Those interviewed wanted to see Mahi Pono become an integral part of the Maui community. They suggested various ways to invest in the well-being and future of Maui, including:

- Provide land for or facilitate affordable housing for agricultural employees. One person suggested “tiny houses” on 500 acres of Mahi Pono land or on land that the company secures for this purpose. Another person suggested that Mahi Pono find ways to collaborate with non-profit associations and Maui County to provide affordable housing for low-income families.
- Invest in improving Central Maui water and wastewater systems.
- Facilitate ways to help local farmers and ranchers conduct their agricultural activities on Mahi Pono lands.
- Actively facilitate internship programs and educational activities that will help young people learn about agriculture, food self-sufficiency, and resource stewardship.

### Expand Communication Efforts

Interviewees suggested that Mahi Pono expand its communication efforts by: 1) convening community-wide forums to present information and solicit feedback and 2) organizing an impartial Citizens Advisory Committee that would evaluate Mahi Pono’s proposals, provide feedback and present recommendations.

## 4.2.5 Analysis of Follow-Up Interviews

### Discernible Shift in Focus from Past to Future

There has been a shift in attitude from the November 2018 focus group sessions and the April 2019 interviews. Previous focus groups sessions emphasized a context based on a past characterized by contentious legal proceedings, confrontational history between A&B and the community, and frustration about the lack of constructive dialogue about the East Maui long-term water application.

The context of the April 2019 interviews was based on change – in ownership, farms plan options and near-term proposals.

The change in context shifted the focus from feelings entrenched in the past to one that looked toward future possibilities.

## **Two Prevalent Themes – Hope and Balance**

With a focus on future possibilities, interviewees tended to express hope that with the new owner, things could be different. They note that diversified agriculture options have become more specific. They believe that the new owner embraces environmental stewardship and sustainability. They appreciate that Maui farmers and local crops are integral in Mahi Pono's farm plan.

Those interviewed also renewed their hope that there is an opportunity for balance of water users and water uses. While balance was encouraged in focus group sessions, people at that time felt frustrated that divisiveness and contention discouraged dialogue about balance.

## **Community Willingness to Work with Mahi Pono and with Each Other**

Many of those interviewed had met with Mahi Pono officials individually and in group settings. They were willing to continue constructive dialogue and encouraged settings conducive to general public participation.

## **Credibility and Accountability**

Though optimistic, albeit cautiously for some, those interviewed felt that to proceed in a positive and constructive manner, they need proof of commitments that have been verbally expressed. Their trust in the new landowner is dependent on actions or written commitments.

Some felt that their questions have not been answered, and understand that it might be too early for specific answers regarding crop-based water allocation, proportion business targeting local market, and so on. Nevertheless, they feel that these answers will give them a better sense of corporate credibility.

## 5. Potential Social Impacts

As discussed in Section 1, the overall framework for SIA is anticipatory research, seeking to place the expectation and attainment of outcomes on a rational and reliable basis. Commonly identified uses of SIA include:

- Understanding the ability of a community or group to adapt to changing conditions
- Defining the problems or clarifying the issues involved in a proposed change
- Illuminating the meaning and importance of anticipated change
- Identifying mitigation opportunities or requirements

From an SIA perspective, the proposed action is distinct from typical changes analyzed in an SIA context. First, the fundamental proposed action, which includes a long-term water lease, does not change conditions that have occurred in the past. The proposed action is in many respects a continuance of an action that has occurred for over a hundred years with the primary change being the amount of water that can be diverted per the IIFS Decision and Order, and the change in the manner of agricultural use of the Central Maui fields.

Second, while the fundamental action and the proposed use of the water are in some respects unchanged, implementation conditions are very different from past practices in terms of use and user. The original leases were intended to primarily support sugar cultivation by A&B. The sugar plantation closed in 2016. The current proposed use of the future leased water is diversified agriculture, the components of which have been surmised, but not determined. Also, after the initial focus group meetings, A&B sold most of the lands that would be served by the water lease, to a farming company with a diversified agricultural plan for these lands. Hence, the user of the leased water changed from A&B to the new owner; the operation of EMI will change as well.

This section begins the discussion of potential social impacts with a description of the social environment in Section 5.1. This is followed by an overview of the relationship of A&B to this social environment, in terms of historic and current conditions in Section 5.2. Section 5.3 presents potential social impacts and recommended mitigation.

## 5.1. Overview of Social Environment

### 5.1.1 Maui Island

Early Hawaiians arrived in at least three waves from southern Polynesian islands. They developed a complex and effective land tenure system with the island of Maui divided into twelve districts or moku, each with several village communities. When used as a term of traditional land tenure, a moku is similar to a political district. Figure D depicts moku of Maui, which is still referred to by residents with generational ties to the island.

**Figure D: Maui Island Moku**

Source: Available at

[https://commons.wikimedia.org/wiki/File:Historic\\_Mokus\\_of\\_Maui\\_Map.svg](https://commons.wikimedia.org/wiki/File:Historic_Mokus_of_Maui_Map.svg)

Each moku was partitioned into smaller portions of land that extended from the mountain to the ocean. Within an ahupua'a, tenants were granted kuleana for home sites and kalo patches. All the chiefs and tenants held land in trust and owed the king a land tax and labor that could be called for at any time.

Irrigation water, which was diverted from streams through ditches, or 'auwai, to kalo and other agricultural fields, was carefully regulated. There were rules setting allowed diversion times. No more than half of the stream water could be diverted into the 'auwai.

Construction of the 'auwai was organized by the chief. Day-to-day management was the responsibility of the appointed agent, or konohiki. Hawaiian water rights were assigned to plots of taro land, or lo'i. The quantity of water allocated to each rights holder was proportional to the amount of labor furnished for construction of the 'auwai

Until the 15th century Maui comprised three chiefdoms: Wailuku, Lele (Lahaina), and Hāna. Eventually all West Maui was consolidated at Wailuku, with Hāna remaining an independent chieftaincy. West Maui and East Maui permanently merged about 1550 when King Pi'ilani married the daughter of Ho'olae, the 6th Ali'i Nui of Hāna. From that time until conquest, Maui was ruled by a single joint royal family. Pi'ilani and his successors were known for the peace and prosperity that followed. They constructed a roadway that circled the island along its coast; remnants of which still exist.

The first outsiders visited Maui in the late 1780s.<sup>16</sup> Soon, missionary work, the whaling industry, and flourishing trade of diverse goods brought Americans and Europeans to the island.

By the mid-1800s, most of Maui's population lived in the towns of Hāna, Makawao, Wailuku and Lahaina due to the arid and inhospitable nature of the rest of the island. As noted in Section 2, the Hawaiian population decreased significantly due to no resistance to Western diseases, namely influenza, tuberculosis and smallpox.

The distribution of people and settlement patterns was altered dramatically with the Māhele established by King Kamehameha III in 1848. It established a land commission that adjudicated land claims. Hawaiians had been living for hundreds of years with the self-sufficient ahupua'a land tenure system and communal subsistence. In this scenario of cultural unfamiliarity and legal and logistic constraints, foreign acquisition of lands intended for Native Hawaiians occurred at an unprecedented scale.<sup>17</sup>

<sup>16</sup> County of Maui Department of Planning, **Maui Island Plan: Island of Maui, General Plan 2020**, p. I-6

<sup>17</sup> *Ibid*, p. I-7

*Potential Social Impacts*

Hawai'i was moving through many economic and demographic shifts in the late 1800s following the intensification of Western commerce, including the continued drift of rural populations toward town centers, which made water a highly contested and protected resource on islands such as O'ahu where these demographic trends were most pronounced. This is largely because water had to be diverted from distant watersheds to support growing cities. The legality surrounding watershed catchment was continuously challenged for leaving too little water for residents where streams were diverted by the government. Regardless of the dismay this may have caused, the costs of abandoning water catchment had to be carefully balanced by the Kingdom, since much more than the municipal water supply hung in the balance.

By developing and using water for sugar cultivation, Hawai'i moved steadily through this transition because it always had something that it could trade. At first the Orient traded for Hawaiian sandalwood. Then the whaling fleet needed crew and provisions. There was California Gold Rush market and newcomers wanted land. These commodities all became available. Both the markets and the resources, however, were limited, and before long they were "used up." Unless it developed a new commodity, Hawai'i ran the risk of becoming a political and economic non-entity, a backwater nation. This did not fit the vision that the monarch, the resident haole, or the people had for the future of the kingdom.

The prospect of growing sugar in Hawai'i was very appealing to the Kingdom as it would provide a renewable economic base. This view was further exemplified in 1876 by "An Act to Aid the Development of the Resources of the Kingdom" in which eminent domain rights reserved for public purposes, such as water, could be applied by the government to private enterprises for the development of sugar. Along with the Reciprocity Act of 1876 that allowed the duty-free export of Hawaiian sugar to the mainland U.S., the groundwork had been set for the start of the industrialization of sugar in Hawai'i.

Pineapple cultivation took hold in the 1890s and became Maui's second largest industry. Cattle ranching was formalized in the 1800s when King Kamehameha III summoned vaqueros of Mexican Spanish descent from Vera Cruz to teach Hawaiians how to handle horses and herd cattle. Cattle ranching quickly flourished under the hands of the Hawaiian cowboys, or paniolo. Multiple ranches were located on the less-fertile upper elevation lands that were left uncultivated. Cattle ranching grew to Maui's third largest industry next to sugar and pineapple.

With the in-migration of laborers for plantations came a significant diversification of people and cultures. World War II added another dimension of change in Maui. The war brought new immigrants and significant investment infrastructure to serve the military, including roads, harbors and airports. The war-years military population on Maui reached approximately 200,000 persons and outnumbered local residents four to one.

Significant changes for the sugar and pineapple industries occurred after World War II. As these industries were becoming more mechanized, labor unions were increasing their influence in the work place and among union members. Eventually, plantation camps were closed as workers found other employment opportunities, and private landownership became more available.

As the economic landscape evolved so did the physical landscape. New towns attracted plantation workers with increasing prosperity, as well as returning military personnel eligible for low-interest loans enacted through the GI Bill of 1944. Kahului and Wailuku became the center of commerce, as well as the center of the island's population. The growth of these areas was envisioned and guided by the first General Plan prepared in 1962 and County-initiated planning initiatives continue to shape the island's future.

The visitor industry emerged as the island's major economic engine. Hotels dotted coastal areas in West Maui, and Kā'anapali was the first resort destination in Hawaii. Its collective hotels, restaurants, shopping center and golf course set a statewide precedent that led to the subsequent development of Wailea and Kapalua.

## **5.1.2 Study Area Communities**

### **5.1.2.1 Upcountry**

Upcountry Maui comprises four major towns, including Kula, Pukalani, Makawao and Ha'ikū, and several smaller communities.

#### **Kula**

Kula, which means "open meadow," is the largest Moku in Maui, and diverse in landscape and weather.

*Potential Social Impacts*

Lower Kula communities such as Waiakoa, Pulehu, Ōma'opio, and Kēōkea each have distinct ethnic histories. As the first immigrants, Portuguese and Chinese, fulfilled their sugarcane plantation contracts many settled in Kula and became vegetable farmers. In the late 19<sup>th</sup> century they produced potatoes for shipment to California's Gold Rush. Later the Japanese followed them into the fertile farming area.

The farming tradition continues today producing a wide variety of vegetables including its well-known onions, cabbage, tomatoes, and cauliflower from small farms. There are many flower farms producing a wide variety of proteas and cut flowers. Almost all the carnations used for lei are grown in Kula.

Along the old lower Kula road there are few businesses but there is one notable landmark, the Holy Ghost Catholic Church with its octagonal shape. Built by the Portuguese in 1894, its turret can be seen from lower Central Maui.

The junction of Haleakala Highway with Kula Highway in Pukalani marks the northern edge of Upper Kula. The upper road, Kekaulike Avenue, or State Highway 377, wanders through eucalyptus groves and green pastures. In the late spring Blue Jacaranda displays beautify the slopes. Upper Kula surrounds Kekaulike Avenue. Beyond the Kula Lodge the road swings upward to Haleakala National Park.

Along Kekaulike Avenue, there is little commercial development except the Kula Botanical Gardens and Ali'i Kula Lavender Farm. Small farms take advantage of fertile soil, filtered sunlight and mild weather.

According to the U.S. Census Bureau, Kula CDP residents numbered almost 6,500 persons in 2010.

Kēōkea is also located within the Kula Moku. Chinese settlers are credited with founding the town of Kēōkea during the height of the sugarcane boom in the 19th century. By 1900, roughly 700 immigrants known as the Hakka forced out of their homeland in the Pearl River Delta, settled on the edge of Kula in Kēōkea after completing their labor contracts and choosing not to return to China. They made up a quarter of Maui's Chinese population at the time. Many became farmers raising vegetables.

They served a key but, largely unknown role in the California Gold Rush, transporting wagonloads of potatoes down to the Kīhei coast for shipments to California miners and railroad workers. The return ships brought miner's soiled clothes for hand laundering. This was a vital connection between Maui and California.

---

*Potential Social Impacts*

The Chinese past in Kēōkea is evident in today's make-up of this small community. The well-preserved wooden and currently active Episcopal Church, St. John's Church, was founded by the Chinese. Off what was known as "Old Chinatown Road", a narrow passage more drive-way than street, is the Kwok Hing Society Building, the first two-story structure erected in Upcountry Maui, a refuge that once provided assistance to Chinese sugar cane laborers.

Kēōkea also is known as the adopted home of the Dr. Sun Yat-sen, revolutionary of the Qing Dynasty. Sun Yat-Sen sought refuge with his family after his failed attempts to reform China, returning to his brother Sun Mei's ranch that stretched for thousands of acres near Kēōkea known as "Kula Chinatown."

The U.S. Census Bureau estimated that approximately 1,600 people live in Kēōkea in 2010.

### **Makawao**

In 1845, King Kamehameha III granted commoners in Makawao the right to own land, a right previously only held by ali'i or chiefs. The Māhele, three years later, established a policy of private land ownership throughout the kingdom.

Open spaces, cool seasonal temperatures and ample rainfall enabled wheat growing in Makawao during the 1850s. That was replaced by sugar in 1857 when H. A. Spencer started the East Maui Sugar Plantation. Tong Akana started the Pi'iholo Plantation in the 1870s. The most notable of Makawao's sugar industry started in 1869 when Henry P. Baldwin and Samuel T. Alexander purchased a twelve-acre homestead to raise sugar cane. They later expanded their holdings with the 559-acre Bush Ranch in the Sunnyside area.

There was some wheat planting in the 1850s to supply the California Gold Rush market but that faded as cattle ranching started dominating the open spaces. Haleakala Ranch of 30,000 acres almost surrounds the Makawao area. By the 1930s no acre of sugar cane could be found on the Ranch.

Pineapple was a later development on Haleakala Ranch in the 1930s but most acreage was devoted to thousands of head of cattle.

Ranching was a source of year-round employment for Hawaiians and Chinese who first populated the area. More immigrants, Japanese and Portuguese, started their own farms or worked on ranches surrounding Makawao. By the 1920s and 30s the town had general stores, a theater, a meat market, slaughterhouse, two service stations, a harness shop and three blacksmiths. The T. Komoda Store and Bakery remains today.

Makawao has maintained a paniolo ambiance with older store front buildings and its fourth of July Makawao Rodeo and Parade.

According to the U.S. Census Bureau, the Makawao CDP, which is a portion of the Makawao District, was home to approximately 3,300 people in 2010.<sup>18</sup>

### **Pukalani**

Pukalani is a suburban community comprising several neighborhoods. The first neighborhood is Pukalani Terrace, built in the early 1970s. The most recent development is Kualono Upcountry Living, a 49-lot subdivision. Kua'Āina is a 3 6-unit subdivision is in its pre-sale stage. Kulamalu Hale is a 56-unit apartment complex that was funded by the Affordable Housing Program.

Commercial services in Pukalani cater to both neighborhood and regional customers. The Pukalani Terrace Center is Upcountry's main shopping center located on Pukalani Street. Kulamalu is a new mixed-use commercial center along Kula Highway.

The Mayor Hannibal Tavares Community Center & Upcountry Pool is a recreational resource serving all of Upcountry. This 20-acre complex includes various athletic fields and a swimming pool. The 160-acre Pukalani Golf Course, Upcountry's only golf course, was built in 1980.

The U.S. Census Bureau indicates that 7,574 people resided in Pukalani in 2010.

---

<sup>18</sup> Section 2.1.2 explains the different geographic designations.

## **Ha'ikū / Huelo**

The Ha'ikū district has a long agricultural history of sugar and pineapple plantation development. During the 19th century, the tops of the ridges between the many gulches were cleared and planted in pineapple and sugar cane. Two sugar mills were in operation in the Huelo area, and a mill was located at Ha'ikū, on the makai side of Pu'u-o-'Umi (Ha'ikū Hill).

George Douglas started the Ha'ikū Sugar Plantation in 1858. The first Ha'ikū Sugar Mill was erected in 1861 on the east side of Maliko Gulch. Products were stored there and shipped by schooner to Honolulu. The Ha'ikū Mill was successful for about eighteen years until the soil was exhausted and the mill moved to the west side. The completion of the Hamakua Ditch, in 1879, by Henry P. Baldwin and Samuel T. Alexander made possible utilization of richer lands outside the rain belt.

A commercial landing was built at Ho'olawa, primarily for transporting milled sugar to Honolulu. During the 1880s the Pacific Navigation Company ran three trips each week between Honolulu and Ha'ikū, bringing 100 tons of sugar per week to Honolulu. As soon as the railroad line from Kahului to Ha'ikū was completed, commercial transportation by water from this area ceased.

D.D. Baldwin inspired the organization of the Ha'ikū Pineapple Company. He experimented on his farm in Ha'ikū, with numerous costly varieties. He eventually confined his cultivation to a variety called Smooth Cayenne. In 1901, his first plantings at his Ha'ikū farm were so successful that Maui's first pineapple company, Ha'ikū Fruit & Packing Company, Ltd. was formed. In 1904, Ha'ikū Fruit & Packing Company, built a successful can-making plant and cannery in Ha'ikū.

World War II brought Maui into focus as a Naval, Marine and Seabees training and operations center for the Pacific. Maui was the largest training grounds for naval air groups in the United States and was the rehabilitation center for the wounded and those on R&R. The most famous of them, the Fourth Marine Division, is remembered at their old headquarters site, Camp Maui, with Ha'ikū park and community playground.

During the 1970s two-and-a-half-acre lots legally known "agricultural subdivisions" are seen with large homes. The largest parcels are open to competitive bids of state lands for growing pineapple or other agricultural uses.

A well-known landmark is the Door of Faith Road, which brings you to the Kaulanapueo Church in Huelo. This historic Protestant church was established in 1853 and is still used for worship, with services in the Hawaiian language.

Twin Falls is a popular local and visitor destination featuring hiking trails and several lower and upper waterfalls. Access to this area is via Wailele Farm, a 39-acre tropical plant and fruit farm. Although there is no fee for access to the falls, farm tours and nature hikes are available for a fee.

#### **5.1.2.2 East Maui**

The Study Area East Maui communities comprises the Koʻolau Moku, which encompasses several ahupuaʻa. The following discussion focusses on Keʻanae and Wailuānui, as well as Nāhiku.

##### **Keʻanae / Wailuānui**

Keʻanae is reported to have been an active agricultural community historically and during pre-contact times. Its lands have been used intensively for wetland kalo cultivation. The need for kalo significantly declined as Native Hawaiian populations declined with the arrival of western disease. The result was unattended loʻi in the Keʻanae area.

A new market emerged, however, in the second half of the nineteenth century, with the increased market for rice due to the increase of Chinese laborers on sugar plantations in Hāna. When their labor contracts were completed, Chinese immigrants grew rice, with the advantage of a pond field irrigation system already in place in Keʻanae. They leased former loʻi lands from Hawaiian owners for rice cultivation in Keʻanae and Wailuānui.

The Chinese farming community flourished in Keʻanae, and with an increase in population came the construction of buildings necessary for production and housing related to the rice plantations, as well as the establishment of socially-related organizations. Rice farming declined sharply after 1910 and ceased by 1935.

Of significance, around 1920, many Hawaiians returned and began commercially cultivating taro on Keʻanae Homesteads. Due to its important cultural and historical significance, the Keʻanae Peninsula taro complex has been designated as a State Inventory of Historic Places, or SIHP.

---

*Potential Social Impacts*

A major influence in social environment for Keʻanae and Wailuānuī has been the development of roadway infrastructure. In 1912, a narrow road and bridges were completed that connected Kailua to Nuaʻailua Bay near Keʻanae, and by 1915, other contractors had built a road connecting Hāna to Keʻanae. In June 1925, the grand opening of the Kailua-to-Keʻanae portion of the Belt Road was celebrated by a procession of automobiles to Keʻanae.

The Keʻanae Protestant Church on the Keʻanae peninsula, also referred to as Keʻanae Congregational Church or Keʻanae Church, is designated as an SIHP. It was dedicated in 1860 and completed in 1863. Of note, this was the only structure left standing on the peninsula when an April 1946 tsunami hit this coastline.

The Keʻanae School was built in 1912 and subsequent additions expanded the original building. Due to decreasing enrollment, the school closed in 2005 and Keʻanae students travel every day to schools in Hana.

It is estimated that in 2010, Keʻanae – Wailuānuī – Nāhiku was home to 1,056 residents.

### **Nāhiku**

The Archaeological Literature Review and Field Inspection for the Proposed Lease for the Nāhiku, Keʻanae, Honomanū, and Huelo License Areas for this EIS (Cultural Surveys 2018) indicates that studies of historic land use refer to flat and terraced lands within Koʻolau Moku were intensively and continuously used for wetland taro cultivation or loʻi agriculture from the pre-Contact era through the present day.

East Maui's experience with the growth of early sugar was two-fold. First, Samuel T. Alexander proposed a massive construction project to bring mountain water from East Maui streams to their plantations to the west along the slopes of Haleakalā. In July 1877, the first water began flowing out of East Maui through the EMI Aqueduct System.

At the same time, Hāna and the undeveloped slopes of East Maui were described as one of the last natural environments that offered the potential for commercialized agriculture, including sugar, coffee and rubber plantations. In 1898, large parcels of land in Nāhiku were sold, and the Nāhiku Sugar Company was formed. Water rights for the Makapipi watershed were jointly shared between the sugar company and multiple homesteaders who collectively formed the body of the company's sugar growers. Sugar cultivation in Nāhiku was dependent on local farmers because a significant portion of the cultivated land was deeded to the same farmers who had water rights.

For a brief period, A&B acquired Nāhiku Sugar Company in 1899. Even with this financial backing, profits declined and by mid-1900, development work on the plantation ceased.

The Nāhiku Sugar Company completed the construction of a landing for the Territorial Government of Hawai'i in 1901 and constructed rail lines for a derrick at the landing. There is no record of the use of locomotives on the rail lines that were constructed. The construction of the landing at Nāhiku placed the plantation owners in additional financial hardship and House of Representatives deferred the landing's construction cost to the government.

In 1902 local homesteaders petitioned their congressional representation not to grant additional water rights to the Nāhiku Sugar Company that would infringe on the already established rights of local farmers who had since had a falling out with the Company. It is noted that water rights and land were shared from the start, so when local homesteaders refused to plant additional cane for the mill in response to a perceived threat to their individual water rights, the Nāhiku Sugar Company petitioned for additional water rights from neighboring watersheds in inaccessible gulches to the northwest to supplement the shortage. Since the initial licenses were upheld, and the homesteaders' rights protected, the Nāhiku Sugar Company was forced to increase cultivated land or cease the plantation.

When the founding homesteaders ceased their relationship with the sugar company, it put the company at risk of collapse due to insufficient land and water access for continued cane cultivation.

In 1902, a merger was planned with the Hāna Sugar Plantation by which the plantation would pay an annual rental of \$4,500 over a 26-year lease which included water rights. In 1904, A&B bought the remaining stock in the Nāhiku Sugar Company. After a brief boom with an unsuccessful rubber plantation, all the former sugar plantation land at Nāhiku was acquired by HC&S and EMI under the parent corporation of A&B.

Today, A&B supplies MDWS approximately 20,000 to 45,000 GPD of water, dependent on weather conditions, directly from the EMI Aqueduct System that is serviced to Nāhiku through a development tunnel in the Ko'olau Ditch near Makapipi Stream.

## 5.2. A&B Relationship in Social Context

The role and relationships between A&B and the social environment evolved over a hundred years and influenced land use, the economy, the natural environment and many people and cultures. Section 5.2.1 provides an historic perspective and Section 5.2.2 describes the current conditions that are part of the overall framework in which the proposed water lease is being considered.

### 5.2.1 Historic Perspective

#### 5.2.1.1 The Sugar Industry

Sugar cane was brought to Hawai'i by early Polynesian voyagers before European contact. It was cultivated in a land system described in Section 5.1.1 and used for centuries before it was grown commercially.

Around 1869, two young men, Samuel Thomas Alexander and Henry Perrine Baldwin, sons of pioneer missionaries, started a sugar business on twelve acres of Bush Ranch in the Sunnyside area of Makawao. In 1870, they paid \$8,000 for an additional 559 acres, marking the birth of what would become Alexander & Baldwin, Inc., or A&B.<sup>19</sup>

---

<sup>19</sup> C. Allan Jones, and Robert V. Osgood, **From King Cane to the Last Sugar Mill** (University of Hawaii Press, 2015), p. 31.

By 1876, the partners had expanded their sugar acreage and began to seek a reliable source of water for their crop. Alexander devised an irrigation system that would bring water from the windward slopes of Haleakalā to Central Maui to irrigate 3,000 acres of cane on their lands as well as neighboring plantations. Baldwin oversaw development of Alexander's vision which became known as the Hamakua Ditch. Within two years the ditch was complete. This system would later become a model for similar Hawai'i irrigation projects.

Over the next 30 years, the two men became agents for nearly a dozen plantations. They eventually expanded their plantation interests by acquiring Hawaiian Commercial & Sugar Company (HC&S).

Seven constructed water catchment / diversion ditches plus various tunnels, flumes, intakes, reservoirs, inverted siphons, a solar powered radio telemetry system to monitor ditch flow, and other devices comprise the EMI Aqueduct System, which was formed in 1908.<sup>20</sup> The ditches, in the order in which they were built, are: Old Hamakua, Ha'ikū, Manuel Luis / Lowrie / Center, Ko'olau, Kauhikoa, New Ha'ikū, and Wailoa.

Water collection begins at roughly the 1,300-foot elevation and is ultimately delivered to Central Maui, covering a linear distance of 25 miles from the ditch system's western to eastern extent. Historically, an estimated 60 billion gallons per year at roughly 165 million gallons per day (MGD) was collected and delivered to Central Maui. Built at a time when Hawai'i was still an independent kingdom, the EMI Aqueduct System was the first of its kind both in the Pacific and on the U.S. West Coast.

Upon completion of the major ditch features, the EMI Aqueduct System collects the runoff water from the Collection Area that is approximately 50,000 acres, of which EMI owned approximately 17,000 acres and the State of Hawai'i owns approximately 33,000 acres.

In addition to supplying A&B's former sugar cane plantations with water, the EMI Aqueduct System also supplies the MDWS with an estimated 2 billion gallons of potable water per year for domestic and agricultural purposes from the Collection Area.

---

<sup>20</sup> *Ibid*, pp 110 -113.

The sugar industry suffered many challenges and in 2015, A&B reported an operating loss of approximately \$30 million in agribusiness. It was difficult to sustain such losses, and the Pu'unēnē Sugar Mill harvested its final harvest in December 2016.<sup>21</sup>

#### 5.2.1.2 Plantation Camps and Community Building

In addition to its reshaping of the sugar industry by redirecting abundant stream water from East Maui, A&B also significantly contributed to the social fabric of Maui due to its immigrant labor force and by providing its workers with a communal environment.

A&B supplemented the local Maui labor force with immigrant workers permitted under the 1850 Masters and Servants Act (see Section 2.1). Immigrants arrived by the thousands from China, Japan, the Philippines, the Portuguese Islands of Madeira and the Azores, Puerto Rico, Korea, and Spain.

There were 25 camps housing workers in the 1940s. These camps were located near the Pu'unēnē and the Pā'ia Sugar Mills. The camps were communities. Collectively, they contained churches, public schools, Japanese-language schools, two hospitals, theaters, swimming pools, a gymnasium and child care nurseries.

By 1951, the plantation employed 11,000 people, many with families. Plantation workers were reportedly increasingly comfortably housed, well paid with field wages high compared to sugar workers in Florida, Louisiana and Puerto Rico. While camps were generally ethnically organized, such as Japanese camps, Filipino camps, Chinese camps, Portuguese camps, and so on, workers often mingled in recreational, religious and social activities.

Through its subsidiary HC&S, A&B provided medical care to its workers. It renovated Pu'unene Hospital, which operated until 1956, after which time worker patients were sent to the Central Maui Memorial Hospital. Plantation doctors joined to open the Maui Clinic in 1959 to serve patients covered by the company's medical plan.

---

<sup>21</sup> "End of an era: Hawaii's last sugar mill wraps up final harvest," **Star Advertiser**, December 12, 2016.

---

*Potential Social Impacts*

The plantation established recreational facilities, such as the F.F. Baldwin Park in Pu'unene. These facilities were managed by community association and were eventually dedicated to Maui County or reverted to cane land. Often, plantation camps sponsored baseball teams, boxing leagues and bowling tournaments, as well as scouts programs.

A memorable story is the Three-Year Swim Club. Coach Soichi Sakamoto, a teacher at Pu'unene School, taught plantation children how to swim in the irrigation ditches. The steady flow of ditch water was used to help develop new techniques to train swimmers in the Three-Year Swim Club to compete in the Olympics. When the F.F. Baldwin Park opened in 1936, the swimmers practiced the community pool and easily beat their competition. Although World War II would interrupt their progress toward the Olympics, the swimmers won Hawai'i and Mainland competitions. In the 1948 Olympics in London, one of the club members captured gold medals in two swimming events.

After World War II, it was increasingly clear that plantation camps were becoming a thing of the past. The agriculture industry was becoming more mechanized and the demand for workers lessened significantly. The rise of unionization required increased compensation and benefit plans. Plus, the economy offered many people more options in employments, options less rigorous than field and mill jobs.

As plantation camps deteriorated and were closing, the demand for single-family housing became more evident. HC&S prepared a plan for the sugarcane fields around the Kahului Harbor. It called this area "Dream City," which was a large-scale master planned community comprising single family homes, businesses, schools, churches and parks.

The intent was to offer home ownership for plantation workers and other residents. Fee simple house and lot packages were offered between 1950 and 1963. The first owners moved into their house in July 1950. The Kahului Shopping Center was built in 1951. Dream City homes originally purchased for less than \$9,000 in the 1950s currently sell for between \$590,000-\$650,000.

This urbanization significantly changed the physical landscape in the Kahului and Wailuku area by centralizing a major portion of Maui's population, its commerce activities and government services. It also altered the social environment irrevocably by replacing the 25 plantation camps with a consolidated and integrated planned development.

## 5.2.2 Current State

### 5.2.2.1 CWRM IIFS Decision

As earlier discussed, the proposed action is different from typical SIA subjects, which generally deal with a change, whether it is public policy, land use development or infrastructure systems. The proposed action is a continuation of the use of water from State-owned land through an existing system that has been operational for over a century. Yet, the circumstances of the use and users of this water have changed dramatically. These changes need to be clearly articulated to analyze possible social impacts in its proper context.

There are three fundamental changes from A&B's previous long-term leases and subsequent revocable permits as hereby discussed.

#### **Commission on Water Resource Management Decision and Order**

On June 20, 2018, the State of Hawai'i Commission on Water Resource Management (CWRM) issued its Findings of Fact, Conclusions of Law, and Decision and Order (D&O) setting Interim Instream Flow Standards (IIFS) for the East Maui Streams that had been the subject of IIFS petitions that evolved through several CWRM proceedings since May 2001.

In setting IIFS, CWRM is required to weigh the importance of the present or potential instream values with the importance of the present or potential uses of water for non-instream purposes, including the economic impact of restricting such uses.<sup>22</sup>

In setting the IIFS for these East Maui streams, CWRM prioritized the instream uses that allowed the stream species to flourish, traditional and customary native Hawaiian rights, both appurtenant and gathering rights, to be actively practiced, and non-municipal domestic uses to be supported.

CWRM also recognized that there are streams for which restoration of flow would not result in significant biological or ecological gains and that the water may be better used for non-instream uses. For those streams, a connectivity flow to allow for movement of instream biota would be sufficient.

---

<sup>22</sup> HRS § 174C-71(2)(D)

CWRM recognized that there is significant value in the non-instream uses which include municipal use, such as domestic and agricultural use. The value of the non-instream uses goes beyond mere economic value to the users. It supports uses that range from households, schools and hospitals to small truck farms and large agricultural concerns. It also assures the continued presence of agriculture in central Maui, a value which has been incorporated by the community through its inclusion in the Maui Island Plan/General Plan 2030, the Countywide Policy Plan, and the various Community Plans.

In explaining the IIFS decision stream by stream, CWRM generally described the following categories of streams.

- **Conveyance of Water to Kalo Growing Areas for Community Use**

CWRM ordered that all diversions on the following streams cease to allow for all water to flow to the taro growing areas or for community and non-municipal domestic uses: Honopou, Huelo (Puolua), Hanehoi, Pi'ina'au, Palauhulu, Waiokamilo, Wailuānui, Ohia, Waianu, Kualani, and Makapipi.

- **Water for Streams With High Biological Value**

Hawai'i's streams support a unique variety of native fish, shrimp, mollusks and insects that live a diadromous lifecycle. This is characterized by "two runs," one to the ocean as newly hatched larvae and subsequent return from the ocean to fresh water as juveniles. The best scientific evidence currently available indicates that 64 percent of median base flow (BFQ50) generally represents the flow necessary to restore 90 percent of the habitat in a stream (H90). Absent any physical barriers to upstream or downstream migrations or interruptions in connectivity, the H90 flow is believed to provide suitable conditions for growth, reproduction, and recruitment of native stream animals as well as protection of traditional and customary native Hawaiian gathering rights, which are affected by the size of native animal populations in a stream.

*Potential Social Impacts*

CWRM expects that the restoration of flows to streams that are spread out geographically will provide greater protection against localized habitat disruptions, will produce a wider benefit to estuarine and near-shore marine species, and will result in improved comprehensive ecosystem function across the entire East Maui watershed. CWRM identified the following streams as having the potential to benefit greatly from restoration of flow to a minimum H<sub>90</sub> level based on the biological diversity and habitat that already exists under diverted conditions: Pi'ina'au, Wailuānui, Honomanu, Waikamoi, Nua'ailua, East Wailuaiki, Kopiliula, and Waiohue. Restoration of these streams should allow the stream species to flourish and reproduce, benefiting not only the natural environment but also allowing for better opportunity for the exercise of traditional and customary native Hawaiian rights.

Additionally, CWRM ordered full restoration of West Wailuaiki Stream and Honomanu Stream. West Wailuaiki presents a unique research opportunity to collect valuable information regarding the impact of full restoration of a stream versus habitat restoration H<sub>90</sub>. East and West Wailuaiki lie in close proximity to each other with similar biological values and similar habitat and biota, and the study of these two streams in combination with one another should provide information regarding the impact, if any, of full restoration versus habitat restoration. Honomanu Stream, despite having several diversions on it, has a high biological rating with a potential for high natural habitat gains with the restoration of flow to the dry reaches. Thus, CWRM ordered that Honomanu Stream should have full streamflow restoration below the Lower Kula Ditch diversion, which provides water for the MDWS system that is used for domestic and agricultural uses.

- **Water for Streams That Have Barriers to Biological or Ecological Improvements**

Other streams, because of the geomorphology of the stream or the presence of groundwater input through the presence of streams, are gaining streams and no additional release of water past the diversions are believed necessary to maintain habitat below the diversions at this time. To allow for the movement of biota, CWRM ordered that there be a minimum connectivity flow across the diversion structures to allow for passage of biota upstream. This minimum connectivity flow would be twenty percent (20%) of the instream flow. Streams that are set at connectivity flow are: Kapaula, Pa'akea, Pua'aka'a, Puohakamoa, Ha'ipua`ena, Nua'ailua, Waiaaka, and Hanawi.

- **Non-instream Use of Water for Municipal and Agricultural Uses**

CWRM acknowledged that in the context of a proceeding to set IIFS, it does not have the authority to determine how much water may be used for non-instream use for municipal and agricultural uses. That authority lies with the BLNR in issuing a water lease pursuant to HRS § 171-58, subject to the IIFS set by CWRM. Recognizing that the non-instream uses, especially municipal use, are valued uses, CWRM set the IIFS to allow MDWS to continue to divert water through its Upper and Lower Kula pipelines. In not requiring full restoration of all streams, CWRM has allowed some streams to continue to be diverted so that BLNR may continue to license the diversion of water not needed to meet the IIFS from those streams for non-instream use. The available water would also include freshets and stormwater which are not included in the calculation of the IIFS.

CWRM recognized that the EMI Aqueduct System remains a valuable asset that delivers non-instream public trust benefits, such as drinking water, as well as other reasonable and beneficial uses. The reduction in diversions does not, by itself, compromise the structural integrity of the EMI Aqueduct System so long as it continues to be maintained as a single coordinated system. CWRM considered factors that contribute to the operational capacity of the existing EMI Aqueduct System by allowing some water diversions from streams in the higher elevation eastern portion of the watershed.

Further, CWRM recognized that the water that may be licensed by the BLNR from the petitioned East Maui streams may not be sufficient to satisfy the full implementation of A&B's Diversified Agricultural Plan. It expected that a sufficient amount of non-instream water would be available to provide the initial phase of allowing lands already designated as Important Agricultural Lands in central Maui to be developed for diversified agriculture.

### 5.2.2.2 Diversified Agriculture Replaces Sugar Mono Crop

The original water leases were issued to support thousands of acres of sugar cultivation. Sugar operations provided predictable employment, and its process from field to cane burning to processing was generally understood by local residents. And though cane burning was bothersome for some, the cane fields provided a green backdrop appreciated by residents and visitors alike. Sugar cultivation ceased with the 2016 closure of the sugar mill.

The current proposed water lease is intended to support diversified agriculture, a departure from the mono crop nature of sugar. A&B presented possible diversified agricultural ventures, including forestry crops, livestock, pasture-fed dairy operations, biogas feed crop, beverage crops, orchard crops including pongamia, and mechanized harvested crops. However, these options were presented as possibilities, not as firm and exact plans. Further, more specific information regarding diversified agriculture has been developed by the new landowner and is presented in the next section.

### 5.2.2.3 New Landowner

Effective January 1, 2017, A&B converted to a real estate investment trust, or REIT. The move was intended to operate commercial real estate business within the REIT structure, and continue to operate active real estate development for sale projects, diversified agricultural activities and materials and construction business through a taxable REIT subsidiary.<sup>23</sup>

---

<sup>23</sup> "Hawaii Real Estate Platform Through Real Estate Investment Trust (REIT) Structure," available at <https://www.prnewswire.com/news-releases/alexander--baldwin-to-strengthen-hawaii-real-estate-platform-through-real-estate-investment-trust-reit-structure-300485020.html>

On December 20, 2018, A&B announced that it sold approximately 40,000 acres of former HC&S lands for \$262 million to Mahi Pono for the purposes of cultivating a variety of food and energy crops. This was to ensure the continued agricultural use of these Central Maui lands, the preservation of green open space in Central Maui, and a consistent and long-term source of revenue for the local economy. Mahi Pono will also partner in the ownership and management of the EMI Aqueduct System.<sup>24</sup>

Mahi Pono is a joint venture of Pomona Farming, LLC, and PSP Investments. Pomona Farming, LLC, is a California-based agricultural group. This global investment and food branding company manages 93,000 acres of farmland. PSP Investments is one of Canada's largest pension investment managers and services Canadian public service, Armed Forces and Royal Canadian Mounted Police and Reserve Force.

A&B sold land and related agricultural operations to Mahi Pono for \$262 million. The change in ownership involved 41,000 acres in Central Maui and EMI watershed land, as well operations involving Kulolio Ranch, Central Maui Feedstocks and a 250-acre trial of energy crops. Additionally, Mahi Pono now owns 50 percent of the EMI Irrigation Aqueduct System and is the managing partner of the system. The former sugar mill site was not included in the purchase.

Mahi Pono extended employment to EMI employees and the A&B farm team. Almost all employment offers were accepted. Mahi Pono's leadership team includes several people local to the Maui community.

At the time of this writing, Mahi Pono is working on two farm plan alternatives, both of which involve 31,177 acres<sup>25</sup> and include

- tropical fruit and nut crops
- coffee and specialty crops
- diversified agriculture, including land set aside for community agriculture near the former sugar mill, and
- irrigated and unirrigated pasture lands.

---

<sup>24</sup> "A&B agreement with Mahi Pono launches new era of agriculture on Maui: Former HC&S lands to be repurposed as diversified agriculture farms, available at [https://www.prnewswire.com/news-releases/ab-agreement-with-mahi-pono-launches-new-era-of-agriculture-on-maui-300769828.html?fbclid=IwAR1GS\\_AQvwiD67UlzfiBhp5BsPOBI2S6\\_py3AUIPGafEzYqcUr-ABkWljZ8](https://www.prnewswire.com/news-releases/ab-agreement-with-mahi-pono-launches-new-era-of-agriculture-on-maui-300769828.html?fbclid=IwAR1GS_AQvwiD67UlzfiBhp5BsPOBI2S6_py3AUIPGafEzYqcUr-ABkWljZ8)

<sup>25</sup> This acreage does not include lands west of Veterans Highway, which would be irrigated by West Maui water sources.

Assumptions upon which the two farm plans are based are as follow.

- Available water in Farm Plan based on IIFS allocations
  - Surface water = 61.78 MGD
  - Brackish groundwater = 15.44 MGD (assume 25 percent of surface water to maintain appropriate salinity level)
  - Total = 82.35 MGD
- Available water in Farm Plan based on no stream diversion from State land
  - Surface water = 22.54 MGD (assume 25 percent of surface water to maintain appropriate salinity level)
  - Brackish groundwater = 5.64 MGD
  - Total = 28.18 MGD<sup>26</sup>

Based on these assumptions, it was estimated that there would be an approximate 65 percent decrease in available water. While most farm components would correspondingly and significantly decrease in acreage, acreage for unirrigated grass-fed cattle would double, from 11,000 to 22,000 acres. Further, with no stream diversion from State lands, approximately 9,577 acres of unirrigated cattle lands would be unproductive for agriculture. Alternative uses would need to be explored and would not include urban development.

Mahi Pono recently announced its 2019 crop plan<sup>27</sup> for approximately 1,500 to 2,000 acres in Central Maui. The first crops to be planted include: avocados, bell peppers, potatoes, papaya, guava, lilikoi, white pineapple, oranges, mandarin oranges, lemons, limes, coffee and macadamia nuts, as well as cover crops such as alfalfa. Mahi Pono's long-term plans will include scaling up citrus fruit, coffee and grass-fed beef.

For 2019, EMI estimates its water deliveries to be approximately 30-35 million gallons per day (MGD). The total amount includes water used by approximately 35,000 Upcountry Maui residents served by the Maui County water system, Mahi Pono, and other water users served by EMI. This level of water use remains well within the amount of water available under the CWRM IIFS decision.

---

<sup>26</sup> At the time of this writing, there have been updated iterations of crop plans and related water implications. From an SIA perspective, the estimated numbers are important in terms of scale and magnitude. The differences that occurred in this time frame do not indicate significant change in magnitude that would change the social context.

<sup>27</sup> This crop plan is an update of what was presented in the April 2019 interviews and discussed in Section 4.2.3.

Further, EMI has completed work on 29 diversion structures in the EMI Aqueduct System and has secured permits to modify or permanently abandon another 30 diversions, with the approval of the additional remaining eleven diversions under review by CWRM.<sup>28</sup>

## 5.3. Potential Social Impacts

### 5.3.1 Overall Community

The larger community, including Maui Island residents and those who are not directly affected by the proposed water lease may experience social impacts by the proposed action. This section identifies possible social impacts on the general population.

#### 5.3.1.1 Potential to Realize Public Policies

Public policy helps to establish a framework for community expectations for the future. Section 3 provides an overview of public intent for:

- The natural environment, including restoring wetlands and watersheds and stream flows
- Stewardship of the natural environment
- Protecting cultural access to mountain, ocean and island resources for traditional Hawaiian cultural practices
- Diversifying and expanding sustainable agricultures to feed the local population and support local farmers, and
- Ensuring a reliable and affordable supply of water.

These public policies help to articulate common goals and objectives that private and government sectors can coordinate and implement. They provide a benchmark of the community's aspirations and an expectation for the future.

---

<sup>28</sup> Source: Mahi Pono, "MAHI PONO ANNOUNCES 2019 MAUI CROP PLAN: The plan covers approximately 1,500 – 2,000 acres to be planted this year, May 8, 2019

By itself, the proposed action has tested the community's ability to trust that public policy will be realized. A long-term water lease to access State watershed streams, without assurances of a viable future for sustainable diversified agriculture, support for local farmers, efficient water transmission, Upcountry Maui domestic and agriculture water supplies and environmental stewardship, can be perceived mostly as just benefitting a private for-profit entity.

The introduction of Mahi Pono and its attendant vision, agricultural focus, and stated objectives regarding environmental responsibility and sustainability, diversified agriculture, and support for local farmers shifts the paradigm from an uncertain future to a possible scenario that may realize, at least in part, community values and vision embodied in public policy.

The possibility that these policies may come to fruition has positive social value. It can guide community expectations towards a more hopeful future. This possibility can encourage people to be willing to reach across the table to opposing views, to build bridges that connect rather than divide.

#### **5.3.1.2 Sustainable and Local Agriculture**

In focus groups and interviews, people shared certain values about agriculture. They tend to feel that the time for mono crops is past, that mono crops tend to be exported and profits benefit big companies and off-island economies.

There was consensus that diversity is the way of the future. Diversified agriculture presents a tapestry of farming landscapes, increases opportunities for local products, and provides possibilities for a variety of scales, from small family ranches and farms to corporate agricultural operations.

There was also a desire to increase food self-sufficiency for the island community. The local market should be integral for future agricultural efforts, thereby ensuring that Maui will have a reliable and accessible food supply.

In and of itself, a long-term water lease does not ensure that these values regarding agriculture and food supply can become reality. The context for the long-term water lease has expanded, however, to include a new landowner whose business is agriculture and who claims to embody these values.

If Mahi Pono's stated vision and farm plan objectives are implemented, then this would have a positive effect on the social environment. Viable diversified agriculture, agricultural products that cater to local market and eateries, support for local farmers and ranchers, and food self-sufficiency will contribute positively to quality of life and social well-being.

## **5.3.2 Affected Groups**

### **5.3.2.1 East Maui**

East Maui residents, farmers and cultural practitioners have been advocating for the reduction of stream diversions and the return of full stream flows. Focus group participants and interviewees stressed that previous water leases have had significant impact on their culture, social well-being and generational ability to thrive in East Maui.

While the recent CWRM decision addresses or mitigates that impact to some degree, the proposed long-term water lease would still affect streams in their area. The proposed action is viewed as a continuation of taking East Maui water to support a private for-profit company. The proposed action is not seen by focus group participants as part of a solution, but rather as an extension of past wrongs. Focus group participants vowed to continue to oppose the proposed water lease, and advocate the removal of all diversion structures from the kalo and community streams designated for full restoration. They also noted that East Maui streams have been flowing well since sugar cultivation ceased. They were very concerned that once active steam diversion resumes, stream flow in the majority of East Maui streams will be lessened and again restricted.

EMI has indicated that it is modifying or removing several diversion structures to complete restoration of diverted streams that have been designated for full flow. This has positive social value for East Maui because it represents progress in stream restoration. Stream restoration addresses physical mitigation and will support cultural and food gathering practices.

In follow-up interviews, there was hope that Mahi Pono would address problems with physical infrastructure by improving stewardship of the EMI Aqueduct System. It was stressed, however, that, while physical and environmental mitigation is crucial, there is still a fundamental need to rectify social, cultural and emotional impacts that have developed for over one hundred years. Although Mahi Pono did not cause these impacts, the company has inherited a legacy that is generational and needs to be addressed to help these East Maui community move forward.

#### **5.3.2.2 Ha'ikū and Huelo Downstream Residents and Farmers**

For Ha'ikū and Huelo residents and farmers downstream of the EMI Aqueduct System, the proposed water lease is often perceived as a continuation of what they have been experiencing for many decades. Focus group participants and interviewees cited problems with the management of the EMI Aqueduct System in terms of both diversion activities and infrastructure condition.

In addition, the proposed action is considered a continuation of restrictions on their ability to access and use stream water on their properties.

#### **5.3.2.3 Local Farmers and Ranchers**

The effect of the proposed water lease on Maui-based farmers, ranchers and flower growers will depend on whether they can participate in future diversified agriculture in Central Maui. Thus far, there has been discussion regarding setting aside land for local farmers and eventually creating support facilities and services intended to provide means to reduce costs for individual farms. Little or no mention has been made regarding including livestock farmers in Mahi Pono's farm plan.

For Upcountry Maui farmers in the current and 262-acre expansion of Kula Agricultural Park, the effect of the proposed action will depend on how much water they can receive if the water lease is granted. There is a current allocation for the Kula Agriculture Park and the 262-acre expansion.

For East Maui farmers, the proposed water lease would continue to divert water from streams not designated for full restoration, although some are mandated to have partial restoration to support the stream habitat. When active diversion resumes, it is expected that an overall decrease in stream flow will occur in East Maui when compared to current conditions, but there will be an overall increase in stream flow compared to when sugar was fully operational in Central Maui.

#### **5.3.2.4 Upcountry Domestic Users**

The effect of the proposed action on Upcountry Maui domestic water users will depend on how much water will be released from the EMI Aqueduct System for MDWS use. If Upcountry Maui water needs exceed its water allocation, other sources of water will need to be developed. The cost of well development and pumping is expected to result in increased water fees.

## 6. Recommended Mitigation

### 6.1. Core Working Group

As discussed in Section 1.3, the SIA process and studies are about relationships, between people, the environment, government, businesses and so on. Two areas of mitigative measures are recommended for consideration, should the proposed water lease be granted by the BLNR. These measures are intended to establish an ongoing working relationship between the community, Mahi Pono and EMI, and related public agencies, as well as continue resolution with East Maui communities.

#### **Consensus**

It is recommended that interest groups, or stakeholder groups, are clearly defined so that there is recognition of who will be affected by the proposed water lease. Groups should include geographic communities, environmental, agriculture and business interests, and public agencies. Each group would be encouraged to reach consensus on their own needs, concerns, opportunities and possible solutions.

A starting point for identifying stakeholder groups could be interviewees and focus group participants and their networks.

#### **Collaboration**

It is recommended that interest groups are equitably represented in a "Core Working Group" that would serve as a forum for exchanging ideas and collaborative efforts, as well as provide feedback and suggestions to Mahi Pono. Each member of the Core Working Group would be expected to reach out to their own networks to extend the discussion beyond the Core Working Group. While there would likely be strong differences in perspectives and opinions, the Core Working Group would need to find ways to establish core principles, common ground and manageable solutions.

### **Transparency**

The fundamental value that will help bring people to the same table is trust. The proposed action has elicited skepticism and distrust over many decades, and these feelings prevent willingness for participating in mediation and collaboration. While developing trust among the various groups will be challenging, the first step is transparency. Being open about intent, plans and activities can begin to establish credibility and open the door to dialogue. Given people's willingness to participate in focus groups and interviews for this SIA, it is believed that key community leaders would be willing to collaborate if there is trust and transparency.

## **6.2. Ke'anae-Wailuanui Reconciliation**

East Maui residents have a unique relationship with the proposed action. While impacts are first and foremost culture-related, they are also entrenched in a social context that is the basis for this mitigation recommendation.

The social impact of diverting water is generational, one that has affected livelihoods, family cohesion, the ability to integrate with environment for food gathering and recreation, resource stewardship, and personal connections or disconnections with values inherent in their lifestyles.

For the Ke'anae – Wailuanui community to move past historical impacts, there needs to be established a point of departure. Mitigation needs to go beyond the physical restoration of streams. It needs to address the social context and include apology and reconciliation. This needs to be done within a cultural foundation that binds the community together, and key players, including Mahi Pono, public agencies and elected officials. The manner and forum for this process should be defined by cultural leaders integral with the process.

# INTRODUCTION

# I. INTRODUCTION

This Economic and Fiscal Impact Study has been prepared for the Environmental Impact Statement (EIS) for the proposed Water Lease for the Nāhiku, Ke‘anae, Honomanū, and Huelo license areas (collectively the License Area).

## A. PROJECT OVERVIEW

### 1. Background

In May 2001, Alexander & Baldwin, Inc. (A&B) and its subsidiary, East Maui Irrigation Company, Limited (EMI) (also collectively referred to as A&B requested that the State, pursuant to Hawai‘i Revised Statutes (HRS) § 171-58, offer a long-term (30 year) lease at public auction for the “*right, privilege and authority to enter and go upon*” State-owned lands at Ko‘olau Forest Reserve and Hanawī Natural Area Reserve, Hāna and Makawao, Maui, for the purposes of developing, diverting, transporting and using government-owned waters. The requested lease (Water Lease) would allow the use of government-owned waters from the Nāhiku, Ke‘anae, Huelo, and Honomanū license areas.

### 2. History of Water Leases

Since 1878, A&B, or its predecessors and affiliates, have operated the EMI Aqueduct System, which is an integrated system of diversions, ditches, intakes, siphons, flumes, and tunnels that collects water from streams located on the rainy windward slopes of East Maui. The EMI Aqueduct System transports water to agricultural fields<sup>1</sup> in Central Maui, as well as to the Maui County Department of Water Supply (MDWS) for the domestic-water needs of Upcountry Maui and the Nāhiku community and the irrigation needs of small farms throughout Upcountry Maui, including the County’s Kula Agricultural Park (KAP).

Historically, A&B has had leases from the State of Hawai‘i that authorized the development, diversion, transportation, and use of government-owned waters emanating from approximately 50,000 acres of land (herein referred to as the Collection Area), of which approximately 33,000 acres are owned by the State of Hawai‘i (License Area) and approximately 17,000 acres were owned by A&B. Pursuant to historical rainfall data and long-standing agreements, “government-owned waters” is deemed to be 70 percent of waters that can be diverted from the

---

<sup>1</sup> The Central Maui Agricultural Fields were owned by Hawaiian Commercial & Sugar Company (HC&S), a former division of A&B. Herein, HC&S will be referred to as A&B, collectively with A&B and EMI.

Collection Area east of Honopou Stream; 30 percent of waters from the Collection Area comes from private lands. After the expiration of the terms of the last long-term water lease, the BLNR issued year-to-year revocable permits for the License Area.

It is noted that on June 20, 2018, the Commission on Water Resource Management (CWRM) adopted Findings of Fact, Conclusions of Law, and Decision and Order, setting the Interim Instream Flow Standards (IIFS) for 24 East Maui Streams located within the License Area (CWRM D&O).<sup>2</sup> The proposed Water Lease will be subject to the CWRM D&O and any future in-stream flow standard decisions made during the term of the Water Lease. As a result, the potential future flow of surface water from East Maui will be significantly reduced compared to past water diversions that occurred for over 90 years.

### **3. Purpose and Needs of Water Lease**

The objectives of the proposed Water Lease are:

- **Preserve and maintain the East Maui aqueduct system**

As mentioned above, A&B has had water leases and revocable permits from the State of Hawai'i that authorized the collection of water and operation of the EMI Aqueduct System since 1878. The issuance of the Water Lease would allow the EMI Aqueduct System to continue to provide water to enable approximately 30,000 acres of fields in Central Maui to remain in agriculture, and to supply water to MDWS, which in turn provides water for domestic and agricultural water needs in Upcountry Maui, including the KAP, and for the domestic water needs in the Nāhiku community.

- **Continue to meet domestic and agricultural water demands in Upcountry Maui**

The EMI Aqueduct System supplies water to the MDWS Upcountry Water System, which is the second largest system in the County. It services the

---

<sup>2</sup> The chart on pages 268-269 of the CWRM D&O identifies 25 streams and tributaries, one of which (Ohia/Waianu) is located below the EMI Aqueduct System and has never been diverted into the EMI Aqueduct System. Although the original Petitions to Amend the Interim Instream Flow Standards identified 27 streams, CWRM found that there were 24, not 27, streams that were the subject of the contested case. The difference being that (i) Waikani is not a stream but a waterfall of Wailuānu Stream; (ii) Alo is a tributary of Waikamoi Stream; (iii) Pua'aka'a is a tributary of Kopiliula Stream; and (iv) Piinaau and Palauhulu are separate streams that join together before reaching the ocean. See CWRM D&O, Findings of Fact 56, 2018.

communities of Kula, Pukalani, Makawao, Ha'ikū, Hali'imaile, Waiakoa, Kēōkea, Waiohuli, 'Ulupalakua, Kanaio, Olinda, 'Ōma'opio, Kula Kai, and Pūlehu. The continuation of the use of water through the proposed Water Lease is necessary to continue MDWS's service for agricultural and domestic purposes in Upcountry Maui. In addition, the KAP also draws non-potable water from the MDWS Upcountry Water System to support 31 farm lots. Furthermore, Maui County recently purchased an additional 262 acres in Upcountry Maui, which will be the first phase of a new County agricultural park, in the vicinity of the KAP. The source of water for the new agricultural park will be the same as for the KAP, Reservoir 40, which is sourced by the EMI Aqueduct System.

- **Continue to serve community water demands in the Nāhiku Community**

The Nāhiku community, a small community in East Maui, also draws water directly from the EMI Aqueduct System, with the source of that water being a development tunnel located east of Makapipi Stream, that feeds into the Ko'olau Ditch and is accessed by MDWS. The water serves 43 water meters located along Nāhiku Road (County of Maui, Department of Water Supply, 2019). As stated above, the proposed Water Lease will enable the continued provision of water supply for the Nāhiku community.

- **Continue to provide water for agricultural purposes in Central Maui**

The proposed Water Lease will enable the EMI Aqueduct System to provide continued water service for the cultivation of naturally non-arable lands in Central Maui. Sugar cane activities were terminated in 2016. The Central Maui agricultural lands as well as other lands formerly owned by A&B are now owned by MP Central A LLC, MP Central B LLC, MP CPR LLC, MP East A LLC, not. MP East B LLC, MP West LLC, and MP EMI LLC (individually or collectively referred to as Mahi Pono) which acquired these lands from A&B in December 2018. Since early 2019, MP EMI LLC owns 50% of EMI and is the managing member of EMI; A&B is the other member of EMI. Mahi Pono has prepared a Farm Plan to put as much of the former sugar cane lands into agricultural uses as economically feasible.

#### **4. Overview of License Area**

Collectively, the Nāhiku, Ke'anae, Honomanū, and Huelo License areas encompass approximately 33,000 acres of State Forest Reserve on the north slope of Haleakalā and collectively comprise the License Area. The location of the License Area is illustrated in **Figure 1** and described in **Table 1**.

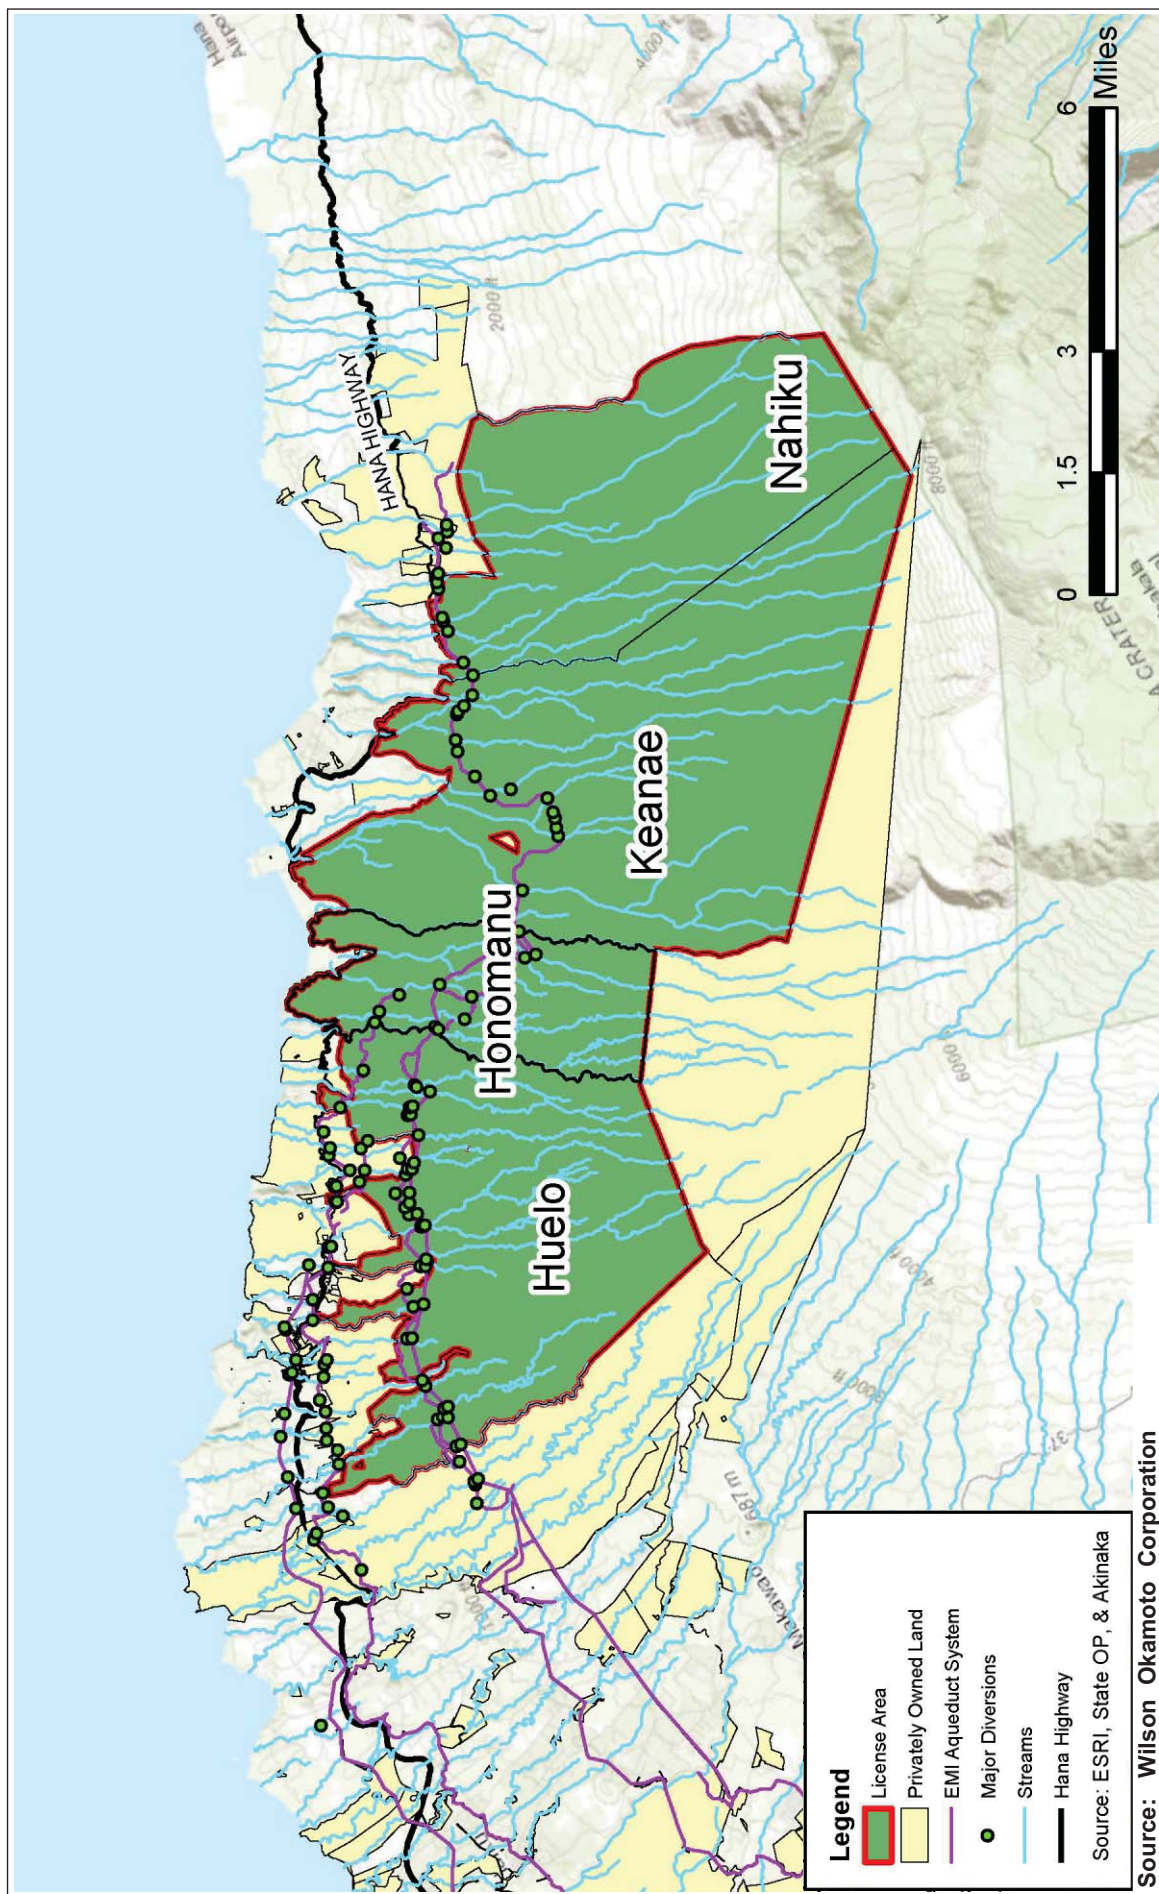

Figure 1

# Proposed Water Lease for the Nāhiku, Ke'ānae, Honomanū, and Huelo License Area Map of License Area

**Table 1. License Area**

| <b>License Area</b> | <b>Tax Map Key</b>                                   | <b>Area</b>                   |
|---------------------|--|-------------------------------|
| Nāhiku              | (2)1-2-004:005, 007 (por.)                           | 7,832 acres, more or less     |
| Ke'anae             | (2)1-1-002:002 (por.)                                | 13,007 acres, more or less    |
| Honomanū            | (2)1-1-001:044                                       | 3,381 acres, more or less     |
| Huelo               | (2)1-1-001:050<br>(2)2-9-014:001, 005, 011, 012, 017 | 8,752.690 acres, more or less |

The License Area is within the Ko'olau Forest Reserve, with mauka portions within Ke'anae and Nāhiku, being bordered by the Kipahulu and Hāna Forest Reserve. The Hanawi Natural Area Reserve also lies within the Nāhiku portion of the License Area.

The Water Lease assessed herein will allow the lessee to continue to enter the License Area *“for the purpose of developing, diverting, transporting, and using government-owned waters”* and to maintain and repair existing access roads and trails used as part of the EMI Aqueduct System. The continued operation of the EMI Aqueduct System will deliver water to agricultural lands in Central Maui, as well as to MDWS for domestic and agricultural water needs in Upcountry Maui and the Nāhiku community.

The EMI Aqueduct System diverts water from streams in East Maui, of which the vast majority, 36 streams, are diverted from within the License Area (CWRM D&O). The CWRM D&O calls for the full restoration of 10 streams within the License Area, and reduced diversions in several (12) other License Area streams, some significantly. Thus, the Proposed Action proposes to continue to divert a reduced amount of water from 26 streams within the License Area, with diversions from 12 of these 26 streams at reduced levels in accordance with the CWRM D&O. This report will assess the economic and fiscal impacts of the *“right, privilege, and authority to enter and go upon”* the License Area *“for the purpose of developing, diverting, transporting, and using government-owned waters”* for the 26 streams along with the streams located outside of the License Area but within the larger, 50,000 acre, Collection Area. See **Table 2**.

**Table 2.** Streams in the License Area

| <b>License Area</b>           | <b>Stream Number</b> | <b>Stream Name</b>                             | <b>Subject to IIFS</b> | <b>Restoration Status</b> | <b>Median Base Flow at IIFS (cfs)</b>                      | <b>IIFS Location</b>            |

## **B. IMPACT ANALYSIS – BASELINE AND FUTURE CONDITIONS**

The Proposed Action that is being assessed in the EIS is the issuance of a long-term (30-year) Water Lease from the BLNR for the continued “*right, privilege, and authority to enter and go upon*” the License Area for the “*purpose of developing, diverting, transporting, and using government owned waters*”, through the existing EMI Aqueduct System which supplies water to domestic and agricultural water users. It is assumed that CWRM D&O defines the maximum amount of stream water that can be diverted, subject to actual need.

This study will assess economic and fiscal impacts for baseline conditions (including certain historical use figures for context), the Proposed Action (preferred alternative), and other future conditions (alternatives), as described below:

### **1. Baseline Conditions**

#### **a. Sugar Cane Cultivation**

A&B cultivated sugar cane in Central Maui for over a century. EMI, a subsidiary of A&B, has operated the EMI Aqueduct System since 1878 to provide irrigation to the Central Maui fields. Water service to the MDWS for Upcountry Maui began in the early 1960's. Although A&B ended sugar cane operations in December 2016, the long history of sugar cane cultivation is a relevant baseline condition for the purposes of assessing economic and fiscal impacts associated with water use from the License Area.

Data from 2008 to 2013 will be used to represent the recent sugar cane cultivation period. The 2008 to 2013 time period was selected because those years are representative of the last six (6) full years of sugar cane operations and because the CWRM D&O reports water diversion and distribution data for these years. It is noted, however, that 2008 to 2013 is not representative of the long-term historic sugar operations because rainfall was below normal, water returned to East Maui streams was large enough to adversely affect sugar cane operations, and HC&S struggled to achieve profitable operations. As such, this report will also provide an analysis of 2006, for the economic and fiscal impacts specifically related to EMI operations and sugar cane cultivation in Central Maui. The 2006 year is representative of the 1987 to 2006 period of “typical” sugar cane operations: rainfall in East Maui was regarded as normal, the restoration of stream flows was not large enough to significantly affect HC&S sugar cane operations, and the plantation was economically healthy. The 2006 analysis will be limited to EMI operations and sugar cane cultivation in Central Maui and will not include economic and fiscal impacts for East

Maui, Upcountry Maui, or Nāhiku as the impacts for these areas in 2006 are not anticipated to be substantially different from the 2008 to 2013 period.

**b. Interim Diversified Agriculture Operations (2017)**

Since the cessation of sugar cane operations in 2016, some of the former cane fields have been transitioned into other agricultural uses. As will be discussed, relative to the Proposed Action below, a mix of diversified agriculture is proposed across the former sugar cane lands, approximately 30,000 acres of which are irrigated by the EMI Aqueduct System. The current “existing condition”, however, is actually an interim condition, with the majority of the fields in a fallow state, following the end of sugar cane cultivation, and diversified agriculture operations in their infancy. This interim condition is expected to change over time as additional fields are transitioned to diversified agriculture. Water use during the interim condition is not representative of the true long-term water demand under the Proposed Action due to the limited active agricultural cultivation during this early transitional period. Thus, while the interim diversified agriculture operations are the current “existing conditions”, the sugar cane cultivation analysis described above provides a more appropriate benchmark to which the Proposed Action and other future condition alternatives may be compared for the purposes of economic and fiscal impacts.

**2. Future Conditions**

The year 2030 is used for analyzing the future conditions alternatives.

**a. Proposed Action**

Under the Proposed Action, it is assumed that through the Water Lease, the State would authorize the right to collect waters emanating from government owned lands up to the maximum amount allowed under the CWRM D&O. Pursuant to the CWRM D&O and based on historic flows, it is estimated that the median amount of water that may be available from the Collection Area would be approximately 87.95 million gallons per day (mgd), measured at Honopou Stream. This estimate is based on historical ditch and stream flows as well as the implemented IIFS under the CWRM D&O. Note that this is a median, and actual ditch flows are expected to range from a low of 21.65 mgd during dry times to a high of 450 mgd (maximum capacity of the EMI Aqueduct System) during large rainfall events. Immediately west and outside of the License Area to Maliko Gulch, the EMI Aqueduct System collects approximately an additional 4.37 mgd from privately owned lands. In total, the median amount of surface water

that may be delivered through the EMI Aqueduct System in compliance with the CWRM D&O is approximately 92.32 mgd.

**b. No Action**

The No Action Alternative would result in no Water Lease being issued by the State. Under the No Action Alternative, the EMI Aqueduct System could continue to divert water from privately owned lands in the Collection Area (i.e., approximately 30 percent of the water available from the Collection Area). Therefore, the median amount of water estimated to be available from the Collection Area at the western boundary of the License Area, which is Honopou Stream, under the No Action Alternative would be approximately 26.39 mgd. Additionally, an estimated 4.37 mgd could be collected from private land from the western boundary of the License Area to Maliko Gulch, for an estimated total of approximately 30.76 mgd water delivered through the EMI Aqueduct System. This is just an estimate, but is the assumption being used in assessing the economic and fiscal impacts of the No Action Alternative.

**c. Reduced Water Lease Alternative**

For this alternative, the Water Lease would authorize less water than allowed under the CWRM D&O. The economic and fiscal impact analysis presented herein will provide a qualitative analysis of potential impacts under the Reduced Water Lease alternative.

The amount of water that would be diverted under the Proposed Action and No Action Alternatives are summarized in **Table 3** below.

**Table 3.** Amount of Water Diverted, Future Conditions

|   | Median Water Diversion (mgd)<br>Collection Area |  |
|---|---|--|
|   | Total At Honopou<br>Boundary                    | Total At Maliko<br>Boundary <sup>a</sup> |
| <b>Proposed Action</b>  | 87.95 mgd                                       | 92.32 mgd                                |
| <b>No Action</b>  | 26.39 mgd                                       | 30.76 mgd                                |
| <sup>a</sup> An additional 4.37 mgd of water is estimated to be available based on the water that is collected in the area west of the Collection Area to Maliko Gulch. |   |  |

**C. AREAS OF POTENTIAL EFFECT**

This study will assess economic and fiscal impacts associated with the baseline and future conditions described above for the following areas of potential effect:

1. **East Maui**

Due to the heavy rainfall on the windward slopes of Haleakalā and the many streams in the area, many of the makai communities in East Maui are well suited for growing taro and truck crops. Also, a number of farmers in East Maui have appurtenant and riparian rights to use water from these streams. Collectively, there are about 45 acres in East Maui that are suitable for growing taro, and about 35 acres for truck crops (Plasch Econ Pacific, LLC, 2019). This Study will summarize economic and fiscal impacts related to agricultural operations in East Maui.

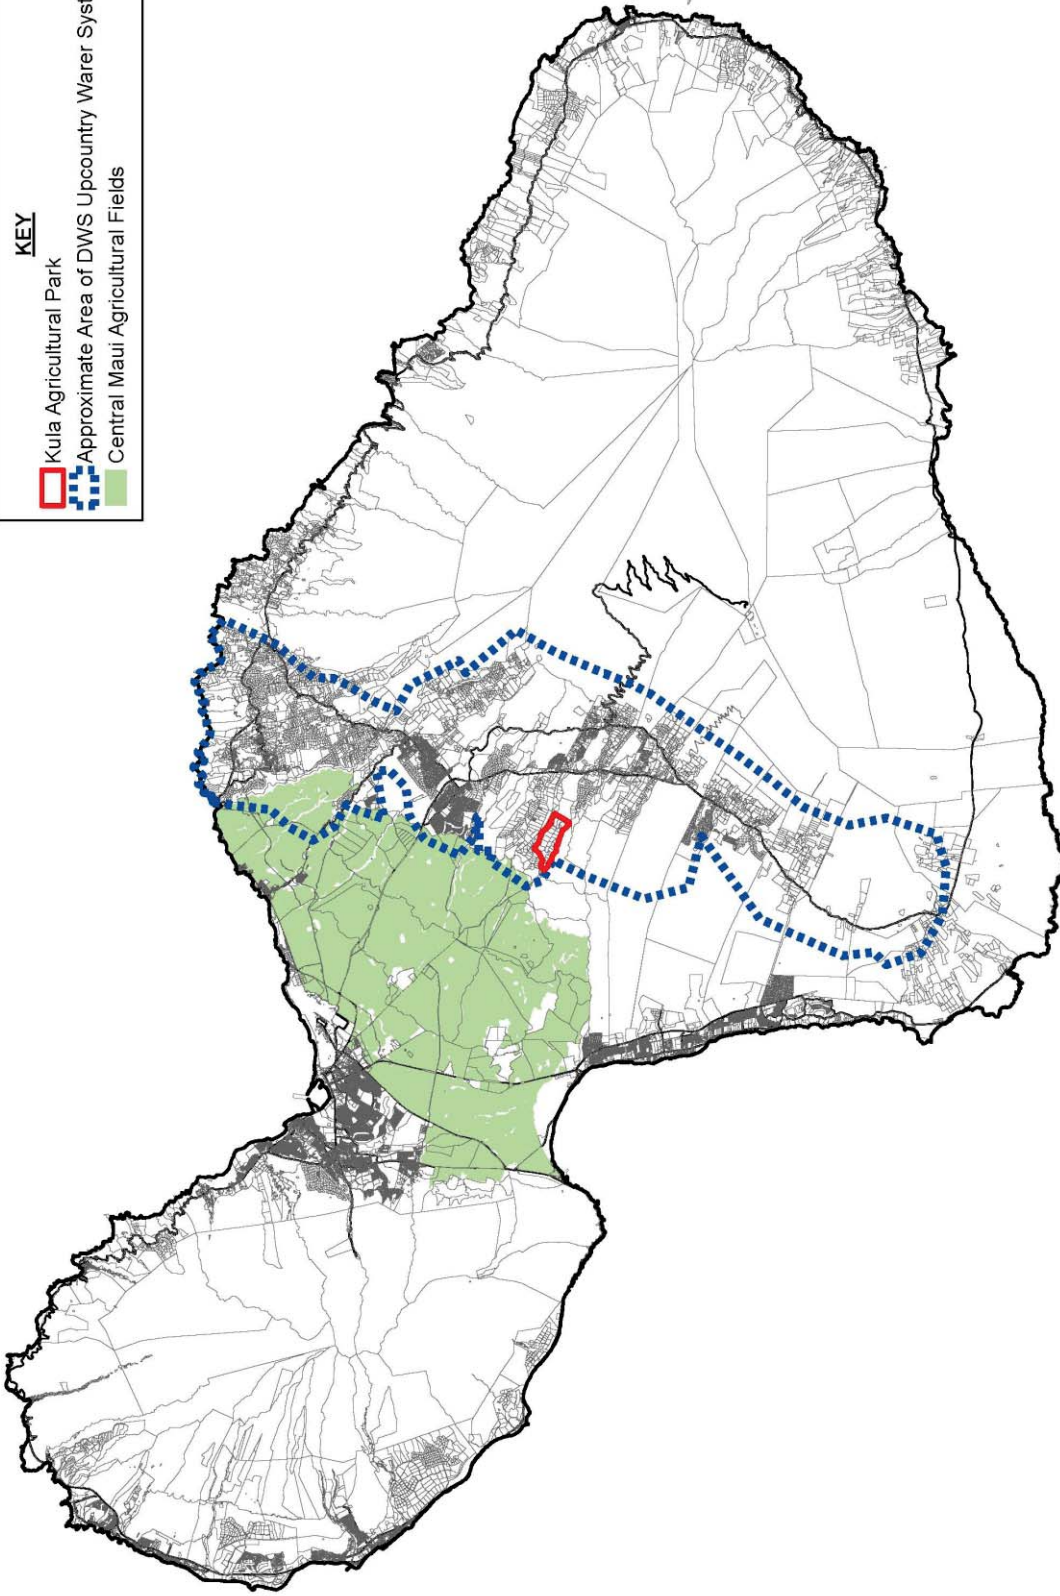

2. **MDWS Upcountry Water System Service Areas**

As previously noted, the EMI Aqueduct System supplies water to the MDWS Upcountry Maui Water System, which covers approximately 61,500 acres. See **Figure 2**. This Economic and Fiscal Impact Study will assess impacts to the following users within the Upcountry Water System.

- **Domestic users:** Domestic users include residents, businesses, and public/quasi-public users.
- **Agricultural users:** Based on analysis using data from the County of Maui's 2017 Real Property Tax Assessment information and State Department of Agriculture's Statewide Agricultural Land Use Baseline 2015, approximately 32,500 acres of land are estimated to be in agricultural cultivation within the Upcountry Maui Water System service area. This includes the KAP, which is owned by the County and consists of 31 farm lots ranging in size from 7 acres to 29 acres, for a total of approximately 447 acres. Maui County purchased an additional 262 acres in Upcountry Maui, the first phase of a new County agricultural park, in the vicinity of the KAP. The source of water for the new agricultural park will be the same as for the KAP, Reservoir 40, which is sourced by the EMI Aqueduct System.

3. **Nāhiku Community**

The Nāhiku Community, located in East Maui, receives domestic water service from MDWS which is directly sourced from the EMI Aqueduct System, with the source of that water being a development tunnel located east of Makapipi Stream, that feeds into the Ko'olau Ditch and is accessed by MDWS. MDWS services approximately 43 water meters, located along Nāhiku Road (County of Maui, Department of Water Supply, 2019).

Proposed Water Lease for the Nāhiku,  
Ke'anae, Honomanū, and Huelo License Area  
Upcountry Water System and Central Maui Fields

Prepared for: Wilson Okamoto Corporation

WOC/E Maui Water Lease/Applications/Figures/Upcountry Water Sys and CM Fields

#### **4. Central Maui**

A&B historically cultivated sugar cane on the fields of Central Maui for over a century. Approximately 30,000 acres of the agricultural fields in Central Maui are irrigated by water diverted by the EMI Aqueduct System. Refer to **Figure 2**. A&B terminated its sugar cane activities in 2016, however, the cultivation of naturally non-arable lands in Central Maui will be maintained to continue Maui's rich agricultural heritage, and to enhance the sustainability and diversity of Maui's economy. The Central Maui agricultural lands are now owned by Mahi Pono, which acquired these lands from A&B in December 2018. Mahi Pono has prepared a Farm Plan to put as much of the former sugar cane lands into agricultural uses as economically feasible. The utilization of water from the EMI Aqueduct System is an essential component for the successful continued use of former sugar cane lands for agricultural purposes.

### **D. METHODOLOGY**

This report was prepared utilizing data from a number of public and private data sources, including the U.S. Census Bureau, State of Hawai'i, Department of Business, Economic Development, and Tourism, CWRM, County of Maui, and Gale Cengage Learning, a private demographic and market data service provider. Information pertaining to economic and fiscal impacts related to agricultural activities have been derived from the *Agricultural and Related Impacts Report* prepared by Plasch Econ Pacific, LLC for the subject EIS.

An overview of the methodology used for the economic and fiscal impact analyses is provided below.

#### **1. Economic Impact Assessment**

The economic impacts presented herein include discussion of operational costs, revenue, employment, and earnings related to the EMI Aqueduct System as well as agricultural operations in East Maui (i.e., taro cultivation), Upcountry Maui, and Central Maui. In addition, with respect to the Upcountry Maui service area, economic impact considerations relate to the resident population and businesses supported by water provided to the MDWS system.

The *Hawai'i State Input-Output Study: 2012 Benchmark Report*, which was prepared by DBEDT in 2016, was utilized to obtain multipliers for direct, indirect, and induced effects for output and employment. Direct impacts refer to immediate effects associated with a change in the economy. Indirect effects relate to inter-industry spending or the secondary impacts of a change. These impacts occur when industries buy goods and services from other local industries. For example,

indirect effects would include purchase of agricultural equipment or supplies by farmers who receive water from the EMI Aqueduct System. Induced effects capture household spending impacts generated when people who benefit from direct or indirect impacts spend their income on local goods and services. For example, an agricultural worker may spend his or her income on groceries or eating out at a restaurant. For the purposes of this report, indirect and induced effects are combined and referred to collectively as “indirect” effects.

## **2. Fiscal Impact Assessment**

Fiscal impacts were analyzed for the State of Hawai‘i and County of Maui general funds. This analysis identifies the key revenues, namely taxes, that the State and County would collect. For each major source, a dollar estimate of revenues is provided. It is noted that this study is not intended to provide a comprehensive analysis of all revenue sources that would be impacted but rather focuses on the largest revenue sources, in terms of dollars collected.

In addition to the State and County general funds, the County of Maui’s Water Supply Fund and the State’s Special Land Development Fund are also assessed.

It is also noted that the City and County of Honolulu derives tax revenues from economic activity on Maui because some of the indirect sales are final sales on O‘ahu. These sales are subject to a 0.5 percent excise-tax surcharge that went into effect in 2007.

Throughout the report, dollar amounts are expressed in terms of 2018 purchasing power and market conditions. Dollar amounts after 2018 are not increased to account for inflation, appreciation in property values, changes in labor rates, changes in building costs, or other changes in market conditions.

It is noted that this report contains quantitative analysis using numbers to estimate anticipated impacts. However, these numbers should not be interpreted as precise predictions. Rather, they represent best estimates of what is expected to occur based on available information.

## **E. REPORT ORGANIZATION**

The balance of this report addresses findings of analysis for both economic and fiscal impact parameters. Each of the remaining chapters addresses alternatives associated with the Baseline Conditions as well as Future Conditions as described in Section I.B of this report. From a report organization standpoint, this report provides the findings and qualitative assessment of impacts (where applicable), as follows:

- Chapter II: Impacts related to EMI operations

- Chapter III: Impacts to East Maui
- Chapter IV: Impacts to Upcountry Maui (including impacts to domestic and agricultural water use)
- Chapter V: Impacts to Nāhiku
- Chapter VI: Impacts to Central Maui
- Chapter VII: Summary

EAST MAUI IRRIGATION  
COMPANY WATER USE  
AND OPERATIONS

## II. EAST MAUI IRRIGATION COMPANY WATER USE AND OPERATIONS

This Chapter presents an analysis of the direct economic and fiscal impacts associated with the East Maui Irrigation Company's (EMI) operations for the baseline and future conditions.

### A. BASELINE CONDITIONS

#### 1. Typical Sugar Cane Operations (2006)

The year 2006 is used in this analysis as a representative year for "typical" sugar cane operations during the 20-year period from 1987 to 2006. In 2006, EMI diverted an estimated 156.54 mgd of surface water. Average daily use by MDWS was 3.23 mgd (Plasch Econ Pacific, LLC, 2019).

##### a. Economic Impacts

In 2006, operational costs for EMI was \$2.0 million, or \$0.035 per 1,000 gallons (kgal) of surface water. Operational costs include EMI labor, fringe benefits, materials, professional services, taxes, revocable permit rent to the State, and other expenses. It is noted that this represents the cost to transport the water to Maliko Gulch. There were additional costs for water transportation and storage from Maliko Gulch to MDWS and the Central Maui agricultural fields. However, these additional costs were covered by HC&S. As such, the \$0.035 per kgal cost does not reflect the full cost to provide water to MDWS and Central Maui.

Direct spending by EMI, excluding the revocable permit payment to the State from the operational costs, was \$1.8 million. The purchase of goods and services by EMI and the families of employees generated indirect sales and in turn, these suppliers generated more indirect sales by their purchases of goods and services. The indirect sales are estimated at \$2.2 million. Total direct spending and indirect sales was \$4.0 million, of which \$3.2 million was on Maui and \$0.8 million on Oahu.

EMI employed 16 people in 2006 with a payroll of \$0.8 million. As with indirect sales, EMI operations generated indirect jobs, including those at companies providing supplies and equipment, professional services, and those involved with supplying goods and services to families of employees. EMI operations generated about 7 indirect jobs with an associated payroll of \$0.3 million. The total direct and indirect employment was 23, of which

about 20 were on Maui. The direct and indirect jobs associated with EMI operations supported an estimated 51 people. See **Table 4**, Section 4.c.

EMI revenues primarily consist of the revenue from water delivered to MDWS. EMI also received some land lease revenue, however the amount of lease income was nominal.

**b. Fiscal Impacts**

The MDWS paid EMI \$0.06 per thousand gallons of water delivered for the Upcountry Water System. Based on delivery of 3.23 mgd, MDWS payment to EMI in 2006 was \$70,700.

Associated taxes accrued to the State of Hawai'i General Fund would include General Excise Tax (GET) on direct spending and indirect sales, and payroll taxes paid by employees. GET would be approximately \$42,000, while payroll tax paid by employees is estimated at \$47,400. The total tax revenue accrued to the State in 2006 was approximately \$89,400.

EMI paid \$158,284 in 2006 to the State Special Land Development Fund for the revocable permits for the water, which is equivalent to approximately \$210,800 in 2018 dollars. The Office of Hawaiian Affairs (OHA) receives 20 percent of the revocable permit revenue, while the Department of Hawaiian Home Lands (DHHL) receives 30 percent. This translates to approximately \$42,200 for OHA and \$63,200 for DHHL. Refer to **Table 4**, Section 4.d.

**2. Recent Sugar Cane Operations (2008-2013)**

Between 2008 and 2013, EMI diverted an average of 113.71 mgd (CWRM D&O, 2018, p. 179). Long-term average daily use by the MDWS was estimated by CWRM at 7.1 mgd (CWRM D&O, 2018, p. 143). The remainder was utilized by Hawaiian Commercial & Sugar Co. ((HC&S) a division of A&B) to support A&B's agricultural operations or represents system losses. Refer to **Table 4**, Section 4.a. and Section 4.b.

**a. Economic Impacts**

Average operational costs for EMI between 2008 and 2013 was \$1.6 million, or \$0.039 per kgal. As previously noted, this represents the cost to transport the water to Maliko Gulch; it does not reflect the full cost to provide water to MDWS and Central Maui.

**Table 4. EMI Water System Economic and Fiscal Impacts**

| Item  | Multiplier or Source    | Baseline             |                          |                           | Future Conditions |              |          |
|---|-------------------------|----------------------|--------------------------|---------------------------|-------------------|--------------|----------|
|   |                         | Typical Sugar (2006) | Recent Sugar (2008-2013) | Interim Conditions (2017) | Proposed Action   | No Action    | Units    |

| Notes:  |                           |                      |                          |                           |                   |           |          |
| (a) Other Uses includes system losses.  |                           |                      |                          |                           |                   |           |          |
| (b) MDWS pays \$0.06 per kgal to EMI under the existing agreement between the two entities. In 2030, EMI's operational cost per kgal will exceed the current \$0.06 per kgal rate. The 2030 water service fee rate is calculated based on the ratio of operational cost to MDWS service fee for 2008-2013.                                      |                           |                      |                          |                           |                   |           |          |
| (c) Between 2006 and 2017, the revocable permit rent was \$158,283.84. The values have been adjusted to be reported in 2018 dollars.  |                           |                      |                          |                           |                   |           |          |
| (d) The lease payment would be based on an appraisal conducted prior to issuance of the lease. For the purpose of this analysis, the payment is based on the equivalent per unit rate under the Revocable Permit established by the BLNR in November 2018. The Revocable Permit rent was set at \$19,247.02 per month or \$230,964.02 per year. |                           |                      |                          |                           |                   |           |          |
| Assuming 16.8 mmd is diverted under the Revocable Permit, the rate would translate to \$230,964.02 / (16.8 mmd x 1,000,000 x 365 days) / 1,000 = \$0.038 / \$1,000 gallons  |                           |                      |                          |                           |                   |           |          |

Notes:

- (a) Other Uses includes system losses.
- (b) MDWS pays \$0.06 per kgal to EMI under the existing agreement between the two entities. In 2030, EMI's operational cost per kgal will exceed the current \$0.06 per kgal rate. The 2030 water service fee rate is calculated based on the ratio of operational cost to MDWS service fee for 2008-2013.
- (c) Between 2006 and 2017, the revocable permit rent was \$158,283.84. The values have been adjusted to be reported in 2018 dollars.
- (d) The lease payment would be based on an appraisal conducted prior to issuance of the lease. For the purpose of this analysis, the payment is based on the equivalent per unit rate under the Revocable Permit established by the BLNR in November 2018. The Revocable Permit rent was set at \$19,247.02 per month or \$230,964.02 per year.
- Assuming 16.8 mgd is diverted under the Revocable Permit, the rate would translate to \$230,964 / (16.8 mgd x 365 days) / 1,000 = \$0.038 / \$1,000 gallons.

Direct spending by EMI, excluding the revocable permit payment to the State from the operational costs, was \$1.4 million. Total direct spending and indirect sales was \$3.2 million, of which \$2.6 million was on Maui.

EMI employed an average of 17 people between 2008 and 2013, with a payroll of \$0.8 million. Total direct and indirect jobs was 24, with an associated payroll of \$1.1 million. Refer to **Table 4**, Section 4.c.

As was the case in 2006, EMI revenues primarily consisted of the revenue from water delivered to MDWS.

**b. Fiscal Impacts**

Based on an average usage of 7.1 mgd, MDWS payments to EMI totaled approximately \$155,500 per year.

GET would average approximately \$37,000 per year while payroll tax paid by employees is estimated at \$45,400 annually. The total tax revenue accrued to the State was approximately \$82,400 per year.

EMI paid \$187,900 to the State Special Land Development Fund for the revocable permits for the water, including approximately \$37,600 for OHA and \$56,400 for DHHL. Refer to **Table 4**, Section 4.d.

**3. Interim Diversified Agriculture Operations (2017)**

In 2017, 28.36 mgd of surface water was diverted from East Maui, of which, 23.99 mgd is estimated to come from the Collection Area. MDWS used 2.86 mgd in 2017, which is significantly less than the 7.1 mgd EMI provided to MDWS historically. MDWS use of surface water from EMI was low in 2017 because heavy rainfall increased supplies from other County Sources that depend on rainfall (Plasch Econ Pacific, LLC, 2019). Refer to **Table 4**, Section 4.a. and Section 4.b.

**a. Economic Impacts**

In 2017, EMI operational costs were \$1.7 million. Due to the reduced water volume in 2017, the per unit operating cost for EMI was higher at \$0.162 per kgal, compared to \$0.039 per kgal in 2008 to 2013. Direct spending by EMI, excluding the revocable permit payment to the State, was \$1.5 million. Total direct spending and indirect sales was \$3.4 million, of which \$2.7 million was on Maui.

EMI employed 13 people in 2017, with a payroll of \$0.5 million. Total direct and indirect jobs was 19, with an associated payroll of \$0.8 million. Refer to **Table 4**, Section 4.c.

**b. Fiscal Impacts**

Based on MDWS' water use of 2.86 mgd, MDWS paid \$62,600 to EMI for the delivery of surface water. Total State GET and payroll tax revenues would be \$65,700.

EMI paid \$162,200 to the State Special Land Development Fund for the revocable permits for the water with the same proportional disbursements to OHA and DHHL. Refer to **Table 4**, Section 4.d.

**B. FUTURE CONDITIONS**

Due to the nature of the EMI Aqueduct System, the operational costs are largely fixed, with minimal variable costs. Future operational costs for the EMI Aqueduct System are anticipated to be similar to the average cost experienced during the recent sugar operations period (2008-2013). As will be discussed below, the operational costs (i.e., maintenance, repair, and personnel) are assumed to be the similar across all future conditions alternatives, with the only variation being the amount of the Water Lease payments owed to the State. Beyond that, costs are not anticipated to fluctuate based on the amount of water diverted. Therefore, while costs remain constant, the per unit cost for delivery of water increases as the amount of water diverted decreases.

**1. Proposed Action**

Under the Proposed Action, for purposes of this report, it is assumed that the State would lease water to EMI up to the maximum amount allowed by the CWRM D&O. This would translate to an estimated 87.95 mgd from the License Area. An additional 4.37 mgd is estimated to be available to be collected between Honopou and Maliko Streams, outside of the License Area, for an estimated total diversion of 92.32 mgd. Refer to **Table 4**, Section 4.a.

**a. Economic Impact Assessment**

Total operational costs for EMI labor, fringe benefits, materials, professional services, taxes, water lease, and other expenses are projected to be \$2.3 million per year. This would translate to \$0.068 per kgal. Refer to **Table 4**, Section 4.c.

It is noted that an unknown factor in EMI's operating cost is the annual lease payment to DLNR. For the purposes of this analysis, the Lease payment has been calculated based on the equivalent per unit cost under the existing 2019 revocable permit. The revocable permit rent payment sent in November 2018 was \$230,964.24, which represents an increase from the rent that was historically paid. Assuming 16.8 mgd is diverted

from the License Area under the revocable permit, the rent rate would translate to \$0.038 per thousand gallons. This rate of \$0.038 is assumed as the basis for the annual lease payment to DLNR. However, the actual Water Lease rental amount will be based on an appraisal conducted prior to issuance of the Water Lease. Should the Water Lease amount be higher or lower, the operational costs of the EMI Aqueduct System would be adjusted accordingly.

Direct spending by EMI, excluding the long-term lease payment to the State from the operational costs, is forecasted to be \$1.4 million. Total direct spending and indirect sales is estimated at \$3.2 million, of which \$2.6 million would be on Maui.

EMI is expected to employ a staff of 17 people with a payroll of \$0.8 million. Total direct and indirect jobs was 24, with an associated payroll of \$1.1 million. The direct and indirect jobs associated with EMI operations would support an estimated 54 residents. Refer to **Table 4**, Section 4.c.

**b. Fiscal Impact Assessment**

Under the Proposed Action, it is assumed that the rate MDWS pays to EMI will increase because EMI's per unit operating cost will increase because fixed costs will be spread out over a lower volume of water diverted and possible higher lease payments to the State compared to historic payments. As previously mentioned, it is estimated that EMI's operating cost under the Proposed Action would be \$0.068 per kgal, which is higher than the current MDWS payment to EMI of \$0.06 per kgal. The actual rate MDWS will pay to EMI in 2030 will be subject to a future agreement between the two (2) entities. However, for the purposes of this analysis, the 2030 water service fee rate is estimated to be \$0.10, which has been calculated based on the ratio of operational cost to MDWS service fee for 2008 to 2013. Under this assumption, EMI would receive an estimated \$268,900 in 2030 from MDWS.

As previously noted, the amount paid to the State Special Land Development Fund for the Water Lease would be based on an appraisal conducted prior to lease issuance. Assuming the amount of the Water Lease is based on the equivalent per unit cost under the existing revocable permits, the annual payment to the Special Land Development Fund would be \$846,700. Of this, \$169,300 would be disbursed to OHA and \$254,000 would be set aside for the DHHL.

GET revenue would be estimated at \$37,000 while payroll tax would be \$45,400 per year. Refer to **Table 4**, Section 4.d.

## 2. **No Action Alternative**

The No Action Alternative would result in no Water Lease issued from the State. EMI could continue to divert non-government-owned water from the Collection Area (i.e., approximately 30 percent of the water available from the Collection Area) plus the 4.37 mgd from that portion of the Collection Area that is derived from privately owned lands between Honopou Stream and Maliko Gulch. Under this Alternative, it is assumed that an estimated total of 26.39 mgd is available to be diverted from the Collection Area (30 percent of total flow within the Collection Area) and 4.37 mgd is collected between Honopou and Maliko Gulch, west of the License Area, for a total estimated diversion of 30.76 mgd. Refer to **Table 4**, Section 4.a.

### a. **Economic Impact Assessment**

Under the No Action Alternative, the cost to operate and maintain the EMI Aqueduct System is assumed to be similar due to the fixed nature of operating costs. The EMI Aqueduct System needs to be maintained regardless of the amount diverted. The No Action Alternative results in an approximately 70 percent reduction in the amount of water from the bulk of the Collection Area compared to the Proposed Action, while the amount of water collected between Honopou and Maliko Gulch, west of the License Area remains unchanged. The only change in the operating cost would be that no Water Lease payment would be made to the State. This would reduce operating costs to approximately \$1.4 million. This translates to \$0.129 per kgal, which is nearly 90 percent higher than the Proposed Action (\$0.068). Direct spending of EMI, excluding the Water Lease payment, and associated indirect sales would be similar to those described for the Proposed Action. A staff of 17 employees is expected, with an associated payroll of \$0.8 million. Refer to **Table 4**, Section 4.c.

For the purposes of the analysis, it is assumed that the entire EMI Aqueduct System continues to be maintained under the No Action Alternative. However, assessment of flow data could result in decisions to reduce the size of the EMI Aqueduct System to reduce operation and maintenance costs. For example, due to the reduced water flow, EMI may decide to abandon lower elevation ditches and limit diversions to the higher elevation ditches only. This would reduce the operation and maintenance cost of the EMI Aqueduct System and reduce the cost per kgal of water. However, potential system reductions are not known at this time and cannot be

determined until there is actual flow data to analyze and determine how best to optimize the EMI Aqueduct System.

It is also noted that EMI may determine that it is not economically feasible to operate and maintain the system at all under the No Action Alternative.

**b. Fiscal Impact Assessment**

Due to the reduced amount of water under the No Action Alternative, there may not be water available to provide to MDWS' Upcountry Water System. The water delivery agreements between the County and A&B are contingent upon the Lease being issued, therefore, if no Lease is issued, it is assumed that the delivery of water to MDWS would terminate. If this were to be the case, there would be no payment from MDWS to EMI. Payroll and GET revenue would be similar to the Proposed Action. However, if the State does not issue the Water Lease, there would be no payment from EMI to the State's Special Land Development Fund under the No Action Alternative and no funds would be disbursed to OHA and DHHL. Refer to **Table 4**, Section 4.d.

**3. Reduced Water Lease Alternative**

The Reduced Water Lease Alternative would result in water diversion from the License Area of an amount estimated between 26.39 mgd (No Action) and 87.95 mgd (Proposed Action). An additional 4.37 mgd is estimated to be available between Honopou and Maliko Gulch, outside of the License Area.

**a. Economic Impact Assessment**

Inasmuch as the costs to operate the EMI Aqueduct System are fixed, it is assumed that EMI's total operational cost would be similar to the other alternatives, with the exception of the amount of lease payment to the State. The operating cost per kgal would range from \$0.068 per kgal to \$0.129 per kgal, depending on the amount of water that would be available. Direct spending of EMI, excluding the Water Lease payment, and associated indirect sales would be similar to those described for the Proposed Action. Similar to the other alternatives, a staff of 17 employees would be expected, with an associated payroll of \$0.8 million.

**b. Fiscal Impact Assessment**

Depending on how much water is available under a Reduced Water Lease Alternative, there may or may not be water available to provide to MDWS' Upcountry Water System. Payment from MDWS would be dependent on

the availability of water under this alternative and could range from no payment to up to \$268,900. Assuming rates equivalent to the existing revocable permits, the amount of the Water Lease to the State Special Land Development Fund would also depend on the amount of water leased and is estimated to range from nothing to \$846,700 annually.

EAST MAUI

### III. EAST MAUI

Due to the heavy rainfall on the windward slopes of Haleakalā and the many streams in the area, many of the makai communities in East Maui are well suited for growing taro and truck crops. Also, a number of farmers in East Maui have appurtenant and riparian rights to use water from these streams. There are about 45 acres in East Maui that are suitable for growing taro and about 35 acres for truck crops. The economic and fiscal impacts related to East Maui are based on *the Agricultural and Related Impacts Report* prepared by Plasch Econ Pacific, LLC.

#### A. **BASELINE CONDITIONS**

A number of East Maui farmers divert stream water to irrigate taro lo'i and small farms. Taro farming is difficult and labor-intensive, and the net returns are modest. Nevertheless, many farmers are attracted to the lifestyle and to growing this culturally significant crop. Farmers in East Maui have reported that past surface-water diversions to supply water to Central Maui left insufficient water in the streams for them to take full advantage of the agricultural potential in East Maui.

#### B. **FUTURE CONDITIONS**

As previously mentioned, on June 30, 2018, the Commission on Water Resource Management (CWRM) adopted Findings of Fact, Conclusions of Law, and Decision and Order (D&O), setting the Interim Instream Flow Standards (IIFS) for 24 East Maui Streams located within the License Area. The CWRM D&O returns free flowing water, with no upstream diversions, to all streams which have historically supported significant taro cultivation. As a result, ample stream water should now be available to irrigate taro lo'i and the small farms relying on East Maui streams. As previously noted, there are about 45 acres in East Maui that are suitable for growing taro and about 35 acres for truck crops. See **Table 5**, Section 5.a. This accounting includes only the existing and potential farms in East Maui affected by the CWRM D&O, and excludes all other East Maui farms.

It is assumed that above mentioned lands suitable for taro and truck crops would be fully cultivated under the future conditions. For all three (3) alternatives (Proposed Action, No Action Alternative, and Reduced Water Lease Alternative), the economic and fiscal impacts of agricultural cultivation in East Maui will be the same.

##### 1. **Economic Impact Assessment**

The taro farms and other farms in East Maui that depend on stream flows would produce at full development about 1.0 million pounds per year of taro, and about 400,000 pounds per year of other crops (refer to **Table 5**, Section 5.b.). The resulting direct sales would be about \$1.4 million per year. Indirect sales generated

**Table 5. East Maui Economic and Fiscal Impacts**

| Item                               | Baseline Conditions         |                                 | Future Conditions (2030) |           | Units      |

Source: Plasch Econ Pacific, LLC

by the purchase of goods and services would be about \$1.5 million per year. Thus, total direct and indirect sales would be about \$2.9 million per year (with rounding), of which about \$2.3 million would be on Maui and \$500,000 on O‘ahu. Profits from farm operations and indirect sales would be about \$300,000.

Full development of the taro farms and other farms in East Maui that depend on stream flows would result in about 14 jobs and generate about 7 indirect jobs, for a total of about 21 jobs. The payroll is expected to reach about \$500,000 for the direct jobs and \$800,000 for all direct and indirect jobs. The direct and indirect jobs provided will support an estimated 47 residents, most of which would be on Maui. Refer to **Table 5**, Section 5.b.

## **2. Fiscal Impact Assessment**

The taro farms and other farms in East Maui that depend on stream flows would generate approximately \$67,000 per year in State taxes at full development. For the County of Maui, property taxes will total about \$100 per year. The City and County of Honolulu will derive about \$300 per year from the excise tax surcharge. Refer to **Table 5**, Section 5.c.

UPCOUNTRY MAUI

IV

## IV. UPCOUNTRY MAUI

The Maui County Department of Water Supply (MDWS) is responsible for the development, operation, and maintenance of the municipal water system and supply and serves approximately 90 percent of the population on the island of Maui. On Maui, MDWS manages nine (9) public water systems as defined by the State of Hawai'i, Department of Health (DOH) under the State Drinking Water Act: Central Maui (Wailuku), West Maui (Lahaina), Upcountry (Makawao), and East Maui (Hāna); each encompasses a number of sub-districts.

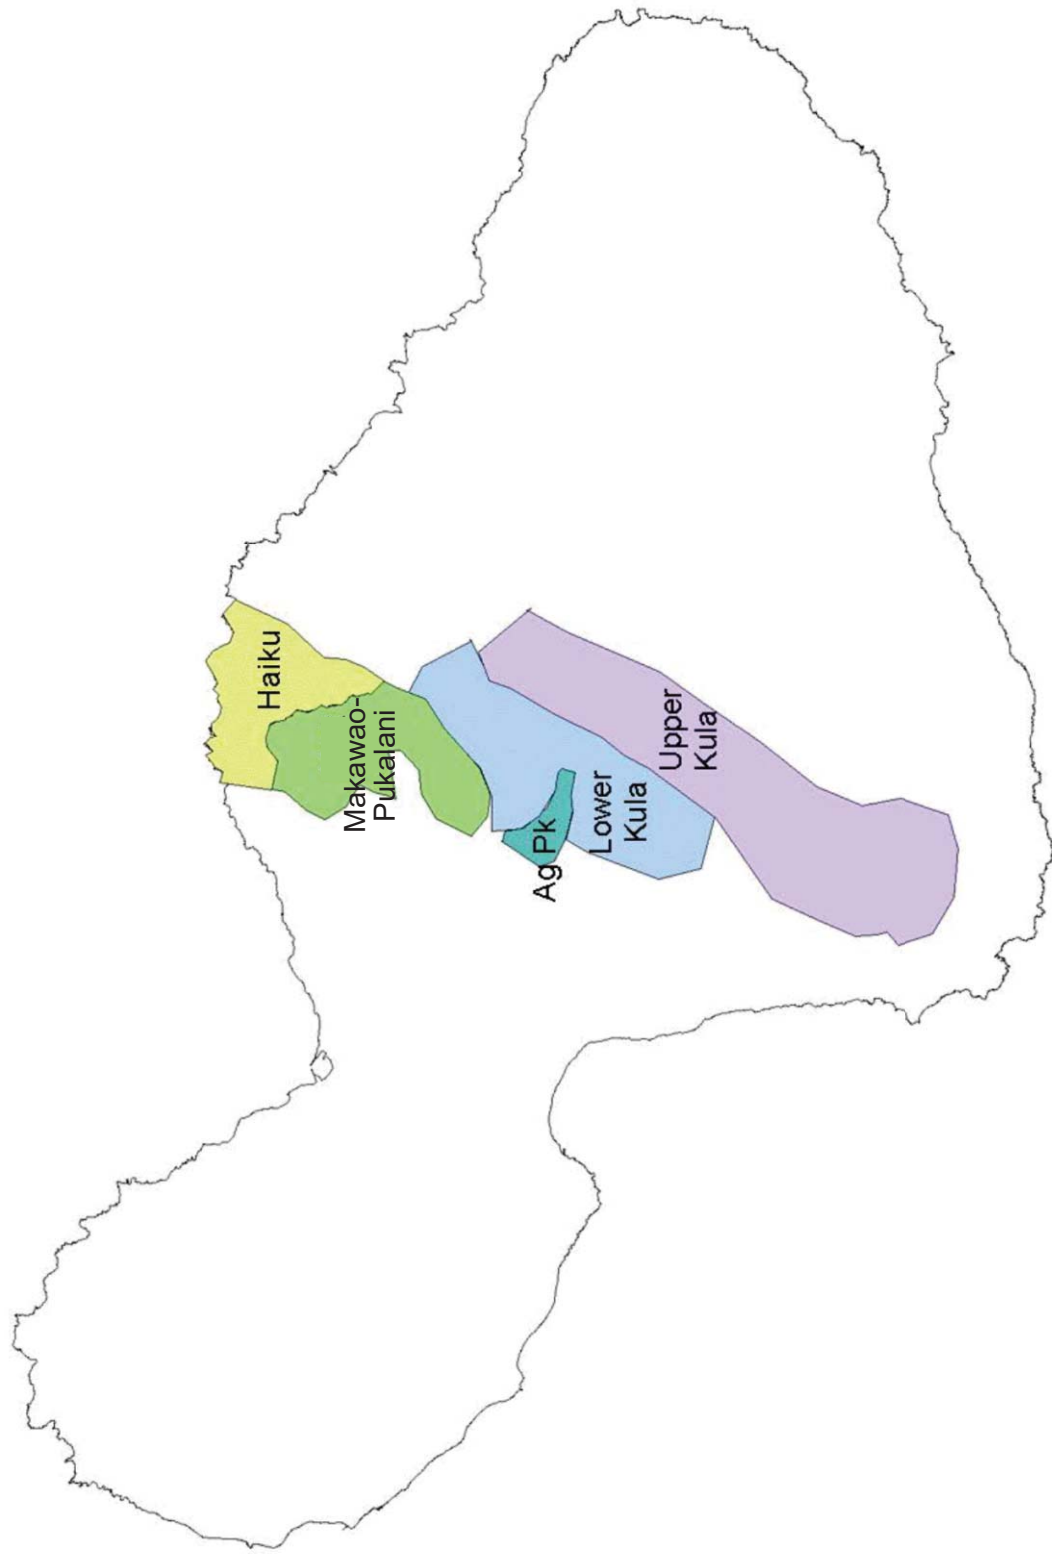

The MDWS Upcountry Water System relies on three (3) surface water sources for potable water, one of which is delivered by the EMI Aqueduct System through the Wailoa Ditch to the Kamole Water Treatment Plant (WTP), and the other two (2) Olinda, and Piihola Water Treatment Plants, are sourced from lands owned previously by A&B and not by Mahi Pono and waters delivered to the plans through MDWS higher elevation aqueducts (the Upper and Lower Waikamoi flumes) maintained by EMI. All three (3) sources are addressed through a contractual agreement. Because the agreements between the County and A&B/EMI are contingent upon the Lease being issued, the supply of water to MDWS could terminate if no Lease is issued.

Over the years, MDWS has received surface water from EMI through a series of contracts. The original contract, referred to as the “Master Water Agreement”, was entered into in 1961 and was later replaced by a 1973 “Memorandum of Understanding”, which had an initial term of 20 years, and was amended some 11 times. In 2018, a new water delivery agreement was entered into which provides for continued delivery of water to MDWS and confirms that water delivery to the County is subject to EMI securing rights related to water permits and the Water Lease from the State. As reported in the CWRM D&O, the long-term average for deliveries to MDWS from the EMI Aqueduct System is 7.1 mgd. The water delivery agreement provides for potentially even greater deliveries to MDWS under certain circumstances and at certain locations.

**Figure 3** shows the approximate location of MDWS Upcountry Water System service areas and **Table 6** shows three (3) potable sub-systems within MDWS Upcountry Water System.

**Table 6.** MDWS Upcountry Water System

| Sub-System | Communities Served                        | Primary Water Facility                   |
|------------|---|--|
| Upper Kula | Kula, Waiakoa, Keokea, Ulupalakua, Kanaio | Olinda WTP                               |
| Lower Kula | Olinda, Kula Kai, Omaopio, Pulehu         | Piihola WTP                              |
| Makawao    | Haiku, Haliimaile, Makawao, Pukalani      | Kamole WTP<br>Haiku and Kaupakalua Wells |

Ke'anae, Honomanū, and Huelo License Area  
Upcountry Maui Water System Service Area

NOT TO SCALE

Prepared for: Wilson Okamoto Corporation

Approximately 80 to 90 percent of water delivered within the MDWS Upcountry Maui Water System is supplied by surface water and the remainder is by groundwater (wells) (CWRM, 2018, p. 211). As noted above, one (1) of the water sources that MDWS Upcountry District relies on for potable water is delivered by the EMI Aqueduct System through the Wailoa Ditch. The two (2) other surface water sources arise on land previously owned by A&B and now owned by Mahi Pono. The surface water delivered by Wailoa Ditch is treated at the Kamole WTP, which has the largest production capacity of the three (3) WTPs within the MDWS Upcountry District. Refer to **Table 6**.

Under normal conditions, the three (3) potable water systems operate independently and treated surface water constitutes the majority of water delivered to Upcountry Maui customers. However, during drought conditions, MDWS implements the following strategies as needed:

- Water is pumped from the Makawao System to the Lower Kula System to supplement water supply from the Piihola WTP.
- The Pookela Well is operated to supplement water supply from the Kamole WTP.
- Water is pumped from the Lower Kula System up to the Upper Kula System (Brown and Caldwell, 2014).

Based on the foregoing, water from EMI's Aqueduct System's Wailoa Ditch services the Makawao Sub-system under normal conditions. However, during drought conditions, water delivered through the EMI Aqueduct System could be pumped to the Lower Kula and Upper Kula Systems if needed.

It is noted that in 1993, MDWS determined that the Upcountry Water System had insufficient supply for fire protection, domestic, and irrigation purposes to take on new or additional services without detriment to existing customers. A water meter priority list for landowners who had applied for water service in the area was established in 1994. As of January 3, 2019, there were 1,650 applicants on the water meter list (MDWS, 2019).

## **A. IMPACTS ON DOMESTIC WATER USE**

Economic and fiscal impacts related to domestic water use in Upcountry Maui are presented in **Table 7** and summarized below.

Table 7. Upcountry Maui - Domestic Economic and Fiscal Impacts

| Item   | Multiplier or Source                | Baseline Conditions         |                                 | Future Conditions (2030) |                  |                 |

| (a) MDWS pays \$0.06 per kgal to EMI under the existing agreement between the two entities. In 2030, EMI's operational cost per kgal will exceed the current \$0.06 per kgal rate. The 2030 water service fee rate is calculated based on the ratio of operational cost to MDWS service fee for 2008-2012. |                                     |                             |                                 |                          |                  |                 |

N.E. - Not Estimated

Notes:

(a) MDWS pays \$0.06 per kgal to EMI under the existing agreement between the two entities. In 2030, EMI's operational cost per kgal will exceed the current \$0.06 per kgal rate. The 2030 water service fee rate is calculated based on the ratio of operational cost to MDWS service fee for 2008-2013.

1. **Baseline Conditions**

a. **Recent Sugar Cane Operations (2008-2013)**

Between 2008 and 2013, the Upcountry Water System used an average of 7.9 mgd. Approximately 60 percent of MDWS' water use in the Upcountry System is for residential, commercial, or institutional use while 40 percent is for agricultural users. An average of 7.1 mgd was provided by the EMI Aqueduct System (CWRM, 2018, p. 143 and 213). Refer to **Table 7**, Section 7.a.

i. **Economic Impacts**

In 2010, there were approximately 35,300 people and 13,500 households within the Upcountry Water System service area (CWRM, 2018, p. 210). Based on a median household income of \$77,400, households in the Upcountry Water System area had a collective income of \$1.0 million.

It is estimated that there were approximately 830 businesses in Upcountry Maui in 2010, employing 5,100 individuals. Total payroll is estimated at \$232.1 million and direct sales revenue associated with these businesses is estimated to be \$836.4 million. Refer to **Table 7**, Section 7.b.

ii. **Fiscal Impacts**

Revenues and expenditures related to MDWS activities go to the County's Water Supply Fund. Based on the average amount of water delivered by the EMI Aqueduct System between 2008 and 2013, it is estimated that MDWS paid \$155,500 to EMI.

The County of Maui assesses water service fees based on 18 different use classifications (i.e., single-family, multi-family, industrial, etc.). The same water rates are charged across the nine (9) water systems in Maui County. The average water service fee rate Countywide is \$4.00 per kgal. Based on this rate and water usage between 2008 and 2013, water service fees averaged \$11.5 million annually from Upcountry Maui. Refer to **Table 7**, Section 7.c.

**b. Interim Diversified Agriculture Operations (2017)**

According to the MDWS Annual Report, the Upcountry Water System used 7.9 mgd in 2017, which is consistent with historic trends (County of Maui, Department of Water Supply, 2017 and 2018). In 2017, 2.86 mgd was provided by EMI. MDWS use of surface water from the EMI Aqueduct System was low in 2017 because heavy rainfall increased supplies from other County sources that depend on rainfall (Plasch Econ Pacific, LLC, 2019). Refer to **Table 7**, Section 7.a.

**i. Economic Impacts**

In 2017, there were estimated 37,100 residents and 14,200 households within the Upcountry Maui Water System service area. Based on a median household income of \$77,400, households in Upcountry Maui had a collective income of \$1.1 billion and consumption expenditures of \$603.5 million. Residential property values within the Upcountry Maui Water System service area was approximately \$2.3 billion in 2017.

There were approximately 880 businesses in Upcountry Maui in 2017, employing 5,400 individuals. Total payroll is estimated at \$245.7 million. Direct sales associated with these businesses were approximately \$885.6 million. Commercial property values within the Upcountry Maui Water System service area were approximately \$145.8 million in 2017.

In total, direct sales from residents' consumption expenditures and Upcountry Maui businesses are estimated at \$1.3 billion and residential and commercial property value is approximately \$2.5 billion. Refer to **Table 7**, Section 7.c.

In addition to residents and businesses serviced by MDWS in Upcountry Maui, there are also numerous public uses that benefit from water from the EMI Aqueduct System and MDWS. These public uses include but are not limited to, public and private schools, fire stations, community centers, and parks. As previously mentioned, the MDWS system also services agricultural users including the Kula Agricultural Park. Impacts related to agricultural water use in Upcountry Maui will be discussed separately in Section B of this Chapter.

ii. **Fiscal Impacts**

Based on an assumed delivery of approximately 2.86 mgd from the EMI Aqueduct System in 2017, MDWS would have paid \$62,600. Based on the average water service fee rate Countywide of \$4.00 per kgal and the assumed water usage in 2017, water service fees of \$11.6 million were collected from Upcountry Maui and deposited into the Water Supply fund. Refer to **Table 7**, Section 7.c.

2. **Future Conditions**

For the period between 2004 and 2013, the average customer water use for the Upcountry Maui Water System varies between 6 mgd and 10 mgd, with an average of 7.9 mgd (CWRM, 2018, p. 213). An assumed 7.1 mgd was supplied by the EMI Aqueduct System through the Wailoa Ditch (CWRM, 2018, p. 143). MDWS projects that by 2030, the population of the area served by the Upcountry Maui Water System will grow to 43,675 residents, with a predicted additional water need of 1.65 mgd (CWRM, 2018, p. 214). In addition to water demand resulting from population growth, additional water is needed to meet the demands of the applicants on the water meter waiting list. As such, MDWS anticipates that it will need to develop between 4.2 mgd and 7.95 mgd, in addition to the approximately 7.1 mgd long term average provided through the EMI Aqueduct System, to meet demands through 2030, including present use, expected increased demand due to population growth, and a percentage of new connections from the current priority list for water meters (CWRM, 2018, p. 214). For the purposes of this analysis, it is assumed that the full 7.95 mgd will be needed to meet future demands through 2030.

The MDWS has evaluated a variety of strategies to meet the long-term future demands in the Upcountry Maui System and/or respond to reductions in the surface water supply. The strategies that have been determined to be most cost effective consist of combinations of additional basal well capacity and/or construction of raw water storage reservoirs. New basal well development would involve construction of new wells at the 1,300 foot elevation and/or wells at the 1,800 foot elevation, along with transmission pipelines, storage tanks, and booster pump stations. It is noted that MDWS entered into a Consent Decree in 2003 that requires that the MDWS conduct rigorous cost/benefit analyses of other water source options before developing groundwater in the East Maui Region. According to an assessment by Brown and Caldwell, development of additional basal wells may be a *“viable strategy to meet future needs from a technical perspective; however, there are legal issues that must be resolved before MDWS can proceed”* (Brown and Caldwell, 2014). In addition, the hydrogeological viability of the wells would need to be assessed.

Constructing additional raw water storage reservoirs to store water from wet periods for use during dry periods presents another strategy to meet future water demand. MDWS evaluated reservoirs ranging in size from 100 million gallons (mgal) to 300 mgal to serve the Olinda, Piiholo, and/or Kamole WTPs. The analysis determined that the most cost-effective reservoirs would be reservoirs designed to feed the Piiholo WTP or the Kamole WTP (Brown and Caldwell, 2014).

New reservoirs have high capital costs but lower operational and maintenance costs compared to groundwater wells. There must be sufficient source water available to fill the reservoir. In comparison, new wells carry relatively lower capital costs but require transmission and storage improvements and have higher operational costs due to the cost of pumping groundwater. It is also noted that there is risk associated with drilling new wells because of the uncertainty of the quantity and quality of water that would be found. The assessment prepared by Brown and Caldwell opined that it would be easier to develop new basal wells than to construct new storage reservoirs due to the need for capital financing mechanisms to construct expensive reservoirs, and potential environmental issues associated with constructing a new reservoir in the Lower Kula area (Brown and Caldwell, 2014).

As will be discussed below, depending on the amount of water available to MDWS from the EMI Aqueduct System, one or more of the aforementioned strategies will be required to meet water needs for the Upcountry Maui Water System.

**a. Proposed Action**

Under the Proposed Action scenario, it is assumed that there will be sufficient water available through the State Water Lease to allow MDWS to receive 7.1 mgd through the Wailoa Ditch. MDWS would need to develop the additional 7.95 mgd to meet future demands through 2030. Refer to **Table 7**, Section 7.a.

**i. Economic Impact Assessment**

The County of Maui projects that the population in the Upcountry Maui service area will grow to approximately 43,700 in 2030 (CWRM, p. 210). This would translate to an estimated 16,700 households. Assuming a median household income of \$77,400, households in the Upcountry Maui service area are anticipated to have a collective income of \$1.3 billion and consumption expenditures of \$710.0 million. Residential property values within Upcountry Maui are estimated to grow to \$2.7 billion.

Assuming proportional growth in line with population, there will be an estimated 1,100 businesses in Upcountry Maui in 2030, employing 6,700 individuals. Total payroll would be estimated at \$304.9 million, while direct sales associated with these businesses would be \$1.1 billion. Commercial property values within Upcountry Maui are estimated to grow to \$180.9 million.

In total, direct sales from residents' consumption expenditures and Upcountry businesses are estimated at \$1.6 billion and residential and commercial property value is approximately \$2.9 billion. Refer to **Table 7**, Section 7.b.

As previously noted, the Upcountry Maui Water System also services numerous public uses, including public and private schools, fire stations, community centers, and parks.

## ii. **Fiscal Impact Assessment**

With 7.1 mgd of water from the EMI Aqueduct System under the Proposed Action, for the purposes of this report, it is assumed that MDWS will need to develop 7.95 mgd of new water sources to meet future demands through 2030. The Brown and Caldwell analysis indicates that incremental basal wells would be a strategy to meet future demands assuming no reduction in surface water flows. Under the Brown and Caldwell analysis, the life-cycle unit cost of developing and operating wells is \$34 per (kgal).<sup>3</sup> It is noted that the life-cycle unit cost to develop new water for Upcountry customers is high. In comparison, a similar analysis conducted for the Central Maui Water System showed a unit cost of less than \$10 per kgal, or less than one third the cost of Upcountry Maui water development (Brown and Caldwell, 2014). The total life-cycle cost for 7.95 mgd of new wells is \$1.2 billion. The life-cycle cost is expressed as the net present value of all the costs incurred over 25 years, including capital, operating, and maintenance costs.

As previously mentioned, that the rate that MDWS pays to EMI will increase by 2030 because EMI's per unit operating cost will increase. The actual rate MDWS will pay to EMI will be subject to a future agreement between the two (2) entities. However, for the

---

<sup>3</sup> Cost as reported in 2014 Brown and Caldwell analysis has been inflation-adjusted to be reflected in 2018 dollars.

purposes of this analysis, the 2030 water service fee rate is estimated to be \$0.10, which has been calculated based on the ratio of operational cost to MDWS service fee for 2008 to 2013. Under this assumption, MDWS would pay an estimated \$268,900 per year to EMI.

Water service rates vary by class of users (i.e., residential, commercial, agricultural, etc.). The average MDWS water service rate Countywide is \$4 per kgal. Inasmuch as the same water rates are charged across the nine (9) water systems in Maui County, there are many factors that determine the water service rate. Therefore, it is difficult to predict what the water service rate would be in 2030. However, it is noted that the life-cycle unit cost to develop new water for Upcountry customers of \$34 per kgal far exceeds the current average water service rate of \$4 per kgal. It is assumed that MDWS would seek a variety of funding sources to cover the cost to develop new wells. This may include County capital improvement program funds as well as State and/or Federal funds. Nevertheless, due to the significant cost of new water source development, it would be reasonable to expect that water service rates would increase in the future to offset the costs of new water sources. As noted above, the County's water rate structure is uniform for all customers; water rates are not dependent on the service area a customer is located in (Brown and Caldwell, 2014). Therefore, under MDWS' current rate structure, the increases would apply Countywide because rates do not vary by service area. Refer to **Table 7**, Section 7.c.

**b. No Action Alternative**

The No Action Alternative would result in no Water Lease from the State. Under the No Action Alternative, EMI could continue to divert some portion of the water within the Collection Area, including west of Honopou Stream. However, this would be limited to an estimated median amount of 26.39 mgd, plus 4.37 mgd, for a total of 30.76 mgd on average. As discussed in Chapter II, it is unclear whether it will be financially feasible to continue to run the EMI Aqueduct System under the No Action Alternative. The operational costs of the EMI Aqueduct System are largely fixed; as such, reducing the amount of water diverted from the Collection Area by 70 percent under the No Action Alternative would significantly increase the cost of transporting the water, on a per unit basis. As previously mentioned, the water delivery agreements between the County and A&B are contingent upon the Lease being issued; if no Lease is issued, it is assumed that the

delivery of water to MDWS would terminate. Therefore, under the No Action Alternative, it is assumed that MDWS would need to find a replacement water source for the 7.1 mgd that is currently supplied by the EMI Aqueduct System through the Wailoa Ditch. In addition, new water source would be required to meet the future water demand of 7.95 mgd by 2030. In total, MDWS would need to develop 15.05 mgd of new water source under the No Action Alternative. Refer to **Table 7**, Section 7.a.

i. **Economic Impact Assessment**

Under the No Action Alternative, population and business growth may be constrained if development of replacement and new water sources cannot keep pace with demand. As such, the number of residents, households, and businesses in the Upcountry Maui Water System service area may very well be less than what is projected for the Proposed Action. The extent to which population and business growth is constrained would be dependent on MDWS' implementation of strategies to replace and develop new water source. As such, it is difficult to quantify potential population, household impacts under this Alternative. However, it is anticipated that economic and household growth factors would be negatively impacted.

ii. **Fiscal Impact Assessment**

Potential strategies for replacement and new water sources for Upcountry Maui include a combination of incremental basal wells and/or new raw water storage reservoirs. According to Brown and Caldwell, the life-cycle unit cost to develop wells and reservoirs for Upcountry Maui if surface water is reduced is estimated to be \$38 per kgal (Brown and Caldwell, 2014)<sup>4</sup>. With the higher water source demand of 15.05 mgd, this would translate to a total life-cycle cost of \$2.6 billion, compared to \$1.2 billion under the Proposed Action. The significantly higher costs associated with the No Action Alternative would impact the County's Water Supply Fund and would be expected to have a corresponding impact to MDWS finances and on ratepayers Countywide, not just in the Upcountry Maui Water System service area. Refer to **Table 7**, Section 7.c.

---

<sup>4</sup> Cost has been inflation-adjusted to be reflected in 2018 dollars.

c. **Reduced Water Lease Alternative**

The Reduced Water Lease Alternative would involve the issuance of the Water Lease authorizing amounts less than the maximum amount allowed under the IIFS. Depending on the amount of water authorized under the Water Lease, MDWS may receive no water from the Wailoa Ditch or some amount up to 7.1 mgd. The greater the reduction in the amount authorized under the Water Lease, proportionally less water will be available to MDWS.

i. **Economic Impact Assessment**

Depending on how much water is available under a Reduced Water Lease Alternative, there may or may not be water available to provide to MDWS' Upcountry Maui Water System. If water is provided to the County, it may be less than the current 7.1 mgd provided from the EMI Aqueduct System. As noted in the No Action Alternative above, population and business growth may be constrained if water supply for Upcountry Maui is not able to keep pace with demand. The degree to which economic growth would be constrained would be dependent on the amount of water available under a Reduced Water Lease Alternative and how much of that water, if any, would be available for MDWS.

ii. **Fiscal Impact Assessment**

Similar to the economic impacts described above, the fiscal impacts of a Reduced Water Lease Alternative would be dependent on the amount of water available, if any, to MDWS. If a Water Lease is issued that authorizes an amount that is not sufficient to supply MDWS and the Central Maui farmlands, the impacts would be similar to the No Action Alternative where the County would face higher costs for developing replacement and new water sources. If, on the other hand, a Water Lease is granted with a sufficient allocation to allow for 7.1 mgd currently provided to MDWS to continue, the fiscal impacts to the County would be similar to the impacts described for the Proposed Action.

**B. IMPACTS ON AGRICULTURAL WATER USE**

Approximately 40 percent of MDWS' usage in the Upcountry Maui Water System is agricultural use. This includes non-potable water provided to the Kula Agricultural Park (KAP) through diversions from the same streams that serve the Kamole WTP through the Wailoa Ditch. Water for the KAP is stored in two (2) reservoirs with a total capacity of 5.4

million gallons. The KAP consists of 31 farm lots ranging in size from 7 to 29 acres, and which are owned by the County of Maui. Maui County has recently purchased an additional 262 acres in Upcountry Maui, the first phase of a new County agricultural park, in the vicinity of the KAP. The source of water for the new agricultural park will be the same as for KAP, Reservoir 40, which is sourced by the EMI Aqueduct System.

Economic and fiscal impacts related to agricultural water use in Upcountry Maui are based on the *Agricultural and Related Economic Impacts Report* prepared by Plasch Econ Pacific, LLC.

## 1. **Baseline Conditions**

### a. **Economic Impact Assessment**

The *Agricultural and Related Economic Impacts Report* provided an analysis of Upcountry Maui agricultural activities in 2017 as the baseline scenario. In 2017, farmers at the Kula Ag Park and other farms in Upcountry Maui who relied on water from the EMI Aqueduct System produced an estimated 12.5 million pounds of crops per year. Annual farm sales were about \$12.5 million and indirect sales were about \$13.8 million. Total direct and indirect sales were about \$26.3 million per year, of which about \$21.5 million was on Maui and about \$4.8 million on O‘ahu. Profits from farm operations and indirect sales were an estimated \$2.6 million per year. See **Table 8**, Section 8.a. and 8.b.

### b. **Fiscal Impact Assessment**

In 2017, the farms at the Kula Ag Park and other farms in Upcountry Maui that rely on water from the EMI Aqueduct System would have generated about \$45,000 per year in State taxes. For the County of Maui, property taxes and rents paid to the County by farmers at the Kula Ag Park totaled less than \$54,000 per year. The City and County of Honolulu will derive about \$2,000 per year from the excise tax surcharge. Refer to **Table 8**, Section 8.c.

## 2. **Future Conditions**

### a. **Proposed Action**

Under the Proposed Action, EMI will continue to supply water to the MDWS for Upcountry Maui, including for agricultural water use. It is also noted that as part of the County’s purchase of the 262-acre expansion of the KAP, EMI has agreed to supply the water for the expansion. The additional water will come from water savings due to infrastructure improvements to the

reservoir and pumps that serve the KAP that will reduce system losses (Plasch Econ Pacific, LLC, 2019). The actual amount of water delivered from the EMI Aqueduct System is not anticipated to increase in order to serve the 262-acre expansion.

i. **Economic Impact Assessment**

Under the Proposed Action, 262 acres of fallow sugar cane lands would be converted to expand the KAP. The cost of this conversion is estimated at \$1.3 million over a five-year development period, or \$0.26 million per year. Indirect sales of \$0.32 million would be expected, for total direct and indirect expenditures of \$0.6 per year for five (5) years.

By 2030, farm activity in Upcountry Maui is expected to increase due to the 262-acre expansion of the Kula Ag Park. The farmers at the KAP and other farms in Upcountry Maui who will rely on water from the EMI Aqueduct System are projected to produce an estimated 15.1 million pounds of crops per year. Annual farm sales are expected to reach about \$15.1 million, and indirect sales about \$16.7 million. Total direct and indirect sales will be about \$31.8 million per year, of which about \$26.0 million will be on Maui and about \$5.9 million on O'ahu. Profits from farm operations and indirect sales are expected to reach about \$3.2 million per year. Refer to **Table 8**, Section 8.b.

ii. **Fiscal Impact Assessment**

The development activity associated with the expansion of the KAP would generate cumulative State tax revenues of about \$180,000.

The County of Maui would derive negligible tax revenues from development activity.

From an operational standpoint, farmers at the KAP and other farms in Upcountry Maui that rely on water from the EMI Aqueduct System would generate about \$54,000 per year in State taxes. For the County of Maui, property taxes and rents paid to the County by farmers at the KAP would total about \$85,000 per year. The increase from 2017 is largely due to the increase in rental income from the 262-acre expansion of the KAP. The City and County of Honolulu would derive about \$2,000 per year from the excise tax surcharge. Refer to **Table 8**, Section 8.c.

**Table 8. Upcountry Maui – Agricultural Economic and Fiscal Impacts**

**b. No Action Alternative**

As previously discussed, a limited amount of water could be diverted under the No Action Alternative. Under the No Action Alternative, the supply of water delivered by the EMI Aqueduct System to the MDWS is presumed to drop to zero because the agreements with the County provide that the delivery of water is contingent upon the Lease being issued. Therefore, it is assumed that MDWS would need to find a replacement water source. Several years would be required to develop new sources. Assuming domestic customers would have priority over agricultural customers, farmers in Upcountry Maui would lack water to irrigate their crops until the new water sources are operational. As a result, farms would be required to close or relocate to Central Maui. Even after the new water source is operational, little commercial farming is expected to return to Upcountry Maui because of the better agronomic conditions in Central Maui.

**i. Economic Impact Assessment**

Under the No Action Alternative, farming activity and economic impacts are expected to be near zero for the farms that depend on water from the EMI Aqueduct System.

**ii. Fiscal Impact Assessment**

Taxes generated under the No Action Alternative are expected to be near zero.

c. **Reduced Water Lease Alternative**

For the Reduced Water Lease Alternative, the impacts would be proportional to the amount of water delivered to MDWS that would be available for agricultural use.

**NĀHIKU**

## V. NĀHIKU

Nāhiku is a small rural community in east Maui located makai of Hana Highway in the vicinity of mile marker 25. The Nāhiku community is characterized by rural residential uses. There is no significant commercial development in Nāhiku. MDWS receives water directly from the EMI Aqueduct System for the Nāhiku community, with the source of that water being a development tunnel located east of Makapipi Stream, that feeds into the Ko'olau Ditch and is accessed by MDWS in the Ko'olau Ditch near Makapipi Stream. There are approximately 43 water meters, all located along Nāhiku Road (County of Maui, Department of Water Supply, 2019).

### A. **BASELINE CONDITIONS**

#### 1. **Recent Sugar Cane Operations (2008-2013)**

In 2013, there were 43 connections to MDWS' Nāhiku system, serving a population of 107 people. The average daily flow to the Nāhiku community was 41,000 gallons per day in 2013 (County of Maui, Department of Water Supply, 2019). Given the small population of Nāhiku and the lack of commercial land uses, the economic and related fiscal impacts for the Nāhiku community are considered negligible.

#### 2. **Interim Diversified Agriculture Operations (2017)**

The Nāhiku area is designated "Agricultural" by the State Land Use Commission and has not experienced significant population growth. As noted under the Historic Sugar Cane Operations period, economic and related fiscal impacts for the Nāhiku community are considered negligible.

### B. **FUTURE CONDITIONS**

Due to its "Agricultural" land designation, the Nāhiku community is not anticipated to experience significant population growth through 2030. The 41,000 gallons per day provided to the Nāhiku community is expected to continue under the Proposed Action. As previously noted, it is unclear whether it will be financially feasible to continue to operate and maintain the EMI Aqueduct System under the No Action Alternative or the Reduced Water Lease Alternative. If operation of the EMI Aqueduct System is discontinued under the No Action Alternative or the Reduced Water Lease Alternative, the Nāhiku community would be adversely impacted as it would lose its source of potable water. If, however, the EMI Aqueduct System does continue to operate, the amount of water required for Nāhiku is negligible and it is assumed that water could continue to be delivered to the community.

# CENTRAL MAUI | VI

## VI. CENTRAL MAUI

A&B historically cultivated sugar cane on the fields of Central Maui for over a century. These Central Maui fields were irrigated by water from the EMI Aqueduct System, brackish groundwater, and surface water from Wailuku Water Co. The economic and fiscal impacts related to Central Maui are derived from the *Agricultural and Related Impacts Report* prepared by Plasch Econ Pacific, LLC. It is noted that the impact analysis is based on approximately 30,000 acres of Central Maui fields that were historically serviced by EMI and supplemental brackish groundwater. Excluded from the analysis were fields west of Maui Veterans Highway that were irrigated with surface water from the West Maui Ditch System and supplemental brackish water.

### A. BASELINE CONDITIONS

#### 1. Typical Sugar Cane Operations (2006)

As previously mentioned, the year 2006 is used in this analysis as a representative year for “typical” sugar cane operations for the 20-year period from 1987 to 2006. Rainfall in East Maui was regarded as normal, the restoration of stream flows was not large enough to significantly affect HC&S operations, and the plantation was economically healthy.

For the 2006 crop year, HC&S grew sugar cane on about 35,180 acres, including 29,430 acres in the EMI service area (approximately 84 percent). See **Table 9**, Section 9.a.

#### a. Economic Impact Assessment

For the 2006 crop, HC&S produced about 145,200 tons of raw sugar, and sold sugar and energy to generate about \$101 million in direct sales. The purchase of goods and services by HC&S and the families of employees generated indirect sales and, in turn, these suppliers generated more indirect sales by their purchases of goods and services. The indirect sales are estimated at \$91 million. Total direct and indirect sales were \$191 million, of which about \$160 million was on Maui and about \$32 million on Oahu. Profits from sugar operations and indirect economic sales were estimated at \$19 million.

HC&S employed about 630 workers, including planters, irrigation workers, harvesters, truck drivers, mill workers, office workers, supervisors, etc. As with indirect sales, sugar operations generated indirect jobs, including those at companies providing agricultural supplies and equipment, office supplies and equipment, repair services, etc. Other indirect jobs included

Source: Plasch Econ Pacific, LLC

those involved with supplying goods and services to families, including grocery workers, store clerks, restaurant workers, service providers, etc. Sugar operations generated about 710 indirect jobs in 2006. The total direct and indirect employment was 1,300, of which about 1,100 jobs were on Maui. The payroll was about \$48.5 million for the direct jobs and \$82.7 million for all direct and indirect jobs. The direct and indirect jobs provided by sugar operations supported an estimated 3,300 residents. Refer to **Table 9**, Section 9.b.

**b. Fiscal Impact Assessment**

In 2006, sugar operations generated about \$5.9 million in State tax revenues and rental payments paid to the State. Most of the revenues were derived from excise taxes on consumption expenditures by families supported by the direct and indirect jobs that were provided personal income taxes paid by these same families. The revenues were low because the sale of the exported sugar was exempt from the excise taxes. Property taxes paid by HC&S to the County of Maui were about \$50,000 per year. Refer to **Table 9**, Section 9.c.

**2. Recent Sugar Cane Operations (2008-2013)**

This baseline time period covers impacts for a six-year period between 2008 and 2013, prior to the termination of sugar cane cultivation. The plantation shut down operations over a two-year period ending in 2016.

Between 2008 and 2013, HC&S cultivated 36,180 acres of sugar cane, of which about 30,320 acres were in the EMI service area (approximately 84 percent). Refer to **Table 9**, Section 9.a.

**a. Economic Impact Assessment**

For the 2008 to 2013 period, HC&S produced an average of about 136,300 tons of raw sugar per year (a decrease of 8.9 tons from 2006), and sold sugar and energy to generate annual revenues of about \$116 million in direct sales (an increase of about \$15 million). Total direct and indirect sales averaged nearly \$220 million per year, of which an estimated \$183 million was on Maui and \$36 million on Oahu. Profits from sugar operations and indirect sales were estimated at \$22 million.

For the 2008 to 2013 period, average employment and payroll was slightly less than the 2006 period. HC&S employed about 620 workers and indirect employment is estimated at 700 workers. Payroll for direct jobs was estimated at \$34.3 million, while total payroll for direct and indirect jobs was

\$68.0 million (Plasch Econ Pacific, LLC, 2019). Refer to **Table 9**, Section 9.b.

**b. Fiscal Impact Assessment**

For the 2008 to 2013 period, sugar operations generated an average of about \$5.1 million in State tax revenues and rental payments paid to the State. Property taxes paid by HC&S to the County of Maui were about \$70,000 per year. The increase from 2006 was due to a higher tax rate. The City and County of Honolulu derived about \$40,000 per year from the excise tax surcharge. Refer to **Table 9**, Section 9.c.

**3. Interim Diversified Agriculture Operations**

In 2017, about 200 acres in Central Maui were used to grow the energy crop, pongamia, and about 500 acres were for unirrigated pasture. Refer to **Table 9**, Section 9.a.

**a. Economic Impact Assessment**

In 2017, there were limited cattle grazing and pongamia cultivation in Central Maui. However, both operations were under development producing negligible revenues in 2017. These activities generated an estimated 10 direct and indirect jobs with total payroll of \$0.5 million. Refer to **Table 9**, Section 9.b.

**b. Fiscal Impact Assessment**

In 2017, diversified agriculture operations in Central Maui generated about \$30,000 in tax revenues. Property taxes paid by HC&S to the County of Maui were about \$20,000 per year. Property taxes decreased because of the land was assessed at a lower value following the close of sugar operations. The City and County of Honolulu derived negligible revenues from the excise tax surcharge. Refer to **Table 9**, Section 9.c.

**B. FUTURE CONDITIONS**

The Central Maui agricultural lands are now owned by Mahi Pono, which acquired these lands from A&B in December 2018. Mahi Pono's current plans for Central Maui envision cultivating a broad range of food and non-food crops for local consumption and export, including orchard crops (citrus, macadamia nuts, coffee, avocado, etc.), tropical fruits, vegetables and melons, row crops, annual crops, energy crops, and grass-fed cattle. In addition, the company plans to lease some of its land to other farmers at favorable terms, including relatively low rents for long-term periods.

## 1. **Proposed Action**

Mahi Pono has developed an initial Farm Plan that is consistent with the anticipated surface water supply from East Maui under the IIFS. The 30,000-acre Farm Plan calls for a mix of crops, irrigated and unirrigated pasture, and green energy (solar farm). Over one-third of the land scheduled for crop farming is being prepared or will soon be prepared for farming. Refer to **Table 9**, Section 9.a.

### a. **Economic Impact Assessment**

#### i. **Development Activities**

Implementation of the Mahi Pono Farm Plan would require conversion of former sugar cane lands into cropland, irrigated pasture, and unirrigated pasture. An estimated 319,000 square feet of building space (for washing and packing areas, storage, offices, etc.) would be required, as well as the development of a 37.5 mW solar farm with storage batteries. The total development expenditures would be about \$214.7 million, or an average expenditure of about \$21.5 million per year assuming a 10-year development period. Indirect sales associated with development activities are estimated to be \$18.5 million per year for a total of \$39.9 million per year, of which \$33.5 million would be on Maui and \$6.5 million on Oahu. Profits on development activity and indirect sales would be about \$4.0 million per year.

Direct and indirect employment associated with the development activities to implement the Mahi Pono Farm Plan would average about 326 jobs, of which 285 jobs would be on Maui and 42 jobs on Oahu. Actual employment would vary over the 10-year development period. Payroll for the direct and indirect jobs would average \$14.5 million per year and these jobs would support an estimated 730 residents. Refer to **Table 9**, Section 9.b.

#### ii. **Operations**

Full development of the Mahi Pono Farm Plan under the Proposed Action would result in a substantial amount of crop production, including about 8 million pounds per year from the Community Farm, 321 million pounds per year from orchards, and 9 million pounds per year of tropical fruits, plus production from row crops, annual crops, and energy crops. Annual sales are expected to reach \$155.9 million. The pastures would support a cattle herd of about 7,300 cow-and-calf animal units, produce over 4,300 calves

per year, and generate revenues of about \$4.8 million per year. The solar farm would generate about 82,125 mW of electricity per year, with revenues of about \$8.2 million per year. Combined farm and energy revenues would reach \$168.9 million per year in direct sales, which would exceed the 2006 revenues from sugar production of \$101 million, and the \$116 million average for the 2008 to 2013 period.

Purchases of goods and services by farmers and the families of employees would generate indirect sales and, in turn, these suppliers would generate more indirect sales by their purchase of goods and services. The indirect sales are estimated at about \$160.7 million per year.

Total direct and indirect sales would be about \$329.5 million per year, of which about \$273.3 million would be on Maui and about \$56.2 million on Oahu. Profits from farm operations, energy operations, and indirect sales would be about \$33 million.

At full build out, farm employment is expected to reach about 790 jobs, or about 160 more than provided by sugar operations in 2006. The jobs would be typical of those provided by diversified-crop farming and ranching-managing soils and pests, operating and maintaining irrigation systems, planting crops, pruning trees, harvesting crops, sorting and washing crops, packing crops, trucking crops to markets and shipping terminals, moving cattle among pastures, maintaining fences, marketing, accounting, etc. The increase in employment would be gradual, with most jobs filled by former sugar cane workers, skilled workers from Maui and other islands, recent graduates of agricultural programs at Hawai'i high schools and colleges, and unskilled workers who would receive on-the-job training.

In addition to direct jobs, the purchase of goods and services by farmers and ranchers and by the families of their employees would generate an estimated 350 jobs. In total, about 1,140 direct and indirect jobs would be supported, including about 1,000 jobs on Maui. Payroll is estimated at \$45.3 million for all direct and indirect jobs. The direct and indirect jobs would support an estimated 2,550 residents. Refer to **Table 9**, Section 9.b.

**b. Fiscal Impact Assessment**

**i. Development Activities**

The conversion of Central Maui farmlands from sugar cane to diversified agriculture and green energy would generate an average of about \$1.9 million per year in State taxes, for a 10-year cumulative total of about \$18.6 million. However, developers of solar farms receive a State subsidy of \$500,000 per 1 mW of generating capacity. For the planned green energy (solar farm), the State subsidy would average about \$1.88 million per year, year cumulative total of about \$18.8 million. Thus, State tax revenues from development minus the energy subsidy would result in a cumulative loss of about \$100,000 (with rounding). Given the nature of Hawai'i's tax system, the County of Maui would derive negligible tax revenues from the anticipated development activity. Over the 10-year development period, the City and County of Honolulu would derived cumulative excise tax surcharges of about \$1.0 million. Refer to **Table 9**, Section 9.c.

**ii. Operations**

Diversified agricultural operations would generate an estimated \$4.5 million in State tax revenues by 2030. Property taxes paid by to the County of Maui would be about \$800,000 per year. The City and County of Honolulu would derived about \$140,000 per year from the excise tax surcharge. Refer to **Table 9**, Section 9.c.

**2. No Action Alternative**

As previously mentioned, the No Action Alternative would result in no Water Lease from the State, however the EMI Aqueduct System could divert some portion of the water within the Collection Area if it deemed it economically feasible to do so. Under the No Action Alternative, Mahi Pono would need to implement a scaled-down Farm Plan to account for the reduced irrigation water. This scaled-down Farm Plan would involve a significant reduction in acreage dedicated to crop cultivation and an increase in unirrigated pasture. Refer to **Table 9**, Section 9.b.

**a. Economic Impact Assessment**

**i. Development Activities**

The total cost for developing the scaled-down Farm Plan under the No Action Alternative would be \$144.8 million, or an average of

about \$24.1 million per year over a six-year development period. Indirect sales are expected to average \$18.8 million per year for total development expenditures of \$42.9 million per year, of which \$36.3 million would be on Maui and \$6.6 million on Oahu. Profits on development activity and indirect sales would be about \$4.3 million per year.

Direct and indirect employment associated with the development activities to implement the scaled-down Farm Plan would average about 295 jobs, of which 250 jobs would be on Maui and 40 jobs on Oahu. Actual employment would vary over the 6-year development period. Payroll for the direct and indirect jobs would average \$13.3 million per year and these jobs would support an estimated 570 residents. Refer to **Table 9**, Section 9.b.

ii. **Operations**

The scaled-down Mahi Pono Farm Plan under the No Action Alternative would result in about one-third as much crop production as the Proposed Action: about 3 million pounds per year from the Community Farm, 104.5 million pounds per year from orchards, and 3 million pounds per year of tropical fruits, plus production from row crops, annual crops, and energy crops. Annual sales are expected to reach \$51.3 million. The pastures would support a cattle herd of about 9,700 cow-and-calf animal units, produce nearly 9,700 calves per year, and generate revenues of about \$6.3 million per year. The solar farm would generate about 82,125 mW of electricity per year, with revenues of about \$8.2 million per year.

Combined farm and energy revenues would reach about \$65.9 million per year in direct sales and \$57.7 million per year in indirect sales for a total of \$123.5 million per year, of which about \$103.4 million would be on Maui and \$20.2 million on Oahu. Profits from farm operations, energy operations, and indirect sales would be about \$12.4 million.

The scaled-down Farm Plan under the No Action Alternative would result in about one-third as much employment as the Proposed Action: about 270 direct jobs, 120 indirect jobs, and 390 total jobs. Payroll for direct and indirect jobs is estimated at \$15.6 million. The direct and indirect jobs would support an estimated 880 residents. Refer to **Table 9**, Section 9.b.

**b. Fiscal Impact Assessment**

**i. Development Activities**

For the No Action Alternative, the conversion of Central Maui farmlands from sugar cane to diversified agriculture and green energy would generate an average of about \$1.9 million per year in State taxes, for a 6-year cumulative total of about \$11.4 million. For the planned green energy (solar farm), the State subsidy would average about \$3.1 million per year, for a 6-year cumulative total of about \$18.8 million. Thus, State tax revenues minus the energy subsidy would average a negative \$1.2 million per year, for a 6-year cumulative total of a negative \$7.3 million. Again, the County would derive negligible tax revenues from the anticipated development activity. The City and County of Honolulu would derived cumulative excise tax surcharges of about \$60,000. Refer to **Table 9**, Section 9.c.

**ii. Operations**

For the No Action Alternative, State tax revenues would be less than half that of the Proposed Action: about \$1.7 million per year. Property taxes paid by to the County of Maui would be about \$650,000 per year. The decrease from the previous alternative is because more land would be used for pasture, which is assessed at a lower value than cropland. The City and County of Honolulu will derived about \$50,000 per year from the excise tax surcharge. Refer to **Table 9**, Section 9.c.

**3. Reduced Water Lease Alternative**

For the Reduced Water Lease Alternative, the impacts would be proportional to the amount of water diverted through the EMI Aqueduct System.

# SUMMARY | VII

## VII. SUMMARY

The Proposed Action (proposed Water Lease) assessed herein would allow for continued domestic and agricultural water service to the Maui Department of Water Supply (MDWS) Upcountry System and Nāhiku Community while also providing water for agricultural cultivation in Central Maui. The Water Lease would be subject to the June 2018 Findings of Fact, Conclusions of Law, and Decision and Order (D&O) adopted by the Commission on Water Resource Management (CWRM), which set the Interim Instream Flow Standards (IIFS) for 24 East Maui Streams located within the License Area.<sup>5</sup> As a result, the potential future flow of surface water from East Maui will be significantly reduced compared to past water diversions that occurred for over 90 years. Pursuant to the CWRM D&O, ample stream water should be available to irrigate taro lo'i and the small farms relying on East Maui Streams.

This Study has assessed the economic and fiscal impacts associated with EMI operations as well as on East Maui farming, the MDWS Upcountry Water System service area, Nāhiku community, and agricultural cultivation in Central Maui. Below is a summary of the economic and fiscal impacts anticipated for these areas of potential effect.

### A. EMI OPERATIONS

The Proposed Action would allow EMI to divert an estimated 87.95 mgd from the License Area, along with an additional 4.37 mgd from lands west of the License Area, for an estimated total diversion of 92.32 mgd. EMI operating costs are largely fixed and are anticipated to be similar to the average operating cost experienced during recent sugar operations. EMI operating costs are assumed to be similar across all alternatives, with the only variation being the amount of Water Lease payments made to the State. As such, while costs remain relatively constant, the per unit cost for delivery of water increases as the amount of water diverted decreases. Total operational costs for EMI are expected to be \$2.3 million per year, or \$0.068 per kgal, under the Proposed Action, compared to \$1.4 million or \$0.129 per kgal under the No Action Alternative.

---

<sup>5</sup> The chart on pages 268-269 of the CWRM D&O identifies 25 streams and tributaries, one of which (Ohia/Waianu) is located below the EMI Aqueduct System and has never been diverted into the EMI Aqueduct System. Although the original Petitions to Amend the Interim Instream Flow Standards identified 27 streams, CWRM found that there were 24, not 27, streams that were the subject of the contested case. The difference being that (i) Waikani is not a stream but a waterfall of Wailuānui Stream; (ii) Alo is a tributary of Waikamoi Stream; (iii) Pua'aka'a is a tributary of Kopiliula Stream; and (iv) Piinaau and Palauhulu are separate streams that join together before reaching the ocean. See CWRM D&O, Findings of Fact 56, 2018.

Economic impacts associated with EMI operations, excluding the Water Lease payment to the State, would be similar for the Proposed Action and No Action alternatives. Total direct spending and indirect sales is estimated at \$1.4 million. EMI is expected to employ a staff of 17 people with a payroll of \$0.8 million.

Under the Proposed Action, EMI would contribute Lease payments to the State Special Land Development Fund based on an appraisal conducted prior to Lease issuance. Assuming the amount of the Water Lease is based on the equivalent per unit cost under revocable permit rent set in November 2018, the annual payment to the Special Land Development Fund would be \$846,700, including set-asides for the Office of Hawaiian Affairs and the Department of Hawaiian Home Lands of \$169,300 and \$254,000, respectively.

It is noted that under the No Action Alternative, assessment of flow data could result in decisions to reduce the size of the EMI Aqueduct System to reduce operation and maintenance costs. However, potential system reductions are not known at this time and cannot be determined until there is actual flow data to analyze and determine how best to optimize the EMI Aqueduct System. It is also noted that EMI may determine that it is not economically feasible to operate and maintain the system at all under the No Action Alternative.

## **B. EAST MAUI**

The CWRM D&O setting the IIFS for East Maui Streams returns free flowing water, with no upstream diversions, to all streams which have historically supported significant taro cultivation. Ample stream water should be available for taro farms and other small farms in East Maui. There are about 45 acres in East Maui suitable for growing taro and about 35 acres for truck crops.

The impacts of East Maui farming activity would be the same for the Proposed Action, No Action, and Reduced Water Lease Alternatives. At full development, East Maui farms would produce about 1.0 million pounds per year of taro and about 400,000 pounds per year of other crops, resulting in \$2.9 million in direct and indirect sales per year. Farms would support a total of 21 direct and indirect jobs. State revenues, Maui County property taxes, and City and County of Honolulu excise tax surcharge revenues associated with East Maui farming activities would be nominal.

## **C. NĀHIKU**

The Proposed Action would allow for the continued water service for the approximately 43 water meters in the Nāhiku community. It is unclear whether it will be financially feasible to continue to operate and maintain the EMI Aqueduct System under the No Action Alternative or the Reduced Water Lease Alternative. If operation of the EMI Aqueduct

System is discontinued under the No Action Alternative or the Reduced Water Lease Alternative, the Nāhiku community would be adversely impacted as it would lose its source of potable water.

## **D. UPCOUNTRY MAUI**

### **1. Domestic Water Use**

Between 2004 and 2013, average customer water use for the Upcountry Maui Water System was 7.9 mgd, including 7.1 mgd supplied by the EMI Aqueduct System through the Wailoa Ditch. MDWS anticipates it will need to develop up to 7.95 mgd of new water source to meet future demands in Upcountry Maui through 2030.

Under the Proposed Action, it is assumed that EMI will continue to supply 7.1 mgd to MDWS. The rate MDWS pays to EMI will increase from the existing agreement of \$0.06 per kgal because EMI's per unit operating cost will increase as a result of fixed costs being spread out over a lower volume of water diverted and possible higher lease payments to the State compared to historic payments.

MDWS would need to develop the additional 7.95 mgd to meet future demands. An analysis conducted by Brown and Caldwell indicates that incremental basal wells would be a strategy to meet future demands, assuming no reduction in surface water flows. The life-cycle unit cost of developing and operating wells is \$34 per kgal, which far exceeds the current average water service rate of \$4 per kgal. The total life-cycle cost for 7.95 mgd of new wells is \$1.2 billion. It is assumed that MDWS would seek a variety of funding sources to cover the cost to develop the new wells. Nevertheless, due to the significant cost of new water source development, it would be reasonable to expect that the water service rate would increase.

Under the No Action Alternative, it is assumed that MDWS would need to find a replacement water source for the 7.1 mgd that is currently supplied by the EMI Aqueduct System in addition to the 7.95 mgd required to meet future water demands. In total, MDWS would need to develop 15.05 mgd of new water source. Potential strategies for replacement and new water sources for Upcountry Maui include a combination of incremental basal wells and/or new raw water storage reservoirs. According to Brown and Caldwell, the life-cycle unit cost to develop wells and reservoirs for Upcountry Maui if surface water is reduced is \$38 per kgal. This would translate to \$2.6 billion, compared to \$1.2 billion under the Proposed Action. The significantly higher costs associated with the No Action Alternative would impact the County's Water Supply Fund and would be expected to have a corresponding impact to MDWS finances and on the ratepayers Countywide.

In 2017, there were approximately 37,100 residents and 14,200 households within the Upcountry Maui service area. These households had a collective income of \$1.1 billion and residential property values within the Upcountry Maui service area was about \$2.3 billion. There were approximately 880 businesses in Upcountry Maui in 2017, employing 5,400 individuals with a payroll estimated at \$245.7 million. The County of Maui projects that population in Upcountry Maui will grow to approximately 43,700 (16,700 households). It is estimated that there would be 1,100 businesses in Upcountry Maui employing 6,700 individuals in 2030. Under the No Action Alternative, population and business growth may be constrained if development of replacement and new water sources cannot keep pace with demand. As such, the number of residents, households, and businesses in Upcountry Maui may be less than what is currently projected for 2030 under the Proposed Action.

## **2. Agricultural Water Use**

Approximately 40 percent of MDWS' customers in Upcountry Maui are agricultural users. In addition, MDWS provides non-potable water to the Kula Agricultural Park (KAP), which consists of 31 farm lots totaling 447 acres. Maui County has recently purchased an additional 262 acres in Upcountry Maui for the expansion of the KAP. The Proposed Action would allow farming to continue and expand at the KAP, and continue at other farms that irrigate crops with water from the EMI Aqueduct System. In total, about 1,510 acres would be farmed in 2030, and this farming would generate about \$31.8 million per year in direct and indirect sales, about 150 direct and indirect jobs, and about \$5.8 million in payroll for these jobs.

Under the No Action Alternative, there may not be water available for MDWS from the EMI Aqueduct System. Assuming domestic customers would have priority over agricultural customers with respect to new water source development, farmers in Upcountry Maui would lack water to irrigate their crops until the new water sources are operational. As a result, farms would be required to close or relocate to Central Maui. Even after the new water source is operational, little commercial farming is expected to return to Upcountry Maui because of the better agronomic conditions in Central Maui. Therefore, farming activity is expected to be near zero for the farms that depended on water from the EMI Aqueduct System in 2017.

## **E. CENTRAL MAUI**

The Proposed Action will enable the EMI Aqueduct System to continue to provide water service for the cultivation of agricultural lands in Central Maui. Mahi Pono has prepared a Farm Plan that calls for a mix of crops, irrigated and unirrigated pasture, and green energy (solar farm). Full development of the Mahi Pono Farm Plan would result in

substantial crop production and \$155.9 million in direct crop sales. Total combined farm sales, including crops, cattle, and energy revenues would reach \$168.9 million per year in direct sales, which would exceed the 2006 revenues from sugar production of \$101 million, and the \$116 million average for 2008 to 2013. Farm employment is expected to reach 790 jobs, or about 160 more than provided by sugar operations in 2006. Diversified agricultural operations would generate an estimated \$4.5 million in State tax revenues by 2030. Property taxes paid by to the County of Maui would be about \$800,000 per year. The City and County of Honolulu would derived about \$140,000 per year from the excise tax surcharge.

Under the No Action Alternative, Mahi Pono would need to implement a scaled-down Farm Plan to account for the reduced irrigation water. This scaled-down Farm Plan would result in a significant reduction in acreage dedicated to crop cultivation and an increase in unirrigated pasture.

The Proposed Action, when compared to the No Action Alternative, would result in three (3) times as much food production, including greater food self-sufficiency and more exports, about \$206 million per year more in direct and indirect sales, about 750 more direct and indirect jobs, and \$29.7 million per year more in total payroll. Development activity associated with preparing fields and related improvements would last four (4) years longer and have higher development-related sales and employment. The Proposed Action would result in about 11,570 acres more of green open space in the form of farms and irrigated pastures (20,650 acres versus 9,080 acres).

The Reduced Water Lease Alternative would see impacts that are proportional to the amount of water diverted through the EMI Aqueduct System.

# EXECUTIVE SUMMARY

## 1. EAST MAUI WATER LEASE

### a. Proposed Lease

In 2001, Alexander & Baldwin, Inc. (**A&B**) and its subsidiary East Maui Irrigation Company, LLC (**EMI**)—A&B and EMI are herein referred to collectively as A&B—requested that the Board of Land and Natural Resources (**BLNR**) offer a long-term East Maui Water Lease (the **Water Lease** or **Lease**) at public auction.

Under the proposed Lease, the State of Hawai‘i would allow the continued diversion of East Maui surface water for delivery to Central Maui and Upcountry Maui. The Central Maui agricultural lands, as well as other lands formerly owned by A&B, are now owned by various entities including MP EMI, LLC MP Central A, LLC, MP Central B, LLC, MP CPR, LLC, MP East A, LLC, MP East B, LLC, and MP West, LLC (individually or collectively, **Mahi Pono**) which acquired these lands from A&B in December 2018. In addition, since early 2019, Mahi Pono owns 50% of EMI and is the managing member of EMI; A&B is the other member of EMI.

For the purposes of this Environmental Impact Statement, the Proposed Action constitutes the issuance of one long-term (30-year) Water Lease from the BLNR that authorizes the lessee the *"right, privilege, and authority to enter and go upon"* the License Area for the *"purpose of developing, diverting, transporting, and using government owned waters"* through the existing EMI Aqueduct System (**EMI System**) which supplies water to domestic and agricultural water users. The Water Lease, which will be awarded by public auction, will enable the lessee to enter upon lands owned by the State of Hawai‘i in order to maintain and repair existing access roads and trails used as part of the EMI System, and will allow for the continued operation of the EMI System to deliver water to the MDWS for domestic and agricultural water needs in Upcountry Maui, including the agricultural users at the Kula Agricultural Park (**Kula Ag Park**) and the 262-acre Park expansion, as well as for the Nāhiku community, which, through MDWS, draws up to 20,000 to 45,000 gpd, dependent on weather, directly from the EMI System. It will also allow the continued supply of water to approximately 30,000 acres of agricultural lands in Central Maui now owned by Mahi Pono.

Compared to past water diversions that occurred for over 90 years, the potential future flow of surface water from East Maui has been reduced significantly due to a June 2018 Decision and Order (**D&O**) by the Commission on Water Resource Management (**CWRM**) to fully or partially restore stream flows in East Maui, which also incorporates previous A&B decisions to voluntarily reduce stream diversions.

**b. Duration of Lease**

The request submitted to BLNR was for a long-term 30-year Water Lease. A Water Lease of that duration is needed to provide sufficient time for Mahi Pono to implement its Farm Plan and provide a return on its investment.<sup>1</sup> A&B is requesting a long-term Water Lease in order to provide sufficient time for Mahi Pono to implement its Farm Plan, and to provide a return on its investment. An estimated 10 years will be required for Mahi Pono and its lessees to remove volunteer sugarcane and weeds from 30,000 acres, amend soils, install field improvements, build warehouses and other structures, and plant crops. The predominant crops will be various types of orchard trees (avocado, coffee, citrus, macadamia nuts, etc.), which reflect a long-term commitment to farming. About 5 to 12 years will be required for orchard trees to reach full maturity, after which the trees will provide yields for 35 to over 100 years.

A short-term Water Lease would derail development of the Mahi Pono Farm Plan as well as any plan to convert the Central Maui lands to diversified agriculture because of the risk of not being able to farm for a long enough period to recover their planned investment. Conversely, the longer the term of the Water Lease, the greater the beneficial agricultural and economic impacts because of the certainty that comes from a long-term lease, which could encourage greater investment in long-term improvements. The State has the authority to issue a Water Lease with up to a 65-year term. However, the analysis used herein assumes a 30-year Water Lease. As mentioned, a longer term Lease would generate greater beneficial impacts.

**2. BASELINE CONDITIONS AND WATER-LEASE ALTERNATIVES**

This analysis of agricultural impacts addresses (1) three baseline conditions for past surface-water diversions from East Maui, and (2) three future water-lease alternatives represented by estimates for the year 2030:

- Past baseline conditions
  - Typical Sugar (2006 Crop)

This baseline covers surface-water diversions and related agricultural impacts for the 2006 sugarcane crop in Central Maui. This year represents typical sugarcane operations during the 20-year period from 1987 to 2006: rainfall in East Maui was regarded as normal, the restoration of stream flows was not large enough to significantly affect HC&S operations, and the plantation was economically healthy.

---

1. Mahi Pono's Farm Plan utilizes most of the water available after consideration of the CWRM D&O, however, it is understood that Department of Hawaiian Home Lands (DHHL) is entitled to establishing a reservation of water prior to the issuance of the Lease.

The EMI System also delivered water to the MDWS to meet a portion of the requirements of Upcountry Maui. In addition, water was delivered to the MDWS for the Nahiku community in East Maui.

- Recent Sugar (Years 2008 to 2013)

This baseline covers average surface-water diversions and related agricultural impacts for the 6-year period just prior to the closure of HC&S: 2008 to 2013.

This period is not typical of sugar operations in that rainfall was below normal, water returned to East Maui streams was large enough to adversely affect sugarcane operations, and HC&S struggled to achieve profitable operations. Also, a large volume of brackish groundwater was used to irrigate the sugarcane in order to maintain high levels of biomass for energy production, even though the high salinity decreased sugar yields.

- Post Sugar (Year 2017)

The analysis for Post Sugar is for the year 2017, after sugar operations ended and diversified agricultural initiatives were just beginning. The EMI System continued to deliver water to the MDWS for Upcountry Maui and Nahiku.

— Alternatives for the future

- Water Lease Limited to CWRM D&O Alternative (proposed action/preferred alternative)

For this alternative, the State would offer at public auction a Water Lease that would enable the awarded lessee the right to divert the East Maui streams in an amount up to the maximum flow allowed by the CWRM D&O. Due to the CWRM D&O and prior voluntary decisions by A&B, significantly less water will be available to Central Maui from the EMI System than has been the case in the past. This report assumes that the Water Lease supplies water through the EMI System for use in Central Maui.

Mahi Pono scaled its Farm Plan, which includes water to lessees of Mahi Pono in Central Maui, to match the available supply of surface water. Under this alternative, it is projected that 30,000 acres of diversified agriculture in Central Maui could be supported. If more water were available, then more crops would be planted. If less water were available, then the Farm Plan would be changed, possibly increasing land for pasture and decreasing land for crops.

The EMI System would continue to supply surface water to the MDWS for Upcountry Maui, but the supply would be maintained at its recent level and not increased to accommodate future growth. Also, water would continue to be delivered to the MDWS for the Nahiku community in East Maui.

- Water Lease with Less than CWRM D&O Alternative

For this alternative, the Water Lease that is put to public auction would allow surface water to be diverted from East Maui, but at a lower level than in the previous alternative. The water would be used to irrigate fields in Central Maui, and to continue water deliveries to the MDWS but at a lower level than under the Water Lease Limited to CWRM D&O Alternative.

Depending on the available supply of surface water, Maui Pono would have to scale down its Farm Plan to the amount of water available.

This alternative is not included in Table ES1 because no particular amount of decreased flow of surface water from East Maui is currently known. However, Section 5.c of this Executive Summary provides information needed to estimate agricultural and related economic impacts for various levels of reduced flow of surface water.

- No Water Lease Alternative

For this alternative, no surface-water would be diverted from State lands in East Maui. Surface water would continue to flow to Central Maui, but it would be limited to waters originating from private lands. Nearly all available water would be used to irrigate fields in Central Maui. Because the agreements with MDWS provide that the delivery of water to MDWS for Upcountry Maui is contingent upon the Lease being issued, no water is presumed to be provided to the MDWS.

This alternative would require major changes to the Mahi Pono Farm Plan in order to reduce their demand for irrigation water and match the available supply.

### **3. GEOGRAPHIC AREAS AND AGRICULTURAL CONDITIONS**

The Water Lease would affect three farm areas:

- Central Maui

This area comprises the Central Maui lands owned by Mahi Pono, which are former HC&S sugarcane lands that historically were serviced

by the EMI System, along with supplemental brackish groundwater pumped from wells now owned by Mahi Pono. These lands are east of Maui Veterans Highway. In this report, Central Maui excludes the former sugarcane lands irrigated with surface water from the West Maui Ditch System. These excluded fields are located west of Maui Veterans Highway.

Central Maui has some of the best agricultural conditions in the State for farming, including a large area in a compact configuration, high-quality soils, high solar radiation, a location near markets and shipping terminals, potentially ample water at low delivery costs (assuming a new Water Lease with a reasonable use fee), and rents that will be comparatively low for lessees.

Most of the water for irrigating crops must come from surface water. Upper fields can be irrigated only with surface water, and lower fields can be irrigated with a mix of surface water and brackish groundwater. Because of salinity and the salt tolerance of diversified crops, the use of brackish water on the lower fields is limited to about 30% of the water applied. Combining the upper and lower fields, the overall water split across all 30,000 acres would be approximately 80% surface water and 20% brackish groundwater water.

If insufficient water is available from the EMI System, then crop farming will have to be reduced.

— Upcountry Maui

The Kula Ag Park and other farm areas in Upcountry Maui (together with Upcountry's domestic water users) depend upon water supplied by the EMI System and delivered by the MDWS. If insufficient water is available from the EMI System, then these farms would be affected.

Upcountry Maui has lands that are suitable for farming, but the conditions are not as good as those in Central Maui. Farms are small and scattered, solar radiation is less, farms are farther from markets and shipping terminals, water is limited and expensive, and annual rents at the Kula Ag Park are much higher than those planned for Central Maui (\$1,200 per acre vs \$150 per acre).

— East Maui

Because of the heavy rainfall on the windward slopes of Haleakalā and the many streams in East Maui, many *makai* areas along the streams are well-suited for growing taro and truck crops. Also, a number of the landowners have appurtenant and riparian rights to use water from these streams for farming.

The CWRM D&O has and will result in increased stream flows, thereby allowing increased farming activity in East Maui.

#### **4. OUTLOOK FOR AGRICULTURE**

##### **a. Central Maui**

Provided that sufficient water is available, Central Maui is expected to host a major expansion in crop farming and cattle grazing. Mahi Pono's current plans for Central Maui envision cultivating a broad range of food and non-food crops for local consumption and export, including orchard crops (citrus, macadamia nuts, coffee, avocado, etc.), tropical fruits, vegetables and melons, row crops, annual crops, energy crops, and grass-fed cattle. In addition, the company plans to lease some of its land to other farmers at favorable terms, including relatively low rents for long periods.

To the extent economically feasible, Mahi Pono and other farmers on its land will grow food crops for the Hawai'i market. However, the Hawai'i market is too small to use all of the available farmland in Central Maui solely to serve the Hawaii market, and thus some export is necessary.

Central Maui agricultural land that cannot be farmed is likely to be used for grazing cattle.

Depending on the supply of surface water delivered to Central Maui, the amount of land used could range from (1) about 5,280 acres in crops and 24,470 acres in pasture, to (2) about 15,950 acres in crops and 13,800 acres in pasture. An additional 250 acres would be used for green energy.

##### **b. Upcountry Maui**

For the Water Lease Limited to CWRM D&O Alternative, existing farming in Upcountry Maui would continue, and the Kula Ag Park would expand by at least 262 acres as planned. Other than this expansion, no significant increase of commercial agriculture is anticipated in Upcountry Maui, primarily because Central Maui offers better conditions for farming. However, some residents of Upcountry Maui may engage in limited semi-commercial agriculture because they are attracted to the farming lifestyle.

For the No Water Lease Alternative, water deliveries by the EMI System to the MDWS would drop to zero. Several years would be required for the MDWS to develop groundwater wells or other alternatives to fill the shortfall in supply, and the feasibility of such development is uncertain. Assuming domestic customers would have priority over agricultural customers, farmers in Upcountry Maui would lack water to irrigate their crops until the new wells are operational. As a result, farms would close or relocate to Central Maui. Even after the new wells are operational, little commercial farming is expected to return to Upcountry Maui because Central Maui has better conditions for farming.

For the Water Lease with Less than CWRM D&O Alternative, this report assumes the impacts on farming would be proportional to the reduction in the supply of water delivered by the EMI System to the MDWS.

### **c. East Maui**

In the past, farmers in East Maui have reported that surface-water diversions to supply water to Central Maui left insufficient water in the streams for them to take full advantage of the agricultural potential in East Maui.

However, ample stream water should now be available to irrigate taro lo‘i and the small farms relying on East Maui streams because the CWRM D&O “will return free flowing water, with no upstream diversions, to all streams which have historically supported significant kalo cultivation ...” The large volume of water that flows out of the taro lo‘i can be used to irrigate other crops.

Given the CWRM D&O to fully restore the flow of all taro streams in East Maui, all alternatives are expected to result in the same expansion of taro and other farming in East Maui.

## **5. SUMMARY OF FINDINGS**

### **a. Major Impacts and Benefits**

Table ES-1 summarizes the major impacts and benefits for the past baseline conditions and two of the three alternatives for the future. The table is divided into 6 parts: (1) Water Supply and Allocation, (2) Agricultural Land Use, (3) Agricultural Water Use, (4) Agricultural Development and Operations, (5) Employment and Payroll, and (6) State and County Revenues. Mahi Pono’s current Farm Plan assumes full development by about 2030. Also, all dollar amounts are expressed in 2018 purchasing power.

#### Water Supply and Allocation

The supply of East Maui surface water that is available for Central and Upcountry Maui is projected to decline significantly: from about 156.54 mgd for Typical Sugar, to 92.32 mgd for the Water Lease Limited to CWRM D&O Alternative, and to 30.76 mgd for the No Water Lease Alternative. For the No Water Lease Alternative, all of the water would come from private lands.

The total water supply (surface water plus groundwater) would decline from about 199.04 mgd for Typical Sugar to 113.63 for the Water Lease Limited to CWRM D&O Alternative and 38.44 mgd for No Water Lease Alternative. The use of groundwater is limited in order to keep salinity below about 30‰ when applied to lower fields in Central Maui.

For the Water Lease Limited to CWRM D&O Alternative, about 106.53 mgd would be allocated to Central Maui for agricultural use, and 7.1 to MDWS for Upcountry Maui.<sup>2</sup> For the No Water Lease Alternative, all of the water would be allocated to Central Maui for agricultural use.

### Agricultural Land Use

#### *Central Maui*

For the Water Lease Limited to CWRM D&O Alternative, about 15,950 acres would be used for growing crops, including 12,850 acres for orchard crops and 3,100 acres for other crops. About 13,800 acres would be used for pasture, of which about 4,700 acres would be irrigated. About 250 acres would be used for green energy, such as a solar farm.

For the No Water Lease Alternative, the reduced supply of water would require a major reallocation of land from growing crops to unirrigated pasture. About 5,250 acres would be used for growing crops, including 4,180 acres for orchard crops and 1,100 acres for other crops. About 24,470 acres would be used for pasture, of which about 3,800 acres would be irrigated. Land for green energy would remain at 250 acres.

#### *Upcountry Maui*

For the Water Lease Limited to CWRM D&O Alternative, about 1,520 acres of farmland would be irrigated with water from the EMI System.

For the No Water Lease Alternative, farmlands in Upcountry Maui that have been irrigated with water from the EMI System are expected to drop to zero acreage for the reasons given in Section 4.b of this Executive Summary.

#### *East Maui*

As indicated in the CWRM D&O, stream restoration could result in 44.83 acres planted in taro in East Maui, and 35.09 acres in other crops. These estimated acreages are the same for all alternatives.

### Agricultural Water Use

#### *Central Maui*

Agricultural water use in Central Maui is projected to decline from about 143.19 mgd for Typical Sugar to 82.34 mgd for the Water Lease Limited to CWRM D&O Alternative and 29.72 mgd for No Water Lease Alternative.

---

2. 7.1 mgd was the long-term average presented in the CWRM D&O.

*Upcountry Maui*

For the Water Lease Limited to CWRM D&O Alternative, about 4.16 mgd would be used to irrigate farms supplied with water from the EMI System.

For the No Water Lease Alternative, it is assumed that no water would be delivered from the EMI System.

*East Maui*

For all water-lease alternatives, gross and net water requirements would be about 6.28 and 1.52 mgd, respectively (derived from the CWRM D&O acreage estimates for the affected farms in East Maui). The high gross water requirement reflects the fact that nearly 80% of the water used for growing taro is diverted from streams, passes through lo'i, and is then returned to the streams.

Agricultural Development and Operations*Central Maui*

For the Water Lease Limited to CWRM D&O Alternative, converting Central Maui from sugarcane to diversified agriculture would entail a capital investment of about \$214.7 million for land preparation and improvements, with expenditures spread out over approximately 10 years. During this period, expenditures and indirect sales would average about \$39.9 million per year. Corresponding figures for the No Water Lease alternative are \$144.8 million invested over about 6 years, with expenditures and indirect sales averaging about \$42.9 million per year.

At full operations, and assuming the Water Lease Limited to CWRM D&O Alternative, farm sales would total about \$160.7 million per year, of which about \$104.4 million would be Hawai'i sales and \$56.2 million would be export sales. Adding energy sales of about \$8.2 million results in total direct sales of about \$168.9 million per year. Direct and indirect sales would total about \$329.5 million per year.

The direct sales of about \$160.7 million per year exceeds sales during sugar operations: about \$100.7 million per year for Typical Sugar, and about \$115.6 million for Recent Sugar. The HC&S revenues figures are for the former plantation lands east of Maui Veterans Highway, and not the entire plantation.

For the No Water Lease Alternative, operations would generate much lower farm sales: about \$57.7 million per year in farm sales, of which about \$46.1 million would be Hawai'i sales and \$11.5 million would be export sales. Adding energy sales results in total direct sales of about \$65.9 million per year. Direct and indirect sales would total about \$123.5 million per year.

*Upcountry Maui*

For the Water Lease Limited to CWRM D&O Alternative, the farms that depend on water from the EMI System would generate direct sales of about \$14.1 million per year. Direct and indirect sales would total about \$31.8 million per year.

For the No Water Lease Alternative, these figures would drop to zero.

*East Maui*

For all water-lease alternatives, the farms in East Maui that depend on stream water would generate about \$1.4 million per year in direct sales, and about \$2.9 million per year in direct and indirect sales.

Employment and Payroll*Central Maui*

For the Water Lease Limited to CWRM D&O Alternative, converting Central Maui from sugarcane to diversified agriculture would employ an average of about 210 workers over a period of about 10 years. Corresponding figures for the No Water Lease Alternative are an average of about 175 workers over about 6 years.

At full operations of farming operations in Central Maui, and assuming the Water Lease Limited to CWRM D&O Alternative, employment would reach about 790 direct jobs with a payroll of about \$28.5 million per year, and 1,140 direct and indirect jobs with a payroll of \$45.3 million. The direct employment of 790 jobs would exceed the 630 direct jobs formerly provided by HC&S for Typical Sugar. The HC&S employment figure is for the former plantation lands east of Maui Veterans Highway, and not the entire plantation.

For the No Water Lease Alternative, full operations would provide about 270 direct jobs with a payroll of about \$9.9 million per year, and 390 direct and indirect jobs with a payroll of \$15.6 million.

*Upcountry Maui*

For the Water Lease Limited to CWRM D&O Alternative, the farms that depend on water from the EMI System would provide about 100 jobs with a payroll of about \$3.5 million per year, and would generate about 150 direct and indirect jobs having a payroll of \$5.8 million.

For the No Water Lease Alternative, these figures would drop to zero.

*East Maui*

For all water-lease alternatives, the farms in East Maui that depend on stream water would provide about 14 jobs with a payroll of about \$500,000 per year, and generate about 21 direct and indirect jobs having a payroll of about \$800,000.

## State and County Revenues

### *Central Maui*

For the Water Lease Limited to CWRM D&O Alternative, the expenditures on land preparation and capital improvements needed to convert Central Maui from sugarcane to diversified agriculture would generate State tax revenues of about \$18.62 million over the assumed 10-year development period, but this would be offset by energy subsidies of \$18.75 million, for net loss of about \$130,000. State revenues would come from excise taxes, corporate income taxes, and personal income taxes. The County derives negligible tax revenues from development activity: there are no major County taxes on expenditures for land preparation and improvements, profits generated, or the payroll of those involved with the development activity. However, once the improvements are completed, the County will benefit from an increase in property-tax revenues due to the increased property values.

For the No Water Lease Alternative, the conversion would generate State tax revenues of about \$11.41 million over the assumed 6-year development period, but this would be offset by energy subsidies of \$18.75 million, for a net loss of about \$7.34 million.

At full operations of farming operations in Central Maui, and assuming the Water Lease Limited to CWRM D&O Alternative, State tax revenues would be about \$4.46 million per year, and County property taxes would be about \$800,000 per year. Property taxes for the County are low because agricultural land is assessed at agricultural values, not at market values.

For the No Water Lease Alternative, full operations would generate State tax revenues of about \$1.66 million per year, and County tax revenues of about \$650,000. Tax revenues for the State are less because crop production and sales would be less. Property taxes are lower because more of the land would be used for pasture, which has a lower assessed value than cropland.

### *Upcountry Maui*

For the Water Lease Limited to CWRM D&O Alternative, the farms that depend on water from the EMI System would generate annual State taxes of about \$540,000, and County revenues of about \$850,000. The County revenues include property taxes and rents from the Kula Ag Park.

For the No Water Lease Alternative, most of these figures would drop to zero or near zero because of the loss of farms and farm production. The County would lose rents from the Kula Ag Park, and property tax revenues would be lower, assuming the agricultural lands would be assessed at pasture values.

### *East Maui*

For all water-lease alternatives, the East Maui farms would generate about \$67,000 per year in State taxes and about \$100 in County property taxes.

**b. Water Lease Limited to CWRM D&O Alternative vs the No Water Lease Alternative****Central Maui**

For Central Maui, the Water Lease Limited to CWRM D&O Alternative would provide far more economic activity and benefits than would the No Water Lease Alternative. The difference between the two alternatives would be as follows:

- About 11,570 acres more green open space in the form of farms and irrigated pastures (20,650 acres vs 9,080 acres).
- About three times as much food production, including greater food self-sufficiency and more exports.
- About \$206 million per year more in direct and indirect sales (\$329.5 million vs \$123.5 million).
- About 750 more direct and indirect jobs (1,140 jobs vs 390 jobs).
- About \$29.7 million per year more in total payroll (\$45.3 million vs \$15.6 million).
- Development activity (land preparation and capital improvements) lasting about 4 years longer (10 years vs 6 years), with similar magnitudes of sales and employment (about \$40 million per year direct and indirect sales, and about 300 direct and indirect jobs).
- About \$2.9 million per year more in State and County tax revenues (\$4.6 million vs \$1.7 million).

**Upcountry Maui**

For Upcountry Maui, the Water Lease Limited to CWRM D&O Alternative would allow farming to continue and expand at the Kula Ag Park, and continue at other farms that irrigate crops with water originating from the EMI System. In total, about 1,510 acres would be farmed in 2030, generating about \$31.8 million per year in direct and indirect sales, about 150 direct and indirect jobs, and about \$5.8 million in payroll for these jobs.

For the No Water Diversions Alternative, farming activity is expected to be near zero for the farms that depended on water from the EMI System in 2017. For these farms, water to irrigate crops is not expected to be available for several years, and once farming ends, significant farming is not expected to return to the area because of better farming conditions in Central Maui.

**East Maui**

All alternatives would result in the same agricultural activity and benefits for East Maui (see Table 7., Section 7c).

**c. Water Lease with Less than CWRM D&O Alternative**

For the Water Lease with Less than CWRM D&O Alternative, the State would allow water to be diverted from East Maui to Central Maui in an amount falling between (1) the 92.32-mgd flow estimated for the Water Lease Limited to CWRM D&O Alternative, and (2) the 30.76-mgd flow estimated for the No Water Lease Alternative. To demonstrate the impacts of such an intermediate alternative, the following table provides (1) the impacts of the Water Lease Limited to CWRM D&O Alternative at full operations of the Mahi Pono Farm plan, and (2) the incremental changes in these impacts (in red) caused by each mgd-reduction in surface water from the 92.32-mgd flow estimated for the Water Lease Limited to CWRM D&O Alternative.

|                               | <b><u>Central<br/>Maui</u></b> | <b><u>Upcountry<br/>Maui</u></b> | <b><u>Units</u></b> |
|-------------------------------|--------------------------------|----------------------------------|---------------------|
| — Land use                    |                                |                                  |                     |
| • Crops                       | 15,950                         | 1,509                            | acres               |

| — State Revenues              | \$4.46                         | \$0.54                           | million/yr          |
| Decrease per 1 mgd            | \$0.0456                       | \$0.0088                         | million/yr          |

Thus, each 1-mgd reduction of surface water from the Water Lease Limited to CWRM D&O Alternative would result in the following changes for Central Maui (first column of the above table): a reduction by about 173 acres of land in crops, a reduction by about 15 acres of land in irrigated pasture, an increase of about 188 acres of land in unirrigated pasture, a reduction in direct sales on Maui of about \$1.7 million per year, a reduction in direct-and-indirect sales on Maui and O‘ahu of about \$3.3 million per year, about 8.5 fewer direct jobs on Maui having a payroll of about \$300,000 per year, about 12 fewer direct-and-indirect jobs on Maui and O‘ahu having a payroll of about \$500,000 per year, and a reduction in State revenues of about \$50,000 per year. Significant but smaller changes would occur for Upcountry Maui (second column of the above table).

## **6. CONSISTENCY WITH STATE AND COUNTY AGRICULTURAL POLICIES**

Of the three alternatives, the Water Lease Limited to CWRM D&O Alternative is the most compatible with State and County agricultural policies. This alternative would (1) preserve and protect the most agricultural land and water, and (2) promote the most agricultural activity.

# EAST MAUI WATER LEASE: AGRICULTURAL AND RELATED ECONOMIC IMPACTS

## 1. INTRODUCTION

### a. Proposed Water Lease

Since 1986, the Board of Land and Natural Resources (**BLNR**) has been issuing 1-year revocable permits for four license areas in East Maui to Alexander & Baldwin, Inc. (**A&B**) and its subsidiary East Maui Irrigation Company, LLC (**EMI**)—A&B and EMI are herein referred to collectively as A&B. The permits have allowed A&B to divert surface water via the aqueduct system owned by EMI (the **EMI System**) to (1) irrigate fields in Central Maui and (2) supply water to the Maui Department of Water Supply (**MDWS**) for use in Upcountry Maui, including agricultural users at the Kula Agricultural Park, as well as for the Nāhiku community, which draws up 20,000 to 45,000 gallons per day, dependent on weather, from the EMI System.

In 2001, A&B requested that the BLNR offer a long-term (30 years) East Maui Water Lease (the **Water Lease** or **Lease**) at public auction for the right, privilege and authority to enter and go upon State-owned lands in East Maui for the purposes of developing, diverting, transporting and using government-owned waters. BLNR action on issuing a Water Lease has been delayed for various reasons, including the requirement that an environmental review be completed before a lease could be issued.

Under the proposed Lease, the State of Hawai‘i would allow the continued diversion of East Maui surface water for delivery to Central Maui and Upcountry Maui. The Central Maui agricultural lands, as well as other lands formerly owned by A&B, are now owned by MP Central A, LLC, MP Central B, LLC, MP CPR, LLC, MP East A, LLC, MP East B, LLC, MP West, LLC, and MP EMI, LLC (individually or collectively, "**Mahi Pono**"), which acquired these lands from A&B in December 2018. In addition, since early 2019, Mahi Pono owns 50% of EMI and is the managing member of EMI; A&B is the other member of EMI.

Compared to past water diversions that occurred for over 90 years under continuous sugar cultivation (since 1923 when the EMI System reached full development), the potential future flow of surface water from East Maui has been reduced significantly due to a June 2018 Decision and Order (**D&O**) by the Commission on Water Resource Management (**CWRM**) to fully or partially restore stream flows in East Maui, which also incorporates previous A&B decisions to voluntarily reduce stream diversions.

## **b. Content and Purpose**

This report addresses the agricultural and related economic impacts of the proposed Lease. It was prepared to support the Environmental Impact Statement being prepared under Hawaii Revised Statutes Chapter 343, by Wilson Okamoto Corporation. Compliance with the requirements of Hawaii Revised Statutes Chapter 343 is necessary before the BLNR can consider issuing the Lease.

## **c. Scope of Analysis**

### Baseline and Water Lease Alternatives

The analysis addresses the following baseline and alternative surface-water diversions from East Maui:

— Past baseline conditions

- Typical Sugar (2006 Crop)

The analysis for Typical Sugar is for the year 2006, which was before significant stream restorations. The EMI System also delivered water to the MDWS to meet a portion of the requirements of Upcountry Maui. In addition, water was delivered to the MDWS for the Nahiku community in East Maui.

- Recent Sugar (Years 2008 to 2013)

The analysis for Recent Sugar covers the 2008-to-2013 period. The EMI System continued to deliver water to the MDWS for Upcountry Maui and Nahiku.

- Post Sugar (Year 2017)

The analysis for Post Sugar is for the year 2017, after sugar operations ended and diversified agriculture initiatives were just beginning. The EMI System continued to deliver water to the MDWS for Upcountry Maui and Nahiku.

— Alternatives for the future

- Water Lease Limited to CWRM D&O<sup>1</sup>

For this alternative, surface water would be diverted from East Maui up to the maximum flow allowed by the D&O. The water would be used to irrigate fields in Central Maui, and to continue water deliveries to the MDWS at the current level.

---

1. Mahi Pono's Farm Plan utilizes most of the water available after consideration of the CWRM D&O, however, it is understood that the Department of Hawaiian Home Lands (DHHL) is entitled to a reservation of water prior to the issuance of the Lease.

- Water Lease with Less than CWRM D&O

For this alternative, surface water would be diverted from East Maui, but at a lower level than for the previous alternative. The water would be used to irrigate fields in Central Maui, and to continue water deliveries to the MDWS but at a lower level than currently.

- No Water Lease

For this alternative, no surface-water would be diverted from State lands in East Maui. Surface water would continue to flow to Central Maui, but it would be limited to waters originating from private lands. Nearly all available water would be used to irrigate fields in Central Maui. Because the agreements with MDWS provide that the delivery of water to MDWS for Upcountry Maui is contingent upon the Lease being issued, for the purposes of this report, no water is presumed to be provided to the MDWS.

More details on the baseline conditions and the alternatives for the future are provided in Section 4.

### Geographic Areas

The analysis addresses three farm areas:

- Central Maui

This area comprises the Central Maui lands owned by Mahi Pono, which are former HC&S sugarcane lands that historically were serviced by the EMI System, along with supplemental brackish groundwater pumped from wells now owned by Mahi Pono. These lands are east of Maui Veterans Highway. In this report, Central Maui excludes the former sugarcane lands irrigated with surface water from the West Maui Ditch System. These excluded fields are located west of Maui Veterans Highway.

Most of the Central Maui lands are now planned for various crops and cattle ranching. Most of the water for irrigating crops must come from surface water. Upper fields can be irrigated only with surface water, and lower fields can be irrigated with a mix of surface water and brackish groundwater. Because of salinity and the salt tolerance of diversified agricultural crops, the use of brackish water on the lower fields is limited to about 30% of the water applied. Combining the upper and lower fields, the overall water split across all 30,000 acres would be approximately 80% surface water and 20% brackish groundwater.

If insufficient water is available from the EMI System, then crop farming will have to be reduced.

— Upcountry Maui

The EMI System supplies water to the MDWS, some of which is then delivered to the County's Kula Ag Park and other farm areas in Upcountry Maui, and more water is planned for the 262-acre expansion of the Park. In addition, water from the EMI System supplies a portion of the water distributed by the MDWS Upcountry Water System to residents, businesses, Kamehameha Schools, the Department of Hawaiian Home Lands, and government facilities. The communities served include Kula, Pukalani, Makawao, Ha'ikū, Hali'imaile, Waiakoa, Keokea, Waiohuli, 'Ulupalakua, Kanaio, Olinda, 'Oma'opio, Kula Kai, and Pūlehu.

If insufficient water is available from the EMI System, then the MDWS will have to develop new water sources, and farming may have to be reduced. Also, domestic and business customers of MDWS may have to reduce their water use.

— East Maui

Some of the water from East Maui streams is diverted for taro farms and other farm operations. An increase in stream flows, as ordered by the CWRM D&O, allows for an increase in taro and other farm activity in East Maui.

In the material which follows, the primary focus of the agricultural impact analysis is on Central Maui because this where most of the changes in agriculture are expected to occur, and the area that will be affected most by a Water Lease from the State.

### Agronomic Conditions

Agronomic conditions are summarized for each of the three geographic areas, including:

- Soil quality.
- Solar radiation.
- Elevations.
- Slopes
- Climatic conditions.
- Access to irrigation water.
- Access to markets.

### Economic Impacts

For each condition/alternative and geographic area, the analysis addresses the following agricultural impacts:

- Supply of water available for agriculture.
- Acreages by agricultural use.
- Water use.
- Production.
- Sales.
- Employment.
- Payroll.
- State and county taxes generated (excise, income, and property taxes).

The analysis of economic impacts is limited to the economic impacts associated with agricultural activities, and do not include the impacts associated with the operations of the EMI System.

## **d. Methodology**

### Multipliers

Acreages by agricultural use are translated into economic impacts based on a number of multipliers. These multipliers reflect the professional judgment of the consultant, and were derived from the following sources: various agricultural projects in Hawai‘i; Hawai‘i farmers, ranchers, and land owners; publications by the U.S. Department of Agriculture; publications by the Hawai‘i Department of Agriculture; publications by the University of Hawai‘i, College of Tropical Agriculture and Human Resources; U.S. Census data; the *State of Hawai‘i Data Book*; *The Hawai‘i State Input-Output Study: 2017 Benchmark Report (I-O Model)*; employment and labor rates from the Department of Labor and Industrial Relations (**DLIR**); and State and County tax rates.

### Direct and Indirect Impacts

“**Direct**” economic impacts (gross sales, employment, payroll, etc.) are the immediate effects of a change in a particular sector of the economy. Traditionally, “indirect” impacts are changes in other sectors of the economy that are caused by the direct impacts, but exclude impacts related to the purchase of goods and services by employees and their families (**household spending**). Traditionally, “induced” impacts are changes in the economy that are caused by the household spending by those who are affected by the direct and indirect changes in the economy. In this report, “**indirect**” economic impacts are redefined broadly to include both the traditional indirect economic impacts and the induced economic impacts.

### 2018 Dollars

Dollar amounts are expressed in terms of 2018 purchasing power and market conditions. Values, prices, costs and dollar amounts for prior years are adjusted for inflation to 2018 dollars based on the Honolulu Consumer Price Index (**CPI**) for Urban Consumers. Dollar amounts after 2018 are not increased to account for inflation, appreciation of property values, changes in labor rates, changes in building costs, or other changes in market conditions.

### Future Impacts

The economic impacts of future agricultural operations are based on (1) full implementation of farm plans, and (2) the farms reaching full maturity. Most of these impacts are expected to occur by 2030, but production and sales could increase after this date due to the maturing of some orchard trees. The year 2030 is used for future impacts in order to be consistent with long-term plans by the County of Maui.

### Accuracy of Estimates

Much of the analysis contained in this report is quantitative in nature, where numbers are used to help communicate anticipated plans and impacts. However, these numbers should not be interpreted as precise predictions. Rather, they represent the best estimates of what is expected to occur based on available information about planned development and operations, market conditions, and tax rates. In practice, the future may bring significant deviations from the projections.

## **e. Organization of the Report**

Section 2 provides information on the EMI System, Lease areas and the lease alternatives. The EMI System and lease areas are shown in Figures 1 and 2, respectively.

Section 3 provides information on the CWRM D&O, and on Interim Instream Flow Standards (**IIFS**).

Section 4 defines the baseline conditions and the water-lease alternatives that are analyzed in this report.

Section 5 provides information on the agronomic conditions of the three agricultural areas addressed in the analysis.

Section 6 provides an overview of the agricultural outlook for Central Maui, Upcountry Maui, and East Maui.

Sections 7 through 12 and their corresponding Tables 1 through 6 provide the analysis of agricultural impacts, including:

- Section 7 and Table 1: Water Supply and Allocation
- Section 8 and Table 2: Agricultural Land Use
- Section 9 and Table 3: Agricultural Water Use
- Section 10 and Table 4: Agricultural Development and Operations
- Section 11 and Table 5: Employment, Payroll and Population Supported
- Section 12 and Table 6: State and County Revenues

Each table covers the three past baseline conditions and two of the three lease alternatives. The Water Lease with Less than CWRM D&O Alternative is not included in the tables because the flow of surface water from East Maui has not been specified. However, Section 13 provides the information needed to estimate agricultural and related economic impacts for assumed flows.

Each table of the tables is divided into three parts, one for each geographic area. The tables provide the detailed assumptions and calculations, while the text highlights the main findings. In these tables, the quantities appearing in **bold** highlight the more significant impacts.

Section 13 summarizes the economic impacts and benefits of the alternatives.

Section 14 summarizes the consistency of the Lease with State and County agricultural policies.

The figures and tables are at the end of the report, along with an Appendix that provides a summary of State and County goals, objectives, policies and guidelines related to agricultural lands.

## 2. EMI AQUEDUCT SYSTEM

### a. Overview of the EMI System

Since 1878, A&B or its predecessors and EMI have operated the EMI System, which is an integrated system of diversions, ditches, intakes, and tunnels that collect surface water from streams located on the rainy windward slopes of East Maui. This surface water is then transported to the comparatively dry agricultural fields in Central Maui.

The EMI System, which was completed in 1923, consists of about 388 intakes, over 24 miles of ditches, about 50 miles of tunnels, and numerous small dams, pipes, and flumes. Dirt roads and trails provide access to maintain the system.

The EMI System has four parallel levels of water ditches, running from east to west across the East Maui mountains. From *mauka* to *makai*, these are the Wailoa, New Hāmākua, Lowrie, and New Ha‘ikū ditches. The Wailoa and Lowrie ditches run year-round, while the New Hāmākua and New Ha‘ikū ditches run on surplus water from the other ditches. Wailoa is the highest elevation ditch, thus has access to large and reliable sources of

water. The Lowrie Ditch captures water that cascades down from higher elevations, and has ground water sources that contribute to generally year round flow. The Wailoa water can be sent to 4 turbines that have a production capacity of 6.1 MW.

Two of the main areas for measuring the water flow from the EMI System are at Honopou Stream and Maliko Gulch. Honopou Stream is the western boundary at the end of the State license areas. Maliko Gulch is considered the end of the EMI System and the beginning of the Central Maui field irrigation system.

Historically, the surface water was used to irrigate the HC&S sugarcane fields—fields which are now planned for diversified agriculture. In addition, a portion of the water from East Maui is delivered to MDWS for the domestic water needs of Upcountry Maui and the irrigation needs of small farms throughout Upcountry, as well as in the County’s Kula Ag Park. The MDWS also delivers up a small volume of water to the Nahiku community in East Maui.

The estimated replacement cost of the EMI System would exceed \$325 million (updated from Wilcox).

#### **b. Watershed and Lease Areas**

The watersheds from which the EMI System collects water total about 50,000 acres on the north slope of Haleakala, of which Mahi Pono now owns about 17,000 acres and the State owns about 33,000 acres. Historically, the right to collect water from State lands has been leased to A&B and its predecessors, with the first lease having been granted by the administration of King Kalākaua.

As shown in Figure 2, the State lands include four License Areas:

- Nahiku: TMKs (2)1-2-04:05, 07; 10,111.220 acres, more or less
- Ke‘anae: TMK (2)1-1-02:02 (por.); 10,768.000 acres, more or less
- Honomanu: TMK (2)1-1-001:443; 381.000 acres, more or less
- Huelo: TMKs (2)1-1-001:05 and (2)2-9-014:01, 05,11 ,12,17; 8,752.690 acres, more or less

The License Areas are within the Ko‘olau Forest Reserve while mauka portions of the Ke‘anae and Nahiku License Areas are bordered by the Kipahulu and Nana Forest Reserve. The Hanawi Natural Area Reserve also lies within the Nahiku License Area.

Thirty seven (37) streams are within the proposed Lease area, two of which are below the EMI System and therefore have never been diverted by the EMI System. However, ten of those streams have been ordered for full restoration, meaning that A&B has and/or will be stopping all diversions and restoring full water flow as required by the D&O. In addition, diversions will be reduced for several other streams.

**c. East Maui Water Lease**

As discussed in Section 1.a, A&B requested that the BLNR offer a long-term Water Lease at public auction. The objectives for the Lease are as follows:

— **Continue to provide water to support agriculture in Central Maui**

The proposed Water Lease will allow the EMI System to continue to supply water to support agriculture on approximately 30,000 acres of fields in Central Maui. Although A&B/HC&S ended its sugar operations in 2016, A&B had planned and Mahi Pono currently plans to put as much of the former sugarcane lands into other diversified agricultural uses as economically feasible.

— **Continue to meet domestic and agricultural water demands in Upcountry Maui**

The EMI System supplies water to the MDWS Upcountry Water System, which is the second largest system in the County. The continuation of the proposed Water Lease is necessary to continue MDWS's service for agricultural and domestic purposes in Upcountry Maui.

MDWS's service includes delivery of non-potable water that originate from the EMI System to the Kula Ag Park and the planned 262-acre expansion of the Park.

— **Continue to serve community water demands in the Nahiku Community**

The Nahiku community, a small community in Eastern Maui, draws about 41,000 gallons per day from the EMI System. The water is delivered by the MDWS. The proposed Water Lease is critical to continued water service for this community.

— **Preserve and maintain the EMI System**

The EMI System is a major capital asset that supplies water to support both agriculture and domestic uses. The proposed Water Lease will allow this valuable asset to be preserved and maintained to serve these needs for water.

**d. Water Flows from State vs Private Lands**

Historically, it has been recognized that 70% of the EMI System flow east of Honopou Stream comes from State lands, and 30% comes from private lands, and thus this assumption is utilized in this report. Between Honopou Stream and Maliko Gulch, all of the additional water flow comes from private lands.

### 3. INTERIM INSTREAM FLOW STANDARDS

On May 24, 2001, the Native Hawaiian Legal Corporation filed petitions with CWRM to Amend the Interim Instream Flow Standards (**IIFS**) for 27 East Maui streams on behalf of Nā Moku ‘Aupuni ‘O Koolau Hui, Beatrice Kepani Kekahuna, Marjorie Wallett, and Elizabeth Lehua Lapenia (collectively **Nā Moku**).

In 2007, A&B ceased diversion on Waiokamilo Stream, fully restoring flows to the stream, in response to an interim order by the BLNR.

In June 2018, the CWRM amended the IIFS for East Maui streams. In its D&O, CWRM fully or partially restored stream flows for most of the petitioned East Maui streams, and limited the volume of water which can be diverted from East Maui streams. The D&O “will return free flowing water, with no upstream diversions, to all streams which have historically supported significant kalo cultivation (Honopou, Huelo, Hanehoi, Pi‘ina‘au, Palauhulu, Ohia (Waianui), Waiokamilo, Kualani, Wailuanui, Makapipi).”<sup>2</sup>

### 4. BASELINE CONDITIONS AND WATER-LEASE ALTERNATIVES

This analysis of agricultural impacts addresses (1) three baseline conditions for past and recent surface-water diversions from East Maui, and (2) three future water-lease alternatives represented by estimates for the year 2030.

#### a. Past Water Diversions

The three baseline conditions for past surface-water diversions from East Maui include the following:

— Typical Sugar (2006 Crop)

This baseline covers surface-water diversions and related agricultural impacts for the 2006 sugarcane crop in Central Maui. This year represents typical sugarcane operations during the 20-year period from 1987 to 2006: rainfall in East Maui was regarded as normal, the restoration of stream flows was not large enough to significantly affect HC&S operations, and the plantation was economically healthy.

Selected agricultural impacts are provided for Central Maui but, with a few exceptions, are not provided for Upcountry Maui and East Maui. For these areas, agricultural impacts of more recent periods are more relevant.

---

2. Although the Executive Summary in the CWRM D&O mentioned Kualani and Ohia, those streams (also referred to as Hamau and Waianu) have never been diverted by the EMI System. CWRM D&O FOF 57.

— Recent Sugar (Years 2008 to 2013)

This baseline covers average surface-water diversions and related agricultural impacts for the 6-year period just prior to the closure of HC&S: 2008 to 2013. The plantation shut down operations over a 2-year period ending in 2016.

This period is not typical of sugar operations in that rainfall was below normal, water returned to East Maui streams was large enough to adversely affect sugarcane operations, and HC&S struggled to achieve profitable operations. Also, a large volume of brackish groundwater was used to irrigate the sugarcane in order to maintain high levels of biomass for energy production, even though the high salinity decreased sugar yields.

— Post Sugar (Year 2017)

This baseline covers surface-water diversions and related agricultural impacts for 2017, after HC&S ceased its sugar operations and diversified agriculture initiatives were just beginning.

## **b. Future Water-Lease Alternatives**

The three future water-lease alternatives include the following:

— Water Lease Limited to CWRM D&O Alternative (proposed action/preferred alternative)

For this alternative—which is the proposed action/preferred alternative—the State would offer a Water Lease at public auction that allows surface water to be diverted from State lands in East Maui up to the maximum flow allowed by the CWRM D&O under the IIFS. Due to IIFS and prior voluntary decisions by A&B, significantly less surface water will be available to Central from the EMI System than has been the case in the past. This report assumes that Mahi Pono is the successful bidder for the Water Lease.

Mahi Pono scaled its Farm Plan, which includes water to lessees of Mahi Pono, to match the available supply of surface water. Under this alternative, it is projected that 30,000 acres of diversified agriculture in Central Maui could be supported, of which over 20,000 acres would be irrigated. If more water were available, then more crops would be planted. If less water were available, then the Farm Plan would be changed, possibly increasing land for pasture and decreasing land for crops.

The EMI System would continue to supply surface water to the MDWS for Upcountry Maui, but the supply would be maintained at its recent level and not increased to accommodate future growth. Also, water would continue to be delivered to the MDWS for the Nahiku community in East Maui.

— Water Lease with Less than CWRM D&O Alternative

For this alternative, the Water Lease that would be put to public auction would allow surface water to be diverted from East Maui, but at a lower level than in the previous alternative. The water would be used to irrigate fields in Central Maui, and to continue water deliveries to the MDWS but at a lower level than under the Water Lease Limited to CWRM D&O alternative. Depending on the available supply of surface water, Maui Pono would have to scale down its Farm Plan to the amount of water available.

As mentioned previously, this alternative is not included in the tables because no particular amount of decreased flow of surface water from East Maui is currently known. However, Section 13 provides information needed to estimate agricultural and related economic impacts for various levels of reduced flow of surface water

— No Water Lease Alternative

For the this alternative, no surface-water would be diverted from State lands in East Maui. Surface water would continue to flow to Central Maui, but it would be limited to waters originating from private lands. Nearly all available water would be used to irrigate fields in Central Maui. Because the agreements with MDWS provide that the delivery of water to MDWS for Upcountry Maui is contingent upon the Lease being issued, no water is presumed to be provided to the MDWS.

This alternative would require major changes to the Mahi Pono Farm Plan in order to reduce their demand for irrigation water and match the available supply.

The estimated agricultural impacts discussed in the following sections are for the year 2030.

### **c. Duration of Lease**

A&B is requesting that the State offer at public auction a long-term (30 years) Water Lease in order to provide sufficient time for Mahi Pono to implement its Farm Plan, returning agriculture to approximately 30,000 acres in Central Maui, and to provide a return on its investment.

An estimated 10 years will be required for Mahi Pono and lessees to remove volunteer (i.e., rogue) sugarcane and weeds from 30,000 acres, amend soils, install field improvements (e.g., irrigation systems, fencing, etc.), build warehouses and other structures), and plant crops.

In addition, about 5 years or more will be required for avocado, citrus and coffee trees to reach full maturity, and 12 years or more for macadamia nuts. After reaching maturity, macadamia nuts trees will provide yields for 35 years or more, citrus and coffee for 50 years or more, and avocado for over 100 years.

In order for Mahi Pono and other farmers to justify the very substantial investment in a 30,000-acre farm, a long-term water lease will be required. A short-term lease would derail development of the Mahi Pono Farm Plan—or any long term agricultural use of the Central Maui fields including any plan to convert the Central Maui lands to diversified agriculture—because of the risk of not being able to farm for a long enough period to recover their planned investment.

Conversely, the longer the term of the Water Lease, the greater the agricultural and economic benefits because of the certainty that comes from a long-term lease, which could encourage greater investment in long-term improvements. The State has the authority to issue a Water Lease with up to a 65-year term. However, the analysis used herein assumes a 30-year Water Lease.

## **5. AGRICULTURAL CONDITIONS**

### **a. Central Maui**

#### Acreage and Layout

The Central Maui fields are shown in Figure 3, and include the areas east of Maui Veterans Highway (areas in blue and purple). The blue areas are upper fields which can be irrigated only with surface water, and the purple fields are lower fields which can be irrigated with a mix of surface water and brackish groundwater.

The fields total about 30,000 acres encompassing most of Central Maui. As can be seen in Figure 3, the configuration is geographically compact.

#### Soil Ratings

Three classification systems are commonly used to rate Hawai'i soils: (1) Land Capability Grouping, (2) Agricultural Lands of Importance to the State of Hawai'i, and (3) Overall Productivity Rating. The soil ratings are for about 30,302 acres of the Central Maui fields that have been irrigated with water from the EMI System.

*Land Capability Grouping (NRCS Rating)*

The 1972 Land Capability Grouping by the U.S. Department of Agriculture, **NRCS** rates soils according to eight levels, ranging from the highest classification level “I” to the lowest “VIII” defined as follows:

- Class I: few limitations that restrict their use.
- Class II: moderate limitations that reduce the choice of plants or require moderate conservation practices.
- Class III: severe limitations that reduce the choice of plants, require special conservation practices, or both.
- Class IV: very severe limitations that reduce the choice of plants, require very careful management, or both.
- Class V: not likely to erode but have other limitations, impractical to remove, that limit their use largely to pasture or range, woodland, or wildlife habitat.
- Class VI: severe limitations that make them generally unsuited to cultivation and limit their use largely to pasture or range, woodland, or wildlife habitat.
- Class VII: very severe limitations that make them unsuited to cultivation and that restrict their use largely to pasture or range, woodland, or wildlife habitat.
- Class VIII: limitations that preclude their use for commercial plant production and restrict their use to recreation, wildlife habitat, or water supply, or to esthetic purposes.

The sub-classification defines the limitations:

- c: climate/limited rainfall.
- e: subject to erosion.
- s: stoniness, unfavorable texture, shallowness, or low water-holding capacity.
- w: excess water/poorly drained.

Figures 4 and 5 show the NRCS ratings of the Central Maui agricultural lands, with and without irrigation. Based in geographic information system (**GIS**) analysis by Munekiyo Hiraga, Inc. (**MHI**), the estimated acreages for each class, with and without irrigation, are as follows:

|             | <u>Acres, with Irrigation</u> | <u>Acres, without Irrigation</u> |
|-------------|-------------------------------|----------------------------------|
| — Class I   | 4,449 (14.7%)                 | 0                                |
| — Class II  | 17,216 (56.8%)                | 1,644 (5.4%)                     |
| — Class III | 3,051 (10.1%)                 | 5,233 (17.3%)                    |
| — Class IV  | 2,629 (8.7%)                  | 15,364 (50.7%)                   |
| — Class V   | 0                             | 0                                |

---

|             |                  |                  |
|-------------|------------------|------------------|
| — Class VI  | 282 (0.9%)       | 5,386 (17.8%)    |
| — Class VII | 2,642 (8.7%)     | 2,642 (8.7%)     |
| — Not rated | <u>33</u> (0.1%) | <u>33</u> (0.1%) |
| — Total     | 30,302           | 30,302           |

With irrigation, approximately 71.5% of the fields are rated Class I or Class II. However, without irrigation, no lands are rated Class I and only about 5.4% are rated Class II.

*Agricultural Lands of Importance in the State of Hawai‘i (ALISH)*

ALISH ratings were developed in 1977 by the NRCS, UH College of Tropical Agriculture and Human Resources, and the State of Hawai‘i, Department of Agriculture. This system classifies land into three broad categories:

- Prime: agricultural land which is land that is best suited for the production of crops because of its ability to sustain high yields with relatively little input and with the least damage to the environment.
- Unique: agricultural land which is non-Prime agricultural land used for the production of specific high-value crops.
- Other: agricultural land which is non-Prime and non-Unique agricultural land that is important to the production of crops.

Figure 6 shows the ALISH ratings of the Central Maui agricultural lands. The estimated acreages for each rating are as follows:

|             |                     |
|-------------|---------------------|
|             | <u>Acres</u>        |
| — Prime     | 25,669 (84.7%)      |
| — Unique    | 0                   |
| — Other     | 2,254 (7.4%)        |
| — Not rated | <u>2,378</u> (7.9%) |
| — Total     | 30,302              |

These ratings reflect the fact that the Central Maui lands were irrigated in 1977. With less water, less acreage would be rated as Prime.

*Overall Productivity Rating (LSB Rating)*

In 1967, the UH Land Study Bureau (LSB) developed an Overall Productivity Rating for Maui soils, which classifies soils according to five levels, with “A” representing the class of highest productivity and “E” the lowest. The ratings reflect the irrigation in 1967.

Figure 7 shows the LSB ratings of the Central Maui agricultural lands. The estimated acreages for each rating are as follows:

|             | <u>Acres</u>      |
|-------------|-------------------|
| — A         | 24,128 (79.6%)    |
| — B         | 3,439 (11.3%)     |
| — C         | 1,443 (4.8%)      |
| — D         | 667 (2.1%)        |
| — E         | 438 (1.4%)        |
| — Not rated | <u>207</u> (0.7%) |
| — Total     | 30,302            |

About 27,567 acres (90.9%) are high-quality lands rated A or B.

These ratings reflect the fact that the Central Maui lands were irrigated in 1967. With less water, less acreage would be rated as A or B.

#### *Summary Evaluation of Soil Quality*

In this report, the term **“high-quality farmland”** is used to describe land that is rated I or II by NRCS, Prime or Unique by ALISH, or A or B by the LSB. Under this definition, 27,097 acres in Central Maui consist of high-quality farmland (see Figure 8). The high-quality farmlands are scattered throughout Central Maui.

With less water, less acreage would be rated as high-quality farmland.

#### Sugar Yields

Another measure of the agronomic quality of the Central Maui lands is average sugar yields. Assuming good agricultural practices, yields are generally higher for fields having good soils, high solar radiation, and sufficient water. Lands considered good for growing sugarcane are good for growing many other crops.

Figure 9 shows average sugar yields (tons per harvested acres) in Central Maui for the 1994-to-2016 period. Hawai‘i sugarcane was a 2-year crop, unlike most other areas throughout the world where cane is grown as a 1-year crop. Thus, annual yields are half the numbers shown in Figure 9.

Figure 9 is consistent with Figure 8; the good farmlands in Central Maui are scattered throughout the former plantation.

#### Elevations

Elevations of the Central Maui fields range from 5 feet to 1,100 feet in mauka areas.

### Slopes

Slopes of the Central Maui fields range from zero to over 7%. During severe rains storms, level fields are more prone to flooding and possible losses of vegetable crops, while fields having higher slopes are more prone to erosion.

### Climatic Conditions

Like other areas in Hawai‘i, Central Maui has a mild *semitropical* climate that is due primarily to three factors: (1) Hawai‘i’s mid-Pacific location near the Tropic of Cancer, (2) the surrounding warm ocean waters that vary little in temperature between the winter and summer seasons, and (3) the prevailing northeasterly tradewinds that bring air having temperatures which are close to those of the surrounding waters.

### *Solar Radiation*

Central Maui receives considerable sunshine, with average daily insolation ranging from slightly less than 450 calories per square centimeter per day in mauka areas, to over 500 calories near Pā‘ia (see Figure 10). Other high-quality farm areas in the State—such as Kunia and ‘Ewa on O‘ahu, and the fields in the southwest corner of Kaua‘i—have similar high-levels of solar radiation.

### *Rainfall*

Average annual rainfall in the Central Maui ranges from less than 15 inches per year in the southern part of the isthmus to over 50 inches in the north-eastern area of Central Maui (see Figure 11). Most of this rainfall occurs during the winter rainy season (October through April), while the summer months (May through September) are hot and dry.

Because of the low annual rainfall and/or seasonal rainfall, irrigation water is needed to grow crops in Central Maui.

### *Temperatures*

Average temperatures range from the low 60s in the winter to the mid 80s in the summer. The mild temperatures are favorable for growing many crops.

### *Winds*

The prevailing tradewinds blow from a northeasterly direction across the isthmus and out to sea. Occasional strong winds can cause crop damage if they are not protected by windbreaks.

### Irrigation Water and Salinity

The Central Maui fields can be irrigated with water from two sources: (1) East Maui surface water delivered by the EMI System and (2) brackish groundwater wells. Fields west of Maui Veterans Highway, which are not included in the analysis, can be irrigated with surface water from the West Maui Ditch System and supplemental brackish groundwater. Water from the West Maui Ditch System are not used to irrigate fields east of Maui Veterans Highway.

### *Surface Water*

A major advantage of farming Central Maui fields is that the EMI System can deliver by gravity a large volume of water at relatively low delivery cost. For the 2008-to-2013 period, the delivery cost was about 3.9 cents per 1,000 gallons vs about 52 cents for brackish groundwater. This accounting includes the payments to the State for the water, but does not include the cost of delivering surface water from Maliko Gulch to the fields in Central Maui—costs which were borne by HC&S. Also the cost of surface water per 1,000 gallons will increase with less available surface water since fixed costs will be spread over a smaller volume of water.

For comparison, the MDWS buys water from Wailuku Water Co. and Maui Land and Pine at 53.5 cents and 27.6 cents per 1,000 gallons, respectively. Farmers in Central O‘ahu—who compete with Maui farmers in the Honolulu and export markets—are charged 58 cents per 1,000 gallons for surface water from Waiahole Ditch.

The higher-elevation fields in Central Maui can be irrigated only with surface water from the EMI System for two reasons: (1) the high pumping cost of groundwater, and (2) the existing water-distribution system was not designed to deliver expensive groundwater to these higher-elevation fields.

Surface water is also used on the lower-elevation fields, but it is mixed with brackish groundwater. The surface water lowers the salinity (which can adversely affect crop yields), and reduces pumping costs.

### *Brackish Groundwater*

Brackish groundwater is available from 15 brackish wells in Central Maui having a combined pumping capacity of 228 million gallons per day (**mgd**).<sup>3</sup> For the 2008-to-2013 period, these wells delivered about 70 mgd of brackish groundwater to the lower-elevation fields that were planted in sugarcane. The brackish groundwater is mixed with surface in order to lower the salinity of the water applied to crops. Because of salinity and the salt

---

3. "Pumping capacity" as used here refers to the size of the currently installed pumps and not the quality or quantity of the water source.

tolerance of crops, the useable supply of brackish groundwater is limited by the supply of surface water.

As mentioned, water from these wells is comparatively expensive at about 52 cents per 1,000 gallons. This cost is based on electricity provided by Maui Electric Company (MECO) to power the pumps.

### *Salinity of Irrigation Water*

According to the Maui Department of Water Supply, “Many of the older high-capacity irrigation wells and shafts operated by sugarcane plantations in central Maui reported salinity exceeding 4 percent of seawater” (“Maui Island Water Use and Development Plan Draft, Part III Regional Plan, Central Aquifer Sector Area,” Nov. 2018). Akinaka & Associates (A&A) found that, during prolonged droughts, the brackish groundwater in Central Maui had average salinity of about 3.6% seawater (chlorides of about 703 mg/L), and this level of salinity is assumed for analysis.

Crops sensitive to salinity can be irrigated with diluted brackish water with little reduction in yields, provided that the water is less than about 0.9% seawater (derived from Government of Western Australia, Department of Agriculture and Food, “Water Salinity and Plant Irrigation,” and Wikipedia, “Salt Tolerance of Crops”).

Less than half of the crops planned for the lower-elevation fields are sensitive to salinity. With this in mind, a reasonably aggressive adjustment to this 0.9% seawater mix would result in irrigation water containing about 1.1% seawater. This adjustment would result in a target figure for irrigation water in the lower elevation fields of Central Maui of more than 70% surface water and less than 30% brackish groundwater ( $30\% \times 3.6\% = 1.1\%$ ). The upper elevation fields of Central Maui would be irrigated with 100% surface water. Combining the upper and lower fields, the overall water split across all 30,000 acres would be approximately 80% surface water and 20% brackish groundwater water.

The irrigation system in Central Maui was not designed to vary the mix of surface water and brackish groundwater to accommodate crop needs of different fields. As a result, the surface-to-groundwater mix will be the same across all of the lower fields that can be irrigate with groundwater.

### Road Access

Access to the Central Maui fields is provided by Hāna Highway, Haleakalā Highway, Maui Veterans Highway, and Baldwin Avenue. In addition, many miles of plantation roads allow movement within the former HC&S plantation.

### Surrounding Uses

Surrounding uses are as follows:

- West: former sugarcane lands most of which are planned by Mahi Pono for continued agricultural use. These lands are irrigated with (1) surface water from the West Maui Ditch System and (2) brackish groundwater.
- North: coastal communities.
- East: agriculture and limited urban develop.
- South: coastal communities, Kealia Pond National Wildlife Refuge, and ranching.

### Locational Advantages and Disadvantages

#### *Maui Island Market*

Farmers in Central Maui are well-located for supplying the Maui Island market because of the short trucking distance to Kahului, which is the Island's commercial, industrial, processing, distribution and transportation center. Kahului and nearby communities are also the largest population center on the island for both customers and labor.

While the Maui Island market is significant, it is comparatively small: in 2015, Maui County had a *de facto* population of about 215,190 residents and visitors.

#### *Honolulu Market*

All Maui farmers are at a disadvantage when competing against O'ahu farmers in supplying the Honolulu market due to inter-island shipping costs, delays and extra handling. In comparing barge and air-cargo services, shipping by barge is less expensive and larger loads can be shipped, but the shipments are slow and infrequent. Air service is faster and frequent, but it is far more expensive and capacities are limited.

In 2015, O'ahu had a *de facto* population of about 1,054,386 residents and visitors—over five times greater than the Maui market.

#### *Mainland Market*

Compared to Hawai'i, the mainland market is enormous: in 2015, the U.S. population totaled 320.9 million. In supplying this market with products that can be carried by container ship—i.e., crops having long shelf-lives such as coffee, nuts, and canned fruit—farmers on Maui are competitive with farmers on O'ahu and the other islands. Even though freight from Maui must first be barged to Honolulu then transferred onto a container ship, Matson's overseas shipping service includes inter-island barge service at no additional fee. With the exception of some minor port charges, Matson charges a common fare for all the islands.

In the case of fresh crops that must be shipped by air to the mainland—i.e., crops having short shelf-lives such as fresh vegetables, fruits, and flowers—farmers on Maui are at a disadvantage compared to O'ahu farmers because most mainland air cargo is shipped via Honolulu's Daniel K. Inouye International Airport. Compared to farmers on O'ahu, Maui farmers encounter additional costs, delays, and handling to cover inter-island air-cargo

service and transferring the fresh crops from small inter-island aircraft to large overseas aircraft.

However, overseas air-cargo service from Maui has improved because the current generation of aircraft can depart from the short runway at Kahului with a full load of passengers and a full load of cargo in the hold. This direct service allows farmers on Maui to be more competitive in mainland markets. However, the lift capacity from Maui is limited by the number of direct flights.

In the U.S. mainland market, Hawai‘i farmers must also compete against farmers on the mainland and in Mexico, Central and South America, Southeast Asia, etc. Most of the competing farm areas have lower production and delivery costs than Hawai‘i does. Competing against Mexico is particularly difficult given the North America Free Trade Agreement (NAFTA) and Mexico’s proximity to major U.S. markets.

#### Summary of Locational Advantages

In terms of location, farmers in Central Maui are well-situated to supply the small Maui Island market. And compared to other farmers in Hawai‘i, they can also compete reasonably well in supplying mainland markets, as long as their crops have long shelf-lives and so can be shipped by surface vessel.

However, compared to farmers on O‘ahu, they are at a disadvantage in supplying the Honolulu market. Furthermore, they are at a disadvantage in supplying mainland markets if their crops have short shelf-lives and so must be shipped by air. Also, farmers on Maui are at a disadvantage in competing against the low-cost producers who supply mainland markets.

#### Land-Use Designations

About 29,455 acres (98%) of the subject 30,000 acres of farmland in Central Maui are in the State Agricultural District. About 545 acres scattered among 18 parcels are designated Urban. Even though these lands are designated Urban, they are zoned Agriculture and Mahi Pono does not plan to develop them for urban uses.

At the County level, all of the subject 30,000 acres are designated for agricultural use in various plans, and are zoned Agriculture.

In addition, most of the Central Maui farmland is designated as Important Agricultural Lands (IAL)—see Figure 12. In 2009, the State Land Use Commission (LUC) approved a petition by A&B to designate 27,102 acres of its Maui lands as IAL, including about 23,000 acres of its Central Maui lands serviced by the EMI System.

As stated in HRS Chapter 205: “The objective for the identification of important agricultural lands is to identify and plan for the maintenance of a strategic agricultural land resource base that can support a diversity of agricultural activities and opportunities that expand agricultural income and job opportunities and increase agricultural self-sufficiency

for current and future generations.” IALs are defined as lands that: “(1) Are capable of producing sustained high agricultural yields when treated and managed according to accepted farming methods and technology; (2) Contribute to the State's economic base and produce agricultural commodities for export or local consumption; or (3) Are needed to promote the expansion of agricultural activities and income for the future, even if currently not in production.”

The IAL designation provides the farmer access to incentives that promote profitable agricultural operations. Incentives include the approval to construct on-site farm dwellings and employee housing, income tax credits for agricultural costs, financing opportunities, loan guarantees, and expedited State-level permitting for agricultural processing facilities.

#### Potential Urbanization of Ag Land

Portions of the Central Maui farmland abut land in the Urban District (see Figure 3). However, Mahi Pono is not planning urban development on any of its farmland.

#### Ag Lease Terms

Subject to the terms of the Water Lease, Mahi Pono plans to offer favorable lease terms for its lands in Central Maui, including anticipated rents of \$150 per acre per year. This rate is low compared to annual per-acre rents of about \$350 for large farm parcels on O‘ahu, over \$400 for State Ag Parks on O‘ahu, and about \$1,200 for the County’s Kula Ag Park.

#### Summary of Agricultural Conditions

Central Maui has some of the best agricultural conditions in the State for farming, including a large area in a compact configuration, high-quality soils, high solar radiation, a location near markets and shipping terminals, and potentially ample water at low delivery costs (assuming a new Water Lease with a reasonable use fee), and for lessees rents that will be comparatively low.

### **b. Upcountry Maui**

#### Agricultural Lands and Activities

The Upcountry Water System Service Area is shown in Figure 13, and the agricultural lands and activities in this area are shown in Figure 14.

#### Soil Ratings

Figures 15 and 16 show the NRCS ratings of Upcountry agricultural lands, with and without irrigation. For Kula, the estimated acreages for each class, with and without irrigation, are as follows:

|             | <u>Acres, Irrigated</u> | <u>Acres, Non-irrigated</u> |
|-------------|-------------------------|-----------------------------|
| — Class I   | 0                       | 0                           |
| — Class II  | 0                       | 0                           |
| — Class III | 384 (85.9%)             | 0                           |
| — Class IV  | 0                       | 384 (86.0%)                 |
| — Class V   | 0                       | 0                           |
| — Class VI  | 48 (10.8%)              | 48 (10.8%)                  |
| — Class VII | 0                       | 15 (3.3%)                   |
| — Not rated | <u>15</u> (3.3%)        | <u>0</u>                    |
| — Total     | 447                     | 447                         |

For the other Upcountry lands, estimated acreages for each class, with and without irrigation, are as follows:

|              | <u>Acres, Irrigated</u> | <u>Acres, Non-irrigated</u> |
|--------------|-------------------------|-----------------------------|
| — Class I    | 1 (0.0%)                | 0                           |
| — Class II   | 5,614 (9.2%)            | 5,466 (9.0%)                |
| — Class III  | 9,010 (14.8%)           | 8,933 (14.6%)               |
| — Class IV   | 6,834 (11.2%)           | 20,121 (33.0%)              |
| — Class V    | 0                       | 0                           |
| — Class VI   | 6,172 (10.1%)           | 14,177 (23.2%)              |
| — Class VII  | 12,088 (19.8%)          | 12,088 (19.8%)              |
| — Class VIII | 178 (0.3%)              | 178 (0.3%)                  |
| — Missing    | 21,067                  |                             |
| — Not rated  | <u>76</u> (0.1%)        | <u>76</u> (0.1%)            |
| — Total      | 61,040                  | 61,040                      |

Figure 17 shows the ALISH ratings for the Upcountry agricultural lands. The estimated acreages for each rating are as follows:

|             | <u>Acres, Kula</u> | <u>Acres, Other Upcountry</u> |
|-------------|--------------------|-------------------------------|
| — Prime     | 63 (14.1%)         | 14,893 (24.4%)                |
| — Unique    | 0                  | 18 (0%)                       |
| — Other     | 354 (79.1%)        | 28,331 (46.4%)                |
| — Not rated | <u>30</u> (6.8%)   | <u>17,797</u> (29.6%)         |
| — Total     | 447                | 61,040                        |

Figure 18 shows the LSB ratings for the Upcountry agricultural lands. The estimated acreages for each rating are as follows:

|             | <u>Acres, Kula</u> | <u>Acres, Other Upcountry</u> |
|-------------|--------------------|-------------------------------|
| — A         | 432 (96.6%)        | 16,723 (27.4%)                |
| — B         | 0                  | 4,802 (7.9%)                  |
| — C         | 0                  | 22,392 (36.7%)                |
| — D         | 0                  | 12,933 (21.2%)                |
| — E         | 0                  | 2,294 (3.8%)                  |
| — Not rated | <u>15</u> (3.4%)   | <u>1,896</u> (3.1%)           |
| — Total     | 447                | 61,040                        |

About 432 acres of the Kula agricultural lands and about 17,134 acres of the Other Upcountry lands consist of high-quality farmland (see Figure 19).

### Climatic Conditions

#### *Solar Radiation*

Upcountry Maui receives moderate sunshine, with average daily insolation ranging from less than 350 to 450 calories per square centimeter per day, although a small portion of Upcountry Maui receives 500 calories (see Figure 20). The Kula Ag Park receives about 450 calories per square centimeter per day.

#### *Rainfall*

Average annual rainfall in Upcountry Maui ranges from 15 to nearly 120 inches (see Figure 21). The Kula Ag Park receives an average of less than 25 inches per year.

#### *Temperatures*

At Kula, average temperatures range from the low 50s in the winter to the high 70s in the summer.

#### *Winds*

As with Central Maui, the prevailing tradewinds in Upcountry Maui blow from a northeasterly direction. Occasional strong winds can cause crop damage if they are not protected by windbreaks.

### Irrigation Water

The MDWS supplies irrigation water to the small farmers in Upcountry Maui. For large-volume users, the cost is \$1.10 per 1,000 gallons for potable (treated) water and \$1 per

1,000 gallons for non-potable water. These rates are far more expensive than the irrigation water for Central Maui sourced from the EMI System or private brackish wells (see Subsection 5.a).

EMI charges 6 cents per 1,000 gallons to deliver East Maui surface water to the MDWS for the Kula Ag Park and other Upcountry farm areas, as well as for domestic use. This charge includes (1) EMI's cost to deliver water to Maliko Gulch (about 3.9 cents), plus (2) HC&S's cost to deliver water from Maliko Gulch to the MDWS system.

In the future, EMI's charges to the MDWS could increase because (1) the fixed costs EMI incurs will be spread over a lower volume of water diverted from East Maui, and (2) the lease payments and conditions attached to Lease from the State for water diverted from State lands could be costly.

#### Road Access

Access from Upcountry Maui to the markets and shipping terminals in Kahalui are provided via Kula Highway and Haleakalā Highway. Trucking distance from the Kula Ag Park to the harbor is about 14 miles.

#### Surrounding Uses

The Kula Ag Park and many of the Upcountry grazing lands are surrounded by open space, while many of the small farms are located near residential communities.

#### Locational Advantages and Disadvantages

The locational advantages and disadvantages for Upcountry Maui are similar to those for Central Maui, although the trucking distances are longer.

#### Summary of Agricultural Conditions

Upcountry Maui has lands that are suitable for farming, but the general conditions are not as good as those in Central Maui. The farms are small and scattered, solar radiation is less, farms are farther from markets and shipping terminals, water is limited and expensive, and annual rents at the Kula Ag Park are much higher than those planned for Central Maui (\$1,200 per acre vs \$150 per acre).

#### **c. East Maui**

Because of the heavy rainfall on the windward slopes of Haleakalā and the many streams in East Maui, many *makai* areas along the streams are well-suited for growing taro

and truck crops. Also, a number of the landowners have appurtenant and riparian rights to use water from these streams for farming. The East Maui taro streams are shown in Figure 22.

Collectively, the known landowners have about 45 acres in East Maui that are suitable for growing taro, and about 35 acres suitable for truck crops (see Section 8.c). This accounting includes only the known existing and potential farms in East Maui addressed by the CWRM D&O.

Solar radiation for these areas is less than 350 calories per square centimeter per day, which is similar to or slightly below other taro-growing areas in Hawai‘i.

## **6. OUTLOOK FOR AGRICULTURE**

### **a. Central Maui**

Provided that sufficient water is available, Central Maui is expected to host a major expansion in crop farming and cattle grazing. As indicated above, the area has very favorable conditions for agriculture, including:

- A very large supply of agricultural land in a compact configuration.
- Favorable agronomic conditions for much of this land (i.e., high-quality soils, high solar radiation, moderate slopes, etc.).
- Access to water delivered at a relatively low cost through the EMI System, assuming the Water Lease Limited to CWRM D&O Alternative and no significantly higher costs that result from the Water Lease rent payments and conditions (the delivery includes the payments to the State for the Water Lease).

In late December 2018, A&B announced that it sold (1) about 41,000 acres of Central Maui land to Mahi Pono, including almost all the farmland serviced by the EMI System. However, A&B retained ownership of the Pu‘unēnē mill property and other remnant parcels.

Mahi Pono is a joint farming venture between (1) Pomona Farming LLC based in California, and (2) Public Sector Pension Investment Board of Canada. The Mahi Pono team has significant experience cultivating diverse crops and managing cattle operations on more than 100,000 acres on the continental U.S. Also, the company has established market channels, and substantial financial resources.

Mahi Pono’s current plans for Central Maui envision cultivating a broad range of food and non-food crops for local consumption and export, including orchard crops (citrus, macadamia nuts, coffee, avocado, etc.), tropical fruits, vegetables and melons, row crops, annual crops, energy crops, and grass-fed cattle. In addition, the company plans to lease some of its land to other farmers at favorable terms, including relatively low rents (anticipated to be \$150 per acre per year) for long periods. Orchard crops reflect a long-term commitment to farming.

To the extent economically feasible, Mahi Pono and other farmers on its land will grow food crops for the Hawai'i market. However, the Hawai'i market is too small to use all of the available farmland in Central Maui solely to serve the Hawai'i market, and thus some export is necessary. Currently, Hawai'i farmers use about 15,000 acres to supply about one-third of the fresh fruits, vegetables and melons consumed in Hawai'i (this does not include nuts or coffee). Self-sufficiency is low because of low-cost imports from the mainland.

Depending on the supply of surface water delivered to Central Maui, the amount of land used could range from (1) about 5,280 acres in crops and 24,470 acres in pasture, to (2) about 15,950 acres in crops and 13,800 acres in pasture. An additional 250 acres would be used for green energy.

Mahi Pono paid about \$6,400 per acre for its purchase of the Central Maui fields. This compares to over \$30,000 per acre for large parcels of good farmland on O'ahu, and about \$100,000 per acre for farmland in Oxnard, California, which is about 60 miles west-northwest of the large Los Angeles market and shipping terminals. The price Mahi Pono paid for the land may assist with their goal of achieving profitable agricultural operations without requiring supplemental income from non-agricultural activities.

Central Maui agricultural land that cannot be farmed—possibly because of insufficient water or insufficient demand for crops that can be profitably grown in the area—is likely to be used for grazing cattle. Even though cattle grazing yields far lower returns and employment per acre than does farming, cattle grazing provides four benefits: (1) a productive use of agricultural land; (2) land management by the rancher (e.g., erosion control, preventing illegal dumping, etc.); (3) reduced fire hazard because the cattle help control the vegetation; and (4) reduced property taxes because the land is assessed at its agricultural value instead of its market value.

#### **b. Upcountry Maui**

The EMI System supplies water to the MDWS, which in turn treats and distributes a portion of this water to small farms in Upcountry Maui and the remainder to domestic users. The EMI System also delivers water to the County's Kula Ag Park distribution system. The supply of water delivered by the EMI System to the MDWS would remain at its current level under the Water Diversions Limited to the CWRM D&O Alternative. However, the charge by EMI to deliver water to MDWS could increase (see Section 5.b).

In 2018, A&B sold 262 acres to the County for the expansion of the Kula Ag Park, and agreed to supply the MDWS with 1 mgd of surface water from the EMI System to meet the needs of the expansion area, subject to the continuation of State permits or issuance of the Water Lease. The needed water allocation will result from infrastructure improvements to the reservoir and pumps that serve the Ag Park, and use existing deliveries from the EMI System more efficiently. Thus, the current level of water deliveries to the Kula Ag Park will suffice for both the existing and expanded Kula Ag Park areas.

The County has expressed a desire to expand the Park by an additional 610 acres, however this has not been funded or currently pursued. This expansion would require additional water be made available to the County from the EMI System.

Other than the Kula Ag Park, no significant increase of commercial agriculture is expected to occur in Upcountry Maui, primarily because Central Maui offers an abundant supply of high-quality farmland, higher solar radiation, flatter terrain, a location closer to markets and shipping terminals, and potentially far better access to water at a lower water rate. However, some residents of Upcountry Maui may engage in limited semi-commercial agriculture because they are attracted to the farming lifestyle, and farming would lower their property taxes. These semi-commercial farmers may sell some of their crops to help cover operating costs.

For the No Water Lease Alternative, water deliveries by the EMI System to the MDWS would drop to zero. As discussed in Section 9.b below, several years would be required for the MDWS to develop groundwater wells or other alternatives to fill the shortfall in supply, and the feasibility of such development is uncertain. Assuming domestic customers would have priority over agricultural customers, farmers in Upcountry Maui would lack water to irrigate their crops until the new wells are operational. As a result, farms would close or relocate to Central Maui. Even after the new wells are operational, little commercial farming is expected to return to Upcountry Maui because Central Maui has better conditions for farming.

For the Water Lease with Less than CWRM D&O Alternative, this report assumes the impacts on farming would be proportional to the reduction in the supply of water delivered by the EMI System to the MDWS.

### **c. East Maui**

A number of East Maui farmers divert stream water to irrigate taro lo‘i and small farms. Taro farming is a chosen way of life and an important cultural activity for many.

In the past, farmers in East Maui have reported that surface-water diversions to supply water to Central Maui left insufficient water in the streams for them to take full advantage of the agricultural potential in East Maui (CWRM D&O).

However, in light of the D&O, ample stream water should now be available to irrigate taro lo‘i and the small farms relying on East Maui streams. As mentioned previously, the D&O “will return free flowing water, with no upstream diversions, to all streams which have historically supported significant kalo cultivation ...” The large volume of water that flows out of the taro lo‘i can be used to irrigate other crops.

Given the CWRM D&O to fully restore the flow of all taro streams in East Maui, all alternatives are expected to result in the same expansion of taro and other farming in East Maui.

## 7. WATER SUPPLY AND ALLOCATION

Table 1 summarizes the supply and allocation of surface water from the EMI System, plus supplemental brackish groundwater used in Central Maui. The table covers the three past water diversions and two of the water-lease alternatives defined in Section 4.

### a. Past Water Diversions

#### Typical Sugar (2006 Crop)

A&B regards 2006 as typical during healthy sugar operations: rainfall in East Maui was regarded as normal, the restoration of stream flows was not large enough to significantly affect HC&S sugar operations, and the plantation was economically healthy.

To grow the 2006 sugarcane crop, the EMI System delivered an average of about 156.5 mgd based on daily readings measured at Maliko Gulch (see Table 1, Section 1.a). In actuality, flows vary greatly from day to day. This figure is a weighted average based on 30% of the EMI System flow in 2004, 55% of the flow in 2005, and 15% of the flow in 2006. A weighted average is used because Hawaiian sugarcane is normally a 2-year crop which requires more water in the initial months, and no water during the last month or so before harvesting.

The corresponding supply of brackish groundwater was approximately 42.5 mgd (see Table 1, Section 1.a). Thus the total water supply was about 199 mgd.

The 199 mgd were used as follows: (1) about 3 mgd by the MDWS for delivery to Upcountry Maui, (2) 143 mgd to irrigate sugarcane in Central Maui, (3) 0.25 mgd to irrigate pineapple, (4) 8 mgd for HC&S industrial activities, and (5) 44 mgd for system losses (see Table 1, Section 1.b).

System losses due to evaporation and leakage are estimated at 22.7% of the gross water use by agriculture, but excluding the water used for pineapple since the fields were close to Maliko Gulch (195.81 mgd total Ag use, less 0.25 mgd for pineapple  $\times$  22.7% = 44.39 mgd). The 22.7% figure for system losses is used for all water-lease alternatives.

After system losses, about 151 mgd were used for sugar operations (143.19 mgd for irrigation + 7.98 mgd for HC&S industrial uses = 151.17 mgd). About 95% of the water was used for irrigation (143.19 mgd  $\div$  151.17 mgd = 94.72%).

Of the 143 mgd that were used to irrigate sugarcane, about 112 mgd were surface water and 31 mgd were brackish groundwater (42.50 mgd gross supply of groundwater less system losses of 22.7%  $\times$  94.72% used for irrigation = 31.12 mgd of groundwater applied after system losses). Thus, brackish groundwater supplied about 22% of the water that was used for irrigating sugarcane (31.12 mgd  $\div$  143.19 mgd = 21.7%).

As shown in Section 1.c of Table 1, water delivery costs were about 3.5 cents per 1,000 gallons for surface water (MHI). The delivery costs for the surface water includes the payments to the State for the Water Lease.

### Recent Sugar (Years 2008 to 2013)

During the last 6 years of full sugarcane operations, and as reported in the CWRM D&O, A&B diverted an average approximately 114 mgd of surface water from East Maui, and pumped an average of approximately 70 mgd of brackish groundwater, for a total water supply of approximately 184 mgd (see Table 1, Section 1.a).

During the 2008-to-2013 period, the average supply of surface water was about 43 mgd less than that for the Typical Sugar Baseline ( $156.54 \text{ mgd} - 113.71 \text{ mgd} = 42.83 \text{ mgd}$ ). The reduction in surface water was due to (1) less rainfall and (2) stream-flow restoration in East Maui.

During the subject 6-year period, the average gross supply of about 184 mgd of surface water and brackish groundwater was used as follows: (1) approximately 7.1 mgd by the MDWS for delivery to Upcountry Maui, (2) approximately 132 mgd to irrigate sugarcane, (3) approximately 7 mgd for other uses in Central Maui, and (4) approximately 42 mgd for system losses (see Table 1, Section 1.b). The table also shows an adjustment of about 4 mgd due to under reported use by the MDWS in the CWRM D&O.

System losses due to evaporation and leakage are calculated to be approximately 23.05% of the gross water use by agriculture for the subject period.

After system losses, about 139 mgd were used for sugar operations ( $132.45 \text{ mgd}$  for irrigation +  $6.66 \text{ mgd}$  for HC&S industrial and other uses =  $139.11 \text{ mgd}$ ). Thus, about 95% of the water was used for irrigation ( $132.45 \div 139.11 = 95.21\%$ ).

Of the approximately 132 mgd that were used to irrigate sugarcane, about 81 mgd were surface water and 51 mgd were brackish groundwater ( $69.9 \text{ mgd}$  gross supply of groundwater less system losses of  $23.05\% \times 95.21\%$  used for irrigation =  $51.21 \text{ mgd}$  of groundwater applied after system losses). Thus, brackish groundwater supplied about 39% of the water to irrigate sugarcane ( $51.21 \text{ mgd} \div 132.45 \text{ mgd} = 38.7\%$ ). As noted in Section 3.a, a large volume of brackish groundwater was used to irrigate the sugarcane in order to maintain high levels of biomass for energy production, even though the high salinity decreased sugar yields.

As shown in Section 1.c of Table 1, water delivery costs were about 3.9 cents per 1,000 gallons for surface water, and about 52 cents per 1,000 gallons for brackish groundwater (MHI and A&B).

### Post Sugar (Year 2017)

After the closure of sugarcane operations, A&B reduced the flow of the EMI System to about 28 mgd in 2017 to meet the needs of MDWS, the initial diversified agricultural projects, and other existing Central Maui uses (see Table 1, Section 1.a). This 28 mgd is less than the 30.76 mgd available under the No Water Lease Alternative.

In 2017, A&B pumped a negligible amount of brackish groundwater. Thus, the total water supply was about 28 mgd.

Water uses included about (1) about 2.9 mgd by the MDWS to supply water to Upcountry Maui; (2) 1 mgd for industrial activities; (3) 4 mgd to irrigate crops; and (4) 20.5 mgd to maintain the reservoirs and for fire protection, plus system losses (not shown in Table 1). MDWS use of surface water from the EMI System was low in 2017 because heavy rainfall increased supplies from other County sources that depend on rainfall. As discussed in Section 9.b, about 1.5 mgd of the County water was for the Kula Ag Park and about 1.4 mgd was for other Upcountry users.

As shown in Section 1.c of Table 1, water delivery costs were about 16.2 cents per 1,000 gallons for surface water, and about 52 cents per 1,000 gallons for brackish groundwater (MHI and A&B). The cost of the surface water increased because fixed costs were spread over a much smaller volume of surface water from the EMI System.

## **b. Future Water-Lease Alternatives**

### Water Lease Limited to CWRM D&O Alternative (proposed action/preferred alternative)

For this alternative, the Water Lease that is put to auction would authorize continued diversions of surface water from State lands in East Maui up to the maximum allowed under the D&O. Most of the water would be used to irrigate crops in Central Maui. For Upcountry Maui and Nahiku, the EMI System would continue to supply water to the MDWS, but the supply would be maintained at its recent level and would not be increased to accommodate future growth. The charge by EMI to deliver water to MDWS will increase (see Section 5.b).

A&A estimates that compliance with the CWRM D&O would result in the EMI System being able to deliver a flow of 92.32 mgd (see Table 1, Section 1.a).

The supply of surface water from the EMI System would be reduced by about 66 mgd compared to the Typical Sugar Baseline (156.54 mgd less 92.32 = 64.22 mgd), and about 21 mgd compared to the Recent Sugar Baseline (113.71 mgd less 92.32 = 21.39 mgd).

Water deliveries by the EMI System to the MDWS would remain at about 7.1 mgd,<sup>4</sup> leaving about 84 mgd to irrigate crops in Central Maui (92.32 mgd from the EMI System less 7.1 mgd to the MDWS = 85.22 mgd).

Assuming a split of 80% surface water and 20% brackish groundwater for irrigating crops in Central Maui (i.e., a 4-to-1 mix), about 21 mgd of brackish groundwater would be required (85.22 mgd of surface water  $\div$  4 = 21.31 mgd). This 80%/20% split applies to the farm as a whole. However, all of the groundwater is applied to the lower fields, and none to the upper fields which are irrigated only with surface water. The resulting water mix that is applied to the lower fields is about 70% surface water and 30% brackish groundwater (see

---

4. 7.1 mgd was the long-term average presented in the CWRM D&O.

Table 3, Section 3.a). This mixture is consistent with safe use of brackish groundwater on diversified crops (see Section 5.a).

As shown in Section 1.a of Table 1, the water supply for the Central Maui fields and Upcountry Maui would total about 114 mgd (92.32 mgd of surface water plus 21.31 mgd of groundwater = 113.63 mgd).

As shown in Section 1.b of Table 1, agricultural water use in Central Maui would total about 107 mgd (a supply of 113.63 mgd less 7.1 mgd by the MDWS = 106.53). System losses are estimated at about 24 mgd (22.7% of 106.53 mgd = 24.18 mgd), leaving about 82 mgd applied to crops after system losses (106.53 mgd less 24.18 for losses = 82.34 mgd with rounding). Of this amount, about 66 mgd would be surface water (80% of 82.34 mgd = 65.88 mgd), and about 16 mgd would be brackish groundwater (20% of 82.34 mgd = 16.47 mgd). Some water would be used for industrial activities (e.g., the washing of crops), but the amount is not estimated.

As shown in Section 1.c of Table 1, water delivery costs would increase to about 6.8 cents per 1,000 gallons for surface water, and would remain at about 52 cents per 1,000 gallons for brackish groundwater. The delivery costs of the surface water includes the payments to the State for the water, and assumes that the rent payment will continue at its 2017 level.

#### Water Lease with Less than CWRM D&O Alternative

For this alternative, the Water Lease that is put to public auction would allow surface water to be diverted from East Maui, but at a lower level than in the previous alternative. As discussed in Section 4.b, this alternative is not included in the tables because no particular amount of decreased flow of surface water from East Maui is currently known.

#### No Water Lease Alternative

For this alternative, it is assumed that the State does not issue the requested Water Lease. And because the agreements between the County and A&B are contingent upon the Lease being issued, the supply of water to MDWS would terminate. As much water as possible from private lands in East Maui would be used to irrigate Central Maui fields.

Without the water from State lands, the EMI System would deliver a flow of about 31 mgd from private lands (see Table 1, Section 1.a). The surface water from the EMI System would be reduced by about 126 mgd compared to the Typical Sugar Baseline (156.54 mgd less 30.76 = 125.79 mgd with rounding), and about 83 mgd compared to the Recent Sugar Baseline (113.71 mgd less 30.76 = 82.96 mgd with rounding).

Assuming a split of 80% surface water and 20% brackish groundwater for irrigating crops in Central Maui, about 8 mgd of brackish groundwater would be required (30.76 mgd of surface water  $\div$  4 = 7.69 mgd). For the lower-elevation fields where groundwater is used,

this split translates to a mix of about 70% surface water and 30% brackish groundwater. As previously, this mixture is consistent with safe use of brackish groundwater on diversified crops. No brackish groundwater would be used on the higher-elevation fields.

As shown in Section 1.a of Table 1, the water supply for the Central Maui fields would total about 38 mgd (30.76 mgd of surface water plus 7.69 mgd of groundwater = 38.44 mgd with rounding).

All of this water would be used to irrigate crops in Central Maui. System losses are estimated at about 9 mgd (22.7% of 38.44 mgd = 8.73 mgd), leaving about 30 mgd applied to crops after system losses (38.44 mgd less 8.73 for losses = 29.72 mgd with rounding). Of this amount, about 24 mgd would be surface water (80% of 29.72 mgd = 23.77 mgd with rounding), and about 6 mgd would be brackish groundwater (20% of 29.72 mgd = 5.94 mgd).

As shown in Section 1.c of Table 1, water delivery costs would increase to about 12.9 cents per 1,000 gallons for surface water, and would remain at about 52 cents per 1,000 gallons for brackish groundwater.

## 8. AGRICULTURAL LAND USE

Table 2 shows acreages of past and projected agricultural land uses.

### a. Central Maui

#### Typical Sugar (2006 Crop)

HC&S grew sugarcane on fields in Central Maui from 1882 to 2016 (134 years). Over time, it grew to become the largest plantation in the islands, and it was the last Hawai'i sugar plantation to close. Its success was due to its large size and economies of scale, a compact configuration which reduced costs, favorable agronomic conditions (e.g., good soils and high solar radiation), and abundant low-cost water from the EMI System. Most of the HC&S fields were owned by A&B, but some were leased from the State and other entities.

For the 2006 crop year, HC&S grew sugarcane on about 35,180 acres, of which about 29,430 acres were irrigated by the EMI System and brackish groundwater wells, and about 5,750 acres were irrigated with water from the West Maui Ditch System and brackish groundwater wells (see Table 2, Section 2.a). For the fields irrigated by the EMI System, about 12,800 acres (43.5%) were upper fields irrigated only with surface water, and about 16,630 acres (56.5%) were lower fields irrigated with a mix of surface water and brackish groundwater.

#### Recent Sugar (Years 2008 to 2013)

For the 2008-to-2013 period, the above estimated acreages changed modestly (see Table 2, Section 2.a). The plantation was slightly larger at about 36,180 acres, of which about

30,320 acres were fields irrigated with water from the EMI System, including about 12,730 acres (42.0%) upper fields, and 17,590 acres (58%) lower fields.

Post Sugar (Year 2017)

In 2017, about 200 acres in Central Maui were used to grow the energy crop pongamia, and about 500 acres were for unirrigated pasture.

Water Lease Limited to CWRM D&O Alternative, Diversified Agriculture (Year 2030)

Mahi Pono has developed an initial Farm Plan consistent with the Water Lease Limited to CWRM D&O Alternative. This Plan will evolve over time based on a number of factors, including the available supply of surface water, experience which will be gained on crops that grow well in Central Maui, crops that are profitable, the size of the market for profitable crops, etc. For the Central Maui fields, planned estimated acreages are as follows (see Table 2, Section 2.a):

|  | <u>Acres</u> |
|--|--------------|
| — Crops  |              |
| • Community Farm (vegetables, melons, etc.)  | 800          |
| • Orchards (lemons, limes, mandarins, oranges, macadamia nuts, coffee, avocados, etc.) | 12,850       |
| • Tropical fruits (dragon fruit, guava, lilikoi, papaya, white pineapple, etc.)        | 600          |
| • Row crops and annual crops (potatoes, etc.)  | 1,200        |
| • <u>Energy crops</u>  | <u>500</u>   |
| • Total Crops  | 15,950       |
| — Pasture  |              |
| • Irrigated  | 4,700        |
| • <u>Unirrigated</u>   | <u>9,100</u> |
| • Total Pasture  | 13,800       |
| — <u>Green energy (solar farms)</u>  | <u>250</u>   |
| — Total Acreage  | 30,000       |

Over 80% of the land in crops will be used for orchards (12,850 acres ÷ 15,950 acres). As mentioned, orchard farming reflects a long-term commitment to agriculture.

About 6,390 acres of upper fields would be irrigated with just surface water because they cannot be irrigated with brackish groundwater, while about 14,260 acres of lower fields would be irrigated with a mixture of surface water and brackish groundwater.

If more water were available, then crop acreage would be increased and pasture acreage decreased, and vice versa. Crop farming provides more employment and other economic benefits per acre than does pasture land.

Regarding the Community Farm, 1-, 5- and 10-acre fields are planned to be offered to local farmers at below-market rents. Also, farmers will have access to Mahi Pono's equipment, management, budgeting and marketing services.

Regarding green energy, it is assumed that this will take the form of a solar farm with storage batteries located on lower-quality agricultural land. Sheep may be grazed among the solar panels to control vegetation.

Mahi Pono would lease about 2,050 acres to other farmers, plus about 250 acres leased for green energy.

Over one-third of the land scheduled for crop farming is being prepared or will soon be prepared for farming (see Figure 23). Near-term crops and estimated acreages include the following:

|  | <u>Acres</u> |
|--|--------------|
| — Community Farm                               | 250          |
| — Citrus                                       |              |
| • Lemons                                       | 125          |
| • Limes  | 800          |
| • Mandarins                                    | 400          |
| • Oranges                                      | 350          |
| — Other orchard                                |              |
| • Avocados                                     | 275          |
| • Coffee                                       | 350          |
| • Macadamia nuts                               | 1,000        |
| — Tropical fruits                              |              |
| • Dragon fruit                                 | 25           |
| • guava  | 20           |
| • Lilikoi                                      | 35           |
| • Papaya                                       | 15           |
| • White pineapple                              | 3            |
| — Sweet potatoes                               | 470          |
| — Row crops (finger-link potatoes and peppers) | 430          |
| — Cover crops (sunflower and Sudan grass)      | 400          |
| — <u>Nursery</u>                               | <u>510</u>   |
| — Total  | 5,458        |

The nursery will be used to grow crops to implement the Mahi Pono Farm Plan, and not for growing plants for commercial sales. In addition to the above, pasture lands are being prepared for grazing cattle.

No Water Lease Alternative, Diversified Agriculture (Year 2030)

Mahi Pono has developed a scaled-down Farm Plan consistent with the No Water Lease Alternative. As before, this initial Plan will evolve over time. For the Central Maui fields, planned estimated acreages are as follows (see Table 2, Section 2.a):

|  |               |
|--|---------------|
| — Crops  |               |
| • Community Farm (vegetables, melons, etc.)  | 300           |
| • Orchards (lemons, limes, mandarins, oranges, macadamia nuts, coffee, avocados, etc.) | 4,180         |
| • Tropical fruits (dragon fruit, guava, lilikoi, papaya, white pineapple, etc.)        | 200           |
| • Row crops and annual crops (potatoes, etc.)  | 400           |
| • <u>Energy crops</u>  | <u>200</u>    |
| • Total Crops  | 5,280         |
| — Pasture  |               |
| • Irrigated  | 3,800         |
| • <u>Unirrigated</u>   | <u>20,670</u> |
| • Total Pasture  | 24,470        |
| — <u>Green energy (solar farms)</u>  | <u>250</u>    |
| — Total Acreage  | 30,000        |

About 2,720 acres of upper fields would be irrigated with surface water only, while about 6,360 acres of lower fields would be irrigated with a mixture of surface water and brackish groundwater.

Mahi Pono would lease about 1,250 acres to other farmers, plus about 250 acres leased for green energy.

**b. Upcountry Maui**

Post Sugar (Year 2017)

The EMI System supplies water to the MDWS for its Upcountry Water System Service Area, which covers approximately 61,500 acres. Approximately 32,500 acres are identified as being in agricultural use according to the County of Maui Real Property Tax records or State of Hawai'i Office of Planning. The estimated acreages by use are as follows:

- Diversified crops: 2,823 acres
- Pineapple: 1,447 acres
- Pasture, unirrigated: about 28,230 acres

The land in diversified crops includes the Kula Ag Park, which is managed by the County of Maui, Office of Economic Development to promote the development of diversified agriculture on the island of Maui. The Ag Park consists of 31 farm lots ranging from 10 to 30 acres, and totaling 447 acres. The lots are leased to 26 farmers who grow a variety of crops, including vegetables, turf grass, landscape nursery products, flowers, bananas, and dryland taro.

In recent years, water provided by the EMI System to the MDWS was used to irrigate crops at the Kula Ag Park, plus about 800 additional acres of farmland in Upcountry Maui. The 800 acres is based on (1) water use of about 2.7 mgd, and (2) about 3,375 gallons per acre per day (**gad**) (800 acres x 3,375 gad = 2.7 mgd). The 2.7 mgd for other Upcountry farms is derived in Section 9.b., and Table 3, Section 3.b. In 2017, however, water from sources other than the EMI System was used to irrigate farms in Upcountry Maui (see Section 9.b).

The total farmland irrigated with water from the EMI System is about 1,250 acres (447 acres for Kula Ag Park plus about 800 acres for other farms = 1,247 acres)—see Table 2, Section 2.b).

#### Water Lease Limited to CWRM D&O Alternative (Year 2030)

For the Water Lease Limited to CWRM D&O Alternative, the EMI System would continue to supply water to the MDWS for Upcountry Maui, but the supply would remain at the current level and would not increase to accommodate future growth in the region.

A&B agreed to supply water for the planned 262-acre expansion of Kula Ag Park. As indicated earlier, the water will come from infrastructure improvements to the reservoir and pumps that serve the Ag Park—improvements that will save water. Thus no increase in deliveries by A&B to the Kula Ag Park is required.

In addition, the County plans to expand Kula Ag Park by an additional 610 acres. However, it is assumed that this second expansion will not occur because of (1) insufficient water, and (2) better agronomic conditions in Central Maui, including cheaper rents and cheaper water.

Thus, the Kula Ag Park would grow to 709 acres (447 existing acres + 262 acres recently added).

Other than the Kula Ag Park, no significant increase of commercial agriculture is expected to occur in Upcountry Maui for the reasons given in Section 6.b: Central Maui offers an abundant supply of high-quality farmland, higher solar radiation, flatter terrain, a location closer to markets and shipping terminals, and potentially far better access to water at

a lower water rate. However, some residents of Upcountry Maui may engage in limited semi-commercial agriculture because they are attracted to the farming lifestyle.

Thus, farmlands in Upcountry Maui that are irrigated with water from the EMI System is expected to increase from about 1,250 acres in 2017 to about 1,510 acres by 2030 (see Table 2, Section 2.b). The increase would be due to the 262-acre expansion of the Kula Ag Park.

#### No Water Lease Alternative (Year 2030)

As mentioned in Section 6.b, water deliveries by the EMI System to the MDWS would drop to zero for the No Water Lease Alternative, and several years would be required to develop groundwater wells to fill the shortfall in supply. In the meantime, the commercial farms in Upcountry Maui that depend on water from the EMI System are likely to close or relocate. Once gone, they are unlikely to return to Upcountry Maui given the better agro-nomic conditions, cheaper rents, and cheaper water in Central Maui.

Thus, for this alternative, farmlands in Upcountry Maui that have been irrigated with water from the EMI System would drop to zero (see Table 2, Section 2.b).

#### **c. East Maui**

As mentioned in Section 6.c, farmers in East Maui have reported that past surface-water diversions for Central Maui left insufficient water in the streams to take full advantage of the agricultural potential in East Maui. However, the D&O will result in ample stream water to irrigate taro lo‘i and the small farms that rely on East Maui streams.

According to the CWRM D&O, the usable acreage of the farms in East Maui that have water rights to the streams subject to the IIFS are as follows:

|               | Taro Lo‘i<br>( <u>acres</u> ) | Other Ag<br>( <u>acres</u> ) |
|---------------|-------------------------------|------------------------------|
| — Area        |                               |                              |
| • Keanae      | 12.13                         | 7.00                         |
| • Wailuā      | 7.22                          | 11.86                        |
| • Wailuā      | 8.30                          | 11.23                        |
| • Wailuā      | 11.63                         | 5.00                         |
| • Honopou     | <u>5.55</u>                   | <u>.</u>                     |
| — Total acres | 44.83                         | 35.09                        |

This accounting only includes known farms and future farms per the CWRM D&O.

Thus, stream restoration could result in about 44.83 acres planted in taro in East Maui, and 35.09 acres in other crops (see Table 2, Section 2.c). These estimated acreages would be the same for all water-lease alternatives.

## 9. AGRICULTURAL WATER USE

Irrigation water requirements for crops and pastures are shown in Table 3.

### a. Central Maui

#### Typical Sugar (2006 Crop)

After system losses, the volume of water used to irrigate the 2006 sugarcane crop was about 143 mgd, or about 4,866 gad (see Table 3, Section 3.a). About 112 mgd (78.3%) was surface water and 31 mgd (21.7%) was brackish groundwater. The upper fields used about 62 mgd of surface water, while the lower fields used a 81-mgd mix of surface water (61.5%) and brackish groundwater (38.5%).

Gross water requirements (before system losses) were about 185 mgd—about 145 mgd of surface water and 40 mgd of brackish groundwater.

#### Recent Sugar (Years 2006 to 2013)

For the 2006-to-2013 period, water used to irrigate the sugarcane crop declined to 132 mgd (a decrease of 11 mgd from the 2006 crop), and the per-acre usage declined to 4,368 gad (a decrease of 498 gad)—see Table 3, Section 3.a. About 81 mgd (61.3%) was surface water and 51 mgd (38.7%) was brackish groundwater. The upper fields used about 56 mgd of surface water, while the lower fields used a 77-mgd mix of surface water (33.4%) and brackish groundwater (66.6%). The high amount of brackish groundwater decreased sugar yields, but maintained high levels of biomass for energy production.

Gross water requirements (before system losses) were about 172 mgd (a decline of 13 mgd from the 2006 crop), including about 106 mgd of surface water (a decline of 39 mgd) and about 67 mgd of brackish groundwater (an increase of 26 mgd).

#### Post Sugar (Year 2017)

In 2017, less than 1 mgd was used to irrigate an energy crop.

#### Water Lease Limited to CWRM D&O Alternative, Diversified Agriculture (Year 2030)

Future water requirements will evolve over time based on the available supply, which crops are planted, per-acre water requirements of the crops, etc.

For the Water Lease Limited to CWRM D&O Alternative, full development of the Mahi Pono Farm Plan (Section 8.a) would require an estimated 82 mgd of irrigation water after system losses, or about 3,987 gad (see Table 3, Section 3.a). About 66 mgd (80%) would be surface water and 16 mgd (20%) brackish groundwater. Upper fields would use about 28 mgd of surface water, while the lower fields would use a 55-mgd mix of surface

water (70%) and brackish groundwater (30%). This mix is consistent with safe use of brackish groundwater on diversified crops (see Section 5.a).

Gross water requirements (before system losses) would be about 107 mgd (a decline of 79 mgd from the 2006 sugarcane crop), including about 85 mgd of surface water (a decline of 60 mgd) and about 21 mgd of brackish groundwater (a decline of 19 mgd).

#### No Water Lease Alternative, Diversified Agriculture (Year 2030)

For the No Water Lease Alternative, about 30 mgd of irrigation water would be required for the scaled-down Mahi Pono Farm Plan, or about 3,259 gad (see Table 3, Section 3.a). About 24 mgd (80%) would be surface water and 6 mgd (20%) would be brackish groundwater. Upper fields would use about 10 mgd of surface water, while the lower fields use a 20-mgd mix of surface water (70%) and brackish groundwater (30%).

Gross water requirements (before system losses) would be about 38 mgd (a decline of 147 mgd from the 2006 sugarcane crop), including about 31 mgd of surface water (a decline of 114 mgd) and about 8 mgd of brackish groundwater (a decline of 33 mgd).

### **b. Upcountry Maui**

#### Post Sugar (Year 2017)

In 2017, the EMI System supplied about 2.86 mgd to the MDWS for Upcountry Maui, which is well below the long-term average of 7.1 mgd. MDWS use of surface water from the EMI System was low in 2017 because heavy rainfall increased supplies from other County sources that depend on rainfall.

Combined with other water sources and after system losses, the MDWS delivered about 7.93 mgd to residents, farms, businesses and others. An estimated 3.16 mgd (40% of the the historic average of 7.9 mgd) were used for agriculture.

About 0.46 mgd were for crops at the Kula Ag Park, however, 1.5 mgd had to be supplied by the EMI System to the County's Kula Ag Park water system to produce the 0.46 mgd used by the farmers. About 2.7 mgd were used for crops elsewhere in Upcountry Maui (agricultural use of 3.16 mgd less 0.46 mgd used at the Kula Ag Park). For this report, it is assumed that, in a normal year, about 2.7 mgd delivered by the MDWS to Upcountry farms originates from the EMI System. As mentioned in Section 8.b, 2.7 mgd are sufficient to irrigate about 800 acres of farmland.

Pineapple in Upcountry Maui relies on groundwater pumped from a Maui Land and Pine well on private land. A&B has allowed groundwater to be transported through the EMI System and withdrawn from a downstream location, but the water for Upcountry Maui pineapple is not sourced from the surface waters diverted by the EMI System. The pastures in Upcountry Maui are not irrigated.

Other farmers in Upcountry Maui rely on rainfall to water their crops.

Water Lease Limited to CWRM D&O Alternative (Year 2030)

For the Water Lease Limited to CWRM D&O Alternative, future water deliveries by the EMI System for agriculture in Upcountry Maui are expected to remain the same, notwithstanding the expansion of the Kula Ag Park, whose water needs will be provided through water savings achieved through infrastructure improvements to the reservoir and pumps that serve the Kula Ag Park. Future water requirements will remain about the same elsewhere in the district (see Table 3, Section 3.a).

No Water Lease Alternative (Year 2030)

For the No Water Lease Alternative, the supply of water delivered by the EMI System to the MDWS is presumed to drop to zero because the agreements with County provide that the delivery of water is contingent upon the Lease being issued (see Table 3, Section 3.b).

Any shortfall in supply is likely to be met by the MDWS developing new groundwater wells. However, several years would be required to prepare engineering designs; conduct environmental studies and write environmental reports; obtain approvals from various State and County agencies; dig, case, and test exploratory wells; dig and case permanent wells; connect the new wells to the MDWS delivery system; etc.

In the meantime, the commercial farms in Upcountry Maui that depend on water from the EMI System are likely to close or relocate as mentioned in Section 6.b. Once gone, they are unlikely to return to Upcountry Maui given the better agronomic conditions, cheaper rents, and cheaper water in Central Maui.

**c. East Maui**

Wetland taro requires very large volumes of water flowing through the lo'i, partly to control the water temperature, thereby preventing taro rot. After flowing through the lo'i, the large volume of excess water can be used to irrigate other crops.

For this analysis, it is assumed that the gross and net water requirements of taro are 140,000 and 30,000 gad, respectively. Other crops are assumed to require about 5,000 gad.

With these assumptions, the gross and net water requirements for the East Maui farms are about 6.3 mgd and 1.5 mgd, respectively (see Table 3, Section 3.c). These requirements would be the same for all water-lease alternatives.

**10.AGRICULTURAL DEVELOPMENT AND OPERATIONS**

Table 4 provides information on agricultural development and operations, with an emphasis on expenditures and sales. All dollar amounts are expressed in terms of 2018 purchasing power.

**a. Central Maui**Typical Sugar, Operations (2006 Crop)

For the 2006 sugar crop, HC&S produced about 145,200 tons of raw sugar, and sold sugar and energy to generate about \$101 million in direct sales (see Table 4, Section 4.a). These figure are for the former plantation lands east of Maui Veterans Highway, and not the entire plantation.

The purchase of goods and services by HC&S and the families of HC&S employees generated indirect sales and, in turn, these suppliers generated more indirect sales by their purchases of goods and services. The indirect sales are estimated at about \$91 million.

Total direct-plus-indirect sales were about \$191 million, of which about \$160 million was on Maui and about \$32 million on O`ahu.

About \$46 million of consumption expenditures were subject to the excise tax on final sales, and about \$67 million subject to the excise tax on intermediate sales.

About \$140,000 per year was paid to the State to lease fields in Central Maui.

Profits from sugar operations and indirect economic sales were an estimated \$19 million.

Recent Sugar, Operations (Years 2008 to 2013)

For the 2008-to-2013 period, HC&S produced an average of about 136,300 tons of raw sugar per year (a decrease of 8.9 tons from 2006), and sold sugar and energy to generate average annual revenues of about \$116 million in direct sales (an increase of about \$15 million)—see Table 4, Section 4.a. Total direct-plus-indirect sales averaged nearly \$220 million per year, of which about \$183 million was on Maui and \$36 million on O`ahu.

About \$37 million of consumption expenditures were subject to the excise tax on final sales, and about \$103 million subject to the excise tax on intermediate sales.

About \$140,000 per year was paid to the State to lease fields in Central Maui.

Profits from sugar operations and indirect sales were an estimated \$22 million.

Post Sugar, Operations (Year 2017)

By 2017, A&B had replaced sugar operations with limited cattle grazing and Pongamia. Both operations were under development, producing negligible revenues in 2017.

Diversified Ag, Development Activity*Water Lease Limited to CWRM D&O Alternative*

For the Water Diversions Limited to the CWRM D&O Alternative, the Mahi Pono Farm plan would require converting former sugarcane lands to about 15,950 acres of cropland, 4,700 acres of irrigated pasture, and 9,100 acres of unirrigated pasture. The conversion would require removing remaining sugarcane plants, adding amendments,

planting windbreaks around fields, modifying field irrigation systems, installing fencing, planting crops, etc. The total cost for this conversion is estimated at about \$89 million (see Table 4, Section 4.a).

Also, the Plan would require an estimated 319,000 square feet of building space for washing and packing areas, storage, offices, etc. Construction is estimated at about \$31.9 million.

Based on recently built or approved solar farms, the 250 acres for green energy are sufficient space for a 37.5 MW solar farm with storage batteries costing about \$93.8 million.

The total development expenditure would be about \$214.7 million, or an average expenditure of about \$21.5 million per year assuming a 10-year development period. Excluding imported construction materials (e.g., solar panels), the annual expenditures would be about \$8.9 million for field preparations and about \$12.6 million per year for building structures. These figures are used to estimate indirect sales.

Development activities will generate indirect sales associated with supplying goods and services to the companies involved with the development, and to the families of those who work for these companies. In turn, the companies supplying goods and services, and the families of their employees, will purchase goods and services from other companies, and so on. These indirect sales will include sales by companies supplying agricultural goods (soil amendments, fencing, irrigation systems, etc.); rental of farm equipment; equipment repair; warehousing services; shipping and trucking services; etc. Indirect sales also include sales by grocery stores, drug stores, restaurants, service stations, beauty salons, medical providers, accountants, attorneys, insurance agents, etc.

Based on State economic multipliers, these indirect sales are expected to average about \$18.5 million per year.

Thus, development expenditures plus indirect sales are expected to average about \$39.9 million per year, of which about \$33.5 million would be on Maui and about \$6.5 on O‘ahu. About \$29.4 million of development and consumption expenditures would be subject to the excise tax on final sales, and about \$10.5 million subject to the excise tax on intermediate sales.

Profits on development activity and indirect sales would be about \$4 million per year.

As indicated above, the above economic activity is expected to last about 10 years, and will vary from year to year.

#### *No Water Lease Alternative*

For the No Water Lease Alternative, the scaled-down Mahi Pono Farm plan would require converting former sugarcane lands to about 5,280 acres of cropland, 3,800 acres of irrigated pasture, and 20,670 acres of unirrigated pasture. The total cost for this conversion is estimated at about \$40.5 million (see Table 4, Section 4.a).

Also, the Plan would require an estimated 105,600 square feet of building space costing about \$10.6 million.

As before, the 250 acres for green energy are sufficient space for a 37.5 MW solar farm with storage batteries costing about \$93.8 million.

The total development expenditure would be about \$144.8 million, or an average of about \$24.1 million per year assuming a 6-year development period for this scaled-down Farm Plan. Indirect sales are expected to average about \$18.8 million per year.

Thus, development expenditures plus indirect sales are expected to average about \$42.9 million per year, of which about \$36.3 million would be on Maui and \$6.6 on O‘ahu. About \$31.4 million of development and consumption expenditures would be subject to the excise tax on final sales, and about \$4.3 million subject to the excise tax on intermediate sales.

Profits on development activity and indirect sales would be about \$4.3 million per year.

#### Diversified Agriculture, Operations (Year 2030)

##### *Water Lease Limited to CWRM D&O Alternative*

For the Water Diversions Limited to the CWRM D&O Alternative, full development of the Mahi Pono Farm Plan would result in a substantial amount of crop production, including about 8 million pounds per year from the Community Farm, 321 million pounds per year from orchards, and 9 million pounds per year of tropical fruits, plus production from row crops, annual crops, and energy crops (see Table 4, Section 4.a). Annual sales are expected to reach about \$155.9 million.

The pastures would support a cattle herd of about 7,300 cow-and-calf animal units (**au**), produce over 4,300 calves per year, and generate revenues of about \$4.8 million per year.

Thus, total farm sales would be about \$160.7 million per year, of which an estimated \$104.4 million (65%) would be Hawai‘i sales and \$56.2 million export sales (35%).

Based on recently built or approved solar farms, the solar farm would generate about 82,100 MW of electricity per year, with revenues of about \$8.2 million per year paid by Maui Electric Company (MECO) to the solar-farm operator.

Combined farm and energy revenues would reach about \$168.9 million per year in direct sales, which would exceed the 2006 revenues from sugar production of \$101 million, and the \$116 million average for the 2008-to-2013 period.

Purchases of goods and services by farmers and the families of employees would generate indirect sales and, in turn, these suppliers would generate more indirect sales by their purchase of goods and services. The indirect sales are estimated at about \$160.7 million per year.

Total direct-plus-indirect sales would be about \$329.5 million, of which about \$273.8 million would be on Maui and about \$56.2 million on O‘ahu.

About \$24.9 million of consumption expenditures would be subject to the excise tax on final sales, and about \$248.2 million subject to the excise tax on intermediate sales.

Rental income from leasing land to other farmers and to an energy company would be about \$1 million per year.

Profits from farm operations, energy operations, and indirect sales would be about \$33 million. Mahi Pono's portion of the profits would be their return on their very substantial investment in agriculture in Central Maui.

#### *No Water Lease Alternative*

For the No Water Lease Alternative, the scaled-down Mahi Pono Farm Plan would result in about one-third as much crop production as the full Plan: about 3 million pounds per year from the Community Farm, 104.5 million pounds per year from orchards, and 3 million pounds per year of tropical fruits, plus production from row crops, annual crops, and energy crops (see Table 4, Section 4.a). Annual sales are expected to reach about \$51.3 million.

The pastures would support a cattle herd of about 9,700 cow-and-calf animal units, produce nearly 5,800 calves per year, and generate revenues of about \$6.3 million per year.

Thus, total farm sales would be about \$57.7 million per year, of which an estimated \$46.1 million (80%) would be Hawai'i sales and \$11.5 million export sales (20%).

The solar farm would generate about 82,100 MW of electricity per year, with revenues of about \$8.2 million per year paid by MECO to the solar-farm operator.

Combined farm and energy revenues would reach about \$65.9 million per year in direct sales, and \$57.7 million in indirect sales.

Total direct-plus-indirect sales would be about \$123.5 million, of which about \$103.4 million would be on Maui and \$20.2 million on O'ahu.

About \$8.6 million of consumption expenditures would be subject to the excise tax on final sales, and about \$103.4 million subject to the excise tax on intermediate sales.

Rental income from leasing land to other farmers and to an energy company would be about \$800,000 per year.

Profits from farm operations, energy operations, and indirect sales would be about \$12.4 million.

### **b. Upcountry Maui**

#### Development Activity

##### *Water Diversions Limited to the CWRM D&O Alternative*

For the Water Diversions Limited to the CWRM D&O Alternative, the 262 additional acres at the Kula Ag Park would have to be converted from fallow sugarcane fields to productive fields for diversified crops. The cost of this conversion is estimated at about \$1.3

million, or an average of about \$260,000 per year assuming a 5-year development period (see Table 4, Section 4.b).

Indirect sales are expected to average about \$320,000 per year.

Thus, expenditures plus indirect sales are expected to average about \$600,000 per year.

#### *No Water Lease Alternative*

For the Water Lease Alternative, improvements to the 262 acres are unlikely to occur due to the lack of water for farming.

#### Post Sugar, Diversified Ag Operations (Year 2017)

In 2017, farmers at the Kula Ag Park and other farmers in Upcountry Maui who relied on water from the EMI System produced an estimated 12.5 million pounds of crops per year (see Table 4, Section 4.b).

Annual farm sales were about \$12.5 million, and indirect sales were about \$13.8 million. Total direct-plus-indirect sales were about \$26.3 million per year, of which about \$21.5 million were on Maui and about \$4.8 million on O‘ahu.

About \$2.7 million of consumption expenditures were subject to the excise tax on final sales, and about \$23.7 million subject to the excise tax on intermediate sales.

Rents paid to the County totaled about \$500,000 per year

Profits from farm operations and indirect sales were an estimated \$2.6 million per year.

#### Diversified Ag Operations (Year 2030)

##### *Water Diversions Limited to the CWRM D&O Alternative*

For the Water Diversions Limited to the CWRM D&O Alternative, farm activity in Upcountry Maui is expected to increase due to the 262-acre expansion of the Kula Ag Park. The farmers at the Kula Ag Park and other farmers in Upcountry Maui who will rely on water from the EMI System are projected to produce an estimated 15.1 million pounds of crops per year (see Table 4, Section 4.b).

Annual farm sales are expected to reach about \$15.1 million, and indirect sales about \$13.4 million. Total direct-plus-indirect sales will be about \$15.5 million per year, of which about \$26 million will be on Maui and about \$5.9 million on O‘ahu.

About \$3.2 million of consumption expenditures would be subject to the excise tax on final sales, and about \$28.6 million subject to the excise tax on intermediate sales.

Rents paid to the County would totaled about \$900,000 per year

Profits from farm operations and indirect sales are expected to reach about \$3.2 million per year.

*No Water Lease Alternative*

For the No Water Diversions Alternative, farming activity and economic impacts are expected to be near zero for the farms that depended on water from the EMI System in 2017 (see Table 4, Section 4.b). For these farms, water to irrigate crops is not expected to be available for several years, and once farming ends, significant farming is not expected to return to the area because of better farming conditions in Central Maui.

**c. East Maui**

For all water-lease alternatives, the taro farms and other farms in East Maui that depend on stream flows would produce at full development about 1 million pounds per year of taro, and about 400,000 pounds per year of other crops (see Table 4, Section 4.3).

The resulting direct sales would be about \$1.4 million per year. Indirect sales generated by the purchase of goods and services would be about \$1.5 million per year. Thus, total direct-and-indirect sales would be about \$2.9 million per year (with rounding), of which about \$3 million would be on Maui and \$700,000 on O‘ahu. About \$500,000 of consumption expenditures would be subject to the excise tax on final sales, and \$2.4 million subject to the excise tax on intermediate sales.

Profits from farm operations and indirect sales would be about \$300,000, or possibly less.

**11. EMPLOYMENT, PAYROLL AND POPULATION SUPPORTED**

Table 5 provides information on agricultural and related employment, payroll, and the number of people supported by the agricultural activity.

**a. Central Maui**Typical Sugar, Operations (2006 Crop)

For the 2006 sugar crop, HC&S employed about 630 workers, including planters, irrigation workers, harvesters, truck drivers, mill workers, office workers, supervisors, etc. (see Table 5, Section 5.a). This employment figure is for the former plantation lands east of Maui Veterans Highway, and not the entire plantation.

As with indirect sales, sugar operations generated indirect jobs associated with the purchase of goods and services by HC&S, and by the families of HC&S employees. In turn, the companies supplying goods and services, and the families of their employees, supported additional indirect jobs by their purchases of goods and services, and so on. Indirect jobs included those at companies providing agricultural supplies and equipment, office supplies and equipment, repair services, etc. Other indirect jobs included those involved with supplying goods and services to families, including grocery workers, store clerks, restaurant

workers, service-station workers, beauticians, barbers, bankers, pharmacists, veterinarians, computer technicians, medical workers, accountants, attorneys, etc. The jobs ranged over a variety of skill levels, including entry-level, semi-skilled, skilled, and management.

Based on State employment multipliers, sugar operations generated about 710 indirect jobs in 2006.

Thus, direct-plus-indirect employment totaled about 1,300 jobs, of which about 1,100 jobs were on Maui.

The payroll was about \$48.5 million for the direct jobs and \$82.7 million for all direct and indirect jobs.

The direct and indirect jobs provided by sugar operations supported an estimated 3,000 residents living in about 1,260 homes, of which about 2,460 residents and 1,080 homes were on Maui.

#### Recent Sugar, Operations (Years 2008 to 2013)

For the 2008-to-2013 period, average employment and payroll was slightly less than that given above for the 2006 sugarcane crop (see Table 5, Section 5.a).

#### Post Sugar, Operations (Year 2017)

In 2017, most of the former sugarcane fields were fallow, but some land was used for an energy crop and for pasture. These activities generated an estimated 10 direct-plus-indirect jobs (see Table 4, Section 4.a).

#### Diversified Ag, Development Activity

##### *Water Lease Limited to CWRM D&O Alternative*

For the Water Diversions Limited to the CWRM D&O Alternative, an average of 210 workers would be needed over the assumed 10-year development period to: (1) convert former sugarcane fields to fields for diversified crops and pasture, (2) construct buildings, and (2) install a solar farm (see Table 5, Section 5.a). Jobs would include equipment operators, soil specialists, irrigation specialists, planters, truck drivers, construction workers, supervisors, etc. Also, the various jobs would range over a variety of skill levels, including entry-level, semi-skilled, skilled, management, and professional positions. Most of these temporary jobs are expected to be filled by residents of Maui and other the islands.

In addition to the direct jobs, about 120 indirect jobs would be generated by purchases of goods and services. Indirect jobs will include those at companies supplying farming equipment, irrigation systems, fencing, chemicals, building materials, repair services, etc. Other indirect jobs would include those involved with supplying goods and services to families, and would range over a variety of skill levels.

Thus, direct-plus-indirect employment during the development period would average about 330 jobs, of which about 290 jobs would be on Maui and 40 jobs on O‘ahu. Actual employment would vary over time.

The payroll during development would average about \$8.8 million for the direct jobs and \$14.5 million for all direct and indirect jobs.

During the development period, the direct and indirect jobs would support an estimated 730 residents living in about 310 homes, of which about 640 residents and 280 homes would be on Maui.

#### *No Water Lease Alternative*

For the No Water Lease Alternative, development activity would be less than that given above, but it would still be substantial and would last for a shorter period (6 years vs 10 years). During the development period, an average of about 176 direct jobs would be provided, plus about 116 indirect jobs, for a total of about 290 direct and indirect jobs. About 250 jobs would be on Maui and 50 jobs on O‘ahu. Actual employment would vary over time.

The payroll during development would average about \$7.7 million per year for the direct jobs and \$13.3 million for all direct and indirect jobs.

During the development period, the direct and indirect jobs would support an estimated 650 residents living in about 280 homes, with about 570 residents and 250 homes on Maui.

#### Diversified Agriculture, Operations (Year 2030)

##### *Water Lease Limited to CWRM D&O Alternative*

The Water Lease Limited to CWRM D&O Alternative would allow full development of the Mahi Pono Farm Plan, with farm employment expected to reach about 790 jobs, or about 160 more jobs than provided by sugar operations in 2006 (see Table 5, Section 5.a). The jobs would be typical of those provided by diversified-crop farming and ranching—managing soils and pests, operating and maintaining irrigation systems, planting crops, pruning trees, harvesting crops, sorting and washing crops, packing crops, trucking crops to markets and shipping terminals, moving cattle among pastures, maintaining fences, marketing, accounting, etc.

The increase in employment would be gradual, with most jobs filled by former sugarcane workers, skilled workers from Maui and other islands, recent graduates of agricultural programs at Hawai‘i high-schools and colleges, and unskilled workers who would receive on-the-job training.

The purchase of goods and services by farmers and ranchers, and by the families of their employees, would generate an estimated 350 indirect jobs. Indirect jobs would include those at companies providing agricultural supplies and equipment, office supplies and

equipment, repair services, trucking services, veterinarian services, etc. Other indirect jobs would include those involved with supplying goods and services to employees and their families.

Thus, direct-plus-indirect employment would totaled about 1,140 jobs, with about 1,000 jobs on Maui. Both the direct and indirect jobs would range over a variety of skill levels, including entry-level, semi-skilled, skilled, and management positions.

The payroll would be about \$28.5 million for the direct jobs and \$45.3 million for all direct and indirect jobs.

The direct and indirect jobs would support an estimated 2,550 residents living in about 1,100 homes, with about 2,290 residents and 1,010 homes on Maui.

#### *No Water Lease Alternative*

For the No Water Lease Alternative, the scaled-down Mahi Pono Farm Plan would result in about one-third as much employment as with the full Plan: about 270 direct jobs, 120 indirect jobs, and 390 total jobs (see Table 5, Section 5.a).

The payroll would be about \$9.9 million for the direct jobs and \$15.6 million for all direct and indirect jobs.

The direct and indirect jobs would support an estimated 880 residents living in about 380 homes, with about 790 residents and 350 homes on Maui.

### **b. Upcountry Maui**

#### Post Sugar, Diversified Ag Operations (Year 2017)

In 2017, farmers at the Kula Ag Park and other farms in Upcountry Maui who relied on water from the EMI System provided about 80 jobs and generated about 40 indirect jobs, for a total of about 120 jobs (see Table 5, Section 5.b).

The payroll was about \$2.9 million for the direct jobs and \$4.8 million for all direct and indirect jobs.

The direct and indirect jobs would support an estimated 275 residents living in about 120 homes, with about 245 residents and 110 homes on Maui.

#### Development Activity

##### *Water Diversions Limited to the CWRM D&O Alternative*

For the Water Diversions Limited to the CWRM D&O Alternative, the 262-acre expansion of the Kula Ag Park would provide an average of about 7.5 direct-plus-indirect jobs during the assumed 5-year development period (see Table 5, Section 5.b). The payroll for these jobs would average about \$300,000 per year.

*No Water Lease Alternative*

For the No Water Lease Alternative, improvements to the 262 acres are unlikely to occur due to a lack of water for farming. Thus, there would be no development activity (see Table 5, Section 5.b).

Diversified Ag Operations (Year 2030)*Water Diversions Limited to the CWRM D&O Alternative*

For the Water Diversions Limited to the CWRM D&O Alternative, employment will increase due to the 262-acre expansion of the Kula Ag Park. By 2030, farmers at the Kula Ag Park and other farms in Upcountry Maui who relied on water from the EMI System are expected to provide about 100 jobs and generate about 50 indirect jobs, for a total of about 150 jobs (see Table 5, Section 5.b).

The payroll is expected to reach about \$3.5 million for the direct jobs and \$5.8 million for all direct and indirect jobs.

The direct and indirect jobs provided will support an estimated 330 residents living in about 140 homes, with about 300 residents and 130 homes on Maui.

*No Water Lease Alternative*

For the No Water Diversions Alternative, farming activity and employment are expected to be near zero for the farms that depended on water from the EMI System in 2017 (see Table 5, Section 5.b). For these farms, water to irrigate crops is not expected to be available for several years as mentioned previously. Once farming ends, significant farming is not expected to return to the area because better farming conditions exist in Central Maui.

**c. East Maui**

For all water-lease alternatives, full development of the taro farms and other farms in East Maui that depend on stream flows would result in about 14 jobs and generate about 7 indirect jobs, for a total of about 21 jobs (see Table 5, Section 5.c).

The payroll is expected to reach about \$500,000 for the direct jobs and \$800,000 for all direct and indirect jobs.

The direct and indirect jobs provided will support an estimated 47 residents living in about 20 homes, most of whom would be on Maui.

## 12. STATE AND COUNTY REVENUES

### a. Overview

Table 6 provides information on State and County revenues generated by agricultural development and operations. For the State, the major sources of revenue are the 4% excise tax on final sales, the 0.5% excise tax on intermediate sales, corporate income taxes, individual income taxes, and land rents paid to the State. For Maui County, the major sources of revenue are property taxes, and land rents paid to the County. The City and County of Honolulu derives tax revenues from economic activity on Maui because some of the indirect sales occur on O‘ahu. A portion of the sales on O‘ahu are subject to a 0.5% excise-tax surcharge which went into effect in 2007.

Farmers pay their fair shares of State and County taxes. However, most agricultural operations pay lower taxes than do most other sectors of the economy. Exported crops are exempt from the State excise tax. Crops sold for local consumption are usually taxed at the intermediate excise-tax rate of 0.5%. Crops that displace imports cause little change in final sales and little change in State excise tax revenues. At the County level, agricultural land values are lower than urban land values. Furthermore, agricultural lands are assessed at a fraction of their market values, so the property taxes are low compared to lands assessed at market values.

Sugar employees were paid higher-than-average wages, so on average their families paid more taxes than did most other families on Maui. However, the opposite is true for most workers on farms that grow diversified crops.

No major State or County expenditures are anticipated to support the planned agricultural development and operations. However, the developer of the solar farm would benefit from substantial State subsidizes.

State and County expenditures on services for families of agricultural workers are similar in magnitude to expenditures to support other families on Maui. Expenditures on services include, but are not limited to, education, libraries, social services, health services, security, fire protection, watershed management, park maintenance, road maintenance, water, waste disposal, etc.

However, State and County expenditures on services for the families of farm workers generally exceed the taxes paid by these families and their employers—a situation which also pertains to most families on Maui. Services to residents are, in effect, subsidized by tax revenues derived from visitors, resorts, commercial activities, and construction activities. Most visitors spend at a high daily rate for their rooms, meals, travel, activities, and purchases. In turn, these expenditures generate a high amount of excise taxes for the State. In addition, visitors are subject to the Transient Accommodation Tax (hotel room tax), which is shared between the State and the counties. Visitors do not require State expenditures on education, social services, and many other items. Construction activity also generates a high amount of excise taxes for the State because new homes and buildings are expensive.

For the County, much of the revenue required to subsidize services to residents are derived from a combination of high property tax assessments and high property-tax rates on resorts, time-share properties, second homes, commercial properties, and industrial properties. Operators of many of these properties provide their own security, waste removal, etc.

The focus of the material which follows is on the major State and County tax revenues generated by agricultural development and operations.

## **b. Central Maui**

### Typical Sugar (2006 Crop)

In 2006, sugar operations generated about \$5.9 million in State tax revenues and rental payments to the State (see Table 6, Section 6.a). Most of the revenues were derived from (1) excise taxes on consumption expenditures by families supported by the direct and indirect jobs that were provided, and (2) personal income taxes paid by these same families (see Table 6, Section 6.a). Revenues were low because the sale of the exported sugar was exempt from the excise taxes.

Property taxes paid by HC&S to the County of Maui were about \$50,000 per year.

In 2006, the City and County of Honolulu derived no revenue from the excise-tax surcharge because it was not in effect that year.

### Recent Sugar (Years 2008 to 2013)

For the 2008-to-2013 period, sugar operations generated an average of about \$5.1 million in State tax revenues and rental payments to the State (see Table 6, Section 6.a). Property taxes paid by HC&S to the County of Maui were about \$70,000 per year. The increase from 2006 was due to a higher tax rate.

The City and County of Honolulu derived about \$40,000 per year from the excise-tax surcharge.

### Post Sugar (Year 2017)

In 2017, diversified agriculture operations in Central Maui generated about \$30,000 in tax revenues (see Table 6, Section 6.a). Property taxes paid by HC&S to the County of Maui were about \$20,000 per year. Property taxes decreased because of the land was assessed at a lower value following the closure of sugar operations.

The City and County of Honolulu derived negligible revenues from the excise-tax surcharge.

Diversified Ag, Development Activity*Water Lease Limited to CWRM D&O Alternative*

For the Water Lease Limited to CWRM D&O Alternative, converting Central Maui farmlands from sugarcane to diversified agriculture and green energy would generate an average of about \$1.9 million per year in State taxes, for a 10-year cumulative total of about \$18.6 million (see Table 6, Section 6.a). However, developers of solar farms receive a State subsidy of \$500,000 per 1 MW of generating capacity. For the planned green energy (solar farm), the State subsidy would average about \$1.9 million per year, for a 10-year cumulative total of about \$18.8 million.

Thus, State tax revenues from development minus the energy subsidy would result in a cumulative loss of about \$100,000 (with rounding).

Given the nature of Hawai'i's tax system, the County of Maui would derive negligible tax revenues from the anticipated development activity.

Over the 10-year development period, the City and County of Honolulu would derive cumulative excise-tax surcharges of about \$60,000.

*No Water Lease Alternative*

For the No Water Lease Alternative, converting Central Maui farmlands from sugarcane to diversified agriculture and green energy would generate an average of about \$1.9 million per year in State taxes, for a 6-year cumulative total of about \$11.4 million (see Table 6, Section 6.a).

For the planned green energy (solar farm), the State subsidy would average about \$3.1 million per year, for a 6-year cumulative total of about \$18.8 million.

Thus, State tax revenues minus the energy subsidy would average a negative \$1.2 million per year, for a 6-year cumulative total of a negative \$7.3 million.

Again, the County would derive negligible tax revenues from the anticipated development activity, while the City and County of Honolulu would derive cumulative excise-tax surcharges of about \$40,000.

Diversified Agriculture, Operations (Year 2030)*Water Lease Limited to CWRM D&O Alternative*

For the Water Lease Limited to CWRM D&O Alternative, diversified-agriculture operations would generate an estimated \$7.5 million in State tax revenues by 2030 (see Table 6, Section 6.a).

Property taxes paid to the County would be about \$800,000 per year.

The City and County of Honolulu would derive about \$140,000 per year from the excise-tax surcharge.

*No Water Lease Alternative*

For the No Water Lease Alternative, State tax revenues would be about half those of the previous alternative: about \$3.8 million per year (see Table 6, Section 6.a).

Property taxes paid to the County would be about \$650,000 per year. This decrease from the previous alternative is due to more land being used for pasture, which is assessed at a lower value than cropland.

The City and County of Honolulu will derive about \$50,000 per year from the excise-tax surcharge.

**c. Upcountry Maui**Post Sugar (Year 2017).

In 2017, the farms at Kula Ag Park and other farms in Upcountry Maui that rely on water from the EMI System would generate about \$45,000 per year in State taxes (see Table 6, Section 6.b).

For the County, property taxes plus rents paid to the County by farmers at the Kula Ag Park totaled less than \$54,000 per year.

The City and County of Honolulu will derive about \$2,000 per year from the excise-tax surcharge.

Diversified Ag, Development Activity*Water Lease Limited to CWRM D&O Alternative*

For the Water Lease Limited to CWRM D&O Alternative, expansion of the Kula Ag Park will result in cumulative State tax revenues of about \$200,000 (see Table 6, Section 6.b).

The County would derive negligible tax revenues from the development activity.

*No Water Lease Alternative*

For the No Water Lease Alternative, expansion of the Kula Ag Park is not anticipated. As a result, there would be no development activity and no tax revenues.

Diversified Ag, Operations (Year 2030).*Water Lease Limited to CWRM D&O Alternative*

For the Water Lease Limited to CWRM D&O Alternative, the farms at the Kula Ag Park and other farms in Upcountry Maui that rely on water from the EMI System would generate about \$54,000 per year in State taxes (see Table 6, Section 6.b).

For the County, property taxes plus rents paid to the County by farmers at the Kula Ag Park would total about \$85,000 per year. Most of the increase from 2017 would be due to the additional rental income from the 262-acre expansion of Kula Ag Park.

The City and County of Honolulu would derive about \$2,000 per year from the excise-tax surcharge.

#### *No Water Lease Alternative*

For the No Water Diversions Alternative, farming activity and State taxes generated are expected to be near zero for the farms that depended on water from the EMI System in 2017 (see Table 6, Section 6.b). For these farms, water to irrigate crops is not expected to be available for several years as mentioned previously. Once farming ends, significant farming is not expected to return to the area because of better farming conditions in Central Maui.

The County would lose rents from the Kula Ag Park, and property taxes would be lower, assuming that the lands would be assessed at pasture values.

#### **d. East Maui**

For all water-lease alternatives, the taro farms and other farms in East Maui that depend on stream flows will generate less than \$70,000 per year in State taxes at full development (see Table 6, Section 6.b).

For the County, property taxes will total about \$100 per year.

The City and County of Honolulu will derive about \$300 per year from the excise-tax surcharge.

### **13. SUMMARY OF ECONOMIC IMPACTS AND BENEFITS**

#### **a. Major Impacts and Benefits**

Table ES-1 summarizes the major impacts and benefits for the past baseline conditions and two of the three alternatives for the future. The table is divided into 6 parts: (1) Water Supply and Allocation, (2) Agricultural Land Use, (3) Agricultural Water Use, (4) Agricultural Development and Operations, (5) Employment and Payroll, and (6) State and County Revenues. Mahi Pono's current Farm Plan assumes full development by about 2030. Also, all dollar amounts are expressed in 2018 purchasing power.

#### Water Supply and Allocation

The supply of East Maui surface water that is available for Central and Upcountry Maui is projected to decline significantly: from about 156.54 mgd for Typical Sugar, to 92.32 mgd for the Water Lease Limited to CWRM D&O Alternative, and to 30.76 mgd for the No

Water Lease Alternative. For the No Water Lease Alternative, all of the water would come from private lands.

The total water supply (surface water plus groundwater) would decline from about 199.04 mgd for Typical Sugar to 113.63 for the Water Lease Limited to CWRM D&O Alternative and 38.44 mgd for No Water Lease Alternative. The use of groundwater is limited in order to keep salinity below about 30‰ when applied to lower fields in Central Maui.

For the Water Lease Limited to CWRM D&O Alternative, about 106.53 mgd would be allocated to Central Maui for agricultural use, and 7.1 to MDWS for Upcountry Maui.<sup>5</sup> For the No Water Lease Alternative, all of the water would be allocated to Central Maui for agricultural use.

### Agricultural Land Use

#### *Central Maui*

For the Water Lease Limited to CWRM D&O Alternative, about 15,950 acres would be used for growing crops, including 12,850 acres for orchard crops and 3,100 acres for other crops. About 13,800 acres would be used for pasture, of which about 4,700 acres would be irrigated. About 250 acres would be used for green energy, such as a solar farm.

For the No Water Lease Alternative, the reduced supply of water would require a major reallocation of land from growing crops to unirrigated pasture. About 5,250 acres would be used for growing crops, including 4,180 acres for orchard crops and 1,100 acres for other crops. About 24,470 acres would be used for pasture, of which about 3,800 acres would be irrigated. Land for green energy would remain at 250 acres.

#### *Upcountry Maui*

For the Water Lease Limited to CWRM D&O Alternative, about 1,520 acres of farmland would be irrigated with water from the EMI System.

For the No Water Lease Alternative, farmlands in Upcountry Maui that have been irrigated with water from the EMI System are expected to drop to zero acreage for the reasons given in Section 6.b.

#### *East Maui*

As indicated in the CWRM D&O, stream restoration could result in 44.83 acres planted in taro in East Maui, and 35.09 acres in other crops. These estimated acreages are the same for all alternatives.

---

5. 7.1 mgd was the long-term average presented in the CWRM D&O.

### Agricultural Water Use

#### *Central Maui*

Agricultural water use in Central Maui is projected to decline from about 143.19 mgd for Typical Sugar to 82.34 mgd for the Water Lease Limited to CWRM D&O Alternative and 29.72 mgd for No Water Lease Alternative.

#### *Upcountry Maui*

For the Water Lease Limited to CWRM D&O Alternative, about 4.16 mgd would be used to irrigate farms supplied with water from the EMI System.

For the No Water Lease Alternative, it is assumed that no water would be delivered from the EMI System.

#### *East Maui*

For all water-lease alternatives, gross and net water requirements would be about 6.28 and 1.52 mgd, respectively (derived from the CWRM D&O acreage estimates for the affected farms in East Maui). The high gross water requirement reflects the fact that nearly 80% of the water used for growing taro is diverted from streams, passes through lo'i, and is then returned to the streams.

### Agricultural Development and Operations

#### *Central Maui*

For the Water Lease Limited to CWRM D&O Alternative, converting Central Maui from sugarcane to diversified agriculture would entail a capital investment of about \$214.7 million for land preparation and improvements, with expenditures spread out over approximately 10 years. During this period, expenditures and indirect sales would average about \$39.9 million per year. Corresponding figures for the No Water Lease alternative are \$144.8 million invested over about 6 years, with expenditures and indirect sales averaging about \$42.9 million per year.

At full operations, and assuming the Water Lease Limited to CWRM D&O Alternative, farm sales would total about \$160.7 million per year, of which about \$104.4 million would be Hawai'i sales and \$56.2 million would be export sales. Adding energy sales of about \$8.2 million results in total direct sales of about \$168.9 million per year. Direct and indirect sales would total about \$329.5 million per year.

The direct sales of about \$160.7 million per year exceeds sales during sugar operations: about \$100.7 million per year for Typical Sugar, and about \$115.6 million for Recent Sugar. The HC&S revenues figures are for the former plantation lands east of Maui Veterans Highway, and not the entire plantation.

For the No Water Lease Alternative, operations would generate much lower farm sales: about \$57.7 million per year in farm sales, of which about \$46.1 million would be Hawai'i sales and \$11.5 million would be export sales. Adding energy sales results in total direct sales of about \$65.9 million per year. Direct and indirect sales would total about \$123.5 million per year.

#### *Upcountry Maui*

For the Water Lease Limited to CWRM D&O Alternative, the farms that depend on water from the EMI System would generate direct sales of about \$14.1 million per year. Direct and indirect sales would total about \$31.8 million per year.

For the No Water Lease Alternative, these figures would drop to zero.

#### *East Maui*

For all water-lease alternatives, the farms in East Maui that depend on stream water would generate about \$1.4 million per year in direct sales, and about \$2.9 million per year in direct and indirect sales.

### Employment and Payroll

#### *Central Maui*

For the Water Lease Limited to CWRM D&O Alternative, converting Central Maui from sugarcane to diversified agriculture would employ an average of about 210 workers over a period of about 10 years. Corresponding figures for the No Water Lease Alternative are an average of about 175 workers over about 6 years.

At full operations of farming operations in Central Maui, and assuming the Water Lease Limited to CWRM D&O Alternative, employment would reach about 790 direct jobs with a payroll of about \$28.5 million per year, and 1,140 direct and indirect jobs with a payroll of \$45.3 million. The direct employment of 790 jobs would exceed the 630 direct jobs formerly provided by HC&S for Typical Sugar. The HC&S employment figure is for the former plantation lands east of Maui Veterans Highway, and not the entire plantation.

For the No Water Lease Alternative, full operations would provide about 270 direct jobs with a payroll of about \$9.9 million per year, and 390 direct and indirect jobs with a payroll of \$15.6 million.

#### *Upcountry Maui*

For the Water Lease Limited to CWRM D&O Alternative, the farms that depend on water from the EMI System would provide about 100 jobs with a payroll of about \$3.5

million per year, and would generate about 150 direct and indirect jobs having a payroll of \$5.8 million.

For the No Water Lease Alternative, these figures would drop to zero.

#### *East Maui*

For all water-lease alternatives, the farms in East Maui that depend on stream water would provide about 14 jobs with a payroll of about \$500,000 per year, and generate about 21 direct and indirect jobs having a payroll of about \$800,000.

### State and County Revenues

#### *Central Maui*

For the Water Lease Limited to CWRM D&O Alternative, the expenditures on land preparation and capital improvements needed to convert Central Maui from sugarcane to diversified agriculture would generate State tax revenues of about \$18.62 million over the assumed 10-year development period, but this would be offset by energy subsidies of \$18.75 million, for net loss of about \$130,000. State revenues would come from excise taxes, corporate income taxes, and personal income taxes. The County derives negligible tax revenues from development activity: there are no major County taxes on expenditures for land preparation and improvements, profits generated, or the payroll of those involved with the development activity. However, once the improvements are completed, the County will benefit from an increase in property-tax revenues due to the increased property values.

For the No Water Lease Alternative, the conversion would generate State tax revenues of about \$11.41 million over the assumed 6-year development period, but this would be offset by energy subsidies of \$18.75 million, for a net loss of about \$7.34 million.

At full operations of farming operations in Central Maui, and assuming the Water Lease Limited to CWRM D&O Alternative, State tax revenues would be about \$4.46 million per year, and County property taxes would be about \$800,000 per year. Property taxes for the County are low because agricultural land is assessed at agricultural values, not at market values.

For the No Water Lease Alternative, full operations would generate State tax revenues of about \$1.66 million per year, and County tax revenues of about \$650,000. Tax revenues for the State are less because crop production and sales would be less. Property taxes are lower because more of the land would be used for pasture, which has a lower assessed value than cropland.

#### *Upcountry Maui*

For the Water Lease Limited to CWRM D&O Alternative, the farms that depend on water from the EMI System would generate annual State taxes of about \$540,000, and

County revenues of about \$850,000. The County revenues include property taxes and rents from the Kula Ag Park.

For the No Water Lease Alternative, most of these figures would drop to zero or near zero because of the loss of farms and farm production. The County would lose rents from the Kula Ag Park, and property tax revenues would be lower, assuming the agricultural lands would be assessed at pasture values.

### *East Maui*

For all water-lease alternatives, the East Maui farms would generate about \$67,000 per year in State taxes and about \$100 in County property taxes.

## **b. Water Lease Limited to CWRM D&O Alternative vs the No Water Lease Alternative**

### Central Maui

For Central Maui, the Water Lease Limited to CWRM D&O Alternative would provide far more economic activity and benefits than would the No Water Lease Alternative. The difference between the two alternatives would be as follows:

- About 11,570 acres more green open space in the form of farms and irrigated pastures (20,650 acres vs 9,080 acres).
- About three times as much food production, including greater food self-sufficiency and more exports.
- About \$206 million per year more in direct and indirect sales (\$329.5 million vs \$123.5 million).
- About 750 more direct and indirect jobs (1,140 jobs vs 390 jobs).
- About \$29.7 million per year more in total payroll (\$45.3 million vs \$15.6 million).
- Development activity (land preparation and capital improvements) lasting about 4 years longer (10 years vs 6 years), with similar magnitudes of sales and employment (about \$40 million per year direct and indirect sales, and about 300 direct and indirect jobs).
- About \$2.9 million per year more in State and County tax revenues (\$4.6 million vs \$1.7 million).

### Upcountry Maui

For Upcountry Maui, the Water Lease Limited to CWRM D&O Alternative would allow farming to continue and expand at the Kula Ag Park, and continue at other farms that irrigate crops with water originating from the EMI System. In total, about 1,510 acres would

be farmed in 2030, generating about \$31.8 million per year in direct and indirect sales, about 150 direct and indirect jobs, and about \$5.8 million in payroll for these jobs.

For the No Water Diversions Alternative, farming activity is expected to be near zero for the farms that depended on water from the EMI System in 2017. For these farms, water to irrigate crops is not expected to be available for several years, and once farming ends, significant farming is not expected to return to the area because of better farming conditions in Central Maui.

### East Maui

All alternatives would result in the same agricultural activity and benefits for East Maui (see Table 7., Section 7c).

#### **c. Water Lease with Less than CWRM D&O Alternative**

For the Water Lease with Less than CWRM D&O Alternative, the State would allow water to be diverted from East Maui to Central Maui in an amount falling between (1) the 92.32-mgd flow estimated for the Water Lease Limited to CWRM D&O Alternative, and (2) the 30.76-mgd flow estimated for the No Water Lease Alternative. To demonstrate the impacts of such an intermediate alternative, the following table provides (1) the impacts of the Water Lease Limited to CWRM D&O Alternative at full operations of the Mahi Pono Farm plan, and (2) the incremental changes in these impacts (in red) caused by each mgd-reduction in surface water from the 92.32-mgd flow estimated for the Water Lease Limited to CWRM D&O Alternative.

|                             | <u>Central<br/>Maui</u> | <u>Upcountry<br/>Maui</u> | <u>Units</u> |
|-----------------------------|-------------------------|---------------------------|--------------|
| — Land use                  |                         |                           |              |
| • Crops                     | 15,950                  | 1,509                     | acres        |
| Decrease per 1 mgd          | 173.31                  | 24.51                     | acres        |
| • Irrigated pasture         | 4,700                   |                           | acres        |
| Decrease per 1 mgd          | 14.62                   |                           | acres        |
| • Unirrigated pasture       | 9,100                   |                           | acres        |
| Increase per 1 mgd          | 187.93                  |                           | acres        |
| — Sales, Ag operations      |                         |                           |              |
| • Direct sales              | \$168.9                 | \$15.1                    | million/yr   |
| Decrease per 1 mgd          | \$1.673                 | \$0.245                   | million/yr   |
| • Direct and indirect sales | \$329.5                 | \$31.8                    | million/yr   |
| Decrease per 1 mgd          | \$3.346                 | \$0.517                   | million/yr   |

|                               |          |          |            |
|-------------------------------|----------|----------|------------|
| — Employment                  |          |          |            |
| • Direct                      | 793      | 101      | jobs       |
| Decrease per 1 mgd            | 8.447    | 1.634    | jobs       |
| • Direct and indirect         | 1,142    | 149      | jobs       |
| Decrease per 1 mgd            | 12.164   | 2.418    | jobs       |
| — Payroll                     |          |          |            |
| • Direct payroll              | \$28.5   | \$3.5    | million/yr |
| Decrease per 1 mgd            | \$0.303  | \$0.057  | million/yr |
| • Direct and indirect payroll | \$45.3   | \$5.8    | million/yr |
| Decrease per 1 mgd            | \$0.481  | \$0.095  | million/yr |
| — State Revenues              | \$4.46   | \$0.54   | million/yr |
| Decrease per 1 mgd            | \$0.0456 | \$0.0088 | million/yr |

Thus, each 1-mgd reduction of surface water from the Water Lease Limited to CWRM D&O Alternative would result in the following changes for Central Maui (first column of the above table): a reduction by about 173 acres of land in crops, a reduction by about 15 acres of land in irrigated pasture, an increase of about 188 acres of land in unirrigated pasture, a reduction in direct sales on Maui of about \$1.7 million per year, a reduction in direct-and-indirect sales on Maui and O‘ahu of about \$3.3 million per year, about 8.5 fewer direct jobs on Maui having a payroll of about \$300,000 per year, about 12 fewer direct-and-indirect jobs on Maui and O‘ahu having a payroll of about \$500,000 per year, and a reduction in State revenues of about \$50,000 per year. Significant but smaller changes would occur for Upcountry Maui (second column of the above table).

For illustration of a line-item calculation, if the EMI System were to supply 70 mgd of surface water under an intermediate alternative, then direct employment in Central Maui would be about 604 jobs calculated as follows:

- Reduction in surface-water supply: 22.32 mgd (92.32 mgd – 70 mgd).
- Reduction in direct employment: 189 jobs (22.32 mgd decrease in surface-water supply × 8.447 direct jobs/mgd from the above table).
- Resulting direct employment: 604 jobs (793 jobs under the Water Lease Limited to CWRM D&O Alternative – 189 fewer jobs because of less water)

## 14. CONSISTENCY WITH STATE AND COUNTY AGRICULTURAL POLICIES

The *Hawai‘i State Constitution*, the *Hawai‘i State Plan*, the *State Agriculture Functional Plan*, Hawai‘i Revised Statute for Important Agricultural lands (Chapter 205), the *County of Maui 2030 General Plan*, and the County’s *Maui Island Plan* call directly or implicitly for preserving the economic viability of plantation agriculture and promoting the growth of diversified agriculture, some specifically targeting agriculture in Central Maui (see Ap-

pendix). To accomplish this, an adequate supply of agriculturally suitable lands and water must be assured and protected.

With regard to plantation agriculture, HC&S was the last sugarcane plantation in Hawai‘i. The Hali‘imaile Pineapple Company in Upcountry Maui irrigates its fields with groundwater, not surface water from East Maui.

The Mahi Pono Farm Plan will conserve the about 30,000 acres of high-quality agricultural land in Central Maui, and these lands will be used for diversified crops and ranching. Furthermore, the IAL designation of about 23,000 acres will help conserve this valuable farmland. However, the amount of usable farmland in Central Maui will depend on how much water the State allows to be diverted from East Maui to Central Maui under the Water Lease.

The Water Lease Limited to CWRM D&O Alternative would maintain the viability of diversified farms in Upcountry Maui that depend on water from the EMI System. But these farms could be lost under the No Water Lease Alternative due to a lack of waters. Even after new wells are developed to fill the shortfall in the supply, significant farming is not expected to return to the area because of better farming conditions in Central Maui. For the Water Lease with Less than CWRM D&O Alternative, the loss of farming activity in Upcountry Maui would be proportional to the reduced water availability from the EMI System.

For all water-lease alternatives, farming in East Maui is expected to increase because CWRM D&O has restored full flow of the taro streams.

Of the three alternatives, the Water Lease Limited to CWRM D&O Alternative is the most compatible with State and County agricultural policies. This alternative would (1) preserve and protect the most agricultural land and water, and (2) promote the most agricultural activity.

**APPENDIX**  
**STATE AND COUNTY GOALS, OBJECTIVES, POLICIES**  
**AND GUIDELINES RELATED TO AGRICULTURAL LANDS**

**1. HAWAI‘I STATE CONSTITUTION (Article XI, Section 3):**

...to conserve and protect agricultural lands, promote diversified agriculture, increase agricultural self-sufficiency and assure the availability of agriculturally suitable lands...

**2. HAWAI‘I STATE PLAN (Chapter 226, Hawaii Revised Statutes, as amended):**

**Section 226-7 Objectives and policies for the economy--agriculture.**

- (a) Planning for the State's economy with regard to agriculture shall be directed towards achievement of the following objectives:
  - (1) Viability in Hawaii's sugar and pineapple industries.
  - (2) Growth and development of diversified agriculture throughout the State.
  - (3) An agriculture industry that continues to constitute a dynamic and essential component of Hawaii's strategic, economic, and social well-being.
- (b) To achieve the agricultural objectives, it shall be the policy of the State to:
  - (2) Encourage agriculture by making best use of natural resources.
  - (10) Assure the availability of agriculturally suitable lands with adequate water to accommodate present and future needs.
  - (16) Facilitate the transition of agricultural lands in economically nonfeasible agricultural production to economically viable agricultural uses.

**Section 226-103 Economic priority guidelines.**

- (c) Priority guidelines to promote the continued viability of the sugar and pineapple industries:
  - (1) Provide adequate agricultural lands to support the economic viability of the sugar and pineapple industries.
- (d) Priority guidelines to promote the growth and development of diversified agriculture and aquaculture:

- (1) Identify, conserve, and protect agricultural and aquacultural lands of importance and initiate affirmative and comprehensive programs to promote economically productive agricultural and aquacultural uses of such lands.
- (10) Support the continuation of land currently in use for diversified agriculture.

**Section 226-104 Population growth and land resources priority guidelines.**

(b) Priority guidelines for regional growth distribution and land resource utilization:

- (2) Make available marginal or non-essential agricultural lands for appropriate urban uses while maintaining agricultural lands of importance in the agricultural district.

**3. AGRICULTURAL STATE FUNCTIONAL PLAN (1991)**

(Functional plans are guidelines for implementing the State Plan. They are approved by the Governor, but not adopted by the State Legislature.)

Objective H: Achievement of Productive Agricultural Use of Lands Most Suitable and Needed for Agriculture.

Policy H(2): Conserve and protect important agricultural lands in accordance with the Hawaii State Constitution.

Action H(2)(a): Propose enactment of standards and criteria to identify, conserve, and protect important agricultural lands and lands in agricultural use.

Action H(2)(c): Administer land use district boundary amendments, permitted land uses, infrastructure standards, and other planning and regulatory functions on important agricultural lands and lands in agricultural use, so as to ensure the availability of agriculturally suitable lands and promote diversified agriculture.

**4. IMPORTANT AGRICULTURAL LANDS [§205-41]**

There is a compelling state interest in conserving the State's agricultural land resource base and assuring the long-term availability of agricultural lands for agricultural use to achieve the purposes of:

- (1) Conserving and protecting agricultural lands;
- (2) Promoting diversified agriculture;
- (3) Increasing agricultural self-sufficiency; and
- (4) Assuring the availability of agriculturally suitable lands.

## **5. COUNTY OF MAUI 2030 GENERAL PLAN, COUNTYWIDE POLICY PLAN (2010)**

### **Countywide goals, objectives, policies and actions**

#### **F. Strengthen the Local Economy**

##### **Objective**

2. Diversify and expand sustainable forms of agriculture and aquaculture.

##### **Policies**

- b. Prioritize the use of agricultural land to feed the local population, and promote the use of agriculture lands for sustainable and diversified agricultural activities.
- e. Support ordinances, programs, and policies that keep agricultural land and water available and affordable to farmers.

##### **Implementing Actions**

- c. Create agricultural parks in areas distant from genetically modified crops.

#### **J. Promote Sustainable Land Use and Growth Management**

##### **Objective**

2. Improve planning for and management of agricultural lands and rural areas.

##### **Policies**

- a. Protect prime, productive, and potentially productive agricultural lands to maintain the islands' agricultural and rural identities and economies.
- c. Discourage developing or subdividing agriculturally designated lands when non-agricultural activities would be primary uses.

##### **Implementing Actions**

- a. Inventory and protect prime, productive, and potentially productive agricultural lands from competing non-agricultural land uses.

## **6. MAUI ISLAND PLAN, GENERAL PLAN 2030 (2012)**

### **Core Values**

- E. Preserve rural and agricultural lands and encourage sustainable agriculture.

### **Economic Development**

#### **Goal**

- 4.3 Maui will have a diversified agricultural industry contributing to greater economic, food, and energy security and prosperity.

**Objective**

- 4.3.1 Strive for at least 85 percent of locally-consumed fruits and vegetables and 30 percent of all other locally-consumed foods to be grown in-State.

**Policies**

- 4.3.1.a Strive to substitute food/agricultural product imports with a reliable supply of locally-produced food and agricultural products.
- 4.3.1.c Encourage growing a diverse variety of crops and livestock to ensure the stewardship of our land while safeguarding consumer safety.

**Objective**

- 4.3.2 Maintain or increase agriculture's share of the total island economy.

**Policies**

- 4.3.2.a Encourage the export of the island's agricultural products to offshore markets.
- 4.3.2.c Encourage the continued viability of sugar cane production, or other agricultural crops, in central Maui and all of Maui Island.

**Objective**

- 4.3.3 Expand diversified agriculture production at an average annual rate of 4 percent.

**Policies**

- 4.3.3.a Promote the development of locally-grown and ecologically-sound biofuels, aquaculture, and forest products.

**Agricultural Lands**

**Goal**

- 7.1 Maui will have a prosperous agricultural industry and will protect agricultural lands.

**Objective**

- 7.1.1 Significantly reduce the loss of productive agricultural lands.

**Policies**

- 7.1.1.a Allow, where appropriate, the clustering of development on agricultural lands when approved as a CSD [Conservation Site Design] plan or similar approval mechanism.
- 7.1.1.b Require, where appropriate, the review and approval of CSD plans prior to the subdivision of agricultural land.

- 7.1.1.c Discourage developing or subdividing productive agricultural lands for residential uses in which the residence would be the primary use and any agricultural activities would be secondary uses.
- 7.1.1.e Focus urban growth, to the extent practicable, away from productive and important agricultural lands.
- 7.1.1.f Strongly discourage the conversion of productive and important agricultural lands (such as sugar, pineapple, and other produce lands) to rural or urban use, unless justified during the General Plan update, or when other overriding factors are present.
- 7.1.1.h Provide incentives for landowners to preserve and protect agricultural lands from development through the use of TDR/PDR, tax credits, easement programs, or similar means.
- 7.1.1.j Require all major developments adjacent to agricultural lands to provide an appropriate and site-specific agricultural protection buffer as part of a required site plan.

### **Directed Growth Plan**

#### **Rural Growth Area, Policies**

- 8.2.d All development within rural growth areas should avoid encroachment upon prime agricultural land.

#### **Wailuku-Kahului**

As shown in Figure 6, Pu‘unani is within the Growth Area for Wailuku, with a portion within the Urban Boundary and a portion within the Rural Boundary.

Attn.: Mr. Earl Matsukawa, Project Manager

Mr. Earl Matsukawa and representatives of Wilson Okamoto Corporation:

The U.S. Fish and Wildlife Service (Service) is providing this letter in response to your request for early consultation in relation an Environmental Impact Statement (EIS) Preparation Notice for a proposed lease of State of Hawaii waters in the Nāhiku, Keanae, Honomanu and Huelo license areas of Maui, Hawaii, pursuant to Hawaii Revised Statutes Chapter 343 (HRS 343). This letter has been prepared under the authority of and in accordance with provisions of the Endangered Species Act (ESA) of 1973 [16 U.S.C. 1531 *et seq.*; 87 Stat. 884]. These comments are also consistent with the National Environmental Policy Act of 1969 [42 U.S.C. 4321 *et seq.*; 83 Stat. 852], as amended, and other authorities mandating the Service's review of projects and provision of technical assistance to conserve trust resources.

#### Proposed Action

The proposed action involves diversion of flows from 31 perennial streams on the north flank of the Haleakala volcano on the eastern section of Maui island, Hawaii (referred to subsequently as "East Maui"). These stream flows originate from four separate license areas running from east to west along the mountain as follows: Nāhiku, with an area of approximately 10,111 acres; Keanae, with an area of approximately 10,768 acres; Honomanu, with an area of approximately 3,381 acres; and Huelo, with an area of approximately 8,753 acres. In aggregate, these license areas comprise approximately 33,013 acres, or 51.6 square miles, much of it covered in native rain forest vegetation and inhabited by hundreds of native species, many of them endemic to the island of Maui, and some listed as Threatened or Endangered under the ESA. The diverted stream flows will be captured by the existing East Maui Irrigation Aqueduct System (referred to

subsequently as the "EMI system"), which consists of 388 separate intake structures, 24 miles of ditches, 50 miles of tunnels, 12 inverted siphons, and numerous other small intakes, pipes and flumes. This system is owned by the East Maui Irrigation Company, Limited (EMI), a wholly owned subsidiary of Alexander & Baldwin, Inc. (A&B), and has operated in various forms since 1878 (Wilcox 1996).

This system is currently authorized to divert up to 80 million gallons of water per day (80 mgd) based on a one-year revocable permit approved by the State of Hawaii's Board of Land and Natural Resources (BLNR) on December 9, 2016. Through the proposed action, A&B now seeks to obtain a long-term 30-year lease pursuant to Hawaii Revised Statutes (HRS) 171-58c for the "right, privilege, and authority to enter, and go upon" the four lease areas noted above "for the purpose of developing, diverting, transporting and using government-owned waters." In addition, the proposed action will involve access to State of Hawaii lands in order to maintain and repair existing roads and trails used as part of the EMI system. It is proposed that the waters diverted from the 31 streams on East Maui will be used to irrigate 26,600 acres of agricultural lands in central Maui owned by A&B and formerly devoted to sugarcane plantation use through its subsidiary Hawaiian Commercial & Sugar (HC&S), as well as to maintain current service to the Maui County Department of Water Supply (which also supplies the Kula Agricultural Park). The applicant has agreed that the proposed lease will not allow diversion of water in excess of the amount allowed under a set of Interim Instream Flow Standards that are currently pending before the State Commission on Water Resource Management (CWRM).

As a condition of this lease application, A&B was instructed by the BLNR on April 14, 2016 to produce a Scope of Work for the preparation of an EIS pursuant to HRS Chapter 343, the State of Hawaii's environmental review law. This Scope of Work was submitted to the BLNR on June 9, 2016, and accepted by the Board on July 8, 2016, with a request that A&B proceed with the preparation of an EIS "in as expeditious a manner as possible." It is the notice of intent to prepare this EIS which has triggered the current request for early consultation with the Service.

#### Background

Construction on what would eventually become the modern EMI system began in 1876, and was basically complete by 1923. Throughout this progression of development the ditch systems were extended progressively eastward along the northern flank of Haleakala, eventually reaching their current most eastward terminus at Makapipi Stream near Nāhiku. For the past 93 years, the EMI system has thus represented a highly integrated water catchment system that diverts the majority of stream runoff from the north side of Haleakala to the agricultural lands of central Maui. At this time the EMI system represents the largest privately owned water company in the United States, and its Waioala Canal has a higher median flow than any natural river in the state of Hawaii (Wilcox 1996). The total delivery capacity of the system in its current configuration is 445 mgd, and during the period when the HC&S plantation was in operation the average daily delivery was 160 mgd. In addition to the EMI system, HC&S has also developed a set of

groundwater wells that can supply up to 144 mgd of additional water. In total, at maximum output, it appears that the water delivery system available to HC&S can therefore provide up to 590 mgd.

The EMI system was operated under long-term licenses for the four license areas mentioned previously until 1986, when the last of these leases expired. From that point onward, the State of Hawaii has issued the company one-year revocable permits for continued diversion. On May 14, 2001, A&B, the owner of the system, filed for a 30 year long-term lease in the four license areas. This action was opposed by a number of groups, who requested a contested case hearing on the matter, and establishment of Interim Instream Flow Standards (IIFS) for 27 of the 40 officially recognized streams lying within the license areas EMI is seeking to divert from. As a consequence of this, the BLNR deferred action on the long-term lease, but continued to approve the existing revocable permits in a "holdover" status on a month-to-month basis, pending resolution of the dispute, a practice that continues to the present time. The IIFS petitions, which are still pending before CWRM, have the potential to significantly influence the amount of water that the EMI system is allowed to divert from these license areas. The contested case hearing on the 30-year lease proposed by A&B has been in abeyance pending CWRM action on the IIFS petitions, and the completion of the proposed EIS under HRS 343, but will resume on January 9, 2017.

On December 9, 2016, A&B went before the BLNR for approval of their current holdover permit, asking permission to divert 100 mgd. After considerable public testimony and an executive session, the Board granted the holdover permit, but capped the allowed diversion at 80 mgd. This amount of water is half of the EMI system's historical median delivery volume when the HC&S plantation was in operation, and only 18 percent of the system's maximum delivery capacity. Significant questions thus arise regarding the future allocation of water previously diverted by this system to instream versus off stream uses; the license areas in which future diversions will occur; the total volume of water that will need to be diverted to serve the current and reasonably projected needs of Maui in the near term; the period of time over which such future diversions will be permitted before being re-evaluated; and the ecological consequences of these decisions.

#### Anticipated Impacts

The EIS Preparation Notice provided to the Service indicates that EMI intends to request a 30-year long term lease to divert 100 mgd for agricultural uses in central Maui, and to continue service to the Maui Department of Water Supply, which supplies drinking water to many of the island's citizens. The Service would note that the amount of diversion proposed is 20 percent in excess of that granted to A&B in the holdover permit approved by the BLNR on December 16, 2016. It is also five times more than the amount of water that A&B is currently taking from East Maui, according to its opening brief filed in October 2016 for the resumption of the IIFS contested case hearing for the 27 streams in the four license areas under consideration. In that

document, A&B states that it is currently diverting only 20-25 mgd, primarily for basic land maintenance uses including dust control and firefighting, that no diversions are occurring in the Nahiku or Keanae license areas, and that the previously diverted flow volume is now being returned to various streams in these sectors. Therefore, resumption of diversions at a rate of 100 mgd would represent a significant increase over currently prevailing rates, with associated ecological consequences.

The long history of stream diversions by the EMI system on East Maui has created an array of impacts to trust resources, including both the native stream biota, other species which inhabit the adjacent upland forests, and nearshore marine ecosystems that rely on streams for nutrient inputs. Several native stream-associated insect species occurring on East Maui water lease areas are now listed under the Endangered Species Act, specifically the damselflies *Megalagrion pacificum*, *Megalagrion nesiotex*, and *Megalagrion xanthomelas*, all three designated as Endangered. The first mentioned species breeds in stream pools and side channels, with adults patrolling the margins of the stream corridor, and therefore suffers direct impacts from loss of habitat linked to diminished stream flows. The breeding habitats of the second mentioned species are not known, but the adults also utilize the stream corridor, and are not present in areas where diversions have created dry streambeds in the place of a formerly flowing channel. The third mentioned species breeds in pools along stream terminal reaches, and although not currently known from windward East Maui, has the potential to occur there. Higher rates of diversion will therefore lead to higher rates of direct impact to all these listed species.

In addition, based on information provided in the EIS scoping packet and pertinent information in our files, including data compiled by the Hawaii Biodiversity and Mapping Project, there are 9 listed birds, 2 listed reptiles, 1 listed mammal, 7 listed insects, and 21 listed plants with final designated Critical Habitat within or near the vicinity of the license areas proposed for diversion. These listed species are as follows:

| Birds   | Status     |
|---|------------|
| Band-rumped storm-petrel ( <i>Oceanodroma castro</i> )        | Endangered |
| Crested honeycreeper ( <i>Palmeria dolei</i> , 'akohelohe)    | Endangered |
| Hawaiian coot ( <i>Fulvia ulai</i> )                          | Endangered |
| Hawaiian duck ( <i>Anas wyvilliana</i> )                      | Endangered |
| Hawaiian goose or nene ( <i>Branta sandvicensis</i> )         | Endangered |
| Hawaiian petrel ( <i>Pterodroma phaeopygia sandvicensis</i> ) | Endangered |
| Hawaiian stilt ( <i>Himantopus mexicanus knudseni</i> )       | Endangered |
| Maui parrotbill ( <i>Pseudonestor xanthophrys</i> , kiwiku)   | Endangered |
| Newell's shearwater ( <i>Puffinus auricularis newelli</i> )   | Threatened |
| Reptiles  | Status     |
| Green sea turtle ( <i>Chelonia mydas</i> )                    | Endangered |
| Hawksbill sea turtle ( <i>Eretmochelys imbricata</i> )        | Endangered |

period than is currently being requested, which will allow more regular assessment of evolving societal demands and ecological impacts. Once again, the Service recommends that multiple lease length alternatives be analyzed in this regard.

*Amount of Water to be Diverted* – The EIS should examine in detail the current level of water diversion in the EMI system, the environmental impacts of diversion, and the subsequent uses of the diverted water, including the following:

- 1) The degree of loss that is sustained through seepage along the system as a whole or in its various components. The EIS should identify those individual ditches or structures with the highest seepage rates, and whether these can be repaired, bypassed, or retired from service in order to render the diversion more efficient, and reserve the maximum amount of water for aquatic ecosystems and their associated native species.
- 2) The environmental impacts of alternative diversion volumes, including the current volume of 25 mgd as stated in the recent A&B contested case opening brief, a higher volume of 50 mgd that is double the current rate, the 80 mgd currently mandated by the BLNR, and the 100 mgd proposed by A&B. The impacts assessed should include the degree to which the diversion structures may represent barriers to upstream or downstream faunal passage of native Hawaiian fishes and other migratory stream biota.

- 3) The actual uses to which the diverted water is being put, and the reasonably foreseeable changes in such demand over varying time spans, as discussed above in regard to diversified agriculture. The Service maintains that proposed amounts of stream diversion should not be predicated on speculative future use at the expense of current ecosystem services and integrity, but should instead be fully justified based on robust data and economic models. If future demand justifies additional off-stream diversion, the current law allows A&B to petition CWRM for further allocations of water at any point in the future. By contrast, the Service does not support locking in excessive off-stream allocations for prolonged periods of time in advance of proven demand. The Service notes that natural resources are defined as a public trust under Article 11, Section 1 of the State of Hawaii Constitution, and that the State Water Code (HRS 174C) specifically mandates that public trust uses such as minimum instream flows for ecological integrity and traditional cultural practices must be fully addressed before off-stream allocations can be granted. The Service also notes that under HRS 174C, agricultural diversions are not considered a public trust use. As stated by the Hawaii State Supreme Court in its *Waiahole Ditch* decision of August 22, 2000: “Although its purpose has evolved over time, the public trust has never been understood to safeguard rights of exclusive use for private commercial gain.”

- 4) The degree to which water from other sources available to A&B, specifically pumped wells, can be substituted for water diverted from streams, thus significantly reducing impacts to stream ecosystems. With its currently installed well capacity of 145 mgd, it appears that all current and future uses projected by A&B could be served by these sources, and the use of well water should thus be considered as an alternative.

*Lease Areas Subject to Diversion* – The EIS should evaluate whether diversions from particular water lease areas will have higher environmental impacts than diversions from others:

- 1) As noted previously, on the whole the Keanae and Nahiku lease areas support a greater extent of native forest and streams with higher levels of native biodiversity than do the Huelo and Honomanu license areas. Therefore, the EIS should examine alternatives that involve curtailing diversion from either one or two of these lease areas.
- 2) The EIS should evaluate the comparative environmental impacts and benefits of fully restoring flow to some stream systems while completely diverting others, versus restoring some level of base flow to all streams impacted by the EMI system.

*Impacts to Federally Listed Species and their Recovery* – The EIS should evaluate in detail the potential direct and indirect impacts to federally listed species of plants, birds, bats and insects occurring in the four water license areas on windward East Maui, including:

- 1) The direct effects of stream flow reduction or restoration on native *Megalagrion* damselflies, and whether the proposed diversions will impede the recovery of these species.
- 2) The indirect effects of stream flow reduction or restoration on native forest birds, and whether additional diversion rates above those currently prevailing will result in additional risk to these populations.
- 3) The degree to which current and future maintenance activities necessary to keep the EMI system functional will impact ESA-listed plants, birds or bats.

#### Summary

In summary, the Service recommends that the EIS consider the following alternatives:

- 1) Alternative leasing periods shorter than that currently proposed, including 5, 15 and 30 years.
- 2) Alternative diversion volumes less than that currently proposed, including 25, 50, 80 and 100 mgd.

- 3) Alternative use of pumped well water in place of diverted stream water.
- 4) Alternative geographical diversion scenarios in regard to particular water lease areas, including termination of diversions from the Nahiku and/or Keanae water lease areas.

The Service also recommends that the EIS make specific reference to how the proposed diversions may affect federally listed plant, bird, bat and insect species occurring in the four water lease areas under consideration.

The Service also notes that if there is a federal action agency funding, permitting, or assisting in the implementation of this project, we recommend in addition to compliance under HRS 343, that the agency consult with the Service to address potential project impacts to listed species pursuant to section 7(a)(2) of the Endangered Species Act. If there is no federal action agency associated with the project, but impacts to listed species cannot be fully avoided, the project should coordinate with the Service directly pursuant to section 10 (a)(1)(B) of the Endangered Species Act.

The Service appreciates the opportunity to comment on this EIS Preparation Notice. If you have any questions regarding this letter, please contact Fish and Wildlife Biologist Dan Polhemus by telephone at (808) 792-9415 or by electronic mail at [dan\\_polhemus@fws.gov](mailto:dan_polhemus@fws.gov), or alternately Fish and Wildlife Biologist Michelle Bogardus by telephone at (808) 792-9473 or by electronic mail at [michelle\\_bogardus@fws.gov](mailto:michelle_bogardus@fws.gov)

Sincerely,

*Mary M. Abrams*

Subject: Environmental Impact Statement  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Dr. Abrams:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas. The Fish and Wildlife Service provided early consultation comments by letter dated December 21, 2016, which was prior to the publication of the EISPN on February 8, 2017. Your agency did not provide written comments on the EISPN. We acknowledge your comments and concerns, which were considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments and this response has been appended to the Draft EIS in Appendix J.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui, which are now owned by Mahi Pono and planned for diversified agriculture.
2. Chapter 4 of the Draft EIS and the Agricultural and Related Economic Impacts study (Appendix I), and the Economic and Fiscal Impact Study (Appendix H), describe historical baselines in terms of a period of typical sugar operations (between 1987 and 2006), and more recent sugar operations (between 2008 and 2013). During these periods, average surface water deliveries to the Central Maui agricultural fields were approximately 156 mgd and 114 mgd, respectively.

3. As described in the Draft EIS, after taking into account the requirements of the Interim Instream Flow Standards under the Commission on Water Resource Management's Decision and Order dated June 20, 2018 (CWRM D&O), it is estimated that the amount of water that can be diverted from the License Area is approximately 87.95 mgd, with potentially an additional 4.37 mgd available for diversion from lands outside of the Lease Area.
4. This significant reduction in surface water diversions means there will be less groundwater that can be pumped from the groundwater wells in the Central Maui fields. Contrary to your statement that the existing groundwater wells in the Central Maui fields can supply up to 144 mgd, the average groundwater pumping during the period between 1987 and 2006 was 42.5 mgd, and between 2008 and 2013 was 69.90 mgd.
5. The diversified agriculture plan proposed by Mahi Pono includes crops that are far less tolerant to brackish water than sugarcane. Taking into account the reduction in the amount of surface water diversions, the diversified agricultural plan described in the Draft EIS anticipates being able to pump only approximately 16 mgd of brackish groundwater to supplement the surface water supply provided through the EMI Aqueduct System. A discussion of sustainable yield and groundwater resources is provided in Section 4.2.2 of the Draft EIS. The use of East Maui surface water to irrigate the Central Maui fields has long supplemented the underlying aquifers, and drilling additional groundwater wells does not appear to be a feasible or environmentally sound option.
6. A discussion of the three native damselflies (Megalagrion xanthomelas, Megalagrion pacificum, and Megalagrion nesiotis) and the mosquito (Culex quinquefasciatus) can be found in Sections 4.4 and 4.2.1 of the Draft EIS and in the technical studies appended the Draft EIS. Specifically, the Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A) and the Terrestrial and Flora and Fauna Report (See Appendix C). The Terrestrial and Flora and Fauna Report also provides information on listed species and applicable areas of critical habitat (See Appendix B).
7. The Draft EIS includes in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action, including alternative lease duration and diversion volume. It is believed that a shorter Water Lease term would derail development of the farm plan and the conversion of the Central Maui lands to diversified agriculture because of the risk of not being able to farm for a long enough period to recover the required planned investment. Conversely, the longer the term of the Water Lease, the greater the beneficial agricultural and economic impacts because of the certainty that comes from a long-term lease, which could encourage greater investment in long-term improvements. See Draft EIS Appendix I (Agricultural and Related Economic Impacts) and Draft EIS Chapter 3.

10238-02  
Letter to Mary M. Abrams, Ph.D.  
Page 3  
September 23, 2019

8. The Draft EIS provides an analysis of permitting diversions in an amount up to what is permitted under the CWRM D&O as well as lesser amounts. See Draft EIS Appendix H (Economic and Fiscal Impact Study), Appendix I (Agricultural and Related Economic Impacts), and Draft EIS Chapter 3. The farm plan for the Central Maui fields was formulated to be in compliance with the CWRM D&O. For each 1 mgd reduction in the amount of surface water permitted under the CWRM D&O, there would be a reduction of some 173 acres of land in crops in Central Maui and 24.51 acres of crops in Upcountry Maui.

9. Some key between the Proposed Action and the no Water Lease alternative (i.e., an alternative whereby water would be diverted only from private lands) would be as follows:

- About 11,570 acres more green open space in the form of farms and irrigated pastures (20,650 acres vs 9,080 acres).
- About three times as much food production, including greater food self-sufficiency and more exports.
- About \$206 million per year more in direct and indirect sales (\$329.5 million vs \$123.5 million).
- About 750 more direct and indirect jobs (1,140 jobs vs 390 jobs).
- About \$29.7 million per year more in total payroll (\$45.3 million vs \$15.6 million).
- About \$2.9 million per year more in State and County tax revenues (\$4.6 million vs \$1.7 million).

It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

  
Earl Matsukawa, AICP

Vice President, Director of Planning

Dear Mr. Matsukawa:

SUBJECT: Early Consultation for the an Environmental Impact Statement Preparation  
Notice for Proposed Lease for the Nāhiku, Kēanā, Honomanu and Huelo  
License Areas

Thank you for the opportunity to review and comment on the subject matter. The Department of Land and Natural Resources' (DLNR) Land Division distributed or made available a copy of your report pertaining to the subject matter to DLNR Divisions for their review and comments.

At this time, enclosed are comments from the (a) Engineering Division, (b) Division of Forestry and Wildlife, (c) Land Division Administration, (d) Maui Island Advisory Council – Nā Ala Hele, Trails & Access Program, (e) Land Division – Maui District, and (f) Commission on Water Resource Management on the subject matter. Should you have any questions, please feel free to call Lydia Morikawa at 587-0410. Thank you.

Sincerely,

  
Russell Y. Tsuji  
Land Administrator

COMMENTS

The rules and regulations of the National Flood Insurance Program (NFIP), Title 44 of the Code of Federal Regulations (44CFR), are in effect when development falls within a designated Flood Hazard.

The owner of the project property and/or their representative is responsible to research the Flood Hazard Zone designation for the project. Flood Hazard Zone designations can be found using the Flood Insurance Rate Map (FIRM), which can be accessed through the Flood Hazard Assessment Tool (FHAT) (<http://gis.hawaii.nfip.org/FHAT>).

Be advised that 44CFR reflects the minimum standards as set forth by the NFIP. Local community flood ordinances may take precedence over the NFIP standards as local designations prove to be more restrictive. If there are questions regarding the local flood ordinances, please contact the applicable County NFIP Coordinators below:

- o Oahu: City and County of Honolulu, Department of Planning and Permitting (808) 768-8098.
- o Hawaii Island: County of Hawaii, Department of Public Works (808) 961-8327.
- o Maui/Molokai/Lanai County of Maui, Department of Planning (808) 270-7253.
- o Kauai: County of Kauai, Department of Public Works (808) 241-4846.

Signed:

CARTY S. CHANG, CHIEF ENGINEER

Subject: Environmental Impact Statement  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Mr. Chang:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas. You provided early consultation comments by letter dated December 5, 2016, which was prior to the publication of the Environmental Impact Statement Preparation Notice (EISPN) on February 8, 2017. The Engineering Division did not provide written comments on the EISPN. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix J.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. Sections 3.4.7 and 4.3.3 of the Draft EIS assess the flood hazard impacts associated with the Proposed Action.
2. Chapter 4 of the Draft EIS includes an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full or partial restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of Streams and the Ocean Water Chemistry (See Appendix A); Terrestrial and Flora and Fauna Report (See Appendix B); Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Steam Habitat Evaluation Procedure (HSHEP) Model (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment

(See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

SUBJECT: EARLY CONSULTATION FOR EIS PREPARATION NOTICE FOR  
PROPOSED LEASE FOR THE NAHIKU, KEANAE, HONOMANU, AND  
HUELO LICENSE AREAS

ds

Thank you for the opportunity to comment on the proposed lease for the Nāhiku, Keʻānae, Honomanū, and Huelo License Areas by Alexander and Baldwin, Inc. and East Maui Irrigation Company, Limited (A&B). The associated application filed for the sale of lease of state lands for the purpose of delivering water from those lands to users includes the state lands managed/designated to the Division of Forestry and Wildlife comprising the Koʻolau Forest Reserve, established by governor's proclamations of 1905 and 1907, and the Hanawi Natural Area Reserve, established by executive order 3351 (1986) (hereinafter, the Reserves). Those Reserves are managed by the Division for purposes consistent with their establishment under state law, including protection of watersheds, natural resources, and public access. Further, the Reserves are public trust lands subject to constitutional and statutory provisions for public use, including hunting, gathering, recreational, subsistence and cultural use.

The Division is concerned that the proposed lease of the Reserves includes public lands well in excess of what is necessary to ensure the effective delivery of the water, and that the requested lease would unnecessarily encumber the Reserves, potentially impacting the purpose and public use of those areas. Thus the Division recommends that the areas to be conveyed for a water license be done so through a land agreement that is limited to the infrastructure required for maintenance and conveyance of water, and that the terms of any agreement established for the delivery of water ensure unrestricted public access to the reserves and any state owned roads and trails.

The Division appreciates the long-standing and productive relationship we have had with A&B and the adjacent landowners of East Maui for the responsible stewardship of watershed lands and natural resources of this region. This partnership has facilitated effective management and ensured that the natural resources of the East Maui watersheds are protected for the benefit of

Russell Tsuji, early consultation comments  
Page 2

future generations. We look forward to productive discussions with A&B regarding this request and determining the appropriate land disposition for the proposed water conveyance. Please contact Scott Fretz, Maui Branch Manager, at (808) 984-8100 or by email at [Scott.Fretz@hawaii.gov](mailto:Scott.Fretz@hawaii.gov) if you have any questions or would like to follow-up on our comments. Mahalo

Department of Land and Natural Resources  
1151 Punchbowl Street  
Honolulu, HI 96813

Subject: Environmental Impact Statement  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Mr. Smith:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas. On behalf of the Division of Forestry and Wildlife (DOFAW), you provided early consultation comments by letter dated December 19, 2016 and January 20, 2017, which was prior to the publication of the EISP. On February 8, 2017, DOFAW did not provide written comments on the EISP. We acknowledge your comments and concerns which were considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments and this response has been appended to the Draft EIS in Appendix J.

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui, which are now owned by Mahi Pono and planned for diversified agriculture.
2. Your comment was taken into consideration in the formulation of the analysis of alternatives to the Proposed Action. You expressed concerns that the land area proposed for the Water Lease, consisting of some 33,000 acres of State land, and which land includes the Hanawi Natural Area Reserve and the Ko'olau Forest Reserve, is in excess of the amount of land needed to ensure effective delivery of the water through the EMI Aqueduct System. You recommended that any land agreement with the State be limited to the infrastructure required for the maintenance and

conveyance of the water through the EMI Aqueduct System. You also recommended that there be unrestricted public access to the two Reserves and any State-owned roads and trails. The Proposed Action as described in the Draft EIS is consistent with the May 14, 2001 request for a Water Lease covering some 33,012 acres of land.

On May 14, 2001, A&B and EMI submitted a request that the BLNR offer a long-term lease at public auction for the right, privilege and authority to enter and go upon State-owned lands at Ko'olau Forest Reserve and Hanawi Natural Area Reserve, for the purposes of developing, diverting, transporting and using government-owned waters. The total lease area as described in that submittal was 33,012.91 acres (Lease Area), but was noted as being subject to review and confirmation by the Department of Accounting and General Services, Survey Division. The submittal noted, among other things, that the lessee would be required to maintain roads, trails, and the EMI Aqueduct System, and that public hunting would be allowed, subject to reasonable restrictions to be documented in the lease.

Shortly after A&B submitted the request, the Coalition to Protect East Maui Water, Maui Tomorrow Foundation, and Nā Moku Aupuni O Ko'olau Hui requested a contested case hearing on the proposed Water Lease. Pending the outcome of the contested case, which is still unresolved, the BLNR deferred action on the A&B request and granted holdover revocable permits to A&B. Since that time, the BLNR has authorized holdover and/or annual revocable permits for this land and the use of water, with the latest being approved on November 9, 2018. The revocable permits cover the proposed Lease Area of some 33,012.91 acres, and the rental amount due to the State under the November 2018 revocable permit approval is \$19,247.02 per month (\$230,964.24 annually).

3. Although A&B holds revocable permits over the proposed Lease Area, as described in Section 4.8 of the Draft EIS, hiking and hunting are permitted uses within the proposed Lease Area. Hiking access is limited to hiking clubs, and access to the Lease Area for hiking is acquired through a hiking waiver from EMI. The public hunting units within the Ko'olau Forest Reserve are within the portions of proposed Lease Area. As you know, the Division of Forestry and Wildlife administers these hunting areas. In order to hunt within those portions of the proposed Lease Area, hunters must obtain a license from the DLNR and a hunting waiver from EMI. Access to the hunting areas is managed by EMI through eight existing EMI access roads.
4. You indicated that there should be unrestricted public access within the proposed Lease Area and to any roads or trails owned by the State within the Lease Area. Although this approach differs from the Proposed Action as described in the Draft EIS, the alternative of reducing the land area under the proposed Water Lease to a smaller area reasonably necessary to operate the EMI Aqueduct System with appropriate buffers to ensure public safety and the security of the system, while not reducing access to the water under the Water Lease, has been considered in the Draft EIS. See Chapter 3. Access that includes sufficient buffers to prevent members of the public

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

001980

from accessing the system could be consistent with the objectives of the Proposed Action. (objectives of the Proposed Action are discussed in Section 1.2 of the Draft EIS), as long as access to and the safety of the water source and the system is not affected and the water volume remains the same as under the Proposed Action.

5. As discussed in Chapter 3 of the Draft EIS, under this "Modified Lease Area" scenario it is assumed that access to the State lands would be managed solely by the State. Similarly, the roads and trails outside of the modified/reduced Lease Area would be managed and maintained by the State. Potential environmental impacts of this Modified Lease Area alternative was assessed in the Terrestrial Flora and Fauna Technical Report for the Proposed East Maui Water Lease (Appendix C) and the Archaeological Literature Review and Field Inspection (Appendix E), and the analysis determined that increased or unfettered public access into the Lease Area could result in the introduction and spreading of invasive species and damage to historic resources.

6. Chapter 5 of the Draft EIS addresses relationship of the Proposed Action to applicable land use plans and policies. Relevant provisions of Hawaii Revised Statutes Chapters 183 and 195 and related administrative rules are included in Chapter 5.

7. Chapter 4 of the Draft EIS includes an assessment of the existing environment and impacts of the Proposed Action, including native ecosystems, resource management, endangered species, drainage and soil management, cultural resources, public access, and climate change.

8. Various technical studies are appended the Draft EIS and provide detailed examinations or resources and potential impacts, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I)

It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

## MEMORANDUM

**TO:** Russell Y. Tsuji, Administrator

**THROUGH:** Kevin E. Moore, Assistant Administrator

**FROM:** Richard T. Howard, Land Agent

**SUBJECT:** Proposed Water Lease for the Nahiku, Keanae, H  
License Areas - Environmental Impact Statement

I have reviewed the subject Environmental Impact Statement Preparation Notice (EISP/N), which presents the goal and objective of Alexander & Baldwin's Proposed Action, i.e. a 30-year water lease for the continued right, privilege, and authority to enter and go upon State lands for the purpose of developing, diverting, transporting, and using government owned waters through the EMI Aqueduct System.

The EMI Aqueduct System, consisting of 388 separate intakes, 24 miles of ditches and 50 miles of tunnels, as well as numerous small dams, intakes pipes and flumes, crosses both State lands and those owned by East Maui Irrigation Company. The State lands are situated in four license areas, Nahiku, Keanehe, Honomahu and Huelo, as shown on Table 1.

RECEIVED  
LAND DIVISION  
2016 DEC 21 AM 8:55  
DEPT. OF LAND &  
NATURAL RESOURCES  
STATE OF HAWAII

Russell Y. Tsuji, Administrator

Table 1

| License Area | TMK                | Acres      | Encumbrances                              |
|--------------|--------------------|------------|---|
| Nahiku       | (2) 1-2-004:005    | 3,087.070  | EO3351, Governor's Proclamation of 5/2/38 |
|              | (2) 1-2-004:007Por | 4,745.000  | EO3351, Governor's Proclamation of 5/2/38 |
| Keama        | (2) 1-1-002:002    | 13,007.147 | Governor's Proclamation of 5/2/38         |
| Honomanu     | (2) 1-1-001:044    | 3,381.000  | Governor's Proclamation of 5/2/38, EO3868 |
| Huelo        | (2) 1-1-001:050    | 2,121.850  | Unencumbered                              |
|              | (2) 2-9-014:001    | 6,585.140  | Unencumbered                              |
|              | (2) 2-9-014:005    | 24.000     | Unencumbered                              |
|              | (2) 2-9-014:012    | 1.600      | Unencumbered                              |
|              | (2) 2-9-014:011    | 3.500      | GL S-4596                                 |
|              | (2) 2-9-014:017    | 16.600     | Unencumbered                              |
|              |                    | 32,972.907 |   |

A Brief description of encumbrances follows:

- **E03351:** The set aside of 7,500 acres for the NARS. Fortunately, the irrigation ditch does not pass through the NARS (see attached maps), so no approvals from the NARS Commission will be necessary.
- **Governor's Proclamation of 5/23/38:** Modifies the boundaries and changes the area of the Ko'olau Forest Reserve. A submittal to withdraw 1,341 acres from the forest reserve and set aside to the DOT, Highways Division for highway improvements was approved by the Board of Land and Natural Resources on November 19, 2004, item D-34. The DOT was to provide the survey maps and description according to State DACS standards. According to the project status form entry of 6/16/11, Debra followed up with Cynthia Okinaka regarding the status of the maps and descriptions, which were outstanding.
- **E03868:** The set aside of .631 acres to the DOT, Highways Division for highway improvement purposes.
- **GL S-4593:** Grant of term easement to Gregory and Masako Westcott for ingress and egress purposes including the right to construct, reconstruct, use maintain and repair the roadway from 101/178 through 9/30/43.

Section 3.10.4 Parks and Recreation Facilities of the EISPN addresses the potential impacts the Proposed Action will have on public access to the license areas for hunting and hiking. It states:

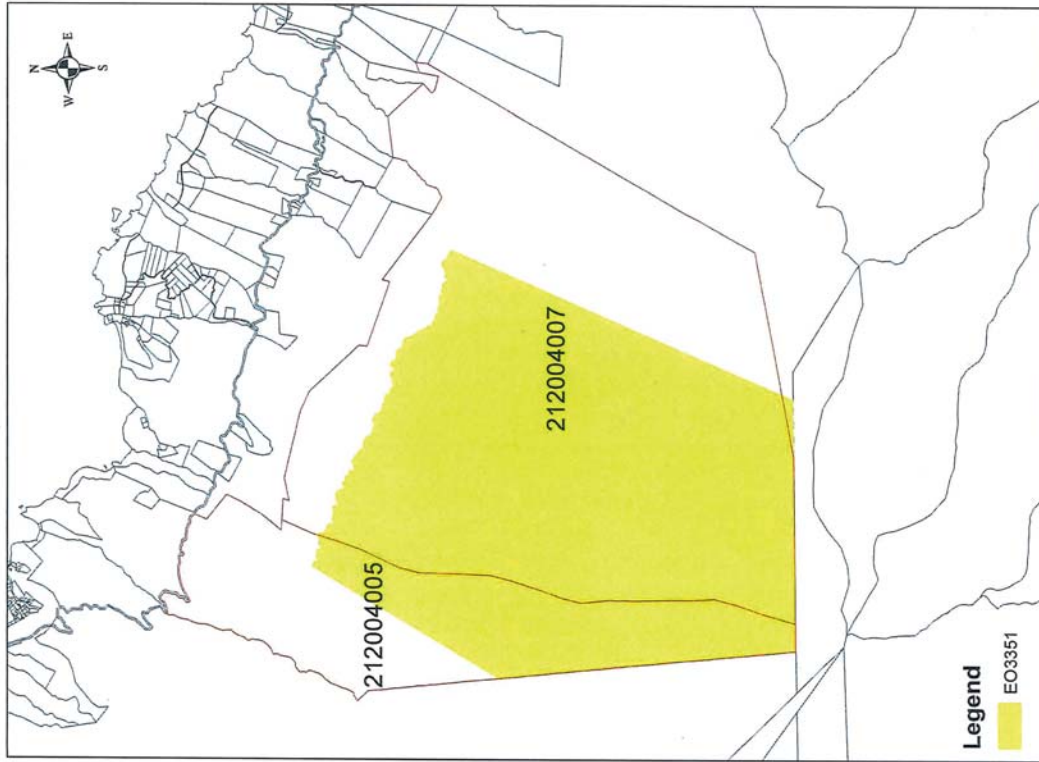

“Designated as a “Hunting Unit” by the Department of Land and Natural Resources, Division of Forestry and Wildlife, hunters with a license and an EMI permit/waiver are permitted to hunt within the Ko’olau Forest reserve on a year-round basis. Access to hunting grounds is by 4-wheel drive vehicles over existing access roads within the License Area and is regulated by a hunting club.”

With respect to hiking it says:

"Hiking on existing access roads is also permitted within the License Area, and is limited to hiking club activities to ensure the safety of individuals as well as to prevent vandalism to the existing ditch and tunnel system."

The EISPN does not anticipate any impacts on the parks and recreational facilities "as hunting and hiking access to the License area will be maintained under the issuance of a State Water Lease."

Alexander & Baldwin's preferred alternative for the Water Lease is to encumber approximately 32,972 acres of State land together with the right to divert, transport and use State owned water. A water lease and term easement for the EMI Aqueduct System is the more appropriate disposition. Pursuant to Section 171-11, a water lease and easement over the parcels located in the forest reserve will require the concurrence of the Division of Forestry and Wildlife and the Governor, in addition to Land Board approval. Finally, survey maps and descriptions of the ditch system, access roads and related facilities would be needed in order to process an easement for the system.

Subject: Environmental Impact Statement  
Proposed Lease (Water Lease) for the Nāhiku, Kē'anae, Honomanū  
and Huelo License Areas

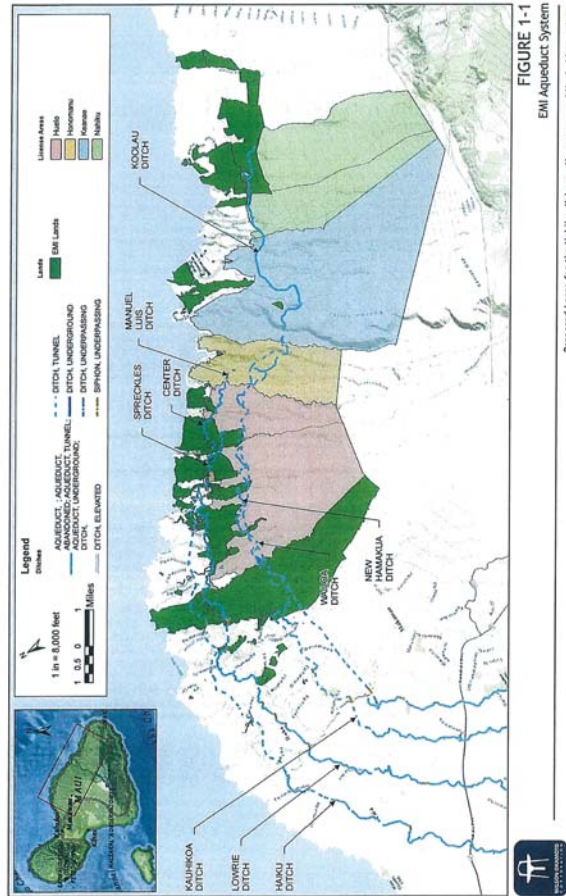

Dear Mr. Howard:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Kē'anae, Honomanū, and Huelo License Areas. Your office provided early consultation comments by letter dated December 16, 2016, which was prior to the publication of the EISP on February 8, 2017. Your office did not provide written comments on the EISP. We acknowledge your comments and concerns which were considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your early consultation comments has been appended to the Draft EIS in Appendix J.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Kē'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui, which are now owned by Mahi Pono and planned for diversified agriculture.
2. We acknowledge that the License Area includes lands set aside for the Hanawi Natural Area Reserve as well as lands within the Ko'olau Forest Reserve.
3. A description of hiking and hunting opportunities within the License Area is provided in Section 4.8 of the Draft EIS, which discusses recreational uses and park facilities located within the areas affected by the Proposed Action. The Proposed Action does not involve the curtailment of any existing hunting or hiking options within the License Area.

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

10238-02

Letter to Richard T. Howard, Land Agent

Page 2

September 23, 2019

4. We acknowledge that survey maps would be needed in order to process an easement for the EMI Aqueduct System. However, an easement authorizing the EMI Aqueduct System was already granted in 1938 between the Territory of Hawai'i and A&B.

5. Section 1.3.1 of the Draft EIS describes the EMI Aqueduct System. Maps of the EMI Aqueduct System are included in Chapter 2 of the Draft EIS.

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

Re: Early Consultation for the Preparation of an Environmental Impact Statement Preparation Notice  
Proposed Lease for the Nahiku, Keanae, Honomanu and Huelo License Areas East, Central, and  
Upcountry Maui, Hawaii

Dear Ms. Case:

The Na Ala Hele, Trail and Access Program's vision, goals and objectives has as its vision statement the following:

*"To develop, via the Na Ala Hele program, a trail and access network and management system which:*

- 1. Provides a broad range of recreational, cultural, religious, and subsistence opportunities for all of Hawaii's people and*
- 2. Helps to conserve Hawaii's cultural heritage and environment."*

In light of this vision, the Maui Island Na Ala Hele Advisory Council has the following concerns regarding the proposed lease:

1. We don't see the necessity to lease the entire Koolau Forest Reserve and Hanawi Natural Area parcels if only portions are needed for water transmission. We are deeply concerned about restriction of public access. We do recommend the license be for only delivery systems and infrastructure, including intakes, ditches, tunnels, dams, pipes and flumes. We would like to see shared use of all roads for multi-use purposes including, equestrian, hiking, biking, hunting and OHV use as appropriate.
2. We feel a 30-year lease is an inappropriate duration of time. A shorter timeframe is preferable.
3. As A&B has been leasing this land since 1886, we would like to see included in the Cultural Impact Assessment historic research and inventory on all the roads, trails and features because all such trails and roads are public access under the Highways Act of 1892.
4. We would strongly encourage the roads that go through EMI lands also be set aside as an easement for public use.

001985

DEPT. OF LAND &  
NATURAL RESOURCES  
STATE OF HAWAII

5. What is proposed in the lease is not consistent with the statutory purpose of the forest reserve system and the protection of natural resources including aquatic stream life and riparian ecosystems.
6. Streams in Hawaii have traditionally been used as linear open spaces for connecting recreational, educational, cultural and natural areas and therefore fit the definition of a greenway. Our concern is that these pathways are accessible to the public for the above uses and subsistence opportunities.

Sincerely,  
  
 Russell Reinertson, Chair  
 Maui Island Advisory Council

Subject: Environmental Impact Statement  
 Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
 and Huelo License Areas

Dear Mr. Reinertson:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and providing early consultation comments dated December 21, 2016, which was prior to the publication of the EISP on February 8, 2017 (Maui Na Ala Hele did not provide written comments on the EISP). We acknowledge those comments and concerns which were considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A copy of your letter has been appended to the Draft EIS in Appendix J.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui. These fields are now owned by Mahi Pono. Mahi Pono's farm plan includes cultivating the fields for diversified agriculture, substantially increasing the amount of local food production.
2. The Proposed Action contemplates a lease of 30 years. A shorter Water Lease term was considered as an alternative. However, it is believed that a shorter Water Lease term would derail development of the farm plan and the conversion of the Central Maui lands to diversified agriculture because of the risk of not being able to farm for a long enough period to recover the required planned investment. Conversely, the longer the term of the Water Lease, the greater the beneficial agricultural and economic impacts because of the certainty that comes from a long-term lease, which could encourage greater investment in long-term improvements. See Draft EIS Appendix I (Agricultural and Related Economic Impacts) and Draft EIS Chapter 3.

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

3. The Draft EIS includes in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action. On such alternative assessed is a reduction to the geographic extent of the proposed Lease Area to an area reasonably necessary to operate the EMI Aqueduct System with appropriate buffers to ensure public safety and the security of the system. Fully unrestricted public access is seen as a safety risk to the public and to the integrity of the EMI Aqueduct System. However, access that includes sufficient buffers to prevent members of the public from accessing the system could be consistent with the objectives of the Proposed Action. (Objectives of the Proposed Action are discussed in Section 1.2 of the Draft EIS). Potential environmental impacts of this Modified Lease Area alternative was assessed in the Terrestrial Flora and Fauna Technical Report for the Proposed East Maui Water Lease (Appendix C) and the Archaeological Literature Review and Field Inspection (Appendix E). Sections 3.4.14 and 4.8 of the Draft EIS discuss recreational resources, as well as access to such resources within the proposed Lease Area.

4. Cultural Surveys Hawai'i, Inc. prepared an archaeological report as well as a cultural impact assessment, which are summarized in Sections 4.5 and 4.6 of the Draft EIS, respectively. These reports are also appended in the Draft EIS (Appendices E and F, respectively).
5. Trutta and SWCA prepared reports in support of the Draft EIS assessing the impacts of the Proposed Action and alternatives on indigenous freshwater species, terrestrial flora and fauna, and invasive mosquitoes. The Draft EIS discusses the impacts of the Proposed Action to freshwater species in Section 4.2.1 and impacts to terrestrial flora and fauna in Sections 4.4.1 and 4.4.2. Both reports are appended to the Draft EIS (See Appendix B and Appendix C). Impacts to natural resources are discussed throughout Chapter 4.

Your letter and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental Quality Control website.

We appreciate your agency's interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP  
Vice President, Director of Planning

Memorandum

To: Russell Tsuji, Land Administrator  
From: Daniel Ornelas, Maui District Land Agent  
Subject: Early Consultation, Environmental Impact Statement Preparation Notice (EISP/N), Proposed Lease of Government Lands of East Maui, 33,000 acres (more or less); Nahiku, Keanae, Hoomanu, Huelo, Maui; TMK (2) 1-2-004:005 & 007, (2) 1-1-002:002, (2) 1-1-001:044 & 050, and (2) 2-9-014:001

This memo serves to document comments from the Maui District Land Office (MDLO) in response to review of the subject draft report received by memo dated November 29, 2016. Please be advised that comments are limited to current priority projects and does not reflect the broad range of responsibilities MDLO administers in regards to the disposition and management of government lands.

Recently, MDLO has been involved in the formulation of a development plan for 285 acres of government lands at Pulehunui, central Maui, situate at TMK (2) 3-8-008:001 por. The development plan, which includes the proposed Kakanilua Business Park, is intended to guide the use and development of parcel 001 amongst multiple stakeholders in the best interest of the State.

Currently, parcel 001 is under Revocable Permit S-7368 to Alexander and Baldwin, Inc. A portion of these lands were recently included into the Maui County Urban Growth Boundary which opens the opportunity to expand the range of authorized land uses from solely agriculture uses to M-1 and M-2 commercial and industrial uses.

A key to expanded use and successful development of the Kakanilua Business Park is the acquisition of suitable water resources. It is noted that there is an existing ditch onsite at parcel 001 that is fed by surface waters originating out of government lands in east Maui being considered for long term water lease.

As a result, the department may request from the Board of Land and Natural Resources (Board), that as a condition of any water lease being issued for government lands in east Maui, a sufficient amount of water be reserved to service the proposed Kakanilua Business Park.

Furthermore, the Land Division needs to ensure that it advises the DLNR Engineering Division of the need for water resources as they update the State Water Projects Plan that is scheduled for public hearings to be held on Maui island in mid-January, 2017.

Finally, please be advised that, MDLO has received comments from both the Maui Division of Forestry & Wildlife and the Maui Division of Aquatic Resources. Pursuant to review of their written concerns, there is a need for the applicant to provide a more in-depth discussion of current management activities related to road and ditch system use and maintenance, ongoing access agreements with third parties, and reasons for the request to lease all 33,000+ acres as opposed to a disposition of a license / easement for just the ditch and related road system. In other words, what are ongoing uses, costs, benefits, processes and impacts involved with leasing over 33,000 acres of government lands in east Maui.

Mahalo for allowing this opportunity to consider this request. If you have any questions, please call me at the Maui District Land Office at (808) 984-8103.

Enc.

Mr. Daniel Ornellas  
Maui District Land Agent  
Department of Land and Natural Resources  
54 High Street, Room 101  
Wailuku, Hawaii 96793

**Subject:** Environmental Impact Statement  
Proposed Lease (Water Lease) for the Nāhiku, Ke‘anae, Honomanū  
and Huelo License Areas

Dear Mr. Ornellas:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke‘anae, Honomanū, and Huelo License Areas. Your office provided early consultation comments by letter dated December 23, 2016, which was prior to the publication of the EISP/N on February 8, 2017. Your office did not provide written comments on the EISP/N. We acknowledge your comments and concerns which were considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai‘i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your early consultation comments and this response has been appended to the Draft EIS in Appendix J.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomāuā, and Huelo License Areas for the "*purpose of developing, diverting, transporting, and using government owned waters*" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui, which are now owned by Mahi Pono and planned for diversified agriculture.
2. TMK No. (2) 3-8-008:001 (por.) is not within the License Area of the Proposed Action.
3. RP S-7368 has been terminated.

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

10238-02  
Letter to Mr. Daniel Ornellas  
Page 2  
September 23, 2019

4. We acknowledge your comment that the Department of Land and Natural Resources may request that the BLNR impose a condition on the Water Lease that the lessee provide water to the proposed Kakanihā Business Park. The diversified agriculture farm plan presented in the Draft EIS was formulated to utilize the amount of water expected to be available for diversion after compliance with the Commission on Water Resources Management's Interim Instream Flow Standards Decision and Order, which was issued in June 2018, and after providing an estimated 7.1 million gallons a day to the County of Maui Department of Water Supply for the Upcountry Maui and Nahiku communities.

5. Regarding comments from the Maui Division of Forestry & Wildlife and the Maui Division of Aquatic Resources, Chapter 4 of the Draft EIS includes an assessment of the existing environment and impacts of the Proposed Action. Various technical studies are also appended the Draft EIS and provide detailed examinations, including: Assessment of Streams and the Ocean Water Chemistry (See Appendix A); Terrestrial and Flora and Fauna Report (See Appendix B); Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

6. Chapter 3 of the Draft EIS includes an evaluation of the reasonable alternatives to the Proposed Action, including discussion of a Water Lease with a more limited geographical scope.

It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

for the Nahiku, Keanae, Honomanu and Huelo License Areas

FILE NO.: RFD 4531.6  
TMK NO.: (2) various

Thank you for the opportunity to review the subject document. The Commission on Water Resource Management (CWARM) is the agency responsible for administering the State Water Code (Code). Under the Code, all waters of the State are held in trust for the benefit of the citizens of the State, therefore all water use is subject to legally protected water rights. CWARM strongly promotes the efficient use of Hawaii's water resources through conservation measures and appropriate resource management. For more information, please refer to the State Water Code, Chapter 174C, Hawaii Revised Statutes, and Hawaii Administrative Rules, Chapters 13-167 to 13-171. These documents are available via the Internet at <http://dlnr.hawaii.gov/cwrm>.

Our comments related to water resources are checked off below.

- ☐ 1. We recommend coordination with the county to incorporate this project into the county's Water Use and Development Plan. Please contact the respective Planning Department and/or Department of Water Supply for further information.
- ☐ 2. We recommend coordination with the Engineering Division of the State Department of Land and Natural Resources to incorporate this project into the State Water Projects Plan.
- ☐ 3. We recommend coordination with the Hawaii Department of Agriculture (HDOA) to incorporate the reclassification of agricultural zoned land and the redistribution of agricultural resources into the State's Agricultural Water Use and Development Plan (AWUDP). Please contact the HDOA for more information.
- ☐ 4. We recommend that water efficient fixtures be installed and water efficient practices implemented throughout the development to reduce the increased demand on the area's freshwater resources. Reducing the water usage of a home or building may earn credit towards Leadership in Energy and Environmental Design (LEED) certification. More information on LEED certification is available at <http://www.usgbc.org/leed>. A listing of fixtures certified by the EAP as having high water efficiency can be found at <http://www.epa.gov/watersense>.
- ☐ 5. We recommend the use of best management practices (BMP) for stormwater management to minimize the impact of the project to the existing area's hydrology while maintaining on-site infiltration and preventing polluted runoff from storm events. Stormwater management BMPs may earn credit toward LEED certification. More information on stormwater BMPs can be found at <http://planning.hawaii.gov/cwm/initiatives/low-impact-development/>
- ☐ 6. We recommend the use of alternative water sources, wherever practicable.
- ☐ 7. We recommend participating in the Hawaii Green Business Program, that assists and recognizes businesses that strive to operate in an environmentally and socially responsible manner. The program description can be found online at <http://energy.hawaii.gov/green-business-program>.
- ☐ 8. We recommend adopting landscape irrigation conservation best management practices endorsed by the Landscape Industry Council of Hawaii. These practices can be found online at

Mr. Russell Tsuji  
Page 2  
December 22, 2016

- [http://www.hawailscape.com/wp-content/uploads/2013/04/LICH\\_Irrigation\\_Conservation\\_BMPs.pdf](http://www.hawailscape.com/wp-content/uploads/2013/04/LICH_Irrigation_Conservation_BMPs.pdf).
- ☐ 9. There may be the potential for ground or surface water degradation/contamination and recommend that approvals for this project be conditioned upon a review by the State Department of Health and the developer's acceptance of any resulting requirements related to water quality.
  - ☐ 10. The proposed water supply source for the project is located in a designated water management area, and a Water Use Permit is required prior to use of water. The Water Use Permit may be conditioned on the requirement to use dual line water supply systems for new industrial and commercial developments.
  - ☐ 11. A Well Construction Permit(s) is (are) required before the commencement of any well construction work.
  - ☐ 12. A Pump Installation Permit(s) is (are) required before ground water is developed as a source of supply for the project.
  - ☐ 13. There is (are) well(s) located on or adjacent to this project. If wells are not planned to be used and will be affected by any new construction, they must be properly abandoned and sealed. A permit for well abandonment must be obtained.
  - ☐ 14. Ground-water withdrawals from this project may affect streamflows, which may require an instream flow standard amendment.
  - ☐ 15. A Stream Channel Alteration Permit(s) is (are) required before any alteration can be made to the bed and/or banks of a stream channel.
  - ☒ 16. A Stream Diversion Works Permit(s) is (are) required before any stream diversion works is constructed or altered.
  - ☒ 17. A Petition to Amend the Interim Instream Flow Standard is required for any new or expanded diversion(s) of surface water.
  - ☐ 18. The planned source of water for this project has not been identified in this report. Therefore, we cannot determine what permits or petitions are required from our office, or whether there are potential impacts to water resources.
- OTHER: ☒ The Commission on Water Resource Management (Commission) is requiring Stream Diversion Works Permit Applications be filed for all diversions that East Maui Irrigation Company (EMI) is planning to abandon. The Commission has also reopened Contested Case Hearing CCH-MA13-01 to address the end of sugar farming on Maui and its impact upon the interim instream flow standards for East Maui. Information on CCH-MA13-01 can be found on the Commission's website at: <http://dlnr.hawaii.gov/cwrm/newsevents/cch/cch-ma13-01/>.
- Additionally, the Commission had previously attempted to set interim instream flow standards through an administrative process that involved the compilation and analysis of best available information on specific East Maui streams. The historical record of that process is captured on the Commission's website at: <http://dlnr.hawaii.gov/cwrm/surfacewater/ifs/eastmaui/ifs/>.

If you have any questions, please contact Dean Uyeno of the Commission staff at 587-0234.

10238-02  
September 23, 2019

Dean D. Uyeno, Acting Deputy Director  
Commission on Water Resource Management  
Post Office Box 621  
Honolulu, HI 96809

Subject: Environmental Impact Statement  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Deputy Director Uyeno:

Thank you for the Commission on Water Resource Management's (CWRM) participation in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas. CWRM provided early consultation comments by letter dated December 22, 2016, which was prior to the publication of the EISP on February 8, 2017. CWRM did not provide written comments on the EISP. We acknowledge your comments and concerns which were considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your early consultation comments has been appended to the Draft EIS in Appendix J.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui, which are now owned by Mahi Pono and planned for diversified agriculture.
2. We acknowledge that a Stream Diversion Works Permit may be required before any stream diversions are constructed. We understand that a petition to amend the Interim Instream Flow Standard is required for any new or expanded diversion of surface water.
3. We acknowledge that Stream Diversion Works Permit Applications must be filed to abandon diversions.

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

10238-02

Letter to Mr. Dean D. Uyeno, Acting Deputy Director  
Page 2  
September 23, 2019

4. By Findings of Fact, Conclusions of Law, & Decision and Order in CCH-MA13-01, dated June 20, 2018, CWRM set Interim Instream Flow Standards (IFS) for numerous East Maui streams. The Proposed Action is in compliance with the IFS requirements thereunder.

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

Subject: Environmental Impact Statement  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Dr. Lebo:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas. Your office provided early consultation comments by letter dated January 25, 2017, which was prior to the publication of the EISP on February 8, 2017. Your office did not provide written comments on the EISP. We acknowledge your comments and concerns which were considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your early consultation comments has been appended to the Draft EIS in Appendix J.

In your early consultation comments, you requested that an archaeological inventory survey and an architectural inventory survey be prepared prior to the issuance of the proposed Water Lease. Additionally, you requested inventory plans for both of the surveys. However, by letter dated October 6, 2017, from Dr. Alan Downer (Log No. 2017.00026, Doc No. 1706MBF11), based on the understanding that issuance of the proposed Water Lease does not involve any ground disturbance and that the potential impact of flooding from abandoning diversions on five of the streams will not be greater than periodic naturally occurring events, SHPD determined that no archaeological inventory survey and no archaeological inventory survey plan was required.

10238-02  
Letter to Susan Lebo, Ph.D.  
Page 2  
September 23, 2019

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui, which are now owned by Mahi Pono and planned for diversified agriculture.
2. Chapter 4 Section 4.5 of the Draft EIS includes a discussion of historic and archaeological resources within the proposed License Area. Technical studies appended to the Draft EIS include a Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); and a Cultural Impact Assessment (See Appendix F). The analysis of these reports is provided in Chapter 4 of the Draft EIS.

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP  
Vice President, Director of Planning

1907 South Beretania Street, Suite 400  
Honolulu, Hawaii 96826

Dear Mr. Matsukawa:

**SUBJECT: Comments on the Early Consultation for the Preparation of an Environmental Impact Statement Preparation Notice for the Proposed Lease for the Nahiku, Keanae, Honomanu, and Huelo License Areas  
East, Central, and Up-Country, Island of Maui, Hawaii**

The Department of Health (DOH), Clean Water Branch (CWB), acknowledges receipt of your letter, dated November 23, 2016, requesting comments on your Environmental Impact Statement Preparation Notice. The DOH-CWB has reviewed the document and offers these comments. Please note that our review is based solely on the information provided in the subject document and its compliance with the Hawaii Administrative Rules (HAR), Chapters 11-54 and 11-55. You may be responsible for fulfilling additional requirements related to our program. We recommend that you also read our standard comments on our website at: <http://health.hawaii.gov/epo/files/2013/05/Clean-Water-Branch-Std-Comments.pdf>.

1. Any project and its potential impacts to State waters must meet the following criteria:
  - a. Antidegradation policy (HAR, Section 11-54-1.1), which requires that the existing uses and the level of water quality necessary to protect the existing uses of the receiving State water be maintained and protected.
  - b. Designated uses (HAR, Section 11-54-3), as determined by the classification of the receiving State waters.
  - c. Water quality criteria (HAR, Sections 11-54-4 through 11-54-8).

Mr. Earl Matsukawa  
December 5, 2016  
Page 2

12005PNN.16

2. You may be required to obtain National Pollutant Discharge Elimination System (NPDES) permit coverage for discharges of wastewater, including storm water runoff, into State surface waters (HAR, Chapter 11-55).

For NPDES general permit coverage, a Notice of Intent (NOI) form must be submitted at least 30 calendar days before the commencement of the discharge. An application for an NPDES individual permit must be submitted at least 180 calendar days before the commencement of the discharge. To request NPDES permit coverage, you must submit the applicable form ("CWB Individual NPDES Form" or "CWB NOI Form") through the e-Permitting Portal and the hard copy certification statement with the respective filing fee (\$1,000 for an individual NPDES permit or \$500 for a Notice of General Permit Coverage). Please open the e-Permitting Portal website located at: <https://eha-cloud.doh.hawaii.gov/epermil/>. You will be asked to do a one-time registration to obtain your login and password. After you register, click on the Application Finder tool and locate the appropriate form. Follow the instructions to complete and submit the form.

3. If your project involves work in, over, or under waters of the United States, it is highly recommended that you contact the Army Corp of Engineers, Regulatory Branch (Tel: 835-4303) regarding their permitting requirements.

Pursuant to Federal Water Pollution Control Act [commonly known as the "Clean Water Act" (CWA)], Paragraph 401(a)(1), a Section 401 Water Quality Certification (WQC) is required for "[a]ny applicant for Federal license or permit to conduct any activity including, but not limited to, the construction or operation of facilities, which may result in any discharge into the navigable waters..." (emphasis added). The term "discharge" is defined in CWA, Subsections 502(16), 502(12), and 502(6); Title 40 of the Code of Federal Regulations, Section 122.2; and HAR, Chapter 11-54.

4. Please note that all discharges related to the project construction or operation activities, whether or not NPDES permit coverage and/or Section 401 WQC are required, must comply with the State's Water Quality Standards. Noncompliance with water quality requirements contained in HAR, Chapter 11-54, and/or permitting requirements, specified in HAR, Chapter 11-55, may be subject to penalties of \$25,000 per day per violation.
5. It is the State's position that all projects must reduce, reuse, and recycle to protect, restore, and sustain water quality and beneficial uses of State waters. Project planning should:
  - a. Treat storm water as a resource to be protected by integrating it into project planning and permitting. Storm water has long been recognized as a source of irrigation that will not deplete potable water resources. What is often overlooked

Mr. Earl Matsukawa  
December 5, 2016  
Page 3

12005PNN.16

is that storm water recharges ground water supplies and feeds streams and estuaries; to ensure that these water cycles are not disrupted, storm water cannot be relegated as a waste product of impervious surfaces. Any project planning must recognize storm water as an asset that sustains and protects natural ecosystems and traditional beneficial uses of State waters, like community beautification, beach going, swimming, and fishing. The approaches necessary to do so, including low impact development methods or ecological bio-engineering of drainage ways must be identified in the planning stages to allow designers opportunity to include those approaches up front, prior to seeking zoning, construction, or building permits.

- b. Clearly articulate the State's position on water quality and the beneficial uses of State waters. The plan should include statements regarding the implementation of methods to conserve natural resources (e.g., minimizing potable water for irrigation, gray water re-use options, energy conservation through smart design) and improve water quality.
- c. Consider storm water Best Management Practice (BMP) approaches that minimize the use of potable water for irrigation through storm water storage and reuse, percolate storm water to recharge groundwater to revitalize natural hydrology, and treat storm water which is to be discharged.
- d. Consider the use of green building practices, such as pervious pavement and landscaping with native vegetation, to improve water quality by reducing excessive runoff and the need for excessive fertilization, respectively.
- e. Identify opportunities for retrofitting or bio-engineering existing storm water infrastructure to restore ecological function while maintaining, or even enhancing, hydraulic capacity. Particular consideration should be given to areas prone to flooding, or where the infrastructure is aged and will need to be rehabilitated.

If you have any questions, please visit our website at: <http://health.hawaii.gov/cwb>, or contact the Engineering Section, CWB, at (808) 586-4309.

Sincerely,

ALEC WONG, P.E., CHIEF  
Clean Water Branch

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Mr. Wong:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas. You provided an early consultation comment letter dated December 5, 2016, prior to the publication of the EISP on February 8, 2017, and also provided written comments on the EISP dated February 17, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawaii Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix J (as to the early consultation letter) and Appendix M (as to your EISP comments).

Your early consultation comments have been incorporated in to the Draft EIS as relevant to the Proposed Action. As suggested by your early consultation comments, the Proposed Action will implement appropriate BMPs which is discussed in Chapter 4 of the Draft EIS. As discussed in Chapter 4 of the Draft EIS, the Proposed Action will comply with the relevant regulations related to Water Quality Standards, HAR Chapter 11-54, and Water Pollution Control, HAR Chapter 11-55.

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP  
Vice President, Director of Planning

Subject: Environmental Impact Statement  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanu  
and Huelo License Areas

Dear Mr. Kau,

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanu, and Huelo License Areas. The Department of Agriculture provided an early consultation letter dated December 22, 2016, which was prior to the publication of the Environmental Impact Statement Preparation Notice (EISP/N) on February 8, 2017. Department of Agriculture did not provide written comments on the EISP/N. We acknowledge the Department's early consultation comments, which were considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17.

We acknowledge that the Department of Agriculture did not have any comments in response to our request for early consultation.

Your letter and this response will be reproduced in Appendix J of the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental Quality Control website.

We appreciate your agency's interest and participation in this environmental review process.

Mr. Earl Matsukawa, AICP  
Project Manager  
Wilson Okamoto Corporation  
1907 S. Beretania Street, Suite 400  
Honolulu, Hawaii 96826

Dear Mr. Matsukawa:

Subject: Early Consultation for the Preparation of an Environmental Impact Statement Preparation Notice for the Proposed Lease of the Nahiku, Keanae, Honomanu, and Huelo License Areas; East, Central, and Upcountry Maui, Hawaii

TMKS: (2) 1-2-04:05, 07 (por); (2) 1-1-02:02 (por); (2) 1-1-001:044; and  
(2) 1-1-001:005, 2-9-014:01, 05, 11, 12, 17

Thank you for the opportunity to provide comments on this early consultation request for the preparation of an Environmental Impact Statement Preparation Notice (EISP/N) on the proposed lease for the Nahiku, Keanae, Honomanu, and Huelo license areas on the Island of Maui. The early consultation review material was transmitted to our office via letter dated November 23, 2016.

It is our understanding that Alexander and Baldwin, Inc. is organizing the preparation of an EISP/N for the issuance of a potential long-term (30 year) water lease from the Board of Land and Natural Resources. This water lease will be granted via auction for the "right, privilege, and authority to enter and go upon" the Nahiku, Keanae, Honomanu, and Huelo license areas for the purpose of developing, diverting, transporting, and using government owned waters. The water lease will also require the Lessee to use lands owned by the State of Hawaii to maintain and repair existing access roads and trails used as part of the East Maui Irrigation Company aqueduct system.

The water lease will allow for the continued operation of the aqueduct system to deliver potable water to the County of Maui. Department of Water Supply for the domestic and agricultural water needs for the Island of Maui.

The Office of Planning (OP) has reviewed the transmitted material and has the following comments to offer:

Mr. Earl Matsukawa, AICP  
Project Manager  
Wilson Okamoto Corporation  
December 8, 2016  
Page 2

1. Pursuant to Hawaii Administrative Rules § 11-200-17(h) – relationship of the proposed action to land use plans, policies, and controls for the affected area – the proposed action must demonstrate that it is consistent with state environmental, social, and economic goals and land use policies. OP provides technical assistance to State and county agencies in administering the statewide planning system in Hawaii Revised Statutes (HRS) Chapter 226, the Hawaii State Planning Act. The Environmental Impact Statement (EIS) should include an analysis of the proposed action to continue the diversion of upcountry Maui streams for domestic and agricultural uses. The EIS should analyze the continued leasing of Maui surface water resources and its compatibility with the themes of the Hawaii State Planning Act or clarify where it is in conflict with them.
- If any of these themes are not applicable to this action, the EIS should affirmatively state such determination. The most efficient method is summarizing these in tabular form, followed by discussion paragraphs.
2. The coastal zone management (CZM) area is defined as "all lands of the State and the area extending seaward from the shoreline to the limit of the State's police power and management authority, including the U.S. territorial sea" (see HRS § 205A-1, the definition of "coastal zone management area").
- HRS Chapter 205A-5(b) requires all state and county agencies to enforce the CZM objectives and policies. The EIS should include an assessment as to how the proposed action conforms to the goals and objectives of the Hawaii CZM program as listed in HRS § 205A-2. Compliance with HRS § 205A-2 is an important component for satisfying the requirements of HRS Chapter 343.
- Of these objectives and policies, the proposed action should address HRS § 205A-2(4)(C) and (D) - Coastal Ecosystems. Within the analysis of HRS § 205A-2, the EIS should include an in-depth discussion related to the proposed project activities by exploring planning and water management issues related to this 30-year water lease, and examining the long-term water needs for the residents of Maui.
3. A program focus of our Land Use Division (LUD) is the conservation of state agricultural land resource base to assure the long-term availability of agricultural lands for agricultural use, as listed in HRS § 205-41. LUD reserves comment on this

001999

Mr. Earl Matsukawa, AICP  
Project Manager  
Wilson Okamoto Corporation  
December 8, 2016  
Page 3

proposed action until an EISPN is submitted for its review.

If you have any questions regarding this comment letter, please contact Josh Hekeia of our office at (808) 587-2845.

Sincerely,

Leo R. Asuncion  
Director

10238-02  
September 23, 2019

Ms. Mary Alice Evans, Director  
Office of Planning, State of Hawai'i  
P.O. Box 2359  
Honolulu HI, 96804

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Ms. Evans:

Thank you for the Office of Planning's participation in the scoping process for the subject Environmental Impact (EIS) Statement pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas. Office of Planning provided early consultation comments dated December 8, 2016, which was prior to the publication of the EISPN on February 8, 2017. Office of Planning also provided written comments dated March 2, 2017, in response to the EISPN. We acknowledge your agency's comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix J (as to the early consultation comments) and M (as to the EISPN comments).

We have taken your agency's comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui, which are now owned by Mahi Pono and planned for diversified agriculture.

10238-01

Letter to Ms. Mary Alice Evans

Page 2

September 23, 2019

2. Pursuant to HAR § 11-200-17(h), the Draft EIS discusses the Proposed Action's consistency with various plans and policies in Chapter 5 of the Draft EIS, specifically the Hawai'i Coastal Zone Management Program in Section 5.1.5, the Hawai'i State Plan in Section 5.1.1, and the State Functional Plans in Section 5.1.2. As you suggested, the analysis is provided in tabular form, followed by discussion paragraphs.

3. The Draft EIS discusses impacts to soils associated with the Proposed Action in Section 4.1.2 of the Draft EIS.

4. The Draft EIS discusses impacts to hydrology associated with the Proposed Action in Section 4.2 of the Draft EIS as well as the reports various technical reports prepared for the Draft EIS, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Steam Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); and Terrestrial and Flora and Fauna Report (See Appendix C).

5. The Draft EIS includes in Section 4.7 an assessment of the impacts of the Proposed Action to socio-economic characteristics including the agricultural economy. Various technical studies will be appended the Draft EIS and provide detailed examinations, including an Agricultural and Related Economic Impacts Report (See Appendix I) and an Economic and Fiscal Impact Analysis Report (See Appendix H).

Your agency's written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

WILSON OKAMOTO CORPORATION

Earl Matsukawa, Project Manager  
Wilson Okamoto Corporation  
1907 South Beretania Street, Suite 400  
Honolulu, Hawai'i 96826

Dear Mr. Matsukawa:

Subject: Early Consultation for the Preparation of an  
Environmental Impact Statement Preparation Notice  
Proposed Lease for Nāhiku, Ke'anae, Honomanū, and  
Huelo License Areas, East, Central and Up-Country  
Maui, Hawai'i.

Mahalo for transmitting your November 23, 2016 request for early consultation on the Preparation of an Environmental Impact Statement Preparation Notice Proposed Lease for Nāhiku, Ke'anae, Honomanū, and Huelo License Areas, East, Central and Up-Country Maui, Hawai'i (EISP) to the Department of Hawaiian Home Lands (DHHL). We understand Alexander & Baldwin, Inc. and the East Maui Irrigation Company (collectively, A&B) have applied for a thirty-year water lease for government waters from the Nāhiku, Ke'anae, Honomanū, and Huelo license areas through the existing East Maui Irrigation (EMI) aqueduct system, subject to section 178-58(c), Hawaii Revised Statutes (HRS) and DHHL's rights to reserve water under section 221 of the Hawaiian Homes Commission Act (HHCA). While we appreciate the early consultation, we note that due to the complexity of the issues raised by the proposed lease, the comments we offer here are not necessarily our final comments on these matters.

We note at the outset of these comments that because A&B may be only one entity to bid on the proposed lease, we respectfully question the appropriateness of A&B preparing this EIS, rather than the state Board of Land and Natural Resources (BLNR), which shall award the lease. Other management options for these diversions are conceivable and perhaps offer other benefits to the legal beneficiaries of these public trust resources. Having

002001

one possible bidder responsible for identifying and analyzing alternatives may bias the states consideration of all appropriate management options.

With that noted, DHHL has reviewed your November 23, 2016 request for comments on this EISPN. As requested, DHHL provides the following comments. We begin with a brief discussion of DHHL and related native Hawaiian interests in these waters and then offer three specific particular comments that we believe will need to be addressed in this EIS.

#### Background: DHHL interests in East Maui Waters

The East Maui Irrigation (EMI) system draws water from approximately 56,000 acres of watershed lands.<sup>1</sup> The four subject license areas cover approximately 17,000 acres that are privately owned by EMI, while the other 33,000 acres are owned by the State and comprise the four license areas described in the EISPN: Huelo (8,752.69 acres), Honomanū (3,381 acres), Ke'anae (10,768 acres), and Nāhiku (10,111.22 acres). The EMI ditch system captures from the four license area lands an average of approximately 165 million gallons per day (mgd),<sup>2</sup> and up to increase to up to 445 mgd.<sup>3</sup> Leasing these lands and the waters that flow from them to allow the continued delivery of water out of these areas may have significant ecological, aesthetic, historic, cultural, economic, social, and health impacts on Maui's communities, including especially DHHL beneficiaries.<sup>4</sup>

<sup>1</sup> Hearing Officer's Proposed Findings of Fact, Conclusions of Law, Decision & Order in Petition to Amend Interim Instream Flow Standards, Commission on Water Resource Management, CCH-MA13-01, at 9 (Jan. 15, 2015) (Minute Order No. 16) ("2015 CWRM Proposed FOFs/COLs").

<sup>2</sup> Long term average delivery of the EMI ditch is 165 mgd, but A&B claimed average delivery between 2004 through 2013 was 126 mgd.

<sup>3</sup> See S.B. Gingerich & D.S. Oki, *Ground Water in Hawaii: U.S. Geological Survey, Fact Sheet 126-00* (2000).

<sup>4</sup> See HAR §11-200.2 ("Effects" and "impacts" are synonymous and include ecological, aesthetic, historic, cultural, economic, social, or health effects).

Fig. 1. DHHL Maui Land Inventory, Maui Island Plan, at 1-10.

DHHL and our native Hawaiian beneficiaries have a series of critical relationships with East Maui's diverted waters. These waters sustain the traditional and customary practices of native Hawaiians, including DHHL beneficiaries who live in and around DHHL's approximately 241 acres at Ke'anae and Wailuanui. DHHL also owns and holds in trust lands elsewhere in Maui at Keōkea-Waiōhuli, Pūlehunui, and Kahikinui; these lands currently use and or may require in the future the use of East Maui waters. Finally, through state Constitutional and statutory provisions, DHHL is entitled to revenues that derive from any water license receipts received by the state of Hawai'i.

Adequate disclosure of the environmental impacts of leasing East Maui waters for A&B's diversions the rights and interests of DHHL and its beneficiaries is needed. This will require careful attention to, among other matters, the specific locations and quantified needs of DHHL's planned and existing developments in Ke'anae, Wailuanui, Keōkea-Waiōhuli, Pūlehunui, and Kahikinui. It will also require an analysis of how different alternatives may affect water-licensing rates.

We now offer five broad comments for your use in preparing this EIS.

*Comment No. 1: Assessment of the environmental impacts of A&B's diversions must develop a broad, historical perspective, inclusive of effects on the water rights of native tenants and native Hawaiians affected by the diversions.*

Environmental effects and impacts of the general lease must be assessed in light of the historical context in which the EMI ditch was developed and from the perspective of native tenants of the lands and native Hawaiians affected by the ditch. With the passage of a Reciprocity Treaty between the United States and the Hawaiian Kingdom on January 30, 1875, sugar planters' plans to water the kula lands of Maui for growing sugar cane became economically feasible. On September 13, 1876, four days after the treaty went into effect, King Kalākaua granted issuance of the first Water License for construction of the "Haiku Ditch," which drew water from Hāmākua Loa District streams. The Kingdom of Hawai'i first approved construction of the East Maui ditch system to promote prosperity for all the people of the Kingdom.<sup>5</sup> The pono wai (water rights) of native tenants of the respective lands through which the ditch system was developed were protected through provisions in the original water licenses, which stated:

*PROVIDED NEVERTHELESS and the continuance of the right here before granted is upon this condition . . . that existing rights or present tenants of said lands or occupiers along said streams shall in no wise be lessened or affected injuriously by reason of anything hereinbefore granted or covenanted . . . .<sup>6</sup>*

The Hawai'i Supreme Court continued to recognize that diversion of surface water was permissible "only if it does not violate the requirement of the well established rule that such diversion shall be without injury to the rights of others." *Hawaiian Commercial & Sugar Co. v. Wailuku Sugar Co.*, 15 Haw. 675, 689

<sup>5</sup> *Keāhi Maly & Onaona Maly, Wai o ke Ola: He Wahi Mo'olelo No Maui Hikina. A Collection of Native Traditions and Historical Accounts of the Lands of Hāmākua Pōko, Hāmākua Loa, and Kō'olau Maui Hikina (East Maui), Island of Maui, No. MaHikina 59-011702b, Vol. 1, chap. 5, at 443 (Jan. 17, 2001) ("Maly & Maly 2001")* citing Section 42 of the Kingdom of Hawai'i Civil Code of 1859.

<sup>6</sup> *Maly & Maly 2001* at 444 (emphasis in original quotation) citing Letter dated September 13, 1876 William L. Mochonua, Minister of the Department of the Interior, Kingdom of Hawai'i; to J.M. Smith, President Haiku Sugar Company, et al.; 2015 CWRM Proposed FOFs/COLs at 10, ¶55.

(1904) (A&B claimed harm from the Wailuku Sugar Co.'s diversions in 'Iao aquifer and was granted an injunction against Wailuku Sugar). More than a century later, it is the impacts of A&B's surface water diversions on others, particularly native Hawaiian beneficiaries, should be a significant focus of A&B's environmental impact statement.

*Comment No. 2: DHHL's rights to East Maui surface waters must be appropriately considered in assessing the impacts of the proposed general lease and in formulating alternatives to the proposed action.*

DHHL's interests in water resources, and the DHHL developments they may support should be fully addressed in assessing the impacts of the proposed general leases. The State and its subdivisions (including the State Commission on Water Resource Management (CWRM)) and BLNR have duties to protect DHHL's rights in water resources as enumerated in the Hawaiian Homes Commission Act, 1920, as amended, §§ 101(4), 220, 221; the Hawai'i Constitution, article XI, §§ 1 and 7; and HRS Chapter 174C, also known as the State Water Code, and in other legal provisions. Our environmental impact review law, HRS Chapter 343 requires environmental impact disclosure documents to examine the impacts of proposed actions on Hawaiian rights, including those of DHHL and its beneficiaries.

The State's has a broad mandate to provide "adequate amounts of water and supporting infrastructure" for Hawaiian home lands. This duty certainly applies to the BLNR and this policy directive must be considered in assessing impacts of the general leases. *Id.* In addition, there are related legal provisions that need to be considered as guidance for how the impacts of proposed leasing alternatives are considered.

For instance, under the State Water Code, HRS § 174C-101(a), the CWRM is directed to incorporate and protect adequate reserves of water for Hawaiian home lands as set forth in section 221 of the Hawaiian Homes Commission Act.<sup>7</sup>

<sup>7</sup> The clear intent of HHCA section 221 was that the Department should have a priority claim to water above any private users in accordance with the Act's mandate. *See e.g.*, HHCA § 221(b) (stating that all water licenses issued shall be subject to the condition that DHHL is entitled to use, without charge any water that DHHL deems necessary in order to "adequately to supply the livestock, aquaculture operations, agriculture operations, or domestic needs of individuals upon any tract"); HHCA § 221(c) (stating that the Department may use without charge water not covered by a water license, or covered by a water license issued after passage of the HHCA in order "adequately

Provisions of this chapter shall not be construed to amend or modify rights or entitlements to water as provided for by the Hawaiian Homes Commission Act, 1920, as amended, and by chapters 167 and 168, relating to the Molokai irrigation system. Decisions of the commission on water resource management relating to the planning for, regulation, management, and conservation of water resources in the State shall, to the extent applicable and consistent with other legal requirements and authority, incorporate and protect adequate reserves of water for current and foreseeable development and use of Hawaiian home lands as set forth in section 221 of the Hawaiian Homes Commission Act.

HRS § 174C-101(a) (emphases added). DHHL reservations and water uses are also public trust uses,<sup>8</sup> as described in a series of significant Hawaii's Supreme Court cases including: *In re Water Use Permit Applications*, 94 Hawai'i 97, 9 P.3d 409 (2000) ("*Waihole I'*"), *In re Water Use Permit Applications*, 105 Hawai'i 1 93 P.3d 643 (2004) ("*Waihole II'*"), *In re Kukui (Moloka'i) Inc.*, 116 Hawai'i 481, 486, 174 P.3d 320, 325 (2007) ("*Kukui*"), *In re 'Iao Ground Water Mgmt. Area High-Level Source Water use Permit Applications*, 128 Hawai'i 228, 287 P.3d 129 (2012) ("*Mā Mai 'Ehā'*"), and *Kauai Springs, Inc. v. Planning Comm'n of County of Kauai*, 133 Hawai'i 141, 173-75, 324 P.3d 951, 982-85 (2014) ("*Kauai Springs*"). Thus, the Hawaii's State Constitution, Water Code, the HHCA, and case law protect and affirm DHHL's water rights for its beneficiaries.<sup>9</sup> In the context of preparing for a possible lease of such broad significance, these rulings should be guidance on how to identify alternatives and analyze how different alternatives may positively or negatively affect the rights of DHHL and its beneficiaries.

DHHL's uses of and potential future needs from diverted East Maui waters in Pūlehunui, Kēōkea-Waiōhuli, and Kahikinui are

to supply the livestock, aquaculture operations, agriculture operations, or domestic needs of individuals upon any tract[.].<sup>10</sup>

<sup>8</sup> Other public trust purposes include (1) water resource protection, (2) domestic water use, and (3) the exercise of Native Hawaiian and traditional and customary rights. Public trust uses do not include private commercial uses. *Kukui*, 116 Hawai'i at 791 n.6, 174 P.3d at 330 n.6; see also *Waiōhuli I*, 94 Hawai'i at 136-37, 9 P.3d at 448-49.

<sup>9</sup> See *In re Wai'ōla o Moloka'i*, 103 Hawai'i 401, 431, 83 P.3d 664, 694 (2004) (recognizing home land water entitlements as a public trust purpose), HRS §§ 174C-101(a), -49(a), -49i, -31(q); HHCA §§ 101(b)(4), 220(d); see also HAR §§ 13-171-60 to -63.

public trust uses. However, DHHL rights and interests extend beyond its uses of East Maui water in MDWS systems. Complete apprehension of rights and interests is necessary to assess the proposed action's significance under HAR §11-200-12. Significance assessment under HAR §11-200-12(3) concerns: "conflicts with the state's long-term environmental policies or goals and guidelines as expressed in Chapter 344, HRS, and any revisions thereof and amendments thereto, court decisions, or executive orders." Hawaii's Environmental Policy Act, Chapter 344, HRS (HEPA) includes conserving natural resources by safeguarding "natural environmental characteristics in a manner which will foster and promote the general welfare, create and maintain conditions under which humanity and nature can exist in productive harmony, and fulfill the social, economic, and other requirements of the people of Hawaii." HRS §344-3(1). Consideration of DHHL water requirements for its proposed land uses is necessary to support a determination that the proposed general leases of the four license areas are consistent with HEPA.

DHHL also has interests in public trust in-stream uses for its tracts in Ke'āne and Wailua, including native Hawaiian traditional and customary uses. Disclosure of the environmental impacts of the four license area leases strongly implicates the State's duty to analyze "tradition[al] and customary native Hawaiian practices and appurtenant rights and the public trust obligations emanating from the Hawaii's Constitution and case decisions construing it[.]."<sup>10</sup> Alerting decision makers to significant environmental impacts on public trust uses of in-stream and diverted waters accords with the purpose of Hawaii's environmental review law.<sup>11</sup> The prioritized water uses of DHHL and other public trust users, including native Hawaiian traditional and customary practitioners, must be appropriately considered in assessing the impacts of the proposed general lease and in formulating alternatives to the proposed action.

<sup>10</sup> *Mani Tomorrow v. State, Bd. of Land & Nat. Res. of State of Hawaii*, 110 Hawai'i 234, 243, 131 P.3d 517, 526 (2006) (affirming the circuit court's finding that BLNR breached its duty).

<sup>11</sup> HRS §343-1; see also *Keehole Def. Coal., Inc. v. Bd. of Land & Nat. Res.*, 110 Hawai'i 419, 441, 134 P.3d 585, 607 (2006), as amended (May 26, 2006) (considering whether State failed to prepare a new or revised EIS under a claim to breach of the public trust).

Comment No. 3: *DHHL's general, island, regional, and water policy plans should be consulted in assessing the significant, cumulative, and secondary impacts of the proposed action.*

The EISPN should consider DHHL's general, island, regional, and water policy plans in discussing direct, cumulative, and secondary impacts and alternatives in the general lease of the Nāhiku, Ke'anae, Honomanū, and Huelo License areas. First, DHHL develops and maintains a general plan providing for the development and use of land needed for fulfilling the purposes of the Hawaiian Homes Commission Act of 1920, as amended (HHCA).<sup>12</sup> DHHL developed a Maui Island Plan (Sep. 2004), which identifies DHHL land use designations of its Maui lands that function similarly to county land-use zoning. DHHL also developed several pertinent regional plans, which identify land use development factors, issues, opportunities, and each region's top priority projects for implementation within three years of regional plan development. Most pertinent to the proposed EISPN are DHHL's Maui Island Plan, Water Policy Plan (Jul. 2014),<sup>13</sup> Keōkea-Waiōhuli Regional Plan (Jun. 2010), and the Kahikinui Regional Plan (Jul. 2011). As discussed below, DHHL is considering use of DWS waters delivered via the EMI system for its Keōkea-Waiōhuli lots and Kahikinui developments. Keōkea-Waiōhuli Regional Plan at 20; Kahikinui Regional Plan at 21.

Comment No. 4: *DHHL's rights and interests, including reservations of water, in East Maui surface waters and potential development needs for those water resources must be considered in determining impacts of long-term leases for the Nāhiku, Ke'anae, Honomanū, and Huelo License areas.*

CWRM is obligated to reserve adequate water for DHHL's foreseeable needs in undesignated aquifer system areas and recently did so when it approved a reservation request by the HHC for 3.398 mgd of ground water pursuant to HRS § 174C-101(a) in the Keahou Aquifer System Area (KASA) on Hawai'i Island.<sup>14</sup>

<sup>12</sup> HAR §10-4-2; see "Department of Hawaiian Home Lands General Plan," (approved Feb. 26, 2002).

<sup>13</sup> See The Hawaiian Homes Commission Water Policy Plan, adopted July 22, 2014 available at:

<http://dhhl.hawaii.gov/wp-content/uploads/2013/09/HHC-Water-Policy-Plan-140722.pdf>.

<sup>14</sup> The CWRM Staff Submittal for that action noted, "Due to the interest in the KASA petition to designate the area as a ground water management area, DHHL filed the petition for reservation request." CWRM Staff Submittal, item No A-2 (Aug. 17, 2015). Staff noted DHHL's "proposed buildout water reservation . . . will be consistent with the [Hawai'i Water Plan (HWP)] for the KASA" and granting the reservation would promote

Currently, DHHL is developing a water reservation request for East Maui aquifer system areas, inclusive of the Ko'olau aquifer in which the four license areas lie. DHHL has also updated its current and foreseeable water needs for Maui, and they are included in a draft update to the State Water Projects Plan ("SWPPP"), which is to be considered by the CWRM in the near future. Planned water needs provided in the SWPP will be one basis upon which DHHL will determine further requests for reservations of water, as well as other considerations.

a. DHHL interests in diverted EMI system waters.

DHHL owns approximately 831 acres of lands at Pūlehuunui, also known as Pu'unene, in Central Maui. DHHL's Pūlehuunui lands were designed by the Hawaiian Homes Commission (HHC) as agricultural, industrial, commercial, and energy development zones. DHHL does not currently hold allocations or reservations of water for these lands. Although Pūlehuunui lands overlie the Kahului Aquifer, DHHL's right to water is not limited to this aquifer. DHHL is required to investigate development of diverse sources of water, including East Maui irrigation waters, and related infrastructure, to ascertain the means of providing water service to these lands. DHHL emphasizes the need to plan for accommodations for DHHL rights and interests. Since 2004, DHHL has had a pending water reservation request for 0.6 mgd for 100 acres of industrial use in Pūlehuunui. DHHL's current foreseeable needs at Pūlehuunui are 1.734 mgd of potable and 1.8564 nonpotable water resources.<sup>15</sup>

DHHL's Keōkea-Waiōhuli mixed-use tract that currently uses 0.096 mgd of potable water and will increase its use to 0.8097 mgd of potable and 0.5780 mgd of nonpotable water resources by 2031. DHHL has a Water Credits Agreement with MDWS, signed on December 9, 1997, under which MDWS will deliver 0.5 mgd of potable water to DHHL for homesteading use in exchange for DHHL improvements to the water system.<sup>16</sup> The non-potable water resources will be used to irrigate Keōkea-Waiōhuli subsistence agricultural lands and will be supplied by the Upcountry Maui Irrigation System.

CWRM's approach to "managing the resource and protecting the public trust through the collaboration and consistency framework provided by the HWP." *Id.* at 5.

<sup>15</sup> Draft SWPP at 4-26.

<sup>16</sup> Draft SWPP at 4-23, -24.

DHHL is considering extending the MDWS Kula water system to its Kaikini tract for pastoral land uses, which will require 0.0765 mgd, some of which will be met through fog drip catchment systems.<sup>17</sup> Finally, DHHL's tract at Ulupalakua may foreseeably require 0.0034 mgd of potable water resources from East Maui irrigation ditches.<sup>18</sup>

b. DHHL interests in in-stream uses of East Maui waters.

DHHL's Wailua tract will be used for general agriculture and lo'i kalo. Fifteen (15) acres of lands designated for subsistence agriculture are allocated for lo'i kalo on the Wailua tract. DHHL also plans for house lots to have lo'i kalo cultivated on adjoining lots. MIP at xvii. The nearby Ke'anae tract will include thirty-two (32) three-acre subsistence agricultural lots on 57 acres located on the mauka portion of the property.<sup>19</sup> Ke'anae's mauka lands include two perennial streams, Pālahulu and Pi'inau streams, which are diverted by EMI's Ko'olau ditch (east of and flowing into the Wailoa Ditch).<sup>20</sup> Of the 57 acres at Ke'anae, thirty (30) acres will be set aside for lo'i kalo.<sup>21</sup> The lo'i kalo uses included in Ke'anae and Wailua subsistence agriculture are estimated to require 150,000 gallons per acre per day.<sup>22</sup> General agricultural uses can be met through ambient rainfall irrigation, but Wailua lo'i kalo will require 2.2802 mgd in nonpotable stream water and Ke'anae lo'i kalo will require 4.5878 mgd in nonpotable stream water.

Environmental impact disclosure documents should assess adverse impacts on DHHL's rights and interests in these waters, and provide alternatives that will prevent such impacts to DHHL and its beneficiaries, which include practitioners of traditional and customary lo'i kalo cultivation and other uses of Ko'olau streams.

<sup>17</sup> Draft SWPP at 4-27; Kahikinui Regional Plan at 21.  
<sup>18</sup> Draft SWPP at 4-28.  
<sup>19</sup> Maui Island Plan, at 6-24.  
<sup>20</sup> Maui Island Plan at 6-19; 2015 CWRM Proposed FOFs/COLs, at 30.  
<sup>21</sup> Maui Island Plan at 6-19, -24.  
<sup>22</sup> See Stephen B. Gingerich, Chiu W. Yeung, Tracy-Joy N. Ibarra, and John A. Engott, "Water use in wetland kalo cultivation in Hawai'i," USGS Open File Rpt. No. 2007-1157 (2007) available at <http://pubs.usgs.gov/of/2007/1157/>.

Comment No. 5: We highly encourage you to consult directly with Hawaiian Homestead community associations and other (N)ative Hawaiian organizations when preparing this EIS in order to better assess potential impacts to cultural and natural resources, access and other rights of Native Hawaiians.

Conclusion:

Mahalo nui for transmitting and requesting pre-consultation comments on the proposed EISP for proposed general leases for Nāhiku, Ke'anae, Honomanū, and Huelo License Areas. DHHL requests that the publicized EISP version fully and expressly address impacts of A&B's proposed general leases on DHHL's reasonably foreseeable rights, plans for water and land development, and its beneficiaries, including native Hawaiian traditional and customary practitioners. Please direct any questions to me at (808) 620-9501, or your staff may contact Kaleo Manuel in our Planning Office at (808) 620-9485 or at [Kaleo.L.Manuel@hawaii.gov](mailto:Kaleo.L.Manuel@hawaii.gov).

Subject: Environmental Impact Statement  
Proposed Lease (Water Lease) for the Nāhiku, Ke'ānae, Honomanū  
and Huelo License Areas

Dear Director Ailā:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas. Your office provided early consultation comments by letter dated December 22, 2016, which was prior to the publication of the EISPN on February 8, 2017; your office did not provide written comments on the EISPN. We acknowledge your comments and concerns which were considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your early consultation comments has been appended to the Draft EIS in Appendix J.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui, which are now owned by Mahi Pono and planned for diversified agriculture.

2. Section 1.4 of the Draft EIS explains that in 2016, the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also considers a proposed diversified agriculture farm plan by Mahi Pono, which purchased A&B's Central Maui lands agricultural lands in December 2018.

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

- The Draft EIS also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) that has been studied.
3. Chapter 3 of the Draft EIS includes an evaluation of the reasonable alternatives to the Proposed Action.
4. As suggested by your comments, the Draft EIS includes a broad, historical perspective, and it also takes into account the Decision and Order issued by the Commission on Water Resource Management dated June 20, 2018, which ordered the restoration of certain streams for kalo cultivation. A discussion of DHHL's rights to reserve water sufficient for current and future homestead needs and DHHL's planning system is provided in Chapter 2 of the Draft EIS. Chapter 2 also describes the beneficiary consultation meeting on the proposed Water Lease that was held on January 14, 2019 at the Paukūkalo Community Center on Maui.
5. Chapter 4 of the Draft EIS discusses the existing environment, impacts of the Proposed Action, and mitigation measures.
6. Various technical studies are appended the Draft EIS and provide detailed examinations of impacts on various resources, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I). The analysis of these reports is provided in Chapter 4 of the Draft EIS.
7. Cultural Surveys Hawai'i, Inc. prepared an archaeological report as well as a cultural impact assessment, which are summarized in Section 4.5 and 4.6 of the Draft EIS, respectively. These reports are also appended in the Draft EIS (Appendices E and F, respectively).

10238-02

Dear Mr. Matsukawa:

**SUBJECT: Early Consultation for Preparation of an Environmental Impact Statement (EC EISP)**  
**Proposed Lease for Nahiku, Keanae, Honomanu, and Huelo License Areas, East Central, and Up-Country Maui, Hawaii**

The Department of Health (DOH), Environmental Planning Office (EPO), acknowledges receipt of your EC EISP to our office on November 28, 2016.

In the development and implementation of all projects, EPO strongly recommends regular review of State and Federal environmental health land use guidance. State standard comments and available strategies to support sustainable and healthy design are provided at: <http://health.hawaii.gov/epo/landuse>. Projects are required to adhere to all applicable standard comments.

EPO has recently updated the environmental Geographic Information System (GIS) website page. It now compiles various maps and viewers from our environmental health programs. The eGIS website page is continually updated so please visit it regularly at: <http://health.hawaii.gov/epo/egis>.

EPO also encourages you to examine and utilize the Hawaii Environmental Health Portal at: <https://eha-cloud.doh.hawaii.gov>. This site provides links to our e-Permitting Portal, Environmental Health Warehouse, Groundwater Contamination Viewer, Hawaii Emergency Response Exchange, Hawaii State and Local Emission Inventory System, Water Pollution Control Viewer, Water Quality Data, Warnings, Advisories and Postings.

We suggest you review the requirements of the Clean Water Branch (HAR, Section 11-54-1.1, -3, 4-8) and/or the National Pollutant Discharge Elimination System (NPDES) permit (HAR, Chapter 11-55) at: <http://health.hawaii.gov/cwb>. If you have any questions, please contact the Clean Water Branch, Engineering Section at (808) 586-4309 or [cleanwaterbranch@doh.hawaii.gov](mailto:cleanwaterbranch@doh.hawaii.gov). If your project involves waters of the U.S., it is highly recommended that you contact the Army Corps of Engineers, Regulatory Branch at: (808) 835-4303.

You may also wish to review the draft Office of Environmental Quality Control (OEQC) viewer at: <http://eha-web.doh.hawaii.gov/oeqc-viewer>. This viewer geographically shows where some previous Hawaii Environmental Policy Act (HEPA) (Hawaii Revised Statutes, Chapter 343) documents have been prepared.

In order to better protect public health and the environment, the U.S. Environmental Protection Agency (EPA) has developed a new environmental justice (EJ) mapping and screening tool called EJSCREEN. It is based on nationally consistent data and combines environmental and demographic indicators in maps and reports. EPO encourages you

002008

Mr. Earl Matsukawa

to explore, launch and utilize this powerful tool in planning your project. The EPA EJSCREEN tool is available at:  
<http://www.epa.gov/ejscreen>.

The Department of Health encourages the application of sustainability strategies and principles early in the planning, review and funding of projects. We also request that you consider conducting a Health Impact Assessment (HIA). More information is available on line at:

- World Health Organization (WHO) HIA information: <http://www.who.int/hia/en>
- U.S. Centers for Disease Control (CDC) HIA information: <https://www.cdc.gov/healthyplaces/hia.htm>
- U.S. Environmental Protection Agency (EPA) HIA information: <https://www.epa.gov/healthresearch/health-impact-assessments>

We request that you utilize all of this information on your proposed project to increase sustainable, innovative, inspirational, transparent and healthy design. Thank you for the opportunity to comment.

We request a written or electronic response confirming your receipt of this DOH EPO comment letter. You may mail your response directly to EPO at 919 Ala Moana Blvd., Suite 312, Honolulu, Hawaii 96814. However, we would prefer an electronic reply to [DOH.EPO@doh.hawaii.gov](mailto:DOH.EPO@doh.hawaii.gov). We hope that our letter(s) and your response(s) will be included in the final document. If you have any questions, please contact me by calling (808) 586-4337.

Dear Mr. Matsukawa:

**SUBJECT: Comments on the Early Consultation for the Preparation of an Environmental Impact Statement Preparation Notice for the Proposed Lease for the Nahiku, Keanae, Honomanu, and Huelo License Areas East, Central, and Up-Country, Island of Maui, Hawaii**

The Department of Health (DOH), Clean Water Branch (CWB), acknowledges receipt of your letter, dated November 23, 2016, requesting comments on your Environmental Impact Statement Preparation Notice. The DOH-CWB has reviewed the document and offers these comments. Please note that our review is based solely on the information provided in the subject document and its compliance with the Hawaii Administrative Rules (HAR), Chapters 11-54 and 11-55. You may be responsible for fulfilling additional requirements related to our program. We recommend that you also read our standard comments on our website at <http://health.hawaii.gov/epo/files/2013/05/Clean-Water-Branch-Std-Comments.pdf>.

1. Any project and its potential impacts to State waters must meet the following criteria:
  - a. Antidegradation policy (HAR, Section 11-54-1.1), which requires that the existing uses and the level of water quality necessary to protect the existing uses of the receiving State water be maintained and protected.
  - b. Designated uses (HAR, Section 11-54-3), as determined by the classification of the receiving State waters.
  - c. Water quality criteria (HAR, Sections 11-54-4 through 11-54-8).

2. You may be required to obtain National Pollutant Discharge Elimination System (NPDES) permit coverage for discharges of wastewater, including storm water runoff, into State surface waters (HAR, Chapter 11-55).

For NPDES general permit coverage, a Notice of Intent (NOI) form must be submitted at least 30 calendar days before the commencement of the discharge. An application for an NPDES individual permit must be submitted at least 180 calendar days before the commencement of the discharge. To request NPDES permit coverage, you must submit the applicable form ("CWB Individual NPDES Form" or "CWB NOI Form") through the e-Permitting Portal and the hard copy certification statement with the respective filing fee (\$1,000 for an individual NPDES permit or \$500 for a Notice of General Permit Coverage). Please open the e-Permitting Portal website located at: <https://leha-cloud.doh.hawaii.gov/epermit/>. You will be asked to do a one-time registration to obtain your login and password. After you register, click on the Application Finder tool and locate the appropriate form. Follow the instructions to complete and submit the form.

3. If your project involves work in, over, or under waters of the United States, it is highly recommended that you contact the Army Corp of Engineers, Regulatory Branch (Tel: 835-4303) regarding their permitting requirements.

Pursuant to Federal Water Pollution Control Act [commonly known as the "Clean Water Act" (CWA)], Paragraph 401(a)(1), a Section 401 Water Quality Certification (WQC) is required for "[a]ny applicant for Federal license or permit to conduct any activity including, but not limited to, the construction or operation of facilities, which may result in any discharge into the navigable waters..." (emphasis added). The term "discharge" is defined in CWA, Subsections 502(16), 502(12), and 502(6); Title 40 of the Code of Federal Regulations, Section 122.2; and HAR, Chapter 11-54.

4. Please note that all discharges related to the project construction or operation activities, whether or not NPDES permit coverage and/or Section 401 WQC are required, must comply with the State's Water Quality Standards. Noncompliance with water quality requirements contained in HAR, Chapter 11-54, and/or permitting requirements, specified in HAR, Chapter 11-55, may be subject to penalties of \$25,000 per day per violation.

5. It is the State's position that all projects must reduce, reuse, and recycle to protect, restore, and sustain water quality and beneficial uses of State waters. Project planning should:

- a. Treat storm water as a resource to be protected by integrating it into project planning and permitting. Storm water has long been recognized as a source of irrigation that will not deplete potable water resources. What is often overlooked

is that storm water recharges ground water supplies and feeds streams and estuaries; to ensure that these water cycles are not disrupted, storm water cannot be relegated as a waste product of impervious surfaces. Any project planning must recognize storm water as an asset that sustains and protects natural ecosystems and traditional beneficial uses of State waters, like community beautification, beach going, swimming, and fishing. The approaches necessary to do so, including low impact development methods or ecological bio-engineering of drainage ways must be identified in the planning stages to allow designers opportunity to include those approaches up front, prior to seeking zoning, construction, or building permits.

- b. Clearly articulate the State's position on water quality and the beneficial uses of State waters. The plan should include statements regarding the implementation of methods to conserve natural resources (e.g., minimizing potable water for irrigation, gray water re-use options, energy conservation through smart design) and improve water quality.
- c. Consider storm water Best Management Practice (BMP) approaches that minimize the use of potable water for irrigation through storm water storage and reuse, percolate storm water to recharge groundwater to revitalize natural hydrology, and treat storm water which is to be discharged.
- d. Consider the use of green building practices, such as pervious pavement and landscaping with native vegetation, to improve water quality by reducing excessive runoff and the need for excessive fertilization, respectively.
- e. Identify opportunities for retrofitting or bio-engineering existing storm water infrastructure to restore ecological function while maintaining, or even enhancing, hydraulic capacity. Particular consideration should be given to areas prone to flooding, or where the infrastructure is aged and will need to be rehabilitated.

If you have any questions, please visit our website at: <http://health.hawaii.gov/cwb/>, or contact the Engineering Section, CWB, at (808) 586-4309.

Sincerely,

ALEC WONG, P.E., CHIEF  
Clean Water Branch

Honolulu, HI 96813

Subject: Environmental Impact Statement  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Dr. Anderson:

Thank you for the Environmental Planning Office's (EPO) participation in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas. Because the EPO permanently closed on May 2, 2018, we are directing this response to you in your capacity as director of the Department of Health. EPO provided early consultation comments by letter dated December 21, 2016, which was prior to the publication of the EISP on February 8, 2018. EPO did not provide written comments on the EISP. We acknowledge EPO's early consultation comments and concerns, which were considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of EPO's comments has been appended to the Draft EIS in Appendix J.

We acknowledge that EPO suggested that the applicant consider a number of resources in preparing the Draft EIS. We have taken EPO's comments into consideration in preparing the Draft EIS, and offer the following responses:

The Draft EIS takes into utilized the relevant resources suggested by EPO, including GIS information from several sources. *See* Chapters 1 and 3 of the Draft EIS. The Department of Health's Clean Water Branch was also consulted as part of the early consultation and Draft EIS process. *See* Appendix J (Pre-Assessment Consultation Correspondence) and Appendix M (Scoping Meeting and EISP Comments and Responses). Compatibility of the Proposed Action with the State's functional plans is considered in Chapter 5 of the Draft EIS.

EPO's written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental Quality Control website.

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Keānae, Honomanu and Huelo License Areas

Dear Ms. Kitkowski:

Thank you for your agency's participation in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Keānae, Honomanu, and Huelo License Areas. You provided an early consultation letter dated December 23, 2016, which was prior to the publication of the EISPN on February 8, 2017, and you also provided written comments dated February 23 and March 22, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix J (as to the early consultation comments) and Appendix M (as to your comments on the EISPN).

We acknowledge that the Department of Health, Maui District Health Office, in early consultation did not have comments but recommended that the applicant review the Standard Comments on the Department of Health's former Environmental Planning Office's (EPO) website. The EPO submitted early consultation comments, a copy of which is included in Appendix J to the Draft EIS.

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

*Earl Matsukawa*

Proposed Lease (Water Lease) for the Nāhiku, Ke'ānae, Honomanū  
and Huelo License Areas

Dear Mr. Rowe:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas. On behalf of the County of Maui Department of Water Supply (DWS), you provided a letter dated December 13, 2016, in response to our request for early consultation comments. That was prior to the publication of the Environmental Impact Statement Preparation Notice (EISP) on February 8, 2017. You did not provide written comments on the EISP.

We acknowledge that you indicated your client, DWS, did not have any early consultation comments. However, we note that DWS subsequently sent two early consultation communications to us on December 15, 2016 and December 20, 2016. A copy of your letter, DWS' letters, and responses to those communications will be appended to the Draft EIS in Appendix J.

It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental Quality Control website.

We appreciate your agency's interest and participation in this environmental review process.

Sincerely,

Re: Proposed Lease for the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas -  
Early Consultation for the Preparation of an Environmental Impact Statement

Dear Mr. Matsukawa:

Thank you for the opportunity to comment on the early consultation for the Preparation of an Environmental Impact Statement (EIS) for the Proposed Lease for the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas.

The Proposed Action requests the issuance of a 30-year Water Lease from the Board of Land and Natural Resources (BLNR) for the "right, privilege and authority to enter and go upon" the stated license areas for the "purpose of developing, diverting, transporting, and using government owned waters" via the East Maui Irrigation (EMI) system, allowing operation of the EMI system and delivery to Department of Water Supply (DWS) and agricultural users, not to exceed diversion of more water that allowed by the pending Interim in Stream Flow Standards (IIFS) decision.

#### Legal Issues

The relationship of the IIFS and contested cases to potential constraints on water diversion and delivery by the EMI system are germane to the proposed action to issue a 30-year lease. The EIS should comprehensively discuss the status of CWRM's efforts to amend IIFS for certain East Maui streams, including estimated timelines. A full disclosure of a range of potential outcomes, and their relationships to the Proposed Action, should be evaluated.

The Final EIS Scope of Services preliminary identifies those parameters for which the CWRM's decision to amend the IIFS is deemed needed and states that the completion of the Draft EIS will be deferred for those elements. However, in the Re-opening of Hearing for Limited Purposes, the Hearings Officer identified specific areas for which additional evidence is anticipated: 1. HC&S Co./A&B's current and future use of surface waters and the impact on the groundwater sources for its central Maui fields of HC&S cessation of sugar operations; 2. the

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

"By Water All Things Find Life"

impact on DWS's use of surface water; 3. Maui County's position on the future use of the central Maui fields; and 4. how EMI is managing the decrease in diversions, the interim restorations and issues concerning the integrity of the EMI system. Data and evidence for the following elements below are available and not dependent on a CWRM Decision on IIFS for full disclosure in the Draft EIS:

#### Hydrogeology

The EIS should fully address Groundwater Interaction in the License Areas, as the Re-opening of Hearing for Limited Purposes will consider impact on groundwater sources for Central Maui fields but not revisit impacts on groundwater resources in License Areas.

#### Economic Impacts

The costs of the EMI System management, capital improvement, system operation and maintenance are important in assessing the future viability of the system and should be disclosed by the applicant. Relevant information include:

- The current and projected costs of the EMI system management, capital improvements, system operation and maintenance.
- Projected revenues and alternative scenarios that might occur after 2016 in the event of reduced and geographically altered IIFS and water demands by various water users. Alternative scenarios based on disclosed assumptions should be developed in consultation with the appropriate parties.
- Although the non-consumptive use of water involved in hydroelectric uses is likely difficult to appraise, the EIS should describe the extent to which hydroelectricity is generated, including the associated costs and revenues.

#### Changing Economic Conditions

The transition of A&B's lands to an alternative agricultural model, with variations in crop types, geographic distribution, timing, and associated future water demands, and water availability are uncertain. The EIS should address potential impacts directly or indirectly related to the Proposed Action in the event that:

- Permitted diversions under the IIFS are inadequate to sustain the economic viability of the EMI System in whole or in part.
- Alternative agricultural uses are inadequate to sustain the economic viability of the EMI System over the transition period or longer term.

In the event the EMI system is not economically viable, "at risk" or compromised due to the above cited issues or state of infrastructure, lack of capital to upgrade, etc., the EIS should assess alternative solutions that might be considered to mitigate the impacts. Examples might include County or State acquisition, lease, management; or other collaborative arrangements.

#### County of Maui Plans

The EIS should address how the proposed project could affect the following provisions of the *County of Maui 2030 General Plan Countywide Policy Plan* (Policy Plan) strategies, goals, objectives and policies relevant to water use, delivery and conservation. Policy Plan Key Strategy I states: "1. Improve Physical Infrastructure - New and old sustainable approaches for the delivery, use, and conservation of water and energy resources..." (<http://www.co.maui.hi.us/DocumentCenter/Home/View/11132>)

The EIS should address how the Proposed Action could affect the following provisions of the *County of Maui General Plan 2030, Maui Island Plan* ([www.mauicounty.gov/1503/Maui-Island-Plan](http://www.mauicounty.gov/1503/Maui-Island-Plan)), which includes the following goals, objectives, and policies.

- Goal: 6.3 Maui will have an environmentally sustainable, reliable, safe, and efficient water system.
- Objective: 6.3.2 Increase the efficiency and capacity of the water systems in striving to meet the needs and balance the island's water needs.
- Policies: 6.3.2.a Ensure the efficiency of all water system elements including well and stream intakes, water catchment, transmission lines, reservoirs, and all other system infrastructure.
- Objective: 6.3.3 Improve water quality and the monitoring of public and private water systems.
- Policies: 6.3.3.a Protect and maintain water delivery systems.

With regard to efficiency, capacity, and monitoring of systems, the EIS should describe the percent transmission efficiency and how the optimization of the system would affect capacity, monitoring, maintenance and overall management.

We hope you find this information useful. Should you have any questions, please contact staff planner Alex Buttaro at (808) 463-3103 or alex.buttaro@mauicounty.gov.

Sincerely,

  
David Taylor, P.E.  
Director

Mr. Jeffrey T. Pearson  
Director  
County of Maui, Department of Water Supply  
200 South High Street  
Wailuku, HI 96793-2155

Subject: Environmental Impact Statement  
Proposed Lease (Water Lease) for the Nāhiku, Ke'ānae, Honomanū  
and Huelo License Areas

Dear Mr. Pearson:

Thank you to the County of Maui Department of Water Supply (MDWS) for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas. MDWS provided early consultation comments by letter dated December 20, 2016, which was prior to the publication of the Environmental Impact Statement Preparation Notice (EISPN) on February 8, 2017. MDWS did not provide written comments on the EISPN. We acknowledge MDWS's early consultation comments and concerns, which were considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A copy of your letter has been appended to the Draft EIS in Appendix J.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui that are now owned by Mahi Pono and planned for diversified agriculture.
2. We acknowledge that at the time of MDWS' letter, the Commission on Water Resource Management (CWRM) had not yet issued its final decision in the Interim Instream Flow Standards (IIFS) contested case proceeding. CWRM has since issued its Findings of Fact, Conclusions of Law, & Decision and Order (D&O) on June 20, 2018. For the purposes of this EIS, diversion quantities allowable under the CWRM D&O were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area.
3. Since your early consultation letter, Hawaiian Commercial & Sugar Co. (HC&S) has ceased all operations and the Central Maui agricultural fields have been sold to Mahi Pono. A description of the Proposed Action is discussed in Chapter 2 of the Draft EIS. Section 2.1.4 of the Draft EIS provides a description of Mahi Pono's farm plan for the agricultural fields in Central Maui. The farm plan is based on the water available after compliance with the CWRM D&O.

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

10238-02  
Mr. Jeffrey T. Pearson, Director  
Page 2  
September 23, 2019

4. Chapter 4 of the Draft EIS includes an assessment of the existing environment, impacts of the Proposed Action and mitigation measures, including the modification or removal of diversion structures in streams designated for full or partial restoration by the CWRM D&O, including discussion of groundwater hydrology in Section 4.2.2 and Appendices A and C of the Draft EIS.
5. Economic impacts of the Proposed Action and alternatives, including a scenario where no Water Lease is issued, are analyzed in the various technical studies appended to the Draft EIS, including an Economic and Fiscal Impact Study (See Appendix H) and an Agricultural and Related Economic Impacts report (See Appendix I). These economic, fiscal, and agricultural impacts are also addressed in Sections 4.7.3 and 4.7.4 of the Draft EIS and also in Chapter 3 of the Draft EIS.
6. Chapter 3 also discusses alternative ownership of the EMI Aqueduct System.
7. Pursuant to HAR § 11-200-17(h), the Draft EIS in Chapter 5 discusses the Proposed Action's consistency with various plans and policies, including the County of Maui land use plans and policies in Section 5.4, including the Countywide Policy Plan and Maui Island Plan, and the community plans relevant to the Proposed Action in Section 5.7.
8. As described in Chapter 3 of the Draft EIS, Mahi Pono's plan includes designing a high-efficiency irrigation system to reduce water usage.

Your letter and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental Quality Control website.

We appreciate your agency's interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP  
Vice President, Director of Planning

Subject: Environmental Impact Statement  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Ms. Townsend:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas. You provided an early consultation comment by email dated December 15, 2016, which was prior to the publication of the Environmental Impact Statement Preparation Notice (EISP) on February 8, 2017. The Department of Water Supply did not provide written comments on the EISP. We acknowledge those comments and concerns which were considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A copy of your letter and this response has been appended to the Draft EIS in Appendix J.

We acknowledge that you requested a clean copy of Figure 3 that was included in the early consultation notice. Figure 3 to the consultation notice has been reproduced in the Draft EIS as Figure 2-2. Please note that Mr. David Taylor on behalf of your Department provided early consultation comments dated December 20, 2016. A copy of our response to Mr. Taylor's comments has been appended to the Draft EIS in Appendix J.

It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental Quality Control website.

We appreciate your agency's interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

**Subject:** Environmental Impact Statement  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanu and Huelo License Areas

Dear Chief Faaumu:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanu, and Huelo License Areas. On behalf of the Police Department of the County of Maui (MPD) you responded to our request for early consultation comments by letter dated December 21, 2016, which was prior to the publication of the Environmental Impact Statement Preparation Notice (EISPN) on February 8, 2017. MPD did not provide written comments on the EISPN.

We acknowledge that the County of Maui Police Department did not have any comments or recommendations in response to our request for early consultation.

Your letter and this response will be reproduced in Appendix J of the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental Quality Control website.

We appreciate your agency's interest and participation in this environmental review process.

Sincerely,

COUNTY OF MAUI  
**DEPARTMENT OF PLANNING**

December 22, 2016

Wilson Okamoto Corporation  
Attention: Mr. Earl Matsukawa, Project Manager  
1907 South Beretania Street, Suite 400  
Honolulu, Hawaii 96826

Dear Mr. Matsukawa:

**SUBJECT: "PROPOSED LEASE FOR NAHIKU, KEANAE, HONOMANU, AND HUELO LICENSE AREAS," RESPONSE TO EARLY CONSULTATION FOR THE PREPARATION OF AN ENVIRONMENTAL IMPACT STATEMENT (RFC 2016/0218)**

The Department of Planning (Department) is in receipt of your request for comments in preparation of an Environmental Impact Statement for the above subject proposed water lease, which has been applied for by Alexander and Baldwin, Inc. and the East Maui Irrigation Company, Limited. From your letter request of November 23, 2016 the Department understands that "the application seeks a long-term lease pursuant to Hawaii Revised Statutes (HRS) Section 171-58(c) for the 'right, privilege, and authority to enter and go upon,' the Nahiku, Keanae, Honomanu, and Huelo license area 'for the purpose of developing, diverting, transporting and using government-owned waters.'"

As it is particularly pertinent to this response letter, the Department further understands the Proposed Action and Purpose and Need for the action to be as follows, as described in the "Early Consultation Summary" dated November 23, 2016 and included with your letter.

**Proposed Action**

The proposed action constitutes the issuance of one long term (30 years) Water Lease from the Board of Land and Natural Resources (BLNR) for the "right, privilege, and authority to enter and go upon" the Nahiku, Keanae, Honomanu, and Huelo license areas for the "purpose of developing, diverting, transporting, and using government owned waters," through the existing EMI Aqueduct System which supplies water to domestic and agricultural water users. The Water Lease will also require the Lessee to continue to go on lands owned by the State in order to maintain and repair existing access roads and trails used as part of the EMI Aqueduct System. The Water Lease will allow continued operation of the EMI Aqueduct System to deliver water to the Maui County Department of Water Supply

Mr. Earl Matsukawa, Project Manager  
December 22, 2016  
Page 2

(DWS) for domestic and agricultural water needs in Upcountry Maui, including agricultural users at the Kula Agricultural Park. It will also allow the continued provision of water to approximately 26,600-acres of agricultural lands (formerly in sugarcane) in Central Maui owned by A&B and farmed and managed by Hawaiian Commercial & Sugar Company, a division of A&B (See Figure 3). The Water Lease will not allow more water to be diverted than allowed by the IIFS decision that is currently pending before the CWRM.

The terms of the long term Water Lease will be subject to all applicable requirements under HRS § 171-58(c), and will also be subject to the Department of Hawaiian Home Lands' (DHHL) rights to reserve water sufficient to support current and future homestead needs as provided by Section 221 of the Hawaiian Homes Commission Act.

**Purpose and Need**

Existing domestic and agricultural water demands in Central and Upcountry Maui are currently served by the EMI Aqueduct System. The purpose and need for the Water Lease is to continue service for agricultural and domestic purposes, as well as to ensure that future water demands, such as those considered for DHHL, may be met.

Moreover, the proposed Water Lease will ensure that the EMI Aqueduct System that enabled the cultivation of naturally non-arable lands in Central Maui will be maintained to continue to serve the community, continue Maui's rich agricultural heritage, and to enhance the sustainability and diversity of Maui's economy.

Based on the foregoing, the Department provides the following comments as pre-consultation in preparation of the (EIS/OEIS):

1. As stated in the Maui County Charter, as amended in 2002:

"The General Plan shall indicate desired population and physical development patterns for each island and region within the county; shall address the unique problems and needs of each island and region; shall explain the opportunities and the social, economic, and environmental consequences related to potential developments; and shall set forth the desired sequence, patterns, and characteristics of future developments. The general plan shall identify objectives to be achieved, and priorities, policies, and implementing actions to be pursued with respect to population density, land use maps, land use regulations, transportation systems, public and community facility locations, water and sewage systems, visitor destinations, urban design, and other matters related to development."

The County of Maui 2030 General Plan Countywide Policy Plan, adopted by the Maui County Council (Council) on March 19, 2010, is the first component of the decennial General Plan update. The Countywide Policy Plan acts as an over-arching values statement and umbrella policy document for the Maui Island Plan and the nine (9) Community Plans that provides broad goals, objectives, policies, and implementing actions that portray the desired direction of the County's future.

Please address how the Proposed Action could affect the following provisions of the *County of Maui 2030 General Plan Countywide Policy Plan* (Policy Plan) that can be found at <http://www.co.maui.hi.us/DocumentCenter/View/11132>.

- Policy Plan Key Strategy I states: "I. **Improve Physical Infrastructure** - New and old sustainable approaches for the delivery, use, and conservation of water and energy resources, along with new ways of thinking about the recycling and disposal of waste, are among the opportunities upon which Maui County can capitalize."

The Policy Plan also includes the following relevant combinations of goals, objectives, and policies:

I. Improve Physical Infrastructure

Goal: Maui County's physical infrastructure will be maintained in optimum condition and will provide for and effectively serve the needs of the County through clean and sustainable technologies.

Objective:

1. Improve water systems to assure access to sustainable, clean, reliable, and affordable sources of water.

Policy:

- a. Ensure that adequate supplies of water are available prior to approval of subdivision or construction documents.
- c. Ensure a reliable and affordable supply of water for productive agricultural uses.
- h. Seek reliable long-term sources of water to serve developments that achieve consistency with the appropriate Community Plans.

2. The Maui Island Plan was adopted by the Council on December 28, 2012. The Plan provides direction for future growth, the economy, and social and environmental decisions through the year 2030. The Plan looks

comprehensively at many factors that influence the physical, social and economic development of the island. In addition to establishing a directed growth strategy to identify areas appropriate for future urbanization and revitalization, the Plan also identifies and addresses key environmental, housing, and economic development issues relevant to Maui's current and future generations. The Plan is intended by the Council, Department, and Maui Planning Commission (Commission) as a policy foundation for day to day decisions and is specifically intended to be used to assist in reviewing discretionary permits.

Please address how the Proposed Action could affect the following provisions of the *County of Maui General Plan 2030 Maui Island Plan* (Island Plan), which includes the following relevant combinations of goals, objectives, and policies. The Island Plan can be found at <http://www.mauicounty.gov/1503/Maui-Island-Plan>.

Goal:

- 6.3 Maui will have an environmentally sustainable, reliable, safe, and efficient water system.

Objective:

- 6.3.2 Increase the efficiency and capacity of the water systems in striving to meet the needs and balance the island's water needs.

Policies:

- 6.3.2.a Ensure the efficiency of all water system elements including well and stream intakes, water catchment, transmission lines, reservoirs, and all other system infrastructure.

Objective:

- 6.3.3 Improve water quality and the monitoring of public and private water systems.

Policies:

- 6.3.3.a Protect and maintain water delivery systems.

3. Please address how the Proposed Action could affect the following provisions of the *Pala-Haiku Community Plan*, which includes the following relevant combinations of goals, objectives, and policies. This community plan can be found at <http://www.mauicounty.gov/423/Community-Plans>.

Water

Goal:

An adequate supply of potable and irrigation water to meet the needs of the region.

Objective:

2. Ensure that adequate water capacity is available for domestic and agricultural needs of the region.
5. Improve the existing potable water distribution system and develop new potable water sources prior to further expansion of the State Urban District boundary or major subdivision of land in the State Agricultural or Rural Districts.
4. Please address how the Proposed Action could affect the following provisions of the *Hana Community Plan*, which includes the following relevant combination of goal, objective, and policy. This community plan can be found at <http://www.mauicounty.gov/423/Community-Plans>.

PHYSICAL INFRASTRUCTURE

Goal:

Timely and environmentally sensitive development and maintenance of infrastructure systems which protect and preserve the safety and health of the Hana region's residents and visitors, including the provision of domestic water, utility and waste disposal services, and effective transportation systems which meet the needs of residents and visitors while protecting the region's rural character.

Objectives and Policies

Water:

7. Improve water sources and delivery facilities to ensure that water supplied to the region's residents and visitor is of the highest quality.

Thank you for the opportunity to comment. Should you require further clarification, please contact Current Planning Supervisor Jeffrey Dack by e-mail at [jeffrey.dack@mauicounty.gov](mailto:jeffrey.dack@mauicounty.gov) or by telephone at 270-6275.

Sincerely,

WILLIAM SPENCE  
Planning Director

Director, Planning Department  
County of Maui  
One Main Plaza Building  
2200 Main Street, Suite 315  
Wailuku, Maui 96793

Subject: Environmental Impact Statement  
Proposed Lease (Water Lease) for the Nāhiku, Ke'ānae, Honomanū  
and Huelo License Areas

Dear Director McLean:

Thank you for your agency's participation in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas. The County of Maui Planning Department provided early consultation comments from William R. Spence dated December 22, 2016, which was prior to the publication of the EISP on February 8, 2017. Your agency did not provide written comments on the EISP. We acknowledge the early consultation comments and concerns which were considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A copy of the Planning Department's early consultation letter has been appended to the Draft EIS in Appendix J.

We have taken your agency's comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. Pursuant to HAR § 11-200-17(h), the Draft EIS discusses the Proposed Action's consistency with various plans and policies in Chapter 5 of the Draft EIS, including the County of Maui land use plans and policies in Section 5.4, including the Countywide Policy Plan and Maui Island Plan, and the community plans relevant to the Proposed Action in Section 5.7.

10238-02  
Letter to Michelle Choteau McLean, Director  
Page 2  
September 23, 2019

Your agency's written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental Quality Control website.

We appreciate your agency's interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

From: Leina Wender  
Subject: Proposed Lease for the Nahiku, Ke'anae, Honomani, and Huelo License Areas  
Date: December 26, 2016 at 1:40 PM  
To: woe@wilsnorkamolo.com  
Bcc: Leina Wender, alan.murakami@nhichi.org, camille.kelams@nhichi.org, summer.sylvia@nhichi.org, skippy.hau@hawaii.gov

The following comments are submitted for the early consultation phase for the preparation of an Environmental Impact Statement Preparation Notice (EISP/N) for the above-named proposed lease.

The residents of Ke'anae-Wailuanui have been demanding that an EIS be prepared for 35 years. As I assume that representatives of East Maui residents and communities will also be submitting comments, I will address only some important issues which I believe need more attention than they have been given in the past. I will not discuss the absence of legal basis for granting these leases nor the devastating effects that the water diversions have caused and would continue to cause, if a new lease were granted, as I believe others will address these issues. I will discuss some of the effects of the recent, wholly inadequate, so-called "restoration" of streamflow.

The Early Consultation Summary of November 23, 2016 states that Waioakamilo Stream was "fully restored in 2007", and that several other streams are "planned for full and permanent restoration." The dictionary definitions of "restore" include "to return...something to a former condition..."; "to repair or renovate...so as to return it to its original condition"; and "to give something previously stolen, taken away, or lost back to the original owner or recipient." EMI has not restored Waioakamilo or any other stream.

EMI apparently no longer utilizes water from Waioakamilo. But this is not the same as restoration. EMI formerly diverted water not only from the main flume at Kikokiko, but also from numerous tributaries of various sizes which, before the existence of the ditch, eventually found their way into Waioakamilo Stream. This water was collected via about two dozen diversions consisting primarily of concrete catchment basins with pipes. EMI has cut these pipes so that the water no longer goes into the ditch. Instead, it now drips or flows onto the ditch road, creating a muddy mess and additional habitat for invasive plants. Most of this water never makes its way off of the road, much less back into the stream. When they were built, the ditch and the ditch road cut into and altered the natural terrain. Nothing has been done to return this terrain to its original condition or to ensure that the water not diverted actually gets into the stream.

In addition, EMI has abandoned and no longer maintains the ditch road in the Waioakamilo area, resulting in its present hazardous condition. They also no longer monitor the area for miconia, which I have frequently encountered there in recent years. EMI has abandoned any responsibility for stewardship of the watershed areas they no longer utilize. Even in the areas they still use, banyan trees, clidemia and other invasive plants grow unlettered.

The EIS should discuss the alternative solutions. One could be to restore the area to its pre-diversion landscape without causing additional environmental damage. If that is not feasible, an alternative could be to allow the ditch road to remain, and to require that it be maintained, and also that a means be provided to ensure that the previously diverted water finds its way to the stream.

On some streams which EMI no longer uses, a continuous mauka / makai flow has still not been reestablished. For instance, at West Wailuaka, the water is diverted and then put back into the stream so that the flow is interrupted at the ditch road. None of the massive, ugly concrete infrastructure has been removed. In short, the streams and their surroundings have not truly been restored.

If any new lease is considered, first restoration of the abandoned areas should be completed, and the lease should contain strict provisions requiring true watershed restoration, not simply

cessation of water diversion, at the end of the lease period. There should also be a requirement that a bond be posted in a sufficient amount to carry out this work.

All of these issues must be discussed in the subject EIS.

I have one additional comment regarding Figure 1 of the preconsultation request, "EMI Aqueduct System". The key indicates that the areas colored green are "EMI lands." This would lead one to believe that EMI wholly owns these lands, which is untrue. I am familiar only with the lands in the Ke'anae-Wailuanui area, which are hui lands, obtained from the Kingdom of Hawai'i in the 19th century by groups of owners and never partitioned or subdivided. EMI claims an interest in these hui, but so do scores or even hundreds of other people, including myself. Such deceptive images and labels should not be permitted.

Thank you for this opportunity to comment.

Sincerely,

Elaine Wender

10238-01  
February 8, 2017

Ms. Leina Wender  
[REDACTED]

Subject: Early Consultation for the Preparation of an  
Environmental Impact Statement Preparation Notice  
Proposed Lease for the Nāhiku, Keʻānae, Honomanū,  
and Huelo License Areas

Dear Ms. Wender:

Thank you for your comment letter on the subject Early Consultation for the Environmental Impact Statement Preparation Notice (EISP/N) pertaining to the Proposed Lease for the Nāhiku, Keʻānae, Honomanū, and Huelo License Areas. Your comments will be considered and a copy of your comment letter will be appended to the EISP/N.

Public scoping meetings in conjunction with the thirty-day public review and comment period on the EISP/N will be conducted on the island of Maui. The purpose of the meetings is to provide an overview of the EIS process and solicit input pertaining to the scope of the Draft EIS. The meetings will be held on: Wednesday, February 22, 2017 from 5:00 p.m. to 7 p.m. at the Maui Electric Company Community Meeting Room (210 W. Kamehameha Avenue), and Thursday, February 23, 2017 from 5:00 p.m. to 7 p.m. at the Hālikū Park and Community Center (2830 Hāna Highway - Hāna Highway at Piliāloha Street).

We appreciate your interest in this environmental review process and will continue to invite your participation.

Sincerely,

Earl Matsukawa, AICP  
Project Manager

Ms. Elaine Wender  
[REDACTED]

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Keʻānae, Honomanū  
and Huelo License Areas

Dear Ms. Wender:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Keʻānae, Honomanū, and Huelo License Areas. During the EISP/N comment period, you provided oral comments at the February 23, 2017 EIS Scoping Meeting, and written comments dated March 9, 2017. We also appreciate your early consultation comments provided by email dated December 26, 2016. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawaiʻi Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix J (as to your early consultation comments) and Appendix M (as to your comments at the public scoping meetings and your written comments in response to the EISP/N).

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Keʻānae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui that are now owned by Mahi Pono and planned for diversified agriculture.
2. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

3. CWRM, pursuant to the D&O issued in June 2018, stated that its intention was to allow for the continued use and viability of the EMI Aqueduct System and that it would not require the complete removal of diversions unless complete removal was necessary to achieve the IIFS.
4. Trutta and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).
5. The Chapter 4 of the Draft EIS includes an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). The CWRM D&O considered objectives and management strategies in setting the IIFS. Chapter 1, Section 1.3.3 and Chapter 4 of the Draft EIS discusses diversions and restoration related to Waiokamilo Stream, which was ordered for full restoration by the CWRM D&O.
6. Various technical studies are appended the Draft EIS and provide detailed examinations or resources and potential impacts, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I)
7. Chapter 3 of the Draft EIS includes an evaluation of the reasonable alternatives to the Proposed Action.
8. The EMI Aqueduct System Collection Area is shown on Figure 1-1 of the Draft EIS. This figure, which is not to scale, also indicates broadly the lands owned by the State of Hawai'i within the Collection Area and the lands owned by A&B and/or Mahi Pono within and adjacent to the Collection Area.

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

Wailuku, HI 96793

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Keānae, Honomanu,  
and Huelo License Areas

Dear Mr. Perez:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Keānae, Honomanu, and Huelo License Areas, by providing your written comments on the EISPN, dated March 10, 2017, and your oral comments at the February 22, 2017 scoping meeting. We also appreciate Maui Tomorrow Foundation's early consultation comments provided by letter dated December 27, 2016 from Mr. Isaac Hall, Esq., on behalf of Maui Tomorrow Foundation, wherein he stated that Maui Tomorrow Foundation joined in the early consultation comments made by Native Hawaiian Legal Corporation (NHLC) dated December 26, 2016. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments and the NHLC comments have been appended to the Draft EIS in Appendix J (Pre-Assessment Consultation Correspondence) and Appendix M (Scoping Meeting and EISPN Comments and Responses). We have also enclosed a copy of our response to NHLC's comments.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Keānae, Honomanu, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

002030

2. Section 1.4 of the Draft EIS explains that in 2016, the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS also studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied. In accordance with Hawai'i Revised Statutes (HRS) Chapter 343 and Hawai'i Administrative Rules (HAR) Section 11-200-4(b), the BLNR, as the executive board of the DLNR, is the accepting authority for the EIS. The DLNR is also the agency that will be issuing the proposed Water Lease for public auction.
3. Chapter 1 of the Draft EIS discusses the purpose and need of the Proposed Action.
4. Chapter 4 of the Draft EIS discusses the existing environment, impacts of the proposed action and mitigation measures. As relevant and appropriate, the discussion of impacts includes those pertaining to conditions before and after the closure of sugar cultivation in 2016.
5. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action, including alternative duration and diversion volume, as well as a No Action alternative. Section 3.1.1 of the Draft EIS discusses water source alternatives. Section 3.1.2 of the Draft EIS discusses alternative aqueduct ownership.
6. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
7. Trutta and SWCA prepared reports in support of the Draft EIS assessing the impacts of the Proposed Action and alternatives on indigenous freshwater species, terrestrial flora and fauna, and invasive mosquitoes. The Draft EIS discusses the impacts of the Proposed Action to freshwater species in Section 4.2.1 and impacts to terrestrial flora and fauna in Sections 4.4.1 and 4.4.2. Both reports are appended to the Draft EIS (See Appendix B and Appendix C).
8. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full or partial restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of Streams and the Ocean Water Chemistry (See Appendix A); Terrestrial and Flora and Fauna Report (See Appendix B); Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using

- the Hawaiian Steam Habitat Evaluation Procedure (HSHEP) Model (See Appendix C), Historical Structure Assessment (See Appendix D), Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).
9. Figure 1-1 in the Draft EIS illustrates the EMI Aqueduct System overlaid on the Department of Land and Natural Resources (DLNR) Division of Aquatic Resources (DAR) geographic information system (GIS) data of streams. An electronic drawing of the EMI Aqueduct System was georeferenced by Akinaka & Associates, Ltd. to depict major diversions on East Maui streams on a United States Geological Survey (USGS) GIS base map. Due to the complexity of the EMI Aqueduct System and the level of detail shown on the map, not all of the minor diversions could be associated with a stream or tributary. The stream names shown are from the DAR GIS database but a few of those stream names may differ from how some East Maui residents may refer to them. Moreover, certain streams that were identified during certain proceedings before the Commission on Water Resources Management (CWRM) do not have associated GIS data and therefore could not be precisely located on the map. Table 1-2 in the Draft EIS reconciles discrepancies between stream names used in the February 2017 EIS Preparation Notice and the D&O.
  10. Section 2.1.4 of the Draft EIS includes a description of Mahi Pono's Farm Plan for the agricultural fields in Central Maui. The Farm Plan is based on estimates of available surface and ground water. Information from the D&O was used to estimate the maximum amount of water that can be diverted by the EMI Aqueduct System from the License Area. Section 2.1.1 discusses the Department of Hawaiian Home Lands' water reservation.
  11. Section 1.3.4 of the Draft EIS discusses the D&O and the authority of the BLNR to issue a Water Lease for non-instream uses pursuant to HRS § 171-58, that is subject to the IIFS set by CWRM.
  12. Section 2.3.1 of the Draft EIS discusses the Maui Department of Water Supply (MDWS) system, including water sourced from the EMI Aqueduct System. Figure 2-4 depicts the MDWS surface water supply system.
  13. Section 2.1.3.2 of the Draft EIS discusses water needs for the Kula Agricultural Park.
  14. Section 1.3 in the Draft EIS incorporates additional historical information from the Archaeological Literature Review and field inspection report (Appendix E).
  15. Section 4.3.1 and 4.3.2 of the Draft EIS discuss climate change and sea level rise, respectively as well as the Assessment of Streams and the Ocean Water Chemistry (See Appendix A).
  16. Section 4.9 of the Draft EIS discusses Visual Resources.
  17. Section 4.8 of the Draft EIS discusses recreational resources and park facilities.

18. Section 4.14 and Section 4.15 of the Draft EIS discuss how the amount of water available through surface water diversion may impact public services and facilities; and, infrastructure and utilities, respectively.
19. Section 4.13 of the Draft EIS discusses potential traffic impacts of Mahi Pono's proposed diversified agricultural operations.
20. Section 1.3.4 of the Draft EIS discusses the D&O.
21. Section 4.2.2 of the Draft EIS discusses groundwater hydrology, including in East Maui.
22. Sea Engineering, Inc. and Marine Research Consultants, Inc. prepared an assessment of streams and the ocean water chemistry in support of the Draft EIS. The Draft EIS summarizes this assessment in Section 4.2.3. The report is also appended in the Draft EIS (Appendix A).
23. Cultural Surveys Hawai'i, Inc. prepared an archaeological report as well as a cultural impact assessment, which are summarized in Section 4.5 and 4.6 of the Draft EIS, respectively. These reports are also appended in the DEIS (Appendices E and F, respectively).
24. Earthplan prepared a social impact assessment which is summarized in Section 4.7.1 and 4.7.2 of the Draft EIS. The report is also appended in the Draft EIS (Appendix G).
25. Implementation of the D&O through modifications and adjustments to the EMI Aqueduct System is independent of the Proposed Action, which is the issuance of a Water Lease. Section 1.3.4 of the Draft EIS discusses the D&O.
26. Section 4.16 of the Draft EIS discusses secondary and cumulative impacts of the Proposed Action.
27. Section 5.8 of the Draft EIS discusses the permits and approvals related to the Proposed Action.

Your written and oral comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

Re: Early Consultation for the Preparation of an EISP/N Proposed Lease for the  
Nahiku, Ke'anae, Honomanu, and Huelo License Areas East, Central and Up-  
Country Maui, Hawaii

Dear Mr. Okamoto,

Mahalo for the opportunity to provide comments prior to the issuance of an  
Environmental Impact Statement Preparation Notice for the use of water from four license areas  
consisting of 33,000 acres of lands and waters in East Maui. Our office represents Nā Moku  
Aupuni o Ko'olau Hui and other farmers, fishermen and women, and gatherers of native plants  
and stream animals in the East Maui region. These comments are preliminary in nature and are  
not intended to represent the entirety of our clients' concerns regarding the proposed use of the  
license areas.

In general, the EIS should consider impacts to and along: (1) each diverted stream, (2)  
each individual license area, and (3) the entire 33,000 acres of license area. In addition, the  
discussion of diversions should include all structures, designs, and mechanisms that either  
remove water from streams **or** prevent water from entering into streams.

First, Alexander & Baldwin's Environmental Impact Statement should provide at a *minimum*  
the following:

- Full disclosure of every single diversion along the East Maui Irrigation system (including  
photographs and descriptions as to how the diversion operates, how much water it diverts  
from the stream daily (on average and at minimum and maximum), and its precise  
location);
- Maps indicating all maintenance and/or access roads for the diversion system including  
identification of all access points at public roads and/or highways;

*Services made possible with major funding from the Office of Hawaiian Affairs*  
Nāho, Upehihi, straight, steady, far and straight as a ree without branches, clearly peaked, as mountains. Fig., - ngahous, correct.

Wilson Okamoto Corporation  
December 26, 2016  
Page 2 of 3

- Maps that show every single stream within East Maui, including all tributaries from ma  
uka to ma kai, identified by name; and
- Alternative proposed uses including one that involves the use of water from less than all  
four license areas and no diversion of water from East Maui.

Second, the EIS should disclose the following information for *each* alternative analyzed in  
the EIS:

- the amount of water proposed to be taken from each stream daily (on average and at  
minimum and maximum);
- the amount of water proposed to be taken from each license area daily (on average and at  
minimum and maximum);
- the total amount of water proposed to be taken from the entire license areas daily (on  
average and at minimum and maximum).

Finally, the EIS should provide an analysis of the following:

- the degree to which leasing of the land interferes with access to the license area -  
including a discussion as to who controls the various gates that prevents access to these  
lands;
- the impact of diverting water from East Maui streams on aquatic life;
- the impact of diverting water from East Maui streams on native plant species;
- the impact of diverting water from East Maui on invasive species, including the creation  
of mosquito breeding grounds;
- the impacts of diverting water from East Maui streams on outdoor recreational activities,  
the maintenance of ecosystems, and aesthetic values such as waterfalls and scenic  
waterways; and
- the impacts of diverting water from East Maui streams on traditional and customary  
Hawaiian practices (including kalo farming, gathering of native stream flora and fauna,  
and recreation).

The discussion of alternatives should also include a no diversion alternative or licensing less than  
the full 33,000 acres for the diversions. In any discussion of alternatives that involve the use of  
less than the full diversion system and all four license areas, analysis of how the existing system  
will be removed and the watersheds restored should be included.

002033

We look forward to the publication of the EISP/N as soon as possible so this long awaited process can finally begin. Should you have any questions regarding the above, please call us at (808) 521-2302.

Sincerely yours,

  
Camille Kalama  
Summer Sylva

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Keʻanae, Honomanū  
and Huelo License Areas

Dear Ms. Kalama and Ms. Sylva:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Keʻanae, Honomanū, and Huelo License Areas. You provided early consultation comments by letter dated December 29, 2016, which was prior to the publication of the EISP/N on February 8, 2017. You also provided written comments on the EISP/N dated March 10, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawaiʻi Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix J (as to the early consultation comments) and Appendix M (as to the EISP/N comments).

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Keʻanae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. Chapter 4 of the Draft EIS discusses the existing environment, impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O), and mitigation measures. As relevant and appropriate, the discussion of impacts includes those pertaining to conditions before and after the closure of sugar cultivation in 2016. Various technical studies are appended the Draft EIS and provide detailed examinations,

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

September 23, 2019

including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Steam Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

3. Trutta and SWCA prepared reports in support of the Draft EIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, terrestrial flora and fauna and invasive mosquitos. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the Draft EIS (See Appendix A and Appendix C).

4. The Draft EIS includes in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.

5. Figure 1-1 in the Draft EIS illustrates the EMI Aqueduct System overlaid on the Department of Land and Natural Resources (DLNR) Division of Aquatic Resources (DAR) geographic information system (GIS) data of streams. An electronic drawing of the EMI Aqueduct System was georeferenced by Akinaka & Associates, Ltd. to depict major diversions on East Maui streams on a United States Geological Survey (USGS) GIS base map. Due to the complexity of the EMI Aqueduct System and the level of detail shown on the map, not all of the minor diversions could be associated with a stream or tributary. The stream names shown are from the DAR GIS database but a few of those stream names may differ from how some East Maui residents may refer to them. Moreover, certain streams that were identified during certain proceedings before the CWRM do not have associated GIS data and therefore could not be precisely located on the map. Table 1-2 in the Draft EIS reconciles discrepancies between stream names used in the February 2017 EIS Preparation Notice and the CWRM D&O.

6. For the purposes of the Draft EIS, diversion quantities from the CWRM D&O were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).

September 23, 2019

7. For purposes of this Draft EIS, the list of streams assessed as part of the License Area is taken from the D&O. The Draft EIS discusses impacts to hydrology associated with the Proposed Action in Section 4.2 of the Draft EIS as well as the reports various technical reports prepared for the Draft EIS, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Steam Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I)

8. The impacts of access into the License Area are discussed in the SWCA report and the Archaeological Literature Review and Field Inspection report (See Appendices B and E, respectively). These impacts are also discussed in the Draft EIS in Section 4.4 pertaining to the natural environment and Section 4.5 on historic and archaeological resources.

9. The Cultural Impact Assessment (See Appendix F) includes a tabulation and evaluation of traditional cultural practices, including those provided through interviews and declarations from the CWRM's proceedings on the IIFS.

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

Vice President, Director of Planning

September 23, 2019

Nanua Kuloloio Puaoi

Subject: Environmental Impact Statement  
Proposed Lease (Water Lease) for the Nāhiku, Kē'anae, Honomanū  
and Huelo License Areas

Dear Ms. Puaoi:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Kē'anae, Honomanū, and Huelo License Areas. You provided early consultation comments by email dated December 9, 2016, which was prior to the publication of the Environmental Impact Statement Preparation Notice (EISPN) on February 8, 2017. You did not provide written comments on the EISPN. We acknowledge your comments and concerns, which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix J.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Kē'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui, which are not owned by Mahi Pono and planned for diversified agriculture. The environmental impacts of the potential Water Lease have been assessed in the Draft EIS.
2. The Commission on Water Resource Management issued a decision on June 20, 2018, setting the Interim Instream Flow Standards for numerous East Maui streams. This decision also ordered full restoration of the taro streams in East Maui. The Proposed Action (issuance of a Water Lease) will be in full compliance with the diversions as permitted under the Commission on Water Resource Management's decision and order.

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

Subject: I strongly oppose A&B water sheds on East Maui

Aloha,

My name is Napua Kuloloio Puaoi, I am from Wailuku, Maui and I have strong family roots on the East side of Maui. I am writing because I strongly oppose A&B's control of East Maui's 33,000 acres of water she'd land. I am in support of Kalo farmers & the livelihood of East side residents who rely on that water. A&B has no right to that water it should remain where it is and not diverted or in what I like to call STOLEN from generations of Kalo farmers & residents that for decades depends on that water. It's not right! Let the water flow from mauka to maika'i! Show our keikis that the people can win over corporate greed like A&B!

Your written and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23 2019 at the Office of Environmental Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP  
Vice President, Director of Planning

Dear Mr. Matsukawa:

Public Access Trails Hawaii (501(c)(3) (publicaccesstrailshawaii.org) takes no position on the water lease to A & B at this time.

HOWEVER, Public Access Trails Hawaii demands that ALL Hawaii State leases require the following paragraph:

"All roads, trails, beach accesses and other public accesses on this leased property must be open at all times to the public".

Sincerely yours,

David Henderson Brown

Executive Director, Public Access Trails Hawaii

Subject: Environmental Impact Statement  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Mr. Brown:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas. You provided early consultation comments by letter dated December 8, 2016, which was prior to the publication of the EISP on February 8, 2017; you did not provide written comments on the EISP. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments and this response has been appended to the Draft EIS in Appendix J.

We acknowledge that your organization did not take a position on the Proposed Action (the Water Lease), but demanded that all State lease include the following paragraph: "All roads, trails, beach accesses and other public accesses on this leased property must be open at all times to the public." The terms and conditions of the proposed Water Lease will be established by the Board of Land and Natural Resources. We note that public access to the License Area is discussed throughout Chapter 3 and Chapter 4 of the Draft EIS.

It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP  
Vice President, Director of Planning

## P R O C E E D I N G S:

FACILITATOR SENELLY: Aloha, everybody, and welcome to our meeting on the proposed lease for the Nahiku, Keanae, Huelo, and Honomanu lease areas. And this is a scoping meeting for the environmental impact statement that's being done. Okay? Before -- my name is Berna Cabacungan Senelly and I'm -- I'll be helping to facilitate the meeting.

And Earl Matsukawa here from Wilson Okamoto is -- he's going to be doing a presentation and it's going to be short, not that long.

And two people that you saw when you came in, Rebecca and Keola, they're still working back there. So that's us.

I am privileged to also introduce Father Tomoso, Father John Tomoso, and he will be doing our pule tonight.

FATHER TOMOSO: Just so you know, Berna and I went to Catholic school, so we figured it out that we come from the same strain.

(Statement in Hawaiian.)

Almighty God, in your hands is everything that we see, in your care and blessing for us, all that we see comes from you. Almighty God, we know that you gift us with many things. First of all, the gift of life and within that abundant life, you give us water, an abundance of water, the abundance of water that reflects the perfection that we

RALPH ROSENBERG COURT REPORTERS, INC.  
1001 Bishop Street, #2460, Honolulu, HI 96813  
808-524-2090 courtreporters@hawaii.rr.com

journey to, which is your perfection. As an island people, you know our needs of and for water. As an island people, you have surrounded us with water, water that is reflective of life that comes from you. Therefore, Almighty God, we know that water is you, literally water breathes you, literally water feeds us with your life-giving breath, with your life-giving presence, with your life-giving abundance.

Almighty God, it is within this abundance that we gather as community. It is within this abundance that we are thankful for the gift of water, for the gift of who we are with and in and through that water. And we thank you most, most graciously, most thankfully for today, for this meeting, and for all that will come out of it.

We ask this in the name of (Hawaiian word), Jesus, your Son, our Lord and Savior. Amen.

AUDIENCE: Amen.

FACILITATOR SENELLY: All right. Everybody got an agenda? The meeting is going to be in five parts. Most of the meeting is going to be you folks talking. Okay? So the purpose of the meeting is -- I'm sorry.

Okay. The purpose of the meeting is pretty -- like we have three: One is we're going to talk about the environmental impact statement, the purpose and kind of an overview of the process.

Second is we're going to talk -- you're going to see

RALPH ROSENBERG COURT REPORTERS, INC.  
1001 Bishop Street, #2460, Honolulu, HI 96813  
808-524-2090 courtreporters@hawaii.rr.com

1 "EISPN" all the time and that's what this meeting is about,  
 2 it's about the environmental impact statement preparation  
 3 notice, and so we're going to talk about that and what's in  
 4 it. And that has already been released and we'll talk about  
 5 what's in it.

6 And third, we're going to ask you for scoping  
 7 comments -- and I'll explain what that is -- that will be  
 8 included in the draft EIS and that will actually guide the  
 9 draft environmental impact statement.

10 Okay. So the proposed action was published over  
 11 here in the "Environmental Notice," in the -- from the Office  
 12 of Economic -- Office of Environmental Quality Control. And  
 13 they put out bulletins and so this project was -- notice was  
 14 in the bulletin, published in the bulletin on February 8th.

15 So it -- what scoping is, scoping starts once the  
 16 public -- the preparation notice is released, okay, or is  
 17 published and what scoping is it's -- it determines the scope  
 18 or the content or what's inside the environmental impact  
 19 statement. So the meeting tonight is for you to guide us and  
 20 to tell us and to share with us what you think the  
 21 environmental impact statement should -- should address. Now,  
 22 the law, actually, Chapter 343 HRS really does require scoping  
 23 in every process; however, it does not -- the meetings  
 24 themselves are optional. And in this project we have two  
 25 meetings so -- because we want to sort of optimize

RALPH ROSENBERG COURT REPORTERS, INC.  
 1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

opportunities for folks to provide input.

Okay. So we've got 30 days from when the -- it was  
 published and so it was published February 8th, we have until  
 March 10th to provide comments. And all of the scoping

comments will be documented in the draft environmental impact  
 study. So there's going to be a draft EIS that's going to be  
 done and the comments that come out of the scoping process  
 will be included in that. Okay? There's three ways to

provide comments: First is oral testimony, so you can do that  
 tonight or this afternoon and, you know, plenty of you guys,  
 when we asked if you wanted to speak, a lot of people went  
 kind of (inaudible), yeah. So if you have time, you want to  
 sign up to speak tonight, you can, okay, or this afternoon.

The second way is everybody has a paper for their  
 comments, okay, you can turn this in tonight if you want. You  
 can also mail it, because it's a mailer, so you have to put a  
 stamp on it and send it in.

And the third way you can do it is by emailing it.

Now, I have to say this: If you're going to email it, you  
 really need to -- we're going to let you know that we received  
 it by email. If you do not receive an email, you've got to  
 call, there's a number up here, you have to let us know so  
 that we can make sure we have your comments.

So now I'm going to turn it over to Earl Matsukawa  
 from --

RALPH ROSENBERG COURT REPORTERS, INC.  
 1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

1 Yes.

2 UNIDENTIFIED SPEAKER: I don't see the email address

3 on this.

4 FACILITATOR SENELLY: It's on the bottom.

5 UNIDENTIFIED SPEAKER: Thank you.

6 FACILITATOR SENELLY: You're welcome.

7 Okay. I'm going to -- oh, you know what -- oh,

8 yeah. Okay, okay. We -- Maui Electric was gracious enough to

9 let us use this room because we needed a place to meet, but

10 they are in no way connected to what we're doing, so just to

11 let everybody know.

12 And you know what we're going to do, Earl is gonna

13 speak for about 15 minutes, he's going to present what we're

14 here about today. I'm going to ask you to really hold your

15 comments and questions until he's pau, because after that,

16 that's when we're going to open it up. Okay? So if you let

17 him speak, then you kind of get the whole picture of the kind

18 of stuff that's in the EISP and then after --

19 FACILITATOR SENELLY: About 15 minutes, yeah?

20 MR. MATSUKAWA: Yeah.

21 FACILITATOR SENELLY: Yeah. And so when he's pau --

22 and he's going to have -- you know, he's going to show you all

23 kinds of maps and stuff, when he's pau, then you -- we'll open

24 it up. However, I'm going to --

25 Do you mind waiting just a couple minutes? We have

RALPH ROSENBERG COURT REPORTERS, INC.  
1001 Bishop Street, #2460, Honolulu, HI 96813  
808-524-2090 courtreporters@hawaii.rr.com

1 some folks coming in, so we're going to wait just a couple

2 minutes. Okay?

3 UNIDENTIFIED SPEAKER: You know, they may not know

4 that there's seats up front.

5 FACILITATOR SENELLY: Oh, I've got seats up here.

6 MR. MATSUKAWA: By the way, there is water back

7 there and cookies, so help yourself. And the restrooms are

8 out this door and turn left and then it'll be on your right.

9 (Short pause in proceedings.)

10 FACILITATOR SENELLY: Okay. So as I said, so I'm

11 just going to repeat some things for the people who came in

12 real quick. This is a meeting for the environmental impact

13 statement, it's a scoping meeting that -- and what we're doing

14 is trying to get your comments on what should be included in

15 the EIS or the environmental impact statement. Okay? And we

16 have until March 10th to provide comments and we have three

17 ways: You can email it, you can give us a paper or mail it

18 back, or you can talk tonight.

19 MR. MATSUKAWA: Thank you, Berna.

20 Okay. I'm just going to overview the EIS, what it

21 is and how it's processed, and then talk about the EIS

22 preparation notice which is part of the entire process. So

23 first I want to emphasize that the EIS is an information

24 disclosure document that documents the impacts of a proposed

25 action. So in this case the proposed action is the issuance

RALPH ROSENBERG COURT REPORTERS, INC.  
1001 Bishop Street, #2460, Honolulu, HI 96813  
808-524-2090 courtreporters@hawaii.rr.com

1 of a water lease by the Board of Land and Natural Resources.  
 2 The EIS is not a permit, it is an information document, and it  
 3 is not an approval to go ahead and do something. It allows  
 4 the -- it is the information document that will be used for  
 5 the processing -- for the decision on the water lease.

6 So acceptance of the final EIS, the last thing  
 7 that's done, the acceptance of the final EIS by the Board of  
 8 Land and Natural Resources means that the content, and I'll be  
 9 talking about content today, and the processing, and I'll be  
 10 talking about the processing today, that the content and  
 11 processing requirements that are set forth in state law and  
 12 the administrative rules have been met and now they can be  
 13 accepted and used for the -- making that decision on the water  
 14 permit.

15 And I also want to make clear, although we are hired  
 16 by Alexander & Baldwin to prepare this EIS, the documents that  
 17 we prepare are turned in to the Department of Land and Natural  
 18 Resources and they need to find that it is acceptable and they  
 19 need to -- this is the DLNR, they need to file it in order to  
 20 continue the processing of these documents.

21 So let me briefly go over the -- some of the items  
 22 that are in the EIS. This is the content part that I'm  
 23 talking about and, again, this is the content part which this  
 24 scoping speaks to, so this -- whatever comments we get in  
 25 here, we will look at it in terms of how it can fit in the

RALPH ROSENBERG COURT REPORTERS, INC.  
 1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

1 EIS, if it's appropriate.

2 So some of the content of the EIS includes the  
 3 general description of the proposed actions: technical,  
 4 economic, social, cultural, and environmental characteristics.  
 5 So we do talk about what is the proposed action in the  
 6 concept -- context of these things and we state what the  
 7 purpose and need for the action is and then what are the goals  
 8 and objectives.

9 We also have in there, and this is the -- the bigger  
 10 part of the EIS, it's a description of the existing  
 11 environment. And there are a number of topics and the next  
 12 slide will kind of show the number of topics that will be  
 13 covered by the EIS, so we will talk about the existing  
 14 environment in these topic areas, the impacts of the proposed  
 15 action, as well as some of the alternatives, and then  
 16 potential mitigation measures that can be implemented so that  
 17 it can reduce the significance of impact.

18 There's also a section relating to the -- how the  
 19 project relates to land use plans and plans in general, like  
 20 the state plans, as well as other policies and controls. It  
 21 will also describe and discuss alternatives to the proposed  
 22 action -- and I will be discussing this a little later what  
 23 the alternatives are -- and it will document the consultation  
 24 process for the EIS, which includes this meeting.

25 So I was talking about the topic areas, these are

RALPH ROSENBERG COURT REPORTERS, INC.  
 1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

1 the topic areas that will be covered by the EIS in terms of  
 2 the existing environment impacts and mitigation measures.  
 3 Okay. So the EIS preparation notice has been  
 4 formally published, so the purpose of that is to notify  
 5 interested parties that an EIS will be prepared for the  
 6 proposed action and, again, the proposed action is the  
 7 issuance of a water lease. It -- the EIS preparation also  
 8 begins the scoping process for receiving comments on the  
 9 contents of the draft EIS, as Berna mentioned, so the next  
 10 document to be prepared is the draft EIS and the comments  
 11 received here will aid us in scoping that document. And it  
 12 also includes a general discussion of impacts and it discusses  
 13 potential technical studies that may be prepared for the draft  
 14 EIS.

15 Okay. Now, this is the process part of the EIS. It  
 16 began with early consultation and this is -- this actually was  
 17 not required for the type of EIS preparation notice that we  
 18 prepared, but it provides an opportunity to notify potentially  
 19 interested parties that the process has started and to allow  
 20 early comments on the process and the EIS preparation notice.  
 21 Then we -- then we prepared the EIS preparation notice, which  
 22 was published, like Berna said, on February 8th, and we're now  
 23 in the 30-day comment period which ends on March 10th.

24 Now, in taking into consideration comments that we  
 25 receive during scoping, we will begin to prepare the draft

RALPH ROSENBERG COURT REPORTERS, INC.  
 1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

1 EIS, but there's another critical thing that we need before we  
 2 can actually finish the draft EIS and this is the interim  
 3 instream flow standards and these will be issued by the  
 4 Commission on Water Resources Management. The IIFS is going  
 5 to determine how much water actually can be diverted through  
 6 the East Maui Irrigation system, aqueduct system. So that  
 7 decision is a separate decision and is actually not tied to  
 8 the EIS process, but we need to know what those standards are  
 9 so we need to know what's going to be flowing in the streams,  
 10 what's going to be flowing in the aqueduct system, so that  
 11 information is needed so that we can determine what kind of  
 12 impacts are going to occur. So the maximum amount of water is  
 13 what the IIFS decision is going to be and then the technical  
 14 studies will be conducted based on the IIFS decision and then  
 15 they'll be incorporated in the draft EIS.

16 So once the -- once we're completed with the draft  
 17 EIS, it'll be up to the Department of Land and Natural  
 18 Resources to publish it in the "Environmental Notice" that we  
 19 showed you earlier. And once it's published, it starts a  
 20 45-day comment period where people may review it and comment  
 21 on draft EIS. And then we will take in those comments and at  
 22 that stage we will do a point-by-point response to all the  
 23 comments that are received and then we'll prepare a final EIS.  
 24 And that will be turned into the Department of Land and  
 25 Natural Resources and they will review it and if they accept

RALPH ROSENBERG COURT REPORTERS, INC.  
 1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

1 it, then they will publish it in the "Environmental Notice"  
 2 again. And once that's done, then it can be taken before the  
 3 Board of Land and Natural Resources to formally accept the  
 4 final EIS. And once that's done, it can be used as a basis  
 5 for the issuance of the decision on the water lease.  
 6 Okay. So the EIS preparation notice is in the  
 7 public now, you can download it from the OEPC website. I'll  
 8 just give a brief summary of that, what that document  
 9 contains.

10 So this was published on February 8th and some of  
 11 the main parts that I think it includes is the proposed action  
 12 and in this case the proposed action is the issuance of a  
 13 water lease. The maximum amount available through that water  
 14 lease will be determined by the IIFS. It also includes the  
 15 right to access state land in order to maintain the aqueduct  
 16 system and the service roads.

17 And there's two key points, really, with regard to  
 18 the proposed action: The amount of water that the Board of  
 19 Land and Natural Resources can put in the water lease, the  
 20 amount that's in the water lease doesn't have to be the full  
 21 amount available through the IIFS decision. The board can  
 22 say -- give less than what is in the IIFS.

23 Another part of this is that once that permit is  
 24 issued -- well, once they -- this permit, once it's  
 25 determined, will go before public auction. So even A&B is the

RALPH ROSENBERG COURT REPORTERS, INC.  
 1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

1 very much involved in this, through the public auction process  
 2 it is possible that it is not awarded to Alexander & Baldwin.  
 3 So two points on that.

4 Okay. This is the map of the four license areas:  
 5 Huelo, Honomanu, Keanae, and Nahiku. It covers about 33,000  
 6 square miles of state owned land. 33,000 acres, sorry.  
 7 (Inaudible.)

8 UNIDENTIFIED SPEAKER: Yeah. I was gonna say, is  
 9 Maui that big?

10 MR. MATSUKAWA: And this is the overlay with the  
 11 four license areas and it shows the aqueduct system through  
 12 the area as well as land owned by East Maui Irrigation Company  
 13 which is shown in the green. The water that is presently  
 14 collected through the aqueduct system goes to several user  
 15 groups. One is the County of Maui DWS which receives the  
 16 water at their Kamaole treatment facility, the water is then  
 17 treated and becomes potable water and is distributed through  
 18 their system to Upcountry Maui. The DWS also treats that  
 19 water and services portions of the Nahiku community, the  
 20 portion that lies below the Hana Highway. And then untreated  
 21 water goes directly to the Kula Agricultural Park for  
 22 irrigation purposes. And then there is about 30,000 acres of  
 23 former sugar land that will receive that water, that is  
 24 presently receiving that water although sugar has now ceased.

This is a map basically of the users. The black

RALPH ROSENBERG COURT REPORTERS, INC.  
 1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

1 line, the black dotted line is basically the transmission  
 2 mains that DWS operates to provide potable water to the  
 3 Upcountry Maui area. This is the lower portion of Nahiku that  
 4 is served also by the DWS. This is the Kula Ag. Park and this  
 5 is the 30,000 acres of former sugar land in Central Maui.  
 6 Again, the maximum amount of water that can be  
 7 provided through the water lease will be determined by the  
 8 IIFS and, again, the amount could be reduced by the Board of  
 9 Land and Natural Resources and, again, the permit will go  
 10 before public auction. But for whatever amount of water that  
 11 is made available through the water lease, there will be a  
 12 reservation of that amount that will be dedicated to the  
 13 Department of Hawaiian Home Lands, although the amount of that  
 14 reservation has yet to be determined.

15 Okay. The objectives as stated in the EIS  
 16 preparation notice, the reason for the water lease will be to  
 17 continue to meet the domestic and agricultural water needs for  
 18 Upcountry Maui, similarly for the portion of the Nahiku  
 19 community below Hana Highway, and to continue to provide water  
 20 for agricultural purposes, likely diversified ag, in Central  
 21 Maui and to protect -- preserve and maintain the EMI aqueduct  
 22 system.

23 So this is a map of the license area, the streams in  
 24 the license area, and there are 39 identified streams. Forty  
 25 by some count, but my understanding is that 40th one is

RALPH ROSENBERG COURT REPORTERS, INC.  
 1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

1 actually a waterfall within a stream, so 39 or 40, most of  
 2 which are subject to the IIFS. And of these 39 or 40 streams,  
 3 A&B has historically diverted 37 streams. Then in nineteen --  
 4 in 2007 Alexander & Baldwin abandoned all diversions in one  
 5 stream and they have plans to remove all diversions from  
 6 another five streams. These are streams that have been  
 7 identified as so-called taro streams because they are used in  
 8 the lower reaches to irrigate taro and other crops.

9 Okay. So we also identified in the EIS preparation  
 10 notice what we think will be the alternatives that will be  
 11 assessed in the draft EIS. And the first one is the amount of  
 12 water that can be available if they award the full amount  
 13 given by the IIFS, so whatever the IIFS decision, the water  
 14 that becomes available with that decision.

15 The second is the no action decision, no action  
 16 alternative, where the Board of Land and Natural Resources  
 17 issues no water lease, so no state waters would be part of  
 18 that license.

19 And the final option is a situation where, we had  
 20 mentioned before, the board could provide less water than  
 21 allowed by the IIFS. And so we haven't determined exactly  
 22 what that point is at this time, we will need that IIFS  
 23 decision, but it's sort of the middle between the first two.

24 Okay. That summarizes the EIS. Now I'll turn it  
 25 back to Berna.

RALPH ROSENBERG COURT REPORTERS, INC.  
 1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

FACILITATOR SENELLY: Thanks, Earl.

Okay. So now we're part -- we're part of the -- we're in the section and we have an hour and a half for this next section, or hour and mostly and a half and the purpose of this is to receive your oral comments. And as I said earlier, the oral comments will be included in the EIS, in the draft EIS. And Sandra here is our transcribing, so when we speak, I'm going to ask you to speak really clearly and stuff.

Okay. So we're going to spend -- can you change the -- yeah. Sorry.

All right. We have -- I'm asking you to follow some protocol, okay, because we have a lot of people here and stuff and I -- people are -- feel strongly about this, I know, so what we'd like to do is really make sure we have safe haven. So what that means is you feel safe in coming up and speaking your mind and what you think and that people will listen.

Okay. So -- oh, and especially because Sandra is taking notes, one person at a time, okay, and also we respect each other. Now, I know sometimes I go to meetings and you clap for each other, which is cool, but, please, no booing, okay, so --

And so that we can have everybody speak, if you can summarize your comments and try not -- okay. Because we want -- we really want a wide range of input, so if you heard somebody or if you heard a couple people say what you were

RALPH ROSENBERG COURT REPORTERS, INC.  
1001 Bishop Street, #2460, Honolulu, HI 96813  
808-524-2090 courtreporters@hawaii.rr.com

gonna say and if you can think of something else, then bring that other stuff up. Okay. But there's no holds on what you can say either, so it's up to you.

Okay. The meeting is scheduled for two hours, it is now about 5:35, 5:33, the way -- what I will do is -- we want as much as possible for everyone to stay at the meeting so you can hear everybody else's manao, yeah. So if it looks like we're going towards the end and still have a lot of people that want to talk or some people or a couple people that want to talk, I will ask you, "Is it okay if we go ten more minutes?" And we will do that for maybe about a half an hour. Okay? But just so that -- it kind of respects your time too, because if you came here expecting it to be a certain amount and it goes on too long, then, you know, some people, they just want to go home and they won't get to hear the whole thing. Okay.

Okay. So we had a sign-in order -- I need the comment sheet.

So we're going to take it in the order that you signed up and so everybody who signed up gets to speak first. Now, let's say we have some more time and you have some thoughts you really want to share, we'll ask you to sign up, somebody will bring you the sign-up sheet, and then, you know, we'll just keep going. Okay. As I said, though, when we reach the time, I will ask you guys if we can keep going. And

RALPH ROSENBERG COURT REPORTERS, INC.  
1001 Bishop Street, #2460, Honolulu, HI 96813  
808-524-2090 courtreporters@hawaii.rr.com

1 remember, the other thing is you can always submit written  
2 comments too if you don't speak at the meeting.

3 UNIDENTIFIED SPEAKER: If we submitted a written  
4 comment already and signed up to speak, not to be redundant,  
5 should we just give up our spot to speak since we already have  
6 written comments in?

7 FACILITATOR SENELLY: It's up to you.

8 UNIDENTIFIED SPEAKER: Okay.

9 FACILITATOR SENELLY: We will bring -- now, I don't  
10 know if you noticed, but I really am asking us as a group  
11 to -- there is no time limit because part of it is if you give  
12 a time limit, then you feel rushed or you kind of feel -- so  
13 I'm going to ask everybody at some point to summarize if you  
14 can, so it'll give everybody a chance. And you can still come  
15 back if there's time. Okay.

16 We're going to bring you the microphone because the  
17 place is kind of crowded, so rather than having to move chairs  
18 and everything, we will -- Rachel -- Rebecca, sorry, Rebecca  
19 and Keala will come by, okay, so be patient with us, please.  
20 And when you come up, if you can speak your name, tell us your  
21 name very -- really clearly.

22 All right. So remember, now, scoping is telling us  
23 what should be covered in the environmental impact statement.  
24 Earl showed you a list of all the topics that are going to be  
25 covered -- that are going to be discussed, but what they

RALPH ROSENBERG COURT REPORTERS, INC.  
1001 Bishop Street, #2460, Honolulu, HI 96813  
808-524-2090 courtreporters@hawaii.rr.com

1 actually discuss is what we're asking you here. So this is a  
2 sentence: "The EIS should address..." You can say what you  
3 want, but every now and then I'm going to ask you or maybe all  
4 the time I may ask you, "Can you please clarify? Is this what  
5 you want in the EIS?"

6 Okay. So first person, who has been here a long  
7 time, Joe. What's your last name?

8 MR. CHESLEDON: Chesledon.

9 FACILITATOR SENELLY: Okay. Joe Chesledon.  
10 Chesledon.

11 MR. CHESLEDON: Hello, my name is Joe Chesledon, but  
12 I am here presenting this statement on behalf of many  
13 generation Hawaiian neighbor, Alvin Kalehuawehe. Alvin cannot  
14 miss work to be here tonight, but sends this statement as a  
15 message.

16 "As a Native Hawaiian from both family sides, I say  
17 to you aloha. Generations ago big sugar and pineapple  
18 companies including Alexander & Baldwin of the mainland  
19 imposed upon Hawaiians a valuable and irreplaceable water  
20 takeaway which has deprived Hawaiians of water and land to use  
21 for subsistence farming to feed our ohana and greatly improve  
22 our lives and restore what we once enjoyed: stream flow, fish  
23 populations, and our agriculture. As a result we have gone  
24 from a subsistence ohana to a dependent ohana.

25 "In sharing our water resources to big sugar by

RALPH ROSENBERG COURT REPORTERS, INC.  
1001 Bishop Street, #2460, Honolulu, HI 96813  
808-524-2090 courtreporters@hawaii.rr.com

1 means of what I understand to be 165 million gallons of water  
 2 per day to 33,000 acres, Hawaiians have been shared out of the  
 3 ability and right to a self-sustaining way of life. It is my  
 4 understanding that Maui currently imports more than 90 percent  
 5 of its food; meanwhile, the Hawaiian farmer, at the expense of  
 6 big sugar, is deprived of rights to work with the land, to  
 7 sustain and feed our ohana. We have lost the right to teach  
 8 our young that we can love our Mother Island and she will take  
 9 care of us. We need a return of the water rights to us and  
 10 our ohana. We do not need another theft of water by big  
 11 sugar, Alexander & Baldwin.  
 12 "Mahalo nui loa, Alvin Kalehuawehe."  
 13 (Applause.)  
 14 FACILITATOR SENELLY: Okay. So what -- what my  
 15 understanding is, is he wants to see the cultural impact study  
 16 in terms of just the water, what happened with the water. He  
 17 wants to see it from a cultural standpoint, but he -- I also  
 18 heard that he wants to make sure it's available for  
 19 sustainable agriculture.

20 MR. CHESLEDON: Like the concept of -- on the -- on  
 21 the mainland there's a concept in cities where they share  
 22 little pea patches and stuff, but larger maybe on a larger  
 23 scale for the locals to have places to have gardens in that  
 24 farmlands using the agricultural water.

25 FACILITATOR SENELLY: Okay. Thank you.

RALPH ROSENBERG COURT REPORTERS, INC.  
 1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

1 Brendan Balthazar. Mr. Balthazar, you've been here  
 2 a long time.

3 MR. BALTHAZAR: I know. I've gotta go back and pump  
 4 water yet, like everybody else.

5 I just wanted to say, you know, my father said that  
 6 we all need water. I've been in several of these hearings and  
 7 testimonies. I believe that nobody can have it all, I think  
 8 it's a shared thing. We really need to know how much water is  
 9 needed by the people who want to plant taro. As a kid I used  
 10 to stand by the pine fields and granted, yes, things were done  
 11 150 years ago that none of us in this room is accountable for;  
 12 however, I believe everybody needs the water. Like myself, I  
 13 live Upcountry and I depend on that water coming up out of my  
 14 pipe, so does my animals, so does my lifestyle. I'm retired  
 15 from the fire department, I ranch, and I'm also on the board  
 16 of the Farm Bureau and the Cattleman's Association. And to  
 17 just (inaudible) what the last gentleman said about us being  
 18 able to be sustainable, with all of that land available for  
 19 ag. and I -- and I emphasize the word "ag."

20 At the last testimony I did before DLNR, one of my  
 21 things that I think was the wrong place, but I did say that if  
 22 this water is earmarked for ag, that amount that is now used  
 23 for potable water, like Upcountry, should be kept. I don't  
 24 think any future subdivision should be coming up and tap into  
 25 that ag. water and that's really my concern. I'm here

RALPH ROSENBERG COURT REPORTERS, INC.  
 1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

1 representing ag. and the fact -- the part of ag. that I  
2 represent is the livestock industry.

3 I know some of the things that I heard some of the  
4 people from Sierra Club and some of the friends that I have  
5 from Keanae say, "Yeah, I mean, they want all this water, what  
6 for?" I don't know how much sorghum will take, how much corn  
7 will take, I can tell you how much if -- if we need to  
8 irrigate the pastures, right now the grasses that works down  
9 in that area would take about 4100 gallons per day per acre,  
10 that's what it takes to keep that thing in grass. Pending no  
11 rain now, I'm just saying just on the bottom line. Of course,  
12 it will be less with the rain and, of course, more with  
13 evaporation. Cattle drink 15 to 20 gallons per day, that's  
14 20,000 gallons on a thousand acre pasture. A thousand acres  
15 of irrigated pasture, you can probably a head per acre.

16 So I can only speak from the livestock side, I, on  
17 my end Upcountry, a lot of the kids now that should be in  
18 ranching and farming are not. I'd like to see that land stay  
19 in ag. and I believe the water really should be shared. And  
20 like he was saying, I think once they found out what the  
21 stream flows is, then it should be adjusted as to what  
22 everybody can have so everybody can share the water. I mean,  
23 without water, there's no ag, I mean, nobody can disagree with  
24 that.

25 So I'm saying also that if EMI -- and I'm not

RALPH ROSENBERG COURT REPORTERS, INC.  
1001 Bishop Street, #2460, Honolulu, HI 96813  
808-524-2090 courtreporters@hawaii.rr.com

1 partial to them, but if EMI, who has been taking care of the  
2 ditch system for all these years, gets out of it, the county  
3 has no way in hell to take care of that ditch, they don't have  
4 the resources nor the funding. So it is essential for us, for  
5 our environment to have this water come out and have somebody  
6 take care of it.

7 FACILITATOR SENELLY: Okay. So my understanding is  
8 I did hear you say that you wanted to see some quantification  
9 of what the taro, the kalo needs are for water.

10 MR. BALTHAZAR: Exactly.

11 FACILITATOR SENELLY: You want to see the impact of  
12 the proposed action on the agricultural lands from your  
13 perspective, it's from ranching. And you also -- oh, you also  
14 want to see -- to make sure, you want the EIS to show what  
15 some of the future uses might be if it's not ag., because you  
16 don't want to see it developed.

17 MR. BALTHAZAR: I'm really concerned that this water  
18 that is earmarked for ag. stay as ag.

19 FACILITATOR SENELLY: Okay. You want it ag. Okay.  
20 (Applause.)

21 FACILITATOR SENELLY: Thank you, Mr. Balthazar.

22 James Coon. Okay, Mr. Coon.

23 MR. COON: Aloha. Aloha kakou. My name is Jim Coon  
24 and I'm speaking as a concerned citizen. I've lived on Maui  
25 for almost 45 years and I've lived in Kula for over three

RALPH ROSENBERG COURT REPORTERS, INC.  
1001 Bishop Street, #2460, Honolulu, HI 96813  
808-524-2090 courtreporters@hawaii.rr.com

1 decades. My home's on ag. land and I maintain a small orchard  
 2 on my land. I believe as time goes on, more and more  
 3 individuals need to plant edible crops to help Maui be more  
 4 food sustainable. I do believe that EMI is the best entity to  
 5 manage the EMI ditch system. In my opinion, it'd be a  
 6 nightmare to turn this valuable resource over to the county or  
 7 state.

8 I also want to see A&B have enough water to ensure  
 9 that diversified agriculture can be viable on their vast  
 10 lands. What will happen to Maui if there's no agricultural  
 11 there? Not enough water means less ag. How can we ever meet  
 12 our needs of energy and food sustainability if there's not  
 13 enough water? Will it go to development? What about us  
 14 Upcountry residents if EMI somehow gets taken out of the  
 15 picture? How will we get our water? EMI must have a lease  
 16 from the state that ensures that the rest of us continue to  
 17 receive the water we need.

18 As you prepare this EIS, please ensure that all  
 19 parties that need water have an adequate supply, keep EMI as  
 20 the managing entity, make sure A&B has enough to continue  
 21 farming instead of massive development.

22 FACILITATOR SENELLY: Thank you. Thank you.

23 (Applause.)

24 FACILITATOR SENELLY: Nalani Kaninau.

25 MS. KANINAU: Okay. Aloha kakou. My name is Nalani

RALPH ROSENBERG COURT REPORTERS, INC.

1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

1 Kaninau. Mahalo for everyone to have my voice heard today.  
 2 For me, it is no coincidence that today, a day water  
 3 protectors from Standing Rock are being forcibly removed from  
 4 the Oceti Camp trying to protect the water, that I, a Native  
 5 Hawaiian, am here to testify to protect water. And this is my  
 6 first time, so (inaudible).

7 I would like the EIS to address agricultural needs  
 8 and that sustainable crops are found with any combination of  
 9 co-op farmers. I would love A&B to be transparent in their  
 10 plans for whatever mass farming that they're wanting to get  
 11 into. I'd also like that there is no action until actual  
 12 stream data -- stream flow data is gathered for all of the  
 13 streams proposed to be diverted and that the repair and  
 14 maintenance of the diversion system is cared for, cared for by  
 15 charging of market rates for water to generate sufficient  
 16 funds to keep that repair and maintenance going.

17 I'd like the EIS, EIS statement to look at impacts  
 18 on aquatic life, native plant species, and traditional and  
 19 customary Hawaiian practices, kalo farming, gathering native  
 20 plants, and kahua dancers, recreation, et cetera. I believe  
 21 we need real farmers, not rich gentleman farmers. If you go  
 22 to the A&B website, there's -- you can become an investor of  
 23 their gentleman farmers. I need to know that A&B truly has  
 24 the interests of Maui at heart. I need A&B to honor the  
 25 tradition of taking only what you need and not taking all that

RALPH ROSENBERG COURT REPORTERS, INC.

1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

1 you can. Mahalo.

2 FACILITATOR SENELLY: Thank you very much.

3 (Applause.)

4 FACILITATOR SENELLY: Darrell Tanaka.

5 MR. TANAKA: My name is Darrell Tanaka. As far as

6 the EIS goes, I'd like to -- them to include if there --

7 there's no water coming from EMI, if EMI is to shut down, if

8 the existing wells can handle supplying the Upcountry with

9 water. And in the long term, you know, 10, 15, 20, 30 years

10 from now, can those wells sustain us? I don't think so.

11 As a fishermen, you know, I'd like to see the water

12 returned to the ocean, yes, but I would be wholeheartedly

13 against all the streams being restored, too much has changed

14 in our climate in the past 150 years. Stream flow needs to be

15 constant, more or less. So I support the taro streams being

16 given water, but if the stream is not being used for taro, I

17 cannot see returning water to that stream when we need it in

18 Central Maui. In order for diversified ag. to happen, there

19 has to be water present or no farmer is going to want to his

20 invest his time, effort, and money into trying to make a farm

21 when there's no guarantee that there's enough water,

22 especially if there is a drought.

23 I come from a farming family, I -- ever since my

24 great grandfather came here we raised vegetables in Happy

25 Valley. My grandfather was a farmer up in Kula and I can tell

RALPH ROSENBERG COURT REPORTERS, INC.  
1001 Bishop Street, #2460, Honolulu, HI 96813  
808-524-2090 courtreporters@hawaii.rr.com

1 you if there's no water, there is no farm. So the water

2 coming through EMI has to reach Central Maui or we're not

3 going to see diversified ag. But I can tell you one thing is

4 that the only people that have money to drill wells and

5 maintain them are developers and the last crop, in farming

6 termination, is always called a subdivision.

7 Okay. So bring the water here, keep EMI in place

8 because our county can't even run our parks, our beach parks,

9 they can't even run that properly, how are they gonna run the

10 ditch system? So we need EMI. Thank you.

11 FACILITATOR SENELLY: Okay, sir. I heard to keep

12 the EMI system and part of it is also that efficiency of the

13 system in terms of what it's doing now and also getting it to

14 agriculture. And you said something in the very beginning

15 about Upcountry and I just --

16 MR. TANAKA: The wells.

17 FACILITATOR SENELLY: Yes. Whether or not the wells

18 could sustain needs in the future without this -- the system?

19 MR. TANAKA: Yeah.

20 FACILITATOR SENELLY: Okay. So thank you.

21 (Applause.)

22 FACILITATOR SENELLY: Mahealani Wendel.

23 MS. WENDEL: I'm going to waive my time.

24 FACILITATOR SENELLY: Okay. Mahalo.

25 Lloyd Fischel. Lloyd.

RALPH ROSENBERG COURT REPORTERS, INC.  
1001 Bishop Street, #2460, Honolulu, HI 96813  
808-524-2090 courtreporters@hawaii.rr.com

1 MR. FISCHEL: Thank you. Thank you, ma'am.  
 2 Just a few, a few things I'd like to see the EIS  
 3 address. Of course, I'm a farmer and we all have to recognize  
 4 that most of the food that we eat, maybe even more than 90  
 5 percent is imported. And being where we are, given the  
 6 problems in the world today, given what could happen to the  
 7 cost of petroleum, of oil, of energy, this decision must  
 8 reflect an understanding of the importance of small farms  
 9 growing food for Maui.

10 (Applause.)

11 MR. FISCHEL: It's insanity to think of giving all  
 12 that water to one company, one company that has not been a  
 13 good partner with small farmers over the years, one company  
 14 that has spewed lots and lots of chemicals into the air, into  
 15 the ground. One company that's in partnership with who?  
 16 Monsanto. It's insanity to think that they would get this  
 17 water and that we would call it the people's water, that we  
 18 would think that the water then would be used for growing  
 19 crops. As Mr. Balthazar said, it's so important that this  
 20 water must be used for agriculture and not developments.

21 And the second thing I want to mention is in the --  
 22 in the documents that have been put forward up to this point,  
 23 as in the screen presentation earlier, the word "state owned  
 24 land" was used. The EIS should address: What does that mean,  
 25 state owned land? Who is the state? And where are the

RALPH ROSENBERG COURT REPORTERS, INC.

1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

1 Hawaiian rights within that concept of state owned land? And  
 2 any of you working on this EIS that can talk about having  
 3 Hawaiian friends and loving Hawaiian people and loving  
 4 Hawaiian culture that don't then address this issue, it's  
 5 really a (inaudible).

6 And the second thing is in this -- words that have  
 7 been used here in these papers and in the screen as well,  
 8 "government owned waters." It said government owned waters.  
 9 I'd like the EIS to define what does that mean, government  
 10 owned waters? Thank you.

11 (Applause.)

12 FACILITATOR SENELLY: Okay. You had two things.  
 13 The first one was -- the first one was make sure that the --  
 14 you want the EIS to address having the water go to small  
 15 farmers or, you know, like diversified and small farmers and  
 16 not just industrial type; right?

17 And the second thing is define what state owned  
 18 lands means and also define what state owned water means.  
 19 Okay.

20 MR. FISCHEL: I'd like to add one more thing to  
 21 that, please.

22 FACILITATOR SENELLY: Okay.

23 MR. FISCHEL: And I think it should address what is  
 24 happening to the water today? From the time that the farming  
 25 of sugar cane stopped to today, what is happening to that

RALPH ROSENBERG COURT REPORTERS, INC.

1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

1 water? Is it being dumped? In a world where water -- people  
2 die for water, is it being dumped? We should know.

3 FACILITATOR SENELLY: Okay. Thank you.

4 John Gelert. Yes. Yes, sir.

5 MR. GELETT: Hello. My name is John Gelert and I'm  
6 a resident of Kihei. I've been a Maui resident for seven  
7 years.

8 I would like the IIFS to address the needs of Native  
9 Hawaiian farmers and also the environmental concerns. So I  
10 believe that every stream should allow at least some water to  
11 go to the ocean to take care of the needs of these -- so that  
12 the environment is healthy and that the Hawaiians have more  
13 than enough for taro and other needs. As far as the rest of  
14 the water that is diverted, I fully support use for only  
15 agriculture with the exception of what is needed already for  
16 Upcountry.

17 And also the court did say that -- that the water is  
18 not allowed to be diverted any more, but then A&B and their  
19 lobbyist got the legislature to overturn that, so that is --  
20 that is wrong and this water should not be going to A&B. This  
21 is the people's water and we need to have more sustainable  
22 agriculture here in Hawaii, so I would say whatever amount  
23 that is determined by the IIFS, it should be subject to review  
24 as more and more farming is actually done, but never to  
25 totally divert all of the water from any stream.

RALPH ROSENBERG COURT REPORTERS, INC.  
1001 Bishop Street, #2460, Honolulu, HI 96813  
808-524-2090 courtreporters@hawaii.rr.com

1 FACILITATOR SENELLY: Thank you. And just for  
2 clarification, the EIS and the IIFS process are parallel  
3 processes. So there's things that found in the EIS, the --  
4 actually, the IIFS will be -- that decision is not going to  
5 depend on what the EIS is.  
6 Am I correct?  
7 But we also understand the things that you said you  
8 want to see studied in the -- we'll just make sure it's in the  
9 EIS, that portion of it.

10 MR. GELETT: Thank you.

11 FACILITATOR SENELLY: Okay. Darren Strand.

12 MR. STRAND: Okay. Thank you.

13 I'm Darren Strand. I'm one of the owners and  
14 operators of Maui Gold Pineapple Company in a farm of about a  
15 thousand acres below Makawao Town and above Halimaile. All  
16 of our property, the ditch borders -- the upper ditch borders  
17 every single acre that we farm and we use absolutely none of  
18 the water from the ditch and we haven't since the very first  
19 instream flow standard was set and I guess that's been several  
20 years.

21 And, you know, I worry mostly about the farmers at  
22 the end of the system that are in Kula Ag. Park. And I see  
23 the ditch every day, there's not much water running through  
24 it, it's already in a state of disrepair and it needs to be  
25 maintained already or we're going to lose the capacity to get

RALPH ROSENBERG COURT REPORTERS, INC.  
1001 Bishop Street, #2460, Honolulu, HI 96813  
808-524-2090 courtreporters@hawaii.rr.com

1 water to the last reservoir at the end of that that the  
2 farmers in the ag. park use.

3 I -- before I moved to Maui I was -- I worked at  
4 Del Monte Pineapple on Oahu in 2004 and 2005 when the Waiahole  
5 Ditch situation was going on and it was -- I was new to Hawaii  
6 at that time, I'd just finished at UH, and it was a  
7 contentious issue, but they were able to come to an  
8 understanding or some kind of agreement, a compromise. And  
9 there were -- at that time Del Monte closed and there was  
10 Larry Jeff, Saloon Farm, a seed corn company, and no other  
11 farmers using the system, but there was a cooperative that  
12 maintained it. And if you go to that area now, it's been, you  
13 know, maybe 10, 12, 15 years, it's amazing how many farmers  
14 are on that land and using that system. And so I'd like to,  
15 you know, see us come to a balance, a compromise, and have the  
16 foresight to think about what that area might look like in 10  
17 or 15 years and not make a decision that's just based on what  
18 we think we want today.

19 FACILITATOR SENELLY: Thank you.

20 (Applause.)

21 FACILITATOR SENELLY: Martha Martin. Yes, ma'am.

22 MS. MARTIN: Thank you. I appreciate all of the  
23 work that is being done on the EIS. I think it's going to be  
24 a very interesting document. And some of my comments that I  
25 have I think go -- should be directed to the Department of

RALPH ROSENBERG COURT REPORTERS, INC.

1001 Bishop Street, #2460, Honolulu, HI 96813  
808-524-2090 courtreporters@hawaii.rr.com

Land and Natural Resources, not to the EIS.

I have -- I've lived on Maui for 50 years and I see  
that agriculture is changing on Maui. We're not going to have  
a big mono crop cultivation of sugar that we -- and pineapple  
that we used to have. And so what I would like added to the  
EIS is for the EIS to address the condition of the ditches and  
the amount of water leases that exists today. It may be in  
there, but in my hurried look at it on the computer, I didn't  
see anything that reported that, the condition of the ditches  
and the amount of leakage in the ditches.

Also I would like the EIS to recognize what the  
priority is for water use. To me, that land that they're  
drawing water from is watershed and the primary use of the  
water should first be watershed and stream protection and  
forest preserve.

And the -- for me, the second priority should be the  
farmer taro users of the streams and restoring flow of the  
water in the streams which maintains animal and reef life in  
the ocean.

And then I think the third user that should have  
priority should be the county.

And then No. 4, I think the small farmers, both old  
and new, should get priority because we don't produce enough  
of our food locally. And when sugar and pineapple were grown,  
they didn't support our state with enough diversity.

RALPH ROSENBERG COURT REPORTERS, INC.

1001 Bishop Street, #2460, Honolulu, HI 96813  
808-524-2090 courtreporters@hawaii.rr.com

1 And then No. 5, the last bidder allow -- the last  
 2 bidders allowed to bid I think should be corporations and I  
 3 think they should get only short-term leases, not -- not  
 4 30-year leases.  
 5 (Applause.)  
 6 MS. MARTIN: And I think bidders who are working to  
 7 make Hawaii more self-sustaining in food and energy should be  
 8 given priority over private profit.  
 9 And so thank you for this chance to speak and I hope  
 10 we're going to make a good decision on this.  
 11 FACILITATOR SENNELLY: Thank you.  
 12 (Applause.)  
 13 FACILITATOR SENNELLY: Those five things will be  
 14 addressed in the EA.  
 15 Edwin Young. Hi, Mr. Young.  
 16 MR. YOUNG: Hi. My name is Edwin Young and I agree  
 17 with that EMI should have some water, but they cannot take all  
 18 of the water. Because I'm a uni fisherman, yeah, and from  
 19 1990 is when EMI started taking all the water from all the  
 20 ditches. I mean, Makapipi -- I live in Hana. Makapipi was  
 21 bone-dry for years all the way up until when the sugar cane  
 22 closed and then they let go a little bit of water. And  
 23 Honomanu was bone-dry and no akule came inside those bays.  
 24 Hana Bay, Honomanu, we used to fish all the way, all the way  
 25 to Kaupo. And when EMI took all the water, then the akule

RALPH ROSENBERG COURT REPORTERS, INC.  
 1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

1 would come inside Hana Bay maybe about once every three  
 2 months, once every four months. And before that, akule used  
 3 to come inside Hana Bay every week when all the rivers were  
 4 flowing prior to 1990. And since they let go of the water,  
 5 like when EMI -- HC&S closed, when they let go of the water,  
 6 we would -- right now we're catching akule like pretty much  
 7 every other week in Hana and Honomanu too. Because I used to  
 8 fish Honomanu all the way to Kaupo to Nuu.  
 9 And I went to Honolulu Institute of Marine Biology  
 10 for one year as a biologist technician for Makai Pacific,  
 11 yeah, and wherever the fresh water enters the ocean, it's  
 12 known as an estuary. These are all estuaries and estuaries  
 13 are all nurseries for all your baby fishes and all your baby  
 14 fishes lives on phytoplankton and zooplankton. Phytoplankton  
 15 is one-cell vegetables and zooplankton is one-cell animal.  
 16 And that's what the akule like to eat and all your baby  
 17 fishes, they come inside to eat that. And since EMI started  
 18 taking all the water, about 90 percent of our fish in Hana has  
 19 disappeared, 90 percent. And, you know, I can tell you  
 20 because plenty people in Hana notice this too, I hardly see  
 21 any uu anymore.  
 22 And the HRS -- the HRS on the water code, yeah, the  
 23 water code for the HRS -- and I asked my cousin, who's a judge  
 24 in Honolulu, and I said, "What does HRS stand for, Greg?"  
 25 And he goes, "Hawaii Revised Statute."

RALPH ROSENBERG COURT REPORTERS, INC.  
 1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

1 I said, "Is that law?"

2 He said, "Yeah, that's the law."

3 And I forgot the -- the code for HRS, you know,  
4 which law it is, but it says you can take water from the  
5 stream, yeah, but you cannot take all the water from the  
6 stream, you have to leave water in the stream for hihiwi,  
7 opae, oopu, and stuff like that. But the water commission  
8 gave EMI permission to take all the water from Honomanu  
9 bone-dry and from Makapipi bone-dry and to me that's -- the  
10 law is the law. But the water commission make excuses to  
11 bypass that law to give A&B all the water, to me that's  
12 totally wrong and how can a big corporation with all the money  
13 and everything like that -- well, for one thing, what's her  
14 name, Meredith Ching was on the water commission, that's --  
15 and she's an employee.

16 And then last, but not least, you guys should have  
17 this meeting in Hana for people that (inaudible) --  
18 (Audience response.)

19 MR. YOUNG: You know, 'cause the Hana people can't  
20 come out here and -- you know, I was out here, so I was  
21 fortunate to come over here and talk.

22 And one, the -- you know, your EMI man over there,  
23 yeah, first thing he should do is make sure that there is  
24 water in all the rivers and, secondly, to help protect our  
25 environment, you know. I -- the taro farmers, I agree with

RALPH ROSENBERG COURT REPORTERS, INC.  
1001 Bishop Street, #2460, Honolulu, HI 96813  
808-524-2090 courtreporters@hawaii.rr.com

1 all what the taro farmers are doing, but nobody's speaking up  
2 for the fishermen. And the people in Hana, we live off the  
3 fish, yeah. When we catch akule, we invite everybody to come  
4 down and help take the fish out of the net, because I'm not  
5 gonna take 5,000, 6,000 fish out of the net, I'll be there for  
6 two days. But the people come down and they take the fish out  
7 of the net and we give the fish away, we don't sell any fish  
8 in Hana, we just give it away to the people. Like you, maybe  
9 for a pretty average size catch, you're gonna get eight, your  
10 husband gonna get eight, you got two kids, they get half  
11 share, they're gonna four each, so that's eight, that's 24  
12 fish you're taking home, that's like about 20 pounds of fish.  
13 And when you don't -- when you don't have this, then that's  
14 why we -- we don't have our supply of fish, yeah, and we gotta  
15 go store. Okay. Anyway, that's all I have to say.

16 FACILITATOR SENELLY: Okay. No, no, no. So my  
17 understanding would be --

18 (Applause.)

19 FACILITATOR SENELLY: What I heard was two -- and  
20 you gave a lot, but the two main things I heard that you want  
21 to see in the EIS is the impact of the stream diversion on the  
22 shoreline, the shoreline environment, and the second thing I  
23 heard was you -- how much water is being taken out of the  
24 stream. Because you said a couple things and so kind of like  
25 having a better idea of how much water is being taken out of

RALPH ROSENBERG COURT REPORTERS, INC.  
1001 Bishop Street, #2460, Honolulu, HI 96813  
808-524-2090 courtreporters@hawaii.rr.com

1 each stream or the streams. Is that correct?

2 MR. YOUNG: They take all the water.

3 FACILITATOR SENNELLY: Okay.

4 MR. YOUNG: Not leaving any water.

5 FACILITATOR SENNELLY: Okay.

6 MR. YOUNG: Only when there's rain, it overflows.

7 When the dams overflow, I've seen the dams, that's the only  
8 time we have water. But now we have water all the time  
9 because -- since HC&S closed, then I guess they opened up some  
10 of the dams, yeah.

11 FACILITATOR SENNELLY: Thank you, Mr. Young.

12 MR. YOUNG: Okay. Thank you very much.

13 FACILITATOR SENNELLY: Michael Pasco.

14 MR. PASCO: Aloha mai kakou.

15 AUDIENCE: Aloha.

16 MR. PASCO: I'm Michael Pasco. I want to save some  
17 of the comments about the taro farmers and about the  
18 agriculture, those -- those remarks were spoken for it seems  
19 like well today. But touching on a little bit the minimum  
20 flow standards, I know that's part of the CWRM process, but I  
21 just want to make sure that when we're looking at the  
22 ecosystems here, the CWRM process, that it's ecosystem based  
23 and not the needs of A&B based about what can be taken from  
24 the -- taken from the streams.

25 And I echo those comments about maintaining mauka to

RALPH ROSENBERG COURT REPORTERS, INC.  
1001 Bishop Street, #2460, Honolulu, HI 96813  
808-524-2090 courtreporters@hawaii.rr.com

1 makai connectivity not just for the health of the fishes for  
2 the fishermen, but, you know, I just want people to make sure  
3 we're keeping track of the fact that the fishes that are  
4 produced on East Maui side, they don't just stay and effect  
5 East Maui, you know, that affects the entire island and even  
6 neighbor islands. And especially when we have like 80 percent  
7 or so of our modern economy based on visitor industry and  
8 stuff like that, a lot of us here have jobs that are connected  
9 to the visitor industry and we need to make sure that we're  
10 protecting those resources also for our economy.

11 The other thing I want to talk about is the  
12 ecosystem-based flow standards, I want to make sure that we're  
13 also keeping enough movement in the water to keep the mosquito  
14 populations down because the mosquitos, when the -- when the  
15 stream flow gets too low, the mosquito populations come up and  
16 that affects the native birds. And we need to make sure we're  
17 protecting all of the native resources, the native plants, the  
18 native birds, you know, with the -- without those native  
19 animals or plants, you have no Native Hawaiian culture and we  
20 need to sure to be protecting those things.

21 The other thing that we're talking about with the --  
22 with the water is we're talking about this being such a --  
23 such a cherished resource, so I want to make sure the EIS is  
24 addressing the management of that resource. We're seeing, you  
25 know, like 20 percent or so leakage and seepage and that

RALPH ROSENBERG COURT REPORTERS, INC.  
1001 Bishop Street, #2460, Honolulu, HI 96813  
808-524-2090 courtreporters@hawaii.rr.com

1 doesn't sound like treating this resource like the valuable  
 2 resource that it is.  
 3 And the last thing I want to say, the -- when we're  
 4 talking about sustainable local agricultural for food  
 5 production, I want to make sure that we're looking at it with  
 6 the -- with the aspect of what's happening in the other parts  
 7 of the world. Like the other gentleman was saying, there's --  
 8 particularly California, you know, we're looking at the  
 9 Oroville dam situation and I know that impacts so much of the  
 10 food that is produced in Southern California. And they're  
 11 talking about -- worrying about that dam failing and what  
 12 that's gonna do to all of the food prices that all of us pay  
 13 since we're not producing enough food on island. So I hope  
 14 that that's factored into this decision-making process about  
 15 where we're going to be getting our food if events in the  
 16 world make it so that we were not getting as much from across  
 17 the ocean.  
 18 And I guess lastly I just want to state that, you  
 19 know, because over the years we've seen that A&B has been such  
 20 poor stewards of the -- of the resource, flushing stuff out to  
 21 sea when they're not use it, I want to make sure that we have  
 22 public access to the -- to the ditches so that way some  
 23 verification can take place, because we haven't been able to  
 24 count on the words and actions of A&B over time to manage our  
 25 resources. So that's all I want to say.

RALPH ROSENBERG COURT REPORTERS, INC.  
 1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

1 (Applause.)  
 2 FACILITATOR SENELLY: So that last point actually is  
 3 related to the -- your second point where you talked about the  
 4 condition of the system itself, yeah?  
 5 MR. PASCO: Yeah, yeah.  
 6 FACILITATOR SENELLY: Thank you.  
 7 UNIDENTIFIED SPEAKER: But be more transparent;  
 8 right? You got that point?  
 9 FACILITATOR SENELLY: Okay. More transparent.  
 10 Okay.  
 11 UNIDENTIFIED SPEAKER: Because they have not been.  
 12 FACILITATOR SENELLY: Thank you.  
 13 Moke Kahiamopu.  
 14 MR. KAHIAMOE: Kahiamoe.  
 15 FACILITATOR SENELLY: Kahiamoe. Moke Kahiamoe.  
 16 MR. KAHIAMOE: My name is Moke Kahiamoe. I come  
 17 from Huelo. I live by the stream. My family all from there  
 18 from way back when they started doing the ditches.  
 19 The thing I like you guys to remember when you  
 20 looking at all this, everybody, the county (inaudible). I --  
 21 for right now, the -- you trying to take care of your --  
 22 there's so much to take care of this world going on, but I  
 23 only can take care so much and the first thing is my ohana.  
 24 So because now your parents getting older, sick, this, that,  
 25 you get pulled away from the actual water situation going on.

RALPH ROSENBERG COURT REPORTERS, INC.  
 1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

1 So the thing that I want to address is that this 30-day  
 2 window, we gotta come in and make one decision, you know,  
 3 that's pretty quick, yeah.

4 FACILITATOR SENELLY: Actually, it's not to make a  
 5 decision, what --

6 MR. KAHIAMOE: But either way --

7 FACILITATOR SENELLY: Yeah, yeah, yeah.

8 MR. KAHIAMOE: We pick out points because what we  
 9 talking about, 30 days is nothing, yeah.

10 FACILITATOR SENELLY: So what's going to happen is  
 11 what you guys tell us during these 30 days is what they have  
 12 to study, which will probably take months. So the things you  
 13 bring up, that is the basis for the studies that they're going  
 14 to look at. Your comments will be in the EIS and it'll help  
 15 frame what is in the EIS.

16 MR. KAHIAMOE: Okay.

17 FACILITATOR SENELLY: Yeah.

18 MR. KAHIAMOE: Okay. That's what I was --

19 FACILITATOR SENELLY: Okay.

20 MR. KAHIAMOE: -- gonna bring you back to here.

21 Because we've been going through this problem for way hell a  
 22 long time. And probably me, I'm gonna (inaudible) before this  
 23 thing get done, because there's other people, our parents,  
 24 going, my grandparents going. Our cousins, they leave Keanae.  
 25 They (inaudible) started all this stuff. We're talking about

RALPH ROSENBERG COURT REPORTERS, INC.  
 1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

1 the same kind of things going on. But you know what, the  
 2 water has been going. I live by 'em, I go up, I check all the  
 3 time, yeah.

4 Things are changing, the environment change, the  
 5 trees not growing because they took the water away, you know,  
 6 and something else that stay inside the land right now that we  
 7 found out -- I went up and I seen something that is -- that  
 8 is -- I have never seen in my -- since I was born stay in the  
 9 stream. Now, whether or not it came -- if people threw it and  
 10 it went in the water or the water wasn't there, that's why it  
 11 grew up, I don't know. It's lot of stuff. So one we need to  
 12 look at is that not only the streams that carry the water, but  
 13 the places where the water do reach, but it's through spring,  
 14 not necessarily on that water -- I mean that river itself,  
 15 need to look at.

16 And then the next thing is when we dam stuff --  
 17 because I see the water come, go, come and goes, so I don't  
 18 know where the thing going. I think -- I don't see 'em  
 19 coming, yeah.

20 FACILITATOR SENELLY: So we've heard this before  
 21 too, you want to know what the flows are and that -- how it's  
 22 managed and stuff, yeah, where the flow goes.

23 Are you signed up?

24 MS. KAHIAMOE: No, but I'm his daughter. Can I say  
 25 something really quickly?

RALPH ROSENBERG COURT REPORTERS, INC.  
 1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

1 FACILITATOR SENELLY: You gotta talk like him then.  
 2 (Laughter.)  
 3 FACILITATOR SENELLY: No, no, no. Tell us your  
 4 name. Tell us your name.  
 5 MS. KAHIAMOE: I can talk like him.  
 6 FACILITATOR SENELLY: Okay.  
 7 MS. KAHIAMOE: My name is Kahikina Kahiamoe. I live  
 8 in Huelo. And I think the EIS should address the people that  
 9 actually gets the water.  
 10 FACILITATOR SENELLY: Okay.  
 11 MS. KAHIAMOE: As far as -- I see the environmental  
 12 issues as far as the fishermen and the farmers, but I'm  
 13 talking about the people like myself, because I -- these  
 14 clothes that I'm wearing, I wash them from that water that  
 15 comes from that stream. We bathe in that water, you know, we  
 16 wash our dishes, everyday use comes from that water. So I  
 17 would like them to address the people and their normal daily  
 18 lives that they need to do and that water that comes to their  
 19 house.  
 20 FACILITATOR SENELLY: The social part.  
 21 MS. KAHIAMOE: Exactly. The modern day living.  
 22 FACILITATOR SENELLY: Okay. Everybody, I diverted,  
 23 'cause I let her talk, but we will still try to stay in order.  
 24 Okay?  
 25 MS. KAHIAMOE: Okay. Thank you.

RALPH ROSENBERG COURT REPORTERS, INC.  
 1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

1 FACILITATOR SENELLY: Thank you.  
 2 (Applause.)  
 3 FACILITATOR SENELLY: Alex Franco.  
 4 MR. FRANCO: Right here.  
 5 FACILITATOR SENELLY: In the back.  
 6 MR. FRANCO: Thank you.  
 7 My name is Alex Franco. I'm with Maui Cattle  
 8 Company. A number of years ago a group of ranchers got  
 9 together to form the company in an effort to try and keep our  
 10 cattle home for the local marketplace. For a number of years  
 11 our cattle has been shipped to the mainland to supply the  
 12 markets there and the local ranchers felt that, gees, we  
 13 should try and keep our cattle home to try and develop a local  
 14 market. And we were very fortunate that as we got into the  
 15 local market, there was quite a bit of demand for our product  
 16 and people sought after our local products. Unfortunately,  
 17 one of the things that happened five years into our company is  
 18 we hit a six-year drought that really impacted the ranching  
 19 community here on Maui as well as the rest of the state. And  
 20 what that did is it pretty much diverted the market share of  
 21 cattle coming into the marketplace back to the mainland again  
 22 because we couldn't sustain those animals here.  
 23 And with water being available to come to the  
 24 central valley, it does provide an opportunity for the  
 25 potential of irrigated pasture that we could keep more of

RALPH ROSENBERG COURT REPORTERS, INC.  
 1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

1 these cattle here at home. But at the same time, we feel it  
 2 is very important to have a shared use for the water and  
 3 realize the importance of what the taro farmers need, but,  
 4 again, just here expressing the concerns of the drought for  
 5 our industry and the need to supply water for all of us that's  
 6 in agriculture here in Hawaii. Whether we're small farmers or  
 7 larger farmers, we all need the water, so I'm here to try and,  
 8 you know, ask for support for water being supplied to bona  
 9 fide farming.

10 FACILITATOR SENELLY: Okay. So -- and you want to  
 11 see the impacts of the proposed action on the Central Maui  
 12 side?

13 MR. FRANCO: That's correct.

14 FACILITATOR SENELLY: Okay. Thank you.

15 MR. FRANCO: Thank you.

16 FACILITATOR SENELLY: Brian Wittman.

17 MR. WITTMAN: That's me.

18 As I'm talking if -- I'm Brian Wittman. I live in  
 19 Huelo on Hanehoi Stream near Moke.

20 Earl, could you put up a map that says "Use Area"?  
 21 It's about, I don't know, ten slides back.

22 I notice almost all of these comments are about  
 23 socioeconomic because we're people and we have to make a  
 24 living and we have families. And we care about the individual  
 25 species, but we're pretty much all talking about ourselves and

RALPH ROSENBERG COURT REPORTERS, INC.  
 1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

our family and our history.

FACILITATOR SENELLY: Is this the map?

MR. WITTMAN: That's a good map.

FACILITATOR SENELLY: Okay.

MR. WITTMAN: That's a good map. Thank you.

I think that A&B is asking for too much and they're  
 too big. So I think when you guys are making the EIS, you  
 should make it with a more reasonable request in mind, not the  
 request for all that water for 30 years. I think they're  
 asking for too long a time and I think also, unfortunately,  
 they're not giving back enough.

And I think one of the things that maybe all of us  
 should realize, all these ditches are up here, right, these  
 were built by steam shovels back before diesel. Right? They  
 were built by Chinese labor, German engineers. We still have  
 German Hawaiians, Chinese Hawaiians. Right? Huelo is a  
 community that actually came from EMI development, it was a  
 fringe area in Hawaiian times, but it became kind of a central  
 part of EMI and it's in Kailua where they maintain the  
 ditches.

And I know some of those ditches, I don't know all  
 of them, but they go around here, right, and they come over  
 here and this is all A&B's land. Now, me, I just have about  
 four acres there, so I'm not even talking about me. I'm on  
 rain catch, so I'm talking about all you guys, the whole

RALPH ROSENBERG COURT REPORTERS, INC.  
 1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

1 island. I think if A&B wants to make a reasonable request,  
 2 they should think about, first of all, where are we gonna put  
 3 the water we're asking for? As it is, what they're doing is  
 4 they're asking to just have the water, have the water, have  
 5 the water, put it in the field and let it run down in the  
 6 ocean.

7 Now, wouldn't it be smarter for them to take some of  
 8 their 30,000 acres -- that's a lot. I've got four, they've  
 9 got 30,000, okay, 30,000 acres. Why not build a reservoir?  
 10 Okay? I drive around here like below Haliimaile, it looks  
 11 like there's kind of a scoop, below Pukalani there's a kind of  
 12 a scoop. I think that they -- if they were smart, they would  
 13 say, Okay, we have a lot of land, we should build a reservoir  
 14 and we should just ask for the overflow.

15 FACILITATOR SENNELLY: Okay.

16 MR. WITTMAN: Instead of asking for the main flow,  
 17 we should say, You guys can have all the main flow and when  
 18 you get storms in East Maui, when there's too much water,  
 19 that's when we take ours and we put our water in a reservoir  
 20 and then we can have what we need and you guys can still have  
 21 everything you need.

22 FACILITATOR SENNELLY: Okay. So it's a matter of  
 23 distributing, of storing and distributing differently than  
 24 what is -- so it's another --

25 MR. WITTMAN: A&B needs to invest. They haven't

RALPH ROSENBERG COURT REPORTERS, INC.  
 1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

1 invested since the 19th Century.

2 FACILITATOR SENNELLY: Okay.

3 Alice Lee. Hi.

4 MS. LEE: Thank you.

5 Good afternoon. Aloha, everyone. My name is Alice  
 6 Lee and I'm a lifelong resident and community volunteer in  
 7 Maui County.

8 I think it is of the utmost importance that the EIS  
 9 be fair, balanced, and representative of a wide range of  
 10 interests that will benefit the community as a whole. These  
 11 are my concerns.

12 What will be the impact on the over 35,000 residents  
 13 in Upcountry who rely on EMI for water? Will Upcountry water  
 14 rates be raised if the county cannot get water from EMI? How  
 15 will the county be able to provide additional water to  
 16 Upcountry due to normal population growth?

17 With Nahiku, will Nahiku water rates go up if the  
 18 streams are restored?

19 Flood control is a significant problem now that the  
 20 Iao Stream or Wailuku River has been substantially restored.  
 21 With water constantly running in the stream, it is difficult,  
 22 almost impossible to maintain the streambeds and control  
 23 vegetation which allows the water to rise in the stream and  
 24 increasingly pose a threat to human lives and property damage  
 25 especially in times of heavy rains as we experienced in

RALPH ROSENBERG COURT REPORTERS, INC.  
 1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

1 September. Will the restoration of East Maui streams cause  
2 the same problems?

3 For over 100 years the stream diversions have  
4 contributed to the recharge of Maui's aquifers. What will be  
5 the impact of reducing recharge? What will happen to A&B  
6 land, over 30,000 acres, with and without stream diversion?  
7 If the central plains no longer receive surface water from  
8 East Maui, will this not cause an environmental catastrophe in  
9 Central Maui, such as serious erosion problems, dust storms,  
10 fire hazards? Native birds and animals who thrive in the cane  
11 fields, what will become of them?

12 How will our largest economic driver, the visitor  
13 industry, be impacted if much of the land becomes arid and a  
14 blight on the formerly lush slopes of Haleakala?

15 Finally, I strongly believe diversified ag. is the  
16 best use of the former cane lands.

17 Thank you for your consideration.

18 FACILITATOR SENELLY: Okay. You said a lot, so I  
19 want to make sure I understand. A lot of it was what happens  
20 to the users, the communities, if it's not -- if they don't  
21 have that water, yeah? And what happens to water rates and  
22 things like that?

23 The other thing I heard was if it -- if you don't  
24 irrigate the Central Maui part, is it going to be dry, you  
25 know, and arid?

RALPH ROSENBERG COURT REPORTERS, INC.  
1001 Bishop Street, #2460, Honolulu, HI 96813  
808-524-2090 courtreporters@hawaii.rr.com

1 And the third thing I heard -- I mean, you said a  
2 lot of things, but I'm trying to like put it in my head.

3 Okay? One of them was also flood control, that if -- can we  
4 handle flood control with -- if all the streams were the other  
5 way?

6 Okay. Thank you.

7 Dianne Shimizu.

8 MS. SHIMIZU: Good --evening. My name is Dianne  
9 Shimizu and I'm a concerned citizen and also a member of O  
10 Maui, Inc., a nonprofit organization that advocates for  
11 affordable workforce housing, water, good-paying jobs, and a  
12 healthy economy for Maui County's residents.

13 I've lived on Maui for 66 years. For over 35 years  
14 my husband and I and my two boys lived in Upcountry Maui. We  
15 were able to build our home and raise our family because we  
16 had water for our domestic water needs. The EMI system  
17 supplied water for Nahiku and irrigation water for ag. users  
18 at the Kula Ag. Park. The possibility that these users will  
19 not continue to have that water is frightening. What will  
20 happen to the families, farmers, businesses, and schools in  
21 Upcountry Maui and in the Nahiku if EMI is not allowed to  
22 continue to deliver water? EMI needs enough water to continue  
23 to meet the domestic and agricultural needs of our Upcountry  
24 and Central Maui residents.

25 I would like to see the EIS assess the impacts on

RALPH ROSENBERG COURT REPORTERS, INC.  
1001 Bishop Street, #2460, Honolulu, HI 96813  
808-524-2090 courtreporters@hawaii.rr.com

1 housing and on our families who are struggling to find homes  
 2 if there's no water, on farmers and ranches in Upcountry and  
 3 Central Maui who depend on the EMI system for their  
 4 livelihood, on HC&S's lands without the sugarcane, and on our  
 5 hopes of food sustainability if the Central Maui lands cannot  
 6 be cultivated? Please consider these factors in your  
 7 preparation of a well-balanced EIS.

8 FACILITATOR SENNELLY: Thank you.

9 Albert Perez. Albert Perez? Oh, okay.

10 MR. PEREZ: Aloha, Albert Perez.

11 FACILITATOR SENNELLY: Aloha.

12 MR. PEREZ: I have a lot of comments and I'm not  
 13 going to read them all because I'm going to submit written  
 14 testimony, but I did want to talk about what I consider to be  
 15 A major flaw in the initial premise of the EIS preparation  
 16 notice. So there are many places where it says the proposed  
 17 action will maintain existing conditions subject to the  
 18 pending stream flow decision and those significant impacts are  
 19 anticipated for various topic areas of like geology and things  
 20 like that. To me, that is a flawed premise, you are -- sorry.  
 21 Currently HC&S is using very little water and it may be years  
 22 before they use much more. In terms of the environmental  
 23 impacts of the proposed action, it does not matter what their  
 24 stated future intent is, we have to evaluate from the existing  
 25 situation, which is that opae and other stream life are

RALPH ROSENBERG COURT REPORTERS, INC.

1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

1 currently using habitat that currently exists. The proposed  
 2 action will reduce or eliminate this habitat and that is an  
 3 impact that must be analyzed. Kalo farmers currently have  
 4 water available that will be reduced or eliminated by the  
 5 proposed action and this is an impact that must be analyzed.  
 6 So your -- I think if you -- if you go ahead on this basis,  
 7 that the entire EIS will be flawed.

8 I also wanted to say that no one is talking about  
 9 either/or, you know, it's not either Central Maui gets water  
 10 or East Maui gets water, it could be both. There's plenty of  
 11 water, but it should be used wisely. I'm hopeful that some of  
 12 the people here today will share what positive impacts they've  
 13 already seen from the increased water flow, and we have heard  
 14 some of that.

15 We need to insist that this EIS has real information  
 16 about real impacts and not just gloss over what has happened  
 17 in the past, because we can learn from that and incorporate  
 18 that into the EIS. And then I'm not going to go into detail  
 19 about what should be discussed, I'm going to leave that out,  
 20 but I did want to talk about some alternative actions that  
 21 could reduce harm to the environment and to cultural users  
 22 such as:

23 Leaving more water in the streams than A&B has  
 24 requested, using other water sources like wells or streams  
 25 that A&B already diverts outside of this lease area. Maybe

RALPH ROSENBERG COURT REPORTERS, INC.

1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

1 they have enough already, maybe they don't need this, this  
2 lease.

3 Making sure that the water is used for agriculture.  
4 A&B does not have clear plans for agriculture. They keep  
5 changing it and the land is being sold, so what assurance do  
6 we have that leasing this thing for 30 years, that the water  
7 is going to be used?

8 How about growing crops that are appropriate for the  
9 environment out there in Central Maui that -- I mean, you  
10 don't have to grow mangos in the middle of the arid part of  
11 the island. Using less thirsty crops that would use less  
12 water.

13 Currently 42 million gallons per day is lost from  
14 the ditch system and the reservoirs. How about the  
15 alternative of reducing ditch system and reservoir losses?  
16 How about allowing more access to public lands so that we can  
17 see what's actually going on there?

18 Do you want stop me?

19 FACILITATOR SENELLY: I'm going to -- you said that  
20 you were going to turn something in?

21 MR. PEREZ: I am.

22 FACILITATOR SENELLY: Because it's still gonna be on  
23 record. Is that okay?

24 MR. PEREZ: That's fine.

25 FACILITATOR SENELLY: All right. And here's what

RALPH ROSENBERG COURT REPORTERS, INC.  
1001 Bishop Street, #2460, Honolulu, HI 96813  
808-524-2090 courtreporters@hawaii.rr.com

1 I'm saying, here's what I'm saying, we do have limited time  
2 and --

3 MR. PEREZ: I'm almost pau.

4 FACILITATOR SENELLY: Okay.

5 MR. PEREZ: I think it would be very important that  
6 we get actual stream flow data. We just participated in  
7 the --

8 FACILITATOR SENELLY: No, no. I'm acknowledging  
9 that.

10 MR. PEREZ: Okay. I'm just watching that finger.  
11 (Laughter.)

12 FACILITATOR SENELLY: No, no. Because I --  
13 we've heard that and I'm just acknowledging.

14 MR. PEREZ: Okay. We don't have stream flow data  
15 for each stream that's proposed to be diverted and we should  
16 have.

17 We should explore alternatives and shorter lease  
18 terms, an alternative of just leasing the ditches and roads  
19 instead of the entire 30,000 acres.

20 What about the possibility of state acquisition and  
21 repair and maintenance of the diversion system and charging of  
22 market rates for water to generate enough money for that  
23 repair and maintenance?

24 (Applause.)

25 MR. PEREZ: And then it can be administered in

RALPH ROSENBERG COURT REPORTERS, INC.  
1001 Bishop Street, #2460, Honolulu, HI 96813  
808-524-2090 courtreporters@hawaii.rr.com

1 accordance with the public trust instead of -- I mean, let's  
 2 face it, the county relying on a private corporation for its  
 3 Upcountry water system is really, really risky. What if they  
 4 change their minds, what are we going to do Upcountry?

5 And then, finally, I'd like to ask about if the EIS  
 6 could analyze -- and I don't know if this is appropriate or  
 7 not because A&B is applying for a lease, DLNR is evaluating  
 8 the impact of that lease to them, but what about the  
 9 possibility of having other bidders for a lease on these  
 10 waters?

11 FACILITATOR SENNELLY: There -- actually, that is  
 12 going to be happen.

13 MR. PEREZ: Okay, Good. And I'll wrap up here.

14 There's also a problem with the analysis in the EIS  
 15 preparation notice. It says that the -- the no action  
 16 alternative says that no entity, including A&B, would have the  
 17 right to use waters derived from state lands if they don't get  
 18 the lease, but this is not true. Downstream riparian and  
 19 appurtenant users would have that right. The water's gonna  
 20 flow and people can use it, so its incorrect to say that  
 21 nobody would have the right to use that water.

22 The other thing that I found odd was that the  
 23 preparation notice raises the possibility that continued  
 24 maintenance of the ditch system outside of the leased areas  
 25 might not be economically feasible. I don't understand why

RALPH ROSENBERG COURT REPORTERS, INC.  
 1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

1 that would be true outside, but not inside the leased area.  
 2 FACILITATOR SENNELLY: Okay. I'm going to -- and  
 3 we'll make -- we have your oral and you're going to turn in  
 4 your written and I -- is that okay?

5 MR. PEREZ: I am actually done.

6 FACILITATOR SENNELLY: Mahalo.

7 (Applause.)

8 FACILITATOR SENNELLY: Okay. Here's why -- I know  
 9 I'm acting of ants, so here's why. Okay? We have 15 people  
 10 who signed up and I'd really like to get through them. And  
 11 we're going to try and pau at 7:00. And as I said, what  
 12 happens is as we get closer to the time, I'm gonna ask you for  
 13 permission to extend, 'cause I really want everybody to hear  
 14 each other. Okay?

15 Cody Nemet. Nemet.

16 MR. NEMET: Aloha kakou. I'm born and raised here  
 17 and I've been a resident and active member of our community.  
 18 I'm here today to express my views and to inquire that we make  
 19 sure we are provided with a thorough and proper EIS survey.

20 I do believe in restoring our rivers from mauka to  
 21 makai and sustainability for the future of our native and  
 22 local farmers. It is also important to me that we revitalize  
 23 the life that connects mauka to makai as well for our  
 24 sustainable future. We, as a community, have concerns. The  
 25 EIS should address full disclosure to see all diversions,

RALPH ROSENBERG COURT REPORTERS, INC.  
 1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

1 roadways, public access areas pertaining to the East Maui  
 2 Irrigation, including maps representing the names of streams  
 3 and diversion amounts being taken for each licensed area, the  
 4 average, maximum, and minimum amount. It is important that  
 5 the community has access to this information and that we are  
 6 given facts, not generalized ideas.

7 With such a valuable resource at stake, I feel we  
 8 need to explore all options besides those proposed. But  
 9 alternatives may be using -- uses including one that involves  
 10 the use of water from less than all four license areas, a  
 11 proposal to look to shorter term leases how much -- as a much  
 12 safer way to monitor and manage compared to the proposed  
 13 30-year lease. There needs to be access for cultural and  
 14 gathering purposes, access for restoration and maintenance,  
 15 including what the future impacts will be for the future of  
 16 these purposes.

17 I see a window of opportunity to make a great change  
 18 to benefit the number one provider, not the corporations, not  
 19 the employers, but the aina. Action and reaction is the key  
 20 when dealing with so much disturbance and change. Let us be  
 21 mindful for the future and learn from our past. Mahalo.

22 FACILITATOR SENNELLY: Mahalo.

23 (Applause.)

24 FACILITATOR SENNELLY: Frank. Frank Caprioni.

25 Frank.

RALPH ROSENBERG COURT REPORTERS, INC.  
 1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

1 MR. CAPRIONI: Aloha mai kakou. My name is Frank  
 2 Caprioni.

3 FACILITATOR SENNELLY: Aloha.

4 MR. CAPRIONI: I'll try to keep it pretty simple,  
 5 but a couple things I think this EIS should definitely address  
 6 is all the history of Alexander & Baldwin and their connection  
 7 with the native taro farmers. And I've been fortunate enough  
 8 to be out in (inaudible) and work in the fields and hear the  
 9 frustration directly from the farmers and to see it and to see  
 10 all of these promises that Alexander & Baldwin says that  
 11 they're going to do and they never, ever do. I think that  
 12 that's crazy, craziness, you know. I can feel the frustration  
 13 from them.

14 I also think the EIS should also address alternative  
 15 measures to have somebody else maintain that ditch. I mean,  
 16 God, East Maui Irrigation, how many times are we gonna let  
 17 these guys get away with what they're done? You know, they're  
 18 obviously not good stewards, why give -- why are we gonna give  
 19 it to them? Why can't the state -- I mean, there needs to be  
 20 other options that need to be looked into, you know. And  
 21 again, I completely understand that water is life, everybody  
 22 needs water. I don't -- I'm pretty sure, I don't think any of  
 23 the kalo farmers (inaudible) are asking for all of the water.  
 24 I'm pretty sure that they've made that pretty clear, you know,  
 25 and so to throw that out there is kind of crazy. I'm pretty

RALPH ROSENBERG COURT REPORTERS, INC.  
 1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

1 positive they're not asking for all the water.

2 And another thing is the uncle talked about, you  
3 know, with the akule and stuff and, you know, the hihiwi and  
4 that's where all the fish spawn and stuff like that, you know.  
5 And I was fortunate enough to go down to the Wailuaiki, it's  
6 the bay east of Wailuanui, that one has two rivers that flow  
7 inside there, one of them on the far side is diverted, the  
8 other one isn't. I mean, it's night and day difference, night  
9 and day difference, the one side there has got hihiwi, which  
10 you rarely see around Maui, all the way up to the shoreline,  
11 the other one has got nothing, no reef right in front, nothing  
12 on the one. It's common sense, it doesn't take a rocket  
13 scientist, you know.

14 Another thing I'd like to say too, I think there  
15 needs to be mediation between East Maui Irrigation and the  
16 Hawaiian community, 'cause, again, there is a lot of -- a lot  
17 of lies that have been told, a lot of things, a lot of  
18 promises that haven't been up kept. And I think in order to  
19 be able to move forward, that stuff needs to be sealed up. I  
20 mean, it's just -- it's crazy. So I really hope that you guys  
21 will look into the history and really go and talk. I know  
22 there is some of the East Maui taro farmers in here and go and  
23 talk to them because they have a lot of manao to share.

24 So thank you guys for your time.

25 FACILITATOR SENELLY: Okay.

RALPH ROSENBERG COURT REPORTERS, INC.  
1001 Bishop Street, #2460, Honolulu, HI 96813  
808-524-2090 courtreporters@hawaii.rr.com

(Applause.)

FACILITATOR SENELLY: You know, I want to say the  
EIS will cover those topics, but the mediation effort in and  
of itself is -- is parallel.

MR. CAPRIONI: Oh, one more thing.

FACILITATOR SENELLY: Yeah, yeah.

MR. CAPRIONI: What I'd like to say too is that  
there's no -- like who -- who oversees East Maui Irrigation?  
You know, we -- on the west side where I'm from, we're dealing  
with some stuff up in streams and it's -- it's incredible to  
try and talk to somebody.

FACILITATOR SENELLY: Okay.

MR. CAPRIONI: I mean, so really quickly I want to  
say there needs to be some oversight. You know, East Maui  
Irrigation is kind of -- and, you know, one last thing too  
that kind of blew my mind, sorry, is that the East Maui taro  
farmers that have gotta get -- they've gotta get permission to  
go drive up and they only get the key one day of the month,  
this is (inaudible) and they've been there forever. Like how  
is East Maui Irrigation able to go up there all the time, but  
the local people who are from there, they've gotta ask  
permission and they only got a certain window period to go up  
there. I think that's ridiculous. I think that is  
ridiculous.

FACILITATOR SENELLY: Sir, access has been brought

RALPH ROSENBERG COURT REPORTERS, INC.  
1001 Bishop Street, #2460, Honolulu, HI 96813  
808-524-2090 courtreporters@hawaii.rr.com

1 up before.

2 (Applause.)

3 FACILITATOR SENNELLY: Okay. Adriane Raff Corwin.

4 MS. RAFF CORWIN: Here.

5 FACILITATOR SENNELLY: Thank you.

6 MS. RAFF CORWIN: Aloha kakou.

7 AUDIENCE: Aloha.

8 MS. RAFF CORWIN: My name is Adriane Raff Corwin.

9 I'm with Sierra Club Maui Group. We will also be submitting  
10 written comments, but I'll just provide a little bit of what  
11 we want to say here.

12 I'd like to say I agree with Albert Perez's comments  
13 that spoke earlier.

14 One of the main things we want to bring up is that  
15 the community has been asking for this EIS for decades and we  
16 know that that's not your fault as the consulting company that  
17 this hasn't been done, but just that there's a lot in here to  
18 address. Because the EIS should have been done so long ago,  
19 we don't have a track record, an official record of the  
20 environmental impacts that have already happened and so we  
21 need an accounting of that as to the damage that has been done  
22 by the previous diversions over all these years and so we  
23 would like to have that history and that understanding in this  
24 document.

25 Another thing is that, as Albert mentioned, that

RALPH ROSENBERG COURT REPORTERS, INC.  
1001 Bishop Street, #2460, Honolulu, HI 96813  
808-524-2090 courtreporters@hawaii.rr.com

1 there's a lot of things that are in the preparation notice  
2 that claims that there aren't environmental impacts, but I  
3 would like to just draw attention and lot of our comments will  
4 come from at the end of the preparation notice -- and I  
5 recommend everyone look at this -- the United States  
6 Department of Interior's Fish and Wildlife Service submitted  
7 comments on this preparation notice that has many, many, many  
8 excellent points as to things that this EIS needs to address,  
9 one of them being currently A&B is only taking 25 million  
10 gallons per day from the diversions when, in fact, they could  
11 take up four hundred something and in the past they took about  
12 170 per day, 170 million gallons per day during sugarcane  
13 growth. So they're only taking 25 right now and we are seeing  
14 many of the streams come back and the wildlife in those  
15 streams. And we need to have an understanding of if we -- if  
16 they start taking more than just 25 and those streams start  
17 disappearing again, that's a major environmental impact  
18 because we've gotten some restoration and we -- so we need  
19 that addressed.

20 There's a lot of other great points and, again, I  
21 recommend everyone read this document that's at the end of the  
22 preparation notice including, yes, different --

23 FACILITATOR SENNELLY: You mean the letters?

24 MS. RAFF CORWIN: Yes, the letters. So the letter  
25 from U.S. Department of the Interior, Fish and Wildlife

RALPH ROSENBERG COURT REPORTERS, INC.  
1001 Bishop Street, #2460, Honolulu, HI 96813  
808-524-2090 courtreporters@hawaii.rr.com

1 Service.

2 Different lengths of the lease is another thing we'd

3 love you to address. There's a lot in here, but, yeah, I

4 would say, again, my major points, because I know everyone

5 else needs to speak, is we need to have a full understanding,

6 a true full environmental impact statement with primary,

7 secondary, tertiary, etc., impacts, cultural impacts,

8 environmental impact, social impacts, and the current

9 preparation notice as written is not addressing much. It is

10 skirting over the majority of these issues and so we would

11 like you to completely readdress this and look at what your

12 preparation notice is missing on these factors.

13 FACILITATOR SENELLY: Okay. Just a couple of

14 clarifications.

15 MS. RAFF CORWIN: Sure.

16 FACILITATOR SENELLY: The prep notice really cannot

17 come to conclusions about significance.

18 MS. RAFF CORWIN: Oh, I don't mean -- I don't mean

19 conclusions, but there's many things in the preparation notice

20 that it looks like you're not even going to address because

21 you claim there's no significance.

22 FACILITATOR SENELLY: Oh, that's why we're here.

23 MS. RAFF CORWIN: Right. So that's what we're

24 saying, we want to make sure that doesn't happen.

25 FACILITATOR SENELLY: Yeah. And my only point is

RALPH ROSENBERG COURT REPORTERS, INC.  
1001 Bishop Street, #2460, Honolulu, HI 96813  
808-524-2090 courtreporters@hawaii.rr.com

1 that the level or whatever of significance has not been

2 determined because the studies have -- are not being -- have

3 not been done. So I take -- I get your point, though, you

4 want it -- you want it -- I think the gentleman here says you

5 want it to be transparent and put a lot of stuff in.

6 MS. RAFF CORWIN: Well, for time reasons, I will

7 leave it at that, but it's a lot more complicated than that.

8 FACILITATOR SENELLY: I know, I know. Okay. Thank

9 you.

10 Tiare Lawrence. Okay. Are you --

11 MS. LAWRENCE: Aloha. Tiare. Over here. I'll

12 stand up.

13 FACILITATOR SENELLY: I'm sorry. No, no, no. I'm

14 the one who -- I'm short too. Sorry.

15 MS. LAWRENCE: Aloha. My name is Tiare Lawrence.

16 FACILITATOR SENELLY: Aloha.

17 MS. LAWRENCE: I'm here from. I'm a lineal

18 descendant of Keanae. My tutu wahine was from there.

19 I enjoy the bountiful akule that come in when my

20 friend Healoa gives me bags of akule, so I know that since

21 the -- since the restoration of some of the streams, that

22 akule have been coming in more frequently. And it's been mind

23 blowing for a lot of the residents out there that they get to

24 experience that. A lot of them thought they wouldn't be able

25 to experience this bounty that's been happening over the past

RALPH ROSENBERG COURT REPORTERS, INC.  
1001 Bishop Street, #2460, Honolulu, HI 96813  
808-524-2090 courtreporters@hawaii.rr.com

1 few months.

2 I'll go into details. I'd definitely like the EIS  
3 to include interviews of kapuna makua and opio from East Maui,  
4 their moku. I'm pretty sure many people in this room are  
5 willing to participate in that.

6 I would also like to request an additional meeting  
7 be held in Keanae and Hana. The kapuna go to work so they  
8 couldn't drive the two hours to be here. I believe that their  
9 voices are being left out and they should be given the  
10 opportunity to speak.

11 I would like the EIS to provide the benefits of  
12 short-term versus long-term leases.

13 The EIS should detail the impacts of the diversion  
14 of each stream, not a generalized view of the entire  
15 watershed.

16 The EIS should consider a range of alternatives.  
17 Besides the no diversions at all alternative it should reveal  
18 the impact of just diverting enough for existing county needs  
19 and the alternative of leaving enough water in every single  
20 stream so that they each receive enough to support 90 percent  
21 of stream life.

22 The EIS should disclose those areas that are pumping  
23 from A&B lands.

24 The EIS should include all past impacts such as  
25 kuleana land titles, quiet titles, and a clear explanation on

RALPH ROSENBERG COURT REPORTERS, INC.  
1001 Bishop Street, #2460, Honolulu, HI 96813  
808-524-2090 courtreporters@hawaii.rr.com

1 how A&B acquired these lands with records.

2 (Applause.)

3 MS. LAWRENCE: And present impacts to the streams  
4 (inaudible) they have more water than normal which helped  
5 increase habitat right now. If they are given the lease, the  
6 stream habitat will be killed, that is a fact.

7 As well as the impacts of the various broken  
8 infrastructure and leaks along the system.

9 Also I would like the EIS to include a map of  
10 potential lohi that can be restored. This will provide an  
11 opportunity for more kalo cultivation. Kalo farmers are  
12 unable to keep up with the current demand and the kalo  
13 industry is a multimillion dollar industry with so much more  
14 potential.

15 I would also like the draft EIS to include the  
16 following: past and present impacts on aquatic life, native  
17 plant species, invasive plant species, recreational  
18 activities, aesthetic value such as waterfalls and scenic  
19 waterways, traditional and customary practices such as kalo  
20 cultivation and gathering of oopu, hihiki, and opae.

21 I personally believe that no future subdivisions or  
22 gentleman estates should have access to surface water for  
23 development.

24 I also believe the EIS should explore policy, if  
25 passed at the county level, such as allowing gray water use

RALPH ROSENBERG COURT REPORTERS, INC.  
1001 Bishop Street, #2460, Honolulu, HI 96813  
808-524-2090 courtreporters@hawaii.rr.com

1 that would allow less use from potable sources.

2 At the very least before any lease is given they  
3 should be required to fix the ditch system and reservoirs  
4 adequately to stop wasting 41 million gallons a day.

5 And I would also like East Maui to get a dedicated  
6 water management area. Mahalo.

7 FACILITATOR SENELLY: Thank you.

8 Diane Hakamatsu. Diane? Oh, over here, over here.

9 MS. HAKAMATSU: Aloha and good evening, everyone.

10 FACILITATOR SENELLY: Good evening.

11 MS. HAKAMATSU: As a lifelong resident of Maui, a  
12 mother of two children, and a member of the Go Maui board, I'm  
13 very concerned about the issue of water for the development of  
14 future affordable housing because we all know that water is a  
15 critical component to providing any future housing. I'd like  
16 to emphasize that what I mean by affordable housing are small-  
17 scale projects that are sold at truly affordable prices, and I  
18 mean all units within the project, so our residents,  
19 particularly those in need, can benefit from home ownership  
20 opportunities.

21 FACILITATOR SENELLY: May I ask you, you're talking  
22 about areas that are already being served by the water?

23 MS. HAKAMATSU: That's correct.

24 FACILITATOR SENELLY: Okay. Thank you.

25 MS. HAKAMATSU: That's correct. And I'd just like

RALPH ROSENBERG COURT REPORTERS, INC.

1001 Bishop Street, #2460, Honolulu, HI 96813  
808-524-2090 courtreporters@hawaii.rr.com

1 to thank you for your favorable consideration of this request.

2 FACILITATOR SENELLY: Thank you.

3 Justin Time. Is that -- Justin Time, is that really  
4 your name?

5 MR. TOMBE: People remember that one.

6 FACILITATOR SENELLY: Okay. Just checking.

7 MR. TOMBE: Okay.

8 FACILITATOR SENELLY: Just checking.

9 MR. TOMBE: Justin Tombe. (Inaudible.)

10 FACILITATOR SENELLY: Okay.

11 MR. TOMBE: Water is life and when we're talking  
12 about it here like a lease and we're making agreements, we're  
13 reviewing ones that have been made like it's an economic  
14 commodity and that's okay, but that process is incomplete if  
15 we don't remember, right, that it's more than that. So this  
16 process, I want to invite everybody participating in this  
17 process here all the way through to remember to stretch  
18 further than just the legal considerations; otherwise, we're  
19 failing our responsibility to the generations. Okay? That's  
20 how I feel it in my heart.

21 The vision of how you steward the land and the water  
22 together has to be considered in this process. Right? So  
23 it's not just water goes to someone for 30 years, they get a  
24 sign off and an agreement and a fee. It's like what's the  
25 land use that it's going to be used for? Specifically how is

RALPH ROSENBERG COURT REPORTERS, INC.

1001 Bishop Street, #2460, Honolulu, HI 96813  
808-524-2090 courtreporters@hawaii.rr.com

1 that vision articulated? I think 30 years, again to echo, is  
 2 too long of a process. Five years, one year at a time if  
 3 that's what it takes to figure it out. And you can't do that  
 4 without accountability of the past, what has happened. Now  
 5 someone step away from the awaas in the shape that they're in  
 6 and now that it's kind of falling apart and they've made their  
 7 money and they've exported all these crops with the water  
 8 embodied in it and all that wealth off the island, and now  
 9 they're gonna step away, no responsibility to take care of  
 10 what's behind? No. That should be addressed, that should be  
 11 a part of this as well. Okay? So accountability.

12 And then for me, like I got a little chance living  
 13 over in Huelo on the Hoolawa to do a little pilot project, an  
 14 eco village in an ahupuaa kind of style. Right? And so what  
 15 that was, what is that, it's a vision of how the land should  
 16 be organized and used, how to steward the water all the way  
 17 through. Okay? So if it's going to end up being in a golf  
 18 course and there's nitrate fertilizers being dumped on there  
 19 and there's organophosphate pesticides sprayed on it and  
 20 they're gonna end up in the ocean and the fish, is that --  
 21 like if we can't address that here in the use process, then  
 22 we're not really doing the job.

23 And so I want to know from A&B what's their 30-year  
 24 vision, what do they see, where is this going, how is this  
 25 going to get used much more articulated. And I love

RALPH ROSENBERG COURT REPORTERS, INC.  
 1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

1 hearing -- thank you so much -- like stream-by-stream impact.  
 2 That's the kind of granularity, that's the kind of attention  
 3 to detail, that's the kind of responsibility that this EIS  
 4 process really needs to try and address even though it's  
 5 beyond its scope a little bit.

6 FACILITATOR SENELLY: Okay. Future uses, you  
 7 mentioned, to my -- there is no golf course. I mean, you  
 8 mentioned that and it's just I kind of want for the record  
 9 that, you know, we're talking about existing uses in the  
 10 central plains and all that kind of stuff.

11 MR. TOMBE: So diversified agriculture.

12 FACILITATOR SENELLY: And diversified agriculture.

13 MR. TOMBE: Right. So that's poly-culture, no more  
 14 mono-crop, monolithic institution. I'd like to see some  
 15 addressing of what the land use looks like that makes room for  
 16 small-time agriculture producers. I'd like to echo that  
 17 again.

18 FACILITATOR SENELLY: Okay.

19 MR. TOMBE: For sure. Yep. And put a plug in also,  
 20 you know, if there is a place for a pilot project for  
 21 industrial hemp to find its place on Maui here as a medicine,  
 22 as a food source, as an industrial product, then that's  
 23 something that really ought to be part of that looking forward  
 24 too.

25 FACILITATOR SENELLY: So different types of

RALPH ROSENBERG COURT REPORTERS, INC.  
 1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

1 agriculture, not monolithic. Okay.

2 MR. TOMBE: Yeah. Absolutely.

3 FACILITATOR SENNELLY: You pau?

4 MR. TOMBE: Absolutely. Mahalo.

5 FACILITATOR SENNELLY: Okay. Zach Williams. Sir.

6 MR. WILLIAMS: Hi, everyone. Aloha. I'm Zach

7 Williams. I'm from Lower Nahiku. I'm just here to say a

8 couple of things really quick about the EMI and what I would  
9 like in the EIS.

10 So starting from the beginning, A&B, their  
11 subsidiaries HC&S and East Maui Irrigation Company have been  
12 very deceitful in what they're saying their uses are. They  
13 said right now they've restored 100 percent of Makapipi  
14 Stream. I walked up, because we cannot drive and I'm a  
15 residence of Nahiku, I walked up to their diversion yesterday,  
16 their eastern boundary diversion because they have multiple  
17 diversion at different layers of each stream so they can take  
18 not water from one place, but multiple places in each stream  
19 and they have pumps as well, they can pump water out of the  
20 streams.

21 So on their eastern most diversion, they said they'd  
22 give us 100 percent stream flow, but I have a video showing  
23 they've opened a little door and it's about four or six inches  
24 deep where the water flows out the door and then their flume,  
25 which is right on the inside of their diversion, has as much

RALPH ROSENBERG COURT REPORTERS, INC.  
1001 Bishop Street, #2460, Honolulu, HI 96813  
808-524-2090 courtreporters@hawaii.rr.com

1 water as they could be possibly taking still flowing into  
2 their diversion. And I have video evidence of this from  
3 yesterday. And that's what they call 100 percent stream flow,  
4 they get more than 50 percent of our water. Well, I'm a new  
5 kalo farmer, but I'm a lifelong resident of Lower Nahiku. I'm  
6 struggling to get my rhodes going, but that's just wind, Kona  
7 winds for the last two weeks. And for the first time since  
8 July we've lost mauka to makai connectivity. We've had that  
9 since July of this year. So yesterday I went up to the  
10 diversion, then I went down to the bridge at the bottom of the  
11 road and into the ocean to check the mauka to makai  
12 connectivity.

13 My neighbors, the (Hawaiian name), were getting opae  
14 and because the water stopped flowing at Wahine Mo, which is  
15 about -- a pond 300 yards up from the ocean, they had to go  
16 above there to even get opae in their ponds because it was all  
17 neko, because HC&S and EMI are not giving us our fair share  
18 and they're saying they're giving us 100 percent. So I want,  
19 I guess, the definitions of 100 percent water restored to  
20 actually be 100 percent. They're like falsifying this to  
21 everybody in Maui County and the State of Hawaii saying  
22 they're giving us our water and I still no more water.

23 And as far as Auntie saying, "Oh, we're worried  
24 about (inaudible) guys paying for the water," hey, don't worry  
25 us, we'll take care, so --

RALPH ROSENBERG COURT REPORTERS, INC.  
1001 Bishop Street, #2460, Honolulu, HI 96813  
808-524-2090 courtreporters@hawaii.rr.com

1 And one more thing too about the opae, the hihiwi,  
 2 the pipiwai, the (Hawaiian word), the moi, all these things  
 3 are all interdependent on that fresh water connectivity into  
 4 the ocean. But we also need accountability, we need (audible)  
 5 to come down and count the opae, count the hihiwi, count the  
 6 pipiwai, the opu. And we need this above and below the  
 7 diversions on every single river and then we can decide who  
 8 gets to take what. But until we have a precedent to preserve  
 9 our animals and our people and everybody who lives in Maui  
 10 (Hawaiian word), then I don't -- I don't see -- I don't know  
 11 where the future is going with EMI, but they need to come  
 12 forward and be way more transparent.

13 And also their water lines are all bust, they call  
 14 them broken water lines, they're just leaking water yesterday,  
 15 buried under gingers. And the EMI guys are driving by in  
 16 their trucks, there's no way they would hear that. I'm  
 17 walking by, I heard the thing, I un- -- dug under gingers and  
 18 ahui for like ten to fifteen feet with my cane knife to find a  
 19 four-inch water line completely ruptured, just busting water  
 20 they've diverted from Makapipi Stream straight into the  
 21 bushes. Where's the accountability? How long has this been  
 22 busted? I just found it yesterday, it was buried a foot  
 23 underground. If I wasn't walking, I wouldn't have heard it.

24 And lastly, I talked to Uncle Frank James, who is a  
 25 lineal descendent of (Hawaiian name) in East Maui. And I

1 think Kuihewa, Maui Land and Pine, they used to have on  
 2 Kuihewa, but they don't take surface water from Kuihewa, but  
 3 they do take water, they pump it, because it's one of the  
 4 largest aquifers we have in East Maui. And since 1990 when  
 5 they put in that pump, Uncle Frank told me that the pond, what  
 6 they call Blue Pond, is actually only running for two or three  
 7 weeks after a big storm and then it dries up completely dry.  
 8 His whole life that never happened, but since 1990 when they  
 9 put in that pump, that's been happening. And what effect did  
 10 that -- these pumps and these pumps stations have an effect on  
 11 other ahupuaas? What about the next ahupuaa in Koolau? But  
 12 we're all connected and there's been no scientific study or  
 13 research to see how our aquifers are connected. When you take  
 14 from one place, people are affected somewhere else. So they  
 15 cannot just say, Oh, this and that. We need way more, way  
 16 more scientific impact statements and, I don't know, research.  
 17 Anyway, that's all I have to say.

18 FACILITATOR SENELLY: You want more data.

19 Okay. It's seven o'clock. We have, I think, 11  
 20 more people, so can we go on to 7:10?

21 AUDIENCE: Yeah.

22 FACILITATOR SENELLY: Is that okay?

23 All right. Kamalani Pahukoa. Kamalani.

24 MS. PAHUKOA: Aloha.

25 AUDIENCE: Aloha.

RALPH ROSENBERG COURT REPORTERS, INC.

1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

RALPH ROSENBERG COURT REPORTERS, INC.

1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

MS. PAHUKOA: My name is Kamalani Pahukoa. Mahalo for everyone for coming and I respect everyone's comments from our country farmers to, you know, our residents and commercial users and everybody. I'm from East Maui, I'm from Keanae. I mainly come here today to give specifics on what I think the EIS should address, so I'll get to it.

So East Maui streams holds one of the worlds most diverse ecosystems and native species, mollusks to arthropods and vertebra. I ask that you honor the recommendations of our state biologists, scientists, Hawaiian practitioners, and Maui community. It is crucial that habitat mapping would be incorporated into the environmental study.

I'd like to see the estimated amount of water that is wasted from the diversions. The leakage of the water from diversions have proven to contribute to landslides in some areas of the Hana Highway. Without these studies it's hard to explain to our highways engineer the detrimental effects of waste water from these diversion pipes, the effects it can cause to erosion and landslides and whatnot. The erosions of some areas along the Hana Highway are from natural material like water; however, they are caused by unnatural waterways also known as EMI's diversions. Maintaining the natural patterns of water flow and streams is the single most important requirement for protection of native Hawaiian stream animals. So I guess what I'm saying is I'd like you to be

RALPH ROSENBERG COURT REPORTERS, INC.  
1001 Bishop Street, #2460, Honolulu, HI 96813  
808-524-2090 courtreporters@hawaii.rr.com

very specific and broad in your habitat mapping for the EIS. I'd like --

FACILITATOR SENELLY: What do you mean, "specific and broad"?

MS. PAHUKOA: Everything.

FACILITATOR SENELLY: Okay.

MS. PAHUKOA: I'd like to see that -- I know there's random -- it's called random --

FACILITATOR SENELLY: Sampling?

MS. PAHUKOA: -- sampling, yeah, and random insect monitoring and whatnot, but I'd also like you to consider our ecosystems, the forests, oopu, hiihiwi, and everything that flows upstream. I'd like you to conduct the EIS not just below the water diversions, but above.

FACILITATOR SENELLY: Okay.

MS. PAHUKOA: And so to wrap it up, I hope that everyone can come out to tomorrow's meeting because I know there's a lot more East Maui residents that will be able to attend tomorrow's meeting as opposed to today 'cause it's kind of far and (inaudible) and whatnot.

But I ask that all records of the EIS and data collection regarding East Maui streams be made public and updated weekly as important data collection become available. So if that's something that can be done, I'd like that to be done, you know, as soon as that data becomes available, as

RALPH ROSENBERG COURT REPORTERS, INC.  
1001 Bishop Street, #2460, Honolulu, HI 96813  
808-524-2090 courtreporters@hawaii.rr.com

1 soon as possible.

2 Other than that, I just wanted to state that I don't  
 3 support EMI obtaining this lease. I think that the county has  
 4 the resources to manage these diversions on our own. I think  
 5 that the community has the power to manage the diversions on  
 6 our own. And for people to be relying on A&B and EMI is kind  
 7 of a -- you know, we should just have more -- we should have  
 8 more -- we should more respect to those who have been managing  
 9 these ahupuaas since -- for several generations. I mean,  
 10 sustainability has been out there since the beginning and in  
 11 these streams from Koolau, from Hana to Haiku and Huelo. So  
 12 for people to say that we have to only rely on A&B is kind  
 13 of -- it's not right, yeah, because Hawaiians have been  
 14 managing our water resources since the beginning.

15 So I just wanted to say that and thank you guys for  
 16 your time. Thank you, everyone, for coming.

17 FACILITATOR SENNELLY: Thank you.

18 (Applause.)

19 FACILITATOR SENNELLY: Alohalani Smith.

20 MS. SMITH: Aloha, everybody. I'm Alohalani Smith.  
 21 I live out in Kaupo and I have also lineal descendantcy in the  
 22 (Hawaiian name) side, we grew up outside there. I am the Aha  
 23 Moku Kaupo representative. I've worked in the national parks  
 24 and DOFA in the natural resources management, but as well as  
 25 it goes with that, development is needed, you know, I'm not

RALPH ROSENBERG COURT REPORTERS, INC.

1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

1 against it. I support it, I was a carpenter too and that, I'm  
 2 looking for smart development. But before we even start with  
 3 development, we need water and we need to settle the water  
 4 issue.

5 Now, it was mentioned on the state owned land in the  
 6 40 license areas the EIS study alternative, okay, I want to  
 7 them to study, which I'm going to propose a solution: To  
 8 cancel the lease, okay, because the DLNR and the state can  
 9 take back the water system from A&B. The restoration to the  
 10 irrigation system too can be worked on. Now, they can also  
 11 work with partnerships. Just like what Kamalani was saying,  
 12 is that the people can do it. We have a lot of partnerships  
 13 right before us. Also the ohanas, okay, the ohanas can help.  
 14 And by doing this we can save money for the state by having  
 15 stewardship which was number one in the beginning.

16 Now, for example, we have this aha moku system and  
 17 it is every ahupuaa that we take care of our kuleana from  
 18 mauka to makai, even to the (Hawaiian word) where fishermen  
 19 can also benefit. Now, all of this will benefit everybody,  
 20 especially the communities that can take better care of our  
 21 own, yeah, resources, our kuleana. So the state in the  
 22 meantime will save money and make money back. Now, this would  
 23 support our water system as Maui grows, it's that simple. But  
 24 if A&B will really wants to take care of Maui, A&B should  
 25 donate the restoration of the irrigation system and train the

RALPH ROSENBERG COURT REPORTERS, INC.

1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

1 state workers or the partners as a tax write-off for the  
 2 deduction and give back to the people. There's nothing wrong,  
 3 it's that simple.

4 So thank you very much for your time.

5 FACILITATOR SENELLY: Thank you, Alohalani.

6 Elaine Wender.

7 MS. WENDER: Wender.

8 FACILITATOR SENELLY: Wender. I'm sorry.

9 MS. WENDER: My name is Elaine Wender. My

10 involvement in this issue began over 35 years ago.

11 Figure 1-1 of the EISPN shows in green what are  
 12 deceptively called EMI lands. In fact, many of these lands  
 13 have multiple owners. For instance, many people, including  
 14 myself, have interests in TMK-1-8-11 by in Waiokamilo Stream  
 15 in Keanae. These maps should be labeled accurately.

16 I submitted timely substantive comments for the  
 17 early consultation phase for the preparation of the EISPN and  
 18 received a letter from Earl stating, quote, Your comments will  
 19 be considered and a copy of your comment letter will be  
 20 appended to the EISPN, unquote. However, they were not  
 21 appended. I have not even received a reply to my written  
 22 request made a week ago that an amended EISPN be published  
 23 including my comments as well as others that were excluded and  
 24 that my comments immediately be sent to all those from whom  
 25 you originally solicited comments as well as those who made

RALPH ROSENBERG COURT REPORTERS, INC.

1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

1 unsolicited comments. I still have not received a reply. I'm  
 2 renewing that request. It is not an adequate remedy to  
 3 include in the draft EIS my comments made in the consultation  
 4 phase.

5 It's taken us over 35 years to get here. In  
 6 November of 1981 residents of Keanae and Hana through their  
 7 counsel Isaac Hall first petitioned DLNR to prepare an EIS in  
 8 this case. For 35 years A&B has fought tooth and nail to defy  
 9 this legal requirement. It took citizen activism and court  
 10 action to finally require them to adhere to the law and  
 11 prepare an EIS. So here we are, 35 years later. In that time  
 12 we've lost two generations of kupuna who fought for water  
 13 restoration and our watershed has continued to be degraded by  
 14 EMI's failure to exercise proper stewardship.

15 A&B apparently no longer utilizes water from  
 16 Waiokamilo, but this is not the same as restoration. EMI  
 17 formerly diverted water not only from the main flume at  
 18 Kukahiko, but also from numerous tributaries of various sizes  
 19 which, before the existence of the ditch, eventually found  
 20 their way into Waiokamilo Stream. This water was collected  
 21 via over two dozen diversions consisting primarily of concrete  
 22 catchment basins with pipes. EMI has cut these pipes so that  
 23 the water no longer goes into the ditch, instead it now drips  
 24 or flows onto the ditch road, creating a muddy mess and  
 25 additional habitat for invasive plants. Most of the water

RALPH ROSENBERG COURT REPORTERS, INC.

1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

1 never makes its way off the road, much less back into the  
 2 stream. When they built, the ditch and the ditch road cut  
 3 into and altered the natural terrain. Nothing has been done  
 4 to return this terrain to its original condition or to ensure  
 5 that the water not diverted actually gets into the stream.  
 6 In addition, EMI has abandoned and no longer  
 7 maintains the ditch road in the Waiokamilo area, resulting in  
 8 its present hazardous condition. They also no longer monitor  
 9 the area for miconia which I have frequently encountered there  
 10 in recent years. EMI has abandoned any responsibility for  
 11 stewardship of the watershed areas they longer utilize. Even  
 12 in the areas they still use, banyan trees, pyaemia, and other  
 13 invasive plants grow unfettered. These conditions must be  
 14 addressed in the EIS.

15 FACILITATOR SENELLY: Okay.

16 MS. WENDER: No. I'd like to finish.

17 FACILITATOR SENELLY: No, no, no. That's what I was  
 18 going to ask you and you just said it, so I'm fine. I was  
 19 going to ask you what of that you wanted in the EIS.

20 MS. WENDER: Could I please finish?

21 FACILITATOR SENELLY: Please.

22 MS. WENDER: The EIS require rules require, quote, a  
 23 description of the environmental setting including a  
 24 description of the environment in the vicinity of the action  
 25 as it exists before commencement of the action, unquote.

RALPH ROSENBERG COURT REPORTERS, INC.  
 1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

1 Throughout the EISPN the phrase, quote, maintain existing  
 2 conditions, unquote, is repeated. This cannot be the starting  
 3 point. We have experienced what EMI's lack of stewardship  
 4 over these past 35 years while they illegitimately held this  
 5 land without an EIS and without a valid lease, not to mention  
 6 the previous decades has gotten us a seriously degraded  
 7 watershed. There has to be some accountability and discussion  
 8 of alternative what true restoration would mean which means  
 9 that the condition of the watershed before these diversions  
 10 existed has to be considered.

11 On some streams which EMI no longer uses a  
 12 continuous mauka-makai flow has still not been reestablished.  
 13 For instance, at West Wailuaiki, the water is diverted and  
 14 then put back into the stream so that the flow is directed at  
 15 the ditch road. None of the massive ugly concrete  
 16 infrastructure has been removed. In short, the streams and  
 17 their surroundings have not truly been restored.

18 The EIS should discuss the alternative solutions.

19 One could be to restore the area to its prediversion landscape  
 20 without causing additional environmental damage. If that is  
 21 not feasible, an alternative could be to allow the ditch road  
 22 to remain and to require that it be maintained and also that  
 23 means be provided to ensure that the previously diverted water  
 24 finds its way to the stream.

Since EMI is no longer using the water from the

RALPH ROSENBERG COURT REPORTERS, INC.  
 1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

1 Nahiku or Keanae areas and since A&B has more than enough well  
 2 water and water arising from their own lands to serve their  
 3 needs, there's no justification to include all of these areas  
 4 in the new license application; however, the EISPEN includes  
 5 all 388 diversion points. If any new lease is considered,  
 6 first restoration of the abandoned areas should actually be  
 7 completed and the lease should contain strict provisions  
 8 requiring true watershed restoration, not simply cessation of  
 9 water diversion at the end of the lease period. There should  
 10 also be a requirement that a bond be posted in sufficient  
 11 amount to carry out this work.

12 I also endorse the comments made by Forestry and  
 13 Wildlife and Na Ala Hele Divisions of DLMR, the Native  
 14 Hawaiian Legal Corporation, and the U.S. Fish and Wildlife  
 15 Service. And I encourage people here to read the EISPEN and  
 16 submit written comments. Thank you.

17 FACILITATOR SENELLY: Thank you, Elaine.

18 (Applause.)

19 FACILITATOR SENELLY: Okay. We have eight more  
 20 people. You want to go ten more minutes?

21 AUDIENCE: Yes.

22 FACILITATOR SENELLY: Okay. Let's go.

23 Tom Blackburn-Rodriguez. Are you here? Oh, okay.  
 24 Thank you.

25 MR. BLACKBURN-RODRIGUEZ: Hello. Thank you very

RALPH ROSENBERG COURT REPORTERS, INC.

1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

1 much for the opportunity to speak to you tonight and also to  
 2 see so many of my friends and neighbors that I haven't had a  
 3 chance to see in a while, so aloha, everyone.

4 My name is Tom Blackburn-Rodriguez. I live in  
 5 Kihei. My family has lived in Hawaii since 1870, that's the  
 6 Blackburn side of the family, the Rodriguez family got here  
 7 before the wall was built and we were refugees from the  
 8 revolution in Mexico and it wasn't a pretty process to be a  
 9 refugee.

10 I'm representing Go Maui, Incorporated. Go Maui is  
 11 a nonpartisan, nonprofit organization with a focus on  
 12 affordable workforce housing, water, and a healthy economy  
 13 with good-paying jobs and benefits, among other issues.

14 There are many issues to consider in the development  
 15 of this EIS and it is a challenging task. There are five  
 16 questions I would like to highlight for your consideration and  
 17 which should be answered in the EIS.

18 Briefly, first: Will the EIS cover and assess what  
 19 would happen to Central Maui if there were no agriculture  
 20 there because there's not enough water.

21 Number two, second: Will the EIS cover what can  
 22 happen to our hopes of energy and food sustainability on Maui  
 23 if the Central Maui lands cannot be cultivated?

24 Third: What about Upcountry residents? The EIS --  
 25 farmers, ranches, etc. The EIS should address where they will

RALPH ROSENBERG COURT REPORTERS, INC.

1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

1 get their water if there's no state lease.

2 Fourth: I have many friends who are in business  
3 Upcountry. Will the EIS address what will happen to them and  
4 the other businesses in Upcountry Maui if there's no more East  
5 Maui stream water?

6 Finally and perhaps most important: Will the EIS  
7 cover what development might occur if there's no agriculture  
8 in Central Maui?

9 These and other questions you will hear and have  
10 heard tonight are important and the answers will have real  
11 consequences for our community which we all love.

12 And, finally, I would just like to endorse the  
13 concept of having a meeting in Hana. Although the Maui County  
14 Council has facilities where you can do remote meetings as  
15 well, I think it's very important for the people of Hana to be  
16 able to participate fully in a meeting of this nature and  
17 strongly endorse that. Thank you.

18 FACILITATOR SENELLY: Thank you very much.  
19 (Applause.)

20 FACILITATOR SENELLY: Larry Koss. Sir.

21 MR. KOSS: Thank you for doing this and for the  
22 manner which you're doing it. It's very supportive.

23 My name is Larry Koss. I live in Wailuku. I'm a  
24 member of the Maui Farmers Union -- the Hawaii Farmers Union,  
25 although I'm not a big farmer. I'm a backyard bachelor

RALPH ROSENBERG COURT REPORTERS, INC.  
1001 Bishop Street, #2460, Honolulu, HI 96813  
808-524-2090 courtreporters@hawaii.rr.com

1 farmer. My -- I don't have all the details, the specifics  
2 that some of the people here have, but I would like to draw a  
3 distinction between a couple of things that I think would be  
4 helpful in the process. One is a distinction between  
5 systematic remediation and shifting of context.

6 FACILITATOR SENELLY: Say that again.

7 MR. KOSS: Systematic remediation, which we're doing  
8 here --

9 FACILITATOR SENELLY: Right.

10 MR. KOSS: -- dealing with water. Right? And  
11 addressing the underlying context that's driving this in the  
12 first place.

13 FACILITATOR SENELLY: Okay.

14 MR. KOSS: Because we could be -- we could be  
15 addressing this issue now in February 2017, if we don't deal  
16 with the underlying context, we could be addressing it again  
17 and again and again on the diversions. Right?

18 The other is the notion of sustainability. And when  
19 that concept first came out, I was on Orcas Island in '96 and  
20 I published a journal, a 60-page journal that we delivered to  
21 the entire San Juan Islands of 14,000 people and it draws a  
22 distinction between -- I don't use the word sustainability  
23 anymore. Most people don't know what it means, it's been  
24 manipulated and abused, and truth is: Who gets to be  
25 sustainable? Is it the top 1 percent of 1 percent? And do

RALPH ROSENBERG COURT REPORTERS, INC.  
1001 Bishop Street, #2460, Honolulu, HI 96813  
808-524-2090 courtreporters@hawaii.rr.com

1 sustain all the people that are -- all the people that are  
 2 homeless or without food, does that number sustain itself and  
 3 keep on going? So the term that I use is whole community  
 4 well-being.

5 FACILITATOR SENELLY: Whole?

6 MR. KOSS: Whole community well-being.

7 FACILITATOR SENELLY: Thank you.

8 MR. KOSS: There's no wiggle room with that. Either  
 9 everybody is cared for and it's all in the funnel, or it's  
 10 not.

11 So I have -- there's a couple of things that come to  
 12 mind for me. Number one, I think water and electricity ought  
 13 to be public trust, period, that handles a lot of issues. I  
 14 think that's a good thing.

15 And the other is -- this may sound really  
 16 outrageous, but I -- and I might get choked up doing it. But  
 17 I have an invitation for A&B that I would like to have it step  
 18 up to or be compelled to, to step up to, and that is given its  
 19 history and given what it's done, it's time to clean up its  
 20 karma and I would like to see that 36,000 acres dedicated to  
 21 public trust for the local farming, organic farming, and for  
 22 affordable housing. And that may sound too wild and crazy,  
 23 but I just need to think that we do one more -- you know, a  
 24 whole continuing series of these kinds of things across a  
 25 number of issues 'cause we're not dealing with the underlying

RALPH ROSENBERG COURT REPORTERS, INC.

1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

1 context that drives it, so --

2 FACILITATOR SENELLY: What do you want to see in the  
 3 EIS?

4 MR. KOSS: Pardon?

5 FACILITATOR SENELLY: What do you want to see  
 6 addressed in the EIS of all the things you said?

7 MR. KOSS: Well, I don't know if -- any way that  
 8 that could fit in there, you know.

9 FACILITATOR SENELLY: Okay. I appreciate --

10 MR. KOSS: I just throw it out as a possibility.

11 FACILITATOR SENELLY: Thank you.

12 MR. KOSS: Thank you very much.

13 FACILITATOR SENELLY: Stacey Sills.

14 MS. SILLS: My name is Stacey Sills and I have been  
 15 on Maui for 25 years. And there was -- the two issues that I  
 16 think I'd like to address is the six-year drought for the  
 17 Upcountry cattle farmers was noted as well as you notice  
 18 California had a ten-year drought. The issue I think that you  
 19 need to be looking at and that needs to be studied are the  
 20 actual particles tested in the water, in the people. I think  
 21 the people need to be tested as well because there is a thing  
 22 and it is called geoeengineering and it's being done over Maui.  
 23 It's shut down the Iao Valley. I am the only person in the  
 24 world who documented the bombing of Iao Valley and also the  
 25 bombing of protest -- of the protesters on the Big Island

RALPH ROSENBERG COURT REPORTERS, INC.

1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

1 Hawaii. They drop aerosol down bursts, they're filled with  
 2 aluminum, barium, and strontium. I'm sure you're gonna pick  
 3 up those particles in the environment. And I think that needs  
 4 to be studied because they can create six-year droughts,  
 5 ten-years droughts, and now they're creating a flood.

6 I just watched the same down bursts that are  
 7 happening right now in Orville that happened in Iao Valley.  
 8 They're doing the same thing. They're -- that dam's gonna  
 9 blow. Trust me, I know it, because I'm watching them.  
 10 They're exploding the same aerosols that they did here in Iao  
 11 and this is an issue, it needs to be addressed, and you need  
 12 to look at that factor in your environmental impact study.

13 It's not a joke. I know it's top secret, we can't  
 14 talk about it, but, you know what, I'm gonna talk about it,  
 15 because it affects each and every one of you. It's global, it  
 16 happens here, it happens all around the globe. I don't  
 17 know --

18 How many people know about global engineering?

19 Anyone.

20 (Audience response.)

21 MS. SILLS: Okay. That is very few. You're just  
 22 ignorant. Please educate yourself. It affects you, you're  
 23 breathing it. It happened today. It happens every single  
 24 day. They're whiting out the planet. You'll never see a  
 25 light blue sky again. Please check the particles, that's what

RALPH ROSENBERG COURT REPORTERS, INC.  
 1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

1 I'd like you to do on your environmental impact statement, is  
 2 protect the health of these Hawaiian people because they're  
 3 being attacked.

4 FACILITATOR SENELLY: Thank you.

5 (Applause.)

6 FACILITATOR SENELLY: Joycelyn Costa.

7 MS. COSTA: Hi. My name is Joycelyn Costa. I'm the  
 8 moku representative for Hanakualoa, but I'm a descendant of  
 9 Nahiku Mokuula on Makapipi. And my father, I'm sure you're  
 10 going to meet him tomorrow, he's 81, he was from Nahiku, his  
 11 mother was born and raised in Nahiku, her father was born and  
 12 raised in Nahiku, his father was born and raised in Nahiku, he  
 13 was taken to Kalaupapa.

14 I would like to see the original lease, I'm talking  
 15 from the 1800s, if there even is a legitimate lease, before we  
 16 even move forward. I would like to see critical data not of  
 17 today, because we've already had too much damage and  
 18 dewatering of a lot of the streams for you to even begin to  
 19 measure it. So it needs to be from the beginning, not from  
 20 the middle, not from the current, but from the beginning so  
 21 you get accurate data.

22 I have to disagree a little bit with my good friend  
 23 Darrell Tanaka that not every stream should be restored  
 24 because there was a reason in Alexander & Baldwin he found it  
 25 to be a waste which is why he decided he needed to capture all

RALPH ROSENBERG COURT REPORTERS, INC.  
 1001 Bishop Street, #2460, Honolulu, HI 96813  
 808-524-2090 courtreporters@hawaii.rr.com

1 of this water and send it central.

2 And if you go with the rule of nature, with the law  
3 of nature, it is essential when we worry about if we're  
4 underground springs and catchments underground that feeds  
5 wells are going to be able to hold the carrying capacity for  
6 elsewhere, the percolation that will be created through the  
7 restoration, you know, has anybody done a study on that? Can  
8 we -- can we restore the lands again to a more healthy  
9 environment? It's missing.

10 I find it really ironic that we don't have money, we  
11 don't have the resources for something more critical than a  
12 rapid transit rail, but we can find billions to put a piece of  
13 steel and concrete not even halfway around an island. So we  
14 need to reevaluate what is important. Economically, the water  
15 restored to the taro patches will be better for the state.

16 My father equates a bag of rice, a lot of people in  
17 here eat a bag rice, it'll last you maybe -- depending on the  
18 size of your family, a week, week and a half, cost you ten  
19 bucks. Buy a bowl of poi for the same amount, can't even feed  
20 the whole family. So multiply that to feed the family for a  
21 week and a half equivalent to that bag of rice, you've got a  
22 major economic rally, but nobody talks about it. The fish,  
23 the ocean is key if we look at -- 'cause everyone stops at the  
24 taro patch, that's okay, but if you go all the way to the end  
25 user, then at least you have a more thorough assessment.

RALPH ROSENBERG COURT REPORTERS, INC.  
1001 Bishop Street, #2460, Honolulu, HI 96813  
808-524-2090 courtreporters@hawaii.rr.com

1 Nobody talks about that.

2 And as far as environmentally conscious, you look at  
3 endangered species, the state considers a Hawaiian person to  
4 be 50 percent. My father is an endangered species, there's  
5 not many left, so you guys need to protect him too. That  
6 needs to be included in the EIS.

7 I love what this young lady said, you need to put  
8 the people, the sense of place, of the people of this place in  
9 that EIS considered, not just -- not just the river, not just  
10 the stream, not just the pohaku, not just the trees, not just  
11 the birds, but the actual human that cohabitates here.

12 FACILITATOR SENELLY: Thank you very much.

13 (Applause.)

14 FACILITATOR SENELLY: Okay. We have three more, so  
15 let's try it. Okay. Kaleikoa Kaeo.

16 UNIDENTIFIED SPEAKER: He left.

17 FACILITATOR SENELLY: All pau? He left. Okay.

18 Mikiala Puaa. Is that you? Okay.

19 MS. PUAA-FREITAS: Aloha.

20 FACILITATOR SENELLY: Aloha.

21 MS. PUAA-FREITAS: Mahalo, you guys, for holding  
22 this meeting and mahalo, you folks, for holding --

23 UNIDENTIFIED SPEAKER: Louder.

24 MS. PUAA-FREITAS: Mahalo, you guys, for holding  
25 this meeting and, you know, hearing our concerns and ideas.

RALPH ROSENBERG COURT REPORTERS, INC.  
1001 Bishop Street, #2460, Honolulu, HI 96813  
808-524-2090 courtreporters@hawaii.rr.com

1 My name is Mikiala Puaa-Freitas. I'm a Native Hawaiian and my  
2 ohana has been on Maui for many generations.

3 You know, this meeting should be held in East Maui  
4 so that, you know, everyone here and you folks as well can  
5 look the people of East Maui in the eye and talk about their  
6 resource that we're trying to do all these other things with,  
7 first and foremost. Maybe consider doing an environmental  
8 impact study on the generations of East Mauians that have lost  
9 of a way of life and continue to be oppressed by these  
10 diversions, so let's start there, you know.

11 After 120 years of diverting the water, it's great  
12 that they're doing an environmental impact statement, but  
13 maybe look a little deeper and really look at what's been  
14 going on out in East Maui and not just argue and bicker about  
15 the water that should be out there and the uses that everybody  
16 wants to use their water with, you know. The people -- the  
17 things that don't have voices, you know, the -- like the  
18 natural environment out there that doesn't have voices, you  
19 know, who's going to be speaking for them? So we need to  
20 consider an environmental impact study to be done on, you  
21 know, these people that have been effected, the people and  
22 environment that have been affected for 120 plus years.

23 Secondly, I think, you know, are you guys adequate  
24 enough to do this study for a 30-year lease, you know? I  
25 mean, is that a recommendation that you folks feel comfortable

RALPH ROSENBERG COURT REPORTERS, INC.

1001 Bishop Street, #2460, Honolulu, HI 96813  
808-524-2090 courtreporters@hawaii.rr.com

1 with, doing a study that's potentially going to influence a  
2 lease for 30 years. Maybe you recommend doing year to year  
3 if -- you know, if you can have any kind of input along the  
4 lines of that, you know. Thirty years is a long time and, you  
5 know, will your study be adequate enough for that?

6 More public involvement, oversight, and transparency  
7 and less privatization, you know, I understand the need for  
8 existing homes and businesses and, you know, ranchers and  
9 everybody that's using the water right now, but, you know, why  
10 does the people of East Maui and, you know, the environment of  
11 East Maui have to put future developments and future business  
12 ideas and expenditures on their shoulders? You should be  
13 looking at, you know, alternative water resource -- I mean  
14 alternative water uses, you know, A&B should be looking at  
15 alternative water uses, you know, whether it be catchments or  
16 swales. Yeah, like uphold their end of the bargain and --

17 You know, as a kalo farmer, you know, the reason you  
18 hear so much about kalo farming and whatnot, is, you know, as  
19 a kalo farmer you use the water and then the water continues  
20 to be used. It's not you take the water, use it for one crop,  
21 and it replenishes a different aquifer from where it came  
22 from. So, you know, that's why you hear about the kalo  
23 farmers and the water is they still have that system of  
24 sharing and using the water for, you know, the things that  
25 don't have voices. So, you know, let's really -- yeah, I

RALPH ROSENBERG COURT REPORTERS, INC.

1001 Bishop Street, #2460, Honolulu, HI 96813  
808-524-2090 courtreporters@hawaii.rr.com

1 don't know how to end it, but that's basically my concerns and  
2 you want to follow up with. You got it?

3 FACILITATOR SENELLY: I got it. Thank you. And  
4 actually, yeah, he's writing it down too. And somebody -- you  
5 remember we have a transcriber too.

6 MS. PUAA-FREITAS: Oh, yeah, I guess you got it.

7 FACILITATOR SENELLY: Are you Sesame?

8 MS. SHIM: Yes.

9 FACILITATOR SENELLY: All right.

10 MS. SHIM: Okay. Aloha. My name is Sesame Shim.

11 FACILITATOR SENELLY: Aloha.

12 MS. SHIM: And pretty much the current state of EMI  
13 is take all and use all, that is not a resource management.

14 And it has been this way since the ditches were (inaudible).

15 Resource management is so alien to A&B and there's so much  
16 water being wasted and unaccounted for, we are truly starting  
17 from square one. There's so much to account for to consider  
18 and it affects all the people of East Maui. We shouldn't be  
19 giving all the power to EMI to determine what happens to all  
20 this water. This is a public resource and A&B is a private  
21 entity.

22 There needs to be more transparency and involvement  
23 from the Native Hawaiian community, especially the community  
24 that lives there. The Native Hawaiian community were there  
25 maintaining a communal relationship with the water prior to

RALPH ROSENBERG COURT REPORTERS, INC.

1001 Bishop Street, #2460, Honolulu, HI 96813  
808-524-2090 courtreporters@hawaii.rr.com

1 these ditches. Their lives and future generations have and  
2 continue to be affected by the actions of a private entity to  
3 control the water. The water usage from A&B is the last  
4 priority to any water usage. If there is not enough after  
5 meeting all the kalo farmers needs, the environmental needs,  
6 the current community needs, they should get none. The lands  
7 currently used for sugarcane was never intended to use so much  
8 water. Cultivation farming should return to where it is  
9 naturally intended to be.

10 FACILITATOR SENELLY: Sesame, I must ask you, what  
11 do you want to see the EIS address about that? How do you  
12 want that, what you just say, how do you want --

13 MS. SHIM: To prioritize.

14 FACILITATOR SENELLY: Okay. Thank you.

15 Okay, everybody, we're on the next agenda item. I  
16 really want to thank everybody. I know a lot of you have been  
17 here very early, you've been very patient. You've also been,  
18 I think -- I really appreciate everybody's aloha. I mean, you  
19 folks really did kind of -- we did it. All pau. So I  
20 appreciate that very much. Thank you.

21 And Father Tomoso is going to --

22 Oh, one more thing, you know, if you're gonna email  
23 your comments, just like we said before, make sure that you  
24 get a receipt back in the email, an email receipt; otherwise,  
25 you use the comment sheet and you call us and you let us know.

RALPH ROSENBERG COURT REPORTERS, INC.

1001 Bishop Street, #2460, Honolulu, HI 96813  
808-524-2090 courtreporters@hawaii.rr.com

1 Okay?

2 Father.

3 FATHER TOMOSO: (Hawaiian statement.) Almighty God,  
4 we have heard and you have been with us all night as we've  
5 talked about the gifts that we see all around us, that what is  
6 reflected in those gifts is the abundance we have that is  
7 surrounding all of us. Call us now into true stewardship of  
8 this abundance as we go forth as an island community, as an  
9 island people surrounded by water which is reflective of your  
10 own perfection as the Almighty God. Help us to understand  
11 that abundance is for everyone. Bless this island, bless the  
12 land, bless the waters, bless the sky, bless everything around  
13 us, because we are true stewards in that abundance.

14 (Hawaiian statement.) Amen.

15 AUDIENCE: Amen.

16 FACILITATOR SENELLY: Thank you, Father.

1 PAIA, HAWAII; 5:08 P.M.  
2 -oOo-  
3  
4 MODERATOR SENELLY: Aloha, everyone.  
5 Thank you for coming. So good to see you all here.  
6 You are here for a scoping meeting for the  
7 proposed Keanae, Nahiku, Honomanu, Huelo License  
8 Areas for the proposed water lease.  
9 An Environmental Impact Statement is being  
10 done. It has not been done yet. This is the first  
11 step for it. Because there was a Preparation  
12 Notice, and this is called scoping, what we're doing  
13 here.  
14 My name is Berna Cabacungan Senelly. I'll  
15 be the facilitator tonight.  
16 This is Earl Matsukawa from Wilson  
17 Okamoto. Wilson Okamoto & Associates is doing the  
18 Environmental Impact Statement.  
19 This is Keola. You'll see him running  
20 around.  
21 And you met Rebecca when you came in.  
22 And I also have the privilege of  
23 introducing Father John Tomoso, and he will be doing  
24 our pue tonight.  
25 FATHER TOMOSO: Thank you, Berna.

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

3

1 (Whereupon, the opening prayer was given  
2 by Father Tomoso.)  
3 MODERATOR SENELLY: Thank you, Father.  
4 Okay. So here's the purpose of the  
5 meeting. As I said, my name is Berna Cabacungan  
6 Senelly, and there's basically three things we're  
7 doing.  
8 Okay. We're going to talk about the  
9 Environmental Impact Statement, about what it's for  
10 and how it's going to go, the process for it.  
11 We're going to talk about the Preparation  
12 Notice, which actually starts this whole process,  
13 and what that's for and then what's in it. So  
14 you're going to hear some of that tonight.  
15 And then you'll also hear -- the main  
16 thing we're here is we're asking for input on what  
17 should be in the draft EIS.  
18 So the Preparation Notice was published in  
19 the Office of Environmental Quality Control  
20 publication on February 8th. And what that does  
21 is when it's published, it starts the EIS process.  
22 Essentially what scoping is -- and you're  
23 going to hear me ask you sometimes when you talk,  
24 I'm really going to try and clarify.  
25 What scoping does is it tells what should

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

4

1 be in the Environment- -- what should be studied or  
2 addressed in the Draft Environmental Impact  
3 Statement.

4 The law actually requires it. Chapter 343  
5 of Title 11 requires scoping as a process where you  
6 go out and you ask the community what do you think  
7 should be in this document, should be addressed in  
8 the document.

9 However, the meetings themselves are  
10 optional. And in this one, we have two just to kind  
11 of optimize what people -- to give people  
12 opportunities to provide the input.

13 So once it was published, we have -- you  
14 have 30 days to provide comments, and that will end  
15 on March 10th. There's three ways.

16 All the comments that we get will be  
17 documented in the Draft EIS. So Darcy here is  
18 patiently transcribing; so that's why, you know,  
19 when you speak and when we speak, we're going to ask  
20 you to go one at a time and speak so that she can  
21 take all the notes.

22 And at one point, by the way, we're going  
23 to break for the -- I'm just saying this to  
24 remember.

25 At one point, we're going to break from

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

5

1 the agenda, probably about 6:15 or so, between 6:00  
2 and 6:15, for about five minutes so that she can  
3 rest her fingers.

4 So one is that you provide oral comments  
5 tonight. And as we've told you, you know, people,  
6 when you came in, we said if you want to speak, you  
7 sign another paper.

8 The other thing is we gave you -- when you  
9 came in, you had a -- you got a comment sheet. So  
10 you can turn this in tonight or you can mail it. If  
11 you look in the back, you can mail it or turn it in  
12 tonight. And the third way is you can e-mail it.  
13 You can e-mail us your comments, and the e-mail  
14 address is on the bottom.

15 The one thing we ask, and I will stress  
16 this, if you do e-mail it, you're supposed to  
17 receive something back in the e-mail that says we  
18 got it. So if you don't get it, you need to call  
19 us, and the number is at the top of this page.

20 So now I'm going to turn it over to Earl.  
21 He's going to spend about 15 minutes describing,  
22 doing the EIS and the EISP description, as I was  
23 talking about.

24 I will ask you to hold your comments while  
25 he's speaking, because once he's pau, we're going to

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

6

1 open it up to everyone. Okay?

2 MR. MATSUKAWA: Good afternoon. I'm Earl

3 Matsukawa with Wilson Okamoto Corporation, and we've

4 been contracted to prepare the Draft EIS or the EIS.

5 So first question is what is an EIS. And

6 the purpose of the EIS is to disclose impacts for a

7 subsequent decision, and that decision is the water

8 lease permit that is going to be made by the Board

9 of Land and Natural Resources.

10 It is an information document. The EIS is

11 not a permit, and it is not an approval to allow

12 something to go forward. It is always used in

13 conjunction with decisions to go forward with the

14 project so that there is good information on which

15 to base the decision.

16 And again, this is for the water lease

17 permit. And although we were hired to prepare the

18 Draft EIS by Alexander & Baldwin, the documents we

19 prepare are actually all submitted to the Department

20 of Land and Natural Resources; and the Department

21 has to accept those documents and has to file it

22 with the OEC for those publication requirements.

23 So they will actually process the EIS.

24 And in the end, the Board of Land and

25 Natural Resources must accept that final EIS before

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

7

1 they can take the deliberations for the water

2 permit.

3 The EIS content. So there's two things to

4 this. So when an EIS is finally accepted, there are

5 two things that have to be met. It is the content

6 and processing requirements, and those have to meet

7 State law. Berna mentioned chapter 343. And then

8 the administrative rules under Title 11.

9 So the EIS has to meet both content and

10 purpose. And I'll be talking a little bit about

11 both.

12 So this is the content part. And this is

13 what this meeting is about. It's to add scope, to

14 determine scope for the content of an EIS.

15 Listed here are some of the major topics

16 that are covered in an EIS. It is not all of it,

17 because there are other things that we need to put

18 in the EIS, but these are the major ones that relate

19 to impact, including the general description of the

20 proposed action's various technical components,

21 including social, cultural and environmental.

22 It has to state the purpose and need of

23 the proposed action, which is the issuance of the

24 water lease, and the objectives.

25 There's also a description of existing

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

8

1 environment impacts and mitigation measures.  
2 And not yet, but on the next slide, I'll  
3 show you all the topics that are covered under this  
4 section of the existing environment.  
5 There needs to be a discussion of the  
6 action's relationship to the plans, policies and  
7 controls, whether they are consistent and where they  
8 may not be.  
9 And in the case of EIS, it doesn't have to  
10 say everything meets those plans because there could  
11 be some discrepancies.  
12 The purpose of the EIS is to bring up all  
13 the information, positive, negative. So it doesn't  
14 matter. As long as it does, then it meets the  
15 requirements for content.  
16 It also talks about the alternatives that  
17 can achieve the objectives. Are there alternative  
18 ways we can achieve the objective.  
19 And then it documents the consultation  
20 process, including this meeting today, that we dem-  
21 -- we document that this input was received on the  
22 scoping.  
23 And then there's steps that I'll go  
24 through later.  
25 Next slide. And these are the resource

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

9

1 topics that are generally covered in an EIS. And  
2 we'll be going through all of these to see how they  
3 fit in with this particular proposed action.  
4 Next slide. Okay. The EIS preparation  
5 that was published on February 8th is the first  
6 thing that's published, and that was actually filed  
7 by the Department of Land and Natural Resources, and  
8 it basically gives notice that -- to interested  
9 parties that an EIS will be prepared for the  
10 proposed action.  
11 And again, I keep repeating this, it's the  
12 issuance of the water lease.  
13 The Preparation Notice begins this scoping  
14 process that we are in the midst of right here, to  
15 receive comments on scoping the Draft EIS, which is  
16 the next document that's prepared.  
17 It also includes a general discussion of  
18 impacts, but much less than what would be in the  
19 Draft EIS.  
20 It also discusses some of the technical  
21 studies that will be done for the Draft EIS, and  
22 we're still working on trying to figure all that out  
23 and how we approach the technical studies. So that  
24 is also what we are receiving is input on.  
25 Okay. This is the process. So we went

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

10

1 over content. This is the process.  
2 So early consultation, the process began  
3 with early consultation. And this actually is not  
4 required for the type of EIS Preparation Notice  
5 we've prepared, but it is basically to give the  
6 opportunity for potentially interested parties to  
7 learn that we are starting the process and to allow  
8 anybody to give early comments.  
9 Then we prepared the EIS Preparation  
10 Notice, which was published on February 8th, and  
11 we are receiving comments on until March 10th.  
12 When we get all of that information, then  
13 we have to figure out, with all that scoping  
14 information, how we approach what will be included  
15 in terms of what will be covered by the EIS. And  
16 again, we are looking back at the law, what is  
17 required to be in the EIS.  
18 So we will start that process and then --  
19 but before we can actually finish the Draft EIS, we  
20 need a separate decision to be made, because the  
21 Commission on Water Resources Management will need  
22 to make a decision on the interim instream flow  
23 standard. That will determine how much water can be  
24 diverted through the East Maui irrigation system,  
25 aqueduct system, that can be diverted out of the

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

11

1 streams.  
2 So we need to know how much that water is  
3 before we can figure out how much water might be  
4 available through the permits. So that decision has  
5 to be made.  
6 And then based on that decision, technical  
7 studies have to be prepared using that information  
8 so that we can prepare the Draft EIS.  
9 So once we complete that process and we  
10 finish the Draft EIS, we'll turn it into the  
11 Department of Land and Natural Resources. They will  
12 review that document. If they feel that the  
13 document meets the standards for the contents, then  
14 they will file it with the Offices of Environmental  
15 Quality Control; it will be published in the  
16 Environmental Notice, and that starts the 45-day  
17 comment period where we will be soliciting comments  
18 on the Draft EIS.  
19 And then for those comments, too, we will  
20 do a written response to each of the comments and  
21 each of the points raised by comment letters. And  
22 that, we will all document, and we will revise the  
23 final EIS accordingly, and then submit that to the  
24 Department of Land and Natural Resources for  
25 acceptance.

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

12

1 And when we file that, they will then  
2 publish that document. Before it is accepted, they  
3 will publish that final EIS, and that will be  
4 available for public review.  
5 And after that, the Board of Land and  
6 Natural Resources can then accept the document. And  
7 once they accept the document, then it is to be used  
8 for the basis for issuing the water lease.  
9 Make sure I've covered everything here.  
10 Okay. Now I'll just kind of go over the  
11 --summarize what was in the -- what is in the Draft  
12 EIS.  
13 First of all, there is a proposed action.  
14 The proposed action is the issuance of the water  
15 lease. The maximum amount that will be available  
16 through the water lease will be determined by the  
17 interim instream flow standard, the IIFS. The  
18 maximum that they can award through the permit will  
19 be determined by the decision made by the Commission  
20 on Water Resources Management.  
21 The proposed action also allows access  
22 through the State land in order to maintain the  
23 aqueduct system and to service roads and other  
24 pertinent things that relate to maintaining the  
25 aqueduct system.

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

13

1 Now there's two key points regarding the  
2 proposed action. First of all, although the maximum  
3 amount that can be awarded through the lease is  
4 determined by the IIFS, the Board does have the --  
5 you know, that's part of the deliberation. They can  
6 change the terms of that permit.  
7 So if the board feels they want to award  
8 less, that's a separate decision. So that's a  
9 possibility also.  
10 And once the permit is determined, the  
11 actual issuance will be done through public auction.  
12 So, you know, technically, I guess whoever bids on  
13 that and wins that bid will get the permit. So it  
14 will not necessarily be Alexander & Baldwin. It's  
15 just a point to be cleared. It'll be auctioned,  
16 offered by public auction, awarded by public  
17 auction.  
18 Okay. So this is the -- these are the  
19 license areas. There are four license areas:  
20 Huelo, Honomanu, Keanae and Nahiku. So for  
21 33,000 acres of State land that's covered by the  
22 license area.  
23 And this is another map that shows the  
24 license area, the four license areas. This one also  
25 shows the ditches that are part of the aqueduct

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

14

1 system. There are several ditches and several  
2 elevations capturing water from the streams.  
3 And then these green areas are EMI lands,  
4 which the -- and so the aqueduct system passes  
5 through the EMI land as well as the State land. So  
6 the permit would be for the portions in the State  
7 land.  
8 Okay. What is the water currently used  
9 for?  
10 So these are the four areas that use the  
11 water. One is the Maui Department of Water Supply.  
12 DWS gets water, receives water from the aqueduct  
13 system at their Kamole treatment facility. And it  
14 is treated there so that it becomes potable water;  
15 and then they distribute it to upcountry Maui for  
16 both domestic and agricultural use.  
17 They also supply, similarly -- the  
18 Department of Water Supply takes water, treats it,  
19 and supplies water to the portion of the Nahiku  
20 community below Hana Highway.  
21 And then there's a direct draw that is  
22 nonpotable water, untreated water, that is delivered  
23 to the Kula Agricultural Park.  
24 And then the rest of it would go to the  
25 approximately 30,000 acres of former sugar land that

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

15

1 was in sugar cultivation.  
2 So this is just a map of these user areas.  
3 This dark line shows the distribution of the water  
4 by DWS. Nahiku is over here and would receive  
5 water. And then this is the Kula Agricultural Park.  
6 And then this is the roughly 30,000 acres of former  
7 sugar land.  
8 Again the maximum amount of water that can  
9 be awarded through the lease would be determined by  
10 the IIFS, and it is issued by public auction. And  
11 it could be less than the amount that's determined  
12 by the IIFS.  
13 But there's a normal provision, and that's  
14 whatever amount of water that is finally issued  
15 through the water lease, there is a reservation for  
16 the Department of Hawaiian Homelands that they are  
17 entitled to, and they will get that reservation,  
18 although that actual amount hasn't been determined  
19 yet.  
20 Okay. So we developed these objectives of  
21 the proposed action, the objectives of issuing the  
22 lease, the lease for the purposes of the EIS. And  
23 there are four objectives.  
24 The first is to supply the water that the  
25 upcountry Maui relies on for domestic and

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

16

1 agricultural water. So continuance of that would be  
2 very important.  
3 Similarly for the Nahiku community, that  
4 we continue to serve Nahiku.  
5 And then to provide sufficient water to  
6 the approximately 30,000 acres of sugar land to  
7 develop diversified agricultural to perpetuate  
8 Maui's agricultural economy and lifestyle.  
9 Finally, an objective is to continue  
10 operating and preserve and maintain the EMI aqueduct  
11 system.  
12 Okay. This is a map of the license area  
13 streams. There are 39 or 40 streams, depending on  
14 how you count. Apparently one of the streams, the  
15 40th stream, is actually a waterfall within a  
16 stream.  
17 And out of these -- and most of these  
18 streams are regulated by the IIFS. And of these 39  
19 or 40 streams, Alexander & Baldwin has historically  
20 diverted 37 of those streams. And then in 2007, A &  
21 B abandoned diversions on one of the streams and is  
22 committed to removing all diversions from five more  
23 streams. And these are the so-called taro streams  
24 that in the lower reaches of the stream are used for  
25 taro cultivation and other agriculture.

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

17

1 Okay. Moving to the alternatives to be  
2 considered. So these are the main alternatives that  
3 we'll be considering for the Draft EIS. And these,  
4 in this initial phase, after scoping, this could  
5 change.  
6 But the first would be to assume that the  
7 permit, the water lease permit will allow the full  
8 use of the amount available through the IIFS  
9 decision.  
10 The second, second alternative is no  
11 action. So if there is nothing awarded through the  
12 water lease, meaning no state water will be awarded  
13 through the water lease, what will happen as a  
14 result of that.  
15 And then the third one, like I said, the  
16 Board of Land and Natural Resources can award less  
17 than the full IIFS amount. What would be the impact  
18 of that. So that's sort of the middle ground  
19 between 1 and 2.  
20 So that basically summarizes what the EIS  
21 Preparation Notice contains.  
22 And I'll turn it back to Berna.  
23 MODERATOR SENEALLY: Thanks, Earl.  
24 Okay. So now we're in the part where this  
25 is yours. Okay. And so we will basically -- as I

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

18

1 said earlier, the purpose of this meeting is to look  
2 at what should be covered in the -- or addressed in  
3 the Draft EIS.  
4 We are -- your oral comments -- you can --  
5 as I said, you can do paper comments, e-mail  
6 comments, but your oral comments also will be  
7 documented, and so just to keep that in mind as you  
8 speak.  
9 Before we go on to the actual comments,  
10 okay, this should be a safe haven for everybody. So  
11 everybody should feel comfortable to speak and to  
12 speak in a way that they know others will be hearing  
13 them.  
14 One person at a time, please. It's also  
15 very practical so that Darcy can, you know, catch  
16 all of the stuff.  
17 And please respect each other. You know,  
18 I know last night we had clapping, but I always tell  
19 people you can clap but don't boo, okay?  
20 And help us get every -- help us so that  
21 everybody can speak. So summarize as much as you  
22 can.  
23 If you want to turn in written to  
24 supplement, you can, but I'm just saying summarize  
25 to give time.

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

19

1 And also try not to repeat. Now people  
2 have different -- they look at the same things and  
3 they see it in different ways. That's cool, too.  
4 But try not to repeat, because the more people speak  
5 about different things, the more different things we  
6 have to look at.  
7 We have two hours scheduled for the  
8 meeting, okay? So that means -- I think we started  
9 like ten minutes late or something. So, you know,  
10 technically, we should go to 7:10.  
11 As I said earlier, we're going to take a  
12 short five-minute break at around 6:15.  
13 But we really would like everybody to stay  
14 as much as possible. I think last night most people  
15 stayed.  
16 And so if we need to extend, when it comes  
17 to like 7:05, 7:10, I will ask you if it's okay.  
18 And we're going to do that every ten minutes, up to  
19 30 minutes, okay? So we're going to really try and  
20 get as many people to speak.  
21 We're going to provide -- you're going to  
22 speak in the order you signed up. And we have the  
23 sign-in sheets. I mean, you know, that one special  
24 paper.  
25 And so I would ask that everybody who did

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

20

1 sign up, to let them speak first; and if you have  
2 stuff you want to add afterwards, if we have time,  
3 you can.  
4 We will bring you the microphones. So  
5 there's two people. Keola and Rebecca will bring  
6 the microphones to you.  
7 So you guys are going to divide up the  
8 room, yeah?  
9 Okay. And before you speak, please tell  
10 us your name. So two things before we start your  
11 comments.  
12 One: The bathrooms are out the door over  
13 there, you know, right over there.  
14 And two, I really want to thank you guys.  
15 I should have said it earlier. I realized -- as I'm  
16 sitting here, I realized this room came up -- the  
17 room was put together like "poof" because everybody  
18 helped. So thank you very much.  
19 Oh, okay. So this is a question. When  
20 you talk, after you -- you know, if I don't -- I'll  
21 always ask you, if it's not really clear, what  
22 should the EIS. So you're going to talk about  
23 something and you're going to have feelings and  
24 stuff, but the end part really is: So this means  
25 that the EIS should cover this.

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

21

1 I'm sorry, yes?  
2 UNIDENTIFIED SPEAKER: I have a general  
3 question about the presentation.  
4 MODERATOR SENNELLY: Yes.  
5 UNIDENTIFIED SPEAKER: My main question  
6 is -- as the presenter said, that after the EIS  
7 process is done, there will be a public auction  
8 process.  
9 So my main question is: If A & B might  
10 not win that public auction process, why is A & B  
11 the one that is in charge of commissioning you to do  
12 this EIS versus having DLNR, Department of Land and  
13 Natural Resources, to actually hire the consultant  
14 company to do this?  
15 MR. MATSUKAWA: Okay. Again, I did not  
16 read all of the court-ordered documents and how this  
17 was set up.  
18 But my understanding is that because they  
19 needed to get an EIS prepared, they asked A & B to  
20 commission the preparation of the EIS.  
21 Now, my understanding is that if somebody  
22 else wins the permit through the auction, they will  
23 need to reimburse A & B the amount of this EIS. I  
24 don't know exactly if it's a hundred percent. I'm  
25 not really familiar. But there is a reimbursement

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

22

1 that will go on if they do not win it.  
2 MODERATOR SENELLY: All right. First  
3 speaker, Dr. Pang.  
4 DR. PANG: Thank you.  
5 There's nothing special about speaking  
6 first. I was -- there was a glitch. I wasn't  
7 speaking last night. Not their fault, not my fault.  
8 So I'm really last from last night, I'm not first  
9 from tonight.  
10 MODERATOR SENELLY: It actually was my  
11 fault.  
12 DR. PANG: Okay. That's all right.  
13 The EIS, you know, I think they should  
14 address some real, how shall we say, radical things,  
15 things that we think are impossible, for a couple  
16 reasons that really are good and they're a little  
17 bit far out.  
18 But we shouldn't just look at what we do  
19 now and say, well, you know, these ten guys, let's  
20 give more to him, he'll be happier, he'll be mad,  
21 and throw a bone to the fighting dogs. You  
22 shouldn't look at your status quo and argue about  
23 the money and the water right now.  
24 And to put this in perspective, you know,  
25 I have to give you my background. I'm not from this

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

23

1 side. I'm not fighting for East water. I fought  
2 for the Na Wai 'Eha water.  
3 So this -- I have no conflict of interest  
4 in here. So sometimes people will say, well, then  
5 shut up, you're not a stakeholder. Sometimes the  
6 best people are those who have no conflict of  
7 interest and are interested enough to give a fair  
8 assessment.  
9 You don't think that's true? I have  
10 reports from Big Island people, Kauai people, who  
11 look at this and say, we have no stake in this game,  
12 so let us give an opinion.  
13 My background opinion is, already last  
14 night, they said "share the water," "share the  
15 water," "share the water." You want to know what  
16 share is? Really? To the Big Island people, the  
17 Kauai people and the Na Wai 'Eha impacted people,  
18 they said here's what share is, somebody took our  
19 water for 120 years, they took 95 percent at some  
20 cheap cost. So that's your time. Now it's time to  
21 share. The East Maui guys get it for 120 years, and  
22 then when it's 120 versus 120, let's --  
23 (Audience clapping.)  
24 DR. PANG: Stop that clapping, because  
25 people who don't get clapped for feel bad.

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

24

1 So now when it's 120 versus 120, then we  
2 talk about sharing.  
3 But with that in the background, let me  
4 give something kind of practical, some far-out  
5 things which you think are impossible because we  
6 haven't done them for so long, it must be  
7 impossible.  
8 First of all, can we feed ourselves? And  
9 I don't mean ag, ag, ag. I mean food, food, food.  
10 Now if you want to say Maui, Maui. If you  
11 want to say can we kind of feed Oahu, ship some  
12 stuff over there, fine. But Hawaii has to be food  
13 self-sufficient. Okay? That means chemical --  
14 (Incomprehensible due to clapping.)  
15 DR. PANG: The minute we say, oh, look, I  
16 made so much, I shipped it out, and I'm on the world  
17 market; and then the world market gets undercut,  
18 then all the macadamia nuts get buried, et cetera,  
19 et cetera. So feed ourselves first.  
20 Now I know you're going to go through the  
21 details, and, oh, that's so expensive. Well, food  
22 security, security costs a little more money.  
23 Okay. So that's what I wanted to address.  
24 Next thing -- there's only three things.  
25 Next thing I want to say is when we feed

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

25

1 ourselves, can we do it based on smaller farmers,  
2 startup, diversified, no spray.  
3 And if you say, well, gee, I just saw the  
4 report where that's just unfeasible, well, I'm  
5 sorry, I've prepared a report, I'll give it to you.  
6 2011, I visited the Big Island guys called  
7 Wild Tomatoes. That was just a practice to show  
8 that homestead land guys had a terrific operation.  
9 It was published in the on-flight magazine. And  
10 that was just a test to show they could do tomatoes.  
11 They're going to convert to taro,  
12 high-fiber carbs. The guy's wife is off insulin  
13 because she helps a little bit in the garden. They  
14 can do it. The financial is sound. They're hiring  
15 their own family to distribute on Oahu. It can be  
16 done. The technical part is in the report, four  
17 pages.  
18 So look at that. Don't just say, well,  
19 we're going to feed ourselves and the big corporate  
20 guys say we can't do it, so we can't do it. There  
21 are alternatives. We used to. We used to do this.  
22 And the final thing is -- I really have to  
23 say this. And here's something, you say, well,  
24 that's impossible, we never did that before, here's  
25 one we never did before. But outside of Hawaii,

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

26

1 water, fresh water, potable water, water for ag, is  
2 like gold, it's like liquid gold.  
3 And people look at Hawaii, and they say,  
4 oh, look, every time it rains here, the muddy water  
5 chokes the reef, the muddy water chokes the reef.  
6 Why don't you guys catch it. So the  
7 Na Wai 'Eha -- that's the other side, right. The Na  
8 Wai 'Eha report said you catch the 17 rainiest day  
9 of Wai 'Eha -- I'm not talking about just the water  
10 on the east side -- you put it in a big -- I call it  
11 the dam, and my wife said call it the reservoirs.  
12 You put it in three big reservoirs. You don't let  
13 the water dirty the reef.  
14 I checked this with the Sierra Club.  
15 Maybe we should go natural. The water is so muddy  
16 and dirty, it's hurting the reef. Hold it, and  
17 that's more than enough water for everything you can  
18 imagine for the near future.  
19 But you have the 800-pound gorilla. You  
20 got that much water? There's no fighting? I'm  
21 going to move in. I cannot solve the 800-pound  
22 gorilla, but this has some beautiful concepts to it.  
23 Locate the reservoirs where you want, near  
24 the ocean, so when they break, like, you know, the  
25 California dams, you don't flood out people. Put it

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

27

1 low, pump up the water with solar energy. No  
2 battery. Just pump it. When the sun shines, you  
3 pump it up. And you control the damage to our reef.  
4 And what happens to this? How we talking  
5 about the east side water? Technically, now it  
6 comes into play. Now to share your chance to get  
7 it, I feel bad about diverting clear water. Clear  
8 water should flow in the streams when it's driest  
9 and needed.  
10 But if your side here generates dirty  
11 water -- say Haiku is developing, every time they  
12 flood, wow, look at that, look at what we did to the  
13 reef in Haiku.  
14 Divert that. Maintain enough EMI system  
15 so that all the dirty waters about to choke the  
16 reefs, whatever, goes into these holding reservoirs,  
17 settle it, pump the water high to the Kula when you  
18 need it.  
19 Now all this stuff is like, yeah, great  
20 pie in the sky. But, you know, that's how things  
21 get started.  
22 I'm not asking for tomorrow, where the  
23 Kula guys say, well, no water. Give them the status  
24 quo. But I want to see some progress moving to some  
25 things that are worthwhile.

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

28

1 For 35 years, all we do is fighting and,  
2 oh, that's your stream, that's your stream, and we  
3 never move at all.  
4 I can guarantee you to fund the  
5 reservoirs, I think there's \$350 million per  
6 billion-gallon reservoir. You can float a bond. If  
7 you can float a bond for the Super Whale that's  
8 never going to be self-supporting, you can surely  
9 float a bond out of state, because fresh water  
10 that's potable, that's usable for ag, is like gold.  
11 But I only like this if your EIS says  
12 long-range plan. I want to see every three years,  
13 we're moving forward, moving forward a little bit  
14 more towards the idea that we choose. Otherwise,  
15 it's so frustrating. And I'm a patient guy, but I  
16 like to see a little progress, sincere progress.  
17 Thank you.  
18 MODERATOR SENEALLY: Thank you, Dr. Pang.  
19 Edward Wendt.  
20 Oh, can you go, Keola?  
21 Mr. Wendt. Thank you.  
22 MR. WENDT: Aloha.  
23 MODERATOR SENEALLY: Aloha.  
24 MR. WENDT: My name is Ed Wendt. I am  
25 president of Na Moku.

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

29

1 Our community has been involved with this  
2 water contested case for many years.  
3 In these years, DLNR and (inaudible) have  
4 never displayed their leadership in enforcing the  
5 laws, protecting our native rights and the public  
6 trust doctrine, which are our constitutional rights.  
7 Who will enforce these laws? Each stream  
8 and river that is diverted has a major impact on our  
9 environment and our constitutional rights, when we  
10 have never had accurate measurements of the volume  
11 of water that is being transferred out of the  
12 watershed.  
13 We need gauges in the ditch systems and  
14 regular intervals to determine how much water is  
15 actually being diverted.  
16 We are also concerned about invasive  
17 species, such as Miconia, Gardenia, and African  
18 tulips, which are overtaking the watershed and  
19 claiming our native plants.  
20 From Maliko to Honopou, which are outside  
21 the permitting areas, streams and rivers are  
22 diverted by East Maui Irrigation for free. The  
23 State has allowed them to take this water also.  
24 This should be accounted for. It is in the public  
25 trusts interests.

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

30

1 Well water. A & B has 15 wells on its  
2 property. The amount of water available to A & B  
3 from these wells needs to be accountable.  
4 Gray water. We need to know if gray water  
5 from the treatment plant can be used for Alexander &  
6 Baldwin irrigation needs.  
7 USGS studies were done on the streams and  
8 rivers, it took three years to do this, specifically  
9 for East Maui watershed. Their recommendations  
10 should be considered. Water needs to flow  
11 uninterrupted into the ocean. It is critical for  
12 our health, a healthy environment.  
13 Based on USGS studies, we have noticed  
14 since the recent release of water that our native  
15 species, such as the Koloe bird, Hawaiian stilt and  
16 species of the dragonfly, found only in East Maui  
17 and Halawa Valley, are returning.  
18 OHA should have a say in the wording of  
19 the 30-year lease. Honomanu, Keanae, Nahiku are on  
20 so-called ceded lands. We'd also like to know how  
21 much water Hawaiian Homes is entitled to.  
22 My last comment, for the people of  
23 upcountry, Kula Farms and Alexander & Baldwin, you  
24 have enjoyed the privilege of receiving water from  
25 these four areas. As Father Tomoso stated, water is

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

31

002106

1 for life and water is for everybody. And we agree.  
2 While you all were enjoying this  
3 privilege, we in the four areas went dry. Dewatered  
4 completely. This does not match (Hawaiian). This  
5 is called sacrifice and culture genocide.  
6 Mahalo.  
7 MODERATOR SENELLY: Next speaker,  
8 Mahealani Wendt.  
9 MS. WENDT: Mahalo.  
10 Before I give my testimony, I'd like to  
11 ask if the facilitator would consider allowing our  
12 East Maui chana to go earlier on the agenda because  
13 the drive home is very far. It's like two hours.  
14 Just something to think about.  
15 I was also going to ask if there was any  
16 possibility of convening a third consultation in  
17 Hana. Many of our people want to come, want to  
18 participate, but are unable to. It's really a  
19 hardship for them, especially with big families.  
20 So you don't have to answer now. Just  
21 something to consider.  
22 MODERATOR SENELLY: Regarding -- how's  
23 about this, we were going to take a break between  
24 6:00 and 6:15.  
25 So why don't we take -- if it's okay, take

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

32

1 the speakers up until then. And then after the  
2 break, whoever is -- whoever from East Maui who  
3 wants -- if that's okay with everybody. Yeah?  
4 Okay.  
5 So during the break, you come and tell me,  
6 and we'll make sure that we put you on. So I'll  
7 make the break sooner than later.  
8 MS. WENDT: Thank you.  
9 My name is Mahealani Wendt. I'm a board  
10 member, I'm also a board member of Na Moku Aupuni 'O  
11 Ko'olau Hui.  
12 As a founder and executive director of the  
13 Native Hawaiian Legal Corporation for 32 years, I  
14 filed the petitions to set interim instream flow  
15 standards for all the streams within Koolau on  
16 behalf of Na Moku. This was in 2001.  
17 In a free and Democratic society, we  
18 should all have a reasonable expectation that the  
19 rule of law will apply and result in a fair and --  
20 fair outcome, a fair and just outcome for all  
21 disputants. This is how we have been taught things  
22 operate in a free and Democratic society.  
23 A & B's last long-term lease expired in  
24 1986. From 1986 until 2016, when the legislation  
25 passed, when the legislation passed the so-called

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

33

1 permit, A & B operated outside the law for 31 years.  
2 From 1986 until 2016, it had no valid permit.  
3 And you know, it's, you know, kind of an  
4 outrage. But more than that, I think when things  
5 like that happen, as people, as citizens, we lose  
6 respect for the law. They lose heart. They feel  
7 like they cannot trust.  
8 So, you know, as yourself, as consultants  
9 and other decision-makers go through this process,  
10 please consider this. Because, you know, honestly,  
11 I feel like we're being herded into another process  
12 with a predetermined outcome. A lot of us feel that  
13 way.  
14 You know, you tell us that, you know, it's  
15 going to open bid and all of that, but there is  
16 every appearance, especially given the history,  
17 that, you know, A & B is going to get the lease and  
18 that the politicians and the people at DLNR Board  
19 are inclined to push it through, the same way they  
20 did at the legislature.  
21 So this is kind of like editorializing a  
22 little bit, but I think these are things that we're  
23 all feeling.  
24 Nevertheless, operating outside the law, A  
25 & B siphoned every drop of water from the East Maui

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

34

1 watershed, while A & B, HC&S, upcountry and other  
2 county users enjoyed water, our families went  
3 without.  
4 You have no idea. We never did not want  
5 to share. We always wanted to share. Nobody shared  
6 with us. And it was really, really, really, really  
7 hurtful, because the origin was right there. We  
8 could look at the water, we could look up mauka and  
9 see the water, but we couldn't use it. It wasn't  
10 for us.  
11 And so, you know, it was really, really  
12 hurtful. And we went through these processes, and  
13 we would hear, you know, the other people who have  
14 access to this water accuse us of being selfish and  
15 not wanting to share. That was not the case. We  
16 didn't have anything.  
17 So, you know, so this was the situation  
18 and, you know, we were for so many generations, the  
19 taro from -- you know, generationally, traditional  
20 taro farming went out. There was no water to farm  
21 taro. The fishing grounds were depleted.  
22 The doctor probably knows, Dr. Lorrin Pang  
23 probably knows that in our area, the empty  
24 streambeds were nesting places for mosquitoes. It  
25 was a very unhealthy situation that we lived with

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

35

1 every day.  
2 Several speakers from East Maui did know  
3 that the EMI ratcheting up is a diversion. So that  
4 you took everything in 1990, just happened to  
5 coincide with a water conference that was held at  
6 Keanae around the same time.  
7 And it seemed like on EMI's part, it was  
8 maybe perhaps a preemptive move or something to send  
9 a signal to the people over there don't try  
10 anything.  
11 You know, the water conference was  
12 attended by a lot of attorneys from both sides. The  
13 attorneys who were sympathetic to the East Maui  
14 farmers were saying you have rights, you really do  
15 have rights. They don't have a right to come in  
16 here and take everything. And these are what your  
17 rights are.  
18 And I think it came to a shock and  
19 surprise to some of the EMI operatives on the ground  
20 who were accustomed to behaving in the old way, you  
21 know, where, you know, like an Imperial, somebody  
22 from outside that comes in and tells you: This is  
23 how it's going to come down, and you have nothing to  
24 say about it.  
25 This is how they treated the people, very

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

36

1       disrespectful, very condescending.

2       So the EMI process should actually have

3       started a long time ago.

4       A lawsuit was filed. And in 2005, EMI and

5       A & B were ordered to do an EIS, and they did not.

6       They fiddle-farted around, you know.

7       And actually, in the interim 30 years

8       since they -- since the other long-term lease

9       expired, they have what amount to a de-facto

10      long-term lease, because it's been 30 years, and

11      they have had continuing access to the water.

12      That's exactly what happened.

13      So there is this -- I mean, I know you're

14      only interested in knowing what's supposed to go

15      into the EIS, but this is a really important

16      historical framework for people to understand.

17      So I actually do have some comments on the

18      Environmental Impact Statement, but I just have

19      another point about that, that all of this would not

20      have been possible but for the collusion of DLNR.

21      The DLNR attorneys with the A & B

22      attorneys were working together and came up with

23      these wonderful legal strategies to issue these

24      so-called temporary interim leases, I mean temporary

25      permits, which did not exist, which were false, and

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

37

1       which were finally declared to be illegal.

2       So given that framework, it's really hard

3       to trust that this process is going to go, you know,

4       in any other way but in A & B's direction.

5       But here are some comments for the EIS.

6       The degraded watershed, which has resulted

7       from decades of A & B's unlawful occupation, should

8       not be the standard. You know, that point was made

9       last night, that they have, you know, all of these

10      many, many, many decades to go out there and wreck

11      the watershed.

12      And that is not the starting point or, you

13      know, the standard toward which we should aspire in

14      terms of the EIS.

15      Never again must aina be transformed into

16      killed areas, disturbed so severely that the people

17      are deprived of their constitutional rights and

18      human rights to live the subsistence traditions of

19      their kupuna, including growing taro, fishing and

20      gathering from the streams and shoreline areas

21      nourished by fresh water. These also include rights

22      of access to these areas.

23      We have had to humble ourselves and beg

24      and go through a monthly permitting process just to

25      be able to go up mauka and clean the streams so that

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

38

1 the water can flow.

2 Streams must flow continuously and

3 uninterrupted from the mountain to the ocean shores

4 so that aquatic animals can live.

5 Gauges to collect accurate water, transfer

6 and collect, collection data are critical.

7 Regulatory oversight and enforcement are

8 also critical.

9 Without enforcement, EMI has run roughshod

10 over the people, you know.

11 The public can say whatever they want, but

12 EMI really does whatever they want. You know, they

13 think whatever they want, we go up there, we say,

14 hey, you know, we're supposed to be getting water,

15 but you've completely closed, you know, closed your

16 gate and nothing is coming to us.

17 And they say, oh, well, you know, take it

18 up with our attorney. And then their attorney calls

19 our attorney, and their attorney says, oh, well, my

20 client is in full compliance.

21 And that's the kind of BS our people have

22 been going through for decades.

23 I have one last point. DLNR should

24 seriously consider alternatives to awarding A & B a

25 30-year lease. I'm totally opposed to A & B

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

39

1 receiving the 30-year lease.

2 MODERATOR SENELLY: Thank you very much.

3 Michelle Waikiki? Michelle Waikiki.

4 We have a lot of people speaking tonight

5 that signed up, and so we're going to try to change

6 the order a little bit. So as I asked earlier, if

7 you can summarize as much as you can. Thank you.

8 MS. WAIKIKI: My name is Michelle Waikiki.

9 And this is a message from my husband to the EIMS --

10 or EIS tonight.

11 The Department of Water Supply, County of

12 Maui, released their statements of cash flow audits

13 done by M & K CPAs. In their audit, cash received

14 from the public trust and others, from 2013 to 2017,

15 equal \$200 million.

16 Payments to suppliers, A & B, HC&S, EMI

17 and Wailuku Water Company from 2013 to 2017

18 surpassed \$100 million. All suppliers are ditch

19 operators. They are all selling state-owned water

20 to the County and charging the public trust at a

21 33 percent or more increase.

22 The public trust pays water bills to the

23 County, who then pays A & B, EMI, HC&S and Wailuku

24 Water Company to transport the water to the County

25 grid.

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

40

1           The public trust doctrine simply has no  
2 representation. This is theft and fraud and other  
3 crimes because these operators are in violation of  
4 expired water licenses, expired leases, EIS audit  
5 violations, violation of HRS 167, failure to public  
6 auction, year to year revocable permits, violation  
7 of HRS 271G, Hawaii Water Carriers Act, violation of  
8 HRS 271G-10, violation of 271.12, under the PUC,  
9 PUCC, PCN. And the County of Maui is an accessory  
10 to these violations.  
11           Only a federally regulated public water  
12 utility company, publicly traded stock corporation,  
13 bonded and insured, providing water, can meet all of  
14 these requirements and lawful demands by  
15 representing and enforcing the public trust  
16 doctrine.  
17           Maui Electric Company is a public utility  
18 company, providing electricity to the public trust.  
19           In final, all of you, meaning the board,  
20 should be arrested for fraud, plundering and  
21 pillaging.  
22           And then I would like to also say for  
23 myself, like, I would like to propose that the  
24 Hawaiians get together and we figure out how we can  
25 figure you guys out through blood quantum.

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

41

1           I know my husband is 100 percent Hawaiian.  
2 They threw him in prison for 20 years over this  
3 water, over \$141,000. So I hope -- before he went  
4 to prison, he put videos out, which are on my  
5 Facebook page.  
6           The 1863 water course agreement, with my  
7 husband's two grandfathers' names on it, he created  
8 an EIN for Maui water utility company. So we need  
9 is the public to come together, and we use this Maui  
10 water utility company to put the water in the  
11 public's hands, not HC&S, EMI.  
12           And then we also have a document that is a  
13 Supreme Court order right here for -- from 1914 to  
14 present, the American government owes the Kingdom of  
15 Hawaii, it's 74 billion on this paper, but it's  
16 about 125 billion now.  
17           And in court, Judge Nishimura ruled that A  
18 & B water permits are invalid.  
19           I have 11 file boxes full of information.  
20 I've proved my husband innocent beyond a reasonable  
21 doubt and this state guilty of fraud. And I want my  
22 husband out of prison. He don't belong in prison.  
23           Thank you.  
24           MODERATOR SENELLY: Okay. Here's what  
25 we're going to do.

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

42

1 Wait. We're going to take a break. Can  
2 we, please? I want to take a break.  
3 The folks -- Mahealani suggested that the  
4 people who are like -- live far away, a couple hours  
5 away, if you have signed up to speak, will you come  
6 and see me, and I will change the order around. And  
7 I'd like to do this.  
8 So we have a five-minute break. Thank  
9 you.  
10 (A brief recess was taken.)  
11 MODERATOR SENELLY: We're going to have  
12 the East Maui people talk first. Okay. Just like  
13 we said, we're going to have Isaac talk before them  
14 because they said that it was okay.  
15 I'm going to do something real quick  
16 before we go. Everybody sit down, please.  
17 Come on, you guys. Come on.  
18 Okay. Here's what we're going to do. I'm  
19 going to go over the protocol again, because we  
20 really do want to let everybody stay here for a  
21 reasonable amount of time. And so we want to -- we  
22 really want to be pau about 7:30. We've got a lot  
23 of speakers.  
24 So again, safe haven; okay? So we all  
25 respect. You guys are doing really good at that.

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

43

1 One person at a time. You're doing good  
2 at that.  
3 You guys are clapping, but don't clap as  
4 loud. It's good. I like it, but, you know.  
5 Summarize, summarize, summarize, please,  
6 so that your fellow -- so the rest of the folks can  
7 talk, please. Try not to repeat.  
8 Okay. So that's it.  
9 Actually, hold on.  
10 MR. HALL: Isaac Hall.  
11 MODERATOR SENELLY: Wait. Actually, you  
12 know what happened, when he was here talking to me,  
13 the other Hana people, the East Maui people said  
14 it's okay. So they said it's okay.  
15 MR. HALL: I want to thank the East Maui  
16 people for letting me speak now.  
17 My name is Isaac Hall. I live in Haiku.  
18 I'm an attorney, and I've been working on this case  
19 for 40 years.  
20 The preliminary comments on the EISP have  
21 been submitted. I want to cover some points that  
22 may not be addressed by others.  
23 One, the proposed leases of public lands  
24 must be disposed of at a public auction. I know  
25 this point is being made. The assumption is being

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

44

1 made, unfortunately, that the ultimate lessee is  
2 going to be A & B.

3 Even though it's been stated by Wilson  
4 people that it's not, they're still talking about  
5 what we're going to examine in this is the  
6 30,000 acres and that we should address the impacts  
7 of those 30,000 acres.

8 That would render this EIS inadequate.  
9 You have to address other alternative lessees.

10 Let's, you know, think about who else might be  
11 interested in getting this land and address those  
12 impacts. Those are alternatives that have to be  
13 addressed in this EIS.

14 Two, when A & B applied for this lease  
15 many, many years ago, it was for a fully functioning  
16 sugar cane plantation. The plantation closed, the  
17 lands are mostly fallow. There's no need for --  
18 there's no current need for anything like 115  
19 million gallons a day.

20 The current application is stale and  
21 should be withdrawn and replaced by an up-to-date  
22 application.

23 Three, the lease is for all four license  
24 areas. This is an antiquated concept designed to  
25 provide all of the water to one prospective lessee,

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

45

A & B.

DLNR is required by law to lease lands in  
economic units, minimum-sized areas that could be  
served by the water. That's HRS 171-33.3 in the Big  
Island Small Ranchers case.

The alternative of separate leased license  
areas. Let's say for the Keanae-Wailua community,  
carving off an area that could be leased to them  
alone, for their purposes alone, is an alternative  
that has to be addressed.

The alternative of a separate leased  
license area for the Huelo area. Carve that off.  
Let them go in and bid for it.

And likewise, a separate leased license  
area for say the Haiku area. Let the Haiku  
community go in and bid for a lease.

These are smaller units that by the  
statute that applies to DLNR have to be discussed as  
alternatives. If they are not, this EIS is going to  
be inadequate again.

Again, as others have said, No. 4, these  
are 5(f) lands. They're part of the public lands  
trust and part of the seed lands trust. Native  
Hawaiians are the beneficiaries of these trusts.

Now there are three aspects of this. One

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

46

1 is that the first priority to this water belongs to  
2 the native Hawaiian homes. That means the current  
3 and future needs of Hawaiian, of people on Hawaiian  
4 home lands must be carved out first. That has never  
5 been done, it's never been studied, and that has to  
6 be done in this EIS or it again is going to be  
7 inadequate.  
8 Also, 30 percent of the revenues from the  
9 leases must go to Hawaiian homes to be spent for the  
10 benefit of native Hawaiians.  
11 20 percent of the revenues from the leases  
12 must go to OHA to be spent for the benefit of native  
13 Hawaiians.  
14 That's 50 percent of the revenues from  
15 these leases is owed to native Hawaiians.  
16 DLNR, BLNR has never paid -- well, they  
17 have paid attention to it, but they've paid tiny  
18 amounts in lease amount -- in leases, for the  
19 leases.  
20 BLNR has never appraised the value of the  
21 water that it has provided to EMI and HC&S.  
22 HRS 17133.5 requires that before any  
23 notice of an intended disposition is given, BLNR  
24 must determine an upset price for that lease based  
25 upon the fair market value of the resource being

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

47

1 leased.  
2 BLNR has never done that. It's leased  
3 everything from way below the fair market value.  
4 So in this EIS, as part of it, a study  
5 must be done, studies must be done, and one of those  
6 studies must be an appraisal of the fair market  
7 value of these lease lands. They cannot possibly  
8 satisfy their trust obligations to native Hawaiians  
9 unless they do this.  
10 This is a point that other people have  
11 touched on tangentially. This is 6. Any lease of  
12 water rights requires a watershed management plan.  
13 That's in their statute 17158-E and F. That's being  
14 done to prevent degradation of surface water,  
15 prevent degradation of ground water quality.  
16 So what has to happen here in an EIS is  
17 that the EIS must address the current conditions of  
18 the watershed and address steps that are required to  
19 restore the condition of the watershed to an  
20 adequate level. That's never been done.  
21 As everybody's said, they've essentially  
22 had the equivalent of a 30-year lease but they've  
23 never done a watershed management plan. And you've  
24 heard testimony about what the condition of the  
25 watershed is. That has to be addressed in the EIS

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

48

1 or it's inadequate.

2 Number 7, I was disappointed to see the

3 list of water users and that the people with

4 riparian and appurtenant rights were totally left

5 out. Those people downstream of these diversions

6 weren't even mentioned.

7 And I did notice that there was a lot of

8 misinformation that I hope will get corrected later

9 by those that know about the number of streams that

10 are diverted, the number of streams that are in the

11 petition area, the number of streams, that sort of

12 thing. The numbers I heard were wrong.

13 Finally, No. 8, the alternatives

14 considered were three. I've already mentioned four

15 or five more, but there way many more alternatives

16 need to be considered or else this will be

17 inadequate.

18 Thank you for the opportunity to speak.

19 And I'll submit more detailed comments by

20 March 10th.

21 MODERATOR SENELLY: Thank you.

22 Okay. Cheryl Kekahuna?

23 MS. KEKAHUNA: Aloha everyone.

24 MODERATOR SENELLY: Aloha.

25 MS. KEKAHUNA: Unfortunately, I was not

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

49

1 really prepared that we have to come to a meeting

2 and give points to the EIS process. I guess the

3 invitation is really not that clear. However, I

4 would like to share and hopefully you can take that

5 with you.

6 My name is Cheryl, also known as Pohe,

7 Kekahuna. I'm the safety director for the Nahiku

8 Community Association, as well as a resident of

9 Lower Nahiku.

10 I am here today to oppose a 30-year lease

11 proposed by A & B. I would like to start with a

12 couple questions.

13 Why after HC&S was officially done in

14 December 2016, the water wasn't restored to all the

15 rivers, being there's no sugar cane in production?

16 And where is the water that was irrigated for the

17 sugar cane?

18 Now, it seems almost coincidental that the

19 same month HC&S was done, A & B sold 300-plus acres

20 in Paia.

21 The message I got from that was, here we

22 go, progress. And it was clear to me that A & B

23 can't be trusted. They have their own agenda.

24 In A & B's Environmental Impact Statement,

25 your EIS for February, you need like a lawyer or a

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

50

1 dictionary to kind of understand this.

2 However, there was something that caught

3 my attention. Under the proposed action, there's a

4 statement that:

5 "Aqueduct system continues to

6 serve a critical role in providing

7 upcountry Maui and Nahiku community

8 with water, and should the delivery of

9 water from EMI aqueduct system be

10 curtailed, upcountry Maui and the

11 Nahiku community would be left without

12 a reliable source of water."

13 Now, I had to Google the definition of

14 "curtail." It states:

15 "To reduce in extent or quantity,

16 impose a restriction on, or deprive

17 someone of something."

18 Makapipi, Hanawi, Haipuaena automatically

19 runs through our island blood. I ask: Are you God?

20 Who gave you the right to deprive us of our right to

21 live?

22 Back in the day when our great

23 grandparents, uncles, grand uncles, grandparents

24 used to work for EMI, the streams and rivers were

25 properly managed. The rivers never ran dry and all

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

51

1 -- and was well maintained. Is that the case now?

2 We, as kanaka'ole, have to fight for our

3 water. Our kava farmers in Keanae for over a decade

4 have been fighting for the rivers to be restored to

5 their (Hawaiian). And here comes A & B with their

6 proposals and greed for more water.

7 State and county representatives, are you

8 going to allow A & B to deprive and be unjust to the

9 people and county you represent?

10 And lastly, I would just like to end my

11 testimony by simply saying: Remember our rivers are

12 sacred. There's (Hawaiian) in these rivers. Don't

13 let the hewa follow you.

14 MODERATOR SENELLY: Thank you, Cheryl.

15 Mapu Kekahuna.

16 MR. KEKAHUNA: Mahalo to all our kupuna

17 for being here. Thank you for being here.

18 Today I'm very disappointed as -- I'm

19 going to (inaudible) the vice chair tonight of the

20 community association.

21 And I'm insulted that A & B, your

22 organization, to bypass Hana and involve East Maui,

23 all of East Maui, from Kaupo, Kipahulu, Hana,

24 Nahiku, and everybody else. This is big

25 geographics, yeah. And not have them participate in

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

52

1 this EIS, whatever you want to call this. Okay?

2 It's not pono.

3 You know, people, our people here in Maui  
4 are seeing the desecration. We see it every day.

5 Gradually we have to keep our Maui, all of us in  
6 this room. People, wake up. Because Maui will be  
7 gone. It will protect this island.

8 Seven generations, my family -- I'm a  
9 seventh-generation from Nahiku.

10 You know, like you guys said, that EIS,  
11 you guys, I was reading through it, that you could  
12 probably compromise our domestic drinking water if A  
13 & B don't get this 30-year lease. That's what I was  
14 reading. Is that a threat?

15 You know, for me, as a kanaka, I feel  
16 like, wow, if A & B don't get what they want, we  
17 don't get drinking water, my kupuna have to go to  
18 the river and haul water from the river, as they did  
19 when they were growing up? Is that what the answer  
20 is?

21 I think the County of Maui has a fiduciary  
22 responsibility. We have three County water tanks in  
23 Makapipi.

24 Like the lawyer said before, carve it out,  
25 take Hanawi, Kapaula, Makapipi, carve it out, take

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

53

1 out that diversion, let the County of Maui take care  
2 of their aqueduct that feeds the county to provide  
3 us domestic water, which is our right too, yeah.

4 And then take us out of your palapala.  
5 Take the word "Nahiku" out. Take it out, take it  
6 out. We don't want it.

7 You know, our people of Maui can see this,  
8 right, plain as day. I drive to Paia every day,  
9 Monday through Friday, going back to Nahiku. The  
10 traffic is nasty. Selling land quietly, use the  
11 term "quietly," they sell it to a businessman in  
12 California to supplement that development.

13 People, we're not stupid. We're not  
14 stupid. The sooner A & B realizes all the illegal  
15 actions -- and I thank the kupuna people that  
16 started this battle. It shouldn't be a battle. Not  
17 for the kanaka, not for the people of Maui, born and  
18 raised, bred, to have to sit in a meeting when we  
19 have to work, work, to come listen to this nonsense.

20 It's expensive to live here in Maui, in  
21 our homeland, our only home. Expensive to live  
22 here, but we have to take that -- our passion for  
23 our island is important to all of us.

24 Even for you malehinis that moved here to  
25 Maui, you guys can see the desecration going on.

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

54

1 Keep Maui Maui. Oahu is already messed  
2 up. Leave Maui alone.  
3 Take Nahiku out of that equation. That's  
4 my recommendation. Cut it out, like the attorney  
5 said, cut it out. Take the diversion, feed on the  
6 other county tanks, that's it, and let our rivers,  
7 rivers flow.  
8 Mahalo.  
9 MODERATOR SENEALLY: Mahalo. Thank you.  
10 Kumu Tamalu Taho'otele.  
11 MS. TAHO'OTELE: I don't feel comfortable  
12 speaking to all of you from the back, so I'm going  
13 to walk up front, if you don't mind, so you all  
14 don't have to twist.  
15 Okay. Anyway, aloha once more. Before I  
16 say what I need to say, mahalo, I would like to do a  
17 little ole for all of us. And I think we need it.  
18 Let us remember this.  
19 (Hawaiian chanting).  
20 Mahalo. I would like to start by reading  
21 something that disturbed me very much. This is a  
22 proposed action from A & B. The proposed action  
23 constitutes the issuance of one long term of 30  
24 years, water lease from the DL, BLNR for the  
25 continued right -- now follow me, my people -- the

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

55

1 continued right, privilege and authority to enter  
2 and go upon the Nahiku, Keanae, Honomanu and Huelo  
3 licensed areas for the purpose, for the purpose of  
4 developing, diverting, transporting, and using  
5 government-owned waters. The water is owned by God.  
6 Excuse me.  
7 Through the existing EMI is Maui  
8 irrigation aqueduct system, which supplies water to  
9 domestic and agriculture water users. I just  
10 thought I'd share that.  
11 And by the way, (Hawaiian name), founder  
12 and president for the past 11-plus years for the  
13 Lower Nahiku Community Association, why was this  
14 information not sent, e-mailed, mailed, to the  
15 Nahiku Community Association or the residents of  
16 Lower Nahiku, informing them on the proposed  
17 application, EISPEN, for A & B's 30-year water lease.  
18 Mahalo to Dick Mayer, Alliance of  
19 Community Associations, for sending this information  
20 to us or we would not have known of this matter  
21 earlier on.  
22 Why was the Hana District not included in  
23 these public meetings involving East Maui streams?  
24 Speaking on behalf of my ahupuaa of Lower  
25 Nahiku, and for our streams and diversions from

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

56

1 (Hawaiian), remember what I just said. The true  
2 name of Makapipi is (Hawaiian), better known today  
3 to everyone as Makapipi River.  
4 Kopiliula and Hanawi, of which currently  
5 flows from the Koolau, down through our (Hawaiian).  
6 You don't hear that no more, because today they call  
7 it the landing, the Lower Nahiku landing. This is  
8 where these streams (Hawaiian.)  
9 There should be no more diversions,  
10 people. All waters should be returned to each and  
11 every ahupuaa, for it is their streams; it is their  
12 livelihood; it is their battle of survival; it is  
13 their (Hawaiian) of healing.  
14 Requesting a 30-year long-term lease would  
15 be very damaging to our community. We all know that  
16 since the closing of the sugar cane plantation, no  
17 firm decisions have been released or open for public  
18 review on their so-called diversified ag.  
19 There was talk about in the absence of  
20 sugar. Just talk? Instead they are selling sugar  
21 cane land to developers from anywhere. For what, I  
22 ask.  
23 As I review the EIS information -- here,  
24 hold this; you need a podium, honey -- provided by  
25 the County of Maui Water Supply could become

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

57

1 promised and that the 30-year lease will enable A &  
2 B to continue to maintain the aqueduct systems that  
3 is currently maintained by EMI.  
4 The County should maintain it to provide  
5 domestic water to Nahiku and not have a third party  
6 dictate the control of this water source for our  
7 community of Nahiku.  
8 Remove all metal gates -- which I know  
9 what they look like, I've been up there, walked the  
10 road -- and have all streams returning to its full  
11 capacity.  
12 Also cap, close, remove all diversion  
13 systems that moves water from Makapipi to Hanawi and  
14 so on.  
15 The County Water Supply should lease or  
16 maintain the aqueduct that supplies water to the  
17 County, water tanks that currently supply Lower  
18 Nahiku with domestic water, farming water,  
19 (Hawaiian) animals, yeah. They gotta drink water  
20 too, not only from the rain.  
21 In closing, A & B, the applicant, needs to  
22 be fully transparent on their intent, their needs,  
23 their wants, and not smoke-screen and quietly do  
24 things to further divide the communities as they did  
25 with HC&S.

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

58

1 I believe that our kupuna (Hawaiian) will  
2 guide our pathway, to be sure that our precious  
3 resource isn't solicited for their money gain, while  
4 our entire livelihood and quality of life is  
5 jeopardized. We must protect, preserve and  
6 perpetuate for the future generations to come.

7 Our voices now and forever will be heard,  
8 as we cannot sit here no longer and watch our island  
9 become more overly developed, culturally desecrated,  
10 and our lahui is left behind, and not have a voice  
11 to our island.

12 We will stand for what is right, and the  
13 right thing is to maintain truth and not deception.

14 Just to add, it's not just the water that  
15 is life; it's the mana that the (Hawaiian) hold from  
16 the days of our not alii, (Hawaiian), for it holds  
17 that strong (Hawaiian) of our ancestors.

18 I close by saying much of our (Hawaiian)  
19 throughout East Maui is (Hawaiian) with debris,  
20 fallen trees and not maintained for proper flow from  
21 mountain to sea. What are we going to do about  
22 that? Is it only about power, money, and greed?

23 Let us think about it. Mahalo.

24 MODERATOR SENELLY: Maluhia Stoner.

25 MR. STONER: My name is Maluhia Stoner,

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

1 and I've lived in Lower Nahiku all of my life.

2 Now before I begin, I would like to inform  
3 you that this is specifically for the East Maui  
4 Irrigation Company and A & B and does not portray my  
5 opinion of the council before me.

6 This is a Hawaiian proverb handed down for  
7 generations: When the earth is ill, what is its  
8 medicine? Rain. Because when the heavens cry, the  
9 earth is healed.

10 By this saying, it is easy to understand  
11 the Hawaiian connection of water and health. The  
12 rain that falls from the heavens causes the waters  
13 to flow; and they, in turn, gives life to the earth.  
14 The earth in turn sustains the people.

15 The waters of life which flow from the  
16 mountains and which will sustain our generation and  
17 future generations are of great importance to me and  
18 people who love and care for the land and culture.

19 The initial development of the ditch  
20 system was authorized as a part of the Hawaiian  
21 Kingdom's program to promote prosperity for all the  
22 people of the Kingdom.

23 Of importance to the native Hawaiian  
24 families of the land, each of the water licenses  
25 issued under the Kingdom included clauses which

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

1 protected the water rights of native tenants of the  
2 respective lands through which the ditch system was  
3 developed.  
4 The original license stated: The  
5 continuance of the right herebefore granted is upon  
6 this condition, that existing rights of present  
7 tenants of said lands or occupiers along said  
8 streams shall in no wise be affected injuriously by  
9 reason of anything herein before granted or  
10 covenanted.  
11 Now before I continue, I would like to  
12 point out that during the time of February 2015,  
13 during the drought on the other side of the island,  
14 you cut off not only the rivers but the aqueduct  
15 that supplies Lower Nahiku with water.  
16 May I inform you that we had children  
17 under the age of three at the time, and this  
18 threatened not only our health but the health of the  
19 land, the native plants and animals, and the native  
20 fish, both fresh water and salt water.  
21 It took having the County workers of our  
22 community go all the way to the water blockage and  
23 turn it back on. This is a clear violation of the  
24 license issued under the Kingdom of Hawaii and is  
25 ineligible to pass in court.

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

61

1 But regardless of the laws and regulations  
2 stated above, you don't only break the laws of the  
3 state but the laws that nature itself has set for  
4 every man, woman and child who sets foot on these  
5 sacred lands; and you are in no position to  
6 determine what is and isn't sacred.  
7 You're making us pay for our water that  
8 you take too much of; and you don't even have the  
9 courtesy of doing it within the legal boundaries of  
10 the laws you agreed upon years ago.  
11 You take 450 million gallons of water a  
12 day and waste a huge percentage on releasing it on  
13 the ground. When will you realize there's no more  
14 cane fields to feed and that the industrial  
15 progression which you support is the very reason why  
16 you feel you must take that much water.  
17 You are the reason that there's no water  
18 in certain sections of the island. Nature has taken  
19 the waters of life from you because you had the  
20 nerve to abuse such a sacred element.  
21 You have already deprived our culture of  
22 the once abundant source of life, and you dare take  
23 more.  
24 I testify that the East Maui Irrigation  
25 Company and A & B is guilty for the theft of our

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

62

1 culture, the endangerment of native and indigenous  
2 species, the choice to ignore the claims of the  
3 Hawaiian people, the people of this island, and the  
4 destruction of the home in which we will always and  
5 have always resided in.  
6 Thank you very much.  
7 MODERATOR SENELLY: Thank you, Maluhia.  
8 Can I say -- excuse me.  
9 You know, actually, you guys are providing  
10 scoping input, and -- because I've heard the word  
11 "testify" and stuff, and I know it has that power,  
12 but I'm just saying technically, it's not testimony.  
13 But we take it -- I mean, we do consider it very  
14 valuable input. Okay? Because this is in itself  
15 not a required meeting.  
16 No, no, it's fine. But I'm just saying I  
17 don't want people to think that it is testimony,  
18 because technically, it's not. That's all.  
19 (Audience speaking.)  
20 MODERATOR SENELLY: Yeah, it is for you.  
21 That's right.  
22 Mavis Oliveira-Medeiros.  
23 MS. OLIVEIRA-MEDEIROS: Aloha. I'm from  
24 Hana. And I decided to come during work, so I don't  
25 really have a really good prepared testimony.

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

63

1 But my name is Mavis Oliveira-Medeiros,  
2 and I come from Hana, Maui, Hamoa. But my mom and  
3 dad was -- my dad actually came from Nahiku, and my  
4 mom came from Olahino, both places that we were  
5 water people.  
6 So my mom was a gatherer. I don't know if  
7 anybody said that yet, but the gathering people need  
8 to be on that EIS. She taught us how to gather all  
9 the stuff growing in the fresh water ponds and  
10 rivers, and that's what we ate, that's what we ate  
11 to subsist.  
12 And then A & B took the water, and then we  
13 had our kids, and our kids had their kids, and it  
14 was never able to be passed on to the next  
15 generations.  
16 So two generations, including me because I  
17 was a little girl when she used to take me in the  
18 rivers, so it's like three generations of people  
19 that were robbed of gathering, gathering food in the  
20 rivers.  
21 I cannot tell you how awful that feels.  
22 What was taught to us, we haven't been able to teach  
23 our kids. It feels like genocide, cultural  
24 genocide, when you cannot teach your children and  
25 theirs how to survive from the aina that they grow

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

64

1 up around. That is a terrible, horrible thing.

2 So I hope that you put that in your EIS,  
3 the gatherers. There's also -- in Hana, there's  
4 tons of fishermen. So I wish you guys come to Hana  
5 too, on the list of wishes.

6 Lots of fishermen, hula dancers, they rely  
7 on the water. And gatherers, we still have people  
8 who actually go in the EMI's ditches. I don't feel  
9 comfortable because it says "keep out, no  
10 trespassing." But there's people who still go in  
11 there and gather opai. So, you know, we still eat  
12 that stuff.

13 In Hana, a lot of people in Hana still  
14 fish to subsist, to survive, to help put food on the  
15 table. That's another thing that you can add to the  
16 EIS. Subsistence.

17 And if you ask me, I think you should put  
18 the people first and the corporation last.

19 MODERATOR SENELLY: Thank you. Thank you  
20 very much.

21 Lany Young.

22 MR. YOUNG: Aloha everybody.

23 Well, this one, it comes from knowledge.

24 (Hawaiian.) As we help others, we will  
25 find help for ourselves.

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

65

1 Hawaiians lived in two distinctive areas  
2 of the islands: Those who lived near the shoreline,  
3 those who lived in the uplands. Goods traded with  
4 one another, those goods only available in their own  
5 area, this system created a mutually beneficial  
6 relationship that supported sustenance, living.

7 This one comes from the heart.

8 Like the veins that flow your blood  
9 through the human body and feeds the limbs is the  
10 water that flows through the valleys and feeds life  
11 among us. You stop the blood flow, the arm, the  
12 leg, the brain goes dead. You stop the streams from  
13 their natural flow, life around us suffers. The  
14 only native (Hawaiian) will diminish. The only true  
15 native opai will be sacrificed. For what?

16 The river mouths, or (Hawaiian), as it is  
17 called, is a place of birth. Like the wound, you  
18 stop the flow to the wound, you stop the beginning  
19 of life for many, many species, species that bigger  
20 species depend on for survival. Species like us.

21 But who cares about all this when you can  
22 have money in the bank? Is this right? Is this  
23 pono?

24 I oppose redirecting 150 million gallons  
25 of water per day from East Maui.

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

66

1 By the mile marker 10, Waihine Bay once  
2 had a water fountain that was an underground spring.  
3 You and the other money-hungry corporations took  
4 that for your profit. Everybody who drives on that,  
5 everybody that lives on the island and the visitors  
6 use that water to sustain their life.  
7 The County and State government, they all  
8 fall in the same corporation. So the reason why  
9 they wanted to destroy it is because the road needed  
10 to be more wide, and also for their profit.  
11 Give back what the corporations stole from  
12 the community. So I say no to the 30-year lease.  
13 We don't need development and added progress, nor  
14 diverting or transporting of our water.  
15 It's not the government's water. It's  
16 ours.  
17 Aloha. Thank you.  
18 MODERATOR SENELLY: Thank you.  
19 Tammy Luat.  
20 MS. LUAT-HUEN: Thank you. My name is  
21 Tammy Luat-Huen. I am from Keanae. I live on the  
22 peninsula. And we try to farm taro in our yard, but  
23 we're the last taro farm to receive the water.  
24 So in your EIS, I would like the  
25 temperature of the water to be tested. You guys

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

67

1 keep taking water out, the water is going very low;  
2 the sun is so hot, it makes the water hot. By the  
3 time it gets to me, all my taro was like horrible.  
4 We tried to save the -- you know, when we  
5 harvested, we tried different patches to see how it  
6 is. Oh, my god, it was terrible, and it was like  
7 spongy. So definitely I think that the EIS should  
8 include the temperature.  
9 And also, before I even started, I was  
10 supposed to tell you guys this. I tripping out that  
11 you guys are talking about our water and handing out  
12 permits to the highest bidder, like you're talking  
13 about stocks and bonds.  
14 We're not talking about stocks and bonds.  
15 We're talking about life. We're talking about water  
16 for all of us to live, because I don't know about  
17 you, but I cannot drink money. So without water, we  
18 cannot survive.  
19 EMI has had control of East Maui's waters  
20 for way too long, also stewards of these lands.  
21 In your EIS, I demand that EMI be ordered  
22 to restore these rivers and streams, especially the  
23 ones that they're not using. They leave all their  
24 cement, their metal, their crap. Take it out.  
25 Like if they were my tenants, I would be

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

68

1 like, you know what, you're out, you're not going to  
2 get another lease from me. You let go our place,  
3 you're out.

4 So I think we should demand that they  
5 restore our rivers and streams to how it was before  
6 they got it.

7 And on that note, also in your EIS, it  
8 should say they took so much water -- when I was  
9 little, my grandpa used to work for EMI, so I know.  
10 He took me up there. There was plenty of water  
11 flow. I'm not that old.

12 You know, I don't want to tell you guys,  
13 but I have a big birthday the other week.

14 But I know how much water there was  
15 flowing.

16 When I drive home to Keanae, there's so  
17 much rivers that used to flow all the time. Now  
18 only trickles coming down. And I'm trying to  
19 remember the story about that water that used to  
20 come up the side of Waikoloa. And we always used to  
21 pull over, wash the baby bottle if something  
22 spilled, drink water. You know, we used to use  
23 that, and it's gone. I remember that.

24 But anyway, where they took a lot of  
25 water, and now they let the rivers run bone dry.

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

69

1 Not even like a little bit. We went all the way up  
2 to the top, dry bone. As wide as you can imagine,  
3 this river was dry. So now what's in there? Just  
4 so happens that invasive trees, bushes, vines, all  
5 kinds of weird stuff started growing in there.

6 Now they go, oh, we are ordered to release  
7 the water, what does EMI do? Instead of they go  
8 clean the rivers and the beds because it's all grown  
9 with invasive stuff, open the water, water is  
10 flowing, no more place to go, where does it go?  
11 Every which way but loose. Not in the flow that  
12 it's supposed to be.

13 So I honestly believe a lot of these  
14 landslides that we've been experiencing on the east  
15 side of Maui, all A & B's fault. They should  
16 have -- they were so worried about their employees,  
17 their 400 employees. They could have had their  
18 employees stay on for one more year while they go  
19 clean up all our rivers and streams. It's their  
20 responsibility.

21 So for the EIS, I highly recommend that  
22 you guys have them -- not ask them -- demand that  
23 they go clean up our rivers and streams to where --  
24 to the point where they got it. And I'm sorry about  
25 that, but it makes me so mad.

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

70

1 Because now, you know, those slides  
2 has caused us so much havoc. We have people that  
3 are putting their lives in danger just to go to the  
4 doctor, you know. We have roads that's completely  
5 shut down for seven hours; and then what happens if  
6 there's an emergency?

7 This is the kind of stuff that EMI  
8 personally caused. And I know that for a fact. So  
9 that's one more thing that I wanted your thing to  
10 say.

11 And, you know, like if it was clean, the  
12 water would flow the way it always flowed centuries  
13 ago. But when the thing is all plugged up, where  
14 does it go? It's got to go to the outside; now it's  
15 going wider and wider, and it's bringing down  
16 everything.

17 And we're not talking small rocks. We're  
18 talking rocks as big as trucks. And now we're going  
19 to be driving home, all unaware -- especially  
20 tonight; it's dark already -- now we're driving  
21 home, and let's go play Frogger and try and jump on  
22 this side, oh, no, let's go to this side, and then  
23 here comes the rocks, you know.

24 So you guys didn't do us no favors by  
25 giving them the lease. They literally put our lives

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

71

1 in danger, and I'm over it. So it's time for  
2 somebody else to -- I understand that everybody on  
3 this side needs water. I do understand that. But  
4 you're talking about our water as if it's a  
5 commodity, and it ain't.

6 Thank you.

7 MODERATOR SENELLY: Thank you.

8 David Prais.

9 MR. PRAIS: My name is David Prais.

10 The first thing would be that I understand  
11 that this is not for testimony. It's you want to  
12 know what's for the EIS.

13 That right there is a flag telling you,  
14 here is your blocks, this is what we offer you, take  
15 it or leave it.

16 Our kupuna, they have been honest all the  
17 way. All the way, you've done it correctly by their  
18 standards and their ways, but we are the new  
19 generation, the generation right here right now. We  
20 are on the rise.

21 I do have one thing I can add to the EIS.

22 The first thing I want to say is there's a  
23 strong presence of police here. Very strong. In  
24 the 30-plus years, have you ever seen this strong of  
25 a presence? And that is because they are afraid.

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

72

1 They're afraid of us because we are intelligent, we  
2 know how to think, and we can act upon it.  
3 There's a lot of people who want to speak.  
4 I'm going to make it quick. The one thing that I  
5 add to the EIS is do not come back before our people  
6 without every concern and demand met.  
7 That's all. Mahalo.  
8 MODERATOR SENELLY: Thank you.  
9 Dan Clark.  
10 By the way, these are all the East Maui  
11 folks. I'm really trying to get them -- let the  
12 Hana and Keanae and Nahiku side go home.  
13 MR. CLARK: Yes. Good evening.  
14 I had a very pleasant ride coming out to  
15 the meeting today. I was with two of my close  
16 friends, that are farmers in Keanae and Wailua.  
17 (Audience and speaker interchange.)  
18 MR. CLARK: Okay. Now at any rate, they  
19 spoke of all of the streams and the mountains  
20 springs all throughout -- from Nahiku on out.  
21 I'm still a student there in Keanae. I've  
22 been fortunate to be taught by a lot of the elders  
23 about farming. I raise taro. I have an affinity  
24 for taro in my family from Nualolo Valley on the  
25 Napali Coast of Kauai.

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

73

1 And though I might not seem that much  
2 cocoa, but I do have.  
3 I wanted to -- I guess you wanted the  
4 specifics as to what you can use in your EIS. Of  
5 course I want to -- I'd like to say that I'm opposed  
6 to, first off, the issuance of a license for  
7 Alexander & Baldwin for the continuance of diversion  
8 of water. There needs to be an incline of this -- a  
9 removal, a plan.  
10 This is recorded or --  
11 MODERATOR SENELLY: She's taking it down.  
12 MR. CLARK: Yeah, okay.  
13 MODERATOR SENELLY: And we have a video.  
14 MR. CLARK: Thank you.  
15 Anyhow, it has been 120 years of  
16 construction and diversion. I've been up in the  
17 mountains, I've seen where all the water, every drop  
18 of water that they can actually take from the side  
19 of a hill by putting little PVC pipes hidden at --  
20 you know, to a particular stream, that ends up in  
21 the ditch itself, diverting it out here.  
22 Now in times of a lot of water, a lot of  
23 rain, the water is brought out so far and then  
24 dumped into a river out here. That doesn't make  
25 sense to me, you know. The ditch is running full,

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

74

1 they'll dump the water all the way out here, as  
2 opposed to discharging the water back to the streams  
3 from which they took the water.

4 Second off, at times I have to sponge my  
5 water off the awai, yeah, fronting our kalo patches,  
6 sponge pretty much the water into the patch. I'm  
7 serious. The water is hugging the bottom of the  
8 ditch, you know. I've been working with, you know,  
9 the Waialua people in trying to clear our pipeline  
10 from Waikane down to Waialua to, you know, get water  
11 to feed the Hana side for the past four years.

12 And we will get there, we will get the  
13 water distributed. But what I've found is that  
14 attending these meetings with the Water Resources  
15 Commission, they were looking for reasons why to  
16 deny these people their water.

17 First they went in and they tried to  
18 confuse the farmers as to where the geographic  
19 location of their water was coming from, feeding  
20 their loading system. Right?

21 And then the Water Department steps in and  
22 says, where do you think your water comes from? I'm  
23 listening, why the heck is the Water Department  
24 asking this?

25 Do you have a water meter, they say?

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

75

1 Well, shucks, of course we have. We're fortunate.  
2 We paid for that well system, right?

3 We may not have paid for all of it, but we  
4 as stepchild way out there, that's how the system  
5 goes. The community assists the rest of the  
6 communities in, you know, providing moneys that make  
7 it possible for us to dig that 400-foot well.

8 That water belongs to us in the district,  
9 yeah. It feeds the Keanae-Waialua Nui area.

10 Same thing with Nahiku. I was listening  
11 to the lady talking about the water from above.

12 Now I would like to see the water metered  
13 that comes into the Parshall flume that feeds the  
14 Keanae loading system. Okay. I want to know, not  
15 by guess and by golly. I want to know what water is  
16 being fed us, because the water is warm in the kalo  
17 patches. We have root rot and all kinds of diseases  
18 that come off from that, you know, failure to  
19 provide cool, clean water, which is what the kalo  
20 require for a good harvest.

21 And Keanae was not issued an amount of  
22 water necessary for our -- you know, all the loading  
23 in there.

24 And they said, well, you've got all --  
25 you've got all Buffalograss or California grass in

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

76

1 there. And there's a system. The Hawaiians have  
2 been raising taro in there for 800 years. They know  
3 certain patches got to go fallow, right, you've got  
4 to regenerate it.

5 So they're saying, well, because the kids  
6 coming behind you guys are not interested in the  
7 taro, we're going to take the water. No, I'm sorry,  
8 that's not the case. You let the water run to the  
9 sea, yeah.

10 And there is 14 vertical shaft wells all  
11 along the isthmus, in between the two mountains  
12 here, if A & B is not telling you that, yeah,  
13 400 feet deep, right, down into the basal land's  
14 crystal clear water.

15 My field was water and wastewater. 40  
16 years, I put in there, in operating wastewater  
17 plants and water treatment systems. I know about  
18 water.

19 But when I brought that to the attention  
20 of Dr. Milk, you know, he immediately shut down,  
21 that I didn't have the right to bring that up in  
22 that particular meeting, the Water Resources  
23 meeting.

24 All I'm saying is -- I talked to some  
25 young lady that was working agriculture with MCC, or

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

77

1 now it's called Maui College, and I was explaining  
2 to her, you know, how the systems were all managed  
3 and the ponahiki of the district determined, you  
4 know, what amount of water went where and nobody cut  
5 anybody short.

6 That water was allowed to flow cool to all  
7 these farmers so that they can farm the land. And  
8 I'm sorry, but I lost trust in the Water Resources  
9 Commission. I'm concerned that they're going to be  
10 making the ultimate decision on this particular EIS  
11 request.

12 And I'm happy for the meeting that you're  
13 putting on here, yeah. All I'm saying is that give  
14 us the water that we need to farm.

15 Also meter the water. So if you tell us  
16 that 3 mgd is what our allotment is, until they can  
17 deconstruct that whole ditch system, then I'd like  
18 to know, put that Stevens meter back that A & B had  
19 inside of that -- what do you call it? -- right  
20 there at the Parshall flume, okay? Right there  
21 above Keanae with the spring water.

22 That spring comes from the ground. If  
23 it's not fed from above, the water is diverted, it's  
24 not going to come up on the spring through the  
25 stream. Okay?

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

78

1 So, I'm sorry, but I'm frustrated that,  
2 you know, not all is going to be heard. The meeting  
3 is, by design -- this young lady told me it's by  
4 design to have the meetings out here as opposed to  
5 inside of Keanae, at the Keanae school for the other  
6 families that were directly affected. By design,  
7 she told me.  
8 I said, okay, but I'm not going to fault  
9 Wilson Okamoto for that. I worked with you in  
10 wastewater and a lot of the design over the years,  
11 so I know that your intent is good. The thing is  
12 that I think, as the lady said, it needs to be  
13 everything transparent and clear, you know, so  
14 everybody's comfortable with the decision going  
15 forward.  
16 And thank you very much this evening for  
17 your time.  
18 MODERATOR SENELLY: Thank you, Dave.  
19 Okay. Kawika Stone.  
20 MR. STONE: Hi, how's it going? My name  
21 is Kawika Stone. I am from Lower Nahiku.  
22 And I know you guys only want to hear  
23 about the EIS and what it should address. But, you  
24 know, first off, I think there's kind of an agenda  
25 behind the EIS and just the way you guys got it,

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

79

1 step one, step two, step three.  
2 And maybe next time you guys should hold  
3 the meeting or you should maybe hold another meeting  
4 out in Hana side, because most of the people -- if  
5 you look on the list of places, Haiku is not on that  
6 list, and most of the people affected by these  
7 decisions actually live out there.  
8 Some of them is kupuna. They can't just  
9 go and drive this long road. Some people have  
10 babies, kids, they can't just drive this long road,  
11 like I said. They gotta work, all this kind of  
12 stuff.  
13 But also I see that you guys -- I see that  
14 you guys are on top -- if I can go to the slide show  
15 real fast, I see you guys mentioned -- there's some  
16 things you guys mentioned in here. Where is it?  
17 Okay. Right here. "General description  
18 on the proposed action," you guys put "economic,  
19 social, cultural and environmental" characteristics  
20 on there.  
21 But what you guys gotta understand is  
22 economic -- if we're talking about Hawaiian and  
23 Hawaiian culture, you put "cultural" on there.  
24 Hawaiians, economics is cultural.  
25 If you think about it, the mauka to makai,

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

80

1 that's from the mountains to the ocean, that's just  
2 the way things go.

3 But you guys', EIS, it's based off of --  
4 you guys said that it has to meet the laws, right,  
5 of the State; it has to meet certain requirements of  
6 the law. But that's the law of the state, but  
7 there's also the law of nature, which doesn't really  
8 get mentioned.

9 Even though you guys mentioned cultural  
10 and environmental, it's a contradiction, because  
11 economic is what? Money, right? But in the ancient  
12 days, the Hawaiians, they never used money.

13 So if you think about that for a second,  
14 the Hawaiians used to trade. The people who lived  
15 by the ocean, makai, they would trade food with  
16 those who live in the mountain, according to what  
17 they have. Like if you're by the ocean, you have  
18 fish; people by the mountain, they have other things  
19 that isn't right next to the ocean.

20 So they would trade, and they would --  
21 that's how -- that's our economics, as Hawaiians.  
22 So you can take that "economic" out of  
23 there because that's a contradiction, because  
24 cultural -- how you guys gonna talk about cultural  
25 when economics and all that is in there?

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

81

1 And then how the EIS is supposedly -- this  
2 is just a prep, right, like a preparation for you  
3 guys' main decision. This is just like -- this  
4 isn't for us to testify, but where do we testify?  
5 Where do we testify?

6 MR. MATSUKAWA: The decision is by the --  
7 for the permit, there will be proceedings, I  
8 imagine.

9 So again, I'm not the attorney, I don't  
10 know the exact process, but I would think there  
11 should be.

12 MR. STONE: Well, if it was me -- I'm not  
13 trying to -- but if I was the one running this  
14 meeting, you know, I would definitely know  
15 everything that's going on, especially what's going  
16 on in the future.

17 Okay. Where's the other page, though?

18 MR. MATSUKAWA: We should clarify that.  
19 We are doing the EIS. You know, I'm still -- in  
20 order to do the EIS, I have to learn things.

21 I don't know all of the legal -- this  
22 thing has had a long history. I got into this not  
23 that long.

24 MR. STONE: I'm not saying you personally.  
25 MR. MATSUKAWA: I don't know everything.

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

82

1 That's why I don't answer some of the questions. I  
2 don't know.  
3 MR. STONE: Okay. You know, I'm not --  
4 you know, it's not a personal thing.  
5 MODERATOR SENELLY: Can I say one thing?  
6 MR. STONE: It's not a personal thing or  
7 anything like that.  
8 MODERATOR SENELLY: By the time the EIS is  
9 pau, we will know. Okay?  
10 But coming out here, part of it is when  
11 you, people like you --  
12 MR. STONE: Yeah, you guys are hearing our  
13 testimony.  
14 MODERATOR SENELLY: Yeah.  
15 MR. STONE: You guys are hearing us speak.  
16 MODERATOR SENELLY: What you guys are  
17 saying. And so that helps --  
18 MR. STONE: That helps you make the  
19 decision.  
20 MODERATOR SENELLY: Right. That helps us  
21 put what's going to be in it.  
22 MR. STONE: I understand your process.  
23 MODERATOR SENELLY: So that by the time  
24 we're pau, we're gonna get.  
25 MR. STONE: Okay. I understand you guys'

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

83

1 process and stuff like that, but like I said, you  
2 guys might need to remake a whole new PowerPoint,  
3 just by -- whoever made it, that's cool. But just  
4 think about where you're at, Hawaii. Who are the  
5 people who's native to this place? Hawaiians. So  
6 when you talk about the actions of anything, you  
7 guys should base it off of that first.  
8 And also when you talk about culture,  
9 people get religions and this and that. Hawaiians'  
10 religion is our culture. So if I was to bring up  
11 another religion, people's ears would perk up. But  
12 they don't see Hawaiian as a religion, but Hawaiian  
13 is a religion.  
14 It's not a religion, but it is because you  
15 know what I mean.  
16 MODERATOR SENELLY: Kawika, we're going to  
17 move on, okay? You know, I have two more people  
18 from East Maui.  
19 MR. STONE: I'm going to wrap it up with  
20 what you guys should address in the EIS.  
21 MODERATOR SENELLY: Okay.  
22 MR. STONE: You guys should address the  
23 area, think about the areas that you're talking  
24 about, think about the people, and maybe you  
25 should -- oh, yeah, address the gatherers and the

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

84

1 providers, which are the same thing.

2 Okay. So if I can't go out to the other  
3 side to get food or anything like that -- some  
4 people go to the store, that's how they get their  
5 food. Some people rely on nature, things around  
6 them to get their food and to provide for their  
7 family.

8 So you guys should address, mainly on the  
9 gatherers and the culture -- you guys put the word  
10 in there, "cultural." And "environmental." That's  
11 the two big words right there.

12 Social and all that can go right now. And  
13 cultural and environmental, that should be you guys'  
14 main basis, but, you know, it's -- this is words and  
15 these are documents and stuff like that.

16 But when it comes down to it, it's not  
17 words and documents and signatures that will  
18 determine how the river is going to flow, because  
19 that's nature.

20 So when it comes to nature -- oh, yeah.  
21 When you talk about meeting the laws of the State,  
22 just think about meeting the laws of nature before  
23 anything.

24 MODERATOR SENELLY: Mahalo.

25 Mr. Young, you've been so patient.

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

85

1 UNIDENTIFIED SPEAKER: You know, I would  
2 just like 10 seconds.

3 Glyphosates, Roundup used on the ditches,  
4 could we have people that drink from the ditches get  
5 free testing of their urine to see how much the  
6 effect has been by phosphates? Please study it.

7 MODERATOR SENELLY: What's your name?

8 UNIDENTIFIED SPEAKER: That's my  
9 testimony.

10 MODERATOR SENELLY: Did you note that?  
11 Okay.

12 UNIDENTIFIED SPEAKER: Thank you.

13 MODERATOR SENELLY: Mahalo.

14 We're taking a break. I'll tell you why.

15 No. You know why? Because the folks from  
16 East Maui are staying. And if they've already gone  
17 home home -- I just want to make sure I take them  
18 first, and so if they want to go home during the  
19 break, that's it.

20 Also, Darcy will need a few minutes.

21 UNIDENTIFIED SPEAKER: Please don't use  
22 that as an excuse not to go out to Hana.

23 MODERATOR SENELLY: I understand.

24 Okay. Mr. Young, go ahead.

25 MR. YOUNG: Now I lost my thought.

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

86

1 MODERATOR SENELLY: Sorry.

2 MR. YOUNG: I want to talk about Makapipi

3 going bone dry from 1990 up until they the their

4 sugar cane; and then when they closed the sugar

5 cane, they opened up Makapipi again.

6 But for 27 years, Makapipi never flowed.

7 Because in 1990, East Maui Irrigation took all the

8 water from Makapipi.

9 There's two big dams up there, one called

10 Poke's ditch, and I don't know what that bottom dam

11 was, but it stopped all the water, and everything

12 went into the ditch system to Wailuku.

13 And as for the Environmental Impact

14 Statement, the government that's supposed to

15 overlook the stream flows, there's -- Makapipi is a

16 perennial stream, which means that the thing is

17 supposed to flow all the time, but it wasn't. It

18 was bone dry.

19 And what happened is that all the springs

20 in Hana all dried up down on the ocean and

21 everything like that, and 90 percent of our fish has

22 disappeared, because 90 percent of the seaweed has

23 disappeared.

24 And the fish live off of the seaweed, and

25 also the baby fish, like the ocean, where the river

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

87

1 enters the ocean is known as an estuary. And

2 estuaries are all nurseries for all your baby fishes

3 and crabs and lobsters and everything like that, and

4 they live off of zooplankton and cytoplakin. One's

5 a vegetable, one's an animal, and these -- this is

6 like milk, mother's milk to them.

7 And when a lobster gets a little bit

8 bigger, then they will feed off the bottom, off of

9 solid food. But when they're little, they just

10 float in the water column, and they have to bump

11 into the food, because they cannot swim up to the

12 zooplankton and catch it. They have to just bump

13 into it.

14 So when there's no fresh water going into

15 the ocean, there's no food to bump into. So all our

16 fish is gone. 90 percent of the fish in Hana has

17 disappeared. 90 percent.

18 Now, as for the environmental or the part

19 that's supposed to watch the environment, they've

20 been doing a real poor job, because I can show

21 you -- you can come into Hana Bay, and I can show

22 you there's no seaweed anymore, no turtles, because

23 no turtles are -- the turtles eat seaweed, and

24 there's no turtles anymore. And there's no

25 (Hawaiian), and that has all disappeared.

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

88

1 And I say don't give East Maui Irrigation  
2 or A & B that 30-year lease, yeah. Stop it.  
3 Thank you.  
4 MODERATOR SENELLY: Thank you, Mr. Young.  
5 Okay. Bob Marta.  
6 MR. MARTA: See if my voice holds out and  
7 if you can hear me.  
8 Aloha everyone.  
9 MODERATOR SENELLY: Aloha.  
10 MR. MARTA: My name is Bob Marta. Born  
11 and raised in Hawaii. I'm a 57-year resident of  
12 Kuau and Paia and have spent 75 of my 88 years  
13 involved in some form of agriculture.  
14 Because of my background, some of what I  
15 share may be complex, unconventional, new or even  
16 unique.  
17 Alexander & Baldwin, Incorporated, once a  
18 very local company, is rapidly changing. Through a  
19 stock distribution, it gave its wholly owned Matson  
20 Navigation, now Hawaii's fourth largest corporation,  
21 to A & B stockholders on a share-for-share basis.  
22 It then merged its agricultural divisions into A & B  
23 properties.  
24 According to Pacific Business News, it is  
25 considering a change in its corporate business

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

89

1 structure into that of a real estate investment  
2 trust by the spring.  
3 With 77.1 percent of A & B stock now held  
4 by investment managers, it is obviously managed for  
5 their benefit.  
6 It is noteworthy that investment managers  
7 now control 84.7 percent instead of 77.1 percent of  
8 Matson incorporated that was recently distributed by  
9 A & B to the stockholders.  
10 This suggests that outside investment  
11 managers will increasingly control A & B and its  
12 Hawaiian assets.  
13 This suggests a need for better  
14 understanding of A & B's future commitment to  
15 agriculture.  
16 A & B has now requested a 30-year lease  
17 for a large amount of water. Much will take place  
18 in the next 30 years, and it's important that this  
19 water be available where most needed.  
20 How fast can things move? Since closing  
21 HC&S, I understand that A & B has sold 339 acres of  
22 land in Paia, where the survey for its county water  
23 line was completed before the sale was announced.  
24 Progress at this rate can accomplish much  
25 in 30 years, but is this development progress? Is

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

90

1 it safe? What is happening in agriculture,  
2 especially sustainable agriculture? Let's give this  
3 some thought.  
4 If the numbers were run, I suspect that we  
5 do not have sufficient water to produce food for our  
6 current population of perhaps 1.4 million, to  
7 tourists and the military. I also suspect that  
8 agriculture is deliberately being held back by state  
9 officials to ensure water for development.  
10 Someone needs to run the numbers on this.  
11 Obviously, we are short of facts.  
12 We also need to know where we collectively  
13 stand on food sustainability, a growing subject of  
14 discussion.  
15 Most machines work by using the sun's  
16 energy, whether derived from fossil fuels, plant  
17 products or solar panels. The same energy from the  
18 sun powers everything we do as individuals, only we  
19 get our energy from a fuel known as food. That is  
20 mostly produced through plants; and the progress in  
21 the process, we call agriculture.  
22 Agriculture a land-based process is noted  
23 for the enormous amounts of water the process  
24 requires for each unit of food produced.  
25 Presently, enormous amounts of sunlight

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

91

1 that could be used to produce food in East Maui is  
2 being wasted for lack of water. And even more  
3 sunlight in central Maui is being wasted for lack of  
4 agriculture. Is this smart planning?  
5 Historically, the Hawaiians were able to  
6 grow enough food to sustain a million people, as  
7 they were hard working and industrious. It may be  
8 this population was not larger because of water  
9 limitations.  
10 Remember, a sustainable population is  
11 limited by what can be produced in a dry year.  
12 With the introduction of sugar cane, there  
13 was a practice to divert water from adjacent and  
14 distant areas, depriving users from their  
15 livelihood. Deprived from income, many farmers  
16 could not pay taxes and lost their lands.  
17 Without farms, many were forced to work as  
18 laborers for shipping, sugar, pineapple and  
19 construction.  
20 The upshot was we lost crops, farmers and  
21 farms.  
22 With long-term lack of water and more  
23 recently riverside drift, our food sustainability  
24 dropped from 100 percent to today's 5 to 13 percent.  
25 MODERATOR SENELLY: Excuse me, excuse me.

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

92

1 Mr. Marta, are you going to -- can you  
2 turn that in? Are you almost done?  
3 MR. MARTA: I beg your pardon?  
4 MODERATOR SENNELLY: Are you done? Or do  
5 you want to turn it in?  
6 UNIDENTIFIED SPEAKER: We want to hear it.  
7 MR. MARTA: I'm almost done.  
8 MODERATOR SENNELLY: Because I also have --  
9 since you have it written, we also want to -- we can  
10 take it also.  
11 (Simultaneous and unintelligible audience  
12 speakers.)  
13 MODERATOR SENNELLY: Go ahead. Do it.  
14 We have one more East Maui person after  
15 this, and then I will address what you said.  
16 MR. MARTA: Shipping to import food from  
17 over 2,000 ocean miles away, is this what we want  
18 and a risk we choose to take?  
19 Before giving water for unidentified  
20 and/or unidentified uses, we need to identify how  
21 much agriculture we want, where it will be, who will  
22 do it, and how much water will be needed.  
23 The State has not done this. It has yet  
24 to identify the problems or reasons why our  
25 sustainability has gone from a hundred percent to

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

93

1 the present unknown but unrealistically low figure.  
2 Overall, the state has failed miserably to  
3 protect its agriculture and its people.  
4 But this is not the subject of tonight's  
5 meeting. Tonight's subject is what are we going to  
6 do with our water.  
7 If agriculture is a serious consideration,  
8 let's recognize that I've had 40 years of experience  
9 in the Paia nursery, with plant damage from  
10 chemicals from the air and County water. HC&S has  
11 gone away, but surprisingly, my problems haven't.  
12 Based on experience, I can suggest that  
13 diversified agriculture as to Baldwin Avenue may  
14 also be in for some unexpected surprises. Will this  
15 affect plans or schedules? We will find out.  
16 Finally, there was a question of a proper  
17 scope of an Environmental Impact Statement.  
18 Will the EIS recognize the existence of  
19 people on Maui and the merits of converting  
20 nonwasted sunlight, falling on East and Central  
21 Maui, into food for their use and possible survival?  
22 If so, the entire process becomes more complex, as  
23 it should be.  
24 I hope that some of this -- I hope that  
25 some of this material will be of use in formulating

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

94

1 the needs of the EIS and some of the things that it  
2 must consider and factor into a good solution.  
3 Thank you very much.  
4 MODERATOR SENELLY: Appreciate it. Thank  
5 you.  
6 Okay. Kaleikoa Ka'eo.  
7 MR. KA'EO: (Hawaiian introduction.)  
8 Aloha. First of all, I'd like to just say  
9 exactly what has already been said, which is I find  
10 it strange that this isn't being heard, first of  
11 all, in Hana or Keanae, first of all. And that's a  
12 clear sign or a sign to the community that we're  
13 being set up.  
14 So I don't know what the intentions were  
15 perhaps, but it's clear to us that the community  
16 wasn't looked at first.  
17 So I want to start off by making clear,  
18 this I think has to be clear, is that this EIS needs  
19 to be careful in making sure it has the correct  
20 historical, political, economic and cultural history  
21 of Koolau and East Maui, not one that provides a  
22 settler, colonial mentality of justifying how we got  
23 here.  
24 But let's be clear, because there's a lot  
25 of great historians out there. So the EIS has

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

95

1 always failed to do that, so I want to make sure  
2 that you get somebody that knows the history of this  
3 area, and that's up front at the very beginning,  
4 prior, prior to the taking and stealing of the water  
5 from East Maui.  
6 So let's not start with when the water was  
7 taken. Let's start with how the water was managed  
8 for many, many years, and generations, let me just  
9 say.  
10 You know, our people has been here for  
11 2,000 years, for many, many generations. So we're  
12 not Johnny-come-Latelies into this area.  
13 However, when you look at this process,  
14 the fact that the EIS is looking on a 30-year lease  
15 extension, extension, these are extensions for the  
16 continued stealing of this water, that's the  
17 starting point, not the starting point says this  
18 water belongs to the people of East Maui. That's  
19 who it belongs to.  
20 And if HC&S, A & B, EMI, whoever they are,  
21 want that water, they should bring their plans to  
22 the people and prove to the people. This process,  
23 it's backwards. it's backwards. We gotta defend  
24 ourselves to go prove that that's our water.  
25 This is part of the confusion. That's why

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

96

1 for me, it's very important we start with that  
2 point. And that's why I'm wondering why hasn't it  
3 started at that point. I can go straight to the EMI  
4 administration and the State process, which wants to  
5 continue business as usual. But I'm here with many  
6 other Hawaiians, and we say no more. No more we  
7 allow this to occur.  
8 So I want to make sure that we have a  
9 correct political, economic history that's at the  
10 forefront and that we have a true Hawaiian historian  
11 involved at the forefront.  
12 Secondly, let's make sure -- we talk about  
13 this EIS, but it also does a terrible job in  
14 explaining -- not the potential impacts, but let's  
15 look at already what the impact has already been for  
16 over a hundred years. The degradation to the  
17 environment. Let's ask how much billions of water  
18 has been taken out of East Maui already? Billions.  
19 Every year, we talking billions that they take.  
20 Well, how much? What is the total?  
21 What have been the effects of the  
22 (Hawaiian) already that have been killed off? We're  
23 not talking maybe might kill. We're talking already  
24 has been wiped out in many of those streams that  
25 used to run every day.

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

97

1 That's an environmental crime that has  
2 already occurred. For me, it was just a crime,  
3 before we talk about continuing crime.  
4 Secondly, let's also look at its effects  
5 already. How much fish has already been lost? How  
6 much shellfish? What degradation has already  
7 happened to the fisheries that depend on their fresh  
8 water to go into that stream, to get the smaller  
9 fish, to get the bigger fish and the limu.  
10 What has already been the destruction that  
11 people pretend as if -- see, people believe this is  
12 the normal state as is now.  
13 This is not the normal. This is the  
14 abnormal. This is what happens when corporate  
15 mentalities comes in and rapes the land, destroys  
16 the land.  
17 So let's make sure we tell the right  
18 story. Let's tell the true story.  
19 And during the course, water has already  
20 had many impacts upon the community, the Hawaiian  
21 community already, who lost, lost food sources  
22 already, who has cultural practices already because  
23 associated with those streams, have already been  
24 harmed.  
25 In other words, that has already been

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

98

1 done. Let's recognize the (Hawaiian) first. We  
2 cannot talk about what we gonna do if you don't  
3 recognize that.  
4 So let's start with that and understand  
5 what are the crimes that have already been against  
6 the native Hawaiian people. Because these are  
7 crimes against humanity.  
8 And that brings me to the third point. We  
9 should also be clear to understand what is going on  
10 between the (Hawaiian) and native Hawaiian  
11 community. We are no longer afraid to speak and say  
12 we demand our human rights as human rights, our  
13 humanistic rights as an occupied people by the  
14 military foreign power that continues to exist and  
15 allows these kinds of crimes against humanity to  
16 occur.  
17 So I want to make sure in this report we  
18 also investigate all of those things. What are our  
19 rights as native Hawaiians internationally, our  
20 human rights, our humanistic rights?  
21 You know, look at things like the UN  
22 resolution 1514, look at the Proxmire Act. These  
23 are all international covenants that are already  
24 there to protect the rights of not some human  
25 beings, but which human beings? All human beings.

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

99

1 And I therefore would say, you know,  
2 Hawaiians, we are human beings. And therefore, we  
3 deserve the right of a state agency that will make  
4 sure, even on international law, our rights are  
5 protected.  
6 Number four, all I'm going to say is  
7 remember Maunakea. Maunakea is occurring today  
8 because of the failure of the EIS, the EA cultural  
9 impact, all those kinds of impacts that was ever  
10 done.  
11 Even when the people came out in droves,  
12 testified against it, didn't matter. No. The State  
13 of Hawaii, the University of Hawaii went ahead  
14 anyway, anyway. And you saw what happened recently  
15 in the past few years. There's an uprising.  
16 So part of this should also address what  
17 happens when you say yes, what happens when you say  
18 yes to A & B.  
19 You guys should be prepared to know that  
20 you gotta deal with all these Hawaiians. You guys  
21 should understand, you guys should address that  
22 question, because you're going to have to deal with  
23 us in the courts and every Planning Commission  
24 meeting. Anything to do with the taking of our  
25 water, our people gonna be there.

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

100

1 And so these are some things even outside  
2 of the courts we gotta realize, because at some  
3 point, we as Hawaiians understand sometimes we need  
4 to stand, sometimes we need to defend.  
5 And I believe that's something that the  
6 EIS should address by looking at examples, like  
7 Haleakala. It's really the same BS that's going on.  
8 The rights of developers, settlers,  
9 colonizers, investors, land speculators, are treated  
10 as if they're some golden child that needs to be  
11 protected, and our concerns as the people of this  
12 land is thrown to the wayside, our commentary to the  
13 side.  
14 See, I understand. I've been coming to  
15 this thing for many, many years, and I've seen a  
16 whole lot of meetings. But you might even have  
17 99 percent of the people testify against something.  
18 And what does the EIS say? Oh, let the project go  
19 through.  
20 So the point I'm trying to say, we let  
21 fools come in here and participate, but we get  
22 asking, we get demanding, and we're here also to  
23 declare that we will do whatever is necessary for us  
24 to protect our resources to return the water back to  
25 the community where it starts.

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

101

1 If any water should be taken from the  
2 community, it's for the community to decide, first  
3 of all.  
4 So I just want to say mahalo to you guys  
5 for coming and giving us the opportunity to share.  
6 But at the same time, I would say this to  
7 everybody here: Our voices, whether one word or a  
8 thousand words, are all important.  
9 Because it's for us, it's for us to decide  
10 for ourselves what is this for ourselves. It's not  
11 going to be the government, it's not going to be the  
12 Board of Land and Natural Resources, it's not going  
13 to be land speculators from outside, because in the  
14 end, it's going to be us.  
15 So if the EIS doesn't listen to these  
16 voices, I blame the EIS for not listening to the  
17 voices of our people.  
18 Mahalo.  
19 MODERATOR SENELLY: Thank you.  
20 Here's what I'm going to ask. Darcy needs  
21 a break. So for the rest of you who didn't give  
22 oral comments, for those of you who want to turn in  
23 written comments or e-mail your comments, that's  
24 okay.  
25 May I ask by show of hands how many of you

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

102

1 still want to speak?

2 Okay. Here's the deal. It is -- and I'm

3 sorry, Darcy -- it is 7:42.

4 We're going to have a five-minute break,

5 and we're going to come back, and I'm going to ask

6 you, all of you will who raised your hand, can you

7 summarize as much as you can? You can also

8 supplement it with written stuff. But let's try and

9 be done by 8:30, okay? Can we do that?

10 (A brief recess was taken.)

11 MODERATOR SENELLY: I'm going to call your

12 name in the order you signed up. And I'm going to

13 ask you, I really want you to summarize. Okay?

14 I really want you to summarize when you

15 speak. Understand that there's a lot of people who

16 want to speak, and we want to be pau at 8:30,

17 please.

18 All right. Christina Hemming.

19 MS. HEMMING: Hi. My name is Christina

20 Hemming, and I actually live on Kuiaha stream.

21 It's been running lately here in Haiku,

22 which has been great. But today I went down there,

23 and it's pretty much all done. Everett Dowling's

24 got a well up above.

25 Okay. So this is an EIS. We've got to

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

103

1 fit into their paradigm in order for it to count.

2 So the number one thing I want to be part

3 of the EIS is the EIS has to be consistent with the

4 development resource plan, which has some very

5 stringent rules.

6 And some of those rules are -- well, first

7 of all, the first rule it says is it only looks 20

8 years out. And you know it says the rules are only

9 for 20 years out.

10 So how can you ask for a lease for 30

11 years when in the rules themselves, in 13.170 32, it

12 says a 20-year vision. So the lease should only be

13 considered for the rules that have the paradigm of

14 20 years.

15 Second of all, who is the lease going to

16 go to? Who -- can the lease be transferred if

17 you -- if they agree to this and it goes through,

18 will the lease be able to be transferred or

19 subdivided to multiple entities. Number two.

20 The instream flow standards need to be --

21 all the -- everything needs to go up, all the water

22 needs to go into the stream, and then you ratchet it

23 down to see how much is actually needed.

24 And this is where it gets kind of tricky

25 for me, because I personally feel like East Maui

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

104

1 needs to be designated as a water management  
2 resource area, just like west Maui. Because  
3 technically, if it's not designated as a water  
4 resource management area, all the waters that's been  
5 flowing down to Central Maui, that's a crime.  
6 That's a crime against the water laws of the State  
7 of Hawaii. And no one has been discussing it.  
8 If they want to take the water from  
9 anywhere on East Maui and take it down to central  
10 valley without a water management designation  
11 area -- which means they have to tell you all the  
12 wells. Everybody's got to get a permit for any well  
13 they drill. They have to tell how many wells there  
14 are. They've got to do a study on the quality of  
15 water, and all of that goes into can they release  
16 water out to another area of the island.  
17 Otherwise, if it's not declared a water  
18 management area and the aquifers aren't protected,  
19 then this EIS application is illegal based on the  
20 Water Resource Commission rules.  
21 You have to project the usage of water,  
22 you have to identify the sources of water, you have  
23 to have the existing uses of water all part of the  
24 EIS; you have to have the capacity, and it all has  
25 to be part of a 20-year analysis plan.

105

1 The last time I went to a water meeting  
2 was like in '99, '98, and it was on the Kaupo ditch  
3 system. And I remember when DLNR awarded the Kaupo  
4 ditch system to the Kaupo Ranch for \$600 a year, in  
5 quarterly payments of \$125 or \$150.  
6 So the amount of money that the people are  
7 paying for the water and then leasing it back to the  
8 people is a crime. And that should also be  
9 addressed.  
10 So the impact of the construction by EMI  
11 on the water quality should also be addressed in the  
12 EIS, please.  
13 And you have to follow the state resource  
14 code. And the lease should not be able to be  
15 transferable, and that should be -- because, hey,  
16 guess what? Monsanto, you know, guess what, there's  
17 a ton of companies.  
18 Do you know how privatized water has  
19 become in the United States? We don't want a  
20 Japanese bottling plant moving out there and taking  
21 all the water and then shipping it over to Japan or  
22 China or wherever else, where they are desperate for  
23 clean water. So that should also be part of the  
24 EIS.  
25 Thank you so much.

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

106

1 MODERATOR SENELLY: Andrea Christian.  
2 Okay. Andrea Christian went home.  
3 Leslie Kuloloio.  
4 MR. KULOLOIO: Aloha everybody.  
5 (Hawaiian.)  
6 We are all related to all the people all  
7 the way around the island, and the same water, I'm  
8 here to talk about what the EIS should not do.  
9 The last time I see an EIS performed was  
10 by the United States Navy for the island of  
11 Kahoolawe. And when we went inside there, we  
12 thought that we had to bring all the people together  
13 to bring back what you call Kanaloa, is a sacred  
14 place, a sacred place.  
15 And when the EIS was done, they did not  
16 clean up the island of the ordinance. This will not  
17 clean up, the (Hawaiian) of Alexander & Baldwin, who  
18 is the Roman empire.  
19 The Roman empire is the guys that came  
20 here from the pilgrims, called Americans, came over  
21 here and put their feet down at the Sea of Kulolia,  
22 which now they are calling Honolulu Harbor.  
23 And guess what? We just had a settlement  
24 agreement of Alexander & Baldwin go out and make the  
25 molasses, who gave it to Matson, who is on EIS, who

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

107

1 is a subsidiary of water, like EMI, done by  
2 consulting companies.  
3 I'm going to respect Okamoto.  
4 And guess what, they killed all the fishes  
5 in Honolulu Harbor by the sugar cane plantation  
6 molasses.  
7 Let's think big now, let's think big.  
8 So did Lahaina Pioneer Inn. So did  
9 Wailuku Sugar. All of the missionary families from  
10 Connecticut, and Pennsylvania, Rhode Island.  
11 You know what Aloha Tower is? Just like  
12 the Statute of Liberty: Come, come, come  
13 immigrants, come into my land on the Sea of Kulolia,  
14 now called Honolulu Harbor.  
15 Who fought the war for the Pauwela  
16 Lighthouse? Yours truly. And guess what the first  
17 used to run. The EMI, EMI is part of the  
18 Spreckelsville Beach that haole bought from Waiehu,  
19 the grant, the grant, 3343, all the way to Pauwela.  
20 That's the railroad. That's the fight land.  
21 So let's talk bigger than that. It is the  
22 ending of A & B, on the plantation product of many  
23 generations. But A & B pau. Go home, go home. You  
24 folks had the aina for a long time. Give back the  
25 water.

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

108

1 And water should be free for the homeless  
2 family in Kahului. The Hawaiians who are homeless,  
3 they're all on Alamaha Street, down the harbor,  
4 they're all over the place. We're all related.  
5 We're all ohana, we all ohana.  
6 You know what freedom of religion is?  
7 Then you'd better know so that your culture impact  
8 will affect what you should address.  
9 Why don't you have -- you folks have a  
10 cultural person tonight, sir?  
11 Well, you'd better. You said you don't  
12 have the experience. If you don't have the  
13 experience, you don't deserve to be here tonight.  
14 MODERATOR SENNELLY: There will be a  
15 cultural expert. We haven't --  
16 MS. KULOLOIO: There better be one that  
17 you folks don't pay them off. Okay.  
18 MODERATOR SENNELLY: Okay.  
19 MR. KULOLOIO: And so all I'm saying is  
20 that native rights gotta be protected. We had  
21 enough. We had enough.  
22 Our ditches -- I want the Kuiaha ditch to  
23 run again. That was the first one they took over to  
24 run the cannery, the pineapple industries. Are you  
25 listening?

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

109

1 And Pauela ditch came all the way down to  
2 the lighthouse. Look at the maps. Show me the  
3 maps.  
4 You know what you don't have? You don't  
5 have the map of Maui. All our families are  
6 affected. No treat us kanakas (Hawaiian). We food  
7 of abundance, we navigators.  
8 Make sure you're listening. Put it down  
9 in your notes.  
10 We navigators, we farmers, we gatherers,  
11 like all you said, and we protectors, and we are  
12 really just people.  
13 That observatory on top there need to come  
14 down, in Haleakala. You know why? It get Inouye's  
15 name on top there.  
16 You folks listening?  
17 And one mayor said the rocks are not  
18 sacred. What? Then the water is not sacred. In  
19 the name of the Father, Son, I baptize you in the  
20 name of the Father, Son and Holy Ghost.  
21 So let's do a cultural impact. Let's talk  
22 Hawaiian religion. Have Hawaiian religion here,  
23 it's about time. And the fishermen are Hawaiian  
24 religion, yeah. They treated us like the teepees.  
25 They took away all our abundant places. Everybody

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

110

1 say: (Hawaiian.)  
2 That's the gill of the fish that travel.  
3 We are related to the fishes of the world. The fish  
4 go around the world. We don't stay in swimming  
5 pools, we don't stay in those aquariums. Our family  
6 go around the world. Okay?  
7 And guess what, say: (Hawaiian.)  
8 We seek knowledge from the gills of the  
9 fish. That's who we are, (Hawaiian).  
10 And the ocean is part of us. We  
11 navigators, we gatherers, we know what is the reefs.  
12 We don't need one haole tell us guys how to protect  
13 the reef.  
14 But you know what, thank you folks for  
15 listening. I'm kind of P-ed off. You know why?  
16 This process is one insult.  
17 Thanks. Mahalo.  
18 MODERATOR SENELLY: Sean Lester.  
19 MR. LESTER: Aloha. My name is Sean  
20 Lester. And I do have a little to read.  
21 I live in an area directly affected by the  
22 EMI's water system and the water request being made  
23 before this body of A & B, because this actually is  
24 by A & B.  
25 The accountability for water resources has

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

111

1 been at the core of all water disputes and requests  
2 before this commission and the State of Hawaii since  
3 the formation of the State constitution. The  
4 requests before you today is no different in this  
5 regard.  
6 Several years ago, HC&S was receiving over  
7 90 billion gallons of water while paying less than  
8 \$150,000 a year for the resource. They were, as A &  
9 B is now, requesting a 30-year lease.  
10 I applaud the wisdom of this commission,  
11 because a few years later, the direction of HC&S  
12 Corporation changed dramatically when it was  
13 liquidated.  
14 Forward-looking local residents questioned  
15 this commission as to the validity of the 30-year  
16 lease request back then, and the commission kept the  
17 annual lease structure.  
18 Forward-looking citizens are once again  
19 questioning the validity of a 30-year lease here  
20 before you today.  
21 Any corporation can be merged or  
22 liquidated, even the corporation who is now before  
23 you asking for a 30-year lease. How prudent is it  
24 to give such a long-term lease to a corporation that  
25 may not be structured as the same company in a few

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

112

1 years, much less 30 years.

2 Maui gave tremendous support for many

3 decades to HC&S as a large local employer and

4 supporter of our local economy. Yet with the final

5 decision in the A & B boardroom, these jobs in the

6 HC&S Corporation itself were extinguished. We, as

7 citizens, need a place besides a boardroom where our

8 future is decided.

9 It is in places like this commission where

10 we, the people, can ask for assurance that

11 thoughtful and balanced approaches to land and the

12 water use will be employed.

13 As in this case, this is the legacy that

14 can balance the corporate model with short-term

15 profit and factor long-term local needs into the

16 equation.

17 Whether people liked it or not, HC&S did

18 try to keep this land in agriculture. We could

19 count on the acreage farm to be consistent, as was

20 their water request. It was on this basis that this

21 commission allowed HC&S to keep using these water

22 contracts year after year.

23 So the question is: Do we acquiesce and

24 give A & B a new long-term water subsidy to the tune

25 of 41 billion gallons of water rights a year for

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

113

1 hypothetical crops and unknown uses?

2 You must ask: Is the water use efficiency

3 of their hypothetical diversified agriculture, or

4 what is it? Are they going to sell even more land

5 designated as agriculture, as they did the 339 acres

6 in Paia, to a mainland business, with no local

7 review or thoughts as to the impact of the local

8 water needs?

9 When A & B sells agricultural land, do

10 they sell the rights to the water -- that they're

11 asking you for now -- with the land sale? Did they

12 bank it as a commodity? What are their use plans

13 that are shown in this water efficiency and their

14 support of local food sufficiency needs?

15 So many unanswered questions. Why?

16 Because, frankly, if you take the time to ask them,

17 they don't know.

18 The parent company of HC&S needs about

19 150 million gallons a day for diversified ag use.

20 This request is based on, at best, a speculative

21 projection with no basis in real fact.

22 Actually, what they're asking for is

23 simply a request to get water rights, justified by

24 the fact that they're a large land owner, hoping you

25 will trust them to have the foresight to know how to

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

114

1 utilize the water correctly as they did when they  
2 were a 140-year-plus monocrop agribusiness. This  
3 logic no longer applies as it's an entirely new  
4 ballgame.  
5 The logical game plan is what you have  
6 here on the table before you.  
7 As you probably are aware, the continually  
8 shifting landscape of A & B's map and its parcels,  
9 and which are listed as ag, were sold, is far too  
10 tenuous to substantiate a blanket long-term water  
11 lease. So many questions are obscured and hidden  
12 behind A & B's corporate structure.  
13 I'll skip on.  
14 A bit of an overview here. A & B is a  
15 huge local land owner owned by out-of-state  
16 entities.  
17 A & B's major shareholders own  
18 81.65 percent of the stock. We're talking from the  
19 mainland and from Europe, according to the  
20 Morningstar investment website.  
21 I will place the list of these investors  
22 in my written testimony.  
23 But you hear the names of these people  
24 that we know as A & B, you see T. Rowe Price,  
25 Vanguard, Touchstone Capital. What stands out here

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

115

1 is there's not a single Hawaii-based institution or  
2 fund listed as an A & B major stockholder. Not one  
3 here.  
4 This is an out-of-state corporation.  
5 Understand that. Please take the time to look at  
6 each of these major investors as I have.  
7 These companies have one purpose: To  
8 ensure the largest possible return on a diversified  
9 portfolio of investments.  
10 So let's be real when we talk about this  
11 lease request. It isn't about keeping diversified  
12 agriculture. A & B does not have the same need we  
13 do for this resource to be wisely allocated.  
14 We also, we who live here, are looking at  
15 a multigenerational survival. A & B's major  
16 shareholders are looking at a quarterly report that  
17 steers decisions on how many shares to buy and sell.  
18 We must weigh this part of the equation when making  
19 decisions of this magnitude.  
20 This company has two potential avenues of  
21 land use here on Maui. One is to sell and build out  
22 as much of this land as possible to keep their  
23 stratospheric 180 rating -- and if you look that up  
24 on online, they're higher than Microsoft was when  
25 they were at their zenith.

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

116

1 The land banked for many years in future  
2 real estate sales. This would include leases or  
3 sales to a few large agri businesses and a thin  
4 covering of local farmers, et cetera, to placate, as  
5 they have for well over a hundred years placated by  
6 handing out a few dollars here and a few dollars  
7 there. Those days are over, those days are over.  
8 The second possibility is to work with a  
9 very different model. Become partners with the  
10 County of Maui and other private or nonprofit  
11 organizations to move to a truly long-term  
12 profitable, sustainable, agricultural model that  
13 will ultimately be profitable in more than just the  
14 normal short-term corporate structure.  
15 This would lead to the wise use of water  
16 resources and engage community support of a future  
17 with long-term, locally aligned values and goals.  
18 Please understand that the areas where  
19 this water is taken from on the East Side, Nahiku,  
20 Keanae, Huelo, have paid the price over the years  
21 for HC&S's use of this resource. An entire way of  
22 life was disrupted and destroyed, remaining so to  
23 this day.  
24 So in my opinion, there is no right to  
25 this water by A & B as a corporation. They were

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

117

1 paid by many generations of local Hawaiian and other  
2 communities for every dollar of profit they have  
3 received, at extraordinarily heavy and profound  
4 costs to these communities.  
5 There is nothing owed to this company  
6 regarding water rights.  
7 At the same time, everything is owed to  
8 these West-side communities. We must reinstate  
9 their water rights ahead of any ruling on A & B's  
10 request. This could be done immediately on request.  
11 To put things in perspective, in order to  
12 receive ag-rate water as a small farmer here on  
13 Maui, we have to show on an annual basis of the  
14 stable farm plan, implement this plan, and be  
15 inspected to ensure it's being applied directly  
16 every single year. We had a plan inspection done  
17 annually to show that it was indeed an agricultural  
18 property.  
19 A & B is primarily a real estate and  
20 transportation company when sugar was taken out of  
21 the equation. They're entering an entirely new area  
22 of land use. Why should they not be held at least  
23 to the same level of accountability as other ag here  
24 on Maui?  
25 And if you look at Keanae or Nahiku, there

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

118

1 simply isn't any water, as you have -- as the  
2 commission has held up the disbursement of even  
3 small amounts of water that was fought for so hard  
4 by locals before the State.

5 We cannot afford the old-style  
6 dog-and-pony show that allows entities like A & B to  
7 demand such water rights or play the game where  
8 they're the only guy at the table with the \$10,000  
9 chip.

10 Those previous models simply can't be used  
11 anymore. Hopefully, experience will be the guide to  
12 a new paradigm of water and land use in Hawaii.

13 Today it's even more pressing that we have  
14 a real ag water utilization plan, one that is truly  
15 proven with substantive penalties if not met and a  
16 real review on an annual basis for water use.

17 This is one of the agencies that can  
18 assure Maui of water use and land utilization that's  
19 a cornerstone for these precious lands.

20 And we can't have a FONSI here where it's  
21 like there's no impact.

22 Anyway, that's mine. Thank you, folks.

23 MODERATOR SENELLY: Charlotte O'Brien.

24 MS. O'BRIEN: I would like the EIS to  
25 include an assessment of the importance of the --

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

119

1 I'd like the EIS to assess the fragility  
2 of the food security of all of the Hawaiian islands  
3 due to the imminent threat of climate change and the  
4 potential for -- for the potential of international  
5 and even national political instability. This is a  
6 state security issue, not that I'm not sympathetic  
7 to all of the other issues, but this is a state  
8 security, food security issue.

9 I think that for our law enforcement  
10 people -- I'm sorry, for our lawmakers to make and  
11 form the decisions, this EIS should assess the  
12 potential of the development of what A & B has  
13 called their important agricultural lands,  
14 27,000 acres, the importance of that to the food  
15 security of all of the Hawaiian islands, in the same  
16 way that the bread basket of the Midwest helps small  
17 farmers in the south, in the east, in the west.

18 To supplement their pasture animals, the  
19 pigs of the Big Island are importing grain at the  
20 cost of \$8.80 a bushel for soybeans. That's just  
21 the shipping cost. \$8.21 a bushel just for corn. I  
22 called Matson myself.

23 Now there's no way that you can be a small  
24 pig farmer on the Big Island and pay those as the  
25 prices in addition to what you're paying for the

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

120

1 grain.

2 So this is a food security issue for all

3 of the Hawaiian islands, and I think that needs to

4 be assessed in this EIS, because it needs to be

5 assessed whether or not it should become a public

6 trust.

7 And I'm not saying that we need to take

8 the land from A & B. I think we can pay them what

9 they carry for the asset on their books. Whatever

10 their historical asset value of that land is on

11 their books, the State could pay them for that so

12 they're not out anything.

13 And the EMI, if the State runs it, A & B

14 can lease water just like anybody else according to

15 need and according to value to the citizens of the

16 State of Hawaii.

17 And I'll write more in my written

18 statement.

19 MODERATOR SENELLY: Thank you, Charlotte.

20 Okay. Nik Hilawanda.

21 MR. HILAWANDA: I'm sorry. I know it's

22 getting late, so I have just a couple little points.

23 MODERATOR SENELLY: You can also turn it

24 in.

25 MR. HILAWANDA: Not these things.

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

121

1 First of all, I wanted to refute the fake

2 news -- we all know what that is now -- on the front

3 page of the finest daily paper here on Maui, which

4 said that yesterday at the meeting at MECO -- and

5 it's interesting to have a meeting at MECO but not

6 in Hana or Keanae -- that without the lease -- and,

7 of course, a former County councilmember said this,

8 and it was quoted in the paper -- without the lease,

9 upcountry would have no water.

10 Okay. Let's get rid of that fake news

11 right away.

12 Next, the lease, A & B is going to donate

13 the ditch system, and I had to the County. But

14 thinking about it here, I changed that to some kind

15 of publicly controlled trust. They could donate the

16 delivery system to us, the people, because they've

17 already made -- as has been said already by many

18 people, they've already made millions and millions

19 of dollars.

20 My employees know that ditch system to be

21 hired by this public entity to run the ditch system.

22 I also want to say, before I go on, I

23 wanted to incorporate in my testimony the brilliant

24 testimony of people before me. It just got me.

25 People have been here for generations.

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

122

1 I bought my property 20 years ago.  
2 Mokupapa Stream is totally bone dry. 20 feet west  
3 of my property, it blocks all the water.  
4 On December 31st, that big storm,  
5 5 feet, it almost was over me, running through my  
6 streams, wiping out all the vegetation, all the  
7 trees and a hundred foot across in that streambed,  
8 running like the Wailuku River.  
9 I've been there 20 years, I've never seen  
10 that. It was incredible. That's how some of these  
11 streams used to be. Those who have been here for  
12 generations know that.  
13 Somebody had earlier mentioned that the  
14 Maui Police Department was here and said they'd  
15 never seen that. Everybody said no, no, no.  
16 About 10 or 15 years ago, maybe 10 years  
17 ago, 12 years ago, there was a meeting right here in  
18 this very room, and there was just as many police  
19 here. Now who asked them to come and why is it a  
20 coincidence that it's another water meeting?  
21 UNIDENTIFIED SPEAKER: EIS, EIS.  
22 MR. HILAWANDA: I do want to thank you for  
23 saying "EIS, EIS," because what I really liked about  
24 this meeting, you guys who know only a little bit  
25 and you've been educated by the people, did you

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

123

1 notice we weren't held to a three-minute testimony?  
2 MODERATOR SENELLY: Actually, people came  
3 up to me, and they wanted -- we don't do that.  
4 MR. HILAWANDA: Okay. So I want to thank  
5 you for that, because the passion of some of the  
6 people here, you can't cover that in three minutes,  
7 like when the County Council or whatever meeting  
8 says, we're going to give you three minutes. It was  
9 incredible.  
10 You know, it's funny, I'm up here for  
11 about five minutes to seven minutes, and other  
12 people go -- and I know it's the end of the day, and  
13 half the people left, and it's fine. That's why I  
14 cut this down to just a couple of points. I hope I  
15 don't miss them.  
16 So by the way, A & B is not going to get  
17 the 30-year lease. They're not even going to get --  
18 hopefully, a one-year lease, but they're not going  
19 to get the 30-year lease because of what's happened  
20 in this room today.  
21 And it's not stopping here. It's been  
22 going on for generations, you guys know. So the  
23 EIS -- but we have to stay on top of that.  
24 And just as a side mention, I want to talk  
25 about development. There's about a half a dozen

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

124

1 developments right here around Haiku already, just  
2 popping up, that we don't even know about, right  
3 here around the Haiku Community Center here. So  
4 it's going to keep on happening, keep on happening,  
5 keep on happening. People have mentioned some of  
6 the other ones.  
7 And I think that's about the things that I  
8 wanted to add that I didn't hear people talking  
9 about.  
10 But again, now put in your EIS that A & B  
11 does not deserve it. The people should have the  
12 water and the people that live on the East side of  
13 Maui. And there's plenty of water. For the people  
14 that need the water upcountry, somewhere else, can  
15 then ask the community of East Maui, hey, could we  
16 have some of your water, not the other way around.  
17 Thank you, Berna. You run a brilliant  
18 meeting.  
19 MODERATOR SENELLY: Lucienne.  
20 And here's what I'm going to do after  
21 Lucienne speaks. It's almost 8:30. Several of you  
22 raised your hands. Here's what I'm going to do.  
23 I'm going to ask you to, after she's done, just say  
24 a little bit and put something in writing. Okay?  
25 Because I promised 8:30.

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

125

1 MS. DE NAIE: Mahalo. My name is Lucienne  
2 de Naie. I've lived in Huelo for 30 years. Me and  
3 my neighbors are the ones that kind of started this  
4 process, along with the folks in Nahiku and Keanae  
5 and Wailuanui, and we've been waiting for more than  
6 20 years for this EIS. So I'm going to speak to  
7 what I think should be in the EIS exclusively.  
8 MODERATOR SENELLY: Thank you.  
9 MS. DE NAIE: First of all, this is not  
10 about taro farmers and rural residents versus  
11 upcountry farmers and residents.  
12 So the EIS should be very clear that there  
13 may be alternate ways for folks upcountry to get the  
14 water they need.  
15 And we all support the ranchers and  
16 farmers having water, the ag parks, the Department  
17 of Hawaiian Homelands, and even folks that want to  
18 farm in Central Maui. The thing is how. And this  
19 EIS needs to look at real alternatives of how.  
20 We need to see if there should be crops  
21 that would use less water. We need to see if  
22 improving our soil would mean that all crops need  
23 less water. We need to take a hard look at the  
24 stuff that would affect how much water we use.  
25 We need to look not at the status quo, as

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

126

1 many people have said, but the existing conditions  
2 and impacts, and there are many.  
3 And we need to address the impacts of our  
4 overgrown streams. We see this in Huelo. Just  
5 letting the water out is not going to solve the  
6 problem. Someone needs to take care of those  
7 streams.  
8 The EIS also needs to have better maps.  
9 The maps, you know, they don't meet the standards  
10 that you're going to need to have information.  
11 First of all, there are not 39 streams.  
12 The decision and order of the hearings officer has  
13 named 43 streams in the lease area. And there are  
14 more if you count the tributaries. But these main  
15 43, I suggest you look at his decision and order.  
16 It's being used by everybody.  
17 There are not five streams being proposed  
18 to be restored. There are eight streams, and they  
19 are by name. And I'm not going to take time to name  
20 them, but if I turn in written stuff, you'll get  
21 their names.  
22 The EIS needs to look at alternative  
23 management plans, like several other people have  
24 said, and look at the economic side of it. So what  
25 else could be done. Could we have these smaller

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

127

1 leased areas? Could we have partnerships in leasing  
2 the land? Does it just have to be the one, you  
3 know, big banana there, A & B? You really need to  
4 take a look at that. The three alternatives are not  
5 enough.  
6 The EIS needs to look at alternatives for  
7 managing the watershed lands.  
8 Let me tell you, boys and girls, we're not  
9 going to keep having water unless we take care of  
10 the lands. It's like in 30 years, I've seen them go  
11 so downhill. They're not going to produce the same  
12 amount of water. So we'll be fighting over less and  
13 less.  
14 We need to grow water and grow our care.  
15 And that needs to be examined in the EIS, what the  
16 strategies for that would be, how much it would  
17 cost, because it's part of awarding any leases, the  
18 kuleana part.  
19 The EIS needs to have specific  
20 stream-by-stream information, both historic use and  
21 proposed diversion. We have no idea what's being  
22 taken out of these streams. That needs to be in the  
23 EIS.  
24 There also needs to be specific info on  
25 how much water is derived from the streams that are

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

128

1 outside the lease area. And those, you know, we can  
2 list those, too, but there's dozens of streams that  
3 are not in the lease area that all go to A & B right  
4 now and are part of their, you know, potential water  
5 source. But we don't know how much that is. So  
6 they're asking for 115 billion on top of all those?  
7 That's just like double dipping.

8 I'm getting to the end.

9 The last thing we really need to look at  
10 is the upcountry water system the county has. This  
11 water system is being very inaccurately portrayed in  
12 the draft prep notice.

13 First of all, there's no map that shows  
14 that the County's two-pipe system was supplied.  
15 Half the water, they use in the upcountry system.  
16 So all the farmers and ranchers that want water, the  
17 Hawaiian homeowners, that's the water that's sent to  
18 them.

19 The Kula pipeline, the lower one and the  
20 upper one, they are not on your maps. They do not  
21 go in the lease area. They go to streams, they go  
22 to five streams, four streams in East Maui. They do  
23 not go in the lease area.

24 So half the County's water is not even  
25 affected by this lease. The EIS should make that

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

129

1 very clear, and it should analyze what the wells of  
2 the County produce. They're barely using their  
3 wells. Half a million gallons a day for that  
4 Dowling well. I read the well reports.

5 I don't see any information like that, you  
6 know, even proposed to be discussed. It should be  
7 in there, and I will write some comments.

8 And I'm going to conclude by saying that  
9 if you put all this information together correctly,  
10 you will understand what really needs to be taken  
11 from East Maui streams, and that number is going to  
12 drop a lot lower, and then we can talk about how  
13 long the lease should be.

14 But 30 years, I think should -- there  
15 should be alternatives, like fish and wildlife and  
16 others that have suggested. 30 years is not the  
17 only number that should be discussed.

18 And public access to the lands needs to be  
19 discussed, too, as has been brought up by many  
20 others.

21 Thank you.

22 MODERATOR SENEALLY: Thank you, Lucienne.

23 I'm going to have Father to come up and  
24 say a closing prayer.

25 Who wants to speak and say something very

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

130

1 short? Okay. Let's do it fast.  
2 Who wants to speak? Can you come over  
3 here? Please be quick.

4 MR. BALDWIN: So my name is Dwight  
5 Baldwin.

6 I want to start with asking that -- you  
7 guys, thanks for having this meeting.

8 I would like to request EIS to have a  
9 thorough analysis to watershed conditions, with the  
10 current conditions right now with A & B, the past  
11 conditions with diversions running, and future  
12 projected conditions, even multiple scenarios.

13 I want to look at the impacts on the East  
14 Maui groundwater, including spring formation and  
15 tributary streams, and if possible, get your  
16 engineers to calibrate the model of the past and  
17 future -- I mean calibrate it to the past events and  
18 just estimate a model of the groundwater flow and  
19 stream conditions with scientific accuracy.

20 Because I think this is a good opportunity  
21 to understand more about what is going on in East  
22 Maui in the past and in the future, because there  
23 aren't accurate gauges and, you know, it would be  
24 good to have reliable, open access to information,  
25 and I think this could be a good stepping point for

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

131

1 that.

2 Thank you very much. That's all I need to  
3 say.

4 MODERATOR SENELLY: Thank you.

5 You're going to come up so that everybody  
6 can see you. And if you can say your name.

7 MR. LIU: My name is Elden Liu, and I'm

8 here tonight concerning this water issue here.

9 But I'm here to just say my ancestor was  
10 an ali'i. His name was Hikio. He was given  
11 Kaupakalua and he was given East Kaupakalua, which  
12 is Jaws, and he was also given a place in West  
13 Makaiwa that has all the A & B lanes coming down  
14 with the water. The water comes out of the  
15 Kaupakalua.

16 And so I'm just here to say I've spoken to  
17 A & B, and I've spoken to their attorney at the same  
18 time too, a representative, Mr. Helia, who manages  
19 the EMI system. We had a very pleasant  
20 conversation. I wanted to let him know that I did  
21 have interest.

22 And I'm the sixth generation from Hikio,  
23 who was the original. He was an ali'i.

24 And so I would like to be consulted with  
25 on some of these decisions that are going to be

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

132

1 made. After all, the royal patent cannot be sold;  
2 and if A & B is selling that, they're in big --  
3 hang onto this, please. I want to read real quickly  
4 what the law, the federal law says about this.  
5 "A warranty deed cannot stand  
6 against a land patent in Hawaii, or a  
7 royal patent. A grant of land, made  
8 patent, is public law standing on the  
9 statute books of the state or nation.  
10 It is notice to everybody subsequent  
11 purchaser under any conflicting sales  
12 made." "Wineman versus Gastrell."  
13 "The land patent is permanent and  
14 cannot be changed by the government  
15 after its issuance. Where the United  
16 States has parted with title by a  
17 patent legally issued and upon surveys  
18 made by itself and approved by the  
19 proper department, the title so  
20 granted cannot be impaired by any  
21 subsequent survey made by the  
22 government for its own purposes."  
23 "Cage versus Danks."  
24 I would like to be considered to sit in meetings  
25 discussing things that are happening on my family's royal

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

133

1 patent.  
2 MODERATOR SENELLY: Thank you.  
3 For the rest of you, can we make it short,  
4 please?  
5 MR. HALLER: Aloha. My name is Alex  
6 Haller. I'm born and raised in Haiku. I've lived  
7 on East Kuiaha Road my whole life. And I live one  
8 property below the EMI diversion, so I know what  
9 it's like.  
10 No lips. So when there's not a lot of  
11 rain and the water is coming down the stream,  
12 there's a 6-inch lip on a lot of these diversions.  
13 So there shouldn't be any minimum criteria  
14 of overflow to go down, you know, to makai.  
15 So all of the lips on every single  
16 diversion should be redone. And also the grates.  
17 Someone mentioned the grates earlier. The grates  
18 are no good as well.  
19 If there's a hundred -- you know, so  
20 around 100 streams, and there's four main levels of,  
21 you know, the system that runs east to west, that's,  
22 you know, a potential 400 diversions.  
23 So we should see it on a huge map from  
24 Maui, each diversion. Yeah, it's going to be 400  
25 pictures with, you know, an engineer to redo it, you

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

134

1 know, in six months.  
2 And the second point is there are Land  
3 Commission awards and po'aliima lots. That's just as  
4 important as the EIS. And that's what Mr. Liu just  
5 mentioned with the royal patents.  
6 And I'm one of the defendants in the  
7 Naweiiwa, and that's actually -- we're waiting for  
8 the results.  
9 So that's extremely important, the land  
10 commission awards.  
11 MODERATOR SENELLY: Thank you.  
12 MS. REILLY: My name is Rose Reilly,  
13 and --  
14 MODERATOR SENELLY: Okay. Can I ask you,  
15 if you have something written, will you please  
16 consider turning it in as opposed to speaking? Just  
17 a thought, please.  
18 Go ahead.  
19 MS. REILLY: I would just like to say that  
20 I see that the streams reaching the ocean with all  
21 of the fish that are produced as fundamentally  
22 important to the survival of the people, and that  
23 for as far as Hawaiians are concerned and as far as  
24 everyone's concerned, we are here in Hawaii because  
25 of Hawaiians. The way that they made this place is

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

135

1 what has made it so special and that everybody wants  
2 to be here because of it. And that they're here,  
3 they all are, with their lands and their water  
4 management, and like the system is set up to manage  
5 this.  
6 The environmental impact is in their  
7 history, and they know the whole thing, and they're  
8 the ones that should be saying like, you know,  
9 restore the forests. Like that's all these  
10 different levels of having -- you have the  
11 groundwater, the middle, the upper. You know, like  
12 the animals.  
13 This system that is being imposed, this  
14 colonial system is killing all of us. Please do not  
15 be a part of that.  
16 MODERATOR SENELLY: Did you state your  
17 name?  
18 MS. REILLY: Yes. My name is Rose Reilly.  
19 MODERATOR SENELLY: Thank you, Rose.  
20 Okay. Say your name.  
21 MS. COSTA: Jocelyn Costa.  
22 First of all, I would like to address the  
23 purpose of the HISPAN. The purpose of the EIS  
24 process is to disclose to government agencies, the  
25 general public, stakeholders and decision-makers the

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

136

1 anticipated impacts.

2 I'd like the impacts to be started from

3 the inception. I would like that to be included.

4 I'd like to know the timetable and dates to

5 determine these anticipations. I'd like to know why

6 the kuleanas were omitted from this process. It's

7 not in this process. And I would like to know what

8 will happen if they're -- when they discover all of

9 the irreparable harms that has already been done.

10 I think it would be too incomplete if you

11 started with anticipated impacts.

12 Within the impacts, will you be studying

13 the soil, surface water, cultural resources, and

14 coastal waters measured from inception?

15 Will the data include significant

16 knowing -- not of outside book knowledge -- to make

17 a determination? Everyone knows who writes the book

18 tells the story; and we have living generations that

19 are of knowing, that have survived the direct

20 historical impacts. Please include them.

21 As far as page 1-1, the description,

22 description of the purpose, "Background:" Since

23 1878, A & B or its predecessors and EMI have held

24 various -- blah, blah, blah -- permits. And use of

25 water from the State lands, please correct them. It

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

137

1 should reflect that the lease came from the Kingdom

2 of Hawaii. There was no such thing as State land in

3 1878.

4 Also I want to propose, in accordance to

5 1.2 "Approval," meaning the direction of consent,

6 include the consultation of the representatives for

7 all affected areas that will not only provide but

8 receive water included in this EIS. We should be

9 part of the consultation board. We shouldn't be on

10 the outside, speaking into the EIS. We are part of

11 DLNR.

12 So I think it would assist in your scoping

13 if you were to have each representative be a part of

14 this process.

15 And on 1.3, "Proposed Action." And so I

16 just briefly went over this, but I'm going to be

17 doing more extensive written.

18 Okay. A correction and/or addition to the

19 fourth sentence of your 1.3.

20 "Purpose of developing, diverting

21 and transporting the use of

22 government-owned waters."

23 It should read "kuleana waters"

24 only.

25 MODERATOR SENEALLY: Thank you.

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

138

1 Again summarize as much as you can.

2 MS. CHASE: I'm not summarizing. I'm

3 reading it. And I've been here a long time, and

4 I've traveled for two years to cover this issue, and

5 I will speak directly to the EIS.

6 Just because I'm making a presentation

7 doesn't mean I condone this process.

8 Faith Chase. No pun intended.

9 MODERATOR SENELLY: Did you say your name?

10 I'm sorry.

11 MS. CHASE: Faith Chase. No pun intended.

12 I don't condone this process, but I'm

13 going to give my testimony because I've showed up to

14 make sure that everybody knows that in this process,

15 DLNR, Department of Water, the Senate, the House of

16 Representatives, that I'm watching.

17 I would like the EIS to examine the

18 contract language of the original sale of the Nahiku

19 and Keanae property that was once bought by Kaupo

20 Ranch -- it's searchable and findable -- at the turn

21 of the century. I haven't seen it, but I'm

22 wondering if there's any language in there that

23 might be salvaged.

24 I would like the EIS to review the

25 repeated letters and news in the Maui News from the

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

139

1 beginning -- the beginning of time, mentioning and

2 reporting the numerous repeated pleading to HC&S and

3 A & B to consider sustainable ag and consider that

4 they haven't considered.

5 I would like the EIS to include a review

6 of all the meeting minutes that were held at Keanae

7 School from the start to the end. I would like --

8 from the Maui County Council, to be specific.

9 I would like the EIS to include the

10 minutes of all Water Resource Committee, Maui County

11 again, where Hana, Keanae, Nahiku, Waialua and

12 Kailua are on the agenda.

13 I would like the EIS to include the

14 reporting of the 2016 seed worm breakout group

15 discussions and their findings, which I was at but

16 I've never seen, and I was told I'd get it e-mailed.

17 I would like you to also include the

18 recent 2017, though limited, seed worm, and though

19 about DHHL, there was a lot of language about this

20 and our sacred rocks at Iao. I want that included.

21 I would like the EIS to include the review

22 of all testimony of the Hawaii State Legislature

23 2016 Senate bill 3001 that didn't pass and the

24 resulting House bill HB2501, or better known as the

25 "water theft bill."

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

140

1 I would like the EIS to include the  
2 numerous petitioners, the number of petitioners, and  
3 all the comments in the Sierra Club petition  
4 relating to HB2501.  
5 I would like the EIS to also include the  
6 number of petitioners and all the comments in the  
7 petition to the governor to veto HB2501.  
8 Lastly, how have these areas been  
9 affected.  
10 I want a socio-cultural consideration to  
11 be made.  
12 Thank you.  
13 MODERATOR SENELLY: Thank you.  
14 MS. MURPHY: Thank you so much to everyone  
15 who's presented tonight, who's spoken up and stood  
16 in their truth about what's happening.  
17 MODERATOR SENELLY: Excuse me. What's  
18 your name?  
19 MS. MURPHY: Yes. My name is  
20 Aubrie Murphy.  
21 MODERATOR SENELLY: Thank you, Aubrie.  
22 MS. MURPHY: Also I just want to share my  
23 main point is please be complicit in this necessary  
24 change.  
25 I'm not entirely convinced that this

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

141

1 meeting is of the highest design and order.  
2 We have somebody taking minutes, great; we  
3 have camera people, great; we have a person who's  
4 supposed to be collecting information writing on a  
5 scrap of paper.  
6 I found out from our facilitator over here  
7 that this woman does not actually work for Wilson  
8 Okamoto. She doesn't know how she's affiliated or  
9 what she really --  
10 (Simultaneous speaking between Ms. Murphy and  
11 the moderator.)  
12 MS. MURPHY: Well, that's what this woman  
13 said over here. I'm not entirely sure.  
14 My base point is that I'm not entirely  
15 convinced that this collection of information is of  
16 the highest order.  
17 I ask you to be complicit in this change.  
18 Go to WOC at Wilson Okamoto, voice  
19 yourself. If you do not, other people will make  
20 these choices for you. Continue the fight, continue  
21 to speak your truth, continue to protect your water.  
22 And I also want every one of you, please,  
23 if you can, reach out to me, I want to share your  
24 story. I'm a published writer. And I'm Mermaid of  
25 Hookipa. I've had my ocean conservation project

142

1 since August of 2015. I host beach cleans. I write  
2 consciously created articles with scientifically  
3 backed research.

4 But I want to tell your story about what  
5 you've experienced as generations of Hawaiians.  
6 Please reach out.

7 My Facebook page is "mermaidofhookipa."  
8 It's open, everyone can come. Please share your  
9 story with me. I want to help make this a reality.  
10 I want the water to go back to its rightful

11 stewards.

12 Aloha.

13 MODERATOR SENELLY: Aloha.

14 MS. POWERS: Aloha. I'm Megan Loomis

15 Powers.

16 MODERATOR SENELLY: Megan Loomis Powers.

17 MS. POWERS: Yes.

18 MODERATOR SENELLY: Okay.

19 MS. POWERS: Thank you, everyone, for all  
20 your incredible sharing and your spot-on, you know,  
21 right to the number responses.

22 I grew up right next -- I grew up on  
23 Ho'olawa Stream, which was an absolutely dry stream.  
24 And thank goodness for Stephen Cabral. He was the  
25 guy who managed the gates most of my life, the EMI

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

143

1 gates. He knew that streams needed a certain  
2 minimum amount just to try and survive.

3 And so every year, he would give us at  
4 least six weeks of uninterrupted stream flow. And  
5 what was so amazing is you would watch life start to  
6 return. And all the mosquitoes would get washed  
7 away, and the frogs would come back, and they'd eat  
8 the rest of the mosquitoes that were growing in the  
9 bananas.

10 And what we're here defending is that we  
11 know that is -- the East Maui watershed is the  
12 supply of water for the big half of Maui, and  
13 it's -- everybody's water depends on that. And if  
14 we don't steward that mountain, if we don't steward  
15 that watershed, if we don't take care of the plants  
16 that gather the rain and bring it down to the earth,  
17 we're cutting off future generations.

18 And we know that because we've lived there  
19 and witnessed it, like your beautiful child with  
20 some mysterious disease that you don't have any way  
21 to fix just withering in front of you.

22 And the thing is living systems, they can  
23 only take so much abuse until something breaks,  
24 until you get cancer, until, oh, my goodness, how  
25 many species have gone extinct on the East Maui

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

144

1 watershed in the last 120 years. You know, that  
2 should be something in the EIS. How many species  
3 have gone extinct.

4 So what I am observing is that there's  
5 been 120 years of severe mismanagement of this  
6 watershed that serves not only the people living  
7 here now but future generations and future  
8 generations and future generations.

9 And that mismanagement also includes the  
10 36,000 acres of A & B land that now doesn't even  
11 hold water because they never, not once, let land be  
12 fallow. They never gave back to the soil. There's  
13 no humic acid in the soil to hold water.

14 I mean, we've seen studies. We've done it  
15 at the farm conferences. You pour water into  
16 A & B's soil, and it doesn't even make the dirt wet.  
17 It just runs around the outside and drips out.

18 If you have healthy soil, it holds water.  
19 There's so many studies that show if you have good  
20 humic acid content in your soil, you can reduce  
21 watering by 70 percent. Wow, 70 percent of the  
22 water gets to stay in East Maui.

23 That's what we need. We need good  
24 management. This is just the beginning of like  
25 recognizing that.

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

145

1 And what she said about go all the way  
2 back to the beginning, we need to -- this is not the  
3 baseline. Right here, this is not the baseline.

4 The baseline needs to be way back when it  
5 was a healthy ecosystem; and we need to make plans,  
6 and this EIS has to direct that planning, to support  
7 bringing, regenerating and restoring what's already  
8 been damaged. And the same goes for the soil out in  
9 the valley.

10 So I know I had something else to say, but  
11 thank you very much.

12 MODERATOR SENELLY: Thank you.

13 Hello again.

14 MR. SLATER: Hi. Steve Slater.

15 I would like to have some -- well, first  
16 thing, I think 30 years is way too long the way  
17 science and biology is going.

18 I mean, we're just breaking the surface of  
19 how important the microbial systems are to the soil,  
20 to our own human bodies, how much symbiotic both  
21 bacteria, virus, fungus. Just it's a whole new era.  
22 To lock us into a 30-year lease at this point, I  
23 don't think the EIS can be at all functional.

24 I think if we did an EIS in two years or  
25 five years, I think we'd be talking about completely

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

146

1 different things on the watershed, like the  
2 connection of the microbial system from the ocean,  
3 like miniature salmon, microscopic salmon swimming  
4 upstream, carrying nutrients.  
5 I mean, we're in a whole 'nother era. I  
6 just find it's going to be very difficult to get an  
7 accurate EIS unless we bring in state-of-the-art  
8 science these days. And I don't think we're going  
9 to get that on Maui.  
10 I really think you'd have to bring in some  
11 cutting-edge biologists, look at the whole microbial  
12 system, what it means to endangered species.  
13 And we're at a time when we're not going  
14 to get a lot happening in a short period. So why  
15 can't A & B be satisfied with a one-year lease?  
16 They've been living with it for all this time, and  
17 now major changes are happening.  
18 I just can't -- you know, that leads me  
19 back into the Glyphosate/Roundup problem, like the  
20 gentleman was explaining. So much spraying. Not  
21 just on the edges; but because it's difficult for  
22 them to go, they spray right in the water.  
23 Could we possibly get a study? You're not  
24 going to be able to go take water samples and find  
25 glyphosate, but couldn't we study some of the people

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

147

1 who have used it as drinking water?  
2 Could they have free access to a urine  
3 test and maybe compared to these people have a  
4 higher rate of glyphosate?  
5 And remember, glyphosate also kills the  
6 microbial content. It's like it's got more  
7 repercussions than just if it gave something to  
8 human health. It's changing the whole biosphere of  
9 the area.  
10 So why didn't A & B ever -- they've never  
11 had to say how much they pumped. A & B has a record  
12 of being able to put poisons out, not inform the  
13 Health Department, not inform the County, keep  
14 secret lists. Could EIS look at what chemicals have  
15 been put in the stream?  
16 And also, A & B has been spraying -- HC&S  
17 has been spraying the cane with glyphosate to make  
18 it dry so they can burn it. That has gone into the  
19 ocean. Plus what they're spraying into the fields.  
20 So what they've put on the fields also  
21 compounds what's coming down the streams.  
22 Is that possible?  
23 Also, you know, I own a property for the  
24 last 15 years where I can only live on catchment.  
25 Even though I have rights on my deed to two ditches,

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

148

1 Lowrie Ditch, Haiku Ditch, and Waipio Stream, I  
2 can't exercise those rights.  
3 You can't talk to EMI about using rights  
4 on your deed. It's a whole legal battle. You're  
5 looking for trouble.  
6 I have to live on catchment. It's \$200  
7 per thousand, I pay to have it water trucked in.  
8 Not \$3 dollars.  
9 And the last thing is what does this EIS  
10 cost? Because if some group or the County wants to  
11 reimburse for the EIS, is this EIS going to be so  
12 expensive that it's going to make that \$160,000  
13 starting point double? Do we know what this EIS is  
14 going to cost?  
15 MODERATOR SENELLY: Okay. That's the last  
16 speaker.  
17 Actually, we have one more very important  
18 speak. It's Father.  
19 But let me say this. Thank you. I know  
20 at times we -- you know, we just try different  
21 things.  
22 Just for your information, the person who  
23 brought this up, I'm actually an independent  
24 consultant to Wilson Okamoto, and I've done a lot of  
25 facilitation as well as mediation and social impact

RALPH ROSENBERG COURT REPORTERS, INC.  
(808) 524-2090/courtreporters@hawaii.rr.com

149

1 stuff.  
2 And actually, you can ask Isaac Hall,  
3 because I've worked with him.  
4 Okay. I'm going to ask Father to say the  
5 pue.  
6 And also, anybody who has any feeling  
7 about helping us put stuff away, that would be  
8 really nice.  
9 Oh, and you know what. You know the  
10 water, if there's anything left, please take it.  
11 (Closing pue by Father Tomoso.)

**APPENDIX M:**  
Scoping Meeting and EISPN Comments and  
Responses

**SUBJECT: EISP: PROPOSED LEASE (WATER LEASE) FOR THE NĀHIKU, KE'ANAE, HONOMANŪ, AND HUELO LICENSE AREAS – SCOPING MEETING, FEBRUARY 22-23, 2017**

This EIS should address the historical & cultural implications of this water & land lease. The water & land issues present are agricultural & livelihood issues. There are communities & people that need access to this land & water to continue their culture. This land & water belongs to the Hawaiian people and this must be recognized. The environmental issues such as plant & animal that have historically existed must also be addressed. A&B is no longer an agricultural entity and they should not be treated as such. I am strongly opposed to this 30 yr lease.

Mr. Adam Lonig

Subject: Environmental Impact Statement Preparation Notice  
 Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū and Huelo License Areas

Dear Mr. Lonig:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments received during the February 23, 2017 EIS Scoping Meeting. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui. The environmental impacts of the potential Water Lease will be assessed.
2. The Draft EIS will include in Chapter 4 an assessment of the impacts of the Proposed Action. Various technical studies will be appended the Draft EIS and provide detailed examinations, including an Archaeological Literature Review and Field Inspection (See Appendix E) and a Cultural Impact Assessment (See Appendix F).
3. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I)

4. Trutta and SWCA prepared reports in support of the Draft EIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the Draft EIS (See Appendix A and Appendix C).

Your written and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23 2019 at the Office of Environmental Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP  
Vice President, Director of Planning

Ms. Alohalani Smith

February 22, 2017

Maui Electric Company Community Meeting Room

Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MS. SMITH: Aloha, everybody. I'm Alohalani Smith. I live out in Kaupo and I have also lineal descendant in the (Hawaiian name) side, we grew up outside there. I am the Aha Moku Kaupo representative. I've worked in the national parks and DOWFAW in the natural resources management, but as well as it goes with that, development is needed, you know, I'm not against it. I support it, I was a carpenter too and that, I'm looking for smart development. But before we even start with development, we need water and we need to settle the water issue.

Now, it was mentioned on the state owned land in the 40 license areas the EIS study alternative, okay, I want to them to study, which I'm going to propose a solution: To cancel the lease, okay, because the DLNR and the state can take back the water system from A&B. The restoration to the irrigation system too can be worked on. Now, they can also work with partnerships. Just like what Kamalani was saying, is that the people can do it. We have a lot of partnerships right before us. Also the ohana's, okay, the ohana's can help. And by doing this we can save money for the state by having stewardship which was number one in the beginning.

Now, for example, we have this aha moku system and it is every ahupua'a that we take care of our kuleana from mauka to makai, even to the (Hawaiian word) where fishermen can also benefit. Now, all of this will benefit everybody, especially the communities that can take better care of our own, yeah, resources, our kuleana. So the state in the meantime will save money and make money back. Now, this would support our water system as Maui grows, it's that simple. But if A&B will really wants to take care of Maui, A&B should donate the restoration of the irrigation system and train the state workers or the partners as a tax write-off for the deduction and give back to the people. There's nothing wrong, it's that simple. So thank you very much for your time.

Subject: Alexander and Baldwin's Water Lease

Aloha Mr. Matsukawa,

I would like to suggest a solution to all the deep issues regarding Alexander and Baldwin's Water Lease. Maui is the only State with it's own Island/State that doesn't own jurisdiction on its own water resources.

The Community of Maui has voiced their deepest concerns in opposition about A&B violating the permit process in the past with the help of DLNR. It goes to show how corruption works in Hawaii. It's a no brainer and well understood in the National and International regions. I totally oppose Alexander & Baldwin gaining this Water Lease.

I am the Maui Island Council Member (Kaupo) for Aha Moku Act 212. It is my belief that the water should be returned to the state-DLNR to take back the responsibility. No excuses! I have included the Maui Island Council Members in this email to assist you in knowing the other districts (Moku) contacts of Maui.

How? The Community (Ohana and Partnerships) of Natural resources (AMAC ACT 288 under DLNR) are available to assist the State. The State hasn't ask us yet, we are an active Council right under their noses. There are Rules of Practices intact for Aha Moku Advisory Committee of Act 288 that could be activated. These Rules were a combination of Community, Scholars and Government workers putting it together.

Next, Alexander & Baldwin shall give up any/all rights to the people's water. They can receive a hefty tax right-off

for restoring the diversion system and turning it over to the State/Community & Families who share this water through a training process of the irrigation system. There are ex-employees that would step back in the ring for water preservation. Then the State can make monies back to get out of the deficient we will be in 2019. Think about that, only two years away.

What History has showed is how the water can be cared for with the Kuleana of the people and the Aha Moku system that was intact for thousands of years (no money included). Yet Today, funds can be accessible through Non-Profit grants and funding that exist.

This is just an idea that would be in harmony for the whole Island of Maui and all the other Islands who are affected in this on-going slaughter of rights and justice.

Thank you for your time.

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Ms. Smith:

Thank you for participating in the scoping process for the subject Environmental Impact Statement pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas, your oral comments on February 22, 2017, as well as your written comments dated March 15, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued *"right, privilege, and authority to enter and go upon"* the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the *"purpose of developing, diverting, transporting, and using government owned waters"* through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.

Your oral and written comments, and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

**To:** Wilson Okamoto Corporation  
**Subject:** EISPN: Proposed Lease(water lease)For the Nahiku, Ke'anae, Honomanu, and Huelo, License Areas

- Please include in your Environmental impact assessment;
- species of fish, prawns, and plant life.
  - How this lease would affect all native cultural uses of water for all areas affected.
  - diversions have affected these uses and comparative analysis on the similarities or differences of this diversion.
  - Research on how the previous diversions have affected these uses and comparative analysis on the similarities or differences of this diversion.
  - loss of soil to run off and erosion.
  - How the diversion will affect soil or the Comprehensive studies of bird species, including the Ne Ne which have been coming down to the area again in recent years, in the lao and all areas affected by the proposed water diversion and the impact it would have on them.

Thank you for taking the time to read this. Our water is precious as is our soil in Maui. Please take all these things and more (I am no scientist, there is much more to include), into consideration in your statement.

Mahalo.

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Al:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments dated March 9, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, & Decision and Order (D&O). Various technical studies will also be appended to the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I)
3. Trutta and SWCA prepared reports in support of the Draft EIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial

flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the Draft EIS (See Appendix A and Appendix C).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

**Subject:** EISPN; proposed lease - east Maui

Aloha my name is Alana Dandrea and I was born and raised in Haiku, Maui.

When I think about what an environmental impact statement really is I try to break it down to the basics, it's a statement or document describing the impact something has on the environment.  
It doesn't take a scientist or professional to tell you if you put metal and cement grates and walls inside a natural stream or river that there will be major impacts.  
What I don't understand is how A&B and EMI can have control over all this water for all this time while we all know that what they are doing is extremely impacting the surrounding

environments negatively.  
I am requesting in this EIS that it be required no matter what that there be an alternative solution that allows more than 50% of the water running in every stream to flow mauka to makai.  
I recently saw a video of a Current east Maui stream which had a diversion about 3 feet wide and only about 10 inches open so water can flow down stream. That is not right.  
On A&B's own website it clearly states their corporate responsibility "the environment is a top priority for A&B and we believe that protecting our natural resources and operating with a high level of concern for the environment is vital to sustaining a healthy community and a healthy business".  
If this statement A&B said were true and they were living up to their responsibility, I don't think we would have such a long history of water rights issues.  
And the question comes up again, why are we allowing these inconsiderate greedy liars to control our islands most valuable resource ??  
It's common sense when you think back to the Hawaiians and their self sustaining system of living for thousands of years, they were not impacting the environment negatively from having a natural non diverted stream flowing-- they lived in a thriving ecosystem. Do the math. It's time for a change. It's time to make Hawaii Hawaiian again.  
So in conclusion I feel A&B needs to prove to us, the people, the real stewards of this land that they are doing everything that they can to live up to their own words and responsibilities and get their diversions as close to natural as possible. No private corporation should own or even be able to lease more than 50% of the water. We the people, the aina need more than 50%.  
I also feel that there needs to be a native Hawaiian cultural and environmental professional watching over and working with EMI and A&B to ensure they are doing what is best to preserve,

respect and restore what is culturally, environmentally and physically important to the land and the people. The EIS needs to examine every possible impact on every single stream. I'd like to see public documentation of each stream, where the water is being used and diverted too, how much is needed min and max and making sure each stream flows mauka to makai. A&B cannot be trusted with a 30year lease for all this land and water until they prove their words and actions are in the best interest of the aina, the people and Mother Nature. Enough lying, we are all watching and we know actions speak louder than words. I also feel whoever is going to be leasing this land and water needs to read over the Maui island general island plan for 2030. There are many goals, objectives and visions that clearly state what we need to do as a community to thrive.

Mahalo nui for this opportunity

Ms. Alana Dandrea

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Kē'anae, Honomanū  
and Huelo License Areas

Dear Ms. Dandrea:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Kē'anae, Honomanū, and Huelo License Areas and for your written comments dated March 1, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Kē'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
3. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM)

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended to the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

4. Trutta and SWCA prepared reports in support of the Draft EIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the Draft EIS (See Appendix A and Appendix C).
5. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.
6. The Draft EIS will include in Chapter 5 an assessment of the consistency of the Proposed Action with the Maui Island General Plan.

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP  
Vice President, Director of Planning

Maui Electric Company Community Meeting Room

Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MR. FRANCO: Thank you. My name is Alex Franco. I'm with Maui Cattle Company. A number of years ago a group of ranchers got together to form the company in an effort to try and keep our cattle home for the local marketplace. For a number of years our cattle has been shipped to the mainland to supply the markets there and the local ranchers felt that, gees, we should try and keep our cattle home to try and develop a local market. And we were very fortunate that as we got into the local market, there was quite a bit of demand for our product and people sought after our local products. Unfortunately, one of the things that happened five years into our company is we hit a six-year drought that really impacted the ranching community here on Maui as well as the rest of the state. And what that did is it pretty much diverted the market share of cattle coming into the marketplace back to the mainland again because we couldn't sustain those animals here.

And with water being available to come to the central valley, it does provide an opportunity for the potential of irrigated pasture that we could keep more of these cattle here at home. But at the same time, we feel it is very important to have a shared use for the water and realize the importance of what the taro farmers need, but, again, just here expressing the concerns of the drought for our industry and the need to supply water for all of us that's in agriculture here in Hawaii. Whether we're small farmers or larger farmers, we all need the water, so I'm here to try and, you know, ask for support for water being supplied to bona fide farming.

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Mr. Franco:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your oral comments at the February 22, 2017 EIS Scoping Meeting. We acknowledge your comments and concerns, they have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. A description of the Proposed Action is discussed in Chapter 2 of the Draft EIS. The Draft EIS will include in Section 2.1.4, a description of Maui Pono's Farm Plan for the agricultural fields in Central Maui. The Farm Plan is based on the water available of which diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
3. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See

Mr. Alex Haller  
[REDACTED]

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Mr. Haller:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your oral comment at the February 23, 2017 EIS Scoping Meeting. We acknowledge your comments and concerns, they have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. Figure 1-1 in the Draft EIS illustrates the EMI Aqueduct System overlaid on the Department of Land and Natural Resources (DLNR) Division of Aquatic Resources (DAR) geographic information system (GIS) data of streams. An electronic drawing of the EMI Aqueduct System was georeferenced by Akinaka & Associates, Ltd. to depict major diversions on East Maui streams on a United States Geological Survey (USGS) GIS base map. Due to the complexity of the EMI Aqueduct System and the level of detail shown on the map, not all of the minor diversions could be associated with a stream or tributary. The stream names shown are from the DAR GIS database but a few of those stream names may differ from how some East Maui residents may refer to them. Moreover, certain streams that were identified during certain proceedings before the Commission on Water Resources Management (CWRM) do not have

Scoping Meeting Comments of

Mr. Alex Haller  
February 23, 2017  
Ha'ikū Park and Community Center  
Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MR. HALLER: Aloha. My name is Alex Haller. I'm born and raised in Haiku. I've lived on East Kuiaha Road my whole life. And I live one property below the EMI diversion, so I know what it's like. No lips. So when there's not a lot of rain and the water is coming down the stream, there's a 6-inch lip on a lot of these diversions. So there shouldn't be any minimum criteria of overflow to go down, you know, to makai. So all of the lips on every single diversion should be redone. And also the grates. Someone mentioned the grates earlier. The grates are no good as well.

If there's a hundred -- you know, so around 100 streams, and there's four main levels of, you know, the system that runs east to west, that's, you know, a potential 400 diversions. So we should see it on a huge map from Maui, each diversion. Yeah, it's going to be 400 pictures with, you know, an engineer to redo it, you know, in six months.

And the second point is there are Land Commission awards and po'alima lots. That's just as important as the EIS. And that's what Mr. Iiu just mentioned with the royal patents. And I'm one of the defendants in the Naweiliwa, and that's actually -- we're waiting for the results.

So that's extremely important, the land commission awards.

associated GIS data and therefore could not be precisely located on the map. Table 1-2 in the Draft EIS reconciles discrepancies between stream names used in the February 2017 EIS Preparation Notice and the CWRM's June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O).

3. For the purposes of this Draft EIS, the stream list used was from the CWRM D&O which is discussed in Section 1.3.4. The CWRM D&O was also used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area based on the modification or removal of diversion structures in streams designated by the CWRM D&O as full restoration.
4. Chapter 1.3.1 of the Draft EIS discusses properties involved with the License Area and Proposed Action.

Your oral comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP  
Vice President, Director of Planning

**Environmental Impact Statement Preparation Notice  
Proposed Water Lease for the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas  
Scoping Meeting Comments of**

Ms. Alice Lee  
February 22, 2017  
Maui Electric Company Community Meeting Room  
Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

Good afternoon. Aloha, everyone. My name is Alice Lee and I'm a lifelong resident and community volunteer in Maui County. I think it is of the utmost importance that the EIS be fair, balanced, and representative of a wide range of interests that will benefit the community as a whole. These are my concerns. What will be the impact on the over 35,000 residents in Upcountry who rely on EMI for water? Will Upcountry water rates be raised if the county cannot get water from EMI? How will the county be able to provide additional water to Upcountry due to normal population growth. With Nāhiku, will Nāhiku water rates go up if the streams are restored?

Flood control is a significant problem now that the Iao Stream or Wailuku River has been substantially restored. With water constantly running in the stream, it is difficult, almost impossible to maintain the streambeds and control vegetation which allows the water to rise in the stream and increasingly pose a threat to human lives and property damage especially in times of heavy rains as we experienced in 1 September. Will the restoration of East Maui streams cause the same problems?

For over 100 years the stream diversions have contributed to the recharge of Maui's aquifers. What will be the impact of reducing recharge? What will happen to A&B land, over 30,000 acres, with and without stream diversion? If the central plains no longer receive surface water from East Maui, will this not cause an environmental catastrophe in Central Maui, such as serious erosion problems, dust storms, fire hazards? Native birds and animals who thrive in the cane fields, what will become of them?

How will our largest economic driver, the visitor industry, be impacted if much of the land becomes arid and a blight on the formerly lush slopes of Haleakala? Finally, I strongly believe diversified ag. is the best use of the former cane lands.

Thank you for your consideration.

10238-02  
September 23, 2019

Ms. Alice Lee  
[REDACTED]

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Ms. Lee:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas, for your oral comments at the February 22, 2017 EIS Scoping Meeting, and for your written comments dated February 22, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. The Draft EIS studies a proposed long term farm plan by Mahii Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied.
3. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM)

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

EISP Public Meeting Wednesday, February 22, 2017  
Maui Electric Co. Conference Room 5pm  
A&B application for state water lease

Good afternoon,

My name is Alice Lee, a member of GO Maui and a life-long resident and community volunteer in Maui County.

Thank you for conducting this outreach meeting in preparation for the EIS regarding A&B's application for a state water lease. It is of the utmost importance that the EIS be fair, balanced and representative of a wide range of interests that will benefit the community as a whole and not just a few people.

The following are my concerns that I request be addressed in the EIS:

- (1) What will be the impact on the over 35,000 residents in upcountry who rely on EMI for water?
- (2) Will upcountry water rates be raised if the county cannot get water from EMI?
- (3) How will the county be able to provide additional water to upcountry due to normal population growth?
- (4) Will Nāhiku water rates go up if the streams are restored?
- (5) Flood control is a significant problem now that the Iao stream (Wailuku River) has been substantially restored. With water constantly running in the stream, it is difficult, almost impossible to maintain the stream beds and control vegetation which allows the water to rise in the stream and increasingly pose a threat to human lives and property damage especially in times of heavy rains as we experienced in September (2016). *Will the restoration of E. Maui's streams cause the same problems?*
- (6) For over 100 hundred years, the stream diversions have contributed to the recharge of Maui's aquifers. What will be the impact of reducing recharge?
- (7) What will happen to A&B land (over 30,000 acres) with and without stream diversion?
- (8) If the Central plains no longer receive surface water from East Maui, will this not cause an environmental catastrophe in Central Maui e.g. serious erosion problems, dust storms, fire hazards, the native birds, animals, insects, etc. who thrived in the cane fields – what will become of them?
- (9) How will our largest economic driver, the Visitor Industry be impacted if much of the land becomes arid and a blight on the formerly lush slopes of Haleakala?
- (10) Diversified ag is the best use of the former cane lands.

Your favorable consideration to include the above concerns in the EIS will be greatly appreciated.

With aloha,

Alice L. Lee

10238-02  
Letter to Ms. Alice Lee

**Scoping Meeting Comments of**

Mr. Joe Chesledon  
(Speaking on Behalf of Alvin Kalehuawehe)  
February 22, 2017  
Maui Electric Company Community Meeting Room  
Excerpt of Transcription by Ralph Rosenberg, Court Reporters, Inc.

MR. CHESLEDON: Hello, my name is Joe Chesledon, but I am here presenting this statement on behalf of many generation Hawaiian neighbor, Alvin Kalehuawehe. Alvin cannot miss work to be here tonight, but sends this statement as a message.

"As a Native Hawaiian from both family sides, I say to you aloha. Generations ago big sugar and pineapple companies including Alexander & Baldwin of the mainland imposed upon Hawaiians a valuable and irreplaceable water takeaway which has deprived Hawaiians of water and land to use for subsistence farming to feed our ohana and greatly improve our lives and restore what we once enjoyed: stream flow, fish populations, and our agriculture. As a result we have gone from a subsistence ohana to a dependent ohana.

"In sharing our water resources to big sugar by means of what I understand to be 165 million gallons of water per day to 33,000 acres, Hawaiians have been shared out of the ability and right to a self-sustaining way of life. It is my understanding that Maui currently imports more than 90 percent of its food; meanwhile, the Hawaiian farmer, at the expense of big sugar, is deprived of rights to work with the land, to sustain and feed our ohana. We have lost the right to teach our young that we can love our Mother Island and she will take care of us. We need a return of the water rights to us and our ohana. We do not need another theft of water by big sugar, Alexander & Baldwin.

"Mahalo nui loa, Alvin Kalehuawehe."

Mr. Alvin Kalehuawehe

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Mr. Kalehuawehe:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas, for your oral comments at the February 22, 2017 EIS Scoping Meeting, and for your written comments received February 22, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawaii's Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. The Draft EIS will include in Section 2.1.4, a description of Mahi Pono's Farm Plan for the agricultural fields in Central Maui. The Farm Plan is based on the water available of which diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

I am presenting this statement on behalf of my third generation Hawaiian neighbor Alvin Kaleh' uawehe (alpluson3@gmail.com). Alvin cannot miss work to be here tonight, but sends this statement as his message.

As a native Hawaiian from both family sides I say to you, Aloha! Generations ago Big Sugar and Pineapple companies, including Alexander and Baldwin, of the mainland imposed upon Hawaiians a valuable and irreplaceable water takeaway lease which has deprived Hawaiians of water and land to do subsistence farming to help feed our ohana and greatly improve our lives and restore what we once enjoyed and did on our own: stream flow, fish populations and our agriculture. As a result, we have gone from a subsistence ohana to a dependent ohana.

In "sharing" our water resources to Big Sugar, by means of what I understand to be 165 million gallons of water per day to 33,000 acres Hawaiians have been "shared out" of the ability and right to a self sustaining way of life.

It is my understanding that Maui currently imports more than 90% of its food. Meanwhile, the Hawaiian farmer, at the expense of Big Sugar, is deprived of rights to work with the land, to sustain and feed our ohana. We have lost the right to teach our young that we can love our mother island and she will take care of us. We need a return of our water rights to us and our ohana. We do not need another theft lease of water by Big Sugar, Alexander and Baldwin. The water belongs to our ohana Maui.

Mahalo nui loa for your consideration

Alvin Kaleh' uawehe

2/22/17

3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.
4. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Economic and Fiscal Impact Study (See Appendix F); Social Impact Assessment (See Appendix G); Economic and report (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I)

Your oral and written comments, and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

Ha'ikū Park and Community Center

Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MS. MURPHY: Also I just want to share my main point is please be complicit in this necessary change. I'm not entirely convinced that this meeting is of the highest design and order. We have somebody taking minutes, great; we have camera people, great; we have a person who's supposed to be collecting information writing on a scrap of paper. I found out from our facilitator over here that this woman does not actually work for Wilson Okamoto. She doesn't know how she's affiliated or what she really --

MS. MURPHY: Well, that's what this woman said over here. I'm not entirely sure. My base point is that I'm not entirely convinced that this collection of information is of the highest order. I ask you to be complicit in this change.

Go to WOC at Wilson Okamoto, voice yourself. If you do not, other people will make these choices for you. Continue the fight, continue to speak your truth, continue to protect your water. And I also want every one of you, please, if you can, reach out to me, I want to share your story. I'm a published writer. And I'm Mermaid of Hookipa. I've had my ocean conservation project since August of 2015. I host beach cleans. I write consciously created articles with scientifically backed research.

But I want to tell your story about what you've experienced as generations of Hawaiians. Please reach out. My Facebook page is "mermaidofhookipa." It's open, everyone can come. Please share your story with me. I want to help make this a reality. I want the water to go back to its rightful stewards.

Aloha.

**From:** Aubrie Murphy  
**Sent:** Thursday, March 09, 2017 10:08 PM  
**To:** Wilson Okamoto Corporation  
**Subject:** EIS for East Maui Water

To whom it may concern:

I am requesting the EIS of the proposed lease of east Maui water, thoroughly investigate the total disappearance and decline of all species of fish, native to the waters of east Maui. Further, I want these investigations to include the testimonies of every resident in the proposed water lease area: Huelo, Nāhiku, Ke'anae and Hana. I want the EIS to include an investigation into the consequences to local Hawaiian cultural practices, of those who reside near these waters; as a result of the disappearance of entire fish species; the impact it has had on their economic stability and cultural/religious practices, including all of the resident generations subjected to the impact of the previously held water lease and the possible implications of thirty years from now (the duration of the newly proposed water lease). I want the EIS to also include the thorough investigation of the decimation of Kalo agriculture practices within the proposed lease areas and the reasons this has occurred, siting any and all influence by company directed water diversions. Again, I want the testimonies of every resident of the proposed water lease areas included in this impact statement.

Sincerely,

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease for the Nāhiku, Ke'ānae, Honomanū  
and Huelo License Areas

Dear Ms. Murphy:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas, for your oral comments at the February 23, 2017 EIS Scoping Meeting, and for your written comments dated March 9, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. Trutta and SWCA prepared reports in support of the Draft EIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the Draft EIS (See Appendix A and Appendix C).
3. Cultural Surveys Hawai'i and Earthplan prepared reports in support of the Draft EIS assessing the cultural and social impacts of the Proposed Action, respectively (See Appendix F and Appendix G). The impacts of the Proposed Action to traditional cultural resources and

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

practices are discussed in Section 4.6 of the Draft EIS while impacts to the social environment can be found in Section 4.7.

4. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended to the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I)

Your oral and written comments, and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP  
Vice President, Director of Planning

**Environmental Impact Statement Preparation Notice**  
**Proposed Water Lease for the Nāhiku, Keʻānae, Honomanū, and Huelo License Areas**  
**Scoping Meeting Comments of**

Mr. Bob Martin  
February 23, 2017  
Haʻikū Park and Community Center  
Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MR. MARTIN: My name is Bob Martin. Born and raised in Hawaii. I'm a 57-year resident of Kuau and Paia and have spent 75 of my 88 years involved in some form of agriculture. Because of my background, some of what I share may be complex, unconventional, new or even unique.

Alexander & Baldwin, Incorporated, once a very local company, is rapidly changing. Through a stock distribution, it gave its wholly owned Matson Navigation, now Hawaii's fourth largest corporation, to A & B stockholders on a share-for-share basis. It then merged its agricultural divisions into A & B properties. According to Pacific Business News, it is considering a change in its corporate business structure into that of a real estate investment trust by the spring. With 77.1 percent of A & B stock now held by investment managers, it is obviously managed for their benefit. It is noteworthy that investment managers now control 84.7 percent instead of 77.1 percent of Matson Incorporated that was recently distributed by A & B to the stockholders. This suggests that outside investment managers will increasingly control A & B and its Hawaiian assets. This suggests a need for better understanding of A & B's future commitment to agriculture.

A & B has now requested a 30-year lease for a large amount of water. Much will take place in the next 30 years, and it's important that this water be available where most needed. How fast can things move? Since closing HC&S, I understand that A & B has sold 339 acres of land in Paia, where the survey for its county water line was completed before the sale was announced. Progress at this rate can accomplish much in 30 years, but is this development progress? Is it safe? What is happening in agriculture, especially sustainable agriculture? Let's give this some thought. If the numbers were run, I suspect that we do not have sufficient water to produce food for our current population of perhaps 1.4 million, to tourists and the military. I also suspect that agriculture is deliberately being held back by state officials to ensure water for development. Someone needs to run the numbers on this. Obviously, we are short of facts.

We also need to know where we collectively stand on food sustainability, a growing subject of discussion. Most machines work by using the sun's energy, whether derived from fossil fuels, plant products or solar panels. The same energy from the sun powers everything we do as individuals, only we get our energy from a fuel known as food. That is mostly produced through plants; and the progress in the process, we call agriculture. Agriculture a land-based process is noted for the enormous amounts of water the process requires for each unit of food produced. Presently, enormous amounts of sunlight that could be used to produce food in East Maui is being wasted for lack of water. And even more sunlight in central Maui is being wasted for lack of agriculture. Is this smart planning? Historically, the

Hawaiians were able to grow enough food to sustain a million people, as they were hard working and industrious. It may be this population was not larger because of water limitations.

Remember, a sustainable population is limited by what can be produced in a dry year. With the introduction of sugar cane, there was a practice to divert water from adjacent and distant areas, depriving users from their livelihood. Deprived from income, many farmers could not pay taxes and lost their lands. Without farms, many were forced to work as laborers for shipping, sugar, pineapple and construction. The upshot was we lost crops, farmers and farms. With long-term lack of water and more recently riverside drift, our food sustainability dropped from 100 percent to today's 5 to 13 percent...

MR. MARTIN: Shipping to import food from over 2,000 ocean miles away, is this what we want and a risk we choose to take? Before giving water for unidentified and/or unidentified uses, we need to identify how much agriculture we want, where it will be, who will do it, and how much water will be needed. The State has not done this. It has yet to identify the problems or reasons why our sustainability has gone from a hundred percent to the present unknown but unrealistically low figure. Overall, the state has failed miserably to protect its agriculture and its people. But this is not the subject of tonight's meeting. Tonight's subject is what are we going to do with our water.

If agriculture is a serious consideration, let's recognize that I've had 40 years of experience in the Paia nursery, with plant damage from chemicals from the air and County water. HC&S has gone away, but surprisingly, my problems haven't. Based on experience, I can suggest that diversified agriculture as to Baldwin Avenue may also be in for some unexpected surprises. Will this affect plans or schedules? We will find out.

Finally, there was a question of a proper scope of an Environmental Impact Statement. Will the EIS recognize the existence of people on Maui and the merits of converting nonwasted sunlight, falling on East and Central Maui, into food for their use and possible survival? If so, the entire process becomes more complex, as it should be. I hope that some of this -- I hope that some of this material will be of use in formulating the needs of the EIS and some of the things that it must consider and factor into a good solution.

Thank you very much.

#36

## 2-23-17 TESTIMONY

My name is Bob Martin. Born and raised in Hawaii, I'm a 57 year resident of Kuau and Paia, and have spent 75 of my 88 years involved in some form of agriculture. Because of my background some of what I share may be complex, unconventional, even unique.

Alexander and Baldwin Inc. (A&B), once a very local company, is rapidly changing. Through a stock distribution it gave its wholly owned Matson Navigation, now Hawaii's 4th largest corporation, to A&B stockholders on a share for share basis. It then merged its agricultural division into A&B Properties. According to Pacific Business News (10-28-16) it is considering a change its corporate business structure into that of a Real Estate Investment Trust by this spring. With 77.1% of A&B stock now held by Investment Managers it is obviously managed for their benefit. It is noteworthy that Investment Managers now control 84.7 % (instead of 77.1) of Matson Inc. that was recently distributed to A&B stockholders. This suggests that (outside) Investment Managers will increasingly control A&B and its Hawaiian assets. This suggests the need for a better understanding of A&B's future commitment to agriculture.

A&B has now requested a 30 year lease for a large amount of water. Much will take place in the next 30 years and it is important that this water be available where most needed. How fast can things move? Since closing HC&S I understand that A&B has sold 339 acres of land in Paia where the survey for its county water line was completed before the sale was announced. Progress at this rate can accomplish much in 30 years. But is this development progress? Is it safe? What is happening in agriculture, especially sustainable agriculture? Let's give this some thought.

If the numbers were run, I suspect that we do not have sufficient water to produce food for our current population of perhaps 1.4 million, the tourists, and the military. I also suspect that agriculture is deliberately being held back by state officials to insure water for development. Someone needs to run the numbers on this. Obviously, we are short of facts. We also need to know where we collectively stand of food sustainability, a growing subject of discussion.

Most machines work by using the sun's energy, whether derived from fossil fuels, plant products, or converted by solar panels. This same energy from the sun powers everything we do as individuals; only we get our energy from a fuel known as food, that is mostly produced through plants in a process that we call agriculture. Agriculture, a land based process, is noted for the enormous amounts of water the process requires for each unit of food produced. Presently, enormous amounts of sunlight that could be used to produce food in east Maui is being wasted for lack of water; and even more sunlight in central Maui is being wasted for lack of agriculture. Is this smart planning?

Historically, the Hawaiians were able to grow enough food to sustain about a million people, and as they were hard working and industrious, it may be that their population was not larger because of water limitations. Remember a sustainable population is limited by what can be produced in a dry year.

With the introduction of sugar cane there was a practice to divert water from adjacent, then distant areas, depriving established users from their livelihood. Deprived from income many farmers could not pay taxes and lost their lands. Without farms many were forced to work as laborers for shipping, sugar, pineapple, and construction. The upshot was that we lost crops, farmers, and farms. With long-term lack of water and, more recently, herbicide drift, our food sustainability dropped from 100% to today's 5-13%. This has made us dependent on (sustainable?) shipping to import food grown over 2,000 ocean miles away. Is this what we want and a risk we choose to take?

Before giving away water for unidentified and/or unjustified uses we need to identify how much agriculture we want, where it will be, who will do it, and how much water it will need. The State has not done this. It has yet to identify the problems or reasons why our sustainability has gone from 100% to the present, unknown, but unrealistically low figure. Overall the state has failed miserably to protect its agriculture and it's people; but that is not the subject of tonight's meeting. Tonight's subject is what are we going to do with our water. If agriculture is a serious consideration let's also recognize that I have had 40 years experience in my Paia nursery with plant damage from chemicals in the air and county water. HC&S has gone away but, surprisingly, my problems haven't. Based on experience I can suggest that diversified agriculture west of Baldwin Avenue may also be in for some unexpected surprises. Will this affect plans or schedules? We'll find out.

Finally, there is the question of the proper scope of an environmental impact statement (EIS). Will the EIS recognize the existence of people on Maui and the merits of converting the now wasted sunlight falling on east and central Maui into food for their use and possible survival? If so, the entire process becomes more complex, as it should be.

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Mr. Martin:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas, for your oral at the February 23, 2017 EIS Scoping Meeting, and written comments received February 23, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued *"right, privilege, and authority to enter and go upon"* the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the *"purpose of developing, diverting, transporting, and using government owned waters"* through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. The Draft EIS will include in Section 2.1.4, a description of Mahi Pono's Farm Plan for the agricultural fields in Central Maui. The Farm Plan is based on the water available of which diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).

**Environmental Impact Statement Preparation Notice**  
**Proposed Water Lease for the Nāhiku, Keʻānae, Honomanū, and Huelo License Areas**  
**Scoping Meeting Comments of**

Mr. Brendan Balthazar  
February 22, 2017  
Maui Electric Company Community Meeting Room  
Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MR. BALTHAZAR : I just wanted to say, you know, my father said that we all need water. I've been in several of these hearings and testimonies. I believe that nobody can have it all, I think it's a shared thing. We really need to know how much water is needed by the people who want to plant taro.

As a kid I used to stand by the pine fields and granted, yes, things were done 150 years ago that none of us in this room is accountable for; however, I believe everybody needs the water. Like myself, I live Upcountry and I depend on that water coming up out of my pipe, so does my animals, so does my lifestyle. I'm retired from the fire department, I ranch, and I'm also on the board of the Farm Bureau and the Cattleman's Association. And to just (inaudible) what the last gentleman said about us being able to be sustainable, with all of that land available for ag, and I -- and I emphasize the word "ag."

At the last testimony I did before DLNR, one of my things that I think was the wrong place, but I did say that if this water is earmarked for ag, that amount that is now used for potable water, like Upcountry, should be kept. I don't think any future subdivision should be coming up and tap into that ag. water and that's really my concern. I'm here representing ag, and the fact -- the part of ag, that I represent is the livestock industry.

I know some of the things that I heard some of the people from Sierra Club and some of the friends that I have from Keanae say, "Yeah, I mean, they want all this water, what for?" I don't know how much sorghum will take, how much corn will take, I can tell you how much if -- if we need to irrigate the pastures, right now the grasses that works down in that area would take about 4100 gallons per day per acre, that's what it takes to keep that thing in grass. Pending no rain now, I'm just saying just on the bottom line. Of course, it will be less with the rain and, of course, more with evaporation. Cattle drink 15 to 20 gallons per day, that's 20,000 gallons on a thousand acre pasture. A thousand acres of irrigated pasture, you can probably a head per acre. So I can only speak from the livestock side, I, on my end Upcountry, a lot of the kids now that should be in ranching and farming are not.

I'd like to see that land stay in ag, and I believe the water really should be shared. And like he was saying, I think once they found out what the stream flows is, then it should be adjusted as to what everybody can have so everybody can share the water. I mean, without water, there's no ag, I mean, nobody can disagree with that. So I'm saying also that if EMI -- and I'm not partial to them, but if EMI, who has been taking care of the ditch system for all these years, gets out of it, the county has no way in hell to take care of that ditch, they don't have the resources nor the funding. So it is essential for us, for our environment to have this water come out and have somebody take care of it.

FACILITATOR SENELLY: Okay. So my understanding is I did hear you say that you wanted to see some quantification of what the taro, the kalo needs are for water.

MR. BALTHAZAR: Exactly.

FACILITATOR SENELLY: You want to see the impact of the proposed action on the agricultural lands from your perspective, it's from ranching. And you also -- oh, you also want to see -- to make sure, you want the ES to show what some of the future uses might be if it's not ag., because you don't want to see it developed.

MR. BALTHAZAR: I'm really concerned that this water that is earmarked for ag, stay as ag.

FACILITATOR SENELLY: Okay. You want it ag. Okay.  
(Applause.)

FACILITATOR SENELLY: Thank you, Mr. Balthazar.

Mr. Earl Matsukawa

Dear Sir,

I just want to clarify one of the statements that I made in my public testimony. I said that the amount of water now being used for domestic use should be capped. That cap should include the water needed to fulfil what ever is needed to service the current water meter list. There are people on that list that have been there for years. Some have already died and still the family ,have not gotten there meter. I believe that number ( amount of gallons needed per day to service the water meter list which is already closed) can be obtained from the water director. This number of gallons needed to service the water meter list should be added to the current amount that is used per day ,and that number should be the amount that is capped. After this list is cleared no other applications for subdivisions should impact the agg water coming out to service agg.

Brendan Balthazar

Please email me so I know you got this addition.

fields in Central Maui. The Farm Plan is based on the water available of which diversion quantities from the D&O were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area.

4. The Draft EIS will include in Chapter 4 an assessment of the impacts of the Proposed Action. Various technical studies will be appended the Draft EIS and provide detailed examinations, including an Agricultural and Related Economic Impacts Report (See Appendix I) and an Economic and Fiscal Impact Analysis Report (See Appendix H).

5. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action

Your oral and written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Mr. Balthazar:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas, for your oral comments at the February 22, 2017 EIS Scoping Meeting, and for your written comments received February 22, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).

3. A description of the Proposed Action is discussed in Chapter 2 of the Draft EIS. The Draft EIS will include in Section 2.1.4, a description of Mahi Pono's Farm Plan for the agricultural

**Scoping Meeting Comments of**

Mr. Brian Wittman  
February 22, 2017  
Maui Electric Company Community Meeting Room  
Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MR. WITTMAN: As I'm talking if -- I'm Brian Wittman. I live in Huelo on Hanehoi Stream near Moke. Earl, could you put up a map that says "Use Area"? It's about, I don't know, ten slides back. I notice almost all of these comments are about socioeconomic because we're people and we have to make a living and we have families. And we care about the individual species, but we're pretty much all talking about ourselves and our family and our history.

That's a good map. Thank you. I think that A&B is asking for too much and they're too big. So I think when you guys are making the EIS, you should make it with a more reasonable request in mind, not the request for all that water for 30 years. I think they're asking for too long a time and I think also, unfortunately, they're not giving back enough.

And I think one of the things that maybe all of us should realize, all these ditches are up here, right, these were built by steam shovels back before diesel. Right? They were built by Chinese labor, German engineers. We still have German Hawaiians, Chinese Hawaiians. Right? Huelo is a community that actually came from EMI development, it was a fringe area in Hawaiian times, but it became kind of a central part of EMI and it's in Kailua where they maintain the ditches.

And I know some of those ditches, I don't know all of them, but they go around here, right, and they come over here and this is all A&B's land. Now, me, I just have about four acres there, so I'm not even talking about me. I'm on rain catch, so I'm talking about all you guys, the whole island. I think if A&B wants to make a reasonable request, they should think about, first of all, where are we gonna put the water we're asking for? As it is, what they're doing is they're asking to just have the water, have the water, have the water, put it in the field and let it run down in the ocean.

Now, wouldn't it be smarter for them to take some of their 30,000 acres -- that's a lot. I've got four, they've got 30,000, okay, 30,000 acres. Why not build a reservoir? Okay? I drive around here like below Halimalie, it looks like there's kind of a scoop, below Pukalani there's a kind of a scoop. I think that they -- if they were smart, they would say, Okay, we have a lot of land, we should build a reservoir and we should just ask for the overflow.

FACILITATOR SENELLY: Okay.

MR. WITTMAN: Instead of asking for the main flow, we should say, You guys can have all the main flow and when you get storms in East Maui, when there's too much water, that's when we take ours and we

Scoping Meeting Comments of Brian Wittman  
Page 2  
February 22, 2017

put our water in a reservoir and then we can have what we need and you guys can still have everything you need.

FACILITATOR SENELLY: Okay. So it's a matter of distributing, of storing and distributing differently than what is -- so it's another --

MR. WITTMAN: A&B needs to invest. They haven't invested since the 19th Century.

**SUBJECT: EISP: Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas - following the scoping meeting, February 22-23, 2017**

**Date: March 9, 2017**

## Preface

For convenience, the following proposal is designated "Proposed Alternative Action 2.2," and is modeled after the project summary on page 3 of the EISP: accessed at:

[http://oegc.doh.hawaii.gov/Shared%20Documents/EA and EIS Online Library/Maui/2010s/2017-02-08-MA-5E-EISP-East-Maui-Water-Lease.pdf](http://oegc.doh.hawaii.gov/Shared%20Documents/EA%20and%20EIS/Online%20Library/Maui/2010s/2017-02-08-MA-5E-EISP-East-Maui-Water-Lease.pdf)

Basically, the proposal is to require A&B to construct, as an additional condition of the lease, a large reservoir in Central Maui (1000 acres, 16 billion gallons) so that their use of East Maui waters can be restricted to storm-overflow rather than normal daily diversion, with the accumulated waters in the reservoir being more than enough to meet all community, agricultural, cultural and environmental requirements, as well as provide excellent drought resistance and flood control management.

Under the Proposed Alternative Action 2.2 heading below, the black print follows the wording of the original EISP: project summary, with the red print indicating substitutions and additions. Following this, under the Discussion heading, each of the four bullet points in the "Objectives of the issuance of the proposed Water Lease (Proposed Action)" of the EISP: heading 1.6 are addressed. And under the Conclusion heading, additional benefits of the Proposed Alternative Action 2.2 are briefly outlined.

Thanks you for your consideration of these ideas.

**Brian Wittman**

*(Trustee of Wittman Homestead and Educational Trust, which is owner of TMK parcels 2-7-9-01 and 2-9-8-033 which are in the Hanalei Stream area of Huelo.)*

## PROPOSED ALTERNATIVE ACTION 2.2

The Proposed Alternative Action (2.2) constitutes the issuance of an initial medium-term water lease of 3 years, after which follow-up leases will be renewable at five-year intervals, provided specific conditions are met at each renewal request, from

the Board of Land and Natural Resources for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, and using surplus flood runoff waters" through the existing EMI Aqueduct System which supplies water to domestic and agricultural water users. The Water Lease will allow non-exclusive access to the license areas to the lessee to maintain and repair existing roads and trails used as part of the Aqueduct System and allow its continued operation to deliver water to the Maui County Department of Water Supply (DWS) for domestic and agricultural water needs in Upcountry Maui, supply domestic water for Nāhiku and supply irrigation water for agricultural users at the Kula Agricultural Park. Any additional flood runoff waters remaining after these priorities are met will be made available to the lessee to provide water to approximately 30,000 acres of former sugar lands in Central Maui owned by A&B, provided the lessee constructs and maintains, on its own property in Central Maui, for the purpose of holding these waters for on-going agricultural and future community uses, a reservoir system totaling not less than 1000 acres, which shall hold a maximum of at least 16 billion gallons (based on an average depth of 50 ft.). The Water Lease will not allow the delivery of more storm runoff water than will be available for diversion after the Commission on Water Resources Management issues a decision on the pending Interim Instream Flow Standard (IIFS) matters. The Maui County DWS shall remain an equal partner in the design and management of the reservoir system throughout each lease term, and shall retain first right of refusal for the purchase of all the acreage comprising the reservoir system should the water lease be transferred directly to the County of Maui at a later date, at the average prevailing price for general agricultural acreage at the time of purchase. During initial 3-year lease period, the lessee shall provide the following improvements:

- 1) Repair of access roads and trails in the license area.
- 2) Provision of reasonable community access to license areas, in conjunction with the DLNR.
- 3) Reconfiguration of water diversion gates so that during high water conditions (heavy rainfall), the diversions are fed, but during low rainfall and drought conditions, no water is diverted.
- 4) Repair of ditches, flumes, and tunnels to minimize wasted resources.
- 5) Design, funding, and substantial completion of a Central Maui Community Reservoir System.

Inadequate progress in any of the above improvements shall be grounds for non-renewal of the lease. However, for the purpose of realizing the completion of the above improvements, the lessee is permitted to engage in the following activities:

- 1) Seek additional funding for water resource development and flood control from any available County, State and Federal resources for the construction of the reservoir and its supply infrastructure.
- 2) Within the general reservoir plan, incorporate private plans on its surrounding property that may benefit from the reservoir, for example: agricultural parks that are well-placed to receive water; recreational and residential areas (where permitted) that take advantage of the ambience associated with a large body of fresh water, etc.
- 3) Solicit from the lessor any assurances of good faith and/or satisfactory performance as may be necessary for the lessee to enter into funding relationships that will further facilitate prompt completion and ongoing maintenance of the project.
- 4) Develop specific management arrangements with affected parties (residents receiving water; County and State agencies having water supply/control mandates, etc.) as necessary to accomplish the "Objectives of the Proposed Action."

## DISCUSSION

Under heading 1.6, In general, the objectives of the issuance of the proposed Water Lease (Proposed Action) are:

- Preserve and maintain the EMI Aqueduct System
- Continue to meet domestic water demands in Upcountry Maui
- Continue to provide water for agricultural purposes in Central Maui
- Continue to serve community water demands in Nāhiku

The Proposed Alternative Action meets these objectives in the following ways:

### **1) Preserve and maintain the EMI Aqueduct System.**

The Proposed Alternative Action 2.2 preserves and maintains the entire EMI Aqueduct System, with the specific new purpose of using the system to not to take the bulk of the normal flow, as has been the practice in the past, but rather to take maximum advantage of the storm runoff overflow of the streams. Normal flow will be maintained in all streams, and only the overflow during heavy rainfall will be diverted through the existing system. Because this overflow will be periodic rather than constant, a large water storage system in Central Maui is required. Under the Proposed Alternative Action 2.2, the lessee (A&B) must agree to build this large reservoir system as a condition for receiving the water lease. This is a very large expense, but it is reasonable to ask A&B to make a new outlay to bring the existing system up to modern needs. The previous practice (of taking all the water) is no

longer sustainable, and the previous sugar crop (which used all the water) is no longer viable.

The previous justification for leasing A&B all the water flow was based on its dominance in the local economy and its paternalistic management of the worker population during the plantation era. In return for the massive original investment (and impressive engineering), the companies that have since merged under A&B were given a privileged status, in spite of the fact that the water needs of the local communities were marginalized by diverting the streams. With accelerated modern development occurring all over the island, the allotment and conservation of water resources is clearly recognized as the primary community issue. A&B can no longer expect to continue to dominate water usage without providing adequate water resources for the remainder of the East Maui community. A&B does deserve some "legacy rights" for the remarkable accomplishment of the EMI system, but their last major investment in the system was the Wailoa ditch in 1923. Greatly enlarging the storage capabilities in Central Maui is the obvious "renewed contribution" that should be required of A&B, in order to meet good faith community needs for the current century.

Fortunately, by building a large Central Maui Reservoir system under the Proposed Alternative Action 2.2, A&B will be able to hold the water it needs for its large acreage just by diverting the storm water overflow from the East Maui streams. This will allow all the streams to maintain normal year-round flow even beyond the pending Interim Instream Flow Standards. In fact, using the EMI system to divert the storm water overflow will actually be helpful in preventing flood conditions and erosion along the streams.

And certainly, in addition to using the reservoir to supply its agricultural lands, A&B will be sure to make maximum use of the aesthetic possibilities of a large body of water to tie in with its existing development plans in the Hali'imaile and North Kihei areas. In acknowledgement of this inevitability, the Proposed Alternative Action 2.2 provides some leeway for A&B to seek funding to complete the reservoir system within the initial 3-year lease period by specifically allowing them to enter into funding arrangements with outside agencies and entities.

### **2) Continue to meet domestic water demands in Upcountry Maui**

Because the Proposed Alternative Action 2.2 not only maintains the existing EMI aqueduct system, but also greatly enhances the water storage capabilities in Central Maui, there will be no problem in continuing to meet domestic water demands in Upcountry Maui. The new reservoir system will be located, by obvious design priorities, as high in elevation as possible in order to benefit from the ditch locations, and the availability of water to feed the existing upcountry systems will only be enhanced.

### **3) Continue to provide water for agricultural purposes in Central Maui**

Mr. Brian Wittman  
[REDACTED]

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Mr. Wittman:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas, your oral comments at the February 22, 2017 EIS Scoping Meeting, and your written comments dated March 9, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui. The environmental impacts of the potential Water Lease will be assessed.
2. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action, including lease durations.

We appreciate your interest in this environmental review process. Your oral and written comments, and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

The large-scale enhancement of water storage facilities in Central Maui will certainly continue to provide water for agricultural purposes in Central Maui. In addition, the greatly increased capacity of the new reservoir system in the Proposed Alternative Action 2.2 will allow the use of seasonal storm overflow rather than constant diversion to feed the Central Maui water storage systems. Though less water will be taken from the streams on a daily basis, none will be wasted, and the gradually accumulating large volumes of water from rainy periods will allow massive water storage to meet agricultural needs during droughts, without taking stream flow from East Maui during critical times.

#### 4) Continue to serve community water demands in Nāhiku

The Proposed Alternative Action 2.2 will continue to serve community water demands in Nāhiku. Nāhiku streams will remain at or above Interim Instream Flow Standards, and existing systems will not be affected. The Proposed Alternative Action 2.2 calls for the repair and on-going maintenance of all existing community supply systems.

#### Conclusion

In addition to meeting the objectives of the issuance of the proposed Water Lease, Proposed Alternative Action 2.2 will create the following:

- 1) Massive drought resistance for the Central Maui agricultural and population areas.
- 2) Additional aesthetic and recreational areas in the form of a fresh water lake on the central Maui slopes, and increased access to watershed areas for East Maui residents.
- 3) East Maui stream flow well above the pending Interim Instream Flow Standards, resulting in increased wildlife restoration including estuary eco-systems and enhanced near-shore fishing.
- 4) Additional economic opportunities for A&B that are commensurate with their expected new investment in water resource infrastructure.

Greetings,

EM

RECEIVED  
FEB 27 2017  
WILSON OKAMOTO CORPORATION

My name is Cal Shinyama. I grew up on Maui but for a few years on the Mainland for college. Maui has been my home. I am now retired and enjoying the fruits of my labor here on the most beautiful island in the world.

I can remember when agriculture was the engine that drove this economy, now it's tourism. Maui has consistently been voted one of the top vacation destinations in the world thanks in part to its open space due our agricultural past. I remember many of those camps that sprang around the mills and the families that grew up and contributed to making Maui attractive.

Now Pioneer Mill is gone, Maui Land and Pineapple is gone and many of those acres have been turned into golf course's, gated communities, or gentlemen's estates when those former agricultural companies get into real estate developments.

There is nothing to stop Alexander and Baldwin from becoming a Realty company as there are prime acres with sweeping mountain or ocean vistas, they have already sold 400 acres near Pala. I applaud them for wanting to keep much of their lands in agriculture, they are under no mandate to do so, the only way they can keep those lands in agriculture is by having a constant and guaranteed water supply.

The cattle industry for instance in order to expand must have water to irrigate those pastures especially in times of drought, any other agriculturally based company must have water to exist without it what other recourse does A&B have but to sell. There is enough water to satisfy everyone's needs, the Taro growers, the stream restorers and agriculture, it does not have to be all for one and none for the other.

We here on Maui will be the lesser if these open spaces become gated communities and Malls, it will be accessible only to those part time residents who come here who can afford to purchase them, they will certainly not be the local families that have made Maui their home. In short I am in favor of Alexander and Baldwin's bid for a long-term water contract.

Very Truly,

  
Cal Shinyama

10238-02  
September 23, 2019

Mr. Cal Shinyama

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Keʻanae, Honomanū  
and Huelo License Areas

Dear Mr. Shinyama:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Keʻanae, Honomanū, and Huelo License Areas and for your written comments received February 27, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawaiʻi Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Keʻanae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. A description of the Proposed Action is discussed in Chapter 2 of the Draft EIS. The Draft EIS will include in Section 2.1.4, a description of Mahi Pono's Farm Plan for the agricultural fields in Central Maui. The Farm Plan is based on the water available of which diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
3. The modification or removal of diversion structures in streams designated for full restoration by the D&O will have positive social value for East Maui, as discussed in the Social Impact Assessment by Earthplan (See Appendix G). Stream restoration supports cultural food gathering practices, as discussed in the Cultural Impact Assessment (See Appendix F). Restoring important cultural streams in East Maui will open opportunities for traditional agriculture and ensuing economic benefits, as assessed in the Agricultural and Related Economics Impacts Report done by Plasch Econ Pacific, LLC (See Appendix I).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

Re: Comments on the EISP/N Proposed Lease for the Nahiku, Ke'anae,  
Honomanu, and Huelo License Areas East, Central and UpCountry Maui, Hawaii

Dear Mr. Hirokawa,

On behalf of Nā Moku Aupuni o Ko'olau Hui and other farmers, fishermen and women, and gatherers of native plants and stream animals in the East Maui region, the Native Hawaiian Legal Corporation submits its comments on the Environmental Impact Statement Preparation Notice (EISP/N) for the proposed "Lease (Water Lease) for the Nahiku, Ke'anae, Honomanu, and Huelo License Areas" published on February 8, 2017.

The EISP/N's impact analysis matter-of-factly states that, "[t]he Proposed Action is limited to the issuance of the Water Lease for the subject License area, which would enable A&B to continue operation of the EMI Aqueduct System that has been in operation for over a century." The clear implication is that the Proposed Action entails nothing more than "maintain[ing] existing conditions[.]" Both inaccurately assume that the status quo is diverted streams. Simply because the same resource has been committed in the past, however, does not make a new commitment of the resource, which in this case lasts for a thirty-year period, a continuous activity. To the contrary, a full opportunity to reevaluate whether the Proposed Action serves contemporary and prospective public needs is required, as is an EIS that evaluates conditions existing prior to approval of the Proposed Action and the consequences of that decision.

## Hydrology Section 3.3

In Section 3.3, Hydrology, the discussion of surface water identifies a total of 39 streams within the four License Areas subject to diversions and notes that the "Proposed Action will maintain existing conditions." EISP/N at 3-4.

This statement ignores that over the past year alone [2016 through the present], A&B

*Services made possible with major funding from the Office of Hawaiian Affairs*

Maui. Upright, straight, tall and straight as a tree without branches, sharply peaked, as mountains. Fig., rightmost, correct.

Board of Land and Natural Resources  
March 10, 2017  
Page 2 of 4

significantly reduced its diversions of East Maui streams, limiting its diversions to the Honomanu and Huelo License Areas which draw from a mere fraction of the 39 streams identified. Compared to A&B's century-old diversion activities, present undiverted conditions are a dramatic turn of events and constitute the "existing conditions" against which the Proposed Action must be evaluated. To the extent the Proposed Action entails or contemplates reverting to pre-2016 conditions, where the high-water mark is a maximum diversion capacity of 450 million gallons daily, those impacts must be assessed. That "[t]he Water Lease will not allow the delivery of more water than will be available for diversion after the Commission on Water Resources Management issues a decision on the pending Interim Instream Flow Standard (IIFS) matters" reveals nothing about the broad spectrum of impacts that result from diverting anywhere from zero to all water in excess of these minimum streamflow standards. Any contention that the Proposed Action will "maintain existing conditions" belies these important considerations.

## Natural Environment Section 3.5

### Flora Section 3.5.1

The impact analysis of flora relies on the misnomer that the Proposed Action maintains existing conditions. The EIS should, however, analyze the changes in flora that have occurred since the 2016 stream releases, as well as any future impacts the Proposed Action would have on existing conditions. The EIS should consider impacts not just on flora found in the four license areas, but in areas that lie beyond and downstream that are impacted by the Proposed Action's reduction in streamflows. A&B claims that reduced *ditch* flows generate increased vegetation requiring additional maintenance. The proper focus of the EIS, however, should be on the streambeds, namely the impact of reduced streamflows on the type and amount of vegetation that grows in the streambed, effects on native species, and the proliferation of alien species in and along the streambeds.

### 3.5.2 Fauna and Aquatic Habitat

A number of studies by the Department of Aquatic Resources have analyzed the impact of stream diversions on native aquatic life in East Maui. The EISP/N states that the Proposed Action will "maintain existing conditions." Once again, the EIS cannot assume that pre-2016 diverted conditions control. Testimony provided to the Commission on Water Resources Management in the re-opened hearings on interim instream flow standards indicates that streamflow restorations can quickly lead to an increase in native aquatic species populations both in streams and in nearshore environments. For example, the return of flows throughout 2016, including Honomanu Stream, may already have caused significant changes from the prior diverted state. Therefore the EISP/N's statement that the Proposed Action will "maintain existing conditions" ignores recent, observable changes in fauna and aquatic habitat within the East Maui watershed.

#### General Considerations

The EISPN's insistence on treating A&B's historic diversions as an "existing condition" that will be "maintained" under the Proposed Action suggests that the true environmental impacts of the Proposed Action will not be meaningfully addressed. It is also unclear whether the detailed descriptions Nā Moku requested concerning the diversion system - particularly the amount of water diverted from each stream, license area, and watershed - will be included such that the EIS will provide the disclosures necessary for proper decisionmaking.

As stated in Nā Moku's pre-comments, Nā Moku's position is that the EIS should consider impacts to and along: (1) each diverted stream, (2) each individual license area, and (3) the entire 33,000 acres of license area. In addition, the discussion of diversions should include all structures, designs, and mechanisms that either remove water from streams or prevent water from entering into streams or flowing throughout a streamcourse.

The EIS should provide the following:

- Full disclosure of every single diversion along the East Maui Irrigation system (including photographs and descriptions as to how the diversion operates, how much water it diverts from the stream daily (on average and at minimum and maximum), and its precise location);
- Maps indicating all maintenance and/or access roads for the diversion system including identification of all access points at public roads and/or highways;
- Maps that show every single stream within East Maui, including all tributaries from ma uka to ma kai, identified by name; and
- Alternative proposed uses including one that involves the use of water from less than all four license areas and no diversion of water from East Maui.

The EIS should also disclose the following information for *each* alternative analyzed in the EIS:

- the amount of water proposed to be taken from each stream daily (on average and at minimum and maximum);
- the amount of water proposed to be taken from each license area daily (on average and at minimum and maximum);
- the total amount of water proposed to be taken from the entire license areas daily (on average and at minimum and maximum).

Finally, the EIS should provide an analysis of the following:

- the degree to which leasing of the land interferes with access to the license area - including a discussion as to who controls the various gates used to facilitate or prevent access to these lands;
- the impact of diverting water from East Maui streams on aquatic life;
- the impact of diverting water from East Maui streams on native plant species;
- the impact of diverting water from East Maui on invasive species, including the creation of mosquito breeding grounds;
- the impacts of diverting water from East Maui streams on outdoor recreational activities, the maintenance of ecosystems, and aesthetic values such as waterfalls and scenic waterways; and
- the impacts of diverting water from East Maui streams on traditional and customary Hawaiian practices (including but not limited to kalo farming, gathering of native stream flora and fauna, and recreation).

Our clients are looking forward to participating in the consultation process required to prepare the Draft EIS. You may contact our office if you need assistance contacting Nā Moku members or our other clients.

Attached to these comments as *Appendix I* are declarations, affidavits, and/or testimony from Nā Moku and other East Maui community members that are relevant to the EIS for this Proposed Action. Should you have any questions regarding the above, please do not hesitate to call us at (808) 521-2302.

Sincerely yours,

  
Camille Kalama

DLNR FILE NO. 01-05-MA  
DECLARATION OF EDWARD WENDT

DECLARATION OF EDWARD WENDT

I declare under penalty of perjury that:

1. I am basing my statements on matters that are within my personal knowledge.
2. I am the current President of Na Moku Aupuni o Ko'olau Hui ("Na Moku").
3. Attached as Exhibit "A" is a true and correct copy of the current Articles of Incorporation for Na Moku.
4. Na Moku, whose membership exceeds 500, is a nonprofit corporation organized by Native Hawaiian residents of the Keanae-Wailuanui ahupua'a, which encompasses the Nahiku, Keanae, and Honomanu license areas.
5. Tax map key numbers relevant to the issue of Na Moku's standing include, but are not limited to, 1-1-01-44; 1-1-02-Portion 2; 1-1-04-28, 30; 1-1-05:16, 20, 22, 52; 1-1-06-8, 39, 46; 1-2-02-09; 1-2-04-05, 07.
6. Na Moku was formed "to promote the general welfare of the tenants and descendants residing in the ahupua'a of Keanae-Wailuanui and elsewhere; in social, spiritual, cultural, educational and economic affairs", "to preserve and protect, and enhance the quality of the existing life of the people within the Keanae-Wailuanui

ahupua'a," and "to provide a formal voice and organization through which the residents of the community can participate fully and more meaningfully in the determination and development of policies and decisions affecting their destiny." See, Na Moku Articles of Incorporation, IV(A),(B), and (D), attached as Exhibit "A".

7. Thus, Na Moku's purposes encompass the assertion, on its members behalf, of rights as beneficiaries of the public trust, the Hawaiian Homes Commission Act, the trust created by Section 5(f) of the Admissions Act, and the constitutionally protected traditional and customary native Hawaiian practices which depend upon sufficient streamflow.

8. Many of Na Moku's members have property interests in kuleana within the Nahiku, Ke'anae, and Honomanu license areas. Although streamflow once fed lo'i on Na Moku's members' lands, that water is diverted and either no longer reaches these lo'i or results in lo'i water temperatures too high to effectively cultivate wetland kalo.

9. Na Moku seeks to restore streamflow in streams within the Nahiku, Keanae, and Honomanu license areas to their natural levels so that kalo cultivation is once again possible and its members may once again exercise their appurtenant and other traditional and customary rights ensured by Hawai'i's Constitution Article XI, §§ 1 & 7, Article XII, § 7, and HRS § 174C-63.

10. Na Moku also represents the interests of certain of its members who are beneficiaries of the trust created by the Hawaiian Homes Commission Act ("Act") and have applied for pastoral and agricultural homesteads within the Ke'anae-Wailuanui ahupua'a. Pursuant to Section 213(i) of the Act, they have a right to expect reasonable revenues to support programs for native Hawaiians and, pursuant to Section 221 of the Act, sufficient water to support homesteading. These rights are implicated by the proposed disposition of public lands for the development, diversion, and use of water.

11. Na Moku also represents the interest of its members who are beneficiaries of the trust established pursuant to Section 5(f) of the Hawaii Admission Act. As beneficiaries of this trust, Na Moku members have a right to expect reasonable revenues from the lease of public lands subject to the provisions of the trust to support programs "for the betterment of the conditions of native Hawaiians."

I declare under penalty of perjury that the foregoing statements are true and correct, to the best of my knowledge, information, and belief.

Dated: Honolulu, Hawaii, April 5, 2002.

  
EDWARD WENDT

DEPARTMENT OF COMMERCE AND CONSUMER AFFAIRS  
BUSINESS REGISTRATION DIVISION  
STATE OF HAWAII

P. O. BOX 40  
HONOLULU, HI 96810

104 00152507 13- 6/14/96 25.00

Articles of Incorporation of

Na Moku Aupuni O Ko'olau Hui

The undersigned, desiring to form a nonprofit corporation under the laws of the State of Hawaii, certifies as follows:

I

The name of the corporation shall be Na Moku Aupuni O Ko'olau Hui.

II

The location of the corporation's initial office shall be in Keanae-Wailuanui Ahupua'a, Maui, State of Hawaii, and the specific address is HC1, Box 62, Wailuanui Road, Keanae, HI 96708

III

The period of corporation's duration is perpetual.

The corporation is organized and shall be operated exclusively for cultural, educational, charitable, religious, scientific and literary purposes within the meaning of 501(c) (3) of the Internal Revenue Code of 1954, and regulations thereunder as they now exist or as they may hereafter be amended. The objects and purposes of the corporation are:

- A. to promote the general welfare of the tenants and descendants residing in the Ahupua'a of Keanae-Wailuanui and elsewhere, in social, spiritual, cultural, educational and economic affairs;

EXHIBIT A

EXHIBIT A

- B. to preserve and protect, and enhance the quality of the existing life of the people within the Keanae-Wailuanui Ahupua'a;
- C. to provide and improve communication and mutual understanding among the tenants and descendants of Keanae-Wailuanui Ahupua'a themselves and with other community associations concerning their mutual welfare;
- D. to provide a formal voice and organization through which the residents of the community can participate fully and more meaningfully in the determination and development of policies and decisions affecting their destiny.

#### V

As a means of accomplishing its cultural, educational, charitable, religious, scientific and literary purposes the corporation shall have, in addition to the general powers conferred upon it by the State of Hawaii'i, but subject to the foregoing limitations, the following powers:

- A. to accept, acquire, receive, take and hold by bequest, devise, grant, gift, purchase, exchange, lease, transfer, by judicial order or decree, or otherwise, for any of this objects and purposes, any property, both real and personal, of whatever kind, nature or description and wherever situated;
- B. to enter into, make, perform, and carry out contracts of every kind for any corporation purpose, without limit as to amount, with any person, firm, association, corporation, or other nonprofit organization, including contracts for the employment of administrators, employees, consultants or other counsel;
- C. in general, and subject to such limitations, and conditions as are or may be prescribed by this Articles of Incorporation, to exercise such other powers which nor or are hereafter conferred by law upon a corporation organized for cultural, education, charitable, religious, scientific and literary purposes set further above, or necessary or incidental to the powers so conferred, conducive to or in furtherance of the attainment of the proposes of the corporation.

#### VI

In all events and under all circumstances, including but not limited to reorganization, dissolution, or amendment of the Articles of Incorporation of the corporation, the purposes and powers shall be subject to the following limitations:

- A. no substantial part of the activities of the corporation shall consist of carrying on propaganda, or otherwise attempt to influence legislation; nor shall it participate in, or intervene in (including the publishing or distributing of statements) any candidate for public office; not shall it engage in any activities which are unlawful under the laws of the United States or of the State of Hawaii'i; nor shall it exercise any powers or engage in any transaction or activity not permitted to be conducted or carried on by an organization exempt under Section 501(c) (3) of the Internal Revenue Code and its Regulations as they now exist or as they may hereafter be amended, or by an organization contributions to which are deductible under Section 170(c) (2) of such Code and Regulations as they now exist or as they may hereafter be amended;
- B. the corporation shall never be operated for the primary purpose of carrying on any trade or business for profit, and neither the whole nor any part or portion of the assets, income or earnings of the corporation shall be used, nor shall the corporation ever be organized or operated, for objects or purposes which are need exclusively cultural, educational, charitable, religious, scientific or literary, under the laws both of the United States and of the State of Hawaii'i;
- C. neither the whole nor any part or portion of the assets, income or earning, current or accumulative, of the corporation shall ever be used for dividends or be otherwise withdrawn or distributed to or divided among any members, directors or officers of the corporation or any donor, whether upon liquidation or dissolution of the corporation or otherwise; provided, further, that neither the whole nor any part or portion of such assets, income or earnings shall ever be used for, accrue to, or inure to the benefit of any private individual within the meaning of the tax exemption requirements of the laws both of the United States and the State of Hawaii'i;
- D. the corporation is not organized for profit and shall not issue any stock, and no part of its assets, income or earnings shall be used for dividends, or otherwise withdrawn or distributed to any of its members, directors or officers. The corporation is organized and shall be conducted exclusively for cultural, educational, charitable, religious, scientific or literary purposes;
- E. the corporation shall be operated so as to qualify as an organization described in Section 509(a) (3) of the Internal Revenue Code, and thereby avoid being classified as a "private foundation" within the meaning of Section 509(a) of the Internal Revenue Code. However, in the event that the corporation becomes or is declared to be a "private foundation", then the income of the corporation for each taxable year shall be distributed at such time and in such manner as not to subject the corporation to the tax under Section 4942 of the Internal Revenue Code and Regulations promulgated in connection therewith. Notwithstanding any other provisions of the Articles of Incorporation or any provisions of law, the corporation shall not:

- a. engage in any act of self-dealing as defined in Section 4941(d);
- b. retain any excess business holdings as defined in Section 4943(c), subject to the right to dispose of such holdings within the period prescribed in said Section;
- c. make any investments in such manner as to subject the corporation to tax under Section 4944 or;
- d. make any taxable expenditures as defined in Section 4945(d).

#### VII

The management of the business and affairs of the corporation and the control and distribution of its property shall be vested in a Board of Directors.

The Board of Directors shall have full power to control and direct the business affairs of the corporation, subject, however, to any limitations contained herein and in the By-Laws of the corporation. The initial directors of the corporation, all residents of the State of Hawai'i, and their home addresses are as follows:

| <u>Name</u>        | <u>Residence</u> |
|--------------------|------------------|
| Edward Wendt       |                  |
| Henry Kailialau    |                  |
| Ellen P. Denecke   |                  |
| Awapuhi Carmichael |                  |
| Pualani Kimoeko    |                  |
| Willie K. Kimoeko  |                  |
| Mary Kaauamo       |                  |

Virgil E. Day, Jr.  
Patricia J. Neal  
Solomon Kaauamo  
Joseph J. Day

#### VIII

The officers of the corporation shall consist of a president, vice-president, corresponding secretary, recording secretary, treasurer and sergeant-at-arms. The initial officers, all residents of the State of Hawai'i, of the corporation and their home address are as follows:

| <u>Name</u>        | <u>Office-Held</u>      | <u>Residence</u> |
|--------------------|-------------------------|------------------|
| Edward Wendt       | President               |                  |
| Henry Kailialau    | Vice-President          |                  |
| Ellen P. Denecke   | Corresponding Secretary |                  |
| Awapuhi Carmichael | Recording Secretary     |                  |
| Pualani Kimoeko    | Treasurer               |                  |
| Willie F. Kimoeko  | Sergeant-At-Arms        |                  |

IX

The property of the corporation shall alone be liable for payment of the debts and liabilities of the corporation and the private property of the directors and officers shall not be subject to the payment of the corporation's debts or claims against the corporation of any extent whatsoever.

X

Upon the dissolution of the corporation or the winding up of its affairs, the assets of the corporation shall be distributed exclusively to cultural, educational, charitable, religious, scientific or literary organizations which would then qualify under the provisions of Section 501(c)(3) of the Internal Revenue Code and its Regulations as they now exist or as they may hereafter be amended.

This Articles of Incorporation shall be subject to amendment from time to time as provided by law, except that no amendment shall be made which would change the objects and purposes of this corporation to inure to the benefit of any member, donor or private individual, or which would permit any transaction or activity not permitted to be conducted or carried on by an organization exempt under Section 501(c)(3) of the United States Internal Revenue Code and its Regulations as they now exist or as they may hereafter be amended.

IN WITNESS WHEREOF, I certify under the penalties of the Hawaii's Revised Statutes, Section 415B-158 that I have read the above statements and that the same are true and correct.

DATED: Keanae-Wailuanui, Maui Hawaii'i, June 6, 1996.

  
Edward Wendt

CERTIFICATE OF SERVICE

I hereby certify that a copy of the foregoing document was duly served upon the following parties in the manner indicated, by U.S. Mail, postage prepaid, or by hand-delivery to their last known address:

## STATE OF HAWAII

Regarding Water Licenses at Honomanu,  
Keanae, Nahiku, and Huelo, Maui

## DECLARATION OF BEATRICE KEPANI KEK AHUNA

I declare under penalty of perjury that:

1. I am basing my statements on matters that are within my personal knowledge.
2. Attached as Exhibit "A" is a true and correct copy of my birth certificate, which establishes that I am native Hawaiian.
3. I have property interests in and lawfully reside upon land identified as TMK: 2-9-001-014 and TMK: 2-9-001-016.

are located in Honopou, Maui and are bordered by Honopou Stream.

5. Honopou Stream exists within the Huulo license area.
6. Honopou Stream streamflow is diverted by a system of ditches operated by East Maui Irrigation.
7. Attached as Exhibit "B" is a true and correct copy of the current tax map for TMK: 2-9-001-014.
8. Attached as Exhibit "C" is a true and correct copy of the current tax map for TMK: 2-9-001-016.

001-014 and TMK; 2-9-001-016.

10. Currently, Honopou Stream streamflow either does not reach these lo'i or results in lo'i water temperatures too high to effectively cultivate wetland taro.
11. I seek to restore streamflow to Honopou Stream so that I and my 'ohana may cultivate taro on our land once again.
12. I also seek to restore streamflow to Honopou and other streams affected by EM) ditch system diversions so that I and my 'ohana may also exercise other traditional and customary rights ensured by Hawai'i's Constitution: Article XI, §§ 1 & 7; Article XII, § 7; HRS § 174C-63; HRS 1-1; and HRS 7-1.

13. As a native Hawaiian, I am also a beneficiary of the trust established pursuant to Section 5(j) of the Hawaii Admission Act. As a beneficiary of this trust, I have a right to expect reasonable revenues from the lease of public lands subject to the provisions of the trust to support programs "for the betterment of the conditions of native Hawaiians."

I declare under penalty of perjury that the foregoing statements are true and correct, to the best of my knowledge, information, and belief.

Dated: Honolulu, Hawaii, April 8, 2002.

In the Matter of the Contested Case Hearing  
Regarding Water Licenses at Honomanu,  
Keanae, Nahiku, and Huelo, Maui

DLNR FILE NO. 01-05-MA

PETITIONERS' DIRECT TESTIMONY OF  
BEATRICE PUALANI KEPANI  
KEKAHUNA; CERTIFICATE OF SERVICE

Hearing  
Date: October 10, 2005  
Time: 9:00 a.m.  
Officer: Hon. E. John McConnell, Esq.

PETITIONERS' DIRECT TESTIMONY OF  
BEATRICE PUALANI KEPANI KEKAHUNA

Q. Please state your name for the record.  
A. BEATRICE PUALANI KEPANI KEKAHUNA.

Q. When and where were you born?  
A. June 3, 1932 in the Hana Hospital in Hana, Maui.

Q. Who are your parents and grandparents?  
A. My mother was Juliana Martha Koko. My father was Lokana Kepani, Jr. and his mother was Pi'i'ohia, aka Piholia.

Q. What are the properties in Honopou in which you currently own an

interest?

A. In addition to other property in Honopou, my 'ohana also acquired title to Royal Patent Grant 1082 to Kaimi. The Kingdom also granted Royal Patent Grant 3101 in two apana, consisting of two separated parcels, approximately 6 and 9.82 acres each, to my grandfather Kepani. Apana 1 of Grant 3101 now consists of 5.7 acres and is now TMK 2-9-01-6. LCAw. 5595-E:1, which surrounds Grant 1918:1, abuts Grant 3101:2. All of these parcels, except for Grant 3101:1, are, together with Grants 1082 and 3101:2, a part of the larger TMK 2-9-01-14, collectively consisting of 22.81 acres. The relevant tax map, now shows that Elizabeth Kepani and others in my 'ohana own Grants 1082, 1918:1, and 3101:1 and 2, and LCAw. 5595-E:1. My father deeded his partial interest in TMK 2-9-01-14 to me and my sister Virginia Amara effectively providing my sister and I with the legal authority to cultivate taro on these lands. This parcel is riparian to Honopou Stream.

Q. How do you use that TMK?

A. I farm a portion of this land with my cousin Marjorie Walleit and her 'ohana, but the current stream flow does not allow us to cultivate taro as we wish.

Q. Who is the current owner of the kuleana on which your hale is located?

A. LCAw. 5459-X:2 to Imihia is designated as TMK 2-9-01-16. My dad deeded that parcel to Lokana Kepani Jr, my oldest brother, now deceased. His three sons, Clifford, Gary, and Thomas who all live and work in Honolulu. They have collectively given me permission to live on and farm this kuleana which is riparian to Honopou Stream.

Q. How do you use that kuleana?

A. I occupy the house on LCAw. 5459-X:2 to Imihia, where I also have 3 taro lo'i.

Q. Where are the lands located?

A. TMK sheet 2-9-01 depicts the area along the Honopou Stream. This land is located down an unpaved road makai of the main government highway.

Q. How did you end up living and farming on the lands you currently occupy?

A. I helped my 'ohana raise taro in Honopou since I was a little girl. As an

002207

adult, I continued to farm taro despite the lack of sufficient streamflow in Honopou Stream.

Q. What is your background in taro farming?

A. I grew up with my parents in Honopou, on the lands mentioned above along Honopou Stream. I had to work the lo'i as a child (keiki). I recall growing taro along the Honopou Stream on Grant 3101.2, Grant 1918.1, LCAw. 5595-E:1, and LCAw. 5459-X:2.

Q. How much taro did you grow back then?

A. As a girl, I remember that we kept about 25 lo'i in wetland taro on Grant 3101.2, Grant 1918.1, and LCAw. 5595-E:1. We had about 3 lo'i near the house on LCAw. 5459-X:2.

Q. What kind of taro did your 'ohana grow?

A. Mainly lehua.

Q. How did you 'ohana manage so many lo'i?

A. We planted in cycles to take advantage of the placement of the lo'i, 'auwai, and the need to let each lo'i rest in between plantings. This pattern allowed the lo'i to stay rich and productive. If we didn't let the lo'i rest in between plantings, the crops would suffer.

Q. Were there other Hawaiian families that lived along the Honopou Stream when you were a girl?

A. Yes, people used to go mauka-makai in the valley, farming mauka and fishing along the shore.

Q. What kinds of fish would these residents of Honopou catch?

A. People would catch many kinds of fish for their diets – manini, po'opa'a, hinalea, enenue, and moi. There was even a trail that went through our 'aina for this purpose.

Q. Would they gather other kinds of foods?

A. Yes, they would gather limu along the shore and hihivai, o'opu, and opae in the stream. There were lots of hihivai, o'opu, and opae, when there was more water in the stream.

Q. What about today?

A. Now, no more. The water in the stream is dirtier, and there is less coming down all the way to the ocean.

Q. Where did you gather what you needed from the stream when you were a girl?

A. I just went to the stream right by our kuleana. For example, in the early morning, I'd fish for o'opu, as they slept in the sand. I didn't even use fish hooks; I just picked them from the stream. I also gathered opae 'oeha'a, which lived in our lo'i and 'auwai.

Q. How would you eat the o'opu?

A. We would dry them, lawalu paha with salt.

Q. Where would you get salt?

A. We'd gather salt from the small natural pools, kaheka, near the sea.

Q. What other foods did you gather or grow?

A. I used to catch moi li'i during its season, with a safety pin. My father also grew sweet potato (uala), pumpkin (pala ai paha), squash, sugar cane, and various vegetables.

Q. How important was the stream and 'aina to your 'ohana?

A. It was vital to our culture and survival. The land sustained and gave life to the families along the stream.

Q. Have you sought the BLNR staff assistance to restore flow?

A. I don't understand why the Department of Land and Natural Resources (DLNR) staff won't act to help us taro farmers and Hawaiian cultural practitioners. They've known about our problem for years, yet refuse to take any action against A&B/EMI to put more water back into the streams. I've made complaints to several generations of these state employees without any result. They come out and visit, look at my problem, then do nothing. My attorneys have repeatedly described in detail my inability to grow more than a small amount of taro with the available water released downstream of the ditch. No one from the DLNR staff has taken any initiative to determine whether I can now grow the amount of taro I am trying and entitled to grow with the amount of water now in the stream. I have been frustrated for years by the failure of the State to address my and others water rights by requiring A&B/EMI to return

streamflow to Honopou Stream so I can grow as much taro on these lands as my father and grandfather before him once did. I asked all that time, but without any response. I am now forced to go to formal contested case hearings. That is not right.

Q. What financial burden has this placed on you and your family?

A. Taro farming, fishing, and gathering from the sea and coastline all contributed significantly to helping me offset the significant costs of feeding my family. It also allowed me to engage in the cultural traditions I learned from my elders and which I want to pass on to my keiki and mo'opuna. Denying me water in the stream has an immediate, direct, and significant effect on my ability to sustain my family with food and cash to pay for living costs and to pass on these cultural practices. In effect, the loss of water has significantly adversely impacted my cultural heritage and my 'ohana's self-sufficiency. I have to pay for the difference in food costs.

In the past 4-5 years, the price of poi available to me in the store costs \$5 per plastic container and is shipped from Kaua'i. The poi from the Maui bags tasted better, but I can hardly get local poi anymore because the supply is so low, especially when you go into a store late in the day. Also, because I cannot find the hihitwai, o'opu, and opae, I am forced to buy other foods to substitute for those sources. This all adds to my food bill. Since I only have social security benefits, every little bit makes a big difference. I would much prefer to be able to rely more on what nature used to provide families like mine in Honopou to help me feed myself and my family.

Q. Has this situation imposed other costs on you?

A. I cannot afford to pay for any major costs of pursuing my legal claims, but I am obligated to pay for the costs of legal representation from the Native Hawaiian Legal Corporation. I have to ask for a waiver of that obligation because I cannot afford to pay for them. I also cannot afford to pay for any mediators, should any be appointed to mediate this dispute.

Q. What is your reaction to this situation?

A. I don't think it's fair, nor legal. I only want to get the water I am clearly entitled to get to farm taro and gather from the stream as my ancestors did. That's an entitlement the DLNR should have recognized and done something about long ago, instead of allowing A&B/EMI to continue victimizing me and my 'ohana. The water I

am seeking comes from ceded lands the state is supposed to manage for my benefit and other native Hawaiians. The DLNR is not doing that job and is, in the process, ignoring Hawaiians. Given my superior rights, I should be able to pick up the phone, call someone at the DLNR, inform them that I am being denied a sufficient amount of streamflow and have the problem resolved quickly. Instead, I have to prove that water should be released from the diversions. The water diversions the DLNR is allowing are illegal and should stop so I get as much water as I need to grow taro and once again gather from the Honopou Stream as my ancestors did. Once my rights and the superior rights of others are satisfied then the DLNR may determine what, if any, amount of the excess can be diverted.

Q. Where have you seen these diversions on Honopou Stream?

A. Right below the main highway on the stream, EMI has a large concrete dam that diverts water into the Haiku Ditch. In place of the natural flow, EMI has installed 4 inch pipes to carry a fraction of the natural stream flow beyond the dam. A gate use to control the release of water into the stream from this diversion. My dad used to open and close that gate as he needed, but now only the 4 inch pipes over the dam allow for a fixed amount of water to flow downstream and that isn't nearly enough to satisfy my rights and the rights of others.

Q. How has this low flow specifically affected your 'ohana?

A. We can't plant as much taro as we once did. I still grow taro on LCaw. 5459-X.2. I have started to restore the lo'i on LCaw. 5595:E:1, and a portion of Grants 1918 and 3101.2. However, the low flow has prevented me from going further.

Although I and my 'ohana want to open up more already existing taro lo'i on our property, there isn't enough water flow to do so. Also, my 'ohana and I are unable to exercise other traditional and customary native Hawaiian rights in and around our ahupua'a, coastline and adjacent ocean waters for subsistence, cultural and religious purposes passed on to us by our ancestors.

Q. How many traditional taro lo'i could you plant on the lands you mentioned?

A. About 33-35 lo'i.

Q. How many do you now have planted?

Q. 1-2 lo'i.

B. What is the reason you do not have more lo'i planted in taro?

A. When there's not enough water, as now, and for the past several years, the taro will rot without sufficient flow through to keep the temperature down in the lo'i.

Q. What are you planning to do in this current situation?

A. I have to leave some lo'i fallow for good farming practices. I would try to open up 3 now, to see whether we can grow it. I am asking the DLNR to force EMI to release water from its ditch so enough water reaches the intake to my 'auwai.

Q. What kind of taro will you plant?

A. I'd prefer Moi or Aweueo Kalo because it can be used for both poi and and luau leaf, but there is more chance it would encounter problems with root rot, so I feel I have to wait until the decision in this case gives me the water I need.

Q. How many lo'i would you open if you had all the water you needed?

A. Maybe 20-25, so I can rotate crops at different times in different lo'i. That means I'll leave about a third fallow.

Q. Who would help you?

A. My cousin Marjorie Wallet, her daughter, Lyn Scott, and my 2 sons Sanford and Boniface. Only the DLNR and its partner A&B/EMI is stopping me from growing the taro I could grow.

Q. Didn't A&B/EMI put in an additional pipe in the past year to make it easier on you?

A. It put in an extra pipe to pass more water over its dam above me, but the additional flow does not provide what I really need. Garrett Hew's employees started measuring the difference in flow during an especially rainy period. As a result, the difference in flow was due more to the rain than the flow through the additional pipe. Flow measurements should be taken during the normal dry period to get a true picture. The regular additional flow from the pipe is not sufficient for me to open up more taro lo'i. I can't rely on the flow through this additional pipe given the costs and amount of work involved with adding more taro lo'i.

Q. It seems as though your roots in Honopou are very deep?

A. I am connected to that land by birth and heritage and will always live there. I believe in malama 'aina, as my dad taught me as a girl, and apply it today in my

kupuna years. There is an old cemetery just above the old Honopu landing. No one is assigned to care for it, so I take care of it myself. This tradition of malama 'aina is important to all Hawaiians like me who have tried to remain on the lands on which we were raised.

The many Hawaiian families, like mine, that once thrived on this coast depended on an abundant flow of water in the streams for our taro growing and gathering activities. Our ability to depend on this water was critical to our being able to survive off the land. However, the diversions undertaken by A&B/EMI with the State's blessing have all but extinguished that ability. The decline in water flow as a result has steadily made our situation worse, because we increasingly lose the ability to fend for ourselves and pushed into relying more on a cash economy for our basic needs. If we had more water flowing in the stream, the resulting farming and gathering activities we would no doubt pursue would help restore our confidence, security, and culture. Without it, we continue to feel burdened by the resulting loss in food and cultural activities so dependent on naturally flowing streams.

I am now 73 years old and have seen many negative changes to the stream and the activities we pursued as Hawaiians that relied on that stream flow. I want to grow more taro and pass on that knowledge to my children and grandchildren so they can continue to make the lands of my ancestors as productive as they once were. I cannot do that without the state and A&B/EMI restoring the stream flow to which we as Hawaiians superior rights. These rights continue to take a back seat to the economic motivations of a private sugar plantation. This is Hawai'i. Our rights are supposed to be enforced so we can keep our unique cultural practices alive and well.

CERTIFICATE OF SERVICE

I hereby certify that two (2) copies of the foregoing document were duly served on Linda L. Chow, Deputy Attorney General, for Hearings Officer, The Honorable E. John McConnell on August 1, 2005, by hand delivery. I further certify that one (1) copy was served on the remaining parties as indicated, on August 1, 2005.

CASE NO. CCH-MA13-01

DECLARATION OF AJA AKUNA

DECLARATION OF AJA AKUNA

I, Aja Akuna, declare that:

1. The statements below are based upon my personal knowledge.
2. I am Hawaiian.
3. I am a member of Nā Moku Aupuni O Kō'olau Hui.
4. I am a taro farmer. My family grows kalo on about 1 ½ to 2 acres of property irrigated by Waiokamilo and Kualani.
5. I am farming this land based on my family traditions and the cultural practices we learned and wish to continue here.
6. Traditionally, my 'ohana gathered 'ōpae, 'o'opu, hihiwai, pohole, kalo, 'ulu, mai'a, watercress, pepeiau and other fish in Honopou, Waikamoi, Alo, Wahinepee, Puohokamoa, Haipuena, Punalau/Kolea, Honomanu, Nuaailua, Piinau, Palauhulu, 'Ōhi'a/Waianu,

Waiokamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopililua, Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapihi, and Waiohue.

7. Traditionally, my 'ohana fished for moi, ane, 'ō'io, 'awa, pakaawa, aholehole, uhu, crab, kole, poopaa, haukeuke, 'opihī, pipi, kupee pu'u, pilali, and wana in or near the mouths of Honopou, Waikamoi, Alo, Wahinepee, Puohokamoa, Haipuena, Punalau/Kolea, Honomanu, Nuaailua, Piinau, Palauhulu, 'Ōhi'a/Waianu, Waiokamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopililua, Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapihi, and Waiohue.

8. My 'ohana also engaged in mālama 'āina and mālama kahawai by only taking what they could eat in and around Honopou, Waikamoi, Alo, Wahinepee, Puohokamoa, Haipuena, Punalau/Kolea, Honomanu, Nuaailua, Piinau, Palauhulu, 'Ōhi'a/Waianu, Waiokamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopililua, Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapihi, and Waiohue.

9. Currently, my 'ohana and I gather 'ōpae, 'o'opu, hihiwai, pohole, kalo, 'ulu, mai'a, watercress, pepeiau and other fish in Honopou, Waikamoi, Alo, Wahinepee, Puohokamoa, Haipuena, Punalau/Kolea, Honomanu, Nuaailua, Piinau, Palauhulu, 'Ōhi'a/Waianu, Waiokamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopililua, Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapihi, and Waiohue. However, we can't get the same amount of these resources as my 'ohana used to be able to. We also need to go further to gather.

10. My family and I fish for whatever fish we can get, including moi, mullet, and aholehole in or near the mouth of in Honopou, Waikamoi, Alo, Wahinepee, Puohokamoa, Haipuena, Punalau/Kolea, Honomanu, Nuaailua, Piinau, Palauhulu, 'Ōhi'a/Waianu, Waiokamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopililua, Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapihi, and Waiohue.

11. I gather and fish to feed my family and kupuna who cannot go and get food themselves.

12. We engage in mālama 'āina and mālama kahawai by only taking what we need and cleaning the above-named streams to help the water flow all the way to the ocean and support the ecosystem we rely on to farm, fish, hunt, and gather.

13. We also enjoy Honopou, Waikamoi, Alo, Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu, Nuaailua, Piinau, Palauhulu, 'Ōhi'a/Waianu, Waiokamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapipi, and Waiohue recreationally. We fish and hunt in and around those streams. We go down to the muliwai to swim.

14. My 'ohana appreciates seeing the rivers run to the ocean and looking at the waterfalls.

15. The lack of stream flow is a problem for my family because we cannot grow kalo or gather how our kupuna used to. We are unable to open up new taro patches. We have also lost taro due to the lack of water. There also is not as much fish to eat. Families cannot support themselves and have to leave the area to make money.

16. If there was enough water in the streams, my 'ohana would open more taro patches.

17. If there were more water in the streams, my 'ohana would gather 'ōpae, hihiwai, and 'o'opu in Honopou, Waikamoi, Wahinepee, Honomanu, Piinau, Waiokamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Waiaaka, Kapaula, Hanawi, and Makapipi.

18. If the lack of water was not a problem, I would fish as my kupuna did, fishing for moi, ane, 'ō'io, 'awa, pakaawa, aholehole, uhu, crab, kole, poopaa, haukeuke, 'opihi, pipi, kupee pu'u, pilali, and wana in or near the mouths of Honopou, Waikamoi, Wahinepee, Honomanu, Piinau, Waiokamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Waiaaka, Kapaula, Hanawi, and Makapipi.

19. If water were put back in the streams, I would continue to mālama the streams by only taking what we could eat. My 'ohana would continue to fish and hunt in and around these streams and swim in the muliwai.

20. If there was more water in the streams, I would appreciate the natural scenery. It would be nice to see the rivers flow to the oceans and see the waterfalls how they used to be.

I declare under penalty of perjury that the foregoing is true and correct.  
DATED: Kihei, Maui, Hawai'i, December 26, 2014.

CASE NO. CCH-MA13-01  
DECLARATION OF 'AWAPUHI  
CARMICHAEL

DECLARATION OF 'AWAPUHI CARMICHAEL

I, 'Awapuhi Carmichael, declare that:

1. The statements below are based upon my personal knowledge.
2. I am Hawaiian.
3. I am a member of Nā Moku Aupuni O Kō'olau Hui.
4. My father Henry Ben Kaauamo was from Wahinepee. My mother Sarah Ahkuna Hueau was from Ke'anae.
5. I grew up in Wailua/Ke'anae and was raised by my grandmother Ellen. We were raised traditionally. Although we had no money, we were still rich.
6. When I was growing up, we had so much food. Now no more. It seemed to change after Hawai'i became a state, and the state introduced foreign species.

7. I farmed kalo when I was a little girl with my grandmother. She farmed taro to feed our family, not to sell it, and we farmed in the traditional way and without the use of commercial fertilizers.
8. I learned traditional and customary gathering practices from my grandmother Ellen. Our 'ohana had our own traditions.
9. Traditionally, my 'ohana went all over to gather 'ōpae, watercress, lū'au, haha, pepeiao, hihiiwai, pupulo'i and goldfish in Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu, Nuaailua, Piinau, Palauhulu, 'Ōhi'a/Waianu, Waiokamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, Kopiliula Puakaa, Paakea, Waiaka, Kapaula, Hanawi, Makapii, and Waiohue. We would gather as far as Kaupo because we were invited. We liked to go to Hanawi at night.
10. Traditionally, we would gather 'opihi on the way home from gathering and also catch 'o'opu at Waiolehe and Ching's pond in Palauhulu.
11. My 'ohana also engaged in mālama 'āina and mālama kahalawai at Honomanu, Piinau, Palauhulu, 'Ōhi'a/Waianu, Waiokamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaka, Kapaula, Hanawi, Makapii, and Waiohue by gathering according to the moon and not always going to the same places so we didn't overharvest the stream. We would mālama our own kō'a's to make sure that we could keep the population going.
12. I noticed EMI started to take more water in 1985. I started noticing the stream went dry. We tried to do something about it, but as we talked, EMI took more water. They expected us to go out and clean the ditches.
13. Currently, my 'ohana and I gather 'ōpae, limu, and opihi in or near the mouths of Piinau, Palauhulu, 'Ōhi'a/Waianu, Waiokamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaka, Kapaula, Hanawi, Makapii, and Waiohue. We have to go farther, higher in the mountains than we used to to find the 'ōpae. We also used to go to Honomanu but it's dirty now.
14. I gather to feed my family.
15. I still engage in mālama 'āina and mālama kahalawai by gathering according to the moon and not always going to the same places so we didn't overharvest the stream.
16. We also enjoy swimming in Ching's Pond at Piinau.

17. If there were more water in the streams, my 'ohana would gather 'ōpae, limu, and ophi in or near the mouths of Piinau, Palauhulu, 'Ohi'a/Waianu, Waiokamilo, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapipi, and Waiohue.

18. If water were put back in the streams, I would continue to gather according to the moon and not always go to the same places.

19. The lack of stream flow is a problem for me because we need water so future generations can continue our traditions.

20. I thank God for all of the blessings, for the upbringing we had. We stayed together through the hardships, always together. I didn't really know my parents until I got married. I was raised by my grandmother. I went everywhere with my grandma. I left Ké'anae at 13 to go to Kamehameha. My parents sacrificed so much for me. After Kamehameha, I went to California to work at an insurance company and then Pacific Stock Exchange. I gave it up to be with my husband. When I came back to Maui and saw what my parents did with their lo'i and my brothers and sisters (only one of 13 of us never got a diploma), I was so appreciative. When I came home, I kissed the ground. I was happy to be on Maui.

21. My 'ohana taught me everything I know today. They showed us by example – they did, and we followed. I want to pass it on to the generations that come after us.

I declare under penalty of perjury that the foregoing is true and correct.

DATED: Keanae, Maui, Hawai'i, 11/11, 2014.

DECLARATION OF CARL WENDT

DECLARATION OF CARL WENDT

I, Carl Wendt, declare that:

1. The statements below are based upon my personal knowledge.
2. I am Hawaiian.
3. I am a member of Nā Moku Aupuni O Ko'olau Hui.
4. My family has an interest in property in proximity to Palauhulu and Waikani (Wailuanui) Streams.
5. I am a taro farmer. I grow kalo on property irrigated by Waiokamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, and East Wailuaiki streams.
6. Traditionally, my family gathered 'ōpae, 'o'opu, and hihiwai from Waikamoi, Alo, Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu, Nuaailua, Piinaau, Palauhulu, Waiokamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakea, Paakea, Waiaaka, Kapaula, Hanawi, Makapipi, and Waiohue.
7. My family also traditionally fished for moi, mullet, turtle, and akule in or near the mouth of Honopou, Hanehoi/Puolua, Waikamoi, Alo, Wahinepee, Puohokamoa, Haipuaena,

Punalau/Kolea, Honomanu, Nuaailua, Piinaau, Palauhulu, 'Ohi'a/Waianu Waiokamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakea, Paakea, Waiaaka, Kapaula, Hanawi, Makapipi, and Waiohue.

8. Traditionally, my family engaged in mālama 'āina and mālama kahawai by being good stewards.
  9. In addition to kalo farming, I also engage in mālama 'āina and mālama kahawai by cleaning the streams, specifically Palauhulu, Waiokamilo, and Kualani.
  10. For me, gathering and fishing from the streams is a way to provide food and pass on traditional practices.
  11. I appreciate the peace of mind I get when I'm outside and experiencing the natural scenery and beauty of Honomanu, Nuaailua, Piinaau, Palauhulu, Waiokamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, and East Wailuaiki.
  12. The lack of stream flow is a problem for me as a Hawaiian. It hurts me to see the 'āina and its resources suffering.
  13. Because of the lack of stream flow, we are losing our cultural practices.
  14. If there was enough water in the streams, I would gather and fish as my family before me did. I would gather 'ōpae and 'o'opu from Waikamoi, Alo, Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu, Nuaailua, Piinaau, Palauhulu, Waiokamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Hanawi, Makapipi, and Waiohue. I would also gather pohole, water cress, banana, bamboo shoot, pepeiao, and mountain haha alongside those streams.
  15. If there was more water in the streams, I would spend more of my time teaching the next generation about our practices at Honomanu, Nuaailua, Piinaau, Palauhulu, Waiokamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, and East Wailuaiki.
  16. If water was returned to the streams, I would appreciate seeing mother nature working as intended.
- I declare under penalty of perjury that the foregoing is true and correct.

CASE NO. CCH-MA13-01  
DECLARATION OF CHARLES  
BARCLAY

DECLARATION OF CHARLES BARCLAY

I, Charles Barclay, declare that:

1. The statements below are based upon my personal knowledge.
2. I am a member of Nā Moku Aupuni O Ko'olau Hui.
3. My family has an interest in property near Wailua Stream. We currently have about  $\frac{3}{4}$  acre to 1 acre in kalo, which is farmed by Carl Wendt.
4. I am farming this land based on my ownership (through my wife).
5. In the past, I gathered hiihiwai, papaya, guava, mountain apple, pohole, 'o'opu, prawns, and 'opae in Honomanu, Wailua, Waikani (Wailuanui), and East Wailuaiki. I also fished for kole, noho, aholehole, kumu, moi, anae, menpachi, enenue, palani, poopaa, kala, he'e, Manini, pāpio, ulua, uhu, aweoweo, lobster, and opihi in or near the mouths of Kailua, Nuaailua, Piinau, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula, Puakaa, and Hanawi. I gathered and fished to feed my family.

6. I have also tried to mālama the stream by cleaning the 'auwai of Wailua.
7. The last time I swam in Waikani (Wailuanui) was about two years ago.
8. The way I see it, the lack of stream flow means no kalo and no 'opae. Without water, kalo becomes unhealthy, watercress becomes unhealthy. Goldfish, 'opae, and 'o'opu disappear. My family and I had to leave the area because there was not enough water and that made it harder to continue farming and gathering.
9. If there was enough water in the streams, I would appreciate the natural scenery and beauty of Waikamoi, Wahinepee, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula, and Hanawi.

I declare under penalty of perjury that the foregoing is true and correct.

DATED: Waiehu, Maui, Hawaii, September 5, 2014.

PAAKEA, WAIATAKA, KAPAULA,

HANAWI and MAKAPII STREAMS

CASE NO. CCH-MA13-01

DECLARATION OF DAN CLARK

DECLARATION OF DAN CLARK

I, Dan Clark, declare that:

1. The statements below are based upon my personal knowledge.
2. I am a member of Nā Moku Aupuni O Kō'olau Hui.
3. My family has an interest in property in proximity to Piinau Stream.
4. I am a taro farmer. My family grows kalo on 0.129 acres of property located in Ke'anae and irrigated by Piinau and Palauhulu. I am farming this land based on my leases with various property owners on the Ke'anae peninsula.
5. I have been kalo farming in Ke'anae for 15 years.
6. The Wailuanui-Ke'anae ahupua'a comprise one of the most beautiful spots on the earth. Once my work is accomplished, I take time to enjoy the beauty of the natural landscape.
7. The fact that the fishing resource is in the process of being restored is a consolation to the hard work required to keep the ecosystem alive. When you can gather, the resource (food) will be there.
8. Currently, my family and I clean both our section of the ditch and above our area at Piinau and Palauhulu in an effort to mālama the land and streams.

9. The lack of stream flow is a problem for me and my 'ohana because I need cool, fast running water to feed my lo'i for the best production of kalo. The low stream flow has caused a decrease in my kalo production and an increase in disease to my kalo.

10. If there was enough water in the streams, I would be able to harvest a much healthier kalo crop at Piinau and Palauhulu. Additionally, it would restore the entire ecosystem, which would benefit everyone.

11. If stream flow was restored, my family and I would continue to clean Piinau and Palauhulu, the streams that water our lo'i.

12. For me, recreation is enjoying the surroundings and gathering around a healthy ecosystem. If the water was to flow again, I would definitely enjoy seeing the Piinau and Palauhulu areas restored and in good health again. There are songs and legends associated with the spots we go to. It is a spiritual feeling.

13. If water was returned, I would appreciate viewing the beauty of Ke'anae's restored natural ecosystem.

14. Please return the stream flows.

I declare under penalty of perjury that the foregoing is true and correct.

DATED: Keanae, Maui, Hawai'i, September 28, 2014.

CASE NO. CCH-MA13-01

DECLARATION OF DARRELL  
AQUINO

DECLARATION OF DARRELL AQUINO

I, Darrell Aquino, declare that:

1. The statements below are based upon my personal knowledge.
2. I am Hawaiian.
3. My father is Eusebio M. Aquino. My mother is Flora Aquino. My mother's father is Harry Palukoa. My mother's mother is Maryann Pauhokoa from Wahinepee. She gave my mom 1/2 acre, which is where we began farming.
4. When I retired, I was still farming. I thought I would be a full time farmer but I don't farm anymore.
5. My family grows kalo on about a 1/2 of property irrigated by Palauhulu Stream.
6. My sister Georgina Garrido is farming this land based on her knowledge from her younger days farming taro. We were taught by my parents when we were old enough to walk and do anything that would contribute to taro farming, including pulling weeds, throwing away rubbish, mowing, cleaning the auwai, etc.

7. I learned how to farm taro from my father. He used to have 52 lo'i and produce about 30 bags a week. In the 1960s, he had 30-40 lo'i. He stopped farming in 1996.

8. I learned how to gather 'ōpae from my mother.

9. Traditionally, my family gathered 'ōpae, bamboo shoot, and frogs in and around Piinau, Palauhulu, 'Ōhi'a, and Kopiliula. They gathered 'O'opu from Palauhulu. My 'ohana gathered hihwai from Hanawi where the water was colder.

10. We used to swim in a swimming hole off Palauhulu and stay in the pond all day.

11. My family also traditionally fished for poopaa, aholehole, and puhi in or near the mouths of Piinau, Palauhulu, and 'Ōhi'a.

12. My family engaged in mālama 'āina and mālama kahawai in Piinau and Palauhulu by cleaning the ditches/auwais up to the flume. If nobody cleans it it's not going to flow.

13. Currently, I gather 'ōpae, hihwai, and 'o'opu in Wahinepee, Puohokamoa, Haepuena, Piinau, Palauhulu, 'Ōhi'a, Kopiliula, Hanawi, and Makapii.

14. I also hunted all the time before I was injured three and a half years ago. I hunt in most of the areas the streams flow, and I notice there is not as much water in the streams.

15. I throw net and dive for lobsters, kumu, uhu, kala, palani, aholehole, and moi in or near the mouth of Punalau/Kolea, Honomanu, Nuaailua, Piinau, Palauhulu, 'Ōhi'a/Waianu, Waiokamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula, Puakaa, Paakea, Waiaka, Kapaula, Hanawi, Makapii, and Waiohue.

16. I gather and fish for subsistence and also because I enjoy it. I also like teaching my son what I learned growing up.

17. I would practice mālama 'āina and mālama kahawai when I was farming by cleaning and maintaining the ditch/auwai near home that are fed by Piinau and Palauhulu.

18. When I was living in Ke'anae full time, I would swim in the swimming hole at Palauhulu.

19. Now I notice there is hardly any water running. I remember Makapii stopped running in the late 1980s to early 90s. Even the swimming hole in Ke'anae is low. The water is disappearing someplace; it's even dry before the diversion in some places. The rivers really only run when there is lots of rain.

20. The problem with not enough water is that lo'i needs water. It also affects 'ōpae. The water problem combined with the prawns that eat the 'ōpae really changed the population.

21. If water got put back into the stream, I would continue to gather 'ōpae, hihiwai, and 'o'opu in Wahinepee, Puohokamoa, Haepuaena, Piinaau, Palauhulu, 'Ōhi'a, Kopiliula, Hanawi, and Makapipi.

22. If stream flow was restored, I would continue to throw net and dive for lobsters, kumu, uhu, kala, palani, aholehole, and moi in or near the mouth of Punalau/Kolea, Honomanu, Nuailua, Piinaau, Palauhulu, 'Ōhi'a/Waianu Waikamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapipi, and Waiohue.

I declare under penalty of perjury that the foregoing is true and correct.

CCH-MA13-01<br>DECLARATION OF DAVIANNA<br>MCGREGOR, PhD |
|--|--|

#### DECLARATION OF DAVIANNA MCGREGOR, PhD

1. I am submitting this expert testimony in support of the petitions filed by Na Moku Aupuni O Ko'olau Hui to amend interim instream flow standards for various East Maui streams located on the Ko'olaupoko, Maui coastline.
2. Attached as Exhibit "A" is a true and correct copy of PETITIONERS' DIRECT EXPERT TESTIMONY OF DAVIANNA POMAIKAI MCGREGOR, Ph.D, filed in the contested case hearing docket DLNR File No. 01-05-MA.
3. Exhibit A is testimony I prepared for and presented to the Board of Land and Natural Resources in 2005 in the contested case proceeding involving Na Moku Aupuni O Ko'olau Hui's challenge to the request of Alexander and Baldwin/Hawaiian Commercial and Sugar/East Maui Irrigation Company for a 30-year lease of the four East Maui water license areas.
4. Attached as Exhibit "B" is a true and correct copy of my most current curriculum vitae.

5. I recognize that in 2008 the CWRM voted to partially restore 5 of 8 streams then under consideration by amending the IFS for Wailuanui, Waiokamilo, Pi'ina'au, Hanehoi, and Honopou Streams, in order to respond to the claims of active taro farmers depending on those streams for the irrigation of taro crops in Wailuanui, Ke'anae, Hanehoi, and Honopou valleys.

6. However, I further understand that EMI's compliance with those amended IIFS continues to be an outstanding issue before the CWRM in this contested case hearing.

7. Accordingly, I affirm that the substance of the testimony I presented to the BLNR in 2005 is still applicable and material to the current IIFS contested case hearing before the CWRM and I now offer it for consideration in this proceeding.

8. I have reviewed the Declarations of Na Moku Members submitted in 2001 in support of the stream flow petitions, attached as Exhibit "C" hereto that were provided to me by the Native Hawaiian Legal Corporation.

9. I have reviewed the Declarations contained in Exhibit "D" which were provided to me by the Native Hawaiian Legal Corporation and submitted in 2010 during the CWRM's 90-Day factfinding process.

10. I have reviewed the Witness Statements for CCH-MA-13-01 of Emily Akiona Wendt, Aja Akuna, Terrance D.K. Akuna, Darrell Aquino, Charles Barclay, Leonora (Smith) Barclay, Danny Carmichael, Healoa Carmichael, Dan Clark, Harry Hueu, Sandy Hueu, Jonah Jacintho, Juliana Jacintho, Lezley Jacintho, Kames F. "Kimo" Kaaa, Gladys Kanoa, Sanford Kekahuna, Jerome K. Kekiwi, Jr., Pualani Kimokeo, Norman "Bush" Martin, Jr., Lurlyn "Lyn" Scott, Edward Wendt, and Joseph "Jojo" Young.

11. Based on my prior research, it is my opinion that the 2001 Statements, the 2009 submissions, and the 2014 Witness Statements referenced above, describing the areas of use for traditional and customary practices of gathering in streams ranging from Makapipi to Honomanu are consistent with my prior research as presented in the Ke'anae-Wailuanui Cultural Landscape study of July 1995. The statements are also consistent with my prior testimony provided in Exhibit A, in which I reported that community members from the Keanae-Wailuanui region engage in traditional and

customary gathering activities throughout the traditional practices region (Makapipi to Honomanu) including in unoccupied areas in order to maintain the resources.

DATED: Honolulu, HI, December 23, 2014.

PETITIONERS' DIRECT EXPERT TESTIMONY OF  
DAVIANNA POMAIIKAI MCGREGOR, Ph.D.

- Q. Please state your name for the record.  
A. DAVIANNA POMAIIKAI MCGREGOR.  
Q. Where do you live?  
A. I live in Kaiwiula, Kapalama, O'ahu and Ho'olehua, Moloka'i.  
Q. Where do you work and what is your title?  
A. I am a Professor of Ethnic Studies at the University of Hawaii, Manoa.  
Q. What is your educational background and training?

A. I graduated from the University of Hawaii with a Bachelor of Education degree in Secondary Education in 1972 and a Bachelor of Arts degree in Asian/Pacific History in 1973. I did my graduate work at the UH, where I obtained a Master of Arts degree in Pacific Islands Studies in 1979. I also earned a PhD in Hawaiian and Pacific History from the University of Hawaii in 1989.

Q. What was your doctoral dissertation topic?

A. The title of my doctoral dissertation is "Kupa'a I Ka 'Aina: Persistence On The Land." It examines the conditions of Hawaiians from 1898 to 1930, the first 32 years of direct U.S. rule over Hawaii. It compared the conditions of Hawaiians in urban O'ahu with that of Hawaiians in rural Hawaiian communities on the island of Molokai, the moku of Hana, Maui and the ahupua'a of Waipi'o, Hawaii.

Q. Did you prepare a *curriculum vitae* to reflect your education and training?

A. As part of my testimony, I have submitted my *curriculum vitae* which contains information on my academic training, my teaching, my research, and my publications.

Q. Have you previously been qualified to testify as an expert witness?

A. I have served as an expert witness regarding traditional Hawaiian subsistence, cultural, and religious customs and practices in the following Civil Cases: *Kelly v. 1250 Oceanside Partners*, Civ. No. 00-1-0192K (Haw. 3<sup>rd</sup> Cir.); *Office of Hawaiian Affairs, et al vs. Housing and Community Development Corporation of Hawaii, et al*, Civil No. 94-4207-11 SSM, 1994 - 2001; *Kanaka v. Department of Defense; Pele Defense Fund v. Paty*, Civ. No. 89-089 (Haw. 3<sup>rd</sup> Cir.); *Pele Defense Fund v. Campbell Estate*, Civ. No. 89-089 (Haw. 3<sup>rd</sup> Cir.); and *Hanakeawe v. Nonsay Hawaii, Inc.*, Civ. No. 90-316 (Haw. 3<sup>rd</sup> Cir.). I have also testified as a cultural expert in the following criminal trespass cases. *State of Hawaii v. Spalding* (Haw. 3<sup>rd</sup> Cir.); *State of Hawaii v. Naeole* (Haw. 3<sup>rd</sup> Cir.); *State of Hawaii v. Kaleo Patterson* (Haw. 3<sup>rd</sup> Cir.); *State of Hawaii v. Keli'ioa* (Haw. 3<sup>rd</sup> Cir.).

Q. Have you ever been qualified before administrative bodies to testify as an expert?

A. I appeared as an expert before the State of Hawaii's Water Commission in the Waiahole Water Case, Docket No. CCH-0A95-1, and *In re Waiola O Molokai*, Docket No. CCH-MO96-1; before the Public Utilities Commission in Docket # 7259 Relating to Hawaiian Electric Light Company, Regarding Integrated Resource Planning, 1993; and before the Public

Utilities Commission in Docket # 6617 To Require Energy Utilities in Hawaii to Implement Integrated Resource Planning, 1990.

Q. Have you had the opportunity to study the nature and extent of cultural, religious, and subsistence activity in which the Native Hawaiians have engaged to support themselves?

A. Yes. I first studied rural Hawaiian communities where Native Hawaiians comprised the majority of the population and continued to support their extended 'ohana through traditional Hawaiian subsistence farming, fishing, hunting, and gathering customs and practices when I wrote my PhD dissertation. Subsequently, I conducted a number of studies of the traditional and customary practices of Native Hawaiians, which mirror long-held cultural practices of ancient Hawaiians in several rural communities throughout the state. While all have unique features associated with those communities, these traditions and customs I've recorded are resilient and persistent. In many instances, the continuation of these cultural practices is financially necessary for many families. These studies have taken me to East Maui, where I conducted extensive and expanded research, as well as Molokai and the Island of Hawaii.

Q. What prompted your expanded research for East Maui?

A. In June 1993, the Hawaii State Legislature approved what later became Act 156 to implement a preexisting statutory mandate requiring planning for the state's physical environment and for socio-cultural enhancement, which recognizes the significance of the state's "cultural landscapes." Accordingly, it established a task force to examine Hawaiian cultural landscapes. This task force was responsible for developing designation criteria, specifying activities and uses consistent with cultural landscape districts, developing procedures for definition of cultural landscape districts and their boundaries, and reporting their findings to the legislature.

Q. What happened as a result of this effort?

A. In January 1994, the DLNR Cultural Landscape Task Force reported back to the Legislature on the importance of landscape preservation within a vital daily living context. The Task Force defined cultural landscapes as geographic areas, which exhibit monolithic characteristics of an ethnic, economic or cultural nature. They reflect the interaction of cultural, economic, and natural forces on the environment. They are a definable area, which clearly defines the settlement or use of the land, water, and/or living systems (plants and animals) over a long period of time, as well as cultural values, norms, and attitudes toward the land, water and/or

living systems. These geographic areas possess a significant concentration, linkage or continuity of landscape components (i.e., vegetation, buildings and structures, archaeological sites, roads and trails, waterways, religious and natural features and resources), which are united by human use and past events and/or aesthetically by plans or physical development. Typically, these landscapes could involve abandoned villages or agricultural systems, taro-producing areas, sugar lands, ranches, fishing areas, traditional gathering areas, and entire islands.

Q. What were the recommendations of the Task Force?

A. The Task Force supported a model project focusing on the Ke'anae-Wailuanui area on Maui, because it recognized that this community is a taro-growing area with long continuity of use and with local support for preservation.

Q. What was the purpose of this model project?

A. The project involved a cultural landscape study to inventory and assess the resources of the Ke'anae-Wailuanui communities. The Maui County General Plan of 1990, on which the Hana Community Plan is based, has themes, one of which under "land use" is: To preserve for present and future generations existing geographic, cultural and traditional community lifestyles by limiting and managing growth through environmentally sensitive and effective use of land in accordance with the individual character of the various communities and regions of the County.

Maui County adopted the Hana Community Plan as part of its adoption of County General Plan in July 1994, under Section 2.80.050 of the Maui County Code. To implement the Hana Community Plan, the Maui County Planning Department initiated the resulting Ke'anae-Wailuanui Cultural Landscape study. The Hana Community Plan calls for county government to "compile special plans and studies necessary to implement the recommendations of the Community Plan." It also establishes the following goals, policies and implementing actions:

- Land Use:** Preservation and enhancement of the current land use patterns which establish and enrich the Hana Community Plan region's unique and diverse qualities.
- Identify and inventory exceptional open space resources and viewsheds. Explore protective management measures such as covenants, easements, and other planning tools.
  - Explore alternative land use and overlay zoning designations that recognize and preserve the unique natural and cultural characteristics of each community within the Hana region.
  - Encourage the availability of agriculturally suitable lands to provide opportunities for small diversified agricultural activities with residential tenancy for farmers.

Q. What was the specific goal of the Ke'anae-Wailuanui Cultural Landscape study of July 1995?

A. The goal was to describe and quantify conditions and traditions which have shaped the land and which still affect the patterns of land use. Land use management policies based on a broad foundation of knowledge of resources will better enable the community and its representatives in county and state government to make effective decisions appropriate to this and other rural and agricultural areas.

Q. What were the specific tasks of the study?

A. There were three major tasks: (1) identify the historic context of the landscape, through archaeological research to determine the depth of wetland taro cultivation and a literature search, including a summary of Land Commission Awards for the Ke'anae and Wailuanui ahupua'a, focused on agricultural or other uses of the claims; (2) identification of cultural landscape components, including farm land, crops, vegetation types, water control, gathering, hunting, home sites, ocean-related activities, and lands associated with Hawaiian legends; and (3) preliminary mapping using historical maps, aerial photographs, and detailed land classification maps to identify existing land use areas and the boundaries of the cultural landscape.

Q. What was the methodology for conducting this study and who was the team responsible for conducting the work?

A. The methodology is described on pp. 13-17 of the report. Basically, (1) Cultural Surveys Hawaii, Inc. conducted a literature search, including a review of aerial photographs, (2) Cultural Surveys Hawaii, Inc. and Group 70 conducted field surveys, including mapping of taro lo'i; and (3) I conducted personal interviews, relying heavily on kupuna (9 of 13 interviewees) from Ke'anae and Wailuanui.

Q. How reliable are the sources of oral history, as related by those Hawaiians you interviewed?

A. The oral history interviews were consistent with each other and were cross validated with the information gathered through the literature search and the field surveys.

Q. What are the cultural landscape area boundaries?

A. The team identified the Ke'anae-Wailuanui core Cultural Landscape area boundaries in Figure 3 of the report. The area encompasses the Ke'anae peninsula and runs southeast along the coast to the southeast ridge of Wailuanui Valley. On the west, it is bounded by the Ke'anae YMCA, Ke'anae Arboretum and the Palauhulu stream. Inland it extends 600 feet mauka of the Hana Highway, stretching from the YMCA camp to the ridge on the east side of Waikani Falls. The informants also identified a wider traditional cultural practices region shown in Figure 4 of the report, for fishing, hunting and gathering. This extends from Makapipi Stream and forest access road in the east, to Honomanu and the Kaumahina ridge on the west and mauka to Pohaku Palaha on the northern rim of the Haleakala Crater.

Q. In summary, what did these sources of information show?

A. The literature search documented the cultural and natural setting of the cultural landscape area, which has a rich and long history of supporting Hawaiians who tilled the land, grew taro and other food crops, and fished the nearshore ocean seas as far as 11 miles offshore. In the various land commission testimonies, maka'ainana from the Ke'anae-Wailuanui community described their agricultural pursuits in the 1840's. The field surveys, combined with the literature search, yielded information that enabled the team to map the cultural landscape - historic locations of buildings, taro lo'i, 'auwai, and other cultural features of the communities that settled the area. The interviews helped me link current uses of land and streams by residents to their historic uses and verified those practices that continued to be followed along the traditions of their ancestors. The relative isolation of this cultural landscape enabled it and its residents to avoid or resist intensive modern land developments and retain many of the ancient traditions passed down through the generations of Hawaiians who resided in this area.

Q. Why was the Ke'anae-Wailuanui area selected for this cultural landscape study?

A. Aside from the land use planning angle I've previously mentioned, it was particularly appropriate because it is associated with a deep and long tradition of growing taro, the staple crop of Native Hawaiians for generations. The earliest Polynesian voyagers to Hawai'i brought taro with them. It has been linked mythologically to the origins of Hawaiians as a people. The plant itself has attributes which are embedded in the notion of the family and kinship relations. All parts of the taro plant are used for food. Much of the traditions surrounding the cultivation and use of taro have persisted in Ke'anae-Wailuanui to a much

greater extent than most other parts of Hawai'i. With such an intimate association with the people and culture of Hawai'i, Ke'anae-Wailuanui was a prime candidate for designation as a cultural landscape. Today, large-scale taro cultivation is confined to isolated areas in Hawai'i - Hanalei/Waioili, Hanapepe and Waimea on Kaua'i, Waikane/Waiahole on O'ahu, Onokohau, Waihe'e, Ke'anae-Wailuanui on Maui, and Waipi'o Valley on the island of Hawai'i. The taro landscape of Ke'anae-Wailuanui is a viable traditional economy which has maintained historic and cultural integrity, traditional lifestyles, and social continuity to an equal or greater extent than any of the other taro growing landscapes in Hawai'i.

Q. What physical attributes of Ke'anae-Wailuanui did your study examine?

A. The 1995 study identified 12 components for examination. They are listed on page 44 of the report. Among them are taro cultivation, the Ko'olau Ditch built and maintained by EMI, and cultural resources and use areas.

Q. What did you learn about the taro cultivation in Ke'anae-Wailuanui?

A. Wetland taro cultivation is the most important single component of the cultural landscape of Ke'anae-Wailuanui. Wetland taro cultivation requires a precisely defined, stable field system with a continuous and reliable source of water. The system must be designed so that cool, fresh water can be delivered constantly to every field. In this sense, a taro landscape is designed as a single system with interrelated elements (fields, streams and 'auwai). Alteration of any of these elements could affect the entire system. The ancient Hawaiians who designed this landscape were limited in the degree to which they could alter the natural topography. They dealt with this constraint by flexibility of design. Seen as a whole, the taro landscape appears as a simple network of inter-connected rectangles defined by banks, which hold in water. Upon closer inspection, it is apparent that field design, water flow, and water delivery are a response to subtle variations in the natural landscape. A taro landscape is extremely complex in its internal workings.

Q. What areas of taro cultivation exist in Ke'anae-Wailuanui?

A. There are five major locations of active taro cultivation - Ke'anae peninsula, Wailuanui, Ke'anae Arboretum, Waianu Valley, and Lakini. An additional small area of cultivation exists at Waioakamilo Stream just makai of its crossing of Wailuanui Road. There are small lo'i on both sides of the stream. In addition, throughout the district old taro terraces can be found and taro still grows in the wild in the valleys, along streams. Informants speak of going

out and gathering lu'au leaves from the wild taro because it has a good flavor, distinct from the cultivated varieties. Some of the areas for the gathering of wild lu'au include Pi'ina'au, Nua'ailua, Kupa'u, Waipio, Awioio, Pohole and Pahoa.

Q. Please describe the Waiuanui taro area.

A. This is the largest taro system of the cultural landscape, with 339 lo'i, that Cultural Surveys plotted off a 1982 aerial photograph in Figure 15. They lie mainly west of Waiuanui Stream and to the north and east below Hana Highway. It is an area of mixed cultivation and uncultivated areas. There is also a smaller set of lo'i above Hana Highway in the area known as Lakini. See, Figure 21.

The essence of Waiuanui is water (wai = water). Waiuanui is best viewed looking mauka. The taro lo'i as seen from makai, are framed by the steep green slopes of the valley with Waikani Falls to the east and Waioakamilo Stream waters entering from the center and west. The lo'i themselves, as they ascend the slopes, decrease in size to accommodate the requirements of water control. Nowhere else in Hawai'i are such miniature fields still cultivated in this kind of topography with such integrity. See, p. 126.

Q. Please describe the Waiuanui 'auwai system.

A. It is evident that at Waiuanui Valley, the 'auwai and lo'i systems were constructed first and subsequent residences and circulation networks accommodated the already established systems. The pattern of cultivated lo'i at Waiuanui is likely close to what existed at the time of the Mahele, but for the time when rice was cultivated just prior to and after the dawn of the 20<sup>th</sup> century.

Cultural Surveys was able to produce a schematic of the 'auwai as it takes water from Waioakamilo Stream and passes through Lakini. Figure 21. The water flows past these lo'i, partially returning back to Waioakamilo Stream, but mainly flowing under the existing Hana Highway to irrigate the valley lo'i below that point.

There is another major diversion of Waioakamilo Stream below Hana Highway that irrigates the extreme western end of the valley. See, Figure 22.

Cultural Surveys approximated the direction of flow in the 'auwai system servicing the valley, as the system was complex and our team did not have the time or resources to make a definitive map of all aspects of it.

Q. Did you discover any major changes in the use of the valley for taro cultivation since the time of the Mahele?

A. Our team did not find any historic map of the valley. Taro cultivation is well documented for the entire area in the 1850's Land Commission Award documents. In Appendix A of the report, the various claims for Land Commission Awards in Ke'anae-Waiuanui are rendered in a table. The table illustrates the extent to which taro was grown on the claimed parcels. The table summarizes the testimonies submitted in support of the requests for Land Commission Awards and reflects the presence of taro cultivation at the time of the Mahele for these parcels. While it indicates what was happening on those parcels at that time, it does not indicate which of the pieces claimed were actually awarded by the Land Commission.

Nevertheless, the table gives an accurate indication of the extent to which active taro cultivation existed and on which parcels in the valley. This activity also indicates where irrigation water from the streams was being applied in pursuit of this activity at the time of the Mahele.

Q. Did you discover any other evidence of the extent of taro growing in the valley during different times in history following the Mahele?

A. Apparently, as an 1896 map (Figure 9) of the lower section of the valley reveals, by then there was a sizable area devoted to rice cultivation, although much of the southeastern portion along Waiuanui Stream remained in taro. This pattern apparently persisted through 1903, according to a similar map of the area (Figure 10). Some of the residents I interviewed indicated that rice was preferred at that period because water temperature was not the crucial consideration as it is for taro cultivation, reflecting a diminished water supply to the valley for irrigation. Chinese farmers grew rice in significant parts of the valley between 1880 and 1927, when the market collapsed because of the competition from California.

A 1936 photograph (Figure 16) shows that a majority of the valley was under taro cultivation, with considerably less tree and bush vegetation than was present in 1994 when I conducted my field research. By 1966, in contrast, while all cultivated areas appeared to be in taro, there is a dramatic increase in forest growth along the periphery of the valley, compared to 1936, as Figures 17 and 18 reveal. Contrasted with current conditions, as depicted in the photographs taken in 2004 and this year in June, it appears that there is now substantially different, as well as fewer, areas of taro lo'i than was being actively cultivated in 1966.

This evidence shows there was apparently a period of decline in taro cultivation in the valley between 1936 and 1966, as well as between 1966 and 1994. However, while to varying degrees, the Wailuanui valley residents, especially Hawaiians, continued a tradition of taro cultivation that continues through the present. This cultural landscape is distinctive in terms of this long tradition, and continues on to this day, reflecting how critical taro production is to this community.

Q. Do you have an opinion as to whether the current taro cultivation reasonably approximates the amount of water used to cultivate taro at the time of the Mahele?

A. Yes.

Q. And what is that opinion?

A. While the rice cultivation earlier last century may have altered some of the pattern of lo'i in the valley, the broad pattern remains since both crops are wetland agricultural products and the irrigation system plays a critical role in their cultivation. The mechanics of irrigation systems must follow gravity. Residences are found on slightly elevated areas at the edges of the fields, not in the center of the lo'i, which would be the low spot and subject to periodic flooding. The roadway network serving these residences skirt the cultivated areas and does not cut into the system of lo'i. This pattern involves frequent tending and fits the horticultural character of Hawaiian agriculture where the cultivated fields are relatively small and are within walking distance of residences. It is a pattern developed before automobiles and mechanized agriculture. The field was central, not the residence. This pattern is found even in areas where residences are not nearby. See, p. 126.

There was far more taro cultivation in the valley in the 1800's than presently. There is also far less water flowing naturally into the valley as a result of the major EMI diversion into the Ko'olau Ditch mauka of Kupau and Akeke Spring. This reduction in taro production is significant compared to historic levels.

Q. On what basis do you make this conclusion?

A. During the fieldwork for this study, which included field trips as well as interviews, it became apparent that the Ke'anae-Wailuanui communities have a long history of small commercial ventures associated with processing and marketing of local taro. Besides the People's Store, which once stood at Ke'anae landing, there were six separate poi mills, each in operation over a different span of time. Each sold local taro processed into poi to the community

itself and also exported taro. Taro was exported in two separate directions: to Hana and to Ha'iku/Kahului/Wailuku. The Alama Poi Shop operated from the 1920's to the 1950's. The Ching Poi Mill operated in the 1930's through the 1950s, exporting poi to Kahului and Hana. The Ng family operated a mill that exported poi to Hana. The Alu family ran the Kupa'u Mill from the late 1930's to the early 1950's. The Lum Hoy Poi Mill exported poi to Wailuku from the 1930's through the 1940s. The last mill, Ke'anae-Wailua Poi Mill was started in 1975 by Mr. Ed Wendt and operated through 1984. The current level of taro production contrasts sharply with what historic records show.

Q. Do you have an opinion, based on your training, research, and expertise, whether the land uses of Wailuanui residents are linked to Hawaiian cultural mores and practices?

A. Yes.

Q. What is your opinion?

A. The land use patterns of the Ke'anae-Wailuanui region have been shaped by Hawaiian cultural mores and practices. The 'ohana values and practices of the community stress the conservation of natural resources for the benefit of present and future generations. Rules of behavior are based on respect of the 'aina, the virtue of sharing, and a holistic perspective of organisms and ecosystems that emphasize balance and coexistence. The Hawaiian outlook which shapes these customs and practices is lokahi or maintaining spiritual, cultural, and physical balance with nature. In the course of their travels through the various 'ili of the traditional cultural practices region, practitioners of Ke'anae and Wailuanui are able to renew their knowledge and understanding of the landscape, the place names, names of the winds and the rains, traditional legends, wahi pana, historical cultural sites, and the location of various native plants and animals. The region is thus experienced as a part of their 'ohana, necessitating the same care as would a member of their family.

Q. Do you have an opinion, based on your training, expertise, and research, on how important traditional and customary gathering of 'o'opu, 'opae, and hihikai is to the Hawaiians of Wailuanui?

A. Yes.

Q. What is that opinion?

A. Ke'anae-Wailuanui is one of the few remaining areas in the Hawaiian Islands where 'opae can be gathered. Virtually every stream has 'opae at some time during the year.

However, it is easier to gather 'opae in the tunnels of the EMI ditch system. The irrigation ditch itself is an excellent breeding area for the 'opae because it has flowing water year round. Some streams below the ditch, however, don't have enough flowing water to sustain the 'opae year round when the water is diverted into the ditch system. Commercial sale of 'opae is prohibited under a state law that went into effect in 1993. 'Opae is still a popular delicacy among the families in the district. They also gather 'opae to share with family and friends outside and on different islands. 'Opae, the 'a'aniu net used to gather it, and the methods of preparing it will continue to be a distinctive aspect of the cultural lifestyle for which Ke'anae-Wailuanui is known and distinguished.

'O'opu and hihiwai are becoming increasingly scarce in the Hawaiian Islands. Certain species of 'o'opu are endangered and others are rare. They require pristine and flowing stream waters to exist. Ke'anae-Wailuanui is one of the few areas where they still can be found in sufficient size to be occasionally caught for subsistence food.

The gathering of hihiwai is also carefully managed. The location of the hihiwai is knowledge that has been passed down from generation to the next for their protection and proper management. It is not information that is made available to the general public.

Q. What is the geographic range of this gathering activity?

A. Family members of all ages engage in some level of gathering activity in the Ke'anae-Wailuanui district. Kupuna like Helen Nakanelua still go out and gathers 'opae with her homemade 'a'aniu net in the 'auwai that runs through her property at Lakini. Waiokamilo Stream still has 'opae which is accessible to the kupuna. The Ka'auamo family is best known for their traditional and customary gathering activities. Awapuhi Ka'auamo Carmichael still goes out gathering for 'opae, hihiwai, and 'opihi from Kailua and over through Kuliwa. Awapuhi Carmichael identified some of the area which she regularly accessed for gathering of 'opae, hihiwai, and 'o'opu:

We have our own names. Kapa'ula, gather 'opae. We use Puakaa, we call it Kaunoa. Above the road, the ditch above the road, we use that stream, and then it branches off. Even Makapipi, we use Makapipi stream. We use all the way to the tunnel. We use it. Kuliwa gulch is used by our family. Kuliwa gulch we use also. Makapipi is just mauka. Kuliwa is mauka.

Gathering from a variety of places is important in order to maintain the resources. The choice of place to gather is determined by the weather and other natural signs. Awapuhi Carmichael described the factors which affected her decision as to where to gather on a particular expedition:

It depends on what we're getting, and how we feel . . . We never go to the same place. You know how the Hawaiians used to do, they don't go back to the same place, so can restore. It depends on the weather, and then we go by the moon, the stars. If use one place, then go to another place, depends on the moon and the stars. We go up far . . . We all go to the same places, although each of us have our favorite hole, places, where we go for 'opae, you know. All mauka for 'opae. And then below have the 'o'opu and the prawns, they introduced the prawns, and hihiwai. Above the road is more the 'opae. Above the road is where all the 'opae are. Above the main highway. And then below the road has hihiwai, 'o'opu, you know.

Within the traditional cultural landscape area for Ke'anae-Wailuanui unoccupied areas with flowing pristine streams and the forested areas are integral to the livelihoods of the families in the district. For example, nobody lives in the area from Wailuiki to Kopili'ula and over to Hanawi but there are many gulches and streams flourishing with hihiwai and 'o'opu.

Q. What was the importance of subsistence gathering to the health of Hawaiian gatherers who engaged in this traditional activity – historically and in current times?

A. Through subsistence, families attain essential resources to compensate for low incomes. They can also obtain food items, especially seafood, that may be prohibitively costly under a strict cash economy. If families on fixed incomes were required to purchase these items, they would probably opt for cheaper, less healthy foods that would predispose them to health problems. In this respect, subsistence not only provides food, it also ensures a healthy diet.

Subsistence generally requires a great amount of physical exertion (e.g., fishing, diving, hunting) that is a valuable form of exercise and stress reduction and contributes to good physical and mental health. It is also a form of recreation that the whole family can share in. Family members of all ages contribute at different phases of subsistence, be it active hunting, fishing or gathering or cleaning and preparing the food for eating. Older family members teach the younger family members how to engage in subsistence and prepare the food, thus passing on ancestral knowledge, experience and skill.

Q. What was the pattern of these subsistence activities amongst those traditional and customary gatherers of Ke'anae-Wailuanui you interviewed?

A. Subsistence gathering, hunting and fishing is an integral part of the lives of the residents of Ke'anae-Waiuanui. There is general agreement among the informants that their traditional cultural practices region extends from Honomanu in the west to Makapipi in the east and mauka from Pohaku Palaha on the rim of the Haleakala crater makai to the shoreline, and into the ocean as far as the buoy 11 miles offshore. Additional areas are used by residents of Ke'anae-Waiuanui depending on where their family ancestors originated and established subsistence practices. For example, some families fish and gather as far as Kaupo or as far west as Honopou and mauka to Waikamoi. The location and distribution of water is the primary determinant of the distribution of natural resources. Traditional land use boundaries were defined in relation to the amount and location of water. The change of season from wet to dry does affect the distribution and availability of subsistence resources. When there is a lot of rain, the resources are more abundant and spread out over a larger area. During the dry period, the amount of resources shrink and they are distributed near to water sources.

Most subsistence areas can only be accessed by land through a trail or a dirt road. The Pi'ilani Trail affords an important route of access between 'ili along the coastline. The Ke'anae-Waiuanui residents also use an extensive network of mauka to makai trails to carry out their subsistence activities. Hunters say that one can readily catch a decent sized pig without venturing far up the mountain. However, the network of trails allows access to upper regions where the larger animals roam. Fishing resources vary by ocean depth. Along the rocky shoreline fishermen gather crab, 'opihī, ha'u'ke'u'ke, and other shellfish. In the reef, residents gather limu and catch squid, lobster, and reef fish such as 'uhu, kala, and manini. At greater depths bottom fish are caught such as weke, ehu, 'opakapaka and uku. In the bays, nets are used to surround 'akule. 'Aholehole, 'ama'ama and uouoa are also caught with gill nets. In the deep ocean and out to the buoy the fishermen troll for ono, aku, 'ahi, marlin, and mahimahi. Ocean resources are accessed by land through mauka-to-makai trails and along the Pi'ilani Highway. Boats are also used for ocean subsistence activities. The launching areas are Honomanu Bay, Ke'anae Landing, Waiuanui Bay and Hana Harbor.

Resource gathering patterns are also influenced by ho'aiona or spiritual signs in natural phenomena. Ke'anae-Waiuanui residents stay alert to the direction and patterns of clouds, winds, rain, the flight of birds, rainfall and all natural elements to inform them about where the ideal place is to gather on any given day. They also keep track of the moon phases and the effect

on the shifts in the tides. Ancestral knowledge of the interpretation of place names in the district also informs Hawaiians about the special features or qualities of that particular area for subsistence and cultural use.

Q. Is this a traditional pattern of subsistence activity?

A. Traditional factors shape the pattern, nature and purpose of the ongoing subsistence fishing, gathering, farming and hunting activities. These include family and ancestral connections to particular features of the landscape; the distribution of water; access; the type of resource to be obtained; the life cycle of that resource; the diet and feeding habits of fauna; the weather and seasonal changes; and ho'aiona. The subsistence activities are also guided by traditional values and customs which include but are not limited to the following:

1. Only take what is needed.
2. Don't waste natural resources.
3. Gather according to the life cycle of the resources. Allow the resources to reproduce. Don't fish during their spawning seasons.
4. Alternate areas to gather, fish and hunt. Don't keep going back to the same place. Allow the resource to replenish itself.
5. If an area has a declining resource, observe a kapu on harvesting until it comes back. Replant if appropriate.
6. Resources are always abundant and accessible to those who possess the knowledge about their location and have the skill to obtain them. There is no need to overuse a more accessible area.
7. Respect and protect the knowledge which has been passed down intergenerationally, from one generation to the next. Do not carelessly give it away to outsiders.
8. Respect each other's areas. Families in Ke'anae-Waiuanui usually fish, hunt, and gather in the areas traditionally used by their ancestors. If they go into an area outside their own for some specific purpose, they usually go with people from that area.
9. Throughout the expedition keep focused on the purpose and goal for which you set out to fish, hunt, or gather.
10. Be aware of the natural elements and stay alert to natural signs, e.g. falling boulders as a sign of flash flooding.
11. Share what is gathered with family and neighbors.

12. Take care of the kupuna who passed on the knowledge and experience of what to do and are now too old to go out on their own.

13. Don't talk openly about plans for going out to subsistence hunt, gather, or fish

14. Respect the resources. Respect the spirits of the land, forest, ocean. Don't get loud and boisterous.

15. Respect family 'aumakua. Don't gather the resources sacred to them.

Q. To what extent, if any, does taro cultivation relate to the traditional and customary gathering of 'o'opu, 'opae, and hihiwai?

A. These native aquatic marine species and taro rely upon pristine, clear, cold, free running streams that flow year round. All of the great historical taro growing areas of Hawai'i rely on pristine streams where native aquatic species thrive - Ke'anae-Wailuanui, Kahakuloa on Maui; Hanalei on Kaua'i; Waipi'o on Hawai'i, the windward valleys of Moloka'i. 'O'opu, 'opae and hihiwai have been a part of the traditional diet of taro farmers in these areas.

Q. Were you able to determine the degree to which traditional and customary gathering of 'o'opu, 'opae, and hihiwai in Wailuanui has changed since the 1890's?

A. Auntie Helen Nakanelua who was 83 in 1994 was born in 1911 and described how she used to go out and gather 'opae with her grandmother who would have been born and learned how to gather 'opae before the 1890's:

And I used to go along with my grandma, with a five gallon can, you know those tall ones, and I pack some wood, and I pack salt, so that whenever my grandma goes with the upena net, do you have an idea what the upena net looks like and they have a little bag there? Some of the bags are small, but she used to have these long bags, and then she cleans that where I am, she takes that out, we clean it and we cook it in this can. Salt it and cook it there, the wood that I take we cook it. And after it's cooked, I begin spreading it on a table oil cloth and a mat I used to pack along and then she leaves me there I attend that opae while it's drying. By the time she comes back here, it's partly dried, I gather that 'opae again, and separate it in another bag, because that's partly dried, and we continue on, she gets another bag to do the same thing, cook, so that by the time she ends up her day, most of the opae, except the last one she has is partly half dried already. Do you know how the upena look like? I show you, cause I have made some for me, because I use it.

Although Auntie Helen continues to gather 'opae, it is not as plentiful as it had been in her youth. An indicator of the decline of 'opae is the passage of a state law in 1993 which prohibits its commercial sale due to its scarcity.

Q. Do you have an opinion as to the importance of the Ke'anae-Wailuanui region to Hawaiian cultural history?

A. Yes.

Q. What is that opinion?

A. The most distinctive historic association of the Ke'anae-Wailuanui landscape is its unbroken relationship to the foundations of Hawaiian culture through the traditional cultivation of taro, the major component of the cultural landscape. The traditional cultural practices region is also significant as a surviving enclave of Hawaiian subsistence, cultural, and spiritual beliefs, customs, and practices. Rural Hawaiian communities like Ke'anae-Wailuanui are cultural kipuka - places where Hawaiians have maintained a close relationship to the land through their livelihoods and customs - that play a vital role in the survival of Hawaiian culture as a whole. There is a growing recognition that protection of the natural resources and the integrity of the lifestyle and livelihoods within rural districts is essential for the perpetuation of Hawaiian culture. However, the survival of these cultural kipuka and the traditions and customs related thereto are continually eroded by an ever increasing lack of water.

Q. Do you have an opinion on how significant the Ke'anae-Wailuanui region is as judged against federal criteria for cultural significance?

A. Yes.

Q. What is that opinion?

A. The Ke'anae and Wailuanui cultural landscape is significant under the four National Register criteria of significance and an additional Hawai'i state criterion. Under Criterion A, Ke'anae-Wailuanui is associated with significant events affecting broad patterns of history. The evolution of Hawaiian culture and society in the Hawaiian Islands over the past 1500 years was sustained by highly developed and well-managed systems of wetland taro cultivation. Ke'anae-Wailuanui is an extraordinary example of a highly developed historic Hawaiian wetland irrigation system which sustained the complex social organization and sophisticated customs and practices of the Native Hawaiian culture. The cultural landscape also includes the historic network of irrigation ditches and tunnels which were developed in the late

nineteenth and early twentieth centuries. The last completed segment of the Hana Belt Road is also in this cultural landscape.

Under Criterion B, Ke'anae-Waihanui is associated with events which involved famous people such as the landing of Uni-a-Liloa's war canoes during his 14th century battle over Hana against Ho'olae-Makua and the staging of the battles between Kalaniopu'u and Kahekili in the 18th century.

Under Criterion C, Ke'anae-Waihanui epitomizes the quality and integrity of a historic landscape centered around the historic wetland cultivation of taro. In addition, the 2 churches, its public school facility and the Waikani Bridge are also excellent examples of each of these types of historic architecture.

Under Criterion D, Ke'anae-Waihanui provides excellent potential to yield information important in the prehistory and history on the origins, chronology and development of Hawaiian taro cultivation, as well as the complex social structures which both sustained and perpetuated by this kind of agricultural technology.

Q. To what extent are those that now gather and attempt to farm taro in the valley genealogically linked to the Hawaiians that lived in the valley during the 1800's?

A. The informants that I interviewed said that they lived and farmed lands that their ancestors had lived on and farmed in the 1800's.

Q. Do you have any opinion based on your training and education of whether there is any correlation historically between the amount of traditional gathering from the streams and the amount of fish and limu that could be taken from the coastal areas of the valley and the sea for subsistence purposes?

A. Yes.

Q. What is that opinion?

A. The abundance of aquatic and marine resources are dependent upon the pristine, clean, free flowing year round streams flowing into the ocean. The bays where the fresh water mixes into the ocean water are important spawning grounds for the fish. Moki Day, a Hawaiian fisherman from the area, described how the bays are important breeding grounds which deserve protection:

You can consider all the shoreline area between here and Kaupo as breeding grounds for all these shoreline species of fish. They come into our rivers here because we have the fresh water, and they come in here and breed here and lay their eggs here.

According to the late Uncle Harry Mitchell, who had been a long-time resident of the area, the streams and the ocean together provided the breeding ground for 'o'opu. He described the lifecycle of the 'o'opu as follows:

The first heavy rains usually arrived in August or September, carrying the 'o'opu to the ocean where they spawned. Once they laid their eggs, the mother 'o'opu died. The baby 'o'opu, called hinano, would hatch and develop in the salt water from August/September through November. The salt water made them strong enough to climb up the stream where they would mature. About November, the hinano began to make their way up stream to the large fresh water pools in the mountains. Their migration upstream coincided with the arrival of the migratory birds from the north which fed upon the hinano as they made their perilous journey to the uplands.

Q. Do you have an opinion on how significant the diversion of stream water from Waihanui Valley by EMI has been on the ability of its residents to continue their tradition of taro growing and gathering from the streams and coastal areas?

A. Yes.

Q. What is that opinion?

A. The diversion of streams in the Ko'olau watershed, via the East Maui Irrigation (EMI) Company system, has reduced the surface water flow in the region mauka of the cultural landscape. The system currently provides most of the irrigation water for central Maui's large-scale agriculture and is the main source for county water supplies to upcountry Maui residents and farmers.

While the degree of reduction has not been quantified, the volumes of water carried by the ditch are significant and impact on the stream ecology in Ke'anae-Waihanui is probable. Native endemic and indigenous species such as 'o'opu and 'opae and hihiwai are likely to have been affected within the last few generations, with consequent impact on the traditional gathering practices that are part of the local lifestyle. During interviews for the study, some residents expressed concern over the impact of the diversion of water by EMI Co. on the ecology of the region. They also questioned the effects that the EMI diversion may have on the temperature and consistent flow of stream water to taro lands.

- Q. Do you have an opinion on what positive steps should be taken to promote the perpetuation of the cultural landscape of Ke'anae-Waihanui?
- A. Yes.
- Q. What is that opinion?
- A. Provide incentives for taro growing, such as tax relief for parcels used for taro farming. Provide support to the community to maintain the water sources and the 'auwai, such as state and county support to clean and maintain the agricultural irrigation systems. Maintain the Pi'ilani Trail along the shoreline as well as the trails and unimproved roads running makai from the highway to the beach, and the trails and unimproved roads running mauka into the forest reserve should be maintained and their significance in the cultural landscape assessed. The watershed's forest should be protected. Access for cultural, subsistence, and spiritual customs and practices should be afforded to those residents of the community who will maintain traditions of respect and stewardship of the land and water resources. Develop the Ke'anae Arboretum to offer interpretation and education, with emphasis on practical and hands-on experience. Improve lookout points with better paving, approach signage, interpretive signage, landscaping and benches. Preserve and maintain the 2 large heiau and other cultural sites. Document and protect historic taro terraces. Perpetuate significant aspects of the cultural landscape without hampering changes beneficial to the community and its residents.
- Q. Are you familiar with crucial definitions of traditional land divisions used by Hawaiians?
- A. Yes.
- Q. What are the land divisions that were common in delineating the various land uses made by Hawaiians?
- A. The traditional Hawaiian land divisions according to Malo (1951:16-18) consist of the following district, subdistricts, land divisions and land parcels:
- island: *Moku-puni* (cut off surrounded)
  - Large District: *Apana* (pieces) or *Moku-o-loko* (interior division), e.g. Hana.
  - Sections: *'Okana* or *Kalana*, e.g. Honua'ula. [*'Okana* is also a district or sub-district and usually comprising several *ahupua'a*; *Kalana* is smaller than a district (Pukui & Elbert 1971: 113, 258)]
  - Subsection within *'Okana*: *Poko*. [Dividing a District, or *ahupua'a* into two or more sections, e.g.: Hamakua *Poko*; Hamakua *Loa*]

- *Ahupua'a*. (running *mauka-makai*, from the mountains to the sea) [a sub-district land division, some contain a few hundred acres, others 10,000 acres, or more]
- *'Ili-'aina* [*'Ili-'aina*, a sub-division of an *ahupua'a*; *'ili lele*, a discontinuous *'ili-'aina*, consisting of two or more parcels of land in the same *ahupua'a* and having the same name]
- *Mo'o-'aina* [*mo'o-'aina* is a cultivated garden within an *'ili-'aina* or *'ili-lele*]
- *Pauku-'aina* (joints of lands) [*pauku-'aina* is a land section smaller than a *mo'o-'aina*]
- *Kihapai* (patches or farms) [dry land garden]
- *Ko'ele* [*ko'ele*, a cultivated garden, the produce of which went to the *ali'i* of the district or island]
- *Hakuone* (land cultivated by 'ohana with crops going to *konohiki*) [produce of which went to chief of the *ahupua'a*]
- *Kuakua* (broad *kuauna* or *kuauna*, an embankment) [embankments between wet taro gardens, usually cultivated] (Malo 1951: 16-18). Information in brackets [ ] added.

High School Diploma, Sacred Hearts Academy, Honolulu, 1968

### Doctoral Dissertation

"Kupa'a I Ka 'Aina: Persistence On The Land," University of Hawai'i - Manoa, 1989.

### Masters Thesis

"Hawaiian Resistance: 1887 - 1889," University of Hawai'i - Manoa, 1979.

### Fellowships, Scholarships & Awards

Awards for book, Na Kua'aina: Living Hawaiian Culture

- Kenneth W. Bairidge Prize for best book in any field of history written by a resident of Hawai'i from 2005-2007.
- Hawai'i Book Publishers' Assn, 2008 Po'okela Award, Honorable Mention for Excellence in Hawaiian Culture.

Hung Wo and Elizabeth Lau Ching Foundation Award for Faculty Service to the Community, 2005

Smithsonian Institution Asian Pacific American Program, Inaugural Scholar-In-Residence, Spring 2000

Na Pokii Graduate Fellowship, 1986 - 1987, 1988-89

Mary Kawena Pukui Hawaiian Studies Scholarship, 1986-87

Ford Foundation Fellowship, 1978 - 1980

### Teaching Experience

Ethnic Studies Program/Department, University of Hawai'i - Manoa, Professor, 2005 to present  
Associate Professor, 1995 to 2005  
Assistant Professor, 1987 - 1995  
Instructor, 1974 to 1986

#### Courses Taught:

ES 101 Introduction to Ethnic Studies: Basic concepts and theories for analyzing dynamics of ethnic group experiences, particularly those represented in Hawai'i and their relation to colonization, immigration, problems of identity, racism and social class.

ES 221 Hawaiians: Relationship between changes in Hawaiian lifestyle and development of Hawaiian economy; land use and tenure; Hawaiian institutions; Hawaiian resistance movements.

ES 301 Ethnic Identity: Individual and group problems of identity, identity conflict, culture conflict, inter-ethnic relations.

ES 310 Community, Ethnicity and Identity: Overview of ethnic communities with site visits to museums, social welfare unites and community guest lecturers including police, health and education professionals.

ES 340 Land Tenure and Use in Hawai'i: Transformation of the traditional Hawaiian land system into a system of private property that is not completely Western given the ongoing recognition of the rights of access for traditional and customary Native Hawaiian practices. Examination of contemporary issues and concerns related to land and development.

ES 350 Economic Change and Hawai'i's People: Development of modern Hawaiian economy and impact on Hawai'i's people. Sugar, pineapple, and tourism industries; role of local and multinational corporations; scenarios for Hawai'i's future development.

ES 380 Field Work in Ethnic Studies: Oversee student field work projects relating to Hawaiian community issues.

ES 392 Change in the Pacific - Polynesia: examines shared traditional cultural customs and practices and contemporary political, economic, and social trends in the island societies which have been labeled "Polynesia."

ES 399 Directed Reading in Ethnic Studies: Oversee student research into aspects of Hawaiian history or contemporary Hawaiian issues.

ES 495/History 495 Hawaiian Labor History: Conditions of work under varying political, social, and economic transformations in Hawai'i; anthropological, sociological, and historic data.

Hawai'i History Institute, Summer 1992 and Summer 1995: Co-taught institute for secondary teachers of Hawai'i history. The institute reviewed key issues in Hawai'i's history; the findings of most recent research in the field; and historic sites and community resources for teaching Hawai'i history. It was sponsored by the National Endowment for the Humanities and the Historic Hawai'i Foundation.

#### Areas Of Research and Teaching Interest

Native Hawaiians:

- Persistence of subsistence, cultural & religious customs & practices
- Resistance in Nineteenth and Twentieth Centuries
- Well-Being in Territorial and Statehood Periods

- Traditional and Contemporary Land Use & Tenure
- Origin and Implementation of Hawaiian Homes Commission Act
- Sovereignty Movement - Recognition, Rights, Claims, Organizations

Indigenous Land Stewardship and International Rights

U.S. Empire in the Pacific

Cultural Impact Studies On Behalf Of Indigenous and Pacific Island Communities

#### Administrative Experience

Acting Director, Ethnic Studies Program, University of Hawai'i, Manoa, 1974 - 77, 1990

Served as director for the fledgling Ethnic Studies Program at the University of Hawai'i - Manoa during its formative years when its faculty struggled to develop the curriculum to establish it as a permanent program, between 1974 - 77.

Served as Acting Director while regular director was on leave in Spring 1990.

Principal Investigator, Ethnic Studies Oral History Project, 1976-78

Set up the Ethnic Studies Oral History Project within the administrative framework of the University of Hawai'i - Manoa campus together with the project staff. Funding for the program was attained through direct legislative funding.

Programmer, University of Hawai'i - Manoa Campus Center, 1974

Coordinator for summer student programs and non-credit courses.

#### Published Works

##### Book of Original Scholarship

Na Kua'aina: Living Hawaiian Culture, Honolulu: UH Press, 2007, xi, 372p..

##### Edited Textbook

Our History, Our Way: An Ethnic Studies Anthology, co-edited with Gregory Y. Mark and Linda A. Revilla, Dubuque, Iowa: Kendall/Hunt, 1996, ix, 469p.

1998

Funded: Hawai'i Office of Planning, State of Hawai'i, Department of Business Economic Development and Tourism Pursuant to National Oceanic and Atmosphere Administration Award No. NA 77OZ0185, \$22,000.

Title: Hawaiian Externalities for the Hawaiian Electric Company Integrated Resource Plan  
Participating Researcher- responsible for 25 percent of the study and report  
1997  
Funded: Hawaiian Electric Company

Title: Traditional Hawaiian Cultural, Spiritual, and Subsistence Beliefs, Customs, and Practices and Waiahole, Waikane, Hakipu'u, and Kahana  
Pro bono study for the Native Hawaiian Advisory Council  
1995  
Funded: Office of Hawaiian Affairs

Title: Kaho'olawe Land Use Plan  
Pro bono member of the planning team - responsible for 15 percent of the study and report, 1995  
Funded: Kaho'olawe Island Reserve Commission

Title: Ke'anae-Waluanui Cultural Landscape Survey  
Participating Researcher - responsible for 15 percent of the study and report  
1994  
Funded: Maui County Planning Department - \$22,000

Title: Mo'omomi Community-Based Subsistence Fishing Area Management Plan  
Pro bono Participating Researcher - responsible for 15 percent of the study and report  
1994  
Pro bono: Moloka'i Office of Department of Business and Economic Development and Hui O Mo'omomi

Title: Native Hawaiian Ethnographic Study for the Hawai'i Geothermal Project  
Environmental Impact Study  
Participating Researcher - responsible for 30 percent of the entire study  
1993 - 1994  
Funded: U.S. Department of Energy to Oak Ridge National Laboratory- \$100,000

Title: Governor's Moloka'i Subsistence Task Force Study  
Participating Researcher - completed 40 percent of the study and report  
1993 - 1994  
Funded: Department of Business and Economic Development - \$36,000

Title: Kaho'olawe Cultural Resources Ocean Study  
Participating Researcher - responsible for 40 percent of the study and report  
1993 - 1994  
Funded: National Oceanic and Atmospheric Administration to Protect Kaho'olawe Fund - \$24,800

Title: Native Hawaiian and Local Cultural Assessment Project, Hawai'i Environmental Risk Ranking Project  
Participating Researcher - completed 35 percent of the study and report  
1992 - 1993  
Funded: State of Hawai'i Department of Health - \$14,600

Title: Status and Entitlements of Hawaiian Natives  
Historical Researcher - completed 10 percent of study and report  
1992  
Funded: Ford Foundation to the Native Hawaiian Advisory Council, 1992 - \$90,000  
Title: Hawaiian Sovereignty Education Grant

Pro bono Curriculum Development Consultant - during the first year, contributed to the development of 5 percent of the curriculum materials, including a documentary video 1991 - 1992

Funded: Administration for Native Americans to Hui Na'auao Hawaiian Sovereignty Education Project - \$364,061 - year 1; \$342, 240 year - 2; \$285, 515 year - 3

Title: Kaua'i Island Study

Participating Researcher - completed 10 percent of the study and report 1991

Pro bono: in conjunction with Social Work research course at the Kaua'i Community College

Title: Sociocultural Impact Assessment of a Commercial Satellite Launching Facility at Palima Point, Kau, Hawai'i.

Participating Researcher - completed 30 percent of the study and report 1991

Funded: Department of Business, Economic Development and Tourism - \$27,000

Title: The Cultural Landscape of Heiau Sites in Hawai'i

Principal Investigator - completed 2 percent of the study 1990-91

Funded: Hawai'i State Department of Land and Natural Resources, Division of Historic Preservation - \$3,997

Educational Improvement Fund, University of Hawai'i, 1987, "Experiential Education at the Kanewai Cultural Garden," Principal Investigator.

#### Audio-Visual Media

"Ho'ala," documentary video reviewing changes in the sovereignty of Native Hawaiians at key periods in history from the pre-contact period through Annexation in 1988. Helped to write the script for producers and directors, Hui Na'auao (consortium of 30 Hawaiian sovereignty organizations) and Juniroa Productions, 1992

"Kaho'olawe: Aloha 'Aina," documentary videotape on the natural and cultural resources of Kaho'olawe. Helped to write the script with producers and directors Na Maka O Ka 'Aina, the Protect Kaho'olawe Fund, and Talk Story, Inc. with funding from the Hawai'i Committee for the Humanities and the State Foundation on Culture and the Arts, 1992.

"Pele's Appeal", documentary videotape on the significance of the volcano and the rainforest to native Hawaiian culture and its threatened destruction by geothermal energy development, served as script consultant to the producers and directors, Pele Defense Fund and Na Maka O Ka 'Aina, 1989.

"Na Wai E Ho'ola I Na 'Iwi? Who Will Care For The Bones?," documentary videotape on the Honokahua Burials issue, script consultant to Na Maka O Ka 'Aina, 1988.

"Kapu Ka'u," documentary videotape on the cultural and historical significance of the Ka'u district of Hawai'i islands, script consultant to Na Maka O Ka 'Aina, 1987.

"Ti Mangyuna: Those Who Led The Way," docudrama on Filipinos in Hawai'i, co-writer, 1981.

DECLARATION OF EDWARD WENDT

DECLARATION OF EDWARD WENDT

I, Edward Wendt, declare that:

1. The statements below are based upon my personal knowledge.
2. I am Hawaiian.

3. I am the president of Nā Moku Aupuni O Ko'olau Hui.

4. I am a taro farmer. I farm kalo on more than one acre of land irrigated by Waiokamilo, Kualani, and Wailua.

5. My family has been in Wailuanui for six generations. I still farm on lands that trace back to the Māhele on my mother's side (Kaiha'a-Waila'ahia-Lu'ukia). I farm the same taro patches, 'auwai, and rivers in the same traditional and customary manner. That knowledge was passed on to me through the generations.

6. My ancestors are buried in Lakini and at St. Gabriel's Church located in Wailuanui.

7. Traditionally, my family engaged in mālama 'āina and mālama kahawai in the above streams by only taking what they needed for their 'ohana and to share with family and neighbors.

8. Currently, my 'ohana gathers 'ōpae, hiliwai, and 'o'opu in Hanawi. It's the only place where I can find these living things. The other streams are dead.

9. Currently, my 'ohana fishes for moi, aholehole, manini, and eneneue along the East Maui shoreline near the mouth of Honopou, Hanehoi/Puolua, Waikamoi, Alo, Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu, Nuaiilua, Piinaau, Palauhulu, \*Ohi'a/Waianu, Waiokamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopililua Puakaa, Paakea, Waiakaa, Kapaula, Hanawi, Makapipi, and Waiohue. There has been a depletion of fish. Eneneue used to be there by the schools but now there are less. Only the strong survive.

10. My family also practices mālama 'āina/mālama kahawai in and around the above streams by only taking what we need, not to sell. I work with marine biologists so the scientists can survey/research environmental impacts and depletion of resources from Hana to Keanae. I also plant native plants.

11. I gather and fish for home consumption and to share if I have more than enough. I also gather and fish to teach my kids and grandkids how to live off the land and sea (fishing, gathering, hunting) to survive after I'm gone.

12. In the past, my family used to wash clothes and swim in the stream.

13. When I go to the streams, I take in the beauty. I don't alter what's there, what's beautiful. The way it was, that's the way I leave it.

14. The lack of stream flow is a problem for me because my grandkids don't have the experience or resources to gather what they need from the land and water. The lack of water has caused too much pilikia. When nobody cares, nobody understands our practices and our need to harvest. It pains me. It's very emotional.

I declare under penalty of perjury that the foregoing is true and correct.

EARL SMITH, SR.

7. Traditionally, my family gathered 'ōpae, 'ō'opu, and hihiwai from Waikamoi, Alo, Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu, Nuaailua, Piinaau, Palauhulu, Waioakamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapipi, and Waiohue.
8. My family also traditionally fished for uhu, u'u, kole, ulua, 'uku, kumu, moi, honu, and anae in or near the mouth of Honopou, Hanchoi/Puolua, Waikamoi, Alo, Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu, Nuaailua, Piinaau, Palauhulu, 'Ōhi'a/Waianu Waioakamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapipi, and Waiohue.
9. Traditionally, my family engaged in mālama 'āina and mālama kahawai by being careful not to overharvest the stream animals as well as clearing the vegetation or rubbish blocking stream flow in and around Waikamoi, Alo, Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu, Nuaailua, Piinaau, Palauhulu, Waioakamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula, Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapipi, and Waiohue.
10. Currently, I gather 'ō'opu and hihiwai in Honomanu, Waioakamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula, Puakaa, Hanawi, Makapipi, and Waiohue. I also fish for moi, enenue, manini, uaouao, ulua, and anae in or near the mouth of Honomanu, Nuaailua, Waioakamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula, Puakaa, Hanawi, Makapipi, and Waiohue.
11. I also engage in mālama 'āina and mālama kahawai by clearing stream banks of vegetation and rubbish that otherwise block stream flow in and along Honomanu, Piinaau, Palauhulu, Waioakamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Hanawi, and Waiohue.
12. For me, gathering and fishing from the streams enables me to provide a protein source to my 'ohana and neighbors, including kupuna, who may be unable to gather and catch their own fish. I also aim to teach the 'ōpio the traditional practices to mālama streams and gather and fish from the streams and coast lines.
13. I appreciate viewing and visiting Honomanu, Nuaailua, Piinaau, Palauhulu, 'Ōhi'a/Waianu, Waioakamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, and East

Wailuaiki. Every morning, my wife and I walk up to Waikani (Wailuanui) waterfall to enjoy the view and experience the beauty of this area.

14. Dewatering the streams prevented my generation from teaching 'ōpio how to mālama streams and use techniques wisely to gather from streams and fish along coastline near the muliwai.
15. The diminished stream flow has negatively affected the muliwai and the coastal fisheries, including a fish sanctuary in Hana that depends on the water. Much of my kalo could not survive the emptying of these streams, so it has made farming more difficult. The lack of stream flow has also allowed vegetation along the stream banks to block the stream beds, and has permitted invasive snail species and African tulips to take over the taro crop. Additionally, some of my neighbors have abandoned kalo farming because the streams had stopped flowing. Ultimately, the loss of stream water has changed the whole way of life in Wailuanui-Ke'anae. It takes more time to find the resources to gather, which robs me of my time for recreation and time with my 'ohana.
16. If there was enough water in the streams, I would gather and fish as my family before me did. I would gather 'ōpae, 'ō'ōpū, and hihiwai from Waikamoi, Alo, Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu, Nuaailua, Piinaau, Palauhulu, 'Ōhi'a/Waianu, Waioakamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula, Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapipi, and Waiohue. My family would fish for uhu, uu, kole, ulua, 'uku, kumu, moi, and honu (if it were legal, of course) in or near the mouths of Waioakamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula, Puakaa, Hanawi, and Waiohue.
17. If there was more water in the streams, I would continue to clear stream banks of the vegetation and rubbish that would otherwise block stream flow.
18. If water was returned to the streams, I would appreciate viewing and visiting Waikamoi, Alo, Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu, Nuaailua, Piinaau, Palauhulu, 'Ōhi'a/Waianu, Waioakamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula, Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapipi, and Waiohue.
19. Many original members of Na Moku have died since we first petitioned for the return of water to these streams. It makes me sad and lose hope. They never lived to see the

water return to the lo'i in 2008. I am afraid I will not live to see the return of the water we are now fighting for.

20. Without the water, my whole way of life would be lost. Corporations last forever. Traditional people do not. Crown lands should be set aside for the benefit of the people.

I declare under penalty of perjury that the foregoing is true and correct.

DATED: Honolulu, Hawai'i, September 10, 2014.

CASE NO. CCH-MA13-01

SUPPLEMENTAL DECLARATION OF  
EDWARD WENDT

### SUPPLEMENTAL DECLARATION OF EDWARD WENDT

I, Edward Wendt, declare that:

1. The statements below are based upon my personal knowledge.
2. My family has been in Wailuanui for six generations. I still farm on those lands.
3. I am very familiar with the layout of Wailuanui.
4. I know who is farming and where their farms are located.
5. During my lifetime, I became aware of taro farmers leasing the State land consisting of approximately 120 acres, located in the ili of Kupau in Wailuanui Valley, and designated as TMK 1-1-08-5, on the map marked as Exhibit A-143.
6. Exhibit A-142 is a large map made up of three separate tax maps (Tax Maps 1-1-04, 1-1-05, and 1-1-06) depicting areas of taro farming based on what I know and have seen in Wailuanui over the many years that I have lived in the valley.
7. I have also identified on this map, marked as Exhibit A-142, where the supporting 'auwai system is located and how the water flows in it.

8. This map is a true and accurate depiction of the location of 'io'i (as shown in green highlighting), the farmers associated with each (as shown on orange labels), and the supporting 'auwai system (as shown in blue highlighting).

I declare under penalty of perjury that the foregoing is true and correct.

DATED: Wailua, Maui, Hawai'i, December 24, 2014.

CASE NO. CCH-MA13-01

DECLARATION OF EMILY WENDT

### DECLARATION OF EMILY WENDT

I, Emily Wendt, declare that:

1. The statements below are based upon my personal knowledge.
2. I am Hawaiian.
3. I was born April 7, 1925 in Hana.
4. My parents were James Akiona and Ellen Higgins.
5. My family consisted of my parents, five brothers and three sisters.
6. I was the fourth born of the family.
7. Until 15 years old, from 1925 through 1940, I lived in a house in Keanae peninsula.
8. Thereafter, my family sent me to Maunaloa Seminary, where I boarded and received my education until the 10<sup>th</sup> grade.

9. While going to school, I visited Wailuanui periodically to visit and stay in touch with my 'ohana.
10. I got married to Donald Wendt and raised my family of five children in Kahului, where I still reside.
11. During the years I was raising my children, my husband and I visited Wailuanui-Keanae as frequently as weekly.
12. My grandmother, Helena Akiona, who used to live at Lakini, is still buried at St. Gabriel's Church located in Wailuanui.
13. My father died when I was nine years old.
14. When I was between the ages of 10-13, I and my older cousin, Dorothea Lum Ho, who taught me how to gather, would gather 'ōpae, 'o'opu, and hihiwai from Palauhulu, Waioamilo, Kualani, Hanawi, Wailuanui Streams.
15. My family also traditionally fished for popa'a, hinalé'a, and kupipi from the shoreline near the mouths of West Wailuaiki and Wailuanui Streams.
16. My brother Jimmy, who was my senior by six years, would bring me by canoe to the shoreline near the muliwai of Wailuanui, Kopiliula, and Waiohue Streams to swim and pick opihi. He taught me the most about how to fish and gather.
17. My father, uncle, brothers and cousins also shared and supplied the family with u'u, enenue, kole, ulua, kumu, moi, honu, aholehole and anae, which they fished in or near the mouth of Wailuanui and West Wailuaiki.
18. My family raised pigs, chicken, and cattle while I was growing up in Keanae.
19. My brother Jimmy and I helped raise and brand pipi in our back yard
20. For me, gathering and fishing from the streams and coastlines near streams was a very important food source to my 'ohana. In fact, most of the food we ate came from what my 'ohana fished, gathered or raised.
21. I recall my relatives, the Akinas, Nakanceluas, and Ka'auamos, as well as my neighbors, all raising taro in Wailuanui and Keanae valleys as the staple for our diets.
22. Many of these families pounded their own poi, as I was taught to do when I was old enough.

23. When my father typically went shopping for food, he only purchased a few items, like sugar, cream, rice, and cookies.
24. The rest of our diet came from what we raised, fished and gathered.
25. As a youth in Wailuanui-Keanae, my 'ohana lived a very basic life living off the land and sea.
26. As I was growing up in Wailuanui-Keanae, I was not aware of any complaints against East Maui Irrigation Company about how much water was available in the lo'i and auwai of the valleys.
27. To this day, my nephew Norman Akiona and son Ed catch fish like papio, enenue, pala, manini, and kole from the Wailuanui-Keanae area for me to eat.
28. It makes me sad and lose hope when I see so many original members of Nā Moku who have died since we first petitioned for the return of all water to these streams; water that would support more taro growing, gathering, and fishing along the mouths of those streams.
29. I do not understand why Nā Moku members who started in 2001 have had to wait so long for the return of the water.
30. I think the priority should be to leave water in East Maui streams so the people who used it traditionally can continue to survive like my 'ohana used to be able to do.
31. To me, I don't know why Hawaiian Commercial and Sugar insists on diverting water that is so important to Hawaiian traditions and customs.

I declare under penalty of perjury that the foregoing is true and correct.

DATED: Kahului, Maui, Hawai'i, December 17, 2014.

CASE NO. CCH-MA13-01

DECLARATION OF GLADYS KANOA

DECLARATION OF GLADYS KANOA

I, Gladys Kanoa, declare that:

1. The statements below are based upon my personal knowledge.
2. I am a member of Na Moku Aupuni O Ko'olau Hui.
3. I am the wife of Isaac Kanoa.
4. Isaac and I farm kalo and lū'au on about four acres of property in Ke'anae irrigated by Palauhulu stream. I also farm about five acres of land in Waianu Valley, located between Wailuanui and Ke'anae, that are irrigated by water from Waiokamilo.
5. As part of farming, I help take care of the streams by cleaning the 'auwai to make sure water reaches everyone who needs it.

6. We enjoy swimming in the ponds of Waiokamilo, Palauhulu, and Piinaau.
7. I appreciate the natural beauty of Ke'anae, including its streams, when I am out on the farm.
8. One of my biggest concerns with the lack of water is the warmth, which is not good for the taro. The water is warm in our patches, some of which are near the top of the 'auwai system.
9. Apple snails are a big problem in Ke'anae and affect the quality of the taro. They like warm water. They hibernate in the winter because they don't like cold water.
10. The lack of water has also created a tension in the community as farmers and families compete for water.
11. If there was more water in the streams, Isaac and I would open up more patches. We would continue to clean the 'auwai to make sure enough water reaches all of the patches that feed our community.
12. If there was more water, we would enjoy swimming in the ponds of East Maui.

PAAKEA, WAIATAKA, KAPAILA,  
HANAWI and MAKAPII STREAMS

DECLARATION OF HARRY HUEU

I, Harry Hueu, declare that:

1. The statements below are based upon my personal knowledge.
2. I am Hawaiian.
3. I am a member of Nā Moku Aupuni O Kō'olau Hui.
4. I was born on May 29, 1939. I was born and raised in the Ke'anae/Wailua area.
5. My father was James Hueu. He was a taro farmer and a foreman for EMI. My father had about three acres of taro. He never had a problem with the water.
6. Growing up I was always in the taro patch. When we came of age, we did it.
7. In 1976, my main focus became growing taro. The lo'i I farmed was about five acres on family land as well as land now owned by Dr. Keppler and EMI that was irrigated by Piinau and Palauhulu. I also once farmed some land in Wailua irrigated by Waiokamilo. The land used to farm taro produced about 75 85-pound bags a week.
8. My son, Aukai Hueu, took over the farming about six years ago.

I declare under penalty of perjury that the foregoing is true and correct.

DATED: Ke'anae, Maui, Hawai'i, December 21, 2014.

  
GLADYS KANOA

9. Traditionally, my 'ohana gathered 'ōpae and 'o'opu in Honomanu, Nuailua, Palauhulu, and 'Ōhi'a. We would also get akule from Honomanu and Nuailua and pohole from 'Ōhi'a.
10. Traditionally, my 'ohana dove or fished for kole, moi, enenue, pāpio, uhu, kumu, menpachi, and 'opihi in or near the mouths of Piinau and Palauhulu.
11. My 'ohana also engaged in mālama 'āina and mālama kahawai at Palauhulu and Waikomilo by cleaning the stream and no make dirty. When I was farming, I would clean the flume every two weeks.
12. We also used to go to Waiole to picnic and catch akule. The kids would catch 'o'opu with small poles. We would go barbecue at Ke'anae landing.
13. Currently, my kids and grandkids gather 'ōpae, 'o'opu and hihiwai in Honomanu, Nuailua, Palauhulu, and 'Ōhi'a. There's not as much hihiwai now.
14. My kids also dive for kole, moi, enenue, pāpio, uhu, kumu, menpachi, and whatever else they can get in or near the mouths of Piinau and Palauhulu. They also gather 'opihi. I want to show my grandkids how to put the net.
15. The ditch is better for gathering than the streams. There is more 'ōpae. By the hundreds.
16. My son Aukai malamas Palauhulu by cleaning the ditches to make sure water is not blocked.
17. Our 'ohana still picnics at Waiole and barbecue at Ke'anae landing.
18. There is a big difference in stream flow since 1976. There is a big rock, maybe five to six feet tall, in Palauhulu by Ching's Pond. When there is plenty water, the water covers the rock almost to the top. Now it's low. Also, the water used to be bubbling; now no more nothing.
19. The water in Piinau has changed too. There used to be a pond called Lalaau near where Isaac Kanoa lives. It was always there when I was a kid, but not anymore.
19. I miss the sound of the water roaring.
20. I hate to say it, because it was my dad's working place, but I think EMI is taking more water now.
21. The lack of water has changed people in the community. Now people don't always mālama everyone.

22. The lack of water in the streams hurts the taro because instead we gotta depend on rain. If no rain, no water in lo'i. You gotta have water to raise taro.
23. If there was more water in the streams, my kids and grandkids would continue to gather 'ōpae, 'o'opu and hihiwai in Honomanu, Nuailua, Palauhulu, and 'Ōhi'a, fish in or near the mouths of Piinau and Palauhulu, mālama the 'auwai off Palauhulu, and swim, picnic, and enjoy each other's company at Waiole and Ke'anae landing.
24. If there was more water in the stream, I would be more confident that my son could continue farming our family lands and other property he takes care of for other community members.

I declare under penalty of perjury that the foregoing is true and correct.

DATED: Keanae, Maui, Hawai'i, 7 May, 2014.

HANAWI and MAKAPII STREAMS

CASE NO. CCH-MA13-01  
DECLARATION OF HEALOHA  
CARMICHAEL

DECLARATION OF HEALOHA CARMICHAEL

I, Healoha Carmichael, declare that:

1. The statements below are based upon my personal knowledge.
2. I am Hawaiian.
3. I am a member of Nā Moku Aupuni O Kō'olau Hui.
4. I grew up in Wailua/Ke'anae.
5. I learned traditional and customary gathering practices from my grandmother, 'Awapuhi Carmichael.
6. Traditionally, my 'ohana gathered 'ōpae, watercress, lū'au, hāha, pepeiao, hihiwai, pupulo'i and goldfish in Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu, Nuaiiua, Pinaau, Palauhulu, 'Ōhi'a/Waianu, Waiokamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapipi, and Waiōhue.

7. Traditionally, my family would also 'opihī on the way home from gathering and also catch 'o'opu at Waiōhue and Ching's pond in Palauhulu.

8. My 'ohana also engaged in mālama 'āina and mālama kahawai at Honomanu, Pinaau, Palauhulu, 'Ōhi'a/Waianu, Waiokamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapipi, and Waiōhue by gathering according to the moon, not always going to the same places so we didn't overharvest the stream, and taking care of the kō'a's to keep the population up.

9. Currently, I gather 'ōpae in Pinaau, Palauhulu, 'Ōhi'a/Waianu, Waiokamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapipi, and Waiōhue. I gather hihiwai in Waiōhue and Kopiliula. We have to go high in the mountains to find the 'ōpae and hihiwai. I understand the traditions my grandmother taught me, including what colors not to wear when gathering, how we should be quiet when we practice, and how we should walk on the sides of the river. I was taught to always look up at the mountain to look for big water.

10. I currently fish for moi, abolehole, uouo, and mullet in and around the mouths of Pinaau, Palauhulu, 'Ōhi'a/Waianu, Waiokamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaaka, Kapaula, Hanawi. I also dive for kole and pick 'opihī. Now, there's not much moi.

11. I gather to feed my family and as recreation.

12. I still engage in mālama 'āina and mālama kahawai as my grandmother taught me by gathering according to the moon and not always going to the same places so we don't overharvest.

13. We also enjoy swimming in Ching's Pond at Pinaau. Also, in some places the water is dirty and just sits because there's not enough flow. I got a staph infection four times just swimming in the water.

14. I've noticed the change in water flow. For example, at East Wailuaiki, you can see the ditch, see the water dropping, and look below and see the pond is completely dry. At Hanawi, one side is water, one side has nothing, then you see EMI's pipe. Mountain Pond at Pinaau is bone dry. So is Kikokiko Spring.

15. Most of the time, you have to wait for it to rain. If you wait a couple days for the rain to clear up, the streams are beautiful. Otherwise it's dry.

CASE NO. CCH-MA13-01

DECLARATION OF IRE KIMOKEO

16. If there were more water in the streams, I would gather ōpae and hihiwai in Piinau, Palauhulu, 'Ōhi'a/Waianu, Waiokamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaaka, Kapula, Hanawi, Makapii, and Waiohū.
17. If water were put back in the streams, I would continue to gather according to the moon and not always go to the same places.
18. If there was more water, I would keep fishing for moi, aholehole, uouo, and mullet in and around the mouths of Piinau, Palauhulu, 'Ōhi'a/Waianu, Waiokamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaaka, Kapula, Hanawi. I would also dive for kole and pick 'opihi.
19. If there was more water in the streams, I would swim in the ponds that are often dry today.

I declare under penalty of perjury that the foregoing is true and correct.

DATED: Keanae, Maui, Hawaii, 11/11/2014.

  
HEALOHA CARMICHAEL

DECLARATION OF IRE KIMOKEO

I, Ire Kimokeo, declare that:

1. The statements below are based upon my personal knowledge.
2. I am Hawaiian.
3. I am a member of Nā Moku Aupuni O Ko'olau Hui.
4. I am a taro farmer. My family grows kalo on about 1 acre of property in Keanae irrigated by Palauhulu and another water source that may be connected to Piinau.
5. My mother is Pualani Kimokeo. I have an interest in the land I farm based on my connection to Kailimoku, on my grandmother's side.
6. Traditionally, my 'ohana gathered pohole, 'opihi, 'ōpae, kalo, fish, lū'au leaf, pipi, bananas, strawberry guava and mango in and around Waikamoi, Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu, Nuaailua, Piinau, Palauhulu, 'Ōhi'a/Waianu, Waiokamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula

Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapipi, and Waiohue. My family also hunted wild pig in those areas.

7. Traditionally, my 'ohana fished for moi, kole, uhu, ahole, enenue, kumu, and weke in or near the mouths of Puohokamoa, Haipuaena, Honomanu, Nuaailua, Piinaau, Palauhulu, 'Ōhi'a/Waianu, Waioakamilo, Wailua, and West Wailuaiki.

8. My 'ohana also engaged in mālama 'āina and mālama kahawai at Waikamoi, Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu, Nuaailua, Palauhulu, 'Ōhi'a/Waianu, Waioakamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapipi, and Waiohue by always throwing the small fish back into the ocean. Also, when my family would hunt wild pig, we would try and let go the pregnant sows and babies to preserve for the future.

9. Currently, my 'ohana and I gather 'ōpae, fish, 'opihī, and hihīwai in and around Waikamoi, Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu, Nuaailua, Piinaau, Palauhulu, 'Ōhi'a/Waianu, Waioakamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapipi, and Waiohue. I also hunt wild pig in those areas.

10. I fish for moi, kole, and ahole in or near the mouth of Punalau/Kolea, Honomanu, Piinaau, Palauhulu, Wailua, and West Wailuaiki.

11. I farm, gather, and fish to feed my family, give to kupuna and to the people that cannot go. I just like māhele with the community.

12. I engage in mālama 'āina and mālama kahawai by cleaning the ditches and the flume by grandpa's house to allow for better water flow for the farmers and our family's lo'i around Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu, Nuaailua, Piinaau, Palauhulu, 'Ōhi'a/Waianu, Waioakamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapipi, and Waiohue.

13. We also enjoy Nuaailua, Piinaau, Palauhulu, 'Ōhi'a/Waianu, Waioakamilo, Kualani, and Wailua for recreation. We hunt, fish, and work taro patch.

14. I appreciate the natural scenery and beauty when I go down to Bird Island and down Nuaailua. I enjoy the scenery around Wahinepee, Honomanu, Nuaailua, Piinaau, Palauhulu, 'Ōhi'a/Waianu, Waioakamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, and Makapipi.

15. The lack of stream flow is a problem for my family because there is hardly any water for the taro patch. I also noticed we lost a lot of 'ōpae.

16. If there was more water in the stream, I would worry less about my kalo. I would expect more cool water to reach my loi

17. If there were more water in the streams, my 'ohana would gather 'ōpae, 'o'opu, hihīwai, and pohole in or near the mouths of Waikamoi, Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu, Nuaailua, Piinaau, Palauhulu, 'Ōhi'a/Waianu, Waioakamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula, Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapipi, and Waiohue.

18. If had more water, we would fish for moi, kumu, kole, ahole, and enenue in or near the mouths of Honomanu, Nuaailua, Piinaau, 'Ōhi'a (Waiuanu), Wailua, West Wailuaiki, and East Wailuaiki.

19. With more stream flow, I would clean the ponds and keep trying to conserve 'ōpae for the next generation in Nuaailua, Piinaau, Palauhulu, 'Ōhi'a/Waianu, Waioakamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, and Kopiliula.

20. If there was more water in the streams, we would enjoy going down Bird Island and enjoy going up the mountain. I love to go up to the mountain and work on the watershed in the area of Wahinepee, Puohokamoa, Haipuaena, Honomanu, Nuaailua, Piinaau, Palauhulu, 'Ōhi'a/Waianu, Waioakamilo, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula, Puakaa, Paakea, and Makapipi. It's what I enjoy the most. Being up in the mountains feels free.

21. There is something spiritual about being around the streams. I love Ke'anae and my family. With more water, I would continue to experience the natural beauty of this area, including Wahinepee, Puohokamoa, Haipuaena, Honomanu, Nuaailua, Piinaau, Palauhulu, 'Ōhi'a/Waianu, Waioakamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula, Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, and Makapipi.

I declare under penalty of perjury that the foregoing is true and correct.

HANAWI and MAKAPIPI STREAMS

CASE NO. CCH-MA13-01

DECLARATION OF ISAAC KANOA

DECLARATION OF ISAAC KANOA

I, Isaac Kanoa, declare that:

1. The statements below are based upon my personal knowledge.
2. I am Hawaiian.
3. My mother is Victoria Young. Her mother's name was Keomailani Young.
4. My father's name is Isaac Kanoa. His father was Martin Kanoa, from Ke'anae. My father's mother was Esther Pueo Kahookole, from Nahiku.
5. I have about four acres in kalo and li'i'au. I currently farm land in Ke'anae from my grandmother's side. I also farm property owned by Bill Kepler, Janet Akau, Naome Ching, Jojo Chong Kee, the State, and EMI. These lands are irrigated by Palauhulu.

6. I also farm about five acres of land in Waianu Valley, located between Wailuanui and Ke'anae, that are irrigated by water from Waiokamilo.
7. As far as gathering, I follow in the tradition of my father, who showed me how to do it.
8. Traditionally, my 'ohana gathered 'ōpae, hihiwai, and 'o'opu in all the streams from Honopou to Makapii.
9. Traditionally, my 'ohana would throw net, dive, or troll for aholehole, moi, aku, enenue, u'u, uhu, and kole all along the coast from Honopou to Makapii. My 'ohana also gathered 'opihi.
10. I gather 'ōpae, hihiwai, and 'o'opu in Piinau, Palauhulu, Kopiliula, PUakaa, Paakea, Waiakaa, Kapaula, Hanawi, and Makapii. Hardly get any 'o'opu because of the introduced prawns. I also catch akule in Waiohue.
11. I currently fish for the same types of fish in the same way my grandfather did along the coast from Honopou to Makapii. I slowed down fishing about eight years ago.
12. Besides making a living and feeding my family, the purpose of my farming, gathering, and fishing is to teach my kids, my son-in-law, and my grandkids the traditions that my father taught me.
13. I currently mālama Piinau, Palauhulu, and Waiokamilo by cleaning the ditches and streams and cleaning the bamboo out of Palauhulu. Also, during droughts, I close off some of my patches to ensure that more water goes to the people below.
14. My 'ohana enjoys swimming in ponds in Waiokamilo and at Ching's Pond in Palauhulu. My kids have also fished in Ke'anae stream, which is where Palauhulu and Piinau meet.
15. Appreciating the beauty of this place where I live and farm is a given. We are farmers. Piinau and Palauhulu are beautiful.
16. The water is warm even up in my patches, which are right near the flume. My patches that are further down are much warmer. Warm water indicates low flow. If my water is warm, then the guys on the bottom must have really warm water. If I had more lo'i, there wouldn't be enough cool water to sustain them.

17. If there was more water in the streams, I would open up more patches.
18. If streamflow came back, my kids and grandkids would gather 'ōpae, hihiwai, and 'o'opu in Piinau, Palauhulu, Kopiliula, Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, and Makapipi, catch akule in Waiohue, fish as I learned along the entire East Maui coast from Honopou to Makapipi, and continue to mālama Palauhulu and Piinau by cleaning the rivers that feed us.
19. If there was more water in the stream, I would be more confident that my son-in-law could continue farming our family lands and other property he takes care of for other community members.
20. I am very familiar with the layout of Ke'anae.
21. I know who is farming and where their farms are located.
22. Or I have identified on maps marked as Exhibits A-140 and A-141 and showing the tax map numbers 1-1-03 and 1-1-07, respectively, the areas of taro farming (as shown in green highlighting) and the farmers associated with each area (as shown on orange labels) based on what I know and have seen in this area over the many years that I have lived in Ke'anae.
23. I have also identified on the map marked as Exhibit A-140 where the supporting 'auwai system is located and how the water flows in it (as shown in blue highlighting).
24. Both maps are true and accurate depictions of the location of lo'i and/or the supporting 'auwai system.

I declare under perjury that the foregoing is true and correct.

I declare under penalty of perjury that the foregoing is true and correct.  
DATED: Ke'anae, Maui, Hawai'i, December 21, 2014.

CASE NO. CCH-MA13-01  
DECLARATION OF JAMES KIMO  
KAAA

DECLARATION OF JAMES KIMO KAAA

I, James Kimo Kaaa, declare that:

1. The statements below are based upon my personal knowledge.

2. I am Hawaiian.

3. I am a member of Nā Moku Aupuni O Ko'olau Hui.

4. I am a taro farmer. I am trying to grow taro on property irrigated by Piinaau, Palauhulu, Waiokamilo, Kualani, and Wailua streams. Unfortunately, the source is not dependable. I am at the end of the line so I don't get sufficient water to maintain the correct levels and temperatures. If the water level gets too low, the weeds start to grow and overtake the field. Without a constant, continuous, cool flow, it's hard to make it work.

5. I am farming this land based on my responsibility to maintain the culture by keeping alive the traditions and practices that the people before me exercised here. Money is not the driving force. It's about doing what is right in the place that I live. It's about respect for all the generations that came before.

6. I learned how to farm taro from many taro farmers, including Ed and Carl Wendt and Bush Martin. I try to gain information from everyone I know who grows taro and is willing to share their knowledge. Different farmers have different ways of farming based on knowledge each one gathered over time – types of taro grown, how and when to care for the lo'i, and the amount and quality of water ideal for growing.

7. I gather 'ōpae and 'o'opu from Wailua stream and fish for mullet and moi in or near the mouth of Wailua. I learned how to gather and fish from kupuna and fishermen who shared their knowledge with me. It started when I was young.

8. I mālama 'āina and mālama kahawai in and around Waiokamilo, Wailua, and Waikani by education, awareness, and involvement. Education is key. To know where the streams ran in the early days, how they were maintained, how they flowed, what areas they fed, where the gathering spots for certain species like 'ōpae and 'o'ōpū can be found. Also to be aware of the effects of the lack of water flow on the ecosystem. Get involved, whether it be by community stream clean up or even discussions on what more needs to be done. For myself, I look at things differently from others. These streams are more than just places to gather from. I see 27 streams that used to be 27 nurseries for both land and sea. What happens to these streams impacts the whole island. Life that depended on this water flow has no other place to go, whether it be for spawning or just protection (a lot of fish sleep upstream for protection, i.e., mullet, aholehole, and even pāpio). The streams not only affect gathering but the island itself. Like everything in life needs water, so does the 'āina. Take care of Haloa. Haloa take care of you. Take care of 'āina, 'āina take care of you.

9. I appreciate the natural scenery of Waikani (Wailuanui).

10. For me, gathering and fishing from the streams is to support my family and sustain life.

11. Because of the lack of stream flow, I am unable to do the necessary farming and gathering needed to supplement my family's needs. At one point, the water was so low that I had to sponge water into my taro patch.

12. Sometimes I spend all day trying to find 'ōpae and 'o'opu, but see only one or two in the water. I return home empty-handed out of respect for the rehabilitation process. It is frustrating because it is a waste of an entire day. Because of the amount of time and effort to find

the resources, there is less time for recreation. Recreation used to be built into the whole day – hiking, catching fish, swimming, and then returning. It's not like that anymore.

13. Now that there is more effort involved in just finding the 'ōpae and 'o'opu, because they have to travel further upstream, there's no time for recreation or to stop and enjoy the natural beauty. The further you have to go, the more difficult it is to do recreation. However, farmers do what they do because there is enjoyment that comes with it – no matter how hard or back breaking the work is.

14. There are many invasive species below the diversion. One example is the African tulip. Native species are being crowded out. This requires additional work to weed out the African tulips from taking over the loi. This additional work takes time away from our other work and opportunities to be with our families.

15. There has also been a lot of displacement of families due to the lack of resources.

16. People are opening up new patches which require more water. As I understand it, there have been leases arranged for approximately fifteen more patches. More patches means more water is needed.

17. If there was enough water in the streams, I would gather 'ōpae and 'o'opu from Waikamoi, Alo, Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu, Nuaailua, Piinaau, Palauhulu, 'Ōhi'a/Waianu, Waioakamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapipi, and Waiohue. I would also fish for mullet, moi, ahole, manini in or near the mouth of Waikamoi, Alo, Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu, Nuaailua, Piinaau, Palauhulu, 'Ōhi'a/Waianu, Waioakamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapipi, and Waiohue. I would also continue to mālama these streams and the areas around them by clearing the streams to prevent blockage of the natural water flow.

18. If there was more water in the streams, I would appreciate the natural scenery that comes from restoring water and health to this area. There is beauty in putting life back into the streams and seeing them as they are supposed to be.

I declare under penalty of perjury that the foregoing is true and correct.

CASE NO. CCH-MA13-01  
DECLARATION OF JEROME K.  
KEKIWI, JR.

DECLARATION OF JEROME K. KEKIWI, JR.

I, Jerome K. Kekwi, Jr., declare that:

1. The statements below are based upon my personal knowledge.
2. I am Hawaiian.
3. I am a member of Nā Moku Aupuni O Kō'olau Hui.
4. My family has an interest in property in proximity to Palauhulu and Waikani (Wailuanui) Streams.
5. I am farming this land based on my family roots dedicating my life to Haloa and the Hawaiian culture here in Wailuanui.
6. I am a taro farmer. My family grows kalo on about five acres of property irrigated by Piinau, Palauhulu, Waioakamilo, Kualani, and Wailua.
7. Traditionally, my family gathered 'ōpae, 'o'opu, and hihiwai from Waikamoi, Alo, Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu, Nuaailua, Piinau,

Palauhulu, 'Ōhi'a/Waianu, Waioakamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapii, and Waiohūe. My 'ōhana also gathered watercress, pepéiao, bamboo shoot, banana, and pohole in those same streams.

8. My family also traditionally fished for turtle, moi, mullet, aholehole, uha, akule, and enenue in or near the mouth of Waikamoi, Alo, Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu, Nuaailua, Piinau, Palauhulu, 'Ōhi'a/Waianu, Waioakamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapii, and Waiohūe. My 'ōhana also gathered limu in or near the mouths of those streams.

9. Traditionally, my family engaged in mālama 'āina and mālama kahawai by being good stewards at Waikamoi, Alo, Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu, Nuaailua, Piinau, Palauhulu, 'Ōhi'a/Waianu, Waioakamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapii, and Waiohūe.

10. Currently, I gather 'ōpae, hihiwai, and prawns in Honomanu, Piinau, Palauhulu, Waioakamilo, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula, Puakaa, Hanawi, and Makapii. Before, there was plenty 'ōpae. You could just grab them from the water. Now, not so much. It takes about four hours to walk to where you can gather. Before you could just get out of the car and you would see them. These days there is sometimes nothing and you need to turn around empty-handed.

11. Currently, I fish for moi, aholehole, anae, pāpio, and enenue in or near the mouth of Honomanu, Nuaailua, Wailua, Waikani (Wailuanui), West Wailuaiki, and East Wailuaiki.

12. I engage in mālama 'āina and mālama kahawai by clearing the streams, cutting the grass, removing hau bush and big stones in and around Honomanu, Piinau, Palauhulu, Waioakamilo, Wailua, and Waikani (Wailuanui).

13. I gather and fish from the streams to eat and keep our traditions going.

14. When gathering, I will stop for a while to take in the natural beauty of Wahinepee, Honomanu, Nuaailua, Piinau, Palauhulu, 'Waioakamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, and Puakaa.

15. I also use the streams for other purposes, including washing dishes and bathing.

16. Without water, I have a hard time farming kalo. The kalo I do grow is more often diseased because of the lack of stream flow.

17. The lack of stream water below the diversions means I need to walk much farther to gather 'opae, hihiwai, and prawns. There is also less fish near the shoreline for me and my 'ohana to catch. Because of all of this, many of my 'ohana had to move away to find a "better" life.

18. If there was enough water in the streams, I would gather and fish like my kupuna did. My family and I would gather 'opae, 'o'opu, hihiwai, prawns, water cress, pepeiao, bamboo shoot, banana, and pohole from Waikamoi, Alo, Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu, Nuaailua, Piinau, Palauhulu, 'Ōhi'a/Waianu, Waikamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, Kopiliula Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapipi, and Waiohue. My family and I would fish for moi, mullet, aholehole, uha, akule, enenue, pāpio, and anae in or near the mouth of Waikamoi, Alo, Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu, Nuaailua, Piinau, Palauhulu, 'Ōhi'a/Waianu, Waikamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapipi, and Waiohue.

19. If the water was to flow again, I would continue to go to the streams to mālama Waikamoi, Alo, Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu, Nuaailua, Piinau, Palauhulu, 'Ōhi'a/Waianu, Waikamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapipi, and Waiohue.

20. If stream flow was restored, I would be able to enjoy the recreational activities that our kupuna enjoyed, including, for example, swimming in Waikamoi, Alo, Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu, Nuaailua, Piinau, Palauhulu, 'Ōhi'a/Waianu, Waikamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapipi, and Waiohue.

21. If water was returned to the streams, I would appreciate the beauty of Waikamoi, Alo, Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu, Nuaailua, Piinau, Palauhulu, 'Ōhi'a/Waianu, Waikamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapipi, and Waiohue. To me, more water means more beauty.

I declare under penalty of perjury that the foregoing is true and correct.  
DATED: Wailua, Maui, Hawai'i, September \_\_, 2014.

CASE NO. CCH-MA13-01  
DECLARATION OF JOSEPH "JOJO"  
YOUNG

DECLARATION OF JOSEPH "JOJO" YOUNG

I, Joseph "Jojo" Young, declare that:

1. The statements below are based upon my personal knowledge.
2. I am Hawaiian.
3. I am a taro farmer.
4. My family grows kalo on property irrigated by Waiokamilo Stream.

Approximately three to four acres of our ten acres are in taro.

I am farming this land based on my lease and ownership of certain Wailua parcels that have been farmed by my family for generations.

I learned how to farm taro on these lands from my father, Joseph Young Sr., who fed and supported his entire family as a full-time taro farmer. The traditional knowledge my father passed down to me was passed down to him by my grandparents, Kemalani Wong and Aima Young, who farmed taro on these lands during their lifetime.

7. Traditionally, my family gathered 'ōpae from West Wailuaiki, East Wailuaiki, Puakaa, Hanawi, and Makapiipi. My 'ohana gathered hiihiwai from Hanawi.
8. My family also traditionally fished for moi, aholehole, anae, 'opihi, akule, enenue, and aweoweo in or near the mouth of Honopou, Hanehoi/Puolua, Waikamoi, Alo, Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu, Nuaailua, Piinau, Palauhulu, 'Ōhi'a/Waianu Waiokamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaka, Kapaula, Hanawi, Makapiipi, and Waiohue.
9. Traditionally, my family engaged in mālama 'āina and mālama kahawai in West Wailuaiki, East Wailuaiki, Puakaa, Hanawi, and Makapiipi by gathering only as much 'ōpae as they needed and nothing more.
10. Currently, in addition to kalo farming, I gather 'ōpae in Piinau and Palauhulu only. The other streams do not have enough water to support my gathering. I gather maybe two or three times a year in order to supply food for 'ohana gatherings on special occasions.
11. I no longer fish because I'm older now. I am 65 years old.
12. I continue to practice mālama 'āina and mālama kahawai in Piinau and Palauhulu by gathering 'ōpae for my current needs. I never take more than I need.
13. I am unable to gather from all of the streams I would have in the past because many of the streams are now "dead." They are not getting enough water. The lack of stream flow is a problem for me because it puts more pressure on other resource areas I wouldn't normally use or access. I also have to rely on other family members to provide food I used to be able to gather myself. I also sometimes have to spend money to provide substitute foods for meals and special occasions, though there really is no substitute for the 'ōpae I get myself.
14. If there was enough water in the streams, my 'ohana would gather 'ōpae in any stream that has 'ōpae but only as much as we needed for our 'ohana. My family would continue to gather 'ōpae from West Wailuaiki, East Wailuaiki, Puakaa, Hanawi, and Makapiipi.
15. If there was more water in the streams, the next generation of my 'ohana would fish for moi, aholehole, anae, 'opihi, akule, and enenue aweoweo in or near the mouth of Honopou, Hanehoi/Puolua, Waikamoi, Alo, Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu, Nuaailua, Piinau, Palauhulu, 'Ōhi'a/Waianu Waiokamilo, Kualani,

Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapipi, and Waiohue as my kupuna did.

I declare under penalty of perjury that the foregoing is true and correct.

DATED: Lahaina, Maui, Hawai'i, November \_\_, 2014.

CASE NO. CCH-MA13-01

DECLARATION OF JONAH JACINTHO

DECLARATION OF JONAH JACINTHO

I, Jonah Jacintho, declare that:

1. The statements below are based upon my personal knowledge.
2. I am Hawaiian.
3. My family has an interest in property near Honopou. We grow kalo on that property, which is about two acres. I have my own lo'i as do my aunt and sister.
4. I am farming this land based on my family history and the practices passed down to me.
5. I learned how to farm taro from Aunt Beatrice Kepani Kekahuna and Lurlyn Scott.
6. Traditionally, my 'ohana gathered pohole, fish for enenue, 'o'opu, watercress, hihiwai, prawns, banana, limu, bamboo, and ulu in and around Honopou.

8. My 'ohana also engaged in mālama 'āina and mālama kahawai at Palauhulu and Waioakomilo by cleaning the stream and no make dirty. When I was farming, I would clean the flume every two weeks.

9. Currently, I help gather hihiwai from Palauhulu. I go swim in the pond and bring home hihiwai to my grandparents. There's not that much hihiwai.

10. I also fish and dive for whatever I can get down Ke'anae, which is fed by Piinaau and Palauhulu.

11. My grandfather wants me to work the taro patch. Sometimes I help Aukai at the lo'i, working the patch and cleaning the ditches.

12. If there was more water in the streams, I would definitely continue the traditions I learned from my grandpa. I would gather hihiwai from Palauhulu, fish in the waters off Piinaau and Palauhulu, work the taro patch, and help keep the streams and ditches clear.

I declare under penalty of perjury that the foregoing is true and correct.

JONAH KUPONOIKEAUEA HUEU

7. Traditionally, my 'ohana fished for moi, enenue, aholehole, 'opihi, kumu, tako or he'e, moanakali, kole, ulua, honu, mullet, omilu, pāpio, uhu, paanau, menpachi, and aweoweo in or near the mouth of Honopou.
8. My 'ohana also engaged in mālama 'āina and mālama kahawai at Honopou by cleaning the 'auwai to our family lo'i, pruning, and cleaning the buildup on the stones in the ponds. My family also fished and planted according to moon phases.
9. My mother, Juliana Jacintho, was baptized in Honopou.
10. I currently gather kalo, pohole, fruit, 'ulu, and watercress in and around Honopou.
11. I fish for enenue, ulua, uhu, 'opihi, haukiuki, poopaa, omilu, aholehole, lae, aweoweo, paanau in or near the mouth of Honopou.
12. I gather and fish to feed my family and myself.
13. My family engages in mālama 'āina and mālama kahawai by fishing and gathering by moon phases. We also clean Honopou for good consistent flow, which keeps the water cooler for planting.
14. I also swim, relax, and get together with my family along Honopou. I learned to swim there.
15. I appreciate the natural beauty of Honopou. I like listening to the stream flow as well as smelling the flowers and fresh flowing water. I love hearing the birds singing and the sound of the wind blowing through the trees. I enjoy the feeling of following what my grandfather did with kalo farming. I feel him with me.
16. The lack of stream flow is a problem because we cannot fish as much. We have to take only a small amount of fish, and much time is needed before the fish replenish. We have lost large amounts of ocean fish due to warmer waters and the fact that less nutrients get into ocean from the land.
17. If there was enough water in the streams, I would farm more kalo because the flow would be sufficient. I would fish more too, because the water would bring back the abundance of fish.
18. More water would also help meet our needs for home use and gardening.
19. If there was more water in the streams, I would fish for ulua, omilu, pāpio, moi, aholehole, uhu, paanau, enenue, he'e, and aweoweo in Honopou.

20. If water was put back in the streams, I would clean Honopou for kalo farming.
21. If water was restored, the streams would flow faster and at cooler temperatures that are ideal for growing taro.
22. More water in the streams would bring back fish, 'o'opu, prawns, and 'ōpae, which my family members rely on. Old ways of life would be more feasible.
23. If there was more water in the streams, I would continue swimming, family picnics, and prawning at Honopou.

I declare under penalty of perjury that the foregoing is true and correct.

DATED: Honopou, Maui, Hawai'i, December 13, 2014.

CASE NO. CCH-MA13-01  
DECLARATION OF JOSEPH KIMO  
DAY

DECLARATION OF JOSEPH KIMO DAY

I, Joseph Kimo Day, declare that:

1. The statements below are based upon my personal knowledge.
2. I am Hawaiian.
3. I am a member of Nā Moku Aupuni O Ko'olau Hui.
4. My family has an interest in property in proximity to Wailuanui.
5. I was a taro farmer. My family used to grow kalo on property irrigated by Waikani Stream. I stopped farming about four years ago and primarily fish now.
6. I was raised by my grandparents, and on weekends, we would throw net and gather from the streams.
7. Traditionally, my family gathered 'ōpae, 'o'opu, hihiwai, aweoweo, and honu from Waikamoi, Alo, Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu,

Nuaailua, Piinau, Palauhulu, 'Ōhi'a/Waianu Waiokamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakea, Paakea, Kapaula, Hanawi, Makapii, and Waiohue. 'Ōpae was for eating and for use as bait for enene. Honu was for eating and its fat had medical uses. My 'ohana also hunted for pig up mauka near the streams and gathered black crab near the ocean.

8. My family also traditionally fished for moi, aholehole, and enene in and around Waikamoi, Alo, Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu, Nuaailua, Piinau, Palauhulu, 'Ōhi'a/Waianu Waiokamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakea, Paakea, Waiaaka, Kapaula, Hanawi, Makapii, and Waiohue. We would lay net at night and also dive for kole. Back then, fish were big and plentiful. We could catch more fish going a shorter distance by canoe.

9. Traditionally, my family engaged in mālama 'āina and mālama kahawai in and around Waikamoi, Alo, Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu, Nuaailua, Piinau, Palauhulu, 'Ōhi'a/Waianu Waiokamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakea, Paakea, Waiaaka, Kapaula, Hanawi, Makapii, and Waiohue. We knew not to overharvest, were mindful of seasonal spawning, and respected the cycle of life. We would also clean and clear debris in the streams.

10. Currently, my 'ohana gathers 'ōpae and hihiwai in Waikamoi, Alo, Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu, Nuaailua, Piinau, Palauhulu, 'Ōhi'a/Waianu Waiokamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakea, Paakea, Waiaaka, Kapaula, Hanawi, Makapii, and Waiohue.

11. I have been fishing since I could walk. I currently fish for deep seven bottom fish (onaga, ehū, 'ōpakapaka, kalekale, lehi, gindai, and hapuupuu), aku, 'ahi, mahimahi, moi, 'ō'io, kole, kumu, and 'opihi in and around Waikamoi, Alo, Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu, Nuaailua, Piinau, Palauhulu, 'Ōhi'a/Waianu Waiokamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakea, Paakea, Waiaaka, Kapaula, Hanawi, Makapii, and Waiohue. Now, we have to go longer distances to catch more fish because of the lack of stream water flowing to the ocean.

12. My family also practices mālama 'āina and mālama kahawai in and around these streams. Everything is seasonal. We fish to feed the family; it's our icebox. We take just what we need and that's it. We treat the resources as our icebox – that's how the village works. If we

don't teach our mo'opuna the same, it's a lost art, and they will have to go to the store for their food.

13. I gather and fish in order to put food on the table. It is for subsistence. We live off the land, from mauka to makai. I teach my traditions to my kids and grandkids. But how can I teach them if the streams are dry and there are no resources left? I don't want my kids eating out of a tin can. I want them to eat natural food.

14. I also take my kids and grandkids to the river below my home (Waikani) to swim, picnic, throw net, and go down to the beach. These are my family traditions. Every Sunday after church, we would dive for fish for the table. It was a community thing.

15. The places my grandfather took me to are sacred to me. As I've gotten older, I have learned to appreciate the surroundings, the beauty, because when I see it, I know I'm home.

16. The lack of stream flow is a problem for me because they are taking away the resources we had before and it's not here now. If water was in the streams, we could have our aquatic life back. The mighty dollar is the only thing that matters to HC&S/EMI – that's the bottom line to the big corporations and the state.

17. The lack of stream water has forced me to stop taro farming and close up my patches. I had about three to four acres worth. All of that used to be open, and I used to pull about 12-14 bags a week, even while working full time and fishing on the weekends. I want my kids to learn – that's the most important to me. But they can't without the water. My granddaughter asks me, "Papa, when we going to open up the farm again?"

18. If there was enough water in the streams, I would teach my kids and grandkids to gather 'ōpae, 'o'opu, hihiwai, and aweoweo from the same streams as me and my ancestors (Waikamoi, Alo, Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu, Nuaailua, Piinaau, Palauhulu, 'Ōhi'a/Waianu Waiokamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuiki, East Wailuiki, Kopiliula Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapipi, and Waiohue).

19. If there was more water in the streams, I would fish for onaga, ehu, 'ōpakapaka, kalekale, lehi, gindai, and hapuupuu, aku, 'ahi, mahimahi, moi, aholehole, 'ō'io, kole, kumu, and 'ōpihi in and around Waikamoi, Alo, Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu, Nuaailua, Piinaau, Palauhulu, 'Ōhi'a/Waianu Waiokamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuiki, East Wailuiki, Kopiliula Puakaa, Paakea, Waiaaka,

Kapaula, Hanawi, Makapipi, and Waiohue. I would teach my kids and grandkids what my grandfather taught me about where to fish and how to harvest.

20. If lack of stream flow was not a problem, I would continue to mālama 'āina and mālama kahawai in and around Waikamoi, Alo, Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu, Nuaailua, Piinaau, Palauhulu, 'Ōhi'a/Waianu Waiokamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuiki, East Wailuiki, Kopiliula Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapipi, and Waiohue, making sure I only take what I needed and treating the streams and shoreline waters as my icebox.

21. My 'ohana and I would continue to swim, picnic, throw net, and go down to the beach in and around these streams if there was enough stream flow. I would also continue to appreciate the natural beauty of these streams, especially with more water.

I declare under penalty of perjury that the foregoing is true and correct.

DECLARATION OF JULIANA P.  
 ALLEN JACINTHO

DECLARATION OF JULIANA P. ALLEN JACINTHO

I, Juliana P. Allen Jacintho, declare that:

1. The statements below are based upon my personal knowledge.
2. I am Hawaiian.
3. I am the granddaughter of Lokana Kepani Sr. I was delivered by my grandmother Juliana Koko Kepani, and to my knowledge, I was the last to be born in their home.
4. My family has an interest in property near Honopou. We grow kalo on that property, which is about two acres.
5. The stream has provided my family with an abundance of uses.
6. Traditionally, my 'ohana gathered 'opae, hihiwai, 'o'opu, pūpū, watercress, bamboo shoot, bamboo for fishing poles, ti leaf, java plum, rosy apple, Hawaiian crayfish, sweet potato, mango, banana, 'ulu, tamarind, guava, hibiscus, plumeria, ferns, pakalana, puakenikeni, 'avapuhi, and medicinal plants in and around Honopou.

7. Traditionally, my 'ohana fished for aholehole, pāpio, pūhi, honu, mullet, popaa, moi, ulua, uhu, enenue, limu, 'opihī, pipipi, and kupehe in or near the mouth of Honopou.
8. My 'ohana also engaged in mālama 'āina and mālama kahawai at Honopou by taking only what we could eat, using the moon to fish and plant, rebuilding stone walls, and maintaining the level of water for taro at Honopou. My grandfather paid special attention to the ditches and kept them flowing so the taro patch and the home below his house had water for their daily uses. He also made sure there was sufficient water to keep the taro growing by checking the flow at EMI gates.
9. As children, Honopou was our pool on hot days where all of us learned to swim. The mangos, guavas, java plum, and rosy apples provided us with snacks as we played and trekked up and down the stream on our adventures. It taught us to be aware of flash flooding, or "big water," as we called it. We knew it was coming by the sounds of big rocks moving, the water becoming muddy, and the change of the rushing waters. As the water reached the ocean, it provided the small pools, brackish water, for ocean fish to lay their eggs and a fertile place for food for the ocean fish.
10. My mother used to wash clothing by hand with a stick and the rocks as a clothes line. We also used the waters for bathing, washing dishes, cleaning house, to cleaning chickens or pigs. The water was also used to irrigate the plants growing around the properties, including flowers, sweet potatoes, and even grapes at one time.
11. At any time, just sitting along the stream gave me comfort and peace. It relaxed my mind and body, sometimes to recharge me and sometimes to just enjoy relaxing. I remember at night just listening to the rushing waters. It was relaxing and would put me to sleep. Listening to the sound of the frogs was also very peaceful.
12. I currently gather oranges, sugar cane, mangoes, bamboo shoots, 'ulu, flowers, ferns, ti leaf, pohole, prawns, and achote in and around Honopou.
13. My 'ohana currently fishes for aholehole, pāpio, pūhi, mullet, popaa, moi, ulua, uhu, enenue, limu, 'opihī, pipipi, and kupehe in or near the mouth of Honopou.
14. I gather and fish to feed my family, to be self-sufficient, and to be somewhat independent. I am proud of my work and abilities.

15. My family engages in mālama 'āina and mālama kahawai by fishing for appropriate sizes of fish, eating what we gather, sharing what we have, taking away 'ōpala, leaving areas clean and fit for the next person, as well as maintaining the streambed at Honopou.

16. I also swim, relax near the water, fish, and gather items as a family. I enjoy just strolling around the Honopou area.

17. I appreciate the scenery at Honopou. It is where my children were able to play and run freely, camp, gather, talk, and remember the past.

18. Water does not flow in the area as it did in my childhood. The lack of stream flow is a problem because there has been decreased productivity. Disease threatens our kalo. There has been a decrease in 'ōpae and hihiwai. The black 'o'opu is gone. We lack the ability to be self-sufficient.

19. If there was enough water in the streams, I would gather 'ōpae at Honopou. I would also fish, as we did traditionally, for aholehole, pāpio, puihi, mullet, popaa, moi, ulua, uhu, enenue, limu, 'opihi, pipipi, and kupehe in or near the mouth of Honopou.

20. If there was more water in the streams, I would continue to mālama as we did before by taking only what we could eat, using the moon to fish and plant, rebuilding stone walls, cleaning the ditches, and maintaining the level of water for taro at Honopou.

21. With more water, I would want my family to be able to do to the same sort of recreational activities I did as a child, including swimming, playing, and using water for other domestic needs.

22. If water was returned to Honopou, I would appreciate the natural beauty of the area. It would remind me of my childhood and family that is here as well as family members who have passed on.

23. Without water in the stream, Honopou would not be the same place I have known. It has supplied so much for the people of this area. It is a comfort knowing that the stream is there.

24. It is urgent that we maintain Honopou for our generation and our children. We are learning through trial and error how to improve taro farming as our kupuna have passed on to us.

I declare under penalty of perjury that the foregoing is true and correct.  
DATED: Honopou, Maui, Hawai'i, December 12, 2014.

CASE NO. CCH-MA13-01  
DECLARATION OF KAUI  
KANAKAOLE; EXHIBIT "1"

DECLARATION OF KAUI L. KANAKAOLE

I, Kaui L. Kanakaole, declare that:

1. The statements below are based on my personal knowledge and upon research that I have conducted.
2. I reside at 4195 Hana Highway, Hana, Hawaii 96713. I was born in Hilo on Hawaii Island, but moved with my family to Hana, Maui at age 4 and grew up in Hana until graduating from Hana High School.
3. Attached to my declaration as Exhibit "1" is a true and accurate copy of my resume.
4. I received my Bachelors of Arts in English and my Teaching Certificate in Secondary Education from University of Hawaii at Hilo. I started my professional career in teaching at Hilo High School then moved on to Ke Ana Laahana Public Charter School before returning home to my alma mater at Hana High and Elementary School. All of my teaching experiences have put me in the middle of high Native Hawaiian populations, from Keaukaha to Hana, public education was an important vehicle for me to reach the native "underprivileged" community and give back what I had gained from my own upbringing in these types of communities.

5. I served as Department Head at Hana High School, trying to rally the school population around reading and raising our students' reading test scores, which came to fruition in 2011 when we scored the highest in Maui County.
6. My hula career started as an 8 year old child in Hana with Namahana Kalama-Panui, learning about the stories and songs of the place I grew up in. Hula had me hiking through the mountains gathering kinolau (body forms of the gods) of the gods we danced about and this practice became my first introduction to the water diversions of East Maui.
7. We were curious about the fumes, waterways, and water pumps that cut through our sacred forest so our kumu and aunts told us about the sugar plantations on the other side of the island needing water and even as a young child I remember feeling angry and confused.
8. My hula career continued on in Hilo with renowned Halau o Kekuhi, which is also my family's halau on my father's side.
9. Hula comes from Edith Kanakaole, my father's mother, and was passed down matrilineal and continues in that vein today.
10. I was a dancer in the PBS broadcast of "Great Performances: Holo Mai Pele" (2000), went on tour for the hula drama "Kamehameha: Na Hoailona" (1999) and "Hanau Ka Moku" (2002).
11. Being an olapa dancer in Halau o Kekuhi has afforded me many cultural learning experiences and opportunities however the added responsibility of being of familial descent from this hula lineage gave this experience deeper meaning.
12. Hula has taught me about the many facets of our culture, from menial work to ritualistic prayer, from the bloom of a leaf-bud to the cycle of water in the forest, from obeying the request of an older sibling to embracing the transformation into your god-self.
13. Hula has given me an education that cannot be translated into any degree at a university, and my family has solidified those teachings and anchored me spiritually and it is this inherited DNA that I pass on to my two children.
14. In 2007, I participated in Halau o Kekuhi's Aha Ailolo Puaalohelohe, which is a rigorous rite of passage from olapa to kumu, and I was granted the right to teach the traditions of hula Aihaa and hula Pele that have been taught to me.

15. In 2009 I started my own hula halau and continue today with children and adult classes for Halau o Nakaulakuhikuhi.
16. I am a member of the Edith Kanakaʻole Foundation, which was started in 1990 by my father and his siblings in order to maintain and perpetuate the teachings, beliefs, practices, philosophies and traditions of their parents, the late Luka and Edith Kanakaʻole. I am currently contracted by Ala Kukui Retreat Center to conduct research on water in East Maui looking at it from a cultural perspective.
18. My research is entitled "Ke Ala Huli i Wāihana" and I use Papaku Makawalu to understand the cycles and significances of water in the Koolau, Hana, Kipahulu and Kaupo districts of Maui.
19. My ties to East Maui are from my mother's side, whose great grandmother, Kahele was a native of Kipahulu and married a Japanese stow-away immigrant by the name of Ishii.
20. My mother remembers her grandmother telling her stories of watching her mother Kahele down at the muliwai (estuary) feed the shark at Maulili. She was of pure Hawaiian descent and although not much was said about Kahele, this little piece of information has been passed down. From this we know that the shark is an aumakua (family deity) of our family and because of that we honor these ocean beings through chant and dance and have an affinity for the muliwai there at Maulili and the flow of fresh water from mauka to makai.
21. These combinatorial experiences, influences, lineages have given me the intimate connection and cultural prowess to understand this land that I live on and the natural cycles it goes through and especially our human role in those natural cycles.
22. East Maui, which is comprised of the four moku (land district) of Koolau, Hana, Kipahulu and Kaupo, is historically significant and is extolled in the chants and stories for time immemorial. In the epic saga of Pele and Hiiaka, when Hiiaka journeys up the island chain from Hawaii to fetch her older sister's lover on Kauai she lands first at Kauiki in Hana and chants about the majestic Kauiki hill, the outcrop of Mokuhanohano the sea and the fresh water spring of Punahoa that brings life to the area.
23. Through stories we know that the gods Kane and Kanaloa have traversed the region thrusting their staff into the ground at various places and fresh water bubbled up. People of the area worshipped these gods because of the abundance of water as in the story of

- Kalemakuaikaimano who was a man who lived in the Pauwahu area where the watercress patches are today.
24. When he lived there, there was no spring, just the water from the river that would flow when there was a lot of rain, however because he constantly importuned Kane and Kanaloa as his gods, grew and ate the kinolau of these gods, they visited him one day. At that visit he prepared a feast and chewed the awa for his gods and served them. In return Kane and Kanaloa thrust their staff and springs erupted out of the ground with a loud rumble that continued so one of the springs was closed up and the one that was flowing quietly was left.
25. There are countless stories and chants that communicate the importance of water in this East Maui region. It is this abundance that made and continues to make this particular land waiwai (valuable) to its inhabitants.
26. This high value was not taken for granted or misused at any cost but met with severe punishment if ever abused, punishment of death. There are a few stories about misuse or greed of the water resource in this area that were met with the death penalty because without water there would be significant repercussions. Found in the Hawaiian language newspaper Ka Nupepa Kuokoa was a story about "Na Akua" Kane and Kanaloa.  
*Ka Moololo o Na Akua*  
... na laua ka wai o Kou ma Kaupo, na laua i hoomake kahuna oia o Koino ma Kikoo i Kipahulu, a na laua i hoomake ka moopuna a Waiaru ma no ka hooaumia i ka wai, a na laua i wahi i ka pohaku a puai mai ka wai.  
*The Story of The Gods*  
... the water of Kou at Kaupo belongs to them (Kane and Kanaloa), they were the ones who killed the priest Koino who was from Kikoo at Kipahulu, and they were also the ones who killed the grandchild of Waiaru folks because of his defiling of the water there, and it was the gods who split the rock and water bubbled forth.
27. Tampering with a natural resource to the point where it prohibited the untainted continuance of the natural cycle was met with strict consequences and this was a pervasive understanding. It's an innate thought process for native people to think this way, which is why as a little girl I was angry and confused about the water diversions in the forest even without any preconceived notions of the sugar industry's effect on Hawaii.

28. It's fundamental to the psyche of the native Hawaiian that we understand the cycles of our natural world and find our fit, as humans, in it all. My Hawaiian ancestors categorized their world into a system of knowledge known as Papaku Makawalu, whose origin can be found in the Kumulipo (Hawaiian Creation chant).
29. Papaku Makawalu is a Hawai'i ontological knowledge system that assigns the Hawaiian universe to three Papa or houses of knowledge. The first of the three is Papahūhūnua, which includes all of the earthly elements such as the ocean, volcanic processes, and the water cycle. Kane (and Kanaloa for that matter) is a vital component of Papahūhūnua in his occupation as water, Kane is the entity in and of Papahūhūnua that mingles continuously with elements of Papahūhūnua (the second Papa).
30. Papahūhūnua is the atmospheric elements including the sun, weather, stars, planets, heavenly strata, and seasonality.
31. The third Papa is Papahānaumoku. This papa is comprised of the living components with the biological intelligence of procreation. Those who belong to the house of Papahānaumoku are the direct beneficiaries of Kane. These individuals include everything from plants, to birds, to coral, to fish, to mea kolo (creepers), and kanaka (man). The house of Papahānaumoku also includes the activities that kanaka engage in, including things like hula and caring for land. Kanaka functions including consciousness and inner conscious are also in the house of Papahānaumoku.
32. Water is one of the few elements that easily traverse all three Papa. It is the nature of the water cycle that make it a part of Papahūhūnua when it is on the earth in the form of streams, springs, aquifers or even a puddle. Kane and Kanaloa preside over these waters as in the chant "Ka Wai a Kane":

*E ui aku ana au ia oe,  
One question I put to you,  
Aia i hea ka wai a Kane?  
Where is the water of Kane?  
Aia i ke kuahivi, i ke kuaiono.  
Yonder on mountain peak, on the ridges steep  
I ke awawa, i ke kahawai;  
In the valleys deep, where the rivers sweep  
Aia i laila ka wai a Kane.  
There is the water of Kane.*

33. Then Laka presides over the evaporation/transpiration process, it gets taken up into the atmosphere, which is the realm of Papahūhūnua and falls to earth in the form of rain, mist, or snow.
34. The role of Laka is illustrated in this chant:
- A ke kuahivi, i ke kuaiono  
From the mountain tops, to the highland ridges  
Ku ana o Laka i ka mauna  
Laka presides over the forest  
Noho ana o Laka i ke po o ka ohu  
Laka is at the pinnacle of the gathering of the mist  
O Laka kumu hula  
Laka the source of movement*
35. As water accumulates it is the beneficiary of Papahānaumoku that ingest and rely on this element for life. The kanaka (man), the plants and animals, crawlers and winged creatures are the ones who are either made up of water and/or rely on it for survival.
36. Papaku Makawalu gives us a framework to understand the movement of water throughout the different papa (foundations) and this framework can be applied to our own localities to understand peculiarities about the cycles we experience everyday. In looking at the moku of Koolau for example, the water cycle there is a microcosm for what is happening in other moku in East Maui, Maui, Hawaii and the world.
37. Starting with Oopuola stream and continuing on to the end of the Koolau moku at Makapipi stream, each water source was given a name by our ancestors. These names tell us information about that particular source, which we can use to better acquaint ourselves with the land, elemental sources and cycles that occurred.
38. Kaaiea stream, for example, was named for the Aiea tree that grew abundantly in the area. The species of this endemic Hawaiian genus Nothocestrum consisted of soft-wooded shrubs and trees with oblong leaves, yellowish flowers and white/red berries, which grew from 1500-5000 feet elevation. The aiea tree acted as a caustic in the water cycle and it helped to accumulate water in the forest.
39. Ohia stream and spring was named such not for the ohia tree; ohia also means "tabooed, as food patches during famine". A native of the area, Henry Kahaleulaokewa Kamali, who has long passed, was born in 1886 at Pauwahu close to Ohia stream and grew up in the area. In his 1970 interview with Clinton Kanabele, which was conducted in Hawaiian and later translated and transcribed he described the water as such:

- "Ohia, That is the waters of Kanaioa and Kane. The water gushes forth from inside from a spring. Yes, that is healing water for coughs and all kinds of sicknesses. There the sick were taken. When you have your illness you go into there to bathe. Healed."
40. The native people in the area understood that this water was special, sacred, kapu (taboo) and only to be used in unique circumstances.
41. A wind of the Wailua area is named Kialeale, meaning stirring, moving, undulating, and rippling with force. This wind is also characteristic of the land because the water sources of Koolau moku (district) are powerful, full of energy and maintain a strong presence over the other elemental forces of nature.
42. The Kialeale wind occupies Papahūlani and is a manifestation of the god Lono and through its stirring force, clouds accumulate in the uplands and that is when the god Kane releases the rains that penetrate the earth and amass in the Kuahiwī (hill) and Kualono (mountain ridge), in the awaia (valley) of Honomānu, Waiohūe, Wailua, and Makaiwa. It is in this realm of Papahūhōnua that we kanaka (man) have most intimate dealings with this water. It is the kanaka (man) of Koolau who give praise to the god Lono who initiated the Kialeale wind that brought this precious resource to the earth where he is able to utilize its gifts, while still allowing the cycle to continue. It would be requisite of the kanaka to deny this resource its due diligence.
44. Kialeale is of Koolau moku only, it serves this area and it would be wrong to take the product (water) of its service elsewhere because that creates a void, a break in the cycle that is distinctly Koolau.
45. The unique natural cycles that occur in each locality belong to that particular place, the mana (spiritual power) that is created as a result of these cycles belongs to that particular place and the displacement or gross manipulation of that element whether it be water, earth, lava, wind or sun is counter to everything that the kanaka Hawai'i believe. And this is illustrated for us in the simple act of naming everything in their world.
46. The wind in Koolau moku is not known as just "Wind" but "Stirring, Moving, Undulating Wind".
47. The spring in Pauwahu is not named "Spring" but "Tabooed, as a food garden during famine Spring".

48. There is a reciprocity of energy that occurs between element and kanaka and it is imperative that these relationships are nurtured and continued so that the our island world lives and prospers.

The people of Koolau were not just called "Wailua-ans" or "Keanae-ans" but "Koolau Hauwalaau". It is a poetic saying, which means "Koolau of the Loud Voices" because inhabitants of the area were said to be loud of voice. And it is this hauwalaau that must be heeded, that must be reckoned with, that must be regarded because they are the mouthpiece of the land of which they occupy.

I declare under penalty of perjury that the foregoing is true and correct.

Guiding Principles

- 1. A strong cultural foundation that is nurtured in all aspects of life will promote physical, mental and spiritual growth that will give one the foresight of his/her purpose not only to their lāhui but also to the global community.
- 2. My kupuna comprised a highly advanced society filled with a mix of people who had purpose; and whether that purpose was great or small the idea that everyone and everything was inextricably connected is what allowed them to excel to heights unfathomable by scientific standards today. It is this fact that pushes me to not only understand their view but also find applicability in my time.
- 3. Kuleana is a two-way street that is bestowed upon those who rise to accept the responsibility in order to enjoy the right. Familial duty is wrapped in this principle of Kuleana and it is paramount to the elevation of the family, principles, and race, that one takes the helm, no matter how great or small the vessel.

CASE NO. CCH-MA13-01

DECLARATION OF LEONORA  
BARCLAY

I, Leonora Barclay, declare that:

1. The statements below are based upon my personal knowledge.
2. I am Hawaiian.
3. I am a member of Nā Moku Aupuni O Ko'olau Hui.
4. My family has an interest in property near Wailua Stream. I farmed until I was about 27 years old. I stopped because I went to work, and my father did most of it. My brother and other family friends continued to farm our land until about 1990. My family and I reopened the patches in 1996 and stopped around 2004-2005.
5. I farmed this land based on my upbringing and my parents owned the land and transferred to me the ownership.
6. I learned how to farm taro from my father, Edward Smith, Sr., mother Anna Kaauamo Smith and Tūtū Wahine, Ellen Kapeka Kaauamo.
7. We currently have about  $\frac{3}{4}$  acre to 1 acre in kalo, which is farmed by Carl Wendt.

8. Traditionally, my 'ohana gathered 'ōpae, 'o'opu, hihiwai, guava, lilikoi, pohole, and prawns in Waikamoi, Wahinepee, Honomanu, Nuaailua, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, and Hanawi.
9. Traditionally, my 'ohana fished for aholehole, poopaa, 'o'opu, nohu, and hinalea in or near the mouths of Honomanu, Nuaailua, Piinau, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, and Hanawi.
10. My family also engaged in mālama 'āina and mālama kahawai by constantly keeping 'auwai clear of 'ōpala and growth in and around Honomanu, Nuaailua, Piinau, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula, Puakaa, and Hanawi. We would clean the ditch so the water would stay in it. We didn't want it to overflow and soften people's land, ruining their patches.
11. Currently, my 'ohana and I gather pohole around Wailua, Waikani (Wailuanui), West Wailuaiki, and East Wailuaiki.
12. I gather to eat and feed my 'ohana.
13. I enjoy nature such as pohole fields, taking pictures of the taro fields and fruit trees in and around Wailua.
14. The lack of stream flow has been a problem for me because less water causes harder farming for my 'ohana as well as the farmers below my patches. This is in stark contrast to the 1970s, when we still had plenty of water. It was always flowing. We had to upkeep our lo'i to make sure that the people below got water.
15. In the 1980s, we would go through periods of water then no water. If there was a big rain, we would see water for two or three days.
16. The lack of water caused my family to stop cultivating the land and to instead offer the land to other farmers to farm if they could.
17. If there was enough water in the streams, I would continue to gather pohole and also gather 'ōpae, hihiwai, and oopu in Wailua, Waikani (Wailuanui), West Wailuaiki and East Wailuaiki.
18. If there were more water in the streams, I would fish for aholehole in or near the mouths of Wailua, Waikani (Wailuanui), West Wailuaiki and East Wailuaiki.

19. If water were put back in the streams, I would mālama the streams by keeping the 'auwai clear of 'ōpala and growth. I would clear the ditch for the same reason as in traditional times – to stop the overflow of water and potential destruction. Under current conditions, people have to clean the ditches just to get water.
20. If there was more water in the streams, I would go to the streams and catch goldfish like I did as a child. You don't see them anymore. You know when the water is flowing because of the goldfish. They don't survive unless there is a steady flow.
21. If lack of water was not a problem, I would appreciate nature, including pohole fields. I would continue to take photos of the taro fields and fruit trees.

I declare under penalty of perjury that the foregoing is true and correct.

CCH-MA13-01<br>DECLARATION OF LEZLEY<br>JACINTHO |
|--|---|

DECLARATION OF LEZLEY JACINTHO

I, Lezley Jacintho, declare that:

1. The statements below are based upon my personal knowledge.
2. I am Hawaiian.
3. I am a taro farmer. I have been growing kalo in Honopou for about six years now on approximately two acres of land.
4. I am farming this land based on my family history and talking with kupuna about practices their parents had done to farm lo'i long before we did.
5. I learned how to farm taro from Beatrice Kepani Kekahuna and Lurlyn Scott.
6. My 'ohana has lived in Honopou for many generations.

7. Traditionally, my 'ohana gathered 'ulu, kalo, uala, moi, aholehole, banana, 'o'opu, pūpū, kala, hau, native crayfish, hihiwai, 'opihi, limu, pohole, mango, 'awapuhi, if leaf, lū'au, guava, watercress, oranges, and medicinal plants in and around Honopou.
8. Traditionally, my 'ohana fished for aholehole, honu, moi, mullet, poopaa, puhi, ulua, lobster, pāpio, 'ō'io, lae, ulu, menpachi, kole, black crab, haukiuki, kupipi, and opihī in or near the mouth of Honopou, Punalau/Kolea, Honomanu, Hanawi, and Makapipi. They also gathered limu in those areas.
9. My 'ohana also engaged in mālama 'āina and mālama kahawai. They were aware of spawning times, they cleaned the 'auwai, gathered only what was needed, gathered and fished with the moon cycle, rebuilt walls, and cleaned Honopou.
10. Currently, my 'ohana and I gather pohole, banana, avocados, 'ulu, mango, orange, puakenikeni, and lū'au in and around Honopou and Honomanu. We also pull kalo if it is not rotten.
11. My family and I fish for pāpio, enenue, moi, prawns, lobster, haukiuki, 'opihi, and kupipi in or near the mouth of Honopou and Honomanu.
12. I gather and fish to feed my family, teach my kids to feed themselves, and live as our grandparents did.
13. My family engages in mālama 'āina and mālama kahawai by cleaning Honopou and nearby ponds, planting kalo, cleaning, and working together to grow food.
14. We also swim in the ponds, teach our kids how to swim, catch prawns, fish, and play games in and around Honopou.
15. I appreciate the natural beauty of Honopou, including the birds and dragon flies. I love the smells of 'awapuhi and other flowers. I enjoy looking around, taking in the beauty and the greenery, and hearing rushing water while sitting on Lynn's deck next to the pond.
16. Water is used to irrigate my lo'i as well as other lo'i. The level of water barely can feed those lo'i. More water is needed as we continue to open more lo'i. Around these lo'i the water also feeds homes that have been established from generations.
17. The lack of stream flow affects our taro. We have lost taro due to root rot and other diseases.
18. Because the streamflow connects to the ocean, improper flow restricts spawning of different species of fish. Thus, the lack of stream flow affects our gathering rights as

- Hawaiians to feed our 'ohana as was once possible. Native species like 'o'opu cannot travel back up stream due to lack of water, which compromises their reproduction. Our families who live in this area cannot gather enough resources from the ocean and streams because there is not enough fish, hihiwai, 'opae, and 'o'opu. The low stream flow has also caused people to move away to provide better for their family.
19. Additionally, swimming in the ponds is what we all enjoy and should continue to be enjoyed, not compromised by improper flow which can cause stagnate water, bringing leptospirosis and other bacteria.
20. If there was enough water in the streams, I go back to traditional gathering practices, being more self-sustainable as a valley. Everything in Honopou would be in abundance.
21. If there were more water in the streams, I would fish for what was traditionally fished for in Honopou. Aholehole would come back as well as other species like moi, nohu, and menpachi.
22. If water were put back in the streams, I would mālama the streams the same way as my kupuna did. We would open more lo'i and continue to monitor fishing practices in and around Honopou.
23. If there was more water in the streams, I would make even more use of the ponds, teach our kids to fish and gather to make traditional tools and implements. I would also appreciate the beauty of the strong flow of water, the additional greenery at Honopou because everything would flourish.
24. Spiritually, we are connected to the water. Water is life. Without water we will not be.

I declare under penalty of perjury that the foregoing is true and correct.  
DATED: Honopou, Maui, Hawai'i, December 13, 2014.

CASE NO. CCH-MA13-01

DECLARATION OF LURLYN SCOTT

DECLARATION OF LURLYN SCOTT

### Declaration of Lurlyn Scott

I, Lurlyn Scott, hereby declare that:

1. I am Hawaiian by birth.
2. I am the daughter of the late Marjorie Walleit, and the niece of the late Beatrice Kekahuna, both of whom were original petitioners to amend the interim instream flow standard (IIFS) for Honopou Stream before this Commission in May 2001.
3. I was born on July 2, 1959 in California after my mother left the U.S. Air Force to begin a family.
4. My mother, Marjorie Walleit, was the daughter of Maria Kaehukai Kepani and John Kalia Kaleialoha.
5. The name listed on the current tax map of this area of Honopou, tax map zone 2, section 9, plat 1 is "Elizabeth Kepani."
6. Elizabeth Kepani's husband, Jerry Kepani, is my mother's first cousin..
7. My extended 'ohana has lived in Honopou for many generations and after returning to Maui from California as a young girl, I grew up along Honopou Stream.
8. As a young girl growing up, I both played in Honopou Stream and enjoyed the scenic beauty of the stretches of stream where I swam and played.
9. During my lifetime, my 'ohana gathered 'ōpae, 'ōpū, hihiwai, watercress, medicinal plants, and crayfish from Honopou Stream to supplement our diet.
10. My 'ohana also traditionally gathered rocks for the imu in and around Honopou Stream.
11. Traditionally, my 'ohana fished for āholehole, enenue, pō'opā'a, moi, weke, moana, kole, 'opihī, uhu, and honu in or near the stream mouths of Honopou, Punalau/Kolea, Honomanu, Hanawi, and Makapipi.
12. They also gathered limu in and along those coastal areas.
13. My 'ohana would mālama Honopou by cleaning out the hau, only taking what they needed, cleaning limu off rocks, and being aware of the spawning cycle of fish and other creatures.
14. My family also used the stream to wash clothes and soak hau to make rope.

15. I also helped my 'ohana raise kalo in lo'i tended to by my mother and other members of my family and located on the properties designated as TMK 2-9-1-14, being portions of Grant 1082 and 3101:2. LCA 5595E-1, and Grant 1918:1.
16. My mother passed away on April 3, 2010.
17. After her passing, I continued to farm kalo in the Honopou lo'i.
18. My cousins Sanford Kekahuna, Richie and Leilani English, Maudrey English, and various youth groups like Kukulu Kumuahana, Mormon Young Women's Group and the Royal Hawaiian Guard help me work the Honopou lo'i. My cousins Kainani Kaleialoha, Lezley Jacintho and Jonah Jacintho have their own lo'i in the system and have their friends come to work with them..
19. My daughter, Wyonette and her children, and Kainani Kaleialoha and her ohana all reside in homes location on these parcels.
20. My family and I currently gather 'ōpū, crayfish, hihiwai, rocks for the imu, pohole, and ferns for lei making in and around Honopou, Honomanu, Hanawi, and Makapipi Streams.
21. We fish for lobster, enenue, pō'opā'a, āholehole, uhu, mullet, and ulua in or near the mouths of Honopou, Honomanu, Hanawi, and Makapipi streams.
22. I gather and fish to perpetuate my cultural food and traditions so my grandchildren will be able to live off the land like our kūpuna did.
23. My family would mālama Honopou by cutting back the hau, trying to regulate shoreline fishing, and breaking apart dams built by other people.
24. We also swim, cliff dive, and enjoy the tranquility at Honopou, Honomanu, Hanawi, and Makapipi after a hard day at work.
25. Our children and grandchildren learned to swim at Honopou.
26. I like hearing and seeing the natural flowing streams at Honopou, Honomanu, Nuailua, Pī'ina'au, Palauhulu, Waiokamilo, Hanawi, and Makapipi.
27. Attached as Exhibit "A-149" is a schematic drawing of the various kalo lo'i that my 'ohana has collectively tended over the decades I have witnessed kalo farming on these properties (hereafter, "Honopou lo'i").
28. Included on Exhibit "A-149" are arrows which depict the direction of water flow passing through the various designated lo'i.

29. I certify that the layout of the Honopou lo'i, albeit not to scale, and direction of water flow is truly and accurately depicted in Exhibit "A-149".
30. I estimate that the land area covered by the Honopou lo'i is about one acre.
31. On September 25, 2008, the Commission on Water Resources Management voted to amend the IIFS for Honopou by establishing a flow of 2.0 cubic feet per second (cfs) at Station A.
32. Station A is located about a half mile below the lowest EMI dam on Honopou Stream, known as "Haiku Dam."
33. Attached as Exhibit "A-151" is an aerial photograph of the Honopou drainage basin, which truly and accurately reflects the location of Station A, which is where the amended IIFS for Honopou stream is measured, and the USGS metering locations that once measured flow and temperature readings of water flow into and out of the Honopou lo'i.
34. When the CWRM amended the IIFS for Honopou Stream to 2.0 cfs at Station A in Exhibit "A-151" in September 2008, I elected not to appeal the decision, although I had reservations about whether this amount of flow would be sufficient to support the kalo cultivation on the Honopou lo'i, the gathering of o'opu, ʻōpae, and hihiwai, and fishing along the mouth of the stream at the coastline.
35. After consulting with attorneys for my mother and aunt, we decided not to appeal the September 2008 CWRM decision because it specifically incorporated an Adaptive Management Strategy (AMS).
36. As a result of the amended IIFS, I looked forward to monitoring the work of EMI workers who installed modifications to the Haiku Dam to supposedly allow more water to pass over that dam to meet the amended IIFS.
37. With great optimism, in 2009-12, I witnessed CWRM and USGS staff periodically install, and download raw data from, instruments at Stations A and B on Honopou Stream in what appeared to be a sustained effort to monitor and enforce stream flow compliance with the amended IIFS established in 2008.

38. I also witnessed USGS staff from Maui separately installed metering in and around the Honopou lo'i at strategic spots to monitor the temperature and flow of the water we diverted from, and later returned to, Honopou Stream.
39. The metering of water temperature and flow *in real time*, apparently through a satellite upload to the USGS website, was especially useful.
40. Access to this metering data, especially the real time information, provided valuable objective information on whether my 'ohana was getting adequate water to irrigate our kalo.
41. In March 2009, I witnessed EMI workers cooperating with CWRM staff to install modifications to the Haiku Dam at Honopou Stream to allow more water to bypass the diversions at that dam.
42. One of the major modifications included a metal bypass flume installed on top of the cement grate feature of the Ha'iku Dam to allow a limited amount of additional stream water to pass over this diversion structure.
43. Attached as Exhibit "A-146" is a photograph taken on March 23, 2009, which I took the day EMI workers installed that metal flume over the Haiku Dam.
44. Despite the collection of stream flow data since the IIFS for Honopou was amended in 2008, I have been supplied with flow measurements for Honopou only sporadically when my attorneys asked CWRM staff for them.
45. The CWRM has not provided me regular or reliable access to flow measurements, either online or by other means of communication.
46. I learned of flow measurements only through my attorneys at NHLC.
47. I have only recently been made aware that the CWRM staff presented its flow data to the CWRM.
48. Attached as Exhibit "A-145" is a true and correct copy of September 24, 2009 update, which I downloaded from the CWRM website.
49. As shown in Exhibit "A-145", the AMS adopted by the CWRM appeared to protect my interests in restoring flow to Honopou Stream, and I looked forward to "[c]ollaborat[ing]" with agency staff and registered diversion owners to determine appropriate actions," as stated on page 12 of Exhibit "A-145."

50. In addition, as the graphic on page 11 of Exhibit "A-145" indicates, the AMS process allowed for continuous adjustments based on the CWRM staff's ongoing monitoring and evaluation, enabling the CWRM to revise the IIFS to address the needs of kalo farmers, cultural gatherers and people who fish.
51. I sincerely believed and relied on CWRM's pledge that the AMS was the key to restoring stream flow where conditions and needs required it and that the CWRM would finally and timely meet the needs of kalo farmers, cultural gatherers, and fishermen.
52. As indicated on page 16 of Exhibit "A-145," EMI diverts water from Honopou Stream at 4 elevation levels with the Wailoa, New Hamakua, Lowrie and Haiku ditches.
53. As shown on page 20 of Exhibit "A-145," EMI failed to abide by the amended IIFS (2.0 cfs @ Station A) for all of the field measurements recorded between October 2008 and July 2009 during the initial implementation phase.
54. Despite the stream channel modifications installed after the 2008 IIFS amendment, I experienced low flows to the Honopou lo'i cultivated by my 'ohana.
55. Since the 2008 IIFS amendments for Honopou Stream, I have not been able to cultivate all 30 lo'i shown in Exhibit "A-149", because there is inadequate stream flow in Honopou to support all the kalo I and my 'ohana could otherwise plant and grow successfully without experiencing harm to our kalo crop from the lack of stream flow.
56. Without adequate stream flow we could otherwise tap to irrigate more kalo, we were forced to reduce the amount of kalo planted in the Honopou lo'i and the dry cracked lo'i that I saw in the summer of 2009, as depicted in Exhibit "A-147".
57. Unfortunately, apparent funding shortages began to affect my ability to access the real time metering by the USGS in and around the Honopou lo'i after I have begun downloading important objective evidence of the shortage of irrigation water negatively affecting by kalo.
58. Ultimately, when the USGS staff removed gauging stations that it had previously installed at strategic points on or near the Honopou lo'i due to lack of funding, I lost access to important flow and temperature data being recording in real time at the intake to the Honopou lo'i and the outflow from that lo'i system.

59. Before the removal of these meters, working with my attorneys, I was able to download various graphs depicting the water flow and temperature into, and the outflow from, the Honopou lo'i at various times between November 2008 and 2010, all of which is attached as Exhibit "A-150".
60. Attached as Exhibit "A-148" is a video which truly and accurately depicts the amount of water that flows past the Haiku Dam, as a result of the modifications undertaken in 2010 to meet the 2008 IIFS amendments for Honopou Stream, and the amount of water that continues to fall into the diversion ditch at that point.
61. The Haiku Ditch transports those diverted water to points northwest to irrigate Hawaiian Commercial and Sugar fields in Central Maui.
62. As shown in Exhibit "A-148," I estimate that, in 2014, despite the Haiku Dam modifications, EMI still diverts over 80% of the Honopou stream flow at Haiku dam.
63. The restoration of natural flow to Honopou Stream would enhance kalo cultivation in the Honopou lo'i, the gathering of o'opu, ʻōpae, and hihiwai in Honopou Stream, and fishing along the mouth of the stream at the coastline.
64. Also, during summer months, we have stagnant, smelly water that is not useable for domestic use.
65. In addition, from 2009 through 2014, although I repeatedly reported to the CWRM staff members that I was not receiving sufficient flow to irrigate the Honopou lo'i, I did not see the staff attempt to increase stream flow as a remedy to my problems.
66. If there was enough water in the streams, I would grow more kalo, raise watercress, gather o'opu, crayfish, hihiwai, rocks for the imu, pohole, and ferns for lei making in Honopou, and fish for lobster, enenue, po'opa'a, aholehole, uhu, mullet, and ulua in or near the mouths of Honopou, Honomanu, and Makapipi.
67. If water were put back in the streams, I would mālama the streams the same way I do now.
68. I would also clean the muliwai, move rocks for better flow, and observe ancient fishing practices at Honopou.
69. If there was more water in the streams, I could swim and enjoy Honopou recreationally all year round.

70. I would also get to enjoy watching the ulua go upstream, smelling the clean breeze, hearing the water flowing, and watching for 'o'opu.

71. If there was more natural flow restored to Honopou Stream, I would be better able to teach the opio of my 'ohana and others in my community how to mālama the kahawai, perpetuate the traditions and customs of my ancestors and enhance our food security for future generations.

COMMISSION ON WATER RESOURCE MANAGEMENT

STATE OF HAWAII

PETITION TO AMEND INTERIM  
INSTREAM FLOW STANDARDS FOR  
HONOPOU, HUELO (PUOLUA),  
HANEHOI, WAIKAMOI, ALO,  
WAHINEPEE, PUOHOKAMOA,  
HAIPUAENA, PUNALAU/KOLEA,  
HONOMANU, NUAAILUA, PIINAU,  
PALAUHULU, 'ŌHI'A (WAIANU),  
WAIOKAMILO, KUALANI, WAILUANUI,  
WEST WAILUAIKI, EAST WAILUAIKI,  
KOPILULUA, PUAKAA, WAIHUE,  
PAAKEA, WAIATAKA, KAPAUOLA,  
HANAWI and MAKAPII STREAMS

CASE NO. CCH-MA13-01  
DECLARATION OF NORMAN "BUSH"  
MARTIN

DECLARATION OF NORMAN "BUSH" MARTIN

I, Norman "Bush" Martin, declare that:

1. The statements below are based upon my personal knowledge.
2. I am Hawaiian.
3. I am a member of Nā Moku Aupuni O Ko'olau Hui.
4. My family has an interest in property in proximity to Wailua Stream.
5. I am a taro farmer. My family grows kalo on about three to four acres of property irrigated by Piinau, Palauhulu, Waiokamilo, Kualani, and Wailua streams.
6. I am farming this land based on my cultural and traditional inheritance of land and knowledge passed on to each generation.
7. I learned how to farm taro from my great grandparents and grandparents.

8. Traditionally, my family gathered 'ōpae, 'o'opu, and hihikai from Waikamoi, Alo, Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu, Nuaailua, Piinau, Palauhulu, Waioakamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapii, and Waiohue. My 'ohana would also gather pohole, water cress, banana, bamboo shoot, pepeiao, and mountain haha alongside those streams.
9. My family also traditionally fished for shoreline reef fish, including uhu, puihi nikiniki, uha, honu, moi, mullet, uoauoa, aholehole, poopaa, ulua, akule, 'ō'io, and aweoweo in or near the mouth of Honopou, Hanehoi/Puolua, Waikamoi, Alo, Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu, Nuaailua, Piinau, Palauhulu, 'Ōhi'a/Waianu Waioakamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapii, and Waiohue. My 'ohana would also gather limu near the mouth of those streams.
10. Traditionally, my family engaged in mālama 'āina and mālama kahawai by being good stewards. My 'ohana would protect the resources and take only what was needed from Waikamoi, Alo, Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu, Nuaailua, Piinau, Palauhulu, Waioakamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapii, and Waiohue. It was my family's kuleana to maintain the entire noku.
11. In addition to farming, I currently gather 'ōpae from above the diversions in Honomanu, Piinau, Waioakamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula, Puakaa, and Hanawi. It takes about four hours to walk to the place where I gather because you cannot find the 'ōpae below the diversions. Even so, sometimes I only see one 'ōpae in eight hours. I usually do not gather 'o'opu and hihikai because there isn't enough. I leave them behind so they can propagate.
12. I fish for uhu, puihi nikiniki, uha, moi, mullet, uoauoa, aholehole, poopaa, ulua, akule, 'ō'io, and aweoweo in or near the mouth of Honomanu, Wailua, Waikani (Wailuanui), West Wailuaiki, and East Wailuaiki. I don't catch very much fish. Sometimes I don't catch anything. Families in our community will often take turns fishing and share with each other to be sure there is enough to go around.

13. I engage in mālama 'āina and mālama kahawai by cleaning the streams. I also will not gather any resources if there is not enough so that they can propagate. This is automatic. It goes hand in hand with gathering practices.
14. For me, gathering and fishing from the streams is to feed my family, put a roof over our head, and teach the next generation – at least those who still reside here.
15. Gathering, fishing, and farming are also recreational for me because I enjoy practicing my traditions. I appreciate the views, the sounds, and the smells of nature that I experience while gathering. Seeing water in the stream is beauty to me.
16. The lack of stream flow has caused many families to leave Wailuanui because the resources aren't there. There are very few people we can pass down these traditions to. We call that generation "the lost generation."
17. Other specific negative effects of the lack of stream flow is that people are not opening their lo'i. And if someone above you doesn't maintain their lo'i, water flow to your lo'i is affected. That has been a real problem. There are also so many invasive species below the diversion due to the lack of stream flow, that I have to walk for four hours to be able to gather above the diversion. That takes time away from other work. Even after the four hour hike to the stream, sometimes I will see some fish and 'ōpae, but I cannot take them because there isn't enough.
18. The lack of stream flow also affects the fish near the shoreline. Fish are dependent on brackish water to spawn. With twenty-seven streams, there are twenty-seven fish nurseries. With only eight streams, there are only eight nurseries. Without all of the streams being restored, it blocks everything out. When the limu came back after the Waikani diversion was opened, there was a noticeable difference after only two weeks. The smell changed with the brackish water. The fish returned to that area.
19. The lack of stream flow has also caused me to lose approximately \$13,000-\$15,000 a year in revenue. I have not been able to pull taro in four years.
20. Ultimately, the low stream flow has displaced my community and changed our way of life.
21. If there was enough water in the streams, I would gather and fish as my family before me did. I would gather 'ōpae, 'o'opu, and hihikai from Waikamoi, Alo, Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu, Nuaailua, Piinau, Palauhulu,

Waiokamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapii, and Waiohue. I would also gather pohole, water cress, banana, bamboo shoot, pepeiao, and mountain haha alongside those streams. I would also fish for uhu, puihi, ninihi, uha, moi, mullet, uoua, aholehole, poopaa, ulua, akule, 'ō'io, and aweoweo in or near the mouth of Honopou, Hanehoi, Waikamoi, Alo, Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu, Nuaailua, Pinaau, Palauhulu, 'Ōhi'a/Waianu Waiokamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapii, and Waiohue. I would expect to be able to catch fish in greater numbers. I would also continue to mālama the streams and the areas around them.

22. If there was more water in the streams, I would appreciate the natural scenery even more. There is beauty in putting life back into the streams and seeing them as they are supposed to be.

I declare under penalty of perjury that the foregoing is true and correct.

DATED: Wailua, Maui, Hawai'i, September \_\_, 2014.

HANAWI and MAKAPII STREAMS

CASE NO. CCH-MA13-01

DECLARATION OF PAUL REPPUN

DECLARATION OF PAUL REPPUN

Petitioners' Direct Testimony of Paul Reppun

1. I am submitting this expert testimony in support of the petitions filed by Na Moku Aupuni O Ko'olau Hui to amend interim instream flow standards for various East Maui streams located on the Ko'olau, Maui coastline.
2. Attached as Exhibit "A" is a true and correct copy of PETITIONERS' DIRECT EXPERT TESTIMONY OF PAUL REPPUN, filed in the contested case hearing docket DLNR File No. 01-05-MA.
3. This is the testimony I prepared for and presented to the Board of Land and Natural Resources in 2005 in the contested case proceeding involving Na Moku Aupuni O Ko'olau Hui's challenge to the request of Alexander and Baldwin/Hawaiian Commercial and Sugar/East Maui Irrigation Company for a 30-year lease of the four East Maui water license areas.
4. Attached as Exhibit "B" is a true and correct copy of my most current resume.
5. I recognize that in 2008 the CWRM voted to partially restore 5 of 8 streams then under consideration by amending the IIFS for Wailuanui, Waioakamilo, Pi'ina'au, Hanehoi, and Honopou Streams, in order to respond to the claims of active taro farmers depending on those streams for the irrigation of taro crops in Wailuanui, Ke'anae, Hanehoi, and Honopou valleys.
6. However, I further understand that EMI's compliance with those amended IIFS continues to be an outstanding issue before the CWRM in this contested case hearing.
7. Accordingly, I affirm that the substance of the testimony I presented to the BLNR in 2005 is still applicable and material to the current IIFS contested case hearing before the CWRM and I now offer it for consideration in this proceeding.

PETITIONERS' DIRECT EXPERT TESTIMONY OF  
PAUL REPPUN

Q. Please state your name and address for the record.

A. Paul Reppun. I live in Waiahole, O'ahu. My mailing address is [REDACTED]

Q. What is your occupation?

A. I am a taro farmer.

Q. What is your history as a taro farmer?

A. I have been farming for 31 years. In 1974, I began farming taro in Ka'alaea Valley (O'ahu). Several years later, I began growing taro in Waie'e Valley and Waiahole as well. I continue to farm taro in Waie'e and Waiahole.

Q. What is your educational background?

A. I have a bachelor's degree in biology. After receiving my degree I spent a year in Argentina gathering data for a botanist, as part of a large project comparing desert ecosystems in Argentina and Arizona.

Q. During your 31 years of farming taro, have you learned anything about the impact of water volume and temperature on taro farming?

A. In the late 1970s, when I began taro farming in Waie'e, I was a party to Reppun v. Board of Water Supply in which we sought to retain enough stream flow to grow our taro. During this case, I observed the methods and models used to take water volume and temperature measurements of my lo'i. Since that time I have, on occasions too numerous to mention, observed, conducted and assisted with taro lo'i water quantity and temperature measurements. I have reviewed and discussed a number of reports on water use in taro cultivation -- stream flows, 'auwai flows, water consumption rates, and amount and temperature of water going in and coming out of the lo'i. These practical experiences have provided me with a pretty good "eye" and feel for water quantity and quality in terms of temperature necessary for the proper and efficient growing of taro.

Q. Based on your 31 years of experience as a taro farmer, can you describe how water is used in the various stages of taro cultivation?

A. When you prepare the field, you flood it, but you don't need very much water, you just need enough to cover the surface. Using the water as your level, you level all the high spots into the deep spots until you've got your patch level.

When you plant your taro, you don't need very much water at that time; you just need enough to cover the surface to keep the weeds from growing. From that point on, as the taro starts to grow, you start to increase the water a little bit at a time. Taro can handle more depth of water as it grows.

During the period of fertilization, which usually occurs approximately every two months, water in the patch is at a fairly low level, say an inch deep. When a sufficient level of water is reached, the flow into and out of the patch is stopped. Once inflow and

outflow are stopped, the banks of the patch are checked to make sure there is no leakage of water. This minimizes the loss of fertilizer. When there is no water leaking out, the fertilizer is applied and dissolves. The water subsides into the soil and carries the fertilizer with it. Approximately a week after applying the fertilizer after the patch has gone dry, waterflow is returned to the patch. For that period of a week, which occurs approximately every two months, the taro doesn't need any water.

My own observations tell me that little fertilizer is lost in taro cultivation. There is little greening of plants along the ditches that carry water away from lo'i, indicating little loss of nitrogen. The taro responds to this single application of fertilizer for approximately two months, indicating long term retention of nutrients in the soil. When weeding or harvesting are expected to severely stir up the mud and cause muddy water to run out of the patch, farmers usually stop the water in and out to minimize soil loss.

After about eight or ten months, depending on the variety of taro, farmers no longer use any fertilizer. The taro will grow for another four to six months before harvesting, and during that time there is no fertilizing. Except when fertilizing, the water is flowing constantly, especially when the corn starts to form.

As the taro gets taller it shades out the soil, it provides more leaf cover, and water temperatures are cooler. As this occurs, the taro becomes more sensitive to temperature because this is when the corn starts to form. At about eight months or so, as the taro begins to shrink down each new leaf that comes out is smaller. Every ten days a new leaf comes out. The corn really starts to fill out in the last half of the crop cycle.

As the next leaf comes out, it's a little bit smaller, your leaf cover, the canopy over the taro patch, starts to decrease, and sunlight starts to penetrate. At that point your flow of water is especially critical because the corn is starting to fill out, and that's what you want to protect the taro from rot.

It's important to keep a good flow of water at this point. Usually, at this point, as the corn starts to rise up out of the ground, the depth of water increases as well.

Q. Based upon your 31 years of taro farming experience, how do you know if you are using too much or too little water?

A. I think the best way to know is by experience. If you want to find out what the lower limit is, then you have to experience taro crops that fail. Over the years,

I've learned that taro crops could fail for a number of reasons, but the primary reason is lack of water.

When I first grew taro, in Ka'alaea, we constructed an 'auwai out of aluminum gutter pieced together to bring the water several hundred feet from the stream. We used to bathe in the outflow from the patch, which was comfortably warm. The crop was pretty much of a disaster and was lost to hard rot (also known as guava seed). It taught me the effects of too warm water, which include guava seed and pythium rot.

When I began farming in Waihe'e, it was a time when the Board of Water Supply ("BWS") had drilled new wells and seriously depleted Waihe'e Stream and dried up the waterfall. Farmers began experiencing severe disease problems with two major root diseases: hard rot, commonly known as guava seed; and soft rot, which is caused by pythium, a mutating fungus. The farmer closest to the water source, who had the most water per acre, had the least problems. As a farmer in Waihe'e, I experienced many partial crop failures.

I have visited many taro farms on all the islands, observed how other farmers use water, and talked with them about problems with water flow and disease. My experience of chronic water shortage is not unique.

Q. Based upon your 31 years of taro farming experience, what variables affect the amount of water used in growing taro?

A. There are many. The most obvious is cultivation practices resulting in no water use, such as when the field is dried after leveling and puddling to let the mud settle before planting or when fertilizer is applied. The usual way to fertilize is to have the field flooded, but stop the water flowing in and out, throw the soluble fertilizer in the water, and let it slowly seep into the soil. Depending on percolation rates, it can take a day or a week for the field to dry. Often a patch of taro is dried for a month or two prior to pulling, to hasten its maturity and make it easier to pull.

The stage of the crop is another factor. Initially, when the taro is just planted, less water is needed, and the flow is increased as the taro starts to grow. When the taro is maturing, it shrinks down vegetatively, reducing leaf cover, which exposes the water surface to the sun. It is especially important at this time to have good flow-through, to

keep the water temperature down. If the farmer needs to hold the crop, to delay harvest, it needs to be kept cool with plenty of water.

The weather and the season also affect water use. Hot, sunny days, of course, cause the water to heat up more. Summer is a critical time because the sun is more directly overhead, and the days are longer.

Often on a rainy, cloudy day I won't bother to check the inlets to my lo'i, but on a sunny day it is the first thing I do in the morning because on sunny days the water heats up and can cause rot.

The initial temperature of the water in the stream also affects water use. More water in the stream means lower temperatures, which in turn means that the capacity of the water to absorb heat is higher, so the quantity needed is less. A farmer who uses water downstream of where an upstream user returns water to the stream must use more water because he starts with warmer water.

Some studies mention the possibility that larger acreages of taro might need less water per acre than small acreages. I don't agree. In my opinion there is a linear relationship between the amount of water needed and the area in taro cultivation. Here's why: the minimum amount of water needed is the amount that flows through the lo'i and exits at 77 degrees. This is the temperature that everyone seems to agree is the critical temperature needed in growing taro. Above this temperature pythium rot begins to accelerate unacceptably. Water that has absorbed enough heat to rise to this temperature can be said to be "used up." It has no capacity left to keep temperatures below the critical level. If a downstream farmer, irrigating the same acreage as that which has already been irrigated, were to reuse this water, it would need to be mixed with an equal amount of unused water. His water use would therefore be double that of the upstream user, but the amount of new water would be the same. The rate of water use would now be twice that of the upstream farmer, but the capacity of the total amount of water to absorb heat would be the same.

Q. Based upon your 31 years of experience as a taro farmer, what is the amount of "new" water needed per acre?

A. I believe taro needs 100,000 to 300,000 gallons of water per acre per day ("gad"). There is no precise figure because of the many variables, such as those I have

described. In an area of taro containing many lo'i, one can assume that there will be all stages of the crop cycle and that different lo'i will have different rates of use at any given time. Any figures named can be assumed to be an average of all these various use rates. The range of figures results from the other parameters discussed -- percolation rates, weather, season, location on the stream relative to other diversions, initial water temperature, and rate of dilution of used water.

What's important is that there are times when the taro farmer must use the maximum amount and that needs to be taken into account when determining how much water is required.

Q. Dramatically different figures from yours are cited in some of the reports done in the past on taro water usage. Can you discuss what you know about these studies and explain why the figures might be different from yours?

A. Studies on the water requirements of taro in Hanalei Valley on Kaua'i done by Kirk Miles for McBryde Sugar Company, in 1930-1931, and H.A.R. Austin & Associates for Gay & Robinson, in 1959, were used in connection with the McBryde v. Robinson case. The conclusion of those studies was that taro needs about 70,000 gad. Although this amount is called the total water use, it is a very misleading figure because it is a measurement of the water consumed in the taro patch and fails to consider the actual water need for taro, particularly "flow through" water.

Q. In your expert opinion, how was this figure arrived at in the studies?

A. The amount of water flowing into the lo'i was measured. The amount flowing out the other side was also measured. The amount flowing out was less than the amount flowing in because some water was lost through percolation, evaporation and transpiration. The amount of water lost in the lo'i was considered to be the total water use. The water that flowed through and was not lost was not included in the total water use figure.

Q. Does the water that flows through serve any function?

A. This "flow through" water is critical because it carries away heat and keeps the taro cool so that it doesn't develop pythium rot.

Q. Were the authors of the studies aware that their figures for total water use of taro did not include flow-through?

A. Yes. As Joel Cox said in the introduction to the study done for the McBryde Sugar Company, "a considerably greater amount would have to be diverted in order to successfully grow taro with proper circulation of water." The studies also noted the relationship between decreased flow and increased rot.

Q. Did the researchers take into account variations in water use based on some of the parameters you mentioned?

A. Yes. The actual measurements of what farmers in Hanalei were using ranged from 200,000 gad to over 1,000,000 gad. These were not quantities manipulated for experimental purposes, but were actual existing uses where the farmers were farming downstream of large diversions of water by the two contending sugar plantations. It is highly unlikely that there was a surplus of water.

Q. Why do you think these studies did not include flow-through as part of the total water use of taro?

A. These studies were done for and by the major sugar companies who were fighting for the water. The more water taro needed, the less they might get, so there was an incentive to minimize the amount of water needed for taro.

Q. Before moving on to the next report, can you discuss the effect of return flow from taro on water temperature?

A. There is no question that the return flow from taro fields can increase stream temperatures. The function of water flowing through lo'i is to cool the taro by carrying away heat. If we assume that the minimum amount of water is being used for this purpose, then the maximum allowable temperature of the water leaving the field is 77 degrees, the temperature above which pythium rot develops. Ideally, water leaving the field is well below this temperature, reducing further the likelihood of pythium rot.

The extent of any rise in stream temperature will depend on the amount of dilution that occurs when used water rejoins the stream. In the worst case scenario, all the water in the stream would be used for taro cooling, and the lower reaches of the stream would reach a temperature of 77 degrees. To my knowledge, it is not known how this might affect native stream life.

This worst case scenario is unlikely to occur. Water flowing through lo'i at night and early and late in the day has much less of a burden on its cooling function. The

highest temperatures would only be reached in the middle of the hotter days, and probably not in all the lo'i of an extended pondfield system at the same time.

Q. What effect, if any, would the increased temperatures have on native stream life?

A. While there has been speculation on the potential harm to 'o'opu of increased temperatures, to my knowledge, the levels at which 'o'opu could be affected are not known. This speculation indicates that there may need to be a component of stream flow above and beyond the projected needs of taro, to serve the function of dilution and thus preserve the health of the stream. We know that colder water has the capacity to contain more dissolved oxygen than warmer water.

Q. Chronologically, what would be the next report you are aware of?

A. Leslie J. Watson did a report on the water requirements of taro in Waialeale and Waiahole valleys on O'ahu. That report was done for the Board of Water Supply in 1962 to 1964.

Q. What was Watson's methodology and what were his results?

A. As in the Hanalei studies, he measured existing uses by farmers. The actual flows of water into lo'i ranged up to 200,000 gad. However, he used the same method of finding the difference between in-flow and out-flow to determine that the total water usage averaged 30,000 gad. At the beginning of his report, Mr. Watson cites numerous reports done in connection with court cases, mostly agreeing with his figures. Although no details are given as to the methodology used in these other cases, their close agreement and his use of them as precedent indicates to me that the methods were the same.

Q. Was Watson aware of the variable nature of taro's water requirements?

A. Yes. He wrote a paper for a symposium on root crops in 1970. It was called "The Legal Importance of the Water Requirements of Taro in Hawaii." In that paper he reaffirms the figure of from 15,000 to 60,000 gad, and he lists some of the reasons for variations in requirements. He mentions a dependency on: (1) the available supply of water and the necessity to conserve; (2) the degree of puddling of the lo'i; (3) the stage of the crop; (4) rainfall, elevation, hours of sunshine and wind conditions; (5) soil characteristics; and (6) whether or not there is a profit motive.

Q. Do you find any significance in the BWS having been the sponsor of the study?

A. The BWS wanted to take water. Minimizing water use of taro made more water available for BWS to take.

Q. Are there any more recent studies, other than measurements of your own 'auwai, that you are aware of?

A. There is the Sumida report, done in 1976, that measured existing uses in Waihe'e, O'ahu. There is nothing worth discussing in that report, however, because it was done in the winter, under conditions of water shortage, with no consultation with farmers, and uses the same methodology as Watson. Ramon de la Peña and F.M. Melchor did some controlled experiments, published in 1983, on amounts and depth of water and effects on yields of taro.

Q. What did de la Peña and Melchor conclude?

A. They found that varying the flow between 30,000 and 105,000 gad caused no significant difference in yield. They quote Watson's 1970 paper as mentioning water use being from 15,000 to 40,000 gad. De la Peña's and Melchor's estimate would not be adequate to grow taro. Although I cannot offer "scientific" proof that the quantity of water recommended by Mr. de la Peña is too little, based on my visits to all the major taro growing areas in Hawaii and to many minor ones, I can say that I have never seen lo'i with inflows approaching this small quantity of water by choice of the farmer.

Q. What methodology did de la Peña and Melchor use?

A. They planted a series of 6 x 9 meter plots, used the same variety of taro and the same fertilizer treatments, harvested at 15 months, and compared yields at harvest.

Q. How do you account for the results?

A. The report is not very detailed. In the study of water depth, the experimental plots were cement lined. If this was also true for the flow rate studies, the concrete lining could have acted as a heat sink, absorbing heat from the water during the day and releasing it to the water at night. There is no discussion of water temperature. Especially important would be the initial starting temperature of the incoming water. There appears to have been no variation in the flow rate according to the stage of the

crop, and there is no mention of the presence or absence of disease in the harvested taro. Where did the soil in the plots come from? Had it been sterilized? Only one crop cycle was studied, so perhaps disease organisms were not present or as numerous as they might be in soils successively planted in taro.

It was noted that vegetative growth was highest with the highest flow rate. Plants were tallest at time of harvest with the high flow rate. This suggests that the taro might not have been fully mature, and yields could have been higher.

Q. What were the results of de la Peña's and Melchor's depth of flooding experiments?

A. They found that yields were highest at a depth of 0 cm. The same kinds of questions come up. What was the effect of using cement tanks? What were water temperatures? If water depth was not varied over the life of the crop, according to the stage of growth, what effect could this have had?

The tests in these experiments were done in what is called "Kapa'a" soil. In experiments using "Hanalei" soil, it appears that contradictory results were obtained, but again, the conditions of the tests are not discussed.

Q. The results of these experiments seem to agree with those of the previous studies discussed. How do you relate the figures in these studies?

A. The water use rates for taro from the Miles and Watson studies clearly show how much water is consumed in the lo'i. If those amounts of water are flowed into the patch, then none will flow out. There will be no flow-through. Since de la Peña and Melchor use figures that are about the same, then in actual practice by farmers, using that quantity of water would result in no flow-through. Taro grown using the water quantities discussed in these studies would be dryland taro, which is not suitable for poi.

Q. Are there any other reports that you are familiar with?

A. There is a 1980 report by Farrington and Bellwood on the "Prehistoric Irrigation Hydrology of Pondfield Taro." This report uses a different method to determine possible uses of water in prehistoric times. The researchers analyze two 'auwai systems, one in the South Pacific and the other in Halawa Valley, Moloka'i. Based on the size and slope of the 'auwai, they determined the amount of water it could safely carry.

Once again, Watson is cited as the authority on taro water use, and his figure of 30,000 gad is referred to as the "Hawaiian Legal Requirement", or "HLR." This is referred to as the minimum needed, and is the amount they say should be used to settle disputes.

What is interesting in this report, however, is that by correlating the acreage of taro land with the capacity of the 'auwai, the researchers estimated that 85% to 90% of the 'auwai flow was used for flow-through. They say that Watson's figure would have applied only in times of extreme scarcity of water.

Q. You stated earlier that you believed 100,000 to 300,000 gad to be the amount of water needed to grow wetland taro. In some of the reports you discussed, the actual amounts of water flowing into taro patches were in the millions of gallons per acre per day range. Can you account for this great range of figures and summarize your conclusions about taro's water needs?

A. In using the 100,000 to 300,000 gad figure, I am referring to "new" water, that is, water that has not been warmed up by previous use. I think the lower figure would be sufficient in the winter or during rainy periods, when water temperatures and isolation are low. The higher figures would be necessary during periods of peak isolation. I suspect that the extremely high figures, such as are found in the Hanapepe studies, came from lower in the valley, where most of the water used by farmers would already have been used higher up in the valley.

# CERTIFICATE OF SERVICE

I hereby certify that two (2) copies of the foregoing document were duly served on Linda L. Chow, Deputy Attorney General, for Hearings Officer, The Honorable E. John McConnell on August 1, 2005, by hand delivery. I further certify that one (1) copy was served on the remaining parties as indicated, on August 1, 2005.

CASE NO. CCH-MA13-01  
DECLARATION OF PUALANI  
KIMOKEO

DECLARATION OF PUALANI KIMOKEO

I, Pualani Kimokeo, declare that:

1. The statements below are based upon my personal knowledge.
2. I am Hawaiian.
3. I am a member of Nā Moku Aupuni O Kō'olau Hui.
4. My father Henry Ben Kaauamo was from Wahinepee. My mother Sarah Ahkuna Hueu was from Ke'anae.

5. I grew up in Wailua/Ke'anae.

6. When I was growing up, my mother had different leases from the state. She had about fifty patches. My mother worked the patches until I was in high school. She continued farming most of them until the 90s and stopped when she was 70 years old. My father worked as a taro farmer until he was 80-something. He refused to give up. My dad was also a garbage collector for the County. He also did a lot of hunting for pigs in these mountains as well.

7. I too am a taro farmer. I grow kalo on about one acre of property in Keanae that is irrigated by Palauhulu and another water source that may be connected to Piinau.
8. I have an interest in the land I farm based on my connection to Kallimoku, on my mother's side.
9. Before times, the fathers worked the taro patches. Mothers fought to get stream flow and worked on the traditional gathering.
10. I learned traditional and customary gathering practices from my grandmother Ellen. She and my mother taught us about what to look for, how to know when big water is coming, how to respect the seasons. We would pull kalo, pick 'opihi, and gather 'opae all in the same day.
11. Traditionally, my 'ohana gathered 'opae, watercress, lū'au, haba, pepeiao, hihiwai, pupulo'i and guava in Wahinepee, Puohokamoa, Haipuena, Punalau/Kolea, Honomanu, Nuaailua, Piinau, Palauhulu, 'Ōhi'a/Waianu, Waioakamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapipi, and Waiohue.
12. Traditionally, my 'ohana fished for 'o'opu, aholehole, uau, and pāpio in or near the mouths of Wahinepee, Puohokamoa, Haipuena, Punalau/Kolea, Honomanu, Nuaailua, Piinau, Palauhulu, 'Ōhi'a/Waianu, Waioakamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapipi, and Waiohue.
13. My 'ohana also engaged in mālama 'āina and mālama kahawai at Wahinepee, Puohokamoa, Haipuena, Punalau/Kolea, Honomanu, Nuaailua, Piinau, Palauhulu, 'Ōhi'a/Waianu, Waioakamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapipi, and Waiohue by respecting the seasons. They didn't have problems that required the same kind of cleaning because there was more flow.
14. Currently, my 'ohana and I gather 'opae, and limu in or near the mouths of Wahinepee, Puohokamoa, Haipuena, Punalau/Kolea, Honomanu, Nuaailua, Piinau, Palauhulu, 'Ōhi'a/Waianu, Waioakamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapipi, and Waiohue. I also gather 'opihi in those same areas.

15. I farm, gather, and fish to feed my family.
16. I taught my kids what I know about farming, gathering, and fishing. My kids also started hunting when they were three. They learned from Doug Chong. They are now teaching their own children our practices.
17. I engage in mālama 'āina and mālama kahawai by cleaning the ditches with a sickle. That allows better flow to my lo'i, which are the last lo'i to get fed by the streams.
18. We also enjoy Wahinepee, Puohokamoa, Haipuena, Punalau/Kolea, Honomanu, Nuaailua, Piinau, Palauhulu, 'Ōhi'a/Waianu, Waioakamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapipi, and Waiohue recreationally.
19. I thank Ke Akua for everything before our eyes, everything he gives us. My mom was a strong woman. I learned a lot from her. I love that she tried to teach us. I try to instill all of that into our children. To me, Ke'anae will always be what I envision from when my mom instilled these lessons in me. To me, that's the biggest gift from Ke Akua.
20. The lack of stream flow is a problem for my family because we cannot grow kalo how we would like to. The taro gets diseased and damage. We get pocket rot and what we call "guava seed," or growths on the taro that affects the quality. We have apple snails, which like the warm water. Also, farmers in Ke'anae have to compete for water. It's not like before – we used to share and it wasn't a problem.
21. If there was more water in the stream, I would worry less about my kalo. I would expect more cool water to reach my lo'i.
22. If there were more water in the streams, my 'ohana would gather 'opae, limu, and 'opihi in or near the mouths of Wahinepee, Puohokamoa, Haipuena, Punalau/Kolea, Honomanu, Nuaailua, Piinau, Palauhulu, 'Ōhi'a/Waianu, Waioakamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapipi, and Waiohue. I also gather 'opihi in those same areas.
23. If water were put back in the streams, I would continue to mālama the streams and cleaning the ditches.
24. If there was more water in the streams, I would appreciate the natural scenery. It would be nice to see the streams of Ke'anae the way I knew them when I learned how to farm and gather from my mother.

I declare under penalty of perjury that the foregoing is true and correct.  
DATED: Keanae, Maui, Hawai'i, 11/01/2014, 2014.

HANAWI and MAKAPI'I STREAMS

CASE NO. CCH-MA13-01  
DECLARATION OF SANFORD  
KEKAHUNA

DECLARATION OF SANFORD KEKAHUNA

I, Sanford Kekahuna, declare that:

1. The statements below are based upon my personal knowledge.
2. I am Hawaiian.
3. I am the son of Beatrice Kekahuna and nephew of Marjorie Wallet, who were some of the first farmers who tried to get more water.
4. My family grows kalo on about two acres by Honopou stream.
5. Traditionally, my 'ohana gathered pohole, watercress, 'ōpae, hihiwai, 'o'opu, and prawns in and around Honopou, Kualani, Wailua, and Makapi'i.
6. My family fished for ulua, aholehole, enenue, kupipihi?, 'ō'io, weke, lae, poopaa, uhu, hinalea, kole, and he'e in or near the mouth of Honopou, Wailua, Waikani (Wailuanui), West Wailuaiki, and East Wailuaiki.
7. My 'ohana mālama-ed Honopou, Kualani, and Wailua by cleaning them, cutting wildlife back, and putting rocks back to the stream.

8. When I was small, we used to fish by the streams. We would take bamboo and a small lead line and worms. We would leave it by the stream, go do what we would do, then come back and there would be something on the line.
9. Now, I gather 'o'opu, prawns, and small baby fish at the edge of the shoreline at Honopou.
10. I fish for ulua, wholehole, enenue, kupipihī, 'ō'io, weke, lae, poopaa, uhu, hinala, kole, and he'e from Honopou out past Ke'anae, Hana, and Kaupō.
11. I gather and fish to feed my family and friends.
12. I still mālama the streams by cleaning them and cutting back wildlife. I mostly do this at Honopou because I live here but sometimes I go and help at Kualani and Wailua.
13. My family and I swim and fish for fun at Honopou. You work first, then you do what you like to.
14. At Honopou, I appreciate the rainfall, the sound of the stream by my house, the wind, the smell of flowers, and the sound of birds – they talk.
15. Because there isn't as much water, there isn't as much fish as there were before. I see the fish are slowly starting to come back. I count them to see how much. At the diversion, some 'ōpae are coming back. If they let water down, it would be more. If more water, life would come back.
16. I make more money where I work than farming. If I could, I would rather farm.
17. If there was more water, I would gather watercress, 'ōpae, and prawns. I would also gather hihīwai, which would probably come back with more water, because they eat the algae on the rocks.
18. If they gave us more water, I would fish for the same fish I do now but I would try to get more here in Honopou. If not, I would have to go somewhere else. Why go there, when I can go here? I'd rather go here.
19. If there was more water, I would mālama Honopou the same way I do now. I would also fish up stone walls and put the river back where it was.
20. If they put more water in Honopou, I would appreciate the natural beauty the same way I do now. Maybe more. That's life right there, so I would appreciate it.

21. H2O for Honopou!

I declare under penalty of perjury that the foregoing is true and correct.

CASE NO. CCH-MA13-01  
DECLARATION OF SOLOMON  
KAAU/AMO

DECLARATION OF SOLOMON KAAU/AMO

I, Solomon Kaaumo, declare that:

1. The statements below are based upon my personal knowledge.
2. I am Hawaiian.
3. I am a member of Nā Moku Aupuni O Ko'olau Hui.
4. My family has an interest in property in proximity to Waiokamilo Stream.
5. I am a taro farmer. My family grows kalo on property irrigated by Waiokamilo Stream. I have about four to five acres, but not all my lo'i are open because there is not enough water.
6. I am farming this land based on my love for this 'āina and to preserve our culture and traditions which in turn will preserve Hawaii.
7. I learned how to farm taro from my parents, grandparents, uncles, and aunts. I grew up on this property.

8. Traditionally, my family gathered 'ōpae, 'o'opu, and hihiwai from Honomanu, Nuaailua, Pinaau, Palauhulu, 'Ōhi'a/Waianu Waiokamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula, Puakaa, Paakea, Waiaka, Kapaula, Hanawi, Makapii, and Waiohue. My 'ohana also gathered plants off stream, including watercress, haha, and hapuu.
9. My family also traditionally fished for 'opihi, enenue, anae, 'ō'io moi, popaa, and other fish in or near the mouth of Honomanu and all along the coastline up to Nahiku. My 'ohana would also gather hihiwai in those streams near the shoreline.
10. Traditionally, my family engaged in mālama 'āina and mālama kahaui in and around Honomanu, Nuaailua, Pinaau, Palauhulu, 'Ōhi'a/Waianu Waiokamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula, Puakaa, Paakea, Waiaka, Kapaula, Hanawi, Makapii, and Waiohue by clearing away the 'ōpala when they gathered. They also made sure to leave enough resources behind so they could propagate.
11. Currently, my 'ohana gathers 'ōpae above the diversions in Wailua, West Wailuaiki, East Wailuaiki, Hanawi, Makapii, and Waiohue. We have to go above because there is no 'ōpae below. We gather hihiwai in Hanawi, Makapii, and Waiohue. There is no 'ō'opu for us to gather.
12. Currently, my 'ohana fishes for 'opihi, enenue, anae, 'ō'io moi, popaa, and other fish in or near the mouth of Honomanu and all along the coastline up to Nahiku. However, the fish are now scarce so we don't catch very many.
13. My family also practices mālama 'āina and mālama kahaui in and around the areas that stretch from Honomanu to Nahiku by doing what our kupuna taught us – taking out all of our 'ōpala when we leave the stream area and leaving resources behind so they can propagate.
14. I gather and fish in order to supplement my family's food resources. Living off of this food is much better than McDonalds or whatever. I also gather and fish to help pass on the tradition to my kids and grandkids.
15. My family also enjoys swimming in Wailua and Waikani.
16. I gather maybe two or three times a year in order to supply food for 'ohana gatherings on special occasions.

17. The lack of stream flow is a problem for me mostly because of the taro. Kalo is our supplemental income. I brought up my kids working the taro patch and gathering. When we had a lot of water, the taro was growing. Then came apple snails, which set us back. Then the lack of water set us back. The quality of the taro was no longer there, so the poi factory wouldn't take the taro. It is a hard life. My kids want to come home and continue this life, but it's hard to do under current conditions.

18. The lack of water has caused financial setbacks, and it has reduced the quality and quantity of taro. Additionally, not all of the lo'i on my property are opened up. Abandoned lo'i above our patches requires more work and maintenance to get water to our lo'i.

19. If there was enough water in the streams, my 'ohana would gather as my kupuna did. We would gather ōpae, 'o'opu, hihiwai, watercress, haha, and hapuu in and around Honomanu, Nuaailua, Piinaau, Palauhulu, 'Ōhi'a/Waianu Wāokamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula, Puakaa, Paakea, Waiaka, Kapaula, Hanawi, Makapii, and Waiohūe. We would have more choices, which would mean more resources. If you rotate from stream to stream, you can give the streams a break.

20. If there was more water in the streams, my family and I would fish for opihi, enenue, anae, 'ō'io moi, popaa, and other fish in or near the mouth of Honomanu and all along the coastline up to Nahiku.

21. If lack of stream flow was not a problem, I would continue to mālama 'āina and mālama kahawai in and around Honomanu up through Nahiku, ensuring I didn't leave any 'ōpala behind or take too much of any resource.

22. My 'ohana would continue to enjoy swimming in Wailua and Waikani (Wailuanui) and maybe other streams if there was enough stream flow.

23. I continue to work the land in my old age so that I will leave something worthwhile for my kids. It has been a hard life, but I want to make sure that my 'ohana will be ok.

I declare under penalty of perjury that the foregoing is true and correct.  
DATED: Haiku, Maui, Hawaii, December 15, 2014.

HANAWI and MAKAPII STREAMS

CASE NO. CCH-MA13-01  
DECLARATION OF STEVEN  
HO'OKANO

DECLARATION OF STEVEN HO'OKANO

I, Steven Ho'okano, declare that:

1. The statements below are based upon my personal knowledge.
2. I am Hawaiian.
3. I am a member of Nā Moku Aupuni O Kō'olau Hui.
4. I was born September 19, 1973 to Clarence Joseph Nishioka Hookano and Stephanie Hookano.
5. My father's father was Genzo Nishioka and his mother was Kanekoa.
6. My father was a good fisherman. He always gave away, that was the tradition. He learned how to fish from his family and by watching Kalalani, who was a master fisherman in our community.

7. I am a taro farmer. My family grows kalo on property irrigated by Waiokamilo. I'm farming this land because I got permission from my Uncle Jojo Young. I don't farm my own family's property because there's not enough water.
8. Traditionally, my family fished and gathered for what they like eat.
9. My 'ohana gathered 'ōpae, 'o'opu, prawns, and frogs in Waiokamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula, and Puakaa. Lakini (off Waiokamilo) and Puakaa were good places for 'ōpae.
10. Traditionally, my 'ohana fished for akule, enenue, uu, menpachi, anae, manini, moi, 'ahi, abolehole, pāpio, 'ō'io, and opihī in or near the mouths of Honomanu, Nuaailua, Piinau, Palauhulu, 'Ōhi'a/Waianu, Waiokamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, and Waiohue. They would live bait and throw net. They even used to throw net in the spring at Nuaailua. My
11. My 'ohana also engaged in mālama 'āina and mālama kahawai in the streams they used for farming, fishing and gathering by not overfishing or overgathering. They were self-monitoring.
12. When I was a kid, I used to be able to gather 'ōpae right from the 'auwai. Once the water flow changed, the 'ōpae never came back into the 'auwai so I don't really gather anymore. Too far.
13. I currently dive and lay net for the same kind of fish my family would get from Honomanu to East Wailuaiki. I don't see as much fish as before.
14. I fish because it is part of my diet. I fished like my father did to help raise our family. It is also important now to do it to help feed the older generations in our community.
15. I practice mālama 'āina and mālama kahawai by not overfishing. I self-regulate. This applies to all the streams that feed the ocean where I fish. I also clean the ditches off Waiokamilo.
16. The lack of stream flow has been a problem. I cannot farm on two acres of my family's land because there is not enough water. The property sits at the end of the flow and the water is too warm. That can cause pocket rot. Instead, I farm on my Uncle's property (Jojo Young). The taro quality isn't as good.
17. My brother, who owns a catering business, has been affected by the junk taro that we have been producing the last few years so he has to get taro from other valleys.

18. Also, there has been fighting amongst community members over water needs. This shouldn't be happening.
19. If there was more water, I would definitely open up a few more acres of kalo in Wailua.
20. If stream flow were restored, I would probably gather 'ōpae in the 'auwai again off Waiokamilo.
21. If water was put back in the streams, I would definitely continue fishing in the ocean fed by Honomanu, Nuaailua, Pīnaau, Palauhulu, 'Ōhi'a/Wāianu, Waiokamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki for the same kind of fish we got traditionally and that I fish for now. Hopefully there would be more.
22. If water was restored, I would keep self-regulating my fishing practices and cleaning the ditches to allow for stream flow to reach the lo'i fed by Waiokamilo.
23. Honestly, when I came home and never had the waterfall, I was pissed off. Growing taro is what I love to do, so when no more water, I get pissed off.
24. Even though EMI put water back, I keep wondering if this is a blessing or a curse. I don't see the water!
25. After those releases, EMI was making record profit. What's up with that?
26. I have friends and family who work for EMI. They say they are concerned about their jobs, but I always think, you can get another job, but you can't get another culture!

I declare under penalty of perjury that the foregoing is true and correct.

CASE NO. CCH-MA13-01

DECLARATION OF TERESA M. "TERI"  
GOMES; EXHIBITS "A-2"-"A-136"

## DECLARATION OF TERESA M. "TERI" GOMES

I, TERESA M. "TERI" GOMES, hereby declare based upon personal knowledge of the facts stated herein.

1. I am presently employed as a title and genealogy researcher at the Native Hawaiian Legal Corporation (hereafter, "NHLCC") and have been involved in researching Hawaiian land titles and family genealogies for over 35 years.

2. My duties as a title and genealogy researcher regularly require me to trace evidence of title in various public and private repositories of documents and information related to the title to fee simple lands, including but not limited to the Bureau of Conveyances, Department of Land and Natural Resources (hereafter, "Bureau"), Land Management Office, Department of Land and Natural Resources (hereafter, "LMO"), and the Hawai'i State Archives, Department of Accounting and General Services (hereafter, "Archives"), back to the Mahele of 1848.
3. Where a holder of title may have died without signing a deed, will or other conveyance of one's property interest during his or her lifetime, I conduct research on the genealogy of the relevant title holder in order to determine how title may have passed down to succeeding generations through intestate succession.
4. To the extent permitted by law, I also research the records of other repositories, including but not limited to: (a) the Circuit Courts of the State of Hawai'i; (b) the Hawai'i Supreme Court; (c) Hawai'i State Public Libraries; (d) the Hawai'i State Department of Health, Bureau of Health Statistics; and (e) County Real Property Tax Assessment Offices.
5. The exhibits, findings and conclusions described below are based upon my examination of records, including but not limited to: (a) the Archives; (b) the Bureau; (c) the Board of Commissioners to Quiet Land Titles; (d) the Survey Division, Department of Accounting and General Services; and (e) the County of Maui, Real Property Tax Assessment Office.
6. **Exhibit "A-2"** is County of Maui, Second Division, Tax Map Key (hereafter, "TMK (2)") 1-1-03-11, containing 2.27 acres, more or less, being (a) Land Commission Award (hereafter, "LCA") 4665-G (Volume 9 Page 361); (b) Native Testimony (hereafter, "NT")

- Volume 5 Page 402 (Hawaiian and English); (c) Foreign Testimony (hereafter, "FT") Volume 8 Pages 265-266 and Volume 16 Page 114; (d) Royal Patent (hereafter, "RP") 3341 (Volume 14 Pages 475-476); (e) Translation of Apana 2 LCA 4665-G; and (f) Derivation Instrument(s).
7. As adjudicated, LCA 4665-G is a kuleana award for lands claimed by a native tenant pursuant to the Act of August 6, 1850, commonly called the "Kuleana Act." *See L. 1850, p. 202.* As described by testimony thereto, Apana 2 contained 6 lo'i poalima (chief's irrigated terrace plantation).
8. **Exhibit "A-3"** is TMK (2) 1-1-03-15, containing 1.99 acres, more or less, being (a) LCA (hereafter, "LCA") 4848-F (Volume 9 Page 362); (b) NT (hereafter, "NT") Volume 5 Pages 436-437 (Hawaiian and English); (c) FT (hereafter, "FT") Volume 8 Page 296; (d) RP (hereafter, "RP") 3332 (Volume 14 Pages 457-458); (e) Translation of Apana 2 LCA 4848-F; and (f) Derivation Instrument(s).
9. As adjudicated, LCA 4848-F is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apana 2 was a lo'i (irrigated terrace) patch.
10. **Exhibit "A-4"** is TMK (2) 1-1-03-16, containing 0.87 acres, more or less, being (a) LCA 4853-L (Volume 3 Pages 827-828); (b) NT Volume 5 Page 434 (Hawaiian and English); (c) FT Volume 8 Page 294; (d) RP 3268 (Volume 14 Pages 329-330); (e) Translation of Apana 1 LCA 4853; and (f) Derivation Instrument(s).
11. As adjudicated, LCA 4853-L is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apana 1 was an ili (land area).
12. **Exhibit "A-5"** is TMK (2) 1-1-03-17, containing 0.07 acres, more or less, being

- (a) LCA 4848-E (Volume 3 Pages 824-825); (b) NT Volume 5 Page 436 (Hawaiian and English); (c) FT Volume 8 Pages 295-296 and Volume 16 Page 107; (d) RP 3232 (Volume 14 Pages 337-338); (e) Translation of Apana 2 LCA 4848-E; and (f) Derivation Instrument(s).
13. As adjudicated, LCA 4848-E is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apana 2 was a lo'i (irrigated terrace).
14. **Exhibit "A-6"** is TMK (2) 1-1-03-18, containing 0.469 acres, more or less, being (a) LCA 4848 (Volume 7 Page 447); (b) Native Register (hereafter, "NR") Volume 6 Page 208 (Hawaiian and English); (c) NT Volume 5 Pages 434-435 (Hawaiian and English); (d) FT Volume 8 Page 294; (e) RP 3655 (Volume 16 Pages 69-70); (f) Translation of Apana 2 LCA 4848; and (g) Derivation Instrument(s).
15. As adjudicated, LCA 4848 is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apana 2 was a lo'i kalo (irrigated taro terrace).
16. **Exhibit "A-7"** is TMK (2) 1-1-03-22, containing 1.00 acre, more or less, being (a) LCA 4848-E (Volume 3 Pages 824-825); (b) NT Volume 5 Page 436 (Hawaiian and English); (c) FT Volume 8 Pages 295-296 and Volume 16 Page 107; (d) RP 3232 (Volume 14 Pages 337-338); (e) Translation of Apana 1 LCA 4848-E; and (f) Derivation Instrument(s).
17. As adjudicated, LCA 4848-E is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apana 1 was an ili (land area).
18. **Exhibit "A-8"** is TMK (2) 1-1-03-23, containing 0.71 acre, more or less, being (a) LCA 4848-G (Volume 3 Pages 826-827); (b) NT Volume 5 Pages 436-437 (Hawaiian and

English); (c) FT Volume 8 Page 296; (d) RP 3346 (Volume 14 Pages 485-486); (e) Translation of Apana 1 LCA 4848-G; and (f) Derivation Instrument(s).

19. As adjudicated, LCA 4848-G is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apana 1 was an ili (land area).

20. **Exhibit "A-9"** is TMK (2) 1-1-03-24, containing 0.75 acre, more or less, being (a) LCA 4847 (Volume 3 Pages 445-446); (b) NR Volume 6 Pages 207-208 (Hawaiian and English); (c) NT Volume 5 Pages 375-376 (Hawaiian and English); (d) FT Volume 8 Page 242; (e) RP 3266 (Volume 14 Pages 325-326); (f) Translation of Apana 3 LCA 4847; and (g) Derivation Instrument(s).

21. As adjudicated, LCA 4847 is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apana 3 contained eight (8) lo'i (irrigated terraces).

22. **Exhibit "A-10"** is TMK (2) 1-1-03-25, containing 0.74 acre, more or less, being (a) LCA 4854 (Volume 3 Page 477); (b) NR Volume 6 Page 210 (Hawaiian and English); (c) NT Volume 5 Pages 378-379 (Hawaiian and English); (d) FT Volume 8 Page 245; (e) RP 3270 (Volume 14 Pages 333-334); (f) Translation of LCA 4854; and (g) Derivation Instrument(s).

23. As adjudicated, LCA 4854 is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, the lot was kalo (taro) land containing four (4) lo'i (irrigated terraces).

24. **Exhibit "A-11"** is TMK (2) 1-1-03-29, designated Lot 15-B, containing 0.25 acre, more or less, being (a) Land Patent Grant (hereafter, "LP Grant) S-13698 (Volume 98 Pages 477-478) and (b) Derivation Instrument(s).

25. As granted, LP Grant S-13698 is a fee simple conversion of Homestead Lease No. 92 for agricultural homestead purposes. As described therein, Lot 15-B is a taro lot.
26. **Exhibit "A-12"** is TMK (2) 1-1-03-31, designated Lot 17, containing 2.50 acres, more or less, being (a) LP Grant S-14514 (Volume 110 Pages 53-56) and (b) Derivation Instrument(s).
27. As granted, LP Grant S-14514 is a purchase of government land for agricultural homestead purposes. As shown on map therein, Lot 17 runs along Kukuipuka Gulch and two (2) kuleana awards.
28. **Exhibit "A-13"** is TMK (2) 1-1-03-34, containing 0.511 acre, more or less, being (a) LCA 4665-G (Volume 9 Page 361); (b) NT Volume 5 Page 402 (Hawaiian and English); (c) FT Volume 8 Pages 265-266 and Volume 16 Page 114; (d) RP 3341 (Volume 14 Pages 475-476); (e) Translation of Apana 1 LCA 4665-G; and (f) Derivation Instrument(s).
29. As adjudicated, LCA 4665-G is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apana 1 was an ili (land area).
30. **Exhibit "A-14"** is TMK (2) 1-1-03-36, designated Lot 17-A, containing 1.05 acre, more or less, being (a) LP Grant S-14514 (Volume 110 Pages 53-56) and (b) Derivation Instrument(s).
31. As granted, LP Grant S-14514 is a purchase of government land for agricultural homestead purposes. As shown on map therein, Lot 17-A is a "Wet Land" lot (currently zoned for agricultural use).
32. **Exhibit "A-15"** is TMK (2) 1-1-03-37, designated Lot 14-A of Homestead Lease No. 17, containing 0.53 acre, more or less, a portion of the Government (Crown) Land of

- Keanae, being (a) Tax History Sheet(s) showing usage, (b) Tax Assessment Sheet(s) showing current lessee(s), and Derivation Instrument(s).
33. As assessed, TMK (2) 1-1-03-37 is zoned for agricultural use and leased for homestead agricultural purposes.
34. **Exhibit "A-16"** is TMK (2) 1-1-03-38, designated Lot 15-A, containing 0.42 acre, more or less, being (a) LP Grant S-13698 (Volume 98 Pages 477-478) and (b) Derivation Instrument(s).
35. As granted, LP Grant S-13698 is a fee simple conversion of Homestead Lease No. 92 for agricultural homestead purposes. As described therein, Lot 15-A is a taro lot.
36. **Exhibit "A-17"** is TMK (2) 1-1-03-39, designated Lot 13-A, containing 0.52 acre, more or less, being (a) LP Grant S-14821 (Volume 110 Pages 78-81) and (b) Derivation Instrument(s).
37. As granted, LP Grant S-14821 is a purchase of government land for agricultural homestead purposes. As described therein, Lot 13-A is a taro lot.
38. **Exhibit "A-18"** is TMK (2) 1-1-03-40, containing 0.30 acre, more or less, being (a) LCA 4848-H (Volume 3 Page 829); (b) NT Volume 5 Page 438 (Hawaiian and English); (c) FT Volume 8 Pages 297-298; (d) RP 3271 (Volume 14 Pages 335-336); (e) Translation of Apana 1 LCA 4848-H; (f) Assessment Instrument(s); and (g) Business registration.
39. As adjudicated, LCA 4848-H is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apana 1 contained five (5) lo'i (irrigated terraces).
40. **Exhibit "A-19"** is TMK (2) 1-1-03-41, containing 6.12 acres, more or less, designated Lots 1 and 3 of Land Court Application 240 of Annie Amoy Ah Quai Chamberlain,

- being (a) Tax History Sheet(s) showing usage; (b) Tax Assessment Sheet(s) showing current ownership; and (c) Derivation Instrument(s).
41. As assessed, TMK (2) 1-1-03-41 is zoned for agricultural use.
42. **Exhibit "A-20"** is TMK (2) 1-1-03-42, containing 0.13 acre, more or less, being (a) LCA 4874 (Volume 7 Page 506); (b) NR Volume 6 Page 214 (Hawaiian and English); (c) RP 3656 (Volume 16 Pages 71-72); (d) Translation of Apana 2 LCA 4854; and (e) Derivation Instrument(s).
43. As adjudicated, LCA 4874 is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apana 2 contained two (2) lo'i (irrigated terraces).
44. **Exhibit "A-21"** is TMK (2) 1-1-03-43, containing 0.146 acres, more or less, a portion of the Government (Crown) Land of Kanae, being (a) Tax History Sheet(s) showing usage and (b) Tax Assessment Sheet(s) showing current lessee(s).
45. As assessed, TMK (2) 1-1-03-43 is zoned for agricultural use and leased for agricultural purposes.
46. **Exhibit "A-22"** is TMK (2) 1-1-03-44, containing 0.201 acres, more or less, a portion of the Government (Crown) Land of Kanae, being (a) Tax History Sheet(s) showing usage and (b) Tax Assessment Sheet(s) showing current lessee(s).
47. As assessed, TMK (2) 1-1-03-44 is zoned for agricultural use and leased for agricultural purposes.
48. **Exhibit "A-23"** is TMK (2) 1-1-03-45, designated Lot 11-A, containing 0.80 acre, more or less, being (a) LP Grant S-14818 (Volume 110 Pages 67-70) and (b) Derivation Instrument(s).

49. As granted, LP Grant S-14821 is a purchase of government land for agricultural homestead purposes. As described therein, Lot 11-A is a taro lot.
50. **Exhibit "A-24"** is TMK (2) 1-1-03-48, designated Lot 10-B, containing 0.11 acre, more or less, being (a) LP Grant 13164 (Volume 93 Pages 333-339) and (b) Derivation Instrument(s).
51. As granted, LP Grant 13164 is a purchase of government land for agricultural homestead purposes. As described therein, Lot 10-B is a taro lot.
52. **Exhibit "A-25"** is TMK (2) 1-1-03-49, containing 0.27 acre, more or less, being (a) LCA 4856 (Volume 7 Pages 444-445); (b) NR Volume 6 Pages 210-211 (Hawaiian and English); (c) NT Volume 5 Page 375 (Hawaiian and English); (d) FT Volume 8 Page 241; (e) RP 3357 (Volume 14 Pages 507-508); (e) Translation of Apana 2 LCA 4856; and (f) Derivation Instrument(s).
53. As adjudicated, LCA 4856 is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apana 2 contained two (2) lo'i (irrigated terraces).
54. **Exhibit "A-26"** is TMK (2) 1-1-03-50, designated Lot 10-C, containing 0.06 acre, more or less, being (a) LP Grant 13164 (Volume 93 Pages 333-339) and (b) Derivation Instrument(s).
55. As granted, LP Grant 13164 is a purchase of government land for agricultural homestead purposes. As described therein, Lot 10-C is a taro lot.
56. **Exhibit "A-27"** is TMK (2) 1-1-03-53, containing 2.40 acre, more or less, being (a) LCA 4665-F (Volume 3 Page 831); (b) NT Volume 5 Page 401 (Hawaiian and English); (c) FT Volume 8 Page 265; (d) RP 3274 (Volume 14 Pages 341-342); (e) Translation of Apana 1

LCA 4665-F; and (f) Derivation Instrument(s).

57. As adjudicated, LCA 4665-F is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apana 1 was an ili (land area).

58. **Exhibit "A-28"** is TMK (2) 1-1-03-57, designated Lot 9-A, containing 0.85 acres, more or less, being (a) LP Grant S-14783 (Volume 109 Pages 308-311) and (b) Derivation Instrument(s).

59. As granted, LP Grant S-14783 is a purchase of government land for agricultural homestead purposes. As described therein, Lot 9-A is a taro lot.

60. **Exhibit "A-29"** is TMK (2) 1-1-03-65, containing 0.18 acres, more or less, a portion of Lot 1 of Land Court Application 240 of Annie Amoy Ah Quai Chamberlain, being (a) Tax History Sheet(s) showing usage; (b) Tax Assessment Sheet(s) showing current ownership; and (c) Derivation Instrument(s).

61. As assessed, TMK (2) 1-1-03-65 is zoned conservation.

62. **Exhibit "A-30"** is TMK (2) 1-1-03-75, containing 0.128 acres, more or less, being (a) LCA 4856 (Volume 7 Pages 444-445); (b) NR Volume 6 Pages 210-211 (Hawaiian and English); (c) NT Volume 5 Page 375 (Hawaiian and English); (d) FT Volume 8 Page 241; (e) RP 3357 (Volume 14 Pages 507-508); (e) Translation of Apana 1 LCA 4856; and (f) Derivation Instrument(s).

63. As adjudicated, LCA 4856 is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apana 1 contained four (4) lo'i (irrigated terraces).

64. **Exhibit "A-31"** is TMK (2) 1-1-03-76, containing 0.09 acre, more or less, being

(a) LCA 2441 (Volume 7 Page 444); (b) NR Volume 3 Page 501 (Hawaiian and English); (c) NT Volume 3 Pages 373-374 (Hawaiian and English); (d) FT Volume 8 Page 240; (e) RP 2946 (Volume 13 Pages 375-376); (e) Translation of Apana 2 LCA 2441; and (f) Derivation Instrument(s).

65. As adjudicated, LCA 2441 is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apana 2 contained two (2) lo'i (irrigated terraces).

66. **Exhibit "A-32"** is TMK (2) 1-1-03-81, containing 0.66 acre, more or less, being (a) LCA 2442 (Volume 7 Pages 443-444); (b) NR Volume 3 Page 501 (Hawaiian and English); (c) NT Volume 3 Page 374 (Hawaiian and English); (d) FT Volume 8 Pages 240-241; (e) RP 2017 (Volume 8 Pages 353-354); (e) Translation of LCA 2442; and (f) Derivation Instrument(s).

67. As adjudicated, LCA 2442 is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, the lot contained six (6) lo'i (irrigated terraces).

68. **Exhibit "A-33"** is TMK (2) 1-1-03-82, containing 1.42 acres, more or less, being (a) LCA 4856 (Volume 7 Pages 444-445); (b) NR Volume 6 Pages 210-211 (Hawaiian and English); (c) NT Volume 3 Page 375 (Hawaiian and English); (d) FT Volume 8 Page 241; (e) RP 3357 (Volume 14 Pages 507-508); (e) Translation of Apana 1 LCA 4856; and (f) Derivation Instrument(s).

69. As adjudicated, LCA 4856 is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apana 1 contained four (4) lo'i (irrigated terraces).

70. **Exhibit "A-34"** is TMK (2) 1-1-03-83, designated Lot 8-A, containing 0.70 acre,

more or less, being (a) LP Grant 13164 (Volume 93 Pages 333-339) and (b) Derivation Instrument(s).

71. As granted, LP Grant 13164 is a purchase of government land for agricultural homestead purposes. As described therein, Lot 8-A is a taro lot.

72. **Exhibit "A-35"** is TMK (2) 1-1-03-89, designated Lot 7-A-1, containing 0.48 acre, more or less, being (a) LP Grant 13208 (Volume 94 Pages 31-35) and (b) Derivation Instrument(s).

73. As granted, LP Grant 13208 is a purchase of government land for agricultural homestead purposes. As described therein, Lot 7-A-1 is a taro lot.

74. The total acreage for all parcels assessed under TMK (2) 1-1-03, situate in Ke'anae, Ko'olau, Hana, Maui, is 29.695 acres, more or less.

75. **Exhibit "A-36"** is TMK (2) 1-1-04-03, containing 0.46 acres, more or less, being (a) LCA 4853-G (Volume 3 Page 612); (b) NT Volume 5 Pages 432-433 (Hawaiian and English); (c) FT Volume 8 Page 292; (d) RP 3255 (Volume 14 Pages 303-304); (e) Translation of Apana 2 LCA 4853-G; and (f) Derivation Instrument(s).

76. As adjudicated, LCA 4853-G is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apana 2 contained two (2) lo'i (irrigated terraces).

77. **Exhibit "A-37"** is TMK (2) 1-1-04-05, containing 4.82 acres, more or less, a portion of the Government (Crown) Land of Keanae, being (a) Tax History Sheet and Tax Assessment Sheet(s) showing no lessee(s).

78. As assessed, TMK (2) 1-1-04-05 is zoned for agricultural use.

79. **Exhibit "A-38"** is TMK (2) 1-1-04-06, containing 1.53 acres, more or less, a

portion of the Government (Crown) Land of Keanae, being (a) Tax History Sheet showing usage and Tax Assessment Sheet(s) showing no lessee(s).

80. As assessed, TMK (2) 1-1-04-06 is zoned for agricultural use.

81. **Exhibit "A-39"** is TMK (2) 1-1-04-09, containing 0.62 acres, more or less, being (a) LCA 4779 (Volume 3 Page 488); (b) NR Volume 6 Page 542 (Hawaiian and English); (c) NT Volume 5 Page 367 (Hawaiian and English); (d) FT Volume 8 Page 233; (e) RP 3279 (Volume 14 Pages 351-352); (e) Translation of LCA 4779; and (f) Derivation Instrument(s).

82. As adjudicated, LCA 4779 is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, the lot contained eight (8) lo'i (irrigated terraces).

83. **Exhibit "A-40"** is TMK (2) 1-1-04-11, containing 0.360 acres, more or less, being (a) LCA 11043-B (Volume 3 Page 614); (b) NR Volume 6 Page 541 (Hawaiian and English); (c) NT Volume 5 Pages 429-430 (Hawaiian and English); (d) FT Volume 8 Page 289; (e) RP 2786 (Volume 13 Pages 33-34); (e) Translation of Apana 2 LCA 11043-B; and (f) Derivation Instrument(s).

84. As adjudicated, LCA 11043-B is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apana 2 was a mo'o (narrow strip of land).

85. **Exhibit "A-41"** is TMK (2) 1-1-04-12, containing 0.35 acres, more or less, being (a) LCA 5068 (Volume 3 Page 832); (b) NR Volume 6 Page 543 (Hawaiian and English); (c) NT Volume 5 Pages 371-372 (Hawaiian and English); (d) FT Volume 8 Page 238; (e) RP 7025 (Volume 26 Pages 469-470); (e) Translation of Apana 1 LCA 5068; and (f) Derivation Instrument(s).

86. As adjudicated, LCA 5068 is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apana 1 contained twenty-four (24) lo'i (irrigated terraces).
87. **Exhibit "A-42"** is TMK (2) 1-1-04-13, containing 1.27 acres, more or less, a portion of the Government (Crown) Land of Wailua, being (a) Tax History Sheet(s) showing usage and (b) Tax Assessment Sheet(s) showing current lessee(s).
88. As assessed, TMK (2) 1-1-04-13 is zoned for agricultural use and leased for agricultural purposes.
89. **Exhibit "A-43"** is TMK (2) 1-1-04-14, containing 0.19 acres, more or less, being (a) LCA 6769 (Volume 3 Page 615); (b) FT Volume 8 Pages 273-274; (c) RP 3260 (Volume 14 Pages 313-314); (d) Translation of LCA 6769; and (f) Derivation Instrument(s).
90. As adjudicated, LCA 6769 is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, the lot contained six (6) kalo lo'i (irrigated taro terraces).
91. **Exhibit "A-44"** is TMK (2) 1-1-04-15, containing 0.620 acres, more or less, a portion of the Government (Crown) Land of Wailua, being (a) Tax Assessment Sheet(s) showing no lessee(s).
92. As assessed, TMK (2) 1-1-04-15 is zoned for agricultural use.
93. **Exhibit "A-45"** is TMK (2) 1-1-04-16, containing 4.905 acres, more or less, being (a) LCA 4853-E (Volume 3 Page 844); (b) NT Volume 5 Page 432 (Hawaiian and English); (c) FT Volume 8 Page 292; (d) RP 3277 (Volume 14 Pages 347-348); (e) Translation of LCA 4853-E; and (f) Derivation Instrument(s).
94. As adjudicated, LCA 4853-E is a kuleana award for lands claimed by a native

- tenant pursuant to the "Kuleana Act." As described by testimony thereto, the lot is a mo'o (narrow strip of land).
95. **Exhibit "A-46"** is TMK (2) 1-1-04-17, a parcel of land dropped into TMK (2) 1-04-13 (**Exhibit "A-42"**) and no longer assessed as a separate parcel of land.
96. **Exhibit "A-47"** is TMK (2) 1-1-04-18, containing 0.65 acres, more or less, a portion of the Government (Crown) Land of Wailua, being (a) Tax Assessment Sheet(s) showing no lessee(s).
97. As assessed, TMK (2) 1-1-04-18 is zoned for agricultural use.
98. **Exhibit "A-48"** is TMK (2) 1-1-04-20, containing 1.006 acres, more or less, being (a) LCA 5056 (Volume 3 Page 486); (b) NR Volume 6 Pages 234 (Hawaiian and English); (c) NT Volume 5 Page 368 (Hawaiian and English); (d) FT Volume 8 Page 235; (e) RP 2804 (Volume 13 Pages 69-70); (e) Translation of LCA 5056; and (f) Derivation Instrument(s).
99. As adjudicated, LCA 5056 is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, the lot contained twenty-one (21) lo'i (irrigated terraces).
100. **Exhibit "A-49"** is TMK (2) 1-1-04-21, containing 0.75 acres, more or less, being (a) LCA 4853-G (Volume 3 Page 612); (b) NT Volume 5 Pages 432-433 (Hawaiian and English); (c) FT Volume 8 Page 292; (d) RP 3255 (Volume 14 Pages 303-304); (e) Translation of Apana 1 LCA 4853-G; and (f) Derivation Instrument(s).
101. As adjudicated, LCA 4853-G is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apana 1 is a mo'o (narrow strip of land).
102. **Exhibit "A-50"** is TMK (2) 1-1-04-22, containing 2.75 acres, more or less, being

- (a) LCA 5051 (Volume 3 Pages 613-614); (b) NR Volume 6 Page 233 (Hawaiian and English); (c) NT Volume 5 Pages 236 and 370 (Hawaiian and English); (d) FT Volume 8 Page 236; (e) RP 3788 (Volume 13 Pages 37-38); (e) Translation of Apana 1 LCA 5051; and (f) Derivation Instrument(s).
103. As adjudicated, LCA 5051 is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apana 1 contained twenty-six (26) lo'i (irrigated terraces).
104. **Exhibit "A-51"** is TMK (2) 1-1-04-23, containing 1.41 acres, more or less, being (a) LCA 4867 (Volume 3 Pages 493-494); (b) NR Volume 6 Pages 211-212 (Hawaiian and English); (c) NT Volume 5 Pages 363-364 (Hawaiian and English); (d) FT Volume 8 Page 280; (e) RP 2787 (Volume 13 Pages 35-36); (e) Translation of LCA 4867; and (f) Derivation Instrument(s).
105. As adjudicated, LCA 4867 is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, the lot is a mo'o (narrow strip of land).
106. **Exhibit "A-52"** is TMK (2) 1-1-04-24, containing 0.614 acres, more or less, being (a) LCA 5030 (Volume 3 Pages 488-489); (b) NR Volume 6 Page 229 (Hawaiian and English); (c) NT Volume 6 Page 367 (Hawaiian and English); (d) FT Volume 8 Page 233; (e) RP 2811 (Volume 13 Pages 83-84); (e) Translation of Apana 1 LCA 5030; and (f) Derivation Instrument(s).
107. As adjudicated, LCA 5030 is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apana 1 contained ten (10) lo'i (irrigated terraces).

108. **Exhibit "A-53"** is TMK (2) 1-1-04-25, containing 0.42 acres, more or less, being (a) LCA 5066-B (Volume 3 Pages 487-488); (b) NR Volume 6 Page 545 (Hawaiian and English); (c) NT Volume 5 Page 367 (No Hawaiian; only English); (d) FT Volume 8 Page 233; (e) RP 3254 (Volume 14 Pages 301-302); (e) Translation of Apana 1 LCA 5066-B; and (f) Derivation Instrument(s).
109. As adjudicated, LCA 5066-B is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apana 1 is an ili (land area).
110. **Exhibit "A-54"** is TMK (2) 1-1-04-26, containing 0.31 acres, more or less, being (a) LCA 4587 (Volume 3 Page 845); (b) NR Volume 6 Pages 186-187 (Hawaiian and English); (c) NT Volume 5 Pages 411 and 430 (Hawaiian and English); (d) FT Volume 8 Pages 274, 289, and 294; (e) RP 2806 (Volume 13 Pages 73-74); (e) Translation of LCA 4587; and (f) Derivation Instrument(s).
111. As adjudicated, LCA 4587 is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, the lot contained twelve (12) lo'i (irrigated terraces).
112. **Exhibit "A-55"** is TMK (2) 1-1-04-27, containing 1.60 acres, more or less, being (a) LCA 5062 (Volume 3 Pages 843-844); (b) NR Volume 6 Page 544 (Hawaiian and English); (c) NT Volume 5 Page 370 (Hawaiian and English); (d) FT Volume 8 Pages 236-237; (e) RP 3263 (Volume 14 Pages 319-320); (e) Translation of LCA 5062; and (f) Derivation Instrument(s).
113. As adjudicated, LCA 5062 is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, the lot contained twenty (20)

lo'i (irrigated terraces).

114. **Exhibit "A-56"** is TMK (2) 1-1-04-28, containing 1.25 acres, more or less, a portion of the Government (Crown) Land of Wailua, being (a) Tax Assessment Sheet(s) showing no lessee(s).

115. As assessed, TMK (2) 1-1-04-28 is zoned for agricultural use.

116. **Exhibit "A-57"** is TMK (2) 1-1-04-30, containing 1.72 acres, more or less, a portion of the Government (Crown) Land of Wailua, being (a) Tax History Sheet(s) showing usage and (b) Tax Assessment Sheet(s) showing current lessee(s).

117. As assessed, TMK (2) 1-1-04-30 is zoned for agricultural use and leased for agricultural purposes.

118. **Exhibit "A-58"** is TMK (2) 1-1-04-38, containing 0.125 acres, more or less, being (a) LCA 3499 (Volume 3 Pages 844-845); (b) NR Volume 6 Pages 94-95 (Hawaiian and English); (c) NT Volume 5 Page 429 (Hawaiian and English); (d) FT Volume 8 Pages 288-289; (e) RP 3264 (Volume 14 Pages 321-322); (e) Translation of LCA 3499; and (f) Derivation Instrument(s).

119. As adjudicated, LCA 3499 is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, the lot contained seven (7) lo'i (irrigated terraces).

120. The total acreage for all parcels assessed under TMK (2) 1-1-04, situate in Wailua, Ko'olau, Hana, Maui, is 27.73 acres, more or less.

121. **Exhibit "A-59"** is TMK (2) 1-1-05-12, containing 0.338 acres, more or less, being (a) LCA 10828-B (Volume 3 Pages 377-378); (b) NT Volume 5 Pages 378-379 (Hawaiian and English); (c) FT Volume 8 Page 244; (d) RP 2802 (Volume 13 Pages 65-66); (e) Translation

of Apana 1 LCA 10828-B; and (f) Derivation Instrument(s).

122. As adjudicated, LCA 10828 is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apana 1 was a loko (pond).

123. **Exhibit "A-60"** is TMK (2) 1-1-05-15, containing 1.684 acres, more or less, being (a) LCA 4865 (Volume 3 Pages 494-495); (b) NR Volume 6 Page 211 (Hawaiian and English); (c) NT Volume 5 Page 262 (Hawaiian and English); (d) FT Volume 8 Pages 229-230; (e) RP 6144 (Volume 23 Pages 455-456); (e) Translation of Apana 1 LCA 4865; and (f) Derivation Instrument(s).

124. As adjudicated, LCA 4865 is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apana 1 was a mo'o (narrow strip of land).

125. **Exhibit "A-61"** is TMK (2) 1-1-05-16, designated Lots 45 and 45-A, containing 2.33 acres, more or less, being (a) LP Grant S-14662 (Volume 108 Pages 247-250) and (b) Derivation Instrument(s).

126. As granted, LP Grant S-14662 is a purchase of government land for agricultural homestead purposes. As described therein, Lots 45 and 45-A are two (2) Wailua Homestead lots.

127. **Exhibit "A-62"** is TMK (2) 1-1-05-17, containing 3.03 acres, more or less, a portion of the Government (Crown) Land of Wailua, being (a) Tax History Sheet(s) showing usage and (b) Tax Assessment Sheet(s) showing current lessee(s).

128. As assessed, TMK (2) 1-1-05-17 is zoned for agricultural use and leased for agricultural purposes.

129. **Exhibit "A-63"** is TMK (2) 1-1-05-18, containing 4.92 acres, more or less, being

(a) LCA 5059 (Volume 3 Page 834); (b) NR Volume 6 Page 235 (Hawaiian and English); (c) NT Volume 5 Page 362 (Hawaiian and English); (d) FT Volume 8 Page 229; (e) RP 3258 (Volume 14 Pages 309-310); (e) Translation of LCA 5059; and (f) Derivation Instrument(s).

130. As adjudicated, LCA 5059 is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, the lot was a mo'ō (narrow strip of land).

131. **Exhibit "A-64"** is TMK (2) 1-1-05-19, designated Lot 6-A, containing 0.60 acres, more or less, being (a) LP Grant S-15305 (Volume 115 Pages 21-25) and (b) Derivation Instrument(s).

132. As granted, LP Grant S-15305 is a purchase of government land for agricultural homestead purposes. As described therein, Lot 6-A is a taro lot.

133. **Exhibit "A-65"** is TMK (2) 1-1-05-20, designated Lot 7-A, containing 0.57 acres, more or less, being (a) LP Grant 13129 (Volume 92 Pages 131-135) and (b) Derivation Instrument(s).

134. As granted, LP Grant 13129 is a fee simple conversion of Homestead Lease No. 40 for agricultural homestead purposes. As described therein, Lot 7-A is a taro lot.

135. **Exhibit "A-66"** is TMK (2) 1-1-05-21, designated Lot 8-A, containing 0.79 acres, more or less, being (a) LP Grant 13329 (Volume 95 Pages 123-127) and (b) Derivation Instrument(s).

136. As granted, LP Grant 13329 is a fee simple conversion of Homestead Lease No. 61 for agricultural homestead purposes. As described therein, Lot 8-A is a taro lot.

137. **Exhibit "A-67"** is TMK (2) 1-1-05-22, designated Lot 9-A, containing 0.77 acres, more or less, being (a) LP Grant S-15850 (LMO Copy), (b) Tax History Sheet(s), and (c)

Tax Assessment Sheet(s).

138. As granted, LP Grant S-15850 is a transfer of government land for agricultural homestead purposes. As assessed, Lot 9-A is zoned for agricultural use.

139. **Exhibit "A-68"** is TMK (2) 1-1-05-23, designated Lot 10-A, containing 0.67 acres, more or less, being (a) LP Grant 13127 (Volume 93 Pages 119-123) and (b) Derivation Instrument(s).

140. As granted, LP Grant 13127 is a fee simple conversion of Homestead Lease No. 74 for agricultural homestead purposes. As described therein, Lot 10-A is a taro lot.

141. **Exhibit "A-69"** is TMK (2) 1-1-05-24, designated Lot 11-A, containing 0.60 acres, more or less, being (a) LP Grant S-15078 (Volume 112 Pages 375-380) and (b) Derivation Instrument(s).

142. As granted, LP Grant S-15078 is a purchase of government land for agricultural homestead purposes. As described therein, Lot 11-A is a taro lot.

143. **Exhibit "A-70"** is TMK (2) 1-1-05-25, containing 1.31 acres, more or less, a portion of the Government (Crown) Land of Wailua, being (a) Tax History Sheet(s) showing usage and (b) Tax Assessment Sheet(s) showing current lessee(s).

144. As assessed, TMK (2) 1-1-05-25 is zoned for agricultural use and leased for agricultural purposes.

145. **Exhibit "A-71"** is TMK (2) 1-1-05-28, containing 0.162 acres, more or less, being (a) LCA 4561 (Volume 7 Pages 441-442); (b) NR Volume 6 Page 181 (Hawaiian and English); (c) NT Volume 5 Page 361 (Hawaiian and English); (d) FT Volume 8 Pages 227-228; (e) RP 3281 (Volume 14 Pages 355-356); (e) Translation of Apana 4 LCA 4561; and (f) Derivation Instrument(s).

146. As adjudicated, LCA 4561 is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apana 4 contained one (1) lo'i (irrigated terrace).
147. **Exhibit "A-72"** is TMK (2) 1-1-05-29, containing 0.86 acres, more or less, being (a) LCA 5058 (Volume 3 Pages 842-843); (b) NR Volume 6 Pages 235-236 (Hawaiian and English); (c) NT Volume 5 Page 369 (Hawaiian and English); (d) FT Volume 8 Pages 235-236; (e) RP 3256 (Volume 14 Pages 305-306); (e) Translation of Apanas 1 and 2 LCA 5058; and (f) Derivation Instrument(s).
148. As adjudicated, LCA 5058 is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apanas 1 and 2 contained twenty-two (22) lo'i (irrigated terraces).
149. **Exhibit "A-73"** is TMK (2) 1-1-05-30, containing 2.67 acres, more or less, being (a) LCA 5060 (Volume 3 Page 485); (b) NR Volume 6 Page 542 (Hawaiian and English); (c) NT Volume 5 Page 369 (Hawaiian and English); (d) FT Volume 8 Page 235; (e) RP 3259 (Volume 14 Pages 311-312); (e) Translation of LCA 5060; and (f) Derivation Instrument(s).
150. As adjudicated, LCA 5060 is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, the lot contained ten (10) lo'i (irrigated terraces).
151. **Exhibit "A-74"** is TMK (2) 1-1-05-31, containing 1.545 acres, more or less, being (a) LCA 4561 (Volume 7 Pages 441-442); (b) NR Volume 6 Page 181 (Hawaiian and English); (c) NT Volume 5 Page 361 (Hawaiian and English); (d) FT Volume 8 Pages 227-228; (e) RP 3281 (Volume 14 Pages 355-356); (e) Translation of Apana 3 LCA 4561; and (f) Derivation Instrument(s).

152. As adjudicated, LCA 4561 is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apana 1 contained one (1) lo'i (irrigated terrace).
153. **Exhibit "A-75"** is TMK (2) 1-1-05-32, containing 1.44 acres, more or less, being (a) LCA 5054 (Volume 7 Pages 440-441); (b) NR Volume 6 Page 234 (Hawaiian and English); (c) NT Volume 6 Page 366 (Hawaiian and English); (d) FT Volume 8 Page 232; (e) RP 3278 (Volume 14 Pages 349-350); (e) Translation of Apana 2 LCA 5054; and (f) Derivation Instrument(s).
154. As adjudicated, LCA 5054 is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apana 2 was a mo'o (narrow strip of land).
155. **Exhibit "A-76"** is TMK (2) 1-1-05-33, designated Lot 25-A, containing 0.63 acres, more or less, being (a) LP Grant S-14236 (Volume 104 Pages 133-136) and (b) Derivation Instrument(s).
156. As granted, LP Grant S-14236 is a purchase of government land for agricultural homestead purposes. As described therein, the lot abuts government land.
157. **Exhibit "A-77"** is TMK (2) 1-1-05-34, containing 0.60 acres, more or less, a portion of the Government (Crown) Land of Wailua, being (a) Tax History Sheet(s) showing usage and (b) Tax Assessment Sheet(s) showing current lessee(s).
158. As assessed, TMK (2) 1-1-05-34 is zoned for agricultural use and leased for agricultural purposes.
159. **Exhibit "A-78"** is TMK (2) 1-1-05-41, containing 0.97 acres, more or less, a portion of the Government (Crown) Land of Wailua, being (a) Tax History Sheet(s) showing

usage and (b) Tax Assessment Sheet(s) showing no lessee(s).

160. As assessed, TMK (2) 1-1-05-41 is zoned for agricultural use.
161. **Exhibit "A-79"** is TMK (2) 1-1-05-42, containing 3.40 acres, more or less, being (a) LCA 5059 (Volume 3 Page 834); (b) NR Volume 6 Page 235 (Hawaiian and English); (c) NT Volume 5 Page 362 (Hawaiian and English); (d) FT Volume 8 Page 229; (e) RP 3258 (Volume 14 Pages 309-310); (e) Translation of LCA 5059; and (f) Derivation Instrument(s).
162. As adjudicated, LCA 5059 is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, the lot was a mo'ō (narrow strip of land).
163. **Exhibit "A-80"** is TMK (2) 1-1-05-44, containing 0.59 acres, more or less, being (a) LCA 5059 (Volume 3 Page 834); (b) NR Volume 6 Page 235 (Hawaiian and English); (c) NT Volume 5 Page 362 (Hawaiian and English); (d) FT Volume 8 Page 229; (e) RP 3258 (Volume 14 Pages 309-310); (e) Translation of LCA 5059; and (f) Derivation Instrument(s).
164. As adjudicated, LCA 5059 is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, the lot was a mo'ō (narrow strip of land).
165. **Exhibit "A-81"** is TMK (2) 1-1-05-45, containing 0.65 acres, more or less, a portion of the Government (Crown) Land of Wailua, being (a) Tax History Sheet(s) showing usage and (b) Tax Assessment Sheet(s) showing current lessee(s).
166. As assessed, TMK (2) 1-1-05-45 is zoned for agricultural use and leased for agricultural purposes.
167. **Exhibit "A-82"** is TMK (2) 1-1-05-46, designated Lot 16-A, containing 0.75 acres, more or less, being (a) LP Grant S-14978 (Volume 111 Pages 327-332) and (b) Derivation

Instrument(s).

168. As granted, LP Grant S-14978 is a purchase of government land for agricultural homestead purposes. As described therein, Lot 16-A is a taro lot.
169. **Exhibit "A-83"** is TMK (2) 1-1-05-54, containing 0.94 acres, more or less, a portion of the Government (Crown) Land of Wailua, being (a) Tax History Sheet(s) showing usage and (b) Tax Assessment Sheet(s) showing current lessee(s).
170. As assessed, TMK (2) 1-1-05-54 is zoned for agricultural use and leased for agricultural purposes.
171. **Exhibit "A-84"** is TMK (2) 1-1-05-58, containing 0.216 acres, more or less, being (a) LCA 4866 (Volume 3 Page 494); (b) NR Volume 6 Page 211 (Hawaiian and English); (c) NT Volume 5 Page 363 (Hawaiian and English); (d) FT Volume 8 Page 229; (e) Translation of Apana 1 LCA 4866; and (f) Derivation Instrument(s).
172. As adjudicated, LCA 4866 is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apana 1 was a kula (plain) and house lot.
173. The total acreage for all parcels assessed under TMK (2) 1-1-05, situate in Wailua, Ko'olau, Hana, Maui, is 33.035 acres, more or less.
174. **Exhibit "A-85"** is TMK (2) 1-1-06-12, containing 6.00 acres, more or less, being (a) LCA 4853-D (Volume 3 Pages 832-833); (b) NT Volume 5 Pages 431-432 (Hawaiian and English); (c) FT Volume 8 Page 291; (d) RP 3276 (Volume 14 Pages 345-346); (e) Translation of Apana 1 LCA 4853-D; and (f) Derivation Instrument(s).
175. As adjudicated, LCA 4853-D is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apana 1 was an ili

(land area).

176. **Exhibit "A-86"** is TMK (2) 1-1-06-15, containing 0.55 acres, more or less, being (a) LCA 5055 (Volume 3 Pages 490-491); (b) NR Volume 6 Pages 234-235 (Hawaiian and English); (c) NT Volume 5 Page 365 (Hawaiian and English); (d) FT Volume 8 Page 231; (e) RP 2943 (Volume 13 Pages 369-370); (f) Translation of Apana 1 LCA 5055; and (g) Derivation Instrument(s).
177. As adjudicated, LCA 5055 is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apana 1 contained eleven (11) lo'i (irrigated terraces).
178. **Exhibit "A-87"** is TMK (2) 1-1-06-16, containing 0.25 acres, more or less, being (a) LCA 5055 (Volume 3 Pages 490-491); (b) NR Volume 6 Pages 234-235 (Hawaiian and English); (c) NT Volume 5 Page 365 (Hawaiian and English); (d) FT Volume 8 Page 231; (e) RP 2943 (Volume 13 Pages 369-370); (f) Translation of Apana 1 LCA 5055; and (g) Derivation Instrument(s).
179. As adjudicated, LCA 5055 is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apana 1 contained eleven (11) lo'i (irrigated terraces).
180. **Exhibit "A-88"** is TMK (2) 1-1-06-17, containing 0.79 acres, more or less, being (a) LCA 5052 (Volume 3 Pages 489-490); (b) NR Volume 6 Page 233 (Hawaiian and English); (c) NT Volume 5 Page 366 (Hawaiian and English); (d) FT Volume 8 Page 233; (e) RP 3275 (Volume 14 Pages 343-344); (f) Translation of LCA 5052; and (g) Derivation Instrument(s).
181. As adjudicated, LCA 5052 is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, the lot contained a house with

twenty-nine (29) lo'i (irrigated terraces).

182. **Exhibit "A-89"** is TMK (2) 1-1-06-18, containing 2.933 acres, more or less, being (a) LCA 10828-B (Volume 9 Pages 377-378); (b) NT Volume 5 Page 378 (Hawaiian and English); (c) FT Volume 8 Page 244; (d) RP 2802 (Volume 13 Pages 65-66); (e) Translation of Apana 3 LCA 10828-B; and (f) Derivation Instrument(s).
183. As adjudicated, LCA 10828-B is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apana 3 was a mo'o (narrow strip of land).
184. **Exhibit "A-90"** is TMK (2) 1-1-06-21, containing 0.87 acres, more or less, a portion of the Government (Crown) Land of Wailua, being (a) Tax History Sheet(s) showing usage and (b) Tax Assessment Sheet(s) showing current lessee(s).
185. As assessed, TMK (2) 1-1-06-21 is zoned for agricultural use and occupied for homestead agricultural purposes.
186. **Exhibit "A-91"** is TMK (2) 1-1-06-22, containing 0.488 acres, more or less, being (a) LCA 4773 (Volume 3 Pages 491-492); (b) NR Volume 6 Page 199 (Hawaiian and English); (c) NT Volume 5 Pages 364-365 (Hawaiian and English); (d) FT Volume 8 Page 231; (e) RP 3261 (Volume 14 Pages 315-316); (f) Translation of Apana 1 LCA 4773; and (f) Derivation Instrument(s).
187. As adjudicated, LCA 4773 is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apana 1 contained nine (9) lo'i (irrigated terraces).
188. **Exhibit "A-92"** is TMK (2) 1-1-06-23, containing 0.487 acres, more or less, being (a) LCA 10828-B (Volume 9 Pages 377-378); (b) NT Volume 5 Pages 378 (Hawaiian and

English); (c) FT Volume 8 Page 244; (d) RP 2802 (Volume 13 Pages 65-66); (e) Translation of Apana 2 LCA 10828-B; and (f) Derivation Instrument(s).

189. As adjudicated, LCA 10828-B is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apana 2 was a mo'o (narrow strip of land).

190. **Exhibit "A-93"** is TMK (2) 1-1-06-24, designated Lot 4-A, containing 0.80 acres, more or less, being (a) LP Grant 13173 (Volume 93 Pages 377-381) and (b) Derivation Instrument(s).

191. As granted, LP Grant 13173 is a fee simple conversion of Homestead Lease No. 62 for agricultural homestead purposes. As described therein, Lot 4-A is a taro lot.

192. **Exhibit "A-94"** is TMK (2) 1-1-06-25, containing 0.08 acres, more or less, being (a) LCA 4729 (Volume 3 Page 492); (b) NR Volume 6 Page 194 (Hawaiian and English); (c) NT Volume 5 Page 364 (Hawaiian and English); (d) FT Volume 8 Page 230; (e) RP 2801 (Volume 13 Pages 63-64); (f) Translation of Apana 1 LCA 4729; and (f) Derivation Instrument(s).

193. As adjudicated, LCA 4729 is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apana 1 contained two (2) lo'i (irrigated terraces).

194. **Exhibit "A-95"** is TMK (2) 1-1-06-26, containing 0.72 acres, more or less, being (a) LCA 4726 (Volume 7 Page 462); (b) NR Volume 6 Page 193 (Hawaiian and English); (c) NT Volume 5 Pages 369 and 411 (Hawaiian and English); (d) FT Volume 3 Pages 236 and 274; (e) RP 3265 (Volume 14 Pages 323-324); (f) Translation of Apana 1 LCA 4726; and (f) Tax Assessment Sheet(s) showing current owner(s).

195. As adjudicated, LCA 4726 is a kuleana award for lands claimed by a native tenant

pursuant to the "Kuleana Act." As described by testimony thereto, Apana 1 contained 14 lo'i (irrigated terraces) and a kula within the mo'o (narrow strip of land).

196. **Exhibit "A-96"** is TMK (2) 1-1-06-27, containing 0.067 acres, more or less, being (a) LCA 4562 (Volume 7 Page 437); (b) NR Volume 6 Page 182-183 (Hawaiian and English); (c) NT Volume 5 Pages 366-367 (Hawaiian and English); (d) FT Volume 8 Page 232; (e) RP 2215 (Volume 9 Pages 521-522); (f) Translation of Apana 3 LCA 4562; and (g) Derivation Instrument(s).

197. As adjudicated, LCA 4562 is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apana 3 contained 2 lo'i (irrigated terraces).

198. **Exhibit "A-97"** is TMK (2) 1-1-06-28, containing 0.038 acres, more or less, being (a) LCA 4726 (Volume 7 Page 462); (b) NR Volume 6 Page 193 (Hawaiian and English); (c) NT Volume 5 Pages 369 and 411 (Hawaiian and English); (d) FT Volume 3 Pages 236 and 274; (e) RP 3265 (Volume 14 Pages 323-324); (f) Translation of Apana 2 LCA 4726; and (f) Derivation Instrument(s).

199. As adjudicated, LCA 4726 is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apana 2 contained two (2) lo'i (irrigated terraces).

200. **Exhibit "A-98"** is TMK (2) 1-1-06-29, containing 0.227 acres, more or less, being (a) LCA 4866 (Volume 3 Page 494); (b) NR Volume 6 Page 211 (Hawaiian and English); (c) NT Volume 5 Page 363 (Hawaiian and English); (d) FT Volume 8 Page 229; (e) Translation of Apana 2 LCA 4866; and (f) Derivation Instrument(s).

201. As adjudicated, LCA 4866 is a kuleana award for lands claimed by a native tenant

pursuant to the "Kuleana Act." As described by testimony thereto, Apana 2 was kalo (taro) land.

202. **Exhibit "A-99"** is TMK (2) 1-1-06-30, containing 0.075 acres, more or less, being (a) LCA 4853-D (Volume 3 Pages 832-833); (b) NT Volume 5 Pages 431-432 (Hawaiian and English); (c) FT Volume 8 Page 291; (d) RP 3276 (Volume 14 Pages 345-346); (e) Translation of Apana 2 LCA 4853-D; and (f) Derivation Instrument(s).

203. As adjudicated, LCA 4853-D is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apana 2 contained two (2) lo'i kalo (irrigated taro terraces).

204. **Exhibit "A-100"** is TMK (2) 1-1-06-31, designated Lot 46-A, containing 0.61 acres, more or less, being (a) LP Grant S-15846 (LMO Copy) and (b) Tax Assessment Sheet(s).

205. As granted, LP Grant S-15846 is a transfer of government land for agricultural homestead purposes. As assessed, Lot 46-A is zoned for agricultural use.

206. **Exhibit "A-101"** is TMK (2) 1-1-06-32, designated Lot 41-A, containing 0.70 acres, more or less, being (a) LP S-Grant 14781 (Volume 110 Pages 301-304) and (b) Derivation Instrument(s).

207. As granted, LP Grant S-14781 is a purchase of government land for agricultural homestead purposes. As described therein, Lot 41-A is a taro lot.

208. **Exhibit "A-102"** is TMK (2) 1-1-06-33, containing 1.32 acres, more or less, being (a) LCA 4772 (Volume 3 Page 485-486); (b) NR Volume 6 Page 198 (Hawaiian and English); (c) NT Volume 5 Page 368 (Hawaiian and English); (d) FT Volume 8 Page 224; (e) Translation of Apana 1 LCA 4772; and (f) Derivation Instrument(s).

209. As adjudicated, LCA 4772 is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apana 1 was an ili (land

area).

210. **Exhibit "A-103"** is TMK (2) 1-1-06-34, containing 0.53 acres, more or less, a portion of the Government (Crown) Land of Wailua, being (a) Tax History Sheet and (b) Tax Assessment Sheet(s) showing no lessee(s).

211. As assessed, TMK (2) 1-1-06-34 is zoned for agricultural use.

212. **Exhibit "A-104"** is TMK (2) 1-1-06-35, containing 0.036 acres, more or less, being (a) LCA 5051 (Volume 3 Pages 613-614); (b) NR Volume 6 Page 233 (Hawaiian and English); (c) NT Volume 5 Pages 236 and 370 (Hawaiian and English); (d) FT Volume 8 Page 236; (e) RP 3788 (Volume 13 Pages 37-38); (f) Translation of Apana 2 LCA 5051; and (g) Derivation Instrument(s).

213. As adjudicated, LCA 5051 is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apana 2 contained one (1) lo'i (irrigated terrace).

214. **Exhibit "A-105"** is TMK (2) 1-1-06-36, containing 1.10 acres, more or less, being (a) LCA 5049 (Volume 3 Pages 495-496); (b) NR Volume 6 Page 232 (Hawaiian and English); (c) NT Volume 5 Page 362 (Hawaiian and English); (d) FT Volume 8 Pages 229-230; (e) RP 3257 (Volume 14 Pages 307-308); (f) Translation of Apana 1 LCA 5049; and (g) Derivation Instrument(s).

215. As adjudicated, LCA 5049 is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apana 1 was a mo'o (narrow strip of land).

216. **Exhibit "A-106"** is TMK (2) 1-1-06-37, containing 0.065 acres, more or less, being (a) LCA 5055 (Volume 3 Pages 490-491); (b) NR Volume 6 Pages 234-235 (Hawaiian and

English); (c) NT Volume 5 Page 365 (Hawaiian and English); (d) FT Volume 8 Page 231; (e) Translation of Apana 2 LCA 5055; and (f) Derivation Instrument(s).

217. As adjudicated, LCA 5055 is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apana 2 contained two (2) lo'i (irrigated terraces).

218. **Exhibit "A-107"** is TMK (2) 1-1-06-38, containing 0.85 acres, more or less, a portion of the Government (Crown) Land of Wailua, being (a) Tax History Sheet(s) showing usage and (b) Tax Assessment Sheet(s) showing current lessee(s).

219. As assessed, TMK (2) 1-1-06-38 is zoned for agricultural use and leased for agricultural purposes.

220. **Exhibit "A-108"** is TMK (2) 1-1-06-39, containing 0.225 acres, more or less, being (a) LCA 4725 (Volume 3 Page 493); (b) NR Volume 6 Page 193 (Hawaiian and English); (c) NT Volume 5 Page 364 (Hawaiian and English); (d) FT Volume 8 Page 230; (e) RP 2800 (Volume 13 Pages 61-62); (f) Translation of LCA 4725; and (g) Derivation Instrument(s).

221. As adjudicated, LCA 4725 is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, the lot contained nine (9) lo'i (irrigated terraces).

222. **Exhibit "A-109"** is TMK (2) 1-1-06-40, containing 0.152 acres, more or less, being (a) LCA 4773 (Volume 3 Pages 491-492); (b) NR Volume 6 Page 199 (Hawaiian and English); (c) NT Volume 5 Pages 364-365 (Hawaiian and English); (d) FT Volume 8 Page 231; (e) RP 3261 (Volume 14 Pages 315-316); (f) Translation of Apana 2 LCA 4773; and (g) Derivation Instrument(s).

223. As adjudicated, LCA 4773 is a kuleana award for lands claimed by a native tenant

pursuant to the "Kuleana Act." As described by testimony thereto, Apana 2 contained one (1) lo'i (irrigated terrace).

224. **Exhibit "A-110"** is TMK (2) 1-1-06-41, containing 0.16 acres, more or less, a portion of the Government (Crown) Land of Wailua, being (a) Tax History Sheet(s) showing usage and (b) Tax Assessment Sheet(s) showing current lessee(s).

225. As assessed, TMK (2) 1-1-06-41 is zoned for agricultural use and leased for agricultural purposes.

226. **Exhibit "A-111"** is TMK (2) 1-1-06-42, containing 0.464 acres, more or less, being (a) LCA 4774 (Volume 3 Page 490); (b) NR Volume 6 Page 199 (Hawaiian and English); (c) NT Volume 5 Page 365 (Hawaiian and English); (d) FT Volume 8 Page 231; (e) RP 2805 (Volume 13 Pages 71-72); (f) Translation of LCA 4774; and (g) Derivation Instrument(s).

227. As adjudicated, LCA 4774 is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, the lot was a mo'o (narrow strip of land).

228. **Exhibit "A-112"** is TMK (2) 1-1-06-43, containing 0.40 acres, more or less, a portion of the Government (Crown) Land of Wailua, being (a) Tax History Sheet(s) showing usage and (b) Tax Assessment Sheet(s) showing current lessee(s).

229. As assessed, TMK (2) 1-1-06-43 is zoned for agricultural use and leased for agricultural purposes.

230. **Exhibit "A-113"** is TMK (2) 1-1-06-45, designated Lot 47-A, containing 0.83 acres, more or less, being (a) LP S-Grant 14533 (Volume 107 Pages 122-125) and (b) Derivation Instrument(s).

231. As granted, LP Grant S-14533 is a purchase of government land for agricultural

homestead purposes. As described therein, Lot 47-A is a taro lot.

232. **Exhibit "A-114"** is TMK (2) 1-1-06-46, designated Lot 40-A, containing 0.83 acres, more or less, being (a) LP Grant S-14888 (Volume 110 Pages 353-354) and (b) Derivation Instrument(s).

233. As granted, LP Grant S-14888 is a purchase of government land for agricultural homestead purposes. As described therein, Lot 40-A is a taro lot.

234. **Exhibit "A-115"** is TMK (2) 1-1-06-47, designated Lot 42-A, containing 0.54 acres, more or less, being (a) LP Grant 13239 (Volume 94 Pages 189-193) and (b) Derivation Instrument(s).

235. As granted, LP Grant 13239 is a fee simple conversion of Homestead Lease No. 67 for agricultural homestead purposes. As described therein, Lot 42-A is a taro lot.

236. **Exhibit "A-116"** is TMK (2) 1-1-06-48, designated Lot 38-A, containing 0.60 acres, more or less, being (a) LP Grant 13209 (Volume 94 Pages 37-41) and (b) Derivation Instrument(s).

237. As LP Grant 13209 is a fee simple conversion of Homestead Lease No. 78 for agricultural homestead purposes. As described therein, Lot 38-A is a taro lot.

238. **Exhibit "A-117"** is TMK (2) 1-1-06-49, designated Lot 39-A, containing 0.54 acres, more or less, being (a) LP Grant 13191 (Volume 93 Pages 473-477) and (b) Derivation Instrument(s).

239. As granted, LP Grant 13191 is a fee simple conversion of Homestead Lease No. 79 for agricultural homestead purposes. As described therein, Lot 39-A is a taro lot.

240. **Exhibit "A-118"** is TMK (2) 1-1-06-67, designated Lot 34-A, containing 0.65 acres, more or less, being (a) LP Grant 13591 (Volume 97 Pages 395-399) and (b) Derivation

Instrument(s).

241. As granted, LP Grant 13591 is a fee simple conversion of Homestead Lease No. 76 for agricultural homestead purposes. As described therein, Lot 34-A is a taro lot.

242. **Exhibit "A-119"** is TMK (2) 1-1-06-68, designated Lot 5-A, containing 0.56 acres, more or less, being (a) LP Grant S-15361 (Volume 115 Pages 317-321) and (b) Derivation Instrument(s).

243. As granted, LP Grant S-15361 is a purchase of government land by a homesteader for agricultural homestead purposes. As described therein, Lot 5-A is taro land.

244. **Exhibit "A-120"** is TMK (2) 1-1-06-69, designated Lot 3-A, containing 0.56 acres, more or less, being (a) LP Grant S-15844 (LMO Copy) and (b) Tax Assessment Sheet(s).

245. As granted, LP Grant S-15844 is a transfer of government land for agricultural homestead purposes. As assessed, Lot 3-A is zoned for agricultural use.

246. **Exhibit "A-121"** is TMK (2) 1-1-06-70, containing 2.76 acres, more or less, a portion of the Government (Crown) Land of Wailua, being (a) Tax History Sheet(s) showing usage and (b) Tax Assessment Sheet(s) showing current lessee(s).

247. As assessed, TMK (2) 1-1-06-70 is zoned for agricultural use and leased for agricultural purposes.

248. **Exhibit "A-122"** is TMK (2) 1-1-06-72, designated Lot 37-A, containing 0.61 acres, more or less, being (a) LP Grant 13304 (Volume 95 Pages 13-17) and (b) Derivation Instrument(s).

249. As granted, LP Grant 13304 is a fee simple conversion of Homestead Lease No. 77 for agricultural homestead purposes. As described therein, Lot 37-A is a taro lot.

250. **Exhibit "A-123"** is TMK (2) 1-1-06-73, designated Lot 43-A, containing 0.75

acres, more or less, being (a) LP Grant S-15847 (LMO Copy) and (b) Tax Assessment Sheet(s).

251. As granted, LP Grant S-15847 is a transfer of government land for agricultural homestead purposes. As assessed, Lot 43-A is zoned for agricultural use.

252. The total acreage for all parcels assessed under TMK (2) 1-1-06, situate in Wailua, Ko'olau, Hana, Maui, is 30.227 acres, more or less.

253. **Exhibit "A-124"** is TMK (2) 1-1-07-03, containing 107 acres, more or less, being (a) RP Grant 1911 (Volume 10 Pages 237-238); (b) Translation of RP Grant 1911; (c) Tax Assessment Sheet(s) showing usage and zoning; and (d) Derivation Instrument(s).

254. As granted, RP Grant 1911 is a purchase of government land for agricultural purposes. As described therein, the lot ran from the mountain to the sea.

255. **Exhibit "A-125"** is TMK (2) 1-1-07-20, containing 53.50 acres, more or less, being (a) RP Grant 2091 (Volume 11 Pages 71-72); (b) Original translation of RP Grant 2091 with map; (c) Tax Assessment Sheet(s); and (d) Derivation Instrument(s).

256. As granted, RP Grant 2091 is a purchase of government land for agricultural purposes. As described therein, the lot runs from the government road to the sea.

257. The total acreage for all parcels assessed under TMK (2) 1-1-07, situate at Waianu & Pahoa, Ko'olau, Hana, Maui, is 160.50 acres, more or less.

258. **Exhibit "A-126"** is TMK (2) 1-1-08-04, containing 9.20 acres, more or less, comprised of two (2) different land titles, being: [1] (a) LCA 3472 (Volume 3 Pages 846-847); (b) NR Volume 6 Page 88 (Hawaiian and English); (c) NT Volume 5 Page 437 (Hawaiian and English); (d) FT Volume 8 Page 297; (e) Translation of LCA 3472; and (f) Derivation Instrument(s); and [2] (a) RP Grant 3177 (Volume 14 Pages 419-420) and (b) Derivation Instrument(s).

259. As adjudicated, LCA 3472 is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, the lot was a taro (kalo) and house lot.

260. As granted, RP Grant 3177 is a purchase of government land for agricultural purposes. As described therein, the lot ran along Hamau Stream.

261. **Exhibit "A-127"** is TMK (2) 1-1-08-05, containing 120.97 acres, more or less, a portion of the Government (Crown) Land of Wailua, being (a) Tax History Sheet showing usage and Tax Assessment Sheet(s) showing no lessee(s).

262. As assessed, TMK (2) 1-1-08-05 is zoned for agricultural and conservation use.

263. **Exhibit "A-128"** is TMK (2) 1-1-08-09, containing 13.70 acres, more or less, being (a) RP Grant 3215 (Volume 14 Pages 495-496), (b) Map of RP Grant 3215; and (c) Derivation Instrument(s).

264. As granted, RP Grant 3215 is a purchase of government land for agricultural purposes. As described therein, the lot runs along Palauhulu Stream.

265. **Exhibit "A-129"** is TMK (2) 1-1-08-10, containing 103.82 acres, more or less, being (a) RP Grant 1899 (Volume 10 Pages 203-204), (b) Translation of RP Grant 1899; and (c) Derivation Instrument(s).

266. As granted, RP Grant 1899 is a purchase of government land for agricultural purposes. As described therein, the lot ran along Wailua Stream.

267. **Exhibit "A-130"** is TMK (2) 1-1-08-11, containing 151.65 acres, more or less, being (a) RP Grant 2549 (Volume 13 Pages 327-328), (b) Translation of RP Grant 2549; and (c) Derivation Instrument(s).

268. As granted, RP Grant 2549 is a purchase of government land for agricultural

purposes. As described therein, the lot ran along the Ditch of Wailua.

269. The total acreage for all parcels assessed under TMK (2) 1-1-08, situate in Ke'anae - Wailua, Ko'olau, Hana, Maui, is 397.41 acres, more or less.

270. **Exhibit "A-131"** is TMK (2) 1-2-02-09, containing 4.17 acres, more or less, being (a) RP Grant 3178 (Volume 14 Pages 421-422), (b) Map of RP Grant 3178, and (c) Derivation Instrument(s).

271. As granted, RP Grant 3178 is a purchase of government land for agricultural purposes. As described therein, the lot ran along Haiha Stream.

272. The total acreage for all parcels assessed under TMK (2) 1-2-02, situate at Makapipi, Ko'olau, Hana, Maui, is 4.17 acres, more or less.

273. **Exhibit "A-132"** is TMK (2) 2-9-01-14, containing 22.81 acres, more or less, comprised of four (4) different land titles, being [1] (a) LCA 5595-E (Volume 8 Page 320); (b) NR Volume 6 Page 305 (Hawaiian and English); (c) NT Volume 5 Page 436 (Hawaiian and English); (d) FT Volume 8 Page 119; (e) RP 3242 (Volume 14 Pages 277-278); (f) Translation of Apana 1 and Poalima LCA 5595-E; and (g) Derivation Instrument(s); [2] (a) RP Grant 1082 (Volume 6 Pages 135-136), (b) Translation of RP Grant 1082; and (c) Derivation Instrument(s); [3] (a) RP Grant 1918 (Volume 10 Pages 341-342), (b) Translation of RP Grant 1082; and (c) Derivation Instrument(s); [4] (a) RP Grant 3101 (Volume 14 Pages 267-268), (b) Translation of Apana 2 RP Grant 3101; and (c) Derivation Instrument(s).

274. As adjudicated, LCA 5595-E is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apana 1 contained twenty-seven (27) lo'i (irrigated terraces) covering 3.32 acres.

275. As granted, RP Grant 1082 contained 8 acres; RP Grant 1918 contained two (2)

poalima (chief's plantations) without survey; and RP Grant 3101 ran along three (3) streams and contained 9.82 acres.

276. **Exhibit "A-133"** is TMK (2) 2-9-01-23, containing 0.08 acres, more or less, being (a) RP Grant 1903 (Volume 10 Pages 211-212), (b) Translation of RP Grant 1903; and (c) Derivation Instrument(s).

277. As granted, RP Grant 1903 contained one (1) lo'i poalima (chief's irrigated terrace plantation) without survey.

278. **Exhibit "A-134"** is TMK (2) 2-9-01-25, containing 1.10 acres, more or less, being (a) LCA 5516 (Volume 8 Pages 332-333); (b) NR Volume 5 Page 63 (Hawaiian and English); (c) NT Volume 5 Page 494 (Hawaiian and English); (d) FT Volume 8 Page 117; (e) RP 3237 (Volume 14 Pages 267-268); (f) Translation of Apana 2 of LCA 3472; and (g) Derivation Instrument(s).

279. As adjudicated, LCA 5516 is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apana 2 was taro and kula (plain) land.

280. The total acreage for all parcels assessed under TMK (2) 2-9-01, situate in Honopou, Hamakualoa, Makawao, Maui, is 23.99 acres, more or less.

281. **Exhibit "A-135"** is TMK (2) 2-9-14-13, containing 0.154 acres, more or less, being (a) LCA 5595-E (Volume 8 Page 320); (b) NR Volume 6 Pages 305-306 [*numbered as "5495"*] (Hawaiian and English); (c) NT Volume 5 Page 496 [*numbered as "5495"*] (Hawaiian and English); (d) FT Volume 8 Page 119; (e) RP 3242 (Volume 14 Pages 277-278); (f) Translation of Apana 2 LCA 5595-E; and (g) Derivation Instrument(s).

282. As adjudicated, LCA 5595-E is a kuleana award for lands claimed by a native

tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apana 2 was a taro pasture.

283. **Exhibit "A-136"** is TMK (2) 2-9-14-23, containing 0.47 acres, more or less, being (a) LCA 5516 (Volume 8 Pages 332-333); (b) NR Volume 5 Page 63 (Hawaiian and English); (c) NT Volume 5 Page 494 (Hawaiian and English); (d) FT Volume 8 Page 117; (e) RP 3237 (Volume 14 Pages 267-268); (f) Translation of Apana 1 of LCA 5516; and (g) Derivation Instrument(s).

284. As adjudicated, LCA 5595-E is a kuleana award for lands claimed by a native tenant pursuant to the "Kuleana Act." As described by testimony thereto, Apana 1 was used for taro and pasture.

285. The total acreage for all parcels assessed under TMK (2) 2-9-14, situate in Honopou, Makawao, Maui, is 2.07 acres, more or less.

I declare under penalty of law that the foregoing is true and correct.

DATED: Honolulu, Hawaii, on December 30, 2014.

CASE NO. CCH-MA13-01  
DECLARATION OF TERRANCE P.K.  
AKUNA

DECLARATION OF TERRANCE P.K. AKUNA

I, Terrance P.K. Akuna, declare that:

1. The statements below are based upon my personal knowledge.
2. I am Hawaiian.
3. I am a member of Nā Moku Aupuni O Ko'olau Hui.
4. My grandfather lived off the land, nothing else. I grew up fishing, hunting, and gathering.
5. I am a taro farmer. My family grows kalo on about 1½ to 2 acres of property irrigated by Waioakamilo and Kualani.
6. I am farming this land based on my desire to continue my cultural practices and traditions.
7. I learned how to farm taro from my family and the people who farmed these lands before I did.

8. Traditionally, my 'ohana gathered 'ōpae, 'o'opu, hihivai, pohole, 'ulu, banana, mountain apple, pepeiau, olena, and wauke in Honopou, Waikamoi, Alo, Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu, Nuaailua, Piinaau, Palauhulu, 'Ōhi'a/Waianu, Waioakamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapipi, and Waiohue.
9. Traditionally, my 'ohana fished for ulua, 'ō'io, pala, kole, poopaa, enenue, anae, moi, akule, 'awa, pakeawa, aholehole, crab and lobster in or near the mouths of Honopou, Waikamoi, Alo, Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu, Nuaailua, Piinaau, Palauhulu, 'Ōhi'a/Waianu, Waioakamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapipi, and Waiohue.
10. My 'ohana also engaged in mālama 'āina and mālama kahawai by only taking what they could eat in and around Waikamoi, Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu, Nuaailua, Piinaau, Palauhulu, 'Ōhi'a/Waianu, Waioakamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Hanawi, Makapipi, and Waiohue.
11. Currently, my 'ohana and I gather the same things as my kupuna before me in Waikamoi, Alo, Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu, Nuaailua, Piinaau, Palauhulu, 'Ōhi'a/Waianu, Waioakamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapipi, and Waiohue. However, we can't get the same amount of these resources as my 'ohana used to be able to.
12. My family and I fish for whatever fish we are on for in or near the mouth of in Waikamoi, Alo, Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu, Nuaailua, Piinaau, Palauhulu, 'Ōhi'a/Waianu, Waioakamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Makapipi, and Waiohue. We catch the same kind of fish as our kupuna, just less of them. We have to go further. We also use newer tools than before time.
13. I gather and fish to feed my family and teach younger generations how we live in such an isolated place without stores. Our streams are our iceboxes.

14. We engage in mālama 'āina and mālama kahawai by only taking what we need from the streams we gather in and cleaning Waioakamilo, Kualani, and Wailua from makai to mauka. For example, my grandpa taught me when fishing for moi, you only keep the small ones, which are the males. The big females should be left so there will be more fish.
15. We also camp, fish, and hunt in and around Nuaailua and swim in the bays from Honopou to Makapipi. As soon as my son and nephew could walk, we would take them down to the beach.
16. I appreciate seeing the water flowing from mauka to makai in all streams from Honopou to Makapipi. This is nature at its prime.
17. If there is no water, there is no life. Life is everything. The lack of stream flow has been a problem for me because I had to move out and get a job to support my family.
18. If there was enough water in the streams, I would live at home and live off the land we were raised on, gathering what my kupuna gathered in and around Punalau/Kolea, Honomanu, Nuaailua, Piinaau, Palauhulu, 'Ōhi'a/Waianu, Waioakamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula, Makapipi, and Waiohue. Right now, we can't open all patches because water won't flow down.
19. If there were more water in the streams, I would fish for all the fish that have been fished for generations in or near the mouth of all the streams from Honopou to Makapipi.
20. If water were put back in the streams, I would continue to mālama the streams by only taking what we could eat and cleaning all the rivers -- especially Piinaau, Palauhulu, Waioakamilo, Kualani, Wailua, and Waikani (Wailuanui) -- routinely, but healthy rivers clean themselves.
21. If there was more water in the streams, I would go camping, fishing, and gathering from Waikamoi to Makapipi. I would also appreciate the natural scenery in and around Honopou, Hanchoi, Waikamoi, Alo, Wahinepee, Puohokamoa, Haipuaena, Punalau/Kolea, Honomanu, Nuaailua, Piinaau, Palauhulu, 'Ōhi'a/Waianu, Waioakamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaaka, Hanawi, Makapipi, and Waiohue. I would enjoy the clean air, cool water, and native trees and shrubs.

I declare under penalty of perjury that the foregoing is true and correct.  
DATED: Kihei, Maui, Hawai'i, December 16, 2014.

CASE NO. CCH-MA13-01  
DECLARATION OF TY KĀWĪKA  
TENGAN, PhD

DECLARATION OF TY KĀWĪKA TENGAN, PhD

1. I am competent to testify to the matters herein, and unless otherwise indicated, I make this declaration based upon my personal knowledge, skill, experience, training and education.
2. I am a Native Hawaiian, born into a family with strong genealogical ties to our Hawaiian ancestors. Native Hawaiian custom and religion was and is an integral part of my family's daily life.
3. Today, I am a practitioner and a scholar of Native Hawaiian cultural and religious practices. I speak the Hawaiian language fluently.
4. In 2003, I received a PhD from the Department of Anthropology at the University of Hawai'i at Mānoa.

5. Currently, I am the Chair and Associate Professor of the Department of Ethnic Studies and also Associate Professor of the Department of Anthropology at the University of Hawai'i at Mānoa.
6. Through practice, community service, the writing of books, journal articles, and reports, I have dedicated my academic career to the study of Native Hawaiian culture and religion. Attached hereto as Exhibit A is a copy of my recent curriculum vitae.
7. My opinions in this Declaration are based upon my personal knowledge, skill, experience, training, and education.
8. Further some of my opinions in this Report are based upon the following source material: Alexander, W.D. *A Brief History of Land Titles in Hawai'i* (1882); Handy, E.S. Craigihill, *Hawaiian Planter* (1940); Handy, & Pukui, *Native Planters* (1972); and Maly, Kepa, VOLUME I *Wai O Ke Ola: He Wahi Mo'olelo No Maui Hikina. A Collection of Native Traditions and Historical Accounts of the Lands of Hāmākua Poko, Hāmākua Loa and Ko'olau, Maui Hikina (East Maui), Island of Maui* (2001).
9. I have reviewed the witness statements of Edward Wendt, Lezley Jacintho, and Terrance P. Akuna provided to me by the Native Hawaiian Legal Corporation.
10. I do not have a personal or familial relationship with any of the named Petitioners in this case.
11. Petitioners have neither paid me nor promised any compensation for my opinions or testimony in this matter.
12. On or about December 4, 2007, I testified as an expert witness at a State of Hawai'i administrative hearing before the Commission on Water Resource Management for the State of Hawai'i in "RE Iao Ground Water Management Area High-Level Source Water Use Permit Applications and Petition to Amend Interim Instream Flow Standards of Waiehe'e, Waiehu, Iao, & Waikapu Streams Contested Case Hearing," Case No. CCH-MA-06-01.
13. In general, Native Hawaiian spiritual tenets and beliefs are expressed and perpetuated in their relationship to each other and to their *kulāwī* (native land). The naming of winds, rains, landmarks, and waters perpetuate the traditional

knowledge that the inhabitants developed of these areas and their resources over centuries of cultivation and habitation.

14. The first inhabitants of the islands were remembered as akua "gods" for their capacity to endow nature with cultural features and "create" society.
15. Kāne and Kanaloa were two of the four primary akua in the Hawaiian pantheon; Kāne was associated with fresh water and taro, and Kanaloa with the ocean and fishing. Wai, fresh water, is an important element in Hawaiian spirituality and fundamental to the exercise of traditional and customary practices. Fresh spring water is presented as ho'ōkupu to the akua (gods). Kāne and Kanaloa are known to have introduced the ritual, social, and medicinal use of drinking 'awa (kava), a drink that requires the waters of Kāne.
16. Handy, Handy, and Pukui (1972) described the correlation between water and life in Hawai'i:  
  
...The life of taro was dependent upon water. In his role as life-giver, Kāne the procreator was addressed as Kane-of-the-water-of-life (Kāne-kā-wai-ola). Water (wai) was so associated with the idea of bounty that the word for wealth was *waiwai*. And water rights were the basic form of law, the Hawaiian word for which was *ka-na-wai*, meaning "relative to water..." [1972:19] [cited in in Maly (2001:21)].
17. East Maui was historically divided into 8 moku or districts, all meeting at a large rock on the northeast brink of the crater of Haleakalā, called Palaha. Alexander (1882:175-76).
18. The 27 streams from Honouliuli to Makapipi fall into the moku of Hāmākualoa and Ko'olau. The two moku are both included in the larger region known as known as Maui Hikina, East Maui, each having unique characteristics. Lyons (1875) and Coulter (1935) as cited in Maly (2001:7).

#### HĀMĀKUĀLOA

19. Hāmākualoa is characterized by numerous minute ahupua'a which indicate a dense population once settled there. Handy (1940:109).
20. J. Waiamānu, recounts the story of Kāne and Kanaloa (or Kāneloa, in this version) in *Ka Ho'omana Kahiko*, Ka Nupepa Kū'oko'a, January 19, 1865 in which Kāne and Kanaloa sailed to Maui and drank 'awa in Hāmākua. Because there was no

water, they caused fresh water to flow which was called "ka wai a Kaneloa" (the water of Kaneloa). The actual location of this spring, Kaneloa, is unknown today. Maly (2001:21).

21. Hāmākua loa is described as follows by firsthand accounts during the 1930s-1950s after the water diversions were in place:

Two *kama'aina* at Ke'anae said that there were small *lo'i* developments watered by Ho'olawa, Waipi'o, Hanalei, Hoalua, Kailua, and Na'ii'i'ihale Streams, all of which flow in deep gulches. Stream taro was probably planted along the watercourses well up into the higher *kula* land and forest taro throughout the lower forest zone. The number of very narrow *ahupua'a* thus utilized along the whole of the Hāmākua coast indicates there must have been a very considerable population. This would be despite the fact that it is an area of only moderate precipitation because of being too low to draw rain out of trade winds flowing down the coast from the rugged and wet northeast Ko'olau area that lies beyond. It was probably a favorable region for breadfruit, banana, sugar cane, arrowroot, and for yams and 'awa in the interior. The slopes between gulches were covered with good soil, excellent for sweet potato planting. The low coast is indented by a number of small bays offering good opportunity for fishing. The *Alaloa*, or "Long-road," that went around Maui passed through Hāmākua close to the shore, crossing streams where the gulches opened to the sea [Handy et. al. 1972:502] [as cited in Maly (2001:8) (emphases in Maly)].

22. Native testimony indicates "there are many *lo'i* [in Honopou]" *Ibid.* at 120-21, 125, 129, 194, 201. See also *ibid.* at 104, 106, 127, 130, 135, 203, 205-06, 208-10, 212, 214, 220, 225-26.

23. The famous Alaloa or Alanui that circled the island was created by the high chief Kiha-a-Pi'ilani (or Kihapi'ilani) after securing his rule over Maui. In *Ka Nūpepa Kūloa*, August 23, 1884, Moses Manu related that after paving sections of the trail in different parts of the island, Kihapi'ilani "began the paving in the forest of 'O'opulua [i.e., 'O'opulua], at Ko'olau, extending from Kawahinepe'e to Kaloa, then on to Pāpa'a'ea, and on to Ka'ohēkanu at Hāmākua Loa" (translation and emphasis by Maly (2001:27). Abraham Fornander (1996:206) also noted that Kihapi'ilani "kept peace and order in the country, encouraged agriculture, and improved and caused to be paved the difficult and often dangerous roads over the Palis of Kaupo, Hana, and Koolau—a stupendous work for those times, the remains of which may still be seen in many places, and are pointed out as the

"Kipapa of Kihapiilani" (cited in Maly (2001:28)). The trail was significant because it created an interconnected cultural and historical landscape where customary practices of gathering, farming, exchange, and travel could be conducted from Hāmākua Loa to Ko'olau and beyond.

## KO'OLAU

24. The Ko'olau region of Maui has been described as the "wettest coastal region in all the islands." Handy, Handy, & Pukui (1972:498) as cited in Maly (2001:8).
25. "Oopuola Gulch marked the northwestern boundary of Ko'olau. Its stream, and likewise Waikamoi, Puohokamoa, and Haipuaena streams watered small patches." Handy (1940:109).
26. Handy, Handy, and Pukui (1972:272) reported that "On the northeast flank of the great volcanic dome of Haleakala...the two adjacent areas of Ke'anae and Wailua-nui comprise the fourth of the main Maui centers and the chief center on this rugged eastern coast. It supported intensive and extensive wet-taro cultivation. Further eastward and southward along this windward coast line is the district of Hana, the fifth great center[.]" As cited in Maly (2001:7).
27. For generations following initial settlement, communities were clustered along the watered, windward (ko'olau) shores of the Hawaiian Islands. Along the ko'olau slopes, streams flowed and rainfall was abundant, and agricultural production became established. The ko'olau region also offered sheltered bays from which deep sea fisheries could be easily accessed, and near shore fisheries, enriched by nutrients carried in the fresh water, could be maintained in fishponds and coastal fisheries. It was around these bays that clusters of houses where families lived, could be found, and in these early times, the residents generally engaged in subsistence practices in the forms of agriculture and fishing. Handy, Handy, and Pukui (1972:287) cited in Maly (2001:6).
28. Waikamoi, Puohokamoa, and Haipuaena watered small *lo'i* areas. *Ibid.* at 9.
29. "Honomanu, a large stream with a broad deep valley at its seaward end and a good beach for fishing canoes and gear, facing its broad bay. Anciently Honomanu supported a large population. Old terraces run back into the valley as far as the level land goes[.]" *Ibid.*

30. Just beyond Honomanu is Nu'uailua [Nu'a'aialua], flat bottomed like Honomanu but smaller. Terraces cover the flatlands and much taro was formerly raised, watered by an ample stream; but the valley has long been uninhabited." *Ibid.*

31. Ke'eanae "is a unique wet-taro growing ahupua'a." *Ibid.* at 9. "It is on the broad flat peninsula of lava extending for about a half a mile into the sea from the western line of the valley that Ke'eanae's famed taro patches are spread out -- striking evidence of old Hawaii's ingenuity." *Ibid.*; see also *ibid.* at 137, 139-40, 145-46, 251, 254, 271, 273, 281-86, 288, 289.

32. In *Ka Nupepa Kuokoa*, dated October 4, 1923, Mrs. Annie Kalau related a visit to Maui Hikina wherein her hosts took her to Waianu at 'Ōhi'a and told her a story of how Kāne and Kanaloa used their spears to cause fresh water to flow for their 'awa; these waters irrigated lo'i in this valley at the time of her visit.

33. Beyond Ke'eanae "is a sizable bay formed by erosion where three streams flow into the ocean. . . . About half the gently sloping land seaward of the cliff was terraced with lo'i which were watered by Wailuanui (Big Wailua) Stream, the larger of the three that flow into the bay. . . . And on high ground there was a war temple" Maly (2001:10). "Wailua has been notable for its continued occupancy and cultivation by Hawaiian families." *Ibid.*; see also *ibid.* at 137, 142-44, 150-52, 154-56, 241-44, 246-51, 257, 277-79, 283, 291.

34. Beyond Wailuanui "there are a succession of small deep gulches, each one having a few lo'i: East Wailuaiki and West Wailuaiki (Little Wailua), Kapili'ula [Kopili'ula], Waiohue, Pa'akea, Kapa'ula, Hanawi. Then comes Nahiku, a settlement spread over gently rising ground above the shore, with a number of groups of lo'i watered from Makapipi Stream." *Ibid.*

35. In his 1861 story of the pig god Kamapua'a, published in *Ka Hae Hawaii*, G.W. Kahiolo noted that Wailuaiki was the home of the goddess Kapoma'ilele, the sister of Pele who distracted Kamapua'a with her flying genitals, luring him to Maui. *Ibid.* at 23.

36. The legendary story of Laukaieie as told by Moses Manu in *Nupepa Ka Oiaio* (1894-1895) provides an abundance of rich cultural information about the Ko'olau-Hāmākua region and its traditional and customary practices. Some activities include (starting in Nāhiku and going to Ho'olawa, adjacent to

Honopou): harvesting lū'au of the god at Nāhiku; seeing the kalo that grew on the cliffs of Hanawī and watching a man carry a large taro there; walking on a path at Waiohue; passing the point of Kanokupeu which is a hula'ana (trail that crosses the water between two points of land); watching noio birds, finding a kū'ula i'a (fishing shrine) at 'Ohea cliff; seeing the famed kala fish outside of the point of Mokumana at Pauwahu; passing Kaliae and its renowned winds; traveling to Wailuaiki famed in song where one can see women going to the shore of Kapiliikaunaoa; gathering awa and 'anae fish at Wailuaiki from a fishpond made by Kāne; seeing the stone body of the supernatural octopus Hā'alua off the landing of Wailuanui; arriving at the muliwai of Wai'ōlohe at Ke'anae; finding a nearby cave that ran to the uplands of Kūō; visiting a pond mauka of Puhipinao where the prophet shark Hi'u was born; glimpsing Kahekili's leaping place of Pu'ukanohua; entering a cave at Kawahinepe'e that led to Waikamō'i stream and 'O'opuola, where slept the supernatural 'o'opu Ka'o'opili; viewing a carved stone in a cave flanked by ti plants at Maka'iwa; reaching Hāwini to gaze at the cove of Hōlawa (Ho'olawa). Maly (2001:34-36). What emerges from this journey is the significance of pathways, those on land or sea, through caves or streams, for connecting the gods, land, and people in an integrated cultural landscape. At the core of this, free flowing water is central for creating abundance, life, and growth in the region.

37. Today the importance of water to the perpetuation of Hawaiian culture and tradition is echoed in the following witness statements: "Without the water, my whole way of life would be lost," Edward Wendt, par. 20, "Spiritually, we are connected to the water. Water is life. Without water we will not be." Lezeley Jacintho, par. 24, and "If there is no water, there is no life." Terrance P. Akuna, par. 18.

38. Fresh water is essential to the perpetuation of Native Hawaiian traditional customary practices. The return of streamflows will support the regeneration of the land and people.

I declare under penalty of perjury that the foregoing statements are true and correct, to the best of my knowledge, information, and belief.

  
TY KAWIKA TENGAN, PhD.

## CURRICULUM VITAE

### Ty P. Kāwika Tengan

#### Office Address

University of Hawai'i at Mānoa  
Department of Ethnic Studies  
2560 Campus Road  
George Hall 308  
Honolulu, Hawai'i 96822  
Tel: (808) 956-5144  
Fax: (808) 956-9494  
Email: ttengan@hawaii.edu

Department of Anthropology  
2424 Maile Way  
Saunders Hall 314  
Honolulu, Hawai'i 96822  
Tel: (808) 956-7831  
Fax: (808) 956-4893

#### Current Position

2013-2016 Chair, Department of Ethnic Studies, University of Hawai'i at Mānoa, Honolulu.

#### Education

2003 PhD, MA (2000), Department of Anthropology, University of Hawai'i at Mānoa, Honolulu. Dissertation: *Hale Mui: (En)gendering Hawaiian Men*.  
Geoffrey M. White, Chair.  
2000 Certificate, International Cultural Studies Program, University of Hawai'i at Mānoa and East-West Center, Honolulu.  
1997 B.A., Department of Anthropology modified with Native American Studies with Honors, Dartmouth College, Hanover.

#### Professional Positions

2008- Associate Professor, Departments of Ethnic Studies and Anthropology, University of Hawai'i at Mānoa, Honolulu, Fall 2008 till present.  
2003- Affiliate Faculty, Center for Okinawan Studies (2008), Department of Women's Studies (2005), Department of Political Science Indigenous Politics Program (2005), Center for Pacific Islands Studies (2004), University of Hawai'i at Mānoa; the International Cultural Studies Graduate Certificate Program (2003), East-West Center and University of Hawai'i at Mānoa  
2003-2008 Assistant Professor, Departments of Ethnic Studies and Anthropology, University of Hawai'i at Mānoa, Honolulu, Fall 2003 till Spring 2008.  
2003- Associate Graduate Faculty, Department of Anthropology, University of Hawai'i at Mānoa, Honolulu, Fall 2003 till present.

#### Grants, Honors and Awards

2012-2015 North Shore Field School, Kamehameha Schools, to conduct archaeology field school at Kūpopolo Heiau and related oral history and ethnographic research (\$225,997 over 3 yrs).  
2010 Hawai'i-Pacific Islands Cooperative Ecosystem Studies Unit Task Agreement, National Park Service, to conduct research on "Hawaiian Soldiering: Indigenous Traditions of Warriorhood" (\$20,000, 1yr).

- 1998-2003 Ford Foundation Predoctoral Fellowship, National Research Council (\$42,000 over 3 years).
- 1998-2003 Mellon Predoctoral Research Grant, Social Science Research Council (\$5,000, 1 year).
- 1995-1997 Mellon Minority Undergraduate Fellowship, Dartmouth College. To conduct ethnographic and historical research on Maui for Honors Thesis "The Architecture of Canoes and Nations: a Case Study in Hawaiian Cultural Nationalism" (\$5,000, 1 year).

## Books

- 2008 *Native Men Remade: Gender and Nation in Contemporary Hawai'i*. Durham, N.C.: Duke University Press.
- Nominated for the Society for the Anthropology of North America's 2009 Delmos Jones and Jagna Sharf Memorial Prize for the Critical Study of North America

## Edited Volumes

- 2010 *Genealogies: Articulating Indigenous Anthropology in/of Oceania*. Special Issue of *Pacific Studies: A Multidisciplinary Journal*, Guest editors T.P.K. Tengan, T.O. Ka'ili and R. Fonoti. Vol 33, Nos 2/3.
- 2001 *Public Anthropology: The Graduate Journal*. Edited at the University of Hawai'i at Mānoa by J. Walsh and T. Tengan.

## Refereed Journal Articles

- 2014 Tengan, Ty P. Kāwika and Lamaku Mikahala Roy. "I Search for the Channel Made Fragrant by the Maile": Genealogies of Discontent and Hope. *Oceania* 84(3):315-330.

### Conference and Symposium Organization

- 2013 Co-organizer, New Mana: Transformations of a Classic Concept in Pacific Languages and Cultures. Australian National University, Sep 19-20.
- 2012 Organizer, "Indigeneity, Anthropology and Native Studies in the Pacific and North America," Native American and Indigenous Studies Association, Uncasville, Connecticut, June 3-6.
- 2010 Moderator, "Kū Ki'i (Standing as the Image/Kū obtained)," Panel at 2<sup>nd</sup> 'Aha Kāne Native Hawaiian Men's Health Conference, Windward Community College, Kāne' ohe, Hawai'i, June 18-20 (With Keawe'aimoku Kaholokūla, Kūkōna Lopes, and Marques Marzan).
- 2009 Moderator, "Plenary Panel: Challenging Inequalities Among Nations," Association for Asian American Studies Annual Meeting, Hilton Waikāki, Honolulu, Hawai'i, April 22-25 (With K. Blaisdel, D. McGregor, and N. Silva)
- 2008 Moderator, "Panel: Planning Pono," Hawai'i Water Works Association Conference, Grand Wailea, Maui, October 29.
- 2006, 2007 Co-organizer of working session on "Articulating Indigenous Anthropology in/of Oceania" at the Annual Meetings of the Association for Social Anthropology in Oceania (San Diego, California, Feb 8-11 and Charlottesville, Virginia, Feb 21-24).
- 2005 Chair of session on "Re-viewing: Language and History" at *Ōlelo Mākuahine: New Hawaiian Language Based Resources*, Hawaiian Historical Society Conference, Hawai'i Pacific University, October 22.
- 2005 Co-organizer of informal session on "Indigenous Anthropology in/of Oceania" at the Annual Meetings of the Association for Social Anthropology in Oceania, Kauai, February 3-6.
- 2003 Chair of session on "Identity, Self, and Subjectivity" at the Annual Meetings of the American Anthropological Association, Chicago, November 19-23.
- 2003 Co-convenor of Ka Li'u o ka Pa'akai 'Aha Kūka Haumāna Ho'okā'oi Hawai'i 'Ōiwi Native Hawaiian Graduate Student Conference, Kamakūkōalani Center for Hawaiian Studies, University of Hawai'i at Mānoa, August 20-22.

### Memberships in Professional Associations

- 2013 Society for American Archaeology
- 2010-2012 Native American and Indigenous Studies Association
- 2008-2012 Association of Indigenous Anthropologists
- 2005-2011 Hawaiian Historical Society
- 2004-2005 Association for Asian American Studies
- 2003-2010 American Ethnological Society
- 2000-2010 Society for Cultural Anthropology
- 2000-2012 American Anthropological Association
- 2000-2002 Native Hawaiian Education Association
- 1998-2008 Association for Social Anthropology in Oceania

### Professional Service

- 2011- Member, Editorial Board, *Hūlili: Multidisciplinary Journal on Hawaiian Well-being*

- 2007- Member, International Advisory Board, *Intersections: Gender and Sexuality in Asia and the Pacific*.
- 2008-2012 Manuscript reviewer, Bergen Books, State University of New York Press, Minnesota University Press, University of Arizona Press, and Kamchamela Schools Press.
- 2002-2011 Submission reviewer, *Anthropologie et Sociétés, American Anthropologist, American Ethnologist, American Studies, Cultural Anthropology, The Contemporary Pacific, Huihui*.
- 2008, 2010 External reviewer for tenure dossiers of faculty at the Colorado State University (2010) and the University of Virginia (2008)
- 2006-2008 Member, Pacific Islander Scholarship Program Committee, Association for Social Anthropology in Oceania.
- 2007, 2009 External Reviewer, PhD Theses of Melissa Cragg (Chair: Mason Durie), Massey University, Aotearoa/New Zealand (2009) & Teena Joanne Brown Pulu (Chair: Michael Goldsmith), University of Waikato, Aotearoa/New Zealand (2007).
- 2004-2005 Member, 2005 Meeting Planning Committee, Association for Social Anthropology in Oceania
- 2001 Consultant for Hawai'i Ethnographic File on eHRAF, Human Relations Area Files.
- University Service**
- 2014 Member, Personnel Committee, Center for Pacific Islands Studies
- 2013- Member, Native Hawaiian Initiative, College of Social Sciences, University of Hawai'i at Mānoa
- 2011-2012 Member, Native Hawaiian Advancement Task Force, University of Hawai'i at Mānoa
- 2011 Participant, Commitment to Liberal Education Initiative, College of Social Sciences, University of Hawai'i at Mānoa, Spring and Fall
- 2011 Speaker, HAP-focus workshop, General Education Office, University of Hawai'i at Mānoa, October 3
- 2010- Member, Editorial Board, Hawai'i 'inuiākea Monograph Series, Hawai'i 'inuiākea School of Hawaiian Knowledge and University of Hawai'i Press
- 2008- Member, Editorial Board, Pacific Islands Monograph Series, Center for Pacific Islands Studies and University of Hawai'i Press
- 2010-2011 Member, Tenure and Promotion Review Committee, UHM
- 2005-2008 Member, Steering Committee (2005-2008), Curriculum Committee (2006-2008) and Admissions Committee (2005-2006), International Cultural Studies Graduate Certificate Program.
- 2005- Member, 5 PhD Committees: J. Salazar, (Poli Sci, 2011-present), C. Castagna (Geography, 2005-present), P. Moore (Poli Sci, 2010), J. Basham (Poli Sci, 2007, second dissertation written in Hawaiian), K. Wong (Linguistics, completed May 2006, first dissertation written in Hawaiian)
- 2004- Member, 4 MA Committees: T. Martinson (Hawaiian Studies, 2009), A. Sala (Music, 2007-present), C. Pang (Music, 2009), K. McKeague (Urban and Regional Planning, completed 2005).
- 2008, 2010 Member, 2 Honors Thesis committees: J. Russo (Political Science, 2008) and N. Nashiro (Political Science, 2010)

- 2006-2007 Member, Honors College Task Force Committee.
- 2006-2007 Member, Honors Futures Committee.
- 2006-2007 Member, Editorial Board, Center for Pacific Islands Studies Occasional Paper Series.
- 2006 Participant, Manoa Forum XIII "Civility," UHM College of Arts and Sciences, Double Tree Alana Hotel, Waikiki, Oct 6-8.
- 2003-2011 Guest lecturer: TPSS 416 Issues Concerning Biotechnology (A. Wicczorek, 2/27/09); Understanding Medicinal Properties of Hawaiian Plants (Wofford College Interim Course; B. Splawn and E. Richardson, 1/12/09); PACS 603 Representing Oceania (V. Hereniko, 10/27/08); POLS 390: Political Inquiry and Analysis (H. Aikau, 10/16/08); EDEF 678: Approaches to Educational Inquiry (W. Nishimoto, 10/14/08); WS 360/ES 365 Pacific/Asian Women in Hawai'i (M. Casumbal-Salazar, 9/25/08); Kōkua A Puni Summer Enrichment Program (HWST, 7/21/11 & 7/23/08); POLS 621: Politics of Indigenous Representation (H. Aikau, 3/22/07); EDCS 632: Qualitative Research Methods – Indigenous Research Methods (M. Maaka, 3/6/06); LAW 520: Advanced Legal Studies – Native Hawaiian Law (M. MacKenzie, 4/17/06); POLS 339/WS 439 Feminist Theory (H. Aikau, 3/14/05); POLS 686 Contemporary Native Hawaiian Politics (4/12/05, N. Silva); PACS 601 Learning Oceania (T. Wesley-Smith, 11/2/05); N. International Cultural Studies: History and Theory (M. Yoshihara, 11/16/05); AMST 683 Museums: Theory, History, Practice (K. Kosasa, 11/16/05); PACS 693: Cultural Identities: American and Pacific Perspectives (V. Hereniko, 2/5/04)
- 2004-2006 Member, Organizing Committee, Ho'okūlāiwi Research Institute for Kanaka Maoli and Indigenous Education.
- 2003- Member, Kūali'i, Native Hawaiian Advisory Council (Executive Committee Member 2004-2005).
- 2004-2006 Faculty advisor, BA in Interdisciplinary Studies (N. Tahauri).
- 2004 Submission reviewer, Occasional Papers Series, Women's Studies.
- 2004 Speaker, Teaching Assistants' training workshop, Center for Teaching Excellence, August 17.
- 2004 Faculty Marshal, Spring Commencement, May 16.
- 2004 Faculty advisor, Native Hawaiian Leadership Project Graduate Assistantship Program (Sean Nālemaile, GRA), Spring-Fall.
- 2003- Member, Pūko'a, System-wide Native Hawaiian Advisory Council.
- 2003-2005 Member, Native Hawaiian Leadership Project curriculum planning committee.
- 2003 Mentor for students from Reed College (Oregon), Marlboro College (Vermont), and Dartmouth College (Hanover), Fall.
- 2003 Orientation facilitator, Re-imagining Indigenous Cultures: The Pacific Islands, National Endowment for the Humanities Summer Institute, East-West Center, Honolulu, July 2.

#### Departmental Service

- 2013-2016 Chair, Department of Ethnic Studies
- 2014-2015 Member, Personnel Committee, Department of Anthropology
- 2012-2014 Faculty Advisor, Ethnic Studies Students Association, Fall-Spring
- 2011-2012 Co-chair, Awards Committee, Department of Anthropology, Fall-Spring

- 2011-2012 Member, Department Personnel Committee and Chinese Diaspora Specialist Search Committee, Department of Ethnic Studies, Fall-Spring
- 2010-2011 Member, Search committee for Race and Race Relations Specialist position, Department of Ethnic Studies, Fall-Spring
- 2010-2011 Member, Search committee for Ecological Anthropologist position, Department of Anthropology, Fall-Spring
- 2010- Convener, Cultural Anthropology Faculty Caucus, Department of Anthropology
- 2010- Member, Curriculum Committee, Department of Anthropology, Fall 2004 to Spring 2007, Fall 2010.
- 2007-2009 Chair, Colloquium Committee, Department of Anthropology, Spring 2007 to Fall 2009 (member since 2003).
- 2007 Coordinator, Anthropology Graduate Student Orientation and Service Learning at Ka'ala Farms, Wai'anac, September 15.
- 2006-2009 Member, External Relations Committee, Department of Anthropology, Fall 2006 to present.
- 2004- Member, ES 101 Curriculum Development Committee, Department of Ethnic Studies, Fall 2004 to present.
- 2003-2009 Chair, Outreach Committee, Department of Ethnic Studies, Fall 2003 to Spring 2009.
- 2007- Chair, PhD Committees for S. Barrier-Heinz, A. Stevens-Gleason, and P. Fifita.
- 2004- Member, 6 MA committees: J. Spoon (1/04-5/05), S. Nāleimaile (8/04-present), C. Claus (10/05-5/06), S. Barrier-Heinz (2/06-5/07), P. Fifita (6/07), K. Pongpanich (6/07), Department of Anthropology.
- 2003- Member, 6 PhD Committees: B. Ledward (8/03-present), J. Spoon (5/05-present), P. Christensen (12/05-present), T. Vu (3/06-present), and H. Katsumo (9/06-present), J. Stephen (8/07-present), Department of Anthropology.
- 2003-2005 Coordinator, service learning projects in Mākuu, Nū'uunu/Kaniakapūpū, Kahana, Waikane, and Keania, College of Social Sciences (with funding from the Hawai'i Pacific Island Campus Compact).
- 2005-2007 Video organizer, Ah Quon McElrath Fund for Social Change, Department of Ethnic Studies.
- 2003-2009 Guest lecturer: ES 310 Ethnicity and Community (U. Hasager, 7/14/09); ES 338 American Indian Experience (T. Castanba, 6/30/09); ES 330 Japanese in Hawai'i (J. Chinen, 9/8/08); ANTH 350 Pacific Islands Cultures (G. White, 11/9/04); ANTH 698 Professional Development (M. Graves, 9/22/04); ANTH 424 Culture, Identity, and Emotion (G. White, 10/23/03); ES 221 Hawaiians (D. McGregor, 10/5/06); ES 101 Introduction to Ethnic Studies (P. Ho, 10/3/06, 10/27/08; M. Das Gupta, 11/30/06) UCLA/UH Mānoa Multicultural Summer Program—Asian American Studies 187D (R. Labrador, 8/1/05, 8/2/06, 7/29/09) and ES 301 Ethnic Identity (J. Okamura, 8/1/03, 8/4/04, 8/3/05, 7/31/06, 7/29/09)

Kona district community liaison and protocol instructor, Project Ola Nā Iwi community workshops established to educate and train Hawaiian community in traditional burial practices (2000-2001).

I, Healoha Carmichael, under penalty of perjury hereby state the following is true and accurate to the best of my knowledge and belief:

The statements below are based upon my personal knowledge.

1. I am Hawaiian.
2. I grew up in Wailua and Ke'anae in East Maui.
3. I learned traditional and customary gathering practices from my grandmother, 'Awapuhi Carmichael, who learned practices passed down from her Hawaiian elders.
4. Traditionally, my 'ohana gathered 'opae, watercress, lū'au, hahā, pepeiao, hihiwai, pupulo; and goldfish in Wahinepee, Puohokamoa, Hāipuaena, Punalau/Kolea, Honomanu, Nuaulu, Pīnaau, Palauhulu, 'Ōhi'a/Waianu, Waioakamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Waiohue, and Makapipi.
5. Traditionally, my family would also pick 'opihi on the way home from gathering and also catch 'o'opu at Waiolehe and Ching's pond in Palauhulu.
6. My 'ohana also engaged in mālama 'āina and mālama kahaikai at Honomanu, Pīnaau, Palauhulu, 'Ōhi'a/Waianu, Waioakamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Waiohue, and Makapipi, and Waiohue by gathering according to the moon, not always going to the same places so we didn't overharvest the stream, and taking care of the ko'a's to keep the population up.
7. Currently, I gather 'opae in Pīnaau, Palauhulu, 'Ōhi'a/Waianu, Waioakamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaaka, Kapaula, Hanawi, Waiohue, and Makapipi. I gather hihiwai in Waiohue and Kopiliula. We have to go high in the mountains to find the 'opae and hihiwai. I practice the traditions my grandmother taught me, including what colors not to wear when gathering, how we should walk on the sides of the river, and how we should be quiet when we carry out these traditions. I was taught to always look up at the mountain to look out for big water.
8. I also fish for moi, wholehole, uouo, and mullet in and around the mouths of Pīnaau, Palauhulu, 'Ōhi'a/Waianu, Waioakamilo, Kualani, Wailua, Waikani (Wailuanui), West Wailuaiki, East Wailuaiki, Kopiliula Puakaa, Paakea, Waiaaka, Kapaula, and Hanawi. I also dive for kole and pick 'opihi. Now, there's not much moi.
9. I gather to feed my family and as recreation.
10. I continue to engage in mālama 'āina and mālama kahaikai as my grandmother taught me, following her instruction to gather according to the moon and from different places so we don't overharvest.
11. My family and I enjoy swimming in Ching's Pond at Pīnaau. However, in some places the water is dirty and just sits because the diversions obstruct the flow. I got a staph infection four times from swimming in the water.
12. I've noticed the change in water flow. For example, at East Wailuaiki, you can see the ditch, see the water dropping into it, and then look below the ditch only to see the pond is completely dry. At Hanawi, the side above the ditch has water, the side below the ditch has nothing. Mountain Pond at Pīnaau is bone dry. So is Kikokiko Spring. Most of the time, you have to wait for it to rain before you see any water in the stream. If you wait a couple days for the rain to clear up, the streams are beautiful. Otherwise they are typically dry.
13. The change in water flow affects the populations of stream animals like 'opae, hihiwai, and 'o'opu. It's not at all like what my grandmother described it was like

IN THE CIRCUIT COURT OF THE FIRST CIRCUIT

STATE OF HAWAII

HEALOHA CARMICHAEL, LEZLEY JACINTHO, and NA MOKU AUPUNI O KO'OLAUI HUI,

Plaintiffs,

vs.

BOARD OF LAND AND NATURAL RESOURCES, SUZANNE CASE, in her official capacity as Chairperson of the Board of Land and Natural Resources, the DEPARTMENT OF LAND AND NATURAL RESOURCES, ALEXANDER & BALDWIN, INC., EAST MAUI IRRIGATION CO., LTD., HAWAIIAN COMMERCIAL AND SUGAR CO., and COUNTY OF MAUI, DEPARTMENT OF WATER SUPPLY, Defendants.

DECLARATION OF HEALOHA CARMICHAEL

15. I've also noticed invasive trees like the African tulip moving in where the water has stopped flowing due to the diversions.

16. The impact of the diversions on this environment is tremendous. When you kill a stream and you allow invasive species to take over, that's a sin. The dewatering of the stream is not caring for it. It's not *mālama 'āina*.

17. I am concerned about the fact that there has never been an environmental assessment or impact statement to analyze what these large-scale diversions have done and will do to this environment. I am also concerned that A&B and EMI continue to get permits to use ceded lands in a way that negatively and significantly impacts my 'ohana and Native Hawaiians in violation of the law.

DATED: Ke'anae, Hawai'i, May 4<sup>th</sup>, 2015.

*Healoha Carmichael*

STATE OF HAWAII

THEALOA CARMICHAEL, LEZLEY JACINTHO, and NĀ MOKU AUPUNI O KO'OLA HUI,

Plaintiffs,

vs.

BOARD OF LAND AND NATURAL RESOURCES, SUZANNE CASE, in her official capacity as Chairperson of the Board of Land and Natural Resources, the DEPARTMENT OF LAND AND NATURAL RESOURCES, ALEXANDER & BALDWIN, INC., EAST MAUI IRRIGATION CO., LTD., HAWAIIAN COMMERCIAL AND SUGAR CO., and COUNTY OF MAUI, DEPARTMENT OF WATER SUPPLY.

**Defendants.**

### DECLARATION OF LEZLEY JACINTO

I, **Lezley Jacintho**, declare that:

- 1.1. The statements below are based upon my personal knowledge.
2. I am Hawaiian.
3. I am a taro farmer. I have been growing kalo in Honopou, East Maui, Hawaii, for 10 years.

- I am a taro farmer. I have been growing kalo in Honopou, East Maui for about six years now on approximately two acres of land in the State of Hawai'i's Huelo license area.

4. I am farming this land based on my family history and talking with kupuna about practices their parents traditionally engaged in to farm lo'i long before we continued those customs.
5. I learned how to farm taro from Beatrice Kepani Kekahuna and Lurlyn Scott.
6. My 'ohana has lived in Honopou for many generations.
7. Traditionally, my 'ohana gathered 'ulu, kalo, uala, moi, aholehole, banana, 'o'opu, pūpū, kala, hau, native crayfish, hihiwai, 'opihi, limu, pohole, mango, 'awapuhi, ō leaf, lū'au, guava, watercress, oranges, and medicinal plants in and around Honopou.
8. Traditionally, my 'ohana fished for aholehole, honu, moi, mullet, poopaa, puihi, ulua, lobster, pāpio, 'ō'io, lae, uhu, menpachi, kole, black crab, haukiuki, kupipi, and opihi in or near the mouth of Honopou, Punalau/Kolea, Honomanu, Hanawi, and Makapipi. They also gathered limu in those areas.
9. My 'ohana also engaged in mālama 'āina and mālama kahaawai. They were aware of spawning times, they cleaned the 'auwai, gathered only what was needed, gathered and fished with the moon cycle, rebuilt walls, and cleaned Honopou.
10. Currently, my 'ohana and I gather pohole, banana, avocados, 'ulu, mango, orange, puakenikeni, and lū'au in and around Honopou and Honomanu. We also pull kalo if it is not rotten.
11. My family and I fish for pāpio, enenue, moi, prawns, lobster, haukiuki, 'opihi, and kupipi in or near the mouth of Honopou and Honomanu.
12. I gather and fish to feed my family, teach my kids to feed themselves, and live as our grandparents did.
13. My family engages in mālama 'āina and mālama kahaawai by cleaning Honopou and nearby ponds, planting kalo, cleaning, and working together to grow food.
14. We also swim in the ponds, teach our kids how to swim, catch prawns, fish, and play games in and around Honopou.
15. I appreciate the natural beauty of Honopou, including the birds and dragon flies. I love the smells of 'awapuhi and other flowers. I enjoy looking around, taking in the beauty and the greenery, and hearing rushing water while sitting on Lurlyn Scott's deck next to the pond.

16. Water is used to irrigate my lo'i as well as other lo'i. The level of water barely feeds those lo'i. More water is needed as we continue to open more lo'i. The water also feeds homes situated around these lo'i, homes which have been established for generations.
17. The lack of stream flow harms our taro. We have lost taro due to root rot and other diseases.
18. Because the streamflow connects to the ocean, diverted streamflow restricts spawning of different species of fish. Thus, the lack of streamflow also affects our gathering rights as Hawaiians and our ability to feed our 'ohana as was once possible. Native species like 'o'opu cannot travel back up stream due to lack of water, which compromises their reproduction and life cycle. Our families who live in this area cannot gather enough resources from the ocean and streams because there is not enough fish, hihiwai, 'ōpae, and 'o'ōpi living in them. The low stream flow has also caused people to move away to provide better for their family, unable to sustain their families with the limited food resources available as a result of the diversions.
19. Additionally, swimming in the ponds is a form of recreation we all enjoy. It should continue to be enjoyed; not compromised by improper flow which can cause stagnate water that breeds leptospirosis and other bacteria.
20. Spiritually, we are connected to the water here. Water is life. Without water we will not be.
21. It is for these reasons – the long list of harmful impacts resulting from A&B and EMI's large-scale diversions all along our ceded lands – that the lack of an environmental assessment for A&B and EMI's use of these state lands upsets me and my community.

I declare under penalty of perjury that the foregoing is true and correct.

DATED: Honopou, Maui, Hawai'i, May 15, 2015.

  
LEZLEY JACINTHO

10. I also engage in mālama 'āina and mālama kahuawai by clearing stream banks of vegetation and rubbish that otherwise block stream flow in and along Honomanu, Piinaau, Palahalulu, Waiokamilo, Kualani, Wailua, Waikani (Wailuanui), West Waiuaki, East Waiuaki, Hanawi, and Waiohue.

11. In the same manner that I learned my traditional and customary practices from my kupuna, many Nā Moku members also learned to gather, fish, and farm in and/or alongside streams in the Honomānu, Keʻānae, and Nahiku license areas and continue to do so today.

12. For me, gathering and fishing from the streams enables me to provide a protein source to my ʻohana and neighbors, including kupuna, who may be unable to gather and catch their own fish. I also aim to teach the ʻōpio the traditional practices to mālama streams and gather and fish from the streams and coast lines.

13. Dewatering the streams has prevented my generation from teaching ʻōpio how to mālama streams and use techniques wisely to gather from streams and fish along coastline near the muliwai.

14. The diminished stream flow has negatively affected the muliwai and the coastal fisheries. Certain volumes of water and enough flow is required to maintain a good kalo crop. As with many other Nā Moku members, much of my kalo could not survive the emptying of these streams, so it has made farming more difficult. Additionally, some of my neighbors have abandoned kalo farming because the streams had stopped flowing.

15. The lack of stream flow has also allowed vegetation along the stream banks to block the stream beds, and has permitted invasive snail species and African tulips to take over the taro crop.

16. Ultimately, the loss of stream water has changed the whole way of life in Wailuanui-Keʻānae. It takes more time to find the resources to gather, which robs me and other Nā Moku members of time for recreation and time with ʻohana.

17. Without water, our whole way of life would be lost.

18. Many original members of Nā Moku have died since we first petitioned for the return of water to these streams. It makes me sad and lose hope. They never lived to see the water return to the loʻi in 2008. I am afraid I will not live to see the return of the water we are now fighting for.

19. I am disappointed and concerned that there has been no environmental review of A&B and EMI's use of our ceded crown lands. There are environmental impacts that have been obvious for decades that continue today. How these corporations have managed to get permits from the Board of Land and Natural Resources year after year without following the law is outrageous.

20. Corporations last forever. Traditional people do not. Crown lands should be set aside for the benefit of the people.

I declare under penalty of perjury that the foregoing is true and correct.

DATED: Wailuanui, Hawaiʻi, May 19, 2015.

EDWARD WENDT

COMMISSION ON WATER RESOURCE MANAGEMENT

STATE OF HAWAII

PETITION TO AMEND INTERIM  
INSTREAM FLOW STANDARDS FOR  
HONOPOU, HUELO (PUOLUA),  
HANEHOI, WAIKAMOI, ALO,  
WAHINEPEE, PUOHOKAMOA,  
HAIPUAENA, PUNALAU/KOLEA,  
HONOMANU, NUAAILUA, PIINAAU,  
PALAUHULU, \*ŌHI'A (WAIANU),  
WAIOKAMILO, KUALANI, WAILUANUI,  
WEST WAILUAIKI, EAST WAILUAIKI,  
KOPIIULA, PUAKEA, WAOHUE,  
PAAKEA, WAIAAKA, KAPAUULA,  
HANAWI and MAKAPIPI STREAMS

CASE NO. CCH-MA13-01

DECLARATION OF LURLYN SCOTT

Declaration of Lurlyn Scott

I, Lurlyn Scott, hereby declare that:

1. I live and farm taro in Honopou Valley and have gathered in Honopou Stream and diverted water for my family's lo'i kalo my whole life.
2. I've seen Honopou Stream during dry seasons, wet seasons, high flows and low flows.
3. In 2008, interim instream flow standards were set for two points along Honopou Stream. The IIFS were not met for the most part following the 2008 decision and subsequent modifications to the diversion structures.
4. Around April 2016, I noticed the flows in Honopou Stream were much higher than ever before and more than what I would expect to flow naturally under undiverted conditions.
5. The higher flows overflowed my 'auwai on several occasions and the overflows and silt and debris carried in them fills my 'auwai which now require constant cleaning.
6. Although I've spent my life asking the Commission to restore water to Honopou Stream, I am concerned that water diverted from streams to the East of Honopou is being

brought through the ditches and dumped in Honopou Stream so that the water flows are higher in the stream when normally summer flows are lower. My family and I rely on the lower summer flows to gathering and recreation and the high flows limit our ability to go in the stream for these purposes.

7. The additional water concerns me because I also gather in other streams to the East and I support the restoration of those streams to support my traditional and customary practices, as well as the practices of other East Maui community members. I also do not know the possible harmful impacts of adding more water than natural will have on the integrity of the Honopou stream bed, the health and life cycles of the stream animals and nearshore fisheries, the promotion of erosion, and other environmentally destructive impacts.

DATED: Honopou, Maui, HI, January 5, 2017.

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Ms. Kalama and Ms. Sylva:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas. You provided early consultation comments by letter dated December 29, 2016, which was prior to the publication of the EISP on February 8, 2017. You also provided written comments on the EISP on dated March 10, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix J (as to the early consultation comments) and Appendix M (as to the EISP comments).

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. Chapter 4 of the Draft EIS discusses the existing environment, impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O), and mitigation measures. As relevant and appropriate, the discussion of impacts includes those pertaining to conditions before and after the closure of sugar cultivation in 2016. Various technical studies are appended the Draft EIS and provide

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

10238-02  
Letter to Ms. Camille Kalama and Ms. Summer Sylva  
Page 2  
September 23, 2019

detailed examinations, including: Assessment of the Environmental Impact of Stream Diversion on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

3. Trutta and SWCA prepared reports in support of the Draft EIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, terrestrial flora and fauna and invasive mosquitoes. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the Draft EIS (See Appendix A and Appendix C).
4. The Draft EIS includes in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.
5. Figure 1-1 in the Draft EIS illustrates the EMI Aqueduct System overlaid on the Department of Land and Natural Resources (DLNR) Division of Aquatic Resources (DAR) geographic information system (GIS) data of streams. An electronic drawing of the EMI Aqueduct System was georeferenced by Akinaka & Associates, Ltd. to depict major diversions on East Maui streams on a United States Geological Survey (USGS) GIS base map. Due to the complexity of the EMI Aqueduct System and the level of detail shown on the map, not all of the minor diversions could be associated with a stream or tributary. The stream names shown are from the DAR GIS database but a few of those stream names may differ from how some East Maui residents may refer to them. Moreover, certain streams that were identified during certain proceedings before the CWRM do not have associated GIS data and therefore could not be precisely located on the map. Table 1-2 in the Draft EIS reconciles discrepancies between stream names used in the February 2017 EIS Preparation Notice and the CWRM D&O.
6. For the purposes of the Draft EIS, diversion quantities from the CWRM D&O were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
7. For purposes of this Draft EIS, the list of streams assessed as part of the License Area is taken from the D&O. The Draft EIS discusses impacts to hydrology associated with the Proposed Action in Section 4.2 of the Draft EIS as well as the reports various technical reports prepared for the Draft EIS, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure

10238-02  
Letter to Ms. Camille Kalama and Ms. Summer Sylva  
Page 3

Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I)

8. The impacts of access into the License Area are discussed in the SWCA report and the Archaeological Literature Review and Field Inspection report (See Appendices B and E, respectively). These impacts are also discussed in the Draft EIS in Section 4.4 pertaining to the natural environment and Section 4.5 on historic and archaeological resources.
9. The Cultural Impact Assessment (See Appendix F) includes a tabulation and evaluation of traditional cultural practices, including those provided through interviews and declarations from the CWRM's proceedings on the IIFS.

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

Ms. Charlotte O'Brien  
February 23, 2017  
Ha'ikū Park and Community Center  
Excerpt of Transcript by Ralph Rosenberg Court Reporters, Inc.

MS. O'BRIEN: I would like the EIS to include an assessment of the importance of the -- I'd like the EIS to assess the fragility of the food security of all of the Hawaiian islands due to the imminent threat of climate change and the potential for -- for the potential of international and even national political instability. This is a state security issue, not that I'm not sympathetic to all of the other issues, but this is a state security, food security issue. I think that for our law enforcement people -- I'm sorry, for our lawmakers to make and form the decisions, this EIS should assess the potential of the development of what A & B has called their important agricultural lands, 27,000 acres, the importance of that to the food security of all of the Hawaiian islands, in the same way that the bread basket of the Midwest helps small farmers in the south, in the east, in the west. To supplement their pasture animals, the pigs of the Big Island are importing grain at the cost of \$8.80 a bushel for soybeans. That's just the shipping cost. \$8.21 a bushel just for corn. I called Matson myself. Now there's no way that you can be a small pig farmer on the Big Island and pay those as the prices in addition to what you're paying for the grain.

So this is a food security issue for all of the Hawaiian islands, and I think that needs to be assessed in this EIS, because it needs to be assessed whether or not it should become a public trust. And I'm not saying that we need to take the land from A & B. I think we can pay them what they carry for the asset on their books. Whatever their historical asset value of that land is on their books, the State could pay them for that so they're not out anything. And the EMI, if the State runs it, A & B can lease water just like anybody else according to need and according to value to the citizens of the State of Hawaii. And I'll write more in my written statement.

Ms. Charlotte O'Brien

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Ms. O'Brien:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and your oral comments at the February 23, 2017 EIS Scoping Meeting. We acknowledge your comments and concerns, they have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued *"right, privilege, and authority to enter and go upon"* the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the *"purpose of developing, diverting, transporting, and using government owned waters"* through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui. The environmental impacts of the potential Water Lease will be assessed.
2. Sections 4.3.1 and 4.3.2 of the Draft EIS and the Assessment of Streams and the Ocean Water Chemistry report (See Appendix A) discuss climate change impacts related to the Proposed Action.
3. Section 2.1.4 of the Draft EIS includes a description of Mahi Pono's Farm Plan for the agricultural fields in Central Maui. The Farm Plan is based on the water available of which diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area.

10238-02  
Letter to Ms. Charlotte O'Brien  
Page 2  
September 23, 2019

4. Sections 1.1 and 1.2 of the Draft EIS discuss the purpose and objectives of the Proposed Action, including the development of diversified agriculture in the fields of Central Maui. The relationship of Mahi Pono's Farm Plan to various land use plans, policies and controls is discussed in Chapter 5, including Section 5.1.1 on the Hawaii State Plan; Section 5.1.2 on the State Functional Plans, especially the Agriculture Functional Plan; Section 5.1.4 on Important Agricultural Lands; Section 5.2 Governor Ige's Sustainability Initiative; and Section 5.4 the Maui County Land Use Plans and Policies.

5. Chapter 4 of the Draft EIS and the Agricultural and Related Economic Impacts Report (See Appendix I) discuss the anticipated impacts of the Proposed Action on agriculture.

Your oral comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP  
Vice President, Director of Planning

**Subject:** EISPN for Proposed Lease for the Nahiku, Ke`anae, Honomanu, and Huelo License Areas of Public Land, Maui, Hawaii

Dear Mr. Okamoto,  
Mahalo for the opportunity to provide comments on this Environmental Impact Statement Preparation Notice (EISPN) for the use of water from four license areas consisting of 33,000 acres of public lands and waters in East Maui.

As a resident of

I am affected by how our streams and watersheds are managed. Because of my interest, I would like to request that the Draft EIS for this proposed Lease include the following information which is not clearly indicated in the EISPN

- Full disclosure of every single diversion along the East Maui Irrigation system
- Full disclosure of the amount of water proposed to be taken from each stream, license area and from the entire license area daily (on average and at minimum and maximum)

- The impact of how the proposed diversions may affect federally listed plant/ bird/bat & insect species in lease areas
- The impacts of diverting water from East Maui streams on outdoor recreational activities

- The impacts on the maintenance of ecosystems

- The impacts on traditional and customary Hawaiian practices (including kalo farming)
  - A discussion of alternatives including: shorter lease periods, less volumes than proposed, termination of diversions from the Nahiku and/or Keanae areas
- Thanks for your attention to these important issues/ concerns. I look forward to following the EIS review process closely and for the opportunity to review the draft EIS.

Best,  
Chelsea Huddleston

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Keʻanae, Honomanū  
and Huelo License Areas

Dear Ms. Huddleston:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Keʻanae, Honomanū, and Huelo License Areas and for your written comments dated March 10, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawaiʻi Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Keʻanae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
3. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
4. Trutta and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

5. The Draft EIS assesses the impacts of the Proposed Action on recreational uses and facilities in Section 4.8.
  6. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Steam Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I)
  7. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.
- Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.  
Sincerely,

Earl Matsukawa, AICP  
Vice President, Director of Planning

**Environmental Impact Statement Preparation Notice**  
**Proposed Water Lease for the Nāhiku, Keʻānae, Honomanū, and Huelo License Areas**  
**Scoping Meeting Comments of**  
Ms. Cheryl Kekahuna  
February 23, 2017  
Haʻikū Park and Community Center  
Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MS. KEKAHUNA: My name is Cheryl, also known as Pohe, Kekahuna. I'm the safety director for the Nahiku Community Association, as well as a resident of Lower Nahiku. I am here today to oppose a 30-year lease proposed by A & B. I would like to start with a couple questions.

Why after HC&S was officially done in December 2016, the water wasn't restored to all the rivers, being there's no sugar cane in production? And where is the water that was irrigated for the sugar cane? Now, it seems almost coincidental that the same month HC&S was done, A & B sold 300-plus acres in Paia. The message I got from that was, here we go, progress. And it was clear to me that A & B can't be trusted. They have their own agenda. In A & B's Environmental Impact Statement, your EIS for February, you need like a lawyer or a dictionary to kind of understand this.

However, there was something that caught my attention. Under the proposed action, there's a statement that:

"Aqueduct system continues to serve a critical role in providing upcountry Maui and Nahiku community with water, and should the delivery of water from EMI aqueduct system be curtailed, upcountry Maui and the Nahiku community would be left without a reliable source of water."

Now, I had to Google the definition of "curtail." It states:

"To reduce in extent or quantity, impose a restriction on, or deprive someone of something."

Makapii, Hanawi, Haipuaena automatically runs through our island blood. I ask: Are you God? Who gave you the right to deprive us of our right to live? Back in the day when our great grandparents, uncles, grand uncles, grandparents used to work for EMI, the streams and rivers were properly managed. The rivers never ran dry and all-- and was well maintained. Is that the case now?

We, as kanaka ʻōle, have to fight for our water. Our kava farmers in Keanae for over a decade have been fighting for the rivers to be restored to their (Hawaiian). And here comes A & B with their proposals and greed for more water. State and county representatives, are you going to allow A & B to deprive and be unjust to the people and county you represent?

And lastly, I would just like to end my testimony by simply saying: Remember our rivers are sacred. There's kaona in these rivers. Don't let the hewa follow you.

Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your oral comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

A&B / EMI, Applicant

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke‘anae, Honomanū, and Huelo License Areas. We acknowledge your comments and concerns, they have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai‘i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. Section 1.3.4 of the Draft EIS discusses the Commission on Water Resources Management's (CWRM) June 20, 2018 Interim Instream Flow Standard (IIFS) Decision and Order (D&O) and the authority of the BLNR to issue a Water Lease for non-instream uses pursuant to Hawaii's Revised Statutes (HRS) § 171-58, that is subject to the IIFS set by CWRM.
3. For the purposes of this EIS, diversion quantities from the D&O were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. Modifications or removal of diversion structures for streams in the License Area are those streams designated for full or partial restoration by the D&O.
4. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of

Ms. Christina Hemming  
February 23, 2017  
Haʻikū Park and Community Center  
Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MS. HEMMING: Hi. My name is Christina Hemming, and I actually live on Kuiaha stream. It's been running lately here in Haiku, which has been great. But today I went down there, and it's pretty much all done. Everett Dowling's got a well up above. Okay. So this is an EIS. We've got to fit into their paradigm in order for it to count.

So the number one thing I want to be part of the EIS is the EIS has to be consistent with the development resource plan, which has some very stringent rules. And some of those rules are -- well, first of all, the first rule it says is it only looks 20 years out. And you know it says the rules are only for 20 years out. So how can you ask for a lease for 30 years when in the rules themselves, in 13.170.32, it says a 20-year vision. So the lease should only be considered for the rules that have the paradigm of 20 years.

Second of all, who is the lease going to go to? Who -- can the lease be transferred if you -- if they agree to this and it goes through, will the lease be able to be transferred or subdivided to multiple entities. Number two. The instream flow standards need to be -- all the -- everything needs to go up, all the water needs to go into the stream, and then you ratchet it down to see how much is actually needed.

And this is where it gets kind of tricky for me, because I personally feel like East Maui needs to be designated as a water management resource area, just like west Maui. Because technically, if it's not designated as a water resource management area, all the waters that's been flowing down to Central Maui, that's a crime. That's a crime against the water laws of the State of Hawaii. And no one has been discussing it if they want to take the water from anywhere on East Maui and take it down to central valley without a water management designation area -- which means they have to tell you all the wells. Everybody's got to get a permit for any well they drill. They have to tell how many wells there are.

They've got to do a study on the quality of water, and all of that goes into can they release water out to another area of the island. Otherwise, if it's not declared a water management area and the aquifers aren't protected, then this EIS application is illegal based on the Water Resource Commission rules. You have to project the usage of water, you have to identify the sources of water, you have to have the existing uses of water all part of the EIS; you have to have the capacity, and it all has to be part of a 20-year analysis plan.

The last time I went to a water meeting was like in '99, '98, and it was on the Kaupo ditch system. And I remember when DUNR awarded the Kaupo ditch system to the Kaupo Ranch for \$600 a year, in

Scoping Meeting Comments of Ms. Christina Hemming  
Page 2  
February 23, 2017

quarterly payments of \$125 or \$150. So the amount of money that the people are paying for the water and then leasing it back to the people is a crime. And that should also be addressed. So the impact of the construction by EMI on the water quality should also be addressed in the EIS, please. And you have to follow the state resource code. And the lease should not be able to be transferable, and that should be -- because, hey, guess what? Monsanto, you know, guess what, there's a ton of companies. Do you know how privatized water has become in the United States? We don't want a Japanese bottling plant moving out there and taking all the water and then shipping it over to Japan or China or wherever else, where they are desperate for clean water. So that should also be part of the EIS. Thank you so much.

Mr. Christina Hemming

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Ms. Hemming:

Thank you for participating in the scoping process for the subject Environmental Impact Statement pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and your oral comments at the February 23, 2017 EIS Scoping Meeting. We acknowledge your comments and concerns, they have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action, including discussion of alternative lease duration and terms.
3. Section 1.3.4 of the Draft EIS discusses the Commission on Water Resources Management's (CWRM) Interim Instream Flow Standard (IIFS) Decision and Order (D&O) and the authority of the BLNR to issue a Water Lease for non-instream uses pursuant to Hawai'i Revised Statutes § 171-58, that is subject to the IIFS set by CWRM.
4. A description of the Proposed Action is discussed in Chapter 2 of the Draft EIS. The Draft EIS will include in Section 2.1.4, a description of Mahi Pono's Farm Plan for the agricultural fields in Central Maui. The Farm Plan is based on the water available of which diversion quantities from the D&O were used to estimate the maximum amount of water to be diverted

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

Letter to Ms. Christina Hemming  
Page 2  
September 23, 2019

by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).

5. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended to the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

Your oral comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP  
Vice President, Director of Planning

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Ms. Carter:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments dated February 23, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. The Draft EIS will include in Chapter 4 an assessment of the impacts of the Proposed Action. Section 4.3.1 discusses climate change impacts related to the Proposed Action.
3. Trutta and SWCA prepared reports in support of the Draft EIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the Draft EIS (See Appendix A and Appendix C).
4. A description of the Proposed Action is discussed in Chapter 2 of the Draft EIS. The Draft EIS will include in Section 2.1.4, a description of Mahi Pono's Farm Plan for the agricultural fields in Central Maui. The Farm Plan is based on the water available of which diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).

Re: EIS – Alexander & Baldwin and East Maui Irrigation

Dear Mr. Matsukawa:

Maui Mayor Alan Arakawa predicted as early as 2005 that Hawaiian Commercial Sugar Company (HC&S) would cease to exist as a major part of Maui's economic engine. While the impact of the economic downturn played a part, HC&S's parent Alexander & Baldwin (A&B) to resource major and essential programs and projects vital to HC&S's ability to continue sugar operations was the lynchpin for HC&S's demise. But one example is A&B's failure to adequately and timely provision the HC&S Puunene Mill to comply with EPA pollution and emission standards and requirements. A&B delayed and delayed, asked for and received waivers, until finally Maui Electric Company, Ltd. (MECO) terminated its Power Purchase Agreement (PPA) with HC&S to provide firm-power to the Maui Grid. Selling electricity generated from HC&S biomass plant to MECO was a loss of a major revenue and income stream for HC&S.

The financial commitment of A&B to its diversified agricultural model is not part or included in the Environmental Impact Statement Preparatory Notice (EISPN) nor specifically raised in the Consultation Comments included as part of the EISPN. Inclusion of detailed financial statements, balance sheets and projected budgets for its diversified agriculture operations is of paramount significance and importance to justify the 30 year term of the lease as being requested by A&B. A&B's unequivocal and firm commitment to diversified agriculture for 30 years, as discussed below, is not established, affirmed or substantiated.

As stated in the EISPN,

The purpose of the EIS process is to disclose to government agencies, the general public, stakeholders, and decision-makers the anticipated impacts of a project and to identify feasible measures that might be taken to mitigate potential impacts.

Statements made by Christopher J. Benjamin, President and Chief Executive Officer of A&B and information contained in the A&B 2016 Annual Report + Form 10-K filed with the United States Securities and Exchange Commission (SEC) filed on March 1, 2017 reinforce the need for a comprehensive, full and complete disclosure of A&B's financial commitment to diversified agriculture, near-term, short-term and long-term, be included and made a part of the EIS for review, evaluation and decision by government agencies, the general public, stakeholders, and final decision-makers. Specifically,

### 1. Reimagining A&B

The cessation of sugar operations, like our separation from Matson four years earlier, changed the character of the Company and provided the opportunity for a fresh articulation of our future direction. We embarked on this process last spring, and what emerged over the summer was a two-pronged strategy to increase our net asset value (NAV) and enhance the market's appreciation of that value. Those objectives are guiding our increased focus on Hawaii commercial real estate (CRE). – Christopher J. Benjamin, President and Chief Executive Officer of A&B Letter to Shareholders.

Source: A&B 2016 Annual Report + Form 10-K. Filed March 1, 2017, accessed June 28, 2017 <https://www.sec.gov/Archives/edgar/data/1545654/000154565417000003/alex201610k.htm>

### 2. Alexander & Baldwin (ALEX) CEO Chris Benjamin on Q1 2017 Results – Earnings Call Transcript

Seeking Alpha. May 7, 2017, accessed June 28, 2017 <https://www.google.com/amp/s/seekingalpha.com/amp/article/4070402-alexander-and-baldwins-alex-ceo-chris-benjamin-q1-2017-results-earnings-call-transcript>

5 years ago, we were primarily a shipping company with a diversified and mostly nonstrategic commercial real estate portfolio, primarily on the U.S. mainland. We had a large sugar plantation and an expanding development pipeline.

Today, following several proactive steps in the real estate business and unavoidable sensation – cessation of our sugar operation, we are a Hawaii-focused real estate company with an increasingly strategic commercial portfolio that is generating nearly 40% More NOI [Net Operating Income] than just 5 years ago.

That's great progress, but we have further to go and are patiently moving toward our goal of even greater concentration and a larger footprint in Hawaii commercial real estate. I say patiently because we're focused on creating long-term sustainable value, and that's not done overnight. It's created by dispositions and taking comprehensive steps to build asset and land dispositions and taking comprehensive steps to build their value over time. And this is what I'm most excited about right now, the energy and enthusiasm of our team building this value. Diversified agriculture efforts are coming along well. We don't expect this to be a near-term driver of profitability.

[Clarification Supplied]

### 3. Risk Factors.

a. "There is no assurance that the Company will be able to transition to and implement a new diversified agricultural model, which could have an adverse impact on the Company's results of operations." Page 19.

b. **"The diversified Agricultural model may not achieve the financial results expected.** The company is currently evaluating several categories of replacement agricultural activities in the transition to the diversified model, including but not limited to energy crops, agroforestry, grass finished livestock operations, diversified food crops/agricultural park, and orchard crops. There is no assurance that the Company's replacement agricultural activities will be economically feasible or improve Land Operations segment's operating results." [Emphasis in original document] Page 19.

Wailuku, HI 96793

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Mr. Hasegawa:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments dated June 28, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. A description of the Proposed Action is discussed in Chapter 2 of the Draft EIS. The Draft EIS will include in Section 2.1.4, a description of Mahi Pono's Farm Plan for the agricultural fields in Central Maui. The Farm Plan is based on the water available of which diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

- c. "A&B's Land Operations segment creates value through actively managing and deploying the Company's land and real estate-related assets to their highest and best use. Primary activities of the Land Operation segment include leasing agricultural land, planning, zoning, financing, constructing, purchasing, managing, selling, and investing in real property, renewable energy, and diversified agriculture." Page 8.

Note Supplied. In terms of priority diversified agriculture is last.

Source: A&B 2016 Annual Report + Form 10-K, Filed March 1, 2017, accessed June 28, 2017. Cited above.

#### 4. Alexander & Baldwin

"**Alexander & Baldwin** is a premier Hawaii company with interests in commercial real estate, land operations, materials and infrastructure construction. We are a 147-year old company, rooted in our Hawaii land heritage, leveraging our unique assets for long-term growth." [Emphasis in original document]

Source: A&B. Accessed June 28, 2017 <http://alexanderbaldwin.com/>

Factual evidence to establish, affirm and substantiate Alexander & Baldwin's financial commitment to fully resource its diversified agricultural model for the entire 30-year term lease is material and relevant to any entitlement to water. If the financial information, as stated above, is not included in the EIS document, the EIS will be incomplete. The government agencies, the general public, stakeholders, and decision-makers will denied the ability to make informed, knowledge-based, accurate and complete decisions. Any decisions thus made will violate the Public Trust, a violation of the Hawaii State Constitution.

Thank you very much.

Respectfully,

Clifton M. Hasegawa

3. The Draft EIS will include in Chapter 4 an assessment of the impacts of the Proposed Action. Various technical studies will be appended the Draft EIS and provide detailed examinations, including an Agricultural and Related Economic Impacts Report (See Appendix I) and an Economic and Fiscal Impact Analysis Report (See Appendix H).
4. The Draft EIS will discuss in Section 3.4.3 the capital investment costs associated with Mahi Pono's Farm Plan.

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Re: Long-term A&B water lease

RECEIVED  
FEB 27 2017  
WILSON OKAMOTO CORPORATION

"Water is Life"

The Central Valley of Maui can be considered a savannah woodland environment. It mostly has low rainfall, strong trade winds and high solar radiation, so evapotranspiration is high. Without irrigation with water from the windward East Maui watershed, the area would likely revert to leawe and hale koa with bunch grasses such as buffel grass and guinea grass only suitable for seasonal grazing at low stocking rates. Fire hazard would also be rampant.

The East Maui watershed also supplies water to upcountry Maui for residential purposes, plus truck farming in Kula and supply to the Kula Agricultural Park. There is a large backlog of upcountry water meter applications.

The East Maui ditch system has also served as a flood mitigation measure for East Maui valleys so there are fewer "lao Valley incidents" destroying property, infrastructure and requiring heavy County, State and Federal disaster assistance.

Irrigation in the Central Valley also reduces fire hazard and the tail water and deep percolation also assist in recharging underground aquifers so there is not loss in well pumping capacity or salt water intrusion.

Historical records would show the volumes of water harvested through the East Maui ditch system. It is conceivable that water use was previously much higher since total acreage in sugar and pineapple was much higher, plus mill operations. Also, water use efficiency greatly improved when there was conversion from flumes and furrow irrigation to drip irrigation. There was also previously more active truck farming, flowers farms and greenhouse operations in Kula.

The County Planning Commission and Department of Water Supply can provide projections on future up-country water demand.

The focus in this deposition is on agricultural use for water for the 27,000 acres in the A&B permit application.

Governor Ige has issued a challenge for Hawaii to double its agricultural production. The irrigated HC&S lands in the Central Valley of Maui can make a significant contribution to that call.

Sugarcane has a high water requirement because of the high yields of biomass produced. So, it is conceivable that future demand for water would be somewhat less under diversified agriculture.

It is inconceivable that a single mono-crop will replace sugarcane over the entire landscape – if that were the case then A&B would have already transitioned land into that enterprise.

So, what we are looking at is a mosaic of different agricultural enterprises on the landscape, and preserving as much land as possible for productive agriculture, and maintaining the scenic beauty of the Central Valley for current and future generations.

Therefore, it is not possible to arrive at a definitive figure on future water requirements for agriculture on the 27,000 acres. A key factor in permitting is to allow for highest and best use of the land-based resource.

Some enterprises would actually require greater volumes of water/acre compared to sugarcane – examples include taro, lau lau, fresh water aquaculture, and some of the vegetable crops. But, all of these in aggregate would represent small acreage.

Enterprises such as corn silage, corn seed production, fodder crops, and bio-energy crops such as sorghums (and sugarcane) would require similar water requirements to sugarcane. In aggregate these could represent large acreage.

Enterprises such as coffee and fruit trees would require less water than sugarcane under drip irrigation systems. In aggregate these could represent significant acreage at the higher elevations of the HC&S plantation.

Pastures would require less water than sugarcane, but would need to be irrigated to complement dry season conditions on ranches, and provide a regular supply of grass-fed beef, or growing out weaners as stocker animals. The method of water application would be a deciding factor, since drip irrigation is not very suitable for pasture, overhead sprinklers are not cost-effective, so flood basins are effective, but have a high water requirement. There is also a demand for livestock drinking purposes. In aggregate, dryland grazing could be a default position, but not likely due to the heavy investment required in infrastructure (fencing, pasture establishment, drinking water, shade, corrals, etc) with low stocking rates. Irrigated pastures/fodder crops could potentially have a similar demand for water as drip irrigated sugarcane, and represent substantial acreage.

Provision would also need to be made for agro-processing in various forms (packing sheds, etc) but in aggregate likely less than a sugar factory. Some of this water would need to be of potable quality.

So, overall, it is challenging to predict the future demand for East Maui water for the 27,000 acres. As a guesstimate, I would say the permit should be for 80% of what was required for the sugar operation. Losses through the distribution system and storage reservoirs would be similar – if the infrastructure is

maintained. Also, not all that water is required on day one, since it will require several years for the HC&S lands to transition to diversified agriculture.

It is expected that the HC&S land will be leased out and/or sold to multiple users with multiple irrigation water requirements. Therefore, and extensive water metering system will need to be installed throughout the plantation, including field-specific water allocations – and possibly a system of water credits that can be traded

Many crops require Class I irrigation water, and drip irrigation can be sustained from ditch water with filtration systems and algacides. Irrigation with potable water supplied through the DWS distribution system is not cost-effective.

As mentioned previously, the Central Valley is a savannah environment with high evapotranspiration. Water is life! Any prospective lessee or buyer of A&B land will first ask about access and availability of water for agriculture and any associated agro-industry. A&B has to be in a position to provide a definitive answer that can be written into the lease or purchase agreement. Otherwise, the rhetoric about diversified agriculture and a green Central Valley of Maui will wither on the vine.

The sugar industry is already pau on Maui. The process of moving forward has to be done in a systematic yet expeditious manner. Otherwise, rehabilitation of dilapidated infrastructure and overgrown fields will become a deal-breaker for diversified agriculture.

Sincerely,

Clive Drew

Senior Agribusiness Value Chain Consultant

September 23, 2019

Mr. Clive Drew

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Mr. Drew:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments dated February 21, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. A description of the Proposed Action is discussed in Chapter 2 of the Draft EIS. The Draft EIS will include in Section 2.1.4, a description of Mahi Pono's Farm Plan for the agricultural fields in Central Maui. The Farm Plan is based on the water available of which diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).

10238-02  
Letter to Mr. Clive Drew  
Page 2  
September 23, 2019

3. The Draft EIS will include in Chapter 4 an assessment of the impacts of the Proposed Action. Various technical studies will be appended to the Draft EIS and provide detailed examinations, including an Agricultural and Related Economic Impacts Report (See Appendix I) and an Economic and Fiscal Impact Analysis Report (See Appendix H).

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP  
Vice President, Director of Planning

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'ānae, Honomanū  
and Huelo License Areas

Dear Mr. Nemet:

Thank you for participating in the scoping process for the subject Environmental Impact Statement pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas and for your oral comments at the February 22, 2017 EIS Scoping Meeting. We acknowledge your comments and concerns, they have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
3. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversion on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See

Environmental Impact Statement Preparation Notice  
Proposed Water Lease for the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas  
Scoping Meeting Comments of

Mr. Cody Nemet  
February 22, 2017  
Maui Electric Company Community Meeting Room  
Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MR. NEMET: Aloha kakou. I'm born and raised here and I've been a resident and active member of our community. I'm here today to express my views and to inquire that we make sure we are provided with a thorough and proper EIS survey. I do believe in restoring our rivers from mauka to makai and sustainability for the future of our native and local farmers. It is also important to me that we revitalize the life that connects mauka to makai as well for our sustainable future. We, as a community, have concerns. The EIS should address full disclosure to see all diversions, roadways, public access areas pertaining to the East Maui Irrigation, including maps representing the names of streams and diversion amounts being taken for each licensed area, the average, maximum, and minimum amount. It is important that the community has access to this information and that we are given facts, not generalized ideas.

With such a valuable resource at stake, I feel we need to explore all options besides those proposed. But alternatives may be using -- uses including one that involves the use of water from less than all four license areas, a proposal to look to shorter term leases how much -- as a much safer way to monitor and manage compared to the proposed 30-year lease. There needs to be access for cultural and gathering purposes, access for restoration and maintenance, including what the future impacts will be for the future of these purposes.

I see a window of opportunity to make a great change to benefit the number one provider, not the corporations, not the employers, but the aina. Action and reaction is the key when dealing with so much disturbance and change. Let us be mindful for the future and learn from our past. Mahalo.

Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I)

4. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.

Your oral comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Mr. Miyamoto:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments dated March 29, 2017. We acknowledge receipt of your comments that the Solid Waste Division does not have any comments and from the Wastewater Reclamation Division stating that the County of Maui does not have a wastewater system in the License Area which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

**SUBJECT: EISP: PROPOSED LEASE (WATER LEASE) FOR THE NĀHIKU,  
KE'ANAE, HONOMANU, AND HUELO LICENSE AREAS –  
SCOPING MEETING, FEBRUARY 22-23, 2017**

In addition to the comprehensive and extensive testimony by community members on Feb. 22, I would like to request the following be included in the draft EIS:

A complete audit of the DMT ditch operations, including revenue, expenses, maintenance, capital improvements, etc.

To address the idea of who should operate the DMT system for water delivery, it is necessary to know what is involved in its operations. If there is to be no consideration of moving control of the delivery system, then any RFP for the water rights is a superficial effort. Please consider allowing multiple proposals that might complement each other as another option to selling out our water resources to one big business.

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Ms. King:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments dated March 4, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. As explained in Section 1.4 of the Draft EIS, in 2016 the BLNR ordered A&B to prepare an EIS for the proposed Water Lease. The Proposed Action under the Draft EIS is the issuance of a Water Lease by the BLNR which will enable the lessee of the proposed Water Lease the rights mentioned above. The Draft EIS studies a proposed long term farm plan by Mahi Pono who purchased A&B's Central Maui agricultural lands, but also acknowledges that the proposed Water Lease will be put out for public auction. For purposes of HRS Chapter 343 review, regardless of who the applicant is, it is the Proposed Action (i.e., the issuance of a long-term Water Lease) and the environmental effects of the Proposed Action and all reasonable alternatives which are being studied.

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

3. A description of the Proposed Action is discussed in Chapter 2 of the Draft EIS. The Draft EIS will include in Section 2.1.4, a description of Mahi Pono's Farm Plan for the agricultural fields in Central Maui. The Farm Plan is based on the water available of which diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
4. The Draft EIS will include in Chapter 4 an assessment of the impacts of the Proposed Action. Various technical studies will be appended to the Draft EIS and provide detailed examinations, including an Agricultural Impact Report (See Appendix I) and an Economic and Fiscal Impact Analysis Report (See Appendix H).
5. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action. Section 3.1.2 will include an explanation or alternative ownership of the EMI Aqueduct System.
6. The Draft EIS will discuss in Section 3.4.3 the capital investment costs associated with Mahi Pono's Farm Plan. Costs associated with maintaining the EMI Aqueduct System are discussed in Section 4.15.

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP  
Vice President, Director of Planning

A&B / EMI, Applicant

Written Testimony:

February 23, 2017

Environmental Impact Statement Preparation Notice  
Proposed by Alexander & Baldwin Inc. and East Maui  
Irrigation Co., Limited (EMI)

Subject: Proposed Water Lease: The Issuance of a one  
long-term (30 year) Water Lease from the Board of Land  
and Natural Resources (DLNR- State of Hawaii) to  
Alexander & Baldwin Inc. and East Maui Irrigation Co.,  
Limited (EMI)-Re: State lands in the Nahiiku, Keanae,  
Honomanu and Huelo License Areas.

My name is Corinna Kekahuna. I am a 6 generation  
descendant of Kaho'okele/Ka'alanimikihau of Nahiiku and  
my residence is located below Makapi'i Stream. Now  
upon reading the EISP that was prepared for A&B/EMI,  
a statement bothered me deeply.

Quote-" The EMI Aqueduct continues to serve a critical  
role in providing Upcountry Maui and the Nahiiku  
community with water, and SHOULD the delivery of  
water from the EMI Aqueduct System be CURTAILED,  
Upcountry Maui and the Nahiiku Community would be left  
WITHOUT a reliable source of water."-unquote.

Now I ask you....Is this 30 year lease more important  
than that of a community that as been around for more  
than 8 generations?? The village whose history totes the  
rubber plant farm and canoe building? Isn't it said that  
"Diversions shall be done without injury to the rights of  
others?". (HC&S v. Walluku Sugar 15 Haw. 675 (1904).  
And what about the County of Maui's Dept. of Water  
Supply?

What plans do they have in place if such a thing was to  
happen since we pay our water bill to DWS???

The monopolization of our streams need to stop. 141  
years of it...enough already....3 sugar mills and 2  
pineapple canals...gone.....what more??  
Development?? For whom and why?? Back in 2010, it  
was 27 streams, now it's 39 and according to another  
it's 31 perennial streams and is currently authorized to  
divert 80 million gallons of water per day based on the  
one (1) year revocable permit. With the 30 year lease ,  
EMI will divert 100 million gallons per day, 20% in  
excess of what's been granted as of Dec. 2016...5 (five)  
times more than what A&B is currently taking from East  
Maui. Why, when it comes to A&B, the numbers never  
jive. Where is the Scope of Service submitted by A&B to  
DLNR so we know exactly who, what, where, how and  
why. No transparency with this entity. Consultation of  
agencies, citizen groups and individuals?? The Nahiiku  
Community Association wasn't notified. I will keep the  
faith that the State of Hawaii (CWRM agency-State Water  
Code in which all waters of the State are held in trust  
for the benefit of the citizens of the State) and the  
County of Maui-DWS do the right thing for the people and  
preserve what we have. There were some good  
suggestions by a few consultations...it's just that  
outside of domestic water use, there should be no more  
unnecessary diversions...I would need to know what type  
of Agriculture is in need of excess water and where in  
Central Maui.

Thank you for your time.

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Ms. Kekahuna:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments dated February 23, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17: A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. A description of the Proposed Action, including the proposed water uses, is discussed in Chapter 2 of the Draft EIS. The Draft EIS will include in Section 2.1.4, a description of Mahi Pono's Farm Plan for the agricultural fields in Central Maui. The Farm Plan is based on the water available of which diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action. Historical as well as estimated water requirements for agricultural uses related to the Proposed Action are assessed in the Agricultural and Related Economic Impacts Report by Placsh Econ Pacific, LLC (See Appendix I).

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

10238-02  
Letter to Ms. Corinna Kekahuna  
Page 2  
September 23, 2019

4. For the purposes of this Draft EIS, the stream list used was from the CWRM D&O which is discussed in Section 1.3.4.
5. Chapter 9 of the Draft EIS will include a list of all persons and organizations consulted as part of the EISPN process.

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP

**Environmental Impact Statement Preparation Notice**  
**Proposed Water Lease for the Nāhiku, Keʻānae, Honomanū, and Huelo License Areas**  
**Scoping Meeting Comments of**

Mr. Dan Clark  
February 23, 2017  
Haʻikū Park and Community Center  
Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MR. CLARK: Okay. Now at any rate, they spoke of all of the streams and the mountains springs all throughout -- from Nāhiku on out. I'm still a student there in Keanae. I've been fortunate to be taught by a lot of the elders about farming. I raise taro. I have an affinity for taro in my family from Nualolo Valley on the Napali Coast of Kauai. And though I might not seem that much koko, but I do have. I wanted to -- I guess you wanted the specifics as to what you can use in your EIS. Of course I want to -- I'd like to say that I'm opposed to, first off, the issuance of a license for Alexander & Baldwin for the continuance of diversion of water. There needs to be an incline of this -- a removal, a plan.

This is recorded or --

MODERATOR SENNELLY: She's taking it down.

MR. CLARK: Yeah, okay.

MODERATOR SENNELLY: And we have a video.

MR. CLARK: Thank you. Anyhow, it has been 120 years of construction and diversion. I've been up in the mountains, I've seen where all the water, every drop of water that they can actually take from the side of a hill by putting little PVC pipes hidden at -- you know, to a particular stream, that ends up in the ditch itself, diverting it out here. Now in times of a lot of water, a lot of rain, the water is brought out so far and then dumped into a river out here. That doesn't make sense to me, you know. The ditch is running full, they'll dump the water all the way out here, as opposed to discharging the water back to the streams from which they took the water.

Second off, at times I have to sponge my water off the auwai, yeah, fronting our kalo patches, sponge pretty much the water into the patch. I'm serious. The water is hugging the bottom of the ditch, you know. I've been working with, you know, the Waialua people in trying to clear our pipeline from Waikane down to Waialua to, you know, get water to feed the Hana side for the past four years. And we will get there, we will get the water distributed. But what I've found is that attending these meetings with the Water Resources Commission, they were looking for reasons why to deny these people their water.

First they went in and they tried to confuse the farmers as to where the geographic location of their water was coming from, feeding their loading system. Right? And then the Water Department steps in

Scoping Meeting Comments of Mr. Dan Clark  
Page 2  
February 23, 2017

and says, where do you think your water comes from? I'm listening, why the heck is the Water Department asking this? Do you have a water meter, they say? Well, shucks, of course we have. We're fortunate. We paid for that well system, right? We may not have paid for all of it, but we as stepchild way out there, that's how the system goes. The community assists the rest of the communities in, you know, providing moneys that make it possible for us to dig that 400-foot well. That water belongs to us in the district, yeah. It feeds the Keanae-Waialua Nui area. Same thing with Nāhiku. I was listening to the lady talking about the water from above. Now I would like to see the water metered that comes into the Parshall flume that feeds the Keanae loading system. Okay.

I want to know, not by guess and by golly. I want to know what water is being fed us, because the water is warm in the kalo patches. We have root rot and all kinds of diseases that come off from that, you know, failure to provide cool, clean water, which is what the kalo require for a good harvest. And Keanae was not issued an amount of water necessary for our -- you know, all the loading in there. And they said, well, you've got all -- you've got all Buffalo grass or California grass in there. And there's a system. The Hawaiians have been raising taro in there for 800 years. They know certain patches got to go fallow, right, you've got to regenerate it. So they're saying, well, because the kids coming behind you guys are not interested in the taro, we're going to take the water. No, I'm sorry, that's not the case. You let the water run to the sea, yeah. And there is 14 vertical shaft wells all along the isthmus, in between the two mountains here, if A & B is not telling you that, yeah, 400 feet deep, right, down into the basal land's crystal clear water. My field was water and wastewater. 40 years, I put in there, in operating wastewater plants and water treatment systems. I know about water. But when I brought that to the attention of Dr. Miiki, you know, he immediately shut down, that I didn't have the right to bring that up in that particular meeting, the Water Resources meeting.

All I'm saying is -- I talked to some young lady that was working agriculture with MCC, or now it's called Maui College, and I was explaining to her, you know, how the systems were all managed and the konohiki of the district determined, you know, what amount of water went where and nobody cut anybody short. That water was allowed to flow cool to all these farmers so that they can farm the land. And I'm sorry, but I lost trust in the Water Resources Commission. I'm concerned that they're going to be making the ultimate decision on this particular EIS request. And I'm happy for the meeting that you're putting on here, yeah. All I'm saying is that give us the water that we need to farm. Also meter the water. So if you tell us that 3 mgd is what our allotment is, until they can deconstruct that whole ditch system, then I'd like to know, put that Stevens meter back that A & B had inside of that -- what do you call it? -- right there at the Parshall flume, okay? Right there above Keanae with the spring water. That spring comes from the ground. If it's not fed from above, the water is diverted, it's not going to come up on the spring through the stream. Okay? So, I'm sorry, but I'm frustrated that, you know, not all is going to be heard. The meeting is, by design -- this young lady told me it's by design to have the meetings out here as opposed to inside of Keanae, at the Keanae school for the other families that were directly affected. By design, she told me. I said, okay, but I'm not going to fault Wilson Okamoto for that. I worked with you in wastewater and a lot of the design over the years, so I know that your intent is good.

February 23, 2017

The thing is that I think, as the lady said, it needs to be everything transparent and clear, you know, so everybody's comfortable with the decision going forward.

And thank you very much this evening for your time.

**SUBJECT: EISP: PROPOSED LEASE (WATER LEASE) FOR THE NĀHIKU,  
KE'ANAE, HONOLULU, AND HUELO LICENSE AREAS -  
SCOPING MEETING, FEBRUARY 22-23, 2017**

*As I expressed at the 2-23-17 meeting in  
Haleiwa, H.C.'S has more than ample water  
for their present needs sitting in 400' underground  
shafts across the Ithama between Haleiwa and  
the West Maui Mountains. There are 14 of  
them if I recall, plus numerous continuous  
flowing waterways, one feeding their hydro-  
electric generator. The local farmers and  
I have in Keanae require continuous water  
to farm our Hilo. Please have H.C.'S  
on N&B as the mill is now discontinued, replace  
the Stephens meter at the partial flume above  
the Keanae Bernards on the spring water flow  
to our Loi patches. The County of Maui needs  
to develop other water sources that are available  
to them on the aquifer in and above the Ithama  
between the West Maui Mountains and Haleiwa.  
"I absolutely reject the issuance of a extended 30  
year or any exclusive lease on the additional water as it is illegal  
under the State Constitution."*

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Mr. Clark:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas, your oral comments at the February 23, 2017 EIS Scoping Meeting, and your written comments dated March 27, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. The CWRM D&O also describes which streams will be partially or fully restored. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
3. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I)

4. The Draft EIS will include in Chapter 4 an assessment of the impacts of the Proposed Action, including a discussion on the potential impacts of climate change. Various technical studies will be appended the Draft EIS and provide detailed examinations, including an Agricultural and Related Economic Impacts Report (See Appendix I) and an Economic and Fiscal Impact Analysis Report (See Appendix H). The Assessment of Streams and the Ocean Water Chemistry by Sea Engineering, Inc. and Marine Research Consultants, Inc. (See Appendix B) will discuss the existing conditions of streams in the License Area, including current temperatures and overall projected temperature changes resulting from climate change.

Your oral and written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP  
Vice President, Director of Planning

Re. Testimony for East Maui streams EIS  
To Wilson Okamoto Consulting  
ATTN: Earl Mutsukawa  
From Darrell Tanaka, Haiku.

I am testifying in concern of what conditions this EIS will take into account as it determines if the permit for A&B is to be approved or not.

The EMI ditches bring water to upcountry residents, which includes farmers. The EIS should include where the water for upcountry residents will come from if not from the EMI ditches, while taking into consideration population growth and expanded farming on former HC&S lands. Also, if wells are to be drilled to obtain the water, how many wells can be made? How many aquifers do we have in the upcountry area? Can they sustain population growth? What is the cost for these wells as well as distribution infrastructure. Can the County of Maui manage all of the wells or would a private company need to manage them and if so, at what cost to the users?

Water is still needed on former HC&S lands in the immediate future for fire suppression should the 36,000 acres become a wild fire.

Some people may claim that since A&B did not put forth a farming plan for its agricultural lands that they don't need the water but that should not be a criteria for whether or not the permit should be approved. Farming is an ongoing and forever fluctuating entity, even if you did come up with a farming plan, there are too many challenging variables to guarantee a farmer could stick to that plan. Variables include climate change, rainfall, pests and diseases, vandalism, rising costs of farm supplies and fuel, shipping costs, crop losses etc, no plan could account for such variables so it is unfair to set a standard that if no plan exists that A&B doesn't need the water...If there is no water on the former cane land, no one will want to start a farm on it. If there are no farms on the former cane land, then the EIS should take into account how the land will be developed and how much water will be needed then as well.

The EIS should take into consideration if the permit is not approved which may result in the dissolving of East Maui Irrigation Co., what will become of the many miles of ditches if the water is returned to the streams? If it is found that the surface water is needed in the future, at what cost would it be to restore all of the ditches to a working level after years of dilapidation? How long would the restoration work take if upcountry residents need the water?

If water is returned to the streams, how much dirt and debris would be forced onto our nearshore reefs? A plan would need to be made to calculate how much water would be released into any one stream as it has been 150 years of dirt and debris accumulating in these stream beds. And if there is a catastrophic flood in these streams, would there be loss of life or structures? Would debris accumulation disrupt stream flow and redirect the water? Do all the streams need to be restored or just certain ones to help taro farmers? How much taro would need to be produced in order to justify the amount of water being restored to the streams? Is it worth it? All these questions should be addressed in the EIS.

Sincerely,  
Darrell Tanaka  
Haiku, Maui resident, 4<sup>th</sup> generation farmer.

**Scoping Meeting Comments of**

Mr. Darrell Tanaka  
February 22, 2017

Maui Electric Company Community Meeting Room  
Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MR. TANAKA: My name is Darrell Tanaka. As far as the EIS goes, I'd like to -- them to include if there -- there's no water coming from EMI, if EMI is to shut down, if the existing wells can handle supplying the Upcountry with water. And in the long term, you know, 10, 15, 20, 30 years from now, can those wells sustain us? I don't think so. As a fisherman, you know, I'd like to see the water returned to the ocean, yes, but I would be wholeheartedly against all the streams being restored, too much has changed in our climate in the past 150 years. Stream flow needs to be constant, more or less. So I support the taro streams being given water, but if the stream is not being used for taro, I cannot see returning water to that stream when we need it in Central Maui. In order for diversified ag. to happen, there has to be water present or no farmer is going to want to invest his time, effort, and money into trying to make a farm when there's no guarantee that there's enough water, especially if there is a drought.

I come from a farming family, I -- ever since my great grandfather came here we raised vegetables in Happy Valley. My grandfather was a farmer up in Kula and I can tell you if there's no water, there is no farm. So the water coming through EMI has to reach Central Maui or we're not going to see diversified ag. But I can tell you one thing is that the only people that have money to drill wells and maintain them are developers and the last crop, in farming termination, is always called a subdivision.

Okay. So bring the water here, keep EMI in place because our county can't even run our parks, our beach parks, they can't even run that properly, how are they gonna run the ditch system? So we need EMI. Thank you.

FACILITATOR SENELLY: Okay, sir. I heard to keep the EMI system and part of it is also that efficiency of the system in terms of what it's doing now and also getting it to agriculture. And you said something in the very beginning about Upcountry and I just --

MR. TANAKA: The wells.

FACILITATOR SENELLY: Yes. Whether or not the wells could sustain needs in the future without this -- the system?

MR. TANAKA: Yeah.

FACILITATOR SENELLY: Okay. So thank you.

Environmental Impact Statement Preparation Notice  
Proposed Water Lease for the Nāhiku, Keʻanae, Honomanū, and Huelo License Areas  
Scoping Meeting Comments of

Mr. Darren Strand  
February 22, 2017

Maui Electric Company Community Meeting Room  
Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MR. STRAND: Okay. Thank you. I'm Darren Strand. I'm one of the owners and operators of Maui Gold Pineapple Company in a farm of about a thousand acres below Makawao Town and above Halimale. All of our property, the ditch borders -- the upper ditch borders every single acre that we farm and we use absolutely none of the water from the ditch and we haven't since the very first instream flow standard was set and I guess that's been several years.

And, you know, I worry mostly about the farmers at the end of the system that are in Kula Ag. Park. And I see the ditch every day, there's not much water running through it, it's already in a state of disrepair and it needs to be maintained already or we're going to lose the capacity to get water to the last reservoir at the end of that that the farmers in the ag. park use.

I -- before I moved to Maui I was -- I worked at Del Monte Pineapple on Oahu in 2004 and 2005 when the Waiahole Ditch situation was going on and it was -- I was new to Hawaii at that time, I'd just finished at UH, and it was a contentious issue, but they were able to come to an understanding or some kind of agreement, a compromise. And there were -- at that time Del Monte closed and there was Larry Jeff, Saloon Farm, a seed corn company, and no other farmers using the system, but there was a cooperative that maintained it. And if you go to that area now, it's been, you know, maybe 10, 12, 15 years, it's amazing how many farmers are on that land and using that system. And so I'd like to, you know, see us come to a balance, a compromise, and have the foresight to think about what that area might look like in 10 or 15 years and not make a decision that's just based on what we think we want today.

**Proposed Water Lease for the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas**  
**Scoping Meeting Comments of**

Mr. David Prais  
February 23, 2017  
Ha'ikū Park and Community Center  
Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MR. PRAIS: My name is David Prais. The first thing would be that I understand that this is not for testimony. It's you want to know what's for the EIS. That right there is a flag telling you, here is your box, this is what we offer you, take it or leave it. Mahalo to our kupuna, they have been on this all the way. All the way, you've done it correctly by their standards and their ways, but we are the new generation, the generation right here right now. We are on the rise. I do have one thing I can add to the EIS. The first thing I want to say is there's a strong presence of police here. Very strong. In the 30-plus years, have you ever seen this strong of a presence? And that is because they are afraid. They're afraid of us because we are intelligent, we know how to think, and we can act upon it. There's a lot of people who want to speak. I'm going to make it quick. The one thing that I add to the EIS is do not come back before our people without every concern and demand met.

That's all. Mahalo.

**Re: Proposed Environmental Impact Statement for East Maui Water Lease**

Pesticide Action Network North America is a national & international organization with over 2,000 members in Hawai'i. On behalf of our members, we are concerned that this long-term lease would facilitate further long-term intensive cultivation of pesticide-reliant crops (including sugar and genetically engineered test and parent crops) rather than diversified, sustainable agriculture to feed the people of Maui.

We therefore respectfully request that the Environmental Impact Statement on the East Maui Water Lease include the following aspects:

- Impacts on soil, water quality, and public health of pesticide use associated with long-term intensive cultivation of sugar and/or genetically engineered crops.
- Impacts on fisheries, fisherpeople, and marine life, including impacts of pesticide use.
- Potential impacts on taro farmers in the impacted area, including impacts of decreased soil quality
- Potential impacts on cultural practices and Hawaiian way of life in the impacted area

Without these four crucial aspects, we and our members believe that the EIS will be incomplete and thus inaccurate. We therefore respectfully provide this input, knowing that you are committed to conducting a comprehensive and complete EIS. We thank you for your time and consideration.

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Ms. Ghai:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments dated March 6, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

Nevertheless, we offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. The Draft EIS discusses impacts of hazardous materials to soils in Section 4.12 of the Draft EIS.
3. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Divisions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

10238-02  
Letter to Ms. Devika Ghai  
Page 2  
September 23, 2019

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP  
Vice President, Director of Planning

Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MS. HAKAMATSU: As a lifelong resident of Maui, a mother of two children, and a member of the Go Maui board, I'm very concerned about the issue of water for the development of future affordable housing because we all know that water is a critical component to providing any future housing. I'd like to emphasize that what I mean by affordable housing are small-scale projects that are sold at truly affordable prices, and I mean all units within the project, so our residents, particularly those in need, can benefit from home ownership opportunities.

FACILITATOR SENELLY: May I ask you, you're talking about areas that are already being served by the water?

MS. HAKAMATSU: That's correct.

FACILITATOR SENELLY: Okay. Thank you.

MS. HAKAMATSU: That's correct. And I'd just like to thank you for your favorable consideration of this request.

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Ms. Hakamatsu:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your oral comments at the February 22, 2017 EIS Scoping Meeting. We acknowledge your comments and concerns, they have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. A description of the Proposed Action is discussed in Chapter 2 of the Draft EIS. The Draft EIS will include in Section 2.1.4, a description of Mahi Pono's Farm Plan for the agricultural fields in Central Maui. The Farm Plan is based on the water available of which diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).
3. The Draft EIS will include in Chapter 3 an evaluation of the reasonable alternatives to the Proposed Action.
4. The assessment of the Proposed Action will be based on obtaining a Water Lease from the Board of Land and Natural Resources (BLNR) for the full amount of water estimated to be available after accounting for the IIFS set by the CWRM in the D&O. The amount of water available for the approximately 30,000 acre Central Maui field system (formerly in sugarcane) would be determined after allocations to other domestic and agricultural uses, as discussed in the EIS. Also, as discussed in the EIS, alternatives to the Proposed Action will be assessed, including the No Action Alternative, in which no Water Lease is awarded. Neither the proposed action nor any

alternatives consider using water collected by the EMI aqueduct System on the former sugar cane field system in Central Maui for anything other than diversified agriculture.

Your oral comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Environmental Impact Statement Preparation Notice  
Proposed Water Lease for the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas  
Scoping Meeting Comments of

Ms. Dianne Shimizu  
February 22, 2017  
Maui Electric Company Community Meeting Room  
Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MS. SHIMIZU: Good-evening. My name is Dianne Shimizu and I'm a concerned citizen and also a member of O Maui, Inc., a nonprofit organization that advocates for affordable workforce housing, water, good-paying jobs, and a healthy economy for Maui County's residents. I've lived on Maui for 66 years. For over 35 years my husband and I and my two boys lived in Upcountry Maui. We were able to build our home and raise our family because we had water for our domestic water needs. The EMI system supplied water for Nāhiku and irrigation water for ag. users at the Kula Ag. Park. The possibility that these users will not continue to have that water is frightening. What will happen to the families, farmers, businesses, and schools in Upcountry Maui and in the Nāhiku if EMI is not allowed to continue to deliver water? EMI needs enough water to continue to meet the domestic and agricultural needs of our Upcountry and Central Maui residents.

I would like to see the EIS assess the impacts on housing and on our families who are struggling to find homes if there's no water, on farmers and ranches in Upcountry and Central Maui who depend on the EMI system for their livelihood, on HC&S's lands without the sugarcane, and on our hopes of food sustainability if the Central Maui lands cannot be cultivated? Please consider these factors in your preparation of a well-balanced EIS.

Earl Matsukawa, AICP  
Vice President, Director of Planning

**SUBJECT: EISPN: PROPOSED LEASE (WATER LEASE) FOR THE NAHIKU, KE'ANAE, HONOMANU, AND HUELO LICENSE AREAS – SCOPING MEETING, FEBRUARY 22-23, 2017**

A+B/EMI has taken care, maintained, developed this water system at no cost to state, county or individuals. If water is taken away, who + what will be using it, or will it just flow into ocean? water flows in this system with no use of electricity – compare this to our county system where everything has to be pumped!

Mr. Douglas Sheehan

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Mr. Sheehan:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and for your written comments received February 23, 2017. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix M.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui. The environmental impacts of the potential Water Lease will be assessed.

2. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Steam Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See

Environmental Impact Statement Preparation Notice  
Proposed Water Lease for the Nāhiku, Keʻānae, Honomanū, and Huelo License Areas  
Scoping Meeting Comments of

Mr. Dwight Baldwin  
February 23, 2017  
Haʻikū Park and Community Center  
Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MR. BALDWIN: So my name is Dwight Baldwin. I want to start with asking that – you guys, thanks for having this meeting. I would like to request EIS to have a thorough analysis to watershed conditions, with the current conditions right now with A & B, the past conditions with diversions running, and future projected conditions, even multiple scenarios. I want to look at the impacts on the East Maui groundwater, including spring formation and tributary streams, and if possible, get your engineers to calibrate the model of the past and future -- I mean calibrate it to the past events an just estimate a model of the groundwater flow and stream conditions with scientific accuracy.

Because I think this is a good opportunity to understand more about what is going on in East Maui in the past and in the future, because there aren't accurate gauges and, you know, it would be good to have reliable, open access to information, and I think this could be a good stepping point for that.

Thank you very much. That's all I need to say.

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Keʻānae, Honomanū  
and Huelo License Areas

Dear Mr. Baldwin:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Keʻānae, Honomanū, and Huelo License Areas and your oral comments at the February 23, 2017 EIS Scoping Meeting. We acknowledge your comments and concerns, they have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawaiʻi Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued *"right, privilege, and authority to enter and go upon"* the Nāhiku, Keʻānae, Honomanū, and Huelo License Areas for the *"purpose of developing, diverting, transporting, and using government owned waters"* through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. Chapter 4 of the Draft EIS discusses the existing environment, impacts of the Proposed Action and mitigation measures. As relevant and appropriate, the discussion of impacts includes those pertaining to conditions before and after the closure of sugar cultivation in 2016. The Draft EIS will also include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).

3. Truttia and SWCA prepared reports in support of the Draft EIS assessing the impacts of the Proposed Action and alternatives on indigenous freshwater species, terrestrial flora and fauna, and invasive mosquitoes. The Draft EIS discusses the impacts of the Proposed Action to freshwater species in Section 4.2.1 and impacts to terrestrial flora and fauna in Sections 4.4.1 and 4.4.2. Both reports are appended to the Draft EIS (See Appendix A and Appendix C).
4. Impacts of the Proposed Action on hydrology, including in East Maui, are discussed in Section 4.2 of the Draft EIS, as well as the reports various technical reports prepared for the Draft EIS, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A) and Assessment of Streams and the Ocean Water Chemistry (See Appendix B).

Your oral comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental and Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

Earl Matsukawa, AICP  
Vice President, Director of Planning

**Environmental Impact Statement Preparation Notice**  
**Proposed Water Lease for the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas**  
**Scoping Meeting Comments of**

Mr. Edwin Young

February 22, 2017

Maui Electric Company Community Meeting Room

Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MR. YOUNG: Hi. My name is Edwin Young and I agree with that EMI should have some water, but they cannot take all of the water. Because I'm a uni fisherman, yeah, and from 1990 is when EMI started taking all the water from all the ditches. I mean, Makapipi -- I live in Hana. Makapipi was bone-dry for years all the way up until when the sugar cane closed and then they let go a little bit of water. And Honomanu was bone-dry and no akule came inside those bays. Hana Bay, Honomanu, we used to fish all the way, all the way to Kaupo. And when EMI took all the water, then the akule would come inside Hana Bay maybe about once every three months, once every four months. And before that, akule used to come inside Hana Bay every week when all the rivers were flowing prior to 1990. And since they let go of the water, like when EMI -- HC&S closed, when they let go of the water, we would -- right now we're catching akule like pretty much every other week in Hana and Honomanu too. Because I used to fish Honomanu all the way to Kaupo to Nuu.

And I went to Honolulu Institute of Marine Biology for one year as a biologist technician for Makai Pacific, yeah, and wherever the fresh water enters the ocean, it's known as an estuary. These are all estuaries and estuaries are all nurseries for all your baby fishes and all your baby fishes lives on phytoplankton and zooplankton. Phytoplankton is one-cell vegetables and zooplankton is one-cell animal. And that's what the akule like to eat and all your baby fishes, they come inside to eat that. And since EMI started taking all the water, about 90 percent of our fish in Hana has disappeared, 90 percent. And, you know, I can tell you because plenty people in Hana notice this too, I hardly see any uu anymore.

And the HRS -- the HRS on the water code, yeah, the water code for the HRS -- and I asked my cousin, who's a judge in Honolulu, and I said, "What does HRS stand for, Greg?" And he goes, "Hawaii Revised Statute." I said, "Is that law?" He said, "Yeah, that's the law." And I forgot the -- the code for HRS, you know, which law it is, but it says you can take water from the stream, yeah, but you cannot take all the water from the stream, you have to leave water in the stream for hihiki, opae, opou, and stuff like that. But the water commission gave EMI permission to take all the water from Honomanu bone-dry and from Makapipi bone-dry and to me that's -- the law is the law. But the water commission make excuses to bypass that law to give A&B all the water, to me that's totally wrong and how can a big corporation with all the money and everything like that -- well, for one thing, what's her name, Meredith Ching was on the water commission, that's -- and she's an employee.

And then last, but not least, you guys should have this meeting in Hana for people that (inaudible) -- You know, 'cause the Hana people can't come out here and -- you know, I was out here, so I was fortunate to

come over here and talk. And one, the -- you know, your EMI man over there, yeah, first thing he should do is make sure that there is water in all the rivers and, secondly, to help protect our environment, you know. I -- the taro farmers, I agree with all what the taro farmers are doing, but nobody's speaking up for the fishermen. And the people in Hana, we live off the fish, yeah. When we catch akule, we invite everybody to come down and help take the fish out of the net, because I'm not gonna take 5,000, 6,000 fish out of the net, I'll be there for two days. But the people come down and they take the fish out of the net and we give the fish away, we don't sell any fish in Hana, we just give it away to the people. Like you, maybe for a pretty average size catch, you're gonna get eight, your husband gonna get eight, you got two kids, they get half share, they're gonna four each, so that's eight, that's 24 fish you're taking home, that's like about 20 pounds of fish. And when you don't -- when you don't have this, then that's why we -- we don't have our supply of fish, yeah, and we gotta go store. Okay. Anyway, that's all I have to say.

FACILITATOR SENELLY: Okay. No, no, no. So my understanding would be -- What I heard was two -- and you gave a lot, but the two main things I heard that you want to see in the EIS is the impact of the stream diversion on the shoreline, the shoreline environment, and the second thing I heard was you -- how much water is being taken out of the stream. Because you said a couple things and so kind of like having a better idea of how much water is being taken out of each stream or the streams. Is that correct?

MR. YOUNG: They take all the water.

FACILITATOR SENELLY: Okay.

MR. YOUNG: Not leaving any water.

FACILITATOR SENELLY: Okay.

MR. YOUNG: Only when there's rain, it overflows. When the dams overflow, I've seen the dams, that's the only time we have water. But now we have water all the time because -- since HC&S closed, then I guess they opened up some of the dams, yeah.

FACILITATOR SENELLY: Thank you, Mr. Young.

**Environmental Impact Statement Preparation Notice**  
**Proposed Water Lease for the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas**  
**Scoping Meeting Comments of**

Mr. Edwin Young

February 23, 2017

Ha'ikū Park and Community Center

Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MR. YOUNG: I want to talk about Makapipi going bone dry from 1990 up until they the their sugar cane; and then when they closed the sugar cane, they opened up Makapipi again. But for 27 years, Makapipi never flowed. Because in 1990, East Maui Irrigation took all the water from Makapipi. There's two big dams up there, one called Poke's ditch, and I don't know what that bottom dam was, but it stopped all the water, and everything went into the ditch system to Wailuku. And as for the Environmental Impact Statement, the government that's supposed to overlook the stream flows, there's -- Makapipi is a perennial stream, which means that the thing is supposed to flow all the time, but it wasn't. It was bone dry.

And what happened is that all the springs in Hana all dried up down on the ocean and everything like that, and 90 percent of our fish has disappeared, because 90 percent of the seaweed has disappeared. And the fish live off of the seaweed, and also the baby fish, like the ocean, where the river enters the ocean is known as an estuary. And estuaries are all nurseries for all your baby fishes and crabs and lobsters and everything like that, and they live off of zooplankton and cytoplasm. One's a vegetable, one's an animal, and these -- this is like milk, mother's milk to them. And when a lobster gets a little bit bigger, then they will feed off the bottom, off of solid food. But when they're little, they just float in the water column, and they have to bump into the food, because they cannot swim up to the zooplankton and catch it. They have to just bump into it.

So when there's no fresh water going into the ocean, there's no food to bump into. So all our fish is gone. 90 percent of the fish in Hana has disappeared. 90 percent. Now, as for the environmental or the part that's supposed to watch the environment, they've been doing a real poor job, because I can show you -- you can come into Hana Bay, and I can show you there's no seaweed anymore, no turtles, because no turtles are -- the turtles eat seaweed, and there's no turtles anymore. And there's no (Hawaiian), and that has all disappeared. And I say don't give East Maui Irrigation or A & B that 30-year lease, yeah. Stop it.

Thank you.

10238-02

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū,  
and Huelo License Areas

Dear Mr. Young:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and your oral comments at the February 22, 2017 and February 23, 2017 EIS Scoping Meetings. We acknowledge your comments and concerns, they have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 206, Section 17. A record of your comments has been appended to the Draft EIS.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. Trutta and SWCA prepared reports in support of the Draft EIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the Draft EIS (See Appendix A and Appendix C).
3. The Draft EIS will include in Chapter 4 an assessment of the impacts of the Proposed Action. Various technical studies will be appended the Draft EIS and provide detailed examinations, including an East Maui Irrigation Assessment of Streams and the Ocean Water Chemistry (See Appendix B).
4. The Draft EIS will include in Chapter 4 an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). Various technical studies will also be appended the Draft EIS and provide detailed examinations, including: Assessment of the Environmental Impact of Stream

Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

have frequently encountered there in recent years. EMI has abandoned any responsibility for stewardship of the watershed areas they longer utilize. Even in the areas they still use, banyan trees, pyaemia, and other invasive plants grow unfettered. These conditions must be addressed in the EIS.

FACILITATOR SENELLY: Okay.

MS. WENDER: No. I'd like to finish.

FACILITATOR SENELLY: No, no, no. That's what I was going to ask you and you just said it, so I'm fine. I was going to ask you what of that you wanted in the EIS.

MS. WENDER: Could I please finish my testimony?

FACILITATOR SENELLY: Please.

MS. WENDER: The EIS require rules require, quote, a description of the environmental setting including a description of the environment in the vicinity of the action as it exists before commencement of the action, unquote. Throughout the EISPN the phrase, quote, maintain existing conditions, unquote, is repeated. This cannot be the starting point. We have experienced what EMI's lack of stewardship over these past 35 years while they illegitimately held this land without an EIS and without a valid lease, not to mention the previous decades has gotten us a seriously degraded watershed. There has to be some accountability and discussion of alternative what true restoration would mean which means that the condition of the watershed before these diversions existed has to be considered.

On some streams which EMI no longer uses a continuous mauka-makai flow has still not been reestablished. For instance, at West Wailuaiki, the water is diverted and then put back into the stream so that the flow is directed at the ditch road. None of the massive ugly concrete infrastructure has been removed. In short, the streams and their surroundings have not truly been restored.

The EIS should discuss the alternative solutions. One could be to restore the area to its prediversion landscape without causing additional environmental damage. If that is not feasible, an alternative could be to allow the ditch road to remain and to require that it be maintained and also that means be provided to ensure that the previously diverted water finds its way to the stream.

Since EMI is no longer using the water from the Nāhiku or Kēānae areas and since A&B has more than enough well water and water arising from their own lands to serve their needs, there's no justification to include all of these areas in the new license application; however, the EISPN includes all 388 diversion points. If any new lease is considered, first restoration of the abandoned areas should actually be completed and the lease should contain strict provisions requiring true watershed restoration, not

MS. WENDER: My name is Elaine Wender. My involvement in this issue began over 35 years ago. Figure 1-1 of the EISPN shows in green what are deceptively called EMI lands. In fact, many of these lands have multiple owners. For instance, many people, including myself, have interests in TMK-1-8-11 by in Waiokamilo Stream in Kēānae. These maps should be labeled accurately.

I submitted timely substantive comments for the early consultation phase for the preparation of the EISPN and received a letter from Earl stating, quote, Your comments will be considered and a copy of your comment letter will be appended to the EISPN, unquote. However, they were not appended. I have not even received a reply to my written request made a week ago that an amended EISPN be published including my comments as well as others that were excluded and that my comments immediately be sent to all those from whom you originally solicited comments as well as those who made unsolicited comments. I still have not received a reply. I'm renewing that request. It is not an adequate remedy to include in the draft EIS my comments made in the consultation phase.

It's taken us over 35 years to get here. In November of 1981 residents of Kēānae and Hana through their counsel Isaac Hall first petitioned DLNR to prepare an EIS in this case. For 35 years A&B has fought tooth and nail to defy this legal requirement. It took citizen activism and court action to finally require them to adhere to the law and prepare an EIS. So here we are, 35 years later. In that time we've lost two generations of kupuna who fought for water restoration and our watershed has continued to be degraded by EMI's failure to exercise proper stewardship.

A&B apparently no longer utilizes water from Waiokamilo, but this is not the same as restoration. EMI formerly diverted water not only from the main flume at Kukahiko, but also from numerous tributaries of various sizes which, before the existence of the ditch, eventually found their way into Waiokamilo Stream. This water was collected via over two dozen diversions consisting primarily of concrete catchment basins with pipes. EMI has cut these pipes so that the water no longer goes into the ditch, instead it now drips or flows onto the ditch road, creating a muddy mess and additional habitat for invasive plants. Most of the water never makes its way off the road, much less back into the stream. When they built, the ditch and the ditch road cut into and altered the natural terrain. Nothing has been done to return this terrain to its original condition or to ensure that the water not diverted actually gets into the stream.

In addition, EMI has abandoned and no longer maintains the ditch road in the Waiokamilo area, resulting in its present hazardous condition. They also no longer monitor the area for miconia which I

simply cessation of water diversion at the end of the lease period. There should also be a requirement that a bond be posted in sufficient amount to carry out this work.

I also endorse the comments made by Forestry and Wildlife and Na Ala Hele Divisions of DLNR, the Native Hawaiian Legal Corporation, and the U.S. Fish and Wildlife Service. And I encourage people here to read the EISP and submit written comments. Thank you.

COMMENTS ON EISP FOR PROPOSED WATER LEASE FOR THE NĀHIKU,  
KE'ANAE, HONOMANU, AND HUELO LICENSE AREAS

SUBMITTED BY ELAINE WENDER  
MARCH 9, 2017

I endorse the many excellent recommendations submitted during the consultation phase for the preparation of the EISP by U.S. Fish and Wildlife Service; Forestry and Wildlife, Land, and Na Ala Hele Divisions of DLNR; Native Hawaiian Legal Corporation; and Department of Hawaiian Home Lands. I will attempt to not discuss issues which have already been raised, and am grateful to have this opportunity to at last comment, more than 35 years after the community of Ke'anae-Wailuanui first formally petitioned for the preparation of an EIS.

The EISP repeatedly emphasizes that: "The Proposed Action... would enable A&B to continue operation of the EMI Aqueduct System that has been in operation for over a century. In general, the Proposed Action will maintain existing conditions..." These phrases imply that since A&B has been operating this system for so long, it is somehow natural that it should continue, and that the starting place for considering impacts is today; that by maintaining existing conditions, the devastation that has occurred over more than a century because of this system can somehow be ignored.

This cannot be the framework within which this Proposed Action (PA) is considered. The condition of the watershed before these diversions existed and the cumulative environmental impacts which have already occurred, as well as those which would continue to occur, must be described in detail. If this were a brand new PA, I am confident that no governmental agency would even consider approval. It is only because it has been going on for so long that some have become numb to the impacts. If A&B wants the longevity of its presence to be considered, then it must also disclose all of the impacts which that presence has created.

Some of the issues which must be discussed are the ways in which A&B has complied or not with provisions of previous leases and permits, and the resulting environmental impacts. For instance, the 1956 Ke'anae lease provided that:

water needed for the irrigation of kuleanas was excluded from water which could be diverted;  
destruction or injury to the forest growth be avoided as far as is practicable;  
the aqueduct system be kept "at all times in good order".

The issue of compliance with these requirements should be discussed in light of the evidence of failure to release adequate water for kuleana users, the degradation of the

watershed due to dewatered streams and failure to control invasive species, and the massive leakage from the ditch.

The 2000 revocable permit required that A&B: "Keep the Premises and Improvements in a clean, sanitary and orderly condition...Not make, permit, or suffer, any waste, strip, spoil, nuisance or unlawful, improper, or offensive use of the Premises. At all times with respect to the Premises, use due care for public safety...The Permittee shall have full responsibility for the maintenance of roads used within the water license areas." The issue of compliance with these requirements must be discussed in light of the conditions described below.

The EISPN states that Waiokamilo Stream was "fully restored in 2007", and that several other streams are "planned for full and permanent restoration." There must be extensive discussion of alternative actions that would constitute "restoration", what has been implemented thus far, and what future plans are. The EIS must discuss why all 388 diversions are included in the PA, including those for streams which are "planned for full and permanent restoration."

A&B apparently no longer utilizes water from Waiokamilo. But this is not the same as restoration. EMI formerly diverted water not only from the main flume at Kikokiko, but also from numerous tributaries of various sizes which, before the existence of the ditch, eventually found their way into Waiokamilo Stream. This water was collected via over two dozen diversions consisting primarily of concrete catchment basins with pipes. EMI has cut these pipes so that the water no longer goes into the ditch. Instead, it now drips or flows onto the ditch road, creating a muddy mess and additional habitat for invasive plants. Most of this water never makes its way off of the road, much less back into the stream. When they were built, the ditch and the ditch road cut into and altered the natural terrain. Nothing has been done to return this terrain to its original condition or to ensure that the water not diverted actually gets into the stream.

On some "restored" streams, a continuous mauka/makai flow has still not been reestablished. Water is diverted and then put back into the stream, so that flow is interrupted at the ditch road. The massive, ugly concrete infrastructure is intact.

In addition, EMI has abandoned and no longer maintains the ditch road in the Waiokamilo area, resulting in its present hazardous condition. They also no longer monitor the area for miconia, which I have frequently encountered there in recent years. EMI has abandoned any responsibility for stewardship of the watershed areas they no longer utilize. Even in the areas they still use, banyan trees, clidemia and other invasive plants grow unfettered. These conditions and remedies must be addressed in the EIS.

Alternatives must be considered. These would include actual restoration of the watershed, creating a way for previously diverted water to be returned to the streams and continuing maintenance of the ditch road for public access.

Before any new lease is considered, first true restoration of the abandoned areas should actually be completed, and the lease should contain strict provisions requiring true watershed restoration, not simply cessation of water diversion, at the end of the lease period. Bond should be required in an amount sufficient to carry out this work.

Maps in the EISPN with areas labelled "EMI lands" are deceptive. Some of these lands are hui lands with multiple owners. EMI's claimed percentage interest in each parcel should be noted on the maps.

Thank you for this opportunity to comment.

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Ms. Wender:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas. During the EISP comment period, you provided oral comments at the February 23, 2017 EIS Scoping Meeting, and written comments dated March 9, 2017. We also appreciate your early consultation comments provided by email dated December 26, 2016. We acknowledge your comments and concerns which have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS in Appendix J (as to your early consultation comments) and Appendix M (as to your comments at the public scoping meetings and your written comments in response to the EISP).

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui that are now owned by Mahi Pono and planned for diversified agriculture.
2. For the purposes of this EIS, diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the EMI Aqueduct System from the License Area. A description of the EMI Aqueduct System and its operation is included within the Draft EIS (refer to Sections 2.2.1 and 2.1.2).

1907 S. Beretania Street, Suite 400 • Honolulu, Hawaii • 96826 • (808) 946-2277

3. CWRM, pursuant to the D&O issued in June 2018, stated that its intention was to allow for the continued use and viability of the EMI Aqueduct System and that it would not require the complete removal of diversions unless complete removal was necessary to achieve the IIFS.
4. Trutta and SWCA prepared reports in support of the DEIS assessing the impacts of the Proposed Action, particularly impacts on indigenous freshwater species, and terrestrial flora and fauna. The impacts of the Proposed Action to freshwater species are discussed in Section 4.2.1 and the impacts to terrestrial flora and fauna are discussed in Sections 4.4.1 and 4.4.2. The two reports are appended to the DEIS (See Appendix A and Appendix C).
5. The Chapter 4 of the Draft EIS includes an assessment of the existing environment and impacts of the Proposed Action, including the modification or removal of diversion structures in streams designated for full restoration by the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O). The CWRM D&O considered objectives and management strategies in setting the IIFS. Chapter 1, Section 1.3.3 and Chapter 4 of the Draft EIS discusses diversions and restoration related to Waiokamilo Stream, which was ordered for full restoration by the CWRM D&O.
6. Various technical studies are appended the Draft EIS and provide detailed examinations or resources and potential impacts, including: Assessment of the Environmental Impact of Stream Diversions on 33 East Maui Streams using the Hawaiian Stream Habitat Evaluation Procedure (HSHEP) Model (See Appendix A); Assessment of Streams and the Ocean Water Chemistry (See Appendix B); Terrestrial and Flora and Fauna Report (See Appendix C); Historical Structure Assessment (See Appendix D); Archaeological Literature Review and Field Inspection (See Appendix E); Cultural Impact Assessment (See Appendix F); Social Impact Assessment (See Appendix G); Economic and Fiscal Impact Study (See Appendix H); and Agricultural and Related Economic Impacts report (See Appendix I).
7. Chapter 3 of the Draft EIS includes an evaluation of the reasonable alternatives to the Proposed Action.
8. The EMI Aqueduct System Collection Area is shown on Figure 1-1 of the Draft EIS. This figure, which is not to scale, also indicates broadly the lands owned by the State of Hawai'i within the Collection Area and the lands owned by A&B and/or Mahi Pono within and adjacent to the Collection Area.

Your written comments and this response will be reproduced in the Draft EIS. It is anticipated the Draft EIS, including the various technical studies associated with it, will be available for review on September 23, 2019 at the Office of Environmental Quality Control website.

We appreciate your interest and participation in this environmental review process.

Sincerely,

10238-02

Environmental Impact Statement Preparation Notice  
**Proposed Water Lease for the Nāhiku, Ke'ānae, Honomanū, and Huelo License Areas**  
Scoping Meeting Comments of

Mr. Elden Liu

February 23, 2017

Ha'ikū Park and Community Center

Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MR. LIU: My name is Elden Liu, and I'm here tonight concerning this water issue here. But I'm here to just say my ancestor was an ali'i. His name was Hikio. He was given Kaupakalua and he was given East Kaupakalua, which is Jaws, and he was also given a place in West Makaiwa that has all the A & B lanes coming down with the water. The water comes out of the Kaupakalua. And so I'm just here to say I've spoken to A & B, and I've spoken to their attorney at the same time too, a representative, Mr. Heila, who manages the EMI system. We had a very pleasant conversation. I wanted to let him know that I did have interest.

And I'm the sixth generation from Hikio, who was the original. He was an ali'i. And so I would like to be consulted with on some of these decisions that are going to be made. After all, the royal patent cannot be sold; and if A & B is selling that, they're in big -- hang onto this, please. I want to read real quickly what the law, the federal law says about this.

"A warranty deed cannot stand against a land patent in Hawaii, or a royal patent. A grant of land, made patent, is public law standing on the statute books of the state or nation. It is notice to everybody subsequent purchaser under any conflicting sales made." "Wineman versus Gastrell." "The land patent is permanent and cannot be changed by the government after its issuance. Where the United States has parted with title by a patent legally issued and upon surveys made by itself and approved by the proper department, the title so granted cannot be impaired by any subsequent survey made by the government for its own purposes." "Cage versus Danks." I would like to be considered to sit in meetings discussing things that are happening on my family's royal patent

Mr. Elden Liu

Subject: Environmental Impact Statement Preparation Notice  
Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū  
and Huelo License Areas

Dear Mr. Liu:

Thank you for participating in the scoping process for the subject Environmental Impact Statement (EIS) pertaining to the Proposed Lease (Water Lease) for the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas and your oral comments at the February 23, 2017 EIS Scoping Meeting. We acknowledge your comments and concerns, they have been considered in the preparation of the Draft EIS with regard to meeting content requirements prescribed in Hawai'i Administrative Rules, Title 11, Chapter 200, Section 17. A record of your comments has been appended to the Draft EIS.

We have taken your comments into consideration in preparing the Draft EIS, and offer the following responses to your comments relating to the content of the Draft EIS:

1. The Draft EIS assesses anticipated environmental impacts associated with the issuance of a long-term (30 years) Water Lease by the Board of Land and Natural Resources (BLNR) for the continued "right, privilege, and authority to enter and go upon" the Nāhiku, Ke'anae, Honomanū, and Huelo License Areas for the "purpose of developing, diverting, transporting, and using government owned waters" through the existing East Maui Irrigation Company, Ltd. (EMI) Aqueduct System which supplies water to domestic and agricultural water users, including A&B's former sugar cane fields in Central Maui.
2. Section 1.3 of the Draft EIS provides a historical perspective of the Proposed Action, including the EMI Aqueduct System, stream diversion in East Maui and a chronology of the various associated leases, licenses agreements and permits.
3. A description of the Proposed Action is discussed in Chapter 2 of the Draft EIS. The Draft EIS will include in Section 2.1.4, a description of Mahi Pono's Farm Plan for the agricultural fields in Central Maui. The Farm Plan is based on the water available of which diversion quantities from the Commission on Water Resource Management's (CWRM) June 20, 2018 Interim Instream Flow Standards (IIFS) Findings of Fact, Conclusions of Law, & Decision and Order (D&O) were used to estimate the maximum amount of water to be diverted by the

Thank you.

**Environmental Impact Statement Preparation Notice**  
**Proposed Water Lease for the Nāhiku, Keʻānae, Honomanū, and Huelo License Areas**  
**Scoping Meeting Comments of**  
Ms. Faith Chase  
February 23, 2017  
Haʻikū Park and Community Center  
Excerpt of Transcription by Ralph Rosenberg Court Reporters, Inc.

MS. CHASE: Faith Chase. No pun intended. I don't condone this process, but I'm going to give my testimony because I've showed up to make sure that everybody knows that in this process DLNR, Department of Water, the Senate, the House of Representatives, that I'm watching.

I would like the EIS to examine the contract language of the original sale of the Nāhiku and Keanae property that was once bought by Kaupo Ranch -- it's searchable and findable -- at the turn of the century. I haven't seen it, but I'm wondering if there's any language in there that might be salvaged.

I would like the EIS to review the repeated letters and news in the Maui News from the beginning -- the beginning of time, mentioning and reporting the numerous repeated pleading to HC&S and A & B to consider sustainable ag and consider that they haven't considered.

I would like the EIS to include a review of all the meeting minutes that were held at Keanae School from the start to the end. I would like -- from the Maui County Council, to be specific.

I would like the EIS to include the minutes of all Water Resource Committee, Maui County again, where Hana, Keanae, Nāhiku, Waialua and Kailua are on the agenda.

I would like the EIS to include the reporting of the 2016 seed worm breakout group discussions and their findings, which I was at but I've never seen, and I was told I'd get it e-mailed.

I would like you to also include the recent 2017, though limited, seed worm, and though about DHHL, there was a lot of language about this and our sacred rocks at Iao. I want that included.

I would like the EIS to include the review of all testimony of the Hawaii State Legislature 2016 Senate bill 3001 that didn't pass and the resulting House bill HB2501, or better known as the "water theft bill."

I would like the EIS to include the numerous petitioners, the number of petitioners, and all the comments in the Sierra Club petition relating to HB2501.

I would like the EIS to also include the number of petitioners and all the comments in the petition to the governor to veto HB2501.

Lastly, how have these areas been affected. I want a socio-cultural consideration to be made.

**SUBJECT: EISPN: PROPOSED LEASE (WATER LEASE) FOR THE NĀHIKU, KE'ANAE, HONOMANŪ, AND HUELO LICENSE AREAS – SCOPING MEETING, FEBRUARY 22-23, 2017**

*I would like the EIS to include:*  
*The original lease contract details from Kapa Ranch purchase of Nāhiku and Keanae properties.*  
*I would like the EIS to include the historical maps showing coverage of requests to A&B to consider sustainable agriculture.*  
*I would like the EIS to include the minutes of all county contract meetings that were held at Kapa Ranch from the first to last.*  
*I would like the EIS to include all 883000 feet/min, all HPS 2500 feet/min.*  
*All Chapman brook at spring water from 2010, all Chapman minutes/transcripts from 2017.*
