasonable precedent for infrastructure projects that have already undergone comprehensive review.

Approving this permit will support long-term shoreline management, improve public safety and infrastructure resilience, and provide meaningful employment opportunities for local residents. Continued delay does not enhance environmental protection; rather, it prolongs uncertainty and prevents the community from realizing the benefits of a project that has already met applicable regulatory requirements.

For these reasons, I respectfully urge the Commission to approve the Stream Channel Alteration Permit for the Kapa'a Bridge project based on the facts, the existing record, and the permit's defined scope.

Mahalo nui loa for your time, consideration, and service to our community.

Subject: [EXTERNAL] Agenda B1 – Testimony in Support of the Kapa'a Bridge SCAP
Date: Monday, January 19, 2026 2:19:44 PM

Dear Commissioners,

Aloha mai kākou,

My name is Nicholas Starkel. I submit these comments in support of the Stream Channel Alteration Permit (SCAP) for the Kapa'a Bridge project and do so with respect for both environmental review requirements and the integrity of agency decision-making.

The Commission's role in this matter is narrow but important. The application before you concerns discrete work associated with the Kapa'a Bridge and improvements within an existing drainage channel. It is not a request to reconsider the overall Turtle Bay development, nor does it reopen prior approvals that were resolved through earlier environmental and land use processes.

Several comments opposing the permit argue that flood risk, groundwater impacts, and stream habitat concerns require further environmental study, including preparation of an additional SEIS. From a procedural standpoint, such a request must be supported by evidence of significant new information or changed circumstances not previously analyzed. Based on the existing administrative record, those criteria have not been met.

The Final SEIS already evaluated hydrology, drainage capacity, flood behavior, and environmental impacts associated with the project area. Those analyses were reviewed and accepted by the appropriate agencies and relied upon in granting prior approvals, including this Commission's 2022 approval of the Kapa'a Bridge project. The current SCAP application does not introduce new project elements that would materially alter those conclusions.

It is also important to ground the analysis in accurate site conditions. The East Main Drain is a constructed drainage facility designed to manage stormwater conveyance. It does not function as a natural stream supporting traditional or customary practices within the area affected by the proposed work. Assertions to the contrary are not supported by the record.

Administrative processes depend on finality and consistency. Requiring additional environmental review without a legally sufficient basis would extend the scope of this permit beyond its intended purpose and weaken confidence in established review frameworks. Infrastructure projects that have undergone extensive analysis must be allowed to proceed when permit applications conform to prior approvals and regulatory standards.

For these reasons, I respectfully support approval of the Stream Channel Alteration Permit for the Kapa'a Bridge project and encourage the Commission to act based on the existing record and the defined scope of the permit.

Mahalo for your time and careful consideration.

Respectfully,

Nicholas Starkel, Oahu Resident.

Re: Agenda # B1

Subject: Testimony in Support of SCAP Approval for the Kapa'a Bridge Project

Aloha Commissioners,

I am submitting testimony in support of Areté Collective and their development plans as it relates to the Stream Channel Alteration Permit for the Kapa'a Bridge project.

As an employee, I have found Areté Collective to be proactive, responsive, and a good partner in supporting sustainable development. From taking care of the golf courses, to proactively hiring the Hawaii Marine Animal Rescue to regularly monitoring by AECOS, and providing onsite wildlife education for staff and contractors, Areté has demonstrated a commitment to protecting the environment and natural and cultural resources in the larger development area.

Furthermore, Areté has validated its pledge to engage meaningfully with the community. They have listened to concerns and adjusted, including increasing setbacks, reducing the project footprint, and increasing the amount of native plants throughout the entire project.

For these reasons, I respectfully request that the Commission approve the Stream Channel Alteration Permit.

Mahalo,

Aloha,

My name is Faith Wenzl, and I am submitting testimony as an interested community member regarding the Stream Channel Alteration Permit for the Kapa'a Bridge project.

I am not a technical expert, but I am someone who follows issues that affect our community and tries to understand the decisions being made on our behalf. After reviewing the information available and listening to the testimony presented, I believe this permit request deserves to be evaluated carefully and within its appropriate scope.

The application before the Commission is limited to work associated with the Kapa'a Bridge within an existing channel. It is not an approval for the broader Turtle Bay project, nor is it a reopening of previously accepted environmental determinations. In my view, expanding the scope of this permit review beyond what is being requested creates confusion and undermines the integrity of the established process.

Concerns about flooding, groundwater movement, and environmental impacts are important and should never be dismissed. However, these matters were addressed through the Final SEIS and supporting studies that were previously reviewed and accepted. I have not seen new information presented that would justify requiring another SEIS or delaying this specific permit.

The East Main Drain has long functioned as a constructed drainage system. While protecting natural resources is essential, it is also important to accurately characterize existing conditions when making regulatory decisions.

As someone with an interest in responsible planning and fair process, I believe that projects which have met regulatory requirements and undergone extensive review should be allowed to proceed. Continued delays without new evidence do not strengthen environmental protection and can erode public trust in the system.

For these reasons, I respectfully support approval of the Stream Channel Alteration Permit for the Kapa'a Bridge project.

Thank you for the opportunity to provide testimony and for your consideration.

Respectfully,

Faith Wenzl

To Whom It May Concern,

I am writing this letter in strong support of Arete Collective and their proposed bridge project over the East Main Drain on the North Shore of O‘ahu. I am a native of Hawai‘i and currently reside on the North Shore of Oahu, and I conducted extensive research for this project. This project was previously reviewed and approved by the appropriate commission in 2022, and I understand that the same approved scope, design, and execution plan will be followed and implemented as originally presented.

Arete Collective has demonstrated diligence and responsibility throughout the planning process. The project has already completed the required Environmental Impact Study, Cultural Inventory Study, and has received approval through the Final Supplemental Environmental Impact Statement (FSEIS). These efforts reflect a clear commitment to respecting Hawai‘i’s natural resources, cultural significance, and regulatory requirements.

The construction of this bridge will greatly enhance safe and responsible access for both kama‘āina and visitors to enjoy the natural beauty of the North Shore shoreline. The project will support community-focused amenities provided by Arete Collective, including parking, showers, gathering areas, fishing access, ocean maintenance, and educational and outreach programs. These features will help unite the community while promoting stewardship, education, and appreciation of Hawai‘i’s unique environment, culture, and natural beauty.

Arete Collective has consistently demonstrated its intent to fully comply with all State of Hawai‘i regulations and environmental protections. The organization remains committed to ensuring that no harm is caused to existing stream flow, ocean tides, or coastal currents throughout construction and beyond. Their continued cooperation with regulatory agencies and community partners further reinforces confidence in the responsible execution of this project.

This bridge project will benefit the many individuals and families who live in, work in, and visit the North Shore area by providing necessary infrastructure while preserving the character and integrity of the surrounding environment. It represents a thoughtful balance between access, safety, education, and environmental stewardship.

I am in full support of the Arete Collective bridge project as previously approved in 2022. I am confident that Arete Collective will continue to work collaboratively with the community, outreach groups, and regulatory agencies to ensure the successful construction of this bridge and the continued positive impact it will have on the North Shore of O‘ahu.

Thank you for your time and consideration.

Sincerely,
Sterling Carvalho

Aloha mai kākou,

My name is Kori Napa'a, and I submit this testimony in support of approval of the Stream Channel Alteration Permit (SCAP) for the Kapa'a Bridge project. I do so as a member of the public who values both environmental protection and adherence to established regulatory process.

At the outset, I respectfully emphasize the importance of evaluating this application within its legally defined scope. The permit before the Commission concerns work associated solely with the Kapa'a Bridge and related improvements within an existing channel. It is not an application for approval of the entire Turtle Bay development, nor does it reopen prior land use or entitlement decisions that have already been resolved through earlier proceedings.

Opposition testimony has asserted that flood hazard analysis, groundwater impacts, and habitat effects are insufficiently addressed, and that an additional Supplemental Environmental Impact Statement (SEIS) should be required. Based on the administrative record, these issues have already been analyzed through extensive environmental review, including hydrologic modeling, flood hazard assessments, and environmental impact analysis conducted as part of the Final Supplemental Environmental Impact Statement (FSEIS). That FSEIS was accepted and relied upon by the appropriate agencies and formed the basis for prior approvals, including the Commission's approval of the Kapa'a Bridge project in 2022.

Under established environmental review principles, a new or supplemental SEIS is warranted only where there is significant new information or changed circumstances that were not previously considered, and that would materially alter the analysis. No such information has been presented in connection with this SCAP application. Requiring a new SEIS in the absence of new facts would exceed the scope of this permit review and undermine the finality and predictability of the environmental review process.

It is also important to accurately characterize the project area. The East Main Drain is a constructed drainage facility designed to convey stormwater and manage flood flows. It does not constitute a natural stream supporting traditional or customary practices within the culvert area affected by the proposed work. Assertions of irreversible harm to a natural stream environment are therefore inconsistent with the documented conditions of the site and prior agency findings.

The current SCAP application is consistent with the project previously approved by this Commission and represents a necessary step in implementing that approval. Delaying or denying the permit based on objections unrelated to the permit's scope would effectively revisit settled matters and set an unreasonable precedent for infrastructure projects that have already undergone comprehensive environmental review.

For these reasons, and based on the existing record, I respectfully urge the Commission to approve the Stream Channel Alteration Permit for the Kapa'a Bridge project.

Mahalo Nui Loa for your careful consideration and for your continued service.

Respectfully submitted,

Mahalo,
Kori Napa'a

 [Book time to meet with me](#)

Dear Commissioners,

Aloha,

My name is Brian Derby. I submit this testimony in support of approving the Stream Channel Alteration Permit (SCAP) for the Kapa'a Bridge project. I do so from the combined perspective of someone trained in regulatory review and administrative process, and as a retired Fire Captain who has spent a career assessing risk, flood hazards, infrastructure safety, and emergency response impacts.

From a legal and procedural standpoint, it is critical that the Commission's review remain limited to the scope of the permit application before you. This SCAP concerns specific work within an existing channel related to the Kapa'a Bridge. It is not a request to approve, modify, or expand the broader Turtle Bay development, and it should not be evaluated as such.

Concerns raised regarding flood hazards, groundwater movement, and environmental impacts are serious issues—particularly to anyone with experience in emergency management. However, these issues are not new, nor are they unresolved. They have already been evaluated through the Final Supplemental Environmental Impact Statement and supporting hydrologic and technical studies, which were accepted and approved after extensive review. No new data has been presented that would warrant reopening that process or delaying this permit.

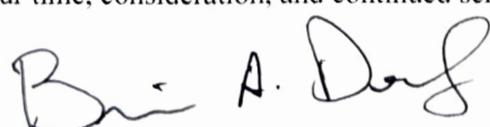

From a practical and safety-oriented perspective, the East Main Drain functions as an engineered stormwater conveyance system. Properly permitted improvements to infrastructure like this bridge are essential for managing storm events, reducing flood risk, and ensuring safe access for emergency vehicles and first responders. Delaying necessary infrastructure work does not increase safety—it increases uncertainty and risk during severe weather events.

The Commission previously approved the Kapa'a Bridge project in 2022. The permit before you is an implementation-level approval required to carry out that decision. Requiring a new or additional SEIS at this stage would exceed the scope of this permit review and create an unreasonable precedent for projects that have already satisfied environmental and regulatory requirements.

From both a regulatory and public safety standpoint, approving this permit supports responsible infrastructure planning, long-term risk reduction, and community resilience. I respectfully urge the Commission to evaluate this application based on the established record and approve the Stream Channel Alteration Permit as submitted.

Mahalo for your time, consideration, and continued service to our community.

Respectfully,

A handwritten signature in black ink that reads "Brian A. Derby". The signature is fluid and cursive, with "Brian" on the top line and "A. Derby" on the bottom line.

Subject: Agenda B1, Support of SCAP Approval for the Kapa'a Bridge Project

Dear Commissioners,

My name is Stewart Carvalho, a resident of Lā'ie, golf coach for Kahuku High School for the past 8 years, and avid beach user of Turtle Bay/keiki beach near the Turtle Bay golf course. I would like to offer my support to the Areté Collective's Stream Channel Alteration Permit. Approval of this permit will allow Areté Collective to build a crossing across the East Main Drain, a man-made, engineered drainage channel that conveys mauka runoff from the highway toward the shoreline. Seeing first hand almost on a weekly basis over the years of how the golf course and beach area is affected by the rain and tides, a project such as the one that is being proposed by the Areté Collective will not only enhance the golf course for players such as our Kahuku team, but also the beach area for our entire community and state.

As stated in 2022 when the same permit was approved, the project will not affect traditional or customary Native Hawaiian practices. This in and of itself, along with the major benefits it will provide to maintain the golf course for generations to come, will greatly enhance everyone's experiences. Additionally, it will provide access for the community to park closer to Keiki Pond with restrooms and showers. These public benefits, and many more, were requested by the community and outlined in the 1986 Unilateral Agreement.

This project is the result of more than 10 years of research and consultation. From the Cultural Impact Assessment and the Final SEIS to the more recent meetings with kūpuna, fishermen, cultural practitioners, environmental groups, and hundreds of residents, the former owners and now Areté Collective have consistently sought public input.

Today, Areté Collective has demonstrated its commitment to responsible development by increasing setbacks, reducing the project footprint, improving access to the shoreline, removing invasive ironwood trees, and planting native plants along the coastline and throughout the golf course

For these reasons and more, I personally, along with many other community members I have talked to about this project, 100% support what the Areté Collective have planned. I request for the approval of their permit to ensure the community's vision for this area and expect it comes to fruition.

Mahlo,

Stewart Carvalho

Subject: Agenda B1, Support of SCAP Approval for the Kapa'a Bridge Project

Dear Members of the Commission,

My name is Kekela Miller, a lifelong resident of Ko'olauloa, kumu hula, a member of the Ko'olauloa Neighborhood Board and Lā'ie Community Association, and an original member of the Kuilima North Shore Strategy Planning Committee (KNSSPC) which has reorganized again.

The KNSSPC is a community-led group formed in the 1980s to work with Turtle Bay's ownership to create the Unilateral Agreement of 1986 – an agreement outlining community benefits tied to the land and development triggers. Many of these benefits have not been realized until now, and I am so grateful to see this project underway.

With development now underway, the new road and bridge over the 'Ō'io Stream, also known as the East Main Drain, will finally provide improved access, a comfort station, parking, pathways, and other community-serving features we have long anticipated. We also look forward to new affordable housing and a childcare center made possible through Areté's development.

It is also important to note that the "stream" referenced in this permit is a man-made waterway conveying mauka runoff from the highway toward the shoreline. No traditional Native Hawaiian practices occur within the area. The Cultural Inventory Study and FSEIS found that no traditional and customary practices occur within the project area. This was confirmed by the Commission in 2022 and reiterated in the most recent staff report.

From my perspective, Areté has also met the requirements of the Ka Pa'akai Framework by documenting traditional and customary practices, analyzing impacts, and implementing appropriate mitigation. There has been extensive engagement for more than 40 years, and Areté voluntarily paused work for months to allow additional outreach.

As a result, mitigation has expanded to include increased setbacks, reduced building footprint and count, improved access, native landscape restoration, and ongoing monitoring.

Mahalo for considering and approving this permit application, which remains unchanged from when it was initially accepted. I am in full support.

Aloha,

Lucy Kekela Miller

Kekela Miller, Kupuna and Kuilima North Shore Strategy Planning Committee Member

To: [DLNR.CW.DLNRCWRM](#); [Kariya-Ramos, Suzanne M](#)
Subject: [EXTERNAL] Support of SCAP
Date: Tuesday, January 20, 2026 1:01:41 AM

Dear Commissioners,

Aloha,

My name is Nalia Toki, and I am a North Shore resident and local business professional. I am writing in support of approval of the Stream Channel Alteration Permit (SCAP) for the Kapa‘a Bridge project.

From a professional standpoint, I believe it is important that regulatory decisions remain focused on the specific permit application under review. This SCAP request is limited to work associated with the Kapa‘a Bridge within an existing drainage channel. It is not an application for the entire Turtle Bay development, and it should not be delayed or reconsidered based on issues that fall outside the scope of this permit.

Concerns raised regarding flooding, groundwater, and environmental impacts deserve careful consideration. However, these topics have already been evaluated through the Final Supplemental Environmental Impact Statement and related technical studies, which were reviewed and approved following extensive public and agency input. No new or material information has been presented that would justify reopening that process for this permit.

The East Main Drain is a constructed drainage system designed to manage stormwater. The proposed bridge work aligns with its engineered function and with prior approvals issued by the Commission, including the 2022 approval of the Kapa‘a Bridge project. Revisiting previously resolved issues at this stage would undermine regulatory certainty and create unnecessary delays for infrastructure projects that have already met established requirements.

From a business and community perspective, predictable and consistent permitting processes are essential. Timely approval of this permit supports infrastructure improvements, responsible planning, and continued investment that benefits local workers and the surrounding community.

I respectfully encourage the Commission to evaluate this application based on the existing record, the studies already completed, and the specific scope of the permit being requested, and to approve the Stream Channel Alteration Permit as submitted.

Thank you for your time and consideration.

Mahalo,

Nalia

From: [LaRissa Stant](#)
To: [DLNR.CW.DLNRCWRM](#); [Kariya-Ramos, Suzanne M](#)
Subject: [EXTERNAL] Agenda B1 – Support for Approval of SCAP for Kapa'a Bridge
Date: Tuesday, January 20, 2026 6:21:31 AM

Dear Commissioners,

Aloha,

My name LaRissa Stant and I am a resident of the North Shore. I am submitting testimony in support of approving the Stream Channel Alteration Permit for the Kapa'a Bridge project.

I respectfully urge the Commission to evaluate this application within the proper scope of review. The SCAP request applies only to work associated with the Kapa'a Bridge within an existing channel. It is not an application for the entire Turtle Bay project and should not be delayed based on issues outside the permit's jurisdiction.

Opposition testimony has questioned whether flood hazards, groundwater flow, and habitat impacts have been adequately addressed. From my review, these issues were already evaluated through the Final SEIS and supporting hydrologic and environmental studies. No new information has been presented that would warrant reopening or repeating the SEIS process.

The East Main Drain is a constructed drainage feature designed to convey stormwater. Characterizing it as a natural stream with unresolved traditional or customary uses does not align with the documented conditions of the site or prior Commission findings.

This bridge project was previously approved by the Commission in 2022, and the current permit request is consistent with that approval. Delaying action to require another SEIS goes beyond the requirements of this permit and sets an unreasonable precedent for infrastructure projects that have already undergone extensive review.

Approving this permit will allow needed infrastructure improvements to proceed while supporting local jobs and long-term planning for the area. I respectfully ask the Commission to approve the Stream Channel Alteration Permit as submitted.

Thank you for your time and consideration.

Sincerely,

LaRissa Stant

Re: Agenda #

Subject: Testimony in Support of SCAP Approval for the Kapa'a Bridge Project

Aloha Commissioners,

I am submitting testimony in support of Areté Collective and the development plans as it relates to the Stream Channel Alteration Permit for the Kapa'a Bridge project.

As an employee, I have found Areté Collective to be proactive, responsive, and a good partner in supporting sustainable development. From taking care of the golf courses, to proactively helping the Hawaii Marine Animal Response to regularly monitor by AECOS, and providing on-site wildlife education for staff and contractors, Areté has demonstrated a commitment to protecting the environment and natural and cultural resources in the larger development area.

Furthermore, Areté has validated its pledge to engage meaningfully with the community. They have listened to concerns and adjusted, including increasing setbacks, reducing the project footprint, and increasing the amount of native plants throughout the entire project.

For these reasons, I respectfully request that the Commission approve the Stream Channel Alteration Permit.

To: [DLNR.CW.DLNRCWRM](#); [Kariya-Ramos, Suzanne M](#)
Subject: [EXTERNAL] Agenda B1 - Testimony in Support of the Kapa'a Bridge SCAP
Date: Wednesday, January 21, 2026 4:36:12 PM

Dear Commissioners,

Aloha,

My name is Alex Reinprecht. I submit this written testimony in support of approval of the Stream Channel Alteration Permit (SCAP) for the Kapa'a Bridge project.

From a regulatory and procedural standpoint, it is important that the Commission's review remain confined to the specific permit application before it. The SCAP request concerns discrete work within an existing channel related to the Kapa'a Bridge and does not constitute approval of, nor expansion upon, the broader Turtle Bay development. Issues unrelated to the scope of this permit should not be used as a basis to delay or deny action on this application.

The record reflects that environmental concerns raised in opposition—particularly those related to flood hazards, groundwater impacts, and habitat effects—were previously analyzed through the Final Supplemental Environmental Impact Statement and accompanying technical studies. The Commission accepted and approved the FSEIS, and no new evidence has been presented demonstrating changed circumstances or previously unconsidered impacts that would trigger the need for additional environmental review under applicable law.

Moreover, the East Main Drain has been consistently characterized in the administrative record as an engineered drainage system designed to convey stormwater. Regulatory determinations regarding this permit should be grounded in the documented function and condition of the channel, as opposed to characterizations that are inconsistent with prior agency findings.

The Commission approved the Kapa'a Bridge project in 2022. The current SCAP application is consistent with that approval and represents an implementation-level permit necessary to carry out previously authorized work. Requiring a new or supplemental SEIS at this stage would exceed the scope of the permit review and would set an unsound precedent for projects that have already satisfied environmental review requirements.

For these reasons, I respectfully submit that the application meets the applicable legal and regulatory standards and should be approved as submitted.

Thank you for your consideration and for your continued service.

Respectfully,

Me Ke Aloha Pumehana,

Alex Reinprecht

Testimony in Protest Against the Approval for the Kapa'a Bridge Project

I am submitting a testimony against Arete Collective and their development plans.

As an employee I can testify that their development plans don't just disrupt the community but the ecosystems as well. It would be detrimental to the 'o'io population which sustains the people of this community. With the bridge, the 'o'io would not be able to swim upstream to feed and repopulate. They are building million dollar condos on what is home to many endangered native Hawaiian Birds as well as the albatross who already had to relocate closer to the golf course. The albatross are now more exposed to diminishing factors such as careless bypassers. They want to turn our land and beach into private housing. They could better use their time and money to build affordable housing for the people of Hawai'i. I testify that the Arete Collective did not consider how their actions would affect the environment. I can also testify that they had dug up Hawaiian 'iwi, and still continued on with their construction with no respect to Hawaiian burial grounds. I hope you will consider this and not let them build this bridge. As a native Hawaiian who was born and raised in this specific area, and as an employee, it is clear they have financial motives and do not care for the people, animals, and plants who grew here. Arete Collective continues to raise their prices to fund more and more of their projects and personal leisure. However their employees are still struggling to make ends meet. While I appreciate receiving a lunch bag as a Christmas bonus, I'd much rather see the destruction caused by Arete Collective be put to an end.

Me ka pono,
Jaclyn Tofa
