Glenn,

Can you please give me a date when DAR made these recommendations?

Skippy

I will not be sending any drawings. It was because of the lack of information that we were objecting to abandonment of infrastructure for the various streams. These streams appear to have been reviewed by CWRM to agree to just restoring stream flow with the removal of sluice gates. We are asking for more site specifications of walls, dams, and diversion infrastructure should be clearly described for each diversion site. We are asking that Stream habitat be restored to improve successful migration of aquatic resources. Just restoring stream flow is a good immediate first step but does not address the intermittent conditions the stream experiences throughout the year. Or the impacts to the ecosystem.

The previous report cards in the past required the notching of dams and walls to improve continuous stream flow those recommendations should be in the files and were never implemented.

Please let me know if you want copies of these previous recommendations when they prioritized a list.

Skippy

Hi Rebecca,

I am scheduling a call w our folks for next week to refine our objectives for these site assessments and after that I will have a better idea of who will staff the team we will deploy, what the field tasks will be, and how best to schedule and deploy the team. I do understand time is of the essence and will keep this moving efficiently.

I think maybe it would be a good idea to get a query out to all of us that were on that CWRM DOFAW DAR call a couple weeks ago just to make sure we are clear on roles, process and tasks, I'll do that later today.

Scott

In the interest of time management, do you have site drawings or sketches for any of these sites? I looked thru the field folder and didn't see any. I want to send them to DAR and DOFAW before we do a site visit or instead of a site visit. Skippy is familiar with some of the sites and I asked him to send me a drawing of what he wants the site to look like. I suspect it will be a negotiated final drawing.
